Quote #: MASP MID-041116 Mobile ID Devices & Transaction Controller Software

Dear ██████████ :

Thank you for your interest in DataWorks Plus and our Mobile ID Solutions. With Mobile ID Systems already deployed or underway in eight states and with thousands of devices operating in the field Dataworks is clearly a leader in providing Mobile ID solutions.

DataWorks Plus' RAPID-ID (Mobile ID) system is a tested and proven fingerprint identification system that is *highly configurable,* and can function with any major manufacturer's fingerprint scanners. The capability sets the DataWorks Plus solution apart from other vendor offerings and gives the Massachusetts State Police (MASP) unmatched flexibility in selecting and implementing the best possible hardware for the job. **MASP won't be tied to a specific hardware vendor – you can select the best scanner type for the job.** I have provided pricing for four different Mobile ID devices that all have a FAP-30 rating. In addition, we are also offering the RAPID-ID Server Application with our solution. The RAPID-ID Transaction Controller Software & Reporting Services will allow MASP to review statistical data for all transactions and perform administrative functions, such as managing device registrations and configuring user activity privileges.

I have outlined the costs and deliverables on the following pages. This quote assumes that the Commonwealth will provide all the necessary computer server hardware and any required network connectivity. Maintenance and Support will be available via our Toll Free Help Desk and is provided for the first year at no additional cost as part of the one first year warranty.

I look forward to working with you and your agency.

Devices and Server Software Quote

Product	Description	Quan	Price
DataWorks Evolution AIO Device	FAP-30 Device: Touch-screen display/keyboard, ruggedized case, Android O/S, Wi-Fi, Bluetooth and Cellular communications & camera. Includes Mobile ID software.	■	■
Crossmatch Verifier Sentry	FAP-30 Device: Touch-screen display/keyboard, ruggedized case, Android O/S, Wi-Fi, Bluetooth and Cellular communications & camera. Includes Mobile ID software	■	■
Intermec CN70	FAP-30 Device: Touch-screen display & QWERTY keyboard, ruggedized case, Windows O/S, Wi-Fi, Bluetooth and Cellular communications & camera. Includes Mobile ID software	■	■
Crossmatch Verifier Mw	FAP-30 Device: Fingerprint Scanner Wand, Wi-Fi or Bluetooth communications, must transmit to Android Cell Phone, MDT or Tablet. Includes Mobile ID Software. (Phones/Tablets/MDT not included)	■	■
Rapid ID Server Software	Transaction Controller Server software per full description below. Includes 10 user licenses (for management of 10 devices)	■	■
		Total Price	■

The Rapid ID Server price assumes that the Commonwealth will provide the server hardware and operating software which should have a minimum of 1 quad core CPU, 8 GB Ram, 300 GB HDD & SQL Server 2012 or better.

Pricing includes installation and set-up of server software and devices and 1 year warranty and service on all devices and software.

The RAPID-ID Transaction Controller Software and Reporting Services provides the gateway between the devices and the AFIS system and also enables agencies to use the RAPID-ID Transaction Monitor web application. Transaction Monitor can be accessed from any workstation on your agency's network within an industry standard web browser. With the RAPID-ID Transaction Monitor, you can:

- Review statistical data for all transactions performed and record narrative for investigative and analytical purposes.
- Perform administrative functions such as managing device registrations and configuring user activity privileges.

System statistics are provided for daily weekly or monthly activities of the devices and include information such as:

- Positive identifications leading to arrest.
- Positive identifications that did not lead to arrest.
- Transactions that retrieved no matches.
- Transactions that need to be reviewed.
- Other transactions, which are generally error or test transactions.

All device registrations and their related data will be backed up on the RAPID-ID server. MASP will be able to manage hundreds or thousands of mobile devices with a single point connection. You may register, un-register, and/or transfer device registrations with the RAPID-ID Transaction Monitor web application. Additionally, if there is a device registered within the system that is not currently being used on a workstation client, you can enter the device serial number (from the client) and "pull" down the device registration information from the RAPID-ID server.

DataWorks Plus would be happy to provide a much greater detailed specification of all the features and functions of the Rapid – ID Transaction controller if required.
