How Criminal Investigations Can Be Expedited Using Facial Recognition

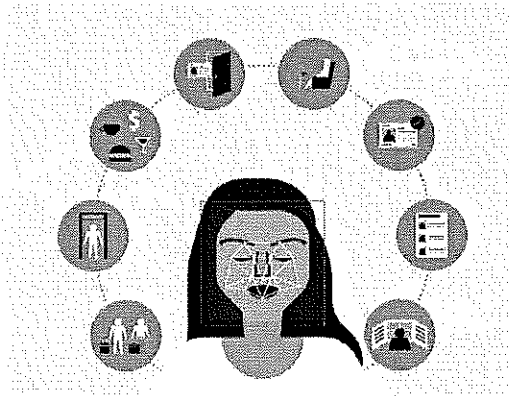

Across the nation, Law Enforcement Organizations (LEOs) are inundated every day with photographic and video evidence in their Criminal Investigation Divisions (CID). Numerous agencies have shared with me that in more than 30% of their CID cases the ONLY evidence they have is a photo or video of an unknown suspect, received from a variety of sources, including surveillance cameras, ...

The Fate of Airport Customer Service Isn't Terminal

Today's air travel is marred by long lines, time-consuming security checks, and constant stress. Travelers are queued up at the check-in counter, at the self-service kiosk, when they drop off their bags, when they navigate the TSA screening lines and when they board the plane. However, these necessary security checks waste precious passenger time and impact an airport's bottom lines. ...

No Budget to Replace or Upgrade Your IT Technology... No Worries!

In today's environment of constant change, you may find yourself needing to replace or upgrade your IT/communications technology due to circumstances out of your control. For instance: Vendor may have announced end-of-life for the system you currently have. An unexpected event has occurred that has compromised your system. Vendor has filed bankruptcy and you don't know what the

JOIN US

In the past year, facial recognition use by public safety has seen significant improvements in matching accuracy. Although the confidence level in the technology is rising, there are still many best practices they are missing out on such as human involvement, a critical deciding factor of whether returned leads are viable or not. In this webinar, see how Director of Client Relations for Vigilant Solutions and Retired NYPD Detective, Roger Rodriguez uses Vigilant's FaceSearch to generate investigative leads from images that normally do not meet the criteria for facial recognition searching after vetting and performing specific enhancements.

Miss the first installment? We've opened registration for another round. Register for our

webinar: **Man v. Machine** and we will explain why the facial recognition process still needs human involvement.

Subject: Vigilant Solutions Acquisition Announcement

VIGILANT SOLUTIONS ACQUISITION ANNOUNCEMENT

Dear Carlos,

We are very excited to announce today that Vigilant Solutions has acquired the assets of ShotCaller Global Inc., developer of GunOps™ and DNAOps™ investigative solutions for law enforcement. This acquisition enables us to provide the law enforcement community with firearm forensic mapping and DNA crime mapping technology that complement our existing suite of automated license plate reader (ALPR) data, facial recognition technology and ballistics analysis solutions.

GunOps and DNAOps are web-based interactive investigation tools. GunOps allows law enforcement investigators and analysts to enter, visualize and access information about firearm-related crimes, forensic test results and armed criminals. DNAOps allows law enforcement to enter, visualize and access information about crimes where DNA has been recovered from crime scenes, using web-based mapping applications.

So, what does this mean for you, our customers? It means Vigilant Solutions is now well-positioned to help you and your jurisdiction to combat the growing epidemic of gun crime. Specifically, our enhanced suite of offerings enables us to provide you the ability to help identify the G.E.T. – geography, event and time – of gun crime.

Anyone who works with or for Vigilant Solutions knows that we are passionate about the fact that our solutions help to keep communities and law enforcement safe. This acquisition is exciting because it not only allows us to continue to achieve that goal, but also enables us to expand our capabilities and help you to eradicate violent gun crime in your communities.

If you are interested in learning more about GunOps, please reach out to your Account Manager or contact us at Sales@VigilantSolutions.com.

Subject: Video Facial Recognition

Hello Commissioner, hope you are well. You very likely won't remember the name, but we had lunch a few years back, I was with Panasonic and Sgt. Sullivan and the tech team had a great meeting discussing mobile technologies for the officers. I've since been leading the growth in this region for Anyvision, a company that is #1 in facial recognition technology (per NIST testing) and thus I wanted to very quickly inquire about you use of, or interest in learning about facial recognition and video AI, and how it can help. Is this an area that interests you, and if so, perhaps we could meet again when your calendar has availability. Let me know what you think, and again hope all is well on your end!

Thank you,

Brian Krause

Mexico's next president plans his own border police force

Bloomberg

After months of Donald Trump's controversial clampdown on immigration, Mexico's President-elect Andres Manuel Lopez Obrador is planning his own border police force to stop undocumented immigrants, drugs and guns from crossing into the country from Central America, his future chief of public security said. Picked by Lopez Obrador, Alfonso Durazo stressed that the new force would be part of a larger regional development effort to ease the poverty and violence that lead so many Central Americans to cross into Mexico. **READ MORE**

DHS teams up with Canadian counterpart to test first responder tech

Nextgov

The Homeland Security Department is joining forces with Canada's national security research office to test a variety of innovative tools that could make firefighters, paramedics and other first responders more effective in the line of duty. Recently, Homeland Security and the Defence Research and Development Canada Centre for Security Science kicked off a two-year partnership aimed at harnessing emerging technologies to bolster both nations' emergency response efforts. **READ MORE**

6 myths preventing you from achieving maximum online privacy

By Harold Kilpatrick

Data plays a significant role in our everyday lives, something that has been made all too clear over the last few years. The enormous amount of false and misleading information about online privacy that's floating around isn't helping the situation, either. With so much conflicting advice out there, it can be hard to know what the best practices for maintaining online privacy

are. Correcting the following common myths is the first step towards living a more private online life. **READ MORE**

Confronting web scraping as a cybersecurity threat

Homeland Security Today

Keeping sensitive information out of the wrong hands should be a priority for any business that runs a high volume of online transactions. Most organizations' traditional defense tactics like antivirus, firewalls, blacklists, etc., are proving woefully inadequate in countering hackers' ever-more sophisticated methods. Therefore, these organizations need a more comprehensive digital security strategy, one that includes an in-depth review of parties in their digital ecosystem, as well as proactive, continuous monitoring and analysis of all their activities. **READ MORE**

LAW ENFORCEMENT HEADLINES

Long Island's top cops use technology to target guns, gangs and drugs

Newsday

Nassau and Suffolk police are using technology to target guns, gangs and drugs to continue to push down crime in both New York counties, according to Long Island's two top cops. Nassau Police Commissioner Patrick Ryder and Suffolk Police Commissioner Geraldine Hart said in interviews that data analysis and intelligence gathering are also key elements in maintaining low crime rates. **READ MORE**

Law enforcement agencies have a new partner: Amazon

By Bambi Majumdar

Amazon has made its entry into the surveillance business with a facial recognition system, Rekognition. The product is geared towards law enforcement use, and has already been used in select police departments around the country. The AI-based program can track, identify and analyze people in real-time. It is powerful enough to identify up to 100 people in a single image

and scan the information quickly against databases. Some are calling it a "first-of-its-kind public-private partnership." **READ MORE**

New Indiana school safety program to offer free

handheld metal detectors

WANE-TV

Indiana Gov. Eric Holcomb announced new changes to the school safety efforts recently. He says that through a new program, the government will offer free handheld metal detectors to schools that want them. The program will make one handheld metal detector device available for every 250 students in traditional public, charter and accredited non-public schools. **READ MORE**

LA gangs stockpile untraceable 'ghost guns' that members make themselves

Los Angeles Times

A small arsenal of weapons that authorities seized from gang members during a six-month undercover operation lay across the tables at LAPD's Hollywood station. It's not unusual for the Los Angeles Police Department and the Bureau of Alcohol, Tobacco, Firearms and Explosives to grab high-power weapons during these types of sweeps. But these AR-15-style semiautomatic rifles and pistols were different — homemade, untraceable "ghost guns" without the traditional serial numbers, built from parts purchased over the internet. **READ MORE**

Mexico's next president plans his own border police force

Bloomberg

After months of Donald Trump's controversial clampdown on immigration, Mexico's President-elect Andres Manuel Lopez Obrador is planning his own border police force to stop undocumented immigrants, drugs and guns from crossing into the country from Central America, his future chief of public security said. Picked by Lopez Obrador, Alfonso Durazo stressed that the new force would be part of a larger regional development effort to ease the poverty and violence that lead so many Central Americans to cross into Mexico. **READ MORE**

DHS teams up with Canadian counterpart to test first responder tech

Nextgov

The Homeland Security Department is joining forces with Canada's national security research office to test a variety of innovative tools that could make firefighters, paramedics and other first responders more effective in the line of duty. Recently, Homeland Security and the Defence Research and Development Canada Centre for Security Science kicked off a two-year partnership aimed at harnessing emerging technologies to bolster both nations' emergency response efforts. **READ MORE**

6 myths preventing you from achieving maximum online privacy

By Harold Kilpatrick

Data plays a significant role in our everyday lives, something that has been made all too clear over the last few years. The enormous amount of false and misleading information about online privacy that's floating around isn't helping the situation, either. With so much conflicting advice out there, it can be hard to know what the best practices for maintaining online privacy

are. Correcting the following common myths is the first step towards living a more private online life. **READ MORE**

Confronting web scraping as a cybersecurity threat

Homeland Security Today

Keeping sensitive information out of the wrong hands should be a priority for any business that runs a high volume of online transactions. Most organizations' traditional defense tactics like antivirus, firewalls, blacklists, etc., are proving woefully inadequate in countering hackers' ever-more sophisticated methods. Therefore, these organizations need a more comprehensive digital security strategy, one that includes an in-depth review of parties in their digital ecosystem, as well as proactive, continuous monitoring and analysis of all their activities. **READ MORE**

LAW ENFORCEMENT HEADLINES

Long Island's top cops use technology to target guns, gangs and drugs

Newsday

Nassau and Suffolk police are using technology to target guns, gangs and drugs to continue to push down crime in both New York counties, according to Long Island's two top cops. Nassau Police Commissioner Patrick Ryder and Suffolk Police Commissioner Geraldine Hart said in interviews that data analysis and intelligence gathering are also key elements in maintaining low crime rates. **READ MORE**

Law enforcement agencies have a new partner: Amazon

By Bambi Majumdar

Amazon has made its entry into the surveillance business with a facial recognition system, Rekognition. The product is geared towards law enforcement use, and has already been used in select police departments around the country. The AI-based program can track, identify and analyze people in real-time. It is powerful enough to identify up to 100 people in a single image

and scan the information quickly against databases. Some are calling it a "first-of-its-kind public-private partnership." **READ MORE**

[ABOUT](#) [SOLUTIONS](#) [CONTACT](#)

**BACK TO SCHOOL:
REMAINING VIGILANT TO
KEEP SCHOOLS SAFE**

JOIN US FOR A WEBINAR: TUESDAY, AUGUST 28TH | 3-4PM EST

Dear Brian,

With the rising number of school shootings over the past couple of years, schools are looking at alternative technology solutions to help bolster security. While there are many resources out there that can potentially bring down the numbers, school officials are struggling with balancing the need to protect their students and teachers and creating an environment that feels welcoming and inherently safe.

Join Sam Rabadi, Retired SAC ATF and Roger Rodriguez, Retired NYPD Detective as they explain how schools can take a multi-pronged approach to ensure public safety by using Vigilant's Safe Campus Solution. This solution combines fixed and mobile

Deployments of license plate readers (LPR) and facial recognition which can help identify an unknown subject and disrupt or mitigate any threat taking a path towards violence. Vigilant's Safe Campus Solution will:

- Provide a safer and more secure learning environment
- Increase officer safety
- Assist in deploying proven crime prevention strategies
- Allow you to acquire very cost-efficient services

Register today to see how you can add two additional layers of security to your existing multi-layered comprehensive security platform!

Thanks and stay safe!

Join us for a Webinar: Tuesday, August 28th, 3:00-4:00 pm EST

Greetings NASRO Members,

With the rising number of school shootings over the past couple of years, schools are looking at alternative technology solutions to help bolster security. While there are many resources out there that can potentially bring down the numbers, school officials are struggling with balancing the need to protect their students and teachers and creating an environment that feels welcoming and inherently safe.

Join Sam Rabadi, Retired SAC ATF and Roger Rodriguez, Retired NYPD Detective as they explain how schools can take a multi-pronged approach to ensure public safety by using Vigilant's Safe Campus Solution. This solution combines fixed and mobile deployments of license plate readers (LPR) and facial recognition which can help identify an unknown subject and disrupt or mitigate any threat taking a path towards violence.

Vigilant's Safe Campus Solution will:

- Provide a safer and more secure learning environment
- Increase officer safety
- Assist in deploying proven crime prevention strategies
- Allow you to acquire very cost-efficient services

Register today to see how you can add two additional layers of security to your existing multi-layered comprehensive security platform!

When: Tuesday, August 28, 2018, 3:00-4:00 PM EST

Hosts: Sam Rabadi, Director, Business Development, Vigilant Solutions (Special Agent in Charge, ATF (RET.)) and Roger Rodriguez, Director of Client Relations, Vigilant Solutions (NYPD Detective (RET.))

VIGILANT COMMUNITIES AWARD

Introducing the Vigilant Communities Award

We're excited to announce the Vigilant Communities Award, which honors law enforcement agencies who have used LPR, facial recognition, and/or ballistics analysis/firearms mapping technology in an innovative way.

We are currently accepting nominations until September 7, 2018 at 11:59PM PST. Do you think you're the agency we're looking for? Or do you know an agency you'd like to nominate? We want to know! Winners will receive a \$2,000 donation to their fallen officers fund.

NOMINATE NOW

BE SAFE. BE SMART. BE VIGILANT.

Vigilant Solutions, 1152 Stealth Street, Livermore, CA 94551, 925-398-2079

Subject: There's Still Time to Register for our Webinar: Back to School: Remaining Vigilant to Keep Schools Safe

[ABOUT](#) [SOLUTIONS](#) [CONTACT](#)

**BACK TO SCHOOL:
REMAINING VIGILANT TO
KEEP SCHOOLS SAFE**

JOIN US FOR A WEBINAR: TUESDAY, AUGUST 28TH | 3-4PM EST

Dear Brian,

With the rising number of school shootings over the past couple of years, schools are looking at alternative technology solutions to help bolster security. While there are many resources out there that can potentially bring down the numbers, school officials are struggling with balancing the need to protect their students and teachers and creating an environment that feels welcoming and inherently safe.

Join Sam Rabadi, Retired SAC ATF and Roger Rodriguez, Retired NYPD Detective as they explain how schools can take a multi-pronged approach to ensure public safety by

using Vigilant's Safe Campus Solution. This solution combines fixed and mobile deployments of license plate readers (LPR) and facial recognition which can help identify unknown subject and disrupt or mitigate any threat taking a path towards violence. Vigilant's Safe Campus Solution will:

- Provide a safer and more secure learning environment
- Increase officer safety
- Assist in deploying proven crime prevention strategies
- Allow you to acquire very cost-efficient services

Register today to see how you can add two additional layers of security to your existing multi-layered comprehensive security platform!

Thanks and stay safe!

Subject: Go With the Flow: The 5 Step Process Behind Every Facial Recognition Search

THE 5 STEP PROCESS BEHIND EVERY FACIAL RECOGNITION SEARCH

In the past year, facial recognition use by public safety has seen significant improvements in matching accuracy. Although the confidence level in the technology is rising, there are still many best practices they are missing out on such as human involvement, a critical deciding factor of whether returned leads are viable or not.

Join Director of Client Relations for Vigilant Solutions and Retired NYPD Detective, Roger Rodriguez as he explains the 5 Steps of the Facial Recognition Investigative Workflow. See firsthand how agencies nationwide are generating positive results with FaceSearch, Vigilant's facial recognition solution.

During Roger's tenure as a lead detective in the New York City Police Department's first dedicated facial recognition unit, he acquired the skills and first-hand experience in best practices for facial recognition in public safety. The success of this unit was driven by establishing a defined workflow which helped develop strong investigative leads and close cases faster.

Keeping Your Cool When Severe Weather Hits

Extreme weather events have caused massive destruction across North America in recent months. In early 2018, the eastern part of the U.S. experienced a “bomb cyclone” consisting of severe cold temperatures, massive amounts of snow and lots of misery. Last summer and early fall, the Gulf Coast and Caribbean were hard hit by hurricanes during one of the most severe ...

The face recognition company

Dear Cheryl,

At IACP, we want to show you how it works!

Cognitec invites you to take a look at our specialized face recognition technology for law enforcement investigation cases, designed to support fast person searches with facial images and in recorded video material.

Investigators can import sets of video files, find unknown persons, frequently seen persons or groups, persons seen together, or persons appearing together repeatedly. Easy image enrollment from video enables quick searches against local and central databases.

Talk to our experts in booth **704** during the IACP Annual Conference!

Please reply to this email to set up a scheduled demo.

See you in Orlando!

To: rcheetham@springfieldpolice.net
Subject: Vigilant Solutions Acquires Edesix, Ltd.

VIGILANT SOLUTIONS ACQUIRES EDESIX, LTD.

Dear Robert,

We are very excited to announce today that Vigilant Solutions has acquired Edesix Ltd, the number one manufacturer of body-worn cameras in the United Kingdom.

Founded in Edinburgh in 2002, Edesix has a global footprint of customers across industries ranging from law enforcement and airline security to fire safety, rail

safety, university security and healthcare. Its body worn video system – VideoBadge™ – employs footage encryption and a wire-free design that make it extremely versatile for various types of users and applications.

Similarly, its VideoManager™ software solutions enable web-based viewing and editing of incidents and preparation of evidence packages. The software is designed to control and manage cameras, their footage and footage from other sources in a highly efficient and secure manner. Additionally, its in-car cameras will seamlessly integrate with our suite of technologies.

So, what does this mean for you, our customers?

1. Anyone who works with Vigilant Solutions knows that we are passionate about the fact that our solutions help to keep communities and law enforcement safe. And, by providing you with body worn cameras, we are able to achieve both goals by aiding you in promoting transparency in your engagements with the public.
2. You no longer need to keep your automated license plate recognition, facial recognition, ballistics analysis, gun crime mapping and body worn/in-car camera images siloed in multiple systems. All the images you capture can easily be integrated into our investigative platform, so we can provide you with a single platform for securely managing your images all in one place.
3. There is a new player in the body worn camera market. And, that means increased competition for your law enforcement dollars, which translates to competitive pricing and continued innovation in technology development.

If you are interested in learning more about our body worn camera and video management solutions, please reach out to your Account Manager or contact us at Sales@VigilantSolutions.com.

Dear Ted,

We are very excited to announce today that Vigilant Solutions has acquired Edesix Ltd, the number one manufacturer of body-worn cameras in the United Kingdom.

Founded in Edinburgh in 2002, Edesix has a global footprint of customers across industries ranging from law enforcement and airline security to fire safety, rail

safety, university security and healthcare. Its body worn video system – VideoBadge™ – employs footage encryption and a wire-free design that make it extremely versatile for various types of users and applications.

Similarly, its VideoManager™ software solutions enable web-based viewing and editing of incidents and preparation of evidence packages. The software is designed to control and manage cameras, their footage and footage from other sources in a highly efficient and secure manner. Additionally, its in-car cameras will seamlessly integrate with our suite of technologies.

So, what does this mean for you, our customers?

1. Anyone who works with Vigilant Solutions knows that we are passionate about the fact that our solutions help to keep communities and law enforcement safe. And, by providing you with body worn cameras, we are able to achieve both goals by aiding you in promoting transparency in your engagements with the public.
2. You no longer need to keep your automated license plate recognition, facial recognition, ballistics analysis, gun crime mapping and body worn/in-car camera images siloed in multiple systems. All the images you capture can easily be integrated into our investigative platform, so we can provide you with a single platform for securely managing your images all in one place.
3. There is a new player in the body worn camera market. And, that means increased competition for your law enforcement dollars, which translates to competitive pricing and continued innovation in technology development.

If you are interested in learning more about our body worn camera and video management solutions, please reach out to your Account Manager or contact us at Sales@VigilantSolutions.com.

Be Safe. Be Smart. Be Vigilant.

HOMELAND SECURITY

Can we finally stop terrorists from exploiting social media?

Forbes

Social media has a terrorism problem. From Twitter's infamous 2015 proclamation that it would never censor a terrorist to Facebook's long delay in adopting signature-based content blacklisting, social media has become a critical inadvertent ally in helping terror organizations throughout the globe recruit, communicate and promote. The platforms themselves have been slow to respond, initially rejecting calls to remove terrorists from their walled gardens, before reversing and aggressively embracing the idea of purging violent users. [READ MORE](#)

Chicago man used social media to recruit fighters for Islamic State, encourage terrorist attacks, feds allege

Chicago Tribune

Federal authorities unsealed charges Friday against a North Side Chicago man that alleged he was a leader of the Islamic State's online propaganda wing who used social media to recruit fighters for the terrorist organization and encourage others to carry out terrorist attacks. Shackled at the ankles in federal court, Ashraf Al Safoo, a naturalized U.S. citizen of Iraqi descent, was ordered held in custody until a detention hearing. [READ MORE](#)

Research provides a more complete picture of suffering caused by terrorist attacks

The Medical News

Terrorist attacks injure far more people than they kill, leaving victims with lost limbs, hearing loss, respiratory disease, depression and other issues. But little research has measured the impact of that damage beyond the number of people who are hurt. New research from The University of Texas at Dallas provides a more complete picture of the suffering caused by terrorist attacks. [READ MORE](#)

CYBERSECURITY

Is facial recognition needed for school security?

By Bambi Majumdar

The unfortunate increase in school shootings across the country has thrust the school security debate into the spotlight. Parents, teachers, administrators, and the government are concerned about security and safety of all present at school premises. A Seattle-based company, RealNetworks, recently made headlines in this regard. It has introduced facial recognition technology to increase security at one Seattle school as a part

of a preliminary service experiment. The experiment has fueled a fierce debate about privacy concerns. [READ MORE](#)

Federal CIO: Tech modernization is about cybersecurity

NextGov

The federal government's technology modernization campaign is inseparable from efforts to shore up government cybersecurity, federal Chief Information Officer Suzette Kent said recently. In many cases, government technology systems were designed years or even decades ago, before the government was deeply concerned about cybersecurity and before hackers were so focused on digitally compromising government systems, Kent said. Updating those systems can benefit agencies by making their work faster, easier and cheaper. It can also make securing the systems far easier, Kent said. [READ MORE](#)

LAW ENFORCEMENT HEADLINES

DA: 4 more bombs could be out there after arrest in mysterious explosion case

PennLive

Although a Bucks County man was charged in connection with making and setting off explosives, four more bombs could be hidden around the Quakertown, Pennsylvania area. David W. Surman Jr., 31, was charged in June after an ongoing investigation into 30 explosions at seven sites that began in April. There were no reported injuries. But now, authorities are concerned more devices could be located in the Milford Square and Revere sections of Upper Bucks County, according to reports. [READ MORE](#)

Report: As tech changes law enforcement, its workforce must adapt

Government Technology

Technology will continue to change the work of law enforcement and staying ahead will mean not just adopting the latest tools but hiring and retaining the best employees, forging unique partnerships and even reorganizing the force, according to a new report from Accenture. Authors found the core mission of law enforcement, which it defined as protecting the public, preventing crime and keeping the peace, while maintaining the public's trust hasn't changed. But if agencies intend to continue to effectively serve, they'll have to "develop a more agile workforce and rely on an increasingly expanded ecosystem of partners," authors wrote, whether in traditional policing or a more "preventative policing model." [READ MORE](#)

How a new database is helping law enforcement fight gangs

The Times

More than 33,000 gang member profiles have been added to a statewide cloud-based intelligence platform, something Hall County, Georgia investigators believe will become a great tool for law enforcement. The Criminal Justice Coordinating Council announced recently that the profiles were added to the Georgia Gang Intelligence Platform. The profiles include names, affiliations and identifiers such as tattoos. As a result, the council said "more than 25,000 connections have been made across investigative case files." [READ MORE](#)

Narcotics Field Testing Certification Course

GSHNSP

A Narcotics Field Testing Certification Course is scheduled for 8 a.m.-4 p.m. Nov. 7 at the Rhode Island Training Facility in Exeter. The course will help participants develop the ability to perform presumptive field testing of narcotics safely and effectively utilizing a proven system and set of recommended tools. Cost is \$495 per student and class size is limited to 20 students. [READ MORE](#)

New webinar: Who Ya Gonna Call ... At DHS?

Justice Clearinghouse

When the Department of Homeland Security was created in 2003, the world was a very different place. Fresh from the shock of 9/11, the Department was stood-up to "protect the homeland," with its span and reach encompassing legacy components like the Secret Service to the US Coast Guard, to creating new components like TSA, and realigning components like CBP and ICE.

But the 3rd largest cabinet department, with all of its resources and "mission critical" responsibilities, can be confusing to the state, county, local and tribal justice professional, who just want to know "who should I call about..." or get help when you need it. [READ MORE](#)

Institute For Cybersecurity

GSHNSP

The National Sheriffs' Association Global Center for Public Safety has created the Institute for Cybersecurity. Training courses and certifications have been designed specifically for law enforcement to arm them with the understanding and knowledge they need to not only conduct criminal investigations and develop intelligence, but to provide meaningful information to those they serve. **READ MORE**

Homeland Security Certifications

GSHNSP

The Certified Homeland Protection Professional (CHPP) and Certified Homeland Protection Associate (CHPA) levels I through IV certification programs were established by the National Sheriffs' Association in partnership with the Global Society of Homeland and National Security Professionals. The designations certify that individuals have demonstrated competency, knowledge, skills and abilities in the blended discipline of Homeland Protection through a rigorous qualification program.

GSHNSP partners with Justice Clearinghouse for webinars

GSHNSP

The National Sheriffs' Association & GSHNSP have teamed up with the Justice Clearinghouse to produce our popular webinars! Justice Clearinghouse is the webinar platform provider for the National Sheriffs' Association. Through this unique partnership, NSA/GSHNSP and JCH will be bringing the enriching topics and training for our homeland security professionals to grow in their careers and to work more collaboratively with other security professionals for the betterment of their communities.

Here are some of the webinars available:

- [Who Ya Gonna Call ... At DHS? Understanding the differences among DHS Components and What They Can Do for State, County, Local and Tribal Justice Agencies](#)
- [Investigating Financial Exploitation: Think Like A Forensic Accountant](#)
- [Latent Print Processing: Non-Porous Evidence](#)
- [Hiring Great People: What Best Predicts the Performance of Law Enforcement Personnel](#)
- [Breaking Your Own News: Telling Your Story on Your Own Terms](#)
- [What Justice Professionals Need to Know about First Amendment Speech and the Public Sector](#)
- [Understanding Sexual Assault Perpetration: Sex Offender Management and Treatment Strategies](#)
- [How Data Analytics Improve Agency & Facility Management](#)
- [Career Planning: From Academy to Retirement](#)
- [Forensic Services Unit Resources, Long-term Missing & Unidentified Children, for Justice Professionals](#)
- [Creating, Managing, or Becoming Peak Performers](#)
- [Restorative Justice Intervention Program: a Case Study](#)
- ["Officer Why Did You Shoot My Dog?" The Dynamics of Officer Involved Shootings of Dogs](#)
- [How to Launch an Elder Abuse Multidisciplinary Team — and Why](#)

- Domestic Violence and Firearm Relinquishment: From Honor System to Actual Enforcement
- LEGAL ISSUES IN TODAY'S JAIL: Use of Force
- Not Your Momma's Ethics
- Case Preparation and Courtroom Presentation: Understanding the basics to be an effective investigator and courtroom witness

■ TRAINING

Training for all first responders & public safety officials

GSHNSP

Nov. 14-15, 2018 — Washington, D.C.

The Fall 2018 IPSA Symposium will bring together public safety officials — law enforcement, fire, EMS, telecommunications, emergency management and allied emergency responders — from around the United States and internationally.

Complimentary registration passes are available for any GSHNSP members and associates who want to attend. [READ MORE](#)

School Based Threat, Risk and Vulnerability Assessment training

GSHNSP

The School Based Threat, Risk and Vulnerability Assessment is a comprehensive assessment that evaluates a school system's strengths and weaknesses in regard to safety and security, identifies critical infrastructure and key resources, identifies the threats to the schools from an all-hazard perspective, and provides a comprehensive vulnerability assessment. ■ TRAINING

Training for all first responders & public safety officials

GSHNSP

Nov. 14-15, 2018 — Washington, D.C.

The Fall 2018 IPSA Symposium will bring together public safety officials — law enforcement, fire, EMS, telecommunications, emergency management and allied emergency responders — from around the United States and internationally.

Complimentary registration passes are available for any GSHNSP members and associates who want to attend. [READ MORE](#)

School Based Threat, Risk and Vulnerability Assessment training

GSHNSP

The School Based Threat, Risk and Vulnerability Assessment is a comprehensive assessment that evaluates a school system's strengths and weaknesses in regard to safety and security, identifies critical infrastructure and key resources, identifies the threats to the schools from an all-hazard perspective, and provides a comprehensive vulnerability assessment. Subject: RTAC Real-Time Facial Recognition
Attachments: Anyvision Public Safety Project Guide.pdf

Hello Bill,

I wanted to reach out & quickly inquire with you regarding capabilities in the RTAC. I have been reading up on your technology approach & use of analytics such as Briefcam. I wanted to know if you all have interest in more real-time or live analytics vs. forensics tools like those. Specifically, have you discussed live facial and object recognition and the value it could add to your team in the RTAC? If this is an area that interests you, perhaps we could set up some time for a brief discussion and introductory demonstration. I've also attached a quick brochure to share some initial info about the Anyvision solution.

Please let me know if you'd have some time to connect?

Thank you,

Brian Krause

NEC's Improved Live Scan Strengthens State and Local Law Enforcement

For law enforcement, processing arrests involves the entry of bio-demographic information, taking fingerprints and possibly mug shots of the suspect. The data is then sent to state and federal authorities, such as the FBI, to determine if there are any existing arrest records in order to verify that the suspect has not provided false information. Authorities also need to determine ...

The 3 R's In Disaster Preparedness

Few want to be 'that person' ... the one whose phone rings first when some aspect of the organization's critical infrastructure fails. Hoping for the best is all well and good. Even planning for the worst only goes so far. There are just too many variables in preventing unexpected outages to be totally failsafe. Yes, there are some situations that ...

NEC Welcomes Greater Industry Collaboration on Facial Recognition Technology

Today, NEC Corporation President and CEO Takashi Niino published the following essay regarding recent calls for government regulation and greater industry collaboration on facial recognition technology. As a world-leading provider of facial recognition and other biometric, as well as information and communications technologies, NEC Corporation welcomes greater industry collaboration and effective discussion for the future of facial recognition technology and ...
