**Subject:** Whidden HVAC quote update details  
**Attachment(s):** "Everett Whidden AC revised (2).pdf"

Hi Eric,

Thanks again for chatting with Brenda and me on the phone yesterday about the Whidden HVAC project. Per our conversation, I've attached your May 9 quote. The updates should be as follows:

- Update the date to be current
- Remove section on page 1 entitled "Labor & Equipment to move from outside cabinet to new equipment rack" since that will roll into the PSnet contract now in place.
- Update section header on page 2 to read "New air conditioning unit equipment" since the labor portion will also roll into PSnet contract.
- Update Scope of work on page 2 to remove references to labor and work performed and any "install" language.
- Update bolded total at the bottom to be just one line that reads "Equipment Total: \$25,522.00."
- Update "Qualifications" section to remove any labor-related language, and only to keep language related to HVAC equipment procurement.

Thank you so much!

Sarah

Thanks, Eric. So actually someone forwarded me a copy of invoice 9918021 that corresponds to that PO (690473) *but* unfortunately the invoice does not match the PO. The PO has 6 lines, 5 for equipment pieces and the last for labor. The invoice needs to be broken out in the same manner otherwise the payment will not go through.

If you could get that turned around ASAP I would appreciate it since this PO was dated back in May and I would like to take care of it this week.

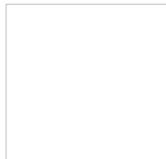

Thanks!  
Sarah

Hi Joe,

I'm attaching the PO that we just spoke about on the phone, and I'm copying Eric so that he can do digging on his end. Essentially, this quote was generated in February 2017 for 3 cameras for Quincy PD. It's funded through the Critical Infrastructure subcommittee so I believe it's a target hardening project.

I have no record of this work ever being done. Can you please verify that the cameras were indeed installed (and when and where)? The PO is dated June 9, **2017** so it is a year outstanding at this point. I want to get it paid and squared away as soon as possible.

Both PO and original quote are attached for your reference.

Thank you,  
Sarah

**Subject:** Update on status of PSnet VMware upgrades and licensing  
**Attachment(s):** "smime.p7s"

Sarah, et al.,

We have successfully upgraded the PSnet hosting centers to VMware vSphere 6.5U1 (standard) and vCenter 6.5U1 (standard). Because VMware had already granted us an upgrade option to version 6.x, this has not resulted in any new expenses, and we only need to acquire annual support contracts to stay current with VMware releases. All hosts have been assigned the new 6.x licenses, along with vCenter. All patches have also been applied to the new software, and HPE extensions have been added to the ESX hosts.

Sarah and I were able to resolve multiple issues with the way that VMware had recorded our contract and license info. The license keys are now being managed by a new "My VMware" account that is visibly assigned to "Boston Office of Emergency Management." While these were mostly in the category of "bureaucratic annoyances," there were sticky issues with the way that the licenses had been assigned that had already caused problems when VMware initiated a self-audit of our license compliance back in May. It is nice to have these annoyances behind us. I also coupled the vCenter license management facilities to the My VMware account, so that it should be easier to manage this stuff in the future.

As a precursor to the VMware upgrades, we also updated critical firmware in the HPE Blade Systems and for each server. This should allow us to better integrate hardware system monitoring and management with the VMware tools. We also cleared out a lot of cobwebs that had accumulated over the past couple of years with no active maintenance.

While we have achieved a significant milestone, there are still multiple tasks we need to pursue:

- Upgrade VMware Tools on all the VMs
- Install any additional HPE software support tools that should be integrated with vSphere
- Deal with any of the Spectre/Meltdown Intel CPU firmware issues that have not been resolved
- Refine configurations to take advantage of new VMware 6.x features
- Set up new VMFS 6 datastores on the 3PAR systems using RAID 6 virtual volumes
- Migrate all VMs and other files to new datastores and decommission existing datastores
- Upgrade vCenter to 6.7 (which does support 6.5U1 ESX hosts)
- Explore feasibility of upgrading ESX on the HPE blade servers to 6.7  
(Aside, we have stayed with 6.5U1 instead of 6.5U2, since there is currently no upgrade path from 6.5U2 to 6.7)

Let me know if you have any questions...

...Chuck

**Subject:** Re: Update on status of PSnet VMware upgrades and licensing

Woo! All sounds good. Let's keep it going! :) Thanks, Chuck & Colin.

On Fri, Sep 28, 2018 at 1:58 PM Chuck Wade <Chuck@interisle.net> wrote:

Sarah, et al.,

We have successfully upgraded the PSnet hosting centers to VMware vSphere 6.5U1 (standard) and vCenter 6.5U1 (standard). Because VMware had already granted us an upgrade option to version 6.x, this has not resulted in any new expenses, and we only need to acquire annual support contracts to stay current with VMware releases. All hosts have been assigned the new 6.x licenses, along with vCenter. All patches have also been applied to the new software, and HPE extensions have been added to the ESX hosts.

Sarah and I were able to resolve multiple issues with the way that VMware had recorded our contract and license info. Hi Mary,

Can you please update your master file to remove the February tab? Often times when you send over the monthly backup it leaves in that old tab; I don't know why.

Thank you,  
Sarah

Hi Eric,

Just reminding you about this email. Could you provide an updated quote next week?

Thanks,  
Sarah

On Tue, Sep 25, 2018 at 10:29 AM Sarah Plowman <[sarah.plowman@boston.gov](mailto:sarah.plowman@boston.gov)> wrote:

Hi Eric,

Thanks again for chatting with Brenda and me on the phone yesterday about the Whidden HVAC project. Per our conversation, I've attached your May 9 quote. The updates should be as follows:

- Update the date to be current
- Remove section on page 1 entitled "Labor & Equipment to move from outside cabinet to new equipment rack" since that will roll into the PSnet contract now in place.
- Update section header on page 2 to read "New air conditioning unit equipment" since the labor portion will also roll into PSnet contract.
- Update Scope of work on page 2 to remove references to labor and work performed and any "install" language.
- Update bolded total at the bottom to be just one line that reads "Equipment Total: \$25,522.00."
- Update "Qualifications" section to remove any labor-related language, and only to keep language related to HVAC equipment procurement.

Thank you so much!  
Sarah

The Somerville PD link to Camb CH is in and out of connectivity . I have talked with Chuck and we are dispatching to Somerville PD to triage. Chuck has shut down for now and has all traffic coming through JFK to stabilize .

More details to follow

Eric, et al.,

Just to update everyone, there is a definite problem with the BridgeWave microwave equipment between Somerville PD and the [former] Courthouse in Cambridge at 40 Thorndike. I will be working with Jim Rex this afternoon to try and isolate the cause of this problem. This may be related to the messy weather we had yesterday and last evening, but we do not know yet.

For the record, here is a chart of the receive levels for this microwave link over the past 24 hours. The red trace is for the receive signal levels at the Somerville end, while the blue trace is for the Cambridge end.

The signal degradation shown yesterday between 14:00 and 18:00, again at around 22:00, and then earlier this morning between 02:00 and 03:00 was due to periods of heavy rain. These 80 GHz links are particularly susceptible to rain, so this weather-related degradation is to be expected. However, a different problem started this morning shortly after 08:30. In this case, the problem was not weather, but something with the microwave equipment. Until we inspect on site, we cannot yet say which radio is causing this problem. This might also be a faulty or loose mount that is now wobbling, which would cause this sort of signal impairment. Again, 80 GHz radios have very narrow beam widths, so they are more susceptible to any movement in the antennas.

Although I had checked the status of all problematic backbone links in PSnet early this morning after the heavy rains, Somerville PD was stable at that time, and the link to the Courthouse was working. I checked again around 08:30, but everything was still stable, so it wasn't until later that we saw the new problem.

At this time, Somerville PD is connected to the PSnet backbone via only a DragonWave 18 GHz microwave link to JFK in Boston. This is keeping things stable. We are also working to activate a new microwave connection into Somerville PD from Cambridge. This will significantly improve reliability of service to Somerville when this link becomes active (soon, we hope).

Update

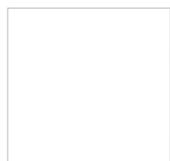

We cannot repair connection from SPD to Camb CH.

The primary link right now is SPD to JFK . Chuck has reached out to Skywave on activating new link installed by Industrial CC from SPD to Camb. ( sorry forget location Chuck can elaborate ) We will assist in any way we can with labor if needed to expedite this connection with Skywave if needed . We will monitor SPD —JFK link thru weekend .

Will update if needed .

Thanks

Sarah,

I have been working with both Dave Mahoney and Gerry Reardon on bringing the Millers River (15 Lambert) site on line. They understand that, in addition to City of Cambridge radios at this site, that it is also necessary to bringing the new MNI microwave link to Somerville PD online.

At this point, the immediate issue we need to deal with is getting cabling run from the Somerville PD first floor server room where the PSnet switches are located to the basement radio room where the MNI IDU equipment is located. LAN-TEL is working this issue with support from Skywave.

I will be in Cambridge tomorrow, and will work on further refinement of the network connectivity to the MNI IDU at Millers River.

Note, I am also working with Cambridge on bringing the Avalon North Point (1 Leighton) site online. The pending issue is lighting the City fiber to the Avalon site and deploying the PSnet switches for that site. Once the Avalon site is online, we will then be able to bring up the MNI microwave link to Whidden Hospital. The Whidden end of this link is already connected to the PSnet switches there.

...Chuck

Hi Eric & Chuck,

Thanks for the emails. Has anyone in Cambridge been alerted to this problem? I don't see Chief Reardon, Dave Mahoney, or anyone else on the email thread.

Thanks,  
Sarah

On Fri, Oct 12, 2018 at 3:48 PM Eric Johnson <[ejohnson@lan-tel.com](mailto:ejohnson@lan-tel.com)> wrote:

Update

We cannot repair connection from SPD to Camb CH.

The primary link right now is SPD to JFK . Chuck has reached out to Skywave on activating new link installed by Industrial CC from SPD to Camb. ( sorry forget location Chuck can elaborate ) We will assist in any way we can with labor if needed to expedite this connection with Skywave if needed . We will monitor SPD —JFK link thru weekend .

Will update if needed .

Thanks

On Oct 12, 2018, at 2:15 PM, Chuck Wade <[Chuck@Interisle.net](mailto:Chuck@Interisle.net)> wrote:

Eric, et al.,

Just to update everyone, there is a definite problem with the BridgeWave microwave equipment between Somerville PD and the [former] Courthouse in Cambridge at 40 Thorndike. I will be working with Jim Rex this afternoon to try and isolate the cause of this problem. This may be related to the messy weather we had yesterday and last evening, but we do not know yet.

For the record, here is a chart of the receive levels for this microwave link over the past 24 hours. The red trace is for the receive signal levels at the Somerville end, while the blue trace is for the Cambridge end.

<lpnibbndfkgcdbc.png>

The signal degradation shown yesterday between 14:00 and 18:00, again at around 22:00, and then earlier this morning between 02:00 and 03:00 was due to periods of heavy rain. These 80 GHz links are particularly susceptible to rain, so this weather-related degradation is to be expected. However, a different problem started this morning shortly after 08:30. In this case, the problem was not weather, but something with the microwave equipment. Until we inspect on site, we cannot yet say which radio is causing this problem. This might also be a faulty or loose mount that is now wobbling, which would cause this sort of signal impairment. Again, 80 GHz radios have very narrow beam widths, so they are more susceptible to any movement in the antennas.

Although I had checked the status of all problematic backbone links in PSnet early this morning after the heavy rains, Somerville PD was stable at that time, and the link to the Courthouse was working. I checked again around 08:30, but everything was still stable, so it wasn't until later that we saw the new problem.

At this time, Somerville PD is connected to the PSnet backbone via only a DragonWave 18 GHz microwave link to JFK in Boston. This is keeping things stable. We are also working to activate a new microwave connection into Somerville PD from Cambridge. This will significantly improve reliability of service to Somerville when this link becomes active (soon, we hope).

Hi PSnet folks,

Just a reminder that *tomorrow afternoon, Wednesday, at 2pm* (note the start time) we have a PSnet Executive Committee meeting. Thanks to Shawn & BPD for hosting us over in Charlestown. I've attached the meeting minutes for your review -- there are two sets, one from June, and one from September. Agenda for the meeting is as follows:

- Welcome/Introductions/Meeting Minutes
- Vendor report: network project updates
- UASI budget updates
- Old/New business

Thanks! See you all tomorrow!

**Subject:** Whidden HVAC quote update details

Hi Eric,

Thanks again for chatting with Brenda and me on the phone yesterday about the Whidden HVAC project. Per our conversation, I've attached your May 9 quote. The updates should be as follows:

- Update the date to be current
- Remove section on page 1 entitled "Labor & Equipment to move from outside cabinet to new equipment rack" since that will roll into the PSnet contract now in place.
- Update section header on page 2 to read "New air conditioning unit equipment" since the labor portion will also roll into PSnet contract.
- Update Scope of work on page 2 to remove references to labor and work performed and any "install" language.
- Update bolded total at the bottom to be just one line that reads "Equipment Total: \$25,522.00."
- Update "Qualifications" section to remove any labor-related language, and only to keep language related to HVAC equipment procurement.

Thank you so much!

Hi Eric,

Upon a closer look - I noticed that you took out the itemized pricing by line. I hadn't mentioned anything about changing that in my first email because your original quote did already have the itemization and we do need to keep that piece.

Therefore, can you please resend this with the itemization put back in for each equipment line?

Thank you,  
Sarah

**Subject:** Whidden HVAC quote update details

Hi Eric,

Thanks again for chatting with Brenda and me on the phone yesterday about the Whidden HVAC project. Per our conversation, I've attached your May 9 quote. The updates should be as follows:

- Update the date to be current
- Remove section on page 1 entitled "Labor & Equipment to move from outside cabinet to new equipment rack" since that will roll into the PSnet contract now in place.
- Update section header on page 2 to read "New air conditioning unit equipment" since the labor portion will also roll into PSnet contract.
- Update Scope of work on page 2 to remove references to labor and work performed and any "install" language.
- Update bolded total at the bottom to be just one line that reads "Equipment Total: \$25,522.00."
- Update "Qualifications" section to remove any labor-related language, and only to keep language related to HVAC equipment procurement.

Thank you so much!  
Sarah

Hi Kelly,

See below for the email with the requested changes, and the May 9 quote we were referring to. Again, the most recent update is almost right -- just needs the itemized cost for those 4 bullet points.

Thanks again,  
Sarah

**Subject:** FATPOT invoice/milestone alignment

**Attachment(s):** "9918128 Revised -BOSTOEM-10-04-2018-2.pdf", "Lan-Tel -FATPOT FINAL QUOTE.pdf", "Projected Timeline.pdf", "Boston Phase IV Project Timeline.pdf"

Hi Eric,

Regarding the most recent invoice for the FATPOT project (attached), could you please clarify where it falls under the SOW Phases (noted in the attached "final quote" document), the Projected Timeline document (attached, same name) and/or the "Boston Phase IV" document (attached)?

It's an odd dollar amount that doesn't seem to coordinate with any of those documents.

Thanks,  
Sarah

**Subject:** UASI Meeting hold date: Wednesday, Nov 28

Hi UASI subcommittee members (CIS, Critical Infrastructure, and PSnet),

You and your colleagues have suggested having another "UASI meeting day" on Wednesday, November 28. At the most recent subcommittee meetings last week, it was proposed to put CIS at 10am, Critical Infrastructure at 11:30am, and PSnet at 1pm. However, I believe there's a lot of overlap between CIS and PSnet folks, and so to be kind to those who attend both but *don't* attend CIKR in the middle, I would like to suggest swapping CIS & CIKR:

**Wednesday, Nov 28:**

- **10am: Critical Infrastructure**
- **11:30am: CIS**
- **1pm: PSnet**

**Location TBD**

Please update your calendars with those dates/times. I should be sending out a Google calendar invite this week with more information.

Thanks!  
Sarah

Hello all,

This is to let you know that we have just cancelled the Somerville Fiber Run bid event (EV00006056). We unfortunately do not have sufficient information available to us to proceed with the bid at this time. We do plan to reissue a bid for a Somerville fiber project in the near future, however. Thanks for your interest in this bid and we hope that you'll consider the future one as well.

Scott & Eric,

Brenda and I would still like to have a conference call to go over the logistics of the FATPOT contract with LAN-TEL. This is a project management call regarding project phases/milestones, invoices and payments, etc. We do not need to involve the FATPOT team members at this point since the contract is between the City and LAN-TEL.

**Please let me know which of the following day(s)/time(s) will work for you for a call:**

- Tuesday, Nov 6, morning
- Tuesday, Nov 6, afternoon
- Wednesday, Nov 7, afternoon
- Thursday, Nov 8, morning
- Thursday, Nov 8, afternoon

Thank you,  
Sarah

**Subject:** Conf. call re: FATPOT project

Scott & Eric,

Brenda and I would still like to have a conference call to go over the logistics of the FATPOT contract with LAN-TEL. This is a project management call regarding project phases/milestones, invoices and payments, etc. We do not need to involve the FATPOT team members at this point since the contract is between the City and LAN-TEL.

**Please let me know which of the following day(s)/time(s) will work for you for a call:**

- Tuesday, Nov 6, morning
- Tuesday, Nov 6, afternoon
- Wednesday, Nov 7, afternoon
- Thursday, Nov 8, morning
- Thursday, Nov 8, afternoon

Thank you,

Sarah

**Subject:** PSnet: Setting up RADIUS account for Shannon LeColst  
**Attachment(s):** "smime.p7s"

Scott,

Given the role that Shannon LeColst is playing within MBHSR, it seems appropriate to give her a RADIUS account on PSnet. Initially, this will allow her to access the InterMapper systems, but it will also enable her to connect into the network to access other resources.

Please confirm, and I will set up the account for her. We'll also spend some time to bring her up to speed on using InterMapper, and this will in turn help her assess the current state of PSnet and associated resources. This may become relevant as we look into piloting various security-related services.

Thanks...  
...Chuck

Hi Eric,

Regarding the most recent invoice for the FATPOT project (attached), could you please clarify where it falls

under the SOW Phases (noted in the attached "final quote" document), the Projected Timeline document (attached, same name) and/or the "Boston Phase IV" document (attached)?

It's an odd dollar amount that doesn't seem to coordinate with any of those documents.

Thanks,  
Sarah

**Subject:** PSnet site clean up/organization

Hi Eric,

At the PSnet meeting a few weeks ago, Vinny reported that LAN-TEL has been going through the PSnet data closets, antenna sites, etc., for clean up, ensuring battery packs, firmware updates, general reorganizing, etc. Have you been documenting these visits with photos? If so, can you please upload the photos to a folder on the SharePoint site, and if not, can you please instruct your team to begin taking photos of the sites after you've worked on them so that we can have a digital catalog?

Thanks,  
Sarah

Hi Eric,

At the PSnet meeting a few weeks ago, Vinny reported that LAN-TEL has been going through the PSnet data closets, antenna sites, etc., for clean up, ensuring battery packs, firmware updates, general reorganizing, etc. Have you been documenting these visits with photos? If so, can you please upload the photos to a folder on the SharePoint site, and if not, can you please instruct your team to begin taking photos of the sites after you've worked on them so that we can have a digital catalog?

Thanks,  
Sarah

**Subject:** PSnet: Cambridge Courthouse switch failure

**Attachment(s):** "smime.p7s"

Dave, et al.,

We had a Cisco 3550-12T switch fail at the Courthouse site (40 Thorndike St). It needs to be replaced, though we may be able to merely re-patch any critical connections from the failed switch to its redundant mate. Either way, someone from LAN-TEL (probably Greg Washburn) will need to go on site. Can you help contact the right players at DCAS to make arrangements for someone to get into this site?

I'm trying to conduct an assessment of the situation, and determine if the switch will actually need to be replaced immediately, or if we can hold off and merely re-patch some connections. If we do need to replace this switch, then someone will need to get into the PSnet storage/staging room at Cambridge Fire HQ to retrieve a replacement switch.

For the record, the most significant problem we have with this switch being down is that the microwave link from Courthouse to Schroeder Plaza is currently unusable since it connects into this failed switch. This does mean that Cambridge, MIT, and Harvard currently have only one path to the Zone 2 Core at this time. However, I believe I should be able to configure an alternative path so that full path redundancy can be restored. Also, for the record, Brookline is unaffected by this problem, and I will probably arrange to have Cambridge use the Brookline to NEBH path to restore full path redundancy to the Zone 2 Core.

I'll provide further updates as I dig into the recovery options further.

Feel free to call my mobile if you want to discuss any of this...

...Chuck

**Subject:** Re: Camb C H Update

**Attachment(s):** "smime.p7s"

Eric,

Greg just finished moving the patch cables over to the working switch at the Courthouse site around 08:10, and I've confirmed that traffic is now flowing as it should. Everything is now in good shape, with the only caveat that the Courthouse site is running on a single switch. However, we are in the process of decommissioning this site, so it may not be worth installing a replacement switch, though I will get one prepped, just in case. I want to put our efforts into getting the new Avalon North Point site at 1 Leighton Ave. up, since that will allow us to finish decommissioning Courthouse.

I'll just note that this was a most unusual failure. We were lucky to have found this problem as quickly as we did, since there were no obvious problems in the network aside from some routing issues, and this failed switch appeared to be working fine, and was passing traffic until I poked hard at it. When I tried a reload on this bad switch, it failed its power on self tests (POST), and did not come back up. Fortunately, having this switch actually fail is what allowed routing to work correctly for the rest of the network.

At this point, I've been monitoring traffic for over a half hour, and everything looks stable and traffic levels are what they should be.

**Subject:** Re: Camb C H Update

**Attachment(s):** "smime.p7s"

Folks,

There seems to have been some confusion about the severity of the problems early evening, yesterday. While PSnet was experiencing route instability that was affecting traffic traversing the backbone, most services were unaffected. In particular, I believe that most CIMS camera traffic was unaffected, and I also believe that all MCC7500 console systems should have stayed connected to the Zone 2 Core. However, users of the BRIC CrimeView or FATPOT services may have experienced spotty performance. If anyone is aware of specific problems, please let me know.

To clarify the timeframes for these problems, it looks like the instabilities in backbone routing began around 16:08, and should have been resolved by around 17:40. However, as of 17:40 last evening, we had lost the path from Cambridge [former] Courthouse to Schroeder Plaza, though other paths carried most of this traffic. This morning, all paths through the Courthouse site were restored at around 08:10.

I want to put our efforts into getting the new Avalon North Point site at 1 Leighton Ave. up, since that will allow us to finish decommissioning Courthouse.

I'll just note that this was a most unusual failure. We were lucky to have found this problem as quickly as we did, since there were no obvious problems in the network aside from some routing issues, and this failed switch appeared to be working fine, and was passing traffic until I poked hard at it. When I tried a reload on this bad switch, it failed its power on self tests (POST), and did not come back up. Fortunately, having this switch actually fail is what allowed routing to work correctly for the rest of the network.

At this point, I've been monitoring traffic for over a half hour, and everything looks stable and traffic levels are what they should be.

...Chuck

Subject: PSnet: Cambridge Courthouse switch failure

Dave, et al.,

We had a Cisco 3550-12T switch fail at the Courthouse site (40 Thorndike St). It needs to be replaced, though we may be able to merely re-patch any critical connections from the failed switch to its redundant mate. Either way, someone from LAN-TEL (probably Greg Washburn) will need to go on site. Can you help contact the right players at DCAS to make arrangements for someone to get into this site?

I'm trying to conduct an assessment of the situation, and determine if the switch will actually need to be replaced immediately, or if we can hold off and merely re-patch some connections. If we do need to replace this switch, then someone will need to get into the PSnet storage/staging room at Cambridge Fire HQ to retrieve a replacement switch.

For the record, the most significant problem we have with this switch being down is that the microwave link from Courthouse to Schroeder Plaza is currently unusable since it connects into this failed switch. This does mean that Cambridge, MIT, and Harvard currently have only one path to the Zone 2 Core at this time. However, I believe I should be able to configure an alternative path so that full path redundancy can be restored. Also, for the record, Brookline is unaffected by this problem, and I will probably arrange to have Cambridge use the Brookline to NEBH path to restore full path redundancy to the Zone 2 Core.

I'll provide further updates as I dig into the recovery options further.

Feel free to call my mobile if you want to discuss any of this...

...Chuck

**Attachment(s):** "image002.jpg", "image002.jpg"

Kate,

It would seem that a lot of the line items in the excel spreadsheet repeat themselves. Is this an accounting error? I don't mean if more than one person performed a task. I mean a task showing up on one date, and then again a few days later - the exact same lines. For example, lines 7 & 8 (dated Oct 1) are for an issue regarding an axis camera on Warren & Milk St in Boston. Later, lines 23 and 24 of the spreadsheet appear to be duplicates of lines 7 & 8, with the other variation being the "date" column now reading Oct 3 and one of the employee names changing. For another example, Sean Pappas recorded the exact same description for work in Revere for both Oct 18 and Oct 20, as did Scott Whitcomb. Is that a duplication? Installing radios and mounts at 1330.bfd shows up on Oct 2 and 6 for Mark Savage. Eric Nisbet recorded "Time Synch Issues" on 4 different days (what does this mean anyway?).

Thanks for the clarification,  
Sarah

Thanks,  
Sarah

**Subject:** RE: CIMS Billing for October 2018 -- LAN-TEL's response to your request for clarification  
**Attachment(s):** "CIMS October FINAL .xls"

Hi Sarah,

Regarding your questions below, we offer the following clarifications:

**Email Issue 1: CIMS - BOSTON Warren and Milk (note- it should say MLK)**

*For example, lines 7 & 8 (dated Oct 1) are for an issue regarding an axis camera on Warren & Milk St in Boston. Later, lines 23 and 24 of the spreadsheet appear to be duplicates of lines 7 & 8, with the other variation being the "date" column now reading Oct 3 and one of the employee names changing.*

**Description of Work Performed:**

*Axis camera randomly going to home position. replaced camera with Bosch dome fixed. Camera did not land on system. Troubleshoot. Modem updated. Installed a temp axis fixed to get thru night. Next night installed a fixed dvtel fixed. Camera no good. Installed another dvtel fixed. All set*

**LAN-TEL Response:**

As noted in our invoice description this repair was performed over the course of two days which is why you see the same description on multiple days. This problem was worked on by our technicians on both October 1 and October 3.

**Email Issue 2: For another example, Sean Pappas recorded the exact same description for work in Revere for both Oct 18 and Oct 20, as did Scott Whitcomb. Is that a duplication?**

**Description of Work Performed:**

CIMS - REVERE

Got the radio link installed at Oak Island and North Shore RD site connected from the corner to the park

**LAN-TEL Response:**

The entries were not a duplication because the repair took place over multiple days and on regular and OT. While some work was performed on the 18<sup>th</sup> the balance was performed on the 20<sup>th</sup> which would require two separate entries on two separate days for the same work ticket. To further add some of the work had to be undertaken on off hours in the AM due to extreme traffic conditions. We did not want to cause a disturbance for normal traffic flow in this corridor, incur further cost for traffic details, nor have our technicians in harm's way. It was agreed upon with RPD Detective Ken Bruker to perform this work in this fashion simply for practicality and safety.

**Email Issue 3: Installing radios and mounts at 1330.bfd shows up on Oct 2 and 6 for Mark Savage**

**Description of Work Performed:**

CIMS - BOSTON Ipswich Street  
install radios and mounts @ 1330,bfd

**LAN-TEL Response:**

Original cameras were mounted on Boston Public School / Boston Arts Academy on Ipswich St in April of 2014 due to Boston Marathon Bombing and perimeter protection of Fenway Park since the Red Sox play on same day as the Marathon. In the late summer of 2018 the Cameras had to be removed due to a building demolition.

Subsequently due to Boston Red Sox participation in the 2018 World Series. It was relayed by BPD personnel to LAN-TEL that the cameras were to be reinstalled on key points on Ipswich Street and Boylston St. which would serve the dual purpose of further advancing the effort to integrate existing BPD cameras onto new BONET hubs. We determined that BONET Fiber existed at BFD Fire Alarm located in the Fenway. To make this key link we had to reinstall equipment at 1330 Boylston St. This would act as a permanent hub for the above mentioned sites and back haul camera transmission to the roof of BFD and thus connect to BONET.

This work was performed by different technicians over multiple days which is what it took to complete the reinstallation of the existing cameras over a broad area in such a short amount of time.

**Email Issues 4: Eric Nisbet recorded "Time Synch Issues" on 4 different days (what does this mean anyway?).**

**LAN-TEL Response:**

Throughout the month of October there were issues with the synchronization of the servers used for CIMS which caused time stamps to be incorrect due to an issue with Windows updates. This issue is known industry issue. The synchronization of the servers for the video system is done through a Network Time Protocol Server commonly referred to as NTP. Each server runs Windows as the operating system. Windows looks every day to the NTP server and sets the time on the server according to the NTP server time. We had

previously had the servers synch to the default gateway at 10.0.66.1 but this started to experience problems with errors and we changed it in the spring to synch with the Video Authentication Server on the Boston PD network. We set up a NTP server on that machine and the servers check that daily. It had been working much better than the previous system. LAN-TEL worked with Lou Madeira of Boston Police Department on this issue over the course of several days.

**Additional Notes that were inadvertently omitted from the invoice are as follows – I have attached a revised invoice containing this information:**

10/10 Eric Nisbet worked 4 hours of regular time related to updating Pivot 3 servers.

10/13 Mark Savage and Gregory Washburn worked 2 hours OT each to repair the antenna on the roof of the Villa Victoria Public Housing complex. They antenna as misaligned and missing a cover. The antenna was recabled and realigned at the housing complex and then resynched with the antenna at the other end.

I hope this above clarifications help. If it would be helpful/easier for you for us to have a call with you to discuss this further please let us know.

Kate and Eric

**Attachment(s):** "10.17.18 PSNEC mtg minutes DRAFT.doc"

Hello PSNEC folks,

Just a reminder that *tomorrow 1pm* we have a PSnet meeting. Thanks to Winthrop for securing for us the classroom at the Deer Island MWRA facility (and for providing lunch!). If you need an address for GPS directions, use 165 Tafts Ave, Winthrop. **Please bring ID in order to enter the facility!**

Please note that I have attached a set of meeting minutes for your review from our October 17 meeting. Also, the agenda for tomorrow is as follows:

- Welcome/introductions/meeting minutes
- Vendor report: network project updates
- Old/New Business

Thanks! See you tomorrow,  
Sarah

**Subject:** Re: CIMS Billing for October 2018

Kate,

It would seem that a lot of the line items in the excel spreadsheet repeat themselves. Is this an accounting error? I don't mean if more than one person performed a task. I mean a task showing up on one date, and then again a few days later - the exact same lines. For example, lines 7 & 8 (dated Oct 1) are for an issue regarding an axis camera on Warren & Milk St in Boston. Later, lines 23 and 24 of the spreadsheet appear to be duplicates of lines 7 & 8, with the other variation being the "date" column now reading Oct 3 and one of the employee names changing. For another example, Sean Pappas recorded the exact same description for work in Revere for both Oct 18 and Oct 20, as did Scott Whitcomb. Is that a duplication? Installing radios and mounts at 1330.bfd shows up on Oct 2 and 6 for Mark Savage. Eric Nisbet recorded "Time Synch Issues" on 4 different days (what does this mean anyway?).

Thanks for the clarification,

Sarah

Thanks,  
Sarah

Thanks for providing the additional information. It's helpful; because there's no indication on the line items of how many days it is. (e.g. "... day 1 of 3" or something). If it's possible to add those notations to future invoices, that would clear up the confusion.

On Mon, Nov 26, 2018 at 11:33 AM Kate Waldron <[kwaldron@lan-tel.com](mailto:kwaldron@lan-tel.com)> wrote:

Hi Sarah,

Regarding your questions below, we offer the following clarifications:

**Email Issue 1: CIMS - BOSTON Warren and Milk (note- it should say MLK)**

*For example, lines 7 & 8 (dated Oct 1) are for an issue regarding an axis camera on Warren & Milk St in Boston. Later, lines 23 and 24 of the spreadsheet appear to be duplicates of lines 7 & 8, with the other variation being the "date" column now reading Oct 3 and one of the employee names changing.*

**Description of Work Performed:**

*Axis camera randomly going to home position. replaced camera with Bosch dome fixed. Camera did not land on system. Troubleshoot. Modem updated. Installed a temp axis fixed to get thru night. Next night installed a fixed dvtel fixed. Camera no good. Installed another dvtel fixed . All set*

**LAN-TEL Response:**

As noted in our invoice description this repair was performed over the course of two days which is why you see the same description on multiple days. This problem was worked on by our technicians on both October 1 and October 3.

**Email Issue 2: For another example, Sean Pappas recorded the exact same description for work in Revere for both Oct 18 and Oct 20, as did Scott Whitcomb. Is that a duplication?**

**Description of Work Performed:**

CIMS - REVERE

Got the radio link installed at Oak Island and North Shore RD site connected from the corner to the park

**LAN-TEL Response:**

The entries were not a duplication because the repair took place over multiple days and on regular and OT. While some work was performed on the 18<sup>th</sup> the balance was performed on the 20<sup>th</sup> which would require two separate entries on two separate days for the same work ticket. To further add some of the work had to be undertaken on off hours in the AM due to extreme traffic conditions. We did not want to cause a disturbance for normal traffic flow in this corridor, incur further cost for traffic details , nor have our technicians in harm' s way . It was agreed upon with RPD Detective Ken Bruker to perform this work in this fashion simply for practicality and safety.

**Email Issue 3: Installing radios and mounts at 1330.bfd shows up on Oct 2 and 6 for Mark Savage**

**Description of Work Performed:**

CIMS - BOSTON Ipswich Street  
install radios and mounts @ 1330,bfd

**LAN-TEL Response:**

Original cameras were mounted on Boston Public School / Boston Arts Academy on Ipswich St in April of 2014 due to Boston Marathon Bombing and perimeter protection of Fenway Park since the Red Sox play on same day as the Marathon. In the late summer of 2018 the Cameras had to be removed due to a building demolition.

Subsequently due to Boston Red Sox participation in the 2018 World Series. It was relayed by BPD personnel to LAN-TEL that the cameras were to be reinstalled on key points on Ipswich Street and Boylston St. which would serve the dual purpose of further advancing the effort to integrate existing BPD cameras onto new BONET hubs. We determined that BONET Fiber existed at BFD Fire Alarm located in the Fenway. To make this key link we had to reinstall equipment at 1330 Boylston St. This would act as a permanent hub for the above mentioned sites and back haul camera transmission to the roof of BFD and thus connect to BONET.

This work was performed by different technicians over multiple days which is what it took to complete the reinstallation of the existing cameras over a broad area in such a short amount of time.

**Email Issues 4: Eric Nisbet recorded "Time Synch Issues" on 4 different days (what does this mean anyway?).**

**LAN-TEL Response:**

Throughout the month of October there were issues with the synchronization of the servers used for CIMS which caused time stamps to be incorrect due to an issue with Windows updates. This issue is known industry issue. The synchronization of the servers for the video system is done through a Network Time Protocol Server commonly referred to as NTP. Each server runs Windows as the operating system. Windows looks every day to the NTP server and sets the time on the server according to the NTP server time. We had previously had the servers synch to the default gateway at 10.0.66.1 but this started to experience problems with errors and we changed it in the spring to synch with the Video Authentication Server on the Boston PD network. We set up a NTP server on that machine and the servers check that daily. It had been working much better than the previous system. LAN-TEL worked with Lou Madeira of Boston Police Department on this issue over the course of several days.

**Additional Notes that were inadvertently omitted from the invoice are as follows – I have attached a revised invoice containing this information:**

10/10 Eric Nisbet worked 4 hours of regular time related to updating Pivot 3 servers.

10/13 Mark Savage and Gregory Washburn worked 2 hours OT each to repair the antenna on the roof of the Villa Victoria Public Housing complex. They antenna as misaligned and missing a cover. The antenna was recabled and realigned at the housing complex and then resynched with the antenna at the other end.

I hope this above clarifications help. If it would be helpful/easier for you for us to have a call with you to discuss this further please let us know.

Kate and Eric

**Attachment(s):** "PO 697929 Whidden HVAC.pdf"

Hello Kelly & Eric,

Just following up on the Whidden HVAC project. I have a copy of the PO attached to give you (LAN-TEL also should be automatically emailed a copy). Thank you for your patience and partnership on this project. I've also copied Sgt. Jeff Gilmore of Everett PD who can assist in coordinating implementation dates/details/access as needed.

Once the work is completed, please email me a copy of the invoice so that I can submit it for payment.

Thank you,  
Sarah

**Subject:** Fwd: Whidden HVAC quote update details

Hi Kelly,

See below for the email with the requested changes, and the May 9 quote we were referring to. Again, the most recent update is almost right -- just needs the itemized cost for those 4 bullet points.

Thanks again,

Sarah

----- Forwarded message -----

**Date:** Tue, Sep 25, 2018 at 10:29 AM  
**Subject:** Whidden HVAC quote update details  
**To:** Eric Johnson <ejohnson@lan-tel.com>  
**Cc:** Brenda Jones <brenda.jones@boston.gov>

Hi Eric,

Thanks again for chatting with Brenda and me on the phone yesterday about the Whidden HVAC project. Per our conversation, I've attached your May 9 quote. The updates should be as follows:

- Update the date to be current
- Remove section on page 1 entitled "Labor & Equipment to move from outside cabinet to new equipment rack" since that will roll into the PSnet contract now in place.

- Update section header on page 2 to read "New air conditioning unit equipment" since the labor portion will also roll into PSnet contract.
- Update Scope of work on page 2 to remove references to labor and work performed and any "install" language.
- Update bolded total at the bottom to be just one line that reads "Equipment Total: \$25,522.00."
- Update "Qualifications" section to remove any labor-related language, and only to keep language related to HVAC equipment procurement.

Thank you so much!

Sarah

**Subject:** PSnet: All four HPE Blade servers now running latest vSphere ESXi 6.7 Update 1

**Attachment(s):** "smime.p7s"

Folks,

We have now completed upgrading all four PSnet HPE Blade Servers (two at Schroeder Plaza in Boston, and two at Healy Facility in Cambridge). These are now at vSphere ESXi 6.7.0 Update 1 (Build 10764712) for the hypervisor OS. All patches and vendor-specific updates have also been applied to each of these servers.

Due to HPE's attempt to force premature obsolescence of these BL460c Gen 8 Blade servers, this whole process was a lot more involved than it should have been, and required multiple manual steps, including a total of four reboots per server. To add insult to injury, HPE also screwed up their scripts for installing the Emulex (a.k.a., Broadcom) driver package used to support iSCSI over Ethernet, which is how we access the HPE 3PAR storage systems. As a result, I had to manually remove, and re-install the Emulex iSCSI driver package (VIB in VMware terminology). It also require a lot of research and testing to confirm the procedures for resolving this problem. All of this work had to be done via the command line interfaces, and could not be done using the vCenter system management utility service.

As an aside, these HPE BL460c Gen 8 Blade servers use a pair of Intel Xeon E5-2640v2 8-core processors, which are fully supported by some of HPE's competitors for the latest version of the vSphere ESXi software, which we are now running. Furthermore, in the Interisle lab, we're using an older generation Dell server (roughly equivalent to HPE's Gen 7) based on Intel Xeon E5645 6-core processors. We have also brought this Dell server (R710) up to the latest version of vSphere ESXi 6.7 Update 1. While Dell does not provide custom builds for the newer ESXi versions for this older line of servers, it was no problem using their custom builds for more recent servers, and the entire upgrade process was handled using the automated vCenter Update Manager with no issues. The old HP was better than the the new HPE, which seems to have lost its way.

I should also point out that we have moved to the latest version of VMware's vCenter system management utility, which has now been deployed as a VM appliance (referred to as VCSA for vCenter Server Appliance). This is also at version 6.7, and it is current with all patches applied, including a critical security update that came out last week.

The reason that all of this matters and was worth the hassle, is that we are now running on a more stable vSphere system with a set of enhancements that will make it easier for us to make use of the HPE 3PAR storage systems. However, the most important benefits of being on the latest vSphere system relate to operational support. Instead of the hodge-podge of management interfaces and system utilities that we had to work within in the prior versions, VMware has completed the integration of all of these disjoint systems into a much cleaner vCenter system that provides a single user interface via a standard HTML5 browser (no more Adobe Flash required). The individual Blade Servers can also be managed via a clean HTML5 browser interface. This greatly simplifies support, and should make it much easier for other people to work with these systems. Even if we stay at this version, it should fully support PSnet's needs for the next 2-3 years, and we will be able to keep it updated with patches and related updates.

Plus, the new vSphere combined with recent firmware improvements for the HPE 3PAR storage systems means that we finally have a well-integrated system for allocating and managing storage for VMs using the VMware VVol (virtual volume) technology introduced recently that is also supported by the 3PAR systems. We plan to move all the current VMs over to using VVols instead of allocating storage within DataStores that are awkward to manage in a shared, virtual infrastructure. This should reduce our operational burden considerably going forward.

Bottom line, we're in a much better place with the PSnet virtual infrastructure as we enter 2019.

**Subject:** Re: Updated invitation with note: PSnet Meeting @ Thu Jan 17, 2019 12:30pm - 1:30pm (EST) (jeffrey.gilmore@cityofeverett.org)

Just a heads up Sgt Gina Collier will be assuming my UASI related responsibilities with the exception of Tactical and Training issues. Gina is Cced on this chain, and she will be attending next weeks meetings with me, to make introductions and get an understanding of how things work. It's been a pleasure working with and getting to know all of you. Please feel free to reach out to me with any questions as we make this transition.

Have a good weekend,  
Jeff

**Subject:** PSnet Meeting tomorrow (and minutes from Nov for your review)

**Attachment(s):** "11.28.19 PSNEC mtg minutes DRAFT.doc"

Hello PSnet Exec,

Just a reminder that we are meeting **tomorrow, Thursday, Jan 17 at 12:30pm at Revere PD** I've attached the meeting minutes from November for your review prior to the vote to approve them tomorrow.

Also - for those of you who may be staying for multiple "UASI Day" meetings, please note that lunch will not be provided. There are multiple locations in the area where you can grab something, including:

- La Esquina del Sabor (by Beachmont T -- 1 Unity Ave, Revere)
- Toretta's Italian Bakery - has subs, salads, etc. (by Beachmont T -- 652 Winthrop Ave, Revere)
- Airport Diner (10 Furlong Dr, Revere)
- Wendy's (42 Furlong Dr, Revere)
- Dunkin' & Starbucks for coffee/sandwiches (DD is by Beachmont T, SBUX is in Target on Furlong Dr)
- Stop & Shop deli (Furlong Dr next to Target)

There are also others if you Google the area. :)

Thanks, and see you tomorrow!

Sarah

Sarah,

Below list was sent to Eric Johnson for 10 new cameras:

Thanks,

Joe

---

Eric,

QPD would like cameras at the following locations:

-

- 1- 1 Merrymount Parkway to monitor the EOC (**we have fiber inside EOC which should be used for this camera**)
- 2- Burgin Parkway & Centre St
- 3- Washington St & Southern Artery
- 4- Beale St & Newport Ave (**fiber located at QFD nearby**)
- 5- Quincy Ave & Southern Artery
- 6- Hancock St & Dimmock St intersection
- 7- Beale St & Adams St intersection
- 8- Palmer St & Sea St (**Fiber on pole**)
- 9- Quincy Shore Dr & E Squantum St
- 10- QPD fuel pumps

**Subject:** Important: Next two "UASI Day" meetings - including FFY19 Abstract Prioritization

Hello UASI members of CIS, Critical Infrastructure (CIKR), and PSnet --

Thanks for coming to Revere yesterday to the "UASI Day" of subcommittee meetings! It was great to see you and talk through the projects. At the meeting yesterday, we penciled in a few days for the next two "UASI Day"s. I will send out Google calendar invitations soon, once I have a location for either date. (If you'd like to host, let me know). For now -- **if you are unable to attend both of these, or particularly the April FFY19 Prioritization meeting, let me know as soon as possible.**

#### **Next UASI Day: Tuesday, February 26!**

- 10 - 11am Critical Infrastructure (CIKR)
- 11:30am - 12:30pm Communications Interoperability (CIS)
- 1pm - 2pm PSnet

*I know that not all of you attend all three meetings, but I'm including information for all three for those to whom it applies*

**FFY19 Prioritization Meeting UASI Day: Tuesday, April 23!** <-- This meeting is our annual new grant money prioritization meeting. For CIS & CIKR: please make every effort to arrange your schedule such that you can attend. At this meeting we will review/discuss/defend/prioritize all abstracts for the new upcoming grant!

- 10am - 12pm Critical Infrastructure (CIKR)
- 12:30pm - 2:30pm CIS
- 3pm - 4pm PSnet.

Thank you!

Sarah

Subject: 40 Thorndike Street

Deputy Chief Ed Morrissey in Division 1 reports a major sprinkler piping break in the courthouse building near the transformer.

He has requested Water Department and Eversource.

My understanding is all of our equipment has been removed from the building. As far as I'm concerned it's an empty concrete and steel building, with no life hazard and very low fire probability.

There should be no need for fire details, similar to last year.

Thanks,

**Subject:** PSnet: Recommendation to disable Internet access to SharePoint system

**Attachment(s):** "smime.p7s"

Sarah, Brenda, Scott,

The PSnet firewalls allow the SharePoint service to be accessed from authenticated users coming from the Internet. However, we see no evidence that this service is being used, yet it is a magnet for "door knocking" attacks, some of which have been quite intense lately. While it does not appear anything is getting through, we do not have the ability to investigate what is going on inside the SharePoint system itself.

We recommend disabling Internet access to this system for the time being. This can be re-enabled at any time, should there be users who want to use this service. This recommendation is based on the principle of minimizing exposures where they serve no operational purpose.

Please let us know if there are any reasons to keep Internet access available at this time.

Thank you...

...Chuck

**Subject:** Re: PSnet: Recommendation to disable Internet access to SharePoint system

Chuck,

Thank you for this update. On behalf of OEM, I agree that there is no reason to keep SharePoint enabled since there is no activity nor benefit to the stakeholders. I do understand Scott Wilder as the PSnet chair should provide the final call on this however he is currently on vacation.

Best,

**Brenda Jones**

**Subject:** Cambridge Courthouse

The courthouse has been running on generator . They are probably going to shut off at some point. If this happens cameras associated with 222 Berkley will be affected .

This could affect an event next week since Boylston St connects to this hub .

Jim and Greg will be working on a permanent or temp site tomorrow , so the cameras will stay up if they decide to shut down.

Will keep you posted .

Eric

Respectfully,

Eric Johnson

Thanks, Eric. I'm copying Dave Mahoney & Chief Reardon - I didn't see him on your list but perhaps they've already been briefed. Just want to keep them in the loop because I know they're working on a project right now involving a long-term relocation of that PSnet equipment up there in the Courthouse. This would affect their plans I would think.

On 1/31/19 4:36 PM, Chuck Wade wrote:

Folks,

At this point, the only two connections out of the Cambridge Courthouse site are still live are the fiber from Healy, and the DragonWave microwave link to Schroeder Plaza. However, routing has been set high enough that there is barely any traffic going over the DragonWave link to Schroeder.

So far, everything is looking good. All Motorola console systems have maintained their primary and secondary paths to the Zone 2 Core at Schroeder Plaza, so traffic has been re-routed away from the Courthouse connection. The Motorola CEN and other P25 traffic, as well as the IPmux-24 traffic between Schroeder and Cambridge Fire is flowing normally.

Camera traffic also seems to be unaffected. Here the big concern has been with Somerville cameras that are mostly backhauled through Burton Faulkner (25 Highland). However, I understand that Somerville's video servers are seeing their cameras.

I plan to shut down the DragonWave microwave link between Courthouse and Schroeder Plaza by 17:00. If anyone does notice any problems, please let me know immediately.

After 17:00, I believe that the Courthouse site can be safely shut down (for good).

On 1/31/19 2:38 PM, Chuck Wade wrote:

Folks,

LAN-TEL was able to establish another connection to the 222 Berkley Street site in Boston from one of the other Boston sites. We were not sure this would work, given the density of buildings in the area, but we lucked out (that, and the LAN-TEL team is good!). This is not a long-term solution, but it should be adequate for the short term, and if the Pats win the Super Bowl, we'll be able to support camera coverage next week for the parade. (I hope we haven't jinxed them.)

With this replacement link in place, we can now handle a shutdown of the former Courthouse site. I would like to propose a graceful shutdown this afternoon, rather than just turning off the standby generator. I recommend the following steps:

1. Disable the connection to the microwave radio that shoots to 222 Berkley. This will confirm that we haven't missed something over in Boston, since LAN-TEL is having to re-address the CIMS equipment.
2. Disable the BridgeWave connection to the Healy Facility. This microwave link is misaligned, so it is not really very useful, and the primary path from Cambridge to the Courthouse site is via City fiber. In other words, this is not going to have any impact.
3. Increase routing metrics for the DragonWave microwave connection to Burton Faulkner in Somerville to force traffic to go via the link to Whidden Hospital. There is about 11 Mbps of continuous traffic currently going from Burton Faulkner to the Courthouse. Aside: the Whidden connection will be the only link into Burton Faulkner after the Courthouse is shut down.
4. Increase routing metrics for the DragonWave microwave connection to Schroeder Plaza in order to force all traffic onto alternative paths. This is the most important link out of the Courthouse site today, since it is carrying about 60 Mbps of continuous traffic comprising camera feeds and secondary connections for P25 radio systems to the Zone 2 Core.

Obviously, we are going to monitor the situation carefully, and make sure that traffic does get rerouted as expected. Once we have confirmed that the alternative routes are handling the increased traffic loads, we will then shut down the two DragonWave links at the Courthouse site, and if there are no problems, we can then give the all clear to turn off the generator.

I will start with the first two steps above within the next 15 minutes (by 14:45), and then proceed to step 3 by 15:00. We will then monitor status for about an hour. Assuming no problems, we will then initiate step 4 around 16:00, and monitor for at least an hour.

Please let me know ASAP if you have any concerns, or suggestions for a different approach. We are living on borrowed time with the Courthouse site, so I think it is prudent to initiate a graceful shutdown expeditiously.

**Subject:** Whidden HVAC quote update details  
**To:** Eric Johnson <ejohnson@lan-tel.com>  
**Cc:** Brenda Jones <brenda.jones@boston.gov>

Hi Eric,

Thanks again for chatting with Brenda and me on the phone yesterday about the Whidden HVAC project. Per our conversation, I've attached your May 9 quote. The updates should be as follows:

- Update the date to be current
- Remove section on page 1 entitled "Labor & Equipment to move from outside cabinet to new equipment rack" since that will roll into the PSnet contract now in place.
- Update section header on page 2 to read "New air conditioning unit equipment" since the labor portion will also roll into PSnet contract.
- Update Scope of work on page 2 to remove references to labor and work performed and any "install" language.
- Update bolded total at the bottom to be just one line that reads "Equipment Total: \$25,522.00."
- Update "Qualifications" section to remove any labor-related language, and only to keep language related to HVAC equipment procurement.

Thank you so much!

Sarah

Hello Kelly & Eric,

Just following up on the Whidden HVAC project. I have a copy of the PO attached to give you (LAN-TEL also should be automatically emailed a copy). Thank you for your patience and partnership on this project. I've also copied Sgt. Jeff Gilmore of Everett PD who can assist in coordinating implementation dates/details/access

as needed.

Once the work is completed, please email me a copy of the invoice so that I can submit it for payment.

Thank you,  
Sarah

Hi Kelly,

See below for the email with the requested changes, and the May 9 quote we were referring to. Again, the most recent update is almost right -- just needs the itemized cost for those 4 bullet points.

Thanks again,  
Sarah

Hi Eric,

Thanks again for chatting with Brenda and me on the phone yesterday about the Whidden HVAC project. Per our conversation, I've attached your May 9 quote. The updates should be as follows:

- Update the date to be current
- Remove section on page 1 entitled "Labor & Equipment to move from outside cabinet to new equipment rack" since that will roll into the PSnet contract now in place.
- Update section header on page 2 to read "New air conditioning unit equipment" since the labor portion will also roll into PSnet contract.
- Update Scope of work on page 2 to remove references to labor and work performed and any "install" language.
- Update bolded total at the bottom to be just one line that reads "Equipment Total: \$25,522.00."
- Update "Qualifications" section to remove any labor-related language, and only to keep language related to HVAC equipment procurement.

Thank you so much!

Sarah

**Subject:** Fwd: Whidden HVAC quote update details

Hi Kelly,

See below for the email with the requested changes, and the May 9 quote we were referring to. Again, the most recent update is almost right -- just needs the itemized cost for those 4 bullet points.

Thanks again,

Sarah

**Subject:** Whidden HVAC quote update details  
**To:** Eric Johnson <[ejohnson@lan-tel.com](mailto:ejohnson@lan-tel.com)>  
**Cc:** Brenda Jones <[brenda.jones@boston.gov](mailto:brenda.jones@boston.gov)>

Hi Eric,

Thanks again for chatting with Brenda and me on the phone yesterday about the Whidden HVAC project. Per our conversation, I've attached your May 9 quote. The updates should be as follows:

- Update the date to be current
- Remove section on page 1 entitled "Labor & Equipment to move from outside cabinet to new equipment rack" since that will roll into the PSnet contract now in place.
- Update section header on page 2 to read "New air conditioning unit equipment" since the labor portion will also roll into PSnet contract.
- Update Scope of work on page 2 to remove references to labor and work performed and any "install" language.
- Update bolded total at the bottom to be just one line that reads "Equipment Total: \$25,522.00."
- Update "Qualifications" section to remove any labor-related language, and only to keep language related to HVAC equipment procurement.

Thank you so much!

Sarah

**Subject:** Notification of COB Bid Event # EV00006436 (MBHSR Whidden Hospital Aerial Fiber Run)

Hello,

Just reaching out because I'm overseeing the requisition and PO process for a new project: the MBHSR Whidden Hospital Aerial Fiber Run.

We've started the written quote contract (WQC) process via posting a bid event. The WQC bid event **will open tomorrow, Wednesday, February 6 at 9am and will close Monday, February 18 at 5pm** with a site walk-through scheduled for this coming Monday, February 11. You should have already received an email with further details to that effect from our online system, but in case not, here's a few directions for your next steps if you should be interested in learning more and responding:

- During the window when the event is open, go to <https://procurement.cityofboston.gov/psp/prdsp/SUPPLIER/ERP/h?tab=DEFAULT> and you'll find the event (ID EV00006436).
- Make sure that your company is registered as a sourcing bidder (link on that website).
- Log in, find the event, and apply.

If you have any questions, let me know.

Thanks so much,

Sarah

**Subject:** PSnet: Status update on switch replacement at 300 Bent St  
**Attachment(s):** "smime.p7s"

Folks,

This is a followup on the issue we ran into yesterday when the PSnet Cisco 3550-12G switch in the Northern Crossroads (NoX) suite at 300 Bent Street failed. This has now been replaced with a pair of Cisco 3750G-12S switches that provide a redundant implementation. Everything is back up as of 11:32 this morning, and traffic is again flowing via this path, including the MetroFire connection to Massport's public safety network.

The rest of this memo just provides some background and reviews the approaches taken to resolve the problem.

The original 3550-12G switch failed in such a manner that it did cause some significant routing headaches within the PSnet Backbone. However, the actual impact on services operating over PSnet was not terribly serious, and most applications and their users were unaffected. Probably the most serious impact was on PSnet network management, when our systems at the Cambridge Healy Facility lost the ability to communicate with many devices throughout the network. This, in turn, caused a lot of alerts to go out to some of the people who receive notifications implying serious outages, when in reality, most things were working just fine. In other words, a lot of false alarms were sent.

For the record, the routing problems started at 05:18 yesterday morning, and by 06:52, I had figured out where the problem was (though not what the cause was, yet), and had stopped most of the problems by shutting down the connection to the PSnet switch at 300 Bent Street. While most traffic that had been flowing through 300 Bent Street was re-routed via alternative paths in PSnet, the two VLANs that connect MetroFire to Massport have a fixed topology at this time, and so they became disconnected. After I got a better handle on the situation, I was able to disable only the VLANs carrying routing information, so that by later yesterday morning, the MetroFire traffic was restored.

Further analysis of the problem with routing via the 300 Bent path kept coming up with "that-can't-be-happening" observations. This generally means that something is broken, and the thing that seemed broken was the switch at 300 Bent. However, this switch was one of the first switches deployed in PSnet back in May of 2010, and it was running on an older version of firmware. It seemed likely that updating the firmware on this switch might resolve the problem, and the process of updating the firmware would flush out any other issues. At 15:30, this switch was rebooted to update the firmware, and it never came back up. On the other hand, this essentially confirmed that this switch truly was broken. Unfortunately, this also shut down the MetroFire connection to Massport again.

Aside: We have developed plans to put in place some additional fiber paths interconnecting 300 Bent Street with the City of Cambridge Network, as well as another diversely routed path between 300 Bent Street and 1 Summer in Boston. With redundant switches now at both 300 Bent and 1 Summer, this should become a very reliable part of the backbone, though even the current arrangement has had only a couple of problems over the past 12 years. It is worth noting that this was the first inter-municipal path in PSnet that was brought up in January of 2007.

With the 300 Bent switch down for the count, we then started work to prepare a replacement pair of switches, this time using the new Cisco 3750G-12S models. Arrangements were made with the Northern Crossroads staff and MIT to gain access in order to replace the failed switch. At 10:00 this morning, I arrived at the NoX suite in 300 Bent, and we physically replaced the failed switch with the new pair. By 11:30, installation and testing was complete, and traffic was again flowing normally through the 300 Bent site. This also restored the MetroFire connection to Massport.

I want to thank the NoX/MIT staff who responded immediately to my request to gain access to 300 Bent, and who went out of their way to assist us in replacing the failed switch and re-patching it into the fiber links. Northern Crossroads (ref. [www.nox.org](http://www.nox.org)), along with Harvard and MIT, helped formulate the original concepts behind PSnet, and have supported this project throughout. They allowed PSnet to locate equipment in their suites at the two major carrier hotels in New England (300 Bent and 1 Summer), and they loaned fiber to the project to connect the City of Cambridge fiber network into 300 Bent along with a pair of fibers to get from 300 Bent to 1 Summer. They even gave us the first two Cisco switches deployed in PSnet, both of which are still operating today. These good friends have been with us from the very beginning, and we continue to enjoy a mutually beneficial relationship with them.

...Chuck

Northern Crossroads (ref. [www.nox.org](http://www.nox.org)), along with Harvard and MIT, helped formulate the original concepts behind PSnet, and have supported this project throughout. They allowed PSnet to locate equipment in their suites at the two major carrier hotels in New England (300 Bent and 1 Summer), and they loaned fiber to the project to connect the City of Cambridge fiber network into 300 Bent along with a pair of fibers to get from 300 Bent to 1 Summer. They even gave us the first two Cisco switches deployed in PSnet, both of which are still operating today. These good friends have been with us from the very beginning, and we continue to enjoy a mutually beneficial relationship with them.

Thanks Chuck,

Pro ambulance is still reporting issues with their 7100, could this still be related? They could also be having issues because of the upgrade ongoing.

Thanks,  
Dave

**Subject:** Re: PSnet: Proposal to perform graceful shutdown of PSnet systems at Courthouse site  
**Attachment(s):** "smime.p7s"

Folks,

I am just confirming that I have followed through on my earlier plan to actually turn off power to the microwave radios at the Cambridge former Courthouse site. Originally, I had thought that the generator being shut off would take care of this, but the site's standby generator has been running for another week, now.

My reason for actually turning off the power to these radios is so that we won't be adding to the RF "noise" in our region, and so that we could retire the FCC licenses, if deemed appropriate. However, let's decide what we're doing with these licenses before actually taking any actions.

For the record, here are the radios that have been turned off:

| Microwave Link   | Radio | Frequency (CamCtH Tx, Rx) | CamCtH Call Sign | Remote Call Sign |
|------------------|-------|---------------------------|------------------|------------------|
| CamCtH<=>CamPS   | BW    | 60 GHz, unlicensed        | n/a              |                  |
| CamCtH<=>SomPD   | BW    | 80 GHz, lightly licensed  | WQIY917          | WQIY917          |
| CamCtH<=>SomBF   | DW    | 19.475, 17.915 GHz        | WQJG686          | WQJG683          |
| CamCtH<=>BosPDHq | DW    | 19.475, 17.915 GHz        | WQJG686          | WQJG684          |
| CamCtH<=>222Berk | NB5   | 5 GHz, unlicensed         | n/a              |                  |

Abbreviations Key:

DW = DragonWave Horizon Compact  
 BW = BridgeWave  
 NB5 = Ubiquiti NanoBridge 5 GHz  
 CamCtH = Cambridge [former] Courthouse at 40 Thorndike Street  
 CamPS = Cambridge Healy Public Safety Facility at 125 6th Street  
 BosPDHq = Boston Police Headquarters at Schroeder Plaza  
 SomPD = Somerville Police Headquarters in Union Square  
 SomBF = Burton Faulkner Apartments at 25 Highland Street, Somerville  
 222Berk = 222 Berkley Street, Boston

Some additional points worth noting:

Since the Courthouse site has been on City of Cambridge fiber for at least eight years, now, the BridgeWave 60 GHz link to the Healy Facility has been a backup (which we have needed at various times). However, this 60 GHz link has been performing so poorly recently that we had already set routing metrics very high to prevent traffic flowing over this link unless the fiber link were to fail. With the new Millers River and Avalon sites coming online, Cambridge no longer has any need to reach the Courthouse site.

The CamCtH<=>SomPD BridgeWave 80 GHz link has been down for a few months due to failure of the radios and planned decommissioning of the Courthouse site. The radio at Somerville PD can be turned off, but we don't have the ability to do this remotely. It is worth noting that there is now a second microwave link into Somerville PD from Millers River Apartments in Cambridge (15 Lambert St.) Note that there is a single regional license for PSnet use of the 80 GHz band.

I have not remotely turned off the DragonWave radio at Burton Faulkner, since we currently have only one other microwave connection to this site that goes to Whidden Hospital. If I did turn off this radio, and we lost the link from Whidden, then we would have no alternative path to Burton Faulkner, even if the Courthouse site had power. Getting a second link into Burton Faulkner needs to be a priority, or we should decommission this site and replace it with other sites (preferably on fiber). Most of Somerville's cameras currently traverse this site.

The DragonWave radio at Boston Schroeder Plaza has been remotely turned off. Currently, the only other PSnet microwave

link into this site is from NE Baptist Hospital, which in turn connects to Brookline Town Hall. There is another link from Brookline Town Hall to Tang Hall on the western end of the MIT campus. Brookline, Cambridge, and Somerville have dependencies on this path through Brookline Town Hall for secondary connections to the MCC7500 Console systems. We also have fiber connections into Schroeder Plaza.

LAN-TEL has re-purposed the 5 GHz radio at 222 Berkley to reach another site in Boston. Hence, there is no need to power down the Boston end. Having the Courthouse end powered down does help with 5 GHz band interference. When the MBTA is able to shut down their equipment at the Courthouse, that will be a more significant reduction in unlicensed band interference.

Obviously, loss of the Courthouse site has diminished the backbone resilience for PSnet. However, we should shortly have the new Avalon North Point site (1 Leighton St.) up, and we will be able to activate the new MNI microwave link to Whidden Hospital. With the Avalon site on City fiber, this new path to Whidden Hospital will restore a good measure of resilience to the PSnet backbone.

Let me know if there are any concerns or questions with respect to the decommissioning of the PSnet Courthouse site.

On 1/31/19 4:36 PM, Chuck Wade wrote:

Folks,

At this point, the only two connections out of the Cambridge Courthouse site are still live are the fiber from Healy, and the DragonWave microwave link to Schroeder Plaza. However, routing has been set high enough that there is barely any traffic going over the DragonWave link to Schroeder.

So far, everything is looking good. All Motorola console systems have maintained their primary and secondary paths to the Zone 2 Core at Schroeder Plaza, so traffic has been re-routed away from the Courthouse connection. The Motorola CEN and other P25 traffic, as well as the IPmux-24 traffic between Schroeder and Cambridge Fire is flowing normally.

Camera traffic also seems to be unaffected. Here the big concern has been with Somerville cameras that are mostly backhauled through Burton Faulkner (25 Highland). However, I understand that Somerville's video servers are seeing their cameras.

I plan to shut down the DragonWave microwave link between Courthouse and Schroeder Plaza by 17:00. If anyone does notice any problems, please let me know immediately.

After 17:00, I believe that the Courthouse site can be safely shut down (for good).

On 1/31/19 2:38 PM, Chuck Wade wrote:

Folks,

LAN-TEL was able to establish another connection to the 222 Berkley Street site in Boston from one of the other Boston sites. We were not sure this would work, given the density of buildings in the area, but we lucked out (that, and the LAN-TEL team is good!). This is not a long-term solution, but it should be adequate for the short term, and if the Pats win the Super Bowl, we'll be able to support camera coverage next week for the parade. (I hope we haven't jinxed them.)

With this replacement link in place, we can now handle a shutdown of the former Courthouse site. I would like to propose a graceful shutdown this afternoon, rather than just turning off the standby generator. I recommend the following steps:

1. Disable the connection to the microwave radio that shoots to 222 Berkley. This will confirm that we haven't missed something over in Boston, since LAN-TEL is having to re-address the CIMS equipment.
2. Disable the BridgeWave connection to the Healy Facility. This microwave link is misaligned, so it is not really very useful, and the primary path from Cambridge to the Courthouse site is via City fiber. In other words, this is not going to have any impact.
3. Increase routing metrics for the DragonWave microwave connection to Burton Faulkner in Somerville to force traffic to go via the link to Whidden Hospital. There is about 11 Mbps of continuous traffic currently going from Burton Faulkner to the Courthouse. Aside: the Whidden connection will be the only link into Burton Faulkner after the Courthouse is shut down.
4. Increase routing metrics for the DragonWave microwave connection to Schroeder Plaza in order to force all traffic onto alternative paths. This is the most important link out of the Courthouse site today, since it is carrying about 60 Mbps of continuous traffic comprising camera feeds and secondary connections for P25 radio systems to the Zone 2 Core.

Obviously, we are going to monitor the situation carefully, and make sure that traffic does get rerouted as expected. Once we have confirmed that the alternative routes are handling the increased traffic loads, we will then shut down the two DragonWave links at the Courthouse site, and if there are no problems, we can then give the all clear to turn off the generator.

I will start with the first two steps above within the next 15 minutes (by 14:45), and then proceed to step 3 by 15:00. We will then monitor status for about an hour. Assuming no problems, we will then initiate step 4 around 16:00, and monitor for at least an hour.

Please let me know ASAP if you have any concerns, or suggestions for a different approach. We are living on borrowed time with the Courthouse site, so I think it is prudent to initiate a graceful shutdown expeditiously.

We lost a switch on the top of the Soldiers Home . It went down within a half hour ago.

It is affecting many cameras in the north area.

We will be on site in AM . Since it is outside on very top of roof and there's no lighting up there .

Will update you accordingly if it resets

Respectfully,

Eric Johnson

**Subject:** Re: LAN-TEL/Office of Emergency Management Fatpot Integration

Hi Dennis,

After review and consultation with Scott Wilder, who is our Brookline point of contact on this project, we're requesting a revision on the invoice. The first and third component of this invoice have been approved for payment (Phase IVA M3 and the Project Management). However, the middle component (Phase IVA M4) involves training that will be ongoing and involve more than just Brookline. Therefore we will wait to pay that portion until we are further along or completed with the training.

Therefore, can you please revise the invoice to a total of \$49,600 at which point I can submit it for payment.

Thank you,  
Sarah

Hi Eric,

Can you please provide more detail on this renewal? I'll need a SOW in order to begin the process of setting this up. A one-page bulleted overview should do - something to explain specifically what is being maintained (and where/how, for how long, etc), and what is being upgraded. If this connects to the previous BriefCam procurement, please reference that accordingly, and if it builds off of that and adds new pieces, please call those out. If this is "part A" of a multi-phased process, please give an overview of the scope and anticipated cost of the future phase(s).

Thank you,  
Sarah

**Subject:** LAN-TEL camera work in the MBHSR

Hi Eric,

I know we've got a lot of camera work going on in the Region right now, and many stakeholders are eager to replace cameras, install new ones, get quotes for future target hardening projects, etc, even make use of the mobile response unit and deploy other LAN-TEL services.

To that end, I want to say by way of reminder that any time you are asked by a MBHSR stakeholder to install new equipment or relocate existing equipment elsewhere, or deploy other services, you need to first reach out to OEM to confirm that the work has been approved prior to beginning. Often times as you well know we need to get FEMA approval for installations and relocation work. We also have several PO's with LAN-TEL currently, and while a stakeholder may think they are asking for work done under an existing PO, it's entirely possible that the scope of work falls outside of that contract and must be procured anew.

I will be reminding the subcommittee members of this next week again as well. But just wanted to send this out now as the weather gets nice enough to begin a new season of outdoor camera (and other) work.

Thanks,  
Sarah

Sarah

Good afternoon , understood on your email . That's how we have always operated and will continue to do so .

While it is tough navigating the different parameters , I believe we keep our demarcations within the POs issued with strict adherence.

If your email is based on anything you may of heard, Is there an insistence of where we did work without OEM not knowing ? Because I cannot think of anything off the top of my head.

Please know that with some of the UASI cities and towns that we maintain with CIMs and PSNET contracts , we also have direct contracts to maintain other internal camera systems that are not affected by OEM.

Example :BPD cell system and District cameras , Somerville internal , etc)

I hope that is being taken into consideration and not being misconstrued as CIMs or PSNET work .

On another note and I discussed this with Scott Wilder recently . While we have many meetings on PSNET and a smaller footprint with stakeholders , we never have any CIMS meetings where we have more day to day dealings with stakeholders and a ton of more equipment.

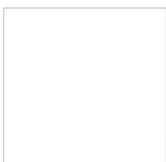

Could we possibly make this an actionable item to accomplish a few meetings regarding CIMS and maybe the message of what can or cannot be done will be repeated and certified in these meetings ?

Just a thought ?

Thanks ! and please let me know if we have done anything to go outside any bounds within the contracts.

Eric

**Subject:** Re: LAN-TEL camera work in the MBHSR

Hi Eric,

Thanks for the thoughtful reply. Yes, I know that this is how you have operated. I just wanted to document again. My concern is more with the stakeholders themselves, who sometimes are not aware of the various PO's in place and are eager to initiate projects. I will also be stressing to them that they must ensure that projects have received all of the appropriate approvals and are tied into current contracts prior to beginning work. If they are ever impatient with you because they assume work can begin when in fact we are still corralling all of those details, you can refer them to my previous email below and let OEM take the heat for any "delays." The stakeholders' intentions are good, but they are not always up to date on the processes. For that reason, I wanted to be sure that all of us are on the same page, hence my emails. If I do hear of a particular instance in which someone jumped the gun somehow, I will certainly bring that to you. But this communication was to be proactive rather than reactive. :)

Regarding a CIMS working group - yes this used to exist. The Critical Infrastructure subcommittee, under which that group belonged, discussed this very thing in October I believe. For the time being they prefer to operate as an entire subcommittee rather than re-initiate a subset working group. That being said, I do hear your rationale regarding having more focused CIMS conversations, and perhaps we can schedule a one-off meeting or incorporate a formal CIMS/LAN-TEL update at one of the spring subcommittee meetings. That's a good thought and I'll pass it along to the subcommittee chair.

Thanks again for all that you do for the Region. LAN-TEL has been a great partner for a number of years and we value your services!

Have a good weekend,  
Sarah

Could we possibly make this an actionable item to accomplish a few meetings regarding CIMS and maybe the message of what can or cannot be done will be repeated and certified in these meetings ?

Just a thought ?

Thanks ! and please let me know if we have done anything to go outside any bounds within the contracts.

Eric

Hi Eric,

I know we've got a lot of camera work going on in the Region right now, and many stakeholders are eager to replace cameras, install new ones, get quotes for future target hardening projects, etc, even make use of the mobile response unit and deploy other LAN-TEL services.

To that end, I want to say by way of reminder that any time you are asked by a MBHSR stakeholder to install new equipment or relocate existing equipment elsewhere, or deploy other services, you need to first reach out to OEM to confirm that the work has been approved prior to beginning. Often times as you well know we need to get FEMA approval for installations and relocation work. We also have several PO's with LAN-TEL currently, and while a stakeholder may think they are asking for work done under an existing PO, it's entirely possible that the scope of work falls outside of that contract and must be procured anew.

I will be reminding the subcommittee members of this next week again as well. But just wanted to send this out now as the weather gets nice enough to begin a new season of outdoor camera (and other) work.

Thanks,  
Sarah

Sarah

Thank you for clarifying and you have my word if someone tries to push something without the proper steps , I will bring to OEM's attention or recommend that we have that particular stakeholder contact you directly .

Have a great weekend as well !

Hi Eric,

Thanks for the thoughtful reply. Yes, I know that this is how you have operated. I just wanted to document again. My concern is more with the stakeholders themselves, who sometimes are not aware of the various PO's in place and are eager to initiate projects. I will also be stressing to them that they must ensure that projects have received all of the appropriate approvals and are tied into current contracts prior to beginning work. If they are ever impatient with you because they assume work can begin when in fact we are still corralling all of those details, you can refer them to my previous email below and let OEM take the heat for any "delays." The stakeholders' intentions are good, but they are not always up to date on the processes. For that reason, I wanted to be sure that all of us are on the same page, hence my emails. If I do hear of a particular instance in

which someone jumped the gun somehow, I will certainly bring that to you. But this communication was to be proactive rather than reactive. :)

Regarding a CIMS working group - yes this used to exist. The Critical Infrastructure subcommittee, under which that group belonged, discussed this very thing in October I believe. For the time being they prefer to operate as an entire subcommittee rather than re-initiate a subset working group. That being said, I do hear your rationale regarding having more focused CIMS conversations, and perhaps we can schedule a one-off meeting or incorporate a formal CIMS/LAN-TEL update at one of the spring subcommittee meetings. That's a good thought and I'll pass it along to the subcommittee chair.

Thanks again for all that you do for the Region. LAN-TEL has been a great partner for a number of years and we value your services!

Have a good weekend,  
Sarah

Good afternoon , understood on your email . That's how we have always operated and will continue to do so .

While it is tough navigating the different parameters , I believe we keep our demarcations within the POs issued with strict adherence.

If your email is based on anything you may of heard, Is there an insistence of where we did work without OEM not knowing ? Because I cannot think of anything off the top of my head.

Please know that with some of the UASI cities and towns that we maintain with CIMs and PSNET contracts , we also have direct contracts to maintain other internal camera systems that are not affected by OEM.

Example :BPD cell system and District cameras , Somerville internal , etc)

I hope that is being taken into consideration and not being misconstrued as CIMs or PSNET work .

On another note and I discussed this with Scott Wilder recently . While we have many meetings on PSNET and a smaller footprint with stakeholders , we never have any CIMS meetings where we have more day to day dealings with stakeholders and a ton of more equipment.

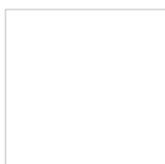

Could we possibly make this an actionable item to accomplish a few meetings regarding CIMS and maybe the message of what can or cannot be done will be repeated and certified in these meetings ?

Just a thought ?

Thanks ! and please let me know if we have done anything to go outside any bounds within the contracts.

**Attachment(s):** "smime.p7s"

Dave, Gerry,

Jason and I got the two PSnet switches installed at the Avalon North Point (1 Leighton Street) site this afternoon. The fiber connections to Cambridge Fire HQ and the Healy Public Safety Facility both came up. Nice!

The microwave radio to Whidden Hospital is connected, and I do see the switch at the Whidden end. However, there's a fair amount of work yet to be done to get the radios actually configured to work with the network and to leverage their redundancy. I hope to get that done soon.

Have a nice weekend...

...Chuck

**Subject:** Recommendation for additional Blade server in each PSnet hosting center  
**Attachment(s):** "BoM for BL460c 8 core 128 GB.pdf", "smime.p7s"

Scott, Sarah,

After a lot of consideration, the PSnet team has determined that the most pressing need for additional capital investment in PSnet is to complete establishment of a fully robust virtualization environment at the Boston and Cambridge hosting centers to adequately support current, plus new applications hosted by PSnet for regional use.

The current Blade systems each have two Blade servers with dual 8-core processors and 128 GB of memory. This provides adequate processing capacity for current workloads. However, for a virtualized environment to support fault tolerance and provide a resilient platform for Virtual Machines (VMs) and applications, three physical servers are needed at each hosting center (see below for the rationale). In other words, PSnet is constrained by not having the required minimum number of servers for a fully robust virtualized environment. At the same time, an additional server will provide more "headroom" for heavier workloads that are anticipated over the next couple of years.

There are many technical and operational advantages to using Blade servers deployed within a shared Blade enclosure that provides a fully integrated system environment for each additional Blade server. However, one downside is that Blade servers are priced at significant premiums. In addition, every server (whether or not a Blade) also requires software licenses for the hypervisor operating system (OS) that supports VMs as well as licenses for Windows OSs used by the individual VMs. Consequently, the total cost per server at list is ~\$22,000.

The table below shows the items that need to be ordered along with published list prices.

| Vendor    | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                | Quantity       | Unit Price                 | Ext. |           |                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <b>Totals:</b> | <b>\$22,158 per server</b> | <b>\$44,316</b> |

Since the above prices are list retail, it is likely that the final procurement prices would be 10% to 20% less.

A Bill of Materials is attached for the HPE Blade Server that was generated using HPE's publicly accessible configuration tool. This configuration was intentionally tailored to be equivalent to the currently deployed Blade Servers (BL 460c Gen 8). Note that there was no option to change the 1-year support contract from "Proactive" to "Foundation," which is all that PSnet needs.

Also, we are recommending that the same Microsoft Windows Server Datacenter 2012 R2 license be procured as was included with the original 2014 purchase of these Blade systems. A complete explanation is provided below for this recommendation.

### Rationale for Adding a Third Server at each PSnet Hosting Center

In order to have a fully functional virtualization environment, each hosting center requires three physical servers. There are several reasons for this requirement, but probably the most compelling is that fault tolerant configurations require at least three physical servers to "vote" which servers are available or unavailable. This voting logic also applies to various services, individual VMs, and core management capabilities. The VMware vSphere virtualization environment used at the PSnet hosting centers is currently unable to handle degraded conditions in an automated manner since there are only two physical servers.

It is also worth emphasizing that the lack of a third server means that many normal maintenance procedures must be done manually. To be specific, any operation that requires a reboot of a server means that we must first migrate all VMs running

on the server to the other server, then manually put the server into maintenance mode, perform the software or firmware upgrade, manually reboot the server, take it back out of maintenance mode, and finally migrate the VMs back to the server when it is fully back online. This procedure takes at least a half hour per physical server. With three servers, all of these steps can be automated and scheduled to take place at an appropriate time; e.g., the middle of the night.

Another benefit to operating with three servers is that vSphere is able to recover from server crashes on its own, often without disrupting VMs. In the current two-server configuration, a server going down will force all VMs active on that server to reboot on the other server. If we become capacity constrained, then it might not be possible to bring up all VMs on a single server.

### **Current Physical Server Deployments**

The current PSnet hosting centers are each based on HPE c3000 Blade Enclosures with both Blade Servers and Switches. Although these Blade Enclosures will each support up to eight (8) Blade Servers, there are only two servers currently deployed per enclosure (or hosting center).

In order to add another server, all that is necessary is to insert a new Blade server into the enclosure. The enclosure provides all of the networking, including storage networking, as well as central server management, console access, redundant power, and redundant thermal management (i.e., blowers). Once a Blade server is inserted, there are no additional cables required, and the new server will be fully integrated with the other servers in the enclosure along with all network connections at multiples of 10 Gbps.

It should be noted that each PSnet Blade Enclosure includes two redundant pairs of "Blade Switches." One pair provides normal network access to the rest of PSnet while the other is primarily used for Storage Area Networking (SAN) to connect the Blade Servers to the 3PAR storage systems. Since the 3PAR systems have their own redundant SAN interfaces and control logic, there are no single points of failure in the overall system. While each Blade server does have one local disk drive, the purpose of this drive is to support management and maintenance functions, primarily for managing the 3PAR systems and virtualization environment. All other storage is provided by the 3PAR systems and shared across all Blade servers and VMs.

### **vSphere Hypervisor and Windows OS Deployments**

Once a new Blade Server is installed and brought online, it will be necessary to install the VMware vSphere hypervisor known as ESXi. This is a straight-forward OS installation requiring about a half hour, and is normally a one-time procedure. When the ESXi host hypervisor is booted up, it will then be integrated into the VMware vCenter virtualization management system, which will handle all software updates and integration with other servers in the local cluster as well as the other datacenter server cluster.

### **Licensing Issues and Pricing for VMware vSphere**

Each new vSphere ESXi host will require a VMware license for each processor included with the server. The recommended hardware configuration for a new Blade Server includes two processors, each with 8 cores. This means two vSphere licenses per server, for a total of four new vSphere licenses. At this time, PSnet is using vSphere Standard, which has a list license price of \$995 per processor, but must be purchased with at least one year of basic support at \$273 per processor for a total of \$1,268 per processor. If purchased with a 3-year support contract, the per processor list price would be \$1,716. This equates to \$224 per additional year of support.

Assuming that a single year of support is ordered, then the cost to license two new 2-processor servers would be four times \$1,268, or \$5,072 with one year of support included. If the 3-year support option is purchased, then the total cost would come to \$6,864. The recommendation would be to go with the 1-year support option. It is also recommended that this be purchased directly from VMware, although this could be ordered from HPE as part of the Blade Server purchase.

### **Licensing Issues and Pricing for Microsoft Windows Server**

Currently, PSnet is licensed to run Windows Server 2012 R2 "Datacenter" on each of the four Blade Servers. The licensing model used by Microsoft for this version of Windows Server was per server with up to two processors, and allows running an unlimited number of Windows Server 2012 Virtual Machines (VMs). This is completely adequate for PSnet applications and planned use over the next few years, and there are no compelling reasons to go to newer versions of Windows Server. Microsoft has announced that Windows Server 2012 Datacenter will be fully supported until October 10, 2023, with additional support available after that date for a price.

However, what is important to consider is that newer versions of Windows Server (2016 or 2019) employ a new licensing model based on cores, rather than processors. In addition, only Windows hypervisors will have any option for running unlimited VMs. For a vSphere environment, only two VMs are licensed, and an additional per-core license is required each time that two more VMs are to be run at the same time on the same server. Further complicating matters, each server must be fully licensed for the maximum number of VMs that might run on that server at any point in time.

If this new licensing model were to be applied to the current servers in the PSnet hosting centers, then each server would need to be able to run up to 12 Windows Server VMs based on the current VM deployments. In reality these 12 VMs are distributed between the two servers in each hosting center for an average of 6 VMs per server, but if the VMs need to be migrated at least temporarily from one server to the other (which they do) then each server would have to be licensed for all

12 VMs. Since each server has 16 cores, we would need 12 divided by 2 licenses for each core, or 6 times 16 core licenses for a total of 96 licenses per server. This needs to be multiplied by 2 again for the two new Blade servers that are proposed.

This is not quite as expensive as it seems on the surface. This is because Microsoft priced a 16-core license bundle for Windows Server 2016 or 2019 to be about the same as for a Windows Server 2012 license for two processors. Where additional costs and complexity come into play is with the requirement to have licenses for the physical hardware server for each pair of VMs running on that server. So, if we want to have licensing for 12 VMs per server, then we would be paying 6 times as much. As an aside, the per VM licensing does not apply to VMs running on the Datacenter edition of Microsoft's own hypervisor, so it would seem this is a strategy to displace VMware vSphere in the market.

For comparison purposes, the original purchase back in 2014 of the two Blade systems with two servers each (four servers in total) included Windows Server 2012 R2 Datacenter licenses at \$4,385 per server, or \$17,540 in total. It is clear that licensing costs for the 2016 or 2019 versions could be considerably more expensive, though probably not 6 times as expensive as the original 2012 licenses that were acquired for PSnet. The reason is that the Datacenter license only makes sense for Microsoft customers that will use Microsoft's hypervisor. For customers using other hypervisors, such as vSphere ESXi, it only makes sense to purchase licenses *à la carte*. It turns out that, for the 12 VMs in this example, the pricing between 2012 and 2016/2019 versions is similar.

There are two major concerns for PSnet moving to the new Microsoft licensing model. One is complexity, since we would have to track VM usage, and be able to respond to audit demands from Microsoft. The other really is cost, since PSnet is likely to use more VMs than would be typical of other use cases. This is because PSnet will support multiple vendors' applications in the hosting centers, and the best way to manage multiple vendors sharing the same virtualized environment would be to give each vendor its own VMs. In other words, it is quite likely that the number of VMs will go up with each new application deployed.

It should be possible to still acquire actual Windows Server 2012 R2 Datacenter licenses from multiple sources. This would be consistent with the current PSnet deployments, and highly preferred for a variety of reasons, including reduction in management overhead to track per-VM licensing. However, purchasing 2016 or 2019 licenses and downgrading to 2012 is not an attractive option, since the newer licensing model would then apply to the 2012 installation.

The other complicating aspect of Microsoft server licensing is the requirement for Client Access Licenses (CALs), either on a per device or per user basis. With the original 2014 order, 100 User CALs were acquired at \$24.25 each, for a total cost of \$2,425. At this time, 100 CALs should continue to be sufficient, even with the addition of a third server at each hosting center. The CALs are required for any user that accesses applications running on a Windows Server 2012 VM running on any server in either hosting center, though this is generally assumed to not apply to system administrators.

Of course, there are other types of CALs that might be used with the PSnet Windows installations, including separate CALs for users using Remote Desktop to access Windows VMs, and CALs used for Microsoft SQL or SharePoint. The 2014 Blade system order included 100 CALs for SQL at total cost of \$15,400. Based on current usage, these CALs are adequate at this time.

In order to get an accurate price estimate for any Windows Server licenses we will need to go through an authorized seller that can advise on Microsoft licensing obligations.

---

I am happy to answer any questions, and we can present these recommendations to the PSnet EC at Tuesday's meeting.

...Chuck

**Subject:** Recommendation for additional Blade server in each PSnet hosting center  
**Importance:** High

Scott, Sarah,

After a lot of consideration, the PSnet team has determined that the most pressing need for additional capital investment in PSnet is to complete establishment of a fully robust virtualization environment at the Boston and Cambridge hosting centers to adequately support current, plus new applications hosted by PSnet for regional use.

The current Blade systems each have two Blade servers with dual 8-core processors and 128 GB of memory. This provides adequate processing capacity for current workloads. However, for a virtualized environment to support fault tolerance and provide a resilient platform for Virtual Machines (VMs) and applications, three physical servers are needed at each hosting center (see below for the rationale). In other words, PSnet is constrained by not having the required minimum number of servers for a fully robust virtualized environment. At the same time, an additional server will provide more "headroom" for heavier workloads that are anticipated over the next couple of years.

There are many technical and operational advantages to using Blade servers deployed within a shared Blade enclosure that provides a fully integrated system environment for each additional Blade server. However, one downside is that Blade servers are priced at significant premiums. In addition, every server (whether or not a Blade) also requires software licenses for the hypervisor operating system (OS) that supports VMs as well as licenses for Windows OSs used by the individual VMs. Consequently, the total cost per server at list is ~\$22,000.

The table below shows the items that need to be ordered along with published list prices.

| Vendor    | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                | Quantity       | Unit Price                 | Ext. |           |                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <b>Totals:</b> | <b>\$22,158 per server</b> | <b>\$44,316</b> |

Since the above prices are list retail, it is likely that the final procurement prices would be 10% to 20% less.

A Bill of Materials is attached for the HPE Blade Server that was generated using HPE's publicly accessible configuration tool. This configuration was intentionally tailored to be equivalent to the currently deployed Blade Servers (BL 460c Gen 8). Note that there was no option to change the 1-year support contract from "Proactive" to "Foundation," which is all that PSnet needs.

Also, we are recommending that the same Microsoft Windows Server Datacenter 2012 R2 license be procured as was included with the original 2014 purchase of these Blade systems. A complete explanation is provided below for this recommendation.

**Rationale for Adding a Third Server at each PSnet Hosting Center**

In order to have a fully functional virtualization environment, each hosting center requires three physical servers. There are several reasons for this requirement, but probably the most compelling is that fault tolerant configurations require at least three physical servers to "vote" which servers are available or unavailable. This voting logic also applies to various services, individual VMs, and core management capabilities. The VMware vSphere virtualization environment used at the PSnet hosting centers is currently unable to handle degraded conditions in an automated manner since there are only two physical servers.

It is also worth emphasizing that the lack of a third server means that many normal maintenance procedures must be done manually. To be specific, any operation that requires a reboot of a server means that we must first migrate all VMs running on the server to the other server, then manually put the server into maintenance mode, perform the software or firmware upgrade, manually reboot the server, take it back out of maintenance mode, and finally migrate the VMs back to the server when it is fully back online. This procedure takes at least a half hour per physical server. With three servers, all of these steps can be automated and scheduled to take place at an appropriate time; e.g., the middle of the night.

Another benefit to operating with three servers is that vSphere is able to recover from server crashes on its own, often without disrupting VMs. In the current two-server configuration, a server going down will force all VMs active on that server to reboot on the other server. If we become capacity constrained, then it might not be possible to bring up all VMs on a single server.

### **Current Physical Server Deployments**

The current PSnet hosting centers are each based on HPE c3000 Blade Enclosures with both Blade Servers and Switches. Although these Blade Enclosures will each support up to eight (8) Blade Servers, there are only two servers currently deployed per enclosure (or hosting center).

In order to add another server, all that is necessary is to insert a new Blade server into the enclosure. The enclosure provides all of the networking, including storage networking, as well as central server management, console access, redundant power, and redundant thermal management (i.e., blowers). Once a Blade server is inserted, there are no additional cables required, and the new server will be fully integrated with the other servers in the enclosure along with all network connections at multiples of 10 Gbps.

It should be noted that each PSnet Blade Enclosure includes two redundant pairs of "Blade Switches." One pair provides normal network access to the rest of PSnet while the other is primarily used for Storage Area Networking (SAN) to connect the Blade Servers to the 3PAR storage systems. Since the 3PAR systems have their own redundant SAN interfaces and control logic, there are no single points of failure in the overall system. While each Blade server does have one local disk drive, the purpose of this drive is to support management and maintenance functions, primarily for managing the 3PAR systems and virtualization environment. All other storage is provided by the 3PAR systems and shared across all Blade servers and VMs.

### **vSphere Hypervisor and Windows OS Deployments**

Once a new Blade Server is installed and brought online, it will be necessary to install the VMware vSphere hypervisor known as ESXi. This is a straight-forward OS installation requiring about a half hour, and is normally a one-time procedure. When the ESXi host hypervisor is booted up, it will then be integrated into the VMware vCenter virtualization management system, which will handle all software updates and integration with other servers in the local cluster as well as the other datacenter server cluster.

### **Licensing Issues and Pricing for VMware vSphere**

Each new vSphere ESXi host will require a VMware license for each processor included with the server. The recommended hardware configuration for a new Blade Server includes two processors, each with 8 cores. This means two vSphere licenses per server, for a total of four new vSphere licenses. At this time, PSnet is using vSphere Standard, which has a list license price of \$995 per processor, but must be purchased with at least one year of basic support at \$273 per processor for a total of \$1,268 per processor. If purchased with a 3-year support contract, the per processor list price would be \$1,716. This equates to \$224 per additional year of support.

Assuming that a single year of support is ordered, then the cost to license two new 2-processor servers would be four times \$1,268, or \$5,072 with one year of support included. If the 3-year support option is purchased, then the total cost would come to \$6,864. The recommendation would be to go with the 1-year support option. It is also recommended that this be purchased directly from VMware, although this could be ordered from HPE as part of the Blade Server purchase.

### **Licensing Issues and Pricing for Microsoft Windows Server**

Currently, PSnet is licensed to run Windows Server 2012 R2 "Datacenter" on each of the four Blade Servers. The licensing model used by Microsoft for this version of Windows Server was per server with up to two processors, and allows running an unlimited number of Windows Server 2012 Virtual Machines (VMs). This is completely adequate for PSnet applications and planned use over the next few years, and there are no compelling reasons to go to newer versions of Windows Server. Microsoft has announced that Windows Server 2012 Datacenter will be fully supported until October 10, 2023, with additional support available after that date for a price.

However, what is important to consider is that newer versions of Windows Server (2016 or 2019) employ a new licensing model based on cores, rather than processors. In addition, only Windows hypervisors will have any option for running unlimited VMs. For a vSphere environment, only two VMs are licensed, and an additional per-core license is required each time that two more VMs are to be run at the same time on the same server. Further complicating matters, each server must be fully licensed for the maximum number of VMs that might run on that server at any point in time.

If this new licensing model were to be applied to the current servers in the PSnet hosting centers, then each server would need to be able to run up to 12 Windows Server VMs based on the current VM deployments. In reality these 12 VMs are distributed between the two

servers in each hosting center for an average of 6 VMs per server, but if the VMs need to be migrated at least temporarily from one server to the other (which they do) then each server would have to be licensed for all 12 VMs. Since each server has 16 cores, we would need 12 divided by 2 licenses for each core, or 6 times 16 core licenses for a total of 96 licenses per server. This needs to be multiplied by 2 again for the two new Blade servers that are proposed.

This is not quite as expensive as it seems on the surface. This is because Microsoft priced a 16-core license bundle for Windows Server 2016 or 2019 to be about the same as for a Windows Server 2012 license for two processors. Where additional costs and complexity come into play is with the requirement to have licenses for the physical hardware server for each pair of VMs running on that server. So, if we want to have licensing for 12 VMs per server, then we would be paying 6 times as much. As an aside, the per VM licensing does not apply to VMs running on the Datacenter edition of Microsoft's own hypervisor, so it would seem this is a strategy to displace VMware vSphere in the market.

For comparison purposes, the original purchase back in 2014 of the two Blade systems with two servers each (four servers in total) included Windows Server 2012 R2 Datacenter licenses at \$4,385 per server, or \$17,540 in total. It is clear that licensing costs for the 2016 or 2019 versions could be considerably more expensive, though probably not 6 times as expensive as the original 2012 licenses that were acquired for PSnet. The reason is that the Datacenter license only makes sense for Microsoft customers that will use Microsoft's hypervisor. For customers using other hypervisors, such as vSphere ESXi, it only makes sense to purchase licenses *à la carte*. It turns out that, for the 12 VMs in this example, the pricing between 2012 and 2016/2019 versions is similar.

There are two major concerns for PSnet moving to the new Microsoft licensing model. One is complexity, since we would have to track VM usage, and be able to respond to audit demands from Microsoft. The other really is cost, since PSnet is likely to use more VMs than would be typical of other use cases. This is because PSnet will support multiple vendors' applications in the hosting centers, and the best way to manage multiple vendors sharing the same virtualized environment would be to give each vendor its own VMs. In other words, it is quite likely that the number of VMs will go up with each new application deployed.

It should be possible to still acquire actual Windows Server 2012 R2 Datacenter licenses from multiple sources. This would be consistent with the current PSnet deployments, and highly preferred for a variety of reasons, including reduction in management overhead to track per-VM licensing. However, purchasing 2016 or 2019 licenses and downgrading to 2012 is not an attractive option, since the newer licensing model would then apply to the 2012 installation.

The other complicating aspect of Microsoft server licensing is the requirement for Client Access Licenses (CALs), either on a per device or per user basis. With the original 2014 order, 100 User CALs were acquired at \$24.25 each, for a total cost of \$2,425. At this time, 100 CALs should continue to be sufficient, even with the addition of a third server at each hosting center. The CALs are required for any user that accesses applications running on a Windows Server 2012 VM running on any server in either hosting center, though this is generally assumed to not apply to system administrators.

Of course, there are other types of CALs that might be used with the PSnet Windows installations, including separate CALs for users using Remote Desktop to access Windows VMs, and CALs used for Microsoft SQL or SharePoint. The 2014 Blade system order included 100 CALs for SQL at total cost of \$15,400. Based on current usage, these CALs are adequate at this time.

In order to get an accurate price estimate for any Windows Server licenses we will need to go through an authorized seller that can advise on Microsoft licensing obligations.

---

I am happy to answer any questions, and we can present these recommendations to the PSnet EC at Tuesday's meeting.

**Subject:** Recommendation for additional Blade server in each PSnet hosting center  
**Importance:** High

Scott, Sarah,

After a lot of consideration, the PSnet team has determined that the most pressing need for additional capital investment in PSnet is to complete establishment of a fully robust virtualization environment at the Boston and Cambridge hosting centers to adequately support current, plus new applications hosted by PSnet for regional use.

The current Blade systems each have two Blade servers with dual 8-core processors and 128 GB of memory. This provides adequate processing capacity for current workloads. However, for a virtualized environment to support fault tolerance and provide a resilient platform for Virtual Machines (VMs) and applications, three physical servers are needed at each hosting center (see below for the rationale). In other words, PSnet is constrained by not having the required minimum number of servers for a fully robust virtualized environment. At the same time, an additional server will provide more "headroom" for heavier workloads that are anticipated over the next couple of years.

There are many technical and operational advantages to using Blade servers deployed within a shared Blade enclosure that provides a fully integrated system environment for each additional Blade server. However, one downside is that Blade servers are priced at significant premiums. In addition, every server (whether or not a Blade) also requires software licenses for the hypervisor operating system (OS) that supports VMs as well as licenses for Windows OSs used by the individual VMs. Consequently, the total cost per server at list is ~\$22,000.

The table below shows the items that need to be ordered along with published list prices.

| Vendor    | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                | Quantity       | Unit Price                     | Ext. |           |                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <b>Totals:</b> | <b>\$22,158<br/>per server</b> | <b>\$44,316</b> |

Since the above prices are list retail, it is likely that the final procurement prices would be 10% to 20% less.

A Bill of Materials is attached for the HPE Blade Server that was generated using HPE's publicly accessible configuration tool. This configuration was intentionally tailored to be equivalent to the currently deployed Blade Servers (BL 460c Gen 8). Note that there was no option to change the 1-year support contract from "Proactive" to "Foundation," which is all that PSnet needs.

Also, we are recommending that the same Microsoft Windows Server Datacenter 2012 R2 license be procured as was included with the original 2014 purchase of these Blade systems. A complete explanation is provided below for this recommendation.

### **Rationale for Adding a Third Server at each PSnet Hosting Center**

In order to have a fully functional virtualization environment, each hosting center requires three physical servers. There are several reasons for this requirement, but probably the most compelling is that fault tolerant configurations require at least three physical servers to "vote" which servers are available or unavailable. This voting logic also applies to various services, individual VMs, and core management capabilities. The VMware vSphere virtualization environment used at the PSnet hosting centers is currently unable to handle degraded conditions in an automated manner since there are only two physical servers.

It is also worth emphasizing that the lack of a third server means that many normal maintenance procedures must be done manually. To be specific, any operation that requires a reboot of a server means that we must first migrate all VMs running on the server to the other server, then manually put the server into maintenance mode, perform the software or firmware upgrade, manually reboot the server, take it back out of maintenance mode, and finally migrate the VMs back to the server when it is fully back online. This procedure takes at least a half hour per physical server. With three servers, all of these steps can be automated and scheduled to take place at an appropriate time; e.g., the middle of the night.

Another benefit to operating with three servers is that vSphere is able to recover from server crashes on its own, often without disrupting VMs. In the current two-server configuration, a server going down will force all VMs active on that server to reboot on the other server. If we become capacity constrained, then it might not be possible to bring up all VMs on a single server.

### **Current Physical Server Deployments**

The current PSnet hosting centers are each based on HPE c3000 Blade Enclosures with both Blade Servers and Switches. Although these Blade Enclosures will each support up to eight (8) Blade Servers, there are only two servers currently deployed per enclosure (or hosting center).

In order to add another server, all that is necessary is to insert a new Blade server into the enclosure. The enclosure provides all of the networking, including storage networking, as well as central server management, console access, redundant power, and redundant thermal management (i.e., blowers). Once a Blade server is inserted, there are no additional cables required, and the new server will be fully integrated with the other servers in the enclosure along with all network connections at multiples of 10 Gbps.

It should be noted that each PSnet Blade Enclosure includes two redundant pairs of "Blade Switches." One pair provides normal network access to the rest of PSnet while the other is primarily used for Storage Area Networking (SAN) to connect the Blade Servers to the 3PAR storage systems. Since the 3PAR systems have their own redundant SAN interfaces and control logic, there are no single points of failure in the overall system. While each Blade server does have one local disk drive, the purpose of this drive is to support management and maintenance functions, primarily for managing the 3PAR systems and virtualization environment. All other storage is provided by the 3PAR systems and shared across all Blade servers and VMs.

### **vSphere Hypervisor and Windows OS Deployments**

Once a new Blade Server is installed and brought online, it will be necessary to install the VMware vSphere hypervisor known as ESXi. This is a straight-forward OS installation requiring about a half hour, and is normally a one-time procedure. When the ESXi host hypervisor is booted up, it will then be integrated into the VMware vCenter virtualization management system, which will handle all software updates and integration with other servers in the local cluster as well as the other datacenter server cluster.

### **Licensing Issues and Pricing for VMware vSphere**

Each new vSphere ESXi host will require a VMware license for each processor included with the server. The recommended hardware configuration for a new Blade Server includes two processors, each with 8 cores. This means two vSphere licenses per server, for a total of four new vSphere licenses. At this time, PSnet is using vSphere Standard, which has a list license price of \$995 per processor, but must be purchased with at least one year of basic support at \$273 per processor for a total of \$1,268 per processor. If purchased with a 3-year support contract, the per processor list price would be \$1,716. This equates to \$224 per additional year of support.

Assuming that a single year of support is ordered, then the cost to license two new 2-processor servers would be four times \$1,268, or \$5,072 with one year of support included. If the 3-year support option is purchased, then the total cost would come to \$6,864. The recommendation would be to go with the 1-year support option. It is also recommended that this be purchased directly from VMware, although this could be ordered from HPE as part of the Blade Server purchase.

## Licensing Issues and Pricing for Microsoft Windows Server

Currently, PSnet is licensed to run Windows Server 2012 R2 "Datacenter" on each of the four Blade Servers. The licensing model used by Microsoft for this version of Windows Server was per server with up to two processors, and allows running an unlimited number of Windows Server 2012 Virtual Machines (VMs). This is completely adequate for PSnet applications and planned use over the next few years, and there are no compelling reasons to go to newer versions of Windows Server. Microsoft has announced that Windows Server 2012 Datacenter will be fully supported until October 10, 2023, with additional support available after that date for a price.

However, what is important to consider is that newer versions of Windows Server (2016 or 2019) employ a new licensing model based on cores, rather than processors. In addition, only Windows hypervisors will have any option for running unlimited VMs. For a vSphere environment, only two VMs are licensed, and an additional per-core license is required each time that two more VMs are to be run at the same time on the same server. Further complicating matters, each server must be fully licensed for the maximum number of VMs that might run on that server at any point in time.

If this new licensing model were to be applied to the current servers in the PSnet hosting centers, then each server would need to be able to run up to 12 Windows Server VMs based on the current VM deployments. In reality these 12 VMs are distributed between the two servers in each hosting center for an average of 6 VMs per server, but if the VMs need to be migrated at least temporarily from one server to the other (which they do) then each server would have to be licensed for all 12 VMs. Since each server has 16 cores, we would need 12 divided by 2 licenses for each core, or 6 times 16 core licenses for a total of 96 licenses per server. This needs to be multiplied by 2 again for the two new Blade servers that are proposed.

This is not quite as expensive as it seems on the surface. This is because Microsoft priced a 16-core license bundle for Windows Server 2016 or 2019 to be about the same as for a Windows Server 2012 license for two processors. Where additional costs and complexity come into play is with the requirement to have licenses for the physical hardware server for each pair of VMs running on that server. So, if we want to have licensing for 12 VMs per server, then we would be paying 6 times as much. As an aside, the per VM licensing does not apply to VMs running on the Datacenter edition of Microsoft's own hypervisor, so it would seem this is a strategy to displace VMware vSphere in the market.

For comparison purposes, the original purchase back in 2014 of the two Blade systems with two servers each (four servers in total) included Windows Server 2012 R2 Datacenter licenses at \$4,385 per server, or \$17,540 in total. It is clear that licensing costs for the 2016 or 2019 versions could be considerably more expensive, though probably not 6 times as expensive as the original 2012 licenses that were acquired for PSnet. The reason is that the Datacenter license only makes sense for Microsoft customers that will use Microsoft's hypervisor. For customers using other hypervisors, such as vSphere ESXi, it only makes sense to purchase licenses *à la carte*. It turns out that, for the 12 VMs in this example, the pricing between 2012 and 2016/2019 versions is similar.

There are two major concerns for PSnet moving to the new Microsoft licensing model. One is complexity, since we would have to track VM usage, and be able to respond to audit demands from Microsoft. The other really is cost, since PSnet is likely to use more VMs than would be typical of other use cases. This is because PSnet will support multiple vendors' applications in the hosting centers, and the best way to manage multiple vendors sharing the same virtualized environment would be to give each vendor its own VMs. In other words, it is quite likely that the number of VMs will go up with each new application deployed.

It should be possible to still acquire actual Windows Server 2012 R2 Datacenter licenses from multiple sources. This would be consistent with the current PSnet deployments, and highly preferred for a variety of reasons, including reduction in management overhead to track per-VM licensing. However, purchasing 2016 or 2019 licenses and downgrading to 2012 is not an attractive option, since the newer licensing model would then apply to the 2012 installation.

The other complicating aspect of Microsoft server licensing is the requirement for Client Access Licenses (CALs), either on a per device or per user basis. With the original 2014 order, 100 User CALs were acquired at \$24.25 each, for a total cost of \$2,425. At this time, 100 CALs should continue to be sufficient, even with the addition of a third server at each hosting center. The CALs are required for any user that accesses applications running on a Windows Server 2012 VM running on any server in either hosting center, though this is generally assumed to not apply to system administrators.

Of course, there are other types of CALs that might be used with the PSnet Windows installations, including separate CALs for users using Remote Desktop to access Windows VMs, and CALs used for Microsoft SQL or SharePoint. The 2014 Blade system order included 100 CALs for SQL at total cost of \$15,400. Based on current usage, these CALs are adequate at this time.

In order to get an accurate price estimate for any Windows Server licenses we will need to go through an authorized seller that can advise on Microsoft licensing obligations.

---

I am happy to answer any questions, and we can present these recommendations to the PSnet EC at Tuesday's meeting.

Eric,

I believe in the past we have paid for the SSA as part of the general CIMS maintenance contract. That is to say, it was another invoice using the same CIMS PO. Doesn't it make sense to do it that way, since this SSA supports that contract?

Sarah

The only potential complicating factor is that the general CIMS contract expires May 31. So we may need to renew the contract prior to paying the SSA. I'll check into that. If that's true, can we pro-rate the SSA for two months initially so that a new SSA would align with a renewed contract date?

**Subject:** Invoice for BPD HQ

Hi Eric,

I hear that the camera installation work at BPD HQ has wrapped up (or is wrapping up?). Can you please have your finance team send me an invoice for that project? PO number for reference is 698448.

Thanks,  
Sarah

**Subject:** Re: Recommendation for additional Blade server in each PSnet hosting center  
**Attachment(s):** "Quote27362.pdf"

Chuck & Eric,

Please see quote attached for a single Blade Server. I realize I'd be ordering two, as we need one in each location. Can you please review and confirm that this meets our technical specification needs?

Thanks,  
Sarah

On Sun, Feb 24, 2019 at 6:29 PM Chuck Wade <Chuck@interisle.net> wrote:

Scott, Sarah,

After a lot of consideration, the PSnet team has determined that the most pressing need for additional capital investment in PSnet is to complete establishment of a fully robust virtualization environment at the Boston and Cambridge hosting centers to adequately support current, plus new applications hosted by PSnet for regional use.

The current Blade systems each have two Blade servers with dual 8-core processors and 128 GB of memory. This provides adequate processing capacity for current workloads. However, for a virtualized environment to support fault tolerance and provide a resilient platform for Virtual Machines (VMs) and applications, three physical servers are needed at each hosting center (see below for the rationale). In other words, PSnet is constrained by not having the required minimum number of servers for a fully robust virtualized environment. At the same time, an additional server will provide more "headroom" for heavier workloads that are anticipated over the next couple of years.

There are many technical and operational advantages to using Blade servers deployed within a shared Blade enclosure that provides a fully integrated system environment for each additional Blade server. However, one downside is that Blade servers are priced at significant premiums. In addition, every server (whether or not a Blade) also requires software licenses for the hypervisor operating system (OS) that supports VMs as well as licenses for Windows OSs used by the individual VMs. Consequently, the total cost per server at list is ~\$22,000.

The table below shows the items that need to be ordered along with published list prices.

| Vendor    | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                | Quantity       | Unit Price                 | Ext. |           |                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <b>Totals:</b> | <b>\$22,158 per server</b> | <b>\$44,316</b> |

Since the above prices are list retail, it is likely that the final procurement prices would be 10% to 20% less.

A Bill of Materials is attached for the HPE Blade Server that was generated using HPE's publicly accessible configuration tool. This configuration was intentionally tailored to be equivalent to the currently deployed Blade Servers (BL 460c Gen 8). Note that there was no option to change the 1-year support contract from "Proactive" to "Foundation," which is all that PSnet needs.

Also, we are recommending that the same Microsoft Windows Server Datacenter 2012 R2 license be procured as was included with the original 2014 purchase of these Blade systems. A complete explanation is provided below for this recommendation.

**Rationale for Adding a Third Server at each PSnet Hosting Center**

In order to have a fully functional virtualization environment, each hosting center requires three physical servers. There are several reasons for this requirement, but probably the most compelling is that fault tolerant configurations require at least three physical servers to "vote" which servers are available or unavailable. This voting logic also applies to various services, individual VMs, and core management capabilities. The VMware vSphere virtualization environment used at the PSnet hosting centers is currently unable to handle degraded conditions in an automated manner since there are only two physical servers.

It is also worth emphasizing that the lack of a third server means that many normal maintenance procedures must be done manually. To be specific, any operation that requires a reboot of a server means that we must first migrate all VMs running on the server to the other server, then manually put the server into maintenance mode, perform the software or firmware upgrade, manually reboot the server, take it back out of maintenance mode, and finally migrate the VMs back to the server when it is fully back online. This procedure takes at least a half hour per physical server. With three servers, all of these steps can be automated and scheduled to take place at an appropriate time; e.g., the middle of the night.

Another benefit to operating with three servers is that vSphere is able to recover from server crashes on its own, often without disrupting VMs. In the current two-server configuration, a server going down will force all VMs active on that server to reboot on the other server. If we become capacity constrained, then it might not be possible to bring up all VMs on a single server.

### **Current Physical Server Deployments**

The current PSnet hosting centers are each based on HPE c3000 Blade Enclosures with both Blade Servers and Switches. Although these Blade Enclosures will each support up to eight (8) Blade Servers, there are only two servers currently deployed per enclosure (or hosting center).

In order to add another server, all that is necessary is to insert a new Blade server into the enclosure. The enclosure provides all of the networking, including storage networking, as well as central server management, console access, redundant power, and redundant thermal management (i.e., blowers). Once a Blade server is inserted, there are no additional cables required, and the new server will be fully integrated with the other servers in the enclosure along with all network connections at multiples of 10 Gbps.

It should be noted that each PSnet Blade Enclosure includes two redundant pairs of "Blade Switches." One pair provides normal network access to the rest of PSnet while the other is primarily used for Storage Area Networking (SAN) to connect the Blade Servers to the 3PAR storage systems. Since the 3PAR systems have their own redundant SAN interfaces and control logic, there are no single points of failure in the overall system. While each Blade server does have one local disk drive, the purpose of this drive is to support management and maintenance functions, primarily for managing the 3PAR systems and virtualization environment. All other storage is provided by the 3PAR systems and shared across all Blade servers and VMs.

### **vSphere Hypervisor and Windows OS Deployments**

Once a new Blade Server is installed and brought online, it will be necessary to install the VMware vSphere hypervisor known as ESXi. This is a straight-forward OS installation requiring about a half hour, and is normally a one-time procedure. When the ESXi host hypervisor is booted up, it will then be integrated into the VMware vCenter virtualization management system, which will handle all software updates and integration with other servers in the local cluster as well as the other datacenter server cluster.

### **Licensing Issues and Pricing for VMware vSphere**

Each new vSphere ESXi host will require a VMware license for each processor included with the server. The recommended hardware configuration for a new Blade Server includes two processors, each with 8 cores. This means two vSphere licenses per server, for a total of four new vSphere licenses. At this time, PSnet is using vSphere Standard, which has a list license price of \$995 per processor, but must be purchased with at least one year of basic support at \$273 per processor for a total of \$1,268 per processor. If purchased with a 3-year support contract, the per processor list price would be \$1,716. This equates to \$224 per additional year of support.

Assuming that a single year of support is ordered, then the cost to license two new 2-processor servers would be four times \$1,268, or \$5,072 with one year of support included. If the 3-year support option is purchased, then the total cost would come to \$6,864. The recommendation would be to go with the 1-year support option. It is also recommended that this be purchased directly from VMware, although this could be ordered from HPE as part of the Blade Server purchase.

### **Licensing Issues and Pricing for Microsoft Windows Server**

Currently, PSnet is licensed to run Windows Server 2012 R2 "Datacenter" on each of the four Blade Servers. The licensing model used by Microsoft for this version of Windows Server was per server with up to two processors, and allows running an unlimited number of Windows Server 2012 Virtual Machines (VMs). This is completely adequate for PSnet applications and planned use over the next few years, and there are no compelling reasons to go to newer versions of Windows Server. Microsoft has announced that Windows Server 2012 Datacenter will be fully supported until October 10, 2023, with additional support available after that date for a price.

However, what is important to consider is that newer versions of Windows Server (2016 or 2019) employ a new licensing

model based on cores, rather than processors. In addition, only Windows hypervisors will have any option for running unlimited VMs. For a vSphere environment, only two VMs are licensed, and an additional per-core license is required each time that two more VMs are to be run at the same time on the same server. Further complicating matters, each server must be fully licensed for the maximum number of VMs that might run on that server at any point in time.

If this new licensing model were to be applied to the current servers in the PSnet hosting centers, then each server would need to be able to run up to 12 Windows Server VMs based on the current VM deployments. In reality these 12 VMs are distributed between the two servers in each hosting center for an average of 6 VMs per server, but if the VMs need to be migrated at least temporarily from one server to the other (which they do) then each server would have to be licensed for all 12 VMs. Since each server has 16 cores, we would need 12 divided by 2 licenses for each core, or 6 times 16 core licenses for a total of 96 licenses per server. This needs to be multiplied by 2 again for the two new Blade servers that are proposed.

This is not quite as expensive as it seems on the surface. This is because Microsoft priced a 16-core license bundle for Windows Server 2016 or 2019 to be about the same as for a Windows Server 2012 license for two processors. Where additional costs and complexity come into play is with the requirement to have licenses for the physical hardware server for each pair of VMs running on that server. So, if we want to have licensing for 12 VMs per server, then we would be paying 6 times as much. As an aside, the per VM licensing does not apply to VMs running on the Datacenter edition of Microsoft's own hypervisor, so it would seem this is a strategy to displace VMware vSphere in the market.

For comparison purposes, the original purchase back in 2014 of the two Blade systems with two servers each (four servers in total) included Windows Server 2012 R2 Datacenter licenses at \$4,385 per server, or \$17,540 in total. It is clear that licensing costs for the 2016 or 2019 versions could be considerably more expensive, though probably not 6 times as expensive as the original 2012 licenses that were acquired for PSnet. The reason is that the Datacenter license only makes sense for Microsoft customers that will use Microsoft's hypervisor. For customers using other hypervisors, such as vSphere ESXi, it only makes sense to purchase licenses *à la carte*. It turns out that, for the 12 VMs in this example, the pricing between 2012 and 2016/2019 versions is similar.

There are two major concerns for PSnet moving to the new Microsoft licensing model. One is complexity, since we would have to track VM usage, and be able to respond to audit demands from Microsoft. The other really is cost, since PSnet is likely to use more VMs than would be typical of other use cases. This is because PSnet will support multiple vendors' applications in the hosting centers, and the best way to manage multiple vendors sharing the same virtualized environment would be to give each vendor its own VMs. In other words, it is quite likely that the number of VMs will go up with each new application deployed.

It should be possible to still acquire actual Windows Server 2012 R2 Datacenter licenses from multiple sources. This would be consistent with the current PSnet deployments, and highly preferred for a variety of reasons, including reduction in management overhead to track per-VM licensing. However, purchasing 2016 or 2019 licenses and downgrading to 2012 is not an attractive option, since the newer licensing model would then apply to the 2012 installation.

The other complicating aspect of Microsoft server licensing is the requirement for Client Access Licenses (CALs), either on a per device or per user basis. With the original 2014 order, 100 User CALs were acquired at \$24.25 each, for a total cost of \$2,425. At this time, 100 CALs should continue to be sufficient, even with the addition of a third server at each hosting center. The CALs are required for any user that accesses applications running on a Windows Server 2012 VM running on any server in either hosting center, though this is generally assumed to not apply to system administrators.

Of course, there are other types of CALs that might be used with the PSnet Windows installations, including separate CALs for users using Remote Desktop to access Windows VMs, and CALs used for Microsoft SQL or SharePoint. The 2014 Blade system order included 100 CALs for SQL at total cost of \$15,400. Based on current usage, these CALs are adequate at this time.

In order to get an accurate price estimate for any Windows Server licenses we will need to go through an authorized seller that can advise on Microsoft licensing obligations.

---

I am happy to answer any questions, and we can present these recommendations to the PSnet EC at Tuesday's meeting.

...Chuck

**Subject:** Re: Recommendation for additional Blade server in each PSnet hosting center  
**Attachment(s):** "smime.p7s"

Sarah,

I have reviewed this quote. One significant concern is that I do not see the second processor, Part # 872012-B21, included in the quote. It is possible that this was included in the first item, but it doesn't look like it. The "L21" part number included in the quote is specifically for the first processor added to the Blade, and the "B21" part is the second processor.

Note, I had specifically recommended a two-processor server with each processor having 8 cores. This is to get the new Blade servers to be similar to what we currently have deployed. Also, without the second processor, the HPE configuration checkers will throw out the quoted configuration.

If possible, I would like to be able to work with the vendor you're going to use for this order. The reason I'm asking to be in the loop is so we can confirm that we are ordering new Blade servers that will be compatible with our current c3000 Blade Enclosures and associated switches. Also with the 3PAR systems.

Thanks for sharing this quote with me...  
...Chuck

Chuck & Eric,

Please see quote attached for a single Blade Server. I realize I'd be ordering two, as we need one in each location. Can you please review and confirm that this meets our technical specification needs?

Thanks,  
Sarah

On Sun, Feb 24, 2019 at 6:29 PM Chuck Wade <[Chuck@interisle.net](mailto:Chuck@interisle.net)> wrote:

Scott, Sarah,

After a lot of consideration, the PSnet team has determined that the most pressing need for additional capital investment in PSnet is to complete establishment of a fully robust virtualization environment at the Boston and Cambridge hosting centers to adequately support current, plus new applications hosted by PSnet for regional use.

The current Blade systems each have two Blade servers with dual 8-core processors and 128 GB of memory. This provides adequate processing capacity for current workloads. However, for a virtualized environment to support fault tolerance and provide a resilient platform for Virtual Machines (VMs) and applications, three physical servers are needed at each hosting center (see below for the rationale). In other words, PSnet is constrained by not having the required minimum number of servers for a fully robust virtualized environment. At the same time, an additional server will provide more "headroom" for heavier workloads that are anticipated over the next couple of years.

There are many technical and operational advantages to using Blade servers deployed within a shared Blade enclosure that provides a fully integrated system environment for each additional Blade server. However, one downside is that Blade servers are priced at significant premiums. In addition, every server (whether or not a Blade) also requires software licenses for the hypervisor operating system (OS) that supports VMs as well as licenses for Windows OSs used by the individual VMs. Consequently, the total cost per server at list is ~\$22,000.

The table below shows the items that need to be ordered along with published list prices.

| Vendor | Description | Quantity | Unit Price | Ext. Price |
|--------|-------------|----------|------------|------------|
|        |             |          |            |            |

|           |                                                                                                                                                                                                                                                                                                                                                                                                                                                            |                |                                |                 |

|           |                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <b>Totals:</b> | <b>\$22,158<br/>per server</b> | <b>\$44,316</b> |

Since the above prices are list retail, it is likely that the final procurement prices would be 10% to 20% less.

A Bill of Materials is attached for the HPE Blade Server that was generated using HPE's publicly accessible configuration tool. This configuration was intentionally tailored to be equivalent to the currently deployed Blade Servers (BL 460c Gen 8). Note that there was no option to change the 1-year support contract from "Proactive" to "Foundation," which is all that PSnet needs.

Also, we are recommending that the same Microsoft Windows Server Datacenter 2012 R2 license be procured as was included with the original 2014 purchase of these Blade systems. A complete explanation is provided below for this recommendation.

### **Rationale for Adding a Third Server at each PSnet Hosting Center**

In order to have a fully functional virtualization environment, each hosting center requires three physical servers. There are several reasons for this requirement, but probably the most compelling is that fault tolerant configurations require at least three physical servers to "vote" which servers are available or unavailable. This voting logic also applies to various services, individual VMs, and core management capabilities. The VMware vSphere virtualization environment used at the PSnet hosting centers is currently unable to handle degraded conditions in an automated manner since there are only two physical servers.

It is also worth emphasizing that the lack of a third server means that many normal maintenance procedures must be done manually. To be specific, any operation that requires a reboot of a server means that we must first migrate all VMs running on the server to the other server, then manually put the server into maintenance mode, perform the software or firmware upgrade, manually reboot the server, take it back out of maintenance mode, and finally migrate the VMs back to the server when it is fully back online. This procedure takes at least a half hour per physical server. With three servers, all of these steps can be automated and scheduled to take place at an appropriate time; e.g., the middle of the night.

Another benefit to operating with three servers is that vSphere is able to recover from server crashes on its own, often without disrupting VMs. In the current two-server configuration, a server going down will force all VMs active on that server to reboot on the other server. If we become capacity constrained, then it might not be possible to bring up all VMs on a single server.

### **Current Physical Server Deployments**

The current PSnet hosting centers are each based on HPE c3000 Blade Enclosures with both Blade Servers and Switches. Although these Blade Enclosures will each support up to eight (8) Blade Servers, there are only two servers currently deployed per enclosure (or hosting center).

In order to add another server, all that is necessary is to insert a new Blade server into the enclosure. The enclosure provides all of the networking, including storage networking, as well as central server management, console access, redundant power, and redundant thermal management (i.e., blowers). Once a Blade server is inserted, there are no additional cables required, and the new server will be fully integrated with the other servers in the enclosure along with all network connections at multiples of 10 Gbps.

It should be noted that each PSnet Blade Enclosure includes two redundant pairs of "Blade Switches." One pair provides normal network access to the rest of PSnet while the other is primarily used for Storage Area Networking (SAN) to connect the Blade Servers to the 3PAR storage systems. Since the 3PAR systems have their own redundant SAN interfaces and control logic, there are no single points of failure in the overall system. While each Blade server does have one local disk drive, the purpose of this drive is to support management and maintenance functions, primarily for managing the 3PAR systems and virtualization environment. All other storage is provided by the 3PAR systems and shared across all Blade servers and VMs.

### **vSphere Hypervisor and Windows OS Deployments**

Once a new Blade Server is installed and brought online, it will be necessary to install the VMware vSphere hypervisor known as ESXi. This is a straight-forward OS installation requiring about a half hour, and is normally a one-time procedure. When the ESXi host hypervisor is booted up, it will then be integrated into the VMware vCenter virtualization management system, which will handle all software updates and integration with other servers in the local cluster as well as the other datacenter server cluster.

### **Licensing Issues and Pricing for VMware vSphere**

Each new vSphere ESXi host will require a VMware license for each processor included with the server. The recommended hardware configuration for a new Blade Server includes two processors, each with 8 cores. This means two vSphere licenses per server, for a total of four new vSphere licenses. At this time, PSnet is using vSphere Standard, which has a list license price of \$995 per processor, but must be purchased with at least one year of basic support at \$273 per processor for a total of \$1,268 per processor. If purchased with a 3-year support contract, the per processor list price would be \$1,716. This equates to \$224 per additional year of support.

Assuming that a single year of support is ordered, then the cost to license two new 2-processor servers would be four times \$1,268, or \$5,072 with one year of support included. If the 3-year support option is purchased, then the total cost would come to \$6,864. The recommendation would be to go with the 1-year support option. It is also recommended that this be purchased directly from VMware, although this could be ordered from HPE as part of the Blade Server purchase.

### **Licensing Issues and Pricing for Microsoft Windows Server**

Currently, PSnet is licensed to run Windows Server 2012 R2 "Datacenter" on each of the four Blade Servers. The licensing model used by Microsoft for this version of Windows Server was per server with up to two processors, and allows running an unlimited number of Windows Server 2012 Virtual Machines (VMs). This is completely adequate for PSnet applications and planned use over the next few years, and there are no compelling reasons to go to newer versions of Windows Server. Microsoft has announced that Windows Server 2012 Datacenter will be fully supported until October 10, 2023, with additional support available after that date for a price.

However, what is important to consider is that newer versions of Windows Server (2016 or 2019) employ a new licensing model based on cores, rather than processors. In addition, only Windows hypervisors will have any option for running unlimited VMs. For a vSphere environment, only two VMs are licensed, and an additional per-core license is required each time that two more VMs are to be run at the same time on the same server. Further complicating matters, each server must be fully licensed for the maximum number of VMs that might run on that server at any point in time.

If this new licensing model were to be applied to the current servers in the PSnet hosting centers, then each server would need to be able to run up to 12 Windows Server VMs based on the current VM deployments. In reality these 12 VMs are distributed between the two servers in each hosting center for an average of 6 VMs per server, but if the VMs need to be migrated at least temporarily from one server to the other (which they do) then each server would have to be licensed for all 12 VMs. Since each server has 16 cores, we would need 12 divided by 2 licenses for each core, or 6 times 16 core licenses for a total of 96 licenses per server. This needs to be multiplied by 2 again for the two new Blade servers that are proposed.

This is not quite as expensive as it seems on the surface. This is because Microsoft priced a 16-core license bundle for Windows Server 2016 or 2019 to be about the same as for a Windows Server 2012 license for two processors. Where additional costs and complexity come into play is with the requirement to have licenses for the physical hardware server for each pair of VMs running on that server. So, if we want to have licensing for 12 VMs per server, then we would be paying 6 times as much. As an aside, the per VM licensing does not apply to VMs running on the Datacenter edition of Microsoft's own hypervisor, so it would seem this is a strategy to displace VMware vSphere in the market.

For comparison purposes, the original purchase back in 2014 of the two Blade systems with two servers each (four servers in total) included Windows Server 2012 R2 Datacenter licenses at \$4,385 per server, or \$17,540 in total. It is clear that licensing costs for the 2016 or 2019 versions could be considerably more expensive, though probably not 6 times as expensive as the original 2012 licenses that were acquired for PSnet. The reason is that the Datacenter license only makes sense for Microsoft customers that will use Microsoft's hypervisor. For customers using other hypervisors, such as vSphere ESXi, it only makes sense to purchase licenses *à la carte*. It turns out that, for the 12 VMs in this example, the pricing between 2012 and 2016/2019 versions is similar.

There are two major concerns for PSnet moving to the new Microsoft licensing model. One is complexity, since we would have to track VM usage, and be able to respond to audit demands from Microsoft. The other really is cost, since PSnet is likely to use more VMs than would be typical of other use cases. This is because PSnet will support multiple vendors' applications in the hosting centers, and the best way to manage multiple vendors sharing the same virtualized environment would be to give each vendor its own VMs. In other words, it is quite likely that the number of VMs will go up with each new application deployed.

It should be possible to still acquire actual Windows Server 2012 R2 Datacenter licenses from multiple sources. This would be consistent with the current PSnet deployments, and highly preferred for a variety of reasons, including reduction in management overhead to track per-VM licensing. However, purchasing 2016 or 2019 licenses and downgrading to 2012 is not an attractive option, since the newer licensing model would then apply to the 2012 installation.

The other complicating aspect of Microsoft server licensing is the requirement for Client Access Licenses (CALs), either on a per device or per user basis. With the original 2014 order, 100 User CALs were acquired at \$24.25 each, for a total cost of \$2,425. At this time, 100 CALs should continue to be sufficient, even with the addition of a third server at each hosting center. The CALs are required for any user that accesses applications running on a Windows Server 2012 VM running on any server in either hosting center, though this is generally assumed to not apply to system administrators.

Of course, there are other types of CALs that might be used with the PSnet Windows installations, including separate CALs for users using Remote Desktop to access Windows VMs, and CALs used for Microsoft SQL or SharePoint. The 2014 Blade system order included 100 CALs for SQL at total cost of \$15,400. Based on current usage, these CALs are adequate at this time.

In order to get an accurate price estimate for any Windows Server licenses we will need to go through an authorized seller that can advise on Microsoft licensing obligations.

---

I am happy to answer any questions, and we can present these recommendations to the PSnet EC at Tuesday's meeting.

...Chuck

Shawn / Lou

It appears we lost BONET at City Hall . I do not know of any planned outages for this site through DOIT. The cameras affected are around Trem / Camb - State St and City Hall PTZ . I do not know how to contact DOIT for response to troubleshoot .

Also the antenna at 40 Harrison is down this affecting about 12 cameras in the Chinatown area . A remote reboot of AP Antenna did not reset we will dispatch to thin site and triage .

Approximately 25 cameras down between 2 sites .

Thanks  
Eric

Thanks, Eric. Did this ever get resolved? I think City Hall had a planned power shutdown on Saturday which maybe is the cause of it.

**Subject: Cameras down**

Shawn / Lou

It appears we lost BONET at City Hall . I do not know of any planned outages for this site through DOIT. The cameras affected are around Trem / Camb - State St and City Hall PTZ . I do not know how to contact DOIT

for response to troubleshoot .

Also the antenna at 40 Harrison is down this affecting about 12 cameras in the Chinatown area . A remote reboot of AP Antenna did not reset we will dispatch to thin site and triage .

Approximately 25 cameras down between 2 sites .

Thanks  
Eric

**Subject:** Re: Recommendation for additional Blade server in each PSnet hosting center  
**Attachment(s):** "Quote27362 (2).pdf"

Hi Chuck,

I requested the revised quote with the missing part number added, and they were quick to provide it. I've attached it again. I won't know which vendor we are using until we are putting a PO together because I do have to bid this out. Therefore, can you please review and let me know if there are other missing elements to this quote or other notes I should include in the bid process?

Thank you,  
Sarah

On Fri, Mar 8, 2019 at 2:06 PM Chuck Wade <Chuck@interisle.net> wrote:

Sarah,

I have reviewed this quote. One significant concern is that I do not see the second processor, Part # 872012-B21, included in the quote. It is possible that this was included in the first item, but it doesn't look like it. The "L21" part number included in the quote is specifically for the first processor added to the Blade, and the "B21" part is the second processor.

Note, I had specifically recommended a two-processor server with each processor having 8 cores. This is to get the new Blade servers to be similar to what we currently have deployed. Also, without the second processor, the HPE configuration checkers will throw out the quoted configuration.

If possible, I would like to be able to work with the vendor you're going to use for this order. The reason I'm asking to be in the loop is so we can confirm that we are ordering new Blade servers that will be compatible with our current c3000 Blade Enclosures and associated switches. Also with the 3PAR systems.

Thanks for sharing this quote with me...  
...Chuck

Chuck & Eric,

Please see quote attached for a single Blade Server. I realize I'd be ordering two, as we need one in each location. Can you please review and confirm that this meets our technical specification needs?

Thanks,  
Sarah

On Sun, Feb 24, 2019 at 6:29 PM Chuck Wade <Chuck@interisle.net> wrote:

Scott, Sarah,

After a lot of consideration, the PSnet team has determined that the most pressing need for additional capital investment in PSnet is to complete establishment of a fully robust virtualization environment at the Boston and Cambridge hosting centers to adequately support current, plus new applications hosted by PSnet for regional use.

The current Blade systems each have two Blade servers with dual 8-core processors and 128 GB of memory. This provides adequate processing capacity for current workloads. However, for a virtualized environment to support fault tolerance and provide a resilient platform for Virtual Machines (VMs) and applications, three physical servers are needed at each hosting center (see below for the rationale). In other words, PSnet is constrained by not having the required minimum number of servers for a fully robust virtualized environment. At the same time, an additional server will provide more "headroom" for heavier workloads that are anticipated over the next couple of years.

There are many technical and operational advantages to using Blade servers deployed within a shared Blade enclosure that provides a fully integrated system environment for each additional Blade server. However, one downside is that Blade servers are priced at significant premiums. In addition, every server (whether or not a Blade) also requires software licenses for the hypervisor operating system (OS) that supports VMs as well as licenses for Windows OSs used by the individual VMs. Consequently, the total cost per server at list is ~\$22,000.

The table below shows the items that need to be ordered along with published list prices.

| Vendor    | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                | Quantity       | Unit Price                 | Ext. |           |                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <b>Totals:</b> | <b>\$22,158 per server</b> | <b>\$44,316</b> |

Since the above prices are list retail, it is likely that the final procurement prices would be 10% to 20% less.

A Bill of Materials is attached for the HPE Blade Server that was generated using HPE's publicly accessible configuration tool. This configuration was intentionally tailored to be equivalent to the currently deployed Blade Servers (BL 460c Gen 8). Note that there was no option to change the 1-year support contract from "Proactive" to "Foundation," which is all that PSnet needs.

Also, we are recommending that the same Microsoft Windows Server Datacenter 2012 R2 license be procured as was included with the original 2014 purchase of these Blade systems. A complete explanation is provided below for this recommendation.

### Rationale for Adding a Third Server at each PSnet Hosting Center

In order to have a fully functional virtualization environment, each hosting center requires three physical servers. There are several reasons for this requirement, but probably the most compelling is that fault tolerant configurations require at least three physical servers to "vote" which servers are available or unavailable. This voting logic also applies to various services, individual VMs, and core management capabilities. The VMware vSphere virtualization environment used at the PSnet hosting centers is currently unable to handle degraded conditions in an automated manner since there are only two physical servers.

It is also worth emphasizing that the lack of a third server means that many normal maintenance procedures must be done manually. To be specific, any operation that requires a reboot of a server means that we must first migrate all VMs running on the server to the other server, then manually put the server into maintenance mode, perform the software or firmware upgrade, manually reboot the server, take it back out of maintenance mode, and finally migrate the VMs back to the server when it is fully back online. This procedure takes at least a half hour per physical server. With three servers, all of these steps can be automated and scheduled to take place at an appropriate time; e.g., the middle of the night.

Another benefit to operating with three servers is that vSphere is able to recover from server crashes on its own, often without disrupting VMs. In the current two-server configuration, a server going down will force all VMs active on that server to reboot on the other server. If we become capacity constrained, then it might not be possible to bring up all VMs on a single server.

### Current Physical Server Deployments

The current PSnet hosting centers are each based on HPE c3000 Blade Enclosures with both Blade Servers and Switches. Although these Blade Enclosures will each support up to eight (8) Blade Servers, there are only two servers currently deployed per enclosure (or hosting center).

In order to add another server, all that is necessary is to insert a new Blade server into the enclosure. The enclosure provides all of the networking, including storage networking, as well as central server management, console access, redundant power, and redundant thermal management (i.e., blowers). Once

a Blade server is inserted, there are no additional cables required, and the new server will be fully integrated with the other servers in the enclosure along with all network connections at multiples of 10 Gbps.

It should be noted that each PSnet Blade Enclosure includes two redundant pairs of "Blade Switches." One pair provides normal network access to the rest of PSnet while the other is primarily used for Storage Area Networking (SAN) to connect the Blade Servers to the 3PAR storage systems. Since the 3PAR systems have their own redundant SAN interfaces and control logic, there are no single points of failure in the overall system. While each Blade server does have one local disk drive, the purpose of this drive is to support management and maintenance functions, primarily for managing the 3PAR systems and virtualization environment. All other storage is provided by the 3PAR systems and shared across all Blade servers and VMs.

### **vSphere Hypervisor and Windows OS Deployments**

Once a new Blade Server is installed and brought online, it will be necessary to install the VMware vSphere hypervisor known as ESXi. This is a straight-forward OS installation requiring about a half hour, and is normally a one-time procedure. When the ESXi host hypervisor is booted up, it will then be integrated into the VMware vCenter virtualization management system, which will handle all software updates and integration with other servers in the local cluster as well as the other datacenter server cluster.

### **Licensing Issues and Pricing for VMware vSphere**

Each new vSphere ESXi host will require a VMware license for each processor included with the server. The recommended hardware configuration for a new Blade Server includes two processors, each with 8 cores. This means two vSphere licenses per server, for a total of four new vSphere licenses. At this time, PSnet is using vSphere Standard, which has a list license price of \$995 per processor, but must be purchased with at least one year of basic support at \$273 per processor for a total of \$1,268 per processor. If purchased with a 3-year support contract, the per processor list price would be \$1,716. This equates to \$224 per additional year of support.

Assuming that a single year of support is ordered, then the cost to license two new 2-processor servers would be four times \$1,268, or \$5,072 with one year of support included. If the 3-year support option is purchased, then the total cost would come to \$6,864. The recommendation would be to go with the 1-year support option. It is also recommended that this be purchased directly from VMware, although this could be ordered from HPE as part of the Blade Server purchase.

### **Licensing Issues and Pricing for Microsoft Windows Server**

Currently, PSnet is licensed to run Windows Server 2012 R2 "Datacenter" on each of the four Blade Servers. The licensing model used by Microsoft for this version of Windows Server was per server with up to two processors, and allows running an unlimited number of Windows Server 2012 Virtual Machines (VMs). This is completely adequate for PSnet applications and planned use over the next few years, and there are no compelling reasons to go to newer versions of Windows Server. Microsoft has announced that Windows Server 2012 Datacenter will be fully supported until October 10, 2023, with additional support available after that date for a price.

However, what is important to consider is that newer versions of Windows Server (2016 or 2019) employ a new licensing model based on cores, rather than processors. In addition, only Windows hypervisors will have any option for running unlimited VMs. For a vSphere environment, only two VMs are licensed, and an additional per-core license is required each time that two more VMs are to be run at the same time on the same server. Further complicating matters, each server must be fully licensed for the maximum number of VMs that might run on that server at any point in time.

If this new licensing model were to be applied to the current servers in the PSnet hosting centers, then each server would need to be able to run up to 12 Windows Server VMs based on the current VM deployments. In reality these 12 VMs are distributed between the two servers in each hosting center for an average of 6 VMs per server, but if the VMs need to be migrated at least temporarily from one server to the other (which they do) then each server would have to be licensed for all 12 VMs. Since each server has 16 cores, we would need 12 divided by 2 licenses for each core, or 6 times 16 core licenses for a total of 96 licenses per server. This needs to be multiplied by 2 again for the two new Blade servers that are proposed.

This is not quite as expensive as it seems on the surface. This is because Microsoft priced a 16-core license bundle for Windows Server 2016 or 2019 to be about the same as for a Windows Server 2012 license for two processors. Where additional costs and complexity come into play is with the requirement to have licenses for the physical hardware server for each pair of VMs running on that server. So, if we want to have licensing for 12 VMs per server, then we would be paying 6 times as much. As an aside, the per VM licensing does not apply to VMs running on the Datacenter edition of Microsoft's own hypervisor, so it would seem this is a strategy to displace VMware vSphere in the market.

For comparison purposes, the original purchase back in 2014 of the two Blade systems with two servers

each (four servers in total) included Windows Server 2012 R2 Datacenter licenses at \$4,385 per server, or \$17,540 in total. It is clear that licensing costs for the 2016 or 2019 versions could be considerably more expensive, though probably not 6 times as expensive as the original 2012 licenses that were acquired for PSnet. The reason is that the Datacenter license only makes sense for Microsoft customers that will use Microsoft's hypervisor. For customers using other hypervisors, such as vSphere ESXi, it only makes sense to purchase licenses *à la carte*. It turns out that, for the 12 VMs in this example, the pricing between 2012 and 2016/2019 versions is similar.

There are two major concerns for PSnet moving to the new Microsoft licensing model. One is complexity, since we would have to track VM usage, and be able to respond to audit demands from Microsoft. The other really is cost, since PSnet is likely to use more VMs than would be typical of other use cases. This is because PSnet will support multiple vendors' applications in the hosting centers, and the best way to manage multiple vendors sharing the same virtualized environment would be to give each vendor its own VMs. In other words, it is quite likely that the number of VMs will go up with each new application deployed.

It should be possible to still acquire actual Windows Server 2012 R2 Datacenter licenses from multiple sources. This would be consistent with the current PSnet deployments, and highly preferred for a variety of reasons, including reduction in management overhead to track per-VM licensing. However, purchasing 2016 or 2019 licenses and downgrading to 2012 is not an attractive option, since the newer licensing model would then apply to the 2012 installation.

The other complicating aspect of Microsoft server licensing is the requirement for Client Access Licenses (CALs), either on a per device or per user basis. With the original 2014 order, 100 User CALs were acquired at \$24.25 each, for a total cost of \$2,425. At this time, 100 CALs should continue to be sufficient, even with the addition of a third server at each hosting center. The CALs are required for any user that accesses applications running on a Windows Server 2012 VM running on any server in either hosting center, though this is generally assumed to not apply to system administrators.

Of course, there are other types of CALs that might be used with the PSnet Windows installations, including separate CALs for users using Remote Desktop to access Windows VMs, and CALs used for Microsoft SQL or SharePoint. The 2014 Blade system order included 100 CALs for SQL at total cost of \$15,400. Based on current usage, these CALs are adequate at this time.

In order to get an accurate price estimate for any Windows Server licenses we will need to go through an authorized seller that can advise on Microsoft licensing obligations.

---

I am happy to answer any questions, and we can present these recommendations to the PSnet EC at Tuesday's meeting.

...Chuck

**Subject:** Re: LAN-TEL camera work in the MBHSR

Hi Eric,

Just wanted to follow up on this thread again. At the most recent Critical Infrastructure meeting, the subcommittee discussion touched on various camera projects going on across the region. This stemmed in part from Marathon Prep, but also just by way of CIMS updates and all that. The group wanted to come together specifically to talk about cameras, and to that end I've set up a meeting with at least one stakeholder from each community who has some point of connection with the CIMS cameras and/or their own community cameras. We're going to be meeting next week, Tuesday March 19, at 2pm at the Brookline Police Department. I'm going to be sending out a Google calendar invite shortly and I will put you on it because the group would like for you to attend if you are available and speak to updates you all are working on, or ideas or concerns you have, etc. I'll be adding a bullet point to the agenda for "LAN-TEL Updates" to reflect that. If you're able to attend, please do. If you have other things going on that day, perhaps you can either send another LAN-TEL representative who works with CIMS, or you can email out ahead of time some of those things and I can share them with the group in your absence.

Thanks!  
Sarah

Thank you for clarifying and you have my word if someone tries to push something without the proper steps, I will bring to OEM's attention or recommend that we have that particular stakeholder contact you directly.

Have a great weekend as well!

Eric

Hi Eric,

Thanks for the thoughtful reply. Yes, I know that this is how you have operated. I just wanted to document again. My concern is more with the stakeholders themselves, who sometimes are not aware of the various PO's in place and are eager to initiate projects. I will also be stressing to them that they must ensure that projects have received all of the appropriate approvals and are tied into current contracts prior to beginning work. If they are ever impatient with you because they assume work can begin when in fact we are still corralling all of those details, you can refer them to my previous email below and let OEM take the heat for any "delays." The stakeholders' intentions are good, but they are not always up to date on the processes. For that reason, I wanted to be sure that all of us are on the same page, hence my emails. If I do hear of a particular instance in which someone jumped the gun somehow, I will certainly bring that to you. But this communication was to be proactive rather than reactive. :)

Regarding a CIMS working group - yes this used to exist. The Critical Infrastructure subcommittee, under which that group belonged, discussed this very thing in October I believe. For the time being they prefer to operate as an entire subcommittee rather than re-initiate a subset working group. That being said, I do hear your rationale regarding having more focused CIMS conversations, and perhaps we can schedule a one-off meeting or incorporate a formal CIMS/LAN-TEL update at one of the spring subcommittee meetings. That's a good thought and I'll pass it along to the subcommittee chair.

Thanks again for all that you do for the Region. LAN-TEL has been a great partner for a number of years and we value your services!

Have a good weekend,  
Sarah

Sarah

Good afternoon , understood on your email . That's how we have always operated and will continue to do so .

While it is tough navigating the different parameters , I believe we keep our demarcations within the POs issued with strict adherence.

If your email is based on anything you may of heard, Is there an insistence of where we did work without OEM not knowing ? Because I cannot think of anything off the top of my head.

Please know that with some of the UASI cities and towns that we maintain with CIMs and PSNET contracts , we also have direct contracts to maintain other internal camera systems that are not affected by OEM.

Example :BPD cell system and District cameras , Somerville internal , etc)

I hope that is being taken into consideration and not being misconstrued as CIMs or PSNET work .

On another note and I discussed this with Scott Wilder recently . While we have many meetings on PSNET and a smaller footprint with stakeholders , we never have any CIMS meetings where we have more day to day dealings with stakeholders and a ton of more equipment.

Could we possibly make this an actionable item to accomplish a few meetings regarding CIMS and maybe the message of what can or cannot be done will be repeated and certified in these meetings ?

Just a thought ?

Thanks ! and please let me know if we have done anything to go outside any bounds within the contracts.

Eric

Hi Eric,

I know we've got a lot of camera work going on in the Region right now, and many stakeholders are eager to replace cameras, install new ones, get quotes for future target hardening projects, etc, even make use of the mobile response unit and deploy other LAN-TEL services.

To that end, I want to say by way of reminder that any time you are asked by a MBHSR stakeholder to install new equipment or relocate existing equipment elsewhere, or deploy other services, you need to first reach out to OEM to confirm that the work has been approved prior to beginning. Often times as you well know we need to get FEMA approval for installations and relocation work. We also have several PO's with LAN-TEL currently, and while a stakeholder may think they are asking for work done under an existing PO, it's entirely possible that the scope of work falls outside of that contract and must be procured anew.

I will be reminding the subcommittee members of this next week again as well. But just wanted to send this out now as the weather gets nice enough to begin a new season of outdoor camera (and other) work.

Thanks,  
Sarah

**Subject:** Re: Recommendation for additional Blade server in each PSnet hosting center  
**Attachment(s):** "smime.p7s"

Sarah,

This looks better. It essentially repeats the configuration I extracted from the HPE configuration tool.

I suggest that the RFP or RFQ stipulate that the new Blade servers must be compatible with our existing c3000 Blade Enclosures, Blade switches, and 3PAR storage systems. It might help to also stipulate that we use iSCSI for the 3PAR SAN. The new Blade servers should also be compatible with the latest version of VMware vSphere with vCenter (at least version 6.7 Update 1). If necessary, I could provide you with a system inventory, or the HPE system numbers that can be used to cross-check the configurations. Unfortunately, the HPE configuration tool that I am able to access does not perform cross-checks against existing system configurations.

The reason I was asking to be "in the loop" for this order is that I would actually like to get some advice from people knowledgeable with HPE server configurations. Obviously, I don't do this every day myself, and even though I have thoroughly scrutinized the available HPE documentation, there can be issues with how systems are integrated that are not documented. As an example, I could not find documentation on what TPM configuration we should use for compatibility with the vSphere ESXi hypervisor. I included the no-cost "HPE Gen10 TPM 1.2 FIO Setting" (872108-B21) as a guess, but I'd really like to understand what this undocumented option does, or does not, provide.

Trying to confirm complex configuration issues while working through 2 or 3 levels of indirection makes this a bit of a challenge.

One other issue to consider is whether there would be any advantages (*real* advantages!) to acquiring either or both the Windows Server 2012R2 Datacenter licenses or the vSphere licenses from HPE. I don't believe this to be the case, and I would be particularly concerned about getting the Windows Server license through them. But it is hard for me to explore these issues without having a dialog with HPE or their reseller.

As a reminder, we really do need to acquire a true Windows Server 2012R2 Datacenter license, and not a downgrade-able Windows Server 2016 or 2019 Datacenter license, since that would force us into the new Microsoft licensing model.

...Chuck

Hi Chuck,

I requested the revised quote with the missing part number added, and they were quick to provide it. I've attached it again. I won't know which vendor we are using until we are putting a PO together because I do have to bid this out. Therefore, can you please review and let me know if there are other missing elements to this quote or other notes I should include in the bid process?

Thank you,  
Sarah

On Fri, Mar 8, 2019 at 2:06 PM Chuck Wade <[Chuck@interisle.net](mailto:Chuck@interisle.net)> wrote:

Sarah,

I have reviewed this quote. One significant concern is that I do not see the second processor, Part # 872012-B21, included in the quote. It is possible that this was included in the first item, but it doesn't look like it. The "L21" part number included in the quote is specifically for the first processor added to the Blade, and the "B21" part is the second processor.

Note, I had specifically recommended a two-processor server with each processor having 8 cores. This is to get the new Blade servers to be similar to what we currently have deployed. Also, without the second processor, the HPE configuration checkers will throw out the quoted configuration.

If possible, I would like to be able to work with the vendor you're going to use for this order. The reason I'm asking to be in the loop is so we can confirm that we are ordering new Blade servers that will be compatible with our current c3000 Blade Enclosures and associated switches. Also with the 3PAR systems.

Thanks for sharing this quote with me...

Chuck & Eric,

Please see quote attached for a single Blade Server. I realize I'd be ordering two, as we need one in each location. Can you please review and confirm that this meets our technical specification needs?

Thanks,  
Sarah

On Sun, Feb 24, 2019 at 6:29 PM Chuck Wade <[Chuck@interisle.net](mailto:Chuck@interisle.net)> wrote:

Scott, Sarah,

After a lot of consideration, the PSnet team has determined that the most pressing need for additional capital investment in PSnet is to complete establishment of a fully robust virtualization environment at the Boston and Cambridge hosting centers to adequately support current, plus new applications hosted by PSnet for regional use.

The current Blade systems each have two Blade servers with dual 8-core processors and 128 GB of memory. This provides adequate processing capacity for current workloads. However, for a virtualized environment to support fault tolerance and provide a resilient platform for Virtual Machines (VMs) and applications, three physical servers are needed at each hosting center (see below for the rationale). In other words, PSnet is constrained by not having the required minimum number of servers for a fully robust virtualized environment. At the same time, an additional server will provide more "headroom" for heavier workloads that are anticipated over the next couple of years.

There are many technical and operational advantages to using Blade servers deployed within a shared Blade enclosure that provides a fully integrated system environment for each additional Blade server. However, one downside is that Blade servers are priced at significant premiums. In addition, every server (whether or not a Blade) also requires software licenses for the hypervisor operating system (OS) that supports VMs as well as licenses for Windows OSs used by the individual VMs. Consequently, the total cost per server at list is ~\$22,000.

The table below shows the items that need to be ordered along with published list prices.

| Vendor | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                | Quantity | Unit Price | Ext. |-----------|------------------------------------------------------------------------------|----------------|----------------------------|-----------------|
| Microsoft | Windows Server Datacenter 2012 R2 license OLP NL for 2 processors per server | 2              | \$6,155                    | \$12,310        |
|           |                                                                              | <b>Totals:</b> | <b>\$22,158 per server</b> | <b>\$44,316</b> |

Since the above prices are list retail, it is likely that the final procurement prices would be 10% to 20% less.

A Bill of Materials is attached for the HPE Blade Server that was generated using HPE's publicly accessible configuration tool. This configuration was intentionally tailored to be equivalent to the currently deployed Blade Servers (BL 460c Gen 8). Note that there was no option to change the 1-year support contract from "Proactive" to "Foundation," which is all that PSnet needs.

Also, we are recommending that the same Microsoft Windows Server Datacenter 2012 R2 license be procured as was included with the original 2014 purchase of these Blade systems. A complete explanation is provided below for this recommendation.

### **Rationale for Adding a Third Server at each PSnet Hosting Center**

In order to have a fully functional virtualization environment, each hosting center requires three physical servers. There are several reasons for this requirement, but probably the most compelling is that fault tolerant configurations require at least three physical servers to "vote" which servers are available or unavailable. This voting logic also applies to various services, individual VMs, and core management capabilities. The VMware vSphere virtualization environment used at the PSnet hosting centers is currently unable to handle degraded conditions in an automated manner since there are only two physical servers.

It is also worth emphasizing that the lack of a third server means that many normal maintenance procedures must be done manually. To be specific, any operation that requires a reboot of a server means that we must first migrate all VMs running on the server to the other server, then manually put the server into maintenance mode, perform the software or firmware upgrade, manually reboot the server, take it back out of maintenance mode, and finally migrate the VMs back to the server when it is fully back online. This procedure takes at least a half hour per physical server. With three servers, all of these steps can be automated and scheduled to take place at an appropriate time; e.g., the middle of the night.

Another benefit to operating with three servers is that vSphere is able to recover from server crashes on its own, often without disrupting VMs. In the current two-server configuration, a server going down will force all VMs active on that server to reboot on the other server. If we become capacity constrained, then it might not be possible to bring up all VMs on a single server.

### **Current Physical Server Deployments**

The current PSnet hosting centers are each based on HPE c3000 Blade Enclosures with both Blade Servers and Switches. Although these Blade Enclosures will each support up to eight (8) Blade Servers, there are only two servers currently deployed per enclosure (or hosting center).

In order to add another server, all that is necessary is to insert a new Blade server into the enclosure. The enclosure provides all of the networking, including storage networking, as well as central server management, console access, redundant power, and redundant thermal management (i.e., blowers). Once a Blade server is inserted, there are no additional cables required, and the new server will be fully integrated with the other servers in the enclosure along with all network connections at multiples of 10 Gbps.

It should be noted that each PSnet Blade Enclosure includes two redundant pairs of "Blade Switches." One pair provides normal network access to the rest of PSnet while the other is primarily used for Storage Area Networking (SAN) to connect the Blade Servers to the 3PAR storage systems. Since the 3PAR systems have their own redundant SAN interfaces and control logic, there are no single points of failure in the overall system. While each Blade server does have one local disk drive, the purpose of this drive is to support management and maintenance functions, primarily for managing the 3PAR systems and virtualization environment. All other storage is provided by the 3PAR systems and shared across all Blade servers and VMs.

### **vSphere Hypervisor and Windows OS Deployments**

Once a new Blade Server is installed and brought online, it will be necessary to install the VMware vSphere hypervisor known as ESXi. This is a straight-forward OS installation requiring about a half hour, and is normally a one-time procedure. When the ESXi host hypervisor is

booted up, it will then be integrated into the VMware vCenter virtualization management system, which will handle all software updates and integration with other servers in the local cluster as well as the other datacenter server cluster.

### **Licensing Issues and Pricing for VMware vSphere**

Each new vSphere ESXi host will require a VMware license for each processor included with the server. The recommended hardware configuration for a new Blade Server includes two processors, each with 8 cores. This means two vSphere licenses per server, for a total of four new vSphere licenses. At this time, PSnet is using vSphere Standard, which has a list license price of \$995 per processor, but must be purchased with at least one year of basic support at \$273 per processor for a total of \$1,268 per processor. If purchased with a 3-year support contract, the per processor list price would be \$1,716. This equates to \$224 per additional year of support.

Assuming that a single year of support is ordered, then the cost to license two new 2-processor servers would be four times \$1,268, or \$5,072 with one year of support included. If the 3-year support option is purchased, then the total cost would come to \$6,864. The recommendation would be to go with the 1-year support option. It is also recommended that this be purchased directly from VMware, although this could be ordered from HPE as part of the Blade Server purchase.

### **Licensing Issues and Pricing for Microsoft Windows Server**

Currently, PSnet is licensed to run Windows Server 2012 R2 "Datacenter" on each of the four Blade Servers. The licensing model used by Microsoft for this version of Windows Server was per server with up to two processors, and allows running an unlimited number of Windows Server 2012 Virtual Machines (VMs). This is completely adequate for PSnet applications and planned use over the next few years, and there are no compelling reasons to go to newer versions of Windows Server. Microsoft has announced that Windows Server 2012 Datacenter will be fully supported until October 10, 2023, with additional support available after that date for a price.

However, what is important to consider is that newer versions of Windows Server (2016 or 2019) employ a new licensing model based on cores, rather than processors. In addition, only Windows hypervisors will have any option for running unlimited VMs. For a vSphere environment, only two VMs are licensed, and an additional per-core license is required each time that two more VMs are to be run at the same time on the same server. Further complicating matters, each server must be fully licensed for the maximum number of VMs that might run on that server at any point in time.

If this new licensing model were to be applied to the current servers in the PSnet hosting centers, then each server would need to be able to run up to 12 Windows Server VMs based on the current VM deployments. In reality these 12 VMs are distributed between the two servers in each hosting center for an average of 6 VMs per server, but if the VMs need to be migrated at least temporarily from one server to the other (which they do) then each server would have to be licensed for all 12 VMs. Since each server has 16 cores, we would need 12 divided by 2 licenses for each core, or 6 times 16 core licenses for a total of 96 licenses per server. This needs to be multiplied by 2 again for the two new Blade servers that are proposed.

This is not quite as expensive as it seems on the surface. This is because Microsoft priced a 16-core license bundle for Windows Server 2016 or 2019 to be about the same as for a Windows Server 2012 license for two processors. Where additional costs and complexity come into play is with the requirement to have licenses for the physical hardware server for each pair of VMs running on that server. So, if we want to have licensing for 12 VMs per server, then we would be paying 6 times as much. As an aside, the per VM licensing does not apply to VMs running on the Datacenter edition of Microsoft's own hypervisor, so it would seem this is a strategy to displace VMware vSphere in the market.

For comparison purposes, the original purchase back in 2014 of the two Blade systems with two servers each (four servers in total) included Windows Server 2012 R2 Datacenter licenses at \$4,385 per server, or \$17,540 in total. It is clear that licensing costs for the 2016 or 2019 versions could be considerably more expensive, though probably not 6 times as expensive as the original 2012 licenses that were acquired for PSnet. The reason is that the Datacenter license only makes sense for Microsoft customers that will use Microsoft's hypervisor. For customers using other hypervisors, such as vSphere ESXi, it only makes sense to purchase licenses *à la carte*. It turns out that, for the 12 VMs in this example, the pricing between 2012 and 2016/2019 versions is similar.

There are two major concerns for PSnet moving to the new Microsoft licensing model. One is complexity, since we would have to track VM usage, and be able to respond to audit demands

from Microsoft. The other really is cost, since PSnet is likely to use more VMs than would be typical of other use cases. This is because PSnet will support multiple vendors' applications in the hosting centers, and the best way to manage multiple vendors sharing the same virtualized environment would be to give each vendor its own VMs. In other words, it is quite likely that the number of VMs will go up with each new application deployed.

It should be possible to still acquire actual Windows Server 2012 R2 Datacenter licenses from multiple sources. This would be consistent with the current PSnet deployments, and highly preferred for a variety of reasons, including reduction in management overhead to track per-VM licensing. However, purchasing 2016 or 2019 licenses and downgrading to 2012 is not an attractive option, since the newer licensing model would then apply to the 2012 installation.

The other complicating aspect of Microsoft server licensing is the requirement for Client Access Licenses (CALs), either on a per device or per user basis. With the original 2014 order, 100 User CALs were acquired at \$24.25 each, for a total cost of \$2,425. At this time, 100 CALs should continue to be sufficient, even with the addition of a third server at each hosting center. The CALs are required for any user that accesses applications running on a Windows Server 2012 VM running on any server in either hosting center, though this is generally assumed to not apply to system administrators.

Of course, there are other types of CALs that might be used with the PSnet Windows installations, including separate CALs for users using Remote Desktop to access Windows VMs, and CALs used for Microsoft SQL or SharePoint. The 2014 Blade system order included 100 CALs for SQL at total cost of \$15,400. Based on current usage, these CALs are adequate at this time.

In order to get an accurate price estimate for any Windows Server licenses we will need to go through an authorized seller that can advise on Microsoft licensing obligations.

---

I am happy to answer any questions, and we can present these recommendations to the PSnet EC at Tuesday's meeting.

...Chuck

Eric - what if an event is multiple days? For example, Revere is interested in using the vehicle for their Sand Castles weekend (July 26-28).

Also - have you offered the MACU services through a state contract vehicle before? I know CIMS is on a state contract.

Thanks for this. What we need to understand is the cost/rate per use (is it hourly and if so how much, or is it per event/day - and how much?). We also need to put into place a management structure so that we'll know when it has been reserved, and how to resolve issues like two different jurisdictions requesting use on the same day.

Finally, I'll note that we do not yet have a contract in place to use this unit. I will need to investigate how to get the various approvals in place, and figure out which state contract (or other mechanism) would work as a contract vehicle.

This is on my list of priorities for the next few weeks, so we will continue to move forward on all of these things!

**CC:** Colin Strutt <Colin Strutt <Colin@Interisle.net>>; Eric Johnson <Eric Johnson <EJohnson@LAN-TEL.com>>  
**Subject:** PSnet: Ordering Windows Server 2012R2 Datacenter licenses and RDS CALs  
**Attachment(s):** "smime.p7s"

Sarah,

Here are three links that can be used to order Windows Server 2012R2 Datacenter OLP:

- **Direct Deals** | Price: \$5,689.99  
<https://www.directdeals.com/Windows-Server-2012-R2-Datacenter---2-Processor-License-OLP/P71-07714-L.htm>
- **Royal Discount** | Price: \$5,988.48 (scroll down to P/N: P71-07835)  
<https://www.royaldiscount.com/products/microsoft/windows-server/2012/product-family/windows-server/user-type/business.html>
- **MyChoice Software** | Price: \$6,299.99  
<https://www.mychoicesoftware.com/collections/filter-microsoft-windows-server/filter-edition-datacenter+filter-release-2012+filter-license-open-business>

In addition, my research into Microsoft licensing issues (there are some people who make their careers out of navigating the complexities of M\$ licensing), I have come to realize that we also need Client Access Licenses (a.k.a., "CALs") for using Remote Desktop Services (RDS). In this case, we don't need to worry about which version of Windows, since RDS CALs can be used for the server version they were ordered for, as well as prior server versions. In other words, if we order Windows Server 2019 RDS CALs, they would work for 2019, 2016, 2012, and even 2008 versions of Windows Server RDS.

There are two types of RDS CALs, (1) "user" and (2) "device." In PSnet, the user CALs are what we need. These should be straight forward to order from any source of Microsoft software, and should be on the GSA price schedule, as well as the State Contract for Microsoft products.

Here is one listing to give you an example:

- **Direct Deals** | 10-pack Windows 2019 RDS CALs OLP | Price \$1,250.99  
<https://www.directdeals.com/windows-2019-remote-desktop-services-10-user-cals-olp.aspx>

A 10-pack is what we need at a minimum to be compliant. Ideally, we could use twice that number, and may need even more in the future. We will also need to install Microsoft's licensing service to keep track of these RDS CALs, but that monkey is on our backs, and there shouldn't be anything further to order.

Since this is getting confusing, let me point out that there are three types of CALs we need to use:

- **Windows Server CALs:** These are necessary for any user to be able to access services delivered by a Windows Server system. However, any version of normal desktop/laptop Windows Pro or Windows Enterprise comes with a CAL for accessing Windows Servers. However, anyone not using Windows Pro or Enterprise must have a CAL. This would include macOS or Linux users, or someone with a Windows Home system.  
In the original order, 100 Windows Server 2012 user CALs were included at \$24.25 each
- **Microsoft SQL CALs:** Required for any user accessing the MS SQL service. This includes SharePoint users, since SharePoint uses SQL. In this case, it doesn't matter what version of Windows someone is using, they will require a CAL to legitimately access an SQL server.  
In the original order, 100 Microsoft SQL 2012 user CALs were included at \$154.00 each
- **Windows Remote Desktop Services CALs:** These are required for any user, no matter what operating system they are using, to be able to legitimately use Remote Desktop Services.  
The original order did not include any RDS CALs, though it should have.

Keep in mind that CALs are associated with users or devices, and allow access to any Microsoft servers. In other words, PSnet needs to have CALs for users/devices that access our systems, but once a CAL is assigned, it can be used for any Microsoft service offered via PSnet. From a practical perspective, we will have to use "user" CALs, since "device" CALs do not make sense for our usage models.

Is your head spinning, yet? I could go on further if you want?

Thanks for pushing the buttons to get this stuff ordered.

...Chuck

Thanks. I'm going to read this more slowly later, but for now - I had reached out to CDW-G about the VMware portion and mentioned the 2012 MS licensing to see if they sold that, too. He asked a series of Qs... can you fill in the blanks?

How many physical servers will be covered with Windows Server licensing or hosting Windows Servers in a virtual environment?

How many physical processors are in each physical server?

How many cores are in each processor?

How many virtual Windows Servers will run on each physical server?

With or without SA?

Thanks,  
Sarah

Sarah,

Here are three links that can be used to order Windows Server 2012R2 Datacenter OLP:

- **Direct Deals** | Price: \$5,689.99  
<https://www.directdeals.com/Windows-Server-2012-R2-Datacenter---2-Processor-License-OLP/P71-07714-L.htm>
- **Royal Discount** | Price: \$5,988.48 (scroll down to P/N: P71-07835)  
<https://www.royaldiscount.com/products/microsoft/windows-server/2012/product-family/windows-server/user-type/business.html>
- **MyChoice Software** | Price: \$6,299.99  
<https://www.mychoicessoftware.com/collections/filter-microsoft-windows-server/filter-edition-datacenter+filter-release-2012+filter-license-open-business>

In addition, my research into Microsoft licensing issues (there are some people who make their careers out of navigating the complexities of M\$ licensing), I have come to realize that we also need Client Access Licenses (a.k.a., "CALs") for using Remote Desktop Services (RDS). In this case, we don't need to worry about which version of Windows, since RDS CALs can be used for the server version they were ordered for, as well as prior server versions. In other words, if we order Windows Server 2019 RDS CALs, they would work for 2019, 2016, 2012, and even 2008 versions of Windows Server RDS.

There are two types of RDS CALs, (1) "user" and (2) "device." In PSnet, the user CALs are what we need. These should be straight forward to order from any source of Microsoft software, and should be on the GSA price schedule, as well as the State Contract for Microsoft products.

Here is one listing to give you an example:

- **Direct Deals** | 10-pack Windows 2019 RDS CALs OLP | Price \$1,250.99  
<https://www.directdeals.com/windows-2019-remote-desktop-services-10-user-cals-olp.aspx>

A 10-pack is what we need at a minimum to be compliant. Ideally, we could use twice that number, and may need even more in the future. We will also need to install Microsoft's licensing service to keep track of these RDS CALs, but that monkey is on our backs, and there shouldn't be anything further to order.

Since this is getting confusing, let me point out that there are three types of CALs we need to use:

- **Windows Server CALs:** These are necessary for any user to be able to access services delivered by a Windows Server system. However, any version of normal desktop/laptop Windows Pro or Windows Enterprise comes with a CAL for accessing Windows Servers. However, anyone not using Windows Pro or Enterprise must have a CAL. This would include macOS or Linux users, or someone with a Windows Home system.  
In the original order, 100 Windows Server 2012 user CALs were included at \$24.25 each
- **Microsoft SQL CALs:** Required for any user accessing the MS SQL service. This includes SharePoint users, since SharePoint uses SQL. In this case, it doesn't matter what version of Windows someone is using, they will require a CAL to legitimately access an SQL server.  
In the original order, 100 Microsoft SQL 2012 user CALs were included at \$154.00 each
- **Windows Remote Desktop Services CALs:** These are required for any user, no matter what operating system they are using, to be able to legitimately use Remote Desktop Services.

The original order did not include any RDS CALs, though it should have.

Keep in mind that CALs are associated with users or devices, and allow access to any Microsoft servers. In other words, PSnet needs to have CALs for users/devices that access our systems, but once a CAL is assigned, it can be used for any Microsoft service offered via PSnet. From a practical perspective, we will have to use "user" CALs, since "device" CALs do not make sense for our usage models.

Is you head spinning, yet? I could go on further if you want?

Thanks for pushing the buttons to get this stuff ordered.

**Subject:** Re: PSnet: Ordering Windows Server 2012R2 Datacenter licenses and RDS CALs  
**Attachment(s):** "smime.p7s"

Sarah,

Let me try to answer these questions:

1. How many physical servers will be covered with Windows Server licensing or hosting Windows Servers in a virtual environment?
  - We need WS2012R2DC licenses for two (2) physical servers.
  - Each server will run vSphere ESXi hypervisor, NOT the Windows Server hypervisor.
2. How many physical processors are in each physical server?
  - Each physical server has two (2) processors
3. How many cores are in each processor?
  - Each processor has eight (8) cores, for a total of 16 cores per physical server
  - For the record, the current servers are each BL460c Gen8 with two processors with 8 cores per processor. The new servers should be BL460c Gen10, but with two processors with 8 cores each.
4. How many virtual Windows Servers will run on each physical server?
  - Lots!
  - We are currently running about a dozen Windows VMs (VOSE's in MS parlance) per data center (per HPE c3000 enclosure). This number is expected to go up by around 5. to 10 over the coming year.
  - Since we are using vSphere DRS and HA, we need the ability to migrate these VMs between physical hosts on the fly, so we have to have licensing for all VMs on all physical servers.
  - There are also quite a few VMs running various flavors of Linux.
5. With or without SA?
  - Currently, we are not using Software Assurance (SA). It does not seem that we need this for our environment.
  - For the record, the original order was for:  
OLP GOVT WIN SVR DATACTR 2012R2 NL 2PROC QLFD

I hope this provides the information sought...

Sarah,

I probably used the wrong acronym expansion for "SA" in responding to question #5. Based on context, I believe this question pertains to whether we need "Security Assurance," which is a suite of additional services that Microsoft provides for enterprise security functions. However, most of these services are not needed in the PSnet environment, or we have other controls in place that already meet our security needs. My read of Security Assurance is that this only makes sense in an all Microsoft product context.

So, my answer remains that I do not believe we need SA. Also, we do not have SA with our current Windows Server licenses.

Just keep in mind, I am providing the best answers I can in a realm that is quite complex, with many interpretations offered from many diverse sources.

| 2   | 020-57069-0002  | Isolated and Connectorized AC to DC Power Supply, 100 240VAC, 48VDC output, 120W Indoor Use only. Two required per link. AC Power Cord Not Included, Must also purchase 319-00506 (for ST Radios Only) |
| 2   | 319-00506       | PWR CORD,AC,FOR POWER SUPPLY-US                                                                                                                                                                        |
| 4   | 171-00511       | SFP TRANSCEIVER,2.125GBPS,GIGE,1000BASE-SX,LC INTERFACE,MULTI-MODE FIBER,850NM                                                                                                                         |

Plus these Band 2 diplexors, for 23 GHz, to have on hand as field-swappable units if needed:

2 010-59016-0004 DPLXR,23G,NAV,TR1200,B2

The 23 GHz band is large enough that it is covered by two different diplexors, known as Band 1 and Band 2. Most microwave radios are ordered for one or the other, but it's a field-swappable unit in the Navigator. Whether radio is then the transmit-high or transmit-low end is changeable by reversing the diplexor. By having Band 2 diplexors on hand, we can order the radios on Band 1 while coordination is still pending, and when we have the frequency assigned, if it's Band 2, we swap it. At some point (they come with a 1-year warranty) we can then order one radio (for a given band) to be spare, and if a radio in the field fails, the diplexor can be moved into the spare as required to match the failed radio.

We also need antennas. CDW should also be able to quote these, as can Tescos, but if they can't, I can recommend other vendors.

For each 23 GHz radio:  
RadioWaves HP2-23-RR.

For each 18 GHz radio:  
RadioWaves HP2-18-RR

The vendor should be sure to use the -RR (Rectangular Remec waveguide connector) version of the antenna; RadioWaves makes these with several variants, the connector types identified by the suffix.

Please let me know if you have further questions. We (Interisle, LAN-TEL) will be discussing specific locations, and will need to work with the City on frequency coordination and licensing. Thank you.

**Subject:** Specifications/BoM for Bridgewave Navigator microwave radios

We have worked with Bridgewave to identify the specific parts to order for 18 and 23 GHz microwave links using the Navigator ST. These can be ordered through CDW, who can quote an actual retail price. As specified here, these radios should be usable for any frequency we get coordination for on the 18 or 23 GHz band.

**Subject:** Re: Specifications/BoM for Bridgewave Navigator microwave radios

Hi Eric,

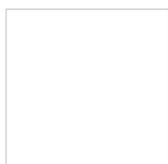

Yes, that email was sent without a lot of context! On a different thread, I had reached out to Chuck as a follow up from the PSnet meeting where we had discussed which equipment to purchase to keep as spares for the PSnet system, or simply to upgrade microwave equipment we have currently that may be approaching end of life. You may recall we discussed ordering a pair of Bridgewave units. Evidently these units don't come pre-assigned "hi" and "lo" but can be used like swappable parts. Thus ends my technical knowledge of it. :) The group decided to allocate funding for buying an initial pair, which was estimated to be around \$10k at the time (but we shall see). So - I had asked Chuck this week if he knew the specific part numbers or other tech specs necessary for these items so that I can go about getting quotes and initiating the procurement. Hence Fred's email. He was copying you to keep you in the loop and to indicate that when we do receive these units, LAN-TEL and Interisle can decide where they should be installed.

Hope that's helpful... if you have follow up Q's let me know!  
Thanks,  
Sarah

**Subject:** Specifications/BoM for Bridgewave Navigator microwave radios

We have worked with Bridgewave to identify the specific parts to order for 18 and 23 GHz microwave links using the Navigator ST. These can be ordered through CDW, who can quote an actual retail price. As specified here, these radios should be usable for any frequency we get coordination for on the 18 or 23 GHz band.

Plus these Band 2 diplexors, for 23 GHz, to have on hand as field-swappable units if needed:

2 010-59016-0004 DPLXR,23G,NAV,TR1200,B2

The 23 GHz band is large enough that it is covered by two different diplexors, known as Band 1 and Band 2. Most microwave radios are ordered for one or the other, but it's a field-swappable unit in the Navigator. Whether radio is then the transmit-high or transmit-low end is changeable by reversing the diplexor. By having Band 2 diplexors on hand, we can order the radios on Band 1 while coordination is still pending, and when we have the frequency assigned, if it's Band 2, we swap it. At some point (they come with a 1-year warranty) we can then order one radio (for a given band) to be spare, and if a radio in the field fails, the diplexor can be moved into the spare as required to match the failed radio.

We also need antennas. CDW should also be able to quote these, as can TESCO, but if they can't, I can recommend other vendors.

For each 23 GHz radio:  
 RadioWaves HP2-23-RR.

For each 18 GHz radio:  
 RadioWaves HP2-18-RR

The vendor should be sure to use the -RR (Rectangular Remec waveguide connector) version of the antenna; RadioWaves makes these with several variants, the connector types identified by the suffix.

Please let me know if you have further questions. We (Interisle, LAN-TEL) will be discussing specific locations, and will need to work with the City on frequency coordination and licensing. Thank you.

Thanks, Fred! I will reach out to CDW about a quote for these items and send it your way for review once I have it.

On Wed, Mar 13, 2019 at 4:01 PM Fred Goldstein <fred@interisle.net> wrote:

We have worked with Bridgewave to identify the specific parts to order for 18 and 23 GHz microwave links using the Navigator ST. These can be ordered through CDW, who can quote an actual retail price. As specified here, these radios should be usable for any frequency we get coordination for on the 18 or 23 GHz band.

Sarah,

Thank you for pursuing this. Fred is the best expert to address any questions that might crop up. We also work closely with the LAN-TEL teams that deploy and maintain microwave equipment, so their insights have been, and will continue to be, incorporated into our recommendations.

...Chuck

Plus these Band 2 diplexors, for 23 GHz, to have on hand as field-swappable units if needed:

2 010-59016-0004 DPLXR,23G,NAV,TR1200,B2

The 23 GHz band is large enough that it is covered by two different diplexors, known as Band 1 and Band 2. Most microwave radios are ordered for one or the other, but it's a field-swappable unit in the Navigator. Whether radio is then the transmit-high or transmit-low end is changeable by reversing the diplexor. By having

Band 2 diplexors on hand, we can order the radios on Band 1 while coordination is still pending, and when we have the frequency assigned, if it's Band 2, we swap it. At some point (they come with a 1-year warranty) we can then order one radio (for a given band) to be spare, and if a radio in the field fails, the diplexor can be moved into the spare as required to match the failed radio.

We also need antennas. CDW should also be able to quote these, as can TESCO, but if they can't, I can recommend other vendors.

For each 23 GHz radio:  
RadioWaves HP2-23-RR.

For each 18 GHz radio:  
RadioWaves HP2-18-RR

The vendor should be sure to use the -RR (Rectangular Remec waveguide connector) version of the antenna; RadioWaves makes these with several variants, the connector types identified by the suffix.

Please let me know if you have further questions. We (Interisle, LAN-TEL) will be discussing specific locations, and will need to work with the City on frequency coordination and licensing. Thank you.

Hi Eric,

Yes, that email was sent without a lot of context! On a different thread, I had reached out to Chuck as a follow up from the PSnet meeting where we had discussed which equipment to purchase to keep as spares for the PSnet system, or simply to upgrade microwave equipment we have currently that may be approaching end of life. You may recall we discussed ordering a pair of Bridgewave units. Evidently these units don't come pre-assigned "hi" and "lo" but can be used like swappable parts. Thus ends my technical knowledge of it. :) The group decided to allocate funding for buying an initial pair, which was estimated to be around \$10k at the time (but we shall see). So - I had asked Chuck this week if he knew the specific part numbers or other tech specs necessary for these items so that I can go about getting quotes and initiating the procurement. Hence Fred's email. He was copying you to keep you in the loop and to indicate that when we do receive these units, LAN-TEL and Interisle can decide where they should be installed.

Hope that's helpful... if you have follow up Q's let me know!

Thanks,  
Sarah

**Subject:** Specifications/BoM for Bridgewave Navigator microwave radios

We have worked with Bridgewave to identify the specific parts to order for 18 and 23 GHz microwave links using the Navigator ST. These can be ordered through CDW, who can quote an actual retail price. As specified here, these radios should be usable for any frequency we get coordination for on the 18 or 23 GHz band.

**Subject: Specifications/BoM for Bridgewave Navigator microwave radios**

We have worked with Bridgewave to identify the specific parts to order for 18 and 23 GHz microwave links using the Navigator ST. These can be ordered through CDW, who can quote an actual retail price. As specified here, these radios should be usable for any frequency we get coordination for on the 18 or 23 GHz band.

18GHz ST 1+0 radios with 200Mb Capacity

| 4   | 171-00511       | SFP TRANSCEIVER,2.125GBPS,GIGE,1000BASE-SX,LC INTERFACE,MULTI-MODE FIBER,850NM                                                                                                                         |

Plus these Band 2 diplexors, for 23 GHz, to have on hand as field-swappable units if needed:

2 010-59016-0004 DPLXR,23G,NAV,TR1200,B2

The 23 GHz band is large enough that it is covered by two different diplexors, known as Band 1 and Band 2. Most microwave radios are ordered for one or the other, but it's a field-swappable unit in the Navigator. Whether radio is then the transmit-high or transmit-low end is changeable by reversing the diplexor. By having Band 2 diplexors on hand, we can order the radios on Band 1 while coordination is still pending, and when we have the frequency assigned, if it's Band 2, we swap it. At some point (they come with a 1-year warranty) we can then order one radio (for a given band) to be spare, and if a radio in the field fails, the diplexor can be moved into the spare as required to match the failed radio.

We also need antennas. CDW should also be able to quote these, as can TESCO, but if they can't, I can recommend other vendors.

For each 23 GHz radio:  
RadioWaves HP2-23-RR.

For each 18 GHz radio:  
RadioWaves HP2-18-RR

The vendor should be sure to use the -RR (Rectangular Remec waveguide connector) version of the antenna; RadioWaves makes these with several variants, the connector types identified by the suffix.

Please let me know if you have further questions. We (Interisle, LAN-TEL) will be discussing specific locations, and will need to work with the City on frequency coordination and licensing. Thank you.

Hi Eric,

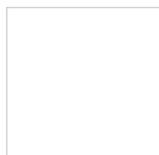

Yes, that email was sent without a lot of context! On a different thread, I had reached out to Chuck as a follow up from the PSnet meeting where we had discussed which equipment to purchase to keep as spares for the PSnet system, or simply to upgrade microwave equipment we have currently that may be approaching end of life. You may recall we discussed ordering a pair of Bridgewave units. Evidently these units don't come pre-assigned "hi" and "lo" but can be used like swappable parts. Thus ends my technical knowledge of it. :) The group decided to allocate funding for buying an initial pair, which was estimated to be around \$10k at the time (but we shall see). So - I had asked Chuck this week if he knew the specific part numbers or other tech specs necessary for these items so that I can go about getting quotes and initiating the procurement. Hence Fred's email. He was copying you to keep you in the loop and to indicate that when we do receive these units, LAN-TEL and Interisle can decide where they should be installed.

Hope that's helpful... if you have follow up Q's let me know!  
Thanks,  
Sarah

| 4   | 171-00511       | SFP TRANSCIEVER,2.125GBPS,GIGE,1000BASE-SX,LC INTERFACE,MULTI-MODE FIBER,850NM                                                                                                                         |

Plus these Band 2 diplexors, for 23 GHz, to have on hand as field-swappable units if needed:

2 010-59016-0004 DPLXR,23G,NAV,TR1200,B2

The 23 GHz band is large enough that it is covered by two different diplexors, known as Band 1 and Band 2. Most microwave radios are ordered for one or the other, but it's a field-swappable unit in the Navigator. Whether radio is then the transmit-high or transmit-low end is changeable by reversing the diplexor. By having Band 2 diplexors on hand, we can order the radios on Band 1 while coordination is still pending, and when we have the frequency assigned, if it's Band 2, we swap it. At some point (they come with a 1-year warranty) we can then order one radio (for a given band) to be spare, and if a radio in the field fails, the diplexor can be moved into the spare as required to match the failed radio.

We also need antennas. CDW should also be able to quote these, as can Tescoco, but if they can't, I can recommend other vendors.

For each 23 GHz radio:  
RadioWaves HP2-23-RR.

For each 18 GHz radio:  
RadioWaves HP2-18-RR

The vendor should be sure to use the -RR (Rectangular Remec waveguide connector) version of the antenna; RadioWaves makes these with several variants, the connector types identified by the suffix.

Please let me know if you have further questions. We (Interisle, LAN-TEL) will be discussing specific locations, and will need to with with the City on frequency coordination and licensing. Thank you.

**Subject:** Re: PSnet: Ordering Windows Server 2012R2 Datacenter licenses and RDS CALs

Hi Chuck and all,

I'll check to see, but my concern is that those resellers aren't City of Boston vendors in our system. I'm also not sure if our grant compliance precludes us from resellers at all. I'll investigate. I did ask CDWG and Hub Tech about Microsoft 2012, and they both said they were only able to sell the current 2019, but that it was downgradeable. I know you didn't want to go that route, but it may be our only option. Just wanted to give you a heads up.

Thanks,  
Sarah

On Tue, Mar 12, 2019 at 15:55 Chuck Wade <[Chuck@interisle.net](mailto:Chuck@interisle.net)> wrote:

Sarah,

I probably used the wrong acronym expansion for "SA" in responding to question #5. Based on context, I believe this question pertains to whether we need "Security Assurance," which is a suite of additional services that Microsoft provides for enterprise security functions. However, most of these services are not needed in the PSnet environment, or we have other controls in place that already meet our security needs. My read of Security Assurance is that this only makes sense in an all Microsoft product context.

So, my answer remains that I do not believe we need SA. Also, we do not have SA with our current Windows Server licenses.

Just keep in mind, I am providing the best answers I can in a realm that is quite complex, with many interpretations offered from many diverse sources.

Sarah,

Let me try to answer these questions:

1. How many physical servers will be covered with Windows Server licensing or hosting Windows Servers in a virtual environment?
  - o We need WS2012R2DC licenses for two (2) physical servers.
  - o Each server will run vSphere ESXi hypervisor, NOT the Windows Server hypervisor.
2. How many physical processors are in each physical server?
  - o Each physical server has two (2) processors
3. How many cores are in each processor?
  - o Each processor has eight (8) cores, for a total of 16 cores per physical server
  - o For the record, the current servers are each BL460c Gen8 with two processors with 8 cores per processor. The new servers should be BL460c Gen10, but with two processors with 8 cores each.
4. How many virtual Windows Servers will run on each physical server?
  - o Lots!
  - o We are currently running about a dozen Windows VMs (VOSE's in MS parlance) per data center (per HPE c3000 enclosure). This number is expected to go up by around 5. to 10 over the coming year.
  - o Since we are using vSphere DRS and HA, we need the ability to migrate these VMs between physical hosts on the fly, so we have to have licensing for all VMs on all physical servers.
  - o There are also quite a few VMs running various flavors of Linux.
5. With or without SA?
  - o Currently, we are not using Software Assurance (SA). It does not seem that we need this for our environment.
  - o For the record, the original order was for:  
OLP GOVT WIN SVR DATACTR 2012R2 NL 2PROC QLFD

I hope this provides the information sought...

Thanks. I'm going to read this more slowly later, but for now - I had reached out to CDW-G about the VMware portion and mentioned the 2012 MS licensing to see if they sold that, too. He asked a series of Qs... can you fill in the blanks?

How many physical servers will be covered with Windows Server licensing or hosting Windows Servers in a virtual environment?

How many physical processors are in each physical server?

How many cores are in each processor?

How many virtual Windows Servers will run on each physical server?

With or without SA?

Thanks,  
Sarah

On Tue, Mar 12, 2019 at 2:42 PM Chuck Wade <[Chuck@interisle.net](mailto:Chuck@interisle.net)> wrote:

Sarah,

Here are three links that can be used to order Windows Server 2012R2 Datacenter OLP:

- **Direct Deals** | Price: \$5,689.99  
<https://www.directdeals.com/Windows-Server-2012-R2-Datacenter---2-Processor-License-OLP/P71-07714-L.htm>
- **Royal Discount** | Price: \$5,988.48 (scroll down to P/N: P71-07835)  
<https://www.royaldiscount.com/products/microsoft/windows-server/2012/product-family/windows-server/user-type/business.html>
- **MyChoice Software** | Price: \$6,299.99  
<https://www.mychoicesoftware.com/collections/filter-microsoft-windows-server/filter-edition-datacenter+filter-release-2012+filter-license-open-business>

In addition, my research into Microsoft licensing issues (there are some people who make their careers out of navigating the complexities of M\$ licensing), I have come to realize that we also need Client Access Licenses (a.k.a., "CALs") for using Remote Desktop Services (RDS). In this case, we don't need to worry about which version of Windows, since RDS CALs can be used for the server version they were ordered for, as well as prior server versions. In other words, if we order Windows Server 2019 RDS CALs, they would work for 2019, 2016, 2012, and even 2008 versions of Windows Server RDS.

There are two types of RDS CALs, (1) "user" and (2) "device." In PSnet, the user CALs are what we need. These should be straight forward to order from any source of Microsoft software, and should be on the GSA price schedule, as well as the State Contract for Microsoft products.

Here is one listing to give you an example:

- **Direct Deals** | 10-pack Windows 2019 RDS CALs OLP | Price \$1,250.99  
<https://www.directdeals.com/windows-2019-remote-desktop-services-10-user-cals-olp.aspx>

A 10-pack is what we need at a minimum to be compliant. Ideally, we could use twice that number, and may need even more in the future. We will also need to install Microsoft's licensing service to keep track of these RDS CALs, but that monkey is on our backs, and there shouldn't be anything further to order.

Since this is getting confusing, let me point out that there are three types of CALs we need to

use:

- **Windows Server CALs:** These are necessary for any user to be able to access services delivered by a Windows Server system. However, any version of normal desktop/laptop Windows Pro or Windows Enterprise comes with a CAL for accessing Windows Servers. However, anyone not using Windows Pro or Enterprise must have a CAL. This would include macOS or Linux users, or someone with a Windows Home system.  
In the original order, 100 Windows Server 2012 user CALs were included at \$24.25 each
- **Microsoft SQL CALs:** Required for any user accessing the MS SQL service. This includes SharePoint users, since SharePoint uses SQL. In this case, it doesn't matter what version of Windows someone is using, they will require a CAL to legitimately access an SQL server.  
In the original order, 100 Microsoft SQL 2012 user CALs were included at \$154.00 each
- **Windows Remote Desktop Services CALs:** These are required for any user, no matter what operating system they are using, to be able to legitimately use Remote Desktop Services.  
The original order did not include any RDS CALs, though it should have.

Keep in mind that CALs are associated with users or devices, and allow access to any Microsoft servers. In other words, PSnet needs to have CALs for users/devices that access our systems, but once a CAL is assigned, it can be used for any Microsoft service offered via PSnet. From a practical perspective, we will have to use "user" CALs, since "device" CALs do not make sense for our usage models.

Is your head spinning, yet? I could go on further if you want?

Thanks for pushing the buttons to get this stuff ordered.

Thanks for this. What we need to understand is the cost/rate per use (is it hourly and if so how much, or is it per event/day - and how much?). We also need to put into place a management structure so that we'll know when it has been reserved, and how to resolve issues like two different jurisdictions requesting use on the same day.

Finally, I'll note that we do not yet have a contract in place to use this unit. I will need to investigate how to get the various approvals in place, and figure out which state contract (or other mechanism) would work as a contract vehicle.

This is on my list of priorities for the next few weeks, so we will continue to move forward on all of these things!

Eric & Chuck,

Please see email below forwarded to me by Brenda. I remember we handled this last year by paying Interisle who paid the renewal. Has LAN-TEL or Interisle already renewed it this year, or if not, can the City do it directly?

Thanks,  
Sarah

**Subject:** Re: MACU One Pager

Well, I bring it up because due to our funding source being a federal grant, we have certain compliance steps we'd need to take in order to make use of that component. I'm attaching a paragraph here that references a SOP (and yes, while it specifically calls out "purchase," renting/leasing the equipment follows the same standards here). If you don't have one, we may need to move ahead with putting a contract together for the MACU without that capability. But if you do have something that meets this criteria, or would be willing to write one, we can talk further about including it. Let me know your thoughts.

Thanks,  
Sarah

6. Small Unmanned Aircraft Systems (AEL #03OE-07-SUAS - System, [Small Unmanned Aircraft](#)) are considered aircraft and are required to meet the requirements in #3 above. In addition, all requests to purchase SUAS with FEMA grant funding must also include copies of the policies and procedures in place to safeguard individuals' privacy, civil rights, and civil liberties of the jurisdiction that will purchase, take title to, or otherwise use the SUAS equipment, see Presidential Memorandum: [Promoting Economic Competitiveness While Safeguarding Privacy, Civil Rights, and Civil Liberties, in Domestic Use of Unmanned Aircraft Systems](#), issued February 20, 2015.

**Subject:** Re: Fw: MACU One Pager

Thanks for this. What we need to understand is the cost/rate per use (is it hourly and if so how much, or is it per event/day - and how much?). We also need to put into place a management structure so that we'll know when it has been reserved, and how to resolve issues like two different jurisdictions requesting use on the same day.

Finally, I'll note that we do not yet have a contract in place to use this unit. I will need to investigate how to get the various approvals in place, and figure out which state contract (or other mechanism) would work as a contract vehicle.

This is on my list of priorities for the next few weeks, so we will continue to move forward on all of these things!

**Attachment(s):** "KMRV993.pdf", "KMRV997.pdf", "smime.p7s"

Sarah,

Yes, we would like to order both a 23 GHz link and an 18 GHz link--i.e., both quotes. This will allow us to begin evaluating these attractive BridgeWave models in the two most important licensed frequency bands for PSnet. Over the next year, we will likely need to replace multiple radios in both bands, since we have several that are operating in degraded states.

Regarding the quotes, CDW-G may call themselves the "People who get it," but they don't always get it right.

These quotes should be okay as provided, but their catalog entries for some of the items were entered with the wrong manufacturers. Specifically, they have several items listed as "WINNCOM" products, but these should be BridgeWave. Similarly, neither antenna uses the correct RadioWaves manufacturer name, with one listed as "WINNCOM" and the other as "PROXIM." However, this appears to be just sloppiness, since the part numbers and prices seem to be correct.

I have re-attached these quotes with the incorrect manufacturer names highlighted, and the correct manufacturer name inserted. This is for your inventory control purposes. You might get CDW-G to confirm the actual manufacturers so you have this for your records, even if they don't correct their catalog entries.

...Chuck

### **Plus these Band 2 diplexors, for 23 GHz:**

2 010-59016-0004 DPLXR,23G,NAV,TR1200,B2

### **We also need antennas.**

For each 23 GHz radio:  
RadioWaves HP2-23-RR.

For each 18 GHz radio:  
RadioWaves HP2-18-RR

The vendor should be sure to use the -RR (Rectangular Remec waveguide connector) version of the antenna; RadioWaves makes these with several variants, the connector types identified by the suffix.

**Subject:** Whidden Hospital Electrical/HVAC projects

Hi Tom & Eric,

This email serves to connect you both. Tom's company (Bent Electric) is doing the electrical wiring work necessary, and Eric is the PM for LAN-TEL's HVAC install. I know that the LAN-TEL project's completion depends upon the electrical work, but in a conversation with Tom today he also noted that you both need to coordinate where everything is going and that he'll be doing the final wiring as well.

I know we're on a tight timetable with the grant funding expiring in June and the temperatures heating up in May, so the plan is for an April wrap up for all of this as close as that is possible. I know Tom has already reached out to the hospital for scheduling purposes. If either of you run into any hang ups where that is concerned, please let me know. I'm also cc'ing Sgt. Gina Collyer of Everett PD who is the local point of contact for the project. She can also assist in aligning things with the hospital if necessary. She's worked with Sgt. Jeff Gilmore, who has spoken with both of you about this project when we were planning for it last year.

Thanks very much to you all,  
Sarah

I know we're on a tight timetable with the grant funding expiring in June and the temperatures heating up in May, so the plan is for an April wrap up for all of this as close as that is possible. I know Tom has already reached out to the hospital for scheduling purposes. If either of you run into any hang ups where that is concerned, please let me know. I'm also cc'ing Sgt. Gina Collyer of Everett PD who is the local point of contact for the project. She can also assist in aligning things with the hospital if necessary. She's worked with Sgt. Jeff Gilmore, who has spoken with both of you about this project when we were planning for it last year.

Thanks very much to you all,  
Sarah

Hi Eric & Scott,

Just following up because I never heard back from either of you on this. (See below)

Thanks,  
Sarah

On Tue, Mar 19, 2019 at 5:48 PM Sarah Plowman <sarah.plowman@boston.gov> wrote:

Well, I bring it up because due to our funding source being a federal grant, we have certain compliance steps we'd need to take in order to make use of that component. I'm attaching a paragraph here that references a SOP (and yes, while it specifically calls out "purchase," renting/leasing the equipment follows the same standards here). If you don't have one, we may need to move ahead with putting a contract together for the MACU without that capability. But if you do have something that meets this criteria, or would be willing to write one, we can talk further about including it. Let me know your thoughts.

Thanks,  
Sarah

6. Small Unmanned Aircraft Systems (AEL #03OE-07-SUAS - System, Small [Unmanned Aircraft](#)) are considered aircraft and are required to meet the requirements in #3 above. In addition, all requests to purchase SUAS with FEMA grant funding must also include copies of the policies and procedures in place to safeguard individuals' privacy, civil rights, and civil liberties of the jurisdiction that will purchase, take title to, or otherwise use the SUAS equipment, see Presidential Memorandum: [Promoting Economic Competitiveness While Safeguarding Privacy, Civil Rights, and Civil Liberties, in Domestic Use of Unmanned Aircraft Systems](#), issued February 20, 2015.

**Subject:** Re: Fw: MACU One Pager

Thanks for this. What we need to understand is the cost/rate per use (is it hourly and if so how much, or is it per event/day - and how much?). We also need to put into place a management structure so that we'll know when it has been reserved, and how to resolve issues like two different jurisdictions requesting use on the same day.

Finally, I'll note that we do not yet have a contract in place to use this unit. I will need to investigate how to get the various approvals in place, and figure out which state contract (or other mechanism) would work as a contract vehicle.

This is on my list of priorities for the next few weeks, so we will continue to move forward on all of these things!

**Attachment(s):** "Lan-Tel -FATPOT FINAL QUOTE (1).pdf","Boston Phase IV Project Timeline (1).pdf"

Hi Eric, Roger, and Scott,

Hope you're doing well this new month. It's been a few weeks since our conference call, so I wanted to reach out again to do a bit of recap and ensure I'm on the same page as you all with wrapping up this contract.

The contract consists of two main parts: Phase IVA and Phase IVB, plus project management (PM). To date, invoices have been paid in the following amounts:

- \$23,000 (IVA)
- \$51,520 (split IVA \$41,520 and IVB \$10,000)
- \$60,000 (split IVB \$50,000 and PM \$10,000)
- \$49,600 (split IVA \$34,600 and PM \$15,000)

This adds up to \$99,120 toward IVA, \$60,000 toward IVB, and \$25,000 toward PM. According to the attached Dec 13, 2017 proposal (referenced also on the invoices), the total breakdown per section of the contract is: \$123,841 IVA, \$76,159 IVB, and \$40,000 PM.

**Thus, remaining to date on the PO is a balance of \$55,880 which is comprised of \$24,721 toward IVA, \$16,159 toward IVB, and \$15,000 PM.** That is how I expect the final invoice to be delineated.

With the final invoice, we had also discussed Tellus/LAN-TEL providing OEM with additional documentation to speak to the training piece, the product as a whole, and including community engagement as well. I remember Jonathan saying he was planning a visit this way end of April or early May. That being the case, I am anticipating the final invoice wouldn't come until mid-May when the notes from his visit can be included in the final documentation.

Am I missing anything else? Do any of you have other questions/concerns? Please also confirm that what I've captured in this email is the understanding of you all as well.

Thanks so much,  
Sarah

**Subject:** Re: Tellus/LAN-TEL for MBHSR

Sarah,

From the big picture, your assessment looks good.

As far as follow up activities:

- **Documentation for training:** Yes, I agreed to do this. Shortly after our call, I had an unfortunate computer crash and it knocked me behind on several things. Between that and some business related travel, I haven't gotten to that yet. Planning to do so by end of next week.
- **Other documentation:** (Product as a whole and community engagement.) I don't remember having discussed these, but I'm not opposed to it, either. I'd just need more direction on what is wanted.
  - Product as a whole: I can provide our administrative guide and users guide if you'd like. It's been provided to the stakeholders before, but I can include it for your records if that would be helpful.
  - Community engagement: This is where I'd struggle a bit since I'm not a party to the area's activities on a regular basis.
- **Travel in April/May:** Jonathan (Tellus President) will actually be in Boston early next week. He will be meeting with Boston Fire Superintendent Steve Keeley and possibly other fire departments regarding a new fire-related proposed initiative. He may actually be reaching out to you as well. (Jonathan CCed here.) The mention of his visit on our last call was intended to be less project-specific but more of an fyi for relationship building. There's still a possibility that Jonathan and/or I may return to Boston in May, but again, not for the sole purpose of the project.

Thanks,

Roger Salisbury

This adds up to \$99,120 toward IVA, \$60,000 toward IVB, and \$25,000 toward PM. According to the attached Dec 13, 2017 proposal (referenced also on the invoices), the total breakdown per section of the contract is:

\$123,841 IVA, \$76,159 IVB, and \$40,000 PM.

**Thus, remaining to date on the PO is a balance of \$55,880 which is comprised of \$24,721 toward IVA, \$16,159 toward IVB, and \$15,000 PM.** That is how I expect the final invoice to be delineated.

With the final invoice, we had also discussed Tellus/LAN-TEL providing OEM with additional documentation to speak to the training piece, the product as a whole, and including community engagement as well. I remember Jonathan saying he was planning a visit this way end of April or early May. That being the case, I am anticipating the final invoice wouldn't come until mid-May when the notes from his visit can be included in the final documentation.

Am I missing anything else? Do any of you have other questions/concerns? Please also confirm that what I've captured in this email is the understanding of you all as well.

Thanks so much,  
Sarah

Hi all,

I'm running off to a meeting shortly but wanted to touch base -- when you said you're in town Tuesday, you meant tomorrow (April 9), correct? Unfortunately I'm at a 3-day training Tues-Thursday this week, so I'm unavailable to connect. So sorry!

Regarding the deliverables, I'll circle back around to this later in the week, Roger. I think we're on the right track and I'm not concerned! We'll just talk more to firm up the details.

Thanks,  
Sarah

Sarah,

>From the big picture, your assessment looks good.

As far as follow up activities:

- **Documentation for training:** Yes, I agreed to do this. Shortly after our call, I had an unfortunate computer crash and it knocked me behind on several things. Between that and some business related travel, I haven't gotten to that yet. Planning to do so by end of next week.
- **Other documentation:** (Product as a whole and community engagement.) I don't remember having discussed these, but I'm not opposed to it, either. I'd just need more direction on what is wanted.
  - Product as a whole: I can provide our administrative guide and users guide if you'd like. It's been provided to the stakeholders before, but I can include it for your records if that would be helpful.
  - Community engagement: This is where I'd struggle a bit since I'm not a party to the area's activities on a regular basis.
- **Travel in April/May:** Jonathan (Tellus President) will actually be in Boston early next week. He will be meeting with Boston Fire Superintendent Steve Keeley and possibly other fire departments regarding a new fire-related proposed initiative. He may actually be reaching out to you as well. (Jonathan CCed here.) The mention of his visit on our last call was intended to be less project-specific but more of an fyi for relationship building. There's still a possibility that Jonathan and/or I may return to Boston in May, but again, not for the sole purpose of the project.

Hi Kate, Eric,

I've been working to reconcile the amounts that Sarah from OEM shared. Although they make sense in totality, specific payments are puzzling me. I also have a question about an outstanding invoice that you might be able to answer.

Can we get on a call in the next couple days to review? I'd prefer it to be a meeting where you can look at my screen so we can document and sort out some of these numbers.

Let me know a good date & time.

Sarah,

Please find the attached report and supporting administrators manual related to the testing and training for the Flir Camera integration. Please let me know if you have any questions.

If this meets your needs from a project oversight perspective, we ask that you approve payment for \$24,721 toward IVA. It may be that LAN-TEL will also ask for some of the remaining \$15,000 project management overhead in addition. Naturally, the invoicing will come from them if approved.

**Subject:** Microsoft for new Blade Servers

Hi Scott, Chuck, and Eric,

Just to close the loop on this - we will not be able to purchase Microsoft 2012 licenses for the new servers. I have asked CDWG, HiQ, and Hub Tech, and all three tell me that they are only able to sell the most recent licenses. While it will be a chore to start with 2019 licenses and downgrade back to 2012, that is what we will have to do. Please plan accordingly. I will put the order in next week with one of those vendors.

Thanks very much,  
Sarah

Sarah,

I understand that your preferred suppliers are not selling existing licenses for Windows Server 2012. However, the implications of switching to the new 2016/2019 licensing model could potentially be significant for PSnet.

Since Boston's IT Department seems to use a lot of VMware vSphere hosts, and they also use Windows Server software, it might be helpful to seek their input on what options make sense. I would be particularly interested if they have encountered the sort of issue we're dealing with where they have added servers as vSphere ESXi hosts, and then licensed Windows Server 2016 or 2019 on that host. Did they acquire Datacenter licenses, or are they ordering multiple instances of the standard licenses to meet any Microsoft requirements for licensing of Windows Server VMs (OSEs in Microsoft parlance)? Also, what are the implications for operating a mix of Windows Server versions (especially pre-2016 alongside 2016/2019) in a vSphere context.

Here is a link to the best article I've come across that describes how the new Microsoft server licensing plays out in practice:

[. <https://virtuallyinclined.com/2016/11/22/microsoft-takes-a-shot-at-vmware-with-windows-server-2016-licensing-changes-and-enforcement-push/>](https://virtuallyinclined.com/2016/11/22/microsoft-takes-a-shot-at-vmware-with-windows-server-2016-licensing-changes-and-enforcement-push/)

I have thoroughly reviewed all of the information available from Microsoft and many other sources. One question that remains unclear is whether or not we can use the Datacenter versions of WS2016/2019 running on top of vSphere ESXi and still be able to install an unlimited number of Windows Server VMs, as we can currently do with the WS2012R2 Datacenter licenses.

To illustrate the vagueness of Microsoft's documentation, here is an excerpt from a Tech Brief that is supposed to address these questions (see attached pdf starting at the bottom of page 4):

#### **Licensing Windows Server for use with VMware vMotion and Microsoft System Center Virtual Machine Manager**

The same licensing rules apply when using Windows Server with VMware vMotion and System Center Virtual Machine Manager. While VMware vMotion and System Center Virtual Machine Manager move virtual OSEs between physical servers, the licenses remain with the physical server to which they were assigned. When an OSE is moved to a new physical server, that new server must already have appropriate licenses assigned to it (see the Clustering, failing over, and moving instances section). As Windows Server Datacenter permits an unlimited number of instances of the server software to run in virtual OSEs, in multi-server installations with VMware vMotion, and System Center Virtual Machine Manager, it offers the greatest flexibility to move OSEs between servers without having to track the number of instances running or worry about being under-licensed.

For Windows Server software, except in a few cases, licenses may only be reassigned to new hardware after 90 days. This, however, does not restrict the dynamic movement of virtual OSEs between licensed servers. As long as the servers are licensed and each server individually does not run more instances than the number for which it is licensed, you are free to use VMware vMotion and System Center Virtual Machine Manager to move virtual OSEs between licensed servers at will.

In one reading of the above, it appears to say that the Datacenter license does allow an unlimited number of virtual OSEs (Windows VMs), but they only seem to allow this if Microsoft's System Center Virtual Machine Manager is used. However, System Center is another licensed software package that we don't need, since this competes directly with VMware's vCenter, which we have already licensed.

Perhaps the most important question for us is if we can run both WS2019 and WS2012 Datacenter licensed hosts in a compliant manner within a vSphere context. My concern is that bringing WS2019 into the mix could make it necessary for us to also upgrade the WS2012 Datacenter hosts. This will get real expensive really fast. Even if Microsoft licensing does not absolutely mandate this upgrade, it may be that from a practical operational perspective, we may find it necessary. There are also potential implications for our MS SQL and SharePoint licenses, since these were licensed under WS2012. And, I haven't even touched on the thorny issue of CALs, and whether or not we'll need to purchase upgrades for existing CALs associated with WS2012.

As an aside, I suspect you can now see why I explicitly spec'ed the new server blades to be only 16 cores.

The bottom line is that it would be much simpler if we could stick with what we've already got, since WS2012R2 is perfectly adequate for our purposes. If we can't, then we need to ascertain exactly what we need to order, and come to grips with the reality that this may require a much larger expenditure in order to stay compliant with Microsoft's terms.

**Subject:** Draft recommendations on Windows Server licensing  
**Attachment(s):** "smime.p7s"

Sarah,

As we've outlined, Microsoft licensing is obscenely complicated, and changes to their licensing models only add to this complexity. When using Windows Server in a non-Microsoft virtualized environment (specifically, VMware vSphere), things become even more complicated. I think it is fair to observe that Microsoft's agenda is not consistent with their customers objectives. Furthermore, Microsoft has become much more aggressive in recent years with their audits of customers using Windows Server licenses, with many of their customers surprised to find that they are not in compliance due to licensing technicalities.

For these, and other reasons, we have recommended an approach that minimizes risks, support burden, and costs. This recommendation is based on the reality that PSnet needs are adequately met by the current Windows Server 2012R2 Datacenter licenses already in use on the four existing Blade servers (two per hosting center). Consequently, the simplest thing would be to just acquire equivalent licenses for the two new Blade servers that are being purchased (one each per hosting center).

However, Boston Purchasing appears to have taken a position that they cannot acquire the older Windows Server 2012 licenses, despite availability of these licenses in the market.

In order to get us over this hurdle with ordering Microsoft Windows Server licenses for the two new Blade Servers, we have laid out three options that I hope will simplify making a decision. The first option is our original preferred recommendation to acquire licenses that are the exact equivalent of what we currently have deployed. Assuming that option 1 won't be pursued, we offer options 2 and 3, presented below in priority order:

#### **Option 1: Acquire two Windows Server 2012R2 Datacenter OLP licenses**

- **Pros**
  - Maintains the current Windows Server virtualized environment as it currently is.
  - This will be the easiest to support as we add a new server to each of the PSnet hosting centers.
  - Lowest risk option.
  - Costs will be lowest with this option
- **Cons**
  - None, really.

#### **Option 2: Acquire two Windows Server 2019 Datacenter OLP licenses for new servers plus four upgrades for existing servers to Windows Server 2019 Datacenter**

- **Pros**
  - Allows PSnet hosting centers to transition to the latest version of Windows Server.
  - Establishes a new technology basis for all Windows Server VMs and associated applications.
  - The entire Windows Server software context will be on a consistent licensing model.
  - Low risk.
  - Potentially resolves some issues with CALs.
- **Cons**
  - Expensive! Upgrade costs for current Windows Server 2012R2 Datacenter licenses will likely be equivalent to buying new Windows Server 2019 Datacenter licenses.
  - Up front support burden, since all currently deployed Windows Server VMs would need to be upgraded, though this can be done incrementally.

#### **Option 3: Acquire two Windows Server 2019 Datacenter OLP licenses and downgrade to WS2012R2**

- **Pros**
  - Maintains the current Windows Server virtualized environment as it currently is.
  - Support effort should be about the same as for Option 1; i.e., minimal extra effort required.
  - A future upgrade to new Windows Server versions would only entail upgrading existing Windows Server 2012 licenses (i.e., for four existing Blade servers)
  - Costs only slightly more than Option 1 (but only because we constrained the number of cores included with the new Blade servers).
- **Cons**
  - PSnet hosting centers will be operating under two different Microsoft licensing models. In practice, the new licensing model will probably apply to the existing Windows Server 2012 installations.
  - No benefits from new licensing model or Windows Server 2019.
  - Some unknowns associated with CALs and support for existing Microsoft SQL and SharePoint licenses.

- Potential extra burdens with software license audit requirements.
- Higher risks.

Assuming that the new Datacenter licenses will allow us to continue to support an unlimited number of Windows Server VMs on each of the PSnet Blade servers operating under VMware vSphere ESXi hypervisor, then we can proceed with any of the above options. Therefore, the decision as to which option to pursue should be made by the PSnet Executive Committee and OEM along with Boston Purchasing.

We do recommend that, when placing the order, we obtain *written confirmation from the reseller or Microsoft that the Datacenter version of the new Windows Server licenses will support an unlimited number of Windows Server VMs (a.k.a., Virtual OSEs) on the licensed hosts operating in a VMware vSphere context with full vMotion support.* Alternatively, a statement to this effect could be added to the order. Despite my best efforts, including direct interactions with Microsoft, I have been unable to get a clear statement to this effect. Microsoft's equivocation on this question is a reason for concern, even though it does appear that the Datacenter license will allow the unlimited use of Windows Server VMs with vMotion that we expect.

**Subject:** RE: Draft recommendations on Windows Server licensing

Chuck's points are all valid, if Boston purchasing will not purchase the licenses we need this needs to be brought to the Jpocs attention, here we go again.

This is not a Boston purchase, this a region wide purchase, other than that we will have to go with the expensive option and replacing all the server licenses with all the associated costs, which will also have to go before the JPOCs.

Or, have another agency purchase the 2012 licenses and have OEM re-reimburse that city., that would eliminate dealing with the Boston side of the issue.

**Subject:** Draft recommendations on Windows Server licensing  
**Importance:** High

Sarah,

As we've outlined, Microsoft licensing is obscenely complicated, and changes to their licensing models only add to this complexity. When using Windows Server in a non-Microsoft virtualized environment (specifically, VMware vSphere), things become even more complicated. I think it is fair to observe that Microsoft's agenda is not consistent with their customers objectives. Furthermore, Microsoft has become much more aggressive in recent years with their audits of customers using Windows Server licenses, with many of their customers surprised to find that they are not in compliance due to licensing technicalities.

For these, and other reasons, we have recommended an approach that minimizes risks, support burden, and costs. This recommendation is based on the reality that PSnet needs are adequately met by the current Windows Server 2012R2 Datacenter licenses already in use on the four existing Blade servers (two per hosting center). Consequently, the simplest thing would be to just acquire equivalent licenses for the two new Blade servers that are being purchased (one each per hosting center).

However, Boston Purchasing appears to have taken a position that they cannot acquire the older Windows Server 2012 licenses, despite availability of these licenses in the market.

In order to get us over this hurdle with ordering Microsoft Windows Server licenses for the two new Blade Servers, we have laid out three options that I hope will simplify making a decision. The first option is our original preferred recommendation to acquire licenses that are the exact equivalent of what we currently have deployed. Assuming that option 1 won't be pursued, we offer options 2 and 3, presented below in priority order:

#### **Option 1: Acquire two Windows Server 2012R2 Datacenter OLP licenses**

- **Pros**
  - Maintains the current Windows Server virtualized environment as it currently is.
  - This will be the easiest to support as we add a new server to each of the PSnet hosting centers.
  - Lowest risk option.
  - Costs will be lowest with this option
- **Cons**
  - None, really.

#### **Option 2: Acquire two Windows Server 2019 Datacenter OLP licenses for new servers plus four upgrades for existing servers to Windows Server 2019 Datacenter**

- **Pros**
  - Allows PSnet hosting centers to transition to the latest version of Windows Server.
  - Establishes a new technology basis for all Windows Server VMs and associated applications.
  - The entire Windows Server software context will be on a consistent licensing model.
  - Low risk.
  - Potentially resolves some issues with CALs.
- **Cons**
  - Expensive! Upgrade costs for current Windows Server 2012R2 Datacenter licenses will likely be equivalent to buying new Windows Server 2019 Datacenter licenses.
  - Up front support burden, since all currently deployed Windows Server VMs would need to be upgraded, though this can be done incrementally.

#### **Option 3: Acquire two Windows Server 2019 Datacenter OLP licenses and downgrade to WS2012R2**

- **Pros**
  - Maintains the current Windows Server virtualized environment as it currently is.
  - Support effort should be about the same as for Option 1; i.e., minimal extra effort required.
  - A future upgrade to new Windows Server versions would only entail upgrading existing Windows Server 2012 licenses (i.e., for four existing Blade servers)
  - Costs only slightly more than Option 1 (but only because we constrained the number of cores included with the new Blade servers).
- **Cons**
  - PSnet hosting centers will be operating under two different Microsoft licensing models. In practice, the new licensing model will probably apply to the existing Windows Server 2012 installations.
  - No benefits from new licensing model or Windows Server 2019.
  - Some unknowns associated with CALs and support for existing Microsoft SQL and SharePoint licenses.
  - Potential extra burdens with software license audit requirements.
  - Higher risks.

Assuming that the new Datacenter licenses will allow us to continue to support an unlimited number of Windows Server VMs on each of the PSnet Blade servers operating under VMware vSphere ESXi hypervisor, then we can proceed with any of the above options. Therefore, the decision as to which option to pursue should be made by the PSnet Executive Committee and OEM along with Boston Purchasing.

We do recommend that, when placing the order, we obtain *written confirmation from the reseller or Microsoft that the Datacenter version of the new Windows Server licenses will support an unlimited number of Windows Server VMs (a.k.a., Virtual OSEs) on the licensed hosts operating in a VMware vSphere context with full vMotion support.* Alternatively, a statement to this effect could be added to the order. Despite my best efforts, including direct interactions with Microsoft, I have been unable to get a clear statement to this effect. Microsoft's equivocation on this question is a reason for concern, even though it does appear that the Datacenter license will allow the unlimited use of Windows Server VMs with vMotion that we expect.

**Subject:** Re: Draft recommendations on Windows Server licensing

Just for clarity --

The first and foremost problem is that none of our existing vendors offer 2012 licenses, that I am aware of. I have asked CDWG, Hub Tech, and HiQ. They only offer current 2019 licenses. I did look up all three of the vendors Chuck suggested in a previous email, and while they may sell 2012 licenses, none of them are existing vendors with the City of Boston system. It's not an overly complicated process for them to become vendors, but they would have to do that step at a minimum for us to consider purchasing from them. If they don't have a vendor ID, I can't generate a PO for them. That's not on Purchasing, that's just how the system works.

Secondarily, I am unfamiliar with Purchasing Dept's policies regarding software resellers as vendors in general. I have reached out, but what with it being 4pm on a Friday I don't expect a response until Monday or Tuesday. I asked if they could get back to me prior to our PSnet meeting so that we can discuss. If Purchasing is okay with it, then I'm okay with it, provided we can identify a City vendor who offers the 2012 licenses.

Scott, I like your idea of having another city procure the licenses. Unfortunately we can't issue award letters to other jurisdictions for regional purchases. For example, if I gave Brookline an award letter so that you could procure these, it would be tied to your MOA and the balance would be deducted from your MOA contract alone. Additionally, the procurement accounting codes wouldn't match - they would need to be regional to reflect the nature of PSnet but they would also need to be Brookline's code since it's tied to your MOA... and I can't put down both codes; it's only one or the other.

The best case scenario is that Purchasing tells me that Chuck's resellers are no problem and we can reach out to them to encourage them to become City vendors. Unless both of those things happen, we will have to go with 2019 licenses, either 2 and downgrade the existing, or 6 and upgrade all.

We'll figure this out, don't worry. And if it's a cost we have to pay, then we will. I'm not overly concerned about that.

Hope you all have a nice weekend. See you all on Tuesday!

Chuck's points are all valid, if Boston purchasing will not purchase the licenses we need this needs to be brought to the Jpocs attention, here we go again.

This is not a Boston purchase, this a region wide purchase, other than that we will have to go with the expensive option and replacing all the server licenses with all the associated costs, which will also have to go before the JPOCs.

Or, have another agency purchase the 2012 licenses and have OEM re-reimburse that city., that would eliminate dealing with the Boston side of the issue.

**Subject:** Draft recommendations on Windows Server licensing

**Importance:** High

Sarah,

As we've outlined, Microsoft licensing is obscenely complicated, and changes to their licensing models only add to this complexity. When using Windows Server in a non-Microsoft virtualized environment (specifically, VMware vSphere), things become even more complicated. I think it is fair to observe that Microsoft's agenda is not consistent with their customers objectives. Furthermore, Microsoft has become much more aggressive in recent years with their audits of customers using Windows Server licenses, with many of their customers surprised to find that they are not in compliance due to licensing technicalities.

For these, and other reasons, we have recommended an approach that minimizes risks, support burden, and costs. This recommendation is based on the reality that PSnet needs are adequately met by the current Windows Server 2012R2 Datacenter licenses already in use on the four existing Blade servers (two per hosting center). Consequently, the simplest thing would be to just acquire equivalent licenses for the two new Blade servers that are being purchased (one each per hosting center).

However, Boston Purchasing appears to have taken a position that they cannot acquire the older Windows Server 2012 licenses, despite availability of these licenses in the market.

In order to get us over this hurdle with ordering Microsoft Windows Server licenses for the two new Blade Servers, we have laid out three options that I hope will simplify making a decision. The first option is our original preferred recommendation to acquire licenses that are the exact equivalent of what we currently have deployed. Assuming that option 1 won't be pursued, we offer options 2 and 3, presented below in priority order:

#### **Option 1: Acquire two Windows Server 2012R2 Datacenter OLP licenses**

- **Pros**
  - Maintains the current Windows Server virtualized environment as it currently is.
  - This will be the easiest to support as we add a new server to each of the PSnet hosting centers.
  - Lowest risk option.
  - Costs will be lowest with this option
- **Cons**
  - None, really.

#### **Option 2: Acquire two Windows Server 2019 Datacenter OLP licenses for new servers plus four upgrades for existing servers to Windows Server 2019 Datacenter**

- **Pros**
  - Allows PSnet hosting centers to transition to the latest version of Windows Server.
  - Establishes a new technology basis for all Windows Server VMs and associated applications.
  - The entire Windows Server software context will be on a consistent licensing model.
  - Low risk.
  - Potentially resolves some issues with CALs.
- **Cons**
  - Expensive! Upgrade costs for current Windows Server 2012R2 Datacenter licenses will likely be equivalent to buying new Windows Server 2019 Datacenter licenses.
  - Up front support burden, since all currently deployed Windows Server VMs would need to be upgraded, though this can be done incrementally.

#### **Option 3: Acquire two Windows Server 2019 Datacenter OLP licenses and downgrade to WS2012R2**

- **Pros**
  - Maintains the current Windows Server virtualized environment as it currently is.
  - Support effort should be about the same as for Option 1; i.e., minimal extra effort required.
  - A future upgrade to new Windows Server versions would only entail upgrading existing Windows Server 2012 licenses (i.e., for four existing Blade servers)
  - Costs only slightly more than Option 1 (but only because we constrained the number of cores included with the new Blade servers).
- **Cons**
  - PSnet hosting centers will be operating under two different Microsoft licensing models. In practice, the new licensing model will probably apply to the existing Windows Server 2012 installations.
  - No benefits from new licensing model or Windows Server 2019.
  - Some unknowns associated with CALs and support for existing Microsoft SQL and SharePoint licenses.
  - Potential extra burdens with software license audit requirements.
  - Higher risks.

Assuming that the new Datacenter licenses will allow us to continue to support an unlimited number of Windows Server VMs on each of the PSnet Blade servers operating under VMware vSphere ESXi hypervisor, then we can proceed with any of the above options. Therefore, the decision as to which option to pursue should be made by the PSnet Executive Committee and OEM along with Boston Purchasing.

We do recommend that, when placing the order, we obtain *written confirmation from the reseller or Microsoft that the Datacenter version of the new Windows Server licenses will support an unlimited number of Windows Server VMs (a.k.a., Virtual OSEs) on the licensed hosts operating in a VMware vSphere context with full vMotion support.* Alternatively, a statement to this effect could be added to the order. Despite my best efforts, including direct interactions with Microsoft, I have been unable to get a clear statement to this effect. Microsoft's equivocation on this question is a reason for concern, even though it does appear that the Datacenter license will allow the unlimited use of Windows Server VMs with vMotion that we expect.

The first and foremost problem is that none of our existing vendors offer 2012 licenses, that I am aware of. I have asked CDWG, Hub Tech, and HiQ. They only offer current 2019 licenses. I did look up all three of the vendors Chuck suggested in a previous email, and while they may sell 2012 licenses, none of them are existing vendors with the City of Boston system. It's not an overly complicated process for them to become vendors, but they would have to do that step at a minimum for us to consider purchasing from them. If they don't have a vendor ID, I can't generate a PO for them. That's not on Purchasing, that's just how the system works.

Secondarily, I am unfamiliar with Purchasing Dept's policies regarding software resellers as vendors in general. I have reached out, but what with it being 4pm on a Friday I don't expect a response until Monday or Tuesday. I asked if they could get back to me prior to our PSnet meeting so that we can discuss. If Purchasing is okay with it, then I'm okay with it, provided we can identify a City vendor who offers the 2012 licenses.

Scott, I like your idea of having another city procure the licenses. Unfortunately we can't issue award letters to other jurisdictions for regional purchases. For example, if I gave Brookline an award letter so that you could procure these, it would be tied to your MOA and the balance would be deducted from your MOA contract alone. Additionally, the procurement accounting codes wouldn't match - they would need to be regional to reflect the nature of PSnet but they would also need to be Brookline's code since it's tied to your MOA... and I can't put down both codes; it's only one or the other.

The best case scenario is that Purchasing tells me that Chuck's resellers are no problem and we can reach out to them to encourage them to become City vendors. Unless both of those things happen, we will have to go with 2019 licenses, either 2 and downgrade the existing, or 6 and upgrade all.

We'll figure this out, don't worry. And if it's a cost we have to pay, then we will. I'm not overly concerned about that.

Hope you all have a nice weekend. See you all on Tuesday!

**Subject:** Draft recommendations on Windows Server licensing  
**Importance:** High

Sarah,

As we've outlined, Microsoft licensing is obscenely complicated, and changes to their licensing models only add to this complexity. When using Windows Server in a non-Microsoft virtualized environment (specifically, VMware vSphere), things become even more complicated. I think it is fair to observe that Microsoft's agenda is not consistent with their customers objectives. Furthermore, Microsoft has become much more aggressive in recent years with their audits of customers using Windows Server licenses, with many of their customers surprised to find that they are not in compliance due to licensing technicalities.

For these, and other reasons, we have recommended an approach that minimizes risks, support burden, and costs. This recommendation is based on the reality that PSnet needs are adequately met by the current Windows Server 2012R2 Datacenter licenses already in use on the four existing Blade servers (two per hosting center). Consequently, the simplest thing would be to just acquire equivalent licenses for the two new Blade servers that are being purchased (one each per hosting center).

However, Boston Purchasing appears to have taken a position that they cannot acquire the older Windows Server 2012 licenses, despite availability of these licenses in the market.

In order to get us over this hurdle with ordering Microsoft Windows Server licenses for the two new Blade Servers, we have laid out three options that I hope will simplify making a decision. The first option is our original preferred recommendation to acquire licenses that are the exact equivalent of what we currently have deployed. Assuming that option 1 won't be pursued, we offer options 2 and 3, presented below in priority order:

**Option 1: Acquire two Windows Server 2012R2 Datacenter OLP licenses**

- **Pros**
  - Maintains the current Windows Server virtualized environment as it currently is.
  - This will be the easiest to support as we add a new server to each of the PSnet hosting centers.
  - Lowest risk option.
  - Costs will be lowest with this option
- **Cons**
  - None, really.

**Option 2: Acquire two Windows Server 2019 Datacenter OLP licenses for new servers plus four upgrades for existing servers to Windows Server 2019 Datacenter**

- **Pros**
  - Allows PSnet hosting centers to transition to the latest version of Windows Server.
  - Establishes a new technology basis for all Windows Server VMs and associated applications.
  - The entire Windows Server software context will be on a consistent licensing model.
  - Low risk.
  - Potentially resolves some issues with CALs.
- **Cons**
  - Expensive! Upgrade costs for current Windows Server 2012R2 Datacenter licenses will likely be equivalent to buying new Windows Server 2019 Datacenter licenses.
  - Up front support burden, since all currently deployed Windows Server VMs would need to be upgraded, though this can be done incrementally.

**Option 3: Acquire two Windows Server 2019 Datacenter OLP licenses and downgrade to WS2012R2**

- **Pros**
  - Maintains the current Windows Server virtualized environment as it currently is.
  - Support effort should be about the same as for Option 1; i.e., minimal extra effort required.
  - A future upgrade to new Windows Server versions would only entail upgrading existing Windows Server 2012 licenses (i.e., for four existing Blade servers)
  - Costs only slightly more than Option 1 (but only because we constrained the number of cores included with the new Blade servers).
- **Cons**
  - PSnet hosting centers will be operating under two different Microsoft licensing models. In practice, the new licensing model will probably apply to the existing Windows Server 2012 installations.
  - No benefits from new licensing model or Windows Server 2019.
  - Some unknowns associated with CALs and support for existing Microsoft SQL and SharePoint licenses.
  - Potential extra burdens with software license audit requirements.
  - Higher risks.

Assuming that the new Datacenter licenses will allow us to continue to support an unlimited number of Windows Server VMs on each of the PSnet Blade servers operating under VMware vSphere ESXi hypervisor, then we can proceed with any of the above options. Therefore, the decision as to which option to pursue should be made by the PSnet Executive Committee and OEM along with Boston Purchasing.

We do recommend that, when placing the order, we obtain *written confirmation from the reseller or Microsoft that the Datacenter version of the new Windows Server licenses will support an unlimited number of Windows Server VMs (a.k.a., Virtual OSEs) on the licensed hosts operating in a VMware vSphere context with full vMotion support.* Alternatively, a statement to this effect could be added to the order. Despite my best efforts, including direct interactions with Microsoft, I have been unable to get a clear statement to this effect. Microsoft's equivocation on this question is a reason for concern, even though it does appear that the Datacenter license will allow the unlimited use of Windows Server VMs with vMotion that we expect.

Assuming that the new Datacenter licenses will allow us to continue to support an unlimited number of Windows Server VMs on each of the PSnet Blade servers operating under VMware vSphere ESXi hypervisor, then we can proceed with any of the above options. Therefore, the decision as to which option to pursue should be made by the PSnet Executive Committee and OEM along with Boston

Purchasing.

We do recommend that, when placing the order, we obtain *written confirmation from the reseller or Microsoft that the Datacenter version of the new Windows Server licenses will support an unlimited number of Windows Server VMs (a.k.a., Virtual OSEs) on the licensed hosts operating in a VMware vSphere context with full vMotion support.* Alternatively, a statement to this effect could be added to the order. Despite my best efforts, including direct interactions with Microsoft, I have been unable to get a clear statement to this effect. Microsoft's equivocation on this question is a reason for concern, even though it does appear that the Datacenter license will allow the unlimited use of Windows Server VMs with vMotion that we expect.

...Chuck

Thanks,  
Sarah

On Tue, Mar 19, 2019 at 5:48 PM Sarah Plowman <sarah.plowman@boston.gov> wrote:

Well, I bring it up because due to our funding source being a federal grant, we have certain compliance steps we'd need to take in order to make use of that component. I'm attaching a paragraph here that references a SOP (and yes, while it specifically calls out "purchase," renting/leasing the equipment follows the same standards here). If you don't have one, we may need to move ahead with putting a contract together for the MACU without that capability. But if you do have something that meets this criteria, or would be willing to write one, we can talk further about including it. Let me know your thoughts.

Thanks,  
Sarah

6. Small Unmanned Aircraft Systems (AEL #03OE-07-SUAS - System, Small Unmanned Aircraft) are considered aircraft and are required to meet the requirements in #3 above. In addition, all requests to purchase SUAS with FEMA grant funding must also include copies of the policies and procedures in place to safeguard individuals' privacy, civil rights, and civil liberties of the jurisdiction that will purchase, take title to, or otherwise use the SUAS equipment, see Presidential Memorandum: [Promoting Economic Competitiveness While Safeguarding Privacy, Civil Rights, and Civil Liberties, in Domestic Use of Unmanned Aircraft Systems](#), issued February 20, 2015.

On Fri, Mar 15, 2019 at 3:21 PM Eric Johnson <ejohnson@lan-tel.com> wrote:

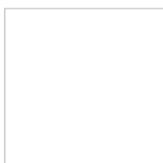

We have never been asked for one We have our own internal checklist that we perform per FAA guidelines / and drone rules and operation . I think it would be hard to keep within a protocol since we don't know environment or event until asked .

I am ccing Scott Torressen of Lan -Tel since he is more involved with drone aspect so we can discuss at some point .

Obviously we could put one together for you specific to UASI , or we just take the drone out of the offering to UASI .

We can offer services a la carte , we will or would never offer all or nothing .

Respectfully,

Eric Johnson

**Subject:** Re: Fw: MACU One Pager

Thanks for this. What we need to understand is the cost/rate per use (is it hourly and if so how much, or is it per event/day - and how much?). We also need to put into place a management structure so that we'll know when it has been reserved, and how to resolve issues like two different jurisdictions requesting use on the same day.

Finally, I'll note that we do not yet have a contract in place to use this unit. I will need to investigate how to get the various approvals in place, and figure out which state contract (or other mechanism) would work as a contract vehicle.

This is on my list of priorities for the next few weeks, so we will continue to move forward on all of these things!

## **1. PURPOSE:**

The purpose of the LAN-TEL Communications (LAN-TEL) Unmanned Aerial System (UAS) policy is to set out clear guidelines for the operation of vehicles in support of the public safety services. The overriding goal is to provide a framework for safe operation and the accomplishment of the mission required to satisfy the mission requirements under applicable rules and regulations.

## **2. SCOPE:**

This policy will apply to all LAN-TEL Communications personnel and pilots authorized to operate UAS aircraft in support of a public safety mission.

2.1. The aviation policy is divided into authorized mission categories that the UAS may operate in at this time.

2.1.1. Structure Fire

2.1.2. Outdoor Fire

2.1.3. Missing Person

2.1.4. Post Incident Assessment

2.1.5. Special Event

## **3. PROCEDURE:**

3.1. LAN-TEL Communications personnel authorized to operate the UAS must meet the required minimum qualifications as put forth by the Federal Aviation Administration (FAA) for the operation of UAS craft. This requires at a minimum that the pilot holds a valid pilot FAA certificate of operation for UAS aircraft and the certificate is active.

LAN-TEL Communications authorized pilots must possess a valid FAA government UAS operator permit:

3.2. LAN-TEL Communications UAS pilots will operate the aircraft at all times with the safety of the public as the primary goal while making all efforts to accomplish the specific mission at hand.

3.3. The LAN-TEL Communications pilot will operate under the designation of Incident Commander. LAN-TEL Communications will be responsible for the oversight and operational use of all UAS operated by LAN-TEL Communications. The pilot will hold all FAA operational certifications and UAS operational flight experience. The pilot will also be responsible for the supervision of the UAS during the mission.

## **4. GENERAL OPERATIONAL REQUIREMENTS:**

4.1. When arriving at the scene of a mission, the pilot will position his vehicle in such a location that would permit for the safe launch and recovery of the UAS. The launch

Communications.com  
Building 3, Suite 3100 | Norwood, MA 02062

[www.LAN-TEL](http://www.LAN-TEL)

[info@LAN-TEL](mailto:info@LAN-TEL)

and recovery location of the UAS will be determined by the pilot and may not be collocated with the Incident Commander location if, at the sole discretion of the pilot, the mission can be better and safer accomplished from an alternative launch and recovery location.

4.2. If members of the public are nearby the pilot will then tape off a no entry zone for all others to not enter. This will be at least a 10 foot radius around the proposed takeoff and recovery point.

4.3. All operations should be in compliance with the FAA issued UAS operation guidelines AC-107-2 which are made a part of this policy. In addition, when operating at night, the UAS must have active visual strobe lights operational to allow for the identification of the craft in the air.

4.4. All LAN-TEL pilots will be assisted by a LAN-TEL field personnel who is a Visual Observer (VO) assisting the pilot during the operation of the UAS. The primary responsibility of the VO will be to ensure the UAS remains clear of any potential collision hazard, maintain an awareness of the position of the UAS, and effectively communicate with the pilot.

4.5. The LAN-TEL Communications UAS pilot will operate under the direction of the Incident Commander but the pilot maintains the sole and exclusive responsibility of operating the UAS in a manner acceptable to the pilot. This might mean the refusal to fly if the situation is determined to be unsafe in the sole discretion of the UAS pilot in command (PIC).

4.6. LAN-TEL Communications will dispatch the UAS PIC secondary to any incident dispatch. It will be the decision of the incident commander to determine when the UAS should be dispatched to the approved incident mission types.

4.7. The LAN-TEL Communications PIC will be required to be in contact with the Incident Commander and LAN-TEL Communications VOs at all times when UAS is in flight

4.8. The UAS will be required to be held in an operational status at all times practical. This will require regular review of hardware and software and inspection of all components to maintain operational use and mission readiness.

4.9. The LAN-TEL Communications PIC will carry the UAS in his/her vehicle and be responsible for the delivery of the UAS and operation at a designated scene.

## **5. APPROVED UAS MISSION CATEGORIES**

### **5.1. STRUCTURE FIRE**

5.1.1. The LAN-TEL Communications UAS can serve a valuable role during a structure fire. Utilizing both the visual and FLIR (Forward Looking Infrared) camera on the aircraft the Commander can obtain significant information about the status of the fire and building.

5.1.2. Flight operations during a structure fire will be at the request of the commander,

(800) 551-8599  
[Communications.com](http://Communications.com)  
1400 Providence Highway  
Communications.com  
Building 3, Suite 3100 | Norwood, MA 02062

[www.LAN-TEL](http://www.LAN-TEL)

[info@LAN-TEL](mailto:info@LAN-TEL)

but all operations are to be conducted in the manner approved by the PIC.

## **5.2. OUTDOOR FIRE**

5.2.1. Outdoor fires can create a secondary complication regarding the operation in the line of sight if tall trees obstruct the pilot's view of the UAS. At the sole discretion of the pilot it may be necessary to request a ladder truck to lift the pilot up above obstructions to maintain a line of sight with the aircraft if the aircraft cannot accomplish the mission with solely a vertical ascent within the line of sight.

5.2.2. The utilization of the UAS at an outdoor fire will allow the scene commander to determine the extent of the fire and/or areas of the fire that should be prioritized. Utilizing the onboard FLIR camera will provide additional information not otherwise available.

## **5.3. MISSING PERSONS**

5.3.1. Depending on the target search area of the missing person search area, it will most likely require the pilot to conduct flight operations from the bucket of the ladder truck to maintain line of sight operations. The need for the ladder truck and elevated platform will be at the sole discretion of the pilot.

5.3.2. Utilizing the onboard FLIR camera the UAS will have significant capabilities otherwise not available for the location of missing persons.

## **5.4. POST DISASTER ASSESSMENT**

5.4.1. As soon as practical for aerial operations and under the guidance of Command, the UAS will start damage assessment over areas that would be deemed a priority for damage assessment. Video and photos would be evaluated for secondary flights.

5.4.2. The utilization of the UAS at a post disaster assessment will allow the Incident Commander and municipality to determine the extent of the damage caused by large scale disasters to determine priority of resources and response.

## **6. INFORMATION CAPTURED BY UAS DURING LAN-TEL COMMUNICATIONS RESPONSE**

6.1. All visual images captured and recorded are the sole property of LAN-TEL Communications.

6.2. After a UAS flight, and as soon as practical, the LAN-TEL Communications UAS PIC will upload captured still and video image files to a secure storage location designated and approved by the corresponding agency.

6.3. The LAN-TEL Communications UAS PIC will submit a flight report as soon as practical after a mission flight to a designated person. This report will include details on the mission flown; including a narrative description of the mission including goals, outcome, measured flight time, and location or folder of saved mission information captured.

Hi Eric & Scott,

Just following up because I never heard back from either of you on this. (See below)

Thanks,  
Sarah

On Tue, Mar 19, 2019 at 5:48 PM Sarah Plowman <sarah.plowman@boston.gov> wrote:

Well, I bring it up because due to our funding source being a federal grant, we have certain compliance steps we'd need to take in order to make use of that component. I'm attaching a paragraph here that references a SOP (and yes, while it specifically calls out "purchase," renting/leasing the equipment follows the same standards here). If you don't have one, we may need to move ahead with putting a contract together for the MACU without that capability. But if you do have something that meets this criteria, or would be willing to write one, we can talk further about including it. Let me know your thoughts.

Thanks,  
Sarah

6. Small Unmanned Aircraft Systems (AEL #03OE-07-SUAS - System, Small [Unmanned Aircraft](#)) are considered aircraft and are required to meet the requirements in #3 above. In addition, all requests to purchase SUAS with FEMA grant funding must also include copies of the policies and procedures in place to safeguard individuals' privacy, civil rights, and civil liberties of the jurisdiction that will purchase, take title to, or otherwise use the SUAS equipment, see Presidential Memorandum: [Promoting Economic Competitiveness While Safeguarding Privacy, Civil Rights, and Civil Liberties, in Domestic Use of Unmanned Aircraft Systems](#), issued February 20, 2015.

On Fri, Mar 15, 2019 at 3:21 PM Eric Johnson <ejohnson@lan-tel.com> wrote:

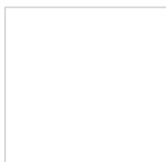

We have never been asked for one We have our own internal checklist that we perform per FAA guidelines / and drone rules and operation . I think it would be hard to keep within a protocol since we don't know environment or event until asked .

I am ccing Scott Torressen of Lan -Tel since he is more involved with drone aspect so we can discuss at some point .

Obviously we could put one together for you specific to UASI , or we just take the drone out of the offering to UASI

We can offer services a la carte , we will or would never offer all or nothing .

Respectfully,

Eric Johnson

**Subject:** Re: Fw: MACU One Pager

Thanks for this. What we need to understand is the cost/rate per use (is it hourly and if so how much, or is it per event/day - and how much?). We also need to put into place a management structure so that we'll know when it has been reserved, and how to resolve issues like two different jurisdictions requesting use on the same day.

Finally, I'll note that we do not yet have a contract in place to use this unit. I will need to investigate how to get the various approvals in place, and figure out which state contract (or other mechanism) would work as a contract vehicle.

This is on my list of priorities for the next few weeks, so we will continue to move forward on all of these things!

Sarah,

From the big picture, your assessment looks good.

As far as follow up activities:

- **Documentation for training:** Yes, I agreed to do this. Shortly after our call, I had an unfortunate computer crash and it knocked me behind on several things. Between that and some business related travel, I haven't gotten to that yet. Planning to do so by end of next week.
- **Other documentation:** (Product as a whole and community engagement.) I don't remember having discussed these, but I'm not opposed to it, either. I'd just need more direction on what is wanted.
  - Product as a whole: I can provide our administrative guide and users guide if you'd like. It's been provided to the stakeholders before, but I can include it for your records if that would be helpful.
  - Community engagement: This is where I'd struggle a bit since I'm not a party to the area's activities on an regular basis.
- **Travel in April/May:** Jonathan (Tellus President) will actually be in Boston early next week. He will be meeting with Boston Fire Superintendent Steve Keeley and possibly other fire departments regarding a new fire-related proposed initiative. He may actually be reaching out to you as well. (Jonathan CCed here.) The mention of his visit on our last call was intended to be less project-specific but more of an fyi for relationship building. There's still a possibility that Jonathan and/or I may return to Boston in May, but again, not for the sole purpose of the project.

On 4/3/2019 12:24 PM, Sarah Plowman wrote:

Hi Eric, Roger, and Scott,

Hope you're doing well this new month. It's been a few weeks since our conference call, so I wanted to reach out again to do a bit of recap and ensure I'm on the same page as you all with wrapping up this contract.

The contract consists of two main parts: Phase IVA and Phase IVB, plus project management (PM). To date, invoices have been paid in the following amounts:

- \$23,000 (IVA)
- \$51,520 (split IVA \$41,520 and IVB \$10,000)
- \$60,000 (split IVB \$50,000 and PM \$10,000)
- \$49,600 (split IVA \$34,600 and PM \$15,000)

This adds up to \$99,120 toward IVA, \$60,000 toward IVB, and \$25,000 toward PM. According to the attached Dec 13, 2017 proposal (referenced also on the invoices), the total breakdown per section of the contract is: \$123,841 IVA, \$76,159 IVB, and \$40,000 PM.

**Thus, remaining to date on the PO is a balance of \$55,880 which is comprised of \$24,721 toward IVA, \$16,159 toward IVB, and \$15,000 PM.** That is how I expect the final invoice to be delineated.

With the final invoice, we had also discussed Tellus/LAN-TEL providing OEM with additional documentation to speak to the training piece, the product as a whole, and including community engagement as well. I remember Jonathan saying he was planning a visit this way end of April or early May. That being the case, I am anticipating the final invoice wouldn't come until mid-May when the notes from his visit can be included in the final documentation.

Am I missing anything else? Do any of you have other questions/concerns? Please also confirm that what I've captured in this email is the understanding of you all as well.

Thanks so much,  
Sarah

The contract consists of two main parts: Phase IVA and Phase IVB, plus project management (PM). To date, invoices have been paid in the following amounts:

- \$23,000 (IVA)
- \$51,520 (split IVA \$41,520 and IVB \$10,000)
- \$60,000 (split IVB \$50,000 and PM \$10,000)
- \$49,600 (split IVA \$34,600 and PM \$15,000)

This adds up to \$99,120 toward IVA, \$60,000 toward IVB, and \$25,000 toward PM. According to the attached Dec 13, 2017 proposal (referenced also on the invoices), the total breakdown per section of the contract is: \$123,841 IVA, \$76,159 IVB, and \$40,000 PM.

**Thus, remaining to date on the PO is a balance of \$55,880 which is comprised of \$24,721 toward IVA, \$16,159 toward IVB, and \$15,000 PM.** That is how I expect the final invoice to be delineated.

With the final invoice, we had also discussed Tellus/LAN-TEL providing OEM with additional documentation to speak to the training piece, the product as a whole, and including community engagement as well. I remember Jonathan saying he was planning a visit this way end of April or early May. That being the case, I am anticipating the final invoice wouldn't come until mid-May when the notes from his visit can be included in the final documentation.

Am I missing anything else? Do any of you have other questions/concerns? Please also confirm that what I've captured in this email is the understanding of you all as well.

Thanks so much,  
Sarah

Sarah,

From the big picture, your assessment looks good.

As far as follow up activities:

- **Documentation for training:** Yes, I agreed to do this. Shortly after our call, I had an unfortunate computer crash and it knocked me behind on several things. Between that and some business related travel, I haven't gotten to that yet. Planning to do so by end of next week.
- **Other documentation:** (Product as a whole and community engagement.) I don't remember having discussed these, but I'm not opposed to it, either. I'd just need more direction on what is wanted.
  - Product as a whole: I can provide our administrative guide and users guide if you'd like. It's been provided to the stakeholders before, but I can include it

- for your records if that would be helpful.
- Community engagement: This is where I'd struggle a bit since I'm not a party to the area's activities on a regular basis.
  - **Travel in April/May**: Jonathan (Tellus President) will actually be in Boston early next week. He will be meeting with Boston Fire Superintendent Steve Keeley and possibly other fire departments regarding a new fire-related proposed initiative. He may actually be reaching out to you as well. (Jonathan CCed here.) The mention of his visit on our last call was intended to be less project-specific but more of an fyi for relationship building. There's still a possibility that Jonathan and/or I may return to Boston in May, but again, not for the sole purpose of the project.

Ok then if we need to renew it, I think that \$20 cost would fall under our existing PSnet contract with LAN-TEL, and would be a part of their ongoing services to us that we pay in equal installments for. There can just be a note on the invoice somewhere or in the backup documentation that indicates the cert has been renewed.

On Wed, Apr 24, 2019 at 4:07 PM Scott Wilder <swilder@brooklinema.gov> wrote:

If we do nothing, it will die out.

There will be no software updates, patches or maintenance etc. ..

Sarah, I think at the Intel meeting you should get this pushed back to our group so we can decide on its future.

I know Stonewall ( Phil Carlucci ) , logs into it on a regular basis to check the system health, and if there are any abnormalities or software\ hardware warnings for the SharePoint server.

Scott,

It doesn't matter to us. I've done it in the past, and it's not a big deal.

However, if Stonewall is involved, then perhaps they could configure this service to use "Let's Encrypt" certs, which would be a good fit for this application, and no cost with future renewals automated.

By the way, our team remains in the dark as to what is going on with the SharePoint server. We do see that Phil Carlucci from Stonewall connects into PSnet via the VPN gateway quite frequently (including yesterday), but we have no information as to what is being done with this service.

We can discuss this on Tuesday.

Sarah, Scott,

The digital certificate for the SharePoint system that resides on PSnet is coming up for renewal. Our team has not received any specific guidance on the status of this SharePoint system. As a result, I want to check before renewing this certificate. It is not particularly expensive; probably less than \$20.

Just let me know what we should do...

Sarah,

I overlooked your last question. Yes, we are on track to close out IVB as we had discussed. We're currently working actively with Somerville PD and FD. With a little luck, we can either make good progress or complete their integration next week. After that, we'll only have Northeastern U and Boston PD/FD to connect. And we all know the issues about :Boston PD/FD, so it may only be Northeastern U who I'm confident will be easy to work with.

On 4/5/2019 1:27 PM, Roger Salisbury wrote:

Sarah,

From the big picture, your assessment looks good.

As far as follow up activities:

- **Documentation for training:** Yes, I agreed to do this. Shortly after our call, I had an unfortunate computer crash and it knocked me behind on several things. Between that and some business related travel, I haven't gotten to that yet. Planning to do so by end of next week.
- **Other documentation:** (Product as a whole and community engagement.) I don't remember having discussed these, but I'm not opposed to it, either. I'd just need more direction on what is wanted.
  - Product as a whole: I can provide our administrative guide and users guide if you'd like. It's been provided to the stakeholders before, but I can include it for your records if that would be helpful.
  - Community engagement: This is where I'd struggle a bit since I'm not a party to the area's activities on an regular basis.
- **Travel in April/May:** Jonathan (Tellus President) will actually be in Boston early next week. He will be meeting with Boston Fire Superintendent Steve Keeley and possibly other fire departments regarding a new fire-related proposed initiative. He may actually be reaching out to you as well. (Jonathan CCed here.) The mention of his visit on our last call was intended to be less project-specific but more of an fyi for relationship building. There's still a possibility that Jonathan and/or I may return to Boston in May, but again, not for the sole purpose of the project.

On 4/3/2019 12:24 PM, Sarah Plowman wrote:

Hi Eric, Roger, and Scott,

Hope you're doing well this new month. It's been a few weeks since our conference call, so I wanted to reach out again to do a bit of recap and ensure I'm on the same page as you all with wrapping up this contract.

The contract consists of two main parts: Phase IVA and Phase IVB, plus project management (PM). To date, invoices have been paid in the following

amounts:

- \$23,000 (IVA)
- \$51,520 (split IVA \$41,520 and IVB \$10,000)
- \$60,000 (split IVB \$50,000 and PM \$10,000)
- \$49,600 (split IVA \$34,600 and PM \$15,000)

This adds up to \$99,120 toward IVA, \$60,000 toward IVB, and \$25,000 toward PM. According to the attached Dec 13, 2017 proposal (referenced also on the invoices), the total breakdown per section of the contract is: \$123,841 IVA, \$76,159 IVB, and \$40,000 PM.

**Thus, remaining to date on the PO is a balance of \$55,880 which is comprised of \$24,721 toward IVA, \$16,159 toward IVB, and \$15,000 PM.** That is how I expect the final invoice to be delineated.

With the final invoice, we had also discussed Tellus/LAN-TEL providing OEM with additional documentation to speak to the training piece, the product as a whole, and including community engagement as well. I remember Jonathan saying he was planning a visit this way end of April or early May. That being the case, I am anticipating the final invoice wouldn't come until mid-May when the notes from his visit can be included in the final documentation.

Am I missing anything else? Do any of you have other questions/concerns? Please also confirm that what I've captured in this email is the understanding of you all as well.

Thanks so much,  
Sarah

Sarah, Scott,

Since this cert needs to be installed into the SharePoint system, would it make more sense for this to be handled by Stonewall? Although we can acquire the cert and install it in the Windows Server VM, we do not have the access to configure this in the SharePoint application. If Stonewall were to handle this, then they can handle the entire cert renewal/installation procedure.

Note, this is not a cost issue, or even a concern about the effort involved, which is modest. However, it just seems to make more sense to have this process owned by the folks maintaining the SharePoint application.

On 4/24/19 4:23 PM, Sarah Plowman wrote:

Ok then if we need to renew it, I think that \$20 cost would fall under our existing PSnet contract with LAN-TEL, and would be a part of their ongoing services to us that we pay in equal installments for. There can just be a note on the invoice somewhere or in the backup documentation that indicates the cert has been renewed.

On Wed, Apr 24, 2019 at 4:07 PM Scott Wilder <[swilder@brooklinema.gov](mailto:swilder@brooklinema.gov)> wrote:

If we do nothing, it will die out.

There will be no software updates, patches or maintenance etc. ..

Sarah, I think at the Intel meeting you should get this pushed back to our group so we can decide on its future.

I know Stonewall ( Phil Carlucci ) , logs into it on a regular basis to check the system health, and if there are any abnormalities or software\ hardware warnings for the SharePoint server.

Ah! I forgot to bring this up at the meeting! What happens if we don't renew it?

On Fri, Apr 19, 2019 at 3:18 PM Chuck Wade <[Chuck@interisle.net](mailto:Chuck@interisle.net)> wrote:

Scott,

It doesn't matter to us. I've done it in the past, and it's not a big deal.

However, if Stonewall is involved, then perhaps they could configure this service to use "Let's Encrypt" certs, which would be a good fit for this application, and no cost with future renewals automated.

By the way, our team remains in the dark as to what is going on with the SharePoint server. We do see that Phil Carlucci from Stonewall connects into PSnet via the VPN gateway quite frequently (including yesterday), but we have no information as to what is being done with this service.

We can discuss this on Tuesday.

Sarah, Scott,

The digital certificate for the SharePoint system that resides on PSnet is coming up for renewal. Our team has not received any specific guidance on the status of this SharePoint system. As a result, I want to check before renewing this certificate. It is not particularly expensive; probably less than \$20.

Just let me know what we should do...

Eric,

Well, the subcommittee decided to move ahead without the drone component. That being said, which state contract do you usually use to rent this vehicle out under?

Thanks,  
Sarah

Hi Eric & Scott,

Just following up because I never heard back from either of you on this. (See below)

Thanks,  
Sarah

On Tue, Mar 19, 2019 at 5:48 PM Sarah Plowman <sarah.plowman@boston.gov> wrote:

Well, I bring it up because due to our funding source being a federal grant, we have certain compliance steps we'd need to take in order to make use of that component. I'm attaching a paragraph here that references a SOP (and yes, while it specifically calls out "purchase," renting/leasing the equipment follows the same standards here). If you don't have one, we may need to move ahead with putting a contract together for the MACU without that capability. But if you do have something that meets this criteria, or would be willing to write one, we can talk further about including it. Let me know your thoughts.

Thanks,  
Sarah

6. Small Unmanned Aircraft Systems (AEL #03OE-07-SUAS - System, Small Unmanned Aircraft) are considered aircraft and are required to meet the requirements in #3 above. In addition, all requests to purchase SUAS with FEMA grant funding must also include copies of the policies and procedures in place to safeguard individuals' privacy, civil rights, and civil liberties of the jurisdiction that will purchase, take title to, or otherwise use the SUAS equipment, see Presidential Memorandum: [Promoting Economic Competitiveness While Safeguarding Privacy, Civil Rights, and Civil Liberties, in Domestic Use of Unmanned Aircraft Systems](#), issued February 20, 2015.

On Fri, Mar 15, 2019 at 3:21 PM Eric Johnson <ejohnson@lan-tel.com> wrote:

We have never been asked for one We have our own internal checklist that we perform per FAA guidelines /

and drone rules and operation . I think it would be hard to keep within a protocol since we don't know environment or event until asked .

I am ccing Scott Torressen of Lan -Tel since he is more involved with drone aspect so we can discuss at some point .

Obviously we could put one together for you specific to UASI , or we just take the drone out of the offering to UASI .

We can offer services a la carte , we will or would never offer all or nothing .

Respectfully,

Eric Johnson

**Subject:** Re: Fw: MACU One Pager

Thanks for this. What we need to understand is the cost/rate per use (is it hourly and if so how much, or is it per event/day - and how much?). We also need to put into place a management structure so that we'll know when it has been reserved, and how to resolve issues like two different jurisdictions requesting use on the same day.

Finally, I'll note that we do not yet have a contract in place to use this unit. I will need to investigate how to get the various approvals in place, and figure out which state contract (or other mechanism) would work as a contract vehicle.

This is on my list of priorities for the next few weeks, so we will continue to move forward on all of these things!

Hi Kelly,

Thank you for this. One clarification question: the second portion of the quote specifically calls out FAC64, which is great. Can you confirm that the first portion of the quote (\$31,812.50) is also applicable to the FAC64 state contract?

Thanks again,  
Sarah

Only software/products are available for FAC 64 discount – it isn't available for monitoring and maintenance.

Technically, FAC64 is for the vendor's products/software only. However, I just spoke with my VP and she indicated we can offer the 2% on the entire invoice if it is needed.
