Good afternoon,
BriefCam is a Video Software solution used in many Cities and Towns across the country. We are most famously known for helping quickly identify the Boston Marathon Bombers. The platforms helps law enforcement be able to effectively review and respond to events recorded by video surveillance. BriefCam enables the review of hours of video in just minutes, dramatically increasing investigation productivity.
You can quickly search and filter objects and events of interest by men, women, children, vehicles, and lighting changes with speed and precision, using 27 classes and attributes, in addition to facial recognition, appearance similarity, color, size, speed, path, direction, and dwell time, providing an ever increasing and powerful set of distinct search combinations.

If you are interested in seeing a demo of the system, I'd be more than happy to set this up for you.

In the interim, I have attached a few cut sheets and Case studies for your review.

BriefCam Short Video Case Studies

Police Investigation- Boston Marathon Bombing
How Video helps overcome the top 3 Police Force Challenges
How Police in Small Cities can Overcome Big Challenges
can police departments of any size integrate video intelligence software
