Taking violent criminals off our streets

From WPLG Local10 in Miami, Florida (emphasis ours):

[...] After the **fatal shooting** on North Miami Avenue at Northwest 20th Street, [the suspect] ran away. Despite a massive manhunt in Miami’s Wynwood-Overtown boundary, [the suspect] was able to escape to another state. Assistant Chief Armando Aguilar said artificial intelligence helped detectives find him.

"**Within just over 30 hours**, we had identified [the suspect] and had him in handcuffs in Columbus, Ohio," Aguilar said on Thursday.

Aguilar said the Miami Police Department has been testing facial recognition software by Clearview.AI […] Detectives said the system, which has been criticized over invasion-of-privacy concerns, **quickly tracked** [the suspect], who has a "Death Before Dishonor" tattoo on his forehead. […]

[This] case isn’t the only one that includes the use of this technology. In the two months that detectives have been using the software they have been able to **identify 10 suspects** who have been tied to felony cases, **including violent crimes**, Aguilar said. […]

**Solving thefts and fraud**
An alleged thief is in jail after two Florida law enforcement agencies used a controversial crime-fighting tool. [The suspect] was wanted for allegedly stealing nearly $12,000 worth of items from a Clermont store last month.

Investigators said they were able to identify [the suspect] through facial recognition technology. [...] Within two days, both Tampa police and Seminole County deputies said they used facial recognition software to tentatively identify the suspect [...] The Sheriff’s Office said it is currently testing a facial recognition program called Clearview AI. [...]

Saving children from sexual abuse

[...] Investigators say Clearview’s tools allow them to learn the names or locations of minors in exploitative videos and photos who otherwise might not have been identified. In one case in Indiana, detectives ran images of 21 victims of the same offender through Clearview’s app and received 14 IDs, according to Charles Cohen, a
retired chief of the state police. The youngest was 13.
“These were kids or young women, and we wanted to be able to find them to tell them
we had arrested this guy and see if they wanted to make victim statements,” Mr. Cohen
said.
Another official, a victim identification officer in Canada, who was not authorized to
discuss investigations publicly, described Clearview’s technology as “the biggest
breakthrough in the last decade” in the field of child sexual abuse crimes. [...] The app is being used by task forces in Florida, Indiana and South Dakota dedicated to
investigating child abuse, as well as by the Department of Homeland Security and law
enforcement in Canada. [...] Read the full story here.

Don't take our word for it... hear it from a hero

A federal agent shares her experience with Clearview AI in the field:

“I love Clearview... I would love to say that Clearview has helped us
identify child victims and perpetrators in record time on child exploitation
investigations. It’s also helped me in financial fraud cases to uncover
multiple accounts on suspects. We have used it every day in human
trafficking investigations and it has helped us to identify more
victims than any other resource!"

Available on desktop and mobile
Clearview AI is an Internet search engine for faces. It only takes one photo of a suspect's face, one quick tap or click on your desktop or cell phone, and one second of search time. Get results from mug shots, social media, news articles, and millions of other publicly available sources from the open web.

Clearview AI combines the cutting edge of facial recognition technology with our proprietary database of over 3 billion images from the open web. Our software can find matches even if a suspect grows a beard, wears glasses or headwear, appears in low light or at odd angles, or even if they're in a group photo.

It only takes one minute to install - and you can start searching immediately.

Sign up now for a free 30-day trial with unlimited searches and test this cutting edge technology for yourself. No strings attached.
