Increasing School Security through Visual Identification

This complimentary webinar will provide you with new ideas to make your school a safer place when students return after the summer break.

🕒 Recorded Date/Time: August 07, 2018, 2:00 PM

[View Archive](#)

Recent school events have focused the attention of administrators, security officers and IT professionals on raising the level of safety for students, staff and visitors. Policies are created or re-examined to make sure that everyone on campus has a legitimate purpose.

This complimentary webinar will provide you with new ideas to make your school a safer place when students return after the summer break. The webinar will address the following questions:

- How are schools around the country raising security through visual identification, enforcing staff, students and visitors to wear and display their ID consistently?
- Exploring the details of the ID plan at Beekmantown CSD, a district with four schools and 2,000 students, and how is this consistently executed one step at a time?

- What are low cost and easy to implement ideas to strengthen the ID badge program, while benefiting from new functionality for staff, students, volunteers and vendors?

Zach Winn is a senior editor at Campus Safety. He has been writing about best practices and solutions in the school security industry since February of 2015.

Zach Winn is the Director of 21st Century Learning for the Beekmantown Central School District in upstate New York, where he has worked for the last 25 years. He started as a Middle & High School French & Spanish teacher, moving to a Technology Coordinator role and his current position. His work experiences have given him a broad knowledge of planning, organizing, and managing the technology infrastructure of a K-12 educational institution as well as an aptitude for integrating that technology into all aspects of the organization. He has overseen countless technology related district initiatives but most recently he has overseen a massive redesign of the district's premise security system to keep staff and students safer.

Mike Mans managed the Direct-to-Card printer portfolio at HID Global, developing and planning of innovative solutions for key target market segments, including education.

Justin Strauss has been with ID Wholesaler since 2007. He has worked with hundreds of schools during this time, evolving their ID badging program by increasing functionality, convenience and security. He currently leads a team of Account Managers in meeting customer needs.

Anonymous Amazon Employee Publishes Op-Ed Opposing Sale of Facial Recognition Tech to Police

October 18, 2018 • by Staff Writer (/authors/504428/staff)

Embed from Getty Images (<http://www.gettyimages.com/detail/952605500>)

An anonymous employee for tech giant Amazon recently posted an opinion article to [Medium \(https://medium.com/s/story/im-an-amazon-employee-my-company-shouldn-t-sell-facial-recognition-tech-to-police-36b5fde934ac\)](https://medium.com/s/story/im-an-amazon-employee-my-company-shouldn-t-sell-facial-recognition-tech-to-police-36b5fde934ac) in which they argue that the sale of facial recognition software to police is wrong because "the product we're selling is a flawed technology that reinforces existing bias."

In [June \(https://www.policemag.com/channel/technology/news/2018/06/22/amazon-employees-join-aclu-investors-in-protest-amazon-s-sale-of-tech-to-police.aspx\)](https://www.policemag.com/channel/technology/news/2018/06/22/amazon-employees-join-aclu-investors-in-protest-amazon-s-sale-of-tech-to-police.aspx), a group of Amazon employees posted to an internal company Wiki page a letter—later obtained by [The Hill \(https://thehill.com/business-a-lobbying/393583-amazon-employees-protest-sale-of-facial-recognition-tech-to-law\)](https://thehill.com/business-a-lobbying/393583-amazon-employees-protest-sale-of-facial-recognition-tech-to-law)—asking company executives to discontinue its sale of the company's Rekognition facial recognition software to law enforcement agencies.

The anonymous op-ed published this week rekindles opposition to the sale of that technology to police.

"Amazon, where I work, is currently allowing police departments around the country to purchase its facial recognition product, Rekognition, and I and other employees demand that we stop immediately," the opinion piece reads.

The employee wrote, "Amazon is designing, marketing, and selling a system for dangerous mass surveillance right now," the write states. "Amazon's website brags of the system's ability to store and search tens of millions of faces at a time. Law enforcement has already started using facial recognition with virtually no public oversight or debate or restrictions on use from Amazon."

School Districts Consider Facial Recognition to Improve Security

One New York school district has begun the installation of 300 facial recognition cameras on its eight campuses using a state grant.

Critics worry the technology will misidentify students and create a negative school climate.

🕒 July 26, 2018 👤 Amy Rock 💬 Jump to Comments

Some school districts have started the process of integrating facial recognition technology into its surveillance systems while others are still in the early stages of simply considering

the technology

Lockport City School District in upstate New York has begun the installation of 300 facial recognition cameras on its eight campuses using \$1.4 million from a \$4 million 2014 state grant, reports Trib Live.

The technology will check each person's face against a database consisting of expelled students, terminated employees, sex offenders and other possible agitators. It can also identify certain weapons the system is programmed to detect.

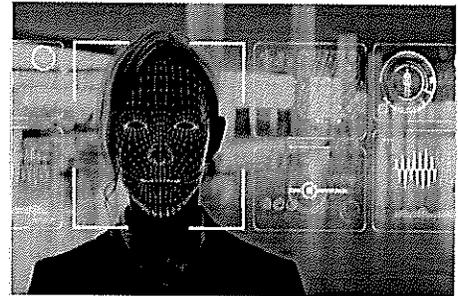

"We shake our heads that we're having to deal with and talk about these kinds of security issues, but here we are," said Robert LiPuma, the district's technology director.

District officials believe the technology could have thwarted shootings like the one in Parkland, Fla., where the gunman was an expelled student with a well-known history of severe mental health issues.

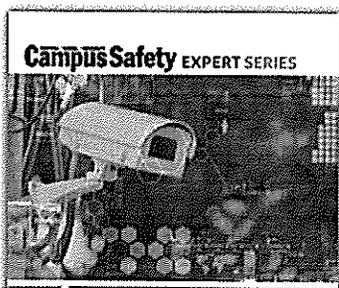

"This would have identified (the gunman) as not being able to be in that building," said Tony Olivo, a security consultant who recommended the system for Lockport.

Officials also acknowledge that the system won't stop a determined attacker from coming through the doors or warn against someone who is not a known threat.

"There's no system that's going to solve every problem," LiPuma said. "It's another tool that we feel will give us an advantage to help make our buildings and our communities a little safer."

Making the Case for Video Surveillance Upgrades

Stakeholders who aren't directly involved in security or law

enforcement might not be familiar with what makes up a security camera solution. Download this FREE report for more information about video

surveillance systems and their benefits that will help you make your case for an investment in security camera technology. [Learn More.](#)

Since Lockport's plans have been made public, many critics have denounced the technology, concerned the software will misidentify students and have a negative effect on school climate.

"Lockport is sending the message that it views students as potential criminals who must have their faces scanned wherever they go," said Donna Lierberman, executive director of the New York Civil Liberties Union, a group that has asked the state Education Department to block the technology from any N.Y. school.

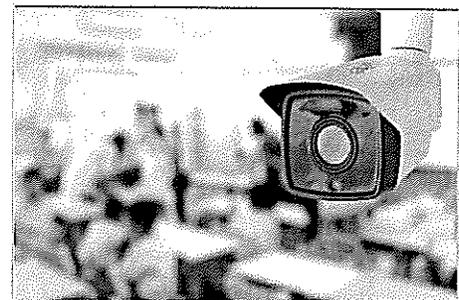

Administrators assure that the system, made by SN Technologies of Ontario, will not build or store a database of student and faculty face prints that could be shared with the government or marketers. Only those seen as threats will be uploaded into the database.

Back in March, the Magnolia School Board in Magnolia, Ark., signed off on spending nearly \$300,000 for a facial recognition system that includes over 200 cameras at two secondary schools, according to [Gizmodo](#).

In Texas, the Fort Bend Independent School District tasked a 40-member school safety advisory committee with evaluating **school security enhancements** for its 75 campuses and 76,000 students.

During a June board meeting, the committee, comprised of students, staff, parents, community members, security experts and two Ford Bend ISD trustees, proposed using facial recognition technology.

"If somebody makes a threat in the community, we could plug their face in and if they pass in front of any of our cameras it would give us an alert

Related: More Districts Approve Security Budgets as New School Year Approaches

right away," said Fort Bend ISD Police Chief David Rider, who presented the suggestion during the board meeting.

... with the Electronic Frontier Foundation, a digital rights group, said any school considering **facial recognition** must consider who will have access to data, how such a system would be managed and whether students can opt out.

Fort Bend ISD trustees expect to vote on the technology and other security items during an Aug. 13 board meeting. If approved, the entire referendum could total \$1.7 billion.

2 responses to “School Districts Consider Facial Recognition to Improve Security”

Steve says:

July 31, 2018 at 10:47 am

WHY? Seems like a waste of money especially since most of the shooting are from students that ATTEND the school. All the program will do is recognize “Jimmy” as being authorized on campus not that he has a backpack filled with ammo and guns. Need more suitable programs...Increased resource officers, video monitoring of approaching personnel, stricter guidelines to what can be brought into school, homework via internet so books aren't needed. etc. etc..

Reply

ARMANDO Seay says:

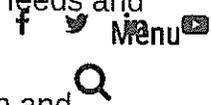

August 15, 2018 at 11:52 am

Most of tge technology on the market today used a set of training data for facial Recognition based on a standard set of characteristics. This training set does have some built in bias factors that leads to a degree of false positives that must be mitigated by a human. More importantly the new technologies hitting the market such as Kogniz take a different approach yo the machine learning and AI capabilities in the camera that increase accuracy of recognition.

Also important is the ability of the new cameras entering the market to recognize movements that could indicate a violent event in progress. This type of capability makes cameras a proactive threat mitigator rather than a witness to an event and an after action forensic tool.

Schools can reduce overhead and technology total cost of ownership by using cloud based solutions that eliminate the cost of servers and DVRs. The ability to share live video with first responders using tablets, iPhones and android devices is important. There are gateway solutions that will bridge surveillance systems in schools with those of police

departments as well – eliminating the need to have a single vendor solution for shared video to be implemented. Police can then assess what is going on using live feeds and eliminating the need for restoration during an active shooter event.

As always, cyber security must play a role to ensure secure video distribution and monitoring by authorized personnel only. Schools must know where the data being collected by cameras is going at all times. Data loss prevention tools can track this information and help prevent unauthorized downloads, uploads and forwarding.

Dear Detective,

Hello, my name is Fran from Suspect Technologies. We developed a highly accurate facial recognition technology that works for any cameras to make identification of people, easier and faster. In turn, we hope it will make identification of suspects easier, save resources, save time, and of course reduce crime. We are currently trying to gather insights to see if this technology works for you, any suggestions or comments, and if this is something that you think would be helpful for you in investigations and possibly the field. Just to be clear, I'm not necessarily trying to sell you anything. We are a spin-off from MIT. We are trying to understand if detectives want this or not and how they are currently using facial recognition and related technologies. Any feedback is helpful. Are you available to answer some quick questions via email or phone?

Best Regards,

Fran

Florida Department Extends Test of Amazon's Facial Recognition Software

July 9, 2018 • by Staff Writer (/authors/504428/staff)

Embed from Getty Images (<http://www.gettyimages.com/detail/90339752>)

The Orlando Police Department plans to continue its test of Amazon's controversial "Rekognition" facial recognition software, despite [opposition \(https://www.policemag.com/blog/technology/story/2018/06/balancing-privacy-rights-and-facial-recognition-technology-for-police.aspx\)](https://www.policemag.com/blog/technology/story/2018/06/balancing-privacy-rights-and-facial-recognition-technology-for-police.aspx) from civil rights groups such as the ACLU and even company employees and investors.

Rekognition can identify a person in a crowd matching an image uploaded to the system and track their movements in real time. The department had been using a free "proof of concept" trial of the system with seven police officers who volunteered to participate having images uploaded.

According to the [Orlando Sentinel \(http://www.orlandosentinel.com/news/orange/os-orlando-extends-amazon-test-20180709-story.html\)](http://www.orlandosentinel.com/news/orange/os-orlando-extends-amazon-test-20180709-story.html), the department informed Mayor Buddy Dyer and the city council that more time was needed to make a "thoughtful, precise and comprehensive recommendation" on whether or not the city should eventually purchase the technology.

Ekin: Smart Patrol in a Lightbar

February 7, 2018 • by [Melanie Basich \(/authors/338067/melanie-basich\)](#)

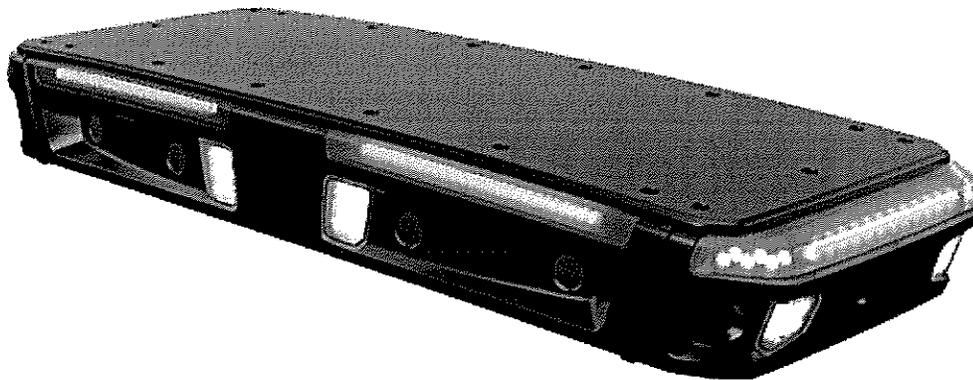

Photo: Ekin

What if you could install one product on a patrol car that provided capability for automatic license plate recognition, facial recognition, and speed and parking violation detection? Billed as the first and only smart patrol in the world, Ekin's Patrol G2 is designed to do just that, in the form of a fully functioning lightbar.

According to Orkunt Yozgat, director of business development and marketing for Ekin, this mobile product is capable of keeping cities around the world safe. "The benefits of Patrol G2 come from its versatility and integrated software," says Yozgat. This "plug-and-play product" can be easily mounted to virtually any emergency vehicle and works autonomously without the need for additional hardware. And Patrol G2's connection to a centrally managed system via the proprietary Red Eagle OS allows officers to view and compare surveillance data from all around the city to better respond to and investigate incidents.

The second generation of the original Ekin Patrol, Ekin Patrol G2 has been completely redesigned with new technology that can detect vehicle speed across five lanes of traffic and read license plates between closely parked vehicles to better enable parking enforcement.

All aspects of Patrol G2 are designed to work together, taking advantage of their integration. The lightbar unit incorporates cameras on all four sides to provide a 360-degree view of the area being patrolled. In concert with the Red Eagle OS, this allows Patrol G2 to constantly scan the area for the license plates of wanted vehicles as well as the faces of suspects in a crowd using Ekin's proprietary facial recognition software.

Ekin's Patrol G2 connects to other city systems via the Red Eagle OS so officers can view all video citywide. Photo: Ekin

"Equipped with Ekin Face, Patrol G2 captures all faces within its field of view and compares them with a police department's database of wanted suspects," Yozgat says. "With face analysis, Ekin Face clearly lists possible time ranges, images, and videos where specified individuals might appear, making it simple to comb through hours of video surveillance."

Ekin Red Eagle OS allows Patrol G2 units to act as part of centrally managed Ekin systems and communicate with other city surveillance systems to facilitate law enforcement response.

"When a wanted car or person is located, Red Eagle alerts the officer by sending a notification to their smart device," Yozgat explains. "Ekin Red Eagle (OS) also makes central management and communication between all systems streamlined and simple, so it is easy for law enforcement agencies to compare surveillance footage from all devices across a city."

Ekin provides all its customers with training in how to use Patrol G2 and the system it integrates with. The first training is in person and follow up trainings, if needed, are done via the web. If further assistance is needed, Yozgat says Ekin support specialists can always assist customers with whatever they require.

"Ekin's mission is to enable law enforcement to more efficiently and effectively protect the public by providing them with state-of-the-art software and hardware that makes their job easier," says Yozgat. "With Patrol G2, police departments have an extra set of eyes patrolling the streets, and it's easy for law enforcement to centrally manage and decipher the data and videos gathered by Ekin's line of products."

Florida Court Hearing Appeal of Case Involving Facial Recognition Technology

March 12, 2018 • by Staff Writer (/authors/504428/staff)    

The Florida state's appellate court is deciding whether the Jacksonville Sheriff's Office and local prosecutors properly handled a conviction that hinged on the identification of a suspect using an innovative police surveillance technology.

The First District Court of Appeals is due to break new legal ground in determining whether police are allowed to use facial recognition software to identify suspects without ever notifying them of the technology.

The court battle, regarded by researchers as the first of its kind in the country to consider how the surveillance tool can be used in a criminal case, is being waged over a statewide biometric database of faces run out of the Pinellas County Sheriff's Office — one that extends to anyone with a Florida driver's license despite their criminal histories, or lack thereof, the [Florida Times-Union](http://www.jacksonville.com/news/20180312/police-surveillance-technology-under-fire-in-appeal) (<http://www.jacksonville.com/news/20180312/police-surveillance-technology-under-fire-in-appeal>) reports.

Undercover detectives from the Jacksonville Sheriff's Office accessed the system through an intermediary in September 2015 to generate a lead after hitting a dead end in their search for the perpetrator of a \$50 crack buy. More than two years later, state prosecutors with the Florida Attorney General's office are making novel arguments to defend the agency's use of the controversial technology.

IJIS Institute National Symposium EARLY BIRD ENDS TONIGHT

IJIS Institute

Date

Feb. 6*-9, 2018

Location

Crystal Gateway Marriott
1700 Jefferson Davis Hwy
Arlington, VA 22202

ROOM DISCOUNT ENDS

JAN. 16, 2018

NEARLY SOLD OUT

**INCLUDED IN PAID
SYMPOSIUM
REGISTRATION:**

1.

Badge & Tech Benefit for
the National Law
Enforcement Officers

Don't miss this opportunity to learn about the hot topics that will impact your business and mission in the upcoming year and beyond. Join us at the IJIS Institute National Symposium from Feb. 6* - Feb. 9 in Arlington, Virginia.

This year, your PAID registration includes the Advisory Committee Meetings and the Facial Recognition Task Force, plus, you can attend the Privacy Summit and the Badge & Tech Benefit & Awards Dinner ** at no additional cost.

Take time to register now before the Early Bird ends!

This year's educational sessions will include:

- Blockchain and Its Potential Use in the Courts
- FirstNet update
- NIST Single Sign-on for Mobile Native and Web Applications
- Facial Recognition Policy Challenges
- Using Data Analytics with NIBRS to Achieve Informed Planning Decisions
- And many others...

Memorial Fund on Feb. 7

2.

Privacy Summit on
afternoon of Feb. 8, morning
of Feb. 9

See the Agenda

New this year:

- ENDS TODAY - Government employees can register for the National Symposium for FREE until end of day, Jan. 8.
- Badge & Tech Benefit & Awards Dinner included for FREE with PAID Symposium registrations (*not included in government reduced or free registration*)

Register Now!

A few Sponsorships left!

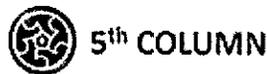

Contact Martha Hill at martha.hill@ijis.org or call 703-726-4483 to select your sponsorship.

Select My Sponsorship Now!

**IJIS Institute Member Advisory Committee meetings will be held on February 6.*

***Have a FREE registration and want to attend the Badge & Tech Benefit and Awards Dinner? You can register here for \$150: http://www.ijis.org/events/event_list.asp*

IS CONTACT AND COVER DEAD?
This two-officer technique used to be a cornerstone of patrol training and tactics. By Steve Albright

The tactic of contact and cover did not start with me. Bill I saw the first book on the subject in 1982, with San Diego Police Detective Lieutenant John Morhart, a few years after my arrival at the same name first run in the April 1980 issue of POLICE. Thirty 20 years is a long run for anything, police tactics especially, but maybe it's time to call the time done. If it's not, then at least "modified to death" by adjustments and tactics which have never had anything else. More on that in a moment.

In John Morhart's book, he talks about how he was involved in the tactic and how it was used in the Los Angeles Police Department. He also talks about the evolution of contact and cover. I happened to

come along in 1982 when he had just written his 1982 edition of the book, which was published in 1982. I had just written my own book on the subject, which was published in 1982. I had just written my own book on the subject, which was published in 1982.

POLICE

HOW TO GET A JOB IN LAW ENFORCEMENT
Bigger budgets have led to a hiring bonanza in law enforcement. What do candidates need to know to land a law enforcement job? By Kristine Girelli

During the Great Recession, law enforcement agencies across the country slashed their budgets. This led to slower hiring and fewer officers, public safety closures, and cutbacks in salaries and benefits. But the economy is better now, and hiring for law enforcement is nearly being restored.

This is good news for those individuals hoping to start a job in the law enforcement field. However, it's important to know what to expect when applying for a law enforcement job.

These agencies have been producing officers to meet the demand for law enforcement. They have been able to meet the demand for law enforcement by recruiting and training officers. The good news is that it's a good time to apply for a law enforcement job. However, it's important to know what to expect when applying for a law enforcement job.

Officers who were previously employed for the Los Angeles County (LAC) Sheriff's Department (SD) who worked for the agency's Patrol and Training Division in the law enforcement agency in the Sheriff's Department. They were able to find a job in the Sheriff's Department. They were able to find a job in the Sheriff's Department. They were able to find a job in the Sheriff's Department.

TO BECOME AN OFFICER
A good first step is to get a good education. While the end of the road may not be a guarantee, a good education is a good first step.

THE PATROL ATHLETE
If you work patrol, you'll benefit from an exercise regimen focused on functional strength training specific to your daily duties. By Whitney Hutchings and Will Birk

A strong, fit, flexible, explosive, and well-coordinated police officer is a better police officer. Improved physical conditioning is correlated with lower officer injury and death rates, lower sick leave usage, lower call ability, lower overall complaints, lower subject injury rates, lower police rate, improved mental health, lower rates of force, and lower off-duty medical screening rates.

The best rule is to work hard and live smart. It's not about how much you can lift, but how much you can use. The best rule is to work hard and live smart. It's not about how much you can lift, but how much you can use.

Craig,

On the heels of Wi-Fiber's **BEST OF SHOW award at CES**, our revolutionary **Intelli-Platform™** has garnered the attention of law enforcement offices as a **rapid Force Multiplier** at a fraction the expense of new officer hires and deployment! Police Departments across the country have become advocates of our approach and technology due to its nimble and open-source architecture.

Our device, a straight replacement to traditional street lamps, incorporates **4K surveillance and high speed wireless connectivity**, which includes:

- Gunshot and glass-break sensors – Instant alerts with location accuracy
 - 4K cameras with facial recognition & LPR – identification of perpetrators within minutes
 - 911 hotline Two way speakers & PA System – Multiple communication methods
 - Energy efficient dual LED Lamp with flash and color-change ability
 - 4G network with wireless mesh Internet and Wi-fi connectivity
- Modular design allows quick & easy maintenance and upgrades

Best of all, with built-in wireless connectivity, power is the only requirement. The **Intelli-Platform** can be installed on any street corner with no additional internet or power lines. In the **City Las Vegas**, the devices were even mounted to a park wall, delivering connectivity, surveillance, illumination, and IoT functionalities, while CIO Michael Sherwood also successfully tested Bosch weather sensors, an Emergency Call Box, and multiple smart-city visualization suites - all powered by our device!

Do you have a few moments to discuss how our core capabilities can ensure safer, smarter and more connected streets and neighborhoods in the most cost effective Force Multiplier available?

Eric Burgdorf
Wi-Fiber

A Quick Guide to Face Recognition with AI

—Moji Solgi, Director of AI and Machine Learning

(#)

Microsoft's President, Brad Smith, recently published a set of principles

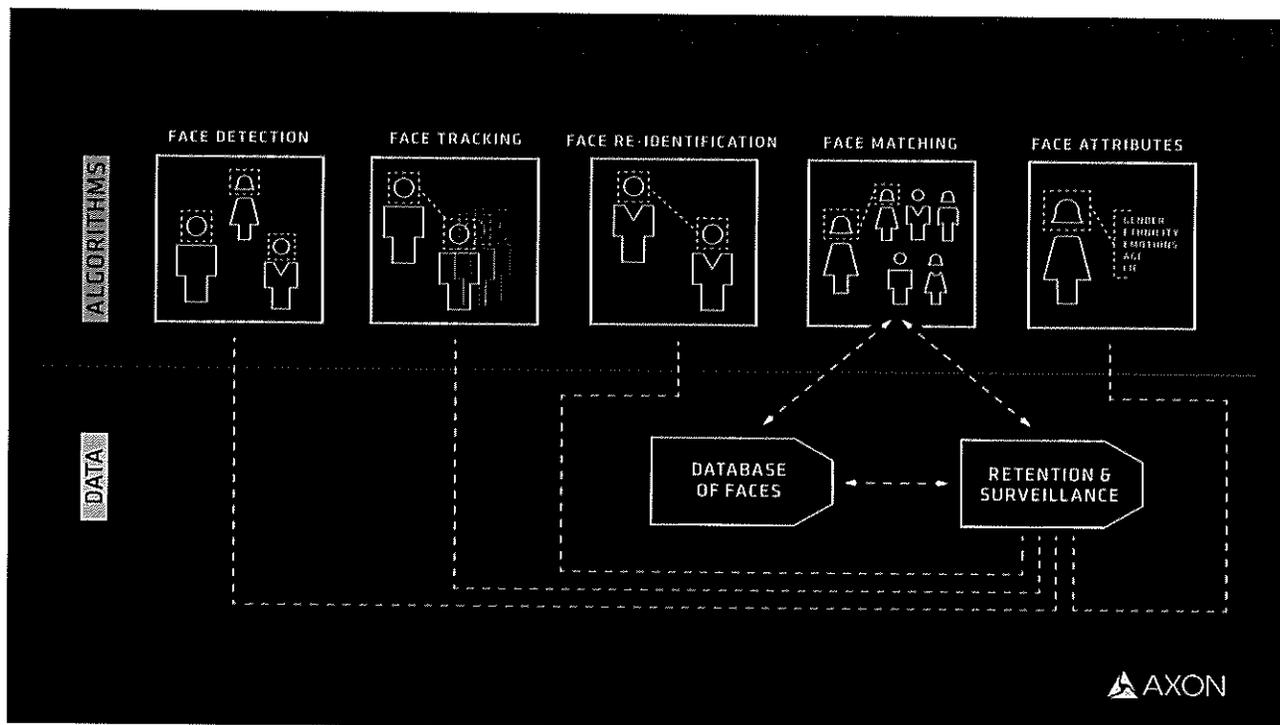

around regulating the development and use of face recognition technologies. As an organization that takes ethical AI seriously ([//www.axon.com/info/ai-ethics](http://www.axon.com/info/ai-ethics)), and as a close partner of Microsoft, we at Axon applaud Microsoft's thoughtfulness for taking this step.

Here we try to shed light on another dimension of the face recognition discussion that often gets overlooked. Face recognition is a broad term that lumps together a collection of technologies. This generalization can make conversations around the subject confusing. Below is an attempt to break down the components under the hood of what is referred to as facial/face recognition.

We use cookies to ensure smooth function, personalise content, and to analyse our traffic. Axon takes reasonable precautions to protect from loss, misuse, and unauthorized access, disclosure, alteration and destruction of personal information. [View Privacy Policy](https://www.axon.com/legal/privacy-policy)
(<https://www.axon.com/legal/privacy-policy>)

Accept Cookies (#)

(#)

Algorithms vs. Data

AI algorithms involved in face recognition are not the true source of controversy around face recognition technology. It is *the combination of some face recognition algorithms (especially face matching and face attributes) and databases for retention and face search* that usually causes privacy and ethical concerns.

Algorithms

An algorithm is a sequence of steps executed by a computer that determines how to perform a task or solve a problem. Algorithms used for face recognition technologies (mostly machine-learned algorithms) can be one of the following:

We use cookies to ensure smooth function, personalise content, and to analyse our site usage. For more information on our cookie policy, please see our Privacy Policy.

**Note that, in this analysis, we focus on the major tasks of face recognition technologies, but it is not comprehensive. For example, face verification and face alignment are excluded for simplicity.*

(<https://www.axon.com/legal/privacy-policy>)

Face Detection

In a given image, Face Detection finds faces and their locations. The Face Detection box in Fig. 1 highlights the detected faces in dotted boxes. Most commodity digital cameras, including mobile phones, run Face Detection to enhance image quality.

Face Tracking

In a given video, Face Tracking corresponds a face from one frame to the next consecutive frame. The Face Tracking box in Fig. 1 shows the face of one person being matched between two frames. This is useful for a police agency when they need to blur out an individual's face in a body-worn video that they want to release to the public. Note: tracking specific facial features (such as eyebrows, lips, etc.) is another area of research.

Face Re-identification

Face Re-identification is conceptually similar to Face Tracking, except the corresponding frames are not necessarily consecutive in the video. For example, if your face appears in the beginning of a video, and again at the end, Face Re-identification can recognize that it's the same face *without* identifying your face by comparing it to a database of faces.

Face Matching

Given a target face and a set of candidate faces, Face Matching finds which one of the candidate faces belongs to the target face. This is where algorithms meet databases for face search and retention. Some photo storage applications use Face Matching to tag a face that appears in various photos, and many smartphones use the technology to unlock your phone.

We use cookies to ensure smooth function, personalise content, and to analyse our traffic. Axon takes reasonable precautions to protect from loss, misuse, and unauthorized access, disclosure, alteration and destruction of personal information. View Privacy Policy

Face Attributes

(<https://www.axon.com/legal/privacy-policy>)

✓ Accept Cookies (#)

(#)

Given an image or a video of a face, Face Attributes extracts information such as gender, ethnicity, emotions, age, facial landmarks, etc.

Data

Data, in the case of face recognition, is a set of quantitative or qualitative values for reference. Commercial deployments of face recognition systems, such as systems you may see in airports around the world, generally reference a database of faces. These databases often include biographical information such as name, age, SSN, and more. In addition, the retention of the captured and/or extracted metadata in a database is a part of some of the face recognition systems.

What is Axon AI Doing

At Axon, we are currently working on algorithms for face detection, tracking, and re-identification. We use these algorithms for redaction in our Axon Evidence Redaction Studio, which helps our customers save time on the tedious task of obscuring and protecting an individual's identity in a given body or in-car camera video that is released to the public.

A few projects Axon AI is currently working on include:

- **Vehicle Recognition**, which is the ability to recognize the make, model, year, and color of vehicles on the road, to help law enforcement in scenarios that include finding missing children;

We use cookies to ensure smooth function, personalise

- **Speech Transcription**, which is an automated way of converting speech to text, and eventually automating record keeping and data entry for police officers, (#) precautions to protect from loss, misuse, and unauthorized access, disclosure, alteration and destruction of personal information. View Privacy Policy

(<https://www.axon.com/legal/privacy-policy>)

- **Critical Event Recognition**, which is when AI can detect an officer's actions, such as a foot chase, that notifies other officers or the precinct that a critical event is unfolding.

We continue to discuss the development of these technologies with our AI & Policing Technology Ethics Board. The mission of this independent board is to provide expert guidance to Axon on the development of its AI products and services, paying particular attention to its impact on communities.

How facial recognition solves cases in Indiana

The state fusion center helps local agencies develop leads and catch criminals using facial recognition from Vigilant Solutions

Sponsored by Vigilant Solutions

By Tim Dees for PoliceOne BrandFocus

What if you could identify a suspect from a powerful network of databases instead of just a single database? The Indiana Intelligence Fusion Center uses facial recognition technology from Vigilant Solutions to assist local, state and federal agencies in generating leads to identify persons of interest and solve crimes, large and small.

Facial recognition technology from Vigilant Solutions helps agencies identify persons of interest (photo/Vigilant)

Fusion Center (IIFC) in Indianapolis.

Sgt. Jeff Carmin has spent most of his career in the more traditional roles of two city police departments and the Indiana State Police, performing traffic and criminal investigations throughout the state. He is now the director of operations at the Indiana Intelligence

WHAT IS A FUSION CENTER?

Fusion centers were established across the United States in the wake of 9/11 to create an information-sharing base among law enforcement agencies, whether federal, state, local or tribal. State and major urban area fusion centers provide information and intelligence to local agencies, working alongside federal agencies like the Department of Homeland Security and the Federal Bureau of Investigation to help local law enforcement.

local agencies, said Carmin. It draws information from roughly 60 different databases and 72 other fusion centers around the United States.

The center also uses Vigilant Solutions for automated license plate and facial recognition technologies. Carmin said the center has used other facial recognition programs but none as successfully as FaceSearch from Vigilant Solutions.

"If you sent me a photo and the guy was looking to the side or down, or wasn't looking straight on like a driver's license photo, we weren't getting good results," he said. "What made us go with Vigilant, besides the cost, was the user-friendliness of it."

MATCHING MUG SHOTS IN THE DATABASE

The IIFC's experience with the Vigilant Solutions' facial recognition system improved significantly after they uploaded mug shot photos stored in Indiana's automated fingerprint recognition system into the comparison gallery maintained by Vigilant Solutions.

"Since then, we've had outstanding results when an investigator requests something via our facial recognition system," Carmin said. "There are just a little under a million booking records."

IIFC can also run comparisons against Vigilant Solutions' master gallery, which contains records from various Vigilant users around the country. Other image databases are available for comparison as well.

"The Department of Homeland Security has a site with multi-state facial recognition. We also utilize that for 30 different states that can run it against their different databases, whatever they may be," said Carmin.

HOW FACIAL RECOGNITION TECHNOLOGY WORKS

Whereas humans recognize faces by an analog method, computers do it by digital mapping. By measuring and comparing distances and angles between facial landmarks – like pupils, the corners of the mouth, the tip of the nose, the lowermost aspect of the chin, etc. – a face can be expressed as a digital pattern the computer can compare with other patterns.

When a sample photo is submitted for analysis in a facial recognition system, the system locates records with a similar pattern in the database and returns them to the user as possible matches.

Local investigators wanting to make use of the IIFC's facial recognition system upload photos or video still frames for comparison. An IIFC analyst enhances the photo, if necessary, using the Vigilant Solutions software, and the comparison results are sent back to the investigator, along with a log of enhancements made to the specimen image.

Vigilant Solutions' FaceSearch system can correct for various problems, such as an off-axis angle or poor image quality.

Carmin said. "It will clear the photo up if it's a blurry photo, it will add eyes if the eyes need to be added and that type of thing."

SOLVING CASES BIG AND SMALL

Carmin recounts one success story where the IIFC assisted in a case where \$7,000 in gift cards was stolen.

"The only photos available were two profile shots, both taken from video surveillance footage," he said. "Using the enhancement tools in the Vigilant software, an analyst was able to match the surveillance image to a booking photo of an inmate then housed in a county jail. The suspect was from Missouri and had no other ties to Indiana except that booking record. He also had outstanding arrest warrants."

Thanks to the image match from the Vigilant system, the suspect was identified at the county jail, served with the warrants and charged with the gift card theft.

"We've had a lot of success with this system," Carmin said. "It could be a homicide case, or it could range all the way down to a simple petty theft case."

Using a powerful technology to solve a shoplifting case might seem like overkill, but it illustrates how making a tool like facial recognition available to all law enforcement can improve satisfaction for all concerned (the gift card thief being a likely exception).

VIGILANT SOLUTIONS ACQUIRES EDESIX, LTD.

Dear Dorothy,

We are very excited to announce today that Vigilant Solutions has acquired Edesix Ltd, the number one manufacturer of body worn cameras in the United Kingdom.

Founded in Edinburgh in 2002, Edesix has a global footprint of customers from the UK and the United States to Abu Dhabi and Australia in industries ranging from law enforcement and airport security to fire safety, rail safety, university security and healthcare. Its body worn video system – VideoBadge™ – employs footage encryption and a wire-free design that make it extremely versatile for various types of users and applications. Similarly, its VideoManager™ software solutions enable web-based viewing and editing of incidents, and preparation of evidence packages. The

software is designed to control and manage cameras, their footage and footage from other sources in a highly efficient and secure manner. Additionally, its in-car cameras will seamlessly integrate with our suite of technologies.

So, what does this mean for our customers?

1. Anyone who works with Vigilant Solutions knows that we are passionate about the fact that our solutions help to keep communities and law enforcement safe. And, by providing law enforcement with body worn and in-car cameras, we are able to achieve both goals by aiding the law enforcement community in your efforts to promote transparency in your engagements with the public.
2. Law enforcement agencies no longer need to keep their ALPR, facial recognition, ballistics analysis, gun crime and body worn/in-car camera images siloed in multiple systems. All the images you capture can easily be integrated into our investigative platform, so we can provide law enforcement with a single platform for securely managing images all in one place.
3. There is a new player in the body worn camera market. And, that means increased competition for law enforcement's dollars, which translates to competitive pricing and continued innovation in technology development.

If you are interested in learning more about Edesix products, please reach out to your Account Manager or contact us at Sales@VigilantSolutions.com.

Be Safe. Be Smart. Be Vigilant.

Shawn Smith
Founder and President, Vigilant Solutions

The limitations and potential of facial recognition software

Police are using the software more and more to identify wanted criminals, missing people and suspected terrorists spotted on video

Download this week's episode on iTunes, SoundCloud or via RSS feed

Last year, rights groups and even Amazon employees and stockholders sought to stop that company from providing its Rekognition software to law enforcement agencies. By all accounts, that effort has failed, as police are using the software—as well as solutions from other vendors—more and more to identify wanted criminals, missing people and suspected terrorists spotted on video. In this podcast segment, Jim and Doug discuss the use of facial recognition technology, its limitations, and its potential for the future.

FACIAL RECOGNITION

San Francisco Could Become First in Nation to Ban Use of Facial Recognition by Police

[ABOUT](#) [SOLUTIONS](#) [CONTACT](#)

THE 5 STEP PROCESS BEHIND EVERY FACIAL RECOGNITION SEARCH

In the past year, facial recognition use by public safety has seen significant improvements in matching accuracy. Although the confidence level in the technology is rising, there are still many best practices they are missing out on such as human involvement, a critical deciding factor of whether returned leads are viable or not.

Join Director of Client Relations for Vigilant Solutions and Retired NYPD Detective, Roger Rodriguez as he explains the 5 Steps of the Facial Recognition Investigative Workflow. See firsthand how agencies nationwide are generating positive results with FaceSearch, Vigilant's facial recognition solution.

During Roger's tenure as a lead detective in the New York City Police Department's first dedicated facial recognition unit, he acquired the skills and first-hand experience in best practices for facial recognition in public safety. The success of this unit was driven by establishing a defined workflow which helped develop strong investigative leads and close cases faster.

**Join us for a Webinar: Tuesday, August 28th,
3:00-4:00 pm EST**

Greetings NASRO Members,

With the rising number of school shootings over the past couple of years, schools are looking at alternative technology solutions to help bolster security. While there are many resources out there that can potentially bring down the numbers, school officials are struggling with balancing the need to protect their students and teachers and creating an environment that feels welcoming and inherently safe.

Join Sam Rabadi, Retired SAC ATF and Roger Rodriguez, Retired NYPD Detective as they explain how schools can take a multi-pronged approach to ensure public safety by using Vigilant's Safe Campus Solution. This solution combines fixed and mobile deployments of license plate readers (LPR) and facial recognition which can help identify an unknown subject and disrupt or mitigate any threat taking a path towards violence.

Vigilant's Safe Campus Solution will:

- Provide a safer and more secure learning environment
- Increase officer safety
- Assist in deploying proven crime prevention strategies
- Allow you to acquire very cost-efficient services

Register today to see how you can add two additional layers of security to your existing multi-layered comprehensive security platform!

When: Tuesday, August 28, 2018, 3:00-4:00 PM EST

Hosts: Sam Rabadi, Director, Business Development, Vigilant Solutions (Special Agent in Charge, ATF (RET.)) and Roger Rodriguez, Director of Client Relations, Vigilant Solutions (NYPD Detective (RET.))

Orlando police plan to extend test of Amazon facial-recognition software

The high-tech system, formally called “Rekognition,” is touted as able to pick a person out of a crowd and track their movements in real time

By Ryan Gillespie
Orlando Sentinel

ORLANDO, Fla. — The Orlando Police Department plans to continue its test of Amazon’s facial recognition software, despite outcry from civil rights groups concerned that the technology could be abused.

A memo informed Orlando Mayor Buddy Dyer and the city council of the decision Friday, explaining more time was needed to make a “thoughtful, precise and comprehensive recommendation” to Dyer on whether or not the city should eventually purchase the technology.

The free pilot used the software on eight city cameras — including five within the Orlando police headquarters and three more downtown. The initial “proof of concept” expired last month and the city plans to sit down with Amazon to put together the parameters of the latest test but said it will operate similarly to the pilot.

“When we were approached we saw the value in how we can use it to get some really violent criminals off the street,” OPD Deputy Chief Mark Canty said.

The high-tech system, formally called “Rekognition,” is touted as able to pick a person out of a crowd and track their movements in real time. Orlando police officials have said such software could be used in finding murder suspects or stopping violent attacks before they happen.

But it’s not being used for investigative purposes during the pilot, the memo states.

During the initial test, city and police officials have said they only uploaded photos of seven police officers who volunteered to participate, including Canty. That will continue, officials confirmed Monday.

More time will allow the city to learn if the software works with the three types of cameras Orlando uses, and also how accurate and reliable it is. They've experimented with officers wearing hats as well as different facial hair, Orlando Chief Information Officer Rosa Akhtarkhavari said.

When Rekognition is activated, the footage flows from the city's data center. If the camera recognizes a person who moves into its reach, the software is supposed to trigger an alert to authorities.

Akhtarkhavari said Amazon's system receives footage from the city when Rekognition is activated, but it cannot retain the footage.

"It just goes in and gets inspected and moves away," Akhtarkhavari said. "[Amazon] gets the stream, but they do not retain the stream."

The system isn't always activated, and only is when officials are running tests, she said.

Use of the program has been criticized by the American Civil Liberties Union, who feared the system can be used to violate civil liberties and civil rights to be used to target immigrants and political activists.

Last month the ACLU and other local groups including the Orange County Classroom Teachers Association, the Farmworker Association of Florida and the United Faculty of Florida at UCF sent a letter to police Chief John Mina urging the department to stop its test.

"The software has the potential of being used for discriminatory immigration enforcement, monitoring individuals who attend protests and engage in other non-violent activities, or disproportionately surveilling minority communities and residents who have committed no crimes," the ACLU letter dated June 21 reads.

Canty said the department has been aware of concerns of the public, and vowed OPD would be responsible when using the software.

"We absolutely listen to the public because I think, particularly for police, we have to have an excellent relationship with the public," Canty said. "When we take on a project like this, we know it's going to be controversial...If it works we're going to set parameters in place where it's not going to be abused. That's the time where we would have maybe some public input in our policies and listen to their concerns."

ABOUT SOLUTIONS CONTACT

VIGILANT SOLUTIONS ACQUISITION ANNOUNCEMENT

Dear Dorothy,

We are very excited to announce today that Vigilant Solutions has acquired the assets of ShotCaller Global Inc., developer of GunOps™ and DNAOps™ investigative solutions for law enforcement. This acquisition enables us to provide the law enforcement community with firearm forensic mapping and DNA crime mapping technology that complement our existing suite of automated license plate reader (ALPR) data, facial recognition technology and ballistics analysis solutions.

GunOps and DNAOps are web-based interactive investigation tools. GunOps allows law enforcement investigators and analysts to enter, visualize and access information about firearm-related crimes, forensic test results and armed criminals. DNAOps allows law enforcement to enter, visualize and access information about crimes where DNA has been recovered from crime scenes, using web-based mapping applications.

This means Vigilant Solutions is now well-positioned to help the law enforcement community to combat the growing epidemic of gun crime. Specifically, our enhanced suite of offerings enables us to provide law enforcement the ability to help identify the G.E.T. – geography, event and time – of gun crime.

Anyone who works with or for Vigilant Solutions knows that we are passionate about the fact that our solutions help to keep communities and law enforcement safe. This acquisition is exciting because it not only allows us to continue to achieve that goal, but also enables us to expand our capabilities and help law enforcement to eradicate violent gun crime.

If you are interested in learning more about GunOps, please contact us at BeVigilant@VigilantSolutions.com.

Be Safe. Be Smart. Be Vigilant.

In the past year, facial recognition use by public safety has seen significant improvements in matching accuracy. Although the confidence level in the technology is rising, there are still many best practices they are missing out on such as human involvement, a critical deciding factor of whether returned leads are viable or not. In this webinar, see how Director of Client Relations for Vigilant Solutions and Retired NYPD Detective, Roger Rodriguez uses Vigilant's FaceSearch to generate investigative leads from images that normally do not meet the criteria for facial recognition searching after vetting and performing specific enhancements.

Miss the first installment? We've opened registration for another round. Register for our webinar: **Man v. Machine** and we will explain why the facial recognition process still needs human involvement.

Webinar: Facial Recognition and Cyber Crimes

According to the FBI, the threat from cyber crimes is serious – and growing. And it's not just corporations that are at risk from this threat. Citizens in your communities could be targets of fraudsters and identity thieves, or children could be targeted by online predators.

In this webinar, Retired NYPD Detective, Roger Rodriguez will share how to analyze images for cyber-crime investigations such as prostitution rings, identity theft, fraud, and child exploitation. In many cases, these investigations included poor quality images obtained from crime victims, social media, or other online sources.

Topics Include:

- Cyber crime overview
- Using facial recognition in cyber crime investigations
- Image editing techniques for CCTV or social media images
- Use case examples

When: Friday, May 19th 3:00 PM EST / 2:00 PM CST

Dorothy,

On the heels of Wi-Fiber's BEST OF SHOW award at CES, our revolutionary Intelli-Platform™ has garnered the attention of law enforcement offices as a rapid **Force Multiplier** at a fraction of the price of additional new hires. Our device, a straight replacement to traditional street lamps, incorporates high speed wireless connectivity and surveillance which includes:

- 4K cameras with facial recognition & LPR
- Microphones
- Two way speakers
- Gunshot and glass-break sensors

Best of all, with built in wireless connectivity, power is the only requirement - allowing your team to install our device on any and every street corner with no additional internet or power lines.

Do you have a few moments to discuss our core capabilities and the most cost effective force multiplier available?

Thanks & regards

Chris Maurer

4 ways speech recognition technology improves police efficiency, safety

Paperwork is crucial, but there's a reason they call it a necessary evil – it takes too much time and can keep us away from one of our most important tasks

By Ed Davis, Nuance Communications

My career in law enforcement spans many ranks and several decades, and while there have been many changes as the result of advances in police technology, there are aspects of the job that remain consistent.

I think I speak for law enforcement professionals across the U.S. when I say that we would rather be catching criminals than doing the less glamorous side of our work that they don't show on "Law and Order" – creating countless incident reports when working a case. Police paperwork is crucial, but there's a reason they call it a *necessary evil*. It takes too much time and can keep us away from one of our most important tasks – protecting the citizens we serve.

According to a national survey of police departments, almost 40% of survey respondents said they can spend 3-4 hours each day on incident reporting and other documentation tasks. That translates to a quarter of the day spent on paperwork alone, rather than policing and protecting our communities.

Tools like speech recognition technology allow officers to dictate documents rather than manually typing them by hand, providing a better way to tackle the heavy documentation demands that plague officers nationwide.

Several benefits speech recognition technologies bring to policing include:

1. INCREASES IN COMMUNITY PRESENCE

Completing incident reports through voice dictation is drastically shorter than the time it would take an officer to create paperwork manually. Technology available today can be up to 99% accurate so
<https://www.policeone.com/police-products/police-technology/software/report-writing/articles/475622006-...> 5/15/2019

With community visibility at the crux of modern-day policing, it's not surprising that in addition to better training and equipment for their officers, departments are embracing solutions that can allow officers to be more visible in the community.

2. ENHANCED TRANSPARENCY

Transparency in policing is why reporting accuracy is so crucial to what we do – everything we say and do can make a difference. Because officers are dictating in the moment, everything is fresh in their minds and more detailed and reliable than if that same information had to be pulled from memory hours later.

Advanced speech technology is able to learn language unique to the trade, so an officer can speak freely and be confident in the system's ability to pick up on and understand traditional police jargon. The accuracy of today's speech technology holds an officer accountable in his or her reporting, which further builds police transparency and trust.

3. VEHICLE ERGONOMICS

Next generation police vehicles are delivering new designs focused on safety, technology, performance and handling improvements. Safety, ergonomics and efficiency should always be taken into account, especially when it comes to adopting new technology in a small space. Police cars are changing and problems associated with hand, wrist and back pain from typing can be solved with voice dictation.

4. OFFICER SAFETY

The reliance on keyboard-driven, in-car systems, such as the MDT, has impacted officer safety. While cramped conditions in patrol cars can cause minor discomfort using the MDT, or worse – lower back pain – the “heads-down” approach is the major concern. With dictation officers can use their voice and stay “heads-up” while conducting common tasks like license plate lookups, enabling them to stay more alert, present and aware of their surroundings.

Many government law enforcement agencies, including the FBI and the military, have already selected speech recognition technology to keep pace with ever-increasing reporting loads. Speech recognition can be used to streamline reporting processes by allowing officers to dictate reports into the department's Record Management System (RMS) from a desktop computer at the station, an in-car system (such as a mobile data terminal or MDT), or even a mobile device.

Adopting solutions like speech recognition technology to streamline incident reporting will help officers prioritize toward higher engagement tasks, like spending more time on patrol and keeping communities safe.

Ed Davis has been in law enforcement for more than 35 years and is a security consultant to Nuance Communications. He served as the 40th Police Commissioner of the city of Boston from December 2006 until October 2013. Prior to that, Davis was the superintendent of the Lowell Police Department, a position he held for 12 years and one he rose to after starting out as a patrol officer in one.

OfficerStore Active Shooter Kit

Get effective protection during Active Shooter situations with OfficerStore's Active Shooter Kit, featuring a Condor Modular Operator Plate Carrier and two Armor Express Level IV Single Curve Standalone Plates. You'll get functionality with modular platforms on all sides and mobility with operator-cut front and back harnesses and maximum ballistic protection against rifle threats with rifle plates capable of stopping .30-06 M2 AP ammo at 2880 ft/s. For more information, visit www.officerstore.com.

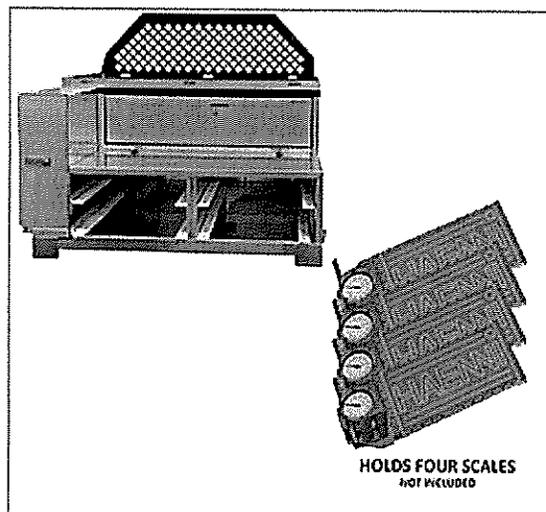

Pryme BTH-300 Bluetooth Headset Wins Mobile Tech Award

Pryme spent years perfecting their new PrymeBlu BTH-300 Bluetooth Headset with built-in wireless PTT. BTH-300 uses any Apple compatible wired audio accessory converting it to wireless operation and dual-pairs with Android or IOS cellphone/tablet and two-way radio simultaneously--perfect for undercover applications operations as the Status multi-color LED is almost invisible. Use your earbuds or choose one of PrymeBlu's 8 unique, heavy-duty headset kits including D-Ring Boom Headset; Dual-element Throat Mic; Surveillance Earphones and more. Maximum performance with 10+ hours talk time (50 hours standby) and

Enabled Enterprises Electric Bike

Enabled Enterprises, a business founded by disabled veterans, along with its GSA approved manufacturing partner, developed the first of its kind Electric Patrol Bike for police and military. Pedal, pedal assist, or full power. Streets, trails, snow, grass. Up to 25 mph. "Bike has performed well our guys and the public love them," said Chief John Sliozis, Deerfield, Ill. PD. For more information visit, www.enabledenterprises.com.

OPS Public Safety CVE Wheel/Axle Scales Unit

OPS Public Safety's all-new CVE Wheel/Axle Scales Unit is specifically designed for Commercial Vehicle Enforcement. Engineered for the Ford Explorer, it holds four scales, gear and rifles. Manufactured of heavy gauge aluminum with available features that include a 10"H X 35"W X 20"D Storage drawer with heavy-duty 200 lbs. ball bearing slides, a 36 inch-deep drivers side storage compartment, an anti-skid top surface with perimeter cargo rail, durable anti-skid rubber in drawer bottom and side compartment.

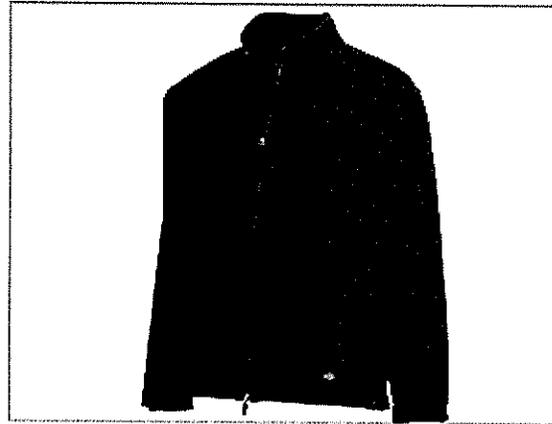

includes USB charger. Clips securely almost anywhere for hands-free wireless communications. For more information, visit www.pryme.com/promo/lo.

Vigilant Solutions FaceSearch Facial Recognition Solution

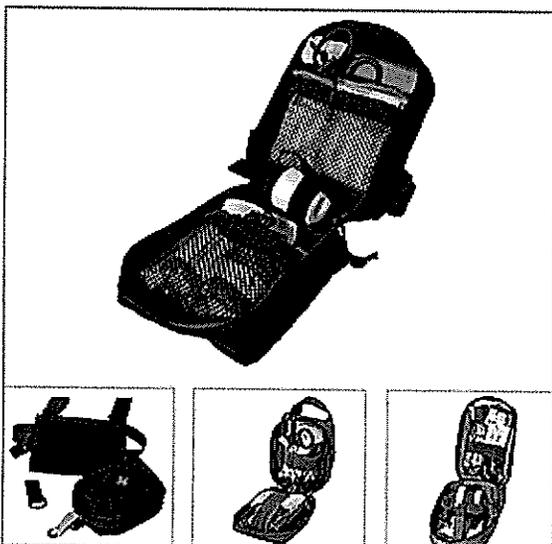

FaceSearch is an easy-to-use facial recognition solution that results in more investigative leads. Developed by Vigilant to deliver a functional, scalable and advanced facial recognition solution that any investigator can use, FaceSearch is available as a PC-based or web-based solution, and is hosted in the cloud and available on Android and Apple OS mobile devices. For more information, visit www.vigilantsolutions.com.

The detachable scale compartment has Teflon slide rails. To access the spare tire, simply unfasten and remove the scale compartment. The base and brackets utilize OEM bolt holes that eliminates drilling for installation (optional barrier available). For more information or a demo visit www.OPSPublicSafety.com.

Dickies Tactical Softshell Performance Jacket

The Dickies Tactical Jacket, through its warm lining and articulated elbows, offers comfort and ease of movement. Hidden front and back ID panels and a side holster for simplified CCA access lets this jacket store all your tools and accessories, keeping your hands free when you need them most. The jacket is available in black and blue. For more information, visit www.DickiesDelivered.com.

OSI Online First Aid Kit Builder

Officer Survival Initiative (OSI), a leading manufacturer and distributor of high quality, innovative medical solutions for high risk and tactical environments, is introducing a system that allows first responders to build their own response kits online at the IFAK Builder web page. Kits are custom built by the user starting with the of bag and color, and followed by a selection of contents from some of the leading names in the industry: combat dressings, tourniquets, QuikClot and other hemostatics, chest seals, decompression needles, PPE, tape, gauze and a wide selection of tools. For more information, visit www.officersurvival.org.

RexONE Backpack Stretcher

REX Rapid Extraction introduces the RexONE First Responder Backpack Mobile Stretcher - A tri-fold backpack stretcher for the rapid extraction of patients by a single responder. Safely move more patients faster with the RexONE Rapid Extraction system. Developed by emergency responders for First Responders, the state-of-the-art RexONE is the fastest and safest patient extraction device available. It can mean the difference between life and death in any emergency, especially tragic situations involving multiple patients. Completely portable, the RexONE mobile stretcher can be carried as a backpack in folded position and can be folded and hung on the wall ready for quick deployment. For more information visit www.rexems.com.

Webinar Series

Register for the February 28th human trafficking webinar for tips to find victims and stop criminals

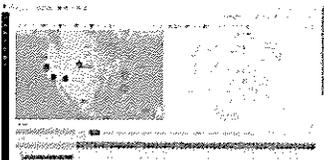

Human Trafficking: Tools and Methods for Successful Cyber Investigations

February 28 at 2:00 pm EST

The Internet has changed how human traffickers operate, enabling them to advertise their victims easily, anonymously, and to a large audience of buyers through various dating and relationship sites and various classified advertising platforms. This webinar, produced in partnership between Marinus Analytics and LexisNexis Risk Solutions, will show the best tools and methods to make use of this huge amount of data to find victims and traffickers successfully. It will cover how the data from LexisNexis law enforcement solutions like Accurint Virtual Crime Center in conjunction with Traffic Jam's artificial intelligence tools such as facial recognition through FaceSearch, can help rescue victims and complete searches in seconds. Join this webinar to gain tips and tools to make the most out of your time, to effectively find victims of human trafficking and bring their exploiters to justice.

Register Today

Introduction the Accurint Virtual Crime Center by LexisNexis

March 29 at 3:00 pm EST

Law enforcement experts will introduce how Accurint Virtual Crime Center is the next generation solution for investigations and nationwide data sharing. This solution helps your agency to solve more crimes and discover hard to find information by linking 10,000 public records sources to national law enforcement data to find non-obvious connections and generate leads with one search.

Register Today

IJIS Institute National Symposium EARLY BIRD ENDS TONIGHT

IJIS Institute

Date

Feb. 6*-9, 2018

Location

Crystal Gateway Marriott
1700 Jefferson Davis Hwy
Arlington, VA 22202

ROOM DISCOUNT ENDS

JAN. 16, 2018

NEARLY SOLD OUT

INCLUDED IN PAID

SYMPOSIUM

REGISTRATION:

1.

Badge & Tech Benefit for
the National Law
Enforcement Officers

Don't miss this opportunity to learn about the hot topics that will impact your business and mission in the upcoming year and beyond. Join us at the IJIS Institute National Symposium from Feb. 6* - Feb. 9 in Arlington, Virginia.

This year, your PAID registration includes the Advisory Committee Meetings and the Facial Recognition Task Force, plus, you can attend the Privacy Summit and the Badge & Tech Benefit & Awards Dinner ** at no additional cost.

Take time to register now before the Early Bird ends!

This year's educational sessions will include:

- Blockchain and Its Potential Use in the Courts
- FirstNet update
- NIST Single Sign-on for Mobile Native and Web Applications
- Facial Recognition Policy Challenges
- Using Data Analytics with NIBRS to Achieve Informed Planning Decisions
- And many others...

Memorial Fund on Feb. 7

2.

Privacy Summit on
afternoon of Feb. 8, morning
of Feb. 9

See the Agenda

New this year:

- ENDS TODAY - Government employees can register for the National Symposium for FREE until end of day, Jan. 8.
- Badge & Tech Benefit & Awards Dinner included for FREE with PAID Symposium registrations (*not included in government reduced or free registration*)

Register Now!

A few Sponsorships left!

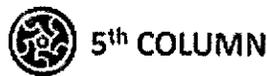

Contact Martha Hill at martha.hill@ijis.org or call 703-726-4483 to select your sponsorship.

How AI software could monitor real-time camera feeds to detect criminal behavior

Using AI and facial recognition software for real-time crime reporting is the next logical progression in how police are already using existing technology

Editor's Note:

Few forces are impacting law enforcement like video. Policing in the Video Age, P1's yearlong special editorial focus on video in law enforcement, aims to address all facets of the topic with expanded analysis and reporting.

In the final installment of this four-part signature coverage effort, we take a look at the future of video in policing. [Click here](#) to learn more about the project.

Also be sure to check out our latest PoliceOne Digital Edition – **2018 Police Video Guide: The emerging tech, training and tactics shaping law enforcement** – in which we explore how departments can best utilize emerging video technologies to enhance police officer safety and improve operational efficiencies. [Download the free guide here.](#)

Companies like Facebook and Google have been working on integrating artificial intelligence (AI) with facial recognition technology for years, and the capability is now rapidly migrating from social media to private security and video surveillance. Surely, it will soon also be employed by law enforcement.

HOW AI COULD ASSIST POLICE OFFICERS

With the advances of AI and machine learning, the storylines of films like *Enemy of the State* and *Minority Report* begin to look a lot less like fiction. (Photo/Pixabay)

AI-driven facial recognition software will allow police departments to gather video from feeds from municipal cameras, privately owned cameras and even bystanders' mobile phone video.

In fact, this technological capability is not just coming – it's here. Although not yet widespread in the West, China has a vast network of video surveillance cameras – reportedly more than 20 million cameras – “in what is believed to be the world's most advanced surveillance system,” according to the *Daily Mail*. That system scans for aberrant or unusual behavior such as public intoxication or attempted theft.

While not as large in scope or scale as the Chinese deployment, the *Detroit News* reported recently that the Detroit Police Department “will soon integrate facial recognition software into the department's Project Green Light video crime monitoring program.” The system will monitor video feeds from participating gas stations, convenience stores and other business.

Further, an automated system called *Alight* was installed in Boston after the 2013 marathon bombing. The software monitors camera feeds in real time and alerts police if it detects criminal behavior.

And companies like Motorola Solutions, Axon, and others have implemented AI into their body-worn camera offerings.

Those private companies stop short of talking about facial recognition – insisting that their systems will scan for things and not people. In the search for a missing child for example, the software will search for the clothing, not the child's face.

But it does not require a tremendous leap of imagination to envision facial recognition software – running on AI – eventually looking for individuals based on previous police booking photos, or even a driver's license picture.

Using AI and facial recognition software for real-time crime reporting is simply the next logical progression in how police are already using existing technology.

For years, investigators used machine learning to examine archived surveillance video for clues (and ultimately, evidence for trial) in criminal investigations. They input the face of the person they are interested in, and the software combs the archived video footage for a match.

“The need has become overwhelming,” said Bud Levin, an expert in AI at the FBI’s Training Division. “Everybody and every place seem to have one or more image-recording devices, from modern cameras and phones to relatively ancient CCTV devices. BWC images alone can swamp police departments and the offices of prosecutors if viewing must be done manually.”

Richard Myers, executive director of the Major Cities Chiefs Association, believes that the role of AI with any public safety camera systems – whether body worn or other – will surely evolve as the algorithms get more robust and facial recognition becomes more reliable.

“Technology already exists in the private sector security where AI helps stores identify behavior patterns that predict an imminent theft from a store shelf via CCTV,” Myers said. “Logically, some of that behavior pattern analysis AI will eventually be integrated into public safety video systems. It is probably more likely that this will first appear in ‘fixed’ CCTV systems, as the dynamic stream of video from body-worn systems will require even more AI rapid analysis.”

Myers added that just as Auto License Plate Reader technology provides immediate feedback when a wanted vehicle passes a camera equipped with ALPR, facial recognition software integrated with body-worn cameras may provide police officers with immediate information about who they’re dealing with.

“There will no doubt be significant legal debate about privacy rights and the like,” Myers said. “It will be important for public safety advocates to assert that there is no expectation of privacy in a public place, nor when engaged in a direct interaction with a uniformed police officer. This is a highly nuanced issue, however, as the facial recognition could work inside a private space where an officer isn’t yet identified as such.”

COULD AI SOFTWARE PROVIDE REAL-TIME CRIME ALERTS?

Will AI and facial-recognition software eventually be used to alert police about crimes in progress or the sighting of a wanted fugitive in real time – essentially bypassing the 911 call-in system of crime reporting?

Levin says it will, but that it will be a while before we get there.

“One problem will be false positives and another will be writing AI so that it understands the complexities and absurdities of the Constitution, our laws and policies. Just as we will be reducing the

vehicles, AI will be used to reduce demand for investigative and patrol manpower.”

There’s a potentially slippery slope here – the term “mission creep” comes to mind.

At the outset, the intention of such initiatives may be to catch the next active shooter or radicalized Islamist terrorists before they are able to unleash their attack. And most Americans would probably be okay with that – fear dramatically reduces concern about civil liberties, after all.

But as is the case in China, the software will do what you tell it to do, and the Chinese have told it to look for much more benign offenses than mass killing – public intoxication, while a nuisance, is not nearly as serious as international terrorism.

However, with the advances of AI and machine learning, the storylines of films like *Enemy of the State* and *Minority Report* begin to look a lot less like fiction than at the time those movies premiered in theaters.

ADDRESSING PRIVACY CONCERNS AS ARTIFICIAL INTELLIGENCE EXPANDS IN SCALE

Privacy rights proponents say that implementing AI in video surveillance on such a broad scale essentially assumes that everyone is a potential criminal. And privacy concerns are not limited to Hollywood producers and privacy rights groups.

In 2014, the U.S. Department of Justice warned that “the use of facial recognition and BWCs may pose serious risks to public privacy. Agencies that explore this integration and other new technologies should proceed very cautiously and should consult with legal counsel and other relevant stakeholders.”

Furthermore – and perhaps most important – facial recognition software is simply not yet accurate enough to use to search for fugitives in real time.

While facial recognition is much more successful on a small scale right now, researchers are working on developing massive-scale AI solutions.

For instance, the MegaFace Challenge – maintained by the University of Washington – “is the world’s first competition aimed at evaluating and improving the performance of face recognition algorithms at the million person scale,” according to UW.

Ira Kemelmacher-Shlizerman – the lead investigator on MegaFace – told the Daily Mail, “We need to test facial recognition on a planetary scale to enable practical applications. Testing on a larger scale lets you discover the flaws and successes of recognition algorithms.”

HOW WILL AI EVOLVE?

As to the question of when this all may come to fruition, Myers points out that some futurists have expressed that AI’s evolution has progressed slower than originally forecast but that like all
<https://www.policeone.com/policing-in-the-video-age/articles/467249006-How-AI-software-could-monitor...> 5/15/2019

and marketplace demand.

“With major police vendors now implementing AI into their systems, it may accelerate the pace of its evolution,” Myers said, “I would think AI and behavior pattern analysis could be integrated into public safety CCTV systems within five years or less, and facial recognition with BWCs could also occur within that time frame. As with most technology advances, however, the limiting factors won’t be the technology, but the human interface, ease of use and user awareness, and the legal debate and limitations.”

“Dedicated video is only part of the AI story,” said Levin. “Consider the IoT. Consider clouds full of data – warehouses ripe for the tapping and AI extracting. Consider also that – well into the digital information age – we cling desperately to industrial-age concepts such as privacy, confidentiality, anonymity and secrecy. ‘Them cows done left the barn.’ Sooner or later, we’ll realize that for most of what we want to hide the cost of keeping them hidden is way beyond the value.”

The Singularity – the point at which computers and machines become more intelligent than the combined intelligence of all living humans – hasn’t happened yet, but with the rapid acceleration of AI and machine learning, it’s apparent that the prediction proffered by Professor Vernor Steffen Vinge in the early 1990s is very likely to come true.

And it will *a//* be recorded on video.

IJIS Institute National Symposium
REGISTRATION NOW OPEN
Register Before Jan. 3 for Early Bird Savings

IJIS Institute

Date

Feb. 6*-9, 2018

Location

Crystal Gateway Marriott
1700 Jefferson Davis Hwy
Arlington, VA 22202

ROOM DISCOUNT ENDS

Jan. 16, 2018

Join us for the Badge & Tech Benefit for the National Law Enforcement Officers Memorial Fund on Feb. 7, 2018

Join over 200 government, non-profit, higher education, and industry colleagues on February 6*-9, 2018, to network and learn about the latest on the state of information sharing and national standards in justice, public safety, and homeland security -- as you develop valuable new contacts and business opportunities.

Learn About:

- *FBI's Future Technologies*
- *Blockchain use in the Public Sector and Courts*
- *Facial Recognition Challenges*
- *Using Data Analytics with NIBRS*
- *Emergency Communications Center of the Future*
- *2018 Budget & Opportunity Forecast, and many others*

NEW THIS YEAR:

- Government employees can register for the National Symposium for FREE until Jan. 3.
- Badge & Tech Benefit & Awards Dinner included for FREE with paid Symposium registrations (*not included in government*)

Thank You

Sponsors

reduced or free registration)

Who should attend:

Executives, key decision makers, and software developers from the public and private Federal/state/local/tribal IT community who are interested in information sharing and national standards.

Why attend:

- **Learn** from prominent IT experts and practitioners in public safety, justice, and homeland security,
- **Develop** valuable business contacts; and,
- **Explore** the latest technologies, platforms, and opportunities.

Register Now!

Sponsorships available!

Contact Martha Hill at martha.hill@ijis.org or call 703-726-4483 to select your sponsorship.

Select My Sponsorship Now!

We look forward to seeing you in Arlington, Virginia in 2018.

**IJIS Institute Member Advisory Committee meetings will be held on February 6.*

As commercial use of facial recognition expands, what are the implications for police?

If citizens willingly permit widespread use of FRT outside of law enforcement, you could argue they no longer have any reasonable expectation of facial privacy

Editor's Note:

Few forces are impacting law enforcement like video. Policing in the Video Age, P1's yearlong special editorial focus on video in law enforcement, aims to address all facets of the topic with expanded analysis and reporting.

In the final installment of this four-part signature coverage effort, we take a look at the future of video in policing. [Click here](#) to learn more about the project.

Also be sure to check out our latest PoliceOne Digital Edition – **2018 Police Video Guide: The emerging tech, training and tactics shaping law enforcement** – in which we explore how departments can best utilize emerging video technologies to enhance police officer safety and improve operational efficiencies. [Download the free guide here.](#)

Facial recognition technology (FRT) is a software application capable of uniquely identifying or verifying a person by comparing and analyzing patterns based on the person's facial contours.

The Fourth Amendment protects people from warrantless government searches or seizures where they have a subjective expectation of privacy that is deemed reasonable by public norms. The reasonableness standard is decided on the totality of circumstances.

In this Friday, Nov. 3, 2017, file photo, an Apple employee demonstrates the facial recognition feature of the new iPhone X at the Apple Union Square store in San Francisco. (AP Photo/Eric Risberg, File)

This is why the expanding commercial use of FRT is interesting. If citizens willingly permit widespread use of FRT outside of law enforcement, an argument could be made that they no longer have any reasonable expectation of facial privacy.

EXPANDING COMMERCIAL USES OF FACIAL RECOGNITION SOFTWARE

In 2008, Lenovo released a line of laptops that allowed users to log on using their face instead of a password. Windows 10 does the same.

Facebook, Apple and Google use facial recognition to assist in "tagging" images – identifying someone in a photo by name.

Other online services that have used facial recognition include:

- Face recognition search engines;
- Stylecaster – a website that allows women to upload their image and try on different makeup, clothes, and hairstyles;
- Snapchat – An image messaging app that allows users to apply lenses to photos using FRT

In 2012, 20 percent of all smartphones shipped had facial recognition capability. It's estimated that by this year, 665 million smartphones and tablets will include facial recognition.

In 2015, China unveiled the first facial recognition ATM. Facial recognition has been incorporated into smart TVs by LG, Samsung and Panasonic. The TV set offers menus based on who's watching. The Nielsen company is exploring the use of smart TVs for measuring ratings and determining who's watching shows and ads.

into accounts. Similarly, Amazon filed a patent in March 2016 for a program that will allow users to authorize purchases by taking selfies.

Retailers are increasingly using the technology not just to prevent loss by identifying shoplifters but to improve sales by tracking legitimate shoppers. The Atlanta-based ad agency Redpepper is testing their project -- Facedeals. Users grant Facedeals access to their Facebook; Facedeals then learns the user's face. The idea is that stores, bars and restaurants rigged with Facedeals cameras will "recognize" users who have opted into the program -- and will text a customized coupon to the user's phone based on their social media activity.

PUSHBACK AGAINST FACIAL RECOGNITION USE IN THE COMMERCIAL SECTOR

In Orwell's dystopian novel, "1984," everyone knew they were being watched and recorded by "The Party." The leader of The Party was called "Big Brother." From that came a pop culture phrase -- "Big Brother is watching you." It was my generation's metaphor for government intrusion.

But in 2013, one of the pioneers of FRT, Joseph Atick, told 60 Minutes, "Big Brother is no longer big government; Big Brother is big business."

More recently, the movie "The Circle" based on Dave Eggers' book imagines an alarming reality where everyone's personal information is readily shared and available on the internet. The Circle (a thinly-veiled, fictitious Facebook, Amazon and Google combined) would eliminate the need for search warrants.

The FBI's amassing of 411.9 million facial images for its Next Generation Identification (NGI) program has garnered plenty of media attention, but that lags well behind Facebook's 1.65 billion users. Facebook has the largest biometric database in the world -- "and it's all been formed by people voluntarily submitting pictures to Facebook and identifying who they belong to," says Amie Stepanovich, director of the domestic surveillance project at the Electronic Privacy Information Center in Washington, D.C.

Facebook has refused to answer questions about what it does with its facial recognition information. Social media companies rarely talk about their internal systems. But in 2012, Facebook bought Face.com, whose company's founders had published a paper titled "Leveraging Billions of Faces to Overcome Performance Barriers in Unconstrained Face Recognition."

Like the FBI's NGI program, the commercial sector's use of FRT is getting pushback. In 2014, the U.S. Department of Commerce held talks about whether and how commercial FRT should be regulated. The negotiations included representatives from consumer-advocacy groups and the tech industry. User privacy groups, including Electronic Frontier Foundation and the Consumer Federation of America, walked out. The industry and its lobbyists, they said, wouldn't even admit that users might want to consent to facial-recognition software so it was no use participating in the talks.

Recently, the Illinois Biometric Information Privacy Act has become the basis of a number of lawsuits against tech giants Facebook, Google, Shutterfly and Snapchat, with consumers claiming their biometric information was handled illegally.

One of the most-watched suits is that of three Illinois plaintiffs against Facebook, alleging the tech giant's collection, storage and subsequent use of biometric information without informed consent invaded their privacy. That case is making its way toward trial – or a settlement.

In Europe and Canada, privacy advocates won a victory last year when Facebook launched its photo app, Moments, without facial recognition scanning.

Plenty of Americans still feel they have some privacy rights to their faces – at least from being identified without their consent by businesses or the government. I wonder what they'll do if Facebook refuses to back down and tells them they can always opt out of Facebook. I wonder what they'll do when TSA offers a quick pass based on facial recognition to those who voluntarily participate, or retailers offer them discounts based on FRT.

If law enforcement waits awhile, the norm may well be that citizens have dealt away their facial privacy rights.

How AI software could monitor real-time camera feeds to detect criminal behavior

Using AI and facial recognition software for real-time crime reporting is the next logical progression in how police are already using existing technology

Editor's Note:

Few forces are impacting law enforcement like video. **Policing in the Video Age**, P1's yearlong special editorial focus on video in law enforcement, aims to address all facets of the topic with expanded analysis and reporting.

In the final installment of this four-part signature coverage effort, we take a look at the future of video in policing. [Click here](#) to learn more about the project.

Also be sure to check out our latest PoliceOne Digital Edition – **2018 Police Video Guide: The emerging tech, training and tactics shaping law enforcement** – in which we explore how departments can best utilize emerging video technologies to enhance police officer safety and improve operational efficiencies. [Download the free guide here.](#)

Companies like Facebook and Google have been working on integrating artificial intelligence (AI) with facial recognition technology for years, and the capability is now rapidly migrating from social media to private security and video surveillance. Surely, it will soon also be employed by law enforcement.

HOW AI COULD ASSIST POLICE OFFICERS

With the advances of AI and machine learning, the storylines of films like *Enemy of the State* and *Minority Report* begin to look a lot less like fiction. (Photo/Pixabay)

AI-driven facial recognition software will allow police departments to gather video from feeds from municipal cameras, privately owned cameras and even bystanders' mobile phone video.

In fact, this technological capability is not just coming – it's here. Although not yet widespread in the West, China has a vast network of video surveillance cameras – reportedly more than 20 million cameras – “in what is believed to be the world's most advanced surveillance system,” according to the *Daily Mail*. That system scans for aberrant or unusual behavior such as public intoxication or attempted theft.

While not as large in scope or scale as the Chinese deployment, the *Detroit News* reported recently that the Detroit Police Department “will soon integrate facial recognition software into the department's Project Green Light video crime monitoring program.” The system will monitor video feeds from participating gas stations, convenience stores and other business.

Further, an automated system called *Alight* was installed in Boston after the 2013 marathon bombing. The software monitors camera feeds in real time and alerts police if it detects criminal behavior.

And companies like Motorola Solutions, Axon, and others have implemented AI into their body-worn camera offerings.

Those private companies stop short of talking about facial recognition – insisting that their systems will scan for things and not people. In the search for a missing child for example, the software will search for the clothing, not the child's face.

But it does not require a tremendous leap of imagination to envision facial recognition software – running on AI – eventually looking for individuals based on previous police booking photos, or even a driver's license picture.

Using AI and facial recognition software for real-time crime reporting is simply the next logical progression in how police are already using existing technology.

For years, investigators used machine learning to examine archived surveillance video for clues (and ultimately, evidence for trial) in criminal investigations. They input the face of the person they are interested in, and the software combs the archived video footage for a match.

“The need has become overwhelming,” said Bud Levin, an expert in AI at the FBI’s Training Division. “Everybody and every place seem to have one or more image-recording devices, from modern cameras and phones to relatively ancient CCTV devices. BWC images alone can swamp police departments and the offices of prosecutors if viewing must be done manually.”

Richard Myers, executive director of the Major Cities Chiefs Association, believes that the role of AI with any public safety camera systems – whether body worn or other – will surely evolve as the algorithms get more robust and facial recognition becomes more reliable.

“Technology already exists in the private sector security where AI helps stores identify behavior patterns that predict an imminent theft from a store shelf via CCTV,” Myers said. “Logically, some of that behavior pattern analysis AI will eventually be integrated into public safety video systems. It is probably more likely that this will first appear in ‘fixed’ CCTV systems, as the dynamic stream of video from body-worn systems will require even more AI rapid analysis.”

Myers added that just as Auto License Plate Reader technology provides immediate feedback when a wanted vehicle passes a camera equipped with ALPR, facial recognition software integrated with body-worn cameras may provide police officers with immediate information about who they’re dealing with.

“There will no doubt be significant legal debate about privacy rights and the like,” Myers said. “It will be important for public safety advocates to assert that there is no expectation of privacy in a public place, nor when engaged in a direct interaction with a uniformed police officer. This is a highly nuanced issue, however, as the facial recognition could work inside a private space where an officer isn’t yet identified as such.”

COULD AI SOFTWARE PROVIDE REAL-TIME CRIME ALERTS?

Will AI and facial-recognition software eventually be used to alert police about crimes in progress or the sighting of a wanted fugitive in real time – essentially bypassing the 911 call-in system of crime reporting?

Levin says it will, but that it will be a while before we get there.

“One problem will be false positives and another will be writing AI so that it understands the complexities and absurdities of the Constitution, our laws and policies. Just as we will be reducing the

vehicles, AI will be used to reduce demand for investigative and patrol manpower.”

There’s a potentially slippery slope here – the term “mission creep” comes to mind.

At the outset, the intention of such initiatives may be to catch the next active shooter or radicalized Islamist terrorists before they are able to unleash their attack. And most Americans would probably be okay with that – fear dramatically reduces concern about civil liberties, after all.

But as is the case in China, the software will do what you tell it to do, and the Chinese have told it to look for much more benign offenses than mass killing – public intoxication, while a nuisance, is not nearly as serious as international terrorism.

However, with the advances of AI and machine learning, the storylines of films like *Enemy of the State* and *Minority Report* begin to look a lot less like fiction than at the time those movies premiered in theaters.

ADDRESSING PRIVACY CONCERNS AS ARTIFICIAL INTELLIGENCE EXPANDS IN SCALE

Privacy rights proponents say that implementing AI in video surveillance on such a broad scale essentially assumes that everyone is a potential criminal. And privacy concerns are not limited to Hollywood producers and privacy rights groups.

In 2014, the U.S. Department of Justice warned that “the use of facial recognition and BWCs may pose serious risks to public privacy. Agencies that explore this integration and other new technologies should proceed very cautiously and should consult with legal counsel and other relevant stakeholders.”

Furthermore – and perhaps most important – facial recognition software is simply not yet accurate enough to use to search for fugitives in real time.

While facial recognition is much more successful on a small scale right now, researchers are working on developing massive-scale AI solutions.

For instance, the MegaFace Challenge – maintained by the University of Washington – “is the world’s first competition aimed at evaluating and improving the performance of face recognition algorithms at the million person scale,” according to UW.

Ira Kemelmacher-Shlizerman – the lead investigator on MegaFace – told the Daily Mail, “We need to test facial recognition on a planetary scale to enable practical applications. Testing on a larger scale lets you discover the flaws and successes of recognition algorithms.”

HOW WILL AI EVOLVE?

As to the question of when this all may come to fruition, Myers points out that some futurists have expressed that AI’s evolution has progressed slower than originally forecast but that like all

<https://www.policeone.com/policing-in-the-video-age/articles/467249006-How-AI-software-could-monitor...> 5/15/2019

and marketplace demand.

“With major police vendors now implementing AI into their systems, it may accelerate the pace of its evolution,” Myers said, “I would think AI and behavior pattern analysis could be integrated into public safety CCTV systems within five years or less, and facial recognition with BWCs could also occur within that time frame. As with most technology advances, however, the limiting factors won’t be the technology, but the human interface, ease of use and user awareness, and the legal debate and limitations.”

“Dedicated video is only part of the AI story,” said Levin. “Consider the IoT. Consider clouds full of data – warehouses ripe for the tapping and AI extracting. Consider also that – well into the digital information age – we cling desperately to industrial-age concepts such as privacy, confidentiality, anonymity and secrecy. ‘Them cows done left the barn.’ Sooner or later, we’ll realize that for most of what we want to hide the cost of keeping them hidden is way beyond the value.”

The Singularity – the point at which computers and machines become more intelligent than the combined intelligence of all living humans – hasn’t happened yet, but with the rapid acceleration of AI and machine learning, it’s apparent that the prediction proffered by Professor Vernor Steffen Vinge in the early 1990s is very likely to come true.

And it will *a//* be recorded on video.

USING FACIAL RECOGNITION IN INVESTIGATIONS THAT INVOLVE CHILDREN

Thursday, August 31st, 3:00 PM - 4:00 PM EST

REGISTER FOR THE WEBINAR NOW

Roger Rodriguez, Retired NYPD Detective, shares best practices, techniques and strategies.

Join Vigilant Solutions law enforcement facial recognition expert, Roger Rodriguez, as he discusses how a unique approach can make use of these images to generate quality leads in any investigation.

Topics will include:

- Step-by-step facial recognition investigative process
- Essential best practices
- Techniques and strategies for producing facial recognition leads

Nominations for Vigilant Solutions' Best in Force Award Honoring Law Enforcement Innovation Now Open

Award recognizes innovative use of license plate recognition (LPR) and/or facial recognition technology; Winner to receive \$5,000 donation to Fallen Officer Fund or another fund of choice

VIGILANT SOLUTIONS, A PART OF MOTOROLA SOLUTIONS INC. — JULY 7, 2017

LIVERMORE, Calif. (June 29, 2017) – Vigilant Solutions is now accepting nominations for the Best in Force award, an annual award recognizing law enforcement's innovative use of license plate recognition (LPR) and/or facial recognition (FR) technology. The winning agency will be announced in October at the annual International Association of Chiefs of Police (IACP) Conference and will receive a \$5,000 donation to the agency's Fallen Officer Fund or another fund of their choice.

"Every day we hear from agencies the stories of how they are leveraging LPR and facial recognition to keep communities safe and solve crimes. We hear stories of loved ones found, crimes prevented, and lives saved. This award recognizes those agencies that leave no stone unturned in the use of LPR and/or facial recognition technology to fulfill their missions to protect and serve," said Shawn Smith, Founder and President of Vigilant Solutions.

All U.S. law enforcement agencies, regardless of size, utilizing LPR and/or FR are eligible and agencies may nominate themselves or may be nominated by another agency. [Nomination forms](#) are due by September 19, 2017, with a final selection made by September 27, 2017. The winning agency will be notified directly with an official presentation of the award to take place during the annual IACP Conference in Philadelphia, October 21-24, 2017.

The New Jersey State Police Regional Operations and Intelligence Center received the inaugural Best in Force Award at the October 2016 IACP conference in San Diego. Recognized for its pioneering and assertive use of LPR, the agency not only used Vigilant's LPR system to locate numerous felony and stolen vehicles in the state of New Jersey, it was proven successful in several high priority events including tracking down a suspect vehicle following a vehicular aggravated assault on a federal agent, locating the vehicle of a missing person found in another state, and developing leads in a triple shooting with only a vehicle description to go on.

For more information on Vigilant Solutions' Best in Force award, including a nomination form, go to <http://www2.vigilantsolutions.com/best-in-force>.

WEBINAR THURSDAY: Disrupting Organized Crime with LPR & Facial Recognition

Thursday, August 3rd 3:00 PM EDT

SAVE YOUR SPOT

We have a few open spots left before Thursday's webinar is full. Register now to reserve your spot.

Product in and money out! Law enforcement agencies are often challenged by the degradation of communities they serve brought on by organized crime groups. These groups use vehicles to traffic guns, humans, narcotics and currency and the unidentified faces of victims and offenders are often caught in various types of imagery. These vehicles and faces are leads that need to be resolved.

Join retired NYPD Detective Tom Joyce, Vice President of Business Development for Vigilant Solutions, as he discusses how vehicle location data and facial recognition technology can help disrupt these organized crime groups and have an effect on the local crime rates in the communities they operate.

[REGISTER FOR THE WEBINAR NOW](#)

Looking forward to you joining us!

Heather Richardson

Partner Marketing Manager

www.vigilantsolutions.com

P.S. If you can't make it to the webinar download the [LPR Beyond the Lens eBook](#) to learn how high tech crime fighters use vehicle location data.

Ready to be a better investigator? Join our Facial Recognition Webinar

There are still a few open spots for our upcoming webinar, *Validate or Exonerate: The Importance of Facial Recognition Checks and Balances*.

In this webinar, Retired NYPD Detective, Roger Rodriguez, will show you how a fully integrated CJIS compliant system, with good enhancement tools and built-in auditing and reporting can assist agencies to validate or exonerate persons wanted in criminal investigations.

Topics Include:

- The importance of reporting and annotation tools
- Checks and balances
- Privacy and compliance
- Use case examples

When: Thursday, July 13th 3:00 PM EST / 2:00 PM CST

[Register Now→](#)

Space is limited, please register early to save your spot.

Facial recognition technology and a 'reasonable expectation of privacy'

Law enforcement might consider using discretion before a court decides whether police need a warrant to scan someone's face

Editor's Note:

From crafting policy to tactical considerations, PoliceOne's 2017 Guide to Emerging Technologies features expert analysis on soundwave technology, facial recognition software, handheld narcotics analyzers, the future of traffic stops, how constitutional law impacts the collection of data for investigations, and how advancements in biometric technologies will help improve correctional facilities.

Sept. 11 demonstrated that the greatest military might in the world couldn't protect us against the "asymmetric threats" of a few "unidentifiable enemies." The idea that FRT could identify terrorist suspects in public locations before they committed their crimes seemed to offer some protection.

Last May, the Government Accountability Office (GAO) issued a report about the FBI's amassing of 411.9 million facial images as part of its Next Generation Identification (NGI) program. It criticized the <https://www.policeone.com/emerging-tech-guide/articles/342072006-Facial-recognition-technology-and-a-...> 5/15/2019

Facial recognition technology and a 'reasonable expectation of privacy'. The photos were of people who had committed no crime. That's a significant police-created biometric database of primarily law-abiding Americans.

When debating any privacy compromises associated with FRT and active surveillance, society must weigh the costs associated with forgoing anonymity in public versus the benefit of active crime prevention using the newest technology available.
(Photo/Pixabay)

"If you're reading this in the United States, there's a 50 percent chance that a photo of your face is in at least one database used in police facial-recognition systems," reported the Atlantic Monthly last October.

Georgetown Law's Center for Privacy and Technology published a report the same month addressing the scale of local and state police involvement in facial recognition. The year-long investigation was based on more than 15,000 pages of records obtained through more than 100 FOIA requests. It found that police departments in nearly half the states can use facial-recognition software to compare surveillance images with databases of ID photos or mugshots. Some departments only use the technology to confirm the identity of a suspect who's been detained; others continuously analyze footage from surveillance cameras.

The GAO and Georgetown Law's reports are fueling public debate, which often lags behind evolving technology – as do court decisions. To date, I could find no court ruling on police use of FRT and the Fourth Amendment's reasonable expectation of privacy against government intrusion absent probable cause and a warrant.

PUBLIC DEBATE

Proponents of police use of FRT argue:

- There is no expectation of privacy to your face once you take it out in public.
- Any privacy intrusion is a small price to pay for increased public safety.
- What difference does it make if the government has a digital algorithm of your face they can use to ID you if you haven't done – or aren't doing – anything wrong?

Privacy advocates' concerns include:

- A reasonable expectation of privacy includes a reasonable expectation of anonymity from government use of computer algorithms and databases to capture law abiding citizens' faces and identify them without their knowledge or consent.
- FRT allows for a different kind of tracking that can occur from far away, in secret, and on large numbers of people. Fingerprints are only left on things you touch and you know when police are taking them. You can't leave your face at home and, with limited exceptions, it isn't acceptable to cover it. Depending how it's used, FRT could rob citizens of a reasonable expectation of anonymity.

Facial recognition technology and a 'reasonable expectation of privacy' creates a slippery slope that could lead to real-time, mass surveillance like that of Big Brother. Police have an incentive to collect as many photos as possible because the larger the database the more likely they are to get a match and solve a crime or identify a suspect or person of interest.

- Real-time, mass surveillance could also chill First Amendment speech unpopular with the government. Advocates point to the FBI's disgraced COINTELPRO program of surveillance against civil rights activists and Vietnam War protesters during the '60s and '70s.

When debating any privacy compromises associated with FRT and active surveillance, society must weigh the costs associated with forgoing anonymity in public versus the benefit of active crime prevention using the newest technology available.

LEGAL QUESTIONS

While the courts have not yet addressed the following, they will. Law enforcement would serve itself well not to go into those cases with a record of overreaching, else the courts restrain us more than we might have effectively restrained ourselves.

1. Does a face recognition constitute a "search" that triggers Fourth Amendment protection?
2. What is the legal standard police must meet before using FRT?
3. Does your state have a law regulating the collection of biometric data?
4. Do your state courts offer more protection against government intrusion under your state constitution than the Supreme Court does under the U.S. Constitution? See, for example, an analysis of FRT under Utah case law as distinguished from the same analysis under federal case law.

PLAN AND CONSIDER

1. Consulting with your prosecutor about federal and state laws and court cases that might be relevant to police use of FRT.
2. Adopting FRT use policies and making them public. Here is a sample policy.
3. Training officers to ensure the most effective use of the scanners. The Institute of Electrical and Electronics Engineers (IEEE) Certified Biometrics Professional (CBP) program offers courses which set a baseline of biometric knowledge for those who plan to use FRT. These course standards aren't yet national but some agencies have adopted them as certification standards.

Law-abiding citizens are not against police use of FRT. Georgetown Law's Center on Privacy & Technology noted:

The benefits of face recognition are real. It has been used to catch violent criminals and fugitives. The law enforcement officers who use the technology are men and women of

Facial recognition technology and a 'reasonable expectation of privacy'

Good faith, they do not want to invade our privacy or create a police state. They are simply using every tool available to protect the people that they are sworn to serve. Police use of face recognition is inevitable. This report does not aim to stop it.

Page 4 of 4

But the public has real concerns about FRT and privacy. Concerns we'd do well to consider in advance of court rulings.

Orlando police chief defends use of facial-recognition software

Chief John Mina insisted no members of the public are being tracked by the software

By Ryan Gillespie
Orlando Sentinel

ORLANDO, Fla. — Three surveillance cameras in downtown Orlando are equipped with Amazon's high-tech facial-recognition software, police Chief John Mina confirmed Thursday — contradicting his claim a day earlier that the software was only being tested at OPD headquarters.

He said at a news conference that five cameras with the company's Rekognition software are in the department's headquarters. The software is also installed on three of the city's IRIS cameras downtown, he said.

Mina still insisted no members of the public are being tracked by the software. Seven OPD officers who volunteered for the pilot are the only people whose images have been uploaded into the system, he said.

He said the software could someday be used in more cameras and for investigations, but "we're a long way away from that."

"We test new equipment all the time," he said. "We test new guns, new vests, new shields, new things for police cars all the time. That doesn't mean that we're going to go with that particular product. We just want to see if it works."

But there remain unanswered questions, including: Where are the cameras that are equipped with the technology? When was the software installed? Does Amazon have access to the video?

During the press conference, Mina told reporters they would be provided the locations of the three downtown IRIS cameras using the software. However, the department later declined to do so, saying that revealing the cameras' locations would pose a security risk.

"I'm not sure," the chief said.

The existence of the software on cameras in Orlando came to light Tuesday, when the ACLU said it found records during an investigation of Amazon's Rekognition system.

In a letter to Amazon CEO Jeff Bezos, the ACLU led a group of organizations in expressing "profound concerns" about the potential for Rekognition — dubbed "supercharged surveillance" by a technology and civil liberties expert for the ACLU — to be abused.

In a statement Thursday, ACLU attorney Matt Cagle reiterated that point.

"After misleading the people of Orlando, the Orlando Police Department has finally confirmed that it is indeed using Amazon's face surveillance technology on public cameras," he said. "Now, it's up to Amazon. Will it stop selling dangerous technology to the government? Or will it continue compromising customer privacy and endangering communities of color, protesters, and immigrants, who are already under attack in the current political climate?"

At the news conference, Mina said privacy isn't an issue.

"There's no privacy concerns because we're just using the pictures of Orlando police officers who've volunteered for the program," he said, adding: "As far as privacy, these are all public spaces, so there are no privacy concerns."

Mina met with two Orlando Sentinel journalists Wednesday to discuss the department's use of the Rekognition software. He said OPD "was not tracking citizens" and was only testing within the department's headquarters — and not in any public places.

"It's all internal," he said in that interview. He said the agency was testing the Rekognition system by tracking the seven officers' movements around the building.

OPD spokeswoman Michelle Guido said Mina did not know about the cameras downtown being part of the program until Thursday. She declined to make him available after the press conference to answer questions about the discrepancy.

The program is said to be able to pick a person out of a crowd and track their movements in real time. The city said no money was spent on the pilot.

In a video posted to YouTube by Amazon Web Services Korea, Ranju Das, the director of the program for Amazon, called Orlando a launch partner. He then played footage that he said was from a traffic camera in Orlando.

"They have cameras all over the city," he said. "The authorized cameras are then streaming the data ... We are a subscriber to the stream. We analyze the video in real time, search against the collection of faces that they have."

Rekognition system was able to track them, tracing their path with colorful dots.

However, Mina said that wasn't footage of Orlando and the company didn't have access to its traffic cameras.

"Amazon's access to our video system is extremely restricted," the chief said.

Amazon acknowledged Thursday that the executive misspoke.

Though the technology isn't being used to investigate crimes or search for suspects in Orlando, Mina made clear that he hopes it one day could be. He said the technology could be used in the body-cameras OPD officers wear.

As he did Wednesday, Mina cited the death of Lt. Debra Clayton, who was killed after confronting a murder suspect last year, and the arrest of Michael Shawn Hunt, accused of stalking singer Lana Del Rey when she came to Orlando for a concert, as cases in which it could have helped.

"Those are the types of situations that we would use these cameras, this technology, in — if it in fact works," he said. "We would never use this technology to track random citizens, immigrants, political activists or, certainly, people of color."

Those groups were all cited by the ACLU as being at high risk of abusive surveillance if the Rekognition technology was misused.

WEBINAR: FACIAL RECOGNITION AND CYBER CRIMES

May 19th, 3:00 PM EST / 2:00 PM CST

REGISTER NOW

THE THREAT FROM CYBER CRIMES IS SERIOUS – AND GROWING.

And it's not just corporations that are at risk from this threat. Adults and children in your community could be targets of fraudsters, identity thieves, and online predators.

In this webinar Retired NYPD Detective, Roger Rodriguez will share how to analyze images for cyber-crime investigations such as prostitution rings, identity theft, fraud, and child exploitation using poor quality images obtained from crime victims, social media, or other online sources.

REGISTER NOW

Just a Few Seats Left:

Achieving Facial Recognition Success Webinar

Many investigations using facial recognition encounter one common problem - poor quality images.

In this free webinar, Roger will showcase FaceSearch's easy-to-use tools that enable analysts and investigators to enhance lower-quality images that previously could not meet the criteria for facial recognition searching.

Roger Rodriguez, spearheaded the NYPD's first dedicated facial recognition unit. The unit has conducted over 8,500 investigations, many with poor quality images.

You will learn how to correct low quality images such as:

- Poor subject poses
- Low resolution or heavy pixelation
- Occlusion (any part of the face blocked or covered)
- Images found within a CCTV video

When: TOMORROW, March 22nd 3:00 PM - 4:00 PM EST

Home // Investigations // Forensics // Facial Recognition // REDACTIVE - Facial Recognition-Based Redaction Software

REDACTIVE - Facial Recognition-Based Redaction Software

WATCHGUARD VIDEO — OCTOBER 19, 2016

REDACTIVE is a video and audio redaction software that expedites the redaction process and eases the learning curve for evidence technicians and law enforcement officers.

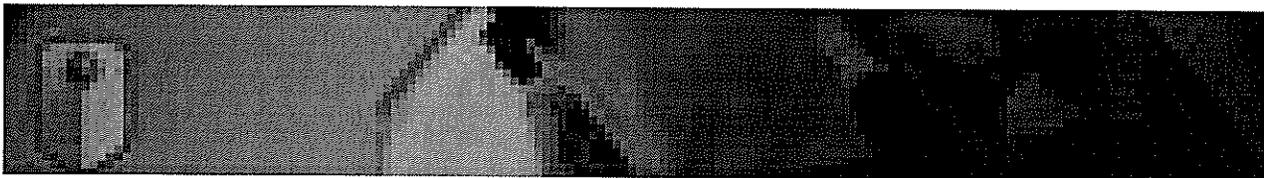

REDACTIVE's advanced facial recognition technology automatically detects and identifies human faces, minimizing the elements of the video which are falsely detected as human, thus reducing the overall time spent manually searching and marking the video for redaction. Users begin the redaction process by instructing the software to auto-detect any face in the video. Once auto-detection is complete, the software allows the user to select and redact the face or faces throughout the video.

"The software is simple to use and extraordinarily powerful in its ability to accurately identify human faces quickly through an entire video clip," said Steve Coffman, President of WatchGuard.

In the wake of the FOIA Improvement Act of 2016 and ever-changing state legislation regarding treatment of video evidence, agencies are shouldering the burden of a significant increase in the quantity and complexity of redaction requests. Redaction requirements can vary from the very specific (i.e. redaction of minors) to the very broad (i.e. redaction of uninvolved bystanders). The increase is leaving agencies struggling to react accordingly.

"Today's redaction tools simply aren't keeping up, forcing agencies to either miss submission deadlines or compromise their output by delivering video that blurs out the entire screen and everything useful," added Coffman. "REDACTIVE's technology reduces the complexity, allowing the evidence technician or officer to deliver the very best redacted video evidence in the shortest amount of time possible."

Webinar Today: 5 Best Practices for Facial Recognition

We still have a few spots open for today's webinar, "5 Best Practices for Facial Recognition in Investigations" featuring retired NYPD Facial Recognition expert Roger Rodriguez. But hurry, the webinar starts in just a few hours!

Join Roger Rodriguez to learn the Five Step Investigative Workflow for Facial Recognition, that will increase accuracy and give agencies a better approach when using facial recognition technology.

Other discussion topics will include:

- The image intake and vetting process for facial recognition.
- Developing investigative leads, even with poor-quality probe images.
- Tips and tricks on how to develop more leads with facial recognition.

To join, click the button below and submit the form. You will receive an email with the link to join.

When: Tuesday, January 17th 2:00 PM EST - TODAY

2021 Las Positas Court, Suite #101

Webinar: Misconceptions of Facial Recognition Technology

A recent report issued by the Center on Privacy and Technology at Georgetown Law Center has essentially called facial recognition technology racist and that Law Enforcement agencies have not been held accountable in its use.

I will be discussing these claims and more in my next webinar, "Misconceptions of Facial Recognition Technology" this Wednesday.

To join, click the button below and submit the form. You will receive an email with the link to join.

When: Wednesday November, 30th 3:00 PM EST

Dear Previous Attendees:

We are happy to announce that registration is now open for the **IAFCI CT Chapter "Spotlight on Fraud VII" Training Conference which will be held on June 5-6, 2019 at Mohegan Sun in Uncasville, CT.**

Please see the attached registration form for additional information. We are finalizing the agenda and we will update on the IAFCI website once it is final.

You can also register online at www.iafci.org and then click on training events, regional training events and click on Spotlight on Fraud VII to register.

We have a special room rate of \$159 per night with the hotel, but act fast because rooms fill up quickly. If you have any questions, please feel free to reach out to CT Chapter Vice President, Heather Bozentko at:

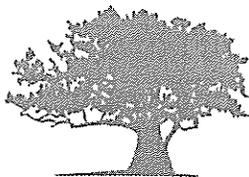

hbozentko@stamfordct.gov

And remember, for law enforcement agencies that have exhausted their training budget for the year, there is a deferred payment plan which will allow you to pay by July 30, 2018.

We hope to see all of you once again and we look forward to another training and networking opportunity!

Respectfully

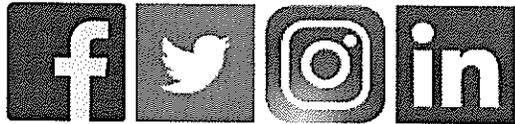

Gary Mackiewicz
IAFCI CT Chapter President

Dear Detective,

Hello, my name is Fran from Suspect Technologies. We developed a highly accurate facial recognition technology that works for any cameras to make identification of people, easier and faster. In turn, we hope it will make identification of suspects easier, save resources, save time, and of course reduce crime. We are currently trying to gather insights to see if this technology works for you, any suggestions or comments, and if this is something that you think would be helpful for you in investigations and possibly the field. Just to be clear, I'm not necessarily trying to sell you anything. We are a spin-off from MIT. We are trying to understand if detectives want this or not and how they are currently using facial recognition and related technologies. Any feedback is helpful. Are you available to answer some quick questions via email or phone?

Best Regards,
Fran
Suspect Technologies

The limitations and potential of facial recognition software

Police are using the software more and more to identify wanted criminals, missing people and suspected terrorists spotted on video

Download this week's episode on iTunes, SoundCloud or via RSS feed

Last year, rights groups and even Amazon employees and stockholders sought to stop that company from providing its Rekognition software to law enforcement agencies. By all accounts, that effort has failed, as police are using the software—as well as solutions from other vendors—more and more to identify wanted criminals, missing people and suspected terrorists spotted on video. In this podcast segment, Jim and Doug discuss the use of facial recognition technology, its limitations, and its potential for the future.

How facial recognition solves cases in Indiana

The state fusion center helps local agencies develop leads and catch criminals using facial recognition from Vigilant Solutions

Sponsored by Vigilant Solutions

By Tim Dees for PoliceOne BrandFocus

What if you could identify a suspect from a powerful network of databases instead of just a single database? The Indiana Intelligence Fusion Center uses facial recognition technology from Vigilant Solutions to assist local, state and federal agencies in generating leads to identify persons of interest and solve crimes, large and small.

Facial recognition technology from Vigilant Solutions helps agencies identify persons of interest (photo/Vigilant)

Sgt. Jeff Carmin has spent most of his career in the more traditional roles of two city police departments and the Indiana State Police, performing traffic and criminal investigations throughout the state. He is now the director of operations at the Indiana Intelligence

Fusion Center (IIFC) in Indianapolis.

WHAT IS A FUSION CENTER?

Fusion centers were established across the United States in the wake of 9/11 to create an information-sharing base among law enforcement agencies, whether federal, state, local or tribal. State and major urban area fusion centers provide information and intelligence to local agencies, working alongside federal agencies like the Department of Homeland Security and the Federal Bureau of Investigation to help local law enforcement.

local agencies, said Carmin. It draws information from roughly 60 different databases and 72 other fusion centers around the United States.

The center also uses Vigilant Solutions for automated license plate and facial recognition technologies. Carmin said the center has used other facial recognition programs but none as successfully as FaceSearch from Vigilant Solutions.

"If you sent me a photo and the guy was looking to the side or down, or wasn't looking straight on like a driver's license photo, we weren't getting good results," he said. "What made us go with Vigilant, besides the cost, was the user-friendliness of it."

MATCHING MUG SHOTS IN THE DATABASE

The IIFC's experience with the Vigilant Solutions' facial recognition system improved significantly after they uploaded mug shot photos stored in Indiana's automated fingerprint recognition system into the comparison gallery maintained by Vigilant Solutions.

"Since then, we've had outstanding results when an investigator requests something via our facial recognition system," Carmin said. "There are just a little under a million booking records."

IIFC can also run comparisons against Vigilant Solutions' master gallery, which contains records from various Vigilant users around the country. Other image databases are available for comparison as well.

"The Department of Homeland Security has a site with multi-state facial recognition. We also utilize that for 30 different states that can run it against their different databases, whatever they may be," said Carmin.

HOW FACIAL RECOGNITION TECHNOLOGY WORKS

Whereas humans recognize faces by an analog method, computers do it by digital mapping. By measuring and comparing distances and angles between facial landmarks – like pupils, the corners of the mouth, the tip of the nose, the lowermost aspect of the chin, etc. – a face can be expressed as a digital pattern the computer can compare with other patterns.

When a sample photo is submitted for analysis in a facial recognition system, the system locates records with a similar pattern in the database and returns them to the user as possible matches.

Local investigators wanting to make use of the IIFC's facial recognition system upload photos or video still frames for comparison. An IIFC analyst enhances the photo, if necessary, using the Vigilant Solutions software, and the comparison results are sent back to the investigator, along with a log of enhancements made to the specimen image.

Vigilant Solutions' FaceSearch system can correct for various problems, such as an off-axis angle or poor image quality.

Carmin said. "It will clear the photo up if it's a blurry photo, it will add eyes if the eyes need to be added and that type of thing."

SOLVING CASES BIG AND SMALL

Carmin recounts one success story where the IIFC assisted in a case where \$7,000 in gift cards was stolen.

"The only photos available were two profile shots, both taken from video surveillance footage," he said. "Using the enhancement tools in the Vigilant software, an analyst was able to match the surveillance image to a booking photo of an inmate then housed in a county jail. The suspect was from Missouri and had no other ties to Indiana except that booking record. He also had outstanding arrest warrants."

Thanks to the image match from the Vigilant system, the suspect was identified at the county jail, served with the warrants and charged with the gift card theft.

"We've had a lot of success with this system," Carmin said. "It could be a homicide case, or it could range all the way down to a simple petty theft case."

Using a powerful technology to solve a shoplifting case might seem like overkill, but it illustrates how making a tool like facial recognition available to all law enforcement can improve satisfaction for all concerned (the gift card thief being a likely exception).
