This SOP is primarily patrol-side, with the big requirement being that before patrol takes action on a hit, they must:

- visually confirm the tag (our APRs have problems with O/0, I/1, S/5, B/8, etc, giving false positives)
- have dispatch verify that the hit is still in NCIC
  - APR software had 4-24 hour lag vs NCIC updating live
  - Our dispatchers have much more practice screening out hits from out-of-state tags with the same number

Good afternoon all,

I am looking for SOPs related to Automatic License Plate Reader (ALPR). If your agency uses LPR and you would be willing to share your policy as it relates to the communications center I would greatly appreciate it. Thanks in advance!!

My agency is a small single-discipline PSAP. When all of our 911 lines (active TCs

plus lines on hold) are full (or in case of technical failure), we overflow to another agency. In our case, it is muni rolling to county, but all law.

From: Karl Christian
Subject: 911 Call Answered At Dispatch Positions

Background: Our PSAP operates with a minimum of 6 call takers, 10 police dispatchers, and 4 fire dispatchers working on any given shift. We set up our Viper phone ACD to see the fire dispatchers 2nd in the 911 queue, after the call takers. 911 calls will automatically roll over to the fire dispatchers when all CT's are busy. We have been questioned about this methodology. We are looking for PSAP's that distribute calls in a similar manner

We give them four weeks for call-taking. They get an introduction to call-taking procedures in their two weeks of classroom (to include scenarios) prior to going to OTJ training. If necessary they can receive an extension at the discretion of the supervisors.

You can purchase a guideline from CALEA that shows how each standard is set up and which ones are mandatory and which are optional. I think it is around $30.00

Subject: Automatic License Plate Reader

Good afternoon all,

I am looking for SOPs related to Automatic License Plate Reader (ALPR). If your agency uses LPR and you would be willing to share your policy as it relates to the communications center I would greatly appreciate it. Thanks in advance!!

My agency is a small single-discipline PSAP. When all of our 911 lines (active TCs

plus lines on hold) are full (or in case of technical failure), we overflow to another agency. In our case, it is muni rolling to county, but all law.

From: Karl Christian
Subject: 911 Call Answered At Dispatch Positions

Background: Our PSAP operates with a minimum of 6 call takers, 10 police dispatchers, and 4 fire dispatchers working on any given shift. We set up our Viper phone ACD to see the fire dispatchers 2nd in the 911 queue, after the call takers. 911 calls will automatically roll over to the fire dispatchers when all CT's are busy. We have been questioned about this methodology. We are looking for PSAP's that distribute calls in a similar manner

We give them four weeks for call-taking. They get an introduction to call-taking procedures in their two weeks of classroom (to include scenarios) prior to going to OTJ training. If necessary they can receive an extension at the discretion of the supervisors.

You can purchase a guideline from CALEA that shows how each standard is set up and which ones are mandatory and which are optional. I think it is around $30.00

This SOP is primarily patrol-side, with the big requirement being that before patrol takes action on a hit, they must:

- visually confirm the tag (our APRs have problems with O/0, I/1, S/5, B/8, etc, giving false positives)
- have dispatch verify that the hit is still in NCIC
  - APR software had 4-24 hour lag vs NCIC updating live
  - Our dispatchers have much more practice screening out hits from out-of-state tags with the same number

We give them four weeks for call-taking. They get an introduction to call-taking procedures in their two weeks of classroom (to include scenarios) prior to going to OTJ training. If necessary they can receive an extension at the discretion of the supervisors.

How long does your agency give for call taking training? Right now we give 6 weeks with an additional 2 if needed.

You can purchase a guideline from CALEA that shows how each standard is set up and which ones are mandatory and which are optional. I think it is around $30.00

This SOP is primarily patrol-side, with the big requirement being that before patrol takes action on a hit, they must:

- visually confirm the tag (our APRs have problems with O/0, I/1, S/5, B/8, etc, giving false positives)
- have dispatch verify that the hit is still in NCIC
  - APR software had 4-24 hour lag vs NCIC updating live
  - Our dispatchers have much more practice screening out hits from out-of-state tags with the same number

Good afternoon all,

I am looking for SOPs related to Automatic License Plate Reader (ALPR). If your agency uses LPR and you would be willing to share your policy as it relates to the communications center I would greatly appreciate it. Thanks in advance!!

My agency is a small single-discipline PSAP. When all of our 911 lines (active TCs

plus lines on hold) are full (or in case of technical failure), we overflow to another agency. In our case, it is muni rolling to county, but all law.

From: Karl Christian
Subject: 911 Call Answered At Dispatch Positions

Background: Our PSAP operates with a minimum of 6 call takers, 10 police dispatchers, and 4 fire dispatchers working on any given shift. We set up our Viper phone ACD to see the fire dispatchers 2nd in the 911 queue, after the call takers. 911 calls will automatically roll over to the fire dispatchers when all CT's are busy. We have been questioned about this methodology. We are looking for PSAP's that distribute calls in a similar manner

You can purchase a guideline from CALEA that shows how each standard is set up and which ones are mandatory and which are optional. I think it is around $30.00

This SOP is primarily patrol-side, with the big requirement being that before patrol takes action on a hit, they must:

- visually confirm the tag (our APRs have problems with O/0, I/1, S/5, B/8, etc, giving false positives)
- have dispatch verify that the hit is still in NCIC
  - APR software had 4-24 hour lag vs NCIC updating live
  - Our dispatchers have much more practice screening out hits from out-of-state tags with the same number

Good afternoon all,

I am looking for SOPs related to Automatic License Plate Reader (ALPR). If your agency uses LPR and you would be willing to share your policy as it relates to the communications center I would greatly appreciate it. Thanks in advance!!

My agency is a small single-discipline PSAP. When all of our 911 lines (active TCs

plus lines on hold) are full (or in case of technical failure), we overflow to another agency. In our case, it is muni rolling to county, but all law.

Subject: 911 Call Answered At Dispatch Positions

Background: Our PSAP operates with a minimum of 6 call takers, 10 police dispatchers, and 4 fire dispatchers working on any given shift. We set up our Viper phone ACD to see the fire dispatchers 2nd in the 911 queue, after the call takers. 911 calls will automatically roll over to the fire dispatchers when all CT's are busy. We have been questioned about this methodology. We are looking for PSAP's that distribute calls in a similar manner

We give them four weeks for call-taking. They get an introduction to call-taking procedures in their two weeks of classroom (to include scenarios) prior to going to OTJ training. If necessary they can receive an extension at the discretion of the supervisors.

Katherine Curtis

This SOP is primarily patrol-side, with the big requirement being that before patrol takes action on a hit, they must:

- visually confirm the tag (our APRs have problems with O/0, I/1, S/5, B/8, etc, giving false positives)
- have dispatch verify that the hit is still in NCIC
  - APR software had 4-24 hour lag vs NCIC updating live
  - Our dispatchers have much more practice screening out hits from out-of-state tags with the same number

My agency is a small single-discipline PSAP. When all of our 911 lines (active TCs

plus lines on hold) are full (or in case of technical failure), we overflow to another agency. In our case, it is muni rolling to county, but all law.

Subject: 911 Call Answered At Dispatch Positions

Background: Our PSAP operates with a minimum of 6 call takers, 10 police dispatchers, and 4 fire dispatchers working on any given shift. We set up our Viper phone ACD to see the fire dispatchers 2nd in the 911 queue, after the call takers. 911 calls will automatically roll over to the fire dispatchers when all CT's are busy. We have been questioned about this methodology. We are looking for PSAP's that distribute calls in a similar manner

We give them four weeks for call-taking. They get an introduction to call-taking procedures in their two weeks of classroom (to include scenarios) prior to going to OTJ training. If necessary they can receive an extension at the discretion of the supervisors.

You can purchase a guideline from CALEA that shows how each standard is set up and which ones are mandatory and which are optional. I think it is around $30.00

My agency is a small single-discipline PSAP. When all of our 911 lines (active TCs

plus lines on hold) are full (or in case of technical failure), we overflow to another agency. In our case, it is muni rolling to county, but all law.

K Curtis

Subject: 911 Call Answered At Dispatch Positions

Background: Our PSAP operates with a minimum of 6 call takers, 10 police dispatchers, and 4 fire dispatchers working on any given shift. We set up our Viper phone ACD to see the fire dispatchers 2nd in the 911 queue, after the call takers. 911 calls will automatically roll over to the fire dispatchers when all CT's are busy. We have been questioned about this methodology. We are looking for PSAP's that distribute calls in a similar manner

We give them four weeks for call-taking. They get an introduction to call-taking procedures in their two weeks of classroom (to include scenarios) prior to going to OTJ training. If necessary they can receive an extension at the discretion of the supervisors.

You can purchase a guideline from CALEA that shows how each standard is set up and which ones are mandatory and which are optional. I think it is around $30.00

This SOP is primarily patrol-side, with the big requirement being that before patrol takes action on a hit, they must:

- visually confirm the tag (our APRs have problems with O/0, I/1, S/5, B/8, etc, giving false positives)
- have dispatch verify that the hit is still in NCIC
  - APR software had 4-24 hour lag vs NCIC updating live
  - Our dispatchers have much more practice screening out hits from out-of-state tags with the same number

You can purchase a guideline from CALEA that shows how each standard is set up and which ones are mandatory and which are optional. I think it is around $30.00

This SOP is primarily patrol-side, with the big requirement being that before patrol takes action on a hit, they must:

- visually confirm the tag (our APRs have problems with O/0, I/1, S/5, B/8, etc, giving false positives)
- have dispatch verify that the hit is still in NCIC
  - APR software had 4-24 hour lag vs NCIC updating live
  - Our dispatchers have much more practice screening out hits from out-of-state tags with the same number

Good afternoon all,

I am looking for SOPs related to Automatic License Plate Reader (ALPR). If your agency uses LPR and you would be willing to share your policy as it relates to the communications center I would greatly appreciate it. Thanks in advance!!

My agency is a small single-discipline PSAP. When all of our 911 lines (active TCs

plus lines on hold) are full (or in case of technical failure), we overflow to another agency. In our case, it is muni rolling to county, but all law.

From: Karl Christian
Subject: 911 Call Answered At Dispatch Positions

Background: Our PSAP operates with a minimum of 6 call takers, 10 police dispatchers, and 4 fire dispatchers working on any given shift. We set up our Viper phone ACD to see the fire dispatchers 2nd in the 911 queue, after the call takers. 911 calls will automatically roll over to the fire dispatchers when all CT's are busy. We have been questioned about this methodology. We are looking for PSAP's that distribute calls in a similar manner

We give them four weeks for call-taking. They get an introduction to call-taking procedures in their two weeks of classroom (to include scenarios) prior to going to OTJ training. If necessary they can receive an extension at the discretion of the supervisors.

You can purchase a guideline from CALEA that shows how each standard is set up and which ones are mandatory and which are optional. I think it is around $30.00

This SOP is primarily patrol-side, with the big requirement being that before patrol takes action on a hit, they must:

- visually confirm the tag (our APRs have problems with O/0, I/1, S/5, B/8, etc, giving false positives)
- have dispatch verify that the hit is still in NCIC
  - APR software had 4-24 hour lag vs NCIC updating live
  - Our dispatchers have much more practice screening out hits from out-of-state tags with the same number

Good afternoon all,

I am looking for SOPs related to Automatic License Plate Reader (ALPR). If your agency uses LPR and you would be willing to share your policy as it relates to the communications center I would greatly appreciate it. Thanks in advance!!

My agency is a small single-discipline PSAP. When all of our 911 lines (active TCs

plus lines on hold) are full (or in case of technical failure), we overflow to another agency. In our case, it is muni rolling to county, but all law.

From: Karl Christian
Subject: 911 Call Answered At Dispatch Positions

Background: Our PSAP operates with a minimum of 6 call takers, 10 police dispatchers, and 4 fire dispatchers working on any given shift. We set up our Viper phone ACD to see the fire dispatchers 2nd in the 911 queue, after the call takers. 911 calls will automatically roll over to the fire dispatchers when all CT's are busy. We have been questioned about this methodology. We are looking for PSAP's that distribute calls in a similar manner

We give them four weeks for call-taking. They get an introduction to call-taking procedures in their two weeks of classroom (to include scenarios) prior to going to OTJ training. If necessary they can receive an extension at the discretion of the supervisors.

Good afternoon all,

I am looking for SOPs related to Automatic License Plate Reader (ALPR). If your agency uses LPR and you would be willing to share your policy as it relates to the communications center I would greatly appreciate it. Thanks in advance!!

My agency is a small single-discipline PSAP. When all of our 911 lines (active TCs

plus lines on hold) are full (or in case of technical failure), we overflow to another agency. In our case, it is muni rolling to county, but all law.

From: Karl Christian
Subject: 911 Call Answered At Dispatch Positions

Background: Our PSAP operates with a minimum of 6 call takers, 10 police dispatchers, and 4 fire dispatchers working on any given shift. We set up our Viper phone ACD to see the fire dispatchers 2nd in the 911 queue, after the call takers. 911 calls will automatically roll over to the fire dispatchers when all CT's are busy. We have been questioned about this methodology. We are looking for PSAP's that distribute calls in a similar manner

We give them four weeks for call-taking. They get an introduction to call-taking procedures in their two weeks of classroom (to include scenarios) prior to going to OTJ training. If necessary they can receive an extension at the discretion of the supervisors.

You can purchase a guideline from CALEA that shows how each standard is set up and which ones are mandatory and which are optional. I think it is around $30.00

This SOP is primarily patrol-side, with the big requirement being that before patrol takes action on a hit, they must:

- visually confirm the tag (our APRs have problems with O/0, I/1, S/5, B/8, etc, giving false positives)
- have dispatch verify that the hit is still in NCIC
  - APR software had 4-24 hour lag vs NCIC updating live
  - Our dispatchers have much more practice screening out hits from out-of-state tags with the same number

Subject: 911 Call Answered At Dispatch Positions

Background: Our PSAP operates with a minimum of 6 call takers, 10 police dispatchers, and 4 fire dispatchers working on any given shift. We set up our Viper phone ACD to see the fire dispatchers 2nd in the 911 queue, after the call takers. 911 calls will automatically roll over to the fire dispatchers when all CT's are busy. We have been questioned about this methodology. We are looking for PSAP's that distribute calls in a similar manner

We give them four weeks for call-taking. They get an introduction to call-taking procedures in their two weeks of classroom (to include scenarios) prior to going to OTJ training. If necessary they can receive an extension at the discretion of the supervisors.

You can purchase a guideline from CALEA that shows how each standard is set up and which ones are mandatory and which are optional. I think it is around $30.00

This SOP is primarily patrol-side, with the big requirement being that before patrol takes action on a hit, they must:

- visually confirm the tag (our APRs have problems with O/0, I/1, S/5, B/8, etc, giving false positives)
- have dispatch verify that the hit is still in NCIC
  - APR software had 4-24 hour lag vs NCIC updating live
  - Our dispatchers have much more practice screening out hits from out-of-state tags with the same number

Good afternoon all,

I am looking for SOPs related to Automatic License Plate Reader (ALPR). If your agency uses LPR and you would be willing to share your policy as it relates to the communications center I would greatly appreciate it. Thanks in advance!!

My agency is a small single-discipline PSAP. When all of our 911 lines (active TCs

plus lines on hold) are full (or in case of technical failure), we overflow to another agency. In our case, it is muni rolling to county, but all law.

You can purchase a guideline from CALEA that shows how each standard is set up and which ones are mandatory and which are optional. I think it is around $30.00

This SOP is primarily patrol-side, with the big requirement being that before patrol takes action on a hit, they must:

- visually confirm the tag (our APRs have problems with O/0, I/1, S/5, B/8, etc, giving false positives)
- have dispatch verify that the hit is still in NCIC
  - APR software had 4-24 hour lag vs NCIC updating live
  - Our dispatchers have much more practice screening out hits from out-of-state tags with the same number

Good afternoon all,

I am looking for SOPs related to Automatic License Plate Reader (ALPR). If your agency uses LPR and you would be willing to share your policy as it relates to the communications center I would greatly appreciate it. Thanks in advance!!

My agency is a small single-discipline PSAP. When all of our 911 lines (active TCs

plus lines on hold) are full (or in case of technical failure), we overflow to another agency. In our case, it is muni rolling to county, but all law.

From: Karl Christian
Subject: 911 Call Answered At Dispatch Positions

Background: Our PSAP operates with a minimum of 6 call takers, 10 police dispatchers, and 4 fire dispatchers working on any given shift. We set up our Viper phone ACD to see the fire dispatchers 2nd in the 911 queue, after the call takers. 911 calls will automatically roll over to the fire dispatchers when all CT's are busy. We have been questioned about this methodology. We are looking for PSAP's that distribute calls in a similar manner

We give them four weeks for call-taking. They get an introduction to call-taking procedures in their two weeks of classroom (to include scenarios) prior to going to OTJ training. If necessary they can receive an extension at the discretion of the supervisors.

Katherine Curtis

This SOP is primarily patrol-side, with the big requirement being that before patrol takes action on a hit, they must:

- visually confirm the tag (our APRs have problems with O/0, I/1, S/5, B/8, etc, giving false positives)
- have dispatch verify that the hit is still in NCIC
  - APR software had 4-24 hour lag vs NCIC updating live
  - Our dispatchers have much more practice screening out hits from out-of-state tags with the same number

Good afternoon all,

I am looking for SOPs related to Automatic License Plate Reader (ALPR). If your agency uses LPR and you would be willing to share your policy as it relates to the communications center I would greatly appreciate it. Thanks in advance!!

My agency is a small single-discipline PSAP. When all of our 911 lines (active TCs

plus lines on hold) are full (or in case of technical failure), we overflow to another agency. In our case, it is muni rolling to county, but all law.

From: Karl Christian
Subject: 911 Call Answered At Dispatch Positions

Background: Our PSAP operates with a minimum of 6 call takers, 10 police dispatchers, and 4 fire dispatchers working on any given shift. We set up our Viper phone ACD to see the fire dispatchers 2nd in the 911 queue, after the call takers. 911 calls will automatically roll over to the fire dispatchers when all CT's are busy. We have been questioned about this methodology. We are looking for PSAP's that distribute calls in a similar manner

We give them four weeks for call-taking. They get an introduction to call-taking procedures in their two weeks of classroom (to include scenarios) prior to going to OTJ training. If necessary they can receive an extension at the discretion of the supervisors.

You can purchase a guideline from CALEA that shows how each standard is set up and which ones are mandatory and which are optional. I think it is around $30.00

My agency is a small single-discipline PSAP. When all of our 911 lines (active TCs

plus lines on hold) are full (or in case of technical failure), we overflow to another agency. In our case, it is muni rolling to county, but all law.

Subject: 911 Call Answered At Dispatch Positions

Background: Our PSAP operates with a minimum of 6 call takers, 10 police dispatchers, and 4 fire dispatchers working on any given shift. We set up our Viper phone ACD to see the fire dispatchers 2nd in the 911 queue, after the call takers. 911 calls will automatically roll over to the fire dispatchers when all CT's are busy. We have been questioned about this methodology. We are looking for PSAP's that distribute calls in a similar manner

We give them four weeks for call-taking. They get an introduction to call-taking procedures in their two weeks of classroom (to include scenarios) prior to going to OTJ training. If necessary they can receive an extension at the discretion of the supervisors.

You can purchase a guideline from CALEA that shows how each standard is set up and which ones are mandatory and which are optional. I think it is around $30.00

This SOP is primarily patrol-side, with the big requirement being that before patrol takes action on a hit, they must:

- visually confirm the tag (our APRs have problems with O/0, I/1, S/5, B/8, etc, giving false positives)
- have dispatch verify that the hit is still in NCIC
  - APR software had 4-24 hour lag vs NCIC updating live
  - Our dispatchers have much more practice screening out hits from out-of-state tags with the same number

Good afternoon all,

I am looking for SOPs related to Automatic License Plate Reader (ALPR). If your agency uses LPR and you would be willing to share your policy as it relates to the communications center I would greatly appreciate it. Thanks in advance!!

Subject: Big news at Leonardo! Two product releases you"ll want to know about.
Date: Wednesday, May 16, 2018 1:21:18 PM

Leonardo

After years of research and development, we are proud to announce the release of two innovative technology solutions: the **ELSAG Make,Type and Color** Recognition software (MTC) and the **ELSAG Cloud Storage Solution** (ECSS).

ELSAG MTC

The MTC uses advanced computer vision software that enables ELSAG automatic license plate readers to process features beyond the plate number. The software can now identify the vehicle's make and type such as sedan, SUV, box truck as well as its general color. It can also identify unique features on the vehicle such as roof racks, spare tires, bumper stickers or ride sharing company decals.

Now, if an eyewitness can't provide a full plate number, the investigator will be able to search the database of scanned plates in that area and use other descriptors such as body type, unique features and the color of the car involved.

This software is available as an add-on to our ELSAG Enterprise Operations Center and end users can choose between a hardware or cloud-based solution.

ELSAG ECSS

The ELSAG Cloud Storage Solution is a CJIS-compliant virtual server that Leonardo established to assist agencies with the IT responsibilities that managing an ALPR server creates. This means end users can focus on investigations while Leonardo takes care of any server IT issues. It also reduces infrastructure costs end users would incur when purchasing and maintaining their own server.

The ECSS allows end users to retain complete ownership and control of their data and is the perfect resource for smaller agencies that may have limited IT support and budget.

Leonardo is committed to offering you cutting-edge solutions to help you reduce crime, manage your costs and work more efficiently. Let us know if you'd like to know more about either of these new technologies.

Dear PoliceOne Member,

It may be years before there is large-scale proliferation of autonomous vehicles on America's roads, but the reality is this emerging technology will have an impact on highway safety. How will these vehicles affect safety, driver responsibility, and law enforcement tactics and strategies?

In our latest PoliceOne Digital Edition, "Officer Safety on the Highway," we explore this and a number of other ways tech, along with progressive training, can reduce the number of LEOs injured on our roadways. Download your copy, brought to you by Pursuit Response.

Dear PoliceOne Member,

It may be years before there is large-scale proliferation of autonomous vehicles on America's roads, but the reality is this emerging technology will have an impact on highway safety. How will these vehicles affect safety, driver responsibility, and law enforcement tactics and strategies?

In our latest PoliceOne Digital Edition, "Officer Safety on the Highway," we explore this and a number of other ways tech, along with progressive training, can reduce the number of LEOs injured on our roadways. Download your copy, brought to you by Pursuit Response.

Dear PoliceOne Member,

It may be years before there is large-scale proliferation of autonomous vehicles on America's roads, but the reality is this emerging technology will have an impact on highway safety. How will these vehicles affect safety, driver responsibility, and law enforcement tactics and strategies?

In our latest PoliceOne Digital Edition, "Officer Safety on the Highway," we explore this and a number of other ways tech, along with progressive training, can reduce the number of LEOs injured on our roadways. Download your copy, brought to you by Pursuit Response.

Dear PoliceOne Member,

It may be years before there is large-scale proliferation of autonomous vehicles on America's roads, but the reality is this emerging technology will have an impact on highway safety. How will these vehicles affect safety, driver responsibility, and law enforcement tactics and strategies?

In our latest PoliceOne Digital Edition, "Officer Safety on the Highway," we explore this and a number of other ways tech, along with progressive training, can reduce the number of LEOs injured on our roadways. Download your copy, brought to you by Pursuit Response.

On Monday, January 28, and Tuesday, January 29, 2019, the NJSP, NYPD, and NNJUASI, facilitated by the Rutgers University Center on Policing, will host a Regional Trafficking Summit. This two-day summit will gather 12 state police superintendents, 12 major city chiefs, and numerous federal agencies with responsibilities along the I-95 corridor between Richmond, VA, Washington, DC, and Boston, MA, to discuss the feasibility and productivity of linking and sharing ALPR data. Establishing this linkage across the northeast region of the United States would immeasurably increase our effectiveness in addressing issues of counter terrorism, drug trafficking, weapons trafficking, Amber and Silver Alerts,

plus other threats to the public safety of our respective states.

Please find the attached letter from Colonel Patrick Callahan for further information and details.

Hi Mike,

Please see below request. I believe that the MOU referred to by Colonel Callahan has been previously sent to EOPPS for approval. I personally believe that this collaborative effort would enhance our efforts in the areas of counter-terrorism, the opioid crisis, human trafficking and others. I would appreciate your insights into this matter.

Respectfully,

Kerry

Dear Police Leader,

Earlier this year, the CDC reported that the opioid epidemic is claiming the lives of 115 Americans every day. Law enforcement plays a complex role in combating this unprecedented public health emergency.

In our latest Digital Edition, sponsored by Thermo Fisher, we look at the evolving LE tactics that are pivotal to winning the war on opioid trafficking and abuse. Download your copy.

Dear Police Leader,

Earlier this year, the CDC reported that the opioid epidemic is claiming the lives of 115 Americans every day. Law enforcement plays a complex role in combating this unprecedented public health emergency.

In our latest Digital Edition, sponsored by Thermo Fisher, we look at the evolving LE tactics that are pivotal to winning the war on opioid trafficking and abuse. Download your copy.

Good morning!

I am looking for feedback from any Departments that may have a Communications (Dispatch) Analyst? If so, what is their actual title and what are their roles/responsibilities.

Please respond off list - THANK YOU!

Kristi House Koglin

Hello all,

This is short notice, but a local security organization is putting on a 6 hour training class on cargo theft in Florence, SC. The training is free for law enforcement and they have some of the most experienced cargo theft investigators in the Eastern US teaching. If you're in the area, we've had a lot of problems in the Carolinas the past few years with organized crews (mainly from Miami/Louisville) targeting high-value shippers and following drivers as they leave the origin. They basically wait for them to park the truck and jump in as soon as they leave.

Here's a sampling of some crimes we've attributed to such groups in the past year.

Good morning everyone,

I need help!

I have run a kernel density, used optimized hot spot analysis, collect events, etc. The results will say that an output was completed, but the output layer, raster, etc. does not show in my table of contents or in the designated workspace. Does anyone know what is going on? The only changes I made were reducing my points from 61000 to 8300 because I am wanting to analyze specific data. After I selected the data I wanted, I created a new layer. I exported the layer into a shapefile. Ran everything as normal and nothing is displaying. Under the results, next output surface or output anything it does NOT say empty.

Any assistance would be greatly appreciated!

Good morning!

I am looking for feedback from any Departments that may have a Communications (Dispatch) Analyst? If so, what is their actual title and what are their roles/responsibilities.

Please respond off list - THANK YOU!

Kristi House Koglin

Hello all,

This is short notice, but a local security organization is putting on a 6 hour training class on cargo theft in Florence, SC. The training is free for law enforcement and they have some of the most experienced cargo theft investigators in the Eastern US teaching. If you're in the area, we've had a lot of problems in the Carolinas the past few years with organized crews (mainly from Miami/Louisville) targeting high-value shippers and following drivers as they leave the origin. They basically wait for them to park the truck and jump in as soon as they leave.

Here's a sampling of some crimes we've attributed to such groups in the past year.

Good morning everyone,

I need help!

I have run a kernel density, used optimized hot spot analysis, collect events, etc. The results will say that an output was completed, but the output layer, raster, etc. does not show in my table of contents or in the designated workspace. Does anyone know what is going on? The only changes I made were reducing my points from 61000 to 8300 because I am wanting to analyze specific data. After I selected the data I wanted, I created a new layer. I exported the layer into a shapefile. Ran everything as normal and nothing is displaying. Under the results, next output surface or output anything it does NOT say empty.

Any assistance would be greatly appreciated!

WOW! I love the list serve. You guys are incredible!

I had an overwhelming response. To all that reached out to me (and you were numerous) THANK YOU!!!!!

We did find our missing person in a hotel in NC. He is safe and sound.

I don't know what we would do without all the support we receive from the IACA members.

Again THANK YOU ALL!

From: IACAList [mailto:iacalist-bounces+shawna.hitchcock=sanangelopolice.org@listserve.com] On Behalf Of Shawna Hitchcock via IACAList

Subject: [IACA] Help Please - ALPR Reader

Afternoon All,

I am working a missing person case, and have found were my person's car is showing up on an ALPR in NC.

I am hoping somebody might have access to Vigilant or something similar who would be willing to run a plate for me in hopes of finding my person

TX plate #CBD0478

Thanks!

My department is exploring implementation of a real time "fusion center". I'm curious to know what software any of your departments who have one are currently using and if you like it. Any helpful information would be appreciated.

Subject: [IACA] Canada: Methods to extract phone number from social
media profiles?
Message-ID:
<2c80091bca974f0792f272cfe918c051@WINSRVP158.intranet.ibc.ca>
Content-Type: text/plain; charset="us-ascii"

Hi Everyone,

I am looking for ways to extract phone numbers from a social media profile. I used to have luck with Pipl by way of the Facebook username, but it appears this feature has been removed.

I'm finding that the standard online search tools such as Spokeo, Pipl and PeekYou are only for US searches, so I do not get any results for my searches on Canadian phone numbers and even parties who reside in Canada as per their social media profiles.

Thanks!

Kaitlynn Campbell

Content-Type: text/plain; charset="us-ascii"

Map your robberies
Add your XY coordinates (projected or geographic is fine)
Map your potential targets if commercial robberies
Export your feature class to a dbf
Pull it into CrimeStat IV
Do a correlated walk analysis (CWA): ask for everything to be saved as a
SHP

Also do Gottlieb's tradition days-between-hit analysis

Compare your CWA to the potential targets
Make prediction based on DBH + CWA

Next event predictions are kind SWAGs but it is better than nothing
(usually)

Subject: [IACA] FW: RE : [Order: W06230776165] Payment invoice from
itunes egift card certificate code email delivery
Message-ID: <00e601d3c6b2$0d65a580$2830f080$@springdalear.gov>
Content-Type: text/plain; charset="utf-8"

Has anyone seen a scam like this from Apple? The victim (she's not out any money) received the below email to her yahoo account stating that her eGift card would be delivered today and purchased with CC ending in 62. However, none of her cards end in 62. I'm sure

this is a scam but I cannot find anything about it as I search.

Subject: [IACA] question regarding county probation departments
sharing information
Message-ID:
<BN6PR09MB1377677388F206FBF4DCAA3BB7A30@BN6PR09MB1377.namprd09.prod.outlook.com>

Content-Type: text/plain; charset="us-ascii"

Hi list!

I am especially looking for input from California agencies since everyone here is on probation now and no one does any real time, but totally interested in how this plays out in other states as well.

We currently have minimal access to our county probation department's data. They do make available the ability to search individually if a person is on probation and what the terms are, but we do not have direct access to their records system or access to get a data dump of all of our active probationers so we could use that data in maps or for other intelligence gathering. They provide a static report we can run by month of people just sentenced to probation, but it is only for that specific month. I used to pull the reports monthly and create my own database but the data would get stale over time and didn't have all the information my officers wanted anyway.

I was wondering how other police departments get access to their probation data and if theirs is as limited as ours. I'm hoping to start a conversation about sharing the data better, but thought a state/nationwide perspective would be useful first.

Thanks so much!

Hi Justin,

I believe this to be a scam. The spelling error (?has been confirm?) is an immediate giveaway.

Looks like a phishing attempt. Incorrect or general information can be provided, prompting the email recipient to reply with correct information. Alternatively, by selecting one of the links in the mail, malware can potentially be downloaded to the user?s computer.

Is the sender?s email address visible?
Try selecting ?Forward? (without actually completing in the action) and, when it is shown in the main body of the email below, determine if it is a genuine Apple address.

Always remember: if it?s unexpected and too good to be true, it probably is!

Best regards / Met vriendelijke groet,
Kelly Pereira
Intelligence Manager, Irdeto

Agreed. Another thought I had is that there are bit.ly links for ?Manage Your Order? and ?Apple ID?. The bit.ly links may send the users to an official looking login page and prompt their credentials to harvest valid Apple ID account information. Taking it one step further, it could ask the user for a number of things actually once they ?login?. For example, explain there was an error with their order and prompt them to reenter their CC or bank info.

If you have a way of gaining access to a sandboxed environment you could safely open the link and see what it tries to do, but I think it?s safe to say no matter what it tries to do, it?s all bad.

Hi Justin,

I believe this to be a scam. The spelling error (?has been confirm?) is an immediate giveaway.

Looks like a phishing attempt. Incorrect or general information can be provided, prompting the email recipient to reply with correct information. Alternatively, by selecting one of the links in the mail, malware can potentially be downloaded to the user?s computer.

Is the sender?s email address visible?
Try selecting ?Forward? (without actually completing in the action) and, when it is shown in the main body of the email below, determine if it is a genuine Apple address.

Always remember: if it?s unexpected and too good to be true, it probably is!

Best regards / Met vriendelijke groet,
Kelly Pereira

Has anyone seen a scam like this from Apple? The victim (she's not out any money) received the below email to her yahoo account stating that her eGift card would be delivered today and purchased with CC ending in 62. However, none of her cards end in 62. I'm sure
this is a scam but I cannot find anything about it as I search.

Hi Justin, I get one every week and I don't even use itunes. The scammers want you to click on their link and when you do, a virus hits your computer to grab your info. I've had some friends who clicked on the link and they had a lot of problems later. The following are two links you can review:

https://urldefense.proofpoint.com/v2/url?u=http-3A__www.scamnet.wa.gov.au_scamnet_Scam-5Ftypes-2DAttempts-5Fto-5Fgain-5Fyour-5Fpersonal-5Finformation-2DPhishing-2DFake-5FiTunes-5Freceipt-5Fphishing-5Femail.htm&d=DwID-g&c=lDF7oMaPKXpkYvev9V-fVahWL0QWnGCCAfCDz1Bns_w&r=RczylWAOGka07XbvRZTVevfhcU9hAe0aT9nmy75UBfiBGzb_X5vX3tcPr0Ql9Vmi&m=PnBmrvsEa2DKLSZjHJFCQ24RNChBou-lXrbxxCTGbjE&s=du4FAl7vLw3iJV_xOUKPxCRQoL2U7qXbdSG2gLbFvUk&e=

Subject: [IACA] FW: RE : [Order: W06230776165] Payment invoice from itunes egift card certificate code email delivery

Has anyone seen a scam like this from Apple? The victim (she's not out any money) received the below email to her yahoo account stating that her eGift card would be delivered today and purchased with CC ending in 62. However, none of her cards end in 62. I'm sure
this is a scam but I cannot find anything about it as I search.

Content-Type: text/plain; charset="utf-8"

Good Afternoon All,

I am interested in creating a comprehensive weekly product for dissemination department-wide. Among other things I would like to include incident reports, NIBIN leads, offender releases, important dates, etc. This would be more of a narrative-style summary of events intended to assist frontline personnel versus something like a CompStat report.

If anyone has examples of products that they can share, or lessons learned, please contact me.

Respectfully,

Adam Earle

I had that problem for several years but was eventually able to get access to our court minutes data. This resolved any concerns that probation had with data inaccuracies because we were looking at the data directly from the courts and there was no liability from them. Our courts share the data to the county for jail, probation, DA, and public defenders use, so if you can find the right people to ask they may likely have a way for you to connect as well.

Good luck and be prepared for networking and firewall issues, both IT and interpersonal.

Matt

Subject: [IACA] question regarding county probation departments sharing information

Hi list!

I am especially looking for input from California agencies since everyone here is on probation now and no one does any real time, but totally interested in how this plays out in other states as well.

We currently have minimal access to our county probation department?s data. They do make available the ability to search individually if a person is on probation and what the terms are, but we do not have direct access to their records system or access to get a data dump of all of our active probationers so we could use that data in maps or for other intelligence gathering. They provide a static report we can run by month of people just sentenced to probation, but it is only for that specific month. I used to pull the reports monthly and create my own database but the data would get stale over time and didn?t have all the information my officers wanted anyway.

I was wondering how other police departments get access to their probation data and if theirs is as limited as ours. I?m hoping to start a conversation about sharing the data better, but thought a state/nationwide perspective would be useful first.

Thanks so much!

The Inland Empire Crime and Intelligence Analysts Association will be hosting "Story Maps with ArcGIS for Law Enforcement" on Tuesday, April 17, 2018. The training will consist of a hands-on workshop at the Esri campus on creating your own story map. For those of you that haven't attended this before, this is a great opportunity to learn an innovative approach to presenting your data or case debriefs!! It's also an excellent refresher for those of you that haven't used it in a while and want to brush up on your skills.

Please note Esri is being gracious enough to provide laptops to the first 40 attendees to check in on the day of training; you can share along with a fellow analyst if you wish. However, there will be plenty of room in the auditorium for you to bring your own laptop and follow along.

Note: analysts, students, interns, and other GIS professionals are all welcome to attend

For more information, please refer to the attached flyer. RSVP can be emailed directly to me. Thank you!!

WOW! I love the list serve. You guys are incredible!

I had an overwhelming response. To all that reached out to me (and you were numerous) THANK YOU!!!!!

We did find our missing person in a hotel in NC. He is safe and sound.

I don't know what we would do without all the support we receive from the IACA members.

Again THANK YOU ALL!

Subject: [IACA] Help Please - ALPR Reader

Afternoon All,

I am working a missing person case, and have found were my person's car is showing up on an ALPR in NC.

I am hoping somebody might have access to Vigilant or something similar who would be willing to run a plate for me in hopes of finding my person

TX plate #CBD0478

Thanks!

My department is exploring implementation of a real time "fusion center". I'm curious to know what software any of your departments who have one are currently using and if you like it. Any helpful information would be appreciated.

Subject: [IACA] Canada: Methods to extract phone number from social
media profiles?
Message-ID:
<2c80091bca974f0792f272cfe918c051@WINSRVP158.intranet.ibc.ca>
Content-Type: text/plain; charset="us-ascii"

Hi Everyone,

I am looking for ways to extract phone numbers from a social media profile. I used to have luck with Pipl by way of the Facebook username, but it appears this feature has been removed.

I'm finding that the standard online search tools such as Spokeo, Pipl and PeekYou are only for US searches, so I do not get any results for my searches on Canadian phone numbers and even parties who reside in Canada as per their social media profiles.

Thanks!

Kaitlynn Campbell

I've got a robbery spree in the City and I need a predictive analysis done
by 1 pm today. Is there anyone that may offer me some assistance in the
next hour?

Subject: [IACA] Predictive Analysis - Journey to Crime
Sent by: "IACAList" <iacalist-bounces
+isaac.vanpatten=roanokeva.gov@listserve.com>

I've got a robbery spree in the City and I need a predictive analysis done
by 1 pm today. Is there anyone that may offer me some assistance in the
next hour?

Has anyone seen a scam like this from Apple? The victim (she's not out any
money) received the below email to her yahoo account stating that her eGift
card would be delivered today and purchased with CC ending in 62. However,
none of her cards end in 62. I'm sure

this is a scam but I cannot find anything about it as I search.

Subject: [IACA] question regarding county probation departments
sharing information
Message-ID:
<BN6PR09MB1377677388F206FBF4DCAA3BB7A30@BN6PR09MB1377 namprd09.prod.outlook.com>

Content-Type: text/plain; charset="us-ascii"

Hi list!

I am especially looking for input from California agencies since everyone here is on probation now and no one does any real time, but totally interested in how this plays out in other states as well.

We currently have minimal access to our county probation department's data. They do make available the ability to search individually if a person is on probation and what the terms are, but we do not have direct access to their records system or access to get a data dump of all of our active probationers so we could use that data in maps or for other intelligence gathering. They provide a static report we can run by month of people just sentenced to probation, but it is only for that specific month. I used to pull the reports monthly and create my own database but the data would get stale over time and didn't have all the information my officers wanted anyway.

I was wondering how other police departments get access to their probation data and if theirs is as limited as ours. I'm hoping to start a conversation about sharing the data better, but thought a state/nationwide perspective would be useful first.

Thanks so much!

Hi Justin,

I believe this to be a scam. The spelling error (?has been confirm?) is an immediate giveaway.

Looks like a phishing attempt. Incorrect or general information can be provided, prompting the email recipient to reply with correct information. Alternatively, by selecting one of the links in the mail, malware can potentially be downloaded to the user?s computer.

Is the sender?s email address visible?
Try selecting ?Forward? (without actually completing in the action) and, when it is shown in the main body of the email below, determine if it is a genuine Apple address.

Always remember: if it?s unexpected and too good to be true, it probably is!

Best regards / Met vriendelijke groet,
Kelly Pereira
Intelligence Manager, Irdeto

Agreed. Another thought I had is that there are bit.ly links for ?Manage Your Order? and ?Apple ID?. The bit.ly links may send the users to an official looking login page and prompt their credentials to harvest valid Apple ID account information. Taking it one step further, it could ask the user for a number of things actually once they ?login?. For example, explain there was an error with their order and prompt them to reenter their CC or bank info.

If you have a way of gaining access to a sandboxed environment you could safely open the link and see what it tries to do, but I think it?s safe to say no matter what it tries to do, it?s all bad.

Hi Justin,

I believe this to be a scam. The spelling error (?has been confirm?) is an immediate giveaway.

Looks like a phishing attempt. Incorrect or general information can be provided, prompting the email recipient to reply with correct information. Alternatively, by selecting one of the links in the mail, malware can potentially be downloaded to the user?s computer.

Is the sender?s email address visible?
Try selecting ?Forward? (without actually completing in the action) and, when it is shown in the main body of the email below, determine if it is a genuine Apple address.

Always remember: if it?s unexpected and too good to be true, it probably is!

Best regards / Met vriendelijke groet,
Kelly Pereira

Has anyone seen a scam like this from Apple? The victim (she's not out any money) received the below email to her yahoo account stating that her eGift card would be delivered today and purchased with CC ending in 62. However, none of her cards end in 62. I'm sure
this is a scam but I cannot find anything about it as I search.

Hi Justin, I get one every week and I don't even use itunes. The scammers want you to click on their link and when you do, a virus hits your computer to grab your info. I've had some friends who clicked on the link and they had a lot of problems later. The following are two links you can review:

https://urldefense.proofpoint.com/v2/url?u=http-3A__www.scamnet.wa.gov.au_scamnet_Scam-5Ftypes-2DAttempts-5Fto-5Fgain-5Fyour-5Fpersonal-5Finformation-2DPhishing-2DFake-5FiTunes-5Freceipt-5Fphishing-5Femail.htm&d=DwID-g&c=lDF7oMaPKXpkYvev9V-fVahWL0QWnGCCAfCDz1Bns_w&r=JjUJPE4iHOCoV4Iuf8VaMhDE2YDQmtiDfmo4sfZoAqY&m=X_g6unqDotSud3kUZsWwHHOgH4UWydIHGAG_FrjM4R4&s=og0D7VYLx8FK--6zUhWxhByryyYqU_qa9GrI0EfO4o0&e=

Has anyone seen a scam like this from Apple? The victim (she's not out any money) received the below email to her yahoo account stating that her eGift card would be delivered today and purchased with CC ending in 62. However, none of her cards end in 62. I'm sure
this is a scam but I cannot find anything about it as I search.

Good Afternoon All,

I am interested in creating a comprehensive weekly product for dissemination department-wide. Among other things I would like to include incident reports, NIBIN leads, offender releases, important dates, etc. This would be more of a narrative-style summary of events intended to assist frontline personnel versus something like a CompStat report.

If anyone has examples of products that they can share, or lessons learned, please contact me.

Respectfully,

Adam Earle

I had that problem for several years but was eventually able to get access to our court minutes data. This resolved any concerns that probation had with data inaccuracies because we were looking at the data directly from the courts and there was no liability from them. Our courts share the data to the county for jail, probation, DA, and public defenders use, so if you can find the right people to ask they may likely have a way for you to connect as well.

Good luck and be prepared for networking and firewall issues, both IT and interpersonal.

Matt

Subject: [IACA] question regarding county probation departments sharing information

Hi list!

I am especially looking for input from California agencies since everyone here is on probation now and no one does any real time, but totally interested in how this plays out in other states as well.

We currently have minimal access to our county probation department?s data. They do make available the ability to search individually if a person is on probation and what the terms are, but we do not have direct access to their records system or access to get a data dump of all of our active probationers so we could use that data in maps or for other intelligence gathering. They provide a static report we can run by month of people just sentenced to probation, but it is only for that specific month. I used to pull the reports monthly and create my own database but the data would get stale over time and didn?t have all the information my officers wanted anyway.

I was wondering how other police departments get access to their probation data and if theirs is as limited as ours. I?m hoping to start a conversation about sharing the data better, but thought a state/nationwide perspective would be useful first.

Thanks so much!

The Inland Empire Crime and Intelligence Analysts Association will be hosting "Story Maps with ArcGIS for Law Enforcement" on Tuesday, April 17, 2018. The training will consist of a hands-on workshop at the Esri campus on creating your own story map. For those of you that haven't attended this before, this is a great opportunity to learn an innovative approach to presenting your data or case debriefs!! It's also an excellent refresher for those of you that haven't used it in a while and want to brush up on your skills.

Please note Esri is being gracious enough to provide laptops to the first 40 attendees to check in on the day of training; you can share along with a fellow analyst if you wish. However, there will be plenty of room in the auditorium for you to bring your own laptop and follow along.

Note: analysts, students, interns, and other GIS professionals are all welcome to attend

For more information, please refer to the attached flyer. RSVP can be emailed directly to me. Thank you!!

Jennifer

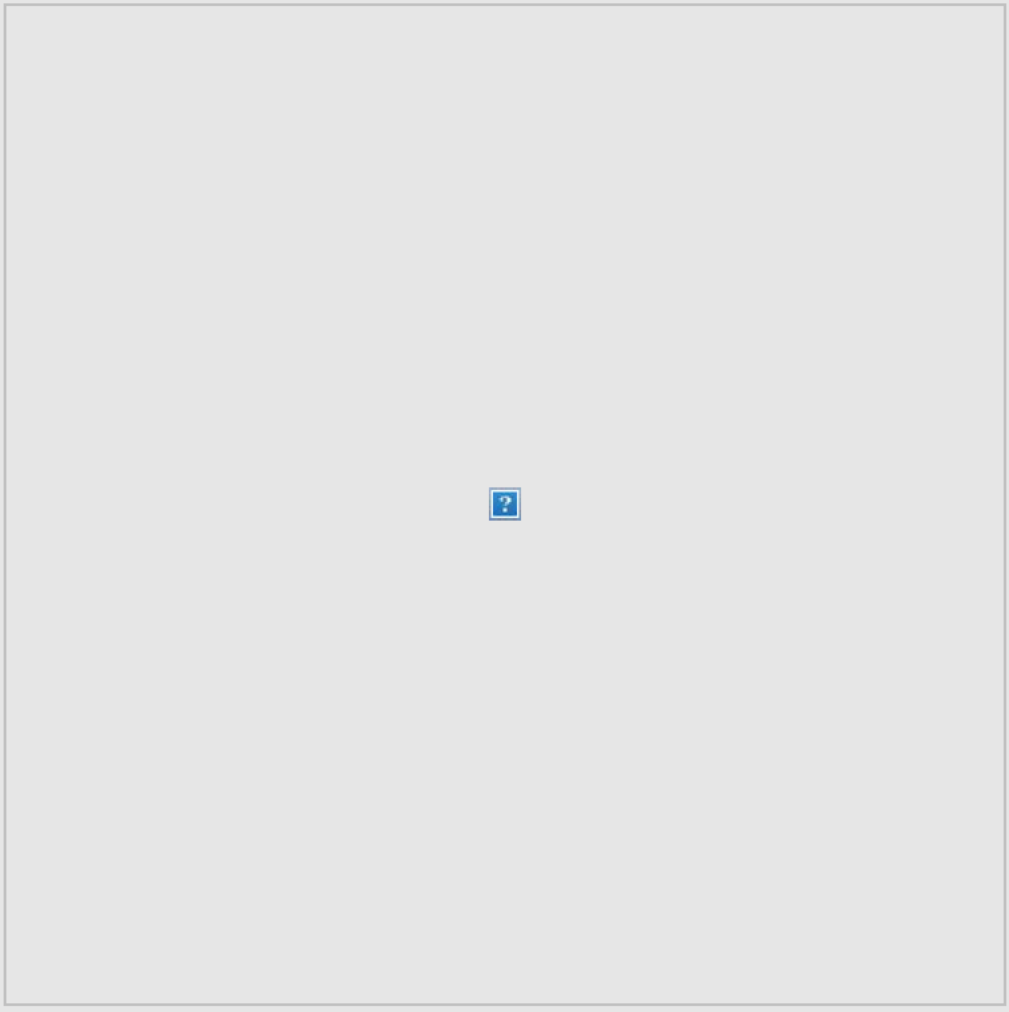
NEW DEMO: Interactive pedestrian crossing

STARLING Crossing (STigmergic Adaptive Responsive LearnING Crossing), based in London, UK, have created an interactive pedestrian crossing that responds dynamically in real time to make pedestrians, cyclists and drivers safer and more aware of each other. This video shows a demonstration of its prototype more...



VIDEO PART 2: OCTA to replace 18 bridges to

significantly reduce congestion on I-405

This amusing video – the sequel to the episode that we shared last week – outlines Orange County Transportation Authority's (OCTA) plans for its I-405 improvement project, which include replacing 18 bridges, as well as building new and widened ones. The bridges will improve access to and from the road and ultimately will significantly reduce congestion more...

Legal Analysis and Commentary

#MeToo: Not Decapitation, but Possibly Lustration

LESLEY WEXLER

verdict post

Illinois Law professor Lesley Wexler explores the narrative of the so-called career death penalty that has arisen from the #MeToo movement and considers lustration—a process of purging or vetting individuals responsible for abuses of the state—as a mechanism to govern some of the high-profile harassers. Wexler calls upon the public and the media to help create a different story—a better world—where individuals who have engaged in harassment no longer need to serve as cultural or economic arbiters.

Government & Administrative Law Opinions

St. Bernard Parish Government v. United States

Court: US Court of Appeals for the Federal Circuit
Docket: 16-2301
Opinion Date: April 20, 2018
Judge: Timothy B. Dyk
Areas of Law: Constitutional Law, Government & Administrative Law, Real Estate & Property Law

Saint Bernard Parish Government and other owners of real property in St. Bernard Parish or in the Lower Ninth Ward of the City of New Orleans sued under the Tucker Act, 28 U.S.C. 1491(a)(1), alleging a taking. They claimed that the government was liable for flood damage to their properties caused by Hurricane Katrina and other hurricanes. Plaintiffs' theory was that the government incurred liability because of government inaction, including the failure to properly maintain or to modify the Mississippi River-Gulf Outlet (MRGO) channel, and government action (the construction and operation of the MRGO channel). The Claims Court found a taking occurred and awarded compensation. The Federal Circuit reversed. The government cannot be liable on a takings theory for inaction and the government action in constructing and operating MRGO was not shown to have been the cause of the flooding. The Claims Court failed to apply the correct legal standard, which required that the causation analysis account for government flood control projects that reduced the risk of flooding.

Motor Vehicle Administration v. Smith

Court: Maryland Court of Appeals
Docket: 42/17
Opinion Date: April 20, 2018
Judge: Hotten
Areas of Law: Civil Rights, Constitutional Law, Government & Administrative Law

The Court of Appeals vacated the judgment of the circuit court affirming the finding of the administrative law judge (ALJ) that Respondent was coerced into submitting to an alcohol breath test required by Md. Code Ann. Transp. 16-205.1. In affirming, the circuit court concluded that substantial evidence supported the ALJ's decision that Respondent did not voluntarily submit to the testing. The ALJ found, specifically, that the due process afforded to Respondent was insufficient and that the officer's actions impermissibly

induced Respondent to submit to an alcohol breath test. The Court of Appeals disagreed, holding that the ALJ's determination was erroneous because Respondent failed to establish that there was an insufficient advisement of rights in violation of her due process protections.

Carey v. Commissioner of Correction

Court: Massachusetts Supreme Judicial Court
Docket: SJC-12369
Opinion Date: April 19, 2018
Judge: Budd
Areas of Law: Government & Administrative Law

The Department of Correction's policy announced in 2013 that visitors to correctional facilities would be subject to search by drug-detecting dogs was not inconsistent with the Department's existing regulations but was not exempt from the Administrative Procedure Act (APA), Mass. Gen. Laws ch. 31A, 1 et seq. Plaintiffs commenced this action to prevent the Department from implementing the new policy. The superior court denied Plaintiffs' motion for a preliminary injunction, and the policy was thereafter implemented. A second superior court judge entered judgment declaring that the Commissioner of Correction had the authority o establish the policy without having to comply with the procedural requirements of the APA. The Supreme Judicial Court remanded this case to the superior court for entry of a judgment declaring that the Department was required to, but did not, meet the requirements of the APA when it adopted this regulation but that the regulation, if properly adopted in conformance with the APA, would not conflict with existing Department regulations.

Wynne v. Menard, Inc.

Court: Nebraska Supreme Court
Citation: 299 Neb. 710
Opinion Date: April 20, 2018
Judge: Michael G. Heavican

Areas of Law: Labor & Employment Law, Government & Administrative Law

The Supreme Court reversed the decision of the Nebraska Workers' Compensation Court sustaining Appellant's motion for summary judgment insofar as it awarded her benefits for two scheduled injuries but denied her claim that she was permanently and totally disabled. The Court held (1) there was no merit to Appellant's first assignment of error that Appellant's employer admitted, through its responses to Appellant's requests for admission, that Appellant was permanently and totally disabled; but (2) the trial court erred in weighing the evidence in the summary judgment matter and concluding that Appellant was not permanently and totally disabled.

Irwin v. Jefferson County Personnel Board

Court: Supreme Court of Alabama
Docket: 1161145
Opinion Date: April 20, 2018
Judge: James Allen Main
Areas of Law: Civil Procedure, Labor & Employment Law, Government & Administrative Law

Paul Irwin, Jr., appealed a final judgment of the Jefferson Circuit Court dismissing his claim for injunctive relief against the Jefferson County Personnel Board ("the Board") and the City of Trussville ("Trussville"). This case arose from Trussville's desire to hire a police chief following the retirement of its former chief. Trussville interviewed Irwin and two other candidates from a certified list of candidates. Trussville did not hire Irwin or any other candidate from the certified list supplied by the Board in January 2017. Instead, Trussville returned the list to the Board and requested that the Board administer a new test for the position of Police Chief II. On January 23, 2017, the Board "expired" the eligibility list. On January 27, 2017, the Board also approved Trussville's request to hire a provisional police chief until such time as a new assessment examination could be administered and a new eligibility list generated. On March 1, 2017, Irwin sued the Board and Trussville, contending that, once the Board issued to Trussville a certified list of eligible candidates for the position of police chief, Trussville was required to hire a candidate from that list and had no

discretion to leave the position unfilled. The complaint sought only injunctive relief. The Alabama Supreme Court determined the specific actions Irwin sought to enjoin –- the administration of a new examination for the position of Trussville's police chief and the appointment of a candidate to the position of police chief who was not on the January 2017 certified list –- have since occurred. Accordingly, it was impossible to provide Irwin the relief he requested. Irwin's appeal was dismissed.

United States v. James

Court: US Court of Appeals for the Third Circuit
Docket: 17-2536
Opinion Date: April 23, 2018
Judge: Smith
Areas of Law: Criminal Law, Government & Administrative Law, White Collar Crime

In 2015, former Virgin Islands Senator James was charged with wire fraud, 18 U.S.C. 1343, and federal programs embezzlement, 18 U.S.C. 666(a)(1)(A), stemming from his use of legislative funds to ostensibly obtain historical documents from Denmark related to the Fireburn, an 1878 St. Croix uprising. The indictment specified: obtaining cash advances from the Legislature but retaining a portion of those funds for his personal use; double-billing for expenses for which he had already received a cash advance; submitting invoices and receiving funds for translation work that was never done; and submitting invoices and receiving funds for translation work that was completed before his election to the Legislature. James, who argued that he was engaged in legislative fact-finding, moved to dismiss the indictment on legislative immunity grounds. The district court denied the motion, stating that James' actions were not legislative acts worthy of statutory protection under the Organic Act of the Virgin Islands. The Third Circuit affirmed. Under 48 U.S.C. 1572(d) legislators are protected from being "held to answer before any tribunal other than the legislature for any speech or debate in the legislature." The conduct underlying the government's allegations concerning James is clearly not legislative conduct protected by section 1572(d).

In re Investigation into Petiton of Vermont Gas Systems, Inc. (AARP, Appellant)

Court: Vermont Supreme Court
Citation: 2018 VT 44
Opinion Date: April 20, 2018
Judge: Carroll
Areas of Law: Government & Administrative Law

From 2006 to 2016, Vermont Gas Systems, Inc. (VGS) operated under an "alternative regulation" plan (ARP). Pursuant to the ARP, VGS's rates were automatically adjusted every quarter based on changes in gas costs. In 2011, VGS proposed amending its ARP by establishing the System Expansion and Reliability Fund (SERF) as a means of facilitating the expansion of its service into Addison County, Vermont, and perhaps beyond, while maintaining a smooth rate trajectory. At the time of the proposal, VGS would have been required under the ARP's automatic rate adjustments to reduce customer rates for the spring 2011 quarter by approximately $4.4 million, which would have been the ninth rate reduction in the previous ten quarters. Instead of reducing rates for existing customers pursuant to the provisions of the ARP, VGS proposed depositing that amount annually into SERF to smooth out rate increases resulting from future expansion of services. Under the proposal, VGS's rates would remain the same rather than be reduced by an automatic adjustment. In this ratemaking proceeding, AARP appealed an order of the Vermont Public Utility Commission that incorporated a memorandum of understanding (MOU) reached by the Department of Public Service and VGS. Among other things, the incorporated MOU set VGS's firm non-gas rates for the tax year beginning October 1, 2016; allowed VGS to use a specified amount from a fund previously authorized by the Commission to mitigate the rate effects of any system expansion; and established both the penalty for VGS's imprudent costs associated with the Addison Natural Gas Project (ANGP) and its return on equity. The Vermont Supreme Court reversed and remanded the matter for the Commission to make further findings regarding VGS's ANGP-related imprudent costs and, if necessary, to reconsider the penalty imposed for those costs under the incorporated MOU.

In re Petition of Conservation Law Foundation

Court: Vermont Supreme Court
Citation: 2018 VT 42
Opinion Date: April 20, 2018
Judge: Beth Robinson
Areas of Law: Civil Procedure, Government & Administrative Law

The question this case presented for the Vermont Supreme Court's review was whether steep increases in project cost estimates for the Addison Natural Gas Project, combined with changes in energy markets, created a "substantial change" such that Vermont Gas System, Inc. (VGS) had to secure an amended certificate of public good under Public Utility Commission Rule 5.408. In ruling on Conservation Law Foundation's (CLF) separate petition for declaratory relief, distinct from post-judgment review of the Commission's certificate of public good, the Commission held that increased cost estimates for VGS's natural gas pipeline project, coupled with changes in the energy markets, were not a "substantial change" under Rule 5.408. The Supreme Court deferred to the Commission's reasonable interpretation of Rule 5.408 and accordingly affirm.

Heffernan v. Vermont

Court: Vermont Supreme Court
Citation: 2018 VT 47
Opinion Date: April 20, 2018
Judge: Carroll
Areas of Law: Constitutional Law, Labor & Employment Law, Government & Administrative Law

Katherine Heffernan appealed the trial court's decision dismissing her complaint, which sought indemnification from the State on a default judgment she obtained against a state employee and which claimed that the State was vicariously liable for the employee's conduct. The State determined that the acts alleged by Heffernan were outside the scope of the employee's official duties and that, therefore, the State did not have a duty to defend the employee against Heffernan's action. Heffernan, unable to

locate the employee to make service of process, eventually served him through process by publication. Heffernan notified the State that she had served the employee, and the State again declined to take any action. The employee did not appear or offer any defense in Heffernan's suit, and the trial court eventually issued a default judgment against him. The court subsequently held a hearing on damages and awarded Heffernan both punitive and compensatory damages. The Vermont Supreme Court found that while Heffernan presented complex arguments, its decision regarding both of her theories of State liability was controlled by the plain language of Vermont's statutory scheme concerning each issue. Pursuant to the clear limitations on liability in Vermont's Tort Claims Act, the State retains sovereign immunity relative to the actions alleged in Heffernan's complaint. As such, the trial court did not err in dismissing her case.

Jesner v. Arab Bank, PLC

Court: US Supreme Court
Docket: 16-499
Opinion Date: April 24, 2018
Judge: Anthony M. Kennedy
Areas of Law: Civil Procedure, Government & Administrative Law, International Law

Petitioners sought compensation under the Alien Tort Statute (ATS), part of the Judiciary Act of 1789, 28 U.S.C. 1350, based on terrorist acts committed abroad. They alleged that those acts were in part facilitated by Arab Bank, a Jordanian institution with a New York branch. They claimed that the bank used that branch to clear dollar-denominated transactions that benefited terrorists through the Clearing House Interbank Payments System (CHIPS) and to launder money for a Texas-based charity allegedly affiliated with Hamas. The Second Circuit and Supreme Court affirmed the dismissal of the case. Foreign corporations may not be defendants in suits brought under the ATS, which is "strictly jurisdictional" and does not provide or define a cause of action for international law violations. The Court noted that after the Second Circuit permitted plaintiffs to bring ATS actions based on human-rights laws, Congress enacted the 1991 Torture Victim Protection Act, creating an express cause of action for victims of torture and extrajudicial killing. ATS suits then became more frequent but "the

presumption against extraterritoriality applies to [ATS] claims." Separation-of-powers concerns that counsel against courts creating private rights of action apply with particular force to the ATS, which implicates foreign-policy concerns. Courts must exercise "great caution" before recognizing new forms of liability under the ATS. In this case. the only alleged connections to the United States, the CHIPS transaction and a brief allegation about a Texas charity, are "relatively minor" and the litigation has caused diplomatic tensions with Jordan, a critical ally.

SAS Institute Inc. v. Iancu

Court: US Supreme Court
Docket: 16-969
Opinion Date: April 24, 2018
Judge: Neil M. Gorsuch
Areas of Law: Government & Administrative Law, Intellectual Property, Patents

SAS sought inter partes review (35 U.S.C. 311(a)) of ComplementSoft's software patent, alleging that all 16 of the patent's claims were unpatentable. The Patent Office instituted review on some of the claims and denied review on the rest. The Federal Circuit rejected SAS's argument that section 318(a) required the Board to decide the patentability of every claim challenged in the petition. The Supreme Court reversed. When the Patent Office institutes an inter partes review, it must decide the patentability of all of the claims the petitioner has challenged. Section 318(a), which states that the Board "shall issue a final written decision with respect to the patentability of any patent claim challenged by the petitioner" is mandatory and comprehensive. The Director's claimed "partial institution" power (37 CFR 42.108(a)) appears nowhere in the statutory text. The statute envisions an inter partes review guided by the initial petition. While section 314(a) invests the Director with discretion on whether to institute review, it does not invest him with discretion regarding what claims that review will encompass. The Director's policy argument—that partial institution is efficient because it permits the Board to focus on the most promising challenges and avoid spending time and resources on others—is properly addressed to Congress.

Oil States Energy Services, LLC v. Greene's Energy Group, LLC

Court: US Supreme Court
Docket: 16-712
Opinion Date: April 24, 2018
Judge: Clarence Thomas
Areas of Law: Civil Procedure, Constitutional Law, Government & Administrative Law, Intellectual Property, Patents

Oil States sued Greene's Energy for infringement of a patent relating to technology for protecting wellhead equipment used in hydraulic fracturing. Greene's challenged the patent's validity in court and petitioned the Patent Office for inter partes review, 35 U.S.C. 311-319. The district court issued a claim-construction order favoring Oil States; the Board concluded that Oil States' claims were unpatentable. The Federal Circuit rejected a challenge to the constitutionality of inter partes review. The Supreme Court affirmed. Inter partes review does not violate Article III. Congress may assign adjudication of public rights to entities other than Article III courts. Inter partes review falls within the public-rights doctrine. Patents are "public franchises" and granting patents is a constitutional function that can be carried out by the executive or legislative departments without "judicial determination.' Inter partes review involves the same basic matter as granting a patent. Patents remain "subject to [the Board's] authority" to cancel outside of an Article III court. The similarities between the procedures used in inter partes review and judicial procedures does not suggest that inter partes review violates Article III. The Court noted that its decision "should not be misconstrued as suggesting that patents are not property for purposes of the Due Process Clause or the Takings Clause." When Congress properly assigns a matter to adjudication in a non-Article III tribunal, "the Seventh Amendment poses no independent bar to the adjudication of that action by a nonjury factfinder."

Commonwealth of Pennsylvania v. President United States

Court: US Court of Appeals for the Third Circuit
Docket: 17-3679
Opinion Date: April 24, 2018
Judge: Hardiman
Areas of Law: Civil Procedure, Government & Administrative Law, Health Law

Little Sisters of the Poor, a Roman Catholic congregation serving the elderly poor of all backgrounds, operates homes for the elderly, all of which adhere to the same religious beliefs. A religious nonprofit corporation that operates a Little Sisters home in Pittsburgh sought to intervene in litigation challenging regulations promulgated under the Patient Protection and Affordable Care Act, 42 U.S.C. 300gg-13(a)(4). That litigation was instituted by the Commonwealth of Pennsylvania, challenging interim final rules, providing for "religious" and "moral " exemptions to the Act's "contraceptive mandate" for "entities, and individuals, with sincerely held religious beliefs objecting to contraceptive or sterilization coverage," including "for-profit entities that are not closely-held." The Third Circuit reversed the denial of their motion. Little Sisters' interest in the regulations is neither novel nor isolated; it has been involved in Affordable Care Act litigation for years. Little Sisters' interest in preserving the religious exemption is concrete and capable of definition; the relationships among the organization's various homes indicate a unique interest compared to other religious objectors who might wish to intervene. Those interests are significantly protectable. Little Sisters have demonstrated that they may be "practically disadvantaged by the disposition of the action" and have established that their interests are not adequately represented by the federal government.

Dana Corp. v. Testa

Court: Supreme Court of Ohio
Citation: 2018-Ohio-1561
Opinion Date: April 24, 2018
Judge: Per Curiam
Areas of Law: Government & Administrative Law, Tax Law

The Supreme Court reversed the decision of the Board of Tax Appeals (BTA) affirming the tax commissioner's order of two reductions that decreased Dana Corporation's amortizable amount against the commercial-

activity tax (CAT) to $4,728,051. At issue was the special credit against the CAT set forth at Ohio Rev. Code 5751.53. One factor in calculating the CAT credit was the net operating losses (NOLs) that were incurred by the corporation before the CAT. To take the credit, Dana Corporation was required to file report with the tax commissioner that calculated an amount that would be applied gradually over a period of up to twenty years (amortizable amount) against the CAT. Dana Corporation argued that its amortizable amount was $12,493,003. The tax commissioner ordered two reductions that ultimately decreased the amortizable amount to $4,728,051. On appeal, Dana argued that the second adjustment was not authorized by 5751.53(F). The BTA disagreed. The Supreme Court reversed, holding that the BTA erred in affirming the reduction of the amortizable amount based on cancellation-of-debt income offset of federal NOLs.

State ex rel. Khumprakob v. Mahoning County Board of Elections

Court: Supreme Court of Ohio
Citation: 2018-Ohio-1602
Opinion Date: April 24, 2018
Judge: Per Curiam
Areas of Law: Election Law, Government & Administrative Law

The Supreme Court granted a writ of mandamus requested by Relators seeking to compel Respondents, the Mahoning County Board of Elections and its members (collectively, the Board), to place a proposed amendment to the Youngstown city charter on the May 2018 ballot. The Board voted not to place the proposed amendment on the ballot, finding that the proposed amendment "contained provisions that are beyond the scope of the City of Youngstown's power" to enact. The Supreme Court held that Relators were entitled to a writ of mandamus because the Board offered no clear support for its conclusion that Relators' current proposal was beyond the scope of the City's legislative power. Therefore, Relators had a clear legal right to have their proposal placed on the ballot, and the Board had a clear legal duty to provide that relief.

Campos v. United States

Court: US Court of Appeals for the Fifth Circuit
Docket: 16-51476
Opinion Date: April 24, 2018
Judge: Leslie Southwick
Areas of Law: Government & Administrative Law, Immigration Law, Personal Injury

The Fifth Circuit affirmed the district court's dismissal of plaintiff's claims against the Government for false arrest and false imprisonment under the Federal Tort Claims Act (FTCA). Plaintiff claimed that she was falsely arrested and imprisoned by Custom and Border Protection (CBP) officers because the officers detained her after she presented them with an Employment Authorization Document (EAD), which in her view conclusively showed entitlement to remain in the United States. The court held that the discretionary function exception to the FTCA applied in this case where the officers enforced a removal order. The court reasoned that, what plaintiff insisted was certain from the EAD and removed all discretion was, in reality, sufficiently uncertain as to leave discretion in the hands of the officers. Furthermore, reading the discretionary function exception in conjunction with the law enforcement proviso, the court held that the district court was correct in holding that there was no subject matter jurisdiction. However, the district court did err in dismissing the FTCA claims with prejudice. Therefore, the court vacated and remanded so that the district court may enter a revised order and final judgment that dismisses the suit without prejudice.

City of Clarksville, Tennessee v. FERC

Court: US Court of Appeals for the District of Columbia Circuit
Docket: 16-1244
Opinion Date: April 24, 2018
Judge: Wilkins
Areas of Law: Energy, Oil & Gas Law, Government & Administrative Law, Utilities Law

The DC Circuit granted a petition for review of FERC's assertion of Natural Gas Act (NGA) jurisdiction over the transportation and sale of natural gas for resale from the City of Clarksville, Tennessee to the City of Guthrie, Kentucky. As a preliminary matter, the court rejected FERC's standing and

ripeness challenges to the court's authority to hear the petition for review. On the merits, the court saw no reason to deviate from the clear and unambiguous language of the statute, as well as FERC precedent, and held that Clarksville was a municipality that was exempt from regulation under NGA Section 7. The court also rejected FERC's alternative argument and held that the articulation of the scope of FERC's jurisdiction did not mean that Congress gave FERC jurisdiction over everything within the three areas listed by FERC. Therefore, the court vacated FERC's order.

Clayton County, Georgia v. Federal Aviation Administration

Court: US Court of Appeals for the Eleventh Circuit
Docket: 17-10210
Opinion Date: April 24, 2018
Judge: Julie Carnes
Areas of Law: Aviation, Government & Administrative Law

The Eleventh Circuit lacked jurisdiction to consider the merits of petitioners' suit challenging the FAA's interpretation of 49 U.S.C. 47133 as set forth in a 2016 letter because the letter did not constitute final agency action. Section 47133 prohibits local taxes on aviation fuel from being spent on anything but aviation. The court held that petitioners' action came too late to challenge the FAA's policy clarification issued in 2014, and it came too early to challenge an FAA enforcement action that may never happen.

Sierra Club v. Oklahoma Corporation Comm'n

Court: Oklahoma Supreme Court
Citation: 2018 OK 31
Opinion Date: April 24, 2018
Judge: Yvonne Kauger
Areas of Law: Civil Procedure, Environmental Law, Government & Administrative Law

This case involved an order of the Oklahoma Corporation Commission that granted Oklahoma Gas & Electric Company pre-approval to install pollution-control devices at one of its power plants. The order raised two issues: (1)

whether res judicata precluded the Commission from pre-approving OG&E's capital expenditure; and (2) whether the Commission could grant pre-approval under Okla. Const. art. 9, section 181 and 17 O.S. 2011 sec. 151 et seq. rather than 17 O.S. 2011 sec. 286(B). The Oklahoma Supreme Court held that although res judicata did not preclude the Commission from pre-approving the expenditure, it lacked authority outside of 17 O.S. 2011 sec. 286(B)2 to do so.

City of Idaho Falls v. H-K Contractors

Court: Idaho Supreme Court - Civil
Docket: 44886
Opinion Date: April 24, 2018
Judge: Bevan
Areas of Law: Civil Procedure, Contracts, Government & Administrative Law, Real Estate & Property Law, Zoning, Planning & Land Use

The City of Idaho Falls ("Idaho Falls") appealed an order dismissing its breach of contract and waste claims against H-K Contractors, Inc. ("H-K"). In 2005, H-K entered into a written contract requiring it to convey a parcel of property to Idaho Falls. The contract required that H-K initially grant Idaho Falls a storm drainage easement "over and across" the parcel. H-K was also required to convey fee title to the parcel at a future date, in no event later than March 1, 2010. H-K failed to convey the property to Idaho Falls as required. In 2016, Idaho Falls sent a letter to H-K requesting conveyance of title. H-K responded by refusing to convey title to the property, claiming that in 2009 a city official had orally informed H-K that Idaho Falls was no longer interested in the property. Based on that alleged representation, H-K decided to invest in the property to make it profitable. Idaho Falls filed a complaint against H-K for breach of contract and waste. H-K moved to dismiss the complaint based on the limitation found in Idaho Code section 5-216, alleging Idaho Falls' claims were time barred because they were not brought within the five-year statute of limitations governing contract actions. Idaho Falls countered that the statute of limitations did not apply to it as a subdivision of the State of Idaho. On January 3, 2017, the district court dismissed Idaho Falls' complaint as time barred. Idaho Falls timely appealed, claiming the district court erred in enforcing the five-year limitation

set forth in section 5-216. The Idaho Supreme Court vacated the district court's judgment, finding it erred when it determined the term “state” in Idaho Code section 5- 216 did not include Idaho’s municipalities. Because Idaho Falls was the “state,” the district court erred when it found its contract claims against H-K were not “for the benefit of the state.”

Independent Sch. Dist. No. 54 v. Independent Sch. Dist. No. 67

Court: Oklahoma Supreme Court
Citation: 2018 OK 34
Opinion Date: April 24, 2018
Judge: James R. Winchester
Areas of Law: Education Law, Government & Administrative Law, Tax Law

Within the 2006 through 2010 tax years, the Oklahoma Tax Commission and the Oklahoma State Board of Equalization issued certified assessments of certain public property physically located within the boundaries of the Stroud school district. Ad valorem taxes associated with these properties were distributed by the Lincoln County Treasurer to the Cushing and Wellston districts, instead of to Stroud. The error was discovered and subsequently corrected by the Lincoln County Board of Tax Roll Corrections during the 2010-2011 fiscal year. There was no disagreement among the three school districts that they were not responsible for the errors made in the distribution of the ad valorem taxes. To recover the funds that should have been Stroud's, Stroud sued Cushing and Wellston school districts. Stroud filed its petition on April 22, 2013. The defendant school districts filed a motion for summary judgment in December of 2014. In the same month, the plaintiff responded with its own motion for summary judgment. Stroud received the taxes from the property identified as within its district; Cushing received the taxes from the property identified as within its district; and Wellston received the taxes from the property identified as within its district. The Oklahoma Supreme Court found Stroud received the same amount for its general funds that it would have received had the ad valorem taxes been properly allocated. Nevertheless, it demanded additional funds from Cushing and Wellston that it would have received if the real property had been correctly identified. The Court determined if that amount was paid to Stroud, then Cushing and Wellston would have deficits in those districts that

they would not have if the real property had been correctly identified. Stroud did not believe the other two school districts are entitled to a setoff if they paid Stroud the misallocated ad valorem taxes. The Court found all three school districts were victims of this error, but no district failed to receive the funds needed for their respective districts. The Court reversed judgments against the Cushing and Wellston districts and that in favor of Stroud: "county and state officials will make mistakes in the taxing of property and the distribution of taxes."

Appeal of State Employees Association/Service Employees International Union, Local 1984

Court: New Hampshire Supreme Court
Docket: 2017-0115
Opinion Date: April 25, 2018
Judge: Gary E. Hicks
Areas of Law: Civil Procedure, Labor & Employment Law, Government & Administrative Law

Petitioner, the State Employees' Association of New Hampshire/Service Employees' International Union, Local 1984 (Union), appealed a New Hampshire Public Employee Labor Relations Board (PELRB) order dismissing its unfair labor practice complaint against respondent, the Community College System of New Hampshire (CCSNH). The Union argued the PELRB erred in ruling that CCSNH was not obligated to: (1) bargain over wages for on-campus tutoring services performed by adjunct faculty; and (2) compensate an adjunct faculty member for lost tutoring income resulting from his participation in collective bargaining negotiations. The New Hampshire Supreme Court concluded that the tutoring services at issue here were, if anything, more closely related to the normal adjunct faculty members' duties than the extracurricular activities in Appeal of Berlin Education Association, 125 N.H. 779 (1984) were related to the teachers' regular duties. "Thus, the result reached in Berlin applies a fortiori to control the outcome here. Either way, the PELRB erred as a matter of law." Because the plain language of RSA 273-A:11, II obligated CCSNH to afford "[a] reasonable number of employees who act as representatives of the bargaining unit . . . a reasonable opportunity to meet" for collective

bargaining negotiations "during working hours without loss of compensation or benefits," the Supreme Court agreed with the Union that CCSNH had to compensate the adjunct faculty for the tutoring hours he missed while attending such negotiations.

Schutz v. Cuyahoga County Board of Revision

Court: Supreme Court of Ohio
Citation: 2018-Ohio-1588
Opinion Date: April 25, 2018
Judge: Per Curiam
Areas of Law: Government & Administrative Law, Real Estate & Property Law

The Supreme Court affirmed the decision of the Board of Tax Appeals (BTA) affirming the decision of the Cuyahoga County Board of Revision (BOR) rejecting Appellant's challenge to the tax-year-2012 valuation of his residential property by the Cuyahoga County fiscal officer. On appeal, Appellant argued that the BTA misplaced the burden of proof and did not give proper consideration to the evidence he presented in support of his claim. The Supreme Court disagreed, holding that the BTA acted reasonably and lawfully in retaining the fiscal officer's valuation.

Bronx Park South III Lancaster, LLC v. Fairfield County Board of Revision

Court: Supreme Court of Ohio
Citation: 2018-Ohio-1589
Opinion Date: April 25, 2018
Judge: Maureen O'Connor
Areas of Law: Government & Administrative Law, Real Estate & Property Law

In this challenge to the real property valuation of a Walgreens drugstore in Lancaster for tax year 2014 the Supreme Court vacated the decision of the Board of Tax Appeals (BTA) disregarding the property owners' appraisal and valuing the property according to a recent arm's-length sale price. Here, as in Terraza 8, LLC v. Franklin County Board of Revision, 83 N.E.3d 916,

the school board sought to have the real property valued according to the sale price, while the owners, relying on appraisal evidence, argued that under Ohio Rev. Code 5713.03, as amended by 2012 Am.Sub.H.B. No. 487 ("H.B. 487"), a lease encumbrance precluded use of the sale price to value the property. The Supreme Court remanded the case to the BTA to weigh and address the appraisal evidence, holding that this appeal presented a straightforward application of Terraza. In other words, the recent sale presumptively represented the value of the unencumbered fee simple estate, but the BTA must also weigh the appraisal evidence.

Sisseton-Wahpeton Oyate of the Lake Traverse Reservation v. U.S. Corps of Engineers

Court: US Court of Appeals for the Eighth Circuit
Docket: 16-4283
Opinion Date: April 25, 2018
Judge: Tunheim
Areas of Law: Environmental Law, Government & Administrative Law, Native American Law, Real Estate & Property Law

The Tribe filed suit alleging that the Corps violated the Administrative Procedure Act (APA), the Clean Water Act (CWA), and the National Historic Preservation Act (NHPA) in issuing permit and exemption determinations to a real property owner. The permits and exemptions allowed the owner to construct a road by dredging and filling portions of Enemy Swim Lake. With one exception, the Eighth Circuit affirmed the district court's dismissal of the Tribe's claims. The court held that the 2010 letter issued by the Corp did not constitute a final agency action for purposes of the permit and exemption determinations, and that the Tribe's recapture claim was a nonjusticiable enforcement action; the Tribe was not eligible for equitable tolling in this case; the Corps did not act arbitrarily and capriciously by determining that the owner's 2009 project qualified for a nationwide permit; and the court did not have appellate jurisdiction to address the lawfulness of the Corps's NHPA regulations.

Amisub v. SCDHEC

Court: South Carolina Supreme Court
Docket: 27792
Opinion Date: April 25, 2018
Judge: Per Curiam
Areas of Law: Civil Procedure, Government & Administrative Law, Health Law

Petitioner Charlotte-Mecklenburg Hospital Authority, d/b/a Carolinas Medical Center-Fort Mill sought a writ of certiorari to review the court of appeals' decision in Amisub of South Carolina, Inc. v. South Carolina Department of Health & Environmental Control, Op. No. 2017-UP-013 (S.C. Ct. App. filed Jan. 11, 2017). In 2005, four hospitals, Petitioner, Respondent Amisub, Presbyterian Healthcare System, and Hospital Partners of America, applied for a certificate of need (CON) to construct and operate an acute-care hospital in Fort Mill. In May 2006, the Department of Health and Environmental Control (DHEC) determined the acute-care hospital was necessary, and granted a CON to Amisub, but denied a CON to Petitioner and the others. DHEC's decision to award the CON to Amisub was based in part on its interpretation of the language of the South Carolina Health Plan that only existing health care providers in York County were eligible for additional hospital beds. Petitioner filed a contested case at the ALC, contending DHEC had erroneously interpreted the language of the Health Plan. Alternatively, Petitioner argued that if DHEC's interpretation was correct, the Health Plan violated the dormant Commerce Clause because it improperly restricted interstate commerce. The ALC found DHEC's interpretation of the Health Plan was not correct, reversed, and remanded to DHEC. The ALC's determination made it unnecessary for the ALC to reach the alternative dormant Commerce Clause claim. On remand, DHEC granted a CON to Petitioner, but denied a CON to the others. Amisub filed a second contested case at the ALC, which again reversed, this time ordering a CON be granted to Amisub and denied to Petitioner. The court of appeals affirmed, finding "the record does not show [Petitioner] presented to the ALC any argument that [Amisub]'s positions on adverse impact and outmigration, if adopted by the ALC, would violate the Dormant Commerce Clause. [Petitioner] waited until filing its Rule 59(e) motion to present this argument, which is too late." If Petitioner had reason to believe this issue was actually being litigated before the ALC in the second contested case, and yet remained silent, the South Carolina Supreme Court would have

agreed with the court of appeals. However, the dormant Commerce Clause issues arising out of the language of the Health Plan were resolved in Petitioner's favor in the first contested case. Thus, Petitioner could not reasonably have foreseen the ALC would craft its order in a fashion to revive those issues. Therefore, Petitioner had no reason to raise the dormant Commerce Clause challenge in the second contested case until the ALC issued its order. “No party should be penalized for not addressing an issue as to which it had previously prevailed, and which it did not reasonably contemplate would yet be the basis of the court's ruling.” Accordingly, the Supreme Court reversed the court of appeals' finding that the dormant Commerce Clause issue was not preserved for appellate review, and remanded the case to the court of appeals for a ruling on the merits of the issue.

Kegerise v. Delgrande, et al,

Court: Supreme Court of Pennsylvania
Docket: 22 MAP 2017
Opinion Date: April 26, 2018
Judge: Wecht
Areas of Law: Civil Procedure, Contracts, Education Law, Labor & Employment Law, Government & Administrative Law

Dr. Susan Kegerise sought reinstatement as superintendent of the Susquehanna Township School District, as well as back pay and benefits. In January 2010, Kegerise was appointed superintendent. In 2013, the District’s Board of Directors extended Kegerise’s contract for a three-year term after agreeing, at Kegerise’s request, to include a resignation provision in her employment contract. Kegerise alleged this resignation clause was necessary to protect her interests in light of several Board members’ inappropriate behavior. Kegerise further alleged that, this clause notwithstanding, and in an effort to force her resignation, several Board members persisted in hostile actions including, inter alia, physical intimidation and verbal abuse, even after the contract was executed. In 2014, Kegerise informed the Board that she was receiving medical care and would be unable to return to work until April 21, 2014. While Kegerise was on medical leave, the Board received several letters from Kegerise’s

counsel asserting that Kegerise had been constructively discharged. The Board responded by affirming that Kegerise remained the Superintendent of Schools, and that "[h]er time away from the District since that day has been recorded as sick leave derived from Dr. Kegerise's pre-existing sick leave accumulation." On April 17, 2014, Kegerise filed a complaint at the United States District Court, alleging, inter alia, that the Board had constructively discharged her. Kegerise asserted that, "although no formal termination has taken place, [she] cannot perform the job duties of Superintendent," due to the Board's behavior toward her. Kegerise sought damages in excess of six million dollars, including compensatory and economic damages "for loss of contractual salary and other emoluments of employment" and consequential damages for "damage to professional reputation and loss of future salary as an educational administrator." The trial court held an evidentiary hearing to determine whether Kegerise had intended to resign when she filed her federal complaint, after which, it ordered the Board to reinstate Kegerise to her position with back pay and benefits. The Board appealed to the Commonwealth Court; the Commonwealth Court affirmed the trial court's grant of mandamus. The Pennsylvania Supreme Court, however, found Kegerise did not demonstrate to a clear legal right to reinstatement. Accordingly, the orders reinstating her as superintendent with back pay and benefits was reversed.

Holloway v. Showcase Realty Agents, Inc.

Court: California Courts of Appeal
Docket: H043492(Sixth Appellate District)
Opinion Date: April 26, 2018
Judge: Eugene M. Premo
Areas of Law: Civil Procedure, Government Contracts, Government & Administrative Law

The San Lorenzo Valley Water District acquired real property in Boulder Creek, California from the Dildines. Holloway, a taxpayer within District, filed suit claiming the contract was void under Government Code section 1090, because one of District's directors, Vierra, had an interest in the contract by nature of his partial ownership in Showcase Realty, which facilitated the property sale, and the fact that his wife was the listing agent for the

property. The trial court dismissed on the ground that Holloway lacked standing to assert a claim for conflict of interest. The court of appeal reversed. Holloway has taxpayer standing under Code of Civil Procedure section 526a to challenge the contract and has standing under Government Code section 1092 to bring an action for conflict of interest. There is no challenge to District's bonds, warrants or other evidence of indebtedness; Holloway was not required to bring a validation action under Water Code section 30066.

Neal v. Fairfax County Police Department

Court: Supreme Court of Virginia
Docket: 170247
Opinion Date: April 26, 2018
Judge: Smith
Areas of Law: Government & Administrative Law

Neal submitted a FOIA request to the Fairfax County Police Department seeking its automated license plate readers (ALPR) records regarding his vehicle. The Department responded that Neal's tag had been read twice and enclosed pictures of his vehicle with the time, date, and GPS location from which at least one photograph was taken. Neal sued under the Government Data Collection and Dissemination Practices Act, Code 2.2-3800-3809, alleging that the "passive use" of ALPRs violated a requirement that information not be collected "unless the need for it has been clearly established in advance." The circuit court granted the Department summary judgment, reasoning "that a license plate number is not personal information." The Supreme Court of Virginia reversed. The pictures and associated data stored in the ALPR database meet the statutory definition of "personal information" but it is not clear whether the retention and "passive use" of that information may be classified as an "information system" under the Act. The circuit court must determine whether the ALPR record-keeping process provides a means through which a link between a license plate and the vehicle's owner may be readily made. If a means exists, then the "passive use" of ALPRs is not covered by the law enforcement exception because the Department collected and retained personal information without any suspicion of criminal activity.

Ford Motor Co. v. Jobe

Court: Kentucky Supreme Court
Docket: 2017-SC-000010-WC
Opinion Date: April 26, 2018
Judge: Wright
Areas of Law: Labor & Employment Law, Government & Administrative Law

The Supreme Court affirmed the judgment of the court of appeals affirming the decision of the Workers' Compensation Board (Board) affirming the decision of the administrative law judge (ALJ) awarding Donald Jobe benefits regarding his back. Jobe, an employee of Ford Motor Company, suffered a right hip injury stemming from a work-related accident. Jobe applied for workers' compensation benefits, asserting that he sustained a low back impairment due to the hip injury. The ALJ found that Jobe's work-related hip injury was a proximate cause of his low back impairment and awarded Jobe benefits for a fourteen percent permanent partial disability, temporary total disability benefits for the periods he was off work due to his back impairment, and medical benefits. The Board affirmed, concluding that the ALJ had substantial evidence to support his finding that Jobe's low back impairment had a causal connection to the work-related injury. The court of appeals affirmed. The Supreme Court affirmed, holding that the ALJ based his decision that Jobe's back impairment was work-related on substantial evidence.

Plumley v. Kroger, Inc.

Court: Kentucky Supreme Court
Docket: 2017-SC-000083-WC
Opinion Date: April 26, 2018
Judge: John D. Minton, Jr.
Areas of Law: Labor & Employment Law, Government & Administrative Law, Personal Injury

The Supreme Court affirmed the opinion of the court of appeals affirming

the decision of the Workers' Compensation Board upholding the decision of the administrative law judge (ALJ), which awarded Michael R. Plumley permanent partial disability benefits. On appeal, the Court held that the ALJ did not err (1) by relying upon the medical report of Dr. Greg Snider, who evaluated Plumley under the range-of-motion method and used terminology different from that which Plumley would use to describe essentially the same condition; (2) by finding that Plumley had three distinct work-related injuries, for each of which the ALJ made three tandem benefit awards rather than a single-injury with a single-benefit award; and (3) in his use of modifier multipliers.

Entergy Texas, Inc. v. Nelson

Court: US Court of Appeals for the Fifth Circuit
Docket: 17-50042
Opinion Date: April 26, 2018
Judge: Thomas Morrow Reavley
Areas of Law: Energy, Oil & Gas Law, Government & Administrative Law, Utilities Law

At issue in this appeal was whether a certain Public Utility Commission of Texas (PUCT) order conflicted with a prior Federal Energy Regulatory Commission (FERC) order. The Fifth Circuit reversed the district court's order and rendered judgment in favor of PUCT and TIEC, holding that PUCT's order was not in conflict with any FERC order. The court held that FERC's orders requiring the Entergy compliance filing did not call for a retroactive reallocation of 2007 Bandwidth Payments; Entergy's compliance filing did not contain a retroactive reallocation that FERC approved in the 2015 FERC Order; the 2015 FERC Order did not retroactively reallocate 2007 Bandwidth Payments; and PUCT's Order was consistent with the 2015 FERC Order.

Reed v. Boley

Court: Supreme Court of Appeals of West Virginia
Docket: 17-0174

Opinion Date: April 26, 2018
Judge: Walker
Areas of Law: Government & Administrative Law

The Supreme Court reversed the order of the circuit court revising the order of the Commissioner of the West Virginia Division of Motor Vehicles (DMV) revoking Petitioner's driver's license after he was arrested for driving under the influence of alcohol, holding that the circuit court erred in finding that Petitioner suffered actual and substantial prejudice as a result of a post-hearing delay by the Office of Administrative Hearings (OAH). When Petitioner challenged the revocation by appeal, the OAH conducted a hearing but then took no action for two and a half years. The OAH eventually affirmed the revocation. The circuit court reversed the revocation. The Supreme Court reversed the circuit court's order and remanded for reinstatement of the DMV's order revoking Petitioner's driver's license, holding that the circuit court's finding of prejudice was erroneous.

Arbors East RE, LLC v. Franklin County Board of Revision

Court: Supreme Court of Ohio
Citation: 2018-Ohio-1611
Opinion Date: April 26, 2018
Judge: Per Curiam
Areas of Law: Government & Administrative Law, Real Estate & Property Law

At issue in this valuation case was the 2011 value, with carryover to 2012 and 2013, of a nursing home that was purchased by its former lessee in April 2011 and to what extent the sale price ought to have been allocated to assets other than the real estate. The Board of Revision (BOR) ordered a small reduction in value to $7,202,900 after making a small deduction for furniture, fixtures, and equipment. The Board of Tax Appeals (BTA) reinstated the entire sale price of $7,490,000 as the value of the real estate. The Supreme Court vacated the BTA's decision and remanded the case for further proceedings, holding that the BTA neglected to exercise its statutory authority to obtain a complete record and predicated its decision in part on legal errors.

Lone Star Steakhouse & Saloon of Ohio, Inc. v. Franklin County Board of Revision

Court: Supreme Court of Ohio
Citation: 2018-Ohio-1612
Opinion Date: April 26, 2018
Judge: Per Curiam
Areas of Law: Government & Administrative Law, Real Estate & Property Law

In this real property valuation case involving tax year 2012, the Supreme Court reversed the decision of the Board of Tax Appeals (BTA) adopting the Franklin County Board of Revision's (BOR) rejection of the sale price of the property at issue as the criterion of value and instead retaining the county auditor's valuation. On appeal, the BTA found that the sale was too remote in relation to the tax-lien date. The Supreme Court remanded the case with instructions that the BTA use the sale price to value the property for tax year 2012, holding that the BTA misapplied court precedent in determining that the sale was too remote.

Start 2018 LE.jpg

"Traffic fatalities rose nearly 6% in 2016. 95% of those fatalities occurred on highways."
-National Transportation Safety Board

Make traffic safety and traffic flow management your top priorities for 2018 with portable, web-enabled traffic devices you can manage from your desktop.

- Variable message signs you access from anywhere to change messages in real time as conditions change
- Radar speed displays, radar speed signs and off-road vehicle counter classifiers with speed measurement that upload data automatically—so you can report on speed, volume, and vehicle counts and classification for quick traffic studies
- Portable trailers that pull double duty with ALPR inside so it's quick and easy to deploy and redeploy ALPR anytime, anywhere—without special equipment

Plus solutions for wrong-way drivers, work zones, traffic flow analysis and more.

BOOTH #2739

Our Products

PORTABLE, WEB-ENABLED SPEED SIGNS, TRAILERS AND MORE!

October
6-9
2018

Visit All Traffic Solutions at IACP 2018 and learn about our cloud-based traffic management solutions and portable traffic devices for speed calming, messaging and safety. Stop at Booth #2739 to say hello, meet with your ATS rep and see our web-enabled radar speed displays and radar speed signs, variable message signs, portable trailers with ALPR and much more.

Plus, get a quick demo of ATS TraffiCloud Remote Traffic Management software!

Law Enforcement Solutions

OUR PRODUCTS

SpeedAlert radar message displays

These versatile signs combine traffic calming and variable messaging, giving you more options and flexibility.

LEARN MORE

Shield radar speed displays

The Shield family of radar speed displays is ideal when you want portability as well as options.

LEARN MORE

InstAlert variable message signs

InstAlert variable message signs are

the fastest, easiest way to tell the public exactly what it needs to know.

LEARN MORE

Trailers with ALPR

ATS 5 Trailers pull double duty with ALPR inside. Ideal for a range of applications.

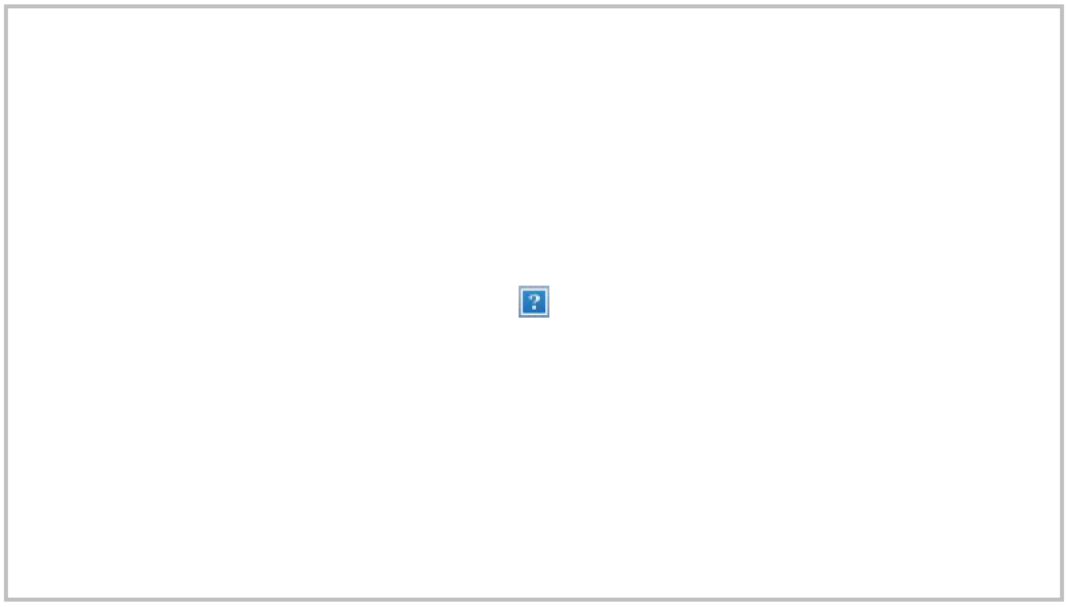
LEARN MORE

Handheld Lidar devices

DragonEye handheld Lidar is rugged, lightweight and easy to use.

LEARN MORE

Portable vehicle counter classifiers



The portable, web-enabled StatTrak mounts in minutes on pole or median. Measures vehicle speeds, volume and classification.

LEARN MORE

TRAFFICLOUD

Access all of your devices and data from anywhere with an Internet connection with the TraffiCloud™ secure web-based traffic management system.

WATCH THE VIDEO

- Change messages on signs in real time from anywhere for emergency notifications, event parking, rerouting traffic and more
- Receive email or SMS alerts for excessive speeding, wrong way drivers and device tampering
- Check battery life and sign locations without driving to each device
- Download and distribute traffic data reports in seconds
- Identify enforcement priorities to maximize resources and budget
- Make more insightful decisions for future planning

As you are all aware, Automated License Plate Reader (LPR) data is one of the most beneficial technologies made available to law enforcement in the past ten years. We utilize this technology every day. That being said, we don't have a good way to capture all of the successful uses of the technology. I'm working with Spencer Lord and Brian Merrick at EOPSS to pull together some examples of the use of LPR data in everyday police work. These stories will be used to counter this bill which we know as practitioners will only further erode our ability to detect and solve crime.
>

Subject: ALPR

All,

Attached please find a bill that will severely regulate and curtail access to, and storage of, ALPR data. As you are all aware, Automated License Plate

Reader (LPR) data is one of the most beneficial technologies made available to law enforcement in the past ten years. We utilize this technology every day. That being said, we don't have a good way to capture all of the successful uses of the technology. I'm working with Spencer Lord and Brian Merrick at EOPSS to pull together some examples of the use of LPR data in everyday police work. These stories will be used to counter this bill which we know as practitioners will only further erode our ability to detect and solve crime.

I'm looking for all types of examples:

Homicide
Sexual Assault
Kidnapping
Terrorism
Threats
Amber Alert
Silver Alert
Robbery
Burglary
Security

Please include anything you can think of that will help our cause. I have attached a copy of our current policy which is based on the EOPSS model LPR policy. We currently retain the data for one year prior to expungement.

Please submit your responses in a brief narrative that outlines the case and the successful use of LPR technology.

Please try to have the responses to me by Thursday and include Rose Warren on the email so we can gather the different responses into one folder for submission to EOPSS.

Thank you in advance for your efforts on this important matter.

Lieutenant Colonel Dermot J. Quinn #1765
Division Commander
Division of Investigative Services
Massachusetts State Police

Sir,

We have had a few examples of getting LPR hits on vehicles on our watch list. These are all drug related cases, not the examples that the LTC mentioned in his e-mail, and we do not have a seizure directly related to a LPR hit on its own. We have also benefitted from the mobile LPR's getting hits on vehicles parked on the street late night, identifying addresses that we were previously unaware of.

Great, as for the SQL..

I'd take the basics like plate, date, X,Y, location, camera name. It would be great to get if the plate is a hit and maybe some hotlist info like contact or other details, the Photo and patch would be great. That way we could do a html popup of the pictures. We have the bulk of the ESRI tools, including GeoEvent if that's easier.

Hi Brian,

I have our project manager coming into town next week to discuss. I'll have a better answer for you by next Friday.

We can certainly get something going in SQL. Aside from 30 days of reads and hits, any other limiters? What data columns are you wanting to see?

Hi Peter,

I just wanted to check in on the progress of the BOSS sharing plug-in. Are you still good for Q1? The Logan Airport data will be great to have.

Also, would it be possible to get a SQL view in our DB that would show the last 30~ days of reads and hits? I'd like to mash up the LPR data in our ESRI ArcGIS Portal and visualize the data along with some of my other data feeds.

Thanks, Brian

Subject: Data sharing

Hi Peter,

We would like to share data across three BOSS systems, Boston PD, EOPSS and MassPort. I'm aware we can all use the same server or do federated search, but we need the capability to push hotlists across all the systems and I wanted to explore the possibility of using the "DEA plug" in and the "Failed Reads" inserter.

Would it be possible to install a modified version of the "DEA Plug-in" to point at the EOPSS server, that way we could process hotlists against those remote reads? Maybe the Failed Inserter could be updated and used to support more throughput and run against the hotlist.

Let me know, Thanks Brian

Hi Peter,

Any status on this?

Also, for the requested SQL – this information would be great

Table 1
List of fixed LPR Locations with these fields;

- *Unique ID*
- *Name*
- *Description*
- *Location Description*
- *Lat*
- *Long*
- *Last Updated or Last Read*
- *1st Read or Earliest Read*
- *Total Reads that Day*
- *Total Hits that Day*

(No Bigints please)
~ this will be used to show were the fixed readers are

Table 2
Nightly dump of the Last 31 days of Reads into a new table

Unique ID
Camera Name
Camera Description
Plate
Plate State (AKA Plate Syntax)
Time Stamp
Image Patch
Image Overview
~ this will be used to answer the question, was there any LPR in the Area

Table 3
Total Reads in the system
Last Hour
Last 5 Minutes

~ we want to dashboard this to monitor the health of the sytem

Thanks, Brian

Subject: RE: Invitation Letter for Regional Trafficking Summit 1/28 - 1/29/19
Date: Monday, December 24, 2018 10:42:24 AM

Colonel:

I checked in with Dave Solet at EOPSS, and he is familiar with the proposal and understands the advantages to participating in the program. Apparently EOPSS discussed a few legal and policy questions with MSP legal back in October-November, and the discussion was inconclusive. Dave said that he and Matt Moran are available to speak with you and your staff at your convenience in order to resolve those few open items.

As I understand it, MSP is the aggregator of Massachusetts LPR information gathered by Commonwealth police departments. When MSP brought the multi-state program to EOPSS in October, EOPSS asked whether MSP's existing agreement with local police departments places any limitations on MSP's ability to share aggregated LPR information with out of State agencies. Additionally, EOPSS had a few questions for MSP about what sort of controls MSP would have on Massachusetts information if it were shared with other States. These are legal questions, but they also have a political element to them given the sorts of concerns regularly raised by civil liberty advocates about police use of LPR information.

I think that MSP and EOPSS could reach a conclusion on this proposal pretty quickly if your staff and Matt and Dave can answer the three or four questions EOPSS raised back in October-November.

Best regards,

Mike

Hello, Colonel--

I agree this looks pretty interesting, but I have not been part of any discussions on this subject. Based on my experience at the DA's Office, I can definitely see how participating in this sort of information sharing would be valuable for public safety and law enforcement. I have been out the warrant business for 4 years now. This information was just starting to be used by other jurisdictions back when I was at Middlesex, but my sense is that this technology has come a long way since then.

I don't know what the EOPSS view is on this.

I would be glad to inquire among the usual suspects on the lawyer side if the MOU and the idea of MSP participation has had any review and where it stands. Would that be helpful?

Mike

On Monday, January 28, and Tuesday, January 29, 2019, the NJSP, NYPD, and NNJUASI, facilitated by the Rutgers University Center on Policing, will host a Regional Trafficking Summit. This two-day summit will gather 12 state police superintendents, 12 major city chiefs, and numerous federal agencies with responsibilities along the I-95 corridor between Richmond, VA, Washington, DC, and Boston, MA, to discuss the feasibility and productivity of linking and sharing ALPR data. Establishing this linkage across the northeast region of the United States would immeasurably increase our effectiveness in addressing issues of counter terrorism, drug trafficking, weapons trafficking, Amber and Silver Alerts, plus other threats to the public safety of our respective states.

Please find the attached letter from Colonel Patrick Callahan for further information and details.

Apparently EOPSS discussed a few legal and policy questions with MSP legal back in October-November, and the discussion was inconclusive. Dave said that he and Matt Moran are available to speak with you and your staff at your convenience in order to resolve those few open items.
>
> As I understand it, MSP is the aggregator of Massachusetts LPR information gathered by Commonwealth police departments. When MSP brought the multi-state program to EOPSS in October, EOPSS asked whether MSP's existing agreement with local police departments places any limitations on MSP's ability to share aggregated LPR information with out of State agencies. Additionally, EOPSS had a few questions for MSP about what sort of controls MSP would have on Massachusetts information if it were shared with other States. These are legal questions, but they also have a political element to them given the sorts of concerns regularly raised by civil liberty advocates about police use of LPR information.
>
> I think that MSP and EOPSS could reach a conclusion on this proposal pretty quickly if your staff and Matt and Dave can answer the three or four questions EOPSS raised back in October-November.

Hi Mike,

Please see below request. I believe that the MOU referred to by Colonel Callahan has been previously sent to EOPPS for approval. I personally believe that this collaborative effort would enhance our efforts in the areas of counter-terrorism, the opioid crisis, human trafficking and others. I would appreciate your insights into this matter.

Respectfully,

Kerry

On Monday, January 28, and Tuesday, January 29, 2019, the NJSP, NYPD, and NNJUASI, facilitated by the Rutgers University Center on Policing, will host a Regional Trafficking Summit. This two-day summit will gather 12 state police superintendents, 12 major city chiefs, and numerous federal agencies with responsibilities along the I-95 corridor between Richmond, VA, Washington, DC, and Boston, MA, to discuss the feasibility and productivity of linking and sharing ALPR data. Establishing this linkage across the northeast region of the United States would immeasurably increase our effectiveness in addressing issues of counter terrorism, drug trafficking, weapons trafficking, Amber and Silver Alerts, plus other threats to the public safety of our respective states.

Please find the attached letter from Colonel Patrick Callahan for further information and details.

No problem. You should proceed without me—I am going to be out of town for a week. Dave can loop in Ben Goldberger in my office if that would be helpful. Dave and Ben and I all spoke about this briefly this morning.

Have a great—and very quiet—Christmas. You deserve a boring week or two with nothing to do but manage snowfall on the highway system.

Sir,

Thank you for your leg work on this. I will set up a meeting between Matt, Dave, my legal team and myself. Would this be something that you would like to be a part of and weigh in on? I will try to set it up for next week.

Thanks again and Merry Christmas,

Kerry

Thanks for the follow up. I am aware of ELSAG and we had a few of their cameras on our Truck Team when we first started with ALPR. I believe the cameras wrote to the central database, but am not sure. I'm going to reach out to a few people and see if anyone knows the workflow.

Deputy and LTC Favuzza,

Regarding the below email, I believe Lt. Dan Griffin was appointed as the ALPR Administrator as required under TRF-11. I was thinking it might be more appropriate for him to testify as the departments ALPR Administrator as opposed to Jason Stelmat , who while knowledgeable, would not have the same information that Lt. Griffin would have regarding the ALPR system.

Thanks

Dermot

Sean and Jason,

I suspect that the most appropriate person to testify would be the Commissioned Officer that has been designated by the Division Commander of Field Services as the ALPR Administrator (or his/her designee) for the Department because the TRF-11 policy specifically states the following:
The Division Commander of Field Services (DFS) shall:

Deputy and LTC Favuzza,

Regarding the below email, I believe Lt. Dan Griffin was appointed as the ALPR Administrator as required under TRF-11. I was thinking it might be more appropriate for him to testify as the departments ALPR Administrator as opposed to Jason Stelmat , who while knowledgeable, would not have the same information that Lt. Griffin would have regarding the ALPR system.

Thanks

Dermot

Deputy and LTC Favuzza,

Regarding the below email, I believe Lt. Dan Griffin was appointed as the ALPR Administrator as required under TRF-11. I was thinking it might be more appropriate for him to testify as the departments ALPR Administrator as opposed to Jason Stelmat , who while knowledgeable, would not have the same information that Lt. Griffin would have regarding the ALPR system.

Thanks

Dermot

Lieutenant Colonel
Dermot J. Quinn
#1765
Division
Commander
Division of
Homeland Security
& Preparedness
Massachusetts State
Police
<image002.png>

From: Range, Scott (POL)
Sent: Monday, July 9, 2018 10:57 AM
To: Stelmat, Jason (POL) <Jason.Stelmat@pol.state.ma.us>; Quinn, Dermot (POL) <dermot.quinn@pol.state.ma.us>; Egnitz, Brian (POL) <brian.egnitz@pol.state.ma.us>
Cc: Farrell, Sean (POL) <sean.farrell@pol.state.ma.us>
Subject: RE: update

Sean and Jason,

I suspect that the most appropriate person to testify would be the Commissioned Officer that has been designated by the

Division Commander of Field Services as the ALPR Administrator (or his/her designee) for the Department because the TRF-11 policy specifically states the following:
The Division Commander of Field Services (DFS) shall:
• Designate a Commissioned Officer as the ALPR Administrator; and
• Ensure the ALPR Administrator has oversight for the ALPR System deployment, operations, and maintenance

Lt. Col. Quinn and Brian, any thoughts on this issue?

Respectfully,
Scott

Subject: FW: update

Major,
See below. I'm being asked to testify by a Cape & Islands ADA. I can definitely answer these questions but

I'm not sure I'm the best person to testify regarding ALPR. Let me know how you wish to proceed.

Thanks,
Jason

To: Stelmat, Jason (POL)
Subject: RE: update

I would send a summons and so that's all you may need to come.
What the system is
Where it is
How long has it been there
Who maintains it
What can be captured
Are records kept
Who has access
What data can be examined
That kind of thing---are you the appropriate person?

LEARN MORE

Shield radar speed displays

The Shield family of radar speed displays is ideal when you want portability as well as options.

LEARN MORE

Variable message signs

InstAlert variable message signs are the fastest, easiest way to tell the public exactly what it needs to know.

LEARN MORE

Trailers with ALPR

ATS 5 Trailers pull double duty with ALPR inside. Ideal for a range of applications.

LEARN MORE

Handheld Lidar devices

DragonEye handheld Lidar is rugged, lightweight and easy to use.

LEARN MORE

Off-road counter classifiers

The portable, web-enabled StatTrak mounts in minutes on pole or median. Measures vehicle speeds, volume and classification.

LEARN MORE

TRAFFICLOUD

Access all of your devices and data from anywhere with an Internet connection with the TraffiCloud™ secure web-based traffic management system.

Watch The Video

- Change messages on signs in real time from anywhere for emergency notifications, event parking, rerouting traffic and more
- Receive email or SMS alerts for excessive speeding, wrong way drivers and device tampering
- Check battery life and sign locations without driving to each device
- Download and distribute traffic data reports in seconds
- Identify enforcement priorities to maximize resources and budget
- Make more insightful decisions for future planning

To: Mullaney, Stephen (POL)
Subject: Use ELSAG Cloud Storage Solution for your ALPR data
Date: Tuesday, August 14, 2018 9:31:29 AM

Having trouble viewing this email? View it in your browser.

Your network of ELSAG Automatic License Plate Readers (ALPR), both fixed and mobile, collect massive amounts of data that you need at your disposal. In order to access the information whenever you need it, someone has to take care of your ALPR data server to maintain its health and integrity.

Dedicated internal IT administration can be costly. What's more costly is not maintaining your ALPR server and then calling in IT support on an as-needed basis. For many agencies, especially with tight budgets, Leonardo's new ELSAG Cloud Storage Solution (ECSS) is an effective solution.

ECSS allows you to upload your ALPR data to a CJIS- compliant cloud-

based server. Your agency still owns the data, but Leonardo becomes your day-to-day IT and administrative support. You'll have 24x7 access to your ALPR data with the flexibility to accommodate sharing and storage protocols.

With an annual subscription to ECSS, keep your ALPR data safe and accessible, without the unpredictable costs and hassles associated with maintaining your own ALPR server.

ABOUT SOLUTIONS CONTACT

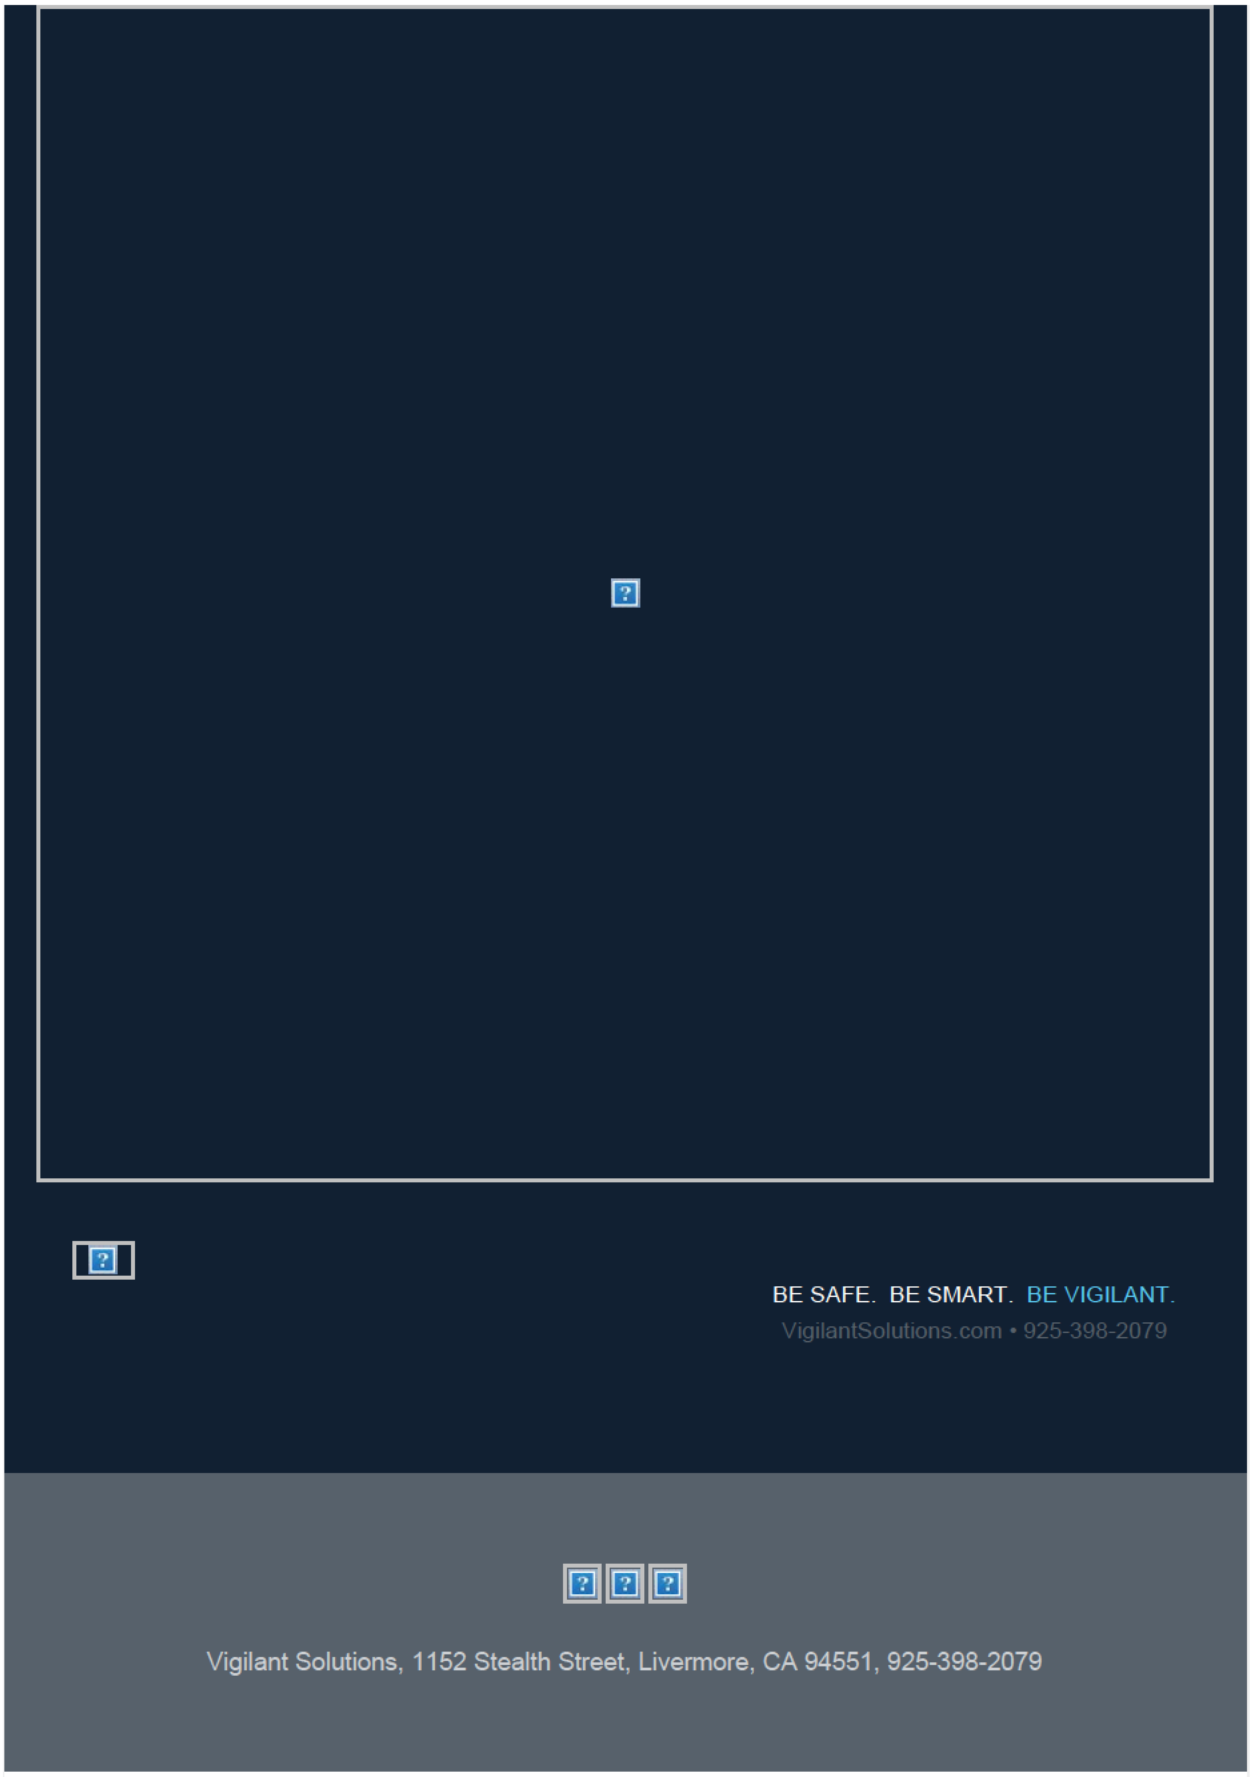
VIGILANT SOLUTIONS ACQUISITION ANNOUNCEMENT

Dear Shawn,

We are very excited to announce today that Vigilant Solutions has acquired the assets of ShotCaller Global Inc., developer of GunOps™ and DNAOps™ investigative solutions for law enforcement. This acquisition enables us to provide the law enforcement community with firearm forensic mapping and DNA crime mapping technology that complement our existing suite of automated license plate reader (ALPR) data, facial recognition technology and ballistics analysis solutions.

GunOps and DNAOps are web-based interactive investigation tools. GunOps allows law enforcement investigators and analysts to enter, visualize and access information about firearm-related crimes, forensic test results and armed criminals. DNAOps allows law enforcement to enter, visualize and access information about crimes where DNA has been recovered from crime scenes, using web-based mapping applications.

This means Vigilant Solutions is now well-positioned to help the law enforcement community to combat the growing epidemic of gun crime. Specifically, our enhanced suite of offerings enables us to provide law enforcement the ability to help identify the G.E.T. – geography, event and time – of gun crime.



Anyone who works with or for Vigilant Solutions knows that we are passionate about the fact that our solutions help to keep communities and law enforcement safe. This acquisition is exciting because it not only allows us to continue to achieve that goal, but also enables us to expand our capabilities and help law enforcement to eradicate violent gun crime.

If you are interested in learning more about GunOps, please contact us at BeVigilant@VigilantSolutions.com.

On-demand Webinar:

Achieving "Availability Certainty" Using Connected Parking Systems, Real-time Data and the Right Technology for You

Webinar Q2.jpg

Are you still relying on estimated parking availability data to manage your parking systems?

If you don't have immediate access to real-time availability across your operations, your customers suffer with substandard guidance assistance, congested parking areas and reduced safety levels. If you're a commercial operator, forecasting is almost impossible—which means you're losing revenue.

Watch this on-demand webinar and learn how to:

- Tie in other systems, such as permitting and ALPR, for greater benefits
- Maximize pricing structures by analyzing peak occupancy times
- Use conditional messaging on signage, apps and even your website to provide up-to-the-minute guidance and wayfinding to get parkers to the best spot, fast

- Leverage data and analytics for reporting, tracking and accurate forecasting
- Benefit from cloud technology and the IoT to gain efficiencies, cost savings and deliver a better customer experience

You'll hear about new ideas and strategies you can implement at your organization.

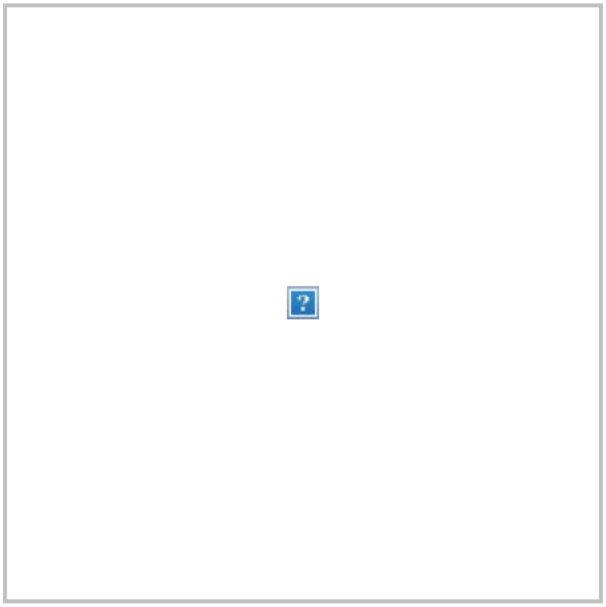
POLICING MATTERS PODCAST



Are prison reform efforts working?

By Doug Wyllie and Jim Dudley, P1 Contributors
In this podcast segment, Jim and Doug discuss the topics of re-entry and recidivism.

PHOTO OF THE WEEK

End of shift

By P1 Members
Officer David Kornowski snapped this photo of a sunrise greeting him at the end of his shift.

Find Suspect Vehicles Faster With ELSAG MTC

New ELSAG MTC plate reader app captures make, type and color. Identify suspect vehicles faster when querying your ALPR data.

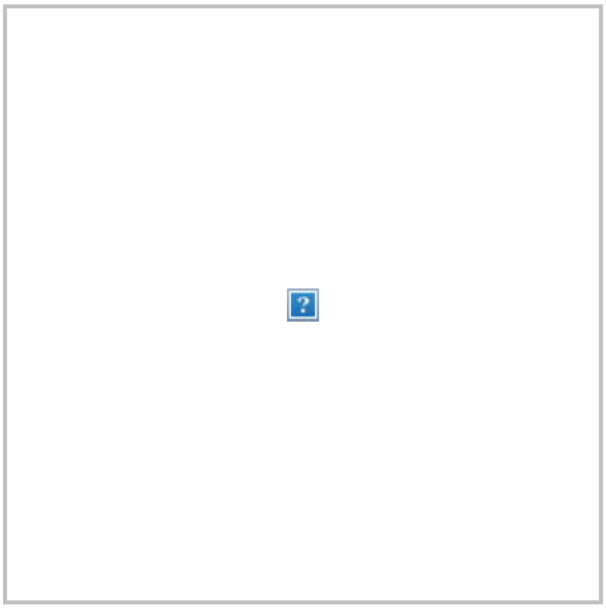
Get details

New Tufloc X-Lock Improves Vehicle Gun Rack Operation

The X-Lock allows quick, easy, one-handed access to guns. New locking arms automatically adjust to a tight, more secure fit.

Click for more X-Lock info

697 Police, other responders support boy's lemonade stand after man complains



606 Retired LEO uses 2 AR-15s to take down shooter on campground

480 Chicago officer who died after being found unconscious identified

5 ways a new riot suit increases protection and comfort

431 Parkland survivors file lawsuit against LEOs, other officials

309 Officer buys food for hungry kids after mother's medical emergency

An adjustable design means you can outfit any officer in your department for a perfect fit without having to purchase specific sizes.

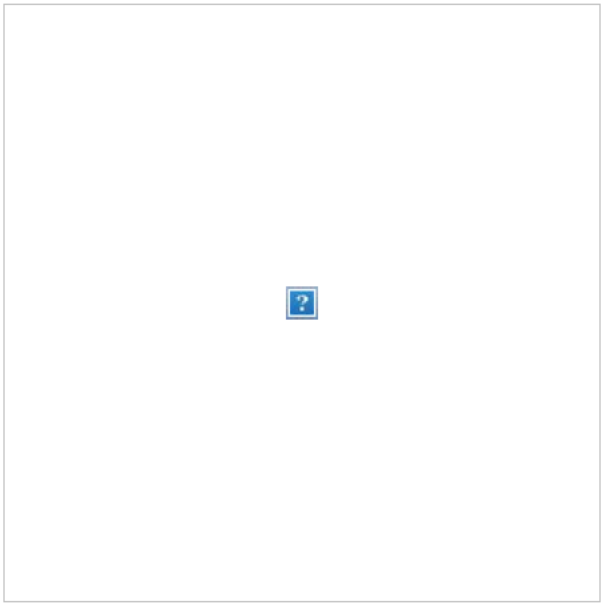
PATROL ISSUES

Law enforcement in the era of the new vigilantes



By James Dudley, P1 Columnist

As more communities explore versions of "self-policing" or vigilantism, the police may not be summoned until situations become untenable.

P1 EXCLUSIVE

Why the cloud should be the foundation of your PD's crisis planning

By Tim Dees, P1 Columnist

Here's what law enforcement leaders need to know about the benefits of the cloud for crisis planning.

As discussed last week at the North Atlantic Region S&P Conference, I have attached the template ALPR Data Sharing MOU as a reference in the hope of having all of the states in our region connected and sharing data with NYPD. Please review the attached and take note that where the MOU references "Partner Agency," that would be replaced with your respective State Police agency.

For specific questions and revisions associated with the execution of the MOU as it pertains to your particular State and the NYPD, please utilize the following two contacts from the NYPD:

Ethel H. Corcoran
Director, Counsel
NYPD Information Technology Bureau
ETHEL.CORCORAN@nypd.org

Richard Schroeder
Assistant Commissioner, Strategic Technology
Strategic Technology Division
RICHARD.SCHROEDER@nypd.org

Boss Specifications 02162018.pdf

Brian, The update for BOSS to correct the memory leak issues and other bugs is released and is BOSS 3.5 I've attached the minimum server requirements for 3.5 for your review. The full web based re-write of BOSS is expected to be released in October.

Some more info on the enhancement for BOSS 3.5. By May we should be able to provide you a free trial period of adding the ability to query Make, Model, Color to BOSS 3.5 I'll let you know what pricing looks like as soon as I receive the information. Here's a link to what it will look like in BOSS. https://www.dropbox.com/s/2976j51isxhy32t/MantisDemo.mp4?dl=0

Let me know what you think.

PIPS ALPR Data Storage Calc.xlsx
BOSS3 3.5.0.0 Upgrade Guide.pdf
Boss Specifications 02162018.pdf
BOSS 3.5.0.1 Release Notes External.pdf

Brian,

Following up on our phone call, attached is the information required to upgrade your ALPR system to the latest BOSS version 3.5. This version will resolve several issues including query speed, mapping functionality and improve auditing. Please review the version notes, updated BOSS server specifications and Upgrade Guide. I've attached the Upgrade Guide that our technicians will follow for your reference and a data storage calculator to assist you in determining the SQL hard drive space required for your agencies ALPR read data.

Once you have confirmed that the server is ready to accept the upgrade we can schedule the service. Please let Mike Roth or I know if you have any questions

Boss Upgrade:

1. Boss 3.5.x looks and feels the same as previous versions with exceptions to the additions and enhancements indicated in the release notes.

2. Boss 3.5.x requires a minimum database version of MSSQL 2012 or newer.
   a. Yes it's safe to upgrade SQL without effecting Boss3 Db.

3. Boss application update is an uninstall and reinstall processes.
   a. Existing Boss licensing is not effected.

4. Existing data can remain in-tacked, no need to rebuild Db.

5. Boss clients will need to be re-installed via the Boss URL, auto upgrade to existing clients is not possible.
   a. Email distribution for new Boss client install should pre-planned to coincide with upgrade date.

6. Upgrades from existing Boss Db typically take approx. 1hr, providing there are no existing Db issue or relocations occurring.

Thank you,

Lt.

As requested, for your review. Please let me know if you see anything glaring missing, as I'm sure there are things we do in practice that escape me. Attached is the flyer that was generated previously, outlining some of the same and elaborating on some points.

Situational Awareness Capabilities:

- HSIN Situational Awareness Room
- MSP/BPD/MBTA/MassDOT Federated Camera Systems
  - Security Desk
  - Avigilon Control Center
  - FLIR
- MSP Airwing Downlink + AeryonLive Drone
- Asset Tracking
  - SilverEye Aviation (MSP Airwing)
  - CompassTrac (AVL)
- Local/Regional/National Media Monitoring
- Open Source Monitoring/OSINT
  - Facebook
    - Public Gatherings
      - Daily Situational Awareness Bulletin
      - Real-time Event Monitoring
        - Protests/Rallies
        - Boston Marathon
        - 4th of July
        - Sail Boston
        - Events of local/state/regional significance with significant anticipated impact on public safety or security
    - Facebook Live
  - Twitter
    - Tweetdeck
  - Periscope
- Video Teleconference Technology
  - Broadcast real-time information/intelligence to stakeholders (ex: Governor's Situational Awareness Room, MSP Crime Lab, etc)
- Fox Messenger
- ShotSpotter Respond
- Barco Video Wall
- GIS Dashboard

Law Enforcement Investigative Tools:

- CJISWeb 3.0
- Commercial Databases:

    - CLEAR
    - TLO
- Coplink
- CrimeNtel
- ACISS
- RAMS
- Issuance 360 Facial Recognition
- Boss 3M ALPR
- ISO
- HSIN Exchange

Bulletin and Intelligence Product Dissemination (Internally/Externally Generated):

- BOLO/Wanted
- Officer Safety
- Situational Awareness
- Missing Persons/Silver Alert
- Identification Wanted
- Request for Information
- Intelligence Bulletins/Analytic Products

Commonwealth Watch Center Operations

- Hours of Operation:
    - Monday – Friday
    - 0700-2300 Hours
- Staffing:
    - MA State Police Sworn Personnel
    - Intelligence Analysts
    - MA State Police Dispatcher
- Objectives:
    - Provide investigative support to local, state, and federal law enforcement agencies, partners, and stakeholders
    - Maintain and contribute to real-time situational awareness within the agency and Commonwealth through the monitoring of open source information, media broadcast, and criminal intelligence and timely dissemination of relevant information
    - Serve as a point of contact and liaison for local/state/federal entities seeking to receive information and/or investigative support from law enforcement agencies in the Commonwealth, as well as across the country through the National Network of Fusion Centers

---

Phil,

Can you review the attachment for your side of DHS and make any changes or additions in track changes mode and if possible try to get it back to me by next Tuesday or Wednesday. I'll work on the CIIS side so we can submit one item back to Matt if that works for you.

Thanks,
Scott

Det. Lt. Murphy,

Can you please provide Det. Capt. Dowd and I a copy of the info you have to date for DHS for this project.

I believe Lt. Col. Mason provided you a document prior to the previous September 29th deadline for the time period of January to September 2017 but I did not receive a copy of it.

Lt. Col. Quinn requested that we follow up re this so we can ensure you have all relevant DHS info.

Thank you,
Scott

Subject: RE: ALPR MOU Template

Hi Jim,

I would think the best and most effective way to prevent or solve a crime would be to share all of the ALPR data. I think we are covered under Paragraph 5 Section C as stated below:

5. ALPR Data Sharing and Dissemination

a) Each Contributing Agency authorizes the release of its information as outlined in this Policy to any other criminal justice agency that may participate in the Central Repository in the future.

b) A Contributing Party that does not want certain information from its ALPR system to be shared is responsible for filtering out such information before entering it into the Central Repository.

c) The information contributed to the Central Repository is limited to ALPR data.

d) Central Repository ALPR data can be accessed, retrieved, or shared for official and legitimate law enforcement operations or public safety purposes only.

To your point, I agree we should advise contributing agencies that the data may be shared with other law enforcement agencies outside of Massachusetts. I don't think that will come as a surprise to them as we constantly run checks through the State Police Commonwealth Watch Center for non-Massachusetts police departments against our database, and for Massachusetts police departments against out of state LPR systems such as New York and New Jersey. This system would just make that ability much quicker and negate the need to place a call to any of the participating states.

Since the ALPR server for Massachusetts is operated by OTIS, it may make more sense for the MOU to be between EOPSS and NYC as opposed to MSP and NYC. Either way is fine from my perspective. I think Mike Halpin is taking a look from a legal perspective.

Thanks

Dermot

Subject: RE: ALPR MOU Template

Hi, Lt. Col. Quinn!

I have a follow up question or two re this effort. Specifically, would we be sharing MSP ALPR data only, or is the thought
that all of the data in the central repository would be shared? If the latter is true, would we need to seek permission from the
other LE agencies which have contributed data?

I know that Section 5 of the Commonwealth's ALPR Policy allows the sharing of data with "any other criminal justice agency
that may participate in the Central Repository…", but in this case, we're talking about shipping the data out-of-state.

I just thought I would raise that as a potential issue.

Jim

Matt and Jim,

Please see attached MOU. Massachusetts is interested in participating in NYPD's Regional Data Sharing Program (RDSP) as outlined in the attached MOU concerning Automated License Plate Reader data. The attached MOU is the agreement between NYPD and NJSP. NYPD agrees to expunge the Massachusetts data after one year which as you know is the current requirement in the Commonwealth. Would EOPSS OTIS be able to support this project as the central repository of ALPR data in the state?

Thanks

Subject: ALPR MOU Template

As discussed last week at the North Atlantic Region S&P Conference, I have attached the template ALPR Data Sharing MOU as a reference in the hope of having all of the states in our region connected and sharing data with NYPD. Please review the attached and take note that where the MOU references "Partner Agency," that would be replaced with your respective State Police agency.

For specific questions and revisions associated with the execution of the MOU as it pertains to your particular State and the NYPD, please utilize the following two contacts from the NYPD:

Hi Mike,

Just an FYI. At this morning's Command Staff meeting the Colonel was asking where we stand on the LPR sharing MOU with NYPD and NJSP. I know you have been reviewing the MOU from a legal perspective. Jim Slater has been reviewing from a technical perspective. If approved we will coordinate with NYPD Inspector Anthony Tasso, Commanding Officer, Strategic Technology Division and put him or his team in touch with EOPSS.

Thanks

Lieutenant Colonel Dermot J. Quinn #1765

Subject: RE: ALPR MOU Template

Hi Jim,

I would think the best and most effective way to prevent or solve a crime would be to share all of the ALPR data. I think we are covered under Paragraph 5 Section C as stated below:

5. ALPR Data Sharing and Dissemination

a) Each Contributing Agency authorizes the release of its information as outlined in this Policy to any other criminal justice agency that may participate in the Central Repository in the future.

b) A Contributing Party that does not want certain information from its ALPR system to be shared is responsible for filtering out such information before entering it into the Central Repository.

c) The information contributed to the Central Repository is limited to ALPR data.

d) Central Repository ALPR data can be accessed, retrieved, or shared for official and legitimate law enforcement operations or public safety purposes only.

To your point, I agree we should advise contributing agencies that the data may be shared with other law enforcement agencies outside of Massachusetts. I don't think that will come as a surprise to them as we constantly run checks through the State Police Commonwealth Watch Center for non-Massachusetts police departments against our database, and for Massachusetts police departments against out of state LPR systems such as New York and New Jersey. This system would just make that ability much quicker and negate the need to place a call to any of the participating states.

Since the ALPR server for Massachusetts is operated by OTIS, it may make more sense for the MOU to be between EOPSS and NYC as opposed to MSP and NYC. Either way is fine from my perspective. I think Mike Halpin is taking a look from a legal perspective.

Thanks

Dermot

Subject: RE: ALPR MOU Template

Hi, Lt. Col. Quinn!

I have a follow up question or two re this effort. Specifically, would we be sharing MSP ALPR data only, or is the thought
that all of the data in the central repository would be shared? If the latter is true, would we need to seek permission from the
other LE agencies which have contributed data?

I know that Section 5 of the Commonwealth's ALPR Policy allows the sharing of data with "any other criminal justice agency
that may participate in the Central Repository…", but in this case, we're talking about shipping the data out-of-state.

I just thought I would raise that as a potential issue.

Jim

Subject: FW: ALPR MOU Template

Matt and Jim,

Please see attached MOU. Massachusetts is interested in participating in NYPD's Regional Data Sharing Program (RDSP) as outlined in the attached MOU concerning Automated License Plate Reader data. The attached MOU is the agreement between NYPD and NJSP. NYPD agrees to expunge the Massachusetts data after one year which as you know is the current requirement in the Commonwealth. Would EOPSS OTIS be able to support this project as the central repository of ALPR data in the state?

Thanks

Dermot

As discussed last week at the North Atlantic Region S&P Conference, I have attached the template ALPR Data

Sharing MOU as a reference in the hope of having all of the states in our region connected and sharing data with NYPD. Please review the attached and take note that where the MOU references "Partner Agency," that would be replaced with your respective State Police agency.

For specific questions and revisions associated with the execution of the MOU as it pertains to your particular State and the NYPD, please utilize the following two contacts from the NYPD:

Ethel H. Corcoran
Director, Counsel
NYPD Information Technology Bureau
ETHEL.CORCORAN@nypd.org

Richard Schroeder
Assistant Commissioner, Strategic Technology
Strategic Technology Division

All,

Attached please find a bill that will severely regulate and curtail access to, and storage of, ALPR data. As you are all aware, Automated License Plate Reader (LPR) data is one of the most beneficial technologies made available to law enforcement in the past ten years. We utilize this technology every day. That being said, we don't have a good way to capture all of the successful uses of the technology. I'm working with Spencer Lord and Brian Merrick at EOPSS to pull together some examples of the use of LPR data in everyday police work. These stories will be used to counter this bill which we know as practitioners will only further erode our ability to detect and solve crime.

I'm looking for all types of examples:

Homicide
Sexual Assault
Kidnapping
Terrorism
Threats
Amber Alert
Silver Alert
Robbery
Burglary
Security

Please include anything you can think of that will help our cause. I have attached a copy of our current policy which is based on the EOPSS model LPR policy. We currently retain the data for one year prior to expungement.

Please submit your responses in a brief narrative that outlines the case and the successful use of LPR technology.

Please try to have the responses to me by Thursday and include Rose Warren on the email so we can gather the different responses into one folder for submission to

EOPSS.

Thank you in advance for your efforts on this important matter.

Unit Commanders,

attached is pending legislation that will hamper our ability to access ALPR data. To counter the legislation, LTC Quinn is looking for cases where we used it successfully. Please forward me details of a case where you successfully used ALPR data to solve a case, arrest an offender or to locate a victim. I know we have had some success stories recently. Please report any cases to me ASAP so we can rebut the legislation.

For example; I recall SPDU Worcester tracked a homicide suspect out of State, they notified the State Police of Jurisdiction and they who subsequently located the suspect and placed same under arrest.

Please send me a synopsis of a case or cases where ALPR data contributed to the apprehension of a suspect, recovery of a victim, or provided key evidence during an investigation. We need this ASAP or no later than tomorrow at 0900 hrs.

Respectfully,

Subject: Assistance Needed

Unit Commanders,

attached is pending legislation that will hamper our ability to access ALPR data. To counter the legislation, LTC Quinn is looking for cases where we used it successfully. Please forward me details of a case where you successfully used ALPR data to solve a case, arrest an offender or to locate a victim. I know we have had some success stories recently. Please report any cases to me ASAP so we can rebut the legislation.

For example; I recall SPDU Worcester tracked a homicide suspect out of State, they notified the State Police of Jurisdiction and they who subsequently located the suspect and placed same under arrest.

Please send me a synopsis of a case or cases where ALPR data contributed to the apprehension of a suspect, recovery of a victim, or provided key evidence during an investigation. We need this ASAP or no later than tomorrow at 0900 hrs.

Respectfully,

Michael J. Lyver #2396
Detective Captain
Division of Investigative Services
Massachusetts State Police

Subject: ALPR

All,

Attached please find a bill that will severely regulate and curtail access to, and storage of, ALPR data. As you are all aware, Automated License Plate Reader (LPR) data is one of the most beneficial technologies made available to law enforcement in the past ten years. We utilize this technology every day. That being said, we don't have a good way to capture all of the successful uses of the technology. I'm working with Spencer Lord and Brian Merrick at EOPSS to pull together some examples of the use of LPR data in everyday police work. These stories will be used to counter this bill which we know as practitioners will only further erode our ability to detect and solve crime.

I'm looking for all types of examples:

Homicide
Sexual Assault
Kidnapping
Terrorism
Threats
Amber Alert
Silver Alert
Robbery
Burglary
Security

Please include anything you can think of that will help our cause. I have attached a copy of our current policy which is based on the EOPSS model LPR policy. We currently retain the data for one year prior to expungement.

Please submit your responses in a brief narrative that outlines the case and the successful use of LPR technology.

Please try to have the responses to me by Thursday and include Rose Warren on the email so we can gather the different responses into one folder for submission to EOPSS.

Thank you in advance for your efforts on this important matter.

Sent: Friday, September 01, 2017 9:50 AM
To: Egnitz, Brian (POL)
Subject: Notes and Observations

Hi Brian,

Here are some observations from Wednesday's session. I also attached a Word document with the notes that I took. I'll call in a bit to discuss.

- Need to establish KPIs to measure effectiveness against a broad mission
- Do a more detailed app inventory and collect the following information:
    - Here's some information to collect:
        - Name
        - Importance - critical, high, medium and low
            - Every app in the inventory should clearly map to one or more mission statements
        - Licensing - how is the app licensed? Per user, per core, etc.
        - Maintenance fees - how much does it cost to operate annually?
        - Backups - who does them? Have they ever been tested?
        - DR plan - is there one and has it been tested?
        - Support - is it Brian or somebody else
        - Cloud version available?
    - This will help feed the decision making process and identify the truly mission critical apps
- Move as many apps as possible to their SaaS equivalents as soon as possible
    - Other than Brian, there is no IT organization statewide that is capable of supporting the current infrastructure
        - It doesn't appear that the current model can support the expanded mission
    - ACISS, CopLink, Esri and SharePoint all appear to have SaaS versions
        - Based on what I heard, there may be more appetite for a monthly operational expense than the capital expense required for on premises software
    - Esri might be the exception to this but you should do a TCO study of on premises vs. ArcGis Online
- Understand the limitations of SaaS
    - Need reliable and fast Internet connection
    - Limited (or no) ability to customize
    - Carefully review SLA particularly with respect uptime commitments
    - Still need some approach to do mash ups

- Check out Visallo as a replacement for i2 if the cost of acquiring licenses for the new analysts is prohibitive
    - https://www.visallo.com/
- Review the privacy and retention policy of each organization that is providing video to the SPEAR
    - I heard 30 days as the retention policy for MassDOT and MassPort but this should be checked
- Need to develop some sort of storage plan for MSP generated video

Take care,

Dave

Hi Kristin,

Thank you for the quick reply. I look forward to meeting and hopefully collaborating with Major Range, Ms Thibault, yourself and the rest of the CFC team.

I understand the time constraints with preparation for the Marathon. We are still at the proposal stage so I am hopeful that we can minimize the effort on your part to. We do not have to have all the answers by the 19th. Perhaps a short telecon to discuss:

- Verify interest and support
- Which data sets the State controls (vs a Federal agency) and might be possible to provide access to
- What the process to get permissions & access to databases is / might look like
- Perhaps a letter indicating intent to work with us to understand the access & permissions issues / process and develop a representational data set might be possible / sufficient.

I look forward to hearing back from you and your team.

Regards

Rich

Good Afternoon Sir,

Thank you for reaching out. Since our last correspondence, Major Mason has been promoted to LT Colonel and no longer is in the Fusion Center due to his promotion. I have shared your

email and request below to our new Major, Scott Range, as well as my direct supervisor, the Intelligence Services Manager, Amy Thibault. Major Range works closely with Assistant Undersecretary Olsen and will review your email and we will get back to you as soon as possible. Right now our main focus is preparation for the Boston Marathon, so your deadline of April 19th might be tough. As a side note, Justin Newton is currently on a leave of absence, and I'm not sure when he will be returning, but hopefully sometime in April.

I hope all is well and we will be in touch soon.

Thank You,
Kristin

Subject: RE: Raytheon CFC Visit Follow Up - Possible ABI Collaboration

Hello Kristin,

Following up on meeting this past fall. Two items of note:

1. Raytheon was recently invited by our DHS Customer, DNDO, to propose development of our Activity Based Intelligence capability. I believe we discussed this concept in our September meeting (see white paper that I will forward separately via our encrypted email service).

Additionally DNDO requested that we identify databases we could access without their assistance.

Databases were part of our discussions and I wanted to follow up with you and Major Manson about access to the State controlled databases or collaboration some kind of representative synthetic data set. For clarity and in reference to Major Manson's previous direction (below) we are not requesting access to CFC's SOP's.

2. We are currently working with Assistant U/S Olson and DNDO to coordinate the deployment of the Raytheon/PSI RAIN prototype system on the Mass Pike as part of Phase V of DNDO's Advanced Technology Demonstration program. The equipment is ready and I am hopeful that we get an agreement in place to deploy the system this spring.

We believe that these two capabilities are synergistic and when fully developed will provide Law Enforcement and Intelligence Analysts' powerful tools to assist you in your extremely challenge mission. We would like to discuss if and how we might collaborate.

Our proposal is due 19 April so I hope we can schedule an initial call next week but am available at your and the State's convenience.

Best Regards

Rich

Subject: Raytheon CFC Visit Follow Up

Kristin, Justin and Hans,

Thank you very much for hosting our visit to the CFC yesterday. My team and I greatly appreciate the time you spent with us and we found the discussion very informative. I look forward to continuing the discussion.

Follow up actions that I had included, both pending approvals to release to us:

- Please forward the chart deck from yesterday or the list of systems and databases that you use.

- Please forward documented workflows / standard operating procedures. We will take as much as you are willing to share but are particularly interested in:
    - "Basic everyday" SAR entry and adjudication workflow as well as those associated with scenarios similar to a distributed sensor system like as RAIN such as ALPR or video from traffic / other cameras.
    - Like you we are takings an approach to integrate with standard Law Enforcement workflows in order to develop a sustainable capability.

- Per your suggestion we will reach out to Lt. Devlin to coordinate a visit to MEMA. He attended our RAIN demo last fall and might be worthwhile to fill him in on our visit yesterday.

Thanks again for you time and hard work to protect the Commonwealth.

Hello Kristin,

Following up on meeting this past fall. Two items of note:

1. Raytheon was recently invited by our DHS Customer, DNDO, to propose development of our Activity Based Intelligence capability. I believe we discussed this concept in our September meeting (see white paper that I will forward separately via our encrypted email service). Additionally DNDO requested that we identify databases we could access without their assistance.

   Databases were part of our discussions and I wanted to follow up with you and Major Manson about access to the State controlled databases or collaboration some kind of representative synthetic data set. For clarity and in reference to Major Manson's previous direction (below) we are not requesting access to CFC's SOP's.

2. We are currently working with Assistant U/S Olson and DNDO to coordinate the deployment of the Raytheon/PSI RAIN prototype system on the Mass Pike as part of Phase V of DNDO's Advanced Technology Demonstration program. The equipment is ready and I am hopeful that we get an agreement in place to deploy the system this spring.

We believe that these two capabilities are synergistic and when fully developed will provide Law

Enforcement and Intelligence Analysts' powerful tools to assist you in your extremely challenge mission. We would like to discuss if and how we might collaborate.

Our proposal is due 19 April so I hope we can schedule an initial call next week but am available at your and the State's convenience.

Best Regards

Rich

Sirs,

Thank you for your visit to Maynard last week. As promised, I did consult with my upper management about what type of information about the CFC that we would be able to release to your group. Per Major Mason, I am allowed to share with you the list of systems we utilize, but unfortunately, not our SOPs. Feel free to reach out if you have any questions.

Kristin, Justin and Hans,

Thank you very much for hosting our visit to the CFC yesterday. My team and I greatly appreciate the time you spent with us and we found the discussion very informative. I look forward to continuing the discussion.

Follow up actions that I had included, both pending approvals to release to us:

- Please forward the chart deck from yesterday or the list of systems and databases that you use.

- Please forward documented workflows / standard operating procedures. We will take as much as you are willing to share but are particularly interested in:
    - "Basic everyday" SAR entry and adjudication workflow as well as those associated with scenarios similar to a distributed sensor system like as RAIN such as ALPR or video from traffic / other cameras.
    - Like you we are takings an approach to integrate with standard Law Enforcement workflows in order to develop a sustainable capability.

- Per your suggestion we will reach out to Lt. Devlin to coordinate a visit to MEMA. He attended our RAIN demo last fall and might be worthwhile to fill him in on our visit yesterday.

Thanks again for you time and hard work to protect the Commonwealth.

Hi Kristin,

Thank you for the quick reply. I look forward to meeting and hopefully collaborating with Major Range, Ms Thibault, yourself and the rest of the CFC team.

I understand the time constraints with preparation for the Marathon. We are still at the proposal stage so I am hopeful that we can minimize the effort on your part to. We do not have to have all the answers by the 19th. Perhaps a short telecon to discuss:

- Verify interest and support
- Which data sets the State controls (vs a Federal agency) and might be possible to provide access to
- What the process to get permissions & access to databases is / might look like
- Perhaps a letter indicating intent to work with us to understand the access & permissions issues / process and develop a representational data set might be possible / sufficient.

I look forward to hearing back from you and your team.

Regards

Rich

Good Afternoon Sir,

Thank you for reaching out. Since our last correspondence, Major Mason has been promoted to LT Colonel and no longer is in the Fusion Center due to his promotion. I have shared your

email and request below to our new Major, Scott Range, as well as my direct supervisor, the Intelligence Services Manager, Amy Thibault. Major Range works closely with Assistant Undersecretary Olsen and will review your email and we will get back to you as soon as possible. Right now our main focus is preparation for the Boston Marathon, so your deadline of April 19th might be tough. As a side note, Justin Newton is currently on a leave of absence, and I'm not sure when he will be returning, but hopefully sometime in April.

I hope all is well and we will be in touch soon.

Thank You,
Kristin

Cc: Taylor, Rita (POL)
Subject: SRIS Trailer support and maintenance

Lt. Fitzgerald,

Attached is the quote from IIS for support and maintenance of the SRIS trailer. The proposal includes three years of service but our current grant awards end on 9/30/19 so we can't commit to the full three years. I suggest that we ask IIS for an agreement that runs from 7/1/18 to 9/30/19 and fund it with FFY17 MCSAP and FFY18 MCSAP.

This cost is not included in these MCSAP Basic budget(s) so I think a request should be sent to Rich Bates to obtain his approval to fund this with these grants. When we prepare the FFY19 and FFY20 grant applications we should make sure to include these costs.

Here is a breakdown of how the costs would be allocated:

SRIS trailer w/ALPR hardware & software

Support & Maintenance

Period

Amount

Funding Source

YEAR 1: 7/1/18 - 6/30/19

$25,000.00

7/1/18 - 9/30/18

$6,250.00

FFY17 MCSAP

10/1/18 - 6/30/19

$18,750.00

FFY18 MCSAP

YEAR 2: 7/1/19 - 6/30/20

$22,500.00

7/1/19 - 9/30/19

$5,625.00

FFY18 MCSAP

10/1/19 - 6/30/20

$16,875.00

FFY19 MCSAP - request in grant app

YEAR 3: 7/1/20 - 6/30/21

$22,500.00

7/1/20 - 9/30/20

$5,625.00

FFY19 MCSAP - request in grant app

10/1/20 - 6/30/21

$16,875.00

FFY20 MCSAP - request in grant app

$6,250.00

< FFY17 MCSAP

$24,375.00

< FFY18 MCSAP

$22,500.00

< FFY19 MCSAP

$16,875.00

< FFY20 MCSAP

Let us know how you want to proceed.

Thanks.

Here is the proposed ALPR agreement the Colonel would like to pursue. I will also discuss with Dave Solet and see if we can find a way for the State and users (if not just MSP) to enter into some arrangement that will allow all to benefit from the additional data.

Matt and Jim,

Please see attached MOU. Massachusetts is interested in participating in NYPD's Regional Data Sharing Program (RDSP) as outlined in the attached MOU concerning Automated License Plate Reader data. The attached MOU is the agreement between NYPD and NJSP. NYPD agrees to expunge the Massachusetts data after one year which as you know is the current requirement in the Commonwealth. Would EOPSS OTIS be able to support this project as the central repository of ALPR data in the state?

Thanks

Dermot

Mike,

Can you see if it is ok for us to enter Into this agreement.

I meant to send this over a few months ago so I'm a little behind on it.

Thanks Dermot

Unit Commanders,
attached is pending legislation that will hamper our ability to access ALPR data. To counter the legislation, LTC Quinn is looking for cases where we used it successfully. Please forward me details of a case where you successfully used ALPR data to solve a case, arrest an offender or to locate a victim. I know we have had some success stories recently. Please report any cases to me ASAP so we can rebut the legislation.
For example; I recall SPDU Worcester tracked a homicide suspect out of State, they notified the State Police of Jurisdiction and they who subsequently located the suspect and placed same under arrest.
Please send me a synopsis of a case or cases where ALPR data contributed to the apprehension of a suspect, recovery of a victim, or provided key evidence during an investigation. We need this ASAP or no later than tomorrow at 0900 hrs.
Respectfully,
Michael J. Lyver #2396
Detective Captain
Division of Investigative Services

Massachusetts State Police

Subject: ALPR

All,

Attached please find a bill that will severely regulate and curtail access to, and storage of, ALPR data. As you are all aware, Automated License Plate Reader (LPR) data is one of the most beneficial technologies made available to law enforcement in the past ten years. We utilize this technology every day. That being said, we don't have a good way to capture all of the successful uses of the technology. I'm working with Spencer Lord and Brian Merrick at EOPSS to pull together some examples of the use of LPR data in everyday police work. These stories will be used to counter this bill which we know as practitioners will only further erode our ability to detect and solve crime.

I'm looking for all types of examples:

Homicide
Sexual Assault
Kidnapping
Terrorism
Threats
Amber Alert
Silver Alert
Robbery
Burglary
Security

Please include anything you can think of that will help our cause. I have attached a copy of our current policy which is based on the EOPSS model LPR policy. We currently retain the data for one year prior to expungement.

Please submit your responses in a brief narrative that outlines the case and the successful use of LPR technology.

Please try to have the responses to me by Thursday and include Rose Warren on the

email so we can gather the different responses into one folder for submission to EOPSS.

Thank you in advance for your efforts on this important matter.

Lieutenant Colonel Dermot J. Quinn #1765
Division Commander
Division of Investigative Services
Massachusetts State Police

Unit Commanders,

attached is pending legislation that will hamper our ability to access ALPR data. To counter the legislation, LTC Quinn is looking for cases where we used it successfully. Please forward me details of a case where you successfully used ALPR data to solve a case, arrest an offender or to locate a victim. I know we have had some success stories recently. Please report any cases to me ASAP so we can rebut the legislation.

For example; I recall SPDU Worcester tracked a homicide suspect out of State, they notified the State Police of Jurisdiction and they who subsequently located the suspect and placed same under arrest.

Please send me a synopsis of a case or cases where ALPR data contributed to the apprehension of a suspect, recovery of a victim, or provided key evidence during an investigation. We need this ASAP or no later than tomorrow at 0900 hrs.

Respectfully,

Michael J. Lyver #2396

On Monday, January 28, and Tuesday, January 29, 2019, the NJSP, NYPD, and NNJUASI, facilitated by the Rutgers University Center on Policing, will host a Regional Trafficking Summit. This two-day summit will gather 12 state police superintendents, 12 major city chiefs, and numerous federal agencies with responsibilities along the I-95 corridor between Richmond, VA, Washington, DC, and Boston, MA, to discuss the feasibility and productivity of linking and sharing ALPR data. Establishing this linkage across the northeast region of the United States would immeasurably increase our effectiveness in addressing issues of counter terrorism, drug trafficking, weapons trafficking, Amber and Silver Alerts,

plus other threats to the public safety of our respective states.

Please find the attached letter from Colonel Patrick Callahan for further information and details.

Hi Mike,

Please see below request. I believe that the MOU referred to by Colonel Callahan has been previously sent to EOPPS for approval. I personally believe that this collaborative effort would enhance our efforts in the areas of counter-terrorism, the opioid crisis, human trafficking and others. I would appreciate your insights into this matter.

Respectfully,

Kerry

ASCIA Members,

The New Jersey State Police recently completely revised their Criminal Intelligence Branch manual to take into account current events and capabilities, including technology. Several of our members who have reviewed the manual have recommended that it be shared with the ASCIA membership. LTC Guidetti has provided me with a copy to share.

Request for additional information concerning this manual should be directed to:

LTC Ray Guidetti
Deputy Superintendent of Investigations
New Jersey State Police
Office - 609-584-5051; 5491
Cell - 609-[redacted]
Email - guidetti.raymond@gw.njsp.org

Mike –

Does the attached document that you just sent over answer the questions I posed in the email below? I think we need to know the answers to these questions before we can make an informed decision about entering into an MOU like this one.

David Solet
Chief Legal Counsel
Executive Office of Public Safety and Security (EOPSS)

Subject: ALPR Data Sharing

Mike –

On the issue of inter-state sharing of ALPR data – it's easy for me to see how this could be a substantial public safety benefit for the Commonwealth, in light of the interstate trafficking of narcotics and illegal firearms, movement of fugitives, etc. between MA and NYC.

But within the MA consortium of contributing agencies, who is allowed to make the decision to share with a non-member agency, and under what constraints, if any? Put another way, if the Colonel can unilaterally decide that it is in the best interests of MSP to enter into a data-sharing agreement with NYPD, and then to commence sharing not only MSP-collected data, but data the consortium has received from other contributing cities and towns in MA, is there anything to prevent any of the other partner agencies from deciding to share MSP-collected data with PA State Police, or Harrisburg PD, or a federal agency? Is there any agreement or norm in place as to when requests from an outside agency will be run by a consortium-member when it won't?

David Solet
Chief Legal Counsel
Executive Office of Public Safety and Security

Hi Mike,

Just an FYI. At this morning's Command Staff meeting the Colonel was asking where we stand on the LPR sharing MOU with NYPD and NJSP. I know you have been reviewing the MOU from a legal perspective. Jim Slater has been reviewing from a technical perspective. If approved we will coordinate with NYPD Inspector Anthony Tasso, Commanding Officer, Strategic Technology Division and put him in touch with EOPSS.

Thanks

Lieutenant Colonel Dermot J. Quinn #1765

Subject: RE: ALPR MOU Template

Hi Jim,

I would think the best and most effective way to prevent or solve a crime would be to share all of the ALPR data. I think we are covered under Paragraph 5 Section C as stated below:

5. ALPR Data Sharing and Dissemination

a) Each Contributing Agency authorizes the release of its information as outlined in this Policy to any other criminal justice agency that may participate in the Central Repository in the future.

b) A Contributing Party that does not want certain information from its ALPR system to be shared is responsible for filtering out such information before entering it into the Central Repository.

c) The information contributed to the Central Repository is limited to ALPR data.

d) Central Repository ALPR data can be accessed, retrieved, or shared for official and legitimate law enforcement operations or public safety purposes only.

To your point, I agree we should advise contributing agencies that the data may be shared with other law enforcement agencies outside of Massachusetts. I don't think that will come as a surprise to them as we constantly run checks through the State Police Commonwealth Watch Center for non-Massachusetts police departments against our database, and for Massachusetts police departments against out of state LPR systems such as New York and New Jersey. This system would just make that ability much quicker and negate the need to place a call to any of the participating states.

Since the ALPR server for Massachusetts is operated by OTIS, it may make more sense for the MOU to be between EOPSS and NYC as opposed to MSP and NYC. Either way is fine from my perspective. I think Mike Halpin is taking a look from a legal perspective.

Thanks

Dermot

Hi, Lt. Col. Quinn!

I have a follow up question or two re this effort. Specifically, would we be sharing MSP ALPR data only, or is the thought
that all of the data in the central repository would be shared? If the latter is true, would we need to seek permission from the
other LE agencies which have contributed data?

I know that Section 5 of the Commonwealth's ALPR Policy allows the sharing of data with "any other criminal justice agency
that may participate in the Central Repository…", but in this case, we're talking about shipping the data out-of-state.

I just thought I would raise that as a potential issue.

Jim

Matt and Jim,

Please see attached MOU. Massachusetts is interested in participating in NYPD's Regional Data Sharing Program (RDSP) as outlined in the attached MOU concerning Automated License Plate Reader data. The attached MOU is the agreement between NYPD and NJSP. NYPD agrees to expunge the Massachusetts data after one year which as you know is the current requirement in the Commonwealth. Would EOPSS OTIS be able to support this project as the central repository of ALPR data in the state?

Thanks

Hi, Lt. Col. Quinn!

I have a follow up question or two re this effort. Specifically, would we be sharing MSP ALPR data only, or is the thought
that all of the data in the central repository would be shared? If the latter is true, would we need to seek permission from the
other LE agencies which have contributed data?

I know that Section 5 of the Commonwealth's ALPR Policy allows the sharing of data with "any other criminal justice agency
that may participate in the Central Repository…", but in this case, we're talking about shipping the data out-of-state.

I just thought I would raise that as a potential issue.

Jim

Matt and Jim,

Please see attached MOU. Massachusetts is interested in participating in NYPD's Regional Data Sharing Program (RDSP) as outlined in the attached MOU concerning Automated License Plate Reader data. The attached MOU is the agreement between NYPD and NJSP. NYPD agrees to expunge the Massachusetts data after one year which as you know is the current requirement in the Commonwealth. Would EOPSS OTIS be able to support this project as the central repository of ALPR data in the state?

Thanks

Dermot

Hi, Dermot!

Where can I get a copy of the Massachusetts policy on LRP data and usage?

Thanks.

Jim

Subject: FW: ALPR MOU Template

Matt and Jim,

Please see attached MOU. Massachusetts is interested in participating in NYPD's Regional Data Sharing Program (RDSP) as outlined in the attached MOU concerning Automated License Plate Reader data. The attached MOU is the agreement between NYPD and NJSP. NYPD agrees to expunge the Massachusetts data after one year which as you know is the current requirement in the Commonwealth. Would EOPSS OTIS be able to support this project as the central repository of ALPR data in the state?

Thanks

Dermot

TRF-11 Automatic License Plate Recognition Revised 6-14-2018.pdf

---

Secretary,

To clarify, Fusion does not manage access to the application/database. The MSP Policy designated the Division Commander of Field Services to manage the system for MSP. LT. Dan Griffin of Traffic Programs has been identified by the department to administer the MSP access. He has created all of our accounts and provides end-user training. We do have elevated access to the system and require those permissions to add cameras and maintain hotlists. On occasion, we will perform off-line database queries for complex cases (such as the homicide of Melisa Marcott). It's my understanding that Sean (when previously at OTIS), Tim and Shannon complete access requests, maintains infrastructure and issues external agency user accounts, like to Barnstable PD.

I have attached my correspondence with ADA Jen Bright, please find the original discovery request and her draft response with my comments. I commented "I believe the Executive Office of Public Safety and Security, Office of Technology and Information Services maintains the images and who has access, for the State Police Access it is managed by MSP Traffic Programs as according to policy." It appears they sent the request to the wrong Agency. Perhaps with all of the recent EOTSS/OTIS staff changes, they thought OTIS was no longer in existence and it was one new agency. To add to the confusion, the images in question were taken by MSP cameras, accessed by Barnstable PD and stored by EOPSS IT (OTIS).

Good morning,

Jen Bright, an assistant DA of the Cape and Islands office called me regarding assistance on a motion. Curt, you'll remember this is related to the bridge cameras on the Bourne and

Sagamore bridges. Jen needs to confirm in addition to MSP, EOTSS and EOPS have access to the images and as well as the names of individuals who can access the images. Brian Egnet (sp) at MSP advised Jen EOTSS and EOPS have access to the images because we and/or EOPS maintain the databases at MITC.

I wanted to check in with you both before gathering any information. Jen has a deadline to respond to the motion.

Thank you!

M.

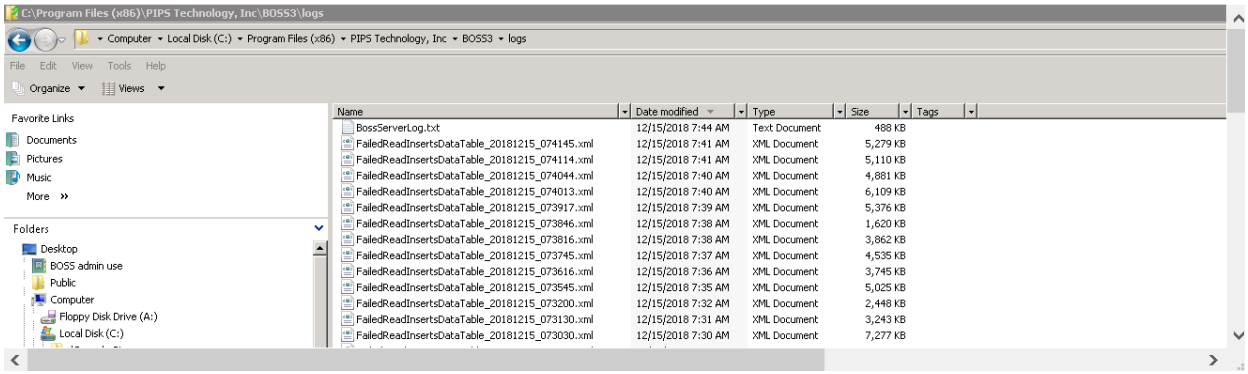
On Monday, January 28, and Tuesday, January 29, 2019, the NJSP, NYPD, and NNJUASI, facilitated by the Rutgers University Center on Policing, will host a Regional Trafficking Summit. This two-day summit will gather 12 state police superintendents, 12 major city chiefs, and numerous federal agencies with responsibilities along the I-95 corridor between Richmond, VA, Washington, DC, and Boston, MA, to discuss the feasibility and productivity of linking and sharing ALPR data. Establishing this linkage across the northeast region of the United States would immeasurably increase our effectiveness in addressing issues of counter terrorism, drug trafficking, weapons trafficking, Amber and Silver Alerts, plus other threats to the public safety of our respective states.



Please find the attached letter from Colonel Patrick Callahan for further information and details.

Hi Israel,

The data is finished moving, can someone please assist in attaching the DB and pointing the app server?

Thanks, Brian

Thank you,

Just a quick update.

- The team is preparing the move and will kick off the copy paste in the AM. It will be monitored and expected to take a few days.

- We are also working on a SOW with John for maintaining the new DB and installing the application on the new server and upgrade.

Thanks, Brian

Thanks, Brian

Ok

From the last note, is that a new SQL Server?

If so, use Dettach/Attach instead of taking offline/ online.

Best regards

Thank you, we will advise once finished. FYI - the “new drive” is a new server with a different IP address.

On Dec 12, 2018, at 11:10 AM, Israel Padilla <ipadilla@neology.mx> wrote:

Hello

The main steps are:

1 Shut down BOSS
2 Restart SQL for closing connections (if possible)
3 Take offline the db
4 Copy the DB files to the new drive
5 Once copied, Change the location of the files on the DB properties or by SQL queries (ALTER TABLE)
6 Take online the DB
7 Start the BOSS service

It's not necessary to change the path of the files on BOSS controller, as the DB is already created, the script that has the paths configuration is not executed again.

If you have any question, please let us know

> > The temp database filled up on ALPR sql instance today so I migrated it to the S: Drive where there is more space. The T: Drive (where the data is stored) has only 9 mbs available on the drive (but room in the DB for data). I don't think a backup and restore is going to work, this is just a massive database at 14 Terabytes. The purge script is still running and the last record is 8/31 and I don't believe it is going to free up enough space to allow the backup. The database also refuses to shrink. Can we get on a call to discuss moving the data at the file level? We rely heavily on this system and need this migrated to support the new LPR equipment we are bringing online. Any help would be greatly appreciated.

>>
>> Hi Brian Egnitz:
>>
>>
>> In order to do the upgrade of BOSS to the 3.5.0.4 version, we would request the following:
>>
>> - Have a recent backup of the database (preferably on an external
>> device)
>> - Have the latest security updates from Microsoft
>> - NET Framework 4.0 or newer is required (Already included on Windows
>> Server 2012 or Windows 10)
>> - Microsoft SQL Server 2012 is required
>> - We need to do a previous examination of the servers in order to see
>> the current configuration of BOSS. For the examination and
>> installation, we need a user with admin privileges for Windows and SQL
>> credentials of current user for BOSS database (preferable sa)
>>
>> Attached you will find the Upgrade Manual applicable to this version for more information.
>>
>> Also, below is a little more info:
>>
>> Boss Upgrade:
>> 1. Boss 3.5.x looks and feels the same as previous versions with exceptions to the additions and enhancements indicated in the release notes.
>> 2. Boss 3.5.x requires a minimum database version of MSSQL 2012 or newer.
>>   a. It's safe to upgrade SQL without effecting Boss3 Db.
>> 3. Boss application update is an uninstall and reinstall processes.
>>   a. Existing Boss licensing is not effected.
>> 4. Existing data can remain in-tacked, no need to rebuild Db.
>> 5. Boss clients will need to be re-installed via the Boss URL, auto upgrade to existing clients is not possible.
>>   a. Email distribution for new Boss client install should pre-planned to coincide with upgrade date.

>> 6. Upgrades from existing Boss Db typically take approx. 1hr, providing there are no existing Db issue or relocations occurring.
>>
>> As I mentioned, we would like to connect prior to the update, in order to take note of the current installation parameters and see if all the requirements are met. This examination would take around 1 hour. We use TeamViewer to do the remote connections. You can download and install a full version of team viewer without problem in order to receive support as we have a license, when installed, it will generate an ID and an random password for us to connect. Also, if you prefer to no install a full version, you can download and run the next tool on your server (this is a TeamViewer module just for quick support). When you run it, it will arise a support ticket on our dashboard, so we can connect with your permission.

Thanks again for assisting. I've copied the agent jobs over and have confirmed they work. I only copied the ones that were using the BOSS account (not the vigilant ones). Please let me know if any are missing.

Thanks, Brian

Hello John

Just to let you know that the reconfiguration of BOSS to point to the new SQL Server was done.

We will look forward to helping with the installation of BOSS on the new server.

Thank you, Brian and Timothy, for your time.

Best Regards

Israel Padilla Sánchez

> > The temp database filled up on ALPR sql instance today so I migrated it to the S: Drive where there is more space. The T: Drive (where the data is stored) has only 9 mbs available on the drive (but room in the DB for data). I don't think a backup and restore is going to work, this is just a massive database at 14 Terabytes. The purge script is still running and the last record is 8/31 and I don't believe it is going to free up enough space to allow the backup. The database also refuses to shrink. Can we get on a call to discuss moving the data at the file level? We rely heavily on this system and need this migrated to support the new LPR equipment we are bringing online. Any help would be greatly appreciated.

>> Subject: Mass State Police - Boss Upgrade
>>
>> Hi Brian Egnitz:
>>
>>
>> In order to do the upgrade of BOSS to the 3.5.0.4 version, we would request the following:
>>
>> - Have a recent backup of the database (preferably on an external
>> device)
>> - Have the latest security updates from Microsoft
>> - NET Framework 4.0 or newer is required (Already included on Windows
>> Server 2012 or Windows 10)
>> - Microsoft SQL Server 2012 is required
>> - We need to do a previous examination of the servers in order to see
>> the current configuration of BOSS. For the examination and
>> installation, we need a user with admin privileges for Windows and SQL
>> credentials of current user for BOSS database (preferable sa)
>>
>> Attached you will find the Upgrade Manual applicable to this version for more information.
>>
>> Also, below is a little more info:
>>
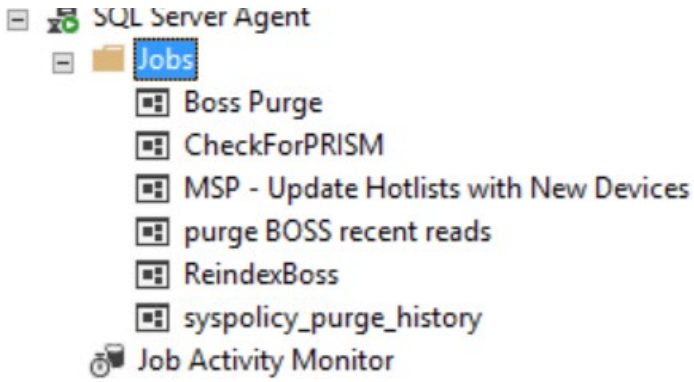
>> Boss Upgrade:
>> 1. Boss 3.5.x looks and feels the same as previous versions with exceptions to the additions and enhancements indicated in the release notes.
>> 2. Boss 3.5.x requires a minimum database version of MSSQL 2012 or newer.
>> a. It's safe to upgrade SQL without effecting Boss3 Db.
>> 3. Boss application update is an uninstall and reinstall processes.
>> a. Existing Boss licensing is not effected.
>> 4. Existing data can remain in-tacked, no need to rebuild Db.
>> 5. Boss clients will need to be re-installed via the Boss URL, auto upgrade to existing clients is not possible.
>> a. Email distribution for new Boss client install should pre-planned to coincide with upgrade date.



>> 6. Upgrades from existing Boss Db typically take approx. 1hr, providing there are no existing Db issue or relocations occurring.
>>
>> As I mentioned, we would like to connect prior to the update, in order to take note of the current installation parameters and see if all the requirements are met. This examination would take around 1 hour. We use TeamViewer to do the remote connections. You can download and install a full version of team viewer without problem in order to receive support as we have a license, when installed, it will generate an ID and an random password for us to connect. Also, if you prefer to no install a full version, you can download and run the next tool on your server (this is a TeamViewer module just for quick support). When you run it, it will arise a support ticket on our dashboard, so we can connect with your permission.

Thanks again for assisting. I've copied the agent jobs over and have confirmed they work. I only copied the ones that were using the BOSS account (not the vigilant ones). Please let me know if any are missing.

Thanks, Brian

Hello John

Just to let you know that the reconfiguration of BOSS to point to the new SQL Server was done.

We will look forward to helping with the installation of BOSS on the new server.

Thank you, Brian and Timothy, for your time.

Best Regards

> > The temp database filled up on ALPR sql instance today so I migrated it to the S: Drive where there is more space. The T: Drive (where the data is stored) has only 9 mbs available on the drive (but room in the DB for data). I don't think a backup and restore is going to work, this is just a massive database at 14 Terabytes. The purge script is still running and the last record is 8/31 and I don't believe it is going to free up enough space to allow the backup. The database also refuses to shrink. Can we get on a call to discuss moving the data at the file level? We rely heavily on this system and need this migrated to support the new LPR equipment we are bringing online. Any help would be greatly appreciated.

Subject: RE: Mass State Police - Boss Upgrade

Hi Tim,

Would it be possible to get Peter Crary a VPN? He will be assisting in the migration.

Thanks, Brian

———-

Hi Guys,

I spoke with Peter Crary today from the Neology team and we kicked around a few ideas to reduce downtime. Here is what we are thinking at a high-level for the migration;

Step 1. Do a complete database backup of the current BOSS to the new environment and restore the database on the new SQL server (either team can do this)

Step 2. Next, install the new software on the new application server and point to the newly restored DB. This will update the db schema and bring the application online. (Neology)

Step 3. Swap the IP from the app server to the new app server (EOPSS team). This will begin to capture all new reads.

Step 4. Link SQL Databases and run custom script to move the reads file missed during the initial restore (Neology)

Action items:

- Peter will need a VPN
- Need firewalls open for backup / restore
- Need firewalls open for linked SQL
- Need to schedule data backup/restore with team

Notes:

Pages will be fine (mobile client) no expected issues
The Boss client will need to be updated (users will still probably need to enter the ip and port). This can get pulled down from the app server using a url and is a click once pkg. we will need to notify users and help desks in advance of the migration.

Please let me know your thoughts, I'm open to anything that can reduce the down time and impact to users.

-Brian

To: Egnitz, Brian (POL)
Cc: Israel Padilla; José Antonio Padrón Galeana; Michael Roth
Subject: Mass State Police - Boss Upgrade

Hi Brian Egnitz:

In order to do the upgrade of BOSS to the 3.5.0.4 version, we would request the following:

- Have a recent backup of the database (preferably on an external device)
- Have the latest security updates from Microsoft
- NET Framework 4.0 or newer is required (Already included on Windows Server 2012 or Windows 10)
- Microsoft SQL Server 2012 is required
- We need to do a previous examination of the servers in order to see the current configuration of BOSS. For the examination and installation, we need a user with admin privileges for Windows and SQL credentials of current user for BOSS database (preferable

sa)

Attached you will find the Upgrade Manual applicable to this version for more information.

Also, below is a little more info:

Boss Upgrade:
1. Boss 3.5.x looks and feels the same as previous versions with exceptions to the additions and enhancements indicated in the release notes.
2. Boss 3.5.x requires a minimum database version of MSSQL 2012 or newer.
    a. It's safe to upgrade SQL without effecting Boss3 Db.
3. Boss application update is an uninstall and reinstall processes.
    a. Existing Boss licensing is not effected.
4. Existing data can remain in-tacked, no need to rebuild Db.
5. Boss clients will need to be re-installed via the Boss URL, auto upgrade to existing clients is not possible.
    a. Email distribution for new Boss client install should pre-planned to coincide with upgrade date.
6. Upgrades from existing Boss Db typically take approx. 1hr, providing there are no existing Db issue or relocations occurring.

As I mentioned, we would like to connect prior to the update, in order to take note of the current installation parameters and see if all the requirements are met. This examination would take around 1 hour. We use TeamViewer to do the remote connections. You can download and install a full version of team viewer without problem in order to receive support as we have a license, when installed, it will generate an ID and an random password for us to connect. Also, if you prefer to no install a full version, you can download and run the next tool on your server (this is a TeamViewer module just for quick support). When you run it, it will arise a support ticket on our dashboard, so we can connect with your permission.

https://get.teamviewer.com/neoqs

Please, tell us when we can work together and make the upgrade.

Regards!

Boss Upgrade:
1. Boss 3.5.x looks and feels the same as previous versions with exceptions to the additions and enhancements indicated in the release notes.
2. Boss 3.5.x requires a minimum database version of MSSQL 2012 or newer.
    a. It's safe to upgrade SQL without effecting Boss3 Db.
3. Boss application update is an uninstall and reinstall processes.
    a. Existing Boss licensing is not effected.
4. Existing data can remain in-tacked, no need to rebuild Db.
5. Boss clients will need to be re-installed via the Boss URL, auto upgrade to existing clients is not possible.

a. Email distribution for new Boss client install should pre-planned to coincide with upgrade date.
6. Upgrades from existing Boss Db typically take approx. 1hr, providing there are no existing Db issue or relocations occurring.

As I mentioned, we would like to connect prior to the update, in order to take note of the current installation parameters and see if all the requirements are met. This examination would take around 1 hour. We use TeamViewer to do the remote connections. You can download and install a full version of team viewer without problem in order to receive support as we have a license, when installed, it will generate an ID and an random password for us to connect. Also, if you prefer to no install a full version, you can download and run the next tool on your server (this is a TeamViewer module just for quick support). When you run it, it will arise a support ticket on our dashboard, so we can connect with your permission.

https://get.teamviewer.com/neogs

Please, tell us when we can work together and make the upgrade.

Regards!

Just to let you know that the reconfiguration of BOSS to point to the new SQL Server was done.

We will look forward to helping with the installation of BOSS on the new server.

Thank you, Brian and Timothy, for your time.

> On Dec 12, 2018, at 11:10 AM, Israel Padilla <ipadilla@neology.mx> wrote:
>
> Hello
>
> The main steps are:

1 Shut down BOSS

2 Restart SQL for closing connections (if possible)

3 Take offline the db

4 Copy the DB files to the new drive

5 Once copied, Change the location of the files on the DB properties or by SQL queries (ALTER TABLE)

6 Take online the DB

7 Start the BOSS service

It's not necessary to change the path of the files on BOSS controller, as the DB is already created, the script that has the paths configuration is not executed again.

> Hi Tim,
>
> The temp database filled up on ALPR sql instance today so I migrated it to the S: Drive where there is more space. The T: Drive (where the data is stored) has only 9 mbs available on the drive (but room in the DB for data). I don't think a backup and restore is going to work, this is just a massive database at 14 Terabytes. The purge script is still running and the last record is 8/31 and I don't believe it is going to free up enough space to allow the backup. The database also refuses to shrink. Can we get on a call to discuss moving the data at the file level? We rely heavily on this system and need this migrated to support the new LPR equipment we are bringing online. Any help would be greatly appreciated.

>>
>> Attached you will find the Upgrade Manual applicable to this version for more
information.
>>
>> Also, below is a little more info:
>>
>> Boss Upgrade:
>> 1. Boss 3.5.x looks and feels the same as previous versions with exceptions to
the additions and enhancements indicated in the release notes.
>> 2. Boss 3.5.x requires a minimum database version of MSSQL 2012 or newer.
>> a. It's safe to upgrade SQL without effecting Boss3 Db.
>> 3. Boss application update is an uninstall and reinstall processes.
>> a. Existing Boss licensing is not effected.
>> 4. Existing data can remain in-tacked, no need to rebuild Db.
>> 5. Boss clients will need to be re-installed via the Boss URL, auto upgrade to
existing clients is not possible.
>> a. Email distribution for new Boss client install should pre-planned to coincide
with upgrade date.
>> 6. Upgrades from existing Boss Db typically take approx. 1hr, providing there
are no existing Db issue or relocations occurring.
>>
>> As I mentioned, we would like to connect prior to the update, in order to take
note of the current installation parameters and see if all the requirements are met.
This examination would take around 1 hour. We use TeamViewer to do the remote
connections. You can download and install a full version of team viewer without
problem in order to receive support as we have a license, when installed, it will
generate an ID and an random password for us to connect. Also, if you prefer to no
install a full version, you can download and run the next tool on your server (this is
a TeamViewer module just for quick support). When you run it, it will arise a
support ticket on our dashboard, so we can connect with your permission.

Attachments: image001.png

Good Afternoon Sir,

Thank you for reaching out. Since our last correspondence, Major Mason has been promoted to LT Colonel and no longer is in the Fusion Center due to his promotion. I have shared your email and request below to our new Major, Scott Range, as well as my direct supervisor, the Intelligence Services Manager, Amy Thibault. Major Range works closely with Assistant Undersecretary Olsen and will review your email and we will get back to you as soon as possible. Right now our main focus is preparation for the Boston Marathon, so your deadline of April 19th might be tough. As a side note, Justin Newton is currently on a leave of absence, and I'm not sure when he will be returning, but hopefully sometime in April.

I hope all is well and we will be in touch soon.

Thank You,
Kristin

Kristin L. Wilczynski, Intelligence Analyst, MPA

Subject: RE: Raytheon CFC Visit Follow Up - Possible ABI Collaboration

Hello Kristin,

Following up on meeting this past fall. Two items of note:

1. Raytheon was recently invited by our DHS Customer, DNDO, to propose development of our Activity Based Intelligence capability. I believe we discussed this concept in our September meeting (see white paper that I will forward separately via our encrypted email service). Additionally DNDO requested that we identify databases we could access without their assistance.

   Databases were part of our discussions and I wanted to follow up with you and Major Manson about access to the State controlled databases or collaboration some kind of representative synthetic data set. For clarity and in reference to Major Manson's previous direction (below) we are not requesting access to CFC's SOP's.

2. We are currently working with Assistant U/S Olson and DNDO to coordinate the deployment of the Raytheon/PSI RAIN prototype system on the Mass Pike as part of Phase V of DNDO's Advanced Technology Demonstration program. The equipment is ready and I am hopeful that we get an agreement in place to deploy the system this spring.

We believe that these two capabilities are synergistic and when fully developed will provide Law Enforcement and Intelligence Analysts' powerful tools to assist you in your extremely challenge mission. We would like to discuss if and how we might collaborate.

Our proposal is due 19 April so I hope we can schedule an initial call next week but am available at your and the State's convenience.

Best Regards

Rich

Sirs,

Thank you for your visit to Maynard last week. As promised, I did consult with my upper management about what type of information about the CFC that we would be able to release to your group. Per Major Mason, I am allowed to share with you the list of systems we utilize, but unfortunately, not our SOPs. Feel free to reach out if you have any questions.

Kristin, Justin and Hans,

Thank you very much for hosting our visit to the CFC yesterday. My team and I greatly appreciate the time you spent with us and we found the discussion very informative. I look forward to continuing the discussion.

Follow up actions that I had included, both pending approvals to release to us:

- Please forward the chart deck from yesterday or the list of systems and databases that you use.

- Please forward documented workflows / standard operating procedures. We will take as much as you are willing to share but are particularly interested in:
    - "Basic everyday" SAR entry and adjudication workflow as well as those associated with scenarios similar to a distributed sensor system like as RAIN such as ALPR or video from traffic / other cameras.
    - Like you we are takings an approach to integrate with standard Law Enforcement workflows in order to develop a sustainable capability.

- Per your suggestion we will reach out to Lt. Devlin to coordinate a visit to MEMA. He attended our RAIN demo last fall and might be worthwhile to fill him in on our visit yesterday.

Thanks again for you time and hard work to protect the Commonwealth.

Regards

Rich

Hi Kristin,

Thank you for the quick reply. I look forward to meeting and hopefully collaborating with Major Range, Ms Thibault, yourself and the rest of the CFC team.

I understand the time constraints with preparation for the Marathon. We are still at the proposal stage so I am hopeful that we can minimize the effort on your part to. We do not have to have all the answers by the 19th. Perhaps a short telecon to discuss:

- Verify interest and support
- Which data sets the State controls (vs a Federal agency) and might be possible to provide access to
- What the process to get permissions & access to databases is / might look like
- Perhaps a letter indicating intent to work with us to understand the access & permissions issues / process and develop a representational data set might be possible / sufficient.

I look forward to hearing back from you and your team.

Regards

Rich

Good Afternoon Sir,

Thank you for reaching out. Since our last correspondence, Major Mason has been promoted to LT Colonel and no longer is in the Fusion Center due to his promotion. I have shared your email and request below to our new Major, Scott Range, as well as my direct supervisor, the Intelligence Services Manager, Amy Thibault. Major Range works closely with Assistant Undersecretary Olsen and will review your email and we will get back to you as soon as possible. Right now our main focus is preparation for the Boston Marathon, so your deadline of April 19th might be tough. As a side note, Justin Newton is currently on a leave of absence, and I'm not sure when he will be returning, but hopefully sometime in April.

I hope all is well and we will be in touch soon.

Thank You,
Kristin

Hi Shawn,
Amy instructed me to reach out to you regarding assistance with her SP Academy Project. Attached is the outline she is using. Her email below states: *Please ask Lt O'Neil for descriptions of the items under 4A numbers 1-10*. I have copied and pasted the items below that she requires assistance with.
Thank you!
Laurie

Bulletin 4 - Situational Awareness, Bulletins, Special Event Support
A. Situational Awareness Capabilities

1. HSIN Connect Situational Awareness Room

2. MSP/BPD/MBTA/MassDOT Federated Camera Systems, Barco Video Wall, Security Desk, Avigilon Control Center, FLIR - Camera coverage to include major interstate roadways, MBTA properties and many larger communities. This will allow real time monitoring of traffic incidents to provide assistance with traffic management.

3. MSP Airwing Downlink + AeryonLive Drone
4. Asset Tracking: SilverEye/CompassTrac
5. Local/Regional/National Media Monitoring

6. Open Source Monitoring/OSINT and Real Time Event Monitoring (Facebook, Facebook Live, Twitter, Tweetdeck, Periscope)

7. Public Gatherings - Daily Situational Awareness Bulletin

8. Video Teleconference Technology - Broadcast real-time information/intelligence to stakeholders (ex: Governor's Situational Awareness Room, MSP Crime Lab, etc)

9. ShotSpotter Respond

10. Web Streaming Gateway - is a tool allowing access to all CWC information via a mobile platform utilizing a provided link and password.

11. Bulletins- 1. Bulletin Creation: BOLO's, wanted suspects, Silver Alerts and other investigative bulletins can be created to assist you with investigations.

Can you please coordinate a page for bulletin 4, 5 and 6.
You should have the info you need for 6.
Please ask Lt O'Neil for descriptions of the items under 4A numbers 1-10. Part B is fine the way it is for Bulletin 4. Just copy all of it to a new document.
For bulletin 5, Kristin and Kurt should be able to assist.

Once you complete one of them, please send to Tpr Paquette.

Thank you!

See you soon.

Amy

To: Fitzgerald, Thomas (POL)
Cc: Taylor, Rita (POL)
Subject: SRIS Trailer support and maintenance

Lt. Fitzgerald,

Attached is the quote from IIS for support and maintenance of the SRIS trailer. The proposal includes three years of service but our current grant awards end on 9/30/19 so we can't commit to the full three years. I suggest that we ask IIS for an agreement that runs from 7/1/18 to 9/30/19 and fund it with FFY17 MCSAP and FFY18 MCSAP.

This cost is not included in these MCSAP Basic budget(s) so I think a request should be sent to Rich Bates to obtain his approval to fund this with these grants. When we prepare the FFY19 and FFY20 grant applications we should make sure to include these costs.

Here is a breakdown of how the costs would be allocated:

SRIS trailer w/ALPR hardware & software

Support & Maintenance

Period

Amount

Funding Source

YEAR 1: 7/1/18 - 6/30/19

$25,000.00

7/1/18 - 9/30/18

$6,250.00

FFY17 MCSAP

10/1/18 - 6/30/19

$18,750.00

FFY18 MCSAP

YEAR 2: 7/1/19 - 6/30/20

$22,500.00

7/1/19 - 9/30/19

$5,625.00

FFY18 MCSAP

10/1/19 - 6/30/20

$16,875.00

FFY19 MCSAP - request in grant app

YEAR 3: 7/1/20 - 6/30/21

$22,500.00

7/1/20 - 9/30/20

$5,625.00

FFY19 MCSAP - request in grant app

10/1/20 - 6/30/21

$16,875.00

FFY20 MCSAP - request in grant app

$6,250.00

< FFY17 MCSAP

$24,375.00

< FFY18 MCSAP

$22,500.00

< FFY19 MCSAP

$16,875.00

< FFY20 MCSAP

Let us know how you want to proceed.

Thanks.

We cannot commit past 9-30-2019. We must have a federal authorization in place at the time we execute an agreement . Or put another way our most current MCSAP expenditure end date is 9-30-2019 -- that is the limit of any agreement we can sign.

Hi Fitzi,

Made changes to section 5.
Let me know if this works.

Thanks!
Enrique

Subject: Fw: SRIS Trailer support and maintenance

Can you adjust the dates and the fees to fit the Federal grant authorization dates we have ?

Lieutenant Thomas Fitzgerald
Mass. State Police CVES
Concord, MA 01742

To: Fitzgerald, Thomas (POL)
Cc: Taylor, Rita (POL)
Subject: SRIS Trailer support and maintenance

Lt. Fitzgerald,

Attached is the quote from IIS for support and maintenance of the SRIS trailer. The proposal includes three years of service but our current grant awards end on 9/30/19 so we can't commit to the full three years. I suggest that we ask IIS for an agreement that runs from 7/1/18 to 9/30/19 and fund it with FFY17 MCSAP and FFY18 MCSAP.

This cost is not included in these MCSAP Basic budget(s) so I think a request should be sent to Rich Bates to obtain his approval to fund this with these grants. When we prepare the FFY19 and FFY20 grant applications we should make sure to include these costs.

Here is a breakdown of how the costs would be allocated:

SRIS trailer w/ALPR hardware & software

Support & Maintenance

Period

Amount

Funding Source

YEAR 1: 7/1/18 - 6/30/19

$25,000.00

7/1/18 - 9/30/18

$6,250.00

FFY17 MCSAP

10/1/18 - 6/30/19

$18,750.00

FFY18 MCSAP

YEAR 2: 7/1/19 - 6/30/20

$22,500.00

7/1/19 - 9/30/19

$5,625.00

FFY18 MCSAP

10/1/19 - 6/30/20

$16,875.00

FFY19 MCSAP - request in grant app

YEAR 3: 7/1/20 - 6/30/21

$22,500.00

7/1/20 - 9/30/20

$5,625.00

FFY19 MCSAP - request in grant app

10/1/20 - 6/30/21

$16,875.00

FFY20 MCSAP - request in grant app

$6,250.00

< FFY17 MCSAP

$24,375.00

< FFY18 MCSAP

$22,500.00

< FFY19 MCSAP

$16,875.00

< FFY20 MCSAP

Let us know how you want to proceed.

Thanks.

ALPR Case Study Interview Questions.docx

Hello Ms. Warren and Lieutenant Colonel Quinn,

Thank you very much for returning my call Ms. Warren. Below is the email that we are sending as part of our recruitment process for the study on LPR use for traffic safety that we are conducting for USDOT and NHTSA. Please also find attached the recruitment letter we send by mail (attaching here to expedite the process). We are interested in conducting case studies with agencies that use LPR for traffic safety (namely for identifying vehicles associated with individuals with suspended, revoked or restricted licenses). The case studies consist of interviewing one administrator, one manager and two users of LPRs for traffic safety. I have also attached the interview questions that we are interested in asking so you can see the type of information we are interested in gathering (primarily questions aimed to understand the effectiveness of using LPRs to increase traffic safety).

Please feel free to review the attached and let me know if you have any questions. I can be reached via email or phone:

Office: 512-407-1166
Cell: 207-[redacted]

Otherwise, I will reach out in the week of May 7th, as I know you folks have your hands full until then.

I sincerely appreciate your time and look forward to speaking with you further,

Ben Ettelman

TTI | Saving Lives, Time & Resources

Dear Lieutenant Colonel Quinn,

This is a follow-up email to a postal letter informing you of the opportunity to participate in a very important research study on law enforcement's use of automated license plate readers (ALPR) for traffic safety purposes (such as detecting drivers with suspended, revoked, or restricted licenses).

The Texas Transportation Institute (TTI), a Texas state agency that is part of the Texas A&M University System, is conducting this study on behalf of the Volpe National Transportation Systems Center, U.S. Department of Transportation for the National Highway Traffic Safety Administration and the Governors Highway Safety Association. As noted in the letter, it is one of several studies being conducted under the National Cooperative Research and Evaluation Program, a program established under the Moving Ahead for Progress in the 21st Century Act (MAP-21) (Public Law 112-141) to research and evaluate state highway safety countermeasures.

As part of this study, our research team would like to conduct case studies with law enforcement agencies that use ALPR technology to improve traffic safety. We'll be speaking with law enforcement agencies across the country. The case studies will gather information about the following topics, via interviews with heads of agency, patrol officers, and other agency staff:

- the extent of your agency's ALPR use that is directed toward traffic safety objectives,
- any existing data on the effectiveness of ALPR in detecting drivers are unlicensed or have suspended/revoked licenses,
- information on the purchase, deployment, training, and maintenance costs of your agency's ALPR units/system,
- any challenges your agency has encountered regarding ALPR use for traffic safety purposes, such as citizen/community complaints or concerns, and
- any existing written policies or procedures for ALPR data capture, analysis, storage/retention, and sharing.

In addition, we'll send a brief list of additional information that we are hoping your agency will be able to share (e.g., written policies or procedures related to ALPRs, cost information).

Your agency's participation in the study will provide us with useful information on the use of ALPR technology for traffic enforcement activities to improve highway safety. Participation in the case studies will be confidential; neither your agency nor any individuals participating on behalf of your agency will be identified in any study report or publication. Study findings will facilitate other law enforcement agencies' use of ALPR technology for traffic safety purposes.

I will follow up with a brief telephone call to discuss the study further.

Cordially,

Ben Ettelman

IntelScope Fall 2018.pdf

Dear Amy,

Please find the latest edition of the IntelScope for your review! Members can also access this and previous versions of the newsletter in the Member's Only File Archive (note: you must be logged in to view this member's only archive).

This edition's topics include: annual award winners, messages from both President Dorn and VP Massop, mentoring program highlights, chapter news and more!

Special thank you to the contributing authors, graphic design/layout editor Matt Fegley, and each of the supporting agencies, academic members, and corporate partners!

We're always looking for new content for the next edition and we want to hear from you, our members! Have a recent intelligence or analytical success story you want to share? Want to highlight your chapter's trainings or initiatives? Learned a new analytical technique or process that might be beneficial to other members? Email communications@ialeia.org for consideration.

A Message from IACA President Noah Fritz

Dear 2016 IACA Conference Attendees,

On behalf of the IACA Executive Board, it is my pleasure to welcome you to the 2016 IACA Conference! Whether you have traveled across town or across continents, we are glad you made the trip to beautiful Louisville, Kentucky. With nearly 400 attendees, 22 exhibitors, and 64 sessions over 6 tracks, this year's conference promises to be the premiere training opportunity for all crime analysts!

Everything that you will experience this week would not be possible were it not for the hard work of our dedicated 2016 conference committee. Please take a moment this week to thank Allison, Mary and the rest of the committee on a job well done. They have gone the distance for you to deliver the best training conference possible!

Many people look forward to conference week, and for a variety of reasons. Some of us can't wait for new training, while others look forward to seeing old friends. Conference week is a fantastic reminder of just how connected our community really is, and how gracious our colleagues are with their time and talents. If this is your first conference, it can be overwhelming. I encourage you to resist the natural urge to keep to yourself. Step outside your comfort zone and challenge yourself to make those introductions. I can assure you that you will be glad you did!

This is our week – a week for all analysts to build new relationships, to absorb new ideas and to be inspired. Whether this is your first conference or your 20th, I encourage you to get the most out of this experience. Meet new people. Learn new material. Develop your skills. Share your knowledge and experiences. Expand your network. Consider new techniques. Be inspired. Be inspirational. Make it count! Let's enjoy our week together and have a wonderful conference!

Noah J. Fritz
IACA President

International Association of CRIME ANALYSTS

IACA Executive Board

President

Dr. Noah Fritz is the Strategic Planning, Analysis and Research Center (SPARC) Supervisor at the Tempe Police Department and the past Crime Analysis Manager at the San Diego County Sheriff's Department. Noah returned to the "field" of crime analysis after spending five years as an Assistant Professor in the Criminal Justice & Criminology Department at Metropolitan State University of Denver. His primary area of research is Crime Mapping, Crime Analysis and Geographic Information Systems. He was the previous Director and Founder of the Crime Mapping and Analysis Program (CMAP)—a U.S. Department of Justice sponsored training and technical assistance program; and served as the Deputy Director of NLECTC; and a previous two term President of the IACA (2000-2006).

Most notable accomplishments include a Doctorate in Justice and Social Inquiry from Arizona State University, a Master's from same and undergraduate degrees in Sociology and Criminal Justice from Illinois State University. He has authored articles in the Sociological Quarterly, the Encyclopedia of Criminology and Deviant Behavior, is a co-author of Exploring Crime Analysis (2004); and appeared nationally on ABC's Weekend News Edition featuring crime mapping and has been featured on public radio in Australia where he provided consulting services to the Victoria Police Department. Noah enjoys camping, hiking and golf; and spending time outdoors with his family and friends.

Email: president@iaca.net

Vice President of Administration

Jim Mallard began his law enforcement career at the Gainesville, Florida Police Department in 2002, first as an intern in the Information Technology Unit and later as a Tactical Crime Analyst. In 2006, Jim received his certification as a Law Enforcement Analyst through the State of Florida. In 2007, Jim became the Crime Analysis Supervisor at the Arlington Texas Police Department where he managed a team of seven analysts. In 2012, Jim returned to Florida to begin a crime analysis program at the Winter Park Police Department.

Jim received his Bachelor's degree in Anthropology from the University of Florida and his Master's in Criminology from the University of Texas at Arlington.

Jim has been a member of the IACA since 2003. He has served as the Technology Director since 2004 and was also a curriculum developer and instructor for the IACA and the National Institute of Justice. In 2008, Jim was the recipient of the Innovations in Crime Analysis award for his work automating CompStat. Most recently, he was awarded the Distinguished Service Award and Outstanding Unit Citation in 2014. Jim has presented on various Crime Analysis topics in Central America, South America, Europe and Asia.

In his spare time, Jim is an avid photographer. He also has a Hungarian Vizsla named Maya, who he loves to photograph!

Email: vp-adminstration@iaca.net

Vice President of Membership

Christopher W. Bruce was elected Vice President of Membership in 2015 after previously serving as President (2007-2012) and Vice President of Administration (2000-2006). He was a crime analyst for 17 years in Massachusetts, first for the Cambridge Police Department (1994-2001) and then for the Danvers Police Department (2001-2011). He was also President of the Massachusetts Association of Crime Analysts from 2000 to 2004.

For the last 5 years, Christopher has served a variety of government and non-profit programs meant to develop crime analysis in police agencies across the United States. He is the contracted Analytical Director for the Data-Driven Approaches to Crime and Traffic Safety (DDACTS) program of the U.S. Departments of Transportation and Justice. He serves as a subject matter expert for the BJA Smart Policing Initiative, the BJA National Training and Technical Assistance Center, and the OJP Diagnostic Center. He is also a project manager on a BJA grant to provide training in crime analysis to police executives.

Christopher serves on the adjunct faculty of Tiffin University and Western Oregon University and frequently teaches classes through the IACA. In his spare time, he enjoys traveling, classic films, and jazz.

Email: vp-membership@iaca.net

Secretary

Brandi Christon is a crime analyst with Fort Collins Police Services. Before returning home to Colorado in 2013, she held a grant-funded position with the Arlington (TX) Police Department's Crime Analysis Unit for two years. Prior to that, she worked for the El Paso County (CO) Sheriff's Office beginning in 2004, first as the crime prevention coordinator and later as the crime analyst. Her earlier positions in law enforcement included working in a county jail and an internal affairs office for two Idaho agencies.

Brandi earned her Bachelor's degree in Sociology/Criminology from Colorado State University-Pueblo in 2007 and she became a Certified Law Enforcement Analyst (CLEA) in 2014. In her free time, she enjoys hiking, camping and photography, or anything else that gives her an excuse to head to the mountains.

Email: secretary@iaca.net

Treasurer

Eric Drifmeyer has been a police officer with the Barnstable Police Department since 1994 and has been assigned to the Research and Analysis Unit since 2009. Prior to becoming a police officer he served in the United States Army where he specialized as a military policeman and completed tours in Germany, Ft. Huachauca AZ, and Southwest Asia.

During his time with the Barnstable Police Department, Officer Drifmeyer has been a member of the Cape Cod Regional S.W.A.T. team, a member of the Barnstable Police Mountain Bike Team and spent time as a Field Training Officer. Officer Drifmeyer has received several awards to include Massachusetts State Senate Citations for efforts to combat Drunk Driving, Meritorious Service Awards, and a Barnstable Police Life Saving Award.

Eric obtained a Bachelor's Degree in Criminal Justice from Western New England University and has been a member of the Massachusetts Association of Crime Analysts since 2009 where he served as Treasurer and Vice President of Administration.

Email: treasurer@iaca.net

International Association of CRIME ANALYSTS

General Conference Information

Registration Desk

The Registration Desk will be located in the Pre-function area Sunday through Thursday. The desk will be open and staffed during the following times:

Sunday	6:00 PM – 8:00 PM
Monday	7:00 AM – 5:00 PM (closed during Opening Ceremonies and for lunch from 10:00 AM – 1:00 PM)
Tuesday	7:00 AM – 5:00 PM (closed from 12:00 PM – 1:00 PM for lunch)
Wednesday	7:30 AM – 5:00 PM (closed from 12 PM – 2 PM for Sponsored Luncheon)
Thursday	8:00 AM – 5:00 PM (closed from 12:15 PM – 4:30 PM for Business Meeting and lunch)
Friday	(Closed)

Attendee Services

- **A floor plan** of the conference training rooms and exhibitor locations is included at the end of this program. **A map of downtown Louisville** is included as well.
- **Lost & Found** articles may be reported to and claimed from the registration table. After the conference, all unclaimed articles will be turned over to hotel security or sold on Craigslist! ☺
- **Name badges are required** for admission to all conference sessions, meal functions, and the exhibit hall. Conference badges and bags are available for pickup to registrants at the registration table. Lost your name badge? Go to the registration desk to obtain a replacement.
- **A charging station** for cellphones, iPads, laptops, and other devices will be located at the IACA Store during its business hours. Please bring your USB cable and/or power cable to use the charging station.
- Attendees need to bring their own laptops - none will be provided for the computer lab sessions.
- For attendees who will be self-parking overnight at the Marriott, there is a reduced rate of $16/day; their regular rates apply to all others not parking overnight.

- **Meeting Etiquette:** Sensitive to the concerns of our members, the IACA affirms the right of all individuals to function in an environment free of offensive behavior.
    - No talking during presentations and please refrain from having loud conversations directly outside of a meeting room.
    - Turn off or mute cellphones, watches and other devices during conference functions.
    - Use perfume or cologne sparingly, as others around you may be allergic.

Exhibitor Stamp Cards and Grand Prize

Upon check-in at the conference, you will receive a card displaying the logos of this year's exhibitors. As you visit each exhibitor booth and meet representatives from these companies, you'll receive a stamp on your card. Once your exhibitor stamp card is full, drop it in the designated box at the registration desk. A random drawing will take place and the winner will be announced at the IACA Business Meeting on Thursday, September 22nd in the Marriott Ballroom – Salons V & VI. The winner will receive a 32GB Amazon Fire HD 10. You must turn in your completed stamp card with your name and phone number on it before the start of the Business Meeting to qualify for the drawing. You do not need to be present to win. Good Luck!

Conference Scholarship Winners

This year, the IACA awarded full scholarships to two members who have never attended an annual training conference, and who needed fiscal assistance in order to attend for the first time. One scholarship was specifically designated for an IACA member from outside the United States. The Awards and Recognition Committee received a total of 19 entries, each including a detailed letter explaining the need to attend the conference.

The Awards and Recognition Committee is proud to recognize the following members as the recipients of this year's conference scholarships:

Megan Johnston, Lansing (MI) Police Department

Josee Arbour, Ontario Provincial Police

The winners received a waived conference fee, round-trip airfare, a four-night stay at the Marriott Downtown Louisville, and a $150 stipend. If you see either of the winners, please introduce yourself and give them a warm IACA welcome!

Conference Planning Committee

Many thanks to this year's Conference Committee for their hard work to make this event a success!

- Allison Mayer (Co-Chair), East Orange (NJ) Police Department
- Mary Bertuccelli (Co-Chair & Vendors), Scottsdale (AZ) Police Department
- Sally Rawlings (Speakers), Broomfield (CO) Police Department
- Tony Berger (Speakers), South Sound 911 (WA)
- Albert Mesa (Registrar) Henderson (NV) Police Department
- Jeanne Chisholm (Nights Out/Advertising) San Francisco (CA) Police Department
- Jessica LeBlanc (Hotel Coordinator) Fairfax County (VA) Police Department
- Jennifer Corum (Nights Out/Local Outreach) Louisville (KY) Metro Police Department
- Special thanks to Joel Hunt (NIJ) for his efforts in organizing the National Institute of Justice tracks

Hospitality Room and Networking Opportunities

Hospitality Room

The Hospitality Suite will be open on Monday, Tuesday, and Wednesday, from 8 PM - midnight. Alcoholic and non-alcoholic drinks will be served, as well as light snacks. Beverages and snacks are provided and served by **Business Watch International**. Please stop by the room and thank Business Watch International for their sponsorship. Enjoy responsibly!

Conference attendees and guests are welcome!

Welcome Reception

This is an IACA sponsored event and is FREE to all attendees. Please join us for the kick off to our conference on the **Belle of Louisville Steamboat** as we cruise on the Ohio River on Monday, September 19th from 6:30 PM – 10:30 PM.

International Reception

This is a sponsored event and is FREE to all attendees. This reception will be held at the **Marriott in Ballroom VI** on Tuesday, September 20th from 6:00 PM – 7:30 PM.

Trivia Night

This is FREE to all attendees. Please join us on Wednesday, September 21st for Trivia in the **Marriott Ballroom IX & X** from 8:00 PM - midnight! This is a great way to test your knowledge of useless facts.

Twilight Thursday – Thoroughbred Horse Racing at Churchill Downs*

Join us for a night of horse racing at the legendary Churchill Downs. The bus, sponsored by **LeadsOnline**, will leave the Louisville Marriott Hotel promptly at 4:15 PM. Races begin at 5:00 PM and the last race is at 8:30 PM. Cost is $8.00. We will have a limited number of reserved box seats. There is a food court located on the 2nd floor & $1.00 beers are available from 5:00 PM – 8:00 PM. This is going to be so much fun!

***NOTE: Tickets to this event were pre-sold. Please stop by the registration desk if you would like to be on the waiting list, or if you would like to sell your ticket(s).**

International Association of CRIME ANALYSTS

2016 IACA/NIJ Annual Training Conference Keynote Speakers

Marilyn Van Derbur

Marilyn Van Derbur was crowned Miss America while she was a student at the University of Colorado. She received a Bachelor of Arts degree, with Phi Beta Kappa honors. Van Derbur chose motivational speaking as her career and was later named "Outstanding Woman Speaker in America" after 30,000 questionnaires were sent to business and civic meeting planners asking whom they considered to be the outstanding speaker. For 16 years, she was the only woman guest lecturer for General Motors. Marilyn has received numerous awards and acknowledgments for her work, including being the first woman to be given the highest speaking award possible by the National Speakers Association and induction into the Colorado Women's Hall of Fame. With a desire to motivate teenagers as well as executives, Marilyn also became United Air Lines "Youth Speaker" and addressed 50 youth conferences each year.

During the course of her exceptional motivational speaking career Van Derbur has produced 24 films, two of which won national and international awards. One was shown on prime-time PBS and eight others have been shown in hundreds of classrooms. Marilyn is requested nationwide as a prominent convention keynote and motivational speaker, now speaking on the topic of sexual abuse prevention and recovery.

As a childhood incest survivor, she has devoted much of her adult life to raising national awareness and understanding of sexual abuse and its long-term effects. In 1989 her family funded an adult incest survivor program in Denver, and in 1993 she co-founded two national not-for-profit organizations dedicated to public education and strengthening laws protecting victims of sexual abuse.

For her tireless work in the area of childhood sexual trauma awareness Marilyn has received many awards and much recognition including, the "Exceptional Achievement in Public Service from the Secretary of Health and Human Services, Washington D.C.". Since her story of incest became public, Marilyn has spoken in over 500 cities and answered tens of thousands of letters and emails from survivors looking to her for support.

Lt. Chuck Cohen

Chuck Cohen's formal education includes a Master of Business Administration from Indiana Wesleyan University and an undergraduate degree from Indiana University with a double major in Criminal Justice and Psychology. Chuck is also a Certified Fraud Examiner.

He is a Lieutenant serving the Indiana State Police, where he has been employed since 1994. He is currently the Commander of the Cybercrime and Investigative Technologies Section. In this capacity, Lt. Cohen is responsible for the cybercrime, electronic surveillance, technical services, and internet crimes against children units along with overseeing the department's overt and covert criminal intelligence function. Chuck is the Indiana Internet Crimes Against Children (ICAC) Task Force Commander.

Chuck speaks internationally on topics including the implications of online social networks in criminal investigations and criminal intelligence gathering, cyber-crime, online fraud, money laundering, corruption investigations, and the investigation of skilled criminal offenders. He is an Adjunct Instructor at Indiana University Bloomington, where he teaches Foundations of Criminal Investigation.

Chuck testified to the 114th Congress in 2016 as a subject matter expert on encryption. Chuck was a member of the Office of the Director of National Intelligence Summer Hard Problem Program in 2008, 2009, and 2010. The 2008 study topic was "3D Cyber Space Spillover: Where Virtual Worlds Get Real." The 2009 topic was "Mixed Reality: When Virtual Plus Real Equals One." And, in 2010, the topic was "Online Social Media." He sits on the IACP Cyber Crime & Digital Evidence Committee and serves as an Association of State Criminal Investigative Agencies Cyber Crime Committee Subject Matter Expert.

He is a published author, including peer reviewed material and a cover article for Police Chief Magazine. Chuck was featured on the cover of the National White Collar Crime Center's Informant magazine and a feature guest on the syndicated radio program "The Badge" on SiriusXM. He was a subject matter expert for a Fox nationally syndicated show regarding criminal activity in online dating sites and for the Canadian Broadcasting Corporation's national news regarding criminal activity in Virtual Worlds.

International Association of CRIME ANALYSTS

Dr. Harvey Goldstein

Dr. Harvey Goldstein brings his expertise in human behavior to the strategic facilitation of difficult situations and difficult people. His executive coaching experiences crosses a wide spectrum of professionals including elite athletes, CEOs, nationally prominent politicians and corporate executive teams.

As a licensed clinical psychologist, he began his professional career studying the effects of stress on adult learning and adult development. This work led to the development of a competency-based negotiation training model. His consultation and training has been successfully applied in numerous high-risk situations such as hostage negotiations, labor management disputes and complex international financial transactions.

As a leader in the police psychology realm Dr. Goldstein founded the Law Enforcement Behavioral Science Association, and the Police Psychology Section of the American Psychological Association. Among his pioneering efforts were attention to the effects of shift work on police personnel and the establishment of a mandatory policy for traumatic incident debriefing, the first in the nation. Dr. Goldstein had served as an expert witness in high profile trials and before Congress on behavioral aspects of crisis management.

Dr. Goldstein has most recently focused on work with senior level executives, assisting them in leadership competencies for high performing teams. As Director of The Halen Group Inc. (a behavioral science and organizational development consulting firm), he has consulting and training relationships with Fortune 500 companies such as UBS, American Express, Citicorp, Time Warner, Florida Power and Light and IBM.

These activities include strategic planning, executive team development and management programs emphasizing emotional and behavioral intelligence. Dr. Goldstein is an internationally recognized speaker for conventions and sales meetings. Past assignments have included motivational seminars for the world champion New York Yankees, The M2 Executive Magazine Forum and The Public Risk Management Association.

He maintains ongoing training and consulting relationships with the Drug Enforcement Administration, Secret Service, FBI, the State Department and the New York City Transit Authority.

Dr. Goldstein has appeared as an expert on numerous network and local television and radio programs discussing behavioral science in the workplace. These include “60 Minutes”, CBS Evening News, PBS and National Public Radio, ABC’s “Nightline” and most recently an HBO production for Court TV. He has held adjunct teaching and lecture assignments at New York University, Johns Hopkins, Columbia University, the University of Denver and the University of Maryland and presently at the University of Virginia.

Dr. Derek Paulsen

Derek J. Paulsen, PhD is the first Commissioner of Planning, Preservation and Development for the city of Lexington where he oversees the divisions of Planning, Engineering, Building Inspection, Code Enforcement, Historic Preservation, Purchase of Development Rights and the Office of Affordable Housing. Prior to becoming Commissioner, Paulsen spent the previous decade at Eastern Kentucky University as a Full Professor of Criminal Justice and the Director of the Center for Crime and the Built Environment (CABE).

In addition to his work for the City of Lexington, Dr. Paulsen continues to teach 3-4 graduate classes a year and is active in research on secure design, crime prevention issues and neighborhoods and crime. Paulsen is the author of numerous articles and 3 books, including the recently published Crime and Planning: Building Socially Sustainable Communities jointly published by the American Planning Association and CRC Press. A frequent presenter at both academic and professional conferences, Paulsen has been an invited speaker at over 50 conferences on 4 continents.

Presentation Abstracts

Monday, September 19th

Cybercrime and Espionage Tactics

Room Location: Bluegrass 1 & 2 **Time:** 1:30 PM - 3:00 PM
Track: Breakout Session

Speaker: Matthew Woodward - Tulane University Police Department

It seems almost weekly that the media is broadcasting stories of cyber attacks, hacks, or crimes within the United States. Cyberspace has a massive appeal to adversaries for criminals. The risk of being caught is low, the payoff of success is great, and the tactics are faster and cheaper than other methods of espionage. Clearly cybercrime pays, but how well?

Further, some nation states and corporations consider economic espionage a tool to achieving wealth and have developed pervasive cyber operations, often called advanced persistent threats. Both China and Russia can be grouped into this category as they belligerently collect U.S. information. This presentation is designed to be a intermediate awareness course that will address the main tactics and counters used by cyber criminals and highlight some theoretical techniques and future threats.

Don't be Scared, It's Just Statistics!

Room Location: Marriott Ballroom - Salon I & II **Time:** 1:30 PM - 3:00 PM
Track: Computer Lab

Speaker: Josie Villa - Shawnee Police Department

You don't have to be a mathematician or a crime statistician to be an effective analyst; however, you do need to know how to select the appropriate statistic and properly interpret that statistic. Whether predicting a tactical crime series, preparing a monthly COMPSTAT report, or evaluating resource deployment, statistics is a consistent theme that we can't ignore - no matter how hard we try!

This presentation will explain how to operationalize key statistical concepts such as standard deviation, z-scores, correlation, regression analysis, and more. Reports that analysts produce on a regular basis will be shown, along with why certain statistics were used for each report and project. Descriptions of each statistic, along with when and how to use them, will also be explained. This presentation is geared toward both newer analysts, along with those who want to ‘up their game’ with some new tools and statistical analysis.

Real Time Crime Center

Room Location: Marriott Ballroom - Salon III & IV **Time:** 1:30 PM - 3:00 PM
Track: Breakout Session

Speaker: Michael Jackson - Houston Police Department

Real Time Crime Centers (RTCC) are centralized technology centers designed to give officers in the field and detectives instant information while processing active police investigations. The officers and analyst working at the RTCC generally have access to law enforcement databases and open source information that investigating officers may not have direct access to while in the field. This information can include, but not limited to, suspect biography, criminal histories, crime patterns, asset information, and crime scene information.

Social Network Analysis using IBM i2 Analyst's Notebook

Room Location: Marriott Ballroom - Salon VII & VIII **Time:** 1:30 PM - 3:00 PM
Track: Breakout Session

Speaker: Rachel Carson - Inspired Acts

Most analysts feel comfortable representing and visualising relationships between individuals in an association or link chart, but what do these charts really mean? Who are the controllers of information in a criminal network? Who has the greatest influence? How can operational commanders use these charts to decide what action to take to gain further intelligence or dismantle a criminal network? Social Network Analysis (SNA) uses a group of metrics to analyze relationships (links) between entities (in this case, people). The growth in the use of social media to coordinate and commit criminal activity, and the sheer scale of online social networks significantly increases the need for analytical tools and techniques which will enable analysts to interpret and communicate the relationships between people within their charts. The SNA feature in IBM i2 Analyst's Notebook is designed for that precise purpose, to allow intelligence analysts to quickly understand group structures, identify key entities within a network and understand communication flows to inform operational decision makers. This session covers the core SNA functionality in IBM i2 Analyst's Notebook and provides an interactive means of understanding the various outputs and how to use and interpret them. Involves audience participation!

Lumen by Numerica - Link Analysis and Social Network Analysis with Lumen

Room Location: Rose **Time:** 1:30 PM - 3:00 PM
Track: Exhibitor-Led Session

Speaker: Nick Coult

Linking people with incidents, vehicles, phone numbers, and other people can be a powerful method for analyzing criminal activity. As a flexible data analytics platform, backed by a scalable, high-performance graph database engine, Lumen has the capability to automatically query across multiple data sources and aggregate the information into a single link chart view. In this class I will walk through some use cases for utilizing the link analysis features of Lumen to show how you can accomplish your objectives, including the following:

- Finding likely associates of a person of interest
- Determining the influential actors in a social network
- Finding possible associations between two people

Using Data from Smart Devices and IoT and the Challenges and Risks in Privacy, Security, and Law

Room Location: Marriott Ballroom - Salon IX & X **Time:** 1:30 PM - 3:00 PM
Track: NIJ Session

Speakers: Christopher Adamczyk - Mesa Police Department; Dr. Timothy Hart - Griffith University; Dr. Michael Losavio - University of Louisville

Christopher Adamczyk: Social media heat maps, check-ins, and meta-data show us the world at the speed of life. Knowing how to acquire, analyze, and derive criminal information from these tools takes crime analysis to the next level. Learn how geolocated data combined with other known elements of social media aids crime analysts in seeing trends, identifying suspects, and preventing future incidents.

Dr. Timothy Hart: Given the extent to which mobile technologies have become integrated into our daily lives, the rich information that can be produced from paper-and-pencil Space-Time Budgets (STBs; Wikström & Butterworth, 2006), and the ecologically valid data that can be obtained from Ecological Momentary Assessments (EMAs; Shiffman et al., 2008), the current study investigated whether electronic Space-Time Budgets (eSTBs), administered as a series of EMAs, yielded accurate and reliable information about person-place interactions. Findings suggest that both researchers and practitioners could use eSTBs delivered on mobile devices to collect detailed information about victimization-risk exposure, from individuals engaged with their everyday activity spaces.

Dr. Michael Losavio: IoT and GIS are key for a "Smart City," a data-driven urban environment that leverages ICT to enable modelling and visualization within "an intelligent community framework." The growth in analytic power and inference depends on data generated in Smart Cities. It presages unprecedented potential for the modelling, profiling and prediction of human behavior, including the deviant and criminal. The richness of this spatio-temporal data modelling and statistical inference challenges social and legal bounds of privacy and personal security. We examine current and future challenges in the context of technology and U.S. law.

Investigative Uses for License Plate Reader Data

Room Location: Bluegrass 1 & 2 **Time:** 3:30 PM - 5:00 PM
Track: Breakout Session

Speaker: Alex Schneider - Arlington Police Department

Automatic License Plate Readers (ALPR or LPR) have become an invaluable tool for law enforcement in recent years. Many agencies use LPR for real time responses, such as recovering stolen vehicles and easily locating vehicles on agency "hot lists". However, stored LPR data can also be used to facilitate in the identification and apprehension of suspects. We will discuss several novel investigative uses for LPR including: partial plate identification, observing the criminal's pattern of behavior, accessing photographs of the actual suspect vehicle, finding new residences, and finding rare makes/models in specific neighborhoods. At the Arlington Police Department, stored LPR data has assisted with a variety of cases, ranging from major homicide to serial burglary. This presentation will discuss the uses and data mining techniques, along with illustrative case studies, that will make LPR an essential part of your investigative process.

REACT - Real-time Electronic Area Canvassing Tool

Room Location: Marriott Ballroom - Salon I & II **Time:** 3:30 PM - 5:00 PM
Track: Computer Lab

Speakers: Candace Hammond - Chandler Police Department; Chris Delaney, CLEA – ESRI

When an area canvassing map is needed to search for a missing child, evacuate a high risk area, or for notifications of public safety issues, expediency of visual status updates is a tremendous benefit to both the incident commander and the field officers. This need has historically been met at a basic level with printed aerial maps distributed to the incident scene; however, it can easily take over an hour to create and print the maps and then additional time to distribute to the scene. Now, imagine that the call comes in to your crime analysis unit for an aerial map to search for a missing child and you can quickly create the map, send an email or text to the incident commander with a link to a parcel map that they can distribute electronically to the incident personnel, all in less than 15 minutes. The field officers use their smart device to click on a parcel to indicate if contact was attempted or made and in real time the incident commander knows the exact status of the incident search to deploy further resources if necessary and to accurately update stakeholders. Does it sound too good to be true? What if you could provide this innovative service tool to your agency with no additional costs because it uses existing technology? This presentation will show you how it can be done.

How to Prepare Effective and Useful Law Enforcement Presentations

Room Location: Marriott Ballroom - Salon III & IV **Time:** 3:30 PM - 5:00 PM

Track: Breakout Session

Speaker: Annie Thompson - Fairfax County Police Department

Many sworn law enforcement personnel and analysts are responsible for preparing presentations in their profession. It is important to reiterate some of the basic concepts to preparing an effective and useful presentation. This presentation will address some of the more common mistakes made in presentation preparation. PowerPoint has been considered the “premier” presentation software in almost every professional realm. There are others that are just as effective; however, regardless of the presentation software or application, the standards for a good presentation will never change. The purpose of this session is to help the audience enhance presentation preparation skills or continue to improve learned skills. If the user is a novice, hopefully this session will explain the importance of using PowerPoint or any other presentation software properly. Even more experienced users can benefit from some refresher points. It will also help the audience readily identify the many pitfalls that can cripple a good presentation. Many of these pitfalls are unknown to the users. Your presentation should help get your point across and not confuse the audience or hinder your effectiveness in delivering your information.

The primary objectives will focus on:

- Understanding the importance of an effective presentation
- Identifying PowerPoint sins or pitfalls and provide informational tips
- Discussing the importance of formatting, color, fonts, backgrounds, animation, transition
- Explaining uses of a law enforcement presentation

Analysis and Homicide Investigations - The Ryan Lane Homicide

Room Location: Marriott Ballroom - Salon VII & VIII **Time:** 3:30 PM - 5:00 PM
Track: Breakout Session

Speaker: Trish Pace and Christina Witt - Calgary Police Service

In today's world, criminal investigations are becoming increasingly complex and are comprised of more information than ever before. Analysts now work hand in hand with investigators, from the initial call through the conclusion of the court process.

This case study will cover the investigation into the disappearance of Ryan Lane in 2013, following his first court-directed visitation with his daughter in two years. We will cover the initial call through the successful conviction of the three suspects. Multiple investigative and analytical techniques were utilized throughout this file; including production order analysis, a large-scale search, complex undercover scenarios, wire taps, related “stims" and search warrants executed on multiple locations. We will also cover how the Analyst was utilized by the Crown Prosecutor to present key evidence in the trial with two days of testimony and cross examination by three Defense Attorneys.

Media Sonar - Using Social Media for Investigations and Intel

Room Location: Rose **Time:** 3:30 PM - 5:00 PM
Track: Exhibitor-Led Session

Speaker: Chris Adamczyk - Mesa Police Department

The role of Social Media in today's investigative process has changed. In the early stages, people would post text and images of exactly what they were doing, and the location would be part of the metadata. In today's world, this is not always necessarily the case. Does that mean social media no longer plays a part in investigations? Actually, the truth is quite the opposite – social media can be more important than ever in today's policing world.

Uses of Social Media is evolving rapidly, as is the content that people are sending. As such, the right tools are needed to keep up with where today's threats and criminals are already entrenched. This presentation will highlight processes and best practices with an eye towards helping today's analysts be more efficient and effective with their online investigations.

Risk Terrain Modeling in Action - Case Studies of Crime Prevention and Risk Reduction

Room Location: Marriott Ballroom - Salon IX & X **Time:** 3:30 PM - 5:00 PM
Track: NIJ Session

Speakers: Jeremy D. Barnum - Rutgers Center on Public Security; Capt. James Nolette - Fayetteville (NC) Police Department; Kimberly Richards - Fayetteville (NC) Police Department; Dr. Dyann Daley – Cooks Children's Medical Center; Lt. James Sarkos - Atlantic City Police Department

Jeremy D. Barnum: This presentation provides a broad overview of Risk Terrain Modeling (RTM). It begins with a brief introduction to the key conceptual underpinnings of RTM as a spatial analysis tool for public safety. Next, it will describe the basic procedures involved in RTM, including data collection, model parameterization, and analysis. Finally, it will discuss the results of a Risk Terrain Model and how such information can be translated into actionable intelligence to inform practical and sustainable solutions to ongoing problems, primarily within the context of existing research.

James Nolette: In 2012, the Fayetteville Police Department (FPD) and the Rutgers Center on Public Security partnered to deploy Risk Terrain Modeling (RTM) to reduce violent crime. Five target areas were identified as being responsible for a substantial share of Fayetteville's violent crime problem. Risk factors specific to each area were identified and risk-reduction interventions were developed to alter the conditions of each area. Interventions were coupled with traditional enforcement and community outreach. Analyses determined that violent crime declined in all target areas and citywide. Crime reductions were achieved via data-driven smart policing approaches that were sustainable in the long-term.

Dr. Dyann Daley: Child maltreatment prevention has been elusive, partly due to difficulty in identifying vulnerable children before they are harmed. This study employed Risk Terrain Modeling (RTM) to forecast future child maltreatment. The model is superior to commonly used hotspot predictions because: 1) high risk areas for future child maltreatment are identified with unprecedented precision; 2) it aids the prioritization of risk-mitigating efforts by informing about the relative importance of significant risk factors; and 3) it is more robust against potential biases. The present study discusses the power of RTM to aid efforts to improve the safety and well-being of vulnerable children.

James Sarkos: The Atlantic City Police Department (ACPD) and Rutgers Center on Public Security partnered in late 2015 to utilize Risk Terrain Modeling (RTM) to more strategically deploy resources for long-term crime prevention. This presentation specifically focuses on the ACPD's use of the "ACTION" model, a framework for risk-based interventions that stands for assessment, connections, tasks, interventions, outcomes, and notifications. The purpose is to harness the information produced by RTM to better understand risky locations, coordinate tasks, develop and implement targeted interventions, evaluate procedures and outcomes, and communicate with stakeholders. The ACTION model structured the risk-based policing process deployed by the ACPD.

Tuesday, September 20th

Hometown Security - The Analysts Role in Homeland Security and Community Policing

Room Location: Bluegrass 1 & 2 **Time:** 1:30 PM - 3:00 PM
Track: Breakout Session

Speaker: Glen Mills - Burlington Police Department

Most large enforcement agencies have full time teams of personnel dedicated to homeland security duties, but what about smaller agencies or agencies that can't afford their own dedicated units? What about community policing? Can an agency effectively engage the community and form community partnerships while simultaneously protecting the homeland against today's threats?

This presentation will discuss a simple plan to implement a program that will enhance your agencies homeland security efforts, intelligence sharing capabilities, emergency preparedness and most importantly, your community policing efforts.

This program will be especially helpful for the public safety analyst with limited time and resources, and will show how one can play a vital role in enhancing community relations while building lasting partnerships that will reduce crime, enhance community safety and build community resilience against all hazards.

Queries and Functions in Microsoft Access

Room Location: Marriott Ballroom - Salon I & II **Time:** 1:30 PM - 3:00 PM
Track: Computer Lab

Speaker: Jason Elder - Vanderbilt University

This lab will introduce how to create various types of queries in Microsoft Access. It will also introduce how to write many functions in these queries. These functions are similar to writing formulas in Microsoft Excel and are very useful in transforming data for better understanding. The instructor will be teaching the lab using Microsoft Access 2010, but students can use versions 2007 or 2013. Students wishing to participate in the hand-on portion of the lab are required to bring their own laptops and have Microsoft Access 2007 or 2013 installed prior to the start of the session. The lab data will contain all queries, so students will not spend much time typing.

Using Trello for Project Management

Room Location: Marriott Ballroom - Salon III & IV **Time:** 1:30 PM - 3:00 PM
Track: Breakout Session

Speaker: Kyle Stoker - Raytown Police Department; Angela Backer-Hines - Eagan Police Department

Need help getting things done? Have you ever wished you were more organized? Then Trello is for you! Trello is an awesome, completely free, project management app that you can use alone or with a group to wrangle your task list into shape. It's intuitive and easy to use and anyone can get started in just a few minutes. The concept behind Trello is the kanban board, which at its simplest is just a cork board on your office wall. Units of work are represented by sticky notes or index cards, sorted into columns. As you work on or complete tasks, you can move the cards between lists and then archive them once they are done. Trello takes those cards and super charges them by adding comments, attachments, and color coded labels, while a powerful search function keeps everything at your fingertips. Apps for every platform keep your project board accessible wherever you are. It has all the flexibility of cards on a cork board, without the clutter and drawbacks of physical paper. Trello's collaboration features allow everyone in the group to be on the same page and access shared resources. Cards can be assigned to specific members and the commenting system allows you to keep the conversation specific to an individual card. In this presentation, members of the IACA's Training Committee will demonstrate live how they use Trello to plan for dozens of classes and manage hundreds of students every year.

Predictive Analytics from the Ground Up - Implementing and Operationalizing Intelligence-Led Policing in the Fight Against Violent Crime

Room Location: Marriott Ballroom - Salon VII & VIII **Time:** 1:30 PM - 3:00 PM
Track: Breakout Session

Speakers: Antonio Sajor - Stockton Police Department; Ruth Padilla - Lexis Nexis

This presentation will detail how the Stockton Police Department went from having no predictive capacity, into being one of the most progressive and innovative agencies in this critical area. Attendees to this session will learn how to implement predictive policing in their respective agencies, as well as how to operationalize forecasts and predictions and how to evaluate and adjust predictive models. Perhaps most importantly, attendees will learn first-hand how critical command level buy-in can be in the process and how best to obtain it to ensure a successful implementation of Predictive Policing.

Business Watch International - Intelligence from Secondhand Businesses

Room Location: Rose **Time:** 1:30 PM - 3:00 PM
Track: Exhibitor-Led Session

Speaker: Jack Gee

There is a location in your jurisdiction that of the people that frequent it:

- 60% have an arrest history for narcotics
- 30% have an arrest history for sex offenses
- 90% have a criminal record

This is the average for customers of your local pawnshops and secondhand dealer. It is not just about property crime. Intelligence for many types of crimes and offenses can be derived from the information given by these shops. An investigator only needs to know what to look for.

This class will provide the investigator a working knowledge on methods to identify criminal activity by targeting the, “red flags”, found in the data provided by these businesses. This class will show what to watch for and how to utilize the information once it is found.

In addition the class will express the advantage of a partnership between law enforcement and the businesses. A working relationship between the police and the industry has proven effective in past cases from Organized Retail Crime, hunting down fugitives, and aiding in a nationwide manhunt for a serial killer.

Open Source Strategic Forecasting Workshop

Room Location: Marriott Ballroom - Salon IX & X **Time:** 1:30 PM - 3:00 PM
Track: NIJ Session

Speaker: Dr. Isaac T. Van Patten - Roanoke Police Department

Forecasting is at the heart of most strategic analyses. There many different approaches to predicting future crime events; some are very accurate and some not so much. Participants will learn to make sophisticated, accurate strategic crime forecasts using common office software. Using Microsoft Excel, Microsoft Access, CrimeStat IV, and the statistical software R, participants will learn how to prepare "one-step ahead" crime forecasts. Two different methods will be demonstrated; one using the CrimeStat IV platform and the other using the R platform as a standalone for building forecast models. Participants should bring their own laptop and sample data will be provided.

Required for this workshop: Data files and installers for R & RStudio can be found at:
https://www.dropbox.com/sh/aant7r2w2bogr4w/AADPgkqsO8rYnmqbvJwykjVua?dl=0
Also, to install the most up-to-date versions of R go here: http://cran.r-project.org/
To install the most up-to-date version of RStudio go here: http://www.rstudio.com

Understanding Non-Traditional Gangs On a Local Level

Room Location: Bluegrass 1 & 2 **Time:** 3:30 PM - 5:00 PM
Track: Breakout Session

Speaker: Alex Schneider - Arlington Police Department

Traditional gangs such as the Crips and Bloods are familiar to most in law enforcement. Increasingly non-traditional gangs are developing across the country, in both large and small towns, which have a more fluid structure and hierarchy. Modern law enforcement must adapt to this new gang model to be effective. This presentation will focus on understanding these non-traditional gangs and their inter-relationships. We will examine the differences between traditional gangs and non-traditional gangs, and discuss the implications for law enforcement personnel and their training. Using real examples from Arlington, Texas, we will discuss the importance of understanding gangs at a local level.

Crystal Reports – Overcoming Data Challenges from Law Enforcement Records Management Systems

Room Location: Marriott Ballroom - Salon I & II **Time:** 3:30 PM - 5:00 PM
Track: Computer Lab

Speaker: Michelle Chitolie - Port St. Lucie Police Department

As an analyst making data connections from record management systems (RMS) utilizing Crystal Reports can be challenging due to various reasons. It can be lack of knowledge of the searchable fields within the RMS, insufficient training, and/or inefficient data entry into the system. Regardless of the reason, we all recognize data will never be perfect. So, how do we deal with the situation? This course will demonstrate ways to capture imperfect data, find trends/patterns within the data, and different ways to find that “needle in the haystack” that may provide support to a Criminal Investigation using Crystal Reports. This presentation is directed towards all support staff of law enforcement agencies that have the need to retrieve data quickly, analyze trends/patterns, and/or assist in criminal investigations.

Free Resources for the Crime Analyst

Room Location: Marriott Ballroom - Salon III & IV **Time:** 3:30 PM - 5:00 PM
Track: Breakout Session

Speaker: Glen Mills - Burlington Police Department

No matter the size of your agency we have all wanted to do something as investigators, officers or analysts that we just couldn't find the resources to do. Usually, these limitations are due to financial restrictions as there is not one public safety agency with an unlimited budget.

This presentation will focus on ways to stretch your limited (or non-existent) budget through the use of free tools and resources found on the internet. You and your agency can spend less time and energy on developing technological resources and focus more on increasing communication with the public, operating more efficiently and providing the highest level of training to your personnel.

The variety of free resources available is staggering and this will be a fast paced demonstration of several cost-saving tools available to you and your agency.

In-Progress Tactical Analysis - Prepare Yourselves

Room Location: Marriott Ballroom - Salon VII & VIII **Time:** 3:30 PM - 5:00 PM
Track: Breakout Session

Speaker: Annie Mitchell - Los Angeles County Sheriff's Department

It could happen to anyone, anywhere at anytime. Sadly, we live in an era of unspeakable acts of violence that could affect the lives of numerous innocent victims. What role can or should an analyst playing during such an event? Analysts have the ability to provide vital information to field and investigative personnel during a number of in-progress scenarios. This presentation, through case studies and interviews with analysts that were put in such a position, will provide insight that will help analysts prepare themselves for a critical incident within their agencies.

Geotime by Uncharted: Cellphone Data - Formatting, Analysis, Mapping, and Presentation

Room Location: Rose **Time:** 3:30 PM - 5:00 PM
Track: Exhibitor-Led Session

Speaker: Adeel Khamisa

Cellphone data plays an increasingly relevant role as evidence in many of the cases analysts support. This presentation is designed to provide an overview of more up-to-date methods of handling cellphone records, beyond Microsoft Excel. It will address common mistakes analysts make in requesting, formatting and presenting cellphone data from call detail records (CDRs) and mobile forensic extractions. The presentation will also focus on easily identifying a suspect's pattern of life and how to present that in court. All attendees will have the opportunity for a follow-up online hands-on training session for practical application.

Repeat and Near Repeat Analysis

Room Location: Marriott Ballroom - Salon IX & X **Time:** 3:30 PM - 5:00 PM
Track: NIJ Session

Speakers: Dr. Travis Taniguchi - RTI International; Philip Glasner - SynerGIS Informationssysteme GmbH; Lorie Velarde - Irvine Police Department; Dr. Yan Zhang - Sam Houston State University

Dr. Travis Taniguchi: For over a decade research has shown that once a burglary occurs on a street, the homes on that street and on nearby streets are at a much higher risk of burglary over the next one to two weeks. We developed an open source utility to identify the areas at high risk of being burglarized and randomly assigned them to treatment and control conditions. Residents in the treatment areas were quickly notified that they were at an increased risk for a burglary and provided with burglary prevention techniques that could be used to reduce the risk of further burglaries. The effects of the intervention on crime, citizen perceptions, and agency volunteers will be discussed.

Philip Glasner: Recently, first attempts have been made to predict future crime locations in Austria using well-known techniques already applied in the US and the UK. A just concluded research project proved that the concept of near repeats offers a great value in forecasting residential burglaries in Vienna, Austria. A software application notifies law enforcement agencies whenever the analysis of a recent burglary event reveals to be likely a near repeat of a previous event. Several triggers are used to detect various patterns and thus the possible existence of serial offenders, allowing law enforcement agencies to deploy resources more effectively.

Lorie Velarde: The Irvine Police Department developed a daily forecast map for residential burglaries. This project is a variation of Philip Glasner's work on crime predictive analysis and adds structural and temporal information to the daily forecast map. The process is completely automated from map creation to distribution. The typical daily forecast covers about 6% of the city and forecasts about 66% of new burglaries. This presentation breaks down the process so it can be replicated at other agencies. Map examples are shared as well as feedback from patrol officers on its use in the field.

Dr. Yan Zhang: We use ballistics hit reports data (NIBIN hits) from the Houston Police Department between 2000 and 2012, to examine the spatial and temporal patterns of repeat criminal gun use in Houston. We find a moderate, positive association between the distance a firearm traveled (from one crime to the next) and the time that elapsed between crimes involving the same gun. The magnitude of the relationship varied by offense types. Overall, more than 40 percent of the firearms traveled in relatively short distances (either within the same or to the adjacent neighborhood).

Wednesday, September 21st

Evaluating Crime Analysis Units – A Case Study

Room Location: Bluegrass 1 & 2 **Time:** 8:30 AM - 10:00 AM
Track: Breakout Session

Speaker: Jessica Herbert - Office of Justice Programs Diagnostic Center

The U.S. Department of Justice, Office of Justice Programs Diagnostic Center is a technical assistance resource for state, local and tribal policymakers seeking to implement data-driven strategies to make decision about justice programming and improve public safety in their communities. This presentation is a case study of the Fayetteville (NC) Police Department's recent efforts to grow data-driven processes and solutions to support their public safety objectives. After combining intelligence and crime analysis units in an effort to streamline analytical processes and enhance analytical output for their community, leaders requested the Diagnostic Center's assistance in evaluating their processes and identifying promising practices in enhance their analytical output.

Developing A Custom Calls-For-Service Dashboard

Room Location: Marriott Ballroom - Salon I & II **Time:** 8:30 AM - 10:00 AM
Track: Computer Lab

Speaker: Manny San Pedro - IACA & IALEIA

This workshop will introduce the analyst to Excel Slicers to create a visualization of Calls-for-Service data in a Dashboard environment. Analysts will perform some data manipulation through functions. Analysts will also learn how to connect to a remote data-source and will develop a custom calls for service dashboard in Microsoft Excel at the completion of the workshop.

Combatting Drug-related Crime

Room Location: Marriott Ballroom - Salon III & IV **Time:** 8:30 AM - 10:00 AM
Track: Breakout Session

Speaker: Friedrich Steiner - Austrian Federal Police

Combatting acquisitive crime is not very popular in many police agencies because most is petty crime and the officers have to fight against major crime types. The annual damage is more than high and a successful fight against these offenders also increases the acceptance of the police. I will show you a simple way to extract RMS data from certain cases and put them straight into an "analyst working file"

(database), searchable and not against the privacy policy. This presentation inclcudes case studies regarding how the database was successfully used by my officers.

Not Yo Mama's COMPSTAT

Room Location: Marriott Ballroom - Salon VII & VIII **Time:** 8:30 AM - 10:00 AM
Track: Breakout Session

Speaker: Wendy Ethridge - Denver Police Department

Are you and your agency tired of the same old COMPSTAT process? Are you being tasked with helping to stand up a COMPSTAT process from scratch? If so, this is the presentation for you. See how the Denver Police Department (DPD) has used advanced analytics to create a cutting edge accountability model and how you can utilize the lessons learned to do the same thing in your agency.

The DPD uses data and analytics to drive decisions and hold staff accountable in all areas of department operations. This approach puts analytics in the hands of all levels to help make better, more informed decisions. Weekly Command Operation Review and Evaluation meetings, known as "CORE", are modeled after the COMPSTAT process of utilizing statistics to analyze police work. CORE also adds in a second component, a robust analytical platform that provides an avenue to have meaningful conversations about accountability, productivity and innovative policing in the City of Denver. This presentation will show how any agency can implement an effective accountability model, similar to CORE, which engages key stakeholders within the agency to formulate strategic, data driven responses to current and emerging crime problems. What sets the CORE process apart from others is the integration and use of advanced data analytics before, during and after meetings to create response plans as well as measure their effectiveness and outcomes.

Blue-Light - Analyst's Notebook Premium Importing and Analysis in the Cloud

Room Location: Rose **Time:** 8:30 AM - 10:00 AM
Track: Exhibitor-Led Session

Speakers: Ed Boggess; Bryan Pardoe

The IBM i2 Analyst's Notebook Premium software allows an analyst to rapidly turn vast, disparate data sets into actionable intelligence that will identify, predict, prevent and disrupt criminal, terrorist and fraudulent activities. It combines data storage, analysis tools, visualization and dissemination capabilities. It features a flexible data model and a comprehensive range of visual analysis tools which are designed to help users discover key individuals, connections, relationships, events, patterns and trends that may otherwise have been missed. Analysts who use this software are able to:

- Significantly reduce time to discover and deliver high-value intelligence
- Quickly identify patterns in data that would otherwise be missed
- Achieve data transparency both within and across investigations

- Communicate results in an easy-to-understand and compelling way

Blue Light LLC is an IBM Strategic Partner and will be hosting this session utilizing the IBM i2 Analyst's Notebook Premium software hosted in the cloud. The goal of this training will be to improve an analyst's overall ability to effectively collect, collate, interrogate, filter, and disseminate information into actionable intelligence and disrupt criminal, terrorist and fraudulent activities. Key subjects covered during this session will be:

- Importing data into i2 Analyst's Notebook Premium
- Identify key people events, connections and patterns using innovative features like social network analysis, "list most connected" and "find connected networks"
- Store structured and unstructured data in an analysis-ready format within a single location
- Accelerate information discovery using available, locally stored data by employing exact and fuzzy searching techniques simultaneously across structured and unstructured data
- Unlock the value of information and intelligence in existing charts by searching individual chart items while stored directly in an analysis repository

All analysis will be conducted in the New i2 Analyst's Notebook Interface (Version 9.0.3) which will highlight new analytical features and functions released in that latest version.

Using Predictive Analytics in Denver - Evaluating the Data and Software (Workshop)

Room Location: Marriott Ballroom - Salon IX & X **Time:** 8:30 AM - 10:00 AM
Track: NIJ Session

Speaker: Shellie Solomon - Justice & Security Strategies, Inc.

Predictive policing is based on the premise that crime can be accurately forecasted for small enough geographic areas and on reasonable enough time frames to enable police agencies to adequately deploy officers to potential problem areas. Through the NIJ funded study and in collaboration with the Denver (CO) Police Department, researchers from Justice & Security Strategies, Inc. examine the process of predictive policing and its components, specifically the role of reliable and useful data; and predictive analytics and algorithms. For this presentation, JSS will discuss tools and processes to evaluate departments' data and to assess predictive analytics software.

Implementing Social Media Intelligence

Room Location: Bluegrass 1 & 2 **Time:** 10:15 AM - 11:45 AM
Track: Breakout Session

Speaker: Sabih Khan - Skokie Police Department

The presentation is a case study of how a police department created its first intelligence unit, the tools it acquired to help officers set up the social media monitoring program, methods and good practices on creating accounts, techniques for monitoring social media platforms, and gathering intelligence using social media platforms such as Facebook, Instagram, Snapchat, Twitter, etc. The presentation will provide examples of incidents/cases that were solved through the use of social media, prevent gang retaliation, and monitor criminal activity.

The presentation will also cover good practices, policies that a police department should create, and privacy issues that arise in social media. Audience members will walk away from the presentation having a set of tools they know are available to help them with Social Media Intelligence. In summary, an analyst will have better understanding of how a police department can start leveraging social media.

Automating Your Products Using Your Desktop PC

Room Location: Marriott Ballroom - Salon I & II **Time:** 10:15 AM - 11:45 AM
Track: Computer Lab

Speaker: Lorie Velarde - Irvine Police Department

Analysts are often tasked with creating the same reports, maps, or products daily, weekly, and monthly. What many analysts don't realize is that many of these processes can be automated, and you don't need to purchase new software or learn complicated scripting. This presentation shows analysts how to create workflows that minimize analyst interaction, create macros and batch files, automate the process of creating a PDF, create scripts that email products to end users, and schedule tasks. Sample reports and products are included.

In Context - Understanding Police Killings of Unarmed Civilians

Room Location: Marriott Ballroom - Salon III & IV **Time:** 10:15 AM - 11:45 AM
Track: Breakout Session

Speaker: Nick Selby - Midlothian PD

There are challenges and problems with police killings, but they are more nuanced than the current public perception and media narrative. To change things, we first must engage in data-driven dialogue to understand them. This session will explore a study of the metrics and findings of incidents where police killed unarmed citizens, and discuss the low-hanging fruit suggested by our year-long research project.

Creating Effective Bulletin and Map Masterpieces from Scratch

Room Location: Marriott Ballroom - Salon VII & VIII **Time:** 10:15 AM - 11:45 AM
Track: Breakout Session

Speaker: Mike Winslow - Scottsdale PD

A well constructed bulletin/map provides officers/investigators with a comprehensive review of data without having to read through a stack of reports. This session is meant to serve as an introduction to bulletin creation and crime maps. Are you looking to make your products stand out above the rest? Do you want people to see your name and know that the attached products are always worth looking at? This session will provide students with the tools necessary to answer yes to both of these questions!

LexisNexis Risk Solutions - Clash of the Titans: Combining Two of the Most Successful Policing Initiatives

Room Location: Rose **Time:** 10:15 AM - 11:45 AM
Track: Exhibitor-Led Session

Speakers: Tom Sizer; Josh Levin

Predictive Policing has clearly taken hold throughout the US as one of the most effective policing techniques to help reduce the number of crimes that occur in a given jurisdiction. Offender based programs have helped law enforcmeent focus on who is responsible for the crimes that are being committed. While these two methodologies align with the two main purposes of law enforcement, preventing crime and solving crime, they are traditionally viewed as two separate policing philosophies. Why?

This session will demonstrate that not only do these two philosophies work extremely well together, but that when combined properly their sum is far greater than the parts.

Improving the Forecasting of Crime with Probability Risk Surfaces

Room Location: Marriott Ballroom - Salon IX & X **Time:** 10:15 AM - 11:45 AM
Track: NIJ Session

Speaker: Dr. Michael Leitner - Louisiana State University

This presentation details current probability risk surface models, including the Risk Terrain Model (RTM) developed by Caplan and Kennedy, that have several limitations that include the collection of all potential risk factors, the selection and weighting of final risk factors having a statistically significant relationship with crime, and the identification of forecasted areas in the computed risk surface that the police should direct their resources to. This presentation addresses such limitations and suggests

innovative and alternative approaches that increase the models' predictability and, ultimately the efficient commitment and distribution of law enforcement resources.

Analysts without Borders - Analyzing Cross-Jurisdictional Criminality

Room Location: Bluegrass 1 & 2 **Time:** 2:15 PM - 3:45 PM
Track: Breakout Session

Speaker: Ruth Padilla - Sacramento Police Department

Investigations involving several jurisdictions is challenging. Criminals have expanded the boundaries in which they operate thanks to the internet, social media and eCommerce sites. Each jurisdiction has different resources available, whether it is the number of analysts, types of software, or connections to other law enforcement agencies. In this session, we will discuss the challenges, and the rewards associated with information sharing, and the benefits of a crime analyst dedicated to analyzing crime beyond the borders of local law enforcement agencies. Case Studies will be utilized to illustrate these elements. An emphasis will be placed on the importance of establishing communication throughout the entire region. The presenter will offer some best practices for cross jurisdictional analytical collaboration.

Crime Mapping - Web-based GIS for Law Enforcement

Room Location: Marriott Ballroom - Salon I & II **Time:** 2:15 PM - 3:45 PM
Track: Computer Lab

Speaker: Stacy Belledin – ESRI

Are you an analyst that has used ArcMap in your office and wondered how you could upload your maps for you customers? Are you a new analyst or law enforcement professional that would like mapping capabilities? This course will focus on how you can either start with or extend your GIS capabilities using ArcGIS Online. ArcGIS Online will allow you to perform analysis, share maps and information within your organization and the public, and allow you to empower non-GIS users with tools for mapping and analysis, supporting the entire agency. For this class, just bring a laptop with internet access, no special software is needed.

You Create Great Analytical Products But Does Your Department Use Them? Tips for You To Enhance Your Department's Use of Crime Analysis

Room Location: Marriott Ballroom - Salon III & IV **Time:** 2:15 PM - 3:45 PM
Track: Breakout Session

Speaker: Jamie Roush - CRH Analysis Consulting

It's a familiar story; crime analysts often produce sound analytical products for their organizations only to find the actual use by the department is varied and inconsistent. Due to their direct supervision or placement within the organization, analysts often find themselves wanting to make effective change but unable to do so. By sharing concrete examples, this presentation will provide tips to enhancing the use of crime analysis in any department.

Analyst Case Study - Thou Shalt Not Steal/DyNoMite Bandit Bank Robbery Series

Track: **Breakout Session**

Room Location: Marriott Ballroom - Salon VII & VIII **Time:** 2:15 PM - 3:45 PM
Track: Breakout Session

Speaker: Mike Winslow - Scottsdale PD

Over the course of 4 years, a highly skilled bank robber operated throughout the greater Phoenix Valley. This serial offender had a particular set of skills, skills that made him quite successful at taking banks down. His initial, unique appearance had Local and Federal agencies dub him as the "Thou Shalt Not Steal Bandit"; however, an unexpected shift in MO caused investigators to wonder if his name should be changed to the "DyNoMite Bandit" or if another bank robber was attempting to stake his claim on the Valley. The entire series will be reviewed with each hit examined, along with reviewing each analytical product produced. This class will provide a fascinating case study, insight to working in partnership with the FBI, and offer various tips and tricks for working future robbery series.

Business Watch International - Using Modern Technology in Regulated Business and On-line Investigations

Room Location: Rose **Time:** 2:15 PM - 3:45 PM
Track: Exhibitor-Led Session

Speaker: Jack Gee

Modern investigations entail much more than it did 20 or even 10 years ago. With the growth of on-line merchant sites like Craigslist and Back Page, plus social media sites like Facebook; online investigation is a must for every type of case. If you are not doing profile or property checks on line then you are

missing important intelligence that may make your case. These types of investigations can be time consuming. However, there is technology out there that can make examination of online data simple and quick. Much of the tools available to the investigator does much of the work in the background while they concentrate on other aspects of the case..

Examples of investigations into pawnshops, Craigslist, eBay, and Facebook will be examined using state of the art technology. Training will include methods to use this technology to not only be reactive but proactive in a wide variety of investigations.

Research Practitioner Partnerships

Room Location: Marriott Ballroom - Salon IX & X **Time:** 2:15 PM - 3:45 PM
Track: NIJ Session

Speakers: Alex Wagner - Fisher College; Dr. Jerry Ratcliffe - Temple University; Dr. Travis Taniguchi - RTI International; R. Renee Richardson - Richmond Police Department

Alex Wagner: Research and practitioner partnerships can provide benefits to both domains while simultaneously helping to improve criminal justice overall. This presentation will highlight an example of such a partnership in which the participation of both realms is necessary to improve the use of crime statistics. This includes successful steps as well as struggles of building and maintaining these partnerships through every phase of the research project. Findings from a random sample from the National Incident Based Reporting System of 480 incidents of aggravated assault, simple assault, sexual assault and intimidation in Massachusetts from 2011 to 2013 will be presented.

Dr. Travis Taniguchi and Dr. Jerry Ratcliffe: Research-practitioner partnerships have numerous benefits. Researchers benefit from applying research and analytic methods in a real world environment and can help evaluate and guide public policy based on the best available scientific evidence. Law enforcement agencies can take advantage of advanced statistical and methodological capabilities that would otherwise be unavailable.

Yet these partnerships are not without their challenges. Law enforcement agencies may not immediately see the value in partnering with researchers especially when those research products may portray the agency in a negative light. Researchers may not want to deal with the tumultuous and often tentative relationships that can develop between researchers and practitioners. Researchers may make unreasonable demands for operational changes in a department while practitioners may have implausible timelines for conducting research, analysis, and provisioning findings.

Panelists will discuss their experiences working in evidence-based research-practitioner partnerships. They will highlight the benefits and challenges of these relationships. Examples of challenging yet successful collaborations will be given.

R. Renee Richardson: You're law enforcement, they're researchers/practitioners: Can we partner? Are there benefits to partnering? How do we partner? What needs to be put into place to establish the

partnership? Are just some of the questions that arise, but the outcome of such a partnership can glean support, strategies, knowledge, sharing and a partnership that continues to grow. The Richmond Police Department has such partnerships with VCU and GMU. I'll discuss how we established and maintain such partnerships to support the Department and the Crime Analysis Unit.

How to investigate Classifieds, E-commerce, and Social Media

Room Location: Bluegrass 1 & 2 **Time:** 4:00 PM - 5:30 PM
Track: Breakout Session

Speaker: Allen Atamer - LTAS Technologies Inc.

The course provides hands-on tips and instruction on investigating websites, such as Craigslist, eBay, Facebook, Twitter, and Instagram. Techniques such as evidence collection, image analysis, metadata analysis, and link analysis are covered. The course also covers common techniques on how individuals can circumvent investigative searches to perpetrate fraud and how to address them using various free and paid tools.

Basic Excel Analytics for Dummies

Room Location: Marriott Ballroom - Salon I & II **Time:** 4:00 PM - 5:30 PM
Track: Computer Lab

Speaker: Katharine Haydar - Jonesboro Police Department

New analysts are welcome. This basic introductory course will cover Microsoft Excel software as it pertains to analytics. Many aspects of Excel will be viewed, such as: basic sorting and filtering, pivot tables to summarize data, conditional formatting to show patterns at a glance, charts (bar, line, pie, scatter, surface) and their best uses, common functions (average, standard deviation, vlookup, text [known as the format function in access], sum), text-to-columns, remove duplicates, and data analysis (correlation, descriptive statistics, histogram, regression).

Cops on Dots - Lessons Learned While Testing Police Analytics

Room Location: Marriott Ballroom - Salon III & IV **Time:** 4:00 PM - 5:30 PM
Track: Breakout Session

Speaker: Barry Fosberg & Paige Burley - Houston Police Department

Law enforcement agencies are searching for and being offered software products under the category of Police Analytics or Predictive Policing solutions. These packages come with convincing demonstrations. Only occasionally is it possible for an agency to directly test vendor claims. Over a period of months the HPD Crime Analysis Unit conducted such a test. This presentation will speak to the specific questions we intended to answer and the lessons learned. Difficulties can arise from a failure to understand how words are defined and what accommodations either party should allow in making changes once testing has begun.

Prior to the problem of testing a specific product is the problem of creating a rationalized process for initial vendor selection. Getting objective information from vendors can be difficult. It is hard to properly test and assess vendors competitively against one another or against their unique product claims. As seen from the list serve, assessments can depend on reports by existing product users. While helpful, agency size, unique needs, and analyst specific duties can alter agency success with the same product.

An "apples to apples" comparison of vendors needs to be created. Customer agencies need a data warehouse to inform their search.

Sometimes hard to remember, agencies need to continually ask themselves about better utilization of existing products already on board their computers or available to them at minimal or no cost.

Clarence “Hurricane” Weaver - A Case Profile in Serial Burglary

Room Location: Marriott Ballroom - Salon VII & VIII **Time:** 4:00 PM - 5:30 PM
Track: Breakout Session

Speaker: Robert LeBlanc - Fairfax County Police Department

In 2006, an offender identified as Clarence Weaver was implicated in several commercial burglaries through a coordinated investigation within Fairfax County, Virginia. Weaver was subsequently taken into custody and eventually engaged in a cooperative agreement with investigators resulting in the closure of more than 50 commercial burglaries as well as intelligence on the craft of commercial burglary from his perspective as a recidivist offender. During the de-brief process, Weaver participated in a candid video recorded ride-along and interview detailing his exploits and strategies as a career offender. This presentation will provide the investigative and analytical context of his criminal exploits as well as afford participants the opportunity to hear directly from Weaver through video excerpts of his recorded de-briefing. Come learn first-hand about Weaver’s decades of criminal conduct, the rationale behind his decisions and how he studied the police to minimize the risk of being caught.

Esri - Get Started with Predictive Policing with Esri's Crime Analysis Toolbox

Room Location: Rose **Time:** 4:00 PM - 5:30 PM
Track: Exhibitor-Led Session

Speakers: John Beck; Chris Delaney - ESRI

Is your agency considering implementing predictive policing, but has a limited budget? Esri's new free-to-download "Crime Analysis Toolbox" helps agencies get started with two tools to support crime prediction using Repeat and Near Repeat Victimization Analysis. This well-known analysis method is derived from research findings that demonstrate locations targeted for crime face a disproportionately high risk to be re-victimized, as do locations within a given area nearby. This method is now available in the ArcGIS Platform for the first time. This presentation will introduce and demonstrate the inaugural tools of the crime analysis toolbox:

- Repeat and Near Repeat Classification Tool
- Prediction Zones Tool

The Repeat and Near Repeat Classification tool allows users to examine whether the patterns of repeat victimization and near repeat victimization are present, and measures the extent of these patterns. If there is a strong presence of repeats and near repeats, the Prediction Zones tool can be used to generate predictions of crime based on the patterning principles of repeats and near repeats. We will demonstrate these tools, illustrate how their outputs can be shared to officers using Web GIS, and discuss operational and investigative implications of the tool outputs

---

Moving Beyond Police Administrative Data

Room Location: Marriott Ballroom - Salon IX & X **Time:** 4:00 PM - 5:30 PM
Track: NIJ Session

Speakers: Jennifer Hernandez-Meier - The Medical College of Wisconsin; Dr. Brian Lawton - John Jay College of Criminal Justice; Dr. Christopher R. Hermann - John Jay College of Criminal Justice

Jennifer Hernandez-Meier: The Cardiff Model enhances law enforcement, health care and public health relationships to reduce interpersonal violence. Surveillance data collected in emergency departments (EDs) is combined with police data for enhanced violence surveillance and prevention development and implementation. We collected data in an ED, and combined it with police and paramedic data to begin translating the technical data aspects of this model to the United States. Spatial patterns, hotspot mapping and overlap analyses suggest that this enhanced surveillance model may be beneficial for further detection of violence and the development and implementation of violence prevention approaches in this community.

Dr. Brian Lawton: The current study examines this relationship using data on liquor license locations, calls for service and arrest data collected by the City of Baltimore. Calls for service and arrest data were

geocoded to street segments within the City of Baltimore and longitudinal and spatial analyses conducted to examine trends in the presence of liquor licenses and several types of calls for police service. In particular, the relationship between public nuisance or incivility calls for service are examined in regards to their proximity to different types of liquor licenses in the city.

Dr. Christopher R. Herrmann: The NYPD's crime statistics indicate that 20% of shootings in New York City occur in public housing. While the number of shootings in New York City has decreased almost 25% in the last five years, shootings in and around public housing have not benefited from these significant crime reductions. With a population of over 400,000 residents, New York City Public Housing developments comprises 4.7% of New York City's diverse residential population. This study analyzes public housing development populations, spatial configurations, and micro-level shooting hot spots to determine the differences in space-time-shooting relationships in and around New York City Public Housing.

Thursday, September 22nd

The Analytical Sleuth: Sure-Fire Methods to Uncover Information, Organize your Data and Crack the Case

Room Location: Filly Thoroughbred **Time:** 9:00 AM - 10:30 AM
Track: Breakout Session

Speaker: Jennifer Godown - Fairfax County Police Department

How many times, as a new analyst, has a detective come to you with a suspect's name and said "I can't find ANYTHING on this person, can you give it a try?" As a new analyst, your first response is always "of course, I'll take care of it right away!"; however, you are then stuck with a list of names (partial at best) and little to no idea where to start or how much information to include.

This presentation will give the new analyst the best places to start, where to dig for information, as well as what to include and where to find the best sources of information. At the end of the class, analysts will have the tools necessary to compile a clear and concise history of the suspect that will inevitably have detectives asking for your assistance time and time again.

Finding the Needle in the Haystack!- Working Through Tower Dumps

Room Location: Marriott Ballroom - Salon I & II **Time:** 9:00 AM - 10:30 AM
Track: Computer Lab

Speaker: Jennifer LaMoure - Ventura County Sheriff's Office

This session will go over processing tower dumps using Microsoft Excel. Tower Dumps can be overwhelming and time consuming, with the analyst looking for a "needle in the haystack". Analysts and investigators will leave the class with the knowledge and tips and tricks to process tower dumps and be successful at doing them.

Predictive Policing for Smaller Agencies

Room Location: Marriott Ballroom - Salon III & IV **Time:** 9:00 AM - 10:30 AM
Track: Breakout Session

Speaker: Brittney Hunt - Castle Rock Police Department

"Predictive Policing" is not only a huge catch phrase in law enforcement today, but it is also a methodology that gets results. The same process for predicting gang related violent crime problems can be applied to combat bicycle thefts or juvenile vandalism issues. While on a smaller scale, the methodology, data and analytics are the same. Learn how to take advanced predictive policing

methodologies and apply them to any crime type in any size agency. Learn how and why you should use different statistical methods and when they are appropriate. You will also learn the difference between forecasting and predicting and why it is important to know the difference. Finally, see and learn how these predictive policing strategies were applied at the Castle Rock Police Department to give officers, investigators and command staff the ability to plan for and respond to crime patterns, series and trends effectively.

Open Source Forecasting

Room Location: Marriott Ballroom - Salon VII & VIII **Time:** 9:00 AM - 10:30 AM
Track: Breakout Session

Speaker: Dr. Isaac Van Patten – Roanoke Police Department

Forecasting is at the heart of most strategic analyses. It is the crystal ball. There are many different approaches to predicting future crime events; some very accurate and some not so much. This presentation is intended to make sophisticated, accurate strategic forecasting available to even the smallest agencies with the tightest budgets. It will provide instruction on two different methods of making accurate predictions using only software commonly available such as Microsoft Office and the open source software CrimeStat IV (available at nij.gov/topics/technology/maps/pages/crimestat.aspx). Additionally, exact, step-by-step instruction in how to do forecasting with the open source statistical and graphics language R will take the participant from data collation to final product.

Many analysts use some form of the linear model (regression) to make forecast from time series data. While better than some, this method ignores both the seasonal nature of crime and the tendency for time series data to be autocorrelated (non-independent). Linear models are better than no model at all, and to paraphrase G.E.P. Cox, "all models are wrong; the practical question is how wrong do they have to be to not be useful." However, linear models introduce inherent errors into the forecast model, most notably serial autocorrelation and a lack of seasonality. They are great for identifying a global trend but can err considerably in a one-step ahead forecast.

Using the Holt-Winters (HW) exponential smoothing algorithm, this method of forecasting takes into consideration the current underlying level of crime, the current trend in crime (up or down), and the seasonal index for the time period to be forecast. By simultaneously accounting for these three factors, the HW algorithm does a better job of strategic forecasting. The result is a much more accurate, seasonally adjusted forecast that can project with reasonable accuracy out to twelve months ahead and is strongest in the one month ahead forecast.

Using a combination of Microsoft Excel, Microsoft Access, and CrimeStat IV, the participant will be walked through the process, step-by-step, of extracting the incident-level data from a records management system, collating that data, joining the data with geographic coordinates, and loading it into CrimeStat IV. Using the Time Series Forecasting tool from the Spatial Modeling II tab, the

participant will learn how to select the appropriate options and generate the forecast. Specific attention will be paid to the use of the Trigg Tracking Signal for counterfactual operational management.

Then, using statistical programming and graphics language R, participants will learn how to prepare "one-step ahead" forecasts for Part 1 crimes (and other crimes or events of interest). Participants who want to practice "line" are encouraged to bring their own laptops with the current version of R installed. Sample data will be provided for practice and "sandbox play" with the various methods.

The presentation will conclude with discussion of the best practice for presenting these forecasts to command staff.

Motorola Solutions - Inter-Jurisdictional Data Sharing

Room Location: Rose **Time:** 9:00 AM - 10:30 AM
Track: Exhibitor-Led Session

Speaker: Daniel Seals

Inter-Jurisdictional Data Sharing, or IJDS, is the ability for two or more agencies to view and analyze the neighboring agency's crime data alongside its own data. Agencies are limited by the availability and analysis of data within a single agency or department and often lack for the "big picture" of crime in the overall area. The result is a failure to pick up on larger crime trends and issues that go beyond the department's boundaries and a higher chance that criminals exploit these limitations.

IJDS can overcome the limitations within agency boundaries with its unique capabilities.

By using IJDS, multiple agencies can share their data on a single platform, regardless of their underlying RMS or CAD systems, and see the big picture of crime trends, track specific crimes more effectively, compare results, and ultimately reduce crime.

Predictive Modeling of Crime - Introduction Predictive Modeling, Results of Experiment, and Description of the Free Software

Room Location: Marriott Ballroom - Salon IX & X **Time:** 9:00 AM - 10:30 AM
Track: NIJ Session

Speakers: Dr. Jerry Ratcliffe - Temple University; Amber Perenzin Askey- Temple University; Jeremy Heffner - Azavea

Dr. Jerry Ratcliffe: The three presentations in this session report on a major NIJ-funded project to not only predict future crime risk potential based on grounded theoretical approaches to understanding localized spatial crime patterns, but also develop a free software program to enable local police departments to capitalize on this knowledge. This first presentation lays out the framework to the

project and explains the long and short term theoretical approaches to crime prediction. It then describes the analytical approach to answer the key question – what is more important to crime prediction: long-term crime patterns or short-term crime spikes?

Amber Perenzin-Askey: This presentation documents the results of our analysis examining the relative importance of the long and short term theoretical approaches to crime prediction. We sought to answer the key question – what is more important to crime prediction: long-term crime patterns or short-term crime spikes? A model combining community structural characteristics, crime counts from the previous year, and an estimate of near repeat activity generated the best results overall. Mixed effects logit models suggest that long-term (year-on-year) crime and demographic changes are more influential in this model than near repeats.

Jeremy Heffner: This presentation explains how PROVE - a free software program designed to help police departments predict crime - integrates community structural characteristics, crime counts from the previous year, and an estimate of near repeat activity. The program is specifically designed to only require access to the internet (to download census data) and crime data. The program is accompanied with a manual and a series of explanatory videos to make predictive policing easy and free.

DDACTS with a Twist - Using a Proven Program to Focus on Narcotics Activity

Room Location: Filly Thoroughbred **Time:** 10:45 AM - 12:15 PM
Track: Breakout Session

Speaker: Katie Hoffman - Rochester NH Police Department

The DDACTS program has been popular and successful for a wide variety of departments and agencies; however, one common struggle for agencies introducing the program is getting officers of all levels to buy into a new patrol philosophy. Without line level officers truly buying into the philosophy, no deployment analysis or strategy could be successful.

After launching the program in 2012, Rochester Police Department struggled with this very issue. To build enthusiasm and compliance, the department has since used intelligence-based analysis and analytical products to create a more dynamic, officer-responsive program. Due to the increasing effects of the opioid epidemic in New England, many officers are very passionate about combating drug crime. Since the interest already existed, the Rochester Police Department took the basic principles of DDACTS and applied it specifically to combat drug crime. This focus completely changed the response from officers to the deployment strategy and the program has since been incredibly successful.

Attendees will see examples of products and results from the Rochester DDACTS program and learn how this approach can be adjusted to benefit their agency and reduce crime.

Crime Mapping - Building Useful Information Products using Web GIS

Room Location: Marriott Ballroom - Salon I & II **Time:** 10:45 AM - 12:15 PM
Track: Computer Lab

Speaker: Stacy Belledin - ESRI

Do you want to use GIS to drive organizational change towards a safer, smarter community? This is the first step. This session will start by illustrating how the ArcGIS platform and foundational apps can be applied to support key missions within your organization. Using tools such as Collector, Operations Dashboard, Web AppBuilder, and Web App Templates, the hands-on class will demonstrate how GIS professionals can support crime reduction initiatives, event planning, open data and transparency initiatives, and predictive policing. For this class, bring a laptop with internet access, no special software is needed.

Crime and Intel Analysts Role in Identifying At Risk Individuals

Room Location: Marriott Ballroom - Salon III & IV **Time:** 10:45 AM - 12:15 PM
Track: Breakout Session

Speaker: Casey Hatchett - Brookline Police Department

In recent years, we have watched as significant crimes such as school shootings, ambush attacks on law enforcement, exploitation of youth, cases of intrafamilial homicide and standoffs with barricaded subjects unfold in communities across the nation. In almost all of these cases, the suspect had prior interactions with law enforcement or was known to social service entities as needing assistance. As these individuals fall through the cracks, they end up being a threat to society requiring a law enforcement response.

This presentation will discuss the role of a crime and/or intel analyst in identifying at-risk individuals in their community in an effort to prevent criminal activity, reduce victimization, identify people who pose potential threats to public safety and ensure proper services are being provided to “frequent flyers” who are taxing law enforcement resources when social service support is a more appropriate response.

As analysts, we have the greatest access to data collected on the various types of interactions that officers are having with these individuals which is being housed in disparate tables in our records management systems - from service calls to medical transports to crime reports to field interviews. Learn how analysts can best collect this data, set up threshold reporting as an early warning system and disseminate this information both within their Department and to appropriate service providers. Also learn how, as an analyst, you fit into the larger picture of supporting community service efforts within your department and how to engage with community crisis intervention teams to gather and share intelligence on people in needs of services.

Advanced Analytics Utilizing Regional Information Sharing Capabilities

Room Location: Marriott Ballroom - Salon VII & VIII **Time:** 10:45 AM - 12:15 PM
Track: Breakout Session

Speakers: Anna Berger and Catherine A. Miller - Montgomery County, MD Police Department

Anna Berger and Catherine Miller of the Montgomery County, MD Police Department will provide a presentation on advanced analytics utilizing regional information sharing capabilities. This course is for those who are or want to be familiar with law enforcement information sharing in order to locate suspects, missing person, vehicles, and to solve crimes, determine crime trends, and prevent terrorism.

The Law Enforcement Information Exchange Program is sponsored by the Naval Criminal Investigative Service and being used by local, state, and federal crime analysts and investigators in Connecticut, Rhode Island, New Hampshire, Maine, Maryland, District of Columbia, Virginia, North Carolina, South Carolina, Georgia, Florida, Illinois, Texas, New Mexico, Arizona, Colorado, Southern California, Washington, Idaho, Oregon, Alaska, and Hawaii as well as by federal agents and analysts around the country. Most of the 15 LInX Regions are also connected to the FBI National Data Exchange System (N-DEx).

The presentation will include:

- A brief overview and update on the LInX Regions – locations, who has access, types of data in LInX, and connectivity with the FBI N-DEx and DHS ICEPIC systems.
- Use of advanced tools in LInX and NDEx such as watch lists, identity searches, person summary reports, identifying and locating possible known associates, advanced free text searches, and advanced tattoo searches.
- A deeper dive into advanced analytics with detailed examples of exporting LInX query results and combining with other outside data sources.
- The future of LInX including additional external interface connections, future enhancements, and partnerships.

Hunchlab by Azavea - A Deep Dive into using Forecasting in Law Enforcement

Room Location: Rose **Time:** 10:45 AM - 12:15 PM
Track: Exhibitor-Led Session

Speaker: Jeremy Heffner - Azavea

Over the last few years, Predictive Policing has become more common in police departments around the world. With the rising interest in crime forecasting tools, important questions concerning ethics, privacy and fairness have been raised. At Azavea, we aim for transparency and fairness in all of our products and services, and we have built HunchLab with the same underlying beliefs. We think that data and

algorithms can help law enforcement improve public safety while becoming more effective and transparent.

This three-part presentation will dive into the use of forecasting within law enforcement. First, the HunchLab team will provide an update on new features and functionality within the solution. Second, novel ideas for how to align the use of crime forecasting with recommendations from the President's Task Force on 21st Century Policing will be presented including ideas of how to collaborate with external organizations to provide non-police responses to crime risk. Finally, a technical discussion will discuss how to evaluate the accuracy and fairness of algorithmic predictions in the context of equity in policing.

Inter-Police Agency Mapping, Analysis, and Intelligence

Room Location: Marriott Ballroom - Salon IX & X **Time:** 10:45 AM - 12:15 PM
Track: NIJ Session

Speakers: R. Renee Richardson - Richmond Police Department; Kelli Daves - Medford Police Department

R. Renee Richardson: "Crime Sweep" is made up of Local/State/Federal Partners in Law Enforcement (13+ Agencies) that focus their resources in the city based on the trends/patterns in violent crime. Another partnership, "Firearm & Fugitive Initiative (FFI), is a seasonal (12 week) operation that partners with Virginia State Police and VCU Police. Although different, both initiatives use various data sources that are visually displayed using GIS Mapping of Hot Spots, Thematic Maps, Line Segment Maps and intelligence to determine the deployment of resources based on what each agency can bring to the table.

Kelli Daves: Kelli Daves, a Crime Analyst with the Medford Police Department, has supported federal agent's investigations in Southern Oregon for over 10 years. Local analysts have access to information not accessible to the federal agents or their analysts. In an area the size of Southern Oregon our federal partners do not have any analytical support in their local office. Kelli has supported T-3 wires, multiple drug investigations and child exploitation investigations in cooperation with federal partners. This presentation will be a case review of several of the above mentioned cases.

Friday, September 23rd

The Role of the Crime Analyst in the Smarter Cities Movement

Room Location: Filly Thoroughbred **Time:** 9:00 AM - 10:30 AM
Track: Keynote Session

Speaker: Derek Paulsen – Commissioner of Planning, Preservation and Development; City of Lexington KY

The continuous advancement of wireless networks and computer processors has led to the rise of the Internet of Things (IOT) and the increased ability to monitor data on almost anything in real time. When applied to Cities, IOT has directly led to the rise of the Smarter Cities movement, a movement focused on improving productivity and quality of life through data. Cities across the world are increasingly monitoring a myriad of things from traffic, traffic signals, parking, electric and water lines and even bill payments to improve the function and quality of life within a City. While the Smarter Cities movement promises an increased ability to measure and monitor the infrastructure and information within cities it also has the potential to lead to an increased data overload. Up to this point the focus of the Smarter Cities movement has been on the monitoring and collecting of data with much less focus on analyzing the data and using it for problem solving across government. This presentation will explore the Smarter Cities movement tracing its evolution and discussing its potential benefits and pitfalls with a major focus on how crime analysts can play an important role in its effective growth. Specifically, the talk will discuss how crime analysts are perfectly situated within government to benefit from the increased collection of data and lead cities in a new way of problem solving across government lines.

International Association of CRIME ANALYSTS

Presenter Profiles – International Association of Crime Analysts

Allen Atamer

Principal Engineer - LTAS Technologies Inc.

40 Hollybrook Crescent
Toronto, Ontario M2J2H7
Canada
allen@harmari.com
(877) 352-3277

Allen graduated from MIT with a Masters Degree in Aeronautics/Astronautics, and has spent the past 16 years working on software engineering, artificial intelligence, and text mining. In his industry experience, he developed a patented approach to intelligent automated troubleshooting questions that is used in diagnostics and repair of commercial aircraft. He has worked on all aspects of software development, business analysis, and many self-starter skills. He even captained a team of astronaut wanna-bes in the NASA-sponsored Space Elevator Games for 2 years! Allen founded LTAS Technologies in 2011 to make an impact on how the Internet is regulated and kept safe for everyone. The Harmari Tools that are developed by LTAS are used by hundreds of customers in government, insurance, retail loss prevention, professional licensing boards, and law enforcement. He lives in Toronto, Ontario, Canada with his wife and 3 daughters.

Angela Backer-Hines, CLEA

Crime Analyst/Computer Forensic Examiner - Eagan Police Department

3830 Pilot Knob Road
Eagan, Minnesota 55122
abhines@cityofeagan.com
(651) 675-5833

Angela Backer-Hines is a Certified Law Enforcement Analyst through the International Association of Crime Analysts (IACA) and currently works as the Crime Analyst and Computer Forensic Examiner for the Eagan Police Department. Angela has a Bachelor's Degree in Criminal Justice and Forensic Science from Hamline University and a Master's Degree in Criminal Behavior from Tiffin University. She is also a Certified Crime and Intelligence Analyst through the California Department of Justice. Angela has been working as an analyst since 2004 and has worked at multiple levels of law enforcement; city, county and state. She has been the treasurer of the Minnesota Association of Criminal Intelligence Analysts

(MACIA) for the past seven years and the training class coordinator for the IACA for the past four years. Angela was also recently appointed to be the Intelligence and Cyber Crimes Division Director for the Twin Cities Organized Retail Crime Association (TCORCA).

Stacy Belledin

Educational Specialist - Public Safety - ESRI

1 International Ct.
Broomfield, Colorado 80021
sbelledin@esri.com
(303) 449-7779 x8222

With over 16 years experience in the law enforcement field, Stacy is currently an Educational Specialist with Esri, creating instructional content for the public safety field. Prior to working with Esri, she was a crime analyst for both the Lakewood (CO) Police Department and the Jacksonville (FL) Sheriff's Office. Stacy has been an active member in the International Association of Crime Analysts for many years, serving as an instructor and conference/symposium chair, as well as other various committees. She previously was an adjunct professor at Tiffin University, and has taught GIS and crime analysis courses since 2005. Stacy earned her bachelor's degree in criminal justice from Indiana University and her master's degree in criminology at Florida State University.

Anna Berger

NCR-LInX Regional Trainer - Montgomery County, MD Police Department

100 Edison Park Drive
Gaithersburg, Maryland 20878
Anna.Berger@montgomerycountymd.gov
(240) 762-0632

Anna Berger has been a LInX user since 2007 and became the Regional NCR-LInX Trainer in March 2013. She handles all aspects of the LInX training including developing lesson plans, creating WebEx training, and assisting in creating online training modules for the LInX Program. In addition to training Anna assists with reviewing agency data quality and makes recommendations for improvements. Prior to joining LInX, Anna spent nearly 13 years with the Montgomery County (MD) Police Department, where 10+ of those years were spent as a Crime Analyst and Analyst Supervisor. Anna holds a Bachelor's Degree in Criminal Justice from the University of Delaware.

Edwin A. Boggess

Director of Training - Blue Light LLC

1876 Bureau Drive
Fayetteville, NC 28312
Edwin.Boggess@bluelightllc.com
(910) 988-8230

Ed Boggess is currently the Director of Training at Blue light LLC. He has been with Blue Light for four years and has served in several positions including Trainer, Program Manager and Deputy Director of Training. Prior to joining Blue Light, Ed served 25 years in the United States Army. He originally enlisted as a Combat Engineer in 1985 and retired in 2010 as Master Sergeant in Special Forces. During his service he deployed to multiple countries including combat tours in Iraq, Afghanistan and the Republic of the Philippines, Demining Operations in Lebanon and Egypt and Disaster Relief Operation in Thailand, Sri Lanka and Indonesia.

Ed has been a long time user of i2 Analyst's Notebook dating back to 2001 using it to map out relationships on a small Island in the Philippines while searching for a US couple kidnapped by Abu Sayyef Militants to Military Operations in Iraq and Afghanistan. After retiring from the Army, he has trained over 500 users from military, retail, law enforcement, financial crimes, intelligence and other related industries.

Paige Burley

Criminal Intelligence Analyst - Houston Police Department

1200 Travis, 19th Flrl
Houston, Texas 77002
Paige.burley@houstonpolice.org
(713) 308-1917

Paige Burley is currently a Criminal Intelligence Analyst at Houston Police Department and has also worked at Harris County Sheriff's Office's Real Time Crime Center. After receiving a Bachelor's in Criminology and International Studies from University of New Mexico, she went on to complete a Master's in International Security from University of Warwick (Coventry, England). Paige has sent time aboard throughout Europe & Russia through her studies.

Rachel Carson

Director - Inspired Acts

37 Singleton Road
Ashford, Other (Not Listed) TN23 3BB United Kingdom
rachel.carson@inspired-acts.com
+07967808092

Rachel Carson is a practitioner and trainer in all aspects of intelligence analysis and statistics, with proven success in influencing operational policing and security as well as the strategic direction of police and government organisations in safety and security through the benefits of data-based decisions. After graduating from University of Bath, England with an honours degree in statistics, Rachel's career initially developed in the aviation, transportation and insurance industries. In 2003, Rachel became Principal Analyst for the British Transport Police, and after four years became head of the Intelligence and Analysis Team at Transport for London (TfL). Rachel left TfL in May 2014 and is currently Director of her own analysis, consulting and training company, Inspired Acts. As a trainer and consultant Rachel is now working with a number of law enforcement and security agencies to help develop their analytical processes and capabilities. Rachel is also the International Development Coordinator for the International Activities Committee.

Michelle Chitolie

Senior Crime and Intelligence Analyst - Port St. Lucie Police Department

121 SW Port St. Lucie Blvd. Donald Mahan Building
Port St. Lucie, Florida 34984
Chitoliecampbell@aol.com
(954)336-2416

Michelle Chitolie is a Senior Crime and Intelligence Analyst for the Port St. Lucie Police Department in Florida. She has been an analyst for 15 years where she began her career in 2001 at the Broward County Sheriff's Office and in 2005 became employed for the Port St. Lucie Police Department. As a Certified Law Enforcement Analyst through the Florida Department of Law Enforcement, she also holds a Geographic Profiling Certification received through the National Law Enforcement and Corrections Technology Center (NLECTC) and a Crime Intelligence Analysis Certification received through Anacapa Sciences. She holds a Bachelor of Arts degree in Criminal Justice and a Master of Science degree in Computer Information Systems. Her "Crime Analysis Profile" is featured in Dr. Boba-Santos' book, Crime

Analysis with Crime Mapping 3rd Edition and she has also co-authored an article entitled "Systematic Responses to Crime Pattern Analysis" highlighted in the Police Foundation's Crime Mapping News in 2009. Her current position entails tactical, strategic and intelligence analysis.

Chris Delaney, CLEA

Industry Framework & Standards: Law Enforcement/National Security - ESRI

cdelaney@esri.com
(909) 793-2853 x7160

Chris Delaney joined Esri in 2013 after a 13 year career as a Law Enforcement Analyst. At Esri, he helps to drive adoption of Esri technology by illustrating how the ArcGIS platform empowers key workflows within the Law Enforcement and National Security industries. His early career was spent as an intelligence analyst, working in the Special Investigations Section at the Rochester, NY Police Department. At RPD, he developed the department's gang database, gang criteria, and conducted spatial and intelligence analysis of gang and violent crime problems. This work included a successful implementation of the gang violence reduction program "Ceasefire" with criminologists John Klofas, Ph.D., of RIT and David Kennedy of John Jay College. From 2006-2009, he ran the Crime Analysis Unit of the Rochester Police Department and was the managing analyst for the Monroe Crime Analysis Center in Monroe County, NY. Most recently, Chris was the Director of Business Intelligence for the Rochester Police Department, where he oversaw GIS, strategic analysis, business intelligence, data management, and technology integration efforts for the Department. In addition to being a Certified Law Enforcement Analyst by the International Association of Crime Analysts, Mr. Delaney holds a B.S. in Criminal Justice and an M.S. in Public Policy from Rochester Institute of Technology, where he is an Adjunct Lecturer in the Department of Criminal Justice.

Jason Elder, CLEA

Analyst - Vanderbilt University

5004 Regent Drive
Brentwood, Tennessee 37027
jason.elder@vanderbilt.edu
(410) 227-3591

Jason Elder is a Business Intelligence Analyst for Vanderbilt University where he analyzes hospital data for the purpose of reporting on data warehouse dashboards. He was a crime analyst at the Cincinnati PD from 2008-2011 where he analyzed crime at the city-wide level with an emphasis on information management. From 2001 to 2008, he worked for the Washington/Baltimore High Intensity Drug Trafficking Area (HIDTA) office as an intelligence analyst. He performed financial, telephone, and link analyses for the Baltimore PD, FBI, DEA, and ATF HIDTA initiatives. He received his Bachelors of Art in Criminal Justice from Edinboro University of Pennsylvania in 1999 and his Masters in Science in Criminal Justice from the University of Cincinnati in 2001. He taught for the International Association of Law Enforcement Intelligence Analysts (IALEIA) in the Foundation of Intelligence Analysis Training (FIAT) program from 2005-2011. In 2010, Jason earned membership as a "Certified Law Enforcement Analyst" from the International Association of Crime Analysts (IACA). In 2011, he became the chairmen of IACA's Standards, Methods, and Technology committee.

Wendy Ethridge

Senior Statistical Researcher - Denver Police Department

1331 Cherokee Street
Denver, Colorado 80204
wendy.ethridge@denvergov.org
(720) 913-6778

Wendy Ethridge is a Senior Statistical Researcher in the Data Analysis Unit of the Denver Police Department (DPD), where she has been serving for one year. Prior to coming to DPD, Wendy served as a Criminal Intelligence Analyst with the Colorado Springs Police Department for 9 years, where she specialized in analyzing gangs and sex crimes. Wendy received her bachelor's degree in Sociology/Criminology from Colorado State University.

International Association of CRIME ANALYSTS

Barry Fosberg

Criminal Intelligence Analyst - Houston Police Department

1200 Travis, 19th Flrl
Houston, Texas 77002
Barry.fosberg@houstonpolice.org
(713) 308-1923

Mr. Fosberg has served over 10 years as a Criminal Intelligence Analyst in the Crime Analysis and Command Center Division of the Houston PD. He is a graduate of the U.S. Naval Academy and holds separate Master's Degrees in Public Administration and Education from the University of New Orleans He has been published in the Crime Mapping & Analysis News and is a previous presenter with the IACA.

Jennifer Godown

Crime Analyst II - Fairfax County Police Department

4100 Chain Bridge Road
Fairfax, Virginia 22030
jennifer.godown@fairfaxcounty.gov
(703) 246-7515

Jennifer Godown has been a Crime Analyst with the Fairfax County Police Department for the past 7 years where she has gained an advanced knowledge of crime analysis. Jennifer is currently assigned to the Major Crimes Division within Fairfax County where she supports Auto Theft, Financial Crimes, Child Exploitation and Homicide detectives. Prior to this assignment, she served as a patrol analyst at two district stations within the County. In 2015 and 2012, Godown received awards for her contributions to cases that oc Prior to joining the Fairfax County PD, Godown spent four years at the National Center for Missing and Exploited Children where she aided in the recovery of hundreds of missing juveniles from around the country. Godown has presented at the National Institute of Justice's 11th Crime Mapping Research Conference in Miami, FL in November 2011, the International Crime Analysis Annual Conference in Henderson, NV in September of 2012 as well as Bellevue, WA in September of 2014 and at the California Crime & Intelligence Association Training Conference in 2015. Jennifer is the President of the Virginia Crime Analysis Network, a Certified DCJS Instructor, a graduate of Clarion University of PA, and a member of the International Association of Crime Analysts.

Candace Hammond

Crime Analysis Supervisor - Chandler Police Department

Mail Stop 303M, PO Box 4008
Chandler, Arizona 85244-4008
candace.hammond@chandleraz.gov
(480) 782-4087

Candace Hammond is the Crime Analysis Supervisor for the Chandler Police Department in Arizona. She oversees the Crime Analysis and Research Unit responsible for administrative, strategic and tactical crime analysis projects; the department's bi-weekly crime suppression meeting coordination and presentation; and Uniform Crime Reporting. She has worked in the Planning and Research division for over fourteen years, the last two of which have been focused on increasing analytic capacity, building relationships through customer service, and enhancing proactive and predictive analytics.

Candace works extensively with the Police Technology and City Information Technology divisions for implementation and maintenance of crime analysis software packages as well as data quality issues. She is a Certified Law Enforcement Planner through the International Association of Law Enforcement Planners (IALEP) and has dual membership with the International Association of Crime Analysts and Arizona Association of Crime Analysts.

She holds a Master of Administration degree, With Distinction, and Bachelor of Arts in Liberal Studies-Sociology degree, both from Northern Arizona University. She received a Certificate in Crime and Intelligence Analysis, Highest Honors, from Chandler Gilbert Community College.

Casey Hatchett

Police Officer/Crime Analyst - Brookline Police Department

350 Washington Street
Brookline, Massachusetts 02445
casey.hatchett@gmail.com
(617) 730-2734

Casey Hatchett has been a Brookline (MA) Police Officer since 1998 and is currently assigned to the Crime Analysis Unit. Prior to this assignment, Casey worked on the Critical Incident Task Force, in the Community Service Division and in the Patrol Division. Casey currently serves as Vice President of the

Massachusetts Association of Crime Analysts.

In addition to her assignment as crime analyst, Casey is certified as Crisis Intervention Team member, a certified instructor and sits on the Brookline Emergency Management Team which coordinates domestic preparedness for the Town and co-coordinates the Brookline Community Emergency Response Team (CERT) Program. In her capacity as CERT co-coordinator, she oversees the training and supervision of 225 community volunteers who activate during local and regional emergencies. Casey regularly presents to local audiences, law enforcement professionals, and Boston area colleges on emergency preparedness and situational awareness.

Casey is also an adjunct professor at Fisher College where she teaches courses on Crime Analysis, Criminal Law, Victimology, Criminal Justice and Criminal Investigations. Casey has a Bachelor of Arts in Political Science from Boston University and a Master of Science in Criminal Justice Administration from Western New England College. Prior to joining the Brookline Police Department, she worked at the Massachusetts Executive Office of Public Safety as a policy analyst and speechwriter.

Katharine Haydar

Crime Analyst - Jonesboro Police Department

1001 S. Caraway Rd
Jonesboro, Arkansas 72401
khaydar@jonesboro.org
(870) 336-7196

Katie Haydar has been a Crime Analyst with the Jonesboro Police Department since June 2015 and is a member of the International Association of Crime Analysts. Katie has a Bachelor of Science in International Business with concentration in Supply Chain Management from the University of Arkansas. She has minors in Spanish and Economics. Shortly after leaving college, she worked for 3 years in the private sector, conducting analysis and managing logistical operations for a Fortune 500 company.

Katie has always been fascinated by Sociology as well as Analytics. Becoming a Crime Analyst has allowed her to explore both fields at the same time.

The Jonesboro Police Department has had a Crime Analytics program for the better part of 4 years. When Katie arrived in 2015, many of the reports that were being released had faulty/inaccurate data. Very soon after she started, Katie realized that she would have to become the local data expert and start all reports from scratch.

International Association of CRIME ANALYSTS

Jessica Herbert

Diagnostic Specialist (Contractor) - Office of Justice Programs Diagnostic Center

901 15th Street, NW, Ste 300
Washington, District of Columbia 20005
jessica@ojpdiagnosticcenter.org
(703) 798-9867

Jessica Herbert is a Diagnostic Specialist for the Office of Justice Programs Diagnostic Center. Ms. Herbert is an experienced criminal justice professional with over 18 years of experience in law enforcement, academia and private industry. As a law enforcement officer, she developed, established and implemented intelligence-led operations for multiple agency task forces addressing violent crimes and criminal organizations in Northern Virginia. Throughout her tenure as an officer, and continuing in the private sector, Ms. Herbert has educated criminal justice professionals through in-person and online training sessions on topics of analytical operations, intelligence-led processes, critical thinking and investigative techniques. She has been a key leader in developing innovative approaches and building effective teams for intelligence and cyber operations across law enforcement, energy, financial and manufacturing corporations. Ms. Herbert holds double Bachelor degrees of Administration of Justice and Sociology from George Mason University and a Master of Arts in Global Security Studies from Johns Hopkins University. She is currently working on her doctorate degree with Arizona State University.

Katie Hoffman

Crime Analyst - Rochester NH Police Department

67 Charles St
Rochester, New Hampshire 03867
katie.hoffman@rochesternh.net
(830) 214-3342

Katie Louise Hoffman has been working as a Crime Analyst at Rochester Police Department since March 2014. She has a B.A. in English and an M.S. in Criminal Justice from Texas State University, where she focused her studies on crime analysis and environmental criminology.

International Association of CRIME ANALYSTS

Brittney Hunt

Crime Analyst - Castle Rock Police Department

100 Perry St.
Castle Rock, Colorado 80104
Brittney.hunt@lexisnexis.com
(303) 663-6120

Brittney Hunt is a graduate of the University of Northern Colorado where she received a Bachelor's degree in Psychology and a Master's degree in Sociology. She is currently a Crime Analyst with LexisNexis and provides various analytical services for the Castle Rock Police Department, including tactical analysis for deployments, statistical analysis for COMPSTAT and pattern analysis for prediction and forecasting. Prior to LexisNexis, Brittney worked for BAIR Analytics as a Crime Analyst Technician and Customer Relationship Coordinator where she provided ATACRAIDS training to both sworn and civilian personnel at multiple agencies. Brittney is also a member of the Colorado and International Crime Analysis Associations.

Michael Jackson

Criminal Intelligence Analyst - Houston Police Department

1200 Travis
Houston, Texas 77002
Michaelw.jackson@houstonpolice.org
(713) 205-0260

Michael Jackson is a criminal intelligence analyst who has been working with the Houston Police Department for five years. Before becoming an analyst, he was a police officer for seven years. Jackson has worked on a variety of cases that include homicides, fraud, robberies, sexual assaults, and fraud. He has experience working on task force within the agency as well as working with federal and local law enforcement agencies across the United States.

Sabih Khan

Crime Analysis Officer - Skokie Police Department

7300 Niles Center Rd.
Skokie, Illinois 60077
sabih.khan@skokie.org
(847) 982-5999

Officer Khan has been a police officer for 8 years working his way from patrol, to the gang/narcotics unit, and now to his current role under the Special Operations division as an Intelligence & Crime Analysis Officer. He was selected to spearhead the first Intelligence Unit at the Skokie Police Department, which is located on the north end of the Chicago city limits. In his current role, he is tasked with managing all incoming and outgoing intelligence including executing the first social media intelligence program. Additionally, he manages the department's crime data, where he is responsible for developing the department's new data driven policing strategy.

Officer Khan is currently pursuing his master's degree in Predictive Analytics and Data Mining at DePaul University and holds a bachelor degree from University of Illinois at Chicago. Alongside, he is also the acting vice president of the Illinois Association of Crime Analyst and holds a position on the board of the Predictive Analytics Group from DePaul University.

Jennifer LaMoure

Senior Crime and Intelligence Analyst - Ventura County Sheriff's Office

5177 Camino Ruiz
Camarillo, California 93012
jennifer.lamoure@ventura.org
(805) 383-8793

Jennifer is a certified Crime & Intelligence Analyst through the California Department of Justice and Pierce College. She has worked for the Ventura County Sheriff's Office since April of 2008 and is currently a Senior Crime and Intelligence Analyst with the Ventura County Sheriff's Office. During her time with the Sheriff's Office, she has researched and published an article on inmate programming and gender specialized training within the jail. Jennifer is the current Vice President of Membership for the Southern California Crime and Intelligence Analysts Association (2015-current). She earned a BS in Criminal Justice from California Lutheran University and a MAS in Criminology, Law & Society from the University of California, Irvine.

International Association of CRIME ANALYSTS

Robert LeBlanc

Master Police Officer - Fairfax County Police Department

4100 Chain Bridge Road
Fairfax, Virginia 22030
robert.leblanc@fairfaxcounty.gov
(571) 641-7217

Master Police Officer (MPO) LeBlanc joined the Fairfax County Police Department in 1995. During his 21 years with the agency, he has served in patrol, on the Selective Enforcement Team, as an operative in the Civil Disturbance Unit Intelligence Section, as a sworn Special Federal Officer conducting prescription narcotics investigations, as a detective in the Criminal Investigations Section and as an instructor at the Fairfax County Criminal Justice Academy. MPO LeBlanc has helped to coordinate the Capital Area Drug Diversion Investigators group for many years and has investigated a wide array of crimes to include theft, fraud, burglary, drug diversion, robbery, abduction, and sexual battery, realizing successful prosecutions in both state and federal courts. MPO LeBlanc is regarded as an expert in criminal investigations, a DCJS-certified instructor and is the recipient of several departmental commendation awards, to include the Sons of the American Revolution's Law Enforcement Commendation Medal in 2015.

Catherine Miller

NCR-LInX Program Manager - Montgomery County, MD Police Department

100 Edison Park Drive
Gaithersburg, Maryland 20878

Catherine Miller has over 28 years working with public safety agencies in the National Capital Region (NCR) and is well respected for her broad knowledge and expertise of the many diverse law enforcement applications, crime analysis, and technology tools. She has been with the Law Enforcement Information Exchange Program (LInX) since early 2007. In her role as Program Manager, she has led and oversees a significant growth in this high profile data sharing system used by thousands of law enforcement professionals. NCR-LInX currently includes agencies sharing data in the Baltimore and National Capital Regions. She works closely with the program sponsor, Naval Criminal Investigative Service (NCIS), 14 LInX Regions, the DoD LInX Region (D-DEx), and has worked to get these connected to the FBI's National Data Exchange Program (N-DEx). Catherine holds a Bachelor's degree in Mathematics and Computer Science and a Master's Degree in Technology Management.

Glen Mills, CLEA

Lieutenant - Burlington Police Department

45 Center Street
Burlington, Massachusetts 01803
gamills@bpd.org
(781) 505-4945

Glen Mills is a lieutenant with the Burlington Massachusetts Police Department. He began his career as a part-time police officer in 1992 and became a full-time officer in 1996. He was promoted to sergeant in 2001 and lieutenant in 2007.

Glen is the departments Criminal intelligence Liaison Officer, Officer in Charge of the Crime Analysis Unit and OIC of the ATV Unit. He is the department's Criminal Justice Information System (CJIS) Representative and he teaches RAD (Rape Aggression Defense), Radkids (Resisting Aggression Defensively) and RAD for Seniors Self-Defense Programs to the community. Glen manages his departments Social Media, Citizens Police Academy, Workplace Safety and Crime Prevention Efforts. He is the current president of the Massachusetts Association of Crime Analysts and an IACA Certified Law Enforcement Analyst.

Annie Mitchell

Supervising Crime Analyst - Los Angeles County Sheriff's Department

12440 Imperial Hwy, B-140
Norwalk, California 90650
ammitche@lasd.org
(323) 351-9570

Annie Mitchell entered the Los Angeles County Sheriff's Department (LASD) in 1975 and has been in crime analysis for 29 years. She currently is a supervisor and training coordinator for 76 analysts employed within the LASD's Criminal Intelligence Bureau. Annie is a past and current president of the Southern California Crime and Intelligence Analysts Association and the recipient of the 2013 California Crime and Intelligence Analysts Association's "Analyst of the Year." She also is the first crime analyst to obtain her advanced instructor certification through California Peace Officer's Standards and Training (POST), provides instruction on crime analysis to detectives, supervisors and managers, designed, developed and instructs in a 40 hour California POST certified Crime and Intelligence Analyst course. Annie has provided in-progress tactical analysis for several critical incidents and large events within Los Angeles County. She continues to train and mentor the LASD crime analysts regarding the analyst's role during critical events.

Trish Pace

Homicide Analyst - Calgary Police Service

5111 47 st NE
Calgary, Alberta T3J 3R2 Canada
Tpace@calgarypolice.ca
(403) 815-3140

Trish Pace has been with the Calgary Police Service as an analyst for 18 years. Her career started as a District Analyst in 1998, spending four years in the newly established District 7. Trish was then seconded to a Provinical agency, Criminal Intellingence Service of Alberta where she wrote the initial proposal for a joint forces Provincial organization with a mandate to assess and target organized crime in Alberta. Trish returned to Calgary in 2003 and was seconded to the Major Crimes Section as a pilot project to assess the effectiveness of utilizing an embedded analyst in an investigative area. Trish initially providing support to Homicide, Robbery, Sex Crimes, Domestic Conflict and Child Abuse. The project proved a success, with each area now having a dedicated analyst. Pace is now supporting Homicide, Missing Persons and Cold Case and has worked on over 100 homicide investigations.

Pace has developed an expertise in the area of cell phone analysis, using the methodology to further investigations and lifestyle suspects. Pace has lectured to fellow analysts and Crown Prosecutors in relation to cell analysis and production orders across the Province. Pace was also the first CPS analyst to testify in court regarding cell analysis and to date has provided evidence in 10 Homicide trials.

Pace was also featured in the reality show, Murder She Solved in an episode regarding a Calgary Homicide investigation as well as the Internet video, Anatomy of an Investigation.

Ruth Padilla

Regional Crime Analyst - Sacramento Police Department

5770 Freeport Blvd, Suite 100
Sacramento, California 95822
rmpadilla@pd.cityofsacramento.org

Ruth is a graduate of Saint Mary's College of California with a Bachelor in Politics and a Cal DOJ Certificate in Crime and Intelligence Analysis from Sacramento State University. While working at Elk Grove Police Department, she volunteered for one year in the Crime Analysis Unit. While there, she assisted with mapping crime patterns, and writing bulletins for catalytic converter thefts. She is now a Crime Analyst with LexisNexis where she provides a wide range of analytical services to the Sacramento

Police Department and Regional Crime Analysis Program, including crime series identification and prediction, pattern analysis and forecasting, and other tactical and investigative products. Ruth is also a member of the IACA.

Jamie Roush

Co-Founder and Chief Executive Officer - CRH Analysis Consulting

218 Cameron Bridge Way
Johns Creek, Georgia 30022
jamielroush@gmail.com
(904) 318-3026

Jamie L. Roush is Co-Founder and Chief Executive Officer in CRH Analysis Consulting, a provider for the Bureau of Justice Assistance's Crime Analysis portfolio, and consultant on numerous aspects of crime and intelligence analysis, including integration of social media with law enforcement data for operational decision-making. Jamie previously had a plus ten year career with the Jacksonville (FL) Sheriff's Office starting as an analyst and commencing as the Crime Analysis Unit Manager, commanding a unit of twenty public safety/crime analysts and supervisors. She is a frequent speaker at law enforcement conferences on crime analysis and social media and an expert writer for the LexisNexis Public Safety Briefing Room on a myriad of law enforcement topics. Jamie is a member of the George Mason University Evidence-Based Policing Hall of Fame for her commitment to using research and data analysis to improve police operations while in Jacksonville. She is an associate member of the International Association of Chiefs of Police (IACP) and member of the International Association of Crime Analysts (IACA). Jamie holds a Master of Science in Social Science and a Bachelor of Arts in Geography from The Florida State University. Follow Jamie on Twitter: @jlroush.
