We were able to determine the issue was with the tablets wifi. The tablet kept trying to connect to the vehicle hotspot and therefore disconnecting from the reader, but the cameras were still recording plates the whole time.

I am getting the unit back and will get it you as soon as I can.

Thank you,

Dave Brown
Director Mobile Technology
Global Publc Safety

Hey Carol…..Just to follow-up with you request:

Attached are some of the programs forwarded to me about Training Program. I did put together a draft training program, it is the attached 'Professional Roadmap'. It is a combination of programs I've working with before with the additional information sent. The program is a draft, verbiage still needs to be worked out and the document needs to be proof-read several more times, but I feel it is solid.
Best Regards,

Best Regards,

J. Duguay, #70838

Subject: Be on the leading edge of technology solutions
Date: Thursday, September 5, 2019 3:10:49 PM

Apply Now to Be Part of POLICE's New Technology Solutions Networking Event

Brought to you by POLICE Magazine, POLICE Technology eXchange, (PTX) brings together senior-level IT, Communications and Technology decision-makers face-to-face with leading law enforcement technology suppliers. The first PTX is taking place December 9-11, 2019, at the beautiful Scottsdale Resort at McCormick Ranch in Scottsdale, AZ.

Learn More

At PTX you'll uncover the latest technologies and have an opportunity for peer-to-peer networking activities such as: sharing challenges, discussing ideas, and learning best practices from each other.

A few of the technologies you can discuss during one-on-one meetings with leading industry suppliers include:

AI & Virtual/Augmented Reality
Drones/UAV/UAS
Elec/Hybrid Patrol Vehicles
e-Citation
Mobile Data Terminals/Rugged Laptops & Tablets
ALPR/LPR
Gunshot Detection Systems
Intelligence-Led Policing
Mobile/Rugged Technology
Data/Information Sharing
Cloud-Based Technology
Crime Analysis
Interoperability
Vehicle Armoring
Video Storage/Analysis
Smartphones
Broadband
Investigative Software

This intimate networking opportunity is at no cost* to police agencies for qualified police agency buyers of IT and other technology. Learn more and apply now to become

a delegate as spots are filling up quickly.

APPLY NOW

For more information please visit www.POLICETechnologyeXchange.com or call (800) 576-8788, 9:00am-5:00pm PST

All,

Please see attached docs re todays discussions on LPR. I understand Dave P is drafting a response for review by EOPSS.

At the bottom of this email is a response I got from NYPD. They are pulling their policy and say they will forward.

Respectfully

Lieutenant Colonel Dermot J. Quinn #1765
Division Commander
Division of Homeland Security & Preparedness
Massachusetts State Police

Cc: Quinn, Dermot (POL) <dermot.quinn@pol.state.ma.us>
Subject: RE: NYPD-NJSP LPR Biweekly Meeting

Major Quinn,

The short answer is that we retain LPR data for five years. Uniformed Members of the Service have access to the LPR data on department computers and smartphones utilizing their department network credentials for general plate searches. For searches that require more detail and extensive searching and filtering Uniformed Members of the Service can contact our Lower Manhattan Security Initiative (LMSI) command center for assistance. The officers at LMSI require a short form to be filled out before assisting in any investigations involving plate data to ensure the integrity of the searches.

Let us know if you are looking for the actual legal documentation, and we can work on getting that as well. Feel free to contact me directly with any questions that you may have.

Thanks.

Sgt. Aaron Lucas

To: Hackett, John (POL)
Subject: Deadline extended: apply by November 8th
Date: Wednesday, November 6, 2019 2:08:00 PM

You're invited to Scottsdale this December for PTX!

We've extended the deadline for delegate applications! POLICE Technology eXchange brings together senior-level IT, Communications and Technology decision-makers face-to-face with law enforcement technology suppliers. This networking opportunity is at **no cost*** to qualified police agency buyers of IT and other technology.

Hurry and apply today because the NEW application deadline is this **Friday, November 8th!**

Event Dates:
December 9-11, 2019

Apply Now to Participate

At the exchange, you'll have one-on-one meetings with leading industry suppliers to talk about ideas, share challenges, and learn best practices. You'll also explore:

Drones

Hybrid Patrol Vehicles

Facial Recognition

AI & Virtual/Augmented Reality
e-Citation
Mobile Data Terminals/Rugged Laptops & Tablets
ALPR/LPR
Gunshot Detection Systems
Intelligence-Led Policing
Mobile/Rugged Technology
Investigative Software
Data/Information Sharing
Cloud-Based Technology
Crime Analysis
Interoperability
Vehicle Armoring
Video Storage/Analysis
Smartphones
Broadband

To participate, complete the application.

For more information please visit www.PoliceTechnologyeXchange.com or call (800) 576-8788, 9:00am-5:00pm PST

The LEIU Source is a weekly news publication brought to you by the LEIU Executive Board.

Each Wednesday, we share with you a few of the articles or intelligence-based publications that have come across our desk. We are exicted to see, each week, Law Enforcement Officers, Analysts and Administrators from around the world reading this.

If you have a publication or an article that you feel needs to be shared, please send these to IntelligenceAnalysis@mac.com for review.

If you feel others at your department would benefit from receiving this publication, please forward this email. At the bottom of this publication is a link where they can add their email to the distribution list.

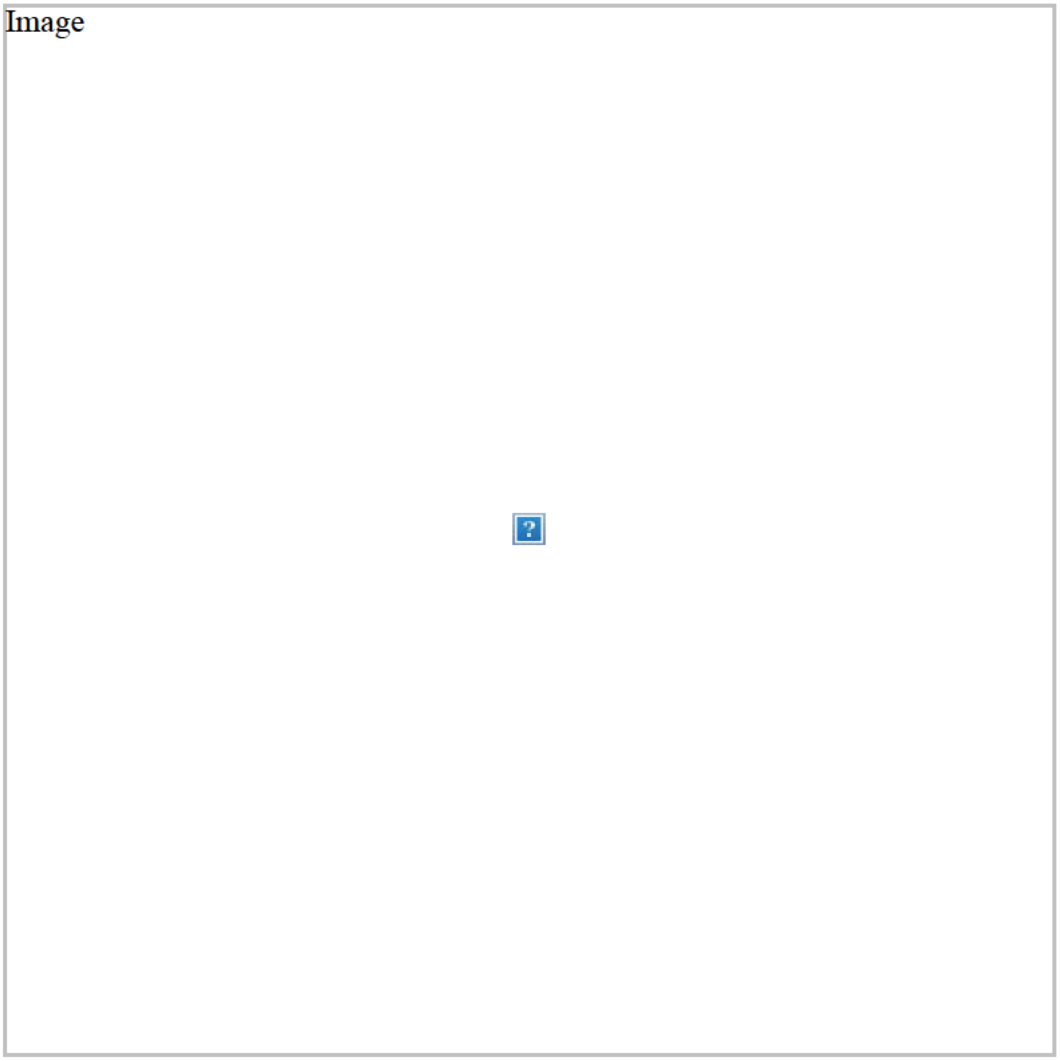
BAE wins open source intelligence

contract from the Army

The Army has awarded BAE Systems a $437 million task order for open source intelligence support, the company announced Oct. 15 during the 2019 Association of the United States Army conference.

As part of the task order, BAE Systems will provide the Army and Army Intelligence & Security Command (INSCOM) approved partners with open source solutions to publicly available data.



“We’re proud to continue to partner with the U.S. Army and support their critical national security missions with this new capability,” Peder Jungck, vice president and general manager of BAE Systems’ intelligence solutions business.

The company won the initial award of the five-year task order and began ramping up in August, Jungck said. The task order is an extension of projects the company has been doing for the

Army, but this is the first time the work been consolidated and awarded as a larger contract, he explained.

“If you look at contracts in general around OSINT there’s been kind of small ones, there’s been lots of pilots out of agencies and even within the Army and throughout INSCOM there were different kind of brigades and battalions that had their own set of tools," he said. "This is one of the first of the really large OSINT and AI consolidation contracts. I don’t think anybody’s really had a large one like this.”

Calif. police stand by cop after video released in 2017 OIS of murder suspect

FRESNO, Calif. — Community activists are expressing outrage after seeing video footage that shows a Fresno police sergeant fatally shooting an unarmed 16-year-old boy as he fled during a

foot pursuit.

Meanwhile, the local police union and supporters of law enforcement have stepped up in support of the sergeant, saying he acted within guidelines while pursuing a murder suspect.

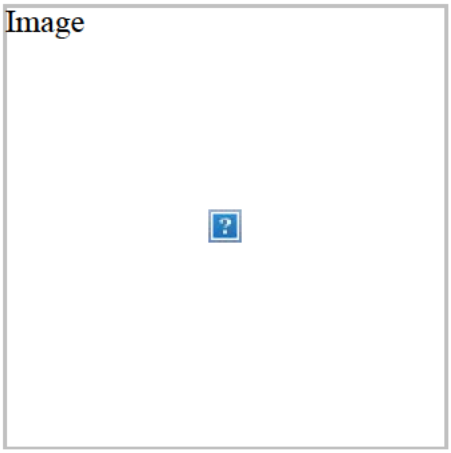
The footage shows Sgt. Ray Villalvazo firing a single shot into the back of Isiah Murrietta-Golding's head, according to a lawsuit filed on behalf of the teen's family.

The video was captured on a surveillance camera at a daycare facility on April 14, 2017, and was released by attorney Stuart Chandler, who's representing the family of Murrietta-Golding. The boy's family alleges the sergeant used excessive and unlawful deadly force, and committed assault and battery with negligence.

Additionally, in footage released from a police officer's body camera, one officer is heard shouting "good shot" as officers handcuff and search the already prone Murrietta-Golding.

Asia has an organized-crime problem. Canada is well placed to help

Image



Jeremy Douglas is the regional representative for the United Nations Office on Drugs and Crime (UNODC) for Southeast Asia and the Pacific and a former UNODC representative for Pakistan. The opinions expressed in this commentary are his.

More than a few eyebrows went up last week when Tse Chi Lop – a 55-year-old Canadian man – was accused of being arguably the biggest drug trafficker in the history of Asia.

Mr. Tse is suspected – by police in Myanmar, Australia and Taiwan, and by the United Nations Office on Drugs and Crime (UNODC) – of being the leader of Sam Gor, or Brother Number Three, a supersyndicate largely responsible for the dramatic shift in recent years in organized crime away from drugs such as heroin and toward synthetics, such as methamphetamine, ketamine and fentanyl. It's a shift that has been driven by control and profit, since synthetics offer many advantages to

criminal organizations: Labs can be quickly set up or moved; they are not subject to external conditions such as climate, nor do they require large work forces; and production can be rapidly scaled up to drive the market. Put these things together and it means the disruption of the traditional drug business and the heavily concentrated profits that come with it.

Florida Senator Rick Scott Announces Legislation To Address 'FBI Failures' Regarding Parkland Shooting

MIAMI (CBSMiami) – Florida Senator Rick Scott announced legislation Thursday to hold the Federal Bureau of Investigations accountable for its 'failures to address critical deficiencies in its handling of actionable intelligence' in regards to the mass shooting at Marjory Stoneman Douglas High School in 2018.

The 'Threat Information Protocol for Sharing (TIPS) Act' is supported by Stand with Parkland, an organization founded by the family members of the victims of the Parkland shooting.

"Not a day goes by that I don't think about the 17 souls that were taken from us in a brutal act of violence at Marjory Stoneman Douglas High School. Following the tragedy, we all worked together to pass the Marjory Stoneman Douglas High School Public Safety Act to make our schools safer and prevent future tragedies, but we aren't finished. We cannot

accept the repeated failures of the FBI to properly investigate and act on specific tips received about the Parkland shooter, as well as other perpetrators of mass violence in Florida. I'm proud to stand with the family members of the victims to announce the TIPS Act, which bridges the gap between federal and state law enforcement agencies by mandating information sharing of all state-specific criminal intelligence tips. This is about getting information on threats into the hands of the right people, who can ultimately prevent violence and protect our families," Scott said.

Majority of Mexicans Say Organized Crime Stronger than Government after El Chapo's Son Released

Image

A majority of Mexicans see organized crime as more powerful than the Mexican government after government forces capitulated to drug-cartel strongmen and released the son of the former cartel leader Joaquín Guzmán, known as “El Chapo.”

About 56 percent of Mexicans say they believe organized crime is stronger, while only 33 percent say the government is stronger, according to a poll by the Mexican newspaper Reforma.

Mexican authorities were forced on Thursday to release Ovidio Guzmán López, El Chapo’s son, shortly after capturing him, when the Sinaloa cartel laid siege to the city of Culiacán and surrounded Mexican troops, taking eight soldiers hostage. Officials said at least 14 people died during the clashes between cartel members and Mexican soldiers.

49 percent of respondents in the Reforma poll disagreed with the decision to release López, while 45 percent said they supported it. Residents of Culiacán expressed relief that the government had surrendered, saying the decision prevented further violence.

Mexican lawmen get FBI training to combat organized crime, terrorism

Image

JUAREZ, Mexico — Three Chihuahua state lawmen recently completed intelligence and intervention training courses sponsored by the FBI, according to the State Security Commission.

Alvaro Serrano Escobedo, the commission's operations

director, received training on anti-terrorism, intelligence gathering, leadership and the combat of organized crime at FBI headquarters in Quantico, Virginia. The training is part of the FBI's Mexican Law Enforcement Executive Development (MEXLEED) program, the commission said in a news release.

Ginés Jaime Ruiz García, first officer of the Chihuahua State Police, and Jesús Alejandro Cruz Rangel, who heads rural operations for the agency, attended the FBI's Mexican American Liaison and Law Enforcement Training (MALLET) program in South Padre Island, Texas, the commission said.

The three lawmen were among 30 duly vetted Mexican officials chosen by the FBI for training this year, the commission said.

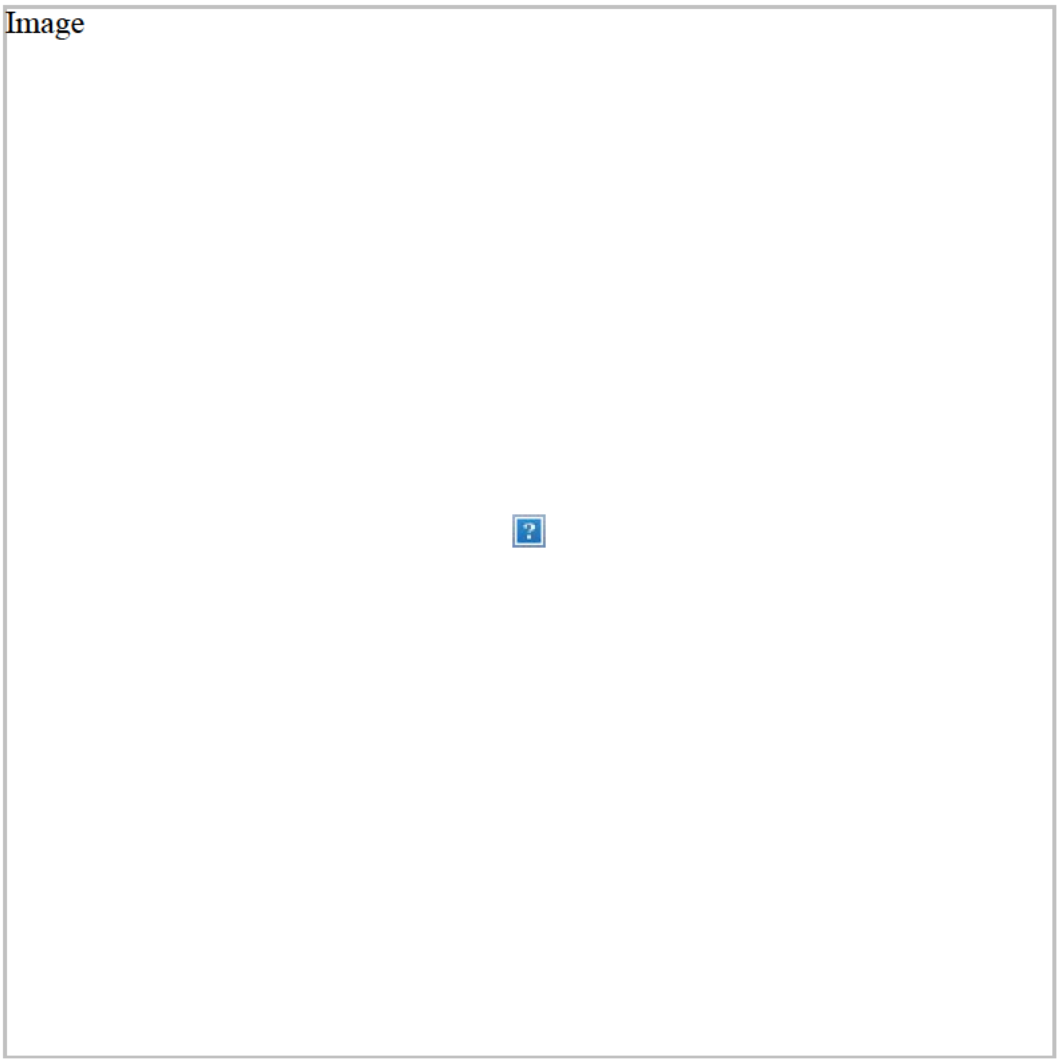
63 accused drug dealers plead guilty in heroin, fentanyl and cocaine trafficking rings



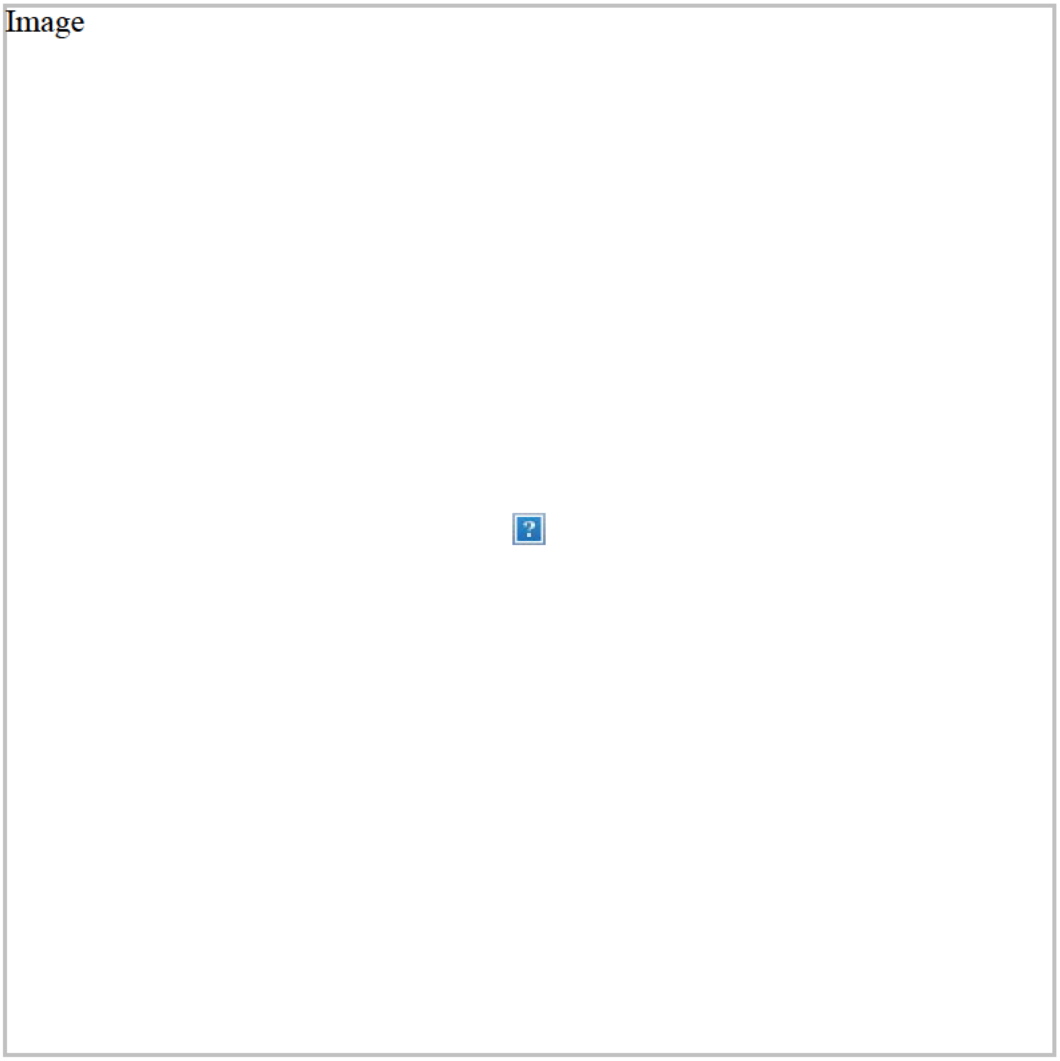
Image

SYRACUSE — New York State Attorney General Letitia James has announced the guilty pleas of 63 people for their roles in two major narcotics trafficking operations that transported heroin, fentanyl, and cocaine to Onondaga, St. Lawrence, Oswego, Oneida, and Jefferson counties.

The investigation resulted in the recovery of approximately 4,700 bags of heroin and fentanyl, worth approximately $140,000, and approximately 2 kilograms of cocaine, worth more than $200,000, according to a news release from the Attorney General's office.

"These individuals flooded our communities with dangerous drugs that are putting New Yorkers at great risk," said Attorney General Letitia James in the news release.

House bill would give border agents tool to detect synthetic opioids



A bill that would give U.S. Customs and Border Protection (CBP) agents the equipment to detect synthetic opioids has been introduced in the U.S. House.

The DHS Opioid Detection Resilience Act of 2019 requires the Commissioner of CBP to procure chemical screening devices that allow border patrol agents to identify narcotics, including synthetic opioids, with purity levels of less than 10 percent. A 2018 study by the Drug Enforcement Administration (DEA) found that most fentanyl seized at the southwest border tends to be less than 10 percent pure. These changes would fill the gap that currently exists in identifying these synthetic opioids.

“Stopping the flow of illegal drugs across our southern border and at ports of entry is a top priority for our CBP law enforcement officers. This includes fentanyl and other synthetic opioids that can be difficult to detect. Our legislation ensures that DHS has the necessary equipment to detect synthetic opioids and the ability to adapt as smuggling methods evolve. We want to prevent this poison from ever reaching American communities, and our bill helps law enforcement carry out that mission,” Rep. Clay Higgins (R-LA), the bill’s sponsor, said.

Teens brawl with police in Brooklyn subway station

Image

BROOKLYN, N.Y. – A video showing members of the NYPD

trying to break up a fight and instead ending up in an all-out brawl with a mob of New Yorkers has gone viral… and media outlets were quick to condemn the cops who were involved.

The Post said that the incident unfolded on Saturday morning around 2:30 a.m. as officers responded to the scene of a fight on the platform of a subway station. The fights had originally began up on Jay Street between two groups of people before the violence spilled down into the station.

Cell phone video captured at the scene shows officers rush into the area and try to pull the brawling teens apart, attempting to put one of the suspects in handcuffs. Other individuals on the outside of the skirmish appear to be pulling the officers away.

The heartbreaking final text this human trafficking victim sent before dying in UK truck

Image

A 26-year-old Vietnamese woman texted her mom frantically that she was suffocating in the truck in which the bodies of 39 people were found in England — and apologized that her journey to a better life ended tragically, according to a report.

“I’m sorry Mom, my path to abroad didn’t succeed,” Pham Thi Tra My wrote in a series of messages about 10:30 p.m. Tuesday, according to the Mirror.

“Mom, I love you and Dad so much! I’m dying because I can’t breathe,” she added.

News about the young woman’s final moments emerged as two more people were arrested after eight women and 31 men were found dead Wednesday in a case that has shocked Britain and made headlines around the world.

Labor Trafficking Is A Crime You Probably Don't Notice

Image

It has been more than four years since Catherine Piedad called 911 from a $1.7 million home in Newton.

In 2015, she worked long hours to care for a Russian family's young twins. Her passport was taken, and she slept in a small room with little light and nowhere to store her clothes. When she asked to be paid, her employer threatened to send her back to the Philippines. She feared deportation and did not know who to trust.

Despite her fear, she called 911. Law enforcement helped her

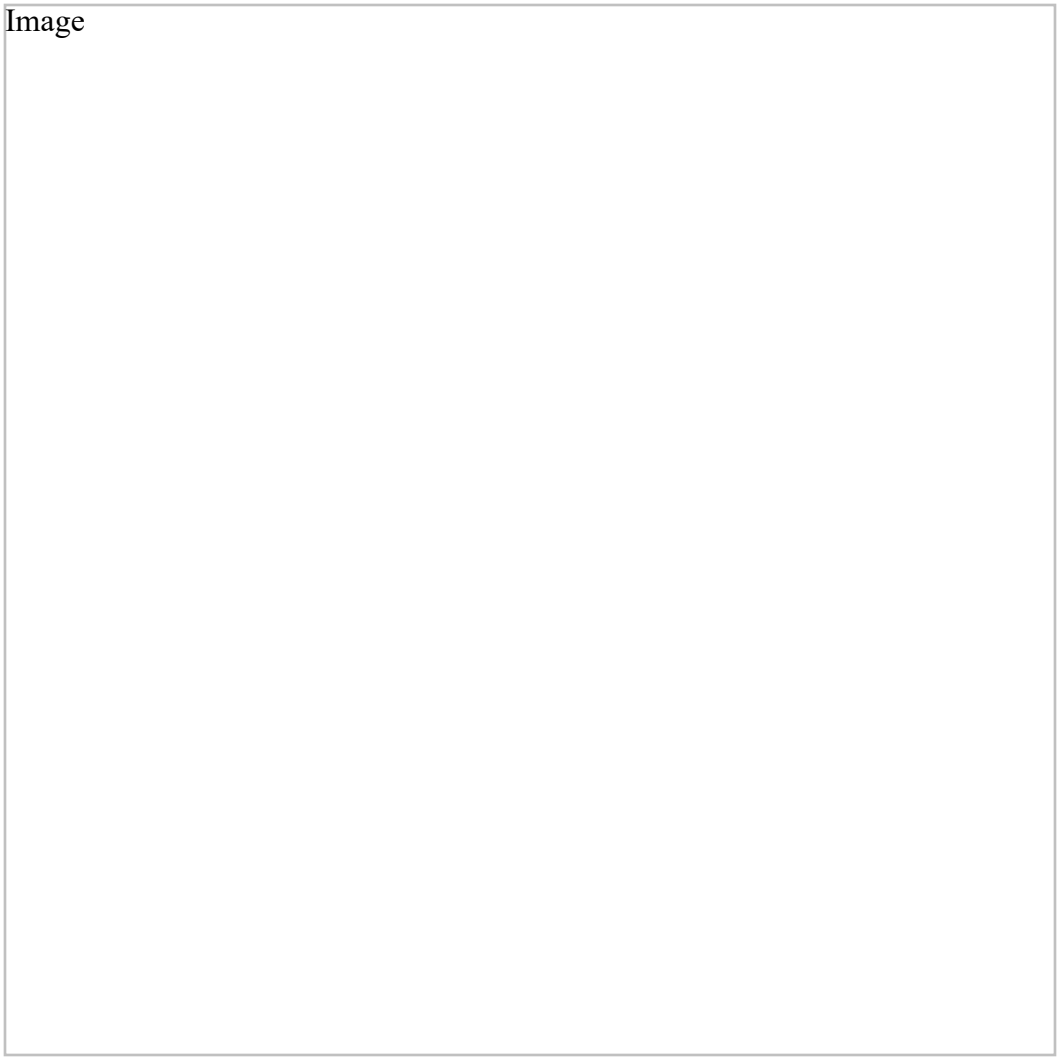
to leave the family's home but did little else. They did not see her case as "labor trafficking." Instead, the incident was labeled a "labor dispute." Piedad struggled to access her rights — despite the robust federal and state laws designed to protect her.

You've probably heard of sex trafficking, which often involves perpetrators who force, trick or coerce victims into sexual servitude. Although difficult to see, sex trafficking is often visible to law enforcement through the internet: perpetrators sometimes leave a footprint online, which can provide a critical entry point for criminal investigations.

The Mafia's history in Las Vegas: From Bugsy Siegel to Anthony Spilotro

Image

Benjamin “Bugsy” Siegel had been at the helm of the Flamingo for only six months in June 1947 when he was killed in a hail of gunfire at his girlfriend’s Beverly Hills, Calif., home.



But his vision for the Flamingo, the first resort-style hotel on the Strip, was the beginning of a 50-year relationship between Las Vegas and traditional organized crime that helped define “Sin City”and turn it into one of the world’s top tourist destinations.

“The general perception on the part of the public is that Las Vegas and the mob have been inextricably linked, and I don’t think it will ever be extricated,” former longtime state archivist Guy Rocha says.

Groundbreaking books such as “The Green Felt Jungle” in 1963, which revealed the mob’s early grip on the city, and popular movies such as “The Godfather” in 1972 and “Casino” in 1995 enhanced this perception through the years.

So did the buzz on the Strip over the Rat Pack, led by headliner Frank Sinatra and his associations with high-profile underworld figures.

New Bill To Bring Illegal Gambling In California Closer To An End

Gambling in the US, as well as in the whole world, is one of the most entertaining and lucrative endeavors. Not only does it provide fun and joy to the players, but it also offers an opportunity to make a fortune.

The gambling operators all around the world are doing everything they can to attract new customers. From online free spins for Australians to no deposit bonuses and other promotions in other countries, casino operators are full of such impressive offers.

However, the industry isn't just this fairy-tale source of joy and money. It also has its drawbacks. With problem gambling, organized crime, and money laundering prospects, gambling has long been considered threatening to society.

That's the reason why the US government, alongside other

governments worldwide, have been eager to put the industry under the limitations and protect the interests of their citizens. With the regulatory restrictions and measures, the government officials have deemed ill-gotten gains illegal and contributed to ending gambling-related crime.

Best true-crime books of all time

Image

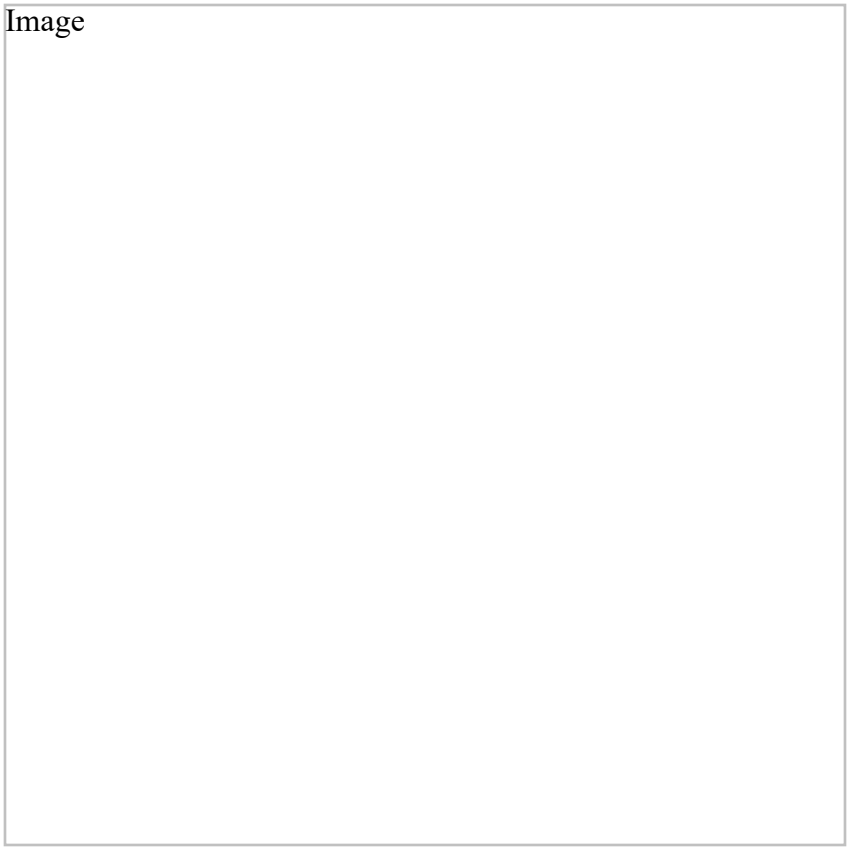
Terrifying tales are not the domain of fiction alone. If you are in search of bone-chilling scares, we recommend you turn to true crime. The key word being true. That's right, no imagination needed. Including stories about such horrific figures as Charles Manson and Ted Bundy, Goodreads compiled a list of the top 10 true-crime books

of all time based on the lists, reviews and ratings of their more than 90 million members.
AP

How a Facebook Crime Page Led to Arrest of N.C. Woman in Cold Case Killing of Sister-in-Law

Image

A Facebook page devoted to the murdered, missing or miscreant residents of western North Carolina is being credited with helping authorities bring charges in the 15-year-old cold-case killing of a missing mom of four, allegedly at the hands of her sister-in-law.



The tip that led authorities to a “shallow grave” containing the remains believed to be those of 29-year-old Deborah Elaine Deans “proved to be very accurate and very reliable,” Nash County Sheriff Keith Stone told reporters last week.

But the tipster did not go to police at first.

Instead, the unidentified person sent information about the alleged crime to a woman who created and runs a Facebook page called Fighting Crime News and Who’s Wanted, an online outlet whose updates range from wanted posters to promotions of local elections and warnings about traffic tie-ups.

On October 20, a re-post about the unsolved missing-person case of Deans — who was last seen around 9 a.m. on January 19, 2004, at a residence on Wiley Road in Spring Hope — elicited a “very detailed” response that was forwarded to authorities by the Facebook page creator, said Nash.

Google Maps Adds ability to see speed limits and speed traps in 40+ countries

Google Maps is gaining some features previously exclusive to Google's navigation app, Waze. The company confirmed it's rolling out the ability for Google Maps users to see speed limits, speed cameras and mobile speed cameras in more than 40 countries worldwide — an expansion of its earlier launch of these features, which were previously limited to select markets.

The change was noted earlier by ZDNet and, of course, Reddit.

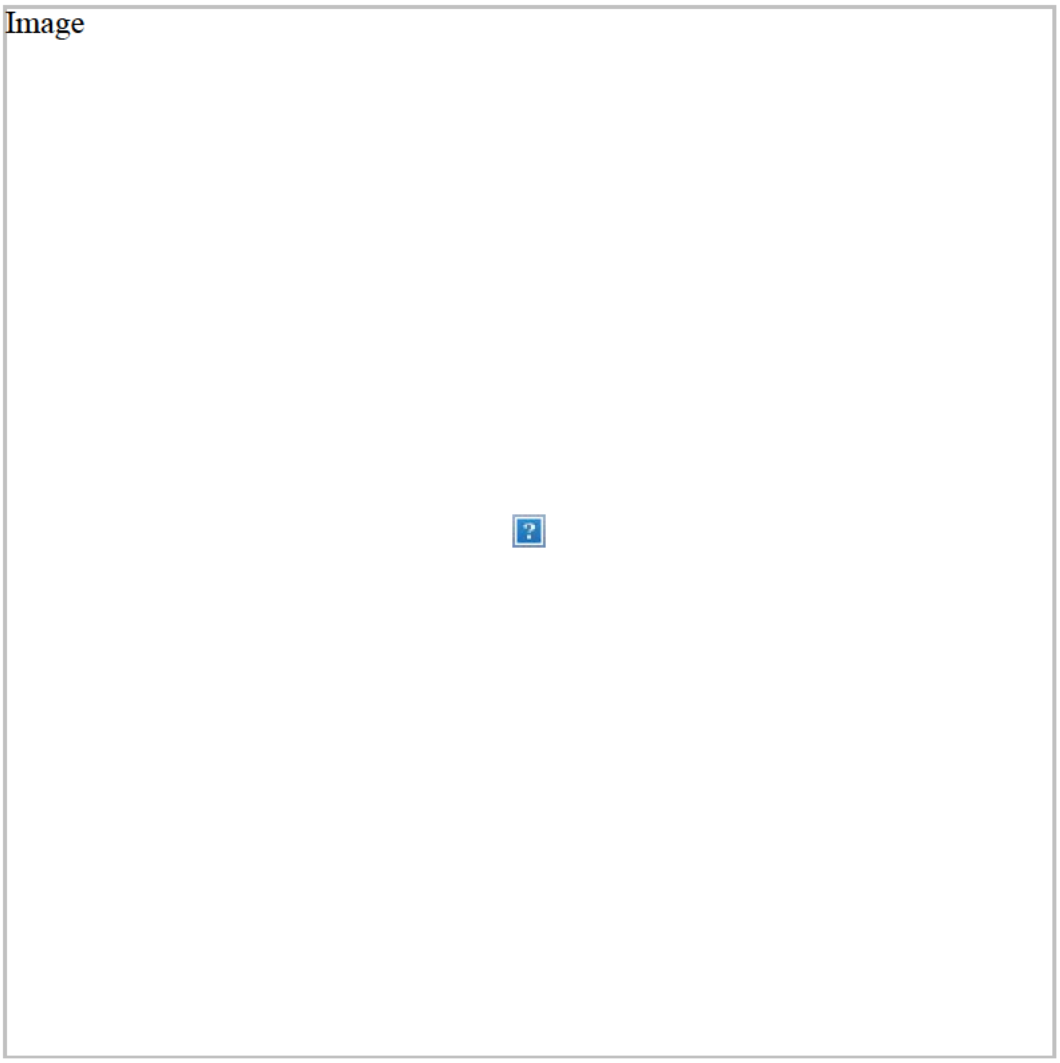
Google confirmed with TechCrunch the full list of supported countries now seeing the speed cameras, which currently includes: Australia, Brazil, U.S., Canada, U.K., India, Mexico, Russia, Japan, Andorra, Bosnia and Herzegovina, Bulgaria, Croatia, Czechia, Estonia, Finland, Greece, Hungary, Iceland, Israel, Italy, Jordan, Kuwait, Latvia, Lithuania, Malta, Morocco, Namibia, Netherlands, Norway, Oman, Poland, Portugal, Qatar, Romania, Saudi Arabia, Serbia, Slovakia, South Africa, Spain, Sweden, Tunisia, and Zimbabwe.

The Ethics Board of One of the Largest Vendors of Police Tech (Axon) Makes the Case Against ALPRs

Image

Automated License Plate Readers (ALPRs)—a mass surveillance technology that allows law enforcement to record the location and travel patterns of nearly every driver on the road—are poorly regulated, threaten privacy, and worsen the racial and economic inequalities already ingrained in our justice system.

That's what EFF and other advocates have been saying for years. But now it's coming from an oversight body formed by one of the nation's largest police tech vendors.



Last week, the AI and Policing Technology Ethics Board at

Axon, a tech company best known for popularizing body-worn cameras and the Taser, released a damning report concerning the commercial sale of ALPRs. The board, whose purpose is to “help guide and advise the company on ethical issues,” concluded that while it sees the potential value of ALPRs, their current role in society is too broad and problematic. The sheer amount of information that ALPRs gather and store was also a concern for the ethics board—particularly when privately collected data is often for sale to whoever wants to buy it.

ALPR systems include cameras that can be mounted on vehicles like police patrol cars or private tow trucks, or on stationary locations such as streetlights or overpasses. These cameras capture every license plate that passes and index them based on time, date, and location. A police officer can search ALPR databases to learn where a vehicle was in the past or even get real-time alerts when a driver passes by an ALPR camera. Research by EFF, MuckRock, and others have found that even small police departments are able to collect millions of plate scans a year, and often agencies are sharing this data with hundreds of other agencies across the country. Private companies also use ALPR and sell their data to police, financial lenders, insurance companies, private investigators, and debt collectors.

Amazon's Ring is 'the Neighborhood Watch of 2020,' police say as doorbell cams proliferate

Image

That's all it took Livonia Police to arrest a man, who hours earlier was caught on video posted on Ring's Neighbors app rummaging through the bed of a pickup parked in a driveway.

Detectives quickly recognized 60-year-old Jeffrey Couch when they saw the video posted by an app user in mid-August. Within a week, he pleaded no contest in court to two attempted larceny charges and was sentenced to 30 days in jail.

"I truly believe this is the Neighborhood Watch of 2020," said Livonia Police Capt. Ronald Taig, whose force was one of the first law enforcement agencies in Michigan — and is one of more than 400 across the country — to partner with the Ring Neighbors app, owned by Amazon.

How the deadly drug fentanyl is making its way to the US

Image

Trump administration officials are divided over part of a proposal to crack down on illicit versions of fentanyl, the deadly synthetic painkiller that President Donald Trump targeted in declaring a national opioid abuse emergency.

In an inter-agency dispute that highlights the challenges of curbing opioid abuse, the US Drug Enforcement Administration (DEA) is publicly backing tighter rules for fentanyl analogs, which are slightly altered copycat versions of the powerful drug fueling an explosion in overdoses.

In this case, the bill would cut the Food and Drug Administration out of the time-consuming review process by

letting the DEA permanently classify illicit fentanyl analogs as Schedule I drugs, like heroin, which are deemed to be addictive with no medical use.

The DEA says these legal changes would help prosecutors keep pace with criminals who constantly churn out chemically tweaked fentanyl analogs to evade strict Schedule I regulations.

Of 70,200 US drug overdose deaths in 2017, according to the CDC, about 41% involved synthetic opioids, such as fentanyl and illicit analogs of it. Most of them are made in China.

Fentanyl, some versions of which are approved to treat cancer pain, is 100 times more potent than morphine.

Trump Orders Study of Root Causes of Crime, Policing Practices

Image

President Trump on Monday ordered Attorney General William Barr to establish a new commission to study crime and law enforcement with the goal of recommending “actions that can be taken to prevent, reduce, and control crime, increase respect for the law, and assist victims.”

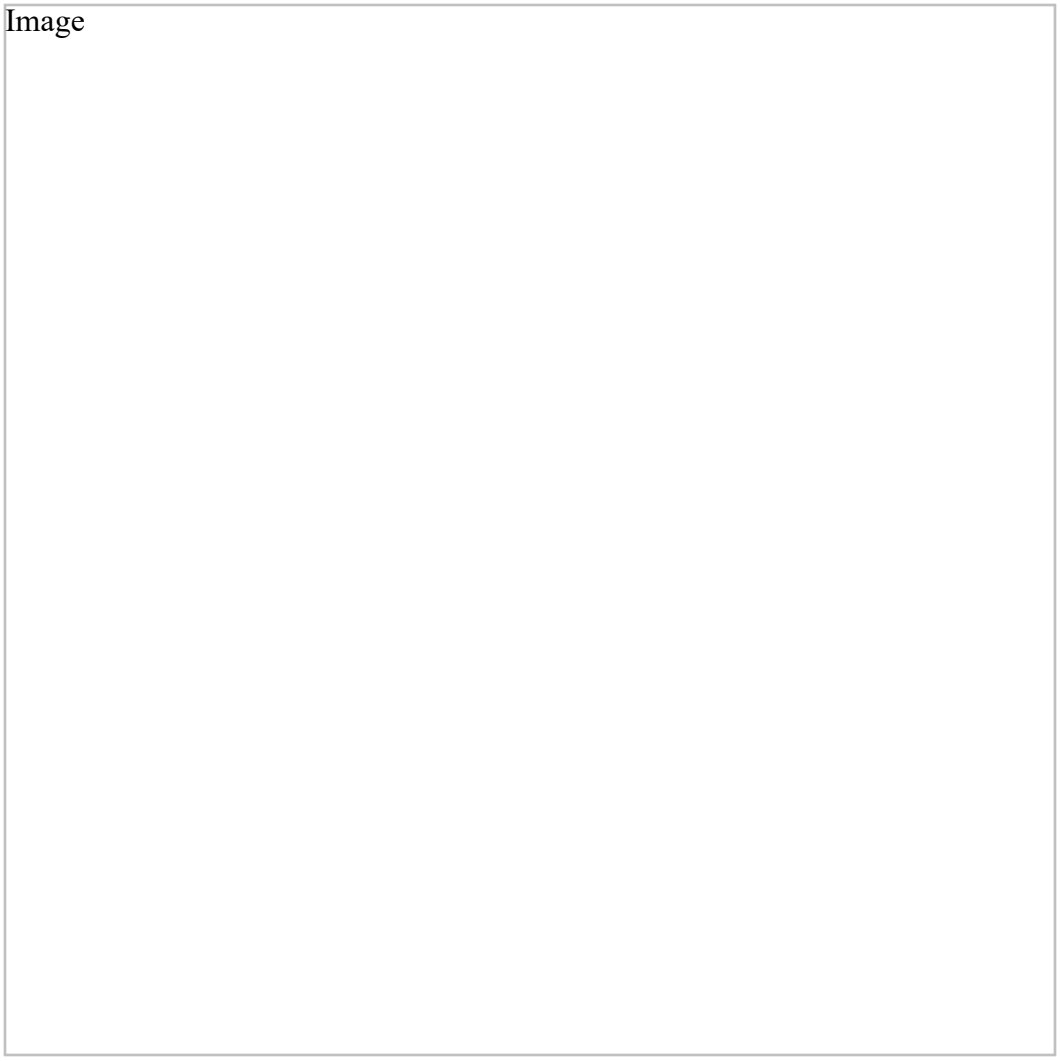
Following remarks in Chicago at the annual International Association of Chiefs of Police conference, the president signed an executive order establishing the Commission on Law Enforcement and the Administration of Justice. The commission will study the influence of substance abuse, homelessness and mental illness on crime as well as examine best practices to recruit, train and support law enforcement, among other things.

“Rigorous study of crime, including its causal factors, and current law enforcement practices is essential to assessing our

current criminal justice system's merits and opportunities for improvement," the executive order stated. "Public safety and proper policing are issues of both national and local significance that continue to require the close cooperation and coordination between the Department of Justice and state, local, and tribal law enforcement."

Quality Afterschool Programs Proven to Reduce Crime

Image



As a member of your District Attorney's Office for almost 30 years, and your DA for nearly 10, I've learned that the hours after school lets out are the prime time for juvenile crime.

It is between these hours of 2 to 6 p.m. that youth are more likely to be arrested for assault, theft and drug-related crimes.

Quality afterschool programs have been proven to reduce these crimes in our community, keep students engaged, and improve academic performance and student behavior.

A new report from Fight Crime: Invest in Kids shows that when youth have access to high-quality, affordable afterschool programming, they benefit immensely from homework help and outdoor activities, and they're less likely to commit or become victims of crime.

Australia's government is floating an idea to scan internet users' faces before they can watch porn online

Australia's Department of Home Affairs has touted an idea to use facial recognition software in order to verify internet users ages before they can access pornography or gambling websites.

In its parliamentary submission, the department says that its Document Verification Service and Face Verification Service — though broadly intended to be used as systems for fighting crime and identity theft — could also be used by police for age verification controls.

"This could assist in age verification, for example by preventing a minor from using their parent's driver licence to circumvent age verification controls," the submission states.

"Whilst they are primarily designed to prevent identity crime, Home Affairs would support the increased use of the

Document and Face Verification Services across the Australian economy to strengthen age verification processes."

Police turn to hackers in Australia's first crowdsourced attempt to find missing people

Image

For decades the traditional 'missing person' poster has been used to enlist the community's help to find individuals who may be in danger.

But with more than 2,600 Australians now listed as a "long-term" disappearance, the federal police are trying what they hope will be a more successful tactic: turning the search into a

game.

More than 350 internet sleuths and "ethical hackers" — hobbyists and professionals — gathered at 10 locations around the country on Friday in a national missing-persons "hackathon".

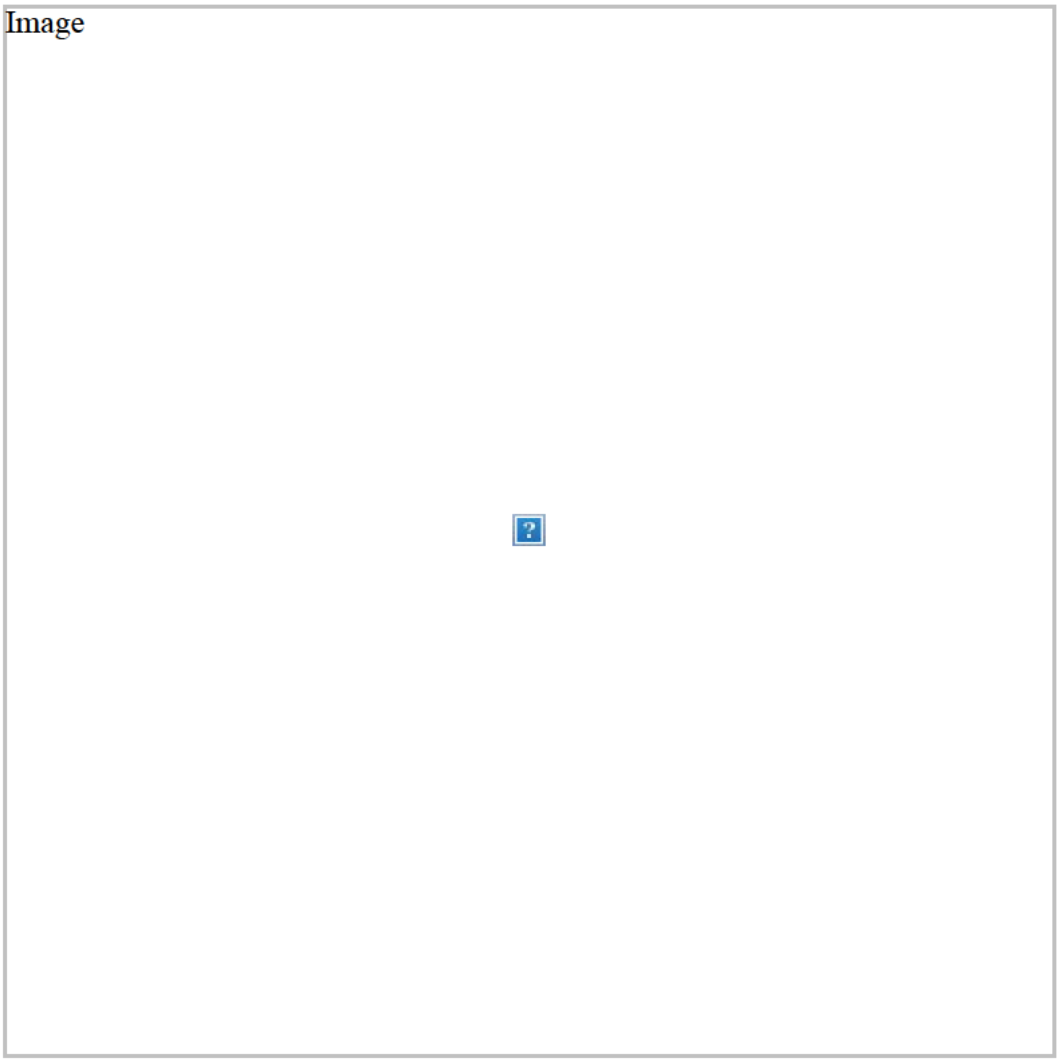
The aim was to generate leads for 12 of Australia's most frustrating cold cases, using sophisticated but legal methods of trawling the internet.

And organisers said the results were astounding: 100 leads were generated every 10 minutes the competing teams worked.

Police overseas have used crowdsourcing in the past for help with isolated cases, aided by these largely voluntary "open-source intelligence" (OSINT) enthusiasts.

But Linda Cavanagh, of the Canberra Cyber Security Innovation Node, said the Australian event was the first of its kind to be deployed on a national scale.

---



10 of the Best Tools to Find Relevant Influencers on Social Media

Image

While it's become a much bigger consideration in recent years, influencer marketing, as a practice, has actually existed for a very long time. In the past, however, influencers were only on TV or in magazines, and unlike social media, TV and newspapers are limited, which led to a situation where a select number of celebrities were able to charge tons of money for making an ad for Pepsi or Swatch in order to influence consumer behavior.

With the birth of social platforms, everything changed. The Internet has no limits, there can be as many influencers as the world requires. They can be of any age and social status, and in any area of expertise (or no area of expertise). And they can work with any brand.

How Your Volunteering Trip Could Contribute To Human Trafficking

The advent of cheap air travel and Instragammable holiday photos, combined with a longing for meaning, has created a new breed of traveler: the voluntourist. This ever-growing trend describes people, most often young and affluent Westerners, who travel to the global South to help with community projects.

While no doubt sweetly intentioned, there is considerable concern over the fad of “voluntourism” and whether it does more harm than good for the communities in developing countries – especially when it involves children or work at an orphanage. On the surface of the problem, it’s questionable whether treating the developing world as a playground is an effective model to address systemic poverty and care for vulnerable children.

An anthropological study published in the Journal of Sustainable Tourism has shown how volunteer programs can actually contribute towards a superficial understanding of poverty that distracts from the larger systems that produce inequality and poverty. Through a series of in-depth interviews with young people from the US who volunteered in Malawi, they found their volunteer work was often carried out through a colonial and “mythologized” image of a helpless Africa needing the benevolence of the West. The volunteers also viewed African poverty in terms of the “American Dream” and the idea of pulling oneself out of poverty through hard work, as opposed to deep-rooted economic, social, and historical factors at play.

Subject: ALPR Draft

Amy,
Attached is the most updated draft of the ALPR policy. I went through the template line by line and tried to cover every topic discussed. As it stands, it's approximately 12 pages long. I also did my best to recreate the Department policy template. I think I got it pretty close. Happy to discuss at any point this afternoon.

Thanks,
Jason

Lt. Brooks,
Attached is a draft ALPR Policy/SOP for the Fusion Center. I started with TRF-11 as a template and incorporated some provisions of the BJA template (also attached) so that the CFC can remain compliant with federal directives and initiatives. Please let me know your thoughts. I'd be happy to meet and discuss at your convenience.

Thanks,
Jason

Subject: Annual Privacy Training (MANDATORY)
Importance: High

Hello all,
This year's annual privacy training is tentatively scheduled as follows:

Maynard: Tuesday, August 20th at 10:00am (also broadcast via GoToMeeting)

Framingham: Thursday, August 22nd (will accommodate a time for each shift)

Make up sessions will be available for those who have vacations and unexpected sick absences. I will keep everybody posted as plans become finalized.

Thank you,
Jason

Hi Tim and Matt,

We had an issue on the BOSS server today that I wanted to make you aware of. The application was unable to write to the database. The problem was resolved by putting the database into single user mode and setting the below to auto grow. This setting appears in a different area from the earlier versions of SSMS, so I wanted to pass it along. I also did some analysis on the BOSS LPR server for planning purposes and I believe it could fill up in 4 months. Please see the charts below, I've estimated each read size to be approximately 175KB. In addition, we have 15 fixed readers in the pipeline over the next year. This will also increase the storage needs. I'll also put in a ticket requesting additional storage.

Thanks, Brian

Brian,

Here's the recommended sizing criteria for the application and database servers. With more fixed cameras pushing data to BOSS it's highly recommended you keep this sizing criteria in mind.

Can you send me screen shoot of the licenses.

That error occurs when using other browser than IE.

1. Prerequisites needed to successful install of BossUI client, the below settings pertain to OS where client is being installed.
    a. “Active Scripting” needs to be enabled in Windows “Internet Options”- “Security”- “Internet”- “Custom level”. (This setting is for Bing maps to function).
    b. Can you add http:// address to “Local Intranet” in Intranet Zones Sites. (This can be taken out after installation as it is only needed for deployment).

2. Internet Explorer must be use.

Subject: RE: BOSS update

Brian
My apologies on the delayed response. What we are looking for from a SQL DBA or Neology/PIPS is a two-pronged database storage design that is more detailed and extends further beyond the "Server Specifications/Database Sizing" document (attached) that we were provided with when we provisioned the new database server last year.

Specifically, we would be looking for the first design to show what their recommended SQL Database File & File Group layout would be distributed among specified volumes for file types (Database & Logs). Does the vendor or SQL DBA want to break the primary file group into multiple files, or do they want to spread things out over different volumes? In either case what are the propose planned file/volume sizes.

We built the new DB server based on their 14TB sizing guideline with a 21TB volume designed on to our SAN. What is the next design level to store the 1 year agreed upon reads in the Public Safety Data Center?

I think that we had discussed the potential of the purchase of additional SAN space in the current PSDC SAN environment. If that purchase is to go forward how would the SQL DBA or Neology/PIPS propose that we deal with the expansion of additional storage. Would that need to be an updated design/expansion on the updated design to deal with the current growth or is there a way to add additional database storage volumes that maintain the same application performance they desire.

So, in short a storage design that deals with the current environment and a storage design that would deal with an expanded environment.

In regards to the SHI contract, from what I understand SHI and Neology have not been able to work out an agreement between themselves so SHI is not able to resell anything to us at this point.

We would be happy to participate in a call next week if folks are available.

Thanks

Subject: Re: BOSS update

Hi Tim,

I can assist coordinating, however like you guys we have a number of projects that we are actively working and I'm not sure if I can coordinate something before the storage fills.

Do you have a specific list of questions you need answered, or is there just general concern about the size of the SQL database and allowing it to continue to grow? I'd like to craft the questions for Neology. It will help guide the resources needed from their team; for example they have a cloud option, which could be a good long term solution. Neology is also in-between builds and the new software has different requirements and is coming out of beta soon.

Once we identify the things your interested in we can host a call or meeting with everyone, the timing will be good. There's a appeal in the Cape which may require everyone to get a search warrant for reads. Depending on which way the appeal goes we may not have LPR log after.

Long term, we may want to be vendor agnostic and look at open source for an LPR interagency sharing platform like Navy's Leopard. New players are making inroads in Mass and want to contribute. Genetec is gaining traction on there ALPR, also OPENAlpr and analytics on Cameras at the edge. Everyone wants to license the backend storage system.

BTW - What happened with SHI, do you want me to see if we can get BCM to resell, we've been purchasing our new LPR cameras through them and this would just be an extension of that.

-Brian

Subject: RE: BOSS update

Brian,

Here's the recommended sizing criteria for the application and database servers. With more fixed cameras pushing data to BOSS it's highly recommended you keep this sizing criteria in mind.

Can you send me screen shoot of the licenses.

That error occurs when using other browser than IE.

1. Prerequisites needed to successful install of BossUI client, the below settings pertain to OS where client is being installed.
   a. "Active Scripting" needs to be enabled in Windows "Internet Options"- "Security"- "Internet"- "Custom level". (This setting is for Bing maps to function).
   b. Can you add http:// address to "Local Intranet" in Intranet Zones Sites. (This can be taken out after installation as it is only needed for deployment).

2. Internet Explorer must be use.

>
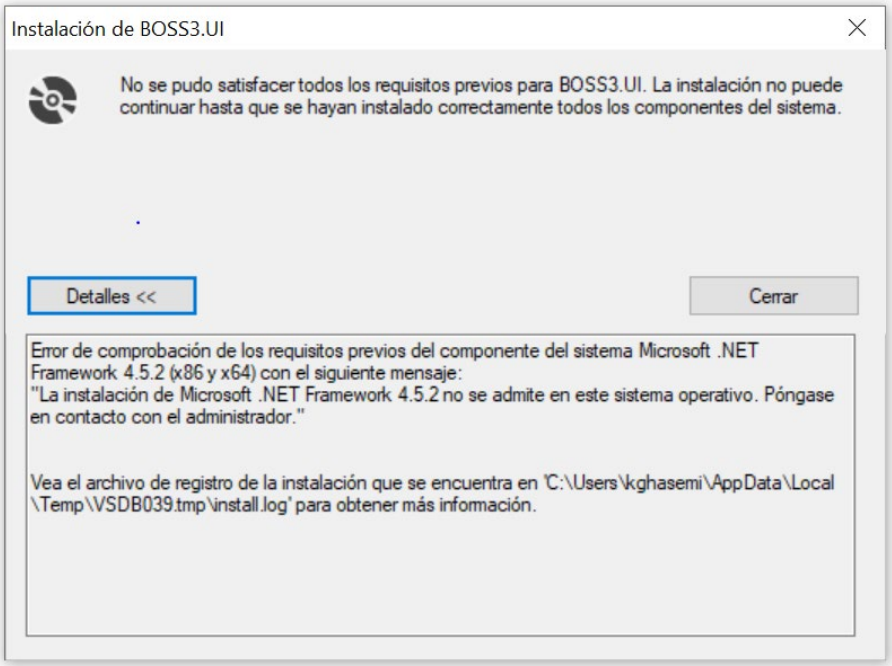
> But I have tried the link that you have provided us and I'm getting an error message in Spanish during the installation! (Please see below) What I get from it, it need .Net. 4.5.2 but my computer already has 4.7 installed on it. I also tried to install it on Watchcenter computers and I got the same error message in Spanish and .Net 4.5.2 wont install on top of the current version



of 4.7

Also translation of other part of the error message is that:

"The Microsoft .NET Framework 4.5.2 installation is not supported on this operating system. Please contact the administrator."

I have CC Lt. Griffin on this email, since he has done many installation of the old one too and all his stations are also effected too.

Error de comprobación de los requisitos previos del componente del sistema Microsoft .NET Framework 4.5.2 (x86 y x64) con el siguiente mensaje:

"La instalación de Microsoft .NET Framework 4.5.2 no se admite en este sistema operativo. Póngase en contacto con el administrador."

Vea el archivo de registro de la instalación que se encuentra en 'C:\Users\MJACKS~1\AppData\Local\Temp\VSD1947.tmp\install.log' para obtener más información.

Brian,
Attached, please find the information that we discussed last week on Genetec's 'FlexReader' LPR analytic. We've requested that a 90-day demo connection be added to MSP's existing Genetec license, and will be forwarding it along as soon as we have it.

Genetec has one camera model that they've certified/tested with FlexReader, but any Genetec-compatible camera (like the Axis one you have) can be used if it meets with the requirements of the attached guide.

Please remember that this guide was developed for a sort of "poor man's" fixed LPR solution, and was created without the mobile/covert concept that you're attempting in-mind (i.e. the references to IR).

FYI,
Bob

Hi Brian, I hope everything is going great at the MSP! I am working for Global Public Safety now and our sister company is big in ALPR as well as speed and move over cameras that also attach citations. They have a product that enables all IP cameras to function as ALPRs. Is something you have any interest in? I have a technical rep in the area Thursday and Friday if you are interested in a quick 30 min coffee discussion to kick the tires. I have attached a small powerpoint that discuss what the system does. This system works with the Neology system you have.

If you are unavailable we can plan another time if you have any interest.

Thank you

On Monday, January 28, and Tuesday, January 29, 2019, the NJSP, NYPD, and NNJUASI, facilitated by the Rutgers University Center on Policing, will host a Regional Trafficking Summit. This two-day summit will gather 12 state police superintendents, 12 major city chiefs, and numerous federal agencies with responsibilities along the I-95 corridor between Richmond, VA, Washington, DC, and Boston, MA, to discuss the feasibility and productivity of linking and sharing ALPR data. Establishing this linkage across the northeast region of the United States would immeasurably increase our effectiveness in addressing issues of counter terrorism, drug trafficking, weapons trafficking, Amber and Silver Alerts, plus other threats to the public safety of our respective states.

Please find the attached letter from Colonel Patrick Callahan for further information and details.

Subject: Fw: Natick LPR Training

Good Morning,

Per below, I was forwarded this by Carol Fitzgerald RE: Natick PD's deployment of LPR at the mall up here on Route 9...

The Natick Police Department is holding a 4 hour training on the system this Thursday (9/26). Do you think that this is something that an analyst or two from the CFC might benefit from attending? I know that we've dabbled in Vigilant before as part of a trial, but where Natick PD is one of our neighbors here, perhaps this could be a good opportunity to connect on what LPR capabilities we might be able to share with them and vice versa? SP Framingham (H-2) has responded on the e-mail chain that they will be sending a Trooper.

In addition to my own personal interest in ALPR, I think there is value in keeping up with the technology that is out there, as well as which of our partner agencies have access to which resources, etc.

Figured that it couldn't hurt to float the idea...

Respectfully,

Sean Bender

To: Sgt. Matthew Reardon; Jonathon Bussey; VanRaalten, Scott; Masiello, Frank; Fitzgerald, Carol (POL)
Subject: Natick Mall

The Natick Mall is deploying License Plate Recognition (LPR) equipment to enforce parking restrictions at their property. This deployment allows the LPR data to be shared with local law enforcement agencies in real time. While Natick Police Department will be responsible for handling all live alerts (stolen vehicles, suspects, missing persons, etc) from the NCIC list the data is a great resource to adjacent agencies.

From personal experience with this type of partnership I saw criminals using stolen credit cards from thefts in my area being used at the mall in the adjacent jurisdiction on a routine basis.. Additionally, access to the data will allow your agency to receive live alerts on suspects who you are attempting to locate when their plates are scanned at the mall. There are many other benefits to receiving access to this data.

I have attached several documents regarding the program and training that is set to take place at Natick Police Department on September 26 from 0800-1200. Feel free to call or email if you have any questions.

Thank you,

Detectives,

Attached please find a link to a flyer for ALPR training that Wellesley PD is hosting July 31st at Babson College.

Wayne Cunningham
Detective Lieutenant
Wellesley Police Department
Bureau of Criminal Investigation
781-235-2208 Ext. 5
FBINA 191

From: Whittemore, Scott
Sent: Wednesday, June 26, 2019 1:10 PM
To: Cunningham, Wayne <wcunningham@wellesleyma.gov>
Subject: NORPAC LPR

LT-

Can you put this training out to your NORPAC list? The upside on this is that everyone who attends get 30 days free access to commercial data, and they will have some idea of what Wellesley can do for them in investigations.

Here's the link: https://vslea.org/default.aspx?act=EventBuilderViewList.aspx&tag=MA&listtype=public&category=&menuitemid=5&MenuGroup=Public

Thanks.

Scott Whittemore
Deputy Police Chief

Ladies and Gentlemen,

Attached please find a hyperlink to enroll in ALPR training to be sponsored by Wellesley PD and held at Babson College. The training is scheduled for Wednesday, July 31 and there are still seats available.

The amount of ALPR recorded plates is amazing.

I recommend that each agency send at least one representative.

Subject: Regional Trafficking Summit - Registration Confirmation

Regional Trafficking Summit Attendee:

This email is to confirm you are registered to attend the Regional Trafficking Summit on January 28 & 29th, 2019.

A block of guest rooms has been reserved for summit attendees at the **Hyatt Regency on the Hudson, 2 Exchange Place, Jersey City, N.J.** If you haven't done so **Please click here to secure a room as soon as possible.**

The 1st day of the program will be held at the Hyatt and will commence at 1:00 p.m. Registration will begin at 12:30 p.m. The program is scheduled to end at 5:30. p.m. A sponsored dinner will be held at Porto Legerro restaurant on 185 Hudson St, Jersey City (a short 4-minute walk from the hotel) from 6:00 p.m. to 9:00 p.m. that evening.

The 2nd day of the program will be held at New York Police Department. Attendees will depart the hotel at 7:30 a.m. and embark on NYPD marine vessels to transport across the Hudson River. Transportation will be provided to the meeting location. We anticipate the program ending at noon and transportation will be provided back to the hotel.

All questions should be posed to Rick Fuentes, who currently works with the Rutgers University Center on Policing and the NJUASI to advance statewide and regional information-sharing programs. He can be reached by email at rrixmail@comcast.net and by phone at (201)554-5514.

Thank you in advance for attending this important summit, and for your participation in this groundbreaking effort to collect, assess, and share ALPR data across the northeastern United States.

Regards,

Linda

Subject: Regional Trafficking Summit Invite

Good Afternoon,

Recently, New York City Police Department (NYPD) Commissioner James P. O'Neill and New Jersey State Police (NJSP) Colonel Patrick Callahan invited you to attend a Regional Trafficking Summit in New Jersey and New York on January 28-29,2019. Former NJSP superintendent and colonel Rick Fuentes followed up with an email which may have gone to your spam file. Please check your spam file for previous information.

This conference – hosted jointly by the NJSP, NYPD and the Northern New Jersey Urban Area Security Initiative (NJUASI) – will be facilitated by the Rutgers University Center on Policing. It will gather 12 state police superintendents, 12 major city chiefs and representatives of numerous federal agencies with responsibilities along the Interstate 95 corridor between Richmond, Virginia and Boston, Massachusetts, to discuss the feasibility and productivity of linking and sharing automated license plate reader data.
Establishing a linkage across the northeast region of the United States will immeasurably

increase our effectiveness in addressing issues of counterterrorism, drug trafficking, human and weapons trafficking, Amber and Silver Alerts and other threats to our public safety.

Please register by Monday, January 7th . Please click here to register and RSVP to Rutgers Center on Policing by January 7th, 2019.

During the morning of Monday, January 28, 2019, attendees will arrive at the Hyatt Regency on the Hudson, 2 Exchange Place, Jersey City, N.J. A block of rooms has been reserved for the summit Please click here to make your room reservations. This should also be done by January 7th, 2019.

All questions should be posed to Rick Fuentes, who currently works with the Rutgers University Center on Policing and the NJUASI to advance statewide and regional information-sharing programs. He can be reached by email at rrixmail@comcast.net and by phone at (201)554-5514.

Thank you in advance for attending this important summit, and for your participation in this groundbreaking effort to collect, assess, and share ALPR data across the northeastern United States.

Hi Jason,

I'm redoing the SOPs & Workflow Guide. There are quite a few attachments but Amy asked that the Facial Recognition and the LPRs be reviewed specifically for legal purposes and that these elements may take a bit more time to review. I should have the rest of the book done sometime next week for the whole book to be reviewed, but wanted to get a jump start on the two mentioned above. The whole guide will likely be reviewed by you, Amy, and the Major. I've attached the different parts of the LPRs and Facial Recognition. Let me know what you think.

Thanks!
-Brit

Subject: Technical Bulletin – P520 / P525 software Application maintenance release 5.1.3782

Technical Bulletin – P520 / P525 software Application Release

We have released a new version of software for the P500 range of cameras – the P520 and P525.
This release is deemed an important update as it corrects a number of issues that have been identified post launch, and has a number of changes to improve the customer experience.
For the full list of changes, see the release note available alongside the application and also attached to this Email.
Please note there were a number of interim (Beta) releases prior to this release.
To determine all the changes since the last release, please be reminded the last official release was 5.1.3561. Please read the release note accordingly.

Latest software versions:

- Application 5.1.3782
- OS 1.10.217 (unchanged since last release)

TIP: The software release can also be installed on any internet connected camera that is running the previous 5.1.3561 release simply by ensuring that a DNS server is configured in the Network Configuration page in Webmin (eg to 8.8.8.8), and then visiting the "check for updates" page in Webmin.

All of this software can be downloaded from the relevant links at:
http://dl.anprlicense.eu/release/public.xml

Internally within the Neology UK network, it can be found at:
http://10.120.10.8/svn/releases/software.xml

Key Changes

For full information, see the release notes, however a few highlights are:

- Allow camera ALPR functionality to be enabled/disabled based on status of GPIO input line (customer request).
- VESLITE: Allow setting the VES Image and UDP port numbers. (Customer request)
- The camera now supports IPv6 when connecting out via a modem.
- The viewfinder, vehicle event viewer, and PIXI protocols can all now be accessed via IPv6.
- Numerous corrections to issues identified during testing / by customers, such as:
    - Correcting a problem identified as “alignment trap” that could reduce performance and sometimes triggered reboots. (Problem experienced by Notts)
    - Fixed a problem that caused the camera to be unable to connect to the remote DLOCR server as a result of server-side updates. (could be relevant to Parking Eye).
    - Implemented a SIM watchdog such that if the Modem SIM becomes unresponsive, the camera will reboot to recover the situation. (Problem experienced by Notts)
    - Fixed a problem that caused dayNightMode to not apply the day settings if the app restarted in the dawn period between the two upper and lower threshold values (problem seen at Notts).

Guidance For Production

This software should be used for all future P520 / P525 cameras – all previous builds are deprecated in preference to this release.

Guidance For Customer Support

Ideally all existing camera installations should be upgraded to use this new application software.

Reminder: Unlike in previous generation cameras the P500 can have the OS **upgraded** without needing a serial connection.
OS and application upgrades can be done in the same way via the latest version of Toolkit by simply selecting “Software Upgrade” and selecting the OS or application distribution.

Subject: FW: TRF-11 suggested changes needed to comply with DHS HSGP Grant Requirements

All,

Given that the ALPR servers are secured and operated at the DCJIS data center in Chelsea, and that the application is managed by both DCJIS and MSP, I am suggesting the following changes highlighted in red. I am also copying in Commissioner Slater and Michaela Dunne from DCJIS for their thoughts and comments.

Please keep in mind that much of this language is coming from the BJA ALPR Policy Template, and our goal is to be in compliance so that HSGP funds continue to flow uninterrupted.

Respectfully,

Lieutenant Colonel Dermot J. Quinn #1765
Division Commander
Division of Homeland Security & Preparedness
Massachusetts State Police

Security The following shall apply to ALPR system and information security:

- The Department of Criminal Justice Information Services of the Executive Office of Public Safety and Security, will operate ALPR servers in a secure facility protected from external intrusion and will utilize secure internal and external safeguards against network intrusions. Any access to DCJIS ALPR information from outside the facility will be allowed only over secure networks;

- The Department and DCJIS will store ALPR information in a manner that ensures that it cannot be added to, modified, accessed, or purged except by personnel authorized to take such actions;

- Access to Department ALPR information will be granted only to personnel whose positions and job duties require such access and who have successfully completed a background check and training;

- Usernames and passwords to ALPR information are not transferrable, must not be shared by Department personnel, and must be kept confidential;

- Queries made to the Department's ALPR information will be logged into the system identifying the user initiating the query. All user access, including participating agency access, and queries are subject to review and audit; and

- The Department and DCJIS will maintain an audit trail of accessed, requested, or disseminated Department-held ALPR information. An audit trail will be kept for a minimum of one-year of requests for access to ALPR information for specific purposes and of what ALPR information is disseminated to each individual in response to the request.

Good Morning,

As you are probably aware, the Department is in the process of ensuring that our policies meet Accreditation standards. Please find attached a pdf of Accreditation standards relative to LPR (along with the attached word doc of the revised TRF-11 DRAFT that has been circulating.)

As part of the Fusion Center's revisions to ensure policy compliance with BJA LPR Policy Template (as reflected in attached revised DRAFT), before finalizing the draft for promulgation, the Department would like you to take this opportunity to incorporate the language the Fusion Center deems appropriate for the MSP to be in compliance with Accreditation standards as well.

Respectfully,
KME

Subject: RE: TRF-11 suggested changes needed to comply with DHS HSGP Grant Requirements

Good Morning,

Please see the attached draft. It incorporates some very minor changes (which have been tracked and can be accepted or not.)

There is one change that I did not want to make without consultation –

- On page 6, "Security" section, first bullet: should the first sentence read "The Department will operate *the ALPR system* in a secure facility protected from external intrusion and will utilize secure internal and external safeguards against network intrusions."?

Also, as you may have discovered, the formatting of these word documents can be very quirky, so when all revisions have been finalized and the document is ready for promulgation, Trooper Tapis and I will do the final formatting.

Respectfully,
KME

Subject: FW: TRF-11 suggested changes needed to comply with DHS HSGP Grant Requirements

Good Evening All,

The Fusion Center needs to be in compliance with three new requirements from DHS to continue to be eligible for HSGF. The first is an MOU between the CFC and DHS. Major Range and his team have already submitted our proposal to DHS for comments. Second, a facial recognition SOP is required and a draft of that document has been submitted to Legal Section for comment. Lastly, an LPR policy that incorporates elements from the BJA LPR Policy Template is required. This email addresses that issue. Attached please find an edited version of the existing MSP ALPR Policy (TRF-11). The edits that have been prepared by Major Range and his team incorporate the required elements from the BJA template required by DHS (See attached BJA LPR Policy Template). We are very open to editing, including grammar and style, and obviously any guidance on legal issues that our edits may present.

Please keep in mind that these are requirements are from DHS, and placed on the CFC in order to continue to receive Homeland Security Grant Funding. HSGF provides the MSP the financial resources to keep the CFC operating. We appreciate your attention to this matter as we need to have this in place by the end of the month.

Good afternoon,
I apologize for the delay in distributing this. I was able to recreate the original TRF-11 in a much more workable format in Word. I've made some additions (highlighted in the attached document) which I believe brings us up to speed with respect to DHS grant requirements. I did not remove anything from the existing TRF-11, but ended up adding approximately 3 pages to the current policy. I did my best to exclude irrelevant or unnecessary portions of the BJA guidelines. Any additional thoughts or suggestions are welcome.

Thanks,
Jason

Good Morning,

As you are probably aware, the Department is in the process of ensuring that our policies meet Accreditation standards. Please find attached a pdf of Accreditation standards relative to LPR (along with the attached word doc of the revised TRF-11 DRAFT that has been circulating.)

As part of the Fusion Center's revisions to ensure policy compliance with BJA LPR Policy Template (as reflected in attached revised DRAFT), before finalizing the draft for promulgation, the Department would like you to take this opportunity to incorporate the language the Fusion Center deems appropriate for the MSP to be in compliance with Accreditation standards as well.

Respectfully,
KME

Good Morning,

Please see the attached draft. It incorporates some very minor changes (which have been tracked and can be accepted or not.)

There is one change that I did not want to make without consultation –

- On page 6, "Security" section, first bullet: should the first sentence read "The Department will operate *the ALPR system* in a secure facility protected from external intrusion and will utilize secure internal and external safeguards against network intrusions."?

Also, as you may have discovered, the formatting of these word documents can be very quirky, so when all revisions have been finalized and the document is ready for promulgation, Trooper Tapis and I will do the final formatting.

Respectfully,
KME

Good Evening All,

The Fusion Center needs to be in compliance with three new requirements from DHS to continue to be eligible for HSGF. The first is an MOU between the CFC and DHS. Major Range and his team have already submitted our proposal to DHS for comments. Second, a facial recognition SOP is required and a draft of that document has been submitted to Legal Section for comment. Lastly, an LPR policy that incorporates elements from the BJA LPR Policy Template is required. This email addresses that issue. Attached please find an edited version of the existing MSP ALPR Policy (TRF-11). The edits that have been prepared by Major Range and his team incorporate the required elements from the BJA template required by DHS (See attached BJA LPR Policy Template). We are very open to editing, including grammar and style, and obviously any guidance on legal issues that our edits may present.

Please keep in mind that these are requirements are from DHS, and placed on the CFC in order to continue to receive Homeland Security Grant Funding. HSGF provides the MSP the financial resources to keep the CFC operating. We appreciate your attention to this matter as we need to have this in place by the end of the month.

Respectfully,

Lieutenant Colonel Dermot J. Quinn #1765

Good afternoon,
I apologize for the delay in distributing this. I was able to recreate the original TRF-11 in a much more workable format in Word. I've made some additions (highlighted in the attached document) which I believe brings us up to speed with respect to DHS grant requirements. I did not remove anything from the existing TRF-11, but ended up adding approximately 3 pages to the current policy. I did my best to exclude irrelevant or unnecessary portions of the BJA guidelines. Any additional thoughts or suggestions are welcome.

Thanks,
Jason

Jason,

As discussed, the existing TRF-11 is attached in a PDF format. Lt. Brooks will have someone try to un-PDF it now and then email it back to this group.

On Thursday, please mark up a new TRF-11 DRAFT with the suggested changes that are needed to comply with the template pursuant to the new DHS HSGP Grant Requirements. Then send that document back to this group on Thursday so Lt. Col. Quinn can work with GHQ to try and get TRF-11 fully updated prior to the end of this month to comply.

Thank again for your work on this. We appreciate it.

TRF-11 Automatic License Plate Recognition DRAFT UPDATE 09182019.docx
41.3.9 LPR CALEA.pdf

All,

Given that the ALPR servers are secured and operated at the DCJIS data center in Chelsea, and that the application is managed by both DCJIS and MSP, I am suggesting the following changes highlighted in red

Security The following shall apply to ALPR system and information security:

- The Department of Criminal Justice Information Services of the Executive Office of Public Safety and Security, will operate ALPR servers in a secure facility protected from external intrusion and will utilize secure internal and external safeguards against network intrusions. Any access to DCJIS ALPR information from outside the facility will be allowed only over secure networks;
- The Department and DCJIS will store ALPR information in a manner that ensures that it cannot be added to, modified, accessed, or purged except by personnel authorized to take such actions;
- Access to Department ALPR information will be granted only to personnel whose positions and job duties require such access and who have successfully completed a background check and training;
- Usernames and passwords to ALPR information are not transferrable, must not be shared by Department personnel, and must be kept confidential;
- Queries made to the Department's ALPR information will be logged into the system identifying the user initiating the query. All user access, including participating agency access, and queries are subject to review and audit; and
- The Department and DCJIS will maintain an audit trail of accessed, requested, or disseminated Department-held ALPR information. An audit trail will be kept for a minimum of one-year of requests for access to ALPR information for specific purposes and of what ALPR information is disseminated to each individual in response to the request.

Jason,

As discussed, the existing TRF-11 is attached in a PDF format. Lt. Brooks will have someone try to un-PDF it now and then email it back to this group.

On Thursday, please mark up a new TRF-11 DRAFT with the suggested changes that are needed to comply with the template pursuant to the new DHS HSGP Grant Requirements. Then send that document back to this group on Thursday so Lt. Col. Quinn can work with GHQ to try and get TRF-11 fully updated prior to the end of this month to comply.

Thank again for your work on this. We appreciate it.

Good Morning,

Please see the attached draft. It incorporates some very minor changes (which have been tracked and can be accepted or not.)

There is one change that I did not want to make without consultation –

- On page 6, "Security" section, first bullet: should the first sentence read "The Department will operate *the ALPR system* in a secure facility protected from external intrusion and will utilize secure internal and external safeguards against network intrusions."?

Also, as you may have discovered, the formatting of these word documents can be very quirky, so when all revisions have been finalized and the document is ready for promulgation, Trooper Tapis and I will do the final formatting.

Respectfully,
KME

Subject: FW: TRF-11 suggested changes needed to comply with DHS HSGP Grant Requirements

Good Evening All,

The Fusion Center needs to be in compliance with three new requirements from DHS to continue to be eligible for HSGF. The first is an MOU between the CFC and DHS. Major Range and his team have already submitted our proposal to DHS for comments. Second, a facial recognition SOP is required

and a draft of that document has been submitted to Legal Section for comment. Lastly, an LPR policy that incorporates elements from the BJA LPR Policy Template is required. This email addresses that issue. Attached please find an edited version of the existing MSP ALPR Policy (TRF-11). The edits that have been prepared by Major Range and his team incorporate the required elements from the BJA template required by DHS (See attached BJA LPR Policy Template). We are very open to editing, including grammar and style, and obviously any guidance on legal issues that our edits may present.

Please keep in mind that these are requirements are from DHS, and placed on the CFC in order to continue to receive Homeland Security Grant Funding. HSGF provides the MSP the financial resources to keep the CFC operating. We appreciate your attention to this matter as we need to have this in place by the end of the month.

Respectfully,

Lieutenant Colonel Dermot J. Quinn #1765

Subject: FW: TRF-11 suggested changes needed to comply with DHS HSGP Grant Requirements

All,

Given that the ALPR servers are secured and operated at the DCJIS data center in Chelsea, and that the application is managed by both DCJIS and MSP, I am suggesting the following changes highlighted in red. I am also copying in Commissioner Slater and Michaela Dunne from DCJIS for their thoughts and comments.

Please keep in mind that much of this language is coming from the BJA ALPR Policy Template, and our goal is to be in compliance so that HSGP funds continue to flow uninterrupted.

Respectfully,

Lieutenant Colonel Dermot J. Quinn #1765
Division Commander
Division of Homeland Security & Preparedness
Massachusetts State Police
<image001.png>

Security The following shall apply to ALPR system and information security:

- The Department of Criminal Justice Information Services of the Executive Office of Public Safety and Security, will operate ALPR servers in a secure facility protected from external intrusion and will utilize secure internal and external safeguards against network intrusions. Any access to DCJIS ALPR information from outside the facility will be allowed only over secure networks;
- The Department and DCJIS will store ALPR information in a manner that ensures that it cannot be added to, modified, accessed, or purged except by personnel authorized to take such actions;
- Access to Department ALPR information will be granted only to personnel whose positions and job duties require such access and who have successfully completed a background check and training;
- Usernames and passwords to ALPR information are not transferrable, must not be shared by Department personnel, and must be kept confidential;
- Queries made to the Department's ALPR information will be logged into the system identifying the user initiating the query. All user access, including participating agency access, and queries are subject to review and audit; and
- The Department and DCJIS will maintain an audit trail of accessed, requested, or disseminated Department-held ALPR information. An audit trail will be kept for a minimum of one-year of requests for access to ALPR information for specific purposes and of what ALPR information is disseminated to each individual in response to the request.

Good Morning,

As you are probably aware, the Department is in the process of ensuring that our policies meet Accreditation standards. Please find attached a pdf of Accreditation standards relative to LPR (along with the attached word doc of the revised TRF-11 DRAFT that has been circulating.)

As part of the Fusion Center's revisions to ensure policy compliance with BJA LPR Policy Template (as reflected in attached revised DRAFT), before finalizing the draft for promulgation, the Department would like you to take this opportunity to incorporate the language the Fusion Center deems appropriate for the MSP to be in compliance with Accreditation standards as well.

Respectfully,
KME

Subject: RE: TRF-11 suggested changes needed to comply with DHS HSGP Grant Requirements

Good Morning,

Please see the attached draft. It incorporates some very minor changes (which have been tracked and can be accepted or not.)

There is one change that I did not want to make without consultation –

- On page 6, "Security" section, first bullet: should the first sentence read "The Department will operate *the ALPR system* in a secure facility protected from external intrusion and will utilize secure internal and external safeguards against network intrusions."?

Also, as you may have discovered, the formatting of these word documents can be very quirky, so when all revisions have been finalized and the document is ready for promulgation, Trooper Tapis and I will do the final formatting.

Respectfully,
KME

Subject: FW: TRF-11 suggested changes needed to comply with DHS HSGP Grant Requirements

Good Evening All,

The Fusion Center needs to be in compliance with three new requirements from DHS to continue to be eligible for HSGF. The first is an MOU between the CFC and DHS. Major Range and his team have already submitted our proposal to DHS for comments. Second, a facial recognition SOP is required and a draft of that document has been submitted to Legal Section for comment. Lastly, an LPR policy that incorporates elements from the BJA LPR Policy Template is required. This email addresses that issue. Attached please find an edited version of the existing MSP ALPR Policy (TRF-11). The edits that have been prepared by Major Range and his team incorporate the required elements from the BJA template required by DHS (See attached BJA LPR Policy Template). We are very open to editing, including grammar and style, and obviously any guidance on legal issues that our edits may present.

Please keep in mind that these are requirements are from DHS, and placed on the CFC in order to continue to receive Homeland Security Grant Funding. HSGF provides the MSP the financial resources to keep the CFC operating. We appreciate your attention to this matter as we need to have this in place by the end of the month.

Jason,

As discussed, the existing TRF-11 is attached in a PDF format. Lt. Brooks will have someone try to un-PDF it now and then email it back to this group.

On Thursday, please mark up a new TRF-11 DRAFT with the suggested changes that are needed to comply with the template pursuant to the new DHS HSGP Grant Requirements. Then send that document back to this group on Thursday so Lt. Col. Quinn can work with GHQ to try and get TRF-11 fully updated prior to the end of this month to comply.

Thank again for your work on this. We appreciate it.

Hi Brian, I hope everything is going great at the MSP! I am working for Global Public Safety now and our sister company is big in ALPR as well as speed and move over cameras that also attach citations. They have a product that enables all IP cameras to function as ALPRs. Is something you have any interest in? I have a technical rep in the area Thursday and Friday if you are interested in a quick 30 min coffee discussion to kick the tires. I have attached a small powerpoint that discuss what the system does. This system works with the Neology system you have.

If you are unavailable we can plan another time if you have any interest.

Thank you

Sir,
I spoke with Mr. Pfister regarding the below request. He stated that NESPIN would be speaking and asked if the MSP wanted to add what they could add to an investigation. I stated that the CFC could speak to what services they provide (Coplink, Facial Rec, Lineups, ALPR,BOLOs, etc,) investigators. He indicated that he would like that and could add the CFC to agenda. I will attend on May 15th to represent the MSP. DO we have a rep from the CFC that could present on that day?

Subject: Northeast Healthcare Law Enforcement Association, May 2019 Conference

Colonel Gilpin,

We are reaching out from the Massachusetts Attorney General's Office MFCU in regards to the Northeast Healthcare Law Enforcement Association (NHLEA) conference which will be held on **MAY 15th and 16th, 2019** at the **Sheraton Four Points**, located at 3800 State Highway, **Eastham, MA** 02642.

NHLEA has been in existence since 1995 with Massachusetts as a founding member. NHLEA was established with the dual purpose of promoting joint

healthcare fraud enforcement investigations and providing staff training opportunities. NHLEA is comprised of representatives from the six New England states and New York. The members include staff from the Medicaid Fraud Control Units (MFCUs) of seven states, the United States Attorney's Office (USAO), the Regional Office of Inspector General (DHHS/OIG/OI), the Federal Bureau of Investigations, the Drug Enforcement Agency, the Food and Drug Administration (FDA), and the Massachusetts Board of Registry in Medicine (BORIM).

Established as the first regional organization of state and federal healthcare fraud professionals, NHLEA's mission is to develop practical, results-oriented strategies to combat fraud and abuse in the medical field. The NHLEA pursues its mission by promoting the sharing of information and resources among its members and by improving interagency cooperation and federal-state relations in the fight against healthcare fraud.

MFD plans to host the conference on either an annual or biannual basis in conjunction with the Rhode Island MFCU and DHHS/OIG/OI. Attached is an agenda of the training when it was last hosted in 2014.

Lodging:

There are 40 rooms held for a government rate of $113/night, available for check-in on May 14th and check-out on May 16th (two night stay). The deadline to book rooms at the government rate is April 1st. Breakfast will be included both mornings. A link to the hotel's website is here. Please mention the NHLEA conference when booking.

Attendance:

Even though each attendee or unit shall book rooms directly with the hotel on a first-come first-serve basis, once you have a sense of how many attendees your unit plans to send please let us know. There is no cost for the program.

Presentations:

At this time we are accepting proposals for presentations. Attached is a *Call for Presentation* form. The deadline to submit proposals to us is March 15th. Also attached, is a past NHLEA agenda to give you a sense of past topics. We encourage you to submit any and all topics for the purpose of establishing a well-rounded training agenda.

Please do not hesitate to reach out if you have any questions. We look forward to sharing this training opportunity with you all.

Best,

Steven Pfister

Subject: RE: NYPD-NJSP LPR Biweekly Meeting

Major Quinn,

The short answer is that we retain LPR data for five years. Uniformed Members of the Service have access to the LPR data on department computers and smartphones utilizing their department network credentials for general plate searches. For searches that require more detail and extensive searching and filtering Uniformed Members of the Service can contact our Lower Manhattan Security Initiative (LMSI) command center for assistance. The officers at LMSI require a short form to be filled out before assisting in any investigations involving plate data to ensure the integrity of the searches.

Let us know if you are looking for the actual legal documentation, and we can work on getting that as well. Feel free to contact me directly with any questions that you may have.

Thanks.

You had suggested that I use SHI. Do you prefer BCM?

I think Maintenance is the entirety of the SOW. What exactly do you want the SOW to cover.

I think so, can we get the maintenance split out separate. If your already working with SHI m, I need the massport scope from an approved reseller. BCM or SHI.

Subject: RE: TRF-11 suggested changes needed to comply with DHS HSGP Grant Requirements

Good afternoon,
I apologize for the delay in distributing this. I was able to recreate the original TRF-11 in a much more workable format in Word. I've made some additions (highlighted in the attached document) which I believe brings us up to speed with respect to DHS grant requirements. I did not remove anything from the existing TRF-11, but ended up adding approximately 3 pages to the current policy. I did my best to exclude irrelevant or unnecessary portions of the BJA guidelines. Any additional thoughts or suggestions are welcome.

Thanks,
Jason

Jason,

As discussed, the existing TRF-11 is attached in a PDF format. Lt. Brooks will have someone try to un-PDF it now and then email it back to this group.

On Thursday, please mark up a new TRF-11 DRAFT with the suggested changes that are needed to comply with the template pursuant to the new DHS HSGP Grant Requirements. Then send that document back to this group on Thursday so Lt. Col. Quinn can work with GHQ to try and get TRF-11 fully updated prior to the end of this month to comply.

Thank again for your work on this. We appreciate it.

Subject: RE: TRF-11 suggested changes needed to comply with DHS HSGP Grant Requirements

Good afternoon,
I apologize for the delay in distributing this. I was able to recreate the original TRF-11 in a much more workable format in Word. I've made some additions (highlighted in the attached document) which I believe brings us up to speed with respect to DHS grant requirements. I did not remove anything from the existing TRF-11, but ended up adding approximately 3 pages to the current policy. I did my best to exclude irrelevant or unnecessary portions of the BJA guidelines. Any additional thoughts or suggestions are welcome.

Thanks,
Jason

Subject: TRF-11 suggested changes needed to comply with DHS HSGP Grant Requirements

Jason,

As discussed, the existing TRF-11 is attached in a PDF format. Lt. Brooks will have someone try to un-PDF it now and then email it back to this group.

On Thursday, please mark up a new TRF-11 DRAFT with the suggested changes that are needed to comply with the template pursuant to the new DHS HSGP Grant Requirements. Then send that document back to this group on Thursday so Lt. Col. Quinn can work with GHQ to try and get TRF-11 fully updated prior to the end of this month to comply.

Thank again for your work on this. We appreciate it.

Flexreader Camera Considerations.pdf

Brian,
Attached, please find the information that we discussed last week on Genetec's 'FlexReader' LPR analytic. We've requested that a 90-day demo connection be added to MSP's existing Genetec license, and will be forwarding it along as soon as we have it.

Genetec has one camera model that they've certified/tested with FlexReader, but any Genetec-compatible camera (like the Axis one you have) can be used if it meets with the requirements of the attached guide.

Please remember that this guide was developed for a sort of "poor man's" fixed LPR solution, and was created without the mobile/covert concept that you're attempting in-mind (i.e. the references to IR).

Hi Brian, I hope everything is going great at the MSP! I am working for Global Public Safety now and our sister company is big in ALPR as well as speed and move over cameras that also attach citations. They have a product that enables all IP cameras to function as ALPRs. Is something you have any interest in? I have a technical rep in the area Thursday and Friday if you are interested in a quick 30 min coffee discussion to kick the tires. I have attached a small powerpoint that discuss what the system does. This system works with the Neology system you have.

If you are unavailable we can plan another time if you have any interest.

Thank you

TextNow as well. They have a mobile app and web app. I?ve tested signing up via web app; create a throwaway Google account, sign up using that account, and you?re in with a phone number in any area code you specify. No other verification. Trucking has a lot of problems with identity theft. Most of the identity thieves we deal with use TextNow these days and use it to scam money orders or steal truckloads of freight. No more getting caught on surveillance buying burners.

In addition to caller ID spoofing, there?s also SIM swap attacks. The scam there is socially engineering your provider to change your phone service to a SIM card they are in possession of. Once that?s done, they?d receive all your texts and be able to make any calls as you. https://urldefense.proofpoint.com/v2/url?u=https-3A__krebsonsecurity.com_2019_03_why-2Dphone-2Dnumbers-2Dstink-2Das-2Didentity-2Dproof_&d=DwICAg&c=lDF7oMaPKXpkYvev9V-fVahWL0QWnGCCAfCDz1Bns_w&r=JjUJPE4iHOCoV4Iuf8VaMhDE2YDQmtiDfmo4sfZoAqY&m=r2TzZER-DwEyols175ODcTL-BmSUd-Udo-hM2Zlfo80&s=2DGy0iIl2Wo12TSarbF6li43Z43GVOpa1-2xx65t5n0&e=.

Subject: Re: [IACA] Spoofing App?

I hate to say it but there is very little that can be done to prevent this type of spoofing. It is a two part process.

First the caller must acquire data in great swaths, usually through social media, and then due typical toll analysis to to find individuals names associated with numbers found in the initial data scrape.

Only after numbers are collated into paring of high closness using the relationships found by analyzing social media can the caller spoof with a number you are likely to answer.

I image this if only going to get worse as our information is out there, and being correlated for sale by both legitimate companies and those with mal intent.

NOTE: many of use often send emails with signature lines that have our phone numbers. In this instance we have done the correlation for the bad guys. all they need is to find the phone number of someone we have emailed and they are in business.

Hi Shanice,

Spoofing.. In theory, the people being scammed are more apt to answer the phone from a familiar area code. So a person?s number gets cloned at random by someone with the technology to do so, and used at an attempt to scam.

Recently heard of someone receiving irate phone calls back, from people who were being called, using the victims spoofed number.

The only reasonable solution suggested was either changing your number, or looking into an app called ?Should I Answer.? It allows the victim of the spoofing, to filter the returned calls, by only receiving calls from numbers they?ve listed in the app. They suggested the victim of the spoofed number change their voicemail message, saying they?ve had their number spoofed. It also allows them to see the log of people who?ve tried to call the number back. It was reported that once this happened, the number of angry call-backers subsided after a couple of weeks.

I think, unfortunately, people?s numbers just get picked at random. Not sure if there?s a solution. Sorry!

Subject: [IACA] Spoofing App?

CAUTION: This email originated from outside of the organization. Do not click links or open attachments unless you recognize the sender and are confident the content is safe.

Good Afternoon Everyone,

I have a question for you all.

Has anyone ever dealt with a case, where a phone call is received showing a number in the victims phone. However, the caller on the line is in fact NOT with the phone or with the actual person said to be calling the phone??

Incident: A civilian received a phone call- the caller ID showed a family member?s name & when the call was answered it turned out to be scammers on the line?.

Is anyone familiar with any ways to track the actual phone call or identify the app used?

Respectfully,

Shanice Gordon, M.A.

For what it?s worth, you can create any number on Google Voice. (And then have it forwarded to your own phone).

I have used this when I did not want to give out my personal number to certain people.

Interestingly, we had a recent situation where a call center agent would call in using multiple Google Voice numbers they had created-and since they could see who was up next for calls-they would answer their own call, keep the line open, hang up after 45 min and then basically fake doing work all day.

> Yes. I get these calls all the time on my personal cell phone. One of the numbers came up as our friend?s number and it turned out to be someone trying to reduce our credit card interest. They use an app to change their actual number from the one they are calling and use a local number. I think it picks the numbers at random and sometimes it just happens to be someone you may know.

Subject: [IACA] Database test bank system for promotional exams
Message-ID: <884005cb07114df9ae289550c6c6427b@Exchange1.myfdle.net>
Content-Type: text/plain; charset="us-ascii"

Good afternoon -

I need some help with a particular issue. We are currently using a test question database to administer promotional exams and other tests within our training programs. The program we are currently using (LXR Test) is obsolete and the original vendor is no longer in business. Once the upgrade to Windows 10 is happening later this year, we will no longer be able to use the current system. So, I am looking for some leads and recommendations on a new database/ test bank.

What are you using at your agency? What's working and what's not? Do you have a point of contact for me?

Any help is greatly appreciated.

Best,

Alexander S. Gulde

Content-Type: text/plain; charset="utf-8"

Katherine,
I use ESRI ArcMap for mapping solutions but it is not that user friendly if you are not familiar with it. It is the best GIS software available, very versatile. If you have a GIS department.

If you are just using GPS data and possibly the tracks from the GPS unit you should try Garmin?s Base Camp. It is a very user friendly GPS software program and I believe it is free on the Garmin Website.

https://urldefense.proofpoint.com/v2/url?u=https-3A__www.garmin.com_en-2DUS_shop_downloads_basecamp&d=DwICAg&c=lDF7oMaPKXpkYvev9V-fVahWL0QWnGCCAfCDz1Bns_w&r=JjUJPE4iHOCoV4Iuf8VaMhDE2YDQmtiDfmo4sfZoAqY&m=r2TzZER-DwEyols175ODcTL-BmSUd-Udo-hM2Zlfo80&s=gwGy_KWCGlSB4qY_QhQUJSC1JdwSQfZ9IUH6wS5BnS4&e=

This link should allow you to learn more about it and see if it is what you are looking for.

Subject: [IACA] Best Product for GPS ALPR and Incident Investigations

We are searching for the best product to visualize GPS data against our Incidents. For instance, we have a serial offender who had an ankle monitor, we want to load the GPS data, and automate checking for incidents in the vicinity of his location. Is there a product easy enough for Investigators to use, maybe even something that incorporates ALPR data?

Thanks!

Subject: [IACA] Excel: Share Workbook
Message-ID:
<CALMN9_vgAkcfL+vKABg0UaVRpBJ6JF7biqySZCDfM+ZDVn=MxQ@mail.gmail.com>
Content-Type: text/plain; charset="utf-8"

Hello all,

I'm having trouble with sharing a workbook. I know it sounds pretty simple but something happened to my shared workbook and I can't figure it out.

SCENE: A workbook was created, on a shared drive, for the sergeants to add daily statistics. Once they added their numbers, they simply have to save.

ISSUE: No one is able to save the workbook without having to save as a copy of it. When someone opens it, it is in Read-Only mode. I get several "copy of XXX", copy of copy of XXX" copy of copy of copy of XXX".

*PROBLEM: * How do I change it/save it so that it is shared again? I have gone so far as to recreate the workbook with new spreadsheets. [Nothing copied - all new] I did tests, and it continues to open in Read-Only.

Is anyone out there that can help, please?
Please contact me at erica.taylor@wcpd.org

Many thanks in advance.

Content-Type: text/plain; charset="us-ascii"

Hi IACA -

I'm writing about crime and intel analysis within prosecution. This is an area that has grown in the past several years as prosecution offices recognize the value that analysts provide in all areas (strategic, tactical, admin, intel), serving both as a continuum of knowledge from LE to the DA, and as information generators for questions and issues specific to the prosecution process. However, we are still outnumbered by analysts at LE agencies and continue to forge a path into new territory!

In AZ, we now have several analysts at both Maricopa and Pima County Attorney's Offices, and I'm aware of other offices around the country with embedded analysts who work alongside prosecutors. We are interested in starting an informal mailing list that is specific to the questions, challenges, and issues that prosecution analysts encounter. Some topic examples:

* What data do you use to identify crime problems? Do you have direct access to LE agency data, or do you use other data as a proxy? If/how does your office work with LE to develop strategies to address these problems?
* Do you analyze internal data for trends/patterns (ex: caseloads, plea/trial outcomes, co-occurring charges, recidivism)?
* Are you supervised by an attorney, an analyst, or other? How does that impact the resources and/or information you are able to obtain and provide?
* Are there analysts at the LE agencies within your jurisdiction and, if so, how do you coordinate/deconflict with them on case work?
* Do you participate in information gathering throughout prosecution process or only specific phase(s)? Ex: investigation; initial appearance; charging; plea development; trial; sentencing; response to motions/issues that arise; victim/witness information
* How does your office handle the information you develop in regards to discovery? Have you had to testify?

* What "different" skill sets do we as prosecution-specific analysts need/have/want that may be different than analysts in LE agencies?

This mailing list is open to anyone working or interested in this area whether analyst, prosecutor, researcher, intern, etc. so please feel free to forward to folks not in IACA, but may be interested. This list will hopefully supplement the valuable information we receive via IACA, but with a prosecution spin for this growing "niche market". Please feel free to email me at wickerse@mcao.maricopa.gov<mailto:wickerse@mcao.maricopa.gov> if you or a colleague is interested. Thank you!

TextNow as well. They have a mobile app and web app. I?ve tested signing up via web app; create a throwaway Google account, sign up using that account, and you?re in with a phone number in any area code you specify. No other verification. Trucking has a lot of problems with identity theft. Most of the identity thieves we deal with use TextNow these days and use it to scam money orders or steal truckloads of freight. No more getting caught on surveillance buying burners.

In addition to caller ID spoofing, there?s also SIM swap attacks. The scam there is socially engineering your provider to change your phone service to a SIM card they are in possession of. Once that?s done, they?d receive all your texts and be able to make any calls as you.

Subject: Re: [IACA] Spoofing App?

I hate to say it but there is very little that can be done to prevent this type of spoofing. It is a two part process.

First the caller must acquire data in great swaths, usually through social media, and then due typical toll analysis to to find individuals names associated with numbers found in the initial data scrape.

Only after numbers are collated into paring of high closness using the relationships found by analyzing social media can the caller spoof with a number you are likely to answer.

I image this if only going to get worse as our information is out there, and being correlated for sale by both legitimate companies and those with mal intent.

NOTE: many of use often send emails with signature lines that have our phone numbers. In this instance we have done the correlation for the bad guys. all they need is to find the phone number of someone we have emailed and they are in business.

Sent by: "IACAList" <iacalist-bounces+frank.b.johnson=ibm.com@listserve.com<mailto:iacalist-bounces+frank.b.johnson=ibm.com@listserve.com>>

Hi Shanice,

Spoofing.. In theory, the people being scammed are more apt to answer the phone from a familiar area code. So a person?s number gets cloned at random by someone with the technology to do so, and used at an attempt to scam.

Recently heard of someone receiving irate phone calls back, from people who were being called, using the victims spoofed number.

The only reasonable solution suggested was either changing your number, or looking into an app called ?Should I Answer.? It allows the victim of the spoofing, to filter the returned calls, by only receiving calls from numbers they?ve listed in the app. They suggested the victim of the spoofed number change their voicemail message, saying they?ve had their number spoofed. It also allows them to see the log of people who?ve tried to call the number back. It was reported that once this happened, the number of angry call-backers subsided after a couple of weeks.

I think, unfortunately, people?s numbers just get picked at random. Not sure if there?s a solution. Sorry!

Subject: [IACA] Spoofing App?

CAUTION: This email originated from outside of the organization. Do not click links or open attachments unless you recognize the sender and are confident the content is safe.

Good Afternoon Everyone,

I have a question for you all.

Has anyone ever dealt with a case, where a phone call is received showing a number in the victims phone. However, the caller on the line is in fact NOT with the phone or with the actual person said to be calling the phone??

Incident: A civilian received a phone call- the caller ID showed a family member?s name & when the call was answered it turned out to be scammers on the line?.

Is anyone familiar with any ways to track the actual phone call or identify the app used?

Respectfully,

Shanice Gordon, M.A.

For what it?s worth, you can create any number on Google Voice. (And then have it forwarded to your own phone).

I have used this when I did not want to give out my personal number to certain people.

Interestingly, we had a recent situation where a call center agent would call in using multiple Google Voice numbers they had created-and since they could see who was up next for calls-they would answer their own call, keep the line open, hang up after 45 min and then basically fake doing work all day.

> Yes. I get these calls all the time on my personal cell phone. One of the numbers came up as our friend?s number and it turned out to be someone trying to reduce our credit card interest. They use an app to change their actual number from the one they are calling and use a local number. I think it picks the numbers at random and sometimes it just happens to be someone you may know.

Subject: [IACA] Database test bank system for promotional exams
Message-ID: <884005cb07114df9ae289550c6e6427b@Exchange1.myfdle.net>
Content-Type: text/plain; charset="us-ascii"

Good afternoon -

I need some help with a particular issue. We are currently using a test question database to administer promotional exams and other tests within our training programs. The program we are currently using (LXR Test) is obsolete and the original vendor is no longer in business. Once the upgrade to Windows 10 is happening later this year, we will no longer be able to use the current system. So, I am looking for some leads and recommendations on a new database/ test bank.

What are you using at your agency? What's working and what's not? Do you have a point of contact for me?

Any help is greatly appreciated.

Best,

Alexander S. Gulde

Content-Type: text/plain; charset="utf-8"

Katherine,
I use ESRI ArcMap for mapping solutions but it is not that user friendly if you are not familiar with it. It is the best GIS software available, very versatile. If you have a GIS department.

If you are just using GPS data and possibly the tracks from the GPS unit you should try Garmin?s Base Camp. It is a very user friendly GPS software program and I believe it is free on the Garmin Website.

https://urldefense.proofpoint.com/v2/url?u=https-3A__www.garmin.com_en-2DUS_shop_downloads_basecamp&d=DwICAg&c=lDF7oMaPKXpkYvev9V-fVahWL0QWnGCCAfCDz1Bns_w&r=RczylWAOGka07XbvRZTVevfhcU9hAe0aT9nmy75UBfiBGzb_X5vX3tcPr0Ql9Vmi&m=trTGElcPqWmjbVtDGeWU1JoTqdlsBh-QCIg-OTRRKNQ&s=1PstC4_9ByVNH0B2pI30zkvRfp47soPVBIxwMxVIQAE&e=

This link should allow you to learn more about it and see if it is what you are looking for.

Subject: [IACA] Best Product for GPS ALPR and Incident Investigations

We are searching for the best product to visualize GPS data against our Incidents. For instance, we have a serial offender who had an ankle monitor, we want to load the GPS data, and automate checking for incidents in the vicinity of his location. Is there a product easy enough for Investigators to use, maybe even something that incorporates ALPR data?

Thanks!

Content-Type: text/plain; charset="utf-8"

Hello all,

I'm having trouble with sharing a workbook. I know it sounds pretty simple but something happened to my shared workbook and I can't figure it out.

SCENE: A workbook was created, on a shared drive, for the sergeants to add daily statistics. Once they added their numbers, they simply have to save.

ISSUE: No one is able to save the workbook without having to save as a copy of it. When someone opens it, it is in Read-Only mode. I get several "copy of XXX", copy of copy of XXX" copy of copy of copy of XXX".

*PROBLEM: * How do I change it/save it so that it is shared again? I have gone so far as to recreate the workbook with new spreadsheets. [Nothing copied - all new] I did tests, and it continues to open in Read-Only.

Is anyone out there that can help, please?
Please contact me at erica.taylor@wcpd.org

Many thanks in advance.

Message-ID:
<BYAPR09MB3368A1567305950386 92BD4499580@BYAPR09MB3368.namprd09.prod.outlook.com>

Content-Type: text/plain; charset="us-ascii"

Hi IACA -

I'm writing about crime and intel analysis within prosecution. This is an area that has grown in the past several years as prosecution offices recognize the value that analysts provide in all areas (strategic, tactical, admin, intel), serving both as a continuum of knowledge from LE to the DA, and as information generators for questions and issues specific to the prosecution process. However, we are still outnumbered by analysts at LE agencies and continue to forge a path into new territory!

In AZ, we now have several analysts at both Maricopa and Pima County Attorney's Offices, and I'm aware of other offices around the country with embedded analysts who work alongside prosecutors. We are interested in starting an informal mailing list that is specific to the questions, challenges, and issues that prosecution analysts encounter. Some topic examples:

* What data do you use to identify crime problems? Do you have direct access to LE agency data, or do you use other data as a proxy? If/how does your office work with LE to develop strategies to address these problems?
* Do you analyze internal data for trends/patterns (ex: caseloads, plea/trial outcomes, co-occurring charges, recidivism)?
* Are you supervised by an attorney, an analyst, or other? How does that impact the resources and/or information you are able to obtain and provide?
* Are there analysts at the LE agencies within your jurisdiction and, if so, how do you coordinate/deconflict with them on case work?
* Do you participate in information gathering throughout prosecution process or only specific phase(s)? Ex: investigation; initial appearance; charging; plea development; trial; sentencing; response to motions/issues that arise; victim/witness information
* How does your office handle the information you develop in regards to discovery? Have you had to testify?
* What "different" skill sets do we as prosecution-specific analysts need/have/want that may be different than analysts in LE agencies?

This mailing list is open to anyone working or interested in this area whether analyst, prosecutor, researcher, intern, etc. so please feel free to forward to folks not in IACA, but may be interested. This list will hopefully supplement the valuable information we receive via IACA, but with a prosecution spin for this growing "niche market". Please feel free to email me at wickerse@mcao.maricopa.gov<mailto:wickerse@mcao.maricopa.gov> if you or a colleague is interested. Thank you!

Can anyone identify the emblem on the cap and the back of the vest?
He's the suspect in the theft of our Sgts personally owned Harley Davidson
Motorcycle at his residence.
I'm just a little concerned as he took it to this gas station and just left
it, like a statement (?).

Job Vacancy Announcement

The Jacksonville Sheriff's Office (JSO), an accredited and consolidated Law Enforcement Agency for Jacksonville, Florida, is hiring Real Time Crime Center Analysts. Jacksonville, the largest city in area in the continental United States, is a rapidly growing metropolitan city in Northeast Florida, with approximately 850,000 residents. A consolidated city and county, the agency consists of approximately 1,750 sworn and 1,200 non-sworn personnel. The current opening is an analytical support position designed to incorporate and leverage multiple technological systems to provide officers real-time intelligence and information.

Real Time Crime Center Analyst

This is a fast paced, analytical, technical and administrative work environment involving automated systems pertaining to law enforcement public safety communications. Work involves monitoring a Real Time Crime Center workstation that includes at least three (3) monitors, performing several tasks at the same time while simultaneously viewing multiple computer/camera screens. Receives, evaluates and transmits information via telephone, computer and multi-channel radio that frequently involves emergency and critical situations affecting human welfare and safety; utilizes computer-aided dispatch and other computer systems; quickly analyzes multiple data sets; recognizes and exploits relevant intelligence; maintains access to, and security of, highly sensitive materials and information; performs multiple activities simultaneously in a high visibility setting; works with frequent interruption in a framework of rules, procedures and regulations and perform technical tasks relative
to assigned area of responsibility. The center will facilitate, via camera feeds, CAD, and ShotSpotter the detection of suspicious and criminal activity. This information will be relayed to the responding and/or on scene officers via radio or message. Work includes monitoring, operating and interpreting multiple interactive software systems regarding emergency and criminal calls for service. Work also includes conducting queries of criminal justice data bases such as criminal histories and vehicle registration as well as researching relevant videos to assist in investigations and upload video to evidence repositories; and related duties as required. Must maintain emotional control and work effectively during emergencies, crisis situation, or extremely stressful conditions.

Basic Requirements Include:

A four-year combination of education from an accredited institution and/or professional experience in research, data analysis, and statistical work is required. A Bachelor's Degree from an accredited institution with a major in criminal justice, criminology, information systems, statistics, or related field is preferred. Prior work experience in law enforcement is preferred. Requires the ability to work overtime with little or no notice, shift work, weekends, holidays, evenings, and nights. Hours of operation are 24 hours a day, 365 days a year.

An Ideal Candidate Possesses:

* Knowledge of techniques and procedures used in operating emergency communications equipment (video monitoring systems, radio/CAD systems).

* Ability to simultaneously communicate, interpret communication, and enter data into a computer accurately.

* Strong understanding of statistics and reporting. University level statistics classes preferred. Statistical packages such as Excel, SPSS preferred. Reporting software such as Crystal Reports preferred.

* Understanding of analytical techniques including research methods, crime theory, and process evaluation. Real-world experience with complex problem-analysis or intelligence-analysis preferred.

* Ability to communicate effectively across all levels of an organization.

* Ability to identify trends and patterns in statistical information and displays.

Content-Type: text/plain; charset="utf-8"

Good Morning,

Like others have suggested, ESRI ArcMap is the industry standard for visualizing data but as most have probably mentioned, it is very difficult to use and takes quite a bit of time to master. However, I think the analysis you are looking for requires a custom algorithm to match up incidents in proximity to the ankle monitor data. I don?t believe there is an off the shelf product that can do exactly what you are asking.

We have a simple to use product that provides visualization of many different types of law enforcement datasets including ankle monitors and ALPR data. It does have the ability to match events in proximity to each other, but it is not exactly what you need in our production version. However, we do have the capability to match your events quickly using our unreleased version and I would be willing to run it to check for matching incidents free of charge to better understand your needs and how we make this capability easier to use as we incorporate it into our product.

In case you are interested and want more information on what we are working with, I attached a flyer to give you more insight into our product and here is a quick summary of some key differentiators of our software:
Synchronizing multiple suspects and data:
Simultaneously visualize the behaviors of multiple suspects
Concurrently view multiple types of data for one or more suspects
Automatically time align imported files
Easily import custom geospatial data
Live data feeds
Supports live data feeds like ping emails, vehicle GPS, mobile device apps, and drone locations
Automatically tracks and maps data
Visual triangulation of Verizon data
Provides extremely accurate position estimates for Verizon ping and ALULTE data
Report builder
Allows user to easily create reports of their findings and export them to PDF
Integrate with other sources
Integrate county resources, google resources, or other sources for more contextual information

Also, we have a short 6 minute video demonstration of how SyncArena was used in solving a murder for a multi-jurisdictional case. The video is available on our website www.syncarena.com <https://urldefense.proofpoint.com/v2/url?u=http-3A__www.syncarena.com_&d=DwICAg&c=lDF7oMaPKXpkYvev9V-fVahWL0QWnGCCAfCDz1Bns_w&r=JjUJPE4iHOCoV4Iuf8VaMhDE2YDQmtiDfmo4sfZoAqY&m=iKD2ybSxPvq3EqRzryTCTgnfMo1hBFK2YAex8xfqN3E&s=POBEVbFdE-ntN90V1YRqchK0JLlxZLQFUAt0hGTUjvU&e=> or you can just use the direct link below:

Can anyone identify the emblem on the cap and the back of the vest?
He's the suspect in the theft of our Sgts personally owned Harley Davidson
Motorcycle at his residence.
I'm just a little concerned as he took it to this gas station and just left
it, like a statement (?).

Job Vacancy Announcement

The Jacksonville Sheriff's Office (JSO), an accredited and consolidated Law Enforcement Agency for Jacksonville, Florida, is hiring Real Time Crime Center Analysts. Jacksonville, the largest city in area in the continental United States, is a rapidly growing metropolitan city in Northeast Florida, with approximately 850,000 residents. A consolidated city and county, the agency consists of approximately 1,750 sworn and 1,200 non-sworn personnel. The current opening is an analytical support position designed to incorporate and leverage multiple technological systems to provide officers real-time intelligence and information.

Real Time Crime Center Analyst

This is a fast paced, analytical, technical and administrative work environment involving automated systems pertaining to law enforcement public safety communications. Work involves monitoring a Real Time Crime Center workstation that includes at least three (3) monitors, performing several tasks at the same time while simultaneously viewing multiple computer/camera screens. Receives, evaluates and transmits information via telephone, computer and multi-channel radio that frequently involves emergency and critical situations affecting human welfare and safety; utilizes computer-aided dispatch and other computer systems; quickly analyzes multiple data sets; recognizes and exploits relevant intelligence; maintains access to, and security of, highly sensitive materials and information; performs multiple activities simultaneously in a high visibility setting; works with frequent interruption in a framework of rules, procedures and regulations and perform technical tasks relative
to assigned area of responsibility. The center will facilitate, via camera feeds, CAD, and ShotSpotter the detection of suspicious and criminal activity. This information will be relayed to the responding and/or on scene officers via radio or message. Work includes monitoring, operating and interpreting multiple interactive software systems regarding emergency and criminal calls for service. Work also includes conducting queries of criminal justice data bases such as criminal histories and vehicle registration as well as researching relevant videos to assist in investigations and upload video to evidence repositories; and related duties as required. Must maintain emotional control and work effectively during emergencies, crisis situation, or extremely stressful conditions.

Basic Requirements Include:

A four-year combination of education from an accredited institution and/or professional experience in research, data analysis, and statistical work is required. A Bachelor's Degree from an accredited institution with a major in criminal justice, criminology, information systems, statistics, or related field is preferred. Prior work experience in law enforcement is preferred. Requires the ability to work overtime with little or no notice, shift work, weekends, holidays, evenings, and nights. Hours of operation are 24 hours a day, 365 days a year.

An Ideal Candidate Possesses:

* Knowledge of techniques and procedures used in operating emergency communications equipment (video monitoring systems, radio/CAD systems).

* Ability to simultaneously communicate, interpret communication, and enter data into a computer accurately.

* Strong understanding of statistics and reporting. University level statistics classes preferred. Statistical packages such as Excel, SPSS preferred. Reporting software such as Crystal Reports preferred.

* Understanding of analytical techniques including research methods, crime theory, and process evaluation. Real-world experience with complex problem-analysis or intelligence-analysis preferred.

* Ability to communicate effectively across all levels of an organization.

* Ability to identify trends and patterns in statistical information and displays.

Subject: Re: [IACA] Best Product for GPS ALPR and Incident
Investigations
Message-ID: <EF0AF72F-222B-4D04-A136-0593266EE5BA@synclayerinc.com>
Content-Type: text/plain; charset="utf-8"

Good Morning,

Like others have suggested, ESRI ArcMap is the industry standard for visualizing data but as most have probably mentioned, it is very difficult to use and takes quite a bit of time to master. However, I think the analysis you are looking for requires a custom algorithm to match up incidents in proximity to the ankle monitor data. I don?t believe there is an off the shelf product that can do exactly what you are asking.

We have a simple to use product that provides visualization of many different types of law enforcement datasets including ankle monitors and ALPR data. It does have the ability to match events in proximity to each other, but it is not exactly what you need in our production version. However, we do have the capability to match your events quickly using our unreleased version and I would be willing to run it to check for matching incidents free of charge to better understand your needs and how we make this capability easier to use as we incorporate it into our product.

In case you are interested and want more information on what we are working with, I attached a flyer to give you more insight into our product and here is a quick summary of some key differentiators of our software:
Synchronizing multiple suspects and data:
Simultaneously visualize the behaviors of multiple suspects
Concurrently view multiple types of data for one or more suspects
Automatically time align imported files
Easily import custom geospatial data
Live data feeds
Supports live data feeds like ping emails, vehicle GPS, mobile device apps, and drone locations
Automatically tracks and maps data
Visual triangulation of Verizon data
Provides extremely accurate position estimates for Verizon ping and ALULTE data
Report builder
Allows user to easily create reports of their findings and export them to PDF
Integrate with other sources
Integrate county resources, google resources, or other sources for more contextual information

Also, we have a short 6 minute video demonstration of how SyncArena was used in solving a murder for a multi-jurisdictional case. The video is available on our website www.syncarena.com <https://urldefense.proofpoint.com/v2/url?u=http-3A__www.syncarena.com_&d=DwICAg&c=lDF7oMaPKXpkYvev9V-

> We are searching for the best product to visualize GPS data against our Incidents. For instance, we have a serial offender who had an ankle monitor, we want to load the GPS data, and automate checking for incidents in the vicinity of his location. Is there a product easy enough for Investigators to use, maybe even something that incorporates ALPR data?

Subject: [IACA] Fwd: Identification

Can anyone identify the emblem on the cap and the back of the vest?
He's the suspect in the theft of our Sgts personally owned Harley Davidson Motorcycle at his residence.
I'm just a little concerned as he took it to this gas station and just left it, like a statement (?).

Who do you all use for crime mapping software. We use Omnigo's map and it leaves a lot to be desired. My Chief is looking for other options.

Good morning,

The Finn Institute is currently seeking to fill a full-time lead crime
analyst position. The analyst will work on-site at the Capital Region Crime
Analysis Center in Albany, NY. The Center is staffed with a team of crime
analysts and sworn law enforcement members who support area law enforcement
agencies in their efforts to track and reduce Part I crime.

Please see the attached position announcement for more information.

Thank you,

Jessica

Jessica Roy
Assistant Director of Technical Assistance, Research Analyst
The John F. Finn Institute for Public Safety, Inc.
421 New Karner Rd., Ste. 12, Albany, NY 12205

> Good Morning,
>
> Like others have suggested, ESRI ArcMap is the industry standard for visualizing data but as most have probably mentioned, it is very difficult to use and takes quite a bit of time to master. However, I think the analysis you are looking for requires a custom algorithm to match up incidents in proximity to the ankle monitor data. I don?t believe there is an off the shelf product that can do exactly what you are asking.
>
> We have a simple to use product that provides visualization of many different types of law enforcement datasets including ankle monitors and ALPR data. It does have the ability to match events in proximity to each other, but it is not exactly what you need in our production version. However, we do have the capability to match your events quickly using our unreleased version and I would be willing to run it to check for matching incidents free of charge to better understand your needs and how we make this capability easier to use as we incorporate it into our product.
>
> In case you are interested and want more information on what we are working with, I attached a flyer to give you more insight into our product and here is a quick summary of some key differentiators of our software:
> Synchronizing multiple suspects and data:

> Simultaneously visualize the behaviors of multiple suspects
> Concurrently view multiple types of data for one or more suspects
> Automatically time align imported files
> Easily import custom geospatial data
> Live data feeds
> Supports live data feeds like ping emails, vehicle GPS, mobile device apps, and drone locations
> Automatically tracks and maps data
> Visual triangulation of Verizon data
> Provides extremely accurate position estimates for Verizon ping and ALULTE data
> Report builder
> Allows user to easily create reports of their findings and export them to PDF
> Integrate with other sources
> Integrate county resources, google resources, or other sources for more contextual information
>
> Also, we have a short 6 minute video demonstration of how SyncArena was used in solving a murder for a multi-jurisdictional case. Hi all,
Earlier this week, I gave a webinar hosted by RTI International, as part of the BJA Sexual Assault Kit Initiative program. (This webinar is not affiliated with LexisNexis Risk Solutions.) If you happened to attend, thank you! If you did not attend, the materials and an archived version are described and linked below.

While visiting the SAKI TTA website <https://urldefense.proofpoint.com/v2/url?u=http-3A__www.sakitta.org&d=DwICAg&c=lDF7oMaPKXpkYvev9V-fVahWL0QWnGCCAfCDz1Bns_w&r=JjUJPE4iHOCoV4Iuf8VaMhDE2YDQmtiDfmo4sfZoAqY&m=k-f3qfAYTa2rKV1jWd2dAEBkTtLd7yjunaAOvqUXQcg&s=-UgqkQhaFqsOhVSORIaty5yjEUJAAS2H5bqpoQ3k4I8&e=>, I encourage you to explore and download additional resources, and sign up for updates (via the Create an Account link).

If you have any feedback or questions about the effort to involve crime analysts in sexual assault investigations and DNA backlog testing efforts, and we have not spoken about this effort already, please feel free to reach out.

Thank you and have a great weekend!
Sam

SAKI TTA Webinar - Crime Analysts: Supporting Sexual Assault Investigations *(Archival)
*

SAKI TTA hosted a webinar titled, 'Crime Analysts: Supporting Sexual Assault Investigations', on Tuesday, March 26th, 2019 from 2:00pm ? 3:00pm ET. This webinar was presented by Samantha Gwinn, Public Safety Platform Manager with LexisNexis Risk Solutions.

You can access a recording of this webinar in our archive <https://urldefense.proofpoint.com/v2/url?u=https-3A__sakitta.us13.list-2Dmanage.com_track_click-3Fu-3Dee5523512411738bf07923a86-26id-3D8768b1c564-26e-3D2d5b9959a5&d=DwICAg&c=lDF7oMaPKXpkYvev9V-fVahWL0QWnGCCAfCDz1Bns_w&r=JjUJPE4iHOCoV4Iuf8VaMhDE2YDQmtiDfmo4sfZoAqY&m=k-f3qfAYTa2rKV1jWd2dAEBkTtLd7yjunaAOvqUXQcg&s=_7i1zs6LwMXqY6cNTHyp2tYJmHltVz_ytEpsQDuBNQk&e=>.

This webinar focused on the growing role for crime analysts as an integral part of SAKI and sexual assault investigations. The research being conducted as more SAKs are tested and more lawfully owed DNA is collected shows us that serial offenders are more common than previously known and that there is a need for better offender tracking and data analysis. Crime analysis has been a thriving professional field for decades, but we are only beginning to see opportunities emerging in the area of sexual assault and cold case investigations.

The presenter discussed best practices for agencies and analysts when it comes to supporting sexual assault investigations and prosecution, thereby holding offenders accountable and enabling justice for victims.

Content-Type: text/plain; charset="utf-8"

Does anyone know of mapping software that can be used to label points on a building map?

I have to update our property check point scan maps to show the location and the name of the scan. I have the blue print type map of the property both internal and external. However I have not been able to find a map software that will let me properly use it. It's like pin point mapping but I have to also be able to clearly label it without it crowding the other pin points. The major issue is crowding on the map. There are at least 200 points I will need to record on the map.

Any suggestions are appreciated.

Thanks!

Subject: [IACA] Fwd: Identification

Can anyone identify the emblem on the cap and the back of the vest?
He's the suspect in the theft of our Sgts personally owned Harley Davidson Motorcycle at his residence.
I'm just a little concerned as he took it to this gas station and just left it, like a statement (?).

Who do you all use for crime mapping software. We use Omnigo's map and it leaves a lot to be desired. My Chief is looking for other options.

Good morning,

The Finn Institute is currently seeking to fill a full-time lead crime
analyst position. The analyst will work on-site at the Capital Region Crime
Analysis Center in Albany, NY. The Center is staffed with a team of crime
analysts and sworn law enforcement members who support area law enforcement
agencies in their efforts to track and reduce Part I crime.

Please see the attached position announcement for more information.

Thank you,

Jessica

Jessica Roy
Assistant Director of Technical Assistance, Research Analyst
The John F. Finn Institute for Public Safety, Inc.
421 New Karner Rd., Ste. 12, Albany, NY 12205

> Good Morning,
>
> Like others have suggested, ESRI ArcMap is the industry standard for visualizing data but as most have probably mentioned, it is very difficult to use and takes quite a bit of time to master. However, I think the analysis you are looking for requires a custom algorithm to match up incidents in proximity to the ankle monitor data. I don?t believe there is an off the shelf product that can do exactly what you are asking.
>
> We have a simple to use product that provides visualization of many different types of law enforcement datasets including ankle monitors and ALPR data. It does have the ability to match events in proximity to each other, but it is not exactly what you need in our production version. However, we do have the capability to match your events quickly using our unreleased version and I would be willing to run it to check for matching incidents free of charge to better understand your needs and how we make this capability easier to use as we incorporate it into our product.
>
> In case you are interested and want more information on what we are working with, I attached a flyer to give you more insight into our product and here is a quick summary of some key differentiators of our software:
> Synchronizing multiple suspects and data:
> Simultaneously visualize the behaviors of multiple suspects
> Concurrently view multiple types of data for one or more suspects
> Automatically time align imported files
> Easily import custom geospatial data
> Live data feeds
> Supports live data feeds like ping emails, vehicle GPS, mobile device apps, and drone locations
> Automatically tracks and maps data
> Visual triangulation of Verizon data
> Provides extremely accurate position estimates for Verizon ping and ALULTE data
> Report builder
> Allows user to easily create reports of their findings and export them to PDF
> Integrate with other sources
> Integrate county resources, google resources, or other sources for more contextual information
>
> Also, we have a short 6 minute video demonstration of how SyncArena was used in solving a murder for a multi-jurisdictional case. Hi all,
Earlier this week, I gave a webinar hosted by RTI International, as part of the BJA Sexual Assault Kit Initiative program. (This webinar is not affiliated with LexisNexis Risk Solutions.) If you happened to attend, thank you! If you did not attend, the materials and an archived version are described and linked below.

While visiting the SAKI TTA website <https://urldefense.proofpoint.com/v2/url?u=http-3A__www.sakitta.org&d=DwICAg&c=lDF7oMaPKXpkYvev9V-fVahWL0QWnGCCAfCDz1Bns_w&r=RczylWAOGka07XbvRZTVevfhcU9hAe0aT9nmy75UBfiBGzb_X5vX3tcPr0Ql9Vmi&m=4FPs4GbqHDUkPVIaY_Lr9ueCufgMX31557X32xgNRCQ&s=5tIAdlTSVbCaOzMh0kLfbade9kCYHm8MrZ32G0Akn50&e=>, I encourage
you to explore and download additional resources, and sign up for updates (via the Create an Account link).

If you have any feedback or questions about the effort to involve crime analysts in sexual assault investigations and DNA backlog testing efforts, and we have not spoken about this effort already, please feel free to reach out.

Thank you and have a great weekend!
Sam

SAKI TTA Webinar - Crime Analysts: Supporting Sexual Assault
Investigations *(Archival)
*

SAKI TTA hosted a webinar titled, 'Crime Analysts: Supporting Sexual Assault Investigations', on Tuesday, March 26th, 2019 from 2:00pm ? 3:00pm ET. This webinar was presented by Samantha Gwinn, Public Safety Platform Manager with LexisNexis Risk Solutions.

You can access a recording of this webinar in our archive
<https://urldefense.proofpoint.com/v2/url?u=https-3A__sakitta.us13.list-2Dmanage.com_track_click-3Fu-3Dee5523512411738bf07923a86-26id-3D8768b1c564-26e-3D2d5b9959a5&d=DwICAg&c=lDF7oMaPKXpkYvev9V-fVahWL0QWnGCCAfCDz1Bns_w&r=RczylWAOGka07XbvRZTVevfhcU9hAe0aT9nmy75UBfiBGzb_X5vX3tcPr0Ql9Vmi&m=4FPs4GbqHDUkPVIaY_Lr9ueCufgMX31557X32xgNRCQ&s=2J1zjMygu6LZGqZuy4uzilPIRVj2EIs3WbdW5r8hK2I&e=>.

This webinar focused on the growing role for crime analysts as an integral part of SAKI and sexual assault investigations. The research being conducted as more SAKs are tested and more lawfully owed DNA is collected shows us that serial offenders are more common than previously known and that there is a need for better offender tracking and data analysis. Crime analysis has been a thriving professional field for decades, but we are only beginning to see opportunities emerging in the area of sexual assault and cold case investigations.

The presenter discussed best practices for agencies and analysts when it comes to supporting sexual assault investigations and prosecution, thereby holding offenders accountable and enabling justice for victims.

Subject: Re: [IACA] Mapping Software
Message-ID:
<DM6PR10MB2956AFC68B9158D66A62ED3D9C5A0@DM6PR10MB2956 namprd10.prod.outlook.com>

Content-Type: text/plain; charset="utf-8"

Does anyone know of mapping software that can be used to label points on a building map?

I have to update our property check point scan maps to show the location and the name of the scan. I have the blue print type map of the property both internal and external. However I have not been able to find a map software that will let me properly use it. It's like pin point mapping but I have to also be able to clearly label it without it crowding the other pin points. The major issue is crowding on the map. There are at least 200 points I will need to record on the map.

Any suggestions are appreciated.

Thanks!

Maj. Robert Misch

From: POLICE Technology eXchange
To: Doyle, Paul (POL)
Subject: Is your agency up-to-date with police technology?
Date: Thursday, September 5, 2019 6:15:33 PM

Apply Now to Be Part of POLICE's New Technology Solutions Networking Event

Brought to you by POLICE Magazine, POLICE Technology eXchange, (PTX) brings together senior-level IT, Communications and Technology decision-makers face-to-face with leading law enforcement technology suppliers. The first PTX is taking place December 9-11, 2019, at the beautiful Scottsdale Resort at McCormick Ranch in Scottsdale, AZ.

Learn More

At PTX you'll uncover the latest technologies and have an opportunity for peer-to-peer networking activities such as: sharing challenges, discussing ideas, and learning best practices from each other.

A few of the technologies you can discuss during one-on-one meetings with leading industry suppliers include:

AI & Virtual/Augmented Reality
Drones/UAV/UAS
Elec/Hybrid Patrol Vehicles
e-Citation
Mobile Data Terminals/Rugged Laptops & Tablets
ALPR/LPR
Gunshot Detection Systems
Intelligence-Led Policing
Mobile/Rugged Technology
Data/Information Sharing
Cloud-Based Technology
Crime Analysis
Interoperability
Vehicle Armoring
Video Storage/Analysis
Smartphones
Broadband
Investigative Software

This intimate networking opportunity is at no cost* to police agencies for qualified police agency buyers of IT and other technology. Learn more and apply now to become

a delegate as spots are filling up quickly.

APPLY NOW

For more information please visit www.POLICETechnologyeXchange.com or call (800) 576-8788, 9:00am-5:00pm PST

Upon a Time in Compton

By Tim Brennan and Robert Ladd

The story of two gang detectives working what many considered, in its heyday, to be some of the meanest streets in the country

How to Catch a Car Thief

Two stories show how stolen vehicle assistance technology puts the brakes on pursuits and leads to safe vehicle recoveries.

I attached the defendant's initial petition, my opposition, and the judge's opinion. Keep in mind that with an interlocutory, so it's a thumbnail of the larger brief I will be writing. I have a contact that I am going to reach out to for the SCA/ECPA argument, she teaches SCA at the cybercrime conference, and might be helpful if she can call in. Thank you for the call- and I look forward to the meeting and assistance. I have lots of technical questions and want to make sure we are all presenting our best case. I'll reach out to Chris Kelly at the AG's office. Once I get the defendant's brief I will send it around.
Thank you,
Beth

banner

The Bureau of Justice Assistance recently released its 2019 Byrne JAG solicitation. These funds can be used to invest in technologies that promote officer and community safety including mission-critical communications equipment, digital evidence solutions, public safety software, video security and analytics solutions, ALPR, and more. Download the free grant guide to learn more and make sure to apply by **August 23.**

We know that grant applications can be challenging to navigate and for agencies nationwide, resources are limited. To help, Motorola Solutions has partnered with the grant experts at PoliceGrantsHelp to offer you a wide range of free grant assistance programs.

FREE GRANT ASSISTANCE PROGRAMS ARE AVAILABLE FOR:					
radios	bwc		cad	ng911	video
Radios	Body-Worn Cameras	Crime Analysis & Investigation Software	Computer Aided Dispatch (CAD)	NG9-1-1 Software	Video Security Solutions

The grant assistance program includes:

- Free customized grant research specific to department needs
- Grant alerts for upcoming grants
- Unlimited free grant consulting from senior grant consultants
- Discounted grant writing services

There's no reason not to take advantage. Whether you're just starting your project, need to add the final touches to an application or are just looking to receive grant alerts, grant consultants are available to help. Get started and equip your agency with the technology that will keep your officers and community safer.

Subject: Re: [IACA] Best Product for GPS ALPR and Incident Investigations
Date: Friday, March 29, 2019 11:09:27 AM
Attachments: synclayer.png
SyncArena Capability.pdf

Good Morning,

Like others have suggested, ESRI ArcMap is the industry standard for visualizing data but as most have probably mentioned, it is very difficult to use and takes quite a bit of time to master. However, I think the analysis you are looking for requires a custom algorithm to match up incidents in proximity to the ankle monitor data. I don't believe there is an off the shelf product that can do exactly what you are asking.

We have a simple to use product that provides visualization of many different types of law enforcement datasets including ankle monitors and ALPR data. It does have the ability to match events in proximity to each other, but it is not exactly what you need in our production version. However, we do have the capability to match your events quickly using our unreleased version and I would be willing to run it to check for matching incidents free of charge to better understand your needs and how we make this capability easier to use as we incorporate it into our product.

In case you are interested and want more information on what we are working with, I attached a flyer to give you more insight into our product and here is a quick summary of some key differentiators of our software:

- Synchronizing multiple suspects and data:
  - Simultaneously visualize the behaviors of multiple suspects
  - Concurrently view multiple types of data for one or more suspects
  - Automatically time align imported files
  - Easily import custom geospatial data
- Live data feeds
  - Supports live data feeds like ping emails, vehicle GPS, mobile device apps, and drone locations
  - Automatically tracks and maps data
- Visual triangulation of Verizon data
  - Provides extremely accurate position estimates for Verizon ping and ALULTE data
- Report builder
  - Allows user to easily create reports of their findings and export them to PDF
- Integrate with other sources
  - Integrate county resources, google resources, or other sources for more contextual information

Also, we have a short 6 minute video demonstration of how SyncArena was used in solving a murder for a multi-jurisdictional case. The video is available on our website www.syncarena.com or you can just use the direct link below:

- https://player.vimeo.com/video/312873319
- Password: syncArenA

Thank you,

> We are searching for the best product to visualize GPS data against our Incidents. For instance, we have a serial offender who had an ankle monitor, we want to load the GPS data, and automate checking for incidents in the vicinity of his location. Is there a product easy enough for Investigators to use, maybe even something that incorporates ALPR data?

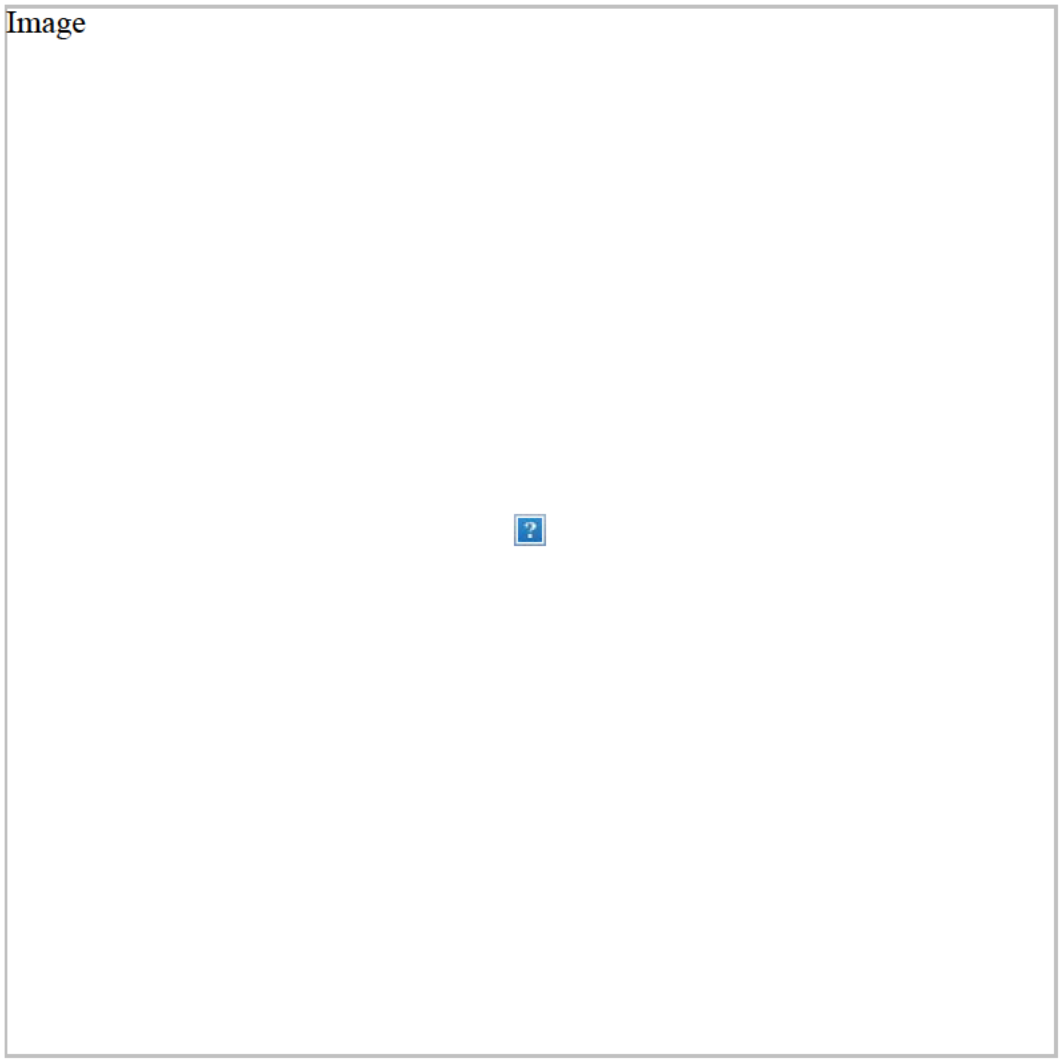
BAE wins open source intelligence contract from the Army

The Army has awarded BAE Systems a $437 million task order for open source intelligence support, the company announced Oct. 15 during the 2019 Association of the United States Army conference.

As part of the task order, BAE Systems will provide the Army and Army Intelligence & Security Command (INSCOM) approved partners with open source solutions to publicly available data.



“We’re proud to continue to partner with the U.S. Army and support their critical national security missions with this new capability,” Peder Jungck, vice president and general manager of BAE Systems’ intelligence solutions business.

The company won the initial award of the five-year task order and began ramping up in August, Jungck said. The task order is an extension of projects the company has been doing for the Army, but this is the first time the work been consolidated and awarded as a larger contract, he explained.

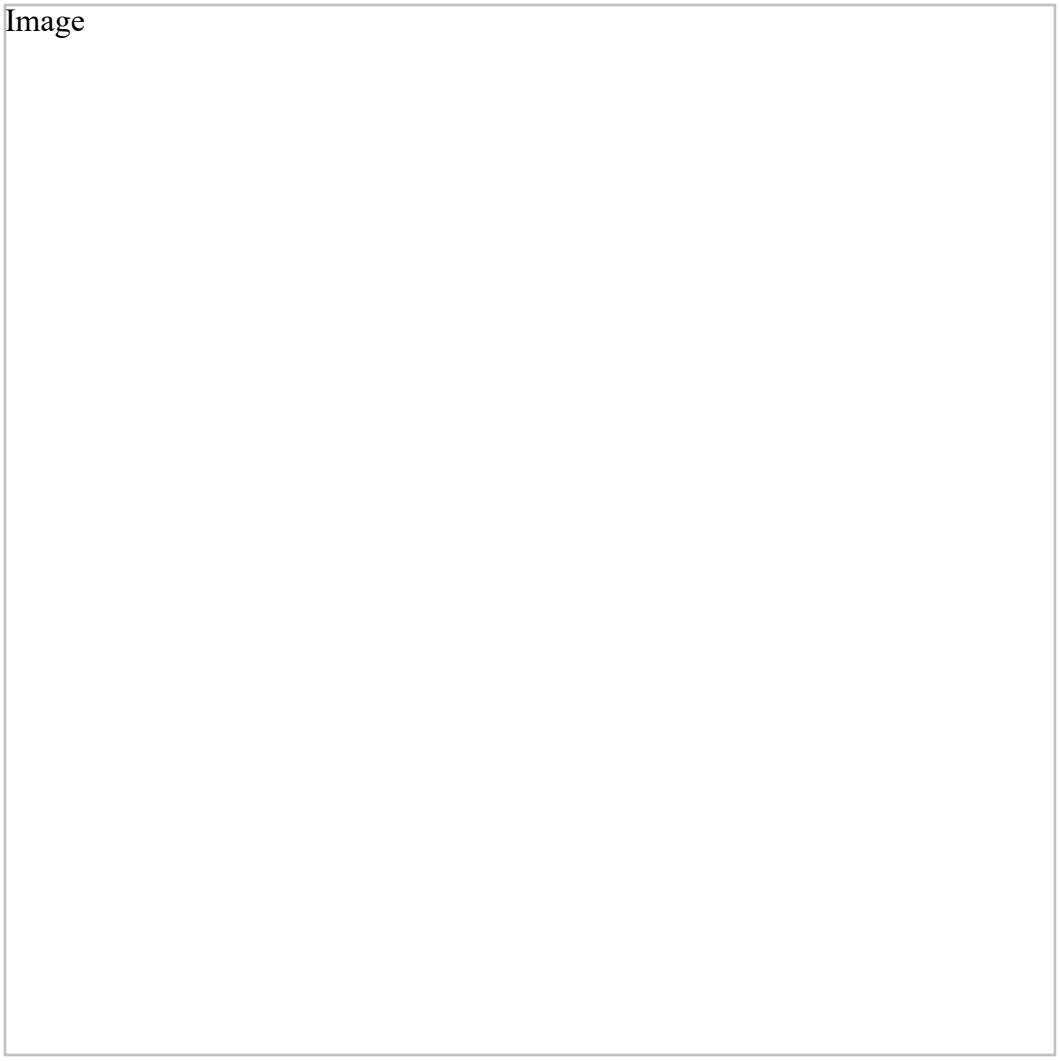
“If you look at contracts in general around OSINT there’s been kind of small ones, there’s been lots of pilots out of agencies and even within the Army and throughout INSCOM there were different kind of brigades and battalions that had their own set of tools," he said. "This is one of the first of the really large OSINT and AI consolidation contracts. I don’t think anybody’s really had a large one like this.”

Calif. police stand by cop after video released in 2017 OIS of murder suspect

Image

FRESNO, Calif. — Community activists are expressing outrage after seeing video footage that shows a Fresno police sergeant fatally shooting an unarmed 16-year-old boy as he fled during a foot pursuit.

Meanwhile, the local police union and supporters of law enforcement have stepped up in support of the sergeant, saying he acted within guidelines while pursuing a murder suspect.



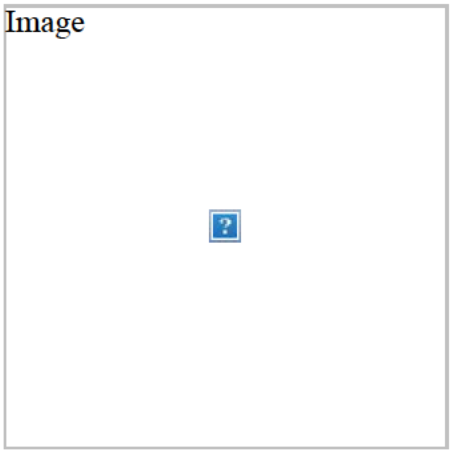
The footage shows Sgt. Ray Villalvazo firing a single shot into the back of Isiah Murrietta-Golding's head, according to a lawsuit filed on behalf of the teen's family.

The video was captured on a surveillance camera at a daycare facility on April 14, 2017, and was released by attorney Stuart Chandler, who's representing the family of Murrietta-Golding. The boy's family alleges the sergeant used excessive and unlawful deadly force, and committed assault and battery with negligence.

Additionally, in footage released from a police officer's body camera, one officer is heard shouting "good shot" as officers handcuff and search the already prone Murrietta-Golding.

Asia has an organized-crime problem. Canada is well placed to help

Image



Jeremy Douglas is the regional representative for the United Nations Office on Drugs and Crime (UNODC) for Southeast Asia and the Pacific and a former UNODC representative for Pakistan. The opinions expressed in this commentary are his.

More than a few eyebrows went up last week when Tse Chi Lop – a 55-year-old Canadian man – was accused of being arguably the biggest drug trafficker in the history of Asia.

Mr. Tse is suspected – by police in Myanmar, Australia and Taiwan, and by the United Nations Office on Drugs and Crime (UNODC) – of being the leader of Sam Gor, or Brother Number Three, a supersyndicate largely responsible for the dramatic shift in recent years in organized crime away from drugs such as heroin and toward synthetics, such as methamphetamine, ketamine and fentanyl. It's a shift that has been driven by control and profit, since synthetics offer many advantages to

criminal organizations: Labs can be quickly set up or moved; they are not subject to external conditions such as climate, nor do they require large work forces; and production can be rapidly scaled up to drive the market. Put these things together and it means the disruption of the traditional drug business and the heavily concentrated profits that come with it.

Florida Senator Rick Scott Announces Legislation To Address 'FBI Failures' Regarding Parkland Shooting

MIAMI (CBSMiami) – Florida Senator Rick Scott announced legislation Thursday to hold the Federal Bureau of Investigations accountable for its 'failures to address critical deficiencies in its handling of actionable intelligence' in regards to the mass shooting at Marjory Stoneman Douglas High School in 2018.

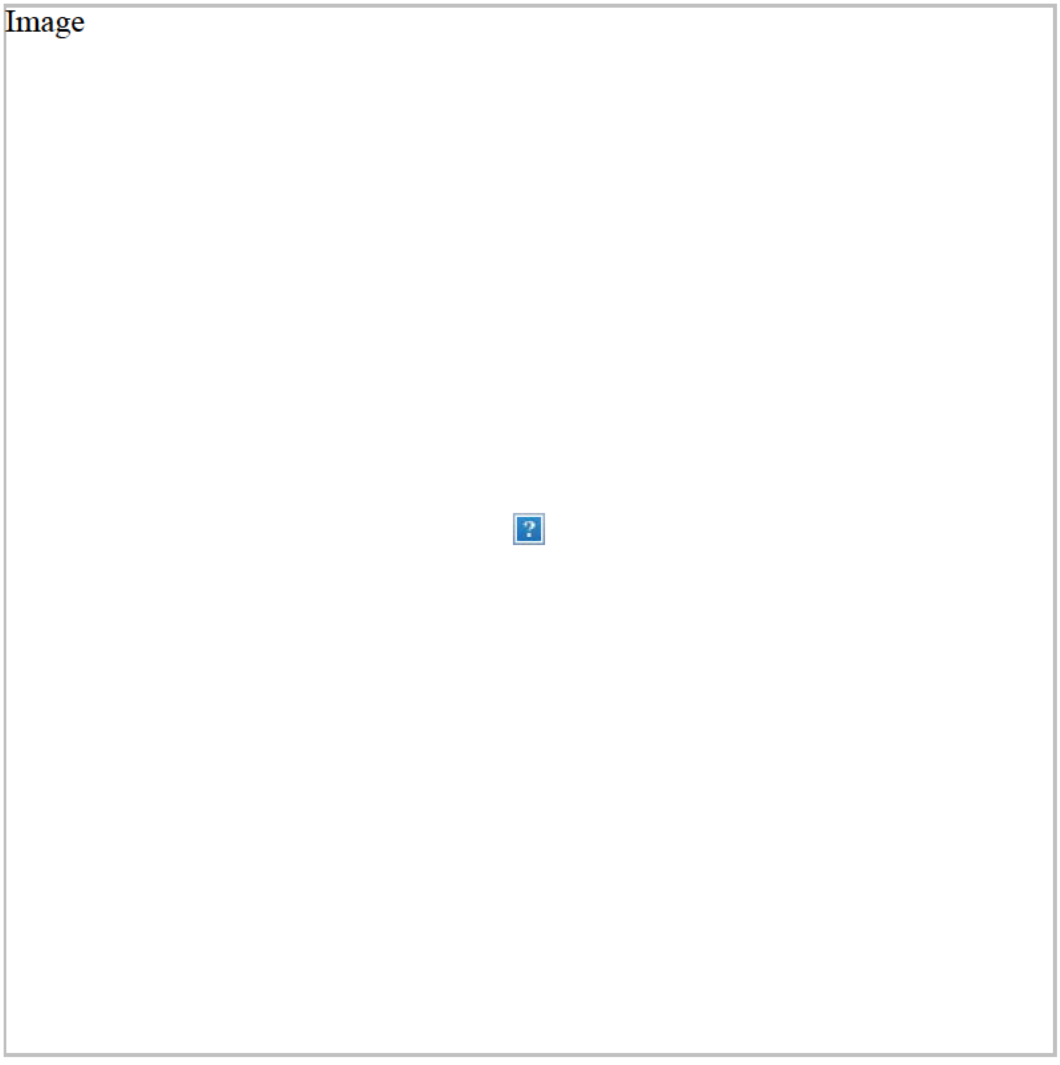
The 'Threat Information Protocol for Sharing (TIPS) Act' is supported by Stand with Parkland, an organization founded by the family members of the victims of the Parkland shooting.

"Not a day goes by that I don't think about the 17 souls that were taken from us in a brutal act of violence at Marjory Stoneman Douglas High School. Following the tragedy, we all worked together to pass the Marjory Stoneman Douglas High School Public Safety Act to make our schools safer and prevent future tragedies, but we aren't finished. We cannot

accept the repeated failures of the FBI to properly investigate and act on specific tips received about the Parkland shooter, as well as other perpetrators of mass violence in Florida. I'm proud to stand with the family members of the victims to announce the TIPS Act, which bridges the gap between federal and state law enforcement agencies by mandating information sharing of all state-specific criminal intelligence tips. This is about getting information on threats into the hands of the right people, who can ultimately prevent violence and protect our families," Scott said.

Majority of Mexicans Say Organized Crime Stronger than Government after El Chapo's Son Released

Image



A majority of Mexicans see organized crime as more powerful than the Mexican government after government forces capitulated to drug-cartel strongmen and released the son of the former cartel leader Joaquín Guzmán, known as “El Chapo.”

About 56 percent of Mexicans say they believe organized crime is stronger, while only 33 percent say the government is stronger, according to a poll by the Mexican newspaper Reforma.

Mexican authorities were forced on Thursday to release Ovidio Guzmán López, El Chapo’s son, shortly after capturing him, when the Sinaloa cartel laid siege to the city of Culiacán and surrounded Mexican troops, taking eight soldiers hostage. Officials said at least 14 people died during the clashes between cartel members and Mexican soldiers.

49 percent of respondents in the Reforma poll disagreed with the decision to release López, while 45 percent said they supported it. Residents of Culiacán expressed relief that the government had surrendered, saying the decision prevented further violence.

Mexican lawmen get FBI training to combat organized crime, terrorism

Image 

JUAREZ, Mexico — Three Chihuahua state lawmen recently completed intelligence and intervention training courses sponsored by the FBI, according to the State Security Commission.

Alvaro Serrano Escobedo, the commission's operations

director, received training on anti-terrorism, intelligence gathering, leadership and the combat of organized crime at FBI headquarters in Quantico, Virginia. The training is part of the FBI's Mexican Law Enforcement Executive Development (MEXLEED) program, the commission said in a news release.

Ginés Jaime Ruiz García, first officer of the Chihuahua State Police, and Jesús Alejandro Cruz Rangel, who heads rural operations for the agency, attended the FBI's Mexican American Liaison and Law Enforcement Training (MALLET) program in South Padre Island, Texas, the commission said.

The three lawmen were among 30 duly vetted Mexican officials chosen by the FBI for training this year, the commission said.

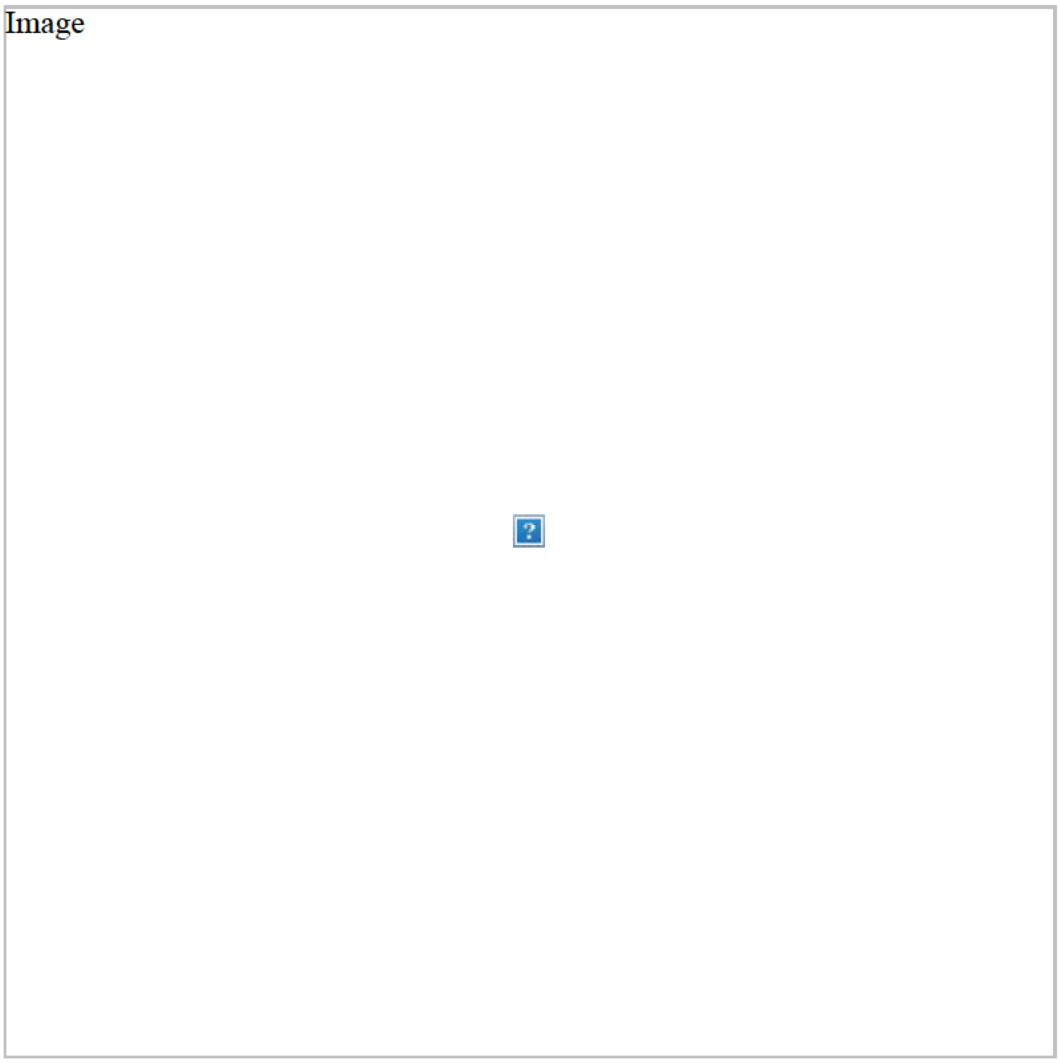
63 accused drug dealers plead guilty in heroin, fentanyl and cocaine trafficking rings



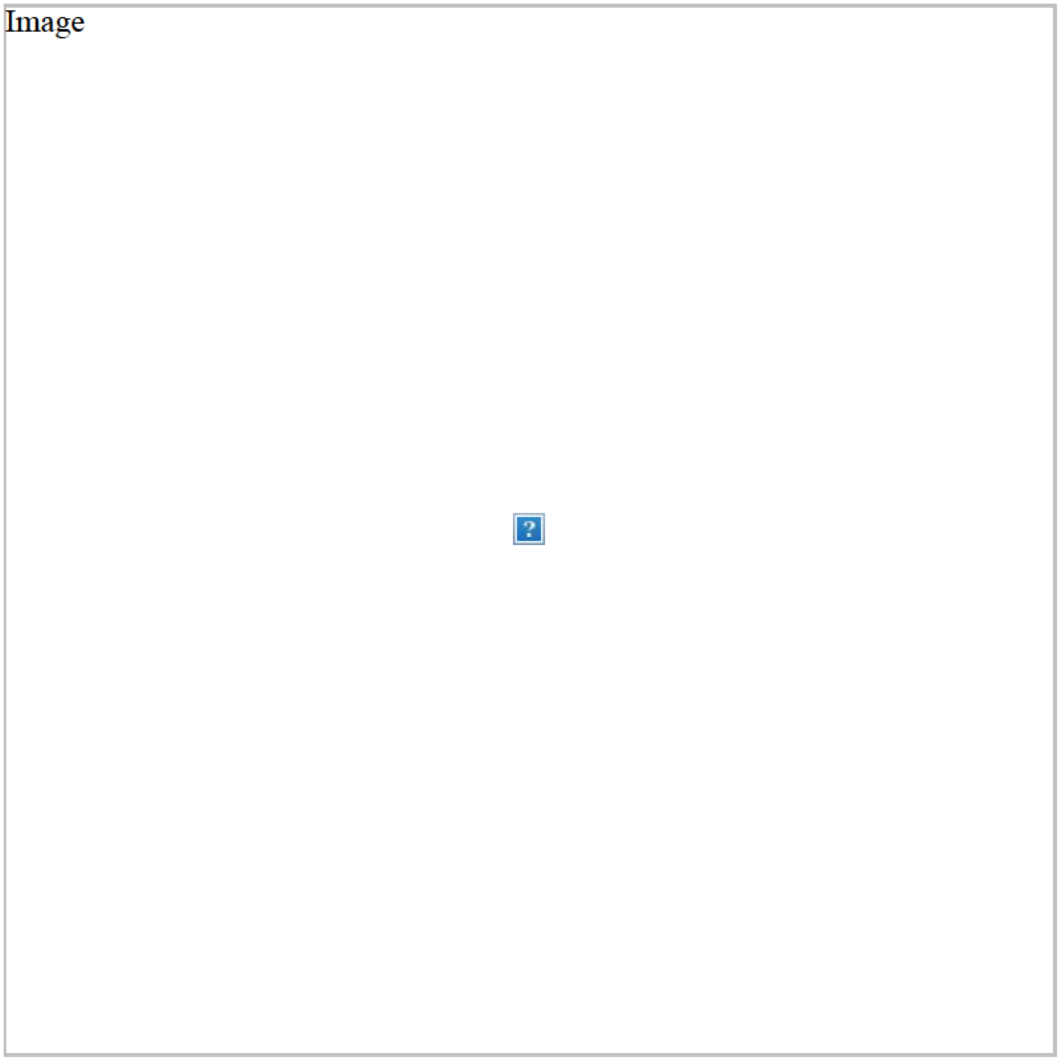
Image

SYRACUSE — New York State Attorney General Letitia James has announced the guilty pleas of 63 people for their roles in two major narcotics trafficking operations that transported heroin, fentanyl, and cocaine to Onondaga, St. Lawrence, Oswego, Oneida, and Jefferson counties.

The investigation resulted in the recovery of approximately 4,700 bags of heroin and fentanyl, worth approximately $140,000, and approximately 2 kilograms of cocaine, worth more than $200,000, according to a news release from the Attorney General's office.

"These individuals flooded our communities with dangerous drugs that are putting New Yorkers at great risk," said Attorney General Letitia James in the news release.

House bill would give border agents tool to detect synthetic opioids



A bill that would give U.S. Customs and Border Protection (CBP) agents the equipment to detect synthetic opioids has been introduced in the U.S. House.

The DHS Opioid Detection Resilience Act of 2019 requires the Commissioner of CBP to procure chemical screening devices that allow border patrol agents to identify narcotics, including synthetic opioids, with purity levels of less than 10 percent. A 2018 study by the Drug Enforcement Administration (DEA) found that most fentanyl seized at the southwest border tends to be less than 10 percent pure. These changes would fill the gap that currently exists in identifying these synthetic opioids.

“Stopping the flow of illegal drugs across our southern border and at ports of entry is a top priority for our CBP law enforcement officers. This includes fentanyl and other synthetic opioids that can be difficult to detect. Our legislation ensures that DHS has the necessary equipment to detect synthetic opioids and the ability to adapt as smuggling methods evolve. We want to prevent this poison from ever reaching American communities, and our bill helps law enforcement carry out that mission,” Rep. Clay Higgins (R-LA), the bill’s sponsor, said.

Teens brawl with police in Brooklyn subway station

Image

BROOKLYN, N.Y. – A video showing members of the NYPD

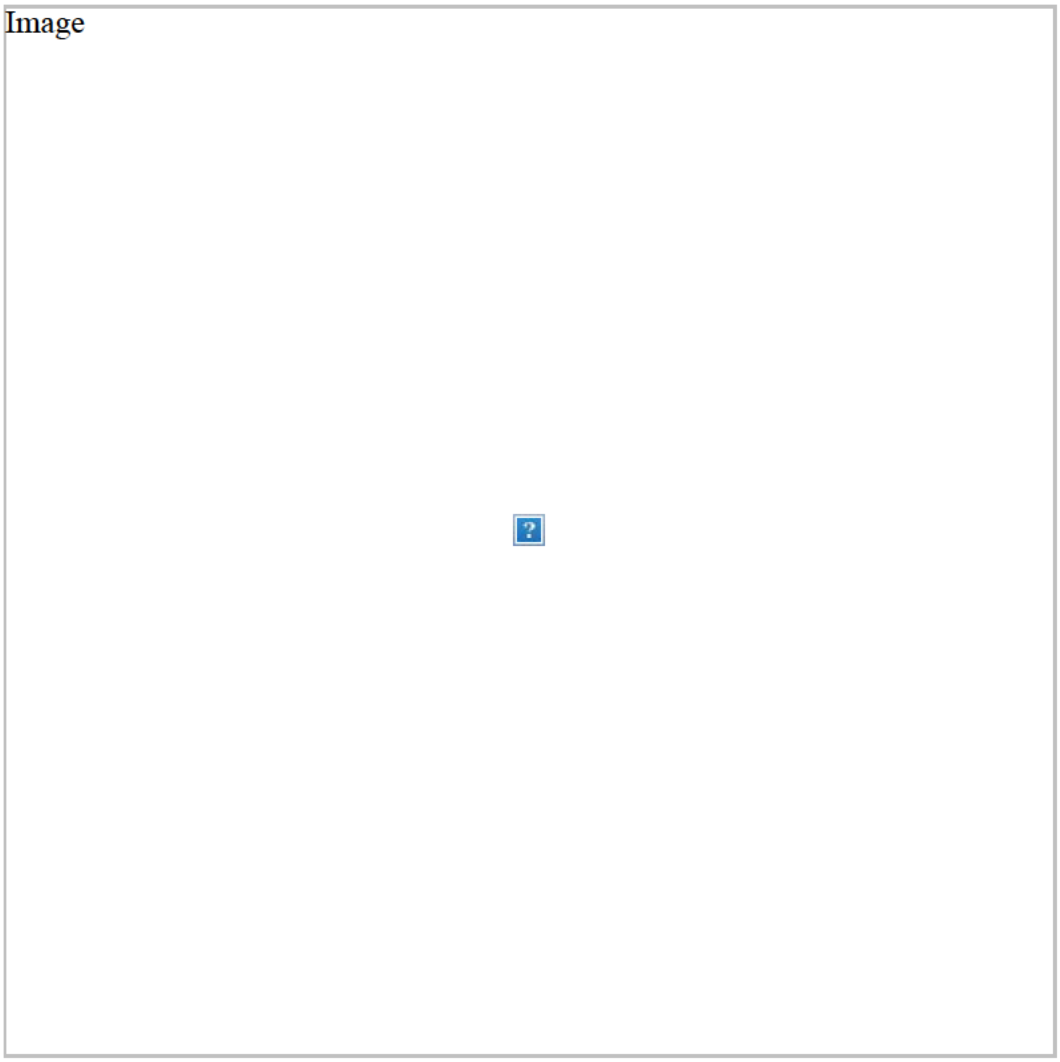
trying to break up a fight and instead ending up in an all-out brawl with a mob of New Yorkers has gone viral… and media outlets were quick to condemn the cops who were involved.

The Post said that the incident unfolded on Saturday morning around 2:30 a.m. as officers responded to the scene of a fight on the platform of a subway station. The fights had originally began up on Jay Street between two groups of people before the violence spilled down into the station.

Cell phone video captured at the scene shows officers rush into the area and try to pull the brawling teens apart, attempting to put one of the suspects in handcuffs. Other individuals on the outside of the skirmish appear to be pulling the officers away.

The heartbreaking final text this human trafficking victim sent before dying in UK truck

Image



A 26-year-old Vietnamese woman texted her mom frantically that she was suffocating in the truck in which the bodies of 39 people were found in England — and apologized that her journey to a better life ended tragically, according to a report.

“I’m sorry Mom, my path to abroad didn’t succeed,” Pham Thi Tra My wrote in a series of messages about 10:30 p.m. Tuesday, according to the Mirror.

“Mom, I love you and Dad so much! I’m dying because I can’t breathe,” she added.

News about the young woman’s final moments emerged as two more people were arrested after eight women and 31 men were found dead Wednesday in a case that has shocked Britain and made headlines around the world.

Labor Trafficking Is A Crime You Probably Don't Notice

It has been more than four years since Catherine Piedad called 911 from a $1.7 million home in Newton.

In 2015, she worked long hours to care for a Russian family's young twins. Her passport was taken, and she slept in a small room with little light and nowhere to store her clothes. When she asked to be paid, her employer threatened to send her back to the Philippines. She feared deportation and did not know who to trust.

Despite her fear, she called 911. Law enforcement helped her

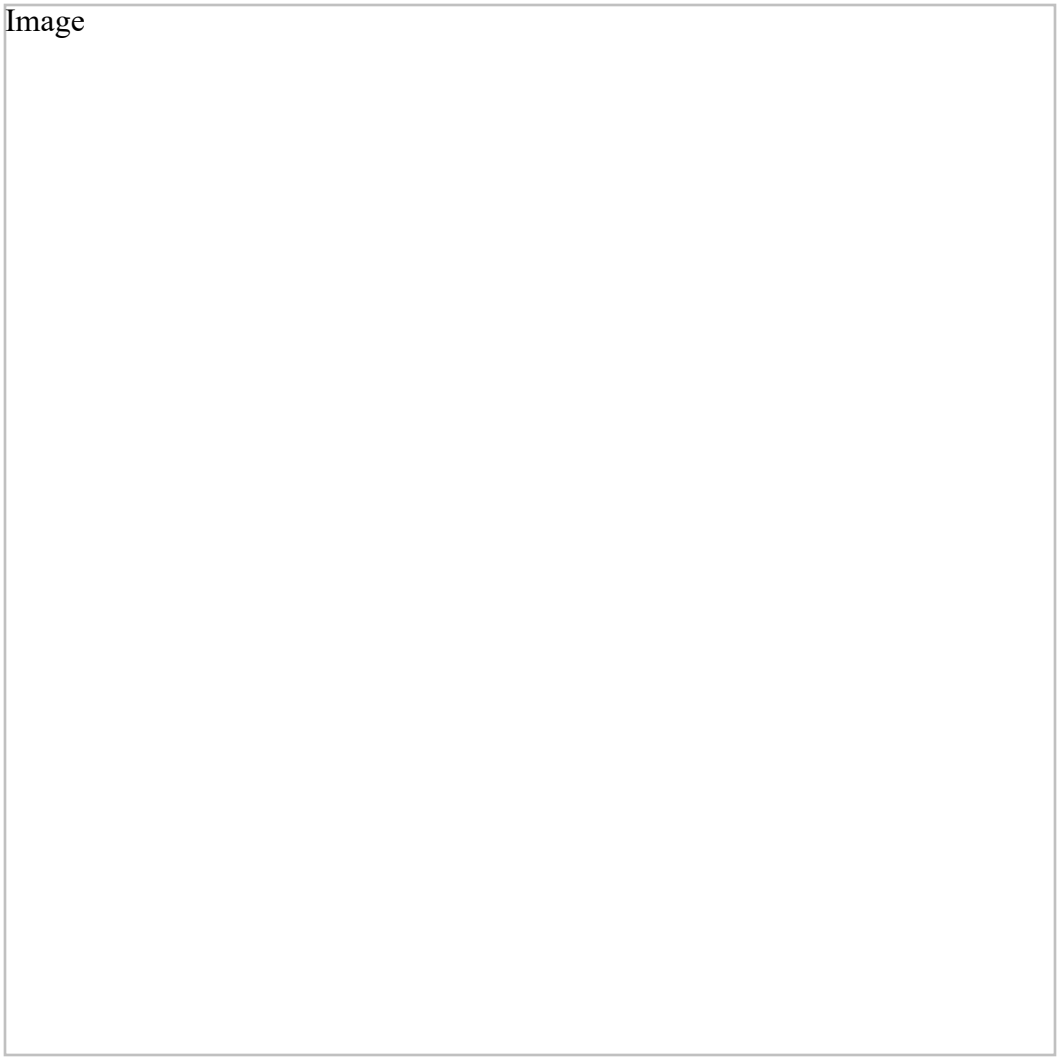
to leave the family's home but did little else. They did not see her case as "labor trafficking." Instead, the incident was labeled a "labor dispute." Piedad struggled to access her rights — despite the robust federal and state laws designed to protect her.

You've probably heard of sex trafficking, which often involves perpetrators who force, trick or coerce victims into sexual servitude. Although difficult to see, sex trafficking is often visible to law enforcement through the internet: perpetrators sometimes leave a footprint online, which can provide a critical entry point for criminal investigations.

The Mafia's history in Las Vegas: From Bugsy Siegel to Anthony Spilotro

Image

Benjamin “Bugsy” Siegel had been at the helm of the Flamingo for only six months in June 1947 when he was killed in a hail of gunfire at his girlfriend’s Beverly Hills, Calif., home.



But his vision for the Flamingo, the first resort-style hotel on the Strip, was the beginning of a 50-year relationship between Las Vegas and traditional organized crime that helped define “Sin City”and turn it into one of the world’s top tourist destinations.

“The general perception on the part of the public is that Las Vegas and the mob have been inextricably linked, and I don’t think it will ever be extricated,” former longtime state archivist Guy Rocha says.

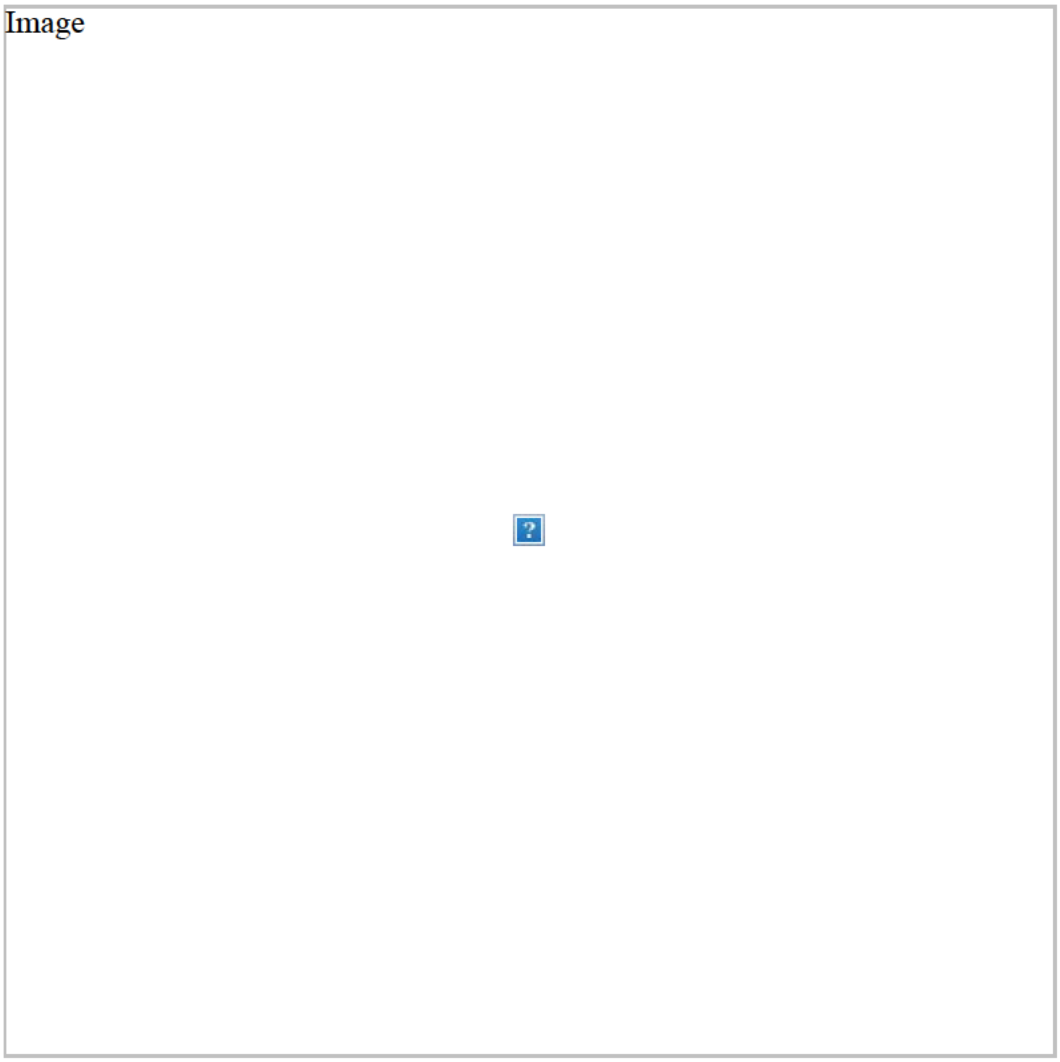
Groundbreaking books such as “The Green Felt Jungle” in 1963, which revealed the mob’s early grip on the city, and popular movies such as “The Godfather” in 1972 and “Casino” in 1995 enhanced this perception through the years.

So did the buzz on the Strip over the Rat Pack, led by headliner Frank Sinatra and his associations with high-profile underworld figures.

New Bill To Bring Illegal Gambling In California Closer To An End

Gambling in the US, as well as in the whole world, is one of the most entertaining and lucrative endeavors. Not only does it provide fun and joy to the players, but it also offers an opportunity to make a fortune.

The gambling operators all around the world are doing everything they can to attract new customers. From online free spins for Australians to no deposit bonuses and other promotions in other countries, casino operators are full of such impressive offers.



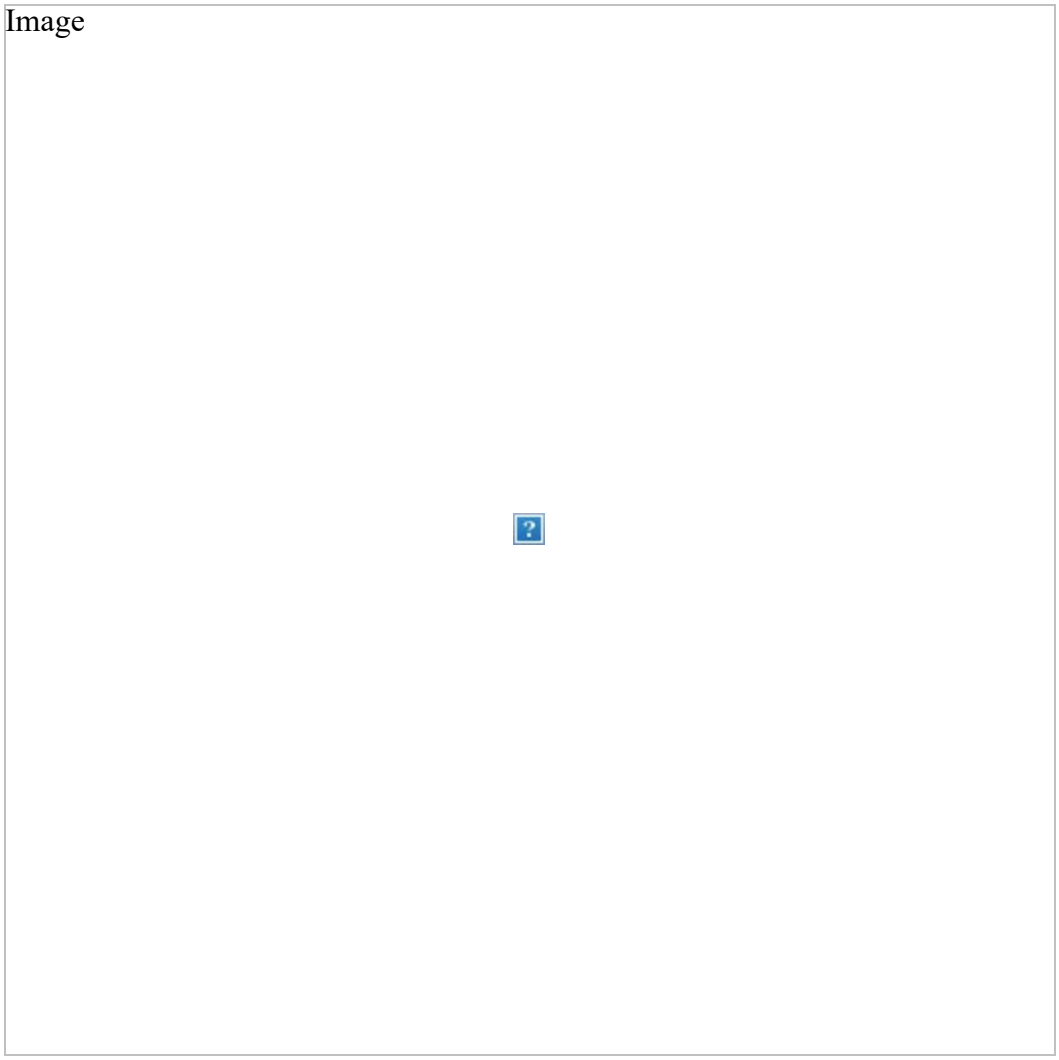
However, the industry isn't just this fairy-tale source of joy and money. It also has its drawbacks. With problem gambling, organized crime, and money laundering prospects, gambling has long been considered threatening to society.

That's the reason why the US government, alongside other

governments worldwide, have been eager to put the industry under the limitations and protect the interests of their citizens. With the regulatory restrictions and measures, the government officials have deemed ill-gotten gains illegal and contributed to ending gambling-related crime.

Best true-crime books of all time

Image



Terrifying tales are not the domain of fiction alone. If you are in search of bone-chilling scares, we recommend you turn to true crime. The key word being true. That's right, no imagination needed. Including stories about such horrific figures as Charles Manson and Ted Bundy, Goodreads compiled a list of the top 10 true-crime books

of all time based on the lists, reviews and ratings of their more than 90 million members.

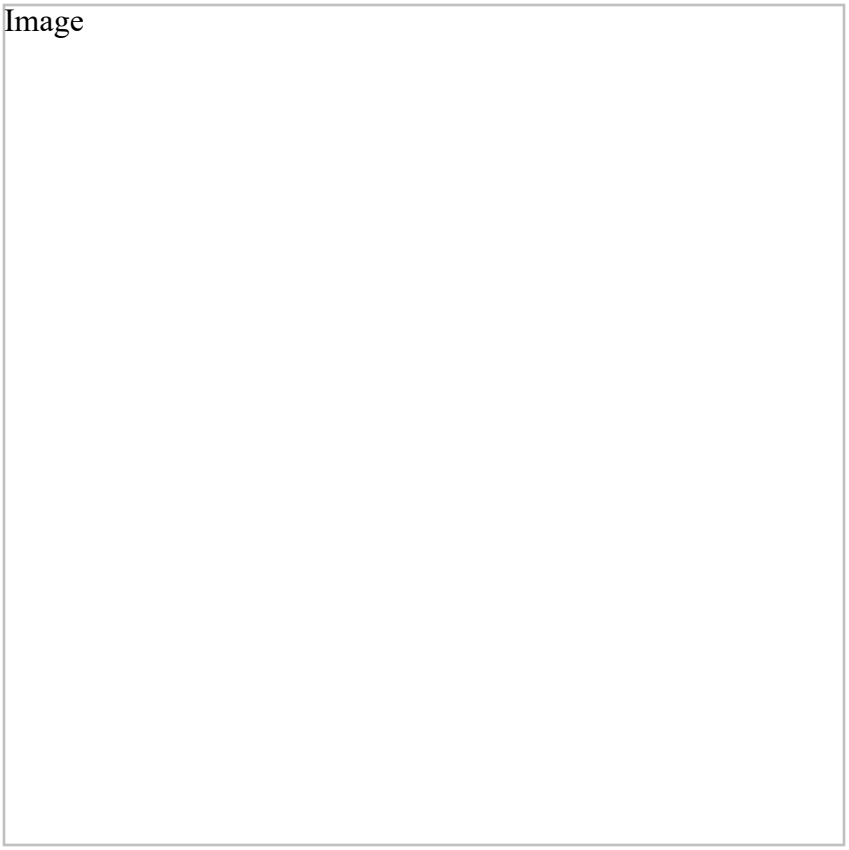
How a Facebook Crime Page Led to Arrest of N.C. Woman in Cold Case Killing of Sister-in-Law

Image

A Facebook page devoted to the murdered, missing or miscreant residents of western North Carolina is being credited with helping authorities bring charges in the 15-year-old cold-case killing of a missing mom of four, allegedly at the hands of her sister-in-law.



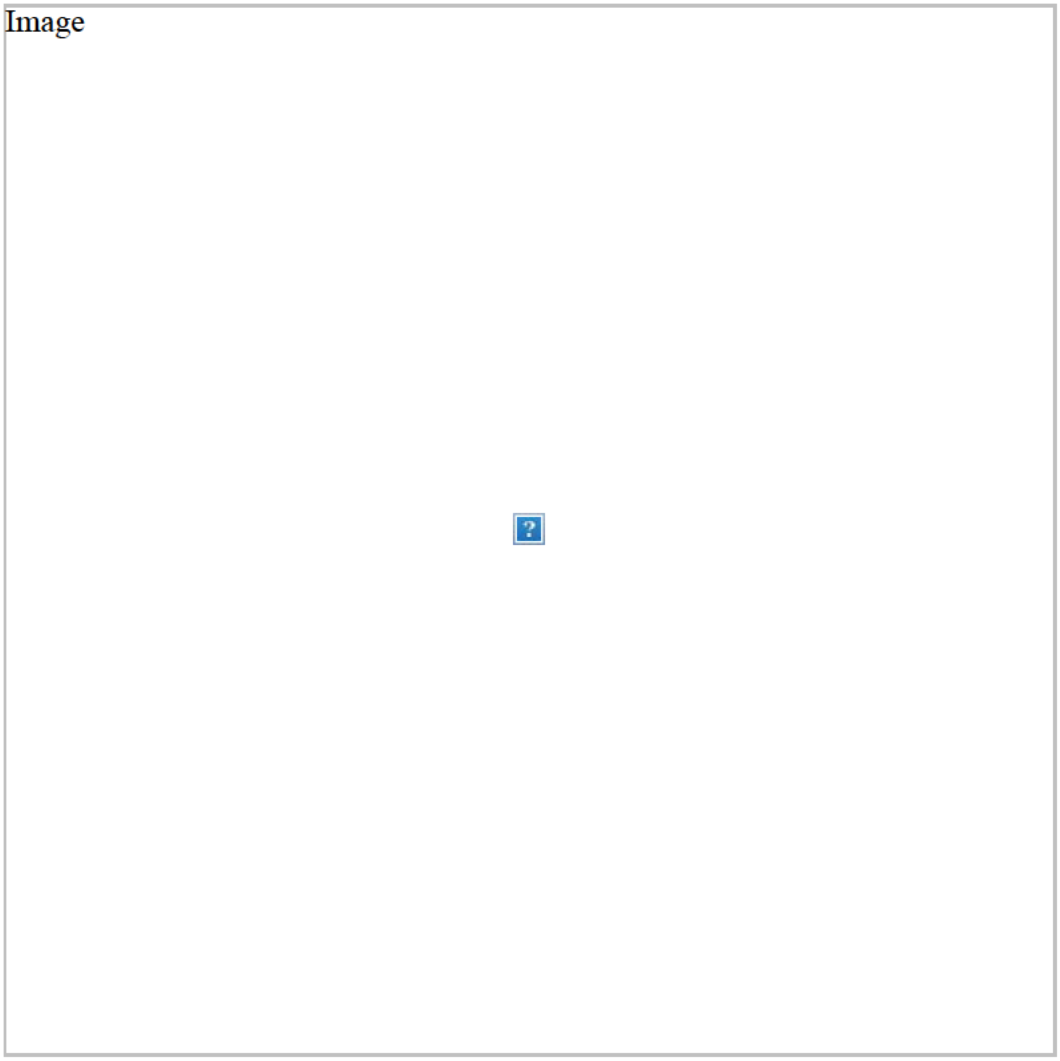
The tip that led authorities to a “shallow grave” containing the remains believed to be those of 29-year-old Deborah Elaine Deans “proved to be very accurate and very reliable,” Nash County Sheriff Keith Stone told reporters last week.

But the tipster did not go to police at first.

Instead, the unidentified person sent information about the alleged crime to a woman who created and runs a Facebook page called Fighting Crime News and Who’s Wanted, an online outlet whose updates range from wanted posters to promotions of local elections and warnings about traffic tie-ups.

On October 20, a re-post about the unsolved missing-person case of Deans — who was last seen around 9 a.m. on January 19, 2004, at a residence on Wiley Road in Spring Hope — elicited a “very detailed” response that was forwarded to authorities by the Facebook page creator, said Nash.

Google Maps Adds ability to see speed limits and speed traps in 40+ countries



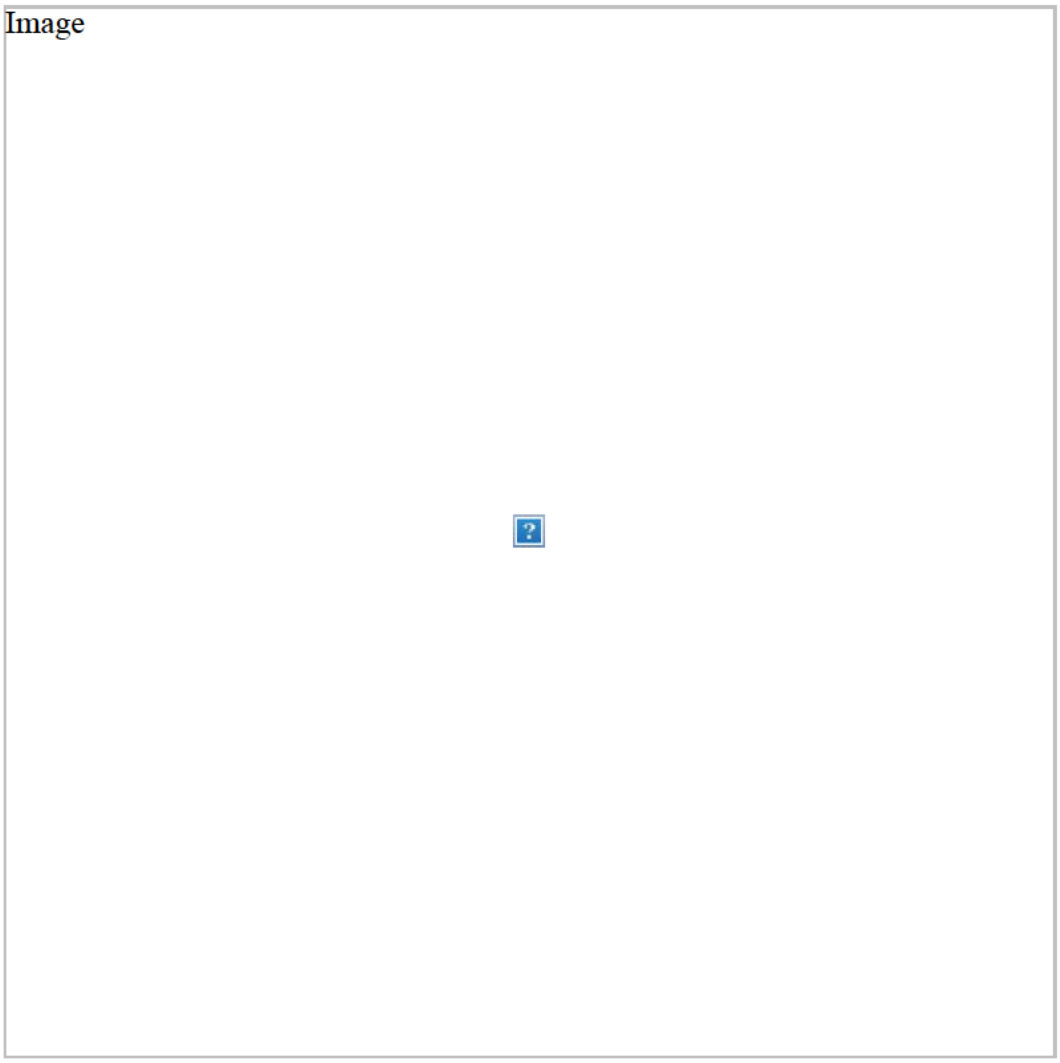
Google Maps is gaining some features previously exclusive to Google's navigation app, Waze. The company confirmed it's rolling out the ability for Google Maps users to see speed limits, speed cameras and mobile speed cameras in more than 40 countries worldwide — an expansion of its earlier launch of these features, which were previously limited to select markets.

The change was noted earlier by ZDNet and, of course, Reddit.

Google confirmed with TechCrunch the full list of supported countries now seeing the speed cameras, which currently includes: Australia, Brazil, U.S., Canada, U.K., India, Mexico, Russia, Japan, Andorra, Bosnia and Herzegovina, Bulgaria, Croatia, Czechia, Estonia, Finland, Greece, Hungary, Iceland, Israel, Italy, Jordan, Kuwait, Latvia, Lithuania, Malta, Morocco, Namibia, Netherlands, Norway, Oman, Poland, Portugal, Qatar, Romania, Saudi Arabia, Serbia, Slovakia, South Africa, Spain, Sweden, Tunisia, and Zimbabwe.

The Ethics Board of One of the Largest Vendors of Police Tech (Axon) Makes the Case Against ALPRs

Automated License Plate Readers (ALPRs)—a mass surveillance technology that allows law enforcement to record the location and travel patterns of nearly every driver on the road—are poorly regulated, threaten privacy, and worsen the racial and economic inequalities already ingrained in our justice system.



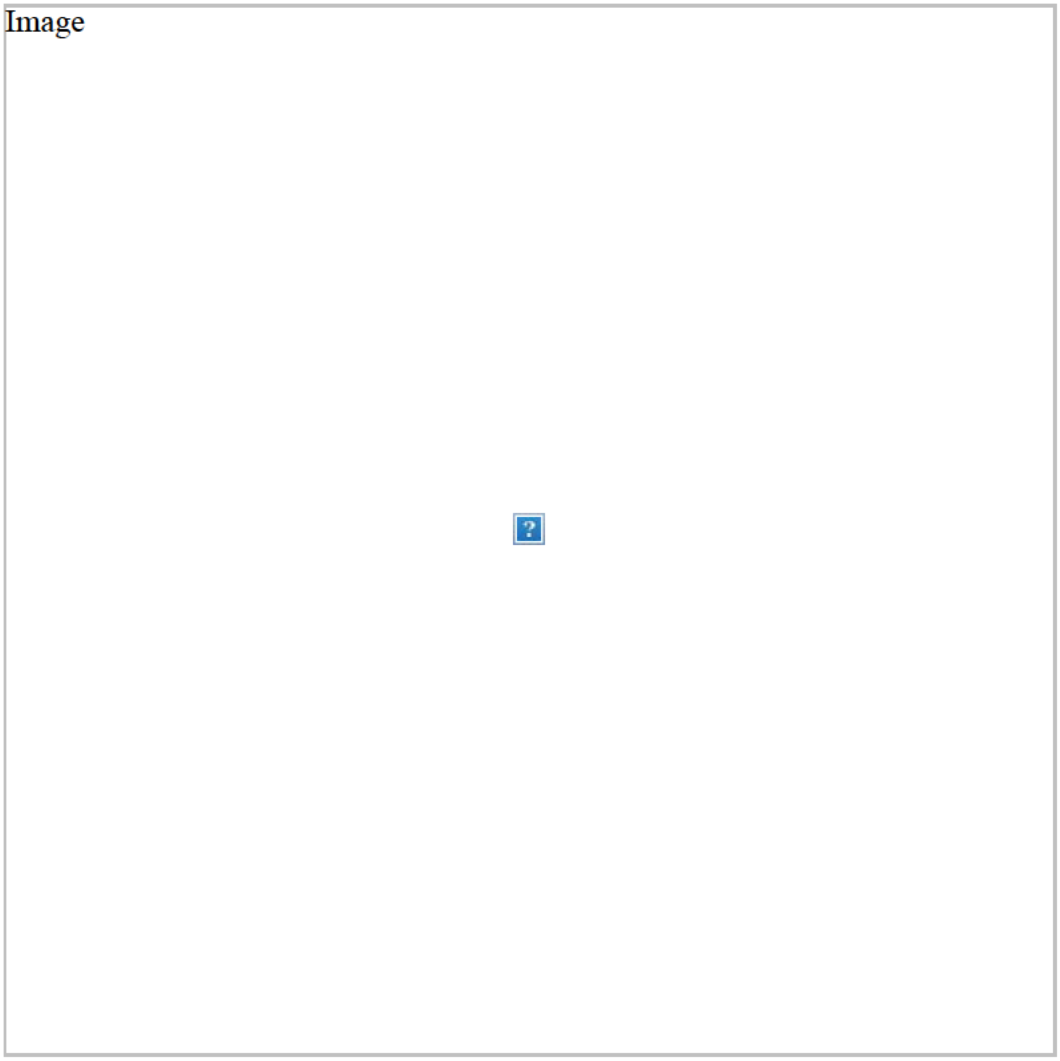
That's what EFF and other advocates have been saying for years. But now it's coming from an oversight body formed by one of the nation's largest police tech vendors.

Last week, the AI and Policing Technology Ethics Board at

Axon, a tech company best known for popularizing body-worn cameras and the Taser, released a damning report concerning the commercial sale of ALPRs. The board, whose purpose is to “help guide and advise the company on ethical issues,” concluded that while it sees the potential value of ALPRs, their current role in society is too broad and problematic. The sheer amount of information that ALPRs gather and store was also a concern for the ethics board—particularly when privately collected data is often for sale to whoever wants to buy it.

ALPR systems include cameras that can be mounted on vehicles like police patrol cars or private tow trucks, or on stationary locations such as streetlights or overpasses. These cameras capture every license plate that passes and index them based on time, date, and location. A police officer can search ALPR databases to learn where a vehicle was in the past or even get real-time alerts when a driver passes by an ALPR camera. Research by EFF, MuckRock, and others have found that even small police departments are able to collect millions of plate scans a year, and often agencies are sharing this data with hundreds of other agencies across the country. Private companies also use ALPR and sell their data to police, financial lenders, insurance companies, private investigators, and debt collectors.

Amazon's Ring is 'the Neighborhood Watch of 2020,' police say as doorbell cams proliferate



That's all it took Livonia Police to arrest a man, who hours earlier was caught on video posted on Ring's Neighbors app rummaging through the bed of a pickup parked in a driveway.

Detectives quickly recognized 60-year-old Jeffrey Couch when they saw the video posted by an app user in mid-August. Within a week, he pleaded no contest in court to two attempted larceny charges and was sentenced to 30 days in jail.

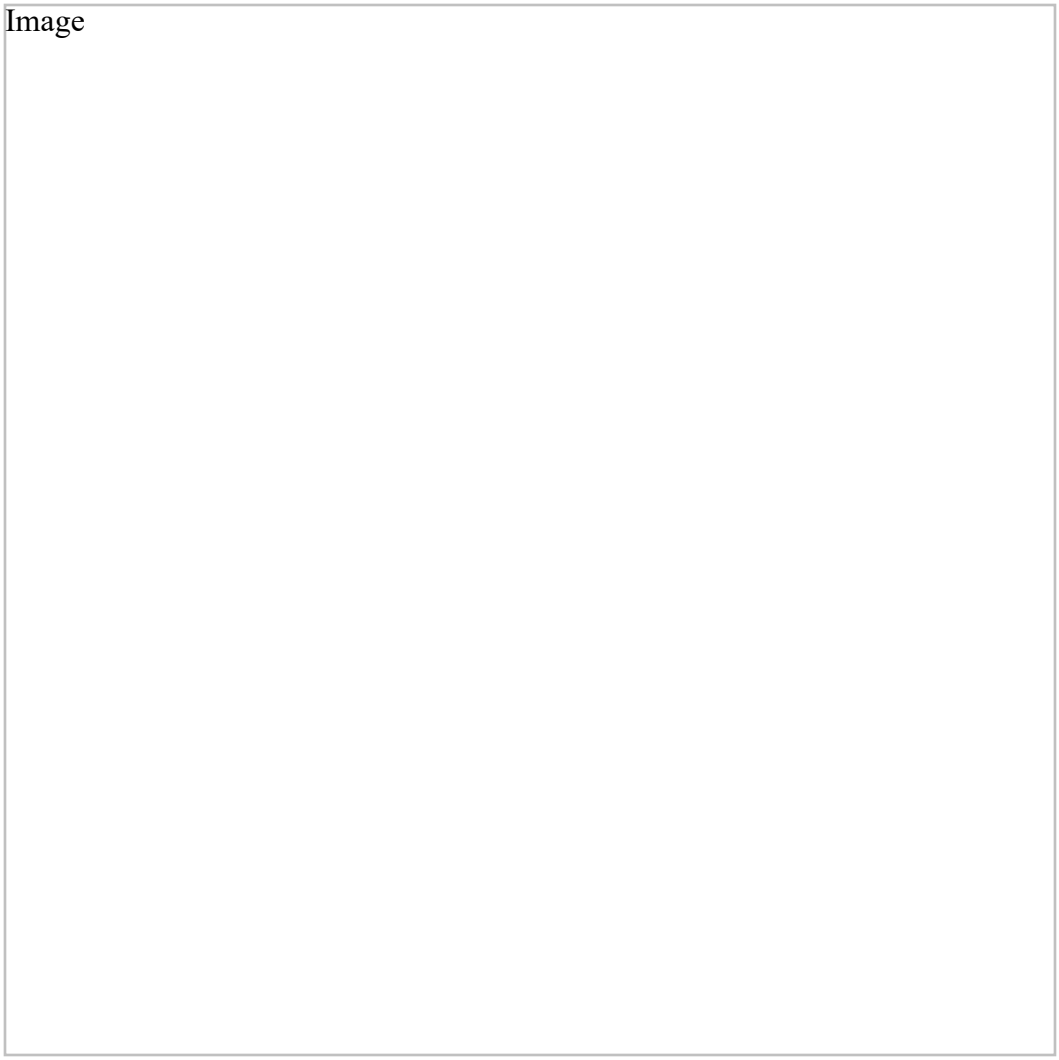
"I truly believe this is the Neighborhood Watch of 2020," said Livonia Police Capt. Ronald Taig, whose force was one of the first law enforcement agencies in Michigan — and is one of more than 400 across the country — to partner with the Ring Neighbors app, owned by Amazon.

How the deadly drug fentanyl is making its way to the US

Trump administration officials are divided over part of a proposal to crack down on illicit versions of fentanyl, the deadly synthetic painkiller that President Donald Trump targeted in declaring a national opioid abuse emergency.

In an inter-agency dispute that highlights the challenges of curbing opioid abuse, the US Drug Enforcement Administration (DEA) is publicly backing tighter rules for fentanyl analogs, which are slightly altered copycat versions of the powerful drug fueling an explosion in overdoses.

In this case, the bill would cut the Food and Drug Administration out of the time-consuming review process by



letting the DEA permanently classify illicit fentanyl analogs as Schedule I drugs, like heroin, which are deemed to be addictive with no medical use.

The DEA says these legal changes would help prosecutors keep pace with criminals who constantly churn out chemically tweaked fentanyl analogs to evade strict Schedule I regulations.

Of 70,200 US drug overdose deaths in 2017, according to the CDC, about 41% involved synthetic opioids, such as fentanyl and illicit analogs of it. Most of them are made in China.

Fentanyl, some versions of which are approved to treat cancer pain, is 100 times more potent than morphine.

Trump Orders Study of Root Causes of Crime, Policing Practices

President Trump on Monday ordered Attorney General William Barr to establish a new commission to study crime and law enforcement with the goal of recommending “actions that can be taken to prevent, reduce, and control crime, increase respect for the law, and assist victims.”

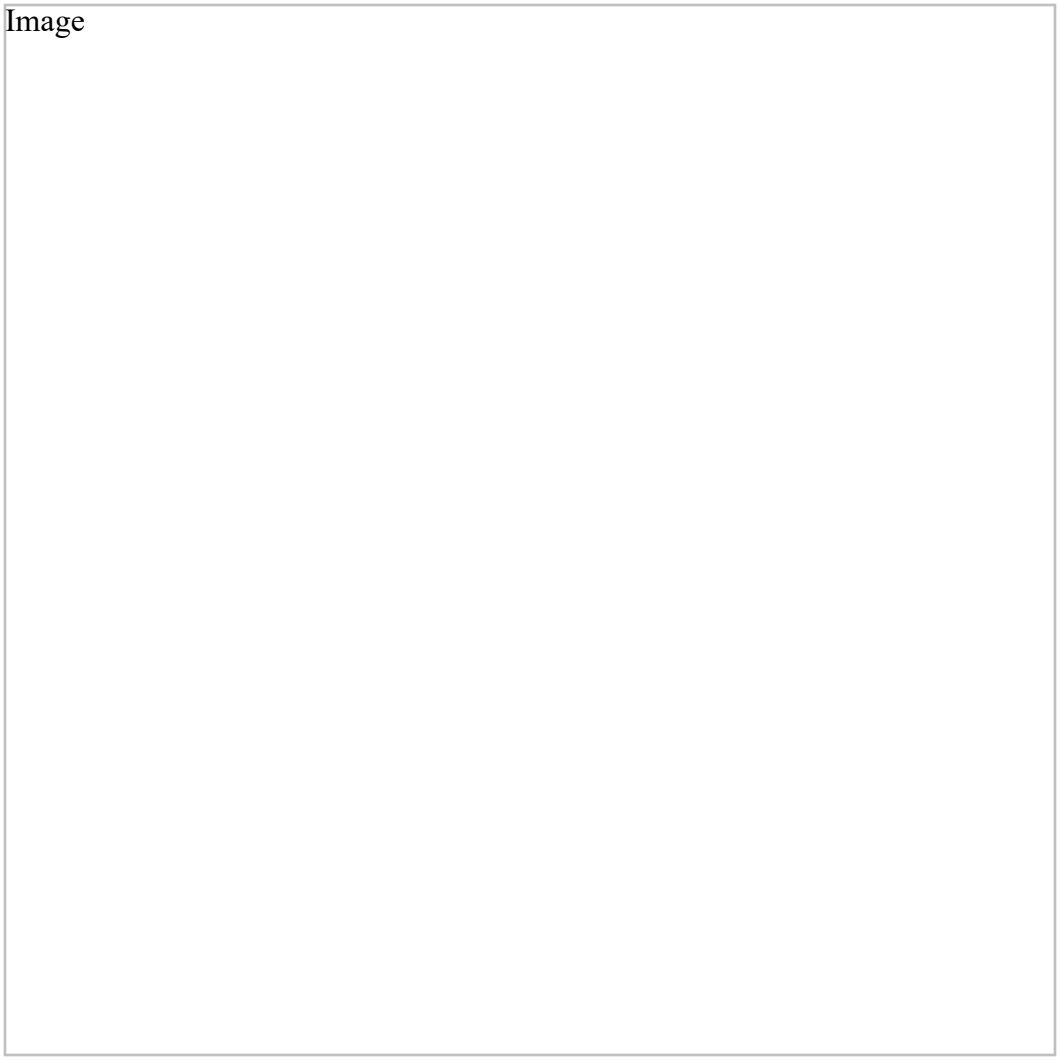
Following remarks in Chicago at the annual International Association of Chiefs of Police conference, the president signed an executive order establishing the Commission on Law Enforcement and the Administration of Justice. The commission will study the influence of substance abuse, homelessness and mental illness on crime as well as examine best practices to recruit, train and support law enforcement, among other things.

“Rigorous study of crime, including its causal factors, and current law enforcement practices is essential to assessing our

current criminal justice system's merits and opportunities for improvement," the executive order stated. "Public safety and proper policing are issues of both national and local significance that continue to require the close cooperation and coordination between the Department of Justice and state, local, and tribal law enforcement."

Quality Afterschool Programs Proven to Reduce Crime

Image



As a member of your District Attorney's Office for almost 30 years, and your DA for nearly 10, I've learned that the hours after school lets out are the prime time for juvenile crime.

It is between these hours of 2 to 6 p.m. that youth are more likely to be arrested for assault, theft and drug-related crimes.

Quality afterschool programs have been proven to reduce these crimes in our community, keep students engaged, and improve academic performance and student behavior.

A new report from Fight Crime: Invest in Kids shows that when youth have access to high-quality, affordable afterschool programming, they benefit immensely from homework help and outdoor activities, and they're less likely to commit or become victims of crime.

Australia's government is floating an idea to scan internet users' faces before they can watch porn online

Australia's Department of Home Affairs has touted an idea to use facial recognition software in order to verify internet users ages before they can access pornography or gambling websites.

In its parliamentary submission, the department says that its Document Verification Service and Face Verification Service — though broadly intended to be used as systems for fighting crime and identity theft — could also be used by police for age verification controls.

"This could assist in age verification, for example by preventing a minor from using their parent's driver licence to circumvent age verification controls," the submission states.

"Whilst they are primarily designed to prevent identity crime, Home Affairs would support the increased use of the

Document and Face Verification Services across the Australian economy to strengthen age verification processes."

Police turn to hackers in Australia's first crowdsourced attempt to find missing people

Image

For decades the traditional 'missing person' poster has been used to enlist the community's help to find individuals who may be in danger.

But with more than 2,600 Australians now listed as a "long-term" disappearance, the federal police are trying what they hope will be a more successful tactic: turning the search into a

game.

More than 350 internet sleuths and "ethical hackers" — hobbyists and professionals — gathered at 10 locations around the country on Friday in a national missing-persons "hackathon".

The aim was to generate leads for 12 of Australia's most frustrating cold cases, using sophisticated but legal methods of trawling the internet.

And organisers said the results were astounding: 100 leads were generated every 10 minutes the competing teams worked.

Police overseas have used crowdsourcing in the past for help with isolated cases, aided by these largely voluntary "open-source intelligence" (OSINT) enthusiasts.

But Linda Cavanagh, of the Canberra Cyber Security Innovation Node, said the Australian event was the first of its kind to be deployed on a national scale.

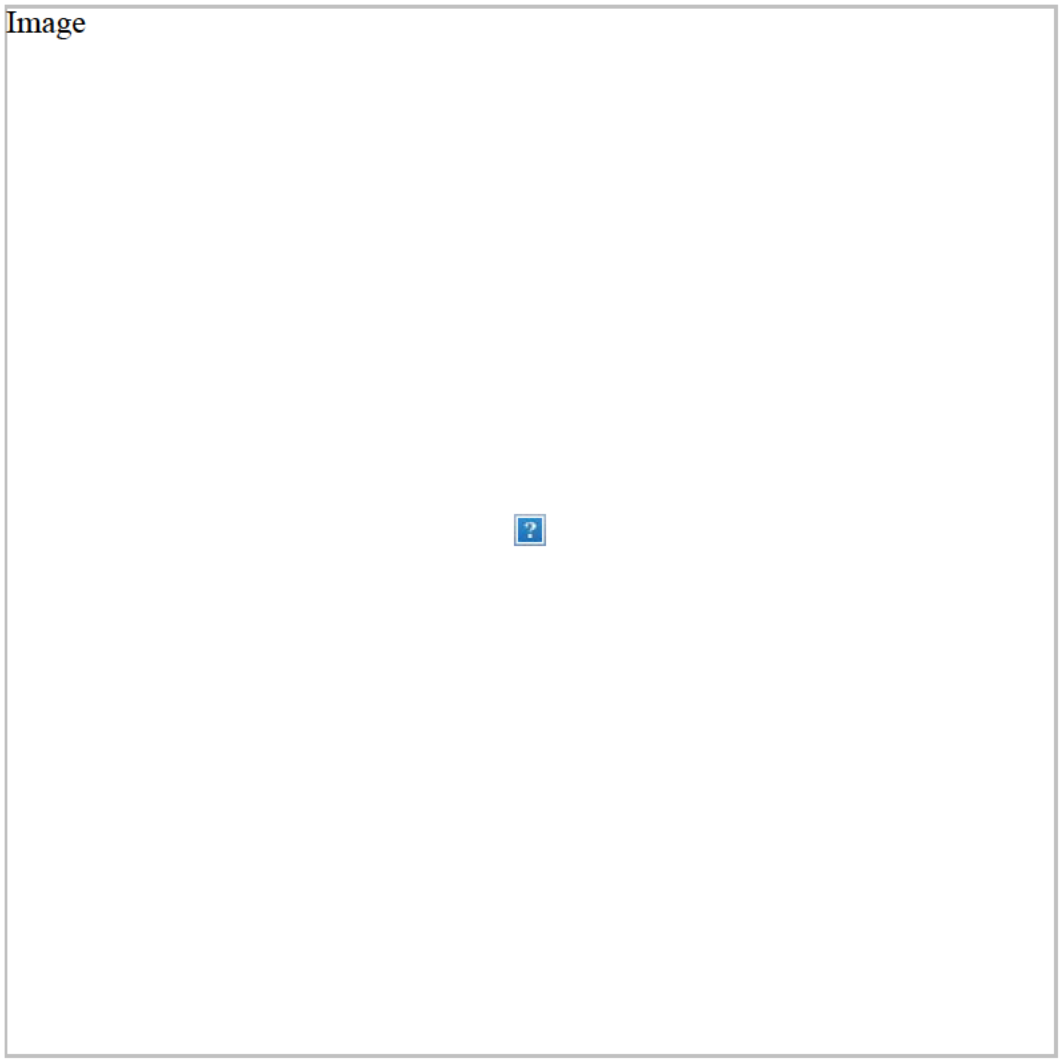
10 of the Best Tools to Find Relevant Influencers on Social Media



Image

While it's become a much bigger consideration in recent years, influencer marketing, as a practice, has actually existed for a very long time. In the past, however, influencers were only on TV or in magazines, and unlike social media, TV and newspapers are limited, which led to a situation where a select number of celebrities were able to charge tons of money for making an ad for Pepsi or Swatch in order to influence consumer behavior.

With the birth of social platforms, everything changed. The Internet has no limits, there can be as many influencers as the world requires. They can be of any age and social status, and in any area of expertise (or no area of expertise). And they can work with any brand.

How Your Volunteering Trip Could Contribute To Human Trafficking

Image

The advent of cheap air travel and Instragammable holiday photos, combined with a longing for meaning, has created a new breed of traveler: the voluntourist. This ever-growing trend describes people, most often young and affluent Westerners, who travel to the global South to help with community projects.

While no doubt sweetly intentioned, there is considerable concern over the fad of “voluntourism” and whether it does more harm than good for the communities in developing countries – especially when it involves children or work at an orphanage. On the surface of the problem, it’s questionable whether treating the developing world as a playground is an effective model to address systemic poverty and care for vulnerable children.

An anthropological study published in the Journal of Sustainable Tourism has shown how volunteer programs can actually contribute towards a superficial understanding of poverty that distracts from the larger systems that produce inequality and poverty. Through a series of in-depth interviews with young people from the US who volunteered in Malawi, they found their volunteer work was often carried out through a colonial and “mythologized” image of a helpless Africa needing the benevolence of the West. The volunteers also viewed African poverty in terms of the “American Dream” and the idea of pulling oneself out of poverty through hard work, as opposed to deep-rooted economic, social, and historical factors at play.

BAE wins open source intelligence

contract from the Army

The Army has awarded BAE Systems a $437 million task order for open source intelligence support, the company announced Oct. 15 during the 2019 Association of the United States Army conference.

As part of the task order, BAE Systems will provide the Army and Army Intelligence & Security Command (INSCOM) approved partners with open source solutions to publicly available data.

“We’re proud to continue to partner with the U.S. Army and support their critical national security missions with this new capability,” Peder Jungck, vice president and general manager of BAE Systems’ intelligence solutions business.

The company won the initial award of the five-year task order and began ramping up in August, Jungck said. The task order is an extension of projects the company has been doing for the

Army, but this is the first time the work been consolidated and awarded as a larger contract, he explained.

“If you look at contracts in general around OSINT there’s been kind of small ones, there’s been lots of pilots out of agencies and even within the Army and throughout INSCOM there were different kind of brigades and battalions that had their own set of tools," he said. "This is one of the first of the really large OSINT and AI consolidation contracts. I don’t think anybody’s really had a large one like this.”

Calif. police stand by cop after video released in 2017 OIS of murder suspect

Image

FRESNO, Calif. — Community activists are expressing outrage after seeing video footage that shows a Fresno police sergeant fatally shooting an unarmed 16-year-old boy as he fled during a

foot pursuit.

Meanwhile, the local police union and supporters of law enforcement have stepped up in support of the sergeant, saying he acted within guidelines while pursuing a murder suspect.

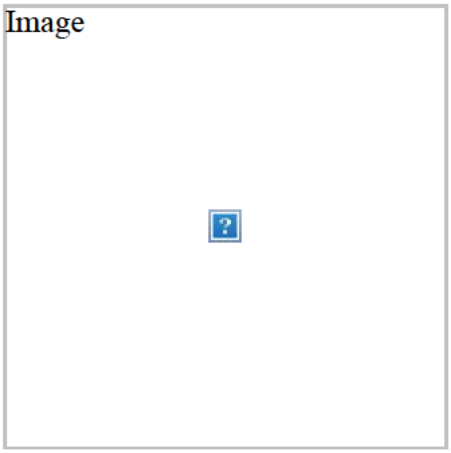
The footage shows Sgt. Ray Villalvazo firing a single shot into the back of Isiah Murrietta-Golding's head, according to a lawsuit filed on behalf of the teen's family.

The video was captured on a surveillance camera at a daycare facility on April 14, 2017, and was released by attorney Stuart Chandler, who's representing the family of Murrietta-Golding. The boy's family alleges the sergeant used excessive and unlawful deadly force, and committed assault and battery with negligence.

Additionally, in footage released from a police officer's body camera, one officer is heard shouting "good shot" as officers handcuff and search the already prone Murrietta-Golding.

Asia has an organized-crime problem. Canada is well placed to help

Image



Jeremy Douglas is the regional representative for the United Nations Office on Drugs and Crime (UNODC) for Southeast Asia and the Pacific and a former UNODC representative for Pakistan. The opinions expressed in this commentary are his.

More than a few eyebrows went up last week when Tse Chi Lop – a 55-year-old Canadian man – was accused of being arguably the biggest drug trafficker in the history of Asia.

Mr. Tse is suspected – by police in Myanmar, Australia and Taiwan, and by the United Nations Office on Drugs and Crime (UNODC) – of being the leader of Sam Gor, or Brother Number Three, a supersyndicate largely responsible for the dramatic shift in recent years in organized crime away from drugs such as heroin and toward synthetics, such as methamphetamine, ketamine and fentanyl. It's a shift that has been driven by control and profit, since synthetics offer many advantages to

criminal organizations: Labs can be quickly set up or moved; they are not subject to external conditions such as climate, nor do they require large work forces; and production can be rapidly scaled up to drive the market. Put these things together and it means the disruption of the traditional drug business and the heavily concentrated profits that come with it.

Florida Senator Rick Scott Announces Legislation To Address 'FBI Failures' Regarding Parkland Shooting

MIAMI (CBSMiami) – Florida Senator Rick Scott announced legislation Thursday to hold the Federal Bureau of Investigations accountable for its 'failures to address critical deficiencies in its handling of actionable intelligence' in regards to the mass shooting at Marjory Stoneman Douglas High School in 2018.

The 'Threat Information Protocol for Sharing (TIPS) Act' is supported by Stand with Parkland, an organization founded by the family members of the victims of the Parkland shooting.

"Not a day goes by that I don't think about the 17 souls that were taken from us in a brutal act of violence at Marjory Stoneman Douglas High School. Following the tragedy, we all worked together to pass the Marjory Stoneman Douglas High School Public Safety Act to make our schools safer and prevent future tragedies, but we aren't finished. We cannot

accept the repeated failures of the FBI to properly investigate and act on specific tips received about the Parkland shooter, as well as other perpetrators of mass violence in Florida. I'm proud to stand with the family members of the victims to announce the TIPS Act, which bridges the gap between federal and state law enforcement agencies by mandating information sharing of all state-specific criminal intelligence tips. This is about getting information on threats into the hands of the right people, who can ultimately prevent violence and protect our families," Scott said.

Majority of Mexicans Say Organized Crime Stronger than Government after El Chapo's Son Released

Image

A majority of Mexicans see organized crime as more powerful than the Mexican government after government forces capitulated to drug-cartel strongmen and released the son of the former cartel leader Joaquín Guzmán, known as “El Chapo.”

About 56 percent of Mexicans say they believe organized crime is stronger, while only 33 percent say the government is stronger, according to a poll by the Mexican newspaper Reforma.

Mexican authorities were forced on Thursday to release Ovidio Guzmán López, El Chapo’s son, shortly after capturing him, when the Sinaloa cartel laid siege to the city of Culiacán and surrounded Mexican troops, taking eight soldiers hostage. Officials said at least 14 people died during the clashes between cartel members and Mexican soldiers.

49 percent of respondents in the Reforma poll disagreed with the decision to release López, while 45 percent said they supported it. Residents of Culiacán expressed relief that the government had surrendered, saying the decision prevented further violence.

Mexican lawmen get FBI training to combat organized crime, terrorism

Image

JUAREZ, Mexico — Three Chihuahua state lawmen recently completed intelligence and intervention training courses sponsored by the FBI, according to the State Security Commission.

Alvaro Serrano Escobedo, the commission's operations

director, received training on anti-terrorism, intelligence gathering, leadership and the combat of organized crime at FBI headquarters in Quantico, Virginia. The training is part of the FBI's Mexican Law Enforcement Executive Development (MEXLEED) program, the commission said in a news release.

Ginés Jaime Ruiz García, first officer of the Chihuahua State Police, and Jesús Alejandro Cruz Rangel, who heads rural operations for the agency, attended the FBI's Mexican American Liaison and Law Enforcement Training (MALLET) program in South Padre Island, Texas, the commission said.

The three lawmen were among 30 duly vetted Mexican officials chosen by the FBI for training this year, the commission said.

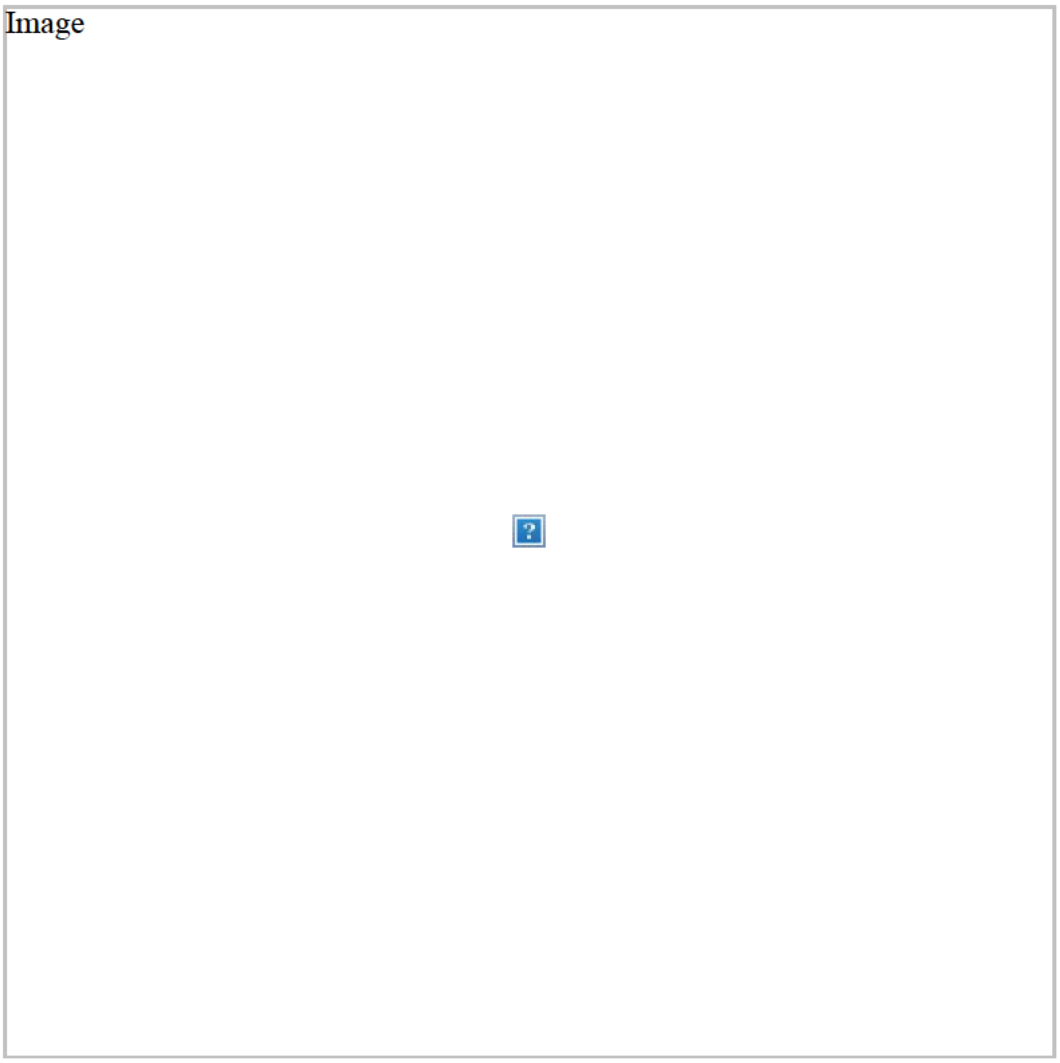
63 accused drug dealers plead guilty in heroin, fentanyl and cocaine trafficking rings



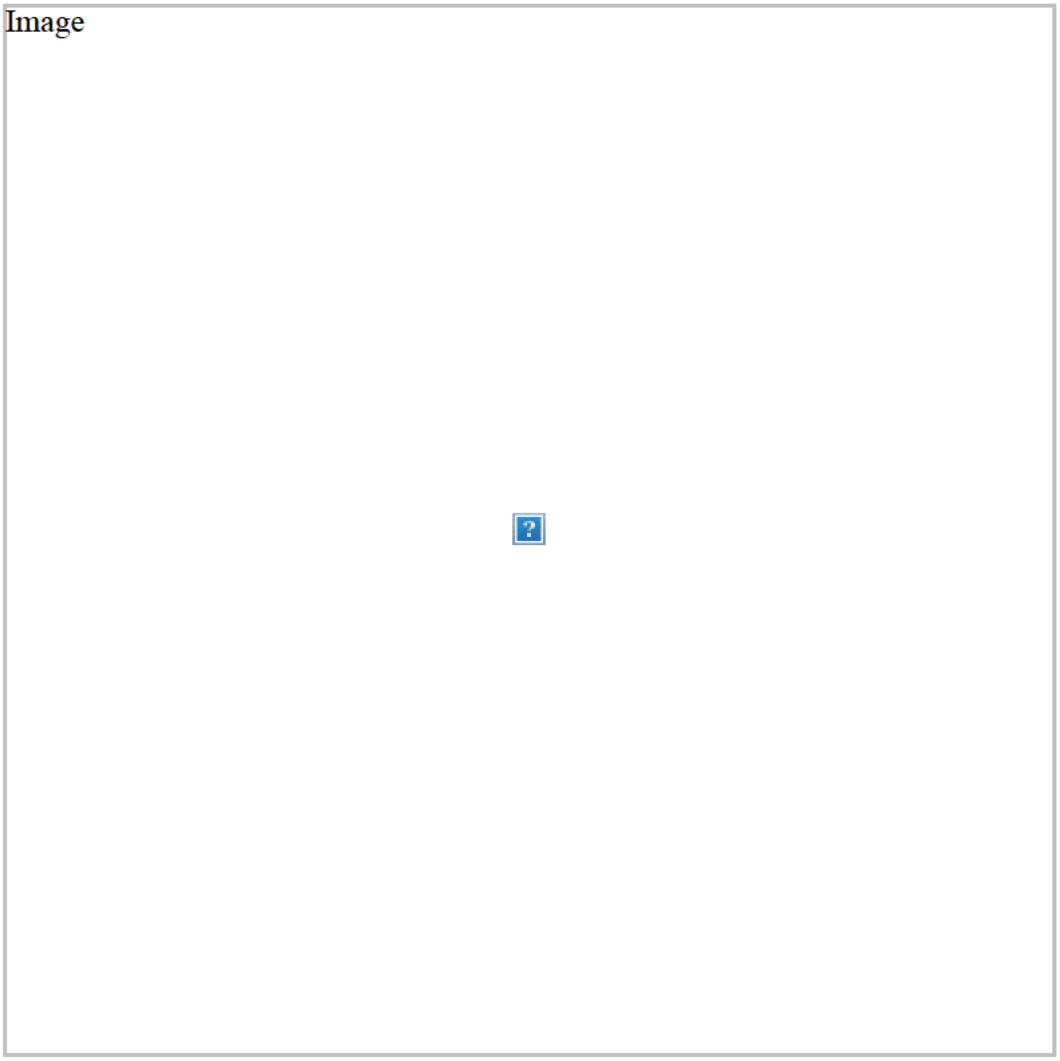
Image

SYRACUSE — New York State Attorney General Letitia James has announced the guilty pleas of 63 people for their roles in two major narcotics trafficking operations that transported heroin, fentanyl, and cocaine to Onondaga, St. Lawrence, Oswego, Oneida, and Jefferson counties.

The investigation resulted in the recovery of approximately 4,700 bags of heroin and fentanyl, worth approximately $140,000, and approximately 2 kilograms of cocaine, worth more than $200,000, according to a news release from the Attorney General's office.

"These individuals flooded our communities with dangerous drugs that are putting New Yorkers at great risk," said Attorney General Letitia James in the news release.

House bill would give border agents tool to detect synthetic opioids



A bill that would give U.S. Customs and Border Protection (CBP) agents the equipment to detect synthetic opioids has been introduced in the U.S. House.

The DHS Opioid Detection Resilience Act of 2019 requires the Commissioner of CBP to procure chemical screening devices that allow border patrol agents to identify narcotics, including synthetic opioids, with purity levels of less than 10 percent. A 2018 study by the Drug Enforcement Administration (DEA) found that most fentanyl seized at the southwest border tends to be less than 10 percent pure. These changes would fill the gap that currently exists in identifying these synthetic opioids.

“Stopping the flow of illegal drugs across our southern border and at ports of entry is a top priority for our CBP law enforcement officers. This includes fentanyl and other synthetic opioids that can be difficult to detect. Our legislation ensures that DHS has the necessary equipment to detect synthetic opioids and the ability to adapt as smuggling methods evolve. We want to prevent this poison from ever reaching American communities, and our bill helps law enforcement carry out that mission,” Rep. Clay Higgins (R-LA), the bill’s sponsor, said.

Teens brawl with police in Brooklyn subway station

Image

BROOKLYN, N.Y. – A video showing members of the NYPD

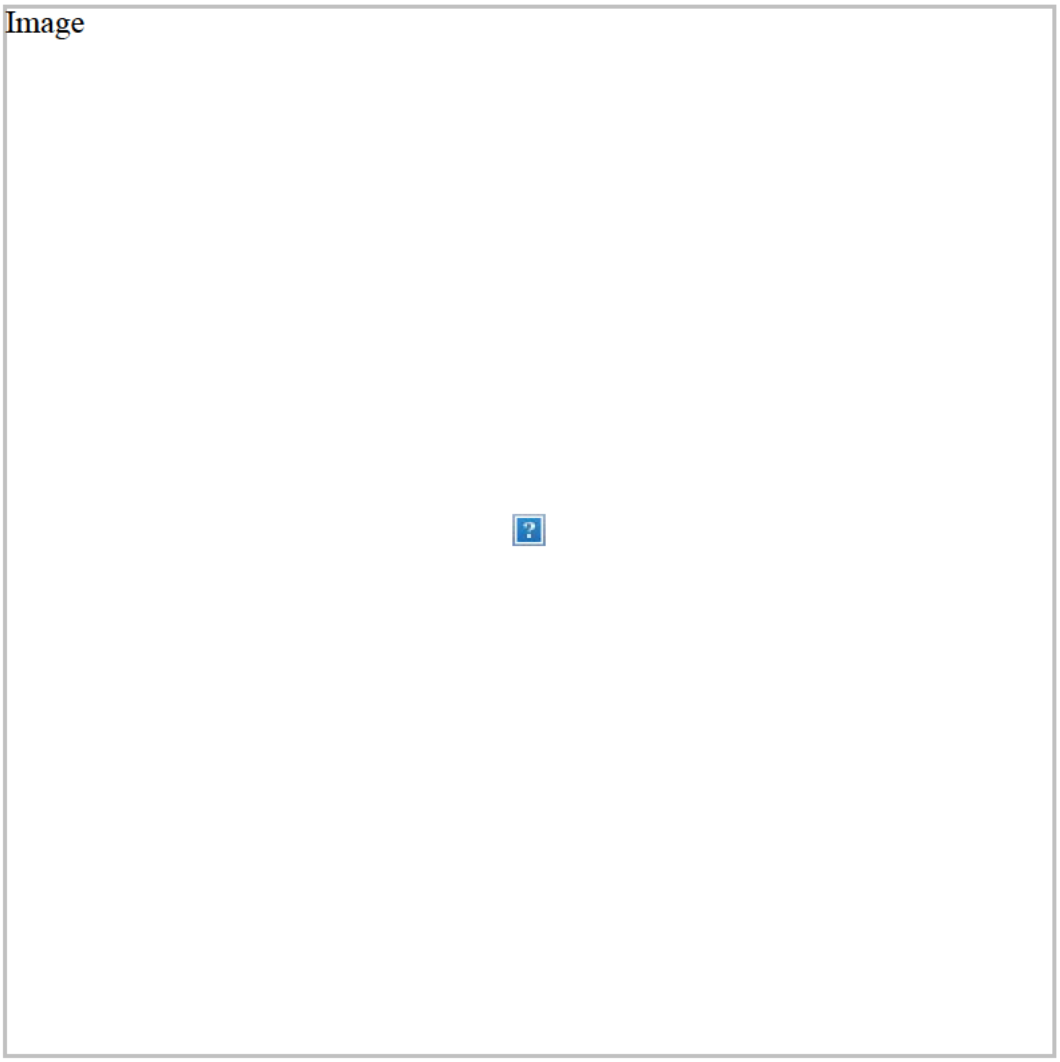
trying to break up a fight and instead ending up in an all-out brawl with a mob of New Yorkers has gone viral… and media outlets were quick to condemn the cops who were involved.

The Post said that the incident unfolded on Saturday morning around 2:30 a.m. as officers responded to the scene of a fight on the platform of a subway station. The fights had originally began up on Jay Street between two groups of people before the violence spilled down into the station.

Cell phone video captured at the scene shows officers rush into the area and try to pull the brawling teens apart, attempting to put one of the suspects in handcuffs. Other individuals on the outside of the skirmish appear to be pulling the officers away.

The heartbreaking final text this human trafficking victim sent before dying in UK truck

Image



A 26-year-old Vietnamese woman texted her mom frantically that she was suffocating in the truck in which the bodies of 39 people were found in England — and apologized that her journey to a better life ended tragically, according to a report.

“I’m sorry Mom, my path to abroad didn’t succeed,” Pham Thi Tra My wrote in a series of messages about 10:30 p.m. Tuesday, according to the Mirror.

News about the young woman’s final moments emerged as two more people were arrested after eight women and 31 men were found dead Wednesday in a case that has shocked Britain and made headlines around the world.

Labor Trafficking Is A Crime You Probably Don't Notice

It has been more than four years since Catherine Piedad called 911 from a $1.7 million home in Newton.

In 2015, she worked long hours to care for a Russian family's young twins. Her passport was taken, and she slept in a small room with little light and nowhere to store her clothes. When she asked to be paid, her employer threatened to send her back to the Philippines. She feared deportation and did not know who to trust.

Despite her fear, she called 911. Law enforcement helped her

to leave the family's home but did little else. They did not see her case as "labor trafficking." Instead, the incident was labeled a "labor dispute." Piedad struggled to access her rights — despite the robust federal and state laws designed to protect her.

You've probably heard of sex trafficking, which often involves perpetrators who force, trick or coerce victims into sexual servitude. Although difficult to see, sex trafficking is often visible to law enforcement through the internet: perpetrators sometimes leave a footprint online, which can provide a critical entry point for criminal investigations.

The Mafia's history in Las Vegas: From Bugsy Siegel to Anthony Spilotro

Image

But his vision for the Flamingo, the first resort-style hotel on the Strip, was the beginning of a 50-year relationship between Las Vegas and traditional organized crime that helped define “Sin City”and turn it into one of the world’s top tourist destinations.

“The general perception on the part of the public is that Las Vegas and the mob have been inextricably linked, and I don’t think it will ever be extricated,” former longtime state archivist Guy Rocha says.

Groundbreaking books such as “The Green Felt Jungle” in 1963, which revealed the mob’s early grip on the city, and popular movies such as “The Godfather” in 1972 and “Casino” in 1995 enhanced this perception through the years.

So did the buzz on the Strip over the Rat Pack, led by headliner Frank Sinatra and his associations with high-profile underworld figures.

New Bill To Bring Illegal Gambling In California Closer To An End

Image

Gambling in the US, as well as in the whole world, is one of the most entertaining and lucrative endeavors. Not only does it provide fun and joy to the players, but it also offers an opportunity to make a fortune.

The gambling operators all around the world are doing everything they can to attract new customers. From online free spins for Australians to no deposit bonuses and other promotions in other countries, casino operators are full of such impressive offers.

However, the industry isn't just this fairy-tale source of joy and money. It also has its drawbacks. With problem gambling, organized crime, and money laundering prospects, gambling has long been considered threatening to society.

That's the reason why the US government, alongside other

governments worldwide, have been eager to put the industry under the limitations and protect the interests of their citizens. With the regulatory restrictions and measures, the government officials have deemed ill-gotten gains illegal and contributed to ending gambling-related crime.

Best true-crime books of all time

Image

Terrifying tales are not the domain of fiction alone. If you are in search of bone-chilling scares, we recommend you turn to true crime. The key word being true. That's right, no imagination needed. Including stories about such horrific figures as Charles Manson and Ted Bundy, Goodreads compiled a list of the top 10 true-crime books

of all time based on the lists, reviews and ratings of their more than 90 million members.
AP

How a Facebook Crime Page Led to Arrest of N.C. Woman in Cold Case Killing of Sister-in-Law

Image

A Facebook page devoted to the murdered, missing or miscreant residents of western North Carolina is being credited with helping authorities bring charges in the 15-year-old cold-case killing of a missing mom of four, allegedly at the hands of her sister-in-law.

The tip that led authorities to a “shallow grave” containing the remains believed to be those of 29-year-old Deborah Elaine Deans “proved to be very accurate and very reliable,” Nash County Sheriff Keith Stone told reporters last week.

But the tipster did not go to police at first.

Instead, the unidentified person sent information about the alleged crime to a woman who created and runs a Facebook page called Fighting Crime News and Who’s Wanted, an online outlet whose updates range from wanted posters to promotions of local elections and warnings about traffic tie-ups.

On October 20, a re-post about the unsolved missing-person case of Deans — who was last seen around 9 a.m. on January 19, 2004, at a residence on Wiley Road in Spring Hope — elicited a “very detailed” response that was forwarded to authorities by the Facebook page creator, said Nash.

Google Maps Adds ability to see speed limits and speed traps in 40+ countries

Image

Google Maps is gaining some features previously exclusive to Google's navigation app, Waze. The company confirmed it's rolling out the ability for Google Maps users to see speed limits, speed cameras and mobile speed cameras in more than 40 countries worldwide — an expansion of its earlier launch of these features, which were previously limited to select markets.

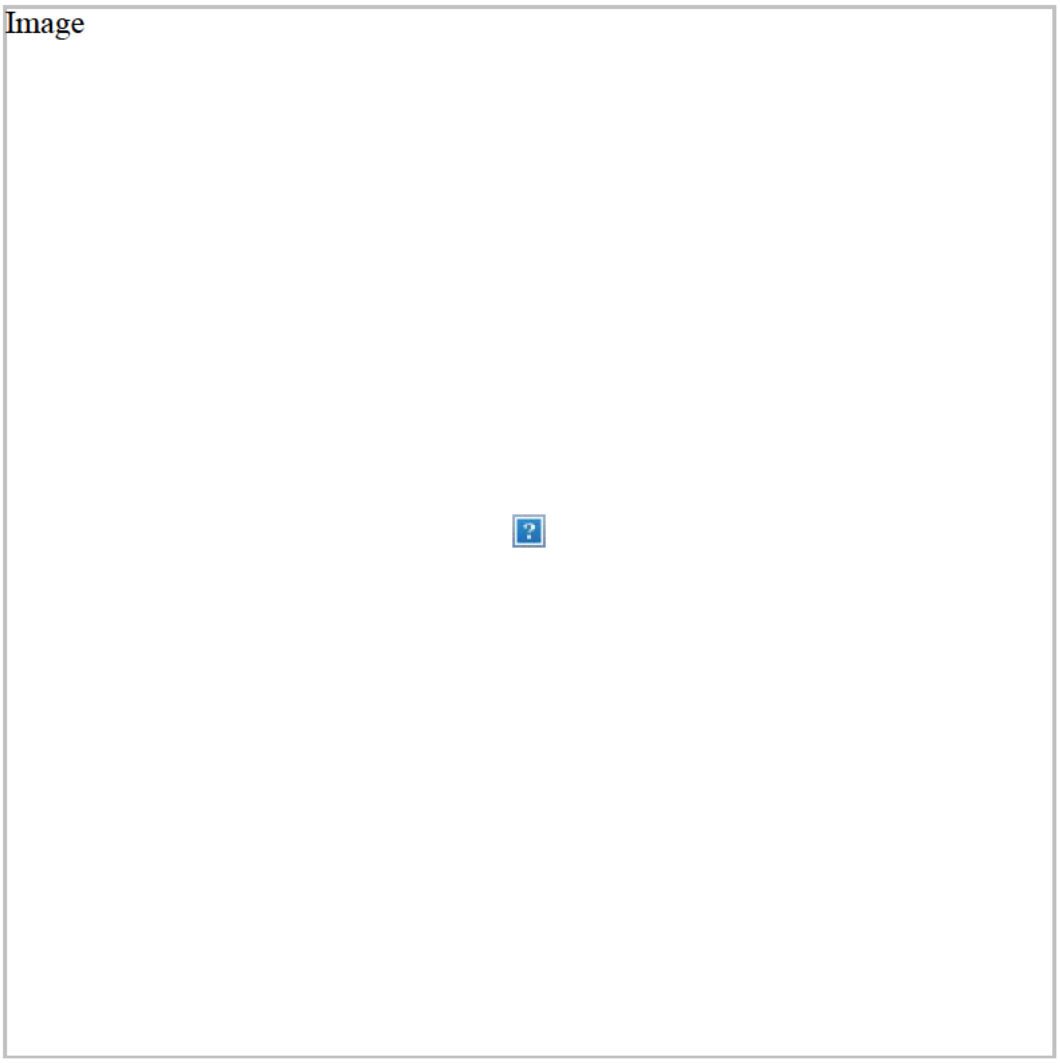
The change was noted earlier by ZDNet and, of course, Reddit.

Google confirmed with TechCrunch the full list of supported countries now seeing the speed cameras, which currently includes: Australia, Brazil, U.S., Canada, U.K., India, Mexico, Russia, Japan, Andorra, Bosnia and Herzegovina, Bulgaria, Croatia, Czechia, Estonia, Finland, Greece, Hungary, Iceland, Israel, Italy, Jordan, Kuwait, Latvia, Lithuania, Malta, Morocco, Namibia, Netherlands, Norway, Oman, Poland, Portugal, Qatar, Romania, Saudi Arabia, Serbia, Slovakia, South Africa, Spain, Sweden, Tunisia, and Zimbabwe.

The Ethics Board of One of the Largest Vendors of Police Tech (Axon) Makes the Case Against ALPRs

Automated License Plate Readers (ALPRs)—a mass surveillance technology that allows law enforcement to record the location and travel patterns of nearly every driver on the road—are poorly regulated, threaten privacy, and worsen the racial and economic inequalities already ingrained in our justice system.

That's what EFF and other advocates have been saying for years. But now it's coming from an oversight body formed by one of the nation's largest police tech vendors.



Last week, the AI and Policing Technology Ethics Board at

Axon, a tech company best known for popularizing body-worn cameras and the Taser, released a damning report concerning the commercial sale of ALPRs. The board, whose purpose is to “help guide and advise the company on ethical issues,” concluded that while it sees the potential value of ALPRs, their current role in society is too broad and problematic. The sheer amount of information that ALPRs gather and store was also a concern for the ethics board—particularly when privately collected data is often for sale to whoever wants to buy it.

ALPR systems include cameras that can be mounted on vehicles like police patrol cars or private tow trucks, or on stationary locations such as streetlights or overpasses. These cameras capture every license plate that passes and index them based on time, date, and location. A police officer can search ALPR databases to learn where a vehicle was in the past or even get real-time alerts when a driver passes by an ALPR camera. Research by EFF, MuckRock, and others have found that even small police departments are able to collect millions of plate scans a year, and often agencies are sharing this data with hundreds of other agencies across the country. Private companies also use ALPR and sell their data to police, financial lenders, insurance companies, private investigators, and debt collectors.

Amazon's Ring is 'the Neighborhood Watch of 2020,' police say as doorbell cams proliferate

Image

That's all it took Livonia Police to arrest a man, who hours earlier was caught on video posted on Ring's Neighbors app rummaging through the bed of a pickup parked in a driveway.

Detectives quickly recognized 60-year-old Jeffrey Couch when they saw the video posted by an app user in mid-August. Within a week, he pleaded no contest in court to two attempted larceny charges and was sentenced to 30 days in jail.

"I truly believe this is the Neighborhood Watch of 2020," said Livonia Police Capt. Ronald Taig, whose force was one of the first law enforcement agencies in Michigan — and is one of more than 400 across the country — to partner with the Ring Neighbors app, owned by Amazon.

How the deadly drug fentanyl is making its way to the US

Image

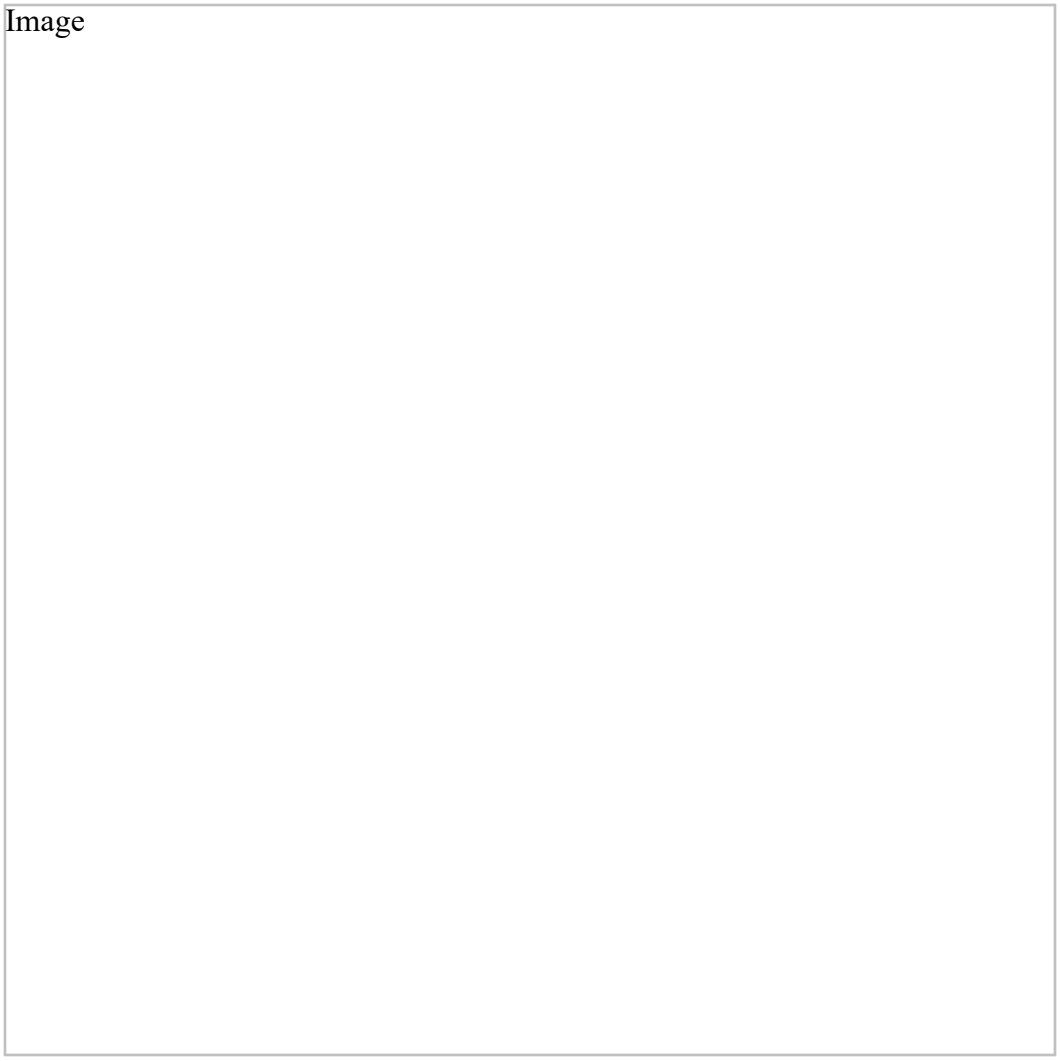
Trump administration officials are divided over part of a proposal to crack down on illicit versions of fentanyl, the deadly synthetic painkiller that President Donald Trump targeted in declaring a national opioid abuse emergency.

In an inter-agency dispute that highlights the challenges of curbing opioid abuse, the US Drug Enforcement Administration (DEA) is publicly backing tighter rules for fentanyl analogs, which are slightly altered copycat versions of the powerful drug fueling an explosion in overdoses.

In this case, the bill would cut the Food and Drug Administration out of the time-consuming review process by



letting the DEA permanently classify illicit fentanyl analogs as Schedule I drugs, like heroin, which are deemed to be addictive with no medical use.

The DEA says these legal changes would help prosecutors keep pace with criminals who constantly churn out chemically tweaked fentanyl analogs to evade strict Schedule I regulations.

Of 70,200 US drug overdose deaths in 2017, according to the CDC, about 41% involved synthetic opioids, such as fentanyl and illicit analogs of it. Most of them are made in China.

Fentanyl, some versions of which are approved to treat cancer pain, is 100 times more potent than morphine.

Trump Orders Study of Root Causes of Crime, Policing Practices

President Trump on Monday ordered Attorney General William Barr to establish a new commission to study crime and law enforcement with the goal of recommending “actions that can be taken to prevent, reduce, and control crime, increase respect for the law, and assist victims.”

Following remarks in Chicago at the annual International Association of Chiefs of Police conference, the president signed an executive order establishing the Commission on Law Enforcement and the Administration of Justice. The commission will study the influence of substance abuse, homelessness and mental illness on crime as well as examine best practices to recruit, train and support law enforcement, among other things.

“Rigorous study of crime, including its causal factors, and current law enforcement practices is essential to assessing our

current criminal justice system's merits and opportunities for improvement," the executive order stated. "Public safety and proper policing are issues of both national and local significance that continue to require the close cooperation and coordination between the Department of Justice and state, local, and tribal law enforcement."

Quality Afterschool Programs Proven to Reduce Crime

Image

As a member of your District Attorney's Office for almost 30 years, and your DA for nearly 10, I've learned that the hours after school lets out are the prime time for juvenile crime.

It is between these hours of 2 to 6 p.m. that youth are more likely to be arrested for assault, theft and drug-related crimes.

Quality afterschool programs have been proven to reduce these crimes in our community, keep students engaged, and improve academic performance and student behavior.

A new report from Fight Crime: Invest in Kids shows that when youth have access to high-quality, affordable afterschool programming, they benefit immensely from homework help and outdoor activities, and they're less likely to commit or become victims of crime.

Australia's government is floating an idea to scan internet users' faces before they can watch porn online

Australia's Department of Home Affairs has touted an idea to use facial recognition software in order to verify internet users ages before they can access pornography or gambling websites.

In its parliamentary submission, the department says that its Document Verification Service and Face Verification Service — though broadly intended to be used as systems for fighting crime and identity theft — could also be used by police for age verification controls.

"This could assist in age verification, for example by preventing a minor from using their parent's driver licence to circumvent age verification controls," the submission states.

"Whilst they are primarily designed to prevent identity crime, Home Affairs would support the increased use of the

Document and Face Verification Services across the Australian economy to strengthen age verification processes."

Police turn to hackers in Australia's first crowdsourced attempt to find missing people

Image

For decades the traditional 'missing person' poster has been used to enlist the community's help to find individuals who may be in danger.

But with more than 2,600 Australians now listed as a "long-term" disappearance, the federal police are trying what they hope will be a more successful tactic: turning the search into a

game.

More than 350 internet sleuths and "ethical hackers" — hobbyists and professionals — gathered at 10 locations around the country on Friday in a national missing-persons "hackathon".

The aim was to generate leads for 12 of Australia's most frustrating cold cases, using sophisticated but legal methods of trawling the internet.

And organisers said the results were astounding: 100 leads were generated every 10 minutes the competing teams worked.

Police overseas have used crowdsourcing in the past for help with isolated cases, aided by these largely voluntary "open-source intelligence" (OSINT) enthusiasts.

But Linda Cavanagh, of the Canberra Cyber Security Innovation Node, said the Australian event was the first of its kind to be deployed on a national scale.

10 of the Best Tools to Find Relevant Influencers on Social Media

Image

While it's become a much bigger consideration in recent years, influencer marketing, as a practice, has actually existed for a very long time. In the past, however, influencers were only on TV or in magazines, and unlike social media, TV and newspapers are limited, which led to a situation where a select number of celebrities were able to charge tons of money for making an ad for Pepsi or Swatch in order to influence consumer behavior.

With the birth of social platforms, everything changed. The Internet has no limits, there can be as many influencers as the world requires. They can be of any age and social status, and in any area of expertise (or no area of expertise). And they can work with any brand.

How Your Volunteering Trip Could Contribute To Human Trafficking

The advent of cheap air travel and Instragammable holiday photos, combined with a longing for meaning, has created a new breed of traveler: the voluntourist. This ever-growing trend describes people, most often young and affluent Westerners, who travel to the global South to help with community projects.

While no doubt sweetly intentioned, there is considerable concern over the fad of “voluntourism” and whether it does more harm than good for the communities in developing countries – especially when it involves children or work at an orphanage. On the surface of the problem, it’s questionable whether treating the developing world as a playground is an effective model to address systemic poverty and care for vulnerable children.

An anthropological study published in the Journal of Sustainable Tourism has shown how volunteer programs can actually contribute towards a superficial understanding of poverty that distracts from the larger systems that produce inequality and poverty. Through a series of in-depth interviews with young people from the US who volunteered in Malawi, they found their volunteer work was often carried out through a colonial and “mythologized” image of a helpless Africa needing the benevolence of the West. The volunteers also viewed African poverty in terms of the “American Dream” and the idea of pulling oneself out of poverty through hard work, as opposed to deep-rooted economic, social, and historical factors at play.

The LEIU Source is a weekly news publication brought to you by the LEIU Executive Board.

Each Wednesday, we share with you a few of the articles or intelligence-based publications that have come across our desk. We are exicted to see, each week, Law Enforcement Officers, Analysts and Administrators from around the world reading this.

If you have a publication or an article that you feel needs to be shared, please send these to IntelligenceAnalysis@mac.com for review.

If you feel others at your department would benefit from receiving this publication, please forward this email. At the bottom of this publication is a link where they can add their email to the distribution list.

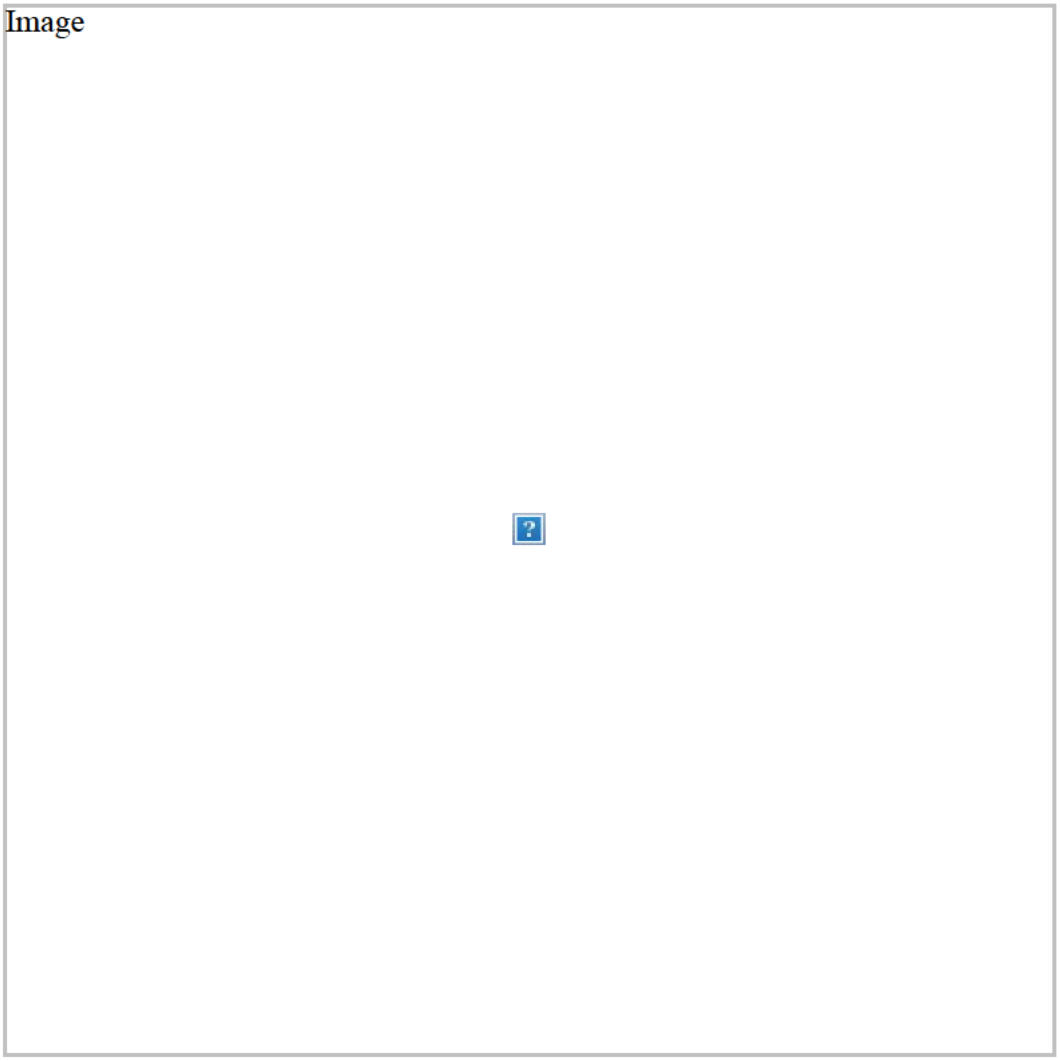
BAE wins open source intelligence

contract from the Army

The Army has awarded BAE Systems a $437 million task order for open source intelligence support, the company announced Oct. 15 during the 2019 Association of the United States Army conference.

As part of the task order, BAE Systems will provide the Army and Army Intelligence & Security Command (INSCOM) approved partners with open source solutions to publicly available data.



“We’re proud to continue to partner with the U.S. Army and support their critical national security missions with this new capability,” Peder Jungck, vice president and general manager of BAE Systems’ intelligence solutions business.

The company won the initial award of the five-year task order and began ramping up in August, Jungck said. The task order is an extension of projects the company has been doing for the

Army, but this is the first time the work been consolidated and awarded as a larger contract, he explained.

“If you look at contracts in general around OSINT there’s been kind of small ones, there’s been lots of pilots out of agencies and even within the Army and throughout INSCOM there were different kind of brigades and battalions that had their own set of tools," he said. "This is one of the first of the really large OSINT and AI consolidation contracts. I don’t think anybody’s really had a large one like this.”

Calif. police stand by cop after video released in 2017 OIS of murder suspect

FRESNO, Calif. — Community activists are expressing outrage after seeing video footage that shows a Fresno police sergeant fatally shooting an unarmed 16-year-old boy as he fled during a

foot pursuit.

Meanwhile, the local police union and supporters of law enforcement have stepped up in support of the sergeant, saying he acted within guidelines while pursuing a murder suspect.

The footage shows Sgt. Ray Villalvazo firing a single shot into the back of Isiah Murrietta-Golding's head, according to a lawsuit filed on behalf of the teen's family.

The video was captured on a surveillance camera at a daycare facility on April 14, 2017, and was released by attorney Stuart Chandler, who's representing the family of Murrietta-Golding. The boy's family alleges the sergeant used excessive and unlawful deadly force, and committed assault and battery with negligence.

Additionally, in footage released from a police officer's body camera, one officer is heard shouting "good shot" as officers handcuff and search the already prone Murrietta-Golding.

Asia has an organized-crime problem. Canada is well placed to help

Image

Jeremy Douglas is the regional representative for the United Nations Office on Drugs and Crime (UNODC) for Southeast Asia and the Pacific and a former UNODC representative for Pakistan. The opinions expressed in this commentary are his.

More than a few eyebrows went up last week when Tse Chi Lop – a 55-year-old Canadian man – was accused of being arguably the biggest drug trafficker in the history of Asia.

Mr. Tse is suspected – by police in Myanmar, Australia and Taiwan, and by the United Nations Office on Drugs and Crime (UNODC) – of being the leader of Sam Gor, or Brother Number Three, a supersyndicate largely responsible for the dramatic shift in recent years in organized crime away from drugs such as heroin and toward synthetics, such as methamphetamine, ketamine and fentanyl. It's a shift that has been driven by control and profit, since synthetics offer many advantages to

criminal organizations: Labs can be quickly set up or moved; they are not subject to external conditions such as climate, nor do they require large work forces; and production can be rapidly scaled up to drive the market. Put these things together and it means the disruption of the traditional drug business and the heavily concentrated profits that come with it.

Florida Senator Rick Scott Announces Legislation To Address 'FBI Failures' Regarding Parkland Shooting

MIAMI (CBSMiami) – Florida Senator Rick Scott announced legislation Thursday to hold the Federal Bureau of Investigations accountable for its 'failures to address critical deficiencies in its handling of actionable intelligence' in regards to the mass shooting at Marjory Stoneman Douglas High School in 2018.

The 'Threat Information Protocol for Sharing (TIPS) Act' is supported by Stand with Parkland, an organization founded by the family members of the victims of the Parkland shooting.

"Not a day goes by that I don't think about the 17 souls that were taken from us in a brutal act of violence at Marjory Stoneman Douglas High School. Following the tragedy, we all worked together to pass the Marjory Stoneman Douglas High School Public Safety Act to make our schools safer and prevent future tragedies, but we aren't finished. We cannot

accept the repeated failures of the FBI to properly investigate and act on specific tips received about the Parkland shooter, as well as other perpetrators of mass violence in Florida. I'm proud to stand with the family members of the victims to announce the TIPS Act, which bridges the gap between federal and state law enforcement agencies by mandating information sharing of all state-specific criminal intelligence tips. This is about getting information on threats into the hands of the right people, who can ultimately prevent violence and protect our families," Scott said.

Majority of Mexicans Say Organized Crime Stronger than Government after El Chapo's Son Released

Image

A majority of Mexicans see organized crime as more powerful than the Mexican government after government forces capitulated to drug-cartel strongmen and released the son of the former cartel leader Joaquín Guzmán, known as “El Chapo.”

About 56 percent of Mexicans say they believe organized crime is stronger, while only 33 percent say the government is stronger, according to a poll by the Mexican newspaper Reforma.

Mexican authorities were forced on Thursday to release Ovidio Guzmán López, El Chapo’s son, shortly after capturing him, when the Sinaloa cartel laid siege to the city of Culiacán and surrounded Mexican troops, taking eight soldiers hostage. Officials said at least 14 people died during the clashes between cartel members and Mexican soldiers.

49 percent of respondents in the Reforma poll disagreed with the decision to release López, while 45 percent said they supported it. Residents of Culiacán expressed relief that the government had surrendered, saying the decision prevented further violence.

Mexican lawmen get FBI training to combat organized crime, terrorism

Image

JUAREZ, Mexico — Three Chihuahua state lawmen recently completed intelligence and intervention training courses sponsored by the FBI, according to the State Security Commission.

Alvaro Serrano Escobedo, the commission's operations

director, received training on anti-terrorism, intelligence gathering, leadership and the combat of organized crime at FBI headquarters in Quantico, Virginia. The training is part of the FBI's Mexican Law Enforcement Executive Development (MEXLEED) program, the commission said in a news release.

Ginés Jaime Ruiz García, first officer of the Chihuahua State Police, and Jesús Alejandro Cruz Rangel, who heads rural operations for the agency, attended the FBI's Mexican American Liaison and Law Enforcement Training (MALLET) program in South Padre Island, Texas, the commission said.

The three lawmen were among 30 duly vetted Mexican officials chosen by the FBI for training this year, the commission said.

63 accused drug dealers plead guilty in heroin, fentanyl and cocaine trafficking rings

Image

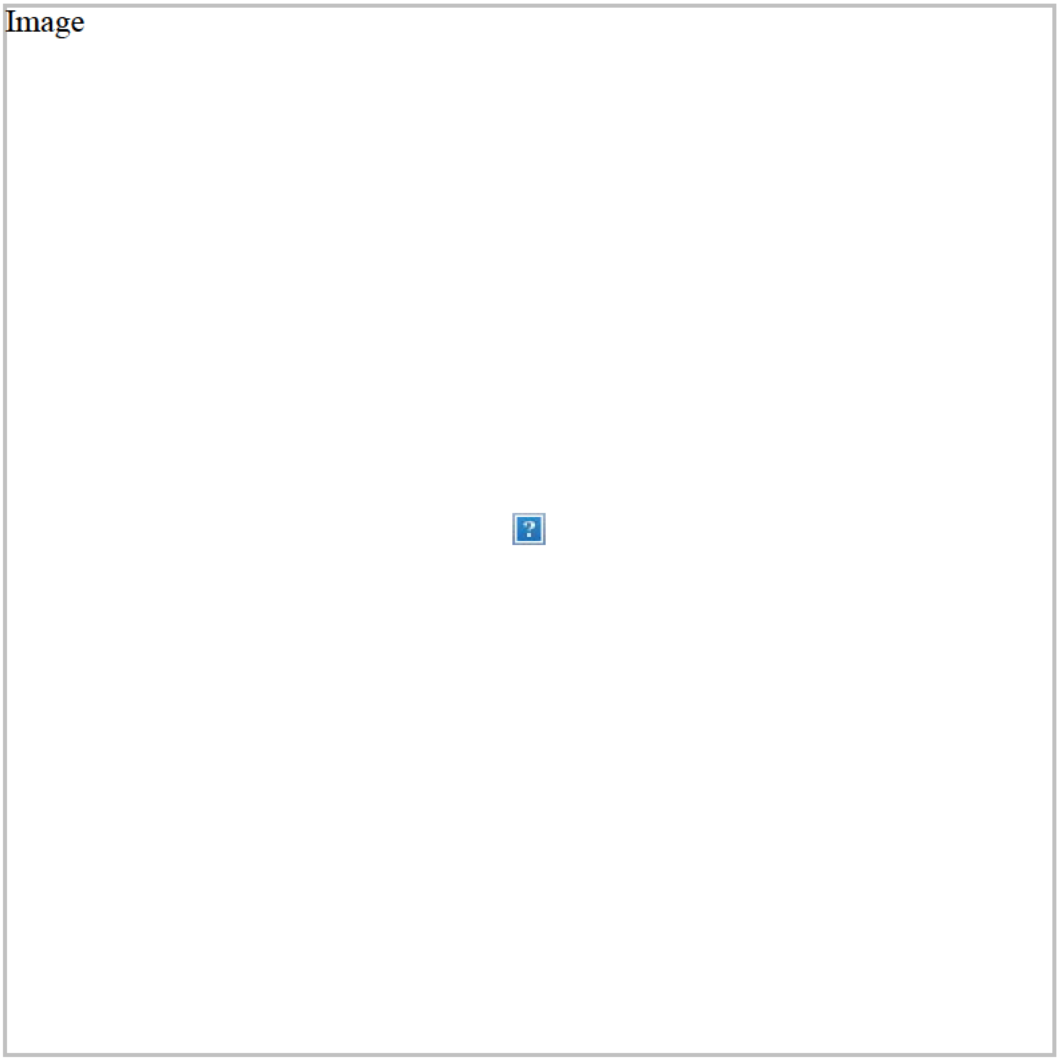
SYRACUSE — New York State Attorney General Letitia James has announced the guilty pleas of 63 people for their roles in two major narcotics trafficking operations that transported heroin, fentanyl, and cocaine to Onondaga, St. Lawrence, Oswego, Oneida, and Jefferson counties.

The investigation resulted in the recovery of approximately 4,700 bags of heroin and fentanyl, worth approximately $140,000, and approximately 2 kilograms of cocaine, worth more than $200,000, according to a news release from the Attorney General's office.

"These individuals flooded our communities with dangerous drugs that are putting New Yorkers at great risk," said Attorney General Letitia James in the news release.

House bill would give border agents tool to detect synthetic opioids



A bill that would give U.S. Customs and Border Protection (CBP) agents the equipment to detect synthetic opioids has been introduced in the U.S. House.

The DHS Opioid Detection Resilience Act of 2019 requires the Commissioner of CBP to procure chemical screening devices that allow border patrol agents to identify narcotics, including synthetic opioids, with purity levels of less than 10 percent. A 2018 study by the Drug Enforcement Administration (DEA) found that most fentanyl seized at the southwest border tends to be less than 10 percent pure. These changes would fill the gap that currently exists in identifying these synthetic opioids.

“Stopping the flow of illegal drugs across our southern border and at ports of entry is a top priority for our CBP law enforcement officers. This includes fentanyl and other synthetic opioids that can be difficult to detect. Our legislation ensures that DHS has the necessary equipment to detect synthetic opioids and the ability to adapt as smuggling methods evolve. We want to prevent this poison from ever reaching American communities, and our bill helps law enforcement carry out that mission,” Rep. Clay Higgins (R-LA), the bill’s sponsor, said.

Teens brawl with police in Brooklyn subway station

Image

BROOKLYN, N.Y. – A video showing members of the NYPD

trying to break up a fight and instead ending up in an all-out brawl with a mob of New Yorkers has gone viral… and media outlets were quick to condemn the cops who were involved.

The Post said that the incident unfolded on Saturday morning around 2:30 a.m. as officers responded to the scene of a fight on the platform of a subway station. The fights had originally began up on Jay Street between two groups of people before the violence spilled down into the station.

Cell phone video captured at the scene shows officers rush into the area and try to pull the brawling teens apart, attempting to put one of the suspects in handcuffs. Other individuals on the outside of the skirmish appear to be pulling the officers away.

The heartbreaking final text this human trafficking victim sent before dying in UK truck

Image

A 26-year-old Vietnamese woman texted her mom frantically that she was suffocating in the truck in which the bodies of 39 people were found in England — and apologized that her journey to a better life ended tragically, according to a report.

“I’m sorry Mom, my path to abroad didn’t succeed,” Pham Thi Tra My wrote in a series of messages about 10:30 p.m. Tuesday, according to the Mirror.

“Mom, I love you and Dad so much! I’m dying because I can’t breathe,” she added.

News about the young woman’s final moments emerged as two more people were arrested after eight women and 31 men were found dead Wednesday in a case that has shocked Britain and made headlines around the world.

Labor Trafficking Is A Crime You Probably Don't Notice

Image

It has been more than four years since Catherine Piedad called 911 from a $1.7 million home in Newton.

In 2015, she worked long hours to care for a Russian family's young twins. Her passport was taken, and she slept in a small room with little light and nowhere to store her clothes. When she asked to be paid, her employer threatened to send her back to the Philippines. She feared deportation and did not know who to trust.

Despite her fear, she called 911. Law enforcement helped her

to leave the family's home but did little else. They did not see her case as "labor trafficking." Instead, the incident was labeled a "labor dispute." Piedad struggled to access her rights — despite the robust federal and state laws designed to protect her.

You've probably heard of sex trafficking, which often involves perpetrators who force, trick or coerce victims into sexual servitude. Although difficult to see, sex trafficking is often visible to law enforcement through the internet: perpetrators sometimes leave a footprint online, which can provide a critical entry point for criminal investigations.

The Mafia's history in Las Vegas: From Bugsy Siegel to Anthony Spilotro

Image

Benjamin “Bugsy” Siegel had been at the helm of the Flamingo for only six months in June 1947 when he was killed in a hail of gunfire at his girlfriend’s Beverly Hills, Calif., home.

But his vision for the Flamingo, the first resort-style hotel on the Strip, was the beginning of a 50-year relationship between Las Vegas and traditional organized crime that helped define “Sin City”and turn it into one of the world’s top tourist destinations.

“The general perception on the part of the public is that Las Vegas and the mob have been inextricably linked, and I don’t think it will ever be extricated,” former longtime state archivist Guy Rocha says.

Groundbreaking books such as “The Green Felt Jungle” in 1963, which revealed the mob’s early grip on the city, and popular movies such as “The Godfather” in 1972 and “Casino” in 1995 enhanced this perception through the years.

So did the buzz on the Strip over the Rat Pack, led by headliner Frank Sinatra and his associations with high-profile underworld figures.

New Bill To Bring Illegal Gambling In California Closer To An End

Image

Gambling in the US, as well as in the whole world, is one of the most entertaining and lucrative endeavors. Not only does it provide fun and joy to the players, but it also offers an opportunity to make a fortune.

The gambling operators all around the world are doing everything they can to attract new customers. From online free spins for Australians to no deposit bonuses and other promotions in other countries, casino operators are full of such impressive offers.

However, the industry isn't just this fairy-tale source of joy and money. It also has its drawbacks. With problem gambling, organized crime, and money laundering prospects, gambling has long been considered threatening to society.

That's the reason why the US government, alongside other

governments worldwide, have been eager to put the industry under the limitations and protect the interests of their citizens. With the regulatory restrictions and measures, the government officials have deemed ill-gotten gains illegal and contributed to ending gambling-related crime.

Best true-crime books of all time

Image

Terrifying tales are not the domain of fiction alone. If you are in search of bone-chilling scares, we recommend you turn to true crime. The key word being true. That's right, no imagination needed. Including stories about such horrific figures as Charles Manson and Ted Bundy, Goodreads compiled a list of the top 10 true-crime books

of all time based on the lists, reviews and ratings of their more than 90 million members.

How a Facebook Crime Page Led to Arrest of N.C. Woman in Cold Case Killing of Sister-in-Law

Image

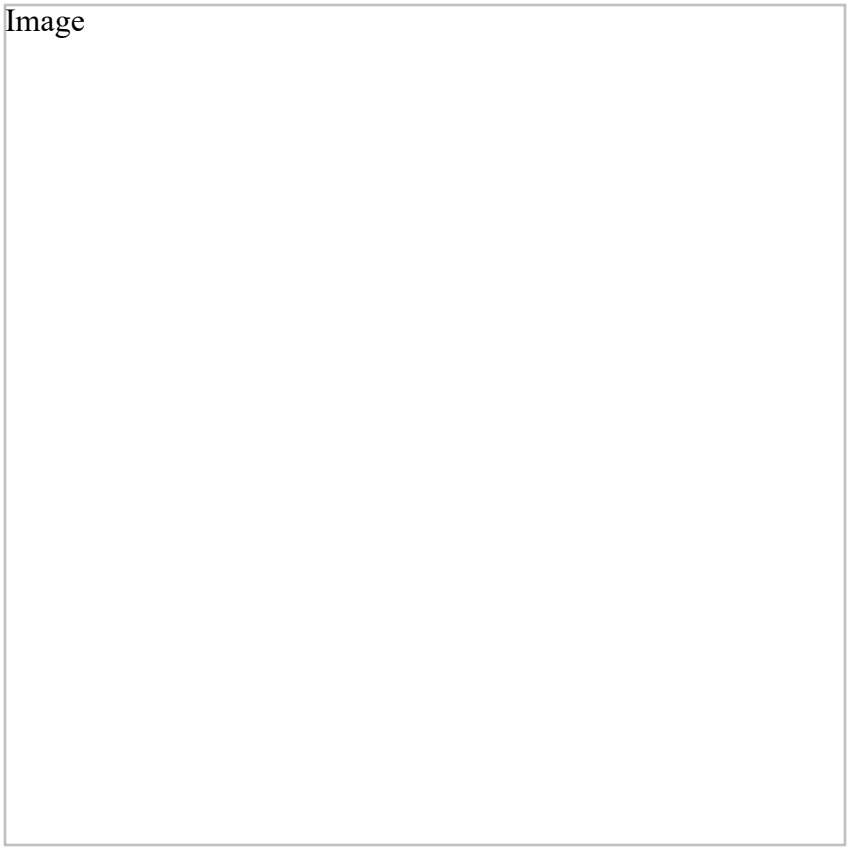
A Facebook page devoted to the murdered, missing or miscreant residents of western North Carolina is being credited with helping authorities bring charges in the 15-year-old cold-case killing of a missing mom of four, allegedly at the hands of her sister-in-law.



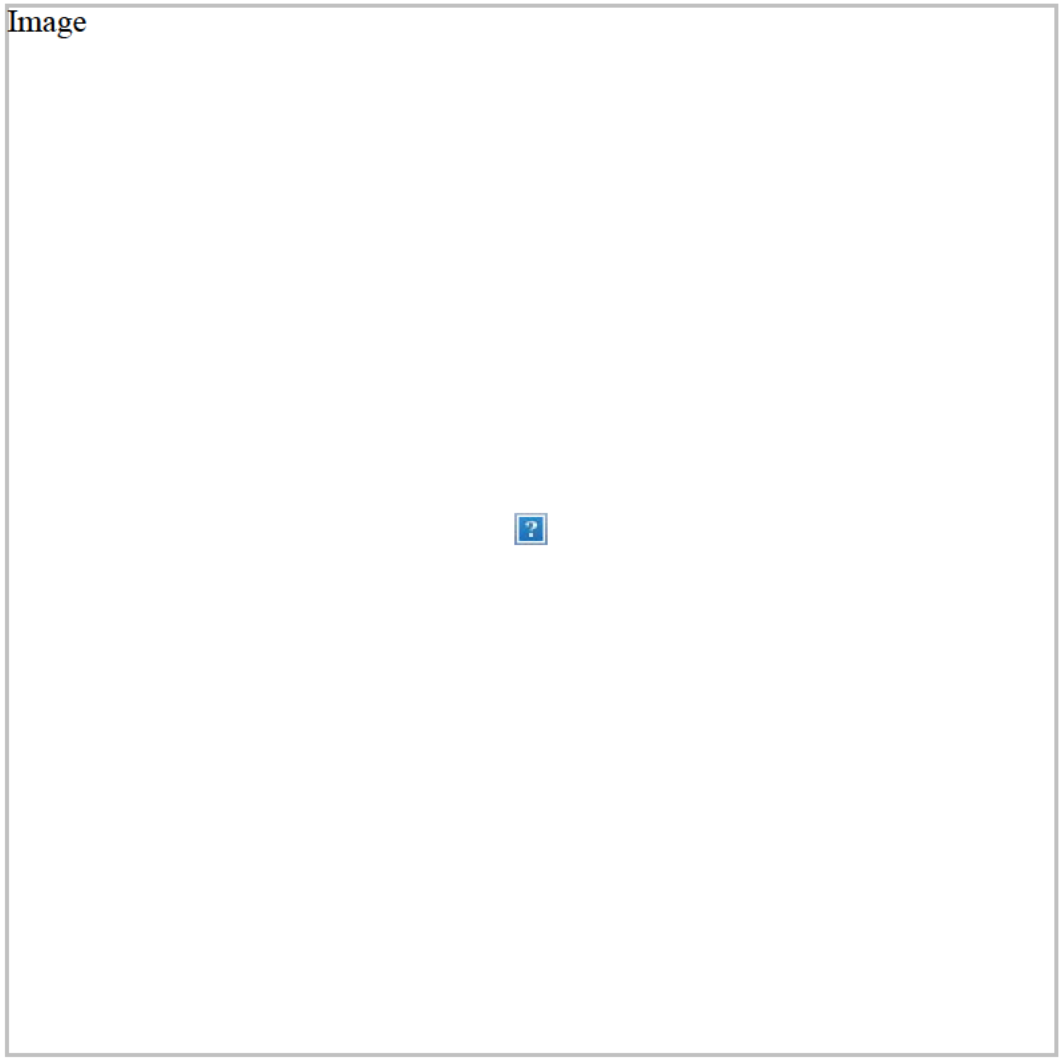
The tip that led authorities to a “shallow grave” containing the remains believed to be those of 29-year-old Deborah Elaine Deans “proved to be very accurate and very reliable,” Nash County Sheriff Keith Stone told reporters last week.

But the tipster did not go to police at first.

Instead, the unidentified person sent information about the alleged crime to a woman who created and runs a Facebook page called Fighting Crime News and Who’s Wanted, an online outlet whose updates range from wanted posters to promotions of local elections and warnings about traffic tie-ups.

On October 20, a re-post about the unsolved missing-person case of Deans — who was last seen around 9 a.m. on January 19, 2004, at a residence on Wiley Road in Spring Hope — elicited a “very detailed” response that was forwarded to authorities by the Facebook page creator, said Nash.

Google Maps Adds ability to see speed limits and speed traps in 40+ countries



Google Maps is gaining some features previously exclusive to Google's navigation app, Waze. The company confirmed it's rolling out the ability for Google Maps users to see speed limits, speed cameras and mobile speed cameras in more than 40 countries worldwide — an expansion of its earlier launch of these features, which were previously limited to select markets.

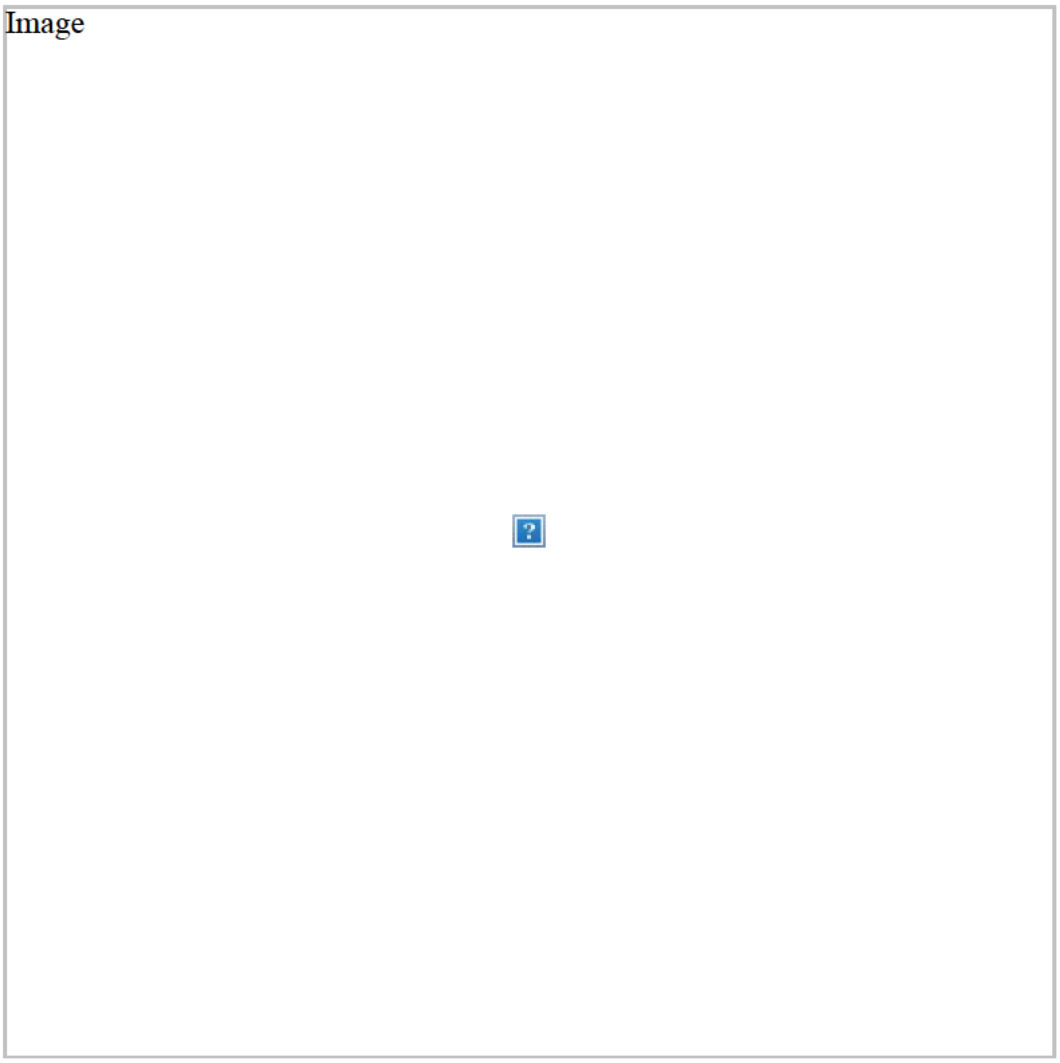
The change was noted earlier by ZDNet and, of course, Reddit.

Google confirmed with TechCrunch the full list of supported countries now seeing the speed cameras, which currently includes: Australia, Brazil, U.S., Canada, U.K., India, Mexico, Russia, Japan, Andorra, Bosnia and Herzegovina, Bulgaria, Croatia, Czechia, Estonia, Finland, Greece, Hungary, Iceland, Israel, Italy, Jordan, Kuwait, Latvia, Lithuania, Malta, Morocco, Namibia, Netherlands, Norway, Oman, Poland, Portugal, Qatar, Romania, Saudi Arabia, Serbia, Slovakia, South Africa, Spain, Sweden, Tunisia, and Zimbabwe.

The Ethics Board of One of the Largest Vendors of Police Tech (Axon) Makes the Case Against ALPRs

Automated License Plate Readers (ALPRs)—a mass surveillance technology that allows law enforcement to record the location and travel patterns of nearly every driver on the road—are poorly regulated, threaten privacy, and worsen the racial and economic inequalities already ingrained in our justice system.

That's what EFF and other advocates have been saying for years. But now it's coming from an oversight body formed by one of the nation's largest police tech vendors.



Last week, the AI and Policing Technology Ethics Board at

Axon, a tech company best known for popularizing body-worn cameras and the Taser, released a damning report concerning the commercial sale of ALPRs. The board, whose purpose is to “help guide and advise the company on ethical issues,” concluded that while it sees the potential value of ALPRs, their current role in society is too broad and problematic. The sheer amount of information that ALPRs gather and store was also a concern for the ethics board—particularly when privately collected data is often for sale to whoever wants to buy it.

ALPR systems include cameras that can be mounted on vehicles like police patrol cars or private tow trucks, or on stationary locations such as streetlights or overpasses. These cameras capture every license plate that passes and index them based on time, date, and location. A police officer can search ALPR databases to learn where a vehicle was in the past or even get real-time alerts when a driver passes by an ALPR camera. Research by EFF, MuckRock, and others have found that even small police departments are able to collect millions of plate scans a year, and often agencies are sharing this data with hundreds of other agencies across the country. Private companies also use ALPR and sell their data to police, financial lenders, insurance companies, private investigators, and debt collectors.

Amazon's Ring is 'the Neighborhood Watch of 2020,' police say as doorbell cams proliferate

Image

That's all it took Livonia Police to arrest a man, who hours earlier was caught on video posted on Ring's Neighbors app rummaging through the bed of a pickup parked in a driveway.

Detectives quickly recognized 60-year-old Jeffrey Couch when they saw the video posted by an app user in mid-August. Within a week, he pleaded no contest in court to two attempted larceny charges and was sentenced to 30 days in jail.

"I truly believe this is the Neighborhood Watch of 2020," said Livonia Police Capt. Ronald Taig, whose force was one of the first law enforcement agencies in Michigan — and is one of more than 400 across the country — to partner with the Ring Neighbors app, owned by Amazon.

How the deadly drug fentanyl is making its way to the US

Image

Trump administration officials are divided over part of a proposal to crack down on illicit versions of fentanyl, the deadly synthetic painkiller that President Donald Trump targeted in declaring a national opioid abuse emergency.

In an inter-agency dispute that highlights the challenges of curbing opioid abuse, the US Drug Enforcement Administration (DEA) is publicly backing tighter rules for fentanyl analogs, which are slightly altered copycat versions of the powerful drug fueling an explosion in overdoses.

In this case, the bill would cut the Food and Drug Administration out of the time-consuming review process by

letting the DEA permanently classify illicit fentanyl analogs as Schedule I drugs, like heroin, which are deemed to be addictive with no medical use.

The DEA says these legal changes would help prosecutors keep pace with criminals who constantly churn out chemically tweaked fentanyl analogs to evade strict Schedule I regulations.

Of 70,200 US drug overdose deaths in 2017, according to the CDC, about 41% involved synthetic opioids, such as fentanyl and illicit analogs of it. Most of them are made in China.

Fentanyl, some versions of which are approved to treat cancer pain, is 100 times more potent than morphine.

Trump Orders Study of Root Causes of Crime, Policing Practices

Image

President Trump on Monday ordered Attorney General William Barr to establish a new commission to study crime and law enforcement with the goal of recommending “actions that can be taken to prevent, reduce, and control crime, increase respect for the law, and assist victims.”

Following remarks in Chicago at the annual International Association of Chiefs of Police conference, the president signed an executive order establishing the Commission on Law Enforcement and the Administration of Justice. The commission will study the influence of substance abuse, homelessness and mental illness on crime as well as examine best practices to recruit, train and support law enforcement, among other things.

“Rigorous study of crime, including its causal factors, and current law enforcement practices is essential to assessing our

current criminal justice system's merits and opportunities for improvement," the executive order stated. "Public safety and proper policing are issues of both national and local significance that continue to require the close cooperation and coordination between the Department of Justice and state, local, and tribal law enforcement."

Quality Afterschool Programs Proven to Reduce Crime

Image

As a member of your District Attorney's Office for almost 30 years, and your DA for nearly 10, I've learned that the hours after school lets out are the prime time for juvenile crime.

It is between these hours of 2 to 6 p.m. that youth are more likely to be arrested for assault, theft and drug-related crimes.

Quality afterschool programs have been proven to reduce these crimes in our community, keep students engaged, and improve academic performance and student behavior.

A new report from Fight Crime: Invest in Kids shows that when youth have access to high-quality, affordable afterschool programming, they benefit immensely from homework help and outdoor activities, and they're less likely to commit or become victims of crime.

Australia's government is floating an idea to scan internet users' faces before they can watch porn online

Australia's Department of Home Affairs has touted an idea to use facial recognition software in order to verify internet users ages before they can access pornography or gambling websites.

In its parliamentary submission, the department says that its Document Verification Service and Face Verification Service — though broadly intended to be used as systems for fighting crime and identity theft — could also be used by police for age verification controls.

"This could assist in age verification, for example by preventing a minor from using their parent's driver licence to circumvent age verification controls," the submission states.

"Whilst they are primarily designed to prevent identity crime, Home Affairs would support the increased use of the

Document and Face Verification Services across the Australian economy to strengthen age verification processes."

Police turn to hackers in Australia's first crowdsourced attempt to find missing people

Image

For decades the traditional 'missing person' poster has been used to enlist the community's help to find individuals who may be in danger.

But with more than 2,600 Australians now listed as a "long-term" disappearance, the federal police are trying what they hope will be a more successful tactic: turning the search into a

game.

More than 350 internet sleuths and "ethical hackers" — hobbyists and professionals — gathered at 10 locations around the country on Friday in a national missing-persons "hackathon".

The aim was to generate leads for 12 of Australia's most frustrating cold cases, using sophisticated but legal methods of trawling the internet.

And organisers said the results were astounding: 100 leads were generated every 10 minutes the competing teams worked.

Police overseas have used crowdsourcing in the past for help with isolated cases, aided by these largely voluntary "open-source intelligence" (OSINT) enthusiasts.

But Linda Cavanagh, of the Canberra Cyber Security Innovation Node, said the Australian event was the first of its kind to be deployed on a national scale.

10 of the Best Tools to Find Relevant Influencers on Social Media

Image

While it's become a much bigger consideration in recent years, influencer marketing, as a practice, has actually existed for a very long time. In the past, however, influencers were only on TV or in magazines, and unlike social media, TV and newspapers are limited, which led to a situation where a select number of celebrities were able to charge tons of money for making an ad for Pepsi or Swatch in order to influence consumer behavior.

With the birth of social platforms, everything changed. The Internet has no limits, there can be as many influencers as the world requires. They can be of any age and social status, and in any area of expertise (or no area of expertise). And they can work with any brand.

How Your Volunteering Trip Could Contribute To Human Trafficking

The advent of cheap air travel and Instragammable holiday photos, combined with a longing for meaning, has created a new breed of traveler: the voluntourist. This ever-growing trend describes people, most often young and affluent Westerners, who travel to the global South to help with community projects.

While no doubt sweetly intentioned, there is considerable concern over the fad of “voluntourism” and whether it does more harm than good for the communities in developing countries – especially when it involves children or work at an orphanage. On the surface of the problem, it’s questionable whether treating the developing world as a playground is an effective model to address systemic poverty and care for vulnerable children.

An anthropological study published in the Journal of Sustainable Tourism has shown how volunteer programs can actually contribute towards a superficial understanding of poverty that distracts from the larger systems that produce inequality and poverty. Through a series of in-depth interviews with young people from the US who volunteered in Malawi, they found their volunteer work was often carried out through a colonial and “mythologized” image of a helpless Africa needing the benevolence of the West. The volunteers also viewed African poverty in terms of the “American Dream” and the idea of pulling oneself out of poverty through hard work, as opposed to deep-rooted economic, social, and historical factors at play.

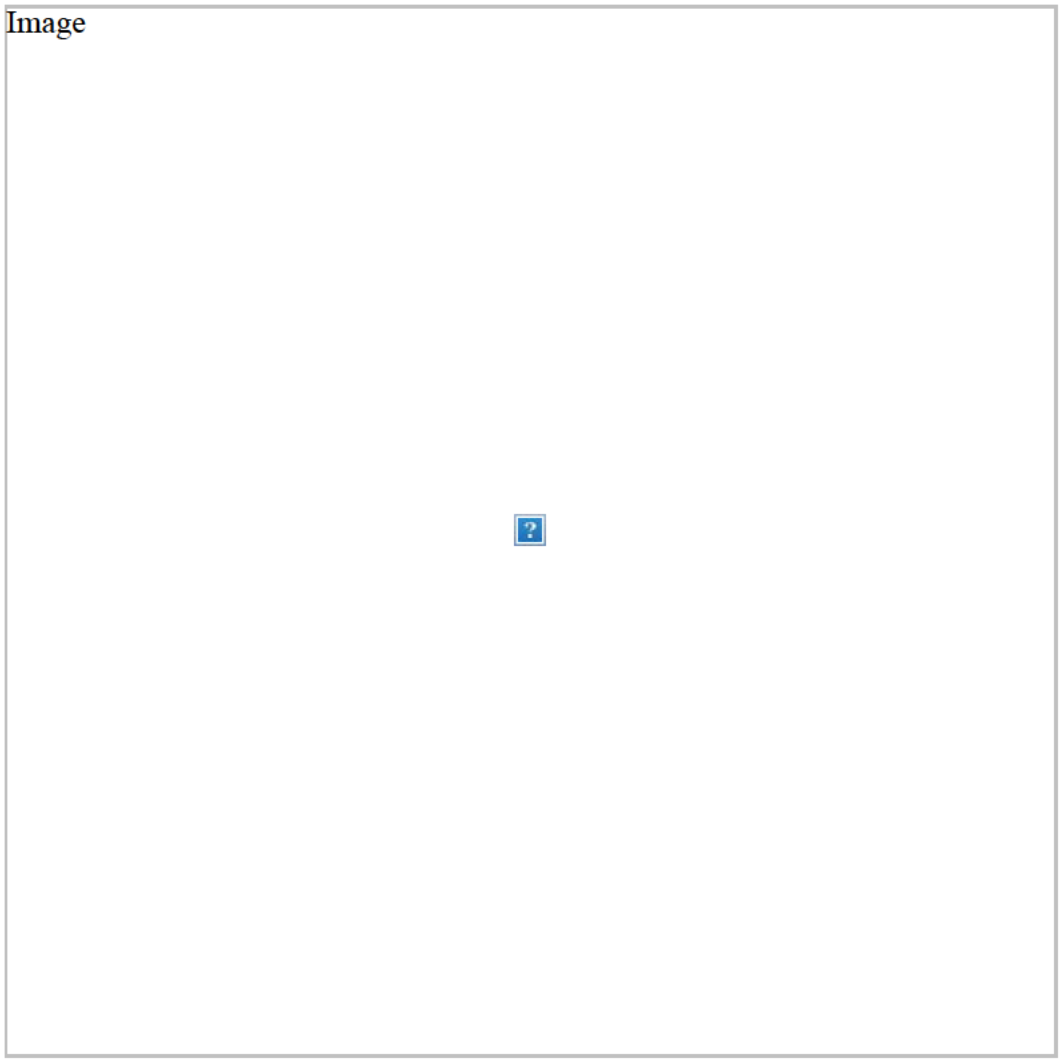
BAE wins open source intelligence contract from the Army

The Army has awarded BAE Systems a $437 million task order for open source intelligence support, the company announced Oct. 15 during the 2019 Association of the United States Army conference.

As part of the task order, BAE Systems will provide the Army and Army Intelligence & Security Command (INSCOM) approved partners with open source solutions to publicly available data.



“We’re proud to continue to partner with the U.S. Army and support their critical national security missions with this new capability,” Peder Jungck, vice president and general manager of BAE Systems’ intelligence solutions business.

The company won the initial award of the five-year task order and began ramping up in August, Jungck said. The task order is an extension of projects the company has been doing for the Army, but this is the first time the work been consolidated and awarded as a larger contract, he explained.

“If you look at contracts in general around OSINT there’s been kind of small ones, there’s been lots of pilots out of agencies and even within the Army and throughout INSCOM there were different kind of brigades and battalions that had their own set of tools," he said. "This is one of the first of the really large OSINT and AI consolidation contracts. I don’t think anybody’s really had a large one like this.”

Calif. police stand by cop after video released in 2017 OIS of murder suspect

Image

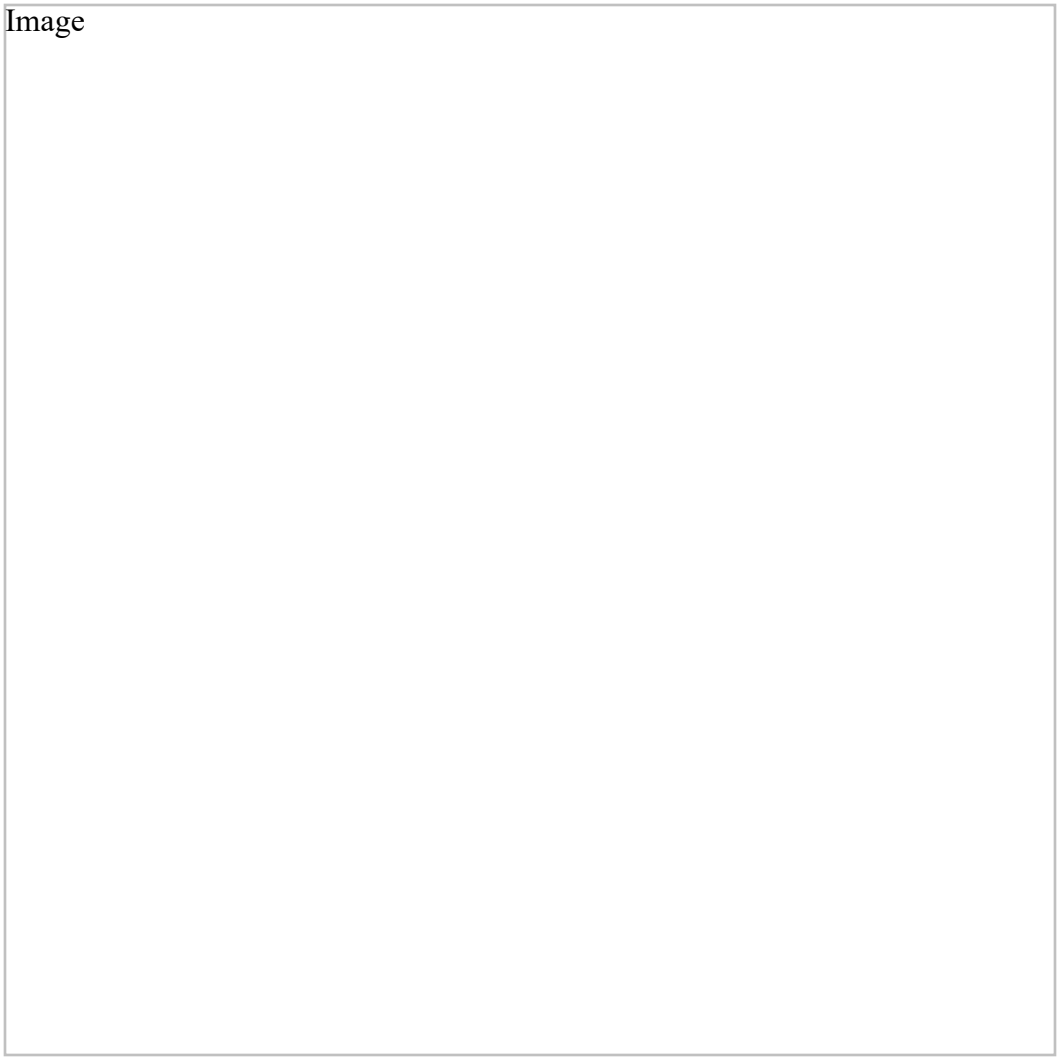
FRESNO, Calif. — Community activists are expressing outrage after seeing video footage that shows a Fresno police sergeant fatally shooting an unarmed 16-year-old boy as he fled during a foot pursuit.

Meanwhile, the local police union and supporters of law enforcement have stepped up in support of the sergeant, saying he acted within guidelines while pursuing a murder suspect.



The footage shows Sgt. Ray Villalvazo firing a single shot into the back of Isiah Murrietta-Golding's head, according to a lawsuit filed on behalf of the teen's family.

The video was captured on a surveillance camera at a daycare facility on April 14, 2017, and was released by attorney Stuart Chandler, who's representing the family of Murrietta-Golding. The boy's family alleges the sergeant used excessive and unlawful deadly force, and committed assault and battery with negligence.

Additionally, in footage released from a police officer's body camera, one officer is heard shouting "good shot" as officers handcuff and search the already prone Murrietta-Golding.

Asia has an organized-crime problem. Canada is well placed to help

Image

Jeremy Douglas is the regional representative for the United Nations Office on Drugs and Crime (UNODC) for Southeast Asia and the Pacific and a former UNODC representative for Pakistan. The opinions expressed in this commentary are his.

More than a few eyebrows went up last week when Tse Chi Lop – a 55-year-old Canadian man – was accused of being arguably the biggest drug trafficker in the history of Asia.

Mr. Tse is suspected – by police in Myanmar, Australia and Taiwan, and by the United Nations Office on Drugs and Crime (UNODC) – of being the leader of Sam Gor, or Brother Number Three, a supersyndicate largely responsible for the dramatic shift in recent years in organized crime away from drugs such as heroin and toward synthetics, such as methamphetamine, ketamine and fentanyl. It's a shift that has been driven by control and profit, since synthetics offer many advantages to

criminal organizations: Labs can be quickly set up or moved; they are not subject to external conditions such as climate, nor do they require large work forces; and production can be rapidly scaled up to drive the market. Put these things together and it means the disruption of the traditional drug business and the heavily concentrated profits that come with it.

Florida Senator Rick Scott Announces Legislation To Address 'FBI Failures' Regarding Parkland Shooting

MIAMI (CBSMiami) – Florida Senator Rick Scott announced legislation Thursday to hold the Federal Bureau of Investigations accountable for its 'failures to address critical deficiencies in its handling of actionable intelligence' in regards to the mass shooting at Marjory Stoneman Douglas High School in 2018.

The 'Threat Information Protocol for Sharing (TIPS) Act' is supported by Stand with Parkland, an organization founded by the family members of the victims of the Parkland shooting.

"Not a day goes by that I don't think about the 17 souls that were taken from us in a brutal act of violence at Marjory Stoneman Douglas High School. Following the tragedy, we all worked together to pass the Marjory Stoneman Douglas High School Public Safety Act to make our schools safer and prevent future tragedies, but we aren't finished. We cannot

accept the repeated failures of the FBI to properly investigate and act on specific tips received about the Parkland shooter, as well as other perpetrators of mass violence in Florida. I'm proud to stand with the family members of the victims to announce the TIPS Act, which bridges the gap between federal and state law enforcement agencies by mandating information sharing of all state-specific criminal intelligence tips. This is about getting information on threats into the hands of the right people, who can ultimately prevent violence and protect our families," Scott said.

Majority of Mexicans Say Organized Crime Stronger than Government after El Chapo's Son Released

Image

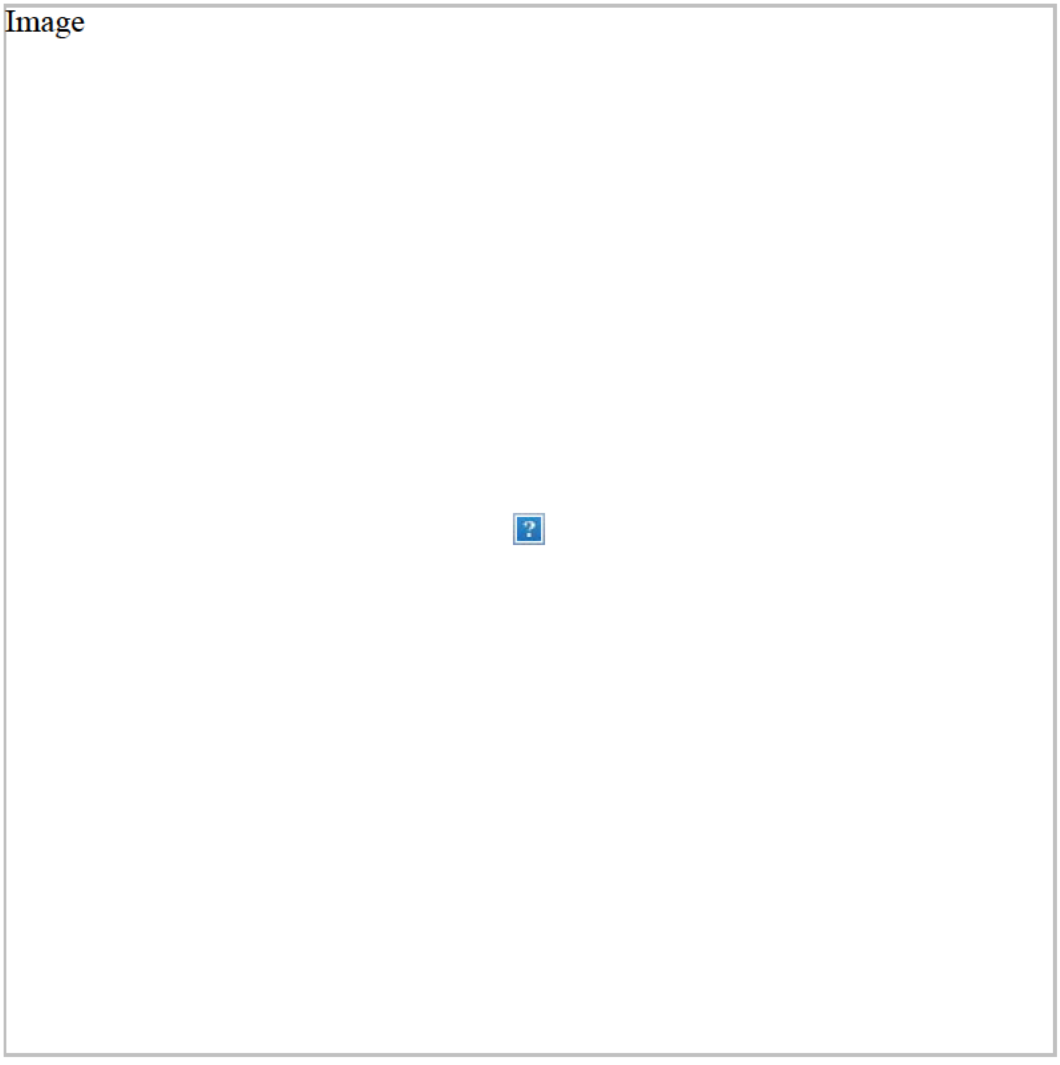
A majority of Mexicans see organized crime as more powerful than the Mexican government after government forces capitulated to drug-cartel strongmen and released the son of the former cartel leader Joaquín Guzmán, known as “El Chapo.”



About 56 percent of Mexicans say they believe organized crime is stronger, while only 33 percent say the government is stronger, according to a poll by the Mexican newspaper Reforma.

Mexican authorities were forced on Thursday to release Ovidio Guzmán López, El Chapo’s son, shortly after capturing him, when the Sinaloa cartel laid siege to the city of Culiacán and surrounded Mexican troops, taking eight soldiers hostage. Officials said at least 14 people died during the clashes between cartel members and Mexican soldiers.

49 percent of respondents in the Reforma poll disagreed with the decision to release López, while 45 percent said they supported it. Residents of Culiacán expressed relief that the government had surrendered, saying the decision prevented further violence.

Mexican lawmen get FBI training to combat organized crime, terrorism

Image

JUAREZ, Mexico — Three Chihuahua state lawmen recently completed intelligence and intervention training courses sponsored by the FBI, according to the State Security Commission.

Alvaro Serrano Escobedo, the commission's operations

director, received training on anti-terrorism, intelligence gathering, leadership and the combat of organized crime at FBI headquarters in Quantico, Virginia. The training is part of the FBI's Mexican Law Enforcement Executive Development (MEXLEED) program, the commission said in a news release.

Ginés Jaime Ruiz García, first officer of the Chihuahua State Police, and Jesús Alejandro Cruz Rangel, who heads rural operations for the agency, attended the FBI's Mexican American Liaison and Law Enforcement Training (MALLET) program in South Padre Island, Texas, the commission said.

The three lawmen were among 30 duly vetted Mexican officials chosen by the FBI for training this year, the commission said.

63 accused drug dealers plead guilty in heroin, fentanyl and cocaine trafficking rings

Image

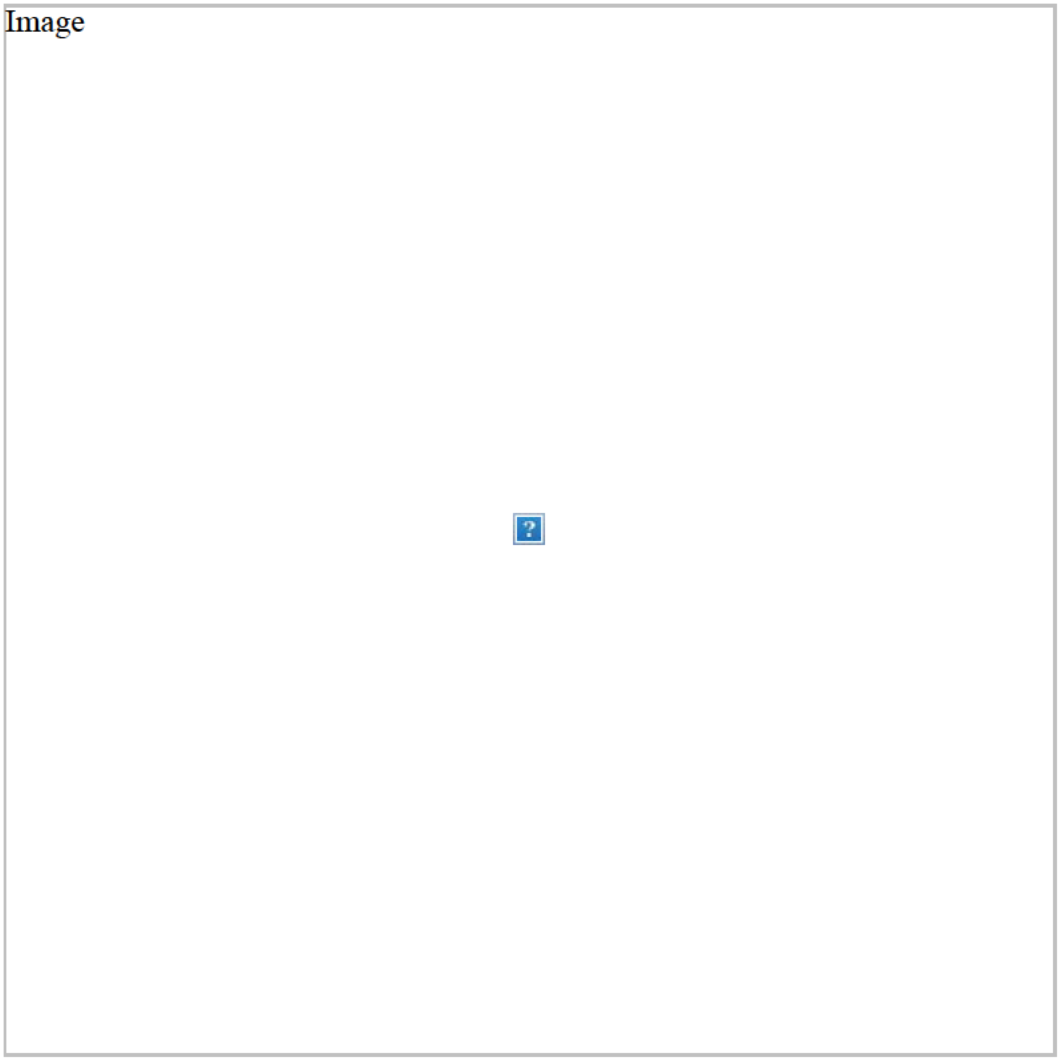
SYRACUSE — New York State Attorney General Letitia James has announced the guilty pleas of 63 people for their roles in two major narcotics trafficking operations that transported heroin, fentanyl, and cocaine to Onondaga, St. Lawrence, Oswego, Oneida, and Jefferson counties.

The investigation resulted in the recovery of approximately 4,700 bags of heroin and fentanyl, worth approximately $140,000, and approximately 2 kilograms of cocaine, worth more than $200,000, according to a news release from the Attorney General's office.

"These individuals flooded our communities with dangerous drugs that are putting New Yorkers at great risk," said Attorney General Letitia James in the news release.

House bill would give border agents tool to detect synthetic opioids



A bill that would give U.S. Customs and Border Protection (CBP) agents the equipment to detect synthetic opioids has been introduced in the U.S. House.

The DHS Opioid Detection Resilience Act of 2019 requires the Commissioner of CBP to procure chemical screening devices that allow border patrol agents to identify narcotics, including synthetic opioids, with purity levels of less than 10 percent. A 2018 study by the Drug Enforcement Administration (DEA) found that most fentanyl seized at the southwest border tends to be less than 10 percent pure. These changes would fill the gap that currently exists in identifying these synthetic opioids.

“Stopping the flow of illegal drugs across our southern border and at ports of entry is a top priority for our CBP law enforcement officers. This includes fentanyl and other synthetic opioids that can be difficult to detect. Our legislation ensures that DHS has the necessary equipment to detect synthetic opioids and the ability to adapt as smuggling methods evolve. We want to prevent this poison from ever reaching American communities, and our bill helps law enforcement carry out that mission,” Rep. Clay Higgins (R-LA), the bill’s sponsor, said.

Teens brawl with police in Brooklyn subway station

Image

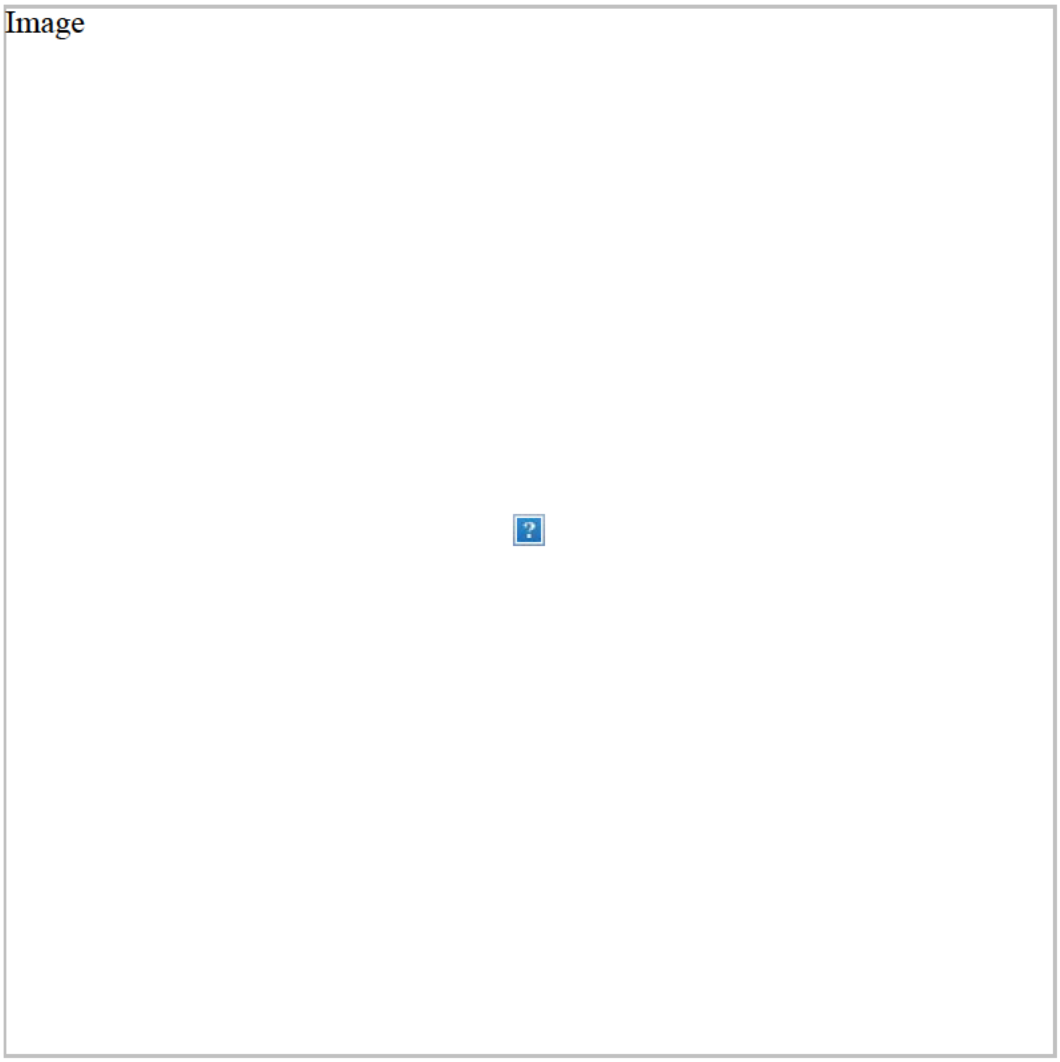
BROOKLYN, N.Y. – A video showing members of the NYPD

trying to break up a fight and instead ending up in an all-out brawl with a mob of New Yorkers has gone viral… and media outlets were quick to condemn the cops who were involved.

The Post said that the incident unfolded on Saturday morning around 2:30 a.m. as officers responded to the scene of a fight on the platform of a subway station. The fights had originally began up on Jay Street between two groups of people before the violence spilled down into the station.

Cell phone video captured at the scene shows officers rush into the area and try to pull the brawling teens apart, attempting to put one of the suspects in handcuffs. Other individuals on the outside of the skirmish appear to be pulling the officers away.

The heartbreaking final text this human trafficking victim sent before dying in UK truck



A 26-year-old Vietnamese woman texted her mom frantically that she was suffocating in the truck in which the bodies of 39 people were found in England — and apologized that her journey to a better life ended tragically, according to a report.

“I’m sorry Mom, my path to abroad didn’t succeed,” Pham Thi Tra My wrote in a series of messages about 10:30 p.m. Tuesday, according to the Mirror.

“Mom, I love you and Dad so much! I’m dying because I can’t breathe,” she added.

News about the young woman’s final moments emerged as two more people were arrested after eight women and 31 men were found dead Wednesday in a case that has shocked Britain and made headlines around the world.

Labor Trafficking Is A Crime You Probably Don't Notice

It has been more than four years since Catherine Piedad called 911 from a $1.7 million home in Newton.

In 2015, she worked long hours to care for a Russian family's young twins. Her passport was taken, and she slept in a small room with little light and nowhere to store her clothes. When she asked to be paid, her employer threatened to send her back to the Philippines. She feared deportation and did not know who to trust.

Despite her fear, she called 911. Law enforcement helped her

to leave the family's home but did little else. They did not see her case as "labor trafficking." Instead, the incident was labeled a "labor dispute." Piedad struggled to access her rights — despite the robust federal and state laws designed to protect her.

You've probably heard of sex trafficking, which often involves perpetrators who force, trick or coerce victims into sexual servitude. Although difficult to see, sex trafficking is often visible to law enforcement through the internet: perpetrators sometimes leave a footprint online, which can provide a critical entry point for criminal investigations.

The Mafia's history in Las Vegas: From Bugsy Siegel to Anthony Spilotro

Image

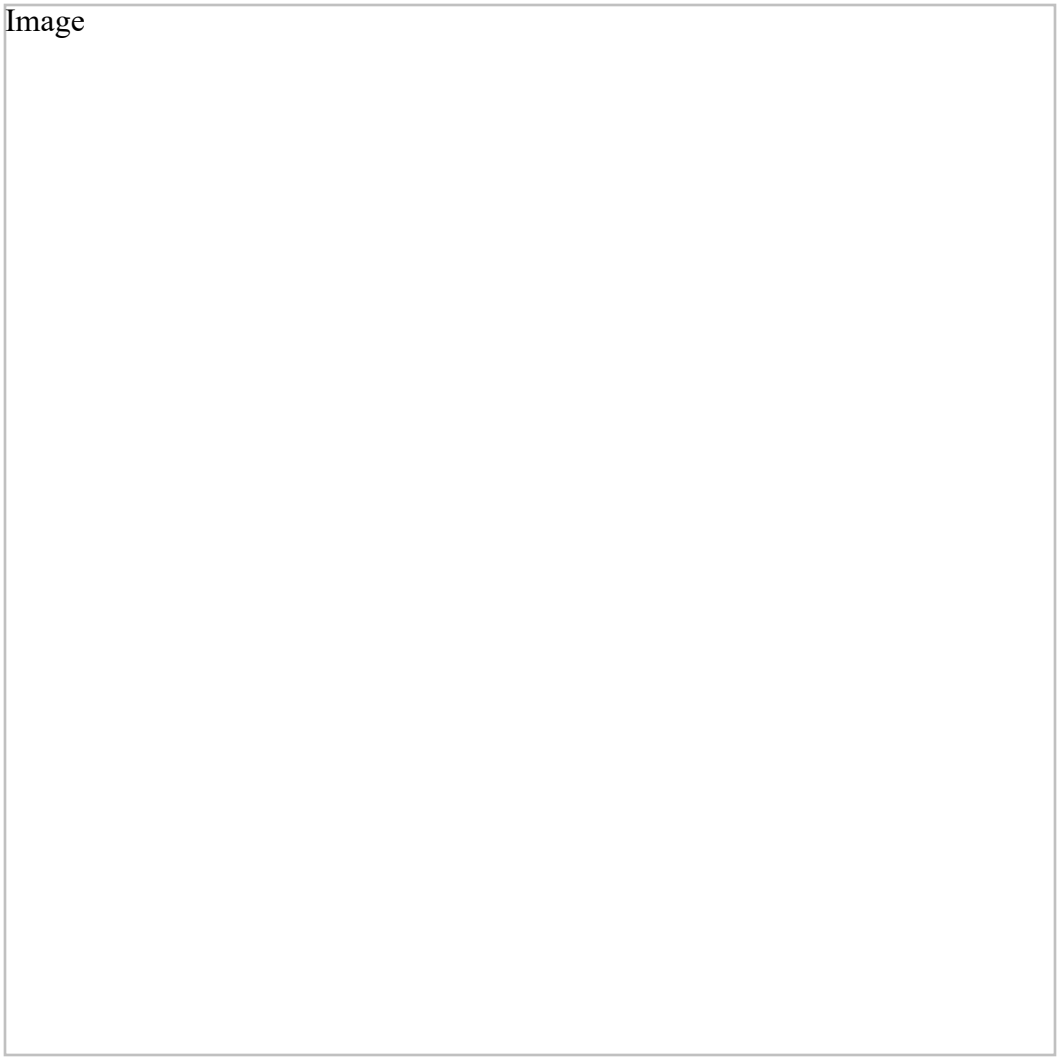
Benjamin “Bugsy” Siegel had been at the helm of the Flamingo for only six months in June 1947 when he was killed in a hail of gunfire at his girlfriend’s Beverly Hills, Calif., home.



But his vision for the Flamingo, the first resort-style hotel on the Strip, was the beginning of a 50-year relationship between Las Vegas and traditional organized crime that helped define “Sin City”and turn it into one of the world’s top tourist destinations.

“The general perception on the part of the public is that Las Vegas and the mob have been inextricably linked, and I don’t think it will ever be extricated,” former longtime state archivist Guy Rocha says.

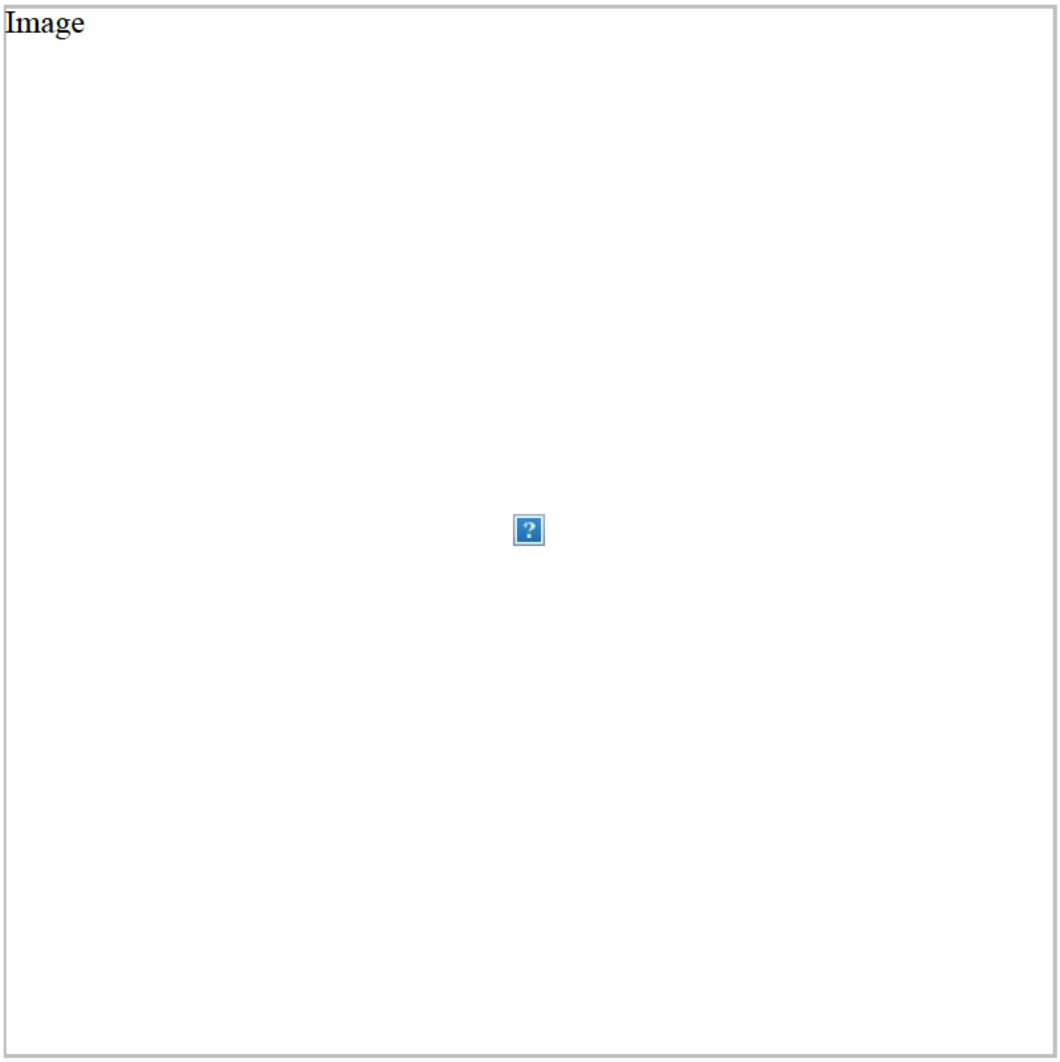
Groundbreaking books such as “The Green Felt Jungle” in 1963, which revealed the mob’s early grip on the city, and popular movies such as “The Godfather” in 1972 and “Casino” in 1995 enhanced this perception through the years.

So did the buzz on the Strip over the Rat Pack, led by headliner Frank Sinatra and his associations with high-profile underworld figures.

New Bill To Bring Illegal Gambling In California Closer To An End

Gambling in the US, as well as in the whole world, is one of the most entertaining and lucrative endeavors. Not only does it provide fun and joy to the players, but it also offers an opportunity to make a fortune.

The gambling operators all around the world are doing everything they can to attract new customers. From online free spins for Australians to no deposit bonuses and other promotions in other countries, casino operators are full of such impressive offers.



However, the industry isn't just this fairy-tale source of joy and money. It also has its drawbacks. With problem gambling, organized crime, and money laundering prospects, gambling has long been considered threatening to society.

That's the reason why the US government, alongside other

governments worldwide, have been eager to put the industry under the limitations and protect the interests of their citizens. With the regulatory restrictions and measures, the government officials have deemed ill-gotten gains illegal and contributed to ending gambling-related crime.

Best true-crime books of all time

Image

Terrifying tales are not the domain of fiction alone. If you are in search of bone-chilling scares, we recommend you turn to true crime. The key word being true. That's right, no imagination needed. Including stories about such horrific figures as Charles Manson and Ted Bundy, Goodreads compiled a list of the top 10 true-crime books

of all time based on the lists, reviews and ratings of their more than 90 million members.
AP

How a Facebook Crime Page Led to Arrest of N.C. Woman in Cold Case Killing of Sister-in-Law

Image

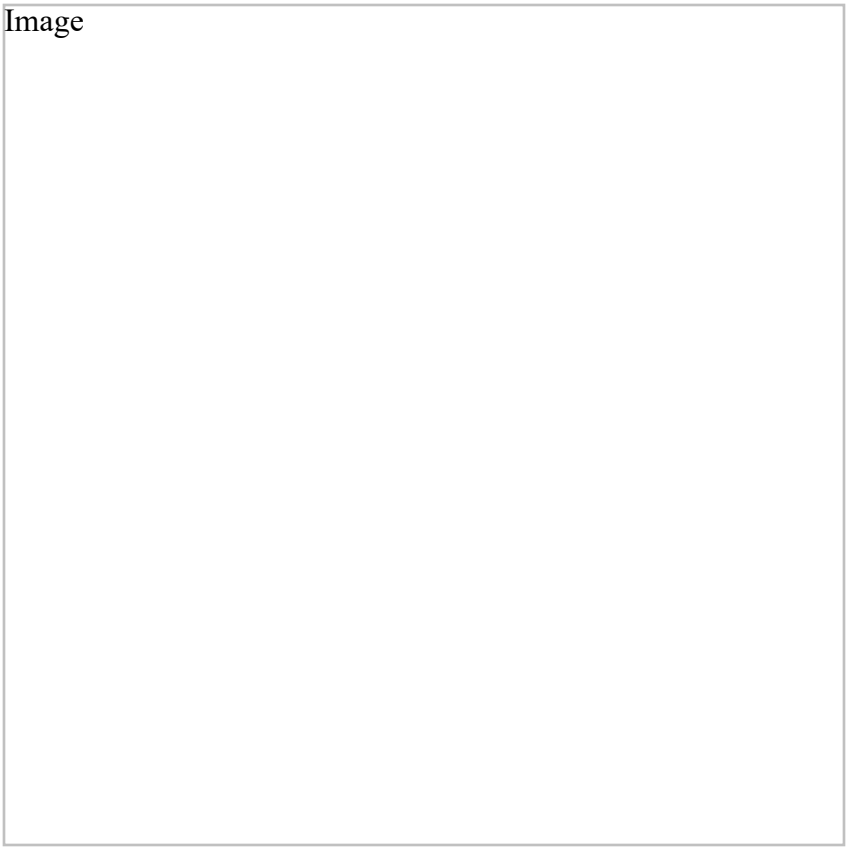
A Facebook page devoted to the murdered, missing or miscreant residents of western North Carolina is being credited with helping authorities bring charges in the 15-year-old cold-case killing of a missing mom of four, allegedly at the hands of her sister-in-law.



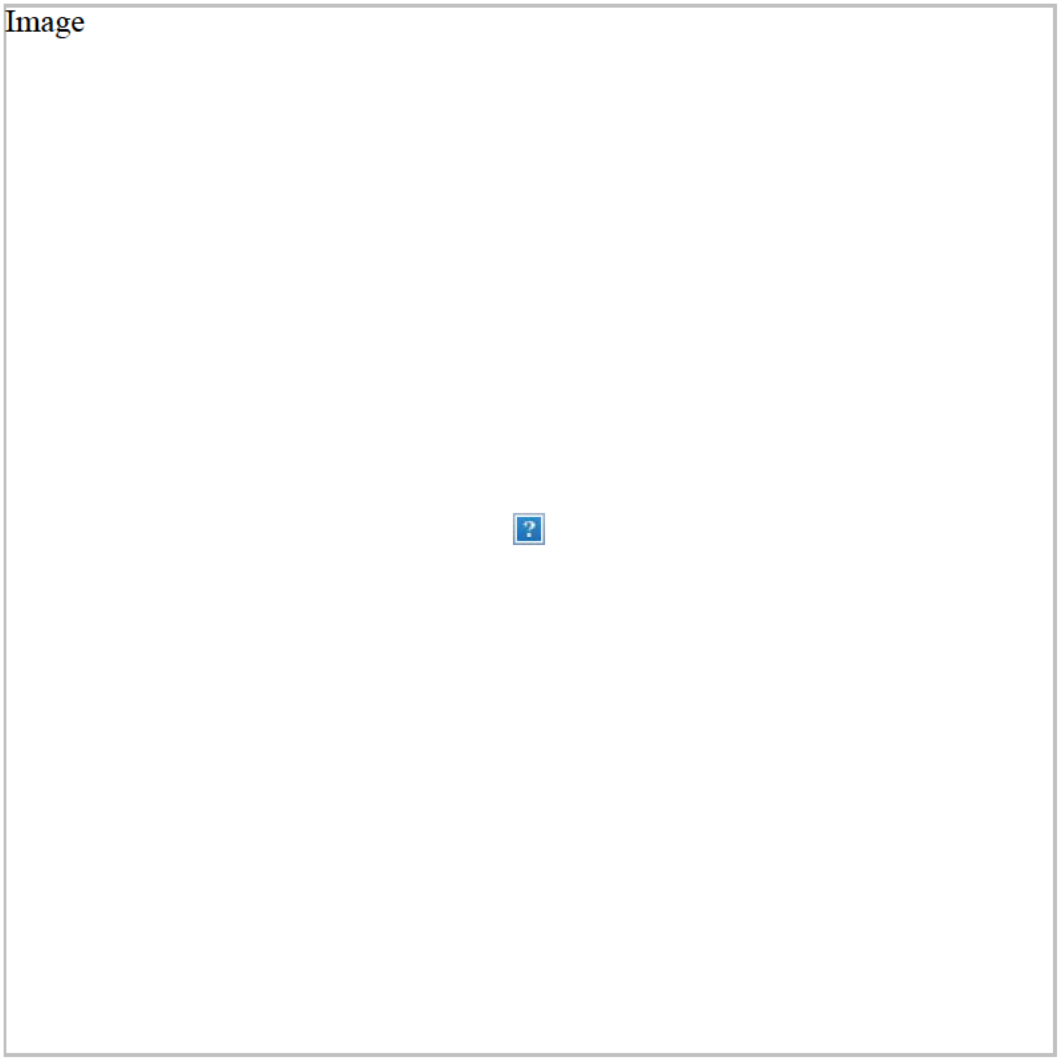
The tip that led authorities to a “shallow grave” containing the remains believed to be those of 29-year-old Deborah Elaine Deans “proved to be very accurate and very reliable,” Nash County Sheriff Keith Stone told reporters last week.

But the tipster did not go to police at first.

Instead, the unidentified person sent information about the alleged crime to a woman who created and runs a Facebook page called Fighting Crime News and Who’s Wanted, an online outlet whose updates range from wanted posters to promotions of local elections and warnings about traffic tie-ups.

On October 20, a re-post about the unsolved missing-person case of Deans — who was last seen around 9 a.m. on January 19, 2004, at a residence on Wiley Road in Spring Hope — elicited a “very detailed” response that was forwarded to authorities by the Facebook page creator, said Nash.

Google Maps Adds ability to see speed limits and speed traps in 40+ countries



Google Maps is gaining some features previously exclusive to Google's navigation app, Waze. The company confirmed it's rolling out the ability for Google Maps users to see speed limits, speed cameras and mobile speed cameras in more than 40 countries worldwide — an expansion of its earlier launch of these features, which were previously limited to select markets.

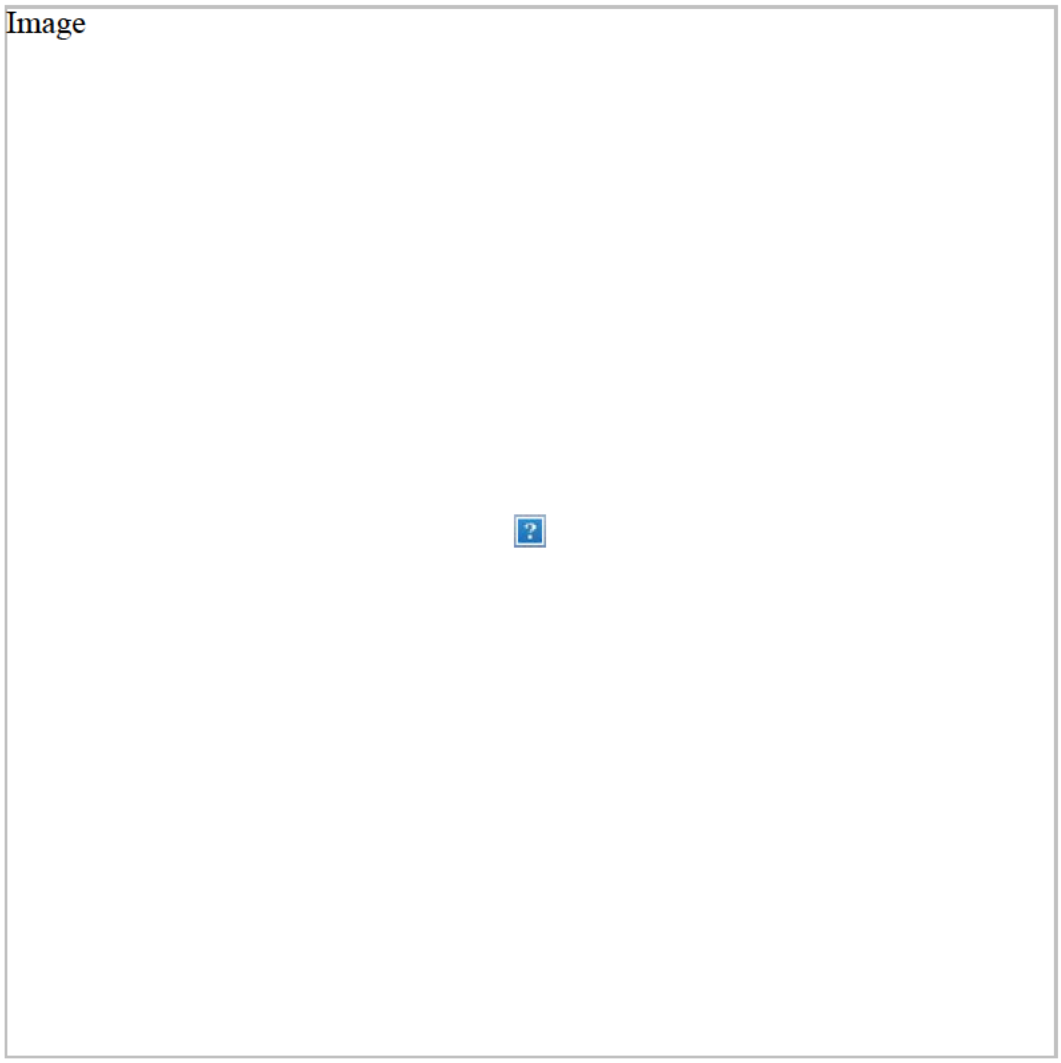
The change was noted earlier by ZDNet and, of course, Reddit.

Google confirmed with TechCrunch the full list of supported countries now seeing the speed cameras, which currently includes: Australia, Brazil, U.S., Canada, U.K., India, Mexico, Russia, Japan, Andorra, Bosnia and Herzegovina, Bulgaria, Croatia, Czechia, Estonia, Finland, Greece, Hungary, Iceland, Israel, Italy, Jordan, Kuwait, Latvia, Lithuania, Malta, Morocco, Namibia, Netherlands, Norway, Oman, Poland, Portugal, Qatar, Romania, Saudi Arabia, Serbia, Slovakia, South Africa, Spain, Sweden, Tunisia, and Zimbabwe.

The Ethics Board of One of the Largest Vendors of Police Tech (Axon) Makes the Case Against ALPRs

Automated License Plate Readers (ALPRs)—a mass surveillance technology that allows law enforcement to record the location and travel patterns of nearly every driver on the road—are poorly regulated, threaten privacy, and worsen the racial and economic inequalities already ingrained in our justice system.

That's what EFF and other advocates have been saying for years. But now it's coming from an oversight body formed by one of the nation's largest police tech vendors.



Last week, the AI and Policing Technology Ethics Board at

Axon, a tech company best known for popularizing body-worn cameras and the Taser, released a damning report concerning the commercial sale of ALPRs. The board, whose purpose is to “help guide and advise the company on ethical issues,” concluded that while it sees the potential value of ALPRs, their current role in society is too broad and problematic. The sheer amount of information that ALPRs gather and store was also a concern for the ethics board—particularly when privately collected data is often for sale to whoever wants to buy it.

ALPR systems include cameras that can be mounted on vehicles like police patrol cars or private tow trucks, or on stationary locations such as streetlights or overpasses. These cameras capture every license plate that passes and index them based on time, date, and location. A police officer can search ALPR databases to learn where a vehicle was in the past or even get real-time alerts when a driver passes by an ALPR camera. Research by EFF, MuckRock, and others have found that even small police departments are able to collect millions of plate scans a year, and often agencies are sharing this data with hundreds of other agencies across the country. Private companies also use ALPR and sell their data to police, financial lenders, insurance companies, private investigators, and debt collectors.

Amazon's Ring is 'the Neighborhood Watch of 2020,' police say as doorbell cams proliferate

Image

That's all it took Livonia Police to arrest a man, who hours earlier was caught on video posted on Ring's Neighbors app rummaging through the bed of a pickup parked in a driveway.

Detectives quickly recognized 60-year-old Jeffrey Couch when they saw the video posted by an app user in mid-August. Within a week, he pleaded no contest in court to two attempted larceny charges and was sentenced to 30 days in jail.

"I truly believe this is the Neighborhood Watch of 2020," said Livonia Police Capt. Ronald Taig, whose force was one of the first law enforcement agencies in Michigan — and is one of more than 400 across the country — to partner with the Ring Neighbors app, owned by Amazon.

How the deadly drug fentanyl is making its way to the US

Image

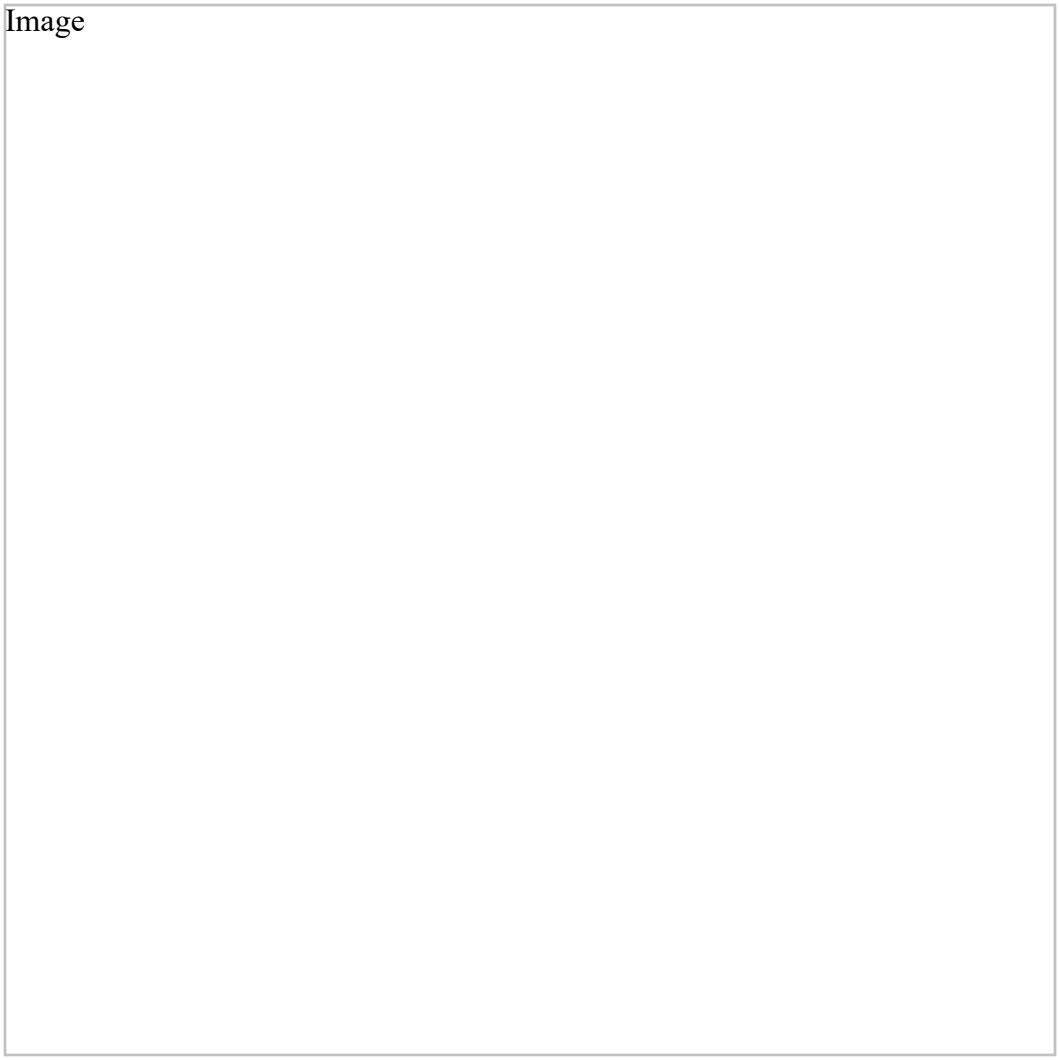
Trump administration officials are divided over part of a proposal to crack down on illicit versions of fentanyl, the deadly synthetic painkiller that President Donald Trump targeted in declaring a national opioid abuse emergency.

In an inter-agency dispute that highlights the challenges of curbing opioid abuse, the US Drug Enforcement Administration (DEA) is publicly backing tighter rules for fentanyl analogs, which are slightly altered copycat versions of the powerful drug fueling an explosion in overdoses.

In this case, the bill would cut the Food and Drug Administration out of the time-consuming review process by



letting the DEA permanently classify illicit fentanyl analogs as Schedule I drugs, like heroin, which are deemed to be addictive with no medical use.

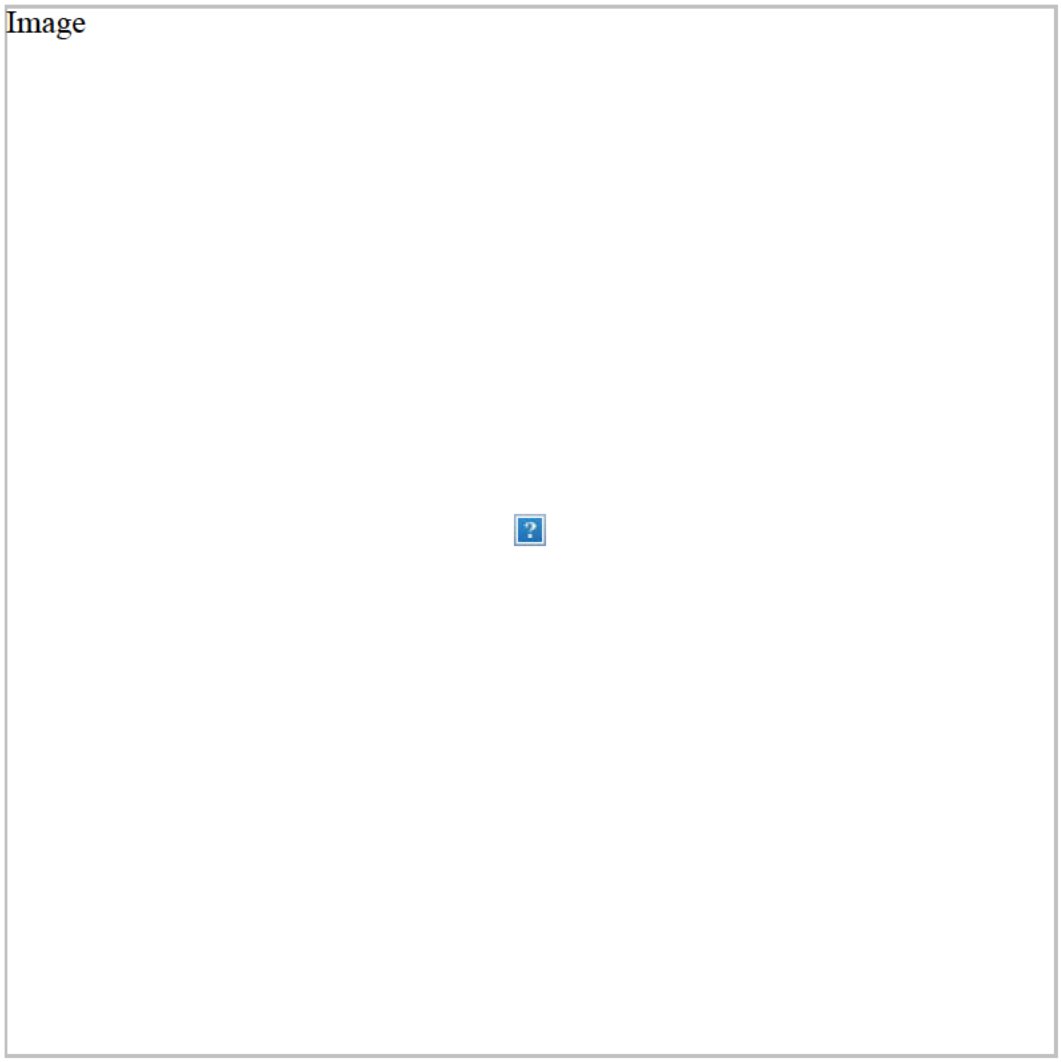
The DEA says these legal changes would help prosecutors keep pace with criminals who constantly churn out chemically tweaked fentanyl analogs to evade strict Schedule I regulations.

Of 70,200 US drug overdose deaths in 2017, according to the CDC, about 41% involved synthetic opioids, such as fentanyl and illicit analogs of it. Most of them are made in China.

Fentanyl, some versions of which are approved to treat cancer pain, is 100 times more potent than morphine.

Trump Orders Study of Root Causes of Crime, Policing Practices

President Trump on Monday ordered Attorney General William Barr to establish a new commission to study crime and law enforcement with the goal of recommending “actions that can be taken to prevent, reduce, and control crime, increase respect for the law, and assist victims.”



Following remarks in Chicago at the annual International Association of Chiefs of Police conference, the president signed an executive order establishing the Commission on Law Enforcement and the Administration of Justice. The commission will study the influence of substance abuse, homelessness and mental illness on crime as well as examine best practices to recruit, train and support law enforcement, among other things.

“Rigorous study of crime, including its causal factors, and current law enforcement practices is essential to assessing our

current criminal justice system's merits and opportunities for improvement," the executive order stated. "Public safety and proper policing are issues of both national and local significance that continue to require the close cooperation and coordination between the Department of Justice and state, local, and tribal law enforcement."

Quality Afterschool Programs Proven to Reduce Crime

Image

As a member of your District Attorney's Office for almost 30 years, and your DA for nearly 10, I've learned that the hours after school lets out are the prime time for juvenile crime.

It is between these hours of 2 to 6 p.m. that youth are more likely to be arrested for assault, theft and drug-related crimes.

Quality afterschool programs have been proven to reduce these crimes in our community, keep students engaged, and improve academic performance and student behavior.

A new report from Fight Crime: Invest in Kids shows that when youth have access to high-quality, affordable afterschool programming, they benefit immensely from homework help and outdoor activities, and they're less likely to commit or become victims of crime.

In its parliamentary submission, the department says that its Document Verification Service and Face Verification Service — though broadly intended to be used as systems for fighting crime and identity theft — could also be used by police for age verification controls.

"This could assist in age verification, for example by preventing a minor from using their parent's driver licence to circumvent age verification controls," the submission states.

"Whilst they are primarily designed to prevent identity crime, Home Affairs would support the increased use of the

Document and Face Verification Services across the Australian economy to strengthen age verification processes."

Police turn to hackers in Australia's first crowdsourced attempt to find missing people

Image

For decades the traditional 'missing person' poster has been used to enlist the community's help to find individuals who may be in danger.

But with more than 2,600 Australians now listed as a "long-term" disappearance, the federal police are trying what they hope will be a more successful tactic: turning the search into a

game.

More than 350 internet sleuths and "ethical hackers" — hobbyists and professionals — gathered at 10 locations around the country on Friday in a national missing-persons "hackathon".

The aim was to generate leads for 12 of Australia's most frustrating cold cases, using sophisticated but legal methods of trawling the internet.

And organisers said the results were astounding: 100 leads were generated every 10 minutes the competing teams worked.

Police overseas have used crowdsourcing in the past for help with isolated cases, aided by these largely voluntary "open-source intelligence" (OSINT) enthusiasts.

But Linda Cavanagh, of the Canberra Cyber Security Innovation Node, said the Australian event was the first of its kind to be deployed on a national scale.

10 of the Best Tools to Find Relevant Influencers on Social Media

Image

While it's become a much bigger consideration in recent years, influencer marketing, as a practice, has actually existed for a very long time. In the past, however, influencers were only on TV or in magazines, and unlike social media, TV and newspapers are limited, which led to a situation where a select number of celebrities were able to charge tons of money for making an ad for Pepsi or Swatch in order to influence consumer behavior.

With the birth of social platforms, everything changed. The Internet has no limits, there can be as many influencers as the world requires. They can be of any age and social status, and in any area of expertise (or no area of expertise). And they can work with any brand.

How Your Volunteering Trip Could Contribute To Human Trafficking

The advent of cheap air travel and Instragammable holiday photos, combined with a longing for meaning, has created a new breed of traveler: the voluntourist. This ever-growing trend describes people, most often young and affluent Westerners, who travel to the global South to help with community projects.

While no doubt sweetly intentioned, there is considerable concern over the fad of “voluntourism” and whether it does more harm than good for the communities in developing countries – especially when it involves children or work at an orphanage. On the surface of the problem, it’s questionable whether treating the developing world as a playground is an effective model to address systemic poverty and care for vulnerable children.

An anthropological study published in the Journal of Sustainable Tourism has shown how volunteer programs can actually contribute towards a superficial understanding of poverty that distracts from the larger systems that produce inequality and poverty. Through a series of in-depth interviews with young people from the US who volunteered in Malawi, they found their volunteer work was often carried out through a colonial and “mythologized” image of a helpless Africa needing the benevolence of the West. The volunteers also viewed African poverty in terms of the “American Dream” and the idea of pulling oneself out of poverty through hard work, as opposed to deep-rooted economic, social, and historical factors at play.

Lt. Brooks,
Please see attached. I've made some changes to ensure that this SOP only applies to the CFC and not the Department as a whole. I've also placed it on our CFC template and deleted any references to any other emails within this chain. Let me know if you'd like to meet and discuss before seeking final approval.

Best,
Jason

Subject: ALPR DRAFT

Jason and Brian,

This also needs to be a CFC SOP re the DHS Fusion Center requirements. Please complete same and have Det. Capt. Gawron provide final review before forwarding back to me by next Friday 8/16 so I can start final review the beginning of the following week so we can get it completed.

Also, please do not mix email chains with items or attachments unrelated to the original emails because it makes it confusing and will cause further confusion if any underlying documents have to produced under a FOUO.

Finally, please continue to ensure all DRAFT documents are labeled as such. They are DRAFT until they have received final approval and been promulagated.

Thank you

Good afternoon,

Thank you ALL for taking the time to rearrange your schedules and attend yesterday's training. I am in the process of addressing some of the individual issues/concerns that some of you had. I spoke w Mr. Tedona yesterday after the training and he was somewhat taken back by the depth of the questions as it shows that several of you have spent some time on the system.

I have attached the PAGIS cheat sheet and will be in touch as I go forward with the unresolved requests. Thank you.

Respectfully,

Lieutenant Daniel J. Griffin 1129

Subject: ALPR Pagis software training

Good afternoon,

Now that the majority of you have the ALPR system installed, it is time to get you the proper training. If you ran over Bambi and your sled is currently in the shop, you can still attend. Mr. John Tedona from Nuology will be conducting the Pagis software training on Wednesday July 24th at the Dartmouth Barracks located 265 Faunce Corner Rd in Dartmouth 02747. Training will commence at 10AM. Kory Koster will also be present should your system be in need of a slight modification to a camera ect… Short of a military commitment (Tpr Carey) I expect to see you there. If you have any issues or questions, please contact me prior to the 24th. Thank you.

Attachments: SFTP Hotlist Import.docx
frederick-speedtix.csv
hotlist.csv
Alpr Insrtructions.docx

Brian and Dave, sorry for my delay, I'm just getting caught up on emails during my travel.

We have Ryan, our engineer that developed the Finder software (and one that would be able to answer all your technical questions about the other parts of OpenALPR) slated to fly to Boston with Dave from MD with the test unit for you.

If you could set aside a few min on Thursday, I assure you that's all it will take.

Here are instructions for you to access the openalpr backend and all the reads we did.

Attached are a brief explanation for how to do the SFTP hotlist upload and import. Here is the SFTP info for the finder:

Mass State Police -- [redacted]

host: finderhotlist.brekford.com

user: [redacted]

password: [redacted]

[redacted]

The hotlist format is exactly the same as the manual import. Here is the information about that. This is the same information that was in the original manual.

Hotlists must be formatted as follows:

plate,state,category,message

abc1234,us-md,stolen,stolen car

- *Plate*
  - *Required*
- *State*
  - *Optional*
  - *Must be formatted as country code – state abbreviation ex. us-md us-fl*
- *Category*
  - *Optional*
  - *Will be displayed in the Alert Notification Area. Recommended to use short words like stolen, repossess, amber alert*
  - *If left blank Alert Notification area will just display HOTLIST*
- *Message*
  - *Optional*

Attached as well are some samples.

For the backend here is the information:

Mass State Police -- [redacted]

host: https://finderdemo4.brekford.com

user: demo@brekford.com

password: [redacted]

Subject: Annual Privacy Training (MANDATORY)
Importance: High

Hello all,
This year's annual privacy training is tentatively scheduled as follows:

Maynard: Tuesday, August 20th at 10:00am (also broadcast via GoToMeeting)

Framingham: Thursday, August 22nd (will accommodate a time for each shift)

Make up sessions will be available for those who have vacations and unexpected sick absences. I will keep everybody posted as plans become finalized.

Thank you,
Jason

Subject: Follow Up

Good morning Donna,

Wanted to follow up with you to get the draft copy of the 6th edition standard on License Plate Readers. If you are able to send me that, it will be utilized in house only to assist us in the revision of our current LPR policy which is currently underway. I understand this is not a final version and may change.

Also, I have submitted a waiver for 81.1.1 to my Colonel for her signature, I will return same to you upon receipt from her.

Thank you,
Bill P.

BOSS 3.6 USER MANUAL Rev2.pdf

Hi Dan,

The attached HOTLIST CREATION Word doc is what I put together that shows screen shots on how to create a Hotlist directly in BOSS. I also attached the BOSS user manual that covers Hotlist creation as well as creating a separate Hotlist CSV file. Let me know if I can discuss anything in further detail.

Mike -If you have anything that could assist Dan please forward.

Thanks,

John Tedona

On Monday, January 28, and Tuesday, January 29, 2019, the NJSP, NYPD, and NNJUASI, facilitated by the Rutgers University Center on Policing, will host a Regional Trafficking Summit. This two-day summit will gather 12 state police superintendents, 12 major city chiefs, and numerous federal agencies with responsibilities along the I-95 corridor between Richmond, VA, Washington, DC, and Boston, MA, to discuss the feasibility and productivity of linking and sharing ALPR data. Establishing this linkage across the northeast region of the United States would immeasurably increase our effectiveness in addressing issues of counter terrorism, drug trafficking, weapons trafficking, Amber and Silver Alerts, plus other threats to the public safety of our respective states.

Please find the attached letter from Colonel Patrick Callahan for further information and details.

Hi Steven!

I hope all is well. I should have emailed you on Friday – my apologies. I am in the middle of creating two separate presentations for this week so my one for the 15th is not completed yet. I can send it to you on Monday or just plan on arriving early on Wednesday to ensure everything works. Please let me know which you would prefer.

Thank you!
Kristine

Kristine Foley has agreed to assist with the CFC presentation for the Northeast Healthcare Law Enforcement Association Meeting on May 15. Amy and I provided the details below to her and she is available on that date. She just needs to know how long the presentation should be and any other details that this group is able to provide ahead of time (parking, location, etc.). Please let us know if this is acceptable to everyone's needs.

Respectfully,
Scott

Amy,

Let's discuss this conference tomorrow when you have time. Can you please check yours and Kristine Foley's availability on the date in question (please see below) to see if either of you could present the CFC overview with resources presentation on that date. They didn't say how long of a time slot so it may need to be modified once they do. Once we know yours and Kristine's availability we can check with Lt. Col. Quinn (who is copied on this) and Deputy Mason. I believe Lt. Col. Quinn would also like real time demos (not sure if he would like to assist with this aspect but he may).

Thanks

Sir,

I spoke with Mr. Pfister regarding the below request. He stated that NESPIN would be speaking and asked if the MSP wanted to add what they could add to an investigation. I stated that the CFC could speak to what services they provide (Coplink, Facial Rec, Lineups, ALPR,BOLOs, etc,) investigators. He indicated that he would like that and could add the CFC to agenda. I will attend on May 15th to represent the MSP. DO we have a rep from the CFC that

could present on that day?

Subject: Northeast Healthcare Law Enforcement Association, May 2019 Conference

Colonel Gilpin,

We are reaching out from the Massachusetts Attorney General's Office MFCU in regards to the Northeast Healthcare Law Enforcement Association (NHLEA) conference which will be held on **MAY 15th and 16th, 2019** at the **Sheraton Four Points**, located at 3800 State Highway, **Eastham, MA** 02642.

NHLEA has been in existence since 1995 with Massachusetts as a founding member. NHLEA was established with the dual

purpose of promoting joint healthcare fraud enforcement investigations and providing staff training opportunities. NHLEA is comprised of representatives from the six New England states and New York. The members include staff from the Medicaid Fraud Control Units (MFCUs) of seven states, the United States Attorney's Office (USAO), the Regional Office of Inspector General (DHHS/OIG/OI), the Federal Bureau of Investigations, the Drug Enforcement Agency, the Food and Drug Administration (FDA), and the Massachusetts Board of Registry in Medicine (BORIM).

Established as the first regional organization of state and federal healthcare fraud professionals, NHLEA's mission is to develop practical, results-oriented strategies to combat fraud and abuse in the medical field. The NHLEA pursues its mission by promoting the sharing of information and resources among its members and by improving interagency cooperation and federal-state relations in the fight against healthcare fraud.

MFD plans to host the conference on either an annual or biannual basis in conjunction with the Rhode Island MFCU and DHHS/OIG/OI. Attached is an agenda of the training when it was last hosted in 2014.

Lodging:

There are 40 rooms held for a government rate of $113/night, available for check-in on

May 14th and check-out on May 16th (two night stay). The deadline to book rooms at the government rate is April 1st. Breakfast will be included both mornings. A link to the hotel's website is here. Please mention the NHLEA conference when booking.

Attendance:

Even though each attendee or unit shall book rooms directly with the hotel on a first-come first-serve basis, once you have a sense of how many attendees your unit plans to send please let us know. There is no cost for the program.

Presentations:

At this time we are accepting proposals for presentations. Attached is a *Call for Presentation* form. The deadline to submit proposals to us is March 15th. Also attached, is a past NHLEA agenda to give you a sense of past topics. We encourage you to submit any and all topics for the purpose of establishing a well-rounded training agenda.

Please do not hesitate to reach out if you have any questions. We look forward to sharing this training opportunity with you all.

Subject: Northeast Healthcare Law Enforcement Association, May 2019 Conference

Colonel Gilpin,

We are reaching out from the Massachusetts Attorney General's Office MFCU in regards to the Northeast Healthcare Law Enforcement Association (NHLEA) conference which will be held on **MAY 15th and 16th, 2019** at the **Sheraton Four Points**, located at 3800 State Highway, **Eastham, MA** 02642.

NHLEA has been in existence since 1995 with Massachusetts as a founding member. NHLEA was established with the dual purpose of promoting joint healthcare fraud enforcement investigations and providing staff training opportunities. NHLEA is comprised of representatives from the six New England states and New York. The members include staff from the Medicaid Fraud Control Units (MFCUs) of seven states, the United States Attorney's Office (USAO), the Regional Office of Inspector General (DHHS/OIG/OI), the Federal Bureau of Investigations, the Drug Enforcement Agency, the Food and Drug Administration (FDA), and the Massachusetts Board of Registry in Medicine (BORIM).

Established as the first regional organization of state and federal healthcare fraud professionals, NHLEA's mission is to develop practical, results-oriented strategies to combat fraud and abuse in the medical field. The NHLEA pursues its mission by promoting the sharing of information and resources among its members and by improving interagency cooperation and federal-state relations in the fight against healthcare fraud.

MFD plans to host the conference on either an annual or biannual basis in conjunction with the Rhode Island MFCU and DHHS/OIG/OI. Attached is an agenda of the training when it was last hosted in 2014.

Lodging:

There are 40 rooms held for a government rate of $113/night, available for check-in on May 14th and check-out on May 16th (two night stay). The deadline to book rooms at the government rate is April 1st. Breakfast will be included both mornings. A link to the hotel's

website is here. Please mention the NHLEA conference when booking.

Attendance:

Even though each attendee or unit shall book rooms directly with the hotel on a first-come first-serve basis, once you have a sense of how many attendees your unit plans to send please let us know. There is no cost for the program.

Presentations:

At this time we are accepting proposals for presentations. Attached is a *Call for Presentation* form. The deadline to submit proposals to us is March 15th. Also attached, is a past NHLEA agenda to give you a sense of past topics. We encourage you to submit any and all topics for the purpose of establishing a well-rounded training agenda.

Please do not hesitate to reach out if you have any questions. We look forward to sharing this training opportunity with you all.

Best,

Steven Pfister

Kristine Foley has agreed to assist with the CFC presentation for the Northeast Healthcare Law Enforcement Association Meeting on May 15. Amy and I provided the details below to her and she is available on that date. She just needs to know how long the presentation should be and any other details that this group is able to provide ahead of time (parking, location, etc.). Please let us know if this is acceptable to everyone's needs.

Respectfully,
Scott

Amy,

Let's discuss this conference tomorrow when you have time. Can you please check yours and Kristine Foley's availability on the date in question (please see below) to see if either of you could present the CFC overview with resources presentation on that date. They didn't say how long of a time slot so it may need to be modified once they do. Once we know yours and Kristine's availability we can check with Lt. Col. Quinn (who is copied on this) and Deputy Mason. I believe Lt. Col. Quinn would also like real time demos (not sure if he would like to assist with this aspect but he may).

Thanks

Subject: Northeast Healthcare Law Enforcement Association, May 2019 Conference

Colonel Gilpin,

We are reaching out from the Massachusetts Attorney General's Office MFCU in regards to the Northeast Healthcare Law Enforcement Association (NHLEA) conference which will be held on **MAY 15th and 16th, 2019** at the **Sheraton Four Points**, located at 3800 State Highway, **Eastham, MA** 02642.

NHLEA has been in existence since 1995 with Massachusetts as a founding member. NHLEA was established with the dual

purpose of promoting joint healthcare fraud enforcement investigations and providing staff training opportunities. NHLEA is comprised of representatives from the six New England states and New York. The members include staff from the Medicaid Fraud Control Units (MFCUs) of seven states, the United States Attorney's Office (USAO), the Regional Office of Inspector General (DHHS/OIG/OI), the Federal Bureau of Investigations, the Drug Enforcement Agency, the Food and Drug Administration (FDA), and the Massachusetts Board of Registry in Medicine (BORIM).

Established as the first regional organization of state and federal healthcare fraud professionals, NHLEA's mission is to develop practical, results-oriented strategies to combat fraud and abuse in the medical field. The NHLEA pursues its mission by promoting the sharing of information and resources among its members and by improving interagency cooperation and federal-state relations in the fight against healthcare fraud.

MFD plans to host the conference on either an annual or biannual basis in conjunction with the Rhode Island MFCU and DHHS/OIG/OI. Attached is an agenda of the training when it was last hosted in 2014.

Lodging:

There are 40 rooms held for a government rate of $113/night, available for check-in on

May 14th and check-out on May 16th (two night stay). The deadline to book rooms at the government rate is April 1st. Breakfast will be included both mornings. A link to the hotel's website is here. Please mention the NHLEA conference when booking.

Attendance:

Even though each attendee or unit shall book rooms directly with the hotel on a first-come first-serve basis, once you have a sense of how many attendees your unit plans to send please let us know. There is no cost for the program.

Presentations:

At this time we are accepting proposals for presentations. Attached is a *Call for Presentation* form. The deadline to submit proposals to us is March 15th. Also attached, is a past NHLEA agenda to give you a sense of past topics. We encourage you to submit any and all topics for the purpose of establishing a well-rounded training agenda.

Please do not hesitate to reach out if you have any questions. We look forward to sharing this training opportunity with you all.

Secretary Wood and Undersecretary Moran,

Please see below email from NYSP and NYSP regarding the ALPR MOU. I know we have a meeting on Thursday regarding this. They are looking for a rep from MSP (Dermot Quinn has volunteered to go) as well as a technical rep and network rep. Dermot is advocating for Brian Egnitz, however, I defer to you to make that call. Please let me know your thoughts.

Respectfully,

Kerry

Good Afternoon,

Recently, New York City Police Department (NYPD) Commissioner James P. O'Neill and New Jersey State Police (NJSP) Colonel Patrick Callahan invited you to attend a Regional Trafficking Summit in New Jersey and New York on January 28-29,2019. Former NJSP superintendent and colonel Rick Fuentes followed up with an email which may have gone to your spam file. Please check your spam file for previous information.

This conference – hosted jointly by the NJSP, NYPD and the Northern New Jersey Urban Area Security Initiative (NJUASI) – will be facilitated by the Rutgers University Center on Policing. It will gather 12 state police superintendents, 12 major city chiefs and representatives of numerous federal agencies with responsibilities along the Interstate 95 corridor between Richmond, Virginia and Boston, Massachusetts, to discuss the feasibility and productivity of linking and sharing automated license plate reader data. Establishing a linkage across the northeast region of the United States will immeasurably increase our effectiveness in addressing issues of counterterrorism, drug trafficking, human and weapons trafficking, Amber

and Silver Alerts and other threats to our public safety.

Please register by Monday, January 7th . Please click here to register and RSVP to Rutgers Center on Policing by January 7th, 2019.

During the morning of Monday, January 28, 2019, attendees will arrive at the Hyatt Regency on the Hudson, 2 Exchange Place, Jersey City, N.J. A block of rooms has been reserved for the summit Please click here to make your room reservations. This should also be done by January 7th, 2019.

All questions should be posed to Rick Fuentes, who currently works with the Rutgers University Center on Policing and the NJUASI to advance statewide and regional information-sharing programs. He can be reached by email at rrixmail@comcast.net and by phone at (201)554-5514.

Thank you in advance for attending this important summit, and for your participation in this groundbreaking effort to collect, assess, and share ALPR data across the northeastern United States.

Regards,
Linda

Subject: SJC-12750 - Notice of Docket Entry

Supreme Judicial Court for the Commonwealth of Massachusetts

RE: Docket No. SJC-12750

Commonwealth
v.
Jason McCarthy

NOTICE OF DOCKET ENTRY

Please take note that the following entry was made on the docket of the above-referenced case:

June 14, 2019 - ANNOUNCEMENT: The Justices are soliciting amicus briefs. Whether either a search warrant or a court order is required before obtaining automatic license plate recognition (ALPR) data collected from fixed points for a particular vehicle. See 18 U.S.C. s. 2518 (Electronic Communications Privacy Act); 18 U.S.C. s. 2703 (Stored Communications Act).

Francis V. Kenneally, Clerk

Dated: June 14, 2019

To:
Paul Alan Bogosian, Esquire
Elizabeth Anne Sweeney, A.D.A.

From: Fitzgerald, Thomas (POL)
To: Egnitz, Brian (POL); Griffin, Daniel (POL)
Subject: Re: SJC-12750 - Notice of Docket Entry
Date: Monday, July 29, 2019 9:22:36 AM

Got it, thanks!

Lieutenant Thomas Fitzgerald
Mass. State Police CVES
Concord, MA 01742

You had suggested that I use SHI. Do you prefer BCM?

I think Maintenance is the entirety of the SOW. What exactly do you want the SOW to cover.

I think so, can we get the maintenance split out separate. If your already working with SHI m, I need the massport scope from an approved reseller. BCM or SHI.

Here's the revised document.

2.2 (a.) Maynard has been changed to Chelsea

2.3 (f.) Bulk deletion of data from the BOSS warehouse has been changed to read Ensure the compliance of ALPR data retention policies within BOSS through periodic audits and any needed purging beyond the system capabilities.

Cc: Slater, James (CHS); Dunne, Michaela (CHS)
Subject: FW: TRF-11 suggested changes needed to comply with DHS HSGP Grant Requirements

All,

Given that the ALPR servers are secured and operated at the DCJIS data center in Chelsea, and that the application is managed by both DCJIS and MSP, I am suggesting the following changes highlighted in red. I am also copying in Commissioner Slater and Michaela Dunne from DCJIS for their thoughts and comments.

Please keep in mind that much of this language is coming from the BJA ALPR Policy Template, and our goal is to be in compliance so that HSGP funds continue to flow uninterrupted.

Respectfully,

Lieutenant Colonel Dermot J. Quinn #1765
Division Commander
Division of Homeland Security & Preparedness
Massachusetts State Police

Security The following shall apply to ALPR system and information security:

- The Department of Criminal Justice Information Services of the Executive Office of Public Safety and Security, will operate ALPR servers in a secure facility protected from external intrusion and will utilize secure internal and external safeguards against network intrusions. Any access to DCJIS ALPR information from outside the facility will be allowed only over secure networks;

- The Department and DCJIS will store ALPR information in a manner that ensures that it cannot be added to, modified, accessed, or purged except by personnel authorized to take such actions;

- Access to Department ALPR information will be granted only to personnel whose positions and job duties require such access and who have successfully completed a background check and training;

- Usernames and passwords to ALPR information are not transferrable, must not be shared by Department personnel, and must be kept confidential;

- Queries made to the Department's ALPR information will be logged into the system identifying the user initiating the query. All user access, including participating agency access, and queries are subject to review and audit; and

- The Department and DCJIS will maintain an audit trail of accessed, requested, or disseminated Department-held ALPR information. An audit trail will be kept for a minimum of one-year of requests for access to ALPR information for specific purposes and of what ALPR information is disseminated to each individual in response to the request.

Good Morning,

As you are probably aware, the Department is in the process of ensuring that our policies meet Accreditation standards. Please find attached a pdf of Accreditation standards relative to LPR (along with the attached word doc of the revised TRF-11 DRAFT that has been circulating.)

As part of the Fusion Center's revisions to ensure policy compliance with BJA LPR Policy Template (as reflected in attached revised DRAFT), before finalizing the draft for promulgation, the Department would like you to take this opportunity to incorporate the language the Fusion Center deems appropriate for the MSP to be in compliance with Accreditation standards as well.

Respectfully,
KME

Subject: RE: TRF-11 suggested changes needed to comply with DHS HSGP Grant Requirements

Good Morning,

Please see the attached draft. It incorporates some very minor changes (which have been tracked and can be accepted or not.)

There is one change that I did not want to make without consultation –

- On page 6, "Security" section, first bullet: should the first sentence read "The Department will operate *the ALPR system* in a secure facility protected from external intrusion and will utilize secure internal and external safeguards against network intrusions."?

Also, as you may have discovered, the formatting of these word documents can be very quirky, so when all revisions have been finalized and the document is ready for promulgation, Trooper Tapis and I will do the final formatting.

Respectfully,
KME

Subject: FW: TRF-11 suggested changes needed to comply with DHS HSGP Grant Requirements

Good Evening All,

The Fusion Center needs to be in compliance with three new requirements from DHS to continue to be eligible for HSGF. The first is an MOU between the CFC and DHS. Major Range and his team have already submitted our proposal to DHS for comments. Second, a facial recognition SOP is required and a draft of that document has been submitted to Legal Section for comment. Lastly, an LPR policy

that incorporates elements from the BJA LPR Policy Template is required. This email addresses that issue. Attached please find an edited version of the existing MSP ALPR Policy (TRF-11). The edits that have been prepared by Major Range and his team incorporate the required elements from the BJA template required by DHS (See attached BJA LPR Policy Template). We are very open to editing, including grammar and style, and obviously any guidance on legal issues that our edits may present.

Please keep in mind that these are requirements are from DHS, and placed on the CFC in order to continue to receive Homeland Security Grant Funding. HSGF provides the MSP the financial resources to keep the CFC operating. We appreciate your attention to this matter as we need to have this in place by the end of the month.

Jason,

As discussed, the existing TRF-11 is attached in a PDF format. Lt. Brooks will have someone try to un-PDF it now and then email it back to this group.

On Thursday, please mark up a new TRF-11 DRAFT with the suggested changes that are needed to comply with the template pursuant to the new DHS HSGP Grant Requirements. Then send that document back to this group on Thursday so Lt. Col. Quinn can work with GHQ to try and get TRF-11 fully updated prior to the end of this month to comply.

Thank again for your work on this. We appreciate it.

To: England, Kara (POL) <kara.england@pol.state.ma.us>
Subject: RE: TRF-11 suggested changes needed to comply with DHS HSGP Grant Requirements

Kara,

It is minor, but in Paragraph 1, a redundant use of "the" should be struck, it is not consistent with how the Department is addressed in MGL. I have provided a highlighted strike through on the attached Word document.

I would suggest a clarification be made to the "manual entries" section. When assigned to the Watch Center, we began to cull the lists and found that members would put information in, but were failing to remove same at the conclusion of their investigation and/or critical event. Identifying who is responsible for the removal of the data allows the Department to assign a level of

accountability, whereas if it is left open-ended everyone assumes someone else will do it.

Under policy review, I would suggest striking the non-bulleted paragraph beginning with "As the use of technology progresses……" An ongoing policy review is a goal of the Department and policies should be under constant review by the Division to which said policies are assigned, with a minimum of annual review.

Just some thoughts that I am sharing with you, not the group as I will defer to you if you wish to bring them to the greater group.

There is one change that I did not want to make without consultation –

- On page 6, "Security" section, first bullet: should the first sentence read "The Department will operate *the ALPR system* in a secure facility protected from external intrusion and will utilize secure internal and external safeguards against network intrusions."?

Also, as you may have discovered, the formatting of these word documents can be very quirky, so when all revisions have been finalized and the document is ready for promulgation, Trooper Tapis and I will do the final formatting.

Respectfully,
KME

Subject: FW: TRF-11 suggested changes needed to comply with DHS HSGP Grant Requirements

Good Evening All,

The Fusion Center needs to be in compliance with three new requirements from DHS to continue to be eligible for HSGF. The first is an MOU between the CFC and DHS. Major Range and his team have already submitted our proposal to DHS for comments. Second, a facial recognition SOP is required and a draft of that document has been submitted to Legal Section for comment. Lastly, an LPR policy that incorporates elements from the BJA LPR Policy Template is required. This email addresses that issue. Attached please find an edited version of the existing MSP ALPR Policy (TRF-11). The edits that have been prepared by Major Range and his team incorporate the required elements from the BJA template required by DHS (See attached BJA LPR Policy Template). We are very open to editing, including grammar and style, and obviously any guidance on legal issues that our edits may present.

Please keep in mind that these are requirements are from DHS, and placed on the CFC in order to continue to receive Homeland Security Grant Funding. HSGF provides the MSP the financial resources to keep the CFC operating. We appreciate your attention to this matter as we need to have this in place by the end of the month.

Respectfully,

Good afternoon,
I apologize for the delay in distributing this. I was able to recreate the original TRF-11 in a much more workable format in Word. I've made some additions (highlighted in the attached document) which I believe brings us up to speed with respect to DHS grant requirements. I did not remove anything from the existing TRF-11, but ended up adding approximately 3 pages to the current policy. I did my best to exclude irrelevant or unnecessary portions of the BJA guidelines. Any additional thoughts or suggestions are welcome.

Thanks,
Jason

Jason,

As discussed, the existing TRF-11 is attached in a PDF format. Lt. Brooks will have someone try to un-PDF it now and then email it back to this

group.

On Thursday, please mark up a new TRF-11 DRAFT with the suggested changes that are needed to comply with the template pursuant to the new DHS HSGP Grant Requirements. Then send that document back to this group on Thursday so Lt. Col. Quinn can work with GHQ to try and get TRF-11 fully updated prior to the end of this month to comply.

Thank again for your work on this. We appreciate it.

Colonel,

Thank you for your response. I will make the below changes in red to the DRAFT.

Also, Accreditation Manager Pinkes provided the following …

- I would suggest a clarification be made to the "manual entries" section. When assigned to the Watch Center, we began to cull the lists and found that members would put information in, but were failing to remove same at the conclusion of their investigation and/or critical event. Identifying who is responsible for the removal of the data allows the Department to assign a level of accountability, whereas if it is left open-ended everyone assumes someone else will do it.

- Under policy review, I would suggest striking the non-bulleted paragraph beginning with "As the use of technology progresses……" An ongoing policy review is a goal of the Department and policies should be under constant review by the Division to which said policies are assigned, with a minimum of annual review.

Please advise, if and how you would like to incorporate the above suggestions into the DRAFT. I can add any other changes you deem appropriate (along with the items in red below) and then recirculate the draft again for final review prior to promulgations.

Respectfully,
KME

Subject: FW: TRF-11 suggested changes needed to comply with DHS HSGP Grant Requirements

All,

Given that the ALPR servers are secured and operated at the DCJIS data center in Chelsea, and that the application is managed by both DCJIS and MSP, I am suggesting the following changes highlighted in red. I am also copying in Commissioner Slater and Michaela Dunne from DCJIS for their thoughts and comments.

Please keep in mind that much of this language is coming from the BJA ALPR Policy Template, and our goal is to be in compliance so that HSGP funds continue to flow uninterrupted.

Respectfully,

Lieutenant Colonel Dermot J. Quinn #1765
Division Commander
Division of Homeland Security & Preparedness
Massachusetts State Police

Security The following shall apply to ALPR system and information security:

- The Department of Criminal Justice Information Services of the Executive Office of Public Safety and Security, will operate ALPR servers in a secure facility protected from external intrusion and will utilize secure internal and external safeguards against network intrusions. Any access to DCJIS ALPR information from outside the facility will be allowed only over secure networks;

- The Department and DCJIS will store ALPR information in a manner that ensures that it cannot be added to, modified, accessed, or purged except by personnel authorized to take such actions;

- Access to Department ALPR information will be granted only to personnel whose positions and job duties require such access and who have successfully completed a background check and training;

- Usernames and passwords to ALPR information are not transferrable, must not be shared by Department personnel, and must be kept confidential;

- Queries made to the Department's ALPR information will be logged into the system identifying the user initiating the query. All user access, including participating agency access, and queries are subject to review and audit; and

- The Department and DCJIS will maintain an audit trail of accessed, requested, or disseminated Department-held ALPR information. An audit trail will be kept for a minimum of one-year of requests for access to ALPR information for specific purposes and of what ALPR information is disseminated to each individual in response to the request.

TRF-11 Automatic License Plate Recognition DRAFT UPDATE 09182019.docx

---

Kara,

It is minor, but in Paragraph 1, a redundant use of "the" should be struck, it is not consistent with how the Department is addressed in MGL. I have provided a highlighted strike through on the attached Word document.

I would suggest a clarification be made to the "manual entries" section. When assigned to the Watch Center, we began to cull the lists and found that members would put information in, but were failing to remove same at the conclusion of their investigation and/or critical event. Identifying who is responsible for the removal of the data allows the Department to assign a level of accountability, whereas if it is left open-ended everyone assumes someone else will do it.

Under policy review, I would suggest striking the non-bulleted paragraph beginning with "As the use of technology progresses……" An ongoing policy review is a goal of the Department and policies should be under constant review by the Division to which said policies are assigned, with a minimum of annual review.

Just some thoughts that I am sharing with you, not the group as I will defer to you if you wish to bring them to the greater group.

Subject: FW: TRF-11 suggested changes needed to comply with DHS HSGP Grant Requirements

Good Evening All,

The Fusion Center needs to be in compliance with three new requirements from DHS to continue to be eligible for HSGF. The first is an MOU between the CFC and DHS. Major Range and his team have already submitted our proposal to DHS for comments. Second, a facial recognition SOP is required and a draft of that document has been submitted to Legal Section for comment. Lastly, an LPR policy that incorporates elements from the BJA LPR Policy Template is required. This email addresses that issue. Attached please find an edited version of the existing MSP ALPR Policy (TRF-11). The edits that have been prepared by Major Range and his team incorporate the required elements from the BJA template required by DHS (See attached BJA LPR Policy Template). We are very open to editing, including grammar and style, and obviously any guidance on legal issues that our edits may present.

Please keep in mind that these are requirements are from DHS, and placed on the CFC in order to continue to receive Homeland Security Grant Funding. HSGF provides the MSP the financial resources to keep the CFC operating. We appreciate your attention to this matter as we need to have this in place by the end of the month.

Respectfully,

Lieutenant Colonel Dermot J. Quinn #1765
Division Commander
Division of Homeland Security & Preparedness
Massachusetts State Police

Jason,

As discussed, the existing TRF-11 is attached in a PDF format. Lt. Brooks will have someone try to un-PDF it now and then email it back to this group.

On Thursday, please mark up a new TRF-11 DRAFT with the suggested changes that are needed to comply with the template pursuant to the new DHS HSGP Grant Requirements. Then send that document back to this group on Thursday so Lt. Col. Quinn can work with GHQ to try and get TRF-11 fully updated prior to the end of this month to comply.

Thank again for your work on this. We appreciate it.

TRF-11 Automatic License Plate Recognition DRAFT UPDATE 09182019.docx

Good Morning,

Please see the attached draft. It incorporates some very minor changes (which have been tracked and can be accepted or not.)

There is one change that I did not want to make without consultation –

- On page 6, "Security" section, first bullet: should the first sentence read "The Department will operate *the ALPR system* in a secure facility protected from external intrusion and will utilize secure internal and external safeguards against network intrusions."?

Also, as you may have discovered, the formatting of these word documents can be very quirky, so when all revisions have been finalized and the document is ready for promulgation, Trooper Tapis and I will do the final formatting.

Respectfully,
KME

Subject: FW: TRF-11 suggested changes needed to comply with DHS HSGP Grant Requirements

All,

Given that the ALPR servers are secured and operated at the DCJIS data center in Chelsea, and that the application is managed by both DCJIS and MSP, I am suggesting the following changes highlighted in red. I am also copying in Commissioner Slater and Michaela Dunne from DCJIS for their thoughts and comments.

Please keep in mind that much of this language is coming from the BJA ALPR Policy Template, and our goal is to be in compliance so that HSGP funds continue to flow uninterrupted.

Respectfully,

Lieutenant Colonel Dermot J. Quinn #1765
Division Commander
Division of Homeland Security & Preparedness
Massachusetts State Police

Security The following shall apply to ALPR system and information security:

- The Department of Criminal Justice Information Services of the Executive Office of Public Safety and Security, will operate ALPR servers in a secure facility protected from external intrusion and will utilize secure internal and external safeguards against network intrusions. Any access to DCJIS ALPR information from outside the facility will be allowed only over secure networks;

- The Department and DCJIS will store ALPR information in a manner that ensures that it cannot be added to, modified, accessed, or purged except by personnel authorized to take such actions;

- Access to Department ALPR information will be granted only to personnel whose positions and job duties require such access and who have successfully completed a background check and training;

- Usernames and passwords to ALPR information are not transferrable, must not be shared by Department personnel, and must be kept confidential;

- Queries made to the Department's ALPR information will be logged into the system identifying the user initiating the query. All user access, including participating agency access, and queries are subject to review and audit; and

- The Department and DCJIS will maintain an audit trail of accessed, requested, or disseminated Department-held ALPR information. An audit trail will be kept for a minimum of one-year of requests for access to ALPR information for specific purposes and of what ALPR information is disseminated to each individual in response to the request.

Good Morning,

As you are probably aware, the Department is in the process of ensuring that our policies meet Accreditation standards. Please find attached a pdf of Accreditation standards relative to LPR (along with the attached word doc of the revised TRF-11 DRAFT that has been circulating.)

As part of the Fusion Center's revisions to ensure policy compliance with BJA LPR Policy Template (as reflected in attached revised DRAFT), before finalizing the draft for promulgation, the Department would like you to take this opportunity to incorporate the language the Fusion Center deems appropriate for the MSP to be in compliance with Accreditation standards as well.

Respectfully,
KME

Subject: RE: TRF-11 suggested changes needed to comply with DHS HSGP Grant Requirements

Good Morning,

Please see the attached draft. It incorporates some very minor changes (which have been tracked and can be accepted or not.)

There is one change that I did not want to make without consultation –

- On page 6, "Security" section, first bullet: should the first sentence read "The Department will operate *the ALPR system* in a secure facility protected from external intrusion and will utilize secure internal and external safeguards against network intrusions."?

Also, as you may have discovered, the formatting of these word documents can be very quirky, so when all revisions have been finalized and the document is ready for promulgation, Trooper Tapis and I will do the final formatting.

Respectfully,
KME

Subject: FW: TRF-11 suggested changes needed to comply with DHS HSGP Grant Requirements

Good Evening All,

The Fusion Center needs to be in compliance with three new requirements from DHS to continue to be eligible for HSGF. The first is an MOU between the CFC and DHS. Major Range and his team have already submitted our proposal to DHS for comments. Second, a facial recognition SOP is required and a draft of that document has been submitted to Legal Section for comment. Lastly, an LPR policy that incorporates elements from the BJA LPR Policy Template is required. This email addresses that issue. Attached please find an edited version of the existing MSP ALPR Policy (TRF-11). The edits that have been prepared by Major Range and his team incorporate the required elements from the BJA template required by DHS (See attached BJA LPR Policy Template). We are very open to editing, including grammar and style, and obviously any guidance on legal issues that our edits may present.

Please keep in mind that these are requirements are from DHS, and placed on the CFC in order to continue to receive Homeland Security Grant Funding. HSGF provides the MSP the financial resources to keep the CFC operating. We appreciate your attention to this matter as we need to have this in place by the end of the month.

Respectfully,

> I apologize for the delay in distributing this. I was able to recreate the original TRF-11 in a much more workable format in Word. I've made some additions (highlighted in the attached document) which I believe brings us up to speed with respect to DHS grant requirements. I did not remove anything from the existing TRF-11, but ended up adding approximately 3 pages to the current policy. I did my best to exclude irrelevant or unnecessary portions of the BJA guidelines. Any additional thoughts or suggestions are welcome.

Thanks,
Jason

Jason,

As discussed, the existing TRF-11 is attached in a PDF format. Lt. Brooks will have someone try to un-PDF it now and then email it back to this group.

On Thursday, please mark up a new TRF-11 DRAFT with the suggested changes that are needed to comply with the template pursuant to the new DHS HSGP Grant Requirements. Then send that document back to this group on Thursday so Lt. Col. Quinn can work with GHQ to try and get TRF-11 fully updated prior to the end of this month to comply.

Thank again for your work on this. We appreciate it.

Subject: Regional Trafficking Summit - Registration Confirmation

Regional Trafficking Summit Attendee:

This email is to confirm you are registered to attend the Regional Trafficking Summit on January 28 & 29th, 2019.

A block of guest rooms has been reserved for summit attendees at the **Hyatt Regency on the Hudson, 2 Exchange Place, Jersey City, N.J.** If you haven't done so **Please click here to secure a room as soon as possible.**

The 1st day of the program will be held at the Hyatt and will commence at 1:00 p.m. Registration will begin at 12:30 p.m. The program is scheduled to end at 5:30. p.m. A sponsored dinner will be held at Porto Legerro restaurant on 185 Hudson St, Jersey City (a short 4-minute walk from the hotel) from 6:00 p.m. to 9:00 p.m. that evening.

The 2nd day of the program will be held at New York Police Department. Attendees will depart the hotel at 7:30 a.m. and embark on NYPD marine vessels to transport across the Hudson River. Transportation will be provided to the meeting location. We anticipate the program ending at noon and transportation will be provided back to the hotel.

All questions should be posed to Rick Fuentes, who currently works with the Rutgers University Center on Policing and the NJUASI to advance statewide and regional information-sharing programs. He can be reached by email at rrixmail@comcast.net and by phone at (201)554-5514.

Thank you in advance for attending this important summit, and for your participation in this groundbreaking effort to collect, assess, and share ALPR data across the northeastern United States.

Regards,
Linda

Subject: Regional Trafficking Summit Invite
Date: Friday, January 4, 2019 2:49:25 PM

Good Afternoon,

Recently, New York City Police Department (NYPD) Commissioner James P. O'Neill and New Jersey State Police (NJSP) Colonel Patrick Callahan invited you to attend a Regional Trafficking Summit in New Jersey and New York on January 28-29,2019. Former NJSP superintendent and colonel Rick Fuentes followed up with an email which may have gone to your spam file. Please check your spam file for previous information.

This conference – hosted jointly by the NJSP, NYPD and the Northern New Jersey Urban Area Security Initiative (NJUASI) – will be facilitated by the Rutgers University Center on Policing. It will gather 12 state police superintendents, 12 major city chiefs and representatives of numerous federal agencies with responsibilities along the Interstate 95 corridor between Richmond, Virginia and Boston, Massachusetts, to discuss the feasibility and productivity of linking and sharing automated license plate reader data.
Establishing a linkage across the northeast region of the United States will immeasurably increase our effectiveness in addressing issues of counterterrorism, drug trafficking, human and weapons trafficking, Amber and Silver Alerts and other threats to our public safety.

Please register by Monday, January 7th . Please click here to register and RSVP to Rutgers Center on Policing by January 7th, 2019.

During the morning of Monday, January 28, 2019, attendees will arrive at the Hyatt Regency on the Hudson, 2 Exchange Place, Jersey City, N.J. A block of rooms has been reserved for the summit Please click here to make your room reservations. This should also be done by January 7th, 2019.

All questions should be posed to Rick Fuentes, who currently works with the Rutgers University Center on Policing and the NJUASI to advance statewide and regional information-sharing programs. He can be reached by email at rrixmail@comcast.net and by phone at (201)554-5514.

Thank you in advance for attending this important summit, and for your participation in this groundbreaking effort to collect, assess, and share ALPR data across the northeastern United States.

Subject: Sagamore and Bourne bridges - LPRs
Date: Monday, July 15, 2019 1:02:59 PM

FYI

New Bedford suspect's case before Supreme Judicial Court

By Wheeler Cowperthwaite

Cape Cod Times 7/15/19

BOSTON — The Supreme Judicial Court is asking attorneys and organizations to weigh in on the constitutionality of the use of the automatic license plate reading cameras on the Sagamore and Bourne bridges.

Jason McCarthy, through his attorney Paul Bogosian, filed an appeal April 10 of Barnstable Superior Court Judge Robert Rufo's order that police use of data collected from the stationary cameras was legal because the cameras only track movements on and off the Cape, and not movements across the state.

McCarthy, 38, of New Bedford, is charged with distribution of a class B substance. Data from the cameras was used in support of the charge.

In his order, Rufo wrote that the bridge cameras presented a "novel" issue that has not been addressed before in Massachusetts. Because the cameras were not used in conjunction with anything else, there was no "looming specter" of constant surveillance, Rufo ruled.

Bogosian also argued that the license plate readers, and the subsequent database they created, were regulated by one of two federal laws, the Electronic Communications Privacy Act and the Stored Communications Act. Rufo rejected those arguments, finding that the definitionsused did not extend to law enforcement activities.

On May 23, Justice Scott Kafker ordered the case sent to the full Supreme Judicial Court. The court announced June 14 it is seeking amicus briefs on a specific question of "whether either a search warrant or a court order is required before obtaining automatic license plate recognition (ALPR) data collected from fixed points for a particular vehicle," according to the docket.

The docket entry also references the two federal laws.

Massachusetts Bar Association Chief Legal Counsel Martin Healy said it is a "question of first impression"

for the high court because it has never ruled on a similar issue.

The call for amicus briefs has generated interest from the American Civil Liberties Union, the Electronic Frontier Foundation and the Committee for Public Counsel Services, Healy said.

The foundation did not return a request for comment. The person writing a brief for the ACLU on the matter was unavailable for comment.

Healy, who sits on the board for the committee, said the committee has not made a decision to file a brief or not.

Although the facts in the case are limited to cameras on the two bridges on Cape Cod, the Supreme Judicial Court could issue an opinion about the more broad and general use of license plate readers.

"It's being used by a host of cities and towns throughout the commonwealth and roughly half of the cities and towns received grants and federal money to implement these types of tools," Healy said.

Plate readers are being used both by law enforcement and by private companies. It is also possible that the Supreme Judicial Court asks the Legislature to regulate the technology, he said.

"They may speak in broad terms and recognize the privacy interests by motorists and lean on the Legislature, as policymakers, to develop some protocols," Healy said.

Bogosian argued the license plate reader data should be treated like cell site location information, a position Rufo rejected. After a 2018 Supreme Court decision, police need a search warrant to access more than two weeks' worth of that location data.

"The court, by taking this up, is indicating to the public and legal community that this is a question of importance and I do not believe they will limit their decision to the facts of this case," Healy said.

Defense attorney Drew Segadelli said the Supreme Judicial Court taking the case "speaks volumes about them taking it seriously and they will do a full scholarly effort."

Cape and Islands District Attorney Michael O'Keefe said he is "very confident" that his office will prevail on the issue of fixed-position cameras. He said the cameras are not tracking a driver's every movement, just when a car enters or leaves the Cape.

While O'Keefe said it is possible that the Supreme Judicial Court will issue an opinion outside of the issue of fixed cameras, it traditionally issues opinions based on the specific "fact patterns" of a case.

Assistant District Attorney Elizabeth Sweeney wrote in her opposition to the appeal that the technology may be new, but the issues presented are not. She noted that in 2014, the Supreme Judicial Court ruled that there is no expectation of privacy for the outside of a car and that law enforcement can use technology to conduct surveillance that would otherwise be done in person.

From: Egnitz, Brian (POL)
To: Quinn, Dermot (POL)
Subject: sojka
Date: Monday, August 12, 2019 11:42:00 AM

Sojka can kind of fill in wherever, here's a few thoughts.

I think his strengths are finding workflow issues or problems, providing user support, application testing, generate training material, good eye for presenting data and making high quality briefing materials, can run a project.

LPR big picture

- Advocacy (SME)
- build LPR network work with communities to ensure contribution to the data center
- maintain list of ALPR in the state with retention
- policy updates
- expert testimony
- maybe permissions, training on PIPS app
- survey who MA for who has ALPR, planning etc
- configure BOSS alerts to Troops when fixed readers are stationed
- Work with DCJIS on Warrants hotlist and its implementation
- Work with DCJIS on Warrants for DNA hotlist and its implementation
- Retention review with surrounding states
- CopLink LPR deploy
- I'll continue to on this and keep him in the loop;
    - Work with EOTSS on server replace
    - Boss 4.0
    - Support contract
    - Genetech sharing or other community integrations
    - Massport connection
    - mantis

ACISS support

- Overlap support if we lose body's
- Provide additional technical support ACISS
- Provide additional technical support P&E
- Develop training material for P&E, guides and resources
- Track required policy updates for P&E
- Maybe do ACISS livescan and arrest updates
- Maybe start ACISS user group/committee
- Monthly stats/charts and graphs, be the Carol for DHS/DIS and use the data we have, I also have a request into Amy, but she needs a few months to be able to assign an analyst.

Upcoming work

- Capers
- Genetic video project

- CopLink cloud (maybe have Sojka do this)
- Finalize SharePoint decommissioning
- Sonim
- Couple of grants will be rolling in shortly

Subject: Some Upcoming Training Classes
Date: Wednesday, May 8, 2019 3:06:47 PM

Here is a very small portion of classes that are listed on the training calendar at LA HIDTA Training. To view all the classes posted on the training calendar, go to www.lahidtatraining.org. **To register for the below classes or any other classes, visit the LA HIDTA Training website and click on the class that you want to register for. To see the next three months of training, click the "next" button on the upper right side. You can also search by counties. At the top of the training page under "Tags", click on the county that you want to look at and it will show only training for that county.Make sure you check the Training Website on a regular basis as classes are added almost daily. Some fill up before an email blast can even go out.**

Subject: Some Upcoming Training Classes
Date: Tuesday, April 30, 2019 1:48:59 PM

Here is a very small portion of classes that are listed on the training calendar at LA HIDTA Training. To view all the classes posted on the training calendar, go to www.lahidtatraining.org. **To register for the below classes or any other classes, visit the LA HIDTA Training website and click on the class that you want to register for. To see the next three months of training, click the "next" button on the upper right side. You can also search by counties. At the top of the training page under "Tags", click on the county that you want to look at and it will show only training for that county.Make sure you check the Training Website on a regular basis as classes are added almost daily. Some fill up before an email blast can even go out.**

From: Police Technology eXchange
To: O"Riordan, Brian (POL)
Subject: Sourcing Technology? Do it on OUR dime.
Date: Wednesday, October 30, 2019 6:18:07 PM

Will you be joining us at PTX?

POLICE Technology eXchange brings together senior-level IT, Communications and Technology decision-makers face-to-face with law enforcement technology suppliers. This networking opportunity is at **no cost*** to qualified police agency buyers of IT and other technology.

Hurry and apply today because the application deadline is this **Friday, November 1st!**

Event Dates:
December 9-11, 2019

Apply Now to Participate

At the exchange, you'll have one-on-one meetings with leading industry suppliers to talk about ideas, share challenges, and learn best practices. You'll also explore:

Drones | Hybrid Patrol Vehicles | Facial Recognition

- AI & Virtual/Augmented Reality
- e-Citation
- Mobile Data Terminals/Rugged Laptops & Tablets
- ALPR/LPR
- Gunshot Detection Systems
- Intelligence-Led Policing
- Mobile/Rugged Technology
- Investigative Software
- Data/Information Sharing
- Cloud-Based Technology
- Crime Analysis
- Interoperability
- Vehicle Armoring
- Video Storage/Analysis
- Smartphones
- Broadband

To participate, complete the application.

For more information please visit www.PoliceTechnologyeXchange.com or call (800) 576-8788, 9:00am-5:00pm PST

Date: Wednesday, October 30, 2019 6:16:55 PM

Will you be joining us at PTX?

POLICE Technology eXchange brings together senior-level IT, Communications and Technology decision-makers face-to-face with law enforcement technology suppliers. This networking opportunity is at **no cost*** to qualified police agency buyers of IT and other technology.

Hurry and apply today because the application deadline is this **Friday, November 1st!**

Event Dates:
December 9-11, 2019

Apply Now to Participate

At the exchange, you'll have one-on-one meetings with leading industry suppliers to talk about ideas, share challenges, and learn best practices. You'll also explore:

Drones | Hybrid Patrol Vehicles | Facial Recognition

- AI & Virtual/Augmented Reality
- e-Citation
- Mobile Data Terminals/Rugged Laptops & Tablets
- ALPR/LPR
- Gunshot Detection Systems
- Intelligence-Led Policing
- Mobile/Rugged Technology
- Investigative Software
- Data/Information Sharing
- Cloud-Based Technology
- Crime Analysis
- Interoperability
- Vehicle Armoring
- Video Storage/Analysis
- Smartphones
- Broadband

To participate, complete the application.

For more information please visit www.PoliceTechnologyeXchange.com or call (800) 576-8788, 9:00am-5:00pm PST

Subject: A Publication of the LEIU Executive Board - The Source

Image

The LEIU Source is a weekly news publication brought to you by the LEIU Executive Board.

Each Wednesday, we share with you a few of the articles or intelligence-based publications that have come across our desk. We are exicted to see, each week, Law Enforcement Officers, Analysts and Administrators from around the world reading this.

If you have a publication or an article that you feel needs to be shared, please send these to IntelligenceAnalysis@mac.com for review.

If you feel others at your department would benefit from receiving this publication, please forward this email. At the bottom of this publication is a link where they can add their email to the distribution list.

BAE wins open source intelligence

contract from the Army

Image

The Army has awarded BAE Systems a $437 million task order for open source intelligence support, the company announced Oct. 15 during the 2019 Association of the United States Army conference.

As part of the task order, BAE Systems will provide the Army and Army Intelligence & Security Command (INSCOM) approved partners with open source solutions to publicly available data.

“We’re proud to continue to partner with the U.S. Army and support their critical national security missions with this new capability,” Peder Jungck, vice president and general manager of BAE Systems’ intelligence solutions business.

The company won the initial award of the five-year task order and began ramping up in August, Jungck said. The task order is an extension of projects the company has been doing for the

Army, but this is the first time the work been consolidated and awarded as a larger contract, he explained.

“If you look at contracts in general around OSINT there’s been kind of small ones, there’s been lots of pilots out of agencies and even within the Army and throughout INSCOM there were different kind of brigades and battalions that had their own set of tools," he said. "This is one of the first of the really large OSINT and AI consolidation contracts. I don’t think anybody’s really had a large one like this.”

Calif. police stand by cop after video released in 2017 OIS of murder suspect

Image

FRESNO, Calif. — Community activists are expressing outrage after seeing video footage that shows a Fresno police sergeant fatally shooting an unarmed 16-year-old boy as he fled during a

foot pursuit.

Meanwhile, the local police union and supporters of law enforcement have stepped up in support of the sergeant, saying he acted within guidelines while pursuing a murder suspect.

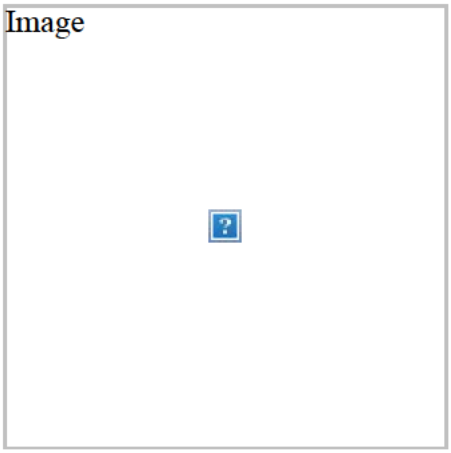
The footage shows Sgt. Ray Villalvazo firing a single shot into the back of Isiah Murrietta-Golding's head, according to a lawsuit filed on behalf of the teen's family.

The video was captured on a surveillance camera at a daycare facility on April 14, 2017, and was released by attorney Stuart Chandler, who's representing the family of Murrietta-Golding. The boy's family alleges the sergeant used excessive and unlawful deadly force, and committed assault and battery with negligence.

Additionally, in footage released from a police officer's body camera, one officer is heard shouting "good shot" as officers handcuff and search the already prone Murrietta-Golding.

Asia has an organized-crime problem. Canada is well placed to help

Image



Jeremy Douglas is the regional representative for the United Nations Office on Drugs and Crime (UNODC) for Southeast Asia and the Pacific and a former UNODC representative for Pakistan. The opinions expressed in this commentary are his.

More than a few eyebrows went up last week when Tse Chi Lop – a 55-year-old Canadian man – was accused of being arguably the biggest drug trafficker in the history of Asia.

Mr. Tse is suspected – by police in Myanmar, Australia and Taiwan, and by the United Nations Office on Drugs and Crime (UNODC) – of being the leader of Sam Gor, or Brother Number Three, a supersyndicate largely responsible for the dramatic shift in recent years in organized crime away from drugs such as heroin and toward synthetics, such as methamphetamine, ketamine and fentanyl. It's a shift that has been driven by control and profit, since synthetics offer many advantages to

criminal organizations: Labs can be quickly set up or moved; they are not subject to external conditions such as climate, nor do they require large work forces; and production can be rapidly scaled up to drive the market. Put these things together and it means the disruption of the traditional drug business and the heavily concentrated profits that come with it.

Florida Senator Rick Scott Announces Legislation To Address 'FBI Failures' Regarding Parkland Shooting

MIAMI (CBSMiami) – Florida Senator Rick Scott announced legislation Thursday to hold the Federal Bureau of Investigations accountable for its 'failures to address critical deficiencies in its handling of actionable intelligence' in regards to the mass shooting at Marjory Stoneman Douglas High School in 2018.

The 'Threat Information Protocol for Sharing (TIPS) Act' is supported by Stand with Parkland, an organization founded by the family members of the victims of the Parkland shooting.

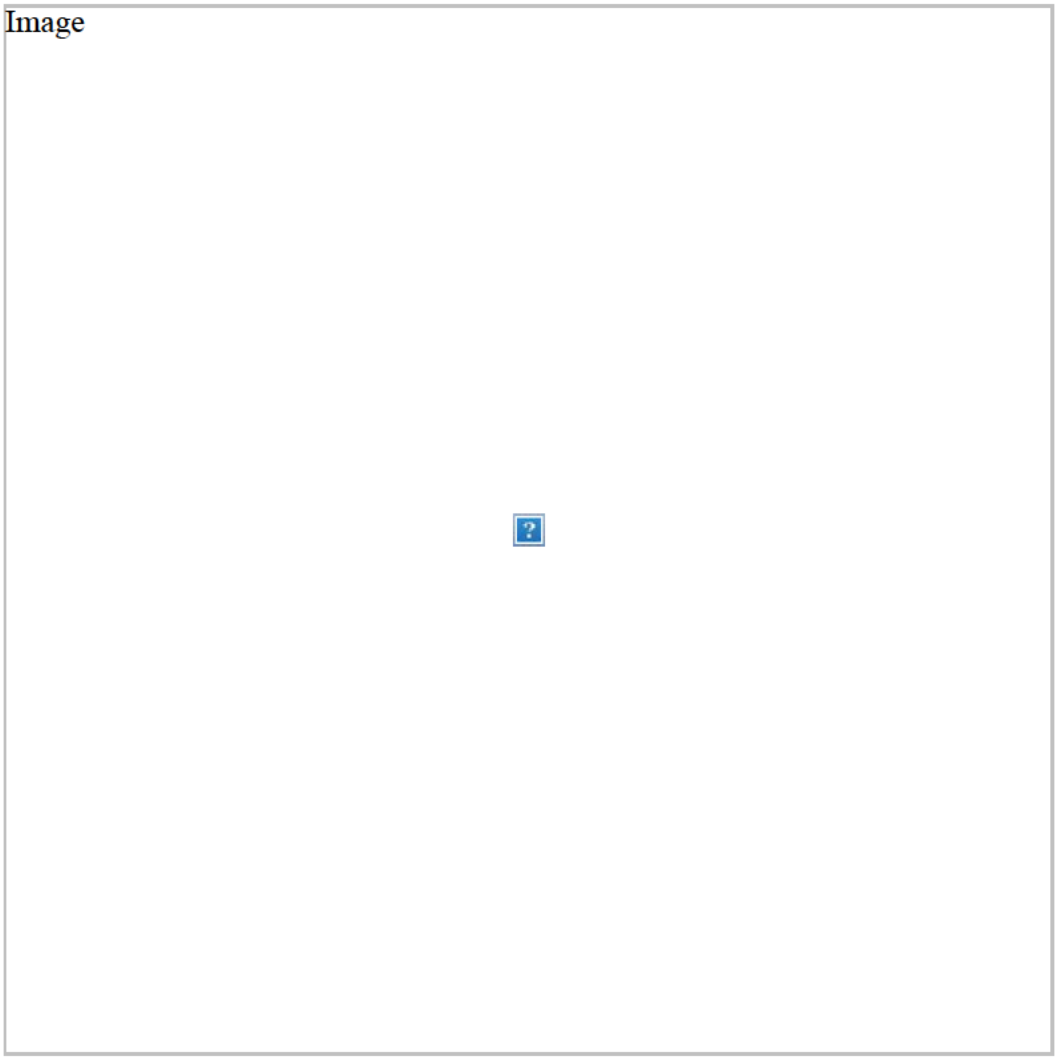
"Not a day goes by that I don't think about the 17 souls that were taken from us in a brutal act of violence at Marjory Stoneman Douglas High School. Following the tragedy, we all worked together to pass the Marjory Stoneman Douglas High School Public Safety Act to make our schools safer and prevent future tragedies, but we aren't finished. We cannot

accept the repeated failures of the FBI to properly investigate and act on specific tips received about the Parkland shooter, as well as other perpetrators of mass violence in Florida. I'm proud to stand with the family members of the victims to announce the TIPS Act, which bridges the gap between federal and state law enforcement agencies by mandating information sharing of all state-specific criminal intelligence tips. This is about getting information on threats into the hands of the right people, who can ultimately prevent violence and protect our families," Scott said.

Majority of Mexicans Say Organized Crime Stronger than Government after El Chapo's Son Released

Image

A majority of Mexicans see organized crime as more powerful than the Mexican government after government forces capitulated to drug-cartel strongmen and released the son of the former cartel leader Joaquín Guzmán, known as “El Chapo.”



About 56 percent of Mexicans say they believe organized crime is stronger, while only 33 percent say the government is stronger, according to a poll by the Mexican newspaper Reforma.

Mexican authorities were forced on Thursday to release Ovidio Guzmán López, El Chapo’s son, shortly after capturing him, when the Sinaloa cartel laid siege to the city of Culiacán and surrounded Mexican troops, taking eight soldiers hostage. Officials said at least 14 people died during the clashes between cartel members and Mexican soldiers.

49 percent of respondents in the Reforma poll disagreed with the decision to release López, while 45 percent said they supported it. Residents of Culiacán expressed relief that the government had surrendered, saying the decision prevented further violence.

Mexican lawmen get FBI training to combat organized crime, terrorism

Image

JUAREZ, Mexico — Three Chihuahua state lawmen recently completed intelligence and intervention training courses sponsored by the FBI, according to the State Security Commission.

Alvaro Serrano Escobedo, the commission's operations director, received training on anti-terrorism, intelligence

gathering, leadership and the combat of organized crime at FBI headquarters in Quantico, Virginia. The training is part of the FBI's Mexican Law Enforcement Executive Development (MEXLEED) program, the commission said in a news release.

Ginés Jaime Ruiz García, first officer of the Chihuahua State Police, and Jesús Alejandro Cruz Rangel, who heads rural operations for the agency, attended the FBI's Mexican American Liaison and Law Enforcement Training (MALLET) program in South Padre Island, Texas, the commission said.

The three lawmen were among 30 duly vetted Mexican officials chosen by the FBI for training this year, the commission said.

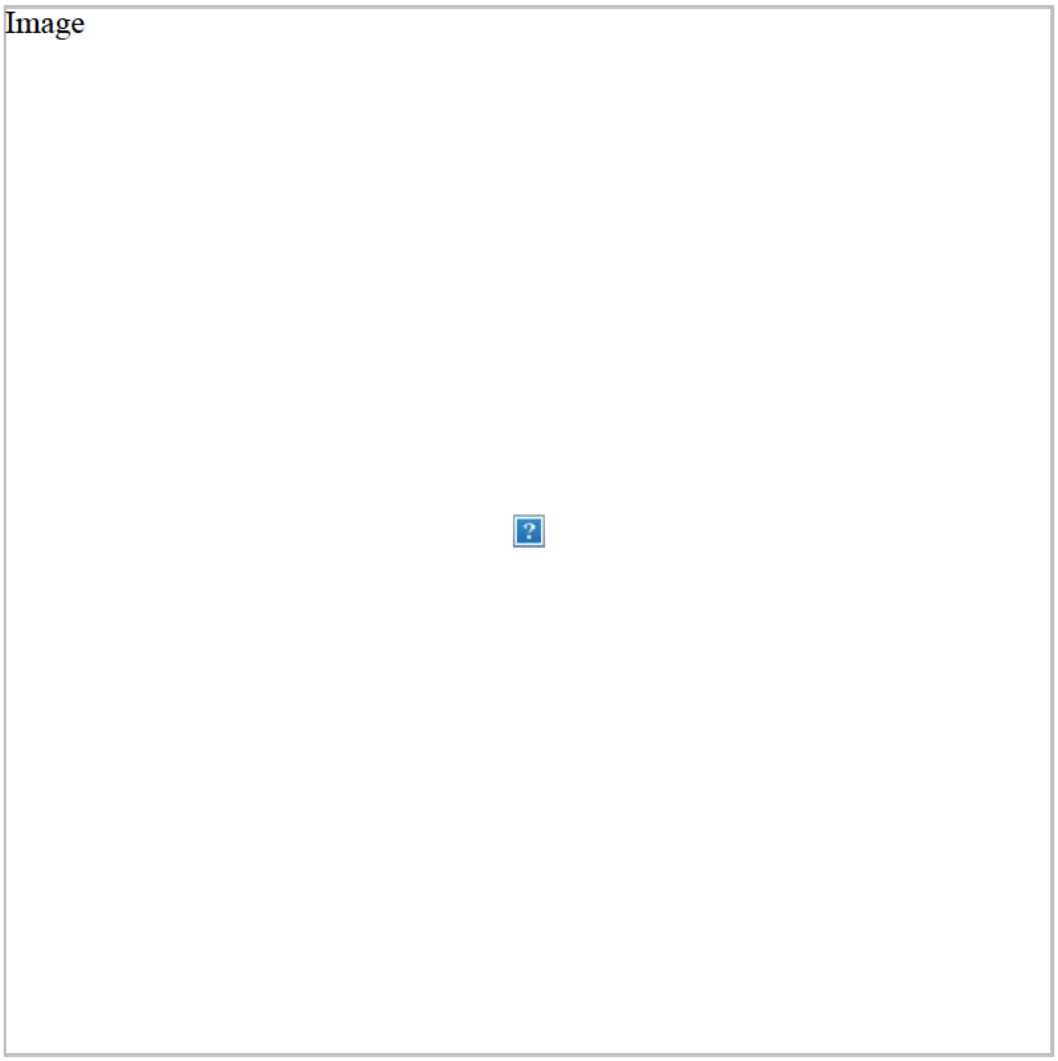
63 accused drug dealers plead guilty in heroin, fentanyl and cocaine trafficking rings



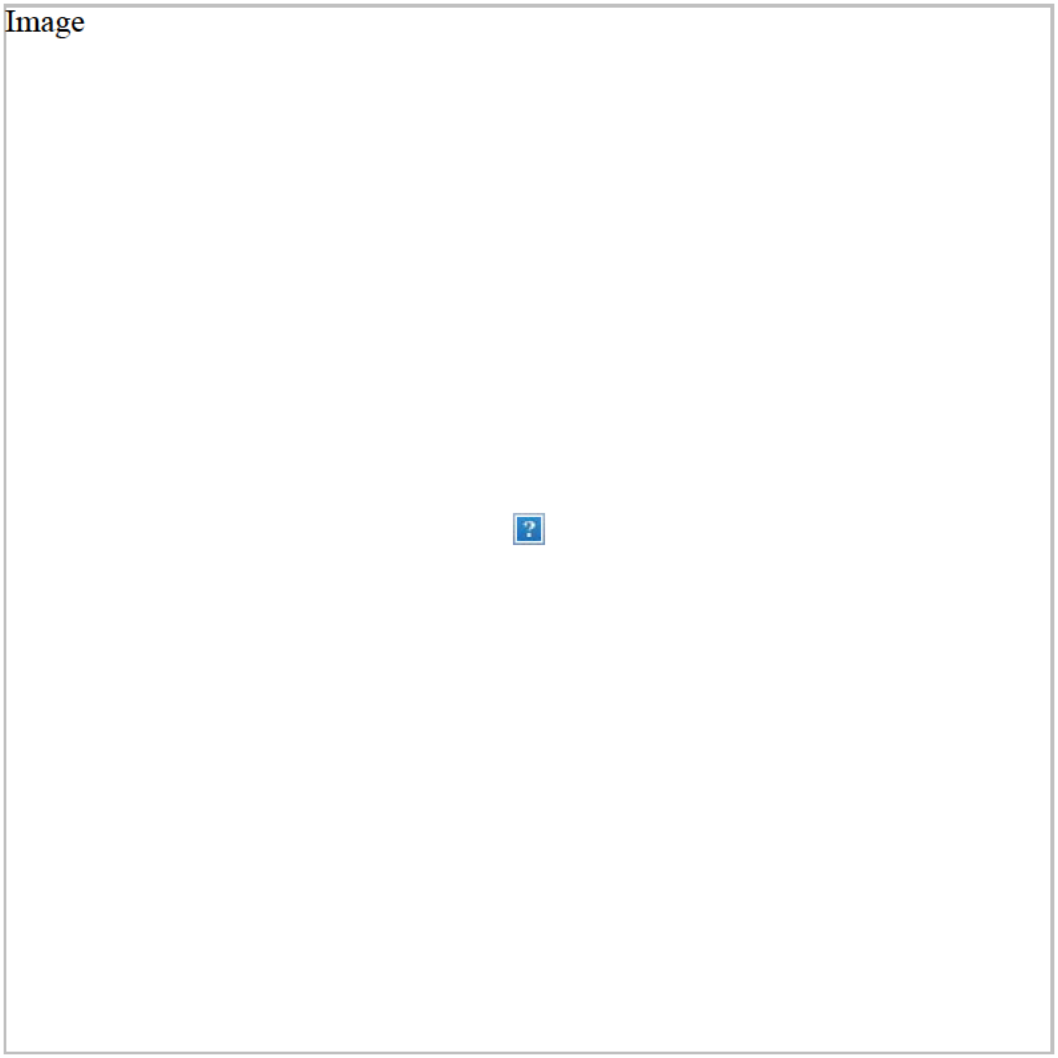
Image

SYRACUSE — New York State Attorney General Letitia James has announced the guilty pleas of 63 people for their roles in two major narcotics trafficking operations that transported heroin, fentanyl, and cocaine to Onondaga, St. Lawrence, Oswego, Oneida, and Jefferson counties.

The investigation resulted in the recovery of approximately 4,700 bags of heroin and fentanyl, worth approximately $140,000, and approximately 2 kilograms of cocaine, worth more than $200,000, according to a news release from the Attorney General's office.

"These individuals flooded our communities with dangerous drugs that are putting New Yorkers at great risk," said Attorney General Letitia James in the news release.

House bill would give border agents tool to detect synthetic opioids



A bill that would give U.S. Customs and Border Protection (CBP) agents the equipment to detect synthetic opioids has been introduced in the U.S. House.

The DHS Opioid Detection Resilience Act of 2019 requires the Commissioner of CBP to procure chemical screening devices that allow border patrol agents to identify narcotics, including synthetic opioids, with purity levels of less than 10 percent. A 2018 study by the Drug Enforcement Administration (DEA) found that most fentanyl seized at the southwest border tends to be less than 10 percent pure. These changes would fill the gap that currently exists in identifying these synthetic opioids.

“Stopping the flow of illegal drugs across our southern border and at ports of entry is a top priority for our CBP law enforcement officers. This includes fentanyl and other synthetic opioids that can be difficult to detect. Our legislation ensures that DHS has the necessary equipment to detect synthetic opioids and the ability to adapt as smuggling methods evolve. We want to prevent this poison from ever reaching American communities, and our bill helps law enforcement carry out that mission,” Rep. Clay Higgins (R-LA), the bill’s sponsor, said.

Teens brawl with police in Brooklyn subway station

Image

BROOKLYN, N.Y. – A video showing members of the NYPD

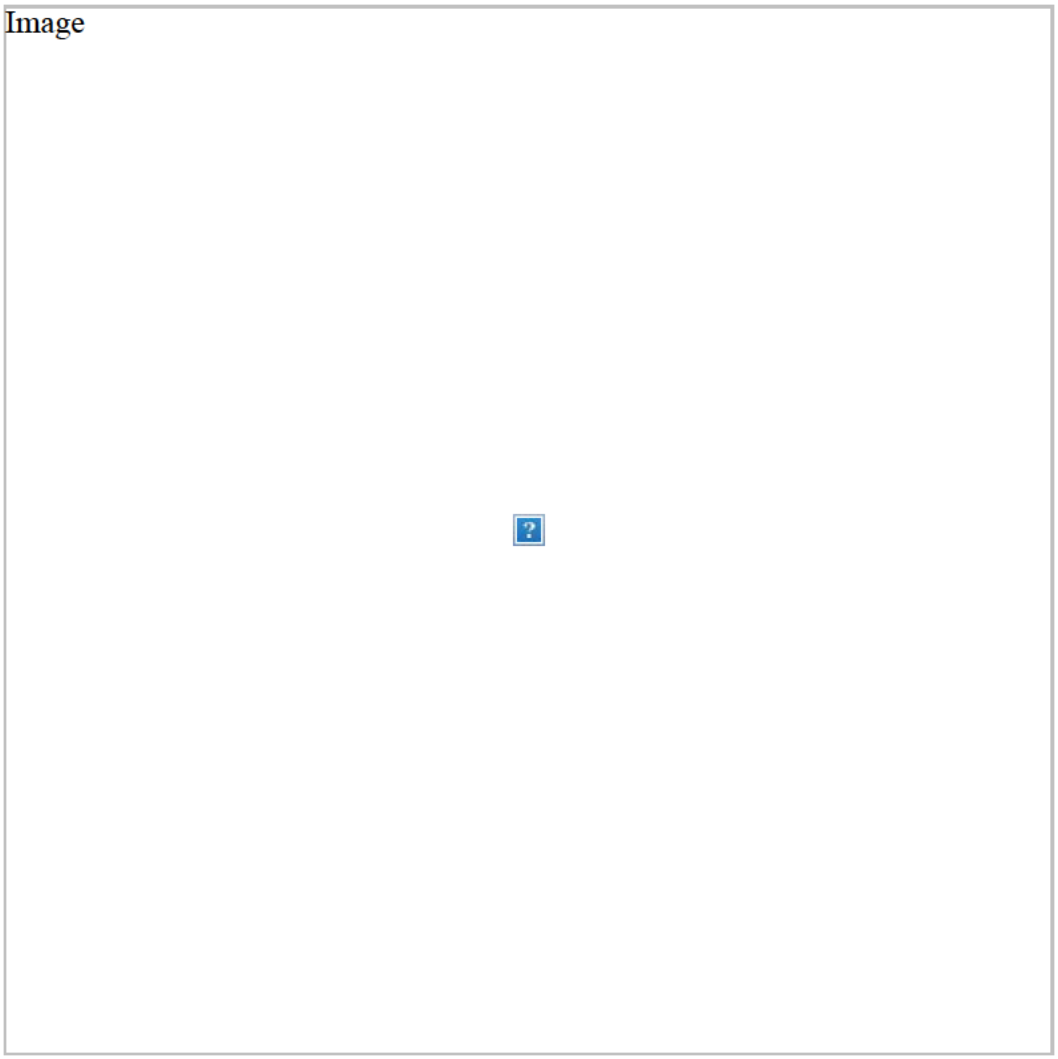
trying to break up a fight and instead ending up in an all-out brawl with a mob of New Yorkers has gone viral… and media outlets were quick to condemn the cops who were involved.

The Post said that the incident unfolded on Saturday morning around 2:30 a.m. as officers responded to the scene of a fight on the platform of a subway station. The fights had originally began up on Jay Street between two groups of people before the violence spilled down into the station.

Cell phone video captured at the scene shows officers rush into the area and try to pull the brawling teens apart, attempting to put one of the suspects in handcuffs. Other individuals on the outside of the skirmish appear to be pulling the officers away.

The heartbreaking final text this human trafficking victim sent before dying in UK truck

Image



A 26-year-old Vietnamese woman texted her mom frantically that she was suffocating in the truck in which the bodies of 39 people were found in England — and apologized that her journey to a better life ended tragically, according to a report.

“I’m sorry Mom, my path to abroad didn’t succeed,” Pham Thi Tra My wrote in a series of messages about 10:30 p.m. Tuesday, according to the Mirror.

“Mom, I love you and Dad so much! I’m dying because I can’t breathe,” she added.

News about the young woman’s final moments emerged as two more people were arrested after eight women and 31 men were found dead Wednesday in a case that has shocked Britain and made headlines around the world.

Labor Trafficking Is A Crime You Probably Don't Notice

It has been more than four years since Catherine Piedad called 911 from a $1.7 million home in Newton.

In 2015, she worked long hours to care for a Russian family's young twins. Her passport was taken, and she slept in a small room with little light and nowhere to store her clothes. When she asked to be paid, her employer threatened to send her back to the Philippines. She feared deportation and did not know who to trust.

Despite her fear, she called 911. Law enforcement helped her

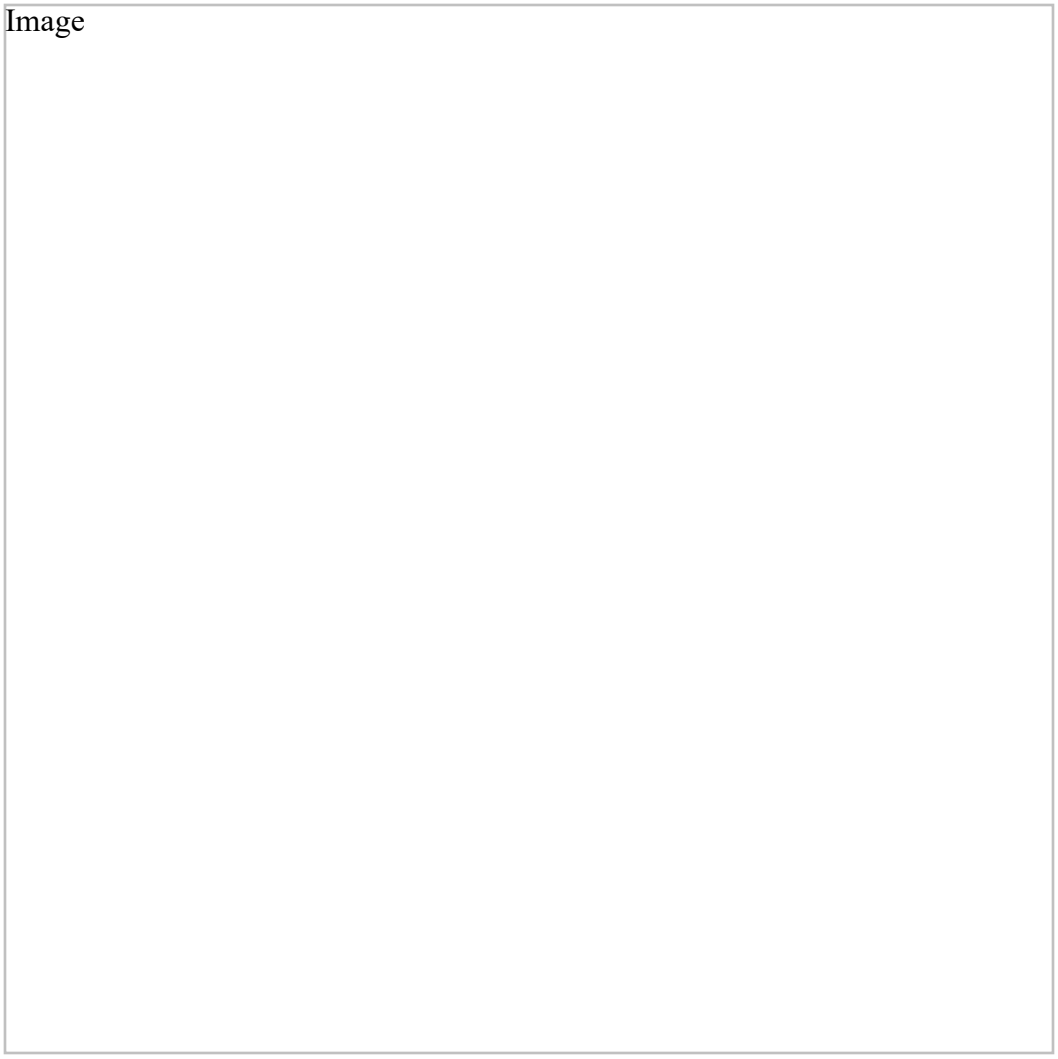
to leave the family's home but did little else. They did not see her case as "labor trafficking." Instead, the incident was labeled a "labor dispute." Piedad struggled to access her rights — despite the robust federal and state laws designed to protect her.

You've probably heard of sex trafficking, which often involves perpetrators who force, trick or coerce victims into sexual servitude. Although difficult to see, sex trafficking is often visible to law enforcement through the internet: perpetrators sometimes leave a footprint online, which can provide a critical entry point for criminal investigations.

The Mafia's history in Las Vegas: From Bugsy Siegel to Anthony Spilotro

Image

Benjamin “Bugsy” Siegel had been at the helm of the Flamingo for only six months in June 1947 when he was killed in a hail of gunfire at his girlfriend’s Beverly Hills, Calif., home.



But his vision for the Flamingo, the first resort-style hotel on the Strip, was the beginning of a 50-year relationship between Las Vegas and traditional organized crime that helped define “Sin City”and turn it into one of the world’s top tourist destinations.

“The general perception on the part of the public is that Las Vegas and the mob have been inextricably linked, and I don’t think it will ever be extricated,” former longtime state archivist Guy Rocha says.

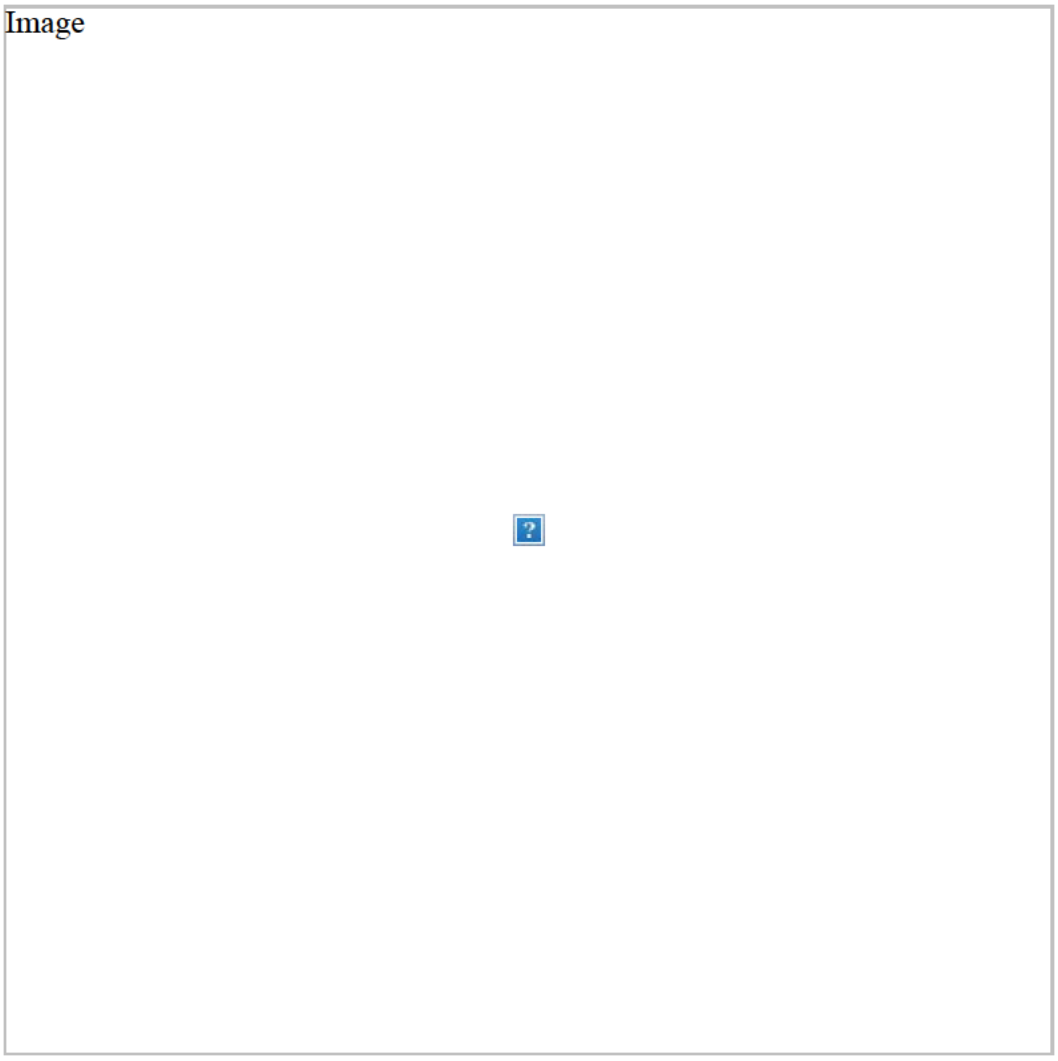
Groundbreaking books such as “The Green Felt Jungle” in 1963, which revealed the mob’s early grip on the city, and popular movies such as “The Godfather” in 1972 and “Casino” in 1995 enhanced this perception through the years.

So did the buzz on the Strip over the Rat Pack, led by headliner Frank Sinatra and his associations with high-profile underworld figures.

New Bill To Bring Illegal Gambling In California Closer To An End

Gambling in the US, as well as in the whole world, is one of the most entertaining and lucrative endeavors. Not only does it provide fun and joy to the players, but it also offers an opportunity to make a fortune.

The gambling operators all around the world are doing everything they can to attract new customers. From online free spins for Australians to no deposit bonuses and other promotions in other countries, casino operators are full of such impressive offers.



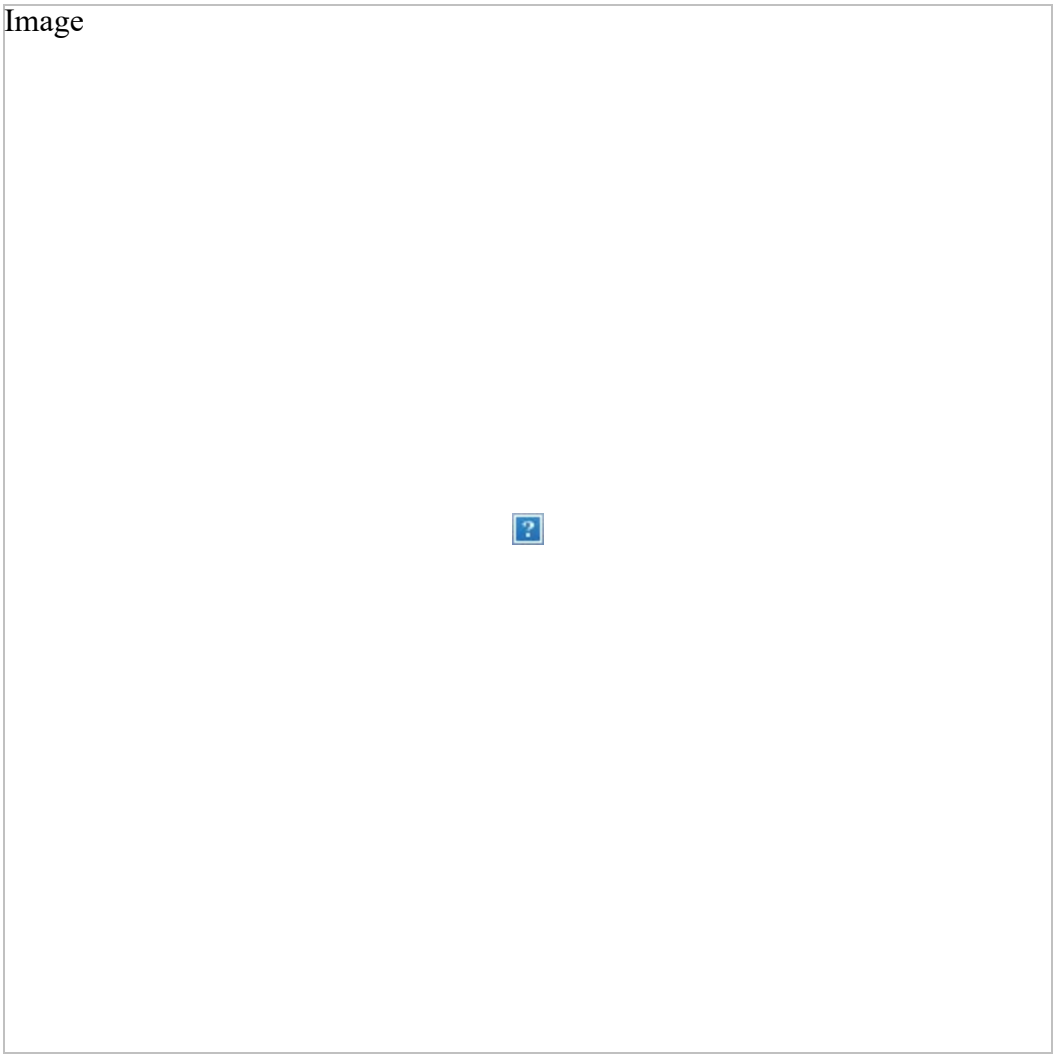
However, the industry isn't just this fairy-tale source of joy and money. It also has its drawbacks. With problem gambling, organized crime, and money laundering prospects, gambling has long been considered threatening to society.

That's the reason why the US government, alongside other

governments worldwide, have been eager to put the industry under the limitations and protect the interests of their citizens. With the regulatory restrictions and measures, the government officials have deemed ill-gotten gains illegal and contributed to ending gambling-related crime.

Best true-crime books of all time

Image



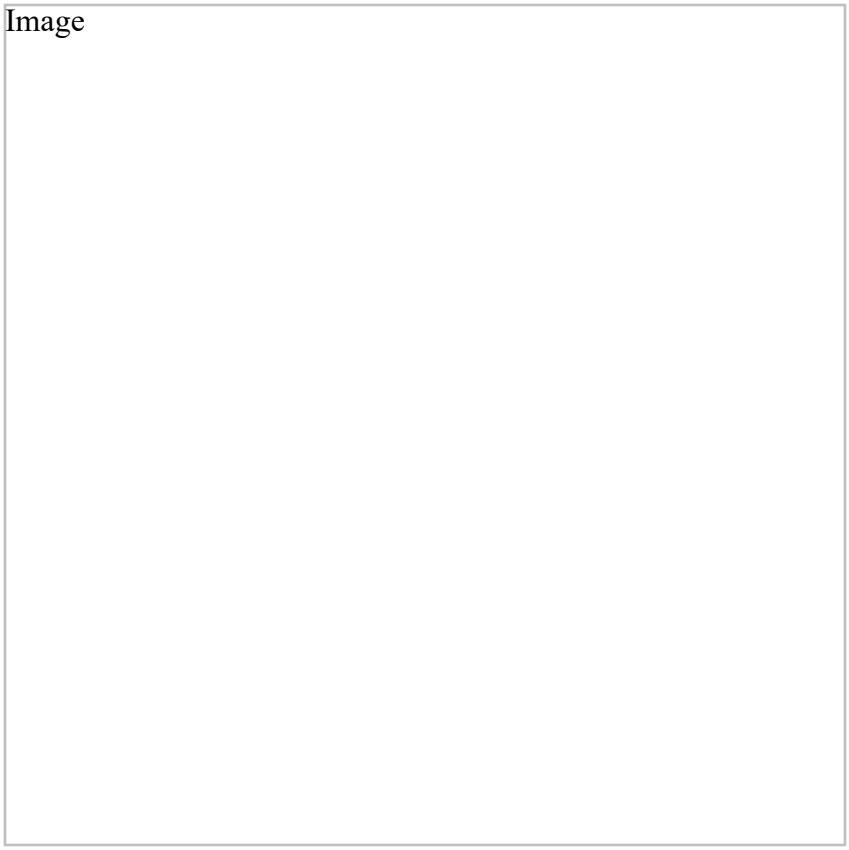
Terrifying tales are not the domain of fiction alone. If you are in search of bone-chilling scares, we recommend you turn to true crime. The key word being true. That's right, no imagination needed. Including stories about such horrific figures as Charles Manson and Ted Bundy, Goodreads compiled a list of the top 10 true-crime books

of all time based on the lists, reviews and ratings of their more than 90 million members.
AP

How a Facebook Crime Page Led to Arrest of N.C. Woman in Cold Case Killing of Sister-in-Law

Image

A Facebook page devoted to the murdered, missing or miscreant residents of western North Carolina is being credited with helping authorities bring charges in the 15-year-old cold-case killing of a missing mom of four, allegedly at the hands of her sister-in-law.



The tip that led authorities to a “shallow grave” containing the remains believed to be those of 29-year-old Deborah Elaine Deans “proved to be very accurate and very reliable,” Nash County Sheriff Keith Stone told reporters last week.

But the tipster did not go to police at first.

Instead, the unidentified person sent information about the alleged crime to a woman who created and runs a Facebook page called Fighting Crime News and Who’s Wanted, an online outlet whose updates range from wanted posters to promotions of local elections and warnings about traffic tie-ups.

On October 20, a re-post about the unsolved missing-person case of Deans — who was last seen around 9 a.m. on January 19, 2004, at a residence on Wiley Road in Spring Hope — elicited a “very detailed” response that was forwarded to authorities by the Facebook page creator, said Nash.

Google Maps Adds ability to see speed limits and speed traps in 40+ countries

Google Maps is gaining some features previously exclusive to Google's navigation app, Waze. The company confirmed it's rolling out the ability for Google Maps users to see speed limits, speed cameras and mobile speed cameras in more than 40 countries worldwide — an expansion of its earlier launch of these features, which were previously limited to select markets.

The change was noted earlier by ZDNet and, of course, Reddit.

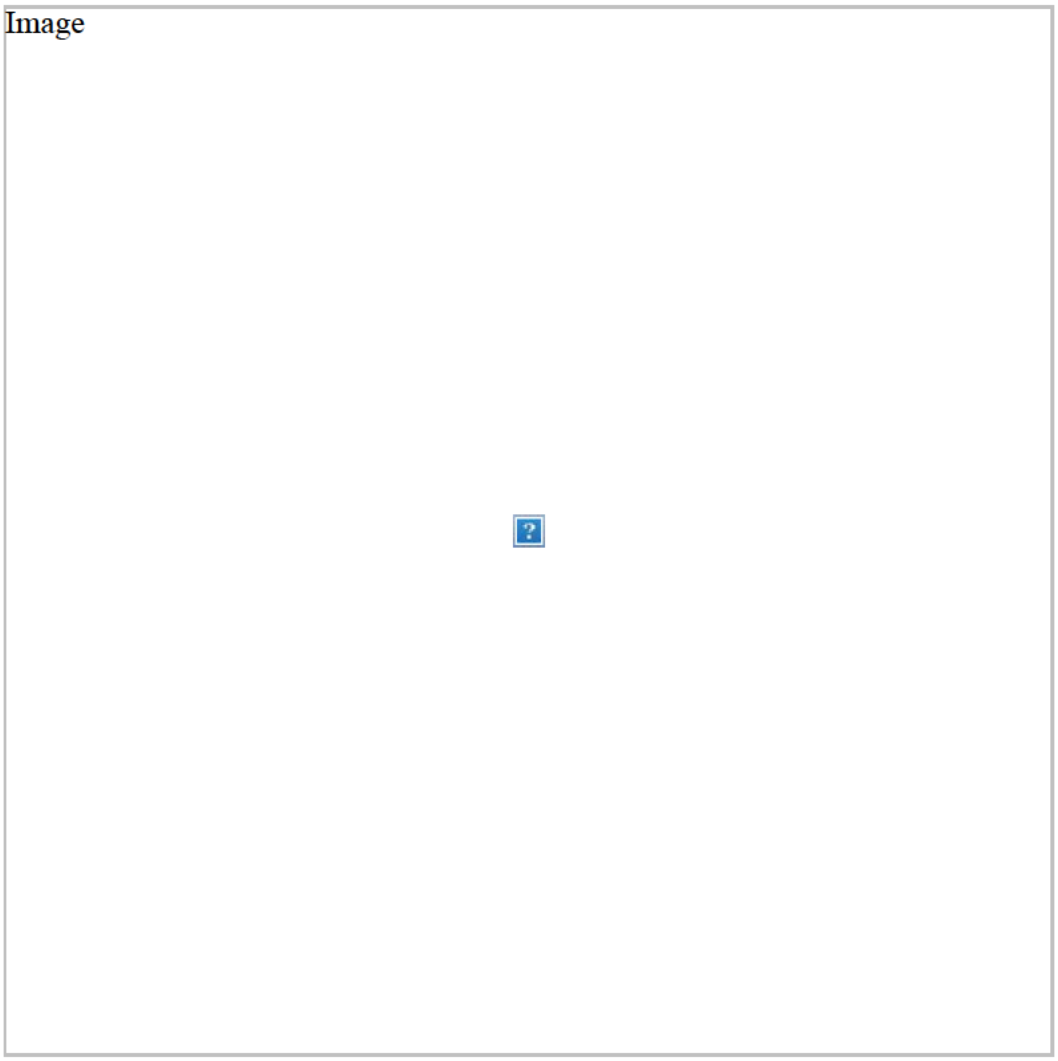
Google confirmed with TechCrunch the full list of supported countries now seeing the speed cameras, which currently includes: Australia, Brazil, U.S., Canada, U.K., India, Mexico, Russia, Japan, Andorra, Bosnia and Herzegovina, Bulgaria, Croatia, Czechia, Estonia, Finland, Greece, Hungary, Iceland, Israel, Italy, Jordan, Kuwait, Latvia, Lithuania, Malta, Morocco, Namibia, Netherlands, Norway, Oman, Poland, Portugal, Qatar, Romania, Saudi Arabia, Serbia, Slovakia, South Africa, Spain, Sweden, Tunisia, and Zimbabwe.

The Ethics Board of One of the Largest Vendors of Police Tech (Axon) Makes the Case Against ALPRs

Image

Automated License Plate Readers (ALPRs)—a mass surveillance technology that allows law enforcement to record the location and travel patterns of nearly every driver on the road—are poorly regulated, threaten privacy, and worsen the racial and economic inequalities already ingrained in our justice system.

That's what EFF and other advocates have been saying for years. But now it's coming from an oversight body formed by one of the nation's largest police tech vendors.



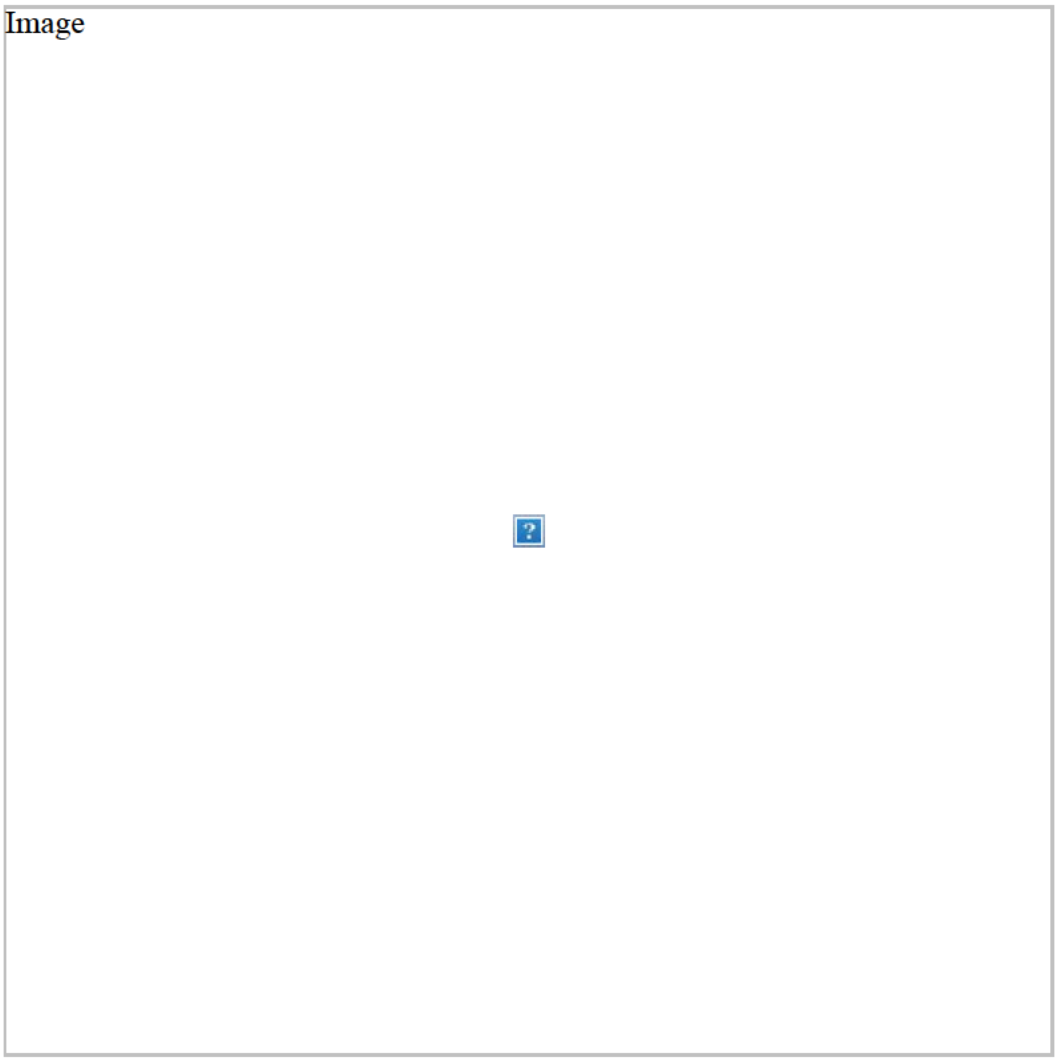
Last week, the AI and Policing Technology Ethics Board at

Axon, a tech company best known for popularizing body-worn cameras and the Taser, released a damning report concerning the commercial sale of ALPRs. The board, whose purpose is to “help guide and advise the company on ethical issues,” concluded that while it sees the potential value of ALPRs, their current role in society is too broad and problematic. The sheer amount of information that ALPRs gather and store was also a concern for the ethics board—particularly when privately collected data is often for sale to whoever wants to buy it.

ALPR systems include cameras that can be mounted on vehicles like police patrol cars or private tow trucks, or on stationary locations such as streetlights or overpasses. These cameras capture every license plate that passes and index them based on time, date, and location. A police officer can search ALPR databases to learn where a vehicle was in the past or even get real-time alerts when a driver passes by an ALPR camera. Research by EFF, MuckRock, and others have found that even small police departments are able to collect millions of plate scans a year, and often agencies are sharing this data with hundreds of other agencies across the country. Private companies also use ALPR and sell their data to police, financial lenders, insurance companies, private investigators, and debt collectors.

Amazon's Ring is 'the Neighborhood Watch of 2020,' police say as doorbell cams proliferate

Image



That's all it took Livonia Police to arrest a man, who hours earlier was caught on video posted on Ring's Neighbors app rummaging through the bed of a pickup parked in a driveway.

Detectives quickly recognized 60-year-old Jeffrey Couch when they saw the video posted by an app user in mid-August. Within a week, he pleaded no contest in court to two attempted larceny charges and was sentenced to 30 days in jail.

"I truly believe this is the Neighborhood Watch of 2020," said Livonia Police Capt. Ronald Taig, whose force was one of the first law enforcement agencies in Michigan — and is one of more than 400 across the country — to partner with the Ring Neighbors app, owned by Amazon.

How the deadly drug fentanyl is making its way to the US

Image

Trump administration officials are divided over part of a proposal to crack down on illicit versions of fentanyl, the deadly synthetic painkiller that President Donald Trump targeted in declaring a national opioid abuse emergency.

In an inter-agency dispute that highlights the challenges of curbing opioid abuse, the US Drug Enforcement Administration (DEA) is publicly backing tighter rules for fentanyl analogs, which are slightly altered copycat versions of the powerful drug fueling an explosion in overdoses.

In this case, the bill would cut the Food and Drug Administration out of the time-consuming review process by

letting the DEA permanently classify illicit fentanyl analogs as Schedule I drugs, like heroin, which are deemed to be addictive with no medical use.

The DEA says these legal changes would help prosecutors keep pace with criminals who constantly churn out chemically tweaked fentanyl analogs to evade strict Schedule I regulations.

Of 70,200 US drug overdose deaths in 2017, according to the CDC, about 41% involved synthetic opioids, such as fentanyl and illicit analogs of it. Most of them are made in China.

Fentanyl, some versions of which are approved to treat cancer pain, is 100 times more potent than morphine.

Trump Orders Study of Root Causes of Crime, Policing Practices

Image

President Trump on Monday ordered Attorney General William Barr to establish a new commission to study crime and law enforcement with the goal of recommending “actions that can be taken to prevent, reduce, and control crime, increase respect for the law, and assist victims.”

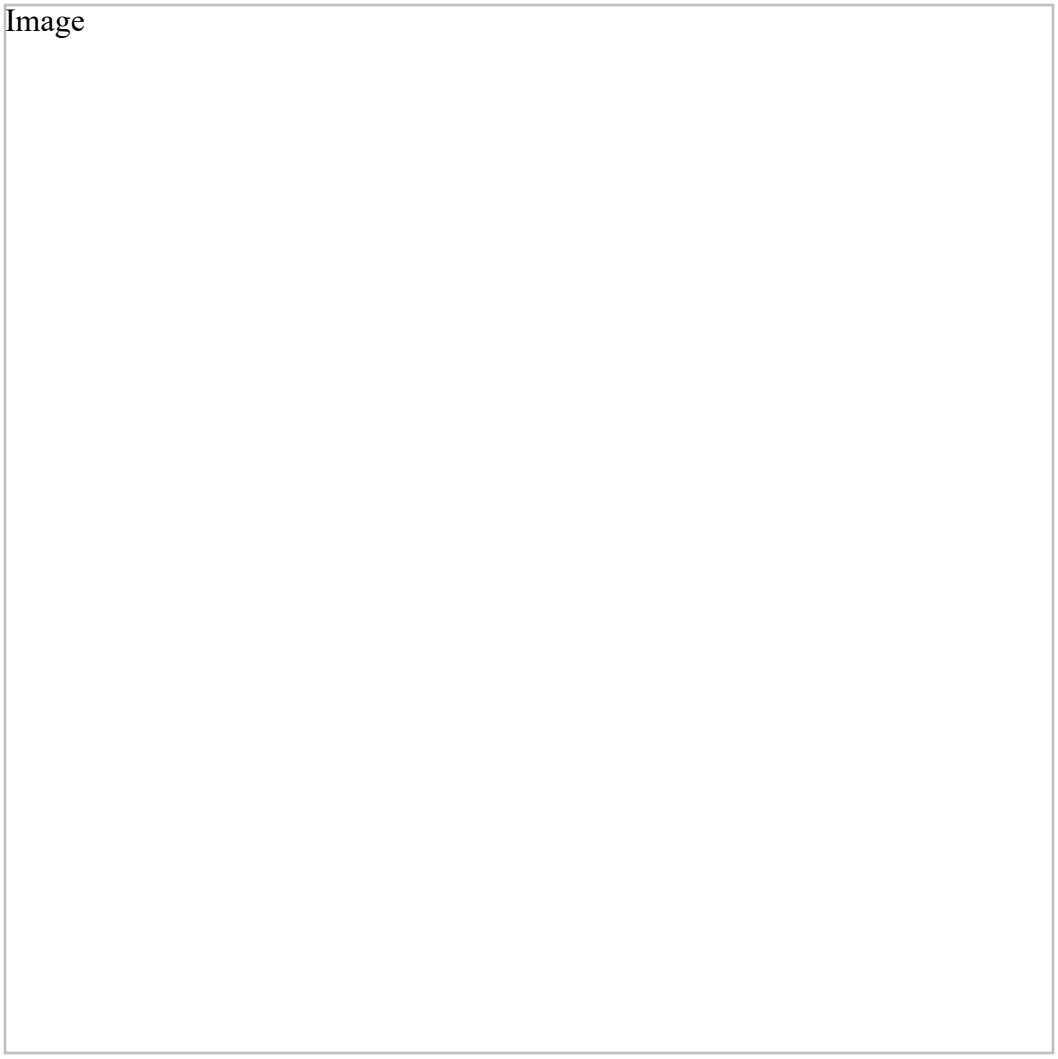
Following remarks in Chicago at the annual International Association of Chiefs of Police conference, the president signed an executive order establishing the Commission on Law Enforcement and the Administration of Justice. The commission will study the influence of substance abuse, homelessness and mental illness on crime as well as examine best practices to recruit, train and support law enforcement, among other things.

“Rigorous study of crime, including its causal factors, and current law enforcement practices is essential to assessing our

current criminal justice system's merits and opportunities for improvement," the executive order stated. "Public safety and proper policing are issues of both national and local significance that continue to require the close cooperation and coordination between the Department of Justice and state, local, and tribal law enforcement."

Quality Afterschool Programs Proven to Reduce Crime

Image



As a member of your District Attorney's Office for almost 30 years, and your DA for nearly 10, I've learned that the hours after school lets out are the prime time for juvenile crime.

It is between these hours of 2 to 6 p.m. that youth are more likely to be arrested for assault, theft and drug-related crimes.

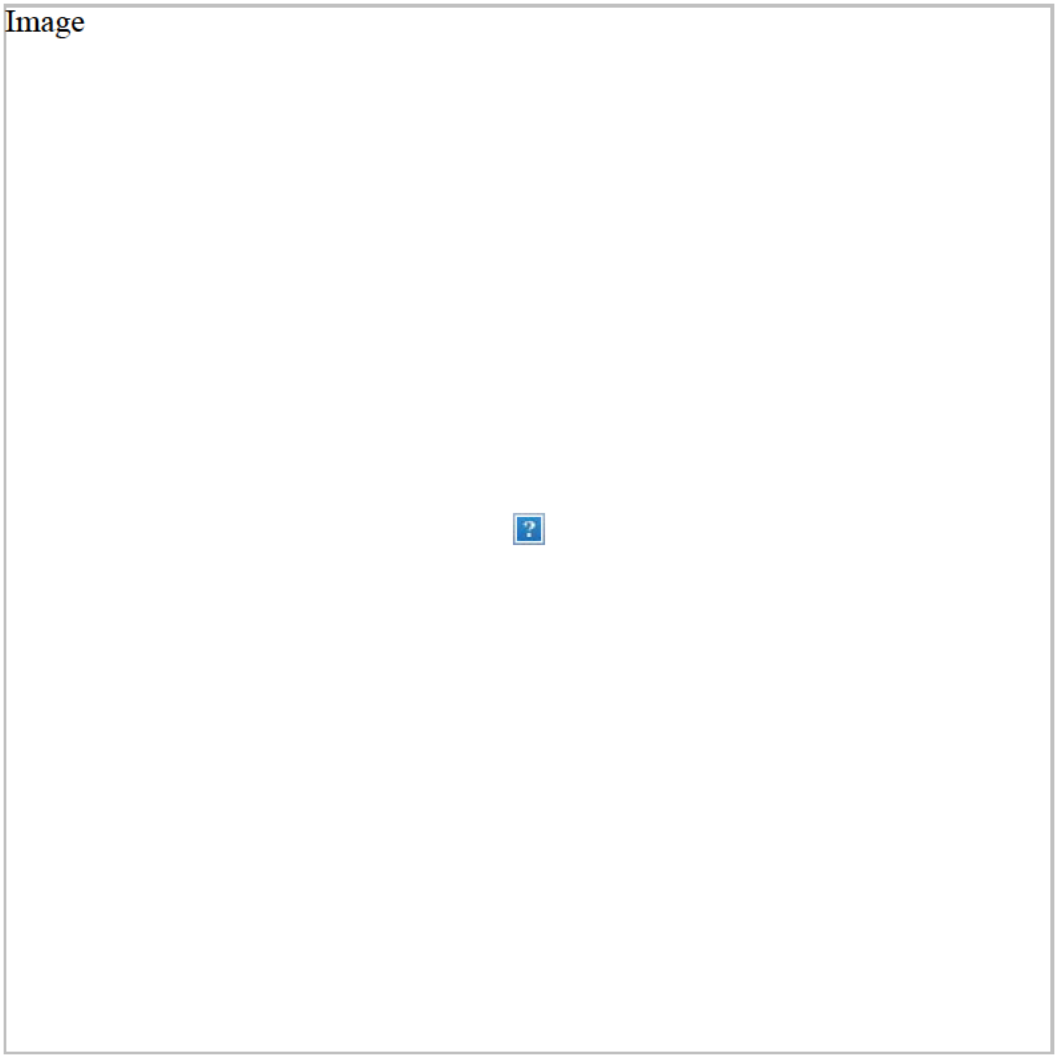
Quality afterschool programs have been proven to reduce these crimes in our community, keep students engaged, and improve academic performance and student behavior.

A new report from Fight Crime: Invest in Kids shows that when youth have access to high-quality, affordable afterschool programming, they benefit immensely from homework help and outdoor activities, and they're less likely to commit or become victims of crime.

Australia's government is floating an idea to scan internet users' faces before they can watch porn online

Australia's Department of Home Affairs has touted an idea to use facial recognition software in order to verify internet users ages before they can access pornography or gambling websites.

In its parliamentary submission, the department says that its Document Verification Service and Face Verification Service — though broadly intended to be used as systems for fighting crime and identity theft — could also be used by police for age verification controls.



"This could assist in age verification, for example by preventing a minor from using their parent's driver licence to circumvent age verification controls," the submission states.

"Whilst they are primarily designed to prevent identity crime, Home Affairs would support the increased use of the

Document and Face Verification Services across the Australian economy to strengthen age verification processes."

Police turn to hackers in Australia's first crowdsourced attempt to find missing people

Image

For decades the traditional 'missing person' poster has been used to enlist the community's help to find individuals who may be in danger.

But with more than 2,600 Australians now listed as a "long-term" disappearance, the federal police are trying what they hope will be a more successful tactic: turning the search into a

game.

More than 350 internet sleuths and "ethical hackers" — hobbyists and professionals — gathered at 10 locations around the country on Friday in a national missing-persons "hackathon".

The aim was to generate leads for 12 of Australia's most frustrating cold cases, using sophisticated but legal methods of trawling the internet.

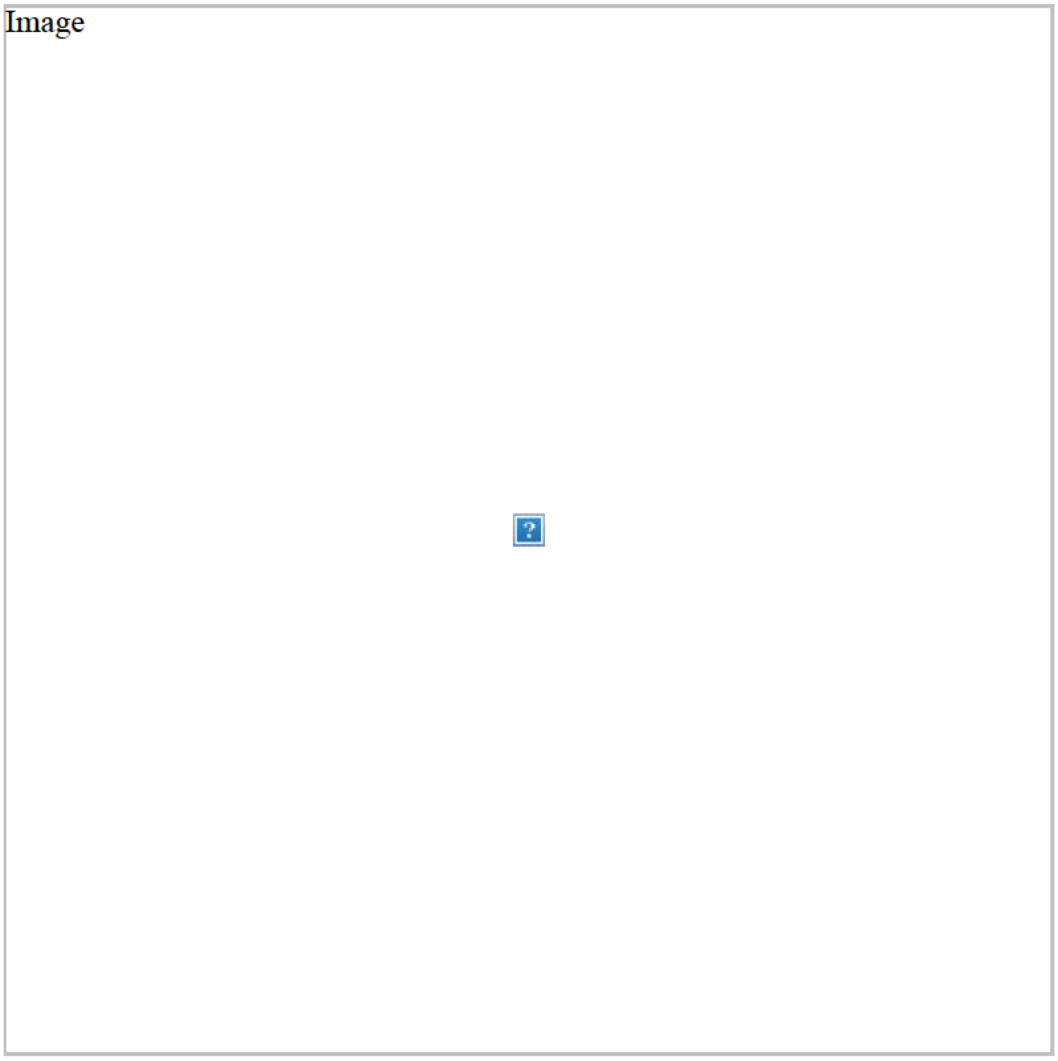
And organisers said the results were astounding: 100 leads were generated every 10 minutes the competing teams worked.

Police overseas have used crowdsourcing in the past for help with isolated cases, aided by these largely voluntary "open-source intelligence" (OSINT) enthusiasts.

But Linda Cavanagh, of the Canberra Cyber Security Innovation Node, said the Australian event was the first of its kind to be deployed on a national scale.

---

10 of the Best Tools to Find Relevant Influencers on Social Media



Image

While it's become a much bigger consideration in recent years, influencer marketing, as a practice, has actually existed for a very long time. In the past, however, influencers were only on TV or in magazines, and unlike social media, TV and newspapers are limited, which led to a situation where a select number of celebrities were able to charge tons of money for making an ad for Pepsi or Swatch in order to influence consumer behavior.

With the birth of social platforms, everything changed. The Internet has no limits, there can be as many influencers as the world requires. They can be of any age and social status, and in any area of expertise (or no area of expertise). And they can work with any brand.

How Your Volunteering Trip Could Contribute To Human Trafficking

Image

The advent of cheap air travel and Instragammable holiday photos, combined with a longing for meaning, has created a new breed of traveler: the voluntourist. This ever-growing trend describes people, most often young and affluent Westerners, who travel to the global South to help with community projects.

While no doubt sweetly intentioned, there is considerable concern over the fad of “voluntourism” and whether it does more harm than good for the communities in developing countries – especially when it involves children or work at an orphanage. On the surface of the problem, it’s questionable whether treating the developing world as a playground is an effective model to address systemic poverty and care for vulnerable children.

An anthropological study published in the Journal of Sustainable Tourism has shown how volunteer programs can actually contribute towards a superficial understanding of poverty that distracts from the larger systems that produce inequality and poverty. Through a series of in-depth interviews with young people from the US who volunteered in Malawi, they found their volunteer work was often carried out through a colonial and “mythologized” image of a helpless Africa needing the benevolence of the West. The volunteers also viewed African poverty in terms of the “American Dream” and the idea of pulling oneself out of poverty through hard work, as opposed to deep-rooted economic, social, and historical factors at play.

Subject: There's still time to throw your hat in the ring
Date: Wednesday, September 25, 2019 5:01:37 PM

Meet With Law Enforcement Technology Leaders at PTX

Taking place December 9-11, 2019, POLICE Technology eXchange, (PTX) brings together senior-level IT, Communications and Technology decision-makers face-to-face with leading law enforcement technology suppliers. **This intimate networking opportunity is at no cost* to police agencies for qualified police agency buyers of IT and other technology**.

A few of the technologies you can experience and discuss during one-on-one meetings with leading industry suppliers include:

Drones | Hybrid Patrol Vehicles | Facial Recognition

- AI & Virtual/Augmented Reality
- e-Citation
- Mobile Data Terminals/Rugged Laptops & Tablets
- ALPR/LPR
- Gunshot Detection Systems
- Intelligence-Led Policing
- Mobile/Rugged Technology
- Investigative Software
- Data/Information Sharing
- Cloud-Based Technology
- Crime Analysis
- Interoperability
- Vehicle Armoring
- Video Storage/Analysis
- Smartphones
- Broadband

At PTX you'll uncover the latest technologies and have an opportunity for peer-to-peer networking activities such as: sharing challenges, discussing ideas, and learning best practices from each other. But, first you must complete the application to participate.

Apply Now to Participate

For more information please visit www.POLICETechnologyeXchange.com or call (800) 576-8788, 9:00am-5:00pm PST

Jason,

As discussed, the existing TRF-11 is attached in a PDF format. Lt. Brooks will have someone try to un-PDF it now and then email it back to this group.

On Thursday, please mark up a new TRF-11 DRAFT with the suggested changes that are needed to comply with the template pursuant to the new DHS HSGP Grant Requirements. Then send that document back to this group on Thursday so Lt. Col. Quinn can work with GHQ to try and get TRF-11 fully updated prior to the end of this month to comply.

Thank again for your work on this. We appreciate it.

Good morning Kara,

I failed to answer the most basic of questions, which is that the draft LPR policy meets all of the criteria for Accreditation.

Bill Pinkes
Accreditation Manager
Massachusetts State Police
470 Worcester Road
Framingham, MA 01702
508-808-3448

From: Pinkes, William (POL)
Sent: Thursday, September 26, 2019 11:59 AM
To: England, Kara (POL) <kara.england@pol.state.ma.us>
Subject: RE: TRF-11 suggested changes needed to comply with DHS HSGP Grant Requirements

Kara,

It is minor, but in Paragraph 1, a redundant use of "the" should be struck, it is not consistent with how the Department is addressed in MGL. I have provided a highlighted strike through on the attached Word document.

I would suggest a clarification be made to the "manual entries" section. When assigned to the Watch Center, we began to cull the lists and found that members would put information in, but were failing to remove same at the conclusion of their investigation and/or critical event. Identifying who is responsible for the removal of the data allows the Department to assign a level of accountability, whereas if it is left open-ended everyone assumes someone else will do it.

Under policy review, I would suggest striking the non-bulleted paragraph beginning with "As the use of technology progresses……" An ongoing policy review is a goal of the Department and policies should be under constant review by the Division to which said policies are assigned, with a minimum of annual review.

Just some thoughts that I am sharing with you, not the group as I will defer to you if you wish to bring them to the greater group.

Bill

Good Morning,

As you are probably aware, the Department is in the process of ensuring that our policies meet Accreditation standards. Please find attached a pdf of Accreditation standards relative to LPR (along with the attached word doc of the revised TRF-11 DRAFT that has been circulating.)

As part of the Fusion Center's revisions to ensure policy compliance with BJA LPR Policy Template (as reflected in attached revised DRAFT), before finalizing the draft for promulgation, the Department would like you to take this opportunity to incorporate the language the Fusion Center deems appropriate for the MSP to be in compliance with Accreditation standards as well.

Respectfully,
KME

Subject: RE: TRF-11 suggested changes needed to comply with DHS HSGP Grant Requirements

Good Morning,

Please see the attached draft. It incorporates some very minor changes (which have been tracked and can be accepted or not.)

There is one change that I did not want to make without consultation –

- On page 6, "Security" section, first bullet: should the first sentence read "The Department will operate *the ALPR system* in a secure facility protected from external intrusion and will utilize secure internal and external safeguards against network intrusions."?

Also, as you may have discovered, the formatting of these word documents can be very quirky, so when all revisions have been finalized and the document is ready for promulgation, Trooper Tapis and I will do the final formatting.

Respectfully,
KME

Subject: FW: TRF-11 suggested changes needed to comply with DHS HSGP Grant Requirements

Good Evening All,

The Fusion Center needs to be in compliance with three new requirements from DHS to continue to be eligible for HSGF. The first is an MOU between the CFC and DHS. Major Range and his team have already submitted our proposal to DHS for comments. Second, a facial recognition SOP is required and a draft of that document has been submitted to Legal Section for comment. Lastly, an LPR policy that incorporates elements from the BJA LPR Policy Template is required. This email addresses that issue. Attached please find an edited version of the existing MSP ALPR Policy (TRF-11). The edits that have been prepared by Major Range and his team incorporate the required elements from the BJA template required by DHS (See attached BJA LPR Policy Template). We are very open to editing, including grammar and style, and obviously any guidance on legal issues that our edits may present.

Please keep in mind that these are requirements are from DHS, and placed on the CFC in order to continue to receive Homeland Security Grant Funding. HSGF provides the MSP the financial resources to keep the CFC operating. We appreciate your attention to this matter as we need to have this in place by the end of the month.

Respectfully,

Good afternoon,
I apologize for the delay in distributing this. I was able to recreate the original TRF-11 in a much more workable format in Word. I've made some additions (highlighted in the attached document) which I believe brings us up to speed with respect to DHS grant requirements. I did not remove anything from the existing TRF-11, but ended up adding approximately 3 pages to the current policy. I did my best to exclude irrelevant or unnecessary portions of the BJA guidelines. Any additional thoughts or suggestions are welcome.

Thanks,
Jason

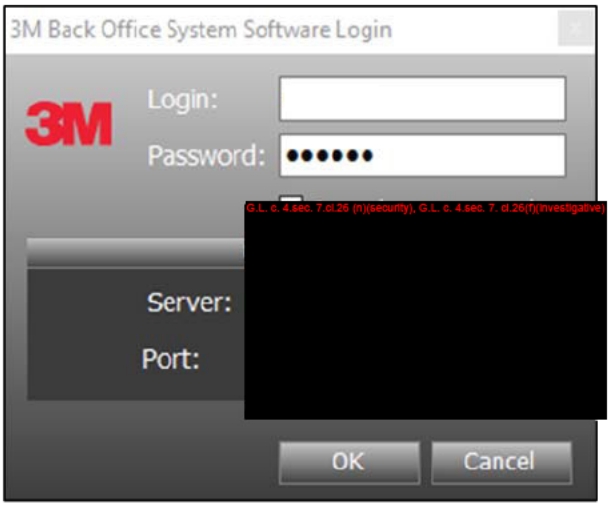
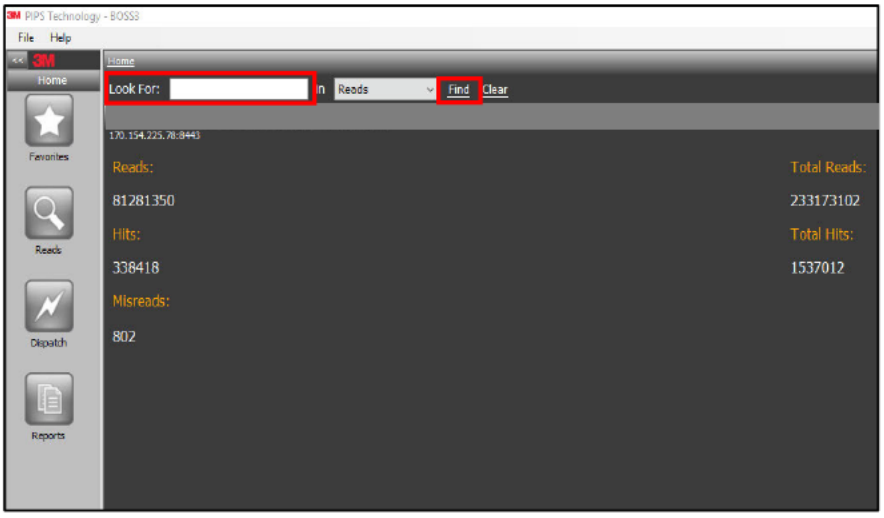
Vigilant LPR Reader



Vigilant is an LPR reader utilized by many departments; however, the CFC receives information only from Lynn and Chelsea.

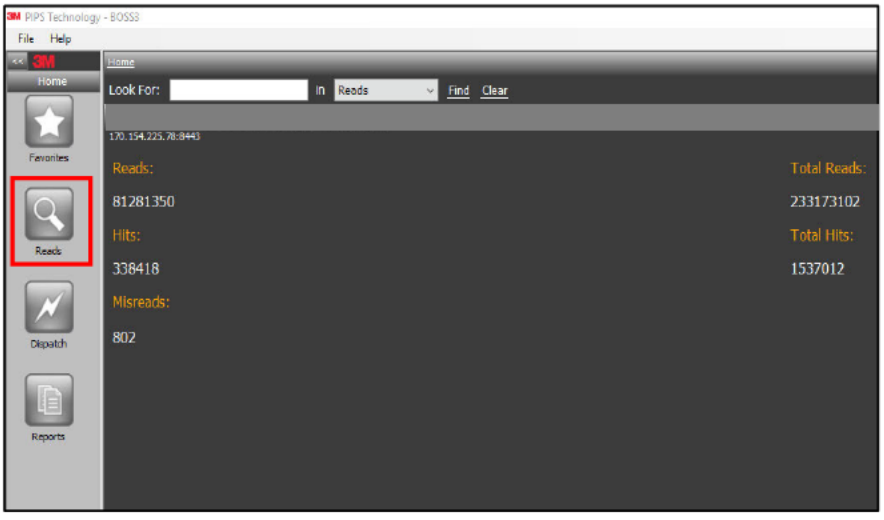
- Refer to Section 2: Accounts – Databases & Systems for log in information.

BOSS/3M LPR Reader



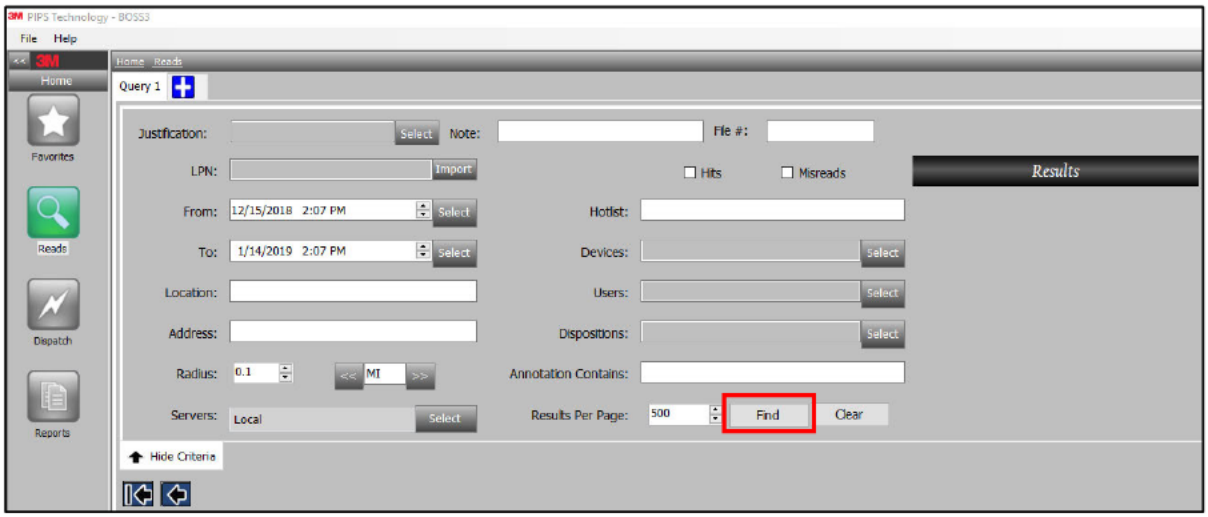
BOSS/3M is the primary LPR system utilized. The systems pulls information from LPRs controlled by MSP throughout the state.

Upon opening the program, ensure the correct Server and Port [redacted] [redacted]



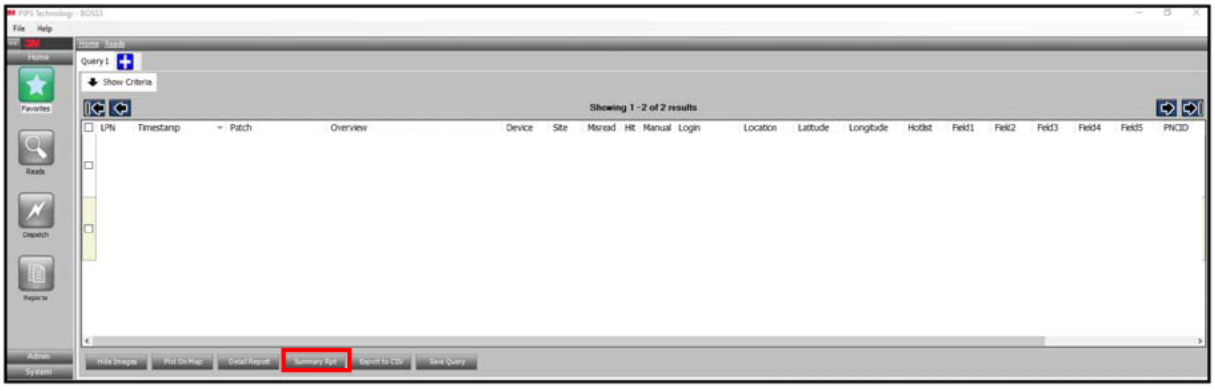
BOSS/3M LPR Reader - Searching a Plate

1. Search a plate by typing the plate number into the "Look For:" box and clicking "Find"



2. Click "Reads" on the left tool bar to search a plate with more advanced perimeters

3. The Reads page will display multiple search perimeters, including:
   - Timeframe (dates and times)
   - Hotlist
   - LPR Device
   - Location
   - Address
   - Radius



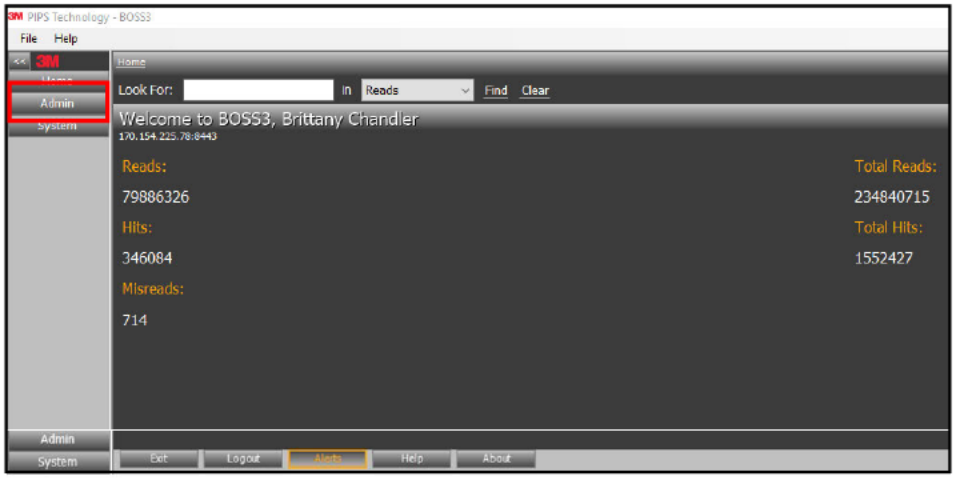
BOSS/3M LPR Reader - Searching a Plate (cont.)

4. The Reads page will allow for multiple search perimeters at once
   - Enter the plant number in "LPN"
   - Enter the appropriate perimeters
   - Click "Find"

BOSS/3M LPR Reader - Printing Results

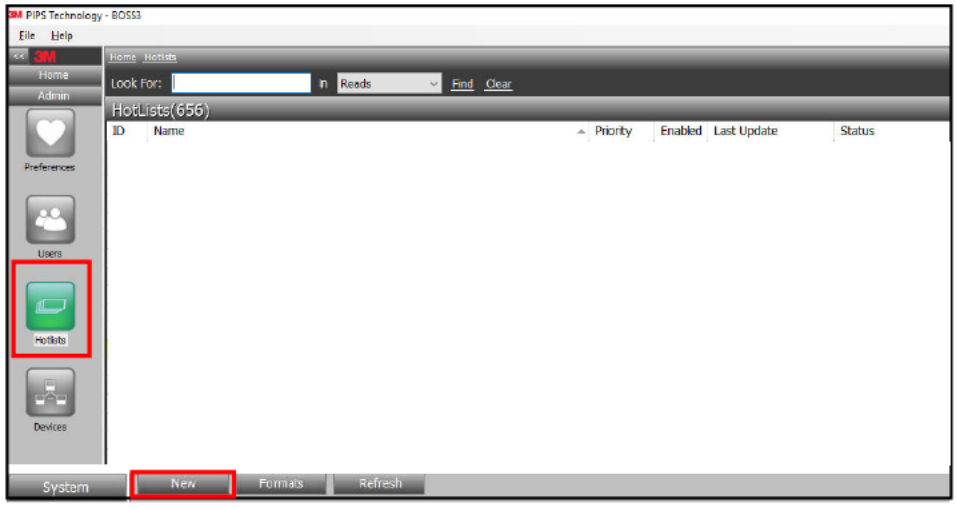
1. On the results page click "Summary Rpt" on the bottom tool bar

2. A popup will appear, click "All Results" or "Current Page" then select "OK"



3. Once the report loads, click the printer icon along the top tool bar

Creating an LPR Hotlist

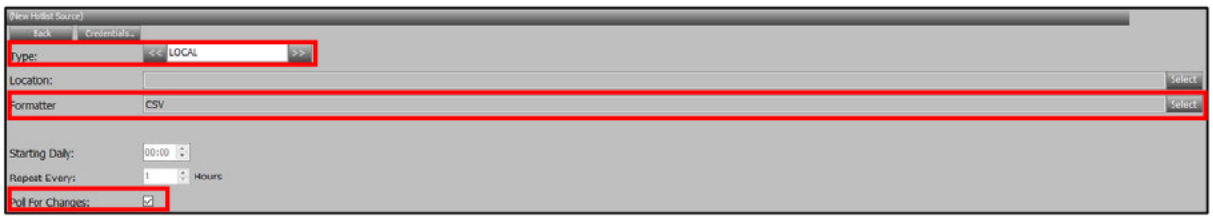


License plates of interest can be added to a Hotlist. When a Hotlist plate is read by an ALPR camera, an email will be sent to the requesting officer.

There are Two Steps to a Hotlist: Creating an LPR Hotlist and then Adding License Plates into an LPR Hotlist.

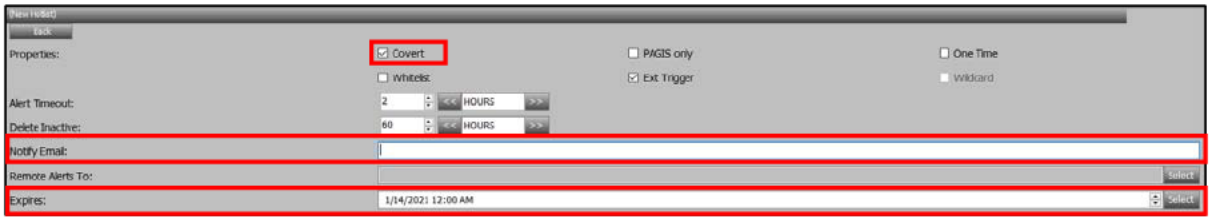
1. **From the main page, click "Admin" on the bottom of the left tool bar**

2. **The tool bars on the left and bottom will change, click "Hotlists" on the left toolbar then click "New" on the bottom tool bar**



Creating an LPR Hotlist (cont.)

3. In the "New Hotlist" box enter the following:
   - Hotlist Name: Agency – Officer – Case Number
   - Description: Officer name – Contact Information
   - Deployment: Select "Select" and check ALL boxes, then select "Save"



4. Click "Source" and enter the following:
   - Type: Local (default)
   - Formatter: Select "Select" and select "CSV," then select "Save"
   - Poll for Changes: Check the box

Note: If not mentioned above, do not change

5. Click "Back"

6. Click "Advanced" and enter the following:
   - Covert: Check the box (Checking the box to ensures that passing ALPRs are NOT alerted)
   - Notify Email: Enter emails separated by commas with NO spaces (Enter the Fusion Mailbox email with the requestor's email)
   - Expires: Three months from entry date

NOTE: Some requestors prefer text notifications, if so, follow the below steps

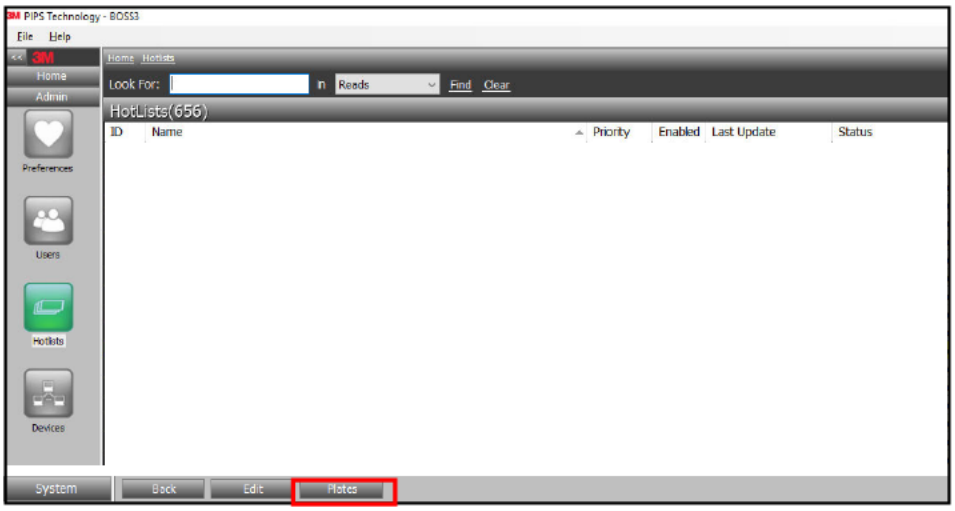
Creating an LPR Hotlist (cont.)

- Ask the requestor for their phone carrier information for the number they wish to receive text notifications
- In the "Notify Email" field enter the cellular number followed by @ and the corresponding cellular carrier suffix:

Mobile Carrier	SMS Gateway Domain
Alltel	sms.alltelwireless.com
AT&T	txt.att.net
Boost Mobile	sms.myboostmobile.com
Cricket Wireless	sms.mycricket.com
MetroPCS	mymetropcs.com
Project Fi	msg.fi.google.com
Republic Wireless	text.republicwireless.com
Sprint	messaging.sprintpcs.com
T-Mobile	tmomail.net
U.S. Cellular	email.uscc.net
Verizon Wireless	vtext.com
Virgin Mobile	vmobl.com

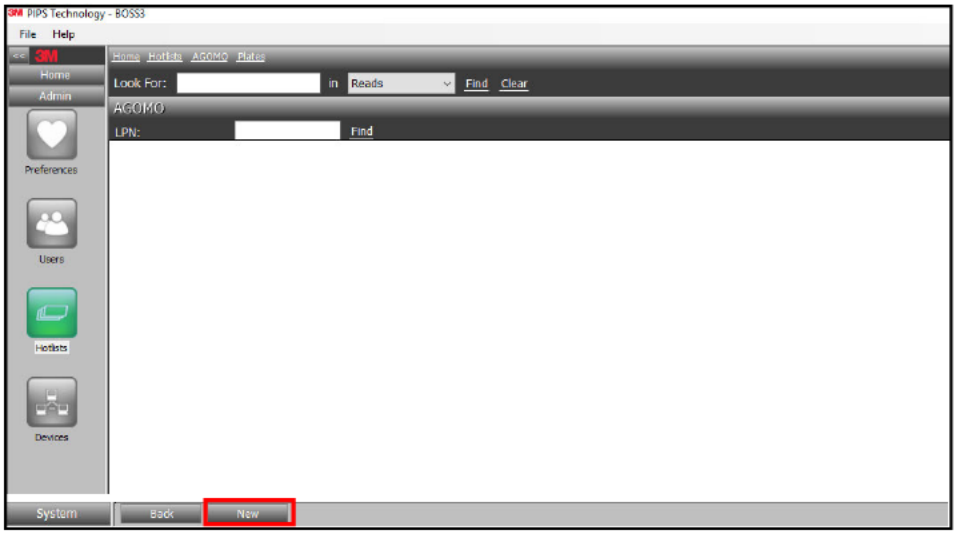
Example: 508-820-2233@vtext.com

7. Click "Back"



8. Click "Save" then select "Save" again

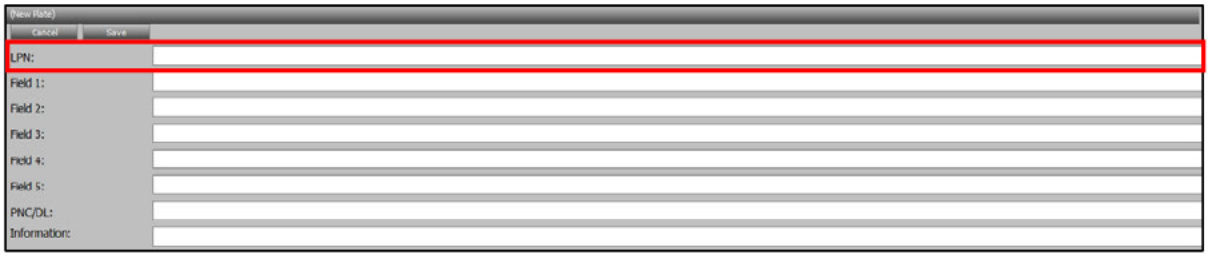
9. Click "Yes" on the "Source File Name" error message



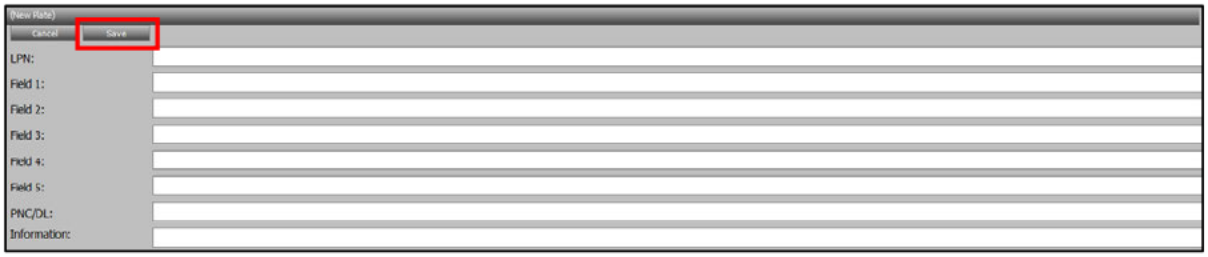
Adding a License Plate to an LPR Hotlist

1. In the "Hotlist" section (Refer to Steps 1 and 2 above) click the appropriate Hotlist that needs a license plate added

2. Click "Plates" on the bottom tool bar

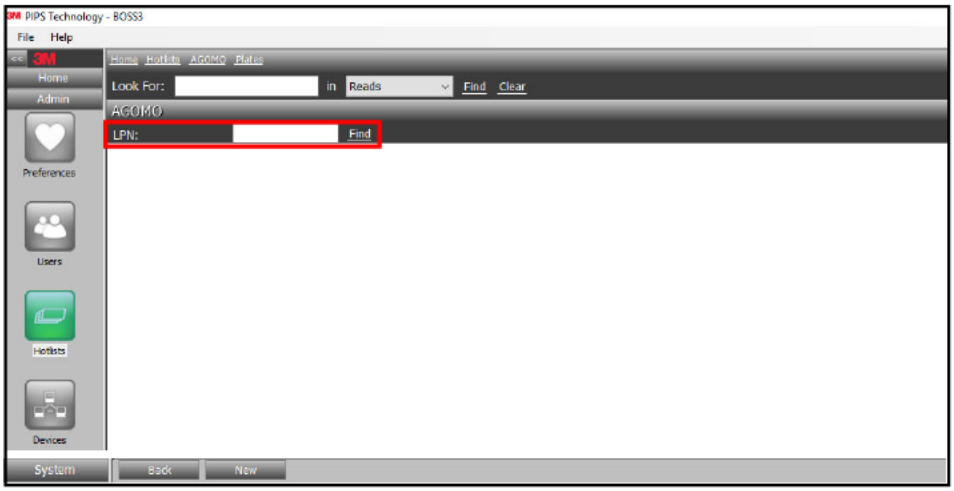


3. Click "New" on the bottom tool bar



Adding a License Plate to an LPR Hotlist (cont.)

4. Enter the following:
   - LPN: Plate number (number only, do NOT add the state)



5. Click "Save"

Searching a License Plate in an LPR Hotlist

1. In the LPR Hotlist navigate to the "Plates" section (Refer to Steps 1 and 2 above)

2. In the "LPN" field, enter the plate number of interest or % to see ALL plates on the Hotlist then select "Find"

Department of State Police
Special Order

Effective Date	Number
October 1, 2019	**19-SO-12**

Subject

Distribution of General Orders

I. DISTRIBUTION OF GENERAL ORDER

Policy and Procedure
TRF-11 Automatic License Plate Recognition

The requirements for the distribution of the above listed General Order are:

√ Each employee shall follow the instructions within this Special Order.

√ Supervisors shall obtain a signature receipt from each employee acknowledging this General Order has been promulgated and posted on DocuShare.

√ Troop/Station/Section/Unit Commanders shall forward the *completed* signature receipt forms through channels to their respective Division Commanders on or before: November 1, 2019.

√ Division Commanders shall:

- Ensure that employees under their command have been notified of this General Order; and
- Maintain a file of all completed signature receipt forms for their Division.

II. DISTRIBUTION OF GENERAL ORDER INSTRUCTIONS

A. Instructions

Each employee shall acknowledge that the following General Order has been rescinded:

Policy and Procedure		Effective Date
TRF-11	Automatic License Plate Recognition	06/14/2018

III. DISTRIBUTION OF GENERAL ORDER INSTRUCTIONS

A. Instructions

It is the responsibility of each sworn and civilian employee to read promulgated directives. Sworn and civilian employees shall read and become familiar with the contents of all posted written directives.

Each employee shall acknowledge the following General Order has been promulgated and posted to DocuShare. Each employee is responsible for reading and becoming familiar with the following General Order:

Policy and Procedure		Effective Date
TRF-11	Automatic License Plate Recognition	10/01/2019

Executive Summary

This document addresses the privacy impact of the enhanced collection, analysis, and dissemination of license plate data made possible by the advent of license plate reader ("LPR") technologies.

Agencies interested in operating a LPR system do not have access to a uniform set of rules governing or even suggesting the appropriate uses and sharing of LPR data. This lack of regulation can cause the public to fear that the information collected by law enforcement agencies through their utilization of LPR systems might be mismanaged or misinterpreted with real-world consequences. Moreover, the potential misuse of LPR data may expose agencies operating such systems to civil liability and negative public perceptions.

The goal of this report is to set forth in a clear and concise manner the impact LPR systems can have on the public's privacy interests and to make recommendations for the development of information management policies intended to govern an agency's operation of a LPR system.

THE NATURE OF LICENSE PLATE READER ("LPR") DATA

License Plate Reader systems consist of high-speed cameras combined with sophisticated computer algorithms capable of converting the images of license plates into computer-readable data. LPR systems typically utilize specialized cameras designed to capture images of license plates, whether from fixed positions or mobile patrol vehicles.

Images of vehicles and license plates are the primary form of information collected by a LPR system. Optical character recognition ("OCR") is performed on these images and the alphanumeric characters on each license plate are rendered into an electronically readable format. LPR systems can attach date, time, and location information to an image.

A license plate number does not identify a specific person; rather it simply identifies a specific vehicle. Although a license plate number may be linked or otherwise associated with an identifiable person, this potential is only realized through a distinct, separate step (e.g., an inquiry to a Secretary of State or Department of Motor Vehicles data system). Absent this extra step, the license plate number and the date, time, and location data attached to it are not personally identifying. Thus, even though LPR systems automate the collection of license plate numbers, it is the investigative process that identifies individuals.

Nevertheless, this Report considers LPR data for official use only and discusses the appropriate protections a law enforcement agency should implement as part of a LPR system.

THE INTERNATIONAL ASSOCIATION OF CHIEFS OF POLICE 2007 RESOLUTION

In 2007, the International Association of Chiefs of Police ("IACP") passed a resolution in support of License Plate Reader (LPR) technology. That resolution strongly encouraged the U.S. Congress to fully fund license plate reader and related digital photographing systems, including interrelated information sharing networks, for the northern and southern borders of the United States. In support of this resolution, the IACP Law Enforcement Information Management ("LEIM") Section set out to develop this Privacy Impact Assessment ("PIA") Report.

TYPES OF PRIVACY RISKS SURROUNDING THE USE OF LPRs

LPR systems have the potential to reveal to the government individuals' driving habits. As LPR systems become more widespread, and as law enforcement agencies improve their information sharing capabilities, the potential to monitor where and when a particular vehicle has traveled is enhanced.

Recording driving habits could implicate First Amendment concerns. Specifically, LPR systems have the ability to record vehicles' attendance at locations or events that, although lawful and public, may be considered private. For example, mobile LPR units could read and collect the license plate numbers of vehicles parked at addiction counseling meetings, doctors' offices, health clinics, or even staging areas for political protests.

Several prominent privacy groups view information concerning individuals' locations as inherently prone to abuses, including expanding data uses beyond the original purposes of collection, sharing data with third parties beyond reasonable expectations, and heightening individuals' vulnerability to crime. Nevertheless, law enforcement agencies can develop policies that set forth the appropriate access and dissemination of LPR data; agencies can also prohibit and punish individuals who inappropriately disclose data from a LPR system. Moreover, agencies can conduct audits and monitor system operations to prevent and identify instances of misuse. As with other law enforcement data systems, security safeguards can also be implemented to limit unauthorized access to LPR data.

PURPOSES OF COLLECTING LPR DATA

Law enforcement agencies are charged with protecting the public as well as investigating crimes and criminal conduct. LPR systems serve four specific public safety goals. Specifically, LPR data can be used: (a) in various forms of crime analysis; (b) to alert law enforcement officials that a license plate number on a hot list is in proximity to a LPR camera; (c) to monitor the movements of vehicles operated by individuals subject to preexisting geographical limitations on their travel; and (d) to identify instances of criminal conduct that might have previously gone undetected without the aid of the LPR system.

Hot lists may be compiled by the local law enforcement agency utilizing the LPR system or by other state or federal government agencies. The purpose of these lists is to signal a law enforcement official that a vehicle displaying a license plate number that is included on a hot list is near a LPR camera.

ACTIVE AND HISTORICAL LPR DATA

Active LPR data is that information which is provided to an officer in real-time. It takes the form of alerts that a license plate number contained on a hot list is near a LPR unit, whether fixed or mobile. Historical LPR data is essentially a database containing the dates, times, and locations of individually identifiable motor vehicles; it is considered passive as it is essentially LPR data that is stored for future investigative or analytical use.

ACCESS AND DISSEMINATION OF LPR DATA

Appropriate access to active and historical LPR data is guided significantly by the purposes for which it is collected. Thus, LPR data may appropriately be accessed by law enforcement officials: (a) to support crime analysis efforts; (b) to alert law enforcement officials that a license plate included on a hot list is or has been near a LPR camera location; and (c) to help law enforcement officials detect instances of criminal conduct.

It may be appropriate to share LPR data with various agencies and individuals throughout the justice system. Any policy regulating the sharing of LPR data should clearly identify the receiving entity and the specific purpose for the dissemination. LPR data may be shared: (a) among law enforcement agencies; (b) with other, non-law enforcement government entities; and (c) in certain, limited circumstances with the public.

RETENTION OF LPR DATA

Agencies may be called upon to explain their reasons for retaining LPR data for as long as they do. Law enforcement agencies may consider several criteria as they develop a retention policy, including but not limited to statutes of limitation, the potential future usefulness of the LPR data, the relative sensitivity of the LPR data, and the LPR system's technologically implemented policy controls.

Although these criteria may be useful when deciding how long to retain LPR data, there is no formula for determining how long LPR data should be retained. There is considerable need to establish a set of guidelines, including standard criteria, to assist law enforcement agencies in their development of retention policies for LPR data.

QUALITY OF LPR DATA

Law enforcement agencies have no way to influence the accuracy of the OCR performed upon an image captured by a LPR camera. Nevertheless, law enforcement agencies will rely upon the accuracy of LPR data as they conduct their investigations. In addition to law enforcement

officers visually confirming the OCR read against the contextual image taken by the LPR camera, regular and systematic audits can help ensure that the quality of data contained in a LPR system remains high. Data quality audits are distinct from system usage audits and focus on the accuracy of the information. In the context of a LPR system, data quality audits concentrate on measuring the accuracy of the OCR output when compared with contextual images.

ACCOUNTABILITY FOR LPR DATA

Many privacy concerns surrounding LPR data can be mitigated by holding law enforcement agencies accountable for the information they collect and how they subsequently use that information. Several methods exist whereby agencies can ensure that their personnel are complying with applicable policies regarding the appropriate collection, use, and dissemination of LPR data. Creating tamper-proof audit trails as well as conducting real-time monitoring and analyzing LPR system usage can all function to protect the public's privacy interests. Training authorized users is also a critical accountability measure.

CONCLUSION

This Report discusses the privacy concerns surrounding a law enforcement agency's utilization of a LPR system and recommends certain measures that can address those concerns. This Report is also an exercise in good government. Transparency in government policy-making allows errors to be corrected through public criticism. Sometimes cogent and passionate arguments can persuade policy makers to see things in a truly new light; other times comments can come from a perspective that may be unavailable to those immersed in the administration of justice.

It is hoped that this Report provides a sound basis upon which law enforcement agencies can build meaningful LPR system policies that respects individuals' privacy rights while providing authorized users with the information necessary to ensure the public's safety.

1

Part 1. The Nature of License Plate Reader information

This Part discusses the types of information that can be collected by license plate readers ("LPRs"). Specifically, this Part provides a brief overview of how LPR systems work, the types of data they are capable of collecting, and how that information can subsequently be used. Whether license plate numbers and locations should be considered personally identifiable for purposes of drafting privacy policy recommendations is also discussed.

A. OVERVIEW: HOW LICENSE PLATE READERS FUNCTION

License Plate Reader systems consist of high-speed cameras combined with sophisticated computer algorithms capable of converting the images of license plates into computer-readable data. Systems in existence as of the date of this report are routinely capable of capturing multiple license plate images per second on vehicles traveling at high speeds.[1]

Essential to any LPR system is the camera hardware that captures the image of the license plates. The quality of the captured image lays the foundation for the overall performance of the system. LPR systems typically utilize specialized cameras designed to capture images of license plates, either from fixed positions or mobile patrol vehicles. Factors which pose difficulty for license plate imaging cameras include the speed of the vehicles being recorded, the distance and angle of the vehicles from the camera; varying ambient lighting conditions, headlight glare, and harsh environmental conditions. In order to address these difficulties, many LPR systems employ infrared cameras operating in addition to visible light cameras.

The Optical Character Recognition ("OCR") of images taken by LPR cameras is performed through the use of sophisticated algorithms. Six primary algorithms that LPR system software requires to identify a license plate include:

1. Plate localization, which finds and isolates the plate contained in the picture;
2. Plate orientation and sizing, which compensates for the skew of the plate and adjusts the dimensions to the appropriate size and shape;
3. Normalization, which adjusts the brightness and contrast of the image;
4. Character segmentation, which finds the individual characters on the plates;

[1] Most LPR systems capture multiple images of the same vehicle and then use the best image; other systems are capable of capturing more than one vehicle per second.

5. Optical character recognition, which converts the image into actual characters; and
6. Syntactical/Geometrical analysis, which checks characters and positions against state-specific rules to identify the license plate's state of issuance.

Many LPR systems utilizing mobile LPRs are equipped with Global Positioning System ("GPS") Receivers. This allows mobile units to record the date, time, and location of license plate image capture. Data such as date and time stamps and GPS coordinates can be reviewed in relation to investigations and can help lead to critical breaks such as placing a suspect at a scene, witness identification, pattern recognition, or the tracking of previously identified suspects.

B. INFORMATION POTENTIALLY COLLECTED BY LPRs

LPR cameras take digital and infrared pictures of vehicles and license plates as they pass through the field of view of a LPR camera. These images, and the metadata associated with them, can be used in a variety of public safety contexts and the amount of information utilized from a LPR system can vary depending upon an agency's law enforcement mission. Thus, fixed LPR units in operation at national border crossings, which often operate in a setting consisting of slow-moving lanes of traffic, may collect different information than a mobile LPR camera operated by a local law enforcement agency. This Subpart describes the types of information that can potentially be collected by LPR systems as they function at the time of this Report. Agencies utilizing LPRs have the discretion to collect all or just a portion of the data elements described below.

Images of vehicles and license plates are the primary form of information collected by a LPR system. Optical character recognition is performed on these images and the alphanumeric characters on each license plate are rendered into an electronically readable format. LPR cameras can attach date, time, and location information to an image. The image collected by a LPR camera is maintained in the information system to provide a means of ensuring that the license plate number was properly converted into an electronically readable format. This digital image, sometimes referred to as a contextual photo, can include additional information that is not necessarily electronically recorded. Thus, LPR systems may contain information including, but not limited to, the following.

- Optical Character Recognition (OCR) of license plate numbers;
- Digital images of license plates as well as the vehicle's make and model;
- Digital image of the vehicle's driver and passengers;
- Images of distinguishing features (e.g., bumper stickers, damage);
- State of registration;
- Camera identification (mobile cameras may capture officer identification and vehicle/unit number);
- GPS coordinates or other location information; and
- Date and time of observation.

Together, these data elements are referred to as LPR data throughout this report.

C. POTENTIAL USES OF LPR DATA

Identifying the intended uses of LPR data is critical to assessing the privacy impact of law enforcement agencies' collection, analysis, and maintenance of license plate data collected via LPR systems. Moreover, how government agencies use the data they collect is of significant concern to the public. Thus, clearly articulating the purposes for collecting license plate numbers via a LPR system is one way to assist in the public oversight of governmental operations and serves a critical role in addressing privacy concerns surrounding the use of such a data system. Any sound privacy or information management policy intended to govern a LPR system should clearly identify the appropriate and intended uses of LPR data.

Law enforcement agencies are charged with protecting the public as well as investigating crimes and criminal conduct. LPR systems serve four specific public safety goals. Specifically, LPR data can be used: (a) in various forms of crime analyses; (b) to alert law enforcement officials that a license plate number on a hot list is nearby; (c) to monitor the movements of vehicles operated by individuals subject to geographical limitations on their travel; and (d) to identify instances of criminal conduct that might have previously gone undetected without the aid of the LPR system. Each anticipated use carries with it certain privacy concerns; these concerns are discussed later in this Report and should be addressed by any subsequently developed policy regulating the collection, maintenance, use, and retention of LPR data.

D. LPR DATA IS NOT CONSIDERED PERSONALLY IDENTIFYING INFORMATION

Technologies that pinpoint and record individuals' locations are improving in accuracy and growing in prevalence; in doing so, they are also provoking new conversations about what constitutes personal data. Privacy interests are only implicated by information that can be used to identify a unique individual. This section discusses whether a license plate number is considered a piece of personally identifying information for the purposes of this Report.

1. PERSONALLY IDENTIFIABLE INFORMATION DEFINED

Personally identifiable information is data that can be used to identify or locate a single person. The National Institute of Standards and Technology ("NIST") *Guide to Protecting the Confidentiality of Personally Identifiable Information* defines personally identifiable information ("PII") as "information which can be used to distinguish or trace an individual's identity, such as their name, social security number, biometric records, etc. alone, or when combined with other personal or identifying information which is linked

or linkable to a specific individual, such as date and place of birth, mother's maiden name, etc."[2]

A single piece of data can be personally identifiable (e.g., social security number or fingerprints). Likewise, multiple pieces of data, when merged, can also be personally identifiable, even where each individual piece of data itself would not (e.g., date of birth plus name plus address). Moreover, law enforcement agencies have access to multiple databases; this is significant as data elements that can be linked together, although not sufficient to distinguish an individual when considered separately, could distinguish individuals when combined from multiple sources.

For example, suppose that two databases contain different PII elements and also share some common PII elements, such as license plate numbers. An individual with access to both databases may be able to link together information from the two databases and distinguish individuals. If the secondary information source is present on the same system or a closely-related system, then the data may be considered linked.

Data elements which might be considered personally identifiable include, but are not limited to:[3]

- A person's name, such as their full name, maiden name, mother's maiden name, or alias;
- A personal identification number, such as SSN, passport number, driver's license number, taxpayer identification number, patient identification number, and financial account or credit card number;
- Address information, such as street or email address;
- Electronic identification numbers, such as Internet Protocol (IP) address or other host-specific persistent static identifier that consistently links to a particular person or small, well-defined group of people;[4]
- Telephone numbers, including mobile, business, and personal numbers;
- Information identifying personally owned property, such as vehicle registration or identification number, and title numbers and related information;

[2] Erika McCallister *et al.*, *Guide to Protecting the Confidentiality of Personally Identifiable Information (Draft)*, Special Publication No. 800-122, 2-1 (U.S. Dept of Commerce, National Institute of Standards and Technology, Jan. 2009) (adopting the definition of PII contained in OMB Memorandum 07-16, *Safeguarding Against and Responding to the Breach of Personally Identifiable Information*).

[3] *See Id.* at 2-2.

[4] *But see In re Charter Commc'ns*, 393 F.3d 771, 774 (8th Cir. 2005) (holding an IP address does not identify a user's name or mailing address); *Klimas v. Comcast Cable Comm'cns, Inc.*, 465 F.3d 271, 276 n.2 (6th Cir. 2006) (noting "that IP addresses do not in and of themselves reveal 'a subscriber's name, address, [or] social security number.' That information can only be gleaned if a list of subscribers is matched up with a list of their individual IP addresses."); *Johnson et al. v. Microsoft*, C06-0900RAJ Or. Granting Def.'s Mot. S.J. 7 (W.D. Wash. June 23, 2009) (ruling that "In order for 'personally identifiable information' to be personally identifiable, it must identify a person. But an IP address identifies a computer, and can do that only after matching the IP address to a list of a particular Internet service provider's subscribers.").

- Personal characteristics, including handwriting, photographic image (especially of face or other distinguishing characteristic), x-rays, fingerprints, or other biometric image or template data (e.g., retina scans, voice signature, facial geometry); and
- Information about an individual that is linked or linkable to one of the above (e.g., date of birth, place of birth, race, religion, weight, activities, or employment, medical, education, or financial information).

2. NON-PERSONALLY IDENTIFYING NATURE OF LPR DATA

(a.) License plates can be associated with individuals' PII

Although license plates don't directly include personally identifiable information, they are frequently associated, by means of computer inquiries, with the identity of an individual person. Thus, a license plate number, just as a name and date of birth, can serve as the gateway to personally identifiable information. Moreover, a license plate number is also a gateway to more traditional types of data relied upon by criminal justice practitioners. Although some intended uses of LPR data focus on the automobile itself (e.g., identifying stolen vehicles), other potential uses of LPR data involve the process of locating the individual(s) somehow connected to a particular license plate.

(b.) LPR data collection and privacy

The mere collection of information regarding individuals implicates privacy concerns. Fewer concerns are raised by the collection of information about individuals premised upon some reasonable suspicion that they are acting unlawfully. Greater concerns regarding the public's privacy interests are raised when the government collects information about individuals for investigatory purposes absent any suspicion of criminal wrongdoing.

Nevertheless, it is a strong argument that a person has a diminished expectation of privacy in public spaces. In the criminal justice context, the common good of public safety has been considered of greater importance than an individual's right to remain anonymous when passing through public spaces.[5]

Furthermore, in the context of license plate readers, the vast majority of states consider the operation of an automobile a privilege and not a right. Every state's laws require

[5] On at least two occasions the U. S. Supreme Court has been confronted with whether an individual can be required to identify himself to the police during a Terry stop, but decided those cases on other grounds. *See Brown v. Texas*, 433 U.S. 47 (1979) (holding the underlying seizure illegal thereby avoiding the constitutional question) and *Kolender v. Lawson*, 461 U.S. 352 (1983) (holding a statute requiring a suspect to identify himself to police officers during a Terry stop void for vagueness and refusing to decide the issues of the constitutionality of compulsory identification). It wasn't until 2004 in *Hiibel v Sixth Judicial District Court of Nevada*, 542 U.S. 177, that the Court concluded that requiring suspects to identify themselves did not violate the Fourth or Fifth Amendments.

the display of license plates when the vehicle is operated or parked on a public road and license plates are even required to be illuminated at night.

(c.) LPR data is not, itself, personally identifying

A license plate number identifies a specific vehicle, not a specific person. Although a license plate number may be linked or otherwise associated with an identifiable person, this potential can only be realized through a distinct, separate step (e.g., an inquiry to a Secretary of State or Department of Motor Vehicles data system). Absent this extra step, the license plate number and the time and location data attached to it are not personally identifying. Thus, even though LPR systems automate the collection of license plate numbers, it is the investigative process that identifies individuals.

The Driver's Privacy Protection Act ("DPPA"), 18 U.S.C.A. §§ 2721-25, also supports the premise that a license plate number alone is not PII. Enacted in 1994, the DPPA is a federal law that regulates how state motor vehicle departments release information contained in their records. The DPPA prohibits, with specific exceptions, state motor vehicle departments from disclosing personally identifying information connected to a motor vehicle record (e.g., a license plate number).[6]

While the DPPA requires states to disclose personal information for certain limited purposes, it permits the disclosure of personally identifiable information connected to a license plate for fourteen enumerated purposes. Three of those purposes relate to law enforcement use of the information and are relevant to the operation of a LPR system. Specifically, personally identifying information connected to a motor vehicle registration may be disclosed for use: (1) "by any government agency, including any court or law enforcement agency, in carrying out its functions, or any private person or entity acting on behalf of a Federal, State, or local agency in carrying out its functions;"[7] (2) "in connection with matters of motor vehicle or driver safety and theft;"[8] and (3) "in connection with any civil, criminal, administrative, or arbitral proceeding in any Federal, State, or local court or agency."[9] The DPPA also regulates how an authorized recipient of motor vehicle records can share information with another subsequent user.

Thus, federal law acknowledges: (1) although license plate numbers are not, by themselves, personally identifying information, they can be linked to individuals and, (2)

[6] The Act defines "personal information" as an "individual's photograph, social security number, driver identification number, name, address…telephone number, and medical or disability information"; the term does not include information on vehicular accidents, driving violations, and driver's status. 18 U.S.C. § 2725(3). In 2000, the Act was amended to create a new class of "highly restricted personal information." This includes an "individual's photograph or image, social security number, and medical or disability information" collected or maintained by a DMV. 18 U.S.C. § 2725(4).

[7] 18 U.S.C. § 2721(b)(1).

[8] 18 U.S.C. § 2721(b)(2).

[9] 18 U.S.C. § 2721(b)(4).

the release of PII associated with a particular license plate number should be limited to official purposes.

Certain contextual photos may contain digital images of the vehicle's driver and/or passengers. As discussed above, the contextual photo is collected and maintained as a mechanism to ensure that the LPR software is accurately reading license plate numbers. Moreover, not every contextual photo contains an image of a vehicle's occupants.

A photograph of an individual's face certainly identifies that individual. Nevertheless, LPR systems currently being utilized by law enforcement agencies are not designed to capture images of occupants of vehicles. In the infrequent instances where images of a vehicle's occupants are captured by the LPR camera, LPR contextual photos may be used to confirm whether an individual already associated with a particular license plate was the person in the car when it passed the LPR camera.

This distinction between identification and confirmation is significant when determining whether to consider LPR data personally identifiable. Furthermore, the confirmation of the identity of the individuals occupying a vehicle only takes place as part of a subsequent investigation into an event surrounding the observation of the vehicle's license plate. Thus, even though some contextual photographs include an image of a vehicle's occupants, this Report considers LPR data as non-personally identifying information.

(d.) LPR data is for official use only

Even where an organization determines that a particular type of information is not personally identifying, the organization should still consider whether the information is sensitive or has organizational or individual risks associated with it, and determine the appropriate protections.

There may be risks surrounding the release of the dates, times, and locations of a certain license plate number where the requestor is in possession of the identity of that vehicle's owner. It is these risks, described in more detail later in this Report, that support the International Association of Chiefs of Police's recommendation that LPR Data be considered For Official Use Only (FOUO).[10]

[10] The term For Official Use Only is used within the U.S. Department of Homeland Security to identify unclassified information of a sensitive nature, not otherwise categorized by statute or regulation, the unauthorized disclosure of which could adversely impact a person's privacy or welfare, the conduct of Federal programs, or other programs or operations essential to the national interest. LPR data may also fall into the federal information categorization of non-classified information being implemented pursuant to Executive Order 12958; under that system of categorization, LPR data may also be considered Controlled Unclassified Information (CUI) and may more specifically fall under the CUI category "Controlled, Special Dissemination." *See* Executive Order 12958 as amended by Executive Order 13292 at 68 Fed. Reg. 15315 (2004); *see also* White House *Memorandum for the Heads of Executive Departments and Agencies*: Designation and Sharing of Controlled Unclassified Information (CUI) (May 7, 2008) available on-line at: http://www.archives.gov/cui/documents/designation_cui.pdf.

2

Part 2. Types of privacy risks surrounding the use of LPRs

This Part summarizes the privacy risks created by the enhanced collection, recording, analysis, and retention of license plate numbers by means of LPR systems. The privacy concerns described below become the themes that run throughout the entire PIA Report; the discussions that follow briefly explain how these risks can be mitigated by policies intended to regulate the use of LPR systems from the initial collection of the data through its life cycle.

A. UNDERLYING PRIVACY CONCERNS

The enhanced sharing, even among law enforcement personnel, of substantial amounts of information about people not immediately suspected of criminal activity may lead the public to believe that its privacy interests are being ignored. Moreover, improper disclosures of potentially sensitive information not only damage the relationship between citizens and their governmental institutions, such disclosures also make people more vulnerable to physical, emotional, financial, and reputational harms.

System designers and justice practitioners sometimes overlook information processing risks that arise from the storage, analysis, and use of data that has already been collected by the justice system. One such risk implicated by the aggregation of data occurs where the compiled information used to judge an individual is incomplete or is distorted because it is being considered out of its original context. Another privacy concern involves the risk that a justice practitioner using an information system may target one individual because of acts committed by another due to a variety of data inaccuracies.

It has been law enforcement's position that the impact of LPR systems on the privacy of individuals is the same as the impact of any ordinary investigation. The premise of this position is that LPR systems simply automate the same exact process that has been available to police manually. Criminal justice agencies explain that LPR systems simply improve the accessibility of information that is already publicly visible and make it available for analysis and appropriate dissemination.

These positions are woven throughout the discussions and recommendations contained in this Report. Ultimately, the goal of this Report is to inform a law enforcement agency's efforts to develop an information management policy that attempts to ensure

the rights of individuals to be treated with fairness and respect while providing law enforcement with the LPR data it needs to protect the public safety in an efficient and productive manner.

B. POTENTIAL CHILLING EFFECTS OF LPR SYSTEMS

Individuals are already compelled to disclose a great deal of information to their government. One privacy issue associated with the enhanced collection and compilation of LPR data from multiple sources is a chilling effect on social and political activities. Specifically, the risk is that individuals will become more cautious in the exercise of their protected rights of expression, protest, association, and political participation because they consider themselves under constant surveillance.

Surveillance is the watching, listening to, or recording of an individual's activities.[11] The potential privacy harm of surveillance is its potential use as a tool of social control: the mere possibility of surveillance has the potential to make people feel extremely uncomfortable, cause people to alter their behavior, and lead to self-censorship and inhibition.[12]

The degree of any system's chilling effect depends a great deal upon the types of information it collects and how the data will subsequently be utilized. LPR systems, unlike other forms of public surveillance, have the potential to reveal to the government individuals' driving habits. As LPR systems become more widespread, and as law enforcement agencies improve their information sharing capabilities, the potential to monitor where and when a particular vehicle travels is enhanced.

Recording driving habits could implicate First Amendment concerns.[13] Specifically, LPR systems have the ability to record vehicles' attendance at locations or events that, although lawful and public, may be considered private. For example, mobile LPR units could read and collect the license plate numbers of vehicles parked at addiction counseling meetings, doctors' offices, or even the staging areas for political protests. Furthermore, fixed LPR units located at traffic choke points may identify travel patterns of particular vehicles as they commute to and from their homes.

Although there may be some chilling effects surrounding the utilization of a LPR system, the development and implementation of policies regulating the collection, uses, sharing, and retention of LPR data can operate to reduce these effects. Deployment of LPR cameras based upon crime analysis that takes into account crime patterns and the types

[11] Daniel J. Solove, *A Taxonomy of Privacy*, 154 U. PA. L. REV. 477, 490 (Jan. 2006).
[12] *Id.* at 493.
[13] One resident of a municipality considering the installation of LPRs who "[didn't] see too much harm in [LPRs]" admitted that a LPR system "still has the taint of Big Brother." Demian Bulwa, *Tiburon may install license plate cameras*, A-1 San Francisco Chronicle (July 10, 2009) http://www.sfgate.com/cgi-bin/article.cgi?f=/c/a/2009/07/10/MNT6189U0U.DTL.

of crime targeted by LPR systems can also reduce the perception that LPRs are simply a tool for public surveillance.[14] Developing retention periods are another way to address the potential chilling effects of LPR systems.

C. IDENTIFICATION OF INDIVIDUALS VIA LICENSE PLATE NUMBERS

Identification is the act of connecting data to particular individuals.[15] Identification enables surveillance by facilitating the monitoring of persons.[16] The potential harm of identification is that it increases the government's power to control individuals through the chilling effects discussed above. It can further inhibit one's ability to be anonymous, which is important in so far as it protects people from bias based on their identities and enables people to vote, speak, and associate more freely by protecting them from the danger of reprisal.[17]

Few rights guaranteed by the First Amendment can be enjoyed without moving about. The rights to "enter into certain intimate human relationships" and "to associate for the purpose of engaging in those activities protected by the First Amendment – speech, assembly, petition for the redress of grievances"[18] are predicated upon freedom of movement. In order to associate with others in political activities or pursue religious beliefs, one must be able to go to the place where their associations meet. To assemble and participate in a rally on behalf of a political candidate, or alternatively to demonstrate against a government policy, traveling is a prerequisite.

The benefits of anonymity in the exercise of First Amendment rights have been recognized by the U.S. Supreme Court. In one case, referencing the "important role in the progress of mankind" that anonymous literature has played, the Court upheld the right to not identify one's self in the exercise of the free press on the grounds that it "provides a way for a writer who may be personally unpopular to ensure that readers will not prejudice her message simply because they do not like its proponent."[19] The right to not identify one's self has also been upheld in other First Amendment contexts. "It is hardly a novel perception that compelled disclosure of affiliation with groups engaged in advocacy may constitute…restraint on freedom of association."[20]

[14] As discussed in Part 4, LPR cameras can be fixed or mobile and can be deployed in an overt or covert manner.
[15] Solove, *supra* note 11 at 511.
[16] *Id.* at 514.
[17] *Id.* at 515.
[18] *Roberts v. United States Jaycees*, 468 U.S. 609, 617-618 (1984).
[19] *McIntyre v. Ohio Elections Comm'n*, 514 U.S. 334, 341-343 (1995) (citing *Talley v. California*, 362 U.S. 60, 62 (1960) (internal quotations and footnotes omitted)).
[20] *NAACP v. Alabama ex rel. Patterson*, 357 U.S. 449, 462 (1958). *See also Brown v. Socialist Workers' 74 Campaign Comm.*, 459 U.S. 87, 91 (1982) (holding that the "Constitution protects against the compelled disclosure of political associations").

LPR systems have the potential to record the license plate numbers of vehicles that embark on travels related to the occupants' exercise of their First Amendment rights. Law enforcement agencies are not implementing LPR systems with the goal of collecting this type of information; rather, LPR camera's potential to impact First Amendment freedoms is a byproduct of the day-to-day operation of the system. Such chilling effects can be reduced by enforcing policies designed to limit access to LPR data for certain, express law enforcement or investigatory purposes. Moreover, the development of policies concerning the collection of license plate numbers by mobile LPR units should include provisions concerning the appropriate use of mobile LPR cameras in areas known to reflect an individual's political, religious or social views, associations, or activities (e.g., churches, abortion clinics, etc.) and limit such collection to instances directly related to criminal conduct or activity.

D. SECONDARY USE OF LPR DATA

Secondary use is the utilization of data for purposes unrelated to the reasons for which the data was initially collected.[21] Secondary use essentially creates the potential for dignitary harm in that it thwarts people's reasonable expectations about how data collected and maintained by LPR systems will ultimately be used.[22] The potential for secondary use generates fear and uncertainty over how one's information will be used in the future, creating a sense of powerlessness and vulnerability among those whose information is collected.[23] Secondary use of information also creates interpretation problems in its analysis; specifically, data may be misunderstood when it is removed from its original context.[24]

Law enforcement agencies' primary concern with regard to their operation of LPR systems is the investigation of crimes and ensuring the public's safety. Privacy concerns regarding secondary uses of LPR data can be addressed in part by: (1) clearly articulating the agency's original purposes for collecting license plate numbers; (2) anticipating and disclosing how LPR data will likely be used; and (3) limiting subsequent uses of LPR data to those original purposes.[25]

Agencies could also address secondary uses of LPR data by clearly articulating permissible secondary uses of the information in advance of the data's collection. Any secondary analyses or uses of LPR data should take into account its limitations in terms of identifying anything other than the vehicle.

[21] Solove, *supra* note 1111 at 521.
[22] *Id.*
[23] *Id.* at 522.
[24] *Id.*
[25] The DPPA implements these three suggestions and specifically makes it "unlawful for any person knowingly to obtain or disclose personal information, from a motor vehicle record, for any use not permitted [by the Act]." 18 U.S.C. § 2722(a); *see also* text accompanying *supra* notes 6-9.

E. AGGREGATION OF LPR DATA

Aggregation is the gathering together of various pieces of information about a person.[26] Although less direct than surveillance, aggregating data from multiple sources is another way to acquire information about an individual.[27] The U.S. Supreme Court has even ruled that there is a significant difference between information that, although public, might be difficult to obtain from multiple locations, and a computerized summary located in a single clearinghouse of information.[28]

The potential privacy harms surrounding aggregation are similar to those of Secondary Use, described in Subpart D above. A piece of information here or there about an individual is not very telling; but when combined, these bits and pieces of data begin to form a portrait of a person.[29] In other words, personally identifiable information brought together from various source systems has the potential to reveal an individual's beliefs or ideas concerning public or social policy, as well as political, educational, cultural, economic, philosophical, or religious matters.

Aggregation can cause dignitary harms because of its ability to unsettle an individual's expectations regarding how much information they actually reveal to others.[30] Aggregation can also create interpretation problems where the data compilation used to judge the individual is incomplete or results in a distorted portrait of the person because the information is disconnected from the original context in which it was gathered.[31]

LPR Systems use optical character recognition to translate the alpha-numerical text of a license plate into electronic data. The license plate number, combined with the date, time, and location of observation is then stored electronically and can readily be combined with other data sources. An authorized user can use LPR data to gather the name and contact information of a vehicle's registered owner from a department of motor vehicles data system. Care should be exercised when combining LPR data with other personally identifying data; this is because the LPR data relates only to the vehicle, not necessarily the registered owner.[32] Thus, to address concerns related to the aggregation of data, law enforcement agencies should keep in mind that LPR data relates only to vehicles and it may be misleading to combine LPR data of vehicles with other data linked to the personally identifying information of registered owners or other occupants.

[26] Solove, *supra* note 11 at 507.
[27] *Id.* at 508.
[28] *See U.S. Department of Justice v. Reporters Committee for Freedom of the Press*, 489 U.S. 749, 764 (1989).
[29] *Id.* at 507.
[30] *Id.* at 508.
[31] *Id.* at 508-511.
[32] Moreover, there are no assurances that an inquiry into the license plate number will lead to the registered car, as in the case of stole license plates.

F. POTENTIAL MISUSES OF LPR DATA

Several prominent privacy groups view information concerning individuals' locations as inherently prone to abuses, including expanding data uses beyond the original purposes of collection, sharing data with third parties beyond reasonable expectations, and heightening individuals' vulnerability to crime.

Misuses of LPR data can take several forms. A common misuse of any data system involves the improper disclosure of its information by authorized users. When data is improperly disclosed by those authorized to access it, the promise the agency made to keep the information confidential is broken. The harm caused by such breaches is not simply that the information has been disclosed, but that the promise made to the subject of the data has been broken.[33] Protections against breaching the confidentiality of the data help promote certain relationships that depend upon trust, such as the relationship between citizens and their government.[34]

Privacy concerns also surround the disclosure of certain true information about a person that, when revealed, impacts the way others judge her character; the potential harm of disclosure involves the damage to an individual's reputation caused by the dissemination.[35] Disclosure can also be a form of social control and carries with it the potential chilling effects associated with surveillance described above in Subpart B. Moreover, knowledge of a person's location could, for example, heighten that person's vulnerability to property theft or physical harm. Disclosure harms occur regardless of whether the dissemination is the result of an inappropriate release of data by an authorized user or is the result of an unauthorized person obtaining access to the data (e.g., by hacking into the system) and releasing the information.

Simply because a type of information may be subject to misuse is not necessarily determinative as to whether to collect and use it; there are several things law enforcement agencies can do to prevent misuse of LPR data. Specifically, law enforcement agencies can develop policies that set forth the appropriate access and dissemination of LPR data; agencies can also prohibit and punish individuals authorized to access LPR data but who inappropriately disclose the information. Furthermore, conducting audits and monitoring system operations can prevent and identify instances of misuse. Security safeguards are common in other law enforcement data systems and can be useful in limiting unauthorized access to LPR data.

3

Part 3. Scope of the PIA Report

Part 3 explains the approach this Report takes to analyze the privacy concerns surrounding a law enforcement agency's use of a LPR system. It explains the steps taken to prepare this document and decisions related to narrowing the scope of this Privacy Impact Assessment.

A. APPROACH OF THE ASSESSMENT

In 2007, the International Association of Chiefs of Police ("IACP") passed a resolution in support of License Plate Reader (LPR) technology.[36] That resolution strongly encouraged the U.S. Congress to fully fund license plate reader and related digital photographing systems, including interrelated information sharing networks, for the northern and southern borders of the United States. In support of this resolution, the IACP LEIM Section set out to develop this Privacy Impact Assessment ("PIA") Report.

The goal of the PIA Report was to identify and address the primary privacy issues implicated by the electronic collection, analysis, dissemination and storage of license plate information by law enforcement agencies across the country. The first step taken in the development of this Report was the preparation of a comprehensive listing of privacy issues raised by the use of LPR systems. This document, entitled *Issue identification: Privacy issues concerning the utilization of automated license plate readers* ("the Issues document"), is included in this Report as Appendix 2. The Issues document reflects the LEIM Section's efforts to document in a comprehensive manner the privacy concerns that should be addressed by any law enforcement agency utilizing or seeking to implement a LPR system.

B. UNDERLYING PREMISES OF THIS REPORT

(1) Focus on law enforcement uses – The privacy impact analysis and discussions contained in this Report focus on law enforcement agencies' utilization of LPR systems and the LPR data they collect to investigate crimes and enforce the criminal laws. If LPR data will be used for additional purposes, additional analysis will be necessary.

[36] Intl. Assn. of Chiefs of Police, *2007 Resolutions*, 51-52 (Oct. 16, 2007) available on-line at: http://www.iacp.org/resolution/2007Resolutions.pdf.

(2) Absence of regulation of LPR data – There is an absence of uniform regulation concerning the appropriate collection, use, analysis, and retention of LPR data. This Report is intended to help law enforcement agencies develop policies meant to fill this gap in regulation in such a manner that ensures public safety needs are met while protecting individuals' privacy interests.

(3) Adult status is presumed – Part 1 explained that LPR Data is not considered personally identifying information for purposes of this Report. Nevertheless, contextual images that include vehicle occupants may contain images of minors; this is because states routinely issue drivers' licenses to individuals under the age of majority and because minors are frequently passengers in cars. Thus, LPR systems may potentially contain the location information of minors whose personally identifying information is associated with a certain vehicle. The discussions contained in this Report do not distinguish between LPR data attributed to adults or minors.

(4) Existing information sharing practices remain in effect – The discussions contained in this Report are not intended to supersede existing data sharing practices concerning license plate data. Rather, this Report is focused on the access, use, and dissemination of license plate data collected by LPR cameras and stored in LPR systems.

(5) LPR data is not considered criminal intelligence information[37] – The data collected by LPR cameras and upon which OCR is performed is only fact-based information; it is not intelligence data. Nevertheless, once that fact-based LPR data is analyzed, it may become intelligence data in the future and be subject to the U.S. Department of Justice's regulations contained at 28 C.F.R. Part 23.

(6) Internal access to LPR data is determined at the agency level – The terms "law enforcement officials" and "law enforcement officers" are used interchangeably throughout this Report. It is up to local agency heads to determine who within the organization may access LPR data.

C. ISSUES NOT ADDRESSED IN THIS REPORT

There are numerous privacy and other public accountability issues surrounding a law enforcement agency's utilization of a LPR system. Some of these issues surround the administration of the system and others concern the utilization of LPR data compiled by

[37] Criminal Intelligence Information means data which has been evaluated to determine that it: (i) is relevant to the identification of and the criminal activity engaged in by an individual who or organization which is reasonably suspected of involvement in criminal activity, and (ii) meets criminal intelligence system submission criteria. 28 C.F.R. §23.3(b)(3).

other agencies. The scope of this Report was narrowed to exclude consideration and discussion of the following issues.

(1) An agency's decision to utilize a LPR system – This Report focuses on the privacy concerns surrounding the operation and administration of a LPR System; it does not, however, discuss a law enforcement agency's initial decision to procure and begin utilizing LPR cameras.

(2) Privacy policy development – Although it is beneficial to utilize a formal development process when creating policies regarding LPR data, this Report does not recommend to law enforcement agencies any particular method of creating privacy or information management policies that implement the recommendations that follow.

(3) Use of another entity's LPR data – This Report contemplates the privacy concerns surrounding a law enforcement agency's collection of LPR data through the use of its own LPR cameras and computer systems. Where LPR data collected by another entity is going to be used by a law enforcement agency, it should determine that the LPR data is reliable and of sound quality.

(4) Sharing LPR data with private companies – Although Part 5 discusses the dissemination of LPR data with various members of the general public, it does not address the sharing of LPR data outside the context of an investigation or public safety purpose. Law enforcement agencies seeking to share LPR data with private companies should fully examine the privacy and public confidence issues of doing so.

(5) Freedom of information and sunshine acts – Since freedom of information acts vary from state to state, this Report does not address the release of LPR data to the public pursuant to such a statute. Nevertheless, such laws are important and their impact on the operation and administration of a LPR system should be reviewed as part of any policy development process.

4

Part 4. Collection of LPR data

This Part explains that LPR system data consists of: (A) the images and data collected by LPR cameras; and (B) the Hot Lists that alert a user to the presence of a particular license plate. The discussions that follow concern how LPR data is collected and for what purposes.

A. LPR CAMERA DATA

1. LPR CAMERA DEPLOYMENT

LPR systems can observe and record over 1,000 license plates an hour in various lighting and weather conditions. LPR cameras can be fixed, mobile, or portable. A fixed LPR unit is permanently mounted, usually to a bridge or a pole, and frequently in a jurisdiction's most heavily traveled points of ingress and egress. Mobile LPR units are mounted to law enforcement agency vehicles and can capture data from any area of an agency's jurisdiction. Portable LPR cameras can be moved from vehicle to vehicle or deployed in covert configurations.

Some privacy issues will vary depending upon the type of camera deployment utilized. For instance, mobile LPR cameras are much less likely than fixed LPR units to collect information concerning the routine commuting of particular vehicles. This is because mobile LPR units are attached to cars and are therefore unlikely to observe license plate numbers in the same location at the same time on a consistent basis. Mobile units, however, do have the potential to patrol parking lots of certain establishments; thus, mobile LPR cameras may collect the license plate numbers of vehicles parked at locations that, even though public, might be considered sensitive, such as doctor's offices, clinics, churches, and addiction counseling meetings, among others.

2. LPR DATA ELEMENTS

As discussed in Part 1 above, LPR systems take images of vehicles and license plates within range of a LPR camera. Thus, depending upon the placement and resolution of its cameras, a LPR system has the potential to gather a wide spectrum of data.

Typically, the contextual image collected by a LPR camera is maintained in the information system to provide a means of ensuring that the license plate number was

properly converted into an electronically readable format by the optical character recognition (OCR) software. The contextual photo provides a more inclusive view of the vehicle and its surroundings. Depending on the focal length of the camera and the distance of capture, the photo may provide a view of part or all of the vehicle, its surroundings, and possibly the occupants of a vehicle. This information may be helpful in *inter alia*: (a) identifying the vehicle by providing color or unique attributes such as damage or bumper stickers; (b) confirming the location of the LPR camera that took the photograph; or (c) confirming the identity of a vehicle's occupant.

Although a contextual photo contained in a LPR system may contain a great deal of raw information, only certain pieces of information contained in any LPR photograph will be subjected to OCR and rendered into an electronically readable format. Thus, images of vehicle occupants, vehicle make and model, and any distinguishing features of a vehicle contained in a contextual photo are not electronically readable or compiled by existing LPR systems.[38]

In addition to collecting the OCR of license plate numbers, LPR systems do ascribe date, time, and location information to an image. Some systems also attach to the image a camera identifier; in the case of mobile LPR units, the patrol car and officer identification number may also be collected.

3. PURPOSE SPECIFICATION

Law enforcement agencies are charged with protecting the public as well as investigating crimes and criminal conduct. LPR systems serve four specific public safety goals. Specifically, LPR data can be used: (a) in various forms of crime analysis; (b) to alert law enforcement officials that a license plate number on a hot list is nearby; (c) to monitor the movements of vehicles operated by individuals subject to geographical limitations on their travel; and (d) to identify instances of criminal conduct that might have previously gone undetected without the aid of the LPR system.

(a.) LPR data is collected to support various forms of crime analysis.

Law enforcement agencies utilize crime analysis to prevent and suppress crime, apprehend offenders, and recover stolen property.[39] Crime analysis is usually conducted on offenses with discernable patterns and trends that can be prevented or reduced through the implementation of directed action plans.[40] A review of existing crime analysis operations reveals that burglary, robbery, auto theft, larceny, fraud, sex crimes, aggravated assaults, and murder are the crimes most appropriate for crime analysis.[41]

[38] Technology is continually advancing. If LPR systems evolve to a level where they can read and compile data other than license plate numbers, the policy discussions contained in this Report will need to be supplemented.
[39] Steven Gottlieb, *et al.*, *Crime Analysis: From First Report to Final Arrest* 14-16 (Alpha 1994).
[40] *Id.*
[41] *Id.* at 133.

There are three types of crime analysis: (1) tactical; (2) strategic; and (3) administrative. Tactical analysis is the first priority of law enforcement agencies.[42] Specifically, tactical crime analysis (a) detects crime patterns and series by studying and linking common elements of crimes;[43] (b) predicts when and where future events will occur; and (c) provides information to officers regarding specific crime problems and is intended to result in the arrest of a suspect.[44]

Strategic crime analysis concentrates on long-term crime trends and can be used to project where police presence should be increased or decreased. Administrative analysis, unlike tactical and strategic crime analysis, interprets crime statistics categorized by economic, geographic, or social conditions and provides information for grant applications, feasibility studies, and city council reports.[45] Thus, administrative analysis provides information useful in running a law enforcement agency while tactical and strategic crime analysis is intended to help the law enforcement agencies protect the public and enforce the criminal laws.

When law enforcement agencies talk about using LPR data to check crime series information to determine if the same vehicles are in the area of different crime scenes, they are referring to tactical crime analysis. Tactical crime analysis is used to determine who is doing what to whom and focuses on crimes against persons and property. LPR data can also be useful to other agencies whose missions are broader in scope, like counter terrorism taskforces interested in utilizing strategic crime analyses. The following categories of data are widely considered most useful for crime analysis purposes.[46]

- Geographic factors[47]
- Victim descriptors
- Physical evidence descriptors
- Suspect descriptors
- Time factors
- Property loss descriptors
- Specific modus operandi factors
- Suspect vehicle descriptors

[42] *Id.* at 15.

[43] A crime pattern is merely a set of similar offences happening in a specific geographical area while a crime series is a crime pattern that appears to be done by either the same person or group of persons. Shawn A. Hutton & Mark Myrent, *Incident-Based Crime Analysis Manual* 34 (Ill. Crim. J. Info. Auth. 1999).

[44] Shawn A. Hutton & Mark Myrent, *Incident-Based Crime Analysis Manual* 7 (Ill. Crim. J. Info. Auth. 1999).

[45] Gottlieb, *supra* note 39 at 15 (stating that administrative analysis essentially includes the "nice to know stuff.").

[46] *Id.* at 128. Experienced analysts have found that the importance of each factor differs depending upon the type of crime being investigated. For example, suspect vehicle descriptors are more useful in determining whether a pattern of thefts from vehicles exists than a pattern of strong armed robberies. See *Id.* at 318-320.

[47] Spot maps can be of great assistance to the analyst. Nevertheless, spot maps will only depict crime patterns; additional information is necessary to determine if a crime pattern is also a crime series.

(b.) LPR systems collect information to alert law enforcement of the proximity of a vehicle displaying a license plate number that is included on a hot list.

License plate numbers of stolen cars, vehicles owned by persons of interest, and vehicles associated with AMBER Alerts are routinely added to "hot lists" circulated among law enforcement agencies. These lists serve an officer safety function as well as an investigatory purpose.

Hot lists are typically transferred daily and can be updated by an operator/officer in the field. Hot list information can come from a variety of sources, including but not limited to, stolen vehicle information from the National Insurance Crime Bureau and the National Crime Information Center (NCIC), as well as national AMBER Alerts and Department of Homeland Security watch lists. Departments of Motor Vehicles can provide lists of expired registration tags and law enforcement agencies can also interface their own, locally-compiled hot lists to the LPR system.

LPR systems function in such a way as to notify an officer when a license plate on the hot list is observed in real time; this can be the case for both fixed and mobile LPR units. Historical LPR data can also be searched to determine the date and time a license plate number contained on a hot list passed a certain camera.

(c.) LPR data is collected to assist in the monitoring of certain identified individuals' compliance with travel restrictions.

In some circumstances, a court can limit the movements of certain individuals for public safety purposes. For instance, sex offenders, probationers and parolees, and people subject to orders of protection may be subject to court-imposed restrictions on their geographic movements. LPR systems can be useful in assisting with the enforcement of geographic limitations on the movements of these types of individuals. Specifically, LPR cameras can record the license plate numbers of vehicles observed near certain locations such as schools and day care facilities, or residences and work addresses of people protected by court orders. These locations and license plate numbers associated with such individuals can be added to LPR systems to bring any potential violations to an officer's attention in real-time or the plate numbers can be queried against historical LPR data. In these instances, the LPR data is merely evidence of a possible violation and further verification is needed to identify the operator of a vehicle.

In instances of mass evacuations, LPR systems could be useful in determining the number of vehicles that have left an area and can also serve as a means of identifying those vehicles. This latter capability may be beneficial to law enforcement agencies' ability to respond to calls asking about the welfare or evacuation status of a relative.

(d.)LPR data is collected to help law enforcement agencies identify previously-undetected crimes

LPR systems have the potential to identify and observe criminal conduct that, prior to the implementation of the technology, would have been extremely difficult to detect in the absence of an offender's chance encounter with authorities.

For example, the failure to obtain and provide proof of mandatory car insurance is grounds for several states to suspend license plates and driver's licenses. Unless these vehicles are operated in such a manner as to raise the suspicions of a police officer, these uninsured vehicles would remain undetected. In a jurisdiction utilizing a LPR system, a department of motor vehicles can create a list of license plate numbers attached to invalid driver's license numbers. That list can be uploaded into a LPR system and officers can be notified when that license plate number passes a LPR camera.

LPR systems can also be used to help implement programs intended to more efficiently bring certain crimes to law enforcement officers' attention. Several states have programs to combat auto thefts that permit vehicle owners to provide written consent for their vehicles to be stopped without cause during late evening hours. LPR systems provide an efficient means of implementing such programs and increase the odds of recovering stolen vehicles because these systems can cross check license plate numbers against lists of stolen plates and vehicles many times faster than if done manually.

LPR systems, like other forms of surveillance cameras, are excellent tools for figuring out what has already happened. Moreover, overt LPR systems may have some deterrent impact.[48]

B. LPR "HOT LISTS"

Many of the potential uses of LPR data involve the comparison of license plate numbers collected by a LPR system to numbers contained on a previously compiled list. These hot lists may be compiled by the local law enforcement agency utilizing the LPR system or by other state or federal government agencies. The purpose of these lists is to signal a law enforcement official that a vehicle displaying a license plate number that is included on a hot list is near a LPR camera. This can be done in real-time or through the use of historical LPR data.

The use of hot lists is essential to LPR systems intended to serve public safety purposes, and the actions taken by law enforcement officers informed of a "hit" will vary depending upon the list that contains the vehicle's license plate number. Limiting the number of hot lists uploaded to a LPR system is recommended to guard against the

[48] *See* Jerry Ratcliffe, *Video Surveillance of Public Places*, 8-11 (U.S. Dept of Justice, Office of Community Oriented Policing Services Feb. 2006) (referring to closed-circuit television surveillance of public spaces).

system "crying wolf." If law enforcement officers are bombarded by an alert at every third license plate that passes the LPR camera due to the inclusion of too many hot lists, a danger exists that officers may turn off the system or otherwise ignore alerts during their shifts. Only including hot lists that further the law enforcement agency's goals is one way to guard against this danger. Local agencies are ultimately responsible for selecting which hot lists to upload onto their LPR systems.

1. COMPILATION & MANAGEMENT OF LPR HOT LISTS

Managing hot lists is a key element to the success of a LPR system. The content of hot lists should be monitored to protect people whose vehicles license plates numbers are contained on such lists from continued and unnecessary annoyance.

While some hot lists focus on identifying a particular vehicle regardless of who is operating it (e.g., stolen cars, AMBER alerts), other lists include license plate numbers known to be associated with specific individuals (e.g., sex offenders, wanted persons). These hot lists, whether they relate to stolen cars or potential occupants of vehicles, enhance law enforcement agencies' ability to detect crime and provide critical officer safety information.

LPR hot lists are compiled to serve agency-specific needs. Hot lists may include, for example, license plate numbers of vehicles known to be operated by: (a) violent probationers and parolees; (b) violent gang members; (c) individuals with outstanding warrants; and (d) individuals identified as witnesses. In some instances, individuals provide the license plate numbers of vehicles they may operate; in others, departments of motor vehicles may provide license plate numbers of vehicles registered to individuals. In still other circumstances, license plate numbers may be linked to certain individuals by direct observation and documentation of law enforcement officers.

When developing their own hot lists, law enforcement agencies should develop a process that sets forth criteria for including certain license plate numbers on a hot list. For instance, in order to activate an America's Missing: Broadcast Emergency Response (AMBER) Alert certain criteria must be met. Specifically, a juvenile: (a) must have been confirmed as abducted; (b) is under the age of 16 or has a proven mental or physical disability; and (c) is in danger of serious bodily injury; finally, there also needs to be enough descriptive information to believe that a broadcast alert will help.[49]

Additionally, agencies may consider providing a process whereby a license plate number's inclusion on a hot list can be verified. Providing for verification is one way of monitoring the accuracy of data contained on a hot list. It also helps ensure that law enforcement officials act only upon complete, correct, and timely information.

[49] U.S. Dept. of Justice, *Recommended AMBER Alert Criteria*, (LT000498, Apr. 2005) available on-line at: http://www.ncjrs.gov/html/ojjdp/amberalert/PocketCard.pdf.

Agencies should also develop procedures for removing license plate numbers that do not belong on a particular hot list.

C. NOTICE OF DATA COLLECTION PRACTICES

1. FAIR INFORMATION PRACTICES

In 1973, the U.S. Department of Health, Education, and Welfare ("HEW") published a groundbreaking report responding to concerns that harmful consequences may result from the storing of information related to individuals in computer systems. That report, entitled *"Records, Computers and the Rights of Citizens,"* articulated several principles HEW deemed essential to the fair collection, use, storage, and dissemination of personal information by electronic information systems.[50]

The five basic principles contained in the HEW Report held that: (1) there must be no personal data record keeping systems whose very existence is secret; (2) there must be a way for an individual to find out what information about him is in a record and how it is used; (3) there must be a way for an individual to prevent information about him that was obtained for one purpose from being used or made available for other purposes without his consent; (4) there must be a way for an individual to correct or amend a record of identifiable information about him; and (5) any organization creating, maintaining, using, or disseminating records of identifiable personal data must assure the reliability of the data for their intended use and must take precautions to prevent misuse of the data.[51]

Several years later, in 1980, the Organization for Economic Cooperation and Development ("OECD") would publish its *Guidelines on the Protection of Privacy and Transborder Flows of Personal Data*. The OECD Guidelines articulated eight Fair Information Practices that incorporated the HEW Report's principles and are still today universally recognized as a solid foundation upon which to build privacy legislation and policies.[52]

The fair information practices provide rules governing the processing of data subjects' personal data. "Processing," "data subjects," and "personal data" are broadly defined

[50] U.S. DEP'T OF HEALTH, EDUC., & WELFARE, Records, Computers and the Rights of Citizens: Report of The Secretary's Advisory Committee on Automated Personal Data Systems xx-xxi (1973) (hereafter "HEW Report"), available at http://aspe.hhs.gov/datacncl/1973privacy/tocprefacemembers.htm.

[51] *Id.*

[52] NAT'L CRIM. JUST. ASS'N, Justice Information Privacy Guideline: Developing, Drafting and Assessing Privacy Policy for Justice Information Systems 22 (NCJA 2002) (hereafter "NCJA Guideline"), available at http://www.ncja.org/Content/NavigationMenu/PoliciesPractices/JusticeInformationPrivacyGuideline/privacyguideline.pdf

terms.[53] One of the fundamental principles is providing to data subjects notice of data collection and data management practices.

2. NOTIFYING THE PUBLIC ABOUT THE USE OF LPR SYSTEMS

The most fundamental Fair Information Practice is notice.[54] Without notice, an individual cannot make an informed decision as to whether and to what extent to disclose information to the data collector. Moreover, other fair information practices are only meaningful when a person has notice of an agency's data collection and management practices.

The decision to provide the public with notice of a law enforcement agency's use of a LPR system involves the consideration of several competing interests. First, there is a growing recognition that promoting public confidence in the administration of justice is one of the primary goals of good government. One way to promote public confidence is to increase the transparency surrounding how LPR data will be managed by the law enforcement agency, even if the LPR data itself should not be released to the public. Doing so serves two purposes: first, it invites constructive comments regarding the operation of the LPR system, and second, it is a mechanism to hold the justice system accountable for adhering to the rules and procedures it develops.

There may also be benefits to being proactive about informing the public of the use of a LPR system. Since the public is very likely to discover an agency's utilization of LPR technology, it could be best to be forthcoming with a positive news story. Moreover, such publicity could also result in some deterrence effect as prospective offenders would be made aware that their license plate numbers could be collected.

Nevertheless, there may be drawbacks to providing the public with notice that LPR cameras are in use in the jurisdiction. Not providing notice can help minimize offenders' implementation of countermeasures. Additionally, knowledge of the locations of fixed LPR units may give offenders information they need to avoid, sometimes with the assistance of GPS devices, passing a LPR camera. Providing the location of fixed LPR cameras could also result in increased costs due to intentionally inflicted damage.

After weighing the costs and benefits, some agencies may still be interested in providing notice. There are several ways to provide public notice of a LPR system. One way is to post a notice on the law enforcement agency's website. To be effective, website notice should be clear and understandable as well as conspicuous and posted in a prominent

[53] Barbara Crutchfield George, *et al.*, *U.S. Multinational Employers: Navigating Through the "Safe Harbor" Principles to Comply with the EU Data Privacy Directive*, 38 AM. BUS. L.J. 735, 752 (2001).

[54] This is sometimes referred to as the *Openness Principle*, under which there should be a general policy of openness about developments, practices, and policies with respect to personal data. Under this principle, means should be readily available of establishing the existence and nature of personal data, and the main purposes of its use, as well as the identity and usual residence of the data controller. *See* NCJA Guideline *supra* note 52 at 31.

location. Agencies may also consider publishing their privacy impact assessments or portions of their LPR system information management policies for a public comment period. Although more costly, signage can also be used to inform the public that a LPR system is being utilized in the jurisdiction.

If a law enforcement agency opts to provide notice, it is recommended that the agency limit the publication of details regarding the locations of fixed and mobile LPR units.

5

Part 5. Access to and Dissemination of LPR data

Part 5 addresses the closely related concepts of access and dissemination of the data collected by LPR cameras. This Report explains the distinction between historical and active LPR data and the privacy concerns surrounding each. The access to and dissemination of LPR Hot Lists are also discussed.

A. ACTIVE AND HISTORICAL LPR DATA

Active LPR data is that information which is provided to an officer in real-time. It takes the form of alerts that a license plate number contained on a hot list is near a LPR unit, whether fixed or mobile. The LPR data recorded during an officer's shift and accessible from within the squad car can also be considered active data as it has not been downloaded into a historic database of LPR data.

Historical LPR data is essentially a database containing the dates, times, and locations of individually identifiable motor vehicles; it is considered passive as it is essentially LPR data that is stored for future use. The amount of historical LPR data available for inquiries depends, in part, upon an agency's number of LPR cameras and its retention policies.

This Report distinguishes between active and historical LPR data as a method of addressing privacy concerns regarding the observation and recording of the date, time, and location of individuals' automobiles. It is submitted that the real-time utilization of LPRs implicates less privacy concerns than historical LPR data. Historical LPR data raises more concerns because of the potential to link a license plate number with an identifiable person.

B. ACCESS TO LPR DATA

Police officials have a duty to investigate crimes and criminal conduct. To fulfill this responsibility, police officials collect various types of information in order to identify potential suspects. Active LPR data helps bring a law enforcement officer's attention to certain violations as they occur, such as the operation of a stolen car or a vehicle displaying license plates associated with a violent felony or child abduction. Historical LPR data can play an important role in the investigation of crimes and can be utilized to

help create investigative leads and ultimately prosecute offenders. Historical LPR data is also utilized in traditional forms of crime analysis.

Appropriate access to active and historical LPR data is guided significantly by the purposes for which it collected. Thus, LPR data may appropriately be accessed by law enforcement officials: (a) to support crime analysis efforts; (b) to alert law enforcement officials that a license plate included on a hot list is or has been near a LPR camera location; and (c) to help law enforcement officials detect instances of criminal conduct.[55]

LPR data is most likely to be utilized by law enforcement officers; nevertheless, there may be additional, foreseeable users of LPR data. Each type of authorized user's access permissions should be clearly articulated.

Moreover, although it is axiomatic that active LPR data is available to any law enforcement officer, agencies might consider establishing more specific criteria for granting access to historical LPR data. Reducing the level of access law enforcement officials have to historical LPR data can protect against misuse of the information and provide additional privacy protections.

C. DISSEMINATION OF LPR DATA

It may be appropriate to share LPR data with various agencies and individuals throughout the justice system. Any policy regulating the sharing of LPR data should clearly identify the receiving entity and the specific purpose for the dissemination. Secondary uses, defined as uses other than the original purposes underlying the collection of the license plate numbers as discussed earlier in this Report, should be described in detail.

1. SHARING LPR DATA AMONG LAW ENFORCEMENT AGENCIES

Law enforcement officials have a duty to investigate crimes and criminal conduct. To fulfill this responsibility, officers collect, analyze, disseminate, and retain a variety of information, including active and historical LPR data. Many of the proposed purposes for collecting license plate data through the use of LPR systems implicitly require the sharing of LPR data across jurisdictions.

It has long been a basic tool of criminal investigators to start with known subjects and vehicles, and, with proper authorization, look for information about them and the people with whom they interact. Historical LPR data could provide police officials with information concerning the location of specific vehicles and, as a result, identify individuals for investigation because of their link to a vehicle observed by a LPR camera.

[55] *See* Part 4 of this Report; subsection (c) is intended to include law enforcement monitoring of certain identified individuals' compliance with travel restrictions and identification of previously-undetected crimes.

Although some of the connections revealed by an analysis of historical LPR data may be tenuous, it is the role and responsibility of law enforcement officials to exhaust investigative leads, something they routinely do in the course of any criminal investigation.

Combining LPR data from agencies in the same region can aid in the investigation of cold cases and in the identification of larger or more expansive crime trends.[56] Where one jurisdiction has already identified a vehicle of interest, it may be enough for a law enforcement agency of another jurisdiction to share the LPR data concerning that particular license plate number. Alternatively, conducting analyses of crime trends and series across jurisdictions may require submitting significant amounts of historical LPR data to another agency or regional data repository.

2. SHARING LPR DATA WITH OTHER GOVERNMENT ENTITIES

Several types of governmental agencies are likely to request LPR data from law enforcement entities. These agencies include, but are not limited to, parking enforcement bureaus,[57] departments of transportation, airport authorities, port authorities, and state departments of motor vehicles. While such requests may be for statistical information, other requests, like those from agencies like parole and departments of corrections officers,[58] might seek LPR data related to specific license plate numbers.

With the development of Fusion Centers, existing guidelines and memoranda of understanding regarding the inter-agency sharing of law enforcement data likely address the sharing of LPR data.

3. SHARING LPR DATA WITH THE PUBLIC

LPR data should only be shared for legitimate law enforcement purposes as it is considered for official use only. There may be instances where law enforcement purposes are furthered by sharing LPR data with the public. Whether LPR data may be shared with the public depends upon the type of entity receiving the LPR data, the nature of the information disseminated, and the circumstances surrounding the disclosure.

[56] Although not always the case, fixed LPRs frequently capture "transient vehicles" driving through a jurisdiction whereas mobile LPRs collect license plate data from local vehicles. Thus, fixed LPRs may further regional law enforcement goals whereas mobile LPRs may be of more value to local law enforcement agencies.

[57] Parking enforcement bureaus are not considered law enforcement in many jurisdictions.

[58] In many jurisdictions, parole and probation officers are peace officers with specific powers of arrest; in those instances, the sharing of information with such officers should be considered the sharing of LPR data among law enforcement agencies.

(a.) LPR data may be shared with private security personnel

Approximately 85 percent of the nation's critical infrastructure[59] is owned by the private sector and vulnerable to crime, such as terrorism and fraud.[60] Fusion Center Guidelines provide for the sharing of certain types of law enforcement data with privacy security personnel even where such access is not available to the public at large.[61] Thus, historical LPR data may be shared with private security personnel in accordance with memoranda of understanding and non-disclosure agreements entered into with the law enforcement agency.

(b.) LPR data may be shared with certain non-governmental organizations

Certain non-government organizations, such as the National Insurance Crime Bureau or the National Center for Missing and Exploited Children may seek access to LPR data. Certain statistical and license plate specific LPR data[62] may be shared with such entities to further the purposes underlying the collection of the license plate numbers by the LPR system. Law enforcement agencies should enter into memoranda of understanding or non-disclosure agreements with the non-government organization receiving the data.

(c.) LPR data may be shared with the general public in certain instances

Although there should be a general prohibition on the dissemination of LPR information to the general public, LPR data[63] could be useful in line-ups and in identifying vehicles involved in the commission of crimes or hit-and-run accidents. Such information may also be useful in seeking missing persons. In these and similar circumstances, law enforcement entities may want to affirmatively disseminate LPR information to the public.

In addition to case-by-case disseminations that take place during the course of an investigation, there may be instances where a vehicle or its known occupants pose a threat of substantial harm to the public. In these instances, the head of a law enforcement agency may release to the general public or news media LPR data that could reasonably protect the public from harm.

[59] Critical infrastructure is defined as those systems and assets, whether physical or virtual, so vital to the United States that the incapacity or destruction of such systems and assets would have a debilitating impact on security, national economic security, national public health or safety, or any combination of those matters. U.S. Dept. of Justice, *The National Criminal Intelligence Sharing Plan*, 13 (October 2003) (hereafter "NCISP") available on-line at http://www.it.ojp.gov/documents/NCISP_Plan.pdf.

[60] U.S. Dept. of Justice, *Fusion Center Guidelines—Developing and Sharing Information in a New Era*, 17 (August 2006) (hereafter "Fusion Center Guidelines") available on-line at http://www.it.ojp.gov/documents/fusion_center_guidelines_law_enforcement.pdf.

[61] *Id.* at 29.

[62] Although statistical summary information is unlikely to create privacy concerns, the sharing of LPR data related to a license plate number may raise privacy issues.

[63] LPR data may include images of vehicle occupants.

D. UPDATING AND SHARING HOT LISTS

Hot lists are typically uploaded onto a LPR system daily and can be updated by the authoring agency or an officer in the field. Hot list information can come from a variety of sources, including but not limited to, stolen vehicle information from the National Insurance Crime Bureau and the National Crime Information Center (NCIC), as well as national AMBER Alerts and Department of Homeland Security watch lists. Departments of Motor Vehicles can provide lists of expired registration tags and police departments can also interface their own hot lists to the LPR system. Hot lists can be uploaded onto a LPR system either as separate lists or merged into a single list.

Law enforcement officials have access to the license plate numbers contained on any LPR hot lists. Some hot lists will contain numerous license plate numbers and officials may not be able or desire to review their entire contents. Thus, for purposes of sharing hot lists across jurisdictions, it may be beneficial for law enforcement agencies that create hot lists to maintain supporting documentation regarding why a particular license plate number is on the specific hot list and make that information available, upon request, to the agency utilizing that hot list as part of its LPR system.

The heads of law enforcement agencies are ultimately responsible for determining which hot lists are uploaded onto the agency's LPR system and what actions officers take in response to a LPR hit. Agencies may want to establish some criteria for determining which hot lists will be uploaded onto the LPR system.

Since hot lists are created to enhance law enforcement officers' abilities to conduct investigations and provide for officer safety, the contents of hot lists should not be disseminated to the public.

E. SECURITY SAFEGUARDS

The focus of this Report is to set forth the impact LPR systems may have on the public's privacy interests; nevertheless, security safeguards may impact the degree to which the public's privacy may be impacted by a law enforcement agencies' operation of a LPR system. LPR data is sensitive enough to be categorized for official use only. As such, LPR systems should be protected by reasonable security safeguards to prevent loss or unauthorized access, destruction, use, modification or disclosure of LPR data. Ensuring that LPR data remains secure is one way for law enforcement agencies to build public confidence.

Law enforcement agencies may consider taking several steps to help secure LPR data. LPR systems and the computers that access them should utilize anti-virus software and firewalls. Additionally, authorized users should be required to utilize alphanumeric passwords consisting of a combination of upper and lower case letters, numbers and symbols; users should also be required to frequently change their passwords and keep

them safe. Law enforcement agencies should also utilize encryption technologies to protect LPR data in storage and in transit over networks.

6

Part 6. Retention of LPR data

Although retention periods were once necessitated by physical storage constraints, electronic storage of records has made the destruction of criminal justice and law enforcement information largely unnecessary. Thus, whether to retain a piece of information indefinitely is now a matter of policy. Part 6 addresses the retention of LPR data; it highlights several criteria a law enforcement agency may want to consider when developing a retention policy. This Part ultimately concludes that a comprehensive study of LPR data practices may be necessary to identify standards for retention periods.

A. RETENTION OF CRIMINAL JUSTICE DATA, GENERALLY

Criminal justice agencies are continuously collecting information about individuals. While some information is collected pursuant to an incident or an arrest, other information is gathered as a result of a tip and follow-up investigation. The information law enforcement agencies collect may be personally identifiable and other information may simply relate to the facts or circumstances of an event. This continuous collection, when combined with indefinite retention of that information, creates some privacy concerns.

The indefinite retention of law enforcement information makes a vast amount of data available for potential misuse or accidental disclosure. Additionally, retaining certain types of information indefinitely can be a form of undesirable social control that can prevent people from engaging in activities that further their own self-development, and inhibit individuals from associating with others, which is sometimes critical for the promotion of free expression. Although there are several reasons to retain certain types of law enforcement data for a substantial period of time,[64] those reasons may not apply to LPR data. Moreover, the indefinite retention of LPR data may enhance certain information dissemination risks.

[64] Official criminal history record information is collected and maintained to compile crime statistics, assist a court in imposing an appropriate sentence, and to help corrections officials make prisoner placement decisions. Criminal history records are also maintained to implement sentence enhancement provisions for recidivists and are also used to ensure that civil disability and offender registration statutes are properly applied. *See* U.S. Dept. of Justice, *Use and Management of Criminal History Record Information: A Comprehensive Report*, 101-127 (NCJ 187670, Dec. 2001) available on-line at http://www.ojp.usdoj.gov/bjs/abstract/umchri01.htm.

Nevertheless, justice practitioners and policy-makers are justifiably hesitant to destroy records. The government's reluctance may be rooted in investigators' experience that seemingly irrelevant or untimely information may acquire new significance as an investigation brings new details to light.[65] Deleting or destroying information, justice practitioners argue, would impede investigations and potentially result in fewer cases being solved.

Unfortunately, state and local records acts don't resolve the issue of data retention. The requirements contained in records retention laws vary from state to state.[66] Most statutes allow, but do not require, the destruction of particular criminal justice records after an established period of time. In many instances, governmental and law enforcement agencies must apply for permission to destroy records prior to doing so. Even though an agency may not be required to dispose of its electronic records, it may choose to remove LPR data from its information systems as a means to address the public's privacy concerns or simply to reduce the costs of storing the numerous back-up tapes necessary to ensure a computer system can recover from an unforeseen disaster.

B. CRITERIA TO CONSIDER WHEN ESTABLISHING RETENTION POLICIES

There is no formula for determining how long LPR data should be retained; nor have standards or guidelines been established that agencies can refer to as they set out to develop LPR data retention policies. In fact, there is surprisingly little literature discussing what criteria should be considered in developing retention periods for electronic criminal justice information in general or for LPR data in particular. Nevertheless, agencies may still need to explain their reasons for retaining LPR data for as long as they do.

1. STANDARD CRITERIA SHOULD BE ESTABLISHED TO ASSIST AGENCIES' DEVELOPMENT OF LPR DATA RETENTION POLICIES

A law enforcement agency seeking to develop a retention period for the data collected by and contained in its LPR systems faces many challenges. Chief among these challenges is the lack of thoroughly researched and well-articulated guidelines regarding how long LPR data should appropriately be retained.

LPR data is multi-faceted and subject to many potential uses. Historical LPR data may lose some of its value over time due to the sale and transfer of automobiles. The public's privacy interests regarding the stored LPR data may diminish as time passes. It's

[65] *See* 68 Fed. Reg. 14140 (2003).

[66] A threshold issue exists as to whether a contextual image taken by a LPR camera and the data associated with that image (including but not limited to the OCR text of the license plate and the date, time and location of observation) are considered records under the law of the jurisdiction.

uncertain if each query-response from a LPR system should be considered a record separate from the underlying LPR data that resides in the system.[67]

Although there are certain criteria that are intuitively useful when deciding how long to retain LPR data, it is unclear how those criteria relate to each other or which criteria would be considered more important in the case of a conflict. There may also be several criteria that are not intuitive but provide sound rationales for the retention or destruction of LPR data.

Thus, there is considerable need to establish a set of guidelines, including standard criteria, to assist law enforcement agencies in their development of retention policies for LPR data. Establishing such guidelines will likely require a thorough study of existing LPR data practices and rationales in use across the country and perhaps internationally. The IACP recommends that such a study be conducted and the results utilized to establish a set of standard criteria as well as guidelines for how those criteria may be used by law enforcement agencies in their development of a retention policy for LPR data.

2. INTERIM CRITERIA EXIST THAT AGENCIES MAY CONSIDER AS THEY DEVELOP RETENTION POLICIES

Regardless of whether a law enforcement agency deletes LPR data after 30 days or retains LPR data indefinitely, it may be called upon to explain how it came to that determination. Even though there is no set of standard criteria or guidelines for the appropriate retention of LPR data, there are still certain criteria specific to LPR data that a law enforcement agency may use to explain its decision to retain LPR data as long as it does.

Although not an exhaustive list, the criteria that follow are interrelated and can be applied comprehensively when setting a retention period for LPR data collected, used, and maintained by a law enforcement agency. Each criterion is described in greater detail below. It is important to note that these criteria are not beyond criticism. The application of the criteria is susceptible to multiple interpretations. Thus, two agencies can review the same facts about their respective sets of LPR data and come to different conclusions about how long the information should appropriately be retained. This is the result of the many judgments that must take place during the development of a retention policy and further counsels the need for uniform guidance in this area.

(a.) Statutes of limitation

Statutes of limitation exist to encourage prompt investigations and prevent stale prosecutions. Where LPR data is associated with crimes not subject to a statute of limitations, law enforcement agencies are justified in setting a long retention period.

[67] If so, those records may have different retention periods; specifically, the query-response record would likely be maintained for purposes of monitoring system use as opposed to supporting criminal investigations.

Conversely, where LPR data is associated with a crime that is subject to a shorter statute of limitation, law enforcement agencies may tend toward setting a shorter retention period.

It is important to note that certain characteristics of a criminal offense that might otherwise have a shorter statute of limitations may operate to extend or toll statutes of limitation.[68] Where those characteristics are present, the LPR data may be retained longer. Similarly, this criterion favors a longer retention period where the LPR data at issue concerns a crime that may be one of a series of acts performed at different times.[69]

Unfortunately, there are several difficulties with implementing statute of limitations criteria. Specifically, these criteria are premised upon the prompt reporting of crimes and that all steps of a crime take place in the same proximity to the location of the occurrence. Some crimes, especially those against property, may go undetected for some time; this may be the case where the property owner is away on vacation. Other crimes are the result of several steps made by one or a group of offenders that may not be readily detectible within days, weeks, or even months of an incident.

Furthermore, a large majority of LPR data will not be directly associated with a crime. Where this is the case, other criteria may need to be relied upon.

(b.) Potential future usefulness of the LPR data

Information collected by LPR systems may have usefulness beyond an individual investigation. Not only could information be part of a continuing series of acts as discussed in the statute of limitations criteria above, but information may be useful to generate leads for the investigation of subsequent crimes. Moreover, the retention period of LPR data may differ depending upon its foreseeable uses.

Law enforcement agencies may consider whether the characteristics of the LPR data (e.g., the geographic location or the date and time of the LPR camera observations) warrant keeping the information for a period longer than the statute of limitations alone advises.

The characteristics of the jurisdiction might also weigh in favor of retaining LPR data longer. For instance, jurisdictions containing likely targets for terrorism may justify retaining LPR data longer. Additionally, differences between LPR data collected by fixed and mobile LPR units may influence retention periods. LPR data collected by fixed units mounted near bridges and other critical infrastructure within a jurisdiction may have

[68] Characteristics of crimes that may extend or toll a statute of limitations vary from state to state. Generally, statutes of limitations are extended in cases involving *inter alia* certain thefts involving a breach of fiduciary duty, identity theft offenses, and certain sex offenses; statutes of limitations are typically tolled *inter alia* when the defendant is not residing in the prosecuting jurisdiction or when a material witness is on active military duty.

[69] Such crimes typically include conspiracy and thefts by deception that continue over a period of time.

greater long-term usefulness than mobile LPR data. Moreover, law enforcement agencies may also base their decision to maintain LPR data for a longer period of time on the premise that the information is useful in counterterrorism measures.[70]

Additionally, law enforcement agencies might also consider whether the LPR data is appropriate for the forms of crime analysis likely to be performed. Vehicle descriptions, including full and partial license plate numbers, are a type of information commonly utilized to analyze similarities of different crimes to connect them to a common offender. The more useful the LPR data is for crime analysis purposes, the more likely a law enforcement agency can justify a longer retention period for the information.

LPR data may also serve important officer safety needs. For example, it can be useful for officers to know that a vehicle was near a domestic violence call or was previously involved in a suspect's use of violence toward police officials. Where the LPR data is likely to improve officer safety, law enforcement agencies may establish a longer retention period for the information.

Some criteria, however, may reduce the potential future usefulness of information and counsel a shorter retention period for LPR data. Retaining vast amounts of data for long periods may undermine the usefulness of an information system over time. Depending upon its capabilities, the overall performance of an information system may decrease as the amount of data stored increases. Not only might it take longer for the system to search its vast repository of data, but the system might also return too much information for a user to sort through effectively.

Thus, processing, analysis, and user limitations of a LPR system caution against overly broad interpretations and expectations of the potential future usefulness of LPR data. These criteria also counsel a shorter retention period for LPR data that is not likely to generate a useful investigative lead, inform a crime analysis technique, or enhance officer safety.

Another consideration that might reduce the potential usefulness of information is lack of public support of the LPR system and its information practices. A law enforcement agency may wish to consider the public's reasonable expectations of how LPR data may be used in the future when developing a retention period for LPR data. In most instances, the public's expectations likely are parallel to the justice system's practices; this is true especially in regard to generating future leads, informing crime analyses, and helping to ensure officer safety. Upsetting reasonable expectations can subject an information system to intense public scrutiny and lead to formal resistance to not only a LPR program but future information systems as well. When taking the public's expectations into account, it is useful to consider the availability of a substitute source

[70] The 9/11 Commission Report found that it took between two and four years to plan and carry out the attacks against the World Trade Center.

of information that would meet the same need but not contain the same risks of alienating the public's trust and confidence in the justice system, such as electronically compiled traffic warnings and citations.

(c.) Relative sensitivity of the LPR data

Part 1 of this Report has already discussed the limits of LPR data to identify individuals and concluded that LPR data is not alone personally identifying. Part 2 cautioned against combining LPR data with other personally identifying data because the LPR data relates only to the vehicle's whereabouts and not necessarily the registered owner or occupant.

Nevertheless, LPR data may be considered sensitive for the purposes of setting a retention period because: (1) it can serve as a gateway to other, more personally identifying information; and (2) the locations from which the LPR data was collected may be considered potentially sensitive. Locations which may be considered sensitive may include, but are not limited to, churches, doctor's offices, clinics, and protest staging areas.

The public's perception that the law enforcement agency will protect the LPR data from improper disclosure is a significant criterion when establishing a retention period. The higher the public's confidence in the law enforcement agency, the more receptive the public may be to a longer retention period. Conversely, if public confidence in the agency's ability to maintain the confidentiality and security of the LPR data is low,[71] a shorter retention period may be advised.

(d.) Quality of LPR data

Although it seems intuitive that reliable LPR data that is accurately attributed to the right vehicles may be retained longer than LPR data that is of lesser quality or from a less reliable source, data quality is not a very useful criteria in the development of a retention period. Law enforcement agencies do not have any control over the quality of LPR photographs or OCR reads of those images. Moreover, even inaccurate OCR reads can yield positive results because the contextual photo may still contain valuable data. Thus, arguments that LPR data should be retained for a shorter period of time due to the uncertain quality of the information are unlikely to be persuasive.

(e.) Technologically implemented policy controls

Information technologies can be utilized to address potential risks of harm associated with accidental and abusive disclosure of the information. Policy controls that can be technologically implemented as part of a law enforcement data system include, but are not limited to, rule-based processing functions, selective revelation of data, encryption, and audit trails. Implementing policy controls promote the public's confidence in a law

[71] Public confidence in a law enforcement agency's ability to maintain the confidentiality of LPR data could be reduced due to the scope of that jurisdiction's freedom of information act.

enforcement agency's abilities to keep LPR data confidential and to limit misuse of the data by authorized and unauthorized users.

Where law enforcement agencies have reduced the risks of improper disclosure of LPR data through training and technologically imposed access restrictions on the data, a longer retention period may be appropriate. Where only minimal training or access restrictions are present a shorter retention period may be advised to reduce the amount of data in the LPR system available for inadvertent disclosure or purposeful misuse.

7

Part 7. Quality of LPR data

Data quality concerns implicated by the operation of a LPR program surround the quality of the license plate data collected by LPR cameras as well as the quality of the information contained on the hot lists that are uploaded to the system. This Part introduces the concept of information quality, describes the data quality issues surrounding OCR reads taken from contextual photos, and briefly discusses the accuracy of information contained in hot lists uploaded onto a LPR system.

A. INFORMATION QUALITY, CONCEPTUALLY

Information quality is a multidimensional concept encompassing critical relationships among multiple attributes.[72] For instance, the quality of a particular set of information can be expressed, among other ways, as the extent to which the data is: (a) available or easily and quickly retrievable; (b) appropriate for the task at hand; (c) regarded as true and credible; (d) easy to interpret and apply to different tasks; (e) correct and reliable; or (f) unbiased, unprejudiced, and impartial.[73] Together, these attributes contribute to the validity of the information as it is used to make informed decisions. Good information quality is the cornerstone for sound decisions by law enforcement officers and inspires trust in the criminal justice system and in the agencies that use information.

Data quality takes on significant importance in the development of information sharing policies. Law enforcement agencies may be more reluctant to share data that is of poor or uncertain quality, preferring instead to share data that can be verified as accurate. Restricting the dissemination of potentially inaccurate data helps to limit the possibility that subsequent users will act or rely upon erroneous information.

Incorporating data quality principles into a privacy or information management policy requires a careful consideration of the accuracy of data contained in the information system and the documentation of the protocols that will be used to locate and correct erroneous information.

[72] U.S. Dept. of Justice, *Information Quality: The Foundation for Justice Decision Making*, 1 (Feb. 2008) available on-line at http://www.it.ojp.gov/documents/IQ_Fact_Sheet_Final.pdf.
[73] *Id.* at 2.

B. ACCURACY OF LPR COLLECTION OF LICENSE PLATE NUMBERS

LPR cameras capture images of vehicles and license plates; optical character recognition (OCR) software utilizing sophisticated algorithms translate the alphanumeric characters on each license plate into an electronically readable format. The image collected by a LPR camera is maintained in the information system to provide a means of ensuring that the license plate number was properly converted into an electronically readable format.[74] A LPR system's ability to accurately identify the characters on a license plate lies at the heart of the data quality issue.

1. OCR ACCURACY

Many variables affect OCR accuracy. Each state has multiple license plate designs and plates vary significantly from state to state. For maximum effectiveness, LPR systems must be properly configured to recognize the design and layout of plates most likely to be encountered in the area of operation. The shape of the characters, amount of contrast between a particular state's background and the color of the license plate's characters, and whether the characters are raised or flat can all impact the accuracy of the OCR read.

Poor image resolution, and thus poor character recognition, can be the result of several factors. License plates can be too far away for the capabilities of the LPR camera to capture and motion blur can also occur. Poor lighting and low contrast due to overexposure, reflection, adverse weather conditions, or shadows can also result in a poor image quality. Occasionally, an object might obscure all or a portion of the license plate and interfere with accurate OCR. Oftentimes the object is a tow bar, dirt on the license plate, or a loaded bike rack; other times the object may be a LPR circumvention device.

Increasing the height of the LPR camera may correct some of these problems; however, changing the position of the LPR camera with respect to the license plate it is supposed to read may require the system to adjust for the new orientation and increased skew of the license plate.

From time to time, states may make significant changes in their license plate formats and designs that can substantially impact OCR accuracy. For instance, a state might add a character or issue a new license plate design. LPR systems must adapt to these changes quickly in order to remain effective.

Sometimes the letter D is mistaken for a Q or an O. Other times, the characters on the license plate are sometimes cut off from the frame of the image; when this occurs, the OCR software may incorrectly read an E as an F or a Z as a 7. Some colors, especially reddish tones, may be difficult for LPR system OCR software to read. Learning the type

[74] Law enforcement agencies should not strip the image from the OCR information in order to save storage space; the OCR information cannot be verified without the contextual photo.

of mistakes LPR system's OCR software makes can help investigators run queries on potentially-misread license plate numbers.

2. COMPARISON OF OCR INFORMATION WITH HOT LIST DATA

Another data quality challenge involves the comparison of the OCR data with the license plate numbers on a hot list. States develop license plate number formats robust enough to provide unique serials for all the motor vehicles the jurisdiction expects to register. Less-populous states may use six-character formats whereas more populous states may choose to utilize a seven-character format.[75] Complicating this factor is the fact that multiple states may utilize the same alphanumerical formats; for example, neighboring states may use three letters followed by four numbers. Thus, two cars from different jurisdictions could have the same number, but different license plate designs.[76] This means that each time a law enforcement officer is alerted to the proximity of a vehicle displaying a license plane number contained on a hot list, the user should make certain that the plate that caused the alert matches the hot list data.

C. ROUTINE DATA QUALITY AUDITS OF INFORMATION SYSTEMS

Although law enforcement officers are able to visually confirm an OCR read against the contextual image, regular and systematic audits can also ensure that the quality of data contained in the LPR system remains high. There is also considerable precedent for subjecting law enforcement computer systems to data quality audits.[77] Data quality audits are distinct from system usage audits and focus on the accuracy of the information. In the context of a LPR system data quality audits would concentrate on measuring the accuracy of the OCR output when compared with contextual images.

As discussed above in Part 6, law enforcement agencies have no way to influence the accuracy of the OCR performed upon an image captured by a LPR camera. Nevertheless, law enforcement agencies will rely upon the accuracy of LPR data as they conduct their investigations. Conducting data quality audits is another method of ensuring that law enforcement officers rely upon accurate and complete LPR data. Data quality audits also have the ability to identify routine errors made by OCR software thereby identifying concrete areas for future improvement.

[75] Delaware and Rhode Island are able to use formats of 123456 and 123-456, respectively, while several populous states use seven-character formats, including 1ABC234 in California, AB1-C234 in Texas, A12-3456 in Illinois, and ABC-1234 in New York, Pennsylvania, Ohio, Georgia, North Carolina, Virginia, and Arizona.

[76] This is also common in the area of vanity license plates.

[77] Mandatory audits are routinely conducted of official criminal history record information (CHRI) repositories to measure the accuracy, completeness, and timeliness of their data. *See* 28 C.F.R. § 20.21(e). These audits are one of the reasons the justice system and society have deemed official CHRI records reliable enough on which to base important decisions affecting individuals' liberty interests.

Law enforcement agencies should develop procedures for identifying and correcting inaccurate OCR reads. Data corrections may be performed on an *ad hoc* basis by investigators as they utilize the LPR system in the course of their investigations or by auditors conducting a formal data quality audit.

D. ACCURACY OF INFORMATION CONTAINED IN HOT LISTS

It is axiomatic that law enforcement officers would have access to the license plate numbers contained on any LPR hot lists. Nevertheless, many hot lists are compiled or administered by entities other than the law enforcement agency utilizing the LPR system. This means that law enforcement agencies frequently do not have supporting documentation regarding why a particular license plate number is on a particular hot list.

Because law enforcement officers will act upon a LPR system hit, it is important that information contained in hot lists is accurate. NCIC requires that records entered into the vehicles hot list be double checked by a second party to verify that the data entered matches that contained in an investigative file.[78]

Law enforcement agencies utilizing a LPR system may develop procedures to verify with the hot list's author that a license plate number is properly on the list prior to taking certain arrest-type actions. Thus agencies compiling hot lists for later use in an LRP system should maintain records sufficient to verify the accuracy of the hot list data.

The heads of law enforcement agencies are ultimately responsible for determining which hot lists will be uploaded onto the agency's LPR system and what actions officers take in response to a LPR hit. Agencies may want to establish some criteria for determining which hot lists will be uploaded onto the LPR system. Those criteria may include indicia of the hot list's accuracy and the ease with which law enforcement officials can verify, from the field, that a particular license plate number properly belongs on the hot list. Moreover, law enforcement agencies utilizing a LPR hot list should take steps to confirm which agency (i.e., the law enforcement agency utilizing the LPR system or the agency that authored the hot list) is ultimately responsible for the quality of the data contained on the hot list.

E. NO INDIVIDUAL RIGHT TO ACCESS OR CHALLENGE LPR DATA

As LPR data alone is not personally identifiable, there is no need to extend to individuals a right to access or challenge LPR data concerning the vehicles registered in their name.

[78] U.S. Dept. of Justice, Federal Bureau of Investigation, *National Crime Information Center Mandatory Minimum Standards Curriculum for Full Access Terminal Operations*, LPF-17; LPR-22 (1992) available on-line at: http://www.eric.ed.gov/ERICWebPortal/custom/portlets/recordDetails/detailmini.jsp?_nfpb=true&_&ERICExtSearch_SearchValue_0=ED354315&ERICExtSearch_SearchType_0=no&accno=ED354315.

Moreover, LPR systems simply collect and compile images of vehicles (and in some instances vehicle occupants) that pass within range of a LPR camera. That contextual picture depicts the scene captured by the LPR camera; there is no basis under which an individual could reasonably challenge the contents of the photograph. Furthermore, there is less of a need to provide individuals with an opportunity to access LPR data because the information is not released to the public.

Nor is it appropriate or necessary to grant individuals access to review or challenge hot list information since doing so would likely interfere with pending or future investigations. Although federal statutes grant individuals a right to access and challenge to certain criminal justice related information concerning them,[79] there is no comparable right to investigative information.[80] Additionally, hot lists enhance law enforcement agencies' ability to detect crime and provide critical officer safety information. Thus, LPR hot lists, which consist only of license plate numbers, are not the type of personally identifying information that would ordinarily be subject to an individual's right to access and challenge.

[79] *See* 28 C.F.R. § 20.21(g)(1).

[80] *See* 28 C.F.R. § 20.3(d) (excluding investigative information from the definition of criminal history record information).

8

Part 8. Accountability for LPR data

Many privacy concerns can be mitigated by holding law enforcement agencies accountable for the information they collect and how they subsequently use that information. This Part describes several methods by which agencies can ensure that they are complying with applicable policies regarding the appropriate collection and use of LPR data. Utilizing tamper-proof audit trails combined with oversight in the form of real-time monitoring and subsequent analysis of LPR system usage can provide a check on the privacy concerns described earlier in this Report.[81] Training authorized users is also a critical accountability measure.

A. AUDIT LOGS

The primary goal of maintaining audit logs is to deter and discover users' abuse and misuse of a LPR system. Programmatic audit trails should be built into LPR systems and such logs should be checked for inconsistencies that raise a suspicion of abuse. Law enforcement officers may be discouraged from requesting LPR data if they know that their access to that data is being monitored and recorded; nevertheless, such audit capabilities can be an effective means to discourage unnecessary or inappropriate use of LPR data and trace any improper uses to the offending party.

In order to facilitate the periodic and random audits necessary to monitor user compliance with relevant laws and policies, audit logs should include certain information. Specifically, queries to a LPR system should be logged and include: (1) the identity of the user initiating the query; (2) the license plate number or other data elements used to query the LPR system; (3) the date and time of the inquiry; and (4) the response to the user's query.

B. SECONDARY DISSEMINATION LOGS

Since LPR data is for official use only, and because LPR data is collected for specified purposes, instances where LPR data is disseminated outside the originating agency should be documented in a secondary dissemination log. Such logs, like programmatic audit trails, help law enforcement agencies monitor the use of LPR data. When information from a LPR system is disseminated outside the law enforcement agency, a

[81] See K. A. Taipale, *Technology, Security And Privacy: The Fear of Frankenstein, the Mythology of Privacy and the Lessons of King Ludd*, 7 YALE J.L. & TECH. 123, 151 (2005).

log should be maintained that contains: (1) a description of the LPR data disseminated; (2) the date and time the information was released; (3) the identity of the individual to whom the information was released, including their agency and contact information; and (4) the purpose for which the LPR data will subsequently be used.[82]

C. MONITORING AND CONDUCTING AUDITS OF SYSTEM USE

Audits of LPR systems help to ensure that law enforcement agencies are operating in accordance with the policies developed to regulate the collection, use, and dissemination of LPR data. An audit of a LPR system involves an evaluation of the law enforcement agency's operations as recorded in its audit logs to determine if the agency is administering its LPR system in accordance with its information management policies. LPR system audits should focus on ensuring that LPR data is only disclosed to authorized users and that the information is utilized for official purposes only. To do this, auditors should be familiar with common misuses of LPR data.

Existing law enforcement data systems already have policies that include prohibitions against misuse of criminal justice data; those policies also frequently impose penalties for such misuse. These existing policies may inform information management policies against misuse of data contained in a LPR system.

D. POLICY AWARENESS AND TRAINING

Personnel employed by law enforcement agencies should be informed about why policies limiting access, use, and dissemination of LPR data are important and how those policies protect the agency and the public. Moreover policy education and awareness surrounding LPR systems is a continual process that must be regularly updated as laws and regulations governing LPR data or law enforcement's access to information change over time.

Each law enforcement agency will have the responsibility of ensuring that its employees have completed training about the appropriate use and sharing of LPR data. LPR system policies should be easily accessible by law enforcement agency employees and, depending upon the level of detail, available to the public as well.[83] Users should be educated and informed about how LPR policies will be enforced, including any penalties for committing violations of the policy provisions.

Law enforcement agencies may consider having each individual with access to the LPR data acknowledge their access to and thorough understanding of LPR system policies.

[82] The DPPA contains a similar requirement; see 18 U.S.C. § 2721(c).

[83] Where LPR system policies are considered too detailed, law enforcement agencies may consider developing a guidance document to inform the public, in general terms, of practices and procedures developed to address privacy concerns surrounding LPR data.

Law enforcement agencies should monitor relevant legislative and regulatory activity and update LPR system policies accordingly. When policies are updated, those individuals having access to LPR data should be informed of the changes and when those new terms take effect.

Appendix 1: 2007 Resolution on LPR Systems

In 2007, the International Association of Chiefs of Police ("IACP") passed the attached resolution in support of License Plate Reader (LPR) technology. The resolutions adopted by the IACP at the114th Annual Conference in New Orleans, Louisiana on October 16, 2007 are available on-line at http://www.iacp.org/resolution/2007Resolutions.pdf.

INTERNATIONAL ASSOCIATION OF CHIEFS OF POLICE

RESOLUTION

Adopted at the 114th Annual Conference
New Orleans, Louisiana
October 16, 2007

SUPPORT FOR LICENSE PLATE READER SYSTEMS

Submitted by the Narcotics & Dangerous Drugs Committee
NDD.020.a07

WHEREAS, effective anticrime programs are effective antiterrorism programs; and evidence indicates that terrorist organizations which are funded in part by the sale of illegal drugs adds a new dimension to the need for continued investigation of narcotics related crime; and

WHEREAS, license plate reader and related digital photographing systems at border checkpoints incorporate the use of technology that provides a searchable database, including associated photographic images; license plate information; and statistical data such as date, time, and entry lane; and

WHEREAS, license plate reader systems and related digital photographing systems, working in combination with existing law enforcement databases, have the potential capability of identifying conveyances used for illegal activity, including the transportation of drugs and bulk cash; and

WHEREAS, law enforcement intelligence information may be shared more efficiently through greater use of technology and information sharing programs such as license plate reader systems to help ensure that investigative links are made to organized drug trafficking and related crime to the maximum extent possible; and

WHEREAS, all countries are encouraged to use technology such as license plate reader and related digital photographing systems, where practical, to share appropriate law enforcement information; and

WHEREAS, license plate reader and related digital photographing systems provide law enforcement with important tools necessary to combat all types of crime and is particularly useful in combating narcotics trafficking; and

WHEREAS, a significant commitment of resources will be required by federal, state, and local law entities to fully take advantage of this emerging technology; now, therefore, be it

RESOLVED that the International Association of Chiefs of Police duly assembled at its 114th Annual Conference in New Orleans, Louisiana, strongly encourages the U.S. Congress to fully fund license plate reader and related digital photographing systems, including interrelated

information sharing networks, for the northern and southern borders of the United States; and, be it

FURTHER RESOLVED that all countries are encouraged to use like technology, to the extent possible, to share appropriate law enforcement information; and be it

FURTHER RESOLVED that the IACP supports the development of a comprehensive License Plate Reader guide for law enforcement executives that addresses current technologies; best practices; privacy issues, legal implications, and open source data systems.

Appendix 2: Issues Document

Issue identification: Privacy issues concerning the utilization of automated license plate readers is attached to provide additional context and areas of privacy concern that may not have been directly addressed in the PIA Report.

Issue identification:

Privacy issues concerning the utilization of automated license plate readers

March 24, 2009

INTRODUCTION

Law enforcement agencies across the country are utilizing or seeking to utilize automated license plate readers. There is currently no uniform guidance concerning the appropriate collection, use, dissemination, and retention of information collected by automated license plate readers. This is problematic because collecting license plate data, which is frequently associated with or connected to personally identifiable information concerning individual drivers, could be considered a form of surveillance. Assessing the privacy risks associated with the broad use of automated license plate readers and developing policies to address those risks will help ensure that license plate data is managed in such a way as to meet public safety needs while protecting individuals' privacy interests.

This document represents the Automated License Plate Reader Policy Working Group's efforts to document the privacy concerns that should be addressed by any criminal justice agency utilizing automated license plate readers or data collected by another agency's use of these devices.

This document is intended to continually evolve as additional uses for license plate reader information come to light. It will lay the foundation for the development of a guidance document intended to: (1) assess the impact of automated license plate readers on the public's privacy interests; and (2) propose procedures and policies intended to protect the public's privacy interests while meeting the goals of law enforcement.

1. General privacy considerations

A. LICENSE PLATE NUMBERS AS PERSONALLY IDENTIFIABLE INFORMATION

Although license plates function primarily to uniquely identify automobiles, there is no doubt that many of the anticipated uses of license plate data involve acquiring the identity of the registered owner of the automobile. It is important to note that, because most law enforcement data systems have been designed with traffic stops in mind, it is very easy for a police officer to obtain information about vehicle owners and drivers from license plate information.

(1.) Because the license plate number operates in such a manner as to link the vehicle to its registered owner, should license plate numbers be discussed or treated in a manner similar to personally identifiable information?
(2.) Does it matter that law enforcement agencies and DMVs and their authorized employees are the only individuals able to access personally identifiable information from license plate data?
(3.) What anticipated uses of recorded license plate numbers involve accessing personally identifiable information about the vehicle's register owner?
(4.) What anticipated uses of recorded license plate numbers involve the mere monitoring or otherwise identifying a vehicle?

B. PUBLIC'S PERCEPTIONS OF AUTOMATED COLLECTION OF LICENSE PLATE DATA

There is no controlling legal precedent directly addressing the privacy implications surrounding law enforcement agencies' use of automated license plate readers ("LPRs"). Even though analogous cases suggest that the use of LPRs does not violate constitutional privacy protections, this does not mean that the public's perceptions of the use of this technology are addressed; nor should the fact that license plate numbers are publicly displayed end the inquiry.

It is likely that the public would consider the use of LPRs as a form of surveillance. Surveillance is the watching, listening to, or recording of an individual's activities. The potential harm of surveillance comes from its use as a tool of social control. The mere possibility of surveillance has the potential to make people feel extremely uncomfortable, cause people to alter their behavior, and lead to self-censorship and inhibition. Too much social control can adversely impact freedom, creativity, and self-development.

(1.) It may be desirable to educate the public as to what information is collected by LPRs, how that information will be used, what information is available to criminal justice agencies and what information is available to the public. Are there any risks of informing the public about an agency's utilization of LPRs and how the information will be used?

(2.) One of the most important notions underlying the Fair Information Practices[1] is the concept of notice; specifically, people should be informed when information about them is being collected in order to make an informed decision as to whether and to what extent to disclose information about them. In the context of LPRs, this would involve posting signs explaining to motorists that their license plates are being electronically read and recorded, thus affording them an opportunity to take a different route if they desired. Should motorists be informed of the presence of fixed and mobile LPRs?

(3.) Driving is considered by state governments as a privilege and not a right. How does treating driving as a privilege affect the nature of the data collection and the public's perceptions of the surveillance?

C. ADDRESSING THE CONCEPT OF PRACTICAL OBSCURITY

Privacy issues will always be generated by the collection and storage of information about the behavior of people not suspected of criminal activity regardless of whether that information is recorded by hand or compiled electronically. License plates function to uniquely identify automobiles. Frequently, license plate numbers are associated with the vehicle owner's driver's license number, which functions to uniquely identify the individual. Thus, automated license plate scanners have the potential to track the movement of individuals who have not committed and are not suspected of committing criminal acts.

Viewed in isolation, each piece of information created by one's day-to-day activities is not telling; however, viewed in combination, that information begins to paint a portrait of that individual's personality. It arises from the fact that data systems enable information from disparate sources to be easily collected and analyzed. In the context of LPRs, information such as a license plate number, while not in and of itself informative, provides access to a host of additional information such as the registered owner's identity and criminal history information.

The U.S. Supreme Court, in *U.S. Dept of Justice et al. v. Reporters Committee for Freedom of the Press*, 489 U.S. 749, 764 (1989), has recognized a difference, for purposes of evaluating privacy interests, between public records that might be found after a diligent search of courthouse files, county archives, and local police stations throughout the country and a computerized summary located in a single clearinghouse of information. Ultimately, the court ruled that the electronic compilation of otherwise publicly available but difficult to obtain records, altered the privacy interest implicated by disclosure of that information in such a way as to restrict the disclosure of the computerized summary of that information.

[1] The Fair Information Practices are addressed below in Section 1(E) of this document.

Manually recording license plate numbers of vehicles traveling near a particular location is an arduous and, depending upon the traffic conditions, impossible task without the use of camera technology. LPRs, however, can create summaries of all license plate numbers traveling past that camera. Just like in the *Reporters Committee* case, the use of advanced technology (i.e., LPRs) to compile otherwise difficult to obtain information (i.e., license plate numbers of every vehicle traveling past a particular location), even where that information is publicly and openly available, changes the public nature of that information and raises the privacy interests surrounding that information.

(1.) It is not enough that police are authorized to watch for and write down license plate numbers. The ability to collect vast quantities of license plate numbers and store them in a manner that facilitates analysis and tracking of vehicles carries with it privacy concerns. How does increasing the scale of the collection of data by means of LPRs remove practical obscurity as a source of privacy protection?
(2.) If license plate data is publicly available and is not cause for privacy concern, doesn't it stand to reason that law enforcement agencies would have no reason to deny any member of the public access to LPR data?
(3.) License plate data stored electronically may be combined with other data sources to create a more complete picture of individuals associated with certain vehicles. What other data sources may be combined with license plate data collected by LPRs?
(4.) Under what circumstances would the types of data identified in Issue 3 above be combined?

D. TYPES OF PRIVACY HARMS SURROUNDING THE USE OF LPRs

Poor data management can make people more vulnerable to harm (i.e., injuries to the individual's dignity, person, or financial well-being). Moreover, data collection activities, including but not limited to the use of LPRs, can upset the balance of social or institutional power in undesirable ways; the classic example of this issue is the potential chilling effect of being able to easily track individuals' vehicles and readily identify people based upon the vehicle they are driving. Privacy harms generally fall into four categories: information collection, information processing, information dissemination, and invasions.

(1.) <u>Surveillance</u> is the watching, listening to, or recording of an individual's activities. The potential privacy harm of surveillance is its potential use as a tool of social control: the mere possibility of surveillance has the potential to make people feel extremely uncomfortable, cause people to alter their behavior, and lead to self-censorship and inhibition. What is the potential surveillance impact of LPRs?

(2.) Identification is the act of connecting data to particular individuals. Identification enables surveillance by facilitating the monitoring of a person. The potential harm of identification is that it increases the government's power to control individuals. It can inhibit one's ability to be anonymous, which is important in so far as it protects people from bias based on their identities and enables people to vote, speak, and associate more freely by protecting them from the danger of reprisal. How can LPRs impact motorists' ability to associate and move freely?

(3.) Secondary use is the use of data for purposes unrelated to the purposes for which the data was initially collected without the data subject's consent. The potential privacy harm of secondary use is dignitary in nature in that it can undermine people's reasonable expectations as to the future use of the information about them. Another problem with secondary use is that data may be misunderstood when it is removed from its original context. What are the likely secondary uses of data collected by LPRs?

(4.) Aggregation is the gathering together of various pieces of information about a person. These issues are discussed in Section 1, Part C ADDRESSING THE CONCEPT OF PRACTICAL OBSCURITY above.

(5.) Breach of confidence involves breaking a promise to keep a person's information confidential. The harm caused by a breach of confidentiality is not simply that information has been disclosed, but that the promise made to the subject of the data has been broken. Protections against breach of confidentiality help promote certain relationships that depend upon trust, such as the relationship between citizens and their government. How will law enforcement agencies utilizing LPRs keep the license plate information confidential and secure?

(6.) Disclosure occurs when certain true information about a person is revealed that impacts the way others judge her character. The potential harm of disclosure involves the damage to an individual's reputation caused by the dissemination. Disclosure can also be a form of social control and carries with it the potential chilling effects associated with surveillance. How, when, and to whom will the data collected by LPRs be disseminated or disclosed?

E. FAIR INFORMATION PRACTICES

In 1973, the U.S. Department of Health, Education, and Welfare published a groundbreaking report responding to concerns that harmful consequences may result from the storing of personal information in computer systems. That report, entitled "Records, Computers and the Rights of Citizens," articulated several principles the Department deemed essential to the fair collection, use, storage, and dissemination of personal information by electronic information systems.[2] The report was one of the earliest acknowledgements by the federal

[2] U.S. DEP'T OF HEALTH, EDUC., & WELFARE, Records, Computers and the Rights of Citizens: Report of The Secretary's Advisory Committee on Automated Personal Data Systems xx-xxi (1973), available at

government that the public's privacy needed to be protected against arbitrary and abusive record-keeping practices. The report also recognized the need to establish standards of record-keeping practices appropriate for the computer age.

The Fair Information Practices are a set of standards governing the collection and use of personal data and addressing issues of privacy and accuracy. The practices include eight guiding principles that evolved from the 1973 report. Any privacy guidance for LPRs should consider incorporating the following principles.

(1.) Collection Limitation Principle – There should be limits to the collection of personal data and any such data should be obtained by lawful and fair means and, where appropriate, with the knowledge or consent of the data subject. Should certain criteria be met before using a license plate number acquired by an LPR to obtain the identity of the vehicle's registered owner?
(2.) Data Quality Principle – Personal data should be relevant to the purposes for which they are to be used, and, to the extent necessary for those purposes, should be accurate, complete and kept up-to-date. How accurately do LPRs record license plate numbers?
(3.) Purpose Specification Principle – The purposes for which personal data are collected should be specified not later than at the time of data collection. Additionally, the subsequent use should be limited to the fulfillment of those purposes or other compatible purposes.
(4.) Use Limitation Principle – Personal data should not be disclosed, made available or otherwise used for purposes other than those specified in accordance with the Purpose Specification Principle except: (a) with the consent of the data subject; or (b) by the authority of law.
(5.) Security Safeguards Principle – Personal data should be protected by reasonable security safeguards against such risks as loss or unauthorized access, destruction, use, modification or disclosure of data. This document focuses on privacy issues and will not discuss specific, technical security measures.
(6.) Openness Principle – There should be a general policy of openness about developments, practices, and policies with respect to personal data. Means should be readily available of establishing the existence and nature of personal data, and the main purposes of its use, as well as the identity and usual residence of the data controller. Will privacy guidance and/or the privacy policy regulating the use of LPR data be made available to the public?
(7.) Individual Participation Principle – An individual should have the right to: (a) obtain from a data controller, or otherwise, confirmation of whether or not the data controller has data relating to him; (b) have communicated to him,

http://aspe.hhs.gov/datacncl/1973privacy/tocprefacemembers.htm.

data relating to him within a reasonable time; at a charge, if any, that is not excessive; in a reasonable manner; and in a form that is readily intelligible to him; (c) be given reasons if a request made under subparagraphs (a) and (b) is denied, and to be able to challenge such denial; and (d) challenge data relating to him and, if the challenge is successful to have the data erased, rectified, completed or amended. Where license plate data is not utilized to access the identity of the registered owner of a vehicle, it is likely that this principle would not apply; nevertheless, should this principle be given effect for LPR data subsequently used to identify an individual's whereabouts?

(8.) Accountability Principle – A data controller should be accountable for complying with measures that give effect to the principles stated above. Accountability issues are discussed in their own section of this document.

2. Potential Uses of LPR data

Identifying the intended uses of LPR data is critical to assessing the privacy impact of law enforcement agencies' collection, analysis, and maintenance of license plate data. Moreover, how government agencies use the data they collect is of significant concern to the public. In accordance with the Purpose Specification and Use Limitation principles discussed above, a sound privacy policy should clearly identify appropriate and intended uses of the data contained in the information system.

A review of the existing literature concerning LPRs reveals five primary uses of LPR data; each anticipated use carries with it certain privacy risks that should be addressed.

A. CRIME ANALYSIS

Police agencies utilize crime analysis to prevent and suppress crime, apprehend offenders, and recover stolen property.[3] Crime analysis is usually conducted on offenses with discernable patterns and trends that can be prevented or reduced through the implementation of directed action plans.[4] A review of existing police crime analysis operations reveals that burglary, robbery, auto theft, larceny, fraud, sex crimes, aggravated assaults, and murder are the crimes most appropriate for crime analysis.[5]

There are three types of crime analysis: tactical, strategic, and administrative. Tactical analysis is the first priority of police departments.[6] Specifically, tactical crime analysis (a) detects crime patterns and series by studying and linking common elements of crimes;[7] (b) predicts when and where future events will

[3] Steven Gottlieb, *et al.*, Crime Analysis: From First Report to Final Arrest 14-16 (1994).
[4] *Id.*
[5] *Id.* at 133.
[6] *Id.* at 15.
[7] A crime pattern is merely a set of similar offences happening in a specific geographical area while a crime series is a crime pattern that appears to be done by either the same person or group of persons.

occur; and (c) provides information to officers regarding specific crime problems and is intended to result in the arrest of a suspect.[8]

Strategic crime analysis concentrates on long-term crime trends and is used to project where police presence should be increased or decreased. Administrative analysis, unlike tactical- and strategic crime analysis, interprets crime statistics categorized by economic, geographic, or social conditions and provides information for grant applications, feasibility studies, and city council reports.[9] Thus, administrative analysis provides information useful in running a police department while tactical and strategic crime analysis is intended to help the police department protect the public and enforce the criminal laws.

When law enforcement agencies talk about using LPR data to check crime series information to determine if the same vehicles are in the area of different crime scenes, they are referring to tactical crime analysis. Tactical crime analysis is used to determine who is doing what to whom and focuses on crimes against persons and property. Categories of data considered most useful for crime analysis are those relating to:[10]

- Geographic factors[11]
- Victim descriptors
- Physical evidence descriptors
- Suspect descriptors
- Time factors
- Property loss descriptors
- Specific *modus operandi* factors
- Suspect vehicle descriptors

(1.) What presumptions are inherent in tactical crime analysis with regard to vehicles?
(2.) Is it presumed that the registered owner of a vehicle is always the driver at the time the license plate number is recorded by an LPR?
(3.) Is it presumed that an individual is always near the location where his automobile is parked?
(4.) Is it presumed that an individual always parks near the location he intends to visit or reside?
(5.) Is it presumed that a registered owner always knows the identity of who is driving his vehicle at any given time?

Shawn A. Hutton & Mark Myrent, Incident-Based Crime Analysis Manual 34 (ILL. CRIM. J. INFO. AUTH. 1999).

[8] *Id.* at 7.

[9] Gottlieb, *supra* note 3 at 15 (stating that administrative analysis essentially includes the "nice to know stuff.").

[10] *Id.* at 128. Experienced analysts have found that the importance of each factor differs depending upon the type of crime being investigated. For example, suspect vehicle descriptors are more useful in determining whether a pattern of thefts from vehicles exists than a pattern of strong armed robberies. See *Id.* at 318-320.

[11] Spot maps can be of great assistance to the analyst. Nevertheless, spot maps will only depict crime patterns; additional information is necessary to determine if a crime pattern is also a crime series.

(6.) How do the presumptions involved in tactical crime influence when a license plate number collected by an LPR will be used to gather personally identifiable information about a vehicle's registered owner?
(7.) Are there ways that an individual's identity can be linked to a license plate number other than being a registered owner, perhaps through sex offender registration or gang member intelligence record?

B. ALERTS AND HOT LISTS

License plate numbers of stolen cars, vehicles owned by persons of interest, and vehicles associated with AMBER Alerts are routinely added to "hot lists" circulated among law enforcement officers. These lists serve an officer safety function as well as an investigatory purpose.

Hot lists are typically transferred daily and can be updated by an operator/officer in the field. Hot list information can come from a variety of sources, including but not limited to, stolen vehicle information from the National Insurance Crime Bureau and the National Crime Information Center (NCIC), as well as national AMBER Alerts and Department of Homeland Security watch lists. Departments of Motor Vehicles can provide lists of expired registration tags and police departments can also interface their own hot lists to the LPR system.

LPRs function in such a way as to notify an officer when a license plate on the hot list is observed; this can be the case for both fixed and mobile LPRs. LPR data can also be searched retroactively to identify a time and location of where a vehicle on a hot list was observed by the LPR camera.

(1.) What are the criteria for adding a license plate number to a hot list that would interface with an LPR?[12]
(2.) Do these criteria include or consider the proper attribution of a license plate number to an individual?
(3.) Is the license plate number on a hot list essentially being used as a proxy for the individual's name or other personally identifying information?
(4.) How are partial license plates handled for hot list purposes? (This may be a data quality issue as well.)
(5.) There may be instances where a license plate is incorrectly included on a hot list, perhaps because of an error in data entry or because the license plate number was attributed to the incorrect person. Is there a process or system in place to remove license plate numbers from hot lists or LPR systems in

[12] For instance, in order to activate an America's Missing: Broadcast Emergency Response (AMBER) Alert. A juvenile (a) must have been confirmed as abducted; (b) is under the age of 16 or has a proven mental or physical disability; and (c) is in danger of serious bodily injury. There also needs to be enough descriptive information to believe that a broadcast alert will help. Are there similar, quantifiable standards for other hot lists?

response to identified errors? (This may primarily concern data quality but is added here in the interest of completeness.)

C. TRACKING INDIVIDUALS

Many of the justifications for LPRs include an element of tracking individuals. It has been suggested that sharing LPR data across jurisdictions can assist law enforcement officials in tracking the movements of drug smugglers, money laundering operations, documented gang members, sex offenders, individuals on parole or wanted on warrants, and missing persons.

In instances of mass evacuations, it has been proposed that LPRs could be used to track not only how many vehicles have left an area but also as a means of tracking who has evacuated in an attempt to respond to calls asking about the welfare or evacuation status of a relative.

LPRs have also been used to record the license plate numbers of vehicles visiting or parked at or near several locations, including but not limited to certain businesses, bars and night clubs, car dealerships, gun shows, and schools. The recording of these license plate numbers has occasionally been used to create a working database in the event a problem or violent crime occurs at some point in the future. As cars can't answer questions, any investigation utilizing these license plate numbers would involve identifying the registered owner of the vehicles whose license plates have been recorded.

It has also been put forward that LPRs can be useful in enforcing geographic limitations on the movements of sex offenders, probationers and parolees, and people subject to orders of protection. LPRs can record the license plate numbers of vehicles parked or observed near certain locations such as schools and day care facilities, or residences and work addresses of people protected by court orders. These locations and individuals' license plates can be added to LPR systems to bring any violations to an officer's attention.

(1.) This collecting of information is a type of surveillance similar to the use of cameras utilizing facial recognition software. The license plate reader isn't just recording an image, it is collecting license plate numbers in an electronic manner that can be used, perhaps at some future point automatically and in real-time, to access various types of information about the person(s) associated with that license plate.
(2.) The uses described above rely heavily on matching a license plate number to a unique individual. How is this done and how reliable is this process? (This is also a data quality issue.)
(3.) Not everyone owns or operates an automobile, especially in large cities. Does the utilization of LPRs to track individuals raise issues of selective enforcement (e.g., it's easier to track and identify "bad guys" with cars so

these people become the focus of enforcement efforts instead of people who are harder to observe/track due to their lack of cars)?

(4.) How will law enforcement agencies utilizing LPRs address the potential chilling effects of increased, potentially large-scale surveillance of license plate information?

(5.) Should there be some sort of triggering mechanism (e.g., articulable suspicion that a crime or other violation has occurred) to authorize access to the location information of individuals?

(6.) When using LPRs to enforce geographic limitations on certain offenders (e.g., probationers, sex offenders, persons subject to orders of protection, etc.,), should the location information about these individuals be limited to those instances where the subject's vehicle was observed in a prohibited area, as opposed to obtaining a listing of all the locations, dates, and times where the vehicle was authorized to be?

D. IDENTIFY PREVIOUSLY-UNDETECTED CRIMES

The American criminal justice system has never been based upon a theory of total enforcement of the criminal laws. Police departments' responsibilities have continually increased due to the rising number of criminal and regulatory offenses at every level of government; there have not been equivalent increases in police resources. Where more responsibilities meet limited resources, a system of selective enforcement was informally established in which public officials at all levels exercise discretionary powers to determine whether an individual enters the criminal justice system and how that individual progresses through the system.

Several of the proposed uses of LPRs concern identifying or observing previously undetected criminal conduct. Specifically, agencies seeking to utilize LPRs have identified several instances involving the commission of crimes that prior to the utilization of LPRs would not only have be extremely difficult to detect by police officers but would only have been discovered by the individual's chance encounter with authorities. For example, data collected by LPRs could be used to enforce geographic limitations on the movements of sex offenders, probationers and parolees, and people subject to various court orders.

LPRs could also be used to help implement programs intended to more efficiently bring certain crimes to law enforcement officers' attention. Several states have programs to combat auto thefts that permit vehicle owners to provide written consent for their vehicles to be stopped without cause during late evening hours. LPRs can provide an efficient means of implementing such programs.

The failure to obtain and provide proof of mandatory car insurance is grounds for several states to suspend license plates and driver's licenses. Unless these

vehicles are operated in such a manner as to raise the suspicions of a police officer, these uninsured vehicles would remain undetected. Operating an uninsured vehicle puts the public in danger in the event of an accident. Police departments have expressed interest in utilizing LPRs to identify vehicles with registrations suspended for failing to obtain mandatory insurance coverage.

LPRs, like surveillance cameras, are excellent tools to figure out what has already happened. Although LPRs may serve some deterrent effect provided their use is overt, they provide no real capability to prevent a crime from occurring.

(1.) LPRs may be perceived by the public as a way to automate the criminal justice system. What types of human review and verification are employed before data collected by LPRs is used to make a determination about an individual?
(2.) Given a police department's available resources, will certain crimes detectable by LPRs be focused on more so than others?
(3.) Is license plate data collected by LPRs more useful to prove a violation after it has been reported to a police department or should police departments have a policy of affirmatively reviewing all LPR data for potential violations?
(4.) Are concerns about inequality (e.g., discrimination against or in favor of reviewing certain neighborhood's LPR data) raised by only reviewing some LPR data as opposed to all data?
(5.) In order to identify vehicles that may be operated by individuals with suspended, revoked, cancelled, or expired driver's licenses (hereafter "unlicensed drivers"), it will be necessary for license plates to be linked to individually identifiable drivers. How will this be done?
(6.) It would seem that identifying vehicles potentially being operated by an unlicensed driver would be a real-time enforcement activity.

E. REVENUE COLLECTION

Many states suspend or revoke license plates and driver's licenses for an individual's failure to pay fees, fines, or taxes owed to governmental entities. Municipal police departments can also compile or receive lists of license plates issued multiple parking violations. LPRs can bring to an officer's attention vehicles whose owners owe outstanding debts to the government.

Revenue collection is distinct from the concept of revenue generation. LPRs do not create a stream of revenue for a jurisdiction in the sense that they generate the issuance of a ticket or citation. Rather, LPRs only help identify those who have already committed a violation or offence and, as a result, owe a fine.

(1.) It can be argued that LPRs are being employed to maximize compliance with the laws and regulations of the jurisdiction, which are presumed to promote

the public's safety and well-being. Nevertheless, it is likely that such activities will be perceived as a revenue collection measure.

(2.) Whereas law enforcement may access a great quantity of personally identifying information concerning individuals to investigate crimes and protect public safety, the balance between collecting revenue and preserving the public's privacy rights is considerably different.

(3.) Will revenue collection efforts potentially involve the transfer or LPR data to other non-law enforcement entities?

(4.) Local and state government agencies owed outstanding debts may only have limited personally identifying information of the debtor and very likely lack an individual's license plate number. Information obtained from these agencies must then be matched up to a license plate record contained in a department of motor vehicle record. Thus, the data from at least two sources is combined before it even goes into an LPR system. Do revenue collection efforts create additional data quality concerns with regard to linking individuals who owe the government fees, fines, or taxes to license plates?

(5.) Are there instances where a city department other than a law enforcement entity will be utilizing LPRs? If so, how does that affect the preparation of a Privacy Impact Assessment Report?

3. Collection

A. LICENSE PLATES PROVIDE ACCESS TO PERSONALLY IDENTIFIABLE INFORMATION.

Although license plates don't directly include personally identifiable information, they are frequently associated, by means of computer inquiries, with an individual owner. Thus, a license plate number serves as the gateway to personally identifiable information. In fact, many of the potential uses of license plate data rely upon the premise that the registered owner of a vehicle is actually driving it. The mere collection of information regarding individuals implicates privacy concerns. Fewer concerns are raised by the collection of information about individuals premised upon some reasonable suspicion that they are acting unlawfully. Great concerns regarding the public's privacy interests are raised when the government collects information about individuals for investigatory purposes absent any suspicion of criminal wrongdoing.

(1.) Exactly what information are LPRs capable of collecting?

a. Optical Character Recognition (OCR) of license plate numbers;
b. Digital images of license plates as well as the vehicle's make and model;
c. Digital image of the vehicle's driver;
d. Images of distinguishing features (e.g., bumper stickers, damage);
e. State of registration;
f. Camera identification;
g. GPS coordinates or other location information;

h. Date and time of observation;
i. Other data elements?

(2.) What information will agencies actually collect from LPRs?
(3.) What factors inform the balance of the amount of data collected to address privacy concerns while still meeting legitimate law enforcement needs?
(4.) How does the fact that license plate numbers constitute potentially identifiable information affect the compilation, access, analysis, and dissemination of LPR data?
(5.) Should certain criteria be met before using a license plate number acquired by an LPR to obtain the identity of the vehicle's registered owner? If so, what are the most appropriate criteria?
(6.) In most states, the minimum age for an individual to be issued a drivers license is below the age of majority. Thus, at any given time, LPRs may be collecting information concerning minors. How does this potential to collect information concerning juveniles impact the collection, analysis, dissemination, and retention of LPR data?

B. LPR DEPLOYMENT

LPR systems can observe and record over 1,000 license plates an hour in various lighting and weather conditions. LPRs can be fixed, mobile, or portable. A fixed LPR is permanently mounted, usually to a bridge or a pole, where as a mobile unit is permanently mounted to a marked patrol vehicle. A portable LPR can be moved from vehicle to vehicle or deployed in a covert configuration.

(1.) Notifying the public about the collection of license plate numbers by LPRs will differ significantly depending upon the type of LPR deployed.
(2.) Do the three manners of LPR deployment change or otherwise impact the privacy concerns surrounding the collection of license plate numbers? If so, should privacy policy guidance address the manner of deployment that causes the most privacy concerns or should any guidance address the manners of deployment separately so that agencies can select a manner of deployment that suits their needs best?
(3.) When will covert deployments be necessary for law enforcement efforts?
(4.) What are the advantages of covert deployments?

C. NOTICE OF DATA COLLECTION

Not only do the Fair Information Practices counsel collecting only that information that is relevant or necessary, but that the collection of data about individuals should be done with the knowledge or consent of the data subject.

Under the openness principle, agencies should provide notice about how they collect, maintain, and disseminate personal information. Complete notices generally include statements that: (a) describe the main purposes for the data's use; (b) identify the entity responsible for the data; (c) identify those who may

access or receive the data; (d) explain whether providing the information is mandatory or voluntary and the consequences of failing to provide the information; and (e) inform the data subject of any rights he may have to access the data and rectify errors.

(1.) Will privacy guidance and/or the privacy policy regulating the use of LPR data be made available to the public?
(2.) Would distribution of the privacy policy itself provide sufficient notice?
(3.) Is notification to individuals whose information has been collected made after covert deployment has been conducted? Should such a notification be made? What are the resource implications of providing this notice? Is this administratively burdensome?
(4.) Does the public know that the cameras they pass on roads are fixed LPRs by signage? By any other means?
(5.) How can the public be notified about an agency's utilization of mobile LPRs?
(6.) The Fair Information Practices also hold that agencies should communicate to affected individuals when personally identifiable information about them is requested or released to other parties. Should compliance with this requirement be applicable to LPR data? Would such compliance be unduly burdensome to the efficient administration of justice?

D. "OWNERSHIP" OF LPR SYSTEM DATA

Clearly establishing which entities have authority over and bear responsibility for the data contributed to the LPR system is of paramount importance. The concept of ownership, while complex in any plan to share electronic data, is critically important to identifying which entities are responsible for ensuring the proper management and treatment of the information as well as implementing any data quality safeguards.

(1.) What entity will ultimately be responsible for the operation of LPRs and the data collected by them?
(2.) What entity will ensure that data collected by LPRs is of sound quality?
(3.) What factors go into the determination of whether to share LPR data across jurisdictions?
(4.) Will the entity from which LPR data originates (i.e., the data "owner") maintain any controls on the subsequent uses and disseminations of the data?

E. LAW ENFORCEMENT COLLECTION OF LPR DATA COMPILED BY OTHER ENTITIES

Police and other criminal justice agencies are not the only entities utilizing or seeking to utilize LPR cameras. For instance, some shopping centers and individual stores are installing fixed LPR cameras at their entrances to capture license plates numbers. LPRs are also used by private companies that facility auto repossessions. Other government entities also collect LPR data; a county

agency responsible for operating a center for care of the elderly is interested in installing fixed LPRs to operate in conjunction with CCTV surveillance of the premises. Some of this privately collected LPR data may be made available to law enforcement agencies or actively sought after by police departments.

(1.) Should LPR data collected by other agencies be managed differently than data collected by the law enforcement agency's own LPRs?
(2.) Should LPR data collected by a non-law enforcement agency be treated differently than LPR data collected by a law enforcement agency?
(3.) Does the sale of LPR data by a law enforcement agency resemble a commercial use? Because the Fair Information Practices were first developed to address commercial uses of data, would it be advisable for a law enforcement agency interested in selling its LPR data to incorporate the FIPs into its data management policies?
(4.) Would selling the data call into question an agencies' position that the data should be treated as confidential?

F. COMPILATION AND SUBMISSION OF "HOT LISTS"

Many of the potential uses of LPR data require the comparison of license plate numbers collected by an LPR to numbers contained on a previously compiled list. These hot lists may be compiled by the local police department utilizing LPRs or compiled by other state or federal government agencies. The purpose of these lists is to bring to law enforcement officials' attention whenever the vehicle or individual somehow associated with that vehicle is nearby so that police officers can act accordingly. Actions taken by police officers will vary depending upon the list that contains the vehicle's license plate number.

(1.) What hot lists are law enforcement agencies likely to utilize as part of an LPR program?
(2.) Under what authority are hot lists created and how does a license plate number get submitted or included on a hot list?
(3.) While some hot lists focus on identifying a particular vehicle (e.g., stolen cars, AMBER alerts, etc.), other lists seem to focus on trying to identify and locate specific individuals (e.g., sex offenders, wanted persons, etc.). What steps are taken to link an individual with a license plate?
(4.) Are the links between license plates and individuals verified or updated on a regular basis?
(5.) Various government agencies compile hot lists that law enforcement agencies may consider utilizing. Do hot lists developed by law enforcement agencies carry privacy implications different from hot lists developed by other government, but non-law enforcement agencies?
(6.) What is the range of actions police officials take when an LPR identifies a license plate number contained on a hot list? Do police take any steps to verify that a license plate number is properly on the hot list?

(7.) If an officer stops a vehicle due to its inclusion on a hot list, may the officer reveal to the driver the reason the license plate was added to the hot list or the name of the agency that created the hot list?

4. Access to and Dissemination of LPR Data

LPR systems that electronically collect, analyze, and share license plate number data have the potential to improve the criminal justice system by enhancing the types of data available to apprehend offenders and identify previously undiscovered criminal activity. LPR data, when appropriately shared, can reveal relationships among persons, places, vehicles, and activities that would not be readily apparent in a paper-based information-sharing environment.

A. SHARING LPR DATA AMONG LAW ENFORCEMENT AGENCIES

Police officials have a general duty to investigate crimes and criminal conduct. To fulfill this responsibility, police officials collect, analyze, disseminate, and retain a variety of information.

It has long been a basic tool of criminal investigators to start with known subjects, and, with proper authorization, to look for information about them and the people with whom they interact. LPR data could provide police officials with information concerning the possible location of individuals and, as a result, identify new individuals for investigation because of their connection with a suspect or incident location. Although some of the connections revealed by an analysis of LPR data may be tenuous, it is the role and responsibility of police officials to exhaust investigative leads.

(1.) It is axiomatic that the real-time operation of mobile and portable LPR units results in a police official's access to LPR data, most frequently in the form of notifications that officer is near a vehicle contained on a hot list.

(2.) There seems to be a distinction between (a) a notification to a police official that a vehicle bearing a license plate number that is also contained on a hot list and (b) accessing stored LPR data concerning the times and locations a vehicle was observed. It is proposed that these purposes for accessing LPR data be addressed separately. Can these purposes for access be referred to as: (a) "notification data" and (b) "historic LPR data"?

(3.) Should there be a triggering device before a police official can access LPR data contained in some type of data repository concerning the times and locations a vehicle was observed? If so, what should that trigger be (e.g., reasonable inference of criminal conduct, reasonable suspicion, demonstrable need to know)?

(4.) It is envisioned that LPR system data will be used in various forms of crime analysis. How will this crime analysis be conducted? What information will the results of the crime analysis contain and who may access these results?

(5.) Is the presence of a license plate number on a hot list, alone, sufficient to justify stopping a vehicle? After stopping a vehicle on the basis that it's license plate is on a hot list, should police officials have to verify that a license plate number is properly included on a hot list before taking any formal decisions regarding the vehicle or driver?

(6.) Although a location under the observation of an LPR remains fixed inside a local jurisdiction, many of the proposed purposes for collecting license plate data through the use of LPRs require the sharing of LPR data across jurisdictions. For example, in order to conduct an analysis of crime trends and series across jurisdictions may require submitting large quantities of historic LPR data to another agency or regional data repository. Alternatively, where another jurisdiction has already identified a vehicle of interest, it may be enough for a law enforcement agency to share the LPR data concerning that particular license plate number. How broadly will historic LPR data be shared across jurisdictions?

(7.) How will requests for LPR data be processed?

(8.) Will the originating agency impose any restrictions on the secondary dissemination of LPR data that it provides to other criminal justice agencies? If so, how will the originating agency ensure that those restrictions are followed?

B. SHARING LPR DATA WITH OTHER GOVERNMENT ENTITIES

Since the traditional sharing of investigatory information as a case progresses through the criminal justice system is already the subject of substantial amounts of case law and in some instance court supervision, this document does not address the subject. As a case progresses through the justice system, the LPR data is treated as any other type of evidence in the case. Thus, this document won't address the sharing of LPR data by a police department with a prosecutor's office.

One of the proposed purposes for the use of LPRs is to enforce geographic limitations on the movements of sex offenders, probationers and parolees, and people subject to orders of protection. This will require the exchange of license plate numbers, relevant geographic information, and actual observation data with agencies such as court clerks' offices, probation departments and departments of corrections.

Some individuals owe fees and fines to a variety of federal, state, and local governmental agencies. LPR technology can also be utilized as a tool to facilitate the collection of outstanding fees and fines owed to governmental entities.

(1.) For purposes of LPR data, are probation and corrections departments considered law enforcement agencies?

(2.) What types of LPR data will be shared with non-law enforcement agencies?

(3.) Under what circumstances should police officials share LPR data with non-law enforcement agencies?
(4.) What other government agencies are likely to request LPR data from a law enforcement agency and for what purposes?
(5.) Are probationers and those on parole or mandatory supervision required to provide a license plate number as a condition of supervision? Who may access such disclosures?
(6.) How does an individual who owes a governmental entity a fee or fine become associated with a license plate number?

C. PUBLIC ACCESS TO LPR DATA

A parallel can be made between the recordings of a license plate by an LPR to the recordings of a radio transponder used to electronically pay a toll. Individuals using radio transponders to pay tolls can frequently obtain a listing of the tolls they paid that includes the toll location, date, and time the vehicle passed the toll. This can be useful for monitoring the use of the transponder. In similar fashion, it is possible that agencies utilizing LPRs may receive requests for data as to the location, date, and time their license plate was recorded by an LPR.

LPR data, potentially including images of the vehicle and the driver, could be useful in line-ups, identifying vehicles involved in hit-and-run accidents, or seeking missing persons. In these and similar circumstances, law enforcement entities may want to affirmatively distribute LPR information to the public.

(1.) Every state has a freedom of information or "sunshine" law that provides the public with access to information maintained by government agencies. How will such requests for LPR data be handled? Are any statutory exemptions likely to permit an agency to withhold requested LPR data?
(2.) Will all LPR data be considered limited to criminal justice agencies or otherwise be considered law enforcement sensitive? Does categorizing LPR data as law enforcement sensitive provide any additional privacy protections to the public? Are there any potentially negative consequences to law enforcement of treating LPR data as law enforcement sensitive?
(3.) Under what public safety circumstances might a police agency seek to disseminate LPR data to the public?
(4.) How might LPR data be disseminated to the public? What methods of dissemination would likely be used?
(5.) Would LPR data be used in a photo array/line-up situation?
(6.) What criteria would be used to determine whether to disseminate LPR data about missing persons? Do certain factors related to age and competency of the missing person influence the public dissemination of LPR data?
(7.) Electronic data systems can create substantial quantities of statistical summary information. LPR systems can generate reports detailing, among

other things, the number of (a) license plates recorded by a certain camera during a requested time period, (b) times a certain license plate is recorded passing a particular camera, and (c) "hot list" license plates spotted versus the gross number of license plates recorded. Will LPR systems be designed to generate statistical summary information regarding their operations? What types of statistical summary information would be helpful in administering an LPR system?

(8.) Who may have access to statistical summary information generated by the LPR system?

D. ACCESS AND DISSEMINATION OF "HOT LIST" DATA

For purposes of clarity, this document separates LPR data from Hot List data. Section 3 (E) COMPILATION AND SUBMISSION OF "HOT LISTS" provides background information concerning the various types of hot lists likely to be utilized as part of an LPR system.

(1.) Are there any limits to the access and dissemination of hot lists? Can hearsay rules provide some guidance on the dissemination and secondary dissemination of hot list data?

(2.) How will requests for hot list data pursuant to a sunshine law be handled? Are any statutory exemptions likely to permit an agency to withhold requested hot list data? Are such exemptions permissive or must an agency withhold data if an exemption can be applied?

(3.) Are hot lists considered the "property" of the agency that compiles it? Does that ownership carry with it ultimate responsibility for the accuracy and completeness of the data contained in the list?

(4.) Is a local law enforcement agency's use of hot lists required by any statute or rule? Is the use of hot lists optional?

(5.) Who is entitled to see what license plate numbers are contained on a hot list?

(6.) What is the basis of any limitations on the public disclosure of hot list information? Are limits on such disclosure mandatory in nature?

(7.) Should there be limits placed on the types of hot lists that will be uploaded into an LPR system?

5. Retention

Although data retention periods were once necessitated by physical storage constraints, electronic storage of records has made the destruction of criminal justice information largely unnecessary. Thus, whether to retain LPR data indefinitely is a matter of policy that should take into consideration, among other things, the justice system's future need for the information as well as the public's reasonable expectations of privacy in the data. It may be important to note here that the Fair Information Practices call for the destruction of personal

information when it no longer serves its original processing purposes. Thus, destruction is included in the concept of retention.

(1.) Ultimately, we must determine how long LPR data should be retained. Alternatively, a set of standards could be developed that would assist local police departments in establishing their own retention periods. Which approach best suits the needs of agencies seeking to utilize LPRs?
(2.) Images collected by LPRs can be separated from the text-only data generated by OCR software. Should the image data be treated differently than the text-only data for purposes of establishing retention standards? If so, why, and how do those reasons impact the retention periods of the data?
(3.) What is the difference between a tactical use of LPR data and strategic uses? How do these different uses factor into establishing a reasonable retention period for LPR data?
(4.) How do state records retention acts and other laws created to aid in government oversight affect the determination of how long to retain LPR data?
(5.) What existing laws, regulations, or policies, if any, currently govern the retention and destruction of LPR data?
(6.) What does it mean to destroy LPR data?
(7.) Is LPR data the type of information that may become stale?
(8.) What factors might inform the establishment of data retention standards for LPR data?
    a. Statutes of limitation exist to encourage prompt investigations and prevent stale prosecutions. How do statutes of limitations impact the retention of LPR data that may be collected near a crime scene? Do statutes of limitation also impact the retention of LPR data not directly associated with a specific criminal event?
    b. Information collected as part of an investigation may have usefulness beyond the life of the case. Not only could information be part of a continuing series of acts (important for statute of limitations purposes), but information may be useful to generate leads for the investigation of subsequent crimes or for crime analysis purposes. Although LPR data may be used to conduct various forms of crime analysis discussed in Section 2(A) CRIME ANALYSIS above; there is also a strong undercurrent of pure surveillance to the utilization of LPRs. How do the potential uses of LPR data weigh in favor of or opposed to longer retention periods for LPR data?
    c. The quality of LPR data will likely weigh into any determination as to how long to retain license plate information collected by LPRs. It is submitted that information of a higher caliber and reliability and that is accurately attributed to the right individuals will weigh in favor of a longer retention period than information that is of lesser quality or from a less reliable source that is inaccurately complied.

d. The level of trust that the public has that the justice system will maintain the confidentiality of the data and use it appropriately is a substantial factor. The lower the level of trust, the higher the public's desire may be to destroy LPR data after a shorter time period.
e. Using information technologies to implement sound policy controls is one way to promote the public's confidence in the justice system's ability to keep sensitive information confidential and limit authorized users' misuse of the data. What technologically implemented policy controls are available concerning LPR data?
f. The social desirability of maintaining vast quantities of surveillance data on the travels of individuals via their license plates is also a key factor in the establishment of a retention period for LPR data.

(9.) Should retaining LPR data automatically include the ability to search the information with analytical tools, or could the LPR data just be stored for limited purposes (e.g., audit or subsequent verification)?

(10.) Is there going to be one centralized repository for retaining license plate data from multiple LPRs?

6. Accountability issues

Transparency surrounding how LPR data is managed, regardless of whether LPR data itself is available to the public, is important to promoting public confidence in an LPR program. Accountability issues arise throughout all stages of the LPR program, beginning with an agency's decision to utilize LPRs, continuing through the policy development stages, and finally to the implementation of those policies.

A. DECIDING TO USE LPRS

At some point an agency should formally decide whether to implement an LPRs program. Logistical and privacy issues should be discussed and a formal determination to procure and utilize LPRs should be documented.

(1.) Which entities ultimately approve the use of LPRs?

(2.) What deliberative process was utilized to determine whether to use LPRs in the jurisdiction?

(3.) Which entities will ultimately control the use of LPRs and the data they collect?

(4.) What are the potential misuses of LPR data and how can they be safeguarded against?

B. ACCOUNTABILITY DURING POLICY DEVELOPMENT

Although the privacy issues identified in this document are varied, they can all be addressed by holding the agencies utilizing LPRs accountable for securing the information they collect and how they subsequently use that information. Agencies should strive to provide sufficient oversight and transparency in the development and implementation of a privacy policy.

(1.) The stakeholders of any information system are usually those individuals whose information is being collected and those individuals who are using the information. Who are the stakeholders of an LPR program?
(2.) Will these stakeholders be contacted or approached to provide comments into the policy development processes?
(3.) Is there any reason to exclude certain stakeholder groups from the privacy policy development process?
(4.) Will there be a public comment period concerning a proposed data management or privacy policy for the LPR program? Will policy development meetings be open to the public?
(5.) Who will ultimately be responsible for the development of a policy governing the collection, access, use, dissemination, and retention of LPR data? Who will be responsible for the adoption of such a policy?

C. ACCOUNTABILITY PROVISIONS CONTAINED IN A PRIVACY POLICY

The Fair Information Practices, Section 1 (E) above, provide that a data controller should be accountable for complying with measures that give effect to privacy protections contained in its policies. There are several means of ensuring that agencies utilizing LPRs or the data collected by LPRs are complying with any applicable policies regarding their use.

(1.) Will LPRs systems utilize programmatic audit logs that document system notifications to users, user queries, and other entries into the LPR computer systems? What information should be contained in such a log?
(2.) Will the LPR system log maintain primary and secondary dissemination logs? How detailed do dissemination logs need to be?
(3.) Who will be responsible for monitoring use of LPR data and conducting audits of the use of LPR data?
(4.) Who will be responsible for investigating allegations that LPR data has been misused?
(5.) Are entities that receive LPR data going to be made subject to the terms of the privacy policy? Should entities that receive LPR data from an originating jurisdiction be required to identify an individual responsible for ensuring that the LPR data is properly managed?
(6.) Should individuals be able to challenge an agency's compliance with LPR policy provisions?
(7.) If individuals were permitted to allege misuse of LPR data or that an agency is otherwise failing to abide by LPR policies, how would such allegations be filed and how could frivolous challenges be avoided?
(8.) Do existing models for filing complaints about police service provide a sound framework for LPR complaints?
(9.) Are periodic compliance audits by an independent agency desirable? If so, what sorts of compliance issues should be audited? Should such audits

examine the LPR data itself as well as the appropriateness of the dissemination of the data?

(10.) What sort of penalties for non-compliance should be devised?

7. Data quality

Information quality is a multidimensional concept encompassing critical relationships among multiple attributes. For instance, the quality of a particular set of information can be expressed, among other ways, as the extent to which the data is: (a) available or easily and quickly retrievable; (b) appropriate for the task at hand; (c) regarded as true and credible; (d) easy to interpret and apply to different tasks; (e) correct and reliable; or (f) unbiased, unprejudiced, and impartial. Together, these attributes contribute to the validity of the information as it is used to make informed decisions. Good information quality is the cornerstone for sound decisions by justice practitioners and inspires trust in the justice system and in the agencies that use information.

Data quality concerns implicated by the operation of an LPR program will focus on the quality of the license plate data collected by the LPR cameras, as well as the quality of the information contributed to the system in the form of hot lists. The sharing of LPR data across jurisdictions is also likely to be affected by the quality of the system's information.

A. ACCURACY OF LPR COLLECTION OF LICENSE PLATE NUMBERS

(1.) Is there any human review of LPR data collection?

(2.) What is the accuracy of LPR cameras in their collection and recognition of license plate numbers? Is there an accuracy percent given by manufacturers (i.e. 98% of license plates are read with optical character recognition (OCR) accurately)? Is there an accuracy percent observed by individuals operating LPR cameras? Are these percentages comparable?

(3.) Several things may negatively affect LPR camera's ability to recognize a license plate, such the amount of contrast between a particular state's background and the color of the license plate's characters. Are there any known difficulties with LPR OCR software? For example, do LPRs have difficulty identifying certain novelty or out-of-state license plates?

(4.) What entity will be responsible ensuring the data collected by LPRs is of sound quality?

(5.) What entity will be responsible for identifying inaccuracies in LPR data and correcting them?

(6.) Regular and systematic audits are one way of ensuring that the quality of information used by justice practitioners remains high; there is considerable precedent for subjecting law enforcement information systems to data quality audits. Will LPR systems be subject to a routine audit requirement? What will be involved in implementing such a requirement?

(7.) Restricting the sharing of potentially inaccurate data is one way to limit the possibility that users in receipt of the information will act upon erroneous information. If the data collected by LPRs is of uncertain quality, will agencies restrict the sharing of their LPR data?

B. ACCURACY OF INFORMATION CONTAINED IN HOT LISTS

Many of the potential uses of LPR data depend in large part upon the quality of the hot lists that will be uploaded into police department computer systems. Little is publicly known about these hot lists and how they are compiled.

(1.) For what reasons are hot lists compiled?
(2.) Which hot lists concern officer safety and which do not?
(3.) Should hot lists that are officer safety related be treated differently than those that are not related to officer safety?
(4.) Because hot lists are compiled by different agencies, are there different rules governing access to the contents of each list? For example, is a hot list from a department of revenue containing license plates with outstanding parking tickets publicly disclosed while a hot list compiled by a police department containing sex offender license plates not?
(5.) Are there statistics concerning the accuracy of data contained in hot lists?
(6.) Is there any method for an individual to challenge their inclusion (or the inclusion of their vehicle's license plate number) on a hot list? If so, who provides this method, the list's authoring agency or the police department that is uploading the hot list into the LPR system?

C. PARTIAL LICENSE PLATES

There are several instances where witnesses are only able to provide partial license plates. As partial license plates are, by definition, incomplete, they create data quality concerns. Nevertheless, partial license plates serve important investigative purposes.

(1.) How do LPR systems handle notifications where partial license plate numbers are involved?
(2.) Should there be different policies concerning the entry of partial license plates onto hot lists or other notification lists?

D. RIGHTS TO ACCESS AND CHALLENGE LPR DATA

(1.) To what extent, if any, should individuals be afforded a right to review and challenge information about them or their license plates collected by an LPR? What factors would help to make this determination?
(2.) There would probably have to be a limitation on this right where it would interfere with a pending investigation.

(3.) Should the right to access and review, if granted, also include a listing of individuals and agencies to whom the information was previously disclosed?
(4.) If it were appropriate to grant individuals a right to access and challenge LPR data about them, what types of administrative procedures would need to be developed?
(5.) Could existing access and review provisions (e.g., those created for Criminal History Record Information) serve as a guide to access and review of other types of justice information? Should a provision be considered that is similar to the section of the Fair Credit Reporting Act that permits the subject of the information to append a narrative to the record that explains his version of it?

8. Intelligence issues

Intelligence analysis is a time consuming and labor-intensive process that focuses on organized crime such as narcotics smuggling, money laundering, gangs, terrorism, and auto theft rings.[13] Specifically, intelligence analysis is the study of criminal relationships and establishes links between known or suspected criminals and other suspected criminals or organizations.[14] It links suspects to criminal organizations or events to determine who is doing what with whom. This goal of intelligence analysis, to determine who is doing what with whom, does so by focusing on the relationships between persons and organizations. Surveillance information, including field observations and travel information collected by LPRs, about suspects and those associated with him are a key part of this type of crime analysis.[15]

There is concern about the government collecting information and creating dossiers about people in the absence of probable cause.

(1.) In what circumstances could LPR data be considered the type of surveillance data that may qualify as intelligence information?
(2.) Is intelligence data information collected on “bad guys” before they commit a crime or is it somehow related to information collected during the investigation of a crime that has already been committed?
(3.) How is intelligence information different from surveillance information? Is there a distinction?
(4.) Do the provisions of the Privacy Act and the Department of Justice’s intelligence systems regulations sufficiently protect the privacy interests of individuals under the surveillance of LPRs? If not, what protections should be

[13] Gottlieb, supra note 3 at 27, 33.
[14] *Id.* at 27.
[15] *Id.* at 28-31.

included in a policy designed to regulate the sharing of LPR information across jurisdictions?

9. Security

Privacy and security, while related, are not the same thing. Although privacy cannot be maintained without security, security alone does not guarantee privacy interests are being respected. The goal of this document is to identify the privacy issues that should be addressed prior to an agency's implementation of an LPR program. As such, this document acknowledges that security is a component of ensuring the effectuation of privacy policies, but does not go into particulars regarding technological security safeguards such as user IDs, passwords, encryption, and firewalls, which are best left to IT professionals.

A:3

Appendix 3: List of Acronyms used in the PIA Report

DPPA	Driver's Privacy Protection Act, 18 U.S.C.A. §§ 2721-25
DMV	Department of Motor Vehicles
FOUO	For Official Use Only
GPS	Global Positioning System
IACP	International Association of Chiefs of Police
LEIM	Law Enforcement Information Management
LPR	License Plate Reader
MOU	Memorandum of Understanding
NCIC	National Crime Information Center
NIST	National Institute of Standards and Technology
OCR	Optical Character Recognition
PIA	Privacy Impact Assessment
PII	Personally Identifiable Information

Appendix 4: Footnote Reference List

[1] Most LPR systems capture multiple images of the same vehicle and then use the best image; other systems are capable of capturing more than one vehicle per second.
[2] Erika McCallister *et al.*, *Guide to Protecting the Confidentiality of Personally Identifiable Information (Draft)*, Special Publication No. 800-122, 2-1 (U.S. Dept of Commerce, National Institute of Standards and Technology, Jan. 2009) (adopting the definition of PII contained in OMB Memorandum 07-16, *Safeguarding Against and Responding to the Breach of Personally Identifiable Information*).
[3] *See Id.* at 2-2.
[4] *But see In re Charter Commc'ns*, 393 F.3d 771, 774 (8th Cir. 2005) (holding an IP address does not identify a user's name or mailing address); *Klimas v. Comcast Cable Comm'cns, Inc.*, 465 F.3d 271, 276 n.2 (6th Cir. 2006) (noting "that IP addresses do not in and of themselves reveal 'a subscriber's name, address, [or] social security number.' That information can only be gleaned if a list of subscribers is matched up with a list of their individual IP addresses."); *Johnson et al. v. Microsoft*, C06-0900RAJ Or. Granting Def.'s Mot. S.J. 7 (W.D. Wash. June 23, 2009) (ruling that "In order for 'personally identifiable information' to be personally identifiable, it must identify a person. But an IP address identifies a computer, and can do that only after matching the IP address to a list of a particular Internet service provider's subscribers.").
[5] On at least two occasions the U. S. Supreme Court has been confronted with whether an individual can be required to identify himself to the police during a Terry stop, but decided those cases on other grounds. *See Brown v. Texas*, 433 U.S. 47 (1979) (holding the underlying seizure illegal thereby avoiding the constitutional question) and *Kolender v. Lawson*, 461 U.S. 352 (1983) (holding a statute requiring a suspect to identify himself to police officers during a Terry stop void for vagueness and refusing to decide the issues of the constitutionality of compulsory identification). It wasn't until 2004 in *Hiibel v Sixth Judicial District Court of Nevada*, 542 U.S. 177, that the Court concluded that requiring suspects to identify themselves did not violate the Fourth or Fifth Amendments.
[6] The Act defines "personal information" as an "individual's photograph, social security number, driver identification number, name, address…telephone number, and medical or disability information"; the term does not include information on vehicular accidents, driving violations, and driver's status. 18 U.S.C. § 2725(3). In 2000, the Act was amended to create a new class of "highly restricted personal information." This includes an "individual's photograph or image, social security number, and medical or disability information" collected or maintained by a DMV. 18 U.S.C. § 2725(4).
[7] 18 U.S.C. § 2721(b)(1).
[8] 18 U.S.C. § 2721(b)(2).
[9] 18 U.S.C. § 2721(b)(4).
[10] The term For Official Use Only is used within the U.S. Department of Homeland Security to identify unclassified information of a sensitive nature, not otherwise categorized by statute or regulation, the unauthorized disclosure of which could adversely impact a person's privacy or welfare, the conduct of Federal programs, or other programs or operations essential to the national interest. LPR data may also fall into the federal information categorization of non-classified information being implemented pursuant to Executive Order 12958; under that system of categorization, LPR data may also be considered Controlled Unclassified Information (CUI) and may more specifically fall under the CUI category "Controlled, Special Dissemination." *See* Executive Order 12958 as amended by Executive Order 13292 at 68 Fed. Reg. 15315 (2004); *see also* White House *Memorandum for the*

[51] *Id.*
[52] NAT'L CRIM. JUST. ASS'N, Justice Information Privacy Guideline: Developing, Drafting and Assessing Privacy Policy for Justice Information Systems 22 (NCJA 2002) (hereafter "NCJA Guideline"), available at http://www.ncja.org/Content/NavigationMenu/PoliciesPractices/JusticeInformationPrivacyGuideline/privacyguideline.pdf
[53] Barbara Crutchfield George, *et al.*, *U.S. Multinational Employers: Navigating Through the "Safe Harbor" Principles to Comply with the EU Data Privacy Directive*, 38 AM. BUS. L.J. 735, 752 (2001).
[54] This is sometimes referred to as the *Openness Principle*, under which there should be a general policy of openness about developments, practices, and policies with respect to personal data. Under this principle, means should be readily available of establishing the existence and nature of personal data, and the main purposes of its use, as well as the identity and usual residence of the data controller. *See* NCJA Guideline *supra* note 53 at 31.
[55] *See* Part 4 of this Report; subsection (c) is intended to include law enforcement monitoring of certain identified individuals' compliance with travel restrictions and identification of previously-undetected crimes.
[56] Although not always the case, fixed LPRs frequently capture "transient vehicles" driving through a jurisdiction whereas mobile LPRs collect license plate data from local vehicles. Thus, fixed LPRs may further regional law enforcement goals whereas mobile LPRs may be of more value to local law enforcement agencies.
[57] Parking enforcement bureaus are not considered law enforcement in many jurisdictions.
[58] In many jurisdictions, parole and probation officers are peace officers with specific powers of arrest; in those instances, the sharing of information with such officers should be considered the sharing of LPR data among law enforcement agencies.
[59] Critical infrastructure is defined as those systems and assets, whether physical or virtual, so vital to the United States that the incapacity or destruction of such systems and assets would have a debilitating impact on security, national economic security, national public health or safety, or any combination of those matters. U.S. Dept. of Justice, *The National Criminal Intelligence Sharing Plan*, 13 (October 2003) (hereafter "NCISP") available on-line at http://www.it.ojp.gov/documents/NCISP_Plan.pdf.
[60] U.S. Dept. of Justice, *Fusion Center Guidelines—Developing and Sharing Information in a New Era*, 17 (August 2006) (hereafter "Fusion Center Guidelines") available on-line at http://www.it.ojp.gov/documents/fusion_center_guidelines_law_enforcement.pdf.
[61] *Id.* at 29.
[62] Although statistical summary information is unlikely to create privacy concerns, the sharing of LPR data related to a license plate number may raise privacy issues.
[63] LPR data may include images of vehicle occupants.
[64] Official criminal history record information is collected and maintained to compile crime statistics, assist a court in imposing an appropriate sentence, and to help corrections officials make prisoner placement decisions. Criminal history records are also maintained to implement sentence enhancement provisions for recidivists and are also used to ensure that civil disability and offender registration statutes are properly applied. *See* U.S. Dept. of Justice, *Use and Management of Criminal History Record Information: A Comprehensive Report*, 101-127 (NCJ 187670, Dec. 2001) available on-line at http://www.ojp.usdoj.gov/bjs/abstract/umchri01.htm.
[65] *See* 68 Fed. Reg. 14140 (2003).

[66] A threshold issue exists as to whether a contextual image taken by a LPR camera and the data associated with that image (including but not limited to the OCR text of the license plate and the date, time and location of observation) are considered records under the law of the jurisdiction.
[67] If so, those records may have different retention periods; specifically, the query-response record would likely be maintained for purposes of monitoring system use as opposed to supporting criminal investigations.
[68] Characteristics of crimes that may extend or toll a statute of limitations vary from state to state. Generally, statutes of limitations are extended in cases involving *inter alia* certain thefts involving a breach of fiduciary duty, identity theft offenses, and certain sex offenses; statutes of limitations are typically tolled *inter alia* when the defendant is not residing in the prosecuting jurisdiction or when a material witness is on active military duty.
[69] Such crimes typically include conspiracy and thefts by deception that continue over a period of time.
[70] The 9/11 Commission Report found that it took between two and four years to plan and carry out the attacks against the World Trade Center.
[71] Public confidence in a law enforcement agency's ability to maintain the confidentiality of LPR data could be reduced due to the scope of that jurisdiction's freedom of information act.
[72] U.S. Dept. of Justice, *Information Quality: The Foundation for Justice Decision Making*, 1 (Feb. 2008) available on-line at http://www.it.ojp.gov/documents/IQ_Fact_Sheet_Final.pdf.
[73] *Id.* at 2.
[74] Law enforcement agencies should not strip the image from the OCR information in order to save storage space; the OCR information cannot be verified without the contextual photo.
[75] Delaware and Rhode Island are able to use formats of 123456 and 123-456, respectively, while several populous states use seven-character formats, including 1ABC234 in California, AB1-C234 in Texas, A12-3456 in Illinois, and ABC-1234 in New York, Pennsylvania, Ohio, Georgia, North Carolina, Virginia, and Arizona.
[76] This is also common in the area of vanity license plates.
[77] Mandatory audits are routinely conducted of official criminal history record information (CHRI) repositories to measure the accuracy, completeness, and timeliness of their data. *See* 28 C.F.R. § 20.21(e). These audits are one of the reasons the justice system and society have deemed official CHRI records reliable enough on which to base important decisions affecting individuals' liberty interests.
[78] U.S. Dept. of Justice, Federal Bureau of Investigation, *National Crime Information Center Mandatory Minimum Standards Curriculum for Full Access Terminal Operations*, LPF-17; LPR-22 (1992) available on-line at: http://www.eric.ed.gov/ERICWebPortal/custom/portlets/recordDetails/detailmini.jsp?_nfpb=true&_&ERICExtSearch_SearchValue_0=ED354315&ERICExtSearch_SearchType_0=no&accno=ED354315.
[79] *See* 28 C.F.R. § 20.21(g)(1).
[80] *See* 28 C.F.R. § 20.3(d) (excluding investigative information from the definition of criminal history record information).
[81] See K. A. Taipale, *Technology, Security And Privacy: The Fear of Frankenstein, the Mythology of Privacy and the Lessons of King Ludd*, 7 YALE J.L. & TECH. 123, 151 (2005).
[82] The DPPA contains a similar requirement; see 18 U.S.C. § 2721(c).
[83] Where LPR system policies are considered too detailed, law enforcement agencies may consider developing a guidance document to inform the public, in general terms, of practices and procedures developed to address privacy concerns surrounding LPR data.

PRIVACY IMPACT ASSESSMENTS

Official Guidance

Office of Privacy and Civil Liberties

United States Department of Justice

(Revised March 2012)

Introduction

The Department of Justice (the Department or DOJ) is committed to ensuring the appropriate protection of privacy and civil liberties in the course of fulfilling its missions. Privacy Impact Assessments (PIAs), which are required by Section 208 of the E-Government Act of 2002,[1] are an important tool to assist the Department in achieving this objective. Specifically, Section 208 of the E-Government Act of 2002 requires all federal agencies to conduct a PIA before developing or procuring information technology that collects, maintains, or disseminates information that is in identifiable form or before initiating a new collection of information that will be collected, maintained, or disseminated using information technology and that includes any information in identifiable form in certain circumstances involving the public.

In August 2010, the Department's Office of Privacy and Civil Liberties (OPCL) revised the Department's PIA template to better assist DOJ components in conducting their PIAs. This guidance is designed to supplement the revised DOJ PIA template by providing DOJ personnel with guidance on how to effectively conduct a PIA and how to properly document this assessment.

This guidance is solely for the purpose of setting forth internal Department policy and guidance, and does not create any rights, substantive or procedural, that are enforceable at law by any party in any matter, civil or criminal.

Chief Privacy and Civil Liberties Officer's Authority

The Department's Chief Privacy and Civil Liberties Officer (CPCLO) is primarily responsible for the Department's privacy policy, including advising the Attorney General regarding "appropriate privacy protections, relating to the collection, storage, use, disclosure, and security of personally identifiable information, with respect to the Department's existing or proposed information technology and information systems."[2] Additionally, the CPCLO is responsible for advising the Attorney General concerning the "implementation of policies and procedures, including appropriate training and auditing, to ensure the Department's compliance with privacy-related laws and policies, including section 552a of title 5, United States Code [the Privacy Act of 1974], and Section 208 of the E-Government Act of 2002 (Public Law 107–347)."[3]

The CPCLO's review and approval of Departmental PIAs is one mechanism through which the CPCLO fulfills the above-referenced statutory mandates.[4]

[1] E-Government Act of 2002, Pub. L. 107-347, § 208, 116 Stat. 2899, 2921-23.
[2] Violence Against Women and Department of Justice Reauthorization Act of 2005, Pub. L. 109-162, § 1174, 119 Stat. 2960, 3124 (2006). See also Implementing Recommendations of the 9/11 Commission Act of 2007, Pub. L. 110-53, § 803, 121 Stat. 266, 360-1.
[3] Violence Against Women and Department of Justice Reauthorization Act of 2005 § 1174.
[4] See Attorney General Order No. 2843-2006, dated October 2, 2006 (CPCLO approval for PIAs required).

Office of Privacy and Civil Liberties' Role

OPCL supports the CPCLO through the development and implementation of the Department's privacy compliance program. With regard to PIAs, OPCL provides guidance and training to components on compliance with E-Government Act PIA requirements, reviews PIAs in preparation for signature by the CPCLO, and provides public notice of PIAs as appropriate. Accordingly, OPCL issues this PIA guidance to be followed by all Departmental offices, boards, divisions, components, and bureaus.

What is a PIA?

A PIA is an analysis required by the E-Government Act of how information in identifiable form[5] is handled to ensure compliance with applicable legal, regulatory, and policy requirements regarding privacy, to determine the risks and effects of collecting, maintaining, and disseminating such information in an electronic information system, and to examine and evaluate protections and alternative processes for handling information to mitigate potential privacy risks.[6] The PIA demonstrates that the Department considers privacy from the beginning stages of a system's development and throughout the system's life cycle (i.e., collection, use, retention, processing, disclosure, and destruction). This ensures that privacy protections are built into the system from the start – not after the fact – when they can be far more costly or could affect the viability of the project. Additionally, the PIA demonstrates that the system developers and owners have made technology choices that reflect the incorporation of privacy into the fundamental system architecture.

The PIA also gives the public notice of this analysis and helps promote trust between the public and the Department by increasing transparency of the Department's systems and missions.

When Should a PIA be Completed?

A PIA should be conducted before developing or procuring IT systems or projects that collect, maintain, or disseminate information in identifiable form, or initiating, consistent with the Paperwork Reduction Act, a new electronic collection of information in identifiable form for ten or more persons (excluding agencies, instrumentalities or employees of the federal government).[7]

---

[5] The E-Government Act of 2002 applies to "information in identifiable form." We note that the National Institute of Standards and Technology (NIST) has stated that the term "information in identifiable form" is "[o]ften considered to have been replaced by the term PII [personally identifiable information]." NIST Special Publication 800-122, Guide to Protecting the Confidentiality of Personally Identifiable Information (PII), Appendix C (April 2010). However, NIST also notes that terms such as "information in identifiable form" are similar to NIST's definition of PII and "organizations should not use the term PII (as defined in this document) interchangeably with these terms and definitions because they are specific to their particular context." Id.

[6] See OMB Memorandum, M-03-22, OMB Guidance for Implementing the Privacy Provisions of the E-Government Act of 2002, Attachment A, Section II.A.6, dated Sept. 26, 2003.

[7] See id. at Section II.B.1.

OPCL assists components by assessing the need to conduct a PIA through the Initial Privacy Assessment (IPA) process.[8] Once OPCL provides a component with a determination that a PIA is required, a PIA should be conducted. The PIA should be drafted and issued during system development, with sufficient lead time to permit final Departmental approval and public website posting on or before the commencement of any system operation (including before any testing or piloting).

Section 208 of the E-Government Act does not apply to national security systems.[9] Nevertheless, it is the Department's policy that PIAs must also be conducted for national security systems and submitted to OPCL for review and approval by the CPCLO.

Who Should Prepare the PIA?

The PIA process requires that candid and forthcoming communications occur among the system manager/owner, component privacy officials, and OPCL, to make the PIA comprehensive and meaningful and to ensure appropriate and timely handling of privacy concerns. With this in mind, the PIA should be written and reviewed by a combination of the component's privacy officials, IT security staff, and the program personnel responsible for the system.

Preparing a PIA

The E-Government Act requires, where practicable, that agencies make PIAs publicly available. Therefore, PIAs should be clear, unambiguous, and understandable to the general public. The length and breadth of a PIA will vary according to the size and complexity of the system.

To ensure consistency within the Department in the preparation of PIAs, all components must utilize and fully complete the most recent Department PIA template, as posted on the OPCL website at http://www.justice.gov/opcl.htm, or on the DOJnet.

Please adhere to the following guidelines when drafting responses to the questions posed in the PIA template:

- Use plain language and take into account the perspective of a member of the public who is unfamiliar with the system or technology.
- Spell out each acronym the first instance it is used it in the document (e.g., Office of Management and Budget (OMB)).
- Use words, phrases, or names in the PIA that are readily known to the public.
- Define technical terms or references.
- Clearly reference projects and systems and provide explanations, if needed, to aid the general public.
- Include the complete name of the reference when first referencing National

[8] More information about the IPA process can be found in the DOJ's IPA Instructions and Template at http://www.justice.gov/opcl/pia.htm.
[9] See E-Government Act of 2002, § 202(i) (stating that most provisions of Title II (including Section 208) do not apply to national security systems).

Institute of Science and Technology (NIST) publications and other documents (e.g., NIST Special Publication 800-122, Guide to Protecting the Confidentiality of Personally Identifiable Information (PII)). The abbreviated format may be used for subsequent references. Full names for NIST documents can be found at NIST's website http://csrc.nist.gov/publications/nistpubs.

It is imperative that in preparing a PIA the component also review other privacy and security documentation relevant to the system, such as any Privacy Act System of Records Notice (SORN) and/or System Security Plan (SSP), to ensure consistency among all privacy/security documentation and the PIA.

A component privacy office with concerns regarding the sufficiency of a proposed answer, or with questions about the PIA template, is welcome to consult informally with OPCL before submitting the response or PIA for final review and approval. Similarly, component IT security staff with concerns or questions regarding the sufficiency of a proposed response to questions concerning the technical or security aspects of the system, should feel free to consult with the Department's Office of the Chief Information Officer (OCIO).

Obtaining Approval and Signatures

The component is responsible for preparing the PIA, including the completion of all internal component reviews, and obtaining the signature of the appropriate component Security Review Official. For Department Components with an appointed Chief Information Officer (CIO), the Security Review Official shall be the Component CIO. For offices within JMD, the Security Review Official shall be the JMD Staff Director. For Offices, Boards and Divisions (OBDs) without an appointed CIO, the Security Review Official shall be the OBD Executive Officer, if the system is owned by the OBD, or the OCIO Staff Director, if the system is owned by the OCIO. In each case, the appropriate Security Review Official shall review all PIAs, assessing whether the system controls meet the security requirements, and shall indicate his/her approval of the system's technical description and security by signing the PIA.

The Senior Component Official for Privacy (if designated; otherwise privacy point of contact) should then sign the PIA, indicating official issuance by the component, and then forward the PIA to OPCL for Departmental review and final approval. [10] (Please email the PIA to OPCL at privacy@usdoj.gov; if a PIA is classified, please contact OPCL to coordinate delivery.) PIAs should not be sent to OPCL until all required component signatures have been obtained.

Upon receipt of the PIA, OPCL will review the PIA for legal sufficiency and compliance with the E-Government Act of 2002, as well as further advise the CPCLO of privacy policy issues. Part of that review will include ensuring that there is consistency with related materials (such as SORNs and SSPs). OPCL will coordinate with the

[10] If a PIA contains information that the component wishes to redact prior to publication due to its sensitive or protected nature, the PIA should be appropriately marked to indicate the proposed redactions and the component must provide an explanation, as discussed below, under "Publishing the PIA."

Department's OCIO to obtain a technical and system security review of the PIA. The OCIO will provide OPCL and the CPCLO with a recommendation for approval once the PIA satisfies the OCIO's requirements. If warranted, OPCL and/or the CPCLO may return the PIA to the component for revision or may disapprove it in accordance with the CPCLO's authority.[11] The CPCLO will approve and sign the PIA once the CPCLO determines that the PIA satisfies the applicable requirements. An approved PIA will then be returned to the component for information and publication.

Publishing the PIA

The PIA should not be published until the PIA has been approved and signed by the CPCLO, and OPCL has so advised the component. Approved PIAs will be available to the general public. However, the Department, in its discretion, is not required to make a PIA (or portions thereof) publicly available if such publication would raise security concerns, or would reveal classified, sensitive, or otherwise protected information (e.g., potentially damaging to a national interest, law enforcement effort, or competitive business interest) that is contained in the assessment. If a component submits a PIA to OPCL that contains information that the component wishes to redact prior to publication due to its sensitive nature, the PIA should be appropriately marked to indicate the portions that the component proposes to redact, and the component must attach a separate explanation for the proposed redaction(s).

Publication normally should be accomplished by placing the PIA on the Justice.gov/opcl website. OPCL has a dedicated web page where Department PIAs are posted. Components may also post their PIAs on a component-specific PIA web page.

For PIAs that are completed for systems in development, the PIA does not need to be published until the design and construction of the system have been completed, and the PIA reflects the system as it will operate. However, a component may exercise its discretion and publish a PIA for a system still in development, if it so chooses.

Updating PIAs

Recognizing that information systems may undergo changes throughout their life cycle, it is important that any changes to the system be evaluated with regard to their effect on individuals' privacy. Components must update their PIAs to reflect significant changes to information collection authorities, business processes, or other factors affecting the collection and handling of information in identifiable form.[12] Components should use the IPA process to ascertain whether or not such changes would require a modification to an existing PIA or would require a new PIA.

Definitions

Individual – For purposes of conducting PIAs, it is the Department's policy to define "individual" in this context as any natural person regardless of citizenship status.

Information in Identifiable Form – is information in an IT system or online collection: (i) that directly identifies an individual (e.g., name, address, social security number or other identifying number or code, telephone number, email address, etc.) or (ii) by which an agency intends to identify specific individuals in conjunction with other data elements, i.e., indirect identification. (These data elements may include a combination of gender, race, birth date, geographic indicators, and other descriptors). OMB Memorandum, M-03-22, OMB Guidance for Implementing the Privacy Provisions of the E-Government Act of 2002, Attachment A, Section II.A.2., dated September 26, 2003.

Information Technology – means, as defined in the Clinger-Cohen Act, any equipment, software or interconnected system or subsystem that is used in the automatic acquisition, storage, manipulation, management, movement, control, display, switching, interchange, transmission, or reception of data or information. Id. at Section II.A.3.

National Security System – means, as defined in the Clinger-Cohen Act, an information system operated by the federal government, the function, operation or use of which involves: (a) intelligence activities, (b) cryptologic activities related to national security, (c) command and control of military forces, (d) equipment that is an integral part of a weapon or weapons systems, or (e) systems critical to the direct fulfillment of military or intelligence missions, but does not include systems used for routine administrative and business applications, such as payroll, finance, logistics and personnel management. Id. at Section II.A.5.

Personally Identifiable Information – is any information about an individual maintained by an agency, including (1) any information that can be used to distinguish or trace an individual's identity, such as name, social security number, date and place of birth, mother's maiden name, or biometric records; and (2) any other information that is linked or linkable to an individual, such as medical, educational, financial, and employment information. NIST Special Publication 800-122, Guide to Protecting the Confidentiality of Personally Identifiable Information (PII) (April 2010).

PRIVACY IMPACT ASSESSMENTS

Official Guidance

Office of Privacy and Civil Liberties

United States Department of Justice

(Revised March 2012)

Introduction

The Department of Justice (the Department or DOJ) is committed to ensuring the appropriate protection of privacy and civil liberties in the course of fulfilling its missions. Privacy Impact Assessments (PIAs), which are required by Section 208 of the E-Government Act of 2002,[1] are an important tool to assist the Department in achieving this objective. Specifically, Section 208 of the E-Government Act of 2002 requires all federal agencies to conduct a PIA before developing or procuring information technology that collects, maintains, or disseminates information that is in identifiable form or before initiating a new collection of information that will be collected, maintained, or disseminated using information technology and that includes any information in identifiable form in certain circumstances involving the public.

In August 2010, the Department's Office of Privacy and Civil Liberties (OPCL) revised the Department's PIA template to better assist DOJ components in conducting their PIAs. This guidance is designed to supplement the revised DOJ PIA template by providing DOJ personnel with guidance on how to effectively conduct a PIA and how to properly document this assessment.

This guidance is solely for the purpose of setting forth internal Department policy and guidance, and does not create any rights, substantive or procedural, that are enforceable at law by any party in any matter, civil or criminal.

Chief Privacy and Civil Liberties Officer's Authority

The Department's Chief Privacy and Civil Liberties Officer (CPCLO) is primarily responsible for the Department's privacy policy, including advising the Attorney General regarding "appropriate privacy protections, relating to the collection, storage, use, disclosure, and security of personally identifiable information, with respect to the Department's existing or proposed information technology and information systems."[2] Additionally, the CPCLO is responsible for advising the Attorney General concerning the "implementation of policies and procedures, including appropriate training and auditing, to ensure the Department's compliance with privacy-related laws and policies, including section 552a of title 5, United States Code [the Privacy Act of 1974], and Section 208 of the E-Government Act of 2002 (Public Law 107–347)."[3]

The CPCLO's review and approval of Departmental PIAs is one mechanism through which the CPCLO fulfills the above-referenced statutory mandates.[4]

[1] E-Government Act of 2002, Pub. L. 107-347, § 208, 116 Stat. 2899, 2921-23.
[2] Violence Against Women and Department of Justice Reauthorization Act of 2005, Pub. L. 109-162, § 1174, 119 Stat. 2960, 3124 (2006). See also Implementing Recommendations of the 9/11 Commission Act of 2007, Pub. L. 110-53, § 803, 121 Stat. 266, 360-1.
[3] Violence Against Women and Department of Justice Reauthorization Act of 2005 § 1174.
[4] See Attorney General Order No. 2843-2006, dated October 2, 2006 (CPCLO approval for PIAs required).

Office of Privacy and Civil Liberties' Role

OPCL supports the CPCLO through the development and implementation of the Department's privacy compliance program. With regard to PIAs, OPCL provides guidance and training to components on compliance with E-Government Act PIA requirements, reviews PIAs in preparation for signature by the CPCLO, and provides public notice of PIAs as appropriate. Accordingly, OPCL issues this PIA guidance to be followed by all Departmental offices, boards, divisions, components, and bureaus.

What is a PIA?

A PIA is an analysis required by the E-Government Act of how information in identifiable form[5] is handled to ensure compliance with applicable legal, regulatory, and policy requirements regarding privacy, to determine the risks and effects of collecting, maintaining, and disseminating such information in an electronic information system, and to examine and evaluate protections and alternative processes for handling information to mitigate potential privacy risks.[6] The PIA demonstrates that the Department considers privacy from the beginning stages of a system's development and throughout the system's life cycle (i.e., collection, use, retention, processing, disclosure, and destruction). This ensures that privacy protections are built into the system from the start – not after the fact – when they can be far more costly or could affect the viability of the project. Additionally, the PIA demonstrates that the system developers and owners have made technology choices that reflect the incorporation of privacy into the fundamental system architecture.

The PIA also gives the public notice of this analysis and helps promote trust between the public and the Department by increasing transparency of the Department's systems and missions.

When Should a PIA be Completed?

A PIA should be conducted before developing or procuring IT systems or projects that collect, maintain, or disseminate information in identifiable form, or initiating, consistent with the Paperwork Reduction Act, a new electronic collection of information in identifiable form for ten or more persons (excluding agencies, instrumentalities or employees of the federal government).[7]

---

[5] The E-Government Act of 2002 applies to "information in identifiable form." We note that the National Institute of Standards and Technology (NIST) has stated that the term "information in identifiable form" is "[o]ften considered to have been replaced by the term PII [personally identifiable information]." NIST Special Publication 800-122, Guide to Protecting the Confidentiality of Personally Identifiable Information (PII), Appendix C (April 2010). However, NIST also notes that terms such as "information in identifiable form" are similar to NIST's definition of PII and "organizations should not use the term PII (as defined in this document) interchangeably with these terms and definitions because they are specific to their particular context." Id.

[6] See OMB Memorandum, M-03-22, OMB Guidance for Implementing the Privacy Provisions of the E-Government Act of 2002, Attachment A, Section II.A.6, dated Sept. 26, 2003.

[7] See id. at Section II.B.1.

OPCL assists components by assessing the need to conduct a PIA through the Initial Privacy Assessment (IPA) process.[8] Once OPCL provides a component with a determination that a PIA is required, a PIA should be conducted. The PIA should be drafted and issued during system development, with sufficient lead time to permit final Departmental approval and public website posting on or before the commencement of any system operation (including before any testing or piloting).

Section 208 of the E-Government Act does not apply to national security systems.[9] Nevertheless, it is the Department's policy that PIAs must also be conducted for national security systems and submitted to OPCL for review and approval by the CPCLO.

Who Should Prepare the PIA?

The PIA process requires that candid and forthcoming communications occur among the system manager/owner, component privacy officials, and OPCL, to make the PIA comprehensive and meaningful and to ensure appropriate and timely handling of privacy concerns. With this in mind, the PIA should be written and reviewed by a combination of the component's privacy officials, IT security staff, and the program personnel responsible for the system.

Preparing a PIA

The E-Government Act requires, where practicable, that agencies make PIAs publicly available. Therefore, PIAs should be clear, unambiguous, and understandable to the general public. The length and breadth of a PIA will vary according to the size and complexity of the system.

To ensure consistency within the Department in the preparation of PIAs, all components must utilize and fully complete the most recent Department PIA template, as posted on the OPCL website at http://www.justice.gov/opcl.htm, or on the DOJnet.

Please adhere to the following guidelines when drafting responses to the questions posed in the PIA template:

- Use plain language and take into account the perspective of a member of the public who is unfamiliar with the system or technology.
- Spell out each acronym the first instance it is used it in the document (e.g., Office of Management and Budget (OMB)).
- Use words, phrases, or names in the PIA that are readily known to the public.
- Define technical terms or references.
- Clearly reference projects and systems and provide explanations, if needed, to aid the general public.
- Include the complete name of the reference when first referencing National

[8] More information about the IPA process can be found in the DOJ's IPA Instructions and Template at http://www.justice.gov/opcl/pia.htm.
[9] See E-Government Act of 2002, § 202(i) (stating that most provisions of Title II (including Section 208) do not apply to national security systems).

Institute of Science and Technology (NIST) publications and other documents (e.g., NIST Special Publication 800-122, Guide to Protecting the Confidentiality of Personally Identifiable Information (PII)). The abbreviated format may be used for subsequent references. Full names for NIST documents can be found at NIST's website http://csrc.nist.gov/publications/nistpubs.

It is imperative that in preparing a PIA the component also review other privacy and security documentation relevant to the system, such as any Privacy Act System of Records Notice (SORN) and/or System Security Plan (SSP), to ensure consistency among all privacy/security documentation and the PIA.

A component privacy office with concerns regarding the sufficiency of a proposed answer, or with questions about the PIA template, is welcome to consult informally with OPCL before submitting the response or PIA for final review and approval. Similarly, component IT security staff with concerns or questions regarding the sufficiency of a proposed response to questions concerning the technical or security aspects of the system, should feel free to consult with the Department's Office of the Chief Information Officer (OCIO).

Obtaining Approval and Signatures

The component is responsible for preparing the PIA, including the completion of all internal component reviews, and obtaining the signature of the appropriate component Security Review Official. For Department Components with an appointed Chief Information Officer (CIO), the Security Review Official shall be the Component CIO. For offices within JMD, the Security Review Official shall be the JMD Staff Director. For Offices, Boards and Divisions (OBDs) without an appointed CIO, the Security Review Official shall be the OBD Executive Officer, if the system is owned by the OBD, or the OCIO Staff Director, if the system is owned by the OCIO. In each case, the appropriate Security Review Official shall review all PIAs, assessing whether the system controls meet the security requirements, and shall indicate his/her approval of the system's technical description and security by signing the PIA.

The Senior Component Official for Privacy (if designated; otherwise privacy point of contact) should then sign the PIA, indicating official issuance by the component, and then forward the PIA to OPCL for Departmental review and final approval. [10] (Please email the PIA to OPCL at privacy@usdoj.gov; if a PIA is classified, please contact OPCL to coordinate delivery.) PIAs should not be sent to OPCL until all required component signatures have been obtained.

Upon receipt of the PIA, OPCL will review the PIA for legal sufficiency and compliance with the E-Government Act of 2002, as well as further advise the CPCLO of privacy policy issues. Part of that review will include ensuring that there is consistency with related materials (such as SORNs and SSPs). OPCL will coordinate with the

[10] If a PIA contains information that the component wishes to redact prior to publication due to its sensitive or protected nature, the PIA should be appropriately marked to indicate the proposed redactions and the component must provide an explanation, as discussed below, under "Publishing the PIA."

Department's OCIO to obtain a technical and system security review of the PIA. The OCIO will provide OPCL and the CPCLO with a recommendation for approval once the PIA satisfies the OCIO's requirements. If warranted, OPCL and/or the CPCLO may return the PIA to the component for revision or may disapprove it in accordance with the CPCLO's authority.[11] The CPCLO will approve and sign the PIA once the CPCLO determines that the PIA satisfies the applicable requirements. An approved PIA will then be returned to the component for information and publication.

Publishing the PIA

The PIA should not be published until the PIA has been approved and signed by the CPCLO, and OPCL has so advised the component. Approved PIAs will be available to the general public. However, the Department, in its discretion, is not required to make a PIA (or portions thereof) publicly available if such publication would raise security concerns, or would reveal classified, sensitive, or otherwise protected information (e.g., potentially damaging to a national interest, law enforcement effort, or competitive business interest) that is contained in the assessment. If a component submits a PIA to OPCL that contains information that the component wishes to redact prior to publication due to its sensitive nature, the PIA should be appropriately marked to indicate the portions that the component proposes to redact, and the component must attach a separate explanation for the proposed redaction(s).

Publication normally should be accomplished by placing the PIA on the Justice.gov/opcl website. OPCL has a dedicated web page where Department PIAs are posted. Components may also post their PIAs on a component-specific PIA web page.

For PIAs that are completed for systems in development, the PIA does not need to be published until the design and construction of the system have been completed, and the PIA reflects the system as it will operate. However, a component may exercise its discretion and publish a PIA for a system still in development, if it so chooses.

Updating PIAs

Recognizing that information systems may undergo changes throughout their life cycle, it is important that any changes to the system be evaluated with regard to their effect on individuals' privacy. Components must update their PIAs to reflect significant changes to information collection authorities, business processes, or other factors affecting the collection and handling of information in identifiable form.[12] Components should use the IPA process to ascertain whether or not such changes would require a modification to an existing PIA or would require a new PIA.

Definitions

Individual – For purposes of conducting PIAs, it is the Department's policy to define "individual" in this context as any natural person regardless of citizenship status.

Information in Identifiable Form – is information in an IT system or online collection: (i) that directly identifies an individual (e.g., name, address, social security number or other identifying number or code, telephone number, email address, etc.) or (ii) by which an agency intends to identify specific individuals in conjunction with other data elements, i.e., indirect identification. (These data elements may include a combination of gender, race, birth date, geographic indicators, and other descriptors). OMB Memorandum, M-03-22, OMB Guidance for Implementing the Privacy Provisions of the E-Government Act of 2002, Attachment A, Section II.A.2., dated September 26, 2003.

Information Technology – means, as defined in the Clinger-Cohen Act, any equipment, software or interconnected system or subsystem that is used in the automatic acquisition, storage, manipulation, management, movement, control, display, switching, interchange, transmission, or reception of data or information. Id. at Section II.A.3.

National Security System – means, as defined in the Clinger-Cohen Act, an information system operated by the federal government, the function, operation or use of which involves: (a) intelligence activities, (b) cryptologic activities related to national security, (c) command and control of military forces, (d) equipment that is an integral part of a weapon or weapons systems, or (e) systems critical to the direct fulfillment of military or intelligence missions, but does not include systems used for routine administrative and business applications, such as payroll, finance, logistics and personnel management. Id. at Section II.A.5.

Personally Identifiable Information – is any information about an individual maintained by an agency, including (1) any information that can be used to distinguish or trace an individual's identity, such as name, social security number, date and place of birth, mother's maiden name, or biometric records; and (2) any other information that is linked or linkable to an individual, such as medical, educational, financial, and employment information. NIST Special Publication 800-122, Guide to Protecting the Confidentiality of Personally Identifiable Information (PII) (April 2010).

2019 NoFIRES Conference
Using Technology in Arson Investigations

5 November 2019

Sgt. Mike George – MSP IMAT
Presentation Title: "DRONES!"

- Map crime/crash/fire scene(s)
- Prioritize:
  - First responder safety
  - Public safety
  - Safe/quick clearance of scene
- First two MSP drones in service in CARS (2017)
  - Pix4D software – 3D image of scene (scale orthomosaic)
  - Accurate < 1 cm
- Approximate Cost to Start a Drone Program:
  - UAV = $1,500.00 - $3,000.00
  - FAA Licensing = $150.00 per pilot every 2 years
  - Pix4D Software = $5,000.00 + $900.00/year OR $350.00/month
  - Computer = $1500.00 - $5000.00
  - GPS Mapping Equipment = $6,000.00 - $20,000.00
  - CAD Software = $1,500.00 - $5,000.00 + annual fees
  - Associated training…
- MSP Division of Homeland Security & Preparedness – IMAT
  - Aeryon Skyranger
    - 30min/flight
    - Extreme weather capable (40mph wind, -22-122F temperature)
    - Encrypted downlink + FLIR capability
  - DJI Mavic 2 Pro
    - 25-30min/flight
    - 20 MP Hasselblad Camera
    - ~$1500.00 – $2,000.00
  - DJI Mavic Enterprise Dual
    - Dual camera for EO/FLIR
    - ~$3500.00
  - DJI Matrice 210 w Z30 & XT2
    - Zoom Camera + FLIR
    - 25min/flight
    - ~$30,000.00
  - SOPS|Registrations|Licensing|Training|Authorizations|Waivers|FAA LEAP reps
- Aeroscope Drone Detection Techonlogy
  - DJI Drones only (~85%+ of commercially available drones)
    - ~97% of UAS capable of carrying a payload are DJI

2019 NoFIRES Conference
Using Technology in Arson Investigations

5 November 2019

Lt. Timothy Howe – Special Operations Coordinator – Department of Fire Services
Presentation Title: "Drone Use in the Fire Service"

- DFS Drone Program: 2017
  - Enhance situational awareness
  - Improve personnel safety
  - Locate victims in need of rescue
- Intended Use(s):
  - Fires – Structure/Brush
    - Thermal Imaging used to target "hot spots"
  - Hazmat
    - Drone vs. Human (personnel safety)
  - Missing Persons
    - Thermal imaging
  - Building Collapse
    - Verify structural integrity (aerial view)
  - Storm Damage Assessment
  - Transportation Incidents
  - Large Area Searches
- Pix4D
  - Identify area to be mapped and select scan height
  - Mark ground control points
  - Stich data points together to generate computer image
- Activation of DFS UAS: 508-820-2000

2019 NoFIRES Conference
Using Technology in Arson Investigations

5 November 2019

Tpr. Stephen Sicard – MSP Fire & Explosion Investigation Section
Presentation Title: "Bomb Squad Capabilities & Equipment Demonstrations"

- PacBot – FLIR Technologies
- FirstLook – FLIR Technologies
    - Use during Boston Marathon Bombing & subsequent shooting investigation
- EK9 – Explosive/Accelerant Detection
- Primary concerns (robots):
    - Stairs/escalation
    - Open doors
    - Self-righting
- Quadruped robot
    - 360 degree sensors
    - Collision detection
    - Automated processes (ex: opening door)
        - Recognizes door handles from "library"
    - Pre-set "poses"
        - No need to manipulate each limb individually
    - Railings for attachment/modification: camera/radio/etc
- Leasing vs. buying – Leased robots easier to maintain/update

2019 NoFIRES Conference
Using Technology in Arson Investigations

5 November 2019

Sgt. Robert LaBarge – MSP Detective Unit – Essex County
Phillip Mallard – Assistant U.S. Attorney – District of Massachusetts
Presentation Title: "Operation Golden Ticket"

- 60 agency collaboration across New England
- Pattern Crime = Crime where the nature and circumstances demonstrate a preplanned and potentially recurring means and method of execution
    - Not crime of opportunity/passion
    - Disciplined & skilled offenders
    - Planning, premeditation, experience
    - Materials: tools, implements, vehicles, knowledge
    - Account for LE response
    - Low-risk for apprehension
- Commercial burglaries (2017-2018)
    - 70+ incidents (cars, cash, goods)
    - Thousands in damage
- Status as of 4/4/2018
    - No leads, no suspects – UNTIL:
    - March 31, 2018 – Pursuit involving Needham PD
- Obstacles:
    - Information silos
    - Jurisdiction
- Trends:
    - Pry bar
    - Alarm cut
    - Headlamps
    - Radios/Walkie-talkies
    - Stolen MV (usually Jeeps/Minivans)
    - Counter surveillance vehicle
- Solutions:
    - ***Fusion Center Bulletins***
    - MA CrimeNet
    - ALPR
    - CJIS
    - ISO ClaimSearch
    - InmateWeb/MIDNET
    - Coplink

Deval L. Patrick, *Governor* | Andrea J. Cabral, *Secretary of Public Safety and Security* | James F. Slater, III, *Acting Commissioner*

EXECUTIVE OFFICE OF PUBLIC SAFETY AND SECURITY DEPARTMENT OF CRIMINAL JUSTICE INFORMATION SERVICES AUTOMATIC LICENSE PLATE RECOGNITION SYSTEMS CENTRAL REPOSITORY COMPANION POLICY

PURPOSE

To establish guidelines and best practices for data use, maintenance, training, and data storage associated with the usage of the Commonwealth Criminal Justice Information Automatic License Plate Recognition Systems Central Repository (Central Repository) by Massachusetts law enforcement agencies.

OVERVIEW

An Automatic License Plate Recognition (ALPR) system is a computerized system that uses high-speed digital cameras combined with sophisticated computer algorithms capable of converting the images of license plates to electronically readable data. The ALPR system captures an infrared image of a license plate and converts it to a text file using Optical Character Recognition (OCR) technology. The technology also compares the digital images of license plates to lists of known plates of interest. Currently, the ALPR is being utilized by many law enforcement and criminal justice agencies in the Commonwealth, which maintain the captured information in a database.

The Central Repository is a centralized data warehouse that stores ALPR information contributed by law enforcement and public safety agencies from the agency's database. By allowing the agencies to share and access the stored information, local, state and federal law enforcement agencies are provided accurate information to be used for official and legitimate law enforcement operations and public safety purposes. Guidelines for submission and retrieval of license plate data for all participating departments are included in the Commonwealth of Massachusetts Global Justice and Public Safety Information Sharing Policy of the Massachusetts Department of Criminal Justice Information Services (DCJIS), which is incorporated by reference, and this ALPR Central Repository Companion Policy. ALPR systems are dependent upon the networking system of Commonwealth's Criminal Justice Information System (CJIS) and all participating agencies and users agree to the terms of these policies.

DCJIS Enhancing Public Safety Through Information Exchange

POLICY

It is the policy of the DCJIS to utilize the technology only in furtherance of official and legitimate law enforcement operations and public safety. Recognizing privacy implications, it is further the policy of DCJIS to ensure the protection of data. Thus, all users of the Central Repository are expected to abide by the guidelines set forth herein when using the Central Repository.

ACRONYMS AND DEFINITIONS

Agency ALPR Administrator: An employee of a Participating Agency designated by that agency to be responsible for the management of its authorized users and the user accounts at the Participating Agency.

Authorized User: An individual designated by a law enforcement agency and properly trained in the use and operational protocols of the ALPR. Only authorized employees who have an approved login and password will be allowed to access or use information in the Central Repository.

Contributing Agency: An agency that contributes ALPR data to the Central Repository.

Non-Contributing Agency: An agency that may access, but does not contribute data to, a data application or system maintained or operated within the DCJIS network or system.

Participating Agency: Either a contributing or non-contributing party that utilizes the Central Repository.

Source Agency: The agency that originally recorded and contributed data to a data application or system maintained or operated within the DCJIS network or system.

PROCEDURES

1. Standard of Use

Central Repository ALPR data shall be accessed and used only for official and legitimate law enforcement operations and public safety and may only be used based on specific and articulable facts of a concern for safety, wrongdoing, criminal investigations, Department-related civil investigations, or pursuant to a court order.

Searches of historical Central Repository ALPR data shall be done in accordance with this policy.

Only users who have been designated by their law enforcement department and properly trained in the use and operational protocols of the ALPR systems shall be permitted to use the Central Repository. DCJIS administrators shall ensure that any changes in hardware, software or law are communicated to all participants. Only authorized employees who have an approved login and password (Central Repository Authorized Users) will be allowed to access or use information in the Central Repository.

When a enforcement action, investigation, or prosecution results from the Repository ALPR data, the information contained in it will be preserved by the agency accessing the information.

Requests for searches of Central Repository ALPR data may be made by authorized members of the Contributing Party or Non-Contributing party subject to the provisions of this policy.

2. Login Application Process

a) Each Contributing and Non-contributing Party shall designate an Agency ALPR administrator to be responsible for management of user accounts at that agency. All authorized users shall be limited to current employees who are legally authorized to review criminal justice information for crime prevention and detection purposes. Each potential user shall submit a request for a login and password to the Agency ALPR Administrator. The Agency ALPR Administrator shall have discretion to deny or revoke individual access.

3. Login Assignment

a) Each Authorized User will be issued a user login and a default password by the Agency ALPR Administrator. Upon logging into the Repository for the first time, each Authorized User shall change the default password to another DCJIS-compliant password.

b) Each Agency ALPR Administrator is responsible for the timely removal of any login accounts as Authorized Users leave their agency.

c) An Authorized User shall not access the Central Repository by using a name and password that was assigned to another user. An Authorized User shall not give his or her password to another person, including another user, to access the system.

4. ALPR Central Repository Data Query Logs

a) An automated log will be maintained for each transaction, which will include the name of the individual accessing the data, along with the date and time of access.

b) Requests to review stored ALPR data and search results will be recorded and maintained in appropriate case files.

c) ALPR Data Query Logs shall be maintained and secured.

d) Audits of the ALPR systems and the central repository shall be conducted by the DCJIS.

5. ALPR Data Sharing and Dissemination

a) Each Contributing Agency authorizes the release of its information as outlined in this Policy to any other criminal justice agency that may participate in the Central Repository in the future.

b) A Contributing Party that does not want certain information from its ALPR system to be shared is responsible for filtering out such information before entering it into the Central Repository.

c) The information contributed to the Central Repository is limited to ALPR data.

d) Central Repository ALPR data can be accessed, retrieved, or shared for official and legitimate law enforcement operations or public safety purposes only.

6. Ownership of Data

a) Each Contributing Party will retain sole responsibility, ownership, management control, and disposition over the information it contributes or allows access to. All system entries will be identifiable to the Contributing Party, and the content of the contributed information remains the sole responsibility of the Contributing Party and is under that Contributing Party's management control.

b) It shall be the responsibility of the party requesting or using the data to confirm the accuracy of the information with the Source Agency before taking any enforcement-related action.

7. Retention of Data

a) Data from field ALPRs will be transferred/uploaded to the Department's server at a time to be determined by the Agency ALPR Administrator.

b) ALPR data shall be stored in the Central Repository for a period of one year except in the following circumstances:

i) Alert data associated with an enforcement action, investigation, or prosecution shall be maintained for one year or until a final disposition has been reached in the particular case, whichever is longer.

ii) Alert data associated with an arrest will be maintained in the criminal case file and retained for the maximum period of time associated with such record.

iii) Alert data associated with criminal investigations will be maintained in the criminal case file and retained for the maximum period associated with such record.

iv) If it is reasonable to believe and the ALPR data will become evidence in a criminal or civil action, the record will be maintained until it is no longer reasonable to believe it will become evidence in a criminal or civil action.

v) Whenever otherwise directed by the ALPR Administrator.

CONFIDENTIALITY OF INFORMATION

Information in the Central Repository is confidential and is not subject to public disclosure, except as required by law. Only Authorized Users are allowed to view and use the information, otherwise, the information shall be kept confidential.

ACKNOWLEDGEMENT OF TERMS AND CONDITIONS OF USE

The Agency ALPR Administrator shall provide a copy of the terms and conditions of the Massachusetts Public Safety Information Sharing Global Policy and this ALPR Central Repository Companion System Policy to all Authorized Users when they are issued a login ID for the system. Each Authorized User shall sign an acknowledgement stating, "I have received a copy of the terms and conditions of usage of the Central Repository. I agree to comply with the terms and conditions and I understand that any violation of the terms and conditions may lead to disciplinary action and/or criminal prosecution." The Agency ALPR Administrator shall maintain the signed acknowledgements at all times.

POLICY REVIEW

The Commissioner of the Department of Criminal Justice Information Services is responsible for the annual review of this policy.

ALPR systems are dependent upon the networking system of Commonwealth's Criminal Justice Information System (CJIS) and all participating agencies and users agree to the terms of these policies.

DCJIS Enhancing Public Safety Through Information Exchange

POLICY

It is the policy of the DCJIS to utilize the technology only in furtherance of official and legitimate law enforcement operations and public safety. Recognizing privacy implications, it is further the policy of DCJIS to ensure the protection of data. Thus, all users of the Central Repository are expected to abide by the guidelines set forth herein when using the Central Repository.

ACRONYMS AND DEFINITIONS

Agency ALPR Administrator: An employee of a Participating Agency designated by that agency to be responsible for the management of its authorized users and the user accounts at the Participating Agency.

Authorized User: An individual designated by a law enforcement agency and properly trained in the use and operational protocols of the ALPR. Only authorized employees who have an approved login and password will be allowed to access or use information in the Central Repository.

Contributing Agency: An agency that contributes ALPR data to the Central Repository.

Non-Contributing Agency: An agency that may access, but does not contribute data to, a data application or system maintained or operated within the DCJIS network or system.

Participating Agency: Either a contributing or non-contributing party that utilizes the Central Repository.

Source Agency: The agency that originally recorded and contributed data to a data application or system maintained or operated within the DCJIS network or system.

PROCEDURES

1. Standard of Use

Central Repository ALPR data shall be accessed and used only for official and legitimate law enforcement operations and public safety and may only be used based on specific and articulable facts of a concern for safety, wrongdoing, criminal investigations, Department-related civil investigations, or pursuant to a court order.

Searches of historical Central Repository ALPR data shall be done in accordance with this policy.

Only users who have been designated by their law enforcement department and properly trained in the use and operational protocols of the ALPR systems shall be permitted to use the Central Repository. DCJIS administrators shall ensure that any changes in hardware, software or law are communicated to all participants. Only authorized employees who have an approved login and password (Central Repository Authorized Users) will be allowed to access or use information in the Central Repository.

When a enforcement action, investigation, or prosecution results from the Repository ALPR data, the information contained in it will be preserved by the agency accessing the information.

Requests for searches of Central Repository ALPR data may be made by authorized members of the Contributing Party or Non-Contributing party subject to the provisions of this policy.

2. Login Application Process

a) Each Contributing and Non-contributing Party shall designate an Agency ALPR administrator to be responsible for management of user accounts at that agency. All authorized users shall be limited to current employees who are legally authorized to review criminal justice information for crime prevention and detection purposes. Each potential user shall submit a request for a login and password to the Agency ALPR Administrator. The Agency ALPR Administrator shall have discretion to deny or revoke individual access.

3. Login Assignment

a) Each Authorized User will be issued a user login and a default password by the Agency ALPR Administrator. Upon logging into the Repository for the first time, each Authorized User shall change the default password to another DCJIS-compliant password.

b) Each Agency ALPR Administrator is responsible for the timely removal of any login accounts as Authorized Users leave their agency.

c) An Authorized User shall not access the Central Repository by using a name and password that was assigned to another user. An Authorized User shall not give his or her password to another person, including another user, to access the system.

4. ALPR Central Repository Data Query Logs

a) An automated log will be maintained for each transaction, which will include the name of the individual accessing the data, along with the date and time of access.

b) Requests to review stored ALPR data and search results will be recorded and maintained in appropriate case files.

c) ALPR Data Query Logs shall be maintained and secured.

d) Audits of the ALPR systems and the central repository shall be conducted by the DCJIS.

5. ALPR Data Sharing and Dissemination

a) Each Contributing Agency authorizes the release of its information as outlined in this Policy to any other criminal justice agency that may participate in the Central Repository in the future.

b) A Contributing Party that does not want certain information from its ALPR system to be shared is responsible for filtering out such information before entering it into the Central Repository.

c) The information contributed to the Central Repository is limited to ALPR data.

d) Central Repository ALPR data can be accessed, retrieved, or shared for official and legitimate law enforcement operations or public safety purposes only.

6. Ownership of Data

a) Each Contributing Party will retain sole responsibility, ownership, management control, and disposition over the information it contributes or allows access to. All system entries will be identifiable to the Contributing Party, and the content of the contributed information remains the sole responsibility of the Contributing Party and is under that Contributing Party's management control.

b) It shall be the responsibility of the party requesting or using the data to confirm the accuracy of the information with the Source Agency before taking any enforcement-related action.

7. Retention of Data

a) Data from field ALPRs will be transferred/uploaded to the Department's server at a time to be determined by the Agency ALPR Administrator.

b) ALPR data shall be stored in the Central Repository for a period of one year except in the following circumstances:

i) Alert data associated with an enforcement action, investigation, or prosecution shall be maintained for one year or until a final disposition has been reached in the particular case, whichever is longer.

ii) Alert data associated with an arrest will be maintained in the criminal case file and retained for the maximum period of time associated with such record.

iii) Alert data associated with criminal investigations will be maintained in the criminal case file and retained for the maximum period associated with such record.

iv) If it is reasonable to believe and the ALPR data will become evidence in a criminal or civil action, the record will be maintained until it is no longer reasonable to believe it will become evidence in a criminal or civil action.

v) Whenever otherwise directed by the ALPR Administrator.

CONFIDENTIALITY OF INFORMATION

Information in the Central Repository is confidential and is not subject to public disclosure, except as required by law. Only Authorized Users are allowed to view and use the information, otherwise, the information shall be kept confidential.

ACKNOWLEDGEMENT OF TERMS AND CONDITIONS OF USE

The Agency ALPR Administrator shall provide a copy of the terms and conditions of the Massachusetts Public Safety Information Sharing Global Policy and this ALPR Central Repository Companion System Policy to all Authorized Users when they are issued a login ID for the system. Each Authorized User shall sign an acknowledgement stating, "I have received a copy of the terms and conditions of usage of the Central Repository. I agree to comply with the terms and conditions and I understand that any violation of the terms and conditions may lead to disciplinary action and/or criminal prosecution." The Agency ALPR Administrator shall maintain the signed acknowledgements at all times.

POLICY REVIEW

The Commissioner of the Department of Criminal Justice Information Services is responsible for the annual review of this policy.

Argos Finder

BREKFORD TRAFFIC SAFETY INC.

Table of Contents

Argos Finder Setup ***2***

Connecting to Argos Finder ***2***

Interface Overview ***2***

Menu Bar ***3***

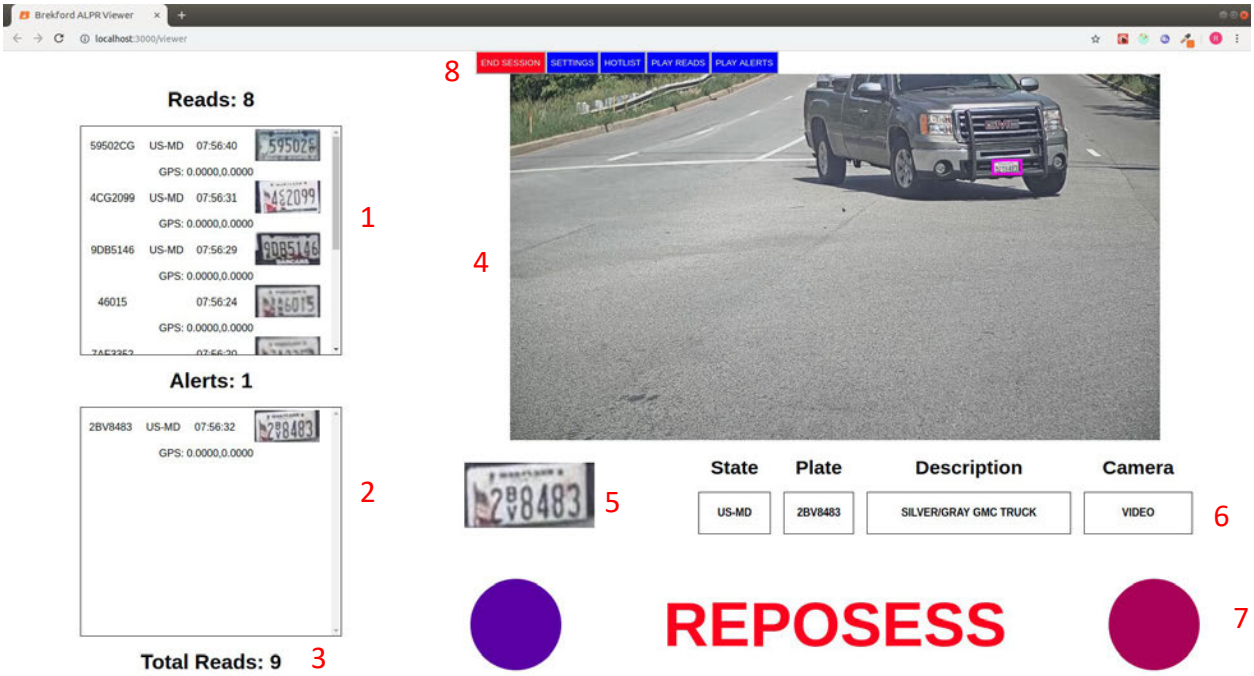
Session Control ***3***

Settings ***4***

Hotlist ***5***

Read Information Display ***6***

Argos Finder Setup



1. Mount the suction cup camera mount so that the cameras are in the middle of the windshield. Cameras The cameras should be pointing parallel to the windshield and slightly pointed down.
2. Connect the GPS receiver to the USB port. This can be mounted on the windshield as well with the provided suction cup. GPS light will be red if powered on and blink red if receiving data.
3. Plug in the power adapter into the cigarette lighter.

Connecting to Argos Finder

Using the provided tablet connect the system Wi-Fi. SSID and password are provided on the inside of the Pelican case. Other devices may be used to connect the system but user experience may vary. Argos Finder interface is optimized to fit the provided tablet. Once Wi-Fi is connected using a web browser open the following URL:

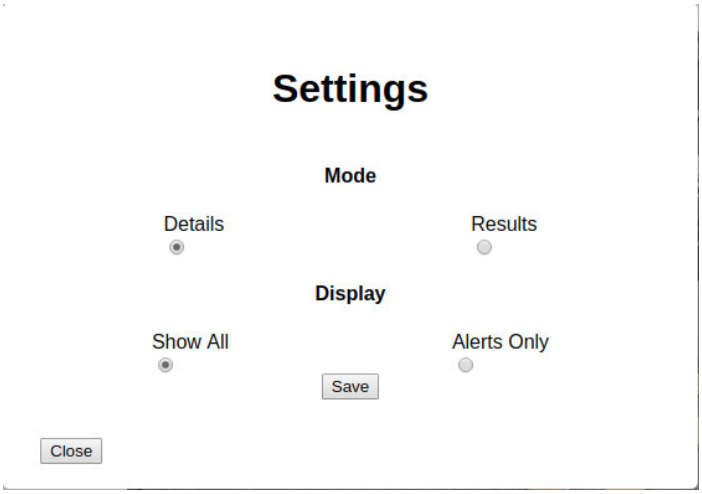
http://192.168.0.40:8000

Interface Overview

1. Session Read History
    a. Shows the last 50 plate reads of the current session
2. Session Alert History
    a. Shows all alerts from the current session
3. Total Read Count
4. Full Image
5. Plate Image
6. Read Information
    a. State
    b. Plate
    c. Vehicle Description
    d. Camera
7. Alert Notification Area
8. Menu bar

Menu Bar

- Session Control
    - Start and Stop an ALPR session
- Settings
    - Viewer Settings
- Hotlist Import
    - Import a hotlist from a local file
- Play Reads
    - Will play a ding on a read
    - Browser limitations require play reads to be re enabled every time that the page is refreshed or reloaded
- Play Alerts
    - Will play a siren on alerts
    - Browser limitations require play alerts to be re enabled every time that the page is refreshed or reloaded

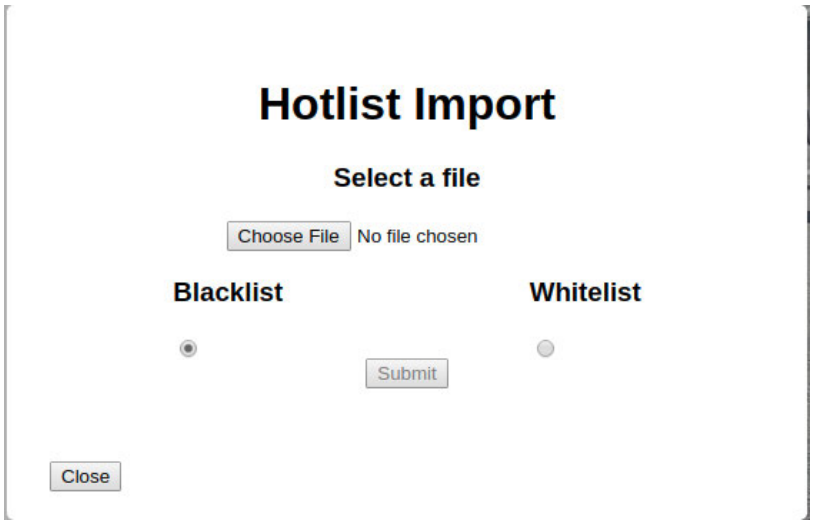


Session Control

Argos Finder requires the user to manually start and ALPR session. The session control button allows for the user to start and stop an ALPR session. Reads are not recorded until a session has been started.

Refreshing the page will reload read history from the current session if the session is still active. When a new session is started the previous session history lists are cleared and the counts are reset to 0.

During an active session an individual plate can only appear once every 30 seconds. If a plate is read multiple times with a difference of more that 1 character (insertions, deletions, substations) it will be presented as a new read. This prevents multiple reads if a plate is in view of the camera for an extended period of time.



Settings

Argos finder can be operated in Details mode and Results mode. When in Results mode the plate, state, and timestamp will be displayed for a read in the read and history table. When in details mode a crop of the plate image, GPS location will additionally be shown. It is not recommended to use details mode on slower systems if with large volume reads over a short interval. There will be a delay in displaying the results.

When in details mode the display setting will control the full image and crop image display. Show all will show the plate image and full image for all reads. Alerts only will only show images for the alerts. This setting is ignored if in results mode. Results mode will always only show alerts only.

Hotlist

Hotlists can be manually imported by a CSV file. A hotlist can be either a blacklist or a whitelist. A blacklist will alert for any license plate that is on the list. A whitelist will alert for any plate that is not on the list.

Hotlists must be formatted as follows:

plate,state,category,message
abc1234,us-md,stolen,stolen car

- Plate
  - Required
- State
  - Optional
  - Must be formatted as country code – state abbreviation ex. us-md us-fl
- Category
  - Optional
  - Will be displayed in the Alert Notification Area. Recommended to use short words like stolen, repossess, amber alert
  - If left blank Alert Notification area will just display HOTLIST
- Message
  - Optional
  - For future display in notification area

Hotlists can be imported using the provided tablet using a USB drive and the provided USB adapter.

When a hotlist is imported the existing hotlist is replaced with the new one. If a hotlist file is improperly formatted the entire file is rejected. The hotlist import will not import a partial file. If hotlist data has not changed a new hotlist does not need to be imported every session.

Read Information Display

The following plate information can be displayed for a plate read:

- Plate
- State
- Vehicle Description
- Camera (Camera Name)

Plate and Camera will always be displayed for every read.

State will be displayed of the accuracy confidence is above 70%.

Vehicle Description based on confidence calculations can have the any combination of make, model, vehicle type, and color. If there is low light or all calculations fall below thresholds the vehicle description will be blank. Example vehicle descriptions are:

- Black Ford F150
- Blue Jeep SUV
- Red
- Sedan
- Silver/Gray Van

Massachusetts State Police
Traffic Safety Resource Prosecutor FY 2017
Proposal to the Highway Safety Division
October 1, 2016– September 30, 2017

Executive Summary

The Massachusetts State Police, Standards and Training Section at the State Police Academy ("the Academy") is primarily responsible for recruit training, professional development and continuing legal education. The Academy provides professional development courses which are designed for, and offered to, the public safety community at little to no cost to the attendee. Additionally, the Academy has developed an E-learning program that provides online training to law enforcement officers throughout the state. This much needed technology is an essential tool in the professional development of public safety personnel. In addition to creating and presenting the curriculum for the classes offered at the Academy, both live and web-based, the staff of XX instructors are responsible for monitoring all changes in the law whether through a legislative change or appellate cases. These nuances in the law, affect the daily work of law enforcement officers. The Academy staff is currently responsible for notifying and educating the XXX state police troopers of these updates in a clear, concise and timely manner. There has been a total transformation of traffic safety related laws in the Commonwealth in the past ten years that makes it incredibly difficult for the Academy Staff to maintain the high level of professional training and education that has become the cornerstone of the Massachusetts State Police. Although the Academy has an experienced staff of well-qualified instructors, the need for a full-time staff attorney at the Academy has become readily apparent.

In 2008, Massachusetts enacted legislation that decriminalized the possession of certain amounts of marijuana. As an indirect consequence of the legislation, the public perception was such that the consumption of marijuana while operating a motor vehicle was permissible. In 2012, further expansion of the utilization of marijuana for medicinal purposes was approved by the voters and in 2016, recreational marijuana was passed by the voters, thus more motorists have been utilizing marijuana while operating a motor vehicle. The inevitable end goal appears to be the legalization of marijuana. NHTSA notes that, for fatally injured drivers, cannabis is detected in 7% to 37% with a mean of 14%.

The National Highway Traffic Safety Administration's (NHTSA's) 2013-2014 National Roadside Survey found that more than 22 percent of drivers tested positive for illegal, prescription or over-the-counter drugs. This was true for both weekday daytime and weekend nighttime drivers. But illegal drug use increased from daytime to nighttime while use of prescription drugs decreased. By comparison, 1.1 percent of drivers tested positive for alcohol during the daytime on weekdays, but 8.3 percent of drivers on weekend nights tested positive (NHTSA).

In addition, the Traffic Programs Section of the State Police conducts, on average, over eighty checkpoints and saturation patrols annually. Troopers working these checkpoints are observing a marked increase in the use of marijuana by operators that proceed into the checkpoints. Troopers screening potentially drug impaired operators rely on academy training, field training and advanced training (ARIDE, DRE), however, unlike a preliminary breath test (PBT) which is used roadside as the last field sobriety test for alcohol, there is currently not a device available to screen for drugs. The Department of State Police is working in conjunction with Alere and Draeger to conduct a roadside oral fluids drug testing pilot program with the ultimate goal being an instrument that law enforcement can use to detect drug impaired drivers at roadside.

To assist in maneuvering through the advancements in technology and the law, the Massachusetts State Police are seeking funding for a Traffic Safety Resource Prosecutor (TSRP) to be assigned to the Academy. This TSRP will work with the Academy Staff and the Traffic Programs Section to provide law enforcement officers and their partners with training and resources in the area of vehicular crimes, assist law enforcement officers across the state with search and seizure issues during roadside stops, sobriety checkpoints, and assist and navigate the legal challenges law enforcement officers will face with the recent legalization of marijuana. The TSRP will provide trainings to law enforcement across the state in areas of distracted driving, drugged driving, report writing, courtroom testimony and various other traffic related topics. These grant funds will ensure that as the State Police navigates through these uncharted technological advances in the law enforcement field, the TSRP will be there to assist and guide through the successful process.

Statement of Need

In 2013 there were 326 fatalities on the Roadways of the Commonwealth, according to the *National Highway Traffic Safety Administration.* Many of these 326 incidents resulted in criminal charges. In that same year in Massachusetts, there were over 16,000 arrests for operating under the influence of alcohol or drugs. The Massachusetts State Police seeks to improve the ability of the Traffic Program to effectively conduct motor vehicle stops and arrests through education, training and legal guidance particularly focused on the following areas:

a. Vehicular crashes involving personal injuries
b. Operating under the influence of alcohol or drugs
c. Operating with a suspended or revoked license
d. Distracted driving
e. Medical Marijuana
f. Sobriety Checkpoints
g. Anticipated challenges to ALPR once warrants are written based on ALPR data.

Currently, Traffic Programs lacks the resources necessary to provide continuous, progressive training so that all law enforcement officers are trained to properly effectuate motor vehicle stops, write and serve warrants and effectively prepare a case for prosecution. Additionally, the whole law enforcement community is also in need of training and all partners could benefit from consistent, up-to-date reference materials to assist in the adjudication of these issues.

Goal

DRAFT

To reduce fatalities, injuries and economic losses resulting from motor vehicle crashes on the roadways of the Commonwealth of Massachusetts by providing training, education and technical support to law enforcement officers and other traffic safety partners throughout the state.

Objectives

1. To have one full-time staff attorney assigned to the State Police Standards and Training Section, specifically, the Academy, dedicated exclusively to training, educating and offering technical support to law enforcement officers throughout the state.
2. To assist and navigate the legal challenges to sobriety checkpoints, oral fluid drug testing and ALPRs in criminal investigations and prosecutions.
3. To develop curriculum in all areas of traffic safety.
4. To develop and update traffic safety programs and resources.
5. To act as a resource for all traffic safety partners across Massachusetts.
6. To participate in working groups and subcommittees on traffic safety.

FFY 2017 Program Plan

The Massachusetts State Police seek to hire an individual who is a former prosecutor who will provide training, education and technical support alongside the Academy Staff. Traffic crimes and safety issues include but are not limited to: alcohol and/or drug impaired driving, vehicular homicide, occupant restraint and other highway safety issues. The TSRP will assess the needs and demands unique to Massachusetts and work in conjunction with many agencies to meet these needs. The National Highway Traffic Safety Administration (NHTSA), Municipal Police Training Committee, Mass. Chiefs Association, crime laboratory, and victim advocate groups will all be utilized to facilitate services to both prosecutors and law enforcement.

Qualifications:

- Juris Doctorate with at a minimum of eight years prosecuting criminal cases.
- Member in good standing of the State Bar.
- Extensive experience in the prosecution of impaired driving cases.
- Knowledge about the NHTSA Standardized Field Sobriety Testing, sobriety checkpoints and saturation patrols, and the Drug Evaluation Program.
- Impressive writing and oral advocacy skills.
- At least six years of training experience.

Budget Narrative

Personnel

- **Traffic Safety Resource Prosecutor – October 1, 2016 – September 30, 2017**

  In order to get an attorney with the experience and necessary to take on the challenges in Traffic Programs, we request a salary commiserate with the level of experience required to fill this TSRP position.

Fulltime Staff Attorney Salary:	**$XXX,000.00**
Additional Salary costs for Staff Attorney:	**$.0**
Fringe and Insurance (FY 2017 rate 35.16%)	$.0

Payroll Tax Rate (FY2017 rate 1.66%)	$.0
Indirect (FY 2017 rate 10.00%)	$.0
Total Personnel Expense (HSD figures)	**XXX,000.0**
Total Personnel Expense	***XXX.0***

Office Supplies/Miscellaneous

- **Office Supplies/Equipment Fees/Misc – October 1, 2016 – September 30, 2017**
  Office supplies, equipment fees, and miscellaneous items associated with the implementation of the outlined grant activities and projects including: staff attorney bar dues, printing, training supplies, traffic safety training equipment, desk calendar, disks, memory sticks, audio-visual equipment, as well as other items as needed.

Cost:	$ 6,000.00
Total Office Supplies/Equipment/Miscellaneous	***$6,000.00***

Travel/Trainings and Conferences

- **Drugged Driving – Fall 2017**
  The TSRP will host a one-day training on *Identifying the Drugged Driving* for law enforcement officers. This training will focus on marijuana and how to identify the signs and symptoms of marijuana impairment. This training will incorporate a section on drug recognition utilizing the experienced DREs in the Commonwealth.

Cost:	$ 0.00

- **Cops In Court – Fall 2017/Summer 2017**
  The foundation to any successful Operating Under the Influence prosecution is a well written police report. This is an area of weakness for many law enforcement officers as it is a skill that is rarely taught in any class. National Traffic Law Center's *Cops In Court* course will be utilized to train Massachusetts law enforcement officers. This training will be repeated a least two times.

Cost:	$ 0.00

- **NHTSA TSRP Regional Training – March 2016**
  Biannually NHTSA sponsors regional meetings that bring together the TSRPs from Vermont, Maine, New Hampshire, Rhode Island, Connecticut, and Massachusetts. These meetings are extremely valuable for the brainstorming and exchange of ideas to increase public awareness of the NHTSA campaigns.

DRAFT

Cost: $800.00

- **The 22nd Annual IACP DRE Section's Training Conference on Drugs, Alcohol, and Impaired Driving – Summer 2016**
  IACP DRE Section's Annual Training Conference on Drugs, Alcohol and Impaired Driving, has helped DREs and other health and safety professionals stay up-to-date on drug trends, legal issues, and innovative technology. Most TSRPs from across the country attend this training to get up to date information on the drug trends and new technology. The 2016 conference will be held in Denver, Colorado, August 13-15, 2016 at the Hyatt Regency Hotel.

  Cost: $2,000.00

- **Lifesavers Meeting – Spring 2017**
  Lifesavers is the premier national highway safety meeting in the United States dedicated to reducing the tragic toll of deaths and injuries on our nation's roadways. Drawing over 1,500 participants in 2016, Lifesavers continues to be the essential conference since its start in the early 1980s. Each year, the Lifesavers Conference provides a forum that delivers relevant and timely common-sense solutions to today's critical highway safety problems.

  Cost: $2,000.00

- **Overtime for Sobriety Checkpoint Attendance – October 1, 2016 – September 30, 2017**
  The TSRP will be required to assist with sobriety checkpoints as the new oral fluid drug testing program gets under way. This category will cover overtime pay for the TSRP to assist with at least ten checkpoints throughout the calendar year.

  Cost: $8,000.00

- **In-State Travel– October 1, 2016 – September 30, 2017**
  This category covers in-state travel (mileage, tolls and parking) associated with the implementation of the outlined grant activities and projects and any additional training opportunities with law enforcement or other traffic safety agencies.

  Cost: $800.00

Total Travel/Trainings and Conferences Expense ***$XXX,000.00***

Project Evaluation

The success of the Massachusetts State Police's initiatives will be evaluated in the following manner:

Trainings Provided and Evaluation Forms: At each formal training and/or conference, the State Police provides all attendees with an electronic evaluation form. The evaluation forms are tailored for the specific event, but are standardized in that the attendee is always asked to evaluate the

content of the presentation, the practical application of the material in a courtroom setting, and the usefulness of any training materials. In addition, the attendee is provided with several open-ended questions that invite recommendations for ways in which the event can be improved along with any additional feedback.

Technical Assistance: The TSRP will log the number of technical assistance calls that come in from the law enforcement community and other partners and report that number in an annual report.

The Success of the Oral Fluid Drug Testing Program: The TSRP will monitor and guide the oral fluid drug testing program as it gets underway lending legal advice and assistance when necessary to make this program as successful and useful to Massachusetts as possible.

Challenges to the Sobriety Checkpoints: There are currently numerous challenges to the sobriety checkpoints to both the State Police paperwork that guides the checkpoints as well as the administration of the checkpoint itself. The TSRP will assist both the law enforcement officers and prosecutors in responding to these challenges and report the number of successes.

Partners

The State Police partners include: The International Association of Chiefs of Police, Mothers Against Drunk Driving, The Brain Injury Association, Mental Health and Substance Abuse Corporations of Massachusetts, Inc., The Department of Public Health, The Massachusetts District Attorneys Association, The Municipal Police Training Committee, and The Judicial Institute. The State Police do not receive funding for a TSRP from any other sources.

Supplanting

The TSRP position will be developed and maintained with the use of HSD grant funding. No funds will go to pay for ongoing activities already budgeted or for activities assigned to a position.

Total Proposal: ***$XXX,000.00***

DRAFT

Automated Regional Justice Information System (ARJIS)
Acceptable Use Policy for the Regional License Plate Reader System

Revised: 02/13/2015

A. STATEMENT OF PURPOSE

The purpose of this document is to outline the responsibilities of the Automated Regional Justice Information System (ARJIS) in its role as a law enforcement information technology provider for the Regional License Plate Reader (LPR) data storage system (LPR system). ARJIS, in cooperation with local, state, and federal law enforcement agencies, maintains a regional server as a LPR data repository in support of law enforcement efforts to improve public safety.

ARJIS provides the secure network infrastructure, technical standards, security protocols, controlled access, and database administration for the LPR system. Included in the support of the secure infrastructure are ongoing system updates, maintenance, disaster recovery, and security monitoring of the circuits, hubs, routers, firewalls, databases, and other components that comprise the ARJIS Enterprise, ensuring the priority, integrity, and availability of service to authorized law enforcement users. This Acceptable Use Policy sets forth rules restricting how the LPR system may be accessed by authorized user agencies (agencies) and defines how the LPR system is maintained by ARJIS.

The Regional LPR Operational Protocol under development by the County Chiefs' and Sheriff's Association outlines LPR best practices and standard operating procedures for those agencies that utilize LPR in the field.

B. LPR OVERVIEW

LPR data is collected by agencies utilizing specially-designed cameras to randomly capture an image of a vehicle license plate and convert the plate characters into a text file using optical character recognition technology. The text file can then be sent to a computer and compared against pre-existing data files, such as databases containing records of stolen or wanted vehicles as well as vehicles associated with AMBER alerts, missing children, wanted subjects, or other criteria. If a match is found, the LPR user (law enforcement officer or agency) is notified by an audible alert and an associated notation on the user's computer screen.

LPR cameras can be mobile (mounted on vehicles) or fixed (mounted to a structure) as determined by the agency that owns the cameras.

Mobile LPR systems scan plates, notify the user of a vehicle alert, and store the plate scan data for upload or transfer to an agency LPR server or the regional LPR server. LPRs in fixed positions link to an LPR server at the agency owning the fixed camera for updates, transmission of scanned plate data in real- time or near-real time, and alert notifications. The LPR data from agency LPR servers is replicated (copied) to the regional server in near real time. The alerting functionality resides with the agencies, not with ARJIS.

The alert lists against which license plate reads are checked may include (but are not limited to) the Stolen Vehicle System and Felony Warrants System, provided by the California Department of Justice (Cal DOJ); and downloaded four times a day. LPR users are required to take into account the potential for lag time between the last update and an alert provided by the LPR system on a stolen or wanted vehicle. Any alert provided by an LPR system is to be considered informational and advisory in nature only and any subsequent action in the field will be based on a law enforcement

agency's standard operating procedures.

1. Specification of Use

Recognizing the public safety benefits that could be achieved by the effective sharing of LPR data, ARJIS established a regional server accessible to authorized agencies capable of receiving and storing LPR data as well as providing query and alerting functions. The data is transferred to the regional server via wireless or hard-wired encrypted communications. Some of the agencies send their scanned plates directly to the regional server, while most of the larger agencies send their LPR scans to their agency-specific server first. The data is then uploaded to the regional server, in near-real time.

The plates scanned by the LPR systems are stored in a stand-alone regional server. The regional server is designed to meet Federal Bureau of Investigation Criminal Justice Information System (FBI CJIS) and Cal DOJ requirements, policies, and procedures, and is not connected to any other server.

The LPR system is restricted to legitimate criminal justice uses for the purpose of furthering law enforcement goals and enhancing public safety. There are two primary objectives of LPR data use in the region. The first is to identify stolen or lost vehicles and license plates, and wanted or missing persons, by matching the LPR data to the alert lists downloaded by Cal DOJ. The second objective is the ability to query LPR data to assist officers with ongoing criminal investigations, crime prevention and detection, and aid in the prosecution of crimes involving vehicles. LPR data is queried only if there is a reasonable suspicion that a vehicle is involved in criminal activity and the requestor has a legitimate need to know.

2. Privacy and Data Quality

2a. Privacy

In October 2008, prior to the implementation of the LPR system, ARJIS participated in a Privacy Impact Assessment (PIA) effort led by the International Association of Chiefs of Police. This effort involved the review of existing local, state, and federal laws, and American Civil Liberties Union privacy concerns. The resulting PIA, published in 2009, provided background for the development of this Policy.

Access to and use of LPR data is for official law enforcement purposes only. Accessing and/or releasing data from the LPR system for non-law enforcement purposes is prohibited. LPR data access and use is governed by the Cal DOJ California Law Enforcement Telecommunications System (CLETS) Polices, Practices and Procedures (PPP) (current rev. 09/2014), via CalMaster Control Agreement between the San Diego County Sheriff's Department (Sheriff) and ARJIS. The CLETS PPP further references the FBI CJIS Security Policy (current rev. 5.3, 8/4/2014).

The data records stored on the regional LPR server include photographs of the vehicle (close-up of the license plate and context photo of the rear of the vehicle)

and accompanying license plate number, date, time, and location in the field, and do not directly identify a particular person.

2b. Source Data

Each agency contributing data retains control and ownership as the official custodian of its records. Prior to sending any data to the regional LPR database, an agency must comply with the following:

- Be an ARJIS Public Safety member agency.
- Be a CLETS-certified agency.
- Be the owner, operator, manager, or controller of the LPR equipment that captures the contributed data.
- Maintain compliance with applicable FBI CJIS security policies regarding law enforcement data.
- Provide only LPR data that is in a format consistent with the National Information Exchange Model (NIEM) standard, or data that is readily capable of conversion to a NIEM-compliant format.
- Provide LPR data that includes, at a minimum, the time, date, and location of capture as well as a unique identifier of the equipment used to capture the information.
- Ensure that LPR equipment utilized by the agency is in full compliance with any requirements or standards established by the United States Department of Justice in regard to LPR systems.
- It is recommended that agencies that do not operate their own LPR server will implement a real time or near-real time data transfer to the regional server, via encrypted communication infrastructure, approved by Cal DOJ. This ensures the timeliness and effectiveness of the alert lists and provides maximum public safety benefit.

3. Data Limitation

The regional LPR server is not to be accessed for the purpose of monitoring individual activities protected by the First Amendment to the United States Constitution. The regional server does not contain alert lists for any of the following activities: insurance issues, parking scofflaws, deadbeat parents, and/or vehicle impounds.

The LPR system exists for the sole purpose of assisting law enforcement officers with ongoing criminal investigations and only for authorized public safety purposes.

4. Performance Evaluation

In addition to audit reports, ARJIS staff regularly monitors the LPR system for performance, reliability, and functionality. Staff also provides system-generated management reports for the participating agencies that highlight agency use, the number of license plate reads on file, and any technical issues identified during the reporting period. Other system-generated reports are produced on an as-needed basis.

5. Transparency and Notice

ARJIS is a Joint Powers Agency governed by the San Diego Association of Governments (SANDAG) Public Safety Committee, which includes elected officials representing the sub-regions of San Diego County and public safety officials.

LPR systems managed and hosted by individual law enforcement agencies existed within San Diego County prior to implementation of the LPR system. A PIA and Regional LPR Guidelines were completed prior to implementation of the LPR system.

This Acceptable Use Policy, the associated PIA, and other governing documents are currently posted on the ARJIS website at ARJIS.org.

6. Security

Regional LPR data is stored in a segregated server located in a secured law enforcement facility with multiple layers of physical security and 24/7 security protections. Physical access is limited to law enforcement staff and select ARJIS technical staff who have completed background investigations and completed the relevant FBI CJIS state and federal training.

Authorized ARJIS technical staff shall have the responsibility for managing the LPR system and associated infrastructure. ARJIS utilizes strong multi-factor authentication, encrypted communications, firewalls, and other system auditing, physical, administrative, and security measures to minimize the risks of unauthorized access to the system.

7. Retention, Access, and Use of LPR Data

7a. Retention

LPR data sent to ARJIS and stored on the regional server will be retained for a period of twelve months. The retention policy is consistent with the policies of the majority of agencies in California that have implemented LPR systems as of January 2015. Once the retention period has expired, the record will be purged from the active database. If an agency determines select LPR data is relevant to a criminal investigation, it is the responsibility of that agency to document and retain those records on its own server in accordance with the agency's policies regarding records retention. In the event California passes pending LPR legislation, this provision will automatically incorporate the retention period mandated in the legislation and will

supersede the 12-month period set forth above.

7b. Requirements for All Users Accessing Regional LPR data

Various measures are taken by ARJIS to limit access to the regional LPR server to prevent unauthorized access. Only those authorized personnel who have met the minimum training, certification, and background checks required for access to criminal justice data may access the regional LPR server. These requirements concerning the security and confidentiality of all 'justice data' are set forth in the FBI CJIS Security Policy and the CLETS PPP.

Authorized users must have an active account in the ARJIS Security Center, are mandated to follow the procedures for establishing complex passwords that must be changed every 90 days, and must enter a reason for access to LPR data prior to executing a query. These requirements are all built into the LPR system and are enforced using data entry fields that users must populate in order to access the regional LPR server. All queries for LPR data are subject to audit and kept in audit logs in accordance with the procedures outlined in the audit section below.

7c. Use of LPR data

LPR data is for official law enforcement purposes only. Participating law enforcement agencies will not share LPR data with commercial or private entities or individuals. However, participating law enforcement agencies may disseminate LPR data to governmental entities with an authorized law enforcement or public safety purpose for access to such data, in accordance with existing FBI and Cal DOJ policies, and their agency's standard operating procedures. ARJIS assumes no responsibility or liability for the acts or omissions of such agencies in disseminating or making use of the LPR data.

8. Auditing and Accountability

ARJIS has developed preset queries to the regional LPR server for auditing and other tracking functions. Included are audit capabilities for individual user activity, management reports of interface functionality and reliability, reports from session logs, and other key system metrics.

Access to, and use of, LPR data is logged for audit purposes. Audit logs are maintained for a minimum of three years. Audit reports are structured in a format that is understandable and useful and will contain, at a minimum:

- The name and agency of the user
- The date and time of access
- The specific data queried

- The justification for the query including a relevant case number if available at the time.

ARJIS will provide specific information regarding individual access and queries upon request from any agency. Identifying and addressing intentional misconduct is the responsibility of the individual agency. Notwithstanding the participating agency's responsibility with regard to misconduct, ARJIS reserves the right to enforce this Policy as described below.

9. Enforcement of Policy

Violation of this Policy by an ARJIS member agency or its staff may lead to suspension or termination of an agency or particular agency staff person's access to the regional LPR system. In the event a member agency discovers suspected or actual misuse of the regional LPR system, it will immediately inform the Director of ARJIS, who will in turn immediately notify the SANDAG Director of Technical Services and SANDAG Executive Director. In the event ARJIS discovers suspected or actual misuse of the regional LPR system, the Director of ARJIS will immediately notify the SANDAG Director of Technical Services, the SANDAG Executive Director, and the agency. The Technical Services Director, in consultation with the Director of ARJIS, or their designees, will determine whether to suspend or terminate access and if so for whom the suspension or termination will apply and will notify the affected agency. The affected agency will be notified of the decision by SANDAG and then will have 10 calendar days to appeal the decision to the SANDAG Executive Director. The Executive Director shall have final decision-making authority.

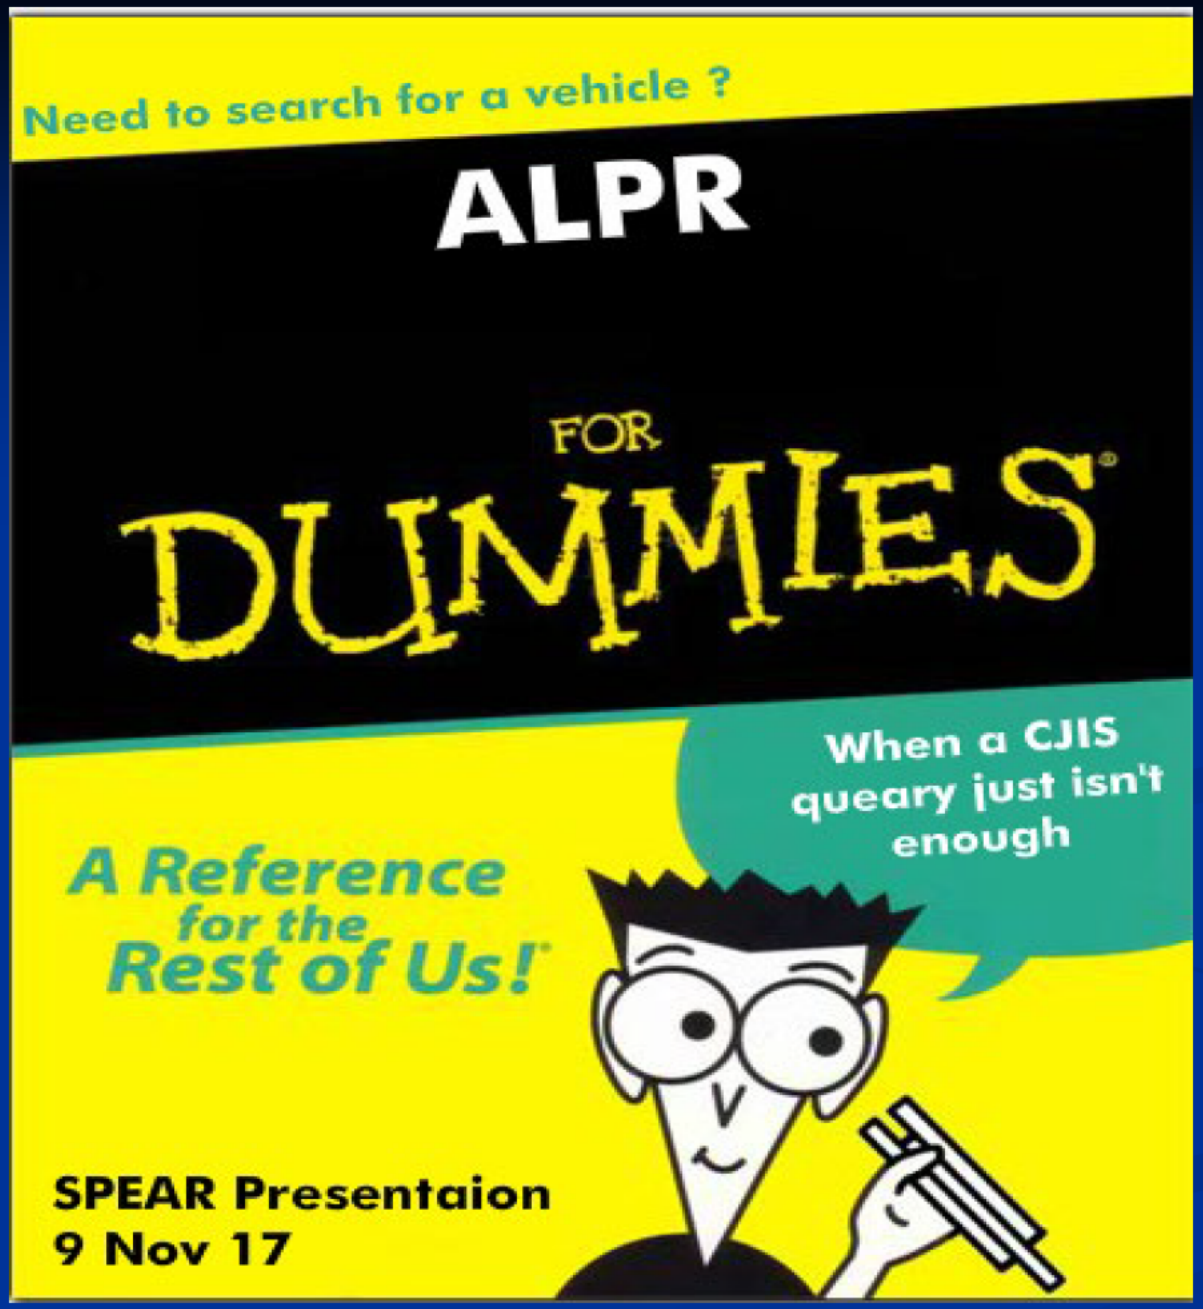
10. Policy Revisions

The Acceptable Use Policy for the Regional LPR System will be brought to the SANDAG Public Safety Committee and the SANDAG Board of Directors at least once per year for review and determination regarding the need for amendments.

Updates regarding the LPR system will be provided to the SANDAG Public Safety and Chiefs'/Sheriff's Management Committees annually or upon request.

11. Indemnification

Each user of the Regional LPR system (User) agrees to indemnify and hold SANDAG and ARJIS, and each of their personnel, harmless from any claim or demand, including reasonable attorneys' fees, made by any third-party in connection with or arising out of User's use of the Regional LPR system, User's violation of any terms or conditions of this Policy, User's violation of applicable laws, regulations or other policies, or User's violation of any rights of another person or entity. The term "Users" is defined to include each agency accessing the LPR system, as well as each individual person with access to the LPR system.



Automated License Plate Reader (ALPR)

S.P.E.A.R Presentation

9.Nov 17

DEFINITION

- *Automated License Plate Recognition* (*ALPR*) is technology which utilizes optical character recognition (OCR) converted into an algorithm to automatically read license plate characters. There are two types of *ALPR*: stationary, which uses infrared (IR) cameras at high fixed points, and mobile, which uses vehicle-mounted IR cameras.

LET'S KEEP IT SIMPLE !

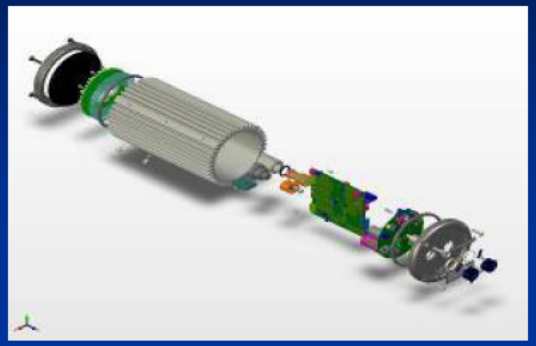
Vendors

- Currently three (3) approved state vendors

  1-Nuology (formerly 3M), primary vendor used by MSP as well as several cities and towns.

  2-Vigilent Video –Used by some cities and towns, data held in a separate server at EOPSS.

  3-Elsag- not sure if anyone still using this system.



DATA retention

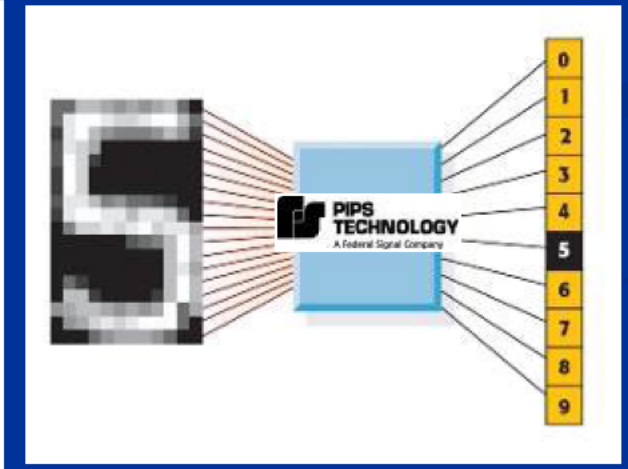
- All data* held at EOPSS CJIS in Chelsea at a central server for a period of one year unless there is an open investigation.
- DATA retention as well as ALPR utilization guided by TRF-11 Automatic License Plate Recognition promulgated on 7/22/2014

UTILIZATION / APPLICATIONS

- Law enforcement- BOLO, Amber Alert, Narcotics trafficking, Stolen MV, **HOTLIST**
- Tolling- open roads tolling
- Vehicle restricted access- refuse/dump, parking lot access

How ALPR Works

Advanced Camera Design



Infrared Illumination

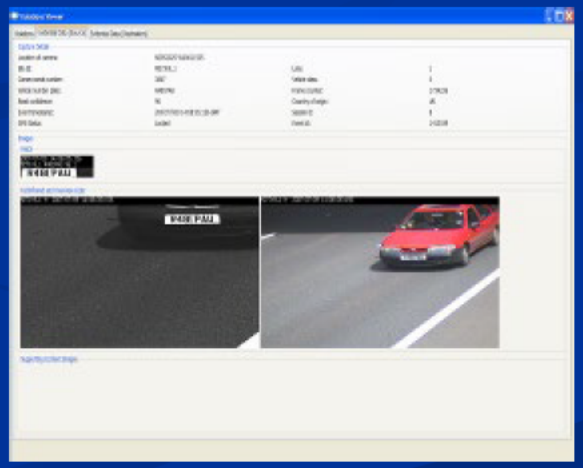


Plate Detection

TripleFlash Image Capture

Optical Character Recognition

Package Data for Software Use

DEPLOYMENT HISTORY

- Initial Deployment 6/2009. One cruiser H-CAT as a result of an EOPSS grant.
- Critical Infrastructure Grant 2/2013- Seventeen cruisers outfitted w/ three camera system.
- Troop E deploys two mobile units to determine future utilization of mobile and fixed cameras.
- 2015 Fixed Cameras installed in both directions on Bourne and Sagamore Bridges.
- 2017 MassPort G.L. c. 4.sec. 7.cl.26 (n)(security)
- Currently deploying covert VMS boards w/ hidden ALPR cameras to special events and points of interest.

Department of State Police
General Order

Effective Date	Number
September __, 2019	

Subject:

AUTOMATIC LICENSE PLATE RECOGNITION

PURPOSE

The purpose of this policy is to establish guidelines and procedures for the proper use and application of the Automatic License Plate Recognition (ALPR) System within the Department of the State Police (Department). Additionally, it is the purpose of this policy to provide Department personnel with guidelines and principles for the collection, access, use, dissemination, and retention of ALPR information to ensure that the information is used for legitimate law enforcement purposes only and the privacy, civil rights, and civil liberties of individuals are not violated.

This policy assists Department and its personnel in:

- Increasing public safety and improving state, local, tribal, territorial, and national security;
- Minimizing the threat and risk of injury to specific individuals;
- Minimizing the threat and risk of physical injury or financial liability to law enforcement and others responsible for public protection, safety, or health;
- Promoting governmental legitimacy and accountability;
- Minimizing the potential risks to individual privacy, civil rights, civil liberties, and other legally protected interests;
- Protecting the integrity of the criminal investigatory, criminal intelligence, and justice system processes and information;
- Minimizing the threat and risk of damage to real or personal property;

- Increasing trust by maximizing transparency;

- Making the most effective use of public resources allocated to public safety entities.

POLICY APPLICABILITY

1. This policy applies to ALPR information collected or received, accessed, used, disseminated, retained, and purged by the Department. It is not intended to apply and does not apply to any other types of information accessed, retained, or used by the Department.

2. All Department personnel, participating agency personnel and authorized individuals working in direct support of Department personnel (such as interns), personnel providing information technology services to the Department, private contractors, and other authorized users will comply with the Department's ALPR policy. This policy applies to information the Department collects or receives, accesses, uses, disseminates, retains, and purges.

GOVERNANCE AND OVERSIGHT

1. An ALPR administrator, as designated by the Massachusetts State Police (MSP) Division Commander of Field Services (DFS) shall:

   - Be qualified to oversee the ALPR System;

   - Have oversight and delegation duties for the ALPR System deployment, operations, and maintenance.

2. The ALPR Administrator shall be responsible for the following:

   - Ensure ALPR equipment be cleaned and maintained according to the manufacturer's recommendations;

   - Verify, prior to use/installation, the aim of the ALPR camera(s) to ensure it is focused on the correct lanes of traffic;

   - Ensuring the proper selection of the personnel approved to operate the ALPR System and maintaining an adequate number of trained and authorized users;

   - Authorizing any requests for ALPR System use or data access according to Department policy;

- Ensuring that designated, trained personnel check equipment on a regular basis to ensure functionality, camera alignment, and removing from service any equipment that falls outside expected functionality until deficiencies are corrected;

- Designate users who have been properly trained in the use and operational protocols of the ALPR System;

- Allow access to the ALPR System for those users with an approved login and password; and

- Ensure that any changes in hardware, software, policy, or law are the subject of continuing in-service training or bulletins.

3. The use of ALPR technology shall be approved by the Colonel/Superintendent or designee. ALPR System and information shall be:

   - Accessed and used only for official and legitimate law enforcement purposes;

   - Used for searches of historical ALPR data, in accordance with this policy and other Department policies or regulations where applicable; and

   - Used for searches of ALPR data by members of this Department or by other law enforcement agencies through the ALPR Administrator.

4. The Department will prohibit access, use, or dissemination of ALPR information for:

   - Any purpose that violates the Constitution or laws of the United States or the Commonwealth of Massachusetts, including the protections of the Fourth Amendment;

   - Non-law enforcement or personal purposes;

   - Discriminatory purposes;

   - The purpose of prohibiting, infringing upon, or deterring individual activities protected by the First Amendment, such as freely practicing one's religion, freedom of speech and peaceful assembly, freedom of the press, and the right to petition the government for the redress of grievances;

   - The purpose of prohibiting or deterring lawful individual exercise of other rights, such as freedom of association, implied by and secured by the U.S. Constitution or any other constitutionally protected right or attribute;

   - Harassing and/or intimidating any individual or group;

- Targeting of any individual or group by means of camera placement or data use in a discriminatory manner;

- Any other access, use, disclosure, or retention that would violate applicable law, regulation, or policy.

DEFINITIONS AND ACRONYMS

Automatic License Plate Recognition (ALPR): Automatic license plate recognition technology uses high-speed cameras combined with sophisticated computer algorithms capable of converting the images of license plates to electronically readable data. The ALPR System captures an image of a license plate and converts it to a text file using Optical Character Recognition (OCR) technology. The technology also compares the digital images of license plates to the CJIS-NCIC Hot file database. The ALPR System is configured as either fixed, mobile, or portable.

Alert: A visual and/or auditory notice that is triggered when the ALPR System receives a potential hit on a license plate.

Alert Data: Information captured by an ALPR relating to a license plate that matches the license plate on a hot list.

ALPR Data: Scan files, alert data, and any other documents or data generated by, or obtained thorough, utilization of the ALPR System. ALPR Data Query Logs: A record of a search or query of ALPR data.

Hit: An alert that a license plate matches a record maintained in the ALPR database related to stolen vehicles, wanted vehicles, or other alert type files that support investigation or which have been manually registered by a user for further investigation.

Hot List: License plate numbers of vehicles of interest, such as stolen vehicles, unregistered vehicles, vehicles owned by persons of interest, and vehicles associated with AMBER Alerts, Missing Child Alerts, Missing College Student Bulletins, Silver Alerts, Be On Look Out (BOLO), Attempt To Locate (ATL), and Wanted or Missing Person broadcasts or bulletins in which a license plate number is included, or other license plate numbers of interest entered by the Department or an authorized officer.

Hot List Download: The method by which the hot list data is transferred to a computer within a law enforcement vehicle.

Optical Character Recognition (OCR): The technology that supports the automated reading and digitizing of images of license plates that are captured by the ALPR System.

AUTHORIZED USES

1. The availability and use of the ALPR System provides opportunities for the enhancement of law enforcement agencies' productivity, effectiveness, and protection of public and officer safety.

2. The Department shall provide ALPR access only to authorized individuals who are acting in furtherance of official and legitimate law enforcement operations and public safety. All Department users shall abide by the guidelines set forth herein when using the ALPR System.

3. The provisions of this policy are provided to support authorized uses of ALPR information. Authorized uses may include, but are not limited to, the following:

    - Enhance Department's AMBER/SILVER or other law enforcement alerts and real-time response capability by deploying and networking ALPRs across the state to more rapidly identify and locate vehicles related to potential child-abduction or other serious crimes;

    - Alert law enforcement that a particular license plate on a "hot list" (e.g., a stolen vehicle or a vehicle associated with a wanted individual) is in close proximity to an ALPR to dramatically reduce the recovery time of stolen vehicles and assist in locating dangerous and wanted individuals;

    - Identify plates associated with potential witnesses and/or victims of violent crime;

    - Support the Department's homeland security mission by protecting critical infrastructure from individuals who intend to damage or disrupt the systems and locations that allow for travel and the free flow of commerce;

    - Identify vehicles linked to stolen license plates or other motor vehicle traffic violations;

    - Provide situational awareness for law enforcement related to public safety or otherwise relevant to their authorized duties;

    - Support local, state, federal, and tribal public safety departments in the identification of subjects associated with/as targets of criminal investigations;

    - Support law enforcement response to critical incident responses and special events;

    - Support special operations, such as high-crime-area patrols, gang investigation/suppression, operating under the influence initiatives, enforcement details, directed criminal investigations, and other investigations; and

    - Support emergency situations including, but not limited to terrorist threats, kidnappings, missing persons, and felons actively traveling to or from a crime scene.

4. The Department will not directly or indirectly seek, receive, accept, or retain ALPR information from:

    - An individual who or nongovernmental agency that may receive a fee or benefit for providing the ALPR information, except as expressly authorized by law or Department policy, and/or

    - An individual who or information provider that is legally prohibited from obtaining or disclosing the ALPR information.

5. The Department will prohibit access, use, or dissemination of ALPR information for:

    - Any purpose that violates the Constitution or laws of the United States, including the protections of the Fourth Amendment;

    - Non-law enforcement or personal purposes;

    - Discriminatory purposes;

    - The purpose of prohibiting, infringing upon, or deterring individual activities protected by the First Amendment, such as freely practicing one's religion, freedom of speech and peaceful assembly, freedom of the press, and the right to petition the government for the redress of grievances;

    - The purpose of prohibiting or deterring lawful individual exercise of other rights, such as freedom of association, implied by and secured by the U.S. Constitution or any other constitutionally protected right or attribute;

    - Harassing and/or intimidating any individual or group;

    - Targeting of any individual or group by means of camera placement or data use in a discriminatory manner; or

    - Any other access, use, disclosure, or retention that would violate applicable law, regulation, or policy.

ALPR OPERATIONS AND PROCEDURES

1. Members using the ALPR System shall:

    - Ensure, at the start of each shift, the ALPR System has been updated and is functioning properly; and

    - Notify the ALPR Administrator or appropriate designee of any malfunctions.

- The Department will investigate, in a timely manner, alleged errors and deficiencies of ALPR information or, if applicable, will request that the originating agency or vendor investigate the alleged errors and deficiencies.

2. ALPR Alerts/Hits - The member shall, prior to initiation of a stop, based on an ALPR Hit or Alert:

   - Visually verify that the vehicle plate number matches the plate number run by the ALPR System, including both:

     a) Alphanumeric characters of the license plate; and
     b) The state of issue.

   - Verify the current status of the plate through:

     a) The Commonwealth's Criminal Justice Information System (CJIS), or
     b) National Crime Information Center (NCIC), or
     c) Department's Records Management System (RMS), or
     d) Other appropriate source of data, when circumstances allow, or as soon as practicable.

3. Manual Entry of Data/Manual Hot List - Manual entries may include, but should not be limited to:

   - Criminal Investigations;

   - AMBER Alerts;

   - Missing Child Alerts;

   - Missing College Student Bulletins;

   - Silver Alerts;

   - Be On Look Out (BOLO);

   - Attempt To Locate (ATL); or

   - Wanted or Missing Person broadcast or bulletin in which a license plate number is included.

4. Manual entries entered into the ALPR System shall be:

   - Manually updated when the information changes or is no longer current;

   - ~~Documented with specific reason by the member~~;

- Documented with agency case number; and
- Given a retention date of 1 year or less.

ALPR DATA: Logs, Collection, Sharing, Dissemination and Retention

1. The Department will directly collect and retain ALPR information that:
   - Is based on a potential threat to public safety or the enforcement of the criminal law;
   - Is based on reasonable suspicion that an identifiable individual or organization has committed a criminal offense or is involved in or planning criminal (including terrorist) conduct or activity that presents a threat to any individual, the community, or the nation and that the information is relevant to the criminal conduct or activity;
   - Is relevant to the investigation and prosecution of suspected criminal (including terrorist) incidents; the resulting justice system response; the enforcement of sanctions, orders, or sentences; or
   - Is directly related to an investigation or mission of the law enforcement entity; and
     a) The source of the information is reliable and verifiable or limitations on the quality of the information are identified, and
     b) The information was collected in a fair and lawful manner (e.g., it does not infringe on the federal or state constitutional rights of any individual, group, or organization).
2. The Department will query ALPR information that:
   - Is based on a possible threat to public safety or the enforcement of the criminal law;
   - Is based on reasonable suspicion that an identifiable individual or organization has committed a criminal offense or is involved in or planning criminal (including terrorist) conduct or activity that presents a threat to any individual, the community, or the nation and that the information is relevant to the criminal (including terrorist) conduct or activity;
   - Is relevant to the investigation and prosecution of suspected criminal (including terrorist) incidents; the resulting justice system response; the enforcement of sanctions, orders, or sentences; or the prevention of crime; or
   - Is directly related to an investigation or mission of the law enforcement entity, and

a) The source of the information is reliable and verifiable or limitations on the quality of the information are identified, and
b) The information was collected in a fair and lawful manner.

3. Department ALPR cameras may be mobile (mounted on vehicles) or stationary (mounted to a structure). A standard ALPR record contains, at a minimum, an optical character recognition (OCR) interpretation of the captured image, a photo of the license plate and a contextual photo of an area surrounding the plate that could range from a few inches to a larger area around the entire vehicle, the geographic coordinates of where the image was captured, the date and time of the recording, and the specific camera/unit that captured the image.

4. Department-accessed ALPR information contains images of license plates that are available to public view (e.g., vehicles that are on a public road or street or that are on private property but whose license plates[s] are visible from a public road, street, or place to which members of the public have access, such as the parking lot of a shop or other business establishment) and that identify specific vehicles. Retained ALPR information does not include specific identification of individuals. Separate video surveillance images of the same location or images from private cameras will not be associated with ALPR data unless a specific image is required to investigate or document a violation in accordance with the authorized purposes described in this policy.

5. License plate numbers and date/time location collected through an ALPR may not be, when taken alone, sufficient to identify the individual associated with the vehicle. The Department may be able to link the ALPR information to an individual through additional use and combination with other information, such as a check of vehicle registration. Thus, even though the ALPR information the Department accesses may be the result of an ALPR system's automated collection of license plate numbers, it is the investigation process that identifies individuals.

6. The Department protects all ALPR information as personally identifiable information (PII) because ALPR information may be combined with other information to specify a unique individual (i.e., the identity of an individual could be directly or indirectly inferred by using information that is linked or linkable to that individual). The Department collects, receives, accesses, uses, disseminates, retains, and purges ALPR information because it can be linked to an individual to further an authorized mission.

7. The following process shall apply to ALPR Data:

- A Query Log is internally maintained by each instrument for each transaction;

- Data case be accessed, retrieved, or shared for official and legitimate law enforcement business only;

- Retention of data shall be determined by the Department of Criminal Justice Information Services (DCJIS) Policy;

- The Department will not seek, submit, or retain ALPR information about individuals or organizations based solely on their religious, political, or social views or activities; their participation in a particular noncriminal organization or lawful event; or their race, ethnicity, citizenship, place of origin, age, disability, gender, gender identity, sexual orientation, or other classification protected by law; and

- ALPR information collection and investigative techniques used by the Department shall be the least intrusive as necessary under the particular circumstances to collect ALPR information the Department is authorized to seek or retain.

8. State Central Repository - The Department has agreed to:

    - Electronically submit captured ALPR data to the state repository maintained by the DCJIS at the Commonwealth's Public Safety Data Center.

9. The Department and its users agree to the terms of this policy and to the *Commonwealth of Massachusetts Global Justice Public Safety Information Sharing Policy* of DCJIS.

INFORMATION QUALITY ASSURANCE

1. Original ALPR information will not be altered, changed, or modified in order to protect the integrity of the data. Any changes will be maintained as a separate and additional record, and such record will be identified as having been modified.

2. Whenever a license plate reader alerts on license plate information, prior to taking any law enforcement action, officers will be required, to the fullest extent possible, to visually verify that the actual vehicle license plate information matches the license plate information used and alerted upon by the system, including both alphanumeric characters of the license plate and the state of issuance; verify the current status of the plate; and confirm whether the alert pertains to the registrant of the car or the car itself. Receipt of an ALPR alert for a stolen or felony vehicle may not rise to the level of reasonable suspicion and is not sufficient probable cause to arrest without confirmation that the alert is still valid and active. If the alert is for another type of transaction, the officer will read the description of the alert and follow the appropriate action or reporting method. If an ALPR alert cannot be verified both visually and for validity, then law enforcement should not act on the alert and it should be rejected.

    - If the officer witnesses a violation of law or other action that establishes reasonable suspicion for a stop, the officer may conduct a stop based on that reasonable suspicion.

    - This provision shall not prevent a law enforcement officer from taking immediate action when a verifiable emergency situation exists for officer safety.

- On each resulting alert, the officer is required to enter a disposition indicating the action taken or not taken on the alert.

3. The Department will perform routine maintenance, upgrades, calibration, and refreshes of all ALPR equipment and components to ensure proper functionality.

4. The Department will correct, notate, delete, or refrain from using ALPR information the Department originated and found to be erroneous or deficient. Originating agencies external to the Department are responsible for reviewing the quality and accuracy of the ALPR information provided to the Department and must take reasonable steps to correct or amend the information upon learning that it is inaccurate or deficient. The Department will review the quality of ALPR information it has received from an originating agency or vendor and will advise the appropriate point of contact, in writing or electronically, when its ALPR information is alleged, suspected, or found to be erroneous or deficient.

5. The Department will use written or electronic notification to inform recipient agencies when ALPR information previously provided is erroneous or deficient. In addition, the Department will take reasonable steps to correct or amend the information provided to the external agency in order to ensure accuracy and sufficiency to the extent possible.

SECURITY AND MAINTENANCE

1. The Department will operate in a secure facility protected from external intrusion and will utilize secure internal and external safeguards against network intrusions. Any access to Department ALPR information from outside the facility will be allowed only over secure networks.

2. All ALPR equipment, software, and components will be properly maintained in accordance with the manufacturer's recommendations and/or any published industry standards.

3. The Department will store ALPR information in a manner that ensures that it cannot be added to, modified, accessed, or purged except by personnel authorized to take such actions.

4. Access to Department ALPR information will be granted only to personnel whose positions and job duties require such access and who have successfully completed a background check and training.

5. Usernames and passwords to ALPR information are not transferrable, must not be shared by Department personnel, and must be kept confidential.

6. The system administrator will ensure that all manufacturer-generated default passwords are replaced with secure passwords before web-based interfaces of the system become operational.

7. Queries made to the Department's ALPR information will be logged into the system identifying the user initiating the query. All user access, including participating agency access, and queries are subject to review and audit.

8. The Department will maintain an audit trail of accessed, requested, or disseminated Department-held ALPR information. An audit trail will be kept for a minimum of [____ Months/Years] of requests for access to ALPR information for specific purposes and of what ALPR information is disseminated to each individual in response to the request. Audit logs will include:

    - The name and agency of the law enforcement user.
    - The date and time of access.
    - The specific information accessed.
    - The modification or deletion, if any, of the ALPR information.
    - The authorized law enforcement or public safety justification for access, including a relevant case number if available.

POLICY REVIEW

1. The CFC Commander/CFC Executive Officer/Privacy Officer/ALPR Administrator shall be responsible for:

    - The annual review of this policy and the procedures contained herein; and
    - Making recommendations through channels to the CFC Commander/CFC Executive Officer/Privacy Officer/ALPR Administrator, for any necessary amendments.

2. As use of the technology progresses, the Department shall continue to monitor and assess the appropriateness of this policy, as new technology may raise both legal and technological issues.

Executive Office of Public Safety and Security (EOPSS) - *The Commonwealth of Massachusetts Global Justice Public Safety Information Sharing Policy.*

Official:

PURPOSE

The purpose of this policy is to establish guidelines and procedures for the proper use and application of the Automatic License Plate Recognition (ALPR) System. Additionally, it is the purpose of this policy to provide **[CFC]** personnel with guidelines and principles for the collection, access, use, dissemination, and retention of ALPR information to ensure that the information is used for legitimate law enforcement purposes only and the privacy, civil rights, and civil liberties of individuals are not violated.

This policy assists **[CFC]** and its personnel in:

- Increasing public safety and improving state, local, tribal, territorial, and national security;
- Minimizing the threat and risk of injury to specific individuals;
- Minimizing the threat and risk of physical injury or financial liability to law enforcement and others responsible for public protection, safety, or health;
- Promoting governmental legitimacy and accountability;
- Minimizing the potential risks to individual privacy, civil rights, civil liberties, and other legally protected interests;
- Protecting the integrity of the criminal investigatory, criminal intelligence, and justice system processes and information;
- Minimizing the threat and risk of damage to real or personal property;
- Increasing trust by maximizing transparency;
- Making the most effective use of public resources allocated to public safety entities.

AUTHORIZED USES

The availability and use of the ALPR System provides opportunities for the enhancement of law enforcement agencies' productivity, effectiveness, and protection of public and officer safety. The **[CFC]** shall only utilize the technology in furtherance of official and legitimate law enforcement operations and public safety. All **[CFC]** Employees shall abide by the guidelines set forth herein when using the ALPR System.

The provisions of this policy are provided to support authorized uses of ALPR information. Authorized uses may include, but are not limited to, the following:

- Enhance **[CFC]**'s AMBER/SILVER or other law enforcement alerts and real-time response capability by deploying and networking ALPRs across the state to more rapidly identify and locate vehicles related to potential child-abduction or other serious crimes;
- Alert law enforcement that a particular license plate on a "hot list" (e.g., a stolen vehicle or a vehicle associated with a wanted individual) is in close proximity to an ALPR to dramatically reduce the recovery time of stolen vehicles and assist in locating dangerous and wanted individuals;
- Identify plates associated with potential witnesses and/or victims of violent crime.

- Support **[CFC]**'s homeland security mission by protecting critical infrastructure from individuals who intend to damage or disrupt the systems and locations that allow for travel and the free flow of commerce;
- Identify vehicles linked to stolen license plates or other motor vehicle traffic violations;
- Provide situational awareness for law enforcement related to public safety or otherwise relevant to their authorized duties;
- Support local, state, federal, and tribal public safety departments in the identification of subjects associated with/as targets of criminal investigations;
- Support law enforcement response to critical incident responses and special events; and
- Support special operations, such as high-crime-area patrols, gang investigation/suppression, driving under the influence initiatives, enforcement details, directed criminal investigations, and other investigations.

DEFINITIONS AND ACRONYMS

Automatic License Plate Recognition (ALPR): Automatic license plate recognition technology uses high-speed cameras combined with sophisticated computer algorithms capable of converting the images of license plates to electronically readable data. The ALPR System captures an image of a license plate and converts it to a text file using Optical Character Recognition (OCR) technology. The technology also compares the digital images of license plates to the CJIS-NCIC Hot file database. The ALPR System is configured as either fixed, mobile or portable.

Alert: A visual and/or auditory notice that is triggered when the ALPR System receives a potential hit on a license plate.

Alert Data: Information captured by an ALPR relating to a license plate that matches the license plate on a hot list.

ALPR Data: Scan files, alert data, and any other documents or data generated by, or obtained thorough, utilization of the ALPR System. ALPR Data Query Logs: A record of a search or query of ALPR data.

Hit: An alert that a license plate matches a record maintained in the ALPR database related to stolen vehicles, wanted vehicles, or other alert type files that support investigation or which have been manually registered by a user for further investigation.

Hot List: License plate numbers of vehicles of interest, such as stolen vehicles, unregistered vehicles, vehicles owned by persons of interest, and vehicles associated with AMBER Alerts, Missing Child Alerts, Missing College Student Bulletins, Silver Alerts, Be On Look Out (BOLO), Attempt To Locate (ATL), and Wanted or Missing Person broadcasts or bulletins in which a license plate number is included, or other license plate numbers of interest entered by the Department or an authorized officer.

Hot List Download: The method by which the hot list data is transferred to a computer within a law enforcement vehicle.

Optical Character Recognition (OCR): The technology that supports the automated reading and digitizing of images of license plates that are captured by the ALPR System.

GOVERNANCE AND OVERSIGHT

1. The MSP Division Commander of Field Services (DFS) shall:

    - Designate a Commissioned Officer as the ALPR Administrator; and
    - Ensure the ALPR Administrator has oversight for the ALPR System deployment, operations, and maintenance.

2. The ALPR Administrator shall be responsible for the following:

    - Ensuring the proper selection of the personnel approved to operate the ALPR System and maintaining an adequate number of trained and authorized users;
    - Authorizing any requests for ALPR System use or data access according to Department/CFC policy;
    - Ensuring that designated, trained personnel check equipment on a regular basis to ensure functionality, camera alignment, and removing from service any equipment that falls outside expected functionality until deficiencies are corrected;
    - Designate users who have been properly trained in the use and operational protocols of the ALPR System;
    - Allow access to the ALPR System for those users with an approved login and password; and
    - Ensure that any changes in hardware, software, policy, or law are the subject of continuing in-service training or bulletins.

3. The use of ALPR technology shall be approved by the Colonel/Superintendent or designee. ALPR System and information shall be:

    - Accessed and used only for official and legitimate law enforcement purposes;
    - Used for searches of historical ALPR data, in accordance with this policy and other Department policies or regulations where applicable; and
    - Used for searches of ALPR data by members of this Department or by other law enforcement agencies through the ALPR Administrator.

4. The **[CFC]** will prohibit access, use, or dissemination of LPR information for:

    - Any purpose that violates the Constitution or laws of the United States or the Commonwealth of Massachusetts, including the protections of the Fourth Amendment;
    - Non-law enforcement or personal purposes;

- Discriminatory purposes;
- The purpose of prohibiting, infringing upon, or deterring individual activities protected by the First Amendment, such as freely practicing one's religion, freedom of speech and peaceful assembly, freedom of the press, and the right to petition the government for the redress of grievances;
- The purpose of prohibiting or deterring lawful individual exercise of other rights, such as freedom of association, implied by and secured by the U.S. Constitution or any other constitutionally protected right or attribute;
- Harassing and/or intimidating any individual or group;
- Targeting of any individual or group by means of camera placement or data use in a discriminatory manner;
- Any other access, use, disclosure, or retention that would violate applicable law, regulation, or policy.

ALPR OPERATIONS AND PROCEDURES

1. Members using the ALPR System shall:

   - Ensure, at the start of each shift, the ALPR System has been updated with the most current hot lists available;
   - Verify, prior to use/installation, the aim of the ALPR camera(s) to ensure it is focused on the correct lanes of traffic;
   - Ensure ALPR equipment be cleaned and maintained according to the manufacturer's recommendations; and
   - Notify the ALPR Administrator of any malfunctions.

2. ALPR Alerts/Hits - The member shall, prior to initiation of a stop, based on an ALPR Hit or Alert:

   - Visually verify that the vehicle plate number matches the plate number run by the ALPR System, including both:

     a) Alphanumeric characters of the license plate; and
     b) The state of issue.

   - Verify the current status of the plate through:

     a) The Commonwealth's Criminal Justice Information System (CJIS), or
     b) National Crime Information Center (NCIC), or
     c) Department's Records Management System (RMS), or
     d) Other appropriate source of data, when circumstances allow, or as soon as practicable.

3. Manual Entry of Data/Manual Hot List - Manual entries may include, but should not be limited to:

    - AMBER Alerts;
    - Missing Child Alerts;
    - Missing College Student Bulletins;
    - Silver Alerts;
    - Be On Look Out (BOLO);
    - Attempt To Locate (ATL); or
    - Wanted or Missing Person broadcast or bulletin in which a license plate number is included.

4. Manual entries entered into the ALPR System shall be:

    - Manually updated when the information changes or is no longer current;
    - Documented with specific reason by the member;
    - Documented with agency case number; and
    - Given a retention date of 1 year or less.

ALPR DATA: Logs, Collection, Sharing, Dissemination and Retention

1. The following process shall apply to ALPR Data:

    - A Query Log is internally maintained by each instrument for each transaction;
    - Data case be accessed, retrieved, or shared for official and legitimate law enforcement business only;
    - Retention of data shall be determined by the Department of Criminal Justice Information Services (DCJIS) Policy; and
    - The **[CFC]** will not seek, submit, or retain ALPR information about individuals or organizations based solely on their religious, political, or social views or activities; their participation in a particular noncriminal organization or lawful event; or their race, ethnicity, citizenship, place of origin, age, disability, gender, gender identity, sexual orientation, or other classification protected by law.
    - LPR information collection and investigative techniques used by the **[CFC]** shall be the least intrusive as necessary under the particular circumstances to collect ALPR information the **[CFC]** is authorized to seek or retain.

2. The **[CFC]** will not directly or indirectly seek, receive, accept, or retain ALPR information from:

    - An individual who or nongovernmental agency that may receive a fee or benefit for providing the ALPR information, except as expressly authorized by law or **[Department/CFC]** policy, and/or

- An individual who or information provider that is legally prohibited from obtaining or disclosing the ALPR information.

3. State Central Repository - The Department has agreed to:

   - Electronically submit captured ALPR data to the state repository maintained by the DCJIS at the Commonwealth's Public Safety Data Center.

4. The Department and its users agree to the terms of this policy and to the *Commonwealth of Massachusetts Global Justice Public Safety Information Sharing Policy* of DCJIS.

POLICY REVIEW

1. The ALPR Administrator shall be responsible for:

   - The annual review of this policy and the procedures contained herein; and
   - Making recommendations through channels to the Colonel/Superintendent or designee, for any necessary amendments.

2. As use of the technology progresses, the Department shall continue to monitor and assess the appropriateness of this policy, as new technology may raise both legal and technological issues.

Massachusetts State Police
Outside Training Review

Name/ID	Sean Bender - MSPC1859 - HRCMS: 458053
Assignment	Intelligence Analyst - Massachusetts State Police - Commonwealth Fusion Center

Name of Training	2019 Northwestern Youth Fire Intervention, Response, Education, & Safety Partnership Conference
Location of Training	Hadley, MA
Dates of Training	5 November 2019 - 6 November 2019
Instructor	Multiple Instructors
Agency Sponsoring Training	NoFIRES
Total Cost	Mileage Reimbursement: ~$143.64

1. Please describe topics covered in training.

- Unmanned Aerial Systems - Sgt. Michael George - Massachusetts State Police - Incident Management Assistance Team
- Drone Use in the Fire Service - Lt. Timothy Howe - Massport Fire Rescue
- Bomb Squad Capabilities & Equipment Demonstrations - Tpr. Stephen Sicard - Massachusetts State Police - Fire & Explosion Investigation Section
- Operation Golden Ticket - AUSA Philip Mallard - United States Attorney's Office - District of Massachusetts
- Operation Golden Ticket - Sgt. Robert LaBarge - Massachusetts State Police - Essex County District Attorney's Office
- Digital Evidence: Identification & Best Practices - Sgt. Brian Gavioli - Massachusetts State Police - Massachusetts Cybersecurity Program
- Open Source Intelligence Techniques - Sgt. Brian Gavioli - Massachusetts State Police - Massachusetts Cybersecurity Program
- Capabilities & Limitations of Technology in Arson Investigations - Sgt. Michael Mazza - Massachusetts State Police Fire & Explosion Investigation Section

2. How will training assist you in doing your job?

The training sessions and presentation topic areas scheduled for the 2019 Northwestern Youth Fire Intervention Response, Education, and Safety Partnership (NoFIRES) Conference would promote the acquisition of new analytic skills, techniques, and resources, with specific emphasis on the use of law enforcement technologies as investigative tools.

3. Would you recommend this training to other members of the Department? Please list what you feel are the positives and negatives of this training.

Positives:

- In depth training regarding current best practices for identifying & collecting digital evidence, as well as exploitation of open source intelligence and related tools.

- Education on UAS regulations and utility as both an investigative tool (crash/accident reconstruction, fire investigation, etc) & emerging threat (payload capability, UAS as weapons, exclusion zones).

- Case studies demonstrate the magnitude and success of enhanced investigatory capability resulting from inter-agency partnerships, task-forces, and information/intelligence sharing collaborations when utilized as a force multiplier towards a common public safety goal and/or to investigate crimes that transcend local and state lines.

Negatives:

- Due to the emphasis on arson investigations and/or fire related crimes, the NoFIRES conference may have more limited value to department members for whom arson investigation is not a frequent or reoccurring investigatory responsibility.***

***Caveat - The majority of the presentations & topics were broad enough that related tools/techniques could likely be applied in more general or non-arson related investigations.

4. Other comments.

1 INTRODUCTION

This document serves as a user's manual for the PIPS Back Office System Software (BOSS) version 3.5 or above and describes the various features and functionality of the application. BOSS is a management and administration tool for the PIPS Automatic License Plate Recognition (ALPR; also known as ANPR, or Automatic License Number Recognition) systems. The BOSS server application provides an interface for user maintenance, data queries, import and export of data, and dispatch functions. BOSS lets an Administrator specify the databases used by both mobile and fixed camera installations. BOSS retrieves these databases on a regular schedule; manages the users of the PIPS PAGIS systems and BOSS Smart Client workstations; provides a central repository for data collected by mobile PAGIS deployments and fixed camera installation; provides reporting and data management tools; provides hit detection and dispatch functions for fixed camera installations; and allows for data mining and data sharing with other agencies.

The following schematic shows how the BOSS server application works together with Smart Client workstations, various data sources, PAGIS, and the full line of ALPR cameras to create a comprehensive solution.

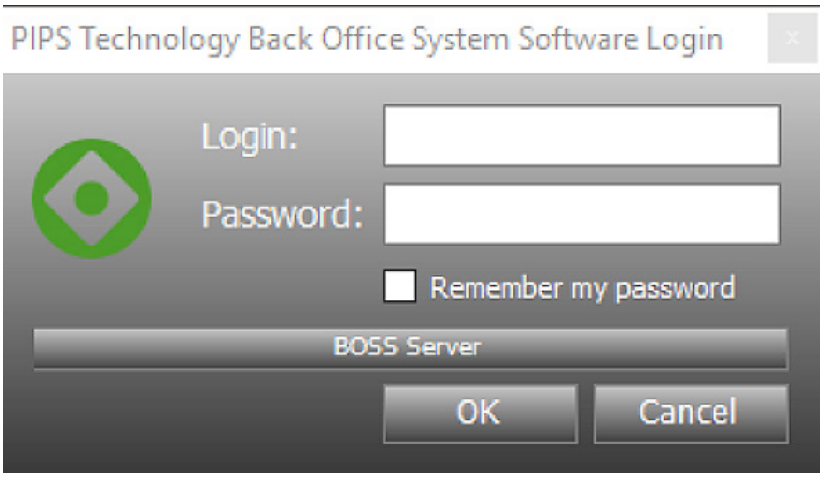
1.1 The Design of PIPS Back Office System Software Version 3.5 and Above

The design of BOSS version 3.5 or above offers ease of accessibility with a user-friendly look and feel. Large, easy-to-identify icons provide intuitive navigation, and the frequently used elements are readily available. The user interface (UI) is very recognizable and comfortable, particularly for users already familiar with Windows-based applications, including Microsoft® Office software, or the Mobile Pagis Software. In addition, users can enter a minimum amount of information to add a data object, with the ability to include more details if needed.

2 LOGGING IN

2.1. PIPS Back Office System Software Administrator Login

During each new installation of the PIPS Back Office System Software, a default user of “admin” is created, with the password of “admin1.” The installer or designated BOSS Administrator can log in with this account to create additional users and otherwise configure the system. It is important that the “admin” password be changed to protect the system’s security. Likewise, it is equally as important to keep this and all passwords confidential to protect the security of the BOSS system. Section 17, Installation and Configuration, offers more information on setting up users and passwords.



2.2 User Logins

The PIPS Back Office System Software will require a user to log in with a username and password only if there is no BOSS user matching the current Active Directory user login. In other words, if the username currently logged into Windows matches a username in the BOSS system, the user is automatically logged into the application when it is started, and no login screen will appear.

For example, if user “bsmith” is logged in using Windows Domain Authentication through Active Directory (“logged into Windows”), when the BOSS Smart Client is started, and a “bsmith” user exists within the BOSS system, no login screen will appear; the application will authenticate the user and load automatically. If a user logs onto Windows with a name that is not an exact match to a username in the BOSS system, or is not logged into the same Windows Domain, a login screen will appear. The user will then need to enter a correct BOSS user name and password in order to enter the application.

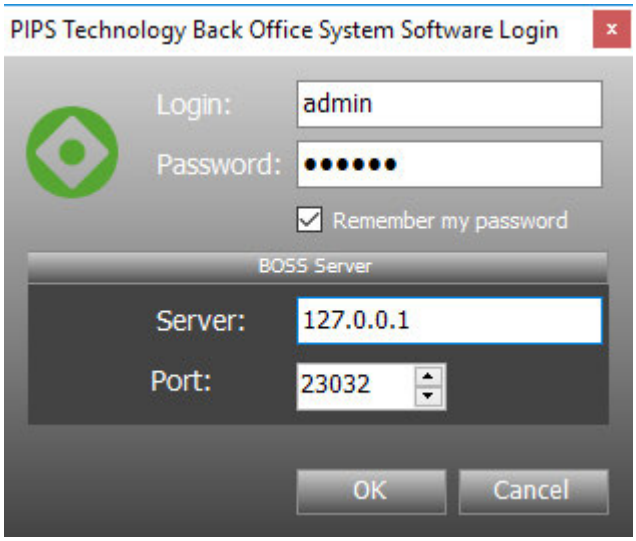
Note: In order for a user to be automatically logged into BOSS, the Active Directory user must be in the same Windows domain as the PIPS™ Back Office System Software server.

2.3 Login Dialog

1. Enter your username in the Login field.

2. Enter the correct password in the Password field.
Note: Passwords are case sensitive.

3. Click OK to complete the login process.

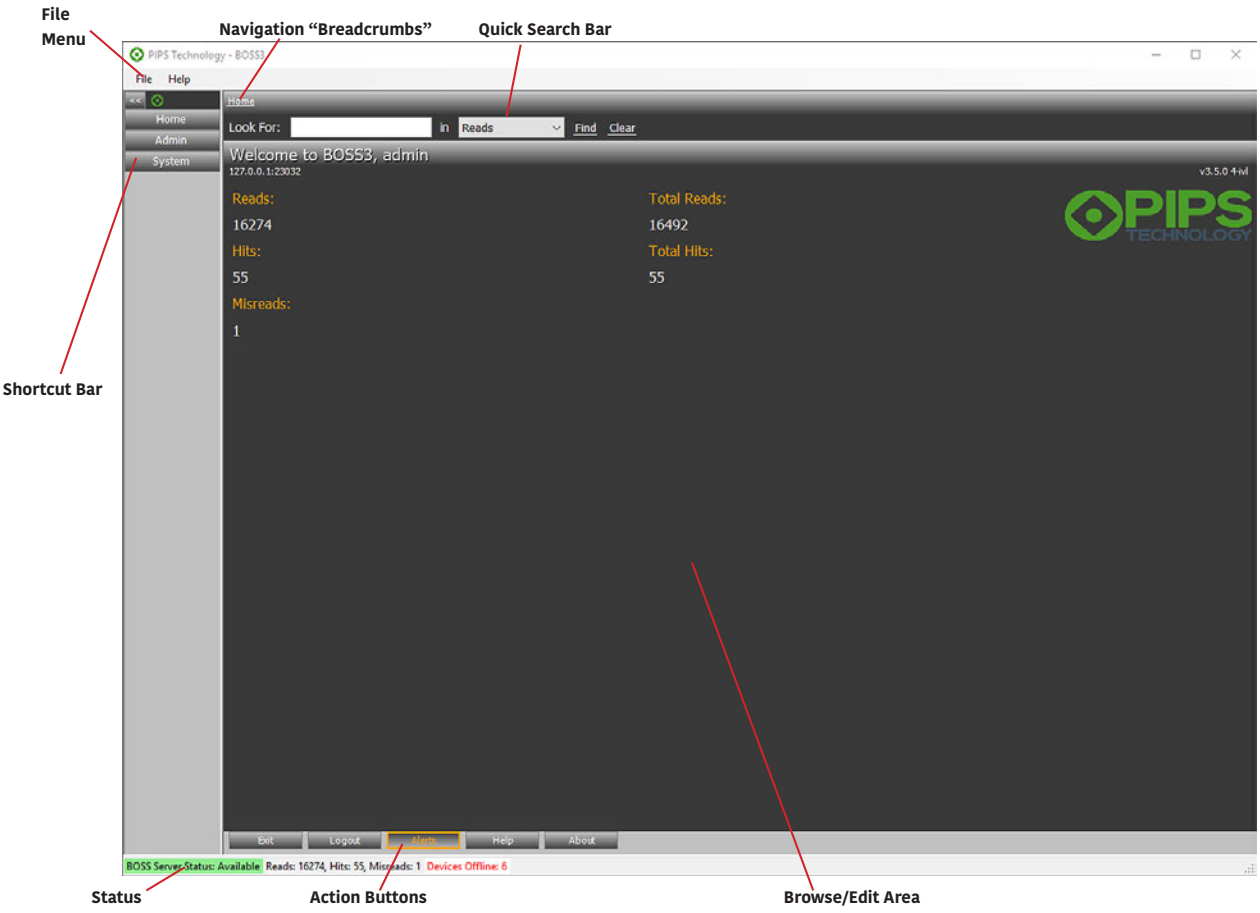


2.3.1 Storing Username and Password

Select the Remember my password option to save the password to the computer's local Windows registry and automatically fill in both Login and Password fields on subsequent logins.
Selecting this option only remembers the login information for the current Windows User on the local computer. It will not apply to a different Windows user logged in the same computer and will not apply to the same user logging in a different computer. This option need not be checked every time. Once checked, the option will stay that way until it is deselected during a login.

Note: The username and the password are stored in the Windows Registry. This can be a security risk. It is recommended that you not use the Remember my password option unless the Windows workstation can be secured against unauthorized access.

2.3.2 BOSS Client Connection Settings



Click the BOSS Server button on the Login screen to view or change the client connection settings.

Server – IP address, computer name, or DNS address can be used in the Server field as long as the client can reach the server using the value entered.
Port – The default port used for connecting to the BOSS server is 23032. This should only be changed here if the BOSS server has been configured to use a non-default port.

3 APPLICATION LAYOUT

3.1 Components of the BOSS Application Screen

File Menu – The File menu of the application resides in the very top left of the application window. The File menu is always visible and available regardless of the screen or shortcut selected. The Exit option is available through this menu.

Navigation – The navigation "breadcrumbs" appear at the top of the BOSS screen as different actions are selected. By clicking on the links it is possible to backtrack to a previous screen.

Shortcut Bar –The Shortcut bar (the panel on the left of the screen) contains icon buttons for the various operations available. The shortcut icons are divided into three categories: Home, Admin, and System. Each time the application is started, all of the categories are closed with no shortcuts displayed. Click on any of the three headings to access the shortcuts within that category. The actual categories and shortcuts that appear depend on the logged-in user's privileges.

The Shortcut bar can be collapsed entirely to provide a larger space for the Browse/Edit area by clicking the << button at the top left of the screen. To expand the Shortcut bar again, click the >> button.

Browse/Edit Area – The widest portion of the application window, the Browse/Edit area is where data is displayed for viewing or editing. The actual data displayed here depends upon the shortcut icon that is selected from the Shortcut bar.

Quick Search Bar – Directly above the Browse/Edit Area, the Quick Search bar allows for simple, immediate queries of BOSS data. Using the Quick Search bar simply involves typing the text to query in the Look For field and selecting the type of data (reads, hits, etc.) to search in the drop-down box.

Action Buttons – These are the buttons directly below the Browse/Edit area. These buttons will differ depending on the shortcut icon selected. The actual buttons that appear will also vary depending upon the user's privileges.

Status Bar – This is the area along the very bottom of the application window that displays the following system information:

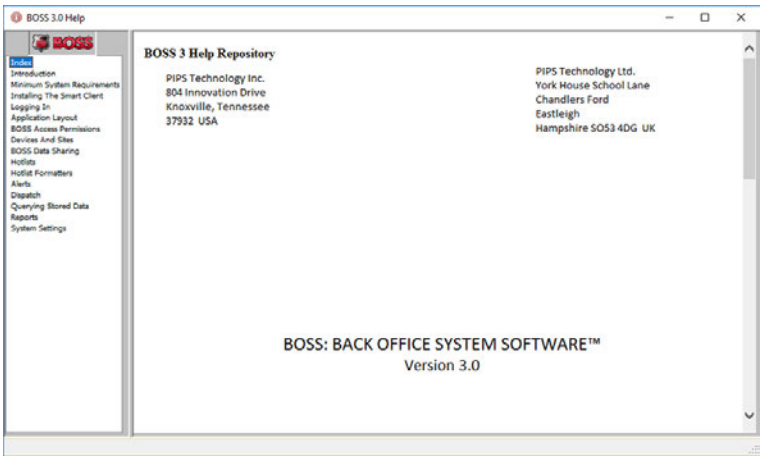
- **BOSS System State (Available or Offline):** "Available" status indicates that the client is currently communicating with the BOSS server application and the server is running. This status is highlighted with a green background. "Offline" status indicates that the client is currently not able to communicate with the BOSS server and is highlighted with a red background. In this event, the BOSS UI will continue to check for the BOSS server to become available again. After three attempts to reconnect, the user will be notified that the connection could not be re-established and will be provided further instructions on how to proceed.
- **Reads:** The total number of reads currently contained in the BOSS system.
- **Hits:** The total number of hits currently contained in the BOSS system.
- **Misreads:** The total number of misreads currently contained in the BOSS system.
- **Devices Offline:** The number of fixed camera devices that are currently identified as offline.

3.2 The BOSS Home Screen

The BOSS Home screen is displayed within the Browse/Edit area upon login. The top banner displays the username of the current BOSS user, the BOSS server address, and current system statistics. Statistics may take a few moments to update after login. The action buttons, described below, are displayed along the bottom of the screen. The actual buttons that display will vary depending upon the user's privileges.

Exit – Exit the BOSS application.

Logout – Log out from the current session to the Login screen.



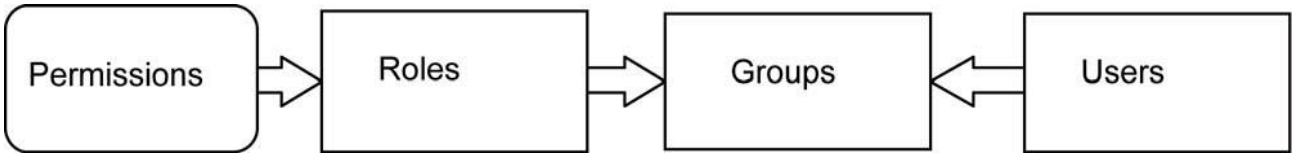
Alerts – Toggle dispatch alerts on (orange highlight) and off. This button will not be displayed if the user is not authorized to access the dispatch screen, or if the user has not chosen to receive dispatch alerts in Preferences (Section 5.3).

Help – Activate the help system.

About – Display application information.

3.3 Help Documentation

BOSS provides a help document accessible in the client application. To access help, select Help in the File menu area or press the F1 button. A help document will be displayed in a browser window and is indexed and searchable for ease of use.



3.4 Minimizing the BOSS Application

The BOSS application can be minimized to the Windows System Tray using the Windows minimize button on the right upper corner of the BOSS application window. To restore the BOSS application, click on the BOSS PIPS icon. When the application is minimized, real-time alerts will still be displayed.

4 BOSS ACCESS PERMISSIONS: USERS/GROUPS/ROLES

Access permissions to various functions (such as reports or dispatches) in BOSS are administered through users, groups, and roles. Each individual who will use the BOSS software must log in via a user account. Each user account is assigned to a group. Every group is assigned a role (such as Administrator or Dispatcher), which determines the set of functionality to which the group's members will have access:

The security parameters defined in a role apply to a user via the group to which the user belongs.

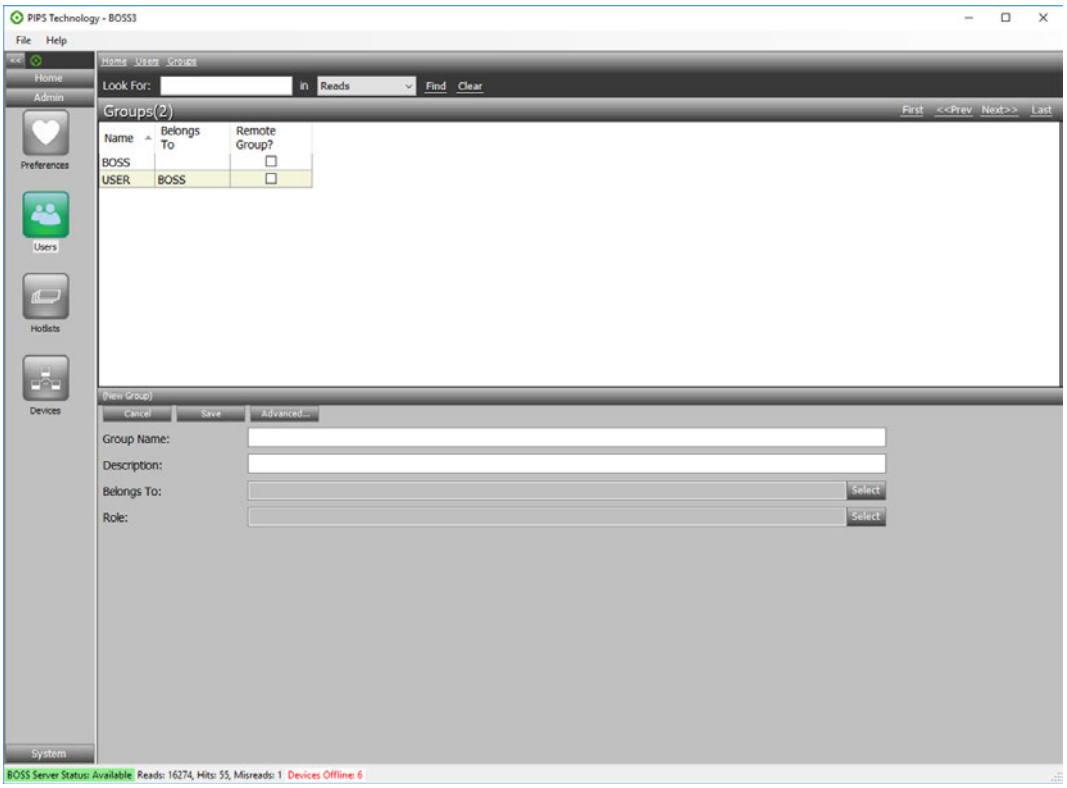
4.1 Permission Levels

The following table lists the levels that apply to permissions:

LEVEL	EXPLANATION
No Access*	No permissions to the function
Read Only	View-only permissions to the function. Add/Change/Delete are not permitted.
Full Access	Complete permissions to the function. View/Add/Change/Delete are permitted.

**When a user's effective permissions to a function are No Access, the function is not visible to the user. For example, if a user has No Access privileges to the System function, the System category is not displayed.*

4.2 Permissions



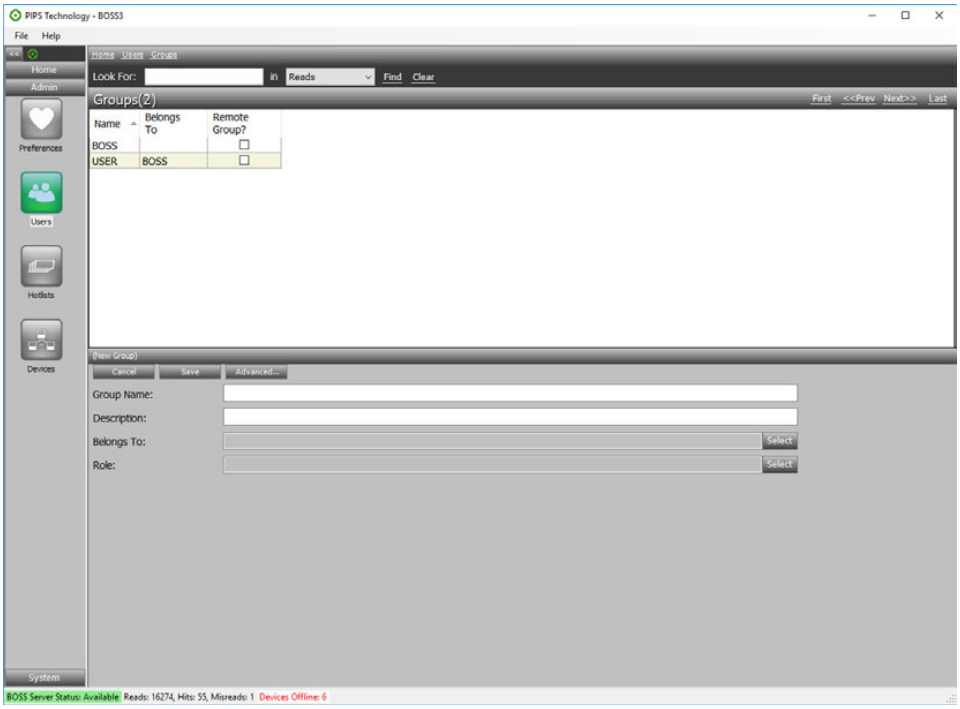
The following table lists the functions that are controlled by permissions levels:

PERMISSION	EXPLANATION
Reads	Plate read information
Dispatch	Real-time monitoring and hit alerts
Users	Groups and user accounts
Hotlists	Hotlists (plates of interest)
Devices	Sites and ALPR camera devices
System	System configuration options

See Section 15.4, Roles, for more information on setting permissions.

4.3 Roles

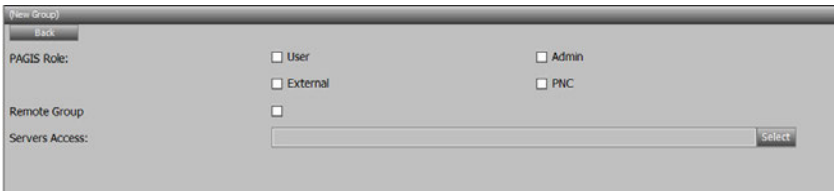
Roles are access permission profiles. BOSS comes with several predefined roles. A BOSS Administrator is able to add additional roles to the system. A BOSS Administrator is also able to alter and delete any roles. Roles define a permission level for different functions of the system. See Section 15.4, Roles, for additional information.



The following roles are installed by default in a BOSS system:

- System Administrators
- User
- Dispatcher
- Group Administrators
- Device Administrators
- Hotlist Administrators

See System Settings section for Role definitions and changes.



4.4 Groups

Groups are collections of users that have the same permissions. Groups provide an efficient way to organize users, for example by organizational units, and easily assign permissions to those users. Using groups is optional. A default group named “BOSS” automatically exists within a BOSS system, and user accounts will belong to the “BOSS” group by default. The BOSS group cannot be deleted.

4.4.1 Creating a New Group

1. Select the **Admin** category on the Shortcut bar.
2. Click the **Users** shortcut. A list of all current users will display in the Browse/Edit area.
3. Click the **Groups** button at the bottom of the Browse/Edit area. A list of all current groups will display in the Browse/Edit area.
4. Click the **New** button. The New Group Entry screen will display.
5. In the Group Name text box enter a name for the group. (**Note:** The group name must have a minimum of three characters.)
6. In the Group **Description** text box enter a description of the group (optional).
7. Each group, except for the default BOSS group, is required to have a parent group. In the Belongs To field, click the **Select** button to view a list of all existing groups. Click on the desired group and click the **Save** button to select. The name of the selected group will display in the Belongs To field as the parent group.
8. Assign a role to the group. In the Role field, click the **Select** button to select from the existing roles. Click the desired role from the list and click the **Save** button to make the selection. The name of the selected role will appear in the field.
9. Click the **Advanced**... button to access additional, optional settings for the new group.

4.4.1 Creating a New Group (continued)

PAGIS Role (User/Admin/External/PNC) – Check desired PAGIS roles to grant the new group for the associated permissions in Pagis. Please refer to the Pagis User's Manual for more information.

Remote Group – Select this option to designate the group as remote. When a BOSS Administrator wants to give access to another BOSS system for remote queries ("data sharing," see Section 6), a login must be created and assigned to a group that is flagged as a remote group. The remote BOSS Administrator will then create a remote site with credentials for that login.
Servers Access – This option allows for defining which, if any, sites will be accessible by this group. Click the Select button to access a list of sites.

Note: There are two sites defined by default: Manual Entries and Unassigned. If no additional sites have been defined, only the default values are available in this field. Click each desired site and click the **Save** button to complete the selection process. If one site is selected the name of that system will appear in the Server Access field. More than one site can be selected.

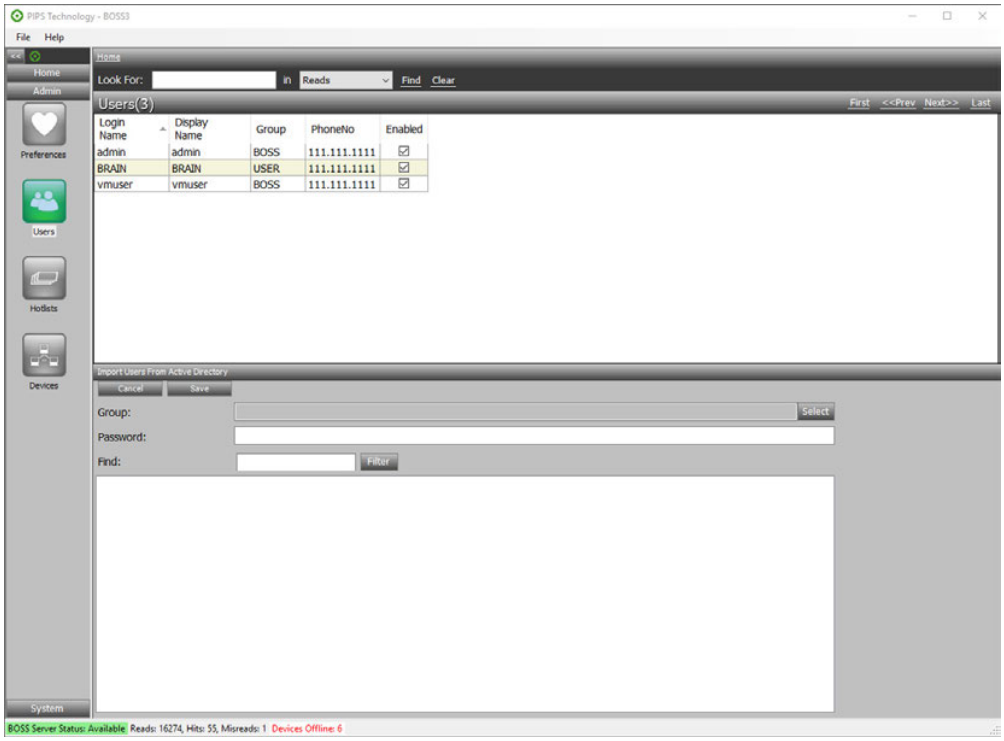
Log Queries – This option, when selected, will result in the logging of all queries made by all users of the group. This information is then available via the audits report. **WARNING:** *This can potentially be a very large amount of data. Select this option with care.*

a. Configure these Advanced User settings as desired.

b. Click the **Back** button to return to the main New Group Entry screen

10. Click **Save** to complete creating the new group, or click **Cancel** to clear the new group.

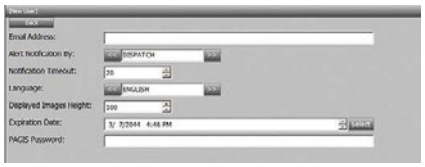
4.4.2 Parent Groups



When creating a new group, you must select a parent group (the Belongs To field). BOSS uses a parent-child group structure as an organizational mechanism. This allows the BOSS Administrator to arrange groups into collections based on location, job role, or any other applicable criteria. In BOSS, the parent group can be selected in order to easily reach the entire collection of groups under that parent. This can be especially helpful in large installations with a large number of groups.

4.4.3 Deleting a Group

1. Select the **Admin** category on the Shortcut bar.
2. Click the **Users** shortcut.
3. Click the **Groups** button at the bottom of the Browse/Edit area. A list of all existing groups will display in the Browse/Edit area.
4. Click to select the desired group from the list.
5. Click the **Delete** button.
6. Click **OK** in the confirmation dialog to complete the operation.



WARNING: Any users currently assigned to the deleted group will be assigned to the default "BOSS" group. You should empty the group by assigning all of its users to different groups prior to deleting it.

4.5 Users

4.5.1 Creating a New User

1. Select the **Admin** category on the Shortcut bar.
2. Click the **Users** shortcut. A list of all existing users will display in the Browse/Edit area.
3. Click the **New** button at the bottom of the Browse/Edit area. The New User Entry screen appears.
4. Enter a **Login Name** for the new user. This is the name the user will enter when logging into the BOSS application. (The login name must be at least three characters.)
5. Enter a **Display Name** for the new user (optional).
6. Enter a **Password** for the new user. (The password must be at least six characters with one Cap, one number and one special symbol.) The strong password requirement cannot be disabled.
7. Select a **Group** for the user. Click the **Select** button to access a list of all groups. Click on the desired group and click the **Save** button to complete the selection.
8. Enter a contact **Phone Number** for the user (optional). This field is for informational purposes only; in case the BOSS Administrator needs to contact the user.
9. Click the **Advanced**... button to access additional, optional settings for the new user. Configure these advanced user settings as desired.

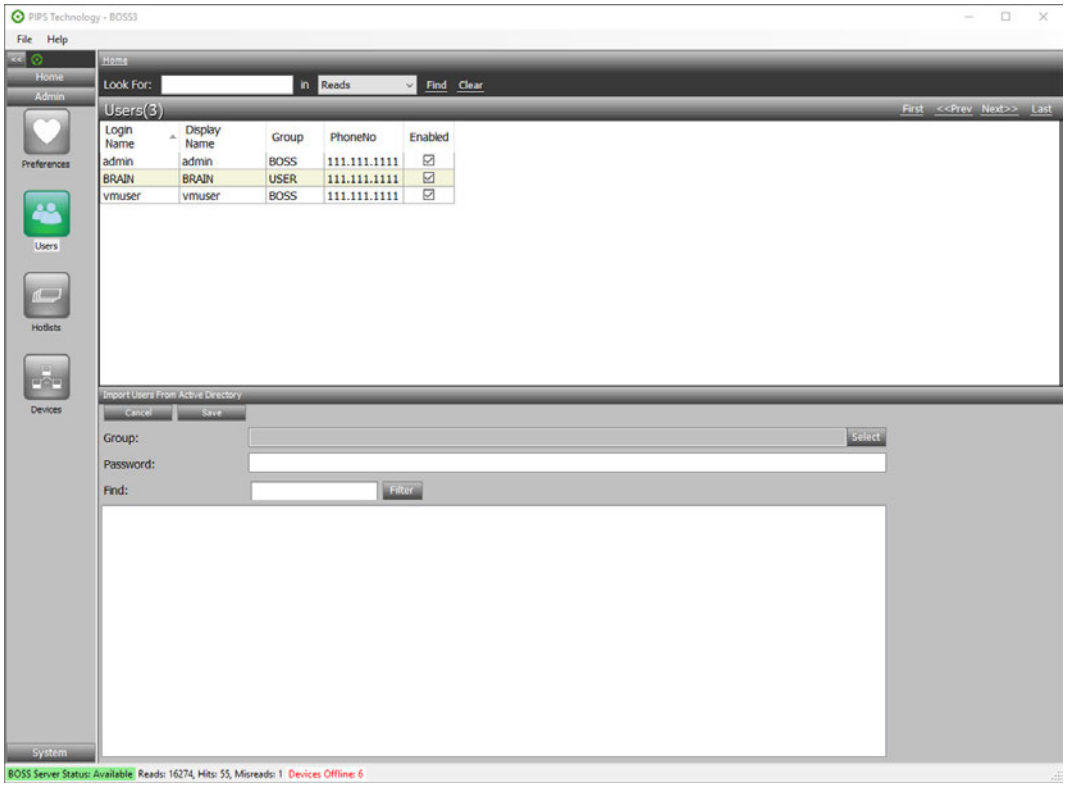
4.4.1 Creating a New Group (continued)

Email Address – Email address or addresses associated with the user. BOSS alerts for the user are sent to the email addresses specified here. Multiple addresses should be separated with a comma.
Alert Notification By – A user can be configured to receive BOSS alerts through the Dispatch application, email, or both. Click the <<
or >> buttons to cycle through the options, stopping at the desired selection.
Notification Timeout – The cutoff time from the time when a hit occurred after which an alert will no longer be sent to the user. For example, if the notification timeout is 20 minutes and a plate of interest is detected at 12:00 pm, notification is not sent to the user after 12:20 pm. This timeout prevents alerts being sent for events that are delayed in arrival to BOSS.
Language – The language preference for the user. The default value is English.
Displayed Images Height – This setting defines the vertical size in pixels of the images (reads and hits) that will display for the user on the Dispatch and Reads screens.
Expiration Date – Date for the user account to automatically be disabled. If no expiration is desired, simply leave this field at its default value (30 years from current date).
PAGIS Password – The user's Pagis password. Strong password requirement not utilized for this field.

Note: The user must be in a group that has been granted PAGIS permissions in order for the user to log in to PAGIS.

---

10. Click the **Back** button to return to the main New User Entry screen.
11. Click the **Save** button to complete creating the new user.



4.5.2 Deleting a User

1. Select the **Admin** category on the Shortcut bar.
2. Click the **Users** shortcut. A list of all existing Users will display in the Browse/Edit area.
3. Click the desired user in the list.
4. Click the **Delete** button at the bottom of the Browse/Edit area.
5. Click **Yes** to confirm the operation.

4.5.3 Importing Users from Active Directory

BOSS allows user logins to be imported from Microsoft Active Directory (AD) service.

1. Select the **Admin** category on the Shortcut bar.
2. Click the **Users** shortcut.
3. Click on the **Import** button.

4. Select the BOSS group that will receive the imported logins. Click the **Select** button to display available groups and **Save** to commit the selection.
5. Enter the default password for the imported logins in the Password field.
6. Browse for the desired users, **or** type in the desired login name (full or partial) in the Find field and press the **Filter** button.
7. Click on the checkbox in front of the desired usernames to select users to be imported to BOSS.
8. Click on **Save** to import the users from Active Directory.

Note: A Windows login cannot have any punctuation included or problems will occur with reads queries being performed.

4.6 Access Permissions Example

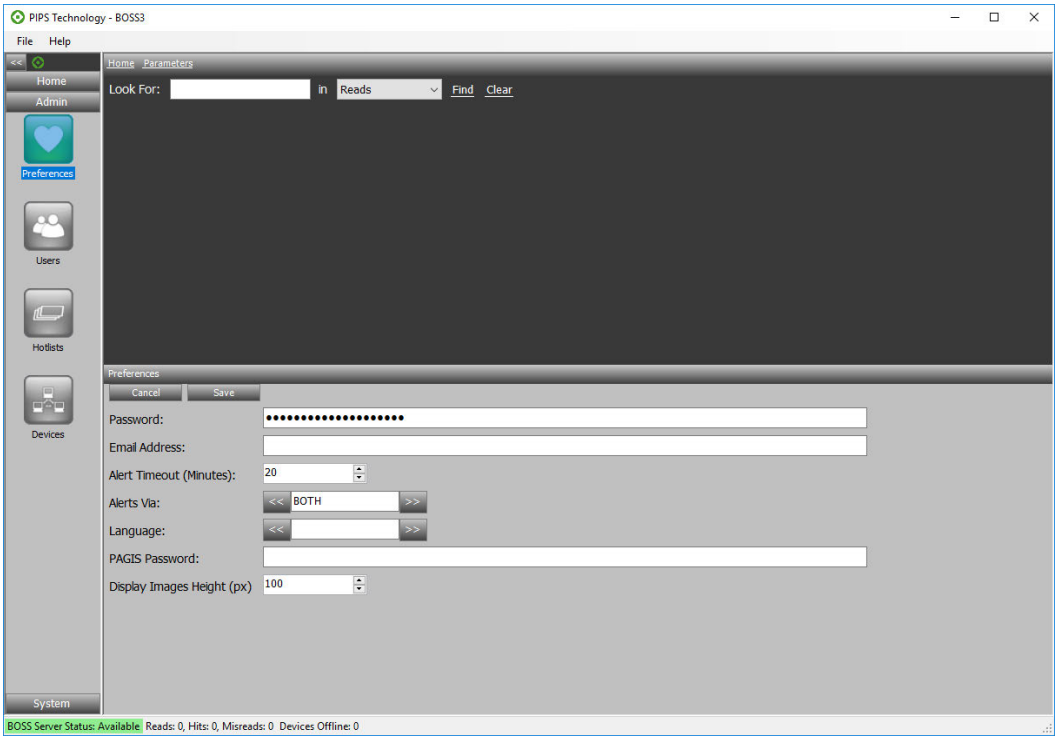
The previous sections have described how BOSS user security is designed, using roles, groups, and user accounts. This section presents a working example that integrates the information in this chapter.

A BOSS Administrator creates a role, names the role “Temporary Workers,” and defines the new role to have very limited permissions, as follows:

Reads	Read Only
Dispatch	Read Only
Users	No Access
Hotlists	No Access
Devices	No Access
System	No Access

Then the Administrator creates a group called “Temps.” When creating the group, a role is required. The Administrator selects the new role just created “Temporary Workers,” which assigns the permissions, defined above, to the new group.

Next, the Administrator creates a user account, “Jsmith,” for a temporary worker. While creating the new user, the Administrator is required to select a group for the user, and assigns the user to the “Temps” group just created. The user “Jsmith” has now been created with the permissions shown above because he belongs to the group called “Temps” and that group was assigned the “Temporary Workers” role.



As this example shows, this security design allows reusability of security roles because a BOSS Administrator can define a set of permissions in a role, and that role can be assigned to multiple groups.

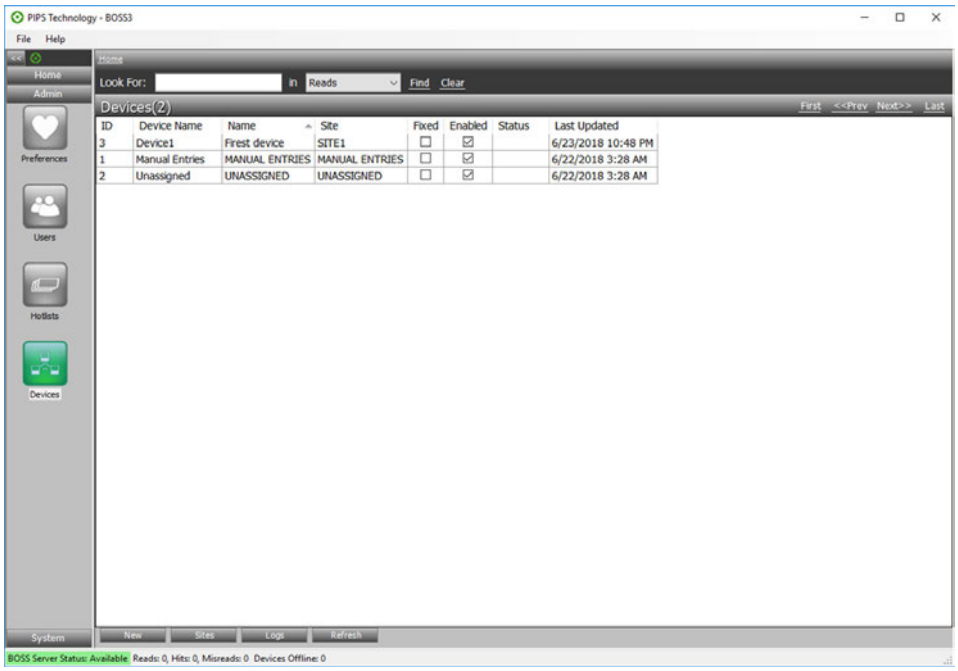
4.7 Preferences

The Preferences section allows for changing settings for the currently logged-on BOSS user, such as the password and email addresses.

4.7.1 Changing User Preferences

1. Select the **Admin** category on the Shortcut bar.
2. Click the **Preferences** shortcut. The Preferences Entry screen appears at the bottom of the Browse/Edit area.
3. Modify the preferences settings as desired and click the **Save** button.

Password – Login password for the BOSS user. For security purposes, the existing password does not display on screen.
Email Address – Email address or addresses associated with the user. BOSS alerts for the user are sent to the email addresses specified here. Multiple addresses should be separated with a comma.
Alert Timeout (Minutes) –The cutoff time for older hits to alert the user.
Alerts Via – A user can elect to receive BOSS alerts through the Dispatch screen, emails, or both.
Language – Language preference for the user. The default value is English.
PAGIS Password (PAGIS Password) – The Pagis Software password for the user.



Note: The user must be in a group that has been granted PAGIS permissions in order for the user to log in to PAGIS.

Display Images Height (px) – This setting defines the size in vertical pixels of the images (reads and hits) that will display for the user in the Dispatch and Reads Query sections.

5 DEVICES AND SITES

5.1 Devices

A BOSS device is any source that can input reads into the system. Typically, a device is a camera—either fixed or mobile. Another source for reads is manual entry, in which a BOSS user types the information for a read into the BOSS Dispatch screen .A new BOSS installation automatically contains two default devices, Manual Entries and Unassigned. A BOSS Administrator creates additional devices applicable to his/her organization.

5.1.1 Device Status

To see the current devices in your system with information about their status:

1. Select the **Admin** category on the Shortcut bar.
2. Click the **Devices** shortcut.

The devices will be listed in rows with the following column headings:

Device Name – The name assigned to the device, used in the device selections and is the description of the device. The list will always include Manual Entries and Unassigned.

Name – The name that is given to the device.

Site – The group of devices to which this device belongs. Sites can be grouped by geographical location or other criteria.

See Section 5.2, Sites.

Fixed – This box will be checked if the device is fixed camera, rather than a mobile camera. Enabled – This box will be checked if the device is currently enabled (see Section 5.1.4). Status – The Status field can display the following messages:

Device Added – If the device is newly added to the list, this message will display.

5.1.1 Default Devices (continued)

Offline – This device is a previously connected fixed camera that is not currently connected to BOSS.
Online Heartbeat – BOSS has detected a ping from a fixed camera.
Online Synced – The device's connection with BOSS has been established. This is shown for PAGIS mobile devices only and may not change when the device is offline.
Updated – Information has been sent from BOSS to the device, and the device is up to date.
Received Logins – Updates to the device included logins that were successfully sent to the device.
Received Source – BOSS has found the hotlist source file that it needs in order to send the updated hotlist to the device. Received Source may not be displayed due to timing or events.
Received Hotlist – The hotlist scheduled to be successfully sent has been sent to the device.
Received Hotplates – BOSS is sending "pages" of hotplates for a large hotlist, and the last page was successfully received.
Received Targets – The update to the device included targets that were successfully sent.

5.1.2 Defining a Device

Note: Devices will be defined automatically when a PIPS device, such as an ALPR camera, connects to BOSS the first time. Normally, there is no need to define devices in advance.

---

1. Select the **Admin** category on the Shortcut bar.
2. Click the **Devices** shortcut. A list of existing devices will appear in the Browse/Edit area.
3. Click the **New** button.
4. Enter a name for the new device. (The name must be at least three characters long.) Note that the name **CANNOT BE CHANGED** once the device has been created.
5. Enter a **Description** for the new device. (The description must be at least three characters long.)
6. Select **Mobile** or **Fixed** in the Type field. By default, **Fixed** is selected. To change the current selection, click the **left** or **right** arrow.
7. Select a **Site**. Click the **Select** button next to the Site field to display a list of all available sites. Click on the desired site in the list and click the **Save** button.

Note: In addition to the two default sites, Manual Entries and Unassigned, which are created automatically when a new BOSS system is installed, other sites can be created by an authorized BOSS user. See Section 5.2, Sites, for more information.

---

8. Select **Owners**. Owners are groups that can access this device. For PAGIS units, user logins are sent only to devices where the group is an owner of the device. Click the **Select** button next to the Owners field to display a list of all BOSS groups. Select each desired group by clicking the checkbox. When the desired groups are selected, click the **Save** button. The group name(s) selected will be displayed in the Owners field.

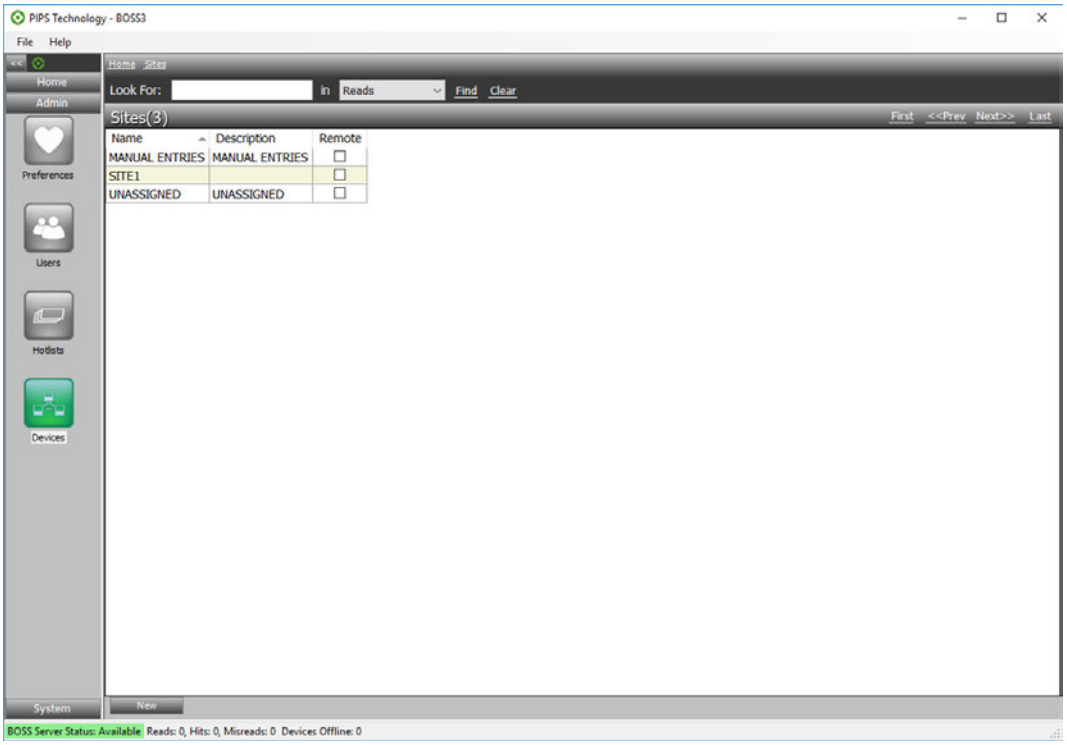
9. Select **Latitude** and **Longitude** values for the geographical location of a device by typing in a value or using the up and down controls on each field to increase or decrease the value. Note that some devices, such as PAGIS units with a GPS attached, will automatically send the latitude and longitude of the device to BOSS.
10. Click the **Advanced** button to display additional options for the device.
    No Reads Alert – Defines how long the device must remain with no reads coming in before the system shows the device as offline.
    Alert Email – The email address or addresses to which alerts associated with this device should be sent.
    Retain Reads – The length of time that reads from this device should be saved in the BOSS database. The Retain Reads setting must be longer or equal to the Retain Images setting.
    Retain Images – The length of time that pictures captured by this device should be saved in the BOSS database.
    Retain Hits – The length of time that hits captured by this device should be saved in the BOSS database.
    SpikeStore – The PIPS High Resolution ANPR/ALPR Camera P382 and the PIPS Compact ANPR/ALPR Camera P372 (formerly the Spike P382 and P372 cameras) allow captured images to be stored in an on-board USB flash drive to be retrieved on demand. Setting a device as a SpikeStore device causes BOSS to attempt to retrieve images from the storage device when the read is requested for viewing.
11. When Advanced Options have been set as desired, click **Back** to return to the New Device screen.
12. Click the **Save** button to complete creation of the new device. The new device will now appear in the devices list above.

5.1.3 Editing a Device

1. Select the **Admin** category on the Shortcut bar.
2. Click the **Devices** shortcut. A listing of all devices appears in the Browse/Edit area.
3. Click the desired device to select it. Details for the selected device appear in the Browse/Edit area.
4. Click the **Edit** button.
5. The Device Edit screen appears in the lower portion of the screen.
6. Modify fields as desired and click the **Save** button.

5.1.4 Enabling and Disabling a Device

1. Select the **Admin** category on the Shortcut bar.
2. Click the **Devices** shortcut. A listing of all devices appears in the Browse/Edit area.
3. Click the desired device to select it. Details for the selected device appear in the Browse/Edit area.
4. Click the **Edit** button.
5. The **Device** Edit screen appears in the lower half of the screen.
6. Click the **Disable/Enable** button. The change will immediately close the edit window and return to the Devices screen. It will also take effect immediately.



5.1.5 Deleting a Device

Note: It is strongly recommended that **devices are never deleted.** If a device is deleted, queries can no longer be performed using the device as a criterion. Instead of deleting a device, it should be disabled or given a new description.

1. Select the **Admin** category on the Shortcut bar.
2. Click the **Devices** shortcut. (A listing of all existing devices will display in the Browse/Edit area).
3. Click the desired device in the listing.
4. Click the **Edit** button.
5. Click the **Delete** button at the bottom of the Browse/Edit area.
6. Click **Yes** to confirm the operation.

5.2 Sites

A site is a mechanism for organizing devices. This allows a BOSS Administrator to arrange devices into groups according to convenience, such as geographical area or a facility. The ability to group or arrange devices can be quite useful in large installations where there are many devices. Each device created must be assigned to a site.

5.2.1 Default Sites

A new BOSS site automatically contains two default sites, Manual Entries and Unassigned. Normally, a BOSS Administrator will want to create additional sites applicable to an organization.

5.2.2 Creating a Site

1. Select the **Admin** category on the Shortcut bar.
2. Click the **Devices** shortcut.
3. Click the **Sites** button at the bottom of the screen. A list of existing sites will appear in the Browse/Edit area.
4. Click the **New** button at the bottom of the screen.
5. Enter a name for the new site. (The name must be at least three characters long.) Note that the name cannot be changed once the site is created.
6. Enter a description for the site. (The description must be at least three characters long.)
7. Select the parent site for the site. BOSS allows organizing sites into tree-like hierarchies. Click the **Select** button next to the Belongs To field, and select one site from the list. Click the **Save** button to complete the selection. The site name will appear in the Belongs to field.
8. Check the **Remote** option to designate the site as a remote site. (Remote sites are explained in Section 6, BOSS Data Sharing.)

5.2.3 Deleting a Site

Note: It is strongly recommended that sites are never deleted. If a site is deleted, queries can no longer be performed using the site as a criterion. Instead of deleting a site, it is recommended that devices assigned to it should be moved to another site.

---

1. Select the **Admin** category on the Shortcut bar.
2. Click the **Devices** shortcut. A listing of all existing devices will display in the Browse/Edit area.
3. Click the **Sites** button at the bottom of the screen. A listing of existing sites will appear in the Browse/Edit area.
4. Click the desired site in the listing and click the **Edit** button.
5. Click the **Delete** button at the bottom of the Browse/Edit area. Click **Yes** to confirm the operation.

6 BOSS DATA SHARING

BOSS allows "linking" of multiple BOSS systems for data-sharing purposes. When a user issues a query from the Smart Client application that includes a remote site, the query is submitted to the local BOSS server, which in turn makes a query to the remote BOSS server(s). The combined results from all the sites are then returned to the Smart Client. **Data from remote sites is not stored in the local BOSS server.**

The following configuration steps need to be taken to permit BOSS data sharing:

6.1 Configuring BOSS to Allow Remote BOSS Queries

1. Create a BOSS user for remote access. This user account is a "proxy" the local BOSS server will use for all requests from a remote site. This user account will have "Reads" privileges by default; no other privileges need to be given. The user must be assigned to a remote group. (See Section 4.4, Groups, for information about flagging a group as remote.)
2. Give the username and password for this "proxy" user to the BOSS Administrator at the remote BOSS system. The remote BOSS will need to be configured to access this BOSS system, described in the next section.

Note: It is best to create a dedicated user account for remote sites—one that will not be used by an actual user to log in and access the application.

6.2 Configuring BOSS to Access a Remote BOSS Server

1. Obtain username and password from BOSS Administrator at the remote site.
2. Create a site for the remote BOSS server and select the **Remote** option.
3. Enter the remote site IP address and BOSS service port (23032 by default).
4. Add the username and password provided.
5. For each group that is allowed to query the remote BOSS server, assign the remote server to the user via the **Servers Access** option. (See Section 4.4, Groups, for information on selecting Servers Access.)
6. Log out of the application.
7. Log back on using the provided username and password. The Remote BOSS server can then be queried by selecting the desired servers in the Reads Query screen.

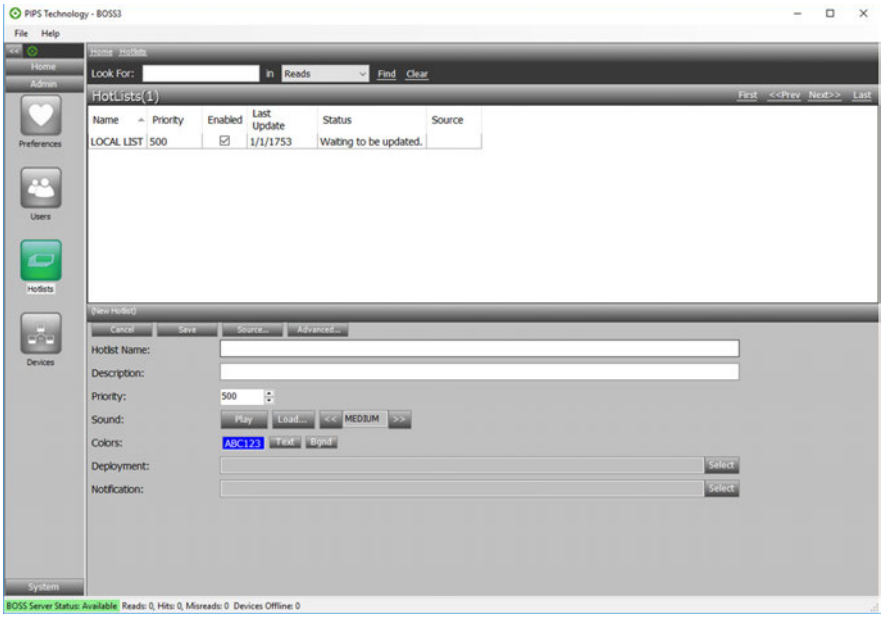
Note: BOSS version 3.2 and above only supports data sharing with servers running BOSS 3.0 and above.

---

7 HOTLISTS

A hotlist is a database that contains license plates of interest. When reads from license plate readers arrive at the BOSS server application, they are compared against hotlist records to find matches. Various hotlists can be enabled on a BOSS system and used in this comparison. In addition, hotlists can be assigned individually to specific devices. Only reads from those devices will be compared against these hotlist records. Typical hotlists include stolen vehicles, amber alerts, wants and warrants, etc. When the system reads in a plate that is determined to be a match to a hotlist entry in a hotlist, the BOSS application informs the user either with an alert sound and a pop-up window displaying a picture of the vehicle, or via email, depending on the user's preferences (see "Alerts via" in Section 5.3, Preferences).

A hotlist can be a database imported from an external source, such as another law enforcement agency. It can also be a list created by the local BOSS Administrator. For the BOSS server application to be able to understand how to import the hotlist records into the database, there are three different format types that exist in a BOSS system. In addition, there are several specific formats that are pre-defined and available by default when a new BOSS system is installed (see Section 8, Hotlist Formatters).



7.1 Creating a New Hotlist

There are three general areas to complete when creating a new hotlist:

- Configure basic settings
- Define a source file location with credentials when necessary.
- Define advanced settings (optional).

7.1.1 Configuring Basic Hotlist Settings

1. Select the **Admin** category on the Shortcut bar.
2. Click the **Hotlists** button. Currently existing Hotlists appear in the Browse/Edit area.
3. Click the **New** button at the bottom of the Browse/Edit area. The New Hotlist Entry form appears.

4. Enter a **Hotlist Name** for the hotlist. It must be at least three alphanumeric characters, and it cannot be an existing hotlist name.
5. Enter a **Description** for the hotlist (optional).

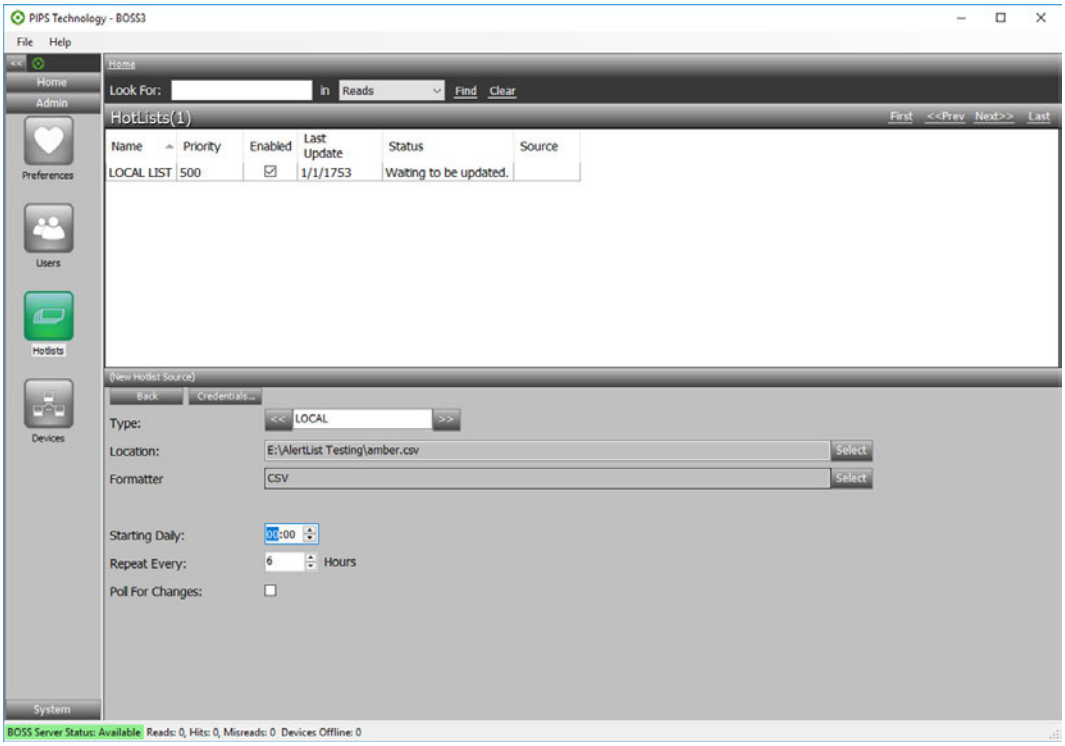
6. Select a **Priority** for the hotlist. When there are multiple hits/alerts, the priority determines which alert will occur first. (The lower the number, the higher the priority.)
7. Select a **Sound** for alerts resulting from this hotlist (optional). Click the **Load** button to select a wave sound file (*.wav). To test the selected sound, click the Play button. Optionally, one of the three default sounds may be selected, **Low, Medium**, or **High** alert.
8. Select **Colors** for the alert if desired (optional). The default is white text on a royal blue background. Custom color settings affect the entries in dispatch. The background color also applies to alerts given in PAGIS.
9. Click the **Text** button to select a color for the text.
10. Click the **Bgnd** (Background) button to select a color for the background.

Note: Currently selected text and background colors are displayed in the sample box (showing "ABC123").

---

11. Select devices for **Deployment**. Click the **Select** button to select devices from the list of those currently available. Click the checkbox next to a device in order to select it. When desired devices are checked, click the **Save** button to make the selection. One or more devices can be selected, and they will be displayed in the Deployment field.

Note: Deployment means distributing the hotlist to a device or devices. Only the devices where a hotlist is deployed will produce hits from the hotlist.



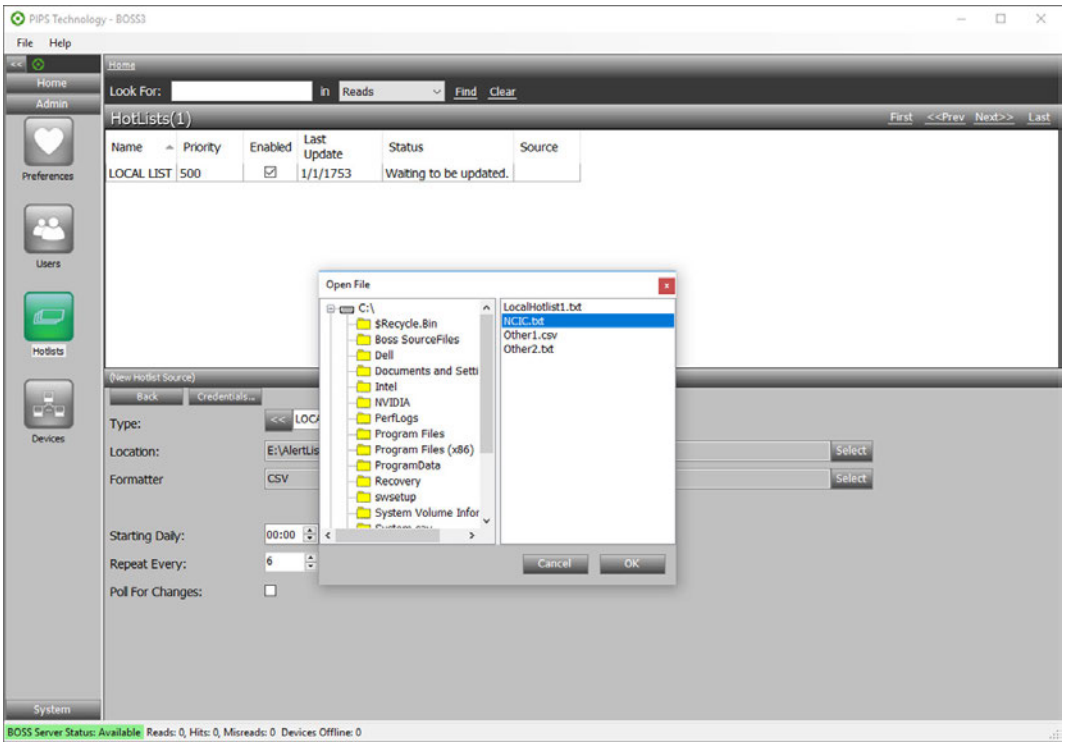
---

12. Select groups for Notification. Click the **Select** button to see a list of all BOSS groups. Click the checkbox next to a group to select the group. When you select a parent group, child groups are automatically selected. When desired groups are checked, click the **Save** button to make the selection.

Note: In order to receive alerts for hits on the hotlist, the user must be in the notification list of the hotlist. For more information see Section 7.1.5, Defining Hotlist Advanced Options.

7.1.2 Defining the Hotlist Data Source

1. On the New Hotlist Entry screen, click the **Source**... button to open the screen shown in the lower half of the following image:



2. Choose the appropriate entries for each of the fields that describe the new hotlist:
   Type (**Network** or **Local**) – A local source means that the file is stored on the BOSS server's Windows file system. A network source means that the hotlist source resides outside the BOSS server.

Note: If a Local source is selected, the source file location (folder) must be accessible to the Windows process running the BOSS server application ("PIPS BOSS3" Windows service).

Location – Enter the location of the hotlist file. Click the **Select** button to the right of the location field.

For a local source, a file dialog will display, allowing you to navigate to a path and select a file.

For a network source, select one of the default locations displayed (if applicable), **or** type in the location of the source:

HTTP – The location format must be in Hypertext Transfer Protocol (HTTP) format: “http://server:port/path.” There are a few predefined HTTP locations (such as CA DOJ) included in BOSS. These locations can be accessed with the **Select** button. Boss also supports FTP & SFTP, examples : “ftp://server:21/path” , : ftp://server:22/path.

Remote BOSS System – The location format must be “boss://server:port/hotlist,” where “hotlist” is the hotlist name on the remote system.

Note: The remote system hotlist name **MUST** be alphanumeric and **CANNOT** contain any spaces.

Formatter – Formatter defines the way a hotlist database file is parsed into discrete fields. Click the **Select** button next to the Formatter field. A list of available formatters appears. Click on the desired formatter and click the **Save** button to make the selection. The name of the selected formatter will appear in the field.

Note: Normally one of the several default formatters included with BOSS is sufficient. A new custom formatter can be created if necessary. See Section 8.1, Creating a New Formatter for Hotlists, for more information.

7.1.2 Defining the Hotlist Data Source (continued)

Starting Daily – Specify the time of day the hotlist should begin updating each day. The time is formatted as hours:minutes in the 24-hour clock, i.e., between 00:00 and 24:00 can be selected.
Repeat Every – Specify the time interval, in hours (1 – 24), between updates.

OR

Poll for Changes – If you choose this setting, BOSS will check for updates to the hotlist approximately every 30 seconds. When this option is selected, the **Starting Daily** and **Repeat Every** options are disabled.

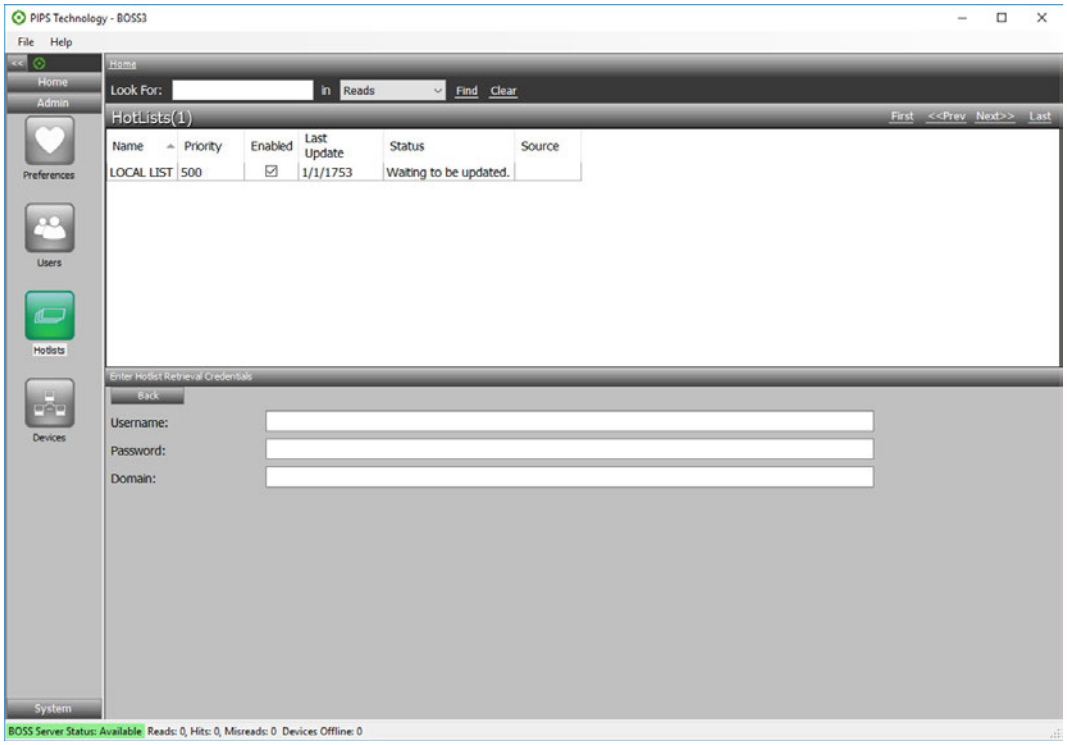
Note: If **Poll for Changes** is selected, and the hotlist source resides on the network, BOSS will attempt to make a network connection every 30 seconds. This frequency may add significantly to network traffic. Use with caution.

7.1.3 ZIP Compressed Hotlist Files

BOSS will automatically recognize and extract a hotlist data file contained in a ZIP archive file, such as Windows Explorer compressed (zipped) folder.

Note: There can be only one file in the ZIP archive.

7.1.4 Defining Hotlist Source Credentials



Some sources will require credential settings (e.g., login information) in order to allow BOSS to access that data. To enter the **Credentials** Settings screen from the Hotlist Source screen, click the Credentials button.
The credentials depend on the source type as follows:

Network-HTTP – If the HTTP (website) source defined requires login information, it should be entered in the Credentials Setting screen. This information will include username and password. The domain field may be necessary as well. Consult the Administrator of the HTTP source for required login information.

Network-Remote BOSS system – A username and password valid on the remote BOSS system must be entered (as in remote sites configuration, described in Section 6.0, BOSS Data Sharing). Consult the Administrator of the remote BOSS system for a username and password.

To set credentials for a source:

1. Click the **Credentials** button. The Credential Input screen appears.
2. Enter the username, password, and domain information applicable to the source you are specifying.
3. Click the **Back** button to return to the Source Entry form.
4. Click the **Back** button again to return to the New Hotlist Entry screen.

Advanced Options are values that allow you to further define details of the new Hotlist. To access the Advanced Options, click the **Advanced**... button.

Covert – A covert hotlist is one that contains sensitive information that should only be available to certain user groups. The effects of defining a hotlist as covert are as follows:

- A Hit on covert hotlist will not be alerted to users in mobile vehicle “Pagis”, unless the logged-in user is a Pagis administrator.
- A hit on the covert hotlist will not be alerted in the Boss application, regardless of the user’s alert preference. Hit alerts for covert hotlist can be send via email.
- When reads are queried, git information on covert hotlist will be displayed only to users in the Notification list for the hotlist. Other users will see that the read is a hit, but no information will be shown.
- Hit information for hits from covert hotlist will not be sent to remote Boss servers.

Whitelist – This option, when selected, defines the hotlist to be a whitelist, which works in reverse to a normal hotlist. A whitelist defines a list of plates that are **authorized** and not of concern. When a whitelist is active, license plates read that do **not** match an entry on the list will trigger a hit/alert.

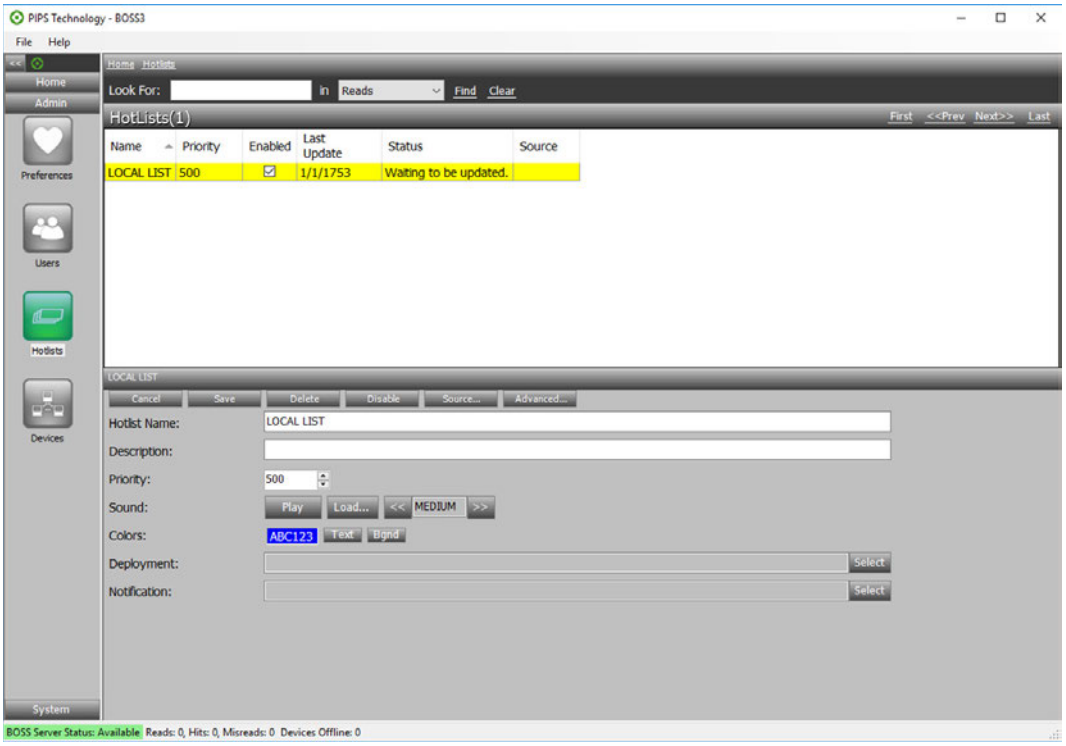
7.1.5 Defining Hotlist Advanced Options (continued)

An example of whitelist use might be a secure parking lot where fixed camera devices are monitoring vehicles entering. Authorized plates will match entries in a whitelist hotlist. If a plate is read that does not match an entry in the whitelist, an alert occurs.

Whitelists and hotlists can be active simultaneously for a device.

Note: Whitelist support in PAGIS requires a separate license. If you do not have the license and wish to use whitelists, please contact your PIPS sales representative for further information.

Ext Trigger – This option, when selected, sets the External Trigger flag on a hotlist when it is passed to PAGIS. It is only supported in PAGIS version 2.6.6 or above and will have no effect on earlier versions of the software.
One Time – This option, when selected, specifies that the hotlist data should only be accessed from its defined source one time; no subsequent updating will occur after the initial import.
Alert Timeout – This setting allows you to define how current a hit (from this hotlist) must be in order to cause an alert. This primarily pertains to information coming in from mobile units, where there may be a large delay. Alert Timeout can be specified in minutes, hours, days, or months.
Delete Inactive – BOSS updates hotlists in an incremental manner, and instead of deleting hotlist entries that no longer exist, non-existent entries are marked as "inactive." If the entry subsequently becomes valid, the entry is marked as active again. The Delete Inactive value determines how long inactive entries are kept in the BOSS hotlist database.
Notify Email – One or multiple email addresses may be defined to receive an alert when there is a hit. Multiple



Note: If PAGIS mobile units are used, this value should be set to the longest time between begin shift downloads to PAGIS.

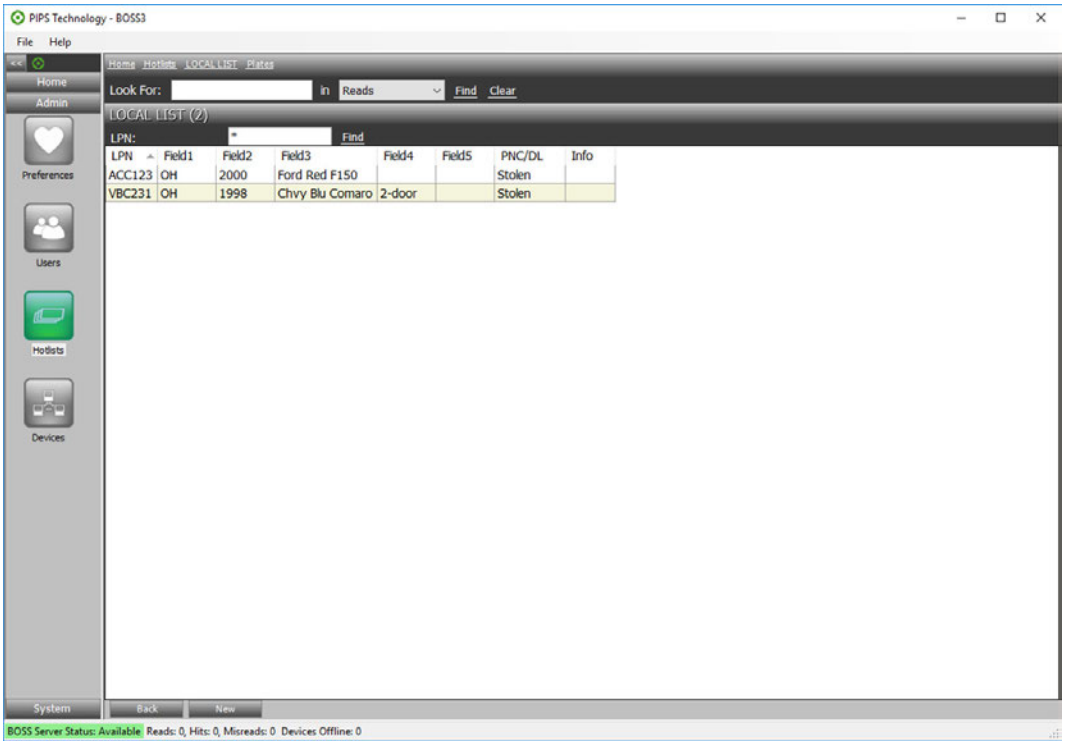
email addresses can be entered in the field, separated by a comma.
Remote Alerts To – Select the remote sites in which to send alerts. When a BOSS system sends an alert to a remote system, it is sent as a read; the remote BOSS system then determines whether to treat the read as a hit.

Note: This setting is only applicable if remote sites are defined.

Expires – Determines the date that the hotlist will stop importing data from its source. For a hotlist that is intended to be permanent, leave the expiration at the default value, 30 years from current date.

7.2 Enabling and Disabling a Hotlist

1. Select the **Admin** category on the Shortcut bar.
2. Click the **Hotlists** shortcut. A list of all hotlists appears in the Browse/Edit area.
3. Click the desired hotlist. Details for the selected hotlist appear in the Browse/Edit area.
4. Click the **Edit** button.
5. The Hotlist Edit screen appears in the lower half of the screen.
6. Click the **Disable** or **Enable** button.



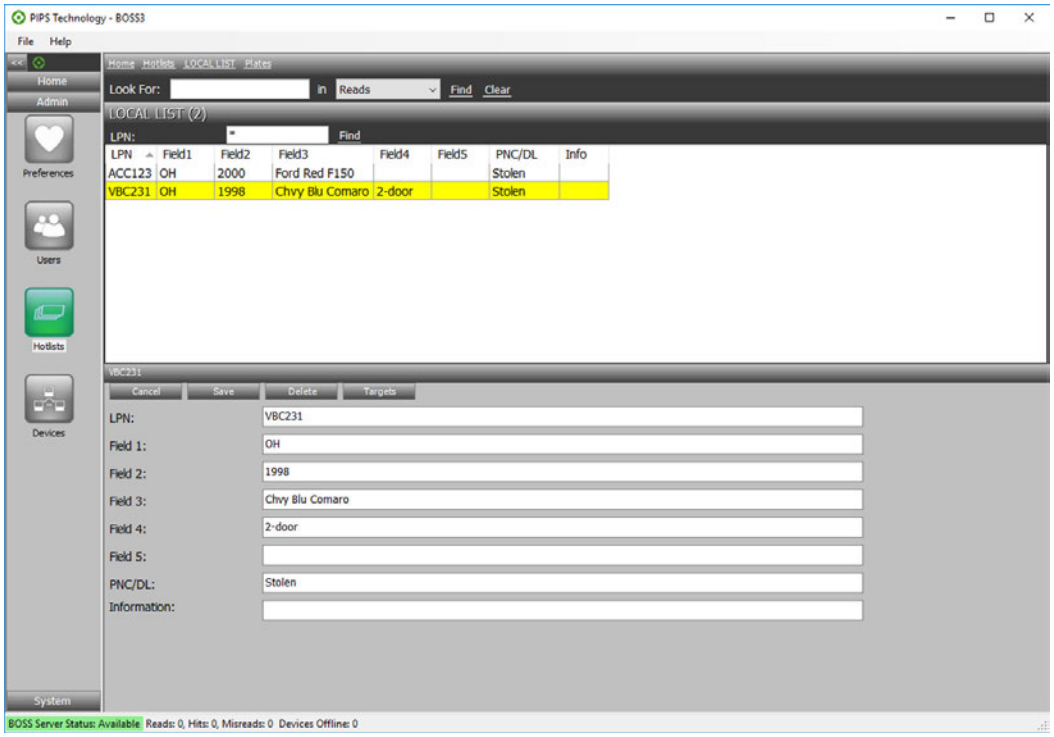
7.3 Modifying Hotlist Entries

BOSS allows viewing, adding, editing, and deleting hotlist entries.

Note: If the hotlist is set to update automatically, any changes to that hotlist made from within the BOSS User Interface application will be lost at the next automatic update.

7.3.1 Querying Hotlist Entries

1. Select the **Admin** category on the Shortcut bar.
2. Click the **Hotlists** shortcut. A listing of all hotlists appears in the Browse/Edit area.
3. Click the desired hotlist. Details for the selected hotlist appear in the Browse/Edit area.
4. Click the **Plates** button.
5. The Hotlist Plates screen will be displayed.



6. Type in the full or partial plate text to search for in the LPN field. (Wildcard searches are supported. See Section 11.1, Wildcards, for more information.)
7. Click on **Find**. License plates that match the criteria will be displayed. Note that only the first 1,000 matching license plates will be shown.

7.3.2 Editing a Hotlist Entry

1. Retrieve hotlist plates as instructed in the previous section.
2. Click on the row showing the desired plate.
3. The Plate Edit form will be displayed at the bottom of the screen.
4. Edit the field values as desired.
5. Click **Save** to save changes.

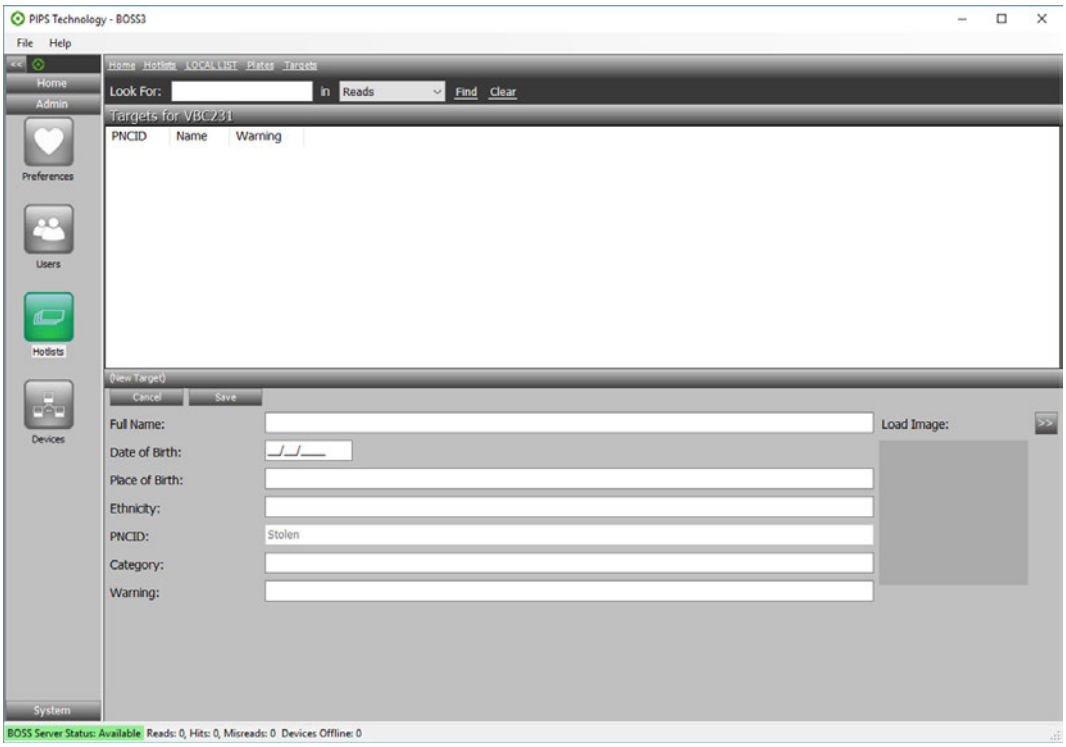
Note: Manually edited hotlist entries will be lost the next time the hotlist is updated.

7.3.3 Adding a Hotlist Entry Manually

1. Select the **Admin** category on the Shortcut bar.
2. Click the **Hotlists** shortcut. A listing of all hotlists appears in the Browse/Edit area.
3. Click the desired hotlist to select. Details for the selected hotlist appear in the Browse/Edit area.
4. Click the **Plates** button.
5. Click the **New** button. The Plate Edit form will be displayed at the bottom of the screen.
6. Enter the **LPN** (mandatory) and other fields (optional).
7. Click **Save** to save changes.

Note: Manually edited hotlist entries will be lost the next time the hotlist is updated.

7.3.4 Deleting a Hotlist Entry



1. Retrieve hotlist plates as instructed in the Querying Hotlists Entries section.
2. Click on the row showing the desired plate. The Plate Edit form will be displayed at the bottom of the screen.
3. Click the **Delete** button.
4. Click **Yes** to confirm the deletion.

Note: Manually deleted hotlist entries may be re-added the next time the hotlist is updated.

7.4 Targets

Targets are individuals of interest associated with a license plate. Target information is downloaded to the PAGIS mobile application from BOSS.

1. Retrieve hotlist plates as instructed in Section 7.3.1, Querying Hotlists Entries.
2. Click on the row showing the desired plate.
3. The Plate Edit form will be displayed at the bottom of the screen.
4. Click the **Targets** button. Information about the target will display.

7.4.1 Creating a New Target

1. Click the **New** button.
2. The Target Edit form will be displayed.
3. Fill in the fields, listed below, with appropriate values.

   Full Name – The first and last name of the target. Date of Birth – The date of birth of the target.

   Place of Birth – The location where the target was born.

   Ethnicity – The ethnicity (race or national origin) of the target.

   PNCID – This field can be used to enter any type of identification number that is available. In the UK this is the Police National Computer identification number of the target. This field is linked to the PNCID field in the hotlist information in the PAGIS application. *See the sample INI configuration file in Section 5 of the Pagis Software User's Manual.*

   Category – The category of the target, such as Felon, Suspect, etc.

   Warning – The warning information to display to the officer.

   Load Image – An image of the target, such as a DMV photo or "mugshot," can also be associated with the Target record. Upload an image by clicking on the Select button and browsing to the image file. Supported formats include JPG, GIF, or BMP.
4. Click the **Save** button.

7.4.2 Deleting a Target

1. Access the Targets screen as described above.
2. Click the row containing the target to be deleted.
3. The Target Edit form will be displayed.
4. Click the **Delete** button.
5. Click **Yes** to confirm deletion.

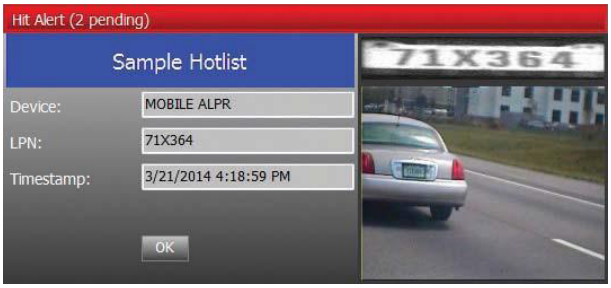
8 HOTLIST FORMATTERS

Hotlist Formatters define the structure of source data that is imported into BOSS Hotlists. BOSS includes several default formatters when the software is installed. There are three types of formatters:

CSV (comma-separated values) – A flat text file containing one line for every record. Each field in the record is separated by a comma.

Fixed Length – A flat text file containing records that are all the same length. No separator characters are used to determine where each field ends and another begins, but rather, field and record lengths are known up front. In a fixed length file, padding spaces are used where necessary, to accomplish the correct field length.

NCIC (United States National Crime Information Center) – The NCIC database is a computerized index of criminal justice information (i.e., criminal record history information, fugitives, stolen properties, missing persons, etc.), that is available to law enforcement agencies 24 hours a day, 365 days a year. Several NCIC import sources/formats exist within BOSS.



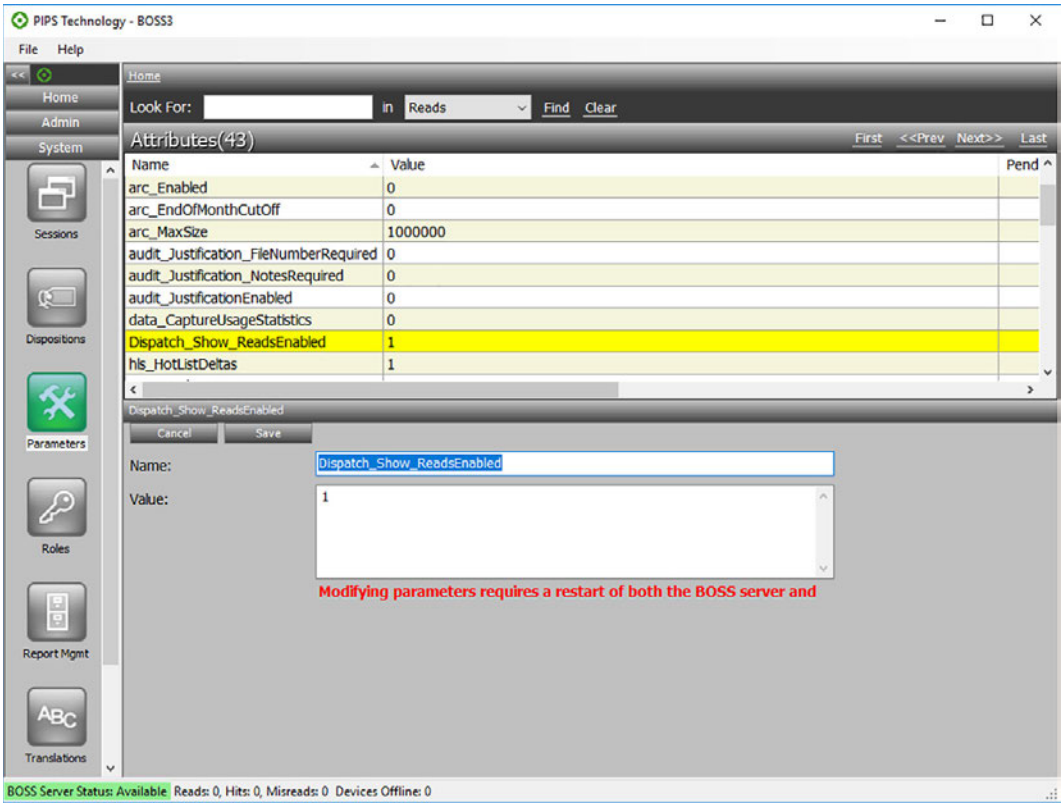
8.1 Creating a New Formatter for Hotlists

Normally, when creating a new hotlist, you will find that one of the default formatters can be used. However, BOSS does give you the flexibility to create new hotlist formatters. Creating a new formatter or modifying an existing formatter should be approached with caution and is beyond the scope of this manual. For more information, please contact PIPS™ Technical Support.

9 ALERTS

BOSS can provide real-time alerts on-screen, via the BOSS User Interface application, or through email. In order to receive alerts through the BOSS application, **the logged-on user must be in a group that is assigned the Dispatch permission**. Email alerts can be sent to any BOSS user or email recipient.

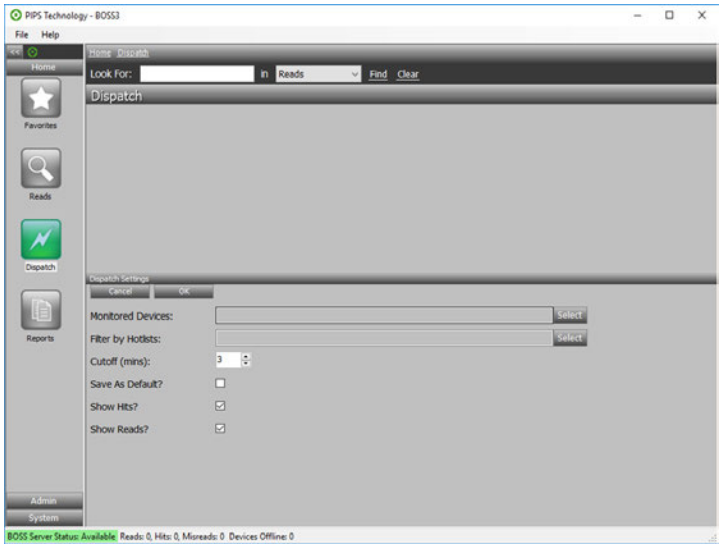
A real-time alert for a hit can pop up on the screen at any time when the BOSS application is running, regardless of which screen the user has active. A sound associated with the hit will be played. Alerts will be queued until the user acknowledges them by clicking **OK**. Real-time alerting in the BOSS application can be turned off by clicking on the **Alerts** toggle button on the BOSS Home screen. The settings for real-time alerts can be modified through the Dispatch screen, (see Section 10, Dispatch).



10 DISPATCH

The Dispatch screen is a tool often used by first responder dispatchers. It enables them to easily view hits, monitor reads, and correct license plates as they enter the BOSS system. The information displayed is as near to real time as possible. For ease of viewing, there are three configurations that can be set:

- If only the hits are set to display, they will appear on the whole screen.
- Similarly, if only the reads are set to display, they appear on the whole screen.
- Of the dispatcher is monitoring both hits and reads, then the hits will be displayed on the top half of the screen and the reads will be displayed on bottom half.



Note: By default, the ability to monitor reads via dispatch is disabled for new Boss installations, this feature can be turned back on by editing the Boss parameter “Dispatch_Show_ReadsEnabled” and setting the value to 1 for on. The Boss service must be restated for this to take effect.

10.1 Dispatch Settings

Dispatch Settings allow you to choose the information shown on the Dispatch screen.

1. Select the **Home** category in the Shortcut bar.
2. Click the **Dispatch** shortcut.
3. Click the **Settings** button in the bottom of the Browse/Edit area.

4. The following settings are available on the Dispatch screen. Change these settings as desired:

   Monitored Devices – Camera sources can be selected or deselected from a pick list to control which ones will supply reads (and resulting hits) to the Dispatch screen. Individual dispatchers can focus on particular camera inputs by selecting/deselecting any combination of sources (one, multiple, or all) for monitoring.

   In large BOSS systems, it may not be practical for a single dispatcher to monitor all sources simultaneously. An organization may choose to assign individual dispatcher personnel to different sources or may select to focus on particular sources during certain time periods or events.

   Filter by Hotlists – Hotlists may be selected to only show hits from designated hotlists. If there are no hotlists selected, hits from the monitored devices will be displayed.

   Cutoff (mins) – The cutoff setting determines how current from the present time a hit or read must be in order to display on the dispatch screen This setting determines the number of minutes before data is discarded from the on-screen display. The maximum time is 10 minutes.

   Save As Default – If checked, the current settings are saved and restored the next time the user logs in. Note that selected devices will always default to the devices where the user is configured to receive notifications in the Hotlist settings. See additional information on notifications in Section 7.1.1, Configuring Basic Hotlist Settings.

   Show Hits? – If checked, hits will display in rows in the top section of the Dispatch screen as they occur. If this option is deselected, rows of hits are not displayed in this section of the Dispatch screen. However, pop-up alerts will still display for hits, regardless of this setting.

Note: If the Alert Toggle button is set to the Off position, hits and reads will not display in the Dispatch screen. See Section 9, Alerts, for additional information.

   Show Reads? – If checked, all reads included in the devices selected in the Monitored Devices field display in the dispatch screen. By default, this option is not selected.

Note: Monitoring reads may slow down the BOSS server. It is recommended that reads are only monitored for diagnostics purposes.

5. Click the **Save** button for the changes to take effect.

10.2 Dispatch Hits

For each row, the columns displayed are:

Device – The device where the read originated.
LPN – The license plate characters read in by a camera or manually entered by a user.
Timestamp – Date and time when the read occurred.
Syntax – The state or region of the plate, if available.
Misread – If checked, indicates that the hit resulted from a read that was marked as a misread. Manual – If checked, indicates that the hit resulted from a manual entry (put in by a BOSS user). Patch – A thumbnail image of the license plate.
Overview – Color overview picture of the vehicle.
Hotlist – The name of the hotlist from which the hit occurred.
Field1 ... Field5 – Fields originating from the hotlist. The content and meaning of these fields vary depending on the composition of the hotlist.
PNC/DL – This field can be used for a driver's license (DL) number in US installations, but primarily used in United Kingdom installations for storing the UK Police National Computer identification number.
Info – Commonly contains additional text associated with the hit record. When the hotlist source contains additional fields, the information from those fields is all stored in this one field.
Priority – Priority assigned to the hotlist, with a lower number being given a higher priority.
Annotation – Notes associated with the read. Annotations are entered by BOSS users.

10.3 Dispatch Reads

For each row, the columns displayed are:

Device – The device where the read originated.
LPN – The license plate characters read in by a camera or manually entered by a user.
Syntax – The state or region of the plate, if available. Timestamp – The date and time when the read occurred. Patch – A thumbnail image of the license plate.
Overview – Color overview image of the vehicle.
Misread – If checked, indicates that this record was marked as a misread.
Hit – If checked, indicates this read resulted in a hit.
Manual – If checked, indicates this read was input manually by a BOSS user, rather than originating from a device.
Annotation – Notes associated with the read. Annotations are entered by BOSS users.

10.4 Manual Entries

There may be times when a read must be manually entered or when a camera does not correctly read a plate. For example, if there was an obstruction between the camera and the plate, then characters may be missed in the read. For this reason, manual entries can be completed by an authorized user via the Dispatch screen.

10.4.1 Adding a Manual Read

1. From the Dispatch screen, click the **Add** button. The Manual Entry screen appears in the lower half of the Browse/Edit area.

Note: The **Add** button will only be present if the logged in user has the Edit Access permission to reads.

2. Enter the plate characters in the LPN field.
3. Click the **Select** button to the right of the disposition field.
4. Select the desired disposition(s) and click the **Save** button to complete the selection.
5. Click the **Save** button to finish saving the manual entry. If the "Manual Entries" device is not being monitored, the manual entry will not appear in the Dispatch screen.

10.4.2 Correcting Reads

1. From the Dispatch screen, click the Add button. The Manual Entry screen appears in the lower half of the Browse/Edit area.
2. Enter the plate characters in the LPN field.
3. Click the **Select** button to the right of the disposition field.
4. Select the desired disposition(s) and click the **Save** button to complete the selection.
5. Click the **Save** button to finish saving the manual entry. If the "Manual Entries" device is not being monitored, the manual entry will not appear in the Dispatch screen.

11 QUERYING STORED DATA

The Reads screen allows for searching and viewing past read records on a local server or on a remote server that has granted access. Reads can be quickly searched by entering a license plate number. This screen also allows for more advanced queries where data can be filtered based on additional fields such as date ranges, location, and radius. Additionally, the Reads screen allows you to perform multiple queries with the use of tabs.

For the queried results returned, there are no limits to the number returned from a local server. To limit the impact on outside systems, there is a limit of 1,000 records returned from a remote server. A maximum of 1000 records will be displayed per page.

Note: Depending on factors such as the size of the BOSS database, the speed of the server, the bandwidth of the connection between client and server, and the parameters of the query, there may be a delay before the results are displayed. A status bar will display that shows that the query progress.

11.1 Wildcards

Wildcards are special characters that represent any alphanumeric character and can be used in searches and queries. Wildcards can make finding a match easier because they can define a portion of the criteria to be ambiguous. Wildcards supported in BOSS are described in the following table.

WILDCARD USED	REPRESENTS
a%	Any values that start with the letter “a”
a	Any values containing “a”
% or *	Any/all values
a_	Any values that are exactly two characters long and start with “a”
_a*b	Any values that have “a” as the second letter and end with “b”
[abc]*	Any values that start with “a”, “b” or “c”

11.2 Quick Search Bar

The Quick Search bar is always visible and available on the top of the BOSS screen regardless of the category or shortcut currently selected. This feature allows for quick, simple searches of various BOSS data.

1. Type the value to search for in the Look For field. This value can include wildcard characters. Multiple values can be entered separated by a comma (e.g., ABC123, XYZ234). However, wildcard values cannot be used when searching for multiple values.
2. In the “In” drop-down box select an area to search. The available options are **Reads**, **Hotlists**, **Users**, **Group Users**, **Groups**, **Devices**, and **Sites**. These areas are described below.
3. Click the Find link to initiate the search. The results will be displayed in the Browse/Edit area of the screen.

11.2.1 Quick Search Fields

When performing a query using the quick search feature, keep in mind that the search is performed in one significant area that can be selected. The search is then run against the significant field in that area, not all fields in that area. For example, when performing a quick search in Users, the text entered is compared against the Username field of all user records.

However, it is not compared to the display names for users. The following is a list of the fields used in the Quick Search:

SEARCH IN AREA	FIELD USED FOR SEARCH
Reads	LPN
Users	Username
Groups	Group Name
Site	Site Name
Hotlists	Hotlist Name
Group Users	Group Name
Devices	Device Name

11.3 Query Result Navigation Icons

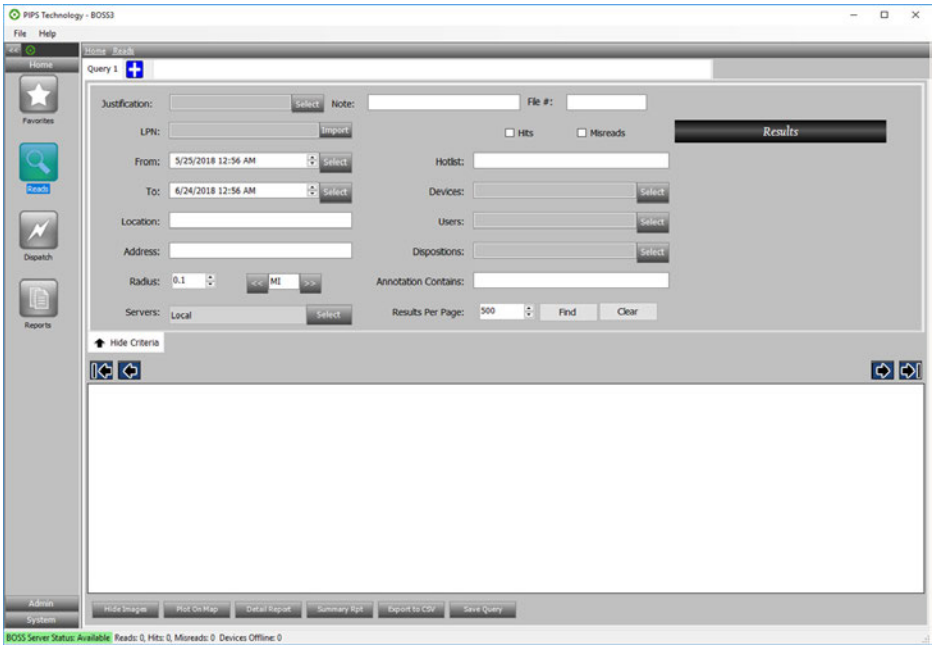
Just above the query results are navigation icons that facilitate moving through the data results. These icons can be very useful for larger result sets, providing an easy way to move through records.

Move to the very beginning of the data results, i.e., the first record.

Move forward through the data results.

Move backward through the data results.

Move the very end of the data results, i.e., the last record.



11.4 Advanced Reads Queries

The Reads screen allows for searching and viewing past read records. Reads can be quickly searched by entering a license plate number. The Reads screen also allows for more advanced read queries where data can be filtered based on additional fields such as date ranges, location, or radius. As indicated earlier, a maximum of 1000 records will be displayed.

11.4.1 Performing an Advanced Reads Query

1. Select the **Home** category on the Shortcut bar.
2. Click the **Reads** shortcut.
3. Enter desired query criteria (see the following section, 11.4.2, Entering Advanced Reads Query Criteria). All fields do not have to be filled in. Leaving a query field blank simply means there will be no filtering on that field.
4. Click the **Find** button to run the query.

11.4.2 Entering Advanced Reads Query Criteria

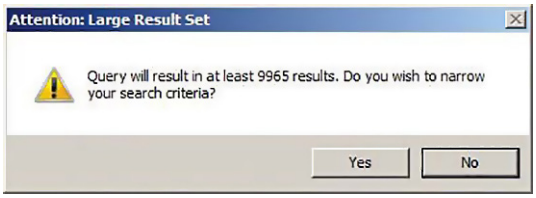
The query criteria fields are:

LPN – Full or partial (using wildcards) license plate number.
From – The start date and time for reads to be retrieved. Either click the **Select** button to display a calendar for quick selection, or type in the date.
To – The end date and time for reads to be retrieved. Either click the **Select** button to display a calendar for quick selection, or type in the date.
Location – The location as entered in the PAGIS application (see the Pagis Software User's Manual for more information).
Near Address – An address to use as the center of a radius search. The address format depends on the mapping system used but typically street name, house number, city and state, or zip code can be entered.
Radius – When a Near Address filter is entered, the search radius from the center point must be entered here.
Servers – Information can be queried from one or more remote BOSS servers. Click the Select button to display a list of authorized BOSS servers.
Justifications – Select the justification that best describes the purpose for the query being performed. This field will only be displayed if Justifications have been enabled in the System Parameters. See Sections 15.3.2, List of BOSS System Parameters, and 15.7, Justifications, for more information.
Justification Note – Enter any additional information necessary to more accurately document the query being performed. This field will only be displayed if Justifications have been enabled in the System Parameters. See Sections 15.3.2, List of BOSS System Parameters, and 15.7, Justifications, for more information.
Hits Only – If checked, only hits are queried.
Misreads Only – If checked, only reads that are marked as misreads are queried.
Hotlist – A search on hits can be limited to a specific hotlist, which can be entered here.
Devices – A query can be narrowed to reads originating from a particular device. Click the Select button to display a list of devices, select one or more.
Users – A query can be narrowed to reads originating by a particular user. Click the Select button to display a list of users and select one or more.

Note: The username can also be typed in.

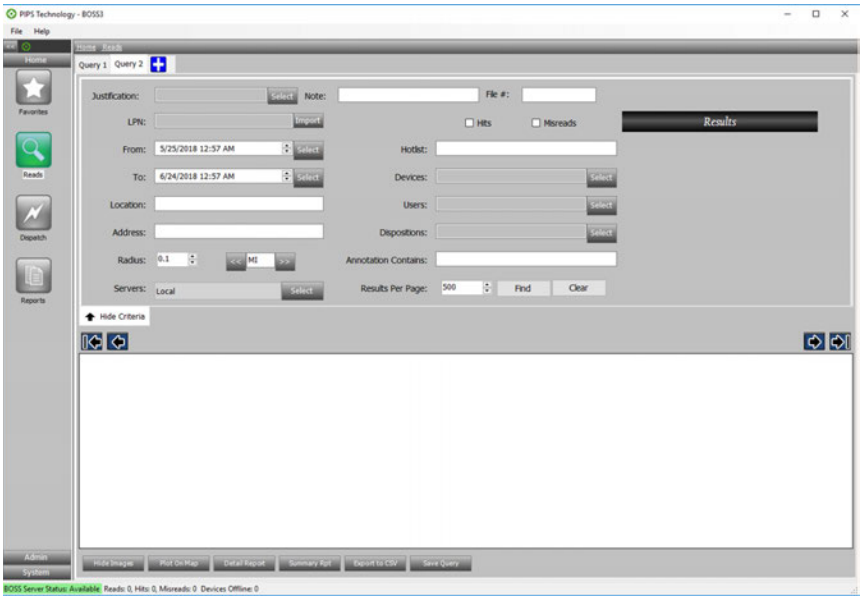
Dispositions – A query can be narrowed to reads with a particular disposition. Click the **Select** button to display a list of dispositions. Then select one or more dispositions.

Annotation Contains – If text is entered in this field, only reads that contain the text in the annotation field are queried.



Results Per Page – The maximum number of reads that will be displayed. The default is 500, the maximum is 1,000.

Clear – If clicked, the fields on the current tab will be returned to their default values.



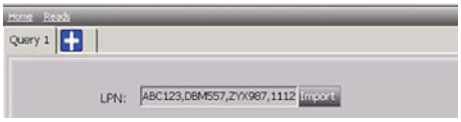
11.4.3 Managing Query Results

With the ability to obtain any number of results from a local server comes the option to narrow the potential results to be returned. If a large number of results will be returned based on the criteria entered, a message is displayed asking if the search criteria should be narrowed. If you select **Yes**, the search criteria is redisplayed offering the chance to make any necessary changes to reduce the results. If you select **No**, the query is performed based on the current criteria selections.

Note: A large number of results can take several minutes to be displayed.

11.5 Multiple Query Tabs

With Query tabs, users can perform multiple queries at a time. By clicking on the last tab, which contains the plus icon, you can access additional Reads Query screens. Enter the desired search criteria on each new screen to obtain additional information through the varying results. Each query can be given a descriptive name by right-clicking on the tab, and obsolete queries can be removed the same way.

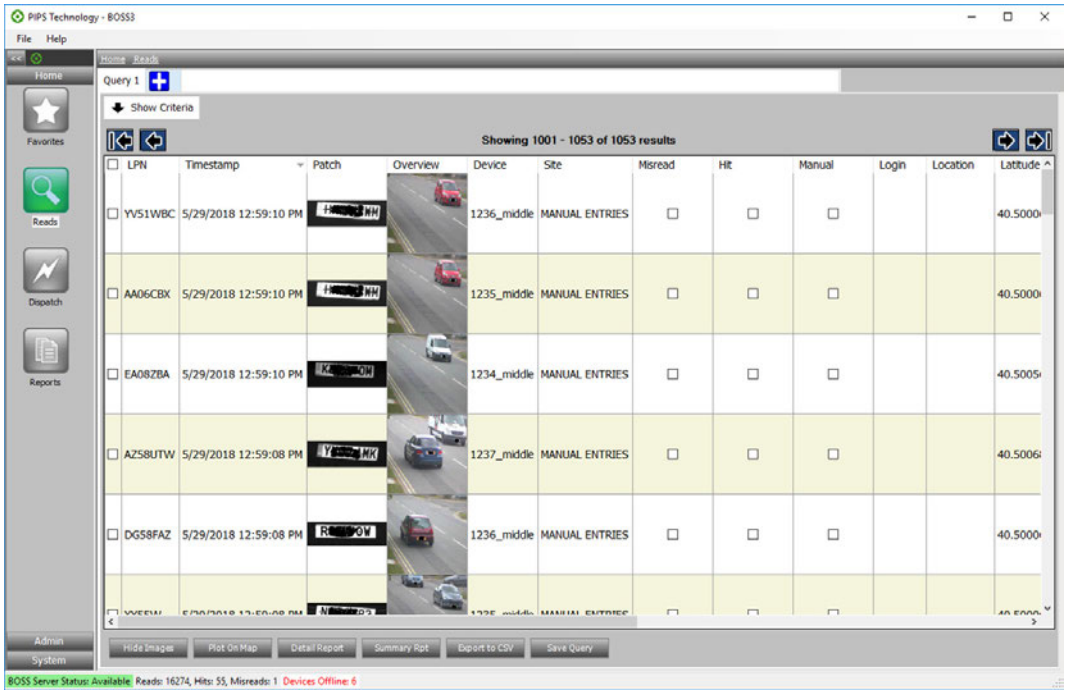


11.6 Cross-Referencing External Data

BOSS allows cross-referencing external data, such as DMV information. To query BOSS based on external information, take the following steps:

1. Create a CSV text file containing the license plate numbers to be cross-referenced. **The license plate number must be in the first field.**
2. Open the Reads Query screen.
3. Click the **Import** button next to the LPN field.

4. Click **Open** to import the plate numbers. A maximum of 50 plate numbers can be referenced at a time. Imported plate numbers will show up in the LPN field:



5. Enter other query criteria, as needed, and click **Find** to run the query.

11.7 Working with Queried Reads

11.7.1 Viewing Query Results

The results of both Quick Searches and Advanced Reads Queries are presented in the same manner.

The columns displayed are:

LPN – The plate text (characters) read in by a camera or manually entered by a user.
Timestamp – The date and time when the read occurred.
Patch – A thumbnail image of the license plate. Overview – The color overview picture of the vehicle. Device – The device where the read originated.
Site – The site where the read originated.
Misread – Indicates whether the read was marked as a misread by a user.
Hit – Indicates whether the read is a hit.
Manual – Indicates whether the read was entered manually.
Login – The username logged into the device at the time the read originated.
Location – The location entered in the PAGIS system. See the Pagis Software User's Manual for more information.
Latitude – The latitude coordinates of the device at the time the read originated. Longitude – The longitude coordinates of the device at the time the read was originated. Hotlist – The name of
the hotlist that produced the hit.
Field1 ... Field5, PCNID, Information – Information from the hotlist that produced the hit.
Annotation – Annotations entered for the read.
Server – The name of the server that has provided this information. This can be a local or remote server.

11.7.2 Query Results Actions

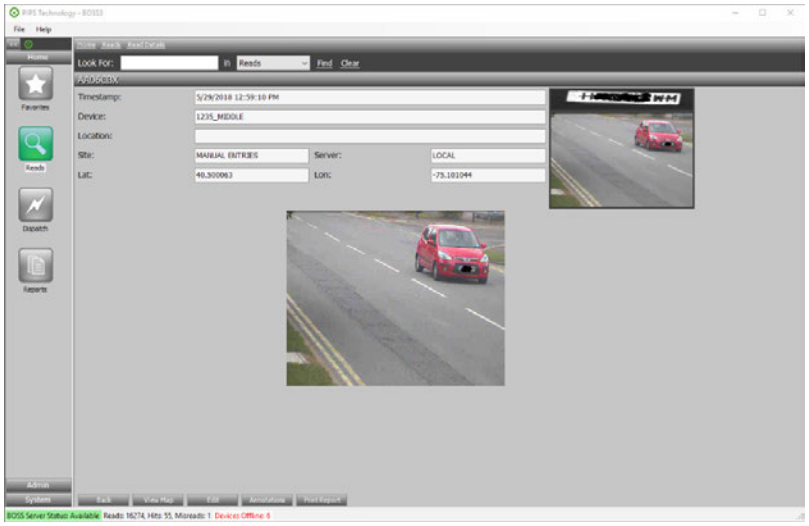
There are several button options available at the bottom of the Reads Query Results screen that offers additional uses of the data results.

Hide Images/Show Images – Used to remove the image columns, patch and overview, from the view. This can be done to provide more room for text fields to be displayed. When clicked, the Hide Images button's caption changes to Show Images. When the button is clicked again, images will again be displayed.

Plot On Map – When clicked, any selected records will be plotted on a map. One or multiple records can be selected by clicking the checkbox in the first column of the record. To select all of the records, click the checkbox in the headings column.

Detail Report – Click to generate a detailed report of selected reads. To select one or more records, click the checkbox in the first column of the record. To select all of the records on the current page, click the checkbox in the headings column. Use the navigation buttons to move to additional pages to select additional records.

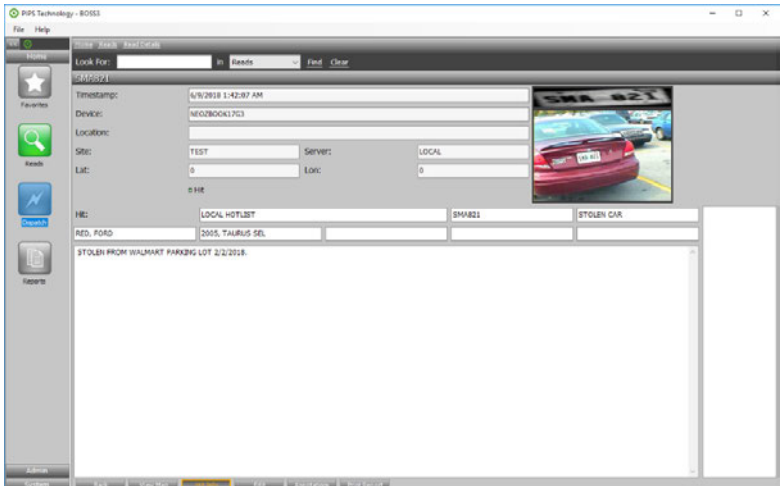
Summary Rpt – Click to get a summary report of selected reads. To select one or more records, click the checkbox in the first column of the record. To select all of the records on the current page, click the checkbox in the headings column. Use the navigation buttons to move to additional pages to select additional records. To include all results choose the All Results option in the Reads Summary Detail Report option box.



Export to CSV – Click to save the results to a file in a CSV format. Select to save the current page or all results provided. Use the navigation buttons to move to additional pages to select additional records.

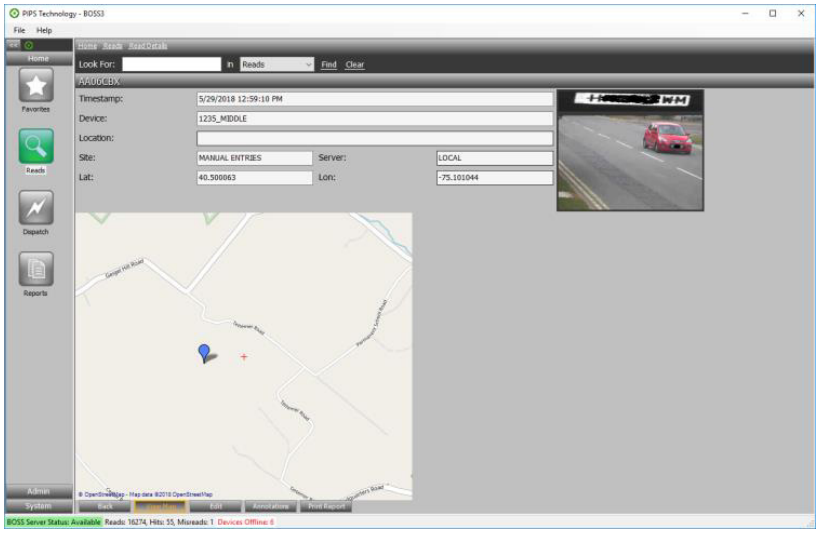
Save Query – Click to save the query criteria as a favorite for future use. See Section 11.8, Favorites, for more information.

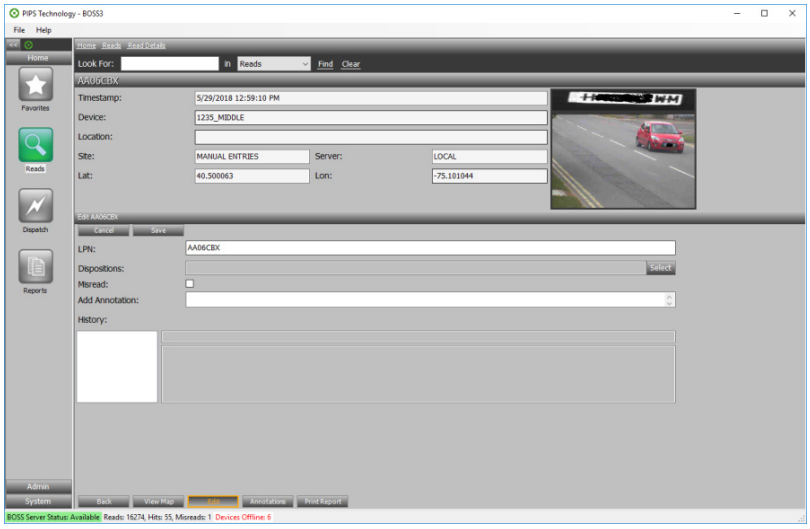
11.7.3 Viewing Read Details



Click a row in the query results to view the details of the record.

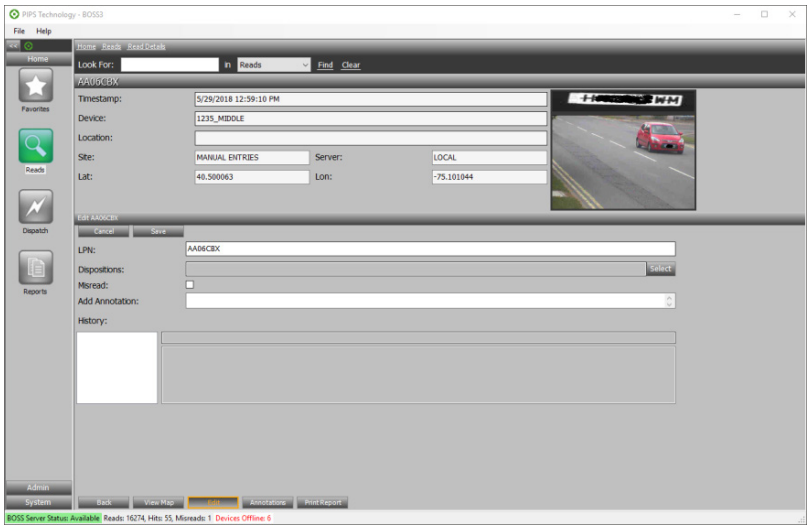
The Read Details screen displays the license plate text in the title. The timestamp, originating device, site, and geographical coordinates are displayed below. The plate patch and vehicle color overview images are on the right.



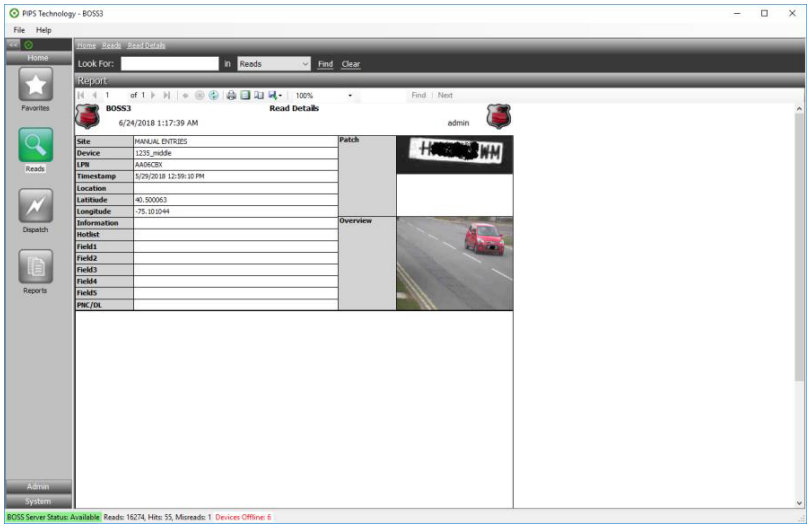


The vehicle color overview picture can be enlarged by clicking on the picture. Use a mouse scroll wheel or the cursor up and down keys to resize the image. Left-click on the enlarged image to close. Right-click on the image to copy the image to the Windows Clipboard.

If the read is a hit, details of the hit can be displayed by clicking on the Hit Info button at the bottom of the screen.



A map plotting the location where the read occurred can be displayed by clicking on the View Map button.



Use the Edit button to correct the plate text and/or assign a disposition and annotation to the read. Click on Save to save the changes. The plate text can also be marked as misread if the read information is found to be incorrect.

Annotations associated with the read can be viewed by clicking on the Annotations button.

A report containing the read's details can be printed by clicking on the Print Report button.

11.8 Favorites

Favorites are read queries that use specified criteria, which have been saved. Favorites can be reused, which allows the user to quickly perform frequently needed queries without having to define the parameters each time. Favorites are specific to each user.

11.8.1 Creating a New Favorite

1. Select **Home** on the Shortcut bar to access its icons.
2. Click on the **Read** shortcut.
3. Enter the desired query parameters in the Browse/Edit area (e.g., data range, location, radius, servers).
4. Click the **Go** button to run the query.
5. When the query results window appears, click the **Save Query** button.
6. A dialog box will appear, prompting for a name. Enter a descriptive name for the new favorite.
7. Select the Use Relative Date Range option if desired.

   Use Relative Date Range Option – If this option is selected when saving a query, and when the resulting favorite query is run in the future, it will use a From and To date and time range relative to the From and To date and time entered for the original query. It will not use the actual range entered in the original query. Also, it is important to remember that the time span between the From and To date and the time range used is relative to the date and time when the original query was run.

   Consider a query that is saved as a favorite and originally defined on 8/9/20xx to search reads between 8/02/20xx and 8/8/20xx (the prior week). If the Relative Date Range option is selected, the query is saved to always run against the prior week rather than those actual dates. If the Favorite option is invoked on 12/3/20xx, it will return results from 11/26/20xx through 12/2/20xx. It is important to note that the results will be relative to the actual time of the original query and when it is rerun. Suppose you run a query at 5 pm today to search for reads occurring between 9 am and 5 pm and save it as a favorite. When you run the query again tomorrow, it will search for reads that occurred eight hours **before** the current time, which may not necessarily fall between 9 am and 5 pm.
8. Click **OK** to complete. The query definition is now saved as a favorite and can be accessed at any time.

11.8.2 Activating a Favorite

1. Select the **Home** category in the Shortcut bar (if not already selected).
2. Click the **Favorites** shortcut.
3. A listing of all favorites is displayed in the Browse/Edit area.
4. Click the desired favorite. (The selected favorite will be highlighted in yellow.)
5. Click the **Go** button in the bottom area of the Browse/Edit area.
6. The query results will appear in the Browse/Edit area.

11.8.3 Deleting a Favorite

1. Select the **Home** category in the Shortcut bar (if not already selected).
2. Click the **Favorites** shortcut.
3. A listing of all favorites is displayed in the Browse/Edit area.
4. Click the desired favorite. The selected favorite will be highlighted in yellow.
5. Click the **Delete** button in the bottom area of the Browse/Edit area.
6. Press **Yes** to confirm deletion.

12 REPORTS

Several reports are included, automatically, with a new BOSS installation. These reports are available for use as soon as a BOSS Administrator assigns role permissions to the reports.

12.1 Running a System Report

1. Select the **Home** category on the Shortcut bar.
2. Click the **Reports** shortcut.
3. The Browse/Edit area will display a list of available reports. (Reports to which the user does not have permissions are not displayed.)
4. Click the desired report. The selected report is highlighted in yellow. Parameters for the report appear in the bottom of the Browse/Edit area.
5. Select **Date Range**. All reports call for From and To dates to define the time range for the report data. By default, the values in these fields define a report for the most recent two weeks. You can change these dates by typing different information into these fields, using the **Up/ Down** arrow keys to the right of the field or by clicking the **Select** button to the right of the field and selecting a date on the calendar and then clicking the **Save** button.
6. Some reports also permit you to filter report results by user(s). For example, the pictures report, which reports pictures taken in PAGIS, allows you to define one or more users to report on.
7. Once desired parameters are selected for the report, click the Go button. The report screen immediately displays, indicating that the server is generating the report until results are displayed.

12.2 Viewing and Printing Reports

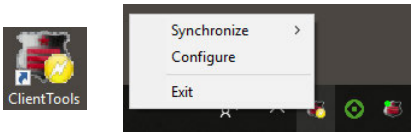
The Report screen displays the date and time the report was generated and the title of the report in the heading area. When you place your mouse above a shortcut on the Report Shortcut bar, a label appears indicating what the shortcut button does. Note that some of the buttons on the Shortcut bar are not relevant to BOSS reports and are therefore disabled.
The Report Results Shortcut bar icons are as follows:

First Page – Return to the first page of the report.
Previous Page – Go to the previous page of the report.
Page Input – In this text box, type in a particular page number to bring up on screen.
Next Page – Go to the next page of the report.
Last Page – Go to the last page of the report.
Stop Rendering – This button can be used to cancel the report processing. This can be helpful if a large report was initiated, but is no longer desired.
Refresh – Refresh the report using the most current BOSS data.
Print – Print the report.
Print Layout – Toggle between available print layouts.
Page Setup – Choose among the options for standard page setup, such as page orientation, and paper size.
Save As – Excel/PDF/Word – Save the current results to a Microsoft Excel (.xls), an Adobe Portable Document Format (.pdf) or a Microsoft Word (.doc) document.
Width Zoom Setting – This drop-down list allows you to select a zoom view for the report results on the screen.

12.2.1 Viewing the Login Statistics Report

1. Select the **Admin** category on the Shortcut bar.
2. Click the **Devices** shortcut.
3. Click the **Logs** button at the bottom of the screen.

4. Click **Go** to view the Login Statistics Report.
   Begin Date – Select the start date for the report.
   End Date – Select the end date for the report.
   Selected Users – Select the users to include in the report. Click the **Select** button. Click the checkbox of the desired user. Click on the **Save** button.



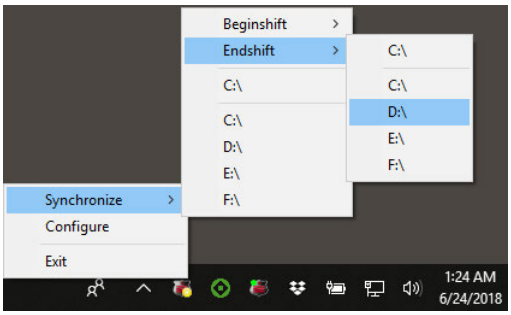
13 CLIENT TOOLS

The Client Tools utility is used to transfer any necessary files needed for a shift from BOSS to an PAGIS system that is being run in the Disk Sync mode. After the completion of a shift, Client Tools can then be used to transfer read data files captured during a shift into BOSS. The utility is configurable and processes files stored on a local, network, or USB flash drive. Like Smart Client, the Client Tools utility does not have to be run on the BOSS server; it can be configured to access the server via an IP Address.

Client Tools does not have a customary interface. Once the utility is started, the Client Tools icon will appear in the Windows System Tray.

Before use, Client Tools must be configured, which is described in Appendix 17. Once the Client Tools has been configured, it can now be used to synchronize information between BOSS and PAGIS:

1. To start, right-click on the **Client Tools** icon.



2. Select **Synchronize**. The next menu displayed is divided into three sections.

   a. The first section allows the user to select either **Create Begin Shift Files or Synchronize End Shift Files**. When either option is selected, the next menu is displayed. It is divided into two sections; it is the bottom two sections of the previous menu and functions the same way.

   b. The second section displays the path defined during configuration. This is a shortcut to perform Begin Shift and End Shift at the same time, storing the Begin Shift files in the defined location and processing the End Shift files at the defined location. If there are no End Shift files to process, this feature will be complete after the Begin Shift file is created. No error message will be displayed if the End Shift files are not found.

   c. The last section lists the drive letters currently on the workstation. If one is selected, Client Tools will perform a Begin Shift first and store the files at the root of the drive selected. Then Client Tools will check to see if there are End Shift files at that location. If found, the files will be processed. If not found, the synchronization process is complete. No error message will be displayed. This is an additional option if the configured drive is not currently available.

Note that once End Shift files have been processed, they are deleted.

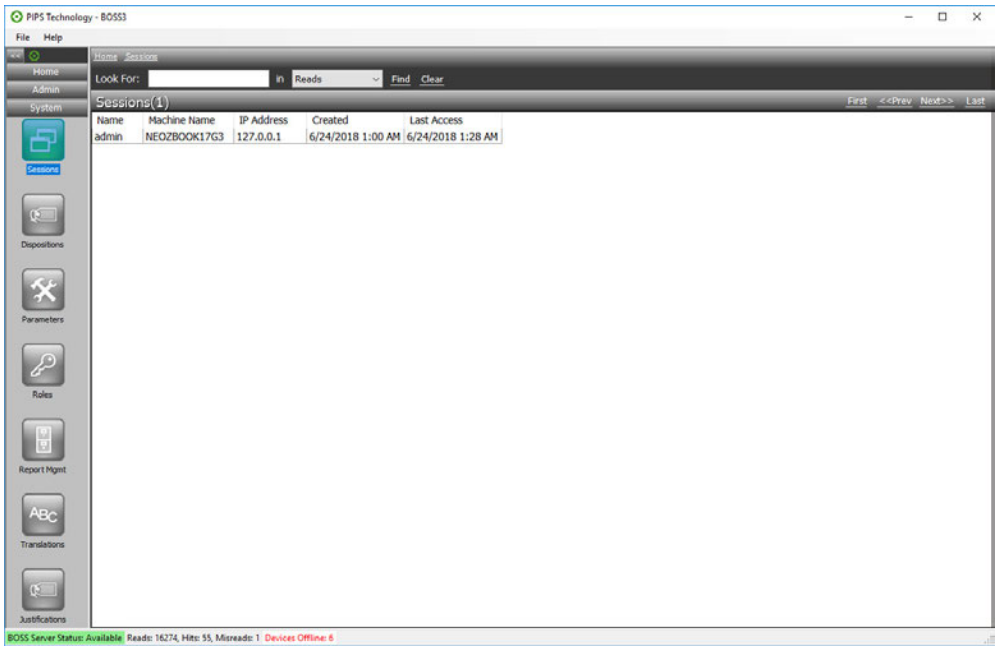
14 ARCHIVING DATA

It is possible to archive reads that have accumulated in the BOSS database. Based on settings that are configurable in System Parameters, reads that meet the specified criteria are transferred from the main BOSS database to an archived BOSS database. *(See Section 15.3.2, List of BOSS System Parameters, for additional information on configuring this feature.)*

Once enabled, this process is handled by the BOSS server. There should be no noticeable difference to a user logged into a BOSS Smart Client when reviewing or reporting on stored reads. The only indication in the BOSS Smart Client that reads have been archived will be on the BOSS Home screen. The user will be able to see a calculable difference between the reads and hits counts compared to the total reads and total hits counts. The difference between the values will be the number of reads and hits stored in the archived database.

15 SYSTEM SETTINGS

15.1 Sessions



The Sessions screen allows for viewing the current list of logged-on BOSS users. Each login on each computer utilizes a concurrent license of the software. Since BOSS is licensed per concurrent active session, a BOSS Administrator may need to have a session disconnected in order to release a session license. A BOSS Administrator can force a session disconnect in the Sessions screen.

Note: BOSS allows a single "admin" login to access BOSS even if the number of concurrent sessions has been exhausted. Please see Section 2.1, BOSS Administrator Login, for more information about the "admin" username.

15.1.1 Viewing and Disconnecting Sessions

1. Select the **System** category on the Shortcut bar.
2. Click the **Sessions** shortcut. A list of current user sessions appears in the Browse/Edit area.
3. The heading in the Browse/Edit area indicates the total number of current sessions.
4. Click on a session to see details in the bottom half in the Browse/Edit area.
5. To disconnect, click the **Disconnect** button that appears in the detail area, and click **OK**.

Note: You cannot disconnect your own session in this manner. To disconnect your own session, simply log off the BOSS application.

15.1.2 Workstation Power Management and Sessions

Using Windows Power Management to hibernate or suspend a workstation running the BOSS Smart Client will cause the session in BOSS to be terminated after five minutes. When the workstation is resumed from hibernation or a suspended state, the user will have to log in to BOSS again.

15.2 Dispositions

Dispositions are pre-defined classifications that can be assigned to hits. “Arrest Made,” “Vehicle Recovered,” “Surveillance Established” are examples of dispositions. A BOSS Administrator is able to define any number of dispositions for her system. Users can then use those dispositions to specify the action taken or the status of the hit. A new BOSS system will have a Default Disposition category that includes one disposition of “No Action.” Additional categories can be defined as needed.

15.2.1 Defining a New Disposition

1. Select the **System** category on the Shortcut bar.
2. Click the **Dispositions** shortcut. A list of all current dispositions appears in the top of the Browse/Edit area.
3. Click the **New** button in the bottom of the Browse/Edit area.
4. Enter a name for the disposition. If adding it to the default category, simply enter the name of the disposition. If adding it to a new category, the format of the name should be [Category : Disposition Name], i.e., **Auto :Vehicle Recovered**.
5. Enter a **Description** for the new disposition.
6. Specify a **Priorit**y for the disposition. (A lower number means a higher priority.)
7. Select the **Back Office Only** option if the disposition should not be available only in the Correct Reads screen in BOSS, and not exposed in PAGIS.

15.2.2 Deleting a Disposition

1. Select the **System** category in the Shortcut bar (if not already selected).
2. Click the **Dispositions** shortcut.
3. A list of all dispositions is displayed in the Browse/Edit area.
4. Click the desired Disposition. The selected disposition will be highlighted in yellow.
5. Click the **Delete** button in the bottom area of the Browse/Edit area.
6. Press **Yes** to confirm deletion.

15.3 System Parameters

System Parameters allow for configuration parameters for a BOSS system. System parameters only need to be configured during initial system configuration and normally do not need to be modified again after that.

15.3.1 Editing System Parameters

1. Select **System** from the left Shortcut bar.
2. Click on the **Parameters** button in the Shortcut bar.
3. Click on the desired parameter in the right Browse/Edit window. The bottom pane of the Browse/Edit window will display the entry field for the selected parameter.
4. Modify the parameter value as desired and click the **Save** button.

15.3.2 List of BOSS System Parameters

arc_ActiveRetentionDays – This setting dictates how long reads will be maintained in the BOSS database. After reads have been stored for this time, they will be moved to the archived database, creating space for additional reads in the main database. The default setting is 730 days but can be varied based on the size and needs of the system.
arc_ArchiveDBRetentionDays – This setting dictates how many days to retain an archived database. After an archived database has been stored for this time it will be removed, creating space for additional archived databases. The default setting is 0 days, which indicates that the archived databases will never be removed, but the number of days can be modified based on the size and needs of the system.
arc_DatabaseLocation – This setting allows the user to specify where the archived databases should be saved. A blank entry will save them in the SQL default location.
arc_Enabled – To allow the BOSS server to archive aged reads and free up space, enable archiving by setting this to 1. When archiving is not desired, this setting should be 0.
arc_EndOfMonthCutOff – This setting forces a restriction on the size of the archived databases, so that nothing will be added after the end of each month. The default setting is disabled (0). To enable the setting, change the value to 1.
arc_MaxSize – This setting allows the Administrator to determine the number of reads that can be stored in the archived database. The default value is 1 million and can be varied based on the size and needs of the system. Once an archived database has reached this maximum number of records, a new archived reads database will be created.
audit_Justification_FileNumberRequired – When this setting is enabled (1), users performing read queries are required to enter a file number.This information will also be listed in the audit report. The default setting is disabled (0).
audit_Justification_NotesRequired – When this setting is enabled (1), users performing read queries are required to enter a justification note. This information will also be listed in the audit report. The default setting is disabled (0).
audit_JustificationEnabled – When this setting is enabled (1), users performing read queries are required to select a pre-defined justification. This information will also be listed in the audit report. The default setting is disabled (0).
data_CaptureUsageStatistics – When this setting is enabled (1), information sent from a PAGIS device that has been modified due to Privacy settings will still be utilized to generate usage statistic reports. The default setting is disabled (0).
hls_HotListDeltas – When this setting is enabled (1), updated hotlists will be deployed in full. Changing the setting to disabled (0) will cause only the changes made in the updated hotlists to be deployed.
Password_Expiration_Days-Number of days a password is allowed to remain unchanged. Value “1”=enabled, “0”=disabled.

15.3.2 List of BOSS System Parameters (continued)

Proxy_uri/proxy_username /proxy_password/proxy_domain – These settings are only necessary if there is a proxy server involved that requires authentication for connection. Enter a valid Uniform Resource Identifier (URI), username, password, and domain in the associated fields to allow communication through the proxy server. Consult the network Administrator for proxy authentication information

purge_Minutes – This setting is the time, in minutes, between each session of purging or archiving. The default value is 15 minutes and is configurable to any value of 1 minute or greater.

purge_ReadCount – This setting is the number of records to be processed by the purging or archiving process per session. It can be any value, but setting it according to system limitations is recommended because the process can be resource intensive if set too high.

readQuery_fromDate – This setting allows the user to adjust the default From date on the Reads Query screen. Any value can be entered and it is used to decrement from today. Example – a value of 7 would result in a from date seven days earlier than today.

readQuery_toDate – This setting allows the user to adjust the default to date on the Reads Query screen. Any value can be entered and it is used to incremented from today. Example – a value of 7 would result in a to date seven days later than today.

Recent_Read_Time- Time in min. of how long to hold reads in the "Recent reads" table for hit evaluation.

Recent_Reads_Amt- Number of records to delete from "Recent reads" if older then Recent read time.

ResendEmailNotice- Resend Offline notification on Fixed Camera after this amount of time has expired.

rq_ReaperHours – This setting manages how long to retain a temporary database table created when running certain read queries. This allows the user to continue to review the results of those queries for a longer time. The default is a minimum of 48 hours, and there is no maximum value.

smtp_AlertTemplate- Default email template, definitions listed in table below.

smtp_SenderName – In order for the BOSS server to send alerts to email addresses, the SMTP settings must be configured correctly. The SMTP sender field should contain the username that will appear in the from field on an email generated by the BOSS system.

smtp_Server – The name or IP address of the SMTP server should be entered here. The name or address used here must be one by which the SMTP server can be reached from the BOSS server. This field must be populated correctly in order for the BOSS system to send any alerts to email addresses.

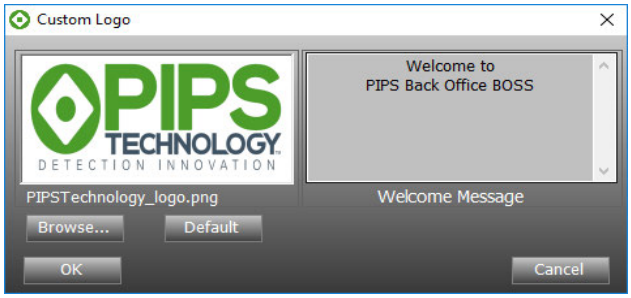
smtp_SSL – If Secure Sockets Layer (SSL) is used on your SMTP server, the value of this field should be set to 1. If you do not use SSL, this field should be set to 0.

smtp_SubjectTemplate – This field sets the subject line of alert emails generated by BOSS. The following entry in the field incorporates both static text and a BOSS field variable as well: BOSS alert FROM [SRC].

TOKEN	DESCRIPTION	TOKEN	DESCRIPTION
[LPN]	license plate	[FD1]	field1
[STE]	site	[FD2]	field2
[SRC]	device	[FD3]	field3
[LOC]	location	[FD4]	field4
[LAT]	latitude	[FD5]	field5
[LON]	longitude	[PNC]	PNCID/DL
[HOT]	hotlist name	[INF]	information

smtp_UserName/smtp_password – The SMTP username and password fields should contain a valid SMTP username and associated password for sending alerts through the SMTP (email) server. Normally, a BOSS Administrator coordinates with his SMTP Administrator to create a special SMTP user that will be used exclusively for BOSS alerts.

Soap variables- All are now legacy features not currently used.



verint_HotlistsMonitored- Enter hotlist by name separated by commas.

verint_NotificationConfigured- Indicates whether the Verint notifier should be used.

15.3.2 Branding

BOSS allows the BOSS Administrator to upload a logo image and a welcome message that is displayed to BOSS users on the Home screen. To define the image and message:

1. Select **System** from the left Shortcut bar.
2. Click on the **Parameters** button in the Shortcut bar.
3. Click on **Branding**.
4. If needed, click **Default** to remove current custom settings.
5. Pick the desired logo image using the **Browse**... button.
6. Type in a message in the Welcome Message box.

Browse – Select an image file (JPEG, GIF, BMP) to be displayed on the home screen. The largest recommended image size is 120 by 380 pixels.

Default – Remove the custom logos and texts.

Welcome Message – A custom welcome message can be typed in here.

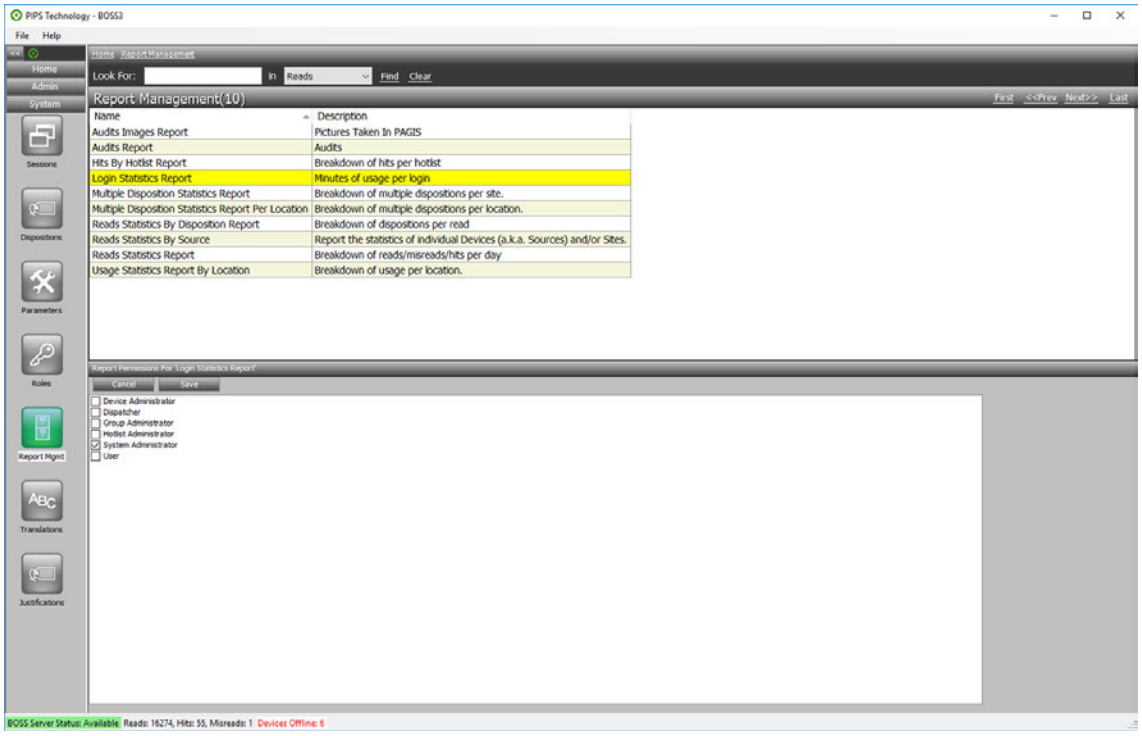
7. Click **OK** to save changes, or **Cancel** to discard changes.

15.4 Roles

In addition to the default roles that are automatically created by BOSS, the Administrator can create and configure custom roles as needed. *See Section 4.2, Permissions, for more information.*

15.4.1 Adding New Roles

1. Select the **System** category on the Shortcut bar.
2. 2. Click the **Roles** shortcut. The Browse/Edit area will display a list of existing roles.
3. 3. Click on the **New** button. The New Role entry window will be displayed in the bottom of the window.
4. 4. Enter the name of the new role and assign the desired permissions.
5. 5. Click the **Save** button.



15.4.2 Deleting Roles

1. Select the **System** category on the Shortcut bar.
2. 2. Click the **Roles** shortcut. The Browse/Edit area will display a list of existing roles.
3. 3. Click on an existing role and the edit window will be displayed in the bottom of the window.
4. 4. Click the **Delete** button. Click **Yes** when prompted to complete the operation.

15.5 Report Management

15.5.1 Assigning Permissions to Access Reports

1. Select the **System** category on the shortcut bar.
2. Click the **Reports Mgmt** shortcut. The Browse/Edit area will display a list of available reports.
3. Select a report by clicking the name in the list. The selected report will be highlighted in yellow.
4. Current report permissions for the type of report chosen display in the bottom of the Browse/Edit area. Each BOSS role is listed along with a checkbox. Click a role in the list to select. Click a second time to change an unchecked box to a checked box.
5. After selecting the desired permissions for the report, click the **Save** button.

15.6 Translations

Across various organizations and agencies, terminology related to BOSS can differ significantly. For this reason, a new function added in the BOSS version 3 series gives customers flexibility in naming conventions used in the application. The Translations function provides for changing wording on BOSS screens, which allows a customer to tailor screen labeling to correspond to their own vernacular. Text items in the translations editor correspond to labels on BOSS screens. Authorized users can change these text items as necessary.

Note: This feature is not intended as a replacement for language-specific versions of BOSS. For international versions of BOSS, please contact PIPS™ Technical Support.

15.6.1 Entering a New Translation

1. Select the **System** category on the Shortcut bar.
2. Click the **Translations** shortcut. A list of all current translations appears in the top of the Browse/Edit area.
3. Click the **New** button and the new Translations Entry screen appears in the bottom area.
4. Enter an existing label from the BOSS application in the Caption field, using the exact case and spelling that normally appears on the screen.
5. Enter the desired replacement text in the Translation field.
6. Click the **Save** button to complete the operation.

Note: The user must log off and on again for translation to take effect in the current session.

For Example: A customer preferring to see a label of “Plate” where the software normally uses the term “LPN” would use the translations feature to create the replacement for their installation. The translation Entry Caption field would contain “LPN,” while the Translation field would contain the replacement term “Plate.”

15.7 Justifications

To ensure that sensitive information is being kept secure, systems can be configured to require that users who are performing queries on reads have a valid reason for doing so. Enabling the audit Justification Enabled parameter requires users to justify their reason for querying reads. There are five justifications created by default: Audit, BOLO Post Scan Query, Crime Scene Query, Test and Trend Analysis. These queries will also be documented in audit reports.

15.7.1 Entering a New Justification

1. Select the **System** category on the Shortcut bar.
2. 2. Click the **Justifications** shortcut. A list of all existing justifications appears in the top of the Browse/Edit area.
3. 3. Click on the **New** button. The Justifications Entry screen appears in the bottom area.
4. 4. Enter a justification. There is no validation on the entry for this field.
5. 5. Click the **Save** button to complete the operation.

15.7.2 Deleting Justifications

1. Select the **System** category on the Shortcut bar.
2. 2. Click the **Justifications** shortcut. A list of all existing justifications appears in the top of the Browse/Edit area.
3. 3. Click on the justification to be deleted. The Justifications Edit screen appears in the bottom area.
4. 4. Click the **Delete** button. Click on **Yes** when prompted to complete the operation.

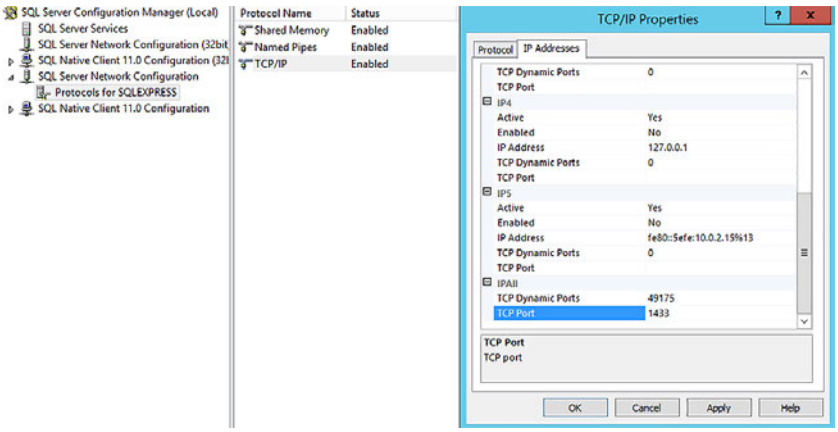
17 APPENDIX: INSTALLATION AND CONFIGURATION

This section is intended for authorized personnel in installation and configuration of a BOSS system. The information in this guide is organized sequentially, in the order that steps would be performed when initially setting up a new BOSS system, with the first section describing the software installation process, and the subsequent sections describing configuration options for a BOSS system.

Upon initial installation of a new BOSS system, the BOSS server application must be configured using the BOSS Controller application. BOSS Administrators may also find the need to modify configuration settings after the system has already been in use. Therefore, the configuration section can be used as an ongoing reference for authorized personnel responsible for maintaining the system.

Note: It is critical that only an IT Administrator or other knowledgeable personnel attempt configuration modifications to a BOSS system. Incorrect configuration settings can cause serious issues with operation and/or adversely affect data integrity. When in doubt, you should consult PIPS Technical Support before making system configuration changes.

OS feature requirements



- Windows server 2008 or newer.
- Net. TCP Port Sharing Service must be enabled and running.
- Framework .Net 4.0.

SQL Server Requirements

1. SQL version 2012 or newer required.
2. 2. SQL login account “NT AUTHORITY\SYSTEM” is required to be mapped to Boss3 database as db_owner. For system with existing “Boss3” databases this should be applied prior to Boss software installation. For new installation this can be applied after the Boss service has ran for the first time and created the Boss3 database. See- “Common issues”

Settings under SQL Server Configuration Manger:

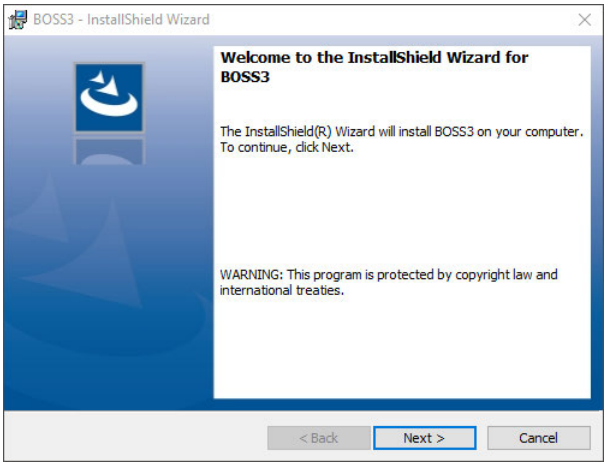
3. “SQL Server Network Configurations” Name Pips must be enabled.
4. “SQL Server Network Configurations” TCP/IP must be enabled, with “IP All” set to port 1433.
5. SQL restart required after changes.

17.1 Installing the BOSS Server Application Files

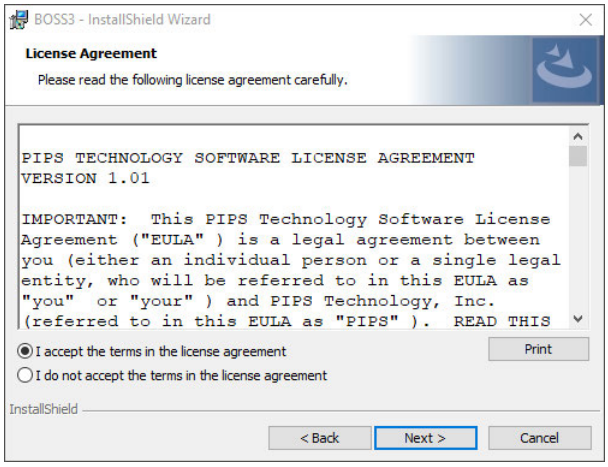
17.1.1 Running the Installer

This guide assumes that the Microsoft SQL Server 2012 or newer instance has already been installed and is available. If the SQL Server is not available, stop now and continue installation after the SQL Server has been installed. To install the Microsoft SQL Server, please follow the instructions provided by Microsoft.

Note: 1. It is recommended that antivirus utilities be disabled during the install.

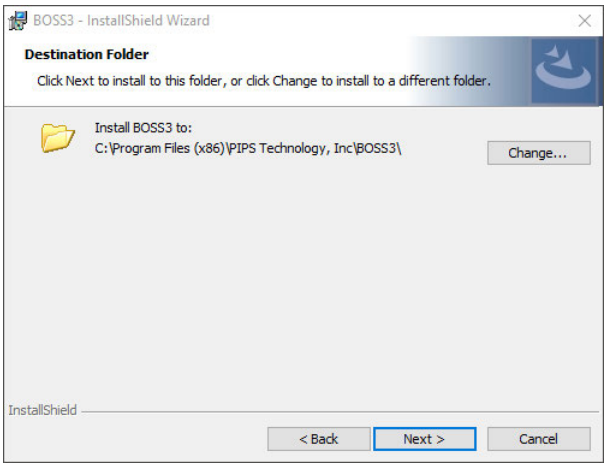


To commence the installation:

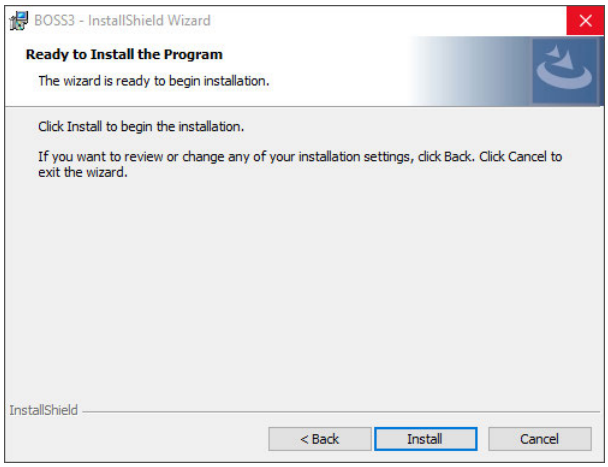


1. Select the link supplied by PIPS to the BOSS installation application.
2. Run the BOSS Setup executable.

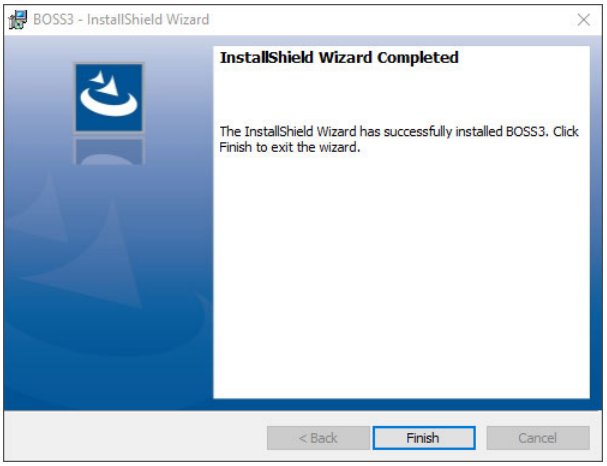
Note: Right-click on the installer icon and select Run As Administrator.



17.1.2 License Agreement

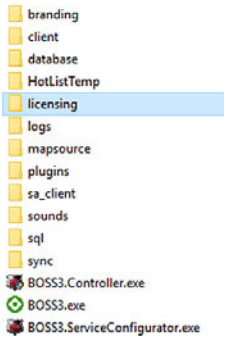


1. Click **Next** then check the license agreement checkbox to acknowledge agreement with the license terms.
2. Click **Next** to continue.

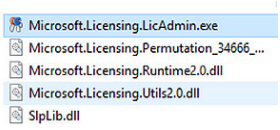


3. Accept the default installation file path or change.
4. Click “Next” to proceed to “Install”

5. When the Installation Complete message is displayed, click **Finish** to proceed to the Licensing.



17.2 License Key Management



17.2.1 Activating the License Key

Following a new installation, a valid BOSS license key must be entered. There are three options available discussed in the sections below that can be used to activate the license. For upgrades or reinstallation on same server this step is not required as the licensing tool will automagical re-acquire the licensing code.

1. Navigate to the licensing folder in the BOSS3 installation folder.

2. Start Microsoft License Manager (Microsoft.Licensing.LicAdmin.exe). This must be run as an Administrator.

3. In the License Manager User interface, select **File → Activation Wizard** to install the new license
4. When the Activation Wizard dialog opens select one of the following:
   a. I want to activate the software over the Internet. *See Section 17.2.1.1.*

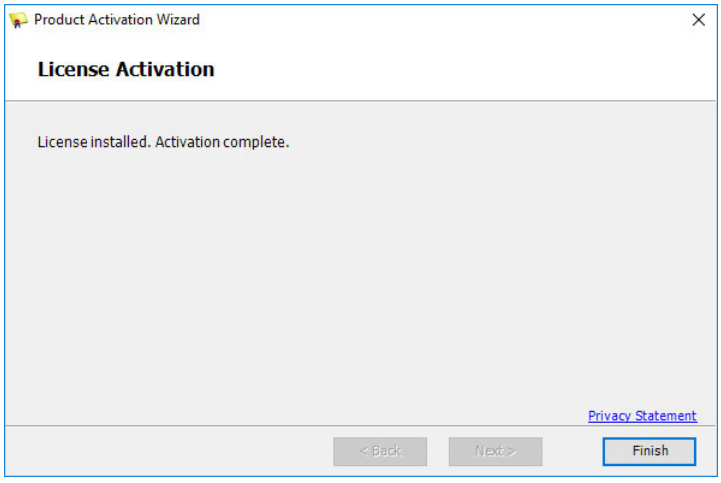
   or

   b. I have a license file I want to install. *See Section 17.2.1.2.*

   or

   c. I want to request a license file. *See Section 17.2.1.3.*

17.2.1.1 Activating the License Key over the Internet



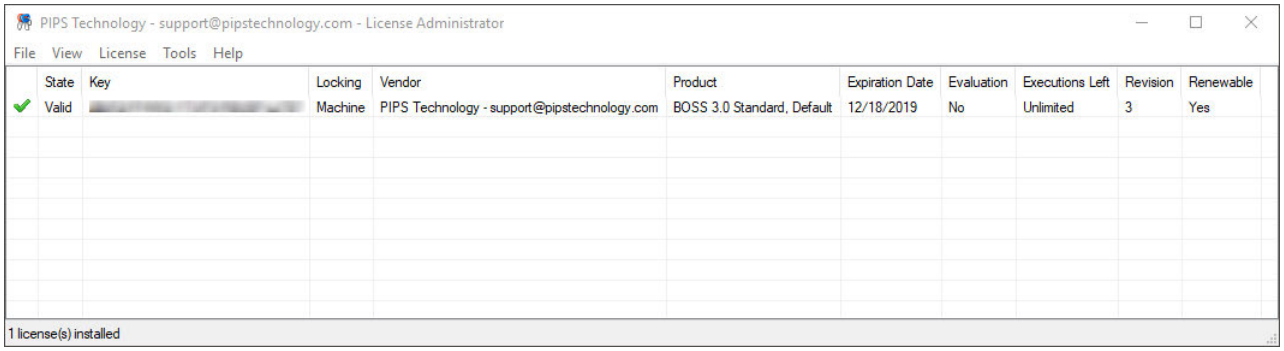
1. Check **I want to activate the software** over the Internet.
2. Click **Next** to continue.

3. Enter the activation key provided by PIPS and click **Next**.

4. The license key will be activated over the Internet. The following screen will display. Click **Finish** to continue.

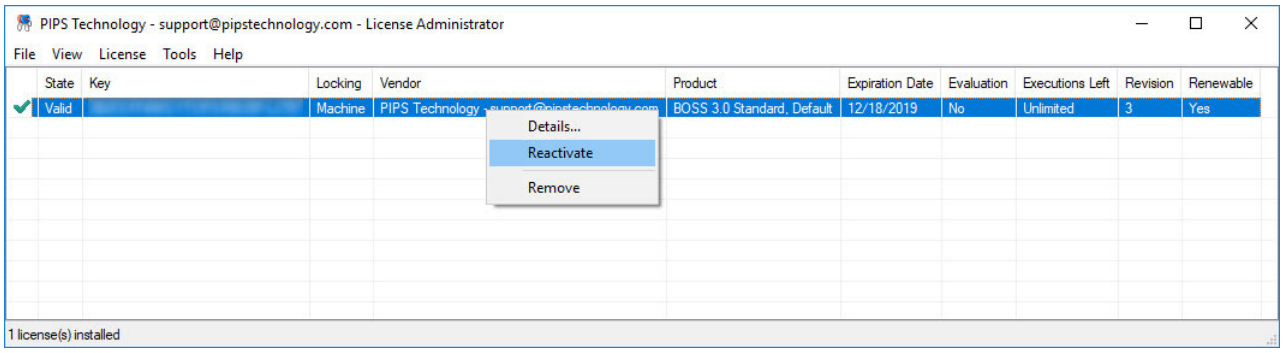
17.2.1.2 Activating the Software with a License File

1. Check I have a license file I want to install.
2. Click **Next** to continue.
3. Navigate to the location of the license file and select it.
4. Click **Next** to continue.
5. When the activation is completed click **Finish**.



17.2.1.3 Request a License File to Activate the License

1. Click **I want to request a license file**. Press Next.
2. Enter the license key you received previously. Press **Next**.
3. In the screen that displays, copy the text block highlighted (starts with "—BEGIN Request") to the clipboard and paste it into an email. Send the email to PIPS Technical Support (support@pipstechnology.com).
4. Close the Activation Wizard by clicking the **Finish** button.
5. You will be sent an activation file via email. Extract the license file (*.bin) and copy it to a folder on the computer where BOSS is installed. Return to Section 17.2.2 and follow the steps to activate the license.



17.2.2 Updating a License Key

If the BOSS license key becomes invalid, or if the license is upgraded, follow these steps to reactivate a BOSS license key:

1. Start Windows Explorer on the BOSS server.
2. Navigate to the folder where the BOSS server application is installed (by default C:\Program Files\PIPS Technology, Inc\BOSS3).
3. Locate the licensing folder as described in Section 17.2.1.
4. Open the folder and right click on the application Microsoft.Licensing.LicAdmin.exe. Select to run as the Administrator. You will see the following screen:

5. Select the license key. Right-click, and from the context menu, select Reactivate.

6. Click Next.
7. When the Installation Complete message is displayed, click Finish.

17.3 Map Display Options with BOSS

BOSS can display collected plate read information plotted on a map. There are two different mechanisms for displaying maps within the BOSS Smart Client application.

17.3.1 U.S. Census Bureau TIGER Maps

U.S Census Bureau TIGER Maps now discontinued.

17.3.2 Advanced Mapping with Internet Maps

PIPS provides an option to purchase an “Advanced Mapping” feature with BOSS. This option enables integration of Maps, an Internet-based service that BOSS can use to display maps in the Smart Client application.

Note: In order to use Advanced Mapping, the BOSS Smart Client will need an unimpeded Internet connection.

17.4 Configuring the BOSS Server Application

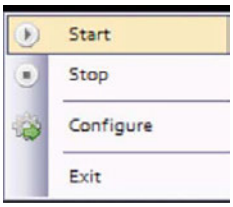
After the BOSS installation is completed, the application must be configured using the BOSS Controller program. The following sections explain how to use this program as well as the configuration settings that are available.

17.4.1 The BOSS Controller Application

17.4.1.1 Starting the Boss Controller

BOSS Controller (BOSS3.Controller.exe) is the application used to configure and control the BOSS service. The BOSS Controller is installed on the server computer along with the server application. After the installation is complete the Controller program will start automatically. If this is a new installation the license will need to be activated first. Choose to configure BOSS at a later time by clicking on Cancel.

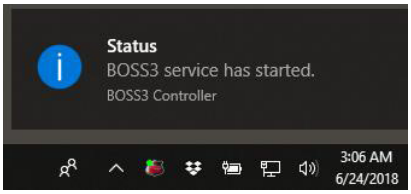
The shortcut to the BOSS Controller program can be found on the desktop or in the All Programs → PIPS Technology → BOSS3 menu. Right-click on the Controller icon and select Run As Administrator. When the BOSS Controller program is started an icon for the application will appear in the Windows System Tray at the lower right corner of the desktop.



17.4.1.2 Status Colors

The icon for the Controller program includes a “traffic light” that uses a color indicator to show the status of the BOSS service application. When the BOSS service application is running, the indicator is green. When the BOSS service application is not running, the indicator is red. Yellow color indicates that the application is changing state (starting or stopping).

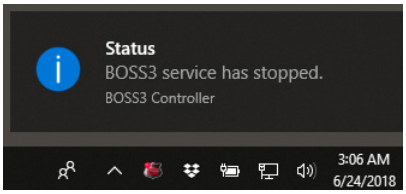
17.4.1.3 Right-Click Menu



When you right-click the BOSS Controller System Tray icon, a pop-up menu will appear:

Start	Start the BOSS service.
Stop	Stop the BOSS service.
Configure	Present the BOSS Configuration Wizard.
Exit	Close the BOSS Controller application. (Note: This closes the BOSS Controller program, but does not stop the BOSS Service.)

17.4.1.4 Starting the BOSS Service

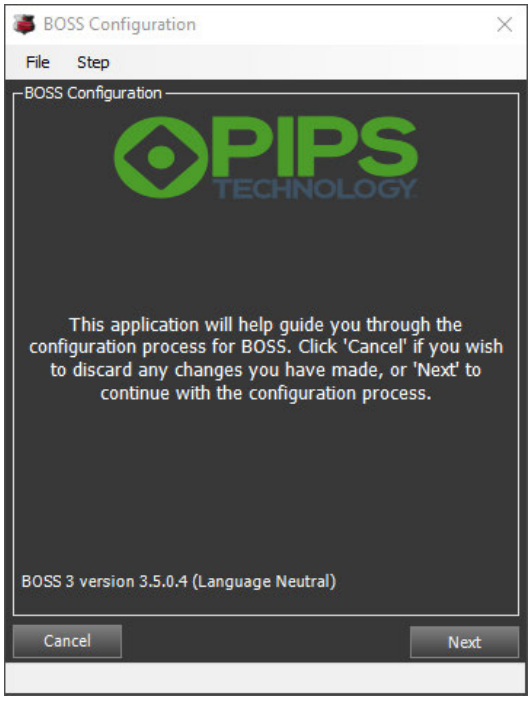


When the **Start** action is selected, and the service starts successfully, a Success message will be displayed:

The traffic light in the BOSS Controller icon will turn green to indicate the status.

17.4.1.5 Stopping the BOSS Service

When the **Stop** action is selected, and the service stops successfully, another Success message will be displayed, and the traffic light changes to red:



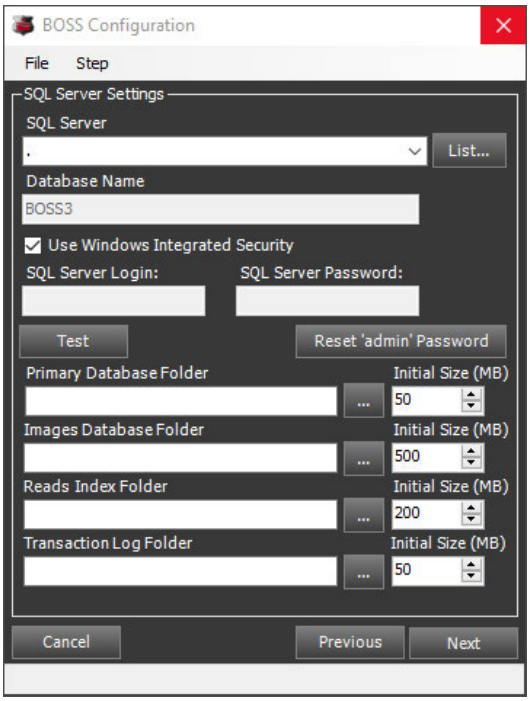
17.4.2 BOSS Configuration

17.4.2.1 Activating the Configuration Wizard

1. Right-click the **Controller System Tray** icon.
2. Select the **Configure** option. The Configuration Wizard options are explained in the following sections.

17.4.2.2 BOSS Configuration Wizard

Step through all configuration screens in the BOSS Configuration Wizard by simply clicking the **Next** button on this first screen. Click **Next** on each subsequent screen after entering in the desired settings. Note: This step-by-step process is recommended when you are configuring the system for the first time.



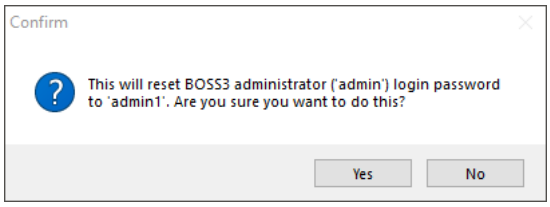
OR

Click the **Step** menu option to access the configuration menu and proceed to the step choice.

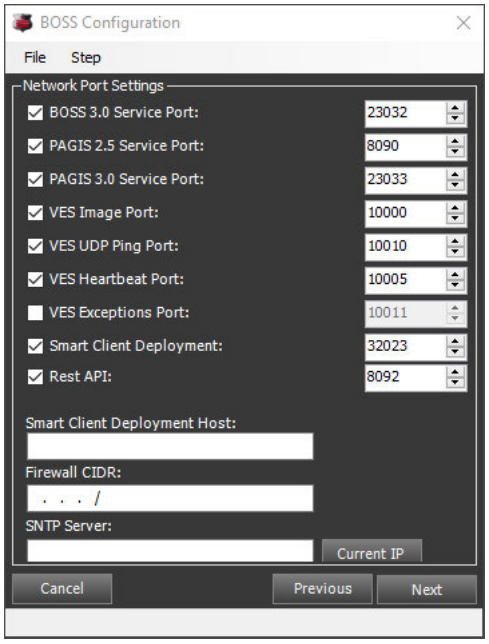
For each configuration step (described in Sections 17.4.2.3 – 17.4.2.9), clicking **Next** will take you to the next configuration screen, clicking **Previous** will take you to the previous one, and clicking Cancel will clear any changes you have made on the current screen.

17.4.2.3 SQL Server Configuration

SQL Server configuration is required for a new BOSS system, in order to specify the location and necessary authentication information for the SQL database.



SQL Server – Select the SQL Server instance for BOSS. Press **List** to choose from a list of available SQL Servers. The SQL Server Browser service must be running at this point. You may also type in the server IP address or host name. Enter a dot "." to use a local SQL Server that is running on the same machine as the BOSS service.
Use Windows Integrated Security – If checked, BOSS will use Windows Integrated Security to access the SQL Server database.
SQL Server Login and SQL Server Password – If Windows Integrated Security is not selected, enter the SQL Server username and password provided for BOSS to use to access the database.
Test – The **Test** button can be used to test the SQL Server settings currently in place. The Test button initiates a connection. A message box will appear to indicate whether the test connection fails or succeeds.
Database file locations: BOSS database can be divided among multiple locations as follows if necessary. When selecting a folder path for the database files keep in-mind that the folder path is referenced from the standpoint of the SQL server location.
Primary Database Folder – The drive and folder where the BOSS primary database will reside.
Images Database Folder – The drive and folder where the BOSS will store images.
Reads Index Folder – The drive and folder where BOSS will store database indices for stored plate reads.
Transaction Log Folder – The drive and folder where BOSS will store the database transaction log file.
Initial Database Sizes - By Default Boss will predefines the sizes as indicated in the controller.



17.4.2.4 Resetting the Administrator Password

If you have forgotten the BOSS administrator (admin) password, you can press the **Reset 'admin' password** button to reset the password to "admin1."

Pressing **Yes** will immediately reset the password.

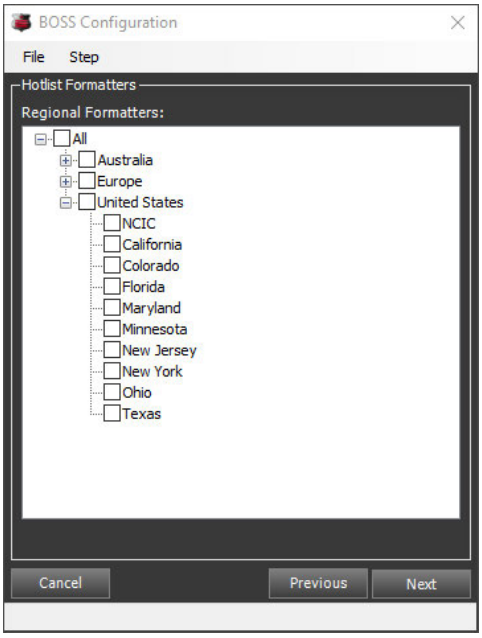
17.4.2.5 Network Port Settings

BOSS uses a number of TCP/IP and UDP network ports for communication between server and client applications and server and license plate reading devices.

17.4.2.5 Network Port Settings (continued)

FIELD	DESCRIPTION	DEFAULT PORT
BOSS 3.0 Service Port	TCP/IP port used to provide access for BOSS Smart Clients	**23032**
PAGIS 2.5 Service Port	TCP/IP port used to provide access for older mobile client versions older than Pagis 2.6.8	**8090**
PAGIS 3.0 Service Port	TCP/IP port used to provide access to various mobile client versions	**23033**
VES Image Port	TCP/IP port used to receive reads from fixed cameras	**10000**
VES UDP Ping Port	UDP port used to receive keep alive ping messages from fixed cameras	**10010**
VES Heartbeat Port	TCP/IP port used to receive heartbeat status messages from fixed cameras	**10005**
VES Exceptions Port	TCP/IP port used to receive exceptions messages from fixed cameras	**10011**
Smart Client Deployment	TCP/IP port used for BOSS client installations via BOSS server	**32023**
REST API Port	HTML port used for the communication between the BOSS service and newer versions of PAGIS	**8092**

If the checkbox in front of the port name is left unchecked, the corresponding connection will be disabled.



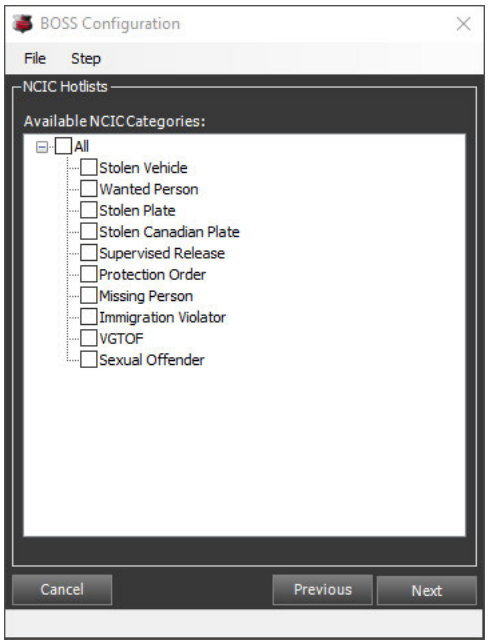
Smart Client Deployment Host – If this information is entered, BOSS Smart Clients will use the given hostname to distribute the smart client application. This can be left blank to use the local host name.

Firewall CIDR – BOSS provides a built-in firewall for incoming fixed camera connections. If a value is entered, only cameras with an IP address matching the CIDR will be allowed to connect. CIDR (Classless Inter-Domain Routing) is a standard industry method for specifying a range of included IP addresses. The format of the CIDR entry is A.B.C.D/N, in which the dotted decimal portion before the "/" is interpreted, like an IPv4 address, as a 32-bit binary number that has been broken into four octets. The value of N indicates the number of shared initial bits, counting from the left-hand side of the address.

For Example: For an entry of 10.200.200.255/24, the CIDR value 24 leaves 8 bits that can be changed. Therefore, addresses 10.200.200.x are permitted addresses.

SNTP Server – BOSS has a built-in time service. The fixed ANPR/ALPR cameras do not support automatic daylight savings time (DST) adjustment. The BOSS time service provides a customized SNTP service for these cameras in order to support DST. To use the built-in time service, Windows Time Service has to be disabled in the Services Control panel, and the BOSS time server IP address entered in this field.

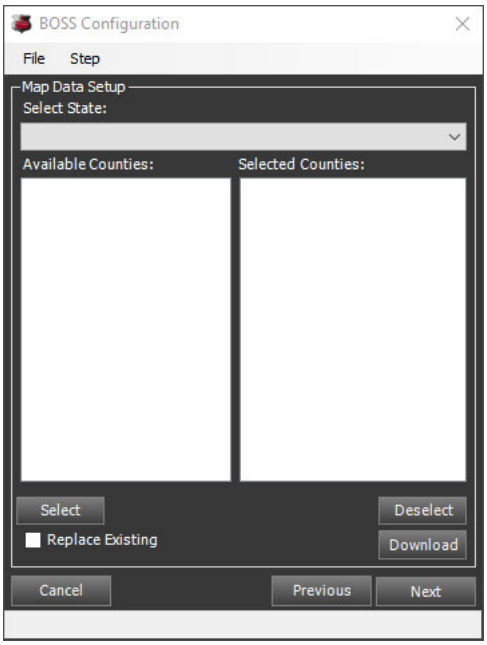
17.4.2.6 Regional Hotlist Formatters



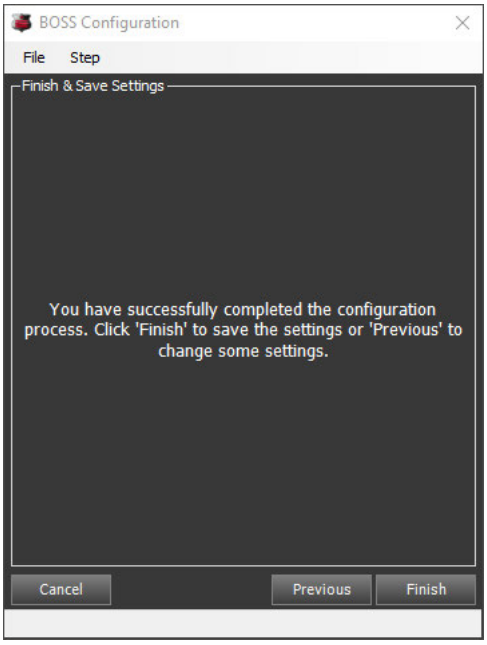
The BOSS allows the selection of predefined hotlist formatters. These formatters define the input format (structure) of hotlist data files. Custom formatters can be defined via the BOSS Smart Client application *(see Section 13 of this manual for more information)*. Also, when installing BOSS in the United States, National Crime Information Center (NCIC) data formatters can be selected for specific states (see section following).

To select or unselect formatters, click on the formatter title to add or remove a check mark. Additional formatters can be added to a system as needed. These will be provided by PIPS Technical Support upon request.

17.4.2.7 NCIC Hotlist Formatters



BOSS supports hotlist import in the United States National Crime Information Center data format. This option is available only in the United States.



To configure formatters for the desired categories, check those categories. Once the desired categories have been selected, press **Next** to proceed.

17.4.2.8 Map Data Setup

U.S Census Bureau TIGER Maps now discontinued. Do not utilize this section, click “Next”

17.4.2.9 Finishing Configuration

Click **Finish** to complete configuration. BOSS will save the chosen configuration.

17.5 Installing the BOSSUI Smart Client Application

17.5.1 Installation over the Web

To initiate a web installation on a workstation, start up Microsoft Internet Explorer and navigate to this web address: **http://{boss_server_ IP_address}:32023/publish.htm**, where {boss_server_IP_address} is the address of the server running the BOSS server application.

For Example: To install the Smart Client on the BOSS server itself, navigate to http://127.0.0.1:32023/publish.htm. The installation webpage will be presented. The advantage of installing the Smart Client over a web browser is that the application will automatically check for updated versions every time it is started.

17.5.2 Stand-Alone Installation

The BOSS Smart Client is a zero-administration desktop application meant for administration of the BOSS server application and querying data collected in the BOSS database as described in this manual. The BOSS Smart Client is installed as a single executable program. This program can be copied to any Windows workstation, or to a shared network drive.

To install the stand-alone application:

1. Start Windows Explorer on the BOSS server.
2. Navigate to the folder where the BOSS server application is installed (**by default C:\Program Files\PIPS Technology, Inc\BOSS3**)
3. Locate folder **sa_client.**
4. Copy the **sa_client** folder to the workstation or shared network folder of choice.

17.6 Configuring Client Tools

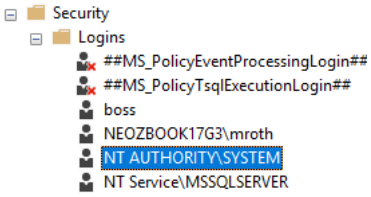
Client Tools is used to transfer any files needed during an Pagis shift from BOSS to an Pagis system that is being run in the Disk Sync mode. *See Section 13, Client Tools, and the Pagis Software User's Manual.*

Client Tools does not have a customary interface. Once the utility is started, the Client Tools icon will appear in the Windows System Tray. Before use, Client Tools must be configured and can be quickly completed with the simple configuration wizard provided:

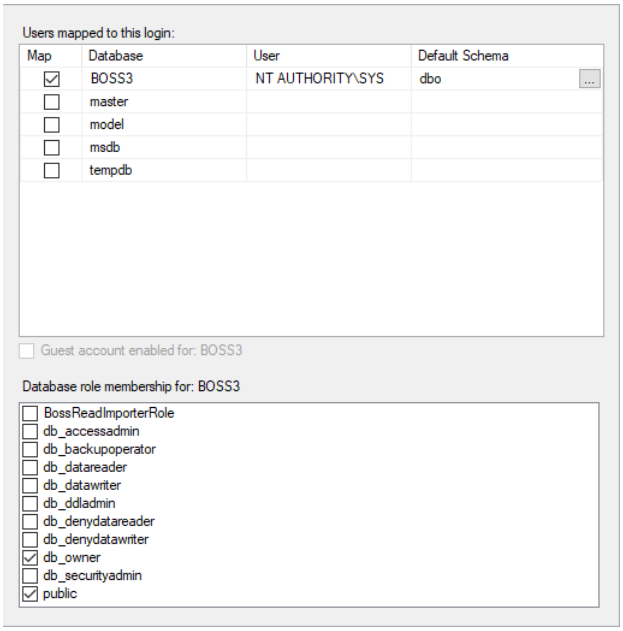
1. To start the wizard, right-click the icon and select **Configure**. The initial screen provides information about the tool.
2. Click **Next** to continue the configuration, or **Cancel** to exit the wizard.
3. Enter a path so that Client Tools knows where to store the files it creates and where to look for files to process. This path can be a local, network, or external drive. Enter the path or click on the … button and browse to the location.
4. If the Begin Shift files that Client Tools creates need to be encrypted, click **Encrypt Output**. Click **Previous** to return to the previous screen, or click **Next** to continue.
5. The data used to create the Begin Shift files is created and managed in BOSS. Client Tools needs to know where the BOSS Server is located. Enter the server IP and the port to use to connect to it. Click **Previous** to return to the previous screen, or click **Next** to continue.
6. The final screen provides additional information on how to use the wizard. Click **Previous** to return to the previous screen, or click **Finish** to save the changes and exit.

Common Issues

Missing Permissions on the database user



PIPS Boss service does not start: If the service does not start after two tries, go to the logs file located in "C:\Program files(x86)\PIPS Technology, Inc\BOSS3\logs", there look for the following message:



a. The server principal "user" is not able to access the database "BOSS3" under the current security context:
This problem is caused by missing permissions in the database user you are using.
To fix this problem you need to go to the Microsoft SQL Server Management Studio application and connect with a user with sysadmin privileges, inside the object explorer expand the folder Security, within the logins folder identify your user, right click on the user and select Properties. Inside "Server Roles" mark the sysadmin box.
After this restart the BOSS service.

The Underlying Provider failed

When a read query is made, the application shows the message **The Underlying Provider failed**

a. Inside the logs file, look for the line with the message "Login failed for user" identify the user, example- "Login failed for user 'NT AUTHORITY\SYSTEM". If this occurs log into SQL Studio Manager and map the BOSS3 Db to that account, also add the membership role of "db_owner" to the account.

Failed login

Check that the service is running, and the credentials are valid, also, check the server configurations, if you have localhost instead of 127.0.0.1 replace it for 127.0.0.1. If the problem persists go to the logs file and identify the error and contact PIPS customer support support@pipstechnology.com.

Relocating BOSS3 database

- When an upgrade requires you to move your existing BOSS3 database to a new location follow the recommend step in our "PIPS Relocate Boss Data Files" document for step by step instructions.

18 Appendix: Troubleshooting

When troubleshooting an issue, always start by looking for error messages in the Server log file, usually found at ...\PIPS Technology, Inc\ BOSS3\logs\BOSSServerLog.txt. Proceed based on the following information, recognizing that escalation may be necessary. If so, obtain a copy of the complete error message and include it with all escalated documentation.

ISSUE REPORTED	EXPLANATION	STEPS TO CORRECT
Just after an installation/upgrade, the UI won't start.	It takes several moments for the BOSS Server to be completely started and ready for information to be accessed.	After starting the BOSS server, wait for several moments before attempting to start the UI. If this is an upgrade this could be several minutes while the database is being updated.
I start the BOSS Controller, but it stops a moment later. The following error message may display "Error: Error in BOSS3 Controller. Please check the log files." (New installation scenario)	The license was not activated. When checking the BOSS Server Log, there will be two error messages : – 'Licensed for 0 concurrent clients' and – 'Failed to set registry parameter [_tmpbaliked a63] to value System.Byte[].'	Return to the licensing activation and updating checklist. (*See Section 17.2, BOSS Version 3.2 and Above License Key Management.*)
I start the BOSS Controller, but it stops a moment later. The following error message may display "Error: Error in BOSS3 Controller. Please check the log files." (Upgrade scenario)	The Upgrade Tool must be run before starting the Controller.	Run the Upgrade Tool. (*See Section 17.7 The BOSS Upgrade Tool.*)
I start the BOSS Controller, but it stops a moment later. The following error message may display "Error: Error in BOSS3 Controller. Please check the log files." (Other scenario)	If the Upgrade Tool has been run, there may be a problem with the database.	Look for error messages in the BOSS Server Log. Provide this information to Technical Support.
A fixed camera won't connect.	The firewall could be blocking the communications.	Ensure that the firewall is allowing communications through the VES ports, found in the BOSS Configuration Controller on the Ports screen.
PAGIS won't connect.	The firewall could be blocking the communications.	– Ensure that the firewall is allowing communications through the REST API (for PAGIS 2.7.x) and PAGIS 3.0 Service (for versions of PAGIS) ports, found in the BOSS Configuration Controller on the Ports screen. – Ensure that the device has been enabled in the BOSS UI Devices screen.
Hotlist will not update.	There is typically a problem with the source file.	– If it is a network hotlist, ensure that the site can be reached by entering the address in a browser. – If a local hotlist, ensure that the file is on the system and can be opened.
The NCIC Hotlist formatter that I need is not available. (New installation scenario)	The NCIC formatters were not added during the initial installation.	Stop the BOSS Service. Go to the Configure option on the BOSS Controller. Step to the NCIC screen. Select the desired NCIC formatters. Click **Save** and exit. Restart the BOSS Service. The formatters will now be available.

ISSUE REPORTED	EXPLANATION	STEPS TO CORRECT
I am unable to see reads/hits in the Dispatch screen.	The time on the read/hit coming in must be relatively close, within a couple of minutes, to the BOSS server time.	For a mobile ALPR system, correct the time on the laptop or ALPR processor. A fixed camera can be configured to use a time server. If issue persists, the server that BOSS is running on could also be configured to sync with a time server.
An error message, "Compressed method not supported," was found in the BOSS Server Log.	There are various reasons that this message can occur.	Obtain a copy of the complete error message. Provide this information to Technical Support.
An error message, "Transaction has aborted," was found in the BOSS Server Log.	There are various reasons that this message can occur.	Obtain a copy of the complete error message. Provide this information to Technical Support.
An error message. "Error #nn appeared in the db for Stored Procedure xxxx on line nn." was found in the BOSS Server Log.	An error occurred when running the stored procedure listed in the message.	Obtain a copy of the complete error message. Provide this information to Technical Support.
An error message, "Timeout expired. The timeout period elapsed prior to completion of the operation or the server is not responding," was found in the BOSS Server Log.	A SQL timeout error has occurred.	Obtain a copy of the complete error message. Provide this information to Technical Support.
An error message, "SNTP server not started, could not bind to InterNetwork 0.0.0.0:123," was found in the BOSS Server Log.	This is an expected error message that occurs when BOSS has not been configured to access a time server.	If no time server has been configured, this message can be ignored. If one has been configured, this needs to be escalated for further assistance.
After a new installation, the BOSS server stops running with an error message, "Failed in working with the database. Ensure connectivity is properly defined. Try running the BOSS Controller again and checking settings," was found in the BOSS Server Log.	When BOSS was started, there was a connection issue between it and the SQL Server.	Start by checking the information in the Controller. If that is all correct, then check to ensure that the SQL Server is running. If no issues are found there contact Technical Support Obtain a copy of the complete error message.
After a new installation, the BOSS Server stops with no error message in the BOSS Server Log.	The server needs to be run with Administrator privileges.	The server should be restarted in the Console as an Administrator. If running BOSS as a service then the BOSS Controller must be run as Administrator.
Error message in BOSS Server Log says that the file "httpconfig.exe" cannot be found.	This is an error that can occur when the system has not been updated in some time. It has been seen for other uncertain reasons as well.	Obtain a copy of the complete error message. Provide this information to Technical Support.
After a new installation, the BOSS Server starts but stops moments later. The BOSS Server Log contains the error message. "The system cannot find the file specified Additional Exception Message: Unhandled exception from 'Name:BOSS3.exe. There are no context policies." However, no file is listed in the message.	This typically occurs on older systems, especially Windows Server 2003, or systems that have not been updated for a while.	The file httpcfg.exe needs to be copied into the c\Windows\System32 directory.
The BOSS Server won't start, and there is an error message, "Transport Manager failed to listen on the supplied UIR using the NetTcpPortSharing service: failed to start the service because it is disabled," in the BOSS Server Log.	The NetTcpPortSharing Service is not running.	Obtain a copy of the complete error message. Provide this information to Technical Support.
The BOSS server stops running, and there is an error message, "Cannot open database "<Database Name>," in the BOSS Server Log.	There is an issue with the connection between the BOSS server and the SQL Server.	Start by checking the information in the Controller. If correct, then check to ensure that the SQL Server is running. If no issues are found contact Technical Support. Obtain a copy of the complete error message.

ISSUE REPORTED	EXPLANATION	STEPS TO CORRECT
The BOSS Server won't start and there is an error message "A file activation error occurred. The physical file name '<filename>' may be incorrect." in the BOSS Server Log.	There could be multiple reasons, but it is probably due to a database connection issue.	Obtain a copy of the complete error message. Provide this information to Technical Support.
When running the upgrade tool, an error message is displayed. A message is included in the BOSS Server Log: "Current upgrade state: One of the upgrade scripts failed to run as expected. Please contact support for direction."	This most likely occurred due to upgrading from an old version of BOSS.	Obtain a copy of the complete error message. Provide this information to Technical Support.
An unexpected response or behavior occurs in BOSS, and there is an error message, "Object reference not set to an instance of an object," in the BOSS Server Log.	This is a generic error message that can occur for various reasons.	Unless the issue has an obvious cause contact Technical Support. Obtain a copy of the complete error message.
The following error message, "Discarding tmp buffer because it's corrupted," has been found in the BOSS Server Log.	This message is associated with a database issue.	Obtain a copy of the complete error message. Provide the information to Technical Support.
The following error message, "SMTP server is not defined, email alerts disabled," has been found in the BOSS Server Log.	This message is informational indicating, as it states, that an email server has not been configured.	If attempts have been made to configure an email server and this error message occurs, recheck the settings and the server. If the error remains contact Technical Support.
The BOSS Service stops running, and the BOSS UI indicates that the server is not available. The following error message, "Cannot access a disposed object," is found in the BOSS UI Log.	This is an informational message provided by the UI confirming that it is no longer able to communicate with the BOSS server.	Restart the BOSS server and the BOSS UI will reconnect. If this does not correct the issue contact Technical Support.
The following error message, "The socket connection was aborted," is found in the BOSS UI Log.	This is an informational message provided by the UI confirming that it is no longer able to communicate with the BOSS server.	Restart the BOSS server, and the BOSS UI will reconnect. If this does not correct the issue contact Technical Support.
A problem occurs while adding a hotlist and the following error message "Invalid object name '<hotlist name here>'," has been found in the BOSS Server Log.	This indicates that there is an issue with the hotlist formatter being used.	Confirm that the correct formatter is being used. If so, confirm the source file is formatted correctly. If so, contact Technical Support. Provide a copy of the full error message.
While installing BOSS, an error message displays: "Error opening file for writing: <File Name>."	This indicates that the application listed in the error message is still running.	Check the Windows System Tray for any BOSS applications still running on the system. Close the application(s) and continue the installation.
The BOSS applications are installed under one user, but are not found when another user logs in.	The application was not installed using administrative privileges.	The application will need to be uninstalled and reinstalled using administrative privileges.
While using Client Tools to create Begin Shift files, an error message displays: "Client has not been activated on the server."	Mobile devices must be enabled on BOSS to synchronize data to it. This message is displayed the first time that Client Tools is used to create Begin Shift files because it has not been enabled yet.	Configure Client Tools on BOSS (see Section 17.6) so that BOSS adds Client Tools as a device.
When using Client Tools to synchronize End Shift files to BOSS, the following error message displays: "Error: Could not find <file and path name>."	Client Tools was unable to find the End Shift files to be processed at the defined path.	Check that the location assigned for the End Shift file matches the location chosen when Client Tools was configured. If it does not, move the file to the configured location.

19 Appendix: Plug-Ins

BOSS allows the use of third-party code via a plug-in that serves the needs of BOSS customers with specific data requirements. Once a plug- in is created and compiled, a copy of the DLL and any other necessary files can be copied to the plug-ins directory under BOSS. BOSS will automatically detect the existence of the plug-in at that point and permit reads to be passed to the ReceiveData method of your plug-in.

The functions of the currently available BOSS plug-ins are described in Sections 19.1 and 19.2. For more information and guidance on installing a plug-in, contact PIPS Technical Support for guidance.

19.1 The BOSS Truck Drayage Utility

Regulation of diesel-fueled heavy-duty trucks and a Drayage Truck Registry (DTR) were implemented by the California Air Resources Board (ARB) to help reduce both emissions from these vehicles and public exposure to contaminants in those emissions. Drayage trucks subject to regulation (Class 7 and Class 8) are registered and information about them is maintained on an ARB web service.

The Truck Drayage Utility is BOSS plug-in that provides access to the ARB web service. The utility is designed to contact the web service, retrieve data, and add it to a comma-separated values file. In BOSS, the Hotlist Administrator will then create a whitelist that uses this CSV file as the source file.

The connection to the ARB web service (managed by the Windows Task Scheduler) can be made once daily for a full download of the data, with subsequent connections allowed no more frequently then every 30 minutes for updates. This whitelist can then be deployed to a mobile or fixed camera in the monitored area. If a plate is read that is not included on the whitelist, a notification will be displayed in BOSS. Appropriate action can be taken at that time.

If the ARB web service is unavailable and downloads cannot be completed, the BOSS whitelist will not be updated. There will also be warning messages in the BOSS log such as “Could not connect to <web service address>. TCP error code nnnnn: <Error description>.” If this occurs, the utility will try again in 30 minutes. If the errors persist, it may be necessary to seek assistance.

19.2 The BOSS LPRD Plug-in

The BOSS LPRD plug-in relays the reads the BOSS server receives on to the national database at the Automated Regional Justice Information System (ARJIS), a joint powers agency that facilitates information-sharing among more than 70 law enforcement agencies—local, state, and federal—in the two California counties (San Diego and Imperial) that border Mexico. ARJIS operates a secure intranet (ARJISnet) with more than 11,000 users in San Diego County alone.

19.3 The BOSS DEA Plug-in

The BOSS DEA plug-in writes LPR messages to the file system as reads are received by the BOSS server. Those files will then be available for the Drug Enforcement Agency, DEA, File Transporter to act upon.

20 Appendix: BOSS Mantis

The Mantis service adds analytical analyses to new and existing read images within BOSS providing the user the ability to search based on vehicle Type, Brand, Color & Unique markings. BOSS Mantis is an additional PAID service that can be enabled on BOSS versions 3.6.x.x and above, older version of BOSS can support this feature by upgrading, providing they meet the system

20.1 How Dose Mantis Work

The service is hosted in the Amazon Web Services (AWS) Elastic Compute Cloud (EC2) platform, running in instances comprised mainly by Graphics Processing Units (GPUs). The only information sent to the Mantis endpoint is the vehicle image, known as the Overview image by the BOSS. Communication between BOSS and Mantis is performed as a client-server architecture, meaning the Mantis server uses the 443 (https) port to allow clients to reach the Mantis endpoint.

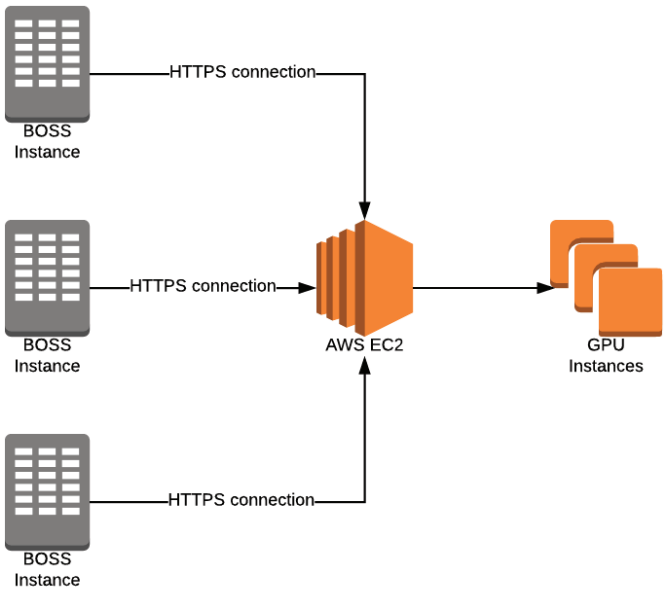


Figure 1 Multiple BOSS instances connected to the Mantis API.:

The information between BOSS and Mantis flows only in one way, this means that only BOSS clients can send data to Mantis, where it will be processed, and a response will be received by the BOSS server. Mantis cannot reach the BOSS Server or perform any kind of operations on the user's behalf over the data stored inside BOSS.

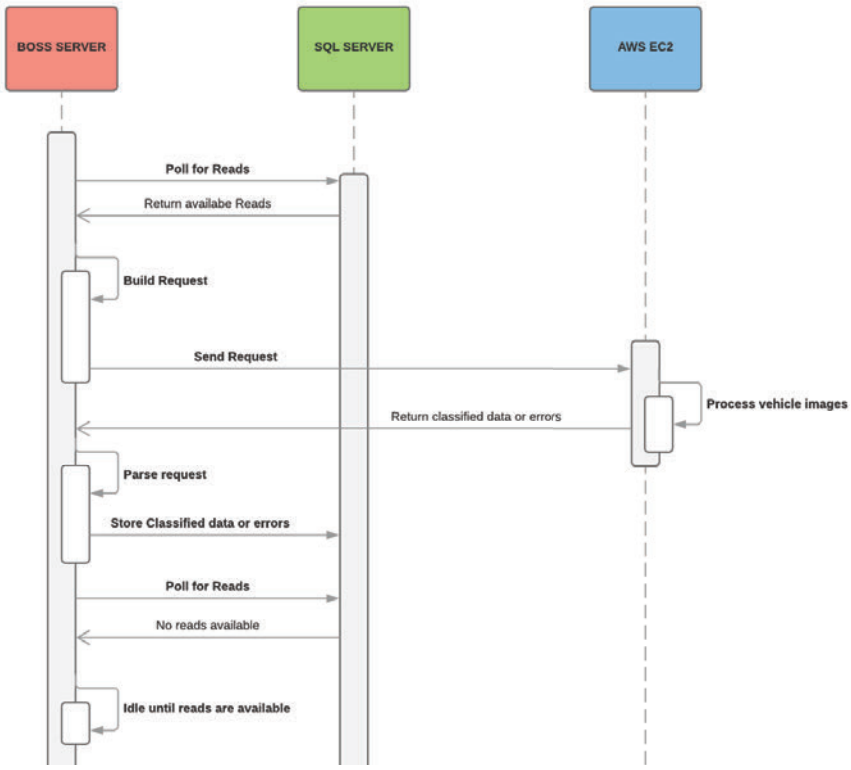

Figure 2 Sequence diagram for the current BOSS-Mantis Integration

20.2 Mantis Security and Encryption

As a summary description for the HTTPS protocol, its security is that of the underlying TLS (Transfer Layer Security) cryptographic protocol, where a certificate is used to authenticate the server, thus, the data flow between the client and the server is encrypted.

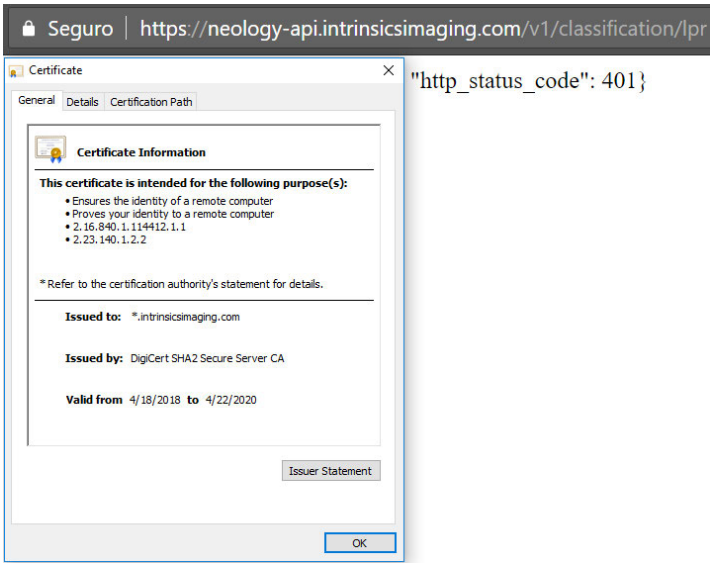

Figure 3 Available details for the certificate on the Mantis-Neology endpoint

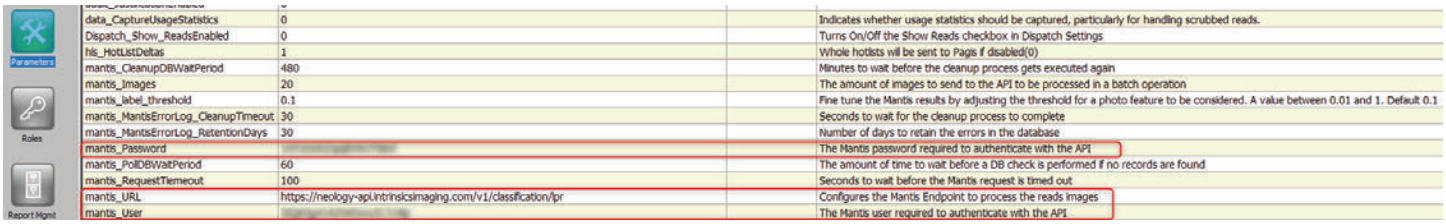
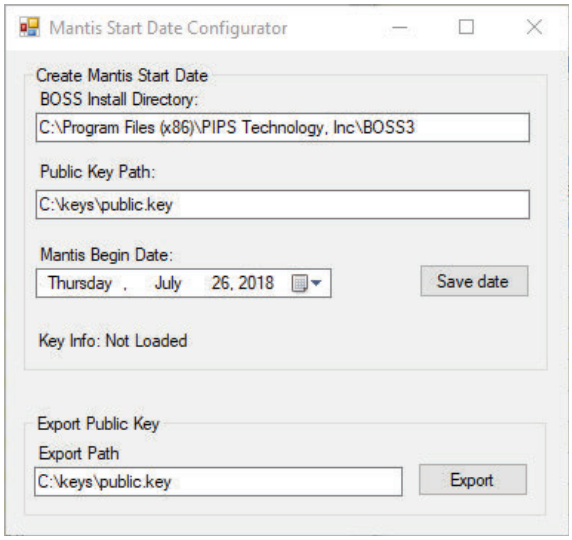
20.3 Mantis Requirements



1. BOSS version 3.6 or newer.
2. Open communication to Mantis API URL (https://neology-api.intrinsicsimaging.com/v1/classification/lpr) via port 443.
3. Mantis Licensing feature required.
4. A valid Mantis User name and password. User name and password provided at time of licensing purchase.

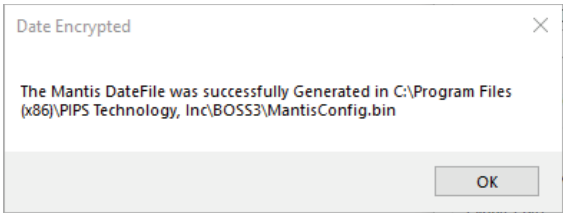
20.4 Mantis Installation



1. To upgrade or install Mantis version of BOSS follow the installation steps provide under Appendix 17. If upgrading from previous BOSS version you will also need to reactive your existing license to reflect the addition of the Mantis feature, see section 17.2.2.
2. Once BOSS is installed or upgraded, start the BOSS service to perform additional Mantis configurations.

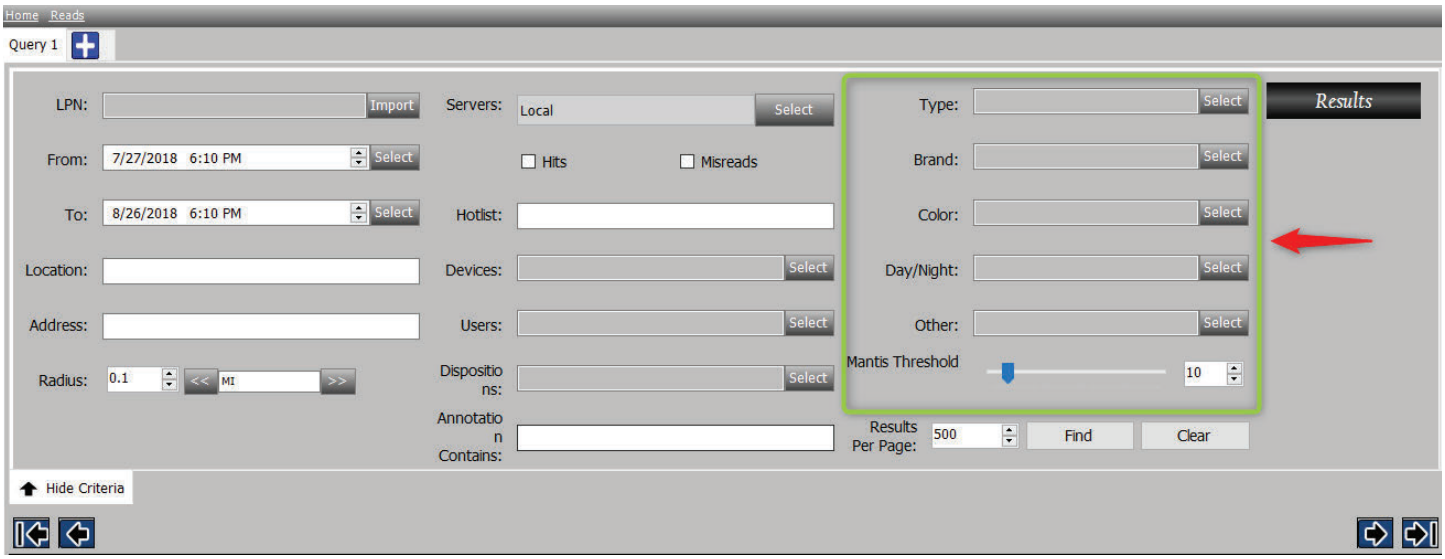
20.5 Mantis Configurations

1. Start and login to the BOSS UI, navigate to System > Parameters.
2. In the Attributes table, look for the entries with the following names:
    - **a. mantis_User:** Assign the provided Mantis user name here.
    - **b. mantis_password:** Assign the provided Mantis user password here.
    - **c. mantis_URL:** Set the Mantis URL here. https://neology-api.intrinsicsimaging.com/v1/classification/lpr



3. Additional parameters can be configured, see Mantis Parameters for details.
4. Once all the entries were assigned their corresponding values, close the BOSS UI and stop the BOSS service.
5. Download and place the “MantisStartDateGenerator.exe” file in the root BOSS3 folder, this executable is sperate from the BOSS installer and will need to be downloaded and placed manually.
6. Start the “MantisStartDateGenerator.exe” utility with administrator permissions.

7. Set the BOSS Install Directory to the Path of the folder where BOSS was installed.:



8. Set the Export Public Key path to a folder where you can access the generated public key, then click the Export button, and verify that the key was exported to the path.
9. Select a date that you want Mantis to take as the begin date for reads to be retrieved “Mantis Begin Date”. Reads that entered the system before this date, won’t be processed.
10. Click the Save date button to create the “MantisConfig.bin” file in the installation directory. A message confirming the file creation will appear.

11. Start the BOSS service.
12. When BOSS is started, the existing reads in the BOSS database will be sent to and processed by the Mantis API. The results will be stored on the local database.
13. Start and login to the BOSS UI.

20.6 Mantis Search Features

The Mantis fields should be visible in the right side of the reads panel in the BOSS UI. In case the fields are not available, diagnose the possible problems in the Mantis Configuration Troubleshoot section 20.8.

20.6.1 Mantis Search Definitions

- **Type=** Vehicle configuration style, i.e. Car, Box-Truck, Full-Size-Van, Hatchback, Minivan, Other-Truck, Pickup, Sedan, Suv.
- **Brand=** Vehicle manufacture.
- **Color=** Vehicle primary color.
- **Day/Night=** Vehicle capture in day or night.
- **Other=** Includes additional vehicle identifiers such a roof racks, spare-time, spoiler, ect...
- **Threshold=** Adjust the threshold slide bar to increase or decrease the confidences level of the Mantis search criteria based on selected filters, 1 being the lowest and 100 the highest confidence level available. When threshold is utilized in searches a new “Confidence” column will appear in the results, a user may now use this column to further sort the results by descending or ascending order.

20.7 Additional Mantis Parameters

As a summary description for the HTTPS protocol, its security is that of the underlying TLS (Transfer Layer Security) cryptographic protocol, where a certificate is used to authenticate the server, thus, the data flow between the client and the server is encrypted.

Parameter Name	Description	Default value
mantis_URL	The URL for the Mantis endpoint. The latest value should be available in this document. See Ports configuration for the corresponding value or ask a PIPS Technology representative.	None
mantis_User	Part of the credentials provided, it may be referenced also as the Mantis API key.	None
mantis_Password	Part of the credentials provided, it may be referenced also as the Mantis API password.	None
mantis_Images	The number of images to send to the API to be processed in a batch operation	20 images
mantis_PollDBWaitPeriod	The amount of time to wait before a DB check is performed if no records are found	60 seconds
mantis_RequestTiemeout	Seconds to wait before the Mantis request is timed out	100 seconds
mantis_MantisErrorLog_RetentionDays	Number of days to retain the errors in the database	30 days
mantis_MantisErrorLog_CleanupTimeout	Seconds to wait for the cleanup process to complete	30 seconds
mantis_CleanupDBWaitPeriod	Minutes to wait before the cleanup process gets executed again	480 minutes
mantis_label_threshold	Fine tune the Mantis results by adjusting the threshold for a photo feature to be considered. A value between 0.01 and 1.	10% (0.1)

20.8 Mantis Configuration Troubleshoot

To trouble shoot any Mantis issue, access to the BOSS Server logs is required. The logs are available inside the logs directory, inside the installation folder, e.g. "C:\Program Files (x86)\PIPS Technology, Inc\BOSS3\logs".

Inside this folder, there are two types of outputs:

- **BOSSMantisLog.txt.*:** This files contain Mantis Service specific information.
- **BOSSServerLog.txt.*:** This files contain overall BOSS Server information.

Known errors

L	Level	Error	Description
	INFO	**Mantis Service: Not available**	The Mantis feature was not enabled in the license key with which BOSS was activated
		Solution	Contact a Neology PIPS Technology agent for information on how to request the activation of the feature in your current license key
	INFO	**Mantis configuration not loaded, the service will not be started**	This error signals missing configuration Look for the additional messages described in the following rows.
	ERROR	**Mantis endpoint not configured, shutting down service**	The mantis URL parameter was not set properly, it cannot be a null or empty value.
		Solution	Review the ports configuration and set the mantis URL parameter to the given mantis URL. If you have an outdated version of this document, contact the Neology PIPS Technology support team to get the latest information.

	ERROR	**Mantis credentials are not configured, shutting down service**	Either the mantis_User or the mantis_password parameter was not set.
		Solution	Check that these values do not have a null or empty value. If you were not provided with these credentials, contact the Neology PIPS Technology support team.
	INFO	**Due to a request error, the next Mantis request will be performed in seconds**	There are three known errors related to mantis functionality: • **Mantis Failure**: Mantis failed to process the uploaded information. This error will not be retried because with the same image, Mantis will produce the same output. • **Connection error**: There was a problem establishing a connection with the server. This batch will be retried. • **Mantis Server Error**: An exception was received from the server. This error will be retried.
		Solution	For the above three errors, the possible solutions or actions to take are described below: • **Mantis Failure:** If too many instances of this error appear, contact the support team to diagnose the error. • **Connection error:** Verify that the appropriate rules for the firewall and whitelisting for URL and ports was set. See Mantis requirements for more details. • **Mantis Server Error:** If too many instances of this error appear, contact the support team to diagnose the error.

For a full list of all the messages produced by Mantis and a more detailed explanation about them, see the Mantis Log messages catalog.

20.8.1 Mantis Log Messages Catalog

Below is a description for the messages produced by the Mantis Service. Only applicable messages will have a solution appended to them.

Glossary

Term	Definition
ALPR	Automatic license plate recognition (also called automatic number plate recognition, or ANPR)
Annotation	A note or comment that can be made about and added to a read.
Deployment	The distribution or making available of a hotlist to a device
Device	A source of ALPR data; an PAGIS unit or a fixed or mobile camera
Disposition	The classification of a hit; e.g., a recovered stolen vehicle
Fixed Camera	An ALPR camera permanently mounted above a roadway
Group	A group of BOSS users that belong together administratively
Hit	A match on a plate read against a hotlist
Hotlist	A list or database of license plates of interest, e.g., the NCIC database
Justification	A purpose for running a query on the captured data. There are several justifications included in the system by default. The BOSS Administrator can also create custom justifications to be used.
LPN	License plate number; also known as the Vehicle Plate Number
PAGIS	PIPS™ Mobile Software, the ALPR Mobile application
Local Server	A server running on a local system, in relation to the SQL server or the BOSS UI Misread A read that was marked as a misread by a user
Mobile Unit	An ALPR system with cameras, a mobile processor, and software, such as Pagis Software, installed in a vehicle
Notification	Propagation or delivery of an alert resulting from a hit
Overview	A color image of the vehicle to which the license plate is attached
Patch	A small image of the license plate
Permission	Authorization to access specified functionality in BOSS
Read	A license plate detection event that results in the plate text optical recognition and pictures being taken
Remote Server	A BOSS server that is running in another location
Role	A position, such as Administrator, with the authorization to access specified functionality in BOSS
Site	A group of related devices
Translation	The interpretation from a word in English to a word in a selected language
User	An authorized BOSS user (with a username and password)
Whitelist	In BOSS a whitelist hit is the opposite of a hotlist hit. When a license plate read does not exist in an enabled whitelist database, the same Hits (Alert) screen will be displayed.

Version

The manual documents the 3.2 series version of the BOSS software. The document was last updated on March 27, 2014.

1 Introduction

This document serves as a user's manual for the 3M Back Office System Software (BOSS) version 3.2 or above and describes the various features and functionality of the application. BOSS is a management and administration tool for the 3M Automatic License Plate Recognition (ALPR; also known as ANPR, or Automatic License Number Recognition) systems. The BOSS server application provides an interface for user maintenance, data queries, import and export of data, and dispatch functions. BOSS lets an Administrator specify the databases used by both mobile and fixed camera installations. BOSS retrieves these databases on a regular schedule; manages the users of the 3M™ License Plate Capture Software (LPCS) systems and BOSS Smart Client workstations; provides a central repository for data collected by mobile LPCS deployments and fixed camera installation; provides reporting and data management tools; provides hit detection and dispatch functions for fixed camera installations; and allows for data mining and data sharing with other agencies.

The following schematic shows how the BOSS server application works together with Smart Client workstations, various data sources, LPCS, and the full line of ALPR cameras to create a comprehensive solution.

1.1 The Design of 3M Back Office System Software Version 3.2 and Above

The design of BOSS version 3.2 or above offers ease of accessibility with a user-friendly look and feel. Large, easy-to-identify icons provide intuitive navigation, and the frequently used elements are readily available. The user interface (UI) is very recognizable and comfortable, particularly for users already familiar with Windows-based applications, including Microsoft® Office software, or the 3M License Plate Capture Software. In addition, users can enter a minimum amount of information to add a data object, with the ability to include more details if needed.

1.2 Organization of This User's Manual

The *3M Back Office System Software, Version 3.2 or above, Software User's Manual* guides BOSS users and Administrators through the following topics:

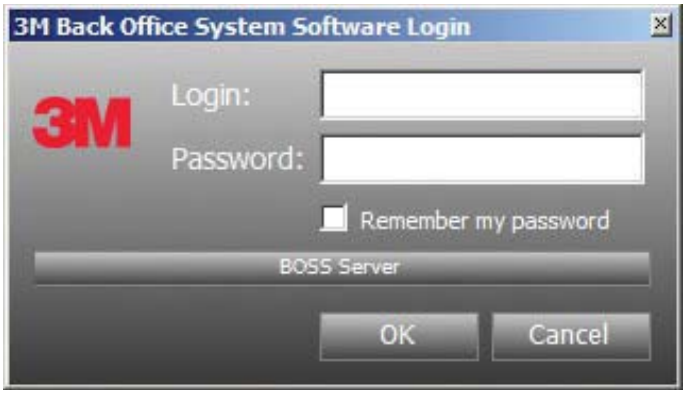
- Logging in
- Application Layout
- Access Permissions: Users/Groups/Roles
- Devices and Sites
- Data Sharing
- Hotlists
- Hotlist Formatters
- Alerts
- Dispatch
- Querying Stored Data
- Reports
- Client Tools
- Archiving Data
- System Settings

The appendices provide system requirements for BOSS servers and Smart Client workstations and a guide to installation and configuration. Additional appendices cover troubleshooting and BOSS plug-ins. A glossary of commonly used terms and acronyms follows the appendices.

2 Logging In

2.1. 3M Back Office System Software Administrator Login

During each new installation of the 3M Back Office System Software, a default user of “admin” is created, with the password of “admin1.” The installer or designated BOSS Administrator can log in with this account to create additional users and otherwise configure the system. It is important that the “admin” password be changed in order to protect the system’s security. Likewise, it is equally as important to keep this and all passwords confidential in order to protect the security of the BOSS system. Section 17, Installation and Configuration, offers more information on setting up users and passwords.



2.2 User Logins

The 3M Back Office System Software will require a user to log in with a username and password only if there is no BOSS user matching the current Active Directory user login. In other words, if the username currently logged into Windows matches a username in the BOSS system, the user is automatically logged into the application when it is started, and no login screen will appear.

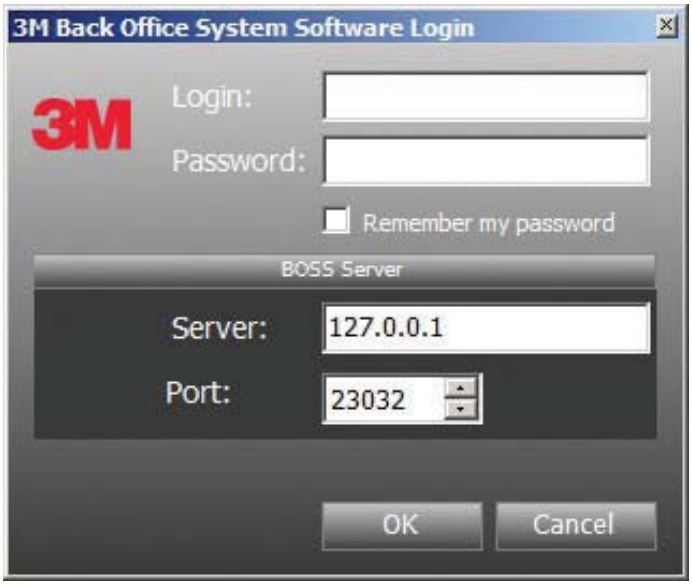
For example, if user “bsmith” is logged in using Windows Domain Authentication through Active Directory (“logged into Windows”), when the BOSS Smart Client is started, and a “bsmith” user exists within the BOSS system, no login screen will appear; the application will authenticate the user and load automatically. If a user logs onto Windows with a name that is not an exact match to a username in the BOSS system, or is not logged into the same Windows Domain, a login screen will appear. The user will then need to enter a correct BOSS user name and password in order to enter the application.

Note: In order for a user to be automatically logged into BOSS, the Active Directory user must be in the same Windows domain as the 3M Back Office System Software server.

2.3 Login Dialog

1. Enter your username in the Login field.
2. Enter the correct password in the Password field. **Note:** Passwords are case sensitive.
3. Click **OK** to complete the login process.

2.3.1 Storing Username and Password



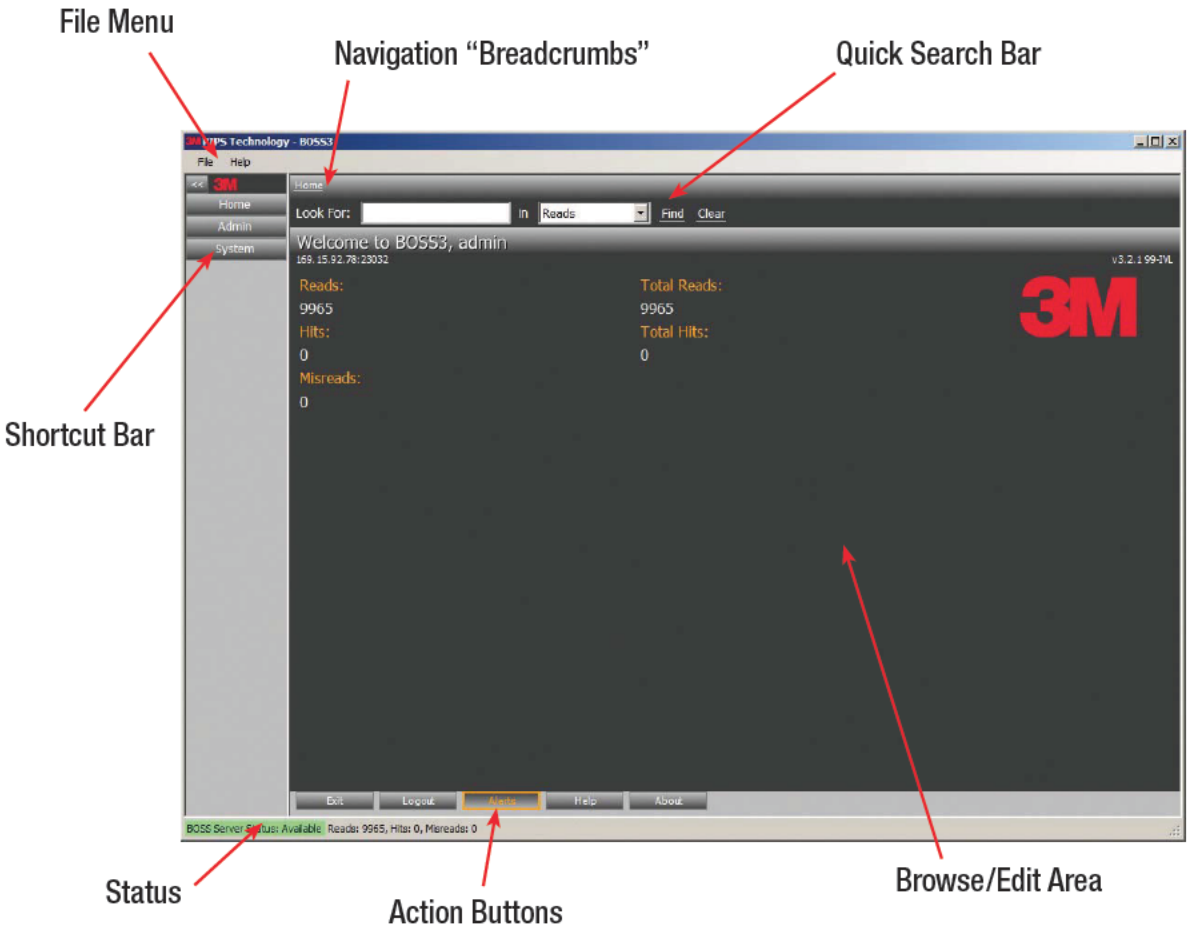
Select the **Remember my password** option to save the password to the computer's local Windows registry and automatically fill in both Login and Password fields on subsequent logins.

Selecting this option only remembers the login information for the current Windows User on the local computer. It will not apply to a different Windows user logged in the same computer and will not apply to the same user logging in a different computer. This option need not be checked every time. Once checked, the option will stay that way until it is deselected during a login.

Note: The username and the password are stored in the Windows Registry. This can be a security risk. It is recommended that you not use the **Remember my password** option unless the Windows workstation can be secured against unauthorized access.

2.3.2 BOSS Client Connection Settings

Click the **BOSS Server** button on the Login screen to view or change the client connection settings.



Server – IP address, computer name, or DNS address can be used in the Server field as long as the client can reach the server using the value entered.

Port – The default port used for connecting to the BOSS server is 23032. This should only be changed here if the BOSS server has been configured to use a non-default port.

3 Application Layout

3.1 Components of the BOSS Application Screen

File Menu – The File menu of the application resides in the very top left of the application window. The File menu is always visible and available regardless of the screen or shortcut selected. The **Exit** option is available through this menu.

Navigation – The navigation "breadcrumbs" appear at the top of the BOSS screen as different actions are selected. By clicking on the links it is possible to backtrack to a previous screen.

Shortcut Bar –The Shortcut bar (the panel on the left of the screen) contains icon buttons for the various operations available. The shortcut icons are divided into three categories: **Home**, **Admin**, and **System**. Each time the application is started, all of the categories are closed with no shortcuts displayed. Click on any of the three headings to access the shortcuts within that category. The actual categories and shortcuts that appear depend on the logged-in user's privileges.

The Shortcut bar can be collapsed entirely to provide a larger space for the Browse/Edit area by clicking the << button at the top left of the screen. To expand the Shortcut bar again, click the >> button.

Browse/Edit Area – The widest portion of the application window, the Browse/Edit area is where data is displayed for viewing or editing. The actual data displayed here depends upon the shortcut icon that is selected from the Shortcut bar.

Quick Search Bar – Directly above the Browse/Edit Area, the Quick Search bar allows for simple, immediate queries of BOSS data. Using the

Quick Search bar simply involves typing the text to query in the **Look For** field and selecting the type of data (reads, hits, etc.) to search in the drop-down box.

Action Buttons – These are the buttons directly below the Browse/Edit area. These buttons will differ depending on the shortcut icon selected. The actual buttons that appear will also vary depending upon the user's privileges.

Status Bar – This is the area along the very bottom of the application window that displays the following system information:

- **BOSS System State** (Available or Offline): "Available" status indicates that the client is currently communicating with the BOSS server application and the server is running. This status is highlighted with a green background. "Offline" status indicates that the client is currently not able to communicate with the BOSS server and is highlighted with a red background. In this event, the BOSS UI will continue to check for the BOSS server to become available again. After three attempts to reconnect, the user will be notified that the connection could not be re-established and will be provided further instructions on how to proceed.
- **Reads:** The total number of reads currently contained in the BOSS system.
- **Hits:** The total number of hits currently contained in the BOSS system.
- **Misreads:** The total number of misreads currently contained in the BOSS system.
- **Devices Offline:** The number of fixed camera devices that are currently identified as offline.

3.2 The BOSS Home Screen

The BOSS Home screen is displayed within the Browse/Edit area upon login. The top banner displays the username of the current BOSS user, the BOSS server address, and current system statistics. Statistics may take a few moments to update after login. The action buttons, described below, are displayed along the bottom of the screen. The actual buttons that display will vary depending upon the user's privileges.

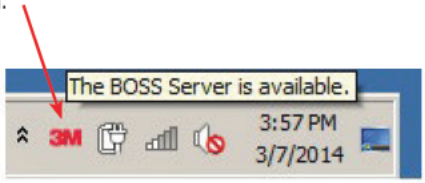
Exit – Exit the BOSS application.

Logout – Log out from the current session to the Login screen.

Alerts – Toggle dispatch alerts on (orange highlight) and off. This button will not be displayed if the user is not authorized to access the dispatch screen, or if the user has not chosen to receive dispatch alerts in Preferences *(Section 5.3)*.

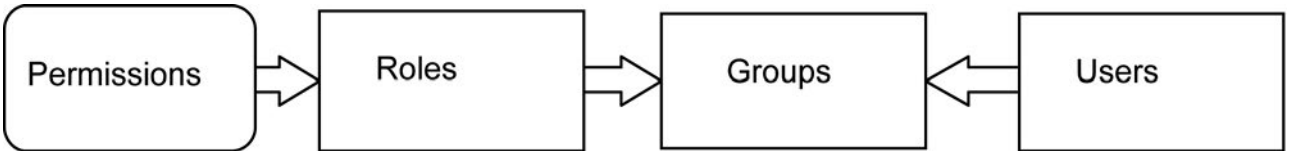
Help – Activate the help system.

About – Display application information.



3.3 Help Documentation

BOSS provides a help document accessible in the client application. To access help, select **Help** in the File menu area or press the **F1** button. A help document will be displayed in a browser window and is indexed and searchable for ease of use.



3.4 Minimizing the BOSS Application

The BOSS application can be minimized to the Windows System Tray using the Windows minimize button on the right upper corner of the BOSS application window. To restore the BOSS application, click on the **BOSS 3M** icon. When the application is minimized, real-time alerts will still be displayed.

4 BOSS Access Permissions: Users/Groups/Roles

Access permissions to various functions (such as reports or dispatches) in BOSS are administered through users, groups, and roles. Each individual who will use the BOSS software must log in via a user account. Each user account is assigned to a group. Every group is assigned a role (such as Administrator or Dispatcher), which determines the set of functionality to which the group's members will have access:

The security parameters defined in a role apply to a user via the group to which the user belongs.

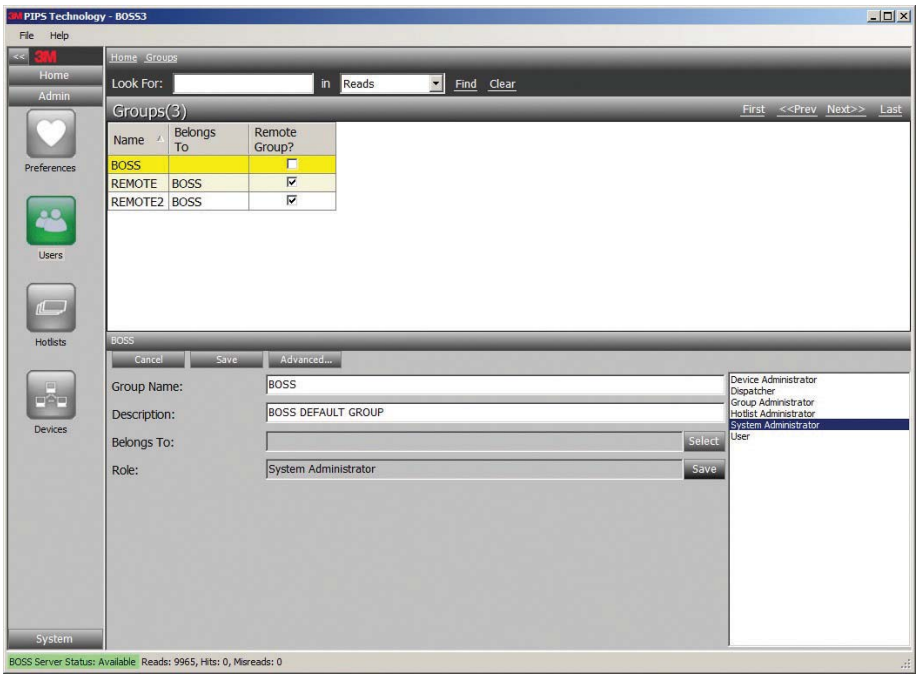
4.1 Permission Levels

The following table lists the levels that apply to permissions:

LEVEL	EXPLANATION
No Access*	No permissions to the function
Read Only	View-only permissions to the function. Add/Change/Delete are not permitted.
Full Access	Complete permissions to the function. View/Add/Change/Delete are permitted.

**When a user's effective permissions to a function are No Access, the function is not visible to the user. For example, if a user has No Access privileges to the System function, the System category is not displayed.*

4.2 Permissions



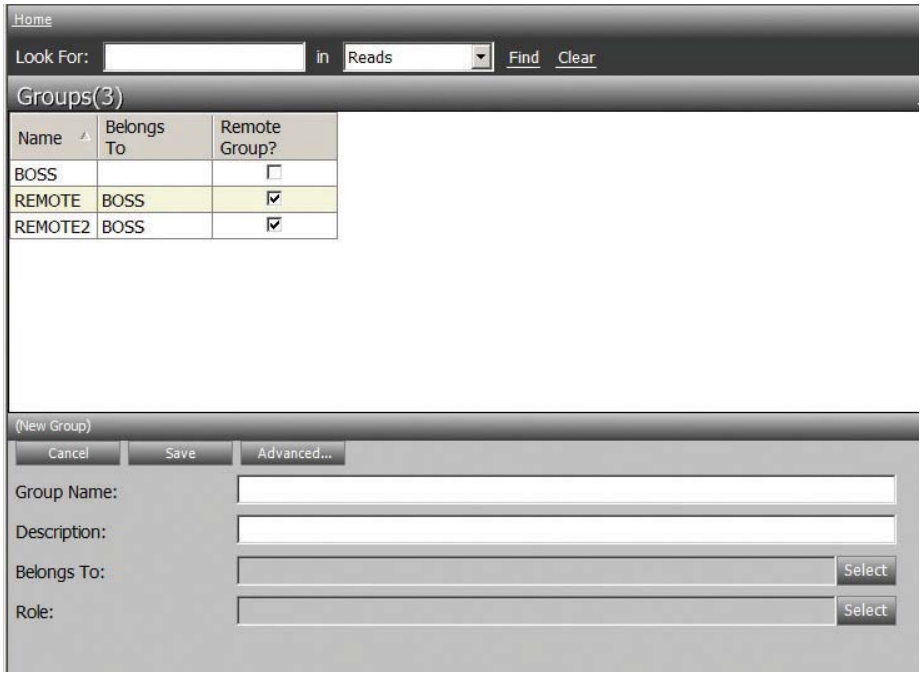
The following table lists the functions that are controlled by permissions levels:

PERMISSION	EXPLANATION
Reads	Plate read information
Dispatch	Real-time monitoring and hit alerts
Users	Groups and user accounts
Hotlists	Hotlists (plates of interest)
Devices	Sites and ALPR camera devices
System	System configuration options

See Section 15.4, Roles, for more information on setting permissions.

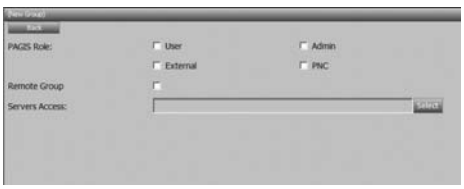
4.3 Roles

Roles are access permission profiles. BOSS comes with several predefined roles. A BOSS Administrator is able to add additional roles to the system. A BOSS Administrator is also able to alter and delete any roles. Roles define a **permission level for different functions** of the system. *See Section 15.4, Roles, for additional information.*



The following roles are installed by default in a BOSS system:

- System Administrator
- User
- Dispatcher
- Group Administrator
- Device Administrator
- Hotlist Administrator



4.4 Groups

Groups are collections of users that have the same permissions. Groups provide an efficient way to organize users, for example by organizational units, and easily assign permissions to those users. Using groups is optional. A default group named “BOSS” automatically exists within a BOSS system, and user accounts will belong to the “BOSS” group by default. The BOSS group cannot be deleted.

4.4.1 Creating a New Group

1. Select the **Admin** category on the Shortcut bar.
2. Click the **Users** shortcut. A list of all current users will display in the Browse/Edit area.
3. Click the **Groups** button at the bottom of the Browse/Edit area. A list of all current groups will display in the Browse/Edit area.
4. Click the **New** button. The New Group Entry screen will display.
5. In the Group Name text box enter a name for the group. (**Note:** The group name must have a minimum of three characters.)
6. In the Group **Description** text box enter a description of the group (optional).
7. Each group, except for the default BOSS group, is required to have a parent group. In the Belongs To field, click the **Select** button to view a list of all existing groups. Click on the desired group and click the **Save** button to select. The name of the selected group will display in the Belongs To field as the parent group.
8. Assign a role to the group. In the Role field, click the **Select** button to select from the existing roles. Click the desired role from the list and click the **Save** button to make the selection. The name of the selected role will appear in the field.
9. Click the **Advanced…** button to access additional, optional settings for the new group.

4.4.1 Creating a New Group *(continued)*

PAGIS Role (User/Admin/External/PNC) – Check desired PAGIS (now LPCS) roles to grant the new group for the associated permissions in LPCS. *Please refer to the 3M License Plate Capture Software User's Manual for more information.*

Remote Group – Select this option to designate the group as remote. When a BOSS Administrator wants to give access to another BOSS system for remote queries ("data sharing," *see Section 6*), a login must be created and assigned to a group that is flagged as a remote group. The remote BOSS Administrator will then create a remote site with credentials for that login.

Servers Access – This option allows for defining which, if any, sites will be accessible by this group. Click the **Select** button to access a list of sites.

Note: There are two sites defined by default: Manual Entries and Unassigned. If no additional sites have been defined, only the default values are available in this field. Click each desired site and click the **Save** button to complete the selection process. If one site is selected the name of that system will appear in the Server Access field. More than one site can be selected.

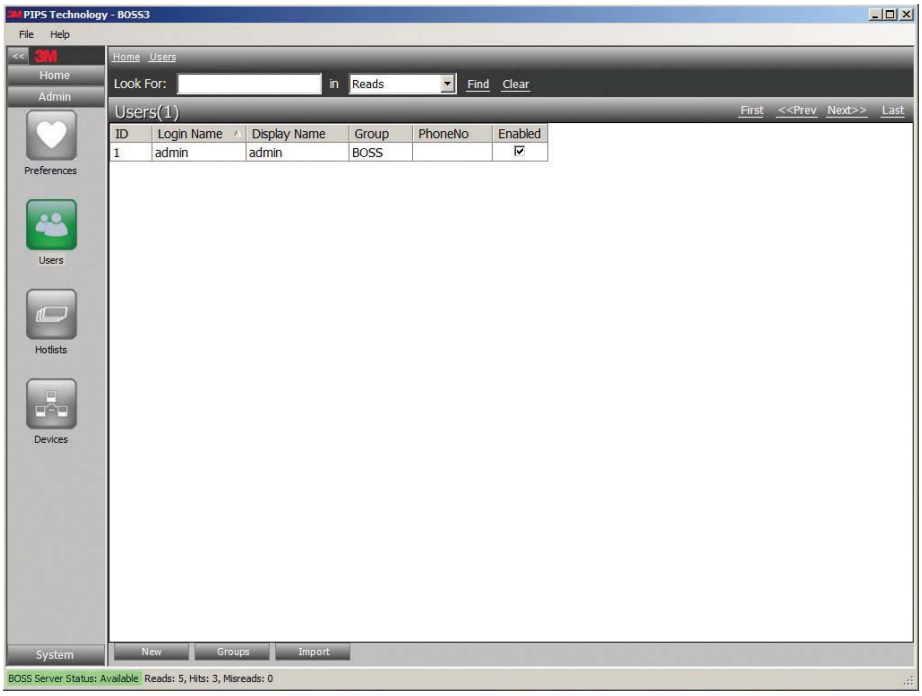
Log Queries – This option, when selected, will result in the logging of all queries made by all users of the group. This information is then available via the audits report. **WARNING:** ***This can potentially be a very large amount of data. Select this option with care.***

a. Configure these Advanced User settings as desired.

b. Click the **Back** button to return to the main New Group Entry screen

10. Click **Save** to complete creating the new group, or click **Cancel** to clear the new group.

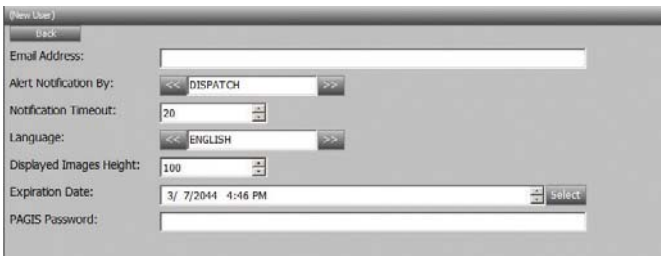
4.4.2 Parent Groups



When creating a new group, you must select a parent group (the Belongs To field). BOSS uses a parent-child group structure as an organizational mechanism. This allows the BOSS Administrator to arrange groups into collections based on location, job role, or any other applicable criteria. In BOSS, the parent group can be selected in order to easily reach the entire collection of groups under that parent. This can be especially helpful in large installations with a large number of groups.

4.4.3 Deleting a Group

1. Select the **Admin** category on the Shortcut bar.
2. Click the **Users** shortcut.
3. Click the **Groups** button at the bottom of the Browse/Edit area. A list of all existing groups will display in the Browse/Edit area.
4. Click to select the desired group from the list.
5. Click the **Delete** button.
6. Click **OK** in the confirmation dialog to complete the operation.



WARNING: Any users currently assigned to the deleted group will be assigned to the default "BOSS" group. You should empty the group by assigning all of its users to different groups prior to deleting it.

4.5 Users

4.5.1 Creating a New User

1. Select the **Admin** category on the Shortcut bar.
2. Click the **Users** shortcut. A list of all existing users will display in the Browse/Edit area.
3. Click the **New** button at the bottom of the Browse/Edit area. The New User Entry screen appears.
4. Enter a **Login Name** for the new user. This is the name the user will enter when logging into the BOSS application. (The login name must be at least three characters.)
5. Enter a **Display Name** for the new user (optional).
6. Enter a **Password** for the new user. (The password must be at least three characters.)
7. Select a **Group** for the user. Click the **Select** button to access a list of all groups. Click on the desired group and click the **Save** button to complete the selection.
8. Enter a contact **Phone Number** for the user (optional). This field is for informational purposes only; in case the BOSS Administrator needs to contact the user.
9. Click the **Advanced…** button to access additional, optional settings for the new user. Configure these advanced user settings as desired.

4.5.1 Creating a New User *(continued)*

Email Address – Email address or addresses associated with the user. BOSS alerts for the user are sent to the email addresses specified here. Multiple addresses should be separated with a comma.

Alert Notification By – A user can be configured to receive BOSS alerts through the Dispatch application, email, or both. Click the << or >> buttons to cycle through the options, stopping at the desired selection.

Notification Timeout – The cutoff time from the time when a hit occurred after which an alert will no longer be sent to the user. For example, if the notification timeout is 20 minutes and a plate of interest is detected at 12:00 pm, notification is not sent to the user after 12:20 pm. This timeout prevents alerts being sent for events that are delayed in arrival to BOSS.

Language – The language preference for the user. The default value is English.

Displayed Images Height – This setting defines the vertical size in pixels of the images (reads and hits) that will display for the user on the Dispatch and Reads screens.

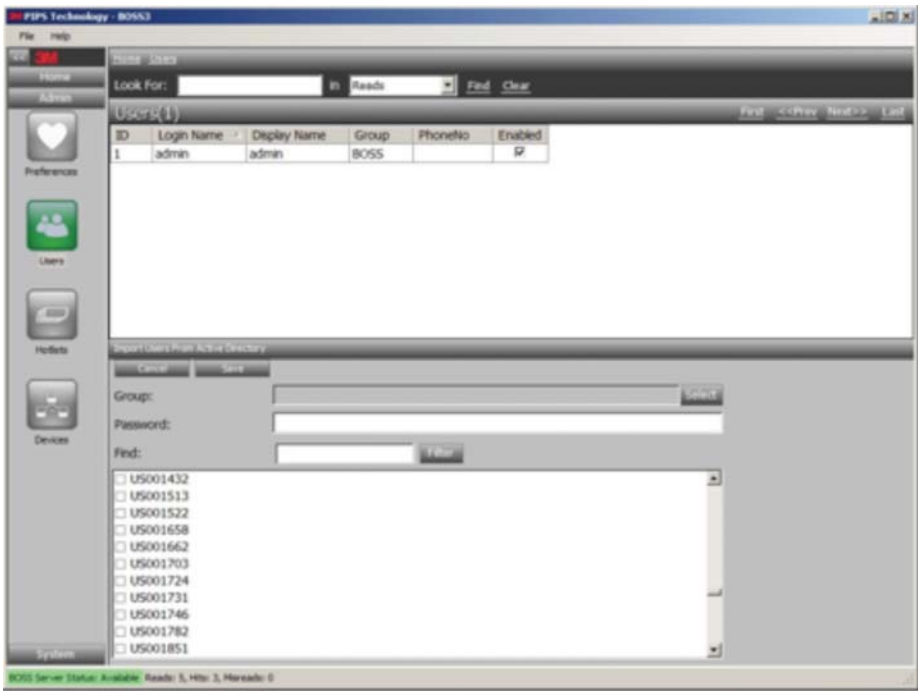
Expiration Date – Date for the user account to automatically be disabled. If no expiration is desired, simply leave this field at its default value (30 years from current date).

PAGIS Password – The user's LPCS password.

Note: The user must be in a group that has been granted LPCS permissions in order for the user to log in to 3M License Plate Capture Software.

---

10. Click the **Back** button to return to the main New User Entry screen.
11. Click the **Save** button to complete creating the new user.



4.5.2 Deleting a User

1. Select the **Admin** category on the Shortcut bar.
2. Click the **Users** shortcut. A list of all existing Users will display in the Browse/Edit area.
3. Click the desired user in the list.
4. Click the **Delete** button at the bottom of the Browse/Edit area.
5. Click **Yes** to confirm the operation.

4.5.3 Importing Users from Active Directory

BOSS allows user logins to be imported from Microsoft Active Directory (AD) service.

1. Select the **Admin** category on the Shortcut bar.
2. Click the **Users** shortcut.
3. Click on the **Import** button.

4. Select the BOSS group that will receive the imported logins. Click the **Select** button to display available groups and **Save** to commit the selection.
5. Enter the default password for the imported logins in the Password field.
6. Browse for the desired users, ***or*** type in the desired login name (full or partial) in the Find field and press the **Filter** button.
7. Click on the checkbox in front of the desired usernames to select users to be imported to BOSS.
8. Click on **Save** to import the users from Active Directory.

Note: A Windows login cannot have any punctuation included or problems will occur with reads queries being performed.

4.6 Access Permissions Example

The previous sections have described how BOSS user security is designed, using roles, groups, and user accounts. This section presents a working example that integrates the information in this chapter.

A BOSS Administrator creates a role, names the role “Temporary Workers,” and defines the new role to have very limited permissions, as follows:

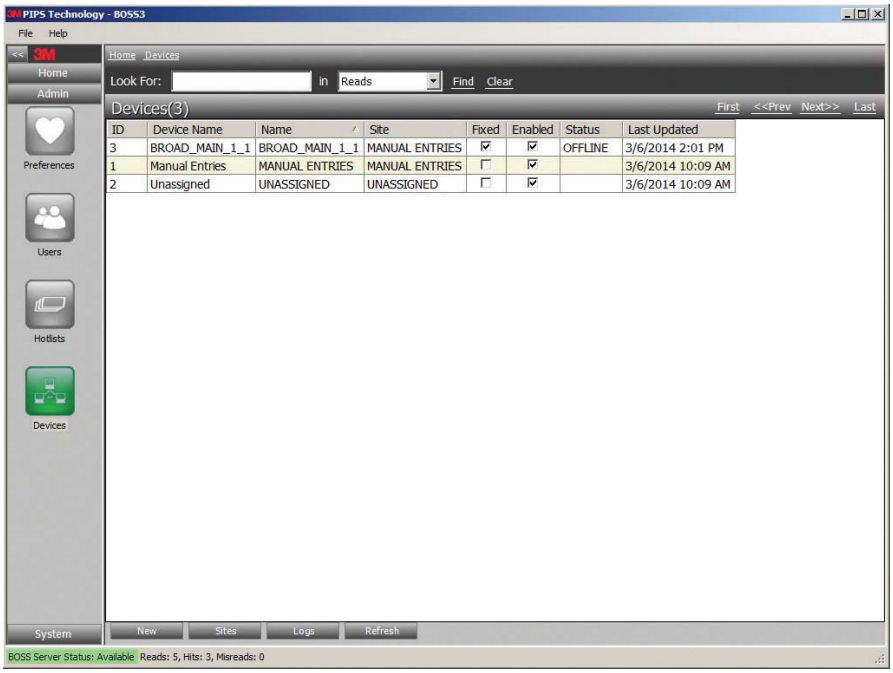
Reads	Read Only
Dispatch	Read Only
Users	No Access
Hotlists	No Access
Devices	No Access
System	No Access

Then the Administrator creates a group called “Temps.” When creating the group, a role is required. The Administrator selects the new role just created “Temporary Workers,” which assigns the permissions, defined above, to the new group.

Next, the Administrator creates a user account, “Jsmith,” for a temporary worker. While creating the new user, the Administrator is required to select a group for the user, and assigns the user to the “Temps” group just created.

The user “Jsmith” has now been created with the permissions shown above because he belongs to the group called “Temps” and that group was assigned the “Temporary Workers” role.

As this example shows, this security design allows reusability of security roles because a BOSS Administrator can define a set of permissions in a role, and that role can be assigned to multiple groups.



5 Devices and Sites

5.1 Devices

A BOSS device is any source that can input reads into the system. Typically, a device is a camera—either fixed or mobile (mounted on a vehicle). Another source for reads is manual entry, in which a BOSS user types the information for a read into the BOSS application.

5.1.1 Default Devices

A new BOSS site automatically contains two default devices, Manual Entries and Unassigned. A BOSS Administrator creates additional devices applicable to his/her organization.

To see the current devices in your system with information about their status:

1. Select the **Admin** category on the Shortcut bar.
2. Click the **Devices** shortcut.

The devices will be listed in rows with the following column headings:

Device Name – The name assigned to the device, used in the device selections and is the description of the device. The list will always include Manual Entries and Unassigned.

Name – The name that is given to the device.

Site – The group of devices to which this device belongs. Sites can be grouped by geographical location or other criteria. *See Section 5.2, Sites.*

Fixed – This box will be checked if the device is fixed camera, rather than a mobile camera.

Enabled – This box will be checked if the device is currently enabled (*see Section 5.1.4*).

Status – The Status field can display the following messages:

Device Added – If the device is newly added to the list, this message will display.

5.1.1 Default Devices *(continued)*

Offline – This device is a previously connected fixed camera that is not currently connected to BOSS.

Online Heartbeat – BOSS has detected a ping from a fixed camera.

Online Synced – The device's connection with BOSS has been established. This is shown for LPCS mobile devices only and may not change when the device is offline.

Updated – Information has been sent from BOSS to the device, and the device is up to date.

Received Logins – Updates to the device included logins that were successfully sent to the device.

Received Source – BOSS has found the hotlist source file that it needs in order to send the updated hotlist to the device. **Received Source** may not be displayed due to timing or events.

Received Hotlist – The hotlist scheduled to be successfully sent has been sent to the device.

Received Hotplates – BOSS is sending "pages" of hotplates for a large hotlist, and the last page was successfully received.

Received Targets – The update to the device included targets that were successfully sent.

5.1.2 Defining a Device

Note: Devices will be defined automatically when a 3M device, such as an ALPR camera, connects to BOSS the first time. Normally, there is no need to define devices in advance.

1. Select the **Admin** category on the Shortcut bar.
2. Click the **Devices** shortcut. A list of existing devices will appear in the Browse/Edit area.
3. Click the **New** button.
4. Enter a name for the new device. (The name must be at least three characters long.) Note that the name **CANNOT BE CHANGED** once the device has been created.
5. Enter a **Description** for the new device. (The description must be at least three characters long.)
6. Select **Mobile** or **Fixed** in the Type field. By default, **Fixed** is selected. To change the current selection, click the **left** or **right** arrow.
7. Select a **Site**. Click the **Select** button next to the Site field to display a list of all available sites. Click on the desired site in the list and click the **Save** button.

Note: In addition to the two default sites, Manual Entries and Unassigned, which are created automatically when a new BOSS system is installed, other sites can be created by an authorized BOSS user. *See Section 5.2, Sites, for more information.*

8. Select **Owners**. Owners are groups that can access this device. For LPCS units, user logins are sent only to devices where the group is an owner of the device. Click the **Select** button next to the Owners field to display a list of all BOSS groups. Select each desired group by clicking the checkbox. When the desired groups are selected, click the **Save** button. The group name(s) selected will be displayed in the Owners field.

9. Select **Latitude** and **Longitude** values for the geographical location of a device by typing in a value or using the up and down controls on each field to increase or decrease the value. Note that some devices, such as LPCS units with a GPS attached, will automatically send the latitude and longitude of the device to BOSS.
10. Click the **Advanced** button to display additional options for the device.

    No Reads Alert – Defines how long the device must remain with no reads coming in before the system shows the device as offline.

    Alert Email – The email address or addresses to which alerts associated with this device should be sent.

    Retain Reads – The length of time that reads from this device should be saved in the BOSS database. The **Retain Reads** setting must be longer or equal to the **Retain Images** setting.

    Retain Images – The length of time that pictures captured by this device should be saved in the BOSS database.

    Retain Hits – The length of time that hits captured by this device should be saved in the BOSS database.

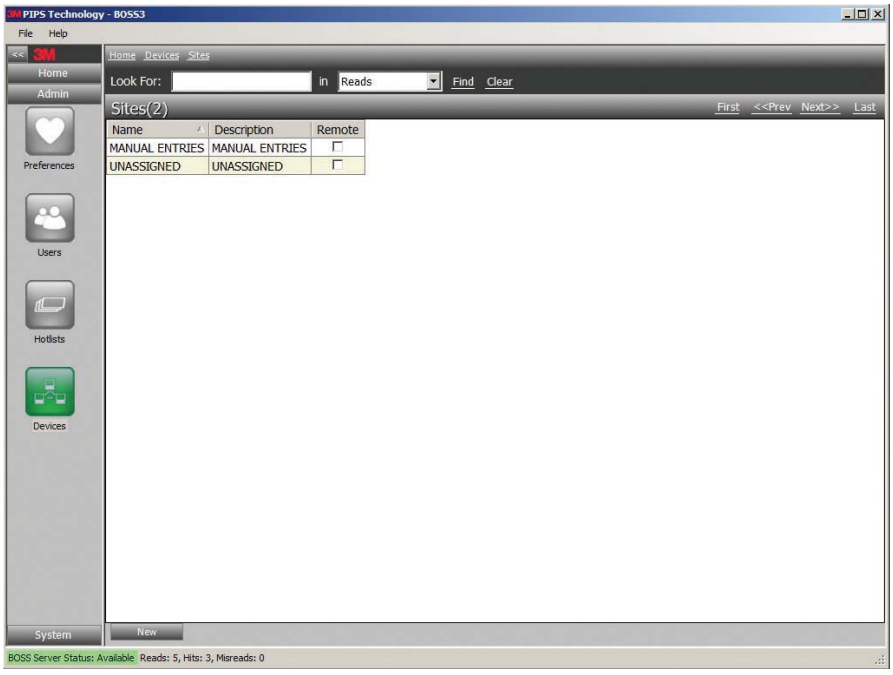
    SpikeStore – The 3M High Resolution ANPR/ALPR Camera P382 and the 3M Compact ANPR/ALPR Camera P372 (formerly the Spike P382 and P372 cameras) allow captured images to be stored in an on-board USB flash drive to be retrieved on demand. Setting a device as a **SpikeStore** device causes BOSS to attempt to retrieve images from the storage device when the read is requested for viewing.
11. When Advanced Options have been set as desired, click **Back** to return to the New Device screen.
12. Click the **Save** button to complete creation of the new device. The new device will now appear in the devices list above.

5.1.3 Editing a Device

1. Select the **Admin** category on the Shortcut bar.
2. Click the **Devices** shortcut. A listing of all devices appears in the Browse/Edit area.
3. Click the desired device to select it. Details for the selected device appear in the Browse/Edit area.
4. Click the **Edit** button.
5. The Device Edit screen appears in the lower portion of the screen.
6. Modify fields as desired and click the **Save** button.

5.1.4 Enabling and Disabling a Device

1. Select the **Admin** category on the Shortcut bar.
2. Click the **Devices** shortcut. A listing of all devices appears in the Browse/Edit area.
3. Click the desired device to select it. Details for the selected device appear in the Browse/Edit area.
4. Click the **Edit** button.
5. The Device Edit screen appears in the lower half of the screen.
6. Click the **Disable/Enable** button. The change will immediately close the edit window and return to the Devices screen. It will also take effect immediately.



5.1.5 Deleting a Device

Note: It is strongly recommended that **devices are never deleted**. If a device is deleted, queries can no longer be performed using the device as a criterion. Instead of deleting a device, it should be disabled or given a new description.

1. Select the **Admin** category on the Shortcut bar.
2. Click the **Devices** shortcut. (A listing of all existing devices will display in the Browse/Edit area).
3. Click the desired device in the listing.
4. Click the **Edit** button.
5. Click the **Delete** button at the bottom of the Browse/Edit area.
6. Click **Yes** to confirm the operation.

5.2 Sites

A site is a mechanism for organizing devices. This allows a BOSS Administrator to arrange devices into groups according to convenience, such as geographical area or a facility. The ability to group or arrange devices can be quite useful in large installations where there are many devices. Each device created must be assigned to a site.

5.2.1 Default Sites

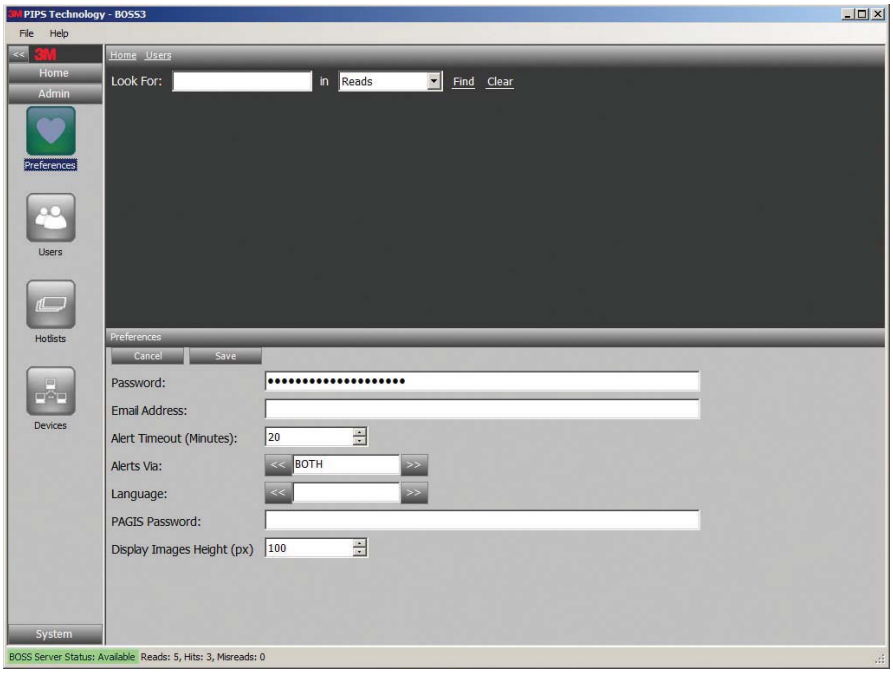
A new BOSS site automatically contains two default sites, Manual Entries and Unassigned. Normally, a BOSS Administrator will want to create additional sites applicable to an organization.

5.2.2 Creating a Site

1. Select the **Admin** category on the Shortcut bar.
2. Click the **Devices** shortcut.
3. Click the **Sites** button at the bottom of the screen. A list of existing sites will appear in the Browse/Edit area.
4. Click the **New** button at the bottom of the screen.
5. Enter a name for the new site. (The name must be at least three characters long.) Note that the name cannot be changed once the site is created.
6. Enter a description for the site. (The description must be at least three characters long.)
7. Select the parent site for the site. BOSS allows organizing sites into tree-like hierarchies. Click the **Select** button next to the Belongs To field, and select one site from the list. Click the **Save** button to complete the selection. The site name will appear in the Belongs to field.
8. Check the **Remote** option to designate the site as a remote site. (*Remote sites are explained in Section 6, BOSS Data Sharing.*)

5.2.3 Deleting a Site

Note: It is strongly recommended that sites **are never deleted**. If a site is deleted, queries can no longer be performed using the site as a criterion. Instead of deleting a site, it is recommended that devices assigned to it should be moved to another site.



1. Select the **Admin** category on the Shortcut bar.
2. Click the **Devices** shortcut. A listing of all existing devices will display in the Browse/Edit area.
3. Click the **Sites** button at the bottom of the screen. A listing of existing sites will appear in the Browse/Edit area.
4. Click the desired site in the listing and click the **Edit** button.
5. Click the **Delete** button at the bottom of the Browse/Edit area. Click **Yes** to confirm the operation.

5.3 Preferences

The Preferences section allows for changing settings for the currently logged-on BOSS user, such as the password and email addresses.

5.3.1 Changing User Preferences

1. Select the **Admin** category on the Shortcut bar.
2. Click the **Preferences** shortcut. The Preferences Entry screen appears at the bottom of the Browse/Edit area.
3. Modify the preferences settings as desired and click the **Save** button.

Password – Login password for the BOSS user. For security purposes, the existing password does not display on screen.

Email Address – Email address or addresses associated with the user. BOSS alerts for the user are sent to the email addresses specified here. Multiple addresses should be separated with a comma.

Alert Timeout (Minutes) –The cutoff time for older hits to alert the user.

Alerts Via – A user can elect to receive BOSS alerts through the Dispatch screen, emails, or both.

Language – Language preference for the user. The default value is English.

PAGIS Password (LPCS Password) – The 3M License Plate Capture Software password for the user.

Note: The user must be in a group that has been granted LPCS permissions in order for the user to log in to LPCS.

Display Images Height (px) – This setting defines the size in vertical pixels of the images (reads and hits) that will display for the user in the Dispatch and Reads Query sections.

6 BOSS Data Sharing

BOSS allows “linking” of multiple BOSS systems for data-sharing purposes. When a user issues a query from the Smart Client application that includes a remote site, the query is submitted to the local BOSS server, which in turn makes a query to the remote BOSS server(s). The combined results from all the sites are then returned to the Smart Client. ***Data from remote sites is not stored in the local BOSS server.***

The following configuration steps need to be taken to permit BOSS data sharing:

6.1 Configuring BOSS to Allow Remote BOSS Queries

1. Create a BOSS user for remote access. This user account is a “proxy” the local BOSS server will use for all requests from a remote site. This user account will have “Reads” privileges by default; no other privileges need to be given. The user must be assigned to a remote group. *(See Section 4.4, Groups, for information about flagging a group as remote.)*
2. Give the username and password for this “proxy” user to the BOSS Administrator at the remote BOSS system. The remote BOSS will need to be configured to access this BOSS system, described in the next section.

Tip: It is best to create a dedicated user account for remote sites—one that will not be used by an actual user to log in and access the application.

6.2 Configuring BOSS to Access a Remote BOSS Server

1. Obtain username and password from BOSS Administrator at the remote site.
2. Create a site for the remote BOSS server and select the **Remote** option.
3. Enter the remote site IP address and BOSS service port (23032 by default).
4. Add the username and password provided.
5. For each group that is allowed to query the remote BOSS server, assign the remote server to the user via the **Servers Access** option. *(See Section 4.4, Groups, for information on selecting Servers Access.)*
6. Log out of the application.
7. Log back on using the provided username and password. The Remote BOSS server can then be queried by selecting the desired servers in the Reads Query screen.

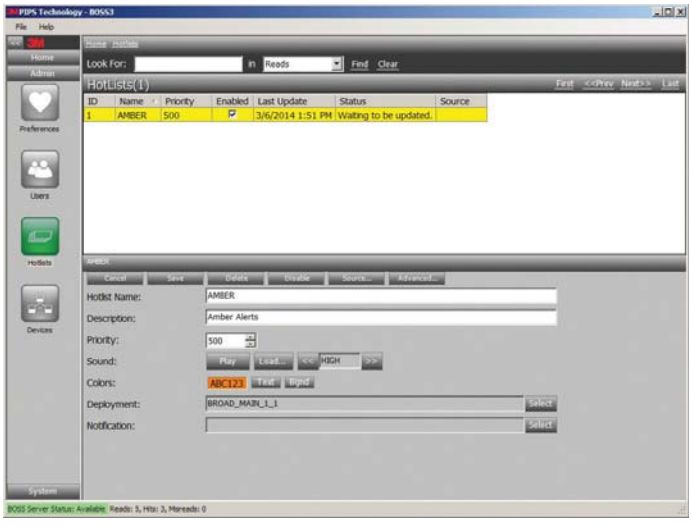
Note: BOSS version 3.2 and above only supports data sharing with servers running BOSS 3.0 and above.

---

7 Hotlists

A hotlist is a database that contains license plates of interest. When reads from license plate readers arrive at the BOSS server application, they are compared against hotlist records to find matches. Various hotlists can be enabled on a BOSS system and used in this comparison. In addition, hotlists can be assigned individually to specific devices. Only reads from those devices will be compared against these hotlist records. Typical hotlists include stolen vehicles, amber alerts, wants and warrants, etc. When the system reads in a plate that is determined to be a match to a hotlist entry in a hotlist, the BOSS application informs the user either with an alert sound and a pop-up window displaying a picture of the vehicle, or via email, depending on the user's preferences *(see "Alerts via" in Section 5.3, Preferences)*.

A hotlist can be a database imported from an external source, such as another law enforcement agency. It can also be a list created by the local BOSS Administrator. For the BOSS server application to be able to understand how to import the hotlist records into the database, there are three different format types that exist in a BOSS system. In addition there are several specific formats that are pre-defined and available by default when a new BOSS system is installed *(see Section 8, Hotlist Formatters)*.



7.1 Creating a New Hotlist

There are three general areas to complete when creating a new hotlist:

- Configure basic settings.
- Define a source and provide credentials for the source (when necessary).
- Define advanced settings (optional).

7.1.1 Configuring Basic Hotlist Settings

1. Select the **Admin** category on the Shortcut bar.
2. Click the **Hotlists** button. Currently existing Hotlists appear in the Browse/Edit area.
3. Click the **New** button at the bottom of the Browse/Edit area. The New Hotlist Entry form appears.

4. Enter a **Hotlist Name** for the hotlist. It must be at least three alphanumeric characters, and it cannot be an existing hotlist name.
5. Enter a **Description** for the hotlist (optional).

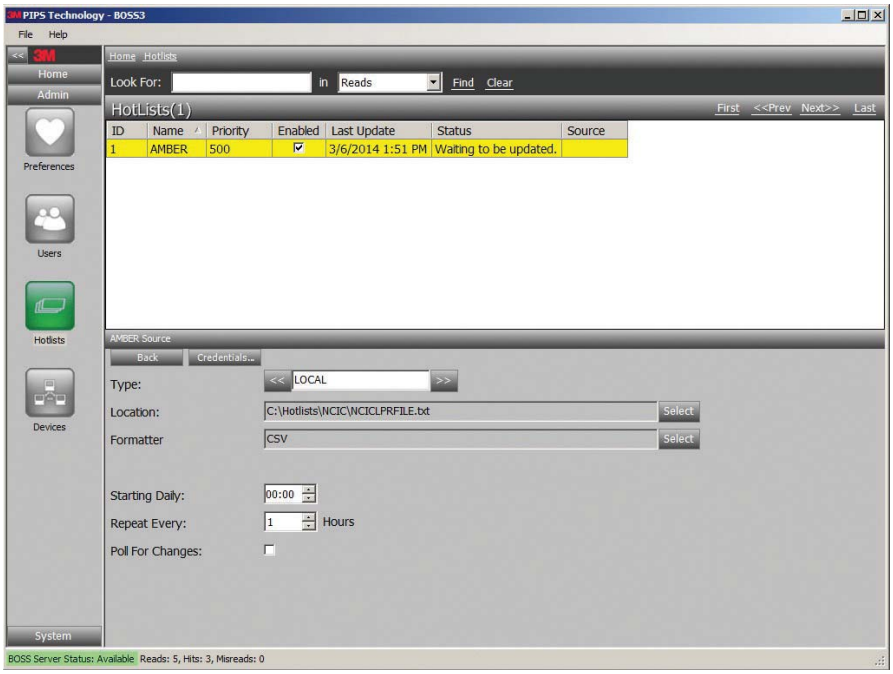
6. Select a **Priority** for the hotlist. When there are multiple hits/alerts, the priority determines which alert will occur first. (The lower the number, the higher the priority.)
7. Select a **Sound** for alerts resulting from this hotlist (optional). Click the **Load** button to select a wave sound file (*.wav). To test the selected sound, click the **Play** button. Optionally, one of the three default sounds may be selected, **Low**, **Medium**, or **High** alert.
8. Select **Colors** for the alert if desired (optional). The default is white text on a royal blue background. Custom color settings affect the entries in dispatch. The background color also applies to alerts given in LPCS.
9. Click the **Text** button to select a color for the text.
10. Click the **Bgnd** (Background) button to select a color for the background.

Note: Currently selected text and background colors are displayed in the sample box (showing “ABC123”).

---

11. Select devices for **Deployment.** Click the **Select** button to select devices from the list of those currently available. Click the checkbox next to a device in order to select it. When desired devices are checked, click the **Save** button to make the selection. One or more devices can be selected, and they will be displayed in the Deployment field.

Note: Deployment means distributing the hotlist to a device or devices. Only the devices where a hotlist is deployed will produce hits from the hotlist.



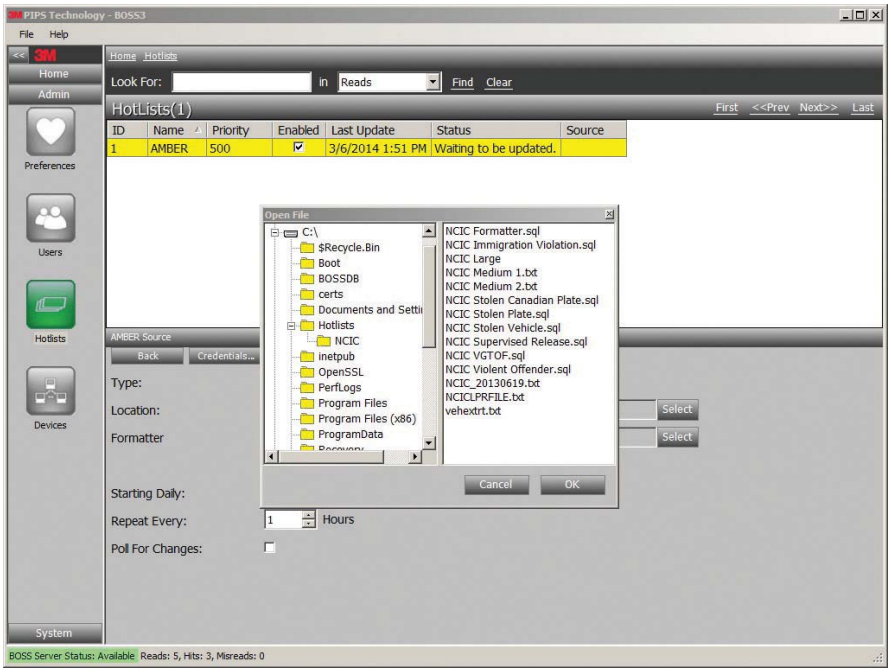
---

12. Select groups for Notification. Click the **Select** button to see a list of all BOSS groups. Click the checkbox next to a group to select the group. When you select a parent group, child groups are automatically selected. When desired groups are checked, click the **Save** button to make the selection.

Note: In order to receive alerts for hits on the hotlist, the user must be in the notification list of the hotlist. *For more information see Section 7.1.5, Defining Hotlist Advanced Options.*

7.1.2 Defining the Hotlist Data Source

1. On the New Hotlist Entry screen, click the **Source…** button to open the screen shown in the lower half of the following image:



2. Choose the appropriate entries for each of the fields that describe the new hotlist:

   Type (**Network** or **Local**) – A local source means that the file is stored on the BOSS server's Windows file system. A network source means that the hotlist source resides outside the BOSS server.

Note: If a Local source is selected, the source file location (folder) must be accessible to the Windows process running the BOSS server application ("PIPS BOSS3" Windows service).

Location – Enter the location of the hotlist file. Click the **Select** button to the right of the location field.

For a local source, a file dialog will display, allowing you to navigate to a path and select a file.

For a network source, select one of the default locations displayed (if applicable), **or** type in the location of the source:

HTTP – The location format must be in Hypertext Transfer Protocol (HTTP) format: "http://server:port/path." There are a few predefined HTTP locations (such as CA DOJ) included in BOSS. These locations can be accessed with the **Select** button.

Remote BOSS System – The location format must be "boss://server:port/hotlist," where "hotlist" is the hotlist name on the remote system.

Note: The remote system hotlist name **MUST** be alphanumeric and **CANNOT** contain any spaces.

Formatter – Formatter defines the way a hotlist database file is parsed into discrete fields. Click the **Select** button next to the Formatter field. A list of available formatters appears. Click on the desired formatter and click the **Save** button to make the selection. The name of the selected formatter will appear in the field.

Note: Normally one of the several default formatters included with BOSS is sufficient. A new custom formatter can be created if necessary. *See Section 8.1, Creating a New Formatter for Hotlists, for more information.*

7.1.2 Defining the Hotlist Data Source *(continued)*

Starting Daily – Specify the time of day the hotlist should begin updating each day. The time is formatted as hours:minutes in the 24-hour clock, i.e., between 00:00 and 24:00 can be selected.

Repeat Every – Specify the time interval, in hours (1 – 24), between updates.

OR

Poll for Changes – If you choose this setting, BOSS will check for updates to the hotlist approximately every 30 seconds. When this option is selected, the **Starting Daily** and **Repeat Every** options are disabled.

Note: If **Poll for Changes** is selected, and the hotlist source resides on the network, BOSS will attempt to make a network connection every 30 seconds. This frequency may add significantly to network traffic. Use with caution.

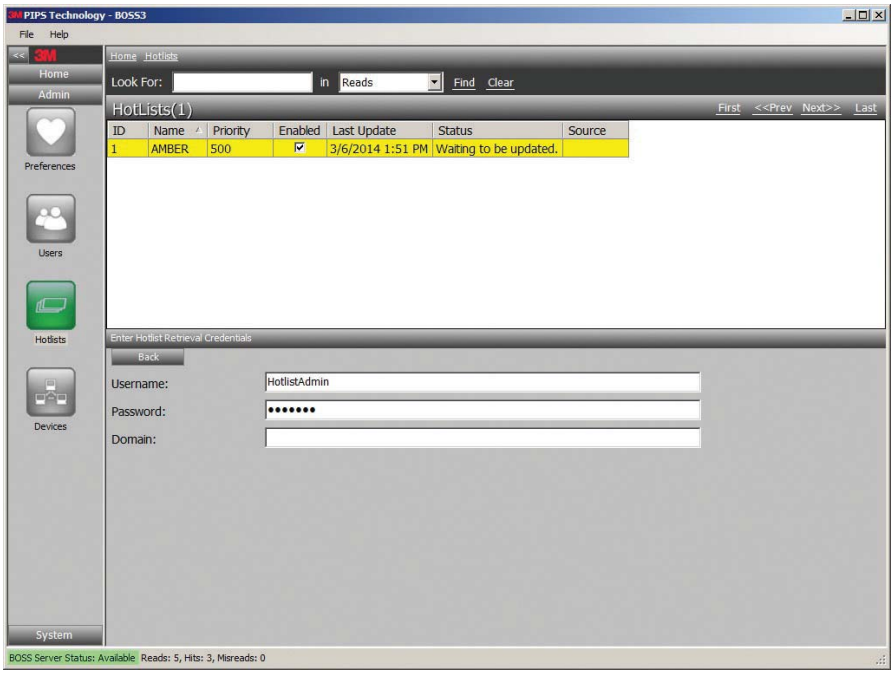
7.1.3 ZIP Compressed Hotlist Files

BOSS will automatically recognize and extract a hotlist data file contained in a ZIP archive file, such as Windows Explorer compressed (zipped) folder.

Note: There can be only one file in the ZIP archive.

7.1.4 Defining Hotlist Source Credentials

Some sources will require credential settings (e.g., login information) in order to allow BOSS to access that data. To enter the Credentials Settings screen from the Hotlist Source screen, click the **Credentials** button.



The credentials depend on the source type as follows:

Network-HTTP – If the HTTP (website) source defined requires login information, it should be entered in the Credentials Setting screen. This information will include username and password. The domain field may be necessary as well. Consult the Administrator of the HTTP source for required login information.

Network-Remote BOSS system – A username and password valid on the remote BOSS system must be entered (as in remote sites configuration, described in Section 6.0, BOSS Data Sharing). Consult the Administrator of the remote BOSS system for a username and password.

To set credentials for a source:

1. Click the **Credentials** button. The Credential Input screen appears.
2. Enter the username, password, and domain information applicable to the source you are specifying.
3. Click the **Back** button to return to the Source Entry form.
4. Click the **Back** button again to return to the New Hotlist Entry screen.

7.1.5 Defining Hotlist Advanced Options

Advanced Options are values that allow you to further define details of the new Hotlist. To access the Advanced Options, click the **Advanced…** button.

Covert – A covert hotlist is one that contains sensitive information that should only be available to certain user groups.

The effects of defining a hotlist as covert are as follows:

- A hit on the covert hotlist will not be alerted to users in mobile LPCS vehicles, unless the logged-on user is a LPCS Administrator.
- A hit on the covert hotlist will not be alerted in the BOSS application, regardless of the user alert preferences. Hit alerts for covert hotlists will be sent only via email.
- When reads are queried, hit information on covert hotlists will be displayed only to users in the Notifications list for the hotlist. Other users will see that the read is a hit, but no information will be shown.
- Hit information for hits from covert hotlists will not be sent to remote BOSS servers.

Whitelist – This option, when selected, defines the hotlist to be a whitelist, which works in reverse to a normal hotlist. A whitelist defines a list of plates that are **authorized** and not of concern. When a whitelist is active, license plates read that do ***not*** match an entry on the list will trigger a hit/alert.

7.1.5 Defining Hotlist Advanced Options *(continued)*

An example of whitelist use might be a secure parking lot where fixed camera devices are monitoring vehicles entering. Authorized plates will match entries in a whitelist hotlist. If a plate is read that does not match an entry in the whitelist, an alert occurs.

Whitelists and hotlists can be active simultaneously for a device.

Note: Whitelist support in LPCS requires a separate license. If you do not have the license and wish to use whitelists, please contact your 3M sales representative for further information.

Ext Trigger – This option, when selected, sets the External Trigger flag on a hotlist when it is passed to LPCS. It is only supported in LPCS version 2.6.6 or above and will have no effect on earlier versions of the software.

One Time – This option, when selected, specifies that the hotlist data should only be accessed from its defined source one time; no subsequent updating will occur after the initial import.

Alert Timeout – This setting allows you to define how current a hit (from this hotlist) must be in order to cause an alert. This primarily pertains to information coming in from mobile units, where there may be a large delay. Alert Timeout can be specified in minutes, hours, days, or months.
