CAUTION: This email originated from a sender outside of the Commonwealth of Massachusetts mail system. Do not click on links or open attachments unless you recognize the sender and know the content is safe.

Brian,

I learned that we are working to deploy a fixed version of a P720 mobile camera -minus the processor- to augment the IRIS camera. The below is a screen shot of a plate I read the other week. Combined speed was 140mph and the on coming vehicle was five lane widths away. Not to mention it was read in a very tight window between two bridge supports. The camera is 60 FPS so at 140mph it was most likely captured in only one frame.

You have the credentials to log into BOSS now and I should be able to mail the demo mobile system out to you this Friday. You'll have plenty to play with now Where do I send the mobile system....470 Worcester Rd?

BOSS 3.6 USER MANUAL Rev2.pdf

Steve,

To download the software cut and paste the following into your browser http[redacted].htm once loaded you will need to configure the port and perhaps the IP address. Click on the "Boss server" which will open the box below and make sure you have the correct server/port info. Once you connect to the server you won't have to do it again.

Your login would be msp2719 and the password I sent you would obviously go in the password section

Could you please forward this info as well as the login information to the other accounts I set up.

David M. Gallagher
Captain, Massachusetts State Police
Special Operations

Date: Tuesday, April 21, 2020 11:14:45 PM
Attachments: Case Update Graphic.png

Case Law update.

Win for the good guys. Defense tried to mirror the Connolly case and suggest a S/W needed to check ALPRs. Court said no. But this could change if a case relied more heavily on ALPR info. Interesting read.

-rudy

Chiefs
Commonwealth v. McCarthy (SJC-12750) ← click on that link to see the case
In this case the SJC ruled that police tracking D's car using 4 automatic license plate readers (ALPRs) at both ends of the Bourne and Sagamore Bridges was too limited to amount to a constitutional "search." The SJC declined to say exactly how detailed digital surveillance would have to be to constitute a search leaving that issue for future cases.

State Po ice maintain ALPRs including ones at both ends of the Bourne and Sagamore Bridges. (p.3) The ALPRs photograph vehicles' license plates; that data along with the date and time of the sighting is retained by EOPPS for a year. (p.3-4) Authorized users including police may put a license plate number on a "hot list " and receive an alert if that plate is sighted; reasons to put someone on the "hot list" include not only criminal investigations but also Amber alerts missing persons and BOLO alerts. (p. 3 25 n.13)

Through surveillance controlled buys and information from 4 Civ Barnstable police suspected that the co-D was selling heroin out of his house in Barnstable. (p.4) Police saw a black Hyundai driven by D visit there briefly so they suspected that D was the co-D's supplier. Police put the Hyundai's license plate number on the State Police ALPR "hot list " so that they'd be notified whenever the Hyundai crossed one of the bridges. (p.5) After getting an alert that the Hyundai had crossed onto the Cape police followed both the Hyundai and the co-D to the buy location on a quiet residential street where D and co-D met for about 30 seconds but police could not see a physical exchange. (p.5) From the ALPR data police generated a spreadsheet showing that in mid-winter the Hyundai had crossed the bridges dozens of times sometimes more than once a day adding to police suspicion that D was the heroin supplier. (p.5-6) When police got a second alert that the Hyundai had crossed onto the Cape they again followed D and co-D to the buy location and saw a 30-second meeting but could not see any exchange. This time police stopped both cars handcuffed both co-D and D and read them Miranda. On co-D police found heroin; on D police found 2 cell phones and cash. (p.6-7) At the station police repeatedly told D he was "not under arrest " and D made statements.

D moved to suppress the ALPR data his statements and evidence obtained from the stop. A Superior Court judge found that the moment of arrest was when D and co-D were handcuffed at the scene of the traffic stop but denied the motion to suppress. (p.33) The SJC upheld the denial.

ALPRs and expectation of privacy in digital surveillance At some length the SJC discussed the constitutional issues raised by digital surveillance. (p.7-29) Police conduct amounts to a search if: (1) it intrudes on a D's expectation of privacy and (2) society is willing to recognize the expectation of privacy as reasonable. Here the SJC ruled D did have an expectation of privacy because D and co-D chose a buy location in a quiet residential area. (p.8 n.5) As to what expectation of privacy society recognizes as reasonable with regard to digital surveillance the SJC was guided by historical understandings of what was an unreasonable search and seizure when the U.S. and Mass. Constitutions were adopted in the late 1700s In reaction to redcoats' rummaging without restraint through colonists' homes. (p.8-10) New technologies like ALPRs raise difficult legal issues because they are easier and less expensive for police than traditional surveillance can be done secretly and permit police to search back in time for a vehicle's movements even before police suspicion arose. (p.12-14) Society does not recognize as reasonable an expectation of privacy in what someone "knowingly exposes" to public view like a license plate – which by statute must be "displayed conspicuously." (p.15-16 & n.8) In older cases involving less advanced technology courts have held that a D did not have an expectation of privacy in contents of a phone conversation in a phone booth or a radio beeper" tracking a single journey. (p14-17) But technology like ALPRs GPS and CSLI are different because they may give police a **mosaic** of information where each piece may be public but when viewed together they create a picture that implicates someone's privacy interests like their political religious or sexual associations. (p.17-21) The SJC was concerned that with enough ALPRs police could track someone's location everywhere which would be "creepy." (p.25) Exigent circumstances would likely justify using an ALPR in a situation involving an Amber alert or missing person. (p.25 n.13) The D urged the SJC to consider not just these four ALPRs on the Bourne and Sagamore Bridges but the hundreds of ALPRs across Massachusetts; the SJC declined to do so because that evidence is not in the record of this case. (p.26) The **limited number of cameras** here and their placements on the bridges was not enough to give D an expectation of privacy that society would recognize as reasonable. (p.28) The SJC declined to say how much digital surveillance would give such an expectation and admitted that its unwillingness to do so "**may bring some interim confusion**" until further cases develop the law on this issue. (p.28 n.15) Chief Justice Gants wrote a separate concurrence suggesting that one thing the SJC could do is to require police who want to search a vast amount of digital data to apply for a court order supported by an affidavit showing reasonable suspicion to do so. (concurrence p.3) This would be like a SW but with a lower standard than PC.

Written policy The SJC rejected D's argument that Barnstable PD should have had a written policy about ALPRs and the MSP policy on which Barnstable relied was not specific enough. (p.30) Written policies are required to justify certain exceptions to the SW requirement (like inventory searches and sobriety checkpoints) – they do not apply to the threshold question whether a search occurred in the first place. (p.31)

Miranda review At the station police repeatedly told D that D was "not under arrest." But the motion judge found that the moment of arrest was when police handcuffed D at the traffic stop. (p.33) D argued that his statements should be suppressed because police telling him he was not under arrest amounted to "deceit or trickery" to get D to confess. The motion judge and the SJC rejected that argument saying that even if telling D he was not under arrest amounted to deceit or trickery it was just one factor to be used in determining voluntariness.

Bottom line: Police use of ALPRs at limited locations is not a constitutional search – but we don't know how many locations it'd have to be to amount to one. Using an ALPR in **exigent circumstances** like an Amber Alert is likely OK. Local police don't need a written policy to use ALPRs maintained by MSP. After a D has been handcuffed police should not tell D that D is "not under arrest" – police will likely be accused later of deceit and trickery.

A thought: There are news stories online that cell phones may be used to do contact tracing for people exposed to COVID-19. If lots of people willingly agree to let their cell phone data be used to track their whereabouts would that ever change courts' view of what society recognizes as a reasonable expectation of privacy? At some point if members of the pub ic come to expect that they're being tracked should police be allowed to use that evidence too? Or at the very least should there be a jury instruction explaining that police have less access to the data than other entities (like software companies or public health agencies)?

As always email me with any questions. Wash your hands!

Commonwealth v. McCarthy - opinion.pdf

SUPPORTING MASSACHUSETTS PROSECUTORS

MDAA

Massachusetts District Attorneys Association

Commonwealth v. McCarthy

Supreme Judicial Court, April 16, 2020
(Search and Seizure/Automatic License Plate Readers)

The use of four automatic license plate reader cameras, placed at two fixed locations on the ends of the Bourne and Sagamore bridges and used to "hit" on the defendant's license when he drove over either bridge,, does not constitute a search within the meaning of either art. 14 or the Fourth Amendment.

"While we recognize that the widespread use of ALPRs in the Commonwealth could implicate constitutional protections against unreasonable searches, the limited use of the technology in this case does not."

Note:
The Court did not find error in the fact that the Bourne Police Department did not have a separate policy, apart from State Police TRF-11, regarding ALPRs.

Additionally, the Court ruled that the government's use of ALPR data is not subject to the Stored Communication Act nor the Electronic Communications Privacy Act

See attached opinion.

Genetec Deployment Overview REV1 07282020.pdf

Brian,
As a follow up to our discussion of last week, attached is a draft version of the narrative system overview that we discussed.

Please take a few minutes to review, and let me know if you think it accurately outlines the need for an assigned administrator, and accurately outlines the need for further operational/use discussions.

I'll be leaving the house at 8:30 to head to a meeting in Cambridge and will be in the car until about 10a (if you'd like to discuss).

I have consolidated a bunch of the badge/ID information, and will send that over to you later today.

Regards,
Bob

Can you send me screen shoot of the licenses.

That error occurs when using other browser than IE.

1. Prerequisites needed to successful install of BossUI client, the below settings pertain to OS where client is being installed.
    a. "Active Scripting" needs to be enabled in Windows "Internet Options"- "Security"- "Internet"- "Custom level". (This setting is for Bing maps to function).
    b. Can you add http:// address to "Local Intranet" in Intranet Zones Sites. (This can be taken out after installation as it is only needed for deployment).

2. Internet Explorer must be use.

Hi guys,

Is there an updated client? This on appears to be calling the Spanish version of dot net, it's also not using the updated version already installed. Do you have one that is properly signed too???

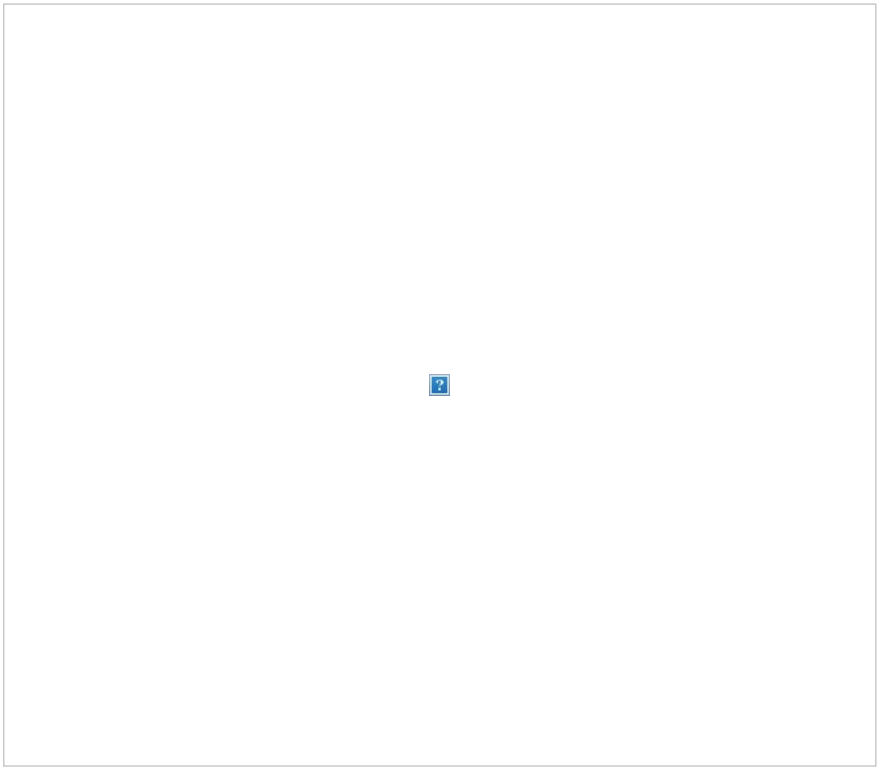
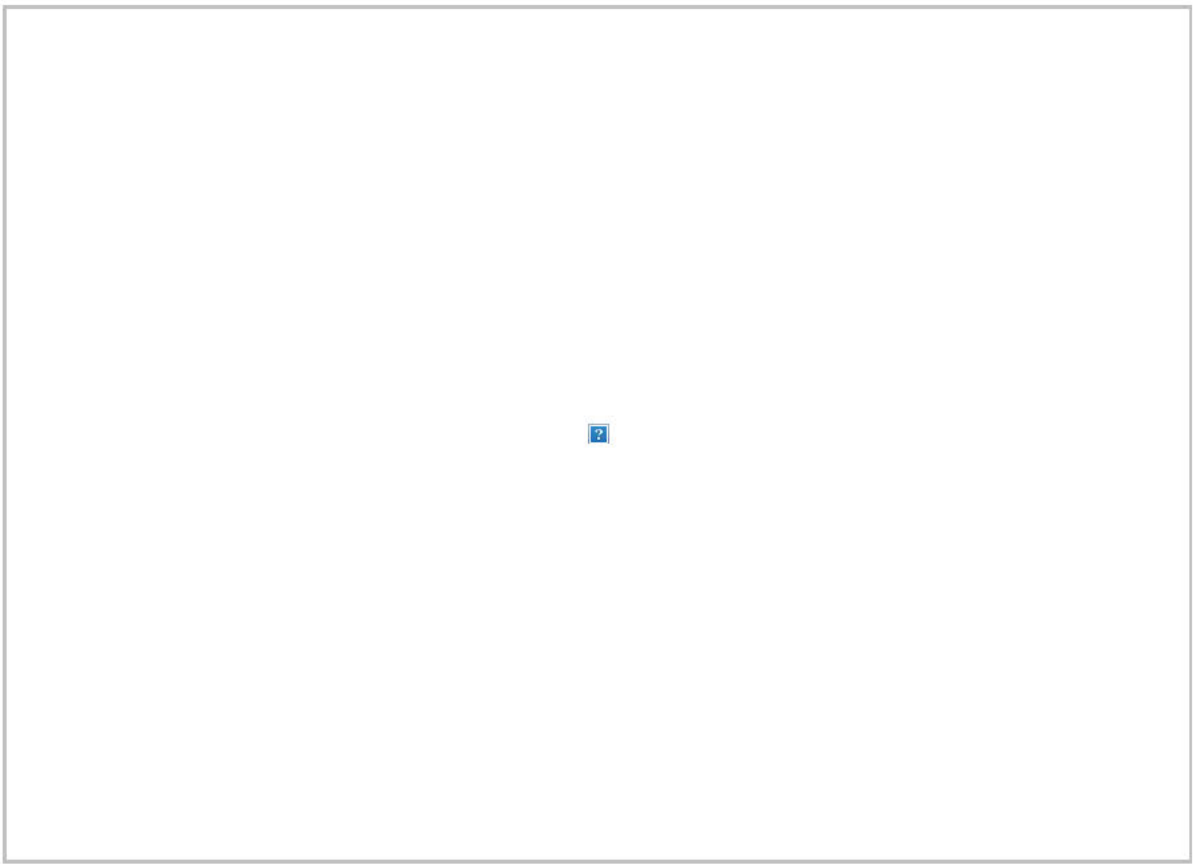
Subject: RE: BOSS update

Hi Brian,



Before this update, On computers that needed access to LPR reporting, we have a copied a folder called “SA Client” and “SA.UI” within that folder, we create a shortcut to that file and that eliminated installation of any program.



But I have tried the link that you have provided us and I’m getting an error message in Spanish during the installation! (Please see below) What I get from it, it need .Net. 4.5.2 but my computer already has 4.7 installed on it. I also tried to install it on Watchcenter computers and I got the same error message in Spanish and .Net 4.5.2 wont install on top of the current version of 4.7

Also translation of other part of the error message is that:

"The Microsoft .NET Framework 4.5.2 installation is not supported on this operating system. Please contact the administrator."

I have CC Lt. Griffin on this email, since he has done many installation of the old one too and all his stations are also effected too.

Error de comprobación de los requisitos previos del componente del sistema Microsoft .NET Framework 4.5.2 (x86 y x64) con el siguiente mensaje: "La instalación de Microsoft .NET Framework 4.5.2 no se admite en este sistema operativo. Póngase en contacto con el administrador."

Vea el archivo de registro de la instalación que se encuentra en 'C:\Users\MJACKS~1\AppData\Local\Temp\VSD1947.tmp\install.log' para obtener más información.

Subject: RE: BWC PO

To help us talk about the costs, I broke them down a little more – see attached.

We are only looking for $6.7 M in capital. I was asking about payment timing because I was wondering whether we could wait a couple of weeks for the pending bond bill to pass, which carries new EOPSS general authorization. Unless - would it be accurate to say that Secretary Heffernan committed A&F capital funds in the meeting with Chief Lepore last week? If so, I will mention that in a request to A&F for an ISA of their general equipment funds, as opposed to my default of assuming we will need to use our own funds.

The remaining $2.2 M ($1.7 M to WatchGuard, $500 K for Records Mgmt Office) in FY21 costs will need to be paid for out of MSP's operating budget. Kerry – I am going to start a thread with you and Michelle to confirm her plan to pay for that.

Subject: RE: BWC PO

Thank you for being on top of the finance side in advance – I will confirm the correct account and get back to you. Do you have any sense for the cashflow – as in, will we essentially need to pay the full capital cost upfront, or will we be paying the total with monthly or quarterly installments? I'll assume upfront unless I hear otherwise.

Hi Emi,
We are working on getting the BWC SOW signed this week. I'm reaching out to you now though because we will need to know out of what account we will be cutting the PO. I wanted to flag this for you now so when the SOW is signed we have the PO ready to go.
Thanks
Kerry

Good morning Colonel,

It is nice to share some good news for a change.
I know the Bridge cam case has wide State Police implications. Thought you would like to give it a read.
Another win for the Cape!
Stay healthy.

Good morning Rich and Scott,

The SJC decision on the bridge cams came out this morning.
I am forwarding it along in case you want to take a look.
Another win for the Cape!

Hope you are staying safe!

Importance: High

Good afternoon,

Attached are ISAs for the purchase of an ALPR system and LiDAR/Radar units. Please review, sign and return ASAP. The end date is June 30, 2016 and being as it can be a lengthy process to get the money into MMARS, I ask for your immediate attention to this matter.

I have also attached the Funding Proposals for your information.

That's it for now. Thanks again for your help and I look forward to your reply.

Good day-

Please find attached the unsigned electronic copy of the application and budget for the FY2021 Traffic Safety Grant Program for State Agencies. Per the AGF, the signed original and one copy, including the budget detail spreadsheets have been mailed via USPS in your attention to the address provided in the AGF.

Please let me know if you have any questions.

Respectfully-

Subject: Good News -Court Decision

Yeah!

Commonwealth v. McCarthy
Supreme Judicial Court, April 16, 2020
(Search and Seizure/Automatic License Plate Readers)

The use of four automatic license plate reader cameras, placed at two fixed locations on the ends of the Bourne and Sagamore bridges and used to "hit" on the defendant's license when he drove over either bridge,, does not constitute a search within the meaning of either art. 14 or the Fourth Amendment.

"While we recognize that the widespread use of ALPRs in the Commonwealth could implicate constitutional protections against unreasonable searches, the limited use of the technology in this case does not."

Note:
The Court did not find error in the fact that the Bourne Police Department did not have a separate policy, apart from State Police TRF-11, regarding ALPRs.

Additionally, the Court ruled that the government's use of ALPR data is not subject to the Stored Communication Act nor the Electronic Communications Privacy Act

See attached opinion.

For other recent case law decisions, go to the MDAA website at www.mass.gov/mdaa

Do you have the correct "Server" and "Port"? Below is the correct information. Unfortunately, it doesn't autofill with the correct information.

I've attached the CFC's Workflow guide I put together, too. There's a section on how to use the LPR that may useful.

Subject: RE: LRP network ideas?

John,
Thank you for the information on the call this afternoon.

Samson/Billy,
We need to add some additional debug code into our service so we can see the full communication path and what is being sent and received. John is also in the process to check and make sure their three servers can reach back into our 184.171 on port 6060. I have also reattached the IP wireshark I did this morning.

Hi Brian,

I'm not sure if 224.154 is a load balancer. I don't believe it is though. It doesn't matter though, that is where you will send requests. You will receive a synchronous response called an acknowledgement. That will let you know if your request was accepted or rejected.

Later, an asynchronous response will be sent from 170.154.224.155 or 170.154.224.156 to your web service.

John,
The 154 address is a load balancer for the services correct. As far as I know there should be no blocked traffic to the .171 but let me include Chris and Tim on this thread.

Hi Brian,

I can check.

The broker will send responses from G.L. c. 4. sec. 7.cl. 26 (c)(privacy) or 17G.L. c. 4. sec. 7.cl. 26 (c)(privacy) on port 6060. Make sure you are allowing that traffic.

When you send in a request you will receive an xml document as the return value. The documents lists if the request was accepted and if it wasn't, why it wasn't. You should be checking those.

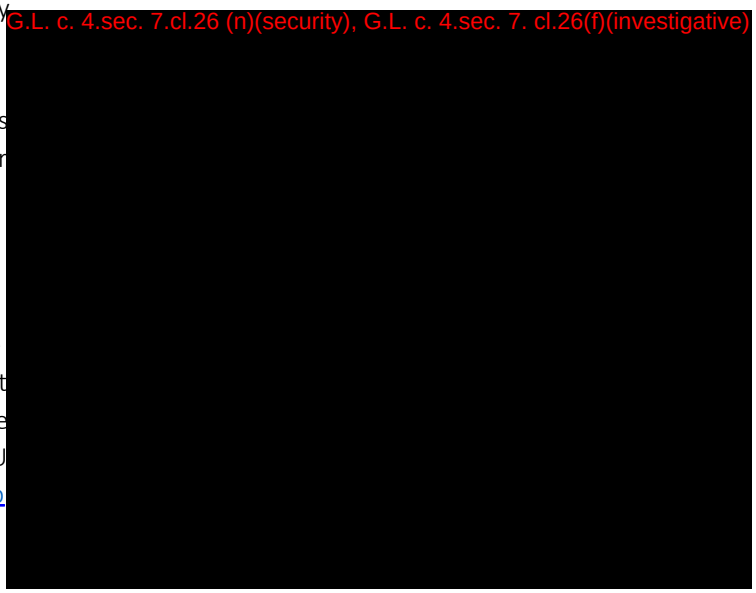
Bill,
I have the service send back a no data found so it looks like we are connecting. Can you check your logs to see if our request actually made it into your system.

I am sending the following test cycle from the G.L. c. 4. sec. 7.cl. 26 (c)(privacy) web server to our FR server

http:/G.L. c. 4. sec. 7.cl. 26 (c)(privacy)60/CHSBReceiver/rest?ori=MAMSP0000&username=TEST&ssn=123123G.L. c. 4. sec. 7.cl. 26 (c)(privacy)

Just so everybody is clear, this the is the connection path

G.L. c. 4. sec. 7.cl. 26 (c)(privacy) [redacted] 6060



Return path

G.L. c. 4. sec. 7.cl. 26 (c)(privacy) [redacted]

Log of request:

2019-11-22 11:16:13,982 main DEBUG LoggerContext[name=MassLPRServlet,

I think I see what might be part of the problem.

The R1 is either OLN or SSN, you can not send both at the same time.

There is No TEST SSN inquiry, use someone from MSP who is working on your project or if you have a developer who is from MA
The TEST OLN is S32935254

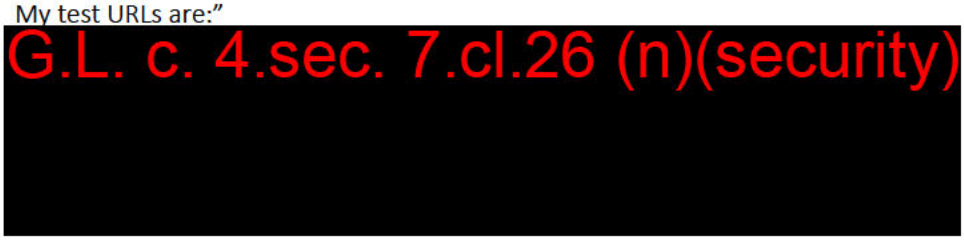
Hi Brian,

The broker is a web service. You need to create a client to connect. Requests are made by sending in an xml document.



Did I forget to send you the broker documentation? Let me know.

Hey Brian,

When you send in a request, the return to that call is an acknowledgement. That is an xml

document that will state if your request was accepted or not; and if it is not, what the reason is.

Are you seeing any acknowledgements?

John,
According to dev the message that is coming back: remote host not allowed. ignoring request. They are stating is a response from your system telling us we are not allowed. Is there anyway you and I can get on the phone, I can try and send some responses and see if you see anything in your log files. I am wondering if they are forming the response to you correctly.

As for the WSDL this is what I see from the 184.171 server.

Hi Brian,

I have added your configuration on the test broker for R1 and RI.
Are there more queries/transactions you'd like to test? Michaela may have requirements for other queries.

The ORI is MAMSPF022
Your requests come from [G.L. c. 4.sec. 7.cl.26 (n)(security)] and responses will be sent back to
http://[G.L. c. 4.sec. 7.cl.26 (n)(security)]6060/CHSBReceiver/CHSBService

Hay Brian,

That won't work. The broker accepts an xml document containing the request, as well as other information.
Attached is a sample R1 request.

By the way, I have your requests coming G.L. c. 4.sec. 7.cl.26 (n)(security)

In order to get responses, you need a web service on your end to receive the responses and I'll need to configure it on the broker side.

Subject: RE: LRP network ideas?

Hi Brian,

I haven't added your configuration to the test broker yet. Can you confirm the following:
For broker connections, we need the following:
IP Address for request: G.L. c. 4.sec. 7.cl.26 (n)(security)
URL for responses: http://G.L. c. 4.sec. 7.cl.26 (n)(security)6060/CHSBReceiver/CHSBService
ORI: MAMSP0000
Queries: I need the list of queries/transactions you will be testing

You will submit to http:/G.L. c. 4.sec. 7.cl.26 (n)(security)060/CJISService This call will return a synchronous acknowledgment.

Responses will come back from G.L. c. 4.sec. 7.cl.26 (n)(security) on port 6060. You need to return a synchronous acknowledgement for each response.

Hey Brian,

I'm not sure what is in the test system either. I believe a dl of 987654321 will work; at least it used to.
Try to find something in test CJISWeb.

Remember that all queries will send in an xml document and will receive a return acknowledgement stating success or failure. If the request failed, the reason will be in the acknowledgement.

At a later time, seconds or less, the response will be returned to your web service. You must return an acknowledgement to that also to let the system know that the response was received and the next response can be sent.

Hi Brian,

All of the broker queries use the same method and accept an xml document. The contents of the xml direct what action the system should take. I have attached documentation for the broker. It's a 5 MB zip file.

If you can't accept zip files or 5 MB files let me know how to send the file.

Brian
What is the ORI that you are using for this setup? There is some configuration work that needs to be done on the broker side to allow your service to run transactions.
Thanks
Tim

Hi folks
The CJIS broker transactions will need to use port 6060 as that is what they have been configured for in the past.

We have discussed the LPR port request and we think that going with a higher port seems to be more acceptable to EOTSS to allow through their public access firewall. Would port 56446 (https) work? We will need to open a ticket with EOTSS to have them allow this port through.

Thanks

Hi Tim,

I spoke with Brian Kruger and he wants the RI image CJIS Broker return to go to the same port as the ALPR image results, are there any issues with that? If not, is your team picking the port or is CopLink? I've included his email request. It sounds like they want to use the same web service to simplify the two integrations (LPR & RMV Images).

Tks, Brian

Subject: LRP network ideas?

Brian/Tim,
Nick is almost done with the new LPR service that will remove the images from the database and have a tomcat app that host the images for a return to the UI. What I need to know:

1. The Migration will sit on the migration

server and needs access to the LPR database to pull out the metadata and create the URL for the Image links.

2. The new service is going to be hosted in Tomcat, so this service will need access to the LPR database for images and both application servers

need to be able to query this tomcat instance. I just need to know where to put it, I can host it on both severs or if we can set it up on the internal server and have a firewall rule that will allow the DMZ server to

talk to the internal server. Let me know if you would like to have a call on this. I have attached a rough network diagram for visual reference.

Hi Samson,

Do you have the dev package? There are example xml documents in there.

Subject: RE: LRP network ideas?

John,
Here is the XML sent from our server to retrieve relevant data. The CJISMessageKey is set to R1. The response we got indicates the XML sent is invalid. Can you point me to what is not valid in the XML? By the way, I checked the XML syntax with an online XML validation tool which indicates the syntax is good.

John,
Thank you for the information on the call this afternoon.

Samson/Billy,
We need to add some additional debug code into our service so we can see the full communication path and what is being sent and received. John is also in the process to check and make sure their three servers can reach back into our 184.171 on port 6060. I have also reattached the IP wireshark I did this morning.

Hi Brian,

I'm not sure if 224.154 is a load balancer. I don't believe it is though. It doesn't matter though, that is where you will send requests. You will receive a synchronous response called an acknowledgement. That will let you know if your request was accepted or rejected.

Later, an asynchronous response will be sent from 170.154.224.155 or 170.154.224.156 to your web service.

John,
The 154 address is a load balancer for the services correct. As far as I know there should be no blocked traffic to the .171 but let me include Chris and Tim on this thread.

Hi Brian,

I can check.

The broker will send responses from 170.154.224.155 or 170.154.224.156 on port 6060. Make sure you are allowing that traffic.

When you send in a request you will receive an xml document as the return value. The documents lists if the request was accepted and if it wasn't, why it wasn't. You should be checking those.

Subject: RE: LRP network ideas?

Bill,
I have the service send back a no data found so it looks like we are connecting. Can you check your logs to see if our request actually made it into your system.

I am sending the following test cycle from the 170.154.224.82 web server to our FR server

http://[redacted]6060/CHSBReceiver/rest?ori=MAMSP0000&username=TEST&ssn=123123123&driversLicense=S32935254

Just so everybody is clear, this the is the connection path

170.154.224.82 → [redacted] port 6060 → [redacted] port 6060

Return path

[redacted] → [redacted] port 6060 → 170.154.224.82

Log of request:

2019-11-22 11:16:13,982 main DEBUG LoggerContext[name=MassLPRServlet, org.apache.logging.log4j.core.LoggerContext@59303963] started OK with configuration org.apache.logging.log4j.core.config.properties.PropertiesConfiguration@61e86192.
2019-11-22 11:16:13,982 main DEBUG Log4jServletContextListener ensuring that Log4j starts up properly.
2019-11-22 11:16:13,982 main DEBUG Log4jServletFilter initialized.

I think I see what might be part of the problem.

The R1 is either OLN or SSN, you can not send both at the same time.

There is No TEST SSN inquiry, use someone from MSP who is working on your project or if you have a developer who is from MA
The TEST OLN is S32935254

Hi Brian,

The broker is a web service. You need to create a client to connect. Requests are made by sending in an xml document.

Did I forget to send you the broker documentation? Let me know.

Subject: RE: LRP network ideas?

John,
I ran two queries through IE I don't see an acknowledge me in the logs. Below is what I am seeing. Do we have a valid Lic number that is in the system I can try, or valid SSN.

My test URLs are:"
http:/[redacted]6060/CHSBReceiver/rest?ori=MAMSP0000&username=TEST&ssn=123123123&driversLicense=987654321

http:/[redacted]6060/CHSBReceiver/rest?ori=MAMSP0000&username=TEST&ssn=123123123&driversLicense=987654321

In my access log I see a 200:

[redacted] - - [15/Nov/2019:13:02:50 -0500] "GET /CHSBReceiver/rest?ori=MAMSP0000&username=TEST&ssn=123123123&driversLicense=987654321 HTTP/1.1" 200 -
[redacted] - - [15/Nov/2019:13:03:05 -0500] "GET /CHSBReceiver/rest?ori=MAMSP0000&username=TEST&ssn=123123123&driversLicense=987654321 HTTP/1.1" 200 –

In my log stdout log I see this:

Hey Brian,

When you send in a request, the return to that call is an acknowledgement. That is an xml document that will state if your request was accepted or not; and if it is not, what the reason is.

Are you seeing any acknowledgements?

John,
According to dev the message that is coming back: remote host not allowed. ignoring request. They are stating is a response from your system telling us we are not allowed. Is there anyway you and I can get on the phone, I can try and send some responses and see if you see anything in your log files. I am wondering if they are forming the response to you correctly.

As for the WSDL this is what I see from the 184.171 server.

Subject: RE: LRP network ideas?

Brian,
Thank you for checking in, sorry for the delay. I had the email together but it was in my draft. I tested the connection again today.

John,
I am still getting the remote Host not allowed. This is the error below:

2019-11-15 10:15:45,808 main DEBUG Log4jServletFilter initialized.
driversLicense=987654321
remote host=[redacted]
remote port=61799
remote addr=[redacted]
scheme =http
scheme =HTTP/1.1
local addr =[redacted]
local name =EPS-CLFACEMATCH
context path = /CHSBReceiver
Init parameter1 =Value1
remote host not allowed. ignoring request.

Regards,

Hi Brian,

I have added your configuration on the test broker for R1 and RI.
Are there more queries/transactions you'd like to test? Michaela may have requirements for other queries.

The ORI is MAMSPF022
Your requests come from [redacted] and responses will be sent back to http://[redacted]6060/CHSBReceiver/CHSBService

Subject: RE: LRP network ideas?

Hay Brian,

That won't work. The broker accepts an xml document containing the request, as well as other information.
Attached is a sample R1 request.

By the way, I have your requests coming from 170.154.226.47

In order to get responses, you need a web service on your end to receive the responses and I'll need to configure it on the broker side.

Hi Brian,

I haven't added your configuration to the test broker yet. Can you confirm the following:

For broker connections, we need the following:
IP Address for request: [redacted]
URL for responses: http://[redacted]6060/CHSBReceiver/CHSBService
ORI: MAMSP0000
Queries: I need the list of queries/transactions you will be testing

You will submit to http://[redacted]6060/CJISService This call will return a synchronous acknowledgment.

Responses will come back from 170.154.224.155 or 170.154.224.156 on port 6060. You need to return a synchronous acknowledgement for each response.

Hey Brian,

I'm not sure what is in the test system either. I believe a dl of 987654321 will work; at least it used to.
Try to find something in test CJISWeb.

Remember that all queries will send in an xml document and will receive a return acknowledgement stating success or failure. If the request failed, the reason will be in the acknowledgement.

At a later time, seconds or less, the response will be returned to your web service. You must return an acknowledgement to that also to let the system know that the response was received and the next response can be sent.

Hi Brian,

All of the broker queries use the same method and accept an xml document. The contents of the xml direct what action the system should take. I have attached documentation for the broker. It's a 5 MB zip file.

If you can't accept zip files or 5 MB files let me know how to send the file.

Hi folks
The CJIS broker transactions will need to use port 6060 as that is what they have been configured for in the past.

We have discussed the LPR port request and we think that going with a higher port seems to be more acceptable to EOTSS to allow through their public access firewall. Would port 56446 (https) work? We will need to open a ticket with EOTSS to have them allow this port through.

Thanks

Hi Tim,

I spoke with Brian Kruger and he wants the RI image CJIS Broker return to go to the same port as the ALPR image results, are there any issues with that? If not, is your team picking the port or is CopLink? I've included his email request. It sounds like they want to use the same web service to simplify the two integrations (LPR & RMV Images).

Tks, Brian

Tim/Brian,
I was thinking last night and would actually like to move the new Image service to the FR server s.L. c. 4.sec. 7.cl.26. We have a route in place already from both PAA and Internal web to that server. I would just need to know what port to run tomcat on. This would also work for the Thompson Reuters adapter as well. Let me know what you guys think.

Subject: LRP network ideas?

Brian/Tim,
Nick is almost done with the new LPR service that will remove the images from the database and have a tomcat app that host the images for a return to the UI. What I need to know:

1. The Migration will sit on the migration server and needs access to the LPR database to pull out the metadata and create the URL for the Image links.
2. The new service is going to be hosted in Tomcat, so this service will need access to the LPR database for images and both application servers need to be able to query this tomcat instance. I just need to know where to put it, I can host it on both severs or if we can set it up

on the internal server and have a firewall rule that will allow the DMZ server to talk to the internal server. Let me know if you would like to have a call on this. I have attached a rough network diagram for visual reference.

Subject: RE: MassPort LPR Cameras

Thanks Jim,

I've reached out to Alex regarding the below and he is fine with the approach. I will coordinate with him and begin cutting over the cameras. I need 6 sierra wireless AC adapters and 12 antennas. I have reached out to BCM for a quote.

I have also requested permission from MSP at MassPort to remove the devices and assist with scheduling. Our Technical Services Unit will remove the devices once approved.

I plan to cut one sector (5-6 cameras per sector) over at a time and monitor the server, we may need to shrink our retention if we run up against storage constraints. Can you please see if the SAN can support additional storage and if it can be added?

-Brian

Hi, Brian!

I reached out to Rob Guerriero at TSS re this to get his perspective and he sees no problem connecting the cameras to the Boss server in the described manner.

So, assuming you move forward with this, who would actually make this happen?

Thanks.

Jim

Subject: Re: MassPort LPR Cameras

Hi Jim,

Regarding the Massport cameras; in the early days of AVL we installed 39 Sierra wireless modem‘s in cruisers that did not have laptops. These cruisers now have Geo tab and no longer need the modem or data plan. Massport is currently paying for the data plan and bought the modems. Because Massport wants to move quickly to give us their data and knowing BOSS4.0 Is delayed; Why don’t we ask Massport to let us use six of those modems and put one at each LPR Camera sector at Massport. We would next push the data back like we do everything else over Verizon. We wouldn’t have to do any firewall work either because they have a 166. and communicate like all of the MDT‘s . Once the back get squared away with the new boss we can revisit the networking. After we migrate everything to the new environment we would them cut the Massport cameras over to the LAN and then give them back their data plans and modems.

We would however need to anticipate expanding the existing sand and run the risk of overburdening the server.

Let me know what you think, Lieutenant Colonel Quinn and I could make the request to Massport if needed.

>
> Good Morning,
>
> I was hoping to get us all on the same page regarding a proposal to push Massport LPR data to the existing DCJIS BOSS server in Chelsea. Some time ago we (MSP) engaged with Massport regarding Automated License Plate Reader technology (LPR). As most of you know, MSP and DCJIS have been rolling out a very robust LPR network across the Commonwealth. This has been on going for the past several years. The LPR system has paid dividends in numerous criminal cases including crimes of violence, Amber and Silver alerts, and also in many missing/endangered/public well being events.
>
> Our communications with Massport started when we were made aware that they would be purchasing an LPR system. We worked with our counterparts at Massport to make sure that the two systems would be compatible so that information could be shared across all law enforcement agencies through the MSP Fusion Center. Towards that end Massport partnered with Neology for their solution. This is the same vendor used by MSP and DCJIS.
>
> Recently Massport has decided not to maintain its own ALPR BOSS database server. The database and application for LPR in Massachusetts is known as “BOSS” and is a Neology product. Massport would like to feed data from its cameras to the DCJIS BOSS server in Chelsea. Originally we had been discussing with Neology the potential for Massport’s cameras to write two records after scanning a plate, one to Massport BOSS and a duplicate to DCJIS BOSS. We think the current proposal to write all LPR records to the BOSS server located at DCJIS is a much better plan.
>
> MSP has a grant to upgrade the current the current BOSS v3.6 application which is at end of life and no longer supported to version v4.0. We have also submitted a Service Now ticket asking for hardware upgrade costs to the existing BOSS server which MSP will try to acquire funding to upgrade.
>

> I have received several calls from Massport looking to see where we are as far as being able to accept data from their cameras so that they can decommission their BOSS server. I believe their intent is to shut the Massport system down if the MSP and DCJIS are unable to accept the data. I have copied Hank Shaw from Massport into this thread in case I have misstated their intent.
>
> To access the Massport data we will need to be able to pass data from the Massport network to the state network much like we do with case management data. An alternative would be to use 4G modems (like we do with many of our mobile units and cruiser mounted units) on the state network, but this may be an unnecessary cost. Obviously this decision would be driven by the EOTSS and Massport network teams.
>
> I can't overstate the value that LPR data from Massport would have for MSP and law enforcement in general. Cases involving terrorism, money laundering, and drug trafficking all have significant ties to the port. Being able to hotlist and search on LPR data from Massport facilities would be a significant addition to the MSP Division of Homeland Security's technology tool set and would have immediate impact. Towards that end, we made be able to leverage Homeland Security grant funds for some of this project.

There is already a network presence at the barracks and it should be easy to point the cameras towards the centralized server. I've spoken to Alex at MassPort and he can volunteer a camera for testing. We could monitor network and server impact. Are you available to discuss?

> Thank you again for taking my call today. As discussed, I would like to explore the opportunity to swing all LPR cameras at Logan directly to the MSP BOSS server without the need for the InStation solution. My understanding is that the EOPSS network resides in both the ATCT as well as the Troop F building. I would propose that we extend this network via Layer 2 to the main locations that the LPR system terminates to and cut the entire LPR network at MassPort over to EOPSS. Most of the roadway cameras are fed to 2 primary network locations. MassPort can supply the necessary fiber paths and switch gear required to extend the EOPSS network to these locations. Currently we have 18 cameras in production, with another 19 scheduled to come online within the next two months. I anticipate this number growing to approximately 50 fixed cameras within our campus over the next year. Let me know what you think the appropriate next steps would be.

Hi, Brian!

This needs to go through MSP fiscal. They need to enter the purchase in OPAS.

Jim

Subject: RE: MassPort LPR Cameras

Thanks Jim,

I've reached out to Alex regarding the below and he is fine with the approach. I will coordinate with him and begin cutting over the cameras. I need 6 sierra wireless AC adapters and 12 antennas. I have reached out to BCM for a quote.

I have also requested permission from MSP at MassPort to remove the devices and assist with scheduling. Our Technical Services Unit will remove the devices once approved.

I plan to cut one sector (5-6 cameras per sector) over at a time and monitor the server, we may need to shrink our retention if we run up against storage constraints. Can you please see if the SAN can support additional storage and if it can be added?

-Brian

Hi, Brian!

I reached out to Rob Guerriero at TSS re this to get his perspective and he sees no problem connecting the cameras to the Boss server in the described manner.

So, assuming you move forward with this, who would actually make this happen?

Thanks.

Jim

Subject: Re: MassPort LPR Cameras

Hi Jim,

Regarding the Massport cameras; in the early days of AVL we installed 39 Sierra wireless modem‘s in cruisers that did not have laptops. These cruisers now have Geo tab and no longer need the modem or data plan. Massport is currently paying for the data plan and bought the modems. Because Massport wants to move quickly to give us their data and knowing BOSS4.0 Is delayed; Why don’t we ask Massport to let us use six of those modems and put one at each LPR Camera sector at Massport. We would next push the data back like we do everything else over Verizon. We wouldn’t have to do any firewall work either because they have a 166. and communicate like all of the MDT‘s . Once the back get squared away with the new boss we can revisit the networking. After we migrate everything to the new environment we would them cut the Massport cameras over to the LAN and then give them back their data plans and modems.

We would however need to anticipate expanding the existing sand and run the risk of overburdening the server.

Let me know what you think, Lieutenant Colonel Quinn and I could make the request to Massport if needed.

>
> Good Morning,
>
> I was hoping to get us all on the same page regarding a proposal to push Massport LPR data to the existing DCJIS BOSS server in Chelsea. Some time ago we (MSP) engaged with Massport regarding Automated License Plate Reader technology (LPR). As most of you know, MSP and DCJIS have been rolling out a very robust LPR network across the Commonwealth. This has been on going for the past several years. The LPR system has paid dividends in numerous criminal cases including crimes of violence, Amber and Silver alerts, and also in many missing/endangered/public well being events.
>
> Our communications with Massport started when we were made aware that they would be purchasing an LPR system. We worked with our counterparts at Massport to make sure that the two systems would be compatible so that information could be shared across all law enforcement agencies through the MSP Fusion Center. Towards that end Massport partnered with Neology for their solution. This is the same vendor used by MSP and DCJIS.
>
> Recently Massport has decided not to maintain its own ALPR BOSS database server. The database and application for LPR in Massachusetts is known as “BOSS” and is a Neology product. Massport would like to feed data from its cameras to the DCJIS BOSS server in Chelsea. Originally we had been discussing with Neology the potential for Massport’s cameras to write two records after scanning a plate, one to Massport BOSS and a duplicate to DCJIS BOSS. We think the current proposal to write all LPR records to the BOSS server located at DCJIS is a much better plan.
>
> MSP has a grant to upgrade the current the current BOSS v3.6 application which is at end of life and no longer supported to version v4.0. We have also submitted a Service Now ticket asking for hardware upgrade costs to the existing BOSS server which MSP will try to acquire funding to upgrade.
>
> I have received several calls from Massport looking to see where we are as far as being able to accept data from their cameras so that they can decommission their BOSS server. I believe their intent is to shut the Massport system down if the MSP and DCJIS are unable to accept the data. I have copied Hank Shaw from Massport into this thread

in case I have misstated their intent.
>
> To access the Massport data we will need to be able to pass data from the Massport network to the state network much like we do with case management data. An alternative would be to use 4G modems (like we do with many of our mobile units and cruiser mounted units) on the state network, but this may be an unnecessary cost. Obviously this decision would be driven by the EOTSS and Massport network teams.
>
> I can't overstate the value that LPR data from Massport would have for MSP and law enforcement in general. Cases involving terrorism, money laundering, and drug trafficking all have significant ties to the port. Being able to hotlist and search on LPR data from Massport facilities would be a significant addition to the MSP Division of Homeland Security's technology tool set and would have immediate impact. Towards that end, we made be able to leverage Homeland Security grant funds for some of this project.

> Thank you again for taking my call today. As discussed, I would like to explore the opportunity to swing all LPR cameras at Logan directly to the MSP BOSS server without the need for the InStation solution. My understanding is that the EOPSS network resides in both the ATCT as well as the Troop F building. I would propose that we extend this network via Layer 2 to the main locations that the LPR system terminates to and cut the entire LPR network at MassPort over to EOPSS. Most of the roadway cameras are fed to 2 primary network locations. MassPort can supply the necessary fiber paths and switch gear required to extend the EOPSS network to these locations. Currently we have 18 cameras in production, with another 19 scheduled to come online within the next two months. I anticipate this number growing to approximately 50 fixed cameras within our campus over the next year. Let me know what you think the appropriate next steps would be.

Subject: FW: MassPort LPR Cameras

Michelle and Kyra,

This purchase request is for equipment to allow Mass Port Sierra Wireless modems to communicate directly with the existing ALPR Boss server in Chelsea. This is the fastest way to bring the Massport LPR cameras on line. EOTSS and EOPSS are OK with this solution as is Major Deb Ryan, the CO at Troop F.

As you can see from the thread, this has been going on for some time. I think we can close it out with this small purchase.

This does not resolve the replacement of the existing ALPR equipment that we discussed at Command Staff yesterday. That is a different issue.

Thanks

Lieutenant Colonel Dermot J. Quinn #1765 Division Commander Division of Homeland Security & Preparedness Massachusetts State Police

Hi, Brian!

This needs to go through MSP fiscal. They need to enter the purchase in OPAS.

Jim

Subject: RE: MassPort LPR Cameras

Thanks Jim,

I've reached out to Alex regarding the below and he is fine with the approach. I will coordinate with him and begin cutting over the cameras. I need 6 sierra wireless AC adapters and 12 antennas. I have reached out to BCM for a quote.

I have also requested permission from MSP at MassPort to remove the devices and assist with scheduling. Our Technical Services Unit will remove the devices once approved.

I plan to cut one sector (5-6 cameras per sector) over at a time and monitor the server, we may need to shrink our retention if we run up against storage constraints. Can you please see if the SAN can support additional storage and if it can be added?

-Brian

Hi, Brian!

I reached out to Rob Guerriero at TSS re this to get his perspective and he sees no problem connecting the cameras to the Boss server in the described manner.

So, assuming you move forward with this, who would actually make this happen?

Thanks.

Jim

Subject: Re: MassPort LPR Cameras

Hi Jim,

Regarding the Massport cameras; in the early days of AVL we installed 39 Sierra wireless modem‘s in cruisers that did not have laptops. These cruisers now have Geo tab and no longer need the modem or data plan. Massport is currently paying for the data plan and bought the modems. Because Massport wants to move quickly to give us their data and knowing BOSS4.0 Is delayed; Why don’t we ask Massport to let us use six of those modems and put one at each LPR Camera sector at Massport. We would next push the data back like we do everything else over Verizon. We wouldn’t have to do any firewall work either because they have a 166. and communicate like all of the MDT‘s . Once the back get squared away with the new boss we can revisit the networking. After we migrate everything to the new environment we would them cut the Massport cameras over to the LAN and then give them back their data plans and modems.

We would however need to anticipate expanding the existing sand and run the risk of overburdening the server.

Let me know what you think, Lieutenant Colonel Quinn and I could make the request to Massport if needed.

> Subject: RE: MassPort LPR Cameras
>
> Good Morning,
>
> I was hoping to get us all on the same page regarding a proposal to push Massport LPR data to the existing DCJIS BOSS server in Chelsea. Some time ago we (MSP) engaged with Massport regarding Automated License Plate Reader technology (LPR). As most of you know, MSP and DCJIS have been rolling out a very robust LPR network across the Commonwealth. This has been on going for the past several years. The LPR system has paid dividends in numerous criminal cases including crimes of violence, Amber and Silver alerts, and also in many missing/endangered/public well being events.
>
> Our communications with Massport started when we were made aware that they would be purchasing an LPR system. We worked with our counterparts at Massport to make sure that the two systems would be compatible so that information could be shared across all law enforcement agencies through the MSP Fusion Center. Towards that end Massport partnered with Neology for their solution. This is the same vendor used by MSP and DCJIS.
>
> Recently Massport has decided not to maintain its own ALPR BOSS database server. The database and application for LPR in Massachusetts is known as “BOSS” and is a Neology product. Massport would like to feed data from its cameras to the DCJIS BOSS server in Chelsea. Originally we had been discussing with Neology the potential for Massport’s cameras to write two records after scanning a plate, one to Massport BOSS and a duplicate to DCJIS BOSS. We think the current proposal to write all LPR records to the BOSS server located at DCJIS is a much better plan.
>
> MSP has a grant to upgrade the current the current BOSS v3.6 application which is at end of life and no longer supported to version v4.0. We have also submitted a Service Now ticket asking for hardware upgrade costs to the existing BOSS server which MSP will try to acquire funding to upgrade.

>
> I have received several calls from Massport looking to see where we are as far as being able to accept data from their cameras so that they can decommission their BOSS server. I believe their intent is to shut the Massport system down if the MSP and DCJIS are unable to accept the data. I have copied Hank Shaw from Massport into this thread in case I have misstated their intent.
>
> To access the Massport data we will need to be able to pass data from the Massport network to the state network much like we do with case management data. An alternative would be to use 4G modems (like we do with many of our mobile units and cruiser mounted units) on the state network, but this may be an unnecessary cost. Obviously this decision would be driven by the EOTSS and Massport network teams.
>
> I can't overstate the value that LPR data from Massport would have for MSP and law enforcement in general. Cases involving terrorism, money laundering, and drug trafficking all have significant ties to the port. Being able to hotlist and search on LPR data from Massport facilities would be a significant addition to the MSP Division of Homeland Security's technology tool set and would have immediate impact. Towards that end, we made be able to leverage Homeland Security grant funds for some of this project.

> We are looking to consolidate the MassPort ALPR cameras into the main EOPSS ALPR server. After evaluating a number of options purposed by Neology, this appears to be the simplest approach. There is already a network presence at the barracks and it should be easy to point the cameras towards the centralized server. I've spoken to Alex at MassPort and he can volunteer a camera for testing. We could monitor network and server impact. Are you available to discuss?

> Thank you again for taking my call today. As discussed, I would like to explore the opportunity to swing all LPR cameras at Logan directly to the MSP BOSS server without the need for the InStation solution. My understanding is that the EOPSS network resides in both the ATCT as well as the Troop F building. I would propose that we extend this network via Layer 2 to the main locations that the LPR system terminates to and cut the entire LPR network at MassPort over to EOPSS. Most of the roadway cameras are fed to 2 primary network locations. MassPort can supply the necessary fiber paths and switch gear required to extend the EOPSS network to these locations. Currently we have 18 cameras in production, with another 19 scheduled to come online within the next two months. I anticipate this number growing to approximately 50 fixed cameras within our campus over the next year. Let me know what you think the appropriate next steps would be.

Attachments: SierraQuoteForMassPort.pdf

Michelle and Kyra,

This purchase request is for equipment to allow Mass Port Sierra Wireless modems to communicate directly with the existing ALPR Boss server in Chelsea. This is the fastest way to bring the Massport LPR cameras on line. EOTSS and EOPSS are OK with this solution as is Major Deb Ryan, the CO at Troop F.

As you can see from the thread, this has been going on for some time. I think we can close it out with this small purchase.

This does not resolve the replacement of the existing ALPR equipment that we discussed at Command Staff yesterday. That is a different issue.

Thanks

Lieutenant Colonel Dermot J. Quinn #1765
Division Commander
Division of Homeland Security & Preparedness
Massachusetts State Police

Hi LTC.,

Can we order this equipment for the MassPort project?

Thanks, Brian

Hi, Brian!

This needs to go through MSP fiscal. They need to enter the purchase in OPAS.

Jim

Subject: RE: MassPort LPR Cameras

Thanks Jim,

I've reached out to Alex regarding the below and he is fine with the approach. I will coordinate with him and begin cutting over the cameras. I need 6 sierra wireless AC adapters and 12 antennas. I have reached out to BCM for a quote.

I have also requested permission from MSP at MassPort to remove the devices and assist with scheduling. Our Technical Services Unit will remove the devices once approved.

I plan to cut one sector (5-6 cameras per sector) over at a time and monitor the server, we may need to shrink our retention if we run up against storage constraints. Can you please see if the SAN can support additional storage and if it can be added?

-Brian

Hi, Brian!

I reached out to Rob Guerriero at TSS re this to get his perspective and he sees no problem connecting the cameras to the Boss server in the described manner.

So, assuming you move forward with this, who would actually make this happen?

Thanks.

Jim

Subject: Re: MassPort LPR Cameras

Hi Jim,

Regarding the Massport cameras; in the early days of AVL we installed 39 Sierra wireless modem‘s in cruisers that did not have laptops. These cruisers now have Geo tab and no longer need the modem or data plan. Massport is currently paying for the data plan and bought the modems. Because Massport wants to move quickly to give us their data and knowing BOSS4.0 Is delayed; Why don’t we ask Massport to let us use six of those modems and put one at each LPR Camera sector at Massport. We would next push the data back like we do everything else over Verizon. We wouldn’t have to do any firewall work either because they have a 166. and communicate like all of the MDT‘s . Once the back get squared away with the new boss we can revisit the networking. After we migrate everything to the new environment we would them cut the Massport cameras over to the LAN and then give them back their data plans and modems.

We would however need to anticipate expanding the existing sand and run the risk of overburdening the server.

Let me know what you think, Lieutenant Colonel Quinn and I could make the request to Massport if needed.

>
> Good Morning,
>
> I was hoping to get us all on the same page regarding a proposal to push Massport LPR data to the existing DCJIS BOSS server in Chelsea. Some time ago we (MSP) engaged with Massport regarding Automated License Plate Reader technology (LPR). As most of you know, MSP and DCJIS have been rolling out a very robust LPR network across the Commonwealth. This has been on going for the past several years. The LPR system has paid dividends in numerous criminal cases including crimes of violence, Amber and Silver alerts, and also in many missing/endangered/public well being events.
>
> Our communications with Massport started when we were made aware that they would be purchasing an LPR system. We worked with our counterparts at Massport to make sure that the two systems would be compatible so that information could be shared across all law enforcement agencies through the MSP Fusion Center. Towards that end Massport partnered with Neology for their solution. This is the same vendor used by MSP and DCJIS.
>
> Recently Massport has decided not to maintain its own ALPR BOSS database server. The database and application for LPR in Massachusetts is known as “BOSS” and is a Neology product. Massport would like to feed data from its cameras to the DCJIS BOSS server in Chelsea. Originally we had been discussing with Neology the potential for Massport’s cameras to write two records after scanning a plate, one to Massport BOSS and a duplicate to DCJIS BOSS. We think the current proposal to write all LPR records to the BOSS server located at DCJIS is a much better plan.
>
> MSP has a grant to upgrade the current the current BOSS v3.6 application which is at end of life and no longer supported to version v4.0. We have also submitted a Service Now ticket asking for hardware upgrade costs to the existing BOSS server which MSP will try to acquire funding to upgrade.
>
> I have received several calls from Massport looking to see where we are as far as being able to accept data from their cameras so that they can decommission their BOSS server. I believe their intent is to shut the Massport system down if the MSP and DCJIS are unable to accept the data. I have copied Hank Shaw from Massport into this thread in case I have misstated their intent.
>
> To access the Massport data we will need to be able to pass data from the Massport network to the state network much like we do with case management data. An alternative would be to use 4G modems (like we do with many of our mobile units and cruiser mounted units) on the state network, but this may be an unnecessary cost. Obviously this decision would be driven by the EOTSS and Massport network teams.

>
> I can't overstate the value that LPR data from Massport would have for MSP and law enforcement in general. Cases involving terrorism, money laundering, and drug trafficking all have significant ties to the port. Being able to hotlist and search on LPR data from Massport facilities would be a significant addition to the MSP Division of Homeland Security's technology tool set and would have immediate impact. Towards that end, we made be able to leverage Homeland Security grant funds for some of this project.

Attachments:	SierraQuoteForMassPort.pdf

Michelle and Kyra,

This purchase request is for equipment to allow Mass Port Sierra Wireless modems to communicate directly with the existing ALPR Boss server in Chelsea. This is the fastest way to bring the Massport LPR cameras on line. EOTSS and EOPSS are OK with this solution as is Major Ryan.

As you can see from the thread, this has been going on for some time. I think we can close it out with this small purchase.

This does not resolve the replacement of the existing ALPR equipment that we discussed at Command Staff yesterday. That is a different issue.

Thanks

Lieutenant Colonel Dermot J. Quinn #1765
Division Commander
Division of Homeland Security & Preparedness
Massachusetts State Police

Subject: Re: MassPort LPR Cameras

Hi Jim,

Regarding the Massport cameras; in the early days of AVL we installed 39 Sierra wireless modem‘s in cruisers that did not have laptops. These cruisers now have Geo tab and no longer need the modem or data plan. Massport is currently paying for the data plan and bought the modems. Because Massport wants to move quickly to give us their data and knowing BOSS4.0 Is delayed; Why don’t we ask Massport to let us use six of those modems and put one at each LPR Camera sector at Massport. We would next push the data back like we do everything else over Verizon. We wouldn’t have to do any firewall work either because they have a 166. and communicate like all of the MDT‘s . Once the back get squared away with the new boss we can revisit the networking. After we migrate everything to the new environment we would them cut the Massport cameras over to the LAN and then give them back their data plans and modems.

We would however need to anticipate expanding the existing sand and run the risk of overburdening the server.

Let me know what you think, Lieutenant Colonel Quinn and I could make the request to Massport if needed.

>
> Good Morning,
>
> I was hoping to get us all on the same page regarding a proposal to push Massport LPR data to the existing DCJIS BOSS server in Chelsea. Some time ago we (MSP) engaged with Massport regarding Automated License Plate Reader technology (LPR). As most of you know, MSP and DCJIS have been rolling out a very robust LPR network across the Commonwealth. This has been on going for the past several years. The LPR system has paid dividends in numerous criminal cases including crimes of violence, Amber and Silver alerts, and also in many missing/endangered/public well being events.
>
> Our communications with Massport started when we were made aware that they would be purchasing an LPR system. We worked with our counterparts at Massport to make sure that the two systems would be compatible so that information could be shared across all law enforcement agencies through the MSP Fusion Center. Towards that end Massport partnered with Neology for their solution. This is the same vendor used by MSP and DCJIS.
>
> Recently Massport has decided not to maintain its own ALPR BOSS database server. The database and application for LPR in Massachusetts is known as “BOSS” and is a Neology product. Massport would like to feed data from its cameras to the DCJIS BOSS server in Chelsea. Originally we had been discussing with Neology the potential for Massport’s cameras to write two records after scanning a plate, one to Massport BOSS and a duplicate to DCJIS BOSS. We think the current proposal to write all LPR records to the BOSS server located at DCJIS is a much better plan.
>
> MSP has a grant to upgrade the current the current BOSS v3.6 application which is at end of life and no longer supported to version v4.0. We have also submitted a Service Now ticket asking for hardware upgrade costs to the existing BOSS server which MSP will try to acquire funding to upgrade.
>
> I have received several calls from Massport looking to see where we are as far as being able to accept data from their cameras so that they can decommission their BOSS server. I believe their intent is to shut the Massport system down if the MSP and DCJIS are unable to accept the data. I have copied Hank Shaw from Massport into this thread in case I have misstated their intent.
>
> To access the Massport data we will need to be able to pass data from the Massport network to the state network much like we do with case management data. An alternative would be to use 4G modems (like we do with many of our mobile units and cruiser mounted units) on the state network, but this may be an unnecessary cost. Obviously this decision would be driven by the EOTSS and Massport network teams.
>

> I can't overstate the value that LPR data from Massport would have for MSP and law enforcement in general. Cases involving terrorism, money laundering, and drug trafficking all have significant ties to the port. Being able to hotlist and search on LPR data from Massport facilities would be a significant addition to the MSP Division of Homeland Security's technology tool set and would have immediate impact. Towards that end, we made be able to leverage Homeland Security grant funds for some of this project.

> Thank you again for taking my call today. As discussed, I would like to explore the opportunity to swing all LPR cameras at Logan directly to the MSP BOSS server without the need for the InStation solution. My understanding is that the EOPSS network resides in both the ATCT as well as the Troop F building. I would propose that we extend this network via Layer 2 to the main locations that the LPR system terminates to and cut the entire LPR network at MassPort over to EOPSS. Most of the roadway cameras are fed to 2 primary network locations. MassPort can supply the necessary fiber paths and switch gear required to extend the EOPSS network to these locations. Currently we have 18 cameras in production, with another 19 scheduled to come online within the next two months. I anticipate this number growing to approximately 50 fixed cameras within our campus over the next year. Let me know what you think the appropriate next steps would be.

We would however need to anticipate expanding the existing sand and run the risk of overburdening the server.

Let me know what you think, Lieutenant Colonel Quinn and I could make the request to Massport if needed.

> Subject: RE: MassPort LPR Cameras
>
> Good Morning,
>
> I was hoping to get us all on the same page regarding a proposal to push Massport LPR data to the existing DCJIS BOSS server in Chelsea. Some time ago we (MSP) engaged with Massport regarding Automated License Plate Reader technology (LPR). As most of you know, MSP and DCJIS have been rolling out a very robust LPR network across the Commonwealth. This has been on going for the past several years. The LPR system has paid dividends in numerous criminal cases including crimes of violence, Amber and Silver alerts, and also in many missing/endangered/public well being events.

>
> Our communications with Massport started when we were made aware that they would be purchasing an LPR system. We worked with our counterparts at Massport to make sure that the two systems would be compatible so that information could be shared across all law enforcement agencies through the MSP Fusion Center. Towards that end Massport partnered with Neology for their solution. This is the same vendor used by MSP and DCJIS.
>
> Recently Massport has decided not to maintain its own ALPR BOSS database server. The database and application for LPR in Massachusetts is known as “BOSS” and is a Neology product. Massport would like to feed data from its cameras to the DCJIS BOSS server in Chelsea. Originally we had been discussing with Neology the potential for Massport’s cameras to write two records after scanning a plate, one to Massport BOSS and a duplicate to DCJIS BOSS. We think the current proposal to write all LPR records to the BOSS server located at DCJIS is a much better plan.
>
> MSP has a grant to upgrade the current the current BOSS v3.6 application which is at end of life and no longer supported to version v4.0. We have also submitted a Service Now ticket asking for hardware upgrade costs to the existing BOSS server which MSP will try to acquire funding to upgrade.
>
> I have received several calls from Massport looking to see where we are as far as being able to accept data from their cameras so that they can decommission their BOSS server. I believe their intent is to shut the Massport system down if the MSP and DCJIS are unable to accept the data. I have copied Hank Shaw from Massport into this thread in case I have misstated their intent.
>
> To access the Massport data we will need to be able to pass data from the Massport network to the state network much like we do with case management data. An alternative would be to use 4G modems (like we do with many of our mobile units and cruiser mounted units) on the state network, but this may be an unnecessary cost. Obviously this decision would be driven by the EOTSS and Massport network teams.
>
> I can’t overstate the value that LPR data from Massport would have for MSP and law enforcement in general. Cases involving terrorism, money laundering, and drug trafficking all have significant ties to the port. Being able to hotlist and search on LPR data from Massport facilities would be a significant addition to the MSP Division of Homeland Security’s technology tool set and would have immediate impact. Towards that end, we made be able to leverage Homeland Security grant funds for some of this project.

> We are looking to consolidate the MassPort ALPR cameras into the main EOPSS ALPR server. After evaluating a number of options purposed by Neology, this appears to be the simplest approach. There is already a network presence at the barracks and it should be easy to point the cameras towards the centralized server. I've spoken to Alex at MassPort and he can volunteer a camera for testing. We could monitor network and server impact. Are you available to discuss?

> Thank you again for taking my call today. As discussed, I would like to explore the opportunity to swing all LPR cameras at Logan directly to the MSP BOSS server without the need for the InStation solution. My understanding is that the EOPSS network resides in both the ATCT as well as the Troop F building. I would propose that we extend this network via Layer 2 to the main locations that the LPR system terminates to and cut the entire LPR network at MassPort over to EOPSS. Most of the roadway cameras are fed to 2 primary network locations. MassPort can supply the necessary fiber paths and switch gear required to extend the EOPSS network to these locations. Currently we have 18 cameras in production, with another 19 scheduled to come online within the next two months. I anticipate this number growing to approximately 50 fixed cameras within our campus over the next year. Let me know what you think the appropriate next steps would be.

Subject: RE: Massport

Sure;

Stakeholders are users of ALPR, MSP, and Public Safety Agencies and MassPort.

The Goal is to get the current and new ALPR MassPort cameras redirected to the EOPSS boss server

Deliverables are when reads are coming into the database and the application is stable

Current Environment is MassPort submitting reads to their own BOSS internal server.

Attached is the thread history.

Morning Brian,

Can we get a high level overview of this Project:

- Stakeholders
- Goals
- Define Deliverables
- Current Environment

There will be a Project Manager assigned so we would like to have some information to present him\her.

thanks

Subject: Mobile ALPR Processor System

CAUTION: This email originated from a sender outside of the Commonwealth of Massachusetts mail system. Do not click on links or open attachments unless you recognize the sender and know the content is safe.

Brian,

The mobile SX4e processor and 25mm camera is scheduled to arrive this Monday. I'm not sure how you will use the system so I included two different power cords. One you can plug into a cigarette lighter, the other you can wire the pig tails to your power source. (Black is (-) ground, Red is (+) hot, Blue goes to ignition source if on a vehicle). If you're wiring to a non automotive power supply both Red and Blue leads go to (+) hot. See the attached Installation manual for more info and display/laptop wiring.

As for setup, the processor is configured for "Standalone" mode meaning you would use a monitor and keyboard. If you want to use the processor via a laptop you need to configure the processor for "VPRelay" (see page 47 in the attached admin manual on how to switch between the two.

As for usage, the processor already has the MA OCR engine installed, the camera's flash tables are already set and port C1 on the processor is where you plug in the 25mm PIPS camera. This camera has a 45' focus range, so for placement purposes start at a distance of 45' then incrementally increase the distance to see how far out you can maintain plate capture and read accuracy. The camera Port C3 has been setup for a 3rd party webcam. Running both PIPS and 3rd party cameras simultaneously will let you compare both cameras performance in real time. You will need to speak with Dave Bynum (PIPS IT Tech) to ensure the proper SDK is loaded for the web cam….I'll get you guys together when you're ready.

Call me when you're ready to use the system so I can walk you through how to use it.

Have Fun!

Subject: FW: OGR and DOC > Automatic License Plate Reader Policy
Date: Tuesday, December 15, 2020 1:35:00 PM
Attachments: TRF-11 Automatic License Plate Recognition Revised 10-1-2019.pdf

---

Hi,

Is the TRF-11 ALPR ok to share with OGR and DOC?

From: Miller, Dianne (POL)
Sent: Tuesday, December 15, 2020 9:38 AM
To: Silva, Kyra (POL)
Cc: Comeau, Melissa (POL); Biagi, Pamela (POL)
Subject: OGR and DOC > Automatic License Plate Reader Policy

Hi Kyra,

Please see email chain below.

Please confirm I can forward the attached policy to Gina (OGR) for review by DOC staff ordering ALPRs.
I will also refer them to the DCJIS policy below and remind them that Commonwealth IT Terms and Conditions apply (to the vendor) because we order ALPRs through OTIS.

Thanks
Di

From: Gallagher, David (POL)

Subject: Re: Automatic License Plate Reader Policy

Dianne,

I believe this is the policy you were inquiring about. Please feel free to share. If you or anyone else has any questions, please contact me.

Thank you,

David M. Gallagher
Major, Massachusetts State Police
Special Operations
508-820-2162
David.Gallagher3@MassMail.state.ma.us

Good Morning Dianne,

I've copied Major Gallagher on this because I think he is now the MSP Department ALPR Coordinator if I'm not mistaken.

TRF-11 is the MSP policy for ALPR.

EOPSS – DCJIS has a policy as listed below. I don't have a copy of it but EOPSS – DCJIS must so Gina or DOC should be able to check with them directly.

Executive Office of Public Safety and Security (EOPSS) - *The Commonwealth of Massachusetts Global Justice and Public Safety Information Sharing Policy*
Executive Office of Public Safety and Security (EOPSS) - Department of Criminal Justice Information Services - *Automatic License Plate Recognition System Central Repository Companion Policy.*

Major Gallagher – Please feel free to weigh in. Is it ok for Dianne to give the DOC TRF-11?

Finally, Gina and DOC should probably check with EOPSS legal and/or MSP legal in case they have any additional insights on ALPR policy developments.

Thank you/Respectfully,
Scott

Subject: Automatic License Plate Reader Policy

Good morning Dianne,

I am hoping you can put me in touch with the right contact on your end. The DOC was awarded grant funds to procure an automatic license plate reader system, and thus will need to implement a policy. They are looking to reference existing policies to guide a draft of their own. Is there a policy at MSP that can be shared with the DOC, or is there anyone else who I

should reach out to at MSP?

Thank you in advance.

Good Morning Dianne,

I've copied Major Gallagher on this because I think he is now the MSP Department ALPR Coordinator if I'm not mistaken.

TRF-11 is the MSP policy for ALPR.

EOPSS – DCJIS has a policy as listed below. I don't have a copy of it but EOPSS – DCJIS must so Gina

or DOC should be able to check with them directly.

Executive Office of Public Safety and Security (EOPSS) - *The Commonwealth of Massachusetts Global Justice and Public Safety Information Sharing Policy*
Executive Office of Public Safety and Security (EOPSS) - Department of Criminal Justice Information Services - *Automatic License Plate Recognition System Central Repository Companion Policy.*

Major Gallagher – Please feel free to weigh in. Is it ok for Dianne to give the DOC TRF-11?

Finally, Gina and DOC should probably check with EOPSS legal and/or MSP legal in case they have any additional insights on ALPR policy developments.

Thank you/Respectfully,
Scott

Hi Kyra,

Please see email chain below.

Please confirm I can forward the attached policy to Gina (OGR) for review by DOC staff ordering ALPRs.
I will also refer them to the DCJIS policy below and remind them that Commonwealth IT Terms and Conditions apply (to the vendor) because we order ALPRs through OTIS.

Thanks

Hello Diane, Tim and Phil

Attached is the Pagis Software info. This is the newest version of Pagis that MSP is NOT running at this time. When Lt Fitzgerald from the truck team moves forward with the new LPR systems this will be the software he will be running. I wanted to send this out because in this document is the info on the newest windows update that is causing Issues with either the processor not communicating or the internal aircard disconnecting when the computer is connected via ethernet cable. Page 58 half way down and page 59 addresses these issue with the current fix/work around. You will all probably start to run into this as Diane already has. Please let me know how this works out for you. Any questions please let me know. As I get more info on this product I will send along to all of you. As an outside vendor it makes my job 100 times easier when I can get someone to return an email or answer their phone. So for that I thank you all very much!!

Thank you

To: "Egnitz, Brian (POL)" <brian.egnitz@pol.state.ma.us>
Subject: RE: BOSS 4.0 Pricing

BOSS 4.0 Software was quoted at $16,995 per year.
Hosting services for BOSS4 was quoted an additional $118,000 per year
Mantis based on the expected data volume would be $125,000 per year. Hosting Mantis is only about 10% of the overall Mantis price, so on-prem Mantis would be in the $112,000

I attached an outline that highlights what is included in the hosted services.

To: Egnitz, Brian (POL)
Subject: BOSS 4.0 Pricing

I understand you don't need this now, but for your reference I've attached pricing for BOSS 4.0 software, pricing for AWS hosting services that is to be added to the BOSS 4.0 license fee if you decide to have PIPS host (see notes in the Cloud/SAS quote that gives an overview of host services and discounts for a 3 or 5 year contact) and the Mantis price adder if you decide to include vehicle classification.

Let me know if you have any questions.

Mr. Egnitz,

As we step into a new year, and decade, we wanted to take a moment to thank you for your continued loyalty and use of the PIPS Technology by Neology solutions. We are incredibly grateful of the customers, resellers and partners who, over the last years have remained loyal and supported us in our vision of “Driving Detection Innovation”. Each day we strive to make a difference in supporting you to achieve your goals, solve your challenges and achieve your mission.

2019 was a major year for us as we finalised significant elements of the overhaul of our products and solutions, culminating with the release of BOSS 4 in the fall, alongside brand new Fixed and Mobile ALPR solutions. Attached you will find the latest reminders in relation to our products and software versions to ensure you are getting the most out of your Neology products and solutions.

The year ahead is primed to be an exciting one! At Neology we firmly believe that the development doesn’t stop – we have almost 30% of our workforce working specifically in the product development area of our business in order to constantly evolve our solutions, improve performance and add new features. We have some exciting additions to the portfolio which are imminent that will provide not only performance improvements to the existing solutions but also provide the ability for greater inter-operability across the Law Enforcement ALPR market in the US more generally. We believe that you retaining the control and ownership of your data is paramount and we continue to respect that as we always have while supporting those customers who

choose to share and provide secure, trusted data sharing between neighbours and friends.

We are always keen to hear your feedback – if there are any elements of our services, solutions or products which you would like to feedback on, please don't hesitate to get in touch with me so I can provide personal attention to both positive and negative feedback. Email me here

Thank you for your continued support – we look forward to serving you in 2020 and beyond.

Best Regards,
Luke & the PIPS Technology team

Yeah!

Commonwealth v. McCarthy
Supreme Judicial Court, April 16, 2020
(Search and Seizure/Automatic License Plate Readers)

The use of four automatic license plate reader cameras, placed at two fixed locations on the ends of the Bourne and Sagamore bridges and used to "hit" on the defendant's license when he drove over either bridge,, does not constitute a search within the meaning of either art. 14 or the Fourth Amendment.

"While we recognize that the widespread use of ALPRs in the Commonwealth could implicate constitutional protections against unreasonable searches, the limited use of the technology in this case does not."

Note:
The Court did not find error in the fact that the Bourne Police Department did not have a separate policy, apart from State Police TRF-11, regarding ALPRs.

Additionally, the Court ruled that the government's use of ALPR data is not subject to the Stored Communication Act nor the Electronic Communications Privacy Act

See attached opinion.

Sirs,

Are you ok with this email? I would like to send to EOPSS and EOTSS and Massport teams.

Respectfully,

DJQ

Good Morning,

I was hoping to get us all on the same page regarding a proposal to push Massport LPR data to the existing DCJIS BOSS server in Chelsea. Some time ago we (MSP) engaged with Massport regarding Automated License Plate Reader technology (LPR). As most of you know, MSP and DCJIS have been rolling out a very robust LPR network across the Commonwealth. This has been on going for the past several years. The LPR system has paid dividends in numerous criminal cases including crimes of violence, Amber and Silver alerts, and also in many missing/endangered/public well being events.

Our communications with Massport started when we were made aware that they would be purchasing an LPR system. We worked with our counterparts at Massport to make sure that the two systems would be compatible so that information could be shared across all law enforcement agencies through the MSP Fusion Center. Towards that end Massport partnered with Neology for their solution. This is the same vendor used by MSP and DCJIS.

Recently Massport has decided not to maintain its own ALPR BOSS database server. The database and application for LPR in Massachusetts is known as "BOSS" and is a Neology product. Massport would like to feed data from its cameras to the DCJIS BOSS server in Chelsea. Originally we had been discussing with Neology the potential for Massport's cameras to write two records after scanning a plate, one to Massport BOSS and a duplicate to DCJIS BOSS. We think the current proposal to write all LPR records to the BOSS server located at DCJIS is a much better plan.

MSP has a grant to upgrade the current the current BOSS v3.6 application which is at end of life and no longer supported to version v4.0. We have also submitted a Service Now ticket asking for hardware upgrade costs to the existing BOSS server which MSP will try to acquire funding to upgrade.

I have received several calls from Massport looking to see where we are as far as being able to accept data from their cameras so that they can decommission their BOSS server. I believe their intent is to shut the Massport system down if the MSP and DCJIS are unable to accept the data. I have copied Hank Shaw from Massport into this thread in case I have misstated their intent.

To access the Massport data we will need to be able to pass data from the Massport network to the state network much like we do with case management data. An alternative would be to use 4G modems (like we do with many of our mobile units and cruiser mounted units) on the state network, but this may be an unnecessary cost. Obviously this decision would be driven by the EOTSS and Massport network teams.

I can't overstate the value that LPR data from Massport would have for MSP and law enforcement in general. Cases involving terrorism, money laundering, and drug trafficking all have significant ties to the port. Being able to hotlist and search on LPR data from Massport facilities would be a significant addition to the MSP Division of Homeland Security's technology tool set and would have immediate impact. Towards that end, we made be able to leverage Homeland Security grant funds for some of this project.

Respectfully,

Lieutenant Colonel Dermot J. Quinn #1765

Hi Jim,

BOSS 3.6 is going end-of-life. We have grant funds to upgrade the EOPSS system's software. I have also submitted a ticket for requesting cost estimations for

infrastructure. The below is still outstanding.

Hi Jim,

We are looking to consolidate the MassPort ALPR cameras into the main EOPSS ALPR server. After evaluating a number of options purposed by Neology, this appears to be the simplest approach. There is already a network presence at the barracks and it should be easy to point the cameras towards the centralized server. I've spoken to Alex at MassPort and he can volunteer a camera for testing. We could monitor network and server impact. Are you available to discuss?

Thanks Brian

Hello All,

I just wanted to follow up with this request to see what the next steps for this project are. I believe that we can make the connections to the EOPSS network, but will want to work within your desired IP scheme and ensure that there aren't any concerns around the network routing, security, etc. Let me know if we can have a quick call to discuss the details.

Respectfully,

~Alex

Subject: RE: MassPort LPR Cameras

Hi Alex,

Can you please provide the updated reads per day? Previously you were interested in sharing 6 cameras at approximately 75,000 reads per day.

Here is the P492 confi I mentioned.

Set host to boss[redacted]
Set image[redacted]
Set number of[redacted]
Set Ping interval[redacted]
Set udp ping[redacted]
Set ping wait time[redacted]
Set security[redacted]

I've looped in the network and server team from TSS on the thread. Maybe we can schedule a call in the next week.
For an estimate on impact, the Caper cameras do between 80,000 to 120,000 per day. We average 337,944 reads per day.

Subject: MassPort LPR Cameras

Brian,

Thank you again for taking my call today. As discussed, I would like to explore the opportunity to swing all LPR cameras at Logan directly to the MSP BOSS server without the need for the InStation solution. My understanding is that the EOPSS network resides in both the ATCT as well as the Troop F building. I would propose that we extend this network via Layer 2 to the main locations that the LPR system terminates to and cut the entire LPR network at MassPort over to EOPSS. Most of the roadway cameras are fed to 2 primary network locations. MassPort can supply the necessary fiber paths and switch gear required to extend the EOPSS network to these locations. Currently we have 18 cameras in production, with another 19 scheduled to come online within the next two months. I anticipate this number growing to approximately 50 fixed cameras within our campus over the next year. Let me know what you think the appropriate next steps would be.

Respectfully,

~Alex

Sir:

Thank you for your response-
The SJC handed down the McCarthy case just last week while we were making our inquiry...!
This is the case that dealt with the issue of whether the collection or search of LPR data without a warrant was an unconstitutional search. The case is important for everyone as it is a Carpenter-centric discussion of technology-facilitated surveillance techniques.
The SJC held that the a person has a constitutionally protected REP in the whole of their public movements, including, potentially, widespread LPR data, but that in this case that interest was not invaded by the limited use. It is very interesting and relevant. Link is below.
Respectfully,
Maura

Frank,

To download the software cut and paste the following into your browser http://[redacted]9988/publish.htm once loaded you will need to configure the port and perhaps the IP address. Click on the "Boss server" which will open the box below and make sure you have the correct server/port info. Once you connect to the server you won't have to do it again.

Your login would be msp2473 and the password I sent you would obviously go in the password section

Good Afternoon Kevin,

Based on our telephone conversation, I am inquiring about the possibility of reprogramming $66,420.00 from the ALPR Upgrade and Rhodium projects into the upgrade of our existing case management system.

At the present time we are unable to move forward on the LPR upgrade project (57,000.00) and our Incident Management Assistance Team was able to leverage a Google Docs solution to an existing problem that made it unnecessary to acquire the Rhodium software upgrade at this time ($9,420.00). That leaves us $66,420.00 in unspent funds.

Within the Massachusetts State Police the Division of Investigative Services and the Division of Homeland Security use a commercial records/case management system known as ACISS Case Management. The Division of Field Services (the uniform patrol division) uses a “in house” developed system called RAMS for its record management system. While there is some communication between the two systems, the situation is far from optimal when it comes to information sharing both internally at MSP and with our local and federal partners. MSP is currently creating modules within ACISS that will serve the needs of the Division of Field Services in an effort to have all MSP Divisions contribute all information into one unified database.

The project has been broken down into two scopes of work. The second scope of work will allow for the creation of a customized “Vehicle Crash” module that would allow MSP to centrally locate all crash data inside the ACISS records/case management system. Given that MSP investigates over

Deliverables

Crash enhancements
Enhancing the crash module with all fields needed by MSP,
A web based diagramming tool,
crash report exchange form, insurance information pushed from CJISWEB
CRA65, CRA23, SP425 forms
RMV submission interface
Towing module
A new module that will handle picking a tow company in rotation when needed to to a crash or arrest based
on geographical boundaries
linked to call for service or arrest

CAUTION: This email originated from a sender outside of the Commonwealth of Massachusetts mail system. Do not click on links or open attachments unless you recognize the sender and know the content is safe.

Brian,

The mobile SX4e processor and 25mm camera is scheduled to arrive this Monday. I'm not sure how you will use the system so I included two different power cords. One you can plug into a cigarette lighter, the other you can wire the pig tails to your power source. (Black is (-) ground, Red is (+) hot, Blue goes to ignition source if on a vehicle). If you're wiring to a non automotive power supply both Red and Blue leads go to (+) hot. See the attached Installation manual for more info and display/laptop wiring.

As for setup, the processor is configured for "Standalone" mode meaning you would use a monitor and keyboard. If you want to use the processor via a laptop you need to configure the processor for "VPRelay" (see page 47 in the attached admin manual on how to switch between the two.

As for usage, the processor already has the MA OCR engine installed, the camera's flash tables are already set and port C1 on the processor is where you plug in the 25mm PIPS camera. This camera has a 45' focus range, so for placement purposes start at a distance of 45' then incrementally increase the distance to see how far out you can maintain plate capture and read accuracy. The camera Port C3 has been setup for a 3rd party webcam. Running both PIPS and 3rd party cameras simultaneously will let you compare both cameras performance in real time. You will need to speak with Dave Bynum (PIPS IT Tech) to ensure the proper SDK is loaded for the web cam….I'll get you guys together when you're ready.

Call me when you're ready to use the system so I can walk you through how to use it.

Have Fun!

Good Morning, Lieutenant -

Since I have an idea of what you'll be doing for the next three days...

I've attached some housekeeping items, links, and points of contact for the new Lieutenants. I'm sure there are some things missing, but this hopefully at least has the essentials and who to contact to get them up and running ASAP.

Give me a shout if you have any questions or need anything.

Respectfully,

Sean Bender

PIPS 2020 Bulletin.pdf

Mr. Egnitz,

As we step into a new year, and decade, we wanted to take a moment to thank you for your continued loyalty and use of the PIPS Technology by Neology solutions. We are incredibly grateful of the customers, resellers and partners who, over the last years have remained loyal and supported us in our vision of "Driving Detection Innovation". Each day we strive to make a difference in supporting you to achieve your goals, solve your challenges and achieve your mission.

2019 was a major year for us as we finalised significant elements of the overhaul of our products and solutions, culminating with the release of BOSS 4 in the fall, alongside brand new Fixed and Mobile ALPR solutions. Attached you will find the latest reminders in relation to our products and software versions to ensure you are getting the most out of your Neology products and solutions.

The year ahead is primed to be an exciting one! At Neology we firmly believe that the development doesn't stop – we have almost 30% of our workforce working specifically in the product development area of our business in order to constantly evolve our solutions, improve performance and add new features. We have some exciting additions to the portfolio which are imminent that will provide not only performance improvements to the existing solutions but also provide the ability for greater inter-operability across the Law Enforcement ALPR market in the US more generally. We believe that you retaining the control and ownership of your data is paramount and we continue to respect that as we always have while supporting those customers who choose to share and provide secure, trusted data sharing between neighbours and friends.

We are always keen to hear your feedback – if there are any elements of our services, solutions or products which you would like to feedback on, please don't hesitate to get in touch with me so I can provide personal attention to both positive and negative feedback. Email me here

Thank you for your continued support – we look forward to serving you in 2020 and beyond.

Best Regards,
Luke & the PIPS Technology team

A NEOLOGY Business

Attachments: TRF-11 Automatic License Plate Recognition Revised 10-1-2019.pdf

---

Hi Kyra,

Please see email chain below.

Please confirm I can forward the attached policy to Gina (OGR) for review by DOC staff ordering ALPRs.
I will also refer them to the DCJIS policy below and remind them that Commonwealth IT Terms and Conditions apply (to the vendor) because we order ALPRs through OTIS.

Thanks
Di

Dianne,

I believe this is the policy you were inquiring about. Please feel free to share. If you or anyone else has any questions, please contact me.

Thank you,

David M. Gallagher
Major, Massachusetts State Police
Special Operations
508-820-2162
David.Gallagher3@MassMail.state.ma.us

Good Morning Dianne,

I've copied Major Gallagher on this because I think he is now the MSP Department ALPR Coordinator if I'm not mistaken.

TRF-11 is the MSP policy for ALPR.

EOPSS – DCJIS has a policy as listed below. I don't have a copy of it but EOPSS – DCJIS must so Gina or DOC should be able to check with them directly.

Executive Office of Public Safety and Security (EOPSS) - *The Commonwealth of Massachusetts Global Justice and Public Safety Information Sharing Policy*
Executive Office of Public Safety and Security (EOPSS) - Department of Criminal Justice Information Services - *Automatic License Plate Recognition System Central Repository Companion Policy.*

Major Gallagher – Please feel free to weigh in. Is it ok for Dianne to give the DOC TRF-11?

Finally, Gina and DOC should probably check with EOPSS legal and/or MSP legal in case they have any additional insights on ALPR policy developments.

Thank you/Respectfully,
Scott

Good morning Dianne,

I am hoping you can put me in touch with the right contact on your end. The DOC was awarded grant funds to procure an automatic license plate reader system, and thus will need to implement a policy. They are looking to reference existing policies to guide a draft of their own. Is there a policy at MSP that can be shared with the DOC, or is there anyone else who I should reach out to at MSP?

Thank you in advance.

All,

I will send out a calendar appointment so that we can discuss in detail.

Just a quick explanation for the Fusion Center team, Bill's Analysts use our CommandCentral Aware platform to make it easier to identify cameras near an incident so that they can feed intelligence to first responders as they are enroute or after they get on the scene of an incident. Triggers to start the process include events from their CAD, Shotspotter hits and ALPR hits.

Specific to ALPR hits, the Aware workstation essentially serves as another PIPS client, though by design it is limited to receiving hit notifications and not for using the database search tools. Below is a sample of what the Aware user sees: the ALPR hit icon on the map, and event details to include location and the photos of the vehicle and license plate. You can see nearby traffic cameras on the map that the Aware operator can click on to bring up and view live, or playback as appropriate to help out responding officers.

Aware is not set up for investigative queries. Those can be conducted by other analysts or detectives on the regular Pips client.

To get Aware setup to receive the PIPS hit notifications, we typically need the URL to reach the PIPS server, a UserID and password with the appropriate permissions to get the event type and other standard hit data, and the network path opened in the Springfield firewall to allow the data to pass.

Looking forward to discussing further next week.

Thank you,

Jim

Neology does not support direct access to the SQL nor do I recommend it, it could have unintended consequences to the systems ability to keep up with reads and alerts. The current supported method for sharing BOSS data is via a PIPS plugin. I am currently working with a cloud vendor and the plug in. If the cloud vendor I'm working with pans out we would have an API for you to use. I'll know more in a few weeks, please hold off if possible.

Hi Brian,

If possible, I'd like to include 70+ more devices in the conversation and discuss the TSU covert cameras. It has recently been brought to our attention that a local Department's covert camera (running VZW 166.) was discovered and has been targeted by a reddit forum post and by members who appear to be actively looking for covert cameras. Are you available the first week in June for a meeting or should I direct this to someone else in TSS?

Agenda could include:

- Overview of our long term goal to consolidate the current video management systems (BOSCH, View Commander, Vigilion, Genetec at the Watch, Genetec in Maynard) into the new Chelsea environment
- ALPR network – how to allow remote management and prepare for the cloud migration
- Covert Camera Network – how we currently handle cameras and could in the future. Can we bring in IPC to manage the TSU network?
- Can we build out one wireless MSP camera network, using sierra modems at the edge, VPN back to Chelsea and scale and store in the new environment.
- E55 Esplanade cutover to the State Fiber (in discussions currently)
- Bandwidth, how much, what's currently in Maynard, what's available
- How we would access Evidence (video on disc)
- VMS networking limitations

Please let me know, Thanks Brian

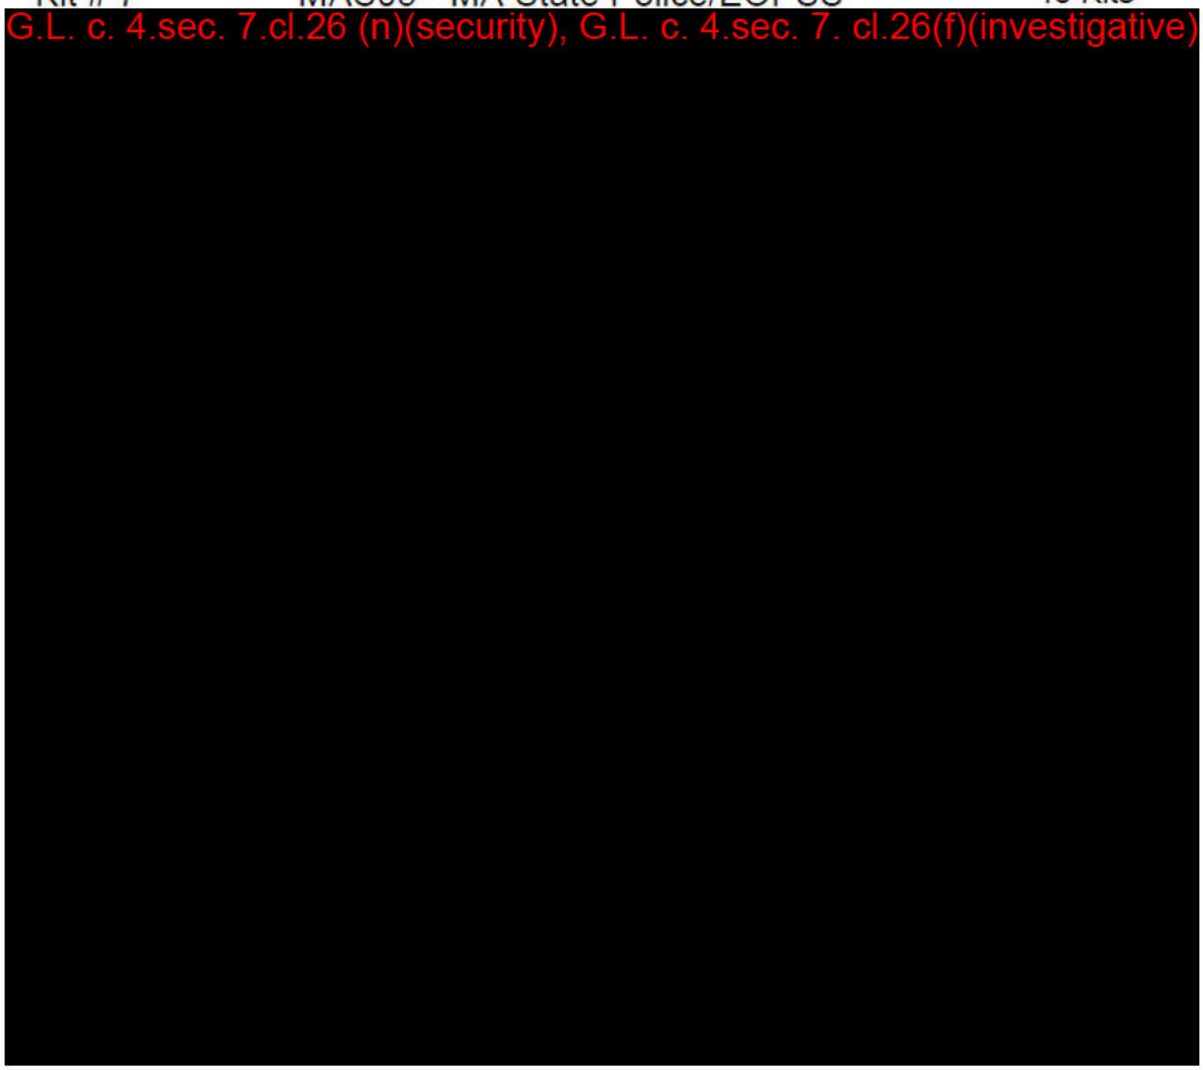
Hi Brian,

I will be cutting over MassPort cameras tomorrow. We have the MassPort modems, I've updated the firmware and double checked connectivity back to the BOSS server from the MassPort SIMS and there is no firewall work needed. For your records, I've included the details below of the modems and IPs/Accounts.



If possible, I would like to review with you or a member of the TSS network Team using the same solution now in place for the new DHS Livescans. We feel this is a good solution for all the MSP LPRS and it would allow us both the remote management needed for the project. If there are no objection, I can reach out to IPC for a quote, but I would prefer to get on a quick call to discuss. Please advise.

Thanks, Brian

Subject: ALPR Cameras

Hi Rob,

As you are probably aware the MassPort project to migrate their ALPR Cameras over to the MSP is moving forward over Verizon Wireless. We have identified modems, data plans and purchased the accessories needed for the project and hope to begin cutting over in the next 2-3 weeks.

I wanted to run something by you and the team to review; we just completed the Sierra MP70 VPN project with IPC and it went well (thanks for your teams help - BTW). Do you want to use the same approach (OneNetwork) for these ALPRS? I think it would give us the same functionality originally discussed by pushing the traffic over MassPorts network back to the core, but we would run it over Verizon.

A couple of thoughts;

This could be a good long term approach for all ALPRs we are hosting, we've begun to standardized on MP70s
This could give us much needed remote access to the cameras
If we moved to the Neology Hosted solution, we could do a split tunnel and pipe the traffic straight over the internet, but only allow remote management via the tunnel.
IPC was the prime on the sierra project and work would be minimal to expand, we also want to begin leveraging them more for our other wire/ covert/camera networks we run down the road (when Jim decides to retire).
If MassPort wants us off Verizon (since they are paying for the data plans), they could get us a straight internet route and connect to the MP70 (Our MP70 establishes internet via a LAN Port, Wifi and Cell, all establishing the VPN tunnel after connection).

Let me know what you think and if you want to get on a call to discuss. Otherwise, we can just get MassPort done with the normal static plan.

Thanks, Brian

Hi Brian,

I just wanted to confirm that you are not waiting on us for anything? There are no network changes requested correct?

thanks
bp

You are the correct, the current plan is VZW, no network changes required. This is a new request to review if the below would be a better solution long term for ALPR.

On Apr 17, 2020, at 9:22 AM, Peek, Brian T. (EOTSS) <Brian.T.Peek@mass.gov> wrote:

Hi Brian,

Is this different from the initial request? If I remember correctly the traffic was going to flow over the VZW network and no FW or Network configurations would need to be changed.

Thanks
Brian

Subject: ALPR Cameras

Hi Rob,

As you are probably aware the MassPort project to migrate their ALPR Cameras over to the MSP is moving forward over Verizon Wireless. We have identified modems, data plans and purchased the accessories needed for the project and hope to begin cutting over in the next 2-3 weeks.

I wanted to run something by you and the team to review; we just completed the Sierra MP70 VPN project with IPC and it went well (thanks for your teams help - BTW). Do you want to use the same approach (OneNetwork) for these ALPRS? I think it would give us the same functionality originally discussed by pushing the traffic over MassPorts network back to the core, but we would run it over Verizon.

A couple of thoughts;

This could be a good long term approach for all ALPRs we are hosting, we've begun to standardized on MP70s
This could give us much needed remote access to the cameras
If we moved to the Neology Hosted solution, we could do a split tunnel and pipe the traffic straight over the internet, but only allow remote management via the tunnel.
IPC was the prime on the sierra project and work would be minimal to expand, we also want to begin leveraging them more for our other wire/ covert/camera networks we run down the road (when Jim decides to retire).
If MassPort wants us off Verizon (since they are paying for the data plans),

they could get us a straight internet route and connect to the MP70 (Our MP70 establishes internet via a LAN Port, Wifi and Cell, all establishing the VPN tunnel after connection).

Let me know what you think and if you want to get on a call to discuss. Otherwise, we can just get MassPort done with the normal static plan.

Thanks, Brian

ALPR DCJIS Policy - Final 20131008.pdf

Matt and Spencer: thank you for your thoughtful and quick review! We definitely have a different view of the call. I really felt they said if you have two pieces of data (upload and time stamp) you can use one to confirm the accuracy of the other. See power point attached. I still agree its exculpatory and we need to disclose just feel that we can solve for this moving forward by the way we turn off the data. When you guys get a chance to review lets connect by phone

Substantive

- From our call with MSP and the vendor, I would be cautious about using this line: "An ALPR date and time stamp's accuracy can be determined through comparison with the upload date and time." My impression was that there was no window within which the times were necessarily accurate. They couldn't give us a benchmark or basis to determine what was good and what was bad. Maybe you have different info at this point, but that was my impression. If that's right, then we need to be cautious about using language that could be interpreted as a definitive statement validating certain readings. It seems intuitive that if the times are close, it's less likely to be an error, but I'm not sure we can even say that definitively. If that is something we can say, then we should still be clear and use terms such as "likely" that accurately reflect that it isn't a bright line Matt: I understood that they we looking for errors by comparing the delta between the upload time and the timestamp on the photo. If the upload time and the time stamp on the photo were less than one minute apart they were presumed to be accurate and more than a minute was an "error" If that is true as long as you have both the photo and the upload data you can determine if the time stamp is accurate. i.e. if the photo time stamp and the upload time stamp are within one minute of each other you can presume the photo time stamp was accurate. When Colonel Quinn said that he didn't think the system would be usable because it would never be able to assure accuracy, Brian responded, if you provided both the photo and the upload you would be able to show accuracy. The problem is that we could only do this for approx. one year of data
- I thought this was a little unclear: "The issue is limited to the ALPR, the date and time stamps of the upload are accurate." My impression is that the date and timestamps of the upload are accurate as to when it was uploaded, but they don't speak to when the car passed the camera. Someone reading that statement could be confused. Agreed its not artful but the idea is that the time when the data is uploaded is recorded accurately so you can look at the delta between photo time stamp and upload to determine accuracy.
- In the last paragraph, we suggest that the times can be verified by "a confirmation with upload time." From our call with the vendor, I did not think this was the case. Again, we didn't get any benchmark for what was and wasn't an error. I would leave this part of the sentence as "ALPR cameras should not be relied upon absent further information or independent evidence that establishes their accuracy." This phrasing covers verification by timestamp if that can be shown to be helpful, and it also covers everything else. Again, I may be wrong but I thought in the power point they showed that of the 126 million records they had 10 million with upload times that were

more than a minute or more different. So the way we found the problem was a non-industry accepted difference between the time on the photo and the time of the upload. The vendor put this at .4% see attached

- I'd like to see a little more explanation re the DCJIS Policy to show (assuming it's true – I wasn't involved with that policy so can't say) that it was promulgated in the interest of citizens' privacy. I attached a copy of the policy

Non-substantive (agree with all of these and Thank you !!)

I know these aren't important suggestion, but because this will be going out to a lot of people, I figured it would be helpful to suggest these style/grammatical edits anyway:

- First paragraph is indented but others are not;
- There should be two spaces after conclusion of each sentence -- in current draft, some have one and some have two; I agree with this but I read that the way you can tell the age of a person (and if you are doing your kids homework) is if you use two spaces because apparently you don't do that anymore
- There should be a comma after "passes" in the fourth line of the second paragraph;
- There should be a comma after "data" in the first line of the third paragraph;
- Lose the comma after "plates" in the second line of the third paragraph;
- MSP is referred to in shorthand as both the State Police and MSP – we should pick one shorthand version;
- In paragraph three, it simply mentions "the vendor," and it is not until paragraph six that we refer to "the relevant vendor, Neology, Inc." We should reverse the order so that paragraph three says "the relevant vendor, Neology, Inc." Then later on, we can refer simply to "the vendor" and it will make sense to the reader.
- Lose comma after "absent" in last paragraph.

Chief/Deputy Chief

Please find attached to this email Brian Egnitz, he is with the Massachusetts State Police and is my main contact for ALPR questions and service. I am not sure who the actual person in charge of the program is, but if it is not Brian he will be able to point you in the right direction.

We have been extremely happy with utilizing the ALPR data with other evidence in assisting with our investigations. The link below is a presentation we were preparing for the courtroom, however after viewing this presentation defense agreed to a plea in the case. This was a Breaking & Entering case where we utilized cell site location information, ALPR data, and records from victims and stores to put a presentation together for grand jury. At the 1:35 mark of the video you will see where we utilized the ALPR data in conjunction with the CSLI to show where the suspect's vehicle was and the ALPR actually had a partial picture of the stolen bike in the bed of the truck.

This is just one of the many successes we have had where the ALPR has been key to solving and assisting with our cases.

Sue:

Here are the suggested edits from Agapi and me to the extent they're helpful to you. We accepted Nick's edits and put our own suggestions in redline with suggested responses in comments.

Hope this helps,

Matt

Hi guys -- heard back from Nick – really the only sticking point is what is the "acceptable upload time" Is there any ball park we can put out ? Within a minute ? No more than 5 minutes. Not sure we could get away with "close in time" ? I put in some suggestions but they are still incredibly vague

Open to any and all suggestions

Our P492s are 5 amp. Our trailers are spec to 600 amp hours

Attached is our policy and an old invoice for some trailers.

Our speed trailer gets about 1-3 days in worst sun conditions of continues power
Maybe a day without sun

Two 85 watt
solar panels - Three 12VDC AGM
batteries, 600 Ah total capacity

Wanco Systems- Custom Mast Trailer: As
per picture w/ previous mount for 3M LPR,
500 W Solar/ 3 x 200Ah, AGM Batteries
(600 total Ah),

ALPR System Vehicle Power Draw

When off, the ALPR system should draw around 20miliamps. The chart below shows the power draw when operational.

Component	Current Draw	Total Draw
SX Processor	3.5 A @ 12VDC	3.5 A @12VDC
Camera 1	1.0 A @ 12VDC	4.5 A @12VDC
Camera 2	1.0 A @ 12VDC	5.5 A @12VDC
Camera 3	1.0 A @ 12VDC	6.5 A @12VDC
Camera 4	1.0 A @ 12VDC	7.5 A @12VDC

NOTE: *These calculations do NOT include load from the MDC, Touchscreen monitor, or GPS antenna*

Brian,
Thank you for taking the time to come over to DOC and help us get this off the ground.
As you requested we are looking for the word document for the Policies and procedures from MSP and EOPPS on the ALPR program so we can start laying down our ground work.
Also looking for the specs on the solar setups.
Thank you and stay safe, and have a great Thanksgiving.

Attached is our policy and an old invoice for some trailers.

Our P492s are 5 amps. Most of or our trailers are spec to 600 amp hours

Our speed trailer gets about 1-2 days in worst sun conditions of continues power
Maybe a day without sun

Two 85 watt
solar panels - Three 12VDC AGM
batteries, 600 Ah total capacity

These are the ones we use mostly and can go for 3-4 days without sun
Wanco Systems- Custom Mast Trailer: As
per picture w/ previous mount for 3M LPR,
500 W Solar/ 3 x 200Ah, AGM Batteries
(600 total Ah),

These are the specs for the mobile setup you were looking at, so it looks like you would want to be 600+ amp hours and 500w + of solar

ALPR System Vehicle Power Draw

When off, the ALPR system should draw around 20miliamps. The chart below shows the power draw when operational.

Hi Gina,

Attached please find MSP policy TRF-11 relative to ALPR's.

DOC staff should also obtain the policy referenced below from DCJIS:

Executive Office of Public Safety and Security (EOPSS) - *The Commonwealth of Massachusetts Global Justice and Public Safety Information Sharing Policy*
Executive Office of Public Safety and Security (EOPSS) - Department of Criminal Justice Information Services - *Automatic License Plate Recognition System Central Repository Companion Policy.*

Lastly, the vendor would need to comply with the IT Terms and Conditions attached. We order ALPRs through the EOPSS OTIS requisition process.

Thank you

Subject: Automatic License Plate Reader Policy

Good morning Dianne,

I am hoping you can put me in touch with the right contact on your end. The DOC was awarded grant funds to procure an automatic license plate reader system, and thus will need to implement a policy. They are looking to reference existing policies to guide a draft of their own. Is there a policy at MSP that can be shared with the DOC, or is there anyone else who I should reach out to at MSP?

Thank you in advance.

BOSS 4 subscription layers.xlsx

BOSS 4.0 Software was quoted at $16,995 per year.
Hosting services for BOSS4 was quoted an additional $118,000 per year
Mantis based on the expected data volume would be $125,000 per year. Hosting Mantis is only about 10% of the overall Mantis price, so on-prem Mantis would be in the $112,000

I attached an outline that highlights what is included in the hosted services.

Subject: BOSS 4.0 Pricing

I understand you don't need this now, but for your reference I've attached pricing for BOSS 4.0 software, pricing for AWS hosting services that is to be added to the BOSS 4.0 license fee if you decide to have PIPS host (see notes in the Cloud/SAS quote that gives an overview of host services and discounts for a 3 or 5 year contact) and the Mantis price adder if you decide to include vehicle classification.

Let me know if you have any questions.

Yes.

1. BOSS 4 software on prem is $16,995
2. If you prefer we host it and maintain and provide the AWS services outlined in this attachment, the total would be $16,995 plus $118,000 for hosting.
3. If you want Mantis its an additional $125,000 on top of either (1) or (2) We can provide Mantis for 30 to 90 days at no cost to see how well it fits your needs.

So if we had you host everything and have mantis, is it 118,000+125,000+16,995?

Or is it Just $125,000 for everything hosted?

If on-prem, mantis is 16995 + 112,000?

Brian,

Here's the recommended sizing criteria for the application and database servers. With more fixed cameras pushing data to BOSS it's highly recommended you keep this sizing criteria in mind.

Subject: RE: BOSS update

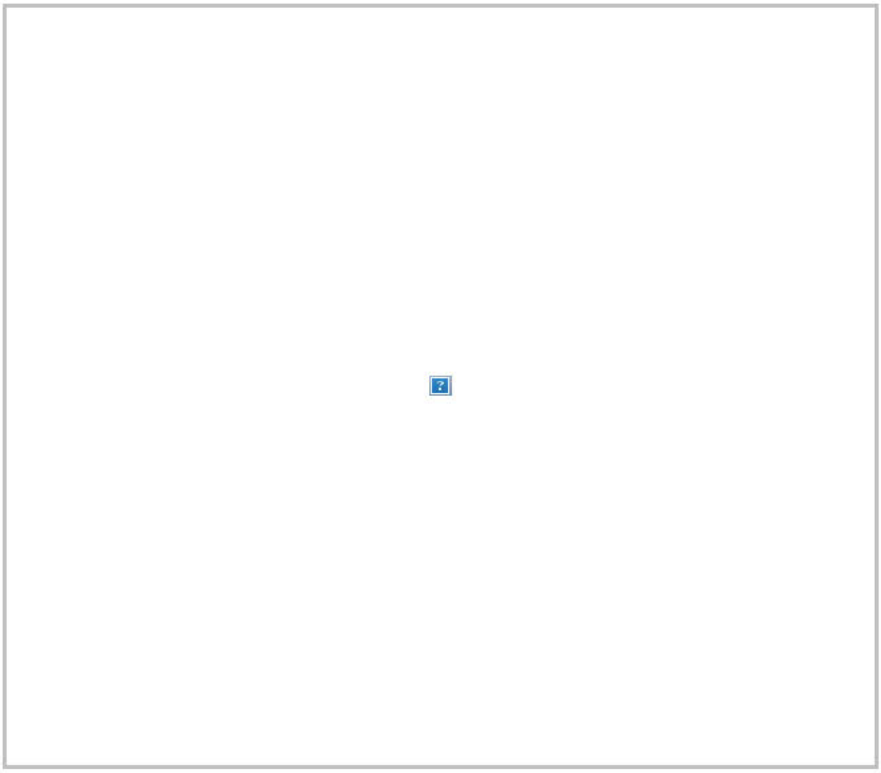
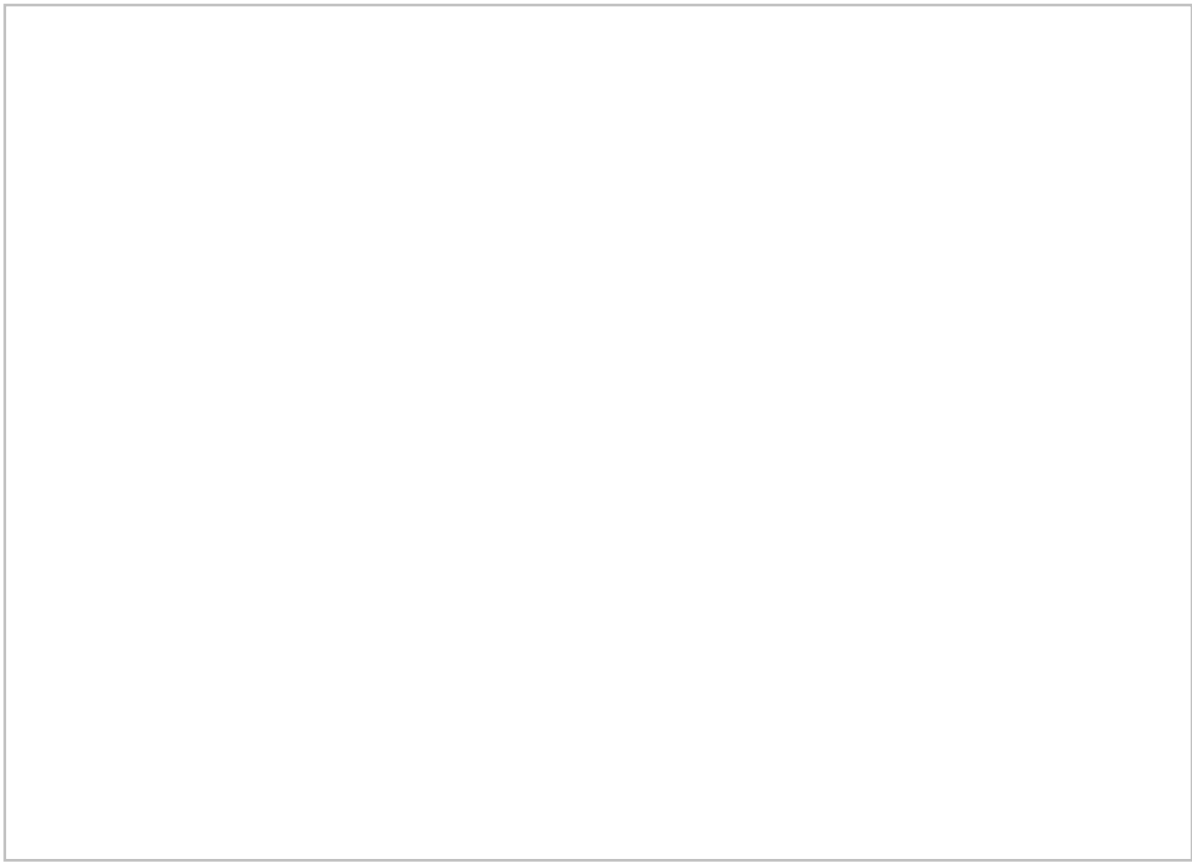
Hi Brian,



Before this update, On computers that needed access to LPR reporting, we have a copied a folder called "SA Client" and "SA.UI" within that folder, we create a shortcut to that file and that eliminated installation of any program.



But I have tried the link that you have provided us and I'm getting an error message in Spanish during the installation! (Please see below) What I get from it, it need .Net. 4.5.2 but my computer already has 4.7 installed on it. I also tried to install it on Watchcenter computers and I got the same error message in Spanish and .Net 4.5.2 wont install on top of the current version of 4.7

Also translation of other part of the error message is that:

"The Microsoft .NET Framework 4.5.2 installation is not supported on this operating system. Please contact the administrator."

I have CC Lt. Griffin on this email, since he has done many installation of the old one too and all his stations are also effected too.

Error de comprobación de los requisitos previos del componente del sistema Microsoft .NET Framework 4.5.2 (x86 y x64) con el siguiente mensaje: "La instalación de Microsoft .NET Framework 4.5.2 no se admite en este sistema operativo. Póngase en contacto con el administrador."

Vea el archivo de registro de la instalación que se encuentra en 'C:\Users\MJACKS~1\AppData\Local\Temp\VSD1947.tmp\install.log' para obtener más información.

Chiefs,
Commonwealth v. McCarthy (SJC 12750)← click on that link to see the case
In this case the SJC ruled that police tracking D's car using 4 automatic license plate readers (ALPRs) at both ends of the Bourne and Sagamore Bridges was too limited to amount to a constitutional "search." The SJC declined to say exactly how detailed digital surveillance would have to be to constitute a search leaving that issue for future cases.

State Police maintain ALPRs including ones at both ends of the Bourne and Sagamore Bridges. (p.3) The ALPRs photograph vehicles' license plates; that data along with the date and time of the sighting is retained by GOPPS for a year. (p.3-4) Authorized users including police may put a license plate number on a "hot list" and receive an alert if that plate is sighted; reasons to put someone on the "hot list" include not only criminal investigations but also Amber alerts missing persons and BOLO alerts. (p. 3 25 n.13)

Through surveillance controlled buys and information from 4 CIs Barnstable police suspected that the co-D was se ling heroin out of his house in Barnstable. (p.4) Police saw a black Hyundai driven by D visit there briefly so they suspected that D was the co-D's supplier. Police put the Hyundai's license plate number on the State Police ALPR "hot list" so that they'd be notified whenever the Hyundai crossed one of the bridges. (p.5) After getting an alert that the Hyundai had crossed onto the Cape police followed both the Hyundai and the co-D to the buy location on a quiet residential street where D and co-D met for about 30 seconds but police could not see a physical exchange. (p.5) From the ALPR data police generated a spreadsheet showing that in mid-winter the Hyundai had crossed the bridges dozens of times sometimes more than once a day adding to police suspicion that D was the heroin supplier. (p.5-6) When police got a second alert that the Hyundai had crossed onto the Cape they again followed D and co-D to the buy location and saw a 30-second meeting but could not see any exchange. This time police stopped both cars handcuffed both co-D and D and read them Miranda. On co-D police found heroin; on D police found 2 cell phones and cash. (p.6-7) At the station police repeatedly told D he was "not under arrest." and D made statements.

D moved to suppress the ALPR data his statements and evidence obtained from the stop. A Superior Court judge found that the moment of arrest was when D and co-D were handcuffed at the scene of the traffic stop but denied the motion to suppress. (p.33) The SJC upheld the denial.

Limits and expectation of privacy in digital surveillance At some length the SJC discussed the constitutional issues raised by digital surveillance. (p.7-29) Police conduct amounts to a search if: (1) it intrudes on a D's expectation of privacy and (2) society is willing to recognize the expectation of privacy as reasonable. Here the SJC ruled D did have an expectation of privacy because D and co-D chose a buy location in a quiet residential area. (p.8 n.5) As to what expectation of privacy society recognizes as reasonable with regard to digital surveillance the SJC was guided by historical understandings of what was an unreasonable search and seizure when the U.S. and Mass. Constitutions were adopted in the late 1700s in reaction to redicals' rummaging without restraint through colonists' homes. (p.8-10) New technologies like ALPRs raise difficult legal issues because they are easier and less expensive for police than traditional surveillance can be done secretly and permit police to search back in time for a vehicle's movements even before po ice suspicion arose. (p.12-14) Society does not recognize as reasonable an expectation of privacy in what someone knowingly exposes" to public view like a license plate – which by statute must be "displayed conspicuously." (p.15-16 n.8) In older cases involving less advanced technology courts have held that a D did not have an expectation of privacy in contents of a phone conversation in a phone booth or a radio beeper" tracking a single journey. (p14-17) But technology like ALPRs GPS and CSLI are different because they may give police a **mosaic** of information where each piece may be public but when viewed together they create a picture that implicates someone's privacy interests like their political re ligious or sexual associations. (p.17-21) The SJC was concerned that with enough ALPRs police could track someone's location everywhere which would be "creepy." (p.21) Exigent circumstances would likely justify using an ALPR in a situation involving an Amber alert or missing person. (p.21 n.12) The D urged the SJC to consider not just these four ALPRs on the Bourne and Sagamore Bridges but the hundreds of ALPRs across Massachusetts; the SJC declined to do so because that evidence is not in the record of this case. (p.24) The **limited number of cameras** here and their placements on the bridges was not enough to give D an expectation of privacy that society would recognize as reasonable. (p.28) The SJC declined to say how much digital surveillance would give such an expectation and admitted that its unwillingness to do so "**may bring some interim confusion**" until further cases develop the law on this issue. (p.28 n.15) Chief Justice Gants wrote a separate concurrence suggesting that one thing the SJC could do is to require police who want to search a vast amount of digital data to apply for a court order supported by an affidavit showing reasonable suspicion to do so. (concurrence p.3) This would be like a 5W but with a lower standard than PC.

Written policy The SJC rejected D's argument that Barnstable PD should have had a written policy about ALPRs and the MSP policy on which Barnstable relied was not specific enough. (p.30) Written policies are required to justify certain exceptions to the SW requirement (like inventory searches and sobriety checkpoints) – they do not apply to the threshold question whether a search occurred in the first place. (p.31)

Miranda issues At the station police repeatedly told D that D was "not under arrest." But the motion judge found that the moment of arrest was when police handcuffed D at the traffic stop. (p.33) D argued that his statements should be suppressed because police tel ing him he was not under arrest amounted to "deceit or trickery" to get D to confess. The motion judge and the SJC rejected that argument saying that even if telling D he was not under arrest amounted to deceit or trickery it was just one factor to be used in determining voluntariness.

Bottom line: Police use of ALPRs at limited locations is not a constitutional search – but we don't know how many locations it'd have to be to amount to one. Using an ALPR in **exigent circumstances** like an Amber Alert is likely OK. Local police don't need a written policy to use ALPRs maintained by MSP. After a D has been handcuffed police should not tell D that D is "not under arrest" – po ice will likely be accused later of deceit and trickery.

A thought: There are news stories online that cell phones may be used to do contact tracing for people exposed to COVID-19. If lots of people willingly agree to let their cell phone data be used to track their whereabouts would that ever change courts' view of what society recognizes as a reasonable expectation of privacy? At some point if members of the public come to expect that they're being tracked should police be allowed to use that evidence too? Or at the very least should there be a jury instruction explaining that police have less access to the data than other entities (like software companies or public health agencies)?

As always email me with any questions. Wash your hands!

Commonwealth v. McCarthy (SJC 12750) ← click on that link to see the case
In this case the SJC ruled that police tracking D's car using it automatic license plate readers (ALPRs) at both ends of the Bourne and Sagamore Bridges was too limited to amount to a constitutional "search." The SJC declined to say exactly how detailed digital surveillance would have to be to constitute a search leaving that issue for future cases.

State Po ice maintain ALPRs including ones at both ends of the Bourne and Sagamore Bridges. (p.3) The ALPRs photograph vehicles' license plates; that data along with the date and time of the sighting is retained by EOPPS for a year. (p.3-4) Authorized users including police may put a license plate number on a "hot list " and receive an alert if that plate is sighted; reasons to put someone on the "hot list" include not only criminal investigations but also Amber alerts missing persons and BOLO alerts. (p. 2 25, n.13)

Through surveillance controlled buys and information from 4 Cis Barnstable police suspected that the co-D was selling heroin out of his house in Barnstable. (p.4) Police saw a black Hyundai driven by D visit there briefly so they suspected that D was the co-D's supplier. Police put the Hyundai's license plate number on the State Police ALPR "hot list " so that they'd be notified whenever the Hyundai crossed one of the bridges. (p.5) After getting an alert that the Hyundai had crossed onto the Cape police followed both the Hyundai and the co-D to the buy location on a quiet residential street where D and co-D met for about 30 seconds but police could not see a physical exchange. (p.5) From the ALPR data police generated a spreadsheet showing that in mid-winter the Hyundai had crossed the bridges dozens of times sometimes more than once a day adding to police suspicion that D was the heroin supplier. (p.5-6) When police got a second alert that the Hyundai had crossed onto the Cape they again followed D and co-D to the buy location and saw a 30-second meeting but could not see any exchange. This time police stopped both cars handcuffed both co-D and D and read them Miranda. On co-D police found heroin; on D police found 2 cell phones and cash. (p.6-7) At the station police repeatedly told D he was "not under arrest " and D made statements.

D moved to suppress the ALPR data his statements and evidence obtained from the stop. A Superior Court judge found that the moment of arrest was when D and co-D were handcuffed at the scene of the traffic stop but denied the motion to suppress. (p.33) The SJC upheld the denial.

ALPRs and expectation of privacy in digital surveillance: At some length the SJC discussed the constitutional issues raised by digital surveillance. (p.7-29) Police conduct amounts to a search if: (1) it intrudes on a D's expectation of privacy and (2) society is willing to recognize the expectation of privacy as reasonable. Here the SJC ruled D did have an expectation of privacy because D and co-D chose a buy location in a quiet residential area. (p.8 n.5) As to what expectation of privacy society recognizes as reasonable with regard to digital surveillance the SJC was guided by historical understandings of what was an unreasonable search and seizure when the U.S. and Mass. Constitutions were adopted in the late 1700s in reaction to redcoats' rummaging without restraint through colonists' homes. (p.8-10) New technologies like ALPRs raise difficult legal issues because they are easier and less expensive for police than traditional surveillance can be done secretly and permit police to search back in time for a vehicle's movements even before police suspicion arose. (p.12-14) Society does not recognize as reasonable an expectation of privacy in what someone "knowingly exposes" to public view like a license plate – which by statute must be "displayed conspicuously." (p.15-16 & n.8) In older cases involving less advanced technology courts have held that a D did not have an expectation of privacy in contents of a phone conversation in a phone booth or a radio beeper" tracking a single journey. (p14-17) But technology like ALPRs GPS and CSLI are different because they may give police a **mosaic** of information where each piece may be public but when viewed together they create a picture that implicates someone's privacy interests like their political religious or sexual associations. (p.17-21) The SJC was concerned that with enough ALPRs police could track someone's location everywhere which would be "creepy." (p.21) Exigent circumstances would likely justify using an ALPR in a situation involving an Amber alert or missing person. (p.25 n.13) The D urged the SJC to consider not just these four ALPRs on the Bourne and Sagamore Bridges but the hundreds of ALPRs across Massachusetts; the SJC declined to do so because that evidence is not in the record of this case. (p.26) The **limited number of cameras** here and their placements on the bridges was not enough to give D an expectation of privacy that society would recognize as reasonable. (p.28) The SJC declined to say how much digital surveillance would give such an expectation and admitted that its unwillingness to do so **"may bring some interim confusion"** until further cases develop the law on this issue. (p.28 n.15) Chief Justice Gants wrote a separate concurrence suggesting that one thing the SJC could do is to require police who want to search a vast amount of digital data to apply for a court order supported by an affidavit showing reasonable suspicion to do so. (concurrence p.3) This would be like a SW but with a lower standard than PC.

Written policy: The SJC rejected D's argument that Barnstable PD should have had a written policy about ALPRs and the MSP policy on which Barnstable relied was not specific enough. (p.30) Written policies are required to justify certain exceptions to the SW requirement (like inventory searches and sobriety checkpoints) – they do not apply to the threshold question whether a search occurred in the first place. (p.31)

Miranda issues: At the station police repeatedly told D that D was "not under arrest." But the motion judge found that the moment of arrest was when police handcuffed D at the traffic stop. (p.33) D argued that his statements should be suppressed because police telling him he was not under arrest amounted to "deceit or trickery" to get D to confess. The motion judge and the SJC rejected that argument saying that even if telling D he was not under arrest amounted to deceit or trickery it was just one factor to be used in determining voluntariness.

Bottom line: Police use of ALPRs at limited locations is not a constitutional search – but we don't know how many locations it'd have to be to amount to one. Using an ALPR in **exigent circumstances** like an Amber Alert is likely OK. Local police don't need a written policy to use ALPRs maintained by MSP. After a D has been handcuffed police should not tell D that D is "not under arrest" – police will likely be accused later of deceit and trickery.

A thought: There are news stories online that cell phones may be used to do contact tracing for people exposed to COVID-19. If lots of people willingly agree to let their cell phone data be used to track their whereabouts would that ever change courts' view of what society recognizes as a reasonable expectation of privacy? At some point if members of the pub ic come to expect that they're being tracked should police be allowed to use that evidence too? Or at the very least should there be a jury instruction explaining that police have less access to the data than other entities (like software companies or public health agencies)?

Case Law update.

Win for the good guys. Defense tried to mirror the Connolly case and suggest a S/W needed to check ALPRs. Court said no. But this could change if a case relied more heavily on ALPR info. Interesting read.

Chiefs,
Commonwealth v. McCarthy (SJC-12750)← click on that link to see the case
In this case the SJC ruled that police tracking D's car using 4 automatic license plate readers (ALPRs) at both ends of the Bourne and Sagamore Bridges was too limited to amount to a constitutional "search." The SJC declined to say exactly how detailed digital surveillance would have to be to constitute a search leaving that issue for future cases.

State Police maintain ALPRs including ones at both ends of the Bourne and Sagamore Bridges. (p.3) The ALPRs photograph vehicles' license plates; that data along with the date and time of the sighting is retained by EOPPS for a year. (p.3-4) Authorized users including police may put a license plate number on a "hot list" and receive an alert if that plate is sighted; reasons to put someone on the "hot list" include not only criminal investigations but also Amber alerts missing persons and BOLO alerts. (p. 2 21 n.13)

Through surveillance controlled buys and information from 4 Cis Barnstable police suspected that the co-D was se ling heroin out of his house in Barnstable. (p.4) Police saw a black Hyundai driven by D visit there briefly so they suspected that D was the co-D's supplier. Police put the Hyundai's license plate number on the State Police ALPR "hot list " so that they'd be notified whenever the Hyundai crossed one of the bridges. (p.5) After getting an alert that the Hyundai had crossed onto the Cape police followed both the Hyundai and the co-D to the buy location on a quiet residential street where D and co-D met for about 30 seconds but police could not see a physical exchange. (p.5) From the ALPR data police generated a spreadsheet showing that in mid-winter the Hyundai had crossed the bridges dozens of times sometimes more than once a day adding to police suspicion that D was the heroin supplier. (p.5-6) When police got a second alert that the Hyundai had crossed onto the Cape they again followed D and co-D to the buy location and saw a 30-second meeting but could not see any exchange. This time police stopped both cars handcuffed both co-D and D and read them Miranda. On co-D police found heroin; on D police found 2 cell phones and cash. (p.6-7) At the station police repeatedly told D he was "not under arrest " and D made statements.

D moved to suppress the ALPR data his statements and evidence obtained from the stop. A Superior Court judge found that the moment of arrest was when D and co-D were handcuffed at the scene of the traffic stop but denied the motion to suppress. (p.23) The SJC upheld the denial.

ALPRs and expectation of privacy in digital surveillance: At some length the SJC discussed the constitutional issues raised by digital surveillance. (p.7-29) Police conduct amounts to a search if: (1) it intrudes on a D's expectation of privacy and (2) society is willing to recognize the expectation of privacy as reasonable. Here the SJC ruled D did have an expectation of privacy because D and co-D chose a buy location in a quiet residential area. (p.8 n.5) As to what expectation of privacy society recognizes as reasonable with regard to digital surveillance the SJC was guided by historical understandings of what was an unreasonable search and seizure when the U.S. and Mass. Constitutions were adopted in the late 1700s in reaction to redcoats' rummaging without restraint through colonists' homes. (p.8-10) New technologies like ALPRs raise difficult legal issues because they are easier and less expensive for police than traditional surveillance can be done secretly and permit police to search back in time for a vehicle's movements even before police suspicion arose. (p.12-14) Society does not recognize as reasonable an expectation of privacy in what someone knowingly exposes" to public view like a license plate – which by statute must be "displayed conspicuously." (p.15-16 & n.8) In older cases involving less advanced technology courts have held that a D did not have an expectation of privacy in contents of a phone conversation in a phone booth or a radio beeper" tracking a single journey. (p14-17) But technology like ALPRs GPS and CSLI are different because they may give police a **mosaic** of information where each piece may be public but when viewed together they create a picture that implicates someone's privacy interests like their political re ligious or sexual associations. (p.17-21) The SJC was concerned that with enough ALPRs police could track someone's location everywhere which would be "creepy." (p.25) Exigent circumstances would likely justify using an ALPR in a situation involving an Amber alert or missing person. (p.25 n.13) The D urged the SJC to consider not just these four ALPRs on the Bourne and Sagamore Bridges but the hundreds of ALPRs across Massachusetts; the SJC declined to do so because that evidence is not in the record of this case. (p.26) The **limited number of cameras** here and their placements on the bridges was not enough to give D an expectation of privacy that society would recognize as reasonable. (p.28) The SJC declined to say how much digital surveillance would give such an expectation and admitted that its unwillingness to do so "**may bring some interim confusion**" until further cases develop the law on this issue. (p.28 n.15) Chief Justice Gants wrote a separate concurrence suggesting that one thing the SJC could do is to require police who want to search a vast amount of digital data to apply for a court order supported by an affidavit showing reasonable suspicion to do so. (concurrence p.3) This would be like a SW but with a lower standard than PC.

Written policy: The SJC rejected D's argument that Barnstable PD should have had a written policy about ALPRs and the MSP policy on which Barnstable relied was not specific enough. (p.30) Written policies are required to justify certain exceptions to the SW requirement (like inventory searches and sobriety checkpoints) – they do not apply to the threshold question whether a search occurred in the first place. (p.31)

Miranda issues: At the station police repeatedly told D that D was "not under arrest." But the motion judge found that the moment of arrest was when police handcuffed D at the traffic stop. (p.32) D argued that his statements should be suppressed because police tel ling him he was not under arrest amounted to "deceit or trickery" to get D to confess. The motion judge and the SJC rejected that argument saying that even if telling D he was not under arrest amounted to deceit or trickery it was just one factor to be used in determining voluntariness.

Bottom line: Police use of ALPRs at limited locations is not a constitutional search – but we don't know how many locations it'd have to be to amount to one. Using an ALPR in **exigent circumstances** like an Amber Alert is likely OK. Local police don't need a written policy to use ALPRs maintained by MSP. Kia,

I have multiple PC's (@5) at Cape and Islands CPAC that were recently upgraded from Windows 7 to Windows 10 by C&I IT. The previously installed and operational LPR software no longer works.

Issue covered under INC0316723.

Please advise if there are corrective steps that need to be taken.

Thanks,
Phillip

Subject: INC0316723 : LPR Install on Windows 10 PC's Recently Upgraded from Windows 7

Kia,

I have multiple PC's (@5) at Cape and Islands CPAC that were recently upgraded from Windows 7 to Windows 10 by C&I IT. The previously installed and operational LPR software no longer works.

Issue covered under INC0316723.

Sirs,

Are you ok with this email? I would like to send to EOPSS and EOTSS and Massport teams.

Respectfully,

DJQ

Good Morning,

I was hoping to get us all on the same page regarding a proposal to push Massport LPR data to the existing DCJIS BOSS server in Chelsea. Some time ago we (MSP) engaged with Massport regarding Automated License Plate Reader technology (LPR). As most of you know, MSP and DCJIS have been rolling out a very robust LPR network across the Commonwealth. This has been on going for the past several years. The LPR system has paid dividends in numerous criminal cases including crimes of violence, Amber and Silver alerts, and also in many missing/endangered/public well being events.

Our communications with Massport started when we were made aware that they would be purchasing an LPR system. We worked with our counterparts at Massport to make sure that the two systems would be compatible so that information could be shared across all law enforcement agencies through the MSP Fusion Center. Towards that end Massport partnered with Neology for their solution. This is the same vendor used by MSP and DCJIS.

Recently Massport has decided not to maintain its own ALPR BOSS database server. The database and application for LPR in Massachusetts is known as "BOSS" and is a Neology product. Massport would like to feed data from its cameras to the DCJIS BOSS server in Chelsea. Originally we had been discussing with Neology the potential for Massport's cameras to write two records after scanning a plate, one to Massport BOSS and a duplicate to DCJIS BOSS. We think the current proposal to write all LPR records to the BOSS server located at DCJIS is a much better plan.

MSP has a grant to upgrade the current the current BOSS v3.6 application which is at end of life and no longer supported to version v4.0. We have also submitted a Service Now ticket asking for hardware upgrade costs to the existing BOSS server which MSP will try to acquire funding to upgrade.

I have received several calls from Massport looking to see where we are as far as being able to accept data from their cameras so that they can decommission their BOSS server. I believe their intent is to shut the Massport system down if the MSP and DCJIS are unable to accept the data. I have copied Hank Shaw from Massport into this thread in case I have misstated their intent.

To access the Massport data we will need to be able to pass data from the Massport network to the state network much like we do with case management data. An alternative would be to use 4G modems (like we do with many of our mobile units and cruiser mounted units) on the state network, but this may be an unnecessary cost. Obviously this decision would be driven by the EOTSS and Massport network teams.

I can't overstate the value that LPR data from Massport would have for MSP and law enforcement in general. Cases involving terrorism, money laundering, and drug trafficking all have significant ties to the port. Being able to hotlist and search on LPR data from Massport facilities would be a significant addition to the MSP Division of Homeland Security's technology tool set and would have immediate impact. Towards that end, we made be able to leverage Homeland Security grant funds for some of this project.

Respectfully,

Lieutenant Colonel Dermot J. Quinn #1765

Hi Jim,

We are looking to consolidate the MassPort ALPR cameras into the main EOPSS ALPR server. After evaluating a number of options purposed by Neology, this appears to be the simplest approach. There is already a network presence at the barracks and it should be easy to point the cameras towards the centralized server. I've spoken to Alex at MassPort and he can volunteer a camera for testing. We could monitor network and server impact. Are you available to discuss?

Thanks Brian

Hello All,

I just wanted to follow up with this request to see what the next steps for this project are. I believe that we can make the connections to the EOPSS network, but will want to work within your desired IP scheme and ensure that there aren't any concerns around the network routing, security, etc. Let me know if we can have a quick call to discuss the details.

Respectfully,

~Alex

Hi Alex,

Can you please provide the updated reads per day? Previously you were interested in sharing 6 cameras at approximately 75,000 reads per day.

Here is the P492 confi I mentioned.

Set host to boss [redacted]
Set image [redacted]
Set number of [redacted]
Set Ping interval [redacted]
Set udp ping [redacted]
Set ping wait time [redacted]
Set security [redacted]

I've looped in the network and server team from TSS on the thread. Maybe we can schedule a call in the next week.
For an estimate on impact, the Caper cameras do between 80,000 to 120,000 per day. We average 337,944 reads per day.

-Brian

Subject: MassPort LPR Cameras

Brian,

Thank you again for taking my call today. As discussed, I would like to explore the opportunity to swing all LPR cameras at Logan directly to the MSP BOSS server without the need for the InStation solution. My understanding is that the EOPSS network resides in both the ATCT as well as the Troop F building. I would propose that we extend this network via Layer 2 to the main locations that the LPR system terminates to and cut the entire LPR network at MassPort over to EOPSS. Most of the roadway cameras are fed to 2 primary network locations. MassPort can supply the necessary fiber paths and switch gear required to extend the EOPSS network to these locations. Currently we have 18 cameras in production, with another 19 scheduled to come online within the next two months. I anticipate this number growing to approximately 50 fixed cameras within our campus over the next year. Let me know what you think the appropriate next steps would be.

Respectfully,

~Alex

Subject: RE: LRP network ideas?

John,
Give me a few minutes and I will give you a call. Here is the CSV file from wireshark. I had to repull it. I don't see any actually log details in our tomcat instance. In the wireshark though I see a bunch of event code errors like below:

Event: <Unknown eventcode 72>, <Unknown eventcode 111>, <Unknown eventcode 116>, <Unknown eventcode 121>, <Unknown eventcode 110>, <Unknown eventcode 45>, <Unknown eventcode 112>, <Unknown eventcode 110>, <Unknown eventcode 114>, <Unknown eventcode 115>, <Unknown eventcode 47>, <Unknown eventcode 110>, <Unknown eventcode 111>, <Unknown eventcode 118>, <Unknown eventcode 110>, <Unknown eventcode 111>, <Unknown eventcode 47>, ColormapNotify, <Unknown eventcode 97>, <Unknown eventcode 120>, <Unknown eventcode 58>, <Unknown eventcode 46>, <Unknown eventcode 104>, <Unknown eventcode 46>, <Unknown eventcode 117>, <Unknown eventcode 97>, <Unknown eventcode 47>, <Unknown eventcode 62>, <Unknown eventcode 114>, <Unknown eventcode 114>, <Unknown eventcode 82>, <Unknown eventcode 120>, <Unknown eventcode 101>, MappingNotify, <Unknown eventcode 109>, <Unknown eventcode 98>, <Unknown eventcode 47>, <Unknown eventcode 119>, <Unknown eventcode 62>, <Unknown eventcode 114>, ColormapNotify, <Unknown eventcode 62>, <Unknown eventcode 115>, MappingNotify, <Unknown eventcode 110>

John,
Can you check again and see if there is a request coming into the .154 server. I ran a packet capture and I do see data sent from the .171 to the .154 server.

Hi Brian,

I'm not sure if 224.154 is a load balancer. I don't believe it is though. It doesn't matter though, that is where you will send requests. You will receive a synchronous response called an acknowledgement. That will let you know if your request was accepted or rejected.

Later, an asynchronous response will be sent from 170.154.224.155 or 170.154.224.156 to your web service.

John,
The 154 address is a load balancer for the services correct. As far as I know there should be no blocked traffic to the .171 but let me include Chris and Tim on this thread.

Hi Brian,

I can check.

The broker will send responses from 170.154.224.155 or 170.154.224.156 on port 6060. Make sure you are allowing that traffic.

When you send in a request you will receive an xml document as the return value. The documents lists if the request was accepted and if it wasn't, why it wasn't. You should be checking those.

Subject: RE: LRP network ideas?

Bill,
I have the service send back a no data found so it looks like we are connecting. Can you check your logs to see if our request actually made it into your system.

I am sending the following test cycle from the 170.154.224.82 web server to our FR server

http://[redacted]6060/CHSBReceiver/rest?ori=MAMSP0000&username=TEST&ssn=123123123&driversLicense=S32935254

Just so everybody is clear, this the is the connection path

170.154.224.82 → [redacted] port 6060 → [redacted] port 6060

Return path

[redacted] → [redacted] port 6060 → 170.154.224.82

Log of request:

2019-11-22 11:16:13,982 main DEBUG LoggerContext[name=MassLPRServlet, org.apache.logging.log4j.core.LoggerContext@59303963] started OK with configuration org.apache.logging.log4j.core.config.properties.PropertiesConfiguration@61e86192.

I think I see what might be part of the problem.

The R1 is either OLN or SSN, you can not send both at the same time.

There is No TEST SSN inquiry, use someone from MSP who is working on your project or if you have a developer who is from MA
The TEST OLN is S32935254

Hi Brian,

The broker is a web service. You need to create a client to connect. Requests are made by sending in an xml document.

Did I forget to send you the broker documentation? Let me know.

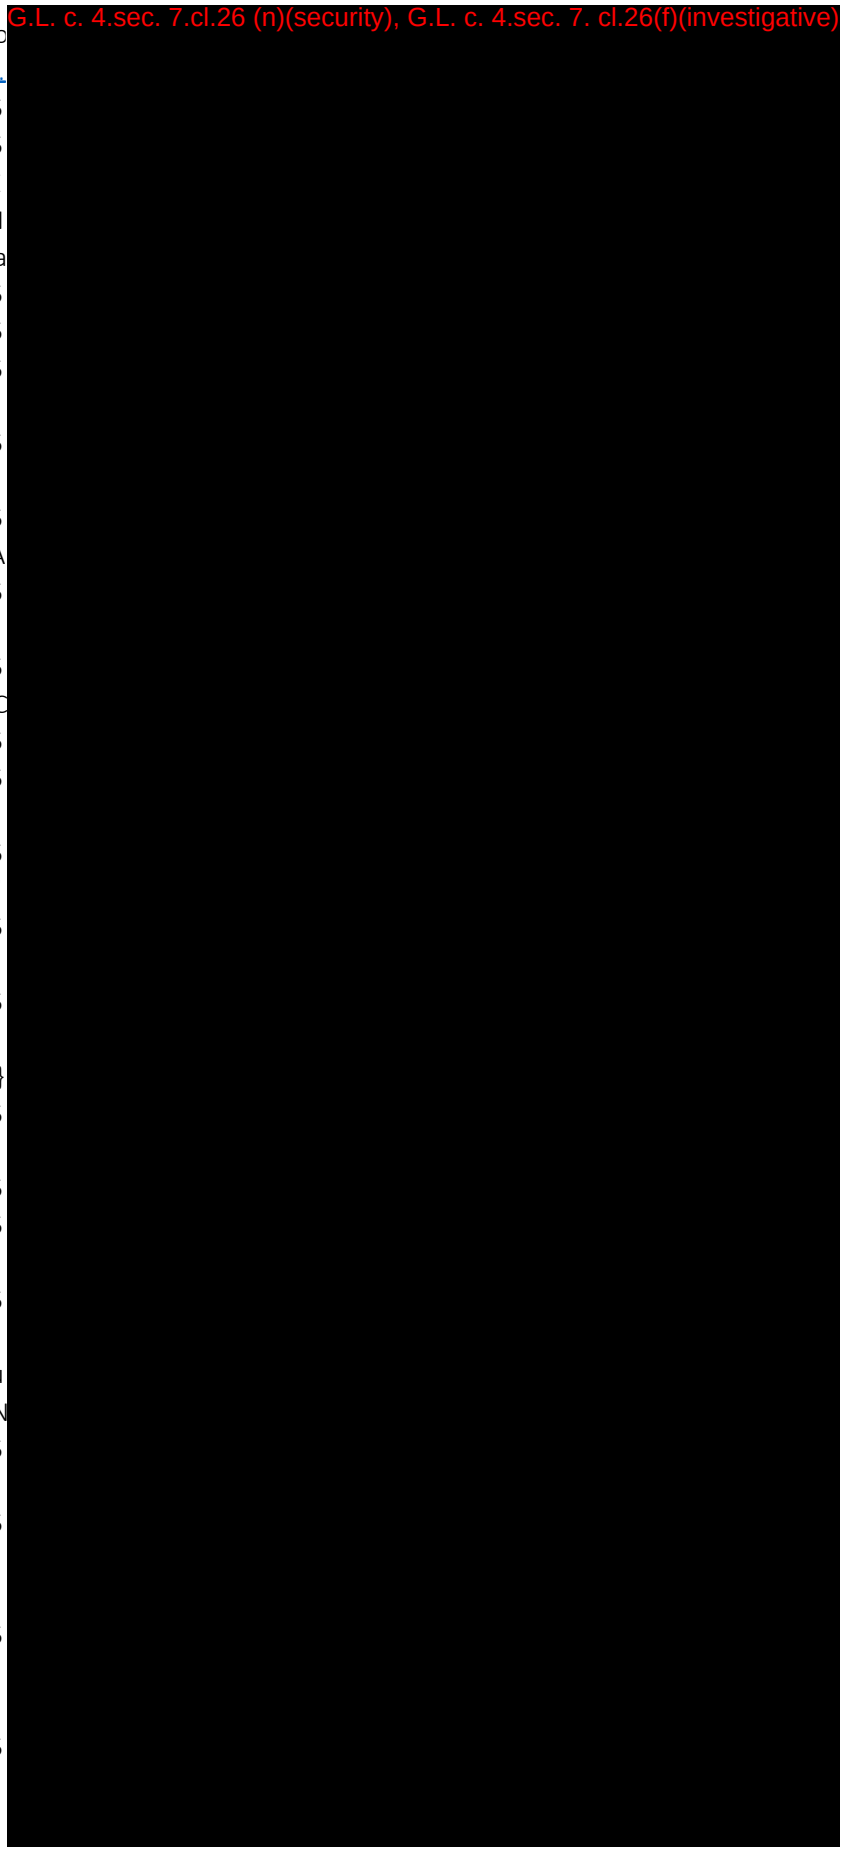
Subject: RE: LRP network ideas?

John,
I ran two queries through IE I don't see an acknowledge me in the logs. Below is what I am seeing. Do we have a valid Lic number that is in the system I can try, or valid SSN.

My test URLs are:"
http://[G.L. c. 4.sec. 7.cl.26 (n)(security)]6060/CHSBReceiver/rest?ori=MAMSP0000&username=TEST&ssn=123123123&driversLicense=987654321



http://[G.L. c. 4.sec. 7.cl.26 (n)(security)]6060/CHSBReceiver/rest?ori=MAMSP0000&username=TEST&ssn=123123123&driversLicense=987654321

In my access log I see a 200:

[G.L. c. 4.sec. 7.cl.26 (n)(security)] - - [15/Nov/2019:13:02:50 -0500] "GET /CHSBReceiver/rest?ori=MAMSP0000&username=TEST&ssn=123123123&driversLicense=987654321 HTTP/1.1" 200 -
[G.L. c. 4.sec. 7.cl.26 (n)(security)] - - [15/Nov/2019:13:03:05 -0500] "GET /CHSBReceiver/rest?ori=MAMSP0000&username=TEST&ssn=123123123&driversLicense=987654321 HTTP/1.1" 200 –

In my log stdout log I see this:

Hey Brian,

When you send in a request, the return to that call is an acknowledgement. That is an xml document that will state if your request was accepted or not; and if it is not, what the reason is.

Are you seeing any acknowledgements?

John,
According to dev the message that is coming back: remote host not allowed. ignoring request. They are stating is a response from your system telling us we are not allowed. Is there anyway you and I can get on the phone, I can try and send some responses and see if you see anything in your log files. I am wondering if they are forming the response to you correctly.

As for the WSDL this is what I see from the 184.171 server.

Hay Brian,

That won't work. The broker accepts an xml document containing the request, as well as other information.
Attached is a sample R1 request.

By the way, I have your requests coming from 170.154.226.47

In order to get responses, you need a web service on your end to receive the responses and I'll need to configure it on the broker side.

Hi Brian,

I haven't added your configuration to the test broker yet. Can you confirm the following:
For broker connections, we need the following:
IP Address for request: [redacted]
URL for responses: http://[redacted]6060/CHSBReceiver/CHSBService
ORI: MAMSP0000
Queries: I need the list of queries/transactions you will be testing

You will submit to http://[redacted]6060/CJISService This call will return a synchronous acknowledgment.

Responses will come back from 170.154.224.155 or 170.154.224.156 on port 6060. You need to return a synchronous acknowledgement for each response.

Hey Brian,

I'm not sure what is in the test system either. I believe a dl of 987654321 will work; at least it used to.
Try to find something in test CJISWeb.

Remember that all queries will send in an xml document and will receive a return acknowledgement stating success or failure. If the request failed, the reason will be in the acknowledgement.

At a later time, seconds or less, the response will be returned to your web service. You must return an acknowledgement to that also to let the system know that the response was received and the next response can be sent.

Hi Brian,

All of the broker queries use the same method and accept an xml document. The contents of the xml direct what action the system should take. I have attached documentation for the broker. It's a 5 MB zip file.

If you can't accept zip files or 5 MB files let me know how to send the file.

Tim,
I am still pending an answer back from dev on how they are going to pull the ORI. For now can we use `MAMSP0000`. `That is actually in our systems as MSP.`

Regards,

Brian
What is the ORI that you are using for this setup? There is some configuration work that needs to be done on the broker side to allow your service to run transactions.

Thanks

Subject: RE: LRP network ideas?

Folks,
For the RMV pull, does anybody have an example image we can try and run through. All the connectivity looks good, I have tried a few ways to pull an image without success.

Our service http://[redacted]6060/CHSBReceiver/CHSBService?wsdl refers to http://[redacted]6060/CJISService?wsdl

I can pull back the WSDL but want to send an image request to it to see if it actually pulls the image. I am looking for something like /GetPhoto?dl_num=20180061903&ss_num=2&type=M, the actually call method

To pull back the WSDL

Yes you will need to run the transactions across to the test server first and DCJIS will need to approve it before you can run to the production server. I will check out the firewall rules today and let you know.

Chris,

I am guessing test first, that way we can validate the broker, unless the route is setup already for production and I can switch it out to that.

Brian E.,
Your thoughts?

Hi folks
The CJIS broker transactions will need to use port 6060 as that is what they have been configured for in the past.

We have discussed the LPR port request and we think that going with a higher port seems to be more acceptable to EOTSS to allow through their public access firewall. Would port 56446 (https) work? We will need to open a ticket with EOTSS to have them allow this port through.

Hi Tim,

I spoke with Brian Kruger and he wants the RI image CJIS Broker return to go to the same port as the ALPR image results, are there any issues with that? If not, is your team picking the port or is CopLink? I've included his email request. It sounds like they want to use the same web service to simplify the two integrations (LPR & RMV Images).

Tks, Brian

Subject: LRP network ideas?

Brian/Tim,
Nick is almost done with the new LPR service that will remove the images from the database and have a tomcat app that host the images for a return to the UI.
What I need to know:

1. The Migration will sit on the migration server and needs access to the LPR database to pull out the metadata and create the URL for the Image links.
2. The new service is going to be hosted in Tomcat, so this service will need access to the LPR database for images and both application servers need to be able to query this tomcat instance. I just need to know where to put it, I can host it on both severs or if we can set it up on the internal server and have a firewall rule that will allow the DMZ server to talk to the internal server. Let me know if you would like to have a call on this. I have attached a rough network diagram for visual reference.

Hi Samson,

Do you have the dev package? There are example xml documents in there.

John,
Here is the XML sent from our server to retrieve relevant data. The CJISMessageKey is set to R1. The response we got indicates the XML sent is invalid. Can you point me to what is not valid in the XML? By the way, I checked the XML syntax with an online XML validation tool which indicates the syntax is good.

John,
Thank you for the information on the call this afternoon.

Samson/Billy,
We need to add some additional debug code into our service so we can see the full communication path and what is being sent and received. John is also in the process to check and make sure their three servers can reach back into our 184.171 on port 6060. I have also reattached the IP wireshark I did this morning.

John,
The 154 address is a load balancer for the services correct. As far as I know there should be no blocked traffic to the .171 but let me include Chris and Tim on this thread.

Regards,

Hi Brian,

I can check.

The broker will send responses from 170.154.224.155 or 170.154.224.156 on port 6060. Make sure you are allowing that traffic.

When you send in a request you will receive an xml document as the return value. The documents lists if the request was accepted and if it wasn't, why it wasn't. You should be checking those.

Subject: RE: LRP network ideas?

Bill,
I have the service send back a no data found so it looks like we are connecting. Can you check your logs to see if our request actually made it into your system.

I am sending the following test cycle from the 170.154.224.82 web server to our FR server

http://[redacted]6060/CHSBReceiver/rest?ori=MAMSP0000&username=TEST&ssn=123123123&driversLicense=S32935254

Just so everybody is clear, this the is the connection path

170.154.224.82 → [redacted]port 6060 → [redacted]port 6060

Return path

[redacted]→[redacted]port 6060 → 170.154.224.82

Log of request:

2019-11-22 11:16:13,982 main DEBUG LoggerContext[name=MassLPRServlet, org.apache.logging.log4j.core.LoggerContext@59303963] started OK with configuration org.apache.logging.log4j.core.config.properties.PropertiesConfiguration@61e86192.
2019-11-22 11:16:13,982 main DEBUG Log4jServletContextListener ensuring that Log4j starts up properly.
2019-11-22 11:16:13,982 main DEBUG Log4jServletFilter initialized.

I think I see what might be part of the problem.

The R1 is either OLN or SSN, you can not send both at the same time.

There is No TEST SSN inquiry, use someone from MSP who is working on your project or if you have a developer who is from MA
The TEST OLN is S32935254

John,
Dev confirmed they are sending XML in the request. Do you have a valid License number in the test data I can try.

Hi Brian,

The broker is a web service. You need to create a client to connect. Requests are made by sending in an xml document.

Did I forget to send you the broker documentation? Let me know.

Subject: RE: LRP network ideas?

John,
I ran two queries through IE I don't see an acknowledge me in the logs. Below is what I am seeing. Do we have a valid Lic number that is in the system I can try, or valid SSN.

My test URLs are:"
http://[redacted]6060/CHSBReceiver/rest?ori=MAMSP0000&username=TEST&ssn=123123123&driversLicense=987654321

http://[redacted]6060/CHSBReceiver/rest?ori=MAMSP0000&username=TEST&ssn=123123123&driversLicense=987654321

In my access log I see a 200:

G.L. c. 4.sec. 7.cl.2- - [15/Nov/2019:13:02:50 -0500] "GET /CHSBReceiver/rest?ori=MAMSP0000&username=TEST&ssn=123123123&driversLicense=987654321 HTTP/1.1" 200 -
G.L. c. 4.sec. 7.cl.2- - [15/Nov/2019:13:03:05 -0500] "GET /CHSBReceiver/rest?ori=MAMSP0000&username=TEST&ssn=123123123&driversLicense=987654321 HTTP/1.1" 200 –

In my log stdout log I see this:

G.L. c. 4.sec. 7.cl.26 (n)(security), G.L. c. 4.sec. 7. cl.26(f)(investigative)

Hi Brian,

I have added your configuration on the test broker for R1 and RI.
Are there more queries/transactions you'd like to test? Michaela may have requirements for other queries.

The ORI is MAMSPF022
Your requests come from [redacted] and responses will be sent back to http://[redacted]:6060/CHSBReceiver/CHSBService

Subject: RE: LRP network ideas?

Hay Brian,

That won't work. The broker accepts an xml document containing the request, as well as other information.
Attached is a sample R1 request.

By the way, I have your requests coming from 170.154.226.47

In order to get responses, you need a web service on your end to receive the responses and I'll need to configure it on the broker side.

Subject: RE: LRP network ideas?

John,
Can you provide me with a DL that should work. From the .82 server this is what we are running:

http:/[redacted]6060/CHSBReceiver/rest?ori=MAMSP0000&username=TEST&ssn=123123123&driversLicense=987654321

I just need to update the drivers license number and hopefully it will work

Regards,

Hi Brian,

I haven't added your configuration to the test broker yet. Can you confirm the following:
For broker connections, we need the following:
IP Address for requests: [redacted]
URL for responses: http://[redacted]:6060/CHSBReceiver/CHSBService
ORI: MAMSP0000
Queries: I need the list of queries/transactions you will be testing

You will submit to http://[redacted]:6060/CJISService This call will return a synchronous acknowledgment.

Responses will come back from 170.154.224.155 or 170.154.224.156 on port 6060. You need to return a synchronous acknowledgement for each response.

Hey Brian,

I'm not sure what is in the test system either. I believe a dl of 987654321 will work; at least it used to.
Try to find something in test CJISWeb.

Remember that all queries will send in an xml document and will receive a return acknowledgement stating success or failure. If the request failed, the reason will be in the acknowledgement.

At a later time, seconds or less, the response will be returned to your web service. You must return an acknowledgement to that also to let the system know that the response was received and the next response can be sent.

Hi Brian,

All of the broker queries use the same method and accept an xml document. The contents of the xml direct what action the system should take. I have attached documentation for the broker. It's a 5 MB zip file.

If you can't accept zip files or 5 MB files let me know how to send the file.

Hi folks
The CJIS broker transactions will need to use port 6060 as that is what they have been configured for in the past.

We have discussed the LPR port request and we think that going with a higher port seems to be more acceptable to EOTSS to allow through their public access firewall. Would port 56446 (https) work? We will need to open a ticket with EOTSS to have them allow this port through.

Thanks

Hi Tim,

I spoke with Brian Kruger and he wants the RI image CJIS Broker return to go to the same port as the ALPR image results, are there any issues with that? If not, is your team picking the port or is CopLink? I've included his email request. It sounds like they want to use the same web service to simplify the two integrations (LPR & RMV Images).

Tks, Brian

Hi Brian
Did you send over a diagram for review? If yes, can you resend as I can't come across it? We need to review this before providing any additional ports.
Thanks

Tim/Brian,
We are ready to start up the LPR ingest again, however I still need to assign a port to Tomcat on the FR server that will be accessible from both application servers. Is there any port range that we can shoot for. I would like to get the LPR data flowing as soon as possible.

Regards,

Subject: RE: LRP network ideas?

Tim,
Do you have any ports you send me that would be allowed for the connection from the app servers. I can update the diagram for approval that will work on the FR server. I will need two, one for Tomcat and one for LEXSR TR.

Regards,

Tim/Brian,
I was thinking last night and would actually like to move the new Image service to the FR server S.L. c. 4 sec. 7 cl 26We have a route in place already from both PAA and Internal web to that server. I would just need to know what port to run tomcat on. This would also work for the Thompson Reuters adapter as well. Let me know what you guys think.

Subject: LRP network ideas?

Brian/Tim,
Nick is almost done with the new LPR service that will remove the images from the database and have a tomcat app that host the images for a return to the UI. What I need to know:

<!--
[if !supportLists]-->-->1.<!--[endif]-->-->The Migration will sit on the migration server and needs access to the LPR database to pull out the metadata and create the URL for the Image links.
<!--[if !supportLists]-->-->2.<!--[endif]-->-->The new service is going to be hosted in Tomcat, so this service will need access to the LPR database for images and both application servers need to be able to

query this tomcat instance. I just need to know where to put it, I can host it on both severs or if we can set it up on the internal server and have a firewall rule that will allow the DMZ server to talk to the internal server. Let me know if you would like to have a call on this. I have attached a rough network diagram for visual reference.

Thanks Jim,

I've reached out to Alex regarding the below and he is fine with the approach. I will coordinate with him and begin cutting over the cameras. I need 6 sierra wireless AC adapters and 12 antennas. I have reached out to BCM for a quote.

I have also requested permission from MSP at MassPort to remove the devices and assist with scheduling. Our Technical Services Unit will remove the devices once approved.

I plan to cut one sector (5-6 cameras per sector) over at a time and monitor the server, we may need to shrink our retention if we run up against storage constraints. Can you please see if the SAN can support additional storage and if it can be added?

Subject: Re: MassPort LPR Cameras

Hi Jim,

Regarding the Massport cameras; in the early days of AVL we installed 39 Sierra wireless modem‘s in cruisers that did not have laptops. These cruisers now have Geo tab and no longer need the modem or data plan. Massport is currently paying for the data plan and bought the modems. Because Massport wants to move quickly to give us their data and knowing BOSS4.0 Is delayed; Why don’t we ask Massport to let us use six of those modems and put one at each LPR Camera sector at Massport. We would next push the data back like we do everything else over Verizon. We wouldn’t have to do any firewall work either because they have a 166. and communicate like all of the MDT‘s . Once the back get squared away with the new boss we can revisit the networking. After we migrate everything to the new environment we would them cut the Massport cameras over to the LAN and then give them back their data plans and modems.

We would however need to anticipate expanding the existing sand and run the risk of overburdening the server.

Let me know what you think, Lieutenant Colonel Quinn and I could make the request to Massport if needed.

> Subject: RE: MassPort LPR Cameras
>
> Good Morning,
>
> I was hoping to get us all on the same page regarding a proposal to push Massport LPR data to the existing DCJIS BOSS server in Chelsea. Some time ago we (MSP) engaged with Massport regarding Automated License Plate Reader technology (LPR). As most of you know, MSP and DCJIS have been rolling out a very robust LPR network across the Commonwealth. This has been on going for the past several years. The LPR system has paid dividends in numerous criminal cases including crimes of violence, Amber and Silver alerts, and also in many missing/endangered/public well being events.
>
> Our communications with Massport started when we were made aware that they would be purchasing an LPR system. We worked with our counterparts at Massport to make sure that the two systems would be compatible so that information could be shared across all law enforcement agencies through the MSP Fusion Center. Towards that end Massport partnered with Neology for their solution. This is the same vendor used by MSP and DCJIS.
>
> Recently Massport has decided not to maintain its own ALPR BOSS database server. The database and

application for LPR in Massachusetts is known as “BOSS” and is a Neology product. Massport would like to feed data from its cameras to the DCJIS BOSS server in Chelsea. Originally we had been discussing with Neology the potential for Massport’s cameras to write two records after scanning a plate, one to Massport BOSS and a duplicate to DCJIS BOSS. We think the current proposal to write all LPR records to the BOSS server located at DCJIS is a much better plan.
>
> MSP has a grant to upgrade the current the current BOSS v3.6 application which is at end of life and no longer supported to version v4.0. We have also submitted a Service Now ticket asking for hardware upgrade costs to the existing BOSS server which MSP will try to acquire funding to upgrade.
>
> I have received several calls from Massport looking to see where we are as far as being able to accept data from their cameras so that they can decommission their BOSS server. I believe their intent is to shut the Massport system down if the MSP and DCJIS are unable to accept the data. I have copied Hank Shaw from Massport into this thread in case I have misstated their intent.
>
> To access the Massport data we will need to be able to pass data from the Massport network to the state network much like we do with case management data. An alternative would be to use 4G modems (like we do with many of our mobile units and cruiser mounted units) on the state network, but this may be an unnecessary cost. Obviously this decision would be driven by the EOTSS and Massport network teams.
>
> I can’t overstate the value that LPR data from Massport would have for MSP and law enforcement in general. Cases involving terrorism, money laundering, and drug trafficking all have significant ties to the port. Being able to hotlist and search on LPR data from Massport facilities would be a significant addition to the MSP Division of Homeland Security’s technology tool set and would have immediate impact. Towards that end, we made be able to leverage Homeland Security grant funds for some of this project.

> We are looking to consolidate the MassPort ALPR cameras into the main EOPSS ALPR server. After evaluating a number of options purposed by Neology, this appears to be the simplest approach. There is already a network presence at the barracks and it should be easy to point the cameras towards the centralized server. I've spoken to Alex at MassPort and he can volunteer a camera for testing. We could monitor network and server impact. Are you available to discuss?

> Thank you again for taking my call today. As discussed, I would like to explore the opportunity to swing all LPR cameras at Logan directly to the MSP BOSS server without the need for the InStation solution. My understanding is that the EOPSS network resides in both the ATCT as well as the Troop F building. I would propose that we extend this network via Layer 2 to the main locations that the LPR system terminates to and cut the entire LPR network at MassPort over to EOPSS. Most of the roadway cameras are fed to 2 primary network locations. MassPort can supply the necessary fiber paths and switch gear required to extend the EOPSS network to these locations. Currently we have 18 cameras in production, with another 19 scheduled to come online within the next two months. I anticipate this number growing to approximately 50 fixed cameras within our campus over the next year. Let me know what you think the appropriate next steps would be.

Hi, Brian!

This needs to go through MSP fiscal. They need to enter the purchase in OPAS.

Jim

Subject: RE: MassPort LPR Cameras

Thanks Jim,

I've reached out to Alex regarding the below and he is fine with the approach. I will coordinate with him and begin cutting over the cameras. I need 6 sierra wireless AC adapters and 12 antennas. I have reached out to BCM for a quote.

I have also requested permission from MSP at MassPort to remove the devices and assist with scheduling. Our Technical Services Unit will remove the devices once approved.

I plan to cut one sector (5-6 cameras per sector) over at a time and monitor the server, we may need to shrink our retention if we run up against storage constraints. Can you please see if the SAN can support additional storage and if it can be added?

-Brian

Hi, Brian!

I reached out to Rob Guerriero at TSS re this to get his perspective and he sees no problem connecting the cameras to the Boss server in the described manner.

So, assuming you move forward with this, who would actually make this happen?

Thanks.

Jim

Subject: Re: MassPort LPR Cameras

Hi Jim,

Regarding the Massport cameras; in the early days of AVL we installed 39 Sierra wireless modem‘s in cruisers that did not have laptops. These cruisers now have Geo tab and no longer need the modem or data plan. Massport is currently paying for the data plan and bought the modems. Because Massport wants to move quickly to give us their data and knowing BOSS4.0 Is delayed; Why don’t we ask Massport to let us use six of those modems and put one at each LPR Camera sector at Massport. We would next push the data back like we do everything else over Verizon. We wouldn’t have to do any firewall work either because they have a 166. and communicate like all of the MDT‘s . Once the back get squared away with the new boss we can revisit the networking. After we migrate everything to the new environment we would them cut the Massport cameras over to the LAN and then give them back their data plans and modems.

We would however need to anticipate expanding the existing sand and run the risk of overburdening the server.

Let me know what you think, Lieutenant Colonel Quinn and I could make the request to Massport if needed.

> Thank you again for taking my call today. As discussed, I would like to explore the opportunity to swing all LPR cameras at Logan directly to the MSP BOSS server without the need for the InStation solution. My understanding is that the EOPSS network resides in both the ATCT as well as the Troop F building. I would propose that we extend this network via Layer 2 to the main locations that the LPR system terminates to and cut the entire LPR network at MassPort over to EOPSS. Most of the roadway cameras are fed to 2 primary network locations. MassPort can supply the necessary fiber paths and switch gear required to extend the EOPSS network to these locations. Currently we have 18 cameras in production, with another 19 scheduled to come online within the next two months. I anticipate this number growing to approximately 50 fixed cameras within our campus over the next year. Let me know what you think the appropriate next steps would be.

Hi, Brian!

This needs to go through MSP fiscal. They need to enter the purchase in OPAS.

Jim

Subject: RE: MassPort LPR Cameras

Thanks Jim,

I've reached out to Alex regarding the below and he is fine with the approach. I will coordinate with him and begin cutting over the cameras. I need 6 sierra wireless AC adapters and 12 antennas. I have reached out to BCM for a quote.

I have also requested permission from MSP at MassPort to remove the devices and assist with scheduling. Our Technical Services Unit will remove the devices once approved.

I plan to cut one sector (5-6 cameras per sector) over at a time and monitor the server, we may need to shrink our retention if we run up against storage constraints. Can you please see if the SAN can support additional storage and if it can be added?

-Brian

Hi, Brian!

I reached out to Rob Guerriero at TSS re this to get his perspective and he sees no problem connecting the cameras to the Boss server in the described manner.

So, assuming you move forward with this, who would actually make this happen?

Thanks.

Jim

Subject: Re: MassPort LPR Cameras

Hi Jim,

Regarding the Massport cameras; in the early days of AVL we installed 39 Sierra wireless modem‘s in cruisers that did not have laptops. These cruisers now have Geo tab and no longer need the modem or data plan. Massport is currently paying for the data plan and bought the modems. Because Massport wants to move quickly to give us their data and knowing BOSS4.0 Is delayed; Why don’t we ask Massport to let us use six of those modems and put one at each LPR Camera sector at Massport. We would next push the data back like we do everything else over Verizon. We wouldn’t have to do any firewall work either because they have a 166. and communicate like all of the MDT‘s . Once the back get squared away with the new boss we can revisit the networking. After we migrate everything to the new environment we would them cut the Massport cameras over to the LAN and then give them back their data plans and modems.

We would however need to anticipate expanding the existing sand and run the risk of overburdening the server.

Let me know what you think, Lieutenant Colonel Quinn and I could make the request to Massport if needed.

> Good Morning,
>
> I was hoping to get us all on the same page regarding a proposal to push Massport LPR data to the existing DCJIS BOSS server in Chelsea. Some time ago we (MSP) engaged with Massport regarding Automated License Plate Reader technology (LPR). As most of you know, MSP and DCJIS have been rolling out a very robust LPR network across the Commonwealth. This has been on going for the past several years. The LPR system has paid dividends in numerous criminal cases including crimes of violence, Amber and Silver alerts, and also in many missing/endangered/public well being events.
>
> Our communications with Massport started when we were made aware that they would be purchasing an LPR system. We worked with our counterparts at Massport to make sure that the two systems would be compatible so that information could be shared across all law enforcement agencies through the MSP Fusion Center. Towards that end Massport partnered with Neology for their solution. This is the same vendor used by MSP and DCJIS.
>
> Recently Massport has decided not to maintain its own ALPR BOSS database server. The database and application for LPR in Massachusetts is known as “BOSS” and is a Neology product. Massport would like to feed data from its cameras to the DCJIS BOSS server in Chelsea. Originally we had been discussing with Neology the potential for Massport’s cameras to write two records after scanning a plate, one to Massport BOSS and a duplicate to DCJIS BOSS. We think the current proposal to write all LPR records to the BOSS server located at DCJIS is a much better plan.
>
> MSP has a grant to upgrade the current the current BOSS v3.6 application which is at end of life and no longer supported to version v4.0. We have also submitted a Service Now ticket asking for hardware upgrade costs to the existing BOSS server which MSP will try to acquire funding to upgrade.
>
> I have received several calls from Massport looking to see where we are as far as being able to accept data from their cameras so that they can decommission their BOSS server. I believe their intent is to shut the Massport system down if the MSP and DCJIS are unable to accept the data. I have copied Hank Shaw from Massport into this thread in case I have misstated their intent.
>
> To access the Massport data we will need to be able to pass data from the Massport network to the state network much like we do with case management data. An alternative would be to use 4G modems (like we do with many of our mobile units and cruiser mounted units) on the state network, but this may be an unnecessary cost. Obviously this decision would be driven by the EOTSS and Massport network teams.
>
> I can’t overstate the value that LPR data from Massport would have for MSP and law enforcement in general. Cases involving terrorism, money laundering, and drug trafficking all have significant ties to the port. Being able to hotlist and search on LPR data from Massport facilities would be a significant addition to the MSP Division of Homeland Security’s technology tool set and would have immediate impact. Towards that end, we made be able to leverage Homeland Security grant funds for some of this project.

> Thank you again for taking my call today. As discussed, I would like to explore the opportunity to swing all LPR cameras at Logan directly to the MSP BOSS server without the need for the InStation solution. My understanding is that the EOPSS network resides in both the ATCT as well as the Troop F building. I would propose that we extend this network via Layer 2 to the main locations that the LPR system terminates to and cut the entire LPR network at MassPort over to EOPSS. Most of the roadway cameras are fed to 2 primary network locations. MassPort can supply the necessary fiber paths and switch gear required to extend the EOPSS network to these locations. Currently we have 18 cameras in production, with another 19 scheduled to come online within the next two months. I anticipate this number growing to approximately 50 fixed cameras within our campus over the next year. Let me know what you think the appropriate next steps would be.

Is this something you can order or does it need to go through MSP?

Subject: RE: MassPort LPR Cameras

Thanks Jim,

I've reached out to Alex regarding the below and he is fine with the approach. I will coordinate with him and begin cutting over the cameras. I need 6 sierra wireless AC adapters and 12 antennas. I have reached out to BCM for a quote.

I have also requested permission from MSP at MassPort to remove the devices and assist with scheduling. Our Technical Services Unit will remove the devices once approved.

I plan to cut one sector (5-6 cameras per sector) over at a time and monitor the server, we may need to shrink our retention if we run up against storage constraints. Can you please see if the SAN can support additional storage and if it can be added?

-Brian

Hi, Brian!

I reached out to Rob Guerriero at TSS re this to get his perspective and he sees no problem connecting the cameras to the Boss server in the described manner.

So, assuming you move forward with this, who would actually make this happen?

Thanks.

Jim

Subject: Re: MassPort LPR Cameras

Hi Jim,

Regarding the Massport cameras; in the early days of AVL we installed 39 Sierra wireless modem‘s in cruisers that did not have laptops. These cruisers now have Geo tab and no longer need the modem or data plan. Massport is currently paying for the data plan and bought the modems. Because Massport wants to move quickly to give us their data and knowing BOSS4.0 Is delayed; Why don’t we ask Massport to let us use six of those modems and put one at each LPR Camera sector at Massport. We would next push the data back like we do everything else over Verizon. We wouldn’t have to do any firewall work either because they have a 166. and communicate like all of the MDT‘s . Once the back get squared away with the new boss we can revisit the networking. After we migrate everything to the new environment we would them cut the Massport cameras over to the LAN and then give them back their data plans and modems.

We would however need to anticipate expanding the existing sand and run the risk of overburdening the server.

Let me know what you think, Lieutenant Colonel Quinn and I could make the request to Massport if needed.

> Subject: RE: MassPort LPR Cameras
>
> Good Morning,
>
> I was hoping to get us all on the same page regarding a proposal to push Massport LPR data to the existing DCJIS BOSS server in Chelsea. Some time ago we (MSP) engaged with Massport regarding Automated License Plate Reader technology (LPR). As most of you know, MSP and DCJIS have been rolling out a very robust LPR network across the Commonwealth. This has been on going for the past several years. The LPR system has paid dividends in numerous criminal cases including crimes of violence, Amber and Silver alerts, and also in many missing/endangered/public well being events.
>
> Our communications with Massport started when we were made aware that they would be purchasing an LPR system. We worked with our counterparts at Massport to make sure that the two systems would be compatible so that information could be shared across all law enforcement agencies through the MSP Fusion Center. Towards that end Massport partnered with Neology for their solution. This is the same vendor used by MSP and DCJIS.
>
> Recently Massport has decided not to maintain its own ALPR BOSS database server. The database and application for LPR in Massachusetts is known as “BOSS” and is a Neology product. Massport would like to feed data from its cameras to the DCJIS BOSS server in Chelsea. Originally we had been discussing with Neology the potential for Massport’s cameras to write two records after scanning a plate, one to Massport BOSS and a duplicate to DCJIS BOSS. We think the current proposal to write all LPR records to the BOSS server located at DCJIS is a much better plan.
>
> MSP has a grant to upgrade the current the current BOSS v3.6 application which is at end of life and no longer supported to version v4.0. We have also submitted a Service Now ticket asking for hardware upgrade costs to the existing BOSS server which MSP will try to acquire funding to upgrade.
>
> I have received several calls from Massport looking to see where we are as far as being able to accept data from their cameras so that they can decommission their BOSS server. I believe their intent is to shut the Massport system down if the MSP and DCJIS are unable to accept the data. I have copied Hank Shaw from Massport into this thread in case I have misstated their intent.
>
> To access the Massport data we will need to be able to pass data from the Massport network to the state network much like we do with case management data. An alternative would be to use 4G modems (like we do with many of

our mobile units and cruiser mounted units) on the state network, but this may be an unnecessary cost. Obviously this decision would be driven by the EOTSS and Massport network teams.
>
> I can't overstate the value that LPR data from Massport would have for MSP and law enforcement in general. Cases involving terrorism, money laundering, and drug trafficking all have significant ties to the port. Being able to hotlist and search on LPR data from Massport facilities would be a significant addition to the MSP Division of Homeland Security's technology tool set and would have immediate impact. Towards that end, we made be able to leverage Homeland Security grant funds for some of this project.

>

> We are looking to consolidate the MassPort ALPR cameras into the main EOPSS ALPR server. After evaluating a number of options purposed by Neology, this appears to be the simplest approach. There is already a network presence at the barracks and it should be easy to point the cameras towards the centralized server. I've spoken to Alex at MassPort and he can volunteer a camera for testing. We could monitor network and server impact. Are you available to discuss?

> Thank you again for taking my call today. As discussed, I would like to explore the opportunity to swing all LPR cameras at Logan directly to the MSP BOSS server without the need for the InStation solution. My understanding is that the EOPSS network resides in both the ATCT as well as the Troop F building. I would propose that we extend this network via Layer 2 to the main locations that the LPR system terminates to and cut the entire LPR network at MassPort over to EOPSS. Most of the roadway cameras are fed to 2 primary network locations. MassPort can supply the necessary fiber paths and switch gear required to extend the EOPSS network to these locations. Currently we have 18 cameras in production, with another 19 scheduled to come online within the next two months. I anticipate this number growing to approximately 50 fixed cameras within our campus over the next year. Let me know what you think the appropriate next steps would be.

Subject: RE: MassPort LPR Cameras

Good Morning,

I was hoping to get us all on the same page regarding a proposal to push Massport LPR data to the existing DCJIS BOSS server in Chelsea. Some time ago we (MSP) engaged with Massport regarding Automated License Plate Reader technology (LPR). As most of you know, MSP and DCJIS have been rolling out a very robust LPR network across the Commonwealth. This has been on going for the past several years. The LPR system has paid dividends in numerous criminal cases including crimes of violence, Amber and Silver alerts, and also in many missing/endangered/public well being events.

Our communications with Massport started when we were made aware that they would be purchasing an LPR system. We worked with our counterparts at Massport to make sure that the two systems would be compatible so that information could be shared across all law enforcement agencies through the MSP Fusion Center. Towards that end Massport partnered with Neology for their solution. This is the same vendor used by MSP and DCJIS.

Recently Massport has decided not to maintain its own ALPR BOSS database server. The database and application for LPR in Massachusetts is known as “BOSS” and is a Neology product. Massport would like to feed data from its cameras to the DCJIS BOSS server in Chelsea. Originally we had been discussing with Neology the potential for Massport’s cameras to write two records after scanning a plate, one to Massport BOSS and a duplicate to DCJIS BOSS. We think the current proposal to write all LPR records to the BOSS server located at DCJIS is a much better plan.

MSP has a grant to upgrade the current the current BOSS v3.6 application which is at end of life and no longer supported to version v4.0. We have also submitted a Service Now ticket asking for hardware upgrade costs to the existing BOSS server which MSP will try to acquire funding to upgrade.

I have received several calls from Massport looking to see where we are as far as being able to accept data from their cameras so that they can decommission their BOSS server. I believe their intent is to shut the Massport system down if the MSP and DCJIS are unable to accept the data. I have copied Hank Shaw from Massport into this thread in case I have misstated their intent.

To access the Massport data we will need to be able to pass data from the Massport network to the state network much like we do with case management data. An alternative would be to use 4G modems (like we do with many of our mobile units and cruiser mounted units) on the state network, but this may be an unnecessary cost. Obviously this decision would be driven by the EOTSS and Massport network teams.

I can’t overstate the value that LPR data from Massport would have for MSP and law enforcement in general. Cases involving terrorism, money laundering, and drug trafficking all have significant ties to the port. Being able to hotlist and search on LPR data from Massport facilities would be a significant addition to the MSP Division of Homeland Security’s technology tool set and would have immediate impact. Towards that end, we made be able to leverage Homeland Security grant funds for some of this project.

Respectfully,

Lieutenant Colonel Dermot J. Quinn #1765
Division Commander
Division of Homeland Security & Preparedness
Massachusetts State Police

Hi Jim,

We are looking to consolidate the MassPort ALPR cameras into the main EOPSS ALPR server. After evaluating a number of options purposed by Neology, this appears to be the simplest approach. There is already a network presence at the barracks and it should be easy to point the cameras towards the centralized server. I've spoken to Alex at MassPort and he can volunteer a camera for testing. We could monitor network and server impact. Are you available to discuss?

Thanks Brian

Subject: RE: MassPort LPR Cameras

Hi Alex,

Can you please provide the updated reads per day? Previously you were interested in sharing 6 cameras at approximately 75,000 reads per day.

Here is the P492 confi I mentioned.

Set host to boss [redacted]
Set image [redacted]
Set number of [redacted]
Set Ping interval [redacted]
Set udp ping [redacted]
Set ping wait time [redacted]
Set security [redacted]

I've looped in the network and server team from TSS on the thread. Maybe we can schedule a call in the next week.

For an estimate on impact, the Caper cameras do between 80,000 to 120,000 per day. We average 337,944 reads per day.

Subject: RE: MassPort LPR Cameras

LTC Quinn,

From my perspective, you've clearly laid out the issues at hand. I couldn't agree more with your characterization of the significance that ALPR technology plays as part of the layered security at Logan, but I also understand the greater benefits of integrating these systems to best support MSP and LE efforts across the greater Commonwealth. As we know, ALPR plays an important role in both proactive and reactive investigations, and the value of finding the best mechanism to integrate not only makes sense, promotes better use of the technology, but ultimately better protects a system put in-place specifically for law enforcement purposes. For all intense and purposes, having a separate "stand alone" system at Logan is inefficient, especially when the primary end users at Logan are from MSP Troop F.

I know there have been a number of discussions on this matter, and I believe finding a viable solution is important to all stakeholders. I've included Massport's CIO Kwang Chen and Bob Haverty, Director of IT – Aviation Systems, into the discussion to share any thoughts they may have from a Massport IT perspective.

Thanks

Hank

Subject: RE: MassPort LPR Cameras

Hi Alex,

Can you please provide the updated reads per day? Previously you were interested in sharing 6 cameras at approximately 75,000 reads per day.

Here is the P492 confi I mentioned.

Set host to boss G.L. c. 4.sec. 7.cl.26 (n)
Set image G.L. c. 4.sec. 7
Set number of G.L. c. 4.sec. 7.cl.2
Set Ping interval G.L. c. 4
Set udp ping G.L. c. 4.sec. 7
Set ping wait time G.L. c. 4.sec
Set security G.L. c. 4.sec. 7

I've looped in the network and server team from TSS on the thread. Maybe we can schedule a call in the next week.
For an estimate on impact, the Caper cameras do between 80,000 to 120,000 per day. We average 337,944 reads per day.

-Brian

Subject: MassPort LPR Cameras

Brian,

Thank you again for taking my call today. As discussed, I would like to explore the opportunity to swing all LPR cameras at Logan directly to the MSP BOSS server without the need for the InStation solution. My understanding is that the EOPSS network resides in both the ATCT as well as the Troop F building. I would propose that we extend this network via Layer 2 to the main locations that the LPR system terminates to and cut the entire LPR network at MassPort over to EOPSS. Most of the roadway cameras are fed to 2 primary network locations. MassPort can supply the necessary fiber paths and switch gear required to extend the EOPSS network to these locations. Currently we have 18 cameras in production, with another 19 scheduled to come online within the next two months. I anticipate this number growing to approximately 50 fixed cameras within our campus over the next year. Let me know what you think the appropriate next steps would be.

Respectfully,

~Alex

LTC Quinn,

From my perspective, you've clearly laid out the issues at hand. I couldn't agree more with your characterization of the significance that ALPR technology plays as part of the layered security at Logan, but I also understand the greater benefits of integrating these systems to best support MSP and LE efforts across the greater Commonwealth. As we know, ALPR plays an important role in both proactive and reactive investigations, and the value of finding the best mechanism to integrate not only makes sense, promotes better use of the technology, but ultimately better protects a system put in-place specifically for law enforcement purposes. For all intense and purposes, having a separate "stand alone" system at Logan is inefficient, especially when the primary end users at Logan are from MSP Troop F.

I know there have been a number of discussions on this matter, and I believe finding a viable solution is important to all stakeholders. I've included Massport's CIO Kwang Chen and Bob Haverty, Director of IT – Aviation Systems, into the discussion to share any thoughts they may have from a Massport IT perspective.

Thanks

Hank

Subject: RE: MassPort LPR Cameras

Good Morning,

I was hoping to get us all on the same page regarding a proposal to push Massport LPR data to the existing DCJIS BOSS server in Chelsea. Some time ago we (MSP) engaged with Massport regarding Automated License Plate Reader technology (LPR). As most of you know, MSP and DCJIS have been rolling out a very robust LPR network across the Commonwealth. This has been on going for the past several years. The LPR system has paid dividends in numerous criminal cases including crimes of violence, Amber and Silver alerts, and also in many missing/endangered/public well being events.

Our communications with Massport started when we were made aware that they would be purchasing an LPR system. We worked with our counterparts at Massport to make sure that the two systems would be compatible so that information could be shared across all law enforcement agencies through the MSP Fusion Center. Towards that end Massport partnered with Neology for their solution. This is the same vendor used by MSP and DCJIS.

Recently Massport has decided not to maintain its own ALPR BOSS database server. The database and application for LPR in Massachusetts is known as "BOSS" and is a Neology product. Massport would like to feed data from its cameras to the DCJIS BOSS server in Chelsea. Originally we had been discussing with Neology the potential for Massport's cameras to write two records after scanning a plate, one to Massport BOSS and a duplicate to DCJIS BOSS. We think the current proposal to write all LPR records to the BOSS server located at DCJIS is a much better plan.

MSP has a grant to upgrade the current the current BOSS v3.6 application which is at end of life and no longer supported to version v4.0. We have also submitted a Service Now ticket asking for hardware upgrade costs to the existing BOSS server which MSP will try to acquire funding to upgrade.

I have received several calls from Massport looking to see where we are as far as being able to accept data from their cameras so that they can decommission their BOSS server. I believe their intent is to shut the Massport system down if the MSP and DCJIS are unable to accept the data. I have copied Hank Shaw from Massport into this thread in case I have misstated their intent.

To access the Massport data we will need to be able to pass data from the Massport network to the state network much like we do with case management data. An alternative would be to use 4G modems (like we do with many of our mobile units and cruiser mounted units) on the state network, but this may be an unnecessary cost. Obviously this decision would be driven by the EOTSS and Massport network teams.

I can't overstate the value that LPR data from Massport would have for MSP and law enforcement in general. Cases involving terrorism, money laundering, and drug trafficking all have significant ties to the port. Being able to hotlist and search on LPR data from Massport facilities would be a significant addition to the MSP Division of Homeland Security's technology tool set and would have immediate impact. Towards that end, we made be able to leverage Homeland Security grant funds for some of this project.

Respectfully,

Lieutenant Colonel Dermot J. Quinn #1765
Division Commander
Division of Homeland Security & Preparedness

Hi Jim,

We are looking to consolidate the MassPort ALPR cameras into the main EOPSS ALPR server. After evaluating a number of options purposed by Neology, this appears to be the simplest approach. There is already a network presence at the barracks and it should be easy to point the cameras towards the centralized server. I've spoken to Alex at MassPort and he can volunteer a camera for testing. We could monitor network and server impact. Are you available to discuss?

Thanks Brian

Hi John, Peter

Any issues with moving Massports cameras to the Chelsea DB?

Using the Boss calculator, I estimate that we would need 9-10 TB of storage.

Hi Alex,

Can you please provide the updated reads per day? Previously you were interested in sharing 6 cameras at approximately 75,000 reads per day.

Here is the P492 confi I mentioned.

Set host to boss [redacted]
Set image [redacted]
Set number of [redacted]
Set Ping interval [redacted]
Set udp ping [redacted]
Set ping wait time [redacted]
Set security [redacted]

I've looped in the network and server team from TSS on the thread. Maybe we can schedule a call in the next week.
For an estimate on impact, the Caper cameras do between 80,000 to 120,000 per day. We average 337,944 reads per day.

Subject: MassPort LPR Cameras

Brian,

Thank you again for taking my call today. As discussed, I would like to explore the opportunity to swing all LPR cameras at Logan directly to the MSP BOSS server without the need for the InStation solution. My understanding is that the EOPSS network resides in both the ATCT as well as the Troop F building. I would propose that we extend this network via Layer 2 to the main locations that the LPR system terminates to and cut the entire LPR network at MassPort over to EOPSS. Most of the roadway cameras are fed to 2 primary network locations. MassPort can supply the necessary fiber paths and switch gear required to extend the EOPSS network to these locations.

Currently we have 18 cameras in production, with another 19 scheduled to come online within the next two months. I anticipate this number growing to approximately 50 fixed cameras within our campus over the next year. Let me know what you think the appropriate next steps would be.

Respectfully,

~Alex

Subject: RE: MassPort LPR Cameras

Good Morning,

I was hoping to get us all on the same page regarding a proposal to push Massport LPR data to the existing DCJIS BOSS server in Chelsea. Some time ago we (MSP) engaged with Massport regarding Automated License Plate Reader technology (LPR). As most of you know, MSP and DCJIS have been rolling out a very robust LPR network across the Commonwealth. This has been on going for the past several years. The LPR system has paid dividends in numerous criminal cases including crimes of violence, Amber and Silver alerts, and also in many missing/endangered/public well being events.

Our communications with Massport started when we were made aware that they would be purchasing an LPR system. We worked with our counterparts at Massport to make sure that the two systems would be compatible so that information could be shared across all law enforcement agencies through the MSP Fusion Center. Towards that end Massport partnered with Neology for their solution. This is the same vendor used by MSP and DCJIS.

Recently Massport has decided not to maintain its own ALPR BOSS database server. The database and application for LPR in Massachusetts is known as “BOSS” and is a Neology product. Massport would like to feed data from its cameras to the DCJIS BOSS server in Chelsea. Originally we had been discussing with Neology the potential for Massport’s cameras to write two records after scanning a plate, one to Massport BOSS and a duplicate to DCJIS BOSS. We think the current proposal to write all LPR records to the BOSS server located at DCJIS is a much better plan.

MSP has a grant to upgrade the current the current BOSS v3.6 application which is at end of life and no longer supported to version v4.0. We have also submitted a Service Now ticket asking for hardware upgrade costs to the existing BOSS server which MSP will try to acquire funding to upgrade.

I have received several calls from Massport looking to see where we are as far as being able to accept data from their cameras so that they can decommission their BOSS server. I believe their intent is to shut the Massport system down if the MSP and DCJIS are unable to accept the data. I have copied Hank Shaw from Massport into this thread in case I have misstated their intent.

To access the Massport data we will need to be able to pass data from the Massport network to the state network much like we do with case management data. An alternative would be to use 4G modems (like we do with many of our mobile units and cruiser mounted units) on the state network, but this may be an unnecessary cost. Obviously this decision would be driven by the EOTSS and Massport network teams.

I can’t overstate the value that LPR data from Massport would have for MSP and law enforcement in general. Cases involving terrorism, money laundering, and drug trafficking all have significant ties to the port. Being able to hotlist and search on LPR

data from Massport facilities would be a significant addition to the MSP Division of Homeland Security's technology tool set and would have immediate impact. Towards that end, we made be able to leverage Homeland Security grant funds for some of this project.

Respectfully,

Lieutenant Colonel Dermot J. Quinn #1765
Division Commander
Division of Homeland Security & Preparedness
Massachusetts State Police

Hi Jim,

We are looking to consolidate the MassPort ALPR cameras into the main EOPSS ALPR

server. After evaluating a number of options purposed by Neology, this appears to be the simplest approach. There is already a network presence at the barracks and it should be easy to point the cameras towards the centralized server. I've spoken to Alex at MassPort and he can volunteer a camera for testing. We could monitor network and server impact. Are you available to discuss?

Thanks Brian

Subject: RE: MassPort LPR Cameras

Hi Alex,

Can you please provide the updated reads per day? Previously you were interested in sharing 6 cameras at approximately 75,000 reads per day.

Here is the P492 confi I mentioned.

Set host to boss [redacted]
Set image [redacted]
Set number of [redacted]
Set Ping interval [redacted]
Set udp ping [redacted]
Set ping wait time [redacted]
Set security [redacted]

I've looped in the network and server team from TSS on the thread. Maybe we can schedule a call in the next week.
For an estimate on impact, the Caper cameras do between 80,000 to 120,000 per day. We average 337,944 reads per day.

-Brian

Subject: MassPort LPR Cameras

Brian,

Thank you again for taking my call today. As discussed, I would like to explore the opportunity to swing all LPR cameras at Logan directly to the MSP BOSS server without the need for the InStation solution. My understanding is that the EOPSS network resides in both the ATCT as well as the Troop F building. I would propose that we extend this network via Layer 2 to the main locations that the LPR system terminates to and cut the entire LPR network at MassPort over to EOPSS. Most of the roadway cameras are fed to 2 primary network locations. MassPort can supply the necessary fiber paths and switch gear required to extend the EOPSS network to these locations. Currently we have 18 cameras in production, with another 19 scheduled to come online within the next two months. I anticipate this number growing to approximately 50 fixed cameras within our campus over the next year. Let me know what you think the appropriate next steps would be.

Respectfully,

~Alex

Subject: RE: MassPort LPR Cameras

Good Morning,

I was hoping to get us all on the same page regarding a proposal to push Massport LPR data to the existing DCJIS BOSS server in Chelsea. Some time ago we (MSP) engaged with Massport regarding Automated License Plate Reader technology (LPR). As most of you know, MSP and DCJIS have been rolling out a very robust LPR network across the Commonwealth. This has been on going for the past several years. The LPR system has paid dividends in numerous criminal cases including crimes of violence, Amber and Silver alerts, and also in many missing/endangered/public well being events.

Our communications with Massport started when we were made aware that they would be purchasing an LPR system. We worked with our counterparts at Massport to make sure that the two systems would be compatible so that information could be shared across all law enforcement agencies through the MSP Fusion Center. Towards that end Massport partnered with Neology for their solution. This is the same vendor used by MSP and DCJIS.

Recently Massport has decided not to maintain its own ALPR BOSS database server. The database and application for LPR in Massachusetts is known as "BOSS" and is a Neology product. Massport would like to feed data from its cameras to the DCJIS BOSS server in Chelsea. Originally we had been discussing with Neology the potential for Massport's cameras to write two records after scanning a plate, one to Massport BOSS and a duplicate to DCJIS BOSS. We think the current proposal to write all LPR records to the BOSS server located at DCJIS is a much better plan.

MSP has a grant to upgrade the current the current BOSS v3.6 application which is at end of life and no longer supported to version v4.0. We have also submitted a Service Now ticket asking for hardware upgrade costs to the existing BOSS server which MSP will try to acquire funding to upgrade.

I have received several calls from Massport looking to see where we are as far as being able to accept data from their cameras so that they can decommission their BOSS server. I believe their intent is to shut the Massport system down if the MSP and DCJIS are unable to accept the data. I have copied Hank Shaw from Massport into this thread in case I have misstated their intent.

To access the Massport data we will need to be able to pass data from the Massport network to the state network much like we do with case management data. An alternative would be to use 4G modems (like we do with many of our mobile units and cruiser mounted units) on the state network, but this may be an unnecessary cost. Obviously this decision would be driven by the EOTSS and Massport network teams.

I can't overstate the value that LPR data from Massport would have for MSP and law enforcement in general. Cases involving terrorism, money laundering, and drug trafficking all have significant ties to the port. Being able to hotlist and search on LPR data from Massport facilities would be a significant addition to the MSP Division of Homeland Security's technology tool set and would have immediate impact. Towards that end, we made be able to leverage Homeland Security grant funds for some of this project.

Respectfully,

Lieutenant Colonel Dermot J. Quinn #1765
Division Commander

Subject: RE: MassPort LPR Cameras

Hi Jim,

We are looking to consolidate the MassPort ALPR cameras into the main EOPSS ALPR server. After evaluating a number of options purposed by Neology, this appears to be the simplest approach. There is already a network presence at the barracks and it should be easy to point the cameras towards the centralized server. I've spoken to Alex at MassPort and he can volunteer a camera for testing. We could monitor network and server impact. Are you available to discuss?

Thanks Brian

Hello All,

I just wanted to follow up with this request to see what the next steps for this project are. I believe that we can make the connections to the EOPSS network, but will want to work within your desired IP scheme and ensure that there aren't any concerns around the network routing, security, etc. Let me know if we can have a quick call to discuss the details.

Respectfully,

~Alex

Hi John, Peter

Any issues with moving Massports cameras to the Chelsea DB?

Using the Boss calculator, I estimate that we would need 9-10 TB of storage.

Subject: RE: MassPort LPR Cameras

LTC Quinn,

From my perspective, you've clearly laid out the issues at hand. I couldn't agree more with your characterization of the significance that ALPR technology plays as part of the layered security at Logan, but I also understand the greater benefits of integrating these systems to best support MSP and LE efforts across the greater Commonwealth. As we know, ALPR plays an important role in both proactive and reactive investigations, and the value of finding the best mechanism to integrate not only makes sense, promotes better use of the technology, but ultimately better protects a system put in-place specifically for law enforcement purposes. For all intense and purposes, having a separate "stand alone" system at Logan is inefficient, especially when the primary end users at Logan are from MSP Troop F.

I know there have been a number of discussions on this matter, and I believe finding a viable solution is important to all stakeholders. I've included Massport's CIO Kwang Chen and Bob Haverty, Director of IT – Aviation Systems, into the discussion to share any thoughts they may have from a Massport IT perspective.

Thanks

Hank

Being able to hotlist and search on LPR data from Massport facilities would be a significant addition to the MSP Division of Homeland Security's technology tool set and would have immediate impact. Towards that end, we made be able to leverage Homeland Security grant funds for some of this project.

Respectfully,

Lieutenant Colonel Dermot J. Quinn #1765
Division Commander
Division of Homeland Security & Preparedness
Massachusetts State Police

Hi Jim,

BOSS 3.6 is going end-of-life. We have grant funds to upgrade the EOPSS system's software. I have also submitted a ticket for requesting cost estimations for infrastructure. The below is still outstanding.

Hi Jim,

We are looking to consolidate the MassPort ALPR cameras into the main EOPSS ALPR server. After evaluating a number of options purposed by Neology, this appears to be the simplest approach. There is already a network presence at the barracks and it should be easy to point the cameras towards the centralized server. I've spoken to Alex at MassPort and he can volunteer a camera for testing. We could monitor network and server impact. Are you available to discuss?

Thanks Brian

Hello All,

I just wanted to follow up with this request to see what the next steps for this project are. I believe that we can make the connections to the EOPSS network, but will want to work within your desired IP scheme and ensure that there aren't any concerns around the network routing, security, etc. Let me know if we can have a quick call to discuss the details.

Respectfully,

~Alex

Hi John, Peter

Any issues with moving Massports cameras to the Chelsea DB?

Using the Boss calculator, I estimate that we would need 9-10 TB of storage.

Hi Alex,

Can you please provide the updated reads per day? Previously you were interested in sharing 6 cameras at approximately 75,000 reads per day.

Here is the P492 confi I mentioned.

Set host to boss [redacted]
Set image [redacted]
Set number of [redacted]
Set Ping interval [redacted]
Set udp ping [redacted]
Set ping wait time [redacted]
Set security [redacted]

I've looped in the network and server team from TSS on the thread. Maybe we can schedule a call in the next week.
For an estimate on impact, the Caper cameras do between 80,000 to 120,000 per day. We average 337,944 reads per day.

Subject: MassPort LPR Cameras

Brian,

Thank you again for taking my call today. As discussed, I would like to explore the opportunity to swing all LPR cameras at Logan directly to the MSP BOSS server without the need for the InStation solution. My understanding is that the EOPSS network resides in both the ATCT as well as the Troop F building. I would propose that we extend this network via Layer 2 to the main locations that the LPR system terminates to and cut the entire LPR network at MassPort over to EOPSS. Most of the roadway cameras are fed to 2 primary network locations. MassPort can supply the necessary fiber paths and switch gear required to extend the EOPSS network to these locations. Currently we have 18 cameras in production, with another 19 scheduled to come online within the next two months. I anticipate this number growing to approximately 50 fixed cameras within our campus over the next year. Let me know what you think the appropriate next steps would be.

Respectfully,

~Alex

Sure;

Stakeholders are users of ALPR, MSP, and Public Safety Agencies and MassPort.

The Goal is to get the current and new ALPR MassPort cameras redirected to the EOPSS boss server

Deliverables are when reads are coming into the database and the application is stable

Current Environment is MassPort submitting reads to their own BOSS internal server.

Attached is the thread history.

Hi Guys,

This meeting is to discuss the method of bringing Logan LPR cameras to the EOPSS network.

This is the last status update from Chute before he left:

"Currently MassPort has G.L. c. 4.sec. 7.cl.26 (n)(security), G.L. c. 4.sec. 7. cl.26(f)(investigative) After several iterations of the system architecture, it has been decided that the path of least resistance is to employ commercial carrier service on the MSP MPLS to the CJIS Datacenter in Chelsea. MSP is working to procure the necessary power adapter and antenna equipment while also identifying accounts and equipment that can be re-purposed for this project. If/when it is feasible for this system to be networked through terrestrial means, MassPort has the switch infrastructure in place to make a direct connection to the EOPSS network at Building 11 (Troop F Headquarters). I hope this gives a brief overview of where we are at, and please do not hesitate to reach out to me via my personal contact information if any questions come up."

Brian,

Attached is the manual that goes over the NTP changes. It's pretty technical and will require using Toolkit to configure.

Cc: Morrissey, Michael (NFK); Antoine, Romere (POL)
Subject: SJC- Com. v. McCarthy- Constitutional ramifications of automatic license plate readers (ALPRs)
Date: Thursday, April 16, 2020 10:54:59 AM
Attachments: e12750.pdf

Today, the SJC addressed whether automatic license plate readers (ALPRs) implicated a person's reasonable expectation of privacy. In addressing the facts of the case before them, involving cameras on the Bourne and Sagamore bridges, they concluded it did not due to the limited extent and use of ALPR data in that case. The Court allowed; however, that in some cases where greater information was taken, an analysis focusing on "the extent to which a substantial picture of the defendant's public movements are revealed by the surveillance," that such information may implicate constitutional protections (pp. 21-26).

Subject: SJC- Com. v. Mora- Long-term usage of pole cameras constitute search under Art. 14
Date: Thursday, August 6, 2020 10:33:17 AM
Attachments: p12890.pdf

Today, the SJC found that the usuage of pole cameras on a defendant's residence for a continual two month period constitutes a search under Art. 14. They declined to decide whether a lesser period of pole camera usage or usage not directed toward a home, would implicate the same reasonable expectation of privacy. They found that because this was a new rule the case should be remanded to the Superior Court to allow the Commonwealth to attempt to demonstrate that there was probable cause for the search.

Anyone who has a pole camera case should read this opinion. If there are any questions, please reach out.

From: Sweeney, Elizabeth (CPI)
To: Mason, Christopher (POL)
Subject: SJC McCarthy Bridge Cam Decision
Date: Thursday, April 16, 2020 10:38:33 AM
Attachments: McCarthy Bridge Cam decision.pdf

Good morning Colonel Mason,
The SJC issued its opinion in the McCarthy cape bridges ALPR case today, which we met and discussed in August. Opinion is in the link below and a PDF attachment. The SJC declined to suppress the ALPR camera evidence, great news. I have not read the entire opinion yet- 40 pages- but I wanted to forward it to you quickly. They give some guidance on how the "limited" use of cameras is permissible in this case, but widespread camera tracking (like a cellphone) would cause concern. This is the holding:

3. Conclusion. While we recognize that the widespread use of ALPRs in the Commonwealth could implicate constitutional protections against unreasonable searches, the limited use of the technology in this case does not.

Thank you to MSP, especially Brian Egnitz, who met with me and answered all my many questions about the plate readers. It helped immensely.

I will have my cellphone on me today if you have any questions. 508-826-7458.
Thank you,
Elizabeth Sweeney

Subject: 2020 Vision - PIPS Technology Update
Date: Wednesday, January 29, 2020 9:25:00 AM

Dear DanGriffin,

As we step into a new year, and decade, we wanted to take a moment to thank you for your continued loyalty and use of the PIPS Technology by Neology solutions. We are incredibly grateful of the customers, re-sellers and partners who, over the last years have remained loyal and supported us in our vision of “Driving Detection Innovation”. Each day we strive to make a difference in supporting you to achieve your goals, solve your challenges and achieve your mission.

2019 was a major year for us as we finalized significant elements of the overhaul of our products and solutions, culminating with the release of BOSS 4 in the fall, alongside brand new Fixed and Mobile ALPR solutions. Click to find the latest reminders in relation to our products and software versions to ensure you are getting the most out of your Neology products and solutions.

The year ahead is primed to be an exciting one! At Neology we firmly believe that the development doesn't stop – we have almost 30% of our workforce working specifically in the product development area of our business in order to constantly evolve our solutions, improve performance and add new features. We have some exciting additions to the portfolio which are imminent that will provide not only performance improvements to the existing solutions but also provide the ability for greater interoperability across the Law Enforcement ALPR market in the US more generally. We believe that you retaining the control and ownership of your data is paramount and we continue to respect that as we always have whilst supporting those customers who choose to share and provide secure, trusted data sharing between neighbors and friends.

We are always keen to hear your feedback – if there are any elements of our services, solutions or products which you would like to feedback on, please don't hesitate to get in touch with me so I can provide personal attention to both positive and negative feedback. Email me here

Thank you for your continued support – we look forward to serving you in 2020 and beyond.

Best Regards,
Luke & the PIPS Technology team

Newly Published!
License Plate Standard - Edition 2

Including Best Practices for Managing Vanity and Specialty License Plate Programs

License plates quickly identify motor vehicles and vehicle registrant information and are most effective when they are designed to optimize legibility to the human eye as well as for license plate readers (LPRs). License plates serve one common purpose: to identify motor vehicles. The ability of motor vehicle agency (MVA) employees, law enforcement, and citizens to quickly and easily identify license plate numbers (consisting of alpha and/or numeric characters) is fundamental to accurate vehicle registration data creation, maintenance, and retrieval. The adoption of the standards within Chapters 1 through 5 streamlines the license plate retrieval processes within MVAs and improves the exchange of license plate data and information between jurisdictions. Alignment with these standards also supports highway safety and increases revenue collection, which are dependent on accurate license plate identification, such as toll collection, restricted lane access, and parking regulations. License plate recognition, by human eye and LPR, is critical to serving these purposes.

In addition, license plates play a central role in preventing and solving crimes. Every day across North America, crimes are prevented or solved through the identification of license plates. It is difficult to quantify the missed opportunities that occur to prevent or solve a crime because a license plate was misread by either the human eye or by LPR, but testing has documented that misreads occur. Adoption of the license plate standard contained in this document will minimize the risk of such misreads.

AAMVA's License Plate Standard - Edition 2 was developed to support a jurisdiction's ability to produce license plates that enhance accurate license plate identification while not limiting a jurisdiction's flexibility for innovation and allowing for multiple license plate designs. It is designed for full-size license plates issued by jurisdictions; portions of it may not apply to smaller license plates typically issued to motorcycles and other similar vehicles. AAMVA recommends jurisdictions involve law enforcement, tolling authorities, and other stakeholders they deem appropriate when developing new license plate designs.

Sections Include:

- Chapter 1: Administrative
- Chapter 2: Design

Appendices Include:

- Chapter 7: Best Practices for Managing Specialty License Plate Programs **NEW!**

Temporary Registration Exemplars: Rhode Island
- Appendix C: Sample Handout (for sponsors): Specialty License Plate Specifications
- Appendix D: Example of a Specialty License Plate Agreement
- Appendix E: AAMVA Improving ALPR Effectiveness through Uniform License Plate Design and Manufacture Best Practices Guide
- Appendix F: AAMVA 2020 License Plate Standard Working Group Roster

---

New License Plate Verification Program

To assist jurisdictions in determining if their license plates meet these standards, AAMVA offers the License Plate Verification Program (LPVP). The LPVP provides jurisdictions, at no cost, the opportunity to submit up to four license plates during each AAMVA fiscal year for comparison to the 2020 AAMVA License Plate Standard. A written report will be generated outlining where the submitted license plate does, and does not, align with the standard.

LPV_Form_3_1713123.png

To participate in the License Plate Verification Program, AAMVA jurisdiction members must ship the plate(s) they wish to submit for verification, along with a completed submission form, to the AAMVA Project Manager (PM), Brian Ursino. The PM will collect plates from submitting jurisdictions and ship in bulk to Element, Inc., approximately every 60-days. Element, Inc. will provide analysis reports to the AAMVA PM within 30-days of receiving the plate(s). The AAMVA PM will forward those reports to the submitting jurisdictions. The examined license plates will be returned to the submitting jurisdiction if their return is requested. Otherwise, they will become part of AAMVA's sample license plate inventory. For additional information contact Brian Ursino, Director, Law Enforcement Programs

Add LPR Technology to Your In-Car Camera System

Officers on patrol are often within close proximity to vehicles that have been associated with crimes, high-risk individuals, missing persons, and abducted children, but they aren't aware of it because they don't always have the information.

Adding LPR to your in-car video system provides access to actionable intelligence via

real-time alerts. WatchGuard in-car video systems are already the technology and industry leader, but adding Vigilant LPR capabilities allow them to do even more. Now, you can use your in-car camera technology as an LPR system without compromising the functionality of the existing system.

The result? Faster response times, interruption of crime, and lives saved. All while spending less.

Subject: ALPR Cameras
Date: Friday, April 17, 2020 6:56:00 AM

Hi Rob,

As you are probably aware the MassPort project to migrate their ALPR Cameras over to the MSP is moving forward over Verizon Wireless. We have identified modems, data plans and purchased the accessories needed for the project and hope to begin cutting over in the next 2-3 weeks.

I wanted to run something by you and the team to review; we just completed the Sierra MP70 VPN project with IPC and it went well (thanks for your teams help - BTW). Do you want to use the same approach (OneNetwork) for these ALPRS? I think it would give us the same functionality originally discussed by pushing the traffic over MassPorts network back to the core, but we would run it over Verizon.

A couple of thoughts;

This could be a good long term approach for all ALPRs we are hosting, we've begun to standardized on MP70s

This could give us much needed remote access to the cameras

If we moved to the Neology Hosted solution, we could do a split tunnel and pipe the traffic straight over the internet, but only allow remote management via the tunnel.

IPC was the prime on the sierra project and work would be minimal to expand, we also want to begin leveraging them more for our other wire/ covert/camera networks we run down the road (when Jim decides to retire).

If MassPort wants us off Verizon (since they are paying for the data plans), they could get us a straight internet route and connect to the MP70 (Our MP70 establishes internet via a LAN Port, Wifi and Cell, all establishing the VPN tunnel after connection).

Let me know what you think and if you want to get on a call to discuss. Otherwise, we can just get MassPort done with the normal static plan.

Thanks, Brian

I think it would give us the same functionality originally discussed by pushing the traffic over MassPorts network back to the core, but we would run it over Verizon.

A couple of thoughts;

This could be a good long term approach for all ALPRs we are hosting, we've begun to standardized on MP70s

This could give us much needed remote access to the cameras

If we moved to the Neology Hosted solution, we could do a split tunnel and pipe the traffic straight over the internet, but only allow remote management via the tunnel.

IPC was the prime on the sierra project and work would be minimal to expand, we also want to begin leveraging them more for our other covert/camera networks we run down the road.

If MassPort wants us off Verizon (since they are paying for the data plans), they could get us a straight internet route and connect to the MP70 (Our MP70 establishes internet via a LAN Port, Wifi and Cell, all establishing the VPN tunnel after connection).

Let me know if you want to get on a call to discuss.

Thanks, Brian

Good evening Colonel Quinn. I'm not sure if you are interested in this or not, but it is timely. Dep. Chief Scott Whittemore from Wellesley is one of the platform speakers on the ALPR Webinar taking place tomorrow. They are long time Vigilant customers and superusers. They have also rolled out the Vigilant ALPR with WatchGuard 4RE integration. He is a big fan. Just in case you are interested.

Subject: TRAINING WEBINAR: Engage the Community by Leveraging License Plate Recognition Technology
To: <lauren.mora@motorolasolutions.com>

As the adoption of advanced video and analytics technology grows, so does the imperative that is applied in collaborative efforts to co-produce public safety programs with communities. At its core, public safety relies on a partnership between law enforcement and community, one that is built on a basis of trust and transparency. In which data, and the technology that enables its collection, has the potential to strengthen that foundation. Overall, with the greatest goal of data to be harnessed for the protection and safety of law enforcement officers.

In this webinar, you will learn how license plate recognition (LPR) data that is captured by the community and civilian agencies can support public safety efforts in real-time. Experience live LPR demonstrations and training tips that can be implemented in your current operations. Our panel of industry practitioners will guide you through best practices and LPR use cases that can help you bolster your operations and enhance community engagement when fighting crime.

Key takeaways:
- Firsthand LPR technology best practices to implement with your operations
- Insights on how to engage your community with technology to enhance crime-fighting efforts
- Key considerations when implementing new LPR technologies into your current systems and

operations

Subject: ALRP
Date: Monday, December 21, 2020 11:59:39 AM

Currently the Truck team has a quote for replacing there current LPR system with new Neology cameras. The grant can also support Gov cloud hosting for the data, but not all the data. A decision is requested on how/if to move forward on this project.

Now that the
Neology Recommendations

Short term:

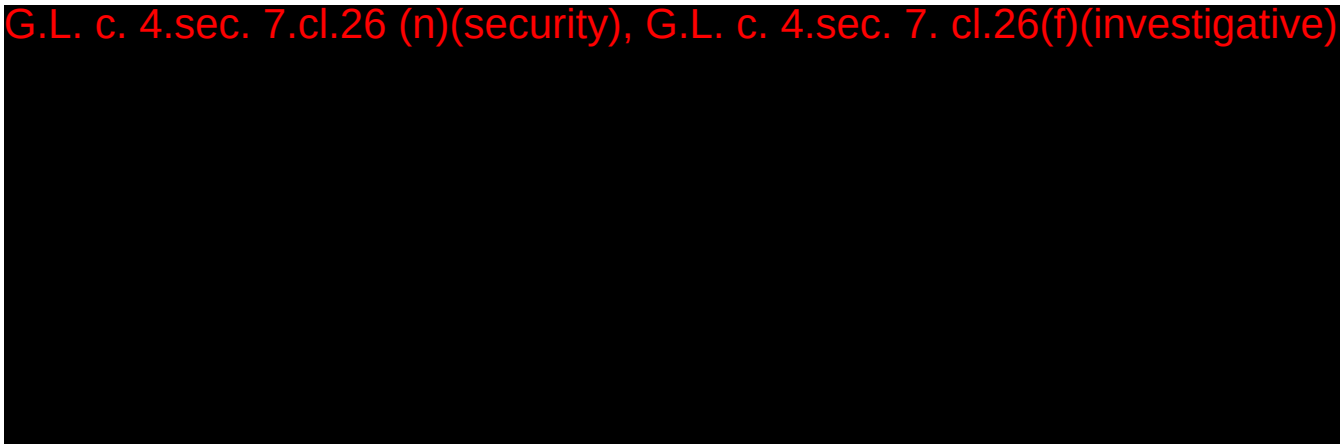
For Fixed

- Disable all cameras in BOSS 3.6 On-Prem (EOPSS)
- Turn on system (allowing access to users)
- Patch each 492 & 525 Camera, configure new watermark and then enable the camera to send to backend system. (need confirmation that new "NTP Flag" metadata will work with 3.6, also if data without NTP lock is being sent)

For Mobiles

- write a new purge script to delete all Mobile data.
- Remove all of these mobiles from hotlists (except NCIC, RMV, Warrants etc.), ensuring no hits are generated.
- Inventory all SX4 &SX4e systems (2017-Present) to identify which systems can be upgraded
- Older systems will need to be decommissioned or configured not to send data to BOSS 3.6 and data would need to be purged.
- The SX4 &SX4e systems (2017-Present) will need to be Patched in order for reads to be sent to the back end. (still reviewing process, might be able to VNC remote)

In Parallel



Establish a new MSP ALPR System
Create data sharing agreements, Include data standards and audit requirements for all submitting Agencies
Complete cloud agreement with Neology (DCJIS)
Move forward with Truck Team purchase, rolling in Gov. Cloud BOSS 4.0 (New MSP System) subscription
Fund remaining cameras and migrate cameras to cloud system over time
Then preserve or decommission EOPSS BOSS 3.6

Subject: Case Update - ending 4 c 194 with ALPRs at Bourne/Sagamore Bridges and 4 search
Date: Friday, April 17, 2020 5:33:47 PM

Chiefs

Commonwealth v. McCarthy (SJC 12750) ← click on that link to see the case
In this case the SJC ruled that police tracking D's car using 4 automatic license plate readers (ALPRs) at both ends of the Bourne and Sagamore Bridges was too limited to amount to a constitutional "search." The SJC declined to say exactly how detailed digital surveillance would have to be to constitute a search leaving that issue for future cases.

State Po lice maintain ALPRs including ones at both ends of the Bourne and Sagamore Bridges. (p.3) The ALPRs photograph vehicles' license plates; that data along with the date and time of the sighting is retained by EOPPS for a year. (p.3-4) Authorized users including police may put a license plate number on a "hot list " and receive an alert if that plate is sighted; reasons to put someone on the "hot list" include not only criminal investigations but also Amber alerts missing persons and BOLO alerts. (p. 3 25 n.13)

Through surveillance controlled buys and information from 4 Cis Barnstable police suspected that the co-D was selling heroin out of his house in Barnstable. (p.4) Police saw a black Hyundai driven by D visit there briefly so they suspected that D was the co-D's supplier. Police put the Hyundai's license plate number on the State Police ALPR "hot list " so that they'd be notified whenever the Hyundai crossed one of the bridges. (p.5) After getting an alert that the Hyundai had crossed onto the Cape police followed both the Hyundai and the co-D to the buy location on a quiet residential street where D and co-D met for about 30 seconds but police could not see a physical exchange. (p.5) From the ALPR data police generated a spreadsheet showing that in mid-winter the Hyundai had crossed the bridges dozens of times sometimes more than once a day adding to police suspicion that D was the heroin supplier. (p.5-6) When police got a second alert that the Hyundai had crossed onto the Cape they again followed D and co-D to the buy location and saw a 30-second meeting but could not see any exchange. This time police stopped both cars handcuffed both co-D and D and read them Miranda. (In co-D police found heroin; on D police found 2 cell phones and cash. (p.6-7) At the station police repeatedly told D he was "not under arrest " and D made statements.

D moved to suppress the ALPR data his statements and evidence obtained from the stop. A Superior Court judge found that the moment of arrest was when D and co-D were handcuffed at the scene of the traffic stop but denied the motion to suppress. (p.33) The SJC upheld the denial.

ALPRs and expectation of privacy in digital surveillance At some length the SJC discussed the constitutional issues raised by digital surveillance. (p.7-24) Police conduct amounts to a search if: (1) it intrudes on a D's expectation of privacy and (2) society is willing to recognize the expectation of privacy as reasonable. Here the SJC ruled D did have an expectation of privacy because D and co-D chose a buy location in a quiet residential area. (p.8 n.5) As to what expectation of privacy society recognizes as reasonable with regard to digital surveillance the SJC was guided by historical understandings of what was an unreasonable search and seizure when the U.S. and Mass. Constitutions were adopted in the late 1700s in reaction to redicasts' rummaging without restraint through colonists' homes. (p.8-10) New technologies like ALPRs raise difficult legal issues because they are easier and less expensive for police than traditional surveillance can be done secretly and permit police to search back in time for a vehicle's movements even before police suspicion arose. (p.12-14) Society does not recognize as reasonable an expectation of privacy in what someone "knowingly exposes" to public view like a license plate – which by statute must be "displayed conspicuously." (p.15-16 & n.8) In older cases involving less advanced technology courts have held that a D did not have an expectation of privacy in contents of a phone conversation in a phone booth or a radio beeper" tracking a single journey. (p.14-17) But technology like ALPRs GPS and CSLI are different because they may give police a **mosaic** of information where each piece may be public but when viewed together they create a picture that implicates someone's privacy interests like their political religious or sexual associations. (p.17-21) The SJC was concerned that with enough ALPRs police could track someone's location everywhere which would be "creepy." (p.21) Exigent circumstances would likely justify using an ALPR in a situation involving an Amber alert or missing person. (p.25 n.13) The D urged the SJC to consider not just these four ALPRs on the Bourne and Sagamore Bridges but the hundreds of ALPRs across Massachusetts; the SJC declined to do so because that evidence is not in the record of this case. (p.24) The **limited number of cameras** here and their placements on the bridges was not enough to give D an expectation of privacy that society would recognize as reasonable. (p.28) The SJC declined to say how much digital surveillance would give such an expectation and admitted that its unwillingness to do so **"may bring some interim confusion"** until further cases develop the law on this issue. (p.28 n.15) Chief Justice Gants wrote a separate concurrence suggesting that one thing the SJC could do is to require police who want to search a vast amount of digital data to apply for a court order supported by an affidavit showing reasonable suspicion to do so. (concurrence p.1) This would be like a SW but with a lower standard than PC.

Written policy The SJC rejected D's argument that Barnstable PD should have had a written policy about ALPRs and the MSP policy on which Barnstable relied was not specific enough. (p.30) Written policies are required to justify certain exceptions to the SW requirement (like inventory searches and sobriety checkpoints) – they do not apply to the threshold question whether a search occurred in the first place. (p.31)

Miranda issues At the station police repeatedly told D that D was "not under arrest." But the motion judge found that the moment of arrest was when police handcuffed D at the traffic stop. (p.33) D argued that his statements should be suppressed because police telling him he was not under arrest amounted to "deceit or trickery" to get D to confess. The motion judge and the SJC rejected that argument saying that even if telling D he was not under arrest amounted to deceit or trickery it was just one factor to be used in determining voluntariness.

Bottom line: Police use of ALPRs at limited locations is not a constitutional search – but we don't know how many locations it'd have to be to amount to one. Using an ALPR in **exigent circumstances** like an Amber Alert is likely OK. Local police don't need a written policy to use ALPRs maintained by MSP. After a D has been handcuffed police should not tell D that D is "not under arrest" – police will likely be accused later of deceit and trickery.

A thought: There are news stories online that cell phones may be used to do contact tracing for people exposed to COVID-19. If lots of people willingly agree to let their cell phone data be used to track their whereabouts would that ever change courts' view of what society recognizes as a reasonable expectation of privacy? At some point if members of the pub ic come to expect that they're being tracked should police be allowed to use that evidence too? Or at the very least should there be a jury instruction explaining that police have less access to the data than other entities (like software companies or public health agencies)?

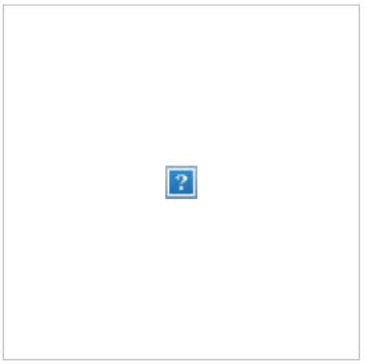
FBINAA APB Leadership Podcast Series
COMING SOON!

Plan on joining us monthly for the launch of the **FBINAA APB Leadership Podcast Series**. This Series will engage law enforcement and public safety executives in discussions on timely and current topics affecting first responders around the world. These leaders will share with you their leadership and managerial philosophies and successes and obstacles they have encountered in their careers.

The podcasts **are free audio programs distributed to FBI National Academy Associates' members, their staffs, and other law enforcement executives that** provide our communities, states, countries, and profession with the highest degree of law enforcement professionalism and expertise.

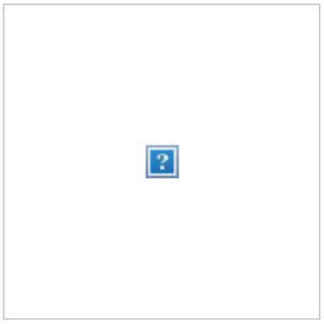
NEW RELEASES:
1st Wednesday/Month

A new APB Leadership Podcast will be available the first Wednesday of each Month.



TRAINING WEBINAR SERIES

Engage the Community by Leveraging License Plate Recognition Technology



In this webinar, you will learn how license plate recognition (LPR) data that is captured by the community and civilian agencies can support public safety efforts in real-time. Experience live LPR demonstrations and training tips that can be implemented in your current operations. Our panel of industry practitioners will guide you through best practices and LPR use cases that can help you bolster your operations and enhance community engagement when fighting crime.

Key takeaways:

- Firsthand LPR technology best practices to implement within your operations
- Insights on how to engage your community with technology to enhance crime-fighting efforts
- Key considerations when implementing new LPR technologies into your current systems and operations

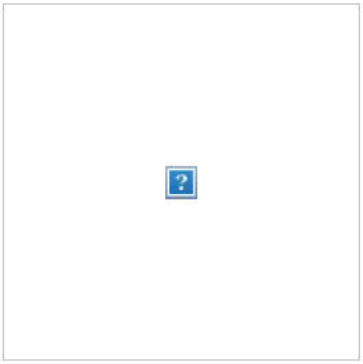
CO-HOST A WEBINAR WITH THE FBINAA

Sponsorships Are Available!



Share Your Thought Leadership and Professional Expertise by Being a Part of the 2020 FBINAA Leadership Webinar Series

These 60-90 minute webinars focus on cutting-edge law enforcement topics and trends and are delivered by law enforcement and public safety experts. Sponsorship provides your organization the opportunity to discuss your products and services to a focused audience, as well as, contributing to the knowledge base of the law enforcement profession. Your Marketing messages will be seen by hundreds of law enforcement professionals with interest in your products/services.

Sponsorships are available! Selected companies will pay a $4,000 sponsorship fee which allows them the use of their company logo and product/service information in the introduction to the educational session. Those selected will also be provided a list of webinar dates throughout 2020 from which they can choose on a first-come, first-serve basis.

These webinars are free to FBINAA members and non-members who can listen in live or get access to the recorded version after the event.

Please contact John Kennedy, Director of Education & Training, for further information at jkennedy@fbinaa.org or call (630) 464-7637.

Did You Know....

FBINAA members control assets and services well in excess of $100 Billion dollars each year, representing significant purchasing power and influence.

COLLABORATIVE REFORM INITIATIVE TECHNICAL ASSISTANCE CENTER: CRI-TAC

As part of our roles and responsibilities as a partner in the COPS Collaborative Reform Initiative Technical Assistance Center (CRI-TAC) Project, each partner has been asked to compile a list of Subject Matter Experts (SMEs) in the CRI-TAC priority areas. The selection of the SMEs will be related to each partner's membership and constituent base (can be both sworn and non-sworn) and will be included in the CRI-TA Resource Center. The CRI-TA Resource Center will be designed to support law enforcement agencies and provides free, customized technical assistance solutions designed to meet the unique needs of state, local, tribal, and campus communities throughout the United States.

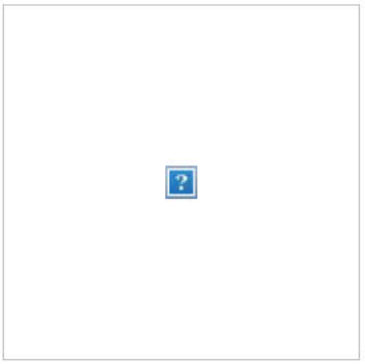
FBINAA APB Leadership Podcast Series
COMING SOON!

Plan on joining us monthly for the launch of the **FBINAA APB Leadership Podcast Series**. This Series will engage law enforcement and public safety executives in discussions on timely and current topics affecting first responders around the world. These leaders will share with you their leadership and managerial philosophies and successes and obstacles they have encountered in their careers.

The podcasts **are free audio programs distributed to FBI National Academy Associates' members, their staffs, and other law enforcement executives that** provide our communities, states, countries, and profession with the highest degree of law enforcement professionalism and expertise.

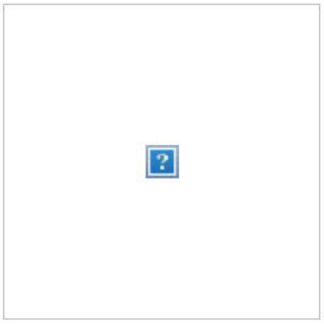
NEW RELEASES:
1st Wednesday/Month

A new APB Leadership Podcast will be available the first Wednesday of each Month.



TRAINING WEBINAR SERIES

Engage the Community by Leveraging License Plate Recognition Technology



In this webinar, you will learn how license plate recognition (LPR) data that is captured by the community and civilian agencies can support public safety efforts in real-time. Experience live LPR demonstrations and training tips that can be implemented in your current operations. Our panel of industry practitioners will guide you through best practices and LPR use cases that can help you bolster your operations and enhance community engagement when fighting crime.

Key takeaways:

- Firsthand LPR technology best practices to implement within your operations
- Insights on how to engage your community with technology to enhance crime-fighting efforts
- Key considerations when implementing new LPR technologies into your current systems and operations

February Issue

FEBRUARY 2020 ISSUE

February 2020 – Investigations

Investigative practices vary depending on the city, state, or country in which a crime occurred, but some practices and techniques apply across the field. From organized crime to homicide to critical incidents, crimes of all types can only be solved by investigators armed with knowledge, experience, and access to the best practices and tools available.

READ CURRENT ISSUE

FEATURES

Death Investigations

Cooperation between medical examiners and law enforcement—both in the lab and in the field—is crucial to the investigations of traumatic, suspicious, or unexpected deaths.

Rapport is the Truth Serum Interviewers Have Been Seeking

While many interrogation models recognize the importance of rapport, a whole new approach is needed to pivot away from accusation and toward information as the interviewer's goal in order to solve crimes and remove dangerous offenders from communities.

Intelligence-Led Policing on a Shoestring Budget

Data mapping is the first layer of intelligence gathering and analysis, and a step that can be accomplished by any agency, regardless of budget constraints, with readily available no-cost software.

New Desktop 3D Scanner for Tiny Objects

February 11, 2020 — Exact Metrology recently announced the availability of the new Artec Micro 3D scanner. The Artec Micro, an automated, metrology-grade desktop 3D scanner is Artec 3D's most accurate 3D scanner to date, and is used for scanning tiny mechanical parts, such as engine valves or connectors, for inspection and reverse engineering, as well as other small objects for industries such as heritage preservation, dentistry, and medical. >Read More

Open Source Web Intelligence Company Opens Office in U.S.

January 22, 2020 — Cobwebs Technologies — the specialized open-source web intelligence company that supports national security agencies, law enforcement agencies, and corporate security departments in rapidly identifying and locating malicious threat actors on the open, deep, and dark webs — is entering the American market with an office in New York City. With little more than a click, Cobwebs makes it highly difficult for terrorists, active shooters, hackers, and other criminal entities to hide, plan, communicate, or ply their nefarious trade in any part of the online world. >Read More

Subject: RE: ALPR Accounts

Major-

Thank you for the prompt assistance with the ALPR.

Could you advise me who would handle password resets?

I had the ALPR when I was down at Plainville but have not had access since.

What (I thought) was my then password no longer works.

Thanks,

Tim

Subject: ALPR Accounts

DLT Babbin,

Sgt. Tirella reached out and requested I set up ALPR accounts for the following:

DLT Timothy Babbin #2120 *****
Lt. Michael Ahern #2486
Lt. Walter Foley #3110
Lt. Steven Connolly #2719 *****
Lt. Joseph Ross #2264
Lt. Michelle Sutherland #2466
Sgt. Michael Leo #2887
Sgt. Maura McCarthy #2759
Sgt. Patrick Johnson #3128
Sgt. Matthew Hannigan #3281
Sgt. Thomas Mahon #3146
Tpr. John MacDonald #3143
Tpr. Loming Chan #0741 *****
Tpr. Robert Noonan #3327
Tpr. Jose Cuevas #3237
Tpr. Carly Rose #3347
Tpr. Robert Soldani #3879
Tpr. Daniel Nunes #3674 *****
Tpr. Erin McLaughlin #3655
Tpr. Kevin Flynn #3791
Tpr. Christopher Andrade #3738 *****
Tpr. Martin Concannon #3409
Tpr. Shawn Murphy #3481
Tpr. Joshua Rucho #3704
Tpr. Nicholas Pellegrino #3684
Tpr. Shawn LeBlanc #3015
Tpr. Steven Grasso #3803
Tpr. Julio Barbosa #4074

***** Indicates that there is already account created.

I will send a separate email with user guide / link to download software.

Logon will be mspXXXX (users 4 digit ID#)

Initial password will be Lastname#XXXX! ex: Flynn#3791! McLaughlin#3655!

They can change it after initial login.

If you can designate a single POC to address any issues, that would be greatly appreciated.

Lt's and Sgt's have advanced access. Tprs. have basic access.

Please let me know if you need any further assistance.

Respectfully,

David M. Gallagher

Subject: Comm v. McCarthy - locating D's MV with ALPRs on Bourne/Sagamore Bridges not a "search"

Chiefs
Commonwealth v. McCarthy (SJC 12750) ← click on that link to see the case
In this case the SJC ruled that police tracking D's car using 4 automatic license plate readers (ALPRs) at both ends of the Bourne and Sagamore Bridges was too limited to amount to a constitutional "search." The SJC declined to say exactly how detailed digital surveillance would have to be to constitute a search leaving that issue for future cases.

State Po ice maintain ALPRs including ones at both ends of the Bourne and Sagamore Bridges. (p.3) The ALPRs photograph vehicles' license plates; that data along with the date and time of the sighting is retained by EOPPS for a year. (p.3-4) Authorized users including police may put a license plate number on a "hot list " and receive an alert if that plate is sighted; reasons to put someone on the "hot list" include not only criminal investigations but also Amber alerts missing persons and BOLO alerts. (p. 3 25 n.13)

Through surveillance controlled buys and information from 4 Cs Barnstable police suspected that the co-D was selling heroin out of his house in Barnstable. (p.4) Police saw a black Hyundai driven by D visit there briefly so they suspected that D was the co-D's supplier. Police put the Hyundai's license plate number on the State Police ALPR "hot list " so that they'd be notified whenever the Hyundai crossed one of the bridges. (p.5) After getting an alert that the Hyundai had crossed onto the Cape police followed both the Hyundai and the co-D to the buy location on a quiet residential street where D and co-D met for about 30 seconds but police could not see a physical exchange. (p.5) From the ALPR data police generated a spreadsheet showing that in mid-winter the Hyundai had crossed the bridges dozens of times sometimes more than once a day adding to police suspicion that D was the heroin supplier. (p.5-6) When police got a second alert that the Hyundai had crossed onto the Cape they again followed D and co-D to the buy location and saw a 30-second meeting but could not see any exchange. This time police stopped both cars handcuffed both co-D and D and read them Miranda. On co-D police found heroin; on D police found 2 cell phones and cash. (p.6-7) At the station police repeatedly told D he was "not under arrest " and D made statements.

D moved to suppress the ALPR data his statements and evidence obtained from the stop. A Superior Court judge found that the moment of arrest was when D and co-D were handcuffed at the scene of the traffic stop but denied the motion to suppress. (p.33) The SJC upheld the denial.

ALPRs and expectation of privacy in digital surveillance: At some length the SJC discussed the constitutional issues raised by digital surveillance. (p.7-24) Police conduct amounts to a search if: (1) it intrudes on a D's expectation of privacy and (2) society is willing to recognize the expectation of privacy as reasonable. Here the SJC ruled D did have an expectation of privacy because D and co-D chose a buy location in a quiet residential area. (p.8 n.5) As to what expectation of privacy society recognizes as reasonable with regard to digital surveillance the SJC was guided by historical understandings of what was an unreasonable search and seizure when the U.S. and Mass. Constitutions were adopted in the late 1700s in reaction to redicasts' rummaging without restraint through colonists' homes. (p.8-10) New technologies like ALPRs raise difficult legal issues because they are easier and less expensive for police than traditional surveillance can be done secretly and permit police to search back in time for a vehicle's movements even before police suspicion arose. (p.12-14) Society does not recognize as reasonable an expectation of privacy in what someone "knowingly exposes" to public view like a license plate – which by statute must be "displayed conspicuously." (p.15-16 & n.8) In older cases involving less advanced technology courts have held that a D did not have an expectation of privacy in contents of a phone conversation in a phone booth or a radio beeper" tracking a single journey. (p.14-17) But technology like ALPRs GPS and CSLI are different because they may give police a **mosaic** of information where each piece may not be public but when viewed together they create a picture that implicates someone's privacy interests like their political religious or sexual associations. (p.17-21) The SJC was concerned that with enough ALPRs police could track someone's location everywhere which would be "creepy." (p.21) Exigent circumstances would likely justify using an ALPR in a situation involving an Amber alert or missing person. (p.21 n.13) The D urged the SJC to consider not just these four ALPRs on the Bourne and Sagamore Bridges but the hundreds of ALPRs across Massachusetts; the SJC declined to do so because that evidence is not in the record of this case. (p.24) The **limited number of cameras** here and their placements on the bridges was not enough to give D an expectation of privacy that society would recognize as reasonable. (p.28) The SJC declined to say how much digital surveillance would give such an expectation and admitted that its unwillingness to do so **"may bring some interim confusion"** until further cases develop the law on this issue. (p.28 n.15) Chief Justice Gants wrote a separate concurrence suggesting that one thing the SJC could do is to require police who want to search a vast amount of digital data to apply for a court order supported by an affidavit showing reasonable suspicion to do so. (concurrence p.1) This would be like a Stlr but with a lower standard than PC.

Written policy: The SJC rejected D's argument that Barnstable PD should have had a written policy about ALPRs and the MSP policy on which Barnstable relied was not specific enough. (p.30) Written policies are required to justify certain exceptions to the SW requirement (like inventory searches and sobriety checkpoints) – they do not apply to the threshold question whether a search occurred in the first place. (p.31)

Minority opinion: At the station police repeatedly told D that D was "not under arrest." But the motion judge found that the moment of arrest was when police handcuffed D at the traffic stop. (p.33) D argued that his statements should be suppressed because police telling him he was not under arrest amounted to "deceit or trickery" to get D to confess. The motion judge and the SJC rejected that argument saying that even if telling D he was not under arrest amounted to deceit or trickery it was just one factor to be used in determining voluntariness.

Bottom line: Police use of ALPRs at limited locations is not a constitutional search – but we don't know how many locations it'd have to be to amount to one. Using an ALPR in **exigent circumstances** like an Amber Alert is likely OK. Local police don't need a written policy to use ALPRs maintained by MSP. After a D has been handcuffed police should not tell D that D is "not under arrest" – police will likely be accused later of deceit and trickery.

A thought: There are news stories online that cell phones may be used to do contact tracing for people exposed to COVID-19. If lots of people willingly agree to let their cell phone data be used to track their whereabouts would that ever change courts' view of what society recognizes as a reasonable expectation of privacy? At some point if members of the pub ic come to expect that they're being tracked should police be allowed to use that evidence too? Or at the very least should there be a jury instruction explaining that police have less access to the data than other entities (like software companies or public health agencies)?

As always email me with any questions. Wash your hands!

Survey Finds Most Police Departments In US Have Issued Guidance To Officers During COVID-19 Pandemic

ABC News (4/16) reports, "A recent survey done by the International Association of Chiefs of Police and George Mason University shows that 91% of the responding departments have offered guidance to officers over COVID-19 concerns. The survey, obtained by ABC News, shows that most police departments were prepared for COVID-19 and more than 1,000 departments around the country were ready to instruct their men and women on calls of service," but "the departments could be doing more to obtain personal protective equipment for officers. Just 15% of agency respondents rated their ability to provide PPE as 'excellent.' Steve Casstevens, the president of the IACP and chief of the Buffalo Grove Police Department, told ABC News that some agencies didn't realize the long-term effects of the virus. 'I don't think a lot of them expected it to go on this long,' he said. 'As this got worse and worse, policies changed.' Now it is standard procedure for all officers to wear masks, Casstevens noted."

Police Departments Finding Help In Unexpected Places Amid Coronavirus Outbreak

NBC News (4/16) reports that coronavirus infection "has already spread to officers in several small departments in several states, including Florida, Washington and Pennsylvania, where the interim police chief of a 20-member force died of COVID-19-related complications on Monday. The coronavirus has taken a toll on several segments of society, but small police departments are especially vulnerable – officers are embedded in the close-knit communities they're struggling to protect while also trying to protect themselves." NBC News adds, "Many departments are planning layers of fail-safes in the event of mass contagion within their force. Help is coming from several places, some as unexpected as dentists' offices. Deficiencies in resources to handle the pandemic have created significant pangs within small departments that frequently find themselves at the back of the line for supplies."

US Cities See Spike In Speeders During Pandemic

The New York Times (4/16, Hu) reports, "Drivers have roared through deserted New York City streets as if they were taking a lap at Le Mans. They have openly drag raced on major commuting arteries, including Sixth Avenue and the West Side Highway in Manhattan. And they have racked up thousands of speeding tickets across the city — and in some cases, they have left behind wrecked cars and lives." The Times adds, "As traffic has disappeared from New York's streets during the coronavirus pandemic, some drivers have responded by revving their engines and taking off. The open streets have also brought out motorcycle gangs and daredevils on dirt bikes and all-terrain vehicles doing wheelies and stunts in traffic lanes, residents said. 'Now that the streets are empty, the Fast & Furious wannabes really think they're living in a video game,' tweeted City Councilman Justin Brannan, a Democrat who represents southwest Brooklyn, adding that the sounds of racing cars and motorcycles on the Belt Parkway in Bay Ridge 'have become a scary lullaby.'"

The Atlanta Journal-Constitution (4/16, Dixon) reports, "Sandy Springs isn't the only city seeing an increase in motorists driving like they are competing in the NASCAR Cup Series on roadways clear of traffic due to the coronavirus pandemic. Smyrna police report quite a few drivers with lead feet are disregarding posted speed limit signs and putting the pedal to the metal." According to the AJC, "Within the last week, officers with the department's Selected Traffic Enforcement Program have written an estimated 50 to 100 tickets along the East-West Connector, said spokesman Sgt. Louis Defense. 'We were noticing that the speeds throughout the city were steadily increasing, so we had to go back to doing some enforcement.'"

Massachusetts Court OKs Limited Use Of License Plate Readers By State Police

The Boston Globe (4/16, Ellement) reports that "the state's high court ruled Thursday that automatic license plate readers used by the State Police do not violate 21st-century privacy protections – under limited circumstances." According to the Globe, "In its unanimous ruling, the Supreme Judicial Court cautioned that it might elevate privacy issues in future cases if State Police and other law enforcement agencies start tapping information in the secretive data base, known by the acronym of ALPR, without proper justification." The court "noted that both the federal and state constitutions have strong protections against unlawful search and seizures by law enforcement built into them by founders who had personal experience with the 'abuses of arbitrary power under British rule.' 'The framers had first-hand experience with abuses of arbitrary power under British rule...The surveillance implications of new technologies must be scrutinized carefully, lest scientific advances give police surveillance powers akin to these general warrants,' Justice Frank M. Gaziano wrote."

Police In US Using Drones To Promote Social Distancing

Fox News (4/16, Sherman) reports from Daytona Beach, Florida, "Kim Andrade was just walking along Daytona beach when a drone came buzzing by. It caught her attention, and she even went ahead and snapped a few photos. What she did not expect to learn, however, is that the drone has a voice. 'This is the Volusia Sheriff's office, please adhere to social distancing guidelines,' said a voice piping out of the unit's onboard speaker." The Volusia County Sheriff's Office "told Fox News that it currently has 18 drones at its disposal. Because of the coronavirus outbreak, officials are increasingly turning to them. 'Unfortunately in law enforcement, we can't practice social distancing,' Volusia County Sheriff Mike Chitwood told Fox News." Chitwood "explains that by using the drones, they can encourage social distancing using the drone's speakers and can break up large gatherings of people without running the risk of getting a deputy infected."

The IACP, with support from the National Highway Traffic Safety Administration (NHTSA), launched the new Traffic Safety Resource Guide (TSRG) designed to help law enforcement officers address the elements of traffic safety from education to enforcement as well as share research and promising practices to support leaders in responding to traffic safety issues encountered in their community. To learn more, access the TSRG here: https://bit.ly/2seLUTg.

CRIME & DRUGS

Italian Mafia Seeks To Profit From Coronavirus Pandemic

Reuters (4/16, Amante) reports, "Italy's mafia clans are taking advantage of the coronavirus pandemic to buy favour with poor families facing financial ruin, prosecutors and officials say, and are offering loans and food in what is seen as an age-old

recruitment tactic." Reuters adds, "After decades of campaigning to curb the influence of the mafia in its traditional strongholds of southern Italy, officials and charitable groups say the pandemic has created new opportunities for organised crime to regain people's loyalties. 'We know that "families of friends", all of them loan sharks, are making themselves available to give money to the people in difficulty,' said Amedeo Scaramella, using a euphemism by which clans of the Camorra criminal syndicate are known." Scaramella "heads the San Giuseppe Moscato Foundation, a Catholic group in Naples that fights loan sharking, in part by guaranteeing bank loans to people normally considered credit risks. He told Reuters the sharks start by offering loans at rates that compete with banks and later entrap borrowers by driving them up to 300%."

Police Warn Of Coronavirus Text Scam Containing Fake Alert Of Potential Infection

Newsweek (4/16) reports, "Police in Maine have warned about a text message phishing scam currently in circulation that uses the ongoing novel coronavirus outbreak as a convincing lure." Newsweek adds, "The fraudulent message is spreading a suspicious link with a warning telling recipients they may have contracted COVID-19, the infectious respiratory disease currently spreading across the U.S. In response, law enforcement urged all local citizens to avoid clicking unsolicited URLs. The phishing text message reads: 'Someone who came into contact with you tested positive or has shown symptoms for COVID-19 and recommends you self-isolate/get tested.'" According to Newsweek, "The destination of the link was not clear, but experts have previously warned scammers will be exploiting fears of the virus to steal personal data and financial details."

Pandemic Disrupting Supply Of Illegal Drugs In US

The Wall Street Journal (4/16, Kamp, Subscription Publication) reports the pandemic has appeared to disrupt the supply of illegal drugs, according to Acting DEA Administrator Uttam Dhillon. However, treatment advocates say the supply shortage can pose a risk for opioid users, who could fatally overdose after a period of withdrawal during which their tolerance declines.

Inmates Escape Wisconsin Jail

The Green Bay (WI) Press-Gazette (4/16) reports James Robert Newman and Thomas E. Deering escaped from Columbia Correctional Institution on Thursday. The jail confirmed the escape and said that the inmates "climbed over the prison fence, went to a hotel and took a cab out of the area."

Five Pennsylvania Men Arrested In Connection To Triple Murder In Virginia

WTVR-TV Richmond, VA (4/16) reports James Christopher Myers, Durward Anthony Allen, Jamal Kelvin Bailey, Hugh Cameron Green, and Montel Jaleek Wilson "have been charged with first-degree murder in the slayings of a teenager and two adults found dead inside a Spotsylvania home last May." Spotsylvania County Sheriff Roger L. Harris said, "I'm very grateful for the tireless efforts our Detectives were faced with along with the collaborative multi-agency assistance to bring these suspects to justice. My continued prayers for peace and comfort to the Ozuna and Coleman families."

UK Man Jailed For Claiming He Had Coronavirus, Spitting At Police Officer

The Independent (UK) (4/16) reports, "A man has been jailed for three months for spitting at a police officer after claiming he had coronavirus." Nicholas Hazell, 36, "from Epsom in Surrey, assaulted the officer at a hospital. He had been taken there after falsely claiming to have swallowed some drugs. Surrey Police said Hazell had been arrested on 7 April in connection with an ongoing investigation. Following his arrest he told officers he was infected with coronavirus and urinated in the back of the police van. After being further arrested for criminal damage, he claimed to have swallowed drugs and was taken to hospital. He spat at an officer while waiting to be seen by medics and was later charged with assaulting an emergency worker."

TECHNOLOGY

Interpol: Hospitals Targeted With Array Of Ransomware

The Wall Street Journal (4/16, Stupp, Subscription Publication) reports that Interpol has warned that hackers have used a number of variations of ransomware to launch cyberattacks on hospitals and healthcare facilities in multiple countries, adding to the concerns of medical providers during the coronavirus pandemic.

GLOBAL SECURITY

Military Task Force Prepares to Secure Washington, DC Area

Newsweek (4/16) reports federal officials in the nation's capital "expect a New York-like epidemic in the District, Maryland and Virginia, one that could potentially cripple the government." A little-known military task force "charged with evacuating Washington has already been activated, a task force charged with the most sensitive government mission of 'securing' Washington in the face of attackers, foreign and domestic." Activated on March 16, Joint Task Force National Capital Region

(JTF-NCR) "is chartered to 'defend' Washington on land, in the air, and even on its waterfronts." JTF-NCR is not "only real and operating, reporting directly to the Secretary of Defense for some of its mission, but some of its units are already on 24/7 alert, specially sequestered on military bases and kept out of coronavirus support duties to ensure their readiness." JTF-NCR is charged "with facilitating continuity of government, particularly moving civil and military leaders to secret locations were the order given to evacuate the city."

US Issues Warning Ahead Of 25th Anniversary Of Oklahoma City Bombing

ABC News (4/16) reports, "Marking 25 years since the deadliest domestic terrorist attack on U.S. soil, federal authorities on Thursday warned law enforcement agencies across the country that the threat from violent white supremacists and anti-government extremists remains 'persistent and evolving.' 'The prevalence of lethal [domestic terrorist] attacks in the 25 years following the bombing of the Alfred P. Murrah Federal Building in Oklahoma City highlights the continued threat they pose,' the FBI, Department of Homeland Security and National Counterterrorism said in a joint intelligence bulletin issued nationwide." The bulletin "noted that the April 19, 1995, bombing by anti-government extremist Timothy McVeigh killed 168 people and injured several hundreds more, making 1995 the nation's deadliest year for domestic terrorist attacks."

The AP (4/16, Murphy) reports from Oklahoma City, "In the 25 years since a truck bomb ripped through a federal building in downtown Oklahoma City and killed 168 people, the United States has suffered through foreign wars, a rise in mass shootings and a much deadlier act of terror, the Sept. 11 attacks," but "the April 19, 1995, assault on a sleepy city in the nation's heartland shocked many Americans out of their sense of security and awakened them to their own vulnerability. Terror wasn't just a foreign problem, it was here. Events since have only contributed to a shared anxiety." The AP adds, "Ordinarily, survivors and victims' families would gather Sunday at the memorial where the Alfred P. Murrah Building once stood to pay tribute to the lives that were lost and tragically altered, as they have every year since the bombing," but "the 25th anniversary ceremony was canceled due to the coronavirus restrictions, denying the public the chance to collectively grieve a past tragedy because a current one is unfolding."

Three Reputed White Supremacists Denied Bond Amid Coronavirus Concerns

The AP (4/16) reports from Rome, Georgia, "Three Georgia men accused of belonging to a white supremacist group and of plotting to kill a couple were denied bond Thursday after requesting a hearing because of coronavirus concerns, authorities said." Floyd County Superior Court Chief Judge Bryant Durham "rejected bond requests for 25-year-old Michael Helterbrand of Dalton; 19-year-old Jacob Kaderli of Dacula; and 21-year-old Luke Lane of Silver Creek, news outlets reported. The three men face charges of conspiring to kill members of a militant anti-fascist group and participation in a criminal gang." Floyd County police "said the men belong to 'the Base,' a group described by the FBI as a collective of hardcore neo-Nazis, operating as a paramilitary organization that is hostile to minority communities."

The Atlanta Journal-Constitution (4/16, Redmon, Joyner) reports, "Three North Georgia men accused of belonging to a white supremacist group and of plotting the murder of a Bartow County couple were denied bond Thursday after citing concerns about the coronavirus pandemic. Floyd County Superior Court Chief Judge Bryant Durham rejected their requests after a hearing in which the defendants were patched in by video from the county jail. The men – Michael Helterbrand, 25, of Dalton; Jacob Kaderli, 19, of Dacula; and Luke Lane, 21, of Silver Creek – have each been charged with participating in a criminal gang and conspiracy to commit murder. Floyd County Police allege they are members of 'the Base,' described as a violent organization that is seeking to 'establish a white ethno-state.' A different judge denied them bond in February."

Federal Prosecutors Appeal Release Of Massachusetts Nursing Home Arson Suspect

The Springfield (MA) Republican (4/16, Barry) reports, "Hours after his arrest Wednesday in connection with the attempted firebombing of a Jewish assisted living facility, John Rathbun was back home at his mother's house in East Longmeadow, released by a federal magistrate judge." Prosecutors "are appealing that decision to U.S. District Judge Mark G. Mastroianni, arguing the magistrate's decision appeared to be based heavily on the COVID-19 pandemic, as opposed to established bail standards." The Republican adds, "There has been an earnest movement in this state and across the country to reduce incarceration rates in order to stem the spread of the coronavirus in prisons and county jails. FBI agents raided Rathbun's Lori Lane home Wednesday morning, looking for evidence from the April 2 attempted firebombing of Ruth's House, a Jewish-sponsored assisted living facility in Longmeadow, according to court records. The alleged attempt occurred six days before the start of Passover."

The Washington Post (4/16, Zauzmer) reports, "A Massachusetts man is accused of planting a homemade bomb at a Jewish assisted-living home, in an act that federal prosecutors say appears to have been motivated by online forums that encouraged violence against Jews." The Post adds, "The bomb did not go off and no one was injured. Authorities arrested John Michael Rathbun, 36, on Wednesday, two weeks after police found the incendiary device at the entrance to Ruth's House, the assisted-living facility in Longmeadow, Mass." Federal prosecutors in Massachusetts "connected Rathbun's alleged actions to a white supremacist group that they did not name, but said the FBI's Western Massachusetts Joint Terrorism Task Force has been

tracking it since March. The members of this group, prosecutors said, have discussed carrying out mass killings using explosive devices to target racial and religious minorities, including people worshiping at synagogues and mosques."

Subject: job description for grant

Condensed job description you requested for the Heroin/Meth grant:
Intelligence Analyst II

Establish criminal profiles on drug trafficking organization members via sophisticated searches into several law enforcement databases, open source and social media databases and through use of investigative software including, but not limited to: TLO, CLEAR, ISO, Facial Recognition, ALPR, CJISWeb, InmateWeb, MIDNet and OSINT. Run historical ALPR queries and create "hot lists" in the ALPR system in order to track particular drug trafficking organization vehicles in real time and determine narcotics trafficking patterns. Determine the structure and operation of criminal groups on a tactical level and identify criminal associations and relationships by performing various kinds of analyses to support investigative work and produce intelligence products such as link analyses, telephone toll analyses, timeline analyses, and any analyses through which data are integrated to determine the existence of networks and patterns.

Justification for Cellebrite renewal:

Cellebrite is the leader in forensic cell phone extractions and as a trained and certified examiner, it is incumbent upon the CINRET West unit to utilize an in-house analyst to perform cell phone extractions in a time-efficient manner to gain access to valuable intelligence related to narcotics investigations. It is imperative that the license be renewed as the program is updated multiples times a month to keep up to date with the ever-changing software and applications used on mobile devices. If the license is not renewed, we will not be able to update the software with critical updates. This can either lead to not being able to extract complete data from a device, or not being able to extract from a device at all.

Justification for computer:

I was hired by MSP in May 2020 to perform specific duties providing intelligence and investigative field support to the CINRET West Unit. The unit did not have a computer for me to perform my duties and six months later still has not received approval for a computer for me to perform my duties despite being awarded a multi-million dollar grant. Detective Lieutenant Loiselle let me use his old Panasonic CF-54 that was issued to him when he was in IA. This was intended to be a

temporary solution. The laptop is sufficient for basic duties using the internet, but is not sufficient for running I2 Analyst Notebook, RAMS, BOSS LPRs, and the internet at the same time. Since there were multiple previous users on this laptop, it was given to me with half of the available space.

Hi Sirs,

We have begun cutting over the MassPort LPR Cameras into the EOPSS BOSS LPR Server. Today, [redacted] at Airport Road arrivals were migrated and are now writing data to Chelsea. I will continue to cut the remaining cameras over in the next few days and weeks. I will advise when the project is complete.

>
> Regarding the Massport cameras; in the early days of AVL we [redacted] modem's in cruisers that did not have laptops. These cruisers now have Geo tab and no longer need the modem or data plan. Massport is currently paying for the data plan and bought the modems. Because Massport wants to move quickly to give us their data and knowing BOSS4.0 Is delayed; Why don't we ask Massport to let us use six of those modems and put one at each LPR Camera sector at Massport. We would next push the data back like we do everything else over Verizon. We wouldn't have to do any firewall work either because they have [redacted] and communicate like all of the MDT's . Once the back get squared away with the new boss we can revisit the networking. After we migrate everything to the new environment we would them cut the Massport cameras over to the LAN and then give them back their data plans and modems.
>
> We would however need to anticipate expanding the existing sand and run the risk of overburdening the server.
>
> Let me know what you think, Lieutenant Colonel Quinn and I could make the request to Massport if needed.

>> Subject: RE: MassPort LPR Cameras
>>
>> Good Morning,
>>
>> I was hoping to get us all on the same page regarding a proposal to push Massport LPR data to the existing DCJIS BOSS server in Chelsea. Some time ago we (MSP) engaged with Massport regarding Automated License

Plate Reader technology (LPR). As most of you know, MSP and DCJIS have been rolling out a very robust LPR network across the Commonwealth. This has been on going for the past several years. The LPR system has paid dividends in numerous criminal cases including crimes of violence, Amber and Silver alerts, and also in many missing/endangered/public well being events.
>>
>> Our communications with Massport started when we were made aware that they would be purchasing an LPR system. We worked with our counterparts at Massport to make sure that the two systems would be compatible so that information could be shared across all law enforcement agencies through the MSP Fusion Center. Towards that end Massport partnered with Neology for their solution. This is the same vendor used by MSP and DCJIS.
>>
>> Recently Massport has decided not to maintain its own ALPR BOSS database server. The database and application for LPR in Massachusetts is known as “BOSS” and is a Neology product. Massport would like to feed data from its cameras to the DCJIS BOSS server in Chelsea. Originally we had been discussing with Neology the potential for Massport’s cameras to write two records after scanning a plate, one to Massport BOSS and a duplicate to DCJIS BOSS. We think the current proposal to write all LPR records to the BOSS server located at DCJIS is a much better plan.
>>
>> MSP has a grant to upgrade the current the current BOSS v3.6 application which is at end of life and no longer supported to version v4.0. We have also submitted a Service Now ticket asking for hardware upgrade costs to the existing BOSS server which MSP will try to acquire funding to upgrade.
>>
>> I have received several calls from Massport looking to see where we are as far as being able to accept data from their cameras so that they can decommission their BOSS server. I believe their intent is to shut the Massport system down if the MSP and DCJIS are unable to accept the data. I have copied Hank Shaw from Massport into this thread in case I have misstated their intent.
>>
>> To access the Massport data we will need to be able to pass data from the Massport network to the state network much like we do with case management data. An alternative would be to use 4G modems (like we do with many of our mobile units and cruiser mounted units) on the state network, but this may be an unnecessary cost. Obviously this decision would be driven by the EOTSS and Massport network teams.
>>
>> I can’t overstate the value that LPR data from Massport would have for MSP and law enforcement in general. Cases involving terrorism, money laundering, and drug trafficking all have significant ties to the port. Being able to hotlist and search on LPR data from Massport facilities would be a significant addition to the MSP Division of Homeland Security’s technology tool set and would have immediate impact. Towards that end, we made be able to leverage Homeland Security grant funds for some of this project.
>>
>> Respectfully,

> Regarding the Massport cameras; in the early days of AVL we installed [redacted] modem's in cruisers that did not have laptops. These cruisers now have Geo tab and no longer need the modem or data plan. Massport is currently paying for the data plan and bought the modems. Because Massport wants to move quickly to give us their data and knowing BOSS4.0 Is delayed; Why don't we ask Massport to let us use six of those modems and put one at each LPR Camera sector at Massport. We would next push the data back like we do everything else over Verizon. We wouldn't have to do any firewall work either because they [redacted] and communicate like all of the MDT's . Once the back get squared away with the new boss we can revisit the networking. After we migrate everything to the new environment we would them cut the Massport cameras over to the LAN and then give them back their data plans and modems.
>
> We would however need to anticipate expanding the existing sand and run the risk of overburdening the server.
>
> Let me know what you think, Lieutenant Colonel Quinn and I could make the request to Massport if needed.

>> Subject: RE: MassPort LPR Cameras
>>
>> Good Morning,
>>
>> I was hoping to get us all on the same page regarding a proposal to push Massport LPR data to the existing DCJIS BOSS server in Chelsea. Some time ago we (MSP) engaged with Massport regarding Automated License Plate Reader technology (LPR). As most of you know, MSP and DCJIS have been rolling out a very robust LPR network across the Commonwealth. This has been on going for the past several years. The LPR system has paid dividends in numerous criminal cases including crimes of violence, Amber and Silver alerts, and also in many missing/endangered/public well being events.

>>
>> Our communications with Massport started when we were made aware that they would be purchasing an LPR system. We worked with our counterparts at Massport to make sure that the two systems would be compatible so that information could be shared across all law enforcement agencies through the MSP Fusion Center. Towards that end Massport partnered with Neology for their solution. This is the same vendor used by MSP and DCJIS.
>>
>> Recently Massport has decided not to maintain its own ALPR BOSS database server. The database and application for LPR in Massachusetts is known as “BOSS” and is a Neology product. Massport would like to feed data from its cameras to the DCJIS BOSS server in Chelsea. Originally we had been discussing with Neology the potential for Massport’s cameras to write two records after scanning a plate, one to Massport BOSS and a duplicate to DCJIS BOSS. We think the current proposal to write all LPR records to the BOSS server located at DCJIS is a much better plan.
>>
>> MSP has a grant to upgrade the current the current BOSS v3.6 application which is at end of life and no longer supported to version v4.0. We have also submitted a Service Now ticket asking for hardware upgrade costs to the existing BOSS server which MSP will try to acquire funding to upgrade.
>>
>> I have received several calls from Massport looking to see where we are as far as being able to accept data from their cameras so that they can decommission their BOSS server. I believe their intent is to shut the Massport system down if the MSP and DCJIS are unable to accept the data. I have copied Hank Shaw from Massport into this thread in case I have misstated their intent.
>>
>> To access the Massport data we will need to be able to pass data from the Massport network to the state network much like we do with case management data. An alternative would be to use 4G modems (like we do with many of our mobile units and cruiser mounted units) on the state network, but this may be an unnecessary cost. Obviously this decision would be driven by the EOTSS and Massport network teams.
>>
>> I can’t overstate the value that LPR data from Massport would have for MSP and law enforcement in general. Cases involving terrorism, money laundering, and drug trafficking all have significant ties to the port. Being able to hotlist and search on LPR data from Massport facilities would be a significant addition to the MSP Division of Homeland Security’s technology tool set and would have immediate impact. Towards that end, we made be able to leverage Homeland Security grant funds for some of this project.

>> We are looking to consolidate the MassPort ALPR cameras into the main EOPSS ALPR server. After evaluating a number of options purposed by Neology, this appears to be the simplest approach. There is already a network presence at the barracks and it should be easy to point the cameras towards the centralized server. I've spoken to Alex at MassPort and he can volunteer a camera for testing. We could monitor network and server impact. Are you available to discuss?

To: Alves, Joe
Cc: O'Leary, John F; Egnitz, Brian (POL)
Subject: FW: MassPort LPR Cameras
Date: Thursday, July 16, 2020 12:48:40 PM

Joe,

Thank you for getting back to me about the LPR work mentioned in the email thread below. I've been told that the remaining 2 locations are in areas that require Detail Support due to the length of time required to perform the work and the fact that partial lane closures are necessary.

Any information you could provide would be helpful so that we could figure out logistics (exact locations, how the detail areas will be set up and billing. As you can see, they would like to complete this work sometime in the next month.

I look forward to hearing from you.

Sgt Michael J. Chavis #0751
Paid Detail Office Supervisor
Mass. State Police – Logan International Airport
2 Service Road
East Boston, MA 02128

Subject: RE: MassPort LPR Cameras

Hi Sgt.,

Thanks for taking my call, as follow up:

- There are 2 sites remaining for cutover.
- I've included the MassPort IT contacts who can tell you specifically where the sites are located.
- I estimate the job to take between 2-6 hours per site.
- I'd like to do one site per day
- Afterhours would be preferred when traffic is lower and there are less eyeballs.
- Tuesday or Thursday eves are open for me now for the next 4 weeks
- A member of the Technical Services Unit will be onsite with me during the cutover in case we have a problem with one of the cameras (you do not need to include them in the detail, they will use TSU OT budget)

-Brian

Hi Major,

I have finished cutting over the LPR cameras that were accessible off the road. [redacted] cameras ([redacted] G.L. c. 4.sec. 7.cl.26 (n)(security) and needs inspection). [redacted] G.L. c. 4.sec. 7.cl.26 (n)(security) need lane closures. [redacted] G.L. c. 4.sec. 7.cl.26 (n)(security) [redacted] and [redacted] G.L. c. 4.sec. 7.cl.26 (n)(security) I estimate needing 2-5 hours per site. Lt. Crouse has offered to assist in lane closures using unmarked vehicles, how would you like to proceeded in completing the cut over of the remaining sites.

Thanks, Brian

>> Hi Jim,
>>
>> Regarding the Massport cameras; in the early days of AVL we installed [redacted] modem‘s in cruisers that did not have laptops. These cruisers now have Geo tab and no longer need the modem or data plan. Massport is currently paying for the data plan and bought the modems. Because Massport wants to move quickly to give us their data and knowing BOSS4.0 Is delayed; Why don’t we ask Massport to let us use six of those modems and put one at each LPR Camera sector at Massport. We would next push the data back like we do everything else over Verizon. We wouldn’t have to do any firewall work either because they have a 166. and communicate like all of the MDT‘s . Once the back get squared away with the new boss we can revisit the networking. After we migrate everything to the new environment we would them cut the Massport cameras over to the LAN and then give them back their data plans and modems.
>>
>> We would however need to anticipate expanding the existing sand and run the risk of overburdening the server.
>>
>> Let me know what you think, Lieutenant Colonel Quinn and I could make the request to Massport if needed.

>>> Good Morning,
>>>
>>> I was hoping to get us all on the same page regarding a proposal to push Massport LPR data to the existing DCJIS BOSS server in Chelsea. Some time ago we (MSP) engaged with Massport regarding Automated License Plate Reader technology (LPR). As most of you know, MSP and DCJIS have been rolling out a very robust LPR network across the Commonwealth. This has been

on going for the past several years. The LPR system has paid dividends in numerous criminal cases including crimes of violence, Amber and Silver alerts, and also in many missing/endangered/public well being events.
>>>
>>> Our communications with Massport started when we were made aware that they would be purchasing an LPR system. We worked with our counterparts at Massport to make sure that the two systems would be compatible so that information could be shared across all law enforcement agencies through the MSP Fusion Center. Towards that end Massport partnered with Neology for their solution. This is the same vendor used by MSP and DCJIS.
>>>
>>> Recently Massport has decided not to maintain its own ALPR BOSS database server. The database and application for LPR in Massachusetts is known as “BOSS” and is a Neology product. Massport would like to feed data from its cameras to the DCJIS BOSS server in Chelsea. Originally we had been discussing with Neology the potential for Massport’s cameras to write two records after scanning a plate, one to Massport BOSS and a duplicate to DCJIS BOSS. We think the current proposal to write all LPR records to the BOSS server located at DCJIS is a much better plan.
>>>
>>> MSP has a grant to upgrade the current the current BOSS v3.6 application which is at end of life and no longer supported to version v4.0. We have also submitted a Service Now ticket asking for hardware upgrade costs to the existing BOSS server which MSP will try to acquire funding to upgrade.
>>>
>>> I have received several calls from Massport looking to see where we are as far as being able to accept data from their cameras so that they can decommission their BOSS server. I believe their intent is to shut the Massport system down if the MSP and DCJIS are unable to accept the data. I have copied Hank Shaw from Massport into this thread in case I have misstated their intent.
>>>
>>> To access the Massport data we will need to be able to pass data from the Massport network to the state network much like we do with case management data. An alternative would be to use 4G modems (like we do with many of our mobile units and cruiser mounted units) on the state network, but this may be an unnecessary cost. Obviously this decision would be driven by the EOTSS and Massport network teams.
>>>
>>> I can’t overstate the value that LPR data from Massport would have for MSP and law enforcement in general. Cases involving terrorism, money laundering, and drug trafficking all have significant ties to the port. Being able to hotlist and search on LPR data from Massport facilities would be a significant addition to the MSP Division of Homeland Security’s technology tool set and would have immediate impact. Towards that end, we made be able to leverage Homeland Security grant funds for some of this project.
>>>

>>>
>>> Hi Jim,
>>>
>>> We are looking to consolidate the MassPort ALPR cameras into the main EOPSS ALPR server. After evaluating a number of options purposed by Neology, this appears to be the simplest approach. There is already a network presence at the barracks and it should be easy to point the cameras towards the centralized server. I've spoken to Alex at MassPort and he can volunteer a camera for testing. We could monitor network and server impact. Are you available to discuss?

Can we schedule last two cut overs for 5/28 & 5/29. In speaking with Maj. Ryan, a coordinated road closure via the detail office is warranted.

Thanks, Brian

Subject: FW: RE: ALPR Login
Date: Wednesday, February 12, 2020 4:03:57 PM

Lt I am just following up on my e-mail (see below) to see if you have had any time to look at my account.

Thank you,

Mike

Subject: RE: ALPR Login

Daniel, Det. Lundegren gave me the info to setup my account, I got as far as the Login screen but the password was rejected 3 times and it looks like it kicked me out?
I used 3282$Ypd & $Ypd3282 but neither worked.

Any help would be great.

Thank you

Mike

Subject: RE: Workflow

I think if you could take some of your work for that day from start to finish and walk us through it, that would be very helpful. I also have a list of things you do when we had to write it for the 960's. They want to know about all processes and duties so if there is something you don't do on a regular basis that's important, you may want to note it so that we cover it.

This is what I have below. I think its more the processes vs the what.

Chris Neville

- Intake, review, editing and redistribution of incoming email and outgoing intelligence to aid local investigators in identifying suspects and patterns of criminal activity to upwards of 2,000 individual recipients 365 days a year.
- Annual selective distribution by county, of approximately 4,000 emails to the email network which includes representatives of almost every State, Local and Federal Agency in Eastern and Central MA, neighboring states, Bank Industry Security Professionals and Retail Asset Protection Professionals.
- Participation in area detective's meetings to share intelligence regarding crimes and arrests of regional significance.
- Comprehensive review and re-distribution in excel spreadsheet format of Pawnshop Information provided by more than a dozen local agencies including highlighting of persons of interest.
- Statewide liaison to NABI (National Association of Bunco Investigators).
- Review and redistribution of Intelligence published by NESPIN and NEORCA.
- Complete responsibility for the addition, subtraction and update of email addresses stored in the 'listserv manager".
- Maintenance, upkeep and distribution of a home-grown Area Wide Detectives Contact List with email and telephone contact information from 1,800 sources.
- Routine access to CJIS systems to perform RMV, CJIS and NCIC related inquiries from law enforcement.

- Routine access to Coplink and other data sources (TLO) to assist local detectives in providing photographs, known associates, associated vehicles and prior incidents while assisting in investigations pertaining to email traffic.

- Routine access and review of ALPR's to provide investigative assistance and documentation to local Law Enforcement, specifically in connection with Organized Crime organizations based out of State but operating in MA and the surrounding New England States.

- Daily review of Area Crime Bulletins from municipal agencies including the BRIC, Cambridge, Everett, Lynn, and others as they are distributed. (Many of whom re-post information previously distributed on Macrimenet).

- Guest presenter to new area detectives providing an overview of what services the CFC provides for local law enforcement.

- Participation in area intelligence sharing meetings specifically directed to targeted crimes such as ATM B&E's, Robberies, Regional Check Frauds or outbreaks of commercial or residential B&Es.

- Daily review of national Crimedex Alerts to ascertain links to other incidents occurring across the country. (ie: Panera Bread Thefts, Felony Lane Gang, and Transient Scams).

Subject: Comm v. McCarthy - locating D's MV with ALPRs on Bourne/Sagamore Bridges not a search

Chiefs:
Commonwealth v. McCarthy (SJC-12750)← click on that link to see the case
In this case the SJC ruled that police tracking D's car using 4 automatic license plate readers (ALPRs) at both ends of the Bourne and Sagamore Bridges was too limited to amount to a constitutional "search." The SJC declined to say exactly how detailed digital surveillance would have to be to constitute a search leaving that issue for future cases.

State Police maintain ALPRs including ones at both ends of the Bourne and Sagamore Bridges. (p.3) The ALPRs photograph vehicles' license plates; that data along with the date and time of the sighting is retained by EOPS for a year. (p.3-4) Authorized users including police may put a license plate number on a "hot list " and receive an alert if that plate is sighted; reasons to put someone on the "hot list" include not only criminal investigations but also Amber alerts missing persons and BOLO alerts. (p. 3 25 n.13)

Through surveillance controlled buys and information from 4 Cis Barnstable police suspected that the co-D was se ling heroin out of his house in Barnstable. (p.4) Police saw a black Hyundai driven by D visit there briefly so they suspected that D was the co-D's supplier. Police put the Hyundai's license plate number on the State Police ALPR "hot list " so that they'd be notified whenever the Hyundai crossed one of the bridges. (p.5) After getting an alert that the Hyundai had crossed onto the Cape police followed both the Hyundai and the co-D to the buy location on a quiet residential street where D and co-D met for about 30 seconds but police could not see a physical exchange. (p.5) From the ALPR data police generated a spreadsheet showing that in mid-winter the Hyundai had crossed the bridges dozens of times sometimes more than once a day adding to police suspicion that D was the heroin supplier. (p.5-6) When police got a second alert that the Hyundai had crossed onto the Cape they again followed D and co-D to the buy location and saw a 60-second meeting but could not see any exchange. This time police stopped both cars handcuffed both co-D and D and read them Miranda. On co-D police found heroin; on D police found 2 cell phones and cash. (p.6-7) At the station police repeatedly told D he was "not under arrest " and D made statements.

D moved to suppress the ALPR data his statements and evidence obtained from the stop. A Superior Court judge found that the moment of arrest was when D and co-D were handcuffed at the scene of the traffic stop but denied the motion to suppress. (p.33) The SJC upheld the denial.

ALPRs and expectation of privacy in digital surveillance At some length the SJC discussed the constitutional issues raised by digital surveillance. (p.7-29) Police conduct amounts to a search if: (1) it intrudes on a D's expectation of privacy and (2) society is willing to recognize the expectation of privacy as reasonable. Here the SJC ruled D did have an expectation of privacy because D and co-D chose a buy location in a quiet residential area. (p.8 n.5) As to what expectation of privacy society recognizes as reasonable with regard to digital surveillance the SJC was guided by historical understandings of what was an unreasonable search and seizure when the U.S. and Mass. Constitutions were adopted in the late 1700s in reaction to redcoats' rummaging without restraint through colonists' homes. (p.8-10) New technologies like ALPRs raise difficult legal issues because they are easier and less expensive for police than traditional surveillance can be done secretly and permit police to search back in time for a vehicle's movements even before po ice suspicion arose. (p.11-14) Society does not recognize as reasonable an expectation of privacy in what someone knowingly exposes" to public view like a license plate – which by statute must be "displayed conspicuously." (p.15-16 & n.8) In older cases involving less advanced technology courts have held that a D did not have an expectation of privacy in contents of a phone conversation in a phone booth or a radio beeper" tracking a single journey. (p.14-17) But technology like ALPRs GPS and CSLI are different because they may give police a **mosaic** of information where each piece may be public but when viewed together they create a picture that implicates someone's privacy interests like their political re gious or sexual associations. (p.17-21) The SJC was concerned that with enough ALPRs police could track someone's location everywhere which would be "creepy." (p.25) Exigent circumstances would likely justify using an ALPR in a situation involving an Amber alert or missing person. (p.25 n.13) The D urged the SJC to consider not just these four ALPRs on the Bourne and Sagamore Bridges but the hundreds of ALPRs across Massachusetts; the SJC declined to do so because that evidence is not in the record of this case. (p.26) The **limited number of cameras** here and their placements on the bridges was not enough to give D an expectation of privacy that society would recognize as reasonable. (p.26) The SJC declined to say how much digital surveillance would give such an expectation and admitted that its unwillingness to do so "**may bring some interim confusion**" until further cases develop the law on this issue. (p.28 n.15) Chief Justice Gants wrote a separate concurrence suggesting that one thing the SJC could do is to require police who want to search a vast amount of digital data to apply for a court order supported by an affidavit showing reasonable suspicion to do so. (concurrence p.3) This would be like a SW but with a lower standard than PC.

Written policy The SJC rejected D's argument that Barnstable PD should have had a written policy about ALPRs and the MSP policy on which Barnstable relied was not specific enough. (p.30) Written policies are required to justify certain exceptions to the SW requirement (like inventory searches and sobriety checkpoints) – they do not apply to the threshold question whether a search occurred in the first place. (p.31)

Miranda issues At the station police repeatedly told D that D was "not under arrest." But the motion judge found that the moment of arrest was when police handcuffed D at the traffic stop. (p.33) D argued that his statements should be suppressed because police tel ing him he was not under arrest amounted to "deceit or trickery" to get D to confess. The motion judge and the SJC rejected that argument saying that even if telling D he was not under arrest amounted to deceit or trickery it was just one factor to be used in determining voluntariness.

Bottom line: Police use of ALPRs at limited locations is not a constitutional search – but we don't know how many locations it'd have to be to amount to one. Using an ALPR in **exigent circumstances** like an Amber Alert is likely OK. Local police don't need a written policy to use ALPRs maintained by MSP. After a D has been handcuffed police should not tell D that D is "not under arrest" – po ice will likely be accused later of deceit and trickery.

A thought: There are news stories online that cell phones may be used to do contact tracing for people exposed to COVID-19. If lots of people willingly agree to let their cell phone data be used to track their whereabouts would that ever change courts' view of what society recognizes as a reasonable expectation of privacy? At some point if members of the public come to expect that they're being tracked should police be allowed to use that evidence too? Or at the very least should there be a jury instruction explaining that police have less access to the data than other entities (like software companies or public health agencies)?

As always email me with any questions. Wash your hands!

The SJC declined to say exactly how detailed digital surveillance would have to be to constitute a search leaving that issue for future cases.

State Police maintain ALPRs including ones at both ends of the Bourne and Sagamore Bridges. (p.3) The ALPRs photograph vehicles' license plates; that data along with the date and time of the sighting is retained by EOPS for a year. (p.3-4) Authorized users including police may put a license plate number on a "hot list " and receive an alert if that plate is sighted; reasons to put someone on the "hot list" include not only criminal investigations but also Amber alerts missing persons and BOLO alerts. (p. 3 25 n.13)

Through surveillance controlled buys and information from 4 Cis Barnstable police suspected that the co-D was se ling heroin out of his house in Barnstable. (p.4) Police saw a black Hyundai driven by D visit there briefly so they suspected that D was the co-D's supplier. Police put the Hyundai's license plate number on the State Police ALPR "hot list " so that they'd be notified whenever the Hyundai crossed one of the bridges. (p.5) After getting an alert that the Hyundai had crossed onto the Cape police followed both the Hyundai and the co-D to the buy location on a quiet residential street where D and co-D met for about 30 seconds but police could not see a physical exchange. (p.5) From the ALPR data police generated a spreadsheet showing that in mid-winter the Hyundai had crossed the bridges dozens of times sometimes more than once a day adding to police suspicion that D was the heroin supplier. (p.5-6) When police got a second alert that the Hyundai had crossed onto the Cape they again followed D and co-D to the buy location and saw a 60-second meeting but could not see any exchange. This time police stopped both cars handcuffed both co-D and D and read them Miranda. On co-D police found heroin; on D police found 2 cell phones and cash. (p.6-7) At the station police repeatedly told D he was "not under arrest " and D made statements.

D moved to suppress the ALPR data his statements and evidence obtained from the stop. A Superior Court judge found that the moment of arrest was when D and co-D were handcuffed at the scene of the traffic stop but denied the motion to suppress. (p.33) The SJC upheld the denial.

ALPRs and expectation of privacy in digital surveillance At some length the SJC discussed the constitutional issues raised by digital surveillance. (p.7-29) Police conduct amounts to a search if: (1) it intrudes on a D's expectation of privacy and (2) society is willing to recognize the expectation of privacy as reasonable. Here the SJC ruled D did have an expectation of privacy because D and co-D chose a buy location in a quiet residential area. (p.8 n.5) As to what expectation of privacy society recognizes as reasonable with regard to digital surveillance the SJC was guided by historical understandings of what was an unreasonable search and seizure when the U.S. and Mass. Constitutions were adopted in the late 1700s in reaction to redcoats' rummaging without restraint through colonists' homes. (p.8-10) New technologies like ALPRs raise difficult legal issues because they are easier and less expensive for police than traditional surveillance can be done secretly and permit police to search back in time for a vehicle's movements even before po lice suspicion arose. (p.12-14) Society does not recognize as reasonable an expectation of privacy in what someone knowingly exposes" to public view like a license plate – which by statute must be "displayed conspicuously." (p.15-16 & n.8) In older cases involving less advanced technology courts have held that a D did not have an expectation of privacy in contents of a phone conversation in a phone booth or a radio beeper" tracking a single journey. (p.14-17) But technology like ALPRs GPS and CSLI are different because they may give police a **mosaic** of information where each piece may be public but when viewed together they create a picture that implicates someone's privacy interests like their political re ligious or sexual associations. (p.17-21) The SJC was concerned that with enough ALPRs police could track someone's location everywhere which would be "creepy." (p.25) Exigent circumstances would likely justify using an ALPR in a situation involving an Amber alert or missing person. (p.25 n.13) The D urged the SJC to consider not just these four ALPRs on the Bourne and Sagamore Bridges but the hundreds of ALPRs across Massachusetts; the SJC declined to do so because that evidence is not in the record of this case. (p.26) The **limited number of cameras** here and their placements on the bridges was not enough to give D an expectation of privacy that society would recognize as reasonable. (p.26) The SJC declined to say how much digital surveillance would give such an expectation and admitted that its unwillingness to do so "**may bring some interim confusion**" until further cases develop the law on this issue. (p.28 n.15) Chief Justice Gants wrote a separate concurrence suggesting that one thing the SJC could do is to require police who want to search a vast amount of digital data to apply for a court order supported by an affidavit showing reasonable suspicion to do so. (concurrence p.3) This would be like a SW but with a lower standard than PC.

Written policy The SJC rejected D's argument that Barnstable PD should have had a written policy about ALPRs and the MSP policy on which Barnstable relied was not specific enough. (p.30) Written policies are required to justify certain exceptions to the SW requirement (like inventory searches and sobriety checkpoints) – they do not apply to the threshold question whether a search occurred in the first place. (p.31)

Miranda issues At the station police repeatedly told D that D was "not under arrest." But the motion judge found that the moment of arrest was when police handcuffed D at the traffic stop. (p.33) D argued that his statements should be suppressed because police tel ling him he was not under arrest amounted to "deceit or trickery" to get D to confess. The motion judge and the SJC rejected that argument saying that even if telling D he was not under arrest amounted to deceit or trickery it was just one factor to be used in determining voluntariness.

Bottom line: Police use of ALPRs at limited locations is not a constitutional search – but we don't know how many locations it'd have to be to amount to one. Using an ALPR in **exigent circumstances** like an Amber Alert is likely OK. Local police don't need a written policy to use ALPRs maintained by MSP. After a D has been handcuffed police should not tell D that D is "not under arrest" – po ice will likely be accused later of deceit and trickery.

A thought: There are news stories online that cell phones may be used to do contact tracing for people exposed to COVID-19. If lots of people willingly agree to let their cell phone data be used to track their whereabouts would that ever change courts' view of what society recognizes as a reasonable expectation of privacy? At some point if members of the public come to expect that they're being tracked should police be allowed to use that evidence too? Or at the very least should there be a jury instruction explaining that police have less access to the data than other entities (like software companies or public health agencies)?

As always email me with any questions. Wash your hands!

Michelle and Kyra,
This purchase request is for equipment to allow Mass Port Sierra Wireless modems to communicate directly with the existing ALPR Boss server in Chelsea. This is the fastest way to bring the Massport LPR cameras on line. EOTSS and EOPSS are OK with this solution as is Major Deb Ryan, the CO at Troop F.
As you can see from the thread, this has been going on for some time. I think we can close it out with this small purchase.
This does not resolve the replacement of the existing ALPR equipment that we discussed at Command Staff yesterday. That is a different issue.

Thanks Jim,
I've reached out to Alex regarding the below and he is fine with the approach. I will coordinate with him and begin cutting over the cameras. I need [redacted] wireless AC adapters and [redacted] I have reached out to BCM for a quote.
I have also requested permission from MSP at MassPort to remove the devices and assist with scheduling. Our Technical Services Unit will remove the devices once approved.
I plan to cut one sector ([redacted]) over at a time and monitor the server, we may need to shrink our retention if we run up against storage constraints. Can you please see if the SAN can support additional storage and if it can be added?

Subject: Re: MassPort LPR Cameras
Hi Jim,
Regarding the Massport cameras; in the early days of AVL we installed [redacted] modem's in cruisers that did not have laptops. These cruisers now have Geo tab and no longer need the modem or data plan. Massport is currently paying for the data plan and bought the modems. Because Massport wants to move quickly to give us their data and knowing BOSS4.0 Is delayed; Why don't we ask Massport to let us use six of those modems and put one at each LPR Camera sector at Massport. We would next push the data back like we do everything else over Verizon. We wouldn't have to do any firewall work either because they have a [redacted] communicate like all of the MDT's . Once the back get squared away with the new boss we can revisit the networking. After we migrate everything to the new environment we would them cut the Massport cameras over to the LAN and then give them back their data plans and modems.
We would however need to anticipate expanding the existing sand and run the risk of overburdening the server.
Let me know what you think, Lieutenant Colonel Quinn and I could make the request to Massport if needed.

Subject: RE: MassPort LPR Cameras
Good Morning,
I was hoping to get us all on the same page regarding a proposal to push Massport LPR data to the existing DCJIS BOSS server in Chelsea. Some time ago we (MSP) engaged with Massport regarding Automated License Plate Reader technology (LPR). As most of you know, MSP and DCJIS have been rolling out a very robust LPR network across the Commonwealth. This has been on going for the past several years. The LPR system has paid dividends in numerous criminal cases including crimes of violence, Amber and Silver alerts, and also in many missing/endangered/public well being events.
Our communications with Massport started when we were made aware that they would be purchasing an LPR system. We worked with our counterparts at Massport to make sure that the two systems would be compatible so that information could be shared across all law enforcement agencies through the MSP Fusion Center. Towards that end Massport partnered with Neology for their solution. This is the same vendor used by MSP and DCJIS.
Recently Massport has decided not to maintain its own ALPR BOSS database server. The database and application for LPR in Massachusetts is known as “BOSS” and is a Neology product. Massport would like to feed data from its cameras to the DCJIS BOSS server in Chelsea. Originally we had been discussing with Neology the potential for Massport’s cameras to write two records after scanning a plate, one to Massport BOSS and a duplicate to DCJIS BOSS. We think the current proposal to write all LPR records to the BOSS server located at DCJIS is a much better plan.
MSP has a grant to upgrade the current the current BOSS v3.6 application which is at end of life and no longer supported to version v4.0. We have also submitted a Service Now ticket asking for hardware upgrade costs to the existing BOSS server which MSP will try to acquire funding to upgrade.
I have received several calls from Massport looking to see where we are as far as being able to accept data from their cameras so that they can decommission their BOSS server. I believe their intent is to shut the Massport system down if the MSP and DCJIS are unable to accept the data. I have copied Hank Shaw from Massport into this thread in case I have misstated their intent.

To access the Massport data we will need to be able to pass data from the Massport network to the state network much like we do with case management data. An alternative would be to use 4G modems (like we do with many of our mobile units and cruiser mounted units) on the state network, but this may be an unnecessary cost. Obviously this decision would be driven by the EOTSS and Massport network teams.
I can't overstate the value that LPR data from Massport would have for MSP and law enforcement in general. Cases involving terrorism, money laundering, and drug trafficking all have significant ties to the port. Being able to hotlist and search on LPR data from Massport facilities would be a significant addition to the MSP Division of Homeland Security's technology tool set and would have immediate impact. Towards that end, we made be able to leverage Homeland Security grant funds for some of this project.
Respectfully,
Lieutenant Colonel Dermot J. Quinn #1765 Division Commander Division
of Homeland Security & Preparedness Massachusetts State Police

Hi Jim,
We are looking to consolidate the MassPort ALPR cameras into the main EOPSS ALPR server. After evaluating a number of options purposed by Neology, this appears to be the simplest approach. There is already a network presence at the barracks and it should be easy to point the cameras towards the centralized server. I've spoken to Alex at MassPort and he can volunteer a camera for testing. We could monitor network and server impact. Are you available to discuss?
Thanks Brian

I've looped in the network and server team from TSS on the thread. Maybe we can schedule a call in the next week. For an estimate on impact, the Caper cameras do between 80,000 to 120,000 per day. We average 337,944 reads per day.

Subject: MassPort LPR Cameras

Brian,

Thank you again for taking my call today. As discussed, I would like to explore the opportunity to swing all LPR cameras at Logan directly to the MSP BOSS server without the need for the InStation solution. My understanding is that the EOPSS network resides in both the [redacted] well as the [redacted] I would propose that we extend

this network via Layer 2 to the main locations that the LPR system terminates to and cut the entire LPR network at MassPort over to EOPSS. Most of the [redacted] are fed to [redacted] network locations. MassPort can supply the necessary fiber paths and switch gear required to extend the EOPSS network to these locations. Currently we have [redacted] in production, with another [redacted] to come online within the next two months. I anticipate this number growing to approximately [redacted] within our campus over the next year. Let me know what you think the appropriate next steps would be.

Respectfully,

~Alex

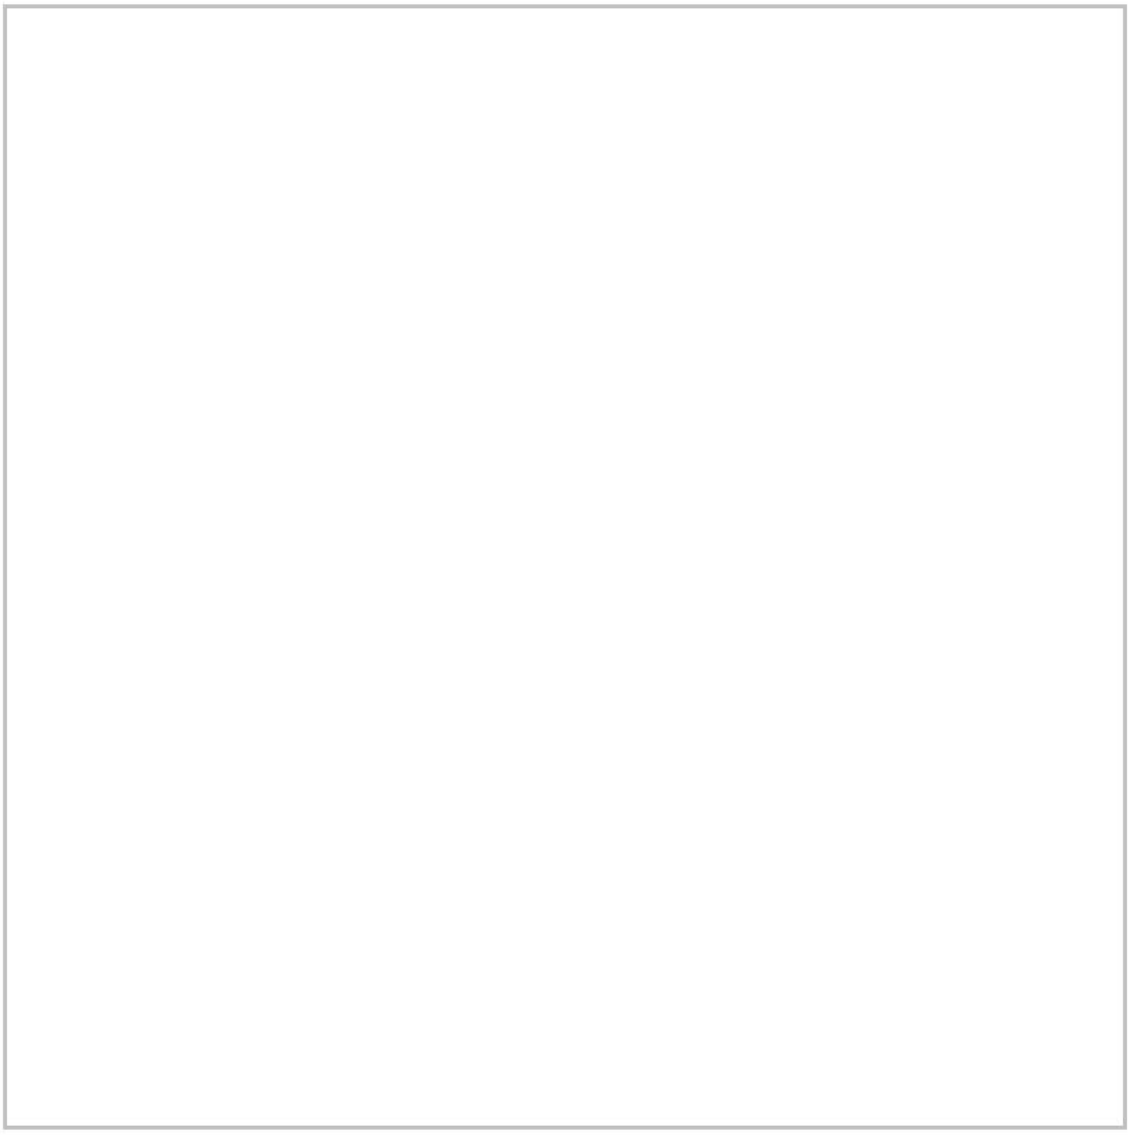
THOUGHT FOR THE DAY

"It's a new day!
Let go of old issues, relationships,
or apprehensions that are holding you back.
Decide to move forward
using the knowledge you've gained,
from your failures and triumphs,
while making room for new accomplishments.

Cleaning isn't just good for your house,
it's healthy for your mind.
Adopt the attitude that you can
and will achieve your dreams,
because it's true.
You have greatness within you!"
~ Les Brown



Can courts do more to force FOID card violators to give up their guns? Cook and DuPage counties considering how following Tribune report.

Cook County Sheriff Tom Dart is calling for changes in how the judicial system handles defendants with revoked gun licenses following a Tribune investigation into the ballooning backlog of people declared too dangerous to own firearms

and the state's failure to address it. The move comes after the Tribune highlighted the story of Christopher Miller, a Joliet man who fatally shot his 18-month-old son, Colton, with a gun he should have relinquished after having his firearm owner's identification card revoked more than a year earlier. According to a Tribune analysis, Miller was among the more than 70% of revoked FOID permit holders statewide who ignored police orders to account for their weapons.

During his 20 months on the revocation list, Miller appeared before judges in two separate counties on criminal charges and never once was asked if he complied. No one at the hearings — one in DuPage County and one in Cook County — ordered the Illinois National Guardsman to give up the multiple firearms he kept in violation of state law.

LAPD automatic license plate readers pose a massive privacy risk, audit says

The Los Angeles Police Department and three other California law enforcement agencies have not provided sufficient privacy protections for the hundreds of millions of images collected by automated license plate readers and shared with other jurisdictions, the state auditor said Thursday. Most of the images collected by the devices are unrelated to criminal cases. The audit found that 99.9% of the 320 million images the LAPD stored came from vehicles that were not on a list of those involved in criminal investigations when the image was made by the automated license plate readers, or ALPR. State Auditor Elaine Howle said in a letter to Gov. Gavin Newsom and the Legislature that changes were needed to better safeguard the privacy of license plate data collected by the Fresno Police Department, Marin County Sheriff's Office, Sacramento

County Sheriff's Office and LAPD."Local law enforcement agencies did not always follow practices that adequately consider the individual's privacy in handling and retaining the ALPR images and associated data," the audit said. "None of the agencies have an ALPR usage and privacy policy that implements all the legally mandated — since 2016 — requirements."

OUAGADOUGOU, Burkina Faso (AP) — Gunmen killed 24 civilians, including a church pastor, and kidnapped three others on Sunday in Burkina Faso, an official said. It was the latest attack against a religious leader in the increasingly unstable West African nation. The mayor of Boundore commune, Sihanri

Osangola Brigadie, said the attack occurred in the town of Pansi in Yagha province. The roughly 20 attackers separated men from women close to a Protestant church. At least 18 other people were injured. “It hurt me when I saw the people,” Brigadie said after visiting some of the victims in the hospital in Dori town, 180 kilometers (110 miles) from the attack. The gunmen looted oil and rice from shops and forced the three youth they kidnapped to help transport it on their motorbikes, he said.

Both Christians and Muslims were killed before the church was set on fire, said a government security official in Dori who spoke on condition of anonymity because they weren’t authorized to speak to the media.

HONOLULU (AP) — Police in Hawaii are investigating the theft of fruit valued

at about $1,000 including durian, which is known for its powerful odor. Two men entered a property in Hilo on the Big Island and removed 18 durian and other types of fruit on the night of Feb. 1, the Hawaii Police Department said. Authorities released a surveillance camera image of two suspects and asked the public for additional information that could lead to the capture of the fruit bandits. The tropical, spiky durian fruit resembles a small porcupine and typically weighs from 2 to 7 pounds (1 to 3 kilograms). Durian is known for a pale yellow flesh with a sweet taste but a smell that has been compared to moldy cheese, rotten onions, dead fish and far worse. Durian is popular across Southeast Asia but also is commonly banned from hotel rooms and public transportation there.

White Mountain Apache Police Officer David Kellywood shot, killed Monday morning

FORT APACHE INDIAN RESERVATION (3TV/CBS 5) -- A White Mountain Apache Police Department officer was killed early Monday morning. Releasing information on behalf of the White Mountain Apache Tribe and Governing Body, the Navajo County Sheriff's Office said the White Mountain Apache Police Department received a report of gunfire near the Hon-Dah Resort Casino shortly before 1 a.m. The first officer on the scene found the man described in that call.

[VIDEO: News conference on shooting death of Officer David Kellywood]

"The subject immediately engaged in a violent, physical altercation with the officer, during which, the officer was shot," NCSO said in news release. "A second responding officer arrived shortly after, and fearing for his life and the public's safety, shot the suspect."

Georgia Sheriff's Deputy Hits Another Deputy on Head With Flashlight

RICHMOND COUNTY, Georgia -- Richmond County Sheriff Richard Roundtree says an altercation involving two deputies at the scene of a Friday shooting was a "heat of the moment" incident that is "embarrassing" to the department.
Deputy Brandon Keathley hit Deputy Nicholas Nunes on the head with a flashlight as they tried to attend to a shooting victim at a convenience store. Both were later disciplined. Nunes and Keathley got into the altercation after responding to Circle K in the 2800 block of Peach Orchard Road, where Deangelo Burns, 17, was taken after being shot on Abelia Drive.
At a news conference Tuesday, Roundtree said Keathley and a trainee were the first to arrive and found Burns inside a vehicle. He was removed and deputies began to administer aid. Nunes arrived shortly afterward and tried to take over the situation, Roundtree said. Keathley told Nunes to step back

because deputies already there were assessing the victim's injuries.

Suspended Ashland police chief files lawsuit against city, mayor

ASHLAND. Mo. (KMIZ) Ashland's suspended police chief filed a lawsuit against the City of Ashland and its mayor on Monday after city officials placed him on administrative leave. According to the lawsuit filed in Boone County court, Mayor Gene Rhorer removed Police Chief Lyn Woolford as city administrator and suspended him as chief after Woolford refused to remove Rhorer's girlfriend from Rhorer's home. Since there was no threat of violence Woolford refused to intervene, but sent officers to "keep the peace," the lawsuit

says. The petition states that since this incident Rhorer has taken "retaliatory action" by firing Woolford as city administrator and then by placing him on administrative leave.

How suburban police departments are courting minority recruits

Ever since Pradeep Singh Deol was old enough to dress up for Halloween, his costume of choice was a police uniform. A Buffalo Grove High School alumnus, Deol now is one of just three Sikh law enforcement professionals in the suburbs. Unwittingly, his lifelong passion has made him the poster child for departments seeking to diversify their ranks. A few suburban police

departments are recruiting in earnest within the Sikh, Muslim, Hindu, and other minority communities to better mirror and serve the growing racial and ethnic diversity of the suburbs. Others are using a common recruitment tactic -- hitting up high school and college campuses. That was the kind of connection that lured Deol, 28, who now is a Prospect Heights police officer. He said his first impressions of law enforcement were drawn from engaging with his school's resource officer and from participation in Drug Abuse Resistance Education and another youth program offered by Wheeling Police Department.

Las Vegas restaurants show officers support after bizarre incident

UPDATE 11 P.M. Two local establishments, Distill and Remedy's, are offering free meals to all officers in uniform from midnight to 8 a.m. through Feb. 21 at all of their locations in the Las Vegas valley after earlier reports had officers not being served at a competitor's bar and grill.

ORIGINAL STORY LAS VEGAS (KTNV) -- 13 Investigates has learned that two uniformed police officers with the Las Vegas Metropolitan Police Department were denied service Thursday night at The Lodge at Cactus near Cactus Avenue and Southern Highlands Parkway. A post about the incident has received a lot of attention on social media. The graveyard police officers

had gone into the restaurant for food and the bartender reportedly told them that the restaurant did not serve "you guys" anymore. The police union sent its membership a letter earlier today that called the incident disgusting and offensive.
13 Investigates was able to confirm that there was an incident and The Lodge has since apologized.

"TEDDY BEAR" POLICE OFFICER ADDS SAFETY AND POSTIVITY TO SOUTHERN ELEMENTARY

Chief Shannon Clem sees Officer Mark Branham, with utmost respect, as a

teddy bear.

Mayor Ron Stinson calls Branham “a home run.” Southern Elementary Principal Mark Hegyi sees Branham as another element of security in a place where no one should feel unsafe. Branham? Branham sees himself as a someone who is made for the job. Branham recently returned to the Falmouth Police Department after 17 years with the Alexandria Police where he spent four years as a school resource officer for Campbell County Middle School, Day Treatment, and Campbell Ridge Elementary, respectively. He is not unfamiliar with the area. He worked with the department for 11 months in the early 2000s, but this time, he has more experience under his belt, and a lot of experience is in the SRO position. Almost as soon as he walked into the job, he saw where he was most needed and where he would have the most impact: Southern Elementary.

THOUGHT FOR THE DAY

**“Fear does not stop death.
It stops life.
And worrying
does not take away tomorrow’s troubles.
It takes away today’s peace.”**

Michigan officials look at banning guns inside state capitol after armed 'reopen' protests

John Truscott (R), vice chairman of the Michigan State Capitol Commission, said the body, which is charged with managing and maintaining the state Capitol and surrounding grounds, is looking into a possible gun ban inside the building after protesters entered the state Capitol brandishing firearms last week.

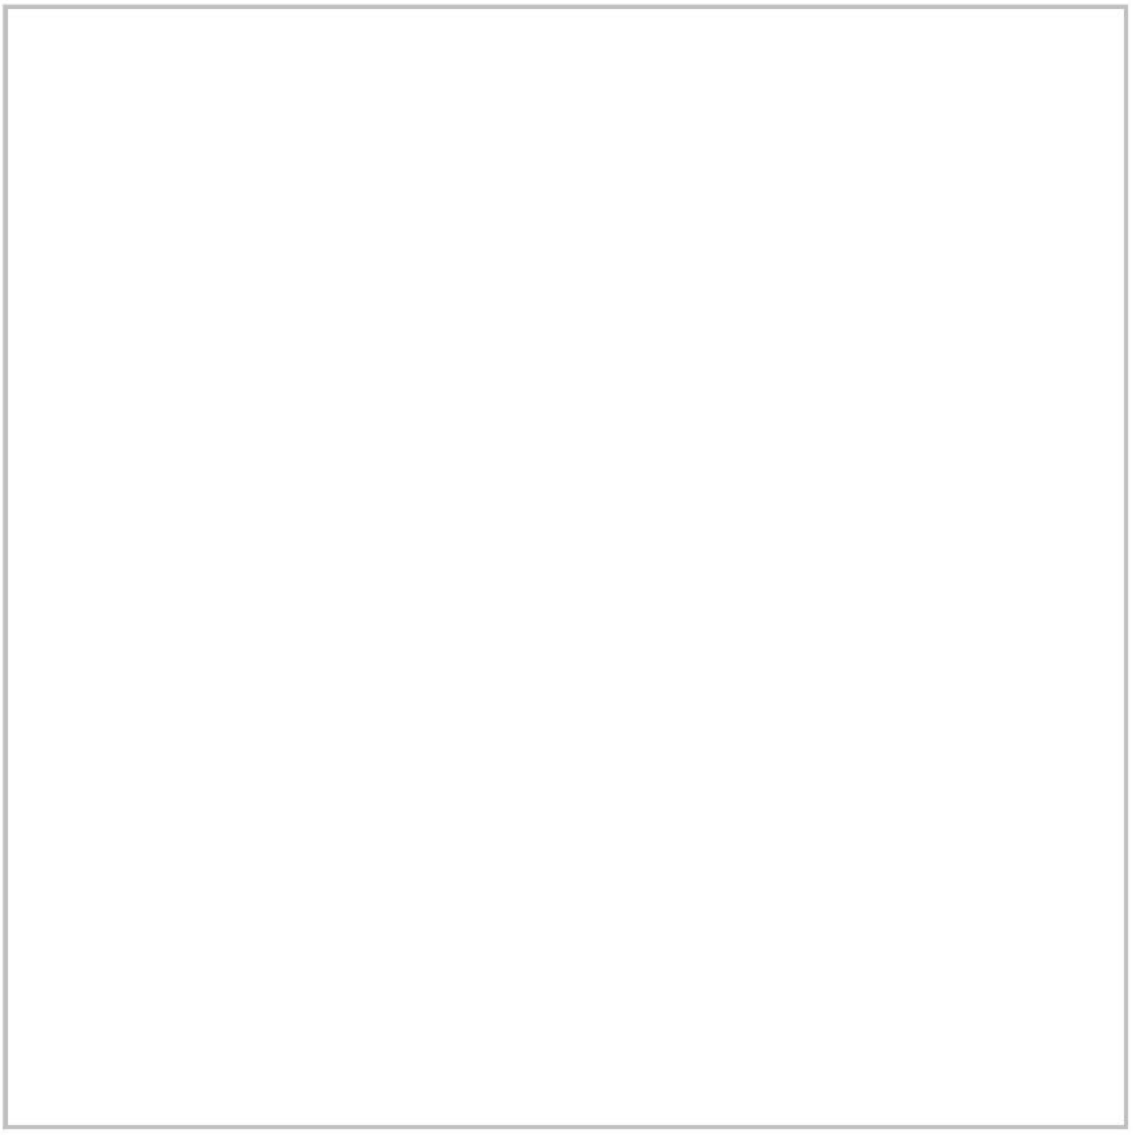
Truscott told the Detroit Free Press on Tuesday that the commission is reviewing a century-old open carry law and seeking legal help to determine whether the body has the power to implement such a ban.

"We'll be getting a more comprehensive briefing at our meeting on Monday," he told the paper.

"One way to easily deal with this would be to pass a law," he also told the paper.

However, the commission — which consists of the secretary of the state

Senate, the clerk of the state House, two individuals appointed by the secretary and clerk, and two individuals appointed by the governor — is not able to pass such legislation.



The Hill has reached out to Truscott for further comment.

His remarks come after hundreds of demonstrators, some of whom were armed, descended on the state Capitol last week to protest Michigan Gov. Gretchen Whitmer's (D) stay-at-home order.

In footage of the demonstration, which was dubbed the "American Patriot Rally," protesters could be seen carrying firearms inside the statehouse and calling for lawmakers to reopen businesses that had been closed temporarily during the pandemic. Some protesters also could be seen with Confederate flags and swastikas.

Whitmer on Sunday condemned the protests, which she said "depicted some of the worst racism and awful parts of our history in this country."

"The behavior you've seen in all of the clips is not representative of who we are in Michigan," she also said.

Law enforcement left in limbo during legal battle between Whitmer, legislature

There is nothing normal about the times we are living in as a result of the COVID-19 pandemic and now law enforcement has had another curveball throw at them.

Gov. Gretchen Whitmer late Thursday issued directives both proclaiming that the coronavirus emergency continues under a 1945 law and declaring new states of emergency and disaster under a 1976 law after lawmakers refused her request for a 28-day extension. The declarations are the foundation of her stay-home order and other measures to curb the spread of the virus.

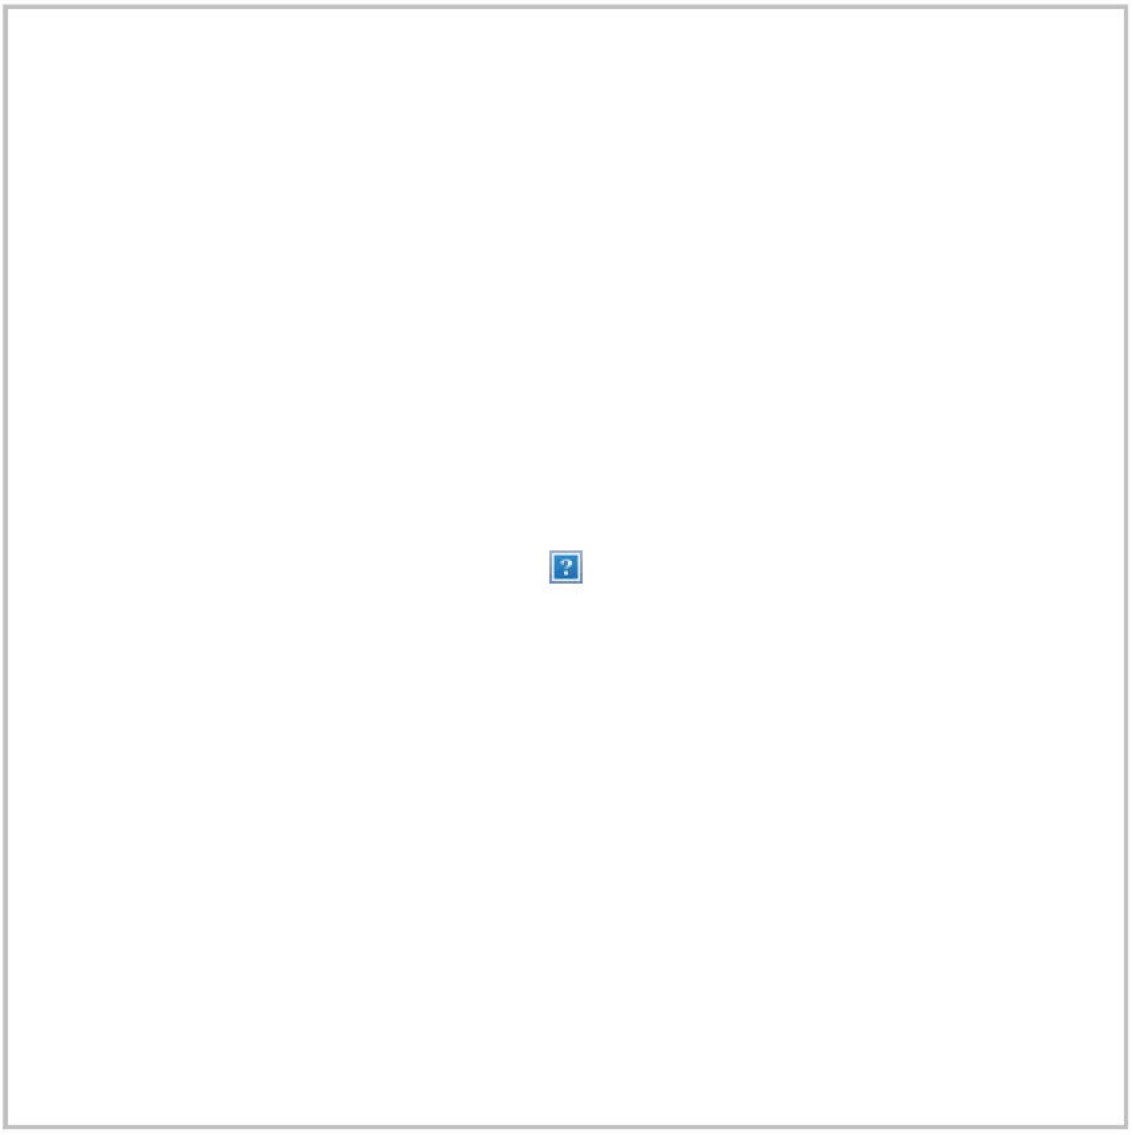
Republicans, who want more input on gradually restarting the economy and say a ban on elective medical and dental procedures should be lifted, also voted to

authorize a lawsuit challenging her authority and actions. They question the legality of her stay-home measure since the Legislature did not lengthen the state of emergency.

But Whitmer said the stay-home order rests on gubernatorial powers in the 1945 law, which does not require legislative consent nor an extension.

"If the 1976 law supersedes the '45 law, they would have repealed it. It was an intentional decision to keep both of these sources of authority for the chief executive of the state of Michigan," she said. "It is for times like these that that authority is really important, when lives are on the line."

The later law has a provision saying it should not be construed to "limit, modify, or abridge" a governor's authority to proclaim an emergency under the earlier law or to exercise powers vested by the state constitution.



House Speaker Lee Chatfield, a Republican, said "the judiciary will have the final say."

While this political and legal showdown will unfold in the coming weeks, with the uncertainty Michigan Attorney General Dana Nessel is advising law enforcement to use their best judgment regarding enforcement of Stay Home, Safe Safe violations until the issue is resolved in court.

For Wexford County Prosecutor Jason Elmore, this doesn't help clarify how law enforcement should proceed.

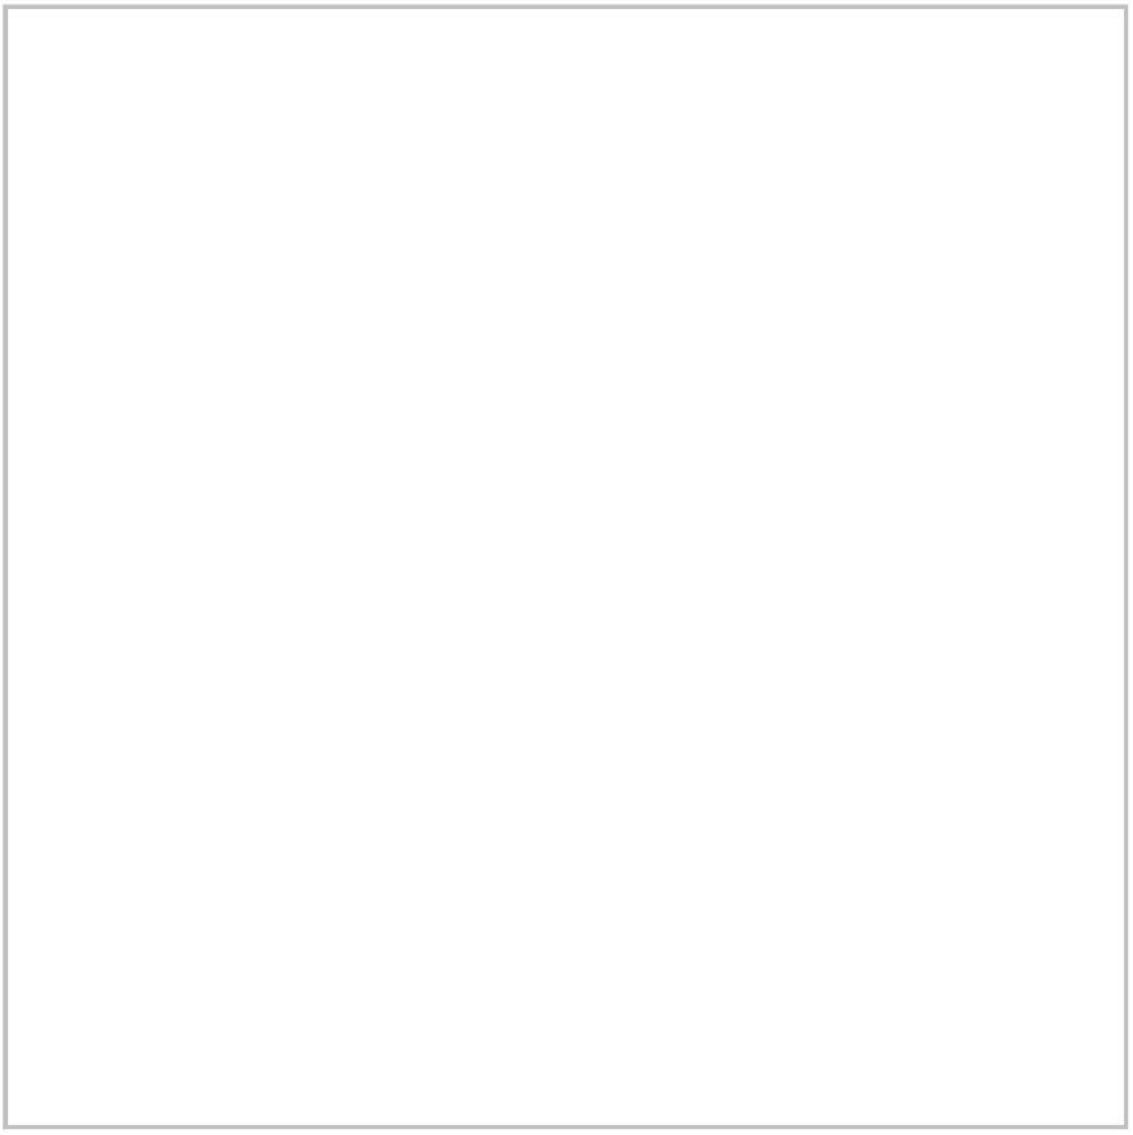
The orders were issued under section 1 of article 5 of the Michigan Constitution of 1963, the Emergency Management Act, 1976 PA 390, as amended, MCL 30.401 et seq., and the Emergency Powers of the Governor Act of 1945, 1945 PA 302, as amended, MCL 10.31 et seq. The issue to be determined in the court is the authority to extend beyond 28 days. This is the separation of powers between legislative, executive, and judicial branches of state government In action.

"Those in law enforcement have taken oaths to enforce the laws," he said. "Typically, our laws are passed by our legislature and signed into law by our executive. They are tested over the years by our judiciary. This is a different situation."

The Coronavirus Becomes a Battle Cry for U.S. Extremists

America's extremists are attempting to turn the coronavirus pandemic into a potent recruiting tool both in the deep corners of the internet and on the streets of state capitals by twisting the public health crisis to bolster their white supremacist, anti-government agenda.

Although the protests that have broken out across the country have drawn out a wide variety of people pressing to lift stay-at-home orders, the presence of extremists cannot be missed, with their anti-immigrant and anti-Semitic signs and coded messages aimed at inspiring the faithful, say those who track such movements.



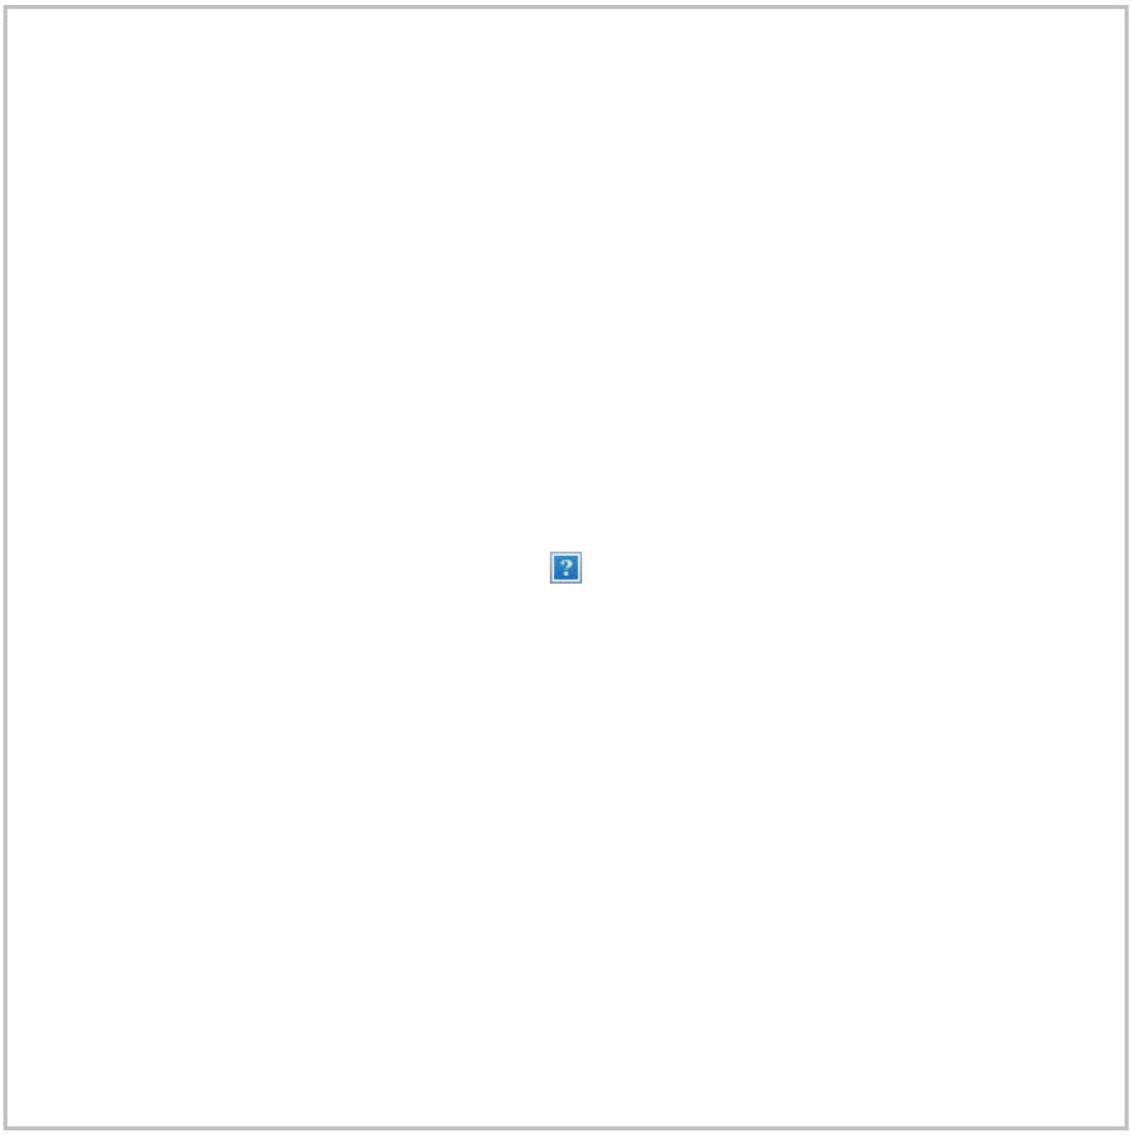
April is typically a busy month for white supremacists. There is Hitler's birthday,

which they contort into a celebration. There is the anniversary of the Oklahoma City bombing, the domestic attack 25 years ago that killed 168 people and still serves as a rallying call for new extremist recruits.But this April, something else overshadowed those chilling milestones. It was the coronavirus, and the disruption it wreaked on society, that became the extremists' battle cry.

Embellishing Covid-19 developments to fit their usual agenda, extremists spread disinformation on the transmission of the virus and disparage stay-at-home orders as "medical martial law" — the long-anticipated advent of a totalitarian state.

"They are being very effective in capitalizing on the pandemic," said Devin Burghart, a veteran researcher of white nationalists who runs the Institute for Research and Education on Human Rights, a Seattle-based research center on far right movements.

What success the groups have had in finding fresh recruits is not yet clear, but new research indicates a significant jump in people consuming extremist material while under lockdown. Various violent incidents have been linked to white supremacist or anti-government perpetrators enraged over aspects of the pandemic.



NY police union warns city will 'fall apart' if enforcement of social distancing does not end

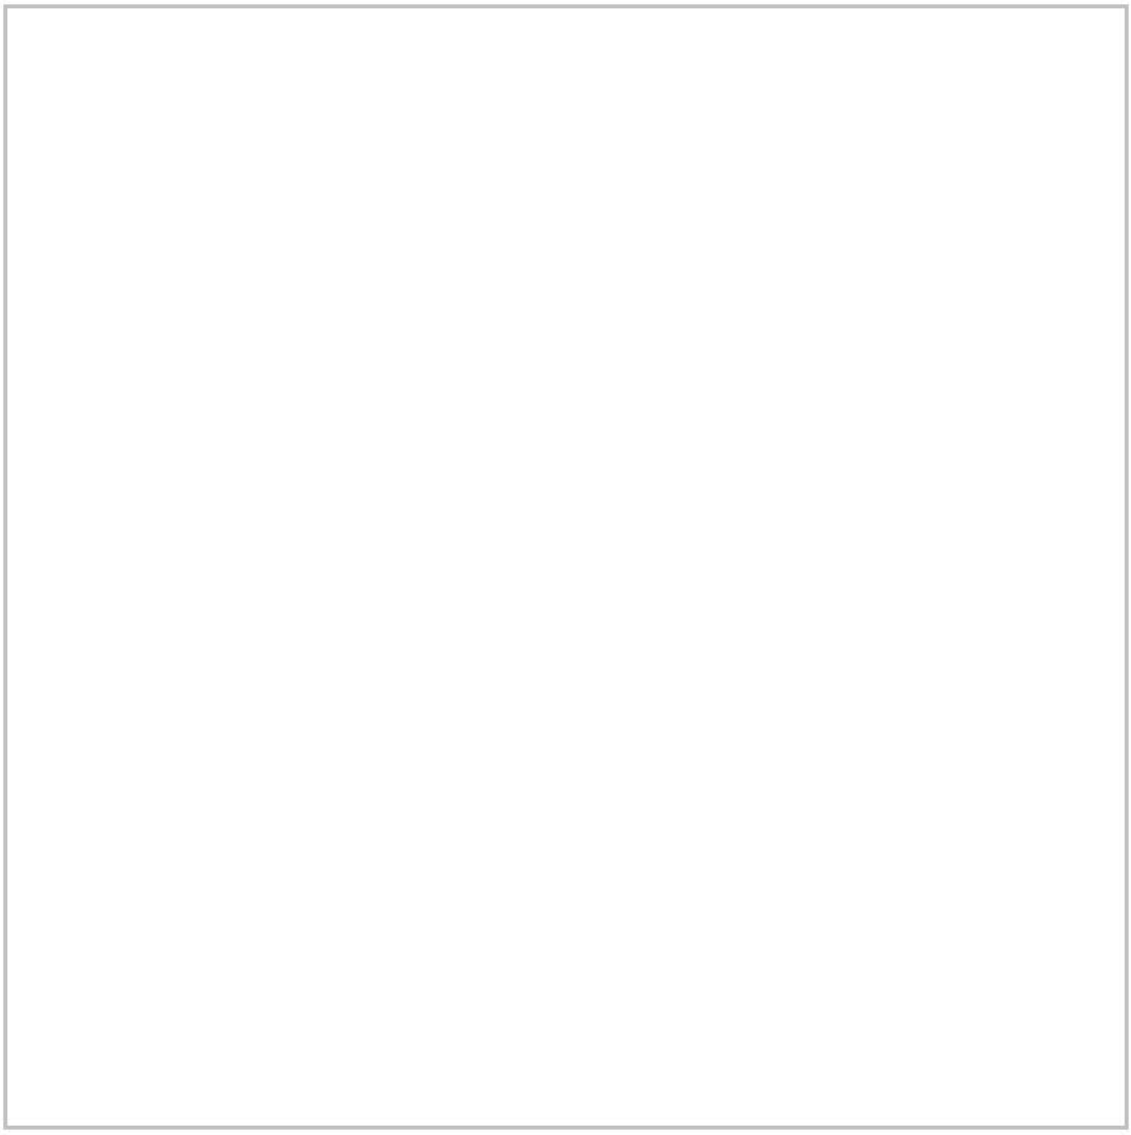
The union representing New York City's police officers warned that the city will "fall apart" if the police force is used to enforce social distancing measures. "This situation is untenable: the [New York Police Department] needs to get cops out of the social distancing enforcement business altogether," Patrick Lynch, the president of the Police Benevolent Association of New York, said in a statement.

The NYPD's involvement in enforcing the city's social distancing orders has been thrust under scrutiny after video surfaced of an officer hitting a man in Manhattan while trying to separate people. Three men in total were arrested in

the incident, and an officer is on modified duty pending an internal review.
Lynch accused the city's leadership of providing the police force only "vague" guidelines over how to enforce the measures, and that the criticism of the NYPD's involvement in making sure people separate from each other was inevitable.
"The cowards who run this city have given us nothing but vague guidelines and mixed messages, leaving the cops on the street corners to fend for ourselves," he said. "Nobody has a right to interfere with a police action, but now that the inevitable backlash has arrived, they are once again throwing us under the bus.

Video of violent LAPD arrest in Boyle Heights sparks outrage, internal review

Footage of a Los Angeles police officer repeatedly punching a man during an arrest in Boyle Heights in late April has stoked outrage and prompted the launch of an internal review of the incident.



Officers were responding to a trespassing call in the 2400 block of Houston Street on April 27 and ordered a man to leave the property near the Church of God of Prophecy, according to a statement issued by the LAPD after footage of the incident began to gain traction online Monday night.

In a 50-second video, two officers can be seen ordering a man to turn around near a fence outside the church. A male officer tells the suspect to “stop fighting,” and the suspect responds, “Ain’t nobody fighting.”

The officer then begins throwing overhand punches to the back of the suspect’s head while shouting profanities. At one point, the suspect attempts to take a few steps away from the officer, who follows and continues to punch the man in the head and body. A female officer stands by, occasionally reaching her hand out but otherwise not intervening.

The LAPD statement described the incident as a “physical altercation” between the suspect and officer. The suspect sustained “abrasions to his head and face” but refused medical attention, according to the LAPD. The officer suffered a hand injury, the LAPD said.

Neither the officer nor the suspect were immediately identified. The man was ultimately released pending further investigation, the LAPD said in its statement.

5-year-old boy pulled over in Utah says he was on his way to California to buy a Lamborghini

A Utah Highway Patrol trooper got a pint-sized surprise when he pulled over a 5-year-old driver who was swerving so badly he thought the driver needed medical attention.

Trooper Rick Morgan said the driver did not respond to his lights but pulled over when Morgan hit his siren on Interstate 15 in Ogden on Monday.

“I approached the vehicle and I was expecting to find somebody who needed an ambulance or paramedics,” Morgan said.

But when the window came down Morgan said it was pretty clear that it was “a very underaged driver who was behind the wheel.”

The boy was sitting on the edge of his seat to reach the brake pedal, the trooper said.

When asked, Morgan said, the boy told the officer he was going to his sister's house — in California. The boy told another trooper that he wanted to buy a Lamborghini when he got there and then flashed open his wallet showing his cash to purchase his dream car: $3.

His parents were contacted and they arrived and took custody of their son and the vehicle.

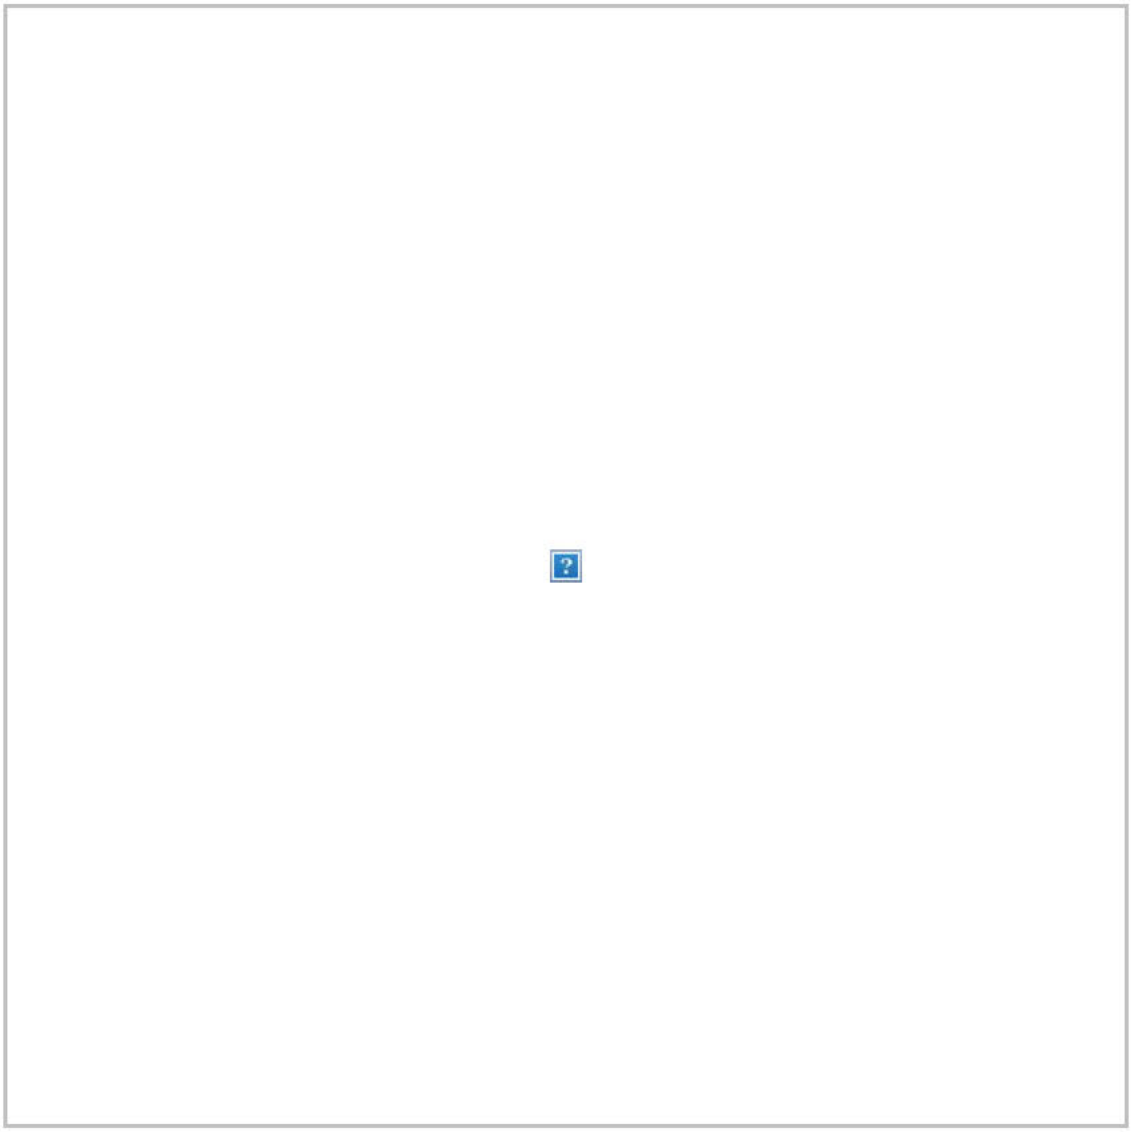
Philippines orders its largest broadcaster off the air as nation fights virus

The Philippine government on Tuesday ordered the country's largest broadcasting network to halt operations, a blow to press freedom and the flow of information in the middle of a pandemic.

Media giant ABS-CBN signed off after its evening news broadcast, leaving the screens of millions of viewers black and the jobs of 11,000 employees in jeopardy.

A cease-and-desist order was issued by the National Telecommunications Commission earlier Tuesday, affecting television and radio operations. ABS-CBN's cable news channel and digital operations will continue, albeit with a limited reach.

Staff of ABS-CBN watch last moments of airtime after ordered to cease operations



ABS-CBN, the Philippines' largest network, ceased operations May 5 after President Rodrigo Duterte's allies in congress refused to renew the station's license. (Nick Villavecer via Storyful)

President Rodrigo Duterte has repeatedly threatened to close down the

network in the past. His office denied that he had a hand in the order, saying the decision was entirely up to the commission.

“ABS-CBN is free to exhaust all legal remedies available to it,” said presidential spokesperson Harry Roque. Duterte “accepted the apology of the network and left its fate to both houses of Congress,” he added.

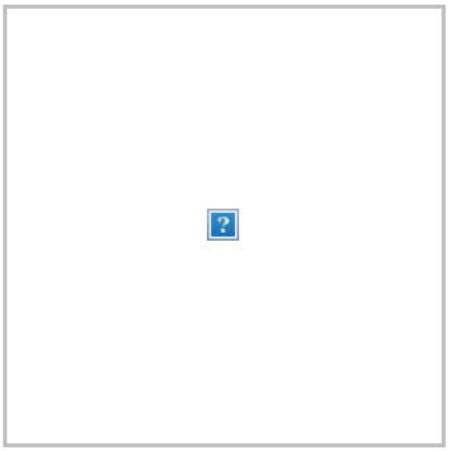
Duterte and his allies have accused ABS-CBN of not carrying his advertisements during the 2016 election campaign, instead airing those of his opponents. The network’s president, Carlo Katigbak, apologized to Duterte in February, clarifying the operations surrounding how the advertisements were aired.

Intel chief nominee says he won't be swayed by politics

Rep. John Ratcliffe, President Donald Trump's nominee to be director of national intelligence, pledged at his confirmation hearing Tuesday to deliver intelligence free of bias or political influence, even as skeptical Democrats repeatedly pressed the Texas Republican on whether he could stand up to the president and defend the agencies he would oversee.

The comments from Ratcliffe were aimed at quelling concerns that the ardent Trump loyalist would be swayed by political pressure from a president who has been openly dismissive of the government's spy agencies and once derided them as being "run amok."

The confirmation hearing, the first in-person one held under drastic new distancing rules to protect Capitol Hill from the coronavirus, comes as Trump faces persistent criticism for politicizing intelligence issues. It's also been a tumultuous time: At least a half dozen intelligence leaders have been replaced over the last year and agencies already confronting the threat of Russian interference in November's election are now investigating the politically charged question of whether the coronavirus pandemic originated in a Chinese market or a laboratory.



Ratcliffe's path to the job has been similarly topsy-turvy, with the original nomination withdrawn after bipartisan criticism that one of the president's most ardent defenders during the Russia investigations and Trump's impeachment was unqualified to oversee 17 U.S. spy agencies. Trump unexpectedly renominated him in February. His chances of securing the job appear better, but confirmation is not guaranteed.

Democrats laid bare their skepticism in occasionally contentious questioning, with Sen. Dianne Feinstein of California pressing him over past comments about whistleblowers and New Mexico Sen. Martin Heinrich asking for instances of when Ratcliffe had ever "spoken truth to power," particularly involving the president.

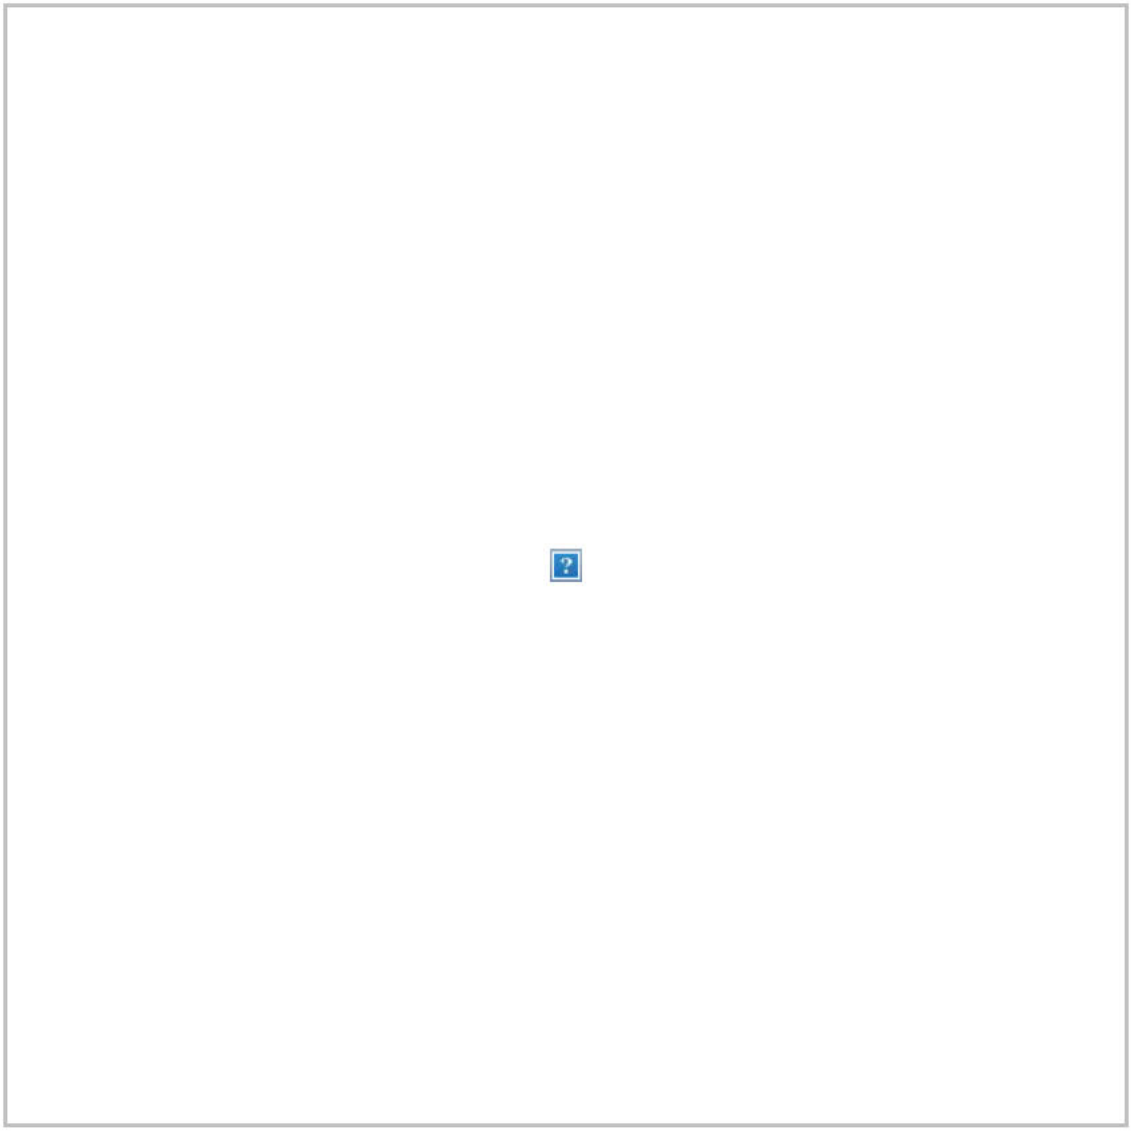
"I have to say that while I am willing to give you the benefit of the doubt at this hearing, I don't see what has changed since last summer when the president decided not to proceed with your nomination," said Virginia Sen. Mark Warner, the panel's top Democrat.

Ratcliffe took pains to break with the president, saying he did not know what Trump meant last summer when he said intelligence agencies had "run amok."

He refused to endorse Trump's assertion of a "deep state" inside the intelligence community and insisted that he would not shade intelligence findings to meet the desires of anyone, including the president.

Feds arrest 2 men in first fraud case involving PPP loan program for small businesses hurt by coronavirus

Two New England businessmen have been charged with illegally trying to procure hundreds of thousands of dollars in federal Paycheck Protection Program loans, the first fraud case in the nation involving the massive effort to rescue small businesses from the coronavirus crisis.



And the chief of the U.S. Justice Department's Criminal Division said he expects more cases in the future. Tuesday's case, filed in Rhode Island, is the first of several investigations launched by federal authorities since the start of the massive program, he said.

"What we see coming out of Rhode Island is what's happening across the country," Assistant Attorney General Brian A. Benczkowski, told USA TODAY. "We have a lot of leads."

On Tuesday, prosecutors charged David A. Staveley, 52, of Andover, Massachusetts, and David Butziger, 51, of Warwick, Rhode Island, with conspiring to seek forgivable loans guaranteed by the Small Business Administration. The loans amounted to nearly $544,000, according to the U.S. Department of Justice.

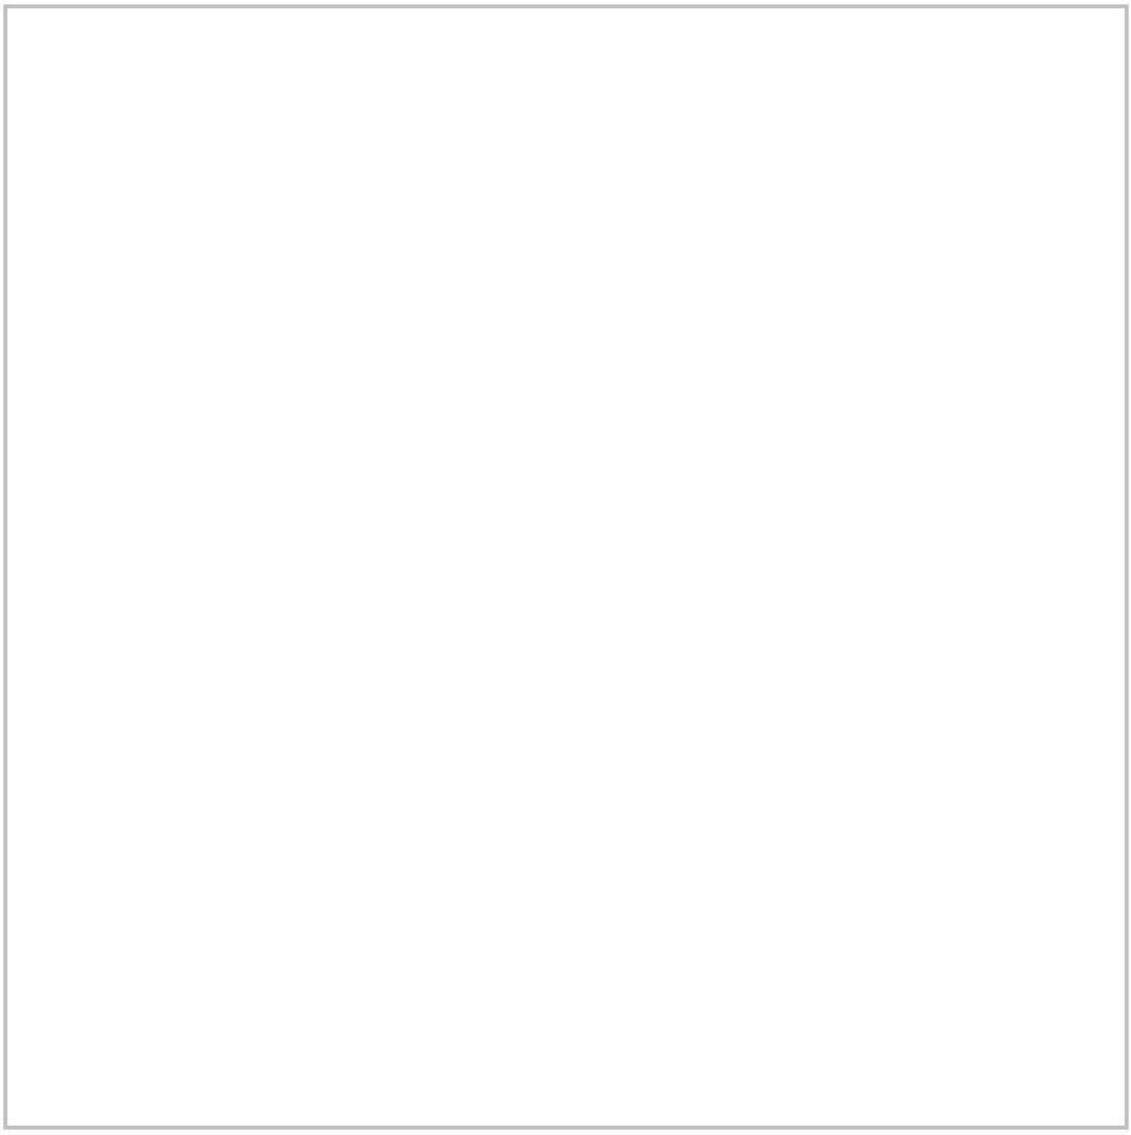
They claimed to have dozens of employees earning wages at four different entities when, in fact, there were no employees working for any of the

businesses, according to a DOJ news release issued Tuesday.Congress created the PPP in March as part of the CARES Act, the federal response to the COVID-19 pandemic, which has forced social distancing steps that have forced millions of small businesses to contract or close entirely. They have allocated more than $660 billion for the program, which has approved loans for some 4 million businesses.

Michigan man arrested after wiping face on store clerk who told him to wear a mask, police say

A 68-year-old Michigan man is expected to face charges after he was captured

on surveillance video wiping his nose and face on a Dollar Tree employee's sleeve rather than wear a mask.



Police said they were tipped off to the identity of the Linden, Michigan, man by a viewer who saw the footage, and the case has been referred to the Oakland County Prosecutor's Office for charges.

The incident happened at 1:30 p.m. local time Saturday at the store in Holly, Michigan, and was captured on surveillance footage.

According to the Holly Police Department, the suspect walked past door signs indicating all customers entering the store were required to wear a face mask and reacted when a young female clerk reminded him of the new store policy.

"Here, I will just use this as a mask," the suspect said as he wiped his face on the clerk's sleeve.

Police said the man continued to be loud and disruptive inside the store before leaving in a white van.

Hand sanitizer is still considered contraband in some prisons around the country

When a half-dozen inmates reported in for their prison jobs in Nebraska in late March, they found themselves with a new assignment: turning vats of ethanol into 2,500 gallons of coronavirus-killing hand sanitizer, for a wage of $1.08 an hour.

But while their work has helped the state government stave off a sanitizer shortage, the inmates on the production line -- and more than 5,000 others in prisons around Nebraska -- are banned from using the hand gel they helped make, according to the state corrections department.

They're not alone. Even as correctional facilities have emerged as some of the country's largest sources of coronavirus outbreaks, hand sanitizer is still

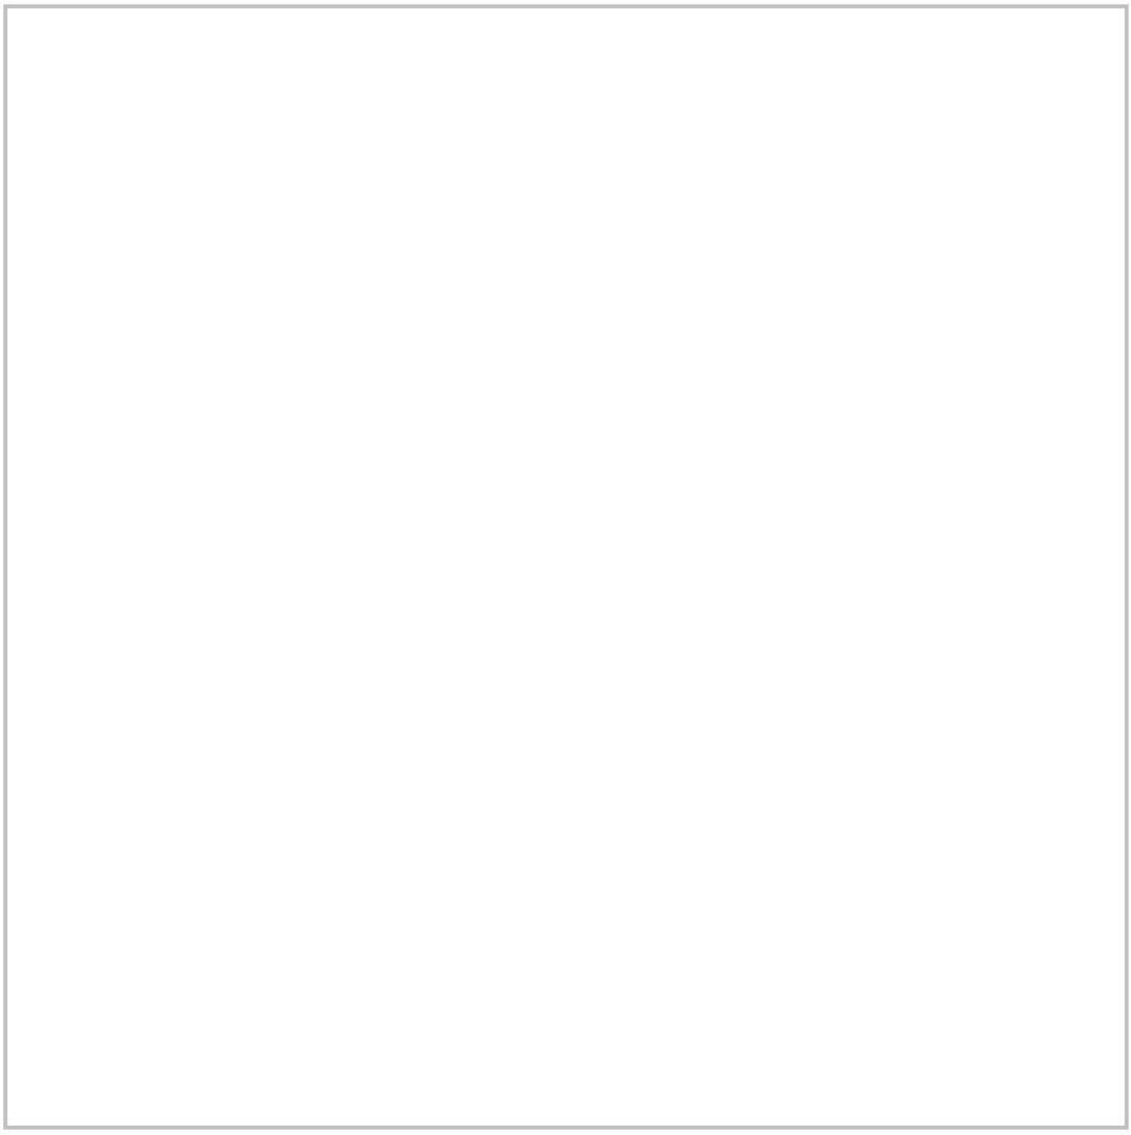
considered contraband in all federal prisons as well as state prisons in more than a dozen states, a CNN review of department policies found.

"They have the capability to protect us, but they are failing to do it," Ryan Kubik, an inmate at the Nebraska State Penitentiary, told CNN. He said he was "scared to death" of catching the virus in his overcrowded prison. "People are going to die in here."

Hand sanitizer has long been banned in most prisons due to its alcohol content, based on fears that inmates would drink it or use it to start fires. But during the pandemic, the Centers for Disease Control and Prevention has recommended that correctional facilities "consider relaxing restrictions" on alcohol-based sanitizer "where security concerns allow." A CDC spokesperson said that the extent to which the rules could be relaxed "will depend on the security level of the facility and other aspects of the operational environment."

Many states have followed the advice: At least 30 corrections departments are allowing inmates to use alcohol-based hand sanitizer, either letting prisoners have their own bottles or dispensing it to them in a more controlled method. Most had banned the substance before the pandemic broke out.

But 17 state corrections departments -- including six of the 10 with the largest inmate populations -- said they were maintaining their bans for now, many arguing that the alcohol in sanitizer made it a safety risk. And inmates in federal prisons around the country are also prohibited from using hand sanitizer, the federal Bureau of Prisons said in a statement.



Venezuela’s Maduro says two Americans captured in failed invasion attempt

President Nicolás Maduro said his government had captured two American “mercenaries” Monday in a murky operation allegedly intended to infiltrate Venezuela, incite rebellion and apprehend its leaders, adding a fresh

complication to escalating tensions between Washington and Caracas. The socialist leader said the plan was to kill him.

In a lengthy speech Monday night, Maduro decried an ongoing “terrorist” assault on Venezuela that he said had led him to dispatch 25,000 reservists to the coasts. He displayed images that apparently depicted the two apprehended Americans in a lineup, one of them forced to lower his head by a captor.U.S. officials and the mainstream Venezuelan opposition headed by Juan Guaidó have strongly denied any connection with the operation, which allegedly involved several dozen men, most of them defectors from the Venezuelan military who had been living hand-to-mouth in camps in Colombia. Former Venezuelan National Guard officer Javier Nieto Quintero and former U.S. Army Green Beret Jordan Goudreau, head of a Florida company that says it offers paid strategic security services, released a video Sunday announcing the start of “Operation Gideon” and calling on Venezuelan soldiers to join them.

Goudreau, in an interview with The Washington Post, confirmed that two Americans in what he says was a force of about 60 men were captured Monday along with six Venezuelans. He identified the Americans as Airan Berry and Luke Denman. Also captured was one of the operation’s leaders, former Capt. Antonio Sequea.The Americans, Goudreau said, were fellow former Special Forces members he had known for years who had joined the operation as “supervisors.” He said he has engaged a lawyer in Venezuela and was reaching out to the State Department to try to secure their release.

FBI: Cyber crimes on the rise during coronavirus pandemic

The Federal Bureau of Investigation wants you to be careful when you go online: The agency says cyber crimes are on the rise in the time of COVID-19.
“It’s really too early to tell the exact numbers but I can assure you the trend is up,” said FBI Public Affairs Officer Don Wood.
Wood told 7News cyber criminals have tailored some traps to trick those thinking about the coronavirus pandemic.
“People will be looking for more information on coronavirus,” he said. “They may be sent a fraudulent link to the CDC website.”
That fake CDC website could then prompt visitors into clicking more links. For example, it could offer free personal protective equipment just by following a

link.

“Once you click the link, you could be downloading a virus,” Wood said. “You’ll definitely be taken to a site that is not legitimate that has its purpose set up to get your personal information and financial information.”

That is just one example.

A more classic scam that is still tricking many Americans is the email extortion scam. These emails will threaten the recipient to pay a sum of money or run the risk of the sender leaking compromising photos, personal data or financial information.

“They’re blackmailing you over the internet,” Wood said.

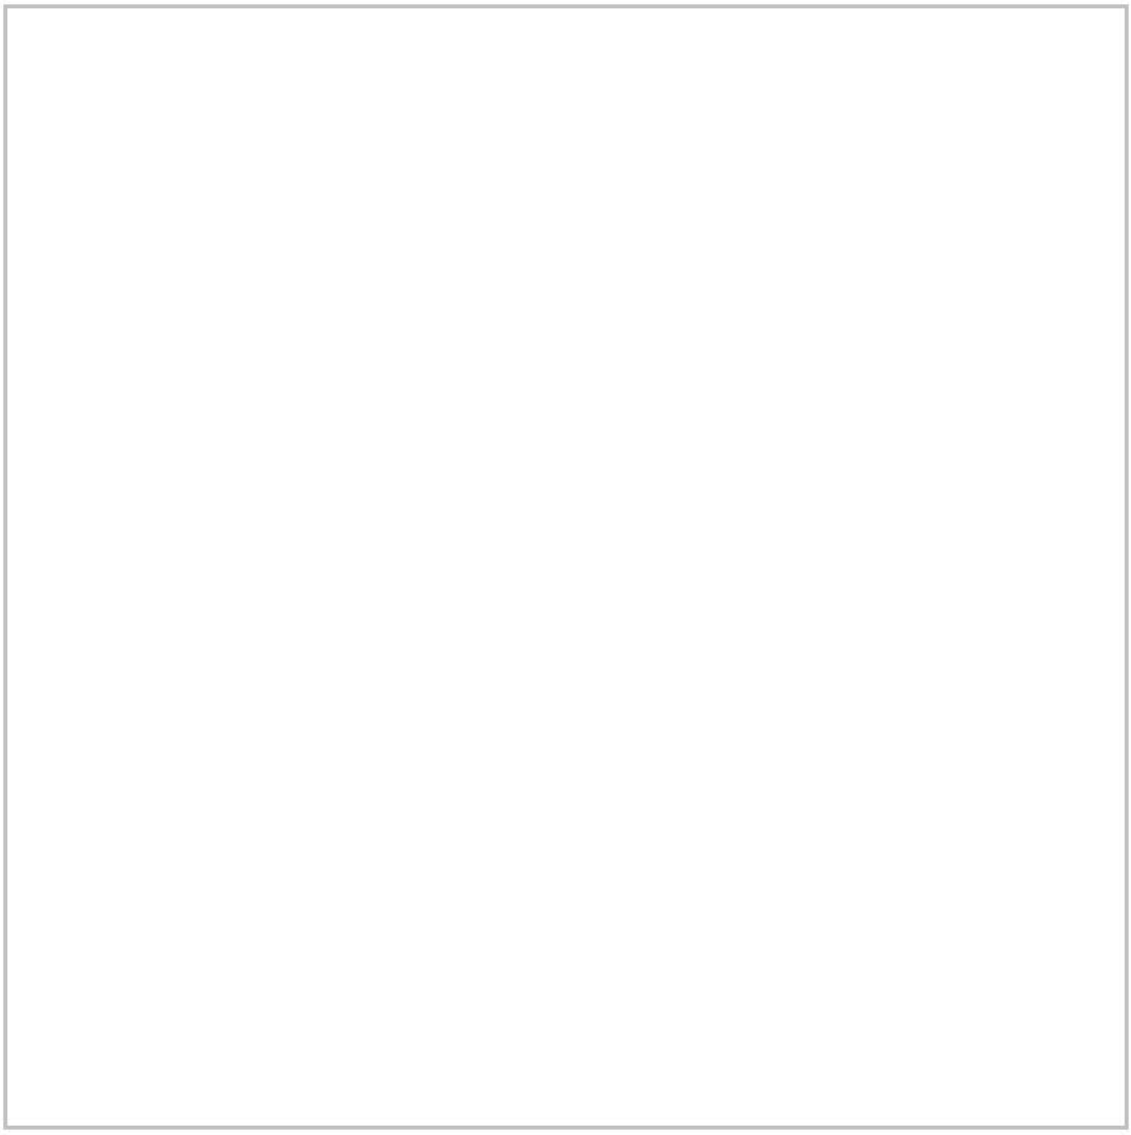
There is good news, though. All of these crimes are preventable if you remain cautious, Wood said. He provided some tips to protect yourself from online criminals:

Do not download email attachments from senders whom you do not recognize.

Do not follow links sent to you from senders you do not recognize.

Be cautious about offers for free services. If it sounds too good to be true, it likely is.

Update your computer regularly.



Update your computer’s security software regularly.

Do not use the same password for multiple accounts or websites.

Change passwords frequently.

Change your Wi-Fi’s password semi-frequently.

Monitor your bank statements for suspicious activity.

Suspect Drops Nearly $1M in Cash on Road During California Vehicle Pursuit

Nearly $1 million in cash was dropped on the side of the road during a vehicle pursuit Friday in Merced County, according to the California Highway Patrol.

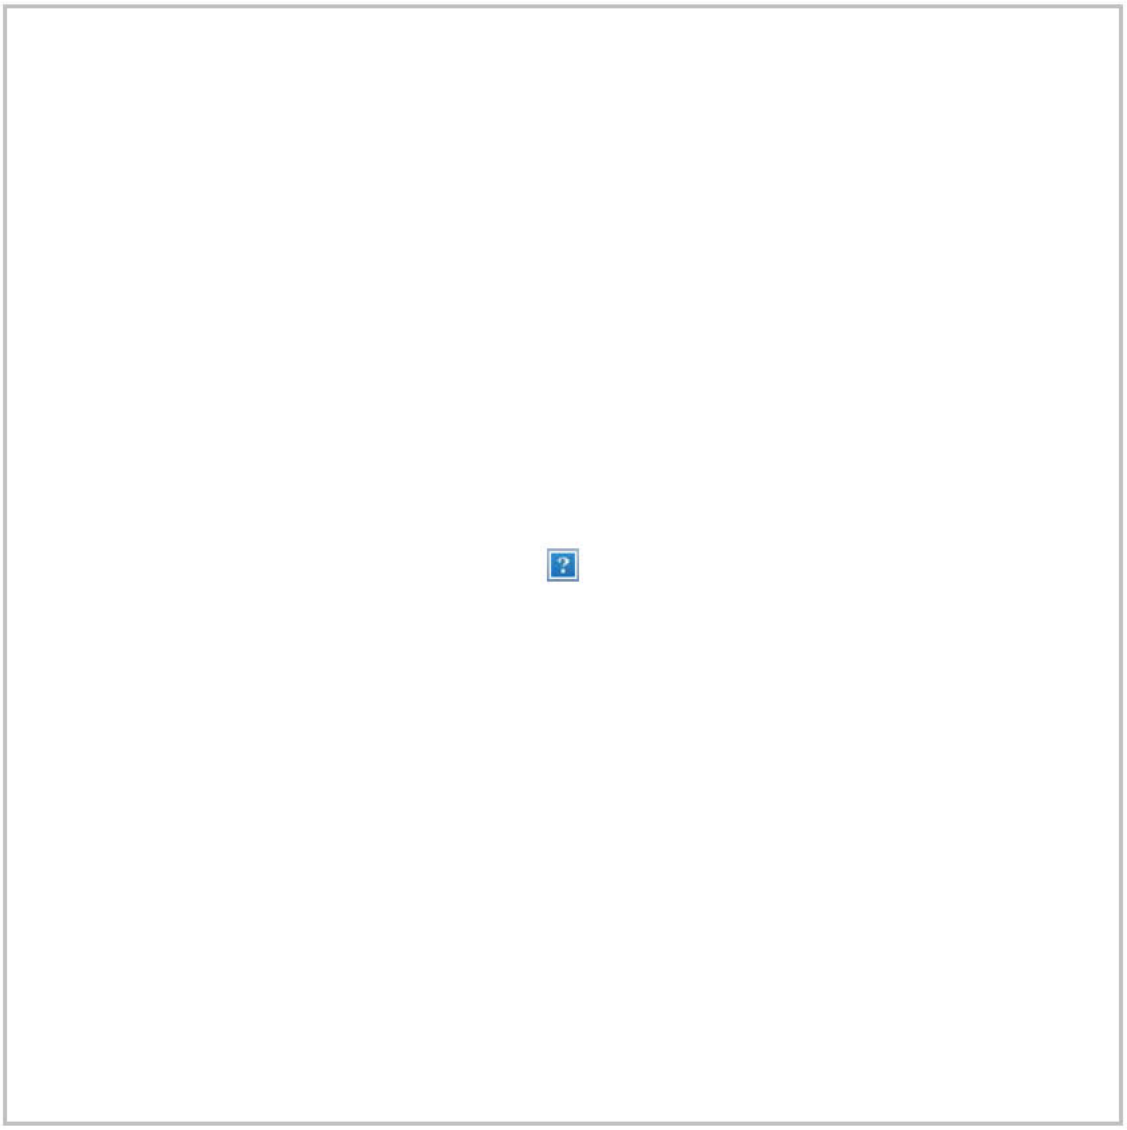
At about 6:26 p.m. an officer, who was traveling with his K-9 ‘Beny,’ observed three SUVs that appeared to be traveling together on northbound Interstate 5 near Highway 165, just south of Los Banos, according to CHP Officer Eric Zuniga.

When the officer attempted to make an enforcement stop on one of the vehicles — a black 2020 Chevrolet Suburban — the vehicle failed to yield and attempted to flee, the CHP said.

The officer pursued the vehicle southbound on I-5 to the area of Nees Avenue.

The pursuit then headed northbound and ended near the John Erreca Rest Area, according to the CHP.

As the officer pursued the vehicle, one of the other SUVs, a black Ford Expedition, attempted to block the officer's vehicle by straddling the lanes. Authorities said the officer was able to out-maneuver the Expedition and continued the pursuit with the Suburban. The CHP said the driver of the Suburban stopped on the right shoulder of the road during the pursuit, exited the vehicle and dropped two cardboard boxes before returning to the vehicle and continuing to flee from authorities.



The driver of the Suburban then stopped the vehicle and surrendered to authorities shortly after dropping the boxes. The driver of the third SUV — a black Chevrolet Tahoe — stopped the vehicle in traffic. Both drivers were taken into custody.

Authorities identified the driver of the Suburban as Frank Capraro, 23, of Medford, New York and the driver of the Tahoe as Desmond McDay, 25, also from Medford, New York.

Authorities said the driver of the Ford changed directions during the pursuit and was not located.

The CHP said the Merced Communications Center received several calls during the incident regarding the cardboard boxes dropped on the shoulder of the road.

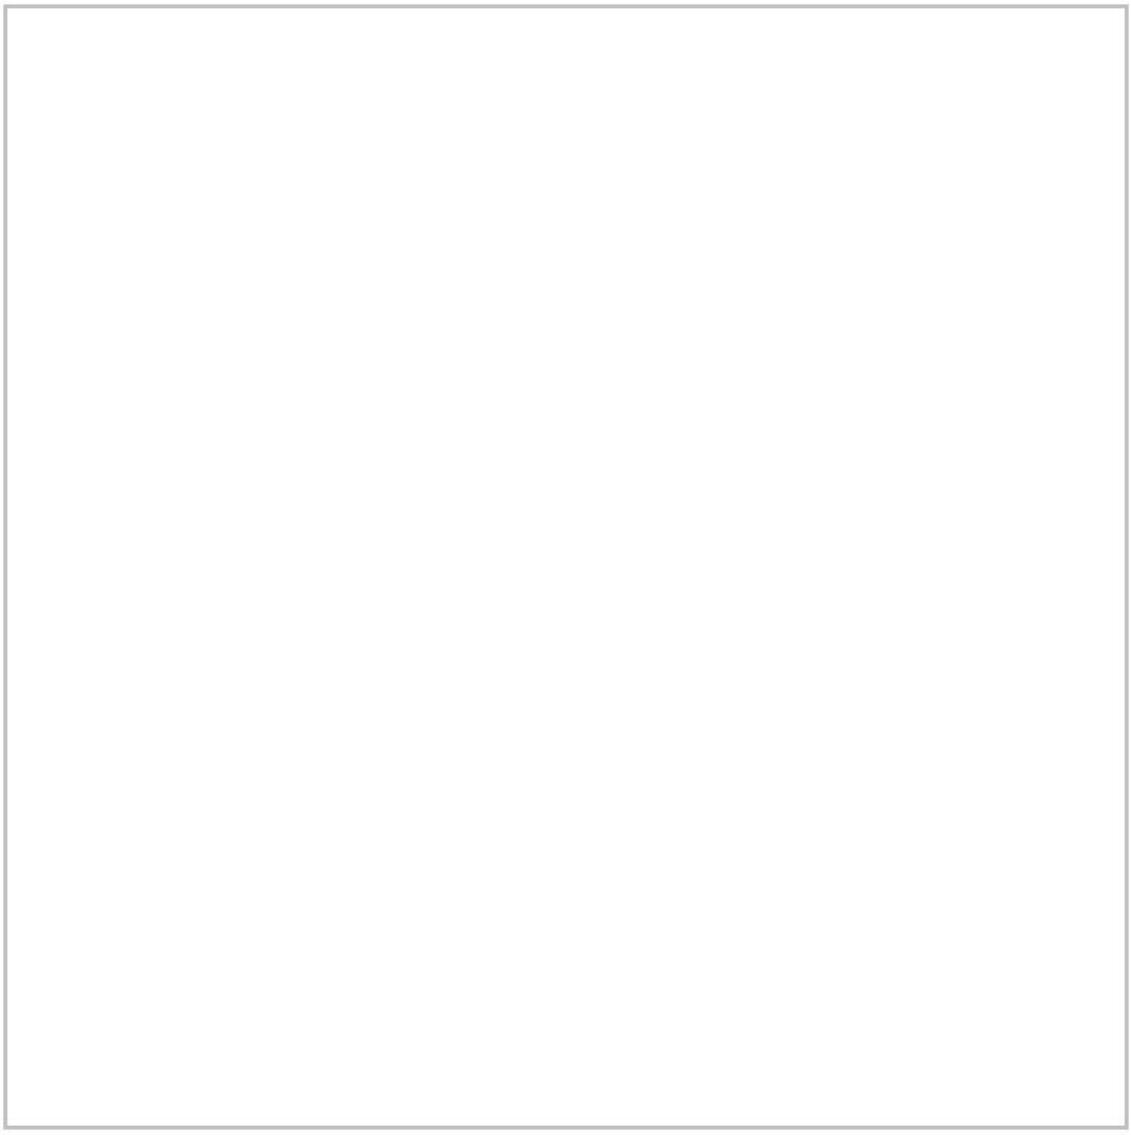
Officers retrieved the boxes and located about $915,000 cash. Officers also located walkie talkies in the suspect vehicles. It was later determined the three drivers were using them to communicate during the pursuit

Layoffs widen rift between police chief, administration

While council met Monday night, Mayor Greg Bricker took the opportunity to distribute a lengthy letter, expressing his displeasure with the city's police chief. At a Finance Committee meeting last week, Police Chief John Lane suggested that committee members look at some different cost-cutting measures than laying off the two lowest ranking patrolmen in the department.

Last month, Safety Service Director David Dawson had hand delivered layoff notices to Jay Lane, the chief's son, and Hunter Maze. Both men were the department's last hires.

Chief Lane had passed along a suggestion from the Fraternal Order Of Police that offering senior ranking officers buyouts, especially if they are contemplating



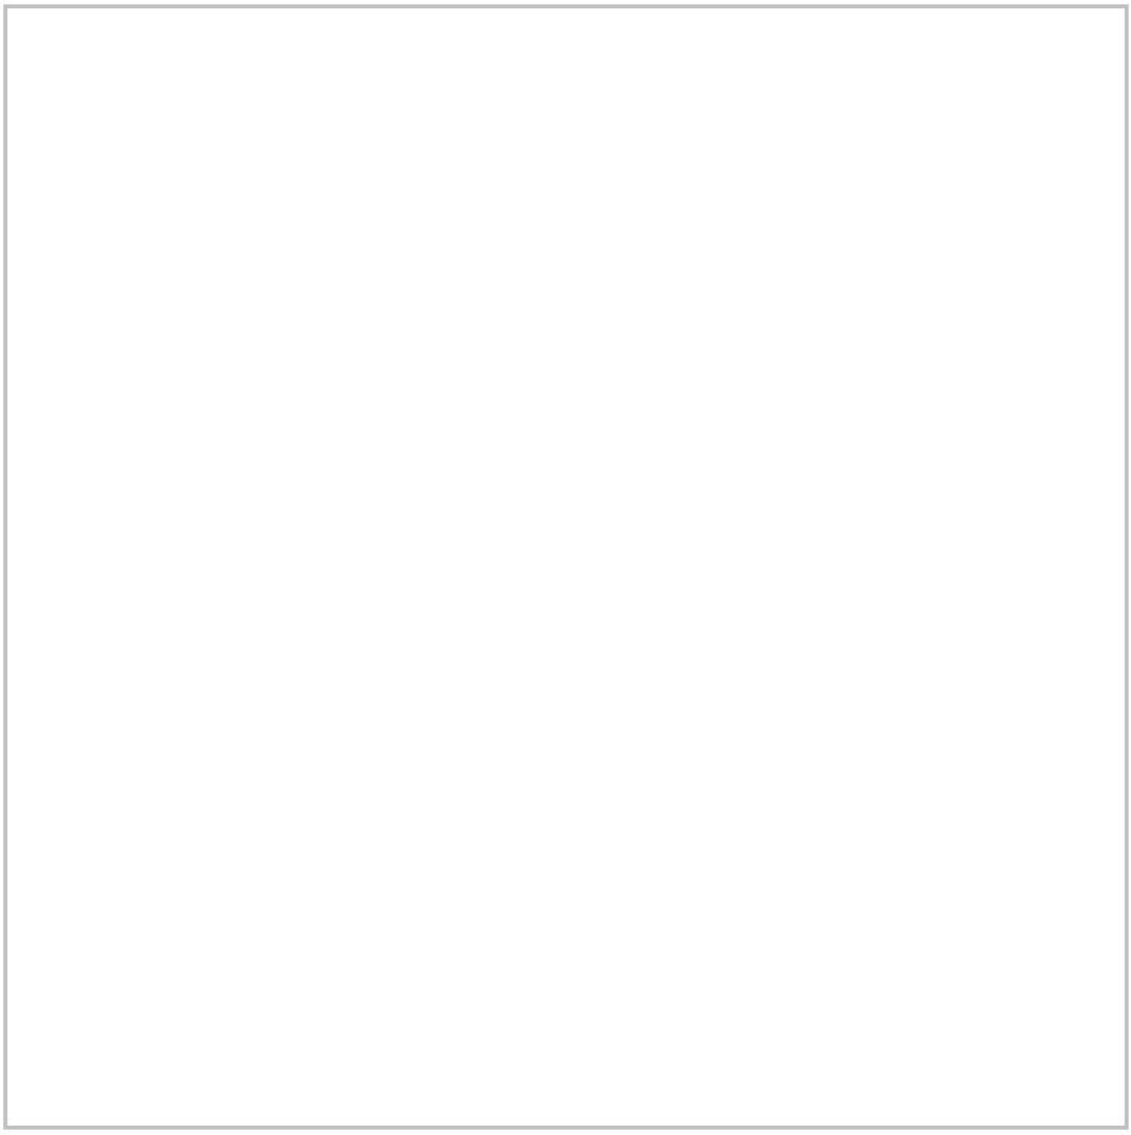
retirement anyway, can generate more savings than laying off lower level patrolmen.

This statement inadvertently offended many officers and their friends and family, who might be eligible for such a buyout, Chief Lane said Monday night before offering apologies to those who felt wronged.

However, it was the letter from Bricker that detailed so-called offenses from the chief, although the source of the information is not specified.

Mayor Bricker talks about the first months of his tenure and how he had organized regular meetings with department heads *"to understand current priorities and develop a strategic plan,"* especially since the city faces a deficit of $420,000 and a half million dollar debt to its health care provider. He anticipates that deficit will only grow due to tax losses stemming from the coronavirus pandemic.

In his letter, Bricker not only alleges that Chief Lane has "not been active in providing updates and implementing important initiatives (beyond purchase of additional cruisers), the mayor also details the poor morale in his department.



Courts Issue Rulings in Two Cases Challenging Law Enforcement Searches of License Plate Databases

This week, the Ninth Circuit Court of Appeals issued an opinion in *United States v. Yang*, a case challenging the search of an automated license plate reader database under the Fourth Amendment. Although the court, citing EFF's amicus brief, recognized ALPRs capture massive amounts of data on Americans across the country, it decided not to reach the search issue. Instead it held that because Yang was driving a rental car after his rental agreement ended when the search occurred, he didn't have the right to challenge the search.

The Ninth Circuit's decision follows an April opinion from Massachusetts's

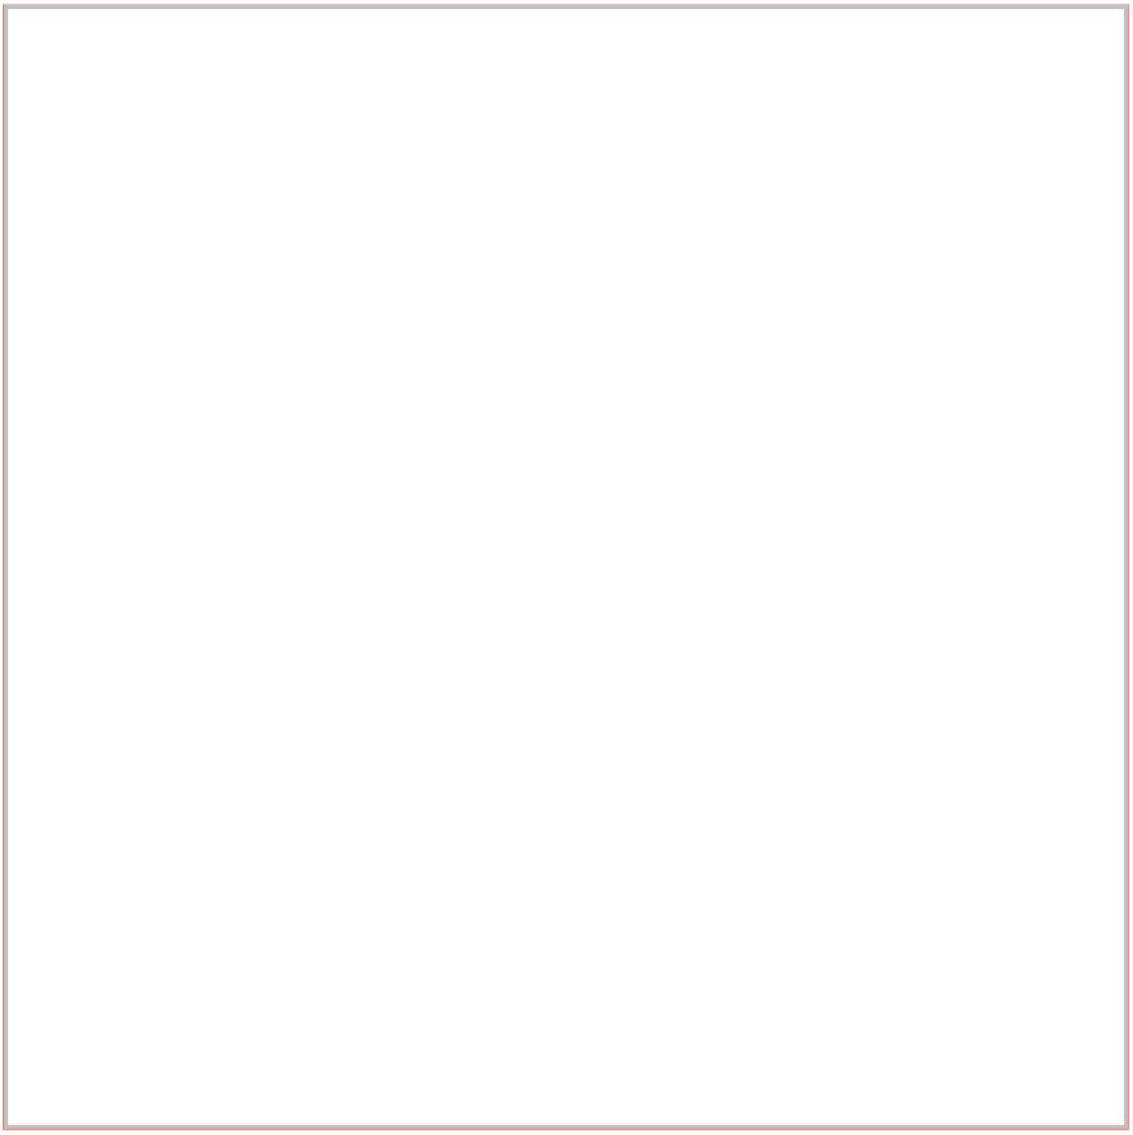
highest court in another ALPR case, *Commonwealth v. McCarthy*. In *McCarthy*, the court held that, although ALPRs raise clear privacy issues under the Fourth Amendment and Massachusetts's Article 14, McCarthy hadn't introduced sufficient facts to show that the search at issue in his case rose to the level of a constitutional violation.

ALPRs are high-speed, computer-controlled camera systems that are attached to vehicles, such as police cars, or can be mounted on street poles, highway overpasses, or mobile trailers. Some models can photograph up to 1,800 license plates every minute, and every week, law enforcement agencies across the country use these cameras to collect data on millions of vehicles. The plate numbers, together with location, date, and time information, are uploaded to central servers, and made instantly available to other agencies. The location data generated by ALPRs is so precise it can place a vehicle in front of a specific home or business, as was the case in *Yang*, or within a specific lane on a bridge, as in *McCarthy*. Law enforcement agencies may maintain their own databases of ALPR data or store their data with private companies. In the *Yang* case, the law enforcement agency didn't collect its own ALPR data but instead accessed a commercial database that advertises it contains 6.5 billion plates collected both by law enforcement and by private contractors.

National Correctional Officers Week being observed through May 9

A tradition begun 36 years ago continues this week with the observation of the first full week of May (May 3-9) as National Correctional Officers Week.

This is done in recognition of the important role these officers play in our criminal justice system, the Genesee County Sheriff's Office said in a press release.



The position of correctional officer, once considered merely that of a "guard," has become increasingly more complex and demanding, involving simultaneously custodial, supervisory, rehabilitation, and counseling roles, and that complexity continues to grow, said Sheriff William A. Sheron Jr. He said

today, the officers continue to play that role in an ever-more-stressful environment due to the current COVID-19 pandemic sweeping the nation and the world.

“This week acknowledges the difficult job correction officers perform, locked within a facility for a large part of their day where they must securely, safely and humanely keep those committed to the jail, respecting the rights and dignity of all the inmates, including those who have been found guilty and those only awaiting adjudication,” Sheron said.

During the April 22 county Legislature meeting, Sheron and legislators recognized correction officers for their continued dedication, professionalism and commitment to public service. The Genesee County Legislature issued a proclamation recognizing May 3-9 as National Correctional Officers’ Week. The lights on the Old County Courthouse cupola have been changed to red, white and blue to acknowledge this week.

“The important and difficult role correctional officers fulfill is not always recognized by the general public,” said Sheron. “If you know a Correctional Officer, please join me in thanking these men and women for their exceptional service.”

$75.3M AVAILABLE FOR LAW ENFORCEMENT & TECH PROGRAMS

APPLY BY AUGUST 19

banner

For decades, the Byrne Justice Assistance Grant (JAG) program has funded key law enforcement initiatives allowing agencies to reduce crime and enhance citizen safety. The Bureau of Justice Assistance recently released its 2020 Byrne JAG solicitation. These funds can be used to invest in technologies that promote officer and community safety including mission-critical communications equipment, digital evidence solutions, public safety software, video security and analytics solutions, ALPR, and more.

FREE GRANT ASSISTANCE

Many Motorola Solutions products and solutions qualify for grant funding, but the grant application can be challenging to navigate. To help you, we've partnered with the grant experts at **PoliceGrantsHelp**. Their team can help answer your questions and offer insights on how to write an effective application.

IADLEST Certified Course

License Plate Recognition Technology & Best Practices

Learn about the diverse uses of License Plate Recognition (LPR) technology and how to utilize the tool in real world scenarios. Led by former law enforcement members, this course will demonstrate how to integrate a cloud-based commercial LPR data platform into the existing traditional law enforcement deployment LPR model.

Session Dates and Times

08/11/2020 12-2:00PM CDT

08/18/2020 12-2:00PM CDT
08/25/2020 12-2:00PM CDT
09/01/2020 12-2:00PM CDT

- Week 1: Introduction, walk-through, take-home work
- Week 2: Week 1 overview – exam, legal aspects, Best Practices, advanced tools walk-through, take-home work
- Week 3: Week 2 overview – exam, hot lists, hot list advanced tools walk-through, take-home work
- Week 4: Week 3 overview – exam, LPR databases, investigative resources, documenting, additional tools/functions, full case walk-through, final LPR exam

This four part series will be taught in 2 hour blocks every Tuesday beginning August 11th to September 1st from 10AM PST – 12PM PST. As an IADLEST certified course, you must attend all four courses to receive course credit. See the Registration Page for more details.

Dear PoliceGrantsHelp Member,

In this month's eNews, we look at the impact of marijuana legalization on grants that stem from marijuana sales. This article is part of Police1's analysis of a recent survey on policing in an era of legal marijuana.

Now is the time to start planning your 2021 grant projects and applications. Don't let the complex and sometimes difficult application process intimidate your efforts. Contact the grant experts at PoliceGrantsHelp for assistance writing and preparing your grant application. To: Scott, Michael (POL)
Subject: job description for grant
Date: Wednesday, November 18, 2020 11:04:45 AM

Condensed job description you requested for the Heroin/Meth grant:
Intelligence Analyst II

Establish criminal profiles on drug trafficking organization members via sophisticated searches into several law enforcement databases, open source and social media databases and through use of investigative software including, but not limited to: TLO, CLEAR, ISO, Facial Recognition, ALPR, CJISWeb, InmateWeb, MIDNet and OSINT. Run historical ALPR queries and create "hot lists" in the ALPR system in order to track particular drug trafficking organization vehicles in real time and determine narcotics trafficking patterns. Determine the structure and operation of criminal groups on a tactical level and identify criminal associations and relationships by performing various kinds of analyses to support investigative work and produce intelligence products such as link analyses, telephone toll analyses, timeline analyses, and any analyses through which data are integrated to determine the existence of networks and patterns.

Justification for Cellebrite renewal:

Cellebrite is the leader in forensic cell phone extractions and as a trained and certified examiner, it is incumbent upon the CINRET West unit to utilize an in-house analyst to perform cell phone extractions in a time-efficient manner to gain access to valuable intelligence related to narcotics investigations. It is imperative that the license be renewed as the program is updated multiples times a month to keep up to date with the ever-changing software and applications used on mobile devices. If the license is not renewed, we will not be able to update the software with critical updates. This can either lead to not being able to extract complete data from a device, or not being able to extract from a device at all.

Justification for computer:

I was hired by MSP in May 2020 to perform specific duties providing intelligence and investigative field support to the CINRET West Unit. The unit did not have a computer for me to perform my duties and six months later still has not received approval for a computer for me to perform my duties despite being awarded a multi-million dollar grant. Detective Lieutenant Loiselle let me use his old Panasonic CF-54 that was issued to him when he was in IA. This was intended to be a *temporary* solution. The laptop is sufficient for basic duties using the internet, but is not sufficient for running I2 Analyst Notebook, RAMS, BOSS LPRs, and the internet at the same time. Since there were multiple previous users on this laptop, it was given to me with half of the available space.

US Court of Appeals for the Ninth Circuit Opinions

Romero-Millan v. Barr

Dockets: 16-73915, 17-72893, 18-71555

Opinion Date: May 4, 2020
Areas of Law: Criminal Law

The Ninth Circuit certified the following questions of state law to the Arizona Supreme Court: 1. Is Arizona's possession of drug paraphernalia statute, A.R.S. 13-3415, divisible as to drug type? 2. Is Arizona's drug possession statute, A.R.S. 13-3408, divisible as to drug type? 3. Put another way, is jury unanimity (or concurrence) required as to which drug or drugs listed in A.R.S. 13-3401(6), (19), (20), or (23) was involved in an offense under either statute?

United States v. Yang

Docket: 18-10341
Opinion Date: May 4, 2020
Judge: Piersol
Areas of Law: Criminal Law

The Ninth Circuit affirmed the district court's denial of defendant's motion to suppress after he pleaded guilty to receipt of stolen mail and being a prohibited person in possession of a firearm. Defendant moved to suppress the evidence seized from his residence and the statements he made to law enforcement on the basis that the search warrant obtained by the Postal Inspection Service relied on evidence that was obtained illegally. The panel declined to address the potential Fourth Amendment privacy interests that may be implicated by the warrantless use of this Automatic License Plate Recognition (ALPR) technology, and held that defendant does not have a reasonable expectation of privacy in the historical location data of the Yukon under the facts of this case. The panel found no evidence in the record that Prestige Motors had a policy or practice of allowing lessees to keep cars beyond the rental period and Prestige had made affirmative attempts to repossess the vehicle by activating the GPS unit to locate and disable the vehicle. Therefore, defendant lacked standing to challenge the warrantless search of the database.

Bark v. United States Forest Service

Docket: 19-35665
Opinion Date: May 4, 2020
Judge: Stephen Andrew Higginson
Areas of Law: Environmental Law, Government & Administrative Law

The Ninth Circuit granted the Forest Service's request to publish the unpublished Memorandum Disposition with modifications. The panel reversed the district court's grant of summary judgment for the Forest Service in an action alleging violations of the National Environmental Policy Act (NEPA) and National Forest Management Act (NFMA). The panel held that the Forest Service's determination that the Crystal Clear Restoration Project did not require an Environmental Impact Statement (EIS) was arbitrary and capricious for two independent reasons. First, the effects of the Project are highly controversial and uncertain, thus mandating the creation of an EIS. Second, the Forest Service failed to identify and meaningfully analyze the cumulative impacts of the Project. Because an EIS is required, and because the findings in the EIS could prompt the Forest Service to change the scope of the Project or the methods it plans to use, the panel did not reach the remaining claims. The panel reversed and remanded for further proceedings.

Read Opinion Are you a lawyer? **Annotate this case**.

John Doe #1 v. Trump

Docket: 19-36020
Opinion Date: May 4, 2020
Judge: Sidney Runyan Thomas
Areas of Law: Immigration Law

The Ninth Circuit denied the government's motion for a stay pending appeal of the district court's preliminary injunction enjoining Presidential Proclamation No. 9945, Suspension of Entry of Immigrants Who Will Financially Burden the United States Health Care System. The Proclamation barred, with some exceptions, individuals seeking to enter the United States on an immigrant visa from entering unless they could demonstrate that they will be covered by certain approved health insurance within 30 days of entry or that they have the resources to cover foreseeable

healthcare costs. The panel held that the government has not established the requisite irreparable harm necessary to justify a stay pending appeal. In this case, the government's rights may be vindicated upon completion of this litigation; the alleged monetary harms to third parties upon which the government relies do not constitute irreparable harm; and the government did not meet its high burden to satisfy the other Nken factors. Therefore, the government has not demonstrated a likelihood of success. The panel also held that staying the injunction would injure both the plaintiff class and third parties, and the public interest weighs against entering a stay; the preliminary injunction preserves the status quo during the pendency of this appeal; and the district court did not abuse its discretion in determining the scope of the preliminary injunction.

He Said/She Said, Save Our Sons, and the Stories that Stick: Part Two of a Two-Part Series of Columns
SHERRY F. COLB

verdict post

In this second in a series of columns on the U.S. Department of Education's recent push toward a higher burden of proof in determinations of sexual harassment or assault under Title IX, Cornell Law professor Sherry F. Colb suggests that gendered narratives play a role in people's willingness to regard an acquaintance rape case as "he said/she said." Colb describes several examples in which people prefer a story that confirms a pre-existing bias over truth based on evidence.

Government & Administrative Law Opinions

Spadaro v. United States Customs and Border Protection

Court: US Court of Appeals for the Second Circuit
Docket: 19-1157
Opinion Date: October 20, 2020
Judge: Joseph F. Bianco
Areas of Law: Government & Administrative Law, Immigration Law

The Second Circuit affirmed the district court's judgment in favor of the government defendants in a Freedom of Information Act (FOIA) action brought by plaintiff, seeking documents related to the revocation of his visa. The court held that the contested documents were properly withheld under FOIA Exemption 3, and specifically INA 222(f), because they pertain to the issuance and refusal of a visa. Furthermore, officials properly invoked Exemption 3 to withhold revocation documents as they are related to visa issuances and refusals. Finally, plaintiff failed to meet his burden of demonstrating that the records are needed by a court "in the interest of the ends of justice," and the discretionary release of records under 8 U.S.C. 1202(f)(1) provides no basis for disclosure in this FOIA action. For the reasons set forth in a separate summary order addressing FOIA Exemption 5 filed simultaneously with this opinion, the court affirmed the judgment.

PDX North Inc v. Commissioner New Jersey Department of Labor and Workforce Development

Court: US Court of Appeals for the Third Circuit
Docket: 19-2968
Opinion Date: October 22, 2020
Judge: Scirica
Areas of Law: Civil Procedure, Government & Administrative Law

PDX is a last-mile shipper of wholesale auto parts in New Jersey and other states. Depending on the volume and timing of its customers' shipping needs, PDX hires "independent owner-operators" on an "as-needed" basis. PDX long classified these drivers as independent contractors. In 2012, after completing an audit of PDX for 2006-2009, the New Jersey Department of Labor and Workforce Development determined that PDX had misclassified its drivers, finding they were employees, not independent contractors. The Department reached the same conclusion in two subsequent audits and sought payment of unemployment compensation taxes PDX filed suit,

contending New Jersey's statutory scheme for classifying workers was preempted by the Federal Aviation Administration Authorization Act of 1994 and was unconstitutional under the Interstate Commerce Clause. An action before the New Jersey Office of Administrative Law (OAL) was stayed at PDX's request. SLS, also a last-mile shipper, was audited by the Department and was allowed to intervene in the lawsuit. The Department's audit against SLS remains pending. The trial court dismissed the entire case as barred by the Younger abstention doctrine. The Third Circuit held that the trial court correctly dismissed PDX, but erred in dismissing SLS. PDX's OAL action is an ongoing judicial proceeding in which New Jersey has a strong interest and PDX may raise any constitutional claims while SLS is not subject to an ongoing state judicial proceeding.

Read Opinion Are you a lawyer? **Annotate this case**.

Wise v. Circosta

Court: US Court of Appeals for the Fourth Circuit
Dockets: 20-2104, 20-2107
Opinion Date: October 21, 2020
Judge: James Andrew Wynn, Jr.
Areas of Law: Civil Rights, Constitutional Law, Election Law, Government & Administrative Law

The Fourth Circuit declined to enjoin the North Carolina State Board of Elections's extension of its deadline for the receipt of absentee ballots for the ongoing general election. The court explained that the only issue it must address now is plaintiffs' request for an emergency injunction pending appeal regarding a single aspect of the procedures that the district court below refused to enjoin: an extension of the deadline for the receipt of mail-in ballots. The court explained that the change is simply an extension from three to nine days after Election Day for a timely ballot to be received and counted. Because plaintiffs have not established a likelihood of success on the merits of their equal protection claim—and because, in any event, Purcell v. Gonzalez, 549 U.S. 1 (2006), and Andino v. Middleton, No. 20A55, 2020 WL 5887393 (U.S. Oct. 5, 2020), require that the court not intervene at this late stage—the court declined to enter an injunction pending appeal. The court also held that plaintiffs lack standing to raise their Elections Clause challenge. Even if they did not lack standing, the Pullman

abstention doctrine strongly counsels the court against exercising jurisdiction over that claim. The court further held that all suggestions from the state courts point to the conclusion that the Board properly exercised its legislative delegation of authority, and there is no irreparable harm from a ballot extension. Finally, the balance of the equities is influenced heavily by Purcell and tilts against federal court intervention at this late stage, and Andino establishes that the appropriate status-quo framework is the status quo created by the state's actions, not by later federal court interventions.

Read Opinion Are you a lawyer? **Annotate this case**.

M.D. v. Abbott

Court: US Court of Appeals for the Fifth Circuit
Docket: 19-41015
Opinion Date: October 16, 2020
Judge: James C. Ho
Areas of Law: Civil Procedure, Government & Administrative Law

Plaintiffs, a certified class of minor children in the permanent managing conservatorship (PMC) of the Texas Department of Family Protective Services, filed 42 U.S.C. 1983 claims alleging that the Texas foster-care system violated their substantive due process right to be free from an unreasonable risk of harm. The district court issued a wide-ranging permanent injunction imposing sweeping changes on the Texas foster-care system. The Fifth Circuit vacated and remanded the injunction to the district court for modification; the district court made additional modifications to the injunction; and the state appealed again. The Fifth Circuit then instructed the district court to begin implementing, without further changes, the modified injunction with the alterations the court made. On remand, however, the district court expanded the injunction again by enjoining the state from moving any PMC child from their current placement as a result of enforcement of the court's requirement for 24-hour awake-night supervision unless application is made to the court prior to the proposed discharge. The Fifth Circuit reversed and held that it is black-letter law that a district court must comply with a mandate issued by an appellate court. The Fifth Circuit remanded to the district court to begin implementing, without further changes, the modified injunction with the alterations the court has made.

Read Opinion Are you a lawyer? **Annotate this case**.

Richardson v. Texas Secretary of State

Court: US Court of Appeals for the Fifth Circuit
Docket: 20-50774
Opinion Date: October 19, 2020
Judge: Jerry Edwin Smith
Areas of Law: Civil Rights, Constitutional Law, Election Law, Government & Administrative Law

After plaintiffs filed suit challenging Texas's absentee-ballot system in August 2019, the district court granted plaintiffs' summary judgment motion in part, issuing an injunction adopting many of plaintiffs' proposed changes to Texas's election procedures. The injunction included three main provisions regarding the 2020 election: first, the district court required the Secretary to issue an advisory, within ten days, notifying local election officials of the injunction, and the notification must inform them that rejecting ballots because of mismatching signatures is unconstitutional unless the officials take actions that go beyond those required by state law; second, the Secretary must either issue an advisory to local election officials requiring them to follow the district court's newly devised signature verification and voter-notification procedures, or else promulgate an advisory requiring that officials cease rejecting ballots with mismatched signatures altogether; and third, the district court mandated that the Secretary take action against any election officials who fail to comply with the district court's newly minted procedures. The Fifth Circuit considered the Nken factors and granted the Secretary's motion to stay the district court's injunction pending appeal, because the Secretary is likely to succeed in showing that Texas's signature-verification procedures are constitutional. The court held that the Secretary is likely to show that plaintiffs have alleged no cognizable liberty or property interest that could serve to make out a procedural due process claim. Given the failure of plaintiffs and the district court to assert that voting—or, for that matter, voting by mail—constitutes a liberty interest, along with the absence of circuit precedent supporting that position, the court stated that the Secretary is likely to prevail in showing that plaintiffs' motion for summary judgment on their due process claim should have been denied. The court rejected the district court's reasoning regarding any state-created liberty interest. Even if voting is a protected

liberty or property interest, the court held that the Secretary is likely to show that the district court used the wrong test for the due process claim. The court held that the Anderson/Burdick framework provides the appropriate test for plaintiffs' due process claims and Texas's signature-verification procedures are reasonable and nondiscriminatory, and they survive scrutiny under the Anderson/Burdick framework. In this case, Texas's important interest in reducing voter fraud—and specifically in stymying mail-in ballot fraud—justifies its use of signature verification. The court also held that the Secretary is likely to prevail in her defense that sovereign immunity bars the district court's injunction requiring that she issue particular advisories and take specific potential enforcement action against noncomplying officials. Finally, the remaining Nken factors counsel in favor of granting a stay pending appeal where the Secretary will be irreparably injured absent a stay, public interest favors granting a stay, and the balance of harms weighs in favor of the Secretary.

Read Opinion Are you a lawyer? **Annotate this case**.

EMW Women's Surgical Center, P.S.C. v. Friedlander

Court: US Court of Appeals for the Sixth Circuit
Docket: 18-6161
Opinion Date: October 16, 2020
Judge: Larsen
Areas of Law: Civil Rights, Constitutional Law, Government & Administrative Law

A 1998 Kentucky law requires abortion facilities to obtain transfer agreements with local hospitals and transport agreements with local ambulance services, Ky. Rev. Stat. (KRS) 216B.0435; 2017 regulations imposed stricter conditions on the agreements but also allowed successive, 90-day waivers for facilities unable to comply. EMW, at the time, Kentucky's only licensed abortion facility, challenged the requirements as imposing an undue burden on abortion access. They argued that it had become impossible for them to obtain the required agreements and that the law's enforcement would leave Kentucky without a licensed abortion facility. The district court found Kentucky's requirements were facially invalid and permanently enjoined them. The Sixth Circuit reversed in part, vacating the injunction. The district court erred in attempting to weigh the benefits of the Kentucky laws against their burdens; a court need only consider whether

the laws are reasonably related to a legitimate state interest and whether they impose a substantial obstacle. The laws are reasonably related to a legitimate government end. The court noted that Planned Parenthood received a provisional license for its Louisville facility in 2020 and currently performs abortions. To establish a substantial burden, the plaintiffs had to establish that both EMW and Planned Parenthood would be unable to operate on the basis of waivers even if they could reasonably expect to renew the waiver every 90 days. They failed to make that showing.

Boardman v. Inslee

Court: US Court of Appeals for the Ninth Circuit
Docket: 19-35113
Opinion Date: October 22, 2020
Judge: N. R. Smith
Areas of Law: Civil Rights, Constitutional Law, Government & Administrative Law, Labor & Employment Law

Washington ballot initiative 1501 prohibits public access to certain government-controlled information, including the personal information of in-home care providers, but permits that information to be disclosed to the providers' certified exclusive bargaining representatives. The law was challenged under 42 U.S.C. 1983 by in-home providers, required by Washington law to participate in statewide collective bargaining, who are not members of their respective unions and do not pay agency fees. They wanted to inform other individual in-home providers of their right to not pay union agency fees and were unable to obtain the necessary contact information. The Ninth Circuit affirmed summary judgment in favor of the defendants. The First Amendment does not guarantee a general right of access to government-controlled information. Whether to disclose government-controlled information is generally left to the political processes but the First Amendment forbids a state from discriminating invidiously among viewpoints. A state does not engage in viewpoint discrimination by disclosing the personal information of public or quasi-public employees to the employees' certified bargaining representative while denying equal access to the public. Initiative 1501 does not implicate the plaintiffs' associational freedom; the plaintiffs lack standing to assert the rights of

other in-home care providers. Initiative 1501 does not violate the Equal Protection Clause; the challenged provisions satisfy rational-basis review. The state has a legitimate interest in protecting seniors and other vulnerable individuals from identity theft and other financial crimes. There was no evidence that those who voted in favor of Initiative 1501 were motivated by an irrational prejudice or desire to harm the plaintiffs or their message.

California v. United States Environmental Protection Agency

Court: US Court of Appeals for the Ninth Circuit
Docket: 19-17480
Opinion Date: October 22, 2020
Judge: Patrick J. Bumatay
Areas of Law: Civil Procedure, Environmental Law, Government & Administrative Law

The U.S. EPA promulgated new landfill emissions guidelines in 2016. Each state was required to submit a plan for implementing the new guidelines. The EPA was to approve or disapprove each state plan. For states that failed to submit a plan, the EPA had to promulgate a federal plan that would govern implementation in those states. The deadline for EPA issue the federal plan was set by regulation for November 2017. The EPA missed the deadline. Several states sued to force EPA to promulgate its federal plan. EPA responded to the suit and also began the rulemaking process to extend its regulatory deadline. While that rulemaking was underway, the district court entered an injunction requiring EPA to promulgate the federal plan within six months (November 2019). Months later, the EPA finalized the rulemaking process, extending its regulatory deadline by two years to August 2021. The district court declined to modify the injunction. The Ninth Circuit reversed. The district court abused its discretion in denying the EPA's request for relief because the new regulations constituted a change in law, and removed the legal basis for the court's deadline. A shift in the legal landscape that removed the basis for an order warranted modification of the injunction. The court rejected an argument that courts must look beyond the new regulations and conduct a broad, fact-specific inquiry into whether modification prevented inequity.

Sensory NeuroStimulation, Inc. v. Azar

Court: US Court of Appeals for the Ninth Circuit
Docket: 19-55036
Opinion Date: October 16, 2020
Judge: Michael M. Baylson
Areas of Law: Government & Administrative Law, Health Law

The Ninth Circuit affirmed the district court's dismissal based on lack of jurisdiction of an action brought by Sensory NueroStimulation, a medical device supplier, seeking Medicare coverage of its product. The panel held that the district court correctly held that 42 U.S.C. 405(h)'s administrative channeling requirement applied and that it therefore had no subject matter jurisdiction to hear Sensory's claims. In this case, the lawsuit is subject to Medicare's administrative channeling requirements; Sensory has not met those requirements; there exists a way to satisfy those requirements; and these conclusions do not completely preclude judicial review so as to trigger a key exception to the channeling requirements.

Speidell v. United States

Court: US Court of Appeals for the Tenth Circuit
Docket: 19-1214
Opinion Date: October 20, 2020
Judge: Mary Beck Briscoe
Areas of Law: Civil Procedure, Government & Administrative Law, Tax Law

The Appellants objected to the IRS's attempts to collect and audit information about their marijuana-related business practices, arguing: (1) the IRS investigation was quasi-criminal, exceeded the Agency's authority, and was being conducted for an illegitimate purpose; (2) even if the investigation had a legitimate purpose, the information sought was irrelevant; and (3) the investigation was in bad faith and constituted an abuse of process because (a) the IRS may share the information collected with federal law enforcement agents, (b) the IRS summonses are overly broad and require the creation of new reports, (c) the dispensaries had a reasonable expectation of privacy in the data they tender to state regulatory

authorities, and (d) those state authorities could not provide the requested information without violating Colorado law. The Appellants further contended the district court applied the wrong standard of review when it denied motions to quash and granted motions to enforce the summonses. Relying on the reasoning outlined in Standing Akimbo, LLC v. United States, 955 F.3d 1146, 1150–69 (10th Cir. 2020), the Tenth Circuit rejected Appellants' arguments and affirmed the district court's rulings in favor of the IRS.

Monk v. Wilkie

Court: US Court of Appeals for the Federal Circuit
Docket: 19-1094
Opinion Date: October 20, 2020
Judge: Pauline Newman
Areas of Law: Government & Administrative Law, Military Law, Public Benefits

Veterans sought certification for the class of veterans whose disability claims had not been resolved by the Board of Veterans Appeals within one year of the filing of a Notice of Disagreement (NOD), requesting judicial action to compel the Secretary of Veterans Affairs to decide all pending appeals within one year of receipt of a timely NOD. The Veterans Court requested that they separate or limit the requested class action into issues that meet the Federal Rule of Civil Procedure 23(b)(2) “commonality” standard. The veterans declined, stating that “systemic delay” exists in the VA claims system, and broad judicial remedy is required. The Veterans Court denied the requested class certification. While the case was pending, the Veterans Appeals Improvement and Modernization Act of 2017, 131 Stat. 1105 purportedly improved processing times by allowing claimants to choose: higher-level review, a supplemental claim, board review with a hearing and opportunity to submit additional evidence, board review without a hearing, but with an opportunity to submit additional evidence, or board review without a hearing or additional evidence, based on their priorities on appeal. The Federal Circuit affirmed the denial of class certification, citing the lack of proof of commonality. When Congress has crafted a comprehensive remedial structure, that structure warrants evaluation in practice before judicial intervention is contemplated.

Am. Chemistry Council v. Off. of Environ. Health Hazard Assessment

Court: California Courts of Appeal
Docket: C079078(Third Appellate District)
Opinion Date: October 19, 2020
Judge: Murray
Areas of Law: Civil Procedure, Environmental Law, Government & Administrative Law

Proposition 65 was enacted by the voters to protect the people of California and its water supply from harmful chemicals. Proposition 65 required the Governor to publish, at least annually, a list of chemicals known to the state to cause cancer or reproductive toxicity. Proposition 65 added Health and Safety Code section 25249.8, which provided the listing obligations and sets forth four independent "listing mechanisms" by which a chemical could be listed, including the "state's qualified expert" listing mechanism and the "authoritative body" listing mechanism. At issue in this case was whether the decision by the Office of Environmental Health Hazard Assessment (OEHHA) to list Bisphenol A (BPA) as a chemical known to cause reproductive toxicity under Proposition 65, was an abuse of discretion. BPA is used primarily to coat food and beverage packaging and containers. The American Chemistry Council (ACC) commenced this action seeking to enjoin OEHHA from listing BPA. In an amended complaint, ACC sought a peremptory writ of mandate directing OEHHA not to list BPA. The trial court denied the requested relief. ACC appealed, asserting that OEHHA abused its discretion in: (1) refusing to consider the arguments against listing BPA; (2) concluding that the National Toxicology Program (NTP) formally identified BPA as a reproductive toxicant in the monograph; and (3) determining that NTP concluded that studies in experimental animals indicated that there was sufficient data to establish that an association between adverse reproductive effects in humans and BPA is "biologically plausible" within the meaning of that term as it was used in OEHHA's own regulation. The Court of Appeal found OEHHA's position as to biological plausibility was based on, among other things, the presumption that chemicals that cause harm in experimental animals will also cause similar harm in humans in the absence of evidence to the contrary. The Court concluded OEHHA did not abuse its discretion in listing BPA based on the

monograph. Therefore, the Court concluded the trial court did not abuse its discretion in denying ACC the relief requested in the amended complaint.

Epstein v. Vision Service Plan

Court: California Courts of Appeal
Docket: A155219(First Appellate District)
Opinion Date: October 22, 2020
Judge: Banke
Areas of Law: Arbitration & Mediation, Civil Rights, Government & Administrative Law

Epstein, an optometrist, entered into a VSP "Network Doctor Agreement." VSP audited of Epstein's claims for reimbursement, concluded he was knowingly purchasing lenses from an unapproved supplier, and terminated the provider agreement. The agreement included a two-step dispute resolution procedure: the "Fair Hearing" step provided for an internal "VSP Peer Review." If the dispute remained unresolved, the agreement required binding arbitration under the Federal Arbitration Act (FAA), under procedures set forth in the policy. A "Fair Hearing" panel upheld the termination. Instead of invoking the arbitration provision, Epstein filed an administrative mandamus proceeding, alleging the second step of the process was contrary to California law requiring certain network provider contracts to include a procedure for prompt resolution of disputes and expressly stating arbitration "shall not be deemed" such a mechanism. (28 Cal. Code Regs 1300.71.38.) He claimed that state law was not preempted by the FAA, citing the McCarran-Ferguson Act, which generally exempts from federal law, state laws enacted to regulate the business of insurance. The court of appeal affirmed the rejection of those challenges. State regulatory law requiring certain network provider agreements to include a dispute resolution process that is not arbitration pertains only to the first step of the dispute resolution process and does not foreclose the parties from agreeing to arbitration in lieu of subsequent judicial review. While the arbitration provision is procedurally unconscionable in minor respects, Epstein failed to establish that it is substantively unconscionable.

Paul Blanco's Good Car Co. Auto Group v. Superior Court

Court: California Courts of Appeal
Docket: A159623(First Appellate District)
Opinion Date: October 21, 2020
Judge: Needham
Areas of Law: Civil Procedure, Government & Administrative Law

The state filed an unverified complaint against the entities and one of their principals, asserting unfair practices and false advertising. The defendants filed an unverified "Answer" with a general denial of the complaint's allegations and affirmative defenses. The judge struck the answer as to the entities because they failed to verify the answer as required by Code of Civil Procedure section 446 and asserted only a general denial in contravention of section 431.30(d). The court concluded that section 446(a)'s exception to the verification requirement was coextensive with the Fifth Amendment privilege against self-incrimination and a corporation may not invoke that privilege. In response to a "show cause order" following the defendants' petition for extraordinary writ relief, the court issued an order noting that the case had been reassigned. After a hearing, a new judge vacated the previous order. The court of appeal agreed that the exception applies to corporations and that the defendants could file a general denial under section 431.30(d), which requires a defendant to answer each material allegation of a verified complaint with specific admissions or denials, but allows a defendant to file a general denial if the complaint is not verified. There is no reason for deeming the state's complaint verified. The court also noted that an order to show cause, unlike an alternative writ, does not invite the trial court to change the challenged order and that superior court judges generally may not overturn the order of another judge unless the other judge is unavailable.

Rhoden, et al. v. Athens-Clarke County Bd. of Elections, et al.

Court: Supreme Court of Georgia
Docket: S21A0030
Opinion Date: October 19, 2020
Judge: Bethel

Areas of Law: Constitutional Law, Election Law, Government & Administrative Law

Jerry NeSmith earned enough support to be placed on the ballot for the office of district commissioner for the Athens-Clarke County Unified Government. NeSmith died just three days before Election Day. In addition to the personal loss of his family and friends, NeSmith's death before Election Day ultimately resulted in an electoral loss for his supporters, a number of whom joined to bring suit in superior court challenging the results of the election. The Georgia Supreme Court found that because the applicable Georgia statutes dictated that votes cast on paper ballots for a candidate who died before Election Day were void, none of the votes cast for NeSmith had legal effect. Therefore, the Athens-Clarke County Board of Elections properly applied Georgia law by voiding votes cast for NeSmith and declaring Jesse Houle the commissioner-elect for Athens-Clarke County Commission. The superior court order dismissing appellants' election challenge was affirmed.

Schoeffel v. Idaho Dept. of Labor

Court: Idaho Supreme Court - Civil
Docket: 47101
Opinion Date: October 16, 2020
Judge: Brody
Areas of Law: Government & Administrative Law, Labor & Employment Law

Connie Schoeffel worked for Thorne Research, Inc. ("Thorne") as a kitchen manager. In 2016, Thorne announced that it would be moving its operations from Idaho to South Carolina. For those employees who would not be relocating to South Carolina, Thorne offered an employee retention program to encourage them to continue working at the Idaho facility until the South Carolina facility was ready. As part of this program, Thorne prepared a "Release of Claims Agreement" ("the Agreement") providing that Thorne would pay participating employees "bargained-for compensation" in exchange for giving up certain rights, including the right to quit before their positions were eliminated. Schoeffel signed this Agreement approximately six weeks before her last day of work. After her separation, Schoeffel filed for unemployment benefits without reporting the retention payments as

income. Around the time Schoeffel received her fourth benefit payment, the Department learned of the payments that Thorne owed Schoeffel under the Agreement. The Department determined that those payments constituted reportable “severance pay” under Idaho Code section 72-1367(4). Consequently, the Department determined that Schoeffel was receiving severance pay and was required to repay the unemployment benefits she had received. Schoeffel appealed to the Department’s Appeals Bureau, which initially ruled in her favor but affirmed the Department’s decision on reconsideration. Schoeffel then appealed to the Industrial Commission which affirmed the Appeals Bureau’s decision. The Idaho Supreme Court determined the payments were reportable severance pay, applying Parker v. Underwriters Labs, Inc., 96 P.3d 618 (2004). "[B]ecause the primary purpose of the Agreement was to secure the relinquishment of Schoeffel’s right to quit, rather than to compensate her for her past service to Thorne, they were not made 'as a result of' severance under Idaho Code section 72-1367(4). Therefore, the retention payments do not constitute reportable severance pay." The Commission's decision was reversed.

Goral v. Dart

Court: Supreme Court of Illinois
Citation: 2020 IL 125085
Opinion Date: October 22, 2020
Judge: Neville
Areas of Law: Civil Procedure, Government & Administrative Law, Labor & Employment Law

Cook County Sheriff Dart instituted disciplinary proceedings against several Sheriff’s officers (plaintiffs) by filing charges with the Cook County Sheriff’s Merit Board under Counties Code, 55 ILCS 5/3-7011. The plaintiffs filed motions with the Board to dismiss the charges. While the administrative proceedings were pending, the plaintiffs filed suit, seeking declaratory, injunctive, and monetary relief against the Sheriff, Cook County, the Board, and the Cook County Board of Commissioners, asserting that the Board was not legally constituted because several of its members were appointed to or served terms that did not comply with the Code section 3-7002 requirements. The Illinois Supreme Court reversed the dismissal of the suit

for failure to exhaust administrative remedies. Because the plaintiffs challenged the authority of the Board to address the charges, the “authority” exception to the exhaustion requirement applied. The circuit court can adjudicate the requests for back pay and other claims, which do not fall within the particular expertise of the Board. The plaintiffs raised the issue before the Board, which refused to hear them until after the disciplinary proceedings were complete. Given that the Board had not taken any substantive action regarding the disciplinary charges before the filing of the lawsuit, the “de facto officer doctrine” does not apply.

Brown v. Indiana Department of Environmental Management

Court: Supreme Court of Indiana
Docket: 20S-MI-609
Opinion Date: October 21, 2020
Judge: Per Curiam
Areas of Law: Government & Administrative Law, Labor & Employment Law

The Supreme Court vacated a portion of the court of appeals opinion affirming the judgment of the trial court denying Appellant's petition for judicial review of the summary judgment granted by the State Employees' Appeals Commission (SEAC) against Appellant on his claim that his alleged protected activity was related to his termination, holding that the court of appeals reached too broad a conclusion to resolve the issue in this case. Appellant appealed his termination, claiming he was a protected whistleblower. SEAC dismissed the complaint, but the superior court reversed. On remand, SEAC granted summary judgment in favor of Appellant's employer. Appellant sought judicial review, claiming that most of his employer's arguments were barred by the law-of-the-case doctrine. The trial court denied the petition, concluding that the law-of-the-case doctrine did not apply. The court of appeals affirmed, agreeing that the law-of-the-case doctrine did not apply but going further to find that the law-of-the-case doctrine "is applicable only when an appellate court determines a legal issue, not a trial court." The Supreme Court vacated that portion of the court of appeals' opinion and otherwise affirmed, holding that the court of appeals need not have reached so broad a conclusion to resolve the issue.

D90 Energy, LLC v. Jefferson Davis Parish Board of Review

Court: Louisiana Supreme Court
Docket: 2020-C-00200
Opinion Date: October 20, 2020
Judge: Crain
Areas of Law: Energy, Oil & Gas Law, Government & Administrative Law, Tax Law

This dispute involved ad valorem taxes for the tax years 2013 through 2016. In October 2012, D90 Energy, LLC, purchased two gas wells and one saltwater disposal well. The wells were subject to ad valorem property taxation in Jefferson Davis Parish, Louisiana. Relying on a Commission regulation applicable to oil and gas wells, D90 argued that a purchase price in a valid sale is fair market value; therefore, the wells should be valued at $100,000.00 for each of these tax years. For each tax year, the Assessor rejected D90's documentation of the sale, explaining, in part, that his office never uses the sales price as fair market value for oil and gas wells. Rather, the Assessor used valuation tables provided by the Commission, which take into account age, depth, type, and production of the wells. D90 appealed each assessment to the Commission, presenting documentary evidence and live testimony to establish the $100,000.00 purchase price for the wells and the arms-length nature of the sale. It presented additional evidence to establish that the condition and value of the wells were virtually identical for each tax year. The district court affirmed the Commission's valuations for all four tax years. Reviewing only what was presented to the Assessor, the court of appeal reversed the district court and reinstated the Assessor's valuation. The Louisiana Supreme Court granted D90's writ application to determine the correctness of the assessments, the proper scope and standard of review, and the legal effect of D90's failure to pay taxes under protest. After review, the Court determined the district court was correct in affirming the Commission, thus reversing the appellate court's judgment.

Meiners v. St. Tammany Parish Fire Protection Dist. No. 4 et al.

Court: Louisiana Supreme Court
Docket: 2020-CC-00491
Opinion Date: October 20, 2020
Judge: Per Curiam
Areas of Law: Government & Administrative Law, Labor & Employment Law

Frederick Meiners, III was employed as Assistant Fire Chief with the St. Tammany Parish Fire Protection District No. 4 ("District"). In early 2016, Meiners agreed to retrieve a repaired ambulance unit from Hattiesburg, but informed his supervisor, provisional fire chief Kenneth Moore, that he first had to attend a speaking engagement with a ladies' group that would last approximately thirty minutes. At 1:08 p.m. that day, Jennifer Glorioso, the wife of Fire Equipment Operator Glorioso (hereinafter referred to as "FEO Glorioso"), photographed Meiners sitting at a table at the La Madeleine restaurant with his wife and his lawyer. She later sent a text message containing this photograph to her husband. At 2:30 p.m., District Fire Chief Brady Anderson advised Chief Moore that Meiners was not yet back from his meeting and offered to pick up the ambulance himself. Chief Moore declined Anderson's offer. After being reassured by Meiners he was on his way back to the District, Chief Moore received a text from an unknown phone number that contained a photograph of Meiners taken at the restaurant. Chief Moore then provided a written notice of investigation to Meiners, stating that he was "initiating an investigation into an incident involving you in a matter which occurred on February 19, 2016, specifically, conflicting details regarding a speaking engagement while on duty." The notice of investigation also stated the "persons conducting this investigation will be Corianne Green and a PMI representative." Chief Moore then placed Meiners on administrative leave with pay. After a hearing, Meiners was terminated from his employment with the district based on his conduct on the date of the ambulance pickup. The termination was affirmed by the St. Tammany Parish Fire Protection District No. 4 Civil Service Board ("Board"). Upon review, a district court reversed and remanded, finding that untruthfulness alone, did not mandate termination, where the misconduct did not result in a detrimental effect on the efficient and orderly operation of the fire department. The Louisiana Supreme Court found the district court erred in remanding the case to the Board to impose discipline other than termination. The Court reversed judgment and reinstated the Board's decision.

RFM-TREI Jefferson Apartments v. Stark County Board of Comm'rs

Court: North Dakota Supreme Court
Citation: 2020 ND 204
Opinion Date: October 21, 2020
Judge: Jerod E. Tufte
Areas of Law: Civil Procedure, Government & Administrative Law, Real Estate & Property Law, Tax Law

RFM-TREI Jefferson Apartments, LLC; RFM-TREI Lincoln Apartments, LLC; Dickinson Homestay, LLC; and Lodgepros Dickinson, LLC (together "the Taxpayers") appealed district court judgments affirming the Stark County Board of Commissioners' ("the Board") denials of their applications for tax abatements or refunds. The Taxpayers collectively owned two apartment complexes and two hotels located in the City of Dickinson. The Taxpayers filed applications for abatement or refund of their 2016 property taxes. The Taxpayers' opinions of value for each property differed from the City's valuations by a range of roughly $1.8 million to $20.3 million. After holding a hearing, the City recommended the Board deny each application. The Board indeed denied the abatement applications in four separate written decisions. Using the same language in each, the Board concluded

the assessor's valuations were not "in error, invalid, inequitable, unjust, or arrived at in an arbitrary, capricious, or unreasonable manner." The decisions also explained the Board did not believe the Taxpayers provided "sufficient enough information relating to the subject properties, or the local market for competing properties, to lead us to the same value conclusions requested by the applicant." The district court affirmed each denial in separate, written orders and judgments. After review, the North Dakota Supreme Court concluded the Board acted arbitrarily and unreasonably in adopting assessments exceeding the true and full value of the property. The Court reversed the district court judgments and the Board's decisions denying the Taxpayers' abatement applications. The matters were remanded for a new hearing to determine the "true and full value" of the properties and reconsideration of the abatement applications.

Suelzle v. NDDOT

Court: North Dakota Supreme Court
Citation: 2020 ND 206
Opinion Date: October 21, 2020
Judge: Jerod E. Tufte
Areas of Law: Criminal Law, Government & Administrative Law

Benjamin Suelzle appealed a district court judgment affirming a Department of Transportation hearing officer's decision revoking his driving privileges for two years. Suelzle argued the hearing officer erred: (1) by finding the arresting officer had reasonable grounds to arrest under N.D.C.C. 39-08-01; (2) by admitting a supplemental report and notice form; and (3) by failing to exclude evidence of his test refusal because he was not given a valid implied consent advisory. Specifically, he contended he could not be lawfully arrested under N.D.C.C. 39-08-01 because the alleged actual physical control occurred on the grassy yard of his private residence, which was an improved private residential lot and not a place to which the public has access. The hearing officer rejected Suelzle's argument that his vehicle was located on private property to which the officer could have no reasonable grounds to believe the public would have a right of access for vehicular use. The North Dakota Supreme Court concluded after review of the Department hearing and district court record that although there was

evidence in the record that Suelzle drove under the influence on areas where the public had a right of access before parking on his lawn, he was not charged with driving under the influence. He was charged only with actual physical control of his pickup where it was ultimately parked on his residential grass lawn. The hearing officer's finding was based on a misapplication of law, and it was not supported by evidence in the record sufficient to show the location of the actual physical control offense was within the scope of N.D.C.C. 39-08-01. The district court's judgment affirming the hearing officer's revocation of Suelzle's driving privileges was reversed.

WSI v. Tolman

Court: North Dakota Supreme Court
Citation: 2020 ND 223
Opinion Date: October 21, 2020
Judge: Gerald W. VandeWalle
Areas of Law: Civil Procedure, Government & Administrative Law, Labor & Employment Law

Workforce Safety and Insurance ("WSI") appealed a district court judgment affirming an administrative law judge's ("ALJ") order that affirmed WSI's April 2018 order awarding permanent impairment benefits to Jason Tolman and that reversed WSI's July 2018 order denying benefits for his depression and anxiety conditions. In September 2014, Tolman was injured when he was driving a tanker truck and involved in a single vehicle roll-over accident. WSI accepted his claim for benefits. In April 2018, WSI issued an order awarding Tolman $4,905 in permanent impairment benefits based on a determination that he had sustained a 16 percent impairment of the whole body. In July 2018, WSI issued an order denying benefits in connection with his depression and anxiety, deciding these conditions were not caused by his physical injury and existed before the work injury. Tolman requested an administrative hearing on the orders, and a hearing was held before an independent ALJ in April 2019. The North Dakota Supreme Court concluded the ALJ erred in applying N.D.C.C. 65-01-02(10)(a)(6) and concluding Tolman established his depression and anxiety conditions were compensable. The Court affirmed that part of the ALJ's order affirming

WSI's April 2018 order; but reversed that part of the ALJ's order reversing WSI's July 2018 order, and reinstated WSI's July 2018 order.

Chernaik v. Brown

Court: Oregon Supreme Court
Docket: S066564
Opinion Date: October 22, 2020
Judge: Nakamoto
Areas of Law: Civil Procedure, Environmental Law, Government & Administrative Law

Plaintiffs, two young Oregonians, concerned about the effects of climate change and their guardians, filed suit against the Governor and the State of Oregon (collectively, the State), contending the State was required to act as a trustee under the public trust doctrine to protect various natural resources in Oregon from substantial impairment due to greenhouse gas emissions and resultant climate change and ocean acidification. Among other things, plaintiffs asked the circuit court to specify the natural resources protected by the public trust doctrine and to declare that the State had a fiduciary duty, which it breached, to prevent substantial impairment of those resources caused by emissions of greenhouse gases. Plaintiffs also asked for an injunction ordering the State to: (1) prepare an annual accounting of Oregon's carbon dioxide emissions; and (2) implement a carbon reduction plan protecting the natural resources, which the court would supervise to ensure enforcement. The circuit court granted the State's motion for summary judgment and denied plaintiffs' motion for partial summary judgment, concluding the public trust doctrine did not encompass most of the natural resources that plaintiffs identified, and did not require the State to take the protective measures that plaintiffs sought. In 2015, the circuit court entered a general judgment dismissing the action, and the Court of Appeals vacated the judgment and remanded for the circuit court to enter a judgment, consistent the Court of Appeals opinion, declaring the parties' rights. Plaintiffs appealed, arguing that as a matter of common law, the public trust doctrine was not fixed and, that it must evolve to address the undisputed circumstances presented, namely, that climate change was damaging Oregon's natural resources. They argued the doctrine was not limited to the natural resources that the circuit court identified and, the

doctrine should cover other natural resources beyond those that have been traditionally protected. The Oregon Supreme Court held the public trust doctrine currently encompassed navigable waters and the submerged and submersible lands underlying those waters. "Although the public trust is capable of expanding to include more natural resources, we do not extend the doctrine to encompass other natural resources at this time." The Supreme Court also declined to adopt plaintiffs' position that, under the doctrine, the State had the same fiduciary duties that a trustee of a common-law private trust would have, such as a duty to prevent substantial impairment of trust resources. Accordingly, the Court affirmed the Court of Appeals, which vacated the judgment of the circuit court. The matter was remanded the circuit court to enter a judgment consistent with Supreme Court's judgment.

In re A.M. & G.M.

Court: Vermont Supreme Court
Citation: 2020 VT 95
Opinion Date: October 16, 2020
Judge: Carroll
Areas of Law: Family Law, Government & Administrative Law

Parents appealed the termination of their rights in A.M. and G.M., ages five and four. Parents struggled with substance abuse and were incarcerated periodically during the underlying proceedings. In January 2018, the Department for Children and Families (DCF) filed a petition alleging the children were in need of care or supervision (CHINS) based on parental neglect, including squalid living conditions, and parental substance-abuse concerns. The children were initially placed with their maternal grandmother pursuant to a conditional custody order (CCO), and then with mother pursuant to a CCO. In April 2018, with parents' agreement, custody of the children was transferred to DCF. Parents stipulated that the children were CHINS, and following a June 2018 disposition hearing, the parties stipulated to continued DCF custody and to DCF's disposition case plan, which contemplated reunification by November 2018 or adoption. Parents were required to take various action steps to achieve reunification. The children did not see mother after June 2018 and they stopped seeing father before

that time. As of September 2018, the children were placed together in the same foster home. Appealing the ultimate termination of the parental rights to their children, Parents challenged the trial court's treatment of voluntary guardianship petitions filed during the pendency of the juvenile proceedings. Mother also argued the court erred in terminating her rights. Finding no abuse of discretion or other reversible error, the Vermont Supreme Court affirmed termination.

Dumfries-Triangle Rescue Squad v. Board of Supervisors

Court: Supreme Court of Virginia
Docket: 191000
Opinion Date: October 22, 2020
Judge: Cleo E. Powell
Areas of Law: Government & Administrative Law

The Supreme Court reversed the judgment of the circuit court determining that the Board of County Supervisors of Prince William County, Virginia had the authority to dissolve the corporate status of Dumfries-Triangle Rescue Squad, Inc. (DTRS), holding that the circuit court erred in concluding that the Board had the power to dissolve the corporate status of DTRS . The Board filed a complaint for declaratory judgment asserting that the Board had the authority to dissolve DTRS's corporate status under Code 32.1-111.4:7(D). The circuit court determined that DTRS was subject to the corporate dissolution authority of the Board pursuant to section 32.1-111.4:7(D) and appointed a receiver to wind up DTRS's corporate affairs, as requested by the Board. The Supreme Court reversed, holding (1) because DTRS was not incorporated pursuant to section 32.1-111.4:7, the Board could not rely on that authority to dissolve its corporate status; and (2) DTRS was not the type of entity that was subject to dissolution under that section.

Neal v. Fairfax County Police

Court: Supreme Court of Virginia

Docket: 191127
Opinion Date: October 22, 2020
Judge: McCullough
Areas of Law: Government & Administrative Law

The Supreme Court reversed the decision of the circuit court concluding that the Fairfax County Police Department's automated license plate recognition (ALPR) satisfied the definition of an "information system" under the Government Data Collection and Dissemination Practices Act (Data Act), Va. Code 2.2-3800 through -3809, holding that the ALPR system does not constitute an "information system" within the meaning of the Data Act. Specifically, the Supreme Court held (1) the ALPR system did not satisfy the statutory definition of an "information system" because it did not contain "the name, personal number, or other identifying particulars of a data subject," and therefore, the Police Department's passive use of the ALPR system was lawful under the Data Act; and (2) the resolution of this case favorably to the Police Department foreclosed the recovery of attorneys' fees.

Reykdal v. Espinoza

Court: Washington Supreme Court
Docket: 98731-9
Opinion Date: October 22, 2020
Judge: Debra Stephens
Areas of Law: Election Law, Government & Administrative Law

Incumbent Superintendent of Public Instruction Chris Reykdal sued to have the Thurston County Superior Court order the removal of one allegedly defamatory line in the voters' guide pamphlet from challenger Maia Espinoza's candidate statement. The superior court agreed that there was a substantial likelihood Reykdal could succeed in a defamation suit based on Espinoza's statement. Using a supervisory power conferred by RCW 29A.32.090(3)(b), the superior court ordered the secretary of state to edit out the offending line. Espinoza sought accelerated direct review, which the Washington Supreme Court granted. Because Reykdal was a public figure, he had to show "actual malice" to succeed in a defamation suit. The Supreme Court found the superior court made no findings regarding actual malice, and thus granted Reykdal's request in error. Because there was no

likelihood that Reykdal could succeed in a defamation suit, the Supreme Court concluded the superior court erred in its application of the statute.

Rethinking Retroactivity in Light of the Supreme Court's Jury Unanimity Requirement

MICHAEL C. DORF

verdict post

In light of the U.S. Supreme Court's decision Monday in *Ramos v. Louisiana*, in which it held that the federal Constitution forbids states from convicting defendants except by a unanimous jury, Cornell law professor Michael C. Dorf discusses the Court's jurisprudence on retroactivity. Dorf highlights some costs and benefits of retroactivity and argues that the Court's refusal to issue advisory opinions limits its ability to resolve retroactivity questions in a way that responds to all the relevant considerations.

Civil Rights Opinions

Ramos v. Louisiana

Court: US Supreme Court
Docket: 18-5924
Opinion Date: April 20, 2020
Judge: Neil M. Gorsuch
Areas of Law: Civil Rights, Constitutional Law, Criminal Law

In 48 states and in federal court, a single juror's vote to acquit is enough to prevent a conviction; Louisiana and Oregon punish people based on 10-to-2 verdicts. Ramos was convicted in a Louisiana court by a 10-to-2 jury verdict and was sentenced to life without parole. The Supreme Court reversed. The Sixth Amendment right to a jury trial, as incorporated against the states by the Fourteenth Amendment, requires a unanimous verdict to convict a defendant of a serious offense. Juror unanimity is a vital common law right. The Court rejected an "invitation" to "perform a cost-benefit analysis on the historic features of common law jury trials and to conclude that unanimity does not make the cut." In overturning its 1972 "Apodaca" decision, the Court stated that the reasoning, in that case, was "gravely mistaken" and "sits uneasily with 120 years of preceding case law." The fact that Louisiana and Oregon may need to retry defendants convicted of felonies by non-unanimous verdicts whose cases are still pending on direct appeal "will surely impose a cost, but new rules of criminal procedure usually do."

Brandt v. Fitzpatrick

Court: US Court of Appeals for the First Circuit
Docket: 19-1174
Opinion Date: April 22, 2020
Judge: Ojetta Rogeriee Thompson
Areas of Law: Civil Rights, Labor & Employment Law

The First Circuit affirmed the district court's grant of summary judgment against Appellant and dismissing his race discrimination and retaliation claims against the Maine Department of Corrections (MDOC), holding that Appellant lacked the proof needed to reach trial. Appellant left his job with MDOC as a state corrections officer to apply for a position in the federal prison system. Appellant met the minimum qualification and interviewed for each open spot but was turned down each time. Appellant subsequently

reapplied for his former job, but MDOC refused to rehire him. Appellant sued MDOC in federal court for race discrimination and retaliation. The district court judge granted summary judgment for MDOC. The First Circuit affirmed, holding that a reasonable jury could not find that MDOC's rejection of Appellant's application for reinstatement was a product of unlawful discrimination or made in retaliation for his complaint to the Maine Human Rights Commission.

Trahan v. Wayfair Maine LLC

Court: US Court of Appeals for the First Circuit
Docket: 19-1961
Opinion Date: April 21, 2020
Judge: Selya
Areas of Law: Civil Rights, Labor & Employment Law

The First Circuit affirmed the decision of the district court granting summary judgment in favor of Employer in this disability discrimination case brought by Plaintiff, a former employee, holding that the district court did not err in entering summary judgment against Plaintiff on her claims. Plaintiff was a military veteran who suffers from post-traumatic stress disorder (PTSD). After she was discharged from her employment, Plaintiff sued Employer for disability discrimination under the Americans with Disabilities Act (ADA), 42 U.S.C. 12101-12213, and the Maine Human Rights Act, Me. Stat. tit. 5 4551-4634, alleging that she was wrongfully discharged based on her PTSD. Plaintiff also claimed that Employer unlawfully failed to accommodate her disability. The district court granted summary judgment for Employer. The First Circuit affirmed, holding that the district court properly granted summary judgment for Employer on Plaintiff's discriminatory discharge claim and failure to accommodate claim.

Ali v. Woodbridge Township School District

Court: US Court of Appeals for the Third Circuit
Docket: 19-2217

Opinion Date: April 22, 2020
Judge: Greenaway
Areas of Law: Civil Rights, Constitutional Law, Education Law, Labor & Employment Law

Ali, a non-practicing Muslim of Egyptian descent, was a non-tenured high school teacher. His supervisor received complaints about Ali's instruction on the Holocaust. One English teacher reported that her students were questioning historical accounts of the Holocaust, opining that Hitler didn't hate the Jews and that the death counts were exaggerated. Students' written assignments confirmed those accounts. Ali also presented a lesson on the September 11 terrorist attacks, requiring students to read online articles translated by the Middle Eastern Media Research Institute (MEMRI). Ali posted links to the articles on a school-sponsored website: "U.S. Planned, Carried Out 9/11 Attacks—But Blames Others" and "U.S. Planning 9/11 Style Attack Using ISIS in Early 2015." The MEMRI articles also contained links to other articles, such as "The Jews are Like a Cancer, Woe to the World if they Become Strong." A reporter questioned Principal Lottman and Superintendent Zega. Lottman directed Ali to remove the MEMRI links from the school's website. The following morning, Ali met with Zega and Lottman; his employment was terminated. Ali sued under New Jersey law and 42 U.S.C. 1981, claiming that Lottman referred to him as "Mufasa," asked Ali if "they had computers in Egypt," and remarked on his ethnicity during the meetings that resulted in Ali's termination. He alleged discrimination, hostile work environment, free speech and academic freedom violations, and defamation. The Third Circuit affirmed summary judgment in favor of the defendants. Ali cannot show that his termination for teaching anti-Semitic views was a pretext for discrimination.

Fogle v. Sokol

Court: US Court of Appeals for the Third Circuit
Docket: 19-1066
Opinion Date: April 21, 2020
Judge: Matey
Areas of Law: Civil Rights, Constitutional Law, Criminal Law

In 1976, the body of 15-year-old "Kathy" was found near her Indiana

County, Pennsylvania home. Kathy's death involved a brutal assault, rape, and a gunshot to the head. Kathy's sisters, ages nine and 12, stated that she had gotten into a car with a man with blue eyes, black hair that came below his ears and curled at the ends, sideburns, heavy eyebrows, and a heavy mustache. Fogle had "straight reddish-blonde hair that dropped down his back and a matching, full beard that reached his waist." After three years, Fogle became a suspect because a psychiatric patient described seeing Kathy get in a car with Fogle and his brother. The story was largely inconsistent with statements by Kathy's sisters. Jailhouse informants were recruited and counseled by law enforcement with promises of leniency. The prosecutors "either knew about, encouraged, or permitted" this strategy. A jury found Fogle guilty of second-degree murder. In 2015, Fogle obtained DNA evidence excluding both himself and his brother as the source of semen collected from Kathy. His conviction was vacated. The Commonwealth declined to pursue new charges, describing the case as lacking "prosecutorial merit." Fogle, having spent three decades in prison, sued the prosecutors and Indiana County under 42 U.S.C. 1983. The Third Circuit affirmed the denial of their motions to dismiss based on absolute immunity. Only truly prosecutorial functions, not investigative conduct, justify complete protection from suit. Fogle's complaint alleges actions that fall outside the narrow doctrine of absolute immunity.

Hope v. Warden Pike County Correctional Facility

Court: US Court of Appeals for the Third Circuit
Docket: 20-1784
Opinion Date: April 21, 2020
Judge: Smith
Areas of Law: Civil Procedure, Civil Rights, Constitutional Law, Immigration Law

On April 3, 2020, 20 immigration detainees filed a habeas petition (28 U.S.C. 2241), seeking immediate release, claiming that due to underlying health conditions, their continued detention during the COVID-19 pandemic puts them at imminent risk of death or serious injury. The district court found that the petitioners face irreparable harm and are likely to succeed on the merits, that the government would "face very little potential harm" from their immediate release, and that "the public interest strongly encourages

Petitioners' release." Without waiting for a response from the government, the court granted a temporary restraining order (TRO) requiring the release. The government moved for reconsideration, submitting a declaration describing conditions at the facilities, with details of the petitioners' criminal histories. The court denied reconsideration, stating that the government had failed to demonstrate a change in controlling law, provide previously unavailable evidence, or show a clear error of law or the need to prevent manifest injustice. The court extended the release period until the COVID-19 state of emergency is lifted but attached conditions to the petitioners' release. The government reports that 19 petitioners were released; none have been re-detained. The Third Circuit granted an immediate appeal, stating that the order cannot evade prompt appellate review simply by virtue of the label "TRO." A purportedly non-appealable TRO that goes beyond preservation of the status quo and mandates affirmative relief may be immediately appealable under 28 U.S.C. 1292(a)(1).

James v. New Jersey State Police

Court: US Court of Appeals for the Third Circuit
Docket: 18-1432
Opinion Date: April 21, 2020
Judge: Porter
Areas of Law: Civil Rights, Constitutional Law, Criminal Law

Stephens called 911 and reported that Gibbons hit her and had a gun in his truck. The police responded. Stephens obtained a temporary restraining order, prohibiting Gibbons from possessing firearms and from returning to Stephens's house. The next day, Gibbons went to Stephens's house. Stephens was talking on the phone; the friend called the police. Gibbons left Stephens's house. Trooper Conza arrived. Stephens stated that Gibbons had waved a gun throughout their argument. Conza told Stephens to go to the police barracks and reported over the radio that Gibbons had brandished a firearm. Conza, with Troopers Bartelt and Korejko, visited the nearby home of Gibbons's mother, James. James stated that she did not know where Gibbons was and that he might be off his schizophrenia medication. While driving to the barracks, Stephens saw Gibbons walking alongside the road and called 911. The Troopers responded. Bartelt parked

his car and, exiting, observed that Gibbons was pointing a gun at his own head. Bartelt drew his weapon, stood behind his car door, and twice told Gibbons to drop his weapon. Gibbons did not comply. Bartelt shot Gibbons twice within seconds of stopping his car. Gibbons died that night. In James' suit under 42 U.S.C. 1983, the Third Circuit held that Bartelt is entitled to qualified immunity because he did not violate Gibbons's clearly established rights. Bartelt's pre-standoff knowledge of Gibbons differs from that of officers involved in cited cases. Bartelt could reasonably conclude that Gibbons posed a threat to others.

In re: Greg Abbott

Court: US Court of Appeals for the Fifth Circuit
Docket: 20-50296
Opinion Date: April 20, 2020
Judge: Jennifer Walker Elrod
Areas of Law: Civil Rights, Constitutional Law, Health Law

On April 7, 2020, the Fifth Circuit issued a writ of mandamus vacating the district court's temporary restraining order (TRO) that exempted abortions from GA-09, an emergency measure temporarily postponing non-essential medical procedures during the COVID-19 pandemic. On April 9, 2020, the district court entered a second TRO exempting various categories of abortion from GA-09. At issue in this mandamus petition is the April 9 TRO. The court held that the district court disregarded the court's mandate in Abbott II and failed to apply the framework governing emergency exercises of state authority during a public health crisis, established over 100 years ago in Jacobson v. Commonwealth of Massachusetts, 197 U.S. 11 (1905). Furthermore, the district court second-guessed the basic mitigation strategy underlying GA-09 (the concept of "flattening the curve"), and also acted without knowing critical facts such as whether, during this pandemic, abortion providers do (or should) wear masks or other protective equipment when meeting with patients. The court concluded that these errors resulted in an overbroad TRO that exceeds the district court's jurisdiction, reaches patently erroneous results, and usurps the state's authority to craft emergency public health measures "during the escalating COVID-19 pandemic." Therefore, the court granted the writ in part and directed the

district court to vacate parts of the April 9 TRO.

Sanchez v. Young County

Court: US Court of Appeals for the Fifth Circuit
Docket: 19-10222
Opinion Date: April 22, 2020
Judge: Edith Brown Clement
Areas of Law: Civil Rights, Constitutional Law

After Diana Simpson died of a drug overdose while she was a pretrial detainee at the Young County Jail, her family filed suit under 42 U.S.C. 1983, alleging Eighth and Fourteenth Amendment violations, as well as a claim under the Texas Tort Claims Act. The Fifth Circuit previously affirmed summary judgment for the County in part, and remanded in part for the district court to evaluate plaintiffs' conditions-of-confinement theory in the first instance. On remand, the district court granted summary judgment on that theory and plaintiffs appealed. The court affirmed the district court's dismissal of plaintiffs' claims based on a failure to train based on the law-of-the-case doctrine. The court held that the district court erred in dismissing plaintiffs' claims based on a failure to monitor because plaintiffs' evidence, when viewed in the light most favorable to them, creates several disputes of material fact about whether the jail has a de facto policy of inadequately monitoring detainees. Furthermore, plaintiffs offered sufficient evidence to create fact issues over whether the County failed to assess pretrial detainees' medical needs and whether this caused plaintiff to be denied needed medical care. Accordingly, the court reversed in part and affirmed in part, remanding for further proceedings.

Singleton v. Cannizzaro

Court: US Court of Appeals for the Fifth Circuit
Docket: 19-30197
Opinion Date: April 21, 2020
Judge: Catharina Haynes

Areas of Law: Civil Rights, Constitutional Law

Plaintiffs allege that for years, prosecutors at the Orleans Parish District Attorney's Office, under the direction of District Attorney Leon Cannizzaro, used fake "subpoenas" to pressure crime victims and witnesses to meet with them. The Fifth Circuit held that (1) at this early, motion to dismiss stage, the individual defendants are not entitled to absolute immunity for plaintiffs' subpoena-related state-law claims and (2) the court lacked jurisdiction to consider the merits of plaintiffs' claims. Accordingly, the court affirmed the district court's holding that the individual defendants are not entitled to absolute immunity for their alleged creation and use of fraudulent subpoenas, but dismissed the remainder of defendants' appeal for lack of jurisdiction.

Valentine v. Collier

Court: US Court of Appeals for the Fifth Circuit
Docket: 20-20207
Opinion Date: April 22, 2020
Judge: Per Curiam
Areas of Law: Civil Rights, Constitutional Law, Criminal Law, Government & Administrative Law, Health Law

Plaintiffs filed suit alleging that TDCJ's adoption and implementation of measures guided by changing CDC recommendations in regards to the COVID-19 pandemic do not go far enough. Plaintiffs filed a class action alleging violations of the Eighth Amendment's prohibition against cruel and unusual punishment, and the Americans with Disabilities Act, seeking a preliminary injunction. The Fifth Circuit granted TDCJ's motion to stay the district court's preliminary injunction, which regulates the cleaning intervals for common areas, the types of bleach-based disinfectants the prison must use, the alcohol content of hand sanitizer that inmates must receive, mask requirements for inmates, and inmates' access to tissues (amongst many other things). The court held that TDCJ is likely to prevail on the merits of its appeal because: (1) after accounting for the protective measures TDCJ has taken, plaintiffs have not shown a "substantial risk of serious harm" that amounts to "cruel and unusual punishment"; and (2) the district court

committed legal error in its application of Farmer v. Brennan, by treating inadequate measures as dispositive of defendants' mental state. In this case, even assuming that there is a substantial risk of serious harm, plaintiffs lack evidence of defendants' subjective deliberate indifference to that harm. The court also held that TDCJ has shown that it will be irreparably injured absent a stay, and that the balance of the harms and the public interest favor a stay. Finally, the court held that plaintiffs have not exhausted their administrative remedies as required in the Prison Litigation Reform Act (PLRA), and the district court's injunction goes well beyond the limits of what the PLRA would allow even if plaintiffs had properly exhausted their claims.

Read Opinion Are you a lawyer? **Annotate this case**.

Williams v. Banks

Court: US Court of Appeals for the Fifth Circuit
Docket: 17-60716
Opinion Date: April 23, 2020
Judge: Priscilla R. Owen
Areas of Law: Civil Rights, Constitutional Law

The Fifth Circuit affirmed the district court's grant of summary judgment to prison officials in a 42 U.S.C. 1983 action brought by plaintiff, an inmate in custody at the MDOC, alleging that defendants violated the Eighth and Fourteenth Amendments by being deliberately indifferent to the risk that another inmate would harm plaintiff. The court held that plaintiff's claims against defendants in their official capacities are barred under sovereign immunity. The court also held that the magistrate judge correctly granted summary judgment on plaintiff's theory that defendants failed to protect him from the other inmate, where there is no evidence in the record to suggest that defendants knew the inmate was a member of a gang or otherwise posed a specific threat to plaintiff when they moved him into plaintiff's zone. Furthermore, the magistrate judge correctly granted summary judgment on plaintiff's theory that defendants violated plaintiff's constitutional rights because they placed the inmate into plaintiff's protective custody zone instead of following MDOC policy and placing the inmate in lockdown. In this case, defendants did not disregard an excessive risk to inmate health or safety.

Gary B. v. Whitmer

Court: US Court of Appeals for the Sixth Circuit
Dockets: 18-1855, 18-1871
Opinion Date: April 23, 2020
Judge: Eric L. Clay
Areas of Law: Civil Rights, Constitutional Law, Education Law

Students at several of Detroit's worst-performing public schools were subject to poor conditions within their classrooms, missing or unqualified teachers, physically dangerous facilities, and inadequate books and materials. In 2016, the plaintiffs filed suit under 42 U.S.C. 1983, claiming that these conditions deprive them of a basic minimum education that provides a chance at foundational literacy, in violation of the due process and equal protection clauses. They sought recognition of a fundamental right to a basic education. They argued that the schools they are forced to attend are schools in name only, so the state cannot justify the restriction on their liberty imposed by compulsory attendance. They sued state officials, rather than local entities, based on the state's general supervision of all public education and the state's specific interventions in Detroit's public schools. The state argued that it recently returned control to local officials. The district court found that the state defendants were the proper parties to sue but dismissed the complaint on the merits. The Sixth Circuit reversed in part. Though the plaintiffs failed to adequately plead their equal protection and compulsory attendance claims, the court reinstated claims that they have been denied a basic minimum education, and have been deprived of access to literacy. Application of the principles in the Supreme Court's education cases to a substantive due process framework demonstrates that a basic minimum education should be recognized as a fundamental right.

Queen v. City of Bowling Green

Court: US Court of Appeals for the Sixth Circuit
Docket: 18-5840

Opinion Date: April 22, 2020
Judge: Bush
Areas of Law: Civil Rights, Constitutional Law, Labor & Employment Law

Queen, a Bowling Green firefighter, 2011-2016, was subject to harassment because he is an atheist. According to Queen, he was forced to participate in Bible studies; his co-workers and supervisors badgered him regarding his sexuality and regularly disparaged minorities. In 2012, Queen complained to his supervisor, Rockrohr, who "responded in hostility." Rockrohr later told Queen that he had discussed the matter with the fire chief and they both believed that Queen "needed to get employment somewhere else." Queen apologized. Queen's employment conditions did not improve. Queen was intentionally tripped while retrieving his gear and was regularly subject to disparaging remarks. Stress and anxiety caused Queen to take a leave of absence. While on leave, Queen received many phone calls from his supervisors asking why he was absent. Queen resigned and filed suit under the Kentucky Civil Rights Act, alleging hostile work environment based on religion and gender, constructive discharge, retaliation, and violations of the Family and Medical Leave Act. The district court granted the defendants summary judgment on hostile work environment based on religion and gender and the FMLA claims. On interlocutory appeal, the Sixth Circuit affirmed the denial of qualified immunity to the city on the claims for hostile work environment based on religion and for retaliation and denial of qualified immunity to Rockrohr for the retaliation claim.

Winburn v. Nagy

Court: US Court of Appeals for the Sixth Circuit
Dockets: 19-2399, 19-2398
Opinion Date: April 23, 2020
Judge: Jeffrey S. Sutton
Areas of Law: Civil Rights, Constitutional Law, Criminal Law

Winburn represented himself at his trial for armed robbery, home invasion, and conspiracy. Based on Winburn's disruptive behavior, the judge removed him from the courtroom and revoked Winburn's permission to represent himself, then granted a competency evaluation and a mistrial. While Winburn awaited his second trial, the judge permitted Winburn's stand-by

attorney to withdraw because Winburn had sued her and enjoined Winburn from filing complaints or grievances against his new attorney, except to discharge her. Although represented by a new attorney, Winburn moved pro se to dismiss his charges on double jeopardy grounds. The trial judge denied the motion because Winburn's attorney had not filed it. Winburn filed a habeas petition under 28 U.S.C. 2241 challenging his retrial and another section 2241 petition challenging the injunction. The district judges denied both and declined to issue certificates of appealability. Winburn filed a notice of appeal for one petition and sought a certificate of appealability for the other. The Sixth Circuit held that state pretrial detainees proceeding under section 2241 may not appeal without certificates of appealability and granted Winburn a certificate on the injunction claim. A reasonable jurist could conclude that the unusual order was constitutionally infirm. The court denied relief with respect to double jeopardy. Winburn failed to exhaust his state-court remedies by a motion to dismiss.

Lund v. City of Rockford

Court: US Court of Appeals for the Seventh Circuit
Docket: 19-1945
Opinion Date: April 20, 2020
Judge: ROVNER
Areas of Law: Civil Rights, Constitutional Law, Criminal Law

Lund, a reporter for the Rockford Scanner, heard, by police scanner, of multiple traffic stops in Midtown. He did not have a driver's license, so he rode a motorized bicycle to Midtown to take photographs. He suspected a prostitution sting operation. An officer noticed Lund and radioed the team. Officers Welsh and Campbell knew of Lund's previous anti-police speech. They directed Lund to "move on." Lund asked if he was breaking any laws. Campbell informed him that he was not, but that his continued presence would constitute obstruction of a police detail and result in arrest. Lund started his bicycle and called out, loudly, "goodbye officers." Concerned that Lund might post pictures on social media while the sting operation was ongoing and create a danger for unarmed undercover officers, the officers followed Lund and arrested him for driving the wrong way on a one-way street, operating a vehicle without insurance, obstructing a police officer,

felony aggravated driving on a revoked license, and operating a motor vehicle without a valid drivers' license. News stories listed Lund's name as an arrestee in the prostitution sting. The charges against Lund were dismissed. Lund sued the officers and the city under 42 U.S.C. 1983. The Seventh Circuit affirmed summary judgment for the defendants on First Amendment retaliation and malicious prosecution under Illinois law, citing the Supreme Court's intervening "Nieves" (2019) holding, that, in most cases, probable cause to arrest defeats a claim of retaliatory arrest. There was probable cause to arrest Lund.

Mayle v. Illinois

Court: US Court of Appeals for the Seventh Circuit
Docket: 19-1691
Opinion Date: April 23, 2020
Judge: HAMILTON
Areas of Law: Civil Procedure, Civil Rights, Family Law, Government & Administrative Law

Mayle, a self-proclaimed Satanist, is a follower of The Law of Thelema, a set of beliefs developed in the early 1900s by Aleister Crowley. As part of this religion, Mayle participates in what he calls "sex magick rituals" that he believes violate Illinois laws forbidding adultery and fornication. He claims that he reasonably fears prosecution for practicing his beliefs. He also says that he wants to marry more than one person at the same time and that if he were to do so, he would violate an Illinois law against bigamy. Mayle's first challenge to the laws was dismissed. Mayle did not appeal, but the next year he filed another suit challenging the same statutes. The Seventh Circuit affirmed the dismissal of the second suit, first rejecting a challenge to the district court's grant of a two-day extension to allow Mayle to file a notice of appeal. Mayle's bigamy claim was precluded by the 2017 final judgment on the merits. Mayle lacked standing to challenge the state's adultery and fornication laws because he still showed no reasonable fear of prosecution; those laws are no longer enforced.

In Re: Leslie Rutledge

Court: US Court of Appeals for the Eighth Circuit
Docket: 20-1791
Opinion Date: April 22, 2020
Judge: Bobby E. Shepherd
Areas of Law: Civil Rights, Constitutional Law, Health Law

The Eighth Circuit granted a writ of mandamus in part and directed the district court to dissolve a Temporary Restraining Order (TRO) enjoining the State from enforcing a COVID-19-related health directive against a provider of surgical abortions. The Arkansas Department of Health (ADH) issued a directive requiring that all non-medically necessary surgeries be postponed in response to Executive Order 20-03, directing the ADH to do everything reasonably possible to respond to and recover from the COVID-19 virus. After adopting the Fifth Circuit's reasoning in In re Abbott, No. 20-50264, 2020 WL 1685929 (5th Cir. April 7, 2020), the court held that the State is entitled to mandamus relief because it has satisfied its burden in demonstrating that it has no other means to obtain the relief that it seeks, the State is clearly and indisputably entitled to the writ, and entry of the writ is appropriate under the circumstances. In Jacobson v. Massachusetts, 197 U.S. 11 (1905), the Supreme Court held that, when faced with a public health crisis, a state may implement measures that infringe on constitutional rights, subject to certain limitations. The court found that the district court's failure to apply the Jacobson framework produced a patently erroneous result. In this case, the directive bears a real and substantial relation to the State's interest in protecting public health in the face of the COVID-19 pandemic; the directive is not, beyond all question, a prohibition of pre-viability abortion in violation of the Constitution because it is a delay, not a ban, and contains emergency exceptions; and the district court clearly abused its discretion in finding that the provider is likely to prevail on its argument that the directive will likely operate as a substantial obstacle to a woman's choice to undergo an abortion in a large fraction of the cases in which the directive is relevant. The court declined to exercise its mandamus power to direct the district court to dismiss the supplemental complaint, and denied the emergency motion to stay the ex parte TRO and for a temporary administrative stay as moot.

Lombardo v. City of St. Louis

Court: US Court of Appeals for the Eighth Circuit
Docket: 19-1469
Opinion Date: April 20, 2020
Judge: Bobby E. Shepherd
Areas of Law: Civil Rights, Constitutional Law

The Eighth Circuit affirmed the magistrate judge's grant of summary judgment in favor of law enforcement officers and the City, in a 42 U.S.C. 1983 action brought by plaintiff after the death of her son. The court held that the officers' actions did not amount to constitutionally excessive force. In this case, the undisputed facts show that the officers discovered the son acting erratically, and even though the son was held in a secure cell, it was objectively reasonable for the officers to fear that he would intentionally or inadvertently physically harm himself. Furthermore, the son actively resisted the officers' attempts to subdue him, and officers held him in the prone position only until he stopped actively fighting against the restraints and the officers. Therefore, the court held that the officers are entitled to qualified immunity on plaintiff's excessive force claim.

Anthony v. TRAX International Corp.

Court: US Court of Appeals for the Ninth Circuit
Docket: 18-15662
Opinion Date: April 17, 2020
Judge: Kim McLane Wardlaw
Areas of Law: Civil Rights, Constitutional Law, Criminal Law

The Ninth Circuit affirmed the district court's grant of summary judgment to TRAX in a disability discrimination action brought by plaintiff under Title I of the Americans with Disabilities Act (ADA). After TRAX terminated plaintiff from her position as a Technical Writer allegedly due to an inability or unwillingness to accommodate her disability, TRAX discovered during the course of litigation that plaintiff lacked the requisite bachelor's degree for her position. The panel held that, although McKennon v. Nashville Banner Publishing Co., 513 U.S. 352 (1995), held that after-acquired evidence

cannot establish a superseding, non-discriminatory justification for an employer's challenged actions, after-acquired evidence remains available for other purposes, including to show that an individual is not qualified under the ADA. Because plaintiff did not satisfy one of the prerequisites for her position, she is not "otherwise qualified," and TRAX was not obligated to engage in the interactive process.

Wilk v. Neven
Court: US Court of Appeals for the Ninth Circuit
Docket: 17-17355
Opinion Date: April 23, 2020
Judge: William A. Fletcher
Areas of Law: Civil Rights, Constitutional Law

The Ninth Circuit reversed the district court's grant of summary judgment for prison officials in a 42 U.S.C. 1983 action alleging that defendants violated plaintiff's right to be free from cruel and unusual punishment when they failed to protect him from an attack by another inmate. The panel held that defendants violated plaintiff's Eighth Amendment right to be protected from serious harm while incarcerated. The panel also held that a reasonable fact-finder would be able to conclude that defendants were subjectively aware of the substantial risk of serious harm to plaintiff, and failed to respond reasonably; any reasonable prison official in the defendants' position would know that the actions defendants took, and failed to take, violated the Eighth Amendment; none of the defendants can claim ignorance to a prisoner's right to be protected from violence at the hands of other inmates where that right has been clearly established in Farmer v. Brennan, 511 U.S. at 833 (1994). Finally, the panel noted that throughout proceedings in the district court plaintiff struggled to obtain discovery from defendants. On remand, plaintiff should have another opportunity to seek the materials he requested previously, and the panel encouraged the district court to appoint him counsel.

Barnett v. Hall, Estill, Hardwick, Gable

Court: US Court of Appeals for the Tenth Circuit
Docket: 18-5090
Opinion Date: April 20, 2020
Judge: Harris L. Hartz
Areas of Law: Civil Procedure, Civil Rights

Plaintiff Christopher Barnett appealed the dismissal with prejudice his federal civil-rights claims for failure to state a claim and dismissing with prejudice his state-law claims because they did not survive the restrictions imposed by the Oklahoma Citizens Participation Act (OCPA), Okla. Stat. tit. 12, sections 1430–40 . Defendants cross-appealed the district court's denial of attorney fees under the OCPA, contending that an award of attorney fees was mandatory. Barnett's complaint bases his claims on an incident on January 4, 2018, related to a hearing in Oklahoma state court on an open-records case he had brought against Tulsa Community College. According to Barnett, two lawyers in the firm of Hall, Estill, Hardwick, Gable, Golden & Nelson, P.C., (Hall Estill) falsely reported to the office of the state attorney general (AG) that Barnett had made a threat. The AG's office then relayed this report to the county sheriff. When Barnett arrived at the courtroom for the hearing, the state-court judge instructed him to speak with a deputy sheriff. After Barnett denied making any threat, the deputy told him to stay inside the courtroom until he received permission to leave. At some point the AG's office arrived with its own security detail. When the proceedings began, the state-court judge discussed the report in open court. Barnett filed suit in state court the next day against Hall Estill, and Tulsa University (TU), alleging federal civil-rights claims under 42 U.S.C. 1983 and state tort claims because he had been unlawfully seized when he was forbidden to leave the courtroom, had been cast in a false light by the public airing of the alleged threat, and had been retaliated against by Defendants for his exercise of his rights to free speech and access to the courts. After review, the Tenth Circuit affirmed dismissal of the federal-law claims, agreeing with the district court that the complaint did not adequately allege that any of the Defendants acted under color of state law. But the Court reversed judgment on the state-law claims and remanded to the district court with instructions to dismiss the claims without prejudice or remand them to the state court.

Durham v. Rural/Metro Corp.

Court: US Court of Appeals for the Eleventh Circuit
Docket: 18-14687
Opinion Date: April 17, 2020
Judge: Per Curiam
Areas of Law: Civil Rights, Constitutional Law, Labor & Employment Law

After plaintiff asked her employer, Rural, for a temporary light-duty or dispatcher assignment for the duration of her pregnancy because her physician advised her to refrain from lifting more than 50 pounds while pregnant, Rural declined plaintiff's request for accommodation. Plaintiff filed suit against Rural, alleging discrimination under the Pregnancy Discrimination Act (PDA). The Eleventh Circuit vacated the district court's grant of Rural's motion for summary judgment, holding that the district court erroneously factored into the "similar in their ability or inability to work" evaluation the distinct, post-prima-facie-case consideration of Rural's purported legitimate, non-discriminatory reasons for treating plaintiff and the non-pregnant employees differently. The court explained that neither a non-pregnant EMT who is limited to lifting 10 or 20 pounds nor a pregnant EMT who is restricted to lifting 50 pounds or less can lift the required 100 pounds to serve as an EMT. Consequently, neither can meet the lifting requirement and are thus the same in their "inability to work" as an EMT. The court held that plaintiff's prima facie requirement to establish that she was similarly situated to other employees in their ability or inability to work was satisfied. The court remanded for the district court to determine the remaining issues in the first instance.

Cave v. State

Court: Arkansas Supreme Court
Citation: 2020 Ark. 356
Opinion Date: April 23, 2020
Judge: Josephine L. Hart
Areas of Law: Civil Rights, Constitutional Law, Criminal Law

The Supreme Court affirmed the judgment of the circuit court denying Appellant's pro se petition for writ of habeas corpus, holding that the circuit

court did not err in denying the petition. Appellant was found guilty of two counts of delivery of a controlled substance and one count of maintaining a drug premises. In his habeas petition, Appellant argued that he was actually innocent because his arrest and conviction was based on the false testimony of a witness who had a lengthy criminal history. Appellant further argued that the writ should issue because he was not afforded effective assistance of counsel. The circuit court denied the petition. The Supreme Court affirmed, holding (1) Appellant's claims regarding the witness's credibility do not constitute a valid assertion that he was being unlawfully detained; and (2) Appellant did not actually connect an allegation of ineffective assistance of counsel to his allegation that he was unlawfully detained.

Thomas v. State

Court: Arkansas Supreme Court
Citation: 2020 Ark. 354
Opinion Date: April 23, 2020
Judge: Josephine L. Hart
Areas of Law: Civil Rights, Constitutional Law, Criminal Law

The Supreme Court affirmed Appellant's conviction of capital murder, holding that the evidence was sufficient to sustain the conviction and that the circuit court did not err in denying Appellant's motion to suppress tracking data generated by his cellphone. On appeal, Appellant argued that the trial court erred by denying his directed-verdict motion because the evidence supported the defense's theory of the case that he did not intend to shoot the victim. Further, Appellant argued that the court abused its discretion in denying his motion to suppress evidence obtained from the seizure of AT&T phone records. The Supreme Court disagreed, holding (1) the evidence was sufficient to support the capital murder conviction; and (2) the circuit court correctly denied the motion to suppress.

Pinter-Brown v. The Regents of the University of California

Court: California Courts of Appeal
Docket: B290086(Second Appellate District)
Opinion Date: April 23, 2020
Judge: Stratton
Areas of Law: Civil Rights, Constitutional Law

Plaintiff filed suit against The Regents for gender discrimination based on a series of events that took place while she was a Professor of Medicine at UCLA. The jury found in favor of plaintiff, awarding her economic and noneconomic damages. The Court of Appeal reversed and held that the trial court committed a series of grave errors that significantly prejudiced The Regents' right to a fair trial by an impartial judge. In this case, the trial court delivered a presentation to the jury highlighting major figures in the civil rights movement, and told the jury their duty was to stand in the shoes of Dr. Martin Luther King and bend the arc of the moral universe toward justice; the trial court allowed the jury to hear about and view a long list of discrimination complaints from across the entire University of California system that were not properly connected to plaintiff's circumstances or her theory of the case; the trial court allowed the jury to learn of the contents and conclusions of the Moreno Report, which documented racial discrimination occurring throughout the entire UCLA campus; and the trial court allowed plaintiff to resurrect a retaliation claim after the close of evidence despite having summarily adjudicated that very claim prior to trial. The court held that these errors were cumulative and highly prejudicial, and were evidence of the trial court's inability to remain impartial, creating the impression that the trial court was partial to plaintiff's claims.

Archer v. State

Court: Florida Supreme Court
Docket: SC19-841
Opinion Date: April 23, 2020
Judge: Per Curiam
Areas of Law: Civil Rights, Constitutional Law, Criminal Law

The Supreme Court affirmed the order of the circuit court denying Appellant's successive motion to vacate his sentence of death under Fla. R. Crim. P. 3.851, holding that the circuit court did not err in denying the Rule

3.851 motion. Appellant was convicted of first-degree murder, armed robbery, and grand theft. Appellant was sentenced to death for the murder. The Supreme Court affirmed the convictions but reversed Appellant's death sentence and remanded the case for a new penalty phase. After a new penalty phase, Appellant was again sentenced to death. In his successive Rule 3.851 motion, Appellant raised three claims. The circuit court denied relief. The Supreme Court affirmed, holding that the circuit court (1) properly denied Appellant's claim that his death sentence violated the Sixth and Eighth Amendments in light of Hurst v. Florida, 136 S. Ct. 616 (2016), and Hurst v. State, 202 So. 3d 40 (Fla. 2016); (2) correctly denied Appellant's claim that his sentence violated the Eighth Amendment; and (3) did not err in denying Appellant's claim of newly discovered evidence.

State v. Gibbs

Court: Iowa Supreme Court
Docket: 18-1298
Opinion Date: April 17, 2020
Judge: Edward M. Mansfield
Areas of Law: Civil Rights, Constitutional Law, Criminal Law

The Supreme Court affirmed Defendant's conviction of murder in the second degree, holding that Defendant's Fifth Amendment rights were invaded when the trial judge instructed the jury that Defendant was required to notify law enforcement of his use of deadly force, but the error was harmless. During trial, Defendant asserted the defense of justification in his shooting of the victim. At issue on appeal was whether the district court abused its discretion by giving a jury instruction incorporating the terms of Iowa Code 704.2B. The instruction included a statement that a person using deadly force is required to notify law enforcement about his use of deadly force. Defendant argued before the Supreme Court that both section 704.2B and the jury instruction incorporating that section violated his Fifth Amendment rights. The Supreme Court affirmed, holding (1) instructing the jury that a homicide defendant is required to notify a law enforcement agency of his use of deadly force violates the defendant's Fifth Amendment rights; but (2) any error in this case was harmless beyond a reasonable doubt.

State v. Harris

Court: Kansas Supreme Court
Docket: 117362
Opinion Date: April 17, 2020
Judge: Wilson
Areas of Law: Civil Rights, Constitutional Law, Criminal Law

The Supreme Court reversed the judgment of the court of appeals affirming Defendant's conviction of possession fo marijuana, holding that Defendant's waiver of jury trial was legally insufficient. On appeal, Defendant argued that he did not properly waive his right to a jury and asserted three other issues. The Supreme Court reversed the judgment of the court of appeals affirming Defendant's convictions without addressing the three remaining issues, holding that because the district court failed properly to apprise Defendant of his right to a jury trial and failed to ensure that Defendant understood the nature of the right he was giving up, Defendant's constitutional right to a jury trial was violated in this case.

Commonwealth v. McCarthy

Court: Massachusetts Supreme Judicial Court
Docket: SJC-12750
Opinion Date: April 16, 2020
Judge: Gaziano
Areas of Law: Civil Rights, Constitutional Law, Criminal Law

The Supreme Judicial Court affirmed the judgment of the district court denying Defendant's motions to suppress, holding that the limited use of automatic license plate readers (ALPRs) in this case did not implicate constitutional protections against unreasonable searches. While police were investigating Defendant on suspicion of drug distribution they used ALPRs on two bridges to track Defendant's movements. The police accessed historical data via ALPR technology and received real-time alerts, the last of

which led to Defendant's arrest. Defendant filed motions to suppress the ALPR data and the fruits of the arrest. The superior court denied the motions. The Supreme Judicial Court affirmed, holding that while the widespread use of ALPRs in the Commonwealth could implicate a defendant's constitutional protected expectation of privacy in the whole of his public movements, that interest was not invaded by the limited extent and use of the ALPR data in the instant case.

State v. Reek

Court: Minnesota Supreme Court
Docket: A19-0153
Opinion Date: April 22, 2020
Judge: G. Barry Anderson
Areas of Law: Civil Rights, Constitutional Law, Criminal Law

The Supreme Court affirmed Defendant's conviction for first-degree murder, holding that there was no error in the proceedings below. Specifically, the Supreme Court held (1) Appellant's right to a fair trial before an impartial tribunal was not violated when the district court stated that it might reconsider its prior Spreigl ruling if the defense presented certain witnesses; (2) the jury instructions on accomplice liability were plainly erroneous, but Appellant failed to establish that there was a reasonable likelihood that the error had a significant effect on the verdict; (3) the prosecutor did not commit misconduct in his closing arguments regarding the law of accomplice liability; (4) the district court did not abuse its discretion by granting the State's motion to admit evidence of appellant's past convictions for impeachment purposes, including by allowing the specific convictions to be disclosed to the jury; and (5) Appellant's pro se arguments were without merit.

Morrisey v. West Virginia AFL-CIO

Court: Supreme Court of Appeals of West Virginia
Docket: 19-0298
Opinion Date: April 21, 2020
Judge: Jenkins
Areas of Law: Civil Rights, Constitutional Law, Labor & Employment Law

The Supreme Court reversed the rulings of the circuit court finding that the Workplace Freedom Act (the Act) infringes upon the rights to associate, as well as the liberty and property rights, of labor unions that are member organizations of the AFL-CIO (Labor Unions), holding that the Act does not violate constitutional rights at issue. In 2016, the Legislature enacted the Act, which prohibits collective bargaining agreements that require an employee to pay any dues, fees, assessments, or other similar charges as a condition of employment, or as a condition for the continuation of employment, when the employee has chosen not to join a union. On remand, the circuit court ruled that the Act unconstitutionally fringes on the rights of the Labor Unions, who represent both private and government workers in West Virginia. The Supreme Court reversed, holding that the Act does not violate the West Virginia Constitution's protections of association, property, and liberty rights.

State v. Taylor

Court: Supreme Court of Appeals of West Virginia
Docket: 18-0502
Opinion Date: April 21, 2020
Judge: Walker
Areas of Law: Civil Rights, Constitutional Law, Criminal Law

The Supreme Court affirmed the judgment of the circuit court giving Petitioner credit for twelve days of time served toward the sentence he received for his felony conviction although Petitioner spent additional time in confinement for other charges that were dismissed in the universal plea agreement, holding that to grant Petitioner additional credit for time served would do little more than reward Petitioner for habitual criminal behavior. Petitioner was charged with several crimes and agreed to resolve the pending charges against him in a universal plea agreement. Under the terms of the agreement, Petitioner agreed to plea guilty to the charge of felony carrying a concealed firearm by a prohibited person. In exchange, the State agreed to drop the remaining charges. After he was sentenced, Petitioner argued that, in addition to the twelve days of credit for time served he was granted, he was constitutionally entitled to credit for time served while he was incarcerated for charges that were resolved in the universal plea agreement. The Supreme Court affirmed, holding that Petitioner's circumstances implicated neither double jeopardy nor equal protection of the law such that additional credit for time served was constitutionally mandated.

Rethinking Retroactivity in Light of the Supreme Court's Jury Unanimity Requirement

MICHAEL C. DORF

verdict post

In light of the U.S. Supreme Court's decision Monday in *Ramos v. Louisiana*, in which it held that the federal Constitution forbids states from convicting defendants except by a unanimous jury, Cornell law professor Michael C. Dorf discusses the Court's jurisprudence on retroactivity. Dorf highlights some costs and benefits of retroactivity and argues that the Court's refusal to issue advisory opinions limits its ability to resolve retroactivity questions in a way that responds to all the relevant considerations.

Constitutional Law Opinions

Ramos v. Louisiana

Court: US Supreme Court
Docket: 18-5924
Opinion Date: April 20, 2020
Judge: Neil M. Gorsuch
Areas of Law: Civil Rights, Constitutional Law, Criminal Law

In 48 states and in federal court, a single juror's vote to acquit is enough to prevent a conviction; Louisiana and Oregon punish people based on 10-to-2 verdicts. Ramos was convicted in a Louisiana court by a 10-to-2 jury verdict and was sentenced to life without parole. The Supreme Court reversed. The Sixth Amendment right to a jury trial, as incorporated against the states by the Fourteenth Amendment, requires a unanimous verdict to convict a defendant of a serious offense. Juror unanimity is a vital common law right. The Court rejected an "invitation" to "perform a cost-benefit analysis on the historic features of common law jury trials and to conclude that unanimity does not make the cut." In overturning its 1972 "Apodaca" decision, the Court stated that the reasoning, in that case, was "gravely mistaken" and "sits uneasily with 120 years of preceding case law." The fact that Louisiana and Oregon may need to retry defendants convicted of felonies by non-unanimous verdicts whose cases are still pending on direct appeal "will surely impose a cost, but new rules of criminal procedure usually do."

Ali v. Woodbridge Township School District

Court: US Court of Appeals for the Third Circuit
Docket: 19-2217
Opinion Date: April 22, 2020
Judge: Greenaway
Areas of Law: Civil Rights, Constitutional Law, Education Law, Labor & Employment Law

Ali, a non-practicing Muslim of Egyptian descent, was a non-tenured high school teacher. His supervisor received complaints about Ali's instruction on the Holocaust. One English teacher reported that her students were questioning historical accounts of the Holocaust, opining that Hitler didn't hate the Jews and that the death counts were exaggerated. Students' written assignments confirmed those accounts. Ali also presented a lesson

on the September 11 terrorist attacks, requiring students to read online articles translated by the Middle Eastern Media Research Institute (MEMRI). Ali posted links to the articles on a school-sponsored website: "U.S. Planned, Carried Out 9/11 Attacks—But Blames Others" and "U.S. Planning 9/11 Style Attack Using ISIS in Early 2015." The MEMRI articles also contained links to other articles, such as "The Jews are Like a Cancer, Woe to the World if they Become Strong." A reporter questioned Principal Lottman and Superintendent Zega. Lottman directed Ali to remove the MEMRI links from the school's website. The following morning, Ali met with Zega and Lottman; his employment was terminated. Ali sued under New Jersey law and 42 U.S.C. 1981, claiming that Lottman referred to him as "Mufasa," asked Ali if "they had computers in Egypt," and remarked on his ethnicity during the meetings that resulted in Ali's termination. He alleged discrimination, hostile work environment, free speech and academic freedom violations, and defamation. The Third Circuit affirmed summary judgment in favor of the defendants. Ali cannot show that his termination for teaching anti-Semitic views was a pretext for discrimination.

Fogle v. Sokol

Court: US Court of Appeals for the Third Circuit
Docket: 19-1066
Opinion Date: April 21, 2020
Judge: Matey
Areas of Law: Civil Rights, Constitutional Law, Criminal Law

In 1976, the body of 15-year-old "Kathy" was found near her Indiana County, Pennsylvania home. Kathy's death involved a brutal assault, rape, and a gunshot to the head. Kathy's sisters, ages nine and 12, stated that she had gotten into a car with a man with blue eyes, black hair that came below his ears and curled at the ends, sideburns, heavy eyebrows, and a heavy mustache. Fogle had "straight reddish-blonde hair that dropped down his back and a matching, full beard that reached his waist." After three years, Fogle became a suspect because a psychiatric patient described seeing Kathy get in a car with Fogle and his brother. The story was largely inconsistent with statements by Kathy's sisters. Jailhouse informants were recruited and counseled by law enforcement with promises of leniency. The

prosecutors "either knew about, encouraged, or permitted" this strategy. A jury found Fogle guilty of second-degree murder. In 2015, Fogle obtained DNA evidence excluding both himself and his brother as the source of semen collected from Kathy. His conviction was vacated. The Commonwealth declined to pursue new charges, describing the case as lacking "prosecutorial merit." Fogle, having spent three decades in prison, sued the prosecutors and Indiana County under 42 U.S.C. 1983. The Third Circuit affirmed the denial of their motions to dismiss based on absolute immunity. Only truly prosecutorial functions, not investigative conduct, justify complete protection from suit. Fogle's complaint alleges actions that fall outside the narrow doctrine of absolute immunity.

Hope v. Warden Pike County Correctional Facility

Court: US Court of Appeals for the Third Circuit
Docket: 20-1784
Opinion Date: April 21, 2020
Judge: Smith
Areas of Law: Civil Procedure, Civil Rights, Constitutional Law, Immigration Law

On April 3, 2020, 20 immigration detainees filed a habeas petition (28 U.S.C. 2241), seeking immediate release, claiming that due to underlying health conditions, their continued detention during the COVID-19 pandemic puts them at imminent risk of death or serious injury. The district court found that the petitioners face irreparable harm and are likely to succeed on the merits, that the government would "face very little potential harm" from their immediate release, and that "the public interest strongly encourages Petitioners' release." Without waiting for a response from the government, the court granted a temporary restraining order (TRO) requiring the release. The government moved for reconsideration, submitting a declaration describing conditions at the facilities, with details of the petitioners' criminal histories. The court denied reconsideration, stating that the government had failed to demonstrate a change in controlling law, provide previously unavailable evidence, or show a clear error of law or the need to prevent manifest injustice. The court extended the release period until the COVID-19 state of emergency is lifted but attached conditions to the petitioners' release. The government reports that 19 petitioners were released; none

have been re-detained. The Third Circuit granted an immediate appeal, stating that the order cannot evade prompt appellate review simply by virtue of the label "TRO." A purportedly non-appealable TRO that goes beyond preservation of the status quo and mandates affirmative relief may be immediately appealable under 28 U.S.C. 1292(a)(1).

James v. New Jersey State Police

Court: US Court of Appeals for the Third Circuit
Docket: 18-1432
Opinion Date: April 21, 2020
Judge: Porter
Areas of Law: Civil Rights, Constitutional Law, Criminal Law

Stephens called 911 and reported that Gibbons hit her and had a gun in his truck. The police responded. Stephens obtained a temporary restraining order, prohibiting Gibbons from possessing firearms and from returning to Stephens's house. The next day, Gibbons went to Stephens's house. Stephens was talking on the phone; the friend called the police. Gibbons left Stephens's house. Trooper Conza arrived. Stephens stated that Gibbons had waved a gun throughout their argument. Conza told Stephens to go to the police barracks and reported over the radio that Gibbons had brandished a firearm. Conza, with Troopers Bartelt and Korejko, visited the nearby home of Gibbons's mother, James. James stated that she did not know where Gibbons was and that he might be off his schizophrenia medication. While driving to the barracks, Stephens saw Gibbons walking alongside the road and called 911. The Troopers responded. Bartelt parked his car and, exiting, observed that Gibbons was pointing a gun at his own head. Bartelt drew his weapon, stood behind his car door, and twice told Gibbons to drop his weapon. Gibbons did not comply. Bartelt shot Gibbons twice within seconds of stopping his car. Gibbons died that night. In James' suit under 42 U.S.C. 1983, the Third Circuit held that Bartelt is entitled to qualified immunity because he did not violate Gibbons's clearly established rights. Bartelt's pre-standoff knowledge of Gibbons differs from that of officers involved in cited cases. Bartelt could reasonably conclude that Gibbons posed a threat to others.

In re: Greg Abbott

Court: US Court of Appeals for the Fifth Circuit
Docket: 20-50296
Opinion Date: April 20, 2020
Judge: Jennifer Walker Elrod
Areas of Law: Civil Rights, Constitutional Law, Health Law

On April 7, 2020, the Fifth Circuit issued a writ of mandamus vacating the district court's temporary restraining order (TRO) that exempted abortions from GA-09, an emergency measure temporarily postponing non-essential medical procedures during the COVID-19 pandemic. On April 9, 2020, the district court entered a second TRO exempting various categories of abortion from GA-09. At issue in this mandamus petition is the April 9 TRO. The court held that the district court disregarded the court's mandate in Abbott II and failed to apply the framework governing emergency exercises of state authority during a public health crisis, established over 100 years ago in Jacobson v. Commonwealth of Massachusetts, 197 U.S. 11 (1905). Furthermore, the district court second-guessed the basic mitigation strategy underlying GA-09 (the concept of "flattening the curve"), and also acted without knowing critical facts such as whether, during this pandemic, abortion providers do (or should) wear masks or other protective equipment when meeting with patients. The court concluded that these errors resulted in an overbroad TRO that exceeds the district court's jurisdiction, reaches patently erroneous results, and usurps the state's authority to craft emergency public health measures "during the escalating COVID-19 pandemic." Therefore, the court granted the writ in part and directed the district court to vacate parts of the April 9 TRO.

Sanchez v. Young County

Court: US Court of Appeals for the Fifth Circuit
Docket: 19-10222
Opinion Date: April 22, 2020
Judge: Edith Brown Clement

Areas of Law: Civil Rights, Constitutional Law

After Diana Simpson died of a drug overdose while she was a pretrial detainee at the Young County Jail, her family filed suit under 42 U.S.C. 1983, alleging Eighth and Fourteenth Amendment violations, as well as a claim under the Texas Tort Claims Act. The Fifth Circuit previously affirmed summary judgment for the County in part, and remanded in part for the district court to evaluate plaintiffs' conditions-of-confinement theory in the first instance. On remand, the district court granted summary judgment on that theory and plaintiffs appealed. The court affirmed the district court's dismissal of plaintiffs' claims based on a failure to train based on the law-of-the-case doctrine. The court held that the district court erred in dismissing plaintiffs' claims based on a failure to monitor because plaintiffs' evidence, when viewed in the light most favorable to them, creates several disputes of material fact about whether the jail has a de facto policy of inadequately monitoring detainees. Furthermore, plaintiffs offered sufficient evidence to create fact issues over whether the County failed to assess pretrial detainees' medical needs and whether this caused plaintiff to be denied needed medical care. Accordingly, the court reversed in part and affirmed in part, remanding for further proceedings.

Singleton v. Cannizzaro

Court: US Court of Appeals for the Fifth Circuit
Docket: 19-30197
Opinion Date: April 21, 2020
Judge: Catharina Haynes
Areas of Law: Civil Rights, Constitutional Law

Plaintiffs allege that for years, prosecutors at the Orleans Parish District Attorney's Office, under the direction of District Attorney Leon Cannizzaro, used fake "subpoenas" to pressure crime victims and witnesses to meet with them. The Fifth Circuit held that (1) at this early, motion to dismiss stage, the individual defendants are not entitled to absolute immunity for plaintiffs' subpoena-related state-law claims and (2) the court lacked jurisdiction to consider the merits of plaintiffs' claims. Accordingly, the court affirmed the district court's holding that the individual defendants are not

entitled to absolute immunity for their alleged creation and use of fraudulent subpoenas, but dismissed the remainder of defendants' appeal for lack of jurisdiction.

Valentine v. Collier

Court: US Court of Appeals for the Fifth Circuit
Docket: 20-20207
Opinion Date: April 22, 2020
Judge: Per Curiam
Areas of Law: Civil Rights, Constitutional Law, Criminal Law, Government & Administrative Law, Health Law

Plaintiffs filed suit alleging that TDCJ's adoption and implementation of measures guided by changing CDC recommendations in regards to the COVID-19 pandemic do not go far enough. Plaintiffs filed a class action alleging violations of the Eighth Amendment's prohibition against cruel and unusual punishment, and the Americans with Disabilities Act, seeking a preliminary injunction. The Fifth Circuit granted TDCJ's motion to stay the district court's preliminary injunction, which regulates the cleaning intervals for common areas, the types of bleach-based disinfectants the prison must use, the alcohol content of hand sanitizer that inmates must receive, mask requirements for inmates, and inmates' access to tissues (amongst many other things). The court held that TDCJ is likely to prevail on the merits of its appeal because: (1) after accounting for the protective measures TDCJ has taken, plaintiffs have not shown a "substantial risk of serious harm" that amounts to "cruel and unusual punishment"; and (2) the district court committed legal error in its application of Farmer v. Brennan, by treating inadequate measures as dispositive of defendants' mental state. In this case, even assuming that there is a substantial risk of serious harm, plaintiffs lack evidence of defendants' subjective deliberate indifference to that harm. The court also held that TDCJ has shown that it will be irreparably injured absent a stay, and that the balance of the harms and the public interest favor a stay. Finally, the court held that plaintiffs have not exhausted their administrative remedies as required in the Prison Litigation Reform Act (PLRA), and the district court's injunction goes well beyond the limits of what the PLRA would allow even if plaintiffs had properly exhausted

their claims.

Williams v. Banks

Court: US Court of Appeals for the Fifth Circuit
Docket: 17-60716
Opinion Date: April 23, 2020
Judge: Priscilla R. Owen
Areas of Law: Civil Rights, Constitutional Law

The Fifth Circuit affirmed the district court's grant of summary judgment to prison officials in a 42 U.S.C. 1983 action brought by plaintiff, an inmate in custody at the MDOC, alleging that defendants violated the Eighth and Fourteenth Amendments by being deliberately indifferent to the risk that another inmate would harm plaintiff. The court held that plaintiff's claims against defendants in their official capacities are barred under sovereign immunity. The court also held that the magistrate judge correctly granted summary judgment on plaintiff's theory that defendants failed to protect him from the other inmate, where there is no evidence in the record to suggest that defendants knew the inmate was a member of a gang or otherwise posed a specific threat to plaintiff when they moved him into plaintiff's zone. Furthermore, the magistrate judge correctly granted summary judgment on plaintiff's theory that defendants violated plaintiff's constitutional rights because they placed the inmate into plaintiff's protective custody zone instead of following MDOC policy and placing the inmate in lockdown. In this case, defendants did not disregard an excessive risk to inmate health or safety.

Gary B. v. Whitmer

Court: US Court of Appeals for the Sixth Circuit
Dockets: 18-1855, 18-1871
Opinion Date: April 23, 2020
Judge: Eric L. Clay
Areas of Law: Civil Rights, Constitutional Law, Education Law

Students at several of Detroit's worst-performing public schools were subject to poor conditions within their classrooms, missing or unqualified teachers, physically dangerous facilities, and inadequate books and materials. In 2016, the plaintiffs filed suit under 42 U.S.C. 1983, claiming that these conditions deprive them of a basic minimum education that provides a chance at foundational literacy, in violation of the due process and equal protection clauses. They sought recognition of a fundamental right to a basic education. They argued that the schools they are forced to attend are schools in name only, so the state cannot justify the restriction on their liberty imposed by compulsory attendance. They sued state officials, rather than local entities, based on the state's general supervision of all public education and the state's specific interventions in Detroit's public schools. The state argued that it recently returned control to local officials. The district court found that the state defendants were the proper parties to sue but dismissed the complaint on the merits. The Sixth Circuit reversed in part. Though the plaintiffs failed to adequately plead their equal protection and compulsory attendance claims, the court reinstated claims that they have been denied a basic minimum education, and have been deprived of access to literacy. Application of the principles in the Supreme Court's education cases to a substantive due process framework demonstrates that a basic minimum education should be recognized as a fundamental right.

Lebamoff Enterprises, Inc., v. Whitmer

Court: US Court of Appeals for the Sixth Circuit
Dockets: 18-2199, 18-2200
Opinion Date: April 21, 2020
Judge: Jeffrey S. Sutton
Areas of Law: Constitutional Law, Government & Administrative Law

The Twenty-first Amendment permits the states to regulate the sales of alcohol within their borders. Michigan is among several states with a three-tier system that forbids alcohol producers (first tier) to sell directly to retailers or consumers. Producers must sell to wholesalers within the state (second tier); those wholesalers sell exclusively to in-state retailers, who sell to consumers. Businesses at each tier must be independently owned; no one may operate more than one tier, Michigan imposes minimum prices and

prohibits wholesalers from offering volume discounts or selling on credit. For liquor (not wine and beer), the state is the wholesaler in Michigan. In 2016, Michigan amended its law to allow in-state retailers to deliver directly to consumers using state-licensed "third party facilitators" or common carriers like FedEx or UPS. A wine retailer based in Fort Wayne, Indiana and Michigan wine consumers alleged that the new law violated the Commerce Clause and the Privileges and Immunities Clause. The district court extended delivery rights to out-of-state retailers. Michigan obtained a stay. The Sixth Circuit reversed. The Twenty-first Amendment permits Michigan to treat in-state retailers differently from out-of-state retailers. There is no inherent right to sell intoxicating liquors by retail. Some reduction in consumer choice is inevitable in a three-tier system, which is intended to make it harder to sell alcohol.

Queen v. City of Bowling Green

Court: US Court of Appeals for the Sixth Circuit
Docket: 18-5840
Opinion Date: April 22, 2020
Judge: Bush
Areas of Law: Civil Rights, Constitutional Law, Labor & Employment Law

Queen, a Bowling Green firefighter, 2011-2016, was subject to harassment because he is an atheist. According to Queen, he was forced to participate in Bible studies; his co-workers and supervisors badgered him regarding his sexuality and regularly disparaged minorities. In 2012, Queen complained to his supervisor, Rockrohr, who "responded in hostility." Rockrohr later told Queen that he had discussed the matter with the fire chief and they both believed that Queen "needed to get employment somewhere else." Queen apologized. Queen's employment conditions did not improve. Queen was intentionally tripped while retrieving his gear and was regularly subject to disparaging remarks. Stress and anxiety caused Queen to take a leave of absence. While on leave, Queen received many phone calls from his supervisors asking why he was absent. Queen resigned and filed suit under the Kentucky Civil Rights Act, alleging hostile work environment based on religion and gender, constructive discharge, retaliation, and violations of the Family and Medical Leave Act. The district court granted the defendants

summary judgment on hostile work environment based on religion and gender and the FMLA claims. On interlocutory appeal, the Sixth Circuit affirmed the denial of qualified immunity to the city on the claims for hostile work environment based on religion and for retaliation and denial of qualified immunity to Rockrohr for the retaliation claim.

Winburn v. Nagy

Court: US Court of Appeals for the Sixth Circuit
Dockets: 19-2399, 19-2398
Opinion Date: April 23, 2020
Judge: Jeffrey S. Sutton
Areas of Law: Civil Rights, Constitutional Law, Criminal Law

Winburn represented himself at his trial for armed robbery, home invasion, and conspiracy. Based on Winburn's disruptive behavior, the judge removed him from the courtroom and revoked Winburn's permission to represent himself, then granted a competency evaluation and a mistrial. While Winburn awaited his second trial, the judge permitted Winburn's stand-by attorney to withdraw because Winburn had sued her and enjoined Winburn from filing complaints or grievances against his new attorney, except to discharge her. Although represented by a new attorney, Winburn moved pro se to dismiss his charges on double jeopardy grounds. The trial judge denied the motion because Winburn's attorney had not filed it. Winburn filed a habeas petition under 28 U.S.C. 2241 challenging his retrial and another section 2241 petition challenging the injunction. The district judges denied both and declined to issue certificates of appealability. Winburn filed a notice of appeal for one petition and sought a certificate of appealability for the other. The Sixth Circuit held that state pretrial detainees proceeding under section 2241 may not appeal without certificates of appealability and granted Winburn a certificate on the injunction claim. A reasonable jurist could conclude that the unusual order was constitutionally infirm. The court denied relief with respect to double jeopardy. Winburn failed to exhaust his state-court remedies by a motion to dismiss.

Lund v. City of Rockford

Court: US Court of Appeals for the Seventh Circuit
Docket: 19-1945
Opinion Date: April 20, 2020
Judge: ROVNER
Areas of Law: Civil Rights, Constitutional Law, Criminal Law

Lund, a reporter for the Rockford Scanner, heard, by police scanner, of multiple traffic stops in Midtown. He did not have a driver's license, so he rode a motorized bicycle to Midtown to take photographs. He suspected a prostitution sting operation. An officer noticed Lund and radioed the team. Officers Welsh and Campbell knew of Lund's previous anti-police speech. They directed Lund to "move on." Lund asked if he was breaking any laws. Campbell informed him that he was not, but that his continued presence would constitute obstruction of a police detail and result in arrest. Lund started his bicycle and called out, loudly, "goodbye officers." Concerned that Lund might post pictures on social media while the sting operation was ongoing and create a danger for unarmed undercover officers, the officers followed Lund and arrested him for driving the wrong way on a one-way street, operating a vehicle without insurance, obstructing a police officer, felony aggravated driving on a revoked license, and operating a motor vehicle without a valid drivers' license. News stories listed Lund's name as an arrestee in the prostitution sting. The charges against Lund were dismissed. Lund sued the officers and the city under 42 U.S.C. 1983. The Seventh Circuit affirmed summary judgment for the defendants on First Amendment retaliation and malicious prosecution under Illinois law, citing the Supreme Court's intervening "Nieves" (2019) holding, that, in most cases, probable cause to arrest defeats a claim of retaliatory arrest. There was probable cause to arrest Lund.

In Re: Leslie Rutledge

Court: US Court of Appeals for the Eighth Circuit
Docket: 20-1791
Opinion Date: April 22, 2020
Judge: Bobby E. Shepherd

Areas of Law: Civil Rights, Constitutional Law, Health Law

The Eighth Circuit granted a writ of mandamus in part and directed the district court to dissolve a Temporary Restraining Order (TRO) enjoining the State from enforcing a COVID-19-related health directive against a provider of surgical abortions. The Arkansas Department of Health (ADH) issued a directive requiring that all non-medically necessary surgeries be postponed in response to Executive Order 20-03, directing the ADH to do everything reasonably possible to respond to and recover from the COVID-19 virus. After adopting the Fifth Circuit's reasoning in In re Abbott, No. 20-50264, 2020 WL 1685929 (5th Cir. April 7, 2020), the court held that the State is entitled to mandamus relief because it has satisfied its burden in demonstrating that it has no other means to obtain the relief that it seeks, the State is clearly and indisputably entitled to the writ, and entry of the writ is appropriate under the circumstances. In Jacobson v. Massachusetts, 197 U.S. 11 (1905), the Supreme Court held that, when faced with a public health crisis, a state may implement measures that infringe on constitutional rights, subject to certain limitations. The court found that the district court's failure to apply the Jacobson framework produced a patently erroneous result. In this case, the directive bears a real and substantial relation to the State's interest in protecting public health in the face of the COVID-19 pandemic; the directive is not, beyond all question, a prohibition of pre-viability abortion in violation of the Constitution because it is a delay, not a ban, and contains emergency exceptions; and the district court clearly abused its discretion in finding that the provider is likely to prevail on its argument that the directive will likely operate as a substantial obstacle to a woman's choice to undergo an abortion in a large fraction of the cases in which the directive is relevant. The court declined to exercise its mandamus power to direct the district court to dismiss the supplemental complaint, and denied the emergency motion to stay the ex parte TRO and for a temporary administrative stay as moot.

Lombardo v. City of St. Louis
Court: US Court of Appeals for the Eighth Circuit
Docket: 19-1469
Opinion Date: April 20, 2020

Judge: Bobby E. Shepherd
Areas of Law: Civil Rights, Constitutional Law

The Eighth Circuit affirmed the magistrate judge's grant of summary judgment in favor of law enforcement officers and the City, in a 42 U.S.C. 1983 action brought by plaintiff after the death of her son. The court held that the officers' actions did not amount to constitutionally excessive force. In this case, the undisputed facts show that the officers discovered the son acting erratically, and even though the son was held in a secure cell, it was objectively reasonable for the officers to fear that he would intentionally or inadvertently physically harm himself. Furthermore, the son actively resisted the officers' attempts to subdue him, and officers held him in the prone position only until he stopped actively fighting against the restraints and the officers. Therefore, the court held that the officers are entitled to qualified immunity on plaintiff's excessive force claim.

Anthony v. TRAX International Corp.

Court: US Court of Appeals for the Ninth Circuit
Docket: 18-15662
Opinion Date: April 17, 2020
Judge: Kim McLane Wardlaw
Areas of Law: Civil Rights, Constitutional Law, Criminal Law

The Ninth Circuit affirmed the district court's grant of summary judgment to TRAX in a disability discrimination action brought by plaintiff under Title I of the Americans with Disabilities Act (ADA). After TRAX terminated plaintiff from her position as a Technical Writer allegedly due to an inability or unwillingness to accommodate her disability, TRAX discovered during the course of litigation that plaintiff lacked the requisite bachelor's degree for her position. The panel held that, although McKennon v. Nashville Banner Publishing Co., 513 U.S. 352 (1995), held that after-acquired evidence cannot establish a superseding, non-discriminatory justification for an employer's challenged actions, after-acquired evidence remains available for other purposes, including to show that an individual is not qualified under the ADA. Because plaintiff did not satisfy one of the prerequisites for her position, she is not "otherwise qualified," and TRAX was not obligated to

engage in the interactive process.

Wilk v. Neven

Court: US Court of Appeals for the Ninth Circuit
Docket: 17-17355
Opinion Date: April 23, 2020
Judge: William A. Fletcher
Areas of Law: Civil Rights, Constitutional Law

The Ninth Circuit reversed the district court's grant of summary judgment for prison officials in a 42 U.S.C. 1983 action alleging that defendants violated plaintiff's right to be free from cruel and unusual punishment when they failed to protect him from an attack by another inmate. The panel held that defendants violated plaintiff's Eighth Amendment right to be protected from serious harm while incarcerated. The panel also held that a reasonable fact-finder would be able to conclude that defendants were subjectively aware of the substantial risk of serious harm to plaintiff, and failed to respond reasonably; any reasonable prison official in the defendants' position would know that the actions defendants took, and failed to take, violated the Eighth Amendment; none of the defendants can claim ignorance to a prisoner's right to be protected from violence at the hands of other inmates where that right has been clearly established in Farmer v. Brennan, 511 U.S. at 833 (1994). Finally, the panel noted that throughout proceedings in the district court plaintiff struggled to obtain discovery from defendants. On remand, plaintiff should have another opportunity to seek the materials he requested previously, and the panel encouraged the district court to appoint him counsel.

United States v. Manzanares

Court: US Court of Appeals for the Tenth Circuit
Docket: 18-2010
Opinion Date: April 17, 2020
Judge: Mary Beck Briscoe

Areas of Law: Constitutional Law, Criminal Law

Defendant-Appellant Archie Manzanares appealed a district court's denial of his 28 U.S.C. 2255 motion challenging his sentence under the Armed Career Criminal Act (ACCA). Under the ACCA, an offense qualified as a violent felony by satisfying at least one of three definitions, which have come to be known as the Elements Clause, the Enumerated Clause, and the Residual Clause. Manzanares asserted that without the Residual Clause, his underlying New Mexico convictions (armed robbery, aggravated assault with a deadly weapon, and aggravated battery) no longer qualified as violent felonies. The district court denied the motion, concluding that all three underlying convictions satisfied the Elements Clause. Manzanares appealed the classification of the armed robbery conviction as a violent felony to the Tenth Circuit, and sought to expand the certificate of appealability to allow him to appeal the decision regarding the aggravated assault with a deadly weapon and aggravated battery convictions. After review, the Tenth Circuit affirmed the district court's denial of Manzanares's 2255 motion, and denied his motion to expand the COA.

Durham v. Rural/Metro Corp.

Court: US Court of Appeals for the Eleventh Circuit
Docket: 18-14687
Opinion Date: April 17, 2020
Judge: Per Curiam
Areas of Law: Civil Rights, Constitutional Law, Labor & Employment Law

After plaintiff asked her employer, Rural, for a temporary light-duty or dispatcher assignment for the duration of her pregnancy because her physician advised her to refrain from lifting more than 50 pounds while pregnant, Rural declined plaintiff's request for accommodation. Plaintiff filed suit against Rural, alleging discrimination under the Pregnancy Discrimination Act (PDA). The Eleventh Circuit vacated the district court's grant of Rural's motion for summary judgment, holding that the district court erroneously factored into the "similar in their ability or inability to work" evaluation the distinct, post-prima-facie-case consideration of Rural's purported legitimate, non-discriminatory reasons for treating plaintiff and the

non-pregnant employees differently. The court explained that neither a non-pregnant EMT who is limited to lifting 10 or 20 pounds nor a pregnant EMT who is restricted to lifting 50 pounds or less can lift the required 100 pounds to serve as an EMT. Consequently, neither can meet the lifting requirement and are thus the same in their "inability to work" as an EMT. The court held that plaintiff's prima facie requirement to establish that she was similarly situated to other employees in their ability or inability to work was satisfied. The court remanded for the district court to determine the remaining issues in the first instance.

Gadsden Industrial Park, LLC v. United States

Court: US Court of Appeals for the Federal Circuit
Docket: 18-2132
Opinion Date: April 22, 2020
Judge: Stoll
Areas of Law: Constitutional Law, Environmental Law, Real Estate & Property Law, Zoning, Planning & Land Use

GIP purchased property from a steel mill's bankruptcy estate, omitting the "Eastern Excluded Property" (EEP). GIP purchased some personal property located on the EEP, which contains two piles comprising slag (a steel manufacturing byproduct), kish (a byproduct of a blast furnace operation), and scrap. Each pile occupied more than 10 acres and was more than 80 feet high. GIP's "Itemization of Excluded Item from Sale" referred to: "All by-products of production other than kish and 420,000 cubic yards of slag" on the EEP "with a reasonable period of time to remove such items." The EPA began investigating contaminants leaching from the piles. While GIP was negotiating for the separation of recoverable metals, the EPA decided to reduce the size of the piles. In 2009-2013, EPA contractors recovered and sold 245,890 tons of material and recovered and used 92,500 cubic yards of slag onsite for environmental remediation; they processed approximately 50% of the piles, spending about $14.5 million, about a million more than income from sales. The EPA compacted the materials to minimize leachate, leaving further remediation to state environmental authorities. GIP did not attempt its own recovery operation during the EPA remediation. GIP sued, alleging "takings" of the slag, kish, and scrap. The trial court awarded GIP

$755,494 for the slag but awarded zero damages for the kish and scrap. The Federal Circuit vacated in part. GIP had no claim to any particular subset of slag. The trial court erred in finding that the EPA somehow prevented GIP from recovering its full allotment of slag; GIP cannot establish a cognizable property interest in the slag that was recovered. The court affirmed in part. GIP's unreliable calculations left the trial court without competent evidence relating to a critical component of the damages calculation with respect to the kish and scrap.

Anderson v Alaska Housing Finance Corporation

Court: Alaska Supreme Court
Docket: S-17077
Opinion Date: April 17, 2020
Judge: Daniel E. Winfree
Areas of Law: Constitutional Law, Real Estate & Property Law

Alaska Housing Finance Corporation (AHFC) held a promissory note and deed of trust executed in connection with a borrower's purchase of his home. AHFC non-judicially foreclosed on the deed of trust without first providing the borrower an opportunity to present to a decision-maker his argument why under AHFC's policies and procedures he was entitled to loan assistance to prevent the foreclosure. The borrower brought suit, alleging among other things, that he was denied procedural due process protections before AHFC took his property by foreclosure. The superior court rejected his due process argument and granted AHFC summary judgment on all issues. The sole issue presented to the Alaska Supreme Court on appeal was the due process question. The Court concluded that AHFC, a public corporation, was a "state actor," that the foreclosure effected a deprivation of the borrower's property, and that the borrower was not afforded a constitutionally required pre deprivation opportunity to be heard. The Court therefore reversed the superior court's summary judgment decision on the due process question and remanded for further proceedings.

Cave v. State

Court: Arkansas Supreme Court
Citation: 2020 Ark. 356
Opinion Date: April 23, 2020
Judge: Josephine L. Hart
Areas of Law: Civil Rights, Constitutional Law, Criminal Law

The Supreme Court affirmed the judgment of the circuit court denying Appellant's pro se petition for writ of habeas corpus, holding that the circuit court did not err in denying the petition. Appellant was found guilty of two counts of delivery of a controlled substance and one count of maintaining a drug premises. In his habeas petition, Appellant argued that he was actually innocent because his arrest and conviction was based on the false testimony of a witness who had a lengthy criminal history. Appellant further argued that the writ should issue because he was not afforded effective assistance of counsel. The circuit court denied the petition. The Supreme Court affirmed, holding (1) Appellant's claims regarding the witness's credibility do not constitute a valid assertion that he was being unlawfully detained; and (2) Appellant did not actually connect an allegation of ineffective assistance of counsel to his allegation that he was unlawfully detained.

Thomas v. State

Court: Arkansas Supreme Court
Citation: 2020 Ark. 354
Opinion Date: April 23, 2020
Judge: Josephine L. Hart
Areas of Law: Civil Rights, Constitutional Law, Criminal Law

The Supreme Court affirmed Appellant's conviction of capital murder, holding that the evidence was sufficient to sustain the conviction and that the circuit court did not err in denying Appellant's motion to suppress tracking data generated by his cellphone. On appeal, Appellant argued that the trial court erred by denying his directed-verdict motion because the evidence supported the defense's theory of the case that he did not intend to shoot the victim. Further, Appellant argued that the court abused its

discretion in denying his motion to suppress evidence obtained from the seizure of AT&T phone records. The Supreme Court disagreed, holding (1) the evidence was sufficient to support the capital murder conviction; and (2) the circuit court correctly denied the motion to suppress.

Williams v. Baptist Health

Court: Arkansas Supreme Court
Citation: 2020 Ark. 350
Opinion Date: April 23, 2020
Judge: Kemp
Areas of Law: Constitutional Law, Labor & Employment Law, Personal Injury

The Supreme Court affirmed in part and reversed in part the judgment of the circuit court dismissing Appellant's action against Baptist Health appellees and John Hearnsberger, M.D., holding that the circuit court abused its discretion in denying Appellant's motions to compel production of two types of disputed discovery. Appellant, a surgeon, was on the medical staff of Baptist Health from 2003 until 2011, when his appointment and clinic privileges at Baptist Health Medical Center-Little Rock were terminated, effective immediately. Baptist Health also reported the suspension of Appellant's clinical privileges to the Arkansas State Medical Board, which, in 2014, revoked Appellant's license. Appellant appealed the revocation, and his license was reinstated. In 2011, Appellant filed a lawsuit against Baptist Health and several individuals, asserting several claims. The circuit court entered a consent order dismissing the Medical Board and Dr. Hearnsberger in his official capacity. The circuit court then granted summary judgment on Appellant's remaining claims. The Supreme Court reversed in part, holding that the circuit court abused its discretion in denying Appellant's motions to compel production of two types of discovery, and the discovery error was not harmless as to Appellant's discrimination and tortious-interference claims.

California v. Landowski

Court: California Courts of Appeal
Docket: C080210(Third Appellate District)
Opinion Date: April 23, 2020
Judge: Andrea Lynn Hoch
Areas of Law: Constitutional Law, Criminal Law

Defendant Michael Reyes, Jr., an active Norteno gang member (from the Broderick Boys subset), confronted a former Norteno gang member (from the Franklin Boys subset), "S.," about a physical altercation that occurred between S. and Reyes's stepfather over a debt. That earlier altercation had taken place in front of Reyes's autistic younger brother. Reyes pulled out a handgun and asked S. if he had a problem. S., who was riding his bicycle with his wife, "R.," when Reyes confronted him with the gun, stopped briefly, told Reyes to put the gun down if he wanted to fight, and then started to ride away. This angered Reyes, prompting him to fire six rounds at S. from behind. S. Was hit but survived. R. Was a short distance in front of S., but was not hit. Defendants Liberty Landowski and Lisa Humble were with Reyes at the time of the shooting and aided in his efforts to avoid being apprehended by law enforcement authorities. Reyes, Landowski, and Humble were tried together before the same jury. Reyes was convicted of one count of attempted murder (Count 1), two counts of assault with a semiautomatic firearm (Counts 2 and 4), one count of possession of a firearm by a convicted felon (Count 5), and one count of possession of ammunition by a convicted felon (Count 6). In addition to various firearm and other enhancements, the jury found Reyes committed the crimes for the benefit of, at the direction of, or in association with a criminal street gang with the specific intent to promote, further, or assist in criminal conduct by gang members. The jury convicted Landowski and Humble of being accessories to Reyes's criminal conduct (Count 9) and also found true gang enhancement allegations attached to that crime. Reyes challenged the sufficiency of the firearm evidence presented to support his conviction, and all defendants challenged the sufficiency of the evidence supporting their gang enhancements. The Court of Appeal determined Senate Bill 620 (2017-2018 Reg. Sess.) gave the trial court discretion to strike firearm enhancements in the interest of justice and applied retroactively; and Senate Bill 136 (2019-2020 Reg. Sess.) eliminated such enhancements, and also applied retroactively. To these issues, the Court remanded for the trial court's consideration. The Court affirmed the trial court in all other respects.

California v. May

Court: California Courts of Appeal
Docket: C084302(Third Appellate District)
Opinion Date: April 20, 2020
Judge: Ronald B. Robie
Areas of Law: Constitutional Law, Criminal Law

Defendant Raymond May was found guilty by jury of possessing an assault weapon and a machine gun based on his possession of a single AK-47 assault rifle while guarding a marijuana plantation. He was sentenced to probation, which included an electronic search condition. On appeal, defendant argued there was a lack of sufficient evidence corroborating his accomplice's testimony and demonstrating he knew of the firearm's illegal character. He further alleged the trial court erred in instructing the jury: that the accomplice instruction should have included language specifying that the accomplice testimony needed to prove more than defendant's mere presence or access to the firearm. Furthermore, defendant argued the electronic search condition imposed as part of his probation failed under the standards announced in California v. Lent, 15 Cal.3d 481 (1975). The Court of Appeal agreed defendant's electronic search condition should have been stricken, but otherwise affirmed.

California v. Perez

Court: California Courts of Appeal
Docket: E072260(Fourth Appellate District)
Opinion Date: April 20, 2020
Judge: Miller
Areas of Law: Constitutional Law, Criminal Law

In 2009, defendant-appellant Rudy Perez pled guilty to active gang participation under Penal Code section 186.22(a), and unlawful possession of a firearm under section 12025(b)(6). In 2010, defendant pled guilty to residential burglary under section 459, and active gang participation under

section 186.22(a). In August of 2018, the State filed a new felony complaint, alleging one of the prior gang participation convictions as a strike prior. In 2018, defendant moved to vacate the two prior gang participation convictions based upon changes in the law that rendered them invalid. The trial court denied defendant's motion. In 2019, defendant asked for reconsideration, which was again denied. Thereafter, defendant filed a timely notice of appeal from the denial of his motion to vacate the convictions. The Court of Appeal found that defendant pled guilty to street terrorism under Penal Code section 186.22(a) in 2009 and 2010, and it was undisputed that while committing these offenses, defendant acted alone. However, subsequent to defendant's guilty pleas, in 2012, the California Supreme Court held that a defendant had to act in concert with a fellow gang member in order to be guilty of street terrorism. At that time, defendant could have filed a state habeas petition requesting relief, but failed to do so. "Defendants can lose remedies that are established by law when they fail to invoke such remedies in time." Section 1473.7 became effective in 2017. In defendant's motion filed in the trial court, defendant failed to state what new evidence was discovered, instead arguing that the trial court was allowed "to vacate a conviction where the defendant is innocent as a matter of law or where vacating the conviction is in the interest of justice, even though the defendant is no longer in custody or otherwise restrained by the conviction." The Court of Appeal concurred with the trial court's reason to deny relief, determining that "while the outcome in this case may be unfortunate for defendant, we are not here to rewrite legislation. The Legislature could amend section 1473.7 to address issues raised in this case. However, under the laws, as written, we must uphold the trial court's order."

Pinter-Brown v. The Regents of the University of California

Court: California Courts of Appeal
Docket: B290086(Second Appellate District)
Opinion Date: April 23, 2020
Judge: Stratton
Areas of Law: Civil Rights, Constitutional Law

Plaintiff filed suit against The Regents for gender discrimination based on a series of events that took place while she was a Professor of Medicine at

UCLA. The jury found in favor of plaintiff, awarding her economic and noneconomic damages. The Court of Appeal reversed and held that the trial court committed a series of grave errors that significantly prejudiced The Regents' right to a fair trial by an impartial judge. In this case, the trial court delivered a presentation to the jury highlighting major figures in the civil rights movement, and told the jury their duty was to stand in the shoes of Dr. Martin Luther King and bend the arc of the moral universe toward justice; the trial court allowed the jury to hear about and view a long list of discrimination complaints from across the entire University of California system that were not properly connected to plaintiff's circumstances or her theory of the case; the trial court allowed the jury to learn of the contents and conclusions of the Moreno Report, which documented racial discrimination occurring throughout the entire UCLA campus; and the trial court allowed plaintiff to resurrect a retaliation claim after the close of evidence despite having summarily adjudicated that very claim prior to trial. The court held that these errors were cumulative and highly prejudicial, and were evidence of the trial court's inability to remain impartial, creating the impression that the trial court was partial to plaintiff's claims.

Colorado v. Lujan

Court: Colorado Supreme Court
Citation: 2020 CO 26
Opinion Date: April 20, 2020
Judge: Brian D. Boatright
Areas of Law: Constitutional Law, Criminal Law

Abel Lujan was charged with first-degree murder for the death of his girlfriend after she was found beaten and strangled behind a friend's house. At trial, two women testified for the State about Lujan's prior violent behavior towards them. Prior to admitting this evidence, the trial court read a limiting instruction, telling the jury that it could only consider the evidence for the purposes of establishing Lujan's motive, intent, or common plan. A copy of this instruction was not given to the jury for deliberations; however, the jury did receive an instruction at the close of the evidence explaining that certain evidence could only be considered for the limited purposes for which it was admitted. While deliberating, the jury submitted a question seeking

clarification about the limiting instruction. Over defense counsel's objection, the trial court cleared the courtroom of the public and parties, leaving only the judge, bailiff, and court reporter; the judge then brought in the jury and reread the limiting instruction that it had previously read twice in open court. The jury ultimately found Lujan guilty of second-degree murder. Lujan appealed, arguing that the court's actions when rereading the jury instruction constituted a courtroom closure that violated his Sixth Amendment right to a public trial. A division of the court of appeals agreed and reversed Lujan's conviction. The State argued on certiorari review that the Colorado Supreme Court adopt a triviality standard, under which a defendant's constitutional right to a public trial was not violated when the closure at issue was trivial. In so doing, the State argued that the brief courtroom closure here was trivial and therefore did not violate Lujan's public trial right. The Court concurred with the State, adopted the standard and reversed the appellate court's decision.

Archer v. State

Court: Florida Supreme Court
Docket: SC19-841
Opinion Date: April 23, 2020
Judge: Per Curiam
Areas of Law: Civil Rights, Constitutional Law, Criminal Law

The Supreme Court affirmed the order of the circuit court denying Appellant's successive motion to vacate his sentence of death under Fla. R. Crim. P. 3.851, holding that the circuit court did not err in denying the Rule 3.851 motion. Appellant was convicted of first-degree murder, armed robbery, and grand theft. Appellant was sentenced to death for the murder. The Supreme Court affirmed the convictions but reversed Appellant's death sentence and remanded the case for a new penalty phase. After a new penalty phase, Appellant was again sentenced to death. In his successive Rule 3.851 motion, Appellant raised three claims. The circuit court denied relief. The Supreme Court affirmed, holding that the circuit court (1) properly denied Appellant's claim that his death sentence violated the Sixth and Eighth Amendments in light of Hurst v. Florida, 136 S. Ct. 616 (2016), and Hurst v. State, 202 So. 3d 40 (Fla. 2016); (2) correctly denied Appellant's

claim that his sentence violated the Eighth Amendment; and (3) did not err in denying Appellant's claim of newly discovered evidence.

Collins v. Georgia

Court: Supreme Court of Georgia
Docket: S20A0158
Opinion Date: April 20, 2020
Judge: David E. Nahmias
Areas of Law: Constitutional Law, Criminal Law

Appellant Tommy Collins was convicted of felony murder in connection with the stabbing death of 14-year-old Rueben Hand. Friends gathered to watch the Peach Drop on New Year's Eve 2010; a disagreement ensued and Hand was stabbed near the Five Points MARTS station shortly after midnight. Appellant's only argument on appeal was that the trial court plainly erred when it gave the jury the State's requested instruction on "revenge for a prior wrong." Seeing no error, "much less plain error," the Georgia Supreme Court affirmed.

Heyward v. Georgia

Court: Supreme Court of Georgia
Docket: S20A0399
Opinion Date: April 20, 2020
Judge: Peterson
Areas of Law: Constitutional Law, Criminal Law

Larmell Heyward was convicted by jury of malice murder and possession of a firearm during the commission of a felony in connection with the 2007 shooting death of Ramon Rogers. Heyward argued on appeal of those convictions that the trial court erred in denying his request to charge the jury on voluntary manslaughter. After review, the Georgia Supreme Court determined the trial court's refusal to give the charge was harmless, since, in the Court's estimation, there was no realistic probability that the jury would have accepted the "slight" evidence of voluntary manslaughter in the

light of the strong evidence of malice murder.

Mills v. Georgia

Court: Supreme Court of Georgia
Docket: S20A0364
Opinion Date: April 20, 2020
Judge: Ellington
Areas of Law: Constitutional Law, Criminal Law

Roger Mills was found guilty by jury of malice murder and aggravated assault in connection with the death of Masuto Garrett. Mills contended that the trial court erred when, during jury deliberations, it excused a holdout juror without sufficient inquiry or good cause. After review, the Georgia Supreme Court concurred with that contention, and reversed Mills's convictions. The Court also concluded the evidence presented at trial was legally sufficient to support the convictions, so the State could retry Mills if it chose.

Moore v. Georgia

Court: Supreme Court of Georgia
Docket: S20A0344
Opinion Date: April 20, 2020
Judge: David E. Nahmias
Areas of Law: Constitutional Law, Criminal Law

Appellant Carzell Moore, proceeding pro se, appealed a trial court's denial of his motion to set aside a September 2017 order denying his motion for an out-of-time appeal of his 2002 resentencing on his 1977 convictions for murder and rape. Moore contended the trial court abused its discretion by denying his motion to set aside because he was not given proper notice of the September 2017 order. Finding that the record supported the trial court's ruling, the Georgia Supreme Court affirmed.

Rickman v. Georgia

Court: Supreme Court of Georgia
Docket: S20A0127
Opinion Date: April 20, 2020
Judge: Harold D. Melton
Areas of Law: Constitutional Law, Criminal Law

Victoria Rickman was convicted by jury of malice murder and a related firearm offense in connection with the shooting death of William Carter, Jr. Rickman and Carter had a tumultuous on-again, off-again relationship with a history of verbal and physical abuse, false accusations of sexual assault, empty threats to obtain temporary protective orders, and numerous calls to 911. In the days leading up to Carter's death, the pair was talking and meeting again despite a recent break-up. On one such 911 call, officers went to Rickman's residence responding to claims shots were fired. Rickman responded holding her small dog, hair wet, and in pajamas. She did not appear to be injured, and nothing in the home looked disturbed or out of place. Rickman told the officers, "he raped me again and I shot him." Officers found Carter laying face up on the bed naked with multiple gunshot wounds to his body. An autopsy revealed that Carter was shot ten times – four times in the chest, three times in the back, once on the arm, and twice in the head. Rickman's examining physician testified that he found no

injuries on Rickman consistent with her description of events, and no signs of trauma to her vaginal cavity. Rickman appealed her convictions, arguing she was denied effective assistance of counsel and that the trial court erred in admitting improper character evidence. Finding no reversible error, the Georgia Supreme Court affirmed.

Read Opinion Are you a lawyer? **Annotate this case**.

Robinson v. Georgia

Court: Supreme Court of Georgia
Docket: S20A0265
Opinion Date: April 20, 2020
Judge: Peterson
Areas of Law: Constitutional Law, Criminal Law

Herbert Robinson appealed his convictions for malice murder, armed robbery, and possession of a firearm during the commission of a felony in connection with the death of Michael Moore. On appeal, he argued the trial court erred by allowing the State to use two firearms for demonstrative purposes during trial, and by allowing body-camera footage to be shown at trial. He also argued his trial counsel was ineffective for failing to object to a letter written by Robinson's cellmate being available to the jury for review during deliberations, and for failing to object to a visual aid used by the State during closing arguments. Because Robinson failed to show ineffective assistance of counsel or reversible error by the trial court, the Georgia Supreme Court affirmed.

Sullivan v. Georgia

Court: Supreme Court of Georgia
Docket: S20A0056
Opinion Date: April 20, 2020
Judge: Warren
Areas of Law: Constitutional Law, Criminal Law

A jury convicted Antonio Sullivan of malice murder and other crimes in connection with the shooting death of Wava Benton. On appeal, Sullivan contended his trial counsel was constitutionally ineffective by failing to present evidence at trial to corroborate Sullivan's testimony about prior difficulties between Sullivan and Benton, and by failing to procure expert testimony about Sullivan's mental health—specifically about post-traumatic stress disorder— to be presented to the jury. The Georgia Supreme Court determined Sullivan failed to establish that his trial counsel was deficient in either respect, and therefore affirmed his convictions.

Read Opinion Are you a lawyer? **Annotate this case**.

Turner v. Georgia

Court: Supreme Court of Georgia
Docket: S20A0247
Opinion Date: April 20, 2020
Judge: Warren
Areas of Law: Constitutional Law, Criminal Law

Appellant Ronald Turner appeals from his conviction for malice murder stemming from the stabbing death of William King. The stabbing took place

outside an apartment at which Turner had driven in order to trade food for drugs. Turner testified in his own defense at trial and claimed that King hit him in the head with a beer bottle because Turner owed money to King from a prior drug transaction. Turner testified that he tried to get away from King, but that King chased him down and grabbed his jacket. According to Turner, King was getting ready to hit him again when Turner stabbed King in self-defense. Appealing his ultimate conviction, Turner contended he was denied the effective assistance of counsel in three respects. Seeing no reversible error after a review of the trial court record, the Georgia Supreme Court affirmed Turner's conviction.

Valrie v. Georgia

Court: Supreme Court of Georgia
Docket: S20A0380
Opinion Date: April 20, 2020
Judge: Keith R. Blackwell
Areas of Law: Constitutional Law, Criminal Law

Reuben Valrie was tried by jury and convicted of murder and other crimes in connection with the death of his infant daughter Aliyana. Valrie appealed, claiming that he was denied the effective assistance of counsel. Aliyana died as a result of closed head trauma, with a blunt-force abdominal injury as a secondary cause of death, which investigators determined was consistent with being shaken or dropped. At trial, Valrie presented the testimony of four expert witnesses who testified that Aliyana died of natural causes and that the injuries to her brain and abdomen were caused by events such as post-mortem CPR and the “rough” handling of her body by first responders. The jury rejected this defense and found Valrie guilty of murder and the other charges. Valrie contended that his trial lawyer should have raised a hearsay objection to the admission of recorded statements that his girlfriend (and Aliyana's mother) made to police investigators (as well as the testimony of one of those investigators about some of those statements). Alternatively, Valrie argued that his lawyer should have sought the redaction of certain portions of the recorded statements that impugned his character. The Georgia Supreme Court concluded Valrie failed to present evidence that his trial counsel was deficient, or that he was

prejudiced by any alleged failures. According, the Court affirmed conviction.

Williams v. Georgia

Court: Supreme Court of Georgia
Docket: S20A0241
Opinion Date: April 20, 2020
Judge: Keith R. Blackwell
Areas of Law: Constitutional Law, Criminal Law

Richard Williams, II, was tried by jury and convicted of murder in connection with the strangulation death of Cory Robinson. Williams and Robinson were involved in a sexual relationship and had been living together at an extended-stay hotel. Kelvin Spencer was a close friend of both Williams and Robinson. When Spencer met Williams at the hotel room, Williams looked angry and had scratches on his neck. Spencer saw Robinson lying on the floor in a “praying position.” Spencer did not believe Robinson was dead, and he helped Williams move clothes and other things to a U-Haul truck parked outside, in preparation for a move. Williams did not testify or present any evidence. Based on his lawyer’s opening and closing arguments, the defense theory was that Spencer killed Robinson because he was jealous of Williams’s relationship with Robinson. Williams’s sole claim on appeal was that he was denied the effective assistance of counsel when his trial lawyer failed to present as a defense that Williams accidentally killed Robinson during consensual erotic asphyxiation. He argued that his lawyer's discomfort with the topic of homosexual BDSM activity, and his own problems with the Georgia State Bar, precluded presentation of the "true" version of events, and that Williams acceded to the lawyer's defense strategy only "through ignorance and that he did not know that a defense based on consensual erotic asphyxiation was available." Finding no reversible error, the Georgia Supreme Court affirmed conviction.

Idaho v. Burke

Court: Idaho Supreme Court - Criminal

Docket: 46841
Opinion Date: April 22, 2020
Judge: Moeller
Areas of Law: Constitutional Law, Criminal Law

Prior to sentencing, defendant James Burke was committed to the state mental hospital for 56 days to restore him to competency. After being evaluated and deemed competent to proceed to trial, Burke was returned to the county jail and later pleaded guilty pursuant to a plea agreement. At the conclusion of his sentencing hearing, Burke sought credit for the 56 days of time spent in court-ordered commitment. The district court denied the motion, concluding that commitment to a state mental hospital did not fall under the definition of 'incarceration' in Idaho Code section 18-309. After reviewing this issue carefully, the Idaho Supreme Court disagreed with the district court's "thorough and thoughtful analysis," holding that court-ordered commitment to state custody pursuant to Idaho Code sections 18-210 and 18-211 met the functional and legal definition of "incarceration" under Idaho Code section 18-309. "The extent of the liberty interests restricted by Burke's court-ordered commitment to State Hospital North are just too similar to imprisonment to conclude otherwise." Accordingly, the Court reversed the district court's order denying Burke's request for credit for time served and remanded the case for the district court to enter an order crediting him with the fifty-six days he spent committed to State Hospital North while the State restored his competency to face criminal charges.

State v. Gibbs

Court: Iowa Supreme Court
Docket: 18-1298
Opinion Date: April 17, 2020
Judge: Edward M. Mansfield
Areas of Law: Civil Rights, Constitutional Law, Criminal Law

The Supreme Court affirmed Defendant's conviction of murder in the second degree, holding that Defendant's Fifth Amendment rights were invaded when the trial judge instructed the jury that Defendant was required to notify law enforcement of his use of deadly force, but the error was harmless. During trial, Defendant asserted the defense of justification in his

shooting of the victim. At issue on appeal was whether the district court abused its discretion by giving a jury instruction incorporating the terms of Iowa Code 704.2B. The instruction included a statement that a person using deadly force is required to notify law enforcement about his use of deadly force. Defendant argued before the Supreme Court that both section 704.2B and the jury instruction incorporating that section violated his Fifth Amendment rights. The Supreme Court affirmed, holding (1) instructing the jury that a homicide defendant is required to notify a law enforcement agency of his use of deadly force violates the defendant's Fifth Amendment rights; but (2) any error in this case was harmless beyond a reasonable doubt.

State v. Harris
Court: Kansas Supreme Court
Docket: 117362
Opinion Date: April 17, 2020
Judge: Wilson
Areas of Law: Civil Rights, Constitutional Law, Criminal Law

The Supreme Court reversed the judgment of the court of appeals affirming Defendant's conviction of possession fo marijuana, holding that Defendant's waiver of jury trial was legally insufficient. On appeal, Defendant argued that he did not properly waive his right to a jury and asserted three other issues. The Supreme Court reversed the judgment of the court of appeals affirming Defendant's convictions without addressing the three remaining issues, holding that because the district court failed properly to apprise Defendant of his right to a jury trial and failed to ensure that Defendant understood the nature of the right he was giving up, Defendant's constitutional right to a jury trial was violated in this case.

State v. Paquin
Court: Maine Supreme Judicial Court
Citation: 2020 ME 53

Opinion Date: April 23, 2020
Judge: Andrew M. Mead
Areas of Law: Constitutional Law, Criminal Law

In this appeal from Defendant's conviction for eleven counts of gross sexual misconduct, the Supreme Judicial Court vacated the judgment of conviction on one count, vacated the dismissal of other counts and remanded for entry of a judgment of acquittal on those counts, and affirmed in all other respects, holding that Defendant's convictions on both Counts 5 and 30 violated his double jeopardy protections and that the court erred in allowing the State to dismiss Counts 27, 28, and 29 during trial without Defendant's consent. The indictment charged Defendant with fifteen counts (Counts 1-13, 30-31) of gross sexual misconduct against the victim and sixteen counts (Counts 14-29) of gross sexual misconduct against a second alleged victim. During trial, the court granted Defendant's motion for a judgment of acquittal on Counts 10-13, and the State dismissed Counts 27-29. Defendant was found guilty of Counts 1-9 and 30-31 and not guilty on the remaining counts. The court entered judgment in accordance with the verdict. The Supreme Judicial Court held that the trial court erred in failing to rule that the Double Jeopardy Clause barred convictions on both Counts 5 and 30 and allowing the State to dismiss Counts 27, 28, and 29 rather than entering a judgment of acquittal on those counts.

Commonwealth v. McCarthy

Court: Massachusetts Supreme Judicial Court
Docket: SJC-12750
Opinion Date: April 16, 2020
Judge: Gaziano
Areas of Law: Civil Rights, Constitutional Law, Criminal Law

The Supreme Judicial Court affirmed the judgment of the district court denying Defendant's motions to suppress, holding that the limited use of automatic license plate readers (ALPRs) in this case did not implicate constitutional protections against unreasonable searches. While police were investigating Defendant on suspicion of drug distribution they used ALPRs on two bridges to track Defendant's movements. The police accessed historical data via ALPR technology and received real-time alerts, the last of

which led to Defendant's arrest. Defendant filed motions to suppress the ALPR data and the fruits of the arrest. The superior court denied the motions. The Supreme Judicial Court affirmed, holding that while the widespread use of ALPRs in the Commonwealth could implicate a defendant's constitutional protected expectation of privacy in the whole of his public movements, that interest was not invaded by the limited extent and use of the ALPR data in the instant case.

Goldstein v. Secretary of the Commonwealth

Court: Massachusetts Supreme Judicial Court
Docket: SJC-12931
Opinion Date: April 17, 2020
Judge: Ralph D. Gants
Areas of Law: Constitutional Law, Election Law

The Supreme Judicial Court granted Plaintiffs' emergency petition and allowed Plaintiff's application for declaratory relief to the extent that this Court declares, in light of emergency circumstances arising from the COVID-19 pandemic, that the minimum signature requirements in Mass. Gen. Laws ch. 53, 7 and 44 for candidates in the September 1, 2020 primary election are unconstitutional. Plaintiffs argued that, in the context of the current pandemic, the minimum signature requirements to be listed on the ballot for a party's nomination posed an unconstitutionally undue burden on Massachusetts would-be candidates' constitutional right to seek elective office. The Supreme Judicial Court agreed, holding (1) application of the signature requirements in the context of the current public health crisis imposes a severe burden a candidate's right to gain access to the September 1 primary ballot, triggering heightened scrutiny; and (2) in this time of pandemic, the justification for the current signature requirements cannot survive this scrutiny and are unconstitutional as applied to Plaintiffs. The Court fashioned equitable relief intended to substantially diminish that burden while respecting the legislative purpose for imposing minimum signature requirements.

State v. Reek

Court: Minnesota Supreme Court
Docket: A19-0153
Opinion Date: April 22, 2020
Judge: G. Barry Anderson
Areas of Law: Civil Rights, Constitutional Law, Criminal Law

The Supreme Court affirmed Defendant's conviction for first-degree murder, holding that there was no error in the proceedings below. Specifically, the Supreme Court held (1) Appellant's right to a fair trial before an impartial tribunal was not violated when the district court stated that it might reconsider its prior Spreigl ruling if the defense presented certain witnesses; (2) the jury instructions on accomplice liability were plainly erroneous, but Appellant failed to establish that there was a reasonable likelihood that the error had a significant effect on the verdict; (3) the prosecutor did not commit misconduct in his closing arguments regarding the law of accomplice liability; (4) the district court did not abuse its discretion by granting the State's motion to admit evidence of appellant's past convictions for impeachment purposes, including by allowing the specific convictions to be disclosed to the jury; and (5) Appellant's pro se arguments were without merit.

State v. Montoya

Court: Nebraska Supreme Court
Citation: 305 Neb. 581
Opinion Date: April 17, 2020
Judge: Freudenberg
Areas of Law: Civil Rights, Constitutional Law, Criminal Law

The Supreme Court affirmed the judgment of the district court affirming Defendant's conviction and sentence for driving under the influence, holding that there was no error in the challenged rulings by the trial court. Specifically, the Supreme Court held that the district court did not err by (1) affirming the county court's order denying Defendant's motion to suppress fruits of the stop; (2) affirming the county court's order that denied

Defendant's motion to suppress the fruits of his arrest; (3) affirming the county court's order that denied Defendant's motion to suppress the results of the test of his breath alcohol content; (4) finding sufficient evidence to support the conviction; and (5) finding that Defendant's sentence was not excessive.

Read Opinion Are you a lawyer? **Annotate this case**.

Multnomah County v. Mehrwein

Court: Oregon Supreme Court
Docket: S066445
Opinion Date: April 23, 2020
Judge: Martha Lee Walters
Areas of Law: Constitutional Law, Election Law, Government & Administrative Law

In the November 2016 election, Multnomah County voters approved Measure 26-184, an amendment to the Multnomah County Home Rule Charter containing campaign finance provisions. Multnomah County then adopted new ordinances, Multnomah County Code (MCC) sections 5.200-203, mirroring and implementing those charter provisions. At issue before the Oregon Supreme Court was the validity of those ordinances under the free speech provisions of both the Oregon and United States Constitutions - Article I, section 8, and the First Amendment. The Court reached four conclusions: (1) the county's contribution limits did not, on their face, violate Article I, section 8, of the Oregon Constitution; (2) the case had to be remanded for factual findings and to consider, in the first instance, whether the contribution limits violated the First Amendment; (3) the county's expenditure limits were invalid under both constitutional provisions; and (4) the parties' dispute with respect to the disclosure provisions was moot.

Pennsylvania v. Britton

Court: Supreme Court of Pennsylvania
Docket: 55 MAP 2018
Opinion Date: April 22, 2020
Judge: Max Baer

Areas of Law: Constitutional Law, Criminal Law

California law enforcement officers interviewed Appellant Stacy Britton in her California residence and, unbeknownst to her, recorded those interviews. Over Appellant's objection, Pennsylvania used those recordings as evidence to help convict Appellant of murder in Pennsylvania. The Pennsylvania Supreme Court granted allowance of appeal to examine whether the California law enforcement officers were acting as agents of the Pennsylvania State Police when they recorded the interviews with Appellant in her California home, and if so, whether Pennsylvania's constitutional and statutory protections were available to Appellant under those circumstances. The Court concluded the California law enforcement officers were not acting as agents of the Pennsylvania State Police when they interviewed Appellant, making analysis of whether any Pennsylvania-specific constitutional or statutory protections unwarranted. Because the Supreme Court concluded the Pennsylvania trial court reached the proper result in this matter, it affirmed that court's judgment.

Pennsylvania v. Copenhaver

Court: Supreme Court of Pennsylvania
Docket: 48 MAP 2019
Opinion Date: April 22, 2020
Judge: Thomas G. Saylor
Areas of Law: Constitutional Law, Criminal Law

In August 2015, a deputy sheriff conducted a vehicle stop of Appellant Victor Copenhaver's pickup truck. Upon approaching the truck, the deputy noticed an odor of alcohol and marijuana emanating from the passenger compartment. After administering field sobriety tests, he arrested Appellant for suspected driving under the influence of alcohol and controlled substances ("DUI"). Appellant was ultimately charged with DUI and other offenses. Appellant challenged the deputy's authority to conduct a traffic stop and sought suppression of all evidence obtained during the encounter. Rather than presenting testimony at a suppression hearing, the parties stipulated that Appellant was driving the vehicle in question and that the deputy had training and qualifications equivalent to that of a police officer.

The parties also agreed that the vehicle stop occurred as a result of the deputy observing the tailgate to the pickup truck being in a down position, which caught the deputy's attention. The deputy further observed the registration on the pickup truck was expired, and additionally, the registration number was identified as belonging to a vehicle other than the one on which it was attached. The issue this case presented for the Pennsylvania Supreme Court's review was whether the deputy could lawfully conduct the traffic stop based on the expired registration sticker, on a theory that such a violation amounts to a breach of the peace. The Supreme Court concluded driving a vehicle with an expired registration did not entail a breach of the peace. It vacated the superior court's order insofar as it held that the expired registration was a breach of the peace, thus alone authorizing the deputy to stop Appellant's vehicle. Notably, in light of its holding, the Supreme Court found the superior court did not proceed to consider other relevant questions, such as whether the parties' factual stipulation should have been read as indicating that the officer's understanding that the registration sticker was associated with a different vehicle arose in the pre-stop timeframe – consistent with the Commonwealth's position throughout this litigation. "These issues should be resolved in the first instance by the intermediate court on remand."

Pennsylvania v. Tedford

Court: Supreme Court of Pennsylvania
Docket: 773 CAP
Opinion Date: April 22, 2020
Judge: Donohue
Areas of Law: Constitutional Law, Criminal Law

Appellant Donald Tedford was convicted of first-degree murder and rape on February 6, 1987. He appealed the dismissal of his second petition for relief filed pursuant to the Post Conviction Relief Act ("PCRA"), on December 2, 2014, as amended by a counseled petition on May 5, 2015, and a supplemental petition filed on June 9, 2015. In connection with his initial filings, Tedford sought wholesale discovery of the prosecution's entire file, but the PCRA court concluded that the petition (as amended) was not timely filed. Tedford also appealed the PCRA court's order denying his

supplemental PCRA petition, in which he requested discovery, an evidentiary hearing, and/or a new trial based upon the admission of expert testimony presented at trial related to microscopic hair analysis. The PCRA court concluded that pursuant to PCRA Section 9545(b)(1)(ii), it had jurisdiction to consider the merits of Tedford's newly-discovered-facts claims, but ultimately it concluded Tedford had not asserted a meritorious claim in accordance with Section 9543(a)(2)(vi). Finding no reversible error in that analysis, the Pennsylvania Supreme Court affirmed dismissal of the petition for relief.

Pennsylvania v. Trahey

Court: Supreme Court of Pennsylvania
Docket: 38 EAP 2018
Opinion Date: April 22, 2020
Judge: Wecht
Areas of Law: Constitutional Law, Criminal Law

The trial court granted Timothy Trahey's motion to suppress the results of a blood test that revealed his blood alcohol concentration ("BAC"), finding no justification for the investigating officers' failure to obtain a search warrant before conducting the test. On the Commonwealth's appeal, the Superior Court reversed, opining that the Commonwealth's evidence sufficiently established the existence of exigent circumstances, thus excusing the absence of a warrant. The Pennsylvania Supreme Court reversed, finding that while the exigency analysis is an objective one, "even disregarding the officers' subjective motivations, or their candid acknowledgment that they would have obtained a search warrant if they thought it necessary, there was no time-sensitive need to conduct a warrantless blood test under the circumstances of this case. Accordingly, the Superior Court's conclusion that the test was justified by exigent circumstances was drawn in error."

In re Greg Abbott

Court: Supreme Court of Texas

Docket: 20-0291
Opinion Date: April 23, 2020
Judge: Per Curiam
Areas of Law: Constitutional Law, Criminal Law

The Supreme Court conditionally granted mandamus relief to the State seeking review of a temporary restraining order (TRO) blocking enforcement of Executive Order GA-13, which changes the rules applicable to judges' decisions regarding pre-trial bail, against judges, holding that the trial court lacked jurisdiction to order the judges' requested relief, even temporarily. GA-13 suspends certain statutes authorizing trial judges to release jail inmates with violent histories during the state of disaster due to the threat of the novel coronavirus. Plaintiffs alleged that GA-13 is unconstitutional and exceeds the governor's statutory emergency powers. Sixteen of the plaintiffs were Texas trial judges alleging that GA-13 improperly interferes with their judicial authority to make individualized bail decisions, and the other plaintiffs were public interest organizations and lawyer associations. The trial court issued a TRO blocking enforcement of GA-13 against judges. The Supreme Court conditionally granted mandamus relief, holding that the alleged threat of a criminal prosecution in this case did not give the judges standing to seek the invalidation of GA-13, and therefore, the trial court lacked jurisdiction to order their requested relief.

Stahmann v. Texas

Court: Texas Court of Criminal Appeals
Docket: PD-0556-18
Opinion Date: April 22, 2020
Judge: Barbara Hervey
Areas of Law: Constitutional Law, Criminal Law

Appellant Karl Stahmann was involved in an automobile accident, after which he threw a bottle of promethazine, a controlled substance, over a nearby wire fence before law enforcement arrived. The bottle landed two to three feet past the fence in plain view. He was convicted of third-degree felony tampering with physical evidence and was sentenced to 10 years' confinement and fined $5,000. The judge suspended his sentence and placed him on community supervision for 10 years. Stahmann appealed,

arguing in part that the evidence was insufficient to prove that he destroyed, altered, or concealed the prescription bottle. The court of appeals agreed that the evidence was insufficient, but instead of rendering an acquittal, it reformed the judgment to show that Stahmann was convicted of the lesser-included offense of attempted tampering with physical evidence, a state-jail felony. After review of the evidence presented at trial, the Texas Court of Criminal Appeals concluded the evidence was indeed insufficient to prove that Appellant altered the prescription pill bottle when he threw it over the fence because the mere act of throwing the bottle did not change the bottle itself. "While a rational jury could have reasonably inferred that Stahmann intended to conceal the pill bottle when he threw it over the wire fence, the evidence shows that he failed to conceal it as he intended because the bottle landed short of the bush in plain view on top of some grass." The Court affirmed the trial court's judgment.

Washington v. Escalante

Court: Washington Supreme Court
Docket: 97268-1
Opinion Date: April 23, 2020
Judge: Steven González
Areas of Law: Constitutional Law, Criminal Law

Alejandro Escalante was detained for hours in a secured area at a border crossing and, the State conceded, interrogated by federal agents without Miranda warnings. Statements he made during that interrogation were used by the State to convict him of drug possession. While a traveler briefly detained and questioned at the border was typically not "in custody" for Miranda purposes, "the government's power to detain and question people at the border without implicating Miranda has limits." Here, the Washington Supreme Court determined those limits were reached. "This border detention created the type of inherently coercive environment that demands Miranda warnings to ensure an individual's choice to speak is the product of free will." The Supreme Court held that Escalante was in custody when he was interrogated and reversed.

Washington v. Haggard

Court: Washington Supreme Court
Docket: 97375-0
Opinion Date: April 23, 2020
Judge: Barbara Madsen
Areas of Law: Constitutional Law, Criminal Law

A class C felony "washes out" and is omitted from a defendant's offender score as long as he or she is not convicted of any crime within five years of the last date of release from confinement. David Haggard was convicted of a misdemeanor offense within this five-year period, which was dismissed pursuant to RCW 3.66.067. When Haggard later pleaded guilty to burglary and arson, the trial court included prior class C felonies in his criminal history, finding that the dismissed misdemeanor conviction interrupted the washout period for those offenses. Haggard contended on appeal this was error. The Washington Supreme Court determined that because a dismissed conviction constituted a "conviction" under the Sentencing Reform Act of 1981 (SRA), and misdemeanor dismissal and vacation were distinct processes, so Haggard's offender score was properly calculated.

Morrisey v. West Virginia AFL-CIO

Court: Supreme Court of Appeals of West Virginia
Docket: 19-0298
Opinion Date: April 21, 2020
Judge: Jenkins
Areas of Law: Civil Rights, Constitutional Law, Labor & Employment Law

The Supreme Court reversed the rulings of the circuit court finding that the Workplace Freedom Act (the Act) infringes upon the rights to associate, as well as the liberty and property rights, of labor unions that are member organizations of the AFL-CIO (Labor Unions), holding that the Act does not violate constitutional rights at issue. In 2016, the Legislature enacted the Act, which prohibits collective bargaining agreements that require an employee to pay any dues, fees, assessments, or other similar charges as a condition of employment, or as a condition for the continuation of

employment, when the employee has chosen not to join a union. On remand, the circuit court ruled that the Act unconstitutionally fringes on the rights of the Labor Unions, who represent both private and government workers in West Virginia. The Supreme Court reversed, holding that the Act does not violate the West Virginia Constitution's protections of association, property, and liberty rights.

State v. Taylor

Court: Supreme Court of Appeals of West Virginia
Docket: 18-0502
Opinion Date: April 21, 2020
Judge: Walker
Areas of Law: Civil Rights, Constitutional Law, Criminal Law

The Supreme Court affirmed the judgment of the circuit court giving Petitioner credit for twelve days of time served toward the sentence he received for his felony conviction although Petitioner spent additional time in confinement for other charges that were dismissed in the universal plea agreement, holding that to grant Petitioner additional credit for time served would do little more than reward Petitioner for habitual criminal behavior. Petitioner was charged with several crimes and agreed to resolve the pending charges against him in a universal plea agreement. Under the terms of the agreement, Petitioner agreed to plea guilty to the charge of felony carrying a concealed firearm by a prohibited person. In exchange, the State agreed to drop the remaining charges. After he was sentenced, Petitioner argued that, in addition to the twelve days of credit for time served he was granted, he was constitutionally entitled to credit for time served while he was incarcerated for charges that were resolved in the universal plea agreement. The Supreme Court affirmed, holding that Petitioner's circumstances implicated neither double jeopardy nor equal protection of the law such that additional credit for time served was constitutionally mandated.

Criminal Law Opinions

Ramos v. Louisiana

Court: US Supreme Court
Docket: 18-5924
Opinion Date: April 20, 2020
Judge: Neil M. Gorsuch
Areas of Law: Civil Rights, Constitutional Law, Criminal Law

In 48 states and in federal court, a single juror's vote to acquit is enough to

prevent a conviction; Louisiana and Oregon punish people based on 10-to-2 verdicts. Ramos was convicted in a Louisiana court by a 10-to-2 jury verdict and was sentenced to life without parole. The Supreme Court reversed. The Sixth Amendment right to a jury trial, as incorporated against the states by the Fourteenth Amendment, requires a unanimous verdict to convict a defendant of a serious offense. Juror unanimity is a vital common law right. The Court rejected an "invitation" to "perform a cost-benefit analysis on the historic features of common law jury trials and to conclude that unanimity does not make the cut." In overturning its 1972 "Apodaca" decision, the Court stated that the reasoning, in that case, was "gravely mistaken" and "sits uneasily with 120 years of preceding case law." The fact that Louisiana and Oregon may need to retry defendants convicted of felonies by non-unanimous verdicts whose cases are still pending on direct appeal "will surely impose a cost, but new rules of criminal procedure usually do."

United States v. Diaz-Rivera

Court: US Court of Appeals for the First Circuit
Docket: 18-1461
Opinion Date: April 20, 2020
Judge: Torruella
Areas of Law: Criminal Law

The First Circuit affirmed Defendant's upwardly variant sentence for one count of possession with intent to distribute cocaine and one count of using a firearm during and in relation to a drug-trafficking crime, holding that the sentence was neither procedurally nor substantively unreasonable. Pursuant to a plea agreement, Defendant pled guilty to drug-related crimes. After a sentencing hearing, the district court sentenced Defendant to an upwardly variant sentence of 180 months of imprisonment, thus declining to impose the government's requested sentence. On appeal, Defendant challenged both the procedural and substantive reasonableness of his sentence. The First Circuit affirmed, holding that the 180-month sentence was neither procedurally nor substantively unreasonable.

United States v. Cotto

Court: US Court of Appeals for the Second Circuit
Docket: 18-2970
Opinion Date: April 20, 2020
Judge: Leval
Areas of Law: Criminal Law

A conviction for retaliating against a witness in violation of 18 U.S.C. 1513 does not require that the Government prove that defendant had knowledge of the federal nature of the proceeding. The Second Circuit rejected defendant's arguments to the contrary and affirmed his conviction for retaliating against a witness. The court remanded for revision of the provision of the sentence relating to the substance abuse treatment condition of supervised release; instructed the district court to consider on remand whether the court's forthcoming order in United States v. Traficante, No. 18-1962 (2d Cir., submitted Oct. 25, 2019) requires modification of the risk notification provision of supervised release; and granted the parties leave to reinstate this appeal to permit review of the district court's decision on remand as to the risk notification provision.

United States v. Rosa

Court: US Court of Appeals for the Second Circuit
Docket: 17-2004
Opinion Date: April 17, 2020
Judge: Nardini
Areas of Law: Criminal Law

Where a district court offers no explanation for its sentence, and where neither the adopted presentence report nor the statement of reasons adequately demonstrates the court's reasoning, the court has committed plain error in violation of 18 U.S.C. 3553(c). The Second Circuit vacated defendant's sentence for conspiracy to commit wire fraud and aggravated identity theft. The court held that the district court failed to state its reasons for sentencing defendant as required under section 3553(c); the error is clear or obvious; and the error affected defendant's substantial rights. Accordingly, the court remanded for resentencing.

Fogle v. Sokol

Court: US Court of Appeals for the Third Circuit
Docket: 19-1066
Opinion Date: April 21, 2020
Judge: Matey
Areas of Law: Civil Rights, Constitutional Law, Criminal Law

In 1976, the body of 15-year-old “Kathy” was found near her Indiana County, Pennsylvania home. Kathy’s death involved a brutal assault, rape, and a gunshot to the head. Kathy's sisters, ages nine and 12, stated that she had gotten into a car with a man with blue eyes, black hair that came below his ears and curled at the ends, sideburns, heavy eyebrows, and a heavy mustache. Fogle had “straight reddish-blonde hair that dropped down his back and a matching, full beard that reached his waist.” After three years, Fogle became a suspect because a psychiatric patient described seeing Kathy get in a car with Fogle and his brother. The story was largely inconsistent with statements by Kathy’s sisters. Jailhouse informants were recruited and counseled by law enforcement with promises of leniency. The prosecutors “either knew about, encouraged, or permitted” this strategy. A jury found Fogle guilty of second-degree murder. In 2015, Fogle obtained DNA evidence excluding both himself and his brother as the source of semen collected from Kathy. His conviction was vacated. The Commonwealth declined to pursue new charges, describing the case as lacking “prosecutorial merit.” Fogle, having spent three decades in prison, sued the prosecutors and Indiana County under 42 U.S.C. 1983. The Third Circuit affirmed the denial of their motions to dismiss based on absolute immunity. Only truly prosecutorial functions, not investigative conduct, justify complete protection from suit. Fogle’s complaint alleges actions that fall outside the narrow doctrine of absolute immunity.

James v. New Jersey State Police

Court: US Court of Appeals for the Third Circuit

Docket: 18-1432
Opinion Date: April 21, 2020
Judge: Porter
Areas of Law: Civil Rights, Constitutional Law, Criminal Law

Stephens called 911 and reported that Gibbons hit her and had a gun in his truck. The police responded. Stephens obtained a temporary restraining order, prohibiting Gibbons from possessing firearms and from returning to Stephens's house. The next day, Gibbons went to Stephens's house. Stephens was talking on the phone; the friend called the police. Gibbons left Stephens's house. Trooper Conza arrived. Stephens stated that Gibbons had waved a gun throughout their argument. Conza told Stephens to go to the police barracks and reported over the radio that Gibbons had brandished a firearm. Conza, with Troopers Bartelt and Korejko, visited the nearby home of Gibbons's mother, James. James stated that she did not know where Gibbons was and that he might be off his schizophrenia medication. While driving to the barracks, Stephens saw Gibbons walking alongside the road and called 911. The Troopers responded. Bartelt parked his car and, exiting, observed that Gibbons was pointing a gun at his own head. Bartelt drew his weapon, stood behind his car door, and twice told Gibbons to drop his weapon. Gibbons did not comply. Bartelt shot Gibbons twice within seconds of stopping his car. Gibbons died that night. In James' suit under 42 U.S.C. 1983, the Third Circuit held that Bartelt is entitled to qualified immunity because he did not violate Gibbons's clearly established rights. Bartelt's pre-standoff knowledge of Gibbons differs from that of officers involved in cited cases. Bartelt could reasonably conclude that Gibbons posed a threat to others.

Bazemore v. Best Buy

Court: US Court of Appeals for the Fourth Circuit
Docket: 18-2196
Opinion Date: April 21, 2020
Judge: Quattlebaum
Areas of Law: Criminal Law

Plaintiff filed suit against her employer, Best Buy, claiming that she was harassed because of her race and gender and subjected to a hostile work

environment in violation of Title VII of the Civil Rights Act of 1964. Plaintiff's complaint stemmed from an incident where a coworker made a racist and sexually charged joke to a small group of coworkers that included plaintiff. The Fourth Circuit affirmed the district court's motion to dismiss and held that, in the case of allegedly harassing comments by a co-worker, an employee must allege plausible facts that the employer knew, or should have known, about the harassment and failed to take action reasonably calculated to stop it. Because plaintiff failed to do this, the court affirmed the district court's judgment. In this case, the coworker's conduct was not imputable to Best Buy where Best Buy took steps that were not only reasonably calculated to end such behavior, but that it did in fact end it.

United States v. Akande

Court: US Court of Appeals for the Fourth Circuit
Docket: 18-6833
Opinion Date: April 20, 2020
Judge: Diana Jane Gribbon Motz
Areas of Law: Criminal Law

After defendant moved under 28 U.S.C. 2255 to vacate his conviction based on the ineffective assistance of counsel, the district court denied the motion. The Fourth Circuit granted a certificate of appealability and reversed the district court's judgment. The court held that, given counsel's specific misadvice regarding defendant's rights to preserve his appellate rights, on which defendant understandably relied, the district court's general admonishments did not amount to the careful explanation that addresses the particular issue necessary to cure the error. In this case, the plea colloquy did not correct counsel's erroneous advice and the error prejudiced defendant. Accordingly, the court remanded for further proceedings.

United States v. Chambers

Court: US Court of Appeals for the Fourth Circuit
Docket: 19-7104

Opinion Date: April 23, 2020
Judge: Floyd
Areas of Law: Criminal Law

After defendant was erroneously sentenced as a career offender, he moved to reduce his sentence to time served under the First Step Act. The district court denied defendant's motion to reduce his custodial sentence, though it granted the motion as to his supervised release term. The Fourth Circuit held that the First Step Act does not constrain courts from recognizing Guidelines errors. The court explained that First Step Act motions fall under 18 U.S.C. 3582(c)(1)(B), a distinct exception to finality, and that section 404(b) of the First Step Act expressly allows a court to impose a reduced sentence in order to give retroactive effect to sections 2 and 3 of the Fair Sentencing Act. Furthermore, 18 U.S.C. 3553(a) sentencing factors apply in the section 404(b) resentencing context, and the resentencing court has discretion within the section 404(b) framework to vary from the Guidelines and, in doing so, to consider movants' post-sentencing conduct. In this case, the district court seemingly believed that it could not vary from the Guidelines range to reflect post-sentencing information. Therefore, the court vacated the district court's sentencing order. Finally, the court held that any Guidelines error deemed retroactive, such as the error in this case, must be corrected in a First Step Act resentencing.

United States v. Ferebee

Court: US Court of Appeals for the Fourth Circuit
Docket: 18-4266
Opinion Date: April 22, 2020
Judge: Traxler
Areas of Law: Criminal Law

The Fourth Circuit affirmed the denial of defendant's motion to suppress evidence recovered from a backpack, and the district court's conclusion that defendant abandoned the backpack and any legitimate expectation of privacy in its contents. The court rejected defendant's claim that the collective-knowledge doctrine has any bearing on the propriety of the district court's conclusion that defendant abandoned the backpack. The court also held that the district court is not precluded from finding abandonment in

cases where the defendant, as here, has physical possession of the property he has disavowed. In this case, the record supported the district court's conclusion that defendant clearly and unequivocally disavowed ownership of the backpack. Even if the district court erred by finding that defendant abandoned the backpack, reversal would not be required because the search of the backpack was a proper search incident to arrest for which no warrant was required under the facts of this case.

United States v. Nance

Court: US Court of Appeals for the Fourth Circuit
Docket: 18-4585
Opinion Date: April 21, 2020
Judge: Pamela Harris
Areas of Law: Criminal Law

The Fourth Circuit affirmed defendant's above-Guidelines sentence imposed after he pleaded guilty to two federal drug- and firearm-related offenses. The court held that defendant's sentence was not procedurally unreasonable where the district court took into account defendant's extensive criminal history; his pattern of reoffending upon release; his disciplinary infractions in custody and inability to comply with the terms of his release; and the fact that the offenses of conviction occurred over the course of days, in which he was arrested once, released, and then arrested again just days later. The court also held that defendant's sentence was substantively reasonable where the district court conducted a thorough, individualized assessment of defendant and his offense conduct in light of the 18 U.S.C. 3553(a) factors, and did not abuse its discretion in formulating the sentence.

Docket: 17-60852
Opinion Date: April 21, 2020

Judge: Priscilla R. Owen
Areas of Law: Criminal Law

The Fifth Circuit vacated defendant's sentence imposed after he pleaded guilty to violating 18 U.S.C. 922(g) and 924(e) by knowingly possessing a firearm after he had been convicted of a misdemeanor crime of domestic violence. The court held that the district court committing plain error by violating Federal Rule of Criminal Procedure 32 when it relied on factual allegations in the confidential sentencing recommendation that were not in the presentence report and that were not disclosed by defendant. The court explained that the use of undisclosed facts to justify an above-guidelines sentence seriously affects the fairness, integrity, and public reputation of judicial proceedings. Therefore, the court remanded for resentencing.

United States v. McGinnis

Court: US Court of Appeals for the Fifth Circuit
Docket: 19-10197
Opinion Date: April 21, 2020
Judge: Stuart Kyle Duncan
Areas of Law: Criminal Law

18 U.S.C. 922(g)(8), which prohibits individuals subject to certain domestic violence protective orders from possessing firearms or ammunition for any purpose, is facially constitutional under the Fifth Circuit's two-step NRA framework. Even assuming arguendo that the conduct at issue -- the keeping and possessing of firearms by individuals subject to domestic protective orders -- falls within the Second Amendment right, defendant's facial challenge fails. The court applied intermediate scrutiny and held that section 922(g)(8) is reasonably adapted to the government interest of reducing domestic gun abuse. The court also held that if the commonly understood definitions of terms in the protective order include acts involving "physical force," the protective order is sufficient to support a conviction under section 922(g)(8)(C)(ii). In this case, the jury plausibly found that the order satisfied the statute and the court declined to reverse defendant's conviction on this basis. However, the court remanded for the limited purpose of conforming defendant's written judgment to the district court's

oral pronouncement.

Valentine v. Collier

Court: US Court of Appeals for the Fifth Circuit
Docket: 20-20207
Opinion Date: April 22, 2020
Judge: Per Curiam
Areas of Law: Civil Rights, Constitutional Law, Criminal Law, Government & Administrative Law, Health Law

Plaintiffs filed suit alleging that TDCJ's adoption and implementation of measures guided by changing CDC recommendations in regards to the COVID-19 pandemic do not go far enough. Plaintiffs filed a class action alleging violations of the Eighth Amendment's prohibition against cruel and unusual punishment, and the Americans with Disabilities Act, seeking a preliminary injunction. The Fifth Circuit granted TDCJ's motion to stay the district court's preliminary injunction, which regulates the cleaning intervals for common areas, the types of bleach-based disinfectants the prison must use, the alcohol content of hand sanitizer that inmates must receive, mask requirements for inmates, and inmates' access to tissues (amongst many other things). The court held that TDCJ is likely to prevail on the merits of its appeal because: (1) after accounting for the protective measures TDCJ has taken, plaintiffs have not shown a "substantial risk of serious harm" that amounts to "cruel and unusual punishment"; and (2) the district court committed legal error in its application of Farmer v. Brennan, by treating inadequate measures as dispositive of defendants' mental state. In this case, even assuming that there is a substantial risk of serious harm, plaintiffs lack evidence of defendants' subjective deliberate indifference to that harm. The court also held that TDCJ has shown that it will be irreparably injured absent a stay, and that the balance of the harms and the public interest favor a stay. Finally, the court held that plaintiffs have not exhausted their administrative remedies as required in the Prison Litigation Reform Act (PLRA), and the district court's injunction goes well beyond the limits of what the PLRA would allow even if plaintiffs had properly exhausted their claims.

United States v. Dowl

Court: US Court of Appeals for the Sixth Circuit
Docket: 19-2469
Opinion Date: April 22, 2020
Judge: Per Curiam
Areas of Law: Criminal Law

Dowl pleaded guilty to presenting false tax returns, 18 U.S.C. 286. He received a sentence of 30 months of imprisonment plus 24 months of supervised release. On supervised release, Dowl was charged with four new state crimes; failing to inform his probation officer that he had police contact; communicating with his co-defendant despite instructions to the contrary; failing to make payments on his restitution, fine, or special assessment; and failing to get a job. At a hearing, the court reviewed the evidence and allowed Dowl to tell his side of the story. The court deferred judgment on three of the four new state criminal law violations and dismissed the fourth and found Dowl gainfully employed. Dowl had failed to notify his probation officer about police contact, impermissibly communicated with his co-defendant, and did not pay his fines. After considering the 18 U.S.C. 3553(a) sentencing factors, the court returned Dowl to prison for 11 months, giving Dowl and his attorney the opportunity to raise any objections. Dowl had none. The Sixth Circuit affirmed, rejecting Dowl's argument that the court committed reversible error by not directly addressing him to solicit an allocution. The court employed the "plain error" standard because Dowl did not raise any objection during his revocation hearing.

Read Opinion Are you a lawyer? **Annotate this case**.

United States v. Fowler

Court: US Court of Appeals for the Sixth Circuit
Dockets: 19-3071, 19-3070
Opinion Date: April 21, 2020
Judge: Donald
Areas of Law: Criminal Law

In 2018, Fowler pled guilty to possession of child pornography and violations of the conditions of his supervised release from a previous conviction for the same. In addition to possessing child pornography, Fowler had failed drug testing, had threatened his parole officer, and had tried to harass his girlfriend to recant her testimony. The district court ordered Fowler to pay a $5,000 special assessment for possession of child pornography under the Justice for Victims of Trafficking Act, 18 U.S.C. 3014. The court also varied upward and sentenced Fowler to the maximum statutory penalty for violating the conditions of his supervised release, imposing a 120-month sentence for possessing child pornography and a consecutive 36-month sentence for violating the terms of his supervised release. The Sixth Circuit vacated as to the assessment and remanded for a determination of indigency. The district court committed plain error by failing to address Fowler's ability to pay; the parties did not contemplate the $5,000 special assessment as a part of the waiver provision in the plea agreement. The court affirmed the sentence. The district court did not consider an impermissible factor (whether Fowler had actually touched a child) and Fowler had no other challenge to the reasonableness of his sentence,

United States v. Sumlin

Court: US Court of Appeals for the Sixth Circuit
Docket: 18-3819
Opinion Date: April 21, 2020
Judge: Bush
Areas of Law: Criminal Law

Sumlin was convicted of the distribution of drugs that caused the 2015 death of Carrie Dobbins, 21 U.S.C. 841(a)(1) and (b)(1)(C), which carries enhanced penalty provisions. The Sixth Circuit affirmed his convictions and his sentence to life in prison. The district court properly denied Sumlin's suppression motion, given that the affidavit established a sufficient nexus between his drug trafficking activity and residence that was searched. The court properly admitted testimony by the victim's sister, Kelly, who was Sumlin's former girlfriend and had purchased drugs from him. Kelly's testimony about Sumlin's drug-trafficking and that Sumlin was with Carrie on

the day of her overdose was intrinsic proof that was relevant for providing background information and contextualizing the government's case against Sumlin. Sufficient evidence supported the jury's verdict that Sumlin distributed the drugs that caused Carrie's death.

United States v. Vance

Court: US Court of Appeals for the Sixth Circuit
Docket: 19-5160
Opinion Date: April 17, 2020
Judge: Bush
Areas of Law: Criminal Law, White Collar Crime

The Spriggs' bank account was established to receive social security checks. The Spriggs' great-grandson, Vance, filled out an application in Mr. Spriggs's name for a debit card to draw on the checking account. Mr. Spriggs had never used a debit card. The Spriggses did not authorize Vance to do so. Bank cameras photographed Vance using the card to withdraw cash. Vance also used the card for personal expenses. At another bank, Vance used Mr. Spriggs's social security number to establish an account and obtain a $15,000 cash advance. Vance made other, unsuccessful loan applications. Upon being notified by the banks about suspicious activities involving his identity, Mr. Spriggs filed a police report. The police arrested Vance. While searching Vance's car, the police located a large stash of personal and financial documents belonging to the Spriggses, including bank statements, tax return forms, property-tax bills, and a car title. The Sixth Circuit affirmed Vance's convictions for access-device fraud, 18 U.S.C. 1029(a)(5), and two counts of aggravated identity theft, 18 U.S.C. 1028A(a)(1), and his 65-month sentence. The court rejected arguments that the district court failed to make adequate findings of fact after the bench trial, improperly denied a motion for judgment of acquittal, and failed to correctly calculate the loss amount connected to Vance's charges under Sentencing Guidelines 2B1.1.

Winburn v. Nagy

Court: US Court of Appeals for the Sixth Circuit
Dockets: 19-2399, 19-2398
Opinion Date: April 23, 2020
Judge: Jeffrey S. Sutton
Areas of Law: Civil Rights, Constitutional Law, Criminal Law

Winburn represented himself at his trial for armed robbery, home invasion, and conspiracy. Based on Winburn's disruptive behavior, the judge removed him from the courtroom and revoked Winburn's permission to represent himself, then granted a competency evaluation and a mistrial. While Winburn awaited his second trial, the judge permitted Winburn's stand-by attorney to withdraw because Winburn had sued her and enjoined Winburn from filing complaints or grievances against his new attorney, except to discharge her. Although represented by a new attorney, Winburn moved pro se to dismiss his charges on double jeopardy grounds. The trial judge denied the motion because Winburn's attorney had not filed it. Winburn filed a habeas petition under 28 U.S.C. 2241 challenging his retrial and another section 2241 petition challenging the injunction. The district judges denied both and declined to issue certificates of appealability. Winburn filed a notice of appeal for one petition and sought a certificate of appealability for the other. The Sixth Circuit held that state pretrial detainees proceeding under section 2241 may not appeal without certificates of appealability and granted Winburn a certificate on the injunction claim. A reasonable jurist could conclude that the unusual order was constitutionally infirm. The court denied relief with respect to double jeopardy. Winburn failed to exhaust his state-court remedies by a motion to dismiss.

Lund v. City of Rockford

Court: US Court of Appeals for the Seventh Circuit
Docket: 19-1945
Opinion Date: April 20, 2020
Judge: ROVNER
Areas of Law: Civil Rights, Constitutional Law, Criminal Law

Lund, a reporter for the Rockford Scanner, heard, by police scanner, of multiple traffic stops in Midtown. He did not have a driver's license, so he

rode a motorized bicycle to Midtown to take photographs. He suspected a prostitution sting operation. An officer noticed Lund and radioed the team. Officers Welsh and Campbell knew of Lund's previous anti-police speech. They directed Lund to “move on.” Lund asked if he was breaking any laws. Campbell informed him that he was not, but that his continued presence would constitute obstruction of a police detail and result in arrest. Lund started his bicycle and called out, loudly, “goodbye officers.” Concerned that Lund might post pictures on social media while the sting operation was ongoing and create a danger for unarmed undercover officers, the officers followed Lund and arrested him for driving the wrong way on a one-way street, operating a vehicle without insurance, obstructing a police officer, felony aggravated driving on a revoked license, and operating a motor vehicle without a valid drivers’ license. News stories listed Lund’s name as an arrestee in the prostitution sting. The charges against Lund were dismissed. Lund sued the officers and the city under 42 U.S.C. 1983. The Seventh Circuit affirmed summary judgment for the defendants on First Amendment retaliation and malicious prosecution under Illinois law, citing the Supreme Court’s intervening "Nieves" (2019) holding, that, in most cases, probable cause to arrest defeats a claim of retaliatory arrest. There was probable cause to arrest Lund.

United States v. Perez

Court: US Court of Appeals for the Seventh Circuit
Docket: 18-3156
Opinion Date: April 23, 2020
Judge: KANNE
Areas of Law: Criminal Law

Beloit officers facilitated a recorded controlled buy of heroin from Perez, a suspected high-level drug dealer. Perez sold 98 grams of heroin to an informant. Based on that transaction alone, Perez pled guilty to distributing heroin. At Perez’s sentencing hearing, the judge expressed concern that the guidelines range of 33–41 months’ imprisonment did not reflect the full scope of his drug trafficking. The PSR described conduct that suggested that Perez was responsible for distributing large quantities of heroin, methamphetamine, and cocaine. The judge continued the hearing, directing

the government to file a memorandum, detailing which offense conduct it could support by a preponderance of the evidence. When the hearing reconvened, the government presented witness testimony that elaborated on conduct described in the PSR, including drug ledgers, Perez's post-arrest conversation with his girlfriend, large sums of cash, a money counter, cell phones, and Perez's passport. The judge calculated a higher guidelines range and imposed a 121-month sentence. The Seventh Circuit affirmed, rejecting an argument that the sentencing judge should have recused himself. Perez has not demonstrated that a reasonable observer would have questioned the judge's impartiality nor did he allege that the judge was biased based on events outside the proceedings. The judge's continuance was laudable, not prejudicial.

Jackson v. United States

Court: US Court of Appeals for the Eighth Circuit
Docket: 19-1131
Opinion Date: April 20, 2020
Judge: Lavenski R. Smith
Areas of Law: Criminal Law

The Eighth Circuit affirmed the district court's denial of a 28 U.S.C. 2255 motion to vacate, set aside, or correct petitioner's sentence. The court held that the district court did not err in denying an evidentiary hearing as to petitioner's claim that counsel was constitutionally ineffective for failing to conduct adequate pretrial investigations. In this case, petitioner failed to identify any specific witnesses or evidence that counsel failed to uncover. Furthermore, petitioner failed to show that counsel's representation prejudiced his case. The court also held that the district court did not err in denying an evidentiary hearing as to petitioner's claim that his new counsel was ineffective for failing to subpoena witnesses, for convincing petitioner not to testify, for failing to object to or appeal the district court's answer to a jury question, and for failing to object to the district court's designation of petitioner as a career offender.

United States v. Bolman

Court: US Court of Appeals for the Eighth Circuit
Docket: 18-2759
Opinion Date: April 21, 2020
Judge: Jane Louise Kelly
Areas of Law: Criminal Law

The Eighth Circuit affirmed defendant's conviction for involuntary manslaughter after he struck and killed his nephew with his truck. The court held that the evidence was sufficient to support the conviction, because a reasonable jury could find defendant grossly negligent beyond a reasonable doubt. The court also held that the district court did not plainly err by failing to instruct the jury that actual knowledge is an essential element of the offense that is separate from gross negligence, because the instructions, viewed as a whole, accurately and adequately defined the essential elements of the offense.

United States v. Boyd

Court: US Court of Appeals for the Eighth Circuit
Docket: 18-3528
Opinion Date: April 17, 2020
Judge: Kobes
Areas of Law: Criminal Law

The Eighth Circuit affirmed defendant's sentence imposed after he pleaded guilty to being a felon in possession of a firearm. The court held that the facts underlying defendant's prior arrests were part of his history and characteristics under 18 U.S.C. 3553(a), and thus the district court could consider defendant's arrest records and the circumstances of those arrests. The court explained that the arrests were listed in the presentence report and gleaned from prior police reports. Furthermore, specific facts underlying the arrests may be considered for an upward departure and should be considered fair game for a variance where defendant did not object to them. The court also concluded that there is nothing here that suggested a corrected misstatement improperly influenced the district court's sentencing decision. Finally, the court held that the upward variance was not

unreasonable in consideration of defendant's previous assaults, coupled with the facts underlying his arrest in this case.

United States v. Sanchez-Velasco

Court: US Court of Appeals for the Eighth Circuit
Docket: 18-3568
Opinion Date: April 17, 2020
Judge: James B. Loken
Areas of Law: Criminal Law, Immigration Law

The Eighth Circuit affirmed the district court's denial of defendant's motion to suppress his responses to an ICE agent's two questions at the Treasurer's Office, because he was not in custody at the time of questioning. Although defendant was in custody at the ICE facility, the court held that an agent's questions were not custodial interrogation because the agent could not have known his questions were likely to elicit incriminating information regarding

the two criminal charges that were eventually brought against defendant. The court noted that the Attorney General's regulations carefully distinguish between the warrantless arrest of an alien for a criminal violation of the immigration laws, and what is called the "administrative arrest" of an alien who is reasonably believed to be illegally present in the United States. The court agreed with the district court that the agent's questioning was a request for routine information necessary for basic identification purposes that is not interrogation under Miranda, even if the information turns out to be incriminating.

Anthony v. TRAX International Corp.

Court: US Court of Appeals for the Ninth Circuit
Docket: 18-15662
Opinion Date: April 17, 2020
Judge: Kim McLane Wardlaw
Areas of Law: Civil Rights, Constitutional Law, Criminal Law

The Ninth Circuit affirmed the district court's grant of summary judgment to TRAX in a disability discrimination action brought by plaintiff under Title I of the Americans with Disabilities Act (ADA). After TRAX terminated plaintiff from her position as a Technical Writer allegedly due to an inability or unwillingness to accommodate her disability, TRAX discovered during the course of litigation that plaintiff lacked the requisite bachelor's degree for her position. The panel held that, although McKennon v. Nashville Banner Publishing Co., 513 U.S. 352 (1995), held that after-acquired evidence cannot establish a superseding, non-discriminatory justification for an employer's challenged actions, after-acquired evidence remains available for other purposes, including to show that an individual is not qualified under the ADA. Because plaintiff did not satisfy one of the prerequisites for her position, she is not "otherwise qualified," and TRAX was not obligated to engage in the interactive process.

Court: US Court of Appeals for the Ninth Circuit
Docket: 18-56451
Opinion Date: April 22, 2020
Judge: Marbley
Areas of Law: Criminal Law, International Law, White Collar Crime

The City of Almaty, in Kazakhstan, filed suit against defendant and his family under the Racketeer Influenced and Corrupt Organizations Act (RICO), alleging that they engaged in a scheme to defraud the city of millions of dollars. The City claimed that it was forced to spend money and resources in the United States to trace where its money was laundered. The district court dismissed the City's claim on the basis that it failed to state a domestic injury pursuant to the Supreme Court's recent decision in RJR Nabisco, Inc. v. European Community, 136 S. Ct. 2090 (2016). The Ninth Circuit held that the City failed to state any cognizable injury other than the foreign theft of its funds, and its voluntary expenditures were not proximately caused by defendants' acts of money laundering. In this case, the City's expenditure of funds to trace its allegedly stolen funds is a consequential damage of the initial theft suffered in Kazakhstan and is not causally connected to the predicate act of money laundering.

United States v. Baldon

Court: US Court of Appeals for the Ninth Circuit
Docket: 18-10411
Opinion Date: April 21, 2020
Judge: Bennett
Areas of Law: Criminal Law

After defendant pleaded guilty to possession with intent to distribute a controlled substance, the district court sentenced him to 184 months in prison. The Ninth Circuit held that defendant's prior convictions for carjacking under section 215 of the California Penal Code are not categorical crimes of violence under USSG 4A1.1(e). Therefore, the district court incorrectly calculated defendant's criminal history by improperly including two points for his prior carjacking convictions. However, the panel held that the district court did not err in finding that defendant possessed a

firearm under USSG 2D1.1(b)(1). Accordingly, the panel affirmed in part, vacated in part, and remanded for resentencing.

United States v. Costanzo

Court: US Court of Appeals for the Ninth Circuit
Docket: 18-10291
Opinion Date: April 17, 2020
Judge: Michael Daly Hawkins
Areas of Law: Criminal Law

The Ninth Circuit affirmed defendant's conviction of five counts of money laundering, holding that a reasonable trier of fact could have found beyond a reasonable doubt that the money laundering transactions, in which payment was made via bitcoin, affected interstate commerce in some way or to some degree. In this case, the transfer involved the use of an Internet or cellular network connected Personal Computer Device (PCD) to transfer bitcoin (together with the digital code necessary to unlock the bitcoin) to the digital wallet of another Internet or cellular network connected PCD.

United States v. Manzanares

Court: US Court of Appeals for the Tenth Circuit
Docket: 18-2010
Opinion Date: April 17, 2020
Judge: Mary Beck Briscoe
Areas of Law: Constitutional Law, Criminal Law

Defendant-Appellant Archie Manzanares appealed a district court's denial of his 28 U.S.C. 2255 motion challenging his sentence under the Armed Career Criminal Act (ACCA). Under the ACCA, an offense qualified as a violent felony by satisfying at least one of three definitions, which have come to be known as the Elements Clause, the Enumerated Clause, and the Residual Clause. Manzanares asserted that without the Residual Clause, his underlying New Mexico convictions (armed robbery, aggravated assault with a deadly weapon, and aggravated battery) no longer qualified

as violent felonies. The district court denied the motion, concluding that all three underlying convictions satisfied the Elements Clause. Manzanares appealed the classification of the armed robbery conviction as a violent felony to the Tenth Circuit, and sought to expand the certificate of appealability to allow him to appeal the decision regarding the aggravated assault with a deadly weapon and aggravated battery convictions. After review, the Tenth Circuit affirmed the district court's denial of Manzanares's 2255 motion, and denied his motion to expand the COA.

United States v. Delaney

Court: US Court of Appeals for the District of Columbia Circuit
Docket: 18-3093
Opinion Date: April 17, 2020
Judge: David S. Tatel
Areas of Law: Criminal Law

The DC Circuit vacated the district court's denial of defendant's motion to suppress evidence. The court held that officers violated the Fourth Amendment when they seized defendant because they lacked reasonable suspicion to justify the stop. In this case, a seizure occurred when the officers pulled into the parking lot, partially blocked defendant's vehicle, and activated their take-down light. The court held that any inference of suspicion that the officers drew from encountering defendant soon after hearing the nearby gunshots were undermined by the government's failure to identify specific and articulable facts supporting the officers' estimation of where the various shots came from. Accordingly, the court remanded for further proceedings.

Antenor v. Alaska, Department of Corrections

Court: Alaska Supreme Court
Docket: S-17005
Opinion Date: April 17, 2020
Judge: Carney

Areas of Law: Civil Procedure, Criminal Law, Government & Administrative Law

Several Alaska Department of Corrections inmates challenged the DOC's policy to charge for local telephone calls, arguing the rates they and call recipients had to pay for calls violated their constitutional right to rehabilitation, their statutory right to reasonable telephone access, and DOC's contractual obligations under a prior settlement and consent decree. In addition, one of the prisoners challenged DOC officers' decision to deny him access to a computer programming book he ordered from outside the prison. He contended that DOC placed a content-specific restriction on the educational materials and publications prisoners were allowed, violating the Alaska Constitution's free speech provisions as well as prisoners' right to reformation. Each of these challenges reached the Alaska Supreme Court after inmates exhausted the administrative process from prison. Inmates then appealed to the superior court, which denied relief. The Alaska Supreme Court determined the superior court record did not provide enough evidence for it to meaningfully determine the reasonableness of the rates charged inmates for local telephone calls; therefore the Court reversed denial of relief and remanded for further fact-finding by the trial court. The Court concluded that the facility's restrictions on programming-related books were rationally related to a legitimate interest, and because they did not infringe on the right to rehabilitation, it affirmed denial of a prisoner's motion to enforce his claimed right to a particular text about computer programming.

Berger v. Bryant

Court: Arkansas Supreme Court
Citation: 2020 Ark. 357
Opinion Date: April 23, 2020
Judge: Rhonda K. Wood
Areas of Law: Criminal Law

The Supreme Court affirmed the judgment of the circuit court denying Appellant's petition to proceed in forma pauperis on a petition for writ of mandamus and a motion for declaratory judgment, holding that Appellant failed to state a colorable cause of action. In 1998, Appellant was convicted

of rape. In his petition for a writ of mandamus, Appellant asserted that he sought information pursuant to the Arkansas Freedom of Information Act regarding his rape conviction but received no response. The circuit court denied the petition. The Supreme Court affirmed, holding (1) even if Appellant had requested disclosable information, he would not be entitled to inspect it as an incarcerated person; and (2) Appellant did not demonstrate a legitimate claim given the facts presented and therefore failed to establish a colorable cause of action to support his request to proceed in forma pauperis.

Carroll v. State

Court: Arkansas Supreme Court
Citation: 2020 Ark. 360
Opinion Date: April 23, 2020
Judge: Wynne
Areas of Law: Criminal Law

The Supreme Court affirmed the judgment of the circuit court denying Appellant's motion for leave to file a petition for writ of error cram knobs, holding that the circuit court did not abuse its discretion in declining to issue the writ. Appellant pled guilty to rape and was sentenced as a habitual offender to 720 months' imprisonment. In his coram nobis petition, Appellant alleged several grounds for relief, including claims of actual innocence, an invalid arrest warrant, a coerced guilty plea, and prosecutorial misconduct. The circuit court denied the motion. The Supreme Court affirmed, holding that Appellant did not demonstrate that that the writ should issue and failed diligently to proceed on his claim for coram nobis relief.

Cave v. State

Court: Arkansas Supreme Court
Citation: 2020 Ark. 356
Opinion Date: April 23, 2020
Judge: Josephine L. Hart

Areas of Law: Civil Rights, Constitutional Law, Criminal Law

The Supreme Court affirmed the judgment of the circuit court denying Appellant's pro se petition for writ of habeas corpus, holding that the circuit court did not err in denying the petition. Appellant was found guilty of two counts of delivery of a controlled substance and one count of maintaining a drug premises. In his habeas petition, Appellant argued that he was actually innocent because his arrest and conviction was based on the false testimony of a witness who had a lengthy criminal history. Appellant further argued that the writ should issue because he was not afforded effective assistance of counsel. The circuit court denied the petition. The Supreme Court affirmed, holding (1) Appellant's claims regarding the witness's credibility do not constitute a valid assertion that he was being unlawfully detained; and (2) Appellant did not actually connect an allegation of ineffective assistance of counsel to his allegation that he was unlawfully detained.

Chatmon v. Kelley

Court: Arkansas Supreme Court
Citation: 2020 Ark. 355
Opinion Date: April 23, 2020
Judge: Josephine L. Hart
Areas of Law: Criminal Law

The Supreme Court denied Appellant's appeal from the order of the circuit court denying his petition to proceed in forma pauperis on the grounds that Appellant failed to state a colorable cause of action in a petition for writ of habeas corpus, holding that the circuit court did not abuse its discretion by denying Appellant's in forma pauperis petition. In his habeas petition, Appellant alleged that the trial court lacked jurisdiction in his criminal case. Before this case was submitted to the Supreme Court, Appellant filed two motions, including a "Judicial Notice of a Void Judgment" and a "Notice to the Court." The Supreme Court denied the motions, holding that neither motion was cognizable under the Court's rules. The Court then affirmed the Supreme Court's denial of Appellant's in forma pauperis petition, holding that the circuit court correctly found that Appellant did not assert a colorable

cause of action.

McClinton v. State

Court: Arkansas Supreme Court
Citation: 2020 Ark. 353
Opinion Date: April 23, 2020
Judge: Karen R. Baker
Areas of Law: Criminal Law

The Supreme Court denied Petitioner's second petition requesting permission to proceed in the trial court with a petition for writ of error coram nobis, holding that Petitioner's proposed attack on the judgment had no merit. Petitioner was convicted of raping a mentally handicapped sixteen-year-old girl and was sentenced to life imprisonment. In his first petition for writ of error coram nobis Petitioner alleged a number of errors in the trial procedure. The first petition was denied. In his second coram nobis petition, Petitioner alleged violations of Brady v. Maryland, 373 U.S. 83 (1963). The Supreme Court denied the writ, holding that Petitioner failed to meet his burden of demonstrating a fundamental error of fact extrinsic to the record.

Siegel v. State

Court: Arkansas Supreme Court
Citation: 2020 Ark. 359
Opinion Date: April 23, 2020
Judge: Wynne
Areas of Law: Criminal Law

The Supreme Court dismissed Appellant's appeal from the circuit court's orders denying her motions to declare Ark. Code Ann. 5-62-106 (disposition of animal) and Ark. Code Ann. 5-62-111 (prevention of cruelty) unconstitutional and conditionally granting her motion for return of seized property, holding that there was no final, appealable order in this case. Appellant was convicted of thirty-one misdemeanor counts of cruelty to animals. The circuit court subsequently dismissed the charges on speedy-

trial grounds. The State appealed, and the Supreme Court dismissed the appeal on the grounds that it was not authorized. Appellant had filed motions seeking a declaration that sections 5-62-106 and -111 are unconstitutional and seeking the return of her seized property. The circuit court denied the constitutional claims and entered a conditional order granting Appellant's motion for return of seized property. Appellant appealed. The Supreme Court dismissed the appeal, holding that because the conditional order did not make specific findings as to the return of the property or as to damages and because it expressly left open the possibility of further proceedings, there was no final, appealable order in this case.

Thomas v. State

Court: Arkansas Supreme Court
Citation: 2020 Ark. 354
Opinion Date: April 23, 2020
Judge: Josephine L. Hart
Areas of Law: Civil Rights, Constitutional Law, Criminal Law

The Supreme Court affirmed Appellant's conviction of capital murder, holding that the evidence was sufficient to sustain the conviction and that the circuit court did not err in denying Appellant's motion to suppress tracking data generated by his cellphone. On appeal, Appellant argued that the trial court erred by denying his directed-verdict motion because the evidence supported the defense's theory of the case that he did not intend to shoot the victim. Further, Appellant argued that the court abused its discretion in denying his motion to suppress evidence obtained from the seizure of AT&T phone records. The Supreme Court disagreed, holding (1) the evidence was sufficient to support the capital murder conviction; and (2) the circuit court correctly denied the motion to suppress.

California v. Landowski

Court: California Courts of Appeal
Docket: C080210(Third Appellate District)

Opinion Date: April 23, 2020
Judge: Andrea Lynn Hoch
Areas of Law: Constitutional Law, Criminal Law

Defendant Michael Reyes, Jr., an active Norteno gang member (from the Broderick Boys subset), confronted a former Norteno gang member (from the Franklin Boys subset), "S.," about a physical altercation that occurred between S. and Reyes's stepfather over a debt. That earlier altercation had taken place in front of Reyes's autistic younger brother. Reyes pulled out a handgun and asked S. if he had a problem. S., who was riding his bicycle with his wife, "R.," when Reyes confronted him with the gun, stopped briefly, told Reyes to put the gun down if he wanted to fight, and then started to ride away. This angered Reyes, prompting him to fire six rounds at S. from behind. S. Was hit but survived. R. Was a short distance in front of S., but was not hit. Defendants Liberty Landowski and Lisa Humble were with Reyes at the time of the shooting and aided in his efforts to avoid being apprehended by law enforcement authorities. Reyes, Landowski, and Humble were tried together before the same jury. Reyes was convicted of one count of attempted murder (Count 1), two counts of assault with a semiautomatic firearm (Counts 2 and 4), one count of possession of a firearm by a convicted felon (Count 5), and one count of possession of ammunition by a convicted felon (Count 6). In addition to various firearm and other enhancements, the jury found Reyes committed the crimes for the benefit of, at the direction of, or in association with a criminal street gang with the specific intent to promote, further, or assist in criminal conduct by gang members. The jury convicted Landowski and Humble of being accessories to Reyes's criminal conduct (Count 9) and also found true gang enhancement allegations attached to that crime. Reyes challenged the sufficiency of the firearm evidence presented to support his conviction, and all defendants challenged the sufficiency of the evidence supporting their gang enhancements. The Court of Appeal determined Senate Bill 620 (2017-2018 Reg. Sess.) gave the trial court discretion to strike firearm enhancements in the interest of justice and applied retroactively; and Senate Bill 136 (2019-2020 Reg. Sess.) eliminated such enhancements, and also applied retroactively. To these issues, the Court remanded for the trial court's consideration. The Court affirmed the trial court in all other respects.

California v. May

Court: California Courts of Appeal
Docket: C084302(Third Appellate District)
Opinion Date: April 20, 2020
Judge: Ronald B. Robie
Areas of Law: Constitutional Law, Criminal Law

Defendant Raymond May was found guilty by jury of possessing an assault weapon and a machine gun based on his possession of a single AK-47 assault rifle while guarding a marijuana plantation. He was sentenced to probation, which included an electronic search condition. On appeal, defendant argued there was a lack of sufficient evidence corroborating his accomplice's testimony and demonstrating he knew of the firearm's illegal character. He further alleged the trial court erred in instructing the jury: that the accomplice instruction should have included language specifying that the accomplice testimony needed to prove more than defendant's mere presence or access to the firearm. Furthermore, defendant argued the electronic search condition imposed as part of his probation failed under the standards announced in California v. Lent, 15 Cal.3d 481 (1975). The Court of Appeal agreed defendant's electronic search condition should have been stricken, but otherwise affirmed.

California v. Perez

Court: California Courts of Appeal
Docket: E072260(Fourth Appellate District)
Opinion Date: April 20, 2020
Judge: Miller
Areas of Law: Constitutional Law, Criminal Law

In 2009, defendant-appellant Rudy Perez pled guilty to active gang participation under Penal Code section 186.22(a), and unlawful possession of a firearm under section 12025(b)(6). In 2010, defendant pled guilty to residential burglary under section 459, and active gang participation under section 186.22(a). In August of 2018, the State filed a new felony complaint, alleging one of the prior gang participation convictions as a strike prior. In

2018, defendant moved to vacate the two prior gang participation convictions based upon changes in the law that rendered them invalid. The trial court denied defendant's motion. In 2019, defendant asked for reconsideration, which was again denied. Thereafter, defendant filed a timely notice of appeal from the denial of his motion to vacate the convictions. The Court of Appeal found that defendant pled guilty to street terrorism under Penal Code section 186.22(a) in 2009 and 2010, and it was undisputed that while committing these offenses, defendant acted alone. However, subsequent to defendant's guilty pleas, in 2012, the California Supreme Court held that a defendant had to act in concert with a fellow gang member in order to be guilty of street terrorism. At that time, defendant could have filed a state habeas petition requesting relief, but failed to do so. "Defendants can lose remedies that are established by law when they fail to invoke such remedies in time." Section 1473.7 became effective in 2017. In defendant's motion filed in the trial court, defendant failed to state what new evidence was discovered, instead arguing that the trial court was allowed "to vacate a conviction where the defendant is innocent as a matter of law or where vacating the conviction is in the interest of justice, even though the defendant is no longer in custody or otherwise restrained by the conviction." The Court of Appeal concurred with the trial court's reason to deny relief, determining that "while the outcome in this case may be unfortunate for defendant, we are not here to rewrite legislation. The Legislature could amend section 1473.7 to address issues raised in this case. However, under the laws, as written, we must uphold the trial court's order."

People v. Bell

Court: California Courts of Appeal
Docket: B288528(Second Appellate District)
Opinion Date: April 23, 2020
Judge: Stratton
Areas of Law: Criminal Law

Defendant was convicted of one count of attempted robbery, one count of second degree murder, and one count of hit and run driving. The jury found not true the allegation that a principal was armed in the commission of the attempted robbery. The trial court found true the allegations that defendant had served four prior prison terms within the meaning of Penal Code section 667.5, subdivision (b). Defendant raised 13 claims of error on appeal. The Court of Appeal held that the section 667.5, subdivision (b) enhancement terms must be stricken and the matter remanded to the trial court for resentencing. The court also held that defendant forfeited some of his substantive claims and other lack merit. Finally, the court held that, if there is instructional error, the errors are harmless under any standard of review. Accordingly, the court affirmed the judgment of conviction.

People v. Drayton

Court: California Courts of Appeal
Docket: H046928(Sixth Appellate District)
Opinion Date: April 17, 2020
Judge: Danner
Areas of Law: Criminal Law

In 1991, the Wards and their teenage daughter awoke and discovered four men, including Drayton, inside their house. Two were armed. One told the daughter he was going to rape her and placed a firearm inside her vagina.

Drayton told the man not to do it. Drayton had a gun and held Mrs. Ward down during the robbery. Two others shot and killed Mr. Ward. Drayton and the others left without seeking help for the Wards. Drayton did not shoot Mr. Ward or threaten to rape the daughter. Drayton surrendered the next day. Drayton's sole prior conviction was a misdemeanor; he had no reported history of violence. Drayton was sentenced to 29 years to life imprisonment. In 2019, Drayton sought resentencing under Penal Code 1170.95, declaring that he "was not a major participant ... or did not act with reckless indifference to human life." Senate Bill 1437, effective January 1, 2019, restricted the circumstances under which a person can be liable for felony murder and enacted Penal Code 1170.95, which allows an individual, previously convicted of felony murder, to petition to have his murder conviction vacated and to be resentenced. The court of appeal directed the trial court to hold a hearing under section 1170.95(d) and to accept the assertions in the petition as true unless facts in the record conclusively refute them as a matter of law. If, accepting the petitioner's assertions as true, he meets section 1170.95(a)'s requirements for relief, the court must issue an order to show cause. In assessing the prima facie showing, the trial court should not weigh evidence or make credibility determinations.

People v. Robinson

Court: California Courts of Appeal
Docket: B293746(Second Appellate District)
Opinion Date: April 20, 2020
Judge: Wiley
Areas of Law: Criminal Law

After defendant penetrated an unconscious woman with his fingers, he challenged evidentiary rulings and requests a presentence conduct credit. The Court of Appeal held that the trial court properly excluded cumulative evidence about past times the woman was intoxicated at the relevant bar, and any error in allowing a drug recognition expert to testify about whether the woman was incapacitated was harmless. However, the court held that the trial court undercalculated defendant's presentence custody credit because he was not convicted of a violent felony under Penal Code section 2933.1, which would otherwise limit those credits. Accordingly, the court

directed the trial court to award defendant 104 days of presentence custody credit and to amend the abstract of judgment, affirming in all other respects.

People v. Torres

Court: California Courts of Appeal
Docket: B292551(Second Appellate District)
Opinion Date: April 20, 2020
Judge: Kenneth R. Yegan
Areas of Law: Criminal Law

Where, as here, the trial court factually finds that a self-represented defendant has engaged in an attempt to intimidate a witness, the constitutional right of self-representation can, in the exercise of the trial court's sound discretion, be revoked. The Court of Appeal affirmed defendant's conviction and sentence for two counts of battery on an ex-girlfriend. Colorado v. Lujan

Court: Colorado Supreme Court
Citation: 2020 CO 26
Opinion Date: April 20, 2020
Judge: Brian D. Boatright
Areas of Law: Constitutional Law, Criminal Law

Abel Lujan was charged with first-degree murder for the death of his girlfriend after she was found beaten and strangled behind a friend’s house. At trial, two women testified for the State about Lujan’s prior violent behavior towards them. Prior to admitting this evidence, the trial court read a limiting instruction, telling the jury that it could only consider the evidence for the purposes of establishing Lujan’s motive, intent, or common plan. A copy of

this instruction was not given to the jury for deliberations; however, the jury did receive an instruction at the close of the evidence explaining that certain evidence could only be considered for the limited purposes for which it was admitted. While deliberating, the jury submitted a question seeking clarification about the limiting instruction. Over defense counsel's objection, the trial court cleared the courtroom of the public and parties, leaving only the judge, bailiff, and court reporter; the judge then brought in the jury and reread the limiting instruction that it had previously read twice in open court. The jury ultimately found Lujan guilty of second-degree murder. Lujan appealed, arguing that the court's actions when rereading the jury instruction constituted a courtroom closure that violated his Sixth Amendment right to a public trial. A division of the court of appeals agreed and reversed Lujan's conviction. The State argued on certiorari review that the Colorado Supreme Court adopt a triviality standard, under which a defendant's constitutional right to a public trial was not violated when the closure at issue was trivial. In so doing, the State argued that the brief courtroom closure here was trivial and therefore did not violate Lujan's public trial right. The Court concurred with the State, adopted the standard and reversed the appellate court's decision.

Archer v. State

Court: Florida Supreme Court
Docket: SC19-841
Opinion Date: April 23, 2020
Judge: Per Curiam
Areas of Law: Civil Rights, Constitutional Law, Criminal Law

The Supreme Court affirmed the order of the circuit court denying Appellant's successive motion to vacate his sentence of death under Fla. R. Crim. P. 3.851, holding that the circuit court did not err in denying the Rule 3.851 motion. Appellant was convicted of first-degree murder, armed robbery, and grand theft. Appellant was sentenced to death for the murder. The Supreme Court affirmed the convictions but reversed Appellant's death sentence and remanded the case for a new penalty phase. After a new penalty phase, Appellant was again sentenced to death. In his successive Rule 3.851 motion, Appellant raised three claims. The circuit court denied

relief. The Supreme Court affirmed, holding that the circuit court (1) properly denied Appellant's claim that his death sentence violated the Sixth and Eighth Amendments in light of Hurst v. Florida, 136 S. Ct. 616 (2016), and Hurst v. State, 202 So. 3d 40 (Fla. 2016); (2) correctly denied Appellant's claim that his sentence violated the Eighth Amendment; and (3) did not err in denying Appellant's claim of newly discovered evidence.

Collins v. Georgia

Court: Supreme Court of Georgia
Docket: S20A0158
Opinion Date: April 20, 2020
Judge: David E. Nahmias
Areas of Law: Constitutional Law, Criminal Law

Appellant Tommy Collins was convicted of felony murder in connection with the stabbing death of 14-year-old Rueben Hand. Friends gathered to watch the Peach Drop on New Year's Eve 2010; a disagreement ensued and Hand was stabbed near the Five Points MARTS station shortly after midnight. Appellant's only argument on appeal was that the trial court plainly erred when it gave the jury the State's requested instruction on "revenge for a prior wrong." Seeing no error, "much less plain error," the Georgia Supreme Court affirmed.

Heyward v. Georgia

Court: Supreme Court of Georgia
Docket: S20A0399
Opinion Date: April 20, 2020
Judge: Peterson
Areas of Law: Constitutional Law, Criminal Law

Larmell Heyward was convicted by jury of malice murder and possession of a firearm during the commission of a felony in connection with the 2007 shooting death of Ramon Rogers. Heyward argued on appeal of those convictions that the trial court erred in denying his request to charge the jury

on voluntary manslaughter. After review, the Georgia Supreme Court determined the trial court's refusal to give the charge was harmless, since, in the Court's estimation, there was no realistic probability that the jury would have accepted the "slight" evidence of voluntary manslaughter in the light of the strong evidence of malice murder.

Morris v. Georgia

Court: Supreme Court of Georgia
Docket: S20A0176
Opinion Date: April 20, 2020
Judge: Bethel
Areas of Law: Constitutional Law, Criminal Law

Darius Morris was found guilty by jury of malice murder and other offenses in connection with the shooting death of Jameson Bush. Morris appealed, arguing he was denied the right to a timely appeal, that the trial court erred in restricting voir dire as to the religious beliefs and connections of potential jurors, that the trial court erred by giving a confusing jury charge regarding statements of co-conspirators, that the trial court erred by violating his right to a public trial by ordering that the courtroom doors be closed and locked during the court's charge to the jury, and that his trial counsel provided ineffective assistance by not objecting to the closure of the courtroom. Finding no error, the Georgia Supreme Court affirmed.

Rickman v. Georgia

Court: Supreme Court of Georgia
Docket: S20A0127
Opinion Date: April 20, 2020
Judge: Harold D. Melton
Areas of Law: Constitutional Law, Criminal Law

Victoria Rickman was convicted by jury of malice murder and a related firearm offense in connection with the shooting death of William Carter, Jr. Rickman and Carter had a tumultuous on-again, off-again relationship with a history of verbal and physical abuse, false accusations of sexual assault, empty threats to obtain temporary protective orders, and numerous calls to 911. In the days leading up to Carter's death, the pair was talking and meeting again despite a recent break-up. On one such 911 call, officers went to Rickman's residence responding to claims shots were fired. Rickman responded holding her small dog, hair wet, and in pajamas. She did not appear to be injured, and nothing in the home looked disturbed or out of place. Rickman told the officers, "he raped me again and I shot him."

Officers found Carter laying face up on the bed naked with multiple gunshot wounds to his body. An autopsy revealed that Carter was shot ten times – four times in the chest, three times in the back, once on the arm, and twice in the head. Rickman's examining physician testified that he found no injuries on Rickman consistent with her description of events, and no signs of trauma to her vaginal cavity. Rickman appealed her convictions, arguing she was denied effective assistance of counsel and that the trial court erred in admitting improper character evidence. Finding no reversible error, the Georgia Supreme Court affirmed.

Robinson v. Georgia

Court: Supreme Court of Georgia
Docket: S20A0265
Opinion Date: April 20, 2020
Judge: Peterson
Areas of Law: Constitutional Law, Criminal Law

Herbert Robinson appealed his convictions for malice murder, armed robbery, and possession of a firearm during the commission of a felony in connection with the death of Michael Moore. On appeal, he argued the trial court erred by allowing the State to use two firearms for demonstrative purposes during trial, and by allowing body-camera footage to be shown at trial. He also argued his trial counsel was ineffective for failing to object to a letter written by Robinson's cellmate being available to the jury for review during deliberations, and for failing to object to a visual aid used by the State during closing arguments. Because Robinson failed to show ineffective assistance of counsel or reversible error by the trial court, the Georgia Supreme Court affirmed.

Santana v. Georgia

Court: Supreme Court of Georgia
Docket: S20A0563
Opinion Date: April 20, 2020

Judge: Warren
Areas of Law: Constitutional Law, Criminal Law

Cuevas Carlos Santana was convicted by jury of malice murder and other crimes in connection with the 2010 shooting deaths of Israel Espinoza Mendoza, Vincente Soto Chavez, and Renato Soto Valencia. On appeal, Santana argues that the evidence was insufficient to support his convictions, that the trial court erred by declining to grant Santana a new trial on the general grounds, and that trial counsel provided ineffective assistance. Finding no reversible error, the Georgia Supreme Court affirmed Santana's convictions.

Sullivan v. Georgia

Court: Supreme Court of Georgia
Docket: S20A0056
Opinion Date: April 20, 2020
Judge: Warren
Areas of Law: Constitutional Law, Criminal Law

A jury convicted Antonio Sullivan of malice murder and other crimes in connection with the shooting death of Wava Benton. On appeal, Sullivan contended his trial counsel was constitutionally ineffective by failing to present evidence at trial to corroborate Sullivan's testimony about prior difficulties between Sullivan and Benton, and by failing to procure expert testimony about Sullivan's mental health—specifically about post-traumatic stress disorder— to be presented to the jury. The Georgia Supreme Court determined Sullivan failed to establish that his trial counsel was deficient in either respect, and therefore affirmed his convictions.

Read Opinion Are you a lawyer? **Annotate this case**.

Turner v. Georgia

Court: Supreme Court of Georgia
Docket: S20A0247
Opinion Date: April 20, 2020
Judge: Warren

Areas of Law: Constitutional Law, Criminal Law

Appellant Ronald Turner appeals from his conviction for malice murder stemming from the stabbing death of William King. The stabbing took place outside an apartment at which Turner had driven in order to trade food for drugs. Turner testified in his own defense at trial and claimed that King hit him in the head with a beer bottle because Turner owed money to King from a prior drug transaction. Turner testified that he tried to get away from King, but that King chased him down and grabbed his jacket. According to Turner, King was getting ready to hit him again when Turner stabbed King in self-defense. Appealing his ultimate conviction, Turner contended he was denied the effective assistance of counsel in three respects. Seeing no reversible error after a review of the trial court record, the Georgia Supreme Court affirmed Turner's conviction.

Valrie v. Georgia

Court: Supreme Court of Georgia
Docket: S20A0380
Opinion Date: April 20, 2020
Judge: Keith R. Blackwell
Areas of Law: Constitutional Law, Criminal Law

Reuben Valrie was tried by jury and convicted of murder and other crimes in connection with the death of his infant daughter Aliyana. Valrie appealed, claiming that he was denied the effective assistance of counsel. Aliyana died as a result of closed head trauma, with a blunt-force abdominal injury as a secondary cause of death, which investigators determined was consistent with being shaken or dropped. At trial, Valrie presented the testimony of four expert witnesses who testified that Aliyana died of natural causes and that the injuries to her brain and abdomen were caused by events such as post-mortem CPR and the “rough” handling of her body by first responders. The jury rejected this defense and found Valrie guilty of murder and the other charges. Valrie contended that his trial lawyer should have raised a hearsay objection to the admission of recorded statements that his girlfriend (and Aliyana's mother) made to police investigators (as well as the testimony of one of those investigators about some of those

statements). Alternatively, Valrie argued that his lawyer should have sought the redaction of certain portions of the recorded statements that impugned his character. The Georgia Supreme Court concluded Valrie failed to present evidence that his trial counsel was deficient, or that he was prejudiced by any alleged failures. According, the Court affirmed conviction.

Williams v. Georgia

Court: Supreme Court of Georgia
Docket: S20A0241
Opinion Date: April 20, 2020
Judge: Keith R. Blackwell
Areas of Law: Constitutional Law, Criminal Law

Richard Williams, II, was tried by jury and convicted of murder in connection with the strangulation death of Cory Robinson. Williams and Robinson were involved in a sexual relationship and had been living together at an extended-stay hotel. Kelvin Spencer was a close friend of both Williams and Robinson. When Spencer met Williams at the hotel room, Williams looked angry and had scratches on his neck. Spencer saw Robinson lying on the floor in a “praying position.” Spencer did not believe Robinson was dead, and he helped Williams move clothes and other things to a U-Haul truck parked outside, in preparation for a move. Williams did not testify or present any evidence. Based on his lawyer’s opening and closing arguments, the defense theory was that Spencer killed Robinson because he was jealous of Williams’s relationship with Robinson. Williams’s sole claim on appeal was that he was denied the effective assistance of counsel when his trial lawyer failed to present as a defense that Williams accidentally killed Robinson during consensual erotic asphyxiation. He argued that his lawyer's discomfort with the topic of homosexual BDSM activity, and his own problems with the Georgia State Bar, precluded presentation of the "true" version of events, and that Williams acceded to the lawyer's defense strategy only "through ignorance and that he did not know that a defense based on consensual erotic asphyxiation was available." Finding no reversible error, the Georgia Supreme Court affirmed conviction.

State v. Malave

Court: Supreme Court of Hawaii
Docket: SCWC-18-0000332
Opinion Date: April 20, 2020
Judge: Mark E. Recktenwald
Areas of Law: Criminal Law

The Supreme Court affirmed the judgment of the intermediate court of appeals (ICA) affirming Defendant's conviction of sexual assault in the first degree on the complaining witness pursuant to Haw. Rev. Stat. 707-730(1)(b), holding that the ICA did not err in affirming the family court. Specifically, the Supreme Court held (1) the jury should have been instructed to determine jurisdictional facts, but the error was harmless beyond a reasonable doubt; and (2) the ICA did not err in finding that there was no rational basis in the record to support providing the jury instruction of the lesser included offense of sexual assault in the third degree.

State v. Malave

Court: Supreme Court of Hawaii
Docket: SCWC-18-0000332
Opinion Date: April 22, 2020
Judge: Mark E. Recktenwald
Areas of Law: Criminal Law

The Supreme Court affirmed the judgment of the intermediate court of appeals (ICA) affirming the judgment of the family court convicting Defendant on two counts of sexual assault in the first degree, holding that the ICA did not err in affirming the family court. At issue on appeal was the jurisdiction of the family court to try Defendant and the propriety of instructing the jury on a lesser included offense. The ICA affirmed, concluding that the family court had subject matter jurisdiction pursuant to Haw. Rev. Stat. 571-14(a)(1) and that there was no rational basis to support an instruction of the lesser included offense of sexual assault in the third degree. The Supreme Court affirmed, holding (1) although the jury should have been instructed to determine jurisdictional facts, the error was

harmless; and (2) the family court was not obligated to instruct the jury on the lesser included offense of sexual assault in the third degree.

Idaho v. Burke

Court: Idaho Supreme Court - Criminal
Docket: 46841
Opinion Date: April 22, 2020
Judge: Moeller
Areas of Law: Constitutional Law, Criminal Law

Prior to sentencing, defendant James Burke was committed to the state mental hospital for 56 days to restore him to competency. After being evaluated and deemed competent to proceed to trial, Burke was returned to the county jail and later pleaded guilty pursuant to a plea agreement. At the conclusion of his sentencing hearing, Burke sought credit for the 56 days of time spent in court-ordered commitment. The district court denied the motion, concluding that commitment to a state mental hospital did not fall under the definition of 'incarceration' in Idaho Code section 18-309. After reviewing this issue carefully, the Idaho Supreme Court disagreed with the district court's "thorough and thoughtful analysis," holding that court-ordered commitment to state custody pursuant to Idaho Code sections 18-210 and 18-211 met the functional and legal definition of "incarceration" under Idaho Code section 18-309. "The extent of the liberty interests restricted by Burke's court-ordered commitment to State Hospital North are just too similar to imprisonment to conclude otherwise." Accordingly, the Court reversed the district court's order denying Burke's request for credit for time served and remanded the case for the district court to enter an order crediting him with the fifty-six days he spent committed to State Hospital North while the State restored his competency to face criminal charges.

State v. Gibbs

Court: Iowa Supreme Court
Docket: 18-1298

Opinion Date: April 17, 2020
Judge: Edward M. Mansfield
Areas of Law: Civil Rights, Constitutional Law, Criminal Law

The Supreme Court affirmed Defendant's conviction of murder in the second degree, holding that Defendant's Fifth Amendment rights were invaded when the trial judge instructed the jury that Defendant was required to notify law enforcement of his use of deadly force, but the error was harmless. During trial, Defendant asserted the defense of justification in his shooting of the victim. At issue on appeal was whether the district court abused its discretion by giving a jury instruction incorporating the terms of Iowa Code 704.2B. The instruction included a statement that a person using deadly force is required to notify law enforcement about his use of deadly force. Defendant argued before the Supreme Court that both section 704.2B and the jury instruction incorporating that section violated his Fifth Amendment rights. The Supreme Court affirmed, holding (1) instructing the jury that a homicide defendant is required to notify a law enforcement agency of his use of deadly force violates the defendant's Fifth Amendment rights; but (2) any error in this case was harmless beyond a reasonable doubt.

State v. Broxton

Court: Kansas Supreme Court
Docket: 114675
Opinion Date: April 17, 2020
Judge: Stegall
Areas of Law: Criminal Law

The Supreme Court affirmed Defendant's convictions for second-degree murder, burglary, and theft but reversed Defendant's sentences, holding that any error during the guilt phase was harmless but that the district court erred by scoring Defendant's prior Florida burglary conviction as a person felony instead of a nonperson felony. On appeal, the court of appeals concluded that a trial court may instruct the jury on felony murder even though the State only charged the defendant with premeditated first degree murder. The Supreme Court disagreed, holding (1) the court of appeals erred in concluding that a district court may elect to provide a felony-murder

instruction when that crime was not charged, and the district court properly found that the felony-murder instruction was not legally appropriate in this case; (2) the district court erred by excluding from evidence an exculpatory document from a Florida homicide investigation on the ground it was not relevant, but the error was harmless; and (3) the district court improperly scored Defendant's prior Florida burglary conviction as a person felony.

State v. Corbin

Court: Kansas Supreme Court
Docket: 119665
Opinion Date: April 17, 2020
Judge: Dan Biles
Areas of Law: Criminal Law

The Supreme Court affirmed the ruling of the district court on remand resentencing Defendant to his original mandatory term of imprisonment after once again finding he was not a person with intellectual disability, holding that the district court did not abuse its discretion when it rejected Defendant's intellectual disability motion and imposed a mandatory term of imprisonment. Defendant pled no contest to first-degree premeditated murder. Before sentencing, Defendant filed a motion pursuant to Kan. Stat. Ann. 21-6622(b) asserting that he was a person with intellectual disability and was thus not subject to a mandatory minimum prison term. The district court denied the motion and sentenced Defendant to a hard twenty-five life sentence. While Defendant's appeal was pending, the Legislature amended Kan. Stat. Ann. 76-12b01(i), which provides new standards for deciding intellectual disability. The Supreme Court reversed and remanded for reconsideration of Defendant's motion using the new criteria. On remand, the district court reaffirmed its earlier ruling and again sentenced Defendant to a hard twenty-five life sentence. The Supreme Court affirmed, holding that the district court's ruling was reasonably based on the law and was supported by substantial competent evidence.

State v. Frazier

Court: Kansas Supreme Court
Docket: 117456
Opinion Date: April 17, 2020
Judge: Wilson
Areas of Law: Criminal Law

The Supreme Court reversed the decision of the district court affirming the judgment of the district court denying Defendant's motion to withdraw plea of no contest to one count of possession of heroin with intent to distribute, holding that the district court's decision in finding no good cause for Defendant to withdraw his plea was based on errors of fact and law, which were grounds for finding abuse of discretion. On appeal, Defendant argued that the district court abused its discretion in denying his motion to withdraw his plea of no contest based on misleading or false statements contained in the plea agreement. The court of appeals affirmed the district court. The Supreme Court reversed, holding (1) there was enough uncertainty in this case to indicate that Defendant's plea agreement was not understandingly made; and (2) therefore, Defendant must be allowed to withdraw his plea.

State v. Harris

Court: Kansas Supreme Court
Docket: 117362
Opinion Date: April 17, 2020
Judge: Wilson
Areas of Law: Civil Rights, Constitutional Law, Criminal Law

The Supreme Court reversed the judgment of the court of appeals affirming Defendant's conviction of possession fo marijuana, holding that Defendant's waiver of jury trial was legally insufficient. On appeal, Defendant argued that he did not properly waive his right to a jury and asserted three other issues. The Supreme Court reversed the judgment of the court of appeals affirming Defendant's convictions without addressing the three remaining issues, holding that because the district court failed properly to apprise Defendant of his right to a jury trial and failed to ensure that Defendant understood the nature of the right he was giving up, Defendant's constitutional right to a jury trial was violated in this case.

State v. Catruch

Court: Maine Supreme Judicial Court
Citation: 2020 ME 52
Opinion Date: April 23, 2020
Judge: Andrew M. Mead
Areas of Law: Criminal Law

The Supreme Judicial Court affirmed the judgments of the trial court terminating Appellant's participation in the Co-Occurring Disorders and Veterans Court (Veterans Court), holding that the court did not err or abuse its discretion in terminating Appellant's participation in the Veterans Court. The Veterans Court is a criminal docket that provides judicial monitoring, specialized treatment, and other services for military veterans who have disorders often attributable to their military service. Appellant was charged

with leaving the scene of an accident and three other offenses. Appellant was admitted to the Veterans Court. Agreeing to sentencing outcomes in a plea agreement and entering into a bail contract, Appellant pleaded guilty to all charges against him. The court later terminated Appellant's participation in the Veterans Court, finding that Appellant had violated the conditions of his bail contract. The Supreme Judicial Court affirmed, holding (1) this matter was properly before the Court; and (2) given Appellant's failure to comply with the requirements for participation in the treatment court and his violations of the agreements, his termination from the Veterans Court was warranted.

State v. Paquin

Court: Maine Supreme Judicial Court
Citation: 2020 ME 53
Opinion Date: April 23, 2020
Judge: Andrew M. Mead
Areas of Law: Constitutional Law, Criminal Law

In this appeal from Defendant's conviction for eleven counts of gross sexual misconduct, the Supreme Judicial Court vacated the judgment of conviction on one count, vacated the dismissal of other counts and remanded for entry of a judgment of acquittal on those counts, and affirmed in all other respects, holding that Defendant's convictions on both Counts 5 and 30 violated his double jeopardy protections and that the court erred in allowing the State to dismiss Counts 27, 28, and 29 during trial without Defendant's consent. The indictment charged Defendant with fifteen counts (Counts 1-13, 30-31) of gross sexual misconduct against the victim and sixteen counts (Counts 14-29) of gross sexual misconduct against a second alleged victim. During trial, the court granted Defendant's motion for a judgment of acquittal on Counts 10-13, and the State dismissed Counts 27-29. Defendant was found guilty of Counts 1-9 and 30-31 and not guilty on the remaining counts. The court entered judgment in accordance with the verdict. The Supreme Judicial Court held that the trial court erred in failing to rule that the Double Jeopardy Clause barred convictions on both Counts 5 and 30 and allowing the State to dismiss Counts 27, 28, and 29 rather than entering a judgment of acquittal on those counts.

Watson v. State

Court: Maine Supreme Judicial Court
Citation: 2020 ME 51
Opinion Date: April 21, 2020
Judge: Joseph Jabar
Areas of Law: Criminal Law

The Supreme Judicial Court vacated the judgment of the unified criminal docket denying Appellant's petition for post-conviction review, holding that Appellant was deprived of the effective assistance of counsel when his trial attorney played a video of the ten-year-old victim's interview with police and that Appellant was adversely affected. Appellant was convicted of two counts of gross sexual assault, one count of unlawful sexual contact, and one count of visual sexual aggression against a child. The Supreme Court affirmed. Appellant later filed a petition for post-conviction review claiming that his trial attorney's representation was deficient because introducing the videotaped recording of the victim's entire interview with law enforcement was unnecessary to provide evidence supporting the victim's potential motive to fabricate the allegations. The post-conviction court denied denied the petition. The Supreme Court vacated the judgment below, holding that trial counsel's conduct was deficient and that counsel's actions rose to the level of comprising the reliability of Appellant's conviction and undermining confidence in it.

Commonwealth v. Mazza

Court: Massachusetts Supreme Judicial Court
Docket: SJC-11363
Opinion Date: April 21, 2020
Judge: Budd
Areas of Law: Criminal Law

The Supreme Judicial Court reversed the order of the superior court denying Defendant's motion for a new trial and set aside the jury's verdicts

of first degree murder and robbery, holding that a recently discovered witness statement made to the police ago constituted newly discovered evidence that "would probably have been a real factor in the jury's deliberations." At issue was Defendant's sixth motion for a new trial, which was predicated on newly discovered evidence consisting of, among other things, a recently discovered statement made to the police in 1972. The superior court denied the motion. As to the police statement, the judge found that it did not constitute newly discovered evidence because Defendant failed to establish that defense counsel did not have possession of it at the time of trial. The Supreme Judicial Court reversed and remanded the case for a new trial, holding (1) Defendant sustained his burden of establishing that defense counsel did not have the 1972 police statement prior to or at trial, and therefore, the statement constituted newly discovered evidence; and (2) there was a substantial risk that the jury would have reached a different conclusion had the evidence been admitted at trial.

Commonwealth v. McCarthy

Court: Massachusetts Supreme Judicial Court
Docket: SJC-12750
Opinion Date: April 16, 2020
Judge: Gaziano
Areas of Law: Civil Rights, Constitutional Law, Criminal Law

The Supreme Judicial Court affirmed the judgment of the district court denying Defendant's motions to suppress, holding that the limited use of automatic license plate readers (ALPRs) in this case did not implicate constitutional protections against unreasonable searches. While police were investigating Defendant on suspicion of drug distribution they used ALPRs on two bridges to track Defendant's movements. The police accessed historical data via ALPR technology and received real-time alerts, the last of which led to Defendant's arrest. Defendant filed motions to suppress the ALPR data and the fruits of the arrest. The superior court denied the motions. The Supreme Judicial Court affirmed, holding that while the widespread use of ALPRs in the Commonwealth could implicate a defendant's constitutional protected expectation of privacy in the whole of his public movements, that interest was not invaded by the limited extent

and use of the ALPR data in the instant case.

Garden v. Commonwealth

Court: Massachusetts Supreme Judicial Court
Docket: SJC-12821
Opinion Date: April 22, 2020
Judge: Per Curiam
Areas of Law: Criminal Law

The Supreme Judicial Court affirmed the judgment of a single justice of the court denying Petitioner's petition for extraordinary relief under Mass. Gen. Laws ch. 211, 3 seeking an order vacating Petitioner's plea to aggravated rape and dismissing the underlying indictment, holding that the single justice did not err or abuse his discretion in denying relief. The issues raised by Petitioner had all been raised and adjudicated through the normal appellate process. Petitioner then filed a motion to withdraw his guilty plea. The motion was denied, and the Appeals Court affirmed. In this petition for extraordinary relief, Petitioner sought an order vacating his plea to aggravated rape and dismissing the underlying indictment. The single justice denied relief. The Supreme Judicial Court affirmed, holding that the superintendence power was not available as an additional layer of appellate review once all other avenues had been exhausted.

In re Mitchell

Court: Massachusetts Supreme Judicial Court
Docket: SJC-12910
Opinion Date: April 22, 2020
Judge: Per Curiam
Areas of Law: Criminal Law

The Supreme Judicial Court affirmed the judgment of the county court denying, without a hearing, Petitioner's petition for relief under Mass. Gen. Laws ch. 211, 3, holding that the single justice did not err or abuse his discretion in denying relief. Defendant was convicted of several offenses.

The Appeals Court reversed the convictions and remanded the matter for a new trial. Thereafter, the Commonwealth filed a nolle prosequi as to all the charges. In his Mass. Gen. Laws ch. 211, 3 petition, Defendant alleged that no crime had been committed and that he was wrongfully prosecuted. The single justice denied relief. The Supreme Judicial Court affirmed, holding that Defendant did not demonstrate entitlement to the exercise of this Court's superintendence powers.

Huff v. Brown

Court: Nebraska Supreme Court
Citation: 305 Neb. 648
Opinion Date: April 23, 2020
Judge: Lindsey Miller-Lerman
Areas of Law: Communications Law, Criminal Law

The Supreme Court reversed the portion of the district court's order granting in part a writ of mandamus requiring Doug Brown, the sheriff of Furnas County, to provide records to Herchel Huff pursuant to the public records statutes, holding that the district court erred when it determined that Huff had shown that Brown had a clear duty to provide the requested records. Huff, an inmate, sought, among other documents, the criminal history records of jurors who had convicted hims. Furnas County sheriff Kurt Kapperman required a deposit of $750 before fulfilling the request. Huff subsequently filed a petition for writ of mandamus naming Kapperman as the defendant and seeking an order compelling Kapperman to release all requested documents. The court permitted Huff to substitute Brown, the current sheriff, in the caption of the case in place of Kapperman and granted in part mandamus. The Supreme Court reversed in part, holding that the

district court (1) did not err when it substituted Brown's name for Kapperman's; but (2) erred in issuing mandamus because Huff failed to demonstrate a prima facie case that he had been denied a request for public records that the sheriff had a clear duty to provide under Neb. Rev. Stat. 84-712.

State ex rel. Kendrick v. Parker

Court: Supreme Court of Ohio
Citation: 2020-Ohio-1509
Opinion Date: April 21, 2020
Judge: Per Curiam
Areas of Law: Criminal Law

The Supreme Court affirmed the judgment of the court of appeals denying Appellant's request for a writ of prohibition and/or mandamus against Montgomery County Court of Common Pleas Judge E. Gerald Parker Jr., holding that the court of appeals correctly determined that Appellant's claim was barred by res judicata. Appellant sought a petition for writ of prohibition and/or mandamus against Judge Erik Blaine, the successor to the judge who sentenced Appellant, alleging that the sentencing court patently and unambiguously lacked jurisdiction to sentence him. Judge Parker, who had succeeded Judge Blaine, subsequently filed a motion for summary judgment. The court of appeals granted summary judgment for Judge Parker, concluding that Appellant failed to demonstrate that the sentencing court patently and unambiguously lacked jurisdiction or that he lacked an adequate remedy at law and that res judicata barred Appellant's claim. The Supreme Court affirmed, holding that Appellant's claim was barred by res judicata.

State ex rel. Nelson v. Russo

Court: Supreme Court of Ohio
Citation: 2020-Ohio-1541
Opinion Date: April 22, 2020
Judge: Per Curiam
Areas of Law: Criminal Law

The Supreme Court affirmed the judgment of the court of appeals dismissing Appellant's petition for a writ of mandamus seeking to compel Cuyahoga County Court of Common Pleas Judge Nancy Margaret Russo to vacate the consecutive prison sentences imposed on Appellant in 1987, holding that Appellant had an adequate remedy at law and was barred from asserting additional claims of sentencing error he could have raised in his previous mandamus action. In 1987, Appellant was convicted of four counts of rape and one count of kidnapping. Appellant was sentenced to prison terms of fifteen to twenty-five years for each of the five counts, to be served consecutively. In 2019, Appellant sought a writ of mandamus to compel Judge Russo to vacate his consecutive sentences. The court of appeals dismissed the writ action, concluding that res judicata barred Appellant's claim and that his prior appeals were an adequate remedy at law to address the alleged defect in his consecutive sentences. The Supreme Court affirmed, holding that Appellant was not entitled to a writ of mandamus in this case.

State ex rel. Roberts v. Marsh

Court: Supreme Court of Ohio
Citation: 2020-Ohio-1540
Opinion Date: April 22, 2020
Judge: Per Curiam
Areas of Law: Criminal Law

The Supreme Court affirmed the judgment of the court of appeals dismissing Appellant's original action seeking a writ of procedendo and/or

mandamus to compel Hamilton County Court of Common Pleas Judge Melba Marsh to issue a corrected sentencing entry, holding that the court of appeals correctly dismissed the petition as moot. Appellant was convicted of murder with a repeat-violent-offender specification. Appellant later asked the trial court to correct his sentence, arguing that he had improperly been sentenced to postrelease control. On remand, Judge Marsh vacated the postrelease-control sentence. Appellant appealed that order. The court of appeals noted that the trial court had not set forth all the information required under Crim.R. 32(C) in a single document and dismissed the appeal for lack of a final, appealable order. Appellant then filed this original action seeking to compel Judge Marsh to issue a corrected sentencing entry that constitutes a final, appealable order. Judge Marsh issued a nunc pro tunc sentencing entry that constituted a final, appealable order. The court of appeals then dismissed the petition as moot. The Supreme Court affirmed, holding that because Judge Marsh performed the act Appellant requested, the court of appeals dismissed the petition as moot.

State ex rel. Steiner v. Rinfret

Court: Supreme Court of Ohio
Citation: 2020-Ohio-1510
Opinion Date: April 21, 2020
Judge: Per Curiam
Areas of Law: Criminal Law

The Supreme Court affirmed the judgment of the court of appeals dismissing Appellant's petition for a writ of mandamus against Holmes County Court of Common Pleas Judge Robert D. Rinfret, holding that the court of appeals correctly determined that Appellant had an adequate remedy in the ordinary course of the law. Appellant, who was serving consecutive prison terms for five convictions, filed a petition for a writ of mandamus arguing that Judge Rinfret improperly sentenced him to a prison term of nine years for his attempted rape conviction instead of the maximum term of eleven years. The court of appeals dismissed the petition, determining that Appellant had failed to file a mandatory affidavit of his prior civil actions and had an adequate remedy in the ordinary course of the law. The Supreme Court affirmed, holding that relief in mandamus was not

available because Petitioner had an adequate remedy in the ordinary course of the law.

State v. Jeffries

Court: Supreme Court of Ohio
Citation: 2020-Ohio-1539
Opinion Date: April 22, 2020
Judge: Donnelly
Areas of Law: Criminal Law

The Supreme Court affirmed the judgment of the court of appeals upholding Defendant's convictions of four counts related to two specific instances of sexual abuse of D.S., holding that the trial court and court of appeals correctly applied Ohio's rape-shield law and determined that evidence of D.S.'s prior nonconsensual sexual assault was inadmissible. On appeal, Defendant asserted that the trial court erred in prohibiting him from introducing evidence during trial that D.S. had previously been sexually assaulted by another person, arguing that the rape-shield law applies only to an accuser's prior consensual sexual activity. The lower court held that Ohio's rape-shield law addresses all sexual activity, not only consensual sexual activity. The court of appeals affirmed. The Supreme Court affirmed, holding (1) the plain meaning of the term "sexual activity" as used in the rape-shield law includes both consensual and nonconsensual sexual activity; and (2) therefore, all sexual activity is barred from admission into evidence by the rape-shield, absent certain exceptions listed in the law.

Pennsylvania v. Britton

Court: Supreme Court of Pennsylvania
Docket: 55 MAP 2018
Opinion Date: April 22, 2020
Judge: Max Baer
Areas of Law: Constitutional Law, Criminal Law

California law enforcement officers interviewed Appellant Stacy Britton in

her California residence and, unbeknownst to her, recorded those interviews. Over Appellant's objection, Pennsylvania used those recordings as evidence to help convict Appellant of murder in Pennsylvania. The Pennsylvania Supreme Court granted allowance of appeal to examine whether the California law enforcement officers were acting as agents of the Pennsylvania State Police when they recorded the interviews with Appellant in her California home, and if so, whether Pennsylvania's constitutional and statutory protections were available to Appellant under those circumstances. The Court concluded the California law enforcement officers were not acting as agents of the Pennsylvania State Police when they interviewed Appellant, making analysis of whether any Pennsylvania-specific constitutional or statutory protections unwarranted. Because the Supreme Court concluded the Pennsylvania trial court reached the proper result in this matter, it affirmed that court's judgment.

Pennsylvania v. Copenhaver

Court: Supreme Court of Pennsylvania
Docket: 48 MAP 2019
Opinion Date: April 22, 2020
Judge: Thomas G. Saylor
Areas of Law: Constitutional Law, Criminal Law

In August 2015, a deputy sheriff conducted a vehicle stop of Appellant Victor Copenhaver's pickup truck. Upon approaching the truck, the deputy noticed an odor of alcohol and marijuana emanating from the passenger compartment. After administering field sobriety tests, he arrested Appellant for suspected driving under the influence of alcohol and controlled substances ("DUI"). Appellant was ultimately charged with DUI and other offenses. Appellant challenged the deputy's authority to conduct a traffic stop and sought suppression of all evidence obtained during the encounter. Rather than presenting testimony at a suppression hearing, the parties stipulated that Appellant was driving the vehicle in question and that the deputy had training and qualifications equivalent to that of a police officer. The parties also agreed that the vehicle stop occurred as a result of the deputy observing the tailgate to the pickup truck being in a down position, which caught the deputy's attention. The deputy further observed the

registration on the pickup truck was expired, and additionally, the registration number was identified as belonging to a vehicle other than the one on which it was attached. The issue this case presented for the Pennsylvania Supreme Court's review was whether the deputy could lawfully conduct the traffic stop based on the expired registration sticker, on a theory that such a violation amounts to a breach of the peace. The Supreme Court concluded driving a vehicle with an expired registration did not entail a breach of the peace. It vacated the superior court's order insofar as it held that the expired registration was a breach of the peace, thus alone authorizing the deputy to stop Appellant's vehicle. Notably, in light of its holding, the Supreme Court found the superior court did not proceed to consider other relevant questions, such as whether the parties' factual stipulation should have been read as indicating that the officer's understanding that the registration sticker was associated with a different vehicle arose in the pre-stop timeframe – consistent with the Commonwealth's position throughout this litigation. "These issues should be resolved in the first instance by the intermediate court on remand."

Pennsylvania v. Tedford

Court: Supreme Court of Pennsylvania
Docket: 773 CAP
Opinion Date: April 22, 2020
Judge: Donohue
Areas of Law: Constitutional Law, Criminal Law

Appellant Donald Tedford was convicted of first-degree murder and rape on February 6, 1987. He appealed the dismissal of his second petition for relief filed pursuant to the Post Conviction Relief Act ("PCRA"), on December 2, 2014, as amended by a counseled petition on May 5, 2015, and a supplemental petition filed on June 9, 2015. In connection with his initial filings, Tedford sought wholesale discovery of the prosecution's entire file, but the PCRA court concluded that the petition (as amended) was not timely filed. Tedford also appealed the PCRA court's order denying his supplemental PCRA petition, in which he requested discovery, an evidentiary hearing, and/or a new trial based upon the admission of expert testimony presented at trial related to microscopic hair analysis. The PCRA

court concluded that pursuant to PCRA Section 9545(b)(1)(ii), it had jurisdiction to consider the merits of Tedford's newly-discovered-facts claims, but ultimately it concluded Tedford had not asserted a meritorious claim in accordance with Section 9543(a)(2)(vi). Finding no reversible error in that analysis, the Pennsylvania Supreme Court affirmed dismissal of the petition for relief.

Pennsylvania v. Trahey

Court: Supreme Court of Pennsylvania
Docket: 38 EAP 2018
Opinion Date: April 22, 2020
Judge: Wecht
Areas of Law: Constitutional Law, Criminal Law

The trial court granted Timothy Trahey's motion to suppress the results of a blood test that revealed his blood alcohol concentration ("BAC"), finding no justification for the investigating officers' failure to obtain a search warrant before conducting the test. On the Commonwealth's appeal, the Superior Court reversed, opining that the Commonwealth's evidence sufficiently established the existence of exigent circumstances, thus excusing the absence of a warrant. The Pennsylvania Supreme Court reversed, finding that while the exigency analysis is an objective one, "even disregarding the officers' subjective motivations, or their candid acknowledgment that they would have obtained a search warrant if they thought it necessary, there was no time-sensitive need to conduct a warrantless blood test under the circumstances of this case. Accordingly, the Superior Court's conclusion that the test was justified by exigent circumstances was drawn in error."

In re Greg Abbott

Court: Supreme Court of Texas
Docket: 20-0291
Opinion Date: April 23, 2020
Judge: Per Curiam

Areas of Law: Constitutional Law, Criminal Law

The Supreme Court conditionally granted mandamus relief to the State seeking review of a temporary restraining order (TRO) blocking enforcement of Executive Order GA-13, which changes the rules applicable to judges' decisions regarding pre-trial bail, against judges, holding that the trial court lacked jurisdiction to order the judges' requested relief, even temporarily. GA-13 suspends certain statutes authorizing trial judges to release jail inmates with violent histories during the state of disaster due to the threat of the novel coronavirus. Plaintiffs alleged that GA-13 is unconstitutional and exceeds the governor's statutory emergency powers. Sixteen of the plaintiffs were Texas trial judges alleging that GA-13 improperly interferes with their judicial authority to make individualized bail decisions, and the other plaintiffs were public interest organizations and lawyer associations. The trial court issued a TRO blocking enforcement of GA-13 against judges. The Supreme Court conditionally granted mandamus relief, holding that the alleged threat of a criminal prosecution in this case did not give the judges standing to seek the invalidation of GA-13, and therefore, the trial court lacked jurisdiction to order their requested relief.

Stahmann v. Texas

Court: Texas Court of Criminal Appeals
Docket: PD-0556-18
Opinion Date: April 22, 2020
Judge: Barbara Hervey
Areas of Law: Constitutional Law, Criminal Law

Appellant Karl Stahmann was involved in an automobile accident, after which he threw a bottle of promethazine, a controlled substance, over a nearby wire fence before law enforcement arrived. The bottle landed two to three feet past the fence in plain view. He was convicted of third-degree felony tampering with physical evidence and was sentenced to 10 years' confinement and fined $5,000. The judge suspended his sentence and placed him on community supervision for 10 years. Stahmann appealed, arguing in part that the evidence was insufficient to prove that he destroyed, altered, or concealed the prescription bottle. The court of appeals agreed

that the evidence was insufficient, but instead of rendering an acquittal, it reformed the judgment to show that Stahmann was convicted of the lesser-included offense of attempted tampering with physical evidence, a state-jail felony. After review of the evidence presented at trial, the Texas Court of Criminal Appeals concluded the evidence was indeed insufficient to prove that Appellant altered the prescription pill bottle when he threw it over the fence because the mere act of throwing the bottle did not change the bottle itself. "While a rational jury could have reasonably inferred that Stahmann intended to conceal the pill bottle when he threw it over the wire fence, the evidence shows that he failed to conceal it as he intended because the bottle landed short of the bush in plain view on top of some grass." The Court affirmed the trial court's judgment.

Blanke v. Board of Pardons & Parole

Court: Utah Supreme Court
Citation: 2020 UT 16
Opinion Date: April 16, 2020
Judge: Himonas
Areas of Law: Criminal Law

The Supreme Court affirmed the decision of the court of appeals affirming the district court's denial of Appellant's petition for extraordinary relief, holding that, under the circumstances, the Utah Board of Pardons and Parole need not afford Appellant the due process protections explained in Neese v. Utah Board of Pardons and Parole, 416 P.3d 663 (2017), before it could determine that Appellant was a sex offender and condition his parole on sex offender treatment. Appellant was serving a prison sentence for his convictions of attempted child kidnapping and kidnapping. Because he was convicted of attempted child kidnapping Appellant was considered a sex offender under the sex offender registration statute. Further, Appellant admitted in his presentence report that he had sexual intercourse with a fifteen-year-old. Appellant filed a petition for extraordinary relief alleging that the Parole Board had violated his due process rights by conditioning his parole on completion of sex offender treatment even though he had not committed a sex offense. Summary judgment was granted for the Parole Board. The Supreme Court affirmed, holding that the Parole Board owed

Appellant no additional process before it considered unconnected sex offenses in its decision to require Appellant to undergo sex offender treatment.

Washington v. Escalante

Court: Washington Supreme Court
Docket: 97268-1
Opinion Date: April 23, 2020
Judge: Steven González
Areas of Law: Constitutional Law, Criminal Law

Alejandro Escalante was detained for hours in a secured area at a border crossing and, the State conceded, interrogated by federal agents without Miranda warnings. Statements he made during that interrogation were used by the State to convict him of drug possession. While a traveler briefly detained and questioned at the border was typically not "in custody" for Miranda purposes, "the government's power to detain and question people at the border without implicating Miranda has limits." Here, the Washington Supreme Court determined those limits were reached. "This border detention created the type of inherently coercive environment that demands Miranda warnings to ensure an individual's choice to speak is the product of free will." The Supreme Court held that Escalante was in custody when he was interrogated and reversed.

Washington v. Haggard

Court: Washington Supreme Court
Docket: 97375-0
Opinion Date: April 23, 2020
Judge: Barbara Madsen
Areas of Law: Constitutional Law, Criminal Law

A class C felony "washes out" and is omitted from a defendant's offender score as long as he or she is not convicted of any crime within five years of the last date of release from confinement. David Haggard was convicted of

a misdemeanor offense within this five-year period, which was dismissed pursuant to RCW 3.66.067. When Haggard later pleaded guilty to burglary and arson, the trial court included prior class C felonies in his criminal history, finding that the dismissed misdemeanor conviction interrupted the washout period for those offenses. Haggard contended on appeal this was error. The Washington Supreme Court determined that because a dismissed conviction constituted a "conviction" under the Sentencing Reform Act of 1981 (SRA), and misdemeanor dismissal and vacation were distinct processes, so Haggard's offender score was properly calculated.

State v. Taylor

Court: Supreme Court of Appeals of West Virginia
Docket: 18-0502
Opinion Date: April 21, 2020
Judge: Walker
Areas of Law: Civil Rights, Constitutional Law, Criminal Law

The Supreme Court affirmed the judgment of the circuit court giving Petitioner credit for twelve days of time served toward the sentence he received for his felony conviction although Petitioner spent additional time in confinement for other charges that were dismissed in the universal plea agreement, holding that to grant Petitioner additional credit for time served would do little more than reward Petitioner for habitual criminal behavior. Petitioner was charged with several crimes and agreed to resolve the pending charges against him in a universal plea agreement. Under the terms of the agreement, Petitioner agreed to plea guilty to the charge of felony carrying a concealed firearm by a prohibited person. In exchange, the State agreed to drop the remaining charges. After he was sentenced, Petitioner argued that, in addition to the twelve days of credit for time served he was granted, he was constitutionally entitled to credit for time served while he was incarcerated for charges that were resolved in the universal plea agreement. The Supreme Court affirmed, holding that Petitioner's circumstances implicated neither double jeopardy nor equal protection of the law such that additional credit for time served was constitutionally mandated.

State v. Harrison

Court: Wisconsin Supreme Court
Dockets: 2017AP002441-CR, 2017AP002440-CR
Opinion Date: April 17, 2020
Judge: Patience D. Roggensack
Areas of Law: Criminal Law

The Supreme Court affirmed in part and reversed in part the decision of the court of appeals reversing an order of the circuit court that granted sentence credit to Defendant, holding that the court of appeals correctly found that Defendant was not entitled to sentence credit but erred by advancing the commencement of Defendant's terms of extended supervision for Defendant's 2007 and 2008 cases. Specifically, the Court held (1) Defendant was not entitled to sentence credit under Wis. Stat. 973.155(1)(a) because the days he spent in custody for which he sought sentence credit were not in connection with the courses of conduct for which those sentences were imposed; and (2) the court of appeals erred by advancing the commencement of Defendant's terms of extended supervision for his 2007 and 2008 cases to the date they would have begun but for Defendant's confinement for unrelated convictions that were later set aside, holding that whether to employ advancement is a public policy decision best left to the legislature.

Rethinking Retroactivity in Light of the Supreme Court's Jury Unanimity Requirement

MICHAEL C. DORF

verdict post

In light of the U.S. Supreme Court's decision Monday in *Ramos v. Louisiana*, in which it held that the federal Constitution forbids states from convicting defendants except by a unanimous jury, Cornell law professor Michael C. Dorf discusses the Court's jurisprudence on retroactivity. Dorf highlights some costs and benefits of retroactivity and argues that the Court's refusal to issue advisory opinions limits its ability to resolve retroactivity questions in a way that responds to all the relevant considerations.

Criminal Law Opinions

Ramos v. Louisiana

Court: US Supreme Court
Docket: 18-5924
Opinion Date: April 20, 2020
Judge: Neil M. Gorsuch
Areas of Law: Civil Rights, Constitutional Law, Criminal Law

In 48 states and in federal court, a single juror's vote to acquit is enough to prevent a conviction; Louisiana and Oregon punish people based on 10-to-2 verdicts. Ramos was convicted in a Louisiana court by a 10-to-2 jury verdict and was sentenced to life without parole. The Supreme Court reversed. The Sixth Amendment right to a jury trial, as incorporated against the states by the Fourteenth Amendment, requires a unanimous verdict to convict a defendant of a serious offense. Juror unanimity is a vital common law right. The Court rejected an "invitation" to "perform a cost-benefit analysis on the historic features of common law jury trials and to conclude that unanimity does not make the cut." In overturning its 1972 "Apodaca" decision, the Court stated that the reasoning, in that case, was "gravely mistaken" and "sits uneasily with 120 years of preceding case law." The fact that Louisiana and Oregon may need to retry defendants convicted of felonies by non-unanimous verdicts whose cases are still pending on direct appeal "will surely impose a cost, but new rules of criminal procedure usually do."

United States v. Diaz-Rivera

Court: US Court of Appeals for the First Circuit
Docket: 18-1461
Opinion Date: April 20, 2020
Judge: Torruella
Areas of Law: Criminal Law

The First Circuit affirmed Defendant's upwardly variant sentence for one count of possession with intent to distribute cocaine and one count of using a firearm during and in relation to a drug-trafficking crime, holding that the sentence was neither procedurally nor substantively unreasonable. Pursuant to a plea agreement, Defendant pled guilty to drug-related crimes. After a sentencing hearing, the district court sentenced Defendant to an upwardly variant sentence of 180 months of imprisonment, thus declining to

impose the government's requested sentence. On appeal, Defendant challenged both the procedural and substantive reasonableness of his sentence. The First Circuit affirmed, holding that the 180-month sentence was neither procedurally nor substantively unreasonable.

United States v. Cotto

Court: US Court of Appeals for the Second Circuit
Docket: 18-2970
Opinion Date: April 20, 2020
Judge: Leval
Areas of Law: Criminal Law

A conviction for retaliating against a witness in violation of 18 U.S.C. 1513 does not require that the Government prove that defendant had knowledge of the federal nature of the proceeding. The Second Circuit rejected defendant's arguments to the contrary and affirmed his conviction for retaliating against a witness. The court remanded for revision of the provision of the sentence relating to the substance abuse treatment condition of supervised release; instructed the district court to consider on remand whether the court's forthcoming order in United States v. Traficante, No. 18-1962 (2d Cir., submitted Oct. 25, 2019) requires modification of the risk notification provision of supervised release; and granted the parties leave to reinstate this appeal to permit review of the district court's decision on remand as to the risk notification provision.

United States v. Rosa

Court: US Court of Appeals for the Second Circuit
Docket: 17-2004
Opinion Date: April 17, 2020
Judge: Nardini
Areas of Law: Criminal Law

Where a district court offers no explanation for its sentence, and where neither the adopted presentence report nor the statement of reasons

adequately demonstrates the court's reasoning, the court has committed plain error in violation of 18 U.S.C. 3553(c). The Second Circuit vacated defendant's sentence for conspiracy to commit wire fraud and aggravated identity theft. The court held that the district court failed to state its reasons for sentencing defendant as required under section 3553(c); the error is clear or obvious; and the error affected defendant's substantial rights. Accordingly, the court remanded for resentencing.

Fogle v. Sokol

Court: US Court of Appeals for the Third Circuit
Docket: 19-1066
Opinion Date: April 21, 2020
Judge: Matey
Areas of Law: Civil Rights, Constitutional Law, Criminal Law

In 1976, the body of 15-year-old “Kathy” was found near her Indiana County, Pennsylvania home. Kathy’s death involved a brutal assault, rape, and a gunshot to the head. Kathy's sisters, ages nine and 12, stated that she had gotten into a car with a man with blue eyes, black hair that came below his ears and curled at the ends, sideburns, heavy eyebrows, and a heavy mustache. Fogle had “straight reddish-blonde hair that dropped down his back and a matching, full beard that reached his waist.” After three years, Fogle became a suspect because a psychiatric patient described seeing Kathy get in a car with Fogle and his brother. The story was largely inconsistent with statements by Kathy’s sisters. Jailhouse informants were recruited and counseled by law enforcement with promises of leniency. The prosecutors “either knew about, encouraged, or permitted” this strategy. A jury found Fogle guilty of second-degree murder. In 2015, Fogle obtained DNA evidence excluding both himself and his brother as the source of semen collected from Kathy. His conviction was vacated. The Commonwealth declined to pursue new charges, describing the case as lacking “prosecutorial merit.” Fogle, having spent three decades in prison, sued the prosecutors and Indiana County under 42 U.S.C. 1983. The Third Circuit affirmed the denial of their motions to dismiss based on absolute immunity. Only truly prosecutorial functions, not investigative conduct, justify complete protection from suit. Fogle’s complaint alleges actions that fall

outside the narrow doctrine of absolute immunity.

James v. New Jersey State Police

Court: US Court of Appeals for the Third Circuit
Docket: 18-1432
Opinion Date: April 21, 2020
Judge: Porter
Areas of Law: Civil Rights, Constitutional Law, Criminal Law

Stephens called 911 and reported that Gibbons hit her and had a gun in his truck. The police responded. Stephens obtained a temporary restraining order, prohibiting Gibbons from possessing firearms and from returning to Stephens's house. The next day, Gibbons went to Stephens's house. Stephens was talking on the phone; the friend called the police. Gibbons left Stephens's house. Trooper Conza arrived. Stephens stated that Gibbons had waved a gun throughout their argument. Conza told Stephens to go to the police barracks and reported over the radio that Gibbons had brandished a firearm. Conza, with Troopers Bartelt and Korejko, visited the nearby home of Gibbons's mother, James. James stated that she did not know where Gibbons was and that he might be off his schizophrenia medication. While driving to the barracks, Stephens saw Gibbons walking alongside the road and called 911. The Troopers responded. Bartelt parked his car and, exiting, observed that Gibbons was pointing a gun at his own head. Bartelt drew his weapon, stood behind his car door, and twice told Gibbons to drop his weapon. Gibbons did not comply. Bartelt shot Gibbons twice within seconds of stopping his car. Gibbons died that night. In James' suit under 42 U.S.C. 1983, the Third Circuit held that Bartelt is entitled to qualified immunity because he did not violate Gibbons's clearly established rights. Bartelt's pre-standoff knowledge of Gibbons differs from that of officers involved in cited cases. Bartelt could reasonably conclude that Gibbons posed a threat to others.

Bazemore v. Best Buy

Court: US Court of Appeals for the Fourth Circuit
Docket: 18-2196
Opinion Date: April 21, 2020
Judge: Quattlebaum
Areas of Law: Criminal Law

Plaintiff filed suit against her employer, Best Buy, claiming that she was harassed because of her race and gender and subjected to a hostile work environment in violation of Title VII of the Civil Rights Act of 1964. Plaintiff's complaint stemmed from an incident where a coworker made a racist and sexually charged joke to a small group of coworkers that included plaintiff. The Fourth Circuit affirmed the district court's motion to dismiss and held that, in the case of allegedly harassing comments by a co-worker, an employee must allege plausible facts that the employer knew, or should have known, about the harassment and failed to take action reasonably calculated to stop it. Because plaintiff failed to do this, the court affirmed the district court's judgment. In this case, the coworker's conduct was not imputable to Best Buy where Best Buy took steps that were not only reasonably calculated to end such behavior, but that it did in fact end it.

United States v. Akande

Court: US Court of Appeals for the Fourth Circuit
Docket: 18-6833
Opinion Date: April 20, 2020
Judge: Diana Jane Gribbon Motz
Areas of Law: Criminal Law

After defendant moved under 28 U.S.C. 2255 to vacate his conviction based on the ineffective assistance of counsel, the district court denied the motion. The Fourth Circuit granted a certificate of appealability and reversed the district court's judgment. The court held that, given counsel's specific misadvice regarding defendant's rights to preserve his appellate rights, on which defendant understandably relied, the district court's general admonishments did not amount to the careful explanation that addresses the particular issue necessary to cure the error. In this case, the plea colloquy did not correct counsel's erroneous advice and the error prejudiced defendant. Accordingly, the court remanded for further proceedings.

United States v. Chambers

Court: US Court of Appeals for the Fourth Circuit
Docket: 19-7104
Opinion Date: April 23, 2020
Judge: Floyd
Areas of Law: Criminal Law

After defendant was erroneously sentenced as a career offender, he moved to reduce his sentence to time served under the First Step Act. The district court denied defendant's motion to reduce his custodial sentence, though it granted the motion as to his supervised release term. The Fourth Circuit held that the First Step Act does not constrain courts from recognizing Guidelines errors. The court explained that First Step Act motions fall under 18 U.S.C. 3582(c)(1)(B), a distinct exception to finality, and that section 404(b) of the First Step Act expressly allows a court to impose a reduced sentence in order to give retroactive effect to sections 2 and 3 of the Fair Sentencing Act. Furthermore, 18 U.S.C. 3553(a) sentencing factors apply in the section 404(b) resentencing context, and the resentencing court has discretion within the section 404(b) framework to vary from the Guidelines and, in doing so, to consider movants' post-sentencing conduct. In this case, the district court seemingly believed that it could not vary from the Guidelines range to reflect post-sentencing information. Therefore, the court vacated the district court's sentencing order. Finally, the court held that any Guidelines error deemed retroactive, such as the error in this case, must be corrected in a First Step Act resentencing.

United States v. Ferebee

Court: US Court of Appeals for the Fourth Circuit
Docket: 18-4266
Opinion Date: April 22, 2020
Judge: Traxler
Areas of Law: Criminal Law

The Fourth Circuit affirmed the denial of defendant's motion to suppress evidence recovered from a backpack, and the district court's conclusion that defendant abandoned the backpack and any legitimate expectation of privacy in its contents. The court rejected defendant's claim that the collective-knowledge doctrine has any bearing on the propriety of the district court's conclusion that defendant abandoned the backpack. The court also held that the district court is not precluded from finding abandonment in cases where the defendant, as here, has physical possession of the property he has disavowed. In this case, the record supported the district court's conclusion that defendant clearly and unequivocally disavowed ownership of the backpack. Even if the district court erred by finding that defendant abandoned the backpack, reversal would not be required because the search of the backpack was a proper search incident to arrest for which no warrant was required under the facts of this case.

United States v. Nance

Court: US Court of Appeals for the Fourth Circuit
Docket: 18-4585
Opinion Date: April 21, 2020
Judge: Pamela Harris
Areas of Law: Criminal Law

The Fourth Circuit affirmed defendant's above-Guidelines sentence imposed after he pleaded guilty to two federal drug- and firearm-related offenses. The court held that defendant's sentence was not procedurally unreasonable where the district court took into account defendant's extensive criminal history; his pattern of reoffending upon release; his disciplinary infractions in custody and inability to comply with the terms of his release; and the fact that the offenses of conviction occurred over the course of days, in which he was arrested once, released, and then arrested again just days later. The court also held that defendant's sentence was substantively reasonable where the district court conducted a thorough, individualized assessment of defendant and his offense conduct in light of the 18 U.S.C. 3553(a) factors, and did not abuse its discretion in formulating the sentence.

United States v. Johnson

Court: US Court of Appeals for the Fifth Circuit
Docket: 17-60852
Opinion Date: April 21, 2020
Judge: Priscilla R. Owen
Areas of Law: Criminal Law

The Fifth Circuit vacated defendant's sentence imposed after he pleaded guilty to violating 18 U.S.C. 922(g) and 924(e) by knowingly possessing a firearm after he had been convicted of a misdemeanor crime of domestic violence. The court held that the district court committing plain error by violating Federal Rule of Criminal Procedure 32 when it relied on factual allegations in the confidential sentencing recommendation that were not in the presentence report and that were not disclosed by defendant. The court explained that the use of undisclosed facts to justify an above-guidelines sentence seriously affects the fairness, integrity, and public reputation of judicial proceedings. Therefore, the court remanded for resentencing.

United States v. McGinnis

Court: US Court of Appeals for the Fifth Circuit
Docket: 19-10197
Opinion Date: April 21, 2020
Judge: Stuart Kyle Duncan
Areas of Law: Criminal Law

18 U.S.C. 922(g)(8), which prohibits individuals subject to certain domestic violence protective orders from possessing firearms or ammunition for any purpose, is facially constitutional under the Fifth Circuit's two-step NRA framework. Even assuming arguendo that the conduct at issue -- the keeping and possessing of firearms by individuals subject to domestic protective orders -- falls within the Second Amendment right, defendant's facial challenge fails. The court applied intermediate scrutiny and held that section 922(g)(8) is reasonably adapted to the government interest of

reducing domestic gun abuse. The court also held that if the commonly understood definitions of terms in the protective order include acts involving "physical force," the protective order is sufficient to support a conviction under section 922(g)(8)(C)(ii). In this case, the jury plausibly found that the order satisfied the statute and the court declined to reverse defendant's conviction on this basis. However, the court remanded for the limited purpose of conforming defendant's written judgment to the district court's oral pronouncement.

Valentine v. Collier

Court: US Court of Appeals for the Fifth Circuit
Docket: 20-20207
Opinion Date: April 22, 2020
Judge: Per Curiam
Areas of Law: Civil Rights, Constitutional Law, Criminal Law, Government & Administrative Law, Health Law

Plaintiffs filed suit alleging that TDCJ's adoption and implementation of measures guided by changing CDC recommendations in regards to the COVID-19 pandemic do not go far enough. Plaintiffs filed a class action alleging violations of the Eighth Amendment's prohibition against cruel and unusual punishment, and the Americans with Disabilities Act, seeking a preliminary injunction. The Fifth Circuit granted TDCJ's motion to stay the district court's preliminary injunction, which regulates the cleaning intervals for common areas, the types of bleach-based disinfectants the prison must use, the alcohol content of hand sanitizer that inmates must receive, mask requirements for inmates, and inmates' access to tissues (amongst many other things). The court held that TDCJ is likely to prevail on the merits of its appeal because: (1) after accounting for the protective measures TDCJ has taken, plaintiffs have not shown a "substantial risk of serious harm" that amounts to "cruel and unusual punishment"; and (2) the district court committed legal error in its application of Farmer v. Brennan, by treating inadequate measures as dispositive of defendants' mental state. In this case, even assuming that there is a substantial risk of serious harm, plaintiffs lack evidence of defendants' subjective deliberate indifference to that harm. The court also held that TDCJ has shown that it will be

irreparably injured absent a stay, and that the balance of the harms and the public interest favor a stay. Finally, the court held that plaintiffs have not exhausted their administrative remedies as required in the Prison Litigation Reform Act (PLRA), and the district court's injunction goes well beyond the limits of what the PLRA would allow even if plaintiffs had properly exhausted their claims.

United States v. Dowl

Court: US Court of Appeals for the Sixth Circuit
Docket: 19-2469
Opinion Date: April 22, 2020
Judge: Per Curiam
Areas of Law: Criminal Law

Dowl pleaded guilty to presenting false tax returns, 18 U.S.C. 286. He received a sentence of 30 months of imprisonment plus 24 months of supervised release. On supervised release, Dowl was charged with four new state crimes; failing to inform his probation officer that he had police contact; communicating with his co-defendant despite instructions to the contrary; failing to make payments on his restitution, fine, or special assessment; and failing to get a job. At a hearing, the court reviewed the evidence and allowed Dowl to tell his side of the story. The court deferred judgment on three of the four new state criminal law violations and dismissed the fourth and found Dowl gainfully employed. Dowl had failed to notify his probation officer about police contact, impermissibly communicated with his co-defendant, and did not pay his fines. After considering the 18 U.S.C. 3553(a) sentencing factors, the court returned Dowl to prison for 11 months, giving Dowl and his attorney the opportunity to raise any objections. Dowl had none. The Sixth Circuit affirmed, rejecting Dowl’s argument that the court committed reversible error by not directly addressing him to solicit an allocution. The court employed the “plain error” standard because Dowl did not raise any objection during his revocation hearing.

United States v. Fowler

Court: US Court of Appeals for the Sixth Circuit
Dockets: 19-3071, 19-3070
Opinion Date: April 21, 2020
Judge: Donald
Areas of Law: Criminal Law

In 2018, Fowler pled guilty to possession of child pornography and violations of the conditions of his supervised release from a previous conviction for the same. In addition to possessing child pornography, Fowler had failed drug testing, had threatened his parole officer, and had tried to harass his girlfriend to recant her testimony. The district court ordered Fowler to pay a $5,000 special assessment for possession of child pornography under the Justice for Victims of Trafficking Act, 18 U.S.C. 3014. The court also varied upward and sentenced Fowler to the maximum statutory penalty for violating the conditions of his supervised release, imposing a 120-month sentence for possessing child pornography and a consecutive 36-month sentence for violating the terms of his supervised release. The Sixth Circuit vacated as to the assessment and remanded for a determination of indigency. The district court committed plain error by failing to address Fowler's ability to pay; the parties did not contemplate the $5,000 special assessment as a part of the waiver provision in the plea agreement. The court affirmed the sentence. The district court did not consider an impermissible factor (whether Fowler had actually touched a child) and Fowler had no other challenge to the reasonableness of his sentence,

United States v. Sumlin

Court: US Court of Appeals for the Sixth Circuit
Docket: 18-3819
Opinion Date: April 21, 2020
Judge: Bush
Areas of Law: Criminal Law

Sumlin was convicted of the distribution of drugs that caused the 2015 death of Carrie Dobbins, 21 U.S.C. 841(a)(1) and (b)(1)(C), which carries enhanced penalty provisions. The Sixth Circuit affirmed his convictions and

his sentence to life in prison. The district court properly denied Sumlin's suppression motion, given that the affidavit established a sufficient nexus between his drug trafficking activity and residence that was searched. The court properly admitted testimony by the victim's sister, Kelly, who was Sumlin's former girlfriend and had purchased drugs from him. Kelly's testimony about Sumlin's drug-trafficking and that Sumlin was with Carrie on the day of her overdose was intrinsic proof that was relevant for providing background information and contextualizing the government's case against Sumlin. Sufficient evidence supported the jury's verdict that Sumlin distributed the drugs that caused Carrie's death.

United States v. Vance

Court: US Court of Appeals for the Sixth Circuit
Docket: 19-5160
Opinion Date: April 17, 2020
Judge: Bush
Areas of Law: Criminal Law, White Collar Crime

The Spriggs' bank account was established to receive social security checks. The Spriggs' great-grandson, Vance, filled out an application in Mr. Spriggs's name for a debit card to draw on the checking account. Mr. Spriggs had never used a debit card. The Spriggses did not authorize Vance to do so. Bank cameras photographed Vance using the card to withdraw cash. Vance also used the card for personal expenses. At another bank, Vance used Mr. Spriggs's social security number to establish an account and obtain a $15,000 cash advance. Vance made other, unsuccessful loan applications. Upon being notified by the banks about suspicious activities involving his identity, Mr. Spriggs filed a police report. The police arrested Vance. While searching Vance's car, the police located a large stash of personal and financial documents belonging to the Spriggses, including bank statements, tax return forms, property-tax bills, and a car title. The Sixth Circuit affirmed Vance's convictions for access-device fraud, 18 U.S.C. 1029(a)(5), and two counts of aggravated identity theft, 18 U.S.C. 1028A(a)(1), and his 65-month sentence. The court rejected arguments that the district court failed to make adequate findings of fact after the bench trial, improperly denied a motion for judgment of acquittal,

and failed to correctly calculate the loss amount connected to Vance's charges under Sentencing Guidelines 2B1.1.

Opinion Date: April 23, 2020
Judge: Jeffrey S. Sutton
Areas of Law: Civil Rights, Constitutional Law, Criminal Law

Winburn represented himself at his trial for armed robbery, home invasion, and conspiracy. Based on Winburn's disruptive behavior, the judge removed him from the courtroom and revoked Winburn's permission to represent himself, then granted a competency evaluation and a mistrial. While Winburn awaited his second trial, the judge permitted Winburn's stand-by attorney to withdraw because Winburn had sued her and enjoined Winburn from filing complaints or grievances against his new attorney, except to discharge her. Although represented by a new attorney, Winburn moved pro se to dismiss his charges on double jeopardy grounds. The trial judge denied the motion because Winburn's attorney had not filed it. Winburn filed a habeas petition under 28 U.S.C. 2241 challenging his retrial and another section 2241 petition challenging the injunction. The district judges denied both and declined to issue certificates of appealability. Winburn filed a notice of appeal for one petition and sought a certificate of appealability for the other. The Sixth Circuit held that state pretrial detainees proceeding under section 2241 may not appeal without certificates of appealability and granted Winburn a certificate on the injunction claim. A reasonable jurist could conclude that the unusual order was constitutionally infirm. The court denied relief with respect to double jeopardy. Winburn failed to exhaust his state-court remedies by a motion to dismiss.

Lund v. City of Rockford

Court: US Court of Appeals for the Seventh Circuit

Docket: 19-1945
Opinion Date: April 20, 2020
Judge: ROVNER
Areas of Law: Civil Rights, Constitutional Law, Criminal Law

Lund, a reporter for the Rockford Scanner, heard, by police scanner, of multiple traffic stops in Midtown. He did not have a driver's license, so he rode a motorized bicycle to Midtown to take photographs. He suspected a prostitution sting operation. An officer noticed Lund and radioed the team. Officers Welsh and Campbell knew of Lund's previous anti-police speech. They directed Lund to "move on." Lund asked if he was breaking any laws. Campbell informed him that he was not, but that his continued presence would constitute obstruction of a police detail and result in arrest. Lund started his bicycle and called out, loudly, "goodbye officers." Concerned that Lund might post pictures on social media while the sting operation was ongoing and create a danger for unarmed undercover officers, the officers followed Lund and arrested him for driving the wrong way on a one-way street, operating a vehicle without insurance, obstructing a police officer, felony aggravated driving on a revoked license, and operating a motor vehicle without a valid drivers' license. News stories listed Lund's name as an arrestee in the prostitution sting. The charges against Lund were dismissed. Lund sued the officers and the city under 42 U.S.C. 1983. The Seventh Circuit affirmed summary judgment for the defendants on First Amendment retaliation and malicious prosecution under Illinois law, citing the Supreme Court's intervening "Nieves" (2019) holding, that, in most cases, probable cause to arrest defeats a claim of retaliatory arrest. There was probable cause to arrest Lund.

United States v. Perez

Court: US Court of Appeals for the Seventh Circuit
Docket: 18-3156
Opinion Date: April 23, 2020
Judge: KANNE
Areas of Law: Criminal Law

Beloit officers facilitated a recorded controlled buy of heroin from Perez, a suspected high-level drug dealer. Perez sold 98 grams of heroin to an

informant. Based on that transaction alone, Perez pled guilty to distributing heroin. At Perez's sentencing hearing, the judge expressed concern that the guidelines range of 33–41 months' imprisonment did not reflect the full scope of his drug trafficking. The PSR described conduct that suggested that Perez was responsible for distributing large quantities of heroin, methamphetamine, and cocaine. The judge continued the hearing, directing the government to file a memorandum, detailing which offense conduct it could support by a preponderance of the evidence. When the hearing reconvened, the government presented witness testimony that elaborated on conduct described in the PSR, including drug ledgers, Perez's post-arrest conversation with his girlfriend, large sums of cash, a money counter, cell phones, and Perez's passport. The judge calculated a higher guidelines range and imposed a 121-month sentence. The Seventh Circuit affirmed, rejecting an argument that the sentencing judge should have recused himself. Perez has not demonstrated that a reasonable observer would have questioned the judge's impartiality nor did he allege that the judge was biased based on events outside the proceedings. The judge's continuance was laudable, not prejudicial.

Jackson v. United States

Court: US Court of Appeals for the Eighth Circuit
Docket: 19-1131
Opinion Date: April 20, 2020
Judge: Lavenski R. Smith
Areas of Law: Criminal Law

The Eighth Circuit affirmed the district court's denial of a 28 U.S.C. 2255 motion to vacate, set aside, or correct petitioner's sentence. The court held that the district court did not err in denying an evidentiary hearing as to petitioner's claim that counsel was constitutionally ineffective for failing to conduct adequate pretrial investigations. In this case, petitioner failed to identify any specific witnesses or evidence that counsel failed to uncover. Furthermore, petitioner failed to show that counsel's representation prejudiced his case. The court also held that the district court did not err in denying an evidentiary hearing as to petitioner's claim that his new counsel was ineffective for failing to subpoena witnesses, for convincing petitioner

not to testify, for failing to object to or appeal the district court's answer to a jury question, and for failing to object to the district court's designation of petitioner as a career offender.

United States v. Bolman

Court: US Court of Appeals for the Eighth Circuit
Docket: 18-2759
Opinion Date: April 21, 2020
Judge: Jane Louise Kelly
Areas of Law: Criminal Law

The Eighth Circuit affirmed defendant's conviction for involuntary manslaughter after he struck and killed his nephew with his truck. The court held that the evidence was sufficient to support the conviction, because a reasonable jury could find defendant grossly negligent beyond a reasonable doubt. The court also held that the district court did not plainly err by failing to instruct the jury that actual knowledge is an essential element of the offense that is separate from gross negligence, because the instructions, viewed as a whole, accurately and adequately defined the essential elements of the offense.

Read Opinion Are you a lawyer? **Annotate this case**.

United States v. Boyd

Court: US Court of Appeals for the Eighth Circuit
Docket: 18-3528
Opinion Date: April 17, 2020
Judge: Kobes
Areas of Law: Criminal Law

The Eighth Circuit affirmed defendant's sentence imposed after he pleaded guilty to being a felon in possession of a firearm. The court held that the facts underlying defendant's prior arrests were part of his history and characteristics under 18 U.S.C. 3553(a), and thus the district court could consider defendant's arrest records and the circumstances of those arrests. The court explained that the arrests were listed in the presentence report

and gleaned from prior police reports. Furthermore, specific facts underlying the arrests may be considered for an upward departure and should be considered fair game for a variance where defendant did not object to them. The court also concluded that there is nothing here that suggested a corrected misstatement improperly influenced the district court's sentencing decision. Finally, the court held that the upward variance was not unreasonable in consideration of defendant's previous assaults, coupled with the facts underlying his arrest in this case.

United States v. Sanchez-Velasco

Court: US Court of Appeals for the Eighth Circuit
Docket: 18-3568
Opinion Date: April 17, 2020
Judge: James B. Loken
Areas of Law: Criminal Law, Immigration Law

The Eighth Circuit affirmed the district court's denial of defendant's motion to suppress his responses to an ICE agent's two questions at the Treasurer's Office, because he was not in custody at the time of questioning. Although defendant was in custody at the ICE facility, the court held that an agent's questions were not custodial interrogation because the agent could not have known his questions were likely to elicit incriminating information regarding the two criminal charges that were eventually brought against defendant. The court noted that the Attorney General's regulations carefully distinguish between the warrantless arrest of an alien for a criminal violation of the immigration laws, and what is called the "administrative arrest" of an alien who is reasonably believed to be illegally present in the United States. The court agreed with the district court that the agent's questioning was a request for routine information necessary for basic identification purposes that is not interrogation under Miranda, even if the information turns out to be incriminating.

Judge: Kim McLane Wardlaw
Areas of Law: Civil Rights, Constitutional Law, Criminal Law

The Ninth Circuit affirmed the district court's grant of summary judgment to TRAX in a disability discrimination action brought by plaintiff under Title I of the Americans with Disabilities Act (ADA). After TRAX terminated plaintiff from her position as a Technical Writer allegedly due to an inability or unwillingness to accommodate her disability, TRAX discovered during the course of litigation that plaintiff lacked the requisite bachelor's degree for her position. The panel held that, although McKennon v. Nashville Banner Publishing Co., 513 U.S. 352 (1995), held that after-acquired evidence cannot establish a superseding, non-discriminatory justification for an employer's challenged actions, after-acquired evidence remains available for other purposes, including to show that an individual is not qualified under the ADA. Because plaintiff did not satisfy one of the prerequisites for her

position, she is not "otherwise qualified," and TRAX was not obligated to engage in the interactive process.

City of Almaty v. Khrapunov

Court: US Court of Appeals for the Ninth Circuit
Docket: 18-56451
Opinion Date: April 22, 2020
Judge: Marbley
Areas of Law: Criminal Law, International Law, White Collar Crime

The City of Almaty, in Kazakhstan, filed suit against defendant and his family under the Racketeer Influenced and Corrupt Organizations Act (RICO), alleging that they engaged in a scheme to defraud the city of millions of dollars. The City claimed that it was forced to spend money and resources in the United States to trace where its money was laundered. The district court dismissed the City's claim on the basis that it failed to state a domestic injury pursuant to the Supreme Court's recent decision in RJR Nabisco, Inc. v. European Community, 136 S. Ct. 2090 (2016). The Ninth Circuit held that the City failed to state any cognizable injury other than the foreign theft of its funds, and its voluntary expenditures were not proximately caused by defendants' acts of money laundering. In this case, the City's expenditure of funds to trace its allegedly stolen funds is a consequential damage of the initial theft suffered in Kazakhstan and is not causally connected to the predicate act of money laundering.

United States v. Baldon

Court: US Court of Appeals for the Ninth Circuit
Docket: 18-10411
Opinion Date: April 21, 2020
Judge: Bennett
Areas of Law: Criminal Law

After defendant pleaded guilty to possession with intent to distribute a controlled substance, the district court sentenced him to 184 months in

prison. The Ninth Circuit held that defendant's prior convictions for carjacking under section 215 of the California Penal Code are not categorical crimes of violence under USSG 4A1.1(e). Therefore, the district court incorrectly calculated defendant's criminal history by improperly including two points for his prior carjacking convictions. However, the panel held that the district court did not err in finding that defendant possessed a firearm under USSG 2D1.1(b)(1). Accordingly, the panel affirmed in part, vacated in part, and remanded for resentencing.

United States v. Costanzo

Court: US Court of Appeals for the Ninth Circuit
Docket: 18-10291
Opinion Date: April 17, 2020
Judge: Michael Daly Hawkins
Areas of Law: Criminal Law

The Ninth Circuit affirmed defendant's conviction of five counts of money laundering, holding that a reasonable trier of fact could have found beyond a reasonable doubt that the money laundering transactions, in which payment was made via bitcoin, affected interstate commerce in some way or to some degree. In this case, the transfer involved the use of an Internet or cellular network connected Personal Computer Device (PCD) to transfer bitcoin (together with the digital code necessary to unlock the bitcoin) to the digital wallet of another Internet or cellular network connected PCD.

United States v. Manzanares

Court: US Court of Appeals for the Tenth Circuit
Docket: 18-2010
Opinion Date: April 17, 2020
Judge: Mary Beck Briscoe
Areas of Law: Constitutional Law, Criminal Law

Defendant-Appellant Archie Manzanares appealed a district court's denial of his 28 U.S.C. 2255 motion challenging his sentence under the Armed

Career Criminal Act (ACCA). Under the ACCA, an offense qualified as a violent felony by satisfying at least one of three definitions, which have come to be known as the Elements Clause, the Enumerated Clause, and the Residual Clause. Manzanares asserted that without the Residual Clause, his underlying New Mexico convictions (armed robbery, aggravated assault with a deadly weapon, and aggravated battery) no longer qualified as violent felonies. The district court denied the motion, concluding that all three underlying convictions satisfied the Elements Clause. Manzanares appealed the classification of the armed robbery conviction as a violent felony to the Tenth Circuit, and sought to expand the certificate of appealability to allow him to appeal the decision regarding the aggravated assault with a deadly weapon and aggravated battery convictions. After review, the Tenth Circuit affirmed the district court's denial of Manzanares's 2255 motion, and denied his motion to expand the COA.

United States v. Delaney

Court: US Court of Appeals for the District of Columbia Circuit
Docket: 18-3093
Opinion Date: April 17, 2020
Judge: David S. Tatel
Areas of Law: Criminal Law

The DC Circuit vacated the district court's denial of defendant's motion to suppress evidence. The court held that officers violated the Fourth Amendment when they seized defendant because they lacked reasonable suspicion to justify the stop. In this case, a seizure occurred when the officers pulled into the parking lot, partially blocked defendant's vehicle, and activated their take-down light. The court held that any inference of suspicion that the officers drew from encountering defendant soon after hearing the nearby gunshots were undermined by the government's failure to identify specific and articulable facts supporting the officers' estimation of where the various shots came from. Accordingly, the court remanded for further proceedings.

Antenor v. Alaska, Department of Corrections

Court: Alaska Supreme Court
Docket: S-17005
Opinion Date: April 17, 2020
Judge: Carney
Areas of Law: Civil Procedure, Criminal Law, Government & Administrative Law

Several Alaska Department of Corrections inmates challenged the DOC's policy to charge for local telephone calls, arguing the rates they and call recipients had to pay for calls violated their constitutional right to rehabilitation, their statutory right to reasonable telephone access, and DOC's contractual obligations under a prior settlement and consent decree. In addition, one of the prisoners challenged DOC officers' decision to deny him access to a computer programming book he ordered from outside the prison. He contended that DOC placed a content-specific restriction on the educational materials and publications prisoners were allowed, violating the Alaska Constitution's free speech provisions as well as prisoners' right to reformation. Each of these challenges reached the Alaska Supreme Court after inmates exhausted the administrative process from prison. Inmates then appealed to the superior court, which denied relief. The Alaska Supreme Court determined the superior court record did not provide enough evidence for it to meaningfully determine the reasonableness of the rates charged inmates for local telephone calls; therefore the Court reversed denial of relief and remanded for further fact-finding by the trial court. The Court concluded that the facility's restrictions on programming-related books were rationally related to a legitimate interest, and because they did not infringe on the right to rehabilitation, it affirmed denial of a prisoner's motion to enforce his claimed right to a particular text about computer programming.

Berger v. Bryant

Court: Arkansas Supreme Court
Citation: 2020 Ark. 357
Opinion Date: April 23, 2020
Judge: Rhonda K. Wood

Areas of Law: Criminal Law

The Supreme Court affirmed the judgment of the circuit court denying Appellant's petition to proceed in forma pauperis on a petition for writ of mandamus and a motion for declaratory judgment, holding that Appellant failed to state a colorable cause of action. In 1998, Appellant was convicted of rape. In his petition for a writ of mandamus, Appellant asserted that he sought information pursuant to the Arkansas Freedom of Information Act regarding his rape conviction but received no response. The circuit court denied the petition. The Supreme Court affirmed, holding (1) even if Appellant had requested disclosable information, he would not be entitled to inspect it as an incarcerated person; and (2) Appellant did not demonstrate a legitimate claim given the facts presented and therefore failed to establish a colorable cause of action to support his request to proceed in forma pauperis.

Carroll v. State

Court: Arkansas Supreme Court
Citation: 2020 Ark. 360
Opinion Date: April 23, 2020
Judge: Wynne
Areas of Law: Criminal Law

The Supreme Court affirmed the judgment of the circuit court denying Appellant's motion for leave to file a petition for writ of error cram knobs, holding that the circuit court did not abuse its discretion in declining to issue the writ. Appellant pled guilty to rape and was sentenced as a habitual offender to 720 months' imprisonment. In his coram nobis petition, Appellant alleged several grounds for relief, including claims of actual innocence, an invalid arrest warrant, a coerced guilty plea, and prosecutorial misconduct. The circuit court denied the motion. The Supreme Court affirmed, holding that Appellant did not demonstrate that that the writ should issue and failed diligently to proceed on his claim for coram nobis relief.

Cave v. State

Court: Arkansas Supreme Court
Citation: 2020 Ark. 356
Opinion Date: April 23, 2020
Judge: Josephine L. Hart
Areas of Law: Civil Rights, Constitutional Law, Criminal Law

The Supreme Court affirmed the judgment of the circuit court denying Appellant's pro se petition for writ of habeas corpus, holding that the circuit court did not err in denying the petition. Appellant was found guilty of two counts of delivery of a controlled substance and one count of maintaining a drug premises. In his habeas petition, Appellant argued that he was actually innocent because his arrest and conviction was based on the false testimony of a witness who had a lengthy criminal history. Appellant further argued that the writ should issue because he was not afforded effective assistance of counsel. The circuit court denied the petition. The Supreme Court affirmed, holding (1) Appellant's claims regarding the witness's credibility do not constitute a valid assertion that he was being unlawfully detained; and (2) Appellant did not actually connect an allegation of ineffective assistance of counsel to his allegation that he was unlawfully detained.

Chatmon v. Kelley

Court: Arkansas Supreme Court
Citation: 2020 Ark. 355
Opinion Date: April 23, 2020
Judge: Josephine L. Hart
Areas of Law: Criminal Law

The Supreme Court denied Appellant's appeal from the order of the circuit court denying his petition to proceed in forma pauperis on the grounds that Appellant failed to state a colorable cause of action in a petition for writ of habeas corpus, holding that the circuit court did not abuse its discretion by denying Appellant's in forma pauperis petition. In his habeas petition, Appellant alleged that the trial court lacked jurisdiction in his criminal case. Before this case was submitted to the Supreme Court, Appellant filed two

motions, including a "Judicial Notice of a Void Judgment" and a "Notice to the Court." The Supreme Court denied the motions, holding that neither motion was cognizable under the Court's rules. The Court then affirmed the Supreme Court's denial of Appellant's in forma pauperis petition, holding that the circuit court correctly found that Appellant did not assert a colorable cause of action.

McClinton v. State

Court: Arkansas Supreme Court
Citation: 2020 Ark. 353
Opinion Date: April 23, 2020
Judge: Karen R. Baker
Areas of Law: Criminal Law

The Supreme Court denied Petitioner's second petition requesting permission to proceed in the trial court with a petition for writ of error coram nobis, holding that Petitioner's proposed attack on the judgment had no merit. Petitioner was convicted of raping a mentally handicapped sixteen-year-old girl and was sentenced to life imprisonment. In his first petition for writ of error coram nobis Petitioner alleged a number of errors in the trial procedure. The first petition was denied. In his second coram nobis petition, Petitioner alleged violations of Brady v. Maryland, 373 U.S. 83 (1963). The Supreme Court denied the writ, holding that Petitioner failed to meet his burden of demonstrating a fundamental error of fact extrinsic to the record.

Siegel v. State

Court: Arkansas Supreme Court
Citation: 2020 Ark. 359
Opinion Date: April 23, 2020
Judge: Wynne
Areas of Law: Criminal Law

The Supreme Court dismissed Appellant's appeal from the circuit court's orders denying her motions to declare Ark. Code Ann. 5-62-106 (disposition

of animal) and Ark. Code Ann. 5-62-111 (prevention of cruelty) unconstitutional and conditionally granting her motion for return of seized property, holding that there was no final, appealable order in this case. Appellant was convicted of thirty-one misdemeanor counts of cruelty to animals. The circuit court subsequently dismissed the charges on speedy-trial grounds. The State appealed, and the Supreme Court dismissed the appeal on the grounds that it was not authorized. Appellant had filed motions seeking a declaration that sections 5-62-106 and -111 are unconstitutional and seeking the return of her seized property. The circuit court denied the constitutional claims and entered a conditional order granting Appellant's motion for return of seized property. Appellant appealed. The Supreme Court dismissed the appeal, holding that because the conditional order did not make specific findings as to the return of the property or as to damages and because it expressly left open the possibility of further proceedings, there was no final, appealable order in this case.

Thomas v. State

Court: Arkansas Supreme Court
Citation: 2020 Ark. 354
Opinion Date: April 23, 2020
Judge: Josephine L. Hart
Areas of Law: Civil Rights, Constitutional Law, Criminal Law

The Supreme Court affirmed Appellant's conviction of capital murder, holding that the evidence was sufficient to sustain the conviction and that the circuit court did not err in denying Appellant's motion to suppress tracking data generated by his cellphone. On appeal, Appellant argued that the trial court erred by denying his directed-verdict motion because the evidence supported the defense's theory of the case that he did not intend to shoot the victim. Further, Appellant argued that the court abused its discretion in denying his motion to suppress evidence obtained from the seizure of AT&T phone records. The Supreme Court disagreed, holding (1) the evidence was sufficient to support the capital murder conviction; and (2) the circuit court correctly denied the motion to suppress.

California v. Landowski

Court: California Courts of Appeal
Docket: C080210(Third Appellate District)
Opinion Date: April 23, 2020
Judge: Andrea Lynn Hoch
Areas of Law: Constitutional Law, Criminal Law

Defendant Michael Reyes, Jr., an active Norteno gang member (from the Broderick Boys subset), confronted a former Norteno gang member (from the Franklin Boys subset), "S.," about a physical altercation that occurred between S. and Reyes's stepfather over a debt. That earlier altercation had taken place in front of Reyes's autistic younger brother. Reyes pulled out a handgun and asked S. if he had a problem. S., who was riding his bicycle with his wife, "R.," when Reyes confronted him with the gun, stopped briefly, told Reyes to put the gun down if he wanted to fight, and then started to ride away. This angered Reyes, prompting him to fire six rounds at S. from behind. S. Was hit but survived. R. Was a short distance in front of S., but was not hit. Defendants Liberty Landowski and Lisa Humble were with Reyes at the time of the shooting and aided in his efforts to avoid being apprehended by law enforcement authorities. Reyes, Landowski, and Humble were tried together before the same jury. Reyes was convicted of one count of attempted murder (Count 1), two counts of assault with a semiautomatic firearm (Counts 2 and 4), one count of possession of a firearm by a convicted felon (Count 5), and one count of possession of ammunition by a convicted felon (Count 6). In addition to various firearm and other enhancements, the jury found Reyes committed the crimes for the benefit of, at the direction of, or in association with a criminal street gang with the specific intent to promote, further, or assist in criminal conduct by gang members. The jury convicted Landowski and Humble of being accessories to Reyes's criminal conduct (Count 9) and also found true gang enhancement allegations attached to that crime. Reyes challenged the sufficiency of the firearm evidence presented to support his conviction, and all defendants challenged the sufficiency of the evidence supporting their gang enhancements. The Court of Appeal determined Senate Bill 620 (2017-2018 Reg. Sess.) gave the trial court discretion to strike firearm enhancements in the interest of justice and applied retroactively; and Senate Bill 136 (2019-2020 Reg. Sess.) eliminated such enhancements,

and also applied retroactively. To these issues, the Court remanded for the trial court's consideration. The Court affirmed the trial court in all other respects.

California v. May

Court: California Courts of Appeal
Docket: C084302(Third Appellate District)
Opinion Date: April 20, 2020
Judge: Ronald B. Robie
Areas of Law: Constitutional Law, Criminal Law

Defendant Raymond May was found guilty by jury of possessing an assault weapon and a machine gun based on his possession of a single AK-47 assault rifle while guarding a marijuana plantation. He was sentenced to probation, which included an electronic search condition. On appeal, defendant argued there was a lack of sufficient evidence corroborating his accomplice's testimony and demonstrating he knew of the firearm's illegal character. He further alleged the trial court erred in instructing the jury: that the accomplice instruction should have included language specifying that the accomplice testimony needed to prove more than defendant's mere presence or access to the firearm. Furthermore, defendant argued the electronic search condition imposed as part of his probation failed under the standards announced in California v. Lent, 15 Cal.3d 481 (1975). The Court of Appeal agreed defendant's electronic search condition should have been stricken, but otherwise affirmed.

California v. Perez

Court: California Courts of Appeal
Docket: E072260(Fourth Appellate District)
Opinion Date: April 20, 2020
Judge: Miller
Areas of Law: Constitutional Law, Criminal Law

In 2009, defendant-appellant Rudy Perez pled guilty to active gang

participation under Penal Code section 186.22(a), and unlawful possession of a firearm under section 12025(b)(6). In 2010, defendant pled guilty to residential burglary under section 459, and active gang participation under section 186.22(a). In August of 2018, the State filed a new felony complaint, alleging one of the prior gang participation convictions as a strike prior. In 2018, defendant moved to vacate the two prior gang participation convictions based upon changes in the law that rendered them invalid. The trial court denied defendant's motion. In 2019, defendant asked for reconsideration, which was again denied. Thereafter, defendant filed a timely notice of appeal from the denial of his motion to vacate the convictions. The Court of Appeal found that defendant pled guilty to street terrorism under Penal Code section 186.22(a) in 2009 and 2010, and it was undisputed that while committing these offenses, defendant acted alone. However, subsequent to defendant's guilty pleas, in 2012, the California Supreme Court held that a defendant had to act in concert with a fellow gang member in order to be guilty of street terrorism. At that time, defendant could have filed a state habeas petition requesting relief, but failed to do so. "Defendants can lose remedies that are established by law when they fail to invoke such remedies in time." Section 1473.7 became effective in 2017. In defendant's motion filed in the trial court, defendant failed to state what new evidence was discovered, instead arguing that the trial court was allowed "to vacate a conviction where the defendant is innocent as a matter of law or where vacating the conviction is in the interest of justice, even though the defendant is no longer in custody or otherwise restrained by the conviction." The Court of Appeal concurred with the trial court's reason to deny relief, determining that "while the outcome in this case may be unfortunate for defendant, we are not here to rewrite legislation. The Legislature could amend section 1473.7 to address issues raised in this case. However, under the laws, as written, we must uphold the trial court's order."

People v. Bell

Court: California Courts of Appeal
Docket: B288528(Second Appellate District)
Opinion Date: April 23, 2020
Judge: Stratton
Areas of Law: Criminal Law

Defendant was convicted of one count of attempted robbery, one count of second degree murder, and one count of hit and run driving. The jury found not true the allegation that a principal was armed in the commission of the attempted robbery. The trial court found true the allegations that defendant had served four prior prison terms within the meaning of Penal Code section 667.5, subdivision (b). Defendant raised 13 claims of error on appeal. The Court of Appeal held that the section 667.5, subdivision (b) enhancement terms must be stricken and the matter remanded to the trial court for resentencing. The court also held that defendant forfeited some of his substantive claims and other lack merit. Finally, the court held that, if there is instructional error, the errors are harmless under any standard of review. Accordingly, the court affirmed the judgment of conviction.

People v. Drayton

Court: California Courts of Appeal
Docket: H046928(Sixth Appellate District)

Opinion Date: April 17, 2020
Judge: Danner
Areas of Law: Criminal Law

In 1991, the Wards and their teenage daughter awoke and discovered four men, including Drayton, inside their house. Two were armed. One told the daughter he was going to rape her and placed a firearm inside her vagina. Drayton told the man not to do it. Drayton had a gun and held Mrs. Ward down during the robbery. Two others shot and killed Mr. Ward. Drayton and the others left without seeking help for the Wards. Drayton did not shoot Mr. Ward or threaten to rape the daughter. Drayton surrendered the next day. Drayton's sole prior conviction was a misdemeanor; he had no reported history of violence. Drayton was sentenced to 29 years to life imprisonment. In 2019, Drayton sought resentencing under Penal Code 1170.95, declaring that he "was not a major participant ... or did not act with reckless indifference to human life." Senate Bill 1437, effective January 1, 2019, restricted the circumstances under which a person can be liable for felony murder and enacted Penal Code 1170.95, which allows an individual, previously convicted of felony murder, to petition to have his murder conviction vacated and to be resentenced. The court of appeal directed the trial court to hold a hearing under section 1170.95(d) and to accept the assertions in the petition as true unless facts in the record conclusively refute them as a matter of law. If, accepting the petitioner's assertions as true, he meets section 1170.95(a)'s requirements for relief, the court must issue an order to show cause. In assessing the prima facie showing, the trial court should not weigh evidence or make credibility determinations.

People v. Robinson

Court: California Courts of Appeal
Docket: B293746(Second Appellate District)
Opinion Date: April 20, 2020
Judge: Wiley
Areas of Law: Criminal Law

After defendant penetrated an unconscious woman with his fingers, he challenged evidentiary rulings and requests a presentence conduct credit. The Court of Appeal held that the trial court properly excluded cumulative

evidence about past times the woman was intoxicated at the relevant bar, and any error in allowing a drug recognition expert to testify about whether the woman was incapacitated was harmless. However, the court held that the trial court undercalculated defendant's presentence custody credit because he was not convicted of a violent felony under Penal Code section 2933.1, which would otherwise limit those credits. Accordingly, the court directed the trial court to award defendant 104 days of presentence custody credit and to amend the abstract of judgment, affirming in all other respects.

People v. Torres

Court: California Courts of Appeal
Docket: B292551(Second Appellate District)
Opinion Date: April 20, 2020
Judge: Kenneth R. Yegan
Areas of Law: Criminal Law

Where, as here, the trial court factually finds that a self-represented defendant has engaged in an attempt to intimidate a witness, the constitutional right of self-representation can, in the exercise of the trial court's sound discretion, be revoked. The Court of Appeal affirmed defendant's conviction and sentence for two counts of battery on an ex-girlfriend. Colorado v. Lujan

Court: Colorado Supreme Court
Citation: 2020 CO 26
Opinion Date: April 20, 2020
Judge: Brian D. Boatright
Areas of Law: Constitutional Law, Criminal Law

Abel Lujan was charged with first-degree murder for the death of his girlfriend after she was found beaten and strangled behind a friend's house. At trial, two women testified for the State about Lujan's prior violent behavior towards them. Prior to admitting this evidence, the trial court read a limiting instruction, telling the jury that it could only consider the evidence for the purposes of establishing Lujan's motive, intent, or common plan. A copy of this instruction was not given to the jury for deliberations; however, the jury did receive an instruction at the close of the evidence explaining that certain evidence could only be considered for the limited purposes for which it was admitted. While deliberating, the jury submitted a question seeking clarification about the limiting instruction. Over defense counsel's objection, the trial court cleared the courtroom of the public and parties, leaving only the judge, bailiff, and court reporter; the judge then brought in the jury and reread the limiting instruction that it had previously read twice in open court. The jury ultimately found Lujan guilty of second-degree murder. Lujan appealed, arguing that the court's actions when rereading the jury instruction constituted a courtroom closure that violated his Sixth Amendment right to a public trial. A division of the court of appeals agreed and reversed Lujan's conviction. The State argued on certiorari review that the Colorado Supreme Court adopt a triviality standard, under which a defendant's constitutional right to a public trial was not violated when the closure at issue was trivial. In so doing, the State argued that the brief courtroom closure here was trivial and therefore did not violate Lujan's public trial right. The Court concurred with the State, adopted the standard and reversed the appellate court's decision.

Archer v. State

Court: Florida Supreme Court
Docket: SC19-841
Opinion Date: April 23, 2020
Judge: Per Curiam
Areas of Law: Civil Rights, Constitutional Law, Criminal Law

The Supreme Court affirmed the order of the circuit court denying Appellant's successive motion to vacate his sentence of death under Fla. R. Crim. P. 3.851, holding that the circuit court did not err in denying the Rule

3.851 motion. Appellant was convicted of first-degree murder, armed robbery, and grand theft. Appellant was sentenced to death for the murder. The Supreme Court affirmed the convictions but reversed Appellant's death sentence and remanded the case for a new penalty phase. After a new penalty phase, Appellant was again sentenced to death. In his successive Rule 3.851 motion, Appellant raised three claims. The circuit court denied relief. The Supreme Court affirmed, holding that the circuit court (1) properly denied Appellant's claim that his death sentence violated the Sixth and Eighth Amendments in light of Hurst v. Florida, 136 S. Ct. 616 (2016), and Hurst v. State, 202 So. 3d 40 (Fla. 2016); (2) correctly denied Appellant's claim that his sentence violated the Eighth Amendment; and (3) did not err in denying Appellant's claim of newly discovered evidence.

Collins v. Georgia

Court: Supreme Court of Georgia
Docket: S20A0158
Opinion Date: April 20, 2020
Judge: David E. Nahmias
Areas of Law: Constitutional Law, Criminal Law

Appellant Tommy Collins was convicted of felony murder in connection with the stabbing death of 14-year-old Rueben Hand. Friends gathered to watch the Peach Drop on New Year's Eve 2010; a disagreement ensued and Hand was stabbed near the Five Points MARTS station shortly after midnight. Appellant's only argument on appeal was that the trial court plainly erred when it gave the jury the State's requested instruction on "revenge for a prior wrong." Seeing no error, "much less plain error," the Georgia Supreme Court affirmed.

Rickman v. Georgia

Court: Supreme Court of Georgia
Docket: S20A0127
Opinion Date: April 20, 2020
Judge: Harold D. Melton
Areas of Law: Constitutional Law, Criminal Law

Victoria Rickman was convicted by jury of malice murder and a related firearm offense in connection with the shooting death of William Carter, Jr. Rickman and Carter had a tumultuous on-again, off-again relationship with a history of verbal and physical abuse, false accusations of sexual assault, empty threats to obtain temporary protective orders, and numerous calls to

911. In the days leading up to Carter's death, the pair was talking and meeting again despite a recent break-up. On one such 911 call, officers went to Rickman's residence responding to claims shots were fired. Rickman responded holding her small dog, hair wet, and in pajamas. She did not appear to be injured, and nothing in the home looked disturbed or out of place. Rickman told the officers, "he raped me again and I shot him." Officers found Carter laying face up on the bed naked with multiple gunshot wounds to his body. An autopsy revealed that Carter was shot ten times – four times in the chest, three times in the back, once on the arm, and twice in the head. Rickman's examining physician testified that he found no injuries on Rickman consistent with her description of events, and no signs of trauma to her vaginal cavity. Rickman appealed her convictions, arguing she was denied effective assistance of counsel and that the trial court erred in admitting improper character evidence. Finding no reversible error, the Georgia Supreme Court affirmed.

Robinson v. Georgia

Court: Supreme Court of Georgia
Docket: S20A0265
Opinion Date: April 20, 2020
Judge: Peterson
Areas of Law: Constitutional Law, Criminal Law

Herbert Robinson appealed his convictions for malice murder, armed robbery, and possession of a firearm during the commission of a felony in connection with the death of Michael Moore. On appeal, he argued the trial court erred by allowing the State to use two firearms for demonstrative purposes during trial, and by allowing body-camera footage to be shown at trial. He also argued his trial counsel was ineffective for failing to object to a letter written by Robinson's cellmate being available to the jury for review during deliberations, and for failing to object to a visual aid used by the State during closing arguments. Because Robinson failed to show ineffective assistance of counsel or reversible error by the trial court, the Georgia Supreme Court affirmed.

Santana v. Georgia

Court: Supreme Court of Georgia
Docket: S20A0563
Opinion Date: April 20, 2020
Judge: Warren
Areas of Law: Constitutional Law, Criminal Law

Cuevas Carlos Santana was convicted by jury of malice murder and other crimes in connection with the 2010 shooting deaths of Israel Espinoza Mendoza, Vincente Soto Chavez, and Renato Soto Valencia. On appeal, Santana argues that the evidence was insufficient to support his convictions, that the trial court erred by declining to grant Santana a new trial on the general grounds, and that trial counsel provided ineffective assistance. Finding no reversible error, the Georgia Supreme Court affirmed Santana's convictions.

Sullivan v. Georgia

Court: Supreme Court of Georgia
Docket: S20A0056
Opinion Date: April 20, 2020
Judge: Warren
Areas of Law: Constitutional Law, Criminal Law

A jury convicted Antonio Sullivan of malice murder and other crimes in connection with the shooting death of Wava Benton. On appeal, Sullivan contended his trial counsel was constitutionally ineffective by failing to present evidence at trial to corroborate Sullivan's testimony about prior difficulties between Sullivan and Benton, and by failing to procure expert testimony about Sullivan's mental health—specifically about post-traumatic stress disorder— to be presented to the jury. The Georgia Supreme Court determined Sullivan failed to establish that his trial counsel was deficient in either respect, and therefore affirmed his convictions.

Turner v. Georgia

Court: Supreme Court of Georgia
Docket: S20A0247
Opinion Date: April 20, 2020
Judge: Warren
Areas of Law: Constitutional Law, Criminal Law

Appellant Ronald Turner appeals from his conviction for malice murder stemming from the stabbing death of William King. The stabbing took place outside an apartment at which Turner had driven in order to trade food for drugs. Turner testified in his own defense at trial and claimed that King hit him in the head with a beer bottle because Turner owed money to King from a prior drug transaction. Turner testified that he tried to get away from King, but that King chased him down and grabbed his jacket. According to Turner, King was getting ready to hit him again when Turner stabbed King in self-defense. Appealing his ultimate conviction, Turner contended he was denied the effective assistance of counsel in three respects. Seeing no reversible error after a review of the trial court record, the Georgia Supreme Court affirmed Turner's conviction.

Valrie v. Georgia

Court: Supreme Court of Georgia
Docket: S20A0380
Opinion Date: April 20, 2020
Judge: Keith R. Blackwell
Areas of Law: Constitutional Law, Criminal Law

Reuben Valrie was tried by jury and convicted of murder and other crimes in connection with the death of his infant daughter Aliyana. Valrie appealed, claiming that he was denied the effective assistance of counsel. Aliyana died as a result of closed head trauma, with a blunt-force abdominal injury as a secondary cause of death, which investigators determined was consistent with being shaken or dropped. At trial, Valrie presented the testimony of four expert witnesses who testified that Aliyana died of natural causes and that the injuries to her brain and abdomen were caused by

events such as post-mortem CPR and the “rough” handling of her body by first responders. The jury rejected this defense and found Valrie guilty of murder and the other charges. Valrie contended that his trial lawyer should have raised a hearsay objection to the admission of recorded statements that his girlfriend (and Aliyana's mother) made to police investigators (as well as the testimony of one of those investigators about some of those statements). Alternatively, Valrie argued that his lawyer should have sought the redaction of certain portions of the recorded statements that impugned his character. The Georgia Supreme Court concluded Valrie failed to present evidence that his trial counsel was deficient, or that he was prejudiced by any alleged failures. According, the Court affirmed conviction.

Williams v. Georgia

Court: Supreme Court of Georgia
Docket: S20A0241
Opinion Date: April 20, 2020
Judge: Keith R. Blackwell
Areas of Law: Constitutional Law, Criminal Law

Richard Williams, II, was tried by jury and convicted of murder in connection with the strangulation death of Cory Robinson. Williams and Robinson were involved in a sexual relationship and had been living together at an extended-stay hotel. Kelvin Spencer was a close friend of both Williams and Robinson. When Spencer met Williams at the hotel room, Williams looked angry and had scratches on his neck. Spencer saw Robinson lying on the floor in a “praying position.” Spencer did not believe Robinson was dead, and he helped Williams move clothes and other things to a U-Haul truck parked outside, in preparation for a move. Williams did not testify or present any evidence. Based on his lawyer’s opening and closing arguments, the defense theory was that Spencer killed Robinson because he was jealous of Williams’s relationship with Robinson. Williams’s sole claim on appeal was that he was denied the effective assistance of counsel when his trial lawyer failed to present as a defense that Williams accidentally killed Robinson during consensual erotic asphyxiation. He argued that his lawyer's discomfort with the topic of homosexual BDSM activity, and his own problems with the Georgia State Bar, precluded presentation of the "true"

version of events, and that Williams acceded to the lawyer's defense strategy only "through ignorance and that he did not know that a defense based on consensual erotic asphyxiation was available." Finding no reversible error, the Georgia Supreme Court affirmed conviction.

State v. Malave

Court: Supreme Court of Hawaii
Docket: SCWC-18-0000332
Opinion Date: April 20, 2020
Judge: Mark E. Recktenwald
Areas of Law: Criminal Law

The Supreme Court affirmed the judgment of the intermediate court of appeals (ICA) affirming Defendant's conviction of sexual assault in the first degree on the complaining witness pursuant to Haw. Rev. Stat. 707-730(1)(b), holding that the ICA did not err in affirming the family court. Specifically, the Supreme Court held (1) the jury should have been instructed to determine jurisdictional facts, but the error was harmless beyond a reasonable doubt; and (2) the ICA did not err in finding that there was no rational basis in the record to support providing the jury instruction of the lesser included offense of sexual assault in the third degree.

State v. Malave

Court: Supreme Court of Hawaii
Docket: SCWC-18-0000332
Opinion Date: April 22, 2020
Judge: Mark E. Recktenwald
Areas of Law: Criminal Law

The Supreme Court affirmed the judgment of the intermediate court of appeals (ICA) affirming the judgment of the family court convicting Defendant on two counts of sexual assault in the first degree, holding that the ICA did not err in affirming the family court. At issue on appeal was the jurisdiction of the family court to try Defendant and the propriety of

instructing the jury on a lesser included offense. The ICA affirmed, concluding that the family court had subject matter jurisdiction pursuant to Haw. Rev. Stat. 571-14(a)(1) and that there was no rational basis to support an instruction of the lesser included offense of sexual assault in the third degree. The Supreme Court affirmed, holding (1) although the jury should have been instructed to determine jurisdictional facts, the error was harmless; and (2) the family court was not obligated to instruct the jury on the lesser included offense of sexual assault in the third degree.

Idaho v. Burke

Court: Idaho Supreme Court - Criminal
Docket: 46841
Opinion Date: April 22, 2020
Judge: Moeller
Areas of Law: Constitutional Law, Criminal Law

Prior to sentencing, defendant James Burke was committed to the state mental hospital for 56 days to restore him to competency. After being evaluated and deemed competent to proceed to trial, Burke was returned to the county jail and later pleaded guilty pursuant to a plea agreement. At the conclusion of his sentencing hearing, Burke sought credit for the 56 days of time spent in court-ordered commitment. The district court denied the motion, concluding that commitment to a state mental hospital did not fall under the definition of 'incarceration' in Idaho Code section 18-309. After reviewing this issue carefully, the Idaho Supreme Court disagreed with the district court's "thorough and thoughtful analysis," holding that court-ordered commitment to state custody pursuant to Idaho Code sections 18-210 and 18-211 met the functional and legal definition of "incarceration" under Idaho Code section 18-309. "The extent of the liberty interests restricted by Burke's court-ordered commitment to State Hospital North are just too similar to imprisonment to conclude otherwise." Accordingly, the Court reversed the district court's order denying Burke's request for credit for time served and remanded the case for the district court to enter an order crediting him with the fifty-six days he spent committed to State Hospital North while the State restored his competency to face criminal charges.

State v. Gibbs

Court: Iowa Supreme Court
Docket: 18-1298
Opinion Date: April 17, 2020
Judge: Edward M. Mansfield
Areas of Law: Civil Rights, Constitutional Law, Criminal Law

The Supreme Court affirmed Defendant's conviction of murder in the second degree, holding that Defendant's Fifth Amendment rights were invaded when the trial judge instructed the jury that Defendant was required to notify law enforcement of his use of deadly force, but the error was harmless. During trial, Defendant asserted the defense of justification in his shooting of the victim. At issue on appeal was whether the district court abused its discretion by giving a jury instruction incorporating the terms of Iowa Code 704.2B. The instruction included a statement that a person using deadly force is required to notify law enforcement about his use of deadly force. Defendant argued before the Supreme Court that both section 704.2B and the jury instruction incorporating that section violated his Fifth Amendment rights. The Supreme Court affirmed, holding (1) instructing the jury that a homicide defendant is required to notify a law enforcement agency of his use of deadly force violates the defendant's Fifth Amendment rights; but (2) any error in this case was harmless beyond a reasonable doubt.

State v. Broxton

Court: Kansas Supreme Court
Docket: 114675
Opinion Date: April 17, 2020
Judge: Stegall
Areas of Law: Criminal Law

The Supreme Court affirmed Defendant's convictions for second-degree murder, burglary, and theft but reversed Defendant's sentences, holding

that any error during the guilt phase was harmless but that the district court erred by scoring Defendant's prior Florida burglary conviction as a person felony instead of a nonperson felony. On appeal, the court of appeals concluded that a trial court may instruct the jury on felony murder even though the State only charged the defendant with premeditated first degree murder. The Supreme Court disagreed, holding (1) the court of appeals erred in concluding that a district court may elect to provide a felony-murder instruction when that crime was not charged, and the district court properly found that the felony-murder instruction was not legally appropriate in this case; (2) the district court erred by excluding from evidence an exculpatory document from a Florida homicide investigation on the ground it was not relevant, but the error was harmless; and (3) the district court improperly scored Defendant's prior Florida burglary conviction as a person felony.

State v. Corbin

Court: Kansas Supreme Court
Docket: 119665
Opinion Date: April 17, 2020
Judge: Dan Biles
Areas of Law: Criminal Law

The Supreme Court affirmed the ruling of the district court on remand resentencing Defendant to his original mandatory term of imprisonment after once again finding he was not a person with intellectual disability, holding that the district court did not abuse its discretion when it rejected Defendant's intellectual disability motion and imposed a mandatory term of imprisonment. Defendant pled no contest to first-degree premeditated murder. Before sentencing, Defendant filed a motion pursuant to Kan. Stat. Ann. 21-6622(b) asserting that he was a person with intellectual disability and was thus not subject to a mandatory minimum prison term. The district court denied the motion and sentenced Defendant to a hard twenty-five life sentence. While Defendant's appeal was pending, the Legislature amended Kan. Stat. Ann. 76-12b01(i), which provides new standards for deciding intellectual disability. The Supreme Court reversed and remanded for reconsideration of Defendant's motion using the new criteria. On remand, the district court reaffirmed its earlier ruling and again sentenced Defendant

to a hard twenty-five life sentence. The Supreme Court affirmed, holding that the district court's ruling was reasonably based on the law and was supported by substantial competent evidence.

State v. Frazier

Court: Kansas Supreme Court
Docket: 117456
Opinion Date: April 17, 2020
Judge: Wilson
Areas of Law: Criminal Law

The Supreme Court reversed the decision of the district court affirming the judgment of the district court denying Defendant's motion to withdraw plea of no contest to one count of possession of heroin with intent to distribute, holding that the district court's decision in finding no good cause for Defendant to withdraw his plea was based on errors of fact and law, which were grounds for finding abuse of discretion. On appeal, Defendant argued that the district court abused its discretion in denying his motion to withdraw his plea of no contest based on misleading or false statements contained in the plea agreement. The court of appeals affirmed the district court. The Supreme Court reversed, holding (1) there was enough uncertainty in this case to indicate that Defendant's plea agreement was not understandingly made; and (2) therefore, Defendant must be allowed to withdraw his plea.

State v. Harris

Court: Kansas Supreme Court
Docket: 117362
Opinion Date: April 17, 2020
Judge: Wilson
Areas of Law: Civil Rights, Constitutional Law, Criminal Law

The Supreme Court reversed the judgment of the court of appeals affirming Defendant's conviction of possession fo marijuana, holding that Defendant's waiver of jury trial was legally insufficient. On appeal, Defendant argued that

he did not properly waive his right to a jury and asserted three other issues. The Supreme Court reversed the judgment of the court of appeals affirming Defendant's convictions without addressing the three remaining issues, holding that because the district court failed properly to apprise Defendant of his right to a jury trial and failed to ensure that Defendant understood the nature of the right he was giving up, Defendant's constitutional right to a jury trial was violated in this case.

State v. Catruch

Court: Maine Supreme Judicial Court
Citation: 2020 ME 52
Opinion Date: April 23, 2020
Judge: Andrew M. Mead
Areas of Law: Criminal Law

The Supreme Judicial Court affirmed the judgments of the trial court

terminating Appellant's participation in the Co-Occurring Disorders and Veterans Court (Veterans Court), holding that the court did not err or abuse its discretion in terminating Appellant's participation in the Veterans Court. The Veterans Court is a criminal docket that provides judicial monitoring, specialized treatment, and other services for military veterans who have disorders often attributable to their military service. Appellant was charged with leaving the scene of an accident and three other offenses. Appellant was admitted to the Veterans Court. Agreeing to sentencing outcomes in a plea agreement and entering into a bail contract, Appellant pleaded guilty to all charges against him. The court later terminated Appellant's participation in the Veterans Court, finding that Appellant had violated the conditions of his bail contract. The Supreme Judicial Court affirmed, holding (1) this matter was properly before the Court; and (2) given Appellant's failure to comply with the requirements for participation in the treatment court and his violations of the agreements, his termination from the Veterans Court was warranted.

State v. Paquin

Court: Maine Supreme Judicial Court
Citation: 2020 ME 53
Opinion Date: April 23, 2020
Judge: Andrew M. Mead
Areas of Law: Constitutional Law, Criminal Law

In this appeal from Defendant's conviction for eleven counts of gross sexual misconduct, the Supreme Judicial Court vacated the judgment of conviction on one count, vacated the dismissal of other counts and remanded for entry of a judgment of acquittal on those counts, and affirmed in all other respects, holding that Defendant's convictions on both Counts 5 and 30 violated his double jeopardy protections and that the court erred in allowing the State to dismiss Counts 27, 28, and 29 during trial without Defendant's consent. The indictment charged Defendant with fifteen counts (Counts 1-13, 30-31) of gross sexual misconduct against the victim and sixteen counts (Counts 14-29) of gross sexual misconduct against a second alleged victim. During trial, the court granted Defendant's motion for a judgment of acquittal on Counts 10-13, and the State dismissed Counts 27-29. Defendant was

found guilty of Counts 1-9 and 30-31 and not guilty on the remaining counts. The court entered judgment in accordance with the verdict. The Supreme Judicial Court held that the trial court erred in failing to rule that the Double Jeopardy Clause barred convictions on both Counts 5 and 30 and allowing the State to dismiss Counts 27, 28, and 29 rather than entering a judgment of acquittal on those counts.

Watson v. State

Court: Maine Supreme Judicial Court
Citation: 2020 ME 51
Opinion Date: April 21, 2020
Judge: Joseph Jabar
Areas of Law: Criminal Law

The Supreme Judicial Court vacated the judgment of the unified criminal docket denying Appellant's petition for post-conviction review, holding that Appellant was deprived of the effective assistance of counsel when his trial attorney played a video of the ten-year-old victim's interview with police and that Appellant was adversely affected. Appellant was convicted of two counts of gross sexual assault, one count of unlawful sexual contact, and one count of visual sexual aggression against a child. The Supreme Court affirmed. Appellant later filed a petition for post-conviction review claiming that his trial attorney's representation was deficient because introducing the videotaped recording of the victim's entire interview with law enforcement was unnecessary to provide evidence supporting the victim's potential motive to fabricate the allegations. The post-conviction court denied denied the petition. The Supreme Court vacated the judgment below, holding that trial counsel's conduct was deficient and that counsel's actions rose to the level of comprising the reliability of Appellant's conviction and undermining confidence in it.

Commonwealth v. Mazza

Court: Massachusetts Supreme Judicial Court

Docket: SJC-11363
Opinion Date: April 21, 2020
Judge: Budd
Areas of Law: Criminal Law

The Supreme Judicial Court reversed the order of the superior court denying Defendant's motion for a new trial and set aside the jury's verdicts of first degree murder and robbery, holding that a recently discovered witness statement made to the police ago constituted newly discovered evidence that "would probably have been a real factor in the jury's deliberations." At issue was Defendant's sixth motion for a new trial, which was predicated on newly discovered evidence consisting of, among other things, a recently discovered statement made to the police in 1972. The superior court denied the motion. As to the police statement, the judge found that it did not constitute newly discovered evidence because Defendant failed to establish that defense counsel did not have possession of it at the time of trial. The Supreme Judicial Court reversed and remanded the case for a new trial, holding (1) Defendant sustained his burden of establishing that defense counsel did not have the 1972 police statement prior to or at trial, and therefore, the statement constituted newly discovered evidence; and (2) there was a substantial risk that the jury would have reached a different conclusion had the evidence been admitted at trial.

Commonwealth v. McCarthy

Court: Massachusetts Supreme Judicial Court
Docket: SJC-12750
Opinion Date: April 16, 2020
Judge: Gaziano
Areas of Law: Civil Rights, Constitutional Law, Criminal Law

The Supreme Judicial Court affirmed the judgment of the district court denying Defendant's motions to suppress, holding that the limited use of automatic license plate readers (ALPRs) in this case did not implicate constitutional protections against unreasonable searches. While police were investigating Defendant on suspicion of drug distribution they used ALPRs on two bridges to track Defendant's movements. The police accessed historical data via ALPR technology and received real-time alerts, the last of

which led to Defendant's arrest. Defendant filed motions to suppress the ALPR data and the fruits of the arrest. The superior court denied the motions. The Supreme Judicial Court affirmed, holding that while the widespread use of ALPRs in the Commonwealth could implicate a defendant's constitutional protected expectation of privacy in the whole of his public movements, that interest was not invaded by the limited extent and use of the ALPR data in the instant case.

Garden v. Commonwealth

Court: Massachusetts Supreme Judicial Court
Docket: SJC-12821
Opinion Date: April 22, 2020
Judge: Per Curiam
Areas of Law: Criminal Law

The Supreme Judicial Court affirmed the judgment of a single justice of the court denying Petitioner's petition for extraordinary relief under Mass. Gen. Laws ch. 211, 3 seeking an order vacating Petitioner's plea to aggravated rape and dismissing the underlying indictment, holding that the single justice did not err or abuse his discretion in denying relief. The issues raised by Petitioner had all been raised and adjudicated through the normal appellate process. Petitioner then filed a motion to withdraw his guilty plea. The motion was denied, and the Appeals Court affirmed. In this petition for extraordinary relief, Petitioner sought an order vacating his plea to aggravated rape and dismissing the underlying indictment. The single justice denied relief. The Supreme Judicial Court affirmed, holding that the superintendence power was not available as an additional layer of appellate review once all other avenues had been exhausted.

In re Mitchell

Court: Massachusetts Supreme Judicial Court
Docket: SJC-12910
Opinion Date: April 22, 2020

Judge: Per Curiam
Areas of Law: Criminal Law

The Supreme Judicial Court affirmed the judgment of the county court denying, without a hearing, Petitioner's petition for relief under Mass. Gen. Laws ch. 211, 3, holding that the single justice did not err or abuse his discretion in denying relief. Defendant was convicted of several offenses. The Appeals Court reversed the convictions and remanded the matter for a new trial. Thereafter, the Commonwealth filed a nolle prosequi as to all the charges. In his Mass. Gen. Laws ch. 211, 3 petition, Defendant alleged that no crime had been committed and that he was wrongfully prosecuted. The single justice denied relief. The Supreme Judicial Court affirmed, holding that Defendant did not demonstrate entitlement to the exercise of this Court's superintendence powers.

Huff v. Brown

Court: Nebraska Supreme Court
Citation: 305 Neb. 648
Opinion Date: April 23, 2020
Judge: Lindsey Miller-Lerman
Areas of Law: Communications Law, Criminal Law

The Supreme Court reversed the portion of the district court's order granting in part a writ of mandamus requiring Doug Brown, the sheriff of Furnas County, to provide records to Herchel Huff pursuant to the public records statutes, holding that the district court erred when it determined that Huff had shown that Brown had a clear duty to provide the requested records. Huff, an inmate, sought, among other documents, the criminal history

records of jurors who had convicted hims. Furnas County sheriff Kurt Kapperman required a deposit of $750 before fulfilling the request. Huff subsequently filed a petition for writ of mandamus naming Kapperman as the defendant and seeking an order compelling Kapperman to release all requested documents. The court permitted Huff to substitute Brown, the current sheriff, in the caption of the case in place of Kapperman and granted in part mandamus. The Supreme Court reversed in part, holding that the district court (1) did not err when it substituted Brown's name for Kapperman's; but (2) erred in issuing mandamus because Huff failed to demonstrate a prima facie case that he had been denied a request for public records that the sheriff had a clear duty to provide under Neb. Rev. Stat. 84-712.

State ex rel. Kendrick v. Parker

Court: Supreme Court of Ohio
Citation: 2020-Ohio-1509
Opinion Date: April 21, 2020
Judge: Per Curiam
Areas of Law: Criminal Law

The Supreme Court affirmed the judgment of the court of appeals denying Appellant's request for a writ of prohibition and/or mandamus against Montgomery County Court of Common Pleas Judge E. Gerald Parker Jr., holding that the court of appeals correctly determined that Appellant's claim was barred by res judicata. Appellant sought a petition for writ of prohibition and/or mandamus against Judge Erik Blaine, the successor to the judge who sentenced Appellant, alleging that the sentencing court patently and unambiguously lacked jurisdiction to sentence him. Judge Parker, who had succeeded Judge Blaine, subsequently filed a motion for summary judgment. The court of appeals granted summary judgment for Judge

Parker, concluding that Appellant failed to demonstrate that the sentencing court patently and unambiguously lacked jurisdiction or that he lacked an adequate remedy at law and that res judicata barred Appellant's claim. The Supreme Court affirmed, holding that Appellant's claim was barred by res judicata.

State ex rel. Nelson v. Russo

Court: Supreme Court of Ohio
Citation: 2020-Ohio-1541
Opinion Date: April 22, 2020
Judge: Per Curiam
Areas of Law: Criminal Law

The Supreme Court affirmed the judgment of the court of appeals dismissing Appellant's petition for a writ of mandamus seeking to compel Cuyahoga County Court of Common Pleas Judge Nancy Margaret Russo to vacate the consecutive prison sentences imposed on Appellant in 1987, holding that Appellant had an adequate remedy at law and was barred from asserting additional claims of sentencing error he could have raised in his previous mandamus action. In 1987, Appellant was convicted of four counts of rape and one count of kidnapping. Appellant was sentenced to prison terms of fifteen to twenty-five years for each of the five counts, to be served consecutively. In 2019, Appellant sought a writ of mandamus to compel Judge Russo to vacate his consecutive sentences. The court of appeals dismissed the writ action, concluding that res judicata barred Appellant's claim and that his prior appeals were an adequate remedy at law to address the alleged defect in his consecutive sentences. The Supreme Court affirmed, holding that Appellant was not entitled to a writ of mandamus in this case.

State ex rel. Roberts v. Marsh

Court: Supreme Court of Ohio
Citation: 2020-Ohio-1540

Opinion Date: April 22, 2020
Judge: Per Curiam
Areas of Law: Criminal Law

The Supreme Court affirmed the judgment of the court of appeals dismissing Appellant's original action seeking a writ of procedendo and/or mandamus to compel Hamilton County Court of Common Pleas Judge Melba Marsh to issue a corrected sentencing entry, holding that the court of appeals correctly dismissed the petition as moot. Appellant was convicted of murder with a repeat-violent-offender specification. Appellant later asked the trial court to correct his sentence, arguing that he had improperly been sentenced to postrelease control. On remand, Judge Marsh vacated the postrelease-control sentence. Appellant appealed that order. The court of appeals noted that the trial court had not set forth all the information required under Crim.R. 32(C) in a single document and dismissed the appeal for lack of a final, appealable order. Appellant then filed this original action seeking to compel Judge Marsh to issue a corrected sentencing entry that constitutes a final, appealable order. Judge Marsh issued a nunc pro tunc sentencing entry that constituted a final, appealable order. The court of appeals then dismissed the petition as moot. The Supreme Court affirmed, holding that because Judge Marsh performed the act Appellant requested, the court of appeals dismissed the petition as moot.

State ex rel. Steiner v. Rinfret

Court: Supreme Court of Ohio
Citation: 2020-Ohio-1510
Opinion Date: April 21, 2020
Judge: Per Curiam
Areas of Law: Criminal Law

The Supreme Court affirmed the judgment of the court of appeals dismissing Appellant's petition for a writ of mandamus against Holmes County Court of Common Pleas Judge Robert D. Rinfret, holding that the court of appeals correctly determined that Appellant had an adequate remedy in the ordinary course of the law. Appellant, who was serving consecutive prison terms for five convictions, filed a petition for a writ of mandamus arguing that Judge Rinfret improperly sentenced him to a prison

term of nine years for his attempted rape conviction instead of the maximum term of eleven years. The court of appeals dismissed the petition, determining that Appellant had failed to file a mandatory affidavit of his prior civil actions and had an adequate remedy in the ordinary course of the law. The Supreme Court affirmed, holding that relief in mandamus was not available because Petitioner had an adequate remedy in the ordinary course of the law.

State v. Jeffries

Court: Supreme Court of Ohio
Citation: 2020-Ohio-1539
Opinion Date: April 22, 2020
Judge: Donnelly
Areas of Law: Criminal Law

The Supreme Court affirmed the judgment of the court of appeals upholding Defendant's convictions of four counts related to two specific instances of sexual abuse of D.S., holding that the trial court and court of appeals correctly applied Ohio's rape-shield law and determined that evidence of D.S.'s prior nonconsensual sexual assault was inadmissible. On appeal, Defendant asserted that the trial court erred in prohibiting him from introducing evidence during trial that D.S. had previously been sexually assaulted by another person, arguing that the rape-shield law applies only to an accuser's prior consensual sexual activity. The lower court held that Ohio's rape-shield law addresses all sexual activity, not only consensual sexual activity. The court of appeals affirmed. The Supreme Court affirmed, holding (1) the plain meaning of the term "sexual activity" as used in the rape-shield law includes both consensual and nonconsensual sexual activity; and (2) therefore, all sexual activity is barred from admission into evidence by the rape-shield, absent certain exceptions listed in the law.

Pennsylvania v. Britton

Court: Supreme Court of Pennsylvania

Docket: 55 MAP 2018
Opinion Date: April 22, 2020
Judge: Max Baer
Areas of Law: Constitutional Law, Criminal Law

California law enforcement officers interviewed Appellant Stacy Britton in her California residence and, unbeknownst to her, recorded those interviews. Over Appellant's objection, Pennsylvania used those recordings as evidence to help convict Appellant of murder in Pennsylvania. The Pennsylvania Supreme Court granted allowance of appeal to examine whether the California law enforcement officers were acting as agents of the Pennsylvania State Police when they recorded the interviews with Appellant in her California home, and if so, whether Pennsylvania's constitutional and statutory protections were available to Appellant under those circumstances. The Court concluded the California law enforcement officers were not acting as agents of the Pennsylvania State Police when they interviewed Appellant, making analysis of whether any Pennsylvania-specific constitutional or statutory protections unwarranted. Because the Supreme Court concluded the Pennsylvania trial court reached the proper result in this matter, it affirmed that court's judgment.

Pennsylvania v. Copenhaver

Court: Supreme Court of Pennsylvania
Docket: 48 MAP 2019
Opinion Date: April 22, 2020
Judge: Thomas G. Saylor
Areas of Law: Constitutional Law, Criminal Law

In August 2015, a deputy sheriff conducted a vehicle stop of Appellant Victor Copenhaver's pickup truck. Upon approaching the truck, the deputy noticed an odor of alcohol and marijuana emanating from the passenger compartment. After administering field sobriety tests, he arrested Appellant for suspected driving under the influence of alcohol and controlled substances ("DUI"). Appellant was ultimately charged with DUI and other offenses. Appellant challenged the deputy's authority to conduct a traffic stop and sought suppression of all evidence obtained during the encounter. Rather than presenting testimony at a suppression hearing, the parties

stipulated that Appellant was driving the vehicle in question and that the deputy had training and qualifications equivalent to that of a police officer. The parties also agreed that the vehicle stop occurred as a result of the deputy observing the tailgate to the pickup truck being in a down position, which caught the deputy's attention. The deputy further observed the registration on the pickup truck was expired, and additionally, the registration number was identified as belonging to a vehicle other than the one on which it was attached. The issue this case presented for the Pennsylvania Supreme Court's review was whether the deputy could lawfully conduct the traffic stop based on the expired registration sticker, on a theory that such a violation amounts to a breach of the peace. The Supreme Court concluded driving a vehicle with an expired registration did not entail a breach of the peace. It vacated the superior court's order insofar as it held that the expired registration was a breach of the peace, thus alone authorizing the deputy to stop Appellant's vehicle. Notably, in light of its holding, the Supreme Court found the superior court did not proceed to consider other relevant questions, such as whether the parties' factual stipulation should have been read as indicating that the officer's understanding that the registration sticker was associated with a different vehicle arose in the pre-stop timeframe – consistent with the Commonwealth's position throughout this litigation. "These issues should be resolved in the first instance by the intermediate court on remand."

Pennsylvania v. Tedford

Court: Supreme Court of Pennsylvania
Docket: 773 CAP
Opinion Date: April 22, 2020
Judge: Donohue
Areas of Law: Constitutional Law, Criminal Law

Appellant Donald Tedford was convicted of first-degree murder and rape on February 6, 1987. He appealed the dismissal of his second petition for relief filed pursuant to the Post Conviction Relief Act ("PCRA"), on December 2, 2014, as amended by a counseled petition on May 5, 2015, and a supplemental petition filed on June 9, 2015. In connection with his initial filings, Tedford sought wholesale discovery of the prosecution's entire file,

but the PCRA court concluded that the petition (as amended) was not timely filed. Tedford also appealed the PCRA court's order denying his supplemental PCRA petition, in which he requested discovery, an evidentiary hearing, and/or a new trial based upon the admission of expert testimony presented at trial related to microscopic hair analysis. The PCRA court concluded that pursuant to PCRA Section 9545(b)(1)(ii), it had jurisdiction to consider the merits of Tedford's newly-discovered-facts claims, but ultimately it concluded Tedford had not asserted a meritorious claim in accordance with Section 9543(a)(2)(vi). Finding no reversible error in that analysis, the Pennsylvania Supreme Court affirmed dismissal of the petition for relief.

Pennsylvania v. Trahey

Court: Supreme Court of Pennsylvania
Docket: 38 EAP 2018
Opinion Date: April 22, 2020
Judge: Wecht
Areas of Law: Constitutional Law, Criminal Law

The trial court granted Timothy Trahey's motion to suppress the results of a blood test that revealed his blood alcohol concentration ("BAC"), finding no justification for the investigating officers' failure to obtain a search warrant before conducting the test. On the Commonwealth's appeal, the Superior Court reversed, opining that the Commonwealth's evidence sufficiently established the existence of exigent circumstances, thus excusing the absence of a warrant. The Pennsylvania Supreme Court reversed, finding that while the exigency analysis is an objective one, "even disregarding the officers' subjective motivations, or their candid acknowledgment that they would have obtained a search warrant if they thought it necessary, there was no time-sensitive need to conduct a warrantless blood test under the circumstances of this case. Accordingly, the Superior Court's conclusion that the test was justified by exigent circumstances was drawn in error."

In re Greg Abbott

Court: Supreme Court of Texas
Docket: 20-0291
Opinion Date: April 23, 2020
Judge: Per Curiam
Areas of Law: Constitutional Law, Criminal Law

The Supreme Court conditionally granted mandamus relief to the State seeking review of a temporary restraining order (TRO) blocking enforcement of Executive Order GA-13, which changes the rules applicable to judges' decisions regarding pre-trial bail, against judges, holding that the trial court lacked jurisdiction to order the judges' requested relief, even temporarily. GA-13 suspends certain statutes authorizing trial judges to release jail inmates with violent histories during the state of disaster due to the threat of the novel coronavirus. Plaintiffs alleged that GA-13 is unconstitutional and exceeds the governor's statutory emergency powers. Sixteen of the plaintiffs were Texas trial judges alleging that GA-13 improperly interferes with their judicial authority to make individualized bail decisions, and the other plaintiffs were public interest organizations and lawyer associations. The trial court issued a TRO blocking enforcement of GA-13 against judges. The Supreme Court conditionally granted mandamus relief, holding that the alleged threat of a criminal prosecution in this case did not give the judges standing to seek the invalidation of GA-13, and therefore, the trial court lacked jurisdiction to order their requested relief.

Stahmann v. Texas

Court: Texas Court of Criminal Appeals
Docket: PD-0556-18
Opinion Date: April 22, 2020
Judge: Barbara Hervey
Areas of Law: Constitutional Law, Criminal Law

Appellant Karl Stahmann was involved in an automobile accident, after which he threw a bottle of promethazine, a controlled substance, over a nearby wire fence before law enforcement arrived. The bottle landed two to three feet past the fence in plain view. He was convicted of third-degree

felony tampering with physical evidence and was sentenced to 10 years' confinement and fined $5,000. The judge suspended his sentence and placed him on community supervision for 10 years. Stahmann appealed, arguing in part that the evidence was insufficient to prove that he destroyed, altered, or concealed the prescription bottle. The court of appeals agreed that the evidence was insufficient, but instead of rendering an acquittal, it reformed the judgment to show that Stahmann was convicted of the lesser-included offense of attempted tampering with physical evidence, a state-jail felony. After review of the evidence presented at trial, the Texas Court of Criminal Appeals concluded the evidence was indeed insufficient to prove that Appellant altered the prescription pill bottle when he threw it over the fence because the mere act of throwing the bottle did not change the bottle itself. "While a rational jury could have reasonably inferred that Stahmann intended to conceal the pill bottle when he threw it over the wire fence, the evidence shows that he failed to conceal it as he intended because the bottle landed short of the bush in plain view on top of some grass." The Court affirmed the trial court's judgment.

Blanke v. Board of Pardons & Parole

Court: Utah Supreme Court
Citation: 2020 UT 16
Opinion Date: April 16, 2020
Judge: Himonas
Areas of Law: Criminal Law

The Supreme Court affirmed the decision of the court of appeals affirming the district court's denial of Appellant's petition for extraordinary relief, holding that, under the circumstances, the Utah Board of Pardons and Parole need not afford Appellant the due process protections explained in Neese v. Utah Board of Pardons and Parole, 416 P.3d 663 (2017), before it could determine that Appellant was a sex offender and condition his parole on sex offender treatment. Appellant was serving a prison sentence for his convictions of attempted child kidnapping and kidnapping. Because he was convicted of attempted child kidnapping Appellant was considered a sex offender under the sex offender registration statute. Further, Appellant admitted in his presentence report that he had sexual intercourse with a

fifteen-year-old. Appellant filed a petition for extraordinary relief alleging that the Parole Board had violated his due process rights by conditioning his parole on completion of sex offender treatment even though he had not committed a sex offense. Summary judgment was granted for the Parole Board. The Supreme Court affirmed, holding that the Parole Board owed Appellant no additional process before it considered unconnected sex offenses in its decision to require Appellant to undergo sex offender treatment.

Washington v. Escalante

Court: Washington Supreme Court
Docket: 97268-1
Opinion Date: April 23, 2020
Judge: Steven González
Areas of Law: Constitutional Law, Criminal Law

Alejandro Escalante was detained for hours in a secured area at a border crossing and, the State conceded, interrogated by federal agents without Miranda warnings. Statements he made during that interrogation were used by the State to convict him of drug possession. While a traveler briefly detained and questioned at the border was typically not "in custody" for Miranda purposes, "the government's power to detain and question people at the border without implicating Miranda has limits." Here, the Washington Supreme Court determined those limits were reached. "This border detention created the type of inherently coercive environment that demands Miranda warnings to ensure an individual's choice to speak is the product of free will." The Supreme Court held that Escalante was in custody when he was interrogated and reversed.

Washington v. Haggard

Court: Washington Supreme Court
Docket: 97375-0
Opinion Date: April 23, 2020

Judge: Barbara Madsen
Areas of Law: Constitutional Law, Criminal Law

A class C felony "washes out" and is omitted from a defendant's offender score as long as he or she is not convicted of any crime within five years of the last date of release from confinement. David Haggard was convicted of a misdemeanor offense within this five-year period, which was dismissed pursuant to RCW 3.66.067. When Haggard later pleaded guilty to burglary and arson, the trial court included prior class C felonies in his criminal history, finding that the dismissed misdemeanor conviction interrupted the washout period for those offenses. Haggard contended on appeal this was error. The Washington Supreme Court determined that because a dismissed conviction constituted a "conviction" under the Sentencing Reform Act of 1981 (SRA), and misdemeanor dismissal and vacation were distinct processes, so Haggard's offender score was properly calculated.

State v. Taylor

Court: Supreme Court of Appeals of West Virginia
Docket: 18-0502
Opinion Date: April 21, 2020
Judge: Walker
Areas of Law: Civil Rights, Constitutional Law, Criminal Law

The Supreme Court affirmed the judgment of the circuit court giving Petitioner credit for twelve days of time served toward the sentence he received for his felony conviction although Petitioner spent additional time in confinement for other charges that were dismissed in the universal plea agreement, holding that to grant Petitioner additional credit for time served would do little more than reward Petitioner for habitual criminal behavior. Petitioner was charged with several crimes and agreed to resolve the pending charges against him in a universal plea agreement. Under the terms of the agreement, Petitioner agreed to plea guilty to the charge of felony carrying a concealed firearm by a prohibited person. In exchange, the State agreed to drop the remaining charges. After he was sentenced, Petitioner argued that, in addition to the twelve days of credit for time served he was granted, he was constitutionally entitled to credit for time served

while he was incarcerated for charges that were resolved in the universal plea agreement. The Supreme Court affirmed, holding that Petitioner's circumstances implicated neither double jeopardy nor equal protection of the law such that additional credit for time served was constitutionally mandated.

State v. Harrison

Court: Wisconsin Supreme Court
Dockets: 2017AP002441-CR, 2017AP002440-CR
Opinion Date: April 17, 2020
Judge: Patience D. Roggensack
Areas of Law: Criminal Law

The Supreme Court affirmed in part and reversed in part the decision of the court of appeals reversing an order of the circuit court that granted sentence credit to Defendant, holding that the court of appeals correctly found that Defendant was not entitled to sentence credit but erred by advancing the commencement of Defendant's terms of extended supervision for Defendant's 2007 and 2008 cases. Specifically, the Court held (1) Defendant was not entitled to sentence credit under Wis. Stat. 973.155(1)(a) because the days he spent in custody for which he sought sentence credit were not in connection with the courses of conduct for which those sentences were imposed; and (2) the court of appeals erred by advancing the commencement of Defendant's terms of extended supervision for his 2007 and 2008 cases to the date they would have begun but for Defendant's confinement for unrelated convictions that were later set aside, holding that whether to employ advancement is a public policy decision best left to the legislature.

Rethinking Retroactivity in Light of the Supreme Court's Jury Unanimity Requirement

MICHAEL C. DORF

verdict post

In light of the U.S. Supreme Court's decision Monday in *Ramos v. Louisiana*, in which it held that the federal Constitution forbids states from convicting defendants except by a unanimous jury, Cornell law professor Michael C. Dorf discusses the Court's jurisprudence on retroactivity. Dorf highlights some costs and benefits of retroactivity and argues that the Court's refusal to issue advisory opinions limits its ability to resolve retroactivity questions in a way that responds to all the relevant considerations.

Criminal Law Opinions

Ramos v. Louisiana

Court: US Supreme Court
Docket: 18-5924
Opinion Date: April 20, 2020
Judge: Neil M. Gorsuch
Areas of Law: Civil Rights, Constitutional Law, Criminal Law

In 48 states and in federal court, a single juror's vote to acquit is enough to prevent a conviction; Louisiana and Oregon punish people based on 10-to-2 verdicts. Ramos was convicted in a Louisiana court by a 10-to-2 jury verdict and was sentenced to life without parole. The Supreme Court reversed. The Sixth Amendment right to a jury trial, as incorporated against the states by the Fourteenth Amendment, requires a unanimous verdict to convict a defendant of a serious offense. Juror unanimity is a vital common law right. The Court rejected an "invitation" to "perform a cost-benefit analysis on the historic features of common law jury trials and to conclude that unanimity does not make the cut." In overturning its 1972 "Apodaca" decision, the Court stated that the reasoning, in that case, was "gravely mistaken" and "sits uneasily with 120 years of preceding case law." The fact that Louisiana and Oregon may need to retry defendants convicted of felonies by non-unanimous verdicts whose cases are still pending on direct appeal "will surely impose a cost, but new rules of criminal procedure usually do."

United States v. Diaz-Rivera

Court: US Court of Appeals for the First Circuit
Docket: 18-1461
Opinion Date: April 20, 2020
Judge: Torruella
Areas of Law: Criminal Law

The First Circuit affirmed Defendant's upwardly variant sentence for one count of possession with intent to distribute cocaine and one count of using a firearm during and in relation to a drug-trafficking crime, holding that the sentence was neither procedurally nor substantively unreasonable. Pursuant to a plea agreement, Defendant pled guilty to drug-related crimes. After a sentencing hearing, the district court sentenced Defendant to an upwardly variant sentence of 180 months of imprisonment, thus declining to

impose the government's requested sentence. On appeal, Defendant challenged both the procedural and substantive reasonableness of his sentence. The First Circuit affirmed, holding that the 180-month sentence was neither procedurally nor substantively unreasonable.

United States v. Cotto

Court: US Court of Appeals for the Second Circuit
Docket: 18-2970
Opinion Date: April 20, 2020
Judge: Leval
Areas of Law: Criminal Law

A conviction for retaliating against a witness in violation of 18 U.S.C. 1513 does not require that the Government prove that defendant had knowledge of the federal nature of the proceeding. The Second Circuit rejected defendant's arguments to the contrary and affirmed his conviction for retaliating against a witness. The court remanded for revision of the provision of the sentence relating to the substance abuse treatment condition of supervised release; instructed the district court to consider on remand whether the court's forthcoming order in United States v. Traficante, No. 18-1962 (2d Cir., submitted Oct. 25, 2019) requires modification of the risk notification provision of supervised release; and granted the parties leave to reinstate this appeal to permit review of the district court's decision on remand as to the risk notification provision.

United States v. Rosa

Court: US Court of Appeals for the Second Circuit
Docket: 17-2004
Opinion Date: April 17, 2020
Judge: Nardini
Areas of Law: Criminal Law

Where a district court offers no explanation for its sentence, and where neither the adopted presentence report nor the statement of reasons

adequately demonstrates the court's reasoning, the court has committed plain error in violation of 18 U.S.C. 3553(c). The Second Circuit vacated defendant's sentence for conspiracy to commit wire fraud and aggravated identity theft. The court held that the district court failed to state its reasons for sentencing defendant as required under section 3553(c); the error is clear or obvious; and the error affected defendant's substantial rights. Accordingly, the court remanded for resentencing.

Fogle v. Sokol

Court: US Court of Appeals for the Third Circuit
Docket: 19-1066
Opinion Date: April 21, 2020
Judge: Matey
Areas of Law: Civil Rights, Constitutional Law, Criminal Law

In 1976, the body of 15-year-old “Kathy” was found near her Indiana County, Pennsylvania home. Kathy’s death involved a brutal assault, rape, and a gunshot to the head. Kathy's sisters, ages nine and 12, stated that she had gotten into a car with a man with blue eyes, black hair that came below his ears and curled at the ends, sideburns, heavy eyebrows, and a heavy mustache. Fogle had “straight reddish-blonde hair that dropped down his back and a matching, full beard that reached his waist.” After three years, Fogle became a suspect because a psychiatric patient described seeing Kathy get in a car with Fogle and his brother. The story was largely inconsistent with statements by Kathy’s sisters. Jailhouse informants were recruited and counseled by law enforcement with promises of leniency. The prosecutors “either knew about, encouraged, or permitted” this strategy. A jury found Fogle guilty of second-degree murder. In 2015, Fogle obtained DNA evidence excluding both himself and his brother as the source of semen collected from Kathy. His conviction was vacated. The Commonwealth declined to pursue new charges, describing the case as lacking “prosecutorial merit.” Fogle, having spent three decades in prison, sued the prosecutors and Indiana County under 42 U.S.C. 1983. The Third Circuit affirmed the denial of their motions to dismiss based on absolute immunity. Only truly prosecutorial functions, not investigative conduct, justify complete protection from suit. Fogle’s complaint alleges actions that fall

outside the narrow doctrine of absolute immunity.

James v. New Jersey State Police

Court: US Court of Appeals for the Third Circuit
Docket: 18-1432
Opinion Date: April 21, 2020
Judge: Porter
Areas of Law: Civil Rights, Constitutional Law, Criminal Law

Stephens called 911 and reported that Gibbons hit her and had a gun in his truck. The police responded. Stephens obtained a temporary restraining order, prohibiting Gibbons from possessing firearms and from returning to Stephens's house. The next day, Gibbons went to Stephens's house. Stephens was talking on the phone; the friend called the police. Gibbons left Stephens's house. Trooper Conza arrived. Stephens stated that Gibbons had waved a gun throughout their argument. Conza told Stephens to go to the police barracks and reported over the radio that Gibbons had brandished a firearm. Conza, with Troopers Bartelt and Korejko, visited the nearby home of Gibbons's mother, James. James stated that she did not know where Gibbons was and that he might be off his schizophrenia medication. While driving to the barracks, Stephens saw Gibbons walking alongside the road and called 911. The Troopers responded. Bartelt parked his car and, exiting, observed that Gibbons was pointing a gun at his own head. Bartelt drew his weapon, stood behind his car door, and twice told Gibbons to drop his weapon. Gibbons did not comply. Bartelt shot Gibbons twice within seconds of stopping his car. Gibbons died that night. In James' suit under 42 U.S.C. 1983, the Third Circuit held that Bartelt is entitled to qualified immunity because he did not violate Gibbons's clearly established rights. Bartelt's pre-standoff knowledge of Gibbons differs from that of officers involved in cited cases. Bartelt could reasonably conclude that Gibbons posed a threat to others.

Bazemore v. Best Buy

Court: US Court of Appeals for the Fourth Circuit
Docket: 18-2196
Opinion Date: April 21, 2020
Judge: Quattlebaum
Areas of Law: Criminal Law

Plaintiff filed suit against her employer, Best Buy, claiming that she was harassed because of her race and gender and subjected to a hostile work environment in violation of Title VII of the Civil Rights Act of 1964. Plaintiff's complaint stemmed from an incident where a coworker made a racist and sexually charged joke to a small group of coworkers that included plaintiff. The Fourth Circuit affirmed the district court's motion to dismiss and held that, in the case of allegedly harassing comments by a co-worker, an employee must allege plausible facts that the employer knew, or should have known, about the harassment and failed to take action reasonably calculated to stop it. Because plaintiff failed to do this, the court affirmed the district court's judgment. In this case, the coworker's conduct was not imputable to Best Buy where Best Buy took steps that were not only reasonably calculated to end such behavior, but that it did in fact end it.

United States v. Akande

Court: US Court of Appeals for the Fourth Circuit
Docket: 18-6833
Opinion Date: April 20, 2020
Judge: Diana Jane Gribbon Motz
Areas of Law: Criminal Law

After defendant moved under 28 U.S.C. 2255 to vacate his conviction based on the ineffective assistance of counsel, the district court denied the motion. The Fourth Circuit granted a certificate of appealability and reversed the district court's judgment. The court held that, given counsel's specific misadvice regarding defendant's rights to preserve his appellate rights, on which defendant understandably relied, the district court's general admonishments did not amount to the careful explanation that addresses the particular issue necessary to cure the error. In this case, the plea colloquy did not correct counsel's erroneous advice and the error prejudiced defendant. Accordingly, the court remanded for further proceedings.

United States v. Chambers

Court: US Court of Appeals for the Fourth Circuit
Docket: 19-7104
Opinion Date: April 23, 2020
Judge: Floyd
Areas of Law: Criminal Law

After defendant was erroneously sentenced as a career offender, he moved to reduce his sentence to time served under the First Step Act. The district court denied defendant's motion to reduce his custodial sentence, though it granted the motion as to his supervised release term. The Fourth Circuit held that the First Step Act does not constrain courts from recognizing Guidelines errors. The court explained that First Step Act motions fall under 18 U.S.C. 3582(c)(1)(B), a distinct exception to finality, and that section 404(b) of the First Step Act expressly allows a court to impose a reduced sentence in order to give retroactive effect to sections 2 and 3 of the Fair Sentencing Act. Furthermore, 18 U.S.C. 3553(a) sentencing factors apply in the section 404(b) resentencing context, and the resentencing court has discretion within the section 404(b) framework to vary from the Guidelines and, in doing so, to consider movants' post-sentencing conduct. In this case, the district court seemingly believed that it could not vary from the Guidelines range to reflect post-sentencing information. Therefore, the court vacated the district court's sentencing order. Finally, the court held that any Guidelines error deemed retroactive, such as the error in this case, must be corrected in a First Step Act resentencing.

United States v. Ferebee

Court: US Court of Appeals for the Fourth Circuit
Docket: 18-4266
Opinion Date: April 22, 2020
Judge: Traxler
Areas of Law: Criminal Law

The Fourth Circuit affirmed the denial of defendant's motion to suppress evidence recovered from a backpack, and the district court's conclusion that defendant abandoned the backpack and any legitimate expectation of privacy in its contents. The court rejected defendant's claim that the collective-knowledge doctrine has any bearing on the propriety of the district court's conclusion that defendant abandoned the backpack. The court also held that the district court is not precluded from finding abandonment in cases where the defendant, as here, has physical possession of the property he has disavowed. In this case, the record supported the district court's conclusion that defendant clearly and unequivocally disavowed ownership of the backpack. Even if the district court erred by finding that defendant abandoned the backpack, reversal would not be required because the search of the backpack was a proper search incident to arrest for which no warrant was required under the facts of this case.

United States v. Nance

Court: US Court of Appeals for the Fourth Circuit
Docket: 18-4585
Opinion Date: April 21, 2020
Judge: Pamela Harris
Areas of Law: Criminal Law

The Fourth Circuit affirmed defendant's above-Guidelines sentence imposed after he pleaded guilty to two federal drug- and firearm-related offenses. The court held that defendant's sentence was not procedurally unreasonable where the district court took into account defendant's extensive criminal history; his pattern of reoffending upon release; his disciplinary infractions in custody and inability to comply with the terms of his release; and the fact that the offenses of conviction occurred over the course of days, in which he was arrested once, released, and then arrested again just days later. The court also held that defendant's sentence was substantively reasonable where the district court conducted a thorough, individualized assessment of defendant and his offense conduct in light of the 18 U.S.C. 3553(a) factors, and did not abuse its discretion in formulating the sentence.

United States v. Johnson

Court: US Court of Appeals for the Fifth Circuit
Docket: 17-60852
Opinion Date: April 21, 2020
Judge: Priscilla R. Owen
Areas of Law: Criminal Law

The Fifth Circuit vacated defendant's sentence imposed after he pleaded guilty to violating 18 U.S.C. 922(g) and 924(e) by knowingly possessing a firearm after he had been convicted of a misdemeanor crime of domestic violence. The court held that the district court committing plain error by violating Federal Rule of Criminal Procedure 32 when it relied on factual allegations in the confidential sentencing recommendation that were not in the presentence report and that were not disclosed by defendant. The court explained that the use of undisclosed facts to justify an above-guidelines sentence seriously affects the fairness, integrity, and public reputation of judicial proceedings. Therefore, the court remanded for resentencing.

United States v. McGinnis

Court: US Court of Appeals for the Fifth Circuit
Docket: 19-10197
Opinion Date: April 21, 2020
Judge: Stuart Kyle Duncan
Areas of Law: Criminal Law

18 U.S.C. 922(g)(8), which prohibits individuals subject to certain domestic violence protective orders from possessing firearms or ammunition for any purpose, is facially constitutional under the Fifth Circuit's two-step NRA framework. Even assuming arguendo that the conduct at issue -- the keeping and possessing of firearms by individuals subject to domestic protective orders -- falls within the Second Amendment right, defendant's facial challenge fails. The court applied intermediate scrutiny and held that section 922(g)(8) is reasonably adapted to the government interest of

reducing domestic gun abuse. The court also held that if the commonly understood definitions of terms in the protective order include acts involving "physical force," the protective order is sufficient to support a conviction under section 922(g)(8)(C)(ii). In this case, the jury plausibly found that the order satisfied the statute and the court declined to reverse defendant's conviction on this basis. However, the court remanded for the limited purpose of conforming defendant's written judgment to the district court's oral pronouncement.

Valentine v. Collier

Court: US Court of Appeals for the Fifth Circuit
Docket: 20-20207
Opinion Date: April 22, 2020
Judge: Per Curiam
Areas of Law: Civil Rights, Constitutional Law, Criminal Law, Government & Administrative Law, Health Law

Plaintiffs filed suit alleging that TDCJ's adoption and implementation of measures guided by changing CDC recommendations in regards to the COVID-19 pandemic do not go far enough. Plaintiffs filed a class action alleging violations of the Eighth Amendment's prohibition against cruel and unusual punishment, and the Americans with Disabilities Act, seeking a preliminary injunction. The Fifth Circuit granted TDCJ's motion to stay the district court's preliminary injunction, which regulates the cleaning intervals for common areas, the types of bleach-based disinfectants the prison must use, the alcohol content of hand sanitizer that inmates must receive, mask requirements for inmates, and inmates' access to tissues (amongst many other things). The court held that TDCJ is likely to prevail on the merits of its appeal because: (1) after accounting for the protective measures TDCJ has taken, plaintiffs have not shown a "substantial risk of serious harm" that amounts to "cruel and unusual punishment"; and (2) the district court committed legal error in its application of Farmer v. Brennan, by treating inadequate measures as dispositive of defendants' mental state. In this case, even assuming that there is a substantial risk of serious harm, plaintiffs lack evidence of defendants' subjective deliberate indifference to that harm. The court also held that TDCJ has shown that it will be

irreparably injured absent a stay, and that the balance of the harms and the public interest favor a stay. Finally, the court held that plaintiffs have not exhausted their administrative remedies as required in the Prison Litigation Reform Act (PLRA), and the district court's injunction goes well beyond the limits of what the PLRA would allow even if plaintiffs had properly exhausted their claims.

United States v. Dowl

Court: US Court of Appeals for the Sixth Circuit
Docket: 19-2469
Opinion Date: April 22, 2020
Judge: Per Curiam
Areas of Law: Criminal Law

Dowl pleaded guilty to presenting false tax returns, 18 U.S.C. 286. He received a sentence of 30 months of imprisonment plus 24 months of supervised release. On supervised release, Dowl was charged with four new state crimes; failing to inform his probation officer that he had police contact; communicating with his co-defendant despite instructions to the contrary; failing to make payments on his restitution, fine, or special assessment; and failing to get a job. At a hearing, the court reviewed the evidence and allowed Dowl to tell his side of the story. The court deferred judgment on three of the four new state criminal law violations and dismissed the fourth and found Dowl gainfully employed. Dowl had failed to notify his probation officer about police contact, impermissibly communicated with his co-defendant, and did not pay his fines. After considering the 18 U.S.C. 3553(a) sentencing factors, the court returned Dowl to prison for 11 months, giving Dowl and his attorney the opportunity to raise any objections. Dowl had none. The Sixth Circuit affirmed, rejecting Dowl’s argument that the court committed reversible error by not directly addressing him to solicit an allocution. The court employed the “plain error” standard because Dowl did not raise any objection during his revocation hearing.

United States v. Fowler

Court: US Court of Appeals for the Sixth Circuit
Dockets: 19-3071, 19-3070
Opinion Date: April 21, 2020
Judge: Donald
Areas of Law: Criminal Law

In 2018, Fowler pled guilty to possession of child pornography and violations of the conditions of his supervised release from a previous conviction for the same. In addition to possessing child pornography, Fowler had failed drug testing, had threatened his parole officer, and had tried to harass his girlfriend to recant her testimony. The district court ordered Fowler to pay a $5,000 special assessment for possession of child pornography under the Justice for Victims of Trafficking Act, 18 U.S.C. 3014. The court also varied upward and sentenced Fowler to the maximum statutory penalty for violating the conditions of his supervised release, imposing a 120-month sentence for possessing child pornography and a consecutive 36-month sentence for violating the terms of his supervised release. The Sixth Circuit vacated as to the assessment and remanded for a determination of indigency. The district court committed plain error by failing to address Fowler's ability to pay; the parties did not contemplate the $5,000 special assessment as a part of the waiver provision in the plea agreement. The court affirmed the sentence. The district court did not consider an impermissible factor (whether Fowler had actually touched a child) and Fowler had no other challenge to the reasonableness of his sentence,

United States v. Sumlin

Court: US Court of Appeals for the Sixth Circuit
Docket: 18-3819
Opinion Date: April 21, 2020
Judge: Bush
Areas of Law: Criminal Law

Sumlin was convicted of the distribution of drugs that caused the 2015 death of Carrie Dobbins, 21 U.S.C. 841(a)(1) and (b)(1)(C), which carries enhanced penalty provisions. The Sixth Circuit affirmed his convictions and

his sentence to life in prison. The district court properly denied Sumlin's suppression motion, given that the affidavit established a sufficient nexus between his drug trafficking activity and residence that was searched. The court properly admitted testimony by the victim's sister, Kelly, who was Sumlin's former girlfriend and had purchased drugs from him. Kelly's testimony about Sumlin's drug-trafficking and that Sumlin was with Carrie on the day of her overdose was intrinsic proof that was relevant for providing background information and contextualizing the government's case against Sumlin. Sufficient evidence supported the jury's verdict that Sumlin distributed the drugs that caused Carrie's death.

United States v. Vance

Court: US Court of Appeals for the Sixth Circuit
Docket: 19-5160
Opinion Date: April 17, 2020
Judge: Bush
Areas of Law: Criminal Law, White Collar Crime

The Spriggs' bank account was established to receive social security checks. The Spriggs' great-grandson, Vance, filled out an application in Mr. Spriggs's name for a debit card to draw on the checking account. Mr. Spriggs had never used a debit card. The Spriggses did not authorize Vance to do so. Bank cameras photographed Vance using the card to withdraw cash. Vance also used the card for personal expenses. At another bank, Vance used Mr. Spriggs's social security number to establish an account and obtain a $15,000 cash advance. Vance made other, unsuccessful loan applications. Upon being notified by the banks about suspicious activities involving his identity, Mr. Spriggs filed a police report. The police arrested Vance. While searching Vance's car, the police located a large stash of personal and financial documents belonging to the Spriggses, including bank statements, tax return forms, property-tax bills, and a car title. The Sixth Circuit affirmed Vance's convictions for access-device fraud, 18 U.S.C. 1029(a)(5), and two counts of aggravated identity theft, 18 U.S.C. 1028A(a)(1), and his 65-month sentence. The court rejected arguments that the district court failed to make adequate findings of fact after the bench trial, improperly denied a motion for judgment of acquittal,

and failed to correctly calculate the loss amount connected to Vance's charges under Sentencing Guidelines 2B1.1.

Court: US Court of Appeals for the Sixth Circuit
Dockets: 19-2399, 19-2398
Opinion Date: April 23, 2020
Judge: Jeffrey S. Sutton
Areas of Law: Civil Rights, Constitutional Law, Criminal Law

Winburn represented himself at his trial for armed robbery, home invasion, and conspiracy. Based on Winburn's disruptive behavior, the judge removed him from the courtroom and revoked Winburn's permission to represent himself, then granted a competency evaluation and a mistrial. While Winburn awaited his second trial, the judge permitted Winburn's stand-by attorney to withdraw because Winburn had sued her and enjoined Winburn from filing complaints or grievances against his new attorney, except to discharge her. Although represented by a new attorney, Winburn moved pro se to dismiss his charges on double jeopardy grounds. The trial judge denied the motion because Winburn's attorney had not filed it. Winburn filed a habeas petition under 28 U.S.C. 2241 challenging his retrial and another section 2241 petition challenging the injunction. The district judges denied both and declined to issue certificates of appealability. Winburn filed a notice of appeal for one petition and sought a certificate of appealability for the other. The Sixth Circuit held that state pretrial detainees proceeding under section 2241 may not appeal without certificates of appealability and granted Winburn a certificate on the injunction claim. A reasonable jurist could conclude that the unusual order was constitutionally infirm. The court denied relief with respect to double jeopardy. Winburn failed to exhaust his state-court remedies by a motion to dismiss.

Lund v. City of Rockford

Court: US Court of Appeals for the Seventh Circuit

Docket: 19-1945
Opinion Date: April 20, 2020
Judge: ROVNER
Areas of Law: Civil Rights, Constitutional Law, Criminal Law

Lund, a reporter for the Rockford Scanner, heard, by police scanner, of multiple traffic stops in Midtown. He did not have a driver's license, so he rode a motorized bicycle to Midtown to take photographs. He suspected a prostitution sting operation. An officer noticed Lund and radioed the team. Officers Welsh and Campbell knew of Lund's previous anti-police speech. They directed Lund to "move on." Lund asked if he was breaking any laws. Campbell informed him that he was not, but that his continued presence would constitute obstruction of a police detail and result in arrest. Lund started his bicycle and called out, loudly, "goodbye officers." Concerned that Lund might post pictures on social media while the sting operation was ongoing and create a danger for unarmed undercover officers, the officers followed Lund and arrested him for driving the wrong way on a one-way street, operating a vehicle without insurance, obstructing a police officer, felony aggravated driving on a revoked license, and operating a motor vehicle without a valid drivers' license. News stories listed Lund's name as an arrestee in the prostitution sting. The charges against Lund were dismissed. Lund sued the officers and the city under 42 U.S.C. 1983. The Seventh Circuit affirmed summary judgment for the defendants on First Amendment retaliation and malicious prosecution under Illinois law, citing the Supreme Court's intervening "Nieves" (2019) holding, that, in most cases, probable cause to arrest defeats a claim of retaliatory arrest. There was probable cause to arrest Lund.

United States v. Perez

Court: US Court of Appeals for the Seventh Circuit
Docket: 18-3156
Opinion Date: April 23, 2020
Judge: KANNE
Areas of Law: Criminal Law

Beloit officers facilitated a recorded controlled buy of heroin from Perez, a suspected high-level drug dealer. Perez sold 98 grams of heroin to an

informant. Based on that transaction alone, Perez pled guilty to distributing heroin. At Perez's sentencing hearing, the judge expressed concern that the guidelines range of 33–41 months' imprisonment did not reflect the full scope of his drug trafficking. The PSR described conduct that suggested that Perez was responsible for distributing large quantities of heroin, methamphetamine, and cocaine. The judge continued the hearing, directing the government to file a memorandum, detailing which offense conduct it could support by a preponderance of the evidence. When the hearing reconvened, the government presented witness testimony that elaborated on conduct described in the PSR, including drug ledgers, Perez's post-arrest conversation with his girlfriend, large sums of cash, a money counter, cell phones, and Perez's passport. The judge calculated a higher guidelines range and imposed a 121-month sentence. The Seventh Circuit affirmed, rejecting an argument that the sentencing judge should have recused himself. Perez has not demonstrated that a reasonable observer would have questioned the judge's impartiality nor did he allege that the judge was biased based on events outside the proceedings. The judge's continuance was laudable, not prejudicial.

Jackson v. United States

Court: US Court of Appeals for the Eighth Circuit
Docket: 19-1131
Opinion Date: April 20, 2020
Judge: Lavenski R. Smith
Areas of Law: Criminal Law

The Eighth Circuit affirmed the district court's denial of a 28 U.S.C. 2255 motion to vacate, set aside, or correct petitioner's sentence. The court held that the district court did not err in denying an evidentiary hearing as to petitioner's claim that counsel was constitutionally ineffective for failing to conduct adequate pretrial investigations. In this case, petitioner failed to identify any specific witnesses or evidence that counsel failed to uncover. Furthermore, petitioner failed to show that counsel's representation prejudiced his case. The court also held that the district court did not err in denying an evidentiary hearing as to petitioner's claim that his new counsel was ineffective for failing to subpoena witnesses, for convincing petitioner

not to testify, for failing to object to or appeal the district court's answer to a jury question, and for failing to object to the district court's designation of petitioner as a career offender.

United States v. Bolman

Court: US Court of Appeals for the Eighth Circuit
Docket: 18-2759
Opinion Date: April 21, 2020
Judge: Jane Louise Kelly
Areas of Law: Criminal Law

The Eighth Circuit affirmed defendant's conviction for involuntary manslaughter after he struck and killed his nephew with his truck. The court held that the evidence was sufficient to support the conviction, because a reasonable jury could find defendant grossly negligent beyond a reasonable doubt. The court also held that the district court did not plainly err by failing to instruct the jury that actual knowledge is an essential element of the offense that is separate from gross negligence, because the instructions, viewed as a whole, accurately and adequately defined the essential elements of the offense.

Read Opinion Are you a lawyer? **Annotate this case**.

United States v. Boyd

Court: US Court of Appeals for the Eighth Circuit
Docket: 18-3528
Opinion Date: April 17, 2020
Judge: Kobes
Areas of Law: Criminal Law

The Eighth Circuit affirmed defendant's sentence imposed after he pleaded guilty to being a felon in possession of a firearm. The court held that the facts underlying defendant's prior arrests were part of his history and characteristics under 18 U.S.C. 3553(a), and thus the district court could consider defendant's arrest records and the circumstances of those arrests. The court explained that the arrests were listed in the presentence report

and gleaned from prior police reports. Furthermore, specific facts underlying the arrests may be considered for an upward departure and should be considered fair game for a variance where defendant did not object to them. The court also concluded that there is nothing here that suggested a corrected misstatement improperly influenced the district court's sentencing decision. Finally, the court held that the upward variance was not unreasonable in consideration of defendant's previous assaults, coupled with the facts underlying his arrest in this case.

United States v. Sanchez-Velasco

Court: US Court of Appeals for the Eighth Circuit
Docket: 18-3568
Opinion Date: April 17, 2020
Judge: James B. Loken
Areas of Law: Criminal Law, Immigration Law

The Eighth Circuit affirmed the district court's denial of defendant's motion to suppress his responses to an ICE agent's two questions at the Treasurer's Office, because he was not in custody at the time of questioning. Although defendant was in custody at the ICE facility, the court held that an agent's questions were not custodial interrogation because the agent could not have known his questions were likely to elicit incriminating information regarding the two criminal charges that were eventually brought against defendant. The court noted that the Attorney General's regulations carefully distinguish between the warrantless arrest of an alien for a criminal violation of the immigration laws, and what is called the "administrative arrest" of an alien who is reasonably believed to be illegally present in the United States. The court agreed with the district court that the agent's questioning was a request for routine information necessary for basic identification purposes that is not interrogation under Miranda, even if the information turns out to be incriminating.

Anthony v. TRAX International Corp.

Court: US Court of Appeals for the Ninth Circuit
Docket: 18-15662
Opinion Date: April 17, 2020
Judge: Kim McLane Wardlaw
Areas of Law: Civil Rights, Constitutional Law, Criminal Law

The Ninth Circuit affirmed the district court's grant of summary judgment to TRAX in a disability discrimination action brought by plaintiff under Title I of the Americans with Disabilities Act (ADA). After TRAX terminated plaintiff from her position as a Technical Writer allegedly due to an inability or unwillingness to accommodate her disability, TRAX discovered during the course of litigation that plaintiff lacked the requisite bachelor's degree for her position. The panel held that, although McKennon v. Nashville Banner Publishing Co., 513 U.S. 352 (1995), held that after-acquired evidence cannot establish a superseding, non-discriminatory justification for an employer's challenged actions, after-acquired evidence remains available for other purposes, including to show that an individual is not qualified under the ADA. Because plaintiff did not satisfy one of the prerequisites for her

position, she is not "otherwise qualified," and TRAX was not obligated to engage in the interactive process.

City of Almaty v. Khrapunov

Court: US Court of Appeals for the Ninth Circuit
Docket: 18-56451
Opinion Date: April 22, 2020
Judge: Marbley
Areas of Law: Criminal Law, International Law, White Collar Crime

The City of Almaty, in Kazakhstan, filed suit against defendant and his family under the Racketeer Influenced and Corrupt Organizations Act (RICO), alleging that they engaged in a scheme to defraud the city of millions of dollars. The City claimed that it was forced to spend money and resources in the United States to trace where its money was laundered. The district court dismissed the City's claim on the basis that it failed to state a domestic injury pursuant to the Supreme Court's recent decision in RJR Nabisco, Inc. v. European Community, 136 S. Ct. 2090 (2016). The Ninth Circuit held that the City failed to state any cognizable injury other than the foreign theft of its funds, and its voluntary expenditures were not proximately caused by defendants' acts of money laundering. In this case, the City's expenditure of funds to trace its allegedly stolen funds is a consequential damage of the initial theft suffered in Kazakhstan and is not causally connected to the predicate act of money laundering.

United States v. Baldon

Court: US Court of Appeals for the Ninth Circuit
Docket: 18-10411
Opinion Date: April 21, 2020
Judge: Bennett
Areas of Law: Criminal Law

After defendant pleaded guilty to possession with intent to distribute a controlled substance, the district court sentenced him to 184 months in

prison. The Ninth Circuit held that defendant's prior convictions for carjacking under section 215 of the California Penal Code are not categorical crimes of violence under USSG 4A1.1(e). Therefore, the district court incorrectly calculated defendant's criminal history by improperly including two points for his prior carjacking convictions. However, the panel held that the district court did not err in finding that defendant possessed a firearm under USSG 2D1.1(b)(1). Accordingly, the panel affirmed in part, vacated in part, and remanded for resentencing.

Defendant-Appellant Archie Manzanares appealed a district court's denial of his 28 U.S.C. 2255 motion challenging his sentence under the Armed

Career Criminal Act (ACCA). Under the ACCA, an offense qualified as a violent felony by satisfying at least one of three definitions, which have come to be known as the Elements Clause, the Enumerated Clause, and the Residual Clause. Manzanares asserted that without the Residual Clause, his underlying New Mexico convictions (armed robbery, aggravated assault with a deadly weapon, and aggravated battery) no longer qualified as violent felonies. The district court denied the motion, concluding that all three underlying convictions satisfied the Elements Clause. Manzanares appealed the classification of the armed robbery conviction as a violent felony to the Tenth Circuit, and sought to expand the certificate of appealability to allow him to appeal the decision regarding the aggravated assault with a deadly weapon and aggravated battery convictions. After review, the Tenth Circuit affirmed the district court's denial of Manzanares's 2255 motion, and denied his motion to expand the COA.

United States v. Delaney

Court: US Court of Appeals for the District of Columbia Circuit
Docket: 18-3093
Opinion Date: April 17, 2020
Judge: David S. Tatel
Areas of Law: Criminal Law

The DC Circuit vacated the district court's denial of defendant's motion to suppress evidence. The court held that officers violated the Fourth Amendment when they seized defendant because they lacked reasonable suspicion to justify the stop. In this case, a seizure occurred when the officers pulled into the parking lot, partially blocked defendant's vehicle, and activated their take-down light. The court held that any inference of suspicion that the officers drew from encountering defendant soon after hearing the nearby gunshots were undermined by the government's failure to identify specific and articulable facts supporting the officers' estimation of where the various shots came from. Accordingly, the court remanded for further proceedings.

Antenor v. Alaska, Department of Corrections

Court: Alaska Supreme Court
Docket: S-17005
Opinion Date: April 17, 2020
Judge: Carney
Areas of Law: Civil Procedure, Criminal Law, Government & Administrative Law

Several Alaska Department of Corrections inmates challenged the DOC's policy to charge for local telephone calls, arguing the rates they and call recipients had to pay for calls violated their constitutional right to rehabilitation, their statutory right to reasonable telephone access, and DOC's contractual obligations under a prior settlement and consent decree. In addition, one of the prisoners challenged DOC officers' decision to deny him access to a computer programming book he ordered from outside the prison. He contended that DOC placed a content-specific restriction on the educational materials and publications prisoners were allowed, violating the Alaska Constitution's free speech provisions as well as prisoners' right to reformation. Each of these challenges reached the Alaska Supreme Court after inmates exhausted the administrative process from prison. Inmates then appealed to the superior court, which denied relief. The Alaska Supreme Court determined the superior court record did not provide enough evidence for it to meaningfully determine the reasonableness of the rates charged inmates for local telephone calls; therefore the Court reversed denial of relief and remanded for further fact-finding by the trial court. The Court concluded that the facility's restrictions on programming-related books were rationally related to a legitimate interest, and because they did not infringe on the right to rehabilitation, it affirmed denial of a prisoner's motion to enforce his claimed right to a particular text about computer programming.

Berger v. Bryant

Court: Arkansas Supreme Court
Citation: 2020 Ark. 357
Opinion Date: April 23, 2020
Judge: Rhonda K. Wood

Areas of Law: Criminal Law

The Supreme Court affirmed the judgment of the circuit court denying Appellant's petition to proceed in forma pauperis on a petition for writ of mandamus and a motion for declaratory judgment, holding that Appellant failed to state a colorable cause of action. In 1998, Appellant was convicted of rape. In his petition for a writ of mandamus, Appellant asserted that he sought information pursuant to the Arkansas Freedom of Information Act regarding his rape conviction but received no response. The circuit court denied the petition. The Supreme Court affirmed, holding (1) even if Appellant had requested disclosable information, he would not be entitled to inspect it as an incarcerated person; and (2) Appellant did not demonstrate a legitimate claim given the facts presented and therefore failed to establish a colorable cause of action to support his request to proceed in forma pauperis.

Carroll v. State

Court: Arkansas Supreme Court
Citation: 2020 Ark. 360
Opinion Date: April 23, 2020
Judge: Wynne
Areas of Law: Criminal Law

The Supreme Court affirmed the judgment of the circuit court denying Appellant's motion for leave to file a petition for writ of error cram knobs, holding that the circuit court did not abuse its discretion in declining to issue the writ. Appellant pled guilty to rape and was sentenced as a habitual offender to 720 months' imprisonment. In his coram nobis petition, Appellant alleged several grounds for relief, including claims of actual innocence, an invalid arrest warrant, a coerced guilty plea, and prosecutorial misconduct. The circuit court denied the motion. The Supreme Court affirmed, holding that Appellant did not demonstrate that that the writ should issue and failed diligently to proceed on his claim for coram nobis relief.
