Subject

Transfers

Policy

In order to maintain and enhance the operational functions of the Department, transfers may be made to:

- Ensure adequate staffing levels;
- Provide efficient public safety services; and
- Meet other goals and objectives of the Department.

Transfer Restrictions

Troopers assigned to the Division of Field Services, who have three (3) or fewer years of creditable service shall not be considered for any job posting or positions outside of the Division of Field Services.

This restriction does not preclude the Colonel/Superintendent from assigning troopers with three (3) or fewer years of creditable service to positions outside of the Division of Field Services based upon specific expertise (e.g. language skills, etc.) which a trooper may possess.

Troopers with five (5) or more years of creditable service may bid on positions within the Division of Field Services-Field Operations pursuant to the Collective Bargaining Agreement.

Biddable Assignments

Biddable Assignments: All assignments established as a biddable assignment pursuant to the Collective Bargaining Agreement.

Non-Biddable Assignments

Non-biddable Assignments: All assignments not otherwise established as a biddable assignment pursuant to the Collective Bargaining Agreement.

Department non-biddable assignments include, but are not limited to:

- Division of Investigative Services;
- Division of Administrative Services;
- Division of Standards and Training;
- Division of Homeland Security and Preparedness;
- Division of Field Services pursuant to the Collective Bargaining Agreement, and
- Office of the Superintendent.

Due to the specialized nature of these assignments, and the knowledge and skills required, these positions require a selection process.

Request for Transfer: Biddable Assignments

Members who request a transfer to a biddable assignment within the Division of Field Services shall:

- Submit an electronic transfer request.

Only those requests received at least twenty-one (21) days prior to the end of a fifty-six (56) day bid cycle shall be considered for the next fifty-six (56) day bid cycle.

Members are allowed to have only one (1) transfer request for a biddable assignment at any time.

The Human Resources Section shall publish a list of transfer requests for the Division of Field Services on Docushare containing the requesting member's name, current assignment, request, and seniority. Two (2) lists shall be maintained: one (1) list for troopers and one (1) list for supervisors.

Note: Requests for transfers to a biddable assignment within the Division of Field Services shall remain on file until honored or withdrawn.

Request for Transfer: Non-Biddable Assignments

Members who request a transfer to a non-biddable assignment within the Department shall submit the following to Human Resources Section:

- A To/From;
- A resume; and
- Any other materials required within the posting.

The member shall forward a copy of the above items to:

- Their current Commanding Officer; and
- The Commanding Officer of the requested section/unit.

Requests for transfer to a non-biddable assignment shall not be kept on file at the Human Resources Section. All requests shall be submitted within the specified time periods of the posting.

Members who request a transfer to a non-biddable assignment within their respective troop or station shall submit the following to the Troop Commander:

- To-From;
- Resume; and
- Any other materials required within the posting.

Posting and Selection Process: Non-biddable Assignments

Vacancies for non-biddable assignments for members shall be posted for at least ten (10) calendar days on Docushare.

Providing that the minimum qualifications are met, members may apply to:

- Department non-biddable assignments;
- Troop non-biddable assignments when the member is assigned to the troop; and
- Station non-biddable assignments when the member is assigned to the station.

Each posting shall include:

- Assignment, location, and work schedule;
- Name of the current Commanding Officer;
- Rank requirements, if any;
- Minimum commitment and retention requirements, if any (e.g., completion of specialized training or the ability to develop a specialized skill); and
- Other requirements or information as appropriate.

Note: All qualified applicants shall be considered. Members who are on leave are responsible for keeping themselves informed of such postings.

Department Procedure: Non-biddable Posting and Selection

Step	Action
1	The Commanding Officer of the section/unit shall seek approval to fill the vacancy from their Division Commander.
2	The Division Commander shall seek approval to fill the vacancy from the Deputy Superintendent.
3	The Division Commander shall submit a SP 389 Posting Request form to the Human Resources Section for any anticipated openings.
4	The Human Resources Section shall post the anticipated openings for non-biddable assignments for ten (10) calendar days.
5	The Human Resources Section shall forward all timely non-biddable transfer requests to the Section/Unit Commander for review.
6	The Commanding Officer of the section/unit shall schedule interviews, conduct the selection process, and select the candidate(s).

Continued next page.

Department Procedure: Non-biddable Posting and Selection (Continued)

Step	Action
7	The Commanding Officer of the section/unit shall submit a To/From to the Division Commander detailing: • The names of all applicants; • The names of the qualified applicants interviewed, the members of the interview panel, questions asked, and the evaluation instrument; and • The candidate chosen. The chosen candidate's resume and other applicable documentation shall be attached to the To/From.
8	If the Commanding Officer of the section/unit does not find an acceptable candidate, the position may be posted again using the process identified above.
9	The transfer order shall serve as official notice to the candidate(s).

Department Procedure: Troop and Station Non-biddable Posting and Selection

Step	Action
1	The Troop Commander shall post within the troop for ten (10) calendar days for anticipated openings for troop/station non-biddable assignments.
2	The Troop Commander, along with the Commanding Officer of the section/unit where applicable, shall review submissions, schedule interviews, conduct the selection process, and select the candidate(s).
3	If the Troop Commander does not find an acceptable candidate, the position may be posted again using the process identified above.
4	The transfer order shall serve as official notice to the candidate(s).

Interview Process: Non-biddable Assignments

Commanding Officers shall:

- Create an interview panel with a minimum of two (2) people;
- Create a list of standard questions using guidelines from the Human Resources Section; and
- Ensure that a minimum of three (3) qualified applicants are interviewed using the standard questions referenced above. (Follow-up questions may be asked, as necessary.)

If there are less than three (3) qualified applicants, all qualified applicants shall be interviewed.

If the section/unit works in conjunction with another agency (e.g., District Attorney's Office), a representative of the other agency may be one of the interview panel members.

Responsibilities

Position	Duties
Deputy Superintendent	• Schedule transfer meetings as needed; • Obtain the transfer request list from the Human Resources Section and conduct inter-divisional transfer meetings; • Review candidates and the operational needs of the Department; • Make written recommendations for transfers to the Colonel/Superintendent; and • Notify Commanding Officers of pending transfers.
Colonel / Superintendent	• Review and approve or deny the recommendations for transfer; and • Forward the approved transfers to the Human Resources Section.
Human Resources Section	• Issue transfer orders through the Office of the Colonel/Superintendent; and • At least five (5) days before the transfers become effective, notify all members affected by the transfers, through transfer orders.

Transfer Process

Transfer meetings shall take place in conjunction with the fifty-six (56) day bid cycle.

Commanding Officers shall be immediately notified of the finalized transfers.

Transfers shall be effective seven (7) days prior to the end of the current 56-day bid cycle.

Commanding Officers may make transfers outside of the fifty-six (56) bid cycle based on operational needs of the Department.

Bidding and Bid Cycle

All bidding shall conform to the Collective Bargaining Agreement. Once in effect, the fifty-six (56) day bid cycle shall not be violated.

Exceptions are as follows:

- Promotions;
- Training activities, with five (5) days notice given to the affected member;
- Vacancies created as a result of retirement, illness, or leave;
- Emergencies; or
- With the mutual consent of all parties.

Subject	Number
Transfers	**ADM-27**

Intra-Troop/Division Transfers

Troop and Division Commanders may make transfers within their Troop or Division at any time within the guidelines of this policy. Troop and Division Commanders shall notify their respective commanders and the Human Resources Section of the pending transfers.

Temporary Duty (TDY) Assignments

TDY assignments may be made by the Colonel/Superintendent at any time.

TDY assignments:

- Need not be posted; and
- Shall not exceed ninety (90) days without a review and written extension by the Colonel/Superintendent.

Members shall maintain only one (1) TDY status at any given time.

Troop Commanders may make TDY assignments within their troop and shall forward a copy of the order to the Human Resources Section.

Deployment

Each Division Commander shall conduct a needs assessment in order to deploy personnel in the best interests of the Department.

The Human Resources Section shall maintain a Position Management System that contains:

- A table of organizational entities, as approved by the Colonel/Superintendent;
- A position description, classification, and task analysis;
- The number, type, and location of each position; and
- A monthly report indicating whether each position is filled or vacant.

Supervisory Members

Supervisory members do not have bidding rights but may be considered for posted positions in accordance with the process identified in this policy.

Equal Opportunity

The Diversity Officer shall obtain and review transfer request lists from the Human Resources Section. The Diversity Officer may make recommendations in writing to the Colonel/Superintendent.

Department of State Police
General Order

Effective Date	Number
March 1, 2016	**ADM-28**

Subject

Department Motor Vehicles

Policy

State owned vehicles shall be operated for official use only and in accordance with Policy and Procedure ADM-19 *Vehicle Management* and ADM-19A *Vehicle Use and Maintenance*.

Commuting in Cruisers

Members with cruisers who are traveling to and from home to their duty stations or assignments shall undertake all necessary activities ordinarily performed during motor patrol.

While commuting in a cruiser, all members are to be attired in the required duty uniform unless their usual duties require otherwise.

While commuting with a cruiser, discretion in choosing routes of travel should be used in order to promote the visibility concept on roadways which receive little or no coverage.

A member coming upon an accident scene while in commuting capacity shall immediately notify the substation or police agency of jurisdiction. The member shall then assist at the scene until relieved by an officer from the substation or police agency with primary jurisdiction, or receives instructions to take appropriate action. If the accident occurs on a roadway where the State Police has primary jurisdiction and a State Police patrol is not available, he/she shall investigate the accident, advise the substation having jurisdiction of the pertinent details, and make a report of same upon returning to duty.

A commuting member arriving at his/her residence shall ensure that the cruiser is properly secured in a safe place and that all equipment is secured in a locked compartment within the cruiser. Firearms shall not be left in an unattended cruiser unless secured in accordance with UOF-04 *Use of Force Equipment*. The vehicle, whenever possible, shall not be parked on a public way. A member may garage a cruiser, at no expense to the Commonwealth, away from his/her residence if the Troop or Section Commander approves the location.

Members shall be required to commute in cruisers, when available, to and from their duty stations and/or assignments and homes, between shifts, unless otherwise authorized by the Troop or Section Commanding Officer.

An asterisk (*) will be marked on the officer's audit sheet to show a violation notice while in commuting capacity.

Subject	Number
Department Motor Vehicles	**ADM-28**

Vehicle Maintenance

Members shall ensure that cruisers assigned to them are given proper maintenance and care. Members shall also ensure that expended or faulty emergency and safety equipment is promptly replaced. Before returning from days off and starting a tour of duty each member shall inspect the cruiser assigned to them in order to determine if the vehicle is in good condition and undamaged and that all equipment prescribed for the vehicle is present and operable. Any deficiencies shall be recorded in the Station Daily Administrative Journal/Department Records Management System and corrective action shall be initiated.

Vandalism to an unattended cruiser shall be reported to the member's duty station or assignment as soon as possible after discovery. Any damage to a cruiser or its equipment, sustained while commuting, responding, or on recall, shall be reported as prescribed for regular on-duty status.

Subject

Workplace Violence

Policy

The Department shall maintain zero tolerance for workplace violence and ensure the workplace environment remains free from any form of violence.

This policy does not apply to situations where members are exposed to threats or violent acts from persons in their care or custody, or the public at large, as an unavoidable component of the lawful performance of their law enforcement duties.

Workplace Violence Defined

Workplace shall be defined as:

- Any Commonwealth owned or leased property;
- Any location where Commonwealth business is conducted;
- Any site where an employee is considered on duty;
- Commonwealth vehicles or private vehicles being used for Commonwealth business; or
- Any location if the violence has resulted from an act or decision made during the course of conducting Commonwealth business.

Workplace violence shall include, but is not limited to:

- Intimidation or threats communicated by any means;
- Physical assault and/or battery;
- Threats and/or acts of intimidation communicated by any means that cause an employee to be in fear of their own safety;
- Disruptive or aggressive behavior that causes a reasonable person to be in fear of their own safety or that of a colleague or that causes the disruption of workplace productivity; or
- Property damage.

Incidents of workplace violence may be individual acts or may take place between an employee(s) and:

- Other employee(s);
- Clients/customers/vendors;
- Acquaintances/partners; and
- The general public.

Subject	Number
Workplace Violence	**ADM-29**

Workplace Violence Coordinator

The Workplace Violence Coordinator shall be a Commissioned Officer assigned by the Colonel/Superintendent. The Workplace Violence Coordinator shall report directly to the Commanding Officer of the Division of Standards and Training.

Workplace Violence Safety Incident Team

The Deputy Superintendent shall designate employees to the Workplace Violence Safety Incidence Team and provide such names to the Commonwealth's Human Resource Division. The established team shall consist of:

- A commissioned officer or senior manager from each division; and
- Representation from the Department's Human Resources Section, the Office of Employee Relations, Division of Standards and Training, and the Legal Section.

Disciplinary Action

Any employee found to have engaged in any act of workplace violence, in violation of this policy, is subject to disciplinary action up to and including termination.

Disciplinary action may also require the employee to participate and to successfully complete counseling, anger management education, or other appropriate programs.

The Department may consider acts of workplace violence, along with an employee's success in completing recommended programs, within the promotional process and other work related determinations (where not prohibited by statute, regulation or collective bargaining agreement).

Investigations

The Workplace Violence Coordinator does not conduct investigations into workplace violence. All investigations shall be conducted in accordance with ADM-14 Personnel Investigations.

Responsibilities

Position	Duties
Department Employees	• Not engage in workplace violence behavior; • Immediately report any incident, threat of incident, or potential incident of workplace violence to their immediate supervisor; • Cooperate in investigations of workplace violence; and • Actively participate in the Department's efforts to prevent and eliminate workplace violence.

Continued next page.

Responsibilities (Continued)

Position	Duties
Sworn Members	• Promptly respond to reports of workplace violence; • Take appropriate and immediate enforcement action in response to an incident to ensure the safety of those involved; • Follow proper reporting and investigating procedures as prescribed by this policy; and • Make notification to the Workplace Violence Coordinator, **within seventy-two (72) hours of the incident** utilizing a SP 390 Workplace Violence Incident Report.
Supervisors	• Aggressively monitor the workplace to prevent and detect workplace violence; • Take appropriate corrective action to stop workplace violence; • Immediately report any incident of workplace violence to the Troop/Section Duty Officer and the Workplace Violence Safety Incidence Team Member designated for their Division; • Conduct investigations in a manner that is sensitive to the safety concerns and privacy of the victim(s), the perpetrator, and all witnesses; • Assist the employee/victim of a workplace violence incident by providing any additional support or services necessary to ensure their protection and safety; • Forward a copy of the final report for all workplace violence incidents, through channels, to the Workplace Violence Coordinator; • Make appropriate referrals to the Employee Assistance Unit, the Office of the Ombudsman, or Human Resources Section as needed; and • Ensure notification is made to the Workplace Violence Coordinator, **within seventy-two (72) hours of the incident** utilizing a SP 390.
Station/Section/ Unit Commanders	• Ensure, if necessary, written workplace protection plans are devised for employee(s) who are victims of workplace violence; and • File a copy of the workplace protection plan with the Workplace Violence Coordinator.

Continued next page.

Responsibilities (Continued)

Position	Duties
Workplace Violence Safety Incident Team	• Meet as needed, to devise, review policies, procedures and safety protocols for workplace violence; • Ensure, when necessary, written workplace protection plans for employees who are victims of workplace violence are operative; • Ensure consistent and coordinated responses to acts of workplace violence; • Evaluate and/or make additional notification, recommendations as required when notified of an incident of workplace violence by a supervisor; and • Review and evaluate any serious or critical incidents of workplace violence and make any appropriate recommendations to the Workplace Violence Coordinator necessary to enhance safety considerations.
Workplace Violence Coordinator	• Review and file all final reports of workplace violence incidents and make recommendations to the Division Commander of Standards and Training and the Workplace Violence Safety Incident Team; • Coordinate and schedule meetings as needed with the Workplace Violence Safety Incident Team; and • Annually report statistical data relative to workplace violence incidents within the Department to the Division Commander of Standards and Training.
Human Resources Section	• Coordinate with Workplace Violence Coordinator and the Commonwealth's Human Resources Division regarding Workplace Violence Training; and • Maintain all records of civilian employees trained in workplace violence.

Exceptions

All employees should be aware that conversations with the Office of the Ombudsman and/or Employee Assistance Unit are considered confidential and that these entities are not the proper venue for notification to the Department for workplace violence complaints or incidents.

Retaliation

Any retaliation against an individual who has complained about workplace violence and any retaliation against individuals for cooperating with an investigation of workplace violence are prohibited and shall not be tolerated.

Subject	Number
Workplace Violence	**ADM-29**

Distribution of Policy

This policy shall be shall be issued to each employee upon hiring, and shall be continuously posted and available on DocuShare.

Subject

Asset Management

Policy

The Department shall conduct an Annual Fixed Asset Inventory.

The Department shall:
- Record and report Governmental Generally Accepted Accounting Principles (GAAP) Fixed Assets of $50,000 or more within the Massachusetts Management Accounting and Reporting System (MMARS) twice per year pursuant to State Comptroller policy;
- Maintain an automated Asset Management System that reflects all Non-GAAP Fixed Assets with a useful life of one (1) year or more and a cost between $1,000 -$49,999; and
- Maintain inventories of other assets in accordance with State Comptroller policy and as determined by the Division of Administrative Services.

Definitions

Fixed Assets: Tangible property with a cost of $1,000 or more and a useful life of one (1) year or more.

Asset Forfeiture or Federal Grant Fixed Asset: Tangible property funded with asset forfeiture or federal grant funds with a useful life of (1) one year or more, regardless of original cost.

Technology Asset: Tangible asset determined to have the capability of storing data, regardless of original cost (excludes USB flash drives, digital versatile disks, or other consumable technology).

Asset Management

The Asset Management Unit shall manage fixed asset transactions and conduct an annual inventory.

The Division of Administrative Services Chief Administrative Officer or designee shall:
- Designate the Asset Manager for the Department; and
- Ensure the Asset Management Unit reports to the Division of Administrative Services Chief Administrative Officer or designee.

When Commanding Officers acquire, transfer, lose, or dispose of fixed assets, they shall:
- Notify the Asset Management Unit by forwarding a copy of the SP 255 Equipment Transfer Form to the Asset Management Unit.

Annual Fixed Assets, Biannual Capital Assets Inventories, Asset Forfeiture, Technology, and Federal Grant Inventories

Step	Action
1	The Asset Management Unit shall distribute two (2) copies of the inventory to the Commanding Officer of each reporting entity.
2	Commanding Officers shall: • Reconcile the inventory with their previous inventory by physically accounting for each item listed; • Complete and return the SP 255 form for fixed assets that have been acquired, transferred, lost, or disposed of; • Complete and return the SP 255A form for all disposals; this form is in addition to the SP 255 form; • Tag newly acquired items with an inventory control identification number; • Rectify discrepancies; • Retain copies of the inventory printout and SP 255 and SP 255A forms; • Sign-off on Capital (Fixed) Asset Inventory confirmation sheet for biannual review of GAAP Fixed Assets; • Complete, sign, and return Compliance letter for annual inventory reviews; and • Continue to monitor and update the Fixed Asset inventory on a perpetual basis throughout the year. Assets should be added when acquired, and updated at all times to reflect their current location and disposition.

The Asset Management Unit shall:

- Coordinate the Annual Fixed Assets Inventory Review; and ensure:
    1. All sections/units receive reports of their fixed asset inventory as of June 30th of each year. All sections/units must complete this inventory annually;
    2. The Biannual Capital (GAAP/Fixed) Asset Report shall be completed as of December 31st and June 30th of each year; and
    3. All sections/units receive reports of their Annual Asset Forfeiture, Technology, and Federal Grant Inventory as of January 31st of each year. All sections/units must complete this inventory annually. Assets associated with each of these funding sources shall be accounted for regardless of value.

Whenever there is a change of command at a reporting entity, or a change in the personnel assigned to manage specified fixed assets, an asset inventory shall be completed.

Note: The Asset Management Unit shall be notified before fixed assets are disposed of, so that surplus procedures can be followed.

Subject	Number
Asset Management	**ADM-30**

Exceptions

The following Sections/Units are responsible for the management of their assigned inventory:

- Fleet Section;
- Armorer;
- Traffic Programs (radars, lidars and portable breath test devices);
- Communications Section;
- Special Operations Section/Units; and
- Other Department Section/Units as determined by the Chief Administrative Officer or designee.

Commanding Officers shall maintain a master inventory of their assigned fixed assets that:

- Is accurate and reflects changes as they occur; and
- Includes the valuation of the assets.

These Sections/Units shall also conduct an annual inventory, reconcile their databases, and forward the updated inventory report to the Asset Management Unit by June 30th of each year.

Subject

Information Technology Resources (ITR)

Policy

The Department shall regulate the use of Information Technology Resources (ITR), including computers, printers and other peripherals, programs, data, local and wide area networks, and use of the internet.

ITR communications including email messages are considered public records, copies of which may be requested by the public.

Definitions

Department Information Technology Resources: Include computers, printers and other peripherals, programs, data, local and wide area networks, and use of the internet.

User: Any employee and/or contractors of the Department that utilizes any of the above resources.

User Responsibilities

Failure to adhere to this policy may subject employees to disciplinary action, up to and including termination.

Employees assigned to a Department entity where they may have occasion to access another system not owned or supplied by the Department shall comply with the terms and provisions of this policy for all such usage.

Acceptable Uses

All employees are allowed to use ITR to the fullest extent possible for any legitimate law enforcement function.

Unacceptable Uses of Agency ITR

Unless conducting a legitimate law enforcement function, it shall be unacceptable for any employee to use ITR:

- In furtherance of any illegal act, including violation of any criminal or civil laws or regulations;
- For any political or commercial purpose;
- To send threatening, sexual, or harassing messages;
- To access or share obscene, or otherwise inappropriate materials;
- To infringe any intellectual property rights;

Continued next page.

Unacceptable Uses of Agency ITRs (Continued)

- To gain, or attempt to gain, unauthorized access to any computer or network;
- For any use that causes interference with or disruption of network users and resources, including distribution of computer viruses or other harmful programs;
- To intercept communications intended for other persons;
- To misrepresent either the Department or a person's role at the Department; or
- To libel or otherwise defame any person.

Supervisor Responsibilities

Supervisors are responsible for ensuring that employees under their command comply with the provisions of this policy, and shall monitor use in order to ensure compliance.

Data Confidentiality

Under no circumstances is it permissible for employees or contractors to acquire access to confidential data, unless such access is required to perform their job or task.

Under no circumstances may employees or contractors disseminate any confidential information that they have rightful access to, unless such dissemination is authorized by proper supervisory authority.

Copyright Protection

Employees shall exercise care and judgment when copying or distributing computer programs or information that could reasonably be expected to be copyrighted.

Hardware or Software Installation

Employees shall not install hardware and/or software on any Department ITR without express written authorization from the Division of Administrative Services.

Computer Viruses

Employees shall exercise reasonable precautions in order to prevent the introduction of a computer virus into the local area or wide area networks. Many viruses are spread using email attachments.

Virus scanning software shall be used to check any software downloaded from the internet or obtained from any questionable source. All disks or software shall be inspected for virus infection prior to introduction into the Department system or stand-alone computers or laptops.

Security

Employees shall:

- Change passwords at least every ninety (90) days;
- Never share their passwords with anyone else, unless ordered by proper authority;
- Promptly notify the Division of Administrative Services if they suspect their passwords have been compromised;
- Log off the network or have password-protected screen savers in operation if leaving their ITR unattended for extended periods;
- Not access the internet or other external networks via modem unless they have received prior written permission from the Division of Administrative Services;
- Not move desktop computers, terminals, and printers from their assigned location without written notification and the consent of the Division of Administrative Services; and
- Not transfer to another employee any mobile equipment assigned to the individual such as laptop computers, mobile data terminals, and portable printers without prior written notification from the Division of Administrative Services.

Email

Employees are reminded that email messages are considered public records, copies of which may be requested by any member of the public.

Employees shall:

- Consider email messages to be the equivalent of letters sent on official letterhead and be written in a professional and courteous tone;
- Be aware that emails can be stored, copied, printed, or forwarded by recipients; and
- Not subscribe to email mailing lists, unless related to their job function.

Email shall only be used to communicate official business documents to official recipients. The forwarding of non-business related information is prohibited. Employees who are the recipients of non-business related email are required to discard them and shall not forward them to anyone.

Email attachments that are received from an unknown party should be considered suspicious, and shall not be opened until the sender's identity can be confirmed.

Emails which represent privileged correspondence between Department attorneys and other Department employees shall be clearly marked within the message as "Attorney Client Privilege". In addition, documents that are sent as attachments to an email shall also be clearly marked with "Attorney Client Privilege."

Subject	Number
Information Technology Resources	**ADM-34**

No Expectation of Privacy

The Department retains the right to inspect any employee's computer at any time.

Use of Department ITR constitutes express consent for the Department to monitor and/or inspect any data that employees create or receive, any messages they send or receive, and any web sites that they have accessed.

Employees shall be aware that network administrators routinely monitor network traffic.

Compliance

Staff Inspections shall conduct periodic inspections of all ITR to ensure compliance with all provisions of this policy.

Subject

Social Media/Networking

Policy

The personal use of social media can have bearing on departmental personnel in their official capacity. As such, this policy provides information of a precautionary nature as well as prohibitions on the use of social media by Department of State Police Employees.

When using social media/networking, Department Employees (sworn and civilian) should be mindful that their speech becomes part of the worldwide electronic domain.

Department Employees should also be mindful to treat Department of State Police business as confidential per Rules and Regulations Article 5.

Definitions

These definitions are evolving as social media, networking, and internet usage and capabilities evolve as well.

Social Media and Networking: Are categories of internet-based resources that integrate user-generated content and user participation. They are online platforms where users can create profiles, share information, and socialize with others professionally, personally, or informally. The interface is conducted through posts or speech via a range of technologies such as computers, cellular phones, and tablets to name a few.

Social Media: A form of electronic communication through which users create online communicated to share information that may include, but are not limited to: personal messages, videos, photo and video sharing sites, blogs, micro blogging sites, Facebook, MySpace, Twitter, You Tube, Pinterest, Instagram, and Snapchat.

Networking: An exchange of information or services among individuals, groups, or institutions that may include, but are not limited to: the cultivation of productive relationships for employment or business, networking sites, podcasts, as well as comments posted on a site, message or discussion boards, LinkedIn, Plaxo, Jobster, Craigslist, and MyWorkster.

Post: Contents an individual shares on a social media/network site or the act of publishing the contents on a site.

Speech: Expression or communication of thoughts or opinions in spoken words, in writing, by expressive conduct, symbolism, photographs, videotape, or related forms of communication.

Subject	Number
Social Media/Networking	**ADM-34A**

Supervisor Responsibilities

Supervisors are responsible for ensuring that employees under their command comply with the provisions of this policy and address violations as soon as possible.

Responsibilities of Employees

In accordance with Department Rules and Regulations and Policy and Procedures, Department Employees using social media/networking applications shall:

- Use appropriate discretion in their reference to the Department and not discredit themselves or the Department;
- Be aware that speech and/or related activities on social media/networking sites may reflect upon them in their official capacities and/or upon the Department, and act accordingly;
- Be cautioned that speech, on or off-duty, may form the basis for disciplinary action under current law;
- Be aware that privacy settings and social media/networking sites are constantly in flux, and they should never assume that personal information posted on such sites is protected;
- Expect that any information created, transmitted, downloaded, exchanged, or discussed in a public online forum may be accessed by the Department at any time without prior notice;
- Not divulge information gained due to their authority; and
- Not make any statements, speeches, appearances, and endorsements or publish materials that could reasonably be considered to represent the views or positions of this Department without express authorization.

Department Employees should use common sense in all communications, particularly on any social media/networking site. An examination of the facts could potentially result in an internal personnel investigation. Employees are responsible for anything you write or present online. Some examples of prohibited action may include, but not be limited to:

- Speech containing obscene or sexually explicit language, images, or acts and statements or other forms of speech that ridicule regardless of the intent to malign, disparage, threaten harm or otherwise express bias against any race, any religion, or any protected class of individuals; and
- Speech involving themselves or other Department personnel reflecting behavior that would reasonably be considered reckless, irresponsible or unprofessional.

Continued next page.

Responsibilities of Employees (Continued)

Department Employees should exercise care if they choose to post personal information on the internet. Some activities in an employees' personal life may impact job performance, the performance of other employees, and/or interests of the Department. Once information is posted, it is accessible by anyone, indefinitely, and such information may result in unintended consequences, such as:

- Limiting future career opportunities e.g., undercover, covert operations, or attainment of a security clearance;
- Manipulation by defense counsel to undermine or impeach an employee's credibility or integrity, hindering a successful prosecution; and
- Being viewed, altered, printed and redistributed by other internet users including criminal organizations.

Department Employees, who choose to identify themselves as an employee of the Massachusetts State Police whether explicitly, implicitly, or visually, shall:

- Be considered to be publicly representing the agency in a professional manner from that period forward while still employed by the agency; and
- Be responsible for all content published on their individual social media site(s).

Creation of Media Application

Colonel/Superintendent shall approve in writing before the creation of any:

- Website, page, fan group or other application of social media using the Department as the basis of such application. Examples may include, but are not be limited to:
  1. Creating a website or fan group dedicated to Massachusetts State Police;
  2. Creating an identity using a username such as Massachusetts State Police, MSP or any term associated with the Department.

Department Employees shall

- Not publish Commonwealth or Department images of intellectual property using social media without prior approval from the Colonel/Superintendent, e.g., photos of sworn personnel in uniform, marked agency vehicles, videos of training or operations exercises, compilation videos of personnel, vehicles, or equipment, electronic artwork of the State Police patch or seal; and
- Not create an identity, website, page, fan group or other application of social media using the Massachusetts State Police as the basis of such a creation without prior approval from the Colonel/Superintendent, e.g., creating a website or fan group dedicated to Massachusetts State Police, using "Massachusetts State Police" or "MSP" in a username.

Subject	Number
Social Media/Networking	**ADM-34A**

Violations

Department Employees shall notify their immediate supervisor when they become aware of:

1. Any personal identifying information of themselves on the internet in violation of this policy; or
2. Have knowledge of a posting and/or website in violation of the provisions of this policy.

.

Any sites deemed inappropriate, bringing discredit to the Department and or employees, and promoting misconduct whether on or off duty shall be:

- Investigated either through a criminal or administrative investigation.

Investigative Activities

Department Employees shall:

- Not conduct any activity related to ongoing investigations through their personal social networking accounts.

Subject:

BODY-WORN CAMERA AND CRUISER-MOUNTED CAMERA PILOT PROGRAM

Sec. 1. GENERAL CONSIDERATIONS:

The Massachusetts State Police (MSP) will conduct a six (6) month pilot program of the use of Body-Worn Cameras and Cruiser-Mounted Cameras (collectively, "BWCs") by members to determine their effectiveness in enhancing policing transparency and increasing public trust and police-community relations. BWCs are an effective tool to preserve factual representations of member-civilian interactions. BWCs are effective in capturing video and audio evidence for use in criminal and internal investigations and member training.

The purpose of this policy is to establish guidelines for the proper use, management, storage, and retrieval of video and audio data recorded by BWCs during the MSP Pilot Program.

It is the policy of the Department to respect the legitimate privacy interests of all persons in the Commonwealth, while ensuring professionalism in its workforce. The recording of a civilian based solely upon the civilian's political or religious beliefs or upon the exercise of the civilian's constitutional rights to freedom of speech and religious expression, constitutional petition and assembly is prohibited. BWC footage shall not be reviewed to identify the presence of individual participants at such events who have not engaged in unlawful conduct.

Sec. 2. PROCEDURES:

Sec. 2.1. Training:
All BWC members and all supervisors who may supervise BWC members shall complete Department-approved training on the operation of the system and this policy.

Sec. 2.2. BWC Activation and Incidents of Use:

Members will activate the BWC only in conjunction with official law enforcement duties, where such use is appropriate to the proper performance of duties, and where the recordings are consistent with this policy and the law. If there is an immediate threat to a member's life or safety, making BWC activation impossible or dangerous, the member shall activate the BWC at the first reasonable opportunity to do so. The BWC shall not be deactivated until the occurrence has fully concluded and/or the member leaves the scene (See Section 2.8, BWC Deactivation). Members shall individually be required to record all contact with civilians in the following occurrences:

1. Vehicle Stops;
2. Investigative person stops: consensual, or articulable reasonable suspicion stops, or stops supported by probable cause;
3. All dispatched calls for service involving contact with civilians;
4. Initial responses by members, including on-site detentions, investigations pursuant to an arrest, arrests, and initial suspect interviews on-scene;
5. Pat-frisks and searches of persons incident to arrest (if not already activated);
6. K-9 searches;
7. Incidents of Emergency Driving (primary and secondary responding members);
8. Incidents of Pursuit Driving (primary and secondary responding members);
9. When a member reasonably believes a crowd control incident may result in unlawful activity;
10. Any contact that becomes adversarial, including a Use of Force incident, when the BWC had not been activated; or
11. Any other civilian contact or official duty circumstance that the member reasonably believes should be recorded in order to enhance policing transparency, increase public trust and police-community relations, or preserve factual representations of member-civilian interactions.

In addition, some triggering events may automatically activate the BWC (e.g., activation of blue lights), depending on the technology employed. Members using event-triggered BWCs will receive specific written explanations of these features prior to deployment.

Sec. 2.3. Recording within a Residence:
Members recording in a residence shall be mindful not to record beyond what is necessary to the civilian contact, and not to use the BWC with exploratory intent in an effort to create an inventory of items in the residence.

Sec. 2.4. Recording in Areas Where There May be a Reasonable Expectation of Privacy:
BWC members should be mindful of locations where recording may be considered insensitive, inappropriate, or may be prohibited by privacy policies. Such locations may include locker rooms, places of worship, religious ceremonies, certain locations in hospitals or clinics, law offices, day care facilities, etc. At such locations, at the member's discretion and based on the circumstances, BWCs may be turned off. The member may consider the option to divert the

BWC away from any subjects and record only audio, if appropriate. When exercising discretion in such situations, the decision whether to stop recording, divert the BWC, or record only audio should generally be based on the following BWC Discretionary Recording Considerations:

- the extent to which the member observes activities or circumstances of a sensitive or private nature;
- the presence of individuals who are not the subject of the member-civilian interaction;
- the presence of people who appear to be minors;
- a request by a civilian to stop recording; and
- the extent to which absence of BWC recording will affect the investigation.

Sec. 2.5. Notice of Recording:
Unless there is an immediate threat to the member's life or safety, making BWC notification impossible or dangerous, BWC members shall inform civilians that they are being recorded at the earliest opportunity. BWC members shall notify civilians with language such as "Ma'am/Sir, I am advising you that our interaction is being recorded by my Body Worn Camera." BWC members shall not record civilians surreptitiously. For custodial interrogations, BWC members are reminded to comply with the requirements of INV-16 Electronic Recording of Interrogations. Use of a BWC is one acceptable method of conducting a recording under such circumstances.

Sec. 2.6. Consent to Record:
Aside from the restriction in Section 2.3 (Recording within a Residence), BWC members are not required to obtain consent to record. If a civilian has requested the BWC member to stop recording, members have no obligation to stop recording if the recording is initiated under any of the circumstances identified in Section 2.2 (BWC Activation and Incidents of Use). When evaluating whether or not to continue recording as an interaction develops, BWC members should weigh the BWC Discretionary Recording Considerations specified in Section 2.4 (Recording in Areas Where There May be a Reasonable Expectation of Privacy). A civilian's request to turn the BWC off should be recorded, as well as the member's response.

Sec. 2.7. Recording of Victims / Witnesses:
If a BWC member is in visual- or audio-recording range of a victim or witness who is giving their first account of a crime, the member may record the encounter but should weigh the BWC Discretionary Recording Considerations specified in Section 2.4 (Recording in Areas Where There May be a Reasonable Expectation of Privacy) in determining whether to activate or discontinue recording. If the BWC member decides to activate and/or continue recording the member shall notify the victim or witness as specified in Section 2.5 (Notice of Recording). If the victim or witness is in anyway unsure of the need for the recording to be made or is uncomfortable with the thought of being recorded, the member shall inform the civilian that they can request to have the BWC turned off. If the camera is already activated, the request to turn the BWC off should be recorded, as well as the member's response.

Sec. 2.8. BWC Deactivation:
To the extent possible, prior to deactivating a BWC, the member shall state the reason for doing

so. Generally, once the BWC is activated, recording should continue uninterrupted until or unless the event has concluded. Below are examples of when an event shall be considered concluded:

1. Victim and/or witness contact has concluded;
2. All persons stopped have been released or left the scene or an arrestee has arrived at the barracks for booking. If a transporting member has a BWC, recording shall continue until the transporting member arrives inside the station at the booking desk;
3. The event is of a sensitive nature and the BWC member has weighed the BWC Discretionary Recording Considerations specified in Section 2.4 (Recording in Areas Where There May be a Reasonable Expectation of Privacy) and decided to deactivate the BWC;
4. The incident has concluded prior to the arrival of the member;
5. The incident or event is of such duration that deactivating the BWC is necessary to conserve available recording time; or
6. The member is ordered to turn the BWC off by a supervisor.

Sec. 3. BWC DEPLOYMENT:

Sec. 3.1. Member Responsibilities:

1. At the beginning of each shift, the BWC member will:
   a. Ensure that the issued equipment has a fully charged battery and is functioning properly;
   b. Notify a Supervisor whenever there is a malfunction or damage to the BWC;
   c. Shall use only MSP issued and approved BWC technologies; and
   d. Wear BWC in a manner that does not obstruct or intentionally defeat the purpose of the BWC Policy.

2. While on duty, the BWC member shall:
   a. Activate the BWC and record as outlined in Section 2 above;
   b. Document the existence of a BWC recording in all of the appropriate documents, i.e. Incident Report, Citation, FIO, Administrative Reports, etc.;
   c. To the extent practicable, notify individuals present, including, but not limited to, law enforcement agency personnel, of the existence of the BWC recording;
   d. If a member fails to activate the BWC, fails to record the entire contact, interrupts the recording, or the BWC malfunctions, the member shall document the circumstances and reason in the incident report or any other applicable report; and
   e. Comply with additional responsibilities that are contingent upon the use of a specific BWC technology that have been conveyed to BWC members through written instructions during the pilot deployment.

Sec. 3.2. Supervisor Responsibilities:

The Supervisor of any BWC members will:

1. Ensure all members assigned a BWC utilize the BWC in accordance with this policy;
2. Upon notification of a malfunction, Supervisors will remove the BWC from service, report the malfunction or damage to the Management Information Section at 508-820-2690 and issue a spare unit, where available ; and
3. Access BWC recordings during the course of duties in accordance with this policy's Section 4 Internal Access/Review.

Sec. 4. INTERNAL ACCESS/REVIEW:

Sec. 4.1. BWC Member Access to Footage:

BWC members may review BWC recordings as they relate to:

1. Their involvement in an incident for the purposes of completing an investigation and preparing official reports. To help ensure accuracy, members are encouraged to review the BWC recording(s) prior to preparing reports;
2. Providing testimony in court to refresh recollection. Members will ensure that the prosecuting attorney is aware that the member has reviewed the BWC recording(s) prior to a court appearance; and
3. Providing a statement pursuant to an internal investigation, including member-involved shooting investigations and other critical incidents as outlined in Section 4.2. BWC Member Access to Footage Following a Member-Involved Shooting.

Sec. 4.2. BWC Member Access to Footage Following an Officer-Involved Shooting:
Following an officer-involved shooting, or other use of deadly force, members, including supervisors, shall not view the BWC recording prior to the Force Investigation Response and Support Team ("FIRST") and/or the State Police Detective Unit (SPDU) of jurisdiction investigating officer(s) viewing the footage and uploading it into the system. This prohibition shall not apply where exigent circumstances exist, such as a member being injured, or where the BWC recording may reasonably provide identifying suspect information or other pertinent, time-sensitive information that may be valuable in addressing the exigent circumstances in a timely manner. BWC members involved in an officer-involved shooting and BWC members who witness an officer-involved shooting or other use of deadly force shall be authorized, upon receiving written permission from their supervisor, to view BWC recording(s) prior to a walkthrough and/or statement.

4.3. Collecting and Securing BWC Footage following an Officer-Involved Shooting or Other Use of Deadly Force:
In the event of an officer-involved shooting or other use of deadly force, FIRST Team personnel and/or SPDU of jurisdiction investigating officer(s) will be responsible for collecting and securing the BWCs from all involved members and witness members at the earliest opportunity. FIRST Team personnel and/or the SPDU of jurisdiction investigating officer(s) will ensure that all involved BWCs are uploaded into the system. Consistent with evidence collection and preservation protocols, BWC(s) will be returned to member(s) once the BWC digital files have been uploaded into the system.

Sec. 4.4. Non-BWC Member Access to Footage:
Non-BWC members who are not supervisors, as defined in Section 4.5 (Supervisor Access to Footage), shall only access footage with the written permission of a supervisor.

Sec. 4.5. Supervisor Access to Footage:
Any supervisor within the recording member's chain of command, any Division Commander, or the Colonel or his or her designee, may review the footage. If a supervisor outside of the chain of command requests to see footage, it shall only be allowed with the written permission of the recording member's commanding officer.

Sec. 4.6. Staff Inspections Access to Footage:
Staff Inspections shall conduct periodic checks to ensure BWCs are being used appropriately.

Sec. 4.7. Use of Footage for Training:
Any member can forward a request to the Division of Standards and Training to use a BWC recording for training purposes.

Sec. 5. EXTERNAL ACCESS:

BWC recordings related to an ongoing investigation or in support of a prosecution shall be provided by the recording member to the applicable law enforcement entity in accordance with ADM-16 Notifying Prosecuting Agencies Regarding Evidence. Should a member receive a subpoena for BWC footage, the member shall direct the subpoena as soon as practicable to the State Police Legal Section. BWC recordings are presumptively subject to a public records request (M.G.L. c. 66, § 10). If a member receives a request for BWC footage from members of the media, the request shall be directed to the Legal Section, with a copy to the Director of the Office of Media Relations. All other requests for BWC recordings, including victim or witness requests, shall be directed to the Legal Section. Members are reminded of the requirements of Rules and Regulations Article 5.23 Dissemination of Information.

Sec. 6. RETENTION:

During the BWC pilot program, no recording or footage shall be deleted. Footage recorded during the pilot program will be retained for no longer than one year after the pilot program concludes; provided, however, that BWC footage recorded during the pilot program that relates to any criminal or civil proceeding, any criminal or administrative investigation, or any use of force will be retained during the pendency of any relevant proceeding (including appeals), investigation, or statute of limitations period, and preserved in accordance with any litigation hold requests issued by appropriate Commonwealth or Department personnel, whichever is longest. The retention period for footage recorded pursuant to the pilot program may be superseded by any future BWC policy implemented, or by specific order of the Colonel or his or her designee.

Sec. 7. RESTRICTIONS:

Sec. 7.1. Improper Recording:

BWCs shall not be used to record:

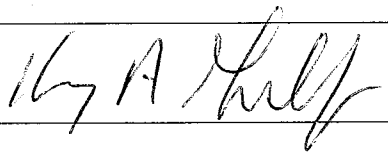
1. During breaks, lunch periods, or time periods when a member is not responding to a call, or when not in service;
2. Any personal conversation of or between other department employees without the recorded employee's knowledge;
3. Non work-related personal activity, especially in places where a reasonable expectation of privacy exists, such as locker rooms, dressing rooms, or restrooms;
4. Investigative briefings;
5. Encounters with undercover members or confidential informants;
6. Departmental meetings, workgroups, in-service training, or assignments of an operational or administrative nature. Using BWCs for training purposes is not a violation of this restriction;
7. Communication with other law enforcement agency personnel;
8. A telephonic conversation, except in accordance with the provisions of State and Federal Law while in the performance of official duties; or
9. Strip searches (refer to PRI-02 Custodial Inventory).

Sec. 7.2. Improper Use of BWC Footage:

BWC recording/footage shall not be:

1. Used for the purposes of ridiculing or embarrassing any employee or person depicted on the recording;
2. Randomly reviewed by the Internal Affairs Division for disciplinary purposes;
3. Disseminated by any employee unless approved by the Colonel or his/her designee, or disseminated in the course of their official duties; or
4. Copied by any employee (e.g., using their personal electronic device to copy).

Sec. 8. PROSECUTORIAL & COURT ORDERED RESTRICTIONS



Access to BWC recordings/footage pursuant to Section 4 Internal Access/Review and/or Section 5 External Access, above, may, at the request, direction or order of appropriate prosecutorial and/or judicial authorities be limited, restricted and/or denied.

BWC recordings/footage shall, when subject to the same, be preserved, stored, and retained in accordance with the requests, directions, and orders of appropriate prosecutorial and/or judicial authorities.

Department of State Police
General Order

Effective Date	Number
November 5, 2008	**ADM-36**

Subject

Diversity and Equal Opportunity

Purpose

The Department prohibits discrimination in employment on the basis of race, color, religious creed, national origin, ancestry, gender, sexual orientation, Vietnam Era Veteran status, age, and disability.

Policy

The Department recognizes that when the effects of employment practices, regardless of their intent, discriminate and create adverse impact against any group of people, affirmative action shall be taken to ensure diversity and equal opportunity and provide equitable remedies for the consequences of present and/or past discriminatory practices. This provides a positive benefit by expanding opportunities to society, the public and all current and future employees.

Strategy for Implementation

The Department shall develop a strategy, which includes plans to address:

- Affirmative Action; and
- Diversity and Equal Opportunity.

The Department, as required and limited by state and federal law, remains committed:

- To ensure equitable participation of minorities, women, Vietnam Era Veterans and persons with disabilities, in all of its operations.

Scope

This policy applies to all employment practices and programs including, but not limited to:

- Recruitment, selection, promotions, termination, transfers, layoffs, compensation, training, and benefits as well as terms and conditions of employment.

The Department shall review, investigate, and when necessary change:

- The policies relative to facilities and programs accessible to the public; and
- Provisions of reasonable accommodation for persons with disabilities.

Subject	Number
Diversity and Equal Opportunity	**ADM-36**

Diversity Officer

The Colonel/Superintendent shall appoint a Diversity Officer who shall:

- Develop and implement:
  1. An Affirmative Action Plan; and
  2. A Diversity Plan.
- Report to the Colonel/Superintendent:
  1. Specific goals and timetables for achievement of each plan;
  2. The Department's compliance with reporting guidelines and requirements; and
  3. Any recommendations regarding equal opportunity.

Responsibilities

The Colonel/Superintendent has the overall responsibility for ensuring equal opportunity and affirmative action in the Department. Supervisors at all levels have the responsibility for the successful implementation of the affirmative action and equal opportunity plans.

Subject

Telephone Use/Access

Policy

The use of Department telephones is limited to conducting official business.

Equipment and Access

Any equipment not issued by the Department is restricted from being connected to any Department telephone jack or telephone line.

Telephone Lines

If…	Then…
Additional line is needed or no longer needed	The commanding officer shall contact the Telecommunications Section at GHQ through channels.

Telephone Bills

Commanding Officers shall:

- Review all telephone bills to ensure compliance with this policy;
- Sign the lower right-hand corner of the front page of the bill to indicate that it was reviewed; and
- Employees shall reimburse the Commonwealth for non-business related calls.

Division Commanders shall:

- Ensure commanding officers and all personnel under their command are in compliance with this policy.

Cellular Phones

Department issued cellular phones are restricted to employees whose duties require them in order to effectively perform their duties.

Continued next page.

Subject	Number
Telephone Use/Access	**ADM-41**

Cellular Phones (Continued)

Cellular phones are maintained and controlled by the Fiscal Section.

Requests for cellular phones shall be:

- Submitted through channels, in writing, to the Chief Administrative Officer.

Cellular phones usage is limited to time critical communications. The restrictions on Department telephone use shall also apply to issued cellular phones.

Employees issued a cellular phone shall:

- Sign for the issued equipment;
- Notify through channels their Division Commander and the Fiscal Section if the cellular phone is lost or stolen; and
- Return the cellular phone to the Fiscal Section when leaving their current assignment.

Subject

Sexual Activity in Public Places

Policy

The Commonwealth of Massachusetts has a legitimate enforcement interest in ensuring that sexual activity and/or genital exposures do not occur in public places, where the likelihood of being observed by a casual passerby is reasonably foreseeable.

Disparate enforcement of applicable statutes against any particular group and/or disparate treatment of any group is unacceptable.

Definitions

Sexual Conduct: The exposure or touching of the genitals, buttocks, or female breasts for purposes of sexual arousal, gratification or offense, or public solicitation to engage in such conduct in a public place. Sexual conduct does not include socializing and expressions of affection absent the particularized conduct described in this subsection.

Public Place: A place where the person engaging in sexual conduct knows or reasonably should know that there is a substantial risk that his or her sexual conduct will be observed by a casual passerby. Sexual conduct does not occur in a public place simply because it is observed by another. An area may be open to the public and not be considered a public place if a reasonable person would not foresee such a substantial risk.

Subject	Number
Sexual Activity in Public Places	**ADM-46**

Criminal Laws

Members shall pay particular attention to the elements of the various offenses when making a determination to arrest possible offenders for engaging in sexual conduct on public property (e.g. rest areas, parks).

All of the elements of a particular offense shall be met in order to charge an individual with an offense.

Most criminal complaints involving consensual sexual conduct on Commonwealth lands generally allege violations of the following Massachusetts General Laws (MGL):

MGL c. 272, s. 16 Open and Gross Lewdness
To sustain a conviction for open and gross lewdness, the Commonwealth must prove five (5) elements:

- That the defendant exposed their genitals, buttocks, or female breasts to one or more persons;
- That they did so intentionally;
- That they did so openly, i.e., with the intent of exposing themselves, or in reckless disregard or substantial risk of public exposure, to others who might be offended by such conduct;
- That defendant's act was done in such a way as to produce alarm or shock; and
- That one or more persons were in fact alarmed or shocked by defendant's exposing their self. Members should identify at least one witness, who is not a police officer, to satisfy this requirement.

MGL c. 272, s. 35 Unnatural Acts
The conduct must:

- Occur in a public place;
- Involve oral contact with the genital or anal area, anal intercourse or masturbation of another person; and
- Be done intentionally or with reckless disregard that others may observe the conduct and be offended.

MGL c. 272, s. 53 Indecent Exposure and Lewd and Lascivious Behavior
A charge of lewd and lascivious behavior requires both:

- The sexual conduct must occur in a public place; and
- That it be by a person who knows or should know of the presence of another person or persons who may be offended by the conduct.

This section also prohibits the:

- Public solicitation of conduct to be performed in a public place; when
- The conduct committed or solicited involves touching of the genitals, buttocks, or female breasts for the purpose of sexual arousal, gratification, or offense.

Subject	Number
Sexual Activity in Public Places	**ADM-46**

Procedure

Members are free to approach and make inquiries to persons in public areas. The approach or inquiry, however, shall neither explicitly nor implicitly assert that persons must respond to their inquiries.

Persons cannot be arrested:

- For failing to respond;
- On mere suspicion;
- For failing to give an account which satisfies the member; or
- Because of a past offense.

Members shall not order someone to leave a public area in the absence of unlawful conduct.

An investigatory stop or brief detention shall be based on reasonable suspicion.

An arrest shall be based on probable cause.

Department of State Police
General Order

Policy Date:	Number:
January 7, 2020	**ADM-47**

Subject:

Bias-Based Profiling

Purpose

Except in "suspect specific incidents", members are prohibited from considering the race, national origin, ethnicity, sexual orientation/identity, socio-economic status, religion, immigration status, and/or age, gender identity or expression, cultural group, or disability, of members of the public in deciding to detain a person or stop a motor vehicle and in deciding upon the scope or substance of any law enforcement action. Bias practices are unfair, ineffective, promote mistrust, and perpetuate negative and harmful stereotypes. The Department is committed to bias-free policing.

Introduction

The Department of State Police is committed to protecting the constitutional and civil rights of all citizens. Allegations of bias-based profiling or any other type of discriminatory practice, real or perceived, are detrimental to the relationship between the police and the communities they protect and serve, because they strike at the basic foundation of public trust. This trust is essential to effective community based policing.

Bias-based profiling is illegal and an ineffective method of law enforcement. Bias-based profiling results in increased safety risks to members and citizens and is a misuse of valuable police resources. More importantly, such improper methods violate the civil rights of members of the public and may lead to increased exposure to liability. The Department is committed to an ongoing and open dialogue with community leaders to ensure that it is engaging in bias-free policing. The Department is committed to community policing in all of the commonwealth's cities and towns, and specifically proactively engaging with youth, families and community members to build relationships, solve problems, and prevent crime.

In conducting law enforcement activities such as criminal investigations, personnel shall not consider personal characteristics such as race, ethnicity, national origin, gender, gender identity/expression, cultural group, sexual orientation/identity, socio-economic status, religion, immigration status, and/or age, except when credible intelligence relevant to the location and time frame links a person or people of a specific race, ethnicity, cultural group, national origin, gender, gender identity/expression, sexual orientation/identity, socio-economic status, religion, immigration status, and/or age to a specific unlawful incident, incidents, criminal patterns or schemes.

Continued next page.

Subject	Number
Bias-Based Profiling	**ADM-47**

Introduction (continued)

The Department does not endorse, train, teach, support, or condone any type of stereotyping, or bias-based profiling by its members. While recognizing that most members perform their duties in a professional, ethical and impartial manner, the Department is committed to identifying, investigating, and eliminating any instances of bias-based profiling.

Definitions

Bias Based Profiling: Any prohibited pattern or practice, including but not limited to stopping, detaining, questioning, frisking, and searching by police officers, that is based upon a generalized belief that a person of a particular race, ethnicity, national origin, gender, or other characteristic, status or trait, is more likely to commit certain types of crimes. This type of inappropriate reliance on certain characteristics such as race, ethnicity, national origin, religion, sex, sexual orientation, immigration status, gender identity or expression, economic status, age, cultural group, or disability as the basis for providing differing law enforcement services or enforcement activity as outlined is strictly prohibited.

Suspect Specific Incident: An incident in which a member is lawfully attempting to detain, apprehend, or otherwise be on the lookout for one or more specific suspects who have been identified or described in part by national or ethnic origin, gender, race, religion, sex, sexual orientation, immigration status, gender identity or expression, economic status, age, cultural group, or disability or any other protected characteristic.

Bias-Based Profiling Prevention

To prevent bias-based profiling, the Department shall:

- Provide training programs to ensure that appropriate employees receive training on bias-based profiling practices, implicit bias, and the standards established by this policy;
- Ensure that this policy is disseminated to all members, dispatchers and appropriate civilian employees;
- Continuously review and, where appropriate, revise all procedures that involve the stop, detention, apprehension, or search of individuals to ensure that procedures are in compliance with the provisions of the law and this policy;
- Continuously review performance recognition and evaluation systems, training curricula, policies, and customs of the Department to determine if any practice encourages conduct that may support or lead to; and
- Work with the Executive Office of Public Safety and Security (EOPSS) and the Registry of Motor Vehicles to educate the public on what to expect when either stopped or detained by the State Police, as well as what the officer's expectations are during motor vehicle stops or detainment, to ensure both officer and citizen safety.

Subject	Number
Bias-Based Profiling	**ADM-47**

Enforcement of Profiling Policy

To enforce the provisions of this policy, the Department shall:

- Take appropriate and timely action to investigate allegations of bias-based profiling; and
- Take appropriate and timely measures to correct any institutional practice or policy that may support or lead to the use of bias-based profiling.

Responsibilities

Division of Standards and Training shall:

- Promote professionalism throughout the Department;
- Ensure that all employees receive training on the prevention and elimination of bias-based profiling;
- Assist supervisors in identifying and modifying potentially problematic behavior;
- Utilize appropriate citizen complaint procedures to document and investigate allegations of bias-based profiling; and
- Investigate referrals from the EOPSS.

Position	Duties
Colonel/ Superintendent	Shall: • Promote the Department's commitment to prevent and eliminate bias-based profiling; • Ensure all employees receive a copy of this policy; • Ensure all employees comply with this policy; and • Ensure the continuing analysis and public release of analysis related to documented police interactions with community members.
Supervisors	Shall: • Monitor members conduct to ensure that the standards of this policy are being carried out; • Ensure that members collect data on race, gender, and searches in accordance with laws, and TRF-08 Citations; and • Take positive steps to identify, prevent, and eliminate any instances of bias-based profiling by members of the Department.

Continued on next page

Subject	Number
Bias-Based Profiling	**ADM-47**

Responsibilities (continued)

Members	Shall: • Provide everyone with fair and impartial police services consistent with constitutional and statutory mandates; • Respect the diversity and the cultural differences of all people; • Uphold the Department's commitment to lawful and nondiscriminatory enforcement that promotes public safety and strengthens the public's trust and confidence; • Promptly reporting any instances of bias-based policing to a supervisor; and • Take affirmative and positive steps to identify, prevent, and eliminate any instances of bias-based profiling by other members.

Department of State Police
General Order

Effective Date	Number
September 3, 2019	**GEN-01**

Subject

Personal Appearance

Policy

As the principal law enforcement agency within the Commonwealth of Massachusetts, members shall present an image of the highest standard, order, and professionalism to the public.

Members shall correct any deficiencies in their personal appearance, uniform, or equipment as soon as practicable, unless otherwise specified in this Order.

Jewelry

No jewelry, pins, necklaces, or bracelets of any kind shall be worn with the uniform. Exceptions, if conservative, are:

- Wristwatch;
- Medic Alert bracelet;
- Rings; and
- Necklaces worn discreetly beneath the shirt.

Note: Earrings shall not be worn while in uniform; however, conservative earrings may be worn by members in plainclothes assignments.

Members shall not display implants or facial/body piercing, while on duty or representing the Department. Note: In some instances, implants may be acceptable if a licensed medical practitioner requires the medical procedure and the procedure is performed under their supervision.

Facial/body piercings include, but are not limited to:

- Piercing of the face, tongue, nasal septum, lips or lip plate; or
- The deliberate expansion of a healed fistula (hole in the skin) for wearing body-piercing jewelry; or
- The transdermal or microdermal implants.

Exception:
Members who are on undercover assignment may display facial or body piercings, when authorized by their Division Commander.

Subject	Number
Personal Appearance	**GEN-01**

Hygiene and Oral Hygiene

Members' personal care shall conform to the highest personal hygiene standards.

Members, when in any uniform or representing the Department, shall ensure:
- Teeth will be clean and free of foreign debris;
- There is an appearance of a full set of teeth; and
- Missing or broken teeth and/or loose orthodontics shall be replaced or repaired as soon as possible.

Members shall not display dental/oral modifications to their teeth or mouth area while on duty or representing the Department. Note: In some instances, dental/oral modifications or procedures may be acceptable if a licensed dental or medical practitioner requires the medical procedure and the procedure is performed under their supervision.

Dental/oral modifications include, but are not limited to:
- Tongue splitting or bifurcation;
- Abnormal filing of the teeth; and
- Dental veneers or laminates ornamented with designs, jewels, initials, or any other decoration.

Cosmetics

Cosmetics, if worn, shall be:
- Subdued and blended to match the natural skin color; and
- Conservative.

No false eyelashes or unnaturally colored contact lenses shall be worn.

No fingernail polish of any color shall be used when in uniform.

Tattoos and Body Modifications

Members shall comply with General Order GEN-01A Tattoos and Body Modifications.

Hair

Hair shall:
- Be clean, neat, and well groomed;
- Not touch the top of the uniform shirt collar, at the back, when standing with the head in a normal posture;
- Not interfere with the wearing of any issued headgear; or
- Not be dyed or tinted in an exaggerated or unnatural color.

Note: Wigs or hairpieces may be worn if they conform to the above standards.

Continued next page.

Subject	Number
Personal Appearance	**GEN-01**

Hair (Continued)

Males in Uniform:
Hair shall be:
- Either tapered or blocked at the back of the neck; and
- Tapered or blocked at the sides but may not touch the ears.

Sideburns shall be:
- Neatly trimmed and rectangular;
- Trimmed horizontally, at a right angle;
- Of even width; and
- No longer than the midpoint of the tragus of the ear.

Faces shall be clean shaven except:
- Members assigned undercover, and with the approval of the Unit/Section Commander; or
- Members with a temporary medical condition, verified by the State Police Surgeon.
  Note: Members with mustaches, beards, or goatees shall not appear in uniform.

Females in Uniform:
- Hair may extend over, but not below, the bottom of the ear, nor more than two inches forward of the ear;
- Conservative ponytails, braids, hair buns, etc., may be used if secured to the head; and
- Inconspicuous hair aids that blend in with the hair may be used.

Department of State Police
General Order

Effective Date	Number
June 22, 2020	**GEN-01A**

Subject

Tattoos and Body Modifications

Policy

Pursuant to GEN-01 Personal Appearance, members shall present an image of the highest standard, order, and professionalism to the public.

Members of the Department shall maintain their personal appearance to the highest standards possible and in conformance with GEN-01 Personal Appearance.

All Sworn Members

No sworn member of the Department shall have ANY tattoo, scarification or brand that is considered extremist.

Extremist tattoos, scarifications or brands are those affiliated with, depicting, and/or symbolizing extremist philosophies, organizations, or activities. Extremist philosophies, organizations, and activities are those which advocate racial, gender and/or ethnic hatred or intolerance; advocate, create, or engage in illegal discrimination based on race, color, gender, gender identity, sexual orientation, ethnicity, religion, or national origin; and/or advocate violence or other unlawful means of depriving individual rights under the U.S. Constitution, Federal, or State law.

For purposes of this policy, the above prohibition on *extremist* tattoos, scarifications or brands shall also include indecent, sexist and racist tattoos, scarifications or brands:

1. *Indecent* tattoos, scarifications or brands are those that are grossly offensive to modesty, decency, or propriety; shock the moral sense because of their vulgar, filthy, or disgusting nature or tendency to incite lustful thought; or tend reasonably to corrupt morals or incite libidinous thoughts.
2. *Sexist* tattoos, scarifications or brands are those that advocate a philosophy that degrades or demeans a person based on gender or gender identity, but that may not meet the same definition of "indecent."
3. *Racist* tattoos, scarifications or brands are those that advocate a philosophy that degrades or demeans a person based on race, ethnicity, or national origin.

Continued next page.

Subject	Number
Tattoos and Body Modifications	**GEN-01A**

All Sworn Members (Continued)

No sworn member shall have a tattoo, scarification or brand on his or her face, neck or hands (wrist to fingertips).

NOTE: This prohibition pertaining to face and hands does not apply to members who have:

- Permanent commitment band(s) on the hand(s); and/or
- Permanent eyeliner, eyebrows or lipstick, as long as the permanent color is conservative and compliments the complexion and uniform.

However, under no circumstances shall any sworn member be allowed to add ANY additional permanent markings to his or her face.

Effective June 22, 2020, no sworn member shall add any additional tattoo, scarification or brand, regardless of size, normally visible while on-duty in ANY authorized uniform or attire.

Applicants

All applicants seeking sworn appointment to the Department shall be screened during applicant processing to assess whether they are in compliance with this General Order.

If an applicant is found to be in violation of this General Order, then the applicant may, at his or her sole discretion, have the non-compliant tattoo, branding, or body art, or visible portion thereof, removed at his or her own expense. If an applicant expresses a willingness to remove a non-compliant tattoo, branding, or body art, his or her application for appointment will be suspended until the removal process is completed and re-evaluated for compliance. Removal of any markings will not per se absolve the applicant of being deemed as having such affiliation or adherence to said philosophies, organizations or activities that may be apparent in any phase of the selection process.

No applicant shall add any additional tattoo, scarification or brand, regardless of size, normally visible while on-duty in ANY authorized uniform or attire**.**

Prior to appointment to the Massachusetts State Police Training Academy, any applicant who has tattoos/body art/brands/scarifications, normally visible while on-duty in **ANY** authorized uniform or attire, shall submit to the Division of Administrative Services / Human Resources Section for inclusion in the applicant's personnel file:

- An SP 802A Applicant Identification and Reporting of Tattoos/Body Art/Brands/Scarifications

The SP 802A must contain the following information:

1. The date the tattoo/body art/brand/scarification was received;
2. A description and photograph(s) of the respective tattoo/body art/brand/scarification; and
3. The size and location of the tattoo/body art/brand/scarification on the member's body that is visible while wearing the Department uniform.

Subject	Number
Tattoos and Body Modifications	**GEN-01A**

Body Modifications

Body modification to any area of the body that is visible while on-duty in ANY authorized uniform or attire is prohibited.

The use of gold, platinum or other dental veneers or caps for the purpose of ornamentation while on-duty is prohibited. Teeth, whether natural, capped, or veneer shall not be ornamented with designs, jewels, initials, etc.

Body piercing jewelry not concealed by any authorized uniform or approved attire while on-duty is prohibited with the exception of earrings worn in compliance with GEN-01 Personal Appearance.

- The wearing of any facial jewelry to include, but not limited to tongue piercings, lip piercings, nose piercings, brow piercings by any sworn member of the Department while on-duty is prohibited.
  Exception: Members who are on undercover assignment may display facial or body piercings when authorized by their Division Commander.

Subject

Uniforms

Policy

Members of the Department shall maintain their personal appearance and uniforms to the highest standards possible.

Cruiser Operation

While operating Department vehicles, all members are required to wear the authorized uniform or appropriate business attire.

Members shall display their badge of office while operating a Department vehicle; exceptions may be allowed for:

- Members assigned to the Division of Investigative Services or to other assignments where the member's identity should not be revealed.

General

Supervisors are responsible for continuous line inspections in order to ensure that members under their control maintain a professional appearance and correctly wear the uniform.

Whenever two (2) or more members are gathered in the same location, the members shall dress the same as the Officer in Charge (OIC) or Senior Trooper, or as otherwise ordered.

Members while in uniform shall not:

- Participate in social functions, unless authorized to do so by their Division Commander;
- Wear unauthorized or non-issued clothing, parts, medallions, ornaments, or other appurtenances;
- Wear personal headphone devices or cellular phone headsets;
- Consume alcoholic beverages;
- Use tobacco, chew gum, or have any foreign object protruding from the mouth when they are:
  - (1) in view of the public; and/or
  - (2) in formation.

Members shall not permit any non-member to wear any part(s) of any issued Massachusetts State Police uniform assigned to them.

Members shall not wear any part of the uniform while off-duty, unless authorized to do so.

Replacement of Uniforms or Equipment

When items are worn out, damaged, destroyed through normal use, or do not fit, members may turn in items to the Troop Clerk and requisition a replacement.

When items are damaged or destroyed through negligence or misuse, the member shall replace the item(s) at their own expense.

Cleaning and Maintenance

- Boots, shoes, and leather shall be highly polished.
- Brass shall be clean and highly shined.
- Clothing items shall be clean, stain free, and pressed.
- Necessary alterations or repairs may be done through the Troop Clerk.
- Whenever an occasion causes deficiencies in personal appearance, uniform, or equipment, members shall avail themselves of the first opportunity to correct the condition.

Riot Gear

All members, unless undercover, shall carry all issued riot gear in the trunk of their cruiser.

The OIC at a riot or disturbance may designate the following items as optional:

- Necktie and tie clasp, cross-strap, name tag, badge of office, whistle and chain, and gas mask; and/or
- Use of force equipment as defined in *UOF-04 Use of Force Equipment*

Summer and Winter Uniform Dates

The Summer Uniform shall be worn from:

- April 15th through October 14th.

The Winter Uniform shall be worn from:

- October 15th through April 14th.
  Note: The Winter shirt is optional for thirty (30) days before and after this period.

Note: Staff Officers while in any uniform shall wear the garrison cap at all times.

Full Dress (Class "A") Uniform

The Class "A" Uniform is for ceremonial or dress occasions. It consists of:

- Long sleeve shirt;
- Necktie and tie clasp;
- Blouse;
- Breeches;
- Field boots; and
- Duty belt with only the holster and firearm, ammunition case, handcuff case, club ring, and the cross-strap;

Continued next page.

Full Dress (Class "A") Uniform (Continued)

- Appropriate cover (the garrison cap during Winter for all members; the straw campaign cover during Summer for all members, except Staff Officers who shall wear the garrison cap);
- Black or white gloves, when authorized; and
- Authorized ribbons and medals.

Sunglasses, keepers, and extra handcuffs shall not be worn with the Class "A" uniform.

For designated periods of mourning, a black badge shroud shall be worn around the badge of office.

Summer Field Service (Class "B") Uniform

- Straw campaign cover shall be worn with cord trimmed to an appropriate length (not knotted) and as follows:
  - *Troopers* – silver hat badge and silver acorns;
  - *Non-Commissioned Officers* – silver hat badge and silver acorns;
  - *Commissioned Officers* – gold hat badge and gold acorns;
- Short sleeve shirt, top button unbuttoned, no undergarments or jewelry visible;
- Slacks;
- Jump boots;
- Garrison belt;
- Duty belt with keepers, holster and firearm, handcuff case, club ring, ammunition case, and other authorized equipment;
- Sweater (optional) tucked into slacks with badge on left chest, name tag on right chest;
- Issued outerwear (optional); and
- No ribbons or medals, except service ribbon.

If the long sleeve shirt or issued sweater is worn, a necktie and tie clasp shall be worn without the cross-strap.

Winter Field Service (Class "B") Uniform

- Garrison cap shall be worn with:
  - *Troopers* – silver hat badge and black leather strap on front and back;
  - *Non-Commissioned Officers* – silver hat badge and silver hat band on front with black leather straps removed;
  - *Commissioned Officers* – gold hat badge and gold hat band on front with black leather straps removed;
  - *Command Staff* – gold hat badge, gold fretting, and glossy gold hat band with black leather straps removed;
- Long sleeve shirt, completely buttoned, with necktie and tie clasp;
- Breeches;
- Field boots;
- Garrison belt;

Continued next page.

Winter Field Service (Class "B") Uniform (Continued)

- Duty belt with cross-strap, keepers, holster and firearm, handcuff case, club ring, ammunition case, and other authorized equipment;
  - Cross-strap shall be worn diagonally across the wearer's front and back, secured directly in front of and behind the holster.
- Sweater (optional), tucked into breeches with cross strap removed and badge on left chest, name tag on right chest;
- Issued outerwear (optional);
- Black gloves and balaclava (optional); and
- No ribbons or medals, except service ribbon.

Knit caps shall not be worn with the Winter Field Service (Class "B") uniform.

Specialty Uniforms

When authorized to do so by their Division Commander, members may wear specialty uniforms. Only members who are performing a specialized function shall wear specialty uniforms.

The Division Commander of Standards and Training, or designee, may revise the duty uniform of personnel assigned to the Academy.

Issued Uniform Parts and Equipment

The **Badge of Office** shall be:

- Prominently displayed by wearing it on the left breast area of the outer uniform garment.

The **Headgear badge** shall be:

- Worn on all campaign covers and garrison caps.

Collar insignias shall be:

- Worn on summer and winter shirts and the dress blouse only;
- Placed with the Commonwealth ornament on the right hand side;
- Placed with the troop designation ornament on the left hand side; and
- Placed one (1) inch back from the leading edge of the collar and centered between top and bottom.

Service chevrons may be:

- Worn, one (1) for every two (2) years of service; and
- Worn on the left sleeve of the blouse, pointing downward with the lowest chevron centered one and one-half (1 ½) inches above the semicircular cuff edging.
  Note: Service chevron shall not be worn by commissioned and non-commissioned officers.

Continued next page.

Issued Uniform Parts and Equipment (Continued)

Non-Commissioned Officer stripes shall be:

- Worn on both sleeves of all shirts, the dress blouse and outer garments except traffic vest and rain jacket;
- Aligned so that the points of the stripes face upward;
- Positioned on the right sleeve so that the point of the highest stripe touches the bottom point of the MSP patch; and
- Positioned on the left sleeve so as to mirror the location of the stripes on the right sleeve.

Commissioned Officers Rank Insignia shall be:

- Worn on both shoulders of all shirts, the blouse, and outer garments, except traffic vest and rain jacket; and
- Centered between the shoulder seam and shoulder strap.

Name tags shall be:

- Prominently displayed on all outer uniform garments, except rain jacket and high visibility safety apparel;
- Affixed to the lower seam edge running horizontally across the right breast and centered over the button of the shirt/blouse pocket; and
- Positioned so as to appear centered between the lapel edge and shoulder seam.

Tie clasps shall be:

- Worn on the tie, clipped to the shirt, and horizontally even with the name tag.

The **chain, key and whistle** shall be:

- Worn suspended from the right epaulet button and attached to the right breast pocket button on the blouse or shirt;
- Worn with the chain under the name tag; and
- Worn in the following order from the right: chain-key-whistle.

The issued **use of force equipment, ammunition, and handcuffs** shall be:

- Carried and secured in appropriate cases on the duty belt.

The **rain jacket** shall be:

- Worn during inclement weather**,** high visibility side out (see *Issued High Visibility Safety Apparel* section of this General Order), except for solemn or ceremonial occasions, where the black side shall be out.
  Note: No rank insignia shall be worn on the rain jacket.

The **traffic vest**:

- See *Issued High Visibility Safety Apparel* section of this General Order.
  Note: No rank insignia shall be worn on the traffic vest.

Promotion Instructions

Prior to the effective date of promotion, all officers shall report to the Supply Section in order to be issued appropriate uniforms and gear. Unless specifically detailed below, uniforms and uniform parts shall remain the same as the next highest rank.

All Ranks

Patrol Jackets
Both reversible patrol jackets should be returned to the Supply Section for an exchange or for application of new rank insignia in the appropriate location(s).

Staff Officers and Commissioned Officers

Rank Insignia
The following ranks will be issued the respective cloth and brass rank insignia**:**

- **Colonel –** Silver Eagle;
- **Lieutenant Colonel –** Silver Oak Leaf;
- **Major –** Gold Oak Leaf;
- **Detective Captain –** Double Silver Bars;
- **Captain –** Double Gold Bars;
- **Detective Lieutenant –** Single Silver Bar;
- **Lieutenant –** Single Gold Bar.

Cloth Rank Insignia shall be

- Sewn onto both shoulders of all uniform shirts; and
- Centered between the shoulder seam and shoulder strap.

Brass Rank Insignia shall be worn on:

- Blue side of patrol jackets;
- Dress blouse; and
- Sweater.

Gold Braiding
Detective Lieutenants/Lieutenants will be issued a dress blouse with the appropriate gold braiding already affixed.

The following ranks will be issued additional gold braiding to be affixed to the sleeve of the lieutenant dress blouse, resulting in:

- **Colonel** – four (4) rows of one-half (1/2) inch braiding affixed one-eight (1/8) inch from each other;
- **Lieutenant Colonel** – three (3) rows of one-half (1/2) inch braiding affixed one-eight (1/8) inch from each other;
- **Major** – One-half (1/2) inch braiding, then one-quarter (1/4) inch braiding, then one-half (1/2) inch braiding affixed one-eight (1/8) inch from each other;
- **Detective Captain/Captain** – two (2) rows of one-half (1/2) inch braiding affixed one-eight (1/8) inch from each other.

Continued next page.

Promotion Instructions (Continued)

Detective Lieutenants/Lieutenants

Detective Lieutenants/Lieutenants will be issued the following:

1. Uniforms
   - Dress Blouse with the appropriate gold braiding already affixed;
   - Slacks and Breeches with two (2), one-half (1/2) inch blue braiding sewn along each pant leg; and
   - Long and short sleeve shirts.

2. Gold Accessories
   - Chain / handcuff key / whistle;
   - Collar ornaments;
   - Duty Belt brass; and
   - Tie clasp.

3. Gold MSP Patches – All blue MSP patches should be removed from the current issue, except rain jacket, and replaced with the gold patches. Troop Clerks may be consulted for alteration locations.

4. Gold Reflective Tape for Riot Helmet:
   - one (1) gold strip of tape is to be placed horizontally on the back of the helmet from rivet to rivet; and
   - one (1) gold strip of tape is to be placed starting on the crown of the helmet downward to the front visor.

Sergeants

Sergeant will be issued the following:

1. Cloth Non-Commissioned Officer Stripes Rank Insignia with dark blue stripes and light blue background which shall be affixed accordingly:
   - Sewn onto the dress blouse and onto all uniform shirts;
   - Worn on both sleeves of dress blouse, and all shirts;
   - Aligned so that the points of the stripes face upward;
   - Positioned on the right sleeve so that the point of the highest stripe touches the bottom point of the MSP patch; and
   - Positioned on the left sleeve so as to mirror the location of the stripes on the right sleeve.

Note: Cloth Non-Commissioned Officer Rank Insignia with light blue stripes and **dark** blue background are for winter sweaters and patrol jackets only.

2. Silver Reflective Tape for Riot Helmet:
   - One (1) silver strip of tape is to be placed horizontally on the back of the helmet from rivet to rivet; and
   - One (1) silver strip of tape is to be placed starting on the crown of the helmet downward to the front visor.

Issued High Visibility Safety Apparel

High Visibility Safety Apparel is comprised of fluorescent colored background material that has retro-reflective applications affixed to it, thus providing the wearer with a high degree of visibility during both daylight and darkness.

The following Department issued apparel shall be considered high visibility safety apparel:

- High visibility yellow traffic test;
- Civilian traffic vest;
- Reversible Rain Jacket with high visibility yellow side out; and
- Reversible Patrol Jackets with high visibility yellow side out.

Department Employees (sworn and civilian) are advised that issued high visibility safety apparel shall be:

- Worn in accordance with current state and federal laws.

Specific clothing worn by certain sections of the Department may be considered high visibility safety apparel, only if the article of clothing has an American National Standards Institute-International Safety Equipment Association (ANSI/ISEA) certified label affixed to it.

The Department realizes that members performing motor vehicle stops have discretion when balancing their need to be visible to approaching traffic and their need to ensure proper patrol procedures/officer safety during the course of the motor vehicle stop.

Employees (sworn and civilian) are <u>not required</u> to wear high visibility safety apparel when:

- A member is performing a motor vehicle stop; or
- A civilian employee is performing functions away from the roadway and traffic areas.

However, members who choose <u>not to wear</u> high visibility safety apparel during motor vehicle stops shall:

- Remain vigilant and understand that they are less likely to be seen by approaching motor vehicle traffic particularly:
    1. In darkness; or
    2. In periods of diminished visibility due to inclement weather.

Employees (sworn and civilian) wearing uniforms or plain clothes <u>shall wear</u> high visibility safety apparel during all hours and lighting conditions when engaged in the following activities:

- Directing traffic;
- At all road and highway motor vehicle crash scenes;
- When working at lane closures and obstructed roadways;
- On all road and highway work zones and construction details including moving details (excluding dignitary protection); and/or
- Special or significant events when ordered by the OIC.

Subject	Number
Uniforms	**GEN-02**

Eye Wear

Members performing a line function and wearing prescription lenses shall have:

- Safety lenses; and
- Conservative and secure frames.

Sunglasses may be worn for outside assignments only, and shall be of a conservative style.

Department Issued Ribbons and Medals

While in Class "B" uniform, Department members who have attained ten (10) years of service shall be allowed to wear over the left breast pocket of the shirt:

- The Department issued Service Ribbon (blue/white/blue); and
- If applicable, one (1) gold star for each additional five (5) years of service to be inserted onto the white section of the ribbon.

Department issued ribbons and medals shall be worn on the Class "A" uniform over the left breast pocket of the blouse. However, if the member has military awards, the Department ribbons and medals shall be worn over the right breast pocket of the blouse.

Memorial pins, medallions, insignias, or other ornaments shall not be worn, unless authorized by the Colonel/Superintendent.

Military Ribbons and Medals

Awarded ribbons and medals issued by the U.S. Armed Forces may:

- Be worn or displayed, in military fashion, while in Class "A" uniform over the left breast pocket of the blouse.

No military ribbons or medals shall be worn or displayed while in Class "B" uniform.

Department of State Police
General Order

Effective Date	Number
April 23, 2009	**GEN-04**

Subject

Military Courtesy

Policy

The Department has been a paramilitary organization since its inception; the application of military courtesies shall continue to maintain this tradition.

Salutes

Salutes shall be given when members are both in uniform and covered, unless it would interfere with the performance of duty.

Salutes shall be given to a Staff Officer or a Commissioned Officer, and be smartly and promptly acknowledged by that member. In the case of Commissioned Officers, this rule shall only apply to members of superior rank.

The salute shall also be given to the Governor, President and Vice President.

This policy shall also apply when meeting uniformed members of other police agencies and the Armed Forces.

Salutes in Formation

Members shall salute upon a command from the Commanding Officer when:

- In formation at a halt, the commands are "Attention", then "Present Arms" and the recovery command is "Order Arms"; and
- In a moving formation, the salute is only executed by the Commanding Officer leading the formation; the command for the formation is "Eyes Right" (or left), and then "Ready Front" as the salute.

Attention

Upon entering the office of the Colonel/Superintendent, a Lieutenant Colonel, or a Major, a member shall remove their cover and stand at attention.

National Anthem

Members in uniform shall stand at attention and salute when the National Anthem is played:

- Facing the music (unless the National Flag is displayed); and
- Starting at the first note of the anthem, continuing to the last note.

If in civilian clothes, the right hand is placed over the heart in lieu of the salute.

Subject	Number
Military Courtesy	**GEN-04**

National Flag

Unless it would interfere with the performance of duty, uniformed members wearing the appropriate cover, shall stand at attention facing the flag and salute when:

- It passes by on all public occasions, ceremonies, parades, etc. (The salute shall be given when the flag has arrived within a distance of six (6) paces and maintained until it has passed six (6) paces beyond); or
- It is carried into any building, room, or other place where members are present; or
- It is formally raised or lowered.

If in civilian clothes, the right hand is placed over the heart in lieu of the salute.

Pledge of Allegiance

Unless it would interfere with the performance of their duty, during the Pledge of Allegiance members shall:

- Stand at attention facing the flag and salute when in uniform wearing the appropriate cover; or
- Stand at attention facing the flag and place their right hand over their heart if in civilian clothes.

Display of Flags

The Flags of the United States and the Commonwealth shall be flown at all Department facilities. The National Colors shall be flown on the flag's own right, (on the right as facing the street), and slightly higher than the Commonwealth Flag.

Flags shall be flown:

- Every day when the weather permits; and
- At night if they are directly illuminated

The National Flag shall be flown at half-staff in honor of a member who dies while in the line of duty, from the notification of death until dusk of the day of interment.

The Flag of the Commonwealth shall be flown at half-staff when:

- The National Flag is at half-staff;
- As ordered by the Governor; or
- As ordered by the Office of the Superintendent.

On Memorial Day, the flags should be flown at half-staff until noon, and then raised.

To display flags at half-staff, the flags should be hoisted to the peak, and then lowered to half-staff.

Ceremonial Tributes

Policy

The protocols identified within this policy shall be adhered to during ceremonial tributes in honoring Department members or when attending tributes with other agencies.

Request Procedure and Authorization

The Colonel/Superintendent shall authorize final approval for all Department tributes and requests from outside agencies. The Division of Field Services shall handle implementation, unless otherwise ordered.

Ceremonial Tributes

The Department may provide the following as determined by the Colonel/Superintendent:

Line of Duty Death

- Wake – Organized police walk-by, honor guard and/or color guard detail;
- Drill and Ceremonial Unit;
- Rifle Salute;
- Mounted Unit;
- Motorcycles;
- Air Wing;
- Vocalist and bugler(s);
- Department Pipes & Drums;
- Classmates of the Deceased;
- Specialty Unit/Team to which the member belonged;
- Minimum of forty (40) members; and
- All available members of the Command Staff.

Off-Duty Death

- Wake – Honor guard at wake consisting of member's troop/section;
- Drill and Ceremonial Unit;
- Motorcycles;
- Classmates of the Deceased;
- Vocalist, bugler and piper;
- Specialty Unit/Team to which the member belonged;
- Minimum of twenty (20) members; and
- Division Commanders or Designees.

Continued next page.

Subject	Number
Ceremonial Tributes	**GEN-04A**

Ceremonial Tribute (Continued)

Death of Immediate Family Member of an Active Member, (spouse, child, brother, sister, parent of member or spouse)

- Four (4) members, provided for by the member's Station/Section/Unit, to cover calling hours, funeral detail, and the procession.

Retired Member(s)

- Two (2) members to be provided by the Division of Field Services to cover calling hours, funeral detail, and procession.

Active Public Safety Officers

The Colonel/Superintendent shall determine any ceremonial tributes provided for active public safety officers killed in the line of duty.

Funeral Attendance

The Department shall attempt to allow as many on-duty members as possible to attend the calling hours and funeral services of an active member.

Members to attend calling hours and funeral services in uniform shall:

- Wear the appropriate uniform-of-the-day as indicated on calling hours and funeral services announcements;
- Be authorized, when attending off-duty, to wear the uniform-of-the-day as indicated on calling hours and funeral services announcements; and
- While inside a funeral home or church carry their headgear under their left upper arm, unless directed otherwise or when participating as a member in the honor guard.

Honor Guard

Details at funeral homes should consist of at least four (4) members. The senior member should coordinate with the family liaison. Members shall wear the class "A" uniform, with a black badge shroud and white gloves, unless otherwise directed.

Funeral Processions

Upon leaving the funeral home or church, members should:

- Cover and form two (2) lines along the path where the casket is to be carried;
- The formation shall start at the funeral home or church and end at the hearse; and
- A proper interval shall be maintained between members.

Subject	Number
Ceremonial Tributes	**GEN-04A**

Badge Shrouds

As designated by the Colonel/Superintendent, black badge shrouds shall be worn for thirty (30) days by all members in honor of an active member who dies in the line of duty.

Black badge shrouds shall be worn by all members in honor of an active member who dies off duty, from the date of the death notification until the interment.

Black badge shrouds shall be worn by uniformed members while appearing at a funeral or memorial service for active or retired members.

Funeral Escorts

Department vehicles escorting or following the funeral procession shall:

- Be operated at a speed consistent with that of the hearse and far enough ahead of the procession to control traffic; and
- Have all the emergency warning lights activated and left on during the entire escort.

Members assigned to traffic control duties where the funeral procession is passing by shall:

- If conditions allow, stand at attention and render the hand salute while the hearse is passing.

If the escort terminates at the entrance to a cemetery, church, or funeral home, the escorting members shall:

- Stand at attention in two (2) lines, face each other; and
- Render the hand salute until the hearse has passed by.

Subject

Communicable Diseases

Policy

The Department shall provide its employees with equipment and information on communicable diseases to prevent exposure to dangerous and life-threatening diseases.

Definitions

Communicable Disease: Infectious illnesses and viruses that are transmitted through contact with bodily fluids, tissue, or breath of an infected individual.

Bodily Fluid: Liquid secretions such as blood, semen, vaginal secretions, saliva, vomit, urine, and feces.

Airborne Exposure: Contact with bacteria, virus, chemical, smoke, or any foreign particle suspended in the environment.

Unprotected Exposure: Any bodily fluid or tissue that comes into direct contact with a mucous membrane (e.g., eyes, nose, and mouth) or non-intact skin (e.g., cuts, chapped skin). This includes a bite from a human or animal.

Communicable Disease Prevention

All employees should assume that all persons are potential carriers of communicable disease.

When coming into contact with people or evidence where the transfer of bodily fluids is a possibility, employees should wear protective clothing and equipment to minimize their exposure to disease. This includes:

- No eating, drinking, or smoking at a scene where bodily fluids are present;
- Wear **disposable gloves** when administering first aid or handling anything that has been exposed to bodily fluids (double gloves should be used, if necessary);
- Wear a **protective mask**, eye wear, and coveralls if available, in situations where bodily fluids may come into contact with the employee;
- Use the issued **plastic mouth piece** or other barrier resuscitation device when performing CPR;

Continued next page.

Communicable Disease Prevention (Continued)

- Use extra care when handling contaminated sharp objects (e.g., wear **protective gloves** when conducting a search, or when handling sharp objects);
- Use a **flashlight or baton** to conduct an initial sweep of areas where sharp objects may be hidden;
- Place hypodermic needles in leak proof, rigid, puncture-resistant, shatterproof containers (needles should not be recapped, bent, broken or removed from the syringe); and
- All employees assigned to the Forensic Service Group involved in the collection and handling of evidence shall follow Communicable Disease Prevention procedures identified in the current version of the Laboratory Safety Manual.

Disinfection Guidelines

If…	Then
Any unprotected skin surface comes in contact with bodily fluids	1. Immediately and thoroughly wash the affected area with hot running water and soap for at least fifteen (15) seconds before rinsing and drying. 2. Use alcohol or waterless antiseptic hand cleaning gel when soap and water is unavailable. 3. Hand lotion should be applied after disinfection to prevent chapping and to seal cracks and cuts on the skin. 4. When necessary, report to a medical facility for an examination or treatment.
You are wearing disposable gloves that come in contact with bodily fluids.	1. Thoroughly rinse the glove before removing. 2. Hands and forearms should then be washed as described above.
Uniform or clothing comes in contact with bodily fluid.	1. Remove the uniform/clothing as soon as practical. 2. Place the contaminated uniform/clothing in a paper bag. 3. Any contaminated skin area should be cleaned as described above. 4. Uniforms/clothing should be marked as contaminated and cleaned by: • Laundering in the usual manner; • Turning into the Supply Clerk for an exchange; or • Disposing according to the State Sanitary Code.

Continued next page.

Disinfection Guidelines (Continued)

If…	Then
A Department vehicle becomes contaminated with bodily fluids.	1. The Troop Supply Clerk shall arrange for a complete cleaning and disinfection, as soon as possible.
Non-disposable equipment becomes contaminated with bodily fluids.	1. Wear protective clothing when cleaning. 2. Prepare a cleaning solution containing: • One (1) part bleach to ten (10) parts water; or • A fungicide or a micro bacterial disinfectant. 3. Wipe excess bodily fluids with disposable absorbent material. 4. Clean equipment with the prepared solution or disinfectant. 5. Dispose of the cleaning material according to the State Sanitary Code. 6. Follow manufacturer's guidelines for proper disinfection/cleaning procedures.
Disposable equipment, (such as cleaning materials) contaminated with bodily fluids.	1. Bag and dispose of according to the State Sanitary Code.
Evidence contaminated with bodily fluids is recovered.	1. Place in paper bags and clearly mark as contaminated. 2. Allow items to dry out. 3. Take additional precautions as necessary. 4. Consult with Crime Services Section for proper disinfection/handling procedures.

Transport and Custody

When transporting an individual who has bodily fluids on their person or has stated that they have a communicable disease:

Position	Duties
Members shall:	• Take all precautions to minimize the possibility of exposure to the bodily fluids; • Administer necessary first aid; • Transport this individual in a separate vehicle from other people; and • Notify the Desk Officer.
Desk Officers shall:	• Appropriately isolate the person; • Notify the Troop Duty Officer; and • Document the incident in the Daily Administrative Journal.

Reporting Unprotected Exposures

Members who have had an unprotected exposure while on duty should seek immediate treatment at an emergency room. Larger hospitals and teaching hospitals are often better able to assist with potential exposures.

The exposure shall be treated as an on-duty injury, and documented under the guidelines of ADM-11B Injury Reporting and Leave. In addition, a **Department of Public Health Unprotected Exposure Form** shall be filled out to document the exposure and:

- Taken to the medical facility where the member(s) is being treated, and
- Faxed to the Health Unit.

All employees assigned to the Forensic Service Group involved in the collection and handling of evidence shall follow the exposure procedures identified in the current version of the Laboratory Safety Manual.

Department civilian employees shall seek guidance from their immediate supervisors who shall follow the procedures for sworn members.

Supplies

All Department cruisers and/or installations should be stocked with the following communicable disease control supplies:

- Disposable and protective gloves;
- Puncture resistant containers and plastic evidence bags;
- Barrier resuscitation equipment, goggles, and masks;
- Liquid germicidal cleaner;
- Disposable towelettes with 70% isopropyl alcohol; and
- Waterproof bandages.

Health Unit Responsibilities

The Health Unit shall:

- Advise members about communicable disease and infection control matters;
- Conduct training pertaining to communicable disease and infection control matters;
- Distribute protective clothing and equipment; and
- Develop guidelines for the use of the equipment and providing care to the public.

Responsibilities

Position	Duties
Members	• Ensure that all assigned medical supplies are properly maintained; • Keep disposable and protective gloves readily available and easily accessible; • When an on-duty incident results in an unprotected exposure, notify the Desk Officer and follow the guidelines in this policy to minimize the risk of infection; and • No member shall refuse to handle or arrest any person.
Desk Officers	• Notify the Troop Duty Officer; and • Document the incident in the Daily Administrative Journal.
Troop Duty Officer	• Ensure that any employee who has an unprotected exposure while on-duty receives proper first aid and medical treatment; • Assign a supervisor to investigate the exposure; and • Ensure Notice of Injury Report is submitted forthwith per ADM-11B.
Commanding Officers	• Ensure that communicable disease control supplies are made readily available to all members of their Troop/Section/Unit; • In the case of an on-duty unprotected exposure, ensure that the employee receives: 1. Assistance in reporting the exposure; 2. Continued testing for evidence of infection; and 3. Any emotional assistance or counseling as required. • Contact the District Attorney to ascertain if criminal charges are appropriate for intentional exposures.

Subject

Drug Testing

Policy

In order to ensure public safety and promote public trust, it is the policy of the Department to maintain a drug-free work environment.

Justification

These compelling reasons justify the use of drug testing:

- **Public Trust**: Members sworn to enforce the law cannot be above it;
- **Public Safety**: The public expects members to have both the physical stamina and psychological stability to properly assume and perform required duties at all times;
- **Potential for Corruption**: Contact with controlled substances and people associated with them exposes members to increased opportunities for corruption;
- **Presentation of Credible Testimony**: A member who illegally uses or abuses drugs would be subject to impeachment through proof or an admission that they violate the law;
- **Morale and Safety in the Workplace**: Every member has the right to be secure in the knowledge that all members are capable of acting in a safe and effective manner; and
- **Loss of Productivity**: The use of controlled substances, and other forms of drug abuse, seriously impair physical and mental health and result in reduced job performance.

Scope

This Drug Testing policy applies to all sworn members of the Department.

Medication Notification

Members shall notify their immediate supervisor when required to use medication that has the potential to impair their job performance.

- The member shall inform their supervisor of the known side effects of such medication and the prescribed period of use;
- The supervisor shall document this information through the use of an internal memorandum to the appropriate Division Commander and shall send a copy to the Occupational Health Unit for review by the State Police Surgeon; and
- The member may be temporarily reassigned other duties, if appropriate.

Subject	Number
Drug Testing	**GEN-06**

Prohibited Activity

Members are prohibited from:

- Illegally possessing any controlled substance;
- Ingesting any unlawful/dangerous drug; and
- Ingesting any controlled substance, unless prescribed by a licensed medical practitioner.

Sanctions

Discipline for members found to be in violation of this Drug Testing policy shall be in accordance with Article 37 of the State Police Association of Massachusetts (SPAM) Collective Bargaining Agreement, the Rules and Regulations for the governance of the State Police, and MGL c. 22C.

Members who refuse to be tested when so ordered, or refuse to enter an Employee Assistance Program or Rehabilitation Program after a positive test, are subject to termination.

Drug Testing Program

Consistent with this policy, the Department has implemented a drug testing program consisting of:

- Drug testing based on reasonable suspicion;
- Random drug testing;
- Post incident drug testing; and
- Annual/biennial physical drug testing.

Employees on extended leave may be subject to drug testing upon their return to service as determined by the Colonel/Superintendent.

Note: The terms “reasonable,” “random,” and “post incident” are defined consistent with Article 37 of the SPAM Collective Bargaining Agreement and all drug testing procedures shall be conducted in accordance with this article.

All drug testing methodologies shall be performed under the Department of Health and Human Services Mandatory Guidelines for federal workplace testing.

Subject

Automatic External Defibrillators

Policy

The Department maintains Automatic External Defibrillators (AED) to help save lives. Only Department members trained in the use of AED's may operate them.

Definitions

Automatic External Defibrillator (AED): An electronic device that when used may:

- Radically reduce the occurrence of disability and death associated with cardiac emergencies through:
  1. An analysis of a victim for bio-electrical activity; and
  2. If needed, administration of an electrical shock.

The supervisor of the Health Unit shall have oversight of AED training, maintenance, and the creation of a standard operating procedure.

Care and Maintenance

Members shall:

- Follow AED procedures prescribed by the Health Unit; and
- Ensure AEDs are not stored in unattended vehicles for any duration, where extreme temperature fluctuations may damage internal components.

Responsibilities for Stations/ Sections with AED

AEDs are considered permanently assigned equipment to the Station/Section. Commanding Officers shall:

- Ensure annually that each device is accounted for according to ADM-30 Asset Management;
- Assign devices according to the Health Unit's standard operating procedure (SOP); and
- Contact the Health Unit for repairs, parts, batteries, or other AED associated supplies as needed.

AED Utilization

AEDs shall only be utilized by members who are trained. Members who possess AED's shall have a copy of the Health Unit's SOP regarding use, maintenance, and reporting procedures.

Each time an AED is utilized to monitor and/or shock an apparent victim of a cardiac arrest the following procedures shall be adhered to:

Position	Duties
The Utilizing Member	• Advise the Desk Officer of AED utilization; and • Before securing from their shift, complete and forward the SP 600 AED Utilization Reporting Form to the Health Unit.
Station Desk Officer	• Document the AED utilization as a Medical Assist into the Daily Administrative Journal; • Do not include the patient name or other identifiers within the entry; and • Provide the incident number to the member who utilized the AED.
Supervisor of the Health Unit	• Ensure AED protocols were followed; • Ensure information received conforms to the SOP; and • Submit the data to the Medical Control Physician for review.

Ride-Along/Observer

Policy

The Department may allow approved ride-along/observers to accompany on-duty members for educational purposes.

Requesting Permission to Observe

Requests for an observer(s) to accompany an on-duty member shall be made in writing to the Troop/Section/Unit Commander and detail each observer's:

- Full name;
- Date of birth;
- Address;
- Social Security Number;
- Organization affiliation (if any);
- Date(s) of observation requested;
- Troop/Section/Unit to be observed; and
- Any special considerations (e.g. request to record, request to carry firearm).

The above information shall be forwarded via a SP 629 Observers Release form to the appropriate Division Commander. All requests for ride-along/observers and accompanying forms shall be maintained by the Division Commander's Office.

Media Requests

Requests for a ride-along for media representatives shall be referred to and approved by Commanding Officer of Media Relations.

Responsibilities

Position	Duties
Troop/Section/Unit Commander	• Ensure a background check (including CORI) is conducted on any observer before approving any ride-along/observation; • Approve or deny the request; • Forward any SP 629 to their Division Commander; • Consult with Media Relations, if appropriate; • If approval has been granted, then assign a member to handle the ride-along/observation duty; • Ensure appropriate safety precautions are taken to minimize risk and to ensure the well being of the observer (e.g. require ballistic vest to be worn); and • Detail any conditions the observer and/or assigned member shall follow.
Supervisor	• Ensure adequate scheduled staffing is available; • Ensure appropriate safety precautions are taken to minimize risk and ensure well being of the observer; • Ensure any directives by the Troop/Section/ Unit Commander are adhered to; • Investigate any issues that may arise from an observation assignment per Department policies; and • Provide a summary of the concluded assignment to the Troop/Section/Unit Commander.
Member	• Shall conduct themselves in a professional manner; • Carefully monitor the assigned observer(s); • Immediately report to their supervisor any injuries or issues regarding the observer(s); • Comply with directives issued by the Troop/ Section/Unit Commander; and • Provide a summary of the concluded assignment to their supervisor.

Continued next page.

Subject	Number
Ride-Along/Observer	**GEN-08**

Responsibilities (Continued)

Position	Duties
Observer	• Sign appropriate forms as required by the Department's Legal Section; • Obey all commands and safety directives issued by the escorting member; • Shall wear seatbelts while traveling in state owned vehicles; and • Agree to not electronically record the observation unless prior written approval is granted by the Troop/Section/Unit Commander and Media Relations. Note: Firearms shall not be carried, unless they are a law enforcement officer and the Troop/Section/Unit Commander has specifically approved this request.

Criminal Investigations

Policy

Investigations shall be conducted on all matters of a criminal nature that fall within the jurisdiction of the Department.

Criminal Investigation

All members assigned to investigate a crime and/or criminal activity shall:

- Be responsible for the thorough and methodical investigation of assigned cases; and
- Continue the investigation until the case is:
  1. Solved or otherwise closed, or
  2. Until it appears that further investigation would be of no significant value.

Division of Investigative Services / Division of Homeland Security and Preparedness

The Division of Investigative Services (DIS) and the Division of Homeland Security and Preparedness (DHS) shall investigate crime and/or criminal activity as determined by the Colonel/Superintendent, District Attorney or Attorney General and in accordance with their section/unit standard operating procedure (SOP).

Cases Involving Human Death

The District Attorney, upon notification of a death shall:

- Have their law enforcement representative direct and control the criminal investigation, in conjunction with the law enforcement agency of jurisdiction. (Massachusetts General Laws c.38 s.4)

Criminal Investigations Field Services Members

Members assigned to the Division of Field Services may initiate criminal investigations, if warranted, in situations where criminal activity is occurring.

Members or their supervisors shall immediately notify, through channels, the appropriate DIS section/unit or DHS section/unit when:

- Circumstances and demands clearly exceed the scope of their investigative abilities or require specialized investigative techniques.

Subject	Number
Criminal Investigations	**INV-01**

Preliminary Investigations for Field Services

In cases where members encounter a situation that necessitates some form of investigation, members may conduct a preliminary investigation concerning those offenses referred to or within the jurisdiction of the Department.

Preliminary investigations may include:

- Determining if a crime has been committed;
- Interviewing the complainant and witnesses;
- Arresting a suspect;
- Protecting the crime scene; and
- Performing other duties necessary to build a solid foundation for follow-up investigators.

Investigations

The first member arriving at a crime scene shall:

- Make scene safety his or her first priority;
- Initiate medical services if needed;
- Secure and preserve the integrity of the crime scene;
- Conduct a preliminary investigation:
  1. Ensuring that evidence is not lost, destroyed, or altered in such a manner as to eliminate its probative value pending the arrival of crime scene/evidence technicians;
  2. Do not move or touch physical evidence unless absolutely necessary, to ensure its preservation; and
  3. If physical evidence is moved, a notation shall be made of its exact location and position at the scene.
- Relinquish their responsibility only when directed by a supervisor or to the designated DIS/DHS investigator assigned to conduct the criminal investigation.

Every effort shall be made to locate, identify and interview reliable witnesses. Witnesses shall be interviewed:

- As soon as possible and in a quiet environment; and
- Separately to ensure independent statements.

If the perpetrator/suspect(s) has left the scene, pertinent information shall be broadcast, as soon as is practicable, utilizing all means necessary.

The member(s) conducting the preliminary investigation should not rely solely on their memory, but should make field notes of all pertinent information. These notes may be subject to discovery by the defense.

The following shall be recorded:

- Date and time of arrival at scene;
- Weather conditions and visibility;
- Exact location, to include addresses, distance measurements, and/or latitude/longitude when possible;

Continued next page.

Subject	Number
Criminal Investigations	**INV-01**

Investigations (Continued)

- Approximate time of the commission of the crime, when it was discovered, and by whom;
- Identity, if possible, or obtain the best available description of the criminal suspect(s);
- Description of any vehicle(s) used by suspect(s);
- Information concerning any physical evidence discovered;
- Name, address of complainant, victim and/or witnesses;
- Identity of other law enforcement officers or civilians present;
- Results of any interviews conducted and statements taken from complainant, victim and/or witnesses; and
- Any other information which may be useful in the apprehension of the perpetrator(s) and subsequent prosecution.

The member conducting the investigation shall complete a written report of the incident.

Reports and Field Notes

All investigative activities, including actions taken, as well as information obtained as a result of said actions, shall be documented in an investigative report.

Investigating members are strongly encouraged to create field notes during the course of an investigation. All relevant facts and information in an investigator's field notes shall be included in the investigative report.

All field notes shall be preserved by the individual member and shall be made available upon request of a supervisor.

May 21, 2018	**INV-01A**

Subject

Case Management

Policy

Case management is an ongoing process involving all members of the Department. Proper case management facilitates the scope and direction of the investigation, in addition to providing documentation for court proceedings.

Complaint/ Information

All criminal information that is reported to the Department shall be evaluated for appropriate action. Minimum information required from the original source shall include:

- Name;
- Address;
- Telephone number(s);
- Date of birth; and
- Nature of the complaint.

Criminal Investigations DFS Members

Criminal investigations may be initiated by members assigned to the Division of Field Services pursuant to their inherent authority to take immediate, positive, enforcement action in each situation which comes to their attention where laws relating to criminal activity are being violated.

However, the member or first line supervisor shall immediately notify the appropriate investigative section/unit when:

- Circumstances existing at the scene of the incident/offense require the application of specialized investigative techniques; or
- When the demands placed upon the responding member clearly exceed the scope of their investigative authority or abilities.

Case Management

Case management is an ongoing process involving all members, and is used to determine:

- The direction and depth of the investigative process; and
- The necessary resources allocated to a particular investigation.

Subject	Number
Case Management	**INV-01A**

Minimum Complaint Information

For the Division of Field Services, every case assigned or initiated shall be entered into the Daily Administrative Journal (DAJ) to be maintained by all Stations/Sections/Units. Minimum complaint information to be entered shall include:

- Complaint number;
- Date of entry;
- Case received by;
- Complainant's name and address;
- Nature of complaint;
- Investigating member;
- Date of case assignment;
- Date report forwarded; and
- Report number.

For the Division of Investigative Services and the Division of Homeland Security and Preparedness every case assigned or initiated shall be entered into ACISS Case Management. Minimum complaint information to be entered shall include:

- Date Initiated;
- Case Officer;
- Case Type;
- Case Description; and
- Case Status.

Case Number

For the Division of Field Services, all case numbers shall be generated by RAMS.

For the Division of Investigative Services and the Division of Homeland Security and Preparedness, all case numbers shall be generated by ACISS.

Case Responsibility

Assignment of a case shall be to a single member who shall:

- Be responsible for the reports on the case;
- Account for evidence; and
- Coordinate the investigative activity and information.

This does not preclude the assignment of additional personnel, nor does it impair the ability of the supervisor(s) to direct investigative efforts or reporting.

Case File

Department Stations/Section/Units shall maintain a case file system utilizing the case number as the primary filing method.

Subject	Number
Case Management	**INV-01A**

Review/ Approval Process

Reports shall be:

- Reviewed by the reporting member for completeness and accuracy prior to submission;
- Reviewed by a supervisor after submission for completeness and accuracy; and
- Sent back for further investigation if necessary.

Case Suspension

Station/Section/Unit Commanders shall:

- Approve a request to suspend a case by recommendation of the case member when:
  1. Every reasonable avenue of investigation has been pursued and exhausted;
  2. There is a lack of further leads or solvability factors;
  3. Investigative resources are unavailable due to current workload; and
  4. The seriousness of the crime is insufficient to justify continued investigative efforts.
- Ensure that the suspension does not preclude the case from being reopened for any reason.

Note: Certain cases, due to their serious nature, are not eligible for suspended status (e.g., murder, rape, armed robbery).

Case Termination

Only the Station/Section/Unit Commander shall approve requests to close a case and should consider, at a minimum, the following criteria in determining if a case merits termination:

- Seriousness of criminal offense;
- Availability of investigative resources;
- Unfounded complaint;
- Complainant's refusal to cooperate;
- Referral to another agency;
- Declination by prosecutor;
- Adjudication completed; and
- Administrative closing.

June 14, 2018	**INV-02**

Subject

Confidential Informants

Policy

The Department shall develop and use confidential informants, as well as other sources of information, as a means to detect, investigate, and prosecute violators of state and federal law.

Definition

Confidential Informant (CI): A person who provides information to a Department investigator on a continuing or regular basis, and wishes their identity to remain confidential.

This does not include "concerned citizens" who provide information on an informal or casual basis.

Special Circumstances

Certain persons should not be used as informants, except in special circumstances with the approval of the Unit Commander. Such persons include:

- Juveniles (a child who has not yet attained their eighteenth (18) birthday), without parental, guardian or legal custodian's approval;
- Persons wanted on warrants;
- Persons with a criminal record for perjury; or
- Persons with a history of serious mental disorder or defect.

Precautions shall be taken to protect the reputations and safety of informants and investigators. Some informants may require additional precautions:

- Addicts- should be carefully supervised and controlled;
- Parolees- should be avoided whenever possible. Parolees are prohibited from associating with felons and approval from the informant's parole officer is required.

Note: When meeting with informants of an opposite sex or sexual preference, members shall ensure that at least two (2) members are present.

Registration of Informants

When a person indicates a willingness to cooperate and provide information, the Unit Commander or designee shall:

- Interview the person as soon as practicable;
- Investigate the background and suitability of the potential informant; and
- Forward the name and biographical data to the appropriate Detective Captain or Major for entry into the Confidential Informant Database.

The Detective Captain/Major shall:

- Check the CI's name against the Undesirable Informant List; and
- Notify the Unit Commander if the CI is currently cooperating and/or assigned to another section/unit.

The recruiting investigator shall:

- Prepare an SP 405 Informant Information Report when the person is approved to be a CI;
- Keep a copy of the SP 405 within the Unit; and
- Debrief the CI regarding their knowledge of other crimes.

Protecting Informant's Identity

The law recognizes the government's privilege not to reveal the identity of a confidential informant. Protecting the identity of all informants from disclosure is an important factor for two reasons:

1. The informant's safety from retaliation on the part of the criminals they helped implicate; and
2. Disclosure of their identity would prevent the informant from assisting on future investigations.

However, the privilege is not absolute, and should be respected as far as reasonably possible consistent with fairness to a defendant.

Informant Management

Units using informants shall maintain a file for each CI, in a locked and secure location accessible only to the Unit Commander or designee. This file shall include:

- Code Name and Code Number designations;
- Biographical and background information;
- Criminal history records;
- SP 404 Standard Agreement Statement; and
- Other information deemed necessary by the Unit Commander.

Continued next page.

Informant Management (Continued)

Unit Commanders shall:

- Periodically review and evaluate all informants' work performance, usefulness, reliability, desirability and records of payment;
- Meet on a semi-annual basis with all registered informants, both confidential and named, and their controlling officers;
- Submit a determination of the status of the informant in writing to the Division of Investigative Services (DIS) Commander or Division of Homeland Security and Preparedness (DHS) Commander by January 15th and June 15th of every year; and
- Upon the termination of an informant, submit in writing to the DIS Commander or DHS Commander the reason for such termination.

Expenditures

Unit Commanders shall ensure expenditures related to a CI be recorded:

- On a SP 406 Confidential Expenditure Fund Voucher; and
- On a SP 407 Confidential Expenditure Fund Log as outlined in INV-02A Confidential Funds.

Unit Commanders shall:

- Not be required to maintain a SP 407 Confidential Expenditure Fund Log when assigned to the Office of the Attorney General, a District Attorneys Office, or a federal task force where there is an internal mechanism for tracking such Confidential Funds.

Undesirable Informants

The primary handler shall submit a report detailing the CI's undesirable conduct to their Unit Commander whenever a CI:

- Endangers officer safety;
- Deliberately gives false or misleading information; or
- Is otherwise determined to be undesirable for use as an informant.

The Unit Commander shall submit to the appropriate Detective Captain/Major:

- Documentation when a CI is terminated for being undesirable;
- A copy of the applicable SP 405; and
- A copy of the primary handler's report.

The Detective Captain/Major shall:

- Place the CI on the Undesirable Informant List maintained by DIS and DHS.

Promises to Informants

Members may:

- Inform the District Attorney or other agencies of the information provided by the CI and the investigation results;
- Make recommendations to a District Attorney's Office, probation officer, or other criminal justice agency for a disposition on behalf of the CI; and
- Not make any promises to a CI concerning the outcome of a pending court case.

Note: The disposition of court cases is in the province of the District Attorney's Office and the Judiciary.

Precautions

Interactions with CIs should be kept to the minimum necessary for effective investigation purposes. Whenever possible and practical, meetings with CIs shall be:

- Attended by two (2) members; and
- With prior notification of the Unit Commander or a supervisor, or as soon as practicable after the meet.

A member who interacts with a known informant, when not on duty or not during the course of an investigation shall:

- Notify their supervisor as soon as practicable; and
- Document the reason for such interaction in the CI's file with a written report.

Whenever practicable, a CI should not report to the Unit's office in order to protect their identity and the identity of other undercover members. CIs shall not:

- Be introduced to more than a minimum number of undercover members, to ensure that informants gain as little information as possible concerning undercover operations and unit activity.

Any member who uncovers information that an informant has engaged in unauthorized criminal activity shall immediately notify their Unit Commander or designee.

The Unit Commander or designee shall:

- Conduct an immediate evaluation of the information and take such action as they deem necessary; and
- Make every effort to prosecute the CI involved in any unauthorized criminal activity.

Subject	Number
Confidential Informants	**INV-02**

Search Warrants

Search warrant applications and their accompanying affidavits containing information from a CI shall be reviewed and approved by a supervisor before filing the application with the court of jurisdiction.

Division of Field Services

Members assigned to Field Services who are seeking to use an individual as a CI shall advise their Station Commander.

The Station Commander shall:

- Contact their Division Commander through channels for authorization to manage and register the CI; or
- Contact the appropriate DIS Unit Commander or DHS Unit Commander.

Subject

Confidential Funds

Policy

Confidential funds may be used to further investigations, and shall be carefully monitored and supervised.

Expenditure of Confidential Funds

Confidential funds may be derived from the funding mechanisms of the Department, the Office of the Attorney General, and the respective District Attorneys' Offices. Grant monies, forfeiture funds, and funds from state and federal government agencies can be used as payment, if such use is not prohibited by state or federal law.

A Unit Commander may maintain a Confidential Expenditure Fund Account. Access to this account shall be restricted to the Unit Commander and/or supervisors.

The Unit Commander may expend monies from a Confidential Expenditure Fund Account for the following investigative purposes:

- The procurement of evidence;
- Payment to a registered confidential informant;
- Investigative expenses; and,
- The purchase of consumable supplies and other equipment in furtherance of an investigation.

Members shall record expenditures from confidential fund accounts on a SP 406 Confidential Expenditure Fund Voucher and shall include the following information:

- Date of expenditure;
- Amount expended; and
- Supervisor's signature.

Members shall ensure the following information is also recorded on the SP 406 where applicable:

- Signature of the member, a witnessing member and the CI confirming receipt of funds.
  Note: CI may use real or assumed name when signing receipt.

Unit Commanders shall maintain a SP 407 Confidential Expenditure Fund Log reflecting:

- The transaction number (expenditures only, from the SP 406);
- The amount of expenditure or deposit; and
- The balance of the account.

Subject	Number
Confidential Funds	**INV-02A**

Accounting and Audits

Prior to the transfer of a Unit Commander, there shall be reconciliation of the accounting records and of the monies on hand with the incoming Unit Commander.

Each quarter, Unit Commanders shall review, evaluate, and analyze all records of expenditures to ensure funds are being used in a cost-effective manner.

An internal audit of all accounting records and accounting practices shall be conducted annually by the appropriate Division Commander.

An audit of Confidential Funds files may be conducted as directed by the appropriate Division Commander or as directed by the Colonel/ Superintendent.

Exceptions

Unit Commanders shall not be required to maintain a SP 407 Confidential Expenditure Fund Log under the following conditions:

- Members who are assigned to the Office of the Attorney General, a District Attorneys' Office, or a federal task force; and
- An internal mechanism exists for tracking Confidential Funds.

Subject

Prescription Monitoring Program

Purpose

The purpose of the Prescription Monitoring Program is to assist health care providers and investigative agencies in addressing drug diversion and the misuse and abuse of pharmaceutical controlled substances.

The Prescription Monitoring Program is a computer-based system that collects prescription data submitted by pharmacies on most prescriptions for controlled substances in Schedules II through V.

Massachusetts General Laws (MGL) c. 94C s.24A established the Prescription Monitoring Program within the Department of Public Health (DPH) effective January 1, 2011. The Department shall, upon request, provide data from the Prescription Monitoring Program to local, state and federal law enforcement or prosecutorial officials working with the Executive Office of Public Safety and Security engaged in the administration, investigation or enforcement of the laws governing prescription drugs; provided, however, that the data request is in connection with a bona fide, specific controlled substance or additional drug-related investigation.

Policy

Only members designated by the Department may access or use information contained within the Prescription Monitoring Program. Access to the system must be pursuant to a bona fide, specific controlled substance investigation or a related criminal investigation.

Any member, who violates this policy and/or state regulations related to the Prescription Monitoring Program, may face disciplinary action, as well as loss of access to the Prescription Monitoring Program.

Subject	Number
Prescription Monitoring Program	**INV-03**

Access to the Prescription Monitoring Program

The Department shall:

- Authorize sworn members assigned to the Division of Investigative Services and the Division of Homeland Security and Preparedness to access and use information obtained via the Prescription Monitoring Program in accordance with state regulations.

According to state regulations, any member granted access to the Prescription Monitoring Program shall:

- Successfully complete any and all required training; and
- Not share their passwords or codes with any other person.

Use Of Data From The Prescription Monitoring Program

Data ascertained from the Prescription Monitoring Program:

- May only be used in furtherance of the official Department investigation for which it was requested;
- May only be shared with authorized personnel from other law enforcement agencies or with state and federal prosecutors who are working on the matter for which it was requested; and
- Shall not be disseminated to others.

Designated members are:

- Allowed to use the Prescription Monitoring Program and the associated data only in connection with the bona fide specific controlled substance related criminal investigation for which it was requested.

Members shall not use the data or information from the Prescription Monitoring Program:

- For the furtherance of any illegal act, including violation of any criminal or civil laws or regulations;
- For any political or commercial purpose;
- To libel or otherwise defame any person(s); or
- For any matter other than the one for which it was requested.

Prior to accessing the Prescription Monitoring Program, the member shall:

- Notify their supervisor;
- Open an investigation;
- Obtain a Department Case Number; and
- Write a short narrative that includes information leading to the belief that prescription drugs are being diverted for illegal purposes.

Subject	Number
Prescription Monitoring Program	**INV-03**

Supervisor Responsibilities

Responsibilities of the Division of Investigative Services and the Division of Homeland Security and Preparedness Supervisors shall include:

- Ensuring that members under their command comply with the provisions of this policy and MGL c.94C s.24A;
- Monitoring members use in order to ensure compliance; and
- Notifying the Prescription Monitoring Program Administrator when a designated member transfers from the unit.

Subject

Special Protections for Juveniles

Policy

Courts recognize the vulnerability of children. The Department shall ensure that juveniles are afforded special protections during interrogations.

Definitions

Juvenile: A child who has not yet attained his or her eighteenth (18) birthday.

Interested Adult: An adult in a position, where he or she is an advocate or has the best interest at heart for the juvenile. The adult shall be eighteen (18) years of age or older and preferably be a parent or legal guardian, or an adult sibling, relative, friend, or attorney.

Juveniles and Miranda

The duration of questioning and the number of members present should be as minimal as possible both to prevent a coercive atmosphere and to protect the juvenile's rights.

Before proceeding with a custodial interrogation of a juvenile, Miranda Warnings shall be given in accordance with the following table, and in the presence of the juvenile, their parent, guardian, or other interested adult. The juvenile shall then be allowed to have a meaningful consultation with the adult. Written waivers are preferred.

If the Juvenile's Age is…	Then…
Under twelve (12) years of age e.g., 1; 2; 3; 4; 5; 6; 7; 8; 9; 10; or 11 years.	No criminal charges can be filed. They shall not be questioned, unless a parent or interested adult is present.

Continued next page.

Subject	Number
Special Protections for Juveniles	**INV-05**

Juveniles and Miranda (Continued)

If the Juvenile's Age is…	Then…
Twelve (12) years of age and not yet attained his or her fourteenth (14) birthday, e.g., 12 or 13 years.	Criminal charges can be filed. The juvenile shall not be questioned, unless a parent or interested adult is present. The interested adult and the juvenile must have an actual opportunity to discuss their rights in private. Moreover, police *must* honor any request by the juvenile or adult to meet privately. Questioning can only commence when the juvenile and the adult indicate that they understand the rights and the consequences of waiving these rights; and when the juvenile expressly waives his or her rights.
Fourteen (14) years of age, but not yet attained his or her eighteenth (18) birthday e.g., 14; 15; 16; or 17 years; and a parent or interested adult is not available after reasonable efforts are made to contact them.	Criminal charges can be filed. The juvenile must be given the opportunity to have a meaningful consultation with an interested adult before he or she can waive Miranda rights. The best practice dictates that the interested adult and the juvenile be given the opportunity to confer in private. Moreover, police *must* honor any request by the juvenile or adult to meet privately. However, a statement *may* be taken if the juvenile demonstrates a high degree of intelligence, experience, knowledge, or sophistication in understanding the Miranda Warnings and the consequences of waiving his or her rights and expressly waives his or her rights.

Special Considerations

Members may have to take extra steps to ensure that juveniles understand their rights. This may include explaining or repeating the Miranda rights, or explaining Department procedures or juvenile court procedures to the juvenile.

Other factors to consider are the juvenile's level of schooling, maturity, history of interaction with the juvenile justice system, and any mental or emotional conditions.

May 21, 2018	**INV-07**

Subject

Non-Published Telephone Numbers

Policy

Telephone company records shall only be obtained when necessary for the furtherance of a criminal investigation or in an emergency.

Statutes

Administrative Subpoena: Issued in the form of a demand letter for telephone company records and may only be authorized by the Attorney General or District Attorney of jurisdiction. Massachusetts General Laws (MGL) c.271, s.17B.

Electronics Communications Privacy Act: Limits access to certain records maintained and stored by a common carrier such as a telephone company. The act sets forth the requirements needed to obtain such records. (18 USC, s.2703)

Authority For Obtaining Records

In order to obtain telephone records, authority may only be granted by:

- Administrative subpoena authorized by the Office of the Attorney General or District Attorney of jurisdiction;
- State or federal grand jury or trial subpoena;
- State or federal warrant;
- State or federal court order; or
- Consent of the customer or subscriber to such disclosure.

Records Available

When a member has reasonable suspicion to believe that the service of a common carrier is being or may be used for an unlawful purpose, they may request, through the Office of the Attorney General or the District Attorney's Office of jurisdiction, an administrative subpoena, for release of records from the common carrier to include, but not limited to:

- Listing of a non-published telephone number;
- Listing of all optional services;
- Telephone toll records and optional services;
- Telephone services, including non-published number; and
- A copy of the contract, listing, and monthly bills for cellular phone and electronic paging.

Subject	Number
Non-Published Telephone Numbers	**INV-07**

Procedure

Members shall submit a request through channels to the Attorney General or District Attorney requesting a subpoena for the required information.

The request shall:

- Detail the grounds for the member's belief that the telephone is being used for an unlawful purpose; and
- Include the case number and the signature of the member's Commanding Officer.

Members shall also follow any written directives promulgated by the Office of the Attorney General or the District Attorney's Office of jurisdiction to request telephone records.

Members not assigned to the Office of the Attorney General or a District Attorney's Office shall contact, through channels, the appropriate State Police Detective Unit Commanding Officer for assistance in determining the policy of the respective jurisdiction.

Emergencies

Troop Duty Officers or Unit Commanders may authorize members to contact the Directory Assistance Operator in emergency situations, such as a serious motor vehicle accident or threat of imminent harm. The member shall:

- Request the operator contact the non-published customer; and
- Inform the customer to call back the member.

This alternative shall not be used to facilitate investigative inquiries, such as attempting to locate a witness.

Reports

Non-published numbers obtained pursuant to a criminal investigation shall be properly documented in the record of investigation in order to:

- Provide the information to the Criminal Information and Intelligence Section; and
- Eliminate duplicate requests to the common carrier, when possible.

When a non-published number is included in a report it shall be clearly noted as such, so that it is not released to the public via the record of investigation.

Subject

Criminal Intelligence

Policy

The Department shall share criminal intelligence among the criminal justice community in an effort to prevent and control crime, while protecting the privacy and constitutional rights of individuals.

Definitions

Criminal Information: Raw data, gathered by law enforcement agencies in the normal course of performing their duties, which is maintained as directed by statute or policy.

Criminal Intelligence Information: Information that has been evaluated and determined to be of value to criminal investigations.

Criminal Intelligence System: The equipment, facilities, and procedures used for the receipt, storage, exchange, dissemination, and analysis of criminal intelligence information.

Content Validity: Refers to the accuracy or truth of the information.

Need-to-Know: The necessity to obtain or receive criminal intelligence information in the performance of official responsibilities as a law enforcement authority.

Right-to-Know: The legal authority to obtain or receive criminal intelligence information pursuant to a court order, statute, or case law.

Reasonable Suspicion: When information exists that provides sufficient facts to believe that there is a reasonable possibility an individual or organization is involved in a definable criminal activity or enterprise.

Source Reliability: Refers to the reliability of the source of the information.

Subject	Number
Criminal Intelligence	**INV-08**

Security

Criminal intelligence information shall be stored in a criminal intelligence database that prevents unauthorized access.

The criminal intelligence database shall provide an audit trail that tracks:
- What intelligence was accessed;
- Who accessed the intelligence; and
- The date and time when the intelligence was accessed.

Collection

Criminal intelligence information shall only be collected and maintained if there is reasonable suspicion to believe that an individual or group is involved in criminal activity and the information is relevant to criminal conduct or activity.

Electronic surveillance shall only be conducted in accordance with all applicable state and federal regulations.

Photographic surveillance shall only be conducted in an effort to identify individuals or groups who are believed:
- To have participated in criminal activity;
- To be planning criminal activity; or
- Are currently engaged in criminal activity.

Each criminal intelligence submission shall be attributable to a credible source. All criminal intelligence information shall be forwarded to the Criminal Information and Intelligence Section (CIIS), as soon as possible, using one of the following methods:
- Direct Entry: Information entered by an authorized member into the criminal intelligence database directly from an authorized Department computer; and
- Indirect Entry: Information entered by CIIS on behalf of a member who does not have authorized access to the criminal intelligence database. Note: CIIS may be contacted for guidance, clarification, and additional support to facilitate criminal intelligence submissions.

Members who submit information for entry into the criminal intelligence database shall classify the source(s) as:
- Completely Reliable: The source is unquestioned or has been tested successfully in the past; or
- Usually Reliable: The source can usually be relied upon. The majority of information provided in the past has proved to be reliable; or
- Unreliable: The source has been determined to be unreliable in the past; or
- Reliability Unknown: The source cannot be judged. Its authenticity or trustworthiness has not yet been determined by either experience or investigative corroboration.

Continued next page.

Subject	Number
Criminal Intelligence	**INV-08**

Collection (Continued)

Members who submit information for entry into the criminal intelligence database shall classify the validity of the information as:

- Confirmed: Has been corroborated by an investigator or another reliable independent source; or
- Probable: Is consistent with past accounts; or
- Doubtful: Is inconsistent with past accounts; or
- Cannot Be Judged: Validity of the information cannot be judged, or its authenticity has not yet been determined.

Note: A source classified as "Reliability Unknown" combined with a content validity rating of "Cannot Be Judged" would not meet the burden of reasonable suspicion for inclusion into the criminal intelligence database.

Information concerning individuals or organizations not reasonably suspected of criminal activity that is entered into the criminal intelligence database, shall be marked as "non-criminal identifying information."

Restrictions

Information and criminal intelligence shall not be collected or developed solely on the basis of an individual or group's:

- Support of a particular cause;
- Race;
- Color;
- Religion;
- Gender;
- National origin or ancestry; or
- Political affiliation.

Information pertaining to the above listed factors shall only be collected and maintained if the information directly relates to criminal conduct, and there is reasonable suspicion that the subject is or may be involved in criminal activity.

Dissemination

Submitting Department entities are responsible for the review and evaluation of data entered into the criminal intelligence database and establishing dissemination levels. Criminal intelligence information shall only be disseminated:

- In the furtherance of an authorized law enforcement activity;
- To authorized law enforcement or criminal justice personnel; and
- On a "need-to-know" and "right-to-know" basis.

Subject	Number
Criminal Intelligence	**INV-08**

Review/Purge

Intelligence information held within the criminal intelligence database shall be:

- Reviewed on a continual basis;
- Purged when found to be obsolete or inaccurate; and
- Purged when information has not been updated or verified for five (5) years from date of entry.

The Commanding Officer of CIIS, when determining whether or not to purge intelligence records contained within the criminal intelligence database shall:

- When feasible, contact the member or agency which contributed the intelligence information to determine if any additional intelligence may be added to update the record;
- Purge the record from the system if there is no additional intelligence;
- Ensure only an administrative record of the purge is maintained; and
- Ensure there is no record of the original criminal intelligence information maintained within the system.

Subject

Polygraph Examinations

Policy

The polygraph is a reliable investigative aid when used by a professional examiner. The Department shall use the polygraph with great selectivity, and then, only as an investigative tool.

Polygraph Examiners

Department Polygraph Examiners shall be designated by the Colonel/ Superintendent.

Restrictions on Polygraphs

In general, an employer cannot request or subject an employee or job applicant to take a polygraph within or outside the Commonwealth. (Massachusetts General Laws (MGL) c.149, s.19B)

Polygraph examinations may not be used for any person applying for employment. Department recruit applications shall contain the following notice:

"It is unlawful in Massachusetts to require or administer a lie detector test as a condition of employment or continued employment." MGL c.149, s.19B(2)(b)."

At present, polygraph evidence is inadmissible in criminal trials and may not be used in a criminal trial for any purpose. (Commonwealth V. Mendes).

Subject	Number
Polygraph Examinations	**INV-09**

Administering an Examination

Under MGL c. 149, s.19B law enforcement agencies are permitted to administer a polygraph examination when the polygraph is requested as part of a criminal investigation.

Submission to the polygraph examination must be a voluntary act on the part of the examinee, and this exemption does not invalidate the constitutional rights of the examinee.

Prior to an examination, the examinee shall sign:

- A statement of voluntariness; and
- A witnessed waiver of any rights against the Polygraph Examiner and the Department.

Requesting an Examination

To request an examination, Department members shall contact the Polygraph Unit through channels.

Any requests from local, state or federal agencies shall be referred to the Polygraph Unit. The Polygraph Unit may decline to conduct an examination.

It is the responsibility of the requesting agency to provide the background of the case and transportation of the examinee to and from the place of examination.

Preparing for an Examination

The member requesting the examination is responsible for providing the Polygraph Examiner with pertinent information concerning the case including:

- Information that supports and justifies the use of the polygraph;
- Investigative reports;
- Evidence available and withheld from the subject;
- Background information on the subject;
- Statements made by the subject, complainants, and witnesses including alibis; and
- Newspaper articles or other general information concerning the case.

Members shall not:

- Interrogate a subject immediately before they are to take a polygraph; or
- Attempt to explain procedures that shall be used in the examination.

Subject	Number
Polygraph Examinations	**INV-09**

Internal Investigations

No member of the Department shall be subjected to a polygraph examination for a violation of written directives, except in cases of alleged criminal conduct.

Department Polygraph Examiners shall not be required to conduct examinations on members of the Department.

The Commander of the Polygraph Unit shall establish reciprocal agreements with other State Police agencies for examinations, when warranted, and as approved by the Colonel/Superintendent.

Department members may assist other state and local law enforcement agencies with internal investigations that involve allegations of criminal wrongdoing. Requests for examinations shall:

- Be in writing; and
- Contain a statement that the polygraph is for a criminal investigation.

Subject

Evidence Collection and Preservation

Policy

The Department shall ensure that evidence is properly recognized, documented, collected, packaged, and stored; and that a chain-of-custody is established for evidence recovered at every crime scene.

Definitions

Chain-of-Custody: The record documenting the location and person in control of evidence from the time of its collection to final disposition.

Evidence Room: Facilities used by the Department to store evidence.

Forensic Services

The Forensic Services Groups within the Division of Investigative Services are a valuable resource at crime scenes. On-call employees within this group are highly trained and equipped to collect many types of evidence.

Crime Lab Response Team (Chemists): This team assists with the recognition, collection and preservation of biological (DNA) evidence including blood, semen and saliva; and can also assist with the recognition, collection, and preservation of gunshot residue and trace evidence such as hairs and fibers.

Crime Scene Services Section (CSSS): This section assists with the recognition, collection, processing, preservation and documentation of many types of physical evidence. Services also include:

- The documentation of crime scenes through photographs, videos, diagrams and sketches;
- The collection and processing for footwear and tire track impression evidence, latent print evidence, and bloodstain pattern analysis; and
- The collection and preservation of many other types of physical evidence.

Digital Evidence and Multimedia Section (DEMS): This section assists with the recognition, collection, preservation, and examination of computers and other digital evidence devices, (e.g., cell phones, cameras, and digital storage media). This section can provide field assistance with drafting of search warrants for digital evidence crime scenes and digital evidence seizures.

Firearms Identification Section (FIS): This section assists with the collection, preservation and documentation of firearms, firearms related evidence, and tool mark evidence.

Subject	Number
Evidence Collection and Preservation	**INV-10**

Arriving at a Crime Scene

Evidence of a criminal nature may potentially be encountered at any incident or call. When arriving at a scene, members should consider the nature of the incident or crime, the jurisdiction, and their investigative authority in the context of recovering evidence of a crime.

Members arriving at a scene shall:

- Attempt to identify and control any dangerous situations or persons bearing in mind the safety of the public and the officer;
- Ensure that medical attention is provided to injured parties;
- Take care when removing the injured or rendering the scene safe and secure; and
- Be mindful that any action taken may affect or alter a potential crime scene and should be documented.

Crime Scene Evaluation

When a scene requires specialized investigative and forensic units, responding members shall:

- Secure the scene and treat the area as a potential crime scene;
- Evaluate the nature of the event or crime and the resources required to effectively respond to the situation; and
- Preserve the scene with minimal contamination and disturbance of potential evidence.

Members shall:

- Notify the Desk Officer or appropriate supervisor of all actual or potential crime scenes;
- Request assistance from other patrols, supervisor(s), investigative, or forensic units as necessary; and
- Document and relay to appropriate supervisory, investigative, or specialized personnel relevant activities and observations made.

Desk Officers shall:

- Notify the Troop Duty Officer of complex crime scenes that require specialized assistance.

Troop Duty Officers shall:

- Request the assistance of specialized units when the scene requires skills or equipment beyond those of the initial responding member(s).

Crime Scene Command and Control

Responding members shall:

- Remain in charge of the scene until command is transferred to a supervisor or to the responding specialized unit(s);
- Continue to provide assistance until released; and
- Document activities while at the scene.

Subject	Number
Evidence Collection and Preservation	**INV-10**

Crime Scene Perimeter and Control

Members responding to a crime scene shall:

- Establish a crime scene perimeter;
- Establish boundaries beyond the initial scope of the crime scene perimeter with the understanding that boundaries can be reduced, but cannot be easily expanded;
- Control access to the scene to authorized personnel only; and
- Document the names of all persons who accessed the scene.

Recovery of Evidence

Crime scenes shall be documented prior to processing and searching. Documentation may include:

- Written description;
- Photographs and videos; and
- Sketches and diagrams.

Members may collect any evidence that does not require assistance from specialized units. Members shall take steps to minimize the handling of evidence. Members shall:

- Wear gloves during evidence collection;
- Understand that when gloved, the handling of evidence may destroy or damage latent fingerprint and DNA evidence; and
- Package evidence in a manner to preserve and prevent spoilage or contamination.

All evidence shall be uniquely identified. The identifiers shall be recorded on the outside of each packaged item and include:

- The case identifier/number;
- Seizing member's name and identification (ID) number; and
- The date, location of seizure, and description of the item(s).

When multiple items are recovered from a single location, members shall sequentially number items for identification purposes.

When personnel from specialized units collect evidence, they shall adhere to their respective policies and directives.

Members shall take appropriate precautions when collecting or storing biological matter or chemical substances, that may pose serious health risks if handled improperly or unprotected.

The Department's Forensic Services Group provides evidentiary guidelines on the proper methods to collect and package different types of evidence. Members may contact the Forensic Services Group for guidance on proper evidence packaging.

Subject	Number
Evidence Collection and Preservation	**INV-10**

Evidence

Station/Section/Unit Commanders shall be responsible for receiving, storing, maintaining, releasing, and accounting of all evidence. Commanders shall ensure that:

- Evidence is placed into the evidence room or other authorized secure location in accordance with Department policy; or
- If analysis is required, evidence is promptly submitted to the appropriate facility.

Any member who recovers or receives evidence to be placed in the evidence room shall have evidence documented at the appropriate station using appropriate Department forms. The inventory shall be witnessed and shall include the following information for all items of evidence:

- Description of the item (including make, model number, and serial number, if any);
- Source (from whom or location obtained); and
- Name of person primarily responsible for collecting the item or items.

INV-11 Controlled Substances – Storage and Handling
INV-11A Contraband – Storage and Handling
INV-14 Seized Currency

Promulgated By:

Department of State Police
General Order

Effective Date	Number
May 10, 2012	**INV-11**

Subject

Controlled Substance -Storage & Handling

Policy

The Department shall establish rigid controls for all controlled substances held within its custody to preserve the integrity of the Department and its personnel.

Through the assignment of responsibilities, processing procedures, storage requirements and continuous inspections, all levels of command shall ensure strict compliance with established controls and this policy.

Definition

Controlled Substances: All narcotics, drugs, and substances listed in Massachusetts General Laws (MGL) Chapter 94C.

Narcotics Inspection Unit (NIU): The unit shall exercise administrative control and supervision of procedures concerning the marking, recording, storage, handling, disposal, and destruction of all controlled substances obtained or seized by members of the Department.

NIU Bunker: Narcotics Locker located at the State Police General Headquarters used to store controlled substances that have been transported from a Station/Section/Unit or Central Evidence Locker and are awaiting trial, destruction, or disposal.

Narcotics Central Evidence Locker (CEL): A secure location located within the State Police Troop of Jurisdiction. Each CEL is staffed by NIU personnel. Each CEL shall have direct control and responsibility for the handling, storage, and security of controlled substances seized by members located within their Troop Jurisdiction.

Department Evidence Officer: A member appointed by the Colonel/Superintendent to act as custodian of all controlled substances seized in the course of any arrest or investigation by the Department.

Subject	Number
Controlled Substance	**INV-11**

Responsibilities

Position	Duties
Narcotics Inspection Unit Commander	• Assume responsibility and duties specified in MGL c.94C, s.47A, as the "Evidence Officer" for the Department; and • Shall have command and control of the Narcotics Locker (NIU Bunker) located at General Headquarters.
Troop/Section Commanders	• Ensure the security and safeguarding of all controlled substances held in all Stations/Sections/Units under their command.
Station/Section/Unit Commander	• Has the responsibility as the "Evidence Officer" of their Station/Section/Unit; • Has direct control and responsibility for the handling, storage, and security of controlled substances seized by members under their command; • Retain responsibility of all controlled substances and ensure adherence to Department Policy and Procedures; and • Ensure that members under their command are trained and familiar with the appropriate handling and storage of controlled substances. In addition, Station/Section/Unit Commander may: • Delegate the duties of the Evidence Officer to any member under their command; and • Designate that member to serve as the "Assistant Evidence Officer" for that Station/Section/Unit.
Investigating Officer of Controlled Substance(s)	Upon arrival at the Station/Section/Unit the Investigating Officer shall: • Log in the controlled substance(s) into the Station/Section/Unit Daily Administrative Journal and in the Temporary Narcotics Evidence Locker Journal;

Subject	Number
Controlled Substance	**INV-11**

Responsibilities (Continued)

Position	Duties
Investigating Officer of Controlled Substance(s)	• Prior to the end of their shift tag each item or place each item in a Department Evidence bag with the information listed below. 1. Defendant's name(s). 2. Defendant's DOB. 3. Case number. 4. Date seized. 5. Location where seized. 6. A brief description of the item, listing the quantities on the evidence packaging and chain of custody form. • Indicate whether the controlled substance(s) have been transferred: 1. Directly to the Evidence Officer; or 2. The controlled substance(s) have been placed in the Temporary Contraband/Controlled Substance Locker with entries made into the Temporary Narcotics Evidence Locker Journal. • Ensure that the SP 295 Narcotics Custody Form is completed. Note: See Controlled Substance Storage Area within this policy for controlled substances that are too large to fit into the Temporary Contraband/Controlled Substances Locker.

Station/Section/ Unit Evidence Officer

The Station/Section/Unit Commander or Evidence Officer shall:

- Maintain the Temporary Narcotics Evidence Locker Journal issued by the Narcotics Inspection Unit;
- Ensure the Temporary Narcotics Evidence Locker Journal is kept near the Temporary Contraband/Controlled Substance Locker;
- Check the Temporary Narcotics Evidence Locker Journal and Temporary Contraband/Controlled Substance Locker during their shift for items that may have been deposited;
- Contact NIU and/or the CEL when controlled substances have been seized and are in the Temporary Controlled Substance Locker; and
- Ensure that the controlled substances are properly labeled and packaged by the Investigating Officer and that they have completed the SP 295.

Note: Assistant Evidence Officers shall perform duties as directed by the Station/Section/Unit Commander.

Controlled Substance Storage Area

Permanent Storage

Permanent Storage of controlled substances shall:

- Be stored at the CEL of jurisdiction and the NIU Bunker; and
- Not be stored in vehicles or personal storage areas.
  Note: For training purposes, controlled substances may be stored at the Troop Headquarters K-9 Aid Storage Lockers with prior approval from the Troop Commander.

Temporary Storage

Each Station/Section/Unit shall:

- Be provided with a Temporary Contraband/Controlled Substance Locker with twenty-four (24) hour access to all authorized personnel;
- Allow for the temporary secure storage of controlled substances; and
- Have available a Temporary Narcotics Evidence Locker Journal to enter all pertinent information.

The Evidence Officer shall:

- Ensure that the Temporary Contraband/Controlled Substance Evidence Locker remains securely locked at all times; and
- Prevent access to unauthorized personnel.

Unusual Value or Size

The CEL of jurisdiction and/or the NIU Commander shall be called immediately for instructions and assistance when:

- Seized narcotics evidence is too large to fit in the temporary Contraband/Controlled Substance Evidence Locker; and
- When any amount of marijuana plants are seized.

The Evidence Officer shall:
Make arrangements with the NIU and/or the CEL of jurisdiction for the storage of items of extreme value or unusual size that meet the following criteria:

Narcotics	Quantity
Marijuana	50 pounds or more
Cocaine	10 ounces/280 grams or more
Heroin	28 grams or more
Tablets/Pills	1000 or more of Class A, B or C

Controlled substances meeting the above criteria shall:

- Not be held for more than seventy-two (72) hours at any Temporary Contraband/Controlled Substance evidence locker or CEL unless:
  1. Authorization is granted by the NIU Commander.
- Be stored at the NIU Bunker in Framingham. If possible, the controlled substance should be submitted to the Crime Laboratory for analysis prior to being secured at the NIU Bunker.

Continued next page.

Subject	Number
Controlled Substance	**INV-11**

Controlled Substance Storage Area (Continued)

The Evidence Officer or Investigating Officer shall:

- Notify the NIU or CEL forthwith to make arrangements for the transportation of the controlled substances according to NIU procedures.

Chain of Custody

Change In the Chain of Custody

The Investigating Officer shall:

- Complete the SP 295 Narcotics Custody Form; and
- Ensure the SP 295 is attached to controlled substances involved in a temporary change of possession outside the custody of the Station/Section/Unit Evidence Officer.

Change in the chain of custody controlled substances shall:

- Be considered when controlled substances are required at judicial proceedings and are transferred to the Investigating Officer from the Station/Section/Unit Evidence Officer, CEL or NIU;
- Have entries made on the SP 295 and in the Temporary Narcotics Evidence Locker Journal (if applicable). In the event that additional space is required to accommodate entries on the SP 295, additional SP 295's shall be used and recorded as "Page 1 of 2, Page 2 of 2 etc"; and
- Require copies of the SP 295 be retained and distributed as indicated on the form.

Handling or Transport Controlled Substances

Each time controlled substances are handled or transported, members shall:

- Ensure the presence and condition of the controlled substance by examining the material without opening closed containers or breaking any seals;
- Obtain the signature of the receiving party; and
- Document the date and location on the SP 295.

Inspection of Control Substance Packaging

All members involved in the movement of controlled substances at either the Station/Section/Unit, CEL or, NIU level shall:

- Inspect the packaging for signs of tampering; and
- Immediately notify the Station/Section/Unit Commander and the NIU Commander if the packaging appears to have been tampered with.

The Station/Section/Unit Commander shall:

- Notify through channels to the Division of Standards and Training and request that an investigation be conducted.

Continued next page.

Subject	Number
Controlled Substance	**INV-11**

Chain of Custody (Continued)

Control Substance Packaging Opened

When any controlled substance evidence is opened during a court proceeding:

- A SP 655 Court Order to Open Secured and Closed Narcotic Evidence form shall be generated and kept with the opened evidence;
- The SP 655 shall include the name of the judge who requested it to be opened; and
- The SP 655 shall be signed by the Presiding Judge that ordered the evidence opened, or by either the Assistant District Attorney (ADA), or the Clerk Magistrate of the Court.

Note: The Evidence Officer may complete the SP 655, however it shall only be signed by a judge, ADA, or clerk magistrate.

Inspections

Troop/Section Commanders shall:

- Conduct monthly line inspections of all Temporary Contraband/Controlled Substance Storage areas under their control to ensure compliance.

The NIU shall:

- Annually, or as directed by the Office of the Colonel/Superintendent, conduct official, unannounced, and random inspections of all Department Permanent Controlled Substance Storage Lockers to ensure compliance

The NIU shall:

- Issue a written report with its findings and observations regarding the inspection conducted;
- A copy of this report shall be sent to:
    1. The Troop/Station/Section/Unit Commander (if applicable),
    2. The supervisor of the CEL inspected; and
    3. The NIU Commander

The Staff Inspections may:

- Conduct periodic checks of all Department Controlled Substance Lockers to ensure integrity of the system.

Training

Station/Section/Unit Evidence Officers, CEL and NIU personnel may:

- Be required to attend specified training conducted by the NIU Commander; and
- Include classroom and/or online academy training.

Subject	Number
Controlled Substance	**INV-11**

Inventories

When practicable as deemed by the Troop/Section Commander or designee, an inventory of all controlled substances may be conducted whenever a new Evidence Officer or Assistant Evidence Officer is designated.

In such instances, the outgoing and incoming Evidence Officers/Assistant Evidence Officers shall:

- Conduct an inventory jointly to verify controlled substances physically stored within that jurisdiction; and
- Document results within the Daily Administrative Journal.

Department of State Police
General Order

Effective Date	Number
June 17, 2013	**INV-11A**

Subject

Property and Contraband

Policy

The Department shall establish procedures for all found, unclaimed, or abandoned property including contraband held within its custody to preserve the integrity of the Department and its personnel.

All levels of supervision shall ensure strict compliance with established procedures within this policy regarding processing, storage requirements, and inspection.

Definition

Found Property: Any property discovered or found by the general public and turned over to the Department or to any police officer.

Unclaimed/Abandoned Property: Any property that comes into the possession of the Department by means of any police officer with no known owner.

Contraband (excluding controlled substances):

- May be property that is not in and of itself unlawful for a person to acquire or possess; however
- May have been acquired by the Department because of its use in an unlawful activity or manner, of its nature, or due to circumstances surrounding the person who acquired or possessed it.
  Note: Contraband in these instances shall be evidentiary and documented when applicable according to Policy and Procedure *INV-10 Evidence Collection and Preservation*.

Property Custodian: The Commanding Officer of each Station/Section/Unit shall be responsible for receiving, storing, maintaining, releasing, and accounting of all found, unclaimed, abandoned property and contraband under their command.

Subject	Number
Property and Contraband	**INV-11A**

Responsibilities

Position	Duties
Troop/Section Commanders	• Ensure the security and safeguarding of all found, unclaimed, abandoned property and contraband, held in all Stations/Sections/Units under their command.
Station/Section/Unit Commander	• Shall be designated as the "Property Custodian" of their Station/Section/Unit; • Shall be responsible for receiving, storing, maintaining, releasing, and accounting of all found, unclaimed, abandoned property and contraband in accordance with this policy; • May delegate the duties of the Property Custodian to any member under their command and designate that member to serve as the "Assistant Property Custodian" for that Station/Section/Unit; • When applicable to do so, make arrangements to the appropriate facility for: 1. Property and contraband to be tested or analyzed; and 2. Firearms to be tested by the Department's Firearms Identification Section. • Shall transport or designate the Assistant Property Custodian to transport any item requiring analysis or testing; and • Ensure that members under their command are trained and familiar with the appropriate handling and storage of all found, unclaimed, abandoned property and contraband.

Continued next page.

Subject	Number
Property and Contraband	**INV-11A**

Responsibilities (Continued)

Position	Duties
Investigating Officer	The Investigating Officer who has found, unclaimed, abandoned property or contraband shall prior to the end of their shift: • Tag each item and/or place each item in a Department Evidence bag with the required information; • Secure any contraband in the Temporary Contraband/Controlled Substances Locker; • Log the contraband in the Temporary Contraband/Controlled Substances Journal; • Ensure a complaint or case number be assigned for found, unclaimed or abandoned property; • Provide a copy of the investigative report to the Property Custodian or Assistant Property Custodian to be placed with the found, unclaimed, abandoned property or contraband; • Provide the Desk Officer with a complete inventory of any found, unclaimed, abandoned property or contraband to be logged into the Daily Administrative Journal (DAJ); Note: Found, unclaimed, abandoned property, or contraband may be given directly to the Property Custodian or Assistant Property Custodian to be secured accordingly. Whenever **evidence and/or currency** are seized, members shall adhere to Policy and Procedure: • INV-10 Evidence Collection and Preservation; and • INV-14 Seized Currency.

Subject	Number
Property and Contraband	**INV-11A**

Storage Area Provisions

Station/Section/Units Permanent Storage

The Contraband Storage Locker shall be:

- Located and alarmed to allow for proper monitoring and security thus preventing unauthorized entry; and
- Maintained to prevent damage to property, contraband or other evidence that may occur due to moisture or extreme room temperature fluctuations.

Contraband/evidence shall:

- Be stored within a secure area within the State Police facility of jurisdiction;
- Not be stored in vehicles or personal storage areas; and
- Secure perishable items requiring refrigeration within the facility's identified refrigerator.

Troop/Section Storage Area

Troop/Section Commanders shall:

- Maintain a contraband storage area within their Troop/Section Headquarters;
- The Troop/Section storage area shall be under the control of the Cases and Reports Supervisor; and
- The storage area shall be used to store contraband/property that has been forwarded and awaiting destruction or disposal.

Temporary Locker

Temporary Storage

Each Station/Section/Unit shall:

- Be provided with a Temporary Contraband/Controlled Substance Evidence Locker with twenty-four (24) hour access to all authorized personnel;
- Allow for the temporary secure storage of contraband;
- Have available a Temporary Contraband/Controlled Substances Evidence Journal to enter all pertinent information; and
- In the event that an item is too large to fit into the Temporary Contraband/Controlled Substances Evidence Locker, the Investigating Officer shall:
    1. Consult with the Property Custodian, Assistant Property Custodian or their Supervisor in locating another secure location.

Continued next page.

Temporary Locker (Continued)

Items secured in the Temporary Contraband/Controlled Substances Evidence Locker shall have an entry made into the Temporary Contraband/Controlled Substances Evidence Journal listing:

1. Investigating Officer's name;
2. Investigating Officer's ID#;
3. Defendant's name(s);
4. Defendant's DOB;
5. Case number;
6. Date seized;
7. Location where seized; and
8. A description of the item(s) including the number of items.

Chain of Custody

Change In the Chain of Custody

When the Property Custodian or Assistant Property Custodian transfers evidence, contraband or property to an Investigating Officer for judicial proceedings it shall be considered a change of possession within the chain of custody. Both the Property Custodian/Assistant Property Custodian and Investigating Officer shall:

- Ensure appropriate entries are made within the Contraband Ledger and the DAJ; and
- Ensure all of the appropriate Department forms are completed indicating the change in possession.

Documentation of Chain of Custody

The Investigating Officer shall:

- Ensure the appropriate chain of custody forms are completed for evidence involving alcohol analysis or the examination of physical evidence;
- Ensure the appropriate chain of custody form(s) accompanies evidence or contraband whenever it is involved in a temporary change of possession outside of the custody of either the Property Custodian or Assistant Property Custodian and/or the Investigating Officer;
- Ensure that a record is made into the Station/Section/Unit's Contraband Ledger and DAJ identifying the new custodian; and
- Ensure the record identifies the evidence or contraband accordingly.

Inspection Evidence or Contraband

All members involved in the movement of evidence or contraband at the Station/Section/Unit, shall:

- Inspect the packaging for signs of tampering;
- Immediately notify the Station/Section/Unit Commander if the packaging appears to have been tampered with.

Continued next page.

Subject	Number
Property and Contraband	**INV-11A**

Chain of Custody (Continued)

Chain of Custody Forms

- *SP 145 Chain of Custody: Contraband /Evidence/Property Form*: Used for all evidence (excluding controlled substances), contraband, found/unclaimed or recovered property to show the chain of custody of the item/property.
- ***Forensic Services Group Forms***
  The following forms shall be used when necessary, retained and copies distributed as indicated:
  - *Alcohol Analysis Form:* Evidence requiring the analysis of alcohol content;
  - *Evidence Submission Form:* Evidence or contraband requiring analysis; and
  - *SP 295 Drug Submission Form:* Controlled Substances requiring analysis.

Troop/Section Supervisor of Cases and Reports

The Troop/Section Cases and Reports Supervisor shall:

- Sign and date the Station/Section/Unit Contraband Ledger as the final receiver of the property;
- Ensure a red line be drawn diagonally through the ledger entry to indicate final disposition and case closed;
- Destroy contraband in an appropriate and acceptable manner in the presence of another commissioned officer; and
- Submit a written report, through channels, to the appropriate Troop/Section Commanding Officer or designee, listing the final disposition of all contraband.

Property to be Auctioned

Per Massachusetts General Law (MGL) 22c. s. 45-46, the Department may:

- Sell held properties at a public auction; and
- Only sell after six (6) months when there is no proven ownership of the property.

The Department may select a vendor to hold the public auctions in accordance with establish procedures. Information and instructions regarding the auction vendor and procedures shall be posted on DocuShare under Bulletins-*Public Auction Vendor.*

Prior to the auction, Media Relations shall promulgate a notice per (MGL) 22c. s. 45, to the necessary media news outlets and newspapers that contain the following information :

- The time and place of the auction; and
- Description of the property to be auctioned.

Subject	Number
Property and Contraband	**INV-11A**

Returning Property to Owner

When property is disposed or returned to an owner specific information shall be recorded on the SP 145 and shall be:

- Attached (original) to the report and retained at the Station/Section/Unit;
- Forwarded (copy) to the Property Custodian or Assistant Property Custodian for filing;
- Forwarded (copy) to the Troop/Section Supervisor of Cases and Reports and retained on file.

Staff Inspection Unit

The Staff Inspection Unit shall conduct periodic audits of all Department Contraband Storage Lockers to ensure the integrity of the system.

Inspections

Troop/Section Commanders or designee shall:

- Conduct biannual line inspections of all contraband storage areas under their control to ensure compliance.

The Office of the Colonel/Superintendent, may direct:

- The unannounced random inspections of all Department contraband lockers to ensure compliance.

Subject

Asset Forfeiture

Policy

The Department shall adhere to state and federal forfeiture laws involving illegal activities.

Troop/Section Asset Forfeiture Officer

The Asset Forfeiture Officer (AFO) shall:

- Provide assistance to members regarding investigations when authorized by the Troop Duty Officer;
- Oversee forfeiture proceedings and manage seized assets until forfeited;
- Maintain a database and files of all seizures and forfeitures; and
- Act as a liaison with the Financial Evidence Officer (per INV-14 Seized Currency), and the Offices of the District Attorney, Attorney General, or U.S. Attorney.

Non-Field Services Sections/Units

This policy is applicable to all Department entities, except those assigned to the Offices of the District Attorney, Attorney General, U.S. Attorney, or a federal task force, and there is an internal mechanism for tracking such seized currency. Members shall follow the policy as set forth by that office or task force.

Troop/Section/Unit Commanders requesting to deviate from this policy shall forward written requests through channels to the Deputy Superintendent for approval.

Factors of Consideration

In some situations one factor alone may be insufficient to justify a seizure and may require a combination of additional factors. Some factors are:

- Suspect is evasive, or gives implausible or false answers;
- Suspect has record of narcotics charges;
- Suspect is carrying a large or unusual amount of currency;
- Suspect cannot explain where the currency came from, or what it is for;
- Suspect has a large sum of currency or an expensive vehicle and no means of income;
- Suspect denies ownership of currency;
- Currency is concealed in an unusual location; or
- A narcotics canine alerts on the currency, vehicle, or property.
  Note: A canine alert alone is not enough to establish probable cause for the seizure of currency.

Subject	Number
Asset Forfeiture	**INV-13**

Making a Seizure

Seizures may be made when there is probable cause to believe that the vehicle, currency, or other property is connected to the sale or distribution of narcotics. This authority is allowed by Massachusetts General Laws (MGL) c.94C, s.47.

Members may seize currency when there is probable cause to believe that the currency is:

- Being used or was intended for use in the procurement, processing, delivery, or distribution of drugs;
- The proceeds of sales of drugs; or
- Involved in the furtherance of criminal enterprise.

Note: Currency seized shall be processed in accordance with INV-14.

Seizing a Vehicle

The Fleet Administrator has the authority to accept or reject vehicles on behalf of the Department. Any vehicle accepted by the Department, shall be delivered to the Fleet Section for inspection according to ADM-19.

A vehicle may be seized when…	A vehicle should not be seized if…
1. An operator, owner, or occupant of the vehicle is arrested for possession with intent to distribute or trafficking: • Ten (10) pounds or more of marijuana; • Any amount of heroin; • Any amount of cocaine; or • Other controlled substances, as outlined in M.G.L. c.94C, s. 32A-G or 32I. 2. The owner knew or should have known that it was being used for such purposes.	• It is rented or leased (unless seized for evidentiary purposes); or • The owner had no knowledge that it was being used for illegal purposes. Note: The Troop AFO shall consult with the District Attorney's Office of jurisdiction and determine if there is a lien on the vehicle that an entity is willing to assume.

Use of Seized Assets

The Colonel/Superintendent may expend funds and proceeds from the Special Law Enforcement Trust Fund to:

- Defray the costs of extended investigations;
- Provide matching funds for grants; and
- Accomplish other law enforcement purpose(s).

Funds shall not be considered a source of revenue to meet operational expenses.

Subject	Number
Asset Forfeiture	**INV-13**

Troop Asset Forfeiture Process

Step	Action
1	The determination is made to seize the assets e.g., vehicle, currency, or other property.
2	All seized assets are to be secured according to Department policy.
3	The seizing member shall notify the Troop AFO. Note: The Troop Duty Officer shall be notified of all seizures and may authorize call outs of the AFO after business hours.
4	The Troop Duty Officer shall notify the Financial Evidence Officer of all currency seizures.
5	The seizing member shall prepare the necessary reports and forms.
6	The Troop AFO shall: • Confirm assets are secured with the investigating member; • Conduct an investigation to determine ownership and liens of the assets; and • Assist the Financial Evidence Officer.
7	If it is determined that the asset forfeiture proceedings shall not continue, the assets shall be returned, as soon as possible, to the lawful owner.
8	Motor vehicles seized shall be secured as directed by the Troop/Section Commander.

Subject

Seized Currency

Policy

The Department shall establish rigid controls and strict accountability for all seized currency coming into its custody. A non-interest bearing cashless system shall be utilized to ensure that all seized currency is properly secured, stored, and readily retrievable. Any changes in the custody of any seized currency shall be properly documented.

Applicability

This policy is applicable to all Department entities, except for the following conditions:

- Members assigned to Offices of the District Attorney, Attorney General, U.S. Attorney or federal task force; and
- An internal mechanism exists for tracking seized currency.

Troop/Section/Unit Commanders requesting to deviate from this policy shall forward written requests through channels to the Deputy Superintendent for approval.

Seized Currency

Members shall not seize less than three-hundred ($300.00) dollars from a defendant, unless the currency is seized as evidence.

Seized currency shall not include:

- Non-evidentiary currency received during custodial processing;
- Currency used for controlled purchases of contraband; or
- Currency that has independent forensic value. (i.e., currency stained with blood, bodily fluids, or other evidentiary material)

Seized currency shall be processed at the appropriate sub-station in the troop of jurisdiction.

Responsibilities

Position	Duties
Desk Officer	• Visually observe currency drop safe at start of shift for general condition and make entry into Daily Administrative Journal (DAJ) system; • Make appropriate entries into DAJ system upon seizure and retrieval; and • Notify Troop Duty Officer of seizure and provide the RAMS case number and investigating member's name.
Investigating Member	• Count currency by denomination and verify amount with a witnessing member present; • Photograph or photocopy currency for evidentiary purposes, if necessary; • Package and seal currency in a Department evidence bag (evidence bags shall be labeled 1 of 1, 1 of 2, 2 of 2, accordingly), initial the seal, ensure both members sign bag with ID numbers, include corresponding RAMS case number; • Deposit Department evidence bag with attached SP 417 Currency Custody Form and SP 418 Seized Currency Receipt into currency drop safe with witnessing member present; and • File copy of SP 417 and SP 418 with the Station Commander.
Troop Duty Officer	• Notify the Financial Evidence Officer by email of the seizure; and • Make appropriate DAJ entries.
Financial Evidence Officer	• Retrieve seized currency from the currency drop safe with a witness present, not later than next banking business day or as otherwise authorized by the Troop Commander; • Document any change in custody on SP 417; • Ensure appropriate DAJ entries are made; • Transport sealed Department evidence bag(s) to Troop HQ to verify currency amount in presence of another commissioned officer; • Report discrepancies to the Troop Commander and Station Commander and reconcile prior to deposit; • Deposit currency into cashless system on the same banking business day as retrieved; • Enter the amount of the seizure into the approved accounting program;

Continued next page.

Subject	Number
Seized Currency	**INV-14**

Responsibilities (Continued)

Position	Duties
Financial Evidence Officer	• Immediately fax a copy of the SP 12 Incident Report to the Chief Financial Officer (CFO) of the District Attorney's Office of jurisdiction; • Maintain copies of SP 12's, SP 417's and SP 418's in a dedicated folder filed alphabetically and by year; • File open and closed cases separately; and • Retain initialed sealed Department evidence bag(s) if there are discrepancies until reconciled.
Station Commander	• Notify the investigating member(s) of any discrepancy; and • Maintain copies of SP 417 and SP 418 for inspections.
Troop Commander	• Maintain a non-interest bearing account at a local banking institution; • Assign a Commissioned Officer as the Financial Evidence Officer; • Maintain historical records of members provided with combination access; • Change access combinations as required; • Conduct quarterly audits; • Conduct investigations as appropriate; and • Notify the Division Commander of any discrepancies.

Discrepancies

Seized currency shall not be deposited into the cashless system until discrepancies are identified and reconciled. All currency shall be documented by amount and denominations. The final official amount shall be determined by the financial institution of deposit.

Troop/Section Commanders shall investigate any currency discrepancies that cannot be reconciled and report findings to the Division Commander.

Return of Seized Funds

Any person requesting the return of seized currency shall:

- Request the return in writing to the Troop Financial Evidence Officer;
- Provide a copy of the court order, if applicable; and
- Receive a check in person upon presentation of positive identification. Note: the check shall indicate subject's name, case number, and troop of jurisdiction.

Seized funds shall only be returned during regular business hours Monday through Friday.

Subject	Number
Seized Currency	**INV-14**

Disposition of Currency

If no person makes a valid claim to found, unclaimed, or abandoned currency within six (6) months from the date the currency was turned into the Department, the funds shall be forwarded to the State Treasurer through channels via the Department's Fiscal Section.

Prior to forwarding the funds to the State Treasurer, the Department may deduct all reasonable charges and expenses incurred in connection with the deposit and accounting of the currency. Such deductions shall be made by the Department's Fiscal Director and documented accordingly. Any claim for return of found, unclaimed or abandoned currency after the funds have been forwarded to the State Treasurer, shall be made to the State Treasurer's Office.

All seized currency ordered forfeited through legal proceedings shall be forwarded to the Office of the Superintendent for the Special Law Enforcement Trust fund within sixty (60) days of adjudication.

Accounting and Audits

The Financial Evidence Officer shall maintain:

- Bank statements;
- An approved software accounting system;
- SP 12's, SP 417's, and SP 418's for currency received; and
- Records, documentation, or invoices of currency disbursements.

Prior to any change of command of the Troop/Section/Unit Commander, Executive Officer, or Financial Evidence Officer, there shall be a reconciliation of the accounting records and current balances with the incoming member(s).

An internal audit of all seized currency accounting records and practices shall be conducted annually by the appropriate Division Commander.

An audit of seized currency may be conducted as directed by the appropriate Division Commander or the Colonel/Superintendent.

Reports

Troop/Section/Unit Commanders shall:

- Submit a quarterly report, from the approved accounting program, to their Division Commander (due January 10, April 10, July 10, and October 10); and
- Submit a copy of the quarterly report to the Chief Financial Officer (CFO) of the District Attorney's Office of jurisdiction.

Subject	Number
Seized Currency	**INV-14**

Currency Drop Safe

Currency drop safes shall be located and maintained at each sub-station as determined by the Division Commander. Only the Troop Commander, Executive Officer, and Financial Evidence Officer shall have authorized access to the currency drop safe and combinations. Whenever the currency drop safe is opened:

- Two (2) members shall be present at all times; and
- Access and retrieval information shall be entered into the station DAJ.

Drop Safe Combinations

Troop Commanders shall be responsible for the change of safe combinations under their command.

Whenever there is a change of command, transfer or departure of a Troop Commander, Executive Officer, or Financial Evidence Officer, the access combination shall be changed.

Field Interview and Observation Reports

Policy

Members shall follow the established guidelines for the collection, security, and dissemination of information gathered through field interviews and observations.

Definitions

SP 73 Field Interview and Observation Report (FIO): An internal, Department report that documents information about a person, place, vehicle, event, occurrence, or any other known activity, observed by a Department member, that may be linked to suspicious or criminal activity or may be of interest to the law enforcement community.

Collection of Information

Information may be recorded on a SP 73 or any other format that is approved by the Criminal Information Section (CIS).

FIO reports are an important crime prevention and information gathering resource. Analysis of these reports is a valuable aid to investigators in uncovering leads that may result in the solving of crimes and the apprehension of criminal suspects.

The collection of information for FIO reports shall not be based solely on an individual's or group's:

- Support of a particular cause;
- Race;
- Color;
- Religion;
- Gender;
- National origin or ancestry; or
- Political affiliation.

Members collecting information for FIO reports shall not:

- Conduct random stops of persons or vehicles to gather information; or
- Employ or direct an individual to engage in any illegal activities.

Subject	Number
Field Interview and Observation Reports	**INV-15**

Public Contact

Members are encouraged to:

- Collect as much information based upon their own observations; and
- Gather as much information provided to them on a voluntary basis.

Members may:

- Detain a person or vehicle briefly when there is reasonable suspicion of criminal activity; or
- Stop and frisk a subject's outer garments for weapons when articulable facts or circumstances warrant such action, for the safety of the public and the member.

A person stopped by a member, who refuses to cooperate or answer questions, shall not be further detained without reasonable suspicion or probable cause.

SP 73 Field Interview and Observation Reports

FIO Reports should be carried by every member while on duty. Additionally:

- Members should complete a report whenever a known criminal is observed or a person, place, vehicle, event, occurrence, or any other activity is observed that would indicate criminal activity or potential criminal activity;
- A separate FIO Report shall be completed for each member of a group and for each observation made; and
- Information shall be typed or printed in black ink and its content should be as complete as possible.

Procedures for completed FIO Reports:

- Provide a copy of the FIO to the Troop/Section/Unit of jurisdiction;
- Forward the original hard copy of the FIO Report to CIS; and
- If the information within the FIO Report is related to terrorism or homeland security contact:
  1. CIS during normal business hours; or
  2. The Communications Section OIC other than normal business hours.

Security and Retention

FIO Reports shall be secured at all times by CIS. A dissemination log shall be maintained for all requests for review and dissemination of information.

Dissemination

Requests for information from the FIO database shall be made to the Commanding Officer of the CIS.

CIS shall only disseminate FIO information:

- In the furtherance of an authorized law enforcement activity;
- To authorized law enforcement or criminal justice personnel; and
- On a "need-to-know" and "right-to-know" basis per INV-08 Criminal Intelligence.

After review by either CIS, or the Communications Section OIC, information contained within an FIO Report determined to be critical, time-sensitive, or pertaining to public or officer safety shall be disseminated to law enforcement agencies, as appropriate. -

Responsibilities

Requests for dissemination shall include the:

- Date and time of the request;
- Requesting Officer's name, rank, identification (ID) number and agency;
- Case number or reason for the request; and
- Name of the person(s) or incident(s) and information sought.

The Criminal Information Section (CIS) shall:

- Respond to requests for information from FIO Reports; and
- Document requests and dissemination of information.

Department of State Police
General Order

Effective Date	Number
April 23, 2009	**INV-16**

Subject

Electronic Recording of Interrogations

Policy

Members shall, whenever it is practical, electronically record all custodial interrogations of suspects or interrogations of suspects conducted in places of detention.

Case Law

In *Commonwealth v. DiGiambattista*, 442 Mass. 423 (2004), the Supreme Judicial Court held that if the prosecution introduces a confession or statement that the police obtained during an interrogation of a defendant, who was either in custody or at a place of detention, and the police did not electronically record the statement, the defendant is entitled to a cautionary jury instruction.

Upon the defendant's request, the judge must instruct the jury that the State's highest court has expressed "*a preference that such interrogations be recorded whenever practicable and . . . that, in light of the absence of any recording of the interrogation in the case before them, they should weigh evidence of the defendant's alleged statement with great caution and care*." This jury instruction is required regardless of the reason that the police did not record the interrogation.

Definitions

Custody: Circumstances in which a reasonable person would believe that their freedom of action has been curtailed such that they are not free to leave.

Electronic Recording: Preservation of an interview through the use of audio or audio/video recording equipment.

Interrogation: Occurs when an officer's questions, actions or words (other than those normally attendant to arrest and custody), are reasonably likely to elicit an incriminating response from a suspect.

Place of Detention: A secure facility where persons may be held in detention in relation to a criminal charge(s) (e.g., a state police barracks, prison, jail, a department of youth services secure facility).

Suspect: A person who has either been charged with a crime or a person for whom there is a reasonable basis to believe that may in the future be charged with a crime. Witnesses, victims, and other persons who provide information to a member are not considered suspects, unless and until, there is reasonable basis to change their status.

Subject	Number
Electronic Recording Of Interrogations	**INV-16**

Applicability

These guidelines require members to record, whenever it is practical, two (2) types of interrogations:

1. Custodial interrogations of suspects; and
2. Interrogations of suspects occurring at places of detention.

Wiretap Violations

The Massachusetts wiretap statute, Massachusetts General Laws (MGL) c. 272, s. 99, generally prohibits anyone from secretly recording another person's oral statements. Accordingly, unless one of the narrow exceptions in the wiretap statute applies, a member who electronically records a suspect's interrogation shall do either of the following:

- Notify a suspect that their statements are being recorded; or
- Conduct the interrogation in such a way that it is obvious to the suspect that their statements are being recorded.

When the suspect knows, or reasonably should know, that they are being recorded, the member may record the interrogation without explicit consent to do so.

Creating a Clear and Complete Record

To the extent it is practical members should electronically record the entire interrogation of a suspect. To assist in the creation of the record, members shall do the following:

- Ensure that the recording device is functioning properly;
- Start the recording device;
- Inform the suspect that they are being recorded unless it is otherwise obvious;
- State the date, time, location, and names of persons present. If a video recording device is used which imprints the time on the tape or disk, verify that the correct time is displayed;
- State the full name of the suspect;
- Execute appropriate Department forms including Miranda warning and waiver, and waiver of prompt arraignment (if applicable); and
- If the member must suspend the recording for any reason, they shall make a record of:
    1. The reasons for stopping (i.e., taking a break or a malfunction);
    2. The time the recording device is turned off;
    3. The time it is turned back on; and
    4. What transpired while the recording device was turned off.

Continued next page.

Subject	Number
Electronic Recording Of Interrogations	**INV-16**

Creating a Clear and Complete Record (Continued)

- If the member uses or refers to documents or other items during the interrogation, the member shall describe those documents or items on the record and mark them with a unique number (similar to an exhibit number at trial) and the member's initials. If the member is unable to write on the actual document or item, the member may write on a bag, envelope, or case in which the document or item is placed, or on a piece of tape which can be attached to the document or item; and
- Conclude the recording by stating the date and the time the interrogation is completed.

Suspect Refuses to be Recorded

Refusal Given Before the Recording Device is Activated:

- If it is practical, turn on the recording device to record the refusal;
- Identify the lead member and the suspect then state the date, time, and location, inform the suspect of any applicable rights and inform the suspect of the benefit to recording, including the fact that a recording will create a clear and complete record of what was said to the suspect, and what the suspect said during the interrogation;
- Ask the suspect on the record if they are willing to make an electronically recorded statement;
- Advise the suspect if, at any time, they change their mind and decide that they do want the interview to be recorded, they should let the member know and the member shall turn on the recording device; and
- If the suspect still refuses, turn off the device, execute a signed refusal form SP 609 Refusal Form, and proceed with the interview.

Suspect Refuses to Have Their Refusal Recorded

- Advise the suspect of the benefits of electronically recording any communications;
- If the suspect objects to having their refusal electronically recorded the member shall execute a SP 609; and
- The member may proceed without recording the refusal or the interrogation.

Suspect Refuses After the Recording Device is Activated

- If, during the course of a recorded interrogation, a suspect decides that they no longer want to answer questions unless the recording device is turned off, the member shall again advise the suspect of the benefits of recording the interrogation; and
- If the suspect still refuses, the member shall turn off the recording device execute a SP 609 and proceed with the interview.

Subject	Number
Electronic Recording Of Interrogations	**INV-16**

Discretionary Decision Not to Record

A member may decide not to record an interrogation, even where it is practical to do so, if that member believes that:

- Recording the interrogation will jeopardize the safety of a member, the suspect, or any other person; or
- It is ill-advised under the circumstances to record the interrogation.

If a member decides that it is unsafe or ill-advised under the circumstances to record the interrogation, the member should:

- Advise the suspect of the potential benefits of recording the interrogation, if warranted;
- Document in the interview, or case report, the reason(s) why the interrogation was not recorded, and if the suspect was advised regarding the potential benefits of recording the interrogation.

Recording Devices

The member should choose a recording device that has removable media (e.g., tape, disk, memory card, etc.) which can be easily duplicated.

Recording Device Malfunctions

If the recording device malfunctions, the member conducting the interrogation shall make a decision whether and how to continue the interrogation, and shall document what occurred.

<u>If the recording device can be restarted or replaced immediately:</u>

- State on the record that the device malfunctioned;
- State how long the device was not working, and
- Whether or not the suspect made any statements that were not recorded.

<u>If the recording device cannot be restarted or replaced immediately:</u>

- Include in the interview or case report the fact that the device malfunctioned;
- Ask the suspect whether they wish to continue the interrogation without a recording device, or whether they wish to suspend the interrogation until an operable recording device is available;
- If the suspect consents to continuing the interrogation without a recording device, document the consent and the interrogation in some manner, such as in a signed written statement by the suspect or in the member's interview or case report; and
- Note whether or not the suspect made any statements that were not recorded.

Subject	Number
Electronic Recording Of Interrogations	**INV-16**

Inoperable or Unavailable Recording Device

If there is no recording device available or the recording device is inoperable, the member should:

- Ask the suspect whether they wish to continue the interrogation without a recording device, or suspend the interrogation until an operable recording device is available.

If it is impractical to defer the interrogation, and the suspect consents to continuing the interrogation without a recording device then:

- Include in the interview or case report the fact that no recording device was available; and
- Document the consent and the interrogation in some manner, such as in a signed written statement by the suspect, or in the member's interview, or case report.

If, under the circumstances, it is impractical to seek or obtain the suspect's consent to continuing the interrogation without a recording device, the ultimate decision to continue shall be made by the member on a case-by-case basis.

Preservation and Copying of Original Recordings

The member who conducted the interrogation shall preserve the original recording. Preservation steps include:

- Remove the storage medium from the recording device;
- Clearly label and appropriately store recordings and copies;
- If the interrogation is recorded digitally, the member shall preserve at least one (1) whole copy of the original recording file;
- As soon as it is practical, create at least one (1) exact copy of the original recording;
- Clearly label copies as such;
- Use copies, not original recordings, to make additional copies; and
- Copies, not the original, shall be used to prepare a written transcript, to comply with discovery obligations, and for all other purposes.

To the extent it is practical, statements from multiple suspects should not be recorded on the same tape or disk.

Subject	Number
Electronic Recording Of Interrogations	**INV-16**

Storage

The member shall preserve all written forms, notes, or records of all statements by a suspect that were not electronically recorded in the original case file.

All electronically recorded interrogations shall:

- Be preserved according to the state records retention law and Department policy as criminal evidence; and
- Be stored in such a manner so as to easily differentiate between original recordings and copies.

Each original and copy shall be authenticated by the interrogator with the following information:

- Date and time of recording;
- Location of the interrogation;
- Name of person interrogated;
- Name of person(s) conducting the interrogation; and
- Departmental assigned case number or incident report number.

Subject

Eyewitness Identification

Policy

Eyewitness identification frequently plays an important role within Department investigations and it is absolutely critical that eyewitness evidence be accurate and reliable, in order to ensure that the highest possible quality of evidence is obtained.

The Department recognizes the importance of conducting and documenting eyewitness identification information in accordance with established guidelines, while recognizing that members are free to exercise discretion in adapting these guidelines to fit the unique circumstances of each case.

Definitions

Simultaneous Identification Procedure: Simultaneous identification is a procedure that displays a group of individuals or group of photographs to a witness at the same time. This allows the witness to compare all individuals or photographs before making a decision.

Sequential Identification Procedures: Sequential identification is a procedure where an eyewitness views only one member of a lineup or one photograph at a time. The witness must make a decision on each lineup member or photo before the viewing the next lineup member or photo.

Relative Judgments: Relative judgments occur when witnesses encounter a lineup in which the actual perpetrator is not in the lineup (i.e., the suspect is not the actual perpetrator). Research has shown that eyewitnesses tend to select the person who looks most like the perpetrator relative to other lineup members because they presume that the actual perpetrator will be in the lineup.

Blind Administration Procedure: A blind administration procedure where the officer/investigator who conducts the lineup has no knowledge of who the suspect is, which reduces unintentional influences. Whenever practical, this method should be used.

Field Identification (Show-Up): An eyewitness identification procedure in which a single suspect is viewed by an eyewitness shortly after the commission of a crime for the purpose of identifying or eliminating a suspect in a criminal offense.

Subject	Number
Eyewitness Identification	**INV-16A**

Definitions (Continued)

Live Lineup: An eyewitness identification procedure in which the witness to a criminal offense is asked to identify one suspect from a group of persons.

Photo Lineup/Photo Array: An eyewitness identification procedure in which the witness to a criminal offense is asked to identify one suspect from a group of photographs.

Filler: A person or photograph used in an eyewitness identification procedure not suspected of the offense and generally meets the description of the suspect.

Guidelines

Department Eyewitness Identification Guidelines may be found in DocuShare/Bulletins regarding:

- Field Identification (Showup);
- Live Lineup; and
- Photo Lineup/Array.

Department members shall adhere to established guidelines and utilize the appropriate Department forms (see References) when conducting any photo lineup, live lineup, or a field identification show-up; except for the following conditions:

- The member assigned to Offices of the District Attorney, Attorney General, U.S. Attorney or federal task force; and
- An internal mechanism exists for conducting eyewitness identification procedure.

Eyewitness Advisement

Before any eyewitness identification procedure is conducted, members shall administer a SP 645 Eyewitness Advisement. The advisement provides clear, consistent, and forceful instructions to avoid relative judgment or any prejudicial action that may influence the witness.

The Massachusetts Supreme Court *Commonwealth v. Silva-Santiago, 453 Mass. 782 (2009)* held that a photo array procedure was not per se suggestive where the police failed to use the standard advisements, sequential presentation, or a blind presenter. However the court stated that it expects such procedures, especially the standard advisements, to be used in all future identification procedures.

General Order

Effective Date:	Number:
August 1, 2017	**INV-17**

Subject:

Travel/Immigration Status Inquiries and Investigations

Policy

Investigating and enforcing violations of federal immigration law is not a mission of the Massachusetts State Police. Accordingly, it is not appropriate for a member of the State Police to inquire about a non-citizen's immigration or travel status for the sole purpose of facilitating that person's detention or deportation by U.S. Immigration & Customs Enforcement (ICE).

However, a member of the State Police may inquire into a person's immigration or travel status if the inquiry is part of, and reasonably likely to facilitate, the investigation of a violation of state law, federal criminal law (excluding federal immigration law), or conduct independent of immigration status that poses a threat to public safety or order. A member of the State Police may also notify federal authorities of the imminent release of a subject consistent with the limits set forth in this General Order.

Definitions

U.S. Immigration and Customs Enforcement (ICE): An agency within the Department of Homeland Security (DHS), its mission is to enforce the nation's immigration and customs laws.

Criminal Justice Information System (CJIS): A computerized system of criminal justice information, available twenty-four (24) hours a day and managed by the Commonwealth's Criminal History Systems Board.

Seizure: To take possession under compulsion of legal authority; to confiscate.

Identification Document: An article/credential that is, or purports to be, issued by a government entity, that is relied upon to record or prove the identity of its bearer. Examples may include:

- A driver's license from any state or country;
- An ICE- issued identity/status card;
- A document issued by the Massachusetts Registry of Motor Vehicles (RMV), or other official governmental motor vehicle organization; and
- A passport issued by the U.S. State Department or any other sovereign nation.

Subject	Number
Travel/Immigration Status	**INV-17**

Seizing Documents

Identification Documents may be seized from an individual only if they are:

- Contraband (including stolen, forged, or altered documents)
- The fruits or instrumentalities of a Massachusetts crime;
- Evidence of a Massachusetts crime; or
- Illegally possessed

The seized documents shall be initially processed as required under INV-10 *Evidence Collection and Preservation*. Once the case is adjudicated, seized documents shall be promptly disposed of according to Department Policy and Procedure INV-11A *Property and Contraband.* Stolen passports seized for these purposes should initially be processed like any other evidence according to INV-10 & INV-11A. Once the case is adjudicated, passports should be forwarded to the originally intended holder, or the U.S. Department of State, Passport Services, Consular Lost/Stolen Passport Section, 1111 19th St. NW, Room 500, Washington, DC 20036.

State Residency

Foreign operators may drive in Massachusetts for up to one (1) year with their foreign license if they are a visitor. An operator with an out-of-state license may drive in Massachusetts at any time, provided they do not establish residency within the Commonwealth. However, pursuant to G.L. c. 90, § 8, once a foreign operator or an out-of-state operator becomes a Massachusetts resident, he or she must immediately obtain a Massachusetts driver's license.

A member may question an operator about his/her employment, current residence, and/or tax status, when the member possesses a reasonable suspicion that a person operating on a foreign or out-of-state license has established residency in Massachusetts and the member requires the information to aid in determining if the operator is in compliance with Massachusetts law.

Out-of-State Licenses

An out-of-state license should not be seized by a member unless this document is:

- Contraband;
- A fruit or instrumentality of a crime;
- Evidence of a crime; or
- Illegally possessed.

Seized licenses shall be processed in accordance with INV-10 & INV-11A.

Determining License Status

To determine if the operator has been living in Massachusetts for longer than one year, the following checks may be performed to aid in determining an operator's current status:

- A motor vehicle violations history check (KQ);
- A criminal history check (BOP);
- Utilize the CJIS screen titled "INS" to learn when the operator entered the U.S.;
- A RMV check to determine if the operator has any license status within Commonwealth; or
- The issuance a RMV "A" or "X" number.

Note: Massachusetts RMV issues an "A" number to individuals who are unlicensed within the Commonwealth, but have received a Massachusetts motor vehicle citation; an "X" number is issued to individuals who are unlicensed within Massachusetts, but own a Massachusetts registered motor vehicle.

Foreign Licensed Operators

Massachusetts shall only honor valid licenses from countries identified within the current Massachusetts Driver's Manual "A" Appendices: *Parties to the Road Traffic Convention and the 1943 Inter-American Automotive Traffic Convention.*

This publication is available to all members via the Massachusetts Registry of Motor Vehicles web site under:
Forms & Manuals→ Driver's Manual→ Appendices "A".

International Driver's License/ Permit

An international driver's license/permit is simply a translation of an operator's foreign driver's license into English. This document is not required to operate a motor vehicle in Massachusetts.

The international license/permit is not a substitute for a person's actual driver's license issued by their country of origin. An operator who is licensed in another country is required to carry only their valid foreign driver's license.

ICE Detainers

Department members are NOT authorized to stop, arrest, and/or take an individual into custody based solely on an ICE detainer.

If an individual is in Department custody pursuant to an arrest on criminal charges or a warrant, or for any other reason, the existence of an ICE detainer for that individual does NOT grant members of the Department authority to detain the individual for any period longer than s/he would otherwise be held in Department custody.

Continued next page.

ICE Detainers (Continued)

I. Member Responsibilities

When a Department member conducts a NCIC/DCJIS query of an individual who is **already** in Department custody pursuant to arrest on criminal charges or a warrant and determines that the individual is the subject of an ICE detainer as defined in 8 C.F.R. § 287, the member shall **immediately** notify the Troop Duty Officer.

II. Troop/Duty Officer Responsibilities

The Troop Duty Officer shall instruct a Troop Dispatcher to contact ICE at (802) 872-6020 to notify ICE that an individual in custody is the subject of an ICE detainer.

The Troop Duty Officer shall monitor the status of an individual with an ICE detainer until the individual is released, transferred, or taken into custody by ICE. If ICE fails to take custody of the individual prior to the time when the individual would otherwise be released or transferred from Department custody, the individual shall be immediately released or transferred from Department custody. All such actions/inactions, and the reasons for the same shall be recorded in the appropriate daily administrative journal and/or reports.

III. Request for Voluntary Notification of Release

In certain circumstances, ICE will request, by providing *Form I-247A ("Immigration Detainer – Notice of Action")* that the Department **notify** ICE before an individual is released or transferred from Department custody. After receiving *Form I-247A* from ICE, the Troop Duty Officer shall notify ICE of the individual's impending release as early as possible and shall document the notification in the appropriate daily administrative journal and/or reports. Upon receipt of Form I-247A, the Troop Duty Officer shall also 1) relay a copy of the detainer form to any other law enforcement agency (including a jail, regional lockup, or state court) to which custody of the individual is transferred, and 2) shall notify ICE in the event of the individual's death, hospitalization, or transfer to another institution. **Under no circumstances will an individual be detained beyond the time s/he would normally be released from Department custody on the basis of the Department's receipt of *Form I-247A*.**

Continued next page.

ICE Detainers (Continued)

IV. Bail Magistrate, Court, and District Attorney Notifications

In circumstances where an individual is eligible for bail, members shall notify the Bail Magistrate that the individual is the subject of an ICE detainer.

In circumstances where an individual is transferred into the custody of the court system, the officer transporting the individual shall notify the court, district attorney's office, and other appropriate law enforcement agencies of the existence of an ICE detainer. This notification shall be documented in the appropriate daily administrative journal and/or reports.

Mandated Consular Reporting

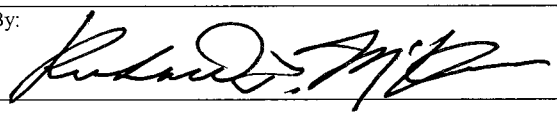
Agreements with certain countries mandate that they be notified when their nationals are confined or detained regardless of the national's request.

When foreign nationals are involved in an incident, members shall consult "Consular Notification and Access" provided by the U. S. State Department, which is available to all members via the State Department website at:
http://travel.state.gov/consularnotification

Continued next page.

Subject	Number
Travel/Immigration Status	**INV-17**

Seizure Procedures



If this occurs…	Then…
The operator is arrested for operating under the influence (OUI) of alcohol and fails a breath test, or refuses a breath test.	• Process as specified by M.G.L.; and • Seize Massachusetts licenses if appropriate. **Note**: If the operator is from out-of-state and possesses an out-of-state license, do not seize the license.
The operator has a suspended or revoked Massachusetts Driver's License.	• Seize the driver's license; • Complete a RMV Form 21188 – *Report and Affidavit of an Operating After Suspension/Revocation Incident*; • Forward both the license and Form 21188 to the RMV; and If the suspended or revoked operator is operating a vehicle registered to them, seize the registration plates and forward the plates to the RMV with Form 21188.
The operator possesses/uses a forged/altered license or any official document from the Massachusetts RMV or from another country or state's department of motor vehicles.	• Seize the forged or altered documents; • Notify the State Police Compliance Unit of this violation by utilizing RMV Form #T21193 – *Affidavit of Person Obtaining License*; and • Process seized documents in accordance with INV-10 & INV-11A. Note: The operator may be charged with G.L. c. 90, §24B, c. 90, §28, or c. 267, §1- (forgery statute).
An operator presents a license from a foreign country.	See "Foreign Licensed Operators" Section.
A passenger in a vehicle presents a suspended or revoked Massachusetts license for identification purposes only.	• If the suspension/revocation is for OUI alcohol, seize the license and forward it to the RMV or destroy it; **however**, • If used for identification purposes only, the suspended/revoked license should not be seized.
The operator presents an out-of-state license, which is suspended, revoked, or expired in the operator's home state.	• Do not seize the license; • The operator may be charged with MGL Ch. 90, §10, unlicensed operation of a motor vehicle; and Obtain the CJIS printout from the operator's home state to verify the suspension or revocation for court purposes.

Department of State Police
General Order

Effective Date	Number
April 23, 2009	**PRI-01**

Subject

Warrant Management

Policy

Department members shall utilize established warrant management systems in accordance with the guidelines established by this policy as well as state and federal laws.

Definitions

Commonwealth's Criminal History Systems Board (CHSB): The state agency responsible for maintaining law enforcement data communications network and systems.

Criminal Justice Information System (CJIS): A computerized system of criminal justice information, available twenty-four (24) hours a day and managed by the CHSB.

Interstate Identification Index (III): Triple III is an interstate exchange of criminal history record information maintained by the FBI.

National Crime Information Center (NCIC): Nationwide computerized system of criminal justice information managed by the FBI.

Warrant Management System (WMS): Centralized database operated by the Trial Court of the Commonwealth that provides CJIS users with access to court issued arrest warrants.

Locate: A computer entry that indicates that the wanted person or item has been apprehended or found.

Wanting Police Department (WPD): Primary police agency or Department Station entering a NCIC warrant.

Criminal Offender Record Information (CORI): A database of criminal record information where the release is regulated by state and federal laws.

CJIS Information

CJIS information shall only be used by law enforcement and criminal justice personnel in the performance of their duties.

Inquiries of a curiosity nature or other types of transactions performed for non-official purposes are strictly prohibited.

Continued next page.

Subject	Number
Warrant Management	**PRI-01**

CJIS Information (Continued)

Members in the lawful performance of their duties may rely in good faith upon the information received from CJIS and the WMS, and are not liable in any criminal prosecution or civil action.

Much of the information in the CJIS computer is codified as CORI, and its dissemination is strictly regulated by law. Employees shall not release information in violation of the CORI laws.

CJIS Representative

Commanding Officers of each Station/Section/Unit containing a CJIS terminal shall:

- Assign a member as the CJIS Representative; and
- Assign a member as the Backup CJIS Representative.

The CJIS Representative shall:

- Act as the liaison to CHSB regarding CJIS training, validation of warrant information, and password oversight;
- Assist other members in the use of the CJIS System;
- Direct members to the CJIS extranet for additional assistance; and
- Ensure all members are informed of updates, publications, or modifications to the CJIS network.

Warrant Databases

CJIS warrant information may be found in:

- WMS which contains most of the statewide warrants entered after 1995;
- CJIS/NCIC which contains information on federal, state, and nationwide warrants entered prior to 1995, including in-state parole warrants; and
- The Board of Probation (BOP) record query of an individual that may indicate a default from a court appearance.

A warrant on the WMS shall constitute notice and the printout of the warrant represents a true copy.

CJIS Inquiries

The Desk Officer or Dispatcher shall be aware that a WMS inquiry which yields a hit shall be considered probable cause to arrest when the warrant does not indicate recall or locate.

The Desk Officer or Dispatcher shall:

- Verify the warrant hit in CJIS/WMS; and
- Contact the court of issue if the warrant cannot be located.

Continued next page.

CJIS Inquiries (Continued)

The Desk Officer or Dispatcher when notified that a person has been arrested on a WMS warrant, shall:

- Place a locate against all CJIS wanted records to indicate that the wanted person has been apprehended; and
- Print a copy of the warrant.

The arresting member shall:

- Give a true copy of the warrant to a prisoner who requests a copy within six (6) hours.

Court Information for WMS

Members making a request for a WMS warrant shall provide a completed warrant application to the court of jurisdiction.

The clerk from the court of jurisdiction is responsible for the entering, recall, and removal of WMS warrants from the system.

NCIC Warrants

WMS warrants do not automatically enter into NCIC. The Department shall enter NCIC warrants in order to provide out of state access or rendition even when the warrant is located within WMS.

Any felony or serious misdemeanor warrant may be entered when:,

- The District Attorney has authorized rendition; or
- For officer safety, licensing, or employment, providing the opening notation in the remarks field is no extradition/rendition (NOEX).

All warrants entered into NCIC shall be in conformance with CJIS/NCIC and Department policy.

NCIC/NOEX warrants entered and maintained by Department entities shall be checked by designated personnel:

- Weekly for recall notices from the courts; and
- Quarterly during the months of January, April, July and October for accuracy and compliance.

NCIC/NOEX warrant file folders shall be kept and maintained by Troop Headquarters or the station of entry as the WPD, and shall contain:

- A copy of the WMS warrant;
- Driver’s license information, missing and wanted checks;
- A copy of BOP and Triple III records; and
- Any other pertinent information.

CJIS or NCIC Warrant Confirmation

A CJIS (non-WMS) or NCIC warrant that yields a hit shall not be probable cause to arrest. However, once the warrant is confirmed as active with the entering agency there may be probable cause to arrest.

When the Department receives a hit from CJIS and/or NCIC, an immediate confirmation with the agency that originated the record in the system shall be made before an arrest or seizure is made.

The Desk Officer/Dispatcher shall:

- Contact the agency that originated the record in the system by telephone to confirm the warrant; and
- Confirm the warrant following CJIS procedures.

When a request for confirmation is made for CJIS/NCIC warrants held by the Department, the Desk Officer/Dispatcher shall:

- Locate the original warrant and confirm the information following CJIS procedures ensuring the response back to the requesting agency is performed within:
  1. Ten (10) minutes for an urgent request; or
  2. One (1) hour for a routine request; or
- Cancel the warrant.

CJIS Responsibilities

Members who use the CJIS network are responsible for:

- Familiarizing themselves with the CJIS and NCIC operating manuals; and
- Maintaining bi-annual CJIS certification.

The name and Department identification (ID) number of the person requesting a BOP or Triple III shall be indicated in the "Requested by" or "Attention" fields.

Justification for BOP / Triple III Checks

Members shall only conduct BOP checks for:

- A history of violence and weapons charges to be disseminated immediately for officer safety;
- An investigation;
- Subjects under arrest; and/or
- Background checks for a legitimate law enforcement purpose.

Members shall only conduct Triple III checks for:

- Legitimate law enforcement purpose;
- Background check for a person applying for employment; and/or
- Background check of a person applying for a Firearms Identification card, or a License to Carry Firearms Permit.

Promulgated By:

Department of State Police
General Order

Effective Date	Number
April 23, 2009	**PRI-01A**

Subject

Warrants, Summons, or Subpoenas

Policy

In furtherance of a legitimate law enforcement purpose, members shall serve warrants, summons, or subpoenas once they become aware of their existence, or as otherwise ordered.

Default Warrants and Bail

Type of Default Warrant	Bail
Felony or misdemeanor punishable by imprisonment for more than one-hundred (100) days.	Only by a judge of the court that issued the warrant or the court of jurisdiction holding the warrant.
Misdemeanors punishable by imprisonment for one-hundred (100) days or less.	By any person authorized to admit bail.

A subject arrested on a default warrant, who is not released on bail, shall be:
- Transported to the court of jurisdiction where the arrest was made; or
- Transported to the court that issued the warrant.

Governor's Warrants

Whenever the Department receives notification that a person wanted by the Department has been arrested in another state as a fugitive from justice:

Step	Action
1.	The Desk Officer receiving such information shall contact the Troop Duty Officer who shall contact the Detective Unit of jurisdiction.
2.	If the District Attorney authorizes the rendition of the subject named in the warrant, the Commanding Officer of the Detective Unit of jurisdiction shall: • Notify the arresting out-of-state agency of the decision by telephone and teletype as soon as possible.

Continued next page.

Subject	Number
Warrants, Summons, or Subpoenas	**PRI-01A**

Governor's Warrants (Continued)

Whenever the Department receives a Governor's Warrant from another state, it shall be forwarded to the Commander of the Detective Unit of jurisdiction.

The Detective Unit Commander shall:
- Execute the warrant by proper means; and
- Ensure all legal requirements are adhered to.

Service of Summons/ Subpoena

The service of a summons or subpoena shall be logged by the Desk Officer in the Daily Administrative Journal and shall include:
- BOP check for member's safety;
- Date and time service was executed or attempted;
- Name of member executing or attempting service;
- Name and address of person on whom legal process was served or executed; and
- Method of service or reason for non-service.

Whenever possible, the summons/subpoena shall be served by giving a copy, in hand, to the party named.

If the party is not home when the service is attempted, the summons/ subpoena:
- May be left with another responsible person residing at the residence; or
- May be left at the last place of abode of the person named.

If the person lives outside the area where service can be made and there is sufficient time, the summons/subpoena may be mailed to the last known address.

If the summons/subpoena is for a juvenile, service may be made in hand to the parent or guardian of the juvenile.

If the service of the summons/subpoena is not possible, it shall be returned to the court of issuance, with a reasonable explanation for non-service.

Subject

Custodial Inventory

Policy

Any person (subject) who comes into the custody of the Department shall be searched.

Purpose

- To protect members and subjects from harmful items or substances that may have been concealed by the subject;
- To protect members from claims of lost, stolen, or damaged property; and
- To establish and define the processing of subjects who come under the care and custody of the Department.

Inventory Protocol

Members SHALL:
- NOT physically search a subject for the sole purpose of determining the subject's gender.
- Conduct searches of transgender or intersex subjects in a respectful and appropriate manner and in the least intrusive manner possible, consistent with security needs.

Members are authorized to:
- Search a subject and remove any property from their clothing or person; and
- Search the contents of any outer garments, bags or accessories.

Members searching a subject shall:
- Inventory any documents, currency, jewelry, or valuable items found, carried or concealed by the subject;
- Record inventory on the SP 2 Custodial Property Inventory;
- If possible, inventory items in the presence of the subject;
- Have the arresting member, booking member, and the subject sign the SP 2. (If the subject refuses to sign, note the refusal and the reason, if any); and
- Properly secure the subject's property.

Member conducting the booking shall:
1. Have the subject remove:
   - Shoes, belts, ties;
   - Loose or extraneous clothing;
   - Jewelry, necklaces, neck chains; and
   - Any other article that the subject may use to escape or cause harm.
2. Before placing the subject in a cell, scan the subject with a hand-held metal detector.

Subject	Number
Custodial Inventory	**PRI-02**

Inventory Protocol (Continued)

The following items may be retained by a subject in the cell, unless a member believes it would create a hazard:

- Wedding ring;
- Currency; and
- Eye glasses, hearing aids, and prosthesis.

Valuable Property, Currency and Jewelry

The member searching a subject that has valuable property, currency or jewelry shall:

- Record the items on the SP 2 Custodial Property Inventory;
- Count currency by denomination and verify amount with a witnessing member present;
- Package and seal valuable property, currency or jewelry in a Department evidence bag (evidence bags shall be labeled 1 of 1, 1 of 2, 2 of 2, accordingly), and initial the seal;
- Secure valuable property, currency or jewelry within the appropriate prisoner belongings area while the subject remains in Department custody; and
- Provide the Desk Officer that is on duty with a copy of the investigative report and complete inventory of the valuable property, currency or jewelry to be logged into the Daily Administrative Journal (DAJ).

If a subject <u>leaves</u> the Department's custody, or is transported or transferred to another facility, and the subject's valuable property, currency or jewelry is <u>not returned</u>, the Desk Officer on duty shall immediately:

- Secure the valuable property, currency or jewelry within the Temporary Contraband/Controlled Substances Locker;
- Log the valuable property, currency or jewelry within the Temporary Contraband/Controlled Substances Journal;
- Make a log note into the Daily Administrative Journal (DAJ) of the time the valuable property, currency or jewelry was placed into the Temporary Contraband/Controlled Substances Locker;
- Notify the Troop Duty Officer; and
- Provide a copy of the investigative report to the Property Custodian or Assistant Property Custodian to be placed with the valuable property, currency or jewelry until the owner returns to collect property.

The Arresting Member shall:

- Make every effort to return the valuable property, currency or jewelry to the owner, or to a designated person identified by the owner, when the owner fails or cannot return to the Department to collect such property.

Subject	Number
Custodial Inventory	**PRI-02**

Return of Property

When the subject is released from custody their property (except seized property) shall be returned to the subject and:

- The subject shall sign the SP 2 acknowledging the return; and
- If the subject refuses to sign the form, the refusal and the reason, if any, shall be noted.

If the subject is to be transported or transferred to another facility, the transporting/transferring member shall ensure that:

- A copy of the SP 2 has been provided to the facility and/or the personnel taking custody of the subject;
- The name of the person taking custody is recorded on the original SP 2;
- The person taking custody has signed the SP 2; and
- The original SP 2 is returned to the Department facility where the subject's inventory search was conducted.

Valuable property, currency or jewelry stored with the Property Custodian or Assistant Property Custodian shall:

- Be returned to the owner on a mutually agreed upon time and date.

Container Protocols

Any closed unlocked container shall be opened and each article inventoried individually.

If a container is locked and secured, or if a container cannot be opened without damaging it, the member shall ask the subject for consent to open it.

If consent is not given, the member shall not open the container unless:

- Probable cause exists to believe that the locked container shall put the member or others in immediate risk of injury or loss of life.

If the container is not opened, it shall be inventoried as a single unit.

A member shall apply for a search warrant to open a locked container if they have probable cause to believe the container has inside it:

- Fruits or instrumentalities of a crime; or
- Evidence, contraband or weapons.

Strip Search Protocols

A "strip search" entails:

- The removal of the last layer of a subject's clothing; so
- A visual inspection can be made of all areas of the subject's body where weapons, dangerous instrumentalities, evidence, or contraband may be concealed.

The need for a strip search is based upon:

- An individual basis by the particular circumstances surrounding the arrest and probable cause to believe that the subject has contraband or weapons that may jeopardize the health and safety of the subject and/or those who may come in contact with the arrested person. The reasons for the search shall be documented in the arrest report.

Strip searches shall only be conducted:

- With the approval of a supervisor (unless exigent circumstances exist);
- Whenever practicable by two (2) members of the same gender as the subject;
- In an area that affords complete privacy (strip searches shall not be conducted outside of a Department facility, unless exigent circumstances exist);
- Out of the public view (including video cameras, windows, et cetera);
- Without any touching of the subject (although the subject may be asked to bend at the waist and spread their buttocks);
- In a reasonable, non-abusive, and professional manner; and
- Only for the duration necessary to complete the search.

Body Cavity Search Protocols

Members shall not perform physical intrusions into body cavities.

A body cavity search is:

- A search conducted pursuant to a warrant, issued by a judge, that is based on a high degree of probable cause; that
- Authorizes a medical professional to conduct an internal manual inspection of any human body cavity.

A member or supervisor seeking such a warrant must:

- Show a **high degree of probable cause** that the subject has contraband or weapons hidden in a body cavity that may jeopardize the health and safety of the subject and/or anyone that s/he may come in contact with.

Body cavity searches shall only be performed:

- By a medical practitioner in appropriate medical surroundings; and
- Pursuant to a search warrant issued by a judge that authorizes a body cavity search.

Continued next page.

Subject	Number
Custodial Inventory	**PRI-02**

Body Cavity Search Protocols (Continued)

The warrant requirement shall apply:

- Where an item may be viewed partially protruding from a body cavity.

No warrant is required when:

- A subject voluntarily and personally extracts any item from their own body cavity; and
- Cases involving exigent circumstances where medical personnel perform an operation, necessitated solely by good medical practice for medical reasons, which incidentally results in the recovery of evidence for police use.

Subject

Prisoner Transportation

Policy

Safety is the paramount concern when transporting prisoners. Members shall always keep in mind:

- The safety and well-being of themselves and others;
- The proper restraint of the prisoner to prevent escape or injuries; and
- The prisoner's safety and rights.

Prisoner Search Protocols

Cruisers shall be searched before and after transporting prisoners for contraband, weapons, fruits or instrumentalities of a crime, and/or evidence. A search is also part of the routine cruiser inspection at the beginning of the shift.

All individuals in custody shall be searched for weapons and contraband prior to being placed in a cruiser or otherwise transported. Never assume that someone else has searched a prisoner.

Under exigent circumstances, it may be necessary for a member to search a member of the opposite gender. Such a search shall be conducted professionally and be limited to the minimal invasion of privacy necessary. In other situations it may be more prudent to request assistance by an officer of the same gender as the prisoner, or conduct the search in the presence of others.

Cruisers

Cruisers which are routinely used to transport prisoners shall have:

- Safety barriers (prisoner cages);
- The rear passenger compartment window and locks disabled;
- Rear passenger seat belts; and
- Rear passenger door locks that cannot be unlocked from the rear passenger compartment.

When transporting a prisoner, members should not respond to calls for service unless:

- The situation clearly poses a serious risk to others; and
- The risk to prisoner is minimal.

Subject	Number
Prisoner Transportation	**PRI-03**

Prisoner Restraint Protocols

Unless extenuating circumstances dictate otherwise, members transporting prisoners shall ensure:

- Prisoners are handcuffed with their hands behind their back;
- Use alternate devices or methods when it is physically unable to handcuff someone behind their back;
- Double locked handcuffs to prevent inadvertent tightening or to avoid causing or aggravating any injuries.

If prisoners are to be transported for an extended period, members may handcuff them in front, and use a waist chain or other device to secure the hands to the waist.

Prisoner's legs may be restrained if their actions indicate that they may be a threat.

Prisoners shall not have their legs bound to their hands, except for extreme circumstances.

Prisoners should not be handcuffed or restrained to any part of the vehicle (except for use of the seat belt).

Seating Positions

Members shall:

- Ensure that prisoners being transported are visually observable at all times;
- Secure prisoners with a seat belt;
- Not transport more than two (2) prisoners at a time, unless authorized by a supervisor;
- Not transport two (2) prisoners in a cruiser without a safety barrier, unless another member is present;
- Whenever practical, transport prisoners of the opposite gender in separate vehicles; and
- Ensure prisoners of opposite gender are not transported to court in the same vehicle Massachusetts General Laws (MGL) c.276, s.53.

IF the cruiser has...	**Then, unless circumstances dictate otherwise, prisoner(s) should be placed...**
A safety barrier.	In the rear compartment, using the right seat first.
One (1) officer, one (1) prisoner, no safety barrier.	In the right front seat.
Two (2) members, one (1) prisoner, no safety barrier.	In the right front seat with the other member behind them.
Two (2) members, two (2) prisoners, no safety barrier.	One in the right front, one in the right rear seats, with the other member seated behind the driver.

Subject	Number
Prisoner Transportation	**PRI-03**

Transportation of Juveniles

Juveniles shall not be transported:

- With adult prisoners; or
- To court or other institutions in a "patrol wagon" as stipulated in MGL c.119, s.34.

Transporting Opposite Gender Prisoners

Members transporting prisoners of the opposite gender shall radio their Station/Unit Desk Officer, and have a Daily Administrative Journal (DAJ) entry made of the:

- Location;
- The number and gender of their prisoner(s);
- Preliminary charges against the prisoner(s);
- Intended destination;
- Beginning odometer mileage, and upon arrival, the ending mileage; and
- Request for back-up, if necessary.

Communication

Conversations with prisoners shall be professional and kept to a minimum.

- Conversations between prisoners shall be limited by the transporting officer for safety reasons.

Members shall not allow prisoners to use communications equipment while in transport, nor stop to allow a prisoner access to communication equipment.

Protocols for Transferring Prisoners

When transporting a prisoner to or from another agency or a court detention facility, members shall:

- Secure firearms if required by that facility's protocol;
- Remove restraining devices in the designated area;
- Positively identify the prisoner by ID, photographs or fingerprints;
- Deliver or receive the necessary documentation, paperwork, and/or information; and
- Adhere to procedures within PRI-02 Custodial Inventory regarding subject's property.

If the prisoner is a security hazard, suicide risk, or has a condition that the receiving agency or court should be aware of, the receiving agency shall be advised in writing of that condition.

Medical Considerations

If, while in transit a prisoner notifies the transporting member of an illness or injury, and if in the member's opinion an illness or injury exists and requires immediate attention, the member shall transport the prisoner to the nearest medical facility for an examination.

- The transporting member shall notify the Desk Officer; and
- Desk Officer shall notify the medical facility of the particulars prior to the prisoner's arrival.

If a prisoner is admitted to a medical facility, the Department shall provide or ensure proper security arrangements, if necessary, or arrange for the prisoner to be bailed.

If released by the medical facility, the prisoner shall be transported to the nearest station or facility, as appropriate.

When transporting a physically or mentally challenged prisoner, special care and attention may be required. The transporting member shall use discretion as to the type of restraints to be used and the Troop Duty Officer shall be notified.

Prisoner Escape Protocols

Position	Duties
Transporting Member	1. Immediately notify the appropriate Desk Officer of: • Cruiser number, member's name, rank; • Exact location; • Prisoner method of escape, escape route, and means of transportation; • Name and aliases of escapee, and a physical description including clothing; and • Criminal history and safety risk of the escapee, and the pending charges. 2. Immediately make every attempt to recapture the escapee, and if unable to do so, preserve the scene for tracking dogs and investigators.
Desk Officer	1. Immediately notify the Troop Duty Officer of jurisdiction; 2. Notify all patrols and local departments of the escape; and 3. Make the appropriate DAJ entries.

Continued next page.

Prisoner Escape Protocols (Continued)

Position	Duties
Troop Duty Officer	1. Dispatch a supervisor to the scene to: • Assume control of the recapture operation; • Investigate the circumstances of the escape; and • Prepare a report with findings and recommendations. 2. Notify: • Department Detectives Unit of jurisdiction: and • The Troop Commander.
Troop Commander	1. Notify Division Commander; 2. Administratively review report(s) for further action; and 3. Take actions to prevent reoccurrences.

Special Situations

No prisoner or individual in custody shall be allowed to participate in any operation and/or function without the specific written approval of the Division Commander.

Section/Units that conduct such operations or functions on a regular basis may request blanket authorization from their Division Commander. If such authorization is granted:

- Sufficient security shall be deployed to maintain control of the prisoner or individual;
- The intended destination shall be checked out in advance by an member;
- Control of the perimeter shall be maintained;
- There shall be minimal contact between the prisoner and others; and
- Any other measures deemed necessary by the officer-in-charge (OIC) shall be taken.

Commercial Air Transportation and Armed Members

Members shall be certified and follow the federal Transportation Security Administration (TSA) guidelines and Code of Federal Regulations (CFR) Title 49 Carriage of Weapons by Law Enforcement Officers.

Troop/Section Commanders shall ensure the following protocols are followed when members, under their command, fly on commercial airlines while armed.

1. An administrative message shall be sent to the Transportation Security Administration (TSA) by the GHQ Communications Section via the National Law Enforcement Telecommunications System (NLETS), requesting a unique alphanumeric identifier receipt for the member who will be flying armed.

Continued next page.

Commercial Air Transportation and Armed Members (Continued)

2. The member shall carry the receipt containing all the pertinent information required by TSA to be verified at the airport on the day(s) of travel.
3. The member shall also carry the appropriate number of signed original Letters of Authority from their Troop/Section Commander and surrender a letter to the airline carrier(s) when requested.
4. The Letters of Authority shall be on Department letterhead and shall include:
   - The name(s) of the member(s);
   - The dates and itinerary for fights;
   - Certification that the member(s) have completed the TSA's Law Enforcement Officers Flying Armed Program;
   - The circumstances for the need to carry a firearm; and
   - The original signature of their Troop/Section Commander and a contact number for verification.

Note: Failure to provide the unique alphanumeric identifier may result in delays due to the additional verification requirements. The airline and the pilot have the discretion to refuse armed members on any fight.

Procedure Transporting Prisoners by Commercial Airlines

When transporting a prisoner on an commercial airline flight, members shall:

- Notify TSA and the airline of the name(s) of the prisoner(s) and the accompanying member(s) at least one (1) hour before the flight;
- Notify TSA and the airline if the prisoner is considered a "high risk" at least twenty-four (24) hours, or as soon as possible, before the scheduled departure. If so, at least two (2) members shall escort the prisoner and arrive at the check-in counter at least one (1) hour before the flight. Only one dangerous prisoner is allowed on the same flight;
- Ask to board the plane first, and deplane last;
- Sit in the rear of the plane, maintaining one (1) member between the prisoner and the aisle;
- Ensure that no food, utensils, or items be given directly to the prisoner without checking the items first; and
- Not consume, nor allow the prisoner to consume, alcoholic beverages.

Note: There shall always be at least one (1) member per prisoner. At least one (1) member shall be the same gender as the prisoner.

Members shall carry:

- Department issued badge and identification card;
- A secondary valid government issued ID;
- Necessary boarding paperwork;
- Letters of Authority to travel while armed on commercial flight; and
- Adequate restraining devices.

Department of State Police
General Order

Effective Date	Number
May 20, 2016	**PRI-04**

Subject

Holding Facility Design and Inspection

Policy

The Department shall maintain holding facilities that comply with applicable laws and regulations, in order to provide a safe environment for members and prisoners.

Definitions

Holding Facility: A temporary confinement cell or lockup where prisoners are generally held for less than seventy-two (72) hours.

Prisoner: A person who has been arrested or is in the custody of the Department.

Design of Holding Facilities

Department holding facilities shall comply with Department of Public Health regulations and shall, at a minimum, be equipped with:

- Adequate lighting and air circulation;
- Access to a toilet and drinking water;
- Access to a wash basin and a bed with sanitary/fire-retardant bedding for each prisoner held in excess of eight (8) hours;
- A first-aid kit, automatic fire alarms, smoke detectors, and adequate fire suppression systems;
- Audio and electronic (Watchman) monitoring system; and
- Posted signage regarding prisoners' rights, obtaining medical services, and emergency evacuation.

Department holding facilities shall comply with the *Prison Rape Elimination Act (PREA) of 2003* and shall have signage posted advising prisoners how to report incidents of sexual abuse and/or harassment.

Sanitation

Holding facilities shall be kept clean and sanitary, and shall be inspected:

- Before use by a prisoner;
- Upon release of a prisoner, and
- As necessary to prevent the spread of communicable diseases, as outlined in GEN-05 *Communicable Diseases*.

Cells and Keys

Cells that are:

- Ready for use shall be kept open and unlocked; or
- Not usable shall be kept closed, locked, and posted.

Keys for the cells, and duplicates, shall be kept readily available at the station desk area.

Fire Prevention

- No matches, lighters, or smoking materials are allowed in any Department holding facility;
- Fire/smoke detection and suppression systems shall have written approval of fire officials;
- An emergency evacuation plan shall be written and posted; and
- At least one (1), preferably two (2), emergency exits shall be marked with a sign.

Electronic Monitoring

In addition to audio monitoring devices required by law, each holding facility shall have:

- A means of communication with the Station Desk Officer, or a panic alarm; and
- A video monitoring system so that each cell can be observed from the desk.

Guidebook

Troop Commanders shall ensure that a guidebook is kept at the desk or in the holding area of each facility, to assist the Station Desk Officer.

The guidebook shall contain information on:

- Holding facility operations;
- Procedures for escapes, fires, or suicide attempts;
- Available alternative lock-up facilities for juvenile offenders;
- The names and contact information for persons or organizations who will respond in the event of an attempted or threatened suicide; and
- The names and contact information for persons or organizations who will respond in the event of an incident of sexual assault and/or sexual harassment.

Training

Members at a location where there are holding facilities shall receive training in:

- Suicide detection, intervention, and prevention;
- PREA Standards
- Department policies regarding holding facilities, equipment and operations;
- Use of physical restraints; and
- Operation of fire suppression equipment.

Access

Non-essential persons shall not have access to the cell area, unless:

- Visiting a prisoner, as outlined in PRI-06 *Prisoner Monitoring***;** or
- No prisoners are present, and the person(s) is accompanied at all times by a member.

Maintenance, sanitation, repair, or other outside personnel may have access to cells as necessary. Afterwards, the cell area shall be inspected for tools or other items that may have been left behind.

Subject	Number
Holding Facility Design and Inspection	**PRI-04**

Inspections

An inspection of each cell for weapons or contraband shall be made immediately prior to use.

Station Commanders are responsible for ensuring:

Frequency	Item of Inspection
Daily	• Fire detection and suppression equipment (visual inspection); • Cell bars, doors, locks, windows, ventilation, lights, monitors, security devices, and first-aid kits; • Tampering or damage to facilities; • Search for weapons or contraband, and • Sanitation, including vermin and pest inspection.
Weekly	• Inspect the cell electronic monitoring device (Watchman) to ensure it is properly functioning; • Run a printout of the previous week's cell checks; • Examine the printout for compliance and discrepancies; and • Retain the weekly printouts for one (1) year.
Monthly	• Automatic Fire Alarm system test.
Semi-Annually	• Fire suppression equipment test; and • The review of the guidebook for accuracy.

Inspection records shall be maintained at the sub-station for line and staff inspections.

Station Commanders shall ensure cooperation with state and local health and fire inspectors.

To prevent inadvertent use, individual cells that do not pass inspection shall be kept closed, locked, and posted with an explanation of the problem.

Incidents

Prisoners who cause damage to the cells may be subject to prosecution under MGL c.266, s.96, Defacement or Injury to a State Building.

Station Commanders shall make written reports to their Troop Commander, of all incidents or conditions that threaten the holding facility or prisoners, or the ability of the sub-station to safely hold prisoners.

Troop Commanders shall immediately notify through channels, the Division Commander of Administrative Services, of all such incidents or conditions. The Division Commander of Administrative Services shall notify the Department of Public Health as required.

Subject	Number
Holding Facility Design and Inspection	**PRI-04**

Temporary Holding Areas

Troop Commanders may authorize such temporary holding areas for the purpose of booking and bailing prisoners, which shall provide for:

- Constant supervision of all prisoners held in temporary holding areas;
- Immovable objects that are intended for use as a restraining device;
- Access to water and restrooms;
- Separation of male, female and juvenile prisoners who are at high risk of being sexually assaulted;
- Fire prevention, evacuation, and suppression procedures; and
- Adherence to any applicable security procedures as outlined in Policy and Procedure.

June 14, 2018	**PRI-05**

Subject

Identification of Persons in Department Custody

Policy

All persons in department custody must be properly identified prior to release. Fingerprints offer the most reliable means of individual identification. The submission and retention of fingerprint records and other biometrics create a reliable criminal history record. **Therefore, all persons arrested shall be fingerprinted and photographed**. In addition, all persons charged with a felony shall have their palmprints recorded if recording equipment is available. Persons taken into department custody for non-criminal reasons may be fingerprinted and photographed or may be identified through other means.

Definitions

AFIS (Automated Fingeprint Identification System): The computerized biometric matching system that stores identifying biometric templates and related demographics. The State AFIS maintains the following biometric information: known fingerprints and palmprints, latent fingerprints and palmprints, booking and tattoo photos, and iris images. AFIS is operated by the State Identification Section.

AFISR: An application available from the Department of Criminal Justice Information Services via single sign-on (DCJIS SSO). This application allows the review of Massachusetts fingerprint supported arrest records and the search of recent arrest submissions. This system can be searched by OBTN, Name, SID, and FBI number.

Biometrics: Distinctive, measurable physiological characteristics used to identify individuals. Commonly collected biometrics include fingerprints, palmprints, photographs (mug shots), and iris images.

Live Scan: Electronic fingerprint capturing devices that submit fingerprints, palmprints, and associated demographics and photographs to the State AFIS and NGI.

OBTN/ SBTN (Occasion/Offense Based Tracking Number): a unique number assigned by the records management system associated with a specific event. This number allows the tracking of the individual event from arrest or summons through the state criminal history systems including AFIS and the courts.

NGI (Next Generation Identification): a biometric matching system operated by the FBI that replaces the IAFIS system creating a national electronic repository of biometric and criminal history information. www.fbi.gov/services/cjis/fingerprints-and-other-biometrics/ngi.

Continued next page.

Definitions (Continued)

SID (State Identification Number): A unique personal identifier based on a fingerprint ID and assigned by AFIS and the Identification Section.

UCN (Universal Control Number, formerly FBI number): Unique personal identifier based on a fingerprint ID and assigned by the FBI. This number is assigned to both criminal AND civil identities on file with the FBI.

Procedure for Properly Identifying Subjects

All persons arrested shall be fingerprinted and photographed. All persons charged with a felony shall have their palmprints recorded if recording equipment is available. Persons taken into department custody for non-criminal reasons may be fingerprinted and photographed or may be identified through other means.

Fingerprints and palmprints shall be captured and submitted to AFIS using the Live Scan device according to the *SIS-DOC 12-LIVESCAN Operational Guide*, which is located on Docushare.

The subject's booking photo/mugshot shall be captured in RAMS.

Fingerprinting shall include the recording or annotation of all fingers and may include the recording of palmprints.

The following demographic information shall be included with all fingerprint submissions:

- OBTN/SBTN
- Name,
- Date of birth,
- Sex,
- Race,
- Place of birth,
- Height,
- Weight,
- Eye color,
- Hair Color,
- Literal description of charges (not the chapter/section only),
- Date printed,
- Fingerprint official, and
- Date of arrest.

All Live Scan operators must properly log on and log off the system to prevent unauthorized access to the system. The operator logged on to the system will be documented as the fingerprint official on the official record.

Arrested persons shall not be considered eligible for bail until their fingerprints have been accepted and verified by AFIS. Fingerprint submission search results may be reviewed from the Live Scan or by viewing results in the DCJIS AFISR application. The *SIS-ADM-10 AFISR Procedural Guide* is available on Docushare.

Subject	Number
Identification of Persons in Department Custody	**PRI-05**

Special Circumstances

In instances where Live Scan is not operational or available, the subject may be:

- Transported for processing to a sub-station where Live Scan equipment is available.

When the Live Scan and/or AFIS is not available and it is impractical to transport to another location, the subject shall be:

- Processed using the traditional fingerprint card and inkpad method. The fingerprint card shall be sent immediately to the Identification Section via troop mail for manual entry into AFIS.

- In circumstances where inked fingerprints are taken, an arrested person may be considered eligible for bail consideration.

In instances when a subject's identity cannot be documented or when mutilated fingerprints are observed, the booking officer or desk officer may contact the Identification Section for review of the fingerprint record. The booking officer shall provide the SBTN/ OBTN.

Additionally, in situations when mutilated prints are observed, the Troop Duty Officer may contact the Crime Scene Services Section (CSSS) to assist in capturing full major case prints and/or tenprints to assist in offender identification.

Supervisors at the sub-station level and Cases and Reports Officer at the Troop level shall ensure:

- All officers are properly trained on the use of electronic fingerprinting/biometric capture equipment;
- All biometric processing equipment is operational;
- Proper supplies are available; and
- Biometrics are properly captured and submitted to the Identification Section.

Identification Section
59 Horse Pond Road
Sudbury, MA 01776
24 hour contact 508-358-3170

Troop Commanders shall ensure overall compliance with this General Order.

Subject

Prisoner Monitoring

Policy

Continuous supervision is essential for maintaining and assuring the safety and welfare of prisoners while in custody. Whenever a prisoner is placed in a Department cell, the Desk Officer shall activate the cell audio and video monitoring system.

Monitoring

- The Desk Officer shall physically check all prisoners every hour, and shall use the electronic monitoring (Watchman) device during the check;
- The audio and video systems shall also be used to continuously monitor the prisoner's condition, and as a means of two-way communication with prisoners and other members in the cell area.
  Note: The system shall not be used to unnecessarily violate the personal privacy of the prisoner(s).
- Prisoners held over four (4) hours shall have meals provided at regular meal times, three (3) meals a day;
- Meals may be provided from a correctional facility, prisoner meal fund, from the prisoner's funds with their consent, or other appropriate source;
- The Desk Officer shall document within the Daily Administrative Journal (DAJ) the number, cost (if applicable), and type of meals served;
- Dishes, cups, and all utensils shall be used only once and then disposed of;
- Common cups and towels are not allowed;
- Prisoners held for over eight (8) hours shall be given access to a wash basin; and
- The Desk Officer shall provide heightened protection to vulnerable detainees to include direct sight and sound supervision. The Desk Officer shall monitor the conduct and treatment of detainees or employees who reported sexual abuse and of detainees who were reported to have suffered sexual abuse pursuant to PRI-07 *Detainee Sexual Abuse and Sexual Harassment* and PRI-07A *Detainee Sexual Abuse and Sexual Harassment Investigations, Review and Data Collection.*

Booking Process

- Firearms and Electronic Control Weapons (ECWs) **shall not** be carried on a member's person during the booking process, including (but not limited to) booking, fingerprinting, and the administration of the breath test.

Entering a Cell Area

Firearms and ECWs shall be secured before entering an occupied cell area, except when all prisoners are secured in the cells and the hourly check is being made.

Members entering the cell area alone should maintain a means of communication by:

- Verbal communication with another member;
- Portable radio; or
- Alarm or other means.

Department members shall announce themselves prior to entering the cell area containing a member(s) of the opposite sex. Staff shall not place themselves in a position where they can view the breasts, buttocks, or genitalia of a detainee of the opposite gender.

Detainees will be allowed to perform bodily functions without members or employees of the opposite gender viewing their breasts, buttocks or genitalia, except in exigent circumstances or when such viewing is incidental to routine cell checks.

Entering an Individual Cell

Members shall only open or enter an occupied cell when:

- At least one (1) other member is present;
- When releasing a prisoner from custody; or
- In the event of an emergency.

Conduct

Members should not engage in speech or behavior that could be construed as inappropriate.

Visitors

Requests for visits that do not interfere with station operations may be allowed by the station OIC. A member shall remain physically present during the visit and all visitors shall:

- Show positive identification;
- Be checked for outstanding warrants;
- Submit to a search for weapons or contraband, which shall include an inspection of their belongings before and after the visit;
- Have their name, address, and relationship documented in the DAJ;
- Only be allowed to visit the prisoner one at a time;
- Not have any physical contact with prisoners; and
- Not violate the privacy of other prisoners.

Visitation with counsel may be permitted at the discretion of the station OIC and reasonable efforts should be made to ensure privacy during these visits.

Mail/Packages

Prisoners may only receive funds, food, prescription medications, or clean clothing. All items shall be:

- Inspected for contraband and placed with the prisoner's property, or given to the prisoner as appropriate;
- Documented on a SP 2 Prisoner Inventory Form; and
- Noted in the DAJ.

Shift Change

The on-duty desk officer shall inform the incoming desk officer about the count and condition of the prisoners. Incoming desk officers shall physically verify the count and condition of prisoners prior to assuming desk duty.

Suicide Threats or Attempts

Information received from any source pertaining to a prisoner's risk of harming themselves shall be considered valid.

If the prisoner…	Then…
• Makes a suicide threat or attempt; • Has an entry in the Q5 Query; • Indicates current suicidal tendencies on the Suicide Prevention Checklist; or • Clearly exhibits signs or symptoms of suicidal behavior.	• A member shall be assigned to **physically watch** the prisoner at all times; or • The prisoner shall be transported to a medical facility for evaluation.

If a person in custody attempts or threatens suicide at a lockup facility, as outlined in Massachusetts General Laws (MGL) c.40, s.36A, the following additional responsibilities apply:

Position	Duties
Desk Officer	• Provide medical attention as necessary; • Notify the Troop Duty Officer and Station Commander; • Consult the guidebook; • Document the incident in the DAJ; and • Enter the incident into the Q5 suicide menu of the CJIS computer prior to the end of the shift.
Station OIC	• Notify, in writing, any lockup facility that the prisoner is transferred to.
Troop Duty Officer	• If needed, send a supervisor to the station to assist; • If appropriate, assign a member to guard the prisoner at the facility; • Make the appropriate DAJ entries; and • Ensure that proper procedures and MGL c.40, s.36A are followed.

Escape or Wrongful Release

If a prisoner escapes or is inadvertently released, the following actions shall be taken:

Position	Duties
Desk Officer	• Immediately notify the Troop Duty Office and Station Commander; • Notify area patrols and local departments of the escape; and • Make the appropriate DAJ entries.
Troop Duty Officer	• Dispatch a supervisor to the scene; • Notify the Troop Commander; • Notify GHQ Communications; • Notify the appropriate State Police Detective Unit (SPDU) of jurisdiction; and • Make the appropriate DAJ entries.
GHQ Communications	• Notify the Division Commander.
Troop Commander	• Ensure the Division Commander was notified; and • Review reports and take actions to prevent reoccurrences.
Division Commander	• Review reports and take actions to prevent reoccurrences.

Medical Care

Sick or injured prisoners should not be transported by the Department, unless two (2) or more members are available for the transport. It may be more prudent to await the arrival of an ambulance.

- Upon arrival of an ambulance, members shall defer medical care to the EMTs but shall retain custody and security; and
- The Troop Duty Officer shall be informed of any such incidents.

When a member observes or is informed by a prisoner that they have a medical problem that requires immediate medical treatment, the station OIC or supervisor should request an ambulance. If unsure as to whether or not a prisoner requires immediate medical treatment, members shall request assistance from trained medical personnel.

If it is an emergency or appears serious, members shall provide basic First Aid.

In the event of a sexual assault upon a detainee while in State Police custody by another detainee, staff member, employee or contractor, the responding member shall adhere to the requirements of PRI-07 *Detainee Sexual Abuse and Sexual Harassment.*

The procedures for requesting emergency health care shall be posted in a conspicuous place in English and any other language(s) prevalent within the station area.

Prisoner Death Protocols

If a prisoner dies while in a Department facility, the following actions shall be taken:

Position	Duties
Desk Officer	• Immediately notify the Troop Duty Officer and the Station Commander.
Troop Duty Officer	• Immediately notify the Troop Commander; • Immediately notify the SPDU of jurisdiction; • Notify the Medical Examiner's Office, as requested by SPDU; • Ensure that the appropriate DAJ entries are made; and • Ensure that proper procedures and MGL c.40, s.36A are followed.
State Police Detective Unit	• Respond to the scene and take command of the investigation.
Station Commander	• Submit, within four (4) days, a report of the incident to the Troop Commander, along with all other related reports.
Troop Commander	• Immediately notify the Division Commander; • Assign a Commissioned Officer to immediately assist the SPDU investigation and to conduct an Administrative Review of the incident; • Forward copies of the reports to the Medical Examiner within seven (7) days; and • Review and submit reports and recommendations to the Division Commander.
Reviewing Commissioned Officer	• Assist the SPDU; • Conduct an Administrative Review of the incident; and • Prepare a report for the Troop Commander within four (4) days. Note: The Administrative Review is to ensure that members followed Department procedures during the incident.
Field Services Division Commander	• Review reports and take actions to prevent reoccurrences; • Submit reports to the Deputy Superintendent for review and action; and • Maintain a file on prisoner deaths.

Department of State Police
General Order

Effective Date	Number
May 21, 2018	**PRI-07**

Subject

Detainee Sexual Abuse and Sexual Harassment

Policy

In accordance with the *Prison Rape Elimination Act (PREA) of 2003,* the Department shall:

- Establish a zero tolerance policy toward all forms of sexual abuse and sexual harassment towards any detainee;
- Ensure that all detainees have the right to be free from sexual abuse and sexual harassment; and
- Establish a zero tolerance policy toward all forms of retaliation against anyone who reports sexual abuse and sexual harassment or who cooperates in a sexual abuse investigation.

This policy shall be made available through the Department's website and upon request.

Definitions

Prison Rape Elimination Act (PREA): Signed into law on September 4, 2003. The Prison Rape Elimination Act establishes a standard of zero tolerance for rape and sexual assault or sexual harassment in any prison, jail, police lockup, or juvenile facility.

Lockup: A facility that contains holding cells, cell blocks, or other secure enclosures that are:
(1) Under the control of a law enforcement, court, or custodial officer; and
(2) Primarily used for the temporary confinement of individuals who have recently been arrested, detained, or are being transferred to or from a court, jail, prison, or other agency.

Detainee: Any person detained in a lockup, regardless of adjudication status.

Employee: A sworn member or civilian who works directly for the Department.

Holding Cell: Any secure enclosure that is under the control of law enforcement and is primarily used for the temporary confinement of suspects who have recently been arrested.

Intersex Individual: A person whose sexual or reproductive anatomy or chromosomal pattern does not seem to fit typical definitions of male or female.

Continued next page.

Definitions (Continued)

PREA Coordinator: A management level employee who oversees, develops, and implements Department efforts to comply with the PREA standards.

Sexual Abuse: Any sexual contact or the intentional touching of the victim's or suspect's genital, anal or other intimate area for sexual arousal or gratification, or for the abuse of either party; in this directive, includes in-custody sex offenses, voyeurism, or rape or attempts; harassment, sexual harassment, neglect, discrimination and similar terms. This policy applies to sexual abuse and/or harassment of a detainee by another detainee and/or sexual abuse of a detainee by a staff member, contractor, or volunteer.

Sexual harassment includes—
(1) Repeated and unwelcome sexual advances, requests for sexual favors, or verbal comments, gestures, or actions of a derogatory or offensive sexual nature by one inmate, detainee, or resident directed toward another; and
(2) Repeated verbal comments or gestures of a sexual nature to an inmate, detainee, or resident by a staff member, contractor, or volunteer, including demeaning references to gender, sexually suggestive or derogatory comments about body or clothing, or obscene language or gestures

Transgender Individual: A person whose gender identity (i.e., internal sense of feeling male or female) is different from the person's assigned sex at birth.

Voyeurism: When a staff member, contractor, or volunteer invades a detainee's privacy for reasons unrelated to official duties, such as peering at an inmate who is using a toilet in his or her cell to perform bodily functions; requiring the detainee to expose his or her buttocks, genitals, or breasts; or taking images of all or part of a detainee's naked body or of a detainee performing bodily functions.

Department Responsibilities

The Department shall ensure that:

- An administrative or criminal investigation is completed for all allegations of detainee sexual abuse and/or sexual harassment pursuant to PRI-07A *Detainee Sexual Abuse and Sexual Harassment Investigations, Review and Data Collection*;
- Alleged detainee sexual abuse and/or sexual harassment incidents, including third-party and anonymous reports, are reported to designated investigators;
- Detainees are informed of at least one way to report sexual abuse and/or sexual harassment to a public or private entity or office that is not part of the Department, allowing the detainee to remain anonymous if so requested;
- Investigators have received special training in sexual abuse investigations pursuant to Code of Federal Regulations (CFR) 28 § 115.34.
- Develop an internal protocol appropriate for juvenile detainees where applicable; and
- Take appropriate measures to prevent retaliation against individuals who report and/or cooperate with an investigation.

Screening for Risk of Victimization and Abusiveness

In accordance with training, when booking detainees, members shall screen all detainees to assess their risk of being sexually abused by other detainees or sexually abusive toward other detainees. The screening shall be documented in RAMS/Department Records Management System.

If after screening, the member determines that the detainee may be at risk, the detainee shall be housed alone in a holding cell for the duration of his/her detainment at a State Police facility. This includes post-screening transportation in a Department vehicle to/from court, jail, prison, or other agency.

Disabled Detainees

Detainees with disabilities include detainees who are deaf, hard of hearing, blind or have low vision, and those who have intellectual, psychiatric, or speech disabilities.

Members shall take appropriate steps to ensure that detainees with disabilities have an equal opportunity to benefit from all aspects of the Department's efforts to prevent, detect, and respond to sexual abuse and sexual harassment. Such steps shall include providing access to interpreters who can interpret effectively, accurately, and impartially when necessary to ensure effective communication with detainees who are deaf or hard of hearing. In addition, members shall ensure that written materials are provided in formats and through methods that ensure effective communication with detainees with disabilities.

Detainees with Limited English Proficiency

Members shall take reasonable steps to ensure that detainees with limited English proficiency have meaningful access to information regarding the Department's policies and efforts to prevent, detect, and respond to sexual abuse and sexual harassment including by providing interpreters who can interpret effectively, accurately, and impartially.

Detainee Interpreters

No member shall use detainees as interpreters or readers or otherwise request assistance from another detainee except in limited circumstances where an extended delay in obtaining an effective interpreter could compromise the detainee's safety, the performance of first-responder duties, or the investigation of the detainee's sexual abuse/harassment allegations.

Staffing Plans

Station commanders for each barracks containing cells shall develop and document a staffing plan that provides for adequate levels of staffing, and, where applicable, video monitoring to protect detainees against abuse.
Station commanders shall consider the following factors when determining adequate staffing plans:

- The physical layout of the lock-up;
- The composition of the detainee population;
- The prevalence of sexual abuse incidents; and
- Any other relevant factor(s).

Each time the staffing plan is not complied with, the station commander shall document and justify all deviations from the staffing plan and shall forward the document with justifications to the PREA Coordinator.

First Responder Responsibilities

The first law enforcement member to respond to a report of a sexual assault or sexual harassment shall:

- Immediately separate the alleged victim and abuser;
- Take immediate action to protect the detainee from substantial risk of imminent sexual abuse;
- Keep the detainee either with the officer or in the cell and under surveillance until a supervisor can investigate and determine any further actions to take to protect the detainee;
- Follow uniform evidence protocol that maximizes the potential for obtaining usable physical evidence including preserving and protecting any crime scene until appropriate steps can be taken to collect any evidence;
- If the abuse occurred within a time period that still allows for the collection of physical evidence, request that the alleged victim not take any action(s) that could destroy physical evidence, including, as appropriate, washing, brushing teeth, changing clothes, urinating, defecating, smoking, drinking, or eating;
- Offer all victims access to forensic medical examinations performed by a Sexual Assault Forensic Examiner (SAFE), Sexual Assault Nurse Examiners (SANEs) or qualified medical practitioner without financial cost to the victim, if evidentiarily or medically appropriate;
- If the detainee is transported for a forensic examination to an outside hospital that offers victim advocacy services, ensure that the detainee be permitted to use such services to the extent available, consistent with security needs;
- Document all efforts to provide a SAFE or medical practitioner;
- Attempt to make a victim advocate from a rape crisis center or other facility available to the detainee if transported to a hospital or other medical facility consistent with security needs; and
- Accompany the victim through the forensic medical examination process and interviews.

If the first staff responder is not a law enforcement staff member, that responder shall:

- Request that the alleged victim not take any actions that could destroy physical evidence; and
- Immediately notify law enforcement staff.

Note: See also Policy and Procedure PRI-07A *Detainee Sexual Abuse and Sexual Harassment Investigations, Review and Data Collection*.

PREA Coordinated Response Plan

If a prisoner reports that he or she was sexually harassed while in a Department facility, the following actions shall be taken:

Position	Duties
First Responder	• Immediately separate the alleged victim and abuser; • Preserve and protect any crime scene until appropriate steps can be taken to collect any evidence; • Request that the alleged victim not take any actions that could destroy physical evidence, including washing, brushing teeth, changing clothes, urinating, defecating, drinking, or eating; • Take immediate action pursuant to this General Order; and • Immediately contact the desk officer.
Desk Officer	• Take immediate actions as a first responder pursuant to this General Order; • Notify, if necessary, local EMS and a local medical facility for an assessment of alleged victim's acute medical needs and to make an assessment of necessary treatment; • Immediately notify the State Police Detective Unit (SPDU)/Specialized PREA investigator(s) of jurisdiction; • Explain to the alleged victim the need for a forensic medical exam and offer the victim the option of undergoing one without any financial costs; • Make best efforts to ensure that examinations are conducted by Sexual Assault Forensic Examiners (SAFEs) or Sexual Assault Nurse Examiners (SANEs), or ensure that a qualified medical practitioner performs forensic medical examinations; • Offer alleged victim services by providing the victim with list of local sexual abuse advocates and/or crisis centers found in the Department's PREA brochure in DocuShare/PREA; • Ensure that the appropriate Daily Administrative Journal (DAJ) entries are made; • Immediately notify the Troop Duty Officer and the Station Commander; and • If the victim is transferred from the lockup to a jail, prison, or medical facility, inform the receiving facility of the incident and the victim's potential need for medical or social services, unless the victim requests otherwise.

Continued next page.

PREA Coordinated Response Plan (Continued)

Troop Duty Officer	• Immediately notify the Troop Commander; and PREA Coordinator; • Ensure proper compliance with this General Order and PRI-07A Detainee Sexual Abuse and Sexual Harassment Investigations, Review and Data Collection; • Provide for any special needs the victim may have; and • In the event that the victim is transferred from the lockup to a jail, prison, or medical facility, ensure that the receiving facility is informed of the incident and the victim's potential need for medical or social services, unless the victim requests otherwise.
State Police PREA Specialized Investigator(s)	• Respond to the scene and take command of the investigation; • Take all actions pursuant to PRI-07A Detainee Sexual Abuse and Sexual Harassment Investigations, Review and Data Collection; • Inform the victim of his or her rights under relevant policies, federal and state laws; • Safeguard the custody of evidence; • Explain to the alleged victim the need for a forensic medical exam and offer the victim the option of undergoing one at no cost; • Offer the presence of a victim advocate or other staff member during the exam; • Interview the victim and any witnesses; • Submit report(s) of investigation pursuant to PRI-07A Detainee Sexual Abuse and Sexual Harassment Investigations, Review and Data Collection; and • Document all referrals of allegations of sexual abuse or sexual harassment for criminal • investigation.
Station Commander	• Submit, within four (4) days, a report of the incident to the Troop Commander, along with all other related reports.

Continued next page.

PREA Coordinated Response Plan (Continued)

Troop Commander	• Immediately notify the Division Commander; • Assign the PREA Coordinator to immediately assist the SPDU investigation and to conduct an Administrative Review of the incident; • Forward copies of the reports to the PREA Coordinator within seven (7) of their completion; and • Review and submit reports and recommendations to the Division Commander.
Reviewing Commissioned Officer	• Assist the SPDU; • Conduct an Administrative Review of the incident; and • Prepare a report for the Troop Commander within four (4) days. Note: The Administrative Review is to ensure that members followed Department procedures during the incident.
Field Services Division Commander	• Review reports and take actions to prevent reoccurrences; • Submit reports to the Colonel/Superintendent for review and action; and • Maintain a file for PREA incident review pursuant to PRI-07A Detainee Sexual Abuse and Sexual Harassment Investigations, Review and Data Collection.

Reporting

All employees shall immediately report to their immediate supervisor:

- Any knowledge, suspicion, or information regarding an incident of detainee sexual abuse and/or sexual harassment that occurred within a Department lockup;
- Any retaliation against detainees or Department employees who reported such an incident;
- Employee neglect or violation of responsibilities that may have contributed to an incident or retaliation; and

All allegations of sexual abuse, including third party and anonymous reports, shall be reported to a designated sexual abuse investigator who shall investigate the allegation pursuant to PRI-07A *Detainee Sexual Abuse and Sexual Harassment Investigations, Review and Data Collection*.

Staff shall not reveal any information related to a sexual assault to anyone other than to the extent necessary to make treatment and investigatory decisions.

Continued next page.

Reporting (Continued)

All verbal reports sexual abuse and/or sexual harassment shall be documented by the immediate supervisor who receives a report of sexual abuse or sexual harassment pursuant to this policy.

Department employees may privately report sexual abuse and/or sexual harassment by contacting the PREA Coordinator, filing a complaint with the Internal Affairs Section, or utilizing the PREA third party contact number posted on the Department's website and on the PREA informational brochure.

Methods of reporting shall include: in-person, phone, mail, email, fax or any means by which the staff person feels comfortable in reporting to supervisory level staff and/or the PREA Coordinator. Employees are expected to report any knowledge or suspicion of abuse. The methods of reporting are expected to vary based on the situation and the individual involved. Should there be any question as to the most appropriate method, the PREA Coordinator or Supervisor should be contacted.

Abuse Reports from Outside Facilities/ Agencies

A member or employee who receives an allegation that a detainee was sexually abused and/or sexually harassed while confined at a non-Department facility, shall notify through channels:

- The Colonel/Superintendent; and
- The Department PREA Coordinator.

Colonel/Superintendent shall:

- Notify the head of the facility or appropriate office of the agency where the alleged abuse occurred;
- Make notification, as soon as possible, but no later than seventy-two (72) hours after receiving the allegation; and
- Document such notification.

Training

All employees and members who may have contact with lockup detainees shall receive training regarding:

- The Department's zero-tolerance policy and detainees' right to be free from sexual abuse and sexual harassment;
- How to fulfill their responsibilities regarding prevention, detection, reporting, and response to sexual abuse and sexual harassment;
- The right of detainees and employees to be free from retaliation for reporting sexual abuse and sexual harassment;
- The dynamics of sexual abuse and sexual harassment in confinement;
- The common reactions of sexual abuse and sexual harassment victims;
- How to detect and respond to signs of threatened and actual sexual abuse;
- How to avoid inappropriate relationships with detainees;
- How to communicate effectively and professionally with detainees, including lesbian, gay, bisexual, transgender, intersex, or gender nonconforming detainees; and
- Compliance with relevant laws related to mandatory reporting of sexual abuse.

All members shall annually review the PREA Standards Bulletin posted to DocuShare.

Continued next page.

Training (Continued)

The Department shall provide each employee with refresher training annually to ensure that all employees know the agency's current sexual abuse and sexual harassment policies and procedures.

In years in which an employee does not receive refresher training, the Department shall provide refresher information on current sexual abuse and sexual harassment policies.

Every member or employee who may have contact with detainees shall acknowledge either in written or electronic format that he or she understands the Department's PREA policies and protocols and the PREA training he or she has received.

The Department shall maintain documentation confirming that employees, volunteers and contractors understand the training they have received.

PREA Coordinator

The Colonel/Superintendent shall:

- Designate a Detective Captain within Division of Investigative Services as the PREA Coordinator; and
- Ensure the PREA Coordinator has the authority to develop, implement, and oversee the Department's effort to comply with the PREA standards in all Department lockups.

The PREA Coordinator shall:

- Annually submit a status report of PREA compliance standards, investigative training requirements and reported/investigated incidents to the Colonel/Superintendent;
- Detail any corrective action required to ensure compliance with the PREA standard;
- Keep a current list of members who receive special training in sexual abuse investigations pursuant to Code of Federal Regulations (CFR) 28 § 115.34; and
- Take necessary action to ensure Department compliance with the PREA standards subject to the Colonel's approval.

Hiring and Promoting Practices

The Department shall not hire or promote anyone who may have contact with detainees and shall not enlist the services of any contractor who may have contact with detainees who:

- Has engaged in sexual abuse in a prison, jail, lockup, community confinement facility, juvenile facility, or other institution (as defined in 42 U.S.C. 1997);
- Has been convicted of engaging or attempting to engage in sexual activity in the community facilitated by force, overt or implied threats of force, or coercion, or if the victim did not consent or was unable to consent or refuse; or
- Has been civilly or administratively adjudicated to have engaged in the activity described in the paragraphs above.

The Department shall consider any incidents of sexual abuse and/or harassment in determining whether to hire or promote an employee, or to retain the services of any contractor, who may have contact with detainees.

Continued next page.

Hiring and Promoting Practices (Continued)

Before hiring new employees who may have contact with detainees, the Department shall: (a) perform a criminal background records check on all applicants; and (b) make its best efforts to contact all prior institutional employers for information on substantiated allegations of sexual abuse, or any resignation during a pending investigation of an allegation of sexual abuse.

The Department shall ask all applicants and employees who may have direct contact with detainees about previous misconduct described in this section, in: (a) written applications and/or interviews for hiring or promotion; and (b) interviews or written self-evaluations conducted as part of reviews of current employees.

All employees shall disclose any of the misconduct described in this section. Material omissions regarding such misconduct, or the provision of materially false information, shall be grounds for termination.

Any member or employee determined to have engaged in sexual abuse or sexual harassment of detainees as defined by policy shall be subject to discipline. The presumptive sanction for having engaged in prohibited behavior under this policy is termination.

Contractors and Volunteers

The Department shall also perform a criminal background records check before retaining the services of any contractor or volunteer who may have contact with detainees and document the same. *See Vendor Acknowledgment PREA form*.

In the event that a contractor or volunteer has engaged in sexual abuse or has been convicted or adjudicated of having engaged in sexual abuse, he or she shall have no access or contact with detainees in Department custody.

The Department shall ensure that all volunteers and contractors who enter Department facilities and who may have contact with detainees have been trained on their responsibilities under the Department's sexual abuse and sexual harassment prevention, detection, and response policies and procedures including the Department's zero-tolerance policy regarding prohibited behavior.

The level and type of training provided to volunteers and contractors shall be based on the services they provide and the level of contact they have with inmates, but all volunteers and contractors who have contact with inmates shall be notified of the Department's zero-tolerance policy regarding sexual abuse and sexual harassment and how to report such incidents. All volunteers and contractors who enter the Barracks and who may have contact with detainees shall sign an acknowledgement that he or she understands the Department's zero-tolerance policy and reporting requirements.

The Department shall maintain documentation confirming that volunteers and contractors understand the Department's PREA policy and information received.

Retaliation

The Department shall ensure that all detainees and staff who report sexual abuse or sexual harassment or cooperate with sexual abuse or sexual harassment investigations are protected from retaliation by other detainees or staff, and shall designate which staff members or departments are charged with monitoring retaliation.

A member or employee who has knowledge, suspicion, or information regarding an incident of retaliation against detainees or staff who reported such an incident and any staff neglect that may have contributed to such retaliation, shall immediately report such incident or retaliation to his or her immediate supervisor.

Supervisors who receive reports of retaliation shall employ multiple protection measures, which may include:

- Cell changes or transfers for detainee victims or abusers;
- Removal of alleged staff or detainee abusers from contact with victims;
- Providing emotional support services for detainees or staff who fear retaliation for reporting sexual abuse or sexual harassment or for cooperating with investigations; and/or
- Closely monitoring detainees or staff who fear retaliation.

Each Barracks Station Commander shall monitor all employee(s) who report sexual abuse or harassment to ensure that the employee(s) are not subject to retaliatory actions by other employees and shall document the same.

Upgrades to Facilities and Technologies

When designing or updating holding cells, the Department will consider the effect of the design upon the ability to protect prisoners from sexual contact.

When installing or updating video monitoring systems, the Department will consider how the technology may enhance the ability to protect prisoners from sexual contact.

Promulgated By:

Department of State Police
General Order

Effective Date	Number
May 5, 2017	**PRI-07A**

Subject

Detainee Sexual Abuse and Sexual Harassment Investigations, Review, and Data Collection

Policy

As the investigative agency for alleged sexual crimes committed on adults and juveniles held in a confinement setting by either the Department of Correction or Department of Youth Services, the Department of State Police shall ensure full compliance with the standards found within federal laws and mandates regarding the *Prison Rape Elimination Act* (2003).

This policy shall be made available through the Department's website and upon request.

Response

The Department shall adhere to the following requirements in regards to detainee allegations of sexual abuse and/or sexual harassment:

- Investigate allegations of sexual abuse and/or sexual harassment from the Department of Correction or Department of Youth Services;
- Investigate allegations of sexual abuse and sexual harassment from within the Department of State Police;
- Investigate allegations of sexual abuse and sexual harassment alleged by a detainee while detained at another facility;
- Follow uniform evidence protocol that maximizes the potential for obtaining usable physical evidence;
- Development of an internal protocol appropriate for juveniles where applicable;
- Offer all victims access without financial cost to forensic medical examinations performed by a Sexual Assault Forensic Examiner or qualified medical practitioner;
- Attempt to make a victim advocate from a rape crisis center available to the detainee;
- Accompany the victim through the forensic medical examination process and interviews; and
- Take appropriate measures to prevent retaliation against individuals who report and/or cooperate with an investigation.

Special Training

Department Investigators shall receive special training in detainee sexual abuse and sexual harassment investigations according to Code of Federal Regulations (CFR) 28 § 115.34, to include:

- Techniques for interviewing sexually abused or sexually harassed victims;
- Proper use of Miranda and Garrity warnings;
- Sexual abuse evidence collection in confinement settings; and
- The criteria and evidence required to substantiate a case for administrative action or prosecution referral.

Subject	Number
Detainee Sexual Abuse and Sexual Harassment Investigations, Review, and Data Collection	**PRI-07A**

Investigations

Department investigators when conducting an investigation into allegations of detainee sexual assault and/or sexual harassment, shall:

- Gather and preserve direct and circumstantial evidence, including any available physical and DNA evidence and any available electronic monitoring data;
- Interview alleged victims, suspected perpetrators, and witnesses;
- Review prior complaints and reports of sexual abuse and/or sexual harassment involving the suspected perpetrator;
- Notify their Division Commander through channels of the possible outcome when the evidence appears to support criminal prosecution;
- Make relevant information regarding the status of the investigation available to the Department and/or requesting agency so that the detainee may be kept apprised of the investigation.

When there is probable cause to believe that a detainee or a Department employee had sexual contact with another detainee in a holding cell, the Department will make a criminal referral to the District Attorney's Office of jurisdiction or to the Attorney General's Office.

A criminal investigation will not be terminated because the alleged perpetrator separates from employment with the Department.

If an outside agency investigates sexual contact, the Department will cooperate with the investigators and remain informed about the progress of the investigation.

Note: See also Policy and Procedure *PRI-07 Detainee Sexual Abuse and Sexual Harassment* for internal allegations.

Subject	Number
Detainee Sexual Abuse and Sexual Harassment Investigations, Review, and Data Collection	**PRI-07A**

Status Reports

Department Investigators who have conducted an investigation of a detainee sexual abuse and sexual harassment shall:

- Make available to the requesting agency relevant information regarding the status of an investigation;
- Document that the detainee will be informed of the investigation status by the requesting agency; and
- Retain all written reports pertaining to the administrative or criminal investigation of alleged sexual abuse or sexual harassment in accordance with the Commonwealth's retention schedule or for as long as the alleged abuser is incarcerated or employed by the agency, plus five years, whichever is longer.

Sexual Abuse Incident Reviews

The PREA Coordinator in consultation with the Incident Review Team, which shall include the Station Commander, PREA Coordinator, and other pertinent individuals, shall conduct a sexual abuse incident review at the conclusion of every investigation into allegation of sexual abuse of a detainee in Department custody. Such review shall ordinarily occur within 30 days of the conclusion of the investigation. Such review will be conducted even when the allegation has not been substantiated, unless the allegation has been determined to be unfounded.

The review will:

- Include input from supervisors and investigators as necessary;
- Consider whether the allegation or investigation indicates a need to change policy or practice to better prevent, detect or respond to sexual contact;
- Consider whether the incident or allegation was motivated by bias or gang affiliation;
- Examine the area where the incident allegedly occurred to assess whether physical barriers in the area may enable abuse;
- Assess the adequacy of staffing levels in that area during different shifts; and
- Assess whether monitoring technology should be deployed or augmented to supplement supervision by staff.

The PREA coordinator shall submit a written report to the Colonel/Superintendent with findings and any recommendations for improvement.

The Department shall implement any recommendations for improvement or document its reasons for not doing so.

Subject	Number
Detainee Sexual Abuse and Sexual Harassment Investigations, Review, and Data Collection	**PRI-07A**

Data Collection and Review

The PREA coordinator shall annually collect accurate, uniform data for every allegation of sexual abuse from each Barracks.

The incident-based data collected shall include, at a minimum, the data necessary to answer all questions from the most recent version of the *Local Jail Jurisdiction Survey of Sexual Violence* or other instrument developed by the Department of Justice and designated lockups.

The Department shall annually review data collected and aggregated in order to assess and improve the effectiveness of its sexual abuse prevention, detection, response policies, and training, including: identifying problem areas; taking corrective action on an on-going basis; and preparing an annual report of its findings from its data review and any corrective actions for each lockup, as well as the agency as a whole.

The PREA coordinator's annual report shall include a comparison of the current year's data and corrective actions with those from prior years and provide an assessment of the agency's progress in addressing sexual abuse. Upon approval of the Colonel, said report shall be made publically available upon request subject to redaction if appropriate.

The Department shall securely retain all incident based and aggregate data collected in accordance with all applicable data security policies and procedures.

All data collected shall be retained at least 10 years after the date of initial collection, unless federal, state, or local law requires otherwise.

Upon request, the Department shall provide the Department of Justice data from the previous calendar.

Subject

Gender Identity and Expression

Policy

The Department strives to ensure that everyone it serves is treated with dignity, respect, and professionalism. Department employees shall not engage in conduct that denigrates or shows hostility toward an individual because of their gender identity or gender expression.

Definitions

Gender Identity: An individual's internal, deeply held sense of self as being male, female, an alternative, or no gender. Gender identity is determined by an individual's self-identification and is different from an individual's sexual orientation.

Gender Expression: External manifestations of gender identity such as an individual's name, personal pronouns, clothing, haircut, voice, and/or body characteristics.

Transgender: An umbrella term for individuals whose gender identity and/or gender expression differs from what is typically associated with the sex they were identified as at birth.

Transgender Male: A person who transitions from female to male, meaning a person who was identified as female at birth, but identifies and lives as a man. A transgender man should be referred to as a man (i.e. he, him, his), regardless of medical history or the sex listed on identification documents.

Transgender Female: A person who transitions from male to female, meaning a person who was identified as male at birth, but identifies and lives as a woman. A transgender woman should be referred to as a woman (i.e. she, her), regardless of medical history or the sex listed on identification documents.

Intersex Individual: A person whose sexual or reproductive anatomy or chromosomal pattern does not seem to fit typical definitions of male or female.

Adopted/Chosen Name: Non-birth name that an individual may use in self-reference. This may or may not be the individual's legal name and may or may not differ from the name on the transgender individual's personal documents (i.e. driver's license, passport, etc.). Department employees should be aware that the use of an adopted/chosen name does not automatically equate to an attempt to hide one's legal identity, nor does it indicate that the individual is misrepresenting themselves.

Employee: A sworn member or civilian who works directly for the Department.

Subject	Number
Gender Identity and Expression	**PRI-08**

Addressing an Individual

An individual may ask to be addressed differently from what his/her official identification documentation states. Therefore, when addressing individuals, Department employees shall adhere to the following:

- When uncertain which pronouns are appropriate, respectfully ask the individual for clarification e.g., "How would you prefer to be referred to?";
- Address the individual by the name the individual chooses, regardless of whether or not the individual has obtained legal recognition of the chosen name;
- Use the titles and pronouns appropriate for the chosen name and/or gender expression (e.g., he/him for a transgender male, she/her for a transgender female, they/them for a person with another gender identity or whose gender identity is unknown, or as requested); and
- In all situations, make every effort to comply with the individual's requests in a non-judgmental, professional manner.

Official Documentation and Reports

An employee may observe that an individual's gender identity differs from the sex indicated on the individual's identification documents.

Department employees encountering an individual wishing to be addressed differently from what is listed on official documents shall:

- Use the name and sex found on the individual's official documents in Department reports, i.e. incident reports, citations, and forms;
- Also document the individual's adopted/chosen name within the Department's Records Management System; and
- Use pronouns and descriptors consistent with the individual's gender identity when writing reports.

Searches

Department members shall adhere to Massachusetts General Laws (MGL), Department Policy and Procedures, and constitutional provisions when conducting searches upon any individual.

When Department members encounter transgender individuals, members shall:

- Not perform a search or frisk for the sole purpose of determining an individual's gender;
- Ask the individual what their preference is regarding the sex of the officer(s) searching the individual;
- Whenever practicable have two (2) officers of the preferred sex perform the search; and
- Document within the incident report the circumstances for the search, including the individual's preference regarding the sex of the officer(s) performing the search.

When an immediate cursory search for weapons is necessary for safety, it may be conducted in the field by an officer of either sex.

Subject	Number
Gender Identity and Expression	**PRI-08**

Custody

If a transgender individual is being detained in a Department cell or vehicle, no other detainee(s) shall be housed in the same cell or placed or transported in the same vehicle.

Members transporting a transgender prisoner shall radio their Station/Unit Desk Officer and have a Daily Administrative Journal (DAJ) entry made of the:

- Location;
- Preliminary charges against the prisoner;
- Intended destination;
- Beginning odometer mileage, and upon arrival, the ending mileage; and
- Request for back-up, if necessary.

Transgender individuals may be held in Department custody pending bail, transportation to another facility, or court appearance as follows:

- When there are no other prisoners in the cell block in the station where the individual is being held in custody, the transgender individual shall be placed into a cell. No other prisoners shall be placed in that cell block until the transgender individual is released from custody.
- When other prisoners are being held in the cell block at a given station, the transgender individual shall be transported to the nearest station that has no prisoners in custody. The transgender prisoner shall be placed in a cell at that station. No other prisoners shall be placed in that cell block until the transgender individual is released from custody.
- Once the booking process is complete, under no circumstances shall a transgender prisoner be secured in a public area (booking room, etc.) in view of other prisoners and shall remain separated from other prisoners at all times.

Department members shall not seize or remove appearance-related items such as clothing and undergarments, wigs, prosthetics, or make-up if those items would not be confiscated from non-transgender individuals, provided those articles and/or items may not be used to escape or cause harm to the prisoner or others or conceal weapons, illegal items, or evidence.

Subject

Juvenile Detention

Policy

The Department shall ensure compliance with Federal and Massachusetts law regarding the detention of children and juveniles.

When a juvenile is arrested or placed into custodial protection, to ensure proper legal treatment, the member and his or her supervisor shall immediately review the most current version of MGL c.119, § 67 and § 39H.

Juveniles

Juvenile: A child who has not yet attained his or her eighteenth (18) birthday.

Under Age 12	A juvenile who has not yet attained his or her twelfth (12) birthday cannot be charged with a crime.
Age 12 to Age 18	A summons is the *preferred* method for bringing all juveniles to court, unless there is reason to believe the juvenile will not appear upon a summons.
Arrest Warrant	An arrest warrant will issue if the court has reason to believe the juvenile will not appear upon a summons, or if the juvenile has been summoned and did not appear, or if the juvenile violated the terms and conditions of probation.

Status Offender

Status Offender: A juvenile who engages in an unlawful activity, which, if he or she were an adult, would be classified as non-criminal. Examples of juvenile status offenders are:

- Child placed into protective custody;
- Youth curfew violations (where applicable); or
- A "Child requiring assistance" from six (6) to eighteen (18) years of age per MGL c.119 § 39H who:
  1. Repeatedly runs away from home;
  2. Repeatedly fails to obey the lawful and reasonable commands of the child's parent, guardian or legal custodian;
  3. Repeatedly fails to obey the lawful and reasonable regulations of the child's school;
  4. Is habitually truant; or
  5. Is a sexually exploited child.

Subject	Number
Juvenile Detention	**PRI-09**

Delinquent Child

Delinquent Child: A child between 12 and 18 years of age who commits any offense against a law of the Commonwealth; **provided, however, that such offense shall not include:**

- A civil infraction;
- A violation of any municipal ordinance or town by-law; or
- A first offense of a misdemeanor for which the punishment is a fine, imprisonment in a jail or house of correction for not more than six (6) months or both such fine and imprisonment.

Non-Secure Detention

Any juvenile who has not yet attained his or her eighteenth (18) birthday, a status offender, or a juvenile in protective custody under MGL c. 111B, § 8, shall be held in accordance with the requirements specified for non-secure detention of status offenders. These requirements are:

1. The area where the juvenile is held is in an unlocked, multipurpose section, such as a report writing room or office;
2. The space is in no way designed for residential use;
3. The juvenile is held long enough to complete identification, investigation, and processing and then shall be released to a parent, guardian, legal custodian, other responsible adult, or transferred to an alternative juvenile facility or court;
4. The juvenile is under continuous visual supervision until released; and
5. At no time is the juvenile to be handcuffed to any stationary object.

Note: A status offender may be handcuffed, but not to a stationary object, and shall not be considered in "secure detention".

Juveniles under 14 years of age, status offenders, or juveniles in protective custody shall not be placed in a cell.

Secure Detention

Secure detention is defined as physically detained or confined in a room, set of rooms, or a cell that has the ability to lock an individual within. Secure detention can result from either being placed in such a room and/or from being physically secured to a stationary object such as a cuffing rail/bench.

Procedures for the Detention of Juveniles

Members shall adhere to the following when detaining juvenile(s):

- A juvenile may not be held in police custody for longer than six (6) hours.
- A juvenile in Department custody should only be held long enough for members to complete the identification and booking process. Once the identification and booking process is complete, the juvenile must be either: a) transported to the juvenile court, b) released to his/her parent/guardian/custodian, or c) transferred to the custody of the Overnight Arrest Program (after 1800hrs on weeknights and anytime on the weekends/holidays).
- A juvenile who has not yet attained his or her fourteenth (14) birthday shall not be placed in secured detention for any amount of time.
- No juvenile between fourteen (14) and eighteen (18) years of age shall be placed in a cell, unless the cell has been certified by the Department of Youth Services (DYS).
- A juvenile who is securely detained in Department custody must be separated by sight and sound from adults in custody.
- A juvenile placed in Protective Custody, for ALCOHOL, **CANNOT BE SECURELY DETAINED** for any amount of time.
- A juvenile placed in Protective Custody, for Controlled Substances/Toxic Vapors, **MUST be transported to an appropriate emergency medical treatment facility.**
- A juvenile placed in custody in accordance with Child Requiring Assistance (CRA) **CANNOT be brought back to the barracks.**

Juvenile Arrest – Delinquent Offense

When a juvenile is placed under arrest, the Troop Duty Officer, or designee, shall immediately notify at least one (1) of the child's parents, or, if there is no parent, the guardian or custodian with whom the child resides or the Department of Children and Families (DCF) if the child is in its custody.

If Arrest Occurs during Court Hours	Members must complete the booking process and then transport the juvenile to the Juvenile Court of jurisdiction.
If Arrest Occurs after Court Hours	There is no longer a statutory requirement for the police to contact a Juvenile Probation Officer, and as such, the Probation Department has ceased its on-call program. Therefore, the Troop Duty Officer, or designee, will make a determination whether to release the juvenile or to detain the juvenile.

Continued next page.

Juvenile Arrest – Delinquent Offense (Continued)

If Arrest Occurs after Court Hours (Continued)	Release: If a juvenile has been arrested without a warrant and the Troop Duty Officer, or designee, determines that the juvenile should be released, such release shall be done so upon the acceptance of the written promise from the parent, guardian, custodian or a representative of DCF who will ensure the juvenile's appearance in court. The Troop Duty Officer, or designee, will ensure that members utilize the SP 122 Written Promise form to obtain the required written promise. The released juvenile shall be advised that he or she must appear in the Juvenile Court of jurisdiction on the next predetermined recognizance date for that court. The Troop Duty Officer, or designee, should refer to the appropriate barracks' current list of Juvenile Court recognizance dates. The Troop Duty Officer, or designee, shall ensure that the appropriate Juvenile Court and recognizance date are noted on the SP 122 Written Promise Form. Detain: If a juvenile between fourteen (14) and eighteen (18) years of age has been *arrested on a warrant* or if the Troop Duty Officer, or designee, *requests in writing that such a juvenile be detained*, the Troop Duty Officer, or designee, shall contact the Bail Magistrate/Bail Commissioner. In accordance with MGL ch. 119, § 67, a juvenile age twelve (12) or thirteen (13) *who has been arrested without a warrant* is prevented from being admitted to bail and therefore must be released to a parent, guardian or, custodian or a representative of DCF.
Bail	The Bail Magistrate/Bail Commissioner will set bail and/or terms and conditions of release based on the juvenile's current charge(s), circumstances of the arrest, criminal history and/or as directed by the arrest warrant.

Juveniles in police custody must be held sight and sound separate from adult detainees.

A juvenile charged with delinquency offenses *shall not be held* in a police lockup or otherwise securely detained for any *longer than six (6) hours.* If the juvenile is placed in a cell, the cell must be a Department of Youth Services certified cell.

Continued next page.

Juvenile Arrest – Delinquent Offense (Continued)

The requirement not to release a defendant for six (6) hours when arrested for a violation of MGL ch. 209A or MGL ch. 265, § 13M (Domestic Assault or Domestic Assault and Battery) or § 15D (Strangulation or Suffocation), ***DOES NOT apply to juveniles.***

A juvenile in Department custody should be held only long enough for members to complete the identification and booking process. Once the identification and booking process is complete, the juvenile must be either: a) transported to the juvenile court, b) released to his/her parent/guardian/custodian, or c) transferred to the custody of the Overnight Arrest Program (after 1800hrs on weeknights and anytime on the weekends/holidays).

- The best practice is for the six (6) hour clock to start when the juvenile is placed in police custody and ends when custody is: a) transferred to the juvenile court, b) the juvenile is released to his/her parent/guardian/custodian or c) custody is transferred to the Overnight Arrest Program.

Juvenile Unable to Make Bail / Unable to be Released

When a juvenile has been charged with a delinquency or youthful offender offense and is unable to make bail or is unable to be released and court is closed, the Troop Duty Officer, or designee, must contact the Department of Youth Services (DYS) Central Referral Line at 617-474-8150 or 617-474-8179 to coordinate DYS placement (after 1800hrs on weeknights and anytime on weekends/holidays). The Troop Duty Officer, or designee, shall ensure that DYS is provided with information regarding the juvenile's arrest and is advised of the bail amount as it relates to the Bail Fee and Bail.

If a juvenile is being held on a Bail Fee only ($40.00 - Personal Recognizance), DYS has no authority to hold the juvenile in its custody. The Troop Duty Officer, or designee, shall inform the Bail Magistrate/Bail Commissioner of this and arrangements will be made to release the juvenile without imposing a Bail Fee.

- If the juvenile is in the custody of DCF, DCF shall be notified via the DCF Hotline to take custody of the juvenile.
- If a parent, guardian or custodian refuses to take custody of a juvenile who is otherwise eligible to be released, the Troop Duty Officer, or designee, shall file a 51A and notify DCF via the DCF Hotline for placement.

DYS will provide the Troop Duty Officer, or designee, with the location of the Overnight Arrest Program.

- If the juvenile is *suffering from any medical condition(s)*, (such as: under the influence drugs/alcohol, suicidal thoughts, pepper sprayed or tasered) he/she *must be medically cleared prior to placement.*
- The Troop Duty Officer, or designee, is responsible for obtaining any current medications for the juvenile.
- The Troop Duty Officer, or designee, must provide a copy of the Booking Sheet prior to placement.

Continued next page.

Juvenile Unable to Make Bail / Unable to be Released (Continued)

It is the Department's responsibility to transport the juvenile to the Overnight Arrest Program.

It is also the Department's responsibility to transport the juvenile from the Overnight Arrest Program to the Juvenile Court before 0900 hours.

Transportation of Juveniles

Juveniles may be:

- Transported in marked or unmarked vehicles.

Juveniles shall not be:

- Transported with adult prisoners; or
- Transported to court or any other institution in patrol wagons MGL c. 119, § 34.

Jenkins Hearing

If a juvenile is arrested without a warrant and held in custody (to include while being held at the Overnight Arrest Program), for more than twenty-four (24) hours, he or she is entitled to a *Jenkins Hearing* to determine whether or not there was probable cause to make the arrest and to continue to hold the juvenile.

- The bail magistrate/bail commissioner that set bail on the juvenile cannot be the same magistrate/commissioner who conducts the *Jenkins Hearing.*
- If the juvenile will be held over twenty-four (24) hours, in order to facilitate a *Jenkin's* determination of probable cause to continue to hold the juvenile, the Troop Duty Officer, or designee, must call a magistrate/commissioner.

Special Considerations

Members may have to take extra steps to ensure that juveniles understand their rights. This may include explaining or repeating the Miranda rights, or explaining Department procedures or juvenile court procedures to the juvenile. Refer to INV-05 Special Protections for Juveniles for procedures regarding the interrogation of juveniles.

Station Juvenile Officers

Station Commanders shall:

- Designate a station court officer as the Juvenile Officer;
- Ensure that Juvenile Officers attend specialized training, if required;
- Ensure that MGL c.119, § 67 and § 39H are followed; and
- Ensure that Juvenile Officers maintain a list of predetermined recognizance dates for the Juvenile Courts in their jurisdictions. This list must be continually updated and must be provided to Troop Duty Officers.

Subject	Number
Juvenile Detention	**PRI-09**

Filing

Station/Section Commanders shall maintain a separate, secure file with all of the identifying data of each juvenile arrest and any related reports.

Records involving criminal charges against juveniles shall be maintained separately from other records.

Administrative Journal Records

The Daily Administrative Journal (DAJ) shall:

- Contain all required information except the juvenile's name, address, date of birth (DOB), and any other identifying data; and
- Under the "name" section the word "JUVENILE" shall appear, followed by a sequential number starting with "#1" for the first juvenile arrested that year.

A separate record shall be maintained that links Juvenile Arrest Journal numbers and juvenile identifying information. This record shall not be released to the public and/or media.

The DAJ shall contain only the juvenile number and no other personal data.

Reporting Juvenile Detentions

Stations that have cells approved for juvenile use are administratively required by the Executive Office of Public Safety & Security (EOPSS) to submit a monthly lockup docket, as directed within CJIS Extranet.

EOPSS may contact a station that has arrested a status or juvenile offender, to ensure compliance with the applicable holding laws. EOPSS utilizes the information to monitor the Commonwealth's compliance with state law and the Federal Juvenile Justice and Delinquency Prevention Act of 1974 and 2002. All members shall assist EOPSS as requested.

Department of State Police
General Order

Policy Date:	Number:
July 12, 2018	**PRI-10**

Subject:

Protective Custody

Policy

It is the policy of the Massachusetts State Police to comply with the requirements of Massachusetts General Law Chapter 111B and Massachusetts General Law Chapter 111E when taking an incapacitated person into protective custody.

Definitions

Incapacitated: The condition of a person who, by reason of the consumption of alcohol and/or a controlled substance, toxic vapor, or other substance other than alcohol, is:

- Unconscious;
- In need of medical attention;
- Likely to suffer or cause physical harm or damage property; or
- Disorderly.

To place someone into protective custody, an officer needs probable cause to believe that the person is incapacitated.

Intoxication alone is not sufficient to warrant a finding of incapacitation.

Assisting Officer: Member placing a person into protective custody.

Facility: Any public or private place, or portion thereof, providing services especially designed for the detoxification of intoxicated persons.

Juvenile: A child who has not yet attained his or her eighteenth (18) birthday.

Protective Custody

Pursuant to M.G.L. c.111B, § 8: Any person who is incapacitated due to consumption of alcohol may be assisted by a police officer with or without the person's consent to the person's residence, to a facility, or to a police station.

Pursuant to M.G.L. c.111E, § 9A: Any person who is incapacitated due to consumption of substance(s) other than alcohol may be placed into protective custody by a police officer without the person's consent for the purpose of immediately transporting the person to an acute care hospital or satellite emergency facility or otherwise immediately obtaining appropriate emergency medical treatment.

Subject	Number
Protective Custody	**PRI-10**

Procedure for Taking Person into Protective Custody

	111B § 8 (Alcohol)	111E § 9A (Substance other than Alcohol)
Determination of Incapacitation is a Two-Step Process	**Step One: Assessment of Incapacitation** A person who, by reason of the consumption of alcohol, is: (1) unconscious, (2) in need of medical attention, (3) likely to suffer or cause physical harm or damage property, or (4) disorderly is deemed incapacitated. **Step Two: Assessment of Intoxication** *Right to a Breathalyzer Test* (BT) - Any person assisted by a police officer to a police station shall have the right, and be informed in writing of said right, to request and be administered a breathalyzer test. *Presumption of Intoxication* - Any person who has a BT of (.10) or above is presumed intoxicated. *Sobriety Testing* - If any person has a BT of .06, .07, .08 or .09, police are authorized to administer sobriety testing in order to determine whether to release or hold the person. *Release Forthwith* – Unless there are pending charges or a warrant, any person who has a BT (.05) or less shall be released from custody forthwith *However*, if a minor registers *any* BT reading, the minor must be released to a parent, guardian, or responsible adult.	**Step One: Assessment of Incapacitation** A person who, by reason of the consumption of substance other than alcohol, is: (1) unconscious, (2) in need of medical attention, (3) likely to suffer or cause physical harm or damage property, or (4) disorderly is deemed incapacitated. **Step Two: Assessment of Intoxication** A police officer may ask a person to consent to reasonable tests of coordination, coherency of speech, and breath to determine if the person is incapacitated. A police officer may place the person into protective custody when such tests or other information or observations indicate that the person is incapacitated.

Continued on next page

Subject	Number
Protective Custody	**PRI-10**

Procedure (Continued)

	111B § 8 (Alcohol)	**111E § 9A (Substance other than Alcohol)**
Role of Police Officer when taking a person into Protective Custody:	A police officer shall assist an incapacitated person by bringing him or her to: • person's residence; • police station (will have to notify facility); or • a facility (as defined above) *NOTE:* If person is brought to police station, person has the right to: • request and be administered a breathalyzer test; and • make a phone call.	A police officer shall assist an incapacitated person by: • immediately transporting the person to an acute care hospital or satellite facility; or • obtaining appropriate immediate emergency medical treatment (EMT) for the person.
Notification of Facility	If any incapacitated person is assisted to a police station, the officer in charge, or designee, shall notify forthwith the nearest facility that the person is being held in protective custody. If suitable treatment services are available at a facility, the department shall thereupon arrange for the transportation of the person to the facility. The officer in charge, or designee, shall ensure that a Daily Administrative Journal (DAJ) entry indicates: • the name of the facility notified; and • if transportation was arranged.	N/A

Continued on next page

Subject	Number
Protective Custody	**PRI-10**

Procedure (Continued)

	111B § 8 (Alcohol)	111E § 9A (Substance other than Alcohol)
Minors	The parent, guardian or legal custodian of any juvenile to be held in protective custody at a police station, shall be notified forthwith upon his/her arrival at said station or as soon as possible thereafter. Any juvenile who is held in protective custody at a police station shall, upon request of his or her parent, guardian or legal custodian, be released to the custody of said parent, guardian or legal custodian. A juvenile placed in protective custody, for alcohol, cannot be securely detained for any amount of time. Members shall ensure that detention of juveniles shall conform to General Order PRI-09 Juvenile Detention.	The parent, guardian or legal custodian of any juvenile placed into protective custody shall be notified as soon as practicable. A juvenile placed in protective custody, for controlled substances/toxic vapors, must be transported to an appropriate emergency medical treatment facility.
Time Restraints	**No adult shall be held more than 12 hours** - No person assisted to a police station shall be held in protective custody against a person's will; provided, however, that if suitable treatment at a facility is not available, an incapacitated person may be held in protective custody at a police station until a person is no longer incapacitated or for a period of no longer than twelve hours, whichever is shorter.	A person cannot be held in protective custody beyond the time required to complete the transport of the individual to an acute care hospital or satellite emergency facility or to obtain immediate emergency medical treatment. Legislation does not provide a time frame for how long transport would take to be completed or medical treatment sought.
Use of Force	Reasonable force may be used to take a person into protective custody.	
Search and Inventory Items	Officers may search the person and immediate surroundings for weapons. Any items seized will be inventoried and returned if lawfully possessed.	

Continued on next page

Subject	Number
Protective Custody	**PRI-10**

Procedure (Continued)

	111B § 8 (Alcohol)	111E § 9A (Substance other than Alcohol)
Documentation	An entry of custody in the report narrative shall be made indicating: o the date, time, place of custody; o the name of the assisting officer; o the name of the officer in charge; o whether the person held in custody **exercised his or her right to make a phone call**; o whether the person held in custody **exercised his or her right to take a breathalyzer test**, **and** the **results of the breathalyzer test if taken**; and o the name of the facility notified and if transportation was arranged. An SP 850 Protective Custody form demonstrating subject was read and understood these rights must be completed.	An entry of custody in the report narrative shall be made indicating: o the date, time, place of custody; o the name of the assisting officer; o the name of the officer in charge; and o the name of the facility to which the person was transported.
Status of Protective Custody	Not an arrest	
Additional Considerations	Pursuant to General Order TRF-14 Operating Under the Influence -Alcohol, if a member places into protective custody a subject who has been bailed after having been arrested for OUI-Alcohol, the member shall process the subject according to MGL c. 111B and this General Order.	If a subject has been revived using naloxone (“Narcan”) and has regained consciousness, it may still be appropriate to place the subject into protective custody and transport that subject for medical attention, if the training and experience of the officer indicate that further medical attention is appropriate.

Subject	Number
Protective Custody	**PRI-10**

Non-Secure Detention

A juvenile in protective custody under MGL c. 111B, §.8, shall be held in accordance to the requirements specified for non-secure detention. These requirements are:

1. The area where the juvenile is held is in an unlocked, multipurpose section, such as a report writing room or office;
2. The space is in no way designed for residential use;
3. The juvenile is held long enough to complete identification and processing, and then shall be released to a parent, guardian, legal custodian, other responsible adult;
4. The juvenile is under continuous visual supervision until released; and
5. At no time is the juvenile to be handcuffed to any stationary object.

Note: **A juvenile in protective custody shall not be placed in a cell.** A juvenile in protective custody may be handcuffed, but not to a stationary object, and shall not be considered in "secure detention".

Subject

Hazardous Materials

Policy

Department personnel, unless properly equipped and trained, shall not be deployed into areas that have been contaminated, or face an immediate and substantial threat of contamination with a hazardous material.

Definition

Hazardous Materials: Chemicals, biological agents or organisms, or radiological substances that are damaging to health or property.

Responding Members

If…	Then members shall…
There is no known or potential presence of a hazardous material on scene; or There is a hazardous material on scene, but it is properly secured and poses no threat of release:	• Respond with due caution; and • Ensure that the Emergency Response Guidebook is accessible.
It is possible to ascertain from a safe distance the identity of a substance or cargo via use of placards or other identification:	• Relay information to the Desk Officer; and • Consult the Emergency Response Guidebook.
There is an immediate and substantial threat of the release of a hazardous material on scene:	• Consult the Emergency Response Guidebook for guidance as to maintaining a safe distance from the area of possible contamination.
Dangerous conditions are observed:	• Take immediate action to ensure their own safety, the safety of other responding officers or personnel, and the safety of the general public; and • Communicate the nature of the threat to the Desk Officer.

Desk Officer

Upon receiving a report of an incident that may involve a hazardous material, the Desk Officer shall make every reasonable effort to obtain available information from the scene.

The following information shall be obtained and relayed to responding members and to the Troop Duty Officer:

- The type of container/vehicle;
- Whether the container/vehicle is leaking;
- Department of Transportation (DOT) placards, labels or numbers;
- Carrier name and any information found in shipping papers;
- Local area road and weather conditions; and
- Other responding resources and/or agencies.

Upon receiving a report of an incident that may involve a hazardous material, the Desk Officer shall notify:

- Assigned patrol and other members in the area;
- Troop Duty Officer;
- Local police department;
- Local fire department; and
- Department of Fire Services-Regional Hazardous Materials Team (877) 385-0822.

Desk Officer-Actual Release or Threat of Release

On receiving a report of an incident involving the actual release or threat of release of a hazardous material, the Desk Officer shall:

- Immediately notify the Troop Duty Officer;
- Notify available resources to include: local fire department, Department of Fire Services-Regional Hazardous Materials Team, Commercial Vehicle Enforcement Section, for initial emergency hazmat actions;
- Obtain expertise from the Emergency Response Guidebook regarding:
    - Scope of contamination; and
    - Minimum safe evacuation zone for unprotected individuals prior to deploying Department personnel; and
- Notify the Massachusetts Department of Environmental Protection at (888) 304-1133 and provide the following information:
    - Location;
    - Type and quantity of material released;
    - Suspected impacts if known (catch basin, wetlands);
    - Name, address, and phone number of carrier (if known);
    - Special conditions which responders should be aware of to facilitate the safe mitigation of the release; and
    - Any other information which may be helpful.

Troop Duty Officer

The Troop Duty Officer shall:

- Dispatch a supervisor to the scene;
- Notify the Troop Commander;
- Notify GHQ Communications at (508) 820-2121; and
- When applicable, notify the Commercial Vehicle Enforcement Section at (978) 369-1004, or if after hours, GHQ Communications at (508) 820-2121.

Patrol Supervisor

Supervisors shall establish an outer perimeter, referencing the Emergency Response Guidebook and available expertise to determine an appropriate distance from the incident.

Supervisors shall:

- Ensure that Department personnel are not deployed contrary to the provisions of this policy;
- Establish a command post upwind and uphill (if possible) and at a sufficient distance from the hazard; and
- Follow incident command procedures.

GHQ Communications

If radioactive material is involved, the GHQ Communications Section shall notify the Department of Public Health Director of Radiation Control Program (617) 242-3055.

If no determination has been made as to who spilled the hazardous material, the GHQ Communications Section OIC shall notify the National Response Center (NRC) at (800) 424-8802.

Hazardous Materials Team

The head of the local fire department or designee shall activate the Department of Fire Services-Regional Hazardous Materials Team.

Available Official Expertise

The following are resources for information on hazardous materials:

- State expertise:
    - Department of Fire Services-Regional Hazardous Materials Team at (877) 385-0822;
    - Massachusetts Department of Environmental Protection at (888) 304-1133;
    - Department of Public Health Director of Radiation Control Program (617) 242-3055;
    - Bomb Squad; and
    - Commercial Vehicle Enforcement Section.

Continued next page.

Subject	Number
Hazardous Materials	**SOC-01**

Available Official Expertise (Continued)

- Federal expertise:
  - CHEMTREC at (800) 424-9300; and
  - The National Response Center at (800) 424-8802 provides emergency chemical/biological assistance twenty-four (24) hours a day.

- Additional resources:
  - Querying MQ in the task field of the CJIS computer, and entering the placard information; and
  - Consulting the Emergency Response Guidebook.

Subject

Bomb Threats/Explosive Incidents

Purpose

To establish and define the role of the Bomb Squad within the Division of Investigative Services- Fire and Explosion Investigation Unit (FEIU), and to establish guidelines for utilization and activation of their members.

Policy

The Bomb Squad is tasked with rendering safe any explosive (Improvised Explosive Device (IED), military or commercial explosives) within the Commonwealth of Massachusetts. The FEIU Commander or designee is responsible for determining a response to any bomb threat.

The Department shall:

- Maintain and support a Bomb Squad comprised of members with specialized training, expertise, and equipment to include explosive detection K-9s.

The Bomb Squad shall:

- When assigned, assist officers from the Department and from other local, state, federal and military agencies to deal with potential life threatening explosive related incidents, chemical, biological, radiological and nuclear (CBRN) incidents as well as clandestine drug lab activity;
- Train first responders in explosives and IED recognition; and
- Develop, under the direction of the Section Commander, a unit specific Standard Operating Procedure (SOP) which shall be maintained and updated as necessary.

Response Guidelines

Since the validity of a bomb threat cannot be determined initially, the decision to evacuate or to re-occupy the threatened premises is the responsibility of the owner or manager of the premises or the head of the fire department or designee.

Department members shall not order an evacuation based only on a threat. If advice is sought from the Department, the recommendation should be to follow the Massachusetts Bomb Threat Response Guidance.

If a suspected explosive device or suspicious package has been located or if there is a perceived threat, the head of the fire department or designee has the authority to order an evacuation under MGL c.148.

Subject	Number
Bomb Threats/Explosive Incidents	**SOC-02**

Utilization of Bomb Squad

Bomb Squad Team members are available twenty-four (24) hours a day for:

- Rendering safe any explosive (IED, military or commercial explosives);
- Security sweeps for high profile events and visiting dignitaries;
- Response and technical assistance/advice for bomb threats;
- Weapons searches with Explosive K-9s;
- Homeland Security assignments;
- Retrieval and remediation of energetic materials to include ammunition, fireworks, gun powder, etc.; and
- Other special events/incidents as assigned.

Emergency Activation Protocol

Requests for the Bomb Squad shall be made to the Troop Duty Officer and shall include:

- The name, rank, and agency name of the requesting officer;
- The name of the primary point of contact and a direct call-back number;
- The nature of the request; and
- The exact location of the incident and any designated staging areas.

The Troop Duty Officer shall make appropriate Daily Administrative Journal entries.

Activation/ Contact

Type of Request	Contact
Emergency	• Troop Duty Office of jurisdiction.
Non-emergency	• During business hours contact the FEIU at 978-567-3310. • After business hours contact the Troop Duty Office of jurisdiction.

Authority

Any officer who encounters or seizes any bomb or other high explosive is required under MGL Chapter 266, Section 102D(a) to make immediate notification to the State Fire Marshal. Bomb Squad members shall assume complete control and authority of any explosives render-safe procedure under Incident Command System (ICS) protocols.

While at an active scene, command and control of the scene shall be exercised only by:

- Bomb Squad Commander or designee;
- FEIU Commander or designee;
- Unified Commanders on scene (ICS);
- Division of Investigative Services Commander or designee; or
- Superintendent/Deputy Superintendent.

Subject	Number
Bomb Threats/Explosive Incidents	**SOC-02**

Response Protocols

All Department members shall take appropriate measures to ensure the safety of people and property while awaiting the arrival of the Bomb Squad.

The first on-scene or investigating member shall assess the situation and determine the need for additional resources including, but not limited to:

- Local Police/Fire Department(s) as well as additional Department resources to include: Crime Scene Services, State Police Detective Unit of jurisdiction, Commonwealth Fusion Center;
- Emergency Medical Services (EMS); and
- Traffic control.

To reduce the risk of detonation, members responding to an explosives threat or incident shall NOT:

- TOUCH, MOVE or DISTURB any suspicious objects, items or packages;
- Allow anyone within three-hundred (300) feet of a suspicious device;
- Allow anyone to be in the path of possible shrapnel or flying glass;
- Utilize electronic communication devices within close proximity to the unattended/suspected item; or
- Direct flashlight beams onto a possible device or use a camera flash (in order to prevent activation by photoelectric cell).

Never rule out the possibility of a secondary or tertiary device.

Responding members shall remain on the scene until properly relieved.

Evidence Considerations

Evidence and materials collection shall be coordinated by FEIU members. Evidence custody shall remain with the lead State Police case officer.

After Action Reporting

Following the completion of any critical incident, Bomb Squad members may be debriefed.

The Bomb Squad Commander or designee is responsible for the completion of any after action reports or Bomb Squad reporting as applicable. After Action Reports shall be forwarded to the Division of Investigative Services Commander for review.

March 25, 2020	**SOC-03**

Subject:

Emergency Planning

Purpose

To maintain and ensure the Department's compliance with Homeland Security Presidential Directive 8 (HSPD-8) with regards to emergency planning.

Policy

The Department shall develop and implement an emergency operational response strategy to address potential public safety threat(s) or the actual occurrence(s) as identified in HSPD-8.

General Considerations

The Department must plan for foreseeable emergencies.
Certain incidents require preplanning by Troop/Section Commanders within specific operational areas. Examples of these include:

(1) A general emergency that may result from a natural or man-made disaster, including civil disorder, acts of terrorism and / or other unusual occurrences.

(2) Disasters including floods, hurricanes, earthquakes, explosions, and tornadoes.

(3) Civil disorders including rioting and other acts of violence.

(4) Planning for special operations that require general emergency planning concepts.

(5) Plans for application to site and situation specific circumstances when time allows, such as hostage or disturbances at correctional facilities.

Plans may be general initially and then become specific. In some circumstances, such as localized weather emergencies or dignitary protection details, certain information may not yet be known, but as much general information as possible should be preplanned with specifics inserted as the emergency occurs; emerging data or circumstances can be addressed as soon as they develop or can be predicted. Target areas and populations should be identified with equipment, personnel needs, the location of staging areas and emergency shelter locations identified beforehand.

Planning for emergency operations promotes efficiency. Preplanning allows for immediate and decisive action that can minimize loss of life, reduce property damage and permit involved authorities to fulfill their responsibilities. Other efficiencies include:

- Emergency equipment can be acquired and readied for deployment;
- Personnel requirements can be more accurately predicted;
- Coordination procedures can be devised and tested;
- Different strategies and tactical options can be assessed;
- Contingency responses can be developed; and
- Durable intelligence information can be assessed before the emergency occurs.

Subject	Number
Emergency Planning	**SOC-03**

General Plan Provisions

Emergency Plans should include the following provisions, as necessary:

1. Communications;
2. Situation Maps;
3. Field Command Posts;
4. Chain of Command (to include other agencies);
5. Casualty information;
6. Community Relations;
7. Public Information;
8. Rumor Control;
9. Other Agency Support & Liaison;
10. Military Support;
11. Martial Law;
12. Public Facility Security;
13. Transportation;
14. De-Mobilization Procedures;
15. Court & Prosecutorial Liaison;
16. Legal Authority;
17. Post Occurrence (Aftermath) Duties; and
18. After Action Incident Reports.

Responsibilities

Position	Duties
Colonel/ Superintendent	Shall: • Designate a Commissioned Officer as the Emergency Planning Officer; • Review and approve Emergency Operation Plans (EOPs) and Incident Action Plans (IAPs) submitted by the Emergency Planning Officer; and • Ensure that all EOPs written after October 2005 are National Incident Management System (NIMS) compliant.
Emergency Planning Officer (EPO)	Shall: • Maintain all Department emergency response plans and standard operating procedures (SOPs) devised for nuclear facilities, prisons, natural or man-made disasters, and similar circumstances; and shall also retain copies of Troop emergency response plans devised for DOC facilities; • Study, draft and maintain appropriate contingency plans for foreseeable circumstances or events for which a Department response may be required; • Prepare EOPs and IAPs and submit them to the Colonel/Superintendent; • Coordinate the creation of EOPs and IAPs with Division Emergency Planning Coordinators; • Annually review and update the EOPs and IAPs; • Ensure that all EOPs written after October 2005 are NIMS compliant;

Continued on next page

Responsibilities (continued)

Emergency Planning Officer (EPO) (Continued)	• Coordinate Department contingency planning and liaison with the Massachusetts Emergency Management Agency and the Military Division of the Commonwealth; • Ensure plans for a Department response to terrorism and civil disorder are created and maintained; • Review Department emergency response plans at least annually and report the results of this review in a written report to the Division Commander of Homeland Security and Preparedness; and • Ensure the Department maintains a minimum of a 60 day supply of: Personal Protective Equipment (PPE), decontamination and cleaning products, and individual hand sanitizers, unless otherwise directed by the Colonel.
Division Commanders	Shall: • Designate a Commissioned Officer as the Division Emergency Planning Coordinator; • Evaluate EOPs and IAPs through simulation exercises prepared by the Emergency Planning Officer; • Report deficiencies in EOPs and IAPs to the Emergency Planning Officer; and • Ensure that all EOPs written after October 2005 are NIMS compliant.

Troop/Section Commanders	Shall:
	• Designate a Commissioned or Non-Commissioned officer as the Troop/Section Emergency Planning Coordinator;
	• Evaluate EOPs and IAPs through simulation exercises prepared by the Emergency Planning Officer;
	• Report deficiencies through channels in EOPs and IAPs to the Emergency Planning Officer; and
	• Each Troop Commander shall develop, at a minimum, the framework of a plan to implement an initial response for the following types of incidents:
	  ◦ Natural or man-made disaster;
	  ◦ Civil disturbances and other unusual occurrences;
	  ◦ Hostage situations and barricaded persons;
	  ◦ VIP protection details; and
	  ◦ Other special events.

Troop/Section Emergency Planning Coordinator	Shall: • Assist the Division Emergency Planning Coordinator with the establishment of EOPs and IAPs; • Prepare and annually update, the Troop/Station/Section/Unit Emergency Planning Manual, EOPs and IAPs; and • Act as the liaison with the Division Emergency Planning Coordinator.

Subject	Number
Emergency Planning	**SOC-03**

Emergency Planning Manual

The Department shall maintain and annually update an Emergency Planning Manual for the purpose of responding to and controlling hazardous situations through the prudent use of Departmental and external resources.

The Emergency Planning Manual shall be located at every State Police facility. It shall be updated annually, or as required.

The Manual shall include all current EOPs, IAPs, operational guidelines, on site operational instructions, personnel and equipment resource inventories and other necessary information, including but not limited to:

- Personnel and skills;
- State Police property and buildings;
- Supplies (food, fuel, clothing);
- Vehicles;
- Arrest/confinement procedures;
- Topographical maps;
- Support equipment;
- Incident Command Posts;
- Field Command Posts;
- Communications;
- Miscellaneous Equipment (generators, boats, etc.);
- Fleet vehicles;
- After action reporting;
- ICS Form 205;
- ICS Form 205A-OS;
- ICS Form 206; and
- Identified Staging Areas.

Drafting Emergency Plans

When drafting an emergency response plan or SOP:

1. Describe all adverse elements.
2. Use available intelligence summaries (Fusion Center); and
3. Involve partner agencies with planning or operations, including but not limited to:

Local police departments;
Local fire departments;
Massachusetts Emergency Management Agency (MEMA);
Military Division of the Commonwealth;
MassDOT;
Massport;
Department of Corrections (DOC);
Courts;
Massachusetts Water Resources Authority(MWRA);
Department of Conservation and Recreation (DCR);
Mutual aid states (NESPAC);
Alcohol, Tobacco, and Firearms (ATF);
U.S. Secret Service;
Homeland Security;
Federal Bureau of Investigation (FBI);
National Transportation Safety Board (NTSB);
Federal Aeronautics Administration (FAA); and
U.S. Department of Defense.

Continued on next page

Drafting Emergency Plans (continued)

A plan should begin with a general assumption that an emergency will develop within the Commonwealth and:

- Normal procedures will not adequately protect life or property or preserve order; and
    - Will be beyond the capabilities of local authorities and shall require Department assistance; or
    - Will be beyond the capabilities of local authorities and the Department and may require National Guard or federal assistance to protect life and property and maintain order;
- That a national emergency may require the full resources of the Department to conduct emergency operations; and
- Immediate and decisive action is required to minimize loss of life, reduce property damage and permit involved authorities to fulfill their responsibilities.
    - Emergency equipment can be acquired and readied for deployment;
    - Personnel requirements can be more accurately predicted;
    - Intra-Department and interagency coordination procedures can be devised and tested;
    - Different strategies and tactical options can be assessed;
    - Contingency responses can be developed; and
    - Durable intelligence information can be assessed before the emergency occurs.

Planning Exercises

The expanding scope and sophistication of emergency operations, along with increased possibilities of acts of terrorism, require agency personnel to quickly act to stabilize and control emergency situations. Proactive emergency planning exercises for these circumstances shall be conducted as follows:

1. Documented annual rehearsals and training exercises regarding emergency incidents are essential for all agency personnel to be fully prepared for actual occurrences and special operations.
2. Training exercises may involve mock exercises, actual exercises, tabletop exercises, in-service training and/or Troop/Section/Unit training.
3. These rehearsals will be used to evaluate the effectiveness, efficiency and applicability of emergency plans in different situations and will include the involvement of those agencies expected to participate in the actual incident.
4. The Division Commander, designated as lead by the Colonel/Superintendent, will determine the extent, scope, and format for the exercise.
5. In the event of an actual implementation of an Emergency Plan due to a natural or man-made disaster incident, the actual implementation of the plan will replace any planned exercise.

Continued on next page

Subject	Number
Emergency Planning	**SOC-03**

Planning Exercises (continued)

6. The After Action Incident Report required for all natural or man-made disasters will serve as the critique of the Emergency Plan.
7. A documented analysis and evaluation of any Incident Command System activation incidents, as well as all intra-agency training & rehearsals, will be prepared at least every three years by the Division Commander of Homeland Security and Preparedness or designee.

Annual Training

Troop/Section Commanders shall coordinate annual emergency operations/incident command training exercises. This exercise may be limited to Troop/Section drill, or may include outside agencies such as local police/fire departments, EMS teams, state level response teams, media, non-profit agencies and other entities related to the exercise. When conducted in conjunction with other agencies, the exercise may consist of a tabletop exercise, drill, emergency operations center simulation, or functional exercise involving actual response scenarios.

Troop/Section Commanders shall submit a summary of incident command training exercises conducted to the Emergency Planning Officer no later than October 1st of each year. Upon review by the Division Commander of Homeland Security and Preparedness, the summaries shall be forwarded to the Office of the Superintendent.

The Office of the Division Commander of Homeland Security and Preparedness shall maintain a file of all incident command exercises conducted, and may recommend future training or exercises based on prior training or identified need.

Emergency Plan Availability

Any commander may request an existing emergency plan from the Emergency Planning Officer and/or from a Section/Troop headquarters.

Emergency plans containing confidential or sensitive information shall be securely maintained.

Department of State Police
General Order

Policy Date:	Number:
March 25, 2020	**SOC-03A**

Subject:

Emergency Operations Center (EOC)

Purpose

To provide guidance to personnel regarding the activation and operation of the Department's Emergency Operations Center (EOC).

Policy

The Department realizes the necessity of an effective response to public safety emergencies as a result of severe weather, terrorist activity, violent protest, natural and/or man-made disasters, through the prudent use of available resources.

State Police Emergency Operations Center

The Superintendent/Deputy Superintendent shall activate the EOC when deemed necessary. The EOC shall:

- Coordinate the deployment of Departmental resources in response to an emergency or incident;
- Coordinate the deployment of responding officers to an incident or an incident staging area;
- Direct the security level of response to a potential/actual threat; and
- Operate in conformance with established EOC Guidelines.

State of Emergency

Upon the declaration of a "State of Emergency" by the Governor, the Superintendent/Deputy Superintendent has the authority (within prescribed limits) to commit resources of the Department, or request resources from outside the Department, as deemed necessary, to mitigate the effects of the emergency and to minimize the disruption to public safety.

The Superintendent/Deputy Superintendent shall activate the EOC and shall establish the appropriate security level when necessary.

Upon the declaration of a "State of Emergency" after normal business hours the Watch Center Unit shall immediately notify:

- Superintendent/Deputy Superintendent;
- The EOC on-call personnel;
- Division Commanders; and
- Division of Homeland Security and Preparedness- Emergency Management Unit.

Security Level Guidelines

Upon authorization by the Superintendent/Deputy Superintendent, the EOC shall establish the appropriate security level when necessary. The EOC Director may add, delete, or modify the listed security level procedures in accordance with prevailing circumstances. Security levels and the corresponding response(s) within each level shall be determined by the specific credible information available at that time.

Subject	Number
Emergency Operations Center (EOC)	**SOC-03A**

Security Level Procedures

Level	Tasks
I	• ID Check enforced at State Police facilities and identified sites; • Note and report suspicious circumstances, packages and activities; • Ensure building integrity and security; and • Exercise heightened caution when responding to calls for service.
II	*Includes Tasks Assigned At Level I and:* • Implement physical security measures and post security personnel as appropriate; • Identify all vehicles within operational and support areas; • Conduct cursory checks for suspicious items, persons and vehicles as necessary; • Verify and inspect all inbound deliveries and services; • Check delivery and service persons for authenticity with their respective companies; • Exercise extreme caution when responding to suspicious calls for service; • Monitor potential target areas; • All personnel shall wear ID cards in State Police facilities unless in duty uniform; and • Escort all visitors (non-MSP) in State Police facilities.
III	*Includes Tasks Assigned At Levels I , II, and:* • Erect barriers and obstacles (e.g. Jersey Barriers) to control traffic; • Suspend all non-essential contract work or deliveries; • Conduct detailed searches of all operational areas and vehicles; and • Limit or restrict parking around sensitive areas and buildings.
IV	*Includes Tasks Assigned At All Levels and:* • Verify the identities of all personnel and need for access; • Deny access to all personnel not associated with local, state or federal agencies; and • Restrict/deny parking in controlled areas.

Subject	Number
Emergency Operations Center (EOC)	**SOC-03A**

Responsibilities

Position	Duties
Superintendent/ Deputy Superintendent	Shall: • Review available information provided by the EOC; • Ensure that the Department is operating at the appropriate security level; • Notify the EOC in the event that conditions warrant a change to the existing security level; • Assign the EOC Director; • Authorize the EOC Director to disseminate security level changes throughout the Department; and • Ensure EOC guidelines are developed and kept current.
Emergency Operation Center Director	Shall: • Collect and analyze information regarding Department security levels during personnel redeployment; • Forward recommendations that warrant a change to the Security Level or procedures to the Superintendent/Deputy Superintendent; • Immediately notify the Division Commanders, Commonwealth Fusion Center, Watch Center Unit, and the Emergency Planning Officer of any changes to the security level; • Disseminate security level changes to each Division/Troop/Station/Section/Unit via radio, telephone, internet, fax or any other means as necessary; and • Develop EOC guidelines as directed by the Superintendent/Deputy Superintendent.
Division Commanders	Shall: • Ensure compliance with the appropriate security level and the established procedures; and • Ensure officers under their command are informed of changes to the security level.
Troop/Station/ Section/ Unit Commanders	Shall: • Notify members who are reporting for duty or members who are re-deployed of the current security level and the established procedure(s) in place.
Sworn/Essential/ Non-essential Personnel	Shall: • Familiarize themselves with the current security level and established procedures.

Continued on next page

Subject	Number
Emergency Operations Center (EOC)	**SOC-03A**

Commonwealth Fusion Center	Shall: • Provide information to the EOC to assist in situational awareness and development of a common operating picture; • Provide the EOC with a secure, comprehensive mechanism for the timely exchange of information if requested; • Provide the EOC with accurate and timely intelligence products such as bulletins, intelligence and informational briefings, and strategic assessments; • Provide the EOC with direct analytical support for events involving precursor criminal activity; and • Provide the EOC with awareness of priority intelligence requirements and of indicators of threats to the Commonwealth.
Watch Center Unit	Shall: • Provide notification of a State of Emergency as directed by this policy; • Act as the Department's point of contact during a State of Emergency until the EOC is functional;and • Provide assistance to the EOC as directed by the Division Commander of Homeland Security and Preparedness or designee.

Promulgated By:

Col Clogg S MA

Department of State Police
General Order

Effective Date	Number
March 25, 2020	**SOC-03B**

Subject

Response to Emergency Situations

Purpose

To provide guidance for the Department's response efforts to public safety emergencies.

Policy

The Department realizes the necessity to effectively respond to public safety emergencies as a result of severe weather, terrorist activity, violent protest, natural and/or man-made disasters, through the prudent use of available resources.

Emergency Operations Center (EOC)

The Superintendent/Deputy Superintendent shall activate the Emergency Operation Center (EOC) when deemed necessary. The EOC shall:

- Coordinate logistics for Troop/Station/Section/Unit personnel redeployment; and
- Operate under established EOC Command Coordination guidelines.

Stages of Personnel Redeployment

The Superintendent/Deputy Superintendent shall authorize the EOC to initiate the following action during the potential threat or occurrence of an emergency/incident.

	If…	**Then…**
Stage I Redeployment of Personnel	A threat or occurrence of an emergency or incident raises the potential for a shift to be held over or the redeployment of sworn personnel…	• Alert personnel of potential shift hold over and/or prepare for deployment; • Temporarily re-deploy an appropriate number of sworn personnel within the affected Troop(s) and Division; and • Hold over an appropriate number of on-duty sworn personnel.
Stage II Redeployment of On-Duty Personnel	A threat or occurrence of an emergency or incident creates a situation that is expected to require additional sworn personnel deployment beyond Stage I deployment …	• Re-deploy sworn on duty personnel as appropriate from the: 1. Division of Field Services; 2. Division of Investigative Services; 3. Division of Standards and Training; and 4. Division of Administrative Services.

Continued on next page

Stages of Personnel Redeployment (continued)

Stage III Redeployment of All Sworn and Essential Personnel	A threat or occurrence of an emergency or incident requires a full deployment of sworn and essential personnel …	• Deploy all available sworn and essential personnel as necessary; and • The Superintendent/Colonel may initiate the cancellation of time-off and establish extended work hours as appropriate.

Declaration of State of Emergency

Upon the declaration of a "State of Emergency" by the Governor, sworn and essential civilian personnel (excluding personnel on suspension, injury, or other approved leaves) shall immediately:

- Contact their duty assignment supervisor or other supervising officer within the chain-of-command for specific instructions.

The Superintendent/Colonel may initiate the cancellation of time-off and establish extended work hours as appropriate pursuant to Collective Bargaining Agreement Article 8 Section 1D.

Security Level Guidelines

Upon the authorization by the Superintendent/Deputy Superintendent, the EOC may establish a specific security level in conjunction with personnel redeployment or when circumstances dictate. The EOC Director may add, delete or modify security level procedures when necessary. Refer to SOC-03A for security level guidelines.

Responsibilities

Division Commander	Shall: • Ensure compliance with the appropriate security level procedures; and • Ensure officers under their command are informed of changes to the security level.
Troop/Station/ Section/ Unit Commander	Shall: • Notify members who are reporting for duty or members who are re-deployed of the current security level and the established procedures in place.
Sworn/Essential/ Non-essential Personnel	Shall: • Familiarize themselves with the current Security Level and established procedures.
Incident Management Assistance Team	Shall: • Provide statewide incident management support for all Department emergency operations, on a 24-hour basis; and • Provide Incident Command System (ICS) compliant framework/systems to Incident Commander(s) when requested.

Subject	Number
Response to Emergency Situations	**SOC-03B**

Emergency Response ICS Framework

The Incident Command System (ICS) provides the basis for response once an incident or event requires more than a single agency response, is multijurisdictional, extends into multiple operational periods, or requires the assistance of highly trained and specialized resources to assist in the tactical response and/or management of the incident or preplanned event. Refer to SOC-03D Incident Command System (ICS)

First On Scene

The initial arriving member is critical for assessing the nature and extent of incidents, and for initiating ICS-based response when needed. Upon arrival at the incident, the initial arriving Critical Incident Responder / Supervisor becomes the Incident Commander until he/she is relieved or command is transferred. The initial arriving Critical Incident Responder / Supervisor should ensure that the following critical tasks are initiated:

- Determine nature & scope of incident;
- Establish command & a Command Post. Announce location by radio;
- Establish communications with dispatch, Troop Duty Officer and assigned officers;
- Identify and secure the Hot Zone. Announce location(s) by radio;
- Establish inner & outer perimeters. Announce location(s) by radio;
- Request resources as needed. Cancel outstanding request(s) upon arrival of requested resource(s);
- Establish and secure a staging area between the inner & outer perimeters. Announce location by radio;
- Designate a Staging Area Manager. Announce by radio;
- Consider the needs of special populations, including but not limited to:
    - schools – hospitals – nursing homes – known disabled persons;
- Reassess each step periodically; and
- Designate a Public Information Officer ("PIO"):
    - PIO: Establish and announce Media Staging Area in consultation with the Incident Commander;
    - All media inquiries shall be directed to the PIO ("Speak with one voice").

Incident Commander

Depending on the circumstances, the Incident Commander may be a Police, Fire / Rescue, EMS, federal, or other official. Where substantial police and fire/rescue objectives or resources are involved, a Unified Command will often be created, including senior fire and police officials, as well as officials from other public or private sector agencies / organizations with a major stake in the incident.

- NOTE: In the event of a Hazardous Materials incident, a Unified Command must be established. (SARA Act, 1986)

Direction from Incident Commander

All personnel responding to a critical incident, request for assistance, mutual aid request or responding to any critical incident requiring interagency assistance are subject to the direction and control of the Incident Commander, regardless of the Incident Commander's rank, department or agency. This command structure continues for the duration of the event and until the Incident Commander is relieved or command is transferred. Supervisors from all departments and agencies are responsible for implementation of this requirement.

Subject	Number
Response to Emergency Situations	**SOC-03B**

Uncontrolled Deployments

Uncontrolled deployments (sometimes referred to as self-deployment or self-dispatching), although initiated with good intentions, can create confusion, cause significant problems at crime and emergency scenes, and can lead to the destruction or inadmissibility of evidence, or injuries to self-dispatching individuals or assigned personnel. These and other forms of unauthorized and / or unreported presence at incidents / events, and unauthorized departures are inconsistent with ICS principals, and may not be eligible for compensation or reimbursement. The highest ranking supervisor responding from each agency is responsible for the control and coordination of all personnel from that agency and will coordinate that agency's response with the Incident Commander. The responding supervisor is responsible for deploying only the amount of personnel needed and requested by the Incident Commander. Department members shall not self-deploy to incidents.

Incident Command Post

The Incident Commander shall establish an Incident Command Post ("ICP," can be a building or vehicle) and advise dispatch of that location. Dispatch shall advise all on-scene and responding personnel of that information. The Incident Commander shall remain at and operate from the ICP. The Incident Commander may move the ICP if its location is threatened by expanding circumstances or hazards. If moved, its new location must be announced immediately to all personnel and to dispatch.

Liaison Officer

The Incident Commander shall designate a Liaison Officer, who shall be the point of contact between all Critical Incident Responders and the Incident Commander. The Liaison Officer shall meet and brief all responding Agency Representatives at a location to be determined, such as the ICP or the Staging Area.

Staging Area

The Incident Commander shall establish a Staging Area between the inner and outer perimeters. It should be large enough to accommodate the required resources and close enough to the incident to make tactical deployments effective and timely. All responding resources shall respond to the Staging Area for check-in unless otherwise directed by the Incident Commander. Resources should not respond to the ICP unless directed to do so by the Incident Commander or his designee.

Staging Area Manager

The Incident Commander shall designate a Staging Area Manager, who shall have authority for check-in and accountability of Critical Incident Responder arrivals and departures. The Staging Area Manager will remain in and operate from the Staging Area. All Critical Incident Responders shall report immediately upon arrival to the Staging Area Manager, and remain in the Staging Area until properly assigned.

Dispatch Notifications

Dispatch shall notify critical incident responder agencies of:

- the location, type and known extent of the emergency;
- the name, rank and agency of the Incident Commander;
- the location of and directions to the Incident Command Post and the Staging Area;
- the name and agency of the Staging Area Manager; and
- the name, agency and location of the Operations Section Chief (if a Unified Command is established).

Subject	Number
Response to Emergency Situations	**SOC-03B**

Requesting Assistance

When requesting critical incident assistance, Incident Commanders, Staging Area Managers and dispatchers should scale requests properly.

- Avoid issuing generalized calls for help; and
- Specify by name which agencies are being asked for assistance, how many personnel and any specialized skills needed (e.g.: negotiators, search-and-rescue, entry-team, etc.), along with requested special equipment types.

Reporting to Staging Area

All arriving Critical Incident Responders shall immediately report to the Staging Area Manager (SAM) located at the Staging Area for check-in. The SAM shall record the names, rank, agency, specialty, and equipment brought with them on NIMS ICS 211 Check-In-Form or other document.

After arrival and check-in at the Staging Area, one supervisor from each responding agency should report to the Incident Command Post or other location designated by the Incident Commander or Liaison Officer. That individual will serve as the responding agency's representative. That person should have authority delegated from his / her agency to make decisions on the deployment of his / her resources.

The SAM must carefully consider where arriving personnel are to park their vehicles. Blocking of streets, bridges, underpasses, etc., may hinder rapid arrival of essential emergency vehicles. Arriving personnel shall park where designated by the SAM.

Arriving personnel shall remain at the Staging Area until assigned by the Incident Commander or relieved.

Demobilization

Personnel located at the Staging Area who intend to demobilize from the incident shall contact the SAM and await his / her authorization before departing.

Agency Representatives wishing to demobilize their resources from the incident shall contact the Liaison Officer and await his / her authorization before departing; demobilization must be accomplished through and according to the direction of the SAM.

A proper demobilization plan shall be completed to accurately record departing personnel and resource check-out time, notation of any apparent physical injuries or critical incident stress-related concerns, and include notations of any damaged or lost equipment. NIMS ICS 221 Demobilization Check-Out Form or other suitable document should be utilized.

Unified Command

A determination must be made promptly whether to continue under an Incident Commander, or via establishment of a Unified Command. If a Unified Command is established, a single, coordinated Incident Action Plan (IAP) must be agreed upon, and an Operations Section Chief designated by agreement to implement it. The Incident Commander remains in command until relieved by the Unified Command.

The Incident Commander or Unified Command must delegate the Planning Section Chief (PSC) to begin or expand the planning process by developing a single consolidated Incident Action Plan with appropriate NIMS ICS 204 Assignment forms for each responding resource that will be assigned to a Division or Group Supervisor, or Strike Team or Task Force Leader.

Subject	Number
Response to Emergency Situations	**SOC-03B**

ICS Support

All supervisors from Critical Incident Responder agencies have a continuing duty to support ICS-based operations, particularly with regard to unity of command, for the duration of the incident or event.

Subject

Response to Civil Disturbances

Purpose

To provide guidance for the Department's response to civil disturbances.

Policy

The Department realizes the necessity of an effective response to any civil disturbance through the prudent deployment of available Departmental resources.

Definition

Massachusetts General Laws c.269 s.1:

- An unlawful assembly exists when five or more persons, being armed with clubs or other dangerous weapons, or ten or more persons, whether armed or not, are unlawfully, riotously, or tumultuously assembled.
- An "Order to Disperse" shall be given to persons unlawfully assembled before any action can be taken against them.

Civil Disturbances Initial Inquiries

Whenever any law enforcement agency requests the assistance of the Massachusetts State Police for civil disorders, riots, etc., a request to such effect shall be made through channels to the Office of the Superintendent/Deputy Superintendent. The following minimum information is required:

- Requesting department, rank and name of the caller;
- Name of authorizing official and a call-back number;
- Specific facts surrounding the incident:
  1. Location;
  2. Number of officers on-scene/enroute;
  3. The reason or purpose for the disturbance; and
  4. Number of people causing the disturbance and whether armed, violent, or hostile.

Civil Disturbances Response

The "Order to Disperse" shall be given by the Incident Commander at the scene. The restoration of public peace should be accomplished first through persuasion. If necessary, force may be employed.

Crowd control objectives:

- Protect life and property;
- Contain and isolate the disturbance;
- Disperse as expeditiously as possible;
- Prevent re-grouping or re-entry; and
- Identify and take action against law violators.

Officers shall keep in mind the limitations imposed upon the Department in private business sector strikes.

Responsibilities

Position	Duties
Responding Officer	Shall: • Report with the current duty uniform and riot gear; • Report to the Incident Commander on-scene for instructions when responding in plainclothes; • Be issued additional restraining devices, as necessary, by the Supply Section; • Field search prisoners prior to entering an established Field Processing Area; and • Submit all appropriate reports using the incident case number as issued by the Incident Commander.
On-scene Department Incident Commander	Shall: • Order or verify that an "Order to Disperse" was issued to all persons to immediately and peaceably disperse; • Take necessary action if the crowd fails to disperse after being ordered to do so; • Request additional personnel and support through the Division Commander of Field Services; • At no time attempt to accomplish a police objective, unless sufficient forces are present to support such objective; • Establish a Field Processing Area when necessary; • Assign officers (e.g., security, intake, booking, evidence control, photo/ fingerprint, court officer, clean-up, etc.) as needed, to maintain a Field Processing Area; and • Prepare and submit an "After Action Report" within 24 hours after termination of all Departmental activities.
Division Commander of Field Services	Shall: • Ensure adequate uniformed personnel and tactical support remain in the affected area during and after order is restored for such period of time as deemed necessary by the Colonel/Superintendent; and • Ensure any further disruptions are addressed as expeditiously as possible.

Mass Arrests Logistics

The following procedures shall be used when a situation requires multiple arrests:

- Normal arrest procedures shall be used for all arrested individuals;
- All arrested individuals shall be subject to the appropriate bail procedures;
- Arrested individuals shall be expeditiously taken to a Field Processing Area;
- For record keeping purposes and whenever feasible, the arresting officer's name shall be written on the photograph of each individual they have arrested;
- As soon as possible, transport arrested individuals to an appropriate place of temporary confinement or released after booking as directed by judicial authorities;

Continued on next page

Subject	Number
Response to Civil Disturbances	**SOC-03C**

Mass Arrests Logistics (continued)

- Food, water, medical and sanitation needs shall be tended to as soon as reasonably possible;
- The face sheet/arrest report and Prisoner Property Inventory Form shall be sent with the transporting officer to the place of confinement or release;
- The court of jurisdiction and the appropriate District Attorney's office shall be apprised of the situation; and
- Contraband or evidence shall remain with an assigned Evidence Control Officer.

After Action Report

An After Action Report shall be prepared by the Incident Commander assigned to the scene. It shall begin with a numerical, chronological listing of all arrested individuals and shall contain, at a minimum:

- Number and source of complaints;
- Verbatim instructions given to the crowd and the name of the officer giving them;
- Department personnel on scene and their respective duties;
- Names of arresting officers and individuals arrested;
- Contraband and evidence seized;
- Damage to private/public property;
- Injuries to police/public; and
- Private/public agencies/personnel involved.

March 25, 2020	**SOC-03D**

Subject

All Hazards Incident Command Framework

Policy

The Department recognizes the Incident Command System (ICS) as a valid incident management system for use at the scenes of all emergency incidents. Regardless of the size or complexity of an incident, emergency responders must employ good management techniques to ensure an effective response and an efficient, safe use of resources. ICS helps emergency responders accomplish these goals.

While ICS is normally associated with responses to emergency incidents, the Department further recognizes that ICS can be applied to a wide variety of incidents requiring Department response.

Members shall use the incident management strategies outlined in this policy for all multiagency and multi-jurisdictional responses. In addition, and when applicable, members are encouraged to use these strategies for responses to incidents involving only the Department.

Purpose

To provide guidance for the Department's response efforts to emergencies and incidents.

Incident Command System Defined

ICS is an emergency incident management system that was originally developed by the fire services in the 1970s in response to a series of wildland fires in California. Over the years, ICS was refined by the fire services and emergency management organizations into an "all-risk" system that is now used for managing a wide variety of emergencies. Many police agencies throughout the nation have begun to include ICS principles in their incident management strategies.

The Federal Emergency Management Agency (FEMA) defines ICS as:

"An incident management system consisting of procedures for organizing personnel, facilities, equipment, and communications at the scene of an emergency."

- The system is based upon traditional business management principles such as planning, directing, organizing, coordinating, communicating, delegating, and evaluating. ICS provides a common organizational structure, or framework, within which participating agencies can work toward accomplishing common goals and objectives. While the system works well in all types of emergency incidents, its primary benefit is found in managing incidents of a multiagency or multi-jurisdictional nature.

- The federal government requires an ICS to be used at the scenes of hazmat incidents. This regulation has been promulgated by the Occupational Safety and Health Administration (OSHA) at 29 CFR 1910.120.

Major Components of the Incident Command System

- Common Terminology: Responding agencies can communicate at the scene of an emergency only if they have a common understanding of the terminology used by the various emergency responders. Common names are established and used for personnel, equipment, and facilities operating in and around the incident area.
- Modular Organization: An incident management system is valuable only if it can adapt to changing conditions at the scene of an incident. A common characteristic of emergency situations is that they seldom remain constant; the incident often will expand or contract. A modular organizational structure will allow the incident response to grow in direct proportion to the complexity of the incident. Conversely, the structure of the response can be scaled back as conditions improve and resources are no longer needed.
- Integrated Communications: Effective communications at the scene of an incident is essential for proper incident management. Whenever possible, responding agencies should be able to talk directly to each other through common radio channels. Furthermore, command personnel must be able to personally interact to formulate effective response strategies.
- Command Structure: ICS recognizes the key ingredient to any emergency response is to have an effective command structure to manage personnel and other resources. The command function may be organized in one of two ways:
- A *single command* involving one person may be used when there is no overlap of jurisdictional boundaries or when a single commander is designated by the agency with overall management responsibility for the incident. This person is normally referred to as the Incident Commander.
- Under a *unified command* structure, all involved agencies contribute to the command process by sharing management responsibility. A unified command structure is the preferred method when responding to emergencies of a multiagency or multi- jurisdictional nature. Even with a unified command structure, however, one person will still be in overall charge of the event.
- Span of Control: Span of control is defined as the number of subordinates one supervisor can manage effectively. ICS recommends that one person can properly supervise no more than three to seven subordinates, with the optimum number being five. Command officers must anticipate span of control problems and prepare for them as the modular organizational structure of the incident response expands.
- Consolidated Action Plan: ICS requires every emergency response to have a consolidated action plan.
    - For small incidents, this may be something as simple as the Incident Commander having a cognitive plan. For large scale events, the incident response may require a written plan, even as the event is unfolding.

Continued on next page

Major Components of the Incident Command System (continued)

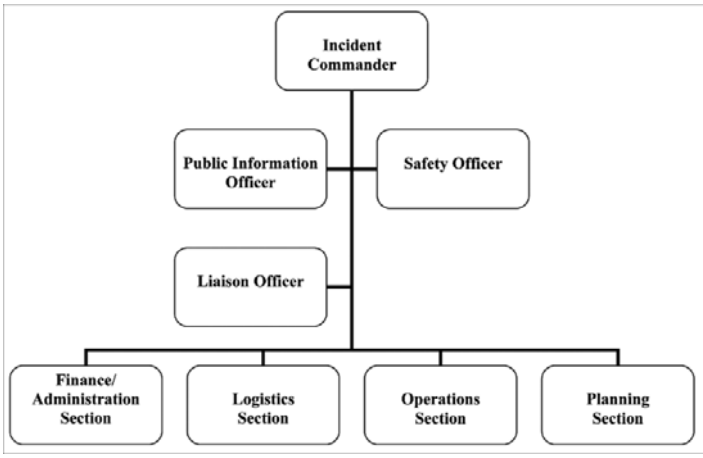
- ICS requires all plans to address strategic goals and tactical objectives.
  - A strategy is the overall plan that will be used to control the incident.
  - Strategic goals are broad in nature.
  - Tactical objectives are the tasks that must be accomplished to achieve strategic goals. Objectives are specific and measurable.

  For example, in a prison riot where inmates have overcome the guard staff and gained control of a cell block, the following goals and objectives might be established:

  - Strategic Goal: Retake control of the affected sections of a riot-torn prison by using the minimum amount of force necessary.
  - Tactical Objectives:
    - Secure the outer perimeter of the prison to ensure only authorized ingress and egress.
    - Mobilize a sufficient number of Department personnel to contain the uprising.
    - Secure unaffected housing units within the correctional facility.
    - Activate a counteraction involving tactical team members.
    - Ensure all injured persons receive appropriate medical attention.
    - Assist correctional authorities in restoring the facility to a sense of normalcy.
- Designated Incident Facilities: ICS recognizes that designated incident facilities can greatly assist the Incident Commander in managing the incident. For instance, a Command Post is designated to serve as the on-scene location from which all incident operations are directed. Similarly, staging areas are established to designate where available resources should report for assignment. Other facilities are established as the need arises.
- Comprehensive Resource Management: The Incident Commander is responsible to ensure all resources currently available are used effectively and efficiently. Resource management requires that the safety of personnel is given the highest priority. Incident Commanders must continually evaluate and adjust the deployment of resources at all incidents. If additional resources are needed to manage the incident, the Incident Commander must ensure they are obtained in a timely manner.

Incident Command System Functional Areas

The organizational structure of ICS requires the establishment of five key functional areas. In a small, single command structure, the Incident Commander will be able to perform all five functions. In a large scale event, however, the Incident Commander will designate section chiefs to manage the responsibilities of the various areas.



Continued on next page

Incident Command System Functional Areas (continued)

Command: Incidents are commanded by an Incident Commander, normally from the agency having primary jurisdiction, who is responsible for the management of all incident operations. As previously discussed, command may be established either through a single or unified command structure. The Incident Commander is responsible for the following activities:

- Assessing incident priorities.
- Determining strategic goals and tactical objectives.
- Developing and implementing the incident action plan.
- Developing an appropriate organizational structure.
- Managing resources.
- Coordinating overall emergency activities.
- Ensuring scene safety, proper liaison with other agencies, and disseminating information to the news media.

NOTE: In some large scale events, Incident Commanders must delegate authority to ensure the above responsibilities are properly addressed. Any functions not specifically delegated by the Incident Commander remain the responsibility of the Incident Commander. Any one or all of the functional areas depicted in the following diagram may be established as the need arises.

Operations Section: The Operations Section is responsible for the management of all tactical operations at an incident. The most common reason for staffing operations is to relieve span-of-control concerns for the Incident Commander. Some incidents may become so complex that the Incident Commander may no longer be able to solely supervise all operational aspects of an incident. An Operations Section Chief will be able to assist the Incident Commander by:

- Assisting in development strategic goals and tactical objectives for the incident;
- Developing operational plans;
- Requesting or releasing resources through the Incident Commander;
- Consulting with the Incident Commander about the overall incident action plan;
- Keeping the Incident Commander informed of the progress of the incident and the status of resources;
- Supervising the Staging Area Manager.

Continued on next page

Incident Command System Functional Areas (continued)

Planning Section: The Planning Section is responsible for the collection, evaluation, dissemination, and use of information about the development of the incident and the status of resources. Planning includes an assessment of the current situation and a projection of future conditions. Members in the Planning Section maintain information about resources committed to the incident and projected resource requirements. The modular nature of ICS also allows the planning function to be expanded in scope to include the following Subdivisions or Units:

- Resource Unit: The Resource Unit provides answers to the following questions which are important to the Incident Commander: What resources (personnel and equipment) are currently committed to the incident? Where are these resources assigned? Are all personnel accounted for at shift changes? Are additional resources necessary? Where can they be obtained?

- Situation Analysis Unit: Members in the Situation Analysis Unit analyze the incident as it progresses. They help the Planning Section Chief and the Incident Commander develop a consolidated action plan and determine if the plan is being followed and whether the plan of action is having the desired effect. Members of this Unit will also offer alternatives to the Incident Commander in those situations where the original plan must be modified.

- Documentation Unit: The Documentation Unit is responsible for recording the incident and protecting all documents relevant to the incident. Examples include Incident Reports, Communication Logs, CLEAN Messages, Injured Employee Statements, correspondence, and directives from various sources. In all incidents, thorough documentation is essential to permit proper after-action analysis. In major emergency incidents, a member should be assigned to collect information for the After-Action Report while the incident is still ongoing. This will ensure the availability of appropriate documentation for reporting purposes and will also ensure a timely completion of the After-Action Report (refer to Chapter 3).

- Demobilization Unit: The Demobilization Unit should begin preparing for the orderly and controlled withdrawal of resources from the scene of the emergency while the incident is still unfolding. This will ensure that resources are properly managed and that the scene is returned to a state of normalcy as soon as possible after the incident has terminated.

- Technical Specialists: Technical specialists should be included in the planning function whenever expertise is needed beyond the levels maintained by the Incident Commander and their immediate subordinates. Examples include hazmat personnel, engineers, industry representatives, explosives technicians, and radiation experts.

- CISM: Crisis Incident Stress Management Team personnel should also be included in the planning function.

Continued on next page

Incident Command System Functional Areas (continued)

Logistics Section: The Logistics Section is responsible for providing facilities, services, and materials to sustain the incident response. The logistical needs of the members assigned to an incident will grow in direct proportion to the size, duration, and complexity of the incident. The Logistics Section Chief may elect to establish functional Units to perform the following roles:

- Communications Unit: The Communications Unit will perform a vital role by developing and overseeing the operation of the communications infrastructure. Members of this Unit will ensure that proper equipment is available and that it is performing to acceptable standards. They will maintain the operational readiness of all radio, telephone, and CLEAN System communications at the Command Post and other incident facilities.

- Facilities Unit: The Facilities Unit will ensure the availability of adequate buildings and shelter for incident operations. Included in this category are such matters as Command Post location and operation, feeding and housing areas, sanitary facilities for field operations, and other fixed facilities necessary for the successful management of the incident.

- Procurement and Supply Unit: This Unit orders the equipment and supplies required for incident operations and maintains ongoing inventory and control of these resources. Examples in this category include clerical supplies such as paper and pens, as well as tactical supplies such as ammunition and tear gas.

- Food Unit: Incidents that operate for an extended period of time will require the procurement of food for participating personnel. In smaller incidents, this role may be handled within the Procurement and Supply Unit, e.g., when sandwiches are obtained for a 12-hour operation. However, for incidents that may extend for days, the Incident Commander and Logistics Section Chief may elect to contract food services from a local vendor. A Food Unit within the Logistics Section would be responsible for making the necessary arrangements.

- Other Service and Support Units: Other service and support Units can be added to the Logistics Section as the need arises.

Finance/Administrative Section: The Finance/Administrative Section is responsible for tracking all incident costs and evaluating the financial considerations of the incident. Financial considerations for a major Department mobilization can be extensive, especially when the Department tries to seek reimbursement for the operation or when detailed records must be prepared for budgetary or planning purposes. The Section Chief has the responsibility to document all incident costs and to provide guidance to the Incident Commander on financial issues that impact incident operations. As with other functional areas, the Finance/Administrative Section can be subdivided into Units to manage matters such as timekeeping, billing, and cost accounting.

Expansion: Not all of the above functional areas may be needed during an incident response. However, Incident Commanders must be prepared to expand their organizational structure if the need arises.

Incident Priorities

A member serving in the capacity of the Incident Commander has numerous duties and responsibilities to perform. These responsibilities will vary depending upon the nature of the incident and the number of available resources. One aspect of the emergency response that will not vary, however, is the recognition of three incident priorities. Regardless of the nature of the incident, the following priorities WILL ALWAYS be addressed in an emergency incident response:

- Life Safety: Life safety is the first priority for any emergency incident. This includes not only the safety of any victims involved in the incident, but also the safety of response personnel and populations surrounding the incident scene. Incident Commanders must place life safety above all other considerations of emergency incident management.
- Incident Stabilization: The Incident Commander's second priority is to formulate a strategy to stabilize the incident. Incident stabilization involves the development of a plan to minimize the effect the incident may have on the surrounding area and populations (e.g., with incidents of civil disorder, this priority will involve isolation of the perpetrators and containment of the disorder to prevent it from spreading; a hazmat response team might stabilize an incident by containing the spill at the scene of a crash and preventing runoff into nearby waterways).
- Property Conservation: Property conservation involves achieving strategic goals and meeting tactical objectives at an incident while minimizing property damage and inconvenience to uninvolved citizens. While this priority is clearly important, it should not weigh as heavily with the Incident Commander as the previous priorities of life safety and incident stabilization. Nevertheless, an emergency incident cannot be considered successfully managed if the Incident Commander does not give this priority proper consideration.

NOTE: In addition to the above priorities, restoration of traffic flow for incidents occurring on or around highways must be considered when normal traffic patterns are disrupted. Major highway incidents often create substantial disruptions to traffic, and it is the Incident Commander's responsibility to restore normal or limited traffic flow around the scene as soon as possible. Refer to TRF-05 Traffic Incident Management for additional guidance.

Incident Command Summary

When using the Incident Command System (ICS), members must be cognizant that the system is a management tool. ICS does not replace sound command decision making at the scene of an incident; it does not avoid the need for proper training and education; and it does not eliminate the need for establishing positive interagency relationships. The system does provide a broad management framework under which one agency or many agencies can operate at the scene of an emergency.

ICS makes the best use of available resources. Resources are essential to the management of any emergency incident. Some incidents, such as a minor non-reportable motor vehicle crash, can be managed with no resources other than the member assigned to make a record of the crash. Other incidents, such as a major prison disturbance, may require hundreds of personnel resources and dozens of pieces of equipment to successfully resolve the incident. ICS helps the on-scene commanders manage the resources at their disposal.

Continued on next page

Subject	Number
All Hazards Incident Command Framework	**SOC-03D**

Incident Command Summary (continued)

ICS does not, in any way, cause an agency to relinquish authority at the scene of an incident. On the contrary, this system recognizes the valid role that all emergency response agencies play at the scene of an incident. ICS further establishes a system in which the various responders can perform their individual roles in a unified manner with the other agencies represented at the scene.

ICS can be effective only when all members of an organization practice ICS principles in their day-to-day responses to emergency situations. ICS works best when members apply the principles taught in training to small, frequently occurring events, such as traffic collisions and minor crime scenes. As a result of this constant repetition and familiarity, members are then better able to manage the large-scale events such as prison riots and motor vehicle crashes involving multiple fatalities. ICS operating principles become so well established that they soon become an integral part of all incident management.

ICS Support

All supervisors from Critical Incident Responder agencies have a continuing duty to support ICS-based operations, particularly with regard to unity of command, for the duration of the incident or event.

For incidents falling within the primary jurisdiction of the Department, the highest ranking Department member at the scene shall assume the role of Incident Commander. However, to ensure command continuity, the temporary involvement of a higher-ranking member at the scene will not automatically require that member to assume the role of Incident Commander. If, in the opinion of the higher ranking member, the situation dictates that he/she remain at the scene, then the higher ranking member shall assume the role of Incident Commander.

Supervisors shall monitor the status of all incidents and ensure that an appropriate management strategy is employed.

ICS Training

The Commandant of the State Police Academy shall ensure Basic Incident Command System training is made part of the Recruit Training Curriculum.

Lost/Missing Person Searches

Policy

Every incident involving a lost and/or missing person shall be treated as a potential emergency event that may require a rapid and coordinated response of specialized personnel and equipment.

Members should understand that every lost and/or missing person incident has the potential of being or becoming a criminal investigation; members shall treat the scene of each incident as a potential crime scene.

If the missing person is identified as a child age seventeen (17) or younger and there is evidence of abduction, the Amber Alert Coordinator shall be notified.

Stage One Response Protocol

Upon receiving a report of a lost/missing person and/or receiving a request for Department assistance in locating a lost/missing person, the Desk Officer shall immediately gather as much information as possible, including, but not limited to:

- Name, age, and address of the missing person;
- Description of appearance/clothing;
- Activity at time of disappearance;
- Place Last Seen (PLS);
- Reporting person's information;
- Physical or general health condition;
- Any mental or cognitive deficiencies e.g., Alzheimer disease, dementia, or autism;
- Does the missing person have an electronic tracking transmitter;
- Involvement of any weapon;
- Requesting agency point of contact including their call back telephone number; and
- Action taken so far.

Continued next page.

Subject	Number
Lost/Missing Person Searches	**SOC-04**

Stage One Response Protocol (Continued)

Position	Duties
Desk Officer	• Dispatch the appropriate patrols; • Notify the Troop Duty Officer of all requests; • Broadcast all pertinent information over the radio; and • Make appropriate Daily Administrative Journal (DAJ) entries.
Troop Duty Officer	• Dispatch a supervisor to the scene; • Dispatch K-9 to the scene; • Make appropriate DAJ entries; • Check on the availability of Air Wing; • Dispatch Department members trained and equipped with electronic tracking receivers, when it is determined the missing person is equipped with an electronic tracking transmitter; • Dispatch other resources as needed; • Conduct an assessment of the "search urgency" by reviewing the current information. The following conditions may indicate a high search urgency: 1. Child under twelve (12) years of age; 2. Adult over seventy (70) years of age; 3. Mentally challenged individuals; 4. Physical conditions or health issues; 5. Extreme or deteriorating weather conditions; 6. Time of day; 7. Persons determined to be at risk to themselves; and 8. Other pertinent factors. • Ensure that a SP 622 Lost/Missing Person Questionnaire is completed by on-scene personnel.

Subject	Number
Lost/Missing Person Searches	**SOC-04**

Stage Two Response Protocol

Upon the need for a more comprehensive response as determined by:

- The requesting agency;
- The responding members; or
- Based upon a search urgency analysis.

The Troop Duty Officer shall request, through the GHQ Communications Section, that the Tactical Operations Commander or designee be contacted for a Stage Two Response.

The Tactical Operations Commander or their designee shall approve all Stage Two requests prior to any Stage Two Response activation orders.

When authorized, the Tactical Operations Commander or designee shall activate:

- Additional resources from within Tactical Operations (SERT, IMAT, Air Wing, Canine, Mounted, etc.) or
- Outside resources (Environmental Police, Department of Conservation and Recreation, Civilian Volunteers, etc.); or
- Other resources as needed.

Subject

AMBER Alert Activation

Policy

The Department shall initiate an AMBER Alert for cases of child abduction, where the child's life is in imminent danger of serious bodily harm or death, and specific criteria supporting the AMBER Alert Activation have been met.

Amber Alert Criteria

America's Missing Broadcast Emergency Response (AMBER) Alerts shall only be activated when:

- A child, seventeen (17) years of age or younger has been abducted;
- The child is in danger of serious bodily harm or death; and
- There is enough descriptive information to believe an AMBER Alert will help locate the child.

Note: AMBER Alerts are <u>not intended</u> for missing child incidents, runaways, or child custody situations.

Activation Procedures Duties / Responsibilities

Position	Responsibilities
First Responding Officer	• Conduct an initial scene assessment to determine if the AMBER Alert Criteria has been met; • Verify witness(s) observations to the abduction; • Notify the Desk Officer with specific information and request an immediate AMBER Alert Activation; and • Remain at the scene until relieved by a supervisor.
Desk Officer	• Dispatch the appropriate patrols; • Notify the Troop Duty Officer of jurisdiction with the specific information for an AMBER Alert Activation; • Broadcast pertinent information via the radio; and • Enter the AMBER Alert Activation request into the Daily Administrative Journal (DAJ).

Continued next page.

Subject	Number
AMBER Alert Activation	**SOC-04A**

Activation Procedures Duties / Responsibilities (Continued)

Position	Responsibilities
Troop Duty Officer	• Complete the AMBER Alert Activation Form and fax to GHQ Communications Section OIC; • Follow up fax with a call to GHQ Communications to ensure the fax has been received; and • Assign a supervisor to respond to the scene, who shall act as a liaison with the AMBER Alert Activator and/or Coordinator.
GHQ Communications Section OIC	• Notify the AMBER Alert Activator and AMBER Alert Coordinator with the specific information received from the AMBER Alert Activation Form; • Notify the Media Relations officer-on-call when an AMBER Alert Activation Request is received; • Notify the Division Commanders of Field Services and Investigative Services when an AMBER Alert Activation has been authorized; • Initiate the AMBER Alert Activation procedures when authorized; and • Enter the information into NCIC if the Department is the initiating agency.
AMBER Alert Activator	• Review the Massachusetts Child AMBER Alert Activation Form information; • Contact the Troop Duty Officer or requesting police department if further information is needed to support an activation; • Authorize the AMBER Alert Activation when specific criteria warrant such activation; • Notify the submitting Troop or local department when the AMBER Alert Activation is authorized or denied; and • Complete an after action report on all activations and forward: 1. The original to the Division Commander of Investigative Services.

Continued next page.

Subject	Number
AMBER Alert Activation	**SOC-04A**

Activation Procedures Duties / Responsibilities (Continued)

Position	Responsibilities
AMBER Alert Coordinator	• Oversee the AMBER Alert Activation Process within the Department; • Select the Massachusetts Child AMBER Alert Committee; • Act as a backup AMBER Alert Activation Officer; • Maintain a database on all requests; • Notify Division Commander of Investigative Services of all activations; • Review all requests for AMBER Alert Activations; • Complete an after action report on all activations; and • Submit findings through channels to the Office of the Superintendent.
Superintendent	• Assign a member as the AMBER Alert Coordinator; and • Assign Commissioned Officers from the Division of Investigative Services as the AMBER Alert Activator.

Subject

Special Considerations

Policy

In accordance with international, federal, and state laws, the following are entitled to special considerations and/or immunities:

- Diplomatic and consular officers;
- Foreign Nationals;
- Individuals requesting political asylum;
- Military personnel; and
- Elected officials.

Diplomatic and Consular Officers

Diplomatic Immunity

Diplomatic Immunity is a principle of international law accorded to duly-accredited diplomatic officers, their families, and their servants that afford them qualified exemptions from local jurisdictional prosecution.

Federal law grants members of foreign diplomatic missions and consular posts privileges and immunities in their offices, private residences, as well as in their papers and correspondence.

Members may consult the U. S. Department of State web site and search for the publication ***Diplomatic or Consular Immunity****- Guidance for Law Enforcement and Judicial Authorities (Revised July 2011)* for further information.

Identification

Foreign nationals who enjoy privileges and immunities possess a valid diplomatic passport issued by their country with a diplomatic "A" or "G" visa.

Other formal documents of identity issued by the U.S. State Department includes a (3¾" x 2½") card with photo which depicts:

- Blue border - Diplomatic officers and their families;
- Green border - Embassy administrative and technical staff and their families; or
- Red border - Consular officers, employees and their families.

Vehicle Registration

The State Department has revised the diplomatic and consular license plates. These plates may or may not designate consular or diplomatic codes to correspond to the owner's privileges and immunities. Members may consult

Continued next page.

Vehicle Registration (Continued)

the U.S. Department of State web site and search for the publication ***Diplomatic or Consular Immunity****- Guidance for Law Enforcement and Judicial Authorities (Revised July 2011)* for further information.

Members shall:

- Not tow or boot any vehicle bearing a diplomatic or consular license plate, however, the vehicle may be moved to the nearest safe location for reasons of public safety.

Diplomatic Immunity Incidents

The following individuals shall not be detained, handcuffed, or arrested:

- Diplomatic agents or their administrative and technical staff;
- Diplomatic level staff of the United Nations; or
- Family members of any of the above.

Exception: Reasonable restraints may be applied in emergency circumstances involving self defense, public safety, or the prevention of serious criminal acts.

Incidents involving foreign diplomatic and consular personnel shall be fully documented to assist the State Department in subsequent prosecution or expulsion.

Civil Infractions

No person is exempt from being issued a citation for a civil motor vehicle violation.

Diplomatic Immunity and OUI

If…	Then…
Operating Under the Influence and has a diplomatic "A" or "G" visa.	Sobriety tests may be offered but not compelled. Do not allow the person to drive, however, a member may: • Transport operator to a police station to arrange for safe transport; or • Contact a taxi, friend, or relative of the individual to drive, or assist in making arrangements.

Notifications

When any foreign diplomatic official, members of their family, or staff are involved in any State Police action the Troop Commander shall:

- Immediately notify their Division Commander; and
- Notify the State Department at (202) 895-3682 or call the telephone number listed on the reverse of the subject's identity card issued by the U.S. Department of State, if after regular business hours.

Subject	Number
Special Considerations	**SOC-05**

Foreign Nationals

Introductions

The State Department requires assistance from state and local police in carrying out certain international obligations arising from the arrest, detention, or death of foreign nationals (citizens of other countries).

For the purposes of consular notification, foreign nationals include lawful permanent resident aliens of the United States who have a resident alien registration card (commonly known as a "green card").

When foreign nationals are involved in an incident, members shall consult *"Consular Notification and Access"* provided by the Department of State, and are available to all stations via the web site at:

- http://travel.state.gov/consularnotification

International Drivers Licenses

Some foreign nationals, while in the United States, may legally drive using their country's license for up to one (1) year from the person's date of entry into the country, unless they establish permanent residency or employment in this country.

Massachusetts shall only honor valid licenses from countries identified within the current Massachusetts Driver's Manual Appendices:

- *Parties to the Road Traffic Convention and the 1943 Inter-American Automotive Traffic Convention*.

This publication is available to all members via the Massachusetts Registry of Motor Vehicles web site under:

- Forms & Manuals→ Driver's Manual→ Appendices "A".

This also applies to private vehicle registrations, when accompanied by a plaque indicating the country of origin.

An operator with a valid driver's license from Germany or Switzerland shall be considered to be duly licensed to operate in Massachusetts.

Foreign Nationals Arrest or Detention

Position	Duties
Member	• The arrest or detainments of a foreign national immediately notify a supervisor.

Continued next page.

Foreign Nationals Arrest or Detention (Continued)

Position	Duties
Supervisor	• Inform the detainee of their right to have their government notified; • Notify the Troop Duty Officer of the detention and of the notification of the detainee's rights; and • Subject to laws and Department procedures, allow consular officers to visit and converse with the detainee.
Troop Duty Officer	• Notify the Troop Commander; and • If the detainee requests, or if it is mandated, notify the appropriate consulate or embassy without delay, and document the notification.

Mandated Reporting

Agreements with certain countries mandate that they be notified when their nationals are confined or detained regardless of the national's request. These countries are listed in *"Consular Notification and Access"* provided by the Department of State, and are available to all stations via the web site at:

- http://travel.state.gov/consularnotification

Contact information for Foreign Consular Offices within the U.S. can be found at:

- http://travel.state.gov/law/consular/consular_745.html

Station Commanders shall ensure that the Consular Notification and Access List is updated and available in the guidebook.

Questions

Members who have questions regarding Consular Notification may contact U.S. Department of State at (202) 485-7703 or after regular business hours the Department of State Operations Center at (202) 647-1512.

Ship and Aircraft Incidents

If a ship or aircraft registered in a foreign country crashes within the United States, the nearest consular offices of that country shall be notified immediately.

Deaths of Foreign Nationals

Article 37 of the Vienna Convention on Consular Relations requires that if federal, state or local government officials become aware of the death of a foreign national in the United States, they must ensure that the nearest consulate of that national's country is notified of the death. Members who become aware of such incidents in the course of their duties shall make appropriate notification in a timely manner.

Subject	Number
Special Considerations	**SOC-05**

Requests for Political Asylum

Asylum

Protection and immunity from extradition granted by the United States to a foreign national who is unable or unwilling to return to their country of nationality because of persecution or a well-founded fear of persecution on account of race, religion, nationality, membership in a particular social group, or political opinion.

Request for Asylum

If approached by a foreign national seeking asylum:

Step	Action
1	Prevent attempts at forced repatriation, and try to make the person feel comfortable and safe: • Offer protection; and/or • Invite the person to the nearest Department station or facility.
2	Obtain personal data/history: • Name, nationality, date and place of birth, and any documents; • Whether person is alone or with a group; and • Whether person has family, friends, or relatives nearby.
3	Notify a supervisor and the Troop/Section/Unit Commander of the situation.
4	Notify U.S. Immigration and Customs Enforcement (ICE) Boston office (617) 565-3100/3104 to transfer the case.

Elected Officials

National Senators and Congressional Representatives

U.S. Senators and Representatives shall in all cases, except treason, felony, and breach of peace, be privileged from arrest during their attendance at the session of their respective houses, and in going to and returning from the same; and for any speech or debate in either house, they shall not be questioned in any other place. *(U.S. Constitution Article 1, section 6, clause 1.)*

Massachusetts State Senators and State Representatives

No member of the House of Representatives or Senate shall be arrested, or held to bail while going to, returning from, or attending the General Assembly. (Massachusetts Constitution Part 2 C.1 §3 Articles 10 & 11.)

If…	Then
A Senator or Representative, as outlined above, is en route to an official function associated within the scope of their duties:	• Release forthwith; and • Take action at a later date.
OUI or endangering public safety:	• Normal arrest process.

Subject	Number
Special Considerations	**SOC-05**

Elected Officials

Notification

The Troop Commander shall immediately notify the Division Commander and the Office of the Superintendent when any elected or appointed official is arrested or detained for a crime.

Military Personnel

Exceptions To License Requirements

Members shall be aware that Massachusetts General Laws (MGL) c.90, s.5B, s.9B, and s.10 allow several exceptions to license and registration requirements for members of the Armed Forces and their spouses.

Promulgated By:

Department of State Police
General Order

Effective Date	Number
July 29, 2014	**SOC-06**

Subject

Administration of Naloxone Hydrochloride (Narcan)

Policy

This policy shall establish protocol for Department members, in order to reduce life-threatening emergency of fatal opioid overdose, where medical professionals are not readily available, by administering naloxone hydrochloride.

Department members shall assist any person who may be suffering from an opioid overdose. Department members trained in accordance with this policy shall make every reasonable effort, to include the use of naloxone combined with First Responder Training, to revive the victim of any apparent drug overdose.

Definitions

Naloxone Hydrochloride or Narcan - An opioid receptor antagonist and antidote for opioid overdose administered in intramuscular, intranasal or intravenous forms. The intranasal form, using prefilled syringes compatible with Mucosal Atomization Device, is permitted for use by first responders under Massachusetts Office of Emergency Medical Services Statewide Protocol Standing Orders.

Mucosal Atomization Device – Used to deliver a mist of atomized medication that is absorbed through the nasal mucosa into a person's blood stream and into the brain and cerebrospinal fluid.

Opioids – Reduce the intensity of pain signals to the brain and affect those brain areas controlling mood, memory, reward and emotion, which diminishes the effects of a painful stimulus, but also can result in addiction. Opioids at high doses reduce the drive to breathe, which can result in inadequate oxygen to the brain and overdose. Medications that fall within this class include hydrocodone, oxycodone, morphine, codeine, and related drugs e.g., heroin potent illicit derived from morphine that is prohibited for medical use in the United States.

Continued next page.

Subject	Number
Dispensing of Naloxone Hydrochloride (Narcan)	**SOC-06**

Definitions (Continued)

Opioid Overdose – An acute condition including but not limited to decreased level of consciousness, respiratory depression, coma, or death resulting from the consumption of an opioid, or another substance with which an opioid was combined, or that a layperson would reasonably believe to be an opioid-related drug overdose that requires medical assistance.

Universal Precautions - is an approach to infection control to treat all human blood and certain human body fluids as if they were known to be infectious for HIV, HBV and other blood borne pathogens.

Training

Department members issued Naloxone Hydrochloride (Narcan), shall:

- Be trained by the Department's Medical Unit on the topic of responding to persons suffering from an apparent opioid overdose and the use of Naloxone Hydrochloride (Narcan); and
- Receive refresher training every two (2) years that may be done in conjunction with First Aid/CPR Training.

Training shall follow recommendations from the Office of Emergency Medical Services (EMS) - Department of Public Health, *Administrative Requirements Manual AR-2-100* as amended.

Issue of Naloxone

Department members who are authorized shall:

- Carry Naloxone Hydrochloride (Narcan) kit with a Mucosal Atomization Device according to EMS Statewide Treatment Protocols;
- Follow Naloxone Hydrochloride (Narcan) and First Responder training conducted by the Department's Medical Unit;
- Store Naloxone Hydrochloride (Narcan) kit with their first aid kits, however, during extreme hot and cold temperatures or when on extended leave, kits should be removed from vehicles and maintained at room temperature (59-86 degree F) away from direct sunlight;
- Report missing, damaged or expired Naloxone Hydrochloride (Narcan) kits to their immediate supervisor;
- Dispose of MAD syringes and Naloxone Hydrochloride (Narcan) vials in a biohazard sharps container; and
- Request replacement Naloxone Hydrochloride (Narcan) kits through channels to the Department's Medical Unit.

Immediate Supervisors shall:

- Document in writing any reports of missing, damaged or expired Naloxone Hydrochloride (Narcan) kits; and
- Forward the documentation through channels to their Division Commander's Office for further action in coordination with the Officer-In-Charge (OIC) of the State Police Medical Unit.

Subject	Number
Dispensing of Naloxone Hydrochloride (Narcan)	**SOC-06**

Use of Naloxone

When dispensing Naloxone Hydrochloride (Narcan) Department members shall:

- Maintain universal precautions;
- Follow training received from the Department's Medical Unit on protocols and procedures for the administration of Naloxone Hydrochloride (Narcan);
- Ensure SP 900 Naloxone Hydrochloride (Narcan) Administration Incident Record is completed for each Naloxone administration and forward through channels to the Department's Medical Unit.

Medical Unit

The Department's Medical Unit shall:

- Ensure Department members receive training in the dispensing of Naloxone Hydrochloride (Narcan) according to EMS and the Statewide Treatment Protocols;
- Authorize and supply members with Naloxone Hydrochloride (Narcan) kits as needed;
- Ensure SP 900 Naloxone Hydrochloride (Narcan) Administration Incident Record is forwarded to the identified Medical Director of the Naloxone Hydrochloride (Narcan) Program; and
- Keep training records of all Department members authorized to dispense Naloxone Hydrochloride (Narcan).

Subject

Domestic Abuse

Policy

The Department shall adhere to the Massachusetts Domestic Violence Law Enforcement Guidelines 2001.

Definitions

Abuse: For the purposes of this policy, abuse is defined by Massachusetts General Laws (MGL) c.209A, s.1 as the occurrence of one or more of the following acts between family or household members:

- Attempting to cause or causing physical harm;
- Placing another in fear of imminent serious physical harm; or
- Causing another to engage involuntarily in sexual relations by force, threat, or duress.

Family or Household Members: Persons who:

- Are or were married to one another;
- Are or were residing together in the same household;
- Are or were related by blood or marriage;
- Have a child in common regardless of whether they have ever married or lived together; or
- Are or have been in a substantive dating or engagement relationship, including same sex relationships.

Response

Domestic abuse situations are considered a high priority and require that members immediately respond to the scene. Notifications shall be made to the department of jurisdiction as appropriate with an offer made of Department assistance.

The State Police Detective Unit (SPDU) of jurisdiction shall be notified of all domestic abuse cases involving serious bodily injury or injury which results in a death.

Continued next page.

Response (Continued)

Position	Duties
Desk Officer /Dispatcher	• Whenever possible, two (2) members should be dispatched to the scene; • Provide available information as requested: 1. Existence of any warrants or protective orders, or record of criminal history; 2. Any other relevant information of prior incidents or likelihood of firearms being present; and 3. Record of Firearms Identification Cards and/or Licenses To Carry Firearms issued to resident(s); and • Notify the Troop Duty Officer. Note: A response shall not be terminated based on a follow-up call from the complainant.
Responding Member(s)	Whenever there is reason to believe that a family or household member has been abused, or is in danger of being abused, members shall: • Arrest the abuser where probable cause exists; • Request medical treatment if appropriate; • Activate the Emergency Judicial Response System (EJR); • Remain on the scene; • Immediately provide the abuse victim with copy of a SP 500 Abused Persons Notice of Rights; • Assist victim and dependent children to a safe place; • Provide referral information for programs, shelters, and counseling to victims; and • Inform victim that abuser may be eligible for bail.

Supervisor Responsibilities

Supervisors shall ensure the provisions of MGL c.209A, as well as these guidelines, are adhered to:

- That an incident report has been filed, even in cases where no arrest was made; and
- That calls which are received as allegations of domestic abuse or a domestic disturbance are not reclassified because no probable cause to arrest existed. Incident reports shall be filed in those cases as well.

If upon review of an incident report, it is believed that probable cause exists, the supervisor shall:

- If required, ensure that a follow-up investigation is conducted;
- Ascertain that appropriate referrals are provided to the victim; and
- Ensure that criminal charges are initiated according to MGL c.209A.

Notice of Rights

The investigating member shall immediate provide abuse victims with adequate notice of rights. The notice shall consist of:

- Handing the victim a copy of SP 500; and
- Reading the victim their rights.

When the victim's native language is not English, every attempt shall be made to provide the statement in their native language.

Confidentiality

A plaintiff's residential address and workplace address shall appear on the court order and be accessible to the defendant unless the plaintiff specifically requests that this information be withheld from the order.

Members assisting in emergency abuse prevention orders shall be cognizant of victims' confidentiality rights and requests.

Service of Orders

Service of orders shall be made in hand, unless otherwise ordered by the court. Orders shall be:

- Served promptly upon receipt. If service is initially unsuccessful, the Department shall continue to attempt service until it is completed. Service of orders shall not be delayed in order to be served by a specialized officer or unit; and
- Returned to the court promptly.

The victim's safety shall be considered in the timing of the service of the order. Members should encourage the victim to contact an advocate (either through the District Attorney's (DA) Office of jurisdiction, SAFEPLAN, or the local battered women's program) in order to develop a safety plan around the service of the order.

Troop/Station/Section/Unit Commanders shall maintain a record of all attempts at service.

Out of State Orders

Persons who violate out of state abuse orders, or violate Massachusetts abuse orders in another state, may be charged criminally for contempt in the Commonwealth of Massachusetts.

- In assessing probable cause, a member may presume the validity of the protection order issued by another jurisdiction when the member has been provided with:
  1. A copy of the order by any source; and
  2. A statement by the victim that such order remains in effect.

A protective order issued in another jurisdiction (as defined in MGL c.209A, s.1) shall be given full faith and credit in the Commonwealth. Therefore, members shall make a warrantless arrest of any person, when the member has probable cause to believe there is a violation of an emergency, temporary or permanent vacate, refrain from abuse, stay away or no-contact order, or judgment issued by another jurisdiction.

Firearms

In domestic abuse incidents, members shall seize all firearms in accordance with SOC-07A Domestic Abuse Arrest/Investigations.

Vacate Orders and Court Orders to Retrieve Belongings

Once a vacate, no contact, stay away, or refrain from abuse order is issued, members shall not accompany any party to the property without specific judicial authorization. A vacate order may include the following requirement:

- The defendant shall not damage any of the plaintiff's belongings, or those of another occupant, and shall not interfere with any utilities or mail delivery to the plaintiff.

The defendant in the vacate order may be allowed to retrieve their belongings under the following conditions and shall:

- Have a court order allowing for the retrieval; and
- Not be allowed to use this as a means of harassing the victim.

The victim/defendant shall have prior notice by the Department, and shall agree to the timing of the retrieval.

Note: Members need to keep in mind that certain behaviors by the victim or the defendant, while at the residence, may constitute a violation of the protective order. Repeated visits may also constitute a violation. The purpose of the restraining order is to keep the defendant away from the plaintiff. If the defendant repeatedly returns to collect their belongings, it is defeating the purpose of the protective order.

In cases where one party has a court order that allows them to return to a residence in order to retrieve their belongings, members shall:

- Accompany the victim to ensure the order is executed: and
- Ensure the victim is free from harassment or abuse by the defendant.

Referral Information

Troop/Station/Section/Unit Commanders shall ensure that referral information for programs, shelters, and counseling for victims are identified within their respective jurisdictions and available within the guidebook.

Subject	Number
Domestic Abuse	**SOC-07**

Confidential Programs Locations

A domestic abuse program is defined as any refuge, shelter, office, safe home, institution, or center established for the purpose of offering assistance to victims of abuse through crisis intervention, medical, legal, or support counseling.

The location and street address of all domestic abuse programs are absolutely confidential and shall not be revealed in any criminal or civil proceeding.

Under no circumstances shall law enforcement officers release information to anyone, other than another law enforcement officer or a victim, regarding the location of a domestic abuse program.

Effective Date	Number
April 23, 2009	**SOC-07A**

Subject

Domestic Abuse Arrest/Investigations

Policy

The Department shall respond and investigate allegations of domestic abuse while ensuring the rights and safety of all those involved.

Arrest Guidelines

The safety of the victim and any children shall be paramount in any decision to arrest, and in the timing of the arrest. The decision to arrest shall be based on whether or not probable cause exists that the crime occurred, not on whether or not the victim wishes to seek complaints or wishes to testify at a future date.

Mandatory Arrest: Members shall make a warrantless arrest of any person the member witnesses or has probable cause to believe has violated an emergency, temporary or permanent vacate, refrain from abuse, stay away or no-contact order, or a judgment, suspension, surrender and/or a protection order issued by any jurisdiction.

Arrest Preferred: When there are no refrain from abuse, vacate, stay-away, or no-contact orders or judgments in effect, arrest shall be the preferred response whenever a member witnesses or has probable cause to believe that a person has committed:

- A felony;
- An assault and battery of a family or household member in violation of Massachusetts General Laws (MGL) c.265, s.13A;
- A misdemeanor involving abuse, as defined in MGL c.209A;
- An assault and battery or permits another to commit an assault and battery upon an elder or a person with a disability in violation of MGL c.265, s.13K;
- An assault and battery with or without a dangerous weapon on an individual under the protection of an abuse prevention order, as defined in MGL c.265 s.13A(b)(iii) and 15A(c)(iii); or
- An assault on an individual who is known to be pregnant, or there is reason to know is pregnant.

Continued next page.

Subject	Number
Domestic Abuse Arrest/Investigations	**SOC-07A**

Arrest Guidelines (Continued)

When probable cause to arrest exists and the suspect has fled the scene, the member shall:

- Have the Desk Officer/Dispatcher advise area patrols and all local police departments as appropriate;
- Attempt to make a warrantless arrest; and
- Seek an arrest warrant from the appropriate court, as soon as possible.

A statement from a police department that probable cause to arrest exists shall be honored by another police department. When probable cause exists to believe a crime involving abuse occurred, members shall not advise the victim to seek complaint applications on their own.

Investigations

Members responding to domestic abuse calls shall follow the guidelines established in SOC-07 Domestic Abuse and ensure an investigation includes:

- Information about the suspect's ownership, access to, or presence of any firearms, and their location;
- Relationships of all parties at the scene, including names and DOB of children present, or those in the household;
- The phone number of the victim's residence and include the number within the incident report so the bail bondsman or court personnel may inform the victim of the defendant's release on bail; and
- Informing the victim that if they intend to leave the residence, and desire to be informed of the abuser's release on bail, they must provide a contact number.

Members shall be aware that thorough documentation of the crime scene condition is critical to the prosecution.

Defendant Information

Members shall provide information regarding a defendant's dangerousness to the Prosecutor for use at arraignment such as:

- Criminal history;
- Restraining, no-contact or other protective orders currently in effect against the suspect;
- Possession of, or past use of weapons;
- Threats of serious physical harm against the victim, other family members, or pets; or
- Attempts or threats to commit suicide.

Arrest of a Caretaker

In cases involving abuse of a child, a person with a disability, or an elder, members shall:

- Address the issue of whether or not the victim can be left alone safely, if the abuser is arrested; and
- Contact the respective protective agency in order to arrange for temporary care, if the child, person with a disability, or the elder cannot be left alone.

In situations involving allegations of abuse of children, the disabled, or the elderly refer to SOC-07C Abuse of Children/Disabled/Elderly.

Subject	Number
Domestic Abuse Arrest/Investigations	**SOC-07A**

Substantive Dating Relationship

Members shall gather enough information to determine whether or not a substantive dating relationship exists and examine the following factors when making this determination:

- The length of time of the relationship;
- The type of relationship;
- The frequency of interaction between the parties; and
- If the relationship has been terminated by either person, the length of time that has elapsed since the termination of the relationship.

If it is determined that a substantive dating relationship exists or did exist, then the member shall:

- Take proper action, including arrest when appropriate, regardless of whether the victim seeks a restraining order.

In cases where there is no substantive dating relationship, another crime such as stalking or criminal harassment, may have been committed.

Dual Arrests

Dual arrests, like the issuance of mutual restraining orders, are strongly discouraged because they trivialize the seriousness of domestic abuse and increase the danger to victims. In the majority of cases, an effective investigation will reveal the dominant aggressor. Members shall:

- Attempt to identify the dominant aggressor bearing in mind the difference between offensive and self-defense injuries; and
- Take action based on that determination.

A member arresting both parties is required by law to submit separate and detailed arrest reports indicating the basis for the dual arrest.

Members investigating an incident of domestic violence shall not discourage requests for law enforcement intervention by threatening, or otherwise indicating all parties will be arrested.

Incident Reports

Incident reports shall be made whether or not an arrest results. Upon request to the Department, reports shall be made available to the victim at no cost. Prosecution and subsequent legal action can be greatly aided by documentation and description of:

- Physical injuries; and
- Photographs of the injuries.

Members shall note the presence of children in the household and other information gained through the investigation.

Subject	Number
Domestic Abuse Arrest/Investigations	**SOC-07A**

Confidentiality

The Department shall ensure the confidentiality of domestic abuse victims by safe guarding certain information including, but not limited to:

- Information regarding the identity of a victim or children;
- Any medical information;
- Statement by witnesses; or
- Keeping a separate record of the victim's address and phone number, if the victim will be seeking to hide from the abuser.

Victims of domestic abuse have a strong privacy interest in this type of information whether contained in the initial incident report or supplemental reports. Domestic abuse reports shall only be released to the victim and the District Attorney's Office of jurisdiction. Any other requests for a domestic abuse report shall be forwarded to the Department's Legal Section.

Firearms

Firearms at the scene of a domestic abuse incident.

If...	Then...
The responding members are informed that a firearm or weapon has been involved in the dispute	• Seize the weapon as evidence of the crime.
The weapon is not reported to have been involved in the dispute	• Request that the firearm or weapon be placed in the Department's custody temporarily.

A consent search is permitted by law in all jointly controlled or accessible areas. Members shall:

- Take temporary custody of the firearm or weapon to alleviate the threat of serious violence; and
- Ascertain whether a firearm is lawfully possessed.

If the member determines that the weapon cannot be seized, then:

- A judge can order the defendant to surrender all firearms, and their Licenses To Carry (LTC) Firearms including their Firearms Identification Card (FID); or
- The issuing authority may revoke or suspend the LTC or FID, which would then allow for the seizure of the firearms.

In all domestic abuse cases, the investigating member shall advise the licensing authority that the subject of the license is suspected of abuse. Notice may be made by mailing or faxing a copy of the incident report to the local licensing authority after authorization from the Department's Legal Section.

Subject	Number
Domestic Abuse Arrest/Investigations	**SOC-07A**

Firearms (Continued)

Abuse Prevention Orders
Upon issuance of any order under MGL c.209A Abuse Prevention Orders, members shall:

- Immediately take possession of all firearms, rifles, shotguns, machine guns, and ammunition, including any LTC and FID, owned or controlled by the subject of the order; and
- Ensure that the order has been completely vacated prior to returning weapons and permits.

Violations of Orders
In the interest of immediacy and the statutory mandate to arrest, members shall:

- Make a warrantless arrest of any person the member witnesses or has probable cause to believe has violated an order, including a violation which stems from the possession of weapons.

Seizure and Storage of Firearms
Every department within the Commonwealth shall honor another department's request for assistance in seizing the above listed items regardless of which department is named within the order. The department named within the order shall be responsible for the storage of the seized items or the delegation of storage to an authorized facility.

Orders Against Law Enforcement Officers
In cases involving police officers that are defendants in Abuse Prevention Orders, the defendant must relinquish all firearms, including departmental weapons, to the department serving the order.

Federal Firearms Provisions

The Colonel/Superintendent shall be notified whenever a member identifies a case involving certain circumstances of which federal action can be taken. Members shall be cognizant of the following federal provisions:

Persons Named in Protective Orders
Under the Federal Crime Control and Law Enforcement Act of 1994, it is unlawful for an individual subject to a permanent restraining order involving intimate partners to receive, ship, transport, or possess guns (including handguns, rifles, and shotguns) or ammunition, that traveled through interstate commerce.

Misdemeanors Involving Domestic Violence
Under 18 USC s.922(g)(9), it is unlawful for any person convicted of certain misdemeanor crimes involving domestic violence to ship, transport, possess, sells, or otherwise dispose of, or receive firearms or ammunition.

Federal Felon in Possession Of A Firearm
Under 18 USC s.922(g)(1), "Felon in possession of a firearm," it is unlawful for any person who has been convicted in any court of a crime punishable by imprisonment for a term exceeding one year to possess any gun or ammunition.

Property

The relationship of the parties and their property interests complicate domestic abuse situations. When a party to a domestic dispute is accused of removing, or attempting to remove property from the dwelling, or is accused of damaging or destroying property, the member shall:

- Conduct an investigation to determine the civil or criminal consequences; and
- Take appropriate action if criminal (e.g. malicious destruction of property).

Police Officers from Other Jurisdictions

In cases involving police officers from other jurisdictions, the investigation shall follow the guidelines established within this policy and SOC-07. The supervisor shall:

- Immediately notify the OIC of the employing department;
- Ensure information is entered into the RAMS system, the Daily Administrative Journal and other appropriate reports;
- Secure the local weapon until returned to the involved Department; and
- Forward a copy of the report to the Chief of Police of the involved officer, through the Department's Legal Section

Subject

Domestic Abuse Involving Members

Policy

The Department shall ensure that all reports of alleged domestic abuse by members are thoroughly investigated.

The Department shall respond and investigate allegations of domestic abuse while ensuring the rights and safety of all those involved.

Involved Member

Any member, upon being notified that they are a defendant in any protective order or modification thereof, or upon becoming aware that they have been accused of abuse, shall:

- Immediately notify their duty assignment supervisor (pursuant to Rules and Regulations), naming the investigating department, if any;
- Surrender Department issued License To Carry (LTC) Firearms and/or weapons and any other state or federal firearms licenses to the responding supervisor; and
- Within twenty-four (24) hours, make written notification, through channels, to their Division Commander. A copy of the protective order or modification shall also be attached to the documentation.

Responding Member

All members responding to incidents of alleged domestic abuse involving members of the Department shall:

- Take immediate action to ensure the safety of the victim;
- Call a supervisor of higher rank than the involved member to the scene;
- Remain on the scene until relieved by the responding supervisor;
- Ensure that all provisions of Massachusetts General Laws (MGL) 209A are followed, including arrest, when necessary; and
- Submit a detailed report of observations and statements made, prior to the end of their shift.

Subject	Number
Domestic Abuse Involving Members	**SOC-07B**

Responding Supervisor

Whenever a member is alleged to have committed abuse, a supervisor of higher rank than the accused member shall be assigned to conduct a criminal investigation. When a protective order is issued, or when the supervisor has reason to believe that the member committed abuse, the supervisor shall immediately:

- Relieve the accused member from duty;
- Seize all Department issued use of force weapons, pursuant to Departmental Rules and Regulations;
- Seize all other firearms and/or weapons at the scene;
- Seize member's LTC, and any other state or federal firearms licenses;
- Notify the member's Troop/Section Commander;
- Seize Department issued vehicle and conduct a vehicle inventory;
- Identify outstanding protective orders against the accused member;
- Ensure that all provisions of MGL 209A are followed, including arrest and further investigation, when appropriate;
- Forward LTC and any other state or federal firearms licenses to the Administrative Investigator;
- Complete an incident report prior to the end of their shift and forward to the Troop/Section Commander; and
- Ensure the complaint has been documented in a To/From format and fax to the Division of Standards and Training (DST) prior to the end of their shift.

Division Commander's Responsibilities

When an abuse prevention order is issued, or when there is reason to believe that the member committed abuse, the Division Commander shall:

- Assign a Commissioned/Staff Officer to conduct an administrative investigation;
- Immediately ensure that the accused member is or has been relieved from duty pursuant to Departmental Rules and Regulations;
- Convene a Duty Status Hearing, pursuant to Department Rules and Regulations; and
- Review reports and initiate additional investigations as necessary.

Administrative Investigation

In all incidents where a member has been accused of abuse, a thorough administrative investigation shall be conducted by a Commissioned/Staff Officer, preferably of higher rank than that of the accused member. The investigation shall include, but not be limited to the following:

- Identify all outstanding and expired protective orders against the accused member;
- Collect and review all reports, affidavits, and records pertaining to the allegations of abuse; and
- Interview the victim and other witnesses.

Other duties of the Administrative Investigator include:

- Working with the criminal investigator (if any) to ensure that the provisions of MGL 209A are adhered to, including criminal action or arrest when appropriate;
- Ensuring appropriate referral information has been given to the victim regarding battered women's programs, emergency shelter, counseling services, and court based advocacy services;
- Forwarding all available documents to the Duty Status Board;
- Attending all court proceedings and maintaining contact with any assigned prosecutor or probation officer; and
- Forwarding copies of all reports to the Internal Affairs Section upon completion of the investigation.

Division of Standards and Training

In domestic abuse cases involving Staff Officers, the DST Commander shall notify the Colonel/ Superintendent.

Subject	Number
Domestic Abuse Involving Members	**SOC-07B**

Complaint Notification to DST

In addition to any other required reports, all complaints of domestic abuse involving members shall be documented and submitted to the Division of Standards and Training (DST).

Member	Action
Member Receiving Complaint	**Internal Complaints** Internal personnel complaints originating within the Department, shall: • Be documented in a To/From format; • Faxed to the Division of Standards and Training within twenty-four (24) hours from the date of the To/From; • Submit a copy through channels to the appropriate Troop/Section/Unit Commander; and • Forward the original copy to the Division of Standards and Training.
Administrative Investigation	The Commissioned/Staff Officer conducting the administrative investigation shall: • Document the complaint in a To/From: • Fax to DST at 508-820-2149 within 24 hours of receipt; • Forward a copy through channels to the appropriate Troop/Section/Unit Commander; and • Forward the original to DST.

Subject

Abuse of Children/Disabled/Elderly

Policy

The Department shall investigate all allegations regarding the abuse of children, the disabled, and the elderly, to ensure the safety and rights of all those involved.

Mandated Reporting

Investigating members shall make mandated reports by immediately contacting the designated agency with an immediate oral report, and shall submit a report in writing **within forty-eight (48) hours** after the initial oral report. Members shall contact:

- Department of Children and Families (DCF) whenever they have reasonable cause to believe that a child under the age of eighteen (18) has been abused or neglected shall:
    1. Call to make an oral report Monday-Friday during the hours of 9:00 A.M. to 5:00 P.M. to the nearest DCF Office found at the bottom of the revised DCF form *"Report of Child(ren) Alleged to be Suffering from Serious Physical or Emotional Injury by Abuse or Neglect"*; or
    2. Call to make an oral report after 5:00 P.M. Monday-Friday and twenty-four (24) hours on weekends and holidays to the Child-At-Risk-Hotline 1-800-792-5200; and
    3. Submit the written report by either by mail or fax within forty-eight (48) hours to DCF. To assist in the written notification of child abuse/neglect, DCF has establish a form *"Report of Child(ren) Alleged to be Suffering from Serious Physical or Emotional Injury by Abuse or Neglect"*. This form can be obtained from DocuShare under Bulletins or from the DCF website: www.mass.gov/dcf .
- Disabled Persons Protection Commission whenever they have reasonable cause to believe that a caretaker has abused/neglected a disabled person, between the ages of eighteen (18) and fifty-nine (59). At any time call (800) 426-9009.
- Executive Office of Elder Affairs whenever they have reasonable cause to believe that someone age sixty (60) or older has been abused/neglected. At any time call (800) 922-2275.

Subject	Number
Abuse of Children/Disabled/Elderly	**SOC-07C**

Notifications

Troop Duty Officers shall notify the State Police Detective Unit of jurisdiction in cases where abuse of children, the disabled, and/or the elderly involve serious bodily injury or results in death.

Arrest of a Caretaker

In cases involving abuse of a child, a disabled person, or an elderly person, members shall:

- Address the issue of whether or not the victim can be left alone safely, if the abuser is arrested; and
- Contact the respective protective agency in order to arrange for temporary care, if the child, the disabled person, or the elderly person cannot be left alone.

Subject

Terrorism/WMD Incidents

Policy

The preservation of life and the prevention of injury shall be recognized as high priorities in responding to terrorist incidents, including those involving Weapons of Mass Destruction.

Terrorism

Terrorism is the unlawful use of force or violence against persons or property to intimidate or coerce a government, the civilian population, or any segment thereof, in furtherance of political or social objectives.

WMD

Weapons of Mass Destruction (WMD) can be chemical, biological, radiological, nuclear or explosive (CBRNE) weapons that have potential for creating mass casualty incidents.

SP 2810 Form

All Members shall keep a copy of the SP 2810 Crime Scene Threat Assessment Worksheet folded inside the Emergency Response Guidebook in their cruiser. Copies of SP 2810 shall be maintained at each Department facility or within the Emergency Response Guidebook to be accessible to Desk Officers and Troop Duty Officers.

Responding Members

When…	Then…
Responding to routine calls for service:	• Respond with due caution; callers may lack a complete understanding of the situation and may not convey the existence of on-scene hazards.
There is the potential that a terrorist or WMD event is occurring:	• Ensure the safety of all responders and the public; and • When possible, review SP 2810 and relay pertinent information to the Desk Officer.
Relaying information from the SP 2810:	• Utilize the most secure channel of communication at your immediate disposal; and • If it is necessary to relay information via radio, request a Code 1.

Continued next page.

Subject	Number
Terrorism/WMD Incidents	**SOC-09**

Responding Members (Continued)

When…	Then…
On-scene hazards threaten life or health:	• The preservation of life and the prevention of injury shall be of the highest priority.
Members inadvertently encounter a potentially contaminated area:	• Avoid contact; • Minimize exposure; • Never purposefully touch, taste or smell any object, package, or container, etc; • Warn others; • If possible, isolate area; and • Stay upwind and uphill.
Issues arise concerning the crime scene or the securing of evidence:	• Contact the Troop Duty Officer for guidance.

Desk Officer

If…	Then…
A report is received involving a potential terrorist or WMD event:	• Transmit the most detailed information possible to all responding members; and • Relay all available information from the scene to the Troop Duty Officer, assigned patrols, local police, and fire departments.

Troop Duty Officer

If…	Then…
A report is received involving a potential terrorist or WMD event:	• Relay all available information from the scene to GHQ Communications and the Troop Commander (who shall contact the Division Commander); • Contact the local fire department to activate Department of Fire Services-Regional Hazardous Materials Team (877)385-0822; • Contact the Department State Police Detective Unit (SPDU) of jurisdiction; and • Ensure that the area hospitals are advised.
The incident involves a suspected explosive device or a suspicious package:	• Contact the Bomb Squad; and • Refer to SOC-02 Bomb Threat/Explosives Incidents.

Continued next page.

Subject	Number
Terrorism/WMD Incidents	**SOC-09**

Troop Duty Officer (Continued)

If…	Then…
The incident involves a hazardous material:	• Contact the local fire department to activate Department of Fire Services-Regional Hazardous Materials Team (877)385-0822; and • Refer to SOC-01 Hazardous Materials.
Issues arise concerning the crime scene or the securing of evidence:	• Contact the SPDU of jurisdiction; and • The Division of Investigative Services (DIS) representative shall be designated the officer-in-charge.

GHQ Communications Section

If…	Then…
A report is received involving a potential terrorist or WMD event:	In addition to duties required by other written directives, the GHQ Communications Section shall notify: • The Office of the Superintendent; • The Division of Investigative Services and Field Services Commanders; • Media Relations; • The Commonwealth Fusion Center; • Massachusetts Emergency Management Agency (MEMA); and • Department of Fire Services-Regional Hazardous Materials Team; and • The National Guard Civil Support Team, if needed.
The incident involves a suspected explosive device or a suspicious package:	• Contact the Bomb Squad; and • Refer to SOC-02 Bomb Threat/ Explosives Incidents.
The incident involves a hazardous material:	• Contact the local fire department to activate Department of Fire Services-Regional Hazardous Materials Team (877)385-0822; and • Refer to SOC-01 Hazardous Materials.

Subject	Number
Terrorism/WMD Incidents	**SOC-09**

DIS

If...	Then...
A preliminary investigation into a reported potential terrorist or WMD event reveals a hoax or an unsubstantiated incident:	• The Division of Investigative Services shall prepare an after action report within forty-eight (48) hours in order to make use of "lessons learned."

Subject

Clandestine Drug Laboratory Response

Purpose

To define the role of the Clandestine Laboratory Enforcement Team (CLET) and establish guidelines for the utilization and activation of team members.

Policy

The Department recognizes the inherent dangers of clandestine drug laboratories and sets forth the following procedures to be followed by all Department members. These procedures are in compliance with Federal Occupational Safety and Health Administration (OSHA) Standards and are designed to limit dangers to Department members and the public.

Definitions

Clandestine Lab (Clan Lab): The operation at any location consisting of chemicals, mixtures, or processes designed or intended to synthesize, extract or convert illegal or controlled substances to include but not be limited to:

- Methamphetamine, Ecstasy, LSD, Fentanyl, THC and other illegal drugs.

Clandestine Laboratory Enforcement Team (CLET): A multi-agency team of law enforcement officers and certified chemists who have completed the Drug Enforcement Agency (DEA) Basic Clandestine Laboratory Certification School.

Site Safety Officer: A CLET member who has completed the DEA Advanced Site Safety School. The Site Safety Officer is responsible for the safe operation and adherence to DEA procedures at clan lab sites.

Utilization of CLET

CLET is available when requested, to assist members from the Department and those from other local, state, and federal agencies for:

- Known or suspected clan labs or their investigations;
- Execution of search warrants at clan lab locations;
- Training personnel relative to clan labs; and
- Other special events as assigned by the Commander of the Division of Investigative Services or designee.

Subject	Number
Clandestine Drug Laboratory Response	**SOC-10**

CLET Activation Protocol

Requests for CLET services shall be made to the Troop Duty Officer and shall include:

- The name, rank, and agency name of the requesting officer;
- The name of the primary point of contact and a call-back number;
- The nature of the request; and
- The exact location of the incident and any designated staging areas.

The Troop Duty Officer shall contact:

- the Department's CLET Leader, or designee; and
- the on-call member of the State Police Detective Unit of jurisdiction.

The CLET Leader, or designee, shall:

- Assess the situation;
- Activate the necessary Department's CLET members, to include the Department's chemists, and
- Contact the DEA CLET Coordinator.

Note: The CLET Leader shall maintain the current list of certified CLET members.

Activation/ Contact Number

During business hours: contact MSP Fire and Explosion Investigation Unit (978)567-3310.

After business hours: contact Troop Duty Office.

Authority

No member of the Department shall enter a known/suspected clan lab site unless:

- Authorized by a CLET Site Safety Officer; or
- Imminent or immediate danger exists to others.

CLET members shall assume complete control and authority of all identified clan lab sites.

While engaged in clan lab operations, CLET members shall take direct orders only from the:

- CLET Leader or designee;
- Site Safety Officer;
- DEA Clan Lab Coordinator;
- Division of Investigative Services Commander or designee; or
- Colonel/Superintendent.

Subject	Number
Clandestine Drug Laboratory Response	**SOC-10**

Operational Protocols

Department Members

Department members who discover or are advised of a suspected clan lab shall:

- Immediately notify the Troop Duty Office;
- **NOT** attempt to touch, turn off, adjust or otherwise manipulate any switches, controls or other materials within the suspected clan lab;
- Secure the area around the suspected clan lab and remain at a safe distance from the lab; and
- Remain on the scene until properly relieved.

CLET Leader

The CLET Leader, or designee, after assessing the situation, shall determine the need for additional resources including, but not limited to:

- Local Fire Department(s);
- MSP Bomb Squad;
- Department of Fire Services Hazardous Materials Team;
- Emergency Medical Services (EMS); and
- Traffic mitigation and controls.

CLET Members

CLET members shall:

- Assist and advise on-scene Incident Commander by recommending actions, coordinating resources, and/or providing appropriate documentation related to an on-going incident; and
- Provide assistance by coordinating internal or external agency resources that can be utilized to respond, mitigate, and/or recover from an incident in accordance with Incident Command System (ICS) protocols.

The Site Safety Officer shall coordinate and work with Department and CLET members from other agencies to respond to mitigate and recover Clandestine Drug Laboratory scenes in accordance with CLET Standard Operating Procedure (SOP).

Evidence Considerations

The collection of evidence, contraband and materials shall be coordinated by CLET members in consultation with chemists (either state or federal).

The Department member or local officer who is the case officer shall ensure evidence preservation and custody.

Subject	Number
Clandestine Drug Laboratory Response	**SOC-10**

After Action Reporting

Following the completion of any critical incident, CLET members shall conduct a debriefing.

The CLET Leader, the Site Safety Officer, or designee, is responsible for the completion of any after action reports or CLET reporting as applicable. After Action Reports shall be forwarded to the Division of Investigative Services Commander or designee for review.

Subject

Jurisdiction/Mutual Aid

Policy

The Department shall ensure that its members are informed of the limits of their police authority and shall work in cooperation with other law enforcement agencies.

Jurisdiction

The Department has sole and/or concurrent jurisdiction within the territorial boundaries of the Commonwealth.

Limits on Jurisdiction

No member may be used or called upon for service at any industrial dispute unless actual violence has occurred therein, and then only by written order of the Governor.

Members shall not exercise police powers on a reservation or other property of the United States of America unless requested by the person in charge of the reservation or property.

Members have no police powers in any Massachusetts Correctional Institution (MCI) facility, except by direction of the principal officer.

New England State Police Administrators Compact

The Commonwealth of Massachusetts has entered into a mutual aid agreement with State Police agencies in adjoining states. The agreement, known as the New England State Police Administrators Compact (NESPAC), provides for:

- Cooperation and assistance in detecting and apprehending those engaged in criminal activity;
- Establishing and maintaining an information sharing system to be accessed by participatory agencies;
- Mutual aid and assistance in the event of police emergencies; and
- The granting of powers, duties, rights, privileges, and immunities of police personnel when rendering such aid.

Requests for Mutual Aid

When approved by the Colonel/Superintendent, Department personnel or other resources may be provided at no cost to other law enforcement agencies.

Continued next page.

Subject	Number
Jurisdiction/Mutual Aid	**SUP-01**

Requests for Mutual Aid (Continued)

When any other law enforcement agency requests mutual aid from the Department, the initial request should contain:

- Nature and duration of the request;
- Contact information for requesting department's officer-in-charge (OIC); and
- Expenditures, if any, which shall be borne by the requesting agency.

The Troop/Section/Unit Commander or designee shall be responsible for determining which personnel shall be dispatched to the incident while maintaining adequate Department services within their command.

Requests by the Department

In the event of an unusual, natural, or man-made emergency situation, the Colonel/Superintendent shall request authorization from the Executive Office of Public Safety and Security:

- To seek assistance from any appropriate state agency;
- To seek assistance from the Massachusetts National Guard; and
- To grant personnel from outside the Department powers as a State Police Officer.

State of Emergency

Upon declaration of a "State of Emergency" by the Governor, all members (excluding personnel on suspension, injury, or other approved leaves) shall immediately contact their duty assignment supervisor, or other supervising officer within their chain-of-command, for specific instructions.

After Action Reporting

The Commanding Officer/OIC rendering assistance shall make a complete and accurate accounting which shall include, at a minimum:

- Number/names of members assigned, and time expended;
- Specific action taken; and
- Equipment utilized.

The Colonel/Superintendent may require a Division Commander or a Troop Commander to complete an After Action Report on significant incidents to determine if:

- Established Rules & Regulations, Policies & Procedures, orders and directives were followed;
- Available resources (personnel, equipment, etc.) were utilized in the most effective and efficient manner possible;
- Whether there is any deficiency or inadequacy in training, supervision, or policy which needs correction, enhancement, or adoption; and
- Conclusion(s), opinion(s), and recommendation(s).

Subject

Media Relations

Policy

The Department shall provide the media and the public with information on Department operations and administration, ensuring that individual rights are protected.

Dissemination of Information

Employees shall treat official business of the Department as confidential. Information shall only be disseminated according to established procedures. Employees shall not:

- Disseminate information in violation of Rules and Regulations; or
- Disseminate information prohibited by this policy.

Driver's Privacy Act

The release of information obtained through any state motor vehicle database shall not be released to non-law enforcement personnel.

Significant News or Events

The Office of the Colonel/Superintendent or Media Relations shall be the authorized source for the dissemination of all press releases.

When a member is involved in an incident or significant event that may be considered of interest to the public, the member or the Desk Officer shall contact Media Relations to provide the necessary information.

Examples of such incidents or events may include, but are not necessarily limited to:

- A significant arrest or investigation;
- Search or rescue;
- Motor vehicle crash with fatal or life-threatening injuries; or
- Large scale law enforcement operation.

Any inquiries from the media about such types of incidents shall be referred to Media Relations.

Media Relations

Troop/Section/Unit Commanders shall assist Media Relations with:

- Coordinating news conferences;
- Preparing and conducting news releases in the absence of a Media Relations member; and
- Positive news stories involving the Department.

Information for Dissemination

Information generally appropriate for members to disclose to the media and the public includes:

- Typical crash information:
  1. Names of the occupants involved, if over eighteen (18) years of age;
  2. Cause of crash if known; and
  3. Degree of injuries- minor, serious, or no injuries occurred.
     Note: Do not give out specific injuries of any occupant due to privacy rights.
- Road and weather information;
- Information from the public log (except for prohibited information as outlined within this policy);
- The time and place of arrest;
- An arrested adult's name, age, town, charges and bail status; and
- The name and rank of the investigating and arresting members (except for undercover officers), assisting agencies and the length of the investigation.

Division/Troop/Section Commanders shall:

- Approve, coordinate and/or release information concerning confidential investigations, operations, and emergency/crisis situations to Media Relations.

It is preferred that the Office of the Attorney General (AG), District Attorney (DA) Offices, the Office of the State Fire Marshal (OSFM), or other outside agencies generate news releases regarding a crime or arrest of concern to that specific office, in coordination with Media Relations, when members of the Department are involved.

Members assigned to the AG, DA, OSFM, or other agencies shall:

- Not become unilaterally involved in media relations efforts unless approved by the Office of the Colonel/Superintendent or Media Relations.

If the AG, DA, OSFM, or other agencies choose not to make a news release, Media Relations may do so when authorized by the Office of the Superintendent.

Media Interviews

Media interviews shall be conducted by the highest ranking or most experienced member on-duty in the order of:

- Media Relations;
- Troop/Section/Unit Commander;
- Troop/Section/Unit Duty Officer; or
- A Supervisor, with training or experience in giving interviews.

Note: Troopers shall not be compelled to do television or radio interviews against their wishes.

Continued next page.

Media Interview (Continued)

After consultation with Media Relations personnel, members may give limited interviews:

- To accredited news personnel at the scene of a vehicle crash or criminal incident, if there is no interference to the ongoing investigation; or
- Concerning information regarding road and weather conditions.

Members shall wear the uniform of the day, including the appropriate cover. Members working in a plain clothes assignment shall be appropriately dressed.

All other interviews shall be approved/coordinated through Media Relations.

Prohibited Information For Release

Employees **shall not** release or give out information on:

- The prior criminal records or driver's history of a person, or the existence or nonexistence of a prior criminal record except:
  1. To other federal, state, or municipal law enforcement agencies as authorized by the Criminal Offender Record Information (CORI) laws; or
  2. To warn the public of imminent danger from such a person; or
  3. In connection with serious or violent offenses, to expedite the location and apprehension of such a person.
- The identity of a deceased victim before confirmation has been received that the next of kin has been notified according to ADM-13 Notification of Medical Examiner and/or Next of Kin;
- The name or address of a juvenile (refer to INV-05 Juvenile Operations for definition) who is a suspect, defendant, complainant, or victim;
- The name or biographical information of the victim of a sexual crime;
- The name or photograph of an undercover officer;
- The existence or contents of any confession, admission, or statement given by a suspect, however, it may be stated that the defendant denies the charges. Note: This does not apply to statements made by the defendant to representatives of the news media or general public;
- Opinions about the guilt, innocence, character, or reputation of a suspect;
- Statements predicting or influencing the outcome of the trial;
- The results, refusal, or failure to submit to any examinations or tests;
- Statements or opinions concerning the credibility or testimony of prospective witnesses;
- Information that may adversely affect an investigation or prosecution of a case;
- Information about ongoing litigation;
- Any medical information;
- Causes of death until officially determined by the Medical Examiner;
- Handicapped individuals per MGL c.41 s.98F; or
- Other information as outlined in the Rules and Regulations.

Subject	Number
Media Relations	**SUP-03**

Photographs

The news media may photograph a person in custody. However, members shall not:

- Pose prisoners for news photographs;
- Allow prisoners to be photographed in Department facilities; or
- Allow prisoners to be photographed in other facilities against the wishes of the owner.

Members should not interfere with photographing or televising of a defendant in a public area, unless such activities:

- Interferes with their official duties; or
- Violate a court order.

Media Relations shall be contacted:

- Before the release of any photograph of Department employees; and
- Before the release of any photograph of a suspect or defendant.
  Note: Members shall be mindful that booking photos are considered part of a subject's CORI record and the release of these photos is restricted.

The release of photographs of Department undercover officers shall only be approved by the Colonel/Superintendent or the Deputy Superintendent.

Access to Crime And Crash Scenes

Representatives of the news media shall not be permitted to interfere with investigations or the efficient flow of traffic. However, news media representatives may be:

- Granted access to crime or emergency scenes; and
- Allowed to locate their vehicles and equipment at points nearer to a scene than permitted by normal traffic.

Permission for media access to a scene occurring in a private dwelling or other area generally not open to the public shall:

- Be obtained from lawful authority over the premises including government entities, such as the Turnpike or Port Authority; and
- Be controlled by a supervisor in command of the scene ensuring the particular needs of the investigation take precedence.

Note: Most accredited news reporters and photographers have identification cards that are issued by their respective employer.

Subject

Employee Assistance Unit

Policy

The Department has a responsibility to ensure the safety of our employees and to contribute to their psychological and physical well-being. The Department shall offer to employees and their families, professional assistance, training, peer counseling, and professional referrals.

Availability

The Employee Assistance Unit (EAU) is available to all Department employees and family members, twenty-four (24) hours a day by calling (978) 975-0794 or the GHQ Communications Section at (508) 820-2121.

Members of the EAU are available:

- To meet employees who request assistance at a mutually acceptable location;
- Provides training to recruit training classes; and
- To provide specialized training upon request.

Responsibility

Employee Assistance Unit members shall:

- Not represent themselves to any third party as the Department's agent for purposes of adjudication, placement or disposition; and
- Not be held responsible for decisions made by any employee receiving EAU services that prove to be in violation of Department rules, regulations, policies, or procedures.

In no event shall a member's involvement with the Employee Assistance Program abrogate their responsibility to conform or comply with rules, regulations, policies and procedures.

Accordingly, and in furtherance of EAU's commitment to recovery and good health, EAU members shall:

- Remind anyone receiving such services that compliance with rules, regulations, policies, and procedures must remain a primary factor in all personal decisions.

Subject	Number
Employee Assistance Unit	**SUP-04**

Confidentiality

It is critical for the success of the Employee Assistance program that confidentiality of case information be maintained. The EAU shall ensure that information obtained from an employee remains confidential, **unless failure to disclose such information could cause a clear and present danger to the safety or security of an individual, the public, or the Department**.

Members of the EAU have the same confidentiality privileges and prohibition on disclosures of information as licensed social workers.

Reports

Written and oral reports shall contain only that information that is pertinent to an ongoing evaluation.

Every effort shall be made to avoid any undue invasion of privacy.

Procedure

Supervisors should remain alert for signs of unhealthy stress in their employees, particularly when involved in a high trauma incident. Reactions to stress may appear immediately after an incident; however, they may not appear for hours, days, or even weeks later.

Supervisors should notify the EAU as soon as possible, but no later than eighteen (18) hours following occurrences of:

- Critical incidents that may evoke extraordinary emotion;
- On or off duty death, serious injury, or serious illness of an employee;
- Unusual death or violence to a child, or a victim known by an employee;
- Use of force incidents involving death or serious injury;
- Fatal accidents involving Department vehicles, or pursuits;
- A prolonged rescue situation that ends in failure; or
- When an employee's work performance appears to be affected by stress.

In any high trauma incident where an employee is affected, or is likely to be affected, supervisors should:

- Assign a support employee, preferably a friend, to the employee for close contact;
- Isolate and remove the employee from the scene of the incident, if possible;
- Ensure against unnecessary repetition of statements and accounts of the incident by the affected employee;
- Assist the employee in preparing the official report; and
- Monitor the employee's condition closely over the following weeks and months for signs of unhealthy stress.

Employees may be referred to the EAU when they may not be aware of the adverse impact, or suppress the need for psychological care.

Subject	Number
Employee Assistance Unit	**SUP-04**

Administrative Leave/ Temporary Modified Duty

Any employee directly involved in a high risk situation that may adversely affect personal or professional conduct may be placed on Administrative Leave or Administrative Duty by the Colonel/Superintendent.

The EAU may recommend members for placement on Temporary Modified Duty as approved by the Colonel/Superintendent. This is a management action used to deal with stress for the individual and the organization, and allows the member to refocus and cope with the situation in a healthy and positive manner.

Commanding Officers shall consult with the EAU prior to the employee resuming regular duties.

Subject

State Police Chaplain Corps

Purpose

To establish guidelines for the responsibilities, organization, and qualifications of chaplains assigned to the Massachusetts State Police Chaplain Corps.

This policy supersedes any previous promulgated Superintendent's Memorandums regarding this subject.

Policy

The State Police Chaplain Corps:

- Is a voluntary support service;
- May assist, but is not intended to replace or impede the efforts of the Department's Employee Assistance Unit and/or the Office of the Ombudsman; and
- Shall provide non-denominational spiritual support and counseling as sought, regardless of gender, ethnicity, religious preference, affiliation, or beliefs.

All members of the State Police Chaplain Corps shall take and affirm an Oath of Office prior to the initial performance of duties.

Oath of Office

I solemnly promise that I will faithfully and diligently perform the duties of Police Chaplain for the Department of the Massachusetts State Police, and that I will provide ministry to the officers of the department and to the citizens of the community as I am called upon.

I will strive to set an exemplary standard of ethical and moral conduct and not use my position of Police Chaplain to proselytize or to gain personal advantage, and will minister to all persons without religious bias.

I will acknowledge those appointed in a position of authority within the department and will serve them with loyalty, and will be supportive of the officers with whom I serve and will be subject to their authority when on duty and will accept the responsibility willingly and without reservation, so help me God.

Subject	Number
State Police Chaplain Corps	**SUP-05**

Requests for Service

The Office of Superintendent shall:

- Coordinate requests for services of the State Police Chaplain Corps with the Director of the State Police Chaplain Corps.

Administrative and Programmatic Oversight

Administrative oversight shall:

- Be conducted by a Commissioned Officer assigned to the Office of the Superintendent.

Programmatic oversight shall:

- Be conducted by the Commanding Officer of the Employees Assistance Unit (EAU) or designee.

Availability

The State Police Chaplain Corps provides services that are available on a twenty-four (24) hour basis for Department employees, when seeking guidance and comfort, or at times of illness, injury, or death.

The Department Chaplains may be contacted through the:

- Communications Center at 508-820-2121;
- Department Telephone Directory; or
- The EAU.

State Police Chaplains shall respond to a critical incident or crime scene when:

- Officially notified by the Department; and
- Render services to only those employees requesting such service.

Upon arriving at a scene, State Police Chaplains shall:

- Immediately identify themselves as a State Police Chaplain, and display the issued Department Identification Card to Officer-In-Charge (OIC) or designee;
- Only enter an active scene when prior approval has been granted from the OIC or designee; and
- As soon as practicable, notify the Commanding Officer of EAU or designee as to such response.

Responsibilities

State Police Chaplains shall be available to provide support and guidance to Department employees. Their duties shall include, but not be limited to:

- Visits to injured or hospitalized personnel;
- Participation at funeral services;
- Provide counseling at the request of an employee;
- Assist in making serious injury or death notifications upon request of the Department;

Continued next page.

Subject	Number
State Police Chaplain Corps	**SUP-05**

Responsibilities (Continued)

- Maintain strict confidentiality of all Department matters;
- Provide follow-up assistance to employees of the Department at times of crisis; and
- Participate in Department functions as requested, (i.e. promotional ceremonies, award ceremonies, etc.).

Designation

The Colonel/Superintendent may designate individuals as State Police Chaplains and shall determine the appropriate number of chaplains.

State Police Chaplains shall serve at the discretion of the Colonel/Superintendent on a voluntary basis and shall not receive compensation.

The Colonel/Superintendent shall designate a Chaplain as Director of the Chaplain Corps to oversee the duties and responsibilities of assigned State Police Chaplains and the program.

Qualifications

Qualifications for State Police Chaplains are:

- Affiliation with a recognized, organized religion;
- Demonstration of sufficient experience in community pastoral and parish work;
- Possession of a Bachelor of Arts and Masters of Divinity degree from an accredited college or seminary;
- Possession of a valid Massachusetts Driver's License and access to a properly registered and insured motor vehicle;
- Successful completion of a background investigation (no individual with a past criminal conviction for any offense shall be designated a Department Chaplain); and
- Attend training(s) as required by the Commanding Officer of EAU.

Director of the Chaplain Corps

The Director of the State Police Chaplain Corps shall:

- Coordinate and monitor the activities of the Chaplain Corps; and
- Conduct bi-annual meetings to share information, discuss goals and objectives, and other issues of interest.

Binding Written Agreements

Policy

All Memorandum of Understandings, Mutual Aid Agreements, or any other type of binding written agreements (collectively referred to as "MOUs") between the Department and outside organizations, including any state or federal agency, shall only be authorized and signed by the Colonel/Superintendent.

MOU Process

Position	Responsibilities
Troop/Section/Unit Commander	• Carefully review the MOU; and • If approved, forward to their Division Commander.
Division Commander	• Review the forwarded MOU; • Either approve the MOU or recommend changes to the language or terms; • Forward the approved MOU to the Chief Administrative Officer; and • Be responsible for the MOU oversight and renewal.
Chief Administrative Officer	• Review the forwarded MOU; • If need be, return the MOU and supporting documentation to the Division Commander with any recommendations; • Forward a copy of any MOU that pertains to a grant program to the Fiscal Grants Manager and the Strategic Planning Section; and • Forward the approved MOU to the Chief Legal Counsel.

Continued next page.

Subject	Number
Binding Written Agreements	**SUP-06**

MOU Process (Continued)

Position	Responsibilities
Chief Legal Counsel	• Review the forwarded MOU; • Submit the reviewed MOU with any recommendations to the Colonel/ Superintendent; • If approved by the Colonel/ Superintendent forward the MOU to the outside agency for signature; • Return a copy of the approved and signed MOU package to the Division Commander and Chief Administrative Officer; and • Retain all signed original MOU documentation for archives.
Colonel/ Superintendent	• Approve all MOUs involving the Department; and • Return signed MOUs to the Chief Legal Counsel.

Written Agreement Sign-Off Sheet

The SP 480 Written Agreement Sign-Off Sheet shall be:

- Attached to all MOU's;
- Submitted through channels; and
- Signed off by all appropriate employees prior to signature by the Colonel/Superintendent.

Property Inventory

Commanding Officers shall ensure that any property acquired as the result of an MOU shall be inventoried and treated in accordance with ADM-30 Asset Management.

Control and Authority

All MOUs for Department law enforcement services shall clearly identify the nature and extent of services to be provided and shall stipulate that the Colonel/Superintendent maintains control and authority over all Department personnel including, but not limited to:

- Hiring;
- Discipline;
- Transfers;
- Promotions;
- Assignments;
- Training; and
- Dismissal.

Subject	Number
Binding Written Agreements	**SUP-06**

Services Provided

All MOUs shall include provisions for services provided, but not limited to:

- Training;
- Equipment;
- Facilities;
- Functions and activities to be performed; and
- Duties and responsibilities.

Financing and Budget

Fiscal accounting shall be clearly articulated to avoid confusion and misunderstandings and shall include, but not be limited to the following:

- Salaries, indirect costs, and fringe benefits;
- Training and equipment costs;
- Maintenance of cost accounting records;
- Issuance of fiscal reports;
- Time and manner of payment for services; and
- Procedures for the disposition of revenues generated by Department law enforcement activity.

Records

MOUs shall specify the types of records required, the frequency of reporting, and the means for maintaining them.

Duration

All MOUs shall include:

- Effective beginning and termination dates or conditions;
- Procedures for modification or amendment; and
- Procedures for termination, if necessary.

Employee Rights

Participation in any MOU shall not penalize the rights of any Department employee.

Subject

Office of the Ombudsman

Policy

The Ombudsman Program provides a confidential, neutral, and informal process to help resolve work-related issues. It is a dispute resolution system that offers employees formal and informal options for addressing work-related problems and concerns. Although the program is an alternative channel of communication, it is designed to complement, not replace or circumvent the Department's formal resolution options.

Definitions

Confidential Communications: Communications, or a source of communication, which are intended to be held in secret.

Privileged Communications: Communications that occur in a context of legal or other recognized professional confidentiality.

Office of the Ombudsman

The Office of the Ombudsman reports to the Colonel/Superintendent. The primary role of an Ombudsman is to act as a designated neutral in order to facilitate fair and equitable resolutions regarding work-related problems and concerns.

An Ombudsman shall:

- Attempt to provide informal conciliation, when appropriate;
- Not use the names of individuals without their permission;
- Exercise discretion on whether to act upon a concern of an employee;
- Maintain objectivity and impartiality; and
- Keep professionally current and competent in areas that relate to the role of an Ombudsman and the practices of the Department.

The Ombudsman shall attempt to identify options within the Department to resolve issues brought forth. This includes creating innovative solutions, when possible, or referring individuals to other available Department processes.

Availability

An employee may contact an Ombudsman and leave a confidential voice message at 508-988-7025.

Subject	Number
Office of the Ombudsman	**SUP-12**

Responsibility

An Ombudsman shall:

- Not represent themselves to any third party as the Department's agent for purposes of adjudication, placement or disposition; and
- Not be held responsible for decisions made by any employee receiving Ombudsman services that prove to be in violation of Department rules, regulations, policies, or procedures.

In no event shall a member's involvement with an Ombudsman abrogate their responsibility to conform or comply with rules, regulations, policies and procedures.

Accordingly, and in furtherance of an Ombudsman commitment to recovery and good health, Ombudsman shall:

- Remind anyone receiving such services that compliance with rules, regulations, policies, and procedures must remain a primary factor in all personal decisions.

Confidentiality

Communications with the Office of the Ombudsman are considered privileged. That privilege cannot be waived, **unless failure to disclose information that was obtained from an employee could cause a clear and present danger to the safety or security of any individual, the public, or the Department.**

Complaints and Department Investigations

The Ombudsman has the responsibility to consider the concerns and rights to privacy of all parties potentially involved in a dispute. The Ombudsman does not take action on calls, letters, or other communications that are anonymous. However, the Department shall be notified of any alleged criminal conduct committed by an employee.

No acts of reprisal or retaliation shall be tolerated against any employee of the Department as a result of contact with the Office of the Ombudsman.

Records

The Office of the Ombudsman does not keep case records for the Department and maintains only those notes necessary to manage an ongoing case. The Office of the Ombudsman adheres to the Standards of Practice and the Code of Ethics of The Ombudsman Association (TOA).

To protect the principle of privileged communications, the Department shall **vigorously resist** any effort to compel testimony or obtain notes or other records from an Ombudsman. To ensure maximum legal protection, the Ombudsman shall immediately contact the Legal Section upon knowledge or receipt of any document indicating efforts to compel testimony or obtain documentation.

The Office of the Ombudsman shall:

- Prepare a quarterly and annual statistical report for the Office of the Superintendent; and
- Protect the confidentiality and anonymity of the involved parties within submitted reports.

Supervisors

Supervisors shall:

- Ensure that employees under their supervision are aware of the Office of Ombudsman's confidential services in assisting with work-related problems;
- Provide support and commitment to the role and function of the Department's Ombudsman; and
- Be accessible to the Ombudsman to help in the resolution of work-related problems, as necessary.

Employees

Contacts with the Office of the Ombudsman need not be reported to a supervisor, as the program is accessible outside of the chain of command. An employee may contact the Office of the Ombudsman when seeking:

- Accurate information about Department policies, procedures, practices, or other issues;
- Informal advice on matters that they prefer to discuss without being "on the record"; and
- Assistance with work-related problems.

An employee who seeks the assistance of an Ombudsman may withdraw from the process at any time.

Contacts with an Ombudsman are voluntary and shall not jeopardize the employee's job security or promotional opportunities.

Subject

Special Operations Command and Control

Purpose

To define the command and control of Special Operations and to provide guidance to Department members who are involved in any incident that involves (or may involve) the utilization of any Special Operations resource.

Policy

Special Operations may be comprised of the following Sections/Units/Teams:

- Special Tactical Operations Team;
- Crisis Negotiations Team;
- Mounted Unit;
- Canine Unit;
- Underwater Recovery Team;
- Special Emergency Response Team;
- Motorcycle Unit;
- Commercial Vehicle Enforcement Section;
- Collision Analysis and Reconstruction Section;
- Traffic Programs Section; and
- Motor Vehicle Regulatory Section.

The Colonel/Superintendent reserves the right to modify the Special Operations' Sections/Units/Teams.

For the purpose of command and control, members of Special Operations Sections/Units/Teams shall be accountable to one chain of command while performing Special Operations functions or assignments.

Continued next page.

Subject	Number
Special Operations Command & Control	**TOP-01**

Policy (Continued)

All Department personnel must be cognizant of the fact that tactical operations are inherently hazardous and require specific understanding of the risks, risk management, and the various capabilities and limitations of Department resources. Special Operations Section/Unit/Team Commanders and their members are specially trained and equipped to meet specific standards applicable to their assigned positions within the various disciplines.

Activation Protocol and Response Procedures

Any emergency request for Special Operations resources shall include:

- The requesting agency's name;
- The requesting party's name and rank;
- The name and direct call-back number of the primary point of contact;
- The nature of the request; and
- The exact location of the incident and any designated staging areas.

Position	Responsibilities
Responding Member(s)	• Assess the situation, taking any actions necessary to eliminate immediate danger to others; • Contain and isolate the suspect(s) in the immediate area; • Advise the Desk Officer and request resources as necessary; • Gather and report as much tactical information as possible; and • If applicable, assume command and control until relieved by proper authority.

Continued on next page.

Subject	Number
Special Operations Command & Control	**TOP-01**

Activation Protocol and Response Procedures (Continued)

Station Desk Officer	• Advise Troop Duty Officer of request; and • Log entries into Daily Administrative Journal.
Patrol Supervisor	• Establish and secure perimeter as soon as possible; • Order evacuations, if necessary; • Establish liaison with local agency at scene; and • Ensure that only a single chain of command has control of the inner perimeter or scene.
Patrol Supervisor	**Additionally for significant events**: • Coordinate activities with outside jurisdictions (federal, state, municipal); • Establish a Command Post away from bystanders and the news media; • Assign a member as the media liaison until members from the Media Relations Section arrive; • Communicate accurate and current information on a regular basis to Troop Duty Officer; and • Upon conclusion of the incident, preserve the crime scene.
Troop Duty Officer	• Notify GHQ Communications Section; • Dispatch Patrol Supervisor if necessary; • Log request in Daily Administrative Journal; • Notify Troop Commander. • Notify appropriate Special Operations Section/Unit/Team Commander or designee of the request; and • Activate/notify Special Operations Section/Unit/Team members and others as requested by Section/Unit/Team Commander or designee.
Special Operations Section/Unit/Team Commander or designee	• Contact initial requesting party to determine appropriate response; and • Brief the Special Operations Commander /designee to obtain operational approval.

Continued on next page.

Subject	Number
Special Operations Command & Control	**TOP-01**

Activation Protocol and Response Procedures (Continued)

Special Operations Commander/designee	• Approve/deny activations/deployments; and • Contact Division of Field Services Commander.
Division of Field Services Commander	• Notify the Office of the Superintendent when appropriate; and • Activate other resources as needed.

Risk Management

Special Operations missions involve the likelihood of encountering potentially life-threatening hazards. All Special Operations Section/Unit/Team members shall exercise the best possible operational risk management strategies to:

1. Identify and assess hazards;
2. Develop controls to reduce hazards or risks; and
3. Use strategies to mitigate risk exposure and to safeguard the public and public safety personnel.

Removal from Assignment

Any member assigned to a non-biddable position with a Special Operations Section/Unit/Team may be removed at the discretion of the Colonel/Superintendent or designee.

Public Relations Requests

Requests for Special Operation resources for ceremonial, static or operational demonstrations, public relations displays, or other events shall be made in writing and approved by the Commander of the Division of Field Services.

After Action Reporting

When so directed, Special Operations Section/Unit/Team Commanders are required to submit mission/incident specific After Action Reports to the Special Operations Commander/designee for review.

All After Action Reports shall be in a format approved by the Special Operations Commander.

Subject

Special Tactical Operations Team

Purpose

To establish and define the role of the Special Tactical Operations Team within the Division of Field Services-Special Operations and establish guidelines for activation and utilization of their resources.

Policy

The Special Tactical Operations (STOP) Team shall:

- When requested and approved, assist members from the Department and those from other local, state, and federal agencies; and
- Develop, under the direction of the Team Commanding Officer, team specific Standard Operating Procedure (SOP) that shall be created, maintained, and updated as directed by the Special Operations Commander.

Definitions

Incident Command Post: A location where members may safely and effectively manage a scene, ideally equipped with a telephone, parking area, rest room, and effective radio communications for tactical team members.

Inner Perimeter: The immediate area of operations where violence or hostile actions are most likely to occur.

Outer Perimeter: A designated area outside the immediate area of operations which limits access and prevents harm to others.

Utilization of Resources

The STOP Team is available for:

- Emergency or critical incidents that may require a specialized response.

Subject	Number
Special Tactical Operations Team	**TOP-02**

Operational Protocols

The designated Incident Commander (IC) shall:

- Attempt to isolate and contain the incident by establishing the initial inner and outer perimeter; and
- Continually assess the situation in conjunction with the STOP Team Commander or designee to determine the need for additional resources and to adjust tactics as required to resolve the incident.

The Inner Perimeter:

- First responding members in the inner perimeter shall normally be replaced by STOP Team members once they arrive at the scene; and
- The Special Operations Commander or designee and STOP Team Commander or designee shall determine what personnel are required to safely manage the outer perimeter and scene.

The Outer Perimeter:

- No Department member on the outer perimeter shall discharge their weapon once the STOP Team has assumed control and authority of the Inner Perimeter unless:
  1. Ordered by the STOP Team Commander or designee; or
  2. When necessary upon the threat of death or serious bodily harm.

Building Entry:

When the STOP Team has made entry into a building, all other responding Department members shall:

- Not aim, fire, or discharge a firearm into the building; and
- Take a position of cover.

The STOP Team Commander or designee shall:

- Have the primary responsibility to determine the type of equipment (including weapons) used by the STOP Team members.

Command and Control

When engaged in STOP Team operations, missions, and/or training the command and control concerning deployment and operational tactics utilized shall be:

- Determined by the STOP Team Commander or designee; or
- Special Operations Commander or designee.

Subject	Number
Special Tactical Operations Team	**TOP-02**

Evacuations/ Witnesses	In some instances, it may be necessary to evacuate nearby civilians. Witnesses or those who may provide situational awareness and/or intelligence may be requested to remain at or near the Command Post.

Subject

Crisis Negotiation Team

Purpose

To establish and define the role of the Crisis Negotiation Team within the Division of Field Services-Special Operations and establish guidelines for activation and utilization of their resources.

Policy

The Crisis Negotiation Team shall:

- When requested and approved, assist members from the Department and those from other local, state, and federal agencies; and
- Develop, under the direction of the Team Commanding Officer, team specific Standard Operating Procedure (SOP) that shall be created, maintained and updated as directed by the Special Operations Commander.

Definitions

Incident Command Post: A location where members may safely and effectively manage a scene, ideally equipped with a telephone, parking area, rest room, and effective radio communication for team members.

Negotiator: A specially trained member of the Crisis Negotiation Team who utilizes crisis management techniques in an effort to stabilize extremely dangerous and volatile circumstances.

Utilization of Resources

The Crisis Negotiations Team is available for:

- Crisis, hostage, or barricaded incidents that can potentially be resolved through dialogue; and
- Other special events/incident as assigned by Special Operations Commander or designee.

Subject	Number
Crisis Negotiation Team	**TOP-03**

Operational Protocols

Crisis Negotiations Team shall:

- Utilize a philosophy of containment and negotiation;
- Assume control of the negotiations process once they arrive on-scene;
- Manage any personnel or individuals involved in the negotiations process; and
- Report to and remain operationally accountable to the Incident Commander.

Useful information related to the operational area include:

- The layout of the building;
- Size and Number of rooms/spaces;
- Ventilation, food, and water supplies; and
- Observation points, approach, and escape routes.

Useful information related to perpetrator(s) and/or hostage(s) include:

- Names, number, age, gender, size, and physical condition;
- Behavior and emotional state (rational, tolerant, aggressive, ambivalent, etc.);
- Criminal record/weapons access/ownership;
- Purpose of act (terrorist, criminal, mentally disturbed); and
- Any stated plans, demands, or motivation.

Additional Response Guidelines

In addition to the response protocols outlined in TOP-01 Special Operations Command and Control, members shall follow these additional guidelines.

Position	Duties
Responding Member(s)	• Assess the situation, taking no aggressive action unless there is an immediate danger to others; • Contain and isolate the suspect(s) in the immediate area; • Attempt to slow the pace of events, and open and establish communication with suspect(s); and • Gather and report as much tactical information as possible.

Continued on next page.

Subject	Number
Crisis Negotiation Team	**TOP-03**

Additional Response Guidelines (Continued)

Position	Duties
Patrol Supervisor	• Request through the Troop Duty Officer the Crisis Negotiation Team; and • Designate a member to research utility shut-offs, if necessary;
Incident Commander	• Work with the Crisis Negotiation Team, • Attempt to maintain as much control as possible over the movements and behavior of the suspect(s); and • Attempt to defuse the situation while affecting the safe release of any hostages.

Evacuations/ Witnesses

In some instances, it may be necessary to evacuate nearby civilians. Witnesses or those who may provide situational awareness and/or intelligence may be requested to remain at or near the Command Post.

Canine Unit

Purpose

To establish and define the role of the Canine Unit within the Division of Field Services-Special Operations and establish guidelines for activation and utilization of their resources.

Policy

The Canine Unit shall:

- When requested and approved, assist members from the Department and those from other local, state, and federal agencies; and
- Develop, under the direction of the Unit Commanding Officer, unit specific Standard Operating Procedure (SOP) that shall be created, maintained and updated as directed by the Special Operations Commander.

Utilization of Resources

The Canine Unit is available for:

- Conducting building searches for hidden offenders;
- Assisting in the arrest of dangerous or violent offenders;
- Tracking/locating suspect(s), lost and/or missing person(s);
- Locating criminal evidence or hidden instrumentalities;
- Locating cadavers;
- Detecting the presence of concealed narcotics, explosives, or arson related accelerants;
- Crowd control;
- Homeland Security related missions; and
- Other special events/incidents as assigned by the Special Operations Commander or designee.

Subject	Number
Canine Unit	**TOP-05**

General Protocols

- Only that amount of force that reasonably appears necessary to apprehend or secure a suspect shall be used. Handlers and their dogs are required to adhere to procedures that properly control their potential use of force and channel their specialized capabilities into legally reasonable crime prevention and control activities;
- Canine handlers are responsible for determining whether a situation justifies canine use and the appropriate Special measures that should be taken;
- Employees shall not pet a canine except with the permission of the canine handler;
- No employee is to tease or agitate any canine unless performed as part of a training exercise;
- The canine shall not enter any State Police facility except for a specific police purpose;
- Whenever a canine is used in a special situation, Incident Commanders shall confer with canine handlers and members shall heed the directions of the canine handler;
- Canines shall not be handled by anyone other than their assigned handler, except in emergency situations;
- **No** commands shall be given to a canine by anyone other than the canine handler except in emergency situations; and
- **No** employee shall enter a canine cruiser while a canine is present, except at the direction and in the presence of the canine handler.

Building Search Protocols

Canines may be utilized for locating suspects in buildings or other structures. To optimize building searches, and if possible, the:

- Perimeter should be secured by the requesting patrol personnel;
- Owner should be contacted to ascertain the layout;
- Tenants, workers, or unnecessary personnel should be removed;
- Heating, air-conditioning, or other blowing units should be shut off so as not to interfere with the canine's scent;
- Entrances and exits should be monitored, and communications limited once entry is made by the search team; and
- Canine handler shall ensure notification has been made to all personnel prior to deploying a canine into any building or structure.

Tracking Protocols

Canines may be utilized for tracking. To facilitate tracking:

- Identify and mark the location where the subject was last seen;
- Avoid foot or vehicular movement in the immediate area;
- Set-up an initial perimeter to be searched; and
- Protect all items of clothing that shall be used for scent acquisition purposes.

Subject	Number
Canine Unit	**TOP-05**

Drug Detection Protocols

Public Facilities: Random exploratory sniffing of luggage, packages, or other inanimate objects may be conducted in public facilities such as:

- Airports/Transportation terminals (bus, train, marine);
- Commercial vehicle weigh stations; and/or
- Government buildings.

Public Schools: The use of drug detection canines in public schools is permitted only when authorized by the Division of Field Services Commander or designee, and if:

- The school administrator and the local police chief, if applicable, request and approve such use; and
- A search is limited to inanimate objects in public areas and the exterior of student lockers, unless reasonable suspicion exists to gain admission to an area.

Motor Vehicles: Drug sniffing canines may be used to sniff motor vehicles during:

- A commercial vehicle inspection; and/or
- A valid motor vehicle stop when reasonable suspicion exists to believe that the operator or passengers are in possession of illegal narcotics.

Canine Bites and Injuries

In the event that a Department canine bites or injures any party, the canine handler shall contact the Troop Duty Officer, who shall immediately dispatch a supervisor and Crime Scene Services to the scene to conduct an investigation and take color photographs.

The supervisor shall forward appropriate information including the SP 376 Use of Force Report to the Division of Field Services Commander and Canine Unit Commander prior to end of their shift.

Underwater Recovery Team

Purpose

To define the role of the Underwater Recovery (Dive) Team within the Division of Field Services-Special Operations and establish guidelines for activation and utilization of their resources.

Policy

The Dive Team shall:

- When requested and approved, assist members from the Department and those from other local, state, and federal agencies; and
- Develop, under the direction of the Team Commanding Officer, team specific Standard Operating Procedure (SOP) that shall be created, maintained and updated as directed by the Special Operations Commander.

Utilization of Resources

The Dive Team is available for:

- Underwater sweeps for hazardous or improvised explosive devices;
- Active search and rescue;
- Water-safety and survival instruction;
- Evidence location and recovery;
- Body location and extrication;
- Vehicle/vessel location and recovery;
- Underwater survey for security purposes;
- Underwater obstruction identification and removal;
- Homeland Security related missions; and
- Other special events/incidents as assigned by the Special Operations Commander or designee.

Operational Protocols

Because of the inherent risks involved in diving operations:

- No dive shall be undertaken until a diving supervisor and at least two (2) divers are present and prepared to dive; and
- The Dive Team Commander or designee at the scene shall make the final determination as to whether a mission shall be undertaken or terminated due to changing conditions.

Subject	Number
Underwater Recovery Team	**TOP-06**

Witnesses

In some instances, it may be necessary to evacuate nearby civilians. Witnesses or those who may provide situational awareness and/or intelligence may be requested to remain at or near the Command Post.

Air Wing

Purpose

To define the role of the Air Wing within the Division of Homeland Security and Preparedness and establish guidelines for activation and utilization of their resources.

Policy

The Air Wing shall:

- When requested and approved, assist members from the Department and those from other local, state, and federal agencies; and
- Develop, under the direction of the Air Wing Commanding Officer, a unit specific Standard Operating Procedure (SOP) that shall be created, maintained and updated as directed by the Planning, Preparedness, and Response Section Commander.

Utilization of Resources

The Air Wing is available for:

- Search and rescue for lost, missing, or endangered persons;
- Photographic and video missions, documentation and video downlink;
- Motor vehicle enforcement and patrol;
- Incident command situations;
- Drug eradication efforts, including surveillance;
- Transportation of specialized equipment and personnel;
- Transportation of government officials;
- Criminal investigations;
- Dignitary protection;
- Fire services support;
- Homeland security related missions; and
- Other special events/incidents as assigned by the Division of Homeland Security and Preparedness Commander or designee.

Subject	Number
Air Wing	**TOP-07**

Operational Protocols

The Colonel/Superintendent, or designee, shall authorize all requests for out-of-state travel in department aircraft.

In accordance with Federal Aviation Regulations, the Air Wing Commander or flight crew members may decline, cancel, or terminate any request or mission due to:

- Safety, weather, distance;
- Type of request beyond aircraft or members capability;
- Availability;
- Mechanical maintenance of the aircraft; or
- Determination that use of aircraft is not the appropriate resource after operational risk management assessment is completed.

This policy shall not preclude the use of the aircraft in any other circumstances at the direction of the Air Wing Commander consistent with the Air Wing SOP.

Command and Control

When engaged in Air Wing operations, missions, and/or training, the command and control concerning deployment and operational tactics utilized shall be determined by:

- Air Wing Commander or designee; or
- Division of Homeland Security and Preparedness Commander or designee.

Subject

Small Unmanned Aircraft Systems (UAS)

Policy

To define the operation of small Unmanned Aircraft Systems (UAS) in the National Airspace System (NAS) within the Department of State Police.

To establish guidelines for the utilization and activation of UAS.

To develop, under the direction of the Department UAS Program Manager, unit-specific Standard Operating Procedures (SOPs) that shall be created, maintained and updated, as directed by the UAS Program Manager.

UAS missions shall:

- Not facilitate the use of any weapons and/or dispersal payloads;
- Comply with the United States Constitution, the Massachusetts Declaration of Rights, and all relevant and applicable laws; and
- Comply with all applicable Department Policies and Procedures, Rules and Regulations, and unit-specific SOPs.

Privacy

A UAS shall not be intentionally used for viewing, recording or transmitting images and/or video in a criminal investigation at any location or property where a person has a *reasonable expectation of privacy* unless:

- A warrant or court order has been approved for the search of the property;
- Consent by the owner or person responsible for the property is obtained; or
- Exigent circumstances exist, including but not limited to: search and rescue missions, tactical missions, crash scenes, crime scenes, fire scenes, hazmat scenes and natural disasters.

Prohibited Uses

Department UAS shall not be used for the following:

- To target a person based solely on individual characteristics, such as, but not limited to race, ethnicity, national origin, religion, disability, gender or sexual orientation;
- To harass, intimidate or discriminate against any individual or group; and/or
- To conduct personal business of any type.

Definitions

Small Unmanned Aircraft (UA): A UA weighing less than 55 pounds, including everything that is onboard or otherwise attached to the aircraft, and can be flown without the possibility of direct human intervention from within or on the aircraft.

Remote Pilot- in- Command (Remote PIC): A person who holds a remote pilot certificate with a UAS rating and has final authority and responsibility for the operation and safety of a UAS operation conducted under 14 CFR 107.

Visual Observer (VO): A person acting as a flight crew member who assists the small UA remote PIC to see and avoid other air traffic or objects aloft or on the ground.

Remote Pilot Certificate: A person acting as a remote PIC of a UAS in the NAS under 14 CFR 107 must obtain a Remote Pilot Certificate with a UAS rating issued by the Federal Aviation Administration (FAA) prior to UAS operation.

UAS Program Manager: A Department member designated by the Colonel to oversee implementation, management, training, documentation and adherence to current FAA regulations for all Department-owned UAS. The UAS Program Manager shall create unit-specific SOPs and ensure the safe operation of all Department unmanned aerial systems.

Utilization of Resources

Consistent with this policy, applicable laws and unit-specific SOPs, Department authorized UAS may be utilized for missions including, but not limited to, the following:

- Search and rescue for lost, missing, or endangered persons;
- Photographic and video documentation missions;
- Motor vehicle crash investigations / crash scene mapping;
- Criminal investigations and crime scene mapping;
- Tactical response missions (e.g., hostage rescue/barricaded subject);
- Providing an aerial visual perspective to assist officers in providing direction for crowd control, traffic incident management, special circumstances, and tempory perimeter security;
- Fire Services support;
- Homeland Security-related missions; and
- Other special events/incidents as assigned by the Division Commander, Unit Commander and/or UAS Program Manager or designee, consistent with and as permitted by law.

Statistics, Records and Audits

The Department UAS Program Manager shall:

- Ensure that yearly statistics are kept for all UAS missions; and
- Ensure that flight and training records are properly maintained by the appropriate Unit Commander responsible for the use of the unit-specific UAS and forwarded to the UAS Program Manager.

Licensing, Certification and Registration

The Department UAS Program Manager shall:

- Ensure that all unit-specific remote pilots hold a Remote Pilot Certificate with a UAS rating issued by the FAA under 14 CFR 107; and
- Ensure that all UAS are registered with the FAA as required by 14 CFR 107.

Operational Protocols

The UAS Program Manager, the appropriate Unit Commander or the Remote PIC may decline, cancel, or terminate any UAS request or mission due to:

- Safety, weather, visibility;
- Type of request is beyond the UAS or member's capability;
- Availability;
- Mechanical maintenance of the UAS;
- Determination that use of UAS is not the appropriate resource after operational risk management or resource assessment is completed; or
- Determination that use of the UAS is in violation of this policy or Massachusetts General Laws.

All UAS missions will be flown in compliance with all current FAA Regulations including but not limited to 14 CFR 107. The Remote PIC has final authority and responsibility for the operation and safety of a UAS operation conducted under 14 CFR 107.

Training

The State Police UAS Program Manager or designee shall:

- Ensure that all training and licensing is compliant with current FAA regulatory requirements including but not limited to 14 CFR 107.

Department members selected to be Remote PICs shall:

- Be properly trained and licensed as required by 14 CFR 107;
- Satisfy and maintain all the conditions of the Certificate of Authorization (COA) issued by the FAA if applicable;
- Have working knowledge of the airspace intended for operations and Air Traffic Control communication requirements; and
- Have the ability to obtain and interpret weather information.

Department members selected to be Visual Observers (VO) shall:

- Be properly trained according to standards set by the UAS Program Manager or designee that comply with FAA current regulatory requirements if any; and
- Satisfy and maintain all the conditions of the COA issued by the FAA if applicable.

Subject	Number
Small Unmanned Aircraft Systems (UAS)	**TOP-07A**

Accident Notification and Investigation:

In the event of a crash/incident involving fatalities, injuries, property damage, damage to the UAS or UAS fly-away, the Remote PIC shall:

- Report the crash/incident immediately to the appropriate Unit Commander and UAS Program Manager or designee;
- When applicable, notify the FAA in compliance with 14 CFR 107; and
- Complete and submit an incident report to the UAS Program Manager and appropriate Unit Commander.

The UAS Program Manager shall:

- Review all documentation and reports;
- Complete a summary report with conclusions and recommendations; and
- Forward all documentation through channels to the Colonel/Superintendent.

Mission Approvals

UAS mission requests shall be authorized by either:

- The appropriate Unit Commander or designee;
- The UAS Program Manager or designee; or
- The appropriate Division Commander.

Note: The Remote PIC has final authority and responsibility for the operation and safety of a UAS operation conducted under 14 CFR 107.

Authorized Equipment

Only Small UAS approved by the UAS Program Manager shall be authorized for use by members of the Department and/or for Department use.

Digital Data preservation

All digital data including but not limited to photographs, video, and/or flight data shall be processed and maintained according to existing Department policies and preservation of evidence procedures.

Marine Unit

Purpose

To define the role of the Marine Unit within the Division of Homeland Security and Preparedness and establish guidelines for activation and utilization of their resources.

Policy

The Marine Unit shall:

- When requested and approved, assist members from the Department and those from other local, state, and federal agencies; and
- Develop, under the direction of the Marine Unit Commanding Officer, a unit specific Standard Operating Procedure (SOP) that shall be created, maintained and updated as directed by the Planning, Preparedness, and Response Section Commander.

Utilization of Resources

The Marine Unit is available for:

- Patrol and law enforcement services;
- Search and rescue;
- Waterborne surveillance/undercover operations;
- Underwater recovery (dive) operations support;
- Homeland security related missions; and
- Other special events/incidents as assigned by the Division of Homeland Security and Preparedness Commander or designee.

Operational Protocols

The Marine Unit Commander, shall assign authorized Marine Unit members who are designated and trained to:

- Operate State Police vessels and their associated motors, trailers, and equipment.

For all Marine Unit missions a member shall be designated as Boat Captain per the Unit's SOP. The Boat Captain shall:

- Be responsible for the safety of the vessel and all on-board.

The Marine Unit and the designated Boat Captain(s) shall:

- Collaborate with the Underwater Recovery Team Commander or designee to ensure a safe and efficient environment for all dive operations.

Subject	Number
Marine Unit	**TOP-08**

Command and Control

When engaged in Marine Unit operations, missions, and/or training, the command and control concerning deployment and operational tactics utilized shall be determined by:

- Marine Unit Commander or designee; or
- The Division of Homeland Security and Preparedness Commander or designee.

Incident Management Assistance Team

Purpose

To define the role of the Incident Management Assistance Team (IMAT) within the Division of Homeland Security and Preparedness and establish guidelines for activation and utilization of its resources.

Policy

The IMAT shall:

- When requested and approved, assist members from the Department and those from other local, state, and federal agencies; and
- Develop, under the direction of the Unit Commander, a team specific Standard Operating Procedure (SOP) which shall be created, maintained and updated as directed by the Division of Homeland Security and Preparedness Deputy Division Commander.

Utilization of Resources

The IMAT is available for:

- Large scale law enforcement operations;
- Lost or missing persons search and rescue missions;
- Extended recovery operations;
- Homeland Security-related missions; and
- Other special events/incidents as assigned by the Division of Homeland Security and Preparedness Deputy Division Commander.

Operational Protocols

IMAT members shall assist and advise on-scene Incident Commanders in the coordination and command and control of personnel and assets during the response to, mitigation of and/or recovery from an incident in a manner consistent with the Incident Command System (ICS) and the National Incident Management System (NIMS).

Subject	Number
Incident Management Assistance Team	**TOP-09**

Responsibilities

Position	Responsibilities
IMAT Coordinator	• Shall be a commissioned officer from the Division of Homeland Security and Preparedness; • Shall be supported by members of the DHSP IMAT; • Shall review the qualifications of all potential members and, select Troop IMAT members who will also be available to the Department as IMAT members; • Maintain a list of all Department IMAT members, in combination with DHSP IMAT members and Troop IMAT members; • Shall assist the Troop IMAT Officer in planning for IMAT support at planned Troop events; • Shall assist the Troop IMAT Officer with response to unplanned Troop events; • At the request of the Troop IMAT Officer, shall provide the requesting Troop with IMAT support from the list of Department IMAT personnel for planned and unplanned events; • Shall plan IMAT training for all Department IMAT members; and • Shall identify and recommend IMAT equipment purchases through channels to the Colonel/Superintendent.
Division of Field Services Troop IMAT Officer	• Shall be a commissioned officer that is appointed by the Troop Major from the Division of Field Services; • Shall identify and recommend to the Department's IMAT Coordinator a team of 5 subordinates as members of the Troop's IMAT; • Shall attend Troop planning meetings and report on anticipated IMAT staffing requirements to the Department's IMAT Coordinator; and • Shall make immediate notification to the Department IMAT Coordinator of Troop IMAT responses to unplanned events.
Department IMAT Members	• Shall provide the Department IMAT Coordinator with their current qualifications for selection and retention as Department IMAT members; • Shall respond to requests for Troop and Department IMAT responses; • Shall attend Department IMAT Training; and • Shall assist their Troop IMAT Officer when requested.

Special Emergency Response Team

Purpose

To establish and define the role of the Special Emergency Response Team within the Division of Field Services-Special Operations and establish guidelines for activation and utilization of their resources.

Policy

The Special Emergency Response Team (SERT) shall:

- When requested and approved, assist members from the Department and those from other local, state, and federal agencies; and
- Develop, under the direction of the Team Commanding Officer, team specific Standard Operating Procedure (SOP) that shall be created, maintained and updated as directed by the Special Operations Commander.

Utilization of Resources

SERT is available for:

- Search and rescue efforts;
- Special event crowd control;
- Area security operations;
- Fugitive searches;
- Prison and civil disturbances;
- Extended recovery operations support;
- Wilderness searches requiring advanced land navigation techniques;
- Homeland Security related missions; and
- Other special events/incidents as assigned by the Special Operations Commander or designee.

Mission, Goals, and Objectives

Policy

All members are responsible for facilitating the safe and expeditious flow of traffic.

Mission

To develop and implement data-driven, multidisciplinary strategies to maximize the safety of the users of the roadway system.

Traffic Law Enforcement

Goal

- Minimize the incidence of offenses committed on the roadways and to promote voluntary compliance with traffic laws.

Objectives

- Minimize the number of crashes and the resulting fatalities, injuries, and property damage through uniform, consistent, and active enforcement;
- Maximize training, selective enforcement, and criminal operations to reduce the number of driver errors, traffic violations, and the overall crime rate; and
- Maximize the utilization of traffic data, crash reports, and citation information as key identifiers for personnel deployment and selective traffic enforcement.

Traffic Crash Management

Goal

- Minimize the incidence of loss of life, personal injury, and property damage resulting from crashes.

Objectives

- Maximize planning and coordinate programs by systematically obtaining data about collisions, roadways, drivers, and other required information;
- Minimize the severity of personal injuries and safeguard the lives and well-being of persons involved in collisions by providing basic medical and other emergency services;
- Minimize the number of driver errors and traffic violations by determining the cause(s) of collisions and taking appropriate enforcement action; and
- Minimize secondary crashes and/or delays by clearing crash scenes as rapidly as possible.

Subject	Number
Mission, Goals, and Objectives	**TRF-01**

Traffic Direction and Control

Goal

- Minimize delays to highway users resulting from crashes, construction, or other impediments.

Objectives

- Maximize the presence of personnel and equipment at locations and times conducive to enhancing traffic safety and flow;
- Maximize the expeditious flow of traffic by maintaining a high degree of officer and cruiser visibility while on patrol or specific assignment;
- Minimize and prevent collisions by eliciting the assistance of transportation officials and other law enforcement agencies to resolve problems as quickly and efficiently as possible;
- Maximize the direction of traffic through the use of signs, signals, and mechanical devices to regulate, coordinate, and detour traffic; and
- Maximize inter-agency relationships by sharing knowledge and information with other law enforcement, transportation, and academic officials involved in the transportation system so as to be better able to identify opportunities and resolve problems as quickly and efficiently as possible.

Traffic Safety Education

Goal

- Maximize the knowledge of highway users through Department announcements and provide information on risks, losses, and hardships associated with unsafe driving practices.

Objectives

- Maximize the awareness among the general public of the risk of damage, economic losses, and hardships associated with crashes and/or arrests resulting from unsafe driving;
- Minimize crashes and traffic violations committed by the general public through comprehensive training and education programs in unison with media informational efforts; and
- Maximize the public's safety by providing education on the importance of safety precautions, and promoting good driving practices such as wearing safety belts.

Subject	Number
Mission, Goals, and Objectives	**TRF-01**

Traffic Ancillary Services

Goal

- Maximize service to highway users in need of aid or information in a timely manner.

Objectives

- Maximize public safety by diligently patrolling assigned areas and rendering assistance when needed;
- Minimize the dangers to a stranded motorist by obtaining appropriate and timely assistance;
- Maximize public acceptance and respect by courteously providing information; and
- Maximize public awareness of traffic safety information through Department Public Service Announcements (PSA's) and community relations efforts.

Department of State Police
General Order

Effective Date	Number
April 23, 2009	**TRF-02**

Subject

Patrol

Policy

The Department shall provide twenty-four (24) hour a day patrol coverage of state and interstate highways, as well as other areas of primary jurisdiction. The Department shall also be available to assist other agencies when required.

Patrol Function

The purpose of the patrol function is to:

- Protect life and property;
- Respond to emergencies and other calls for service;
- Investigate crimes;
- Ensure the safety of motorists and pedestrians; and
- Assist other members, police departments, and government agencies.

Deployment

Members may be deployed based upon the documented need for services. Criteria to be used for the assignment of personnel are:

- Crime: Number of crimes, type, and severity;
- Calls For Service: Number of specific incidents, time, and type;
- Jurisdiction: Geography and demographics of the area;
- Crash Data: Number of crashes, type and severity;
- Roads: Type and miles of roadways; and
- Coverage: Sufficient patrols are available to ensure officer safety.

Roll Call

Supervisors or Station Desk Officers should conduct a roll call with shift members, preferably at the start of each shift. Roll call information may include items such as:

- Review of Department written orders and directives;
- Administrative or teletype messages;
- Legal updates;
- Patrol information; and
- Investigative bulletins.

Patrol Responsibilities

The safety of members and the public are a paramount concern at all times.

Members shall:

- Maintain high visibility for general deterence of criminal and traffic violations;
- Familiarize themselves with their patrol area;
- Know the location of hospitals, local police departments, and other such facilities;
- Utilize various routes of travel to promote the visibility concept and to minimize predictability;
- Remain in their assigned patrol area, unless otherwise authorized or directed;
- Check vehicles parked within their patrol area, on the highway, and in rest areas (see ADM-46 Sexual Activity in Public Places), particularly at night and during periods of extreme or inclement weather to ascertain if the motorist/occupants are in need of assistance;
- Be alert to and report hazards within their patrol area, such as: road debris, inoperative traffic lights, missing traffic signs, fallen trees, or icy roads; and
- If the condition or hazard is of an emergency nature, the member should remain at the scene until the situation has been resolved, or the member is relieved by another member, entity, or as ordered.

Supervisors shall provide support to members to ensure their safety and efficiency while on patrol.

Desk Officer Responsibilities

Desk Officers shall:

- Enter the proper Roll Call information into the Daily Administative Journal (DAJ) including officers present and accounted for;
- Notify the Troop Duty Officer as appropriate;
- Take appropriate action to address reported hazards/situations; and
- Enter information as required into the DAJ.

Assisting Motorists

All members, regardless of duty assignment, shall be constantly alert for motorists who may appear to need assistance. Whenever a disabled motor vehicle is observed, members shall stop, unless a call or assignment prohibits them from doing so.

- Members are not required to perform mechanical work, change flat tires, jump-start vehicle batteries, unlock doors, etc.

If a disabled vehicle presents a clear and present danger, further traffic problems, and/or the possibility of a traffic crash, it may be pushed off the roadway and onto the shoulder, median, or breakdown lane. Members shall:

- Ensure that when pushing a disabled vehicle sufficient care is taken to prevent unnecessary damage; and
- Use only vehicles modified with extended front push bumpers.

Continued next page.

Assisting Motorists (Continued)

Members shall remain with the disabled vehicle and its occupants until assistance arrives, or they are assigned to a higher priority call for service.

- Members may allow stranded motorists and/or occupants to remain in a Department vehicle for safety and warmth; additionally
- Members may transport operators and/or occupants to another location for their safety or to a location where arrangements may be made for further assistance.

When encountering an unattended/abandoned motor vehicle members shall:

- Stop and make a visual check of the vehicle; and
- Make a RMV CJIS/NCIC inquiry into the status of the vehicle.

If the vehicle is properly registered and does not appear to be stolen or pose a risk to public safety, a courtesy check sticker shall be completed and affixed to the vehicle, on the upper left corner of the rear glass, where it can be readily identified by other members.

When asked to provide directions, guidance, or general information, members shall conduct themselves in a courteous and professional manner.

Subject

Selective Traffic Enforcement

Policy

The Department shall use special enforcement patrol duties as an effective technique to meet our highway traffic safety goals and objectives.

Selective Traffic Enforcement

The primary purpose of selective traffic enforcement is to:

- Regulate traffic flow;
- Reduce traffic crashes; and
- Improve the safety of roads and highways.

Assignments shall be based upon:

- Crash data;
- Frequency of traffic violations;
- Traffic volume;
- Citizen complaints; and
- Any other pertinent information.

Traffic law enforcement depends upon the public and judicial acceptance of our efforts. Selective enforcement shall be fairly applied to create a climate of compliance with motor vehicle laws.

The selective enforcement performance standards for members shall be based upon the goals and objectives of the mission.

It is important to understand that both a quantitative and a qualitative emphasis are integral parts of selective enforcement.

Troop Commanders

Troop Commanders may utilize any of the following selective enforcement techniques, or combinations thereof, based upon the Traffic Program Officer's and/or Traffic Program Section's reports.

- Aerial patrol by the Air Wing;
- Speed reduction with speed measuring devices;
- Removing intoxicated drivers through saturation patrols, sobriety checkpoints, and other approved methods;
- Commercial vehicle enforcement conducted by the CVES;
- Joint operations in unison with other law enforcement agencies; and
- Education and information with electronic and print media releases and public presentations on traffic safety.

Subject	Number
Selective Enforcement	**TRF-03**

Traffic Programs Section

The Traffic Programs Section shall provide assistance and guidance to Troop Commanders on the selective enforcement activities to be conducted. This shall occur on a monthly basis and may include, at a minimum:

- Analysis of traffic crash investigations/reports;
- Analysis of traffic enforcement activities;
- Determining selective enforcement activities and programs success; and
- Review and revision of selective enforcement objectives.

Troop Traffic Programs Officer

The Troop Traffic Programs Officer is responsible for providing the traffic analysis for their respective Troop in conjunction with the Traffic Programs Section as stated above. The summaries shall include:

- Time and location of crashes;
- Causal factors; and
- Types of violations noted.

Station Commanders

Station Commanders shall utilize this traffic information for the scheduling of members for selective enforcement.

- Routine patrol assignments shall be planned based upon available assets in order to maximize the patrol effort of members not specifically assigned to other duties; and
- The assignment and deployment of members to selective enforcement should complement rather than replace regular patrols.

Subject

Motor Vehicle Pursuits

Purpose

This policy provides guidelines for the pursuit of motor vehicles.

Policy

A motor vehicle pursuit is justified when the necessity of the apprehension of a suspect outweighs the risk created by the pursuit.

Officers shall continually evaluate all circumstances surrounding a pursuit. If the degree of danger to the public, the pursuing officer(s), and/or the suspect(s) is greater than the necessity for immediate apprehension, a pursuit should not be initiated, or if in progress terminated.

Definitions

Vehicular Pursuit: An active attempt by an officer in an authorized emergency vehicle to apprehend a fleeing suspect who is actively attempting to elude the police.

Densely Populated Area: An established city or town that is thickly settled and/or comprised of a business district marked by compactness, pedestrian and vehicular traffic.

Prohibited Pursuits

Pursuits of motorcycles **shall be prohibited**, unless the suspect poses an imminent threat of death or serious bodily harm to the public or officers.

When a member initiates or signals the operator of a motorcycle to stop for a motor vehicle violation and recognizes that the violator is refusing to stop, the member shall:

- Terminate any further pursuit, unless the suspect poses an imminent threat of death or serious bodily harm to the public or officers.

The Troop Duty Officer shall:

- Immediately assume command and control when circumstances result in a request for a CODE 1 regarding pursuit of a motorcycle; and
- Terminate the pursuit, unless the suspect poses an imminent threat of death or serious bodily harm to the public or officers.

Subject	Number
Motor Vehicle Pursuits	**TRF-04**

Initiating a Pursuit

If a violator fails to stop when signaled to do so and operates in such a manner as to avoid capture, officers must first recognize the potential risk to public safety before initiating a pursuit. Consideration should be given to tactics that reduce the opportunity for a suspect to flee apprehension.

If the degree of danger to the public, the pursuing officer(s), and/or the suspect(s) is greater than the necessity for immediate apprehension a pursuit should not be initiated or, if in progress terminated.

Factors to consider include:

- Probability of apprehension;
- Type of vehicle being pursued;
- Offense;
- Availability of assistance;
- Speed and driving behavior;
- Presence of passengers;
- Location, visibility, weather, road conditions, and the time of day;
- Volume of vehicular and pedestrian traffic; and
- Other circumstances or conditions which mitigate or aggravate hazards associated with the pursuit.

Termination of Pursuits

Officers shall immediately terminate a pursuit when any of the following conditions exist:

- When a pursuit for a civil infraction, misdemeanor, or non-violent felony enters into a densely populated area or heavily congested roadway;
- If radio communications with the Troop Duty Officer cannot be established or lapse during the pursuit;
- When the initiating officer or Troop Duty Officer determines that the risks of continuing the pursuit are outweighed by the risk to public safety; or
- When ordered to do so. Termination orders shall be immediately acknowledged.

When an officer terminates a pursuit they shall immediately deactivate all emergency visual and audible systems.

Subject	Number
Motor Vehicle Pursuits	**TRF-04**

Pursuit Responsibilities

Position	Duties
Primary Pursuit Officer	Shall: • Request a **CODE 1** and broadcast cruiser number, location, direction of travel, speed and traffic conditions; • Activate all emergency visual and audible systems; • Provide the original reason for the attempt to stop the motor vehicle and a vehicle description; • Continually broadcast the location, direction, speed, and road conditions; • Operate cruiser in accordance with General Order ADM-19A Vehicle Use and Maintenance and MGL c.89 s.7B and continually re-evaluate the risk to public safety; • Advise the Troop Duty Officer and render assistance to any civilian vehicle involved in a crash; • Assistance to injured parties shall take precedence over the continuation of the pursuit; and • Conduct a comprehensive follow-up investigation in the event the operator eludes apprehension. **<u>Out of State Pursuits</u>** • Officers shall not pursue a fleeing vehicle across the territorial boundaries of the Commonwealth and into another state for a misdemeanor; and • Officers may pursue felony suspects into other states only when authorized by the Troop Duty Officer.
Station Desk Officer	Shall immediately: • Notify the Troop Duty Officer of a pursuit and request **CODE 1**; • Receive, record, and coordinate information on the pursuit and the pursued vehicle with the Troop Duty Officer and other law enforcement agencies; and

Continued next page.

Subject	Number
Motor Vehicle Pursuits	**TRF-04**

Pursuit Responsibilities (Continued)

Position	Duties
Station Desk Officer	• Ensure that all pertinent information regarding the pursuit is entered into the Daily Administrative Journal (DAJ) and forwarded to the Troop Duty Officer.
Assisting Pursuit Officer(s)	Shall immediately: • Notify the Troop Duty Officer of their participation in the pursuit; • Maintain a safe distance behind the primary unit, but be close enough to provide aid; and • Assume radio communication if and when required. <u>Only two (2) State Police vehicles may engage in active pursuit.</u> The Troop Duty Officer may permit additional State Police officers to assist in a pursuit if they determine extraordinary circumstances exist. State Police vehicles not directly engaged in the pursuit, but in close proximity to the pursuit shall immediately notify the Troop Duty Officer. These officers shall position themselves on alternate/parallel roadways to provide assistance in the event the suspect eludes the pursuing officer(s) or flees on foot; or as otherwise directed by the Troop Duty Officer.
Troop Duty Officer	Shall immediately: • Initiate a **CODE 1**; • <u>Personally broadcast</u> that they have assumed "command and control" of the pursuit; • Ascertain the cruiser number(s) of the involved officer(s); location, direction of travel, speed, and traffic conditions; • Determine the original reason for the attempt to stop the motor vehicle; • Obtain the vehicle description, including plate number, if known, and number of occupants; • Continually evaluate the risk to the public, and the pursuing officer(s), as such risks relate to the necessity for immediate apprehension;

Continued next page.

Subject	Number
Motor Vehicle Pursuits	**TRF-04**

Pursuit Responsibilities (Continued)

Position	Duties
Troop Duty Officer	• Utilize State Police Air Wing (if available); and • Direct State Police K-9 units to respond to the general area (if available). **Mandatory Termination** In the event the Pursuit Officer fails to transmit the required information to the Troop Duty Officer, said Duty Officer shall terminate the pursuit. If the degree of danger to the public, the pursuing officer(s), and/or the suspect(s) is greater than the necessity for immediate apprehension, a pursuit should not be initiated, or if in progress, terminated. **Authority** Regardless of the rank of the pursuing officer, the Troop Duty Officer shall remain in command and control of the pursuit for the entire duration. **Inter-Troop Pursuits** The Troop Duty Officer of jurisdiction shall assume command and control once the pursuit enters their Troop. Adjoining Troop Duty Officers shall be notified of pursuits that are in close proximity to their jurisdiction and may enter into their area of responsibility. When a pursuit enters into another Troop the originating Duty Officer shall remain in command and control until the adjoining Troop Duty Officer personally broadcasts that they have assumed "command and control" of the pursuit. **Note: Only the Duty Officer from the originating Troop shall complete the pursuit evaluation.**

Continued next page.

Subject	Number
Motor Vehicle Pursuits	**TRF-04**

Pursuit Responsibilities (Continued)

Position	Duties
Troop Duty Officer	**Inter-Jurisdictional Pursuits** Troop Duty Officers shall notify other law enforcement agencies when a State Police pursuit is within their primary jurisdiction. They shall factor into their consideration any additional information bearing on the pursuit provided by said law enforcement jurisdiction. Request for their assistance or; • Courtesy notification with NO participation requested. **Out of State Pursuits** If a felony has been committed, the Troop Duty Officer may authorize the pursuing officer(s) to continue to pursue into another state. If this occurs, the Troop Duty Officer shall immediately: • Notify the law enforcement agency of jurisdiction and request their assistance; • Require that the first out-of-state law enforcement vehicle that joins the pursuit become the primary pursuit vehicle; and • Direct the Massachusetts State Police vehicle to become a backup unit; and • Direct the MSP officer(s) involved to return to the Commonwealth as soon as the pursuit investigation is terminated. **Crash Investigations** The Troop Duty Officer shall assign a supervisor to investigate all crashes associated with a State Police pursuit.

Other Law Enforcement Agency Pursuits

Once a law enforcement agency notifies the State Police that they are in pursuit the caller must be identified and specifically asked:

- Whether they are making a request for State Police assistance; or
- Making a courtesy notification with NO State Police participation requested.

Once a request for assistance is made, the Troop Duty Officer shall determine if the State Police shall participate. If approval is granted, State Police officer(s) shall act as a secondary unit to the other agency's officer unless otherwise directed by the Troop Duty Officer.

All State Police officers directly or indirectly involved in a pursuit initiated by another law enforcement agency shall adhere to all of the requirements established in State Police General Orders, as well as Rules and Regulations.

Subject	Number
Motor Vehicle Pursuits	**TRF-04**

Pursuit Driving Tactics

Deliberate Contact – Shall be prohibited unless specifically authorized and ordered by the Troop Duty Officer, Troop Commander, or Command Staff Member and where the suspect poses an imminent threat of death or serious bodily harm to the public or officers.

Tire Deflating Devices – Should be considered as an effective option for bringing a pursuit to conclusion for passenger vehicles only. The use of these devices is prohibited for motorcycles, buses, and trucks. (Refer to TRF-21 for additional details.)

Caravanning - Only two (2) State Police vehicles may engage in active pursuit. The Troop Duty Officer may permit additional State Police officers to assist in a pursuit if they determine extraordinary circumstances exist.

Units Paralleling – Additional State Police officers may operate with emergency visual and audible systems activated and assist by paralleling the pursuit or pre-position themselves at likely avenues of escape. These assisting units are strictly prohibited from direct/active pursuit unless specifically authorized by the Troop Duty Officer.

Passing – Attempts to pass another police vehicle are strictly prohibited, unless the police vehicle is disabled or ordered by the Troop Duty Officer.

Spacing – All units in pursuit shall space themselves at a safe distance to ensure proper braking and reaction time.

State Police Motorcycles – SHALL NOT become involved in a pursuit.

Unmarked State Police Vehicles – Officers operating unmarked State Police vehicles shall only engage in pursuits if they are equipped with emergency visual and audible systems and shall allow a marked/semi-marked unit to assume the primary pursuit position at the earliest opportunity. The unmarked vehicle shall then become the assisting unit until an additional marked/semi marked State Police vehicle can assume the secondary role. Once two (2) marked/semi marked State Police vehicles have become actively involved in the pursuit, the unmarked vehicle shall immediately disengage from the pursuit unless specifically authorized by the Troop Duty Officer to continue involvement in the pursuit.

Reckless/Hazardous Driving – Officers shall not duplicate the reckless operation displayed by fleeing suspects. Officers are strictly prohibited from wrong way operation.

Subject	Number
Motor Vehicle Pursuits	**TRF-04**

Post Pursuit Documentation and Review

Position	Duties
Pursuit Officer	Provide the Troop Duty Officer with relevant information so they can complete the SP 343 Pursuit Evaluation Form.
Troop Duty Officer	• Ensure that the Desk Officer has entered all pertinent information into the DAJ and the entry is forwarded to Troop Headquarters; • Complete all required entries in the Troop Headquarters DAJ; • Ensure that the Troop Headquarters DAJ entry is included in the Daily AM Report; • Complete the electronic RAMS Pursuit Evaluation; and • Ensure a follow-up investigation occurs for suspects who elude apprehension.
Deputy Superintendent	• Appoint members to the Pursuit Review Committee.
Pursuit Review Committee	• Examine each pursuit and ensure compliance with this policy and report their findings to the Deputy Superintendent.

Foot Pursuits

Policy

Members shall continually evaluate all circumstances surrounding a pursuit. If the degree of danger to the public, the pursuing officer(s), and or member(s) is greater than the necessity for immediate apprehension, a pursuit shall not be initiated, or if in progress, terminated.

Criteria for Foot Pursuits

Mere flight by an individual not otherwise suspected of criminal activity shall not serve as the sole justification for engaging in an extended foot pursuit, or for a significant commitment of Department assets.

Alternatives to Foot Pursuits

In deciding whether or not to initiate or continue a foot pursuit, a member should continuously consider reasonable alternatives to pursuit based upon the circumstances and resources available, including:

- Containment of the area;
- Canine search;
- Saturation of the area with additional patrol personnel;
- Air Wing support;
- Apprehension at another time when the identity of the suspect is known or other information is available that would likely allow for later apprehension; and
- The need to immediately apprehend the suspect does not reasonably appear to outweigh the risk in continuing the pursuit.

The team concept of using two (2) or more officers should be used whenever possible.

If exigent circumstances exist, it is generally recommended that a single member keep the suspect in sight from a safe distance and coordinate containment.

Continued next page.

Subject	Number
Foot Pursuits	**TRF-4A**

Alternatives to Foot Pursuit (Continued)

Foot pursuits are inherently dangerous and require heightened officer safety awareness, common sense and sound tactics.

Before initiating a foot pursuit, member(s) shall contact the station of jurisdiction and at a minimum, provide the following information:

- Member's identification (e.g. cruiser number) and exact location;
- Reason for the pursuit and current direction of travel;
- Number and description of suspects; and
- Whether the suspect is known or believed to be armed.

Members should consider, if the situation allows, removing the keys from the ignition of Department vehicle and/or the suspect's vehicle before commencing the tracking of the suspect operator.

Unless there is an immediate threat to another officer or a member of the public, members shall not initiate a foot pursuit under the following conditions:

- The member has no portable radio, no means of communicating or loses communications with other members or duty station;
- The member is alone and the subject has fled into the woods or an unoccupied building;
- When two (2) or more members become separated, lose visual contact with one another, or obstacles separate them to the degree that they cannot immediately assist each other should a confrontation take place;
- The member loses possession of their weapon or other essential equipment;
- When the member is unsure of their location and direction of travel;
- When pursuing multiple suspects and the pursuing members(s) do not reasonably believe that they would be able to control the suspects should a confrontation occur; or
- When ordered to do so by the Troop Duty Officer.

Traffic Incident Management

Policy

The Department shall use Traffic Incident Management protocols to minimize the congestion and delay caused by highway incidents.

Traffic congestion causes safety concerns due to the increased risk of secondary crashes, resulting in economic losses, which can adversely impact the quality of life.

Every effort should be made to minimize this cost, in addition to the impact to public safety and the inconvenience to motorists of the Commonwealth.

Applicability

Every incident requires that certain management activities be performed. Even if the incident is small, Traffic Incident Management protocols are applicable to some degree.

The system should always be applied, even to routine incidents to:
- Create familiarity with the system;
- Be prepared for escalation; and
- Increase awareness of the risks that exist in all incidents.

Goal and Objectives

Goal: Use "Quick Clearance" to restore the normal traffic flow as quickly and safely as possible.

Objectives:
- Coordinate and expedite emergency response to incidents;
- Save lives, preserve property and minimize damage to the environment by the use and implementation of standard procedures and/or agreements;
- Improve scene management to facilitate quick clearance of incidents;
- Provide timely, accurate information to other agencies and roadway users about roadway conditions and alternate routes through the use of media, MassHighway's Advanced Traveler Information System (ATIS), and other systems; and
- Minimize the impact of non-recurring incidents through the use of pre-planned alternate routes.

Subject	Number
Traffic Incident Management	**TRF-05**

Unified Command

Incidents occur without regard to jurisdictional boundaries requiring a well integrated, unified command approach to managing the incident scene.

Roadway crashes, fire, and hazardous material incidents usually require a multi-jurisdiction, multi-agency response. Individual agency responsibilities and authority are normally confined by jurisdiction or function by statute.

Unified Command requires all responding agencies to have a functional responsibility that contributes to:

- Ensuring safety of ALL emergency responders;
- Determining overall incident objectives;
- Ensuring joint planning;
- Implementing strategy chosen for clearing the incident;
- Ensuring integrated tactical operations are conducted;
- Maximizing all assigned resources; and
- Re-opening the affected roadway as quickly and efficiently as possible to minimize congestion delays resulting from the incident.

First-On-Scene

There are certain duties and responsibilities required of the first-on-scene member that are critical to initiating the appropriate response necessary to successfully manage an incident.

1. **Initiate Communication of incident with exact location-** Give brief description of incident, route number, direction, town, exit number or mile marker, landmark.
2. **Evaluate the incident-** Type of incident and potential number of injured, traffic conditions, lanes that are blocked, best access to scene:
   - **I.** If a commercial motor vehicle (bus or truck) is involved the Department of Transportation Number is required.
   - **II.** In case of hazardous material releases then the type, estimated amount, tank rupture and placard number is required.
3. **Communicate the evaluation**- Communicate the evaluation and the need for additional responders to the sub-station of jurisdiction.
4. **Secure the scene**- Secure the scene by whatever means available (cruiser, cones, etc.) to prevent further injury or property damage to the motoring public.
5. **Perform First Responder Duties**- Provide basic medical care; (e.g. CPR, first aid), until the arrival of more qualified EMS personnel.
6. **Assume Incident Command (IC) duties until relieved-** Begin to initiate IC responsibilities until the appropriate IC agency arrives. The first-on-scene member shall brief the relieving Incident Commander on the situation.

Subject	Number
Traffic Incident Management	**TRF-05**

Traffic Incident Management Response Framework

Department members shall:

- **Perform First-On-Scene Duties-** All members, when first arriving on the scene of a roadway crash, shall be prepared to assume the first-on-scene duties.
- **Assist in Securing the Scene-** The first responding member shall immediately take charge and secure the scene pending the arrival of the assigned patrol or supervisory personnel to whom the responsibility shall be surrendered.
- **Perform First Responder Duties-** Provide basic medical care; (e.g. CPR, first aid), until the arrival of more qualified EMS personnel.
- **Assume IC Duties When Appropriate**- The senior member at the scene shall assume IC duties. In the event that a fire, explosion, HazMat, or serious threat of fire, explosion, or HazMat is encountered, the responsibility for the "immediate scene" shall fall to the Senior Local Fire Department Official. Department personnel should be aware that Incident Command shall be transferred back to the Department once the fire, threat of fire or Hazardous Material has been removed.
- **Support Unified Command As Necessary-** Paramount to the successful management of any critical incident is cooperation among all of the agencies participating in the operation. Department members shall be aware that Incident Command might be rotated with an official of another agency (such as Fire or MassHighway).
- **Control Scene Access/Egress-** This may include providing escorts for emergency vehicles and equipment necessary for clearing the scene of the injured and any obstructions or hazards.
- **Implement Alternate Routes-** Redirect the flow of traffic from the incident when necessary. Members are reminded that when alternate routing is initiated, which may affect local communities, additional personnel may be needed to augment the local police department at strategic locations to safely move large volumes of traffic within the local community.
- **Assist the Public Information Coordinator-** In order to facilitate the movement of traffic around and away from the incident, the media should be contacted. The Department's Media Relations shall dispatch qualified personnel to the scene of major incidents, if available, and shall provide support to on-scene personnel. The IC shall designate a Public Information Coordinator, normally a member from Media Relations, to interface with the media at the incident.

Continued next page.

Subject	Number
Traffic Incident Management	**TRF-05**

Traffic Incident Management Response Framework (Continued)

- **Conduct Incident Investigation-** The initial responding member, a member designated by the IC, or the assigned patrol of jurisdiction shall complete any and all reports required pursuant to established Department policy and procedure.
- **Participate In After Action Review/Debriefing-** All Department personnel involved shall be available for any after-action review of the incident. Members shall be prepared to discuss their roles and actions during the management of the entire incident.

Traffic Control

When conducting manual traffic control, members shall ensure that their presence and purpose are clear and obvious, and that they use traffic direction and control signals that are easily understood to ensure the safe and efficient flow of traffic.

Members conducting manual traffic control shall:

- Wear issued retro-reflective outerwear and employ a flashlight when warranted;
- Position themselves in a safe location so they can be seen by all;
- Stand straight, with a military-like bearing facing traffic, and be alert to their duties and conditions around them;
- Use clear and simple signals to direct traffic; and
- Start or stop one lane of traffic at a time on multiple lane roads, before proceeding to start or stop the next lane of traffic.

At the scene of critical incidents, members should assist by diverting vehicles around or away from the incident and allow medical and fire personnel room to operate. Roadway closures should be as short as possible; quick clearance techniques shall be employed whenever practicable.

Temporary traffic control devices, including portable signs, moveable barriers, and other apparatus, may be deployed to assist members in the safe and efficient flow and control of traffic. This is mainly applicable for pre-planned events, or long-term road closures.

In most circumstances, planning a road closure beforehand can reduce the length of the closure.

Motor Vehicle Stops

Policy

Necessary precautions shall be taken for every motor vehicle stop to ensure the safety of all. Members shall use these guidelines as well as their training and experience to determine specific actions for each situation.

Racial and Gender Profiling

All motor vehicle stops shall be in compliance with ADM-47 Identification and Prevention of Racial and Gender Profiling.

Marked Cruiser Motor Vehicle Stops

Members in marked cruisers shall:

- Activate the emergency lights and siren, as necessary;
- Select a safe location, if possible, to stop a violator; and
- Position the cruiser behind the violator at a safe and reasonable distance, or as circumstances require.

Unmarked or Low-profile Cruiser Motor Vehicle Stops

Members operating unmarked/semi-marked cruisers should be aware that motorists might not recognize them as police members and may refuse or be reluctant to stop. These motorists may drive to areas with increased population, illumination or to a local police station before feeling safe enough to stop.

Members shall:

- If in uniform, wear the appropriate cover while signaling the motorist to stop during the contact;
- Request assistance from a marked cruiser if the motorist does not comply; and
- Advise the Troop or GHQ Communications Center of the situation. In many instances people may use cellular phones to call 911 to ascertain the member's authenticity.

Subject	Number
Motor Vehicle Stops	**TRF-07**

Felony Stops

Members making felony or high risk stops shall conduct the stop in accordance with established training guidelines, and if practical:

- Contact the station Desk Officer giving the location, direction of travel, description of the vehicle and occupants(s), and the reason for the stop;
- Request a Code 1 if necessary;
- Position the cruiser in a manner that provides protection and cover; and
- Make an effort to conduct the stop with back up.

Assisting members shall not give additional commands, unless necessary for officers' safety. They shall remain in position to cover the primary member, who shall issue the instructions to the vehicle occupant(s).

Approaching a Vehicle

When approaching a vehicle, members shall be aware of their environment and alert to oncoming traffic. Members shall:

- If in uniform, wear the appropriate cover;
- Ensure the portable radio is on;
- Approach in a manner that affords maximum protection; and
- Remain alert for any sudden or suspicious movement within the vehicle.

Operator Contact

Members shall:

- Speak to the operator from a safe position;
- Inform the operator of the reason for the stop;
- Remain professional and courteous;
- Avoid unnecessary conversation that may lead to verbal confrontations; and
- Assist the operator in safely re-entering the traffic flow.

Member Safety

To maximize safety, the operator and occupants of the stopped vehicle shall be instructed to remain in the vehicle except for:

- An arrest;
- Situations where the member has specific articulable facts and reasonable suspicion that causes the member to be apprehensive for their safety or that of the public;
- Specialized enforcement functions;
- When conducting a field interview; or
- Other situations as necessary.

If individuals refuse to stay in the vehicle, they shall be directed to a position of safety off the roadway, away from the cruiser, but within view of the member.

If a member is stopping a vehicle which they have good reason to believe may pose a threat to the member or the public, they shall follow the felony stops procedure.

Citations

Policy

Citations shall be issued in accordance with Policy and Procedure ADM-04 State Police Authority and Massachusetts General Law (MGL) c. 90C.

Issuance of Citation

The specific enforcement action taken should be predicated upon the offense. Traffic enforcement action shall be taken at the time and place of the occurrence, unless:

- The vehicle could not be stopped;
- Additional time or information is necessary to determine the nature of the violation or identity of the operator; or
- Other extenuating circumstances exist at the time of the violation.

Members shall fill out all applicable fields within a citation including:

- The gender of the operator;
- One applicable authorized code when identifying the operator's race; and
- If a non-inventory motor vehicle search is conducted the appropriate block shall be checked "yes or no."

Under no circumstances shall the race block contain unauthorized codes, remain unfilled, or contain inappropriate notations such as "unknown."

Issuing Member's Responsibilities

Issuing members shall:

- Complete appropriate sections of the traffic citation accurately and legibly;
- Forward the citations to the appropriate court/station of jurisdiction at or before the completion of their tour of duty;
- Ensure the Department copy is submitted to the appropriate court officer; and
- Record citation information onto the PayStation Citation Entry Form.

Members assigned to a station within the Division of Field Services shall utilize the station code of their assigned station in the approved format (e.g., A-1 Andover is SA-1). Members assigned to a section or unit not in Field Services shall use the station identifier approved by their Division Commander.

Subject	Number
Citations	**TRF-08**

Court Officer's Responsibilities

Court Officers shall:

- Forward warning copies to the Registry of Motor Vehicles (RMV) forthwith;
- Mail or deliver civil infraction copies to the Registrar not later than the end of the sixth (6^{th}) business day after the date of the violations;
- Forward criminal complaint/summons to the court of jurisdiction not later than the end of the sixth (6^{th}) business day after the date of the violations; and
- File the Department copy.

Supervisor's Responsibilities

Supervisors shall:

- Review citations for accuracy, legibility, and compliance with statutory requirements; and
- Ensure that unacceptable/unprofessional patterns are immediately addressed.

Station/Section/ Unit Commander's Responsibilities

Station/Section/Unit Commanders shall:

- Maintain a Control Journal for all citation books received and issued;
- Review citations for accuracy, legibility, and compliance with statutory requirements;
- Review the citation data entered into the PayStation Citation Entry application by members under their command;
- Submit monthly/quarterly compliance reports as directed by the Traffic Stop Data Collection Technical Support Manual located on DocuShare;
- Ensure all citation copies are classified, distributed, and delivered to the RMV and the appropriate court(s), as required by statute;
- Retain all Department citation copies in station files for a period of three (3) years; and
- Ensure that unacceptable/unprofessional patterns are immediately addressed.

Troop Traffic Programs Officer's Responsibilities

Troop Traffic Programs Officers shall:

- Maintain and forward up-to-date traffic/legal information as appropriate;
- Maintain a Control Journal for the issuance of citation books; and
- Maintain Monthly Troop Traffic Law Enforcement Statistical Summaries prepared in accordance with the requirements of the Division of Field Services.

Troop/Section Commander's Responsibilities

Troop/Section Commanders shall:

- Review monthly/quarterly compliance reports to ensure that the members under their command are in compliance with the provisions of this policy; and
- Ensure that unacceptable/unprofessional patterns are immediately addressed.

Subject	Number
Citations	**TRF-08**

Division Commander's Responsibilities

Division Commanders shall:

- Establish internal guidelines for procedural review to ensure that the personnel under their command are in compliance with the provisions of this policy.

Recreational Vehicles

Members shall take appropriate enforcement action for violations committed by operators of off-road recreational vehicles (snowmobiles, dirt bikes, all-terrain vehicles, etc.,) observed and/or reported to them.

All MGL c. 90B violations shall be entered upon the standard RMV citation, or an application for complaint may be made with the District Court of jurisdiction.

The standard uniform citation can be utilized as a complaint application for a recreational vehicle operated on a public way in violation of MGL c. 90B s.25.

Note: If needed, under the Executive Office of Energy and Environmental Affairs, the Massachusetts Environmental Police may be called for assistance at (800) 632-8075.

Voidance of Citations

If an error is made while writing a citation, or if a citation becomes accidentally damaged, it may be administratively voided by the issuing member. The member shall:

- Print "VOID" on all copies of the citation;
- Provide a full explanation in writing (To/From) before the end of their tour of duty and submit it to their first line supervisor for review; and
- Record the voided citation in the PayStation Citation Entry application.

If satisfied with the explanation provided, the supervisor shall approve the "VOIDED" citation and the explanation for such action. The voided citation and explanation shall be returned to the Registrar forthwith.

Department of State Police
General Order

Effective Date	Number
June 14, 2018	**TRF-09**

Subject

Towing

Purpose

To establish and define guidelines for State Police officers engaged in towing vehicles.

Policy

Public safety is the Department's primary concern and shall guide the application of this policy. When authorized to remove vehicles, officers shall remove such vehicles to an area which shall ensure the safety and well being of the occupants, security of the vehicle, and allow for safe and efficient flow of traffic.

All personnel and approved tow companies shall adhere to and comply with all Division Commanders' Standard Operating Procedures relating to towing, as well as the Department of State Police Tow Service Agreement SP 357.

Nothing in this policy shall prevent personnel assigned to Troop F from adhering to Massport towing regulations.

Causes for Removal

Officers are authorized to remove (or cause to be removed) any vehicle found upon a road/state highway when:

- The vehicle was stolen or taken without the owner's consent;
- The vehicle is disabled as to constitute an obstruction to traffic and/or is an obvious hazard;
- The operator of the vehicle is arrested and the vehicle would be left unattended on a public way;
- The vehicle is improperly parked or standing in violation of a state or municipal law or regulation;
- The operator of the vehicle is not properly licensed and there are no properly licensed occupants;
- The vehicle is not validly registered or insured;
- The vehicle, in its current condition, is too hazardous or dangerous to be driven;
- The vehicle is impounded/towed pursuant to MGL or state or federal court order; and/or
- Adverse weather conditions or other emergency reasons necessitate the removal in the interest of public safety, or when requested by the Massachusetts Highway Department or other agency having jurisdiction over maintenance of the roadway.

Continued on next page

Subject	Number
Towing	**TRF-09**

Causes for Removal (continued)

Public safety is of paramount importance when considering the time, manner, and method of off-loading and/or towing a large vehicle. The key determinants are current and impending road, weather, and traffic conditions.

All crash/recovery scenes should be cleared as quickly as possible in order to return the highway to its normal traffic flow. If necessary, cargo may be pulled/pushed to adjacent shoulders/medians before the vehicle is towed.

The off-loading and/or towing of large trucks involved in crashes and recoveries on high density/congested roadways should be avoided during peak commuter hours (0600-0900 hours and 1500-1830 hours) as it may contribute to additional delays and/or crashes.

Responsibilities of the Officer Towing a Vehicle

Officers shall inquire if there is a preference for a particular tow company and it shall be honored unless:

- The emergency requires expediency;
- Traffic conditions require immediate removal; and
- The response time of the tow company requested would be unreasonably long in the opinion of the on-scene officer(s) and safety dictates its removal.

When no request for preference is expressed, the officer shall inform the Station Desk Officer who will dispatch a tow company from the Station's Tow Company List that is approved to provide the required service.

Depending upon time of day, weather, or other variables, the officer shall remain with a disabled vehicle and its occupants until assistance arrives, or until the officer is assigned to a higher priority call for service. The officer may transport the occupant(s) to a safer location to make their own arrangements, if it is agreeable to the occupants.

If the officer at the scene makes an informed observation that a particular on-scene tow company is unable to safely and expediently remove a vehicle; they may request the services of the nearest available State Police Tow Company capable of handling the job.

When applicable, officers shall inventory the towed vehicle in accordance with TRF-10.

Responsibilities of the Station Desk Officer

The Station Desk Officer shall appropriately record the following via RAMS:

- The registration number and state;
- The location from which the vehicle was towed from including time and date;
- Make and description of the vehicle;
- The cause for removal;
- The name or identification number of the officer or proper authority requesting such removal; and
- The towing company name.

The officer requesting the tow shall notify or cause to be notified, the owner of record as soon as possible.

Responsibilities of the Station Commander

Station Commanders shall establish a Station Tow Company List based upon fair and equitable standards including, but not limited to: minimum response times, the maximum allowable number of tow companies, the provisions of this policy and all Division Commanders' Standard Operating Procedures relating to towing.

Fair and equitable standards shall include:

- A consideration of the financial and administrative burden of maintaining and administering the Station Tow Company Lists;
- The public interest and necessity for the prompt removal of wrecked, crashed, and disabled vehicles from the roadway;
- The maximum number of tow companies on a Station Tow List shall not exceed ten companies unless authorized by the Troop Commander; and
- Any additional factors that a Station Commander deems reasonably necessary.

Station Commanders shall be responsible for the oversight of station tow companies in their station areas and may suspend, terminate, and/or place on probation any station tow company consistent with the requirements of all Division Commanders' Standard Operating Procedures relating to towing and the State Police Tow Service Agreement SP 357.

Station Commanders shall appoint a Station Tow Officer to assist with the administration of this policy and to maintain records of all tow agreements and associated documents.

Station Commanders shall also maintain all required records necessary for the administration of this General Order and all Division Commanders' Standard Operating Procedures relating to towing.

Station Commanders, or his/her designee, may establish exclusive tow zones during natural or man-made emergencies in order to maximize public and officer safety.

Responsibilities of the Troop Commander

The Troop Commander shall ensure the effectiveness of the towing process by monitoring personnel under his/her command. The Troop Commander, or his/her designee, as Troop Tow Officer shall:

- Perform random line inspections;
- Order an immediate indefinite suspension without advance notice (until such time as the deficiencies have been satisfactorily corrected) for an event where a tow company's actions have resulted in a threat to public safety;
- Hold and preside over hearings relative to the appeal of a Station Commander's decision or suspension. The Troop Tow Officer may preside over appeal hearings at the discretion of the Troop Commander;
- Notify the tow company in writing of all decisions; and
- Ensure that Station Commanders maintain all records and Tow Service Agreements required by this General Order and all Division Commanders' Standard Operating Procedures relating to towing.

Vehicle Inventory

Policy

Any vehicle ordered towed, or in the custody of the Department, shall be inventoried and properly documented in order to protect:

- The vehicle and its contents;
- The Department and tow company against false claims of lost, stolen, or vandalized property; and
- The member(s) and the public from dangerous items that might be in the vehicle.

When to Inventory a Vehicle

An inventory is a non-investigative procedure in which the contents of a vehicle are itemized, and the condition of the vehicle is noted.

The Department shall inventory any vehicle ordered towed, removed, or impounded:

- As outlined within TRF-09 Towing;
- When involved in a crash, and the owner is unable to care for it;
- Pursuant to a lawful arrest when the vehicle would be left unattended; or
- As a seizure - the vehicle is subject to statutory forfeiture or lawful seizure pursuant to a governmental interest, such as:
  1. A seizure pending forfeiture;
  2. Company or corporation distress warrant; or
  3. The vehicle was used in the commission of a crime, as an instrument of a crime, or is stolen.

The inventory process should be conducted at the scene before towing the vehicle. If the scene is not safe or practical, the process may be done at another location, however the inventory shall be done within a reasonably short period of time.

Inventory Not Necessary

A motor vehicle inventory need not be taken if the vehicle is:

- Legally parked and locked;
- Abandoned and locked;
- Removed by a third party; or
- Disabled with the operator and/or occupants present, and is towed at their request.

Subject	Number
Vehicle Inventory	**TRF-10**

Inventory Procedure

The standard inventory procedure shall consist of a detailed inspection of the interior and exterior of the vehicle for damaged and missing parts, as well as to locate and record the contents of the vehicle. The following areas shall be inventoried:

- The interior of the vehicle;
- The glove compartment and trunk (unless they are locked and there is no key available); and
- The exterior of the vehicle for missing or damaged parts.

The inventory listing of personal items and valuables shall extend to all storage areas and compartments that are accessible to the operator or occupants. This encompasses:

- All open areas, including the floor areas, the area in and around the instrument panel and the rear deck above the rear passenger seat, the open area under the seats, the glove compartment and trunk, and other places where property is likely to be kept.

All closed but unlocked containers shall be opened, and each article inventoried individually.

Locked containers shall be inventoried as a single unit.

If an owner and/or operator requests to remove or entrust their possessions to another person, without it impeding the towing or impoundment process, such request may be granted, unless the member has probable cause to seize the items.

Search Warrants

A search warrant shall be obtained before the search of a locked container or forcing open a locked glove compartment or trunk, unless:

- Consent to open the container is obtained from its owner; or
- The member has probable cause to believe that such locked container shall put the member or others in immediate risk of injury or loss of life.

Subject	Number
Vehicle Inventory	**TRF-10**

Responsibilities

Position	Duties
Members	• Locate and secure any monies or articles of value that cannot be secured by the tow company; • Accurately record on the motor vehicle inventory form a complete listing of the general condition of the vehicle and its contents; • File the form in the station of jurisdiction; 1. Records shall be kept for one (1) year; and 2. Filed by date. • A copy of the form may be filed with any report of investigation; • Make, or cause to be made, any necessary administrative journal entries; • Ensure that all articles taken for safekeeping are stored in an appropriate container and secured in the station; and • An article of value may be left with the vehicle, if the owner so requests, by storing it in the trunk.
Station Commanders	• Provide a central location for members to file the motor vehicle inventory forms, and periodically review the forms for compliance with this policy; and • Ensure that property secured during the inventory procedure is returned to the rightful owners, as appropriate, and not kept longer than necessary.
Troop Commanders	• Strictly enforce the motor vehicle inventory procedure in order to avoid arbitrary application of the policy.

Department of State Police
General Order

Effective Date	Number
October 1, 2019	**TRF-11**

Subject

Automatic License Plate Recognition

Purpose

The purpose of this policy is to establish guidelines and procedures for the proper use and application of the Automatic License Plate Recognition (ALPR) System within the Department of State Police (Department). Additionally, it is the purpose of this policy to provide Department personnel with guidelines and principles for the collection, access, use, dissemination, and retention of ALPR information to ensure that the information is used for legitimate law enforcement purposes only and the privacy, civil rights, and civil liberties of individuals are not violated.

Policy

The availability and use of the ALPR System provides opportunities for the enhancement of law enforcement agencies' productivity, effectiveness, and protection of public and officer safety.

The Department shall only utilize the technology in furtherance of official and legitimate law enforcement operations and public safety. All Department Employees shall abide by the guidelines set forth herein when using the ALPR System.

Definitions and Acronyms

Automatic License Plate Recognition (ALPR): Automatic license plate recognition technology uses high-speed cameras combined with sophisticated computer algorithms capable of converting the images of license plates to electronically readable data. The ALPR System captures an image of a license plate and converts it to a text file using Optical Character Recognition (OCR) technology. The technology also compares the digital images of license plates to the CJIS-NCIC Hot file database. The ALPR System is configured as either fixed, mobile, or portable.

Alert: A visual and/or auditory notice that is triggered when the ALPR System receives a potential hit on a license plate.

Alert Data: Information captured by an ALPR relating to a license plate that matches the license plate on a hot list.

ALPR Data: Scan files, alert data, and any other documents or data generated by, or obtained through, utilization of the ALPR System.

ALPR Data Query Logs: A record of a search or query of ALPR data.

Continued next page.

Definitions and Acronyms (Continued)

Hit: An alert that a license plate matches a record maintained in the ALPR database related to stolen vehicles, wanted vehicles, or other alert type files that support investigation or which have been manually registered by a user for further investigation.

Hot List: License plate numbers of vehicles of interest, such as stolen vehicles, unregistered vehicles, vehicles owned by persons of interest, and vehicles associated with AMBER Alerts, Missing Child Alerts, Missing College Student Bulletins, Silver Alerts, Incapacitated or Endangered Persons, Be On Look Out (BOLO), Attempt To Locate (ATL), and Wanted or Missing Person broadcasts or bulletins in which a license plate number is included, or other license plate numbers of interest entered by the Department or an authorized officer.

Hot List Download: The method by which the hot list data is transferred to a computer within a law enforcement vehicle.

Optical Character Recognition (OCR): The technology that supports the automated reading and digitizing of images of license plates that are captured by the ALPR System.

Authorized Uses

The provisions of this policy are provided to support authorized uses of ALPR information. Authorized uses may include, but are not limited to, the following:

- Investigation and prosecution of suspected criminal (including terrorist) incidents; the resulting justice system response; the enforcement of sanctions, orders, or sentences; or the prevention of crime;
- Enhance Department's AMBER/SILVER or other law enforcement alerts and real-time response capability by deploying and networking ALPRs across the state to more rapidly identify and locate vehicles related to potential child-abduction or other serious crimes;
- Alert law enforcement that a particular license plate on a "hot list" (e.g., a stolen vehicle or a vehicle associated with a wanted individual) is in close proximity to an ALPR to dramatically reduce the recovery time of stolen vehicles and assist in locating dangerous and wanted individuals;
- Identify plates associated with potential witnesses and/or victims of crime;
- Support the Department's homeland security mission by protecting critical infrastructure from individuals who intend to damage or disrupt the systems and locations that allow for travel and the free flow of commerce;
- Identify vehicles linked to stolen license plates or other motor vehicle traffic violations;

Continued next page.

Authorized Uses (Continued)

- Provide situational awareness for law enforcement related to public safety or otherwise relevant to their authorized duties;
- Support local, state, federal, and tribal public safety departments in the identification of subjects associated with/as targets of criminal investigations;
- Support law enforcement response to critical incident responses and special events;
- Support special operations, such as high-crime-area patrols, gang investigation/suppression, operating under the influence initiatives, enforcement details, directed criminal investigations, and other investigations; and
- Support emergency and public safety situations including, but not limited to terrorist threats, kidnappings, missing persons, and felons actively traveling to or from a crime scene.

ALPR Administrator

The Division Commander of Field Services (DFS) shall:

- Designate a Commissioned Officer as the ALPR Administrator; and
- Ensure the ALPR Administrator has oversight for the ALPR System deployment, operations, and maintenance.

The ALPR Administrator shall be responsible for the following:

- Ensuring the proper selection of the personnel approved to operate the ALPR System and maintaining an adequate number of trained and authorized users;
- Authorizing any requests for ALPR System use or data access according to Department policy;
- Coordinating with all Divisions to ensure resources are available and deployed to meet Departmental investigative needs; and
- Ensuring that designated, trained personnel check equipment on a regular basis to ensure functionality, camera alignment, and removing from service any equipment that falls outside expected functionality until deficiencies are corrected.

The ALPR Administrator shall:

- Designate users who have been properly trained in the use and operational protocols of the ALPR System;
- Allow access to the ALPR System for those users with an approved login and password; and
- Ensure that any changes in hardware, software, policy, or law are the subject of continuing in-service training or bulletins.

Subject	Number
Automatic License Plate Recognition	**TRF-11**

ALPR Procedures

The use of ALPR technology shall be approved by the Colonel/Superintendent or designee.

ALPR System and information shall be:

- Accessed and used only for official and legitimate law enforcement purposes;
- Used for searches of historical ALPR data, in accordance with this policy and other Department policies or regulations where applicable; and
- Used for searches of ALPR data by members of this Department or by other law enforcement agencies through the ALPR Administrator.

ALPR Operations

Members using the ALPR System shall:

- Ensure, at the start of each shift, the ALPR System has been updated with the most current hot lists available;
- Verify, prior to use, the aim of the ALPR camera(s) to ensure it is focused on the correct lanes of traffic;
- Ensure ALPR equipment be cleaned and maintained according to the manufacturer's recommendations; and
- Notify the ALPR Administrator of any malfunctions.

ALPR Alerts/Hits

The member shall, prior to initiation of a stop, based on an ALPR Hit or Alert:

- Visually verify that the vehicle plate number matches the plate number run by the ALPR System, including both:
  1. Alphanumeric characters of the license plate; and
  2. The state of issue.

- Verify the current status of the plate through:
  1. The Commonwealth's Criminal Justice Information System (CJIS), or
  2. National Crime Information Center (NCIC), or
  3. Department's Records Management System (RMS), or
  4. Other appropriate source of data, when circumstances allow, or as soon as practicable.

License plate numbers and date/time location collected through an ALPR may not be, when taken alone, sufficient to identify the individual associated with the vehicle. The Department may be able to link the ALPR information to an individual through additional use and combination with other information, such as a check of vehicle registration. Thus, even though the ALPR information the Department accesses may be the result of an ALPR system's automated collection of license plate numbers, it is the investigative process that identifies individuals.

Manual Entry of Data/Manual Hot List

Manual entries may include, but should not be limited to:

- AMBER Alerts;
- Missing Child Alerts;
- Missing College Student Bulletins;
- Silver Alerts;
- Be On Look Out (BOLO);
- Investigative needs;
- Attempt To Locate (ATL); or
- Wanted or Missing Person broadcast or bulletin in which a license plate number is included.

Manual entries entered into the ALPR System shall be:

- Manually updated when the information changes or is no longer current;
- Documented with the specific reason by the member;
- Documented with agency case number; and
- Given a retention date of 1 year or less.

ALPR Data: Logs, Sharing, Dissemination, and Retention

The following process shall apply to ALPR Data:

- A Query Log is internally maintained by each instrument for each transaction;
- Data can be accessed, retrieved, or shared for official and legitimate law enforcement business only; and
- Retention of data shall be determined by the Department of Criminal Justice Information Services (DCJIS) Policy.

The Department will prohibit access, use, or dissemination of ALPR information for:

- Any purpose that violates the Constitution or laws of the United States or the Commonwealth of Massachusetts, including the protections of the Fourth Amendment;

- Based solely on an individual's or organization's religious, political, or social views or activities; their participation in a particular noncriminal organization or lawful event; or their race, ethnicity, citizenship, place of origin, age, disability, gender, gender identity, sexual orientation, or other classification protected by law;

- Non-law enforcement or personal purposes;

- The purpose of prohibiting, infringing upon, or deterring individual activities protected by the First Amendment, such as freely practicing one's religion, freedom of speech and peaceful assembly, freedom of the press, and the right to petition the government for the redress of grievances;

Continued next page.

ALPR Data: Logs, Sharing, Dissemination, and Retention (Continued)

- Harassing and/or intimidating any individual or group;
- Targeting of any individual or group by means of camera placement or data use in a discriminatory manner; and
- Any other access, use, disclosure, or retention that would violate applicable law, regulation, or policy.

The Department protects all ALPR information as personally identifiable information (PII) because ALPR information may be combined with other information to specify a unique individual (i.e., the identity of an individual could be directly or indirectly inferred by using information that is linked or linkable to that individual).

Information Quality Assurance

Original ALPR information will not be altered, changed, or modified in order to protect the integrity of the data. Any changes will be maintained as a separate and additional record, and such record will be identified as having been modified.

The Department will correct, notate, delete, or refrain from using ALPR information the Department originated and found to be erroneous or deficient. Originating agencies external to the Department are responsible for reviewing the quality and accuracy of the ALPR information provided to the Department and must take reasonable steps to correct or amend the information upon learning that it is inaccurate or deficient.

The Department will advise the appropriate point of contact, in writing or electronically, when its ALPR information is alleged, suspected, or found to be erroneous or deficient.

Security

The following shall apply to ALPR system and information security:

- The Department of Criminal Justice Information Services of the Executive Office of Public Safety and Security will operate ALPR servers in a secure facility protected from external intrusion and will utilize secure internal and external safeguards against network intrusions. Any access to DCJIS ALPR information from outside the facility will be allowed only over secure networks;
- The Department and DCJIS will store ALPR information in a manner that ensures that it cannot be added to, modified, accessed, or purged except by personnel authorized to take such actions;
- Access to Department ALPR information will be granted only to personnel whose positions and job duties require such access and who have successfully completed a background check and training;

Continued next page.

Subject	Number
Automatic License Plate Recognition	**TRF-11**

Security (Continued)

- Usernames and passwords to ALPR information are not transferrable, must not be shared by Department personnel, and must be kept confidential;
- Queries made to the Department's ALPR information will be logged into the system identifying the user initiating the query. All user access, including participating agency access, and queries are subject to review and audit; and
- The Department and DCJIS will maintain an audit trail of accessed, requested, or disseminated Department-held ALPR information. An audit trail will be kept for a minimum of one-year of requests for access to ALPR information for specific purposes and of what ALPR information is disseminated to each individual in response to the request.

State Central Repository

The Department has agreed to:

- Electronically submit captured ALPR data to the state repository maintained by the DCJIS at the Commonwealth's Public Safety Data Center.

The Department and its users agree to the terms of this policy and to the Commonwealth of Massachusetts *Global Justice and Public Safety Information Sharing Policy* of the DCJIS.

Policy Review

The ALPR Administrator shall be responsible for:

- The annual review of this policy and the procedures contained herein; and
- Making recommendations through channels to the Colonel/Superintendent or designee, for any necessary amendments.

As use of the technology progresses, the Department shall continue to monitor and assess the appropriateness of this policy, as new technology may raise both legal and technological issues.

Department of State Police
General Order

Effective Date	Number
April 23, 2009	**TRF-12**

Subject

Crash Investigations

Policy

To establish guidelines for traffic crash reporting and investigations

Definitions

Crash: A motor vehicle collision with any other vehicle, object, or person.

Crash Investigation: The systematic recording and examination of the involved vehicles, the roadway, and human factors, to determine the cause of the collision, contributing factors, and determination of violations of law.

Crash Reporting: The basic data collection needed to identify the operators and the particulars of every crash referred to Massachusetts General Laws (MGL) c.90 s.26.

Crash Reconstruction: The technical analysis of all available information and physical evidence to determine how and potentially why the crash occurred.

Commercial Motor Vehicle: A motor vehicle used in commerce, and designed or used to transport passengers or property, which has a gross vehicle weight rating (GVWR) of 10,000 or more pounds, or which is designed to transport more than eight (8) passengers (including the driver), or which transports hazardous materials and is required to be placarded in accordance with federal law.

Serious Bodily Injury: Any bodily injury which creates a substantial risk of death or which involves either total disability or the loss or substantial impairment of some bodily function for a substantial period of time.

Reporting Requirements

Members shall conduct an on-scene investigation and complete Registry CRA-65 Motor Vehicle Crash Report whenever a crash results in:

- A death;
- Personal injury;
- Any violation of law exists;
- Any damage occurs to a Federal/State/Municipal vehicle; or
- Property damage per MGL c. 90 s.26.

For crashes not meeting the above requirements members shall assist the operator(s) with the exchange of any pertinent information and safely clear the crash scene. Members may utilize a SP 256 Crash Data Exchange Form.

Station Desk Officer

Desk Officers shall:

- Dispatch members as needed to respond to the scene of any reported crash;
- Make an entry into the Daily Administrative Journal (DAJ) on all calls for service with appropriate findings;
- Make every attempt to identity callers for investigative purposes;
- Contact MassHighway to respond with necessary equipment (such as arrow boards, cones, curiosity screens, message boards, signage, etc.);
- Notify the Troop Duty Officer of any serious injury or fatal crash;
- Ensure Media Relations is made aware of any serious injury or fatal crash by faxing the SP 640 Serious Crash Fact Sheet directly to Media Relations and GHQ Communications; and
- Notify the Registrar of Motor Vehicles of all crash fatalities immediately through the CJIS "FATAL" screen.

Responding Members

All responding member(s) shall:

- Exercise sound judgment in proceeding to the scene;
- Position the cruiser and/or flares in such a manner as to provide maximum protection for the crash scene;
- Render first aid to the injured, pending arrival of emergency medical personnel;
- Direct traffic safely around crash scene;
- Retain charge of the scene pending the arrival of the assigned patrol, department of jurisdiction, or any supervisory personnel;
- Ensure roadway is clear of debris e.g., flares, cones; and
- Expedite quick road clearance re: TRF-05 Traffic Incident Management.

Primary Investigating Officer's Responsibilities

In addition to the above duties the primary investigating member shall:

- Comply with all reporting procedures;
- Take appropriate enforcement action when sufficient evidence exists;
- Notify the Troop Duty Officer if the crash results in serious injury or death;
- When applicable, utilize findings and measurements determined by the Collision Analysis and Reconstruction Section (CARS) member as the official record for reference throughout the investigation;
- Request to the station of jurisdiction an entry into the DAJ documenting the time cleared and when traffic is back to normal; and
- Submit a CRA-65 to a supervisor, within ten (10) days for approval.

Troop Duty Officer

Upon notification of a crash resulting in serious injury or death, as appropriate notify:

- On call member from CARS;
- Crime Scene Services;
- The District Attorney's Office of jurisdiction; and
- Media Relations.

Troop Duty Officers shall follow the CARS call-out protocol set forth by the CARS Commander.

Note: Ensure that MassHighway has been contacted to respond with necessary equipment when CARS members are responding to crashes on limited access highways.

Station Commander

Station Commanders shall:

- Review all reports for accuracy, completeness, and legibility; and
- Ensure the reports are forwarded to the Registrar of Motor Vehicles within fifteen (15) days.

Crash Reported at Construction Sites

When a crash occurs on the scene of a construction detail under the control and jurisdiction of the Department, the Desk Officer shall:

- Dispatch a patrol to investigate and take appropriate action; or
- If the detail officer is not involved in the crash, assign the member working the detail to investigate the crash when no patrol is available.

Reports for Death or Serious Injury

Motor vehicle crashes occurring on a public way resulting in death or serious injury require an incident report that may include:

- Observations from eye witnesses;
- Observations of hospital personnel;
- Forensic evidence (of operation) such as fingerprints, hair, blood, clothing fibers, etc. that places the occupants accordingly;
- Seat positions;
- Matching damage to the interior of the vehicle to defendant's and passenger's injuries;
- Evidence from occupant protection devices such as seat belts and air bags;
- Evidence of contact with glass in the vehicle;
- Any other pertinent information or evidence; and
- Preliminary findings from the CARS reconstructionist.

Off-Road/ Recreation Vehicles

Off road recreational vehicle crashes occurring on public ways shall:

- Be investigated and reported on the standard CRA-65; and
- The standard uniform citation can be utilized as a complaint application for a recreational vehicle operated on a public way in violation of MGL c. 90B s.25.
  Note: If needed, under the Executive Office of Energy and Environmental Affairs, the Massachusetts Environmental Police may be called for assistance at (800) 632-8075.

Crashes occurring on private property that involve a motor vehicle, or an off-road recreational vehicle, and resulting in death or serious injury shall:

- Be investigated and reported following the same reporting requirements and procedures set forth for death and serious injury crashes.

Crashes involving only property damage that occur on private property, not open to the general public, shall not require an investigation.

Collision Analysis and Reconstruction Section

CARS may be used for the following purposes:

- When any crash involves a fatality;
- When any serious injury crash involves a strong possibility of criminal charges being filed;
- When any Department vehicle collision involves serious injury/death;
- When any serious injury occurs at a work zone where a member is working a paid detail;
- When any Department pursuit results in serious injury or death;
- Upon request by another police department/agency;
- Upon request of the District Attorney's Office, Fire Marshal's Office, or Attorney General's Office for assistance in forensic mapping of crime scenes; and
- As directed by the Troop/Section Commander.

CARS shall:

- Assist the primary investigator and shall not assume full responsibility for any investigation, unless ordered to do so by the Troop/Section Commander; and
- Forward an approved copy of the final report to the primary investigator for proper filing.

Local Cruiser Crash Investigations

Upon a request for a crash investigation involving a local police department, the request shall:

- Be made by the officer-in–charge (OIC) of the requesting department to the Troop Duty Officer.

Troop Duty Officers shall:

- Assign a supervisor (preferably of a higher rank than the officer involved) to conduct a crash investigation.

Continued next page.

Local Cruiser Crash Investigations (Continued)

Investigating Officers shall:

- Conduct an investigation and determine the cause;
- Take immediate enforcement action as necessary;
- Prepare an incident report;
- Submit the incident report together with a CRA-65 for review to the Troop Commander within seventy-two (72) hours of the crash.

Troop Commanders shall:

- Upon approval, forward a copy of the crash investigation to the local police department chief or designee for final disposition.

Crashes/ Commercial Motor Vehicles

Troop Duty Officers shall notify the Commercial Vehicle Enforcement Section (CVES) of all significant commercial motor vehicle crashes when they:

- Cause a major disruption of normal traffic;
- Involve serious injury or a fatality;
- Cause extensive property damage;
- Involve hazardous or radioactive materials;
- Involve violations of law; or
- Are requested by the investigating officer.

The "Truck and Bus Information" section of the CRA-65 shall be completed by the primary investigator with CVES assistance.

Crashes with Deer and Disposition

Eligible Person: A resident of Massachusetts who is an operator or an occupant of a vehicle that strikes a deer.

Members shall be aware that 321 CMR 2.04 allows an eligible person, to salvage the deer in accordance certain stipulations.
Members shall:

- Ascertain if there is an eligible person who wishes to take possession of the deer;
- Advise the eligible person to immediately notify the Massachusetts Environmental Police;
- Ensure an DAJ entry includes the name, address, and telephone number of the eligible person; and
- Notify MassHighway if no eligible person is available to, or declines to take possession of the deer carcass.

Release of Crash Reports

Private Individuals/Businesses

Private individuals, whether representing a business or themselves, are required to obtain crash reports from the Registry of Motor Vehicles.

Instructions for obtaining crash data can be found on the internet at: http://www.mass.gov/rmv/forms/accrecform.pdf.

State Employees/Representatives

Members shall release unredacted crash reports to:

- Employees of the Massachusetts Highway Department when an official(s) appears in person and is properly identified.

Representatives of private companies, under State contracts, responsible for repairs may be allowed to access crash report/record information available at Department facilities, under the following conditions:

- For the purpose of identifying monetary liability in crashes which resulted in damage to the infrastructure of the State highway system;
- Crash reports shall be accessed and copied under the supervision of a Department member; and
- The Station Commander, or designee, shall be responsible for blacking out, the dates of birth and operator license numbers of all parties contained within the crash report.

Specific questions or concerns about the applicability of the Public Records Law or any other statute authorizing or restricting access to such material shall be directed to the Department's Legal Section at (508) 820-2311.

Department of State Police
General Order

Effective Date	Number
July 22, 2014	**TRF-14**

Subject

Operating Under the Influence-Alcohol

Policy

To promote traffic safety through the detection, arrest and prosecution of persons operating a motor vehicle while under the influence of alcohol.

Definitions

Breath Test Operator (BTO): A member certified to administer a breath test in accordance with 501 CMR 2.00.

Officer-in-Charge of Instruments (OIC): A BTO, designated by a Troop Commander responsible for maintaining station/unit breath test devices.

Office of Alcohol Testing (OAT): Established within the Department's Forensic Services Group that oversees the State's Breath Test Device Program and Breath Test Operator Training.

Preliminary/Portable Breath Test Device (PBT): A breath test device, used to administer a screening test, that is capable of quantifying the amount of alcohol in a breath sample or calibration standard.

Standardized Field Sobriety Test(s) (SFST): A test or tests administered to a person prior to arrest and designed to assist in the detection of impairment due to alcohol.

Standardized Field Sobriety Tests

- These tests should be administered by the member, if able, in accordance with training and the procedures outlined in the SFST Manual; and
- A PBT Device when used as a field sobriety test should be the **last** test administered.
  Note: Please refer to TRF-14B Preliminary/Portable Breath Test Device for further information.

Post Arrest Breath Tests

All post arrest breath tests shall be conducted:

- By a certified BTO, however refusals maybe entered by either a certified BTO or by an uncertified Department employee;
- In accordance with 501 CMR 2.00 and Massachusetts General Laws (MGL) c. 90 s. 24;
- In accordance with training and operational procedures developed by the OAT;

Continued next page.

Subject	Number
Operating Under the Influence-Alcohol	**TRF-14**

Post Arrest Breath Tests (Continued)

- At the station of jurisdiction in which the arrest was made; or
- At any station or department having an operational breath test device; or
- In the Department's Breath Alcohol Testing (BAT) vehicle.

Note: If the result of the post arrest breath test is 0.05% BAC or less, there shall be a permissible inference that such defendant was not under the influence of intoxicating liquor, and they shall be released from custody forthwith per MGL c. 90 s. 24, unless other charges support continued incarceration.

Blood Tests

Individuals arrested for operating under the influence (OUI) of alcohol and being treated at a medical facility licensed under MGL c. 111 s. 51 may be offered an opportunity to submit to a blood test in lieu of a breath test.

Refusals

If after being advised of their rights and the consequences of refusing to submit to a test, the individual refuses to submit to a test, none shall be given.

- All refusals, breath and blood, shall be entered into the Breath Alcohol Testing System (BATS) and noted in the Daily Administrative Journal (DAJ);
- Once a refusal is entered into the BATS, no test shall be given;
- Refusal may be entered by a certified BTO or by an uncertified Department employee;
- Refusals shall be witnessed by a third party other than the defendant and the refusal officer; and
- The refusal witness shall be noted within the report and BATS.

Protective Custody

Subjects who have been bailed, after having been arrest for operating under the influence and are placed into protective custody, the Arresting Officer or Desk Officer shall:

- Process the subject according to MGL c. 111B;
- Re-enter the protective custody into the DAJ: and
- Ensure an SP 850 Protective Custody form is completed with a separate report and log entry made.

Subject	Number
Operating Under the Influence-Alcohol	**TRF-14**

Responsibilities

Position	Duties
Arresting Member	• Advise the prisoner of their rights and consequences as outlined in the Statutory Rights and Consent form during the booking process; • If certified as a BTO, administer the breath test; • If not a certified BTO, ensure the breath test is administered by a certified BTO; • If the arrestee refuses to submit to a breath test, enter the refusal into the BATS; • If data entered into BATS is found to be incorrect, complete a BATS Data Correction Form, and fax to the RMV and OAT; • Complete all required documents and reports; and • Ensure arrestee is given suspension notification(s) if they fail the evidential breath test or refuse to submit to a breath test. Note: All required documents and reports shall be completed and signed by the arresting member and/or BTO.
Breath Test Operator	• If the arrestee refuses to submit to a breath test, enter the refusal into the BATS; • Administer a breath test in accordance with Chapter 90, §24 and 501CMR 2.00; • If data entered into BATS is found to be incorrect, complete a BATS Data Correction Form, and fax to the RMV and OAT; • Complete all required documents and reports; and • Ensure arrestee is given suspension notification(s) forthwith. Note: All required documents and reports shall be completed and signed by the arresting member and/or BTO.
Desk Officer	• Notify the bail commissioner and advise them if the prisoner requests to exercise their rights per MGL c. 263 s. 5A; and • Make appropriate entries into the DAJ.

Continued next page.

Subject	Number
Operating Under the Influence-Alcohol	**TRF-14**

Responsibilities (Continued)

Position	Duties
Supervisor	• Ensure compliance with this policy and the completion of all required documents and reports.
Troop Traffic Programs Officer	• Document the date, time and location of each OUI related arrest and crash within their Troop; and • Maintain monthly OUI related reports as may be required by the Traffic Programs Section.
Troop Commander	• Designate OIC of Instruments and ensure they perform all assigned duties regarding station/unit breath test devices; and • Oversee the OUI enforcement efforts within their jurisdiction.
Officer-in-Charge Instruments	• Provide guidance and assistance to BTOs and members entering refusal data; • Ensure arrestee has been suspended if they fail the evidential breath test or refuses to submit to a breath test; • Ensure station/unit breath test devices, supplies, and current reference manuals are maintained and readily accessible; • Troubleshoot breath test devices and perform periodic tests as prescribed by OAT; • Maintain calibration stations for members who have been issued PBTs; • Coordinate with both OAT and individual members for all breath test devices certifications, calibration, repairs, and loaner/replacement units; • Maintain station records of all periodic tests performed as prescribed by OAT; and • Testify as the Keeper of Records in all prosecutions within their jurisdiction.

Subject

Operating Under the Influence-Drugs

Policy

To promote traffic safety through the identification, arrest, and prosecution of persons found to be operating a motor vehicle while under the influence of a drug(s).

Definitions

Drug Recognition Expert (DRE): A member who has successfully completed a National Highway Traffic Safety Administration (NHTSA) approved program and is certified by the International Association of Chiefs of Police (IACP) as a Drug Recognition Expert.

DRE Department Coordinator: A member designated by the Division of Standards and Training as the program coordinator responsible for DRE selection, retention, training, and protocols.

Drug: Any substance, when taken into the human body, which impairs the mental or physical abilities of the person taking it. This definition does not include the ingestion of ethyl alcohol.

Categories of Drugs:
- Central Nervous System (CNS) depressants;
- Central Nervous System (CNS) stimulants;
- Hallucinogens;
- Dissociative anesthetics,
- Narcotic analgesics;
- Inhalants; and
- Cannabis.

Requests for DRE

A request for the assistance of a DRE shall be made to the Troop Duty Officer. If approved, the Troop Duty Officer shall:
- Ascertain if a DRE is working; and
- If available, have the DRE respond to the requesting member/agency.

Subject	Number
Operating Under the Influence-Drugs	**TRF-14A**

Criteria for a DRE Evaluation

The investigating member may request a DRE, through the Troop Duty Officer, when any of the following circumstances exist:

1. The detainee is under arrest and being charged with Operating Under the Influence in violation of Massachusetts General Laws (MGL) c.90 s.24, if :
   - The detainee displays signs and symptoms of impairment associated with drug use; or
   - The detainee refused to submit to a breath test, or submits to a breath test with the result less than .08 BAC, and drug use is suspected; or
   - The detainee consents to a DRE evaluation.

2. Cases involving arrests or investigations for violations of MGL c.94C possession of drugs (that may or may not be associated with a driving offense), if:
   - The detainee consents to a DRE evaluation;
   - The DRE's opinion may help establish an affirmative link between the subject and the drugs; and
   - The requesting member provides the Troop Duty Officer with a substantial rationale for the services of a DRE.

3. In any other cases where a DRE may be beneficial.

Responsibilities

Position	Duties
Drug Recognition Expert	• Ensure that the individual's statutory rights are communicated and understood; • Conduct an evaluation consistent with the twelve (12) step protocol as set out in the DRE Program; • Ensure that a parent, guardian, or legal custodian is present for juveniles who are under the age of eighteen (18) years; • Complete a Drug Influence Evaluation Report to be submitted with the arrest report; and • Forward a copy to the Department DRE Coordinator.
Department DRE Coordinator	• Develop a standard operating procedure (SOP) to include training, protocols, and the selection process of DRE officers; and • Maintain a list of DRE trained members.

Specimen Collection

When consent is given, the DRE shall collect a urine sample using the following procedures:

Step	Action
1	• The defendant shall sign the SP 606 Consent to Toxicology form.
2	• Use a sterile specimen container.
3	• Adults shall be escorted to a cell with a toilet; or • Juveniles shall be escorted to a restroom, not a cell.
4	• The DRE shall collect the specimen from the subject ensuring that there is no opportunity for specimen tampering or adulteration; • If the DRE is not of the same gender as the subject then: 1. A request shall be made for the assistance of another member who is of the same gender as the subject; 2. The assisting member shall collect the subject's specimen and transfer the specimen to the DRE; and • The DRE shall ensure the proper chain of custody is reflected on all documentation regarding specimen collections.
5	• Once the sample is deposited into the container, the DRE shall: 1. Seal the container; 2. Indicate on the container the subject's name, time and date; 3. Place the container into a plastic evidence bag; 4. Place copies of the SP 604 Drug Influence Evaluation Report and the SP 603 Toxicology Request Form with the evidence bag; 5. Secure the evidence bag and container within the evidence refrigerator at the Troop Headquarters; 6. Request the Troop Duty Officer to make an entry into the Daily Administrative Journal of the evidence being secured at the Troop Headquarters; and 7. Ensure the specimen is transported to the Department Crime Laboratory for analysis as soon as is practical.
6	• The arresting member shall enter the sample as evidence into the Evidence Control System.

Preliminary/Portable Breath Test Devices

Purpose

To provide guidance for the proper use, documentation, and maintenance of Preliminary/Portable Breath Test (PBT) instruments.

Policy

All devices approved and issued by Traffic Programs Section shall be operated and maintained in accordance with approved Department training.

Definitions and Acronyms

Officer-in-Charge (OIC): The keeper of the breath test records for instruments assigned to their individual barracks or unit.

Office of Alcohol Testing (OAT): Established within the Department Forensic Services Group that oversees the State's Breath Test Device Program and Breath Test Operator training.

Preliminary/Portable Breath Test Device (PBT): A breath test device, used to administer a screening test, that is capable of quantifying the amount of alcohol in a breath sample or calibration standard.

Preliminary/Portable Breath Test Operator: A member trained to administer preliminary breath test.

Calibration and Certification

OIC and members issued a PBT Device shall:

- Successfully complete an operator training program;
- Adhere to Department of State Police guidelines for PBT Device maintenance and operation;
- Perform accuracy checks monthly according to Department of State Police guidelines;
- Ensure that a PBT Device is taken out of service immediately when found not to be working properly;
- Notify Traffic Programs of a PBT Device taken out of service and in need of repair thus following repair arrangements made by OAT; and
- Ensure the PBT Device is certified annually, at the Office of Alcohol Testing, as directed by the Traffic Programs Section.

Subject	Number
Preliminary/Portable Breath Test Devices	**TRF-14B**

Records

OIC and members issued a PBT Device shall:

- Ensure records are maintain within their assigned station/unit per Department of State Police training; and
- Forward copies of the monthly accuracy checks to the Traffic Programs Section.

Traffic Programs Section

The Traffic Programs Section shall maintain an inventory of all issued PBT Devices and the inventory shall include:

- The member's station or unit assigned;
- Model and serial number of each PBT Device; and
- The Department Inventory Control number.

Testimony

Members should be aware that the following elements may be required in court testimony:

- Date, time, test number, subjects name and result of the blood alcohol contents percentage (BAC %);
- Department SP 691 Preliminary/Portable Breath Test (PBT) Log;
- The PBT Device was operating properly;
- The PBT Device was properly calibrated and certified;
- The training, qualifications and certification of the member; and
- PBT Device was used as the **last** field sobriety test.

Limitations

The acceptance of PBT Devices within the court system is dependant upon the member's :

- Proper care and effective use of the PBT Device;
- Appropriate PBT Device training and certification; and
- Use in combination with Standardized Field Sobriety Tests.

Subject

Sobriety Checkpoints

Policy

When utilized, Sobriety Checkpoints shall be conducted in conformance with judicial guidelines.

Key Considerations

In the preparation and execution of any Sobriety Checkpoint, the following considerations shall receive special attention:

- Motorist safety shall be assured;
- Motorist inconvenience shall be minimized;
- The action undertaken shall be in accordance with a written plan devised by supervisory personnel and developed prior to implementation of the checkpoint;
- Selection of vehicles to be stopped shall not be arbitrary;
- Advance public notice shall be given to reduce motorist surprise, fear, and inconvenience; and
- A trained Commissioned Officer shall be in charge.

Site Safety

The Officer In Charge (OIC) of the Sobriety Checkpoint shall ensure compliance with the following Work Zone Safety Guidelines:

- Physical barriers shall not be used;
- Sufficient warning signs shall be placed ahead of the checkpoint to provide advance notice for on-coming vehicles;
- Signs should be illuminated or constructed of highly reflective material;
- Sufficient road flares, reflectors, or cones should be used to safely control traffic;
- Auxiliary and/or sufficient street lighting should be in place to illuminate the checkpoint;
- There shall be sufficient law enforcement presence to reduce fear and apprehension, minimize inconvenience, and ensure compliance;
- All officers shall be in uniform;
- All officers shall wear an issued traffic vest, reflectorized belt, or other high visibility clothing;
- Officers shall position themselves so they can be easily observed by motorists;
- Officers shall give visual stop/start commands;
- Marked cruisers shall be utilized as site safety vehicles;
- All cruisers shall have operable visual emergency warning devices; and
- Cruisers shall be positioned in compliance with the predetermined plan.

Continued next page.

Site Safety (continued)

Vehicles shall be waved through the Sobriety Checkpoint without stopping when:

- Traffic is backed up to the safety officer; or
- A commercial vehicle with a gross vehicle weight rating (GVWR) greater than 10,000 pounds causes sight obstructions.

Vehicles which are transporting flammable liquids (including compressed gas as a motor fuel), hazardous materials or explosives as the cargo or a part thereof shall not be parked within three-hundred (300) feet of any portion of the check-point where flares are being utilized. In addition, such vehicles shall be allowed to pass through the checkpoint without stopping.

Site Selection

Individual site selection shall be made based upon selective enforcement identifiers of alcohol related traffic crashes or prior OUI violations such as:

- Time;
- Day of the week; and
- Location.

Site selection data for each Sobriety Checkpoint shall be retained by the Troop Traffic Programs Officer for a period of five (5) years.

Safety considerations for the site location should include:

- Motorist/officer safety;
- Sight visibility;
- Traffic volume and pattern;
- Operator reaction time; and
- Operator stopping distance.

Parking lots, rest areas, or wide shoulders immediately adjacent to the Sobriety Checkpoint should be available and accessible for use as a screening area. This shall ensure that vehicles can be directed out of the normal flow of traffic without creating a traffic safety hazard.

Advance Notification

The OIC shall coordinate activities with Media Relations to ensure that:

- Announcements to the appropriate electronic and print media shall be made, at a minimum, three (3) business days prior to the implementation;
- The press release provides the overall purpose of the Sobriety Checkpoint, thereby allowing the Department to gain the public acceptance, support, cooperation, and voluntary compliance of the endeavor;
- The press release specifies the county the Sobriety Checkpoint shall be conducted in, but does not detail the precise location or hours of implementation; and
- Any inquiries pertaining to the Sobriety Checkpoint are referred to the appropriate Troop Commander.

Subject	Number
Sobriety Checkpoints	**TRF-15**

Operational Plans

Individual Sobriety Checkpoint plans shall be prepared in advance of the date of actual implementation. These plans shall include, at a minimum:

- Date;
- Time and duration;
- Site selection and justification;
- Set patterns of vehicles to be stopped;
- Personnel, assignments, and responsibilities;
- Training for this particular sobriety check-point;
- Field sketch detailing the Sobriety Checkpoint logistics and site configuration;
- Notifications; and
- Equipment and materials needed.

These plans shall be strictly adhered to. There shall be no arbitrary or random modification of Sobriety Checkpoint procedures.

Officers may make suggestions for changes due to extenuating circumstances, but only the OIC can authorize and approve any changes in plans.

All officers shall be briefed and trained on details of the specific plan prior to the start of each Sobriety Checkpoint.

Operational plans shall be maintained at the Troop Headquarters and retained for a period of five (5) years. A copy shall be forwarded to the Traffic Programs Section.

Site Configuration

Site configuration shall be as follows:

- Each Sobriety Checkpoint shall have a clearly marked warning sign;
- All signs, signals, markers, traffic cones, flares, or reflectors shall be placed in accordance with the Work Zone Safety Guidelines;
- The position of the cones, flares, or reflectors should guide vehicles to the appropriate lane of travel and are parallel to the stop location; and
- The position of the cones, flares, or reflectors around the stop location should provide as much protection to the officers in that location as possible.

Subject	Number
Sobriety Checkpoints	**TRF-15**

Stopping Vehicles

The selection of vehicles to be stopped shall be either:

- Every vehicle; or
- A set pattern, e.g., every other, every third vehicle, or other set number desired.

Vehicles stopped at the checkpoint should be greeted for a period of one (1) minute or less.

The operator and/or passengers shall remain within the vehicle to minimize the intrusion.

If there is reasonable suspicion, based upon articulable facts, that the operator and/or passenger(s) is committing or has committed an OUI violation or other violation of law, that vehicle shall be directed from the normal flow of traffic and the offender(s) checked further.

Cruisers

All Department vehicles shall be placed at Sobriety Checkpoint in such a manner as the OIC deems appropriate for safety purposes.

Personnel

The number of uniformed officers needed for a Sobriety Checkpoint shall vary according to site and take into consideration visible authority, motorist safety, and minimizing inconvenience.

There shall only be one (1) Commissioned Officer as the OIC of a Sobriety Checkpoint.

Responsibilities

Position	Duties
Division Commander of Field Services	• Annually, confer with the Traffic Programs Section regarding the efficiency of Sobriety Checkpoints; • Make a determination as to whether or not such checkpoints shall be utilized as a component of the OUI Countermeasures Program; and • Issue a Division Commander's Order directing all Troop Commanders to gather intelligence regarding potential sites for the deployment of checkpoints during the coming year, if such checkpoints are to be utilized.
Troop Commanders	• Shall designate a Commissioned Officer to conduct the site selection and operational planning for each Sobriety Checkpoint; • Approve the written operational plan and site selection; and • Designate a Commissioned Officer to be the OIC of the Sobriety Checkpoint.

Continued next page.

Responsibilities (Continued)

Position	Duties
Sobriety Checkpoint OIC	Ensure: • The safety of all motorists and officers in the OUI checking area; • Motorists are directed into the checking area for screening by at least one (1) officer; • At least one (1), preferably two (2) officers interact with motorists during the screening process; • Motorists not arrested are released as quickly as possible; and • Arrested motorist's vehicles are inventoried and towed in accordance with existing policy or are released to a legal driver/passenger.
Safety Vehicle Officer(s)	Shall: • Position the safety vehicle(s) prior to the start of the checkpoint setup; • Observe traffic for vehicular operation indicating OUI; • Observe traffic to forewarn other officers and motorists of impending dangerous drivers approaching; • Observe traffic for violations of law and notify the OIC; • Ensure that visual warning devices are activated; and • Monitor traffic for backup. Note: Speed measuring devices may be used by the safety officer.
Sobriety Checkpoint Screening Officers	Shall: • Be courteous and polite when interacting with motorists. The element of voluntariness reduces the intrusiveness of the procedure; • All contacts shall be kept brief, with a short greeting such as "Good evening, this is a State Police Sobriety Checkpoint. Sorry for the inconvenience, thank you." The inconvenience to motorists must be minimized; • Guide motorists to the screening area to ensure the safety of all other officers and motorists within the OUI checking area; and • Ensure the safety of motorists being checked further by directing them to an appropriate location to park in the OUI checking area.

Continued next page.

Subject	Number
Sobriety Checkpoints	**TRF-15**

Responsibilities (Continued)

Position	Duties
Sobriety Checkpoint Screening Officers	• Minimize the inconvenience of motorists by screening them for OUI as efficiently as possible and administering the standard field sobriety tests, horizontal gaze nystagmus test or portable breath test device (PBT). If all elements of the OUI violation have been clearly established, the member shall arrest the subject, and follow Department arrest procedures.

Subject

Speed Measuring Devices

Policy

The Department shall use speed measuring devices as part of the strategy to reduce motor vehicle crashes and enhance public safety within the Commonwealth.

Use

The safety of the member, traffic violator, and motoring public shall be of primary concern whenever selecting locations for speed enforcement operations.

- Light Detection and Ranging (LIDAR) and Radio Detection and Ranging (RADAR) devices should not be used during inclement weather.

Calibration and Certification

All members using a LIDAR, or RADAR, or any other speed measuring device shall successfully complete the basic operator training program and receive certification prior to use.

- Members shall follow the manufacturer's guidelines for the maintenance and operational procedures of the devices;
- Members shall perform calibration checks at the beginning and end of each shift, and periodically as needed to ensure accuracy. If the device is not working properly, it shall be taken out of service immediately until repaired; and
- LIDAR and RADAR devices shall be certified annually, as directed by the Traffic Programs Section.

Records

Certificates and documentation of maintenance, calibration, and certification shall be maintained by the assigned member, or at the station.

Speedometer

Speedometers shall be checked by using a speed measuring device:

- Periodically;
- After cruiser service, specifically including transmission work or new tires; and
- If a question of accuracy arises.

Troop Traffic Programs

The Troop Traffic Programs Officer shall maintain an inventory of all speed measuring devices within the Troop. The inventory shall include:

- Member assigned the unit;
- Serial number of the unit; and
- The Department Inventory Control number.

Testimony

Members should be aware of the following elements that may be required in court testimony:

- The time, location, and direction of travel of the violator vehicle;
- The identity of the violator;
- The make, model, and color of the violator's vehicle;
- The visual estimate and the confirmation of the speed by the speed measuring device;
- The device was operating properly;
- The device was properly calibrated and certified; and
- The training, qualifications, and certification of the member.

Limitations

The effective use of speed measuring devices and their acceptance by the public and courts is dependent upon the member's:

- Understanding the factors that limit the accuracy of the device;
- Appropriate training and certification; and
- Proper care and use of the equipment.

Department of State Police
General Order

Effective Date	Number
April 23, 2009	**TRF-17**

Subject

Emergency Roadblocks

Policy

At times, situations arise which may necessitate the utilization of an emergency roadblock. Many factors have to be considered prior to implementation of a roadblock, to ensure officer and public safety.

Only Commissioned Officers may approve and authorize the implementation of an emergency roadblock.

Definitions

Roadblock: A deliberate obstruction by physical means at one or more selected points on a roadway.

Activation and Implementation

Many factors need to be considered before the implementation of a roadblock. The decision to use a roadblock shall be based upon:

- The seriousness of the known/alleged crime;
- The number of members available to be assigned;
- The sufficiency of information and descriptions of wanted persons and vehicles;
- The elapsed time between the known/alleged criminal act and the time of reporting to the Department or other law enforcement agencies; and
- Any other pertinent facts.

Upon implementation of an emergency roadblock:

- A Patrol Supervisor shall be dispatched and shall assume command at the scene of the roadblock;
- If available, the Air Wing should provide aerial assistance.

Fixed Roadblocks

Fixed roadblock barricades may consist of any strong structure augmented by any combination of signs, signals, markers, reflectors, or flares, and may include the strategic positioning of cruisers on the roadway.

- No member shall remain in a cruiser utilized as a fixed roadblock; and
- Firearms may be made ready for use.

Subject	Number
Emergency Roadblocks	**TRF-17**

Circle System

The Circle System is designed to completely contain the suspect in a given area by blocking every possible avenue of escape.

Typically two (2) circles are established; an inner circle and an outer circle. The radius of the circles is determined by the estimated time that has elapsed from the commission of the crime. The locations of blocking points are then determined by using the crime scene as a center and drawing circles around it.

- The inner circle is the area immediately surrounding the crime scene; and
- The outer circle is set up to apprehend the fugitive if they get through the inner circle.

Incident Commanders/Supervisors shall assign members to:
- Patrol the area between the two circles;
- Staff blocking points established at major intersections and highways;
- Stop all traffic and interview each operator; and
- Use cover-contact techniques as appropriate.

Observation Techniques

It may be more desirable to slow traffic, as this enables members to check vehicles and occupants without bringing traffic to a complete stop.

Department vehicles should be parked at forty-five (45) degree angle with the traffic flow. In this position members can observe traffic and maintain mobility.

Blocking Two-Lane Roads

To stop traffic traveling in only one direction, Department vehicles should be:
- Parked at a forty-five (45) degree angle with the traffic flow;
- Partially on the roadway; and
- Blocking the lane to be stopped.

Light traffic can be stopped in both directions with this system. However, in heavy traffic it may be necessary to set up this blocking method on both sides of the road. This second roadblock should be close enough, approximately seventy-five (75) yards away, and in sight of the first roadblock.

If signs and other warning devices are used, consideration should be given to the sight and stopping distances and the need for the element of surprise.

Blocking Roads at Night

At night, the member assigned as the contact officer shall:
- Stay off the roadway and out of oncoming headlights;
- Wear safety vest or high visibility clothing;
- Ensure roadblock lighting does not blind oncoming motorists; and
- Use cover-contact techniques as appropriate.

Subject	Number
Emergency Roadblocks	**TRF-17**

Blocking Multi-Lane Roadways

The blockade procedure for one side of a multi-lane highway is basically the same as for a one or two lane roadway.

A major difference is in the placement of signs and other warning devices.

- Because of greater speeds, the signs should be placed further away from the cruisers to allow motorists time to stop safely;
- If used, at least two (2) signs should be placed on both sides of the roadway facing towards oncoming traffic; and
- Flares and other warning devices should be arranged to funnel traffic into one or more lanes.

Promulgated By:

Department of State Police
General Order

Effective Date	Number
July 8, 2009	**TRF-20**

Subject

Department Vehicle Crashes

Policy

The Department shall document, within the Records Activity Management System (RAMS), all Department vehicle crashes in accordance with this policy.

The Department shall objectively investigate all vehicle crashes, in order to ensure that each crash investigation reflects the Department's commitment to impartiality and integrity.

Definitions

Cruiser Crash: A motor vehicle crash involving any Department vehicle, or any vehicle assigned to Department personnel, including civilian personnel.

Damage to a Department Vehicle: Non-crash damage, e.g. broken window or vandalism to an unattended vehicle. This includes windshield damage incurred as a result of debris from an unidentified or natural source.

Type I Crash: A minor cruiser crash not meeting any of the conditions of a Type II crash.

Type II Crash: A vehicle crash involving:
- Any injury or fatality to any party; or
- The issuance of a citation/criminal complaint; or
- Estimated damage over $1000 to any vehicle or property; or
- Any civilian employee operating a Department vehicle.

Registry of Motor Vehicle (RMV) Forms: Department operators shall:
- Identify themselves as operator number one; and
- List the operator's address as:
  Department of State Police
  470 Worcester Road
  Framingham, MA 01702; and
- The owner's name and address shall be listed in accordance with the vehicle's registration.

Note: When a crash involves more than one Department operator, the investigating supervisor shall determine the numerical designation of each operator, such as Operator Number One, Operator Number Two, and so on.

Subject	Number
Department Vehicle Crashes	**TRF-20**

Damage to Department Vehicle

Employees discovering/incurring damage to their assigned Department vehicles shall:

- Notify the sub-station of jurisdiction and request an entry to be made into the Daily Administrative Journal (DAJ);
- Report the damage, as soon as practicable, to their immediate supervisor and the Fleet Administrator per ADM-19A Vehicle Use and Maintenance.

Note: Any damage to a vehicle caused by a person arrested or a person summonsed to court shall be reported to the Fleet Section, in order to collect restitution. The investigating officer shall document the damage and take out appropriate criminal charges.

Type I Procedure

Employee	Duties
Member Involved in Crash	*Preliminary Procedures* • Immediately report the crash to the sub-station of jurisdiction; • If the Department vehicle was damaged, have photographs taken (not necessarily at the scene); • Ensure queries of license and registration data are done through the Registry databases and take appropriate action as necessary (See Type II); • Complete and submit within RAMS, the SP 425 Preliminary Documentation of Cruiser Crash prior to the completion of tour of duty; and • Completed reports shall be reviewed by the member's Station/Unit Commander prior to submission to Troop/Section Major; and • Complete and mail the original Registry form CRA-23, to the Registry of Motor Vehicles (RMV) within five (5) days. *Completed Documentation* • Completed documentation shall include: 1. To/From reporting the circumstances, to include the date the Registry CRA-23 was forwarded to the RMV; 2. A copy of the Registry CRA-23; and 3. Troop Mechanic's report and photographs. • Completed documentation shall be forwarded to their Troop/Section Major within five (5) days.

Continued next page.

Type I Procedure (Continued)

Employee	Duties
Desk Officer	• Document the crash within the DAJ as a Type I Cruiser Crash activity; and • Notify the Troop Duty Officer.
Troop Duty Officer of Jurisdiction	• Document the crash within the DAJ; • Authorize operator to document crash; or • Assign a supervisor to investigate, preferably of higher rank than the member involved, from the Division of Field Services. **Note: Whenever a supervisor is assigned to investigate a cruiser crash, Type II procedures shall be followed.**
Involved Member's Station/Unit Commander	• Shall review reports for accuracy and completeness prior to submission to the Troop/Section Major.
Troop/Section Major	*Preliminary Documentation* The Troop/Section Major of the involved member shall: • Review the SP 425 upon receipt or no later than one (1) business day following the crash; • Ensure the Cruiser Crash is reclassified within RAMS from a Type I to a Type II if warranted; • Consult with the Major of jurisdiction within the Division of Field Services, to assign a supervisor to conduct a Type II Investigation when so determined; • Ensure that only a supervisor shall issue any citations related to the cruiser crash. *Completed Documentation* Upon receipt of all documentation the Troop/Section Major shall within RAMS: • Fill out the appropriate section of the SP 377; • Make findings and recommendations; and • Forward all documentation to the involved member's Division Commander within twenty-one (21) days of the crash.

Subject	Number
Department Vehicle Crashes	**TRF-20**

Crash in Personal Vehicle

On-duty Department employees involved in a crash while operating their personal vehicles shall immediately inform their duty assignment supervisor of the crash when:

- They are authorized to operate their personal vehicle within the scope of their duties; and
- They are entitled to mileage pay for that travel.

Within five (5) days of the crash, the employee shall provide their duty assignment supervisor with a copy of the RMV CRA-23 and all other pertinent documentation and forward a copy to the Legal Section.

When a Department employee is injured in a crash that meets the criteria listed above, the injury shall be investigated as an on-duty injury.

Type II Procedure

Employee	Duties
Employee Involved in Crash	• Immediately report the crash to the sub-station of jurisdiction; • Preserve the scene, if safety and traffic concerns allow; • Members shall not take any enforcement action except to prevent parties from unlawfully leaving; • Complete and mail the Registry CRA-23 to the RMV within five (5) days; • Ensure their Station/Unit Commander has reviewed completed reports prior to submission; and • Complete and forward the following printed reports to the investigating officer within five (5) days (unless incapacitated): 1. To/From reporting the circumstances, to include the date the Registry CRA-23 was forwarded to the RMV; 2. A copy of Registry CRA-23; and 3. Commonwealth's Form 1 Notice of Injury (if injured).
Desk Officer	• Document the crash within the DAJ as a Type II Cruiser Crash activity; and • Notify the Troop Duty Officer.

Continued next page.

Type II Procedure (Continued)

Employee	Duties
Troop Duty Officer of Jurisdiction	• Document the crash within the DAJ; • Assign a supervisor from within the troop to investigate, preferably of higher rank than the member involved. • If appropriate, notify the involved employee's Troop/Section Major or designee; and • Make arrangements for other assistance at the scene (Photographs, crash reconstruction, etc.).
Investigating Supervisor	*Preliminary Investigation* • Take command of the crash scene and investigation; • Have photographs taken of the scene and/or the damage; • Ensure queries of license and registration data are done through the Registry databases; • Take appropriate action on violations of law (e.g. citations); • Complete and submit the SP 425 within RAMS, prior to the completion of tour of duty; and • Complete and forward SP 624 Initial Injury Report if necessary. (Refer to ADM-11B Injury Reporting) *Completed Investigation* Forward reports to Troop Commander within fifteen (15) days from the date of the crash: • Registry CRA-65; • SP 209 Supplementary Cruiser Crash Report; • Troop Mechanic's Report and photographs of damage; • If applicable, towing bills; • If applicable, the SP 37 Statement In Support of Claim, Section 8; • All other reports, photographs, copies of citations, etc; and • If employee is incapacitated complete: 1. SP 37 Sections, 1-7, and 2. Commonwealth's Form 1.

Continued next page.

Type II Procedure (Continued)

Employee	Duties
Involved Member's Station/Unit Commander	Shall review reports for accuracy and completeness prior to submission to the investigating supervisor.
Troop Commander of Crash Jurisdiction	*Preliminary Investigation* The Troop Commander shall: • Review the SP 425 upon receipt or no later than one (1) business day following the crash. *Completed Investigation* The Troop Commander shall within RAMS: • Make findings and recommendations; • If applicable, fill out the appropriate sections of the SP 37; • If applicable, fill out the appropriate sections of the SP 377 in RAMS; • Send a copy of the SP 37 and Commonwealth's Form 1 to Occupational Health if appropriate; and • Forward the completed report to the involved member's Division Commander within twenty-one (21) days of the crash.

Involved Employee's Division Commander

Division Commanders shall:
- Review all Type I and II reports including findings and recommendations;
- Complete appropriate sections of SP 377 in RAMS;
- Take corrective action when appropriate;
- Submit completed reports to the Division of Standards and Training within thirty (30) days of the crash; and
- Send a copy of the completed reports to the Fleet Section.

Division of Standards and Training

The Division of Standards and Training Commander or designee, shall:
- Complete appropriate section of SP 377 in RAMS;
- Ensure reports are complete and are filed within the Records Section; and
- If reports are not complete, return to the Division Commander for reconciliation.

The Commanding Officer or designee, of the Emergency Vehicle Operation Center (EVOC) shall within RAMS:
- Fill out and submit the appropriate section of the SP 377 when remedial training is completed.

Subject	Number
Department Vehicle Crashes	**TRF-20**

Records Section The Records Section shall maintain all hard copies of reports and investigations upon receipt from the Division of Standards and Training.

Tire Deflation Devices

Policy

The Department may use tire deflation devices in specific circumstances to reduce the speed and duration of pursuits in order to reduce the risk of injury to persons and/or damage to property.

Definitions

Tire Deflation Device: A device that, when driven over, causes one or more tires of a vehicle to safely deflate.

Channelizing: A technique where objects are placed in the anticipated path of a pursued vehicle in order to alter its direction.

Utilization of Tire Deflation Devices

Tire Deflation Devices shall:

- Only be deployed by a member trained in its use;
- Only be deployed if the device has a recovery cord;
- Be readily accessible in the event of an emergency; and
- Not be used to stop a motorcycle, tractor trailer, bus carrying passengers, or vehicle with less than four (4) wheels unless:
  1. The suspect and/or vehicle poses an imminent threat of death or serious bodily harm to the public or officers; or
  2. When specifically authorized and ordered by the Troop Duty Officer, Troop Commander or a Command Staff Member.

Site Selection

Tire deflation devices shall not be used at intersections or in locations where geographic configurations (such as curves and steep embankments) increase the risk of injury to the suspect or occupants of other vehicles.

Deployment Notification

A tire deflation device shall only be deployed when:

- The pursuing member has been informed of the location of deployment; and
- Has acknowledged this information on the radio.

Covert Deployment

Situations where it is prudent to covertly disable a vehicle with a tire deflation device may include:

- Stolen vehicles;
- Serious felony arrest warrants and/or charges; and
- Hostage or kidnapping situations.

Subject	Number
Tire Deflation Devices	**TRF-21**

Recovery of Tire Deflation Device(s)

A deployed tire deflation device(s) shall be safely removed from the roadway after the fleeing vehicle passes. Members shall not enter into the travel lane until all traffic is clear and it is safe to retrieve the device from the roadway. The deployed device(s) shall not be left unattended in the roadway.

Duty of Pursuit Member(s)

On approach to the deployment area the pursuing member(s) shall proceed cautiously and adjust the cruiser speed as necessary to:

- Allow time for the removal of the tire deflation device; or
- Respond to sudden evasive or unpredictable maneuvers by the fleeing vehicle.

After clearing the deployment area the member(s) may increase cruiser speed, if necessary.

Maintenance of Tire Deflation Device

Members assigned tire deflation devices shall maintain them according to the manufacturer's guidelines and specifications.

Non-functioning parts/units shall be forwarded to the Troop Clerk for replacement, unless otherwise indicated.

Reporting

Members shall report all deployments:

- To the Troop Duty Officer of jurisdiction; and
- To the Emergency Vehicle Operations Center (EVOC) via SP 601 Tire Deflation Device Evaluation Form.

The Troop Duty Officer shall report the use of a tire deflation device and the results on the RAMS pursuit database.

Damage to Vehicles or Property

The Troop Duty Officer shall assign a supervisor to investigate any related damage to any other vehicle or property.

Third party owners of any damaged vehicle or property shall be advised to contact the Legal Section for guidance in filing a claim at (508) 820-2311.

Escorts and Relays

Policy

The Department may authorize escorts or relays to provide added security, expedite the delivery of special items, and ensure the safe and efficient movement of traffic.

General Guidelines

The Division of Field Services Commanding Officer shall have operational control of all escorts and relays.

Routine requests for escort or relay services shall be approved as outlined below. All emergency requests for escort or relay services shall be forwarded to the Troop Duty Officer.

Members shall not initiate or commence any escort or relay without permission from the Troop Duty Officer.

Routine Requests

If the request is for…	Then the request should be forwarded to…
• Any sub-division of the United States Government; • Executive Security; • Political or high-profile figures; or • Nuclear, Radiological, Biological, Hazardous, and/or Sensitive Materials.	Troop "S" Commanding Officer, or his/her designee.
• Funerals, parades, etc.; • Public Safety vehicles; or • Other instances where an escort or relay is in the public interest.	Troop Commander
• Oversize vehicles; or • Unusual cargo.	Troop Detail Officer

Whenever possible, the request shall be in writing and include the trip route and any other pertinent information. Notification of an escort or relay shall be made to any affected Troop.

Emergency Requests

Legitimate requests for unscheduled Department escort or relay services may include:

- Protection of life;
- Medical personnel;
- Other law enforcement agencies; or
- Valuable cargo, which may include blood, life saving medicines, human organs and tissues, or other materials as required by law.

The Troop Duty Officer shall notify the GHQ Communications Section of every escort or relay that extends beyond the troop area.

Emergency escort of ambulances or private vehicles shall be avoided except when a life is in jeopardy. Permission to escort shall be sought immediately from the Troop Duty Officer.

Escort of Nuclear, Radiological, Biological and/or Sensitive Materials

The movement of nuclear, radiological, biological and/or other sensitive materials, in and through the Commonwealth, may require the utilization of an escort.

When an escort is recommended by the Massachusetts Department of Public Health, the Commanding Officer of Troop "S" or his/her designee shall develop an Operations Plan that will ensure the following steps are undertaken:

- Notify the Division Commander of Field Services;
- Notify the Division Commander of Homeland Security and Preparedness;
- Notify the Division Commander of Investigative Services;
- Notify the Emergency Management Unit;
- Assign a Commissioned Officer from Special Operations as the escort Incident Commander / OIC;
- Ensure that Commercial Vehicle Enforcement Section (CVES) personnel provide appropriate inspections of the vehicle(s) to be escorted. CVES personnel will accompany the escort for the duration of the escort;
- Contact the Division Commander of Homeland Security and Preparedness to request a dedicated Air Wing unit to provide aerial surveillance for the duration of the escort if deemed necessary;
- Assign Special Tactical Operations (STOP) Team personnel to coordinate appropriate security measures. STOP Team personnel will, as appropriate, utilize armored or other assigned vehicles during the escort;
- Assign the Motorcycle Unit, as appropriate, to facilitate the movement of the escort; and
- Assign other Special Operations assets as appropriate.

(Continued next page.)

Escort of Nuclear, Radiological, Biological and/or Sensitive Materials (Continued)

The Emergency Management Unit shall coordinate the escort with the following entities, as appropriate:

- Special Operations Commanding Officer;
- CVES;
- Air Wing;
- STOP Team;
- Motorcycle Unit;
- Criminal Information and Intelligence Section-Commonwealth Fusion Center;
- Troop Commanders of each Troop through which the escort will travel;
- Communications Section;
- Fiscal Section;
- State Police agency of adjoining state(s) through which the escort will travel;
- Police Department of the receiving/departing community;
- Police Department of adjoining communities, as appropriate;
- Massachusetts Department of Public Health Radiation Control Program;
- Shipping/receiving company; responsible financial party; and
- Additional notifications, as appropriate.

The Criminal Information and Intelligence Section Commanding Officer, or his/her designee, shall assign personnel to:

- Conduct open source research related to the shipment;
- Query internal databases to determine if the Commonwealth Fusion Center has any relevant information pertaining to the shipment;
- Contact a representative of the federal Department of Homeland Security's Intelligence and Analysis Section to determine if his/her agency has any relevant information pertaining to the shipment;
- Contact a representative of the Federal Bureau of Investigation's Boston Field Office to determine if his/her agency has any relevant information pertaining to the shipment;
- Contact a representative of the Boston Regional Intelligence Center to determine if his/her agency has any relevant information pertaining to the shipment; and
- Report all results and significant findings to the Emergency Management Unit's Commanding Officer.

Troop Commanders of each Troop through which the escort travels shall:

- Provide notification to communities, as appropriate; and
- Provide uniformed personnel, as appropriate, to facilitate the movement of the escort through the Troop.

Communications Section shall:

- Assign a SOPs channel for escort personnel to utilize.

Subject	Number
Escorts and Relays	**TRF-22**

Escort Request for Charitable Events

At least thirty (30) days in advance, organizers of a legitimate charity shall provide the Paid Detail Officer of jurisdiction a written plan and sign a SP 618 Motorcycle Escort Waiver.

The written plan shall contain:

- The date of the event, routes of travel and the anticipated number of participants;
- Number of Department members requested for escort;
- Notification to local and state authorities, and media in writing;
- Proof of the required one million dollar bond to cover the event; and

Acknowledgement that participants shall obey all traffic laws during the duration of the event.

Outlaw Motorcycle/ Criminal Gangs

The Paid Detail Officer shall consult with the Criminal Information and Intelligence Section if it appears that the event organizers, or likely participants, have an association with criminal activity.

Outlaw motorcycle/criminal gangs shall be barred from obtaining Department escorts.

Training Administration

Policy

The Department shall provide training that will develop the skills necessary for the safe, professional and effective performance of its personnel, and that is designed to promote and maintain the professionalism and operational readiness of the Department.

The Department shall ensure that all employees successfully complete compulsory training as required by law and the Colonel/Superintendent.

State Police Academy

The State Police Academy is commanded by the Deputy Division Commander of Standards and Training, who is responsible for ensuring that all training is conducted in accordance with Department directives and applicable laws.

Academy Staff Responsibilities

The Academy Staff shall:

- Identify, develop, and evaluate training and educational programs;
- Assist in the development of lesson plans for all Department training courses;
- Provide necessary training to Department employees and the law enforcement community;
- Meet all federal, state and Department mandated training requirements;
- Provide training to develop the skills necessary for the safe, professional and effective performance of its employees;
- Provide career development opportunities for employees; and
- Maintain training records for employees, including attendance records.

Attending Training

Employees assigned to all training programs shall:

- Report at the specified time and location with the proper uniform/attire and materials;
- Be returned to their duty assignment for failing to report as directed and may be subject to disciplinary action; and
- Attend non-mandatory training programs only as approved in accordance with Departmental guidelines.
  Note: Changes in work schedules for the purpose of training shall be in accordance with the Collective Bargaining Agreement.

Subject	Number
Training Administration	**TRN-01**

Training Requests

Massachusetts State Police personnel, requesting to attend a training program that has *any* costs associated with it and/or is held outside of the Department, shall comply with the following:

- ***At least forty-five (45) days prior*** to the anticipated date of the requested training, ***each traveler*** shall submit, through channels to their Division Commander:
    1. A To/From requesting approval;
    2. A completed *SP 371 Travel Training Endorsement Sheet;*
    3. A completed *Commonwealth of Massachusetts Travel Authorization Form* (TAF Form Primary);
        - ***NOTE***: *Section 9 "Travel Itinerary and Justification*" must include a ***thorough*** explanation of how the travel will benefit the Commonwealth;
        - ***NOTE:*** *Section 10 "Expenses"* must be completed even if the cost of the Travel/Training will be paid by personal funds, Commonwealth funds, or federal/ Other State Funds;
    4. If the travel and/or training is funded by a private entity, a completed *Disclosure by Non-Elected Public Employee of Travel Expenses Serving a Legitimate Public Purpose* form;
        - ***NOTE***: ***Each traveler*** must estimate and account for expenses in the "*Itemization and explanation of amounts offered"* section when travel/training is funded by a private entity; and
    5. **All** supporting documentation (i.e. training fees and agenda; lodging and transportation estimates; meal reimbursement rates and other appropriate expenses as specified in the member's appropriate Collective Bargaining Agreement.)

- When estimating expenses, it is the responsibility of the traveler to ascertain and account for taxes and fees associated with hotel reservations, car rentals, etc. It is also the responsibility of the traveler to minimize all costs associated with travel and training.

- If the training is out-of-state, personnel should review on Docushare the Executive Office of Administration and Finance *Out Of State Travel Guidelines.*

The Division Commander, or designee, within five (5) days of receipt of the training request shall forward approved requests and accompanying documentation to:

- The Deputy Superintendent; and
- The Department's Leave Coordinator per ADM-11E Leaves of Absence.

Subject	Number
Training Administration	**TRN-01**

State Police Academy Coordinated/ No Cost Training

Massachusetts State Police personnel, requesting to attend training that is coordinated by the State Police Academy and has no costs associated with it, **need not** submit To/From and travel forms as described in the previous section. Instead, personnel, interested in attending such training, shall complete the *MSP Professional Development Registration* form which will be attached to the State Police Academy e-mail that announces such training. Personnel shall submit the **completed** *Registration* form to the State Police Academy.

Expense Reimbursement

Reimbursement for expenses shall be made only if prior written approval has been received from the Deputy Superintendent.

In order to be reimbursed for expenses, *each* traveler must submit to the Fiscal Section a completed *Employee Travel/Training/ Reimbursement Voucher Input Form* along with all necessary receipts and paperwork.
Note: The reimbursement amount should not exceed the previously authorized expenditure.

Testing

Instructors shall use competency based testing with performance objectives designed to measure the participant's ability and knowledge of course related skills. Participants shall be advised of minimum acceptable standards prior to the administration of such tests.

Remedial Training

Employees who fail to meet required standards of performance shall be required to participate in remedial training, as soon as possible.

The goal of remedial training is to ensure that employees demonstrate the knowledge, ability, and skills to achieve an acceptable level of performance.

Employees, who fail to attend assigned remedial training, and/or who fail to achieve acceptable levels of performance, shall be subject to disciplinary action.

Records

In order for the Department to maintain complete and accurate training records, commencing January 1, 2012, employees shall:

- Forward copies of training certificates or records of attendance for non-Department training to:
    1. The State Police Academy (SPA); and
    2. Their Station/Section/Unit Commanding Officer.
- Ensure that copies of certificates or records of attendance for any future non-Department trainings are forwarded to:
    1. The State Police Academy (SPA); and
    2. Their Station/Section/Unit Commanding Officer.

Note: If available, employees are encouraged to forward training records acquired before January 1, 2012, to their Commanding Officer and the SPA for insertion into their Individual Training files.

Continued next page.

Subject	Number
Training Administration	**TRN-01**

Records (Continued)

Station/Section/Unit Commanding Officers shall:

- Ensure that all employees under their command have an Individual Training File that is retained and updated within the Station/Section/Unit; and
- Ensure that the Individual Training File is administratively forwarded together with the employee's Attendance Calendar(s) and the Employee Evaluation System (EES) Fact File when, transferred out of the Station/Section/Unit.

The Academy Commandant shall be responsible for maintaining current Department training records. Such records shall include, but not be limited to:

- Name, rank, ID#, and duty assignment of Department employees attending all training programs;
- Name and agency of non-department personnel attending all training programs;
- Attendance records;
- Name of instructor and course lesson plan;
- Individual records of performance evaluations administered with associated results; and

The type of certificates received, if any.

Recruit Training

Policy

Prior to assuming duties as a sworn State Police Trooper, recruits shall be assigned to, and satisfactorily complete a recruit training class. This class shall be held at the State Police Academy and fulfill the requirements as prescribed by Massachusetts General Laws and the Colonel/Superintendent.

Recruit Handbook

The Academy Commandant shall, prior to the commencement of a recruit training class, prepare and distribute to each recruit a handbook containing the following information:

- Recruit performance expectation;
- The rules and regulations governing the conduct of recruits while assigned to the Academy; and
- The method for determining the final overall average score of each recruit which shall be used to establish the class standing of each trainee.

Recruit Class Curriculum

The Academy Commandant shall develop a recruit class curriculum including, but not limited to:

- Constitutional principles, criminal law and procedure, motor vehicle law;
- Department operations, Rules and Regulations, Policies and Procedures;
- Use of force, including firearms;
- Emergency vehicle operations;
- CPR/First Responder training;
- Principles of leadership;
- Report writing, court testimony and communications skills;
- Cultural diversity and ethics; and
- Physical fitness and wellness.

Authorized Use of Recruits

The Colonel/Superintendent may authorize the use of recruits assigned to the State Police Academy to tasks not requiring law enforcement powers.

Field Training Program

Policy

The Department shall provide a Field Training Program for the transition from the controlled learning environment of the Academy to the responsibilities and duties of a State Trooper.

Field Training Program

The Field Training Program shall be twelve weeks in duration, or as prescribed by the Colonel/Superintendent. Successful completion of the program is contingent upon satisfactory attendance and performance.

Probationary troopers may be assigned to three (3) Field Training Officers, on different shifts, as set forth in the Field Training Program. Exceptions may be made for specific operational and training reasons.

Excessive absenteeism shall be reported to the Field Training Administrator and may result in termination of the probationary trooper.

Academy Commandant

The Academy Commandant is responsible for the administration of the Field Training Program. The Academy Commandant shall coordinate the selection of an appropriate number of Field Training Officers (FTOs) through the Division of Field Services.

Prior to the commencement of the Field Training Program, the Academy Commandant shall develop and provide training to Station Commanders and FTOs. This training shall, at a minimum:

- Provide an overview of the current Academy recruit training program reinforcing:
  1. The mission of the Department;
  2. Fundamental training values;
  3. Department goals and objectives; and
  4. Instructions on the administration and reporting requirements of the Field Training Program.

Subject	Number
Field Training Program	**TRN-03**

Field Training Administrator

The Academy Commandant shall designate a member of the Academy Staff as the Field Training Administrator. The Field Training Administrator shall be responsible for:

- The management of the Field Training Program;
- The development and distribution of the Field Training Program Manual; and
- Coordinating the selection of Field Training Officers with Troop Field Training Coordinators.

Troop Commander

The Troop Commander shall:

- Appoint a member to serve as the Troop Field Training Coordinator; and
- Allow the Troop Field Training Coordinator to modify their work schedule to effectively manage the Field Training Program.

Troop Field Training Coordinator

The Troop Field Training Coordinator shall:

- Administer the Field Training Program;
- Act as the liaison with the Field Training Administrator; and
- Review the Daily/Weekly Observation Reports on a weekly basis.

Station Commander

Station Commanders shall:

- Administer the Field Training Program within their sub-station;
- Review and approve all submitted FTO evaluations;
- Forward the approved evaluations to the Troop Field Training Coordinator; and
- Immediately notify the Troop Field Training Coordinator of any issues that arise during the Field Training Program.

Field Training Officer

The FTO performs a critical role in the development of the new trooper and shall be responsible for:

- Providing an effective learning environment through leadership and experience;
- Providing an opportunity to realistically apply the knowledge, ability, and skills acquired during academy training;
- Providing an example that promotes professionalism, public respect, and confidence;
- Complying with the procedures established in the Field Training Program; and
- Assessing the performance of probationary trooper and providing remedial instruction as necessary.

Subject	Number
Field Training Program	**TRN-03**

Field Training Program Manual

The Field Training Program Manual shall:

- Be provided to Station Commanders and FTOs prior to the commencement of the Field Training Program;
- Clearly define the responsibilities of the FTO; and
- Provide specific direction concerning the knowledge, ability, and skills to be taught, performed and assessed.

Selection Process

The identification and selection of the FTOs is critical to the success of the Field Training Program.

Selection Process:

- Station Commanders shall recommend to the Troop Commander members who demonstrate integrity, character, and commitment to the Field Training Program;
- Troop Commanders shall approve and forward the final list of FTOs to the Commander of the Division of Field Services; and
- The Division of Field Services Commander shall forward the names of the approved FTOs to the Academy Commandant.

Evaluations

Station Commanders and FTOs shall ensure that all written evaluation forms are submitted in accordance with the Field Training Program Manual.

All deficiencies that may impact the ability of the probationary trooper to safely and successfully complete the Field Training Program shall be brought to the attention of the Station Commander immediately.

Completion of Program

After twelve (12) weeks, the Station Commander shall forward a recommendation to the Field Training Administrator which shall include a conclusion as to:

- The probationary Trooper is capable of working on their own; or
- An extension of the Field Training Program is necessary; or
- Termination of employment is appropriate.

The Troop Commander shall forward all recommendations for termination to the Colonel/Superintendent, through channels after consultation with the:

- Field Training Officer(s);
- Station Commander;
- Troop Field Training Coordinator; and
- Field Training Administrator

Professional Development

Policy

The Department recognizes the necessity of continuous education and training in order to maintain and enhance the knowledge, abilities, and skills of its employees.

This shall be accomplished, in part, through an ongoing professional development program to include regular in-service training.

Compulsory Training

The Department shall provide compulsory training to all members.

The Deputy Division Commander of Standards and Training, shall:

- Ensure that an annual training assessment is conducted to identify the training and educational needs of the Department;
- Ensure the Academy Staff develops a training curriculum, based on annual training assessment; and
- Forward the training curriculum, through channels, for review and approval by the Colonel/Superintendent.

Members shall attend compulsory training on dates assigned. Members who fail to attend may be subject to discipline.

In-service training may be conducted at the State Police Academy or any site approved by the Colonel/Superintendent.

Online Academy

The Online Academy Unit within the Academy shall:

- Be responsible for the development and distribution of online training;

Employees are encouraged to submit recommendations for training topics to the Online Academy Unit.

Subject	Number
Professional Development	**TRN-04**

Professional Development

The Department shall identify and develop training programs to be presented internally which shall provide its employees with the opportunity to expand or enhance their knowledge, abilities, and skills in specialized areas, or upon promotion.

The Academy Staff shall be responsible for:

- Development and/or administration of courses in accordance with the procedures outlined in TRN-01 Training Administration;
- Maintaining a current schedule of professional development courses on the intranet website;
- Maintaining accurate attendance records for members who have attended training; and
- Forwarding to respective Troop/Section Commanders the accurate attendance records for members who have attended training upon completion of training.

Employees may attend training or seminars intended to improve their professional abilities. Employees requesting to attend professional development courses shall adhere to the procedure outlined within TRN-01 Training Administration. Authorization to attend may be granted based upon the applicability of the program and available Department resources.

Training Records

In order for the Department to maintain complete and accurate training records commencing, January 1, 2012, employees shall:

- Forward copies of training certificates or record of attendance for non-Department training to:
    1. The State Police Academy (SPA); and
    2. Their Station/Section/Unit Commanding Officer.
- Ensure that copies of certificates or records of attendance for any future non-Department trainings are forwarded to:
    1. The State Police Academy (SPA); and
    2. Their Station/Section/Unit Commanding Officer.

Note: If available, employees are encouraged to forward training records acquired before January 1, 2012, to their Commanding Officer and the SPA for insertion into their files.

Station/Section/Unit Commanding Officers shall:

- Ensure that all employees under their command have an Individual Training File that is retained and updated within the Station/Section/Unit; and
- Ensure that the Individual Training File is administratively forwarded together with the employee's Attendance Calendar and the Employee Evaluation System (EES) Fact File when, transferred out of the Station/Section/Unit.

Use of Force

Policy

Members shall use, or are authorized to use, only that force which is *objectively reasonable* to:

- Effect an arrest;
- Restrain or subdue an individual resisting a lawful seizure; or
- Protect themselves or others from physical harm.

Members should assess each situation to determine which action shall best bring the incident under control, using only that amount of force that is reasonably necessary.

Any technique or hold that is, by application or duration, intended to prevent an individual's ability to breathe or prevent blood flow to an individual's head in a manner the member knows or should reasonably know will create a substantial risk of death or serious bodily harm constitutes lethal force.

If a member observes another member engaging in an unauthorized or excessive use of force, the observing member has an affirmative duty to intervene and attempt to stop the unauthorized or excessive use of force.

Members shall administer and secure medical aid after any use of force, if necessary and practical.

Definitions

Objectively Reasonable: This term means that, in determining the necessity for and appropriate level of force, officers shall evaluate each situation in light of the known circumstances, including, but not limited to, the seriousness of the crime, the level of threat or resistance presented by the subject, and the danger to the officer, subject, or community. The reasonableness of a particular use of force must be judged from the perspective of a reasonable officer on scene, rather than with the 20/20 vision of hindsight. Determining reasonableness of force must allow for the fact that police officers are forced to make split second judgments in circumstances that are tense, uncertain and rapidly evolving. The force used must be reasonable under the circumstances known to the officer at the time force is used.

Subject	Number
Use of Force	**UOF-01**

Definitions (Continued)

Less Lethal Force: Use of force that is not intended to cause serious bodily harm/serious physical injuries or death.

- Members are authorized to use less lethal force in accordance with the law and the contents of this policy.

Lethal Force: Use of force intended to inflict serious bodily harm/serious physical injuries or death.

- Members are authorized to use lethal force in accordance with the law and the contents of this policy.

Sensitive Population Groups: Sensitive population groups include those who reasonably appear to be, or are known to be, children, elderly, medically infirm, pregnant, or users of a cardiac pacemaker.

Compliant Individual: An individual who is fully cooperative with a Department member.

Passively Resistant Individual: An individual who is uncooperative but does not use physical strength or body movement to resist a Department member.

Actively Resistant Individual: An individual who uses physical strength and/or body movement to resist a Department member. Examples of active resistance include pulling, turning, or walking away from an officer.

Assaultive Individual (Bodily Harm): An individual who attempts to injure a Department member or another person or engages in conduct that has the potential to injure a Department member or another person.

Aggravated Assaultive Individual (Serious Bodily Harm/Death): An individual who engages in conduct that is likely to produce death or serious bodily harm to a member of the Department or another person.

Use of Force Responses

(Note: *Use of Force responses need not be exercised in progression*.)

Determining the level of force necessary may depend on resistance levels and circumstances. Factors in this decision include, but are not limited to:

- Subject vs. member - relative to age, size, physical condition, skill level;
- Subject's drug and alcohol use;
- Weapons - type, proximity;
- Seriousness of offense;
- Exigent circumstances; and

Number of potential assailants vs. number of police on the scene.

Continued next page.

Subject	Number
Use of Force	**UOF-01**

Use of Force Responses (Continued)

(Note: *Use of Force responses need not be exercised in progression*.)

If the subject is…	Then the response may include…
Compliant	• Verbal commands
Passively Resistant	• Verbal commands; and/or • Contact control techniques.
Actively Resistant	• Verbal commands; • Contact control techniques; • Compliance techniques; • Distraction techniques; • Oleoresin Capsicum (OC) Spray, according to training; • Laser activation of Electronic Control Weapon (ECW) according to training; • Spark display of Electronic Control Weapon (ECW) according to training; and • Drive Stun deployment of Electronic Control Weapon (ECW) according to training.
Assaultive-Bodily Harm	• All of the above responses; • Striking techniques; • Probe deployment of Electronic Control Weapon (ECW) according to training; and • Any other Department approved less lethal force equipment.
Aggravated Assaultive - Serious Bodily Harm /Death	• All of the above responses; and • Lethal force.

Continued next page

Subject	Number
Use of Force	**UOF-01**

Use of Force

Verbal Commands - Commands and gestures designed to:
- Effect compliance; and
- Express the member's intent.

Contact Control Techniques: Touch techniques (carrying and guiding) not designed to produce pain compliance.

Compliance Techniques:
Techniques authorized by the Department that may be used to achieve compliance and/or control of an actively resistant or assaultive subject.

In exigent circumstances, other compliance techniques may be used.

Distraction Techniques: Techniques intended to temporarily break the mental focus of an actively resisting individual and create an opportunity for the member to apply a compliance or control technique. Distraction techniques may be similar to striking techniques, but they differ in *intent* and *intensity*. The *intent* is to take the subject's focus off of their chosen method of resistance so that the member can bring them under control, unlike a striking technique, where the intent is to stop an assault. The *intensity* is, therefore, less than it would be with a striking technique. The intensity of the distraction technique should be limited so as not to create substantial trauma or lasting injury.

OC Spray - OC spray may be used in situations involving:
- Assaultive subjects; or
- Actively Resistant subjects when:
  1. Verbal commands have failed to bring about compliance; and
  2. Subject has signaled their intentions to actively resist.

OC spray shall not be used on passive resisters who offer **NO** physical resistance.

Striking Techniques - Striking techniques may be used on an assaultive subject to achieve compliance and/or control.

Striking techniques may include the use of issued equipment (e.g., baton, flashlight, PR-24NX), as well as hands, feet, elbows, or knees.

In exigent circumstances, other instrumentalities may be used.

Electronic Control Weapons (ECW) - Department Members are authorized to use ECW in accordance with Department training and UOF-06 *Electronic Control Weapons.*

Use of Force	**UOF-01**

Lethal Force Authorization

Members are authorized to use lethal force in order to protect themselves or others from an immediate threat of death or serious bodily harm.

Warnings- If feasible, some warning shall be given before any use of force.

Use of Lethal Force: Preventing Escape	Members are authorized to use lethal force to prevent the escape of a suspect when the officer has probable cause to believe that: • The arrest is for a felony; and • The member believes that the force employed creates no substantial risk of injury to innocent persons; and either: 1. The crime for which the arrest is made involved conduct including the use or threatened use of deadly force; or 2. There is a substantial risk that the person to be arrested will cause death or serious bodily harm/serious physical injuries if the suspect's apprehension is delayed. and • If feasible, some warning has been given.
A member <u>may</u> discharge a firearm for:	• The lawful performance of duties; • On or off duty training at a range, specifically designed for that purpose and using only Department authorized ammunition; or • Rendering harmless an animal that represents a threat to public safety or is seriously injured and suffering.
A member **<u>SHALL NOT</u>** discharge a firearm:	• As a warning; • To merely disable a fleeing vehicle; or • At a moving vehicle – **<u>UNLESS</u>**: An occupant uses or threatens to use immediate lethal force directed at the member or another person to cause them serious bodily harm/serious physical injury or death.
Discharge of a Firearm At a Moving Motor Vehicle	Members shall: • As a first course of action, <u>remove themselves</u> from the path of a moving vehicle or position of vulnerability; and • Understand and consider that: 1. Bullets fired at moving vehicles are extremely unlikely to stop or disable the motor vehicle; 2. Bullets fired may miss the intended target or ricochet and cause injury to themselves, other officers, or innocent persons; or 3. If the bullets disable the operator, the vehicle may crash and cause injury to themselves, other officers, or innocent persons.

Continued next page.

Subject	Number
Use of Force	**UOF-01**

Ready Position	When the member reasonably believes that there is a potential threat of serious bodily harm/serious physical injuries or death, the firearm may be placed at the ready position: • Trigger finger is alongside of the frame except when ready to engage; and • In a safe direction, below the line of sight, so as not to impede member's vision.
Use of Force Equipment and Training	The Colonel/Superintendent shall authorize the specific use of force equipment and training to be used by members. Members are responsible for keeping their equipment clean and operational at all times. All members shall have successfully completed training in the specific use of force equipment prior to use.

Investigations/ Reporting

Reporting Use of Force - The policy UOF-03 Reports, shall be adhered to upon any:

- On duty discharge of any weapon outside of a training range specifically designed for that purpose;
- Off duty discharge of a Department weapon outside of a training range specifically designed for that purpose;
- Compliance or striking techniques are used;
- OC Spray is used;
- Department issued Electronic Controlled Weapon (ECW) activation, on or off duty, as defined in UOF-06 Electronic Control Weapons; or
- Use of force caused or is reported to have caused injury or death to another.

Subject

Lethal Force - Response

Policy

The Department shall immediately respond to the scene and conduct an investigation when a use of force results in:

- A death;
- Serious bodily injury; and/or
- Any reportable discharge of a firearm per UOF-03 Reports.

Discharge not requiring an investigation:

- Authorized testing in a properly controlled environment (e.g. Armorer, Ballistician); or
- A firearm is discharged at a range, specifically designed for training and using only Department authorized ammunition; or
- Rendering harmless an animal that is seriously injured and suffering.

Officer-Involved Use of Lethal Force Investigation

Fatal

When a Department member is involved in a use of lethal force resulting in a fatality, the District Attorney's Office or SPDU of jurisdiction shall direct the investigation.

Non-Fatal

When a Department member is involved in a use of lethal force **not** resulting in a fatality, the Division of Investigative Services (DIS) Major who oversees the area where the incident occurs shall assign a commissioned officer from DIS to conduct an investigation.

Force Investigation Response and Support Team (FIRST)

The Force Investigation Response and Support Team (FIRST) shall:

- Be comprised of Commissioned Officers designated by the Colonel/Superintendent;
- Be assigned to regional teams; and
- Assist the DIS Commander.

Subject	Number
Lethal Force - Response	**UOF-02**

FIRST Activation

Upon notification of an incident resulting in the use of lethal force, the Communications Section shall notify:

- The DIS Commander or designee; and
- The SPDU Commander of jurisdiction.

The DIS Commander or designee shall dispatch the FIRST.

FIRST Duties

The DIS Commander or designee shall determine the duties of the FIRST which may include:

- Verify that the following has occurred:
    1. The scene is safe and secure;
    2. A perimeter has been established;
    3. Threats have been eliminated; and
    4. Any suspect(s) have been secured.
- Verify that all proper notifications are made, through channels to the Colonel/Superintendent;
- Identify a controlled area for on-scene interviews and conduct interviews where appropriate;
- Verify that individuals are advised of their rights; and
- Coordinate with the assigned DIS investigator to notify next of kin of all law enforcement and/or civilian victims in accordance with ADM-12 Serious Injury/Death of a Member, if necessary.

Weapons Seizure/

The first responding supervisor shall:

- Immediately seize or take custody of involved weapons and magazines (if applicable);
- Transfer custody of the seized weapon to the Firearms Identification Section; and
- Assist the Firearms Identification Section and Crime Scene Services personnel in the processing of evidence.

Crime Scene Services

Crime Scene Services shall:

- Respond to the scene and coordinate all Crime Scene Services activities with the assigned DIS investigator;
- Gather all evidence at the scene in accordance with INV-10 Evidence Collection/Preservation; and
- Map, photograph, and videotape the scene, if necessary.

Firearms Identification Section

If a firearm is involved, a member of the Firearms Identification Section shall:

- Proceed to the scene and take custody of any involved firearms and begin a firearms related investigation; and
- Notify the Armorer when a Departmental firearm is removed from service.

If appropriate, a temporary firearm shall be issued by the Armorer, as specified in ADM-20 Weapons Management.

Interviews

Interviews with involved Department members shall be:

- Conducted by a commissioned officer, as directed by the assigned DIS investigator.

Interviews with civilian witnesses may be:

- Conducted by commissioned and/or non-commissioned officers as directed by the assigned DIS investigator.

Troop/Section Commanders

The Troop/Section Commanders of jurisdiction shall:

- Establish interagency cooperation in conjunction with the assigned DIS investigator.

Members Using Force

A member involved in a use of force incident resulting in death or serious bodily injury shall:

- Surrender use of force equipment **only** to a Department supervisor;
- Absent an injury, incapacitation, or other exigent circumstances:
    1. Submit a detailed written report not less than twenty-four (24) hours, nor more than forty-eight (48) hours after the incident; or
    2. Submit to an interview by a commissioned officer involved in the investigation, in lieu of a written report, subject to all rights under applicable laws and collective bargaining agreements; and
    3. Submit a SP 376 Use of Force Report to the assigned DIS Investigator, within twenty-four (24) hours of the incident.
- Submit to a follow-up interview, if necessary; and
- Be allowed to contact a union representative, if desired.

Temporary Relief from Duty

A member:

- Shall be placed on Administrative Leave with pay for up to five (5) work days, when involved in a shooting or when the member's actions result in a death; or
- May be placed on Administrative Leave with pay in other circumstances, as appropriate.

Medical Evaluations

A member shall undergo a medical evaluation by the State Police Surgeon prior to returning to duty from any period of Administrative Leave following a shooting, or when a member's actions result in a death.

Employee Assistance Unit

Members are strongly encouraged to contact the Employee Assistance Unit (EAU) for additional support and assistance.

Follow-up counseling and assistance shall be provided by the EAU as needed. The EAU shall also assist members in obtaining support resources outside the Department.

Responsibilities and Protocol

Position	Responsibilities
All Members at Scene	• Administer and secure medical aid after any use of force, if necessary; • Protect and secure the scene; • Ensure that the Desk Officer has been notified; • Speak only to Department investigators, unless otherwise ordered by a member of the Command Staff; and • May consult an attorney.
Desk Officer	• Dispatch necessary assistance to the scene; • Notify Troop Duty Officer and Station Commander; • Make appropriate Daily Administrative Journal entries; and • Refer media inquiries to the Media Relations Section or the District Attorney's Office.
Troop Duty Officer	• Dispatch to the scene a supervisor who is at least one rank higher than the involved officer; • Notify Troop Commander; • Notify the appropriate DIS on-call representative; • Notify GHQ Communications Duty Officer; • Make appropriate Daily Administrative Journal entries; and • Refer media inquiries to the Media Relations Section or the District Attorney's Office.
Supervisors	• Determine condition of all members and civilians at the scene and ensure that EMS has been notified; • Ensure the involved weapon(s) have been seized and secured; • Ensure the area has been secured and limit entry to the scene; • Record and document all members present at the scene in the on-scene access control log; • Keep Troop Duty Officer informed; and • Refer media inquiries to the Media Relations Section or the District Attorney's Office.

Subject	Number
Lethal Force - Response	**UOF-02**

Responsibilities and Protocol (Continued)

Position	Responsibilities
GHQ Communications	• Notify Colonel/Superintendent; • Contact DIS Commander or designee; • Ensure the appropriate DIS on-call representative has been notified; • Notify the Media Relations Section; and • Notify the Employee Assistance Unit.
Lead DIS Investigator	• Assume control of the scene; • Coordinate actions with the Troop Commander and/or DIS Commander or designee; • Before interviewing or requesting written statements, advise the involved member(s) of their rights, if the member is suspected of violating the law; and • Review and submit a SP 376.
Troop Commander of Jurisdiction	• Notify the Division Commander of involved member(s); • Proceed directly to scene in incidents of death or serious bodily injury; and • Assist the media pending arrival of the Media Relations Section.
Division Commander of Member(s) Involved	• Appoint a commissioned officer to conduct an Administrative Review of the final report issued by the assigned DIS supervisor responsible for the investigation. • Note: The Administrative Review is to ensure that members followed Department procedures during the incident.
Colonel/ Superintendent	• Notify the Executive Office of Public Safety and Security (EOPSS).

Subject

Reports

Policy

All incidents involving the use of force shall be documented.

Definition

Reportable Incident: Any:

- On duty discharge of any weapon outside of a training range specifically designed for that purpose;
- Off duty discharge of a Department weapon outside of a training range specifically designed for that purpose;
- Compliance or striking techniques are used;
- OC Spray is used;
- Department issued Electronic Control Weapon (ECW) activation, on or off duty, as defined in UOF-06 *Electronic Control Weapons*; or
- Use of force caused or is reported to have caused injury or death to another.

Use of Force Reporting

Any reportable incident, as defined above, shall be reported to the Station Desk Officer of jurisdiction and documented within the Daily Administrative Journal.

The involved member(s) shall:

- Submit a SP 376 *Use of Force Report* along with the SP12 or To/From within twenty-four (24) hours of the incident, absent an injury, incapacitation, or other circumstances with approval from Division Commander.
- Ensure that Station/Unit Commander is provided access to ECW for downloading purposes.

Review

Supervisors shall:

- Ensure members submit a SP 376 along with the SP12 or To/From;
- Review every SP 376 and SP12 or To/From ; and
- Forward all reports to the Division Commander, through channels with findings and recommendations as to the necessity of further investigation of the incident.

Continued next page.

Review (Continued)

Station/Unit Commander or Designee Shall:

- Ensure that ECW data is downloaded per manufacturer instructions; and
- Ensure that data from ECW download is consistent with reports submitted by involved member(s).

The Troop Commander and/or Detective Captain of jurisdiction:

- Shall assign a commissioned officer to conduct an administrative review of the use of lethal force; or
- May assign a commissioned officer to conduct an administrative investigation of the use of less lethal force.

Division Commanders shall:

- Forward a copy of all reports, through channels, to the Division of Standards and Training; and
- Forward a copy of all reports to the Use of Force Review Committee.

Division of Standards and Training Commander may:

- Provide a copy of each report involving the discharge of a firearm to the Director of Firearms Training.

Use of Force Review Committee

The Deputy Superintendent shall appoint members of the Use of Force Review Committee. The Use of Force Review Committee shall evaluate each use of force incident and forward their findings and recommendations to the Deputy Superintendent.

Use of Force Review Committee Evaluation

The Committee shall determine that the use of force was:

- Within Department guidelines; or
- Outside Department guidelines.

The Committee's evaluations and recommendations shall include:

- Tactics and training considerations;
- Supervision considerations;
- Department directives; and
- The need for further Department action.

Classifications of weapons discharge include:

- Intentional: deliberate discharge;
- Unintentional: when an officer does in fact depress the trigger and causes the firearm to discharge without consciously or deliberately willing to do so; or
- Accidental: restricted to the description of a mechanical flaw, shortcoming, or breakdown of a firearm that occurs from such causes as excessive wear, corrosion, mechanical design, or a part breakage, which would allow the weapon to discharge without the shooter depressing the trigger; and
- Other findings as necessary.

Subject	Number
Reporting	**UOF-03**

Use of Force Reports Records

The Committee shall maintain in the Deputy Superintendent's Office, a secure file of all Use of Force Reports, investigations, and reviews.

Subject

Use of Force-Equipment

Policy

Members on duty shall carry and use only Department issued use of force equipment.

Definition

Use of Force Equipment: All equipment approved by the Colonel/ Superintendent and issued by the Department such as firearms, ammunition, Oleoresin Capsicum (OC) Spray, batons, Electronic Control Weapons (ECW), and/or any other equipment used to effect control and compliance of a subject.

Purchase/ Issuance

Title	Duties
Colonel/Superintendent	• Shall approve all use of force equipment issued and utilized by the Department; and • Shall authorize, in writing, the Division of Administrative Services (DAS) to purchase all use of force equipment issued and utilized by the Department.
Division of Administrative Services (DAS)	• Is solely responsible and solely authorized to purchase any and all use of force equipment issued and utilized by the Department; and • Shall purchase any and all use of force equipment issued and utilized by the Department pursuant to the written authorization of the Colonel/Superintendent or designee.
Armorer	• Shall test and recommend use of force equipment, including ammunition, through channels to the Office of the Superintendent or designee; • Issue and maintain use of force equipment; • Document and retain all records related to use of force equipment; and • Replace use of force equipment as needed.

Subject	Number
Use of Force-Equipment	**UOF-04**

Inspections

All use of force equipment shall be inspected for condition and operational readiness, only by a supervisor trained to inspect such equipment.

Supervisors shall:
- Remove from service any equipment found to be defective; and
- Notify the Armorer when a Department firearm or ECW is removed from service.

Title	Jurisdiction	Occurrence
Commanders/ Supervisors	Direct/conduct an inspection of all use of force equipment of those under their supervision.	Quarterly
Firearms Training Unit	Conduct an inspection of all use of force equipment brought to range.	Pre- and post-training
Staff Inspections	Conduct an inspection of all use of force equipment.	As appropriate

Maintenance

All use of force equipment shall be kept clean and operational at all times.

Issued firearms shall be cleaned promptly after training:
- In a safe location and manner; and
- Prior to leaving any range.

Only the Armorer and personnel authorized by the Armorer shall repair or modify any use of force equipment or parts.

ON DUTY Carry/Security

While on duty:
- Uniformed members shall carry issued sidearms secured in an issued holster; and
- Non-uniformed members shall carry issued sidearms secured in an issued holster, or otherwise authorized holster, as approved by the Colonel/Superintendent.

When carrying issued firearms, members shall do so in a safe and secure manner:
- Sidearms shall be fully loaded with a round in the chamber and the weapon de-cocked, if equipped;
- Desk Officers shall carry their sidearm in their holster on their person;
- Firearms shall not be left unattended in any non-secure location such as a desk drawer or file cabinet; and
- Firearms and ECWs **shall not** be carried on a member's person during the booking process, including (but not limited to) booking, fingerprinting, and the administration of the breath test.

OFF DUTY Carry/Security

When carrying a Department issued firearm off duty, the following items shall be in the member's possession:

- The member's Department's Badge of Office;
- The member's Department's Identification Card; and
- The member's active License to Carry a Firearm.

When issued firearms are not being carried, they shall be secured with the issued firearm lock and/or in a gun safe, inaccessible to children and others.

Members are not required to carry any issued firearm while off duty.

Members are not authorized to carry their Department issued ECW while off duty.

When off duty, members shall secure Department issued ECWs in a manner consistent with the securing of a firearm and in accordance with all applicable Massachusetts Laws. Members must ensure that Department issued ECWs are inaccessible to children and others.

Firearms in Vehicles

Firearms shall not be left unattended in any vehicle, unless the vehicle is a Department issued vehicle for which the Department has authorized a gun safe or other device designed to secure the weapon and the firearm is secured in such a device. When a member stores a firearm in such a device within an unattended Department vehicle, the device shall be locked and secured, the vehicle's windows shall be closed, and the vehicle's doors shall be closed and locked.

Examples of properly secured weapons:

Patrol Rifle:

- The patrol rifle shall be secured in the Department installed gun rack in accordance with the patrol rifle standard operating procedures.

Shotgun:

- The shotgun shall be secured in the Department installed gun rack, in accordance with shotgun standard operating procedures; and
- If equipped, the key lock shall be engaged when the vehicle is unattended.

STOP Team:

- Firearms shall be secured in accordance with STOP Team standard operating procedures.

Vehicle Safe Requests:

Members requesting to install a gun safe within Department vehicles shall:

- Submit a written request for approval to their Division Commander articulating the need for such a device;
- If approved, coordinate with the Fleet Administrator regarding the professional installation of the safe and regarding the location of installation within the vehicle; and
- Agree, in writing, to assume all responsibility for:
  - The loss or theft of the safe; and
  - Any damage caused to the vehicle associated with the installation or removal of the safe.

Continued next page.

Subject	Number
Use of Force-Equipment	**UOF-04**

Firearms in Vehicles (Continued)

The Armorer shall:

- Determine and approve the make and model of all gun safes to be issued by the Department; and
- Advise the Fleet Administrator of the gun safes authorized for purchase.

Division Commanders shall forward all gun safe requests, whether approved or denied, to the Fleet Administrator.

Soft body Armor

Soft body armor shall be issued to members with the intent that it be worn as often as possible, while on duty.

Members who decline to wear the issued soft body armor shall submit a letter to the appropriate Division Commander stating their reasons.

Department of State Police
General Order

Effective Date	Number
November 5, 2008	**UOF-05**

Subject

Firearms Qualifications

Policy

The Department shall provide training and instruction to every member in order to become proficient and confident in the use of issued weapons.

All members shall successfully complete appropriate training and shall qualify with weapons and techniques prior to use.

Definition

Specialized Firearms: Any firearm other than the main duty pistol(s).

Training

Safety is of paramount importance. Regardless of a member's rank, Use of Force Instructors shall be in command of all personnel and equipment during training.

Training shall, as closely as possible, reflect the conditions with which members are likely to be confronted. This training shall include comprehensive instruction in:

- Department's use of force directives and applicable standard operating procedures;
- Legal updates;
- Proficiency and safe weapons handling skills; and
- Safety, storage, and maintenance of use of force weapons and equipment.

Failure to Qualify with Firearms

Those members who fail to meet initial qualification and firearms handling standards shall receive immediate remedial assistance. Members may receive two (2) additional opportunities to qualify within the same day; unless the Supervisor of Firearms Training determines that it would be unsafe or impractical to do so.

In the event a member fails to achieve qualification standards after remedial assistance:

- The Division of Standards and Training Commander, or designee, shall immediately notify the Deputy Superintendent.

Subject	Number
Firearms Qualifications	**UOF-05**

Remedial Training

Member(s) failing to initially qualify shall be assigned to the Range for the Remedial Training Program.

The Remedial Training Program shall consist of three phases designed to assist the remedial shooter in attaining firearms qualification standards. The content of the remedial program shall be determined by the Supervisor of Firearms Training.

- Phase 1 Remedial Training shall consist of one (1) training day.
- Phase 2 Remedial Training shall consist of two (2) training days.
- Phase 3 Remedial Training shall consist of two (2) training days.

If a member fails to achieve firearms qualification standards after Phase 1 Remedial Training, the member shall be assigned to the Phase 2 Remedial Training.

If a member fails to achieve firearms qualification standards after the Phase 2 Remedial Training, the member shall be:

- Evaluated by the State Police Surgeon to determine if any physical limitation(s) exist that would prevent them from achieving the firearms qualification standards; and
- Assigned to the Phase 3 Remedial Training at the State Police Academy for more in-depth assistance.

When participating in any phase of the Remedial Training Program, it is mandatory that a member successfully complete two (2) consecutive runs of the qualification course.

If proficiency is not established at the end of the Remedial Training Program:

- The member shall immediately surrender all firearms and cruiser keys to the Supervisor of Firearms Training;
- The Supervisor of Firearms Training shall immediately secure the firearm(s) and cruiser and advise the Division of Standards and Training (DST) Commander or designee; and
- The DST Commander or designee, shall place the member on administrative leave with pay, and shall proceed with an administrative hearing in accordance with Articles 5 and 6 of the Rules and Regulations.

The Three Phase Remedial Training Program shall constitute reasonable efforts by the Department in an attempt to achieve qualification by a member.

Failure to qualify with issued firearms shall result in administrative action, up to and including termination of employment.

Subject	Number
Firearms Qualifications	**UOF-05**

Specialized Firearms- Failure to Qualify

In the event that a member fails to achieve firearms qualification standards with Specialized Firearms after remedial training, the member shall:

- Be required to surrender such specialized firearms to the Supervisor of Firearms Training; and
- Be assigned to a one (1) day Specialized Firearms Remedial Training Program.

If proficiency is not established at the end of the Specialized Firearms Remedial Training Program, the member may:

- Receive additional remedial training at the discretion of the Colonel/Superintendent.

Qualification/ Other Use of Force Weapons

The DST Commander or designee shall establish standards for qualification with other use of force weapons prior to issuance.

Responsibilities

Position	Duties
Supervisor of Firearms Training	• Conduct necessary training and testing; and • Maintain documentation on firearms training.
Division Commander of DST or designee	• Approve instructors; • Recommend training standards; • Maintain program records.
Division Commanders	• Ensure all members are trained as required.
Deputy Superintendent	• Authorize all use of force training prior to implementation.
Colonel/Superintendent	• Establish qualification standards.

Extended Leaves of Absence

Members returning from a leave in excess of ninety (90) days shall comply with any and all training requirements in accordance with ADM-11D Extended Leaves of Absence.

References

Articles 5 and 6 of the Rules and Regulations
ADM-11D Extended Leaves of Absence

Promulgated By:

Department of State Police
General Order

Effective Date	Number
July 3, 2019	**UOF-06**

Subject

Electronic Control Weapons (ECW)

Policy

The Department shall ensure proper guidance and direction on the use of Electronic Control Weapons (ECWs).

Department members shall use, and are authorized to use, only that force which is *objectively reasonable* to:

- Effect an arrest;
- Restrain or subdue an individual resisting a lawful seizure; or
- Protect themselves or others from physical harm.

ECWs may be used by authorized and trained Department members in accordance with this policy and other established Policy and Procedures. Department members shall use reasonable force to control individuals who are violent, exhibiting threatening or potentially violent behavior, or physically resisting arrest or detention.

Members should assess each situation to determine which action shall best bring the incident under control, using only that amount of force that is reasonably necessary.

If deployed, ECW cycles shall be limited to the minimum number of deployments necessary and should last no longer than necessary to bring an individual under control.

Definitions

Electronic Control Weapon (ECW): A weapon that uses electricity to override voluntary motor responses or applies pain in order to gain compliance or overcome resistance. ECWs are designed to incapacitate without causing serious physical injury or death.

ECW Activation: Any time an ECW is turned on, exclusive of training and routine maintenance/readiness checks.

Laser Activation: The ECW is turned on, activating the light and/or laser beam. Laser activation may be utilized as a warning technique if drive stun deployment and/or probe deployment is objectively reasonable.

Spark Display: The ECW is activated and the arc switch is depressed, activating the electrical arc. Spark display may be utilized as a warning technique if drive stun deployment and/or probe deployment is objectively reasonable.

Drive Stun Deployment: In Drive Stun mode, the ECW is a pain-compliance facilitator rather than an electro-muscular disruptor. Drive stun occurs when the ECW is held against the subject, whether or not probes are deployed. Drive stun may be utilized in response to active resistance or assaultive behavior.

Probe Deployment: In Probe Deployment mode, the ECW uses electricity to override voluntary motor responses. Probe Deployment occurs when probes deploy from an ECW, whether or not the probes strike their intended target. This includes follow-up drive stuns when a single probe is attached to an individual. Probe deployment may be utilized in response to assaultive behavior.

ECW Cycle: Occurs when probe deployment delivers energy to an individual.

Objectively Reasonable: This term means that, in determining the necessity for and appropriate level of force, officers shall evaluate each situation in light of the known circumstances, including, but not limited to, the seriousness of the crime, the level of threat or resistance presented by the subject, and the danger to the officer, subject, and/or community. The reasonableness of a particular use of force must be judged from the perspective of a reasonable officer on scene, rather than with the 20/20 vision of hindsight. Determining reasonableness of force must allow for the fact that police officers are forced to make split second judgments in circumstances that are tense, uncertain and rapidly evolving. The force used must be reasonable under the circumstances known to the officer at the time force is used.

Compliant Individual: An individual who is fully cooperative with a Department member.

Passively Resistant Individual: An individual who is uncooperative but does not use physical strength or body movement to resist a Department member.

Actively Resistant Individual: An individual who uses physical strength and/or body movement to resist a Department member. Examples of active resistance include pulling, turning, or walking away from an officer.

Assaultive Individual (Bodily Harm): An individual who attempts to injure a Department member or another person or engages in conduct that has the potential to injure a Department member or another person.

Aggravated Assaultive Individual (Serious Bodily Harm/Death): An individual who engages in conduct that is likely to produce death or serious bodily harm to a member of the Department or another person.

Sensitive Population Groups: Sensitive population groups include those who reasonably appear to be, or are known to be, children, elderly, medically infirm, pregnant, or users of a cardiac pacemaker.

Subject	Number
Electronic Control Weapons	**UOF-06**

Less Lethal Force: Use of force that is not intended to cause serious bodily harm/serious physical injuries or death.

- Members are authorized to use less lethal force in accordance with the law, the contents of General Order UOF-01, and this policy.

Lethal Force: Use of force intended to inflict serious bodily harm/serious physical injuries or death.

- Members are authorized to use lethal force in accordance with the law, the contents of General Order UOF-01, and this policy.

Authorized Users

Only those Department members who have successfully completed the Department's initial ECW training and subsequent in-service ECW training are authorized to use an ECW.

Weapon Readiness

Department members issued and authorized to use a ECW shall:

- Ensure the ECW is carried in an approved holster on the side of the body opposite the service handgun;
  [NOTE: members not assigned to uniformed duty may use other Department-approved holsters and carry the weapon consistent with Department training.]
- Ensure the ECW is fully armed with the safety on in preparation for immediate use;
- Ensure one spare cartridge is available as backup in case of cartridge failure or the need for reactivation;
- Ensure the spare cartridge is stored, carried, and used in a manner consistent with training;
- Ensure cartridges are replaced following the manufacturer's expiration requirements;
- Ensure only manufacturer-approved battery power sources are used for the ECW;
- Prior to each regular tour of duty shift, confirm that the ECW is functioning properly by performing all tests as defined in training; and
- Not make any modifications or repairs on the ECW unless authorized in writing by the Armorer.

Activation

In accordance with the law, the contents of General Order UOF-01, and this policy, and when it is objectively reasonable to do so, Department members are authorized to utilize an ECW to arrest and/or detain an individual that has and/or continues to exhibit behavior that leads the officer to believe the individual is actively resisting or assaultive and will resist being arrested or detained.

Subject	Number
Electronic Control Weapons	**UOF-06**

ECW Use of Force Response Table

If the subject is:	Then the response may include:
Actively Resistant	Laser Activation Spark Display Drive Stun
Assaultive – Bodily Harm	Laser Activation Spark Display Drive Stun Probe Deployment
Aggravated Assaultive – Serious Bodily Harm/Death	Laser Activation Spark Display Drive Stun Probe Deployment NOTE: Department members are not required to use a weapon of less-lethal force if use of lethal force is objectively reasonable.

Situations in which the ECW may be activated in accordance with the above table include but are not limited to:

- When an individual uses force or violence against the member or another person(s);
- When an individual exhibits violent, threatening, or potentially violent behavior;
- When an individual actively resists an arrest or detention;
- When an individual flees in order to avoid arrest or detention in circumstances where the member would pursue on foot and physically effect the arrest or detention;
- When an individual expresses intent and has the means to commit suicide or inflict serious bodily harm to themselves or others and ECW activation does not create additional risk;
- To protect Department members or others against an aggressive animal; and
- In the course of Department-authorized training exercises or demonstrations.

Department members shall:

- Give the individual a warning prior to activating the ECW, unless doing so would place any member or person(s) at risk;
- Adhere to the Department's training regarding warnings, which may include verbal warnings, display of the ECW, laser painting, arcing, spark display, or a combination thereof;
- When feasible, an announcement should be made to other members or personnel on the scene that an ECW is going to be activated;
- Not intentionally activate more than one ECW at a time against an individual; and
- Be aware that an individual subjected to an ECW Cycle may not be able to respond to commands during or immediately following an ECW Cycle exposure.

- ECW cycles should be limited to the least number of exposures and should last no longer than necessary to bring an individual under control. Each 5-second cycle is considered an independent use of force and must be objectively reasonable and be documented in writing.
- Avoid continued ECW use as an attempt to facilitate compliance if circumstances indicate that drive stun deployment is ineffective as a pain-compliance technique.
- Be aware that pain compliance may not be effective against an individual in a mental health crisis state, under the influence of a mind altering substance, or when extremely focused.
- Consider potential risk(s) to third parties or bystanders when activating ECWs.
- Be aware that a subject's heavy clothing may impede the effectiveness of ECWs.
- Aim, to the degree possible, for the following target areas:
  - Lower center mass below the chest
  - Back
  - Legs

  NOTE: Consistent with training and to the extent possible, Department members should avoid sensitive areas such as the eyes, face, head, throat, neck, breasts, groin and genitals.

Department members shall **not** use the ECW:

- On individuals who passively resist as defined within this policy;
- On a handcuffed or secured prisoner;
  EXCEPTION: ECW, in limited situations, may be used on a handcuffed or secured prisoner if an individual exhibits overtly assaultive, self-destructive, or violently resistive behavior that cannot reasonably be controlled by other readily available means.
- In any environment where the member reasonably believes that a flammable, volatile, or explosive material is present, including but not limited to OC spray with volatile propellant, gasoline, natural gas, propane;
- When the individual is located in water;
- In any situation where the member has a reasonable belief that the subject might fall resulting in death or serious physical injury, and the circumstances presented do not justify that risk; or
- On individuals in physical control of a vehicle in motion (e.g., automobiles, trucks, motorcycles, ATVs, bicycles, scooters) unless exigent circumstances exist.

Sensitive Population Group

Department members shall be aware of general concerns when an ECW is used on an individual of a Sensitive Population Group. Department Members are not prohibited from using an ECW on sensitive population individuals, but use is limited to those exceptional circumstances where the potential benefit of using the ECW (i.e., injury reduction) reasonably outweighs the risks and concerns.

Subject	Number
Electronic Control Weapons	**UOF-06**

ECW Post-Activation

After a probe deployment, Department Members shall seek medical attention for the individual and ensure that ECW probes are removed by qualified medical personnel.

In any case of Drive Stun deployment or Probe deployment from an ECW on an individual, members shall:

- Transport the individual to an emergency care facility for evaluation and/or treatment if any of the following apply:
  - The individual requests medical attention or there is an obvious need for medical attention;
  - The ECW was deployed in a sensitive area (e.g., eye, face, head, throat, neck, breasts, groin, genitals);
  - The individual is part of a sensitive population group;
  - More than three ECW cycles were deployed on the individual or the ECW was deployed for continuous cycles amounting to 15 seconds or more; or
  - More than one ECW device has been deployed on an individual.
- Use restraint techniques that minimize risk of impairing a subject's respiration.
- Make reasonable efforts to protect the subject's privacy.

Internal Reporting

Department members who activate an ECW shall:

- Adhere to Policy and Procedure UOF-03 Reports, *Reportable Incident*;
- Report ECW activations to the Station Desk Officer of jurisdiction;
- Ensure ECW activations are documented within the Daily Administrative Journal/Department Records Management System; and
- Ensure that Station/Unit Commander is provided access to ECW for downloading purposes.

The involved member(s) shall:

- Submit a SP 376 Use of Force Report within twenty-four (24) hours of the activation, absent an injury, incapacitation, or other exigent circumstances.

Supervisors shall:

- Ensure members submit a SP 376;
- Review every SP 376; and
- Forward reports to the Division Commander, through channels with findings and recommendations as to the necessity of further investigation of the incident.

Station/Unit Commander or Designee Shall:

- Ensure that ECW data is downloaded as per manufacturer instructions; and
- Ensure that data from ECW download is consistent with reports submitted by involved member(s).

Subject	Number
Electronic Control Weapons	**UOF-06**

External Reporting

The Use of Force Review Committee shall:

- Collect Department information regarding the use of ECW;
- Ensure the Executive Office of Public Safety and Security (EOPSS) *ECW Use Reporting Form* is completed and submitted as required by EOPSS in accordance with M.G.L. c. 140, § 131J and St. 2004, c. 170, s.2;
- Forward a copy of the EOPSS *ECW Use Reporting Form* to the Deputy Superintendent.

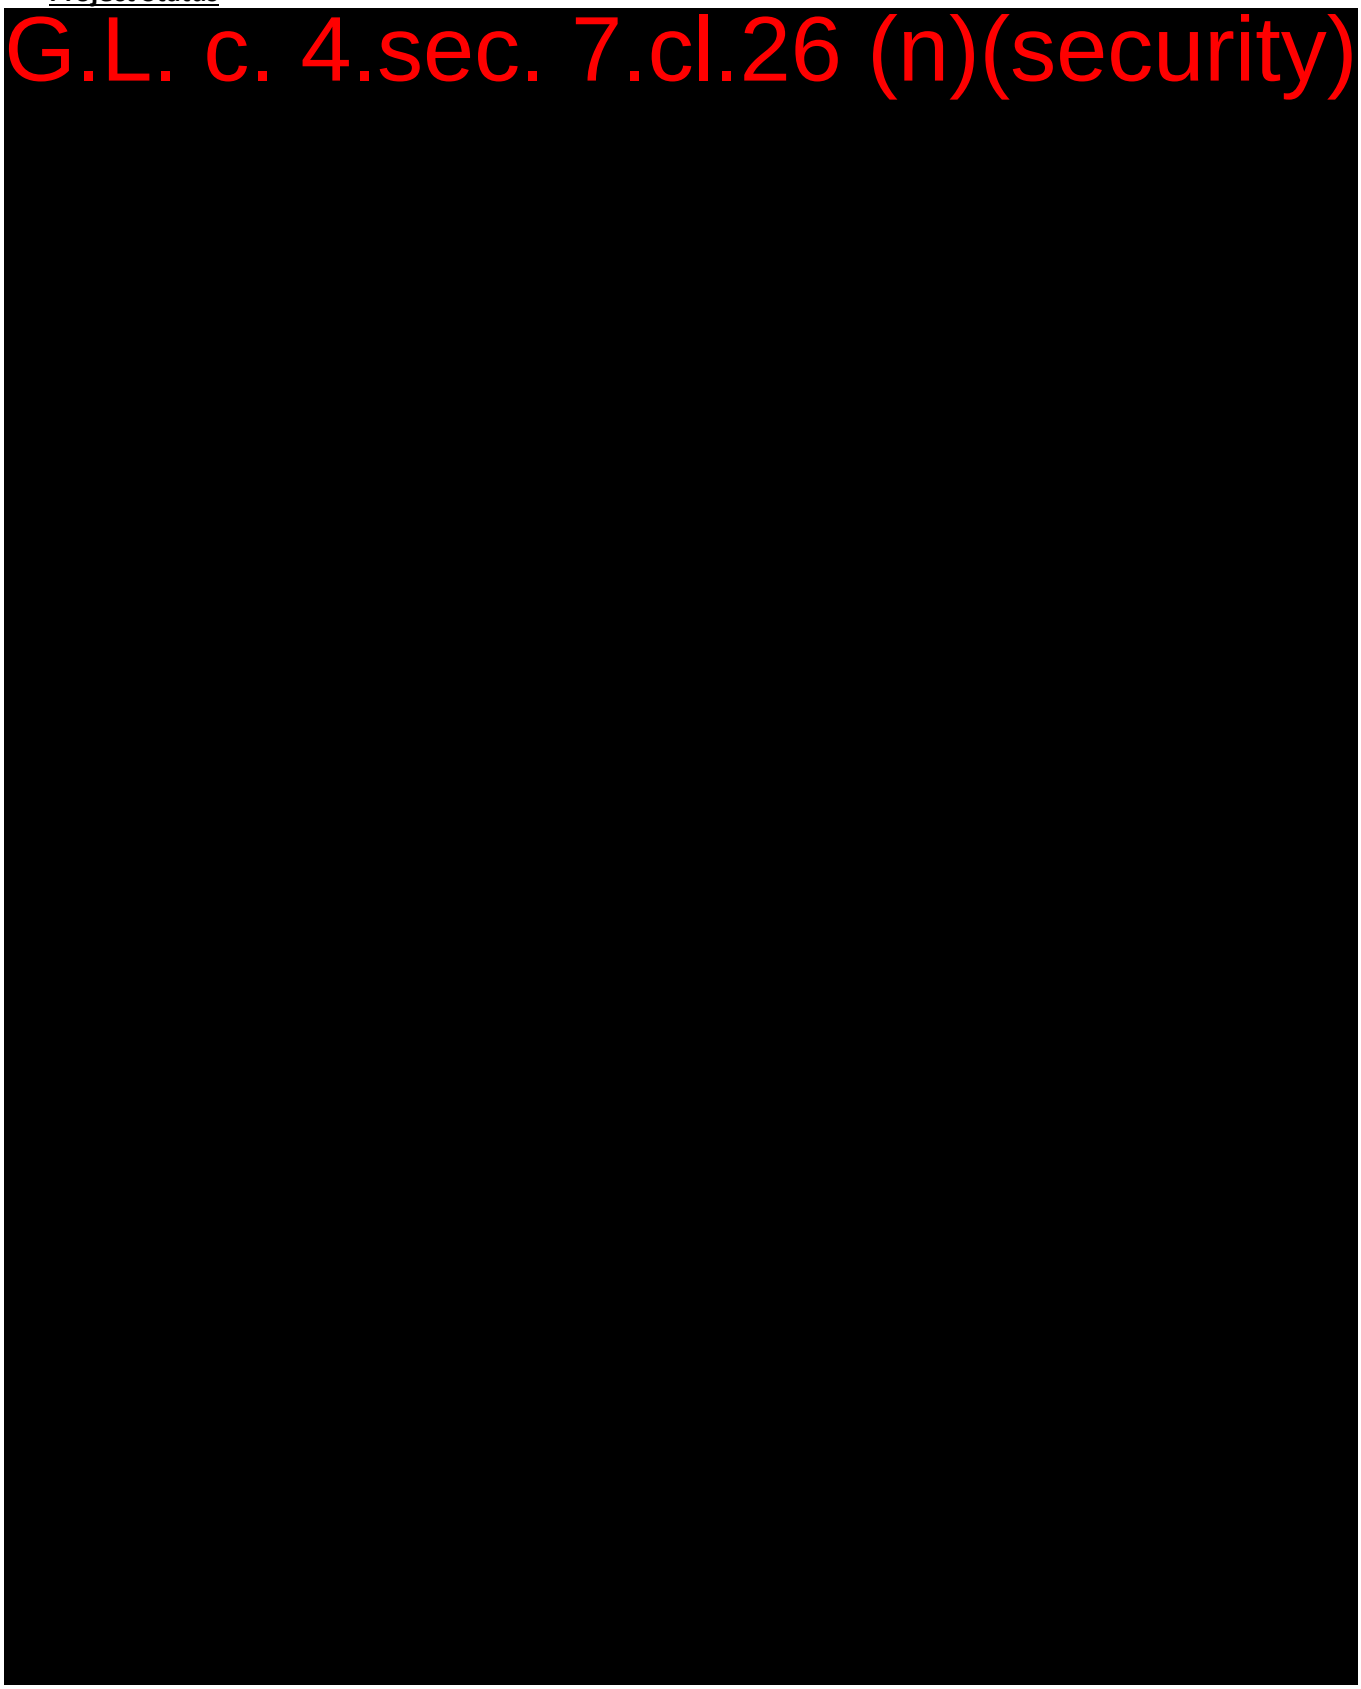
Off-Duty Considerations

Members are not authorized to carry their Department issued ECW while off duty.

When off duty, members shall secure Department issued ECWs in a manner consistent with the securing of a firearm and in accordance with all applicable Massachusetts Laws. Members must ensure that Department issued ECWs are inaccessible to children and others.

Training

Department members shall be trained in accordance with the lesson plan provided by the manufacturer approved by EOPSS in accordance with M.G.L. c. 140, § 131J .



Department members shall be trained in accordance with the law, the contents of General Order UOF-01, and this policy.

COMMONWEALTH TERMS AND CONDITIONS FOR INFORMATION TECHNOLOGY CONTRACTS

This Commonwealth Terms and Conditions for Information Technology Contracts ("IT Terms and Conditions") form is jointly issued by the Executive Office of Technology Services and Security (EOTSS), the Executive Office for Administration and Finance (ANF), the Office of the Comptroller (CTR) and the Operational Services Division (OSD) for use by all Commonwealth of Massachusetts ("State") Departments and Contractors to govern Contracts subject to the object codes for information technology, as defined by the Office of the Comptroller's Expenditure Classification Handbook, or other Contracts as expressly approved in writing by EOTSS, ANF, OSD, and CTR. Any changes or electronic alterations by either the Department or the Contractor to the official version of this form shall be void. Upon execution of the Standard Contract Form and filing as prescribed by the Office of the Comptroller, these IT Terms and Conditions will be incorporated by reference into any Contract for IT commodities or services executed by the Contractor and any State Department, in the absence of a superseding law or regulation requiring a different Contract form. Performance shall include services rendered, obligations due, costs incurred, commodities and deliverables provided and accepted by the Department, programs provided or other commitments authorized under a Contract. A deliverable shall include any tangible product to be delivered as an element of performance under a Contract. The Commonwealth is entitled to ownership and possession of all deliverables purchased or developed with State funds. The Commonwealth's possession, installation, or use of proprietary IT commodities or services, developed by Contractor for the open market without the use of State funds, shall not transfer title or ownership thereof to the Commonwealth. A "Contract" shall mean, in the following order of priority: (i) these IT Terms and Conditions; (ii) the Standard Contract Form issued jointly by ANF, CTR and OSD, and the Standard Contract Form Instructions and Contractor Certifications; (iii) the Request for Response (RFR) or applicable solicitation document, as it may be amended by the Department; (iv) the Contractor's response to the RFR or applicable solicitation document, as it may be amended by the Department and Contractor, including any negotiated terms and conditions allowable pursuant to law or regulation; (v) a solicitation created by the Department for a particular engagement such as a Request for Quote (RFQ), as it may be amended by the Department; (vi) any negotiated terms and conditions governing a particular engagement, as expressly agreed to in writing between the Department and the Contractor; and (vii) the Contractor's response to the Department's solicitation.

1. *Contract Effective Start Date.* Notwithstanding verbal or other representations by the parties, the effective start date of performance under a Contract shall be the later of the date the Contract was executed by an authorized signatory of the Contractor, the date the Contract was executed by an authorized signatory of the Department, the date specified in the Contract, or the date of any approvals required by law or regulation.

2. *Payments And Compensation.* The Contractor shall only be compensated for performance delivered and accepted by the Department in accordance with the specific terms and conditions of a Contract. The Department may, in its sole discretion, agree to pre-payment for subscription-based IT commodities or services for a term length as specified in the Contract. All Contract payments are subject to appropriation pursuant to M.G.L. c. 29, § 26, or the availability of sufficient non-appropriated funds for the purposes of a Contract, and shall be subject to intercept pursuant to M.G.L. c. 7A, § 3 and 815 CMR 9.00. Overpayments shall be reimbursed by the Contractor or may be offset by the Department from future payments in accordance with state finance law. Acceptance by the Contractor of any payment or partial payment, without any written objection by the Contractor, shall in each instance operate as a release and discharge of the State from all claims, liabilities or other obligations relating to the performance of a Contract.

3. *Contractor Payment Mechanism.* All Contractors will be paid using the Comptroller's payment system unless a different payment mechanism is required. The Contractor shall timely submit invoices and supporting documentation as prescribed in a Contract. The Department shall review and return rejected invoices within fifteen (15) days of receipt with a written explanation for rejection. Payments shall be made in accordance with the bill paying policy issued by the Office of the Comptroller and 815 CMR 4.00, provided that payment periods listed in a Contract of less than forty-five (45) days from the date of receipt of an invoice shall be effective only to enable a Department to take advantage of early payment incentives and shall not subject any payment made within the forty-five (45) day period to a penalty. The Contractor Payroll System shall be used only for Individual Contractors who have been determined to be Contract Employees as a result of the Department's completion of an Internal Revenue Service SS-8 form in accordance with the Omnibus Budget Reconciliation Act (OBRA) of 1990, and shall automatically process all state and federal mandated payroll, tax and retirement deductions.

4. *Contract Termination Or Suspension.* A Contract shall terminate on the date specified in a Contract, unless this date is properly amended in accordance with all applicable laws and regulations prior to this date, or unless terminated or suspended under this Section upon prior written notice to the Contractor. The Department may, without penalty, terminate or suspend a Contract: (i) without cause; (ii) if the Contractor breaches any material term or condition or fails to perform or fulfill any material obligation required by a Contract; (iii) in the event of an elimination of an appropriation or availability of sufficient funds for the purposes of a Contract; or (iv) in the event of an unforeseen public emergency mandating immediate Department action. Upon immediate notification to the other party, neither the Department nor the Contractor shall be deemed to be in breach for failure or delay in performance due to Acts of God or other causes factually beyond their control and without their fault or negligence. Subcontractor failure to perform or price

increases due to market fluctuations or product availability will not be deemed factually beyond the Contractor's control.

5. *Written Notice*. Any notice shall be deemed delivered and received when submitted in writing in person or when delivered by any other appropriate method evidencing actual receipt by the Department or the Contractor. Any written notice of termination or suspension delivered to the Contractor shall state the effective date and period of the notice, the reasons for the termination or suspension, if applicable, any alleged breach or failure to perform, a reasonable period to cure any alleged breach or failure to perform, if applicable, and any instructions or restrictions concerning allowable activities, costs or expenditures by the Contractor during the notice period.

6. *Confidentiality, Privacy, and Protection of Data*. The Contractor shall comply with M.G.L. c. 66A if the Contractor becomes a "holder" of "personal data" and shall comply with M.G.L. c. 93H if the Contractor accesses "personal information." The Contractor shall also protect the physical security and restrict any access to personal or other Department data in the Contractor's possession, or used by the Contractor in the performance of a Contract, which shall include, but is not limited to, the Department's public records, documents, files, software, equipment or systems. See also the Commonwealth's Standard Contract Form and the Enterprise Security Policies and Standards: https://www.mass.gov/handbook/enterprise-information-security-policies-and-standards.

7. *Record-keeping And Retention, Inspection Of Records.* The Contractor shall maintain records, books, files and other data as specified in a Contract and in such detail as shall properly substantiate claims for payment under a Contract, for a minimum retention period of six (6) years beginning on the first day after the final payment under a Contract, or such longer period as is necessary for the resolution of any litigation, claim, negotiation, audit or other inquiry involving a Contract. The Department shall have access, as well as any parties identified under Executive Order 195, during the Contractor's regular business hours and upon reasonable prior notice, to such records, including on-site reviews and reproduction of such records at a reasonable expense.

8. *Assignment.* The Contractor may not assign or delegate, in whole or in part, or otherwise transfer any liability, responsibility, obligation, duty or interest under a Contract, with the exception that the Contractor shall be authorized to assign present and prospective claims for money due to the Contractor pursuant to a Contract in accordance with M.G.L. c. 106, § 9-318. The Contractor must provide sufficient notice of assignment and supporting documentation to enable the Department to verify and implement the assignment. Payments to third party assignees will be processed as if such payments were being made directly to the Contractor and these payments will be subject to intercept, offset, counter claims or any other Department rights which are available to the Department or the State against the Contractor. Upon prompt written notice to the Contractor, the Department may assign or delegate, in whole or in part, or transfer any liability, responsibility, obligation, duty or interest under a Contract, to another Department, provided that the assignee has agreed to take full responsibility of such Contract, liability, responsibility, obligation, duty or interest.

9. *Subcontracting By Contractor.* Any subcontract entered into by the Contractor for the purposes of fulfilling the obligations under a Contract must be in writing, authorized in advance by the Department and shall be consistent with and subject to the provisions of these IT Terms and Conditions and a Contract. Subcontracts will not relieve or discharge the Contractor from any duty, obligation, responsibility or liability arising under a Contract. The Contractor shall be responsible for the acts and omissions of its subcontractors. The Department is entitled to copies of all subcontracts and shall not be bound by any provisions contained in a subcontract to which it is not a party.

10. *Affirmative Action, Non-Discrimination In Hiring And Employment.* The Contractor shall comply with all federal and state laws, rules and regulations promoting fair employment practices or prohibiting employment discrimination and unfair labor practices and shall not discriminate in the hiring of any applicant for employment nor shall any qualified employee be demoted, discharged or otherwise subject to discrimination in the tenure, position, promotional opportunities, wages, benefits or terms and conditions of their employment because of race, color, national origin, ancestry, age, sex, religion, disability, handicap, sexual orientation or for exercising any rights afforded by law. The Contractor commits to purchasing supplies and services from certified minority or women-owned businesses, small businesses or businesses owned by socially or economically disadvantaged persons or persons with disabilities.

11. *Liability.* Unless otherwise exempted by law, and subject to Section 13, the Contractor shall be liable for any and all claims, liabilities, and costs which arise out of the Contractor's performance of a Contract.

12. *Indemnification*. The Contractor shall indemnify and hold harmless the State, including the Department, its agents, officers and employees, against any and all claims, liabilities, and costs for personal injury, property damage, or infringement of intellectual property rights, (each, an "Unlimited Claim"), and all claims, liabilities, and costs, in connection with a security or data breach, or unauthorized disclosure of data, (each, a "Data Breach"), and other claims, liabilities, and costs, which arise out of Contractor's performance of a Contract. After prompt notification by the State, the Contractor shall have an opportunity to participate in the defense of claims and any negotiated settlement agreement or judgment. The State shall not be liable for any costs incurred by the Contractor arising under this Section 12. The Contractor (including its agents, officers, employees or subcontractors) shall at no time be considered an agent or representative of the Department or the State. Any indemnification of the Contractor shall be subject to appropriation and applicable law.

13. *Limitation of Liability*. Absent a higher limitation of liability expressly agreed to in a particular Contract between the Department and the Contractor, the limitation of liability in this

COMMONWEALTH TERMS AND CONDITIONS FOR INFORMATION TECHNOLOGY CONTRACTS

Section 13 shall apply. This Section 13 shall not limit the State's right of recovery for the Contractor's indemnification obligations for an Unlimited Claim under Section 12, nor the State's ability to join the Contractor as a third-party defendant in connection with an Unlimited Claim or Data Breach. The Contractor's liability for any Data Breach shall not exceed the greater of: (i) $250,000; (ii) the amount mandated by applicable State or Federal law; (iii) five times the total value of the Contract (or in the case of subscription-based Contracts, five times the total value of the Contract during the committed subscription term); or (iv) the total coverage provided by Contractor's insurance provider(s) for such Data Breach. The Contractor's liability for any other claim shall not exceed the greater of: (i) $100,000; or (ii) two times the total value of the Contract (or in the case of subscription-based Contracts, two times the total value of the Contract during the committed subscription term). Except for the Contractor's indemnification obligations for an Unlimited Claim or Data Breach under Section 12, the Contractor shall not be liable for incidental or consequential damages, including without limitation, loss of use of equipment, lost revenue, lost savings or lost profits of the State.

14. ***Waivers.*** Forbearance or indulgence in any form or manner by a party shall not be construed as a waiver, nor in any way limit the legal or equitable remedies available to that party. No waiver by either party of any default or breach shall constitute a waiver of any subsequent default or breach.

15. ***Risk Of Loss.*** The Contractor shall bear the risk of loss for any Contractor materials used for a Contract and for all deliverables, Department personal or other data which is in the possession of the Contractor or used by the Contractor in the performance of a Contract until possession, ownership and full legal title to the deliverables are transferred to and accepted by the Department.

16. ***Forum, Choice of Law And Mediation.*** Any actions arising out of a Contract shall be governed by the laws of Massachusetts, and shall be brought and maintained in State court in Massachusetts, unless a federal court in Massachusetts has exclusive jurisdiction thereof. The Department, with the approval of the Office of the Attorney General (AGO), may: (i) consent to the jurisdiction of federal courts outside of Massachusetts; or (ii) agree to voluntary mediation through the Massachusetts Office of Dispute Resolution (MODR) of any Contract dispute and will share the costs of such mediation with the Contractor. No legal or equitable rights of the parties shall be limited by this section.

17. ***Contract Boilerplate Interpretation, Severability, Conflicts With Law, Integration.*** Any amendment or attachment to any Contract which contains conflicting language or has the effect of deleting, replacing or modifying any printed language of these IT Terms and Conditions, as officially published by EOTSS, ANF, CTR and OSD, or any printed language of the Standard Contract Form shall be interpreted as superseded by the official printed language. If any provision of a Contract is found to be superseded by state or federal law or regulation, in whole or in part, then both parties shall be relieved of all obligations under that provision only to the extent necessary to comply with the superseding law, provided however, that the remaining provisions of the Contract, or portions thereof, shall be enforced to the fullest extent permitted by law. All amendments must be executed by the parties in accordance with Section 1 of these IT Terms and Conditions and filed with the original record copy of a Contract as prescribed by CTR. The printed language of the Standard Contract Form, as officially published by ANF, CTR and OSD, which incorporates by reference these IT Terms and Conditions, shall supersede any conflicting verbal or written agreements relating to the performance of a Contract, or attached thereto, including contract forms, purchase orders or invoices of the Contractor.

IN WITNESS WHEREOF, the Contractor certifies under the pains and penalties of perjury that it shall comply with these IT Terms and Conditions for any applicable Contract executed with the Commonwealth as certified by their authorized signatory signing the Standard Contract Form.

UNITED SHIELD ACH/MICH MIL BALLISTIC HELMET

The new US Military design featuring a low profile compact helmet with minimum target area and weight.

- Weight: 2.6-2.8 lbs.
- Features an advanced 7 comfort pad system
- Offers improved head stability with a 4-point adjustable harness, suede covered chip cup and nape strap
- Ballistic performance to NIJ 0106.01 and HP White 0401.01
- Shock absorption - US Army ACH Spec for impact
- Hemi-Anvil, 10ft/sec with less than 150 G's force transmitted to head
- Fragmentation performance to US ACH Mil-Spec

UNITED SHIELD SPEC OPS DELTA GEN II

Made from advanced Aramid composites and provides lightweight robust protection from ballistic and fragmentation projectiles as well as other low energy threats.

- Weight: 2.7 lbs.
- NEW carbon fiber Universal NVG mount with guaranteed no-rattle fit
- NEW USI Rapid Adjustment Dial BOA® retention system with 2-way adjustments
- NEW 4D Combat Pad ultra comfort system with phase change technology
- Industry leading ballistic proprietary thermoplastic aramid composite shell
- Removable suede split chin strap to allow for laundry, replacement or use of gas mask extender
- 4-point adjustment harness, picatinny rails, helmet VELCRO® brand fastener kit and bungees
- NIJ 0106.01 Level IIIA, HP White 0401.01B Level IIIA and exceeds US MIL-SPEC for ACH helmet for 2, 4, 16, 64, 17 grain fragments

REVISION MILITARY BATLSKIN VIPER™ P4 HELMET

The Viper P4 head protection system is the most advanced combat helmet, weighing up to 24% lighter than the legacy U.S. Army ACH system - pushing the boundaries of obtainable weight reduction while maintaining superior ballistic and fragmentation protection.

- Stops NIJ IIIA level threats
- Available with Revision's MSS Liner System for enhanced comfort and stability
- Every helmet meets U.S. Army's strict performance, protection and quality standards
- Foundation for all Batlskin modular protection system components and accessories
- Available in 3 cuts (full, mid and high) and 4 sizes (S-XL)

UNITED SHIELD PASGT BALLISTIC HELMET

The PASGT helmet is manufactured with state of the art advanced high strength multi-layered Aramid composites laminated under heat and pressure.

- Excellent bullet resistance
- Minimal deformation at a weight of approximately 3 lbs.
- Offers improved head stability with a 4-point adjustable harness, suede covered chip cup and nape strap
- Ballistic performance to NIJ 0106.01 and HP White 0401.01B
- Wider cut around ears and collar cut to reduce interference from other equipment

TEAM WENDY EXFIL® BALLISTIC HELMET

With a ballistic rating of NIJ Level III-A, it exceeds current ACH Blunt Impact Protection requirements and offers optimal comfort, fit and stability.

- Hybrid composite shell for increased strength and a unique geometry for ideal fit
- Boltless CAM FIT™ retention utilizes a Boa® Fit System with Cam Lock sliders for one-handed adjustment. Left Eye Dominant (LED) option also available.
- Zorbium® foam liner provides customizable comfort while protecting against blunt impact, and allows for an overhead communications headband
- Lanyard compatible Wilcox® shroud secures any standard NVG mount
- Complete system weight of 2.6 lbs. (size 1) and 2.75 lbs. (size 2) includes the helmet shell, accessory rails, impact liner and retention system

LRAD® 100X

Self-contained, hand-held portable voice broadcast system for on-scene and tactical communications.

- Powerful, intelligible communication up to 600 meters
- 20-30 decibels louder than bullhorns and vehicle P.A. systems
- Focused, directional sound pattern for target-ed communication
- Create instant acoustic standoff perimeter
- 8-hour rechargeable battery
- Simple operator interface
- Water resistant

LRAD® 100X MAG-HS KIT

Rapidly deployable, self-contained voice broadcast system with high-strength magnet mount and wireless operation capability.

- Wireless control up to 300 meters and a high strength, easy on/off magnetic mount system
- Up to 6X louder than systems of comparable size and weight
- Focused, directional sound pattern for targeted communication with unparalleled clarity
- Create instant acoustic standoff perimeter
- High-strength neodymium mount system
- Wireless system batteries operates up to 8 hours
- 8-hour rechargeable battery
- Simple operator interface
- Water resistant

LRAD® 450XL

Low profile, lighter weight and designed for temporary or fixed mounting on tripods, vehicles, and small boats. Generates the audio output of systems almost twice its size and weight.

- Powerful, intelligible communication up to 1,700 meters
- Voice boost for extended coverage
- Safely communicate beyond standoff distances to determine intent
- Clear, long-range directional communication
- All-weather use
- Creates isntant acoustic standoff perimeter

LRAD® 500X-RE

Compact long range communication system designed for mounting on tripods, larger vehicles and boats.

- Fixed or portable mounting
- Powerful, intelligible communication up to 2,000 meters
- Voice boost for extended coverage
- Creates instant acoustic standoff perimeter
- Rugged, military tested construction
- All-weather use
- Low power requirements: 60W w/voice, 260W w/ tone
- Simple operator interface

LRAD® 360XT SOLAR W/ SATELLITE CONTROL

Mobile, self-contained mass notification system on wheels. Broadcasts highly intelligible voice messages and warning sirens with uniform 360° area coverage.

- Integrated with a fully self-contained, ruggedized trailer and features lockable electronics and equipment enclosures containing the amplifier modules and battery pneumatic systems
- Battery bank can be charged using the built-in AC powered battery charger or optional solar panel
- Standard configuration of a 3 stack 360X emitter provides a 1,000 meters radius of clear communication coverage

LRAD® 500X-MMT

Fully self-contained helicopter mounted, air-to-ground communication system featuring rugged mount with fu pan-and-tilt range of motion.

- Powerful, intelligible communication up to 2,000 meters
- Quickly installed and removed from helicopter
- Self-powered for 6+ hours of continuous operation when fully charged
- Supplemental type certificates not required
- Simple operator interface

LRAD® 360XL-MID MOBILE KIT

Rapidly deployable, fully self-contained mass notification and incident management communication system.

- 360° uniform sound coverage
- Powerful, highly intelligible voice communications over 2.0 km2
- Complete mass notification kit (emitter head, power amplifier, control module, push-to-talk microphone)
- Lightweight and compact form factor
- Low power consumption for hours of continuous operation
- Industry-leading voice clarity and intelligibility

LRAD

AVON FM54™ AIR PURIFYING RESPIRATOR

Provides maximum level of protection to the face, eyes, and respiratory tract from CBRN, riot agents, TICs, and toxic industrial materials while maintaining extreme user flexiblity as mission profiles change.

- Functions in both negative and positive pressure modes (APR, SCBA, CCBA, and PAPR)
- Panoramic single lens visor
- Electronic communication port for integrated voice projection and radio communication
- 4 sizes to accommodate all operators
- Low profile brow for superior helmet compatibility
- Interchangeable silicone nosecups for custom fit
- Multiple modes
- Optional VPU provides ability to easily communicate while wearing mask

AVON C50™ MASK ASSEMBLY

Based on the U.S. M50/JSGPM (Joint Services General Purpose Mask) and sharing key technologies, provides maximum operational flexibility to counter multiple threat scenarios, including CBRN agents, TICs and TIMs.

- Offers high protection, outstanding field of vision and superior comfort
- The innovative design features optimize the user's time in the operational area

FOR A NON-CBRN OPTION, ASK ABOUT AVON'S PC50

AVON ST53™ SCBA

Combines Avon's FM53 mask technology with an advanced modular breathing apparatus to provide positive pressure SCBA and/or PAPR capability for specialist operations.

- Utilizes black anodised lightweight components
- Enables a fast response to changing operational conditions in one complete modular system
- A switch between negative (filter) and positive (SCBA) pressure is achieved at the flick of an easy to locate lever on the front of the mask
- Can attach a short or long duration compressed air cylinder and enter a location on filter mode, assess the situation and change to SCBA mode if the need arises

MSA G1 SCBA

Designed solely with your safety and comfort in mind. The G1 SCBA offers integrated and enhanced solutions to exceed your needs today as well as years into the future.

- Facepiece is lightweight and compact (no electronics needed)
- Control module provides dual color LCD and analog displays
- Improved visibility through buddy lights and reflective material
- Heads up display (HUD) shows remaining cylinder pressure in 4 increments via colored LEDs
- Electronic communications are integrated into every unit
- G1 SCBA ergonomics
- Central power system for all electronics
- Available in easily-upgradeable threaded or quick-connect cylinder attachment
- Integrated technology for future expansion
- Customizable

MSA MILLENIUM CBRN GAS MASK

A Hycar version of the reliable military-style gas mask (MCU-2/P Mask, used by the Air Force in Desert Storm). The mask combines high performance, customized fit, comfort, cost efficiency and is ideal for law enforcement and emergency response personnel.

- Flexible, one piece polyurethane lens with wide field of vision, bonded to a durable super-soft Hycar rubber facepiece
- NIOSH approved for protection against CN and CS tear gas
- Effective against, but does not have approval for OC tear gas
- Effective against biological agents and chemical warfare agents
- Dual-canister mount to allow weapon firing from either shoulder
- Canister provides up to 8 hours service time against CN, CS and OC agents
- Drinking tube to allow fluid ingestion in contaminated atmospheres
- Standard equipment includes a speaking diaphragm for clear, short-range communications
- Features a nosecup to reduce lens fogging in low temperatures or high humidity conditions

MSA MILLENIUM CBRN CANISTER

3M™ SCOTT SAFETY AV-3000 W/ SURESEAL FACEPIECE

Combines superior fit with greater comfort and versatility. Holds NIOSH approvals across a wide variety of applications, including CBRN.

- Top down convertibility-single facepiece for APR, PAPR, supplied air and SCBA applications, including CBRN
- Reverse Reflex faceseal for improved comfort and fit
- Deep, low profile seal for easier interface with PPE
- Dual large mechanical voicemitters as well as extensive electronic options for improved communications for every workplace
- Available with Kevlar, Poly or Rubber head harness

3M™ SCOTT SAFETY 40MM CARTRIDGES AND CANISTERS

3M | SCOTT Fire & Safety

3M™ SCOTT SAFETY AIR-PAK™ X3 PRO

The Air-Pak™ X3 Pro SCBA is built on a proven foundation of redundant safety features to help ensure the security and comfort of today's firefighter.

- Easy to remove harness
- New harness materials offer greater resistance to chemical and water absorption to help minimize contamination
- Reflective webbing
- Natural articulation promotes greater range of motion to the firefighter, while transferring weight to the hips for a more balanced load
- Superior breathablity
- Electronic PAR (ePAR) provides wireless, bi-directional communication between the firefighter and incident command to improve fireground accountability and communications
- New buckle design provides firm hold
- Integrated drag rescue loop
- System integrity alarm provides visual and audible alert
- High flow alarm provides visual and audible alert
- No flow alarm provides visual and audible alert
- "Buddy" lights provide a 360° view of the firefighter's air pressure and PASS status

Honeywell

NORTH®

HONEYWELL OPTI-FIT™ TACTICAL GAS MASK

- Superior field of vision offers an unobstructed view
- Full facepiece constructed of soft silicone for excellent comfort, fit and durability
- Choice of headgear - 5-pt. strap or nylon mesh headnet
- Three-position canister mounting adaptable for various applications
- Anti-scratch coated polycarbonate lens
- Lens meets ANSI Z87.1 standard for impact and penetration resistance
- DIN-threaded 40 mm connectors
- Low breathing resistance
- NIOSH approved with the Model 1688 Canister to provide protection against choloracetophenone (CN), chlorobenzylidene malononitrile (CS) and includes a P100 filter for use against particulates such as pepper spray
- NIOSH approval number TC-14G 0264

HONEYWELL NORTH SAF-T-FIT® P100 PARTICULATE RESPIRATOR

NIOSH-approved P100 protection provides 99.97% particulate efficiency against oil and non-oil based particulates.

- Meets OSHA and EPA filtering facepiece requirements for lead abatement
- Full face seal for secure and comfort fit
- Durable and adjustable straps
- Exhalation valve expels warm air
- Molded cup design
- Incorporates humidity-resistant filter media
- Low breathing resistance
- Lightweight design
- Nose clip is color-coded for visible size recognition
- Latex free
- Multiple size options for wide range and improved fit

AIRIUS AND ARAURA LEVEL IIIA ALSO AVAILABLE

UNITED SHIELD AIRIUS LEVEL II VEST

The latest innovation in WEARABLE body armor.

- NIJ 0101.06 certified Level II armor
- Provides the areal density weight and thinness of leading polyethylene vests with the flexibility and softness of leading aramid vests
- Comes standard with SPA carrier with 'Dry Run' moisture management system to wick away mositure from the body
- The SPA features a 12-point adjustment system, hidden plate pockets, full side coverage, recessed closure system and optional tails
- Weight: 0.63 psf
- Thickness: .22'
- Performance: 9mm v50 - 1705 fps/.357 v50 - 1685 fps

UNITED SHIELD ARAURA LEVEL II VEST

- Weight: 0.99 psf
- Thickness: .25'
- Performance: 9mm v50 - 1729 fps/.357 v50 - 1663 fps

BALLISTICS

UNITED SHIELD LITE TACTICAL VEST

Blends the functionality of a tactical carrier with a lightweight design that's geared for high performance. Features an abrasion resistant outer fabric that provides exceptional durability for extreme situations.

- Sturdy 500D Cordura® nylon outershell exterior construction
- Top loading plate pockets
- Additional pocket for one size smaller rifle plate
- MOLLE compatible webbing on the front, back and sides
- Adjustable shoulder straps
- Adjustable cummerbund with hook/loop closure underneath the front flap
- Bungee lace cummerbund adjustment
- Flat Kanagroo magazine pockets on front flap
- "Man-Down" drag strap in the rear
- Internal straps for adjustable groin protector
- Accepts insertion of United Shield concealable panels

UNITED SHIELD GARRISON VEST

Providing high performance ballistic protection, integrated in a fully functional and versatile design to meet the strategic needs of your specific mission.

- Sturdy 500D Cordura® nylon outershell exterior construction
- Top loading plate pockets
- Additional pocket for one size smaller rifle plate
- MOLLE compatibility on front, back and sides
- Adjustable shoulder straps
- Adjustable cummerbund with hook/loop closure underneath the front flap
- Bungee lace cummerbund adjustment
- Flat Kangaroo magazine pockets on front flap
- "Man-Down" drag strap in the rear
- Internal straps for adjustable groin protector

UNITED SHIELD MOLLE CROSSOVER CARRIER

Ideal for law enforcement officers who have occasional equipment-carrying assignments. Can be easily converted into a ballistic protective vest by allowing insertion of United Shield ballistic panels.

- Durable 500D Cordura® nylon exterior fabric
- Spacer mesh interior fabric improves breathability
- Top loading internal front and back plate pockets
- MOLLE webbing compatibiilty in the front of the carrier
- Adjustable front to back side hook/loop closure
- Internal 4" adjustable elastic cummerbund sewn in the back

UNITED SHIELD DELTA +6H BALLISTIC PLATE

Level III+ stand alone single curve ballistic plate. Ergonomically designed using proven technology affording the wearers excellent stand alone protection against a range of high velocity threats.

- NIJ 0101.06 Certified
- 3.1 lbs. | 10" x 12"

DELTA LITE 6H ALSO AVAILABLE

UNITED SHIELD SIGMA 6H BALLISTIC PLATE

Level III+ stand alone multi-curve ballistic plate. Ergonomically designed using proven technology affording the wearers excellent stand alone protection against a range of high velocity threats.

- NIJ 0101.06 Certified
- 5.8 lbs. | 10" x 12"

SIGMA LITE 6H ALSO AVAILABLE

UNITED SHIELD ZETA 6H BALLISTIC PLATE

Level III+ stand alone single curve ballisitic plate. Ergonomically designed using proven technology affording the wearers excellent stand alone protection against a range of high velocity threats.

- NIJ 0101.06 Certified
- 7.6 lbs. | 10" x 12"

ZETA LITE 6H ALSO AVAILABLE

UNITED SHIELD UNIFORM SHIRT CARRIER

Specially designed to be worn over the dress shirt.

- Uniform shirt design
- Durable 600D Cordura® nylon exterior fabric
- Poly/cotton interior fabric
- Hook/loop shoulder adjustment
- Front adjustable side hook/loop closure
- Two front lower pockets with zipper closure
- Internal tablet pocket with zipper closure
- Front chest pockets with hook/loop closure
- Internal cell phone pocket
- Pen openings
- Shoulder mic tabs
- Bottom internal ballistic opening

ACTIVE SHOOTER

UNITED SHIELD LEVEL IV ACTIVE SHOOTER KIT

Includes:

- (1) PST SC650 helmet
- (2) Zeta 6h NIJ06 certified Stand Alone Ballistic Plates and (1) carrier option
- The Level IV plates are ergonomically designed to offer the user NIJ 0101.06 certified stand alone protection
- Bag included

BALACLAVA

- Fire retardant
- Designed to give a specified level of protection against accidental contact with flame and against certain forms of heat transfer
- One Size

DARK NAVY

EA — ARM 21305-15 (SZ)

ARMADILLO MERINO EPIC SOCK

- Over the calf sock
- Extra long so it can be folded down over the top of the boot
- Elastic arch support system
- Elastic above the ankle for a better fit
- Lightweight high-stretch padding up the shin and across the top of the foot
- Reinforced toe and heel
- Smooth toe seam
- 62% wool, 21% polyamide, 9% polypropylene, 8% elastic
- SM-XL

DARK NAVY

PR — ARM 11511-15-1 (SZ)

ARMADILLO MERINO COUGAR SHORT SLEEVE CREW SHIRT

- Crew neck with generous back length
- Seamless underarm for no chaffing and seamless shoulders designed for load carrying
- Extra strong tread in the stitching and a tag free neckline
- Regular fit
- 100% Merino Wool, Jersey Knit
- SM-4X

DARK NAVY

EA — ARM 21001-15-X

ARMADILLO MERINO JOHNNIES 2 LONG JOHN BOTTOMS

- Flattened seams for increased comfort

CHEST AND BACK PROTECTOR

- Lightweight, ergonomically designed chest and back protection
- Chest protection: From collar bones to waistline
- Back protection: From shoulder blades to waistline
- Outer shell: Super high impact ABS moulded shell. Ridged design gives excellent protection against impact while keeping weight to a minimum.
- Inner foam: Low-density impact absorbing polyethylene moulded foam reduces weight and allows circulation of air around the product
- Fastenings: 4 Velcro adjustable Nylon straps riveted to the body of the guard. One at each shoulder, two at the waist. Ensuring security and comfort.
- Guards should be worn beneath a compatible flame retardant coverall. The outer moulding offers limited flame spread in accordance with UL-94 HB.
- Certification: Meets the requirements of UK Home Office Centre for Applied Science and Technology Standard 20/07
- Sizes SM-LG

BLACK

PR — DMS CH/BCK (SZ)

SHOULDER AND UPPER ARM GUARDS

- Lightweight, ergonomically designed shoulder and upper arm protection
- Area of protection: The clavicle, the top and point of the shoulder and the upper arm to above the elbow
- Outer shell: Super high impact ABS moulded shell. Ridged design gives excellent protection against impact while keeping weight to a minimum.
- Inner foam: Low-density impact absorbing polyethylene moulded foam reduces weight and allows circulation of air around the product
- Fastenings: 2 cotton covered Velcro adjustable Nylon straps riveted to the body of the guard. One attaches around the shoulder strap of body armour, the other fastens around the upper arm.
- Guards should be worn beneath a compatible flame retardant coverall. The outer moulding offers limited flame spread in accordance with UL-94 HB.
- Certification: Tested and approved to UK Home Office Centre for Applied Science and Technology Standard 20/07 rated
- Sizes XS-XL

BLACK

PR — DMS SHP/ARM (SZ)

FOREARM AND ELBOW GUARDS

- Lightweight, ergonomically designed lower arm protection. Fits the curvature of the arm minimising pressure points at the wrist and elbow. Articulated elbow section ensures freedom of movement.
- Area of protection: The forearm from the wrist to above the elbow
- Outer shell: Super high impact ABS moulded shell. Ridged design gives excellent protection against impact while keeping weight to a minimum.
- Inner foam: Low-density impact absorbing polyehtylene moulded foam reduces weight and allows circulation of air around the product
- Fastenings: 3 cotton covered Velcro adjustable Nylon straps riveted to the body of the guard. Ensuring security and comfort.
- Guards should be worn beneath a compatible flame retardant coverall. The outer moulding offers limited flame spread in accordance with UL-94 HB.
- Certification: Tested and approved to UK Home Office Centre for Applied Science and Technology Standard 20/07 rated
- Sizes XS-XL

BLACK

PR — DMS FRM/040 (SZ)

FEMALE GROIN GUARD

- Lightweight, ergonomically designed female groin protection
- Area of protection: Groin and lower abdomen
- Outer shell: High impact lightweight polypropylene moulding contained within a washable polyester cover
- Inner foam: Low-density impact absorbing foam
- Fastenings: Fully adjustable 2" waist strap. 2 x 1" leg straps pass from the bottom of the guard, between the legs to fasten around the waist strap at the back
- Guards should be worn beneath a compatible flame retardant coverall
- Certification: Tested and approved to UK Home Office Centre for Applied Science and Technology Standard 20/07
- Sizes SM-MD

BLACK

EA — DMS FGG/100 (SZ)

MALE GROIN GUARD

- Lightweight, ergonomically designed male groin protection
- Area of protection: Groin and lower abdomen
- Outer shell: High impact lightweight polypropylene moulding contained within a washable polyester cover
- Inner foam: Low-density impact absorbing foam
- Fastenings: Fully adjustable 2" waist strap. 2 x 1" leg straps pass from the bottom of the guard, between the legs to fasten around the waist strap at the back
- Guards should be worn beneath a compatible flame retardant coverall
- Certification: Tested and approved to UK Home Office Centre for Applied Science and Technology Standard 20/07
- Sizes MD-LG

BLACK

EA — DMS MGG/100 (SZ)

THIGH GUARDS

- Lightweight, ergonomically designed thigh protection
- Area of protection: The front and side of the thighs from close to the hip to just above the knee
- Outer shell: Super high impact ABS moulded shell. Ridged design gives excellent protection against impact while keeping weight to a minimum.
- Inner foam: Low-density impact absorbing polyethylene moulded foam reduces weight and allows circulation of air around the product
- Fastenings: 2 cotton covered Velcro adjustable Nylon straps riveted to the body of the guard. One passes around the thigh, the other attaches to the waist belt. Ensuring security and comfort.
- Guards should be worn beneath a compatible flame retardant coverall. The outer moulding offers limited flame spread in accordance with UL-94 HB.
- Certification: Tested and approved to UK Home Office Centre for Applied Science and Technology Standard 20/07 rated
- Sizes XS-XL

BLACK

PR — DMS THG/050 (SZ)

SHIN AND KNEE PROTECTORS

- Lightweight, ergonomically designed lower leg protection. Fits the curvature of the leg minimising pressure points at the knee and ankle. Articulated knee section ensures freedom of movement.
- Area of protection: The knee and shin to the top of the instep
- Outer shell: Super high impact ABS moulded shell. Ridged design gives excellent protection against impact while keeping weight to a minimum.
- Inner foam: Low-density impact absorbing polyethylene moulded foam reduces weight and allows circulation of air around the product
- Fastenings: 3 cotton covered Velcro adjustable Nylon straps riveted to the body of the guard. Ensuring security and comfort.
- Guards should be worn beneath a compatible flame retardant coverall. The outer moulding offers limited flame spread in accordance with UL-94 HB.
- Certification: Tested and approved to UK Home Office Centre for Applied Science and Technology Standard 20/07 rated
- Sizes XS-XL

BLACK

PR — DMS SHN/100 (SZ)

METATARSAL PROTECTOR

- Lightweight, ergonomically designed instep/metatarsal protection
- Area of protection: The top of the foot from the bottom of the shin/knee guard to the toecap of the boot
- Outer shell: Super high impact ABS moulded shell. Ridged design gives excellent protection against impact while keeping weight to a minimum.
- Inner foam: Low-density impact absorbing polyethylene moulded foam reduces weight and allows circulation of air around the product
- Fastenings: A single Velcro fastening leather strap loops around the boot laces to hold firmly in position
- The outer moulding offers limited flame spread in accordance with UL-94 HB.
- Certification: Tested and approved to UK Home Office Centre for Applied Science and Technology Standard 20/07 rated
- Sizes XS-XL

BLACK

PR — DMS FTPM (SZ)

FORTRESS UNIVERSAL TACTICAL VEST

- Provides full protection to the front, back and sides
- Capable of accepting Level II and IIIA ballistic inserts
- Comes with a gusset sewn top-loading plate pocket that accepts 10 x 12 plates and a heavy-duty operator rescue drag handle
- 360° MOLLE webbing, and front gusset sewn map/tool pocket for quick mission access is fully adjustable in girth and length to fit multiple sizes
- Vest adjustments allows standardization of team equipment and has velcro on the front and rear to accept ID patches
- Accessories include neck, throat, bicep and groin armor
- Sizes SM-XL

NAVY

EA — USI FUTV-SZNV

ID PANELS

- Custom identification panels available for helmets and vests
- Customer can select background color and lettering color
- Vest ID panels will have a Velcro backer to apply to vest. Helmet ID panels will come with both sides of the Velcro attached with a glue backing for helmets.

017 SERIES PUBLIC ORDER HELMET

- Thermoplastic shell
- Energy absorbing expanded polystyrene line improves impact protection
- High comfort, flame retardant interior with removable cheek pads for easy cleaning, improved hygiene and longer service life
- Headbands, crown pads and sizing pads for easy fit to individual head shapes and sizes
- High-impact polycarbonate visor with option of anti-mist and anti-scratch coating for improved resistance to fogging and surface abrasion
- Replaceable heavy duty neck curtain - padded for extra comfort and optimum protection
- Four metal gauze audio inserts - resistant to liquid penetration
- Adjustable chinstrap with quick release buckle
- Comply fully with PAS 017: 1995 - the first technical performance standard to be dedicated to public order helmets offering a new higher standard of protection for police and prison officers exposed to front line hazards
- Sizes 00-5

	BLACK, NAVY BLUE
EA	ARG 017T/3 (SIZE/COLOR)

APH05 PUBLIC ORDER HELMET

- Choice of thermoplastic or GRP helmet shells incorporating optically correct, high impact resistant polycarbonate visor with optional anti-mist, anti-scratch coating
- Liquid resistant, metal gauze audio apertures enable local commands to be heard
- Compatible with range of CBRN respirators
- Replaceable neck protector and quick release chin strap with chin cup - accepts high dynamic load with minimum extension and helps to maintain helmet stability
- Range of sizes available to provide optimum fit, with combined impact and padded linings to maximize protection and comfort. Internal fitting accepts radio connection.
- Complies with testing requirements of Home Office Scientific Development Branch Standard 2004, incorporating new tests for impact attenuation of whole helmet and solvent resistance of visor
- Thermoplastic (Sizes 00-5)
- GRP (Sizes 00-6)

	THERMOPLASTIC (BLACK, NAVY BLUE)
EA	ARG APH05T/1 (SIZE/COLOR)

	GRP (BLACK, NAVY BLUE, RED, YELLOW, WHITE)

AA50 PUBLIC ORDER GLOVE

- Lightweight
- Black leather
- Elasticated mid-length cuff. Gathered wrist with foam padded lining to prevent ingress of liquids. Compatible with commonly used forearm guards and coveralls.
- Outer material: 0.9-1 mm goatskin leather
- Inner lining: 365 gsm Polyester (Heat resistant to EN659:1996 Annex A)
- Intermediate lining: 0.5 mm Low Density Polyethylene Foam
- Thread: Aramid - flame retardant
- Impact protection: 7-8 mm foam rubber to back of hand & 4 mm foam to back of fingers/thumb
- Abrasion protection: Leather reinforcement to high wear areas of palm/fingers
- Blade cut protection: Aramid loaded reinforcement to palm, fingers and back of hand
- Certification: BS7971-6:2003 Type 2 Level 3
- Sizes 6-13

BLACK

PR — DMS AA50 (SZ)

RIOT ControlBY

- Waterproof aniline fireproof cowhide leather according to DIN/EN 407, level 4
- Anti-cut insert lining according to DIN/EN 388, level 5
- Hard shell knuckle and handback protectors
- Shock absorbing protectors (foam and jelly) on fingers, thumb and wrist
- Fireproof stitching thread and fireproof male and female velcro
- Roller buckle closure with leather strap at wrist for secure fit
- Sizes 5-13

BLACK

AVON C50™ MASK ASSEMBLY

- Based on the U.S. M50/JSGPM and sharing key technologies
- Provides maximum operational flexibility to counter multiple threat scenarios, including CBRN agents, TICs and TIMs
- Offers high protection, outstanding field of vision and superior comfort
- The innovative design features optimize the user's time in the operational area
- Sizes SM-LG

	BLACK
EA	AVO 70501-18X

AVON FM53™ MASK ASSEMBLY

- A multi-role Respiratory Protective Equipment (RPE) System that has been developed specifically for specialist applications where the user needs to respond to ever changing operational conditions
- Provides protection against traditional chemical and biological warfare agents and select TIMs
- Offers both positive pressure SCBA, PAPR and negative pressure APR/capability
- All of the capabilities are available from one mask platform without the need to change components
- Right, left or twin port filter configurations available
- Sizes XS-LG

	BLACK
EA	AVO 72601-250-X

AVON OUTSERT ASSEMBLY

CLEAR OUTSERT

- Flexible polycarbonate outsert that simply attaches to 50 series masks to provide additional impact and scratch resistance in extreme environments.

EA	AVO 70501-156

SUNLIGHT OUTSERT

- Additional protection against high level UV light and flash flares. Constructed from flexible polycarbonate providing additional impact and scratch resistance.

EA	AVO 70501-157

MASK BAG

	BLACK
EA	SFW 44014

CBRNCF50 FILTER

- When combined with an appropriate chemical protective mask, the CBRNCF50 filter canister protects the face, eyes and gastrointestinal tract of the wearer against known chemical and biological agents in aerosol, liquid and vapor form

	BLACK
EA	AVO 72602-2

CTCF50 RIOT AGENT FILTER

- Low profile combination filter containing a pleated high-efficiency filter element
- Specifically designed for removal of riot control agents and tear gases including CS, CN and OC pepper spray
- Pack of 4

	BLACK
PK	AVO 72606-3

INTERLOCKING SHIELDS

- Lightweight personal protective shield
- Can be used individually or locked together to form a continuous barrier
- 4 mm thick clear Makralon Polycarbonate. Offers excellent resistance to impacts, thrown objects and liquids while giving the user an excellent field of vision ahead.
- Handles: Forearm hook and double D handle (optional locking folding handles). Aluminum handles with rubber hand grips. Bolted through the blade and backing plate for maximum strength and security

COLD FIRE™ TACTICAL CANS

- An environmentally friendly fire extinguishing agent that puts out any fire faster, safer, with less water, less damage to property and less risk to personnel
- Completely 'green' and non-toxic
- Instantly cools everything it touches
- Cools 21x faster than water and works to remove heat, therefore preventing re-igniton
- Encapsulates and breaks down hydrocarbons
- Availablity: 12 oz. and 20 oz. Pistol Grip or Loop Handle Spray Cans, 2L and 6L CFT extinguishers, backpack and fleet kit

12OZ. LOOP HANDLE TACTICAL CAN	
EA	CFT CF302-12TL

20OZ. LOOP HANDLE TACTICAL CAN	
EA	CFT CF302-20TL

2 LITER KIT	
EA	CFT CF302-2LTRKIT

PUBLIC ORDER - LESS THAN LETHAL

COMBINED TACTICAL SYSTEMS AEROSOLS

- Advanced solutions with an array of formulations, sizes and delivery including stream, fog, gel, vapor and Omni-Stream™
- Pepper spray
- Crown management, high volume units
- Omni-Stream™ features a bag on valve (BOV) delivery system allowing the operator to hold the can at any orientation and get consistent stream performance

COMBINED TACTICAL SYSTEMS FLASH BANGS AND STING BALL GRENADES

- Flash Bangs are an ATF controlled Class-C explosive device
- Sting-Ball Grenades are explosive "rubber-ball" style grenades that upon initiation eject rubber balls into a radius surrounding the device

COMBINED TACTICAL SYSTEMS 40MM LAUNCHER

- Multi-Launcher 6.2" Cyl Collapsible Stock
- Lightweight and versatile
- Manufactured using 4140 hardened steel, 6061-T6 mil-spec anodized aluminum and DuPont super tough glass filled nylon

SAGE HAND THROWN MUNITIONS

- 40MM Munitions
- 37MM Rifled Munitions
- 37MM Smooth Bore Munitions

SAGE CHASSIS STOCK SYSTEMS

Each SAGE Enhanced Battle Rifle Chassis System is precison CNC machined from a solid billet of high strength aircraft grade aluminum and is finished with mil-spec hard anodizing. The system increases accuracy and reliablity, reduces perceived recoil, provides ambidextrous sling mounts and multiple Picatinny rails for mounting optics and accessories.

V-LITE™

- 0.8 oz.
- A versatile personal lighting/identification marker
- A simple and intuitive alternative to chemical light sticks
- One button to cycle through the preset functions
- Fully encapsulated to ruggedize the electronics, the flexible silicone body not only protects the good stuff inside but also conforms to curved surfaces
- Mounting is made simple with the V-Lite™ sleeve, providing the operator with a velcro-backed attachment system
- An unnoticeable addition to your helmet during routine operations and low-profile enough to reduce snag hazards during airborne operations
- Modes available: On/Off, Blink/Off, On/Blink/Off, Low/High/Off
- One Size

FOR A QUOTE TODAY!

H&H MEDICAL SWAT-T TOURNIQUET (ORANGE)

Allows a more rapid means to control extremity bleeding and allows application higher into the groin and axilla than other tourniquets.

- Ease of application
- Made with a bright safety orange color for easy identification and application
- Instructions for use are printed on the tourniquet along with the trademark pressure application measure showing just how much pressure to apply to reach occlusion

H&H MEDICAL H*VENT LAMINAR VENTED CHEST DRESSING

Designed to work to relieve pressure from an open chest wound due to air in the chest or bodily fluid.

- A unique multi-directional vented dressing (allows the fluids to "drain towards gravity")
- Helps prevent occlusion
- The unique dome membrane design creates a complete seal around the wound area
- Large vent openings on the H*VENT allows for visual monitoring of the wound
- Proven in internal testing to retain a seal during inhalation and to maintain a sustainable negative pressure (below ambient pressure) within the pleural space
- Lowest profile of any vented chest seal and easy to fold

H&H MEDICAL BLEEDING CONTROL BASIC KIT

Provides first responders with a compact and durable individual hemorrhage control kit to treat bleeding from penetrating and other traumatic injuries.

Kit includes:

- SWAT-T tourniquet
- H&H Mini Compression Bandage
- H&H PriMed Compressed Gauze roll
- Nitrile gloves

NORTH AMERICAN RESCUE COMBAT APPLICATION TOURNIQUET (C-A-T)

The C-A-T® utilizes a durable windlass system with a patented free-moving internal band providing true circumferential pressure to the extremity.

- New single routing buckle for faster application, decreased blood loss, effective slack removal, fewer windlass turns, and simplified training with single protocol application standards
- Includes reinforced windlass, stabilization plate, windlass clip and writeable windlass security strap
- Featuring NAR's signature Red Tip Technology® elliptical tab providing added visual clues during application

NORTH AMERICAN RESCUE

NORTH AMERICAN RESCUE RIGID GEN 7 TOURNIQUET CASES W/ SHIRT SHIELD

Designed to provide personnel with the capability of carrying the life-saving C-A-T® Tourniquet on their person by easily mounting it to their duty/patrol/pistol belt, where it is needed most.

- Includes a Shirt Shield complete with mounting hardware to protect your uniform shirt from undue wear caused by the friction from the windlass clip
- Blade-Tech TekLok Belt Attachment fits up to a 2.25" belt
- Injection molded nylon case to stand up to rugged LE/MIL usage

H&H MEDICAL TECC KIT

Designed to hold enough emergency products to respond to a mass casualty situation.

- Contains everything you need to treat the 3 most preventable causes of traumatic death: blood loss, airway occlusion and sucking chest wound
- Meets the basic requirements for Tactical Emergency Casualty Care

NORTH AMERICAN RESCUE M-FAK MINI FIRST AID KIT

Designed to be the most compact, multi-use IFAK for delivering immediate critical care for penetrating, blast or other traumatic injuries.

Kit includes:

- 1 x C-A-T® (Combat Application Tourniquet®) black
- 1 x 4" Flat ETD™
- 1 x S-rolled gauze (4.5" x 4.1 yd)
- 1 x HyFin® Vent Compact Chest Seal, twin pack
- 1 x pair Bear Claw® nitrile trauma gloves, LG
- Super compact, rugged nylon platform that allows attachment both vertically (MOLLE backing) and horizontally (3" belt loop)
- Clam shell configuration utilizes (2) main sleeves that open on both ends for easy access

NORTH AMERICAN RESCUE PATROL VEHICLE TRAUMA KIT

Desinged to provide personnel with an easily accessible, quick to deploy medical kit from your patrol vehicle.

- One side covers all your agency needs to administer basic first aid and community assistance
- Second side offers a first time combination of basic first aid and basic trauma medical items
- Exterior includes MOLLE-style system to accommodate extra equipment as needed

QUIKCLOT® BELT TRAUMA KIT®

A compact, lightweight, wearable holder that fits up to a 2" belt and can be rotated 90° to make room for other gear. Contents can treat up to one injury.

Includes:

- QuikClot Combat gauze® LE
- SWAT-T™ pressure dressing
- Nitrile gloves

QUIKCLOT® BLEEDING CONTROL BAG®

This bag is integral for responding to a range of bleeding situations. Its innovative design allows it to function in a stand-alone capacity or as part of an overall bleeding control program. Contents can treat up to 12 injuries.

Includes:

- QuikClot Combat gauze® LE
- QuikClot® EMS 4x4 dressings
- QuikClot® EMS rolled gauze
- Tourniquets, C-A-T™ , SOF™ TT-W
- Dressing, TacMed Control™ Wrap
- Nitrile gloves
- Shears, EMS-style

ADS XR150 X-RAY SOURCE

Provides the ultimate option in portability for high powered X-ray machines.

- Weighs less than 5 lbs.
- Penetrates up to 1/2" of steel
- Small size makes the unit easy to position in hard to reach places or to maneuver on a robot arm
- Performance - high penetrating capability, durable, lightweight packing, long battery life
- Simplicity - only one variable to control exposure
- Safety - extremely short exposure time and low leakage
- Spectrum - wide spectrum penetrates both high and low density material in same radiograph

ADS MITHIX PRO EOD HOOK AND LINE TEAM KITS

Designed for EOD, bomb squad, and special operations prodedures.

- High quality components
- Stainless steel hooks
- High-strength marine-grade pulleys
- Low-stretch high grade Kevlar rope and other essential tools made specifically for IED, remote movement and remote handling operations

ADS NEX-RAY®

Offers advanced, portable, lightweight x-ray image capture units designed to obtain accurate, near real-time radiographic imaging.

- Patented technology allows NeX-Ray® to dispense with the use of fragile and heavy glass plates integral to most flat panel imagers
- 2 models available (FPX and MMX)
- Can be operated with Windows XP, 7, or 8 laptops or with Android 4.2 (or later) mobile devices
- NeX-Ray® imagers can be operated in standalone, tethered remote, and wireless modes

ADS TITAN

(1) 12" main barrel
(2) Smooth bore extensions
(1) Rifled extenson
(1) Breech cap
(1) Breech plug
(1) Thread protector

NOW WITH TWO NEW CONFIGURABLE OPTIONS

MISTRAL INC.
Member of Mistral Group

MISTRAL SECURITY EXPEN

Ampoule-based technology. Designed for military, EOD, and security personnel primarily for easy carrying and for situations that do not require multiple tests.

- Capabilities: Nitro Aromatic, Nitramines, Ammonium Nitrate, Peroxide, Acetic Anhydride, and much more

MISTRAL SECURITY EXPRAY®

A unique explosive aerosol test technology, Expray®, detects both trace and substance levels of explosives as well as homemade explosive (HME) precursors.

- Capabilities: Nitro Aromatic, Nitro Esters, Nitramines, Inorganic Nitrates and much more

MISTRAL SECURITY TOTAL CONTAINMENT VESSELS (ARC)

Provides full protection against blast and fragmentation with repeated detonation capability.

- Safely contain and transport explosive devices

TACTICAL ELECTRONICS
ELITE TACTICAL CAMERAS & EOD SOLUTIONS

TACTICAL ELECTRONICS 1ST LINE EOD TOOL KIT

Designed to provide EOD operators and bomb technicians with a versatile, lightweight kit that builds upon the capabilities of the Immediate Action Pouch without necessary or wasteful redundancy. Ideal for missions where the user has limited cargo or carry space and where the operator must take weight or dimensions into consideration.

- Small lightweight design
- Can be carried in a cargo pocket or stored in a small compartment
- Ideal for dismounted operations

TACTICAL ELECTRONICS WIRE ATTACK SPECIAL PIERCER PROBES (WASPP) KIT

Specifically designed to allow EOD operators to make non-invasive electrical measurements of wires.

- Includes 10 specialized "bed of nails" piercers with volt meter leads, 10 extensions and 1 roll up carry pouch

TACTICAL ELECTRONICS 2ND LINE EOD TOOL KIT

Customized to equip EOD and bomb technicians with the tools necessary to execute render safe procedures. Allows operators to customize the configuration based on each scenario.

- Comes complete with 6 individually populated tool kits: 1st Line, Immediate Action Pouch, RIP Kit, Detonator Diagnostic Kit, Manual Access Kit and Bit Kit
- All kits fit into one pack with extra room for additional supplies

QINETIQ TALON®

TALON robots are powerful, durable, lightweight tracked vehicles that are widely used for EOD, reconnaissance, communications, sensing, security, defense and rescue. They have all-weather, day/night and amphibious capabilities and can navigate virtually any terrain.

- IOP compliant
- Man-portable, instantly ready for operation
- Fast
- Configurable
- Intuitive
- Outstanding situational awareness: standard 4 color cameras, including night vision, thermal and zoom options
- Withstands repeated decontamination

QINETIQ DRAGON RUNNER® 10

The micro unmanned ground vehicle is lightweight, compact, multi-mission remote platform developed for supporting small unit dismounted operations. When fitted with the Light Weight Modular Arm, it has the ability to investigate and recover or neutralize a potential IED. Day and night sensors allow it to serve as the forward eyes of the team while also delivering remote sensors, emplacing counter-IED charges and more.

- Speed: 4 mph
- Max arm lift: 4.4 lbs.
- Front and rear cameras
- On-board microphone
- Controller: compatible with lightweight radio unit and Gen 2.5 hand controller
- Tough enough to be thrown and survive rough handling and adverse weather

DRAGON RUNNER® 20 ALSO AVAILABLE!"

QINETIQ North America

ICOR MINI-CALIBER®

The lightweight, modular Mini-CALIBER® is a man transport robot for SWAT and EOD operators. Developed for rapid tactical missions, the robot is simple to operate and quick to deploy, providing fast action for searching rooms, hallways, stairwells and confined spaces.

- Includes a manipulator arm on a rotating turret with a 10X zoom camera on the claw and a max arm lift of 15 lbs.
- CBRNE detectors and sensors can be mounted onto the deck of the robot chassis
- Handheld command control unit is portable and intuitive to use
- Clear images are transmitted to the 5.8" LCD daylight readable screen over a wireless RF system

ICOR TECHNOLOGY

ALSO AVAILABLE:

Caliber® T5

Caliber® MK4

MK3 Caliber®

TacticID By. B&W TEK

B&W TEK TACTICID® - GP

A field-ready handheld spectral analysis instrument designed for non-contact forensic analysis. Utilizes proven Raman spectroscopy, allowing users to get real-time actionable identification of unknown chemicals, narcotics, pharmaceutical drugs, explosives and many other substances while reducing operational uncertainty and response time.

- Customized libraries
- Critical component mixture ID
- Indirect contact analysis
- Wi-Fi connectivity
- Touch screen quick notes
- Color-coded result screens
- TacticOne Response™ (24/7/365 emergency support and spectral analysis)

B&W TEK TACTICID® - N

Handheld Raman analyzer for narcotic and pharmaceutical drug identification.

- Comes standard with a comprehensive library of over 1,000 substances
- Critical component mixture ID
- Indirect contact analysis
- Wi-Fi connectivity
- Touch screen quick notes
- Color-coded results screen
- TacticOne Response™ (24/7/365 emergency support and spectral analysis)

MISTRAL SECURITY PDT

A series of individual, presumptive reagent drug tests that help law enforcement officers, drug enforcement agencies and military CID units quickly and easily identify controlled substances while in the field.

- Options: Heroin, LSD, marijuana, cocaine, bath salts and much more

MISTRAL SECURITY PENTEST

An ampoule-based technology that detects trace amounts of drugs as well as bulk amounts.

- Multi-use
- Will not destroy evidence
- Options include: D4D (general screening), Coca, Cannabis, Herosol, LSD, Meth/X, Opiates, and more

MISTRAL INC.
Member of Mistral Group

MISTRAL SECURITY FENTANYL PDT

The only fentanyl test that can distinguish fentanyl from other drugs like meth or amphetamines.

NIGHT VISION

ARMASIGHT PVS7 GEN 3P NIGHT VISION GOGGLES

The most widely recognized and dependable U.S. Military night vision goggle system available.

- Compact, rugged design
- Waterproof
- Ergonomic, simple, easy to operate controls
- Built-in infrared illuminator and flood lens
- Equipped with Automatic Brightness Control (ABC)
- Head or helmet mountable for hands-free usage

AIMPOINT® MICRO T-2

Electronic red dot sighting technology.

- Advanced optical lenses
- Cutting edge lens coatings
- Lightweight sight for extreme conditions
- Excellent night vision compatability

NIGHTOPS TACTICAL PVS-14

A widely recognized monocular night vision device, battle tested by the U.S. Military.

- L-3 Gen 3 Unfilmed technology
- 40 hour runtime
- 1X magnification

THERMAL IMAGING

FLIR BREACH® PTQ136

Thermal imaging monocular. Spots th total darkness.

- Weighing only 7.4 oz. (can be concealed in a pocket or mounted to a helmet with its mini-rail feature)
- On-board recording
- Exceptional vision
- 7 palettes for fast detection of suspects or evidence, day or night
- Digital compass and inclinometer

FLIR THERMOSIGHT® PRO SERII

Thermal imaging weapon sight.

- Exceptional vision
- Built using the new FLIR Boson 1
- Bright, high definition FLCOS display for absolute clarity
- Completely digital for better detection, classification and recovery, day or night
- Powerful and compact hardware is protected by a robust body
- On-board video recording, image capture and storage
- Multiple color palettes
- Digital compass and inclinometer

PELICAN™

PELICAN 7600 TACTICAL FLASHLIGHT WITH WAND KIT

- Performance surpassing 900 lumens
- 3 LED colors (white, red, and green)
- Provides high, strobe, medium and low modes
- Full time battery level indication
- USB rechargeable lithium ion battery
- Type III hard anodized finish
- Ingress protected IPX8 submersible

PELICAN 7100 TACTICAL FLASHLIGHT

Compact/high performance flashlight.

- 5" long
- 700 lumens of light output
- High, strobe, medium and low modes
- Full time battery level indication
- USB Lithium Ion rechargeable
- Ingress protected IPX8 submersible

PELICAN 9490 REMOTE AREA LIGHT

- Up to 6,000 lumens (calculated)
- Up to 24 hours of run time
- Intelligent control (allows for various light output levels)
- Maintenace free LED array with 50,000 hour life expectancy
- Full time battery level indication with low level flashing indicator
- 6' deployable mast with 340° rotation
- Multiple deployment positions
- Quick release/ Hot swappable battery design with 12 volt power supply
- Convenient shoulder strap

STREAMLIGHT

STREAMLIGHT PROTAC HL® USB FLASHLIGHT

USB rechargeable, 850 lumen tactical flashlight.

- Choice of three user selectable programs
- Multi-fuel capability
- Durable, anodized aluminum construction
- Water resistant sliding metal sleeve protects USB port
- Multi-function, push-button tail switch for one-handed operation
- LED technology impervious to shock with a 50,000 hour lifetime
- Anti-roll head
- IPX4 water resistant
- 1m impact resistance tested

STREAMLIGHT TLR-1® GUN LIGHT

Rail-mounted tactical weapon light.

- 300 lumens
- 2.5 hours regulated run time
- 12,000 candela peak beam intensity
- Rail grip clamp system securely attaches/detaches quickly and safely with no tools
- Powered by two 3-volt CR123 lithium batteries
- Mounts directly to handguns with Glock-style rails and to all MIL-STD-1913 (Picatinny) rails
- Machined aluminum sealed construction with black anodized finish
- IPX7 rated design, waterproof to 1m for 30 minutes

STREAMLIGHT TLR-7® GUN LIGHT

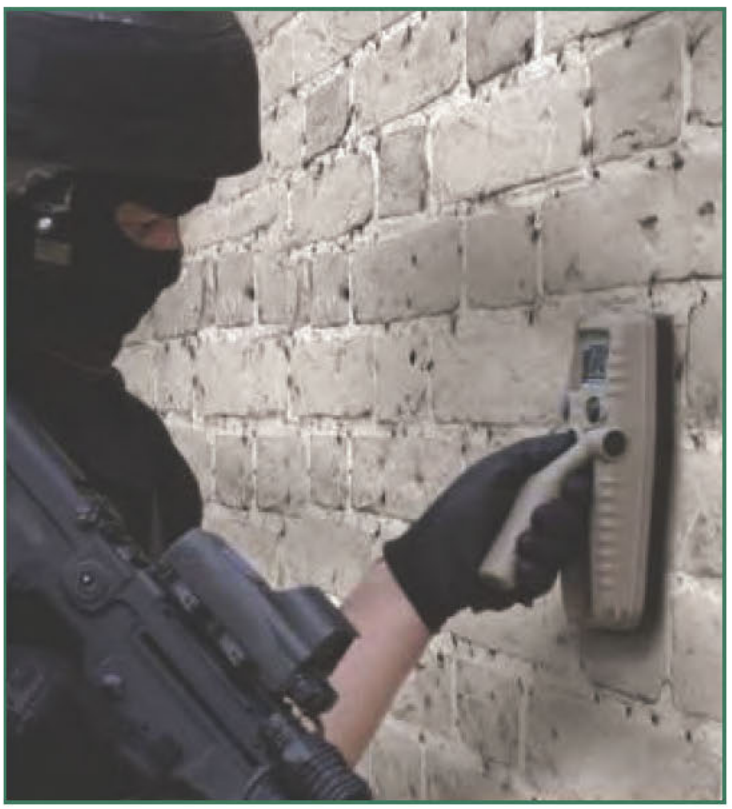
Small and mighty 500 lumen tactial weapon light.

- Runs 1.5 hours
- 4,300 candela
- Custom optic produces a concentrated beam with optimum peripheral illumination
- Uses one CR123A lithium battery
- Safe off feature prevents accidental activation
- Rail grip clamp system securely attaches/ detaches quickly and safely with no tools
- Durable, anodized machined aluminum construction
- IPX7 waterproof to 1m for 30 minutes

SUREFIRE X300U-A

1,000 lumens LED handgun light.

- Custom TIR lens creates smooth, far-reaching light with a larger center spot beam
- Integral ambidextrous momentary-and constant-on switching
- Attaches securely to both universal and picatinny accessory rails
- High-strength aerospace aluminum body, mil-spec hard anodized for extreme durability



SUREFIRE M600DF-BK

1,500 lumen dual fuel rechargeable LED scout light.

SUREFIRE®

- Virtually indestructible ultra-high-output LED generates 1,200 lumens of blinding light with SF123A batteries and 1,500 lumens with included SF18650A rechargeable lithium ion battery charger kit
- TIR lens shapes versatile beam with enough reach and surround light for close-to longer-range operations
- Mil-Spec hard anodized aluminum body, tempered window and O-ring seals make light rugged, durable, and combat ready
- Activation via Z68 momentary/contant-on push button switching with protective shroud

CAMERO
Step into the known

CAMERO XAVER™ 100

Handheld, tactical through-wall detection system. Provides instant critical situational awareness and target acquisition data.

- Potential uses include: Tactical entry/assault, hostage recovery, search and rescue, breaching and force protection
- Reliable detection of moving and static people behind most common wall materials
- 1d imaging information
- Simple user interface and operation requiring no advanced training

CAMERO XAVER™ 400

Compact, tactical through-wall imaging system. Allows for quick location of people hidden by walls and barriers, enabling tactical teams to step into the known and obtain mission-critical information.

- Compact, light and easy to operate
- Ready to go at the push of a button
- Simple user interface with tracking capabilities for intuitive interpretation
- Simultaneous detection of static and moving objects
- Provides information about room dimensions and major infrastructure elements

CMC RESCUE PERSONAL RAPPEL KIT

Lightweight, durable and low profile. Provides everything needed for rappel access or escape for one tactical officer.

Kit includes:

- Black storage bag
- Stealth rope bag
- 8 Link
- Tactical rappel harness
- Black variable anchor strap
- Large edge guard
- Kong Trapezium Quick-Link
- CMC Lifeline - 75' of black 3/8"
- Prusik cord - 5' of blue 7 mm
- Tubular webbing - 20' of black
- (5) black ProTech™ Screw-Lock carabiners

CMC RESCUE TACTICAL TEAM RAPPEL KIT

Provides rope, harnesses, and hardware for two tactical officers moving in vertical environments, where keeping a low profile is a must.

Kit includes:

- Black storage bag
- #2 black rope bag
- Heavy Rescue Organizer™
- (2) 8 Link
- Black variable anchor strap
- (2) tactical rappel harnesses
- Kong Trapezium Quick-Link
- CMC Lifeline - 150' of black 7/16"
- Tubular webbing - 40' (2 z 12') of black
- Large edge guard
- Prusik cord - 10' (2 x 5') of blue 7 mm
- (7) black ProTech™ Screw-Lock carabiners

TACTICAL ELECTRONICS CORE POLE CAMERA

Extend your vision and tactical inspections.

- High-Definition 1280x720p monochrome video
- Longwave infrared (LWIR) thermal imager
- 4 High-intensity white and LED illumination
- Telescopic pole with locking sections
- Lightweight high density graphite pole
- Omni-directional microphone
- Attaches to POLE Grip, or CORE Grip
- Wireless video transmission - 5 GHz
- AES encryption
- WPA2-PSK authentication
- Graphical LCD for status information
- Hardwire video option
- Backlit push buttons
- MicroSD card video recording (32GB)

TACTICAL ELECTRONICS CORE K-9 CAMERA

Transmits real-time HD video back to the handler.

- High-Definition 1280x720p color video
- Longwave infrared (LWIR) thermal imager
- Adjustable high-intensity IR LED illumination
- Push-to-talk two-way audio
- Wireless video transmission - 2.4 GHz
- AES encryption
- Graphical LCD for status information
- Backlit push buttons
- MicroSD card video recording (32GB)

5.11 BREACHING EQUIPMENT

The Heavy Breaching Kit includes four 5.11 breaching tools desgined to defeat any portal quickly and effectively, along with a steel-reinforced, backpack-style Heavy Kit Bag that keeps your breaching tools organized and ready to roll.

- Size: 37" high
- Includes: MultiBreacher, MultiPry, MiniRam, and EdgeBender, Heavy Kit Bag
- Minimizes breach team exposure time
- Durable steel-framed carry pack
- Padded yoke straps
- 400 lb. quick-release buckles
- Removable hood with hook and loop brand closure

TACTICAL ELECTRONICS CORE UNDER DOOR CAMERA

Gain covert visual inspection into rooms behind closed doors.

- 0.26" insertion panel thickness
- Adjustable high-intensity IR LED illumination
- Attaches to POLE Grip or CORE Grip
- Lightweight high density graphite POLE Grip
- Color eyepiece - AMOLED display (CORE Grip)
- Wireless video transmission - 5 GHz
- AES encryption
- WPA2-PSK authentication
- Graphical LCD for status information
- Hardwire video option
- Backlit push buttons
- MicroSD card video recording (32GB)

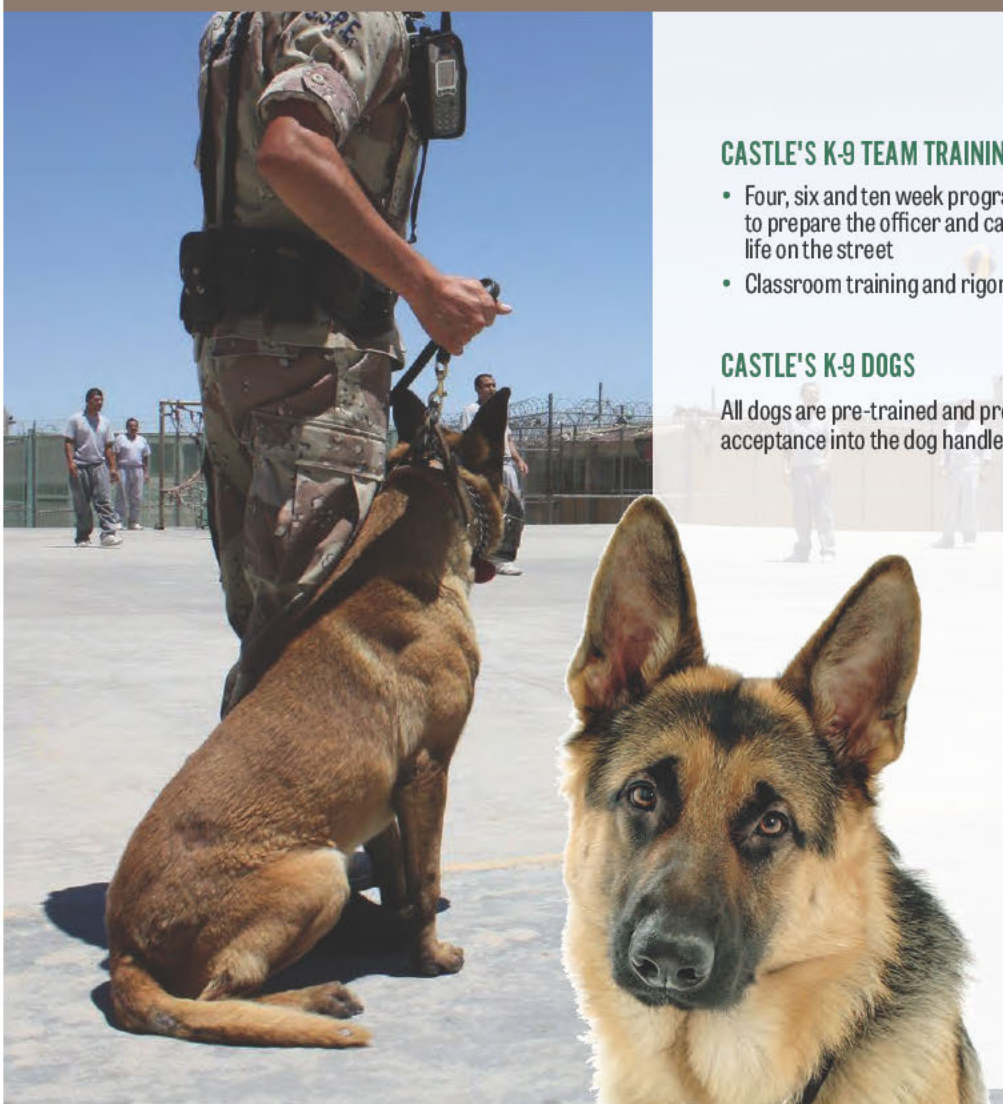
TACTICAL ELECTRONICS CORE MONITOR

Presents high-definition video from all CORE cameras over an AES encrypted 5 GHz wireless channel.

- Receives high-definition 1280x720p color video on a 5.0" IPS LCD
- Secure pairing with multiple CORE cameras
- Capacitive touchscreen for setup/ configuration
- 1mm Corning Gorilla Glass screen
- Remote camera control for view selection and illumination/dimming
- WPA2-PSK authentication
- Hardwire video option
- Backlit push buttons

5.11

BSG CBRNE



BLACKTHORNE SERVICES GROUP

Provides expertise in CBRNe and related matters. BSG can also branch out to other areas of expertise through their strategic alliances to provide a single point for coordinated consultation on an even larger subject matter.

Training programs include:

- PPE for first responders
- First 100 minutes of RDD, Biological, Chemicals and Explosives response
- Hazardous materials/WMD training
- Illicit and drug lab recognition
- Hazmat rapid intervention teams/fast teams
- Much more!

K9

CASTLE'S K-9 TEAM TRAINING

- Four, six and ten week programs are designed to prepare the officer and canine for everyday life on the street
- Classroom training and rigorous field training

CASTLE'S K-9 DOGS

All dogs are pre-trained and pre-tested before acceptance into the dog handler bonding process

VOHNE LICHE KENNELS

- Selection tested canines
- Narcotic or Explosive trained
- Single or dual purpose

BODY CAMERA

4137

KUSTOM SIGNALS VANTAGE BODY CAMERA

- Flexible data storage solutions (use our cloud or use yours, it is up to you!)
- 30 years of video for law enforcement
- One piece-no cable
- Glove friendly
- Configurable (use only the features you want)
- Rugged design
- IP64 compliant
- 480SD-1080HD capable (and all in between)
- 32GB internal storage
- 120° field of view
- Bookmark button (to mark important events on tape)
- Magnetic mount
- Audio mute

KUSTOM SIGNALS, INC.®

SPEED DETECTION

KUSTOM SIGNALS SMART 650

Speed monitoring awareness radar trailer.

- Kustom Directional RADAR
- 12' high intensity amber LED display
- Flashing overspeed violater alert
- Optional overspeed alerts including 'SLOW', red/blue lightbar, and white LED strobe
- Optional traffic statistics
- 5 year warranty

KUSTOM SIGNALS SMART 850

Speed monitoring awareness radar trailer.

- Kustom Directional RADAR
- 18" high intensity amber LED display
- Flashing overspeed violator alert
- Optional overspeed alerts including "SLOW DOWN", red/blue lightbar, and white LED strobe
- Optional traffic statistics
- Optional solar
- 5 year warranty

KUSTOM SIGNALS VARIABLE MESSAGE SIGN WITH HOMELAND TRAILER

Designed for static and dynamic messages, VMS trailers can be quickly and easily put into place.

- Kustom Directional RADAR
- Amber LED lights provide outstanding visibility
- Hydraulic sign lift
- 4x 2-ton screw leveling jacks
- Removable tongue and 2" ball hitch
- 80W solar panel
- Up to 39 day run time with 6 batteries
- Wi-Fi modem for local wireless programming

3M AUTOMATIC LICENSE PLATE RECOGNITION (ALPR)

3M

ALPR is widely recognized as an effective tool to combat criminal activity, enhance productivity and improve officer safety. Fixed and mobile ALPR systems can help identify certain people and situations:

- Stolen vehicles
- Wanted felons
- Amber alerts
- Sexual predators
- DUI surveillance
- Drug enforcement
- Campus security

GOVERNMENT SECURITY SOLUTIONS

CINTEL ALPR CAMERA

Manufacturer of a full suite of rapidly deployable fixed and mobile ALPR cameras and surveillance products.

CINTEL
Safe. Secure. Simple.

LENCO BEARCAT®

LENCO ARMORED VEHICLES
Protecting Our Nation's Defenders™

Can be used as a SWAT or Military Counter Attack and Rescue vehicle and is often used in hostile Urban Environments.

LDV MOBILE COMMAND CENTERS

LDV

Offers used and new mobile command centers, SWAT trucks and many other specialty vehicle solutions.

GAS DETECTION

MSA ALTAIR® 5X MULTI-GAS DETECTOR

The Altair® 5X is designed with XCell Sensor Technology for faster response and calibration times. XCell Sensors offer superior stability, accuracy and repeatability.

- Easy to use in all applications
- Bluetooth wireless connectivity
- A rugged polycarbonate housing provides unsurpassed durability
- MotionAlert sensor
- InstantAlert feature
- Altair Connect App available on Google Play
- Configurable to meet your needs

MSA
The Safety Company

RAE MULTIRAE WIRELESS, PORTABLE MULTIGAS MONITOR

With the flexibility of up to six gas sensors and the convenience of wireless portability, this multi-gas monitor is versatile and customizable, while delivering real-time access to instrument readings and alarm status from any location. Choose from 25 sensor options including LEL, PID, NDIR, and exotics that can be easily changed in the field. With five built-in alarms, including man down, and wireless connectivity to your command center, MultiRAE delivers vital information for fast incident response.

- Optional integrated wireless
- Dust-tight and waterproof (IP65-rated)
- Onboard gas libraries include 190 VOCs and 55 combustible gases
- Continuous data logging-6 months for 5 sensors 24/7

RAE GAMMARAE II R

A gamma radiation detector and full-range dosimeter in a single instrument. Designed specifically to meet the needs of first responders.

- Two types of sensors for excellent response in high and low dose rate ranges
- Waterproof to IP-67 standards
- Certified for use in Class I, Division 1 hazardous environments
- Top-mounted, invertible display
- Two AA alkaline batteries last up to 600 hours

Honeywell
RAE® SYSTEMS

KROMEK D3S ID

A wearable RIID that gives you the power to make the right decisions about nuclear threats in seconds. A powerful combination of two of Kromek's leading technologies: the non-3He compact thermal neutron detector and its world leading gamma detector, delivering the performance of a RIID in a small, but powerful device, the size of a PRD.

- One of the fastest and most accurate isotope ID devices on the market
- Discreet, wearable, lightweight
- Rapid, visible, audible and tactile alarm settings
- Identifies 17 extra isotopes, 4X faster
- Extensively tested and characterised in multiple DNDO and DARPA programs
- Quick, simple and intuitive to use, no need for specialist training or knowledge
- Built around your operational needs

FLIR®
The World's Sixth Sense®

FLIR IDENTIFINDER® R200

Spectroscopic Personal Radiation Detector (SPRD). Ideal for routine traffic stops or high visibility events and in mass transit or critical infrastructure entry control points.

- Wearable, weighs less than 0.9 lbs.
- Gamma only (R200-G) and gamma/neutron (R200-GN)
- Fully compliant with ANSI N42.32 and N42.48 standards, nuclide identification (≤ 7.5% resolution)
- IP67 and MIL-STD 810G rated enclosure, 1.5m drop-tested on all six sides
- Single-hand operation with 3-button control
- Common user interface with other FLIR raditation detectors
- No consumables or user maintenance

IDENTIFINDER® R300 ALSO AVAILABLE

FLIR IDENTIFINDER® R400

All-Purpose Radionuclide Identification Device (RID)

- Handheld radiation detection and identification
- Intuitive and lightweight (< 3.2 lbs.)
- 3-button interface simplifies operation in high stress situations
- Over 20,000 deployed globally

PPE

DUPONT™ TYCHEM® 2000 SFR

Chemical and secondary flame protection in a lightweight garment. Intended to be worn overy primary flame resistant garments. Also provides an effective barrier against a range of inorganic acids and bases as well as industrial cleaning chemicals and particles.

- Respirator-fit hood lined with Pro-Shield® 6 SFR fabric
- Covered, braided elastic at hood
- Nylon zipper with large metal pull
- Chin flap with double-sided adhesive tape
- Storm flap covers zipper which can be sealed by the wearer with double-sided adhesive strip to prevent intrusion at zipper
- Covered, braided elastic openings at wrist and ankle for tighter fit
- Taped seams

DUPONT®

DUPONT™ TYCHEM® 6000 TF611T

Made of a proprietary barrier film laminated to a Tyvek® substrate. The fabric provides at least 30 minutes of protection against over 180 challenge chemicals including chemical warfare agents and toxic industrial chemicals.

- Strong, durable and lightweight
- Hooded coverall with Elastomeric interface hood for tight fit around respirator
- Rear entry design keeps closure away from direct contact with frontal chemical exposure
- Double storm flap covers zipper which can be secured by the wearer with snaps and hook and loop closure to prevent intrusion at zipper
- Attached dissipative socks with boot flaps
- Attached inner gloves (to be used with appropriate outer gloves)
- Elastic wrist for an optimum fit
- Taped seams provide strong chemical resistance against heavy liquid splashes. A sewn seam is covered with a strip of compatible chemical resistant material through heat sealing

BLAUER RC3® ENSEMBLE

Designed to protect wearers against a broad range of CBRNe threats including liquid and vapor chemicals, radiological and biological particulates, and liquid chemical splash during physically demanding tactical entries, confined space rescue, and US&R missions.

- NFPA 1994 Class 3-R (2018 ed.) certification
- NFPA 1994 Class 4-R (2018 ed.) certification
- NFPA 1992 (2018 ed.) certification
- Breathable GORE CHEMPAK fabric
- Streamlined pattern provides a more tactical fit on the user and better equipment integration
- Durable fabric and seams prevent accidental contamination and provide user confidence
- Ten year shelf life
- Machine washable for multiple uses if not grossly contaminated

Kappler
Know What You're Getting Into.®

KAPPLER DURACHEM® 500

Certified NFPA 1994 protection for both CBRN and Hazmat.

- Includes dual certification to NFPA 1994 for both Class 1 and Class 2
- Provides tactical CBRN protection in non-encapsulating suit
- Rubber gasket fits securely around respirator (eliminates need for taping)
- Rear entry design enhances frontal splash protection

KAPPLER LANTEX® 100

Certified to NFPA 1999 for fentanyl response.

- NFPA 1999 certified Lantex® 100 meets IAB and CDC/NIOSH guidelines for fentanyl protection
- Fabric and seams pass ASTM F1671 blood and viral penetration test
- Breathable protective fabric provides enhanced comfort
- Unique rear entry garment design allows safer doffing, helps prevent cross-contamination
- Soft, flexible rubber gasket around face opening provides secure fit around respirator
- Finger loop features ensures sleeves extend over gloves

LION ERS

LION ready for action

The ERS (Extended Response Suit) protects against lower levels of vapor and liquid concentrations that may be encountered in the Warm Zone when deployed with the proper ensemble. This one piece, front entry suit is breathable for deployment over an extended period of time.

- Durable GORE® CHEMPAK® Selectively Permeable Fabric provides the wearer with protection against TIC's, TIM's, and CWA's below IDLH concentration levels while peforming technical and tactical operations
- Certified to (Warm Zone Operations), NFPA 1994, Class 3 (Toxic Industrial Chemical and Warfare Agent Protection) and NFPA 1992 (Liquid Splash)
- Certifed with variety of face pieces
- Increased mission time and performance due to the breathable selectively permeable membrane
- 24 hour / 3 wash wear life
- Sleek, one-piece, lighweight design with attached hood that easily compacts for storage
- Front-entry design for ease of donning/doffing
- GORE® G9492 inner glove
- Molded face seal that does not require tape and is certified for use with multiple CBRN respirators and masks
- Tapered legs with elasticated cuffs and attached booties for increased funtionality and mobility
- 4 adjustable belt loops to securely wear a duty belt or a PAPR and allow for easy doffing during decontamination

LION MT94™

The MT94™ (Multi-Threat) CBRN ensemble offers first responders advanced protection when facing some of the world's worst chemical and biological threats.

- Limited Hot Zone protection - certified to NFPA 1994, Class 2 and NFPA 1992 for hot zone operations
- GORE® CHEMPAK® Ultra Barrier Fabric provides durable protection against TIC's and CWA's above IDLH concentration levels while also providing improved mobility during tactical and technical operations
- Streamlined design combines durability, mobility and comfort
- Usable for multiple wears and washings, if not exposed or contaminated
- Rugged construction allows you to perform in the most challenging of circumstances
- Certified for use with GORE® G9492™ glove system using GORE® CHEMPAK® Ultra Barrier Fabric

PIP NOMEX HOOD

This NFPA straight cut full face hood is made of 20% Nomex and 80% Lenzing FR, fire resistant 2 ply knit fabrics that are certiifed to NFPA 1971-2007 standard for structural fire fighting.

- 20" in total length with a back gusset that allows it to lay flat around the neck
- Tunneled elastic face opening - 1/2" elastic is encased in fabric to ensure snug and durable fit
- Flatlock seams add strength and extra comfort

APPLICATIONS

- Incident command
- Privacy/scene/evidence protection
- Long-term operations
- Rehab
- Dive rescue

BENEFITS

- 1 person automatic deployment
- Compact storage
- All-weather use
- Pre-installed LED lighting
- Customizable

ZUMRO®
Fast. Simple. Proven.

#1 IN THE INDUSTRY ★

OTHER SIZES & OPTIONS AVAILABLE
PLEASE CALL FOR AN ON-SITE DEMO!

PELTOR®

3M™ PELTOR™ COMTAC™ HEADSETS

Designed to provide warfighters the options needed for successful field hearing protection and combat communications.

- 2-way tactical headset
- Level-dependent surround sound for "talk through"
- Ambidextrous noise-canceling boom mic
- Adjustable sizing

3M™ PELTOR™ TACTICAL 6-S HEADSET

Designed to perceive and localize weak sounds while offering hearing protection in high-noise environments.

- NRR: 19dB
- Small, compact and foldable
- Slim earcup profile
- External earcup microphones help provide situational awareness

ATLANTIC SIGNAL GLADIATOR H TACTICAL HEADSET

Allows an operator to engage and disengage hearing pro at-will while having no impact whatsoever on his ability to RX and TX.

- Earplugs provide up to 23 NRR
- Allows the operator to receive radio communications through his/her facial bones, leaving both ears free to maintain 360° of situational and directional awareness
- Audio transducers are positioned in front of the ears
- Communication systems are customizable

ATLANTIC SIGNAL COMBAT PUSH TO TALK

- Front mounted PTT switch as a secondary actuation switch
- Side mounted switch is quiet and shrouded
- Water resistant

atlantic signal

SAFEWARE IS A PROUD DISTRIBUTOR OF THESE LEADING UNIFORM MANUFACTURERS!

5.11®

elbeco

SPIEWAK® since 1904

TRU-SPEC®

TIMBERLAND PRO® VALOR™ DUTY BOOT

Soft-toe waterproof boots feature outsoles that grip any terrain and lightweight insoles for athletic performance.

- Uppers are black smooth leather and 1200-denier ballistic nylon
- Waterproof membrane
- Mesh lining with antimicrobial treatment for odor control and comfortable feet
- Scotchgard™ protector by 3M for stain resistance
- Bloodborne pathogen-resistant membrane
- Dynamic anti-fatigue technology absorbs shock and returns energy at key zones of the foot for all-day comfort
- Rounded driving moc heel
- Wall-climb toe grip
- Non-marking Timberland PRO® rubber lug outsole is slip-, oil-, and abrasion-resistant

5.11 TACTICAL® A.T.A.C 8" SHIELD CSA/ASTM BOOT

Offers unbeatable puncture, moisture and toe protection for superior safety in the harshest environments. The ATAC Shield Boot keeps you mobile, secure and comfortable at all times.

- Waterproof/breathable BPR membrane
- Side zip functionality
- 5.11 Shock Mitigation System®
- Antibacterial and moisture-wicking lining
- Cushioned insole
- Oil and slip resistant, no-squeak outsole
- Semi-rigid heel and toe reinforcement
- Full grain leather and rugged nylon construction

DANNER ACADIA BOOTS

Made in the USA, the Acadia® features Danner's famous stitchdown construction, providing a more stable platform underfoot and superior durability.

- 8" black
- Waterproof breathable GORE-TEX® lining and a combination upper of 1000 Denier nylon and full-grain leather
- Vibram® Kletterlift outsole provides superior shock absorption and great traction on both wet and dry surfaces

PROPPER® SERIES 100® 8" WATERPROOF SIDE ZIP BOOT

- Polishable full grain leather (black only) with 1000D nylon upper
- Durable, coated, speed lace hardware with 550 paracord lacing
- Fast-rope compatible arch design resists wear from ladders and fast-roping
- Ortholite® sock liner for comfort
- Washable open cell foam inserts contour to your foot for weight distribution and arch support
- Oil- and slip- resistant upper outsole for excellent traction and impact absorption
- Open cell air mesh foam provides full foot air circulation for maximum comfort
- Anti-microbial breathable lining prevents odor and extends the life of the boot
- Triple stitching for durability NATO speed lacing system
- YKK side zipper with zipper guard

HAIX GSG9-S

Developed for and with SRT Teams.

- 8" black
- Waterproof leather
- Footwear liner which will never pull out or wrinkle up over time
- Lightweight foam injected into the sole to provide exceptional shock absorption and superior heat/cold insulation
- Two-zone lacing system

SAFEWARE OFFERS AN EXTENSIVE OFFERING OF DUTY GEAR

GOULD™ &GOODRICH
A PASSION FOR PROTECTION

Including badges, belts, holsters, flashlight holders, magazine cases, radio holders, handcuff holders and much more.

Mobile ALPR Systems

Mobile ALPR Systems assist on-street patrol officers checking for criminal activity by capturing and analyzing license plates against known databases. This compact, rugged system has been IP67 certified and mounts securely below the lightbar for limited visual interference.

PIPS Mobile ALPR Solution is a force multiplier that increases officer productivity and safety with every deployment.

APPLICATIONS

On-street enforcement of:

- Stolen Vehicles
- Amber Alerts
- Unregistered Vehicles
- Wanted Criminals
- Parking Violations
- Be on the Lookout (BOLO)

FEATURES AND BENEFITS:

- Offers high resolution coverage for a full lane of traffic with up to two concurrent vehicles in the field of view.
- Instantly checks captured plates against one or more databases of interest to immediately alert officers of hits.
- Increases spatial awareness for improved officer safety.
- Enhances proactive, preventative enforcement by enabling more intelligent investigations and data sharing across jurisdictions.
- Back Office System Software (BOSS) stores all collected data in a central location to support data analysis, data queries and reporting for law enforcement investigations (in accordance with each jurisdiction's data retention policy).

Version

This manual demonstrates the attributes of the Neology / PIPS Technology PAGIS Software Version 2.14 and was last updated in March 2020.

INTRODUCTION

PIPS Technology's Automated License Plate Recognition (ALPR) software solution called PAGIS utilizes dual-channel, dual-lens, cameras to "read" plates. Our software is optimized to run on the Mobile Processor itself or in conjunction with a mobile data computer (MDC). Our mobile software is compatible with Microsoft Windows 7, 8 and 10. The PIPS Mobile ANPR/ALPR Processor comes equipped with Microsoft Windows 7 Embedded.

The PAGIS Software processes the infrared plate image provided by any of the cameras and then interprets the plate number through Optical Character Recognition (OCR) via the mobile processor. The PAGIS application then searches for any matches of the plate with those listed in the databases, or "hotlists," distributed from the PIPS Back Office System Software (BOSS) or other external sources.

WARNING: To reduce the risks associated with impact, which if not avoided, could result in serious injury or death: Do Not interact with the ALPR system while driving in hazardous situations. The PIPS mobile camera series and License Plate Capture Software are not intended for use in hazardous environments, so that the User and/or others are not put at risk for personal injury and/or property damage.

1.1 Dual Lens Color and Infrared Camera

The PIPS Technology Mobile ALPR System allows for a maximum of four (4) PIPS dual-lens cameras to be installed on each ALPR vehicle provided that the vehicle supports the additional mounting equipment.

Each dual-lens mobile camera uses visible light to take color overview pictures of the vehicle and uses infrared (IR) illumination to capture the license plate's alphanumeric characters. IR illumination offers the best capture performance of reflective license plate characters for the following reasons:

- State issued license plates are designed to be highly reflective to IR light.
- Cameras using IR capture technology do not depend on the presence of visible light to function.
- Cameras using IR capture technology are not negatively impacted by the effects of headlights, solar glare, or total darkness.
- IR light penetrates rain and fog better than visible light.
- Due to these attributes, the system can be used 24 hours a day, seven days a week.

1.1.1 Available Products

Additional information about this and other PIPS Technology applications, cameras, and solutions are available on the PIPS web site: http://www.pipstechnology.com

1.2 Using This Manual

4169

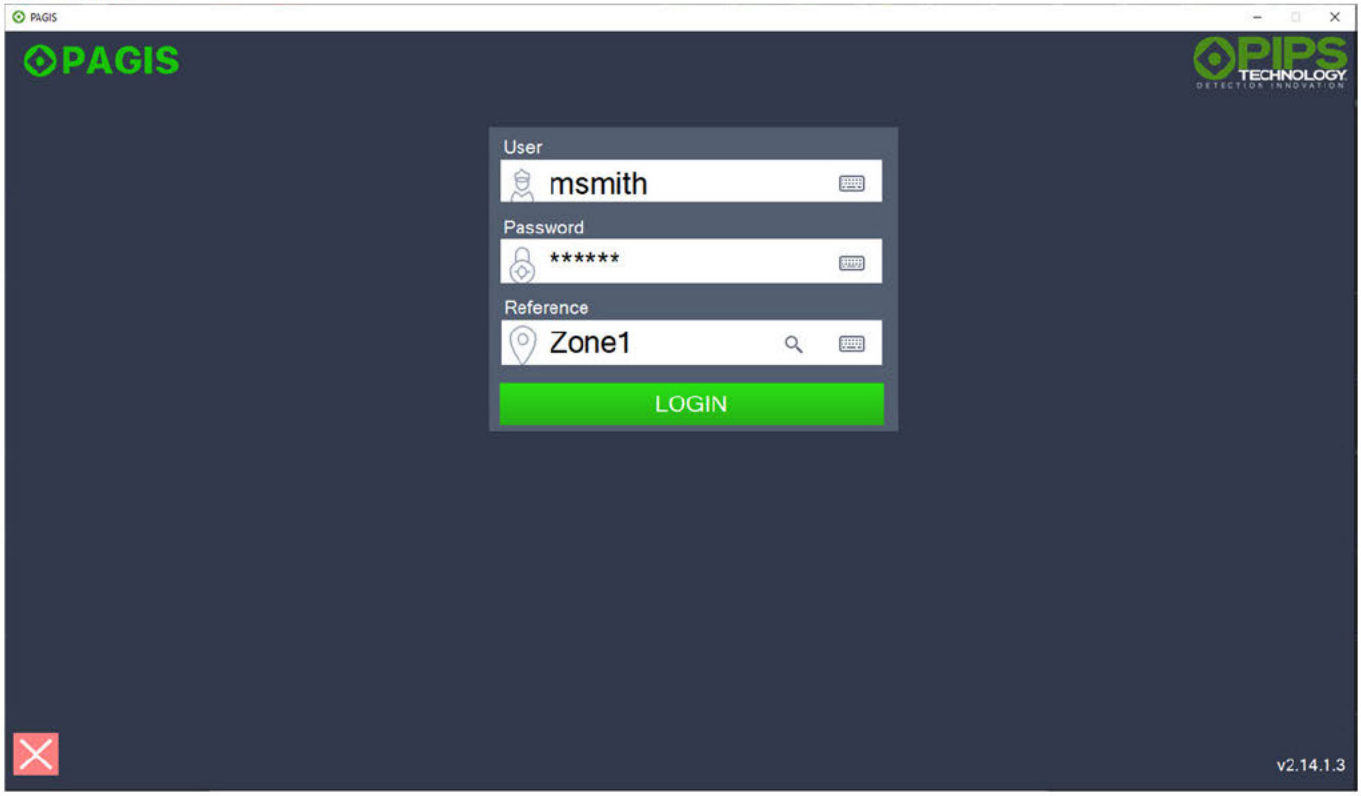
The section overview of this software manual is as follows:

Section 1: The Introduction and Basics

Section 2: PAGIS User's Section: Explains screen function and User Operations in the PAGIS Software

Section 3: Troubleshooting Tips

Section 4: Software Administrator's Guide: Explains how to install and configure the PAGIS Software



Section 5: Additional Information and Troubleshooting Tips

Section 6: Initial BOSS configuration for new PAGIS devices (MDCs)

Appendices: Additional features and details

SCREEN REFERENCE

This section guides the user through the PAGIS Software screens and the available options. Screens are grouped according to function. When a button is grayed out or missing, the option is not available, or no information has been accrued to activate it.

2.1 The PAGIS Software Login Screen

The PAGIS Software allows users with various access privileges to use the same MDC. For users with touch screen monitors, the Keypad button immediately to the right of any text box gives the user access to an on-screen keyboard for data entry.

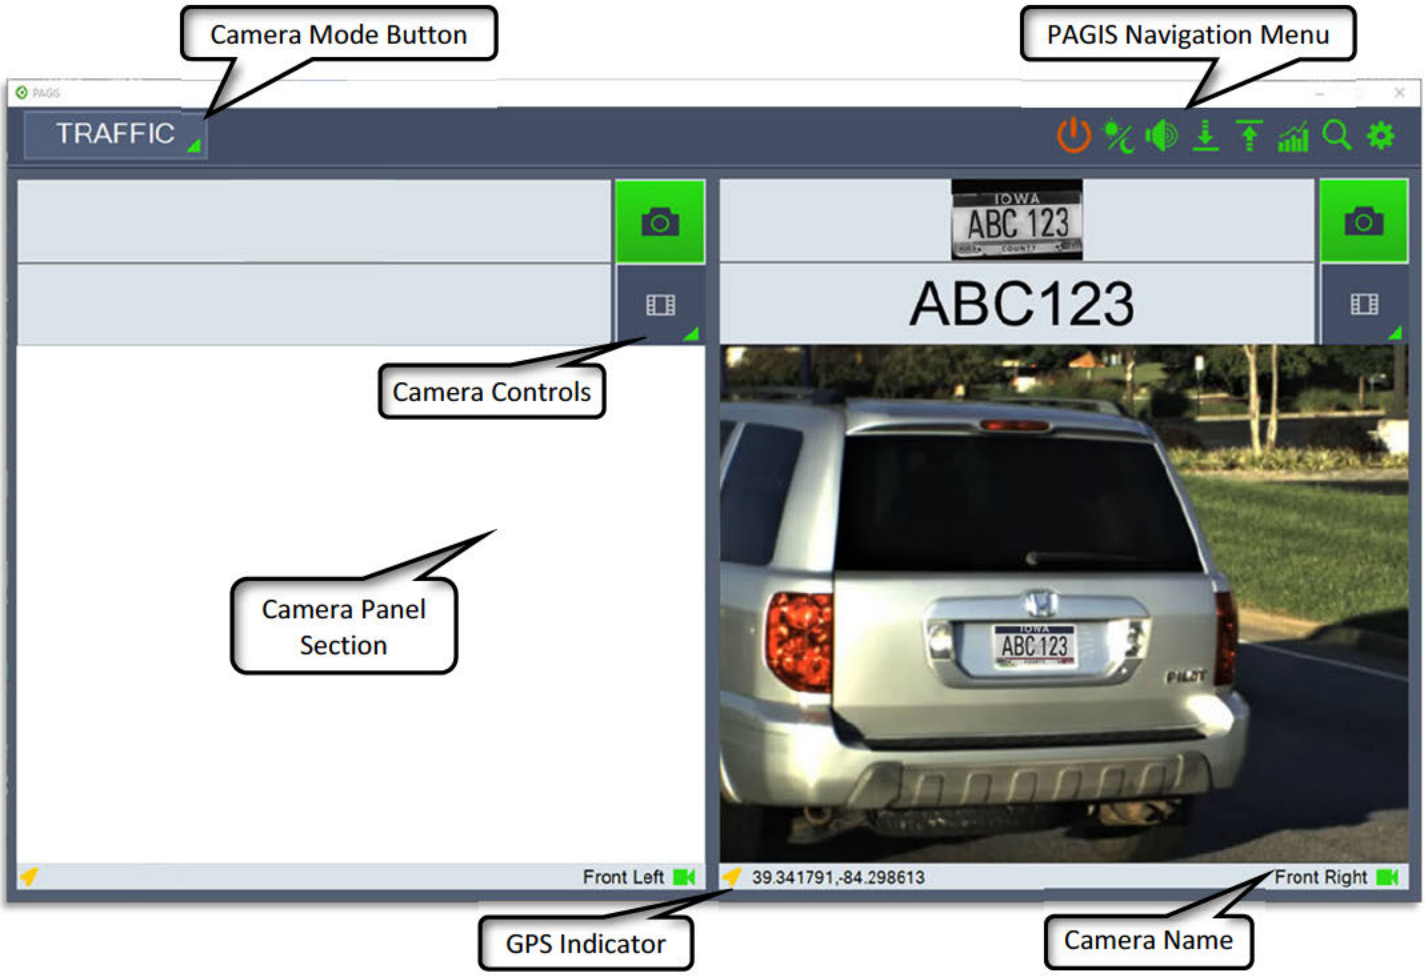
User Field: The alphanumeric string assigned to identify the user. Usernames are not case sensitive.
Password Field: Password of the assigned user logging in. Passwords are case sensitive.
Reference Field: This is an optional field utilized to fit a number of use cases. A user can manually enter a reference at logon, leave the field blank, or select list of unique tags that will be associated with all data captured while logged in. If the Administrator has configured a default reference tags, that information will be displayed automatically. Otherwise, it will be blank.
Login Button: Submits the username and password to attempt a login.
Exit Button: By clicking the X icon in the lower left-hand corner, the user can exit/close the PAGIS Software.

2.1.1 Logging on with the Default Administrative Account

The PAGIS Software includes a default administrative account that can be used for the initial configuration. To do so, simply click the **Login** button with the User and Password fields blank.

NOTE: System Administrators are strongly encouraged to configure users for PAGIS just before, or soon after the installation and setup. PAGIS users accounts are created and maintained in BOSS. Once Users are established by the BOSS System Administrator, the default user account is automatically disabled. Best practices are to be certain at least one User account has administrative privileges.

2.2 Main Screen - Live View



Upon a successful login, the user will see the Main screen (Live View). This is the default view and starting place of all PAGIS Software features. (NOTE: Access to features is based on user group rights established in BOSS.)

The Main Screen is also the place users will monitor read images and ALPR "hits". At the initial startup of the system it is normal to see only a blank/grey screen for a few seconds. Once a connection has been established with the mobile cameras, white boxes will be displayed showing the live-feed camera panels. At this point, the system is ready to capture reads/plates.

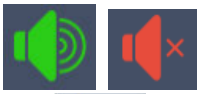
2.2.1 Getting Started in PAGIS

By default, PAGIS loads into a static view. This means live video will not automatically appear in the camera panels (white boxes) until a plate has be captured or the user selects one of the live feed options.

Once a plate is "seen" by a camera assigned to the current viewing mode (Traffic vs Parking), it will display the captured information in the corresponding camera panel. Each plate capture is also accompanied by a short "Beep" to audibly alert the user a read has taken place. (NOTE: If the user is in the Traffic Mode at the time a parking camera reads a plate, there will be a sound effect, but no plate image will be displayed on screen unless that plate is on a synchronized Hotlist or until the user switches to Parking Mode.)

2.3 The PAGIS Navigation Buttons

4172



This section provides a quick reference guide to the available navigation buttons of the Live View screen.

The Camera Mode button is located in the upper left corner and is used to switch between the configured camera modes. Once configured, the name will change to a selected mode. The default values are “ALL”, “Traffic” and “Parking”.

The Logoff button is located in the upper right of the window. When selected, the user will be logged out of PAGIS and return to the login screen.

The Sound button is located to the right of the Logoff button. When selected, this button with toggle the PAGIS system sounds On and Off.

Day/Nite mode switches PAGIS between day & night mode screen skins.

The Begin Shift Synchronization button is located to the right of the Sound button. When selected, this will reach out to the BOSS server to download users, hotlists, and other system settings.

The End Shift Synchronization button is located to the right of the Begin Shift Button. When selected, this will upload any previously unsent reads, images, and audits to the BOSS server.

The Statistics/Review button is located to the right of the End Shift Button. When selected the user is able to review Databases/Hotlists, Reads, Targets, and other PAGIS information.

The Search button is located to the right of the Review Button. When selected the user can search his/her reads as well as manually add a license plate to a temporary hotlist.

The Admin/Settings button is located in the upper right corner of the screen. This button is only viewable to Admin level users and allows for system configuration changes and setup.

Firmware update icon will atomically appear when PAGIS detects a new firmware is available for the P720 mobile cameras. All user types are notified, but only Admins can apply the update.

2.3.1 Camera Control Buttons

The dual-lens cameras can capture both color and an infrared image. Formerly, there were a total of three buttons that allowed the user to view the IR and color feed as well as capture a picture directly from PAGIS. Now there is a toggle button to switch between color and IR views and a separate button to take a picture. These buttons are displayed on the main Live Screen as shown below:

The Camera View Selector button: This is the default state at login showing the Static View. (**NOTE**: PAGIS does not automatically display a life feed.)

Color View: by clicking on the Camera View Selector button once, the user will switch to the Color View Mode. This displays the current view of the color camera and will time out after 60 seconds.

IR View: by clicking on the Camera View Selector button twice, the user will switch to the Infrared (IR) View Mode. This displays the current view of the IR camera and will time out after 60 seconds.

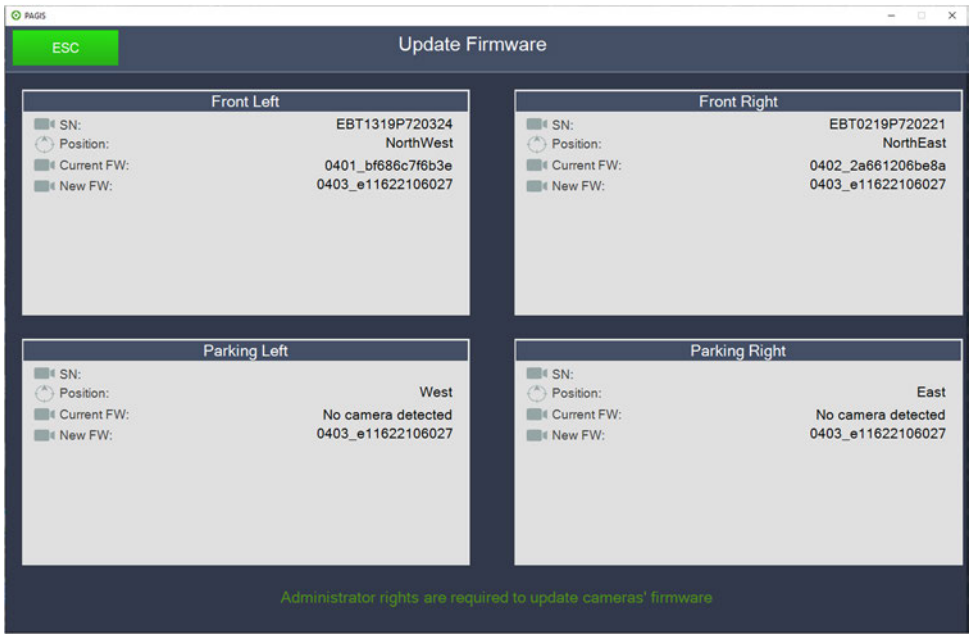
The Take Pic button: Just above the Camera View Selector button is the “Take Pic” button. This button allows the user to quickly take a picture from the camera currently viewed.

2.3.2 GPS Indicators

4173

GPS is stamped on each read and hit as capture events take place by the system. The signal strength and location indicators are located underneath the camera panels at the bottom of the Live Screen.

39.341788,-84.298518 Shows an example of the Location Indicator displaying the Lat/Long on the most recent read



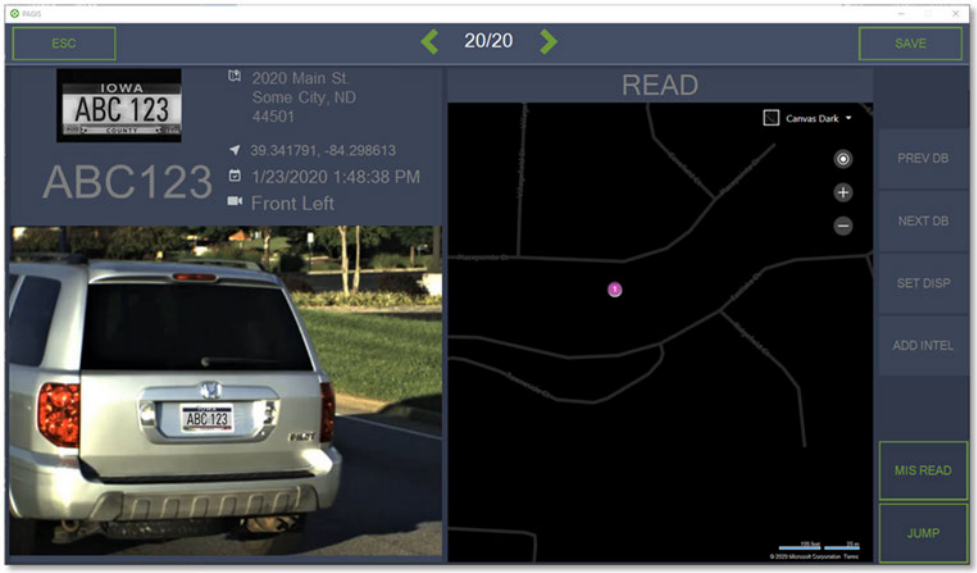
A green or yellow indicator shows a strong or medium strength GPS lock.

A red indicator shows there is no available GPS information.

2.3.3 Camera Firmware Update (Restricted Users)

Camera firmware update provides a means for PIPS to update the camera software to enhance and or correct camera performance. The frimware icon will only apper when update is avialable.

- The firmware update process only updates camera that are attached and function on the mobile processor.
- Restricted PAGIS users are only notified and displayed update information, only a PAGIS administrator can apply the FW update.



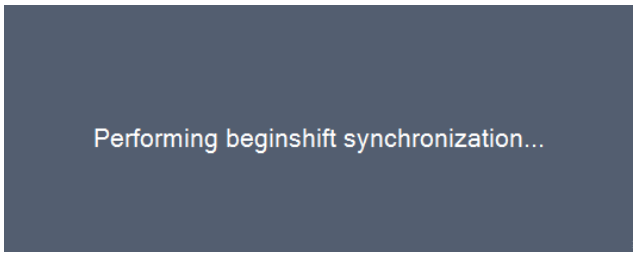
Firmware Updater Window List.

- Title “Camera Name”.
- Camera serial number.
- Position.
- Current FW version.
- New FW version available.

2.3.4 Day/Night Mode

Day/Night mode changes PAGIS user interface skins to a darker appearance to reduce illuminating the vehicle interior.

2.4 Begin Shift



Begin Shift is thought of as the first step for all PAGIS users. From the Live View Screen, the PAGIS user must click the Begin Shift button twice. Once to select the function and once more to launch the Sync. With most agencies, this action utilizes a wireless network to import all the necessary data used during a shift (Hotlists, Dispositions, and Targets) directly from the BOSS Server. However, agencies can also configure their systems to perform this function via Thumb drive or a local source file.

2.4.1 Sync via USB Thumb drive (or Local Source)

Depending on the agency network, some alter the default PAGIS/BOSS configuration mode to use a USB Thumb drive or locally stored file on the MDC/Laptop instead of the wireless Sync. In order to synchronize effectively, the user must first confirm he/she has access to the source location before initiating Begin Shift. **NOTE**: All synchronizations using this method must be performed manually. To learn more about this process, refer to the "Client Tools" section of the BOSS Manual.

2.4.2 Sync via Wireless Network

Synchronizations over a wireless network provide the agency with additional automated features. Best practices recommend the user manually launch Begin Shift from the Live View Screen at the beginning of every patrol shift. However, it is possible for users to allow PAGIS to synchronize via its auto-sync settings. When a manual Begin Shift is launched, the Main View Screen removes the camera feeds and displays a status window of the Sync process. Once the Begin Shift operation is complete, PAGIS will return to the normal Main View Screen.

2.4.3 PAGIS Auto-Sync Settings

PAGIS auto-sync settings are best thought of as how PAGIS receives additional updates and maintains the downloaded ALPR data throughout the entire patrol shift. This prevents the need for the officer to manually perform Begin Shift functions multiple times a day. The auto-sync occurs every 30 seconds and receives data in small batches. The batches are not to exceed 1MB in size for every minute of download. In addition to receiving data, the auto-sync function also uploads a copy of data collected by PAGIS and sends it to BOSS for reporting/processing.

2.4.4 Begin Shift – Additional Information

By default, the synchronizations in PAGIS receive only what has been changed to the ALPR data since the last Sync. Meaning, if some plates have been removed from a Hotlist and others have been added, the system will only transfer that data instead of downloading the entire Hotlist each time the Begin Shift is launched. This helps to reduce the amount of data transferred over the agency's network. **NOTE**: Begin and End Shift synchronization, as well as all auto-sync features, are dependent upon stable communication to the BOSS server via an active data connection.

2.5 End Shift

End Shift in PAGIS is the process in which all the collected ALPR data (Reads, Hits, and Images) from the recent shift is uploaded to the BOSS server and cleared from the local cache. As with Begin Shift, the agency has two options. They can choose to Sync via USB Thumb drive or via wireless connection. Best practices recommend users perform an End Shift Sync at the end of every patrol.

2.5.1 Sync to BOSS

At the end of every shift, the accrued ALPR data should be exported to BOSS. Just like with Begin Shift, the user must click the button twice to launch it (once to select it and once more to execute the Sync). During the Sync, PAGIS uploads any Reads, Hits, and Images not already synchronized to BOSS and purges these items from the local cache on the MDC's hard drive. Completing an End Shift also removes any VLP entries manually added to PAGIS during the shift.

2.6 Cam Mode Button

Clicking the Cam Mode button in the upper left corner of the Live View Screen allows the user to cycle through the different camera modes configured by the PAGIS Administrator. Changing the camera mode changes which cameras are displayed on the Main Screen.

2.6.1 Camera Modes

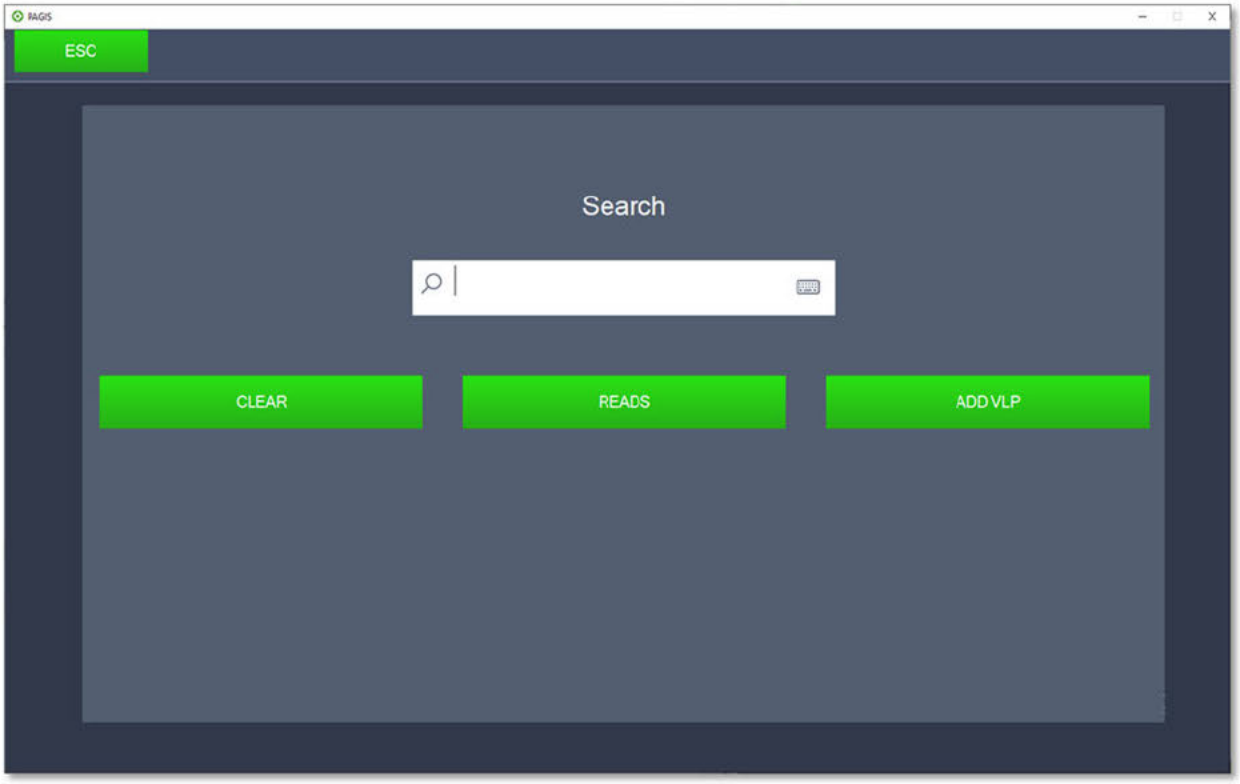
By default, PAGIS provides "Parking" and "Traffic" as the two configuration modes. Users often switch these modes to suit their current use-case. For example, an officer in a parking lot will often switch the mode to "Parking" so s/he can see the parking cameras on the Live View Screen. They can then switch back to "Traffic" when monitoring city streets.

2.7 Taking a Picture

The PAGIS software has ability to quickly take a picture from one of the currently displayed ALPR cameras on the Live Screen. The user only needs to click on the Take Pic button.

To Take a Picture:

1. From the Live View Screen, press the Take Pic button from the desired camera
2. The image taken will be displayed
3. Enter a description of the picture in the text field at the bottom of the screen
4. Press Save to save the picture or Escape to cancel. Either action will return you to Live View.



NOTE: The picture will Not be saved if a description/note is not entered in the text box.

To View the Saved Images:

1. Navigate to the Review menu in PAGIS
2. Select Audits
3. The user will be able to see a thumbnail of the image and the saved text/note
4. In order to review the saved images at a later time, the user will need to run the Audit Report from BOSS.

2.8 Search Entry Screen

Pressing the Search button icon from the Live View screen or SEARCH from the Databases window allows the user to search all manually entered plates as well as all BOSS synchronized databases (Hotlists) for license plate and target information. Users can also search all locally stored reads/images accrued since the last End Shift by clicking the Reads button instead of pressing the Enter key.

2.8.1 Searching Synchronized Hotlists for License Plates

By entering a vehicle license plate number (VLP) and pressing the Enter key or the ADD VLP button, the user can quickly search all the stored plate information locally collected as well as the information from all synchronized hotlists distributed from the BOSS server. **NOTE**: Hotlists can only be searched by entering complete VLPs. Wildcards and partial plate numbers will not return results.

Search Box: The text field used to enter the desired plate search via alphanumeric characters and/or wild card symbols.

Clear Button: Clears the contents of the search box.

Driver's License Info: The search field can also check the Hotlists for any DL information stored (Not available all countries).

Reads Button: This button searches for a match from all the reads/hits locally stored on the MDC/Laptop.

ADD VLP: Searches all locally stored hotlists for the plate and if there's no match, allows the user to add the plate to the "Manual Reports" alert list for use in the field. **NOTE**: All manual entries are cleared with each End Shift

ESC: The Escape button allows the user to exit to the Main/ Live View screen.

2.8.2 Searching Locally Stored Reads and Hits

As mentioned previously, this search function allows users to find reads and hits directly from their recent patrols using the search field and the Reads button. These searches pull only the reads and hits locally gathered/stored since the last time the user completed an End Shift. **NOTE**: The search results are specific to each Windows User Profile and do NOT pull images from the BOSS server.

2.8.2.1 Searching for a Match

4177

- From the Search field, users may enter a plate (or partial plate with wildcards) and then click the **READS** button.
- Results are displayed with the data gathered at the time the read was taken (See example below).
- Each result should display the infrared (IR) image of the plate as well as the color overlay of the vehicle for review.
- Each result shows the GPS data, Closest address point, Time and Date, and the Camera that read the plate.
- If there are multiple results, the user can cycle through them by clicking the left and right navigation arrows.

2.8.3 Wild Card Symbols

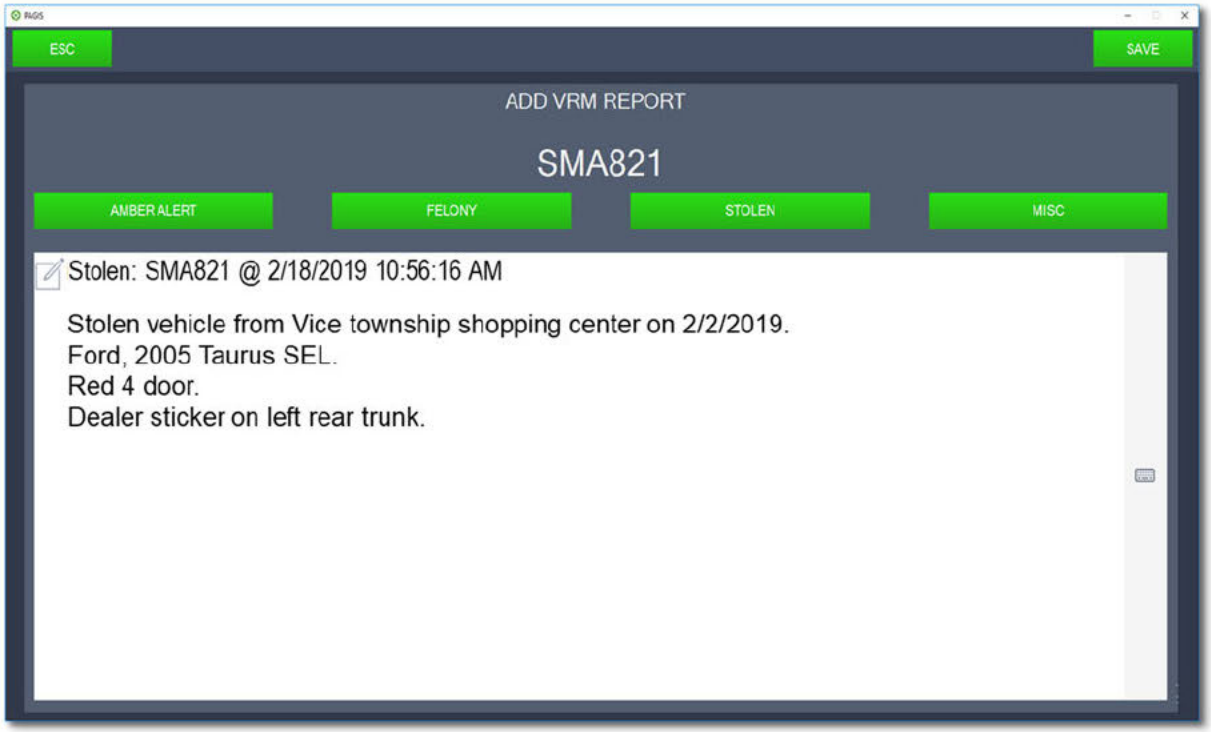
The use of wild card symbols in the Search box allows greater flexibility for the user, but may return a larger set of results.

- Wild card searches performed using the asterisk (*) designates an unknown number of characters.
- Wild card searches performed using the underscore (_) indicates a single missing or unknown character.
- Searches can be performed using one, both or no wild card symbols.

Example: The officer received an alert from Dispatch looking for a vehicle plate containing the letter J and the number 8 separated by one character. Because the officer doesn't know how many characters there are before or after the J and 8, he enters *J_8* in the search box to review all possible matches of J and 8 separated by only one digit.

2.8.4 Manually Adding a Plate to PAGIS

PAGIS allows users to manually add a plate of interest directly into the software as needed. Once saved, these entries are stored as part of the Manual Reports alert list and work just like any other Hotlist synchronized from the BOSS server.
NOTE: These additions are designed to be temporary and are cleared from the software with each End Shift.



2.8.4.1 ADD VLP Query

Before an entry is added to the Manual Reports Hotlist in PAGIS, the software searches all stored databases for a match. If a match occurs, a message will display under the search box showing which Hotlist(s) it has been found in. If the VLP query does not return a match, the "ADD VRM REPORT" screen appears.

2.8.4.2 ADD VRM Report Screen

If the desired plate does not already reside in another Hotlist, the ADD VRM Report Screen becomes accessible to the user.

1. From the Search Entry Screen, enter the desired plate to add.
2. Click the ADD VLP button. If no match is found on any other hotlist, the "Add VRM Report" screen will appear.
3. Click to select the applicable alert type (AMBER ALERT , FELONY , STOLEN , or MISC)
4. Either leave the default information or add additional detail.
5. Click Save at the top right to add the plate to the Manual Entries Hotlist

2.9 The Review Screen

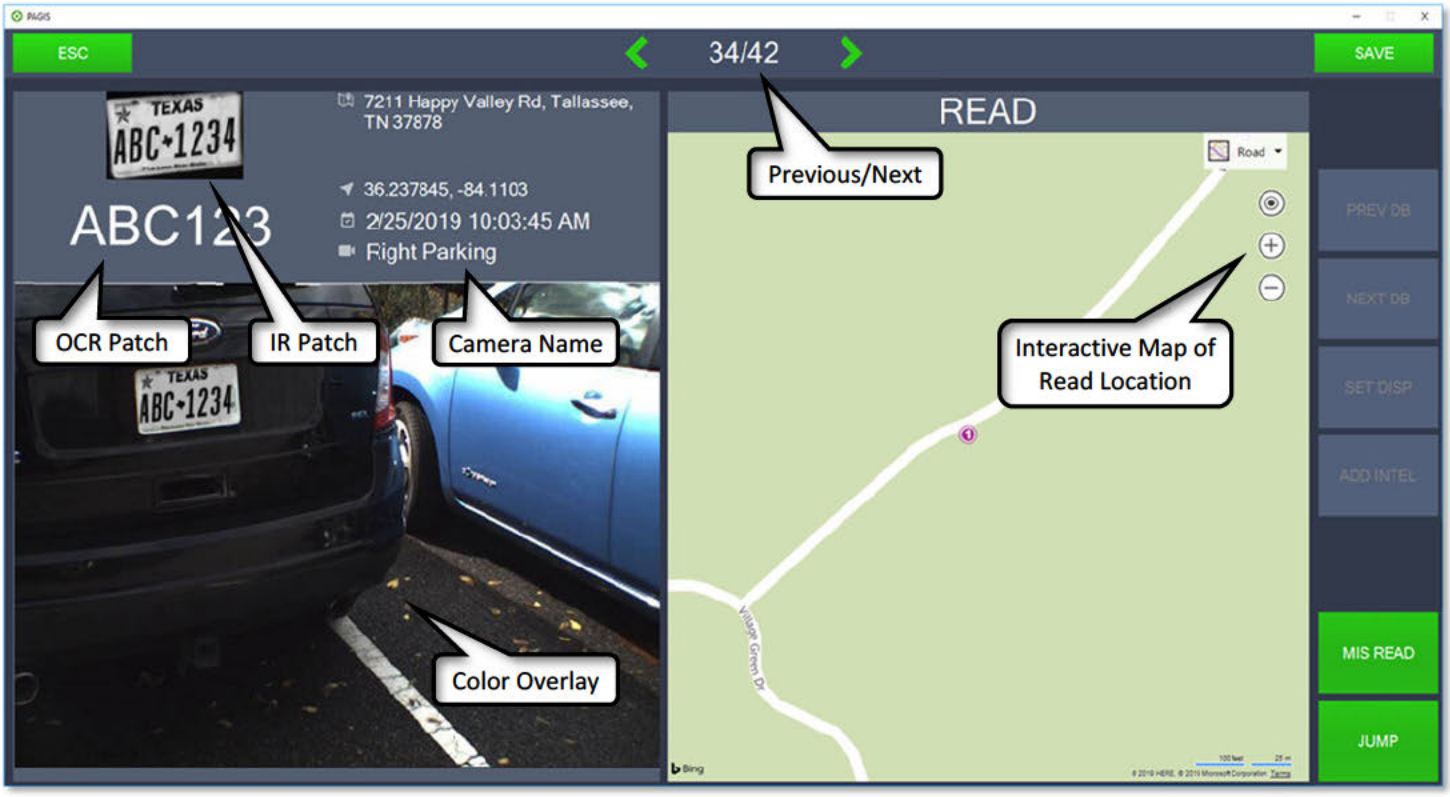
4179

PAGIS allows users to review all locally stored data from one easy location. Clicking the Review icon from the Main Screen launches Review. This screen is divided into the Summary View Chart and sub-section navigation buttons to the right.

2.9.1 Summary Review Section

The Summary View Chart is divided into five categories and allows a user to review the information collected during their shift at a glance.

Total Reads: Shows the total number of Reads/Hits synced to BOSS and the total number of reads captured during the shift.
Reads: Shows the total number of reads synced to BOSS and the total number of reads captured during the shift.
Hits: Shows the total number of hits synced to BOSS and the total number captured during the shift.
Misreads: Shows the total number of reads marked as a "misread" synced to BOSS and the total marked during the shift.
Audits: Shows the total number of audits synced to BOSS and the total number of audits during the shift.
Targets: Shows only the number of targets downloaded from BOSS.
(NOTE: The Sync value will always be zero for customers using Disk Sync mode/Client Tools.)



2.9.2 Review Navigation Buttons

The navigation buttons allow the user to review specific sets of information gathered during the shift.

Reads: Review all plate detections that have occurred since the last End Shift synchronization.
Hits: Review the hit alerts for Vehicle License Plate (VLP) reads that matched a Hotlist.
Misreads: Review reads and/or hits that have been manually flagged during the shift as misreads, where the plate number in the image does not match the OCR interpretation of the plate (e.g., a letter O misread as a Q or zero).
Audits: Review failed and successful logons, any manual data entered during the shift, pictures taken and all manual license plate searches.
Targets: Review targets that have been synchronized/downloaded from Boss.
Databases: Review all the Hotlists currently distributed to this PAGIS laptop/MDC.
Esc: Returns the user to the previous screen.

2.9.3 Reads

From the Main Screen, the user can review his or her accumulated Reads (those gathered since the last End Shift was completed) by clicking on the Review icon and then selecting the Reads Navigation button. The Read Review Screen is divided into two main sections. The left side displays the information gathered at the time of the read and the right side displays an interactive map of the GPS location.

NOTE: Buttons that are greyed out indicate options that are not available in the current view. For example, the Reads and Hits review screens share the same layout but different on-screen options.

2.9.3.1 Reads Result Screen Navigation Buttons

Read Count: The left number is the current record. The right number is the total available for review.

Next/Previous button: The arrows on either side of the read count allow the user to navigate back and forth to review reads/results.

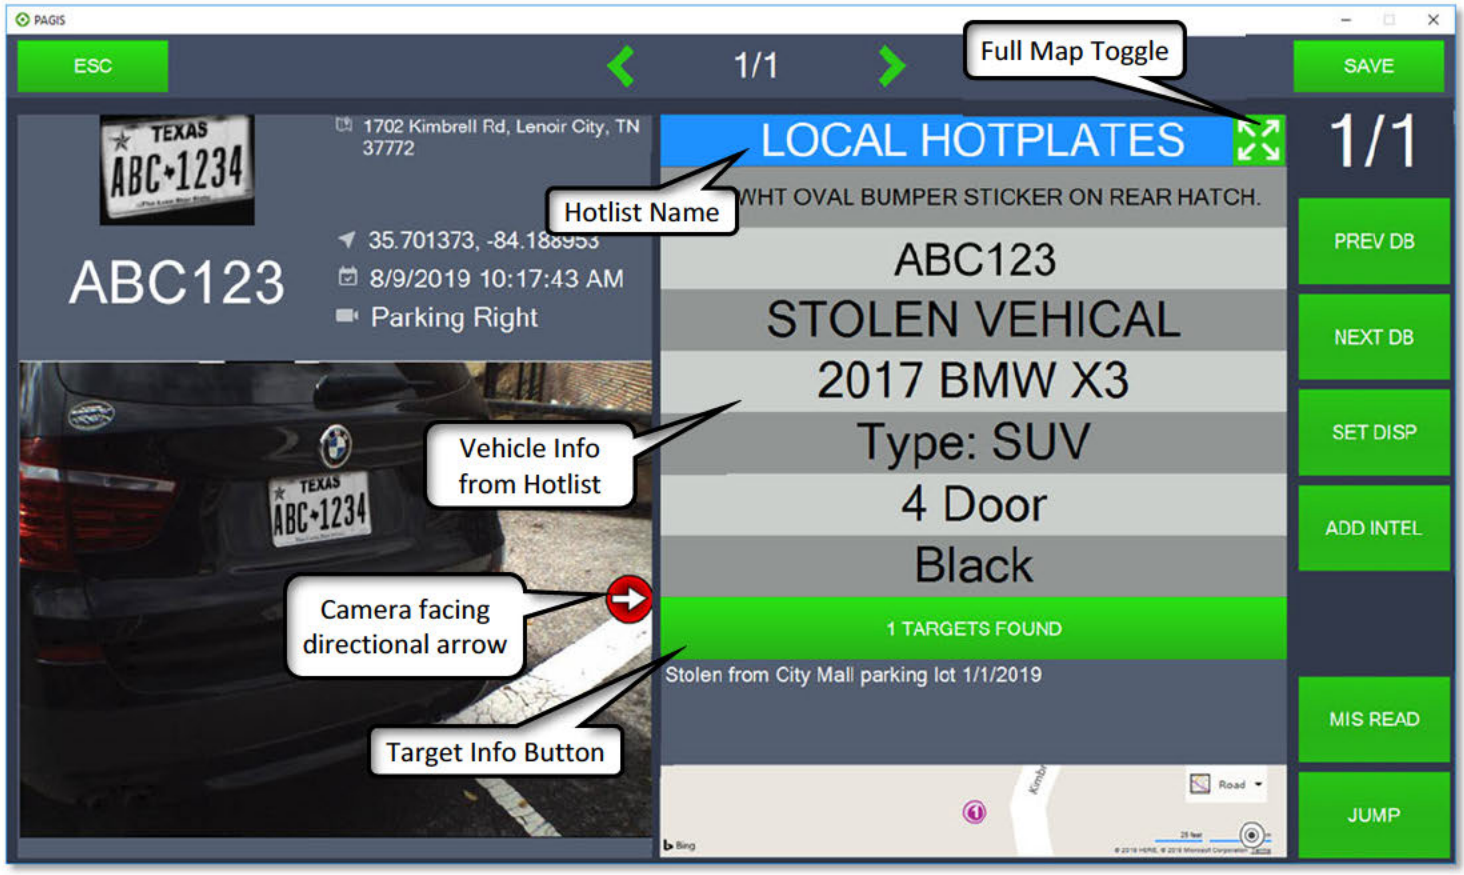
MisRead button: When the button is green it indicates the record has NOT been edited as a Misread by a user. Once a Misread is saved, this button will turn grey and the record title will update.

Jump button: Allows the user to "jump" to a specific record without the need to navigate one record at a time using the Next/Previous buttons.

Save button: Apply any changes/edits and return to the Main Screen.

Escape button: Returns the user to the Main Screen.

2.9.3.2 Interactive Buttons – Reads Screen



From the Reads Review, the user can interact with the following:

- IR Patch: The user can click on the IR "Patch" plate image to open a full-screen view.
- OCR Patch: The user can click on the OCR "Patch" image to edit the license plate number if necessary/Misread.
- Color OV Image: The user can click on the color image to open a full-screen view.
- Map: The user can manipulate the interactive map of the read location (Map Type, Scroll, and Zoom).

2.9.4 Hits

Users can manually access the Hits Section by first selecting the Review icon from the Live View Screen and then clicking the Hits Button. The Hits Screen is also divided into two main sections. The left side displays the information gathered from the ALPR equipment during the read. And the right side displays the information provided by the associated alert list.

NOTE: Each time a VLP matches a Database value (a license plate read by the system matches a Hotlist entry), PAGIS plays an audible tone and automatically displays the Hit Screen to alert the user.

2.9.4.1 Hit Screen Attributes

Hit Count and Navigation Buttons: Displays the total Hit count as well as the Next/Previous navigation buttons.
IR Patch Image: A thumbnail image of the license plate from the IR camera.
OCR Text: The character string the OCR engine generated from the current plate.
GPS Location: The GPS coordinates at the time of the hit. (If a GPS device is not attached, the Lat/Long is displayed as 0,0).
Date and Timestamp: The date and time when the read/hit was captured.
Overview Image: The overview image of the vehicle from the Color Camera. (**NOTE**: Color images require visible light)
Camera Name: The name of the camera that captured the read ("Right Parking" in the screenshot).
Hotlist Name: This is the name of the Hotlist or "Database" where the plate was matched.
Target Button: When available, this indicates a person of interest is associated with the Hit and opens the Targets Screen.
Vehicle Information: The area of grey bars will display the related vehicle information from the Hotlist. Any information added manually by the user will appear in the Text Box near the bottom of the screen.
Interactive Map: Shows the location the Hit took place. Users can access full-screen view by clicking the map or the toggle .

2.9.4.2 Hit Screen Function Buttons

The Hit Count Indicator: shows how many Hotlists the current Hit has registered against.

Previous DB button: This button moves the user to the previous Database/Hotlist that produced a Hit.

Next DB button: Pressing this button moves the user to the next Database/Hotlist that produced a Hit.

The Set Disposition button: prompts the user to report the disposition of the hit by selecting one of the approved codes assigned in BOSS by the Administrator.

The Add Intel button: allows the user to add additional information regarding the current Hit.

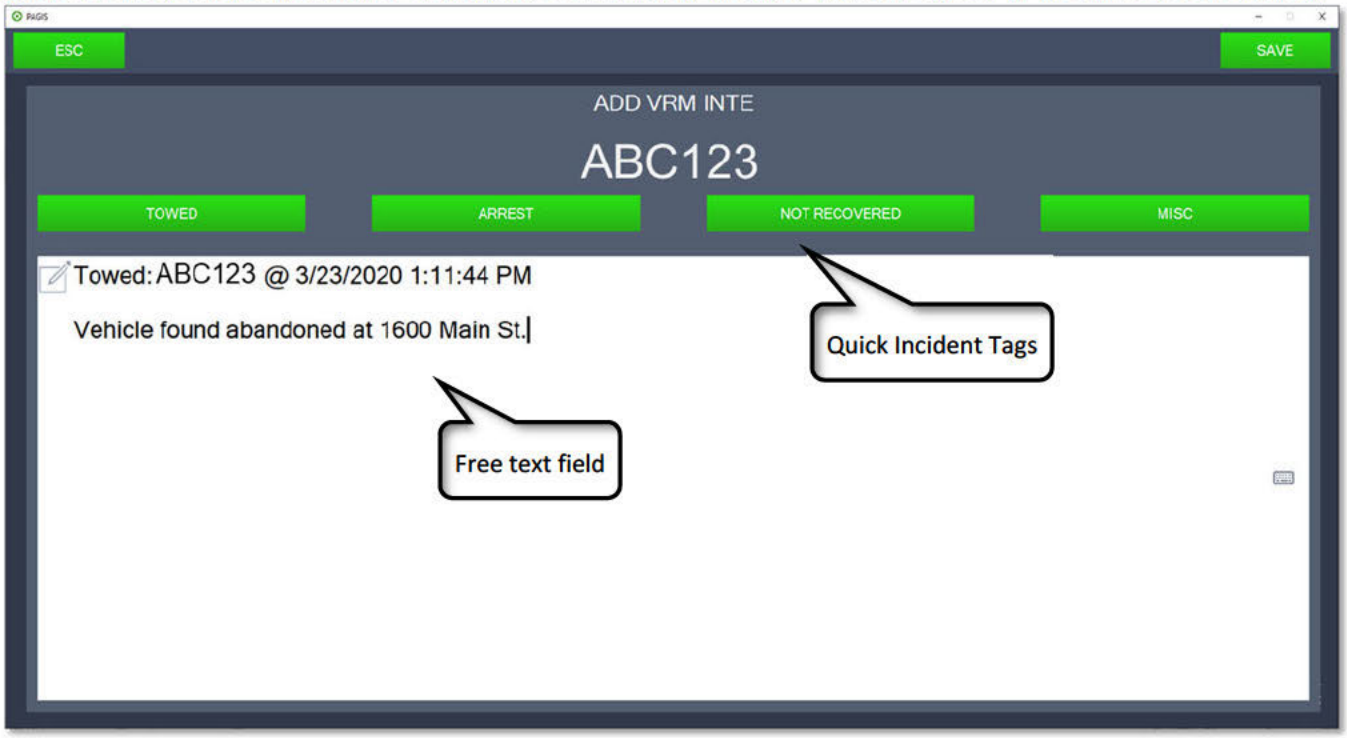
The Misread button: allows the user to flag the Hit as a misread.

The Jump button: Allows the user to "jump" to a specific Hit instead of navigating one at a time.

2.9.4.3 Interactive Buttons – Hits Screen

- IR Patch: The user can click on the IR "Patch" image to open a full-screen view.
- OCR Patch: The user can click on the OCR "Patch" image to edit the license plate number if necessary/Misread.
- Target Button: Shows associated person(s) of interest and opens the Targets Screen.
- Color OV Image: The user can click on the color image to open a full-screen view.
- Map: The user can manipulate the interactive map of the read location (Map Type, Scroll, and Zoom).

2.9.4.4 Set Disposition – Additional Detail

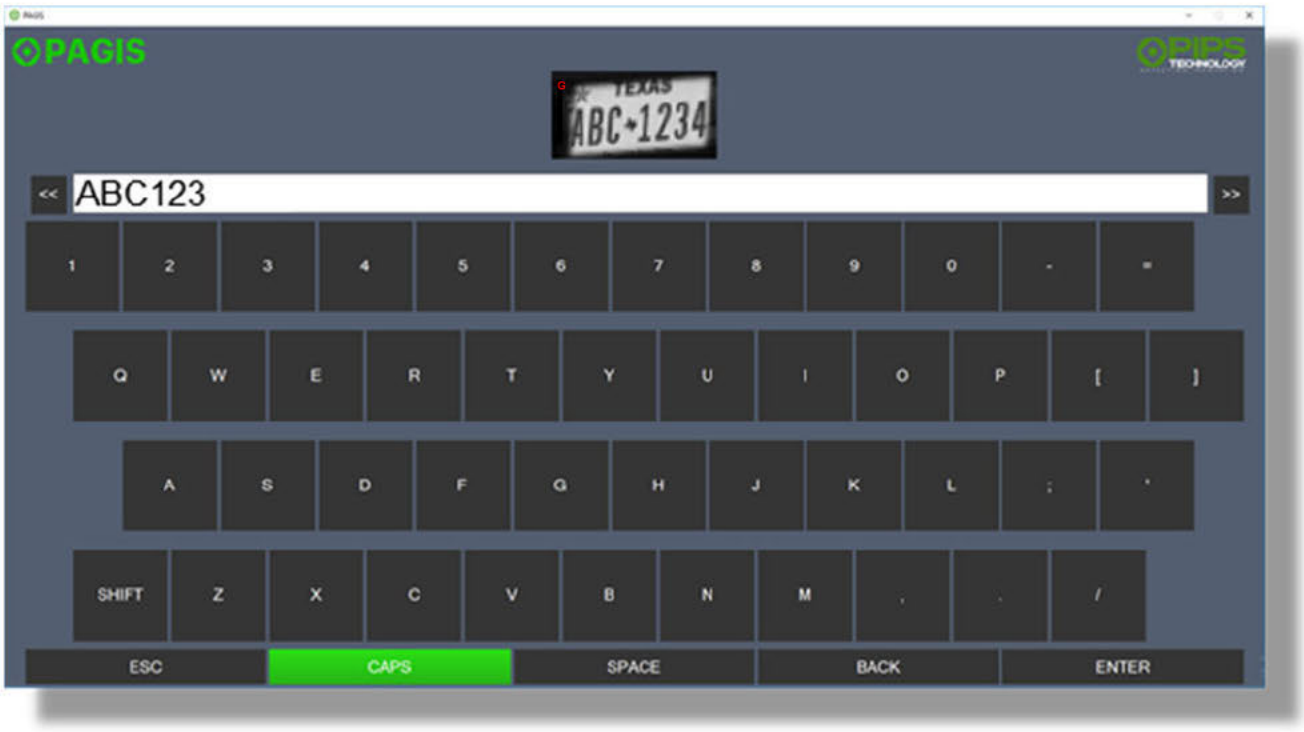


PAGIS allows for additional information to be added to a record in the form of a Disposition. Once Hits are flagged with a disposition code, the Agency is capable of running a "Reads Statistics by Disposition Report" in BOSS. Thus, providing valuable metrics and understanding to leadership in regard to their ALPR Enterprise.

When the "Set Disp" button is selected, the user is prompted to choose from a list of predefined values set by the Agency/BOSS Administrator. Once a disposition is selected and Saved, the disposition is reported to BOSS and will also show up in the Hits Review Screen text box in PAGIS on the next alert notification.

2.9.4.5 Add Intel – Additional Detail

4183



The Add Intel button launches the Intel screen. The user is prompted to assign one of four values: Towed, Arrest, Not Recovered, and Misc. by clicking the associated button at the top of the screen. The user may also enter additional detail regarding the license plate/vehicle. After clicking the Save button, the intel will now appear in the Hits Screen text box.

2.9.5 Misreads

PAGIS allows the user to mark Reads and Hits with incorrect OCR translations as a Misread. This is most commonly done by Agencies for Hits only as users typically don't have time to review every single Read from their shift. Once an errant Hit is corrected, the system updates the record to show it as a Misread and thus improves Agency Hit Reporting.

Correcting a plate read can be accomplished by clicking on the "OCR Patch" in either the Hits or Reads review screen. When the user clicks on the OCR Patch, the OCR Edit Screen opens and allows the user to update the Vehicle License Plate (VLP) data.

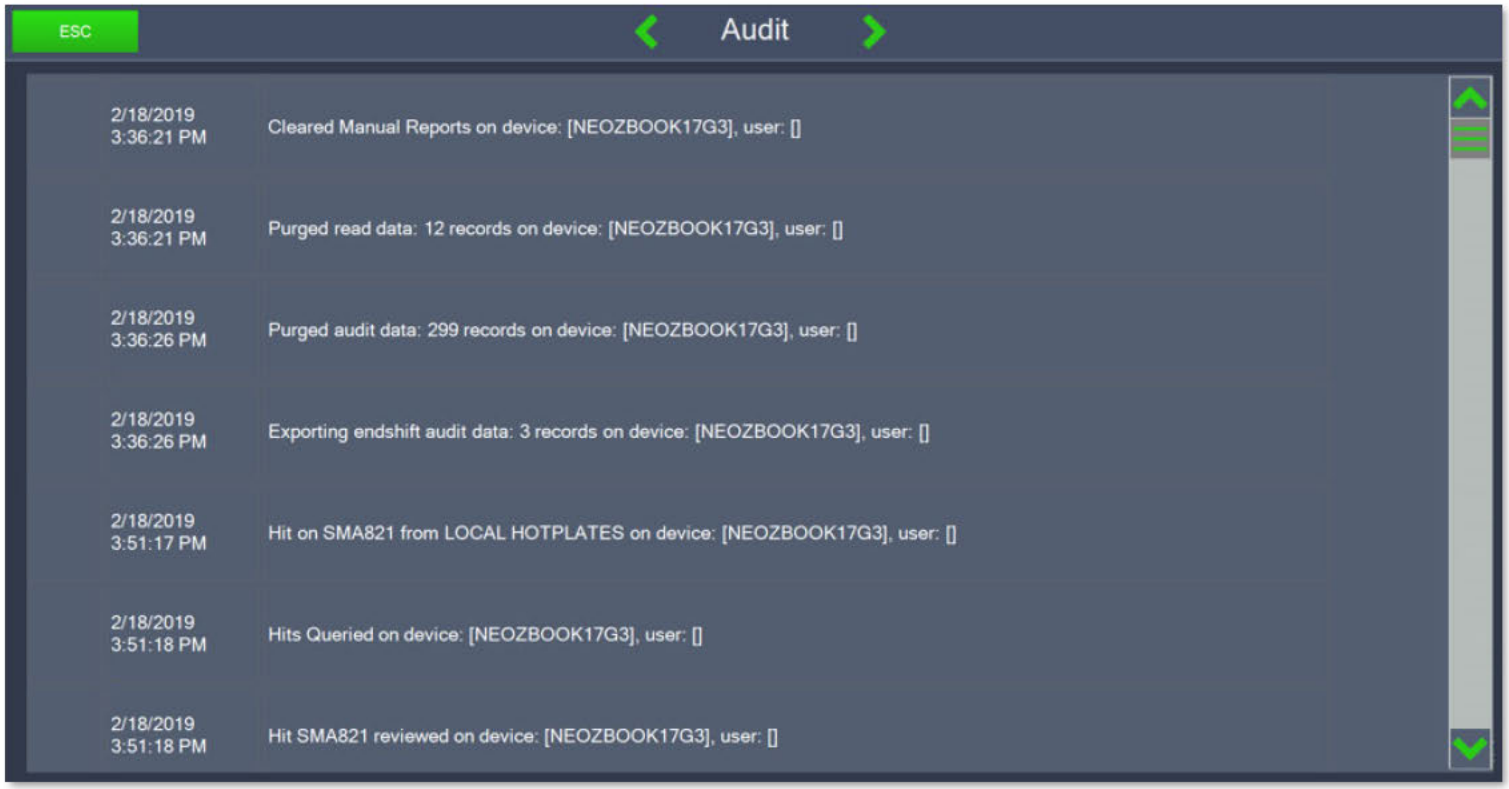
2.9.5.1 Marking a Record as a Misread:

The user can mark a record as a Misread from both Reads or Hits Review Screen. Each user can either simply flag the record as a Misread or update the OCR Patch information. **NOTE**: This ability is only available until the user has performed an End Shift function.

Manually Flagging a Read or Hit as a Misread:

1. Navigate to either the Reads or Hits Review Screen
2. Click on the Misread button on the Right
3. Click Save
4. Take note that the record title has now changed from “Read” to “Misread”

Updating the Read/Hit OCR Patch:



1. Navigate to either the Reads or Hits Review Screen
2. Click on the OCR Patch (Text just under the IR Plate Image)
3. Use the keyboard or on-screen keypad to update the Vehicle License Plate Number
4. Click the Enter Button to Save the changes (and exit back to the Review Screen)
5. When the user saves the changes to the OCR Patch, the record (Read/Hit) is automatically flagged as a Misread

2.9.6 Audits

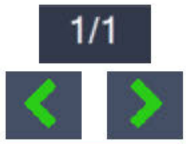
4185

PAGIS logs both user and key system activity during each use of the software. The audit log captures various information like Read searches, synchronizations, hits, and user login attempts. The Audit Report is viewed in PAGIS by navigating to the Review section and selecting “AUDITS”.

NOTE: Performing an End Shift or syncing the database clears the current log.

2.9.7 Targets

PAGIS has the ability to display information regarding Persons of Interest in response to a Hit alert. Targets are created by BOSS/Hotlist Administrators, and typically provide detailed information about owners of a registered vehicles. When configured, Target data is always linked to unique VLP data (a specific License Plate). If PAGIS registers a Hit on a Plate with a target ID, the Target Information Button is displayed in the Hit Alert window and allows the user to access the Target Screen.



2.9.7.1 The Targets Screen

When a PAGIS user clicks the Target Information Button from a Hit Alert, the Targets Screen opens. This screen displays the information from the BOSS server about the Person(s) of Interest matched to the Hit (license plate).

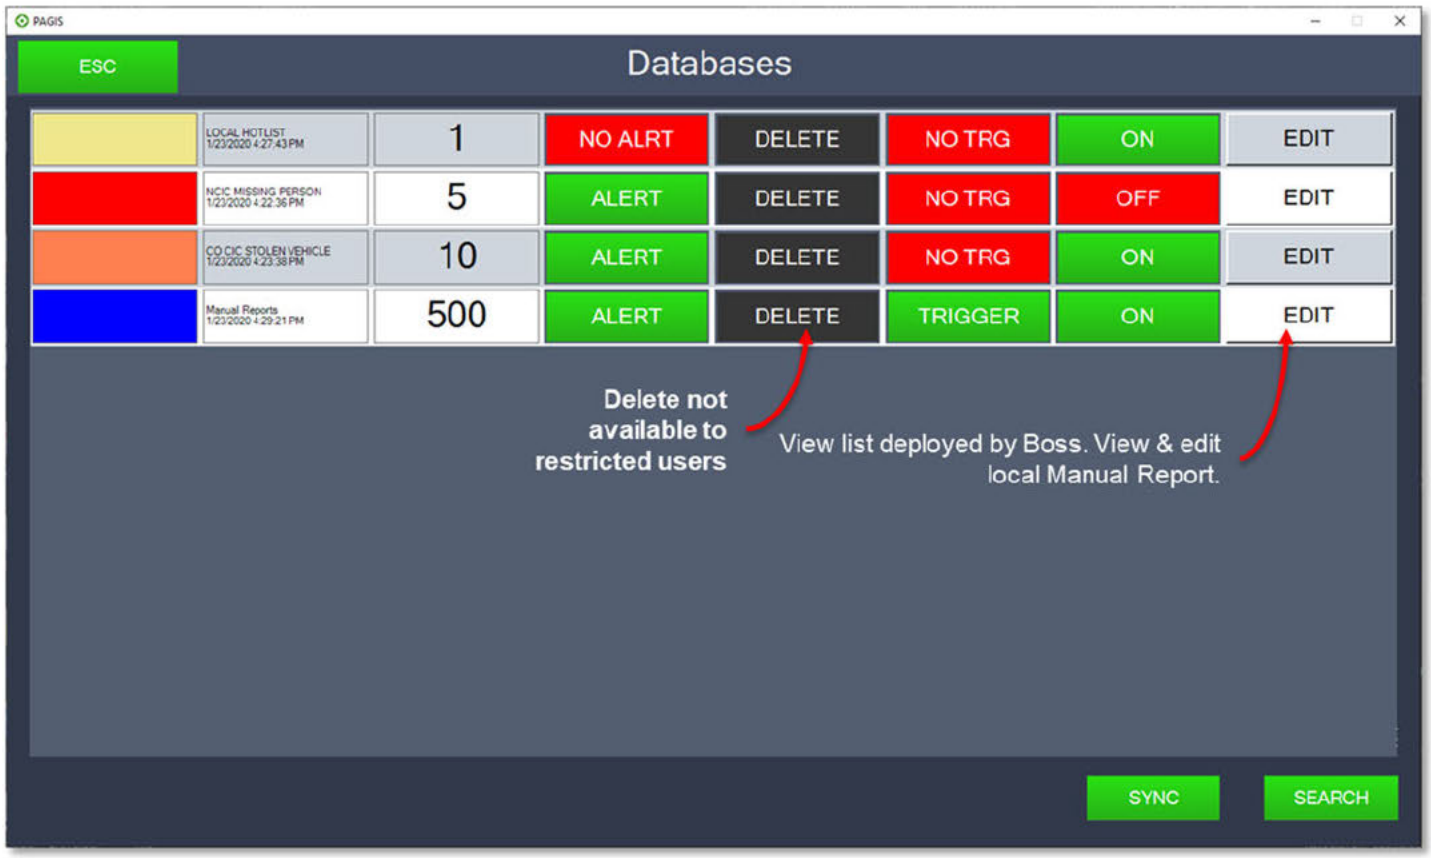
2.9.7.2 Targets Screen Navigation Buttons

If a Hit alert has more than one Target associated with it, the PAGIS user can navigate all Target information with the buttons described below:

Target Count: The left number is the current record. The right number is the total available for review.

Next/Previous button: Arrows on either side of the target count allow the user to navigate back and forth to review the various targets.

Jump button: Allows the user to "jump" to a specific record without the need to navigate one record at a time using the Next/Previous buttons.



Close button: Returns the user to the previous screen.

2.9.8 Databases

Users can review Hotlists in PAGIS by navigating to the Review section and selecting "DATABASES" on the right. From the Databases Screen, users can toggle Hotlists functions On and Off based on their rights.

NOTE: User rights and Hotlist attributes are configured in BOSS.

2.9.8.1 Databases Screen Functions

Hotlist Color Code: The color attributed to each Hotlist by the BOSS Administrator.

Hotlist Name: The name of the Hotlist given by the BOSS Administrator. Also shows the time/date of the last synchronization.

Hotlist Priority: The priority of the Hotlist assigned by the BOSS Administrator. The lower the number between 1 and 999, the higher the priority. If a plate resides on multiple Hotlists, the list with the higher priority will be displayed first.

Alert Button: Toggles audible alerts On and Off for each Hotlist until the next synchronization.

Delete Button: Based on user rights, allows the user to temporarily delete a Hotlist from PAGIS until the next synchronization. To delete a hotlist, the user must click the button twice (it turns green and then deletes the list).

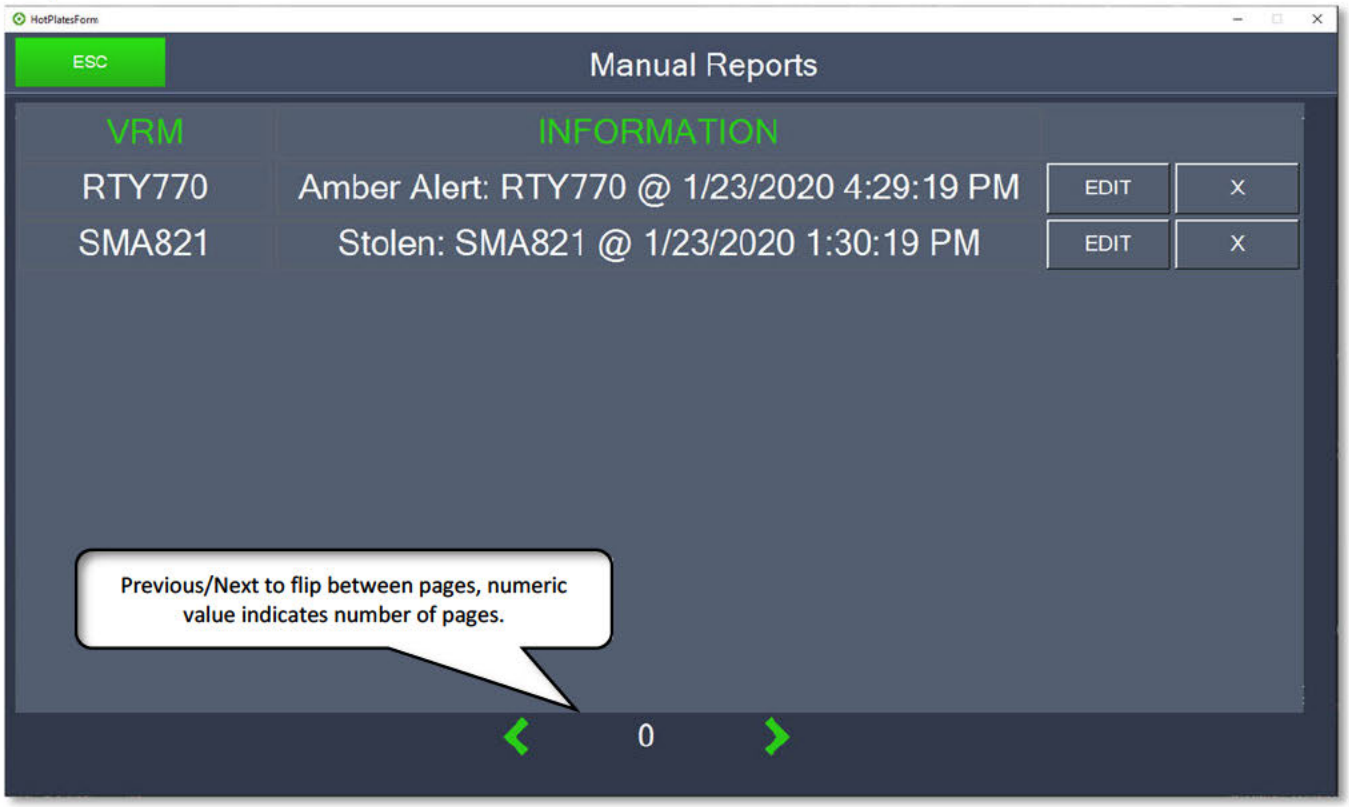
Trigger Button: Toggles external triggers On and Off. An example of an external trigger is a light bar.

On/Off Button: Disables and enables each Hotlist (each Hotlist is set to On by default).

Edit: View and edit localy created hotplates with a given hotlist, Hotlist/Hotplates deployed via BOSS can only be viewed.

NOTE: Hotlist settings altered in PAGIS will be reset to their default configuration during the next Sync or End Shift. The default configurations are assigned by the BOSS Server/Administrator.

2.9.8.2 Databases Screen Navigation Buttons



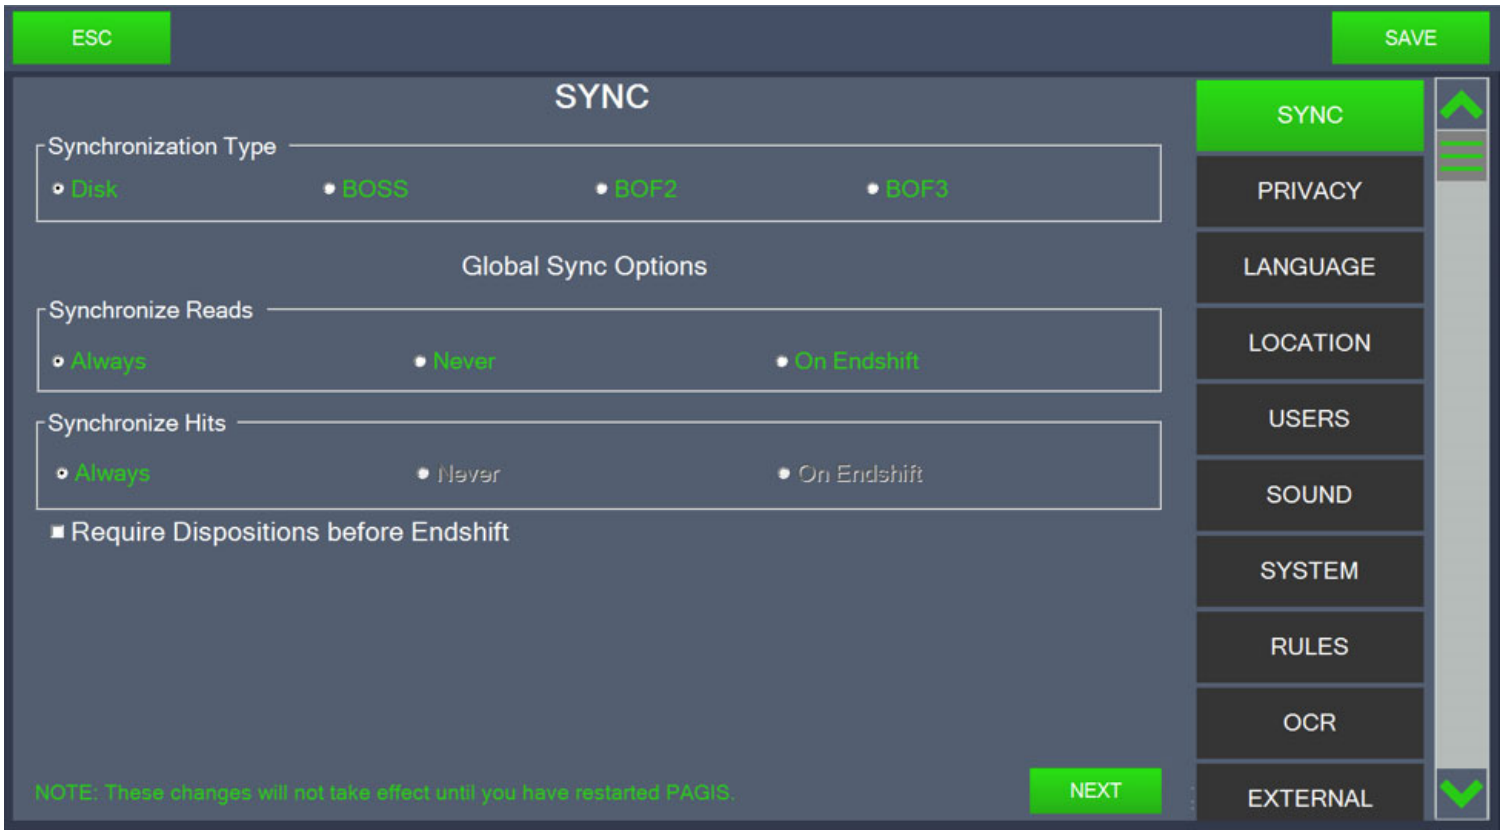
SYNC — **Sync button**: Synchronizes PAGIS with the BOSS server in order to update the Hotlists.

SEARCH — **Search button**: Open the Search Entry Screen (See section 2.8 for more information).

2.9.8.3 Databases Edit- “Manual Reports”

Editing Hotlist has two function based on origin of hotlist.

- Hotlist deployed to PAGIS via BOSS cannot be edited, only the hotplates list can be viewed. Editing/updates are indented to be managed via BOSS.
- Hotlist created in PAGIS, i.e. “Manual Reports” can be managed by PAGIS users, allowing for changes or deletion of the hotplates contained within the hotlist.



EDIT Button: Make changes to the indicustly hotplate information including licanse plate nuamber.
X Button: Remove indivualy hotlist from hotlist.
Previous/Next Button: Scroll thought lising of hotplates contaned within the hotlist. The numeric value indicates the number of pages.

ADMIN SETTINGS

The Settings Menu is the central location for configuring PAGIS Software functions endpoint by endpoint. Users with Admin level rights in PAGIS can see and click on the Settings Button from the Live View Screen. Launching Settings opens the menu to the Sync Options Screen by default. **NOTE**: Users without Admin level access will not see this icon on the Live View Screen.

3.1 Sync Options Screen

As mentioned previously in sections 2.4 and 2.5, PAGIS uses various sync options to store, update, and synchronize ALPR data to and from the BOSS server. On the Sync Screen, Administrators configure the synchronization method and options.
NOTE: Configuration changes will not take effect until they are saved and the PAGIS Software has been restarted.

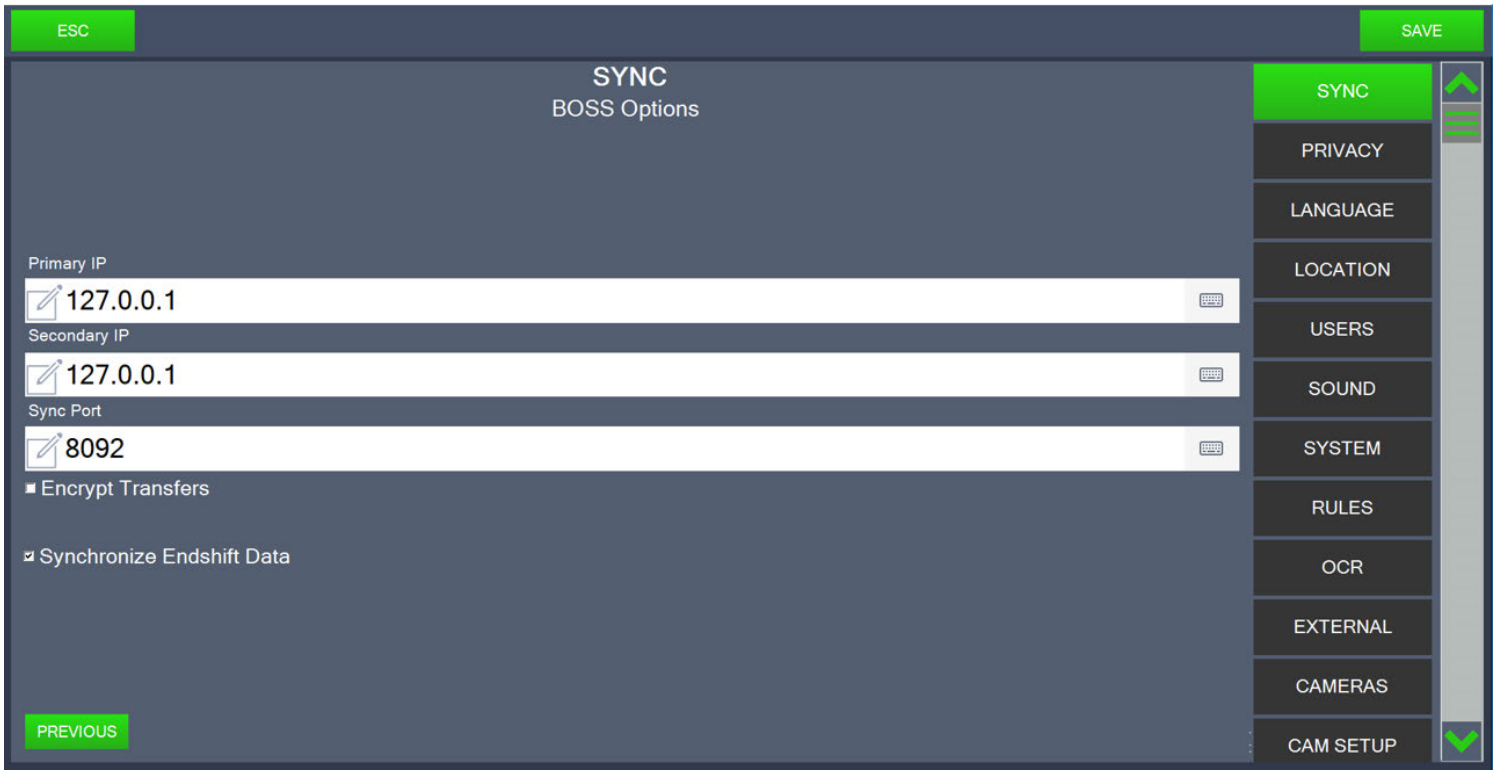
3.1.1 Synchronization Types

- **Disk**: Uses local storage of Sync files in conjuction with a USB flashdrive to manually Sync to and from BOSS.
- **BOSS**: Uses a wireless data network to Sync files to and from the BOSS server.
- **BOF2**: Used predominantly in Europe (see regional guide for support).
- **BOF3**: Used predominantly in Europe (see regional guide for support).

3.1.1.1 Synchronization to Disk (Local Storage)

4190

Sync to Disk is a manual two-part process most commonly used with a USB Thumb drive. To use Begin Shift, the user accesses a centralized terminal (Ex. Patrol Room PC) to download the files from BOSS and then inserts the Thumb drive in the laptop to perform Begin Shift. At the end of the day, the user then Performs End Shift from the laptop/MDC connected to the Thumb drive and uploads those files to BOSS via the central terminal (See the "Client Tools" section of the BOSS Manual).
NOTE: From the Sync Menu, select "Disk" and click the Next button at the bottom to configure the drive location.



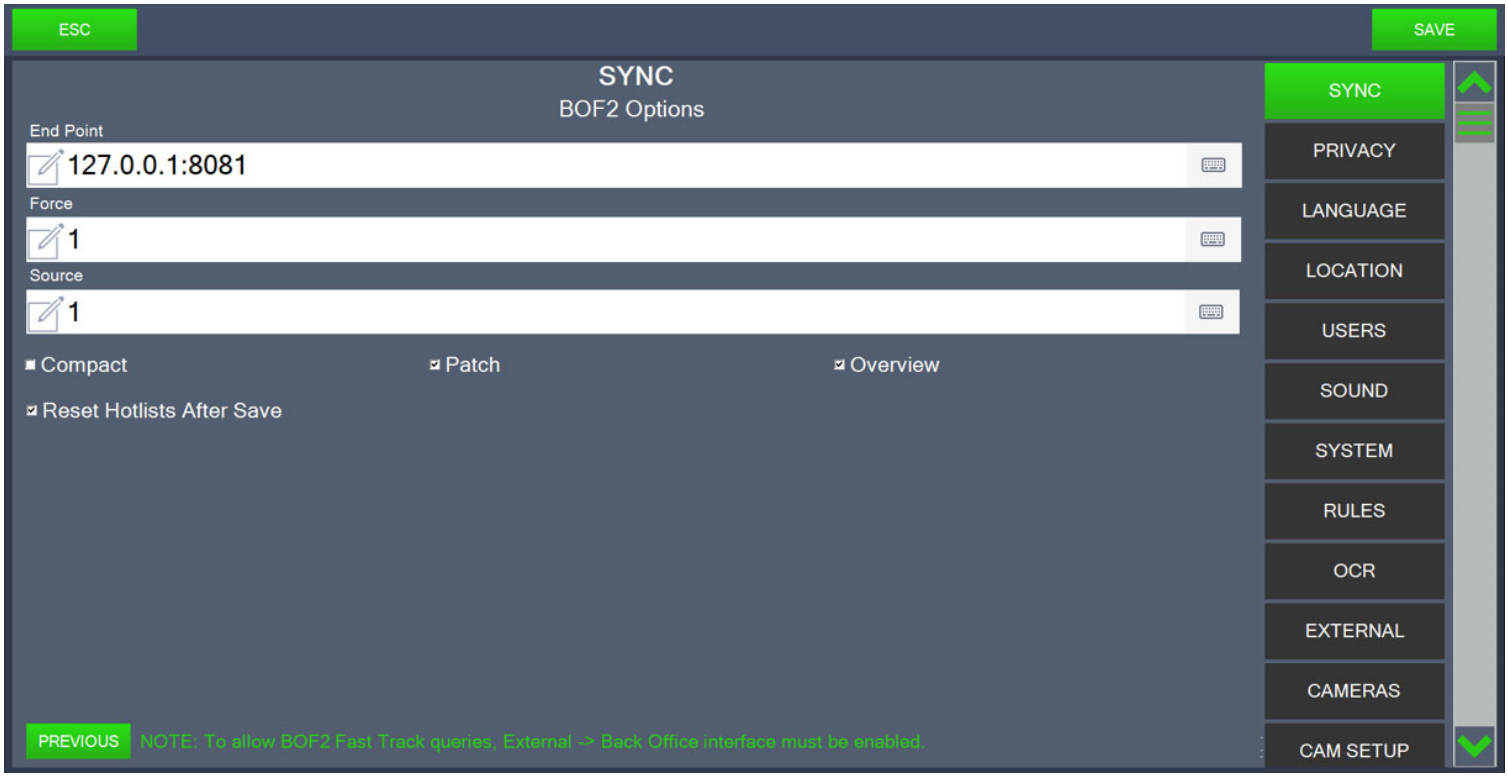
- **Delete Beginshift Data on Sync**: The sync folder on the Flash Drive is deleted once all Begin Shift data has been imported to PAGIS. This is on by default to help prevent false alerts.
- **Encrypt Endshift Data**: All uploaded End Shift data created in PAGIS is encrypted. This is off by default.
- **Copy Endshift Data on Sync**: If unchecked, no End Shift data will be transferred from PAGIS to the Drive location.
- **Keep Only Updated Databases**: Removes any Hotlists from PAGIS that were not updated during Begin Shift as "outdated". This is off by default.

Sync to Disk Setup:
In the text box, enter the drive path or letter to be used with Disk Sync. Folder name is not required as PAGIS creates the required folder(s). Once entered, select the desired options and then click the Previous button. Click Save to retain the settings.

3.1.1.2 Synchronization with BOSS

Sync to BOSS is a streamlined method for updating ALPR data to the field units and the server. Additionally, selecting this option enables the PAGIS auto-sync features that synchronize data throughout the shift without user involvement. However, this does require a stable data connection as well as some network configuration before it can be utilized.

Sync to BOSS Screen:



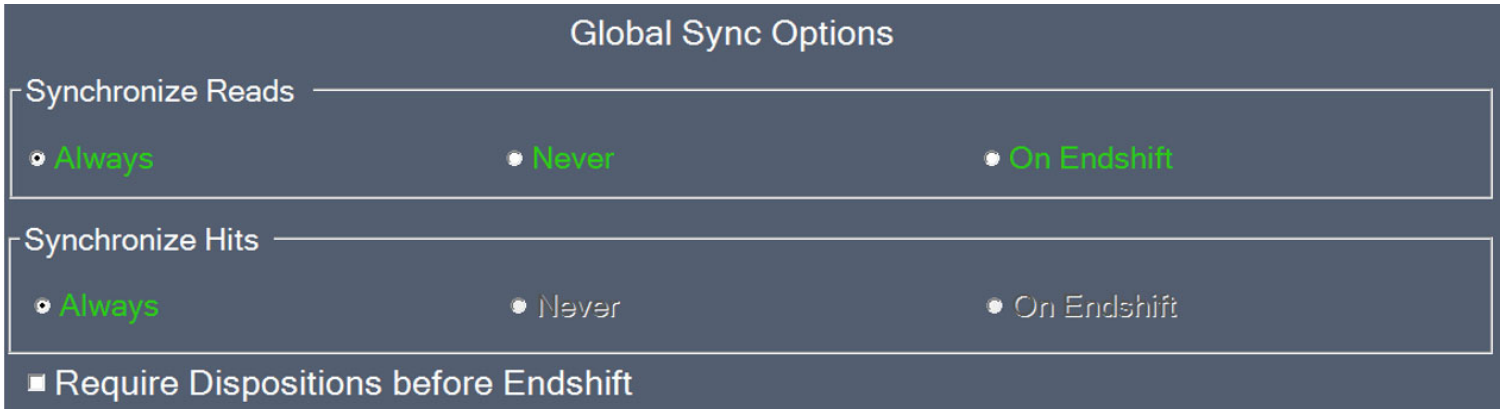
- **Primary IP**: The IP address of the BOSS server. This can also be the DNS name (**NOTE**: using DNS adds an additional failure point via the Domain Controllers and is not recommended as the best option).
- **Secondary IP**: Used for a secondary IP in cases where users switch from a cellular network to a Domain APN thus routing to BOSS from either an internal or external IP. This field can be left blank or with the primary IP as well.
- **Encrypt Transfers**: When enabled, data transfers to BOSS will be encrypted.
- **Synchronize Endshift Data**: On by default, this enables PAGIS to sync to BOSS when End Shift is performed by the user.

Sync to BOSS Prerequisites:
To establish the wireless sync to BOSS, the Agency Network Administrator will need to open TCP 8092 to the BOSS server as well as define the internal and/or external IP address(es).

Sync to BOSS Setup:
From the Sync Settings Menu, the Admin must select the BOSS option and click the Next button. Then s/he will update the Primary and Secondary IP fields as necessary and de/select any options. Once configured, click the Previous button and then click Save to retain the changes. (For more information on PAGIS Auto-Sync settings, refer to section 2.4.3)
NOTE: After synchronizing to BOSS, data is flagged in the database to prevent duplicate values on future synchronizations.

3.1.1.3 Sync to "Instation" (Formerly BOF2 and BOF3)

The Instation software was formerly known as BOF2 & BOF3 and was developed by Anite PLC. It is a web-based Back Office software suite used in European markets to provide similar features as the PIPS BOSS server and UI Client.
NOTE: These options are NOT used in the Domestic United States.

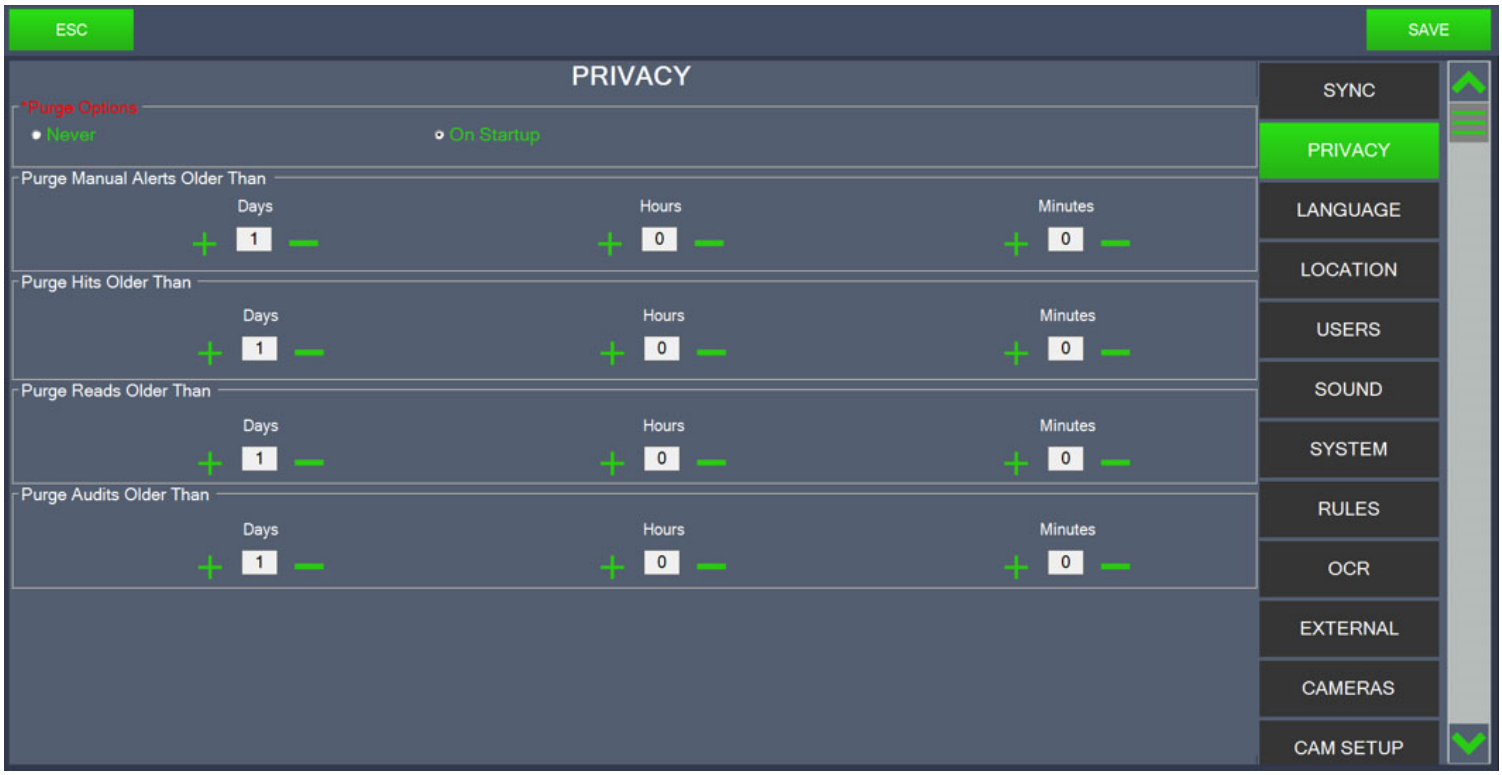


- **End Point**: The IP Address of the Instaion website. Format must be [IP Address:Port]
- **Force/Source**: Unique codes assigned to each police force.
- **Compact**: This option minimizes data transfer to Instation. Images will be deselected by default when in use.
- **Patch**: Refers to the image of the plate pulled from the read. This is on by default.
- **Overview**: Refers to the color overlay image from the read. This is on by default.
- **Reset Hotlists After Save**: When the software syncs to Instation, this will reset the hotlist tracking.

3.1.2 Global Sync Options

4192

Global Sync settings control how PAGIS synchronizes ALPR data during Begin and End Shift cycles and applies to both manually launched synchronizations as well as Auto-Sync functions. The two sections are Synchronize Reads and Synchronize Hits.



NOTE: All Hits are Reads, but not all Reads are Hits. A "hit" is a read that coincides with an Alert List. Due to this, the Options selected in the "Synchronize Reads" section dictate what options are available in the "Synchronize Hits" section. Unavailable options are greyed out.

- **Always**: Reads and Hits are synchronized to BOSS as close to real-time as the data network and PC processing allow.
- **Never:** The information gathered during the shift will be "sanitized" with each launch of End Shift. The corresponding data and images will NOT be sent to the BOSS server.
- **On End Shift**: Synchronization to BOSS will only occur when the user manually launches End Shift.
- **Require Dispositions before Endshift**: Requires the user to select a disposition code for each Hit registered in the PAGIS software since the last End Shift was completed before the Synchronization is processed.

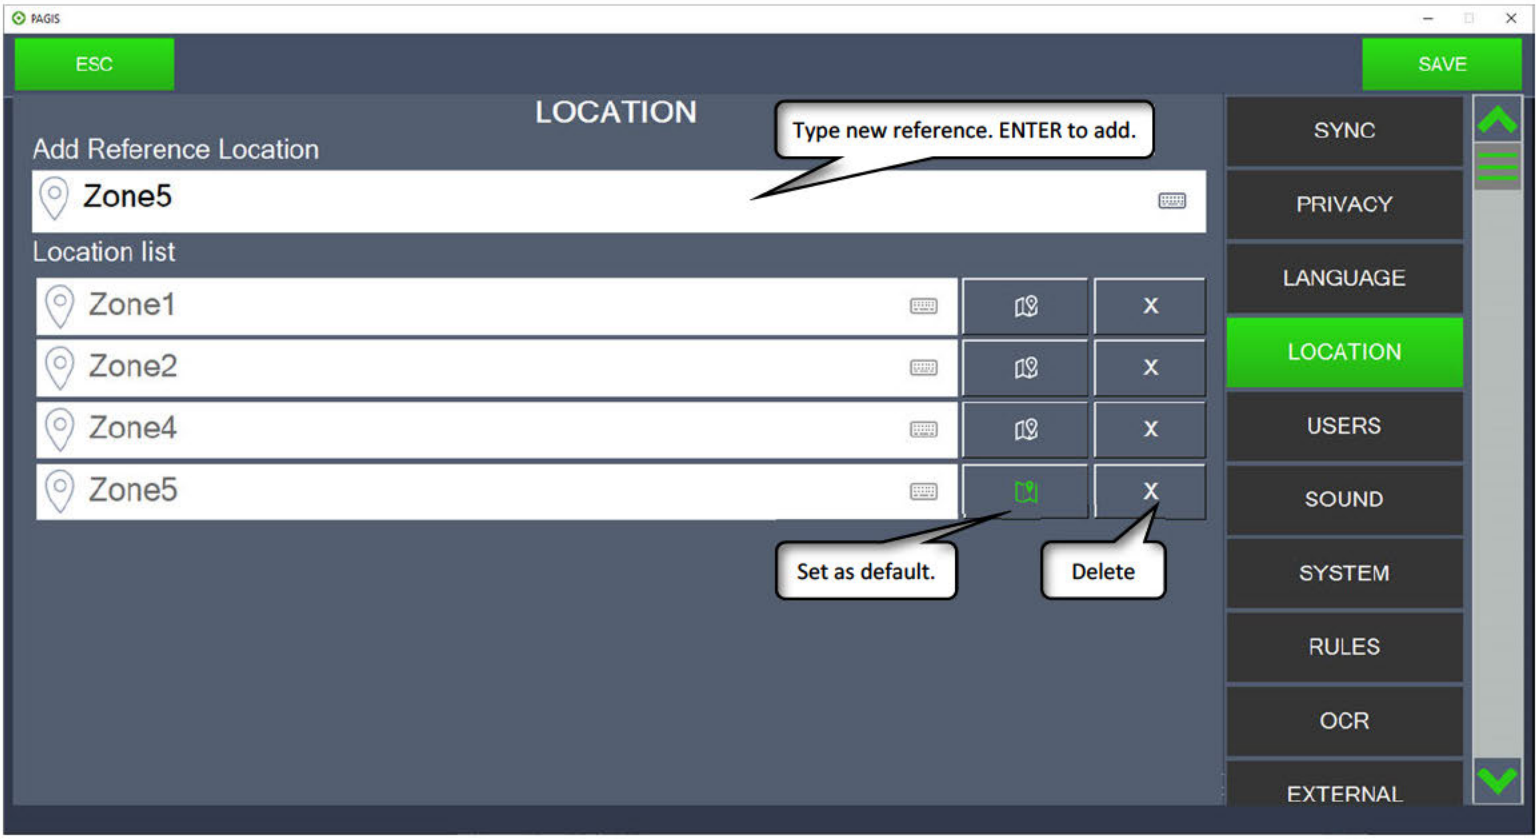
3.2 PAGIS Privacy Settings (Local Data Retention)

4193

Although most commonly configured in BOSS, the PAGIS Software allows the Admin to configure the data retention settings for the local endpoint by minutes, hours, or days. This feature ensures the data captured/stored on the MDC is sanitized by the software itself (this is important for customers without BOSS). **NOTE**: To enable the Privacy settings, the Admin must select the "On Startup" purge option and then set at least one value in each row. Rows left with all Zero will not be sanitized or purged.

- **Never**: Selected by default, this option disables the PAGIS privacy settings and uses only those set in BOSS.
- **On Startup**: This option must be selected in order to enable the PAGIS privacy settings. Once enabled, PAGIS looks to purge/sanitize the system each time it's launched or restarted.
- **Purge Manual Alerts Older Than**: Controls how frequently all of the Databases/Hotlists in PAGIS are purged. The purge rate is calculated from the timestamp of the Hotlist. Once the retention value is surpassed, the Hotlist is deleted. Hotlists distributed from BOSS will be re-downloaded on the next Sync.
- **Purge Hits Older Than**: Controls how frequently all Hits in PAGIS are purged. The purge rate is calculated from the timestamp of read. Once the retention value is surpassed, the Hit is removed the next time PAGIS is restarted.
- **Purge Reads Older Than**: Controls how frequently all Reads in PAGIS are purged. The purge rate is calculated from the timestamp of read. Once the retention value is surpassed, the Read is removed the next time PAGIS is restarted.
- **Purge Audits Older Than**: Controls how frequently all Audits in PAGIS are purged. The purge rate is calculated from the timestamp of audit. Once the retention value is surpassed, the audit is removed the next time PAGIS is restarted.

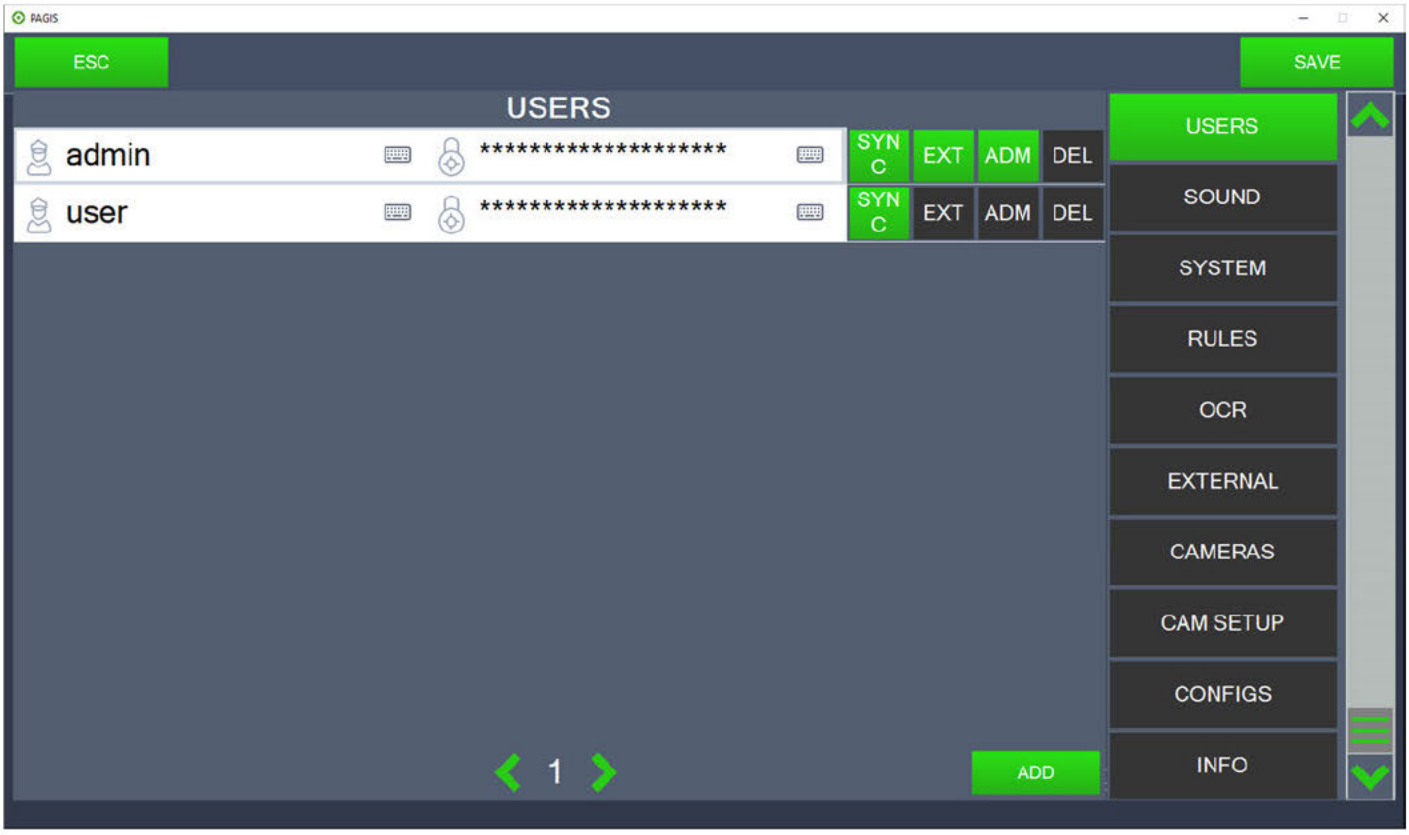
NOTE: Once the hits, reads, databases, or audits have been purged, they can no loner be viewed in the PAGIS software.



3.3 Language

4194

The Language screen allows the Admin to change the language assignment used in the PAGIS Software. Available languages are listed in the drop-down list and are added during the installation process.



3.4 Location

Updates to the location field will auto-fill the “Reference” section of the PAGIS Login Screen. These are often used to specify a patrol region (Examples: “North Patrol” or “A2”). Once designated all reads/hits will show this designation. Muiltiple “Referance” location can be added, the available list can then be selected from the login screen.

3.5 Users

User accounts, credentials, and rights are generally administered from BOSS and then distributed to the MDC. However, PAGIS does allow for Administrators to add and delete users as well as set their privileges directly from PAGIS.

NOTE: Adding user directly in PAGIS should be limited to customers not utilizing a BOSS server. User accounts created directly in PAGIS by customers with BOSS will be overwritten/removed during the next sync.

Adding a User in PAGIS:

1. From the Admin Screen, select the Users Button on the Right
2. Click the Add Button ADD
3. Enter the case sensitive username in the Username Field (max of 15 alphanumeric characters)
4. Enter the case sensitive password in the Password Field (max of 15 alphanumeric characters)
5. Select the User's privileges
6. Click the Save Button SAVE

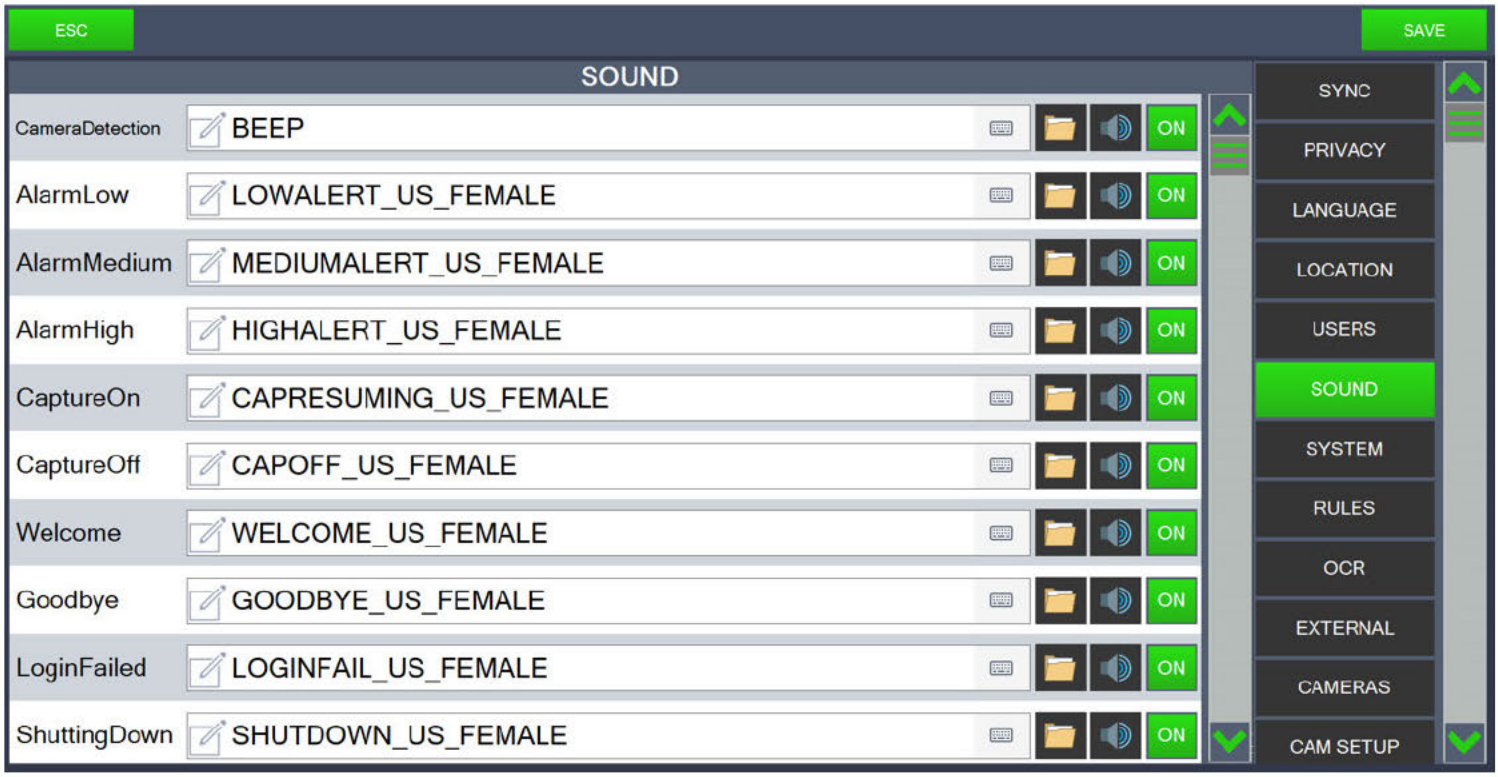
3.5.1 User Privileges

These are the "rights" the new user will have in the PAGIS software (When selected, each button turns green).

SYNC — **Sync:** Allows users to synchronize data.

EXT — **External**: Allows the user to access external databases.

ADM — **Admin**: Provides the user Admin rights and allows him/her to configure the PAGIS Software.



DEL — **Delete**: Allows the Admin to delete a User from the list. Click once to select and the save button to delete.

NOTE: Creating a new user in PAGIS automatically deactivates the default user account settings (Section 2.1.1).

3.6 Sound

4196

Sounds in PAGIS mirror the user or software activity (Ex. Login, Audible alert from a "Hit", and Logout) and are On by default. PAGIS Administrators can adjust the sounds from the available presets and/or load unique .wav files onto each MDC for custom use. **NOTE**: The default storage path is C:\Program Files (x86)\PIPS Technology, Inc\PAGIS2\sounds

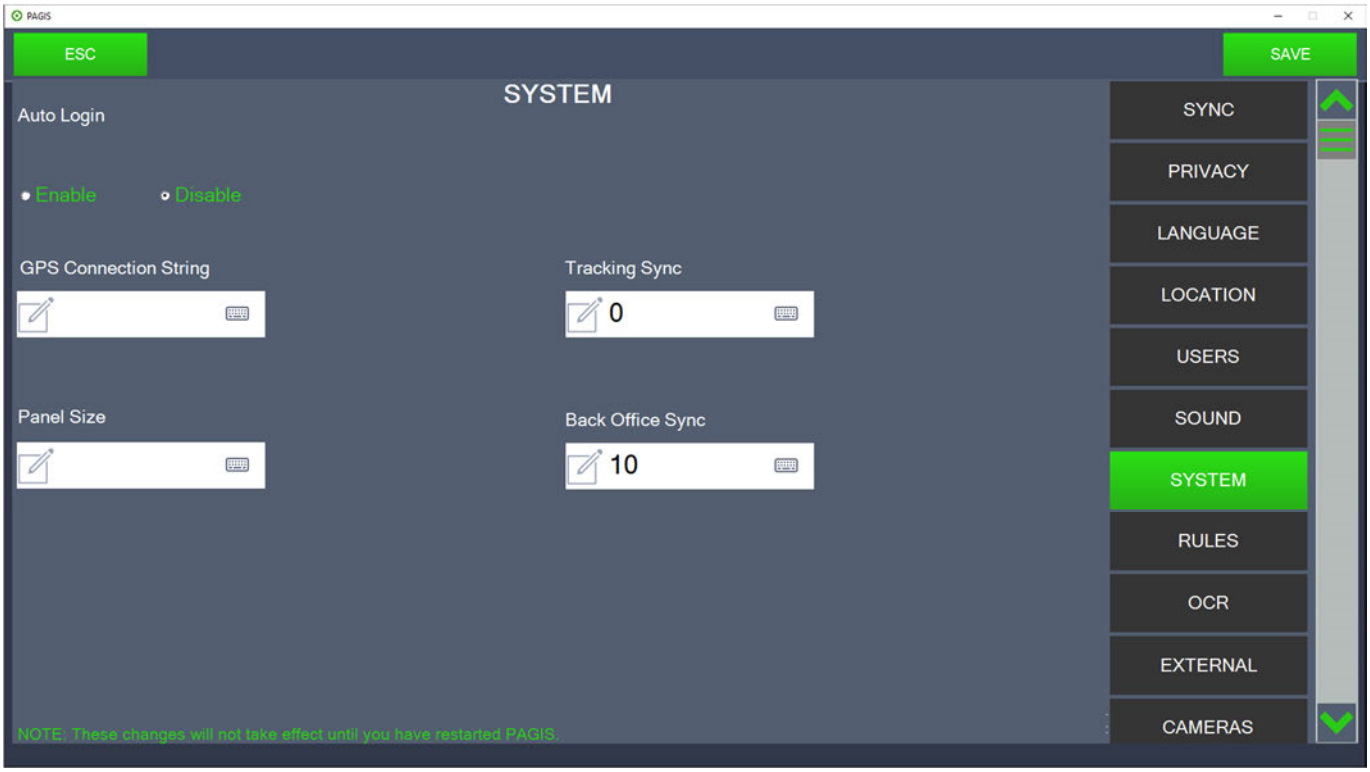
3.6.1 Configuration Buttons

The sounds listed on the configuration screen can be altered or updated by PAGIS administrators using the buttons below. **NOTE**: Changes to any sounds must be saved before they can be played in PAGIS.

Click to browse to the sounds folder. This is used to select a new sound file.

Click to Test/Play the selected sound.

Shows the status of that sound. Click to turn each sound Off.

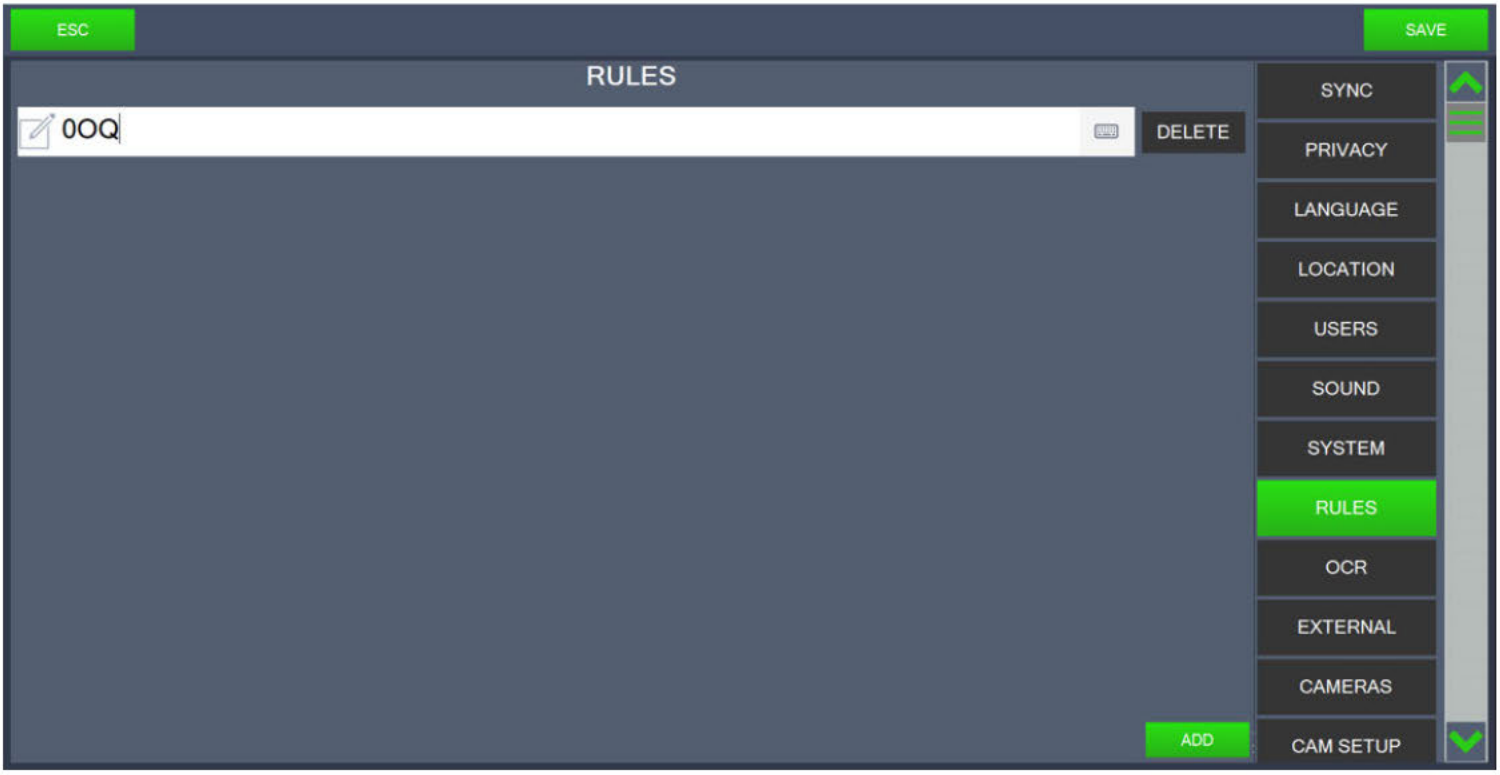


Shows the status of that sound. Click to turn each sound On.

3.7 System

4197

The System screen determines external system connections. The primary external connection is the GPS antenna. The GPS connection string will accept TCP/IP ports or COM port designations. This section also contains control of the PAGIS "Auto Login" feature (which is set to Off by default).



- **Auto Login**: Enabling this feature will ignore existing user account information and login to PAGIS as the Admin. This feature is recommended only for unattended use (Speed-Trailer applications and Covert Drop and Go deployments).
- **GPS Connection String**: This value is utilized by PAGIS to acquire the GPS feed from its source. The default is traditionally either blank (no entry) or 6.
- **Tracking Sync**: Controls the sync intervals in (Sec.) that PAGIS communicates with BOSS4 to update tracking status. Default off=Zero, values can range from 1-9999. BOSS4 Back Office Software requiered for this feature.
- **Panel Size**: Controls the resolution of the color image displayed on the Live View Screen. By default this is blank as PAGIS controls the aspect ratio. However a PAGIS Admin can assign custom resolutions in WxL format (720x1024) to assist with non-standard dispalys.
- **Back Office Sync**: This setting controls the sync timing that PAGIS sends data back to BOSS3/BOSS4, Timing is in (Sec.), default is 10sec, values can range from 0-9999.

NOTE: All changes must be saved and will not take effect until PAGIS is restarted.

3.8 Rules

Rules in PAGIS allow Administrators to force the software to process plate reads in specific ways. For example, in states that allow for both O and 0 (zero) on their license plates, a rule can be set to read any zero as an O and any O as a zero. This provides PAGIS greater flexibility to the standard OCR functions.

Adding a Rule to PAGIS:

1. Click the Add Button ADD
2. Enter the desired alphanumeric characters (Ex. 0 and O) into the text field
3. Click the Save Button SAVE at the top right of the screen

Deleting a Rule:

1. Locate the rule to be removed from PAGIS
2. Click the Delete Button DELETE to the right of the rule (It will turn green when selected)
3. Click the Save Button to complete the removal

3.8.1 Rules – Additional Clarifications

1. Rules are processed based on the first character entered. So in order to read any O as a zero, the Admin will need to add rule "O0". And in order to read any zero as an O, a second rule must be entered as "0O".
2. Rules are NOT designed to overhaul OCR function. Any consistently misread values should first be brought the attention of PIPS Support for review. And only those cases where further adjustments to the OCR software are impossible would rules be recommended.
3. Adding rules to PAGIS will make it less likely to miss a Hit Alert. However, it will increase the number of Hit Notifications that require the Officer to visually confirm the OCR read ("IR Patch") and the Hotlist Alert match.

3.9 OCR

The OCR Section in PAGIS provides Administrators some additional options on how they would like PAGIS to process plate reads.

- **JPEG Images**: On by default, this forces PAGIS to use compressed .JPG images instead of the full resolution Bitmap images each time a read is taken. This settings minimizes data storage requirements and preserves MDC drive space.
- **Inverse Plates**: Off by default, this setting is only used in States where plates with light color lettering over a dark background are prevalent. Enabling this option increases processing load and should remian disabled unless required.
- **Square Plates**: Off by default, this setting adjusts the read area plates that are square instead of retangular.
- **Disable Duplicate Read**: On by default, this setting helps PAGIS prevent duplicate plate reads. If a VLP is read by more than one camera within a short period, the duplicate read is ignored. This minimizes data storage requirements and improves overall system metrics related to numbers of Hits and Reads.

NOTE: Once changes are made, the Admin must click the Save Button SAVE button in the upper right corner to retain them.

3.10 External

The External Screen allows the Admin to connect PAGIS to an external database or device via XML Datastream. This feature is Off by default and any changes must be saved before they will be available.

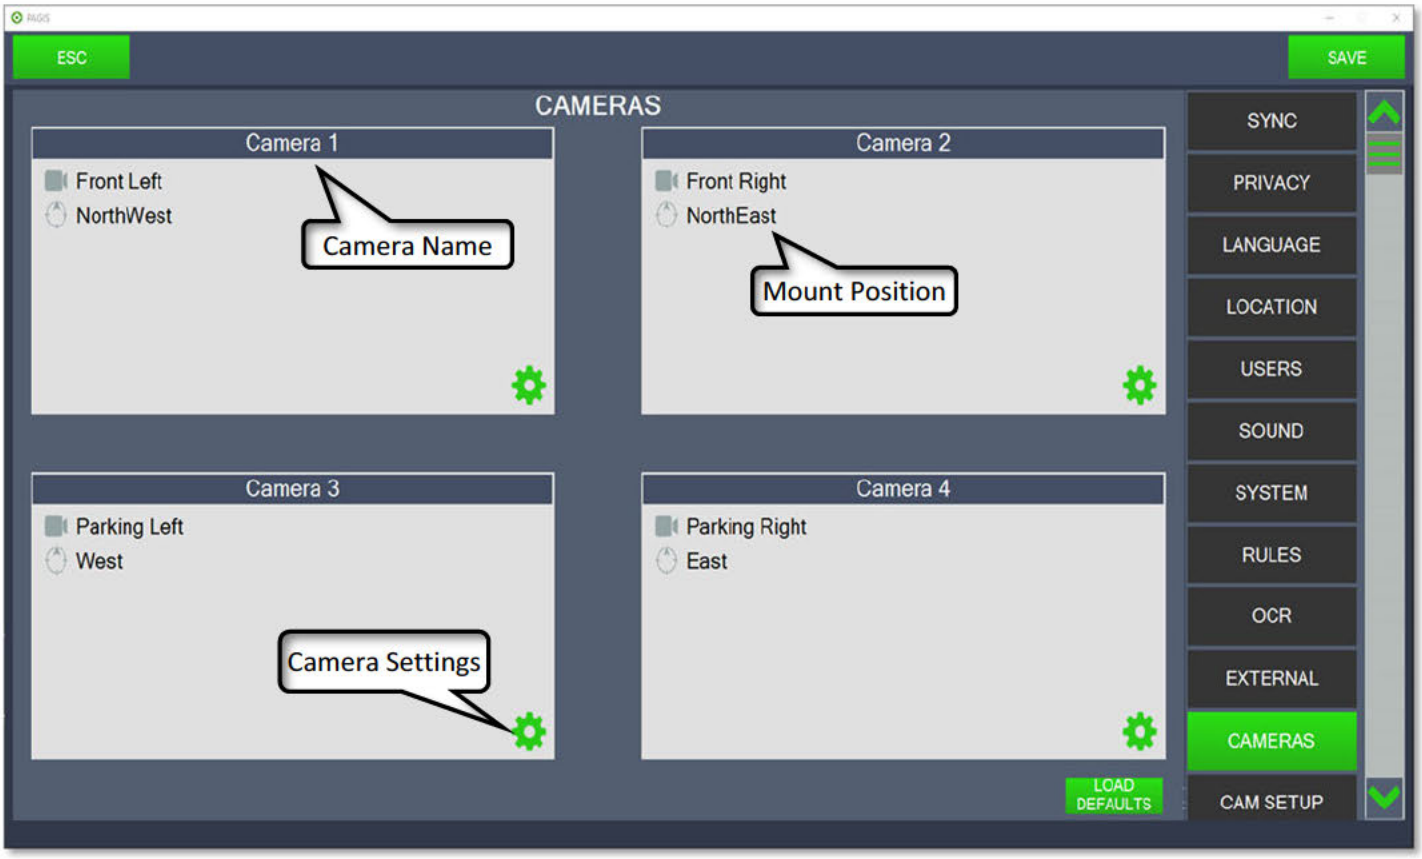
Enabling the Datastream:

1. Click the Off Button OFF to toggle to On ON
2. Click the Save button in the upper right corner
3. Close and reopen PAGIS

NOTE: Enabling this feature will reduce the overall performance of the PAGIS Software.

3.10.1 XML Datastream Ports

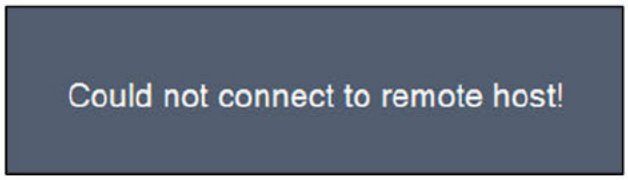
Administrators will need to configure their external device or database to utilize two specific TCP ports:



1. Query Port: TCP 7000
2. XML Datastream/Heartbeat: TCP 10100

NOTE: Greater detail on the XML Datastream can be found in Appendix D

3.11 Cameras



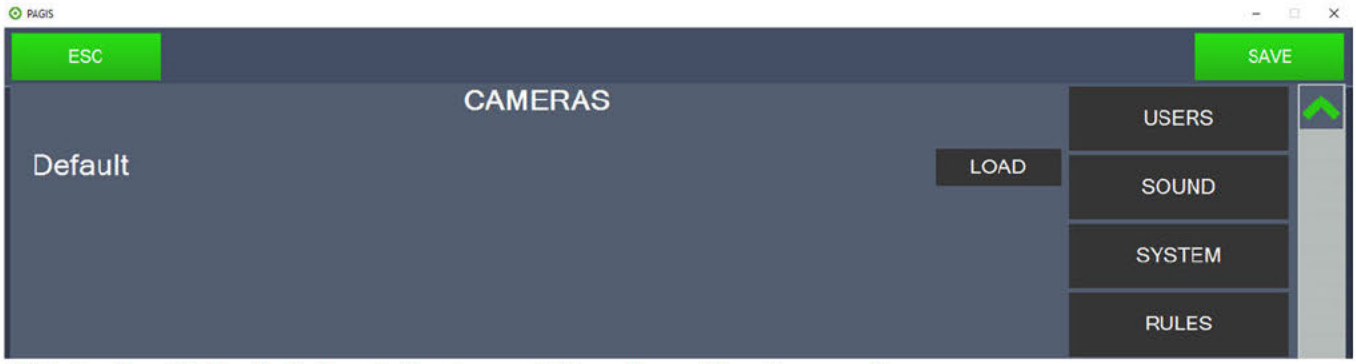
The Cameras Section provides the Administrator the means to add/delete, identify, and configure the ALPR cameras. Although the PAGIS Software comes preloaded with a default layout, best practices advise the Admin to fully review, and completely configure at least one MDC by hand in order to tailor the setup for the Agency's unique attributes.

IMPORTANT: The configuration steps completed here will dictate the available camera mode options in the Configs Section.

3.11.1 Checking the Connection

In order to configure the cameras, the PAGIS Software and the SX Processor (Black Box) must be able to communicate. If they cannot, the Administrator will receive the error message below as soon as he or she clicks on the Cameras Button CAMERAS indicating that PAGIS cannot "see" the cameras.

3.11.2 Troubleshooting Camera Connections

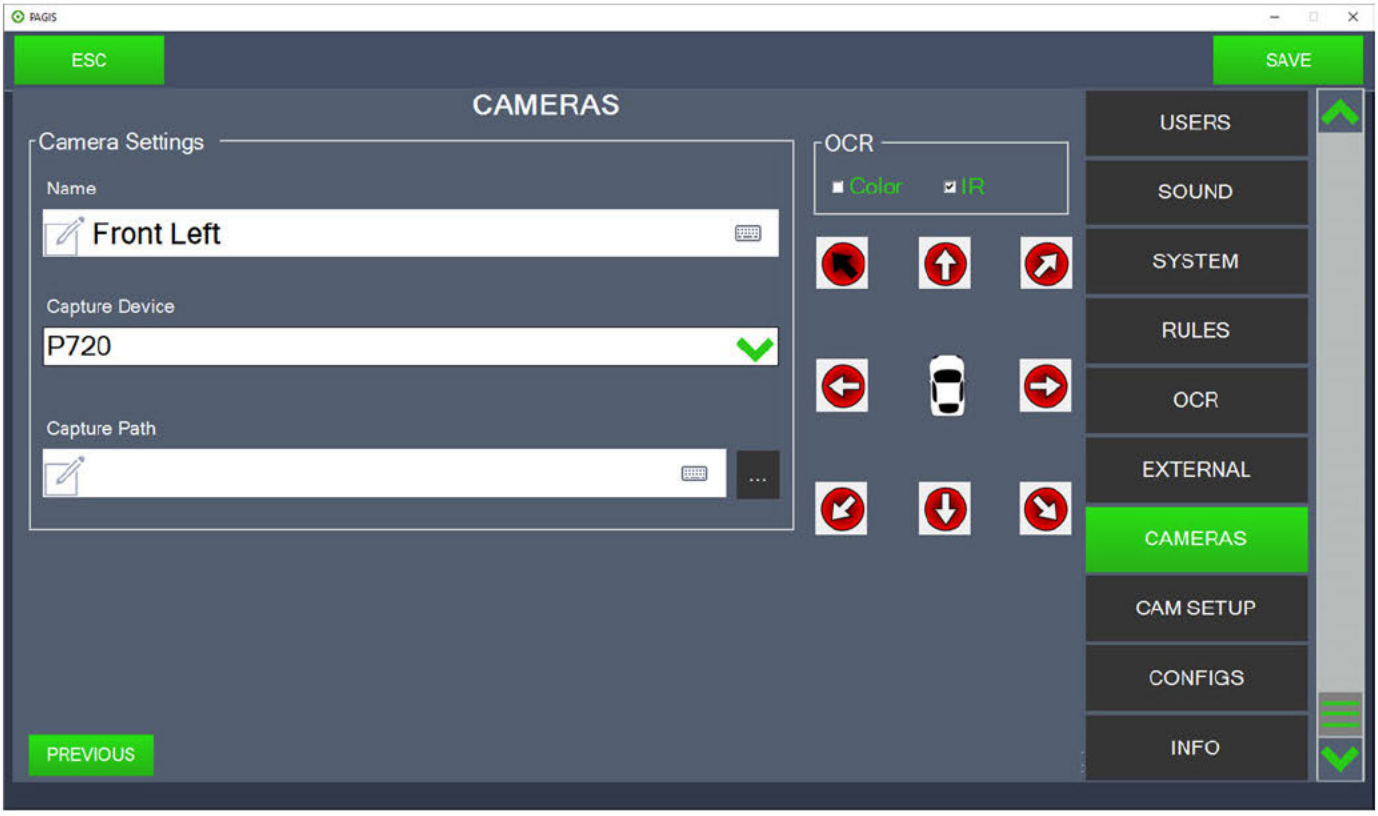


The most common troubleshooting steps have been included below for convenience. If these don't resovle the issue, please contact PIPS Support for additional assistance. **NOTE**: For more information see Appendix C – The Mobile FAQ

1. Start the vehicle and confirm power to the Processor. Confirm the SX switch, and any added in-line switch, is set to On.
2. Confirm the network adapter settings on the laptop match the proper Static IP scheme for the SX Processor in use.
3. Disable the local Windows Firewall, VPN software, and any real-time monitoring software one at a time.
4. Use a different network cable ensuring it's properly seating in NIC port on the SX as well as the MDC or Docking Station.
5. Docking Stations can also impede communication. Test by removing the laptop from thhe dock, directly connect the network cord to the laptop, and then reconfigure the network adapter settings as needed.

3.11.3 Configuring the Cameras in PAGIS

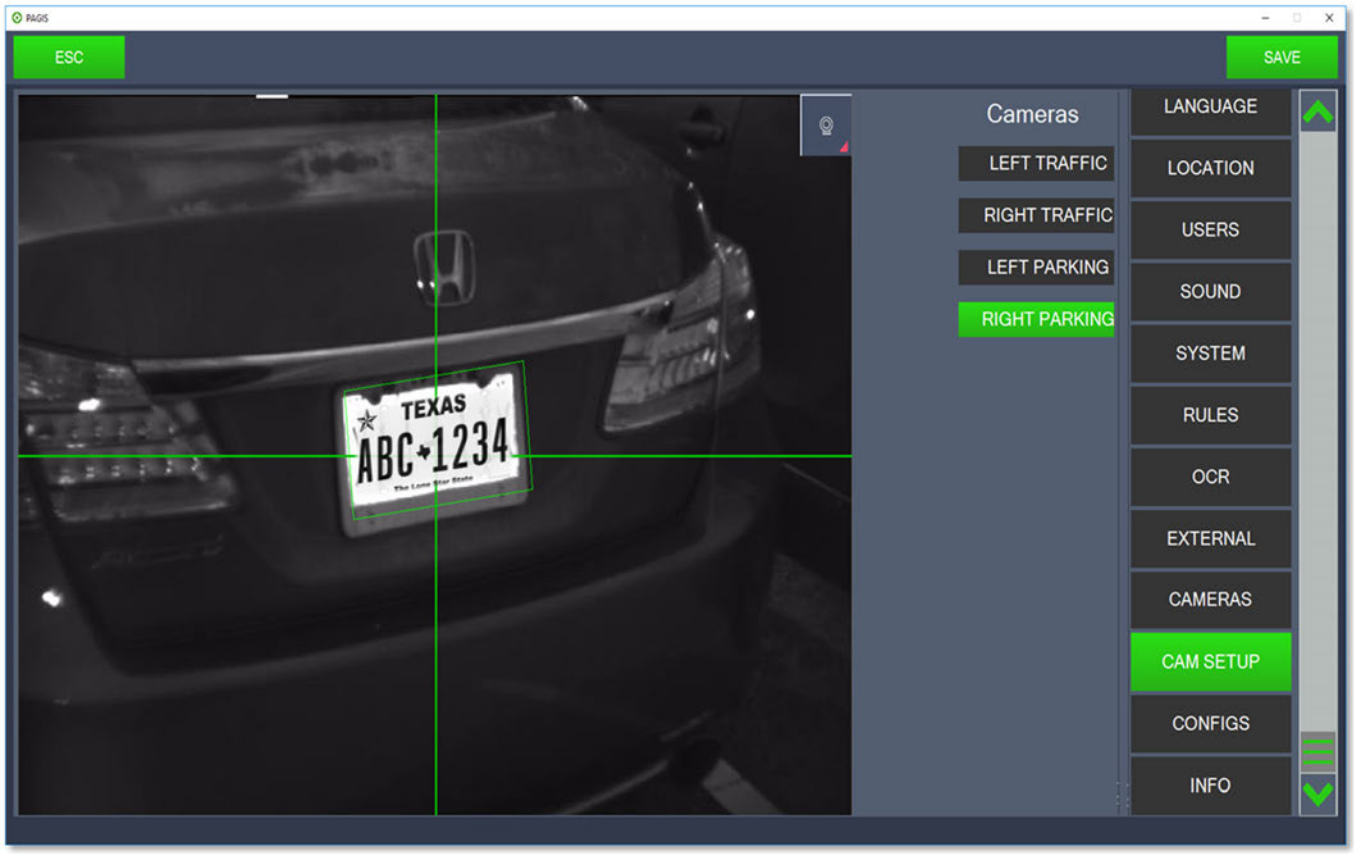
This section will assist with the general configuration of the cameras. Administrators can begin by selecting the Settings Icon to edit each of the existing cameras or by selecting the Load Defaults Button LOAD DEFAULTS. This manual will start with Load Defaults.



Gettings Started – Load Defaults:

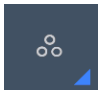
1. Click the Load Defaults Button in the lower right portion of the Cameras Screen
2. Locate "Default" and click the Load Button LOAD
3. Once it's selected (and turned Green), click the Save Button (This returns the Admin to the Cameras Screen)
4. Click the Settings Icon to inspect and configure each camera one at a time

The Camera Settings (Edit) Screen:



This provides the Admin a single screen to edit the name, confirm the capture device, assign camera position, and confirm OCR.

1. Confirm/Update the Camera Name **NOTE**: Use Camera Names with 11 characters or less to avoid various UI anomalies
2. Confirm the "Capture Device" field was auto-detected. If not, use the drop down to select the only Pxxx value on the list
3. Leave "Capture Path" blank (This is an optional field)
4. Select the camera mount position indicating the direction the camera is facing. The arrows turn black when selected
5. Ensure the OCR is set to IR. The color camera is used for OCR in only rare situations and will increase system load as well as the likelihood of false alerts. Use this setting with caution
6. Click the Save Button to retain the changes



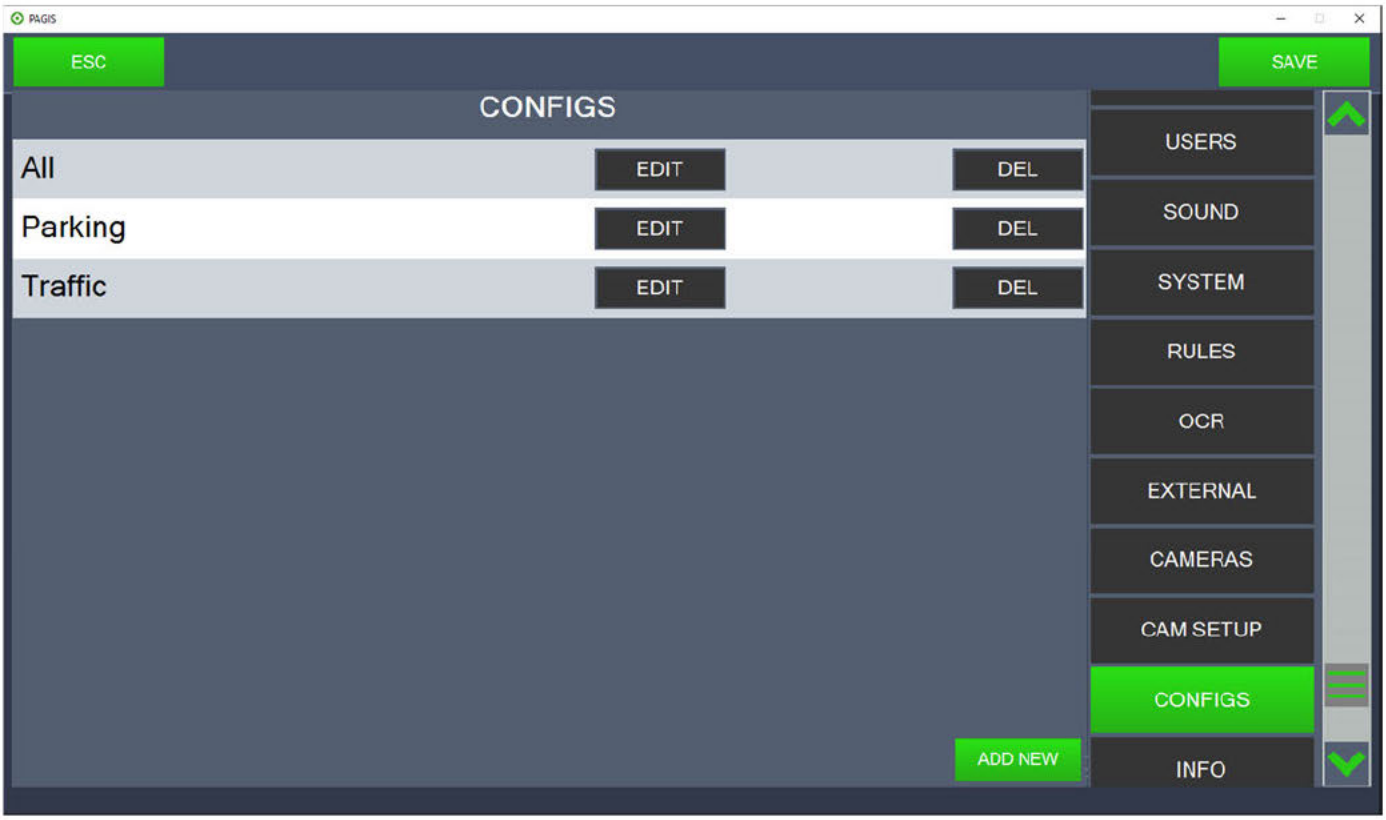
3.12 Cam Setup

The Cam Setup Screen presents Administrators with a live preview of the configured cameras. This section also allows the Admin to switch view modes from Color to IR to ensure the system is functioning properly. **NOTE**: This screen can also be utilized as a means to align newly mounted cameras when RDP access to the SX Processor is limited or unknown.

3.12.1 Cam Setup Navigation Buttons

The Admin may view the output of each camera by clicking on the camera name. When a camera is selected, the button will turn green to indicate it has been selected. In order to switch view modes, the Admin must use the following buttons:

Color View: The Color View Mode is the default view when the Admin first enters Cam Setup. This displays a live preview of the color camera.



IR View: By clicking on the Camera View Selector button, the Admin will switch to the Infrared (IR) View Mode. This displays a live preview of the IR camera.

NOTE: Unlike the main Live View Screen, the camera feed shown on the Cam Setup page will not time out when in use. This feature makes it easier for the Administrator to review and align the mobile cameras.

3.13 Configs (Camera View Modes)

The Configs Screen allows the Admin to construct how the cameras will be displayed on the Live View Screen for the user. This section also allows agencies to create multiple viewing configurations to meet specific environmental needs or to add greater functionality to the software. By default, the Configs layout provides the agency with three camera modes, “ALL”, “Traffic” and “Parking”. All mode dipalys the front two cameras and rear two are activated, Traffic mode only displays the front two cameras and rear cameras are off, Parking mode only displays rear two cameras and front cameras are off.

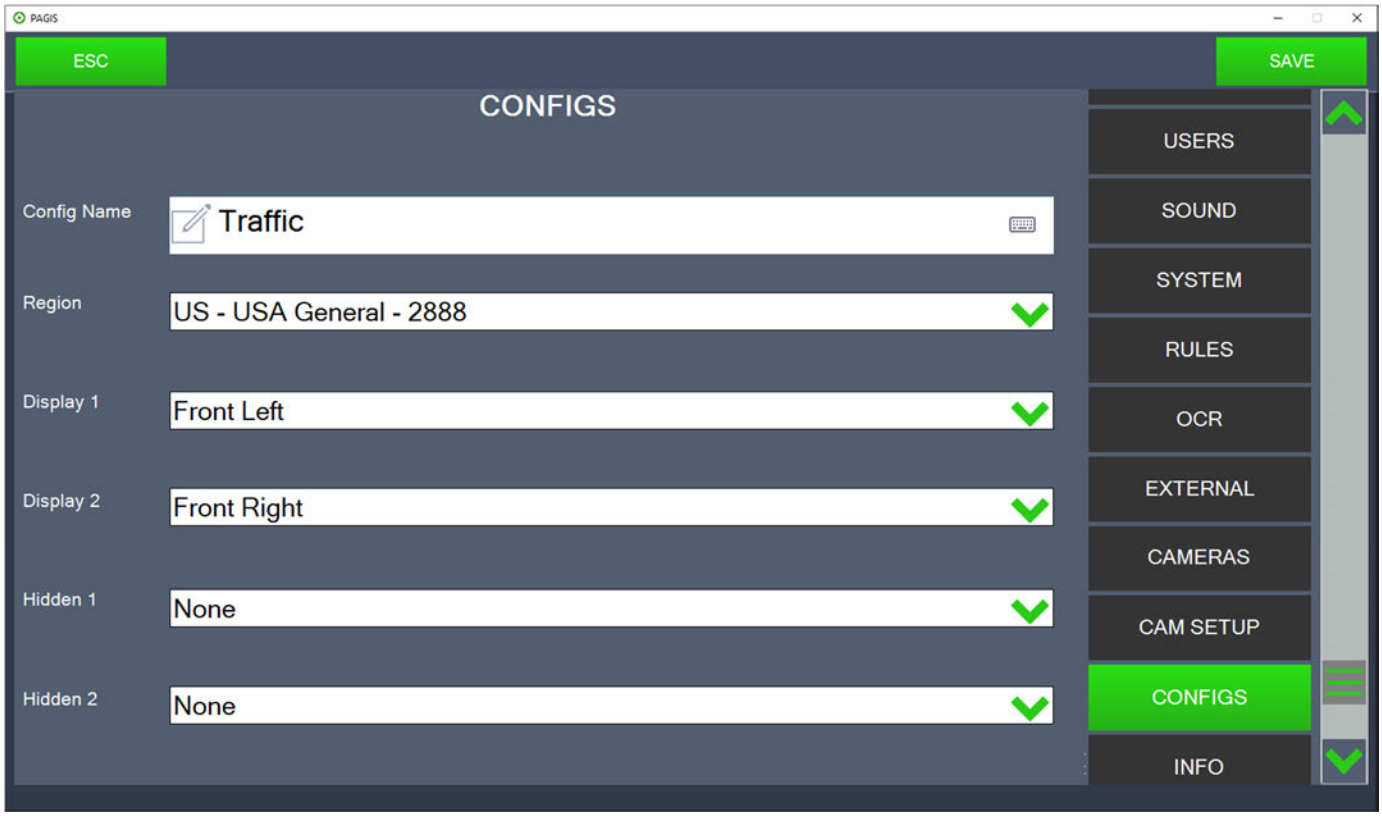
3.13.1 Configs Navigation Buttons

To properly configure the camera modes used in PAGIS, the Admin will navigate this section with the following:

To delete a config/camera mode, click the DEL button to select it (turns Green) and then click Save

To review, edit, or modify a camera mode, click the EDIT button

To preserve changes or finalize a deletion, click the SAVE button

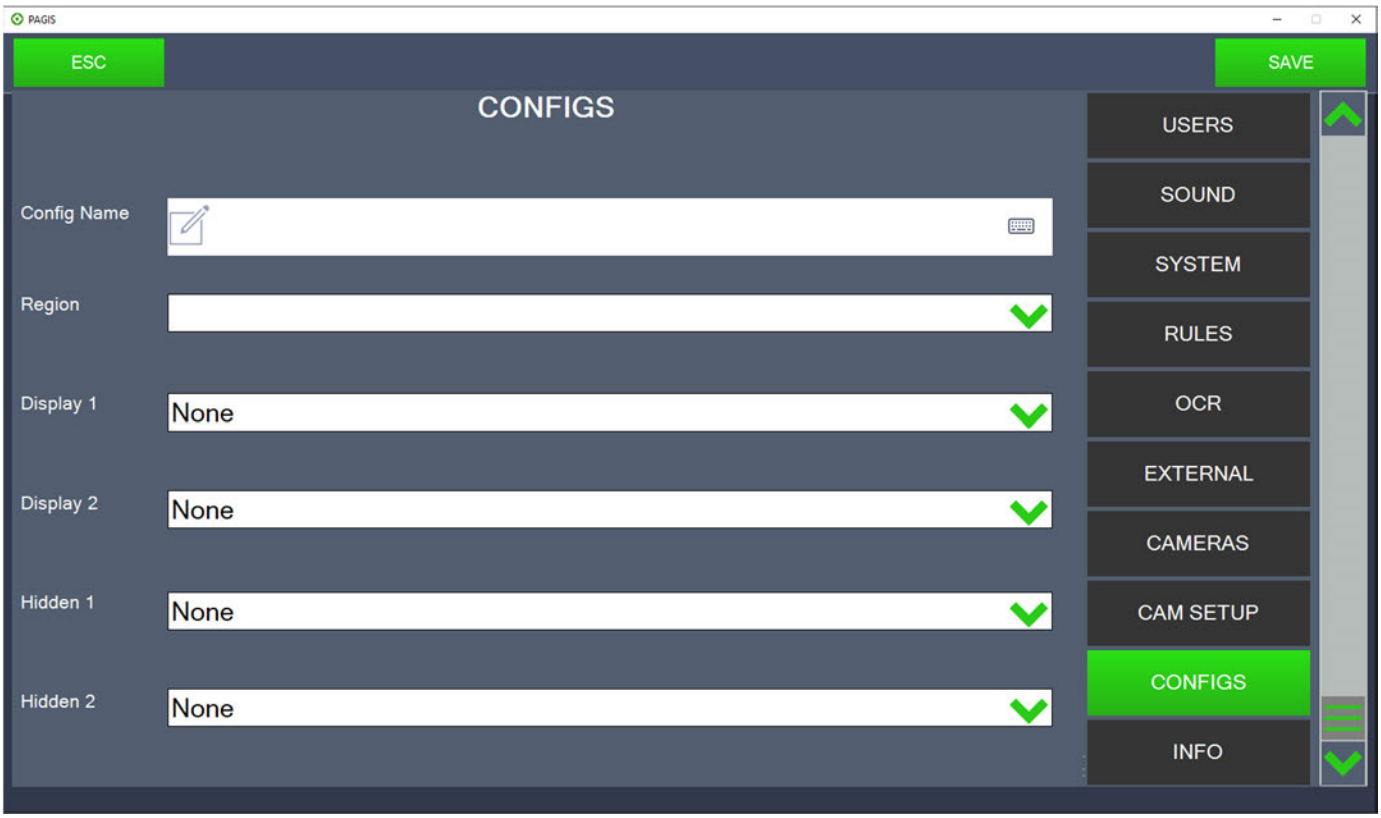


To add a new camera mode, click the ADD NEW button

NOTE: The number of Configs equals the number of Camera Modes available to the user from the Live View Screen. Each camera mode untilizes the Config name established in this section. Users cycle through the modes on the Live View Screen by clicking the Mode Selection Button in the upper left corner.

3.13.2 Reviewing and Modifying Existing Modes

When getting started, most Administrators will begin by simply modifying the existing camera modes or “configs”. The following example will demonstrate the standard configuration of a four-camera mobile unit.



1. Click the EDIT Button EDIT from the main Configs Screen to modify a mode
2. Review/Update the name of the Mode **NOTE**: The name should be intuitive for all users as this becomes the label of the mode selection button on the Live View Screen
3. Click the drop down arrow on the Region field to select the best local option (Adds additional accuracy to OCR)
4. Confirm the camera listed in the Display 1 field. This camera will be displayed on the left side of the Live View Screen
5. Confirm the camera listed in the Display 2 field. This camera will be displayed on the right side of the Live View Screen
6. Confirm the Hidden 1 field shows one of the other cameras not listed in the Display fields
7. Confirm the Hidden 2 field shows the last available camera not yet listed (Leave field as “NONE” for 3-cam systems)
8. Click the Save button to retain the changes
9. Click the Configs Button from the menu to access the other Mode(s)
10. Perform steps 1-8 for all Configs/Camera Modes available

NOTE: Cameras listed in the Hidden fields will function, perform OCR, and capture plate reads, but they will not be displayed to the user while in the named camera mode (unless a Hit is detected opening the Alert Screen). For ALPR units with more than two cameras, best practices dictate the Admin utilize these fields.

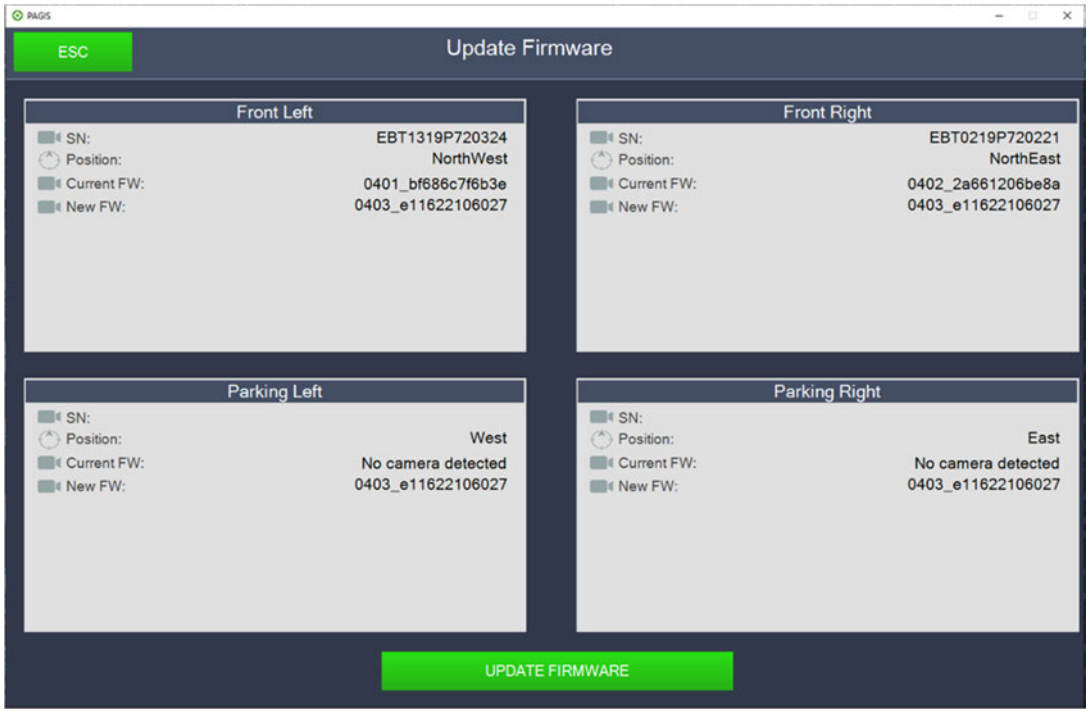
3.13.3 Adding a New Camera Mode

When the two default modes provided in the PAGIS software do not offer the agency all the functionality desired, the Administrator can use the Configs Screen to add additional camera modes. For example, if officers request a mode to view only the cameras on the left side of the vehicle while stopped on the side of the road, the PAGIS Adminstrator can build that functionality from this screen.

1. Enter a name for the new Mode (Ex. “Left Side”)
2. Click the drop down arrow on the Region field to select the best local option (Adds additional accuracy to OCR)
3. Confirm the camera listed in the Display 1 field. This camera will be displayed on the left side of the Live View Screen
4. Confirm the camera listed in the Display 2 field. This camera will be displayed on the right side of the Live View Screen
5. Confirm the Hidden 1 field shows one of the other cameras not listed in the Display fields
6. Confirm the Hidden 2 field shows the last available camera not yet listed (Leave field as “NONE” for 3-cam systems)
7. Click the Save button to retain the changes

3.14 Info

4207



The Info screen displays additional information including the version number of the current installation. This information is helpful when contacting Technical Support.

3.15 Camera Firmware Update, (Admin)

Camera firmware update provides a means for PIPS to update the camera software to enhance and or correct camera performance. The frimware icon  will only apper when a update is avialable.

- The firmware update process only updates camera that are attached and function on the mobile processor.
- Administrator must log into PAGIS and apply the FW update. The update process takes around 4min and should not be interrupted or risk permanently damaging the cameras, PAGIS will return to normal opertaion after update.
- Once the "UPDATE FIRMWARE" button is clicked PAGIS will switch to full gray screen with message indicating "Camera Firmware is Updating", during this process you'll will notice small command windows opening on top of PAGIS, these windows represent the firmware being applied to each active camera so you may notice one or server depending. Once completed a message will appear "Firmware Updated Successfully" then PAGIS will return to normal operation.
- After FW completion and return to "Live View", its requiered to cycle thought the "Cam Mods" to refresh cameras.

Firmware Updater Window List.

- Title "Camera Name".
- Camera serial number.
- Position.
- Current FW version.
- New FW version available.

4.1 PAGIS System Requirements

The PAGIS Software requires the following minimum system requirements for the mobile data computer:

- Intel I3 CPU at 2.0 GHz or higher.
- Windows Operating System (Win7-Win10).
- Microsoft .NET Framework 3.5.
- 8 GB of RAM.
- At least 1 GB of free disk space.
- SVGA display with a minimum resolution of 800 x 600 pixels.
- Available 10/100 Ethernet port.
- Keyboard and mouse, or a touch screen monitor.
- Internet access needed for mapping and Firmware update.

4.2 PAGIS Prerequisites

Prerequisites:

1. Ability to install software.
2. Ability to configure the network adapter.
3. PAGIS 2.12 and above are only compatible with SX4 and SX4e Processors.

Network Adapter Settings:

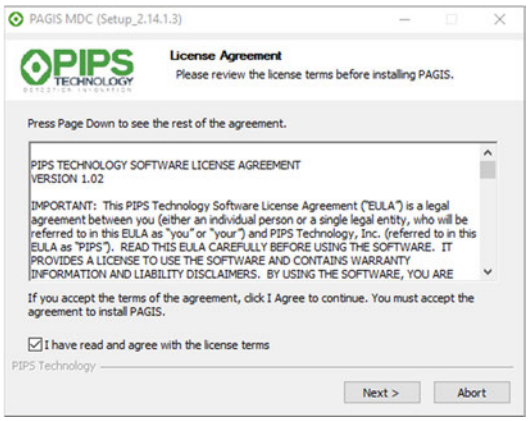
The PIPS mobile processor operates based on a static IP and is preassigned the IP address of 192.168.200.201. When connecting laptop/MDC to the PIPS mobile processor your computer must be on the same IP network as the mobile processor, in fact the connecting compute must adopt one octet lower than the assigned IP of the PIPS processor in order for MDC installed PAGIS to connect to the mobile processor and receive data from the ALPR cameras. Below are the steps to configure your computer.

1. Navigate to Adapter Options in Windows and right click on the adapter and select properties.
2. Click to select IPv4 and click Properties
3. Click the radio button “Use the following IP Address” to set the Static IP address.
4. Enter 192.168.200.200 in “IP address” section.
5. Enter 255.255.255.0 in “Subnet mask” section.
6. Either leave the “Default gateway” blank or enter 192.168.200.201.
7. Click OK to save changes.

NOTE: The Mobile processor is pre-configured to relay its camera data connection to the 192.168.200.200 IP address, using alternative IP’s on MDC/Laptop will result in the software’s failure to communicate with the cameras when using VPRelay mode.

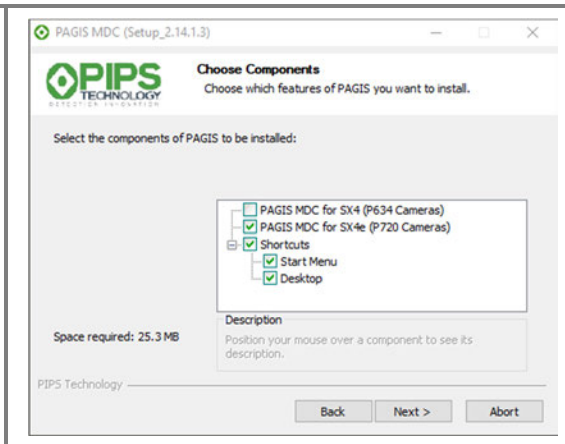
Alternative IP Network:

It is possible to configure the PIPS mobile processor to utilize a different IP network in conjunction with MDC/Laptop. Typical scenario would be when PIPS mobile processor and MDC/Laptop are connected through an onboard modem that has an Ethernet switch with available ports. Below are the general steps to changing IP network.

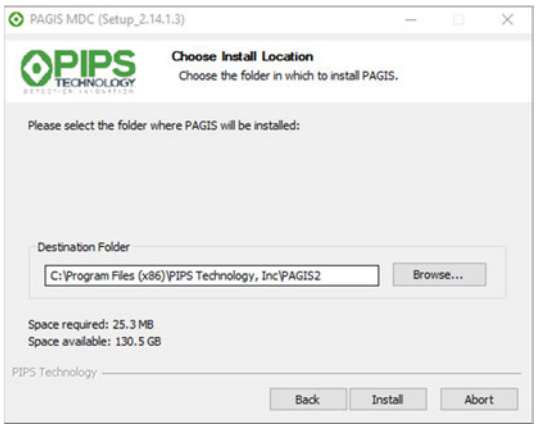


1. Follow the step above to connected to PIPS mobile processor.
2. Remote desktop to PIPS mobile processor and login using credentials provided in SX4 or SX4e manual.
3. In Windows “Services” find and stop the “PIPS VPRELAY” service.
4. Navigate to “C:\PIPSTechnology\VPRelay” and located file “anpr2.ini and open in notepad.
5. Alter “Address=192.168.200.102” to the IP your MDC/Laptop will assume after change to new network, save and close. The “PIPS VPRELAY” service will use this IP address to send camera data to PAGIS running on MDC/Laptop.
6. Alter PIPS mobile processors “Ethernet adapter 1” to new IP, refer to SX4 or SX4e manual for instruction on disabling the “WFManager” so change made to Ethernet are permanently saved.
7. Reboot PIPS mobile processor and enable “WFManager”.
8. Reassign IP on MDC/Laptop.
9. Start PAGIS on MDC/Laptop and confirm camera connectivity, if issues refer to FAQ’s in this manual for troubleshooting tips.

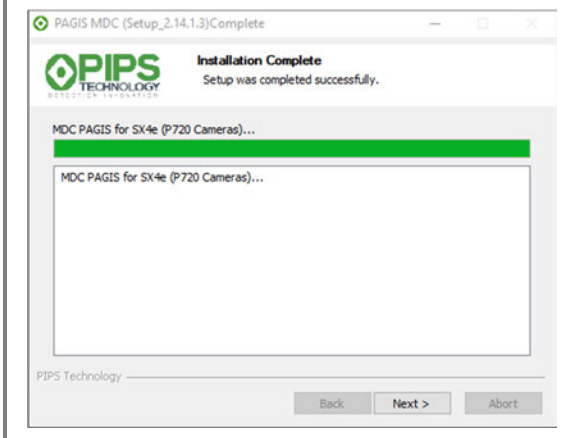
4.2.2 PAGIS Software Installation (MDC)



1. If PAGIS exist on your computer, it must be version 2.9 or 2.12 for installer to update. If your version of PAGIS is older it is recommended you “EndShift” any existing data, then uninstall PAGIS.
2. It is recommended you “EndShift” any existing data if upgrading a previous version of PAGIS.
3. Prior to software installation, take the time to figure out what version of PIPS mobile processor you have as the software installation requires you to select options so it can properly configure the camera settings based on processor type. PAGIS version 2.14 supports processor versions SX4 & SX4e only, you can either look at the product tag located on the processor or look at the camera IO ports on the back of the processor. If the 4 camera IO ports are vertically arranged RJ45’s then it’s a **SX4e(P720)**, if they are vertically arranged circular shaped “LEMO” connectors then it’s a **SX4(P634)**. Horizonal arranged circular shaped “LEMO” connectors is a SX3 and is not compatible with PAGIS 2.14.
4. Upgrading to PAGIS V2.14.x.x also requires that the PIPS mobile processor be updated to same version in order to take advantage of the Firmware updater feature.



5. Place the PAGIS installer on your computer’s desktop, “PAGIS_Setup_MDC_2.14.x.x.exe”.
6. Right click the PAGIS installer executable and select “Run as administrator”.



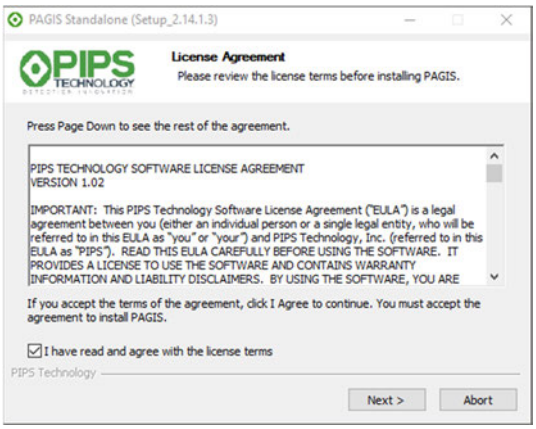
7. Check the license agreement box, then click Next.

8. Select the mobile processor type and alter “Shortcuts” if needed. Next to continue.

9. Confirm path if upgrading, click Install to proceed.

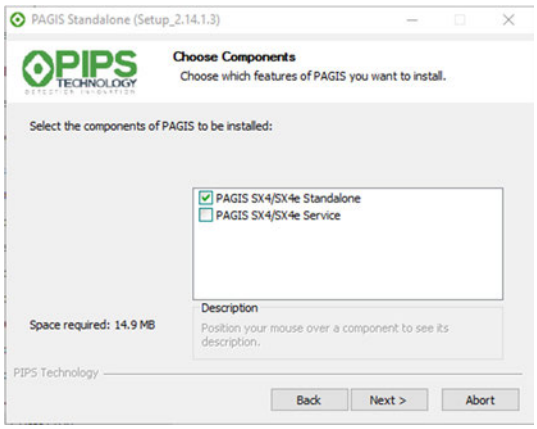
10. Installation Compete, Next to proceed.
11. Click Finish.
12. Click Yes to reboot if you would like to test PAGIS auto start at login if selected during installation, otherwise click No as its not required for PAGIS to run.

Note: See Appendix A for terminology definitions.

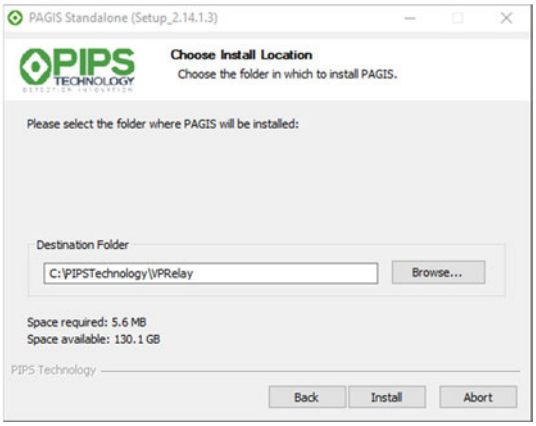


4.2.3 PAGIS Software Installation (Mobile Processor)

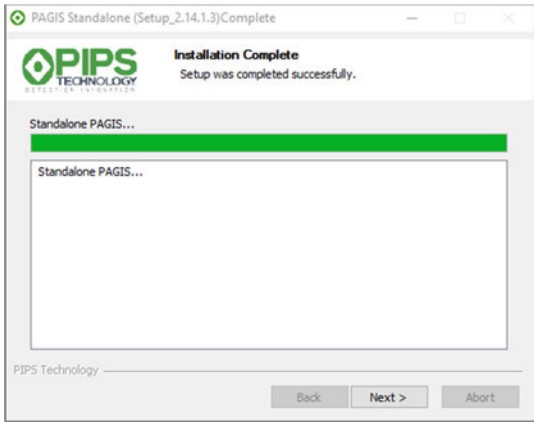
1. PAGIS v2.14.x.x updater is only compatible with PIPS mobile processors SX4 & SX4e.
2. The PAGIS updater only updates existing versions of PAGIS on mobile processor, version 2.9 and newer.
3. Update required for both “Standalone” & “Service/VPRelay” to support some of the newer features.
4. The processor must be in its respective mode to update that option as the folder path are hidden when not active, see “Change Mode” in SX4 or SX4e manual.



NOTE: If processor is in Service/VPRelay mode you MUST stop the “PIPS VPRELAY” service before running the updater.



5. Remote desktop into processor or utilize attached monitor/keyboard.
6. Place the updater in C:\PIPSTechnology folder on the PIPS mobile processor.
7. Execute PAGIS Updater.



8. Check the license agreement box, then click Next.

9. Select option to update, next to continue.
   - Standalone= PAGIS login from Processor.
   - Service= PAGIS login from connected Laptop.

10. Change the default path presented by updater, see below.
    - For “Service” C:\PIPSTechnology\VPRelay.
    - For “Standalone” C:\PIPSTechnology\Standalone.

11. Installation Compete, Next to proceed.
12. Click Finish.
13. Click Yes to reboot.

Note: See Appendix A for terminology definitions.

TROUBLESHOOTING TIPS

This section provides some basic troubleshooting tips and information

5.1 Troubleshooting & Tips

- The first login to PAGIS after the new install of an unconfigured version does not require a username or password. Simply click Login to be granted Admin access to the software.
- A good means to test the communication from the MDC to BOSS is ping or telnet (over TCP 8092) through the command prompt.
- A good means to test the communication from the MDC to the SX Processor is ping or telnet (over TCP 9000) via command prompt.
- For many other troubleshooting tips, see Appendix C – Frequently Asked Questions

5.1.1 PAGIS with NetMotion VPN

Agencies utilizing NetMotion VPN software on the MDC will need to apply the following passthrough steps:

1. Login to the NetMotion server as administrator
2. Click Settings > Then select Client > Select Global Client Settings > Then select Passthrough List
3. Click the “Add…” button on the right > Select “Network Address”
4. Enter the following settings (as shown):
    A. IP address:192.168.200.0 (the zero is correct, it's an IP address “range”) Subnet Mask: 255.255.255.0.
    B. Keep all other settings default (as shown) and click OK.
5. The MDC must then disconnect from NetMotion and reconnect again for the settings to be applied locally.

5.1.2 Cisco VPN Client:

Make sure Stateful Firewall is unchecked and "Allow Local LAN".

5.1.3 Microsoft .NET 3.5 Installation

The PAGIS Software requires Microsoft .NET Framework 3.5 specifically. If the MDC doesn’t have .NET, it can be downloaded from the Microsoft website.

5.1.4 Firewall Settings for Client-Server Installations

For client-server installations, the Windows Firewall needs to allow the SX Processor and the MDC to communicate. If the MDC is maintained by a Network Administrator, he or she should be contacted before making changes to the firewall. The command prompt commands for the exceptions are below

Option 1: Allow Microsoft Windows Version 8 or newer to auto-detect the launch of the PAGIS.exe application and use the wizard to add the PAGIS.EXE to the exception list (making note of Public or Private Network settings as necessary).

Option 2: Add PAGIS to the exception list manually by browsing to the install path of PAGIS. The default is below for reference: C:\Program Files (x86)\PIPS Technology, Inc\PAGIS2\PAGIS.exe

Option 3: Add the communication ports manually:
TCP in/out 8092 = Pagis sync port to BOSS back office software.
TCP in/out 9000 = Mobile processor camera feed port.
TCP in/out 9001 = Mobile processor camera snapshot port.
TCP in/out 32023 = Mobile processor camera setup port.
TCP in/out 10000 = Mobile processor data capture port.
NOTE: XML Datastream uses TCP 10100 and TCP 7000

PAGIS/BOSS3 CONFIGURATION 4212

In order for the PAGIS software to function properly, the device must be built, enabled, and configured in BOSS3 before being deployed for service in the field.

6.1 Creating a New Device in BOSS3

Once network communication to BOSS3 has been established from the vehicle, the new device must be "built" or added to the Device List in BOSS3 before it can be used. The approved way to do this, is to simply perform a Begin Shift from the PAGIS software. **NOTE**: The computer name is what will be displayed in BOSS as device name.

1. At the PAGIS Live View Screen, click the Begin Shift button once to select it, and then click again to launch the sync.
2. If the laptop has previously been setup to communicate with BOSS and is already enabled, the sync transfer window should appear in the middle of the Live View Screen.
3. If this is a new/disabled device, a message indicating "HttpStatusCode" will be displayed.
4. This indicates the BOSS3 server has received the sync request but has rejected it due to device status.
5. Once the BOSS Admin has enabled the device, the Status Code error will not appear again, and syncs should complete as configured in BOSS3.

6.2 Enabling a New Mobile System in BOSS3

Installing PAGIS and configuring the network settings is only the first step in making the ALPR unit operational. Once PAGIS is configured to work with or on the SX Processor and the mobile cameras, it must then be enabled in BOSS3 before synchronizations can take place. **NOTE**: By default, every new device recognized by the BOSS3 server is disabled until the Admin enables it. This is done for security.

1. Log into the BOSS3 UI Client Software with Admin privileges.
2. Click the Admin button on the left to expand the options.
3. Click the Devices button. The new device should now be listed to the right.
4. Click the name of the Device to select it. (This will open the device details screen)
5. Click the Edit button at the bottom of the window.
6. Click the Enable button from the Edit window.
7. This will enable the device and return the Admin to the Device List.

NOTE: If desired, the Admin can re-enter the Edit window to assign an alternate name in BOSS3 for the new device. The Admin will need to update the "Description" field and then click the Save button. Agencies commonly use this field to signify the Unit number, Car name, or Patrol Shift. The "Name" field is the device/host name and cannot be edited in BOSS3.

NOTE: Once the Device is enabled the Admin needs to assign ownership and hotlist distribution.

6.3 Assigning Ownership to a Device in BOSS3

Every new device added to BOSS3 allows for Admin level access into PAGIS without the use of a username or password. In order to password protect the PAGIS software, the BOSS Administrator must assign "Owners" to the device in BOSS3.
NOTE: For more detail on Users, User Groups, Sites, and Roles, refer to the BOSS3 manual.

1. Login to the BOSS3 UI with Admin credentials.
2. Click the Admin button on the Left to expand the options.
3. Click Devices to review the list.
4. Click on the Device Name to open the device details screen.
5. Click on the Edit button.
6. Locate the "Owners" field. Click the Select button to the right.
7. Check the box(es) for the appropriate Site(s)/User Group(s). **NOTE**: This tells BOSS3 which sets of users will have rights to login to PAGIS from this specific device.
8. Notice the Select button has changed to a Save button. Click Save to retain changes.
9. Confirm the changes show in the Owners Field.
10. Click the Save button at the top left of the Edit window.

6.4 Assigning Hotlists to a Device in BOSS3

In order for the PAGIS users to receive alerts, one or more of the stored hotlists in BOSS3 must be distributed to the new device. **NOTE**: For more information on building and configuring Hotlists, refer to the BOSS3 manual.

1. Login to the BOSS3 UI with Admin credentials.
2. Click the Admin button on the Left to expand the options.
3. Click the “Hotlists” button to review the list of configured alert lists.
4. Click the Hotlist Name to select the first alert list. This will open the Details screen.
5. Click the Edit button at the bottom of the window.
6. Locate the “Deployment” field. Then click the Select button to the right.
7. Check the box next to the name of the new device.
8. Notice the Select button has changed to a Save button. Click Save to retain the changes.
9. Confirm the changes show in the Deployment Field.
10. Click the Save button at the top left of the Edit window.
11. Perform these steps again for all remaining Hotlists necessary for this device.

PAGIS/BOSS4 CONFIGURATION

In order for the PAGIS software to function properly, the device must be built, enabled, and configured in BOSS4 before being deployed for service in the field.

7.1 Creating a New Device in BOSS4

Once network communication to BOSS4 has been established from the vehicle, the new device must be “built” or added to the Device List in BOSS4 before it can be used. The approved way to do this, is to simply perform a Begin Shift from the PAGIS software. **NOTE**: The computer name is what will be displayed in BOSS as device name.

1. At the PAGIS Live View Screen, click the Begin Shift button once to select it, and then click again to launch the sync.
2. If the computer has previously been setup to communicate with BOSS and is already enabled, the sync transfer window should appear in the middle of the Live View Screen.
3. If this is a new/disabled device, a message indicating “HttpStatusCode” will be displayed.
4. This indicates the BOSS4 server has received the sync request but has rejected it due to device status.
5. Once the BOSS Admin has enabled the device, the Status Code error will not appear again, and syncs should complete as configured in BOSS4.

7.2 Enabling a New Mobile System in BOSS4

Installing PAGIS and configuring the network settings is only the first step in making the ALPR unit operational. Once PAGIS is configured to work with or on the SX Processor and the mobile cameras, it must then be enabled in BOSS4 before synchronizations can take place. **NOTE**: By default, every new device recognized by the BOSS4 server is disabled until the Admin enables it. This is done for security.

1. Log into the BOSS4 URL with Admin privileges.
2. Navigate to the Resources pulldown menu.
3. Select Devices from the menu options. The new device should now be listed.
4. Click the name of the Device to select it. (This will open the device details windows on the left)
5. Click the Enable slide toggle to enable device, located in upper right of device edit window then click save.
6. This will enable the device, synchronization between BOSS4 and PAGIS is allowed.

NOTE: Once the Device is enabled the Admin needs to assign ownership and hotlist distribution.

7.3 Assigning Ownership to a Device in BOSS4

Every new device added to BOSS4 allows for Admin level access into PAGIS without the use of a username or password. In order to password protect the PAGIS software, the BOSS Administrator must assign “Owners” to the device in BOSS4.

NOTE: For more detail on Users, User Groups, Sites, and Roles, refer to the BOSS4 manual.

1. Login to the BOSS4 URL with Admin credentials.
2. Navigate to the Resources pulldown menu.
3. Select Devices from the menu options. The new device should now be listed.
4. Click the name of the Device to select it. (This will open the device details windows on the left)
5. Locate the “Owner” field. Click in the Owner filed, and a list of all available Groups will appear.
6. Select group by clicking on it, it will then automatically be added to owners, see list below “Owner”.
7. To add mode groups, repeat step 15.
8. Confirm the changes show in the Owner Field.
9. Click the Save button at the bottom right of the Edit window.

7.4 Assigning Hotlists to a Device in BOSS4

In order for the PAGIS users to receive alerts, one or more of the stored hotlists in BOSS4 must be distributed to the new device.

NOTE: For more information on building and configuring Hotlists, refer to the BOSS4 manual.

1. Login to the BOSS4 URL with Admin credentials.
2. Navigate to the System pulldown menu.
3. Select Hotlists from the menu options
4. Click the Hotlist Name to select the first alert list. This will open the Details screen.
5. Locate the “Deployment” field.
6. Check the box next to the name of the new device listed.
7. Click the Save button at the bottom right of the Edit window.
8. Perform these steps again for all remaining Hotlists necessary for this device.

APPENDIX A: THE GLOSSARY

4215

ALPR/ANPR	"Automatic License Plate Recognition/Automatic Number Plate Recognition".
BOSS	"Back Office System Software". This is the ALPR server.
GPS	"Global Positioning System".
GUI	"Graphical User Interface".
Hotlist	A database or list that contains vehicle license plates of interest ("alert list").
IR	Infrared light.
License Plate	Also called a tag or number plate.
MDC	"Mobile Data Computer". This is the tablet or laptop in the vehicle.
OCR	"Optical Character Recognition" (also referred to as a "cardet").
OS	"Operating System".
PAGIS	This is the License Plate Capture Software most commonly used in an ALPR vehicle.
Service	Operation mode of the PAGIS software. Service or "VPRelay" is used to refer to PAGIS instance that is running directly on the PIPS mobile processor without a GUI interface, this mode is intended to run in conjunction with MDC version of PAGIS installed on laptop connected via Ethernet.
Standalone	Operation mode of the PAGIS software. Standalone is used to refer to PAGIS instance that is running directly on the PIPS mobile processor with a GUI interface. Same a "Service"
SX	SX is a short notation referencing PIPS's mobile processor, commonly the SX is followed by the generation number of the processor, i.e. SX3, SX4 & SX4e.
UI	A "User Interface" is the means in which the user can access and navigate the software.
USB Flash Drive	Also called a thumb drive or memory stick.
VLP	"Vehicle License Plate".
VPN	"Virtually Protected Network".
VPRelay	Operation mode of the PAGIS software. VPRelay or "Service" is used to refer to PAGIS instance that is running directly on the PIPS mobile processor without a GUI interface, this mode is intended to run in conjunction with MDC versions of PAGIS installed on laptop connected via Ethernet.
Whitelist	Opposite of a standard BOSS Hotlist. This is a list of license plates that should not trigger an alert.

APPENDIX B: PAGIS SOFTWARE DATABASE FILE

This section is used to configure the PAGIS Software when it's not being used with the Back Office System Software (BOSS). Comma-separated value (CSV) format is the only format the PAGIS Software supports for importing data into the vehicles for the purpose of matching against the captured license plate data. PAGIS will support CSV files with any number of columns, called "fields", as long as the first field is the VLP (Vehicle License Plate). **NOTE**: The CSV format is standard ASCII.

Example CSV Files:

1. *ABC123, Red, Ford, Explorer, 1996, WANTED XYZ456, Blue, Audi, A4, 2001, MURDER*
2. *45ABC234, Vehicle wanted in associated with a kidnapping on 12/5/2005 995BD233, Vehicle reported stolen from Liz's Lounge at 6am on 12/1/2005*
3. *UIO223 ABC123*

General Function:

PAGIS calls/utilizes files in pairs. Each database in PAGIS is created using two files; a CSV file, and an INI configuration file. Without both of these files, the database will not load and PAGIS will not "see" it. Each CSV file/hotlist must have the exact same name as the INI configuration file. Example: Stolen.ini and Stolen.csv will work. Stolen.ini and Plates.csv will not.

Reading an INI Configuration File

Lines that appear in brackets [] are called "Headings". The labels that appear inside the headings, are called "values". Values will always contain an equal sign (=). If a line starts with a semicolon, it is considered to be a comment and is not read by the software. There is no limit to the number of comments in the INI file.

The [SETTINGS] Heading

The values in the Settings heading are: NumFiles, DbName, DbColor, Priority, Covert, Alarm, and NumFields.

- NumFiles: Determines how many database files the system should split the specified hotlist into. Generally, this value is set to 1. But for larger hotlists (200,000+ lines), a number of 2-5 may be more desirable.
- DbName: Tells the PAGIS Software what the displayed name of the hotlist should be.
- DbColor: Sets the display color of the hotlist. This is merely an esthetic setting and not a functional setting. The right-hand side of the equal sign is the HEX value representing the ARGB values for the color. If this value is unknown, the Admin should simply leave this line out of the file.
- Priority: Designates the priority of this hotlist in relation to other hotlists in the system. The highest priority database is 1 and the lowest is 999. **NOTE**: if a plate resides on multiple lists the higher priority will be alerted first.
- Covert: Determines whether standard PAGIS Software users are alerted when a hit is made from the database. Covert database can be used for hotlists that are included for information-gathering purposes rather than eliciting user intervention. The system can also be configured to notify via email or SMS message when a hit is made from a covert hotlist.
- Alarm: Sets the audible alert to be played in PAGIS when a hit is made from the hotlist. Values for Alarm are LOW, MED, HIGH
- NumFields: Indicates how many fields (columns) are in the CSV file. If this value is less than the actual number of fields in a file, then the additional fields are placed in the general information area. This value also determines the number of headings of the [Field x] present in the file. For example, if NumFields=2 then there will be two additional headings, [Field 0] and [Field 1]. **NOTE**: Adding "Creation =" will place the timestamp the hotlist was added to the Begin Shift file.

The [FIELD X] Heading

Under the Field heading, there are two configurable values, “Name” and “PAGIS”.

- Name: Tells the system what the name of this field is. If no name is specified, then no name given to the field. The format is Name = <field>
- PAGIS: Specifies how to display the field in the GUI/PAGIS Software.
  - If no value is defined, the field is placed as general information.
  - Values 1-5 represent special fields for the PAGIS Software that translate to the information being displayed in a box of its own when a hit is processed.
  - A value of 6 represents an ID number to cross reference the vehicle from the hotlist with a person from the wanted list.
  - A value of 7 is identical to leaving the value undefined.

Sample INI Configuration File

[Settings] NumFiles=1
DbName=Stolen Vehicles DbColor=ffffff00 Priority=5 Covert=False Alarm=MED NumFields=8
;PAGIS Values
;0 is VRM / VLP (Not User Definable, always Field 0)
;1 is Special Field 1
;2 is Special Field 2
;3 is Special Field 3
;4 is Special Field 4
;5 is Special Field 5
;6 is ID Number (PNC ID, Driver’s License, Social Security Number, etc.)
;7 is General Info (Default for all undefined fields) [Field 0]
PAGIS=VRM

Sample INI Configuration File

[Field 0] Name=VRM
[Field 1] Name=Color
PAGIS=3 [Field 2]
Name=Make PAGIS=1
[Field 3] Name=Model
PAGIS=2 [Field 4]
Name=Action PAGIS=4
[Field 5] Name=Warning
PAGIS=5 [Field 6]
Name=PNCID PAGIS=6
[Field 7] Name=Intelligence PAGIS=7

To deploy a locally created hotlist to PAGIS without BOSS.

1. Create a folder called “beginshift” (Without Quotes) on the root drive of whatever drive media your using that PAGIS has access to, remember only on root drive, no subdirectory’s. Example C:\beginshift.
2. Place the .CSV & .INI in the newly created beginshift folder.
3. Log into PAGIS and configure Sync to access the drive where your file/files are located. When setting disk drive letter in PAGIS no need to indicate folder path as PAGIS assumes by default that “beginshift” exist on the root drive your selecting, refer to section 3.1 in this manual.
4. Go back to main screen and do beginshift.

APPENDIX C: FAQ

Q: **HOW DO I ENTER A SUPPORT CASE?**
A: We have a webform you can use here, you can email our Support Team at Support@PIPSTechnology.com, or you can call us on the phone Monday-Friday 8am to 4pm Central Time (9am-5pm Eastern) at (833) 747-7577 Option 2.

Q: **HOW DO WE CREATE USERS IN PAGIS?**
A: The agency BOSS Administrator creates all users, both for BOSS and for PAGIS. Once the user is created in BOSS, the Admin would click the user's name to select/edit the user. Then click the Advanced button and update the PAGIS specific password. Please note that the username and password fields are both case sensitive and the PAGIS users need to be added to a group with the Role that allows them to use PAGIS/LPCS.

If you have any further questions, please feel free to enter a request for support here.

Q: **WHERE DO USERS CHANGE THEIR LOGIN PASSWORD IN PAGIS?**
A: User passwords are created and updated in BOSS via the UI client software. For the majority of our customers using both the PAGIS Software and BOSS, any user accounts or passwords created in the PAGIS Software itself will be overwritten by the user information defined in BOSS during the next sync.

If you have any further questions, please feel free to enter a request for support here.

Q: **HOW DO WE REQUEST AN RMA REPAIR?**
A: To assist with this, please navigate here to review our RMA procedure as well as to download the request form. Please keep in mind that once submitted, all repairs are reviewed for age of equipment and warranty status before final processing takes place. Additionally, incomplete forms and those without much detail often result in processing delays.

If you have any further questions, please feel free to enter a request for support here.

Q: **WE GOT NEW MDC LAPTOPS IN THE PATROL CARS, HOW DO WE ADD THOSE DEVICES TO BOSS?**
Q: **HOW DO WE EDIT THE DEVICE NAMES IN BOSS?**
A: The initial device template/skeleton is automatically created in BOSS the first time the device attempts to Sync from the field. Devices should NEVER be created manually. For PAGIS laptops, this is done after PAGIS is installed and configured and Begin Shift is launched. However, if the agency would like to organize the device list by updating the "Device Name" field, those steps are below:
1. Login to the BOSS UI with Admin rights
2. Navigate to Admin > Devices
3. Click on a device name to select it > Click Edit
4. Update the name of the device in the "Description" field (Name field cannot be altered)
5. Click Save > This will take you back to the Device Summary List. The "Device Name" field should show the new name

If these troubleshooting steps did not resolve the issue, please feel free to enter a request for support here.

Q: **WE HAVE A NEW MOBILE COMPUTER/MDC THAT'S NOT SYNCING WITH BOSS.**
Q: **WE KEEP SEEING AN HTTP_STATUS_CODE ERROR WHEN RUNNING BEGIN SHIFT.**
A: This error most commonly means that a new device in the field (laptop/tablet) can "see" the BOSS server, but that it hasn't been enabled yet to "talk" with it. Follow the general steps below to address this issue:
1. The agency BOSS Administrator will need to login to the BOSS UI client and Select Admin
2. Then select Devices and from there, left click on the device/computer name of that MDC to edit it
3. Once in the Edit screen, Enable the device. This will take you back to the Device List.
4. Click the name to edit the device again. Now assign users/Owners and save.
NOTE: The Select button becomes a Save button when selecting which Groups/Users should have access to login to this device

5. Once that is done, navigate to Admin > Hotlists
6. From here, click on each hotlist one at a time to distribute them to the new device being sure to Save the changes next to the Distribution field. Note again that the Select button becomes a Save button. And there's another Save button at the top left of the edit window.
7. After this is complete, perform Begin Shift from the field unit/MDC and confirm there are no further errors.

If these troubleshooting steps did not resolve the issue, please feel free to enter a request for support here.

Q: **NEW PAGIS USER CAN'T LOGIN BUT OTHERS CAN.**
Q: **USERS CAN LOGIN TO PAGIS WITH NO CREDENTIALS AT ALL.**
A: Entry or login to the PAGIS software in the field is partially controlled by the Device settings in BOSS. The users themselves must also be properly setup with an LPCS/PAGIS password. To check the current device settings/ access, perform the following steps:
1. Login to BOSS UI (with Administrator rights)
2. Select the Admin Section
3. Select Devices and then Select the Device in question by PC name
4. Once selected click on the Edit button near the bottom
5. Locate and inspect the "Owners" Field (this is a list of users/groups that have access to login to the device)
NOTE: If this field is blank, the device is in an open configuration mode allowing admin level access simply by clicking login (any credentials would also be accepted).
6. To update the device owners, click the "Select" button next to the Owners field (notice it changes to a Save button)
7. Check which Users/Groups of Users should be able to login to PAGIS from this device
8. Click the Save button next to the field
9. And then click Save in the upper left portion of the Edit window
10. Have a previous user or Admin login to PAGIS and perform Begin Shift to sync the new data
11. A PAGIS Admin can confirm by navigating to Admin, Admin, and then Users to review the list
12. Another test would be to have the new user attempt to login

If these troubleshooting steps did not resolve the issue, please feel free to enter a request for support here.

Q: **WHEN USERS LOGIN TO PAGIS, THEY ONLY SEE A GREY SCREEN.**
Q: **CAMERAS AREN'T SHOWING UP IN PAGIS ANYMORE.**
SEE ALSO: "THE LINK LIGHTS ON OUR ALPR COMPUTER/MDC WON'T TURN ON OR FLASH"
A: Below are some basic troubleshooting steps you'll want to follow before creating a support ticket.
1. Doublecheck the physical power switch on the black box/Processor is On. In many vehicles, there is also an in-line switch in the front of the vehicle that needs to be switched On. When the units are properly powered and on, you should see lights and hear fans running.
2. Confirm that the network adapter settings on the laptop match the proper Static IP scheme for the SX Processor in use. The older scheme is 192.200… and the newer scheme is 192.168…. NOTE: the adapter status in Windows should say "unidentified network". If it says "cable unplugged" the laptop can't "see" the SX.
3. If the power and Static IP settings are good and things still aren't working, test further by disabling the three main software related culprits. Turn off/bypass the local Windows firewall, antivirus, and VPN software one at a time.
4. If you're still not able to see the camera feed after that, you may want to use a different network cable as those can get damaged over time and then confirm that the cord is properly plugged into the ports.
5. If the network cord from the SX Processor is routed through a docking station, then it's possible the dock is preventing the traffic. You should contact the dock's manufacturer for the most recent firmware. To test for this, remove the laptop from the dock, directly connect the network cord to the laptop, and then reconfigure the network adapter settings (remove the static settings from the dock's adapter/ and assign the static IP to the laptop's NIC adapter).

If these troubleshooting steps did not resolve the issue, please feel free to enter a request for support here.
Q: **THE LEFT FRONT CAMERA ON OUR ALPR VEHICLE IS NO LONGER SHOWING IN PAGIS**?
Q: **HOW DO WE TROUBLESHOOT MOBILE CAMERAS**?
A: Below are the main troubleshooting steps to test the camera(s) and cable(s) on a system where only one or two cameras are

no longer displaying images.
Step 1: Confirm MDC/SX communication - steps shown in section “Cameras aren’t showing up in PAGIS anymore.” 4220
Step 2: Access the SX Processor – RDP or directly connect a monitor, keyboard, and mouse to the SX. Contact PIPS Support for help with RDP if the credentials are unknown to the agency.
Step 3: Confirm camera activity – Launch Tools. Then open P6Utility or Mobile Toolkit. Check the camera feeds/function by switching the Input menu to the camera(s) in question
Step 4: Unplug and Reattach the Camera Cables – Note, the cables DO NOT TWIST. The metal locking nut on the cable slides back about a millimeter and the cable comes straight out. Do this at the SX Processor and the Camera. You may need to remove the camera from the mount in order to unplug the cable successfully (most brackets use a #3.5 Hex/Allen Wrench)
Step 5: Swap Port on SX Processor – At the SX Processor, swap the camera cables from the non-working camera to a port with a working port (Take care to note the swap so the cables get back to their original ports). If the camera outage stays at the port site, the issue is most likely the capture card on the SX Processor and will require RMA (Example: working Left cam is swapped to port of non-working Right cam and no longer functions. AND the previous non-working Right cam starts working once it’s plugged into the Left cam’s port). If the fault/error stays with the camera regardless of SX port, continue to Step 6.
Step 6: Physically Swap Camera Locations – Once all other items are checked, move the camera itself to a working position in order to test the cable. (Example: physically move Left cam to the Right cam position on the top of the vehicle) Connect the cable at the new position and test feed in Tools > P6Utility/Mobile Toolkit. If the camera works at the new location, the issue is most likely a bad cable. If the camera still does not work, the issue is most likely a faulty camera in need of repair/RMA.

If these troubleshooting steps did not resolve the issue, please feel free to enter a request for support here.

Q: **WE’RE NO LONGER GETTING GPS IN PAGIS.**
Q: **WE’RE NOT SEEING GPS DATA FROM SOME OF OUR FIELD UNITS IN BOSS.**
A: Below are the basic troubleshooting steps for checking the GPS of field units:
1. Login to PAGIS (as Admin)
2. Navigate to Admin section, then click the Admin button
3. Select “System” on the left pane
4. Confirm/Set the button at top to “Default”
5. Remove any value(s) stored in the GPS Connection String field. Leave ‘5’ in the Computer String.
6. Click the Save button to retain changes made.
7. Close PAGIS fully and relaunch and log back in to test (Note: GPS will only show with test reads/hits)
8. For versions of PAGIS 2.9 and up, test with a GPS Connection String of 6 if the blank field doesn’t work. Save the changes. Log out. Close the software and then relaunch to test.

Please be advised, that some GPS issues can be caused by local or domain firewall settings, antivirus software, or any other software package monitoring/transmitting network data. To test these, disable or bypass those software options on the MDC and retest.

If these initial troubleshooting steps did not resolve the issue, please feel free to enter a request for support here.

Q: **HOW DO I INSTALL THE PAGIS SOFTWARE?**
Q: **I JUST LOADED PAGIS ON A MACHINE AND IT CRASHES WITH A .DLL ERROR WHEN I TRY TO LAUNCH IT.**
A: The most common installation of PAGIS is Client/Server or “VPRelay Mode”. The .dll error is caused by the installer not being run from the HDD and/or the wrong install option being selected (Example: SupeRex instead of MDC). The best practices for the installation are below. (Note, this does not cover MDC or PAGIS configuration, only the act of installation)
1. Always copy the installer over to the HDD/Desktop of the MDC. Never run it from a thumb-drive or network share
2. Regardless of how you're logged in to Windows, right click the installer and select "run as Admin" or "run with elevated privileges"
3. Continue through the message/error about OS compatibility
4. Click next on the wizard and then be sure to select the MDC option (to use with VPRelay)
5. After that, it's next, next, next, finish the reboot is not necessary

If these steps did not resolve the issue, please feel free to enter a request for support here.

Q: **USERS ARE GETTING HITS/ALERTS ON PREVIOUSLY RECOVERED STOLEN PLATES.**
Q: **USERS AREN'T GETTING HITS FROM KNOWN ACTIVE PLATES.**
Q: **THE HOTLISTS IN PAGIS DON'T SHOW TODAY'S DATE.**
Q: **THE HOTLISTS AREN'T SYNCING WITH BEGIN/END SHIFT.**
A: Whether it's from data latency or just use over time, the local file structure can get some minor corruption and will need to be refreshed. The steps below show the best practices:
1. Login to Windows with Admin rights (ability to uninstall/delete software)
2. Login to PAGIS and perform an End Shift
3. When complete without error, Logout of PAGIS and then Exit/Close the program
NOTE: If the End Shift fails or displays an error, contact Support for additional assistance.
4. If there were no errors, locate the PAGIS icon on the desktop.
5. Right click on the icon and select "Open File Location" (This should open a window where the program was installed)
6. Scroll up and locate the folder labeled "data". Double-click it to open it
7. Select and delete everything in here EXCEPT for "Attributes.db"
8. Once that's complete, Login to the PAGIS software again
9. Perform a Begin Shift. This will pull down fresh data from the server
NOTE: Once complete, the files in the data subfolder as well as the Databases section of PAGIS should be restored.

If these troubleshooting steps did not resolve the issue, please feel free to enter a request for support here.

Q: **IS PAGIS COMPATIBLE WITH OUR NEW WINDOWS 10 LAPTOPS?**
A: Although there's a warning about compatibility during the install of PAGIS on any Windows OS after XP, it is compatible with all them. However, we have seen errors occur when agencies copy and paste folder structures from previous installations. This of course is not recommended.

Q: **THE LINK LIGHTS ON OUR ALPR COMPUTER/MDC WON'T TURN ON OR FLASH.**
Q: **OUR WINDOWS 10 MDC WAS WORKING BUT HAS STOPPED COMMUNICATING TO THE SX PROCESSOR.**
A: There are many variables with troubleshooting any network connection. And the connection from the ALPR computer to the SX Processor is no different. The following troubleshooting list highlights the most common:
1. The physical network cord is bad/damaged.
A: Test with a different cable and confirm that it is plugged in fully

2. The network adapters are not configured or have incorrect static IPs
A: Confirm the Static IP scheme in use and properly configure the network adapters

3. Local and/or Domain Firewall rules have prevented the flow of communication
A: Disable or bypass these and test again

4. VPN, Anti-Spyware, Antivirus, or other monitoring software has blocked communication
A: Disable or bypass these one at a time and test after each to find the culprit(s)

5. Docking Station Firmware can be incompatible with some newer computers or become corrupt
A: Test by running the network cord straight to the MDC and then configuring the network adapters (NOTE: It would also be a good idea to contact station manufacturer to see what the latest firmware version is and upgrade as necessary)

6. The NIC Drivers have become corrupt
A: Update the specific Networking drivers in use on the MDC through the Device Manager in Windows

7. Turn off all power saving settings of the Ethernet Adapter in the device manager
A: Uncheck "Allow the computer to turn off this device to save power"

8. Check for Windows 10 update 1709 and 1803 as this update will not allow the NIC and Cellular Aircard to run simultaneously

A: Settings > Update and Security > Windows Update > “Update History” link – if there, see the steps in the FAQ 4222

If these troubleshooting steps did not resolve the issue, please feel free to enter a request for support here.

Q: **AS SOON AS WE DOCK OUR MDC, WE LOSE CONNECTION TO THE WIRELESS.**
Q: **OUR WINDOWS 10 LAPTOP LOSES CONNECTION TO THE INTERNET WHEN THE NETWORK CABLE IS PLUGGED IN.**
Q: **OUR MDC HAS MICROSOFT VERSION 1709 OR 1803 AND CAN’T CONNECT TO WIFI WHEN DOCKED.**
A: Microsoft Updates (1709 and 1803) prevent the Wireless connection as soon as a Network cable is plugged into the device. This also occurs for MDCs/laptops that are docked (where the Network cable from the SX Processor is run through the docking station). As of January 2019, the steps to correct this are below.
WIN10 version 1803
1. Open Regedit
2. Expand HKEY_LOCAL_MACHINE
3. Navigate to Software > Policies > Microsoft > WcmSvc > Local
4. Right click on Local > Hover over New > Select “DWORD (32-bit)”
5. Name the new value “fMinimizeConnections”
6. Right click the on the new name > select Modify > Set value data to 1 (leave base Hex) > Click OK
7. Reboot Windows and test

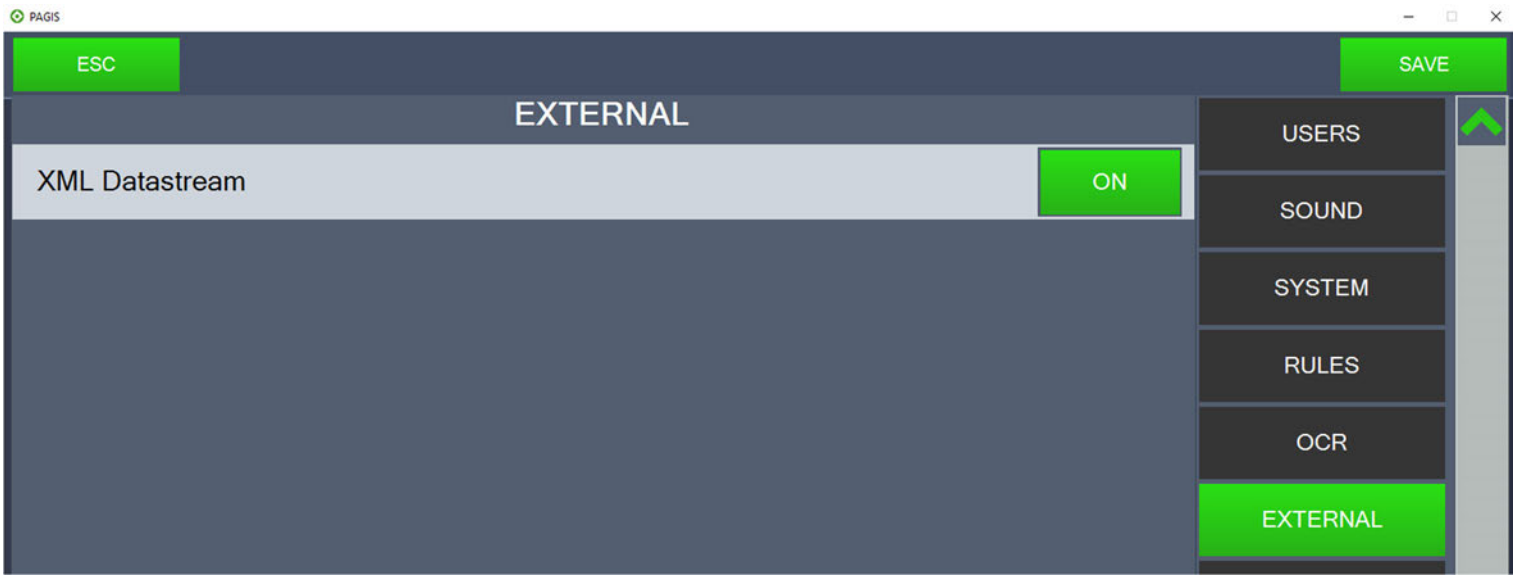
WIN10 version 1709 - Microsoft fixed this with Update KB 4284822. But if you still have issues, the registry steps are below:
1. Open Regedit
2. Navigate to HKEY_LOCAL_MACHINE > Software > Policies > Microsoft > WcmSvc > Local
3. Right click on Local > Hover over New > Select “DWORD (32-bit)”
4. Name the new value “fMinimizeConnections”
5. Right click the on the new name > select Modify > Set value data to 0 (leave base Hex) > Click OK
6. Then Navigate to HKEY_LOCAL_MACHINE\Software\Microsoft\Wcmsvc
7. Right click on Wcmsvc > Hover over New > Select DWORD (32-bit)
8. Name the value “IgnoreNonRoutableEthernet”
9. Right click on the new value > Modify > Set value data to 1 (leave base in Hex) > OK
10. Reboot Win10 and test

If the steps above did not resolve the issue, you may need to address this with Microsoft. Their support site is here.

APPENDIX D: XML DATASTREAM

Overview

The XML Datastream can be used to push the current data from a running PAGIS system to another application. The data available via the Datastream includes reads, hits and current images. The connection to the Datastream is a TCP/IP socket (default port: 10100). When initially connecting, an XML packet is passed to the PAGIS Software to subscribe to the Datastream. The data connection is configured as "push only" and doesn't allow receipt of additional external data. The current image stream is pushed periodically whereas reads and hits are passed as close to real-time as possible.



PAGIS Port

By default, the PAGIS.exe.config file has a key for defining the port number for the XML Datastream. The default value is 10100. This setting does not need to be changed unless the default port is unavailable.
The key has the following format:

```
<!--XML Datastream Settings/-->
<add key="XML.Datastream.Port" value="10100"/>
```

PAGIS Admin Setting

To utilize this feature, the XML Datastream needs to be enabled in PAGIS. To do this, navigate to Settings > Admin > External. The "XML Datastream" option should be turned on as shown in the image below and then saved.

XML Subscription

When initially connecting to PAGIS, the Datastream subscriber will receive only a Heartbeat XML packet (see example below) until PAGIS receives a subscription packet from the subscriber. The properly formed subscription packet defines the specific data that the subscriber wishes to receive.

Heartbeat XML Packet

The Heartbeat Packet is sent once every 10 seconds. The purpose of the heartbeat packet is to let the subscriber know that the communications channel is working between PAGIS and the subscriber. The timestamp is sent in the format of "`YYYY-MM-DDThh:mm:ss`".

Sample of the Subscription XML Packet

```
<?xml version="1.0" encoding="utf-8"?>
<pips-datastream-heartbeat>
  <timestamp>2011-10-13T09:41:56Z</timestamp>
</pips-datastream-heartbeat>
```

Subscription XML Packet

A properly formed subscription packet will have all of the data being requested from PAGIS. To receive a specific datatype, a tag must be added to the subscription to define the desired datatype. The valid entries for datatype are: Reads, Hits, and CurrentImage.

- Subscribing to Reads will send all plates that are detected by PAGIS regardless of whether or not it has an associated hit.
- Subscribing to Hits will send all plates detected by PAGIS that are on a hotlist and the associated Read data for that Hit.
- Subscribing to the CurrentImage Datastream offers two additional attributes that may be passed as well. The "camera" attribute can be set to determine which camera the image is coming from. If no value is passed for "camera" the value defaults to zero. The "milliseconds" attribute determines how long the system waits between sending the current image. The default value for milliseconds is 1000. If a value of zero is sent, the system will send a single snapshot.

Sample of the Subscription XML Packet

```
<?xml version="1.0" encoding="utf-8"?>
<pips-datastream-subscription>
  <datatype>Reads</datatype>
  <datatype>Hits</datatype>
  <datatype>HitTrigger</datatype>
  <datatype camera="0" milliseconds="1000">CurrentImage</datatype>
</pips-datastream-subscription>
```

HitTrigger

The HitTrigger packet is used to alert other systems that a hit has occurred on the PAGIS system. The packet is greatly simplified from the Reads/Hits XML packet and only contains the license plate text, timestamp and a description of the hit. The description will contain the name of the hotlist that originated the hit and may be used to send additional information.

Sample of the HitTrigger XML Packet

```
<?xml version="1.0" encoding="utf-8"?>
<pips-datastream-hittrigger>
  <timestamp>2011-10-13T09:41:56Z</timestamp>
  <vrm>SBX989</vrm>
  <hotList name='Alpha'>
    <field1><![CDATA[This is Alpha Field 1]]></field1>
    <field2><![CDATA[This is Alpha Field 2]]></field2>
    <field3><![CDATA[This is Alpha Field 3]]></field3>
    <field4><![CDATA[This is Alpha Field 4]]></field4>
    <field5><![CDATA[This is Alpha Field 5]]></field5>
  </hotList>
</pips-datastream-hittrigger>
```

Reads/Hits XML Packet

The Reads/Hits packet contains information about the plate that was detected. This information includes:

- Source – The device that detected the plate
- Camera – The camera on the device that detected the plate
- Read – The Information about the plate that was captured
- VRM – The plate translated to text
- Timestamp – When the read occurred
- GPS – The location coordinates where the read took place
- ImagesPatch – The image of plate in infrared (IR)
- Overview – The image of scene/car in Color
- Hits – The associated hotlist(s) data

Sample of the Current Image XML Packet

NOTE: The Current/Live Image XML Packet contains the current image from the camera. It is sent every 5 seconds.

```
<?xml version="1.0" encoding="utf-8"?>
<pips-datastream-currentimage>
  <timestamp>2011-10-13T09:41:56</timestamp>
  <data>(Image data here)</data>
</pips-datastream-currentimage>
```

Sample Read with Hits XML

```
<?xml version="1.0" encoding="utf-8"?>
<pips-datastream-reads>
  <reads>

NOTICES

The information within this manual is authorized for distribution to customers, authorized service center personnel, and distributors of Neology. Every effort has been made to supply correct information. However, Neology assumes neither responsibility for its use, nor for any infringements of patents or other rights of third parties, which may result from its use. No license is granted by the manufacturer under any patent or patent rights. Neology reserves the right to modify and update the equipment at any time without prior notice. No part of this publication may be reproduced, stored in a retrieval system, or transmitted in any form or by any means to a third party without the prior consent of the copyright holder. The manufacturer's warranty will be invalidated if untrained personnel operate the equipment or if any attempt is made to service the equipment by unauthorized personnel.

This manual contains confidential and proprietary information and should not be redistributed except as needed for proper use and maintenance of the agency's Mobile ALPR system.

Technical Support

Service of this equipment by replacement of parts, on-site repair, routine maintenance inspection, and scheduled remote support session is available. Please contact PIPS Technology's ALPR Technical Support.
Phone: 833-PIPS-LPR (833-747-7577), Option 2
Support Team Email: Support@PIPSTechnology.com

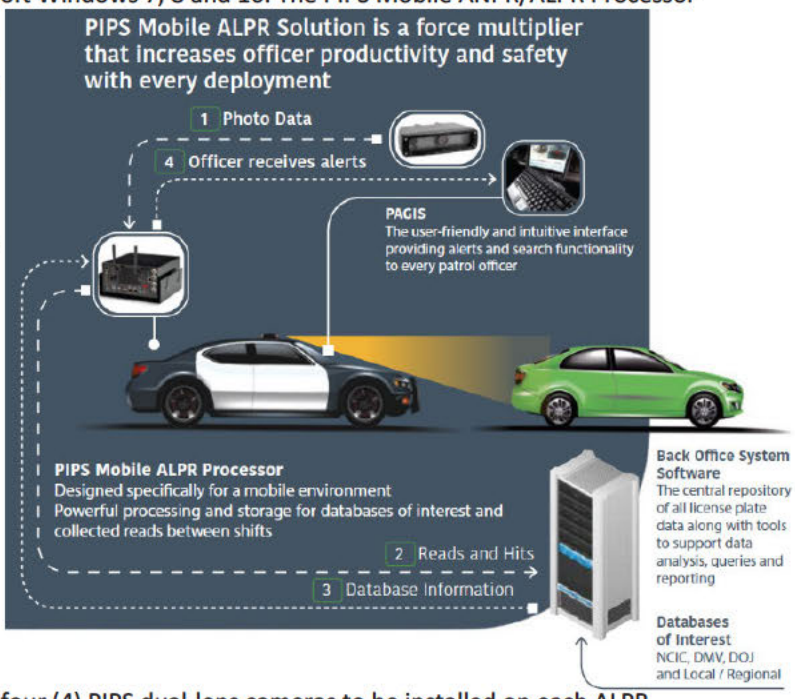
Unauthorized reproduction or distribution of this program, or any portions of it, may result in civil and criminal penalties.



Version

This manual demonstrates the attributes of the Neology / PIPS Technology PAGIS Software Version 2.14 and was last updated in March 2020.

INTRODUCTION

PIPS Technology's Automated License Plate Recognition (ALPR) software solution called PAGIS utilizes dual-channel, dual-lens, cameras to "read" plates. Our software is optimized to run on the Mobile Processor itself or in conjunction with a mobile data computer (MDC). Our mobile software is compatible with Microsoft Windows 7, 8 and 10. The PIPS Mobile ANPR/ALPR Processor comes equipped with Microsoft Windows 7 Embedded.

The PAGIS Software processes the infrared plate image provided by any of the cameras and then interprets the plate number through Optical Character Recognition (OCR) via the mobile processor. The PAGIS application then searches for any matches of the plate with those listed in the databases, or "hotlists," distributed from the PIPS Back Office System Software (BOSS) or other external sources.

WARNING: To reduce the risks associated with impact, which if not avoided, could result in serious injury or death: Do Not interact with the ALPR system while driving in hazardous situations. The PIPS mobile camera series and License Plate Capture Software are not intended for use in hazardous environments, so that the User and/or others are not put at risk for personal injury and/or property damage.

1.1 Dual Lens Color and Infrared Camera

The PIPS Technology Mobile ALPR System allows for a maximum of four (4) PIPS dual-lens cameras to be installed on each ALPR vehicle provided that the vehicle supports the additional mounting equipment.

Each dual-lens mobile camera uses visible light to take color overview pictures of the vehicle and uses infrared (IR) illumination to capture the license plate's alphanumeric characters. IR illumination offers the best capture performance of reflective license plate characters for the following reasons:

- State issued license plates are designed to be highly reflective to IR light.
- Cameras using IR capture technology do not depend on the presence of visible light to function.
- Cameras using IR capture technology are not negatively impacted by the effects of headlights, solar glare, or total darkness.
- IR light penetrates rain and fog better than visible light.
- Due to these attributes, the system can be used 24 hours a day, seven days a week.

1.1.1 Available Products

Additional information about this and other PIPS Technology applications, cameras, and solutions are available on the PIPS web site: http://www.pipstechnology.com

1.2 Using This Manual

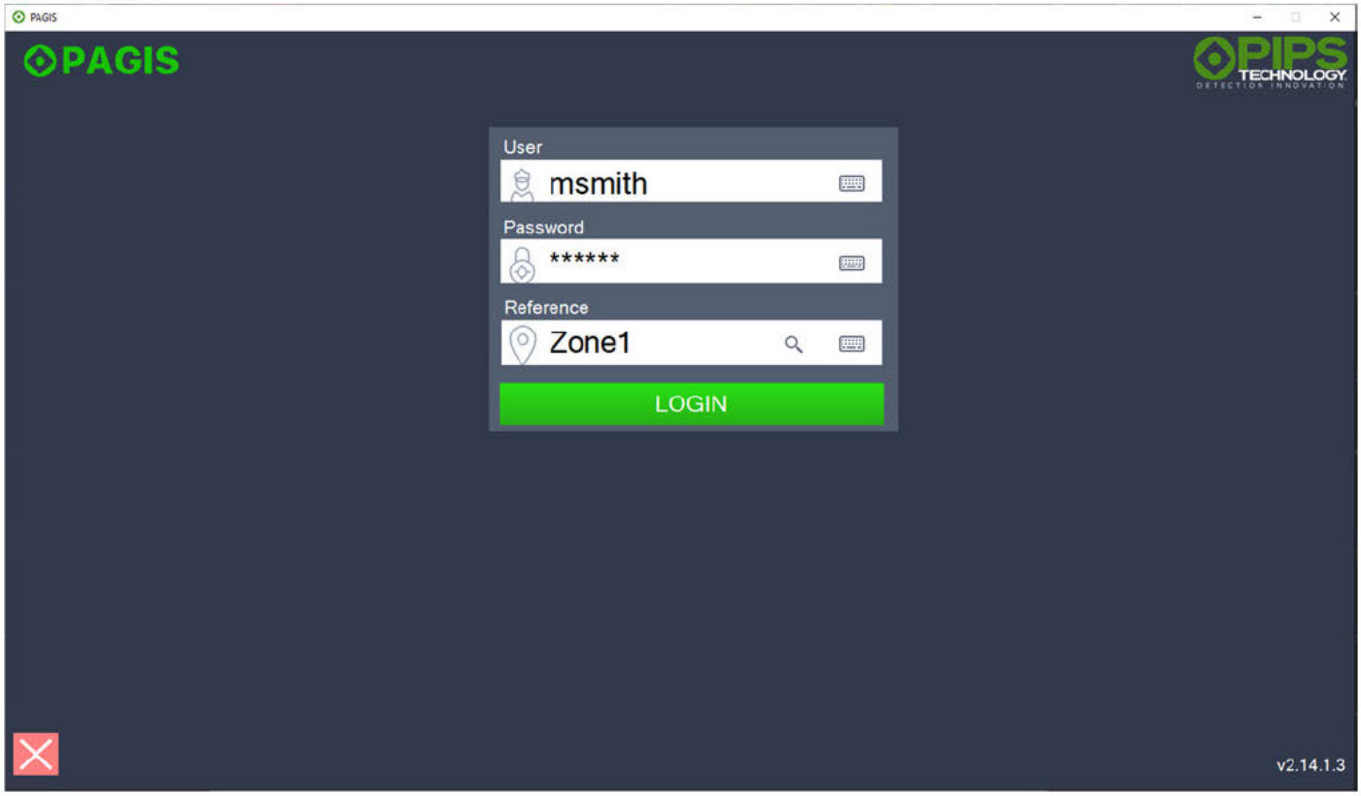
The section overview of this software manual is as follows:

Section 1: The Introduction and Basics

Section 2: PAGIS User's Section: Explains screen function and User Operations in the PAGIS Software

Section 3: Troubleshooting Tips

Section 4: Software Administrator's Guide: Explains how to install and configure the PAGIS Software



Section 5: Additional Information and Troubleshooting Tips

Section 6: Initial BOSS configuration for new PAGIS devices (MDCs)

Appendices: Additional features and details

SCREEN REFERENCE

This section guides the user through the PAGIS Software screens and the available options. Screens are grouped according to function. When a button is grayed out or missing, the option is not available, or no information has been accrued to activate it.

2.1 The PAGIS Software Login Screen

The PAGIS Software allows users with various access privileges to use the same MDC. For users with touch screen monitors, the Keypad button immediately to the right of any text box gives the user access to an on-screen keyboard for data entry.

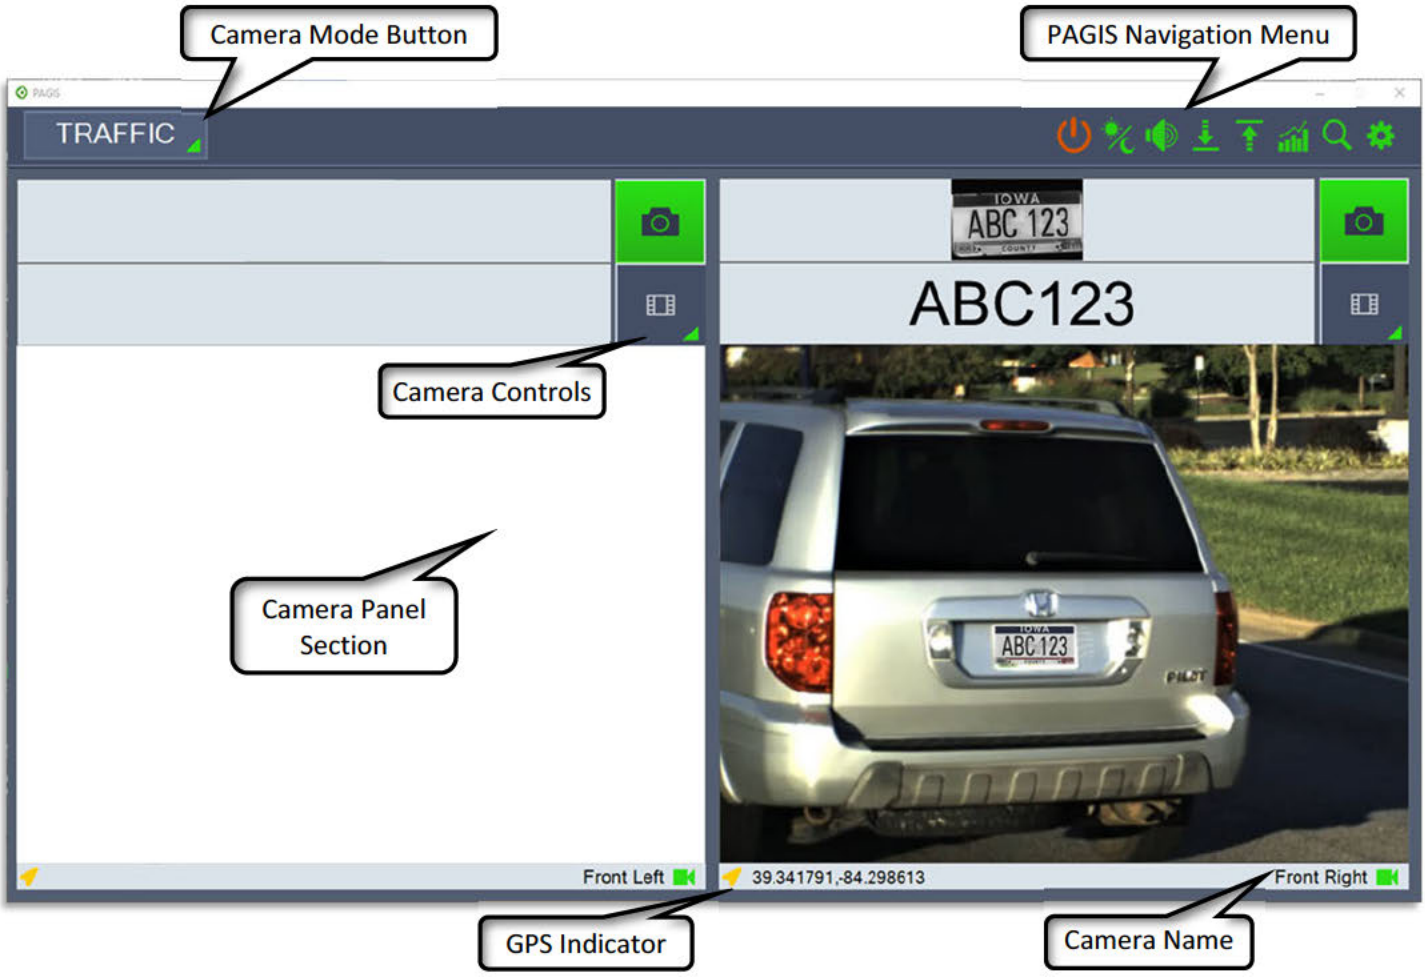
User Field: The alphanumeric string assigned to identify the user. Usernames are not case sensitive.
Password Field: Password of the assigned user logging in. Passwords are case sensitive.
Reference Field: This is an optional field utilized to fit a number of use cases. A user can manually enter a reference at logon, leave the field blank, or select list of unique tags that will be associated with all data captured while logged in. If the Administrator has configured a default reference tags, that information will be displayed automatically. Otherwise, it will be blank.
Login Button: Submits the username and password to attempt a login.
Exit Button: By clicking the X icon in the lower left-hand corner, the user can exit/close the PAGIS Software.

2.1.1 Logging on with the Default Administrative Account

The PAGIS Software includes a default administrative account that can be used for the initial configuration. To do so, simply click the **Login** button with the User and Password fields blank.

NOTE: System Administrators are strongly encouraged to configure users for PAGIS just before, or soon after the installation and setup. PAGIS users accounts are created and maintained in BOSS. Once Users are established by the BOSS System Administrator, the default user account is automatically disabled. Best practices are to be certain at least one User account has administrative privileges.

2.2 Main Screen - Live View



Upon a successful login, the user will see the Main screen (Live View). This is the default view and starting place of all PAGIS Software features. (NOTE: Access to features is based on user group rights established in BOSS.)

The Main Screen is also the place users will monitor read images and ALPR "hits". At the initial startup of the system it is normal to see only a blank/grey screen for a few seconds. Once a connection has been established with the mobile cameras, white boxes will be displayed showing the live-feed camera panels. At this point, the system is ready to capture reads/plates.

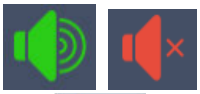
2.2.1 Getting Started in PAGIS

By default, PAGIS loads into a static view. This means live video will not automatically appear in the camera panels (white boxes) until a plate has be captured or the user selects one of the live feed options.

Once a plate is "seen" by a camera assigned to the current viewing mode (Traffic vs Parking), it will display the captured information in the corresponding camera panel. Each plate capture is also accompanied by a short "Beep" to audibly alert the user a read has taken place. (NOTE: If the user is in the Traffic Mode at the time a parking camera reads a plate, there will be a sound effect, but no plate image will be displayed on screen unless that plate is on a synchronized Hotlist or until the user switches to Parking Mode.)

2.3 The PAGIS Navigation Buttons

4234



This section provides a quick reference guide to the available navigation buttons of the Live View screen.

The Camera Mode button is located in the upper left corner and is used to switch between the configured camera modes. Once configured, the name will change to a selected mode. The default values are “ALL”, “Traffic” and “Parking”.

The Logoff button is located in the upper right of the window. When selected, the user will be logged out of PAGIS and return to the login screen.

The Sound button is located to the right of the Logoff button. When selected, this button with toggle the PAGIS system sounds On and Off.

Day/Nite mode switches PAGIS between day & night mode screen skins.

The Begin Shift Synchronization button is located to the right of the Sound button. When selected, this will reach out to the BOSS server to download users, hotlists, and other system settings.

The End Shift Synchronization button is located to the right of the Begin Shift Button. When selected, this will upload any previously unsent reads, images, and audits to the BOSS server.

The Statistics/Review button is located to the right of the End Shift Button. When selected the user is able to review Databases/Hotlists, Reads, Targets, and other PAGIS information.

The Search button is located to the right of the Review Button. When selected the user can search his/her reads as well as manually add a license plate to a temporary hotlist.

The Admin/Settings button is located in the upper right corner of the screen. This button is only viewable to Admin level users and allows for system configuration changes and setup.

Firmware update icon will atomically appear when PAGIS detects a new firmware is available for the P720 mobile cameras. All user types are notified, but only Admins can apply the update.

2.3.1 Camera Control Buttons

The dual-lens cameras can capture both color and an infrared image. Formerly, there were a total of three buttons that allowed the user to view the IR and color feed as well as capture a picture directly from PAGIS. Now there is a toggle button to switch between color and IR views and a separate button to take a picture. These buttons are displayed on the main Live Screen as shown below:

The Camera View Selector button: This is the default state at login showing the Static View. (**NOTE**: PAGIS does not automatically display a life feed.)

Color View: by clicking on the Camera View Selector button once, the user will switch to the Color View Mode. This displays the current view of the color camera and will time out after 60 seconds.

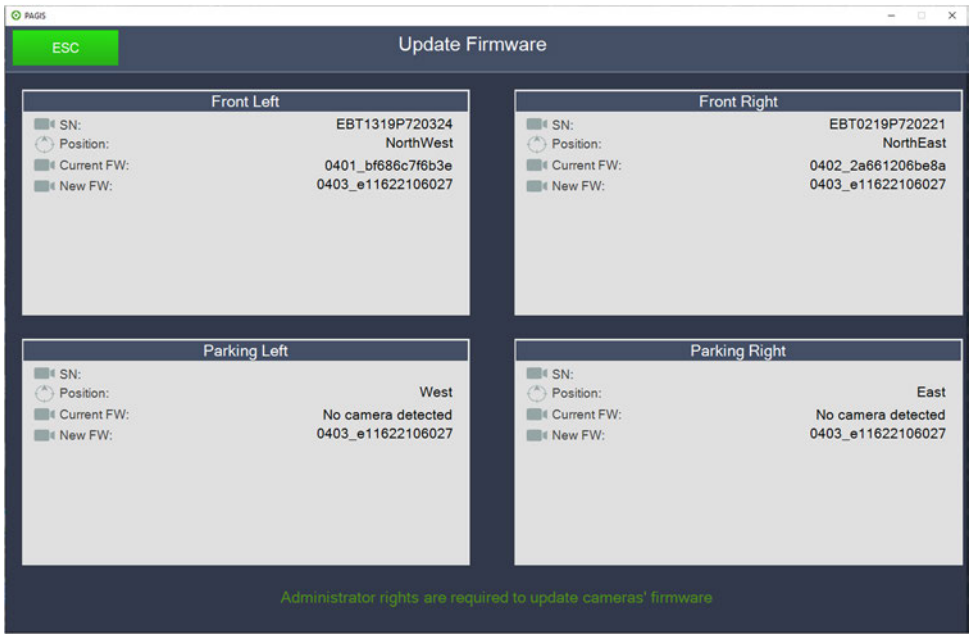
IR View: by clicking on the Camera View Selector button twice, the user will switch to the Infrared (IR) View Mode. This displays the current view of the IR camera and will time out after 60 seconds.

The Take Pic button: Just above the Camera View Selector button is the “Take Pic” button. This button allows the user to quickly take a picture from the camera currently viewed.

2.3.2 GPS Indicators

GPS is stamped on each read and hit as capture events take place by the system. The signal strength and location indicators are located underneath the camera panels at the bottom of the Live Screen.

39.341788,-84.298518 Shows an example of the Location Indicator displaying the Lat/Long on the most recent read



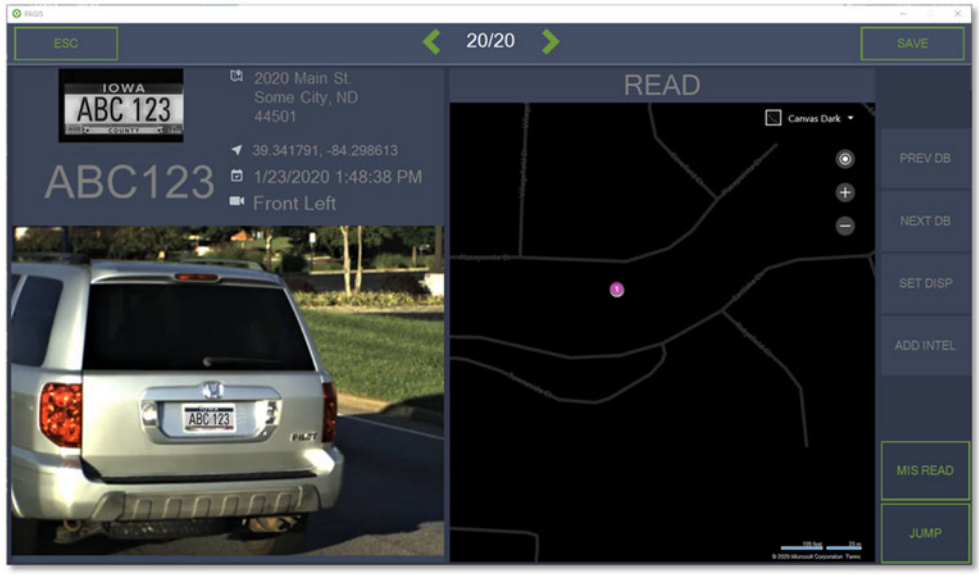
A green or yellow indicator shows a strong or medium strength GPS lock.

A red indicator shows there is no available GPS information.

2.3.3 Camera Firmware Update (Restricted Users)

Camera firmware update provides a means for PIPS to update the camera software to enhance and or correct camera performance. The frimware icon will only apper when update is avialable.

- The firmware update process only updates camera that are attached and function on the mobile processor.
- Restricted PAGIS users are only notified and displayed update information, only a PAGIS administrator can apply the FW update.



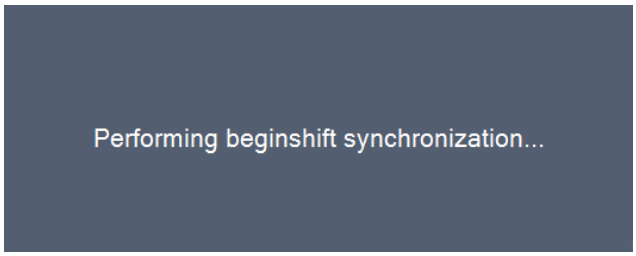
Firmware Updater Window List.

- Title “Camera Name”.
- Camera serial number.
- Position.
- Current FW version.
- New FW version available.

2.3.4 Day/Night Mode

Day/Night mode changes PAGIS user interface skins to a darker appearance to reduce illuminating the vehicle interior.

2.4 Begin Shift



Begin Shift is thought of as the first step for all PAGIS users. From the Live View Screen, the PAGIS user must click the Begin Shift button twice. Once to select the function and once more to launch the Sync. With most agencies, this action utilizes a wireless network to import all the necessary data used during a shift (Hotlists, Dispositions, and Targets) directly from the BOSS Server. However, agencies can also configure their systems to perform this function via Thumb drive or a local source file.

2.4.1 Sync via USB Thumb drive (or Local Source)

Depending on the agency network, some alter the default PAGIS/BOSS configuration mode to use a USB Thumb drive or locally stored file on the MDC/Laptop instead of the wireless Sync. In order to synchronize effectively, the user must first confirm he/she has access to the source location before initiating Begin Shift. **NOTE**: All synchronizations using this method must be performed manually. To learn more about this process, refer to the "Client Tools" section of the BOSS Manual.

2.4.2 Sync via Wireless Network

Synchronizations over a wireless network provide the agency with additional automated features. Best practices recommend the user manually launch Begin Shift from the Live View Screen at the beginning of every patrol shift. However, it is possible for users to allow PAGIS to synchronize via its auto-sync settings. When a manual Begin Shift is launched, the Main View Screen removes the camera feeds and displays a status window of the Sync process. Once the Begin Shift operation is complete, PAGIS will return to the normal Main View Screen.

2.4.3 PAGIS Auto-Sync Settings

PAGIS auto-sync settings are best thought of as how PAGIS receives additional updates and maintains the downloaded ALPR data throughout the entire patrol shift. This prevents the need for the officer to manually perform Begin Shift functions multiple times a day. The auto-sync occurs every 30 seconds and receives data in small batches. The batches are not to exceed 1MB in size for every minute of download. In addition to receiving data, the auto-sync function also uploads a copy of data collected by PAGIS and sends it to BOSS for reporting/processing.

2.4.4 Begin Shift – Additional Information

By default, the synchronizations in PAGIS receive only what has been changed to the ALPR data since the last Sync. Meaning, if some plates have been removed from a Hotlist and others have been added, the system will only transfer that data instead of downloading the entire Hotlist each time the Begin Shift is launched. This helps to reduce the amount of data transferred over the agency's network. **NOTE**: Begin and End Shift synchronization, as well as all auto-sync features, are dependent upon stable communication to the BOSS server via an active data connection.

2.5 End Shift

End Shift in PAGIS is the process in which all the collected ALPR data (Reads, Hits, and Images) from the recent shift is uploaded to the BOSS server and cleared from the local cache. As with Begin Shift, the agency has two options. They can choose to Sync via USB Thumb drive or via wireless connection. Best practices recommend users perform an End Shift Sync at the end of every patrol.

2.5.1 Sync to BOSS

At the end of every shift, the accrued ALPR data should be exported to BOSS. Just like with Begin Shift, the user must click the button twice to launch it (once to select it and once more to execute the Sync). During the Sync, PAGIS uploads any Reads, Hits, and Images not already synchronized to BOSS and purges these items from the local cache on the MDC's hard drive. Completing an End Shift also removes any VLP entries manually added to PAGIS during the shift.

2.6 Cam Mode Button

Clicking the Cam Mode button in the upper left corner of the Live View Screen allows the user to cycle through the different camera modes configured by the PAGIS Administrator. Changing the camera mode changes which cameras are displayed on the Main Screen.

2.6.1 Camera Modes

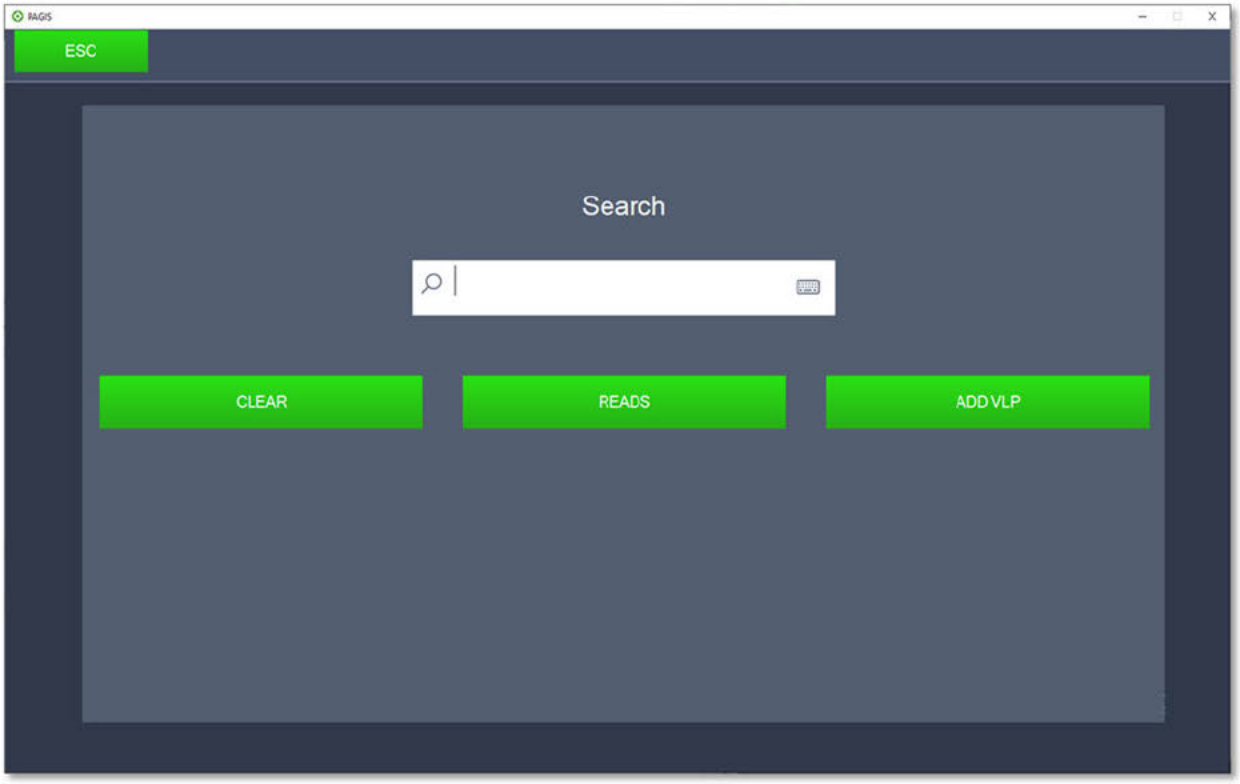
By default, PAGIS provides "Parking" and "Traffic" as the two configuration modes. Users often switch these modes to suit their current use-case. For example, an officer in a parking lot will often switch the mode to "Parking" so s/he can see the parking cameras on the Live View Screen. They can then switch back to "Traffic" when monitoring city streets.

2.7 Taking a Picture

The PAGIS software has ability to quickly take a picture from one of the currently displayed ALPR cameras on the Live Screen. The user only needs to click on the Take Pic button.

To Take a Picture:

1. From the Live View Screen, press the Take Pic button from the desired camera
2. The image taken will be displayed
3. Enter a description of the picture in the text field at the bottom of the screen
4. Press Save to save the picture or Escape to cancel. Either action will return you to Live View.



NOTE: The picture will Not be saved if a description/note is not entered in the text box.

To View the Saved Images:

1. Navigate to the Review menu in PAGIS
2. Select Audits
3. The user will be able to see a thumbnail of the image and the saved text/note
4. In order to review the saved images at a later time, the user will need to run the Audit Report from BOSS.

2.8 Search Entry Screen

Pressing the Search button icon from the Live View screen or SEARCH from the Databases window allows the user to search all manually entered plates as well as all BOSS synchronized databases (Hotlists) for license plate and target information. Users can also search all locally stored reads/images accrued since the last End Shift by clicking the Reads button instead of pressing the Enter key.

2.8.1 Searching Synchronized Hotlists for License Plates

By entering a vehicle license plate number (VLP) and pressing the Enter key or the ADD VLP button, the user can quickly search all the stored plate information locally collected as well as the information from all synchronized hotlists distributed from the BOSS server. **NOTE**: Hotlists can only be searched by entering complete VLPs. Wildcards and partial plate numbers will not return results.

Search Box: The text field used to enter the desired plate search via alphanumeric characters and/or wild card symbols.

Clear Button: Clears the contents of the search box.

Driver's License Info: The search field can also check the Hotlists for any DL information stored (Not available all countries).

Reads Button: This button searches for a match from all the reads/hits locally stored on the MDC/Laptop.

ADD VLP: Searches all locally stored hotlists for the plate and if there's no match, allows the user to add the plate to the "Manual Reports" alert list for use in the field. **NOTE**: All manual entries are cleared with each End Shift

ESC: The Escape button allows the user to exit to the Main/ Live View screen.

2.8.2 Searching Locally Stored Reads and Hits

As mentioned previously, this search function allows users to find reads and hits directly from their recent patrols using the search field and the Reads button. These searches pull only the reads and hits locally gathered/stored since the last time the user completed an End Shift. **NOTE**: The search results are specific to each Windows User Profile and do NOT pull images from the BOSS server.

2.8.2.1 Searching for a Match

4239

- From the Search field, users may enter a plate (or partial plate with wildcards) and then click the **READS** button.
- Results are displayed with the data gathered at the time the read was taken (See example below).
- Each result should display the infrared (IR) image of the plate as well as the color overlay of the vehicle for review.
- Each result shows the GPS data, Closest address point, Time and Date, and the Camera that read the plate.
- If there are multiple results, the user can cycle through them by clicking the left and right navigation arrows.

2.8.3 Wild Card Symbols

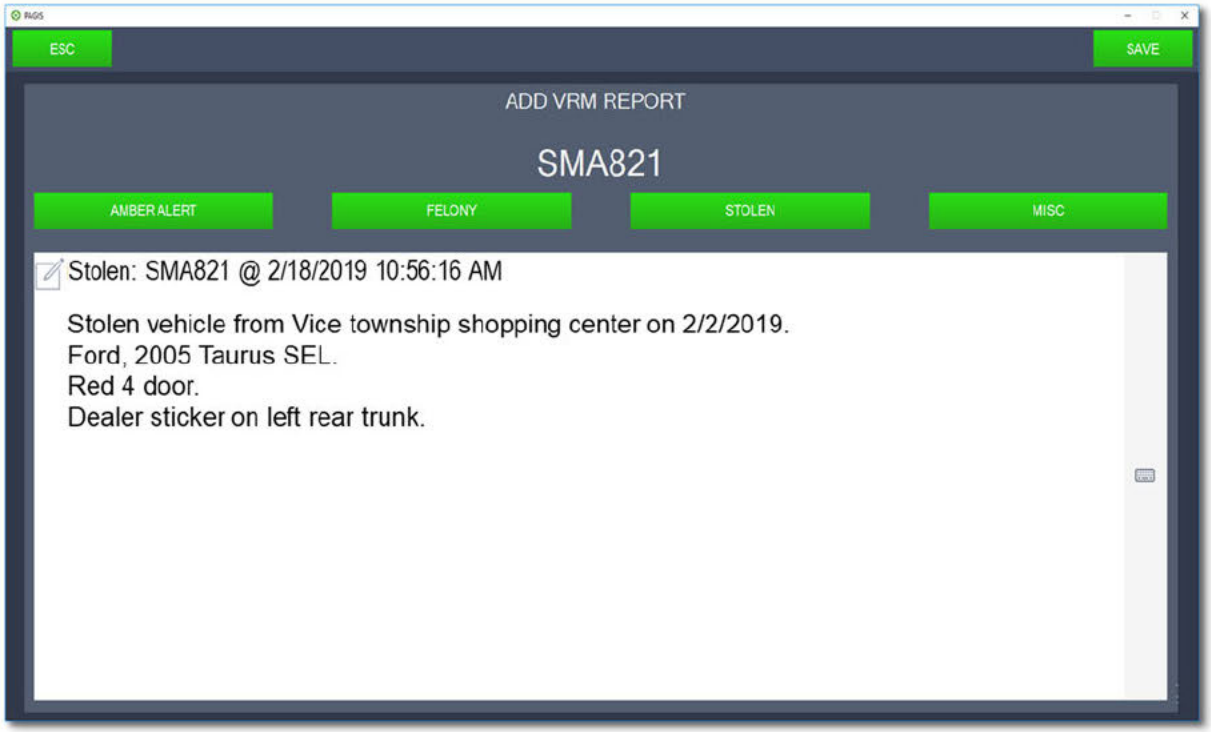
The use of wild card symbols in the Search box allows greater flexibility for the user, but may return a larger set of results.

- Wild card searches performed using the asterisk (*) designates an unknown number of characters.
- Wild card searches performed using the underscore (_) indicates a single missing or unknown character.
- Searches can be performed using one, both or no wild card symbols.

Example: The officer received an alert from Dispatch looking for a vehicle plate containing the letter J and the number 8 separated by one character. Because the officer doesn't know how many characters there are before or after the J and 8, he enters *J_8* in the search box to review all possible matches of J and 8 separated by only one digit.

2.8.4 Manually Adding a Plate to PAGIS

PAGIS allows users to manually add a plate of interest directly into the software as needed. Once saved, these entries are stored as part of the Manual Reports alert list and work just like any other Hotlist synchronized from the BOSS server.
NOTE: These additions are designed to be temporary and are cleared from the software with each End Shift.



2.8.4.1 ADD VLP Query

Before an entry is added to the Manual Reports Hotlist in PAGIS, the software searches all stored databases for a match. If a match occurs, a message will display under the search box showing which Hotlist(s) it has been found in. If the VLP query does not return a match, the "ADD VRM REPORT" screen appears.

2.8.4.2 ADD VRM Report Screen

If the desired plate does not already reside in another Hotlist, the ADD VRM Report Screen becomes accessible to the user.

1. From the Search Entry Screen, enter the desired plate to add.
2. Click the ADD VLP button. If no match is found on any other hotlist, the "Add VRM Report" screen will appear.
3. Click to select the applicable alert type (AMBER ALERT , FELONY , STOLEN , or MISC)
4. Either leave the default information or add additional detail.
5. Click Save at the top right to add the plate to the Manual Entries Hotlist

2.9 The Review Screen

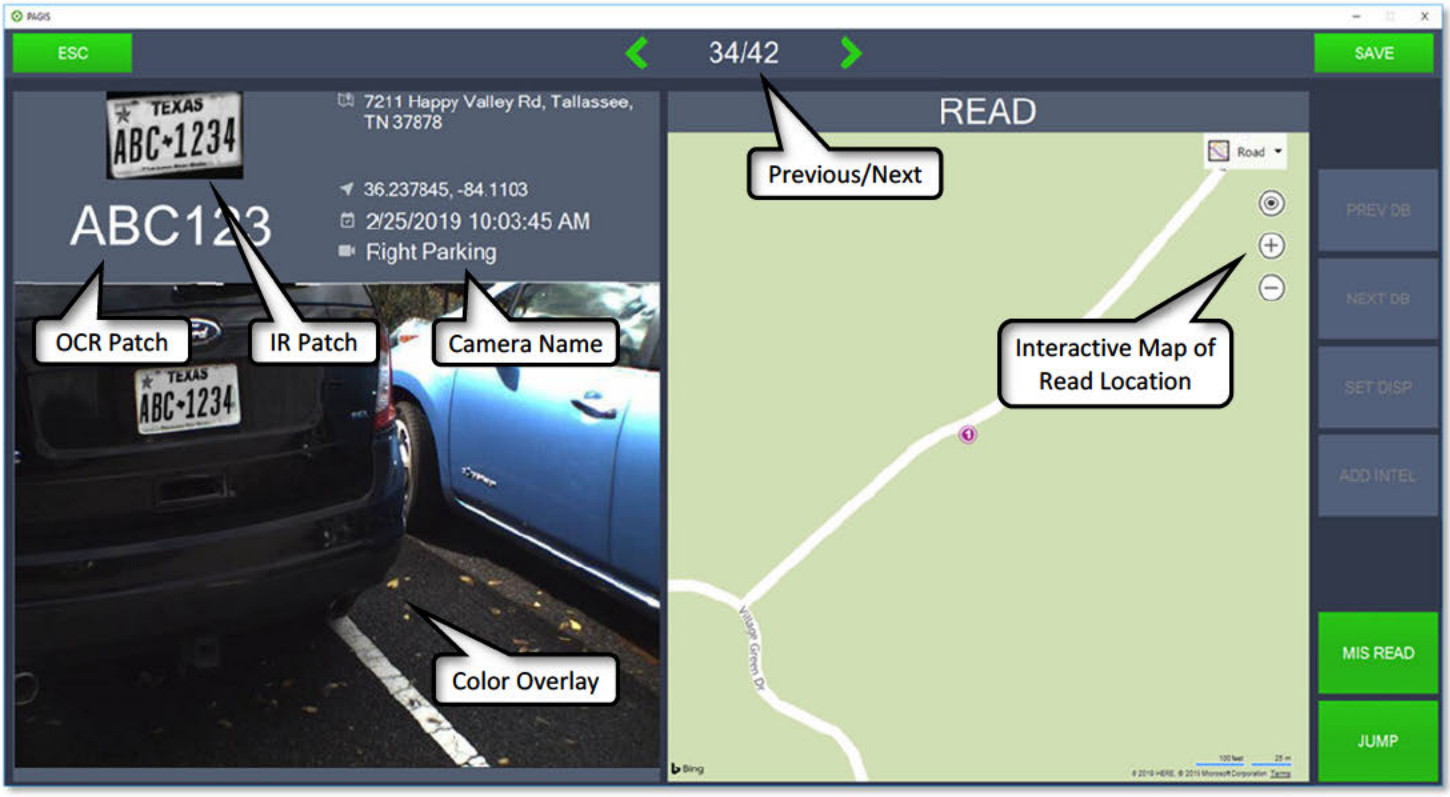
4241

PAGIS allows users to review all locally stored data from one easy location. Clicking the Review icon from the Main Screen launches Review. This screen is divided into the Summary View Chart and sub-section navigation buttons to the right.

2.9.1 Summary Review Section

The Summary View Chart is divided into five categories and allows a user to review the information collected during their shift at a glance.

Total Reads: Shows the total number of Reads/Hits synced to BOSS and the total number of reads captured during the shift.
Reads: Shows the total number of reads synced to BOSS and the total number of reads captured during the shift.
Hits: Shows the total number of hits synced to BOSS and the total number captured during the shift.
Misreads: Shows the total number of reads marked as a "misread" synced to BOSS and the total marked during the shift.
Audits: Shows the total number of audits synced to BOSS and the total number of audits during the shift.
Targets: Shows only the number of targets downloaded from BOSS.
(NOTE: The Sync value will always be zero for customers using Disk Sync mode/Client Tools.)



2.9.2 Review Navigation Buttons

The navigation buttons allow the user to review specific sets of information gathered during the shift.

Reads: Review all plate detections that have occurred since the last End Shift synchronization.
Hits: Review the hit alerts for Vehicle License Plate (VLP) reads that matched a Hotlist.
Misreads: Review reads and/or hits that have been manually flagged during the shift as misreads, where the plate number in the image does not match the OCR interpretation of the plate (e.g., a letter O misread as a Q or zero).
Audits: Review failed and successful logons, any manual data entered during the shift, pictures taken and all manual license plate searches.
Targets: Review targets that have been synchronized/downloaded from Boss.
Databases: Review all the Hotlists currently distributed to this PAGIS laptop/MDC.
Esc: Returns the user to the previous screen.

2.9.3 Reads

From the Main Screen, the user can review his or her accumulated Reads (those gathered since the last End Shift was completed) by clicking on the Review icon and then selecting the Reads Navigation button. The Read Review Screen is divided into two main sections. The left side displays the information gathered at the time of the read and the right side displays an interactive map of the GPS location.

NOTE: Buttons that are greyed out indicate options that are not available in the current view. For example, the Reads and Hits review screens share the same layout but different on-screen options.

2.9.3.1 Reads Result Screen Navigation Buttons

Read Count: The left number is the current record. The right number is the total available for review.

Next/Previous button: The arrows on either side of the read count allow the user to navigate back and forth to review reads/results.

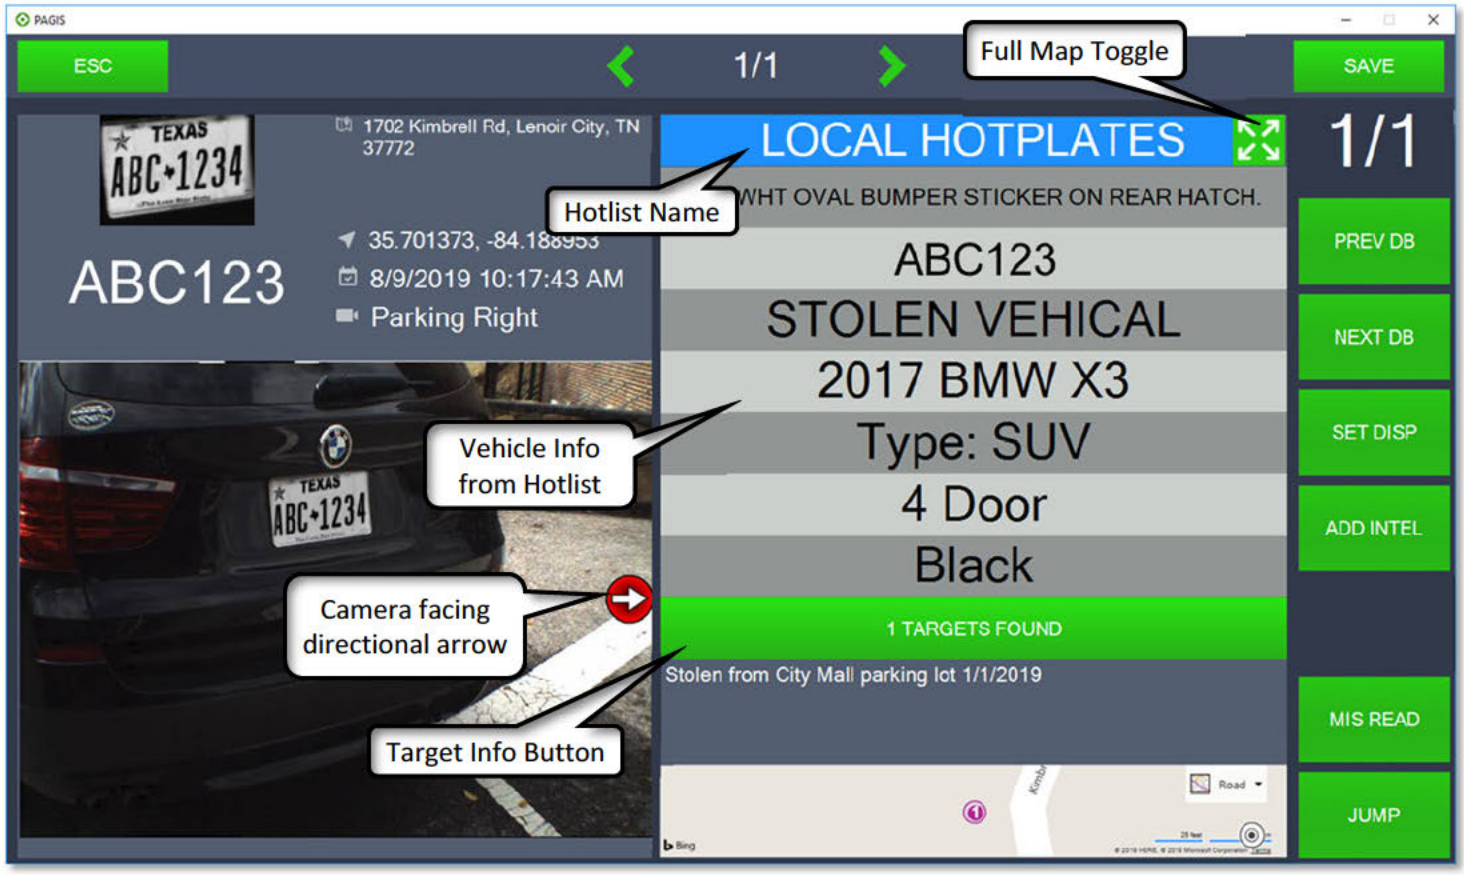
MisRead button: When the button is green it indicates the record has NOT been edited as a Misread by a user. Once a Misread is saved, this button will turn grey and the record title will update.

Jump button: Allows the user to "jump" to a specific record without the need to navigate one record at a time using the Next/Previous buttons.

Save button: Apply any changes/edits and return to the Main Screen.

Escape button: Returns the user to the Main Screen.

2.9.3.2 Interactive Buttons – Reads Screen



From the Reads Review, the user can interact with the following:

- IR Patch: The user can click on the IR "Patch" plate image to open a full-screen view.
- OCR Patch: The user can click on the OCR "Patch" image to edit the license plate number if necessary/Misread.
- Color OV Image: The user can click on the color image to open a full-screen view.
- Map: The user can manipulate the interactive map of the read location (Map Type, Scroll, and Zoom).

2.9.4 Hits

Users can manually access the Hits Section by first selecting the Review icon from the Live View Screen and then clicking the Hits Button. The Hits Screen is also divided into two main sections. The left side displays the information gathered from the ALPR equipment during the read. And the right side displays the information provided by the associated alert list.

NOTE: Each time a VLP matches a Database value (a license plate read by the system matches a Hotlist entry), PAGIS plays an audible tone and automatically displays the Hit Screen to alert the user.

2.9.4.1 Hit Screen Attributes

Hit Count and Navigation Buttons: Displays the total Hit count as well as the Next/Previous navigation buttons.

IR Patch Image: A thumbnail image of the license plate from the IR camera.

OCR Text: The character string the OCR engine generated from the current plate.

GPS Location: The GPS coordinates at the time of the hit. (If a GPS device is not attached, the Lat/Long is displayed as 0,0).

Date and Timestamp: The date and time when the read/hit was captured.

Overview Image: The overview image of the vehicle from the Color Camera. (**NOTE**: Color images require visible light)

Camera Name: The name of the camera that captured the read ("Right Parking" in the screenshot).

Hotlist Name: This is the name of the Hotlist or "Database" where the plate was matched.

Target Button: When available, this indicates a person of interest is associated with the Hit and opens the Targets Screen.

Vehicle Information: The area of grey bars will display the related vehicle information from the Hotlist. Any information added manually by the user will appear in the Text Box near the bottom of the screen.

Interactive Map: Shows the location the Hit took place. Users can access full-screen view by clicking the map or the toggle .

2.9.4.2 Hit Screen Function Buttons

The Hit Count Indicator: shows how many Hotlists the current Hit has registered against.

Previous DB button: This button moves the user to the previous Database/Hotlist that produced a Hit.

Next DB button: Pressing this button moves the user to the next Database/Hotlist that produced a Hit.

The Set Disposition button: prompts the user to report the disposition of the hit by selecting one of the approved codes assigned in BOSS by the Administrator.

The Add Intel button: allows the user to add additional information regarding the current Hit.

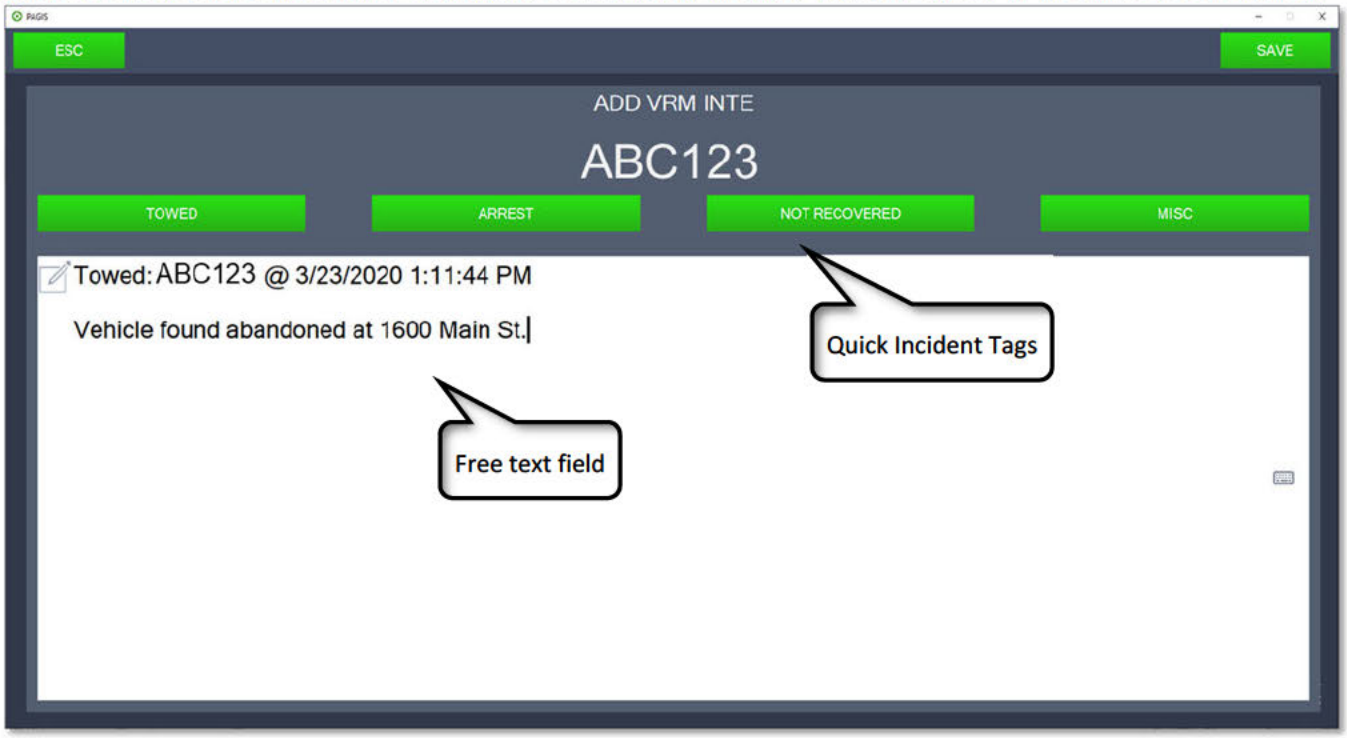
The Misread button: allows the user to flag the Hit as a misread.

The Jump button: Allows the user to "jump" to a specific Hit instead of navigating one at a time.

2.9.4.3 Interactive Buttons – Hits Screen

- IR Patch: The user can click on the IR "Patch" image to open a full-screen view.
- OCR Patch: The user can click on the OCR "Patch" image to edit the license plate number if necessary/Misread.
- Target Button: Shows associated person(s) of interest and opens the Targets Screen.
- Color OV Image: The user can click on the color image to open a full-screen view.
- Map: The user can manipulate the interactive map of the read location (Map Type, Scroll, and Zoom).

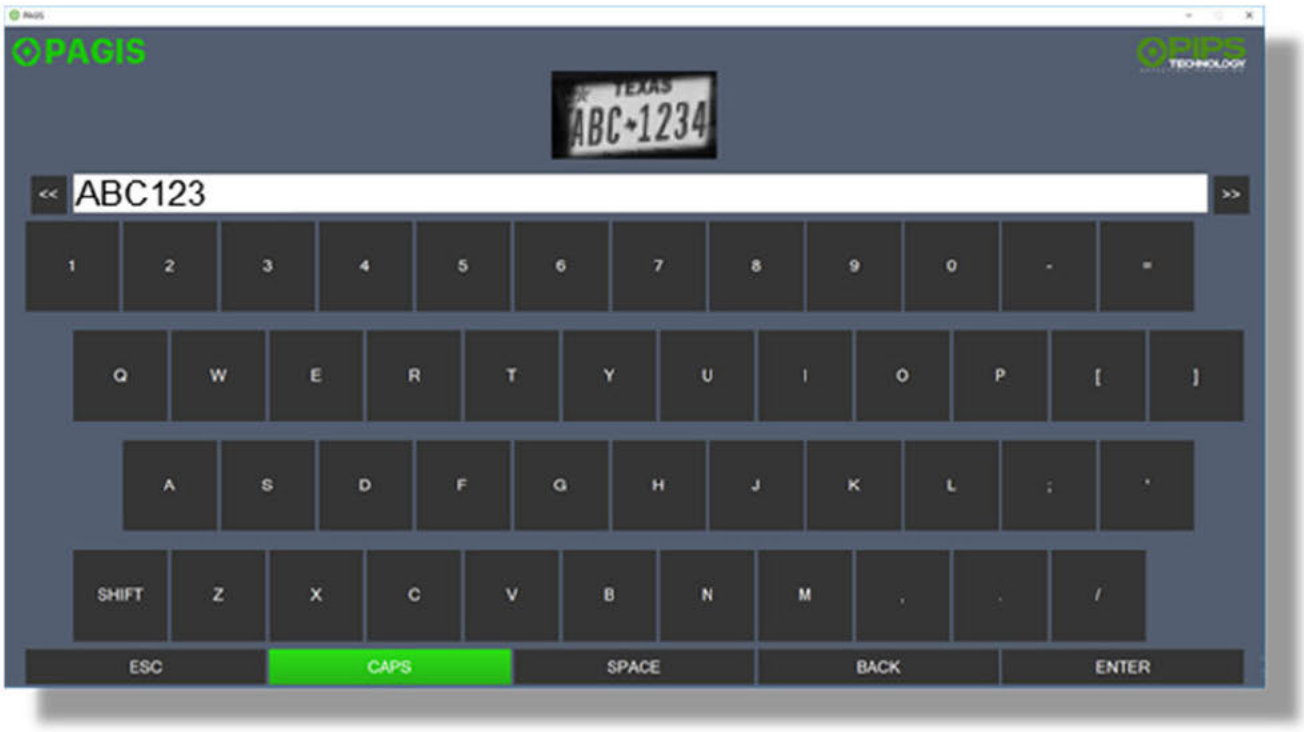
2.9.4.4 Set Disposition – Additional Detail



PAGIS allows for additional information to be added to a record in the form of a Disposition. Once Hits are flagged with a disposition code, the Agency is capable of running a "Reads Statistics by Disposition Report" in BOSS. Thus, providing valuable metrics and understanding to leadership in regard to their ALPR Enterprise.

When the "Set Disp" button is selected, the user is prompted to choose from a list of predefined values set by the Agency/BOSS Administrator. Once a disposition is selected and Saved, the disposition is reported to BOSS and will also show up in the Hits Review Screen text box in PAGIS on the next alert notification.

2.9.4.5 Add Intel – Additional Detail



The Add Intel button launches the Intel screen. The user is prompted to assign one of four values: Towed, Arrest, Not Recovered, and Misc. by clicking the associated button at the top of the screen. The user may also enter additional detail regarding the license plate/vehicle. After clicking the Save button, the intel will now appear in the Hits Screen text box.

2.9.5 Misreads

PAGIS allows the user to mark Reads and Hits with incorrect OCR translations as a Misread. This is most commonly done by Agencies for Hits only as users typically don't have time to review every single Read from their shift. Once an errant Hit is corrected, the system updates the record to show it as a Misread and thus improves Agency Hit Reporting.

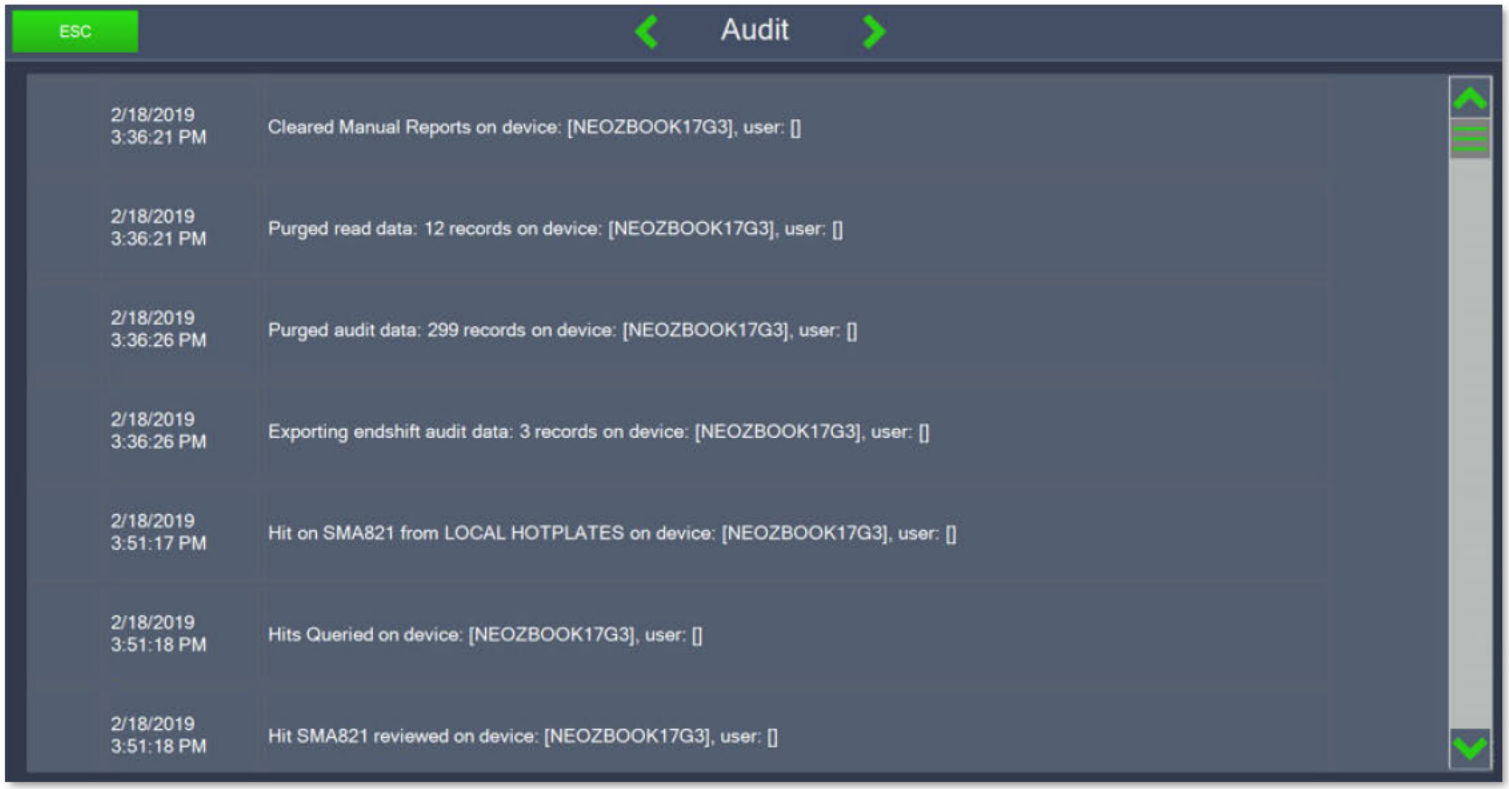
Correcting a plate read can be accomplished by clicking on the "OCR Patch" in either the Hits or Reads review screen. When the user clicks on the OCR Patch, the OCR Edit Screen opens and allows the user to update the Vehicle License Plate (VLP) data.

2.9.5.1 Marking a Record as a Misread:

The user can mark a record as a Misread from both Reads or Hits Review Screen. Each user can either simply flag the record as a Misread or update the OCR Patch information. **NOTE**: This ability is only available until the user has performed an End Shift function.

Manually Flagging a Read or Hit as a Misread:

1. Navigate to either the Reads or Hits Review Screen
2. Click on the Misread button on the Right
3. Click Save
4. Take note that the record title has now changed from “Read” to “Misread”



Updating the Read/Hit OCR Patch:

1. Navigate to either the Reads or Hits Review Screen
2. Click on the OCR Patch (Text just under the IR Plate Image)
3. Use the keyboard or on-screen keypad to update the Vehicle License Plate Number
4. Click the Enter Button to Save the changes (and exit back to the Review Screen)
5. When the user saves the changes to the OCR Patch, the record (Read/Hit) is automatically flagged as a Misread

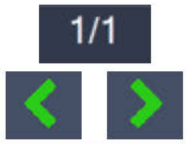
2.9.6 Audits

PAGIS logs both user and key system activity during each use of the software. The audit log captures various information like Read searches, synchronizations, hits, and user login attempts. The Audit Report is viewed in PAGIS by navigating to the Review section and selecting “AUDITS”.

NOTE: Performing an End Shift or syncing the database clears the current log.

2.9.7 Targets

PAGIS has the ability to display information regarding Persons of Interest in response to a Hit alert. Targets are created by BOSS/Hotlist Administrators, and typically provide detailed information about owners of a registered vehicles. When configured, Target data is always linked to unique VLP data (a specific License Plate). If PAGIS registers a Hit on a Plate with a target ID, the Target Information Button is displayed in the Hit Alert window and allows the user to access the Target Screen.



2.9.7.1 The Targets Screen

When a PAGIS user clicks the Target Information Button from a Hit Alert, the Targets Screen opens. This screen displays the information from the BOSS server about the Person(s) of Interest matched to the Hit (license plate).

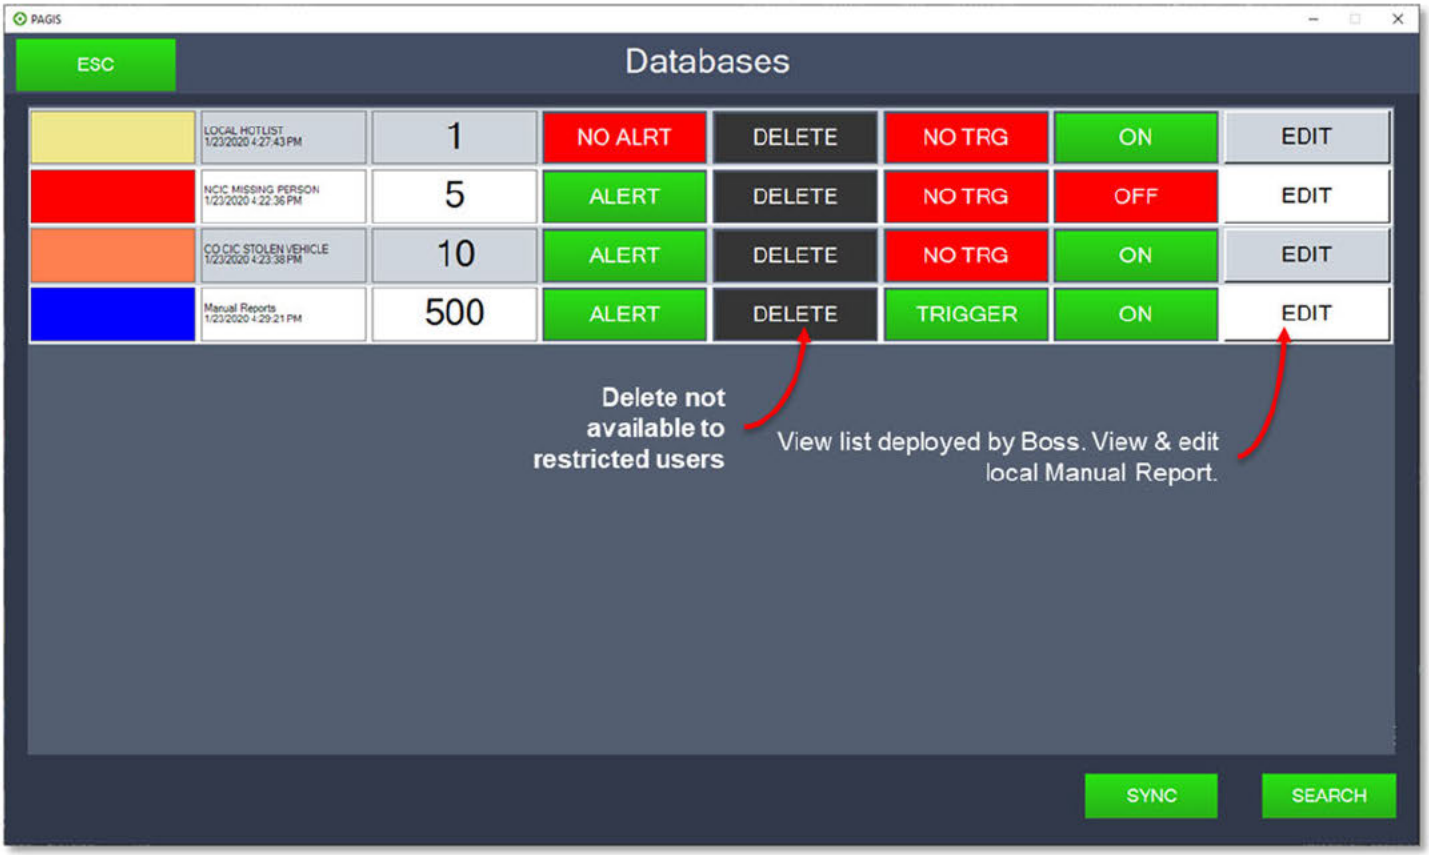
2.9.7.2 Targets Screen Navigation Buttons

If a Hit alert has more than one Target associated with it, the PAGIS user can navigate all Target information with the buttons described below:

Target Count: The left number is the current record. The right number is the total available for review.

Next/Previous button: Arrows on either side of the target count allow the user to navigate back and forth to review the various targets.

Jump button: Allows the user to "jump" to a specific record without the need to navigate one record at a time using the Next/Previous buttons.



Close button: Returns the user to the previous screen.

2.9.8 Databases

Users can review Hotlists in PAGIS by navigating to the Review section and selecting "DATABASES" on the right. From the Databases Screen, users can toggle Hotlists functions On and Off based on their rights.

NOTE: User rights and Hotlist attributes are configured in BOSS.

2.9.8.1 Databases Screen Functions

Hotlist Color Code: The color attributed to each Hotlist by the BOSS Administrator.

Hotlist Name: The name of the Hotlist given by the BOSS Administrator. Also shows the time/date of the last synchronization.

Hotlist Priority: The priority of the Hotlist assigned by the BOSS Administrator. The lower the number between 1 and 999, the higher the priority. If a plate resides on multiple Hotlists, the list with the higher priority will be displayed first.

Alert Button: Toggles audible alerts On and Off for each Hotlist until the next synchronization.

Delete Button: Based on user rights, allows the user to temporarily delete a Hotlist from PAGIS until the next synchronization. To delete a hotlist, the user must click the button twice (it turns green and then deletes the list).

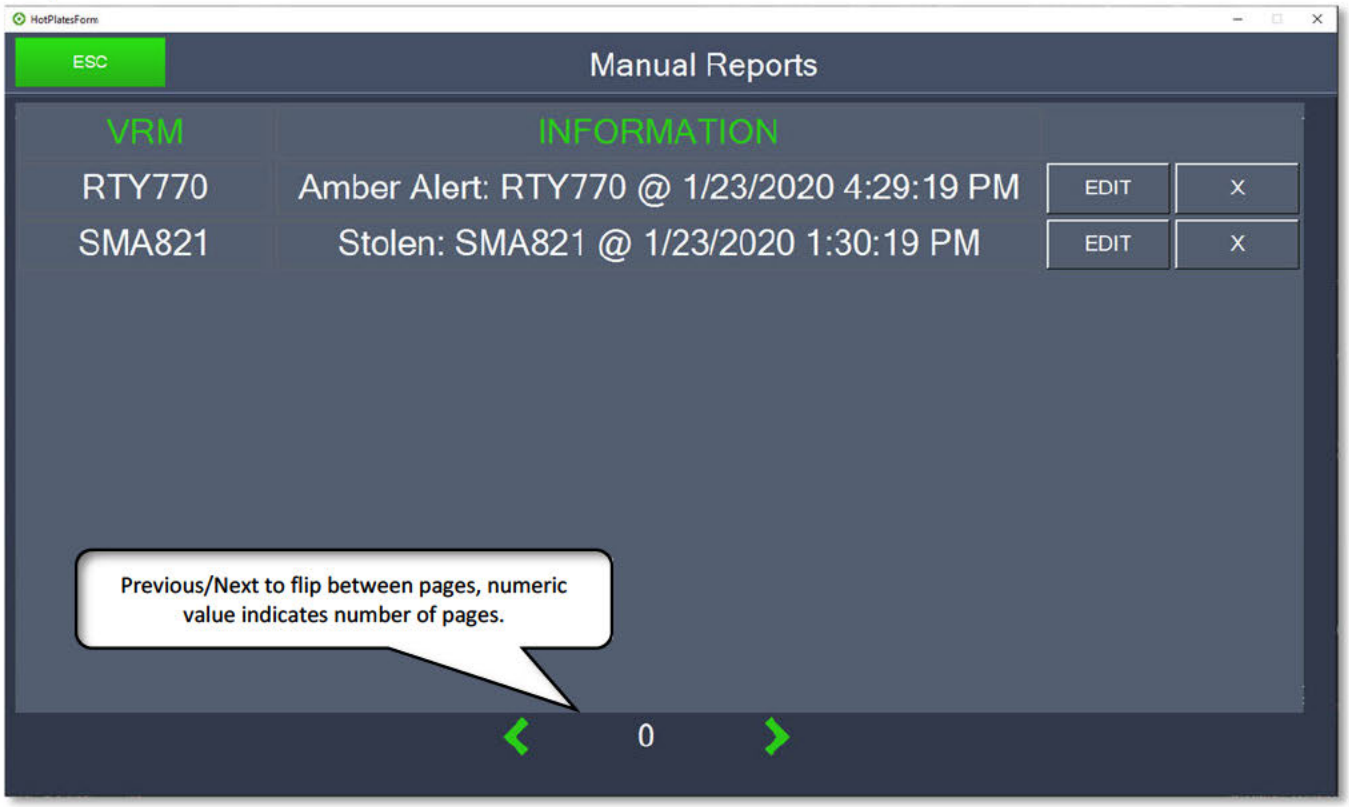
Trigger Button: Toggles external triggers On and Off. An example of an external trigger is a light bar.

On/Off Button: Disables and enables each Hotlist (each Hotlist is set to On by default).

Edit: View and edit localy created hotplates with a given hotlist, Hotlist/Hotplates deployed via BOSS can only be viewed.

NOTE: Hotlist settings altered in PAGIS will be reset to their default configuration during the next Sync or End Shift. The default configurations are assigned by the BOSS Server/Administrator.

2.9.8.2 Databases Screen Navigation Buttons



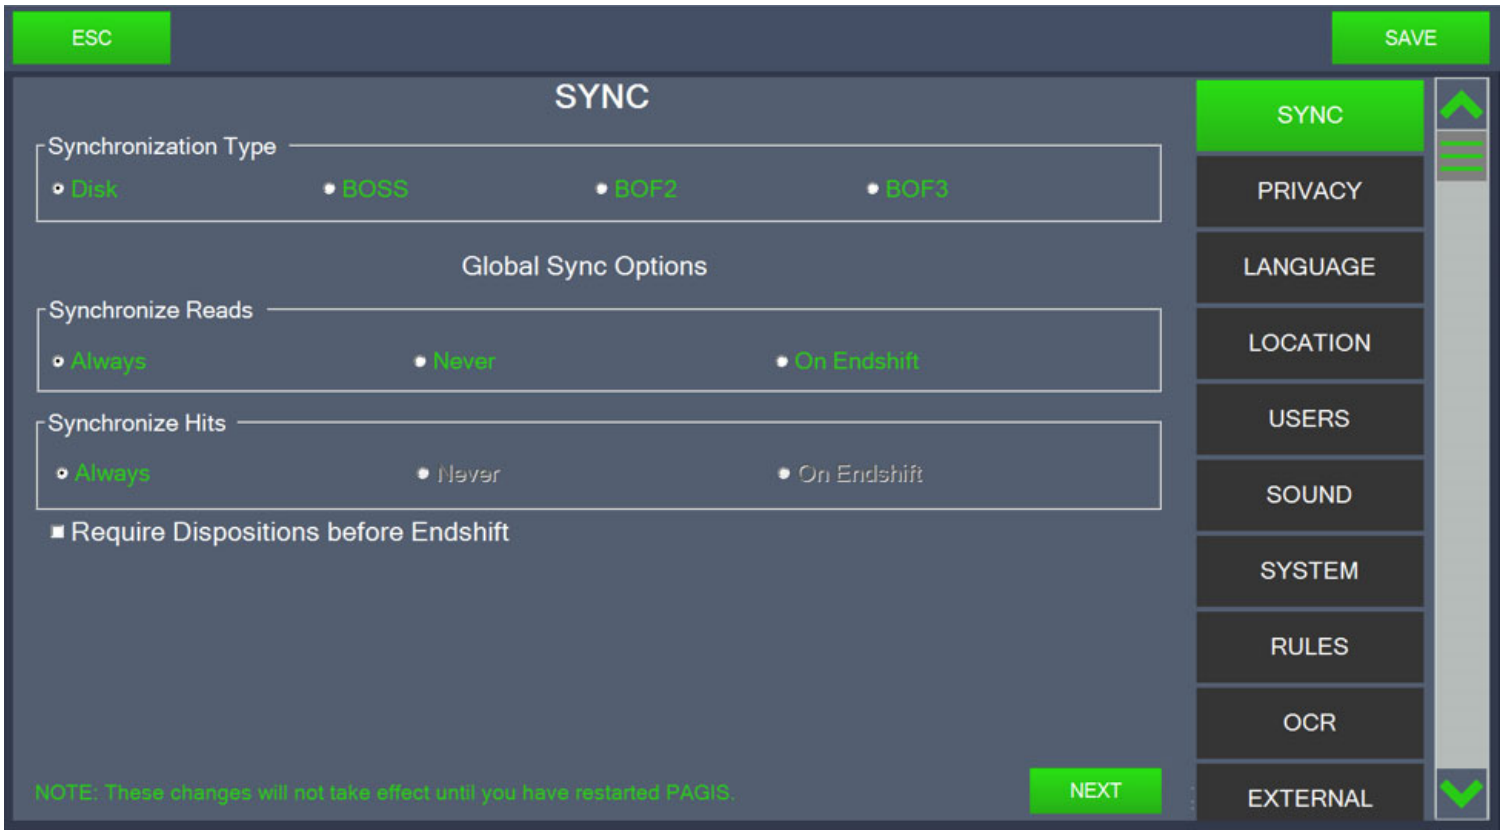
SYNC — **Sync button**: Synchronizes PAGIS with the BOSS server in order to update the Hotlists.

SEARCH — **Search button**: Open the Search Entry Screen (See section 2.8 for more information).

2.9.8.3 Databases Edit- “Manual Reports”

Editing Hotlist has two function based on origin of hotlist.

- Hotlist deployed to PAGIS via BOSS cannot be edited, only the hotplates list can be viewed. Editing/updates are indented to be managed via BOSS.
- Hotlist created in PAGIS, i.e. “Manual Reports” can be managed by PAGIS users, allowing for changes or deletion of the hotplates contained within the hotlist.



EDIT Button: Make changes to the indicustly hotplate information including licanse plate nuamber.
X Button: Remove indivualy hotlist from hotlist.
Previous/Next Button: Scroll thought lising of hotplates contaned within the hotlist. The numeric value indicates the number of pages.

ADMIN SETTINGS

The Settings Menu is the central location for configuring PAGIS Software functions endpoint by endpoint. Users with Admin level rights in PAGIS can see and click on the Settings Button from the Live View Screen. Launching Settings opens the menu to the Sync Options Screen by default. **NOTE**: Users without Admin level access will not see this icon on the Live View Screen.

3.1 Sync Options Screen

As mentioned previously in sections 2.4 and 2.5, PAGIS uses various sync options to store, update, and synchronize ALPR data to and from the BOSS server. On the Sync Screen, Administrators configure the synchronization method and options.
NOTE: Configuration changes will not take effect until they are saved and the PAGIS Software has been restarted.

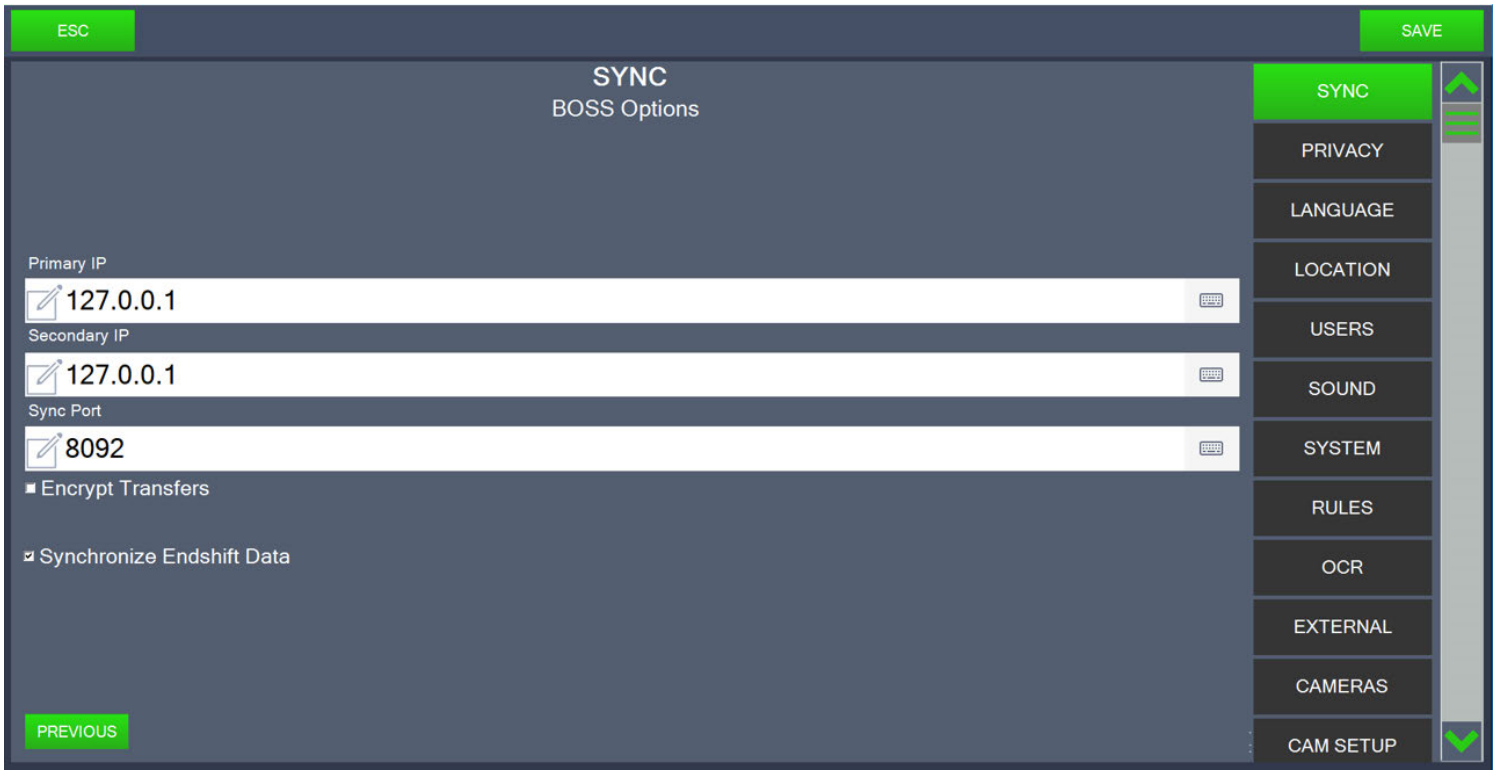
3.1.1 Synchronization Types

- **Disk**: Uses local storage of Sync files in conjuction with a USB flashdrive to manually Sync to and from BOSS.
- **BOSS**: Uses a wireless data network to Sync files to and from the BOSS server.
- **BOF2**: Used predominantly in Europe (see regional guide for support).
- **BOF3**: Used predominantly in Europe (see regional guide for support).

3.1.1.1 Synchronization to Disk (Local Storage)

4252

Sync to Disk is a manual two-part process most commonly used with a USB Thumb drive. To use Begin Shift, the user accesses a centralized terminal (Ex. Patrol Room PC) to download the files from BOSS and then inserts the Thumb drive in the laptop to perform Begin Shift. At the end of the day, the user then Performs End Shift from the laptop/MDC connected to the Thumb drive and uploads those files to BOSS via the central terminal (See the "Client Tools" section of the BOSS Manual).
NOTE: From the Sync Menu, select "Disk" and click the Next button at the bottom to configure the drive location.



- **Delete Beginshift Data on Sync**: The sync folder on the Flash Drive is deleted once all Begin Shift data has been imported to PAGIS. This is on by default to help prevent false alerts.
- **Encrypt Endshift Data**: All uploaded End Shift data created in PAGIS is encrypted. This is off by default.
- **Copy Endshift Data on Sync**: If unchecked, no End Shift data will be transferred from PAGIS to the Drive location.
- **Keep Only Updated Databases**: Removes any Hotlists from PAGIS that were not updated during Begin Shift as "outdated". This is off by default.

Sync to Disk Setup:
In the text box, enter the drive path or letter to be used with Disk Sync. Folder name is not required as PAGIS creates the required folder(s). Once entered, select the desired options and then click the Previous button. Click Save to retain the settings.

3.1.1.2 Synchronization with BOSS

Sync to BOSS is a streamlined method for updating ALPR data to the field units and the server. Additionally, selecting this option enables the PAGIS auto-sync features that synchronize data throughout the shift without user involvement. However, this does require a stable data connection as well as some network configuration before it can be utilized.

Sync to BOSS Screen:

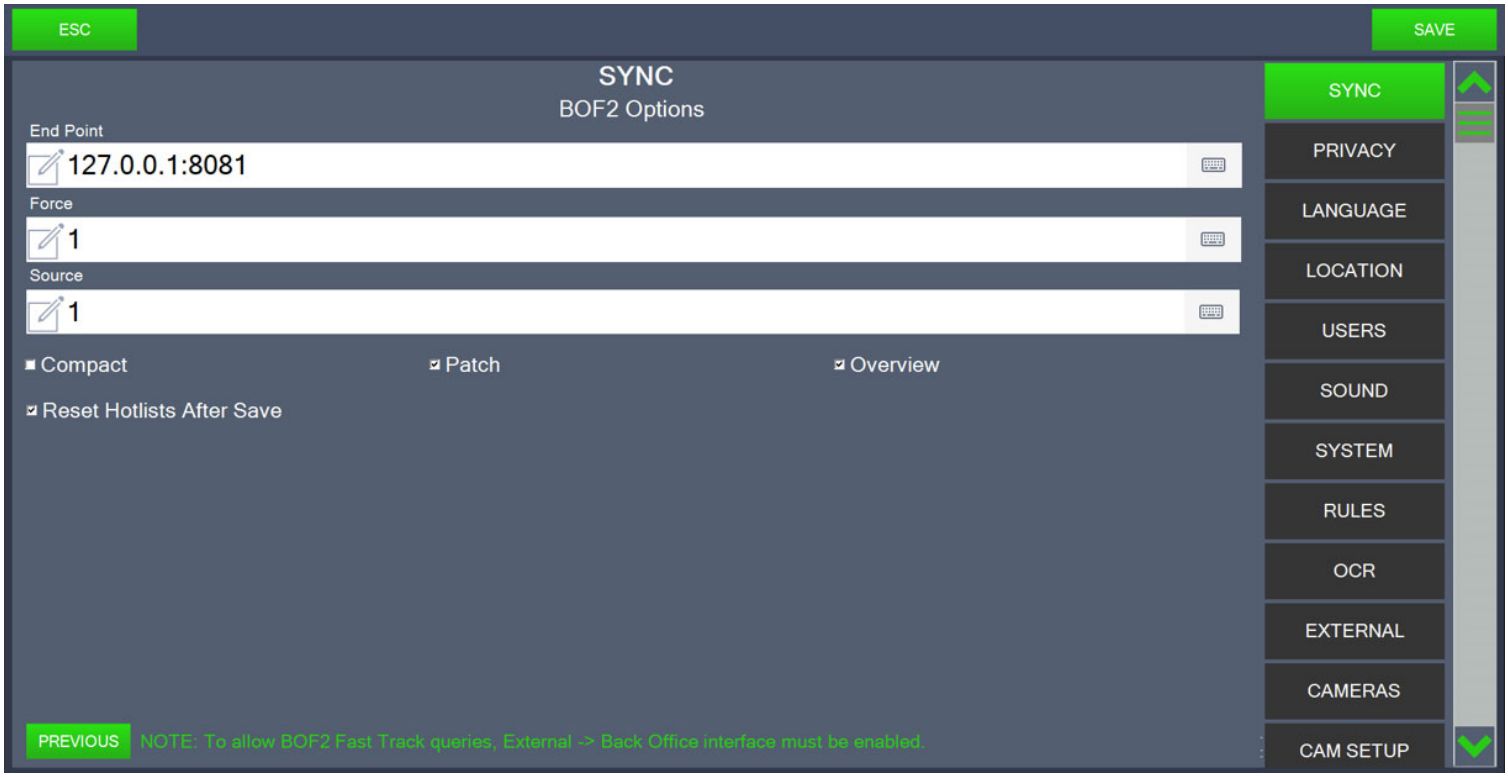
4253

- **Primary IP**: The IP address of the BOSS server. This can also be the DNS name (**NOTE**: using DNS adds an additional failure point via the Domain Controllers and is not recommended as the best option).
- **Secondary IP**: Used for a secondary IP in cases where users switch from a cellular network to a Domain APN thus routing to BOSS from either an internal or external IP. This field can be left blank or with the primary IP as well.
- **Encrypt Transfers**: When enabled, data transfers to BOSS will be encrypted.
- **Synchronize Endshift Data**: On by default, this enables PAGIS to sync to BOSS when End Shift is performed by the user.

Sync to BOSS Prerequisites:

To establish the wireless sync to BOSS, the Agency Network Administrator will need to open TCP 8092 to the BOSS server as well as define the internal and/or external IP address(es).

Sync to BOSS Setup:



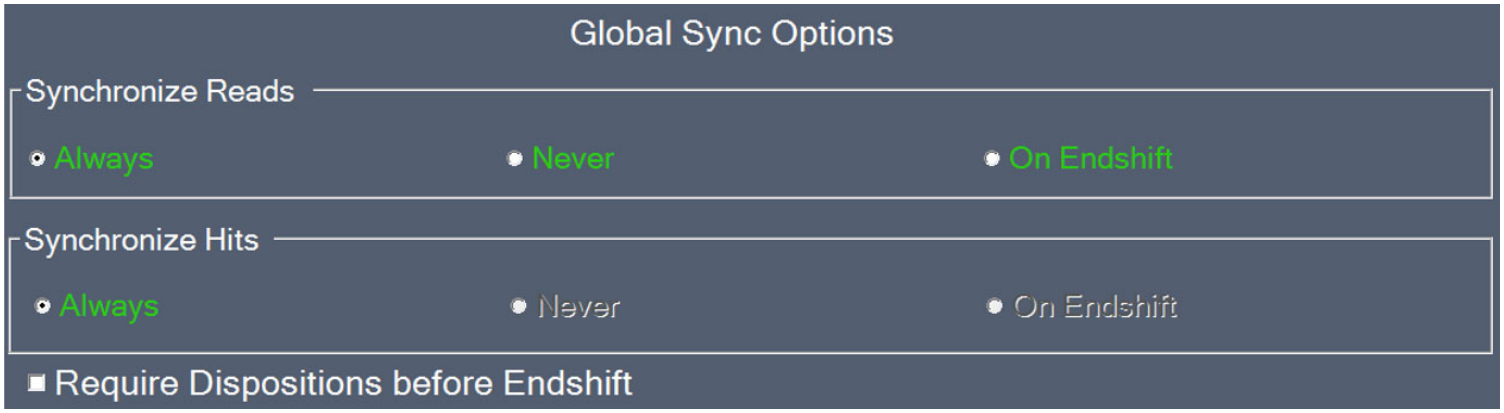
From the Sync Settings Menu, the Admin must select the BOSS option and click the Next button. Then s/he will update the Primary and Secondary IP fields as necessary and de/select any options. Once configured, click the Previous button and then click Save to retain the changes. (For more information on PAGIS Auto-Sync settings, refer to section 2.4.3)

NOTE: After synchronizing to BOSS, data is flagged in the database to prevent duplicate values on future synchronizations.

3.1.1.3 Sync to "Instation" (Formerly BOF2 and BOF3)

The Instation software was formerly known as BOF2 & BOF3 and was developed by Anite PLC. It is a web-based Back Office software suite used in European markets to provide similar features as the PIPS BOSS server and UI Client.

NOTE: These options are NOT used in the Domestic United States.

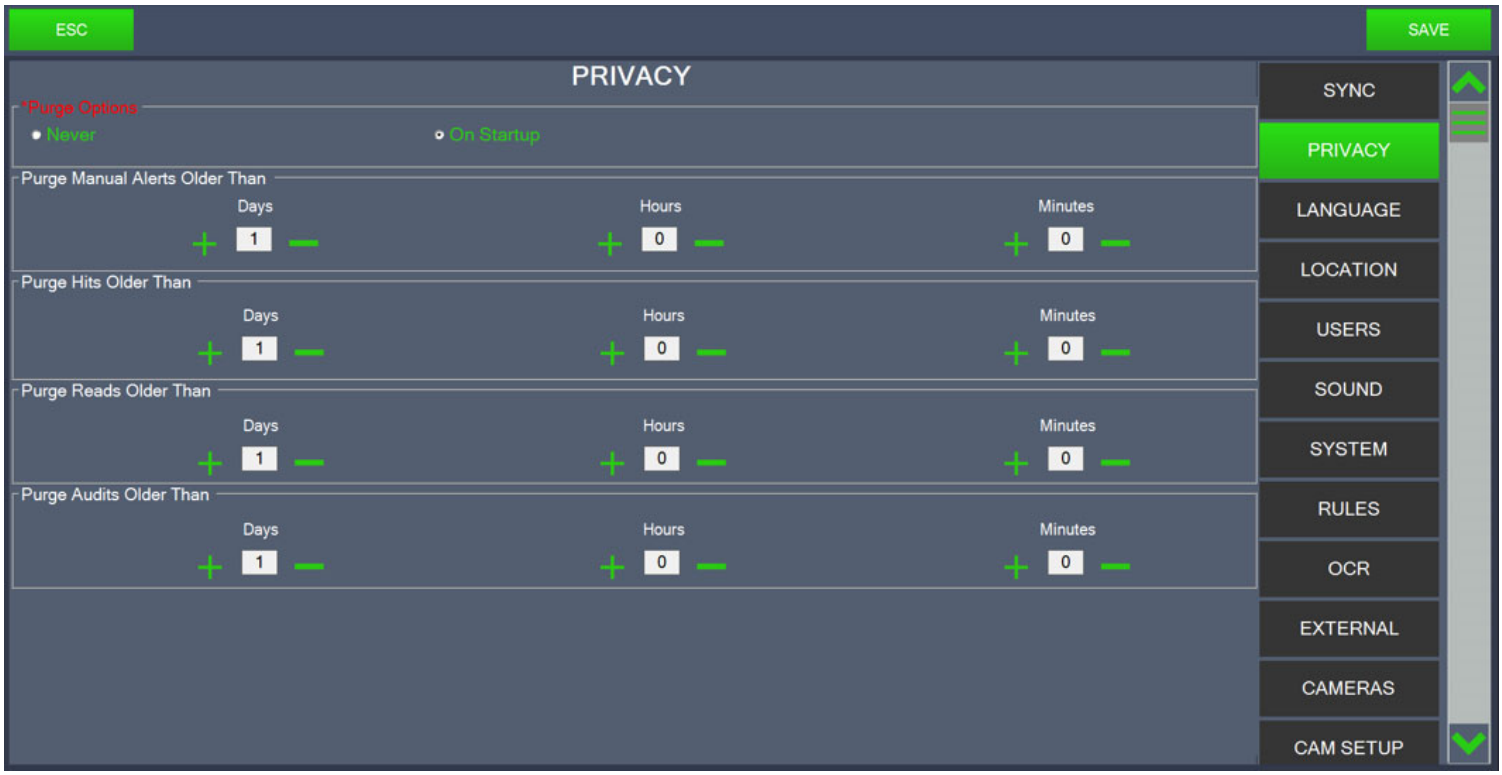


- **End Point**: The IP Address of the Instaion website. Format must be [IP Address:Port]
- **Force/Source**: Unique codes assigned to each police force.
- **Compact**: This option minimizes data transfer to Instation. Images will be deselected by default when in use.
- **Patch**: Refers to the image of the plate pulled from the read. This is on by default.
- **Overview**: Refers to the color overlay image from the read. This is on by default.
- **Reset Hotlists After Save**: When the software syncs to Instation, this will reset the hotlist tracking.

3.1.2 Global Sync Options

4254

Global Sync settings control how PAGIS synchronizes ALPR data during Begin and End Shift cycles and applies to both manually launched synchronizations as well as Auto-Sync functions. The two sections are Synchronize Reads and Synchronize Hits.



NOTE: All Hits are Reads, but not all Reads are Hits. A "hit" is a read that coincides with an Alert List. Due to this, the Options selected in the "Synchronize Reads" section dictate what options are available in the "Synchronize Hits" section. Unavailable options are greyed out.

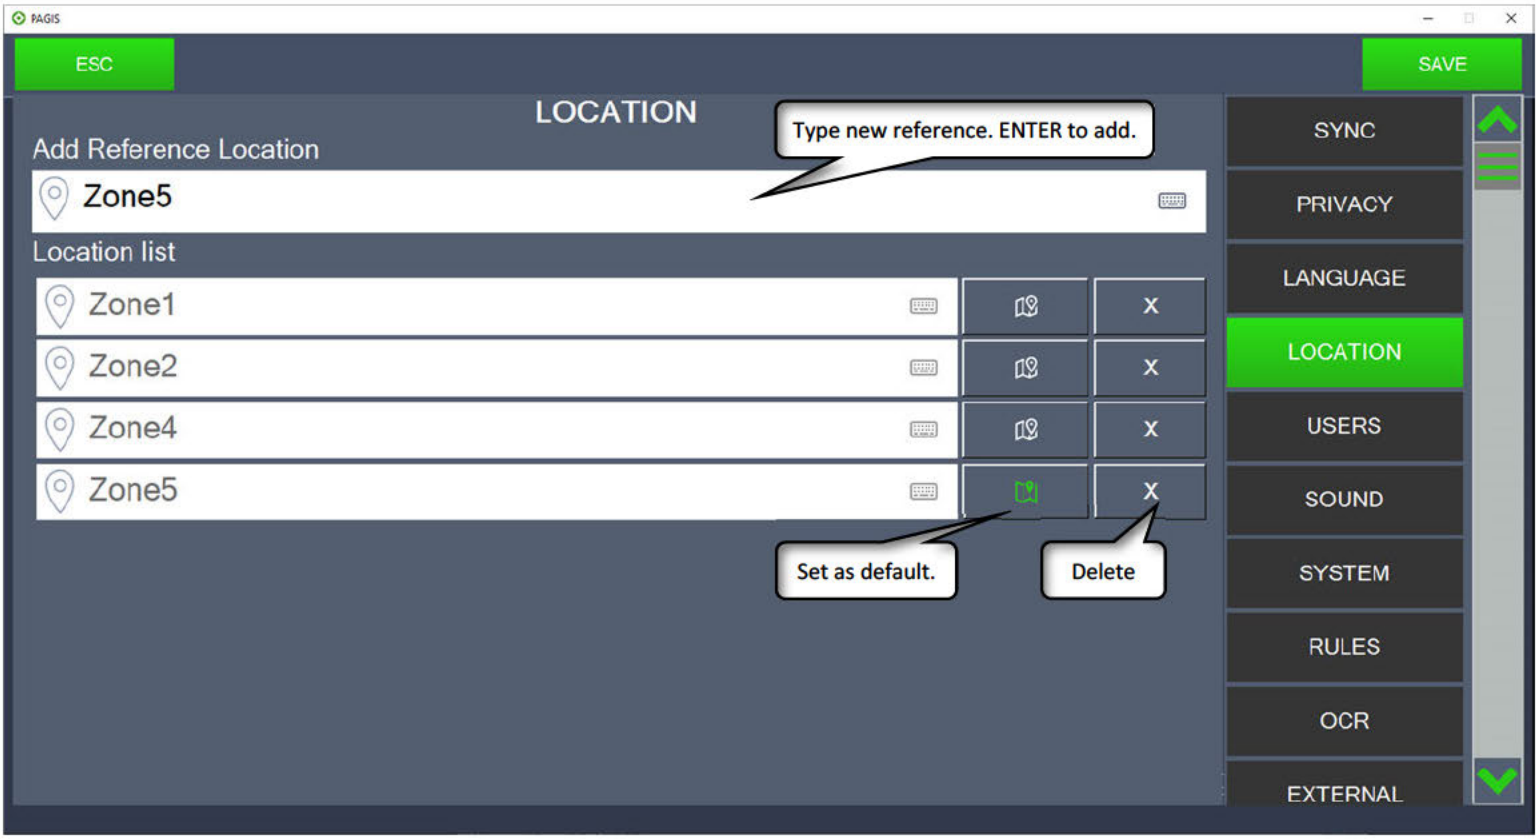
- **Always**: Reads and Hits are synchronized to BOSS as close to real-time as the data network and PC processing allow.
- **Never:** The information gathered during the shift will be "sanitized" with each launch of End Shift. The corresponding data and images will NOT be sent to the BOSS server.
- **On End Shift**: Synchronization to BOSS will only occur when the user manually launches End Shift.
- **Require Dispositions before Endshift**: Requires the user to select a disposition code for each Hit registered in the PAGIS software since the last End Shift was completed before the Synchronization is processed.

3.2 PAGIS Privacy Settings (Local Data Retention)

4255

Although most commonly configured in BOSS, the PAGIS Software allows the Admin to configure the data retention settings for the local endpoint by minutes, hours, or days. This feature ensures the data captured/stored on the MDC is sanitized by the software itself (this is important for customers without BOSS). **NOTE**: To enable the Privacy settings, the Admin must select the "On Startup" purge option and then set at least one value in each row. Rows left with all Zero will not be sanitized or purged.

- **Never**: Selected by default, this option disables the PAGIS privacy settings and uses only those set in BOSS.
- **On Startup**: This option must be selected in order to enable the PAGIS privacy settings. Once enabled, PAGIS looks to purge/sanitize the system each time it's launched or restarted.
- **Purge Manual Alerts Older Than**: Controls how frequently all of the Databases/Hotlists in PAGIS are purged. The purge rate is calculated from the timestamp of the Hotlist. Once the retention value is surpassed, the Hotlist is deleted. Hotlists distributed from BOSS will be re-downloaded on the next Sync.
- **Purge Hits Older Than**: Controls how frequently all Hits in PAGIS are purged. The purge rate is calculated from the timestamp of read. Once the retention value is surpassed, the Hit is removed the next time PAGIS is restarted.
- **Purge Reads Older Than**: Controls how frequently all Reads in PAGIS are purged. The purge rate is calculated from the timestamp of read. Once the retention value is surpassed, the Read is removed the next time PAGIS is restarted.
- **Purge Audits Older Than**: Controls how frequently all Audits in PAGIS are purged. The purge rate is calculated from the timestamp of audit. Once the retention value is surpassed, the audit is removed the next time PAGIS is restarted.

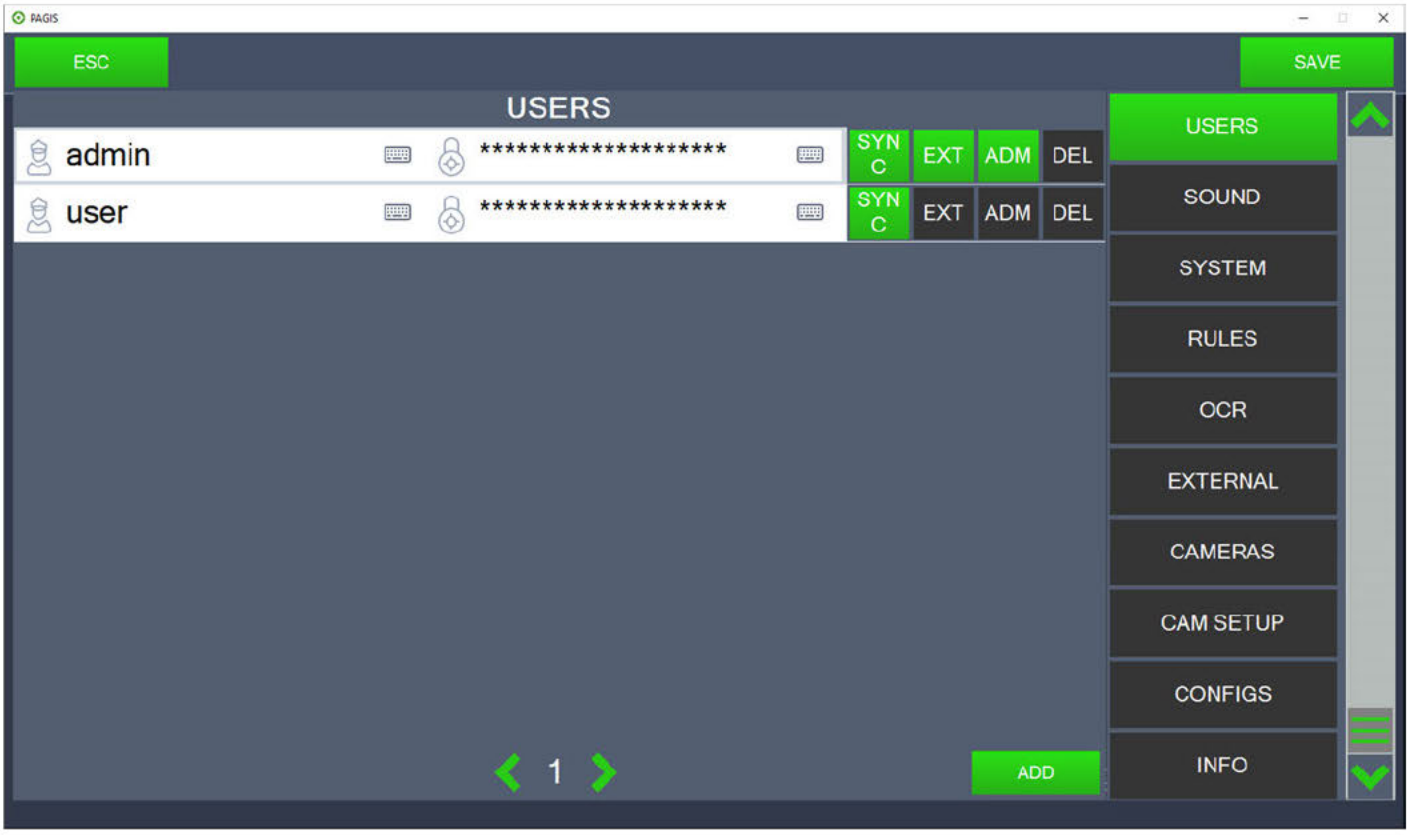


NOTE: Once the hits, reads, databases, or audits have been purged, they can no loner be viewed in the PAGIS software.

3.3 Language

The Language screen allows the Admin to change the language assignment used in the PAGIS Software. Available languages are listed in the drop-down list and are added during the installation process.

3.4 Location



Updates to the location field will auto-fill the “Reference” section of the PAGIS Login Screen. These are often used to specify a patrol region (Examples: “North Patrol” or “A2”). Once designated all reads/hits will show this designation. Muiltiple “Referance” location can be added, the available list can then be selected from the login screen.

3.5 Users

4257

User accounts, credentials, and rights are generally administered from BOSS and then distributed to the MDC. However, PAGIS does allow for Administrators to add and delete users as well as set their privileges directly from PAGIS.

NOTE: Adding user directly in PAGIS should be limited to customers not utilizing a BOSS server. User accounts created directly in PAGIS by customers with BOSS will be overwritten/removed during the next sync.

Adding a User in PAGIS:

1. From the Admin Screen, select the Users Button on the Right
2. Click the Add Button ADD
3. Enter the case sensitive username in the Username Field (max of 15 alphanumeric characters)
4. Enter the case sensitive password in the Password Field (max of 15 alphanumeric characters)
5. Select the User's privileges
6. Click the Save Button SAVE

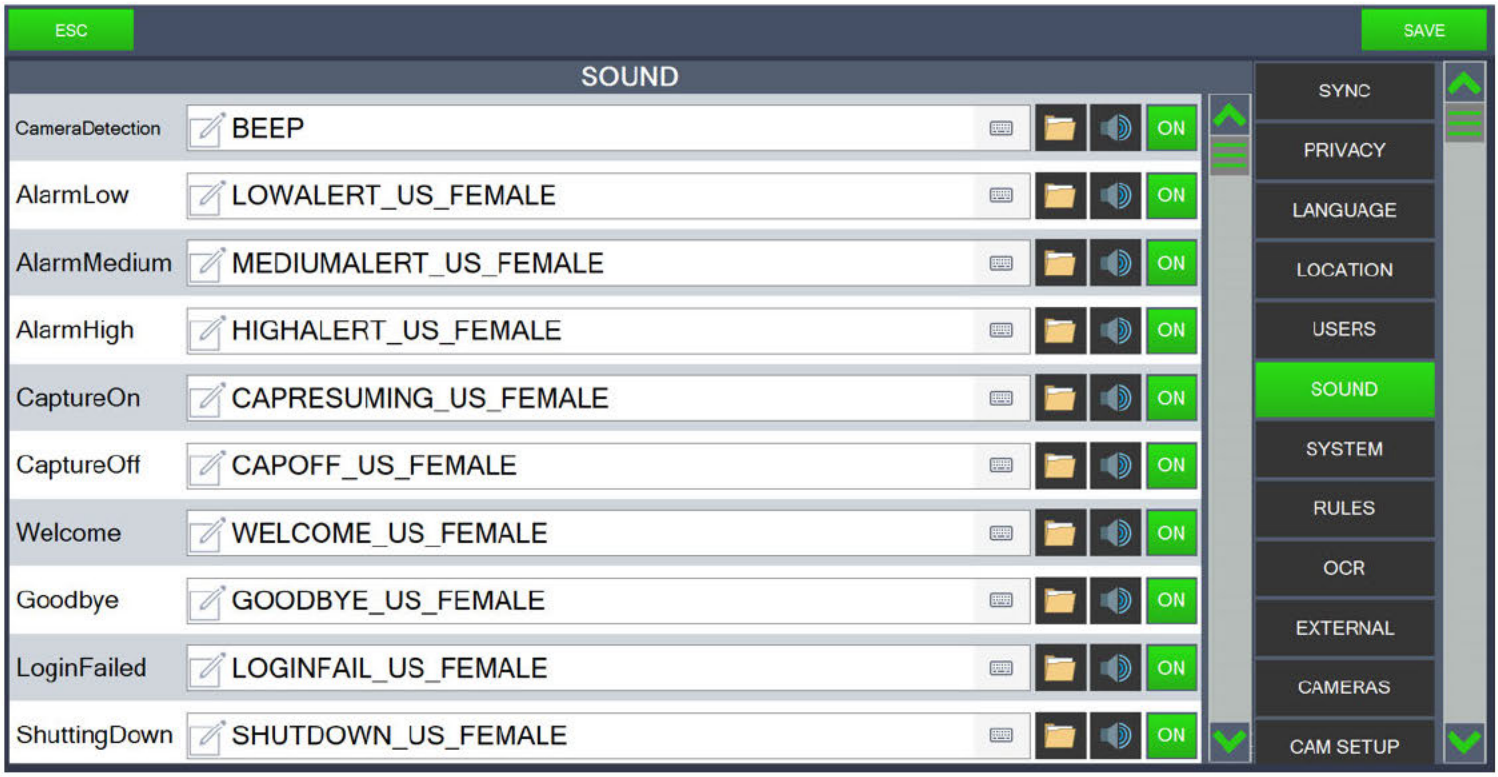
3.5.1 User Privileges

These are the "rights" the new user will have in the PAGIS software (When selected, each button turns green).

SYNC — **Sync:** Allows users to synchronize data.

EXT — **External**: Allows the user to access external databases.

ADM — **Admin**: Provides the user Admin rights and allows him/her to configure the PAGIS Software.



DEL — **Delete**: Allows the Admin to delete a User from the list. Click once to select and the save button to delete.

NOTE: Creating a new user in PAGIS automatically deactivates the default user account settings (Section 2.1.1).

3.6 Sound

4258

Sounds in PAGIS mirror the user or software activity (Ex. Login, Audible alert from a "Hit", and Logout) and are On by default. PAGIS Administrators can adjust the sounds from the available presets and/or load unique .wav files onto each MDC for custom use. **NOTE**: The default storage path is C:\Program Files (x86)\PIPS Technology, Inc\PAGIS2\sounds

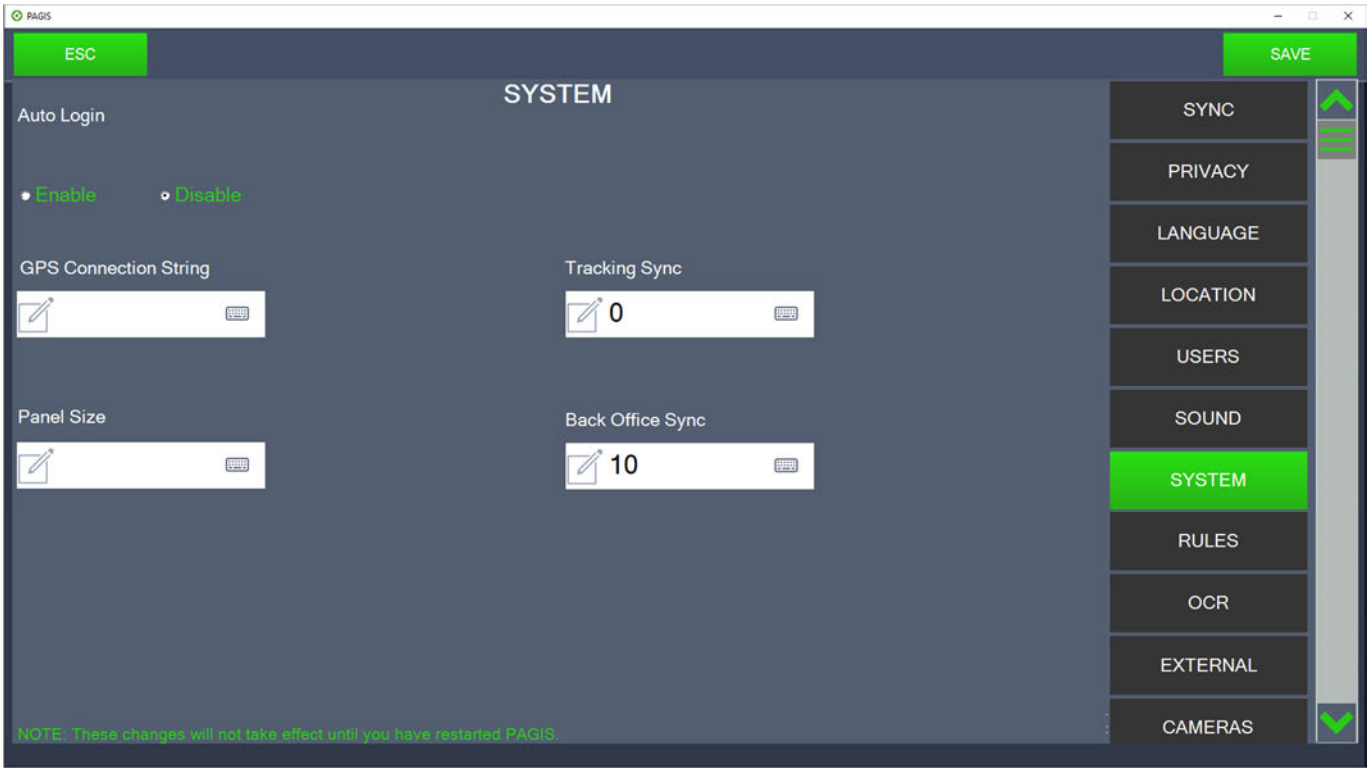
3.6.1 Configuration Buttons

The sounds listed on the configuration screen can be altered or updated by PAGIS administrators using the buttons below. **NOTE**: Changes to any sounds must be saved before they can be played in PAGIS.

Click to browse to the sounds folder. This is used to select a new sound file.

Click to Test/Play the selected sound.

Shows the status of that sound. Click to turn each sound Off.

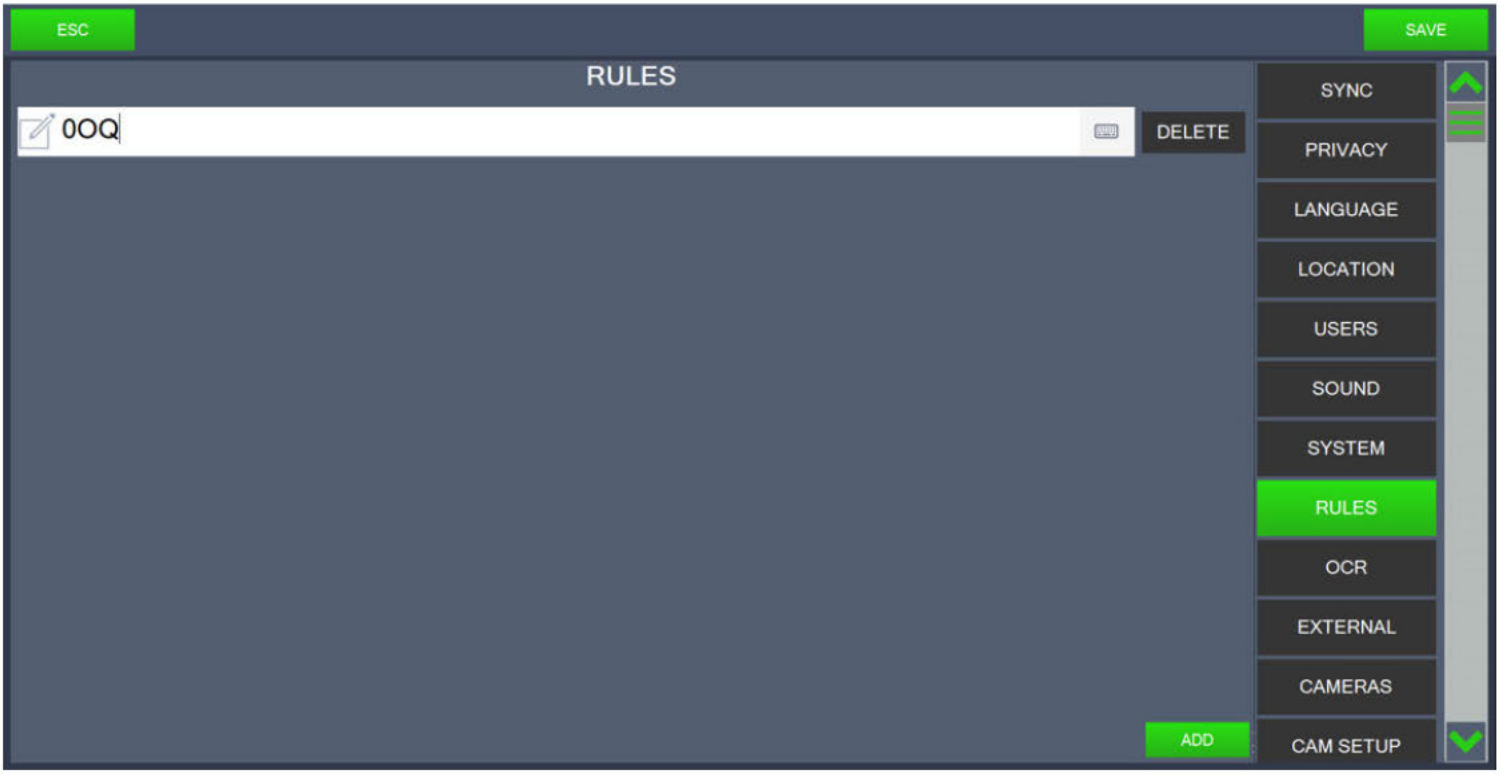


Shows the status of that sound. Click to turn each sound On.

3.7 System

4259

The System screen determines external system connections. The primary external connection is the GPS antenna. The GPS connection string will accept TCP/IP ports or COM port designations. This section also contains control of the PAGIS "Auto Login" feature (which is set to Off by default).



- **Auto Login**: Enabling this feature will ignore existing user account information and login to PAGIS as the Admin. This feature is recommended only for unattended use (Speed-Trailer applications and Covert Drop and Go deployments).
- **GPS Connection String**: This value is utilized by PAGIS to acquire the GPS feed from its source. The default is traditionally either blank (no entry) or 6.
- **Tracking Sync**: Controls the sync intervals in (Sec.) that PAGIS communicates with BOSS4 to update tracking status. Default off=Zero, values can range from 1-9999. BOSS4 Back Office Software requiered for this feature.
- **Panel Size**: Controls the resolution of the color image displayed on the Live View Screen. By default this is blank as PAGIS controls the aspect ratio. However a PAGIS Admin can assign custom resolutions in WxL format (720x1024) to assist with non-standard dispalys.
- **Back Office Sync**: This setting controls the sync timing that PAGIS sends data back to BOSS3/BOSS4, Timing is in (Sec.), default is 10sec, values can range from 0-9999.

NOTE: All changes must be saved and will not take effect until PAGIS is restarted.

3.8 Rules

Rules in PAGIS allow Administrators to force the software to process plate reads in specific ways. For example, in states that allow for both O and 0 (zero) on their license plates, a rule can be set to read any zero as an O and any O as a zero. This provides PAGIS greater flexibility to the standard OCR functions.

Adding a Rule to PAGIS:

1. Click the Add Button ADD
2. Enter the desired alphanumeric characters (Ex. 0 and O) into the text field
3. Click the Save Button SAVE at the top right of the screen

Deleting a Rule:

1. Locate the rule to be removed from PAGIS
2. Click the Delete Button DELETE to the right of the rule (It will turn green when selected)
3. Click the Save Button to complete the removal

3.8.1 Rules – Additional Clarifications

1. Rules are processed based on the first character entered. So in order to read any O as a zero, the Admin will need to add rule "O0". And in order to read any zero as an O, a second rule must be entered as "0O".
2. Rules are NOT designed to overhaul OCR function. Any consistently misread values should first be brought the attention of PIPS Support for review. And only those cases where further adjustments to the OCR software are impossible would rules be recommended.
3. Adding rules to PAGIS will make it less likely to miss a Hit Alert. However, it will increase the number of Hit Notifications that require the Officer to visually confirm the OCR read ("IR Patch") and the Hotlist Alert match.

3.9 OCR

The OCR Section in PAGIS provides Administrators some additional options on how they would like PAGIS to process plate reads.

- **JPEG Images**: On by default, this forces PAGIS to use compressed .JPG images instead of the full resolution Bitmap images each time a read is taken. This settings minimizes data storage requirements and preserves MDC drive space.
- **Inverse Plates**: Off by default, this setting is only used in States where plates with light color lettering over a dark background are prevalent. Enabling this option increases processing load and should remian disabled unless required.
- **Square Plates**: Off by default, this setting adjusts the read area plates that are square instead of retangular.
- **Disable Duplicate Read**: On by default, this setting helps PAGIS prevent duplicate plate reads. If a VLP is read by more than one camera within a short period, the duplicate read is ignored. This minimizes data storage requirements and improves overall system metrics related to numbers of Hits and Reads.

NOTE: Once changes are made, the Admin must click the Save Button SAVE button in the upper right corner to retain them.

3.10 External

The External Screen allows the Admin to connect PAGIS to an external database or device via XML Datastream. This feature is Off by default and any changes must be saved before they will be available.

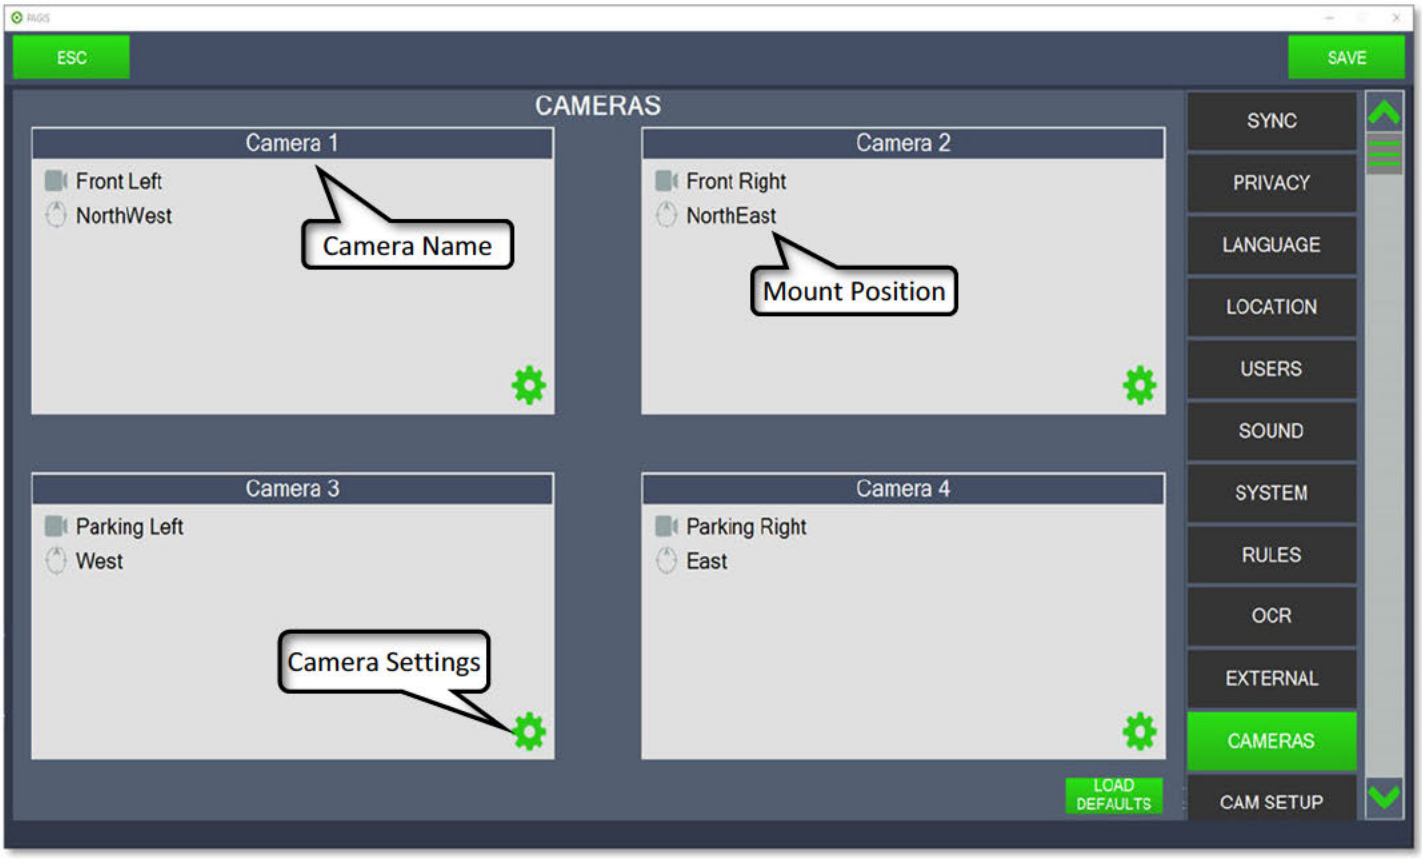
Enabling the Datastream:

1. Click the Off Button OFF to toggle to On ON
2. Click the Save button in the upper right corner
3. Close and reopen PAGIS

NOTE: Enabling this feature will reduce the overall performance of the PAGIS Software.

3.10.1 XML Datastream Ports

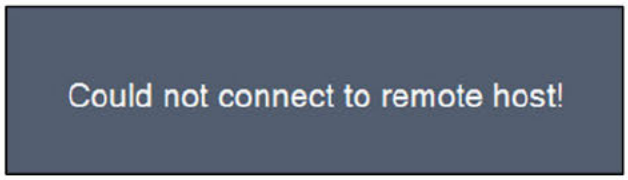
Administrators will need to configure their external device or database to utilize two specific TCP ports:



1. Query Port: TCP 7000
2. XML Datastream/Heartbeat: TCP 10100

NOTE: Greater detail on the XML Datastream can be found in Appendix D

3.11 Cameras



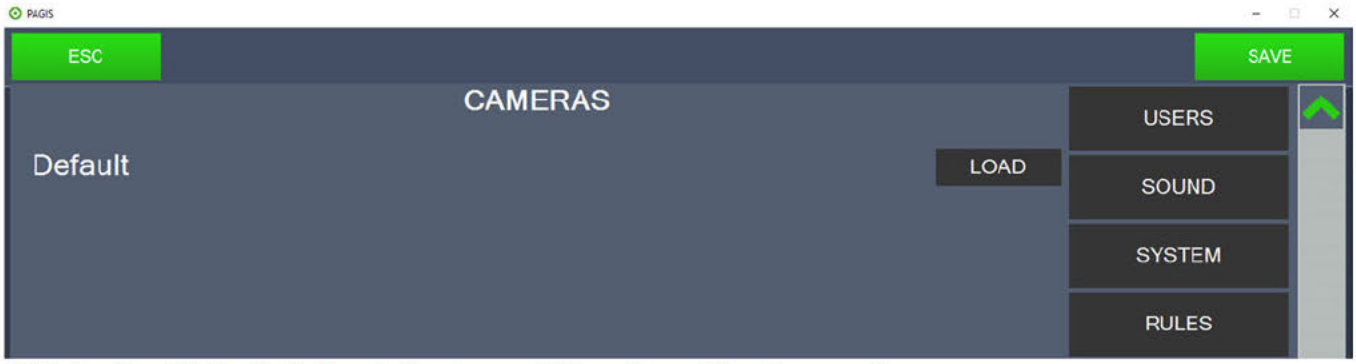
The Cameras Section provides the Administrator the means to add/delete, identify, and configure the ALPR cameras. Although the PAGIS Software comes preloaded with a default layout, best practices advise the Admin to fully review, and completely configure at least one MDC by hand in order to tailor the setup for the Agency's unique attributes.

IMPORTANT: The configuration steps completed here will dictate the available camera mode options in the Configs Section.

3.11.1 Checking the Connection

In order to configure the cameras, the PAGIS Software and the SX Processor (Black Box) must be able to communicate. If they cannot, the Administrator will receive the error message below as soon as he or she clicks on the Cameras Button CAMERAS indicating that PAGIS cannot "see" the cameras.

3.11.2 Troubleshooting Camera Connections

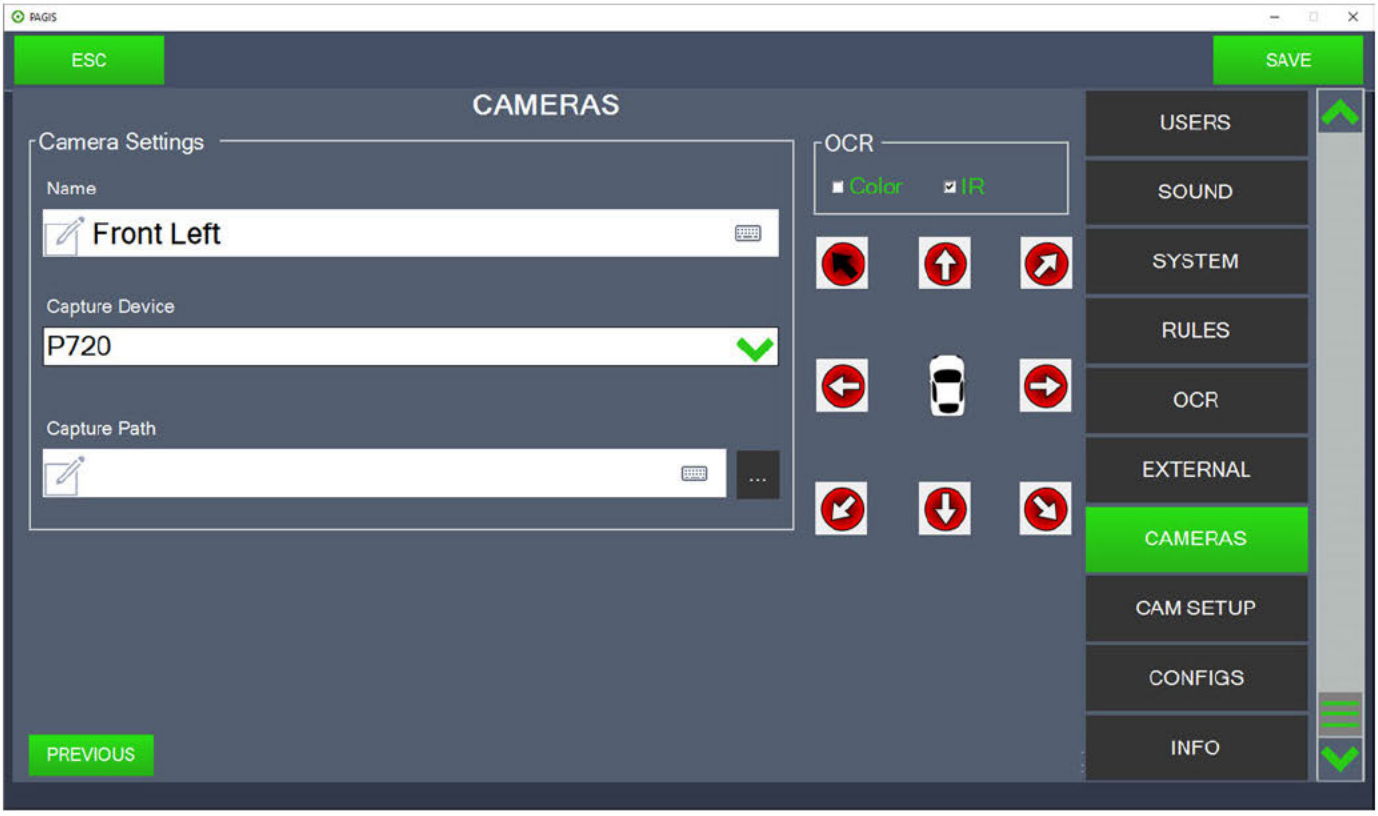


The most common troubleshooting steps have been included below for convenience. If these don't resovle the issue, please contact PIPS Support for additional assistance. **NOTE**: For more information see Appendix C – The Mobile FAQ

1. Start the vehicle and confirm power to the Processor. Confirm the SX switch, and any added in-line switch, is set to On.
2. Confirm the network adapter settings on the laptop match the proper Static IP scheme for the SX Processor in use.
3. Disable the local Windows Firewall, VPN software, and any real-time monitoring software one at a time.
4. Use a different network cable ensuring it's properly seating in NIC port on the SX as well as the MDC or Docking Station.
5. Docking Stations can also impede communication. Test by removing the laptop from thhe dock, directly connect the network cord to the laptop, and then reconfigure the network adapter settings as needed.

3.11.3 Configuring the Cameras in PAGIS

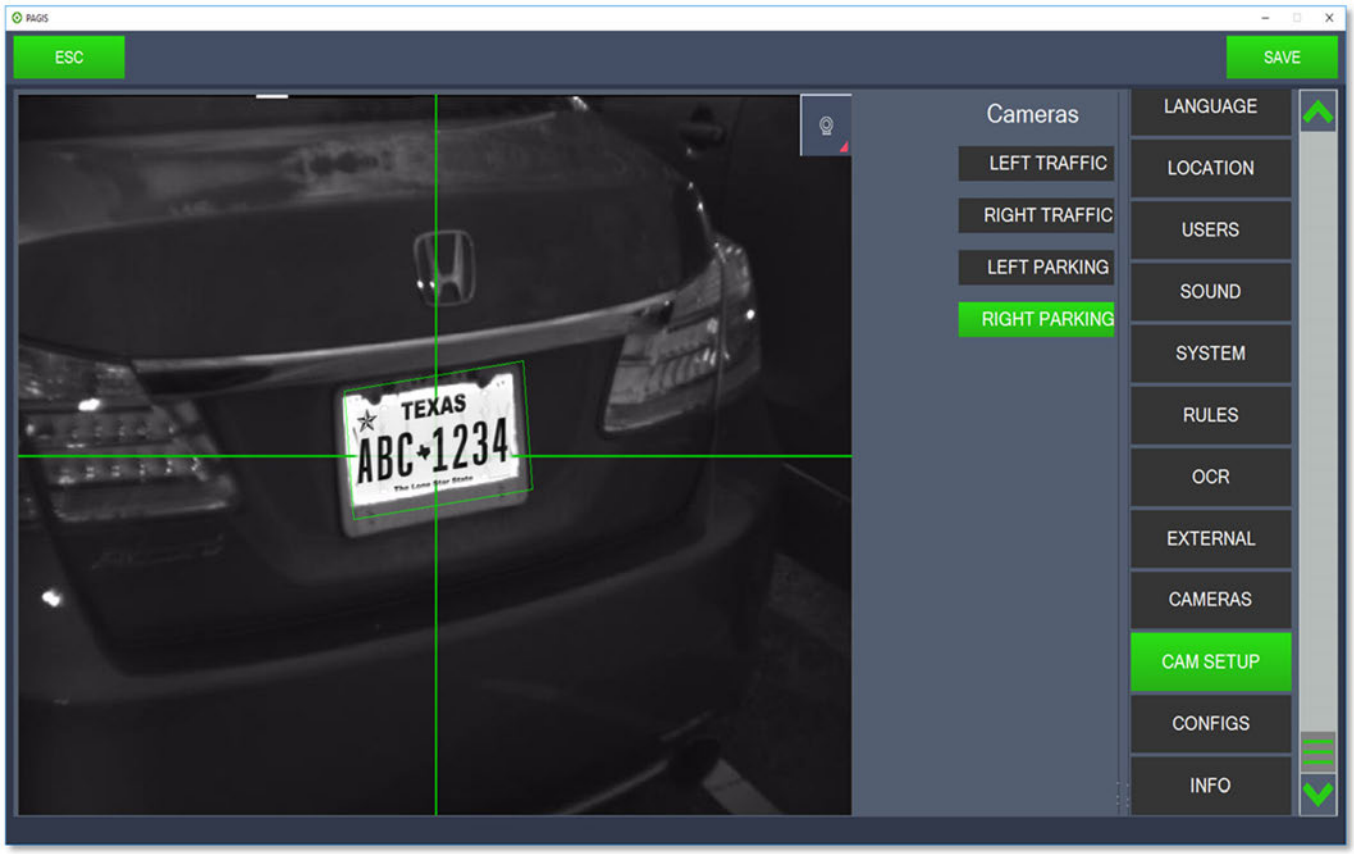
This section will assist with the general configuration of the cameras. Administrators can begin by selecting the Settings Icon to edit each of the existing cameras or by selecting the Load Defaults Button LOAD DEFAULTS. This manual will start with Load Defaults.



Gettings Started – Load Defaults:

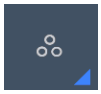
1. Click the Load Defaults Button in the lower right portion of the Cameras Screen
2. Locate "Default" and click the Load Button LOAD
3. Once it's selected (and turned Green), click the Save Button (This returns the Admin to the Cameras Screen)
4. Click the Settings Icon to inspect and configure each camera one at a time

The Camera Settings (Edit) Screen:



This provides the Admin a single screen to edit the name, confirm the capture device, assign camera position, and confirm OCR.

1. Confirm/Update the Camera Name **NOTE**: Use Camera Names with 11 characters or less to avoid various UI anomalies
2. Confirm the "Capture Device" field was auto-detected. If not, use the drop down to select the only Pxxx value on the list
3. Leave "Capture Path" blank (This is an optional field)
4. Select the camera mount position indicating the direction the camera is facing. The arrows turn black when selected
5. Ensure the OCR is set to IR. The color camera is used for OCR in only rare situations and will increase system load as well as the likelihood of false alerts. Use this setting with caution
6. Click the Save Button to retain the changes



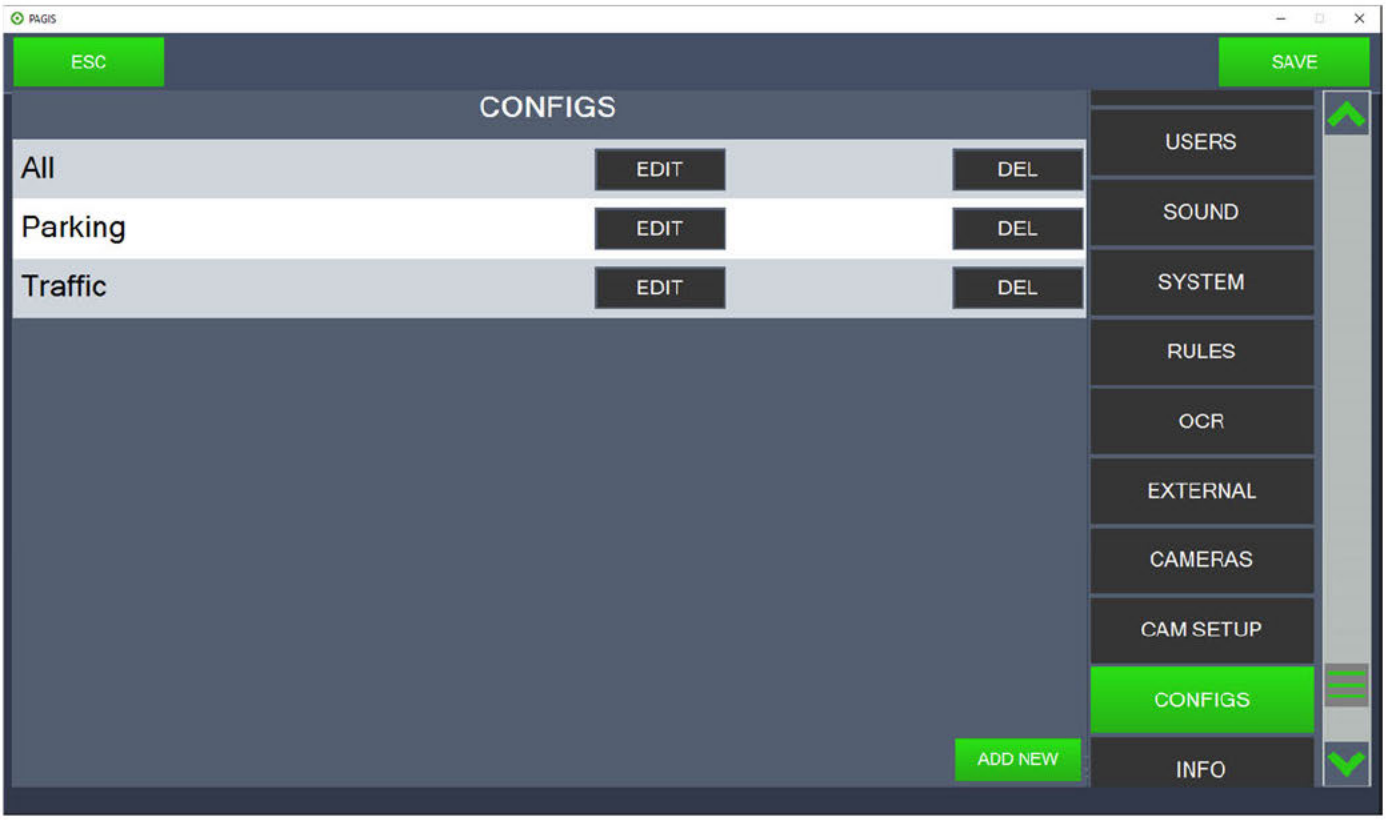
3.12 Cam Setup

The Cam Setup Screen presents Administrators with a live preview of the configured cameras. This section also allows the Admin to switch view modes from Color to IR to ensure the system is functioning properly. **NOTE**: This screen can also be utilized as a means to align newly mounted cameras when RDP access to the SX Processor is limited or unknown.

3.12.1 Cam Setup Navigation Buttons

The Admin may view the output of each camera by clicking on the camera name. When a camera is selected, the button will turn green to indicate it has been selected. In order to switch view modes, the Admin must use the following buttons:

Color View: The Color View Mode is the default view when the Admin first enters Cam Setup. This displays a live preview of the color camera.



IR View: By clicking on the Camera View Selector button, the Admin will switch to the Infrared (IR) View Mode. This displays a live preview of the IR camera.

NOTE: Unlike the main Live View Screen, the camera feed shown on the Cam Setup page will not time out when in use. This feature makes it easier for the Administrator to review and align the mobile cameras.

3.13 Configs (Camera View Modes)

The Configs Screen allows the Admin to construct how the cameras will be displayed on the Live View Screen for the user. This section also allows agencies to create multiple viewing configurations to meet specific environmental needs or to add greater functionality to the software. By default, the Configs layout provides the agency with three camera modes, “ALL”, “Traffic” and “Parking”. All mode dipalys the front two cameras and rear two are activated, Traffic mode only displays the front two cameras and rear cameras are off, Parking mode only displays rear two cameras and front cameras are off.

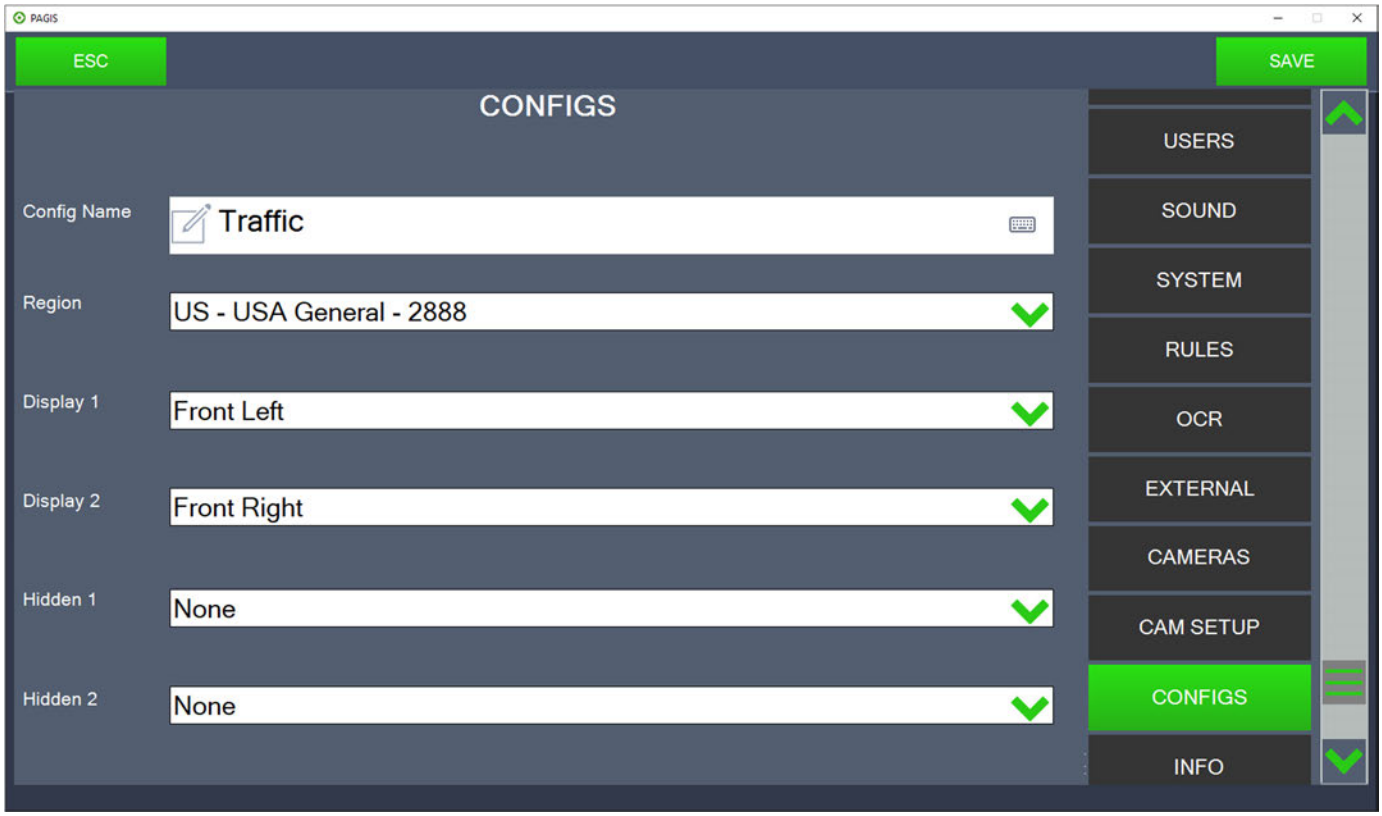
3.13.1 Configs Navigation Buttons

To properly configure the camera modes used in PAGIS, the Admin will navigate this section with the following:

To delete a config/camera mode, click the DEL button to select it (turns Green) and then click Save

To review, edit, or modify a camera mode, click the EDIT button

To preserve changes or finalize a deletion, click the SAVE button

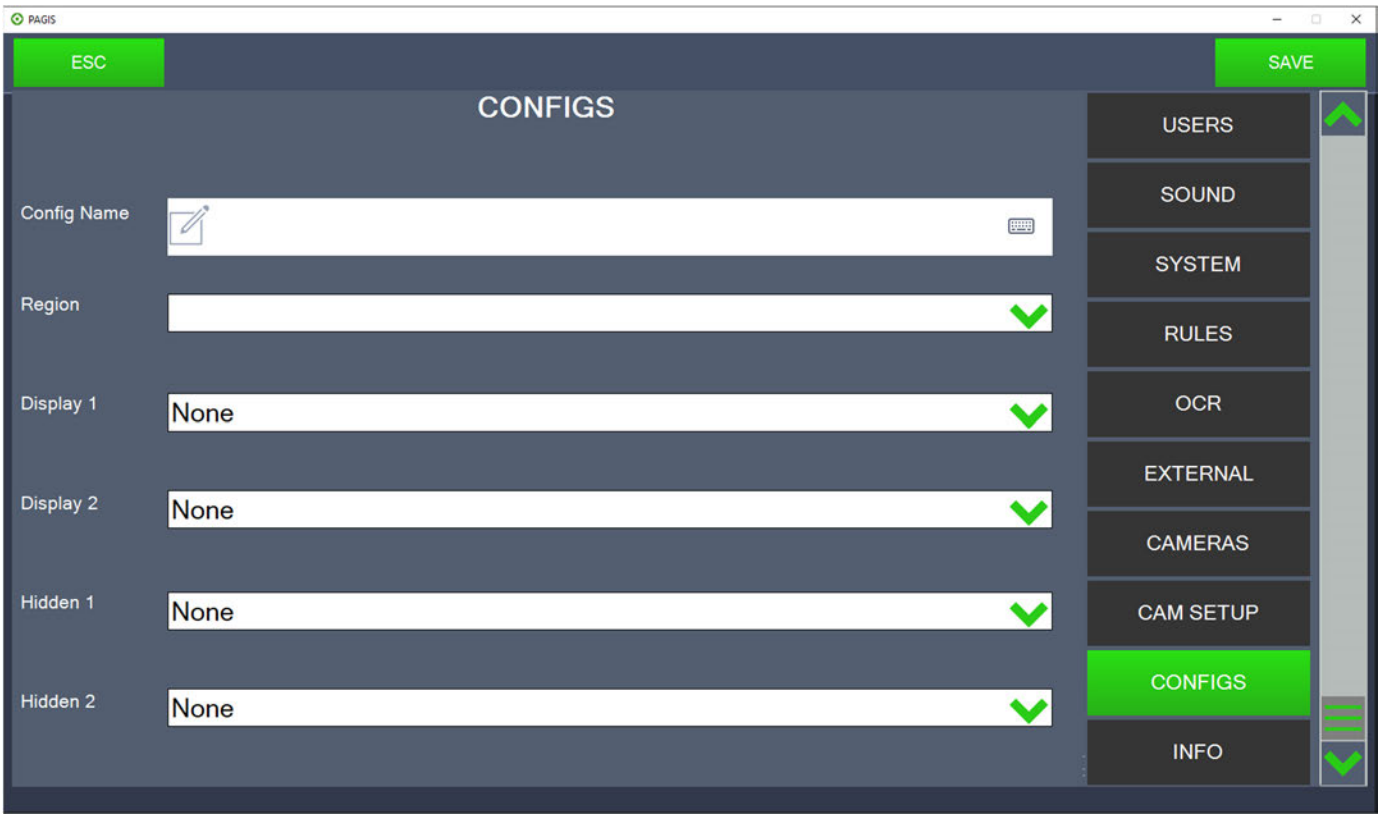


To add a new camera mode, click the ADD NEW button

NOTE: The number of Configs equals the number of Camera Modes available to the user from the Live View Screen. Each camera mode untilizes the Config name established in this section. Users cycle through the modes on the Live View Screen by clicking the Mode Selection Button in the upper left corner.

3.13.2 Reviewing and Modifying Existing Modes

When getting started, most Administrators will begin by simply modifying the existing camera modes or “configs”. The following example will demonstrate the standard configuration of a four-camera mobile unit.



1. Click the EDIT Button EDIT from the main Configs Screen to modify a mode
2. Review/Update the name of the Mode **NOTE**: The name should be intuitive for all users as this becomes the label of the mode selection button on the Live View Screen
3. Click the drop down arrow on the Region field to select the best local option (Adds additional accuracy to OCR)
4. Confirm the camera listed in the Display 1 field. This camera will be displayed on the left side of the Live View Screen
5. Confirm the camera listed in the Display 2 field. This camera will be displayed on the right side of the Live View Screen
6. Confirm the Hidden 1 field shows one of the other cameras not listed in the Display fields
7. Confirm the Hidden 2 field shows the last available camera not yet listed (Leave field as “NONE” for 3-cam systems)
8. Click the Save button to retain the changes
9. Click the Configs Button from the menu to access the other Mode(s)
10. Perform steps 1-8 for all Configs/Camera Modes available

NOTE: Cameras listed in the Hidden fields will function, perform OCR, and capture plate reads, but they will not be displayed to the user while in the named camera mode (unless a Hit is detected opening the Alert Screen). For ALPR units with more than two cameras, best practices dictate the Admin utilize these fields.

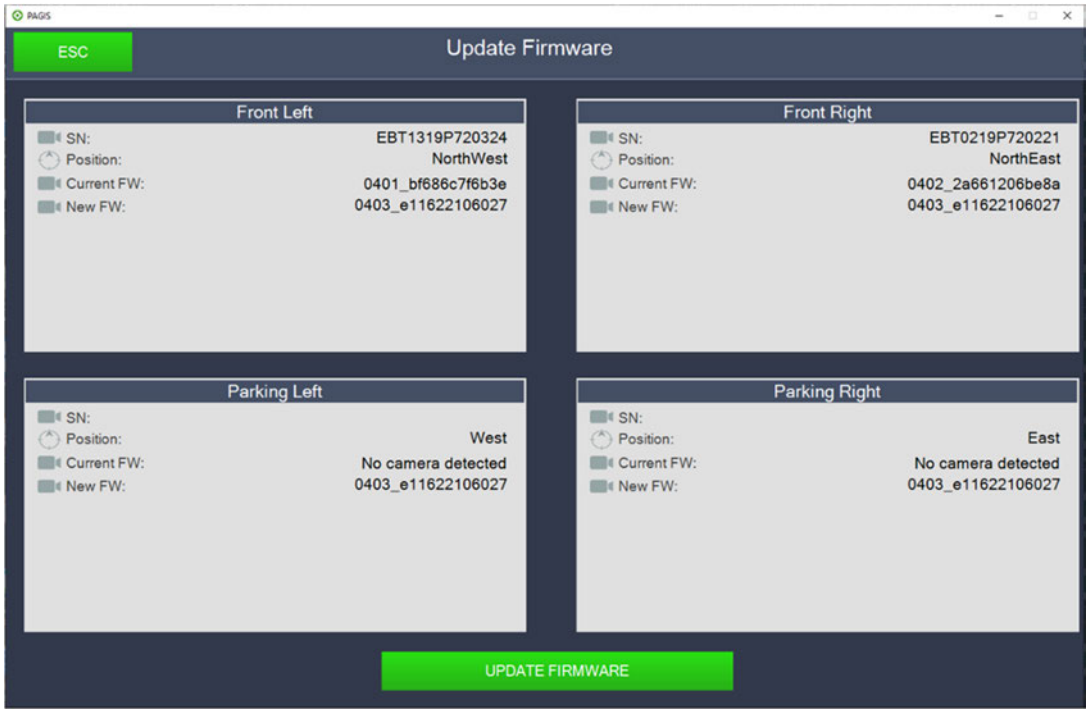
3.13.3 Adding a New Camera Mode

When the two default modes provided in the PAGIS software do not offer the agency all the functionality desired, the Administrator can use the Configs Screen to add additional camera modes. For example, if officers request a mode to view only the cameras on the left side of the vehicle while stopped on the side of the road, the PAGIS Adminstrator can build that functionality from this screen.

1. Enter a name for the new Mode (Ex. “Left Side”)
2. Click the drop down arrow on the Region field to select the best local option (Adds additional accuracy to OCR)
3. Confirm the camera listed in the Display 1 field. This camera will be displayed on the left side of the Live View Screen
4. Confirm the camera listed in the Display 2 field. This camera will be displayed on the right side of the Live View Screen
5. Confirm the Hidden 1 field shows one of the other cameras not listed in the Display fields
6. Confirm the Hidden 2 field shows the last available camera not yet listed (Leave field as “NONE” for 3-cam systems)
7. Click the Save button to retain the changes

3.14 Info

4269



The Info screen displays additional information including the version number of the current installation. This information is helpful when contacting Technical Support.

3.15 Camera Firmware Update, (Admin)

Camera firmware update provides a means for PIPS to update the camera software to enhance and or correct camera performance. The frimware icon  will only apper when a update is avialable.

- The firmware update process only updates camera that are attached and function on the mobile processor.
- Administrator must log into PAGIS and apply the FW update. The update process takes around 4min and should not be interrupted or risk permanently damaging the cameras, PAGIS will return to normal opertaion after update.
- Once the "UPDATE FIRMWARE" button is clicked PAGIS will switch to full gray screen with message indicating "Camera Firmware is Updating", during this process you'll will notice small command windows opening on top of PAGIS, these windows represent the firmware being applied to each active camera so you may notice one or server depending. Once completed a message will appear "Firmware Updated Successfully" then PAGIS will return to normal operation.
- After FW completion and return to "Live View", its requiered to cycle thought the "Cam Mods" to refresh cameras.

Firmware Updater Window List.

- Title "Camera Name".
- Camera serial number.
- Position.
- Current FW version.
- New FW version available.

4.1 PAGIS System Requirements

The PAGIS Software requires the following minimum system requirements for the mobile data computer:

- Intel I3 CPU at 2.0 GHz or higher.
- Windows Operating System (Win7-Win10).
- Microsoft .NET Framework 3.5.
- 8 GB of RAM.
- At least 1 GB of free disk space.
- SVGA display with a minimum resolution of 800 x 600 pixels.
- Available 10/100 Ethernet port.
- Keyboard and mouse, or a touch screen monitor.
- Internet access needed for mapping and Firmware update.

4.2 PAGIS Prerequisites

Prerequisites:

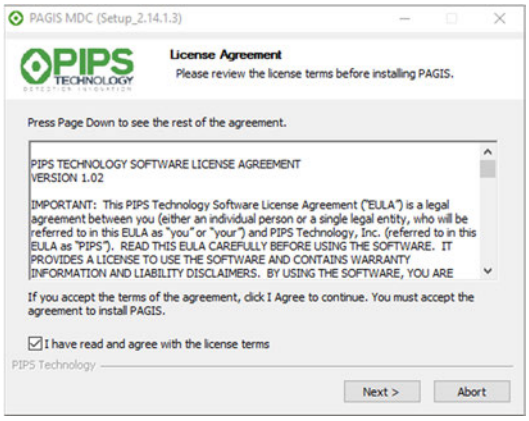
1. Ability to install software.
2. Ability to configure the network adapter.
3. PAGIS 2.12 and above are only compatible with SX4 and SX4e Processors.

Network Adapter Settings:

The PIPS mobile processor operates based on a static IP and is preassigned the IP address of 192.168.200.201. When connecting laptop/MDC to the PIPS mobile processor your computer must be on the same IP network as the mobile processor, in fact the connecting compute must adopt one octet lower than the assigned IP of the PIPS processor in order for MDC installed PAGIS to connect to the mobile processor and receive data from the ALPR cameras. Below are the steps to configure your computer.

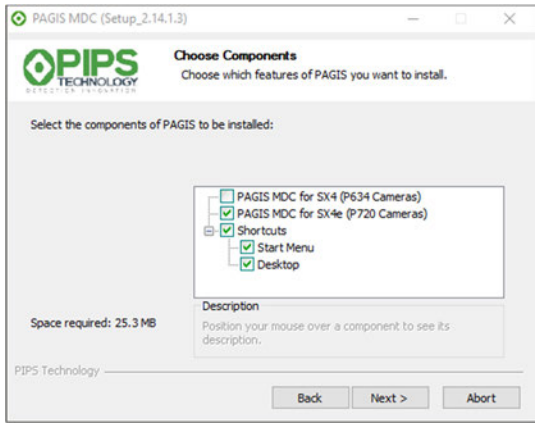
1. Navigate to Adapter Options in Windows and right click on the adapter and select properties.
2. Click to select IPv4 and click Properties
3. Click the radio button “Use the following IP Address” to set the Static IP address.
4. Enter 192.168.200.200 in “IP address” section.
5. Enter 255.255.255.0 in “Subnet mask” section.
6. Either leave the “Default gateway” blank or enter 192.168.200.201.
7. Click OK to save changes.

NOTE: The Mobile processor is pre-configured to relay its camera data connection to the .200 IP address, using alternative IP’s on Laptops will result in the software’s failure to communicate with the cameras.

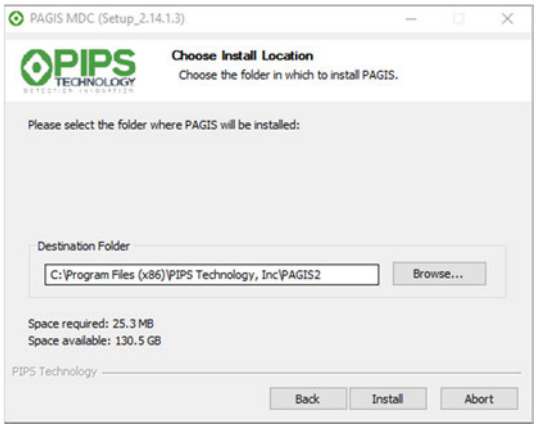


4.2.2 PAGIS Software Installation (MDC)

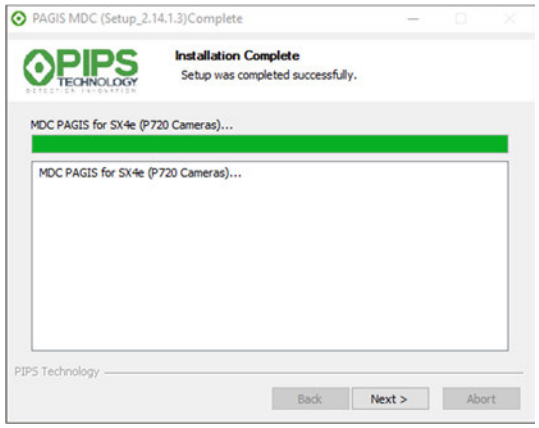
4271



1. If PAGIS exist on your computer, it must be version 2.9 or 2.12 for installer to update. If your version of PAGIS is older it is recommended you “EndShift” any existing data, then uninstall PAGIS.
2. It is recommended you “EndShift” any existing data if upgrading a previous version of PAGIS.
3. Prior to software installation, take the time to figure out what version of PIPS mobile processor you have as the software installation requires you to select so it can properly configure the camera settings based on processor type. PAGIS version 2.14 supports processor versions SX4 & SX4e only, you can either look at the product tag located on the processor or look at the camera IO ports on the back of the processor, if the 4 camera IO ports are vertically arranged RJ45’s then it’s a SX4e, if they are vertically arranged circular shaped “LEMO” connectors then it’s a SX4. Horizonal arranged circular shaped “LEMO” connectors is a SX3 and is not compatible with PAGIS 2.14.
4. When upgrading to PAGIS V2.14.x.x also requires that the PIPS mobile processor be updated to same version in order to take advantage of Firmware update.



5. Place the PAGIS installer on your computer’s desktop, “PAGIS_Setup_MDC_2.14.x.x.exe”.
6. Right click the PAGIS installer executable and select “Run as administrator”.

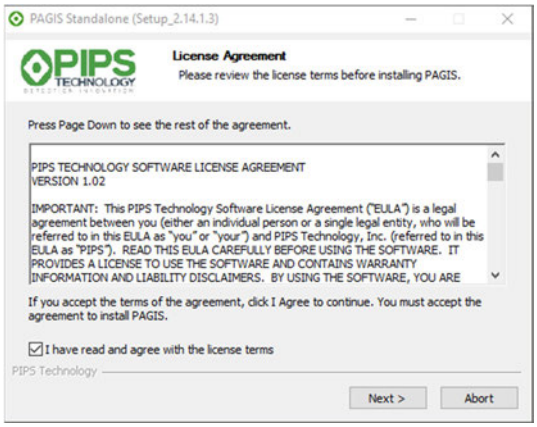


7. Check the license agreement box, then click Next.

8. Select the mobile processor type and alter “Shortcuts” if needed. Next to continue.

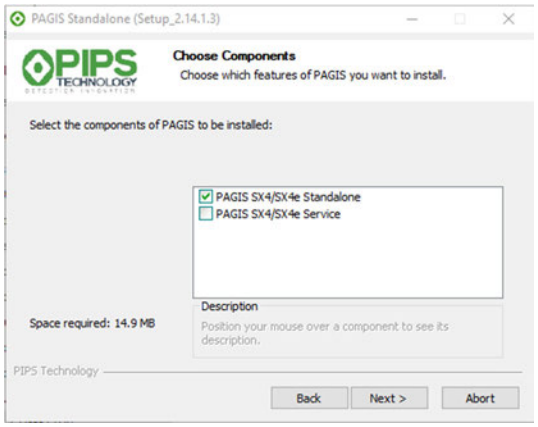
9. Confirm path if upgrading, click Install to proceed.

10. Installation Compete, Next to proceed.
11. Click Finish.
12. Click Yes to reboot if you would like to test PAGIS auto start at login if selected during installation, otherwise click No as its not required for PAGIS to run.

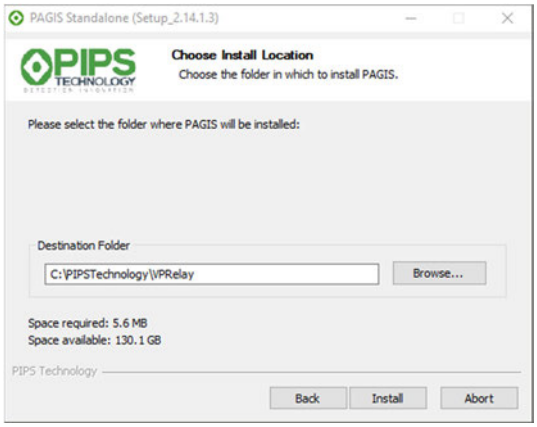


Note: See Appendix A for terminology definitions.

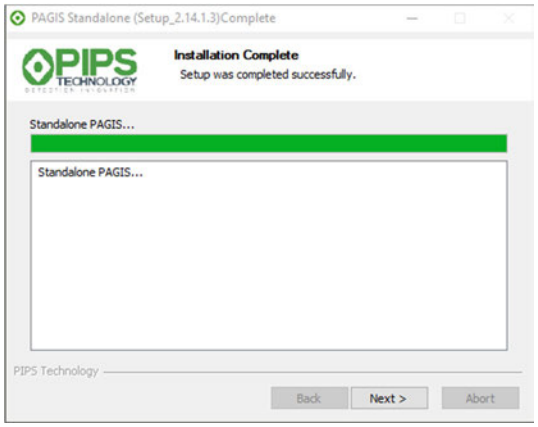
4.2.3 PAGIS Software Installation (Mobile Processor)



1. PAGIS v2.14.x.x updater is only compatible with PIPS mobile processors SX4 & SX4e.
2. The PAGIS updater only updates existing versions of PAGIS on mobile processor, version 2.9 and newer.
3. Update required for both “Standalone” & “Service/VPRelay” to support some of the newer features.
4. The processor must be in its respective mode to update that option as the folder path are hidden when not active, see “Change Mode” in SX4 or SX4e manual.



5. Remote desktop into processor or utilize attached monitor/keyboard.
6. Place the updater in C:\PIPSTechnology folder on the PIPS mobile processor.
7. Execute PAGIS Updater.



8. Check the license agreement box, then click Next.

9. Select option to update, next to continue.
   - Standalone= PAGIS login from Processor.
   - Service= PAGIS login from connected Laptop.

10. Change the default path presented by updater, see below.
    - For “Service” C:\PIPSTechnology\VPRelay.
    - For “Standalone” C:\PIPSTechnology\Standalone.

11. Installation Compete, Next to proceed.
12. Click Finish.
13. Click Yes to reboot.

Note: See Appendix A for terminology definitions.

TROUBLESHOOTING TIPS

This section provides some basic troubleshooting tips and information

5.1 Troubleshooting & Tips

- The first login to PAGIS after the new install of an unconfigured version does not require a username or password. Simply click Login to be granted Admin access to the software.
- A good means to test the communication from the MDC to BOSS is ping or telnet (over TCP 8092) through the command prompt.
- A good means to test the communication from the MDC to the SX Processor is ping or telnet (over TCP 9000) via command prompt.
- For many other troubleshooting tips, see Appendix C – Frequently Asked Questions

5.1.1 PAGIS with NetMotion VPN

Agencies utilizing NetMotion VPN software on the MDC will need to apply the following passthrough steps:

1. Login to the NetMotion server as administrator
2. Click Settings > Then select Client > Select Global Client Settings > Then select Passthrough List
3. Click the “Add…” button on the right > Select “Network Address”
4. Enter the following settings (as shown):
    A. IP address:192.168.200.0 (the zero is correct, it's an IP address “range”) Subnet Mask: 255.255.255.0.
    B. Keep all other settings default (as shown) and click OK.
5. The MDC must then disconnect from NetMotion and reconnect again for the settings to be applied locally.

5.1.2 Cisco VPN Client:

Make sure Stateful Firewall is unchecked and "Allow Local LAN".

5.1.3 Microsoft .NET 3.5 Installation

The PAGIS Software requires Microsoft .NET Framework 3.5 specifically. If the MDC doesn’t have .NET, it can be downloaded from the Microsoft website.

5.1.4 Firewall Settings for Client-Server Installations

For client-server installations, the Windows Firewall needs to allow the SX Processor and the MDC to communicate. If the MDC is maintained by a Network Administrator, he or she should be contacted before making changes to the firewall. The command prompt commands for the exceptions are below

Option 1: Allow Microsoft Windows Version 8 or newer to auto-detect the launch of the PAGIS.exe application and use the wizard to add the PAGIS.EXE to the exception list (making note of Public or Private Network settings as necessary).

Option 2: Add PAGIS to the exception list manually by browsing to the install path of PAGIS. The default is below for reference: C:\Program Files (x86)\PIPS Technology, Inc\PAGIS2\PAGIS.exe

Option 3: Add the communication ports manually:
TCP in/out 8092 = Pagis sync port to BOSS back office software.
TCP in/out 9000 = Mobile processor camera feed port.
TCP in/out 9001 = Mobile processor camera snapshot port.
TCP in/out 32023 = Mobile processor camera setup port.
TCP in/out 10000 = Mobile processor data capture port.
NOTE: XML Datastream uses TCP 10100 and TCP 7000

PAGIS/BOSS3 CONFIGURATION 4274

In order for the PAGIS software to function properly, the device must be built, enabled, and configured in BOSS3 before being deployed for service in the field.

6.1 Creating a New Device in BOSS3

Once network communication to BOSS3 has been established from the vehicle, the new device must be "built" or added to the Device List in BOSS3 before it can be used. The approved way to do this, is to simply perform a Begin Shift from the PAGIS software. **NOTE**: The computer name is what will be displayed in BOSS as device name.

1. At the PAGIS Live View Screen, click the Begin Shift button once to select it, and then click again to launch the sync.
2. If the laptop has previously been setup to communicate with BOSS and is already enabled, the sync transfer window should appear in the middle of the Live View Screen.
3. If this is a new/disabled device, a message indicating "HttpStatusCode" will be displayed.
4. This indicates the BOSS3 server has received the sync request but has rejected it due to device status.
5. Once the BOSS Admin has enabled the device, the Status Code error will not appear again, and syncs should complete as configured in BOSS3.

6.2 Enabling a New Mobile System in BOSS3

Installing PAGIS and configuring the network settings is only the first step in making the ALPR unit operational. Once PAGIS is configured to work with or on the SX Processor and the mobile cameras, it must then be enabled in BOSS3 before synchronizations can take place. **NOTE**: By default, every new device recognized by the BOSS3 server is disabled until the Admin enables it. This is done for security.

1. Log into the BOSS3 UI Client Software with Admin privileges.
2. Click the Admin button on the left to expand the options.
3. Click the Devices button. The new device should now be listed to the right.
4. Click the name of the Device to select it. (This will open the device details screen)
5. Click the Edit button at the bottom of the window.
6. Click the Enable button from the Edit window.
7. This will enable the device and return the Admin to the Device List.

NOTE: If desired, the Admin can re-enter the Edit window to assign an alternate name in BOSS3 for the new device. The Admin will need to update the "Description" field and then click the Save button. Agencies commonly use this field to signify the Unit number, Car name, or Patrol Shift. The "Name" field is the device/host name and cannot be edited in BOSS3.

NOTE: Once the Device is enabled the Admin needs to assign ownership and hotlist distribution.

6.3 Assigning Ownership to a Device in BOSS3

Every new device added to BOSS3 allows for Admin level access into PAGIS without the use of a username or password. In order to password protect the PAGIS software, the BOSS Administrator must assign "Owners" to the device in BOSS3.
NOTE: For more detail on Users, User Groups, Sites, and Roles, refer to the BOSS3 manual.

1. Login to the BOSS3 UI with Admin credentials.
2. Click the Admin button on the Left to expand the options.
3. Click Devices to review the list.
4. Click on the Device Name to open the device details screen.
5. Click on the Edit button.
6. Locate the "Owners" field. Click the Select button to the right.
7. Check the box(es) for the appropriate Site(s)/User Group(s). **NOTE**: This tells BOSS3 which sets of users will have rights to login to PAGIS from this specific device.
8. Notice the Select button has changed to a Save button. Click Save to retain changes.
9. Confirm the changes show in the Owners Field.
10. Click the Save button at the top left of the Edit window.

6.4 Assigning Hotlists to a Device in BOSS3

In order for the PAGIS users to receive alerts, one or more of the stored hotlists in BOSS3 must be distributed to the new device. **NOTE**: For more information on building and configuring Hotlists, refer to the BOSS3 manual.

1. Login to the BOSS3 UI with Admin credentials.
2. Click the Admin button on the Left to expand the options.
3. Click the "Hotlists" button to review the list of configured alert lists.
4. Click the Hotlist Name to select the first alert list. This will open the Details screen.
5. Click the Edit button at the bottom of the window.
6. Locate the "Deployment" field. Then click the Select button to the right.
7. Check the box next to the name of the new device.
8. Notice the Select button has changed to a Save button. Click Save to retain the changes.
9. Confirm the changes show in the Deployment Field.
10. Click the Save button at the top left of the Edit window.
11. Perform these steps again for all remaining Hotlists necessary for this device.

PAGIS/BOSS4 CONFIGURATION

In order for the PAGIS software to function properly, the device must be built, enabled, and configured in BOSS4 before being deployed for service in the field.

7.1 Creating a New Device in BOSS4

Once network communication to BOSS4 has been established from the vehicle, the new device must be "built" or added to the Device List in BOSS4 before it can be used. The approved way to do this, is to simply perform a Begin Shift from the PAGIS software. **NOTE**: The computer name is what will be displayed in BOSS as device name.

1. At the PAGIS Live View Screen, click the Begin Shift button once to select it, and then click again to launch the sync.
2. If the computer has previously been setup to communicate with BOSS and is already enabled, the sync transfer window should appear in the middle of the Live View Screen.
3. If this is a new/disabled device, a message indicating "HttpStatusCode" will be displayed.
4. This indicates the BOSS4 server has received the sync request but has rejected it due to device status.
5. Once the BOSS Admin has enabled the device, the Status Code error will not appear again, and syncs should complete as configured in BOSS4.

7.2 Enabling a New Mobile System in BOSS4

Installing PAGIS and configuring the network settings is only the first step in making the ALPR unit operational. Once PAGIS is configured to work with or on the SX Processor and the mobile cameras, it must then be enabled in BOSS4 before synchronizations can take place. **NOTE**: By default, every new device recognized by the BOSS4 server is disabled until the Admin enables it. This is done for security.

1. Log into the BOSS4 URL with Admin privileges.
2. Navigate to the Resources pulldown menu.
3. Select Devices from the menu options. The new device should now be listed.
4. Click the name of the Device to select it. (This will open the device details windows on the left)
5. Click the Enable slide toggle to enable device, located in upper right of device edit window then click save.
6. This will enable the device, synchronization between BOSS4 and PAGIS is allowed.

NOTE: Once the Device is enabled the Admin needs to assign ownership and hotlist distribution.

7.3 Assigning Ownership to a Device in BOSS4

Every new device added to BOSS4 allows for Admin level access into PAGIS without the use of a username or password. In order to password protect the PAGIS software, the BOSS Administrator must assign “Owners” to the device in BOSS4.

NOTE: For more detail on Users, User Groups, Sites, and Roles, refer to the BOSS4 manual.

1. Login to the BOSS4 URL with Admin credentials.
2. Navigate to the Resources pulldown menu.
3. Select Devices from the menu options. The new device should now be listed.
4. Click the name of the Device to select it. (This will open the device details windows on the left)
5. Locate the “Owner” field. Click in the Owner filed, and a list of all available Groups will appear.
6. Select group by clicking on it, it will then automatically be added to owners, see list below “Owner”.
7. To add mode groups, repeat step 15.
8. Confirm the changes show in the Owner Field.
9. Click the Save button at the bottom right of the Edit window.

7.4 Assigning Hotlists to a Device in BOSS4

In order for the PAGIS users to receive alerts, one or more of the stored hotlists in BOSS4 must be distributed to the new device.

NOTE: For more information on building and configuring Hotlists, refer to the BOSS4 manual.

1. Login to the BOSS4 URL with Admin credentials.
2. Navigate to the System pulldown menu.
3. Select Hotlists from the menu options
4. Click the Hotlist Name to select the first alert list. This will open the Details screen.
5. Locate the “Deployment” field.
6. Check the box next to the name of the new device listed.
7. Click the Save button at the bottom right of the Edit window.
8. Perform these steps again for all remaining Hotlists necessary for this device.

APPENDIX A: THE GLOSSARY

4277

ALPR/ANPR	"Automatic License Plate Recognition/Automatic Number Plate Recognition".
BOSS	"Back Office System Software". This is the ALPR server.
GPS	"Global Positioning System".
GUI	"Graphical User Interface".
Hotlist	A database or list that contains vehicle license plates of interest ("alert list").
IR	Infrared light.
License Plate	Also called a tag or number plate.
MDC	"Mobile Data Computer". This is the tablet or laptop in the vehicle.
OCR	"Optical Character Recognition" (also referred to as a "cardet").
OS	"Operating System".
PAGIS	This is the License Plate Capture Software most commonly used in an ALPR vehicle.
Service	Operation mode of the PAGIS software. Service or "VPRelay" is used to refer to PAGIS instance that is running directly on the PIPS mobile processor without a GUI interface, this mode is intended to run in conjunction with MDC version of PAGIS installed on laptop connected via Ethernet.
Standalone	Operation mode of the PAGIS software. Standalone is used to refer to PAGIS instance that is running directly on the PIPS mobile processor with a GUI interface. Same a "Service"
SX	SX is a short notation referencing PIPS's mobile processor, commonly the SX is followed by the generation number of the processor, i.e. SX3, SX4 & SX4e.
UI	A "User Interface" is the means in which the user can access and navigate the software.
USB Flash Drive	Also called a thumb drive or memory stick.
VLP	"Vehicle License Plate".
VPN	"Virtually Protected Network".
VPRelay	Operation mode of the PAGIS software. VPRelay or "Service" is used to refer to PAGIS instance that is running directly on the PIPS mobile processor without a GUI interface, this mode is intended to run in conjunction with MDC versions of PAGIS installed on laptop connected via Ethernet.
Whitelist	Opposite of a standard BOSS Hotlist. This is a list of license plates that should not trigger an alert.

APPENDIX B: PAGIS SOFTWARE DATABASE FILE

This section is used to configure the PAGIS Software when it's not being used with the Back Office System Software (BOSS). Comma-separated value (CSV) format is the only format the PAGIS Software supports for importing data into the vehicles for the purpose of matching against the captured license plate data. PAGIS will support CSV files with any number of columns, called "fields", as long as the first field is the VLP (Vehicle License Plate). **NOTE**: The CSV format is standard ASCII.

Example CSV Files:

1. *ABC123, Red, Ford, Explorer, 1996, WANTED XYZ456, Blue, Audi, A4, 2001, MURDER*
2. *45ABC234, Vehicle wanted in associated with a kidnapping on 12/5/2005 995BD233, Vehicle reported stolen from Liz's Lounge at 6am on 12/1/2005*
3. *UIO223 ABC123*

General Function:

PAGIS calls/utilizes files in pairs. Each database in PAGIS is created using two files; a CSV file, and an INI configuration file. Without both of these files, the database will not load and PAGIS will not "see" it. Each CSV file/hotlist must have the exact same name as the INI configuration file. Example: Stolen.ini and Stolen.csv will work. Stolen.ini and Plates.csv will not.

Reading an INI Configuration File

Lines that appear in brackets [] are called "Headings". The labels that appear inside the headings, are called "values". Values will always contain an equal sign (=). If a line starts with a semicolon, it is considered to be a comment and is not read by the software. There is no limit to the number of comments in the INI file.

The [SETTINGS] Heading

The values in the Settings heading are: NumFiles, DbName, DbColor, Priority, Covert, Alarm, and NumFields.

- NumFiles: Determines how many database files the system should split the specified hotlist into. Generally, this value is set to 1. But for larger hotlists (200,000+ lines), a number of 2-5 may be more desirable.
- DbName: Tells the PAGIS Software what the displayed name of the hotlist should be.
- DbColor: Sets the display color of the hotlist. This is merely an esthetic setting and not a functional setting. The right-hand side of the equal sign is the HEX value representing the ARGB values for the color. If this value is unknown, the Admin should simply leave this line out of the file.
- Priority: Designates the priority of this hotlist in relation to other hotlists in the system. The highest priority database is 1 and the lowest is 999. **NOTE**: if a plate resides on multiple lists the higher priority will be alerted first.
- Covert: Determines whether standard PAGIS Software users are alerted when a hit is made from the database. Covert database can be used for hotlists that are included for information-gathering purposes rather than eliciting user intervention. The system can also be configured to notify via email or SMS message when a hit is made from a covert hotlist.
- Alarm: Sets the audible alert to be played in PAGIS when a hit is made from the hotlist. Values for Alarm are LOW, MED, HIGH
- NumFields: Indicates how many fields (columns) are in the CSV file. If this value is less than the actual number of fields in a file, then the additional fields are placed in the general information area. This value also determines the number of headings of the [Field x] present in the file. For example, if NumFields=2 then there will be two additional headings, [Field 0] and [Field 1]. **NOTE**: Adding "Creation =" will place the timestamp the hotlist was added to the Begin Shift file.

The [FIELD X] Heading

Under the Field heading, there are two configurable values, “Name” and “PAGIS”.

- Name: Tells the system what the name of this field is. If no name is specified, then no name given to the field. The format is Name = <field>
- PAGIS: Specifies how to display the field in the GUI/PAGIS Software.
    - If no value is defined, the field is placed as general information.
    - Values 1-5 represent special fields for the PAGIS Software that translate to the information being displayed in a box of its own when a hit is processed.
    - A value of 6 represents an ID number to cross reference the vehicle from the hotlist with a person from the wanted list.
    - A value of 7 is identical to leaving the value undefined.

Sample INI Configuration File

[Settings] NumFiles=1
DbName=Stolen Vehicles DbColor=ffffff00 Priority=5 Covert=False Alarm=MED NumFields=8
;PAGIS Values
;0 is VRM / VLP (Not User Definable, always Field 0)
;1 is Special Field 1
;2 is Special Field 2
;3 is Special Field 3
;4 is Special Field 4
;5 is Special Field 5
;6 is ID Number (PNC ID, Drivers License, Social Security Number, etc.)
;7 is General Info (Default for all undefined fields) [Field 0]
PAGIS=VRM

Sample INI Configuration File

[Field 0] Name=VRM
[Field 1] Name=Color
PAGIS=3 [Field 2]
Name=Make PAGIS=1
[Field 3] Name=Model
PAGIS=2 [Field 4]
Name=Action PAGIS=4
[Field 5] Name=Warning
PAGIS=5 [Field 6]
Name=PNCID PAGIS=6
[Field 7] Name=Intelligence PAGIS=7

APPENDIX C: FAQ

Q: **HOW DO I ENTER A SUPPORT CASE?**
A: We have a webform you can use here, you can email our Support Team at Support@PIPSTechnology.com, or you can call us on the phone Monday-Friday 8am to 4pm Central Time (9am-5pm Eastern) at (833) 747-7577 Option 2.

Q: **HOW DO WE CREATE USERS IN PAGIS?**
A: The agency BOSS Administrator creates all users, both for BOSS and for PAGIS. Once the user is created in BOSS, the Admin would click the user's name to select/edit the user. Then click the Advanced button and update the PAGIS specific password. Please note that the username and password fields are both case sensitive and the PAGIS users need to be added to a group with the Role that allows them to use PAGIS/LPCS.

If you have any further questions, please feel free to enter a request for support here.

Q: **WHERE DO USERS CHANGE THEIR LOGIN PASSWORD IN PAGIS?**
A: User passwords are created and updated in BOSS via the UI client software. For the majority of our customers using both the PAGIS Software and BOSS, any user accounts or passwords created in the PAGIS Software itself will be overwritten by the user information defined in BOSS during the next sync.

If you have any further questions, please feel free to enter a request for support here.

Q: **HOW DO WE REQUEST AN RMA REPAIR?**
A: To assist with this, please navigate here to review our RMA procedure as well as to download the request form. Please keep in mind that once submitted, all repairs are reviewed for age of equipment and warranty status before final processing takes place. Additionally, incomplete forms and those without much detail often result in processing delays.

If you have any further questions, please feel free to enter a request for support here.

Q: **WE GOT NEW MDC LAPTOPS IN THE PATROL CARS, HOW DO WE ADD THOSE DEVICES TO BOSS?**
Q: **HOW DO WE EDIT THE DEVICE NAMES IN BOSS?**
A: The initial device template/skeleton is automatically created in BOSS the first time the device attempts to Sync from the field. Devices should NEVER be created manually. For PAGIS laptops, this is done after PAGIS is installed and configured and Begin Shift is launched. However, if the agency would like to organize the device list by updating the "Device Name" field, those steps are below:
1. Login to the BOSS UI with Admin rights
2. Navigate to Admin > Devices
3. Click on a device name to select it > Click Edit
4. Update the name of the device in the "Description" field (Name field cannot be altered)
5. Click Save > This will take you back to the Device Summary List. The "Device Name" field should show the new name

If these troubleshooting steps did not resolve the issue, please feel free to enter a request for support here.

Q: **WE HAVE A NEW MOBILE COMPUTER/MDC THAT'S NOT SYNCING WITH BOSS.**
Q: **WE KEEP SEEING AN HTTP_STATUS_CODE ERROR WHEN RUNNING BEGIN SHIFT.**
A: This error most commonly means that a new device in the field (laptop/tablet) can "see" the BOSS server, but that it hasn't been enabled yet to "talk" with it. Follow the general steps below to address this issue:
1. The agency BOSS Administrator will need to login to the BOSS UI client and Select Admin
2. Then select Devices and from there, left click on the device/computer name of that MDC to edit it
3. Once in the Edit screen, Enable the device. This will take you back to the Device List.
4. Click the name to edit the device again. Now assign users/Owners and save.
NOTE: The Select button becomes a Save button when selecting which Groups/Users should have access to login to this device
5. Once that is done, navigate to Admin > Hotlists
6. From here, click on each hotlist one at a time to distribute them to the new device being sure to Save the changes next to the Distribution field. Note again that the Select button becomes a Save button. And there's another Save button at the top left of

the edit window.
7. After this is complete, perform Begin Shift from the field unit/MDC and confirm there are no further errors. 4281

If these troubleshooting steps did not resolve the issue, please feel free to enter a request for support here.

Q: **NEW PAGIS USER CAN'T LOGIN BUT OTHERS CAN.**
Q: **USERS CAN LOGIN TO PAGIS WITH NO CREDENTIALS AT ALL.**
A: Entry or login to the PAGIS software in the field is partially controlled by the Device settings in BOSS. The users themselves must also be properly setup with an LPCS/PAGIS password. To check the current device settings/ access, perform the following steps:
1. Login to BOSS UI (with Administrator rights)
2. Select the Admin Section
3. Select Devices and then Select the Device in question by PC name
4. Once selected click on the Edit button near the bottom
5. Locate and inspect the "Owners" Field (this is a list of users/groups that have access to login to the device)
NOTE: If this field is blank, the device is in an open configuration mode allowing admin level access simply by clicking login (any credentials would also be accepted).
6. To update the device owners, click the "Select" button next to the Owners field (notice it changes to a Save button)
7. Check which Users/Groups of Users should be able to login to PAGIS from this device
8. Click the Save button next to the field
9. And then click Save in the upper left portion of the Edit window
10. Have a previous user or Admin login to PAGIS and perform Begin Shift to sync the new data
11. A PAGIS Admin can confirm by navigating to Admin, Admin, and then Users to review the list
12. Another test would be to have the new user attempt to login

If these troubleshooting steps did not resolve the issue, please feel free to enter a request for support here.

Q: **WHEN USERS LOGIN TO PAGIS, THEY ONLY SEE A GREY SCREEN.**
Q: **CAMERAS AREN'T SHOWING UP IN PAGIS ANYMORE.**
SEE ALSO: "THE LINK LIGHTS ON OUR ALPR COMPUTER/MDC WON'T TURN ON OR FLASH"
A: Below are some basic troubleshooting steps you'll want to follow before creating a support ticket.
1. Doublecheck the physical power switch on the black box/Processor is On. In many vehicles, there is also an in-line switch in the front of the vehicle that needs to be switched On. When the units are properly powered and on, you should see lights and hear fans running.
2. Confirm that the network adapter settings on the laptop match the proper Static IP scheme for the SX Processor in use. The older scheme is 192.200… and the newer scheme is 192.168…. NOTE: the adapter status in Windows should say "unidentified network". If it says "cable unplugged" the laptop can't "see" the SX.
3. If the power and Static IP settings are good and things still aren't working, test further by disabling the three main software related culprits. Turn off/bypass the local Windows firewall, antivirus, and VPN software one at a time.
4. If you're still not able to see the camera feed after that, you may want to use a different network cable as those can get damaged over time and then confirm that the cord is properly plugged into the ports.
5. If the network cord from the SX Processor is routed through a docking station, then it's possible the dock is preventing the traffic. You should contact the dock's manufacturer for the most recent firmware. To test for this, remove the laptop from the dock, directly connect the network cord to the laptop, and then reconfigure the network adapter settings (remove the static settings from the dock's adapter/ and assign the static IP to the laptop's NIC adapter).

If these troubleshooting steps did not resolve the issue, please feel free to enter a request for support here.
Q: **THE LEFT FRONT CAMERA ON OUR ALPR VEHICLE IS NO LONGER SHOWING IN PAGIS**?
Q: **HOW DO WE TROUBLESHOOT MOBILE CAMERAS**?
A: Below are the main troubleshooting steps to test the camera(s) and cable(s) on a system where only one or two cameras are no longer displaying images.
Step 1: Confirm MDC/SX communication - steps shown in section "Cameras aren't showing up in PAGIS anymore."
Step 2: Access the SX Processor – RDP or directly connect a monitor, keyboard, and mouse to the SX. Contact PIPS Support for

help with RDP if the credentials are unknown to the agency.
Step 3: Confirm camera activity – Launch Tools. Then open P6Utility or Mobile Toolkit. Check the camera feeds/function by switching the Input menu to the camera(s) in question
Step 4: Unplug and Reattach the Camera Cables – Note, the cables DO NOT TWIST. The metal locking nut on the cable slides back about a millimeter and the cable comes straight out. Do this at the SX Processor and the Camera. You may need to remove the camera from the mount in order to unplug the cable successfully (most brackets use a #3.5 Hex/Allen Wrench)
Step 5: Swap Port on SX Processor – At the SX Processor, swap the camera cables from the non-working camera to a port with a working port (Take care to note the swap so the cables get back to their original ports). If the camera outage stays at the port site, the issue is most likely the capture card on the SX Processor and will require RMA (Example: working Left cam is swapped to port of non-working Right cam and no longer functions. AND the previous non-working Right cam starts working once it's plugged into the Left cam's port). If the fault/error stays with the camera regardless of SX port, continue to Step 6.
Step 6: Physically Swap Camera Locations – Once all other items are checked, move the camera itself to a working position in order to test the cable. (Example: physically move Left cam to the Right cam position on the top of the vehicle) Connect the cable at the new position and test feed in Tools > P6Utility/Mobile Toolkit. If the camera works at the new location, the issue is most likely a bad cable. If the camera still does not work, the issue is most likely a faulty camera in need of repair/RMA.

If these troubleshooting steps did not resolve the issue, please feel free to enter a request for support here.

Q: **WE'RE NO LONGER GETTING GPS IN PAGIS.**
Q: **WE'RE NOT SEEING GPS DATA FROM SOME OF OUR FIELD UNITS IN BOSS.**
A: Below are the basic troubleshooting steps for checking the GPS of field units:
1. Login to PAGIS (as Admin)
2. Navigate to Admin section, then click the Admin button
3. Select "System" on the left pane
4. Confirm/Set the button at top to "Default"
5. Remove any value(s) stored in the GPS Connection String field. Leave '5' in the Computer String.
6. Click the Save button to retain changes made.
7. Close PAGIS fully and relaunch and log back in to test (Note: GPS will only show with test reads/hits)
8. For versions of PAGIS 2.9 and up, test with a GPS Connection String of 6 if the blank field doesn't work. Save the changes. Log out. Close the software and then relaunch to test.

Please be advised, that some GPS issues can be caused by local or domain firewall settings, antivirus software, or any other software package monitoring/transmitting network data. To test these, disable or bypass those software options on the MDC and retest.

If these initial troubleshooting steps did not resolve the issue, please feel free to enter a request for support here.

Q: **HOW DO I INSTALL THE PAGIS SOFTWARE?**
Q: **I JUST LOADED PAGIS ON A MACHINE AND IT CRASHES WITH A .DLL ERROR WHEN I TRY TO LAUNCH IT.**
A: The most common installation of PAGIS is Client/Server or "VPRelay Mode". The .dll error is caused by the installer not being run from the HDD and/or the wrong install option being selected (Example: SupeRex instead of MDC). The best practices for the installation are below. (Note, this does not cover MDC or PAGIS configuration, only the act of installation)
1. Always copy the installer over to the HDD/Desktop of the MDC. Never run it from a thumb-drive or network share
2. Regardless of how you're logged in to Windows, right click the installer and select "run as Admin" or "run with elevated privileges"
3. Continue through the message/error about OS compatibility
4. Click next on the wizard and then be sure to select the MDC option (to use with VPRelay)
5. After that, it's next, next, next, finish the reboot is not necessary

If these steps did not resolve the issue, please feel free to enter a request for support here.

Q: **USERS ARE GETTING HITS/ALERTS ON PREVIOUSLY RECOVERED STOLEN PLATES.**
Q: **USERS AREN'T GETTING HITS FROM KNOWN ACTIVE PLATES.**

Q: **THE HOTLISTS IN PAGIS DON'T SHOW TODAY'S DATE.**
Q: **THE HOTLISTS AREN'T SYNCING WITH BEGIN/END SHIFT.** 4283
A: Whether it's from data latency or just use over time, the local file structure can get some minor corruption and will need to be refreshed. The steps below show the best practices:
1. Login to Windows with Admin rights (ability to uninstall/delete software)
2. Login to PAGIS and perform an End Shift
3. When complete without error, Logout of PAGIS and then Exit/Close the program
NOTE: If the End Shift fails or displays an error, contact Support for additional assistance.
4. If there were no errors, locate the PAGIS icon on the desktop.
5. Right click on the icon and select "Open File Location" (This should open a window where the program was installed)
6. Scroll up and locate the folder labeled "data". Double-click it to open it
7. Select and delete everything in here EXCEPT for "Attributes.db"
8. Once that's complete, Login to the PAGIS software again
9. Perform a Begin Shift. This will pull down fresh data from the server
NOTE: Once complete, the files in the data subfolder as well as the Databases section of PAGIS should be restored.

If these troubleshooting steps did not resolve the issue, please feel free to enter a request for support here.

Q: **IS PAGIS COMPATIBLE WITH OUR NEW WINDOWS 10 LAPTOPS?**
A: Although there's a warning about compatibility during the install of PAGIS on any Windows OS after XP, it is compatible with all them. However, we have seen errors occur when agencies copy and paste folder structures from previous installations. This of course is not recommended.

Q: **THE LINK LIGHTS ON OUR ALPR COMPUTER/MDC WON'T TURN ON OR FLASH.**
Q: **OUR WINDOWS 10 MDC WAS WORKING BUT HAS STOPPED COMMUNICATING TO THE SX PROCESSOR.**
A: There are many variables with troubleshooting any network connection. And the connection from the ALPR computer to the SX Processor is no different. The following troubleshooting list highlights the most common:
1. The physical network cord is bad/damaged.
A: Test with a different cable and confirm that it is plugged in fully

2. The network adapters are not configured or have incorrect static IPs
A: Confirm the Static IP scheme in use and properly configure the network adapters

3. Local and/or Domain Firewall rules have prevented the flow of communication
A: Disable or bypass these and test again

4. VPN, Anti-Spyware, Antivirus, or other monitoring software has blocked communication
A: Disable or bypass these one at a time and test after each to find the culprit(s)

5. Docking Station Firmware can be incompatible with some newer computers or become corrupt
A: Test by running the network cord straight to the MDC and then configuring the network adapters (NOTE: It would also be a good idea to contact station manufacturer to see what the latest firmware version is and upgrade as necessary)

6. The NIC Drivers have become corrupt
A: Update the specific Networking drivers in use on the MDC through the Device Manager in Windows

7. Turn off all power saving settings of the Ethernet Adapter in the device manager
A: Uncheck "Allow the computer to turn off this device to save power"

8. Check for Windows 10 update 1709 and 1803 as this update will not allow the NIC and Cellular Aircard to run simultaneously
A: Settings > Update and Security > Windows Update > "Update History" link – if there, see the steps in the FAQ

If these troubleshooting steps did not resolve the issue, please feel free to enter a request for support here.

Q: **AS SOON AS WE DOCK OUR MDC, WE LOSE CONNECTION TO THE WIRELESS.**
Q: **OUR WINDOWS 10 LAPTOP LOSES CONNECTION TO THE INTERNET WHEN THE NETWORK CABLE IS PLUGGED IN.**
Q: **OUR MDC HAS MICROSOFT VERSION 1709 OR 1803 AND CAN'T CONNECT TO WIFI WHEN DOCKED.**
A: Microsoft Updates (1709 and 1803) prevent the Wireless connection as soon as a Network cable is plugged into the device. This also occurs for MDCs/laptops that are docked (where the Network cable from the SX Processor is run through the docking station). As of January 2019, the steps to correct this are below.
WIN10 version 1803
1. Open Regedit
2. Expand HKEY_LOCAL_MACHINE
3. Navigate to Software > Policies > Microsoft > WcmSvc > Local
4. Right click on Local > Hover over New > Select "DWORD (32-bit)"
5. Name the new value "fMinimizeConnections"
6. Right click the on the new name > select Modify > Set value data to 1 (leave base Hex) > Click OK
7. Reboot Windows and test

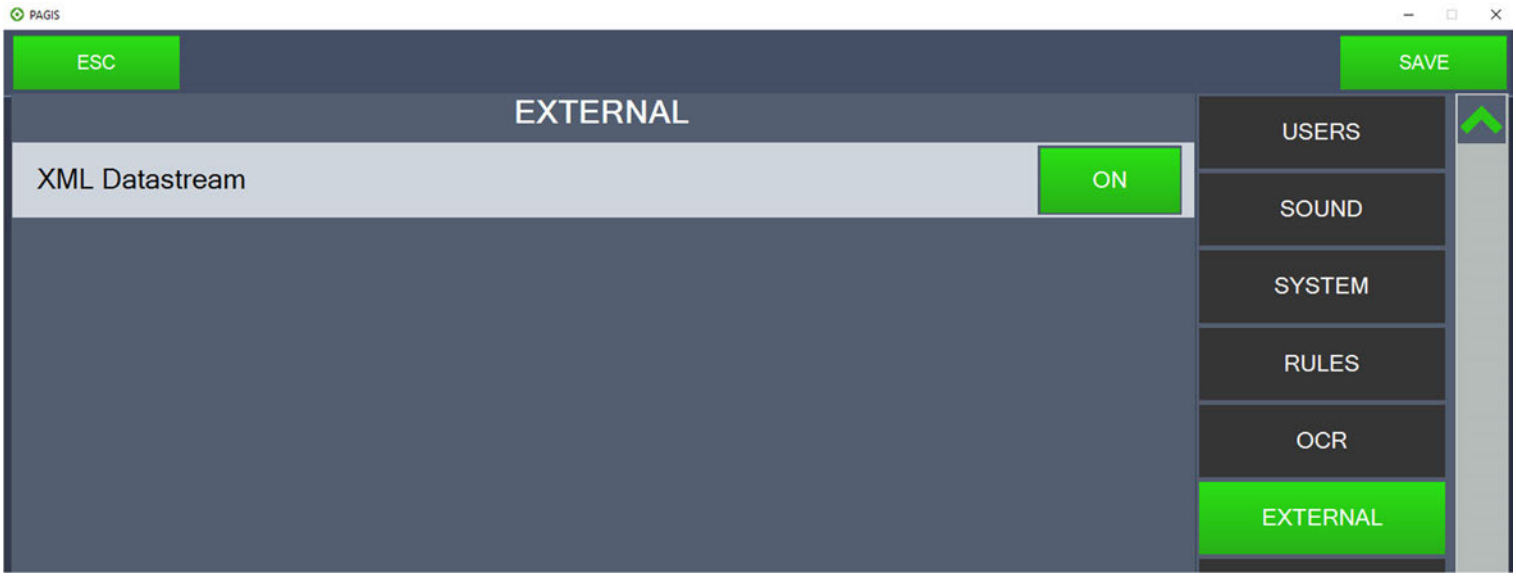
WIN10 version 1709 - Microsoft fixed this with Update KB 4284822. But if you still have issues, the registry steps are below:
1. Open Regedit
2. Navigate to HKEY_LOCAL_MACHINE > Software > Policies > Microsoft > WcmSvc > Local
3. Right click on Local > Hover over New > Select "DWORD (32-bit)"
4. Name the new value "fMinimizeConnections"
5. Right click the on the new name > select Modify > Set value data to 0 (leave base Hex) > Click OK
6. Then Navigate to HKEY_LOCAL_MACHINE\Software\Microsoft\Wcmsvc
7. Right click on Wcmsvc > Hover over New > Select DWORD (32-bit)
8. Name the value "IgnoreNonRoutableEthernet"
9. Right click on the new value > Modify > Set value data to 1 (leave base in Hex) > OK
10. Reboot Win10 and test

If the steps above did not resolve the issue, you may need to address this with Microsoft. Their support site is here.

APPENDIX D: XML DATASTREAM

Overview

The XML Datastream can be used to push the current data from a running PAGIS system to another application. The data available via the Datastream includes reads, hits and current images. The connection to the Datastream is a TCP/IP socket (default port: 10100). When initially connecting, an XML packet is passed to the PAGIS Software to subscribe to the Datastream. The data connection is configured as "push only" and doesn't allow receipt of additional external data. The current image stream is pushed periodically whereas reads and hits are passed as close to real-time as possible.



PAGIS Port

By default, the PAGIS.exe.config file has a key for defining the port number for the XML Datastream. The default value is 10100. This setting does not need to be changed unless the default port is unavailable.
The key has the following format:

```
<!--XML Datastream Settings/-->
<add key="XML.Datastream.Port" value="10100"/>
```

PAGIS Admin Setting

To utilize this feature, the XML Datastream needs to be enabled in PAGIS. To do this, navigate to Settings > Admin > External. The "XML Datastream" option should be turned on as shown in the image below and then saved.

XML Subscription

When initially connecting to PAGIS, the Datastream subscriber will receive only a Heartbeat XML packet (see example below) until PAGIS receives a subscription packet from the subscriber. The properly formed subscription packet defines the specific data that the subscriber wishes to receive.

Heartbeat XML Packet

The Heartbeat Packet is sent once every 10 seconds. The purpose of the heartbeat packet is to let the subscriber know that the communications channel is working between PAGIS and the subscriber. The timestamp is sent in the format of "`YYYY-MM-DDThh:mm:ss`".

Sample of the Subscription XML Packet

```
<?xml version="1.0" encoding="utf-8"?>
<pips-datastream-heartbeat>
  <timestamp>2011-10-13T09:41:56Z</timestamp>
</pips-datastream-heartbeat>
```

Subscription XML Packet

A properly formed subscription packet will have all of the data being requested from PAGIS. To receive a specific datatype, a tag must be added to the subscription to define the desired datatype. The valid entries for datatype are: Reads, Hits, and CurrentImage. 4286

- Subscribing to Reads will send all plates that are detected by PAGIS regardless of whether or not it has an associated hit.
- Subscribing to Hits will send all plates detected by PAGIS that are on a hotlist and the associated Read data for that Hit.
- Subscribing to the CurrentImage Datastream offers two additional attributes that may be passed as well. The "camera" attribute can be set to determine which camera the image is coming from. If no value is passed for "camera" the value defaults to zero. The "milliseconds" attribute determines how long the system waits between sending the current image. The default value for milliseconds is 1000. If a value of zero is sent, the system will send a single snapshot.

Sample of the Subscription XML Packet

```
<?xml version="1.0" encoding="utf-8"?>
<pips-datastream-subscription>
  <datatype>Reads</datatype>
  <datatype>Hits</datatype>
  <datatype>HitTrigger</datatype>
  <datatype camera="0" milliseconds="1000">CurrentImage</datatype>
</pips-datastream-subscription>
```

HitTrigger

The HitTrigger packet is used to alert other systems that a hit has occurred on the PAGIS system. The packet is greatly simplified from the Reads/Hits XML packet and only contains the license plate text, timestamp and a description of the hit. The description will contain the name of the hotlist that originated the hit and may be used to send additional information.

Sample of the HitTrigger XML Packet

```
<?xml version="1.0" encoding="utf-8"?>
<pips-datastream-hittrigger>
  <timestamp>2011-10-13T09:41:56Z</timestamp>
  <vrm>SBX989</vrm>
  <hotList name='Alpha'>
    <field1><![CDATA[This is Alpha Field 1]]></field1>
    <field2><![CDATA[This is Alpha Field 2]]></field2>
    <field3><![CDATA[This is Alpha Field 3]]></field3>
    <field4><![CDATA[This is Alpha Field 4]]></field4>
    <field5><![CDATA[This is Alpha Field 5]]></field5>
  </hotList>
</pips-datastream-hittrigger>
```

Reads/Hits XML Packet

The Reads/Hits packet contains information about the plate that was detected. This information includes:

- Source – The device that detected the plate
- Camera – The camera on the device that detected the plate
- Read – The Information about the plate that was captured
- VRM – The plate translated to text
- Timestamp – When the read occurred
- GPS – The location coordinates where the read took place
- ImagesPatch – The image of plate in infrared (IR)
- Overview – The image of scene/car in Color
- Hits – The associated hotlist(s) data

Sample of the Current Image XML Packet

NOTE: The Current/Live Image XML Packet contains the current image from the camera. It is sent every 5 seconds.

```
<?xml version="1.0" encoding="utf-8"?>
<pips-datastream-currentimage>
  <timestamp>2011-10-13T09:41:56</timestamp>
  <data>(Image data here)</data>
</pips-datastream-currentimage>
```

Sample Read with Hits XML

```

Version

This manual demonstrates the attributes of the Neology / PIPS Technology PAGIS Software Version 2.14 and was last updated in March 2020.

INTRODUCTION

PIPS Technology's Automated License Plate Recognition (ALPR) software solution called PAGIS utilizes dual-channel, dual-lens, cameras to "read" plates. Our software is optimized to run on the Mobile Processor itself or in conjunction with a mobile data computer (MDC). Our mobile software is compatible with Microsoft Windows 7, 8 and 10. The PIPS Mobile ANPR/ALPR Processor comes equipped with Microsoft Windows 7 Embedded.

The PAGIS Software processes the infrared plate image provided by any of the cameras and then interprets the plate number through Optical Character Recognition (OCR) via the mobile processor. The PAGIS application then searches for any matches of the plate with those listed in the databases, or "hotlists," distributed from the PIPS Back Office System Software (BOSS) or other external sources.

WARNING: To reduce the risks associated with impact, which if not avoided, could result in serious injury or death: Do Not interact with the ALPR system while driving in hazardous situations. The PIPS mobile camera series and License Plate Capture Software are not intended for use in hazardous environments, so that the User and/or others are not put at risk for personal injury and/or property damage.

1.1 Dual Lens Color and Infrared Camera

The PIPS Technology Mobile ALPR System allows for a maximum of four (4) PIPS dual-lens cameras to be installed on each ALPR vehicle provided that the vehicle supports the additional mounting equipment.

Each dual-lens mobile camera uses visible light to take color overview pictures of the vehicle and uses infrared (IR) illumination to capture the license plate's alphanumeric characters. IR illumination offers the best capture performance of reflective license plate characters for the following reasons:

- State issued license plates are designed to be highly reflective to IR light.
- Cameras using IR capture technology do not depend on the presence of visible light to function.
- Cameras using IR capture technology are not negatively impacted by the effects of headlights, solar glare, or total darkness.
- IR light penetrates rain and fog better than visible light.
- Due to these attributes, the system can be used 24 hours a day, seven days a week.

1.1.1 Available Products

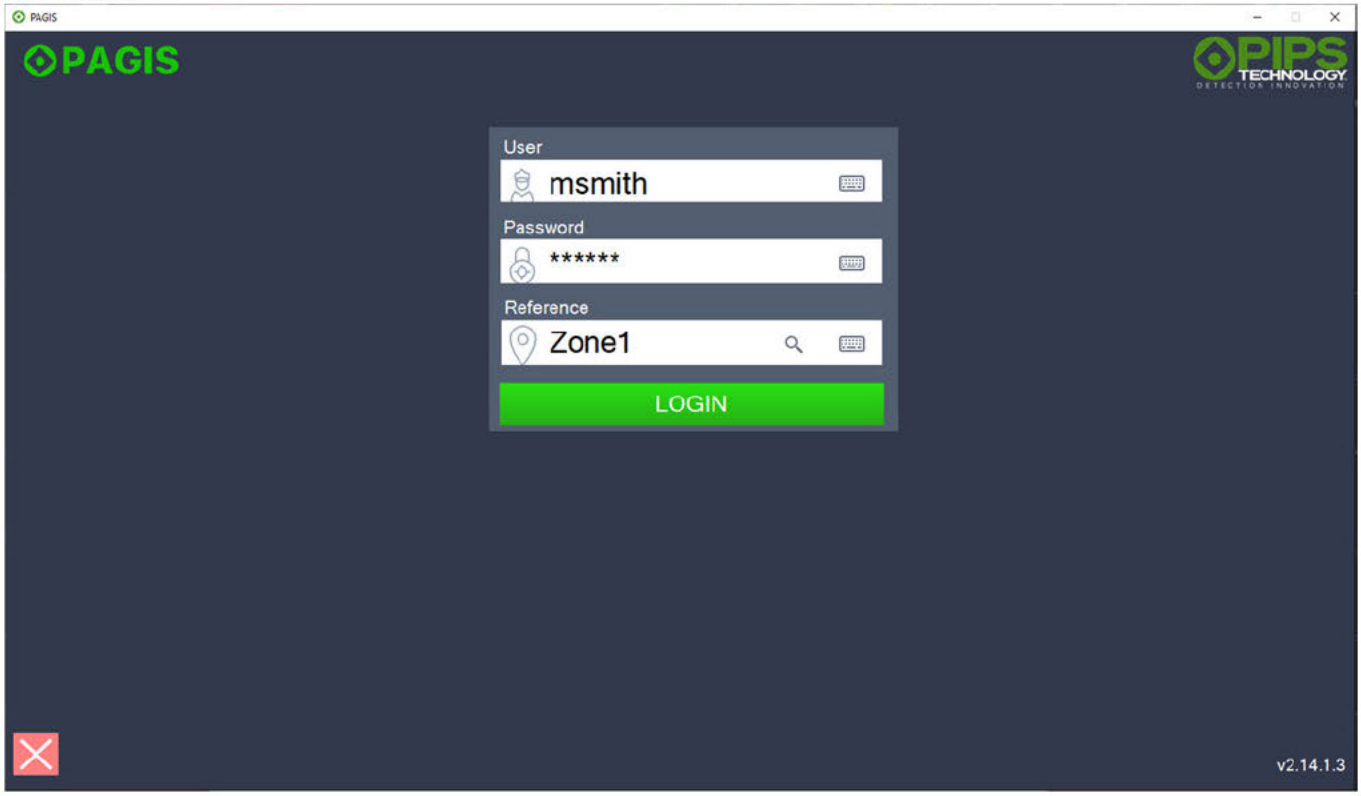
Additional information about this and other PIPS Technology applications, cameras, and solutions are available on the PIPS web site: http://www.pipstechnology.com

1.2 Using This Manual

4292

The section overview of this software manual are as follows:

Section 1: The Introduction and Basics



Section 2: PAGIS User's Section: Explains screen function and User Operations in the PAGIS Software

Section 3: Troubleshooting Tips

Appendices: Additional features and details

SCREEN REFERENCE

This section guides the user through the PAGIS Software screens and the available options. Screens are grouped according to function. When a button is grayed out or missing, the option is not available, or no information has been accrued to activate it.

2.1 The PAGIS Software Login Screen

The PAGIS Software allows users with various access privileges to use the same MDC. For users with touch screen monitors, the Keypad button immediately to the right of any text box gives the user access to an on-screen keyboard for data entry.

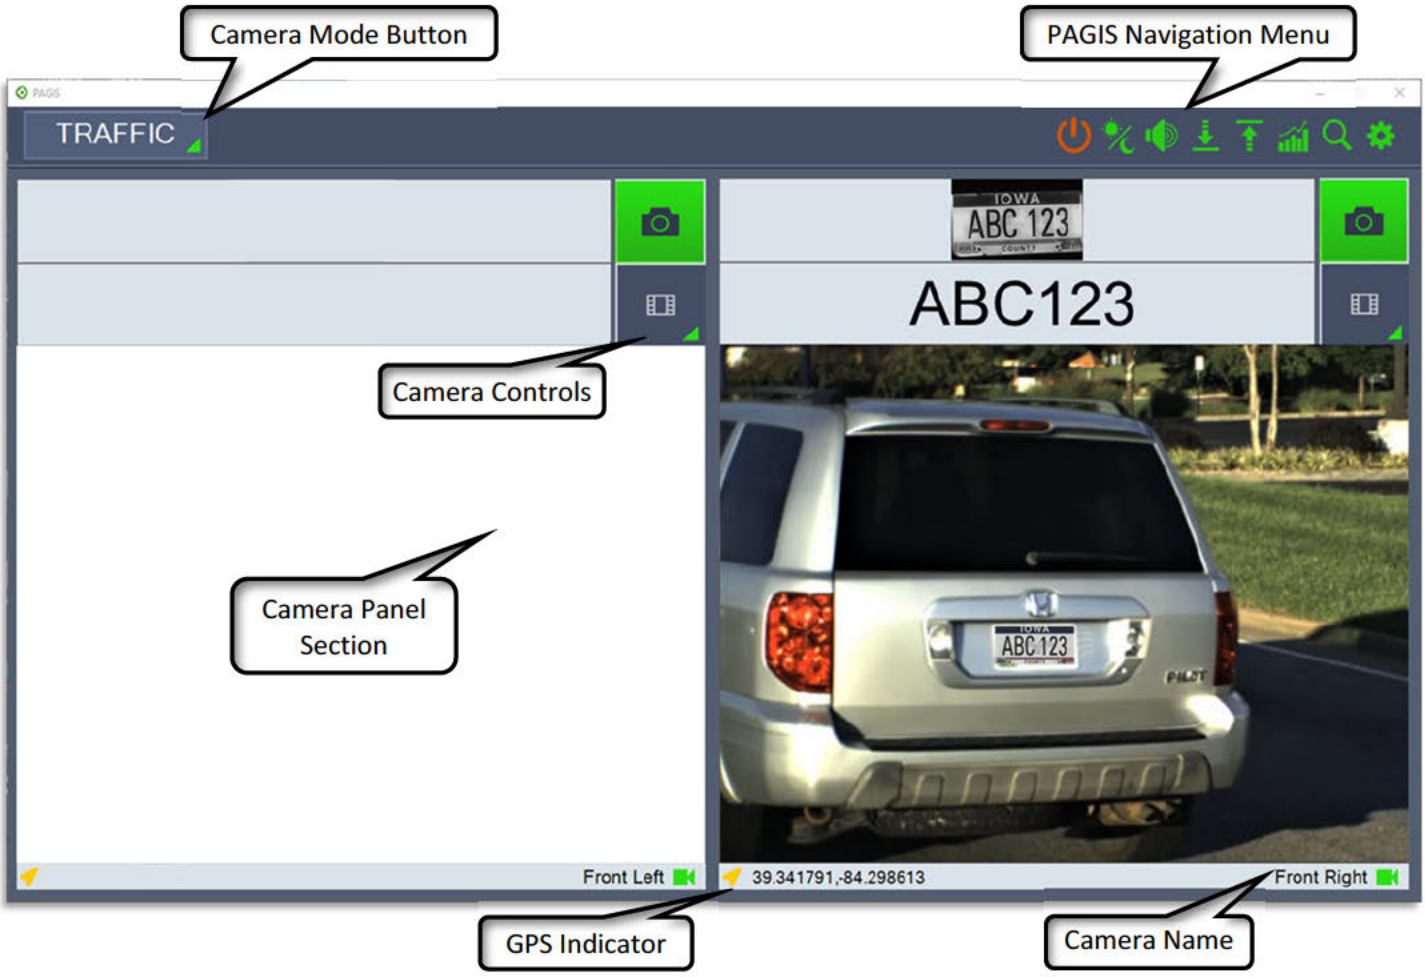
User Field: The alphanumeric string assigned to identify the user. Usernames are not case sensitive.
Password Field: Password of the assigned user logging in. Passwords are case sensitive.
Reference Field: This is an optional field utilized to fit a number of use cases. A user can manually enter a reference at logon, leave the field blank, or select list of unique tags that will be associated with all data captured while logged in. If the Administrator has configured a default reference tags, that information will be displayed automatically. Otherwise, it will be blank.
Login Button: Submits the username and password to attempt a login.
Exit Button: By clicking the X icon in the lower left-hand corner, the user can exit/close the PAGIS Software.

2.1.1 Logging on with the Default Administrative Account

The PAGIS Software includes a default administrative account that can be used for the initial configuration. To do so, simply click the **Login** button with the User and Password fields blank.

NOTE: System Administrators are strongly encouraged to configure users for PAGIS just before, or soon after the installation and setup. PAGIS users accounts are created and maintained in BOSS. Once Users are established by the BOSS System Administrator, the default user account is automatically disabled. Best practices are to be certain at least one User account has administrative privileges.

2.2 Main Screen - Live View



Upon a successful login, the user will see the Main screen (Live View). This is the default view and starting place of all PAGIS Software features. (NOTE: Access to features is based on user group rights established in BOSS.)

The Main Screen is also the place users will monitor read images and ALPR "hits". At the initial startup of the system it is normal to see only a blank/grey screen for a few seconds. Once a connection has been established with the mobile cameras, white boxes will be displayed showing the live-feed camera panels. At this point, the system is ready to capture reads/plates.

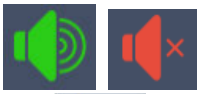
2.2.1 Getting Started in PAGIS

By default, PAGIS loads into a static view. This means live video will not automatically appear in the camera panels (white boxes) until a plate has be captured or the user selects one of the live feed options.

Once a plate is "seen" by a camera assigned to the current viewing mode (Traffic vs Parking), it will display the captured information in the corresponding camera panel. Each plate capture is also accompanied by a short "Beep" to audibly alert the user a read has taken place. (NOTE: If the user is in the Traffic Mode at the time a parking camera reads a plate, there will be a sound effect, but no plate image will be displayed on screen unless that plate is on a synchronized Hotlist or until the user switches to Parking Mode.)

2.3 The PAGIS Navigation Buttons

4295



This section provides a quick reference guide to the available navigation buttons of the Live View screen.

The Camera Mode button is located in the upper left corner and is used to switch between the configured camera modes. Once configured, the name will change to a selected mode. The default values are “ALL”, “Traffic” and “Parking”.

The Logoff button is located in the upper right of the window. When selected, the user will be logged out of PAGIS and return to the login screen.

The Sound button is located to the right of the Logoff button. When selected, this button with toggle the PAGIS system sounds On and Off.

Day/Nite mode switches PAGIS between day & night mode screen skins.

The Begin Shift Synchronization button is located to the right of the Sound button. When selected, this will reach out to the BOSS server to download users, hotlists, and other system settings.

The End Shift Synchronization button is located to the right of the Begin Shift Button. When selected, this will upload any previously unsent reads, images, and audits to the BOSS server.

The Statistics/Review button is located to the right of the End Shift Button. When selected the user is able to review Databases/Hotlists, Reads, Targets, and other PAGIS information.

The Search button is located to the right of the Review Button. When selected the user can search his/her reads as well as manually add a license plate to a temporary hotlist.

The Admin/Settings button is located in the upper right corner of the screen. This button is only viewable to Admin level users and allows for system configuration changes and setup.

Firmware update icon will atomically appear when PAGIS detects a new firmware is available for the P720 mobile cameras. All user types are notified, but only Admins can apply the update.

2.3.1 Camera Control Buttons

The dual-lens cameras can capture both color and an infrared image. Formerly, there were a total of three buttons that allowed the user to view the IR and color feed as well as capture a picture directly from PAGIS. Now there is a toggle button to switch between color and IR views and a separate button to take a picture. These buttons are displayed on the main Live Screen as shown below:

The Camera View Selector button: This is the default state at login showing the Static View. (**NOTE**: PAGIS does not automatically display a life feed.)

Color View: by clicking on the Camera View Selector button once, the user will switch to the Color View Mode. This displays the current view of the color camera and will time out after 60 seconds.

IR View: by clicking on the Camera View Selector button twice, the user will switch to the Infrared (IR) View Mode. This displays the current view of the IR camera and will time out after 60 seconds.

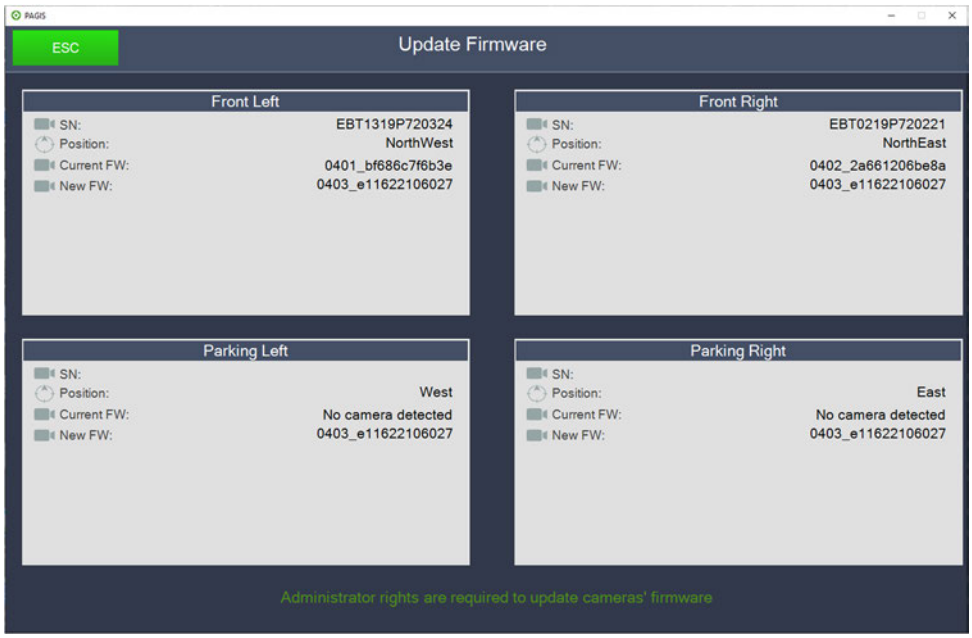
The Take Pic button: Just above the Camera View Selector button is the “Take Pic” button. This button allows the user to quickly take a picture from the camera currently viewed.

2.3.2 GPS Indicators

4296

GPS is stamped on each read and hit as capture events take place by the system. The signal strength and location indicators are located underneath the camera panels at the bottom of the Live Screen.

39.341788,-84.298518 Shows an example of the Location Indicator displaying the Lat/Long on the most recent read



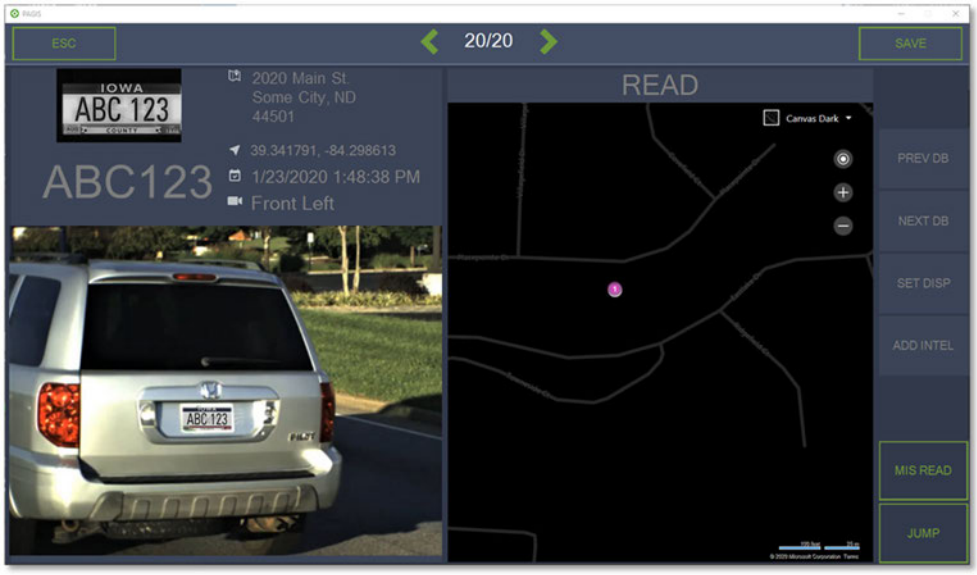
A green or yellow indicator shows a strong or medium strength GPS lock.

A red indicator shows there is no available GPS information.

2.3.3 Camera Firmware Update (Restricted Users)

Camera firmware update provides a means for PIPS to update the camera software to enhance and or correct camera performance. The frimware icon will only apper when update is avialable.

- The firmware update process only updates camera that are attached and function on the mobile processor.
- Restricted PAGIS users are only notified and displayed update information, only a PAGIS administrator can apply the FW update.



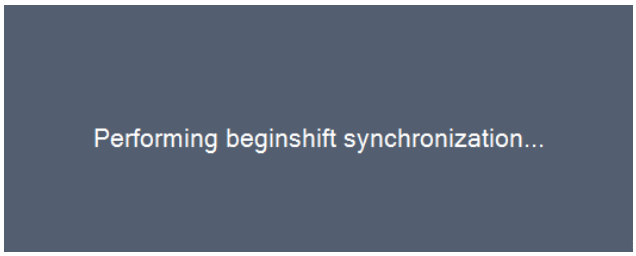
Firmware Updater Window List.

- Title “Camera Name”.
- Camera serial number.
- Position.
- Current FW version.
- New FW version available.

2.3.4 Day/Night Mode

Day/Night mode changes PAGIS user interface skins to a darker appearance to reduce illuminating the vehicle interior.

2.4 Begin Shift



Begin Shift is thought of as the first step for all PAGIS users. From the Live View Screen, the PAGIS user must click the Begin Shift button twice. Once to select the function and once more to launch the Sync. With most agencies, this action utilizes a wireless network to import all the necessary data used during a shift (Hotlists, Dispositions, and Targets) directly from the BOSS Server. However, agencies can also configure their systems to perform this function via Thumb drive or a local source file.

2.4.1 Sync via USB Thumb drive (or Local Source)

Depending on the agency network, some alter the default PAGIS/BOSS configuration mode to use a USB Thumb drive or locally stored file on the MDC/Laptop instead of the wireless Sync. In order to synchronize effectively, the user must first confirm he/she has access to the source location before initiating Begin Shift. **NOTE**: All synchronizations using this method must be performed manually. To learn more about this process, refer to the "Client Tools" section of the BOSS Manual.

2.4.2 Sync via Wireless Network

Synchronizations over a wireless network provide the agency with additional automated features. Best practices recommend the user manually launch Begin Shift from the Live View Screen at the beginning of every patrol shift. However, it is possible for users to allow PAGIS to synchronize via its auto-sync settings. When a manual Begin Shift is launched, the Main View Screen removes the camera feeds and displays a status window of the Sync process. Once the Begin Shift operation is complete, PAGIS will return to the normal Main View Screen.

2.4.3 PAGIS Auto-Sync Settings

PAGIS auto-sync settings are best thought of as how PAGIS receives additional updates and maintains the downloaded ALPR data throughout the entire patrol shift. This prevents the need for the officer to manually perform Begin Shift functions multiple times a day. The auto-sync occurs every 30 seconds and receives data in small batches. The batches are not to exceed 1MB in size for every minute of download. In addition to receiving data, the auto-sync function also uploads a copy of data collected by PAGIS and sends it to BOSS for reporting/processing.

2.4.4 Begin Shift – Additional Information

By default, the synchronizations in PAGIS receive only what has been changed to the ALPR data since the last Sync. Meaning, if some plates have been removed from a Hotlist and others have been added, the system will only transfer that data instead of downloading the entire Hotlist each time the Begin Shift is launched. This helps to reduce the amount of data transferred over the agency's network. **NOTE**: Begin and End Shift synchronization, as well as all auto-sync features, are dependent upon stable communication to the BOSS server via an active data connection.

2.5 End Shift

End Shift in PAGIS is the process in which all the collected ALPR data (Reads, Hits, and Images) from the recent shift is uploaded to the BOSS server and cleared from the local cache. As with Begin Shift, the agency has two options. They can choose to Sync via USB Thumb drive or via wireless connection. Best practices recommend users perform an End Shift Sync at the end of every patrol.

2.5.1 Sync to BOSS

At the end of every shift, the accrued ALPR data should be exported to BOSS. Just like with Begin Shift, the user must click the button twice to launch it (once to select it and once more to execute the Sync). During the Sync, PAGIS uploads any Reads, Hits, and Images not already synchronized to BOSS and purges these items from the local cache on the MDC's hard drive. Completing an End Shift also removes any VLP entries manually added to PAGIS during the shift.

2.6 Cam Mode Button

Clicking the Cam Mode button in the upper left corner of the Live View Screen allows the user to cycle through the different camera modes configured by the PAGIS Administrator. Changing the camera mode changes which cameras are displayed on the Main Screen.

2.6.1 Camera Modes

By default, PAGIS provides "Parking" and "Traffic" as the two configuration modes. Users often switch these modes to suit their current use-case. For example, an officer in a parking lot will often switch the mode to "Parking" so s/he can see the parking cameras on the Live View Screen. They can then switch back to "Traffic" when monitoring city streets.

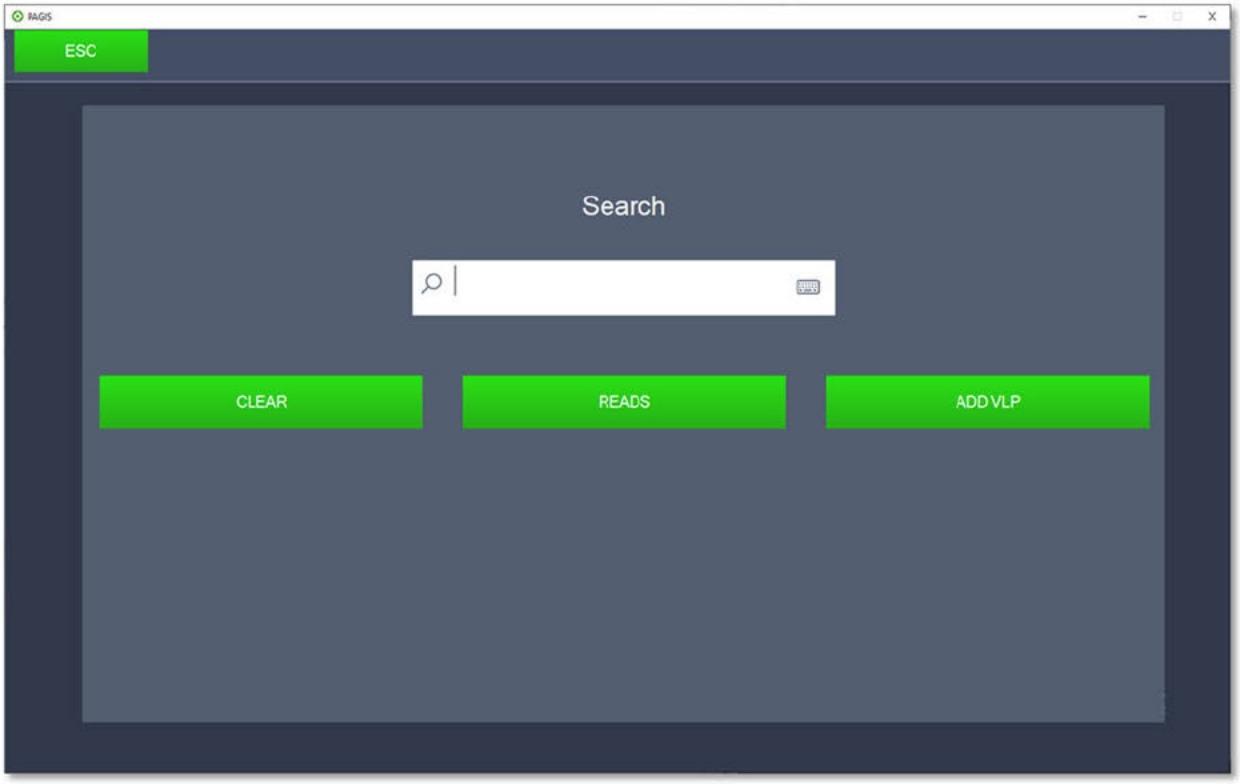
2.7 Taking a Picture

The PAGIS software has ability to quickly take a picture from one of the currently displayed ALPR cameras on the Live Screen. The user only needs to click on the Take Pic button.

To Take a Picture:

1. From the Live View Screen, press the Take Pic button from the desired camera
2. The image taken will be displayed
3. Enter a description of the picture in the text field at the bottom of the screen
4. Press Save to save the picture or Escape to cancel. Either action will return you to Live View.

NOTE: The picture will Not be saved if a description/note is not entered in the text box.



To View the Saved Images:

1. Navigate to the Review menu in PAGIS
2. Select Audits
3. The user will be able to see a thumbnail of the image and the saved text/note
4. In order to review the saved images at a later time, the user will need to run the Audit Report from BOSS.

2.8 Search Entry Screen

4299

Pressing the Search button icon from the Live View screen or SEARCH from the Databases window allows the user to search all manually entered plates as well as all BOSS synchronized databases (Hotlists) for license plate and target information. Users can also search all locally stored reads/images accrued since the last End Shift by clicking the Reads button instead of pressing the Enter key.

2.8.1 Searching Synchronized Hotlists for License Plates

By entering a vehicle license plate number (VLP) and pressing the Enter key or the ADD VLP button, the user can quickly search all the stored plate information locally collected as well as the information from all synchronized hotlists distributed from the BOSS server. **NOTE**: Hotlists can only be searched by entering complete VLPs. Wildcards and partial plate numbers will not return results.

Search Box: The text field used to enter the desired plate search via alphanumeric characters and/or wild card symbols.

Clear Button: Clears the contents of the search box.

Driver's License Info: The search field can also check the Hotlists for any DL information stored (Not available all countries).

Reads Button: This button searches for a match from all the reads/hits locally stored on the MDC/Laptop.

ADD VLP: Searches all locally stored hotlists for the plate and if there's no match, allows the user to add the plate to the "Manual Reports" alert list for use in the field. **NOTE**: All manual entries are cleared with each End Shift

ESC: The Escape button allows the user to exit to the Main/ Live View screen.

2.8.2 Searching Locally Stored Reads and Hits

As mentioned previously, this search function allows users to find reads and hits directly from their recent patrols using the search field and the Reads button. These searches pull only the reads and hits locally gathered/stored since the last time the user completed an End Shift. **NOTE**: The search results are specific to each Windows User Profile and do NOT pull images from the BOSS server.

2.8.2.1 Searching for a Match

4300

- From the Search field, users may enter a plate (or partial plate with wildcards) and then click the **READS** button.
- Results are displayed with the data gathered at the time the read was taken (See example below).
- Each result should display the infrared (IR) image of the plate as well as the color overlay of the vehicle for review.
- Each result shows the GPS data, Closest address point, Time and Date, and the Camera that read the plate.
- If there are multiple results, the user can cycle through them by clicking the left and right navigation arrows.

2.8.3 Wild Card Symbols

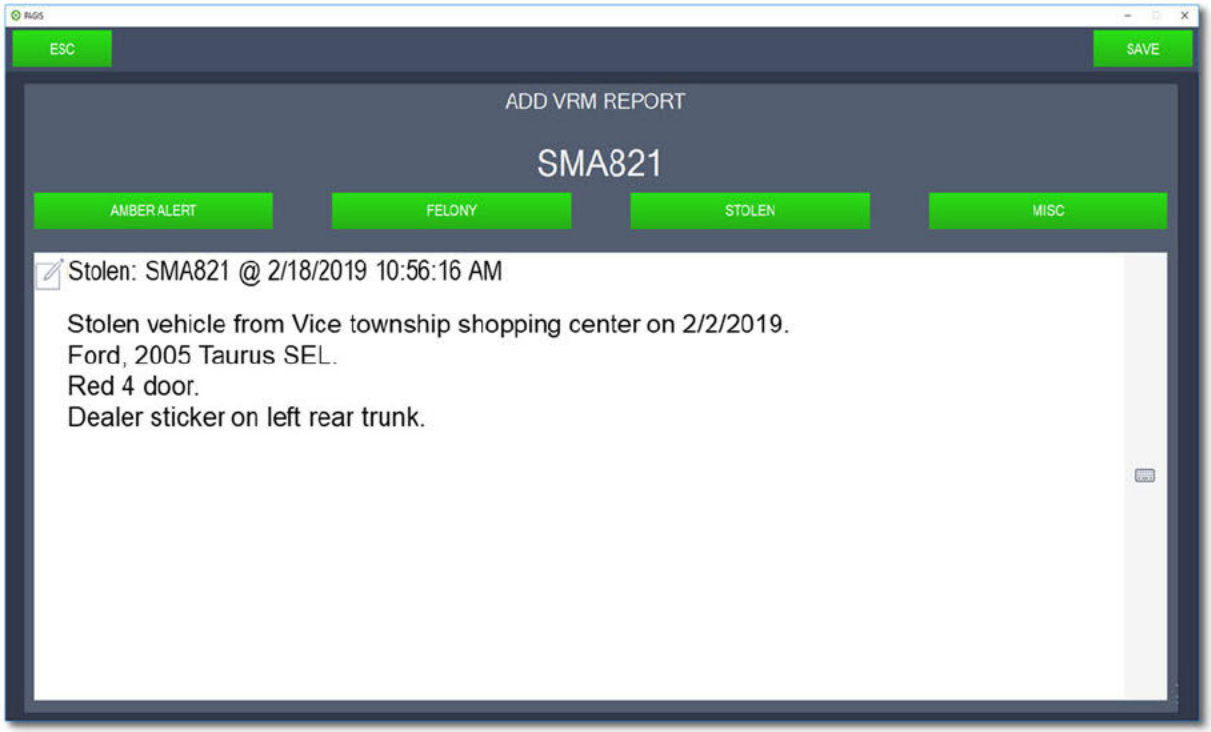
The use of wild card symbols in the Search box allows greater flexibility for the user, but may return a larger set of results.

- Wild card searches performed using the asterisk (*) designates an unknown number of characters.
- Wild card searches performed using the underscore (_) indicates a single missing or unknown character.
- Searches can be performed using one, both or no wild card symbols.

Example: The officer received an alert from Dispatch looking for a vehicle plate containing the letter J and the number 8 separated by one character. Because the officer doesn't know how many characters there are before or after the J and 8, he enters *J_8* in the search box to review all possible matches of J and 8 separated by only one digit.

2.8.4 Manually Adding a Plate to PAGIS

PAGIS allows users to manually add a plate of interest directly into the software as needed. Once saved, these entries are stored as part of the Manual Reports alert list and work just like any other Hotlist synchronized from the BOSS server.
NOTE: These additions are designed to be temporary and are cleared from the software with each End Shift.



2.8.4.1 ADD VLP Query

Before an entry is added to the Manual Reports Hotlist in PAGIS, the software searches all stored databases for a match. If a match occurs, a message will display under the search box showing which Hotlist(s) it has been found in. If the VLP query does not return a match, the "ADD VRM REPORT" screen appears.

2.8.4.2 ADD VRM Report Screen

If the desired plate does not already reside in another Hotlist, the ADD VRM Report Screen becomes accessible to the user.

1. From the Search Entry Screen, enter the desired plate to add.
2. Click the ADD VLP button. If no match is found on any other hotlist, the "Add VRM Report" screen will appear.
3. Click to select the applicable alert type (AMBER ALERT , FELONY , STOLEN , or MISC)
4. Either leave the default information or add additional detail.
5. Click Save at the top right to add the plate to the Manual Entries Hotlist

2.9 The Review Screen

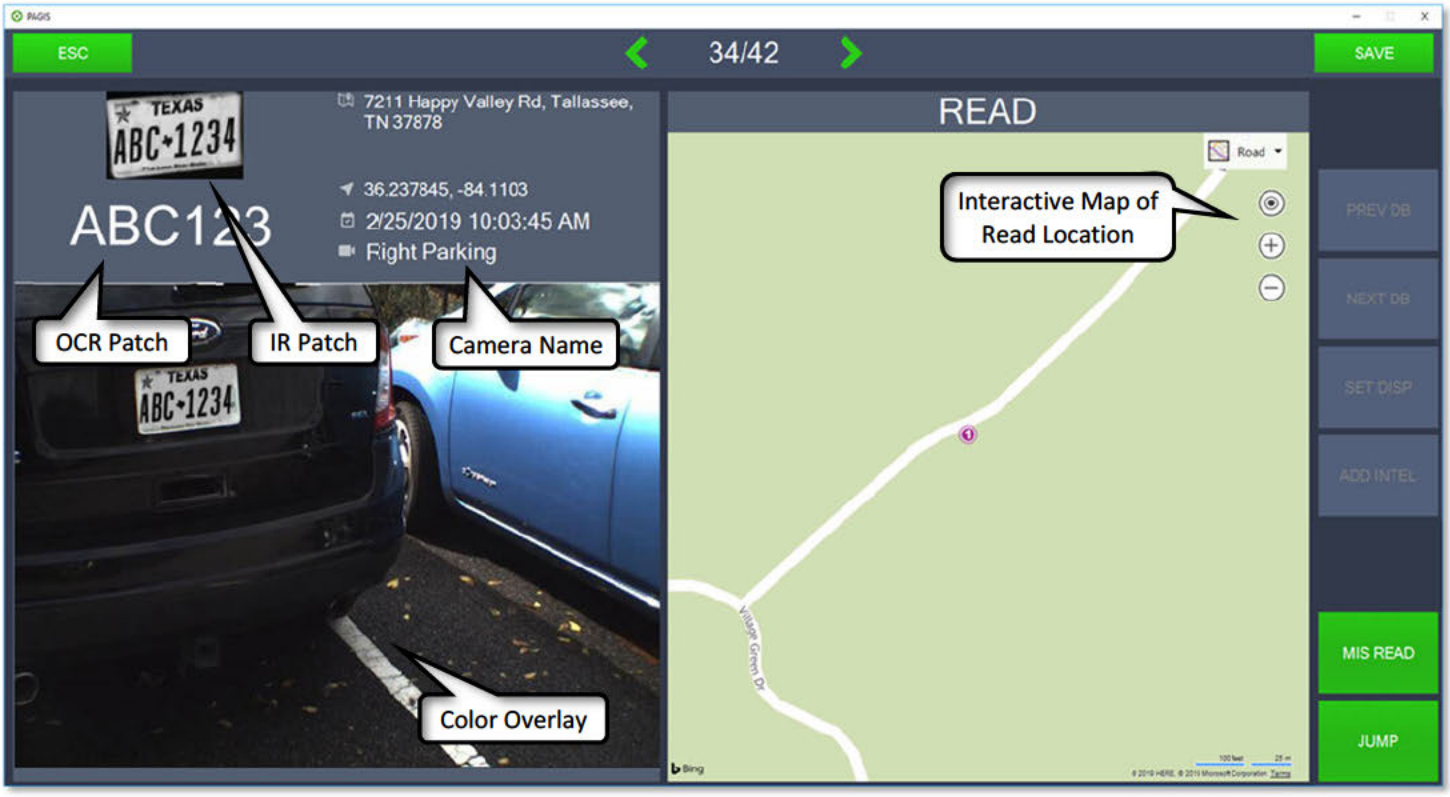
4302

PAGIS allows users to review all locally stored data from one easy location. Clicking the Review icon from the Main Screen launches Review. This screen is divided into the Summary View Chart and sub-section navigation buttons to the right.

2.9.1 Summary Review Section

The Summary View Chart is divided into five categories and allows a user to review the information collected during their shift at a glance.

Total Reads: Shows the total number of Reads/Hits synced to BOSS and the total number of reads captured during the shift.
Reads: Shows the total number of reads synced to BOSS and the total number of reads captured during the shift.
Hits: Shows the total number of hits synced to BOSS and the total number captured during the shift.
Misreads: Shows the total number of reads marked as a "misread" synced to BOSS and the total marked during the shift.
Audits: Shows the total number of audits synced to BOSS and the total number of audits during the shift.
Targets: Shows only the number of targets downloaded from BOSS.
(NOTE: The Sync value will always be zero for customers using Disk Sync mode/Client Tools.)



2.9.2 Review Navigation Buttons

The navigation buttons allow the user to review specific sets of information gathered during the shift.

Reads: Review all plate detections that have occurred since the last End Shift synchronization.
Hits: Review the hit alerts for Vehicle License Plate (VLP) reads that matched a Hotlist.
Misreads: Review reads and/or hits that have been manually flagged during the shift as misreads, where the plate number in the image does not match the OCR interpretation of the plate (e.g., a letter O misread as a Q or zero).
Audits: Review failed and successful logons, any manual data entered during the shift, pictures taken and all manual license plate searches.
Targets: Review targets that have been synchronized/downloaded from Boss.
Databases: Review all the Hotlists currently distributed to this PAGIS laptop/MDC.
Esc: Returns the user to the previous screen.

2.9.3 Reads

From the Main Screen, the user can review his or her accumulated Reads (those gathered since the last End Shift was completed) by clicking on the Review icon and then selecting the Reads Navigation button. The Read Review Screen is divided into two main sections. The left side displays the information gathered at the time of the read and the right side displays an interactive map of the GPS location.

NOTE: Buttons that are greyed out indicate options that are not available in the current view. For example, the Reads and Hits review screens share the same layout but different on-screen options.

2.9.3.1 Reads Result Screen Navigation Buttons

Read Count: The left number is the current record. The right number is the total available for review.

Next/Previous button: The arrows on either side of the read count allow the user to navigate back and forth to review reads/results.

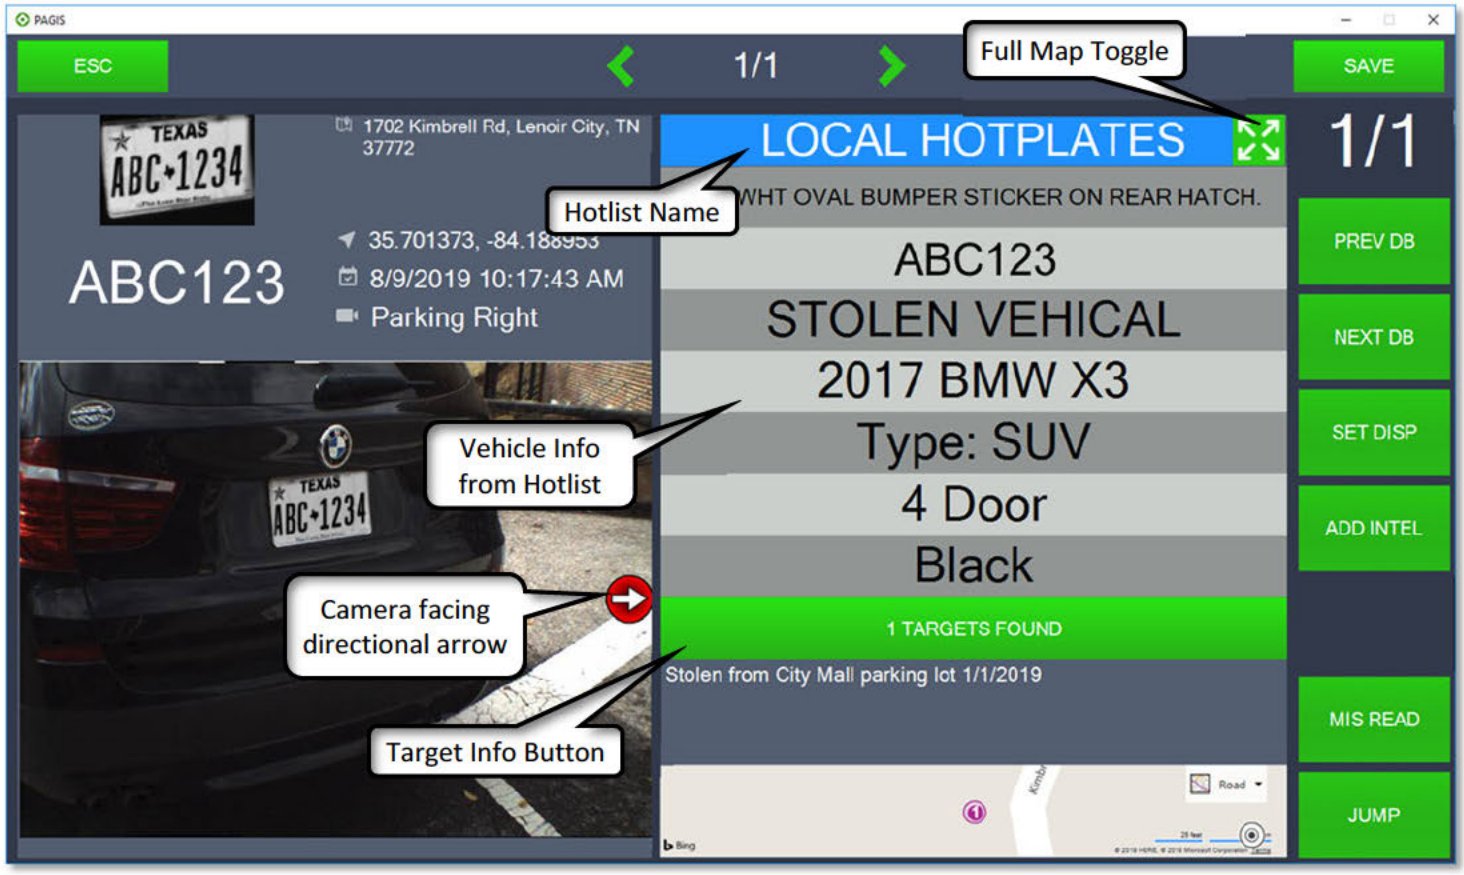
MisRead button: When the button is green it indicates the record has NOT been edited as a Misread by a user. Once a Misread is saved, this button will turn grey and the record title will update.

Jump button: Allows the user to "jump" to a specific record without the need to navigate one record at a time using the Next/Previous buttons.

Save button: Apply any changes/edits and return to the Main Screen.

Escape button: Returns the user to the Main Screen.

2.9.3.2 Interactive Buttons – Reads Screen



From the Reads Review, the user can interact with the following:

- IR Patch: The user can click on the IR "Patch" plate image to open a full-screen view.
- OCR Patch: The user can click on the OCR "Patch" image to edit the license plate number if necessary/Misread.
- Color OV Image: The user can click on the color image to open a full-screen view.
- Map: The user can manipulate the interactive map of the read location (Map Type, Scroll, and Zoom).

2.9.4 Hits

Users can manually access the Hits Section by first selecting the Review icon from the Live View Screen and then clicking the Hits Button. The Hits Screen is also divided into two main sections. The left side displays the information gathered from the ALPR equipment during the read. And the right side displays the information provided by the associated alert list.

NOTE: Each time a VLP matches a Database value (a license plate read by the system matches a Hotlist entry), PAGIS plays an audible tone and automatically displays the Hit Screen to alert the user.

2.9.4.1 Hit Screen Attributes

Hit Count and Navigation Buttons: Displays the total Hit count as well as the Next/Previous navigation buttons.

IR Patch Image: A thumbnail image of the license plate from the IR camera.

OCR Text: The character string the OCR engine generated from the current plate.

GPS Location: The GPS coordinates at the time of the hit. (If a GPS device is not attached, the Lat/Long is displayed as 0,0).

Date and Timestamp: The date and time when the read/hit was captured.

Overview Image: The overview image of the vehicle from the Color Camera. (**NOTE**: Color images require visible light)

Camera Name: The name of the camera that captured the read ("Right Parking" in the screenshot).

Hotlist Name: This is the name of the Hotlist or "Database" where the plate was matched.

Target Button: When available, this indicates a person of interest is associated with the Hit and opens the Targets Screen.

Vehicle Information: The area of grey bars will display the related vehicle information from the Hotlist. Any information added manually by the user will appear in the Text Box near the bottom of the screen.

Interactive Map: Shows the location the Hit took place. Users can access full-screen view by clicking the map or the toggle .

2.9.4.2 Hit Screen Function Buttons

The Hit Count Indicator: shows how many Hotlists the current Hit has registered against.

Previous DB button: This button moves the user to the previous Database/Hotlist that produced a Hit.

Next DB button: Pressing this button moves the user to the next Database/Hotlist that produced a Hit.

The Set Disposition button: prompts the user to report the disposition of the hit by selecting one of the approved codes assigned in BOSS by the Administrator.

The Add Intel button: allows the user to add additional information regarding the current Hit.

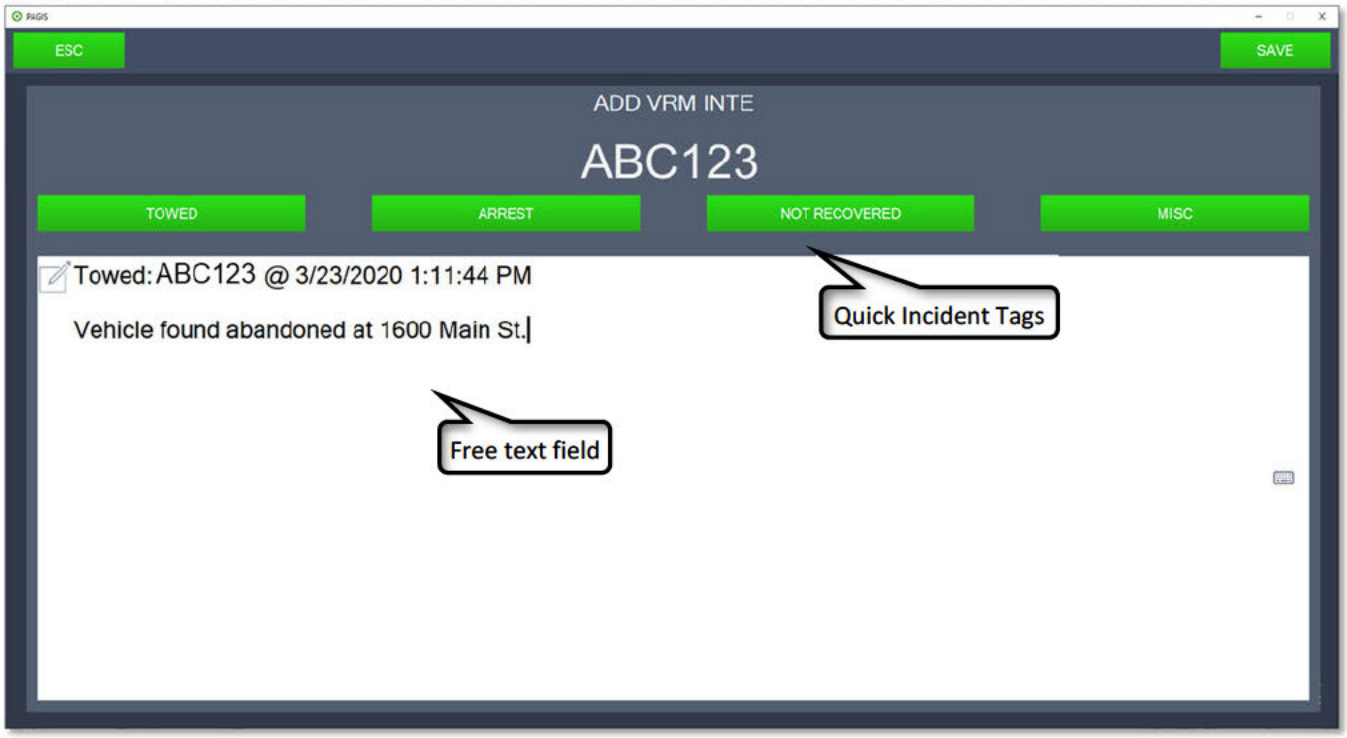
The Misread button: allows the user to flag the Hit as a misread.

The Jump button: Allows the user to "jump" to a specific Hit instead of navigating one at a time.

2.9.4.3 Interactive Buttons – Hits Screen

- IR Patch: The user can click on the IR "Patch" image to open a full-screen view.
- OCR Patch: The user can click on the OCR "Patch" image to edit the license plate number if necessary/Misread.
- Target Button: Shows associated person(s) of interest and opens the Targets Screen.
- Color OV Image: The user can click on the color image to open a full-screen view.
- Map: The user can manipulate the interactive map of the read location (Map Type, Scroll, and Zoom).

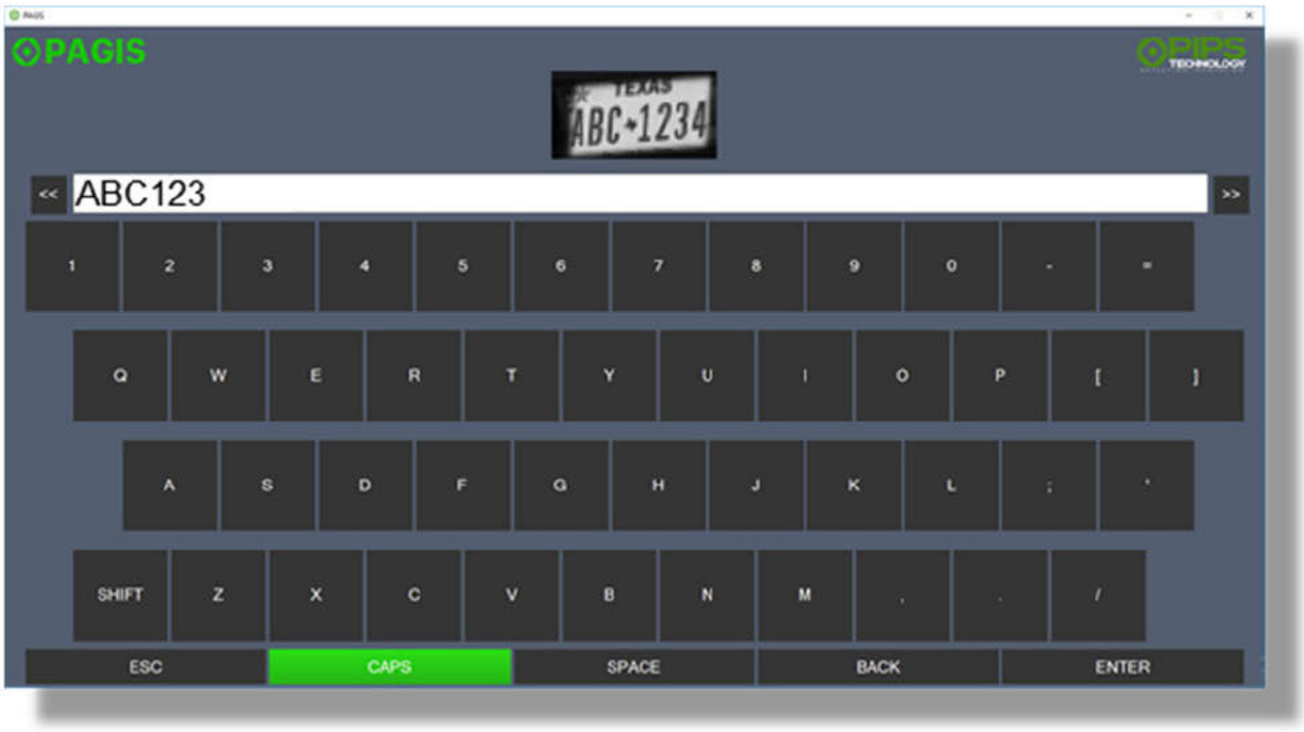
2.9.4.4 Set Disposition – Additional Detail



PAGIS allows for additional information to be added to a record in the form of a Disposition. Once Hits are flagged with a disposition code, the Agency is capable of running a "Reads Statistics by Disposition Report" in BOSS. Thus, providing valuable metrics and understanding to leadership in regard to their ALPR Enterprise.

When the "Set Disp" button is selected, the user is prompted to choose from a list of predefined values set by the Agency/BOSS Administrator. Once a disposition is selected and Saved, the disposition is reported to BOSS and will also show up in the Hits Review Screen text box in PAGIS on the next alert notification.

2.9.4.5 Add Intel – Additional Detail



The Add Intel button launches the Intel screen. The user is prompted to assign one of four values: Towed, Arrest, Not Recovered, and Misc. by clicking the associated button at the top of the screen. The user may also enter additional detail regarding the license plate/vehicle. After clicking the Save button, the intel will now appear in the Hits Screen text box.

2.9.5 Misreads

PAGIS allows the user to mark Reads and Hits with incorrect OCR translations as a Misread. This is most commonly done by Agencies for Hits only as users typically don't have time to review every single Read from their shift. Once an errant Hit is corrected, the system updates the record to show it as a Misread and thus improves Agency Hit Reporting.

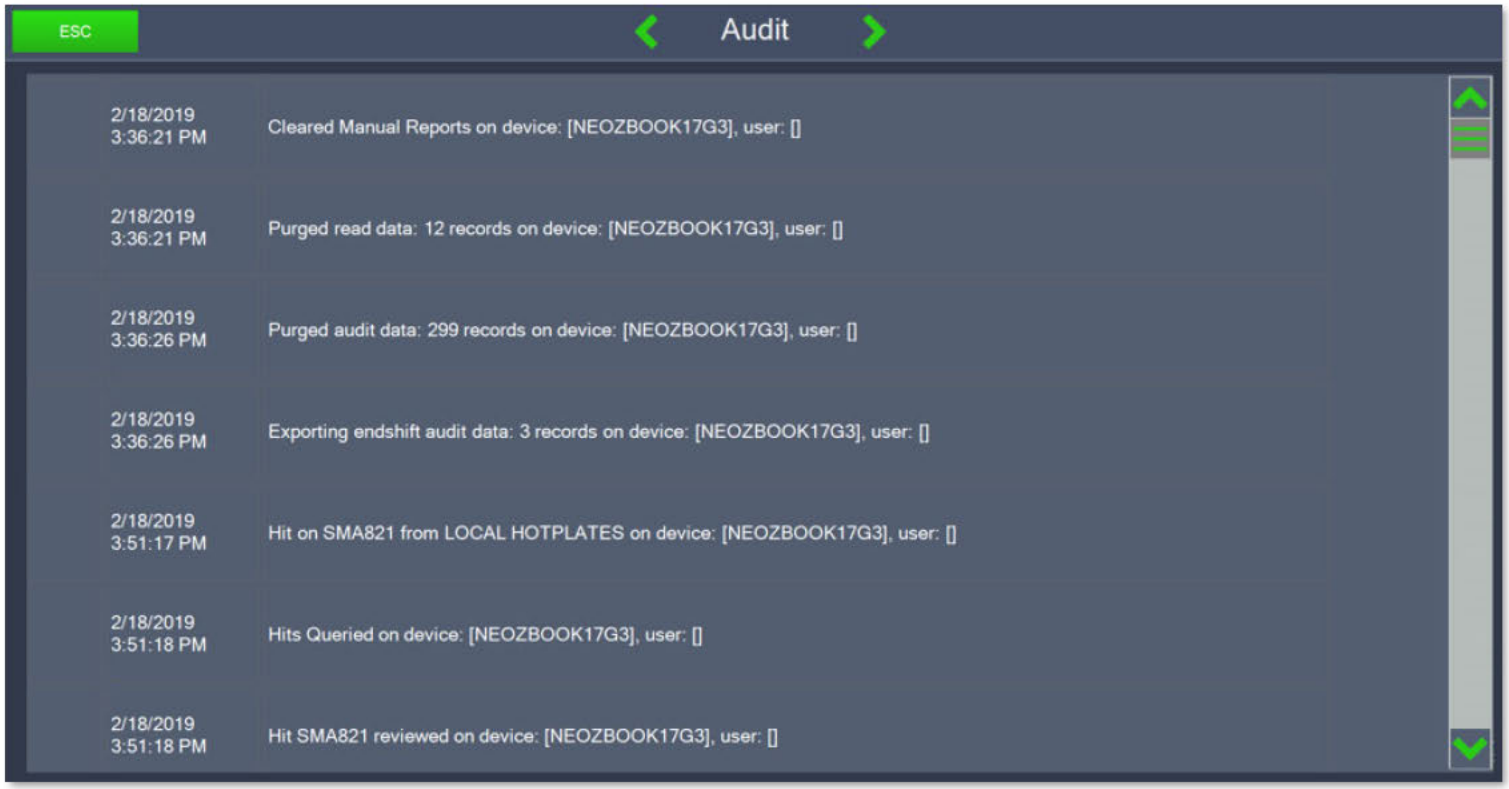
Correcting a plate read can be accomplished by clicking on the "OCR Patch" in either the Hits or Reads review screen. When the user clicks on the OCR Patch, the OCR Edit Screen opens and allows the user to update the Vehicle License Plate (VLP) data.

2.9.5.1 Marking a Record as a Misread:

The user can mark a record as a Misread from both Reads or Hits Review Screen. Each user can either simply flag the record as a Misread or update the OCR Patch information. **NOTE**: This ability is only available until the user has performed an End Shift function.

Manually Flagging a Read or Hit as a Misread:

1. Navigate to either the Reads or Hits Review Screen
2. Click on the Misread button on the Right
3. Click Save
4. Take note that the record title has now changed from “Read” to “Misread”



Updating the Read/Hit OCR Patch:

1. Navigate to either the Reads or Hits Review Screen
2. Click on the OCR Patch (Text just under the IR Plate Image)
3. Use the keyboard or on-screen keypad to update the Vehicle License Plate Number
4. Click the Enter Button to Save the changes (and exit back to the Review Screen)
5. When the user saves the changes to the OCR Patch, the record (Read/Hit) is automatically flagged as a Misread

2.9.6 Audits

PAGIS logs both user and key system activity during each use of the software. The audit log captures various information like Read searches, synchronizations, hits, and user login attempts. The Audit Report is viewed in PAGIS by navigating to the Review section and selecting “AUDITS”.

NOTE: Performing an End Shift or syncing the database clears the current log.

2.9.7 Targets

PAGIS has the ability to display information regarding Persons of Interest in response to a Hit alert. Targets are created by BOSS/Hotlist Administrators, and typically provide detailed information about owners of a registered vehicles. When configured, Target data is always linked to unique VLP data (a specific License Plate). If PAGIS registers a Hit on a Plate with a target ID, the Target Information Button is displayed in the Hit Alert window and allows the user to access the Target Screen.

2.9.7.1 The Targets Screen

When a PAGIS user clicks the Target Information Button from a Hit Alert, the Targets Screen opens. This screen displays the information from the BOSS server about the Person(s) of Interest matched to the Hit (license plate).

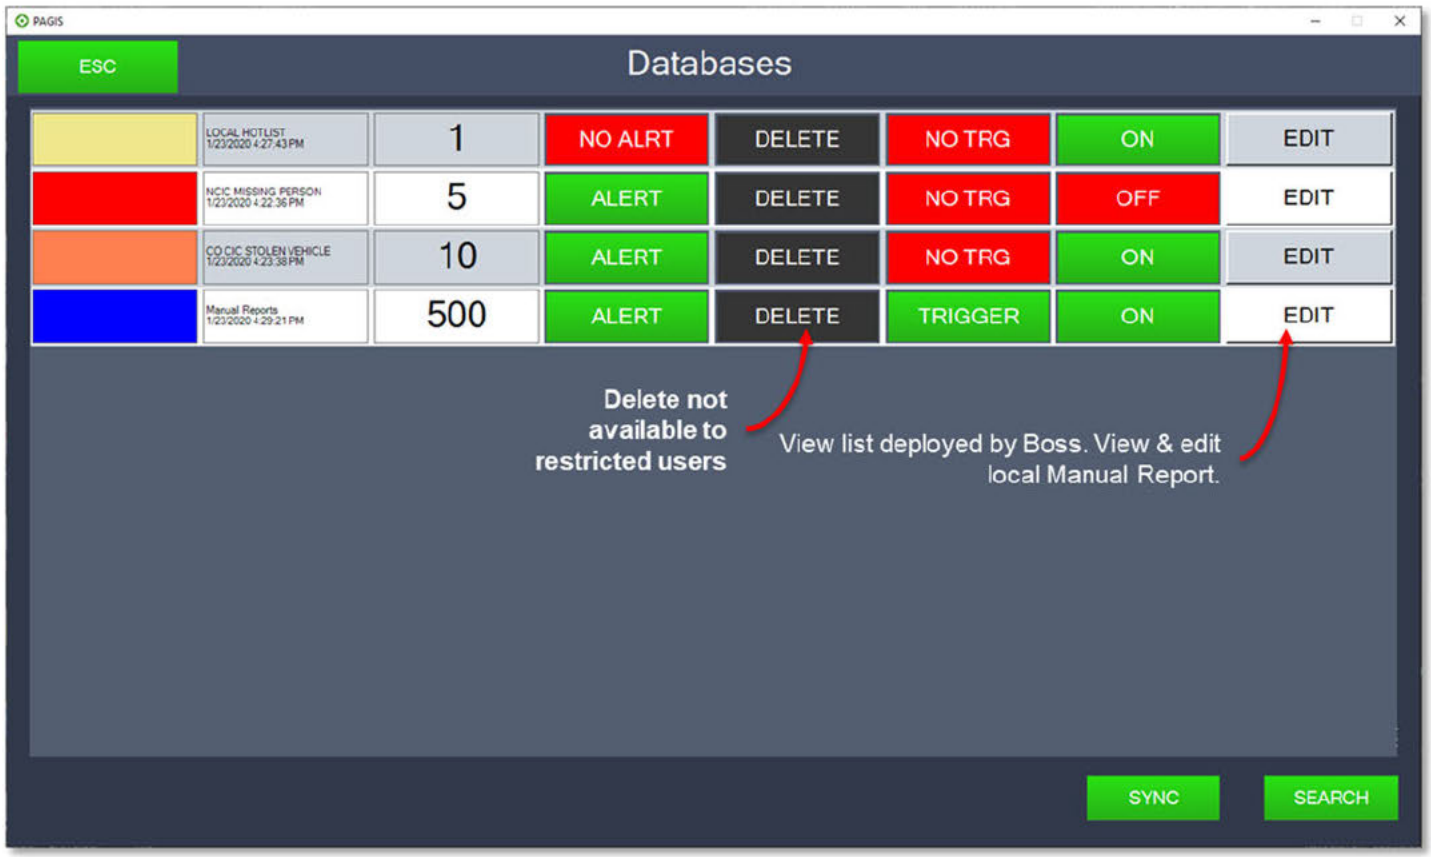
2.9.7.2 Targets Screen Navigation Buttons

If a Hit alert has more than one Target associated with it, the PAGIS user can navigate all Target information with the buttons described below:

Target Count: The left number is the current record. The right number is the total available for review.

Next/Previous button: Arrows on either side of the target count allow the user to navigate back and forth to review the various targets.

Jump button: Allows the user to "jump" to a specific record without the need to navigate one record at a time using the Next/Previous buttons.



Close button: Returns the user to the previous screen.

2.9.8 Databases

Users can review Hotlists in PAGIS by navigating to the Review section and selecting "DATABASES" on the right. From the Databases Screen, users can toggle Hotlists functions On and Off based on their rights.

NOTE: User rights and Hotlist attributes are configured in BOSS.

2.9.8.1 Databases Screen Functions

Hotlist Color Code: The color attributed to each Hotlist by the BOSS Administrator.

Hotlist Name: The name of the Hotlist given by the BOSS Administrator. Also shows the time/date of the last synchronization.

Hotlist Priority: The priority of the Hotlist assigned by the BOSS Administrator. The lower the number between 1 and 999, the higher the priority. If a plate resides on multiple Hotlists, the list with the higher priority will be displayed first.

Alert Button: Toggles audible alerts On and Off for each Hotlist until the next synchronization.

Delete Button: Based on user rights, allows the user to temporarily delete a Hotlist from PAGIS until the next synchronization. To delete a hotlist, the user must click the button twice (it turns green and then deletes the list).

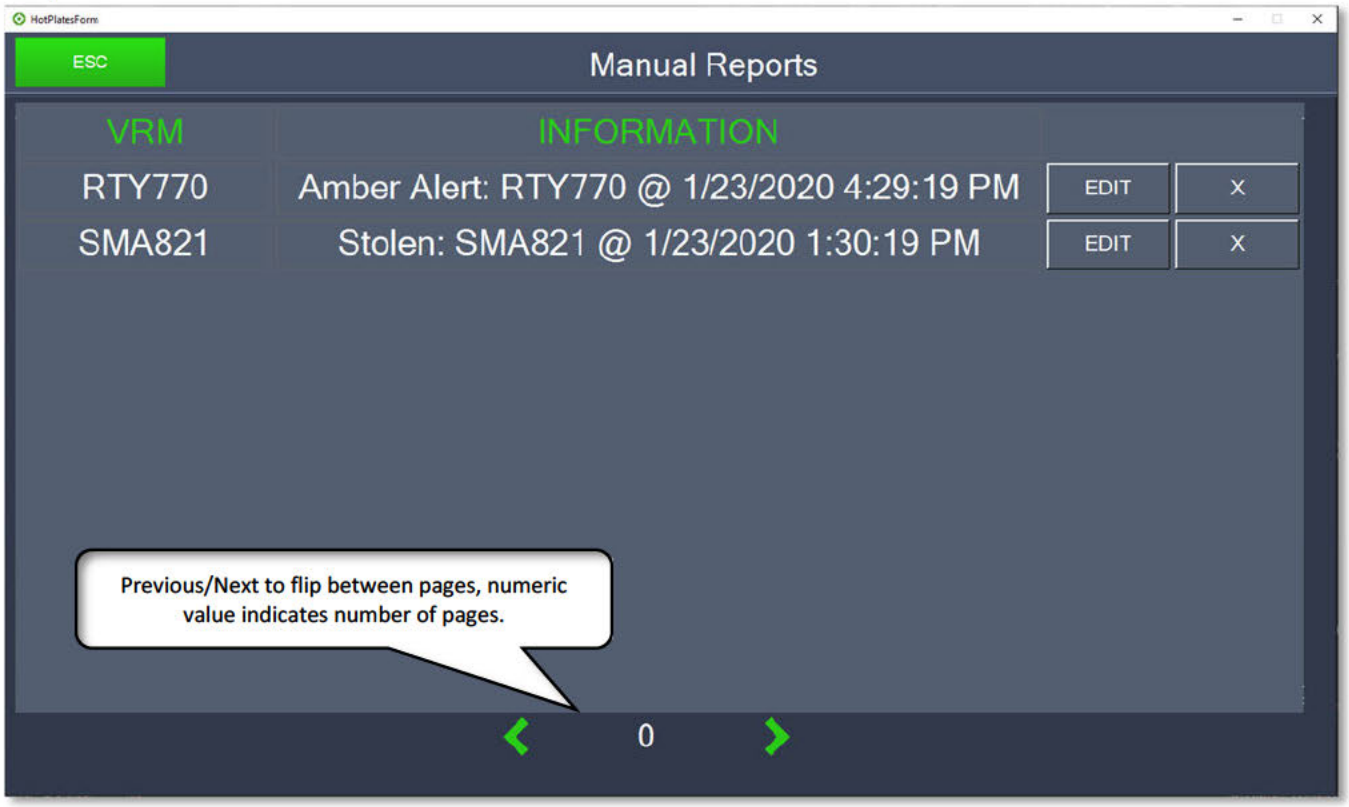
Trigger Button: Toggles external triggers On and Off. An example of an external trigger is a light bar.

On/Off Button: Disables and enables each Hotlist (each Hotlist is set to On by default).

Edit: View and edit localy created hotplates with a given hotlist, Hotlist/Hotplates deployed via BOSS can only be viewed.

NOTE: Hotlist settings altered in PAGIS will be reset to their default configuration during the next Sync or End Shift. The default configurations are assigned by the BOSS Server/Administrator.

2.9.8.2 Databases Screen Navigation Buttons



SYNC — **Sync button**: Synchronizes PAGIS with the BOSS server in order to update the Hotlists.

SEARCH — **Search button**: Open the Search Entry Screen (See section 2.8 for more information).

2.9.8.3 Databases Edit- “Manual Reports”

Editing Hotlist has two function based on origin of hotlist.

- Hotlist deployed to PAGIS via BOSS cannot be edited, only the hotplates list can be viewed. Editing/updates are indented to be managed via BOSS.
- Hotlist created in PAGIS, i.e. “Manual Reports” can be managed by PAGIS users, allowing for changes or deletion of the hotplates contained within the hotlist.

EDIT Button: Make changes to the indicustly hotplate information including licanse plate nuamber.
X Button: Remove indivualy hotlist from hotlist.
Previous/Next Button: Scroll thought lising of hotplates contaned within the hotlist. The numeric value indicates the number of pages.

TROUBLESHOOTING TIPS

This section provides some basic troubleshooting tips and information

3.1 Troubleshooting & Tips

- The first login to PAGIS after the new install of an unconfigured version does not require a username or password. Simply click Login to be granted Admin access to the software.
- A good means to test the communication from the MDC to BOSS is ping or telnet (over TCP 8092) through the command prompt.
- A good means to test the communication from the MDC to the SX Processor is ping or telnet (over TCP 9000) via command prompt.
- For many other troubleshooting tips, see Appendix C – Frequently Asked Questions

3.1.1 PAGIS with NetMotion VPN

Agencies utilizing NetMotion VPN software on the MDC will need to apply the following passthrough steps:

1. Login to the NetMotion server as administrator
2. Click Settings > Then select Client > Select Global Client Settings > Then select Passthrough List
3. Click the “Add…” button on the right > Select “Network Address”
4. Enter the following settings (as shown):
    A. IP address:192.168.200.0 (the zero is correct, it's an IP address “range”) Subnet Mask: 255.255.255.0.
    B. Keep all other settings default (as shown) and click OK.
5. The MDC must then disconnect from NetMotion and reconnect again for the settings to be applied locally.

3.1.2 Cisco VPN Client:

Make sure Stateful Firewall is unchecked and "Allow Local LAN".

3.1.3 Microsoft .NET 3.5 Installation

The PAGIS Software requires Microsoft .NET Framework 3.5 specifically. If the MDC doesn’t have .NET, it can be downloaded from the Microsoft website.

3.1.4 Firewall Settings for Client-Server Installations

For client-server installations, the Windows Firewall needs to allow the SX Processor and the MDC to communicate. If the MDC is maintained by a Network Administrator, he or she should be contacted before making changes to the firewall.

Option 1: Allow Microsoft Windows Version 8 or newer to auto-detect the launch of the PAGIS.exe application and use the wizard to add the EXE to the exception list (making note of Public or Private Network settings as necessary).

Option 2: Add PAGIS to the exception list manually by browsing to the install path of PAGIS. The default is below for reference: “C:\Program Files (x86)\PIPS Technology, Inc\PAGIS2\PAGIS.exe”

Option 3: Add the communication ports manually:
TCP 8092
TCP 9000
TCP 9001
TCP 32023
TCP 32029
TCP 10000
TCP 10010
NOTE: XML Datastream uses TCP 10100 and TCP 7000

APPENDIX A: THE GLOSSARY

ALPR/ANPR	"Automatic License Plate Recognition/Automatic Number Plate Recognition".
BOSS	"Back Office System Software". This is the ALPR server.
GPS	"Global Positioning System".
GUI	"Graphical User Interface".
Hotlist	A database or list that contains vehicle license plates of interest ("alert list").
IR	Infrared light.
License Plate	Also called a tag or number plate.
MDC	"Mobile Data Computer". This is the tablet or laptop in the vehicle.
OCR	"Optical Character Recognition" (also referred to as a "cardet").
OS	"Operating System".
PAGIS	This is the License Plate Capture Software most commonly used in an ALPR vehicle.
Service	Operation mode of the PAGIS software. Service or "VPRelay" is used to refer to PAGIS instance that is running directly on the PIPS mobile processor without a GUI interface, this mode is intended to run in conjunction with MDC version of PAGIS installed on laptop connected via Ethernet.
Standalone	Operation mode of the PAGIS software. Standalone is used to refer to PAGIS instance that is running directly on the PIPS mobile processor with a GUI interface.
SX	SX is a short notation referencing PIPS's mobile processor, commonly the SX is followed by the generation number of the processor, i.e. SX3, SX4 & SX4e.
UI	A "User Interface" is the means in which the user can access and navigate the software.
USB Flash Drive	Also called a thumb drive or memory stick.
VLP	"Vehicle License Plate".
VPN	"Virtually Protected Network".
VPRelay	Operation mode of the PAGIS software. VPRelay or "Service" is used to refer to PAGIS instance that is running directly on the PIPS mobile processor without a GUI interface, this mode is intended to run in conjunction with MDC versions of PAGIS installed on laptop connected via Ethernet.
Whitelist	Opposite of a standard BOSS Hotlist. This is a list of license plates that should not trigger an alert.

APPENDIX B: PAGIS SOFTWARE DATABASE FILE

This section is used to configure the PAGIS Software when it's not being used with the Back Office System Software (BOSS). Comma-separated value (CSV) format is the only format the PAGIS Software supports for importing data into the vehicles for the purpose of matching against the captured license plate data. PAGIS will support CSV files with any number of columns, called "fields", as long as the first field is the VLP (Vehicle License Plate). **NOTE**: The CSV format is standard ASCII.

Example CSV Files:

1. *ABC123, Red, Ford, Explorer, 1996, WANTED XYZ456, Blue, Audi, A4, 2001, MURDER*
2. *45ABC234, Vehicle wanted in associated with a kidnapping on 12/5/2005 995BD233, Vehicle reported stolen from Liz's Lounge at 6am on 12/1/2005*
3. *UIO223 ABC123*

General Function:

PAGIS calls/utilizes files in pairs. Each database in PAGIS is created using two files; a CSV file, and an INI configuration file. Without both of these files, the database will not load and PAGIS will not "see" it. Each CSV file/hotlist must have the exact same name as the INI configuration file. Example: Stolen.ini and Stolen.csv will work. Stolen.ini and Plates.csv will not.

Reading an INI Configuration File

Lines that appear in brackets [] are called "Headings". The labels that appear inside the headings, are called "values". Values will always contain an equal sign (=). If a line starts with a semicolon, it is considered to be a comment and is not read by the software. There is no limit to the number of comments in the INI file.

The [SETTINGS] Heading

The values in the Settings heading are: NumFiles, DbName, DbColor, Priority, Covert, Alarm, and NumFields.

- NumFiles: Determines how many database files the system should split the specified hotlist into. Generally, this value is set to 1. But for larger hotlists (200,000+ lines), a number of 2-5 may be more desirable.
- DbName: Tells the PAGIS Software what the displayed name of the hotlist should be.
- DbColor: Sets the display color of the hotlist. This is merely an esthetic setting and not a functional setting. The right-hand side of the equal sign is the HEX value representing the ARGB values for the color. If this value is unknown, the Admin should simply leave this line out of the file.
- Priority: Designates the priority of this hotlist in relation to other hotlists in the system. The highest priority database is 1 and the lowest is 999. **NOTE**: if a plate resides on multiple lists the higher priority will be alerted first.
- Covert: Determines whether standard PAGIS Software users are alerted when a hit is made from the database. Covert database can be used for hotlists that are included for information-gathering purposes rather than eliciting user intervention. The system can also be configured to notify via email or SMS message when a hit is made from a covert hotlist.
- Alarm: Sets the audible alert to be played in PAGIS when a hit is made from the hotlist. Values for Alarm are LOW, MED, HIGH
- NumFields: Indicates how many fields (columns) are in the CSV file. If this value is less than the actual number of fields in a file, then the additional fields are placed in the general information area. This value also determines the number of headings of the [Field x] present in the file. For example, if NumFields=2 then there will be two additional headings, [Field 0] and [Field 1]. **NOTE**: Adding "Creation =" will place the timestamp the hotlist was added to the Begin Shift file.

The [FIELD X] Heading

Under the Field heading, there are two configurable values, “Name” and “PAGIS”.

- Name: Tells the system what the name of this field is. If no name is specified, then no name given to the field. The format is Name = <field>
- PAGIS: Specifies how to display the field in the GUI/PAGIS Software.
    - If no value is defined, the field is placed as general information.
    - Values 1-5 represent special fields for the PAGIS Software that translate to the information being displayed in a box of its own when a hit is processed.
    - A value of 6 represents an ID number to cross reference the vehicle from the hotlist with a person from the wanted list.
    - A value of 7 is identical to leaving the value undefined.

Sample INI Configuration File

[Settings] NumFiles=1
DbName=Stolen Vehicles DbColor=ffffff00 Priority=5 Covert=False Alarm=MED NumFields=8
;PAGIS Values
;0 is VRM / VLP (Not User Definable, always Field 0)
;1 is Special Field 1
;2 is Special Field 2
;3 is Special Field 3
;4 is Special Field 4
;5 is Special Field 5
;6 is ID Number (PNC ID, Drivers License, Social Security Number, etc.)
;7 is General Info (Default for all undefined fields) [Field 0]
PAGIS=VRM

Sample INI Configuration File

[Field 0] Name=VRM
[Field 1] Name=Color
PAGIS=3 [Field 2]
Name=Make PAGIS=1
[Field 3] Name=Model
PAGIS=2 [Field 4]
Name=Action PAGIS=4
[Field 5] Name=Warning
PAGIS=5 [Field 6]
Name=PNCID PAGIS=6
[Field 7] Name=Intelligence PAGIS=7

APPENDIX C: FAQ

Q: **HOW DO I ENTER A SUPPORT CASE?**
A: We have a webform you can use here, you can email our Support Team at Support@PIPSTechnology.com, or you can call us on the phone Monday-Friday 8am to 4pm Central Time (9am-5pm Eastern) at (833) 747-7577 Option 2.

Q: **HOW DO WE CREATE USERS IN PAGIS?**
A: The agency BOSS Administrator creates all users, both for BOSS and for PAGIS. Once the user is created in BOSS, the Admin would click the user's name to select/edit the user. Then click the Advanced button and update the PAGIS specific password. Please note that the username and password fields are both case sensitive and the PAGIS users need to be added to a group with the Role that allows them to use PAGIS/LPCS.

If you have any further questions, please feel free to enter a request for support here.

Q: **WHERE DO USERS CHANGE THEIR LOGIN PASSWORD IN PAGIS?**
A: User passwords are created and updated in BOSS via the UI client software. For the majority of our customers using both the PAGIS Software and BOSS, any user accounts or passwords created in the PAGIS Software itself will be overwritten by the user information defined in BOSS during the next sync.

If you have any further questions, please feel free to enter a request for support here.

Q: **HOW DO WE REQUEST AN RMA REPAIR?**
A: To assist with this, please navigate here to review our RMA procedure as well as to download the request form. Please keep in mind that once submitted, all repairs are reviewed for age of equipment and warranty status before final processing takes place. Additionally, incomplete forms and those without much detail often result in processing delays.

If you have any further questions, please feel free to enter a request for support here.

Q: **WE HAVE NEW MDC LAPTOPS IN THE PATROL CARS, HOW DO WE ADD THOSE DEVICES TO BOSS?**
Q: **HOW DO WE EDIT THE DEVICE NAMES IN BOSS?**
A: The initial device template/skeleton is automatically created in BOSS the first time the device attempts to Sync from the field. Devices should NEVER be created manually. For PAGIS laptops, this is done after PAGIS is installed and configured and Begin Shift is launched. However, if the agency would like to organize the device list by updating the "Device Name" field, those steps are below:
1. Login to the BOSS UI with Admin rights
2. Navigate to Admin > Devices
3. Click on a device name to select it > Click Edit
4. Update the name of the device in the "Description" field (Name field cannot be altered)
5. Click Save > This will take you back to the Device Summary List. The "Device Name" field should show the new name

If these troubleshooting steps did not resolve the issue, please feel free to enter a request for support here.

Q: **WE HAVE A NEW MOBILE COMPUTER/MDC THAT'S NOT SYNCING WITH BOSS.**
Q: **WE KEEP SEEING AN HTTP_STATUS_CODE ERROR WHEN RUNNING BEGIN SHIFT.**
A: This error most commonly means that a new device in the field (laptop/tablet) can "see" the BOSS server, but that it hasn't been enabled yet to "talk" with it. Follow the general steps below to address this issue:
1. The agency BOSS Administrator will need to login to the BOSS UI client and Select Admin
2. Then select Devices and from there, left click on the device/computer name of that MDC to edit it
3. Once in the Edit screen, Enable the device. This will take you back to the Device List.
4. Click the name to edit the device again. Now assign users/Owners and save.
NOTE: The Select button becomes a Save button when selecting which Groups/Users should have access to login to this device
5. Once that is done, navigate to Admin > Hotlists
6. From here, click on each hotlist one at a time to distribute them to the new device being sure to Save the changes next to the

Distribution field. Note again that the Select button becomes a Save button. And there's another Save button at the top left of the edit window.
7. After this is complete, perform Begin Shift from the field unit/MDC and confirm there are no further errors.

If these troubleshooting steps did not resolve the issue, please feel free to enter a request for support here.

Q: **NEW PAGIS USER CAN'T LOGIN BUT OTHERS CAN.**
Q: **USERS CAN LOGIN TO PAGIS WITH NO CREDENTIALS AT ALL.**
A: Entry or login to the PAGIS software in the field is partially controlled by the Device settings in BOSS. The users themselves must also be properly setup with an LPCS/PAGIS password. To check the current device settings/ access, perform the following steps:
1. Login to BOSS UI (with Administrator rights)
2. Select the Admin Section
3. Select Devices and then Select the Device in question by PC name
4. Once selected click on the Edit button near the bottom
5. Locate and inspect the "Owners" Field (this is a list of users/groups that have access to login to the device)
NOTE: If this field is blank, the device is in an open configuration mode allowing admin level access simply by clicking login (any credentials would also be accepted).
6. To update the device owners, click the "Select" button next to the Owners field (notice it changes to a Save button)
7. Check which Users/Groups of Users should be able to login to PAGIS from this device
8. Click the Save button next to the field
9. And then click Save in the upper left portion of the Edit window
10. Have a previous user or Admin login to PAGIS and perform Begin Shift to sync the new data
11. A PAGIS Admin can confirm by navigating to Admin, Admin, and then Users to review the list
12. Another test would be to have the new user attempt to login

If these troubleshooting steps did not resolve the issue, please feel free to enter a request for support here.

Q: **WHEN USERS LOGIN TO PAGIS, THEY ONLY SEE A GREY SCREEN.**
Q: **CAMERAS AREN'T SHOWING UP IN PAGIS ANYMORE.**
SEE ALSO: "THE LINK LIGHTS ON OUR ALPR COMPUTER/MDC WON'T TURN ON OR FLASH"
A: Below are some basic troubleshooting steps you'll want to follow before creating a support ticket.
1. Doublecheck the physical power switch on the black box/Processor is On. In many vehicles, there is also an in-line switch in the front of the vehicle that needs to be switched On. When the units are properly powered and on, you should see lights and hear fans running.
2. Confirm that the network adapter settings on the laptop match the proper Static IP scheme for the SX Processor in use. The older scheme is 192.200… and the newer scheme is 192.168…. NOTE: the adapter status in Windows should say "unidentified network". If it says "cable unplugged" the laptop can't "see" the SX.
3. If the power and Static IP settings are good and things still aren't working, test further by disabling the three main software related culprits. Turn off/bypass the local Windows firewall, antivirus, and VPN software one at a time.
4. If you're still not able to see the camera feed after that, you may want to use a different network cable as those can get damaged over time and then confirm that the cord is properly plugged into the ports.
5. If the network cord from the SX Processor is routed through a docking station, then it's possible the dock is preventing the traffic. You should contact the dock's manufacturer for the most recent firmware. To test for this, remove the laptop from the dock, directly connect the network cord to the laptop, and then reconfigure the network adapter settings (remove the static settings from the dock's adapter/ and assign the static IP to the laptop's NIC adapter).

If these troubleshooting steps did not resolve the issue, please feel free to enter a request for support here.
Q: **THE LEFT FRONT CAMERA ON OUR ALPR VEHICLE IS NO LONGER SHOWING IN PAGIS**?
Q: **HOW DO WE TROUBLESHOOT MOBILE CAMERAS**?
A: Below are the main troubleshooting steps to test the camera(s) and cable(s) on a system where only one or two cameras are no longer displaying images.
Step 1: Confirm MDC/SX communication - steps shown in section "Cameras aren't showing up in PAGIS anymore."

Step 2: Access the SX Processor – RDP or directly connect a monitor, keyboard, and mouse to the SX. Contact PIPS Support for help with RDP if the credentials are unknown to the agency.
Step 3: Confirm camera activity – Launch Tools. Then open P6Utility or Mobile Toolkit. Check the camera feeds/function by switching the Input menu to the camera(s) in question
Step 4: Unplug and Reattach the Camera Cables – Note, the cables DO NOT TWIST. The metal locking nut on the cable slides back about a millimeter and the cable comes straight out. Do this at the SX Processor and the Camera. You may need to remove the camera from the mount in order to unplug the cable successfully (most brackets use a #3.5 Hex/Allen Wrench)
Step 5: Swap Port on SX Processor – At the SX Processor, swap the camera cables from the non-working camera to a port with a working port (Take care to note the swap so the cables get back to their original ports). If the camera outage stays at the port site, the issue is most likely the capture card on the SX Processor and will require RMA (Example: working Left cam is swapped to port of non-working Right cam and no longer functions. AND the previous non-working Right cam starts working once it's plugged into the Left cam's port). If the fault/error stays with the camera regardless of SX port, continue to Step 6.
Step 6: Physically Swap Camera Locations – Once all other items are checked, move the camera itself to a working position in order to test the cable. (Example: physically move Left camera to the Right camera position on the top of the vehicle) Connect the cable at the new position and test feed in Tools > P6Utility/Mobile Toolkit. If the camera works at the new location, the issue is most likely a bad cable. If the camera still does not work, the issue is most likely a faulty camera in need of repair/RMA.

If these troubleshooting steps did not resolve the issue, please feel free to enter a request for support here.

Q: **WE'RE NO LONGER GETTING GPS IN PAGIS.**
Q: **WE'RE NOT SEEING GPS DATA FROM SOME OF OUR FIELD UNITS IN BOSS.**
A: Below are the basic troubleshooting steps for checking the GPS of field units:
1. Login to PAGIS (as Admin)
2. Navigate to Admin section, then click the Admin button
3. Select "System" on the left pane
4. Confirm/Set the button at top to "Default"
5. Remove any value(s) stored in the GPS Connection String field. Leave '5' in the Computer String.
6. Click the Save button to retain changes made.
7. Close PAGIS fully and relaunch and log back in to test (Note: GPS will only show with test reads/hits)
8. For versions of PAGIS 2.9 and up, test with a GPS Connection String of 6 if the blank field doesn't work. Save the changes. Log out. Close the software and then relaunch to test.

Please be advised, that some GPS issues can be caused by local or domain firewall settings, antivirus software, or any other software package monitoring/transmitting network data. To test these, disable or bypass those software options on the MDC and retest.

If these initial troubleshooting steps did not resolve the issue, please feel free to enter a request for support here.

Q: **HOW DO I INSTALL THE PAGIS SOFTWARE?**
Q: **I JUST LOADED PAGIS ON A MACHINE AND IT CRASHES WITH A .DLL ERROR WHEN I TRY TO LAUNCH IT.**
A: The most common installation of PAGIS is Client/Server or "VPRelay Mode". The .dll error is caused by the installer not being run from the HDD and/or the wrong install option being selected (Example: SupeRex instead of MDC). The best practices for the installation are below. (Note, this does not cover MDC or PAGIS configuration, only the act of installation)
1. Always copy the installer over to the HDD/Desktop of the MDC. Never run it from a thumb-drive or network share
2. Regardless of how you're logged in to Windows, right click the installer and select "run as Admin" or "run with elevated privileges"
3. Continue through the message/error about OS compatibility
4. Click next on the wizard and then be sure to select the MDC option (to use with VPRelay)
5. After that, it's next, next, next, finish the reboot is not necessary

If these steps did not resolve the issue, please feel free to enter a request for support here.

Q: **USERS ARE GETTING HITS/ALERTS ON PREVIOUSLY RECOVERED STOLEN PLATES.**
Q: **USERS AREN'T GETTING HITS FROM KNOWN ACTIVE PLATES.**
Q: **THE HOTLISTS IN PAGIS DON'T SHOW TODAY'S DATE.**
Q: **THE HOTLISTS AREN'T SYNCING WITH BEGIN/END SHIFT.**
A: Whether it's from data latency or just use over time, the local file structure can get some minor corruption and will need to be refreshed. The steps below show the best practices:
1. Login to Windows with Admin rights (ability to uninstall/delete software)
2. Login to PAGIS and perform an End Shift
3. When complete without error, Logout of PAGIS and then Exit/Close the program
NOTE: If the End Shift fails or displays an error, contact Support for additional assistance.
4. If there were no errors, locate the PAGIS icon on the desktop.
5. Right click on the icon and select "Open File Location" (This should open a window where the program was installed)
6. Scroll up and locate the folder labeled "data". Double-click it to open it
7. Select and delete everything in here EXCEPT for "Attributes.db"
8. Once that's complete, Login to the PAGIS software again
9. Perform a Begin Shift. This will pull down fresh data from the server
NOTE: Once complete, the files in the data subfolder as well as the Databases section of PAGIS should be restored.

If these troubleshooting steps did not resolve the issue, please feel free to enter a request for support here.

Q: **IS PAGIS COMPATIBLE WITH OUR NEW WINDOWS 10 LAPTOPS?**
A: Although there's a warning about compatibility during the install of PAGIS on any Windows OS after XP, it is compatible with all them. However, we have seen errors occur when agencies copy and paste folder structures from previous installations. This of course is not recommended.

Q: **THE LINK LIGHTS ON OUR ALPR COMPUTER/MDC WON'T TURN ON OR FLASH.**
Q: **OUR WINDOWS 10 MDC WAS WORKING BUT HAS STOPPED COMMUNICATING TO THE SX PROCESSOR.**
A: There are many variables with troubleshooting any network connection. And the connection from the ALPR computer to the SX Processor is no different. The following troubleshooting list highlights the most common:
1. The physical network cord is bad/damaged.
A: Test with a different cable and confirm that it is plugged in fully

2. The network adapters are not configured or have incorrect static IPs
A: Confirm the Static IP scheme in use and properly configure the network adapters

3. Local and/or Domain Firewall rules have prevented the flow of communication
A: Disable or bypass these and test again

4. VPN, Anti-Spyware, Antivirus, or other monitoring software has blocked communication
A: Disable or bypass these one at a time and test after each to find the culprit(s)

5. Docking Station Firmware can be incompatible with some newer computers or become corrupt
A: Test by running the network cord straight to the MDC and then configuring the network adapters (NOTE: It would also be a good idea to contact station manufacturer to see what the latest firmware version is and upgrade as necessary)

6. The NIC Drivers have become corrupt
A: Update the specific Networking drivers in use on the MDC through the Device Manager in Windows

7. Turn off all power saving settings of the Ethernet Adapter in the device manager
A: Uncheck "Allow the computer to turn off this device to save power"

8. Check for Windows 10 update 1709 and 1803 as this update will not allow the NIC and Cellular Aircard to run simultaneously
A: Settings > Update and Security > Windows Update > "Update History" link – if there, see the steps in the FAQ

If these troubleshooting steps did not resolve the issue, please feel free to enter a request for support here.

Q: **AS SOON AS WE DOCK OUR MDC, WE LOSE CONNECTION TO THE WIRELESS.**
Q: **OUR WINDOWS 10 LAPTOP LOSES CONNECTION TO THE INTERNET WHEN THE NETWORK CABLE IS PLUGGED IN.**
Q: **OUR MDC HAS MICROSOFT VERSION 1709 OR 1803 AND CAN'T CONNECT TO WIFI WHEN DOCKED.**
A: Microsoft Updates (1709 and 1803) prevent the Wireless connection as soon as a Network cable is plugged into the device. This also occurs for MDCs/laptops that are docked (where the Network cable from the SX Processor is run through the docking station). As of January 2019, the steps to correct this are below.
WIN10 version 1803
1. Open Regedit
2. Expand HKEY_LOCAL_MACHINE
3. Navigate to Software > Policies > Microsoft > WcmSvc > Local
4. Right click on Local > Hover over New > Select "DWORD (32-bit)"
5. Name the new value "fMinimizeConnections"
6. Right click the on the new name > select Modify > Set value data to 1 (leave base Hex) > Click OK
7. Reboot Windows and test

WIN10 version 1709 - Microsoft fixed this with Update KB 4284822. But if you still have issues, the registry steps are below:
1. Open Regedit
2. Navigate to HKEY_LOCAL_MACHINE > Software > Policies > Microsoft > WcmSvc > Local
3. Right click on Local > Hover over New > Select "DWORD (32-bit)"
4. Name the new value "fMinimizeConnections"
5. Right click the on the new name > select Modify > Set value data to 0 (leave base Hex) > Click OK
6. Then Navigate to HKEY_LOCAL_MACHINE\Software\Microsoft\Wcmsvc
7. Right click on Wcmsvc > Hover over New > Select DWORD (32-bit)
8. Name the value "IgnoreNonRoutableEthernet"
9. Right click on the new value > Modify > Set value data to 1 (leave base in Hex) > OK
10. Reboot Win10 and test

If the steps above did not resolve the issue, you may need to address this with Microsoft. Their support site is here.

6 January 2020

PIPS Product Bulletin

With the start of the new year, we have a few announcements and reminders regarding PIPS Technology™ solutions. We are starting 2020 with revamped software and product solutions that have greater capabilities to help you in your daily mission! We dedicate a third of our staff to product and solution improvements and innovations to make your job easier, safer, and more efficient.

BOSS 4 Continued Roll Out

In 2019, we released an early version of our new BOSS 4 software. This new software is a leap forward in design and usability compared to our BOSS 3 product and provides additional features not currently in existing software. The new web-based design also offers the ability to rapidly add features and deploy the software to any number of users in your network. As before, the BOSS software gives you complete control over your data and allows you to dictate who you share data with and how much access to give them.

BOSS 4 provides the ability for you to host inside your own servers/data center as with previous generations of BOSS. However, in response to feedback from the customers, we are also now offering a Hosted Managed Service. Providing industry leading infrastructure and service management, including 99.999% infrastructure availability with the latest in security, this option provides the ability for your teams to focus on front-line duties rather than worrying about Databases, Servers and Infrastructure.

Give us a call at 833-PIPS-LPR (833-747-7577) and speak with our sales team to get a free online demonstration and test run.

New Mobile System Hardware and Software Continued Roll Out

Also, in 2019, we released a new version of our popular mobile system with the SX4e processor and P720 camera. The P720 uses the same form factor as the robust P634 camera, but provides better lenses, better sensors which provides higher quality images, and more lane coverage. The optical performance improvements this technology provides improves detection and recognition rates compared to previous generations of PIPS' products and those of our competitors.

The SX4e is the power-over-ethernet (PoE) version of the processor allowing more versatility in configuration and deployment of the mobile system. System configuration still allows between one to four cameras per processor, but the PoE cable can have 100 feet between processor and camera.

Questions / Concerns? Contact Technical Services (833) PIPS-LPR or (833) 747-7577

Along with the new hardware, we are making continuous improvements to our PAGIS in-car mobile software. This includes security enhancements, more firmware updating, and additional mapping tools. Our development team continues to roll out new changes and features which are available free of charge, during their warranty phase, to those customers who have already upgraded.

If you are interested in any of our new mobile products, please reach out to our sales team for a demonstration. You can also contact our support team to see if your existing system is on the latest software or firmware version. Contact us at 833-PIPS-LPR or at support@pipstechnology.com.

BOSS 3 End of Life Notice – December 31, 2020

At the end of 2020, we will no longer support our BOSS 3 software. This includes software updates and service/support inquires related to this product.

The migration from BOSS 3 to BOSS 4 is designed to be made as simple as possible for the customer, with specific migration tools developed by PIPS to aid the process. Please get in touch so we can discuss how you could migrate to BOSS 4 from BOSS 3. For any customers committing to upgrade before the end of March 2020 we will be crediting any pro-rata BOSS3 support fees against the BOSS 4 license as well as waiving the migration cost.

We will naturally continue to support those customers who have recently purchased software support for the BOSS 3 product until the end of the current obligation.

Questions / Concerns? Contact Technical Services (833) PIPS-LPR or (833) 747-7577

IRIS P500 Latest Software Build with feature enhancements and bug fixes
The IRIS P500 series camera was newly released in 2019 and received superb feedback from those customers who used it, including beating competitor products in numerous “head to head” performance evaluations by customers.

As with all new products we were providing software releases throughout the year in direct feedback from customers for enhancements as well as reported bug fixing highlighted to our Service / Support teams.

We formally released 4 updates during the year and one hot-fix in response to feedback, including the latest hot fix in December 2019. These releases resolved the reported issues, including one that can appear in some of the earlier IRIS cameras under certain circumstances which were not running on the latest released software standard. This manifest itself when the camera first booted, it may erroneously use GMT time instead of the configured time zone. This will cause the camera to record images with the time stamp of GMT instead of local, but not give an indication that the image is using an incorrect time zone. Once the camera is finished booting and synchronizing with its time source (typically within 1 minute), it will use the local time zone, but the images captured during the booting process will have an incorrect timestamp.

We have issued a firmware update to correct this issue. This ensures that the correct time zone is applied to all reads, even during boot up. Please call our support line, 833-PIPS-LPR, to receive the latest firmware and have it setup on your camera system.

NOTE – this only applies to the IRIS P500 series cameras and does not manifest itself in previous generations of our products.

Questions / Concerns? Contact Technical Services (833) PIPS-LPR or (833) 747-7577

New Termination Box (T-Box) Design
In 2020, we begin rolling out a new T-Box design. This design reduces the weight and size of the previous T-Box, while continuing to provide the same functionality. The new design also helps control costs, which in turn helps prevent price increases on the product.

Please call our support line at 833-PIPS-LPR or email us at support@pipstechnology.com to let us know how we can continue to improve this and our other products.

Update to Latest Versions of Software and Camera Firmware
Throughout the year, we have released updates to the firmware of our camera products (both mobile and fixed) along with software updates to PAGIS. We recommend that either your IT staff check to see if your cameras are on the latest patch or contact us to determine your camera status.

Our service staff would be happy to evaluate any of your PIPS products to determine if they are on the latest version. Give our support team a call at 833-PIPS-LPR.

Update Product Passwords
As a means of providing sound security, we recommend changing that the passwords on each camera system and software. In following CJIS policy (code 5.6.2.1.1), we recommend passwords should contain the following:

1. Be a minimum length of eight (8) characters on all systems.
2. Not be a dictionary word or proper name.
3. Not be the same as the User ID.
4. Changed regularly (ideally every 90 days)
5. Not be identical to the previous ten (10) passwords.
6. Not be transmitted in the clear outside the secure location.

Remember, every law enforcement agency that uses CJIS is audited at least once every three years. We are aware of customer being asked about their password policy in relation to their ALPR infrastructure and would urge the ALPR cameras to be considered as part your organizations' password policy.

Regards,

Peter Crary
Global R&D Director, ALPR/ANPR

Requirements and Specifications
Back Office Server Software (BOSS4)

On-Premise Applications Server

Below, there are the minimal recommended configurations for different capacity configurations for BOSS4 On-Premise infrastructure.

Application Servers Specifications				
Configuration	**Demo**	**Medium**	**Large**	**High Capacity**
ALPR Devices	1 to 3	3 to 50	50 to 150	Beyond 150
Average Daily Intake	Around 30,000 events	Around 500,000 events	Around 1,500,000 events	Beyond 1,500,000 events
Average of users querying data	3 users	15 users	25 users	Beyond 25 users
Alert list averaging	Around 1M records	Around 2M records	Around 2M records	Around 2M records
Operating System	Amazon Linux / Amazon Linux 2 x64 Linux x64 (RHEL/CentOS, Ubuntu, Debian, SUSE) macOS x64 Windows 10 Professional x64 Windows Server 2016 x64			
Memory	16GB	32GB	64GB	192GB
Processor	x64 2.0 GHz 8 cores o better	Server Processor x64 (Intel Xeon Gold) 2 GHz 4 cores, 8 threads, 4MB cache	Server Processor x64 (Intel Xeon Platinum) 2.4 GHz 16 cores, 32 threads, 8MB cache	Server Processor x64 (Intel Xeon Platinum) 2.4 GHz 24 cores, 48 threads, 24MB cache
Hard Drive	7200 RPM SATA3	SSD SATA3	SSD SATA3 or NVMe PCI Express	SSD SATA3 or NVMe PCI Express
Application Space	128 GB of available space	256GB of available space	320GB of available space	512GB of available space

On-Premise Database Server

BOSS4 uses the MongoDB Database Engine.

Specifications of the Database Server				
Configuration	**Demo**	**Medium**	**Large**	**High Capacity**
ALPR Devices	1 to 3	3 to 50	50 to 150	Beyond 150
Average Daily Intake	Around 30,000 events	Around 500,000 events	Around 1,500,000 events	Beyond 1,500,000 events
Average of users querying data	3 users	15 users	25 users	Beyond 25 users
Alert list averaging	Around 1M records	Around 2M records	Around 2M records	Around 2M records
Database Engine	Mongo DB Community	MongoDB Enterprise		
Operating System	Amazon Linux / Amazon Linux 2 x64 Linux x64 (RHEL/CentOS, Ubuntu, Debian, SUSE) macOS x64 Windows 10 Professional x64 Windows Server 2016 x64			
Processor	x64 2.0 GHz 8 cores o better	Server Processor x64 (Intel Xeon Gold) 2.5 GHz 4 cores, 8 threads, 4MB cache	Server Processor x64 (Intel Xeon Platinum) 2.4 GHz 16 cores, 32 threads, 16MB cache	Server Processor x64 (Intel Xeon Platinum) 2.4 GHz 24 cores, 48 threads, 24MB cache
Memory	N/A	32 GB	128GB	256GB
Hard Drive	7200 RPM SATA3 Not suitable for camera implantation with any kind of data retention expected	SSD SATA3 RAID level redundancy and scheduled DB backups recommended *See sizing chart for storage.*	SSD SATA3 or NVMe PCI Express RAID level redundancy and scheduled DB backups recommended *See sizing chart for storage.*	SSD SATA3 or NVMe PCI Express RAID level redundancy and scheduled DB backups recommended *See sizing chart for storage.*

Data Storage Requirements

The calculation of storage applies to Cloud and On-Premise configurations.

Approximant Sizing based on Hybrid data, Mobile & Fixed Camera data			
# of records	Database size Metadata and indexes	Repository Size Imagery	Total
1 Million	32GB	153GB	**185GB**
5 Million	64GB	763GB	**827GB**
10 Million	320GB	1.5TB	**1.82TB**
50 Million	1.6TB	7.5TB	**6.1TB**
100 Million	3.2TB	15TB	**18.2TB**

The calculations for storage are approximated based on an average sampling of around 192KB per event.

System Communication Ports

Ports	TCP / UDP	Description
80	TCP	HTTP Web access port for mapping.
443**	TCP	HTTPS Web access for client access, SW Updates, AWS Services.
8090	TCP	Legacy Pagis 268 data port, not required unless using older Pagis SW.
8092	TCP	REST API data port for PAGIS, supports TLS v1.0.
8093	TCP	REST API data port for PAGIS, supports TLS v1.3.
10000	TCP	VES Image port for fixed cameras.
10005	TCP	VES Heartbeat for fixed cameras.
10010	UDP	VES Ping port for fixed cameras.
27017	TCP	MongoDB data connection port.
**	Specific BOSS4 Micro Services require Internet access to AWS Services managed by Neology.	

Additional System Requirements

Application Server:

- Linux x64 (RHEL/CentOS, Ubuntu, Debian, SUSE).
- MacOS x64.
- Windows 10 Professional x64 or newer.
- Windows Server 2016 x64 or newer.

Database Server:

- MongoDB.

Client-Side:

- Chrome v72 and newer, we are currently working to validate more browsers.
- Standalone Alert application- Windows version 7 and up, x32/x64.

Remote Access:

- Scheduled or 24x7 remote access is required during installation and testing.

This document and its contents are intended for the recipient only. Copying, redistributing, or discussing with any other party outside of the intended recipient and PIPS-Neology is prohibited.

Frequently Asked Questions, FAQ's.

Q. Support for other Operating Systems?
A. Currently supported are Windows based x64 OS's, MacOS x64, Linux x64 (RHEL/CentOS, Ubuntu, Debian, SUSE). The preferred OS is Linux for BOSS application server.

Q. Can Boss work in virtual OS's?
A. Yes, supported are Windows based x64 OS's, MacOS x64, Linux x64 (RHEL/CentOS, Ubuntu, Debian, SUSE). The preferred OS is Linux for BOSS application server.

Q. How long does a typical BOSS4 installation take?
A. Boss4 installation and setup can vary depending on requirements, typical installations can take anywhere for 1-3 days to complete and possible longer depending on data migration.

Q. What Database programs are supported?
A. Currently MongoDB is supported, other databases will be supported in future releases.

Q. Can you migrate data from non-PIPS ALPR servers into BOSS4?
A. No. We can only migrate data from existing BOSS3 systems.

Q. Can existing BOSS3 database files be utilized when upgrading to BOSS4?
A. No. BOSS4 is a completely new database structure, however data can be migrated.

Q. How long can data migration take.
A. Data migration can vary depending on volume, anywhere from hours to days.

Q. What data is miraged from BOSS3?
A. Customizable among the following. Reads, Hits, Users, Groups, Roles, Devices, Sites, and Hotlist.

Q. Can BOSS4 reside on same OS as database application?
A. Yes. Only small demo or trial configurations can support same OS for both.
A. No. Production deployments it is not recommended.

Q. Can BOSS4 ports be customized?
A. No. Current BOSS4 version does not support customer port configurations.

Q. Can BOSS4 versions share data with older BOSS3 versions?
A. Yes. Data sharing is built into our latest versions to connect with other older versions of BOSS3.

Q. How are the database tables created?
A. BOSS4 application installation and start configures the required database structure needed.

This document and its contents are intended for the recipient only. Copying, redistributing, or discussing with any other party outside of the intended recipient and PIPS-Neology is prohibited.

Chapter 1. Introduction

This manual is for the Neology ANPR cameras listed inside the front cover. These cameras are very similar so most of this manual covers them all. Where differences occur the manual will note them.

The P382, P392+ and P492 share many common features, the highlights of which are

- ANPR Camera, illuminator and processor in one package
- Provides savings in system cost, complexity and timescales
- Neology proven camera and processor technology

This manual is only as up to date as the software it ships with. The corresponding version number is listed in the Revision note. Trying to use this manual with the wrong version of the software will be frustrating where differences occur.

P382

P382 is a fully integrated number plate reading camera incorporating both the camera and the recogniser within a single sealed enclosure. It is designed for use in the highest performance applications where it is necessary to provide the ANPR function across a full 4metre carriageway (3.5m with 0.5m overlap). The unit comprises a high resolution monochrome CCD camera with high sensitivity in the infra-red, surrounded by two banks of IR LEDs. Patented filter / flash technique gives suppression of headlights and bright sunlight. Field-by-field control of camera parameters allows the use of the ‘triple flash’ technique to reduce problems of plate-to-plate variability.

An optional independent, integrated, synchronous, colour camera may be configured to the same focal length as the monochrome camera, or to a wider field of view, as required. Therefore an ANPR read will have a colour overview image associated with it.

The integrated number-plate recogniser incorporates the Neology ‘Autoplate’ ANPR engine, which has been proven in many countries worldwide. Patented real-time video triggering upon plate presence provides excellent plate detection. A vehicle presence trigger input is also provided for the most demanding applications, e.g. taking an overview picture of a vehicle with a missing plate.

P382 can be integrated into a wide variety of systems via relay output, RS232, TCP/IP Ethernet with socket and FTP protocols (100baseT). Wireless IP connectivity over GPRS, EDGE or 3G is provided by fitting an optional modem. Additionally IEE802.11b/g ‘WiFi’ may be fitted to give local wireless operation. IP connectivity, (wired or wireless), provides time-lock of distributed cameras to a central server via NTP. A GPS unit may be fitted giving very high accuracy time and position information.

Real-time JPEG hardware compression is provided for both IR and colour images and can be used to provide a real-time IP video stream of the traffic. This can be used to record the image stream for ground-truthing.

P382 is fully web-enabled and can be configured and monitored from a standard web-browser on a PC.

External devices such as DSRC, Radar, Weigh-in-Motion or ticketing systems can be integrated into the system via RS232 or TCP/IP. A flexible interface allows this data to trigger the camera or be added asynchronously to the data set which the camera provides for each vehicle.

The Vehicle Enforcement System (VES) application software offers socket based transfer of Summary and Evidential Records via either push or pull protocols with full key handling, authentication, encryption and local storage of up to 60,000 events. Pre and post event contextual images showing the direction of travel may also optionally be captured. The direction of travel may also be captured.

- 4 metre road width coverage, using 1392 x 512 pixel sensor
- Powerful processor
- Reading multiple number plates in a single field of view

- Embedded Linux operating system, offering standard Linux connectivity including encrypted links
- Multiple concurrent access to viewfinder and event viewer
- Hardware MJPEG streaming of the video streams (50fps, 1392 x 512) eliminating the need for a high performance frame-grabber on a PC for data acquisition

P392+/P492

P392+/P492 is a fully-integrated number plate recognition unit incorporating camera (s), illuminator and data and image processing within a single sealed enclosure. The unit comprises a monochrome camera surrounded by two sets of IR LEDs. Neology patented filter/flash technique provides suppression of headlights and bright sunlight. Field-by-field control of camera parameters allows the use of ‘triple flash’ technique to reduce any problems of plate to plate variability.

P392+/P492 can also include an optional independent, integrated, synchronous, colour camera. The colour camera can be configured to the same focal length as the monochrome camera, or to a wider field of view as required enabling ANPR (Automatic Number Plate Recognition) reads to have associated colour overview images.

The integrated number-plate recogniser incorporates the Neology ‘AutoPlate’ ANPR engine, proven in many countries worldwide. Patented real-time video triggering upon plate presence provides excellent plate detection. A vehicle presence trigger is also provided for the most demanding applications, for example taking an overview picture of a vehicle with a missing plate.

P392+/P492 can be integrated into a wide variety of systems. Wireless IP connectivity over GPRS, EDGE or 3G can be provided by fitting an optional internal modem.

IP connectivity (wired or wireless), provides a time-lock of distributed cameras to a central server via NTP.

Real-time JPEG hardware compression is provided for both IR and colour images and can be used to provide a real-time IP video stream of the traffic. This can be used to record the image stream for ANPR data verification.

P392+/P492 is fully web-enabled and can be configured and monitored from a standard web-browser. External devices such as DSRC, radar, weigh-in-motion or ticketing systems can be integrated into the system. A flexible interface allows this data to trigger the camera or be added, without synchronisation, to the data set which the camera generates for each vehicle.

- Reading multiple number plates in a single field of view.
- Embedded Linux operating system, offering standard Linux connectivity including encrypted links.
- Multiple concurrent access to viewfinder and Neology client monitor application.
- Hardware MJPEG streaming of the video streams (50fps, 752x480 - P392/P392+ or 2048x720 P492) eliminating the need for a high performance frame-grabber on a PC for data acquisition.

Assumptions

The P382, P392+ and P492 are networked cameras, and a course in networking is beyond the scope of this manual. You are expected to have a working understanding of TCP/IP networking, or be able to consult with someone who can help you with this.

Conventions

We use several typographic conventions in this manual to describe things including interaction with a computer terminal.

Commands to be typed in are described as follows:

- `command`

The name of the command.

- {required_argument}
  A required argument to the command.
- [optional_arument]
  An optional argument to the command.
- [*replace_me*]
  Text which should be replaced by you to indicate, for example, the file to be worked on

these can be combined, for example

`ls` [-l] [*directory*]
describes part of how to use the ls command in Linux.

Some text needs to be typed in exactly as given

```
type this in exactly
```

and sometimes we give some representative response from the system

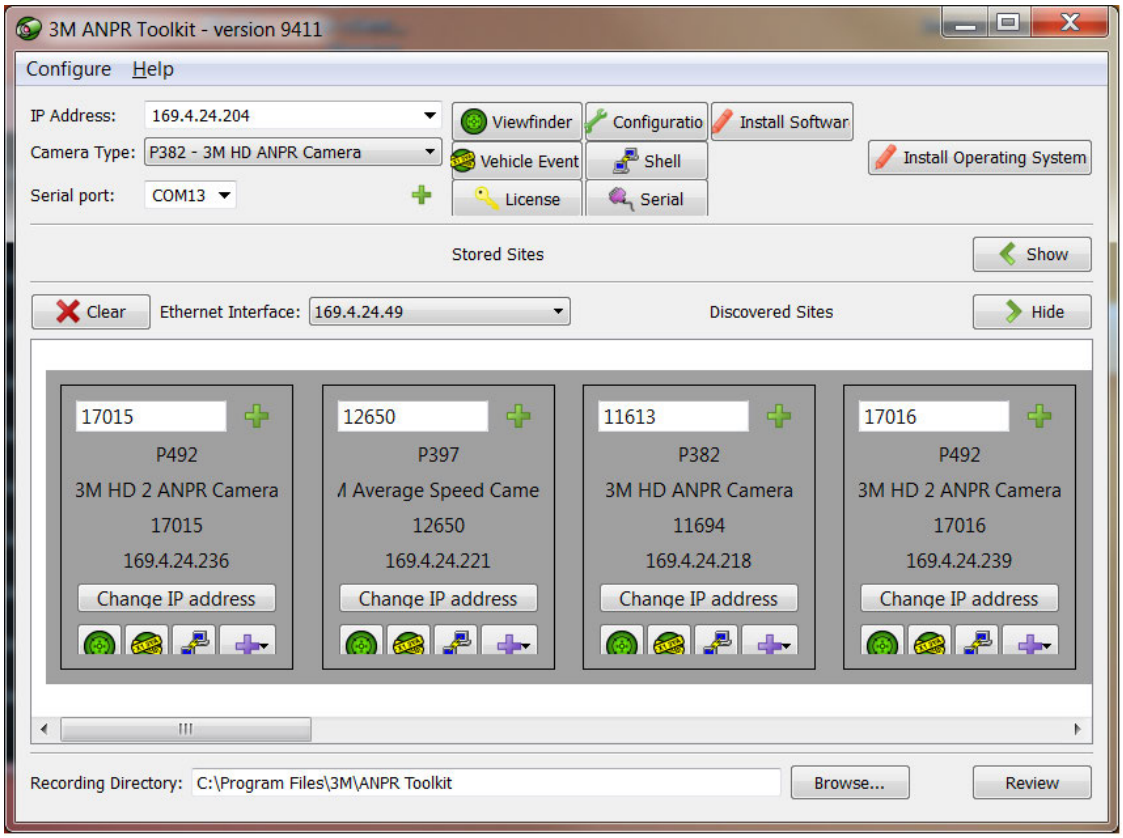
```
and it will print this out,
or at least something similar
```

We will also provide links to other sections of the book, for example this section is the section called “Conventions”[2] or sometimes external references, like this one to our web homepage: http://solutions.Pips.co.uk/wps/portal/Neology/en_GB/TrafficSafety/Systems/-/AutomaticNumberPlateRecognition/. If the medium you are reading this on supports it, you may be able to click to go to the appropriate place. Obviously, this doesn't work on printed copies!

Chapter 2. Getting started

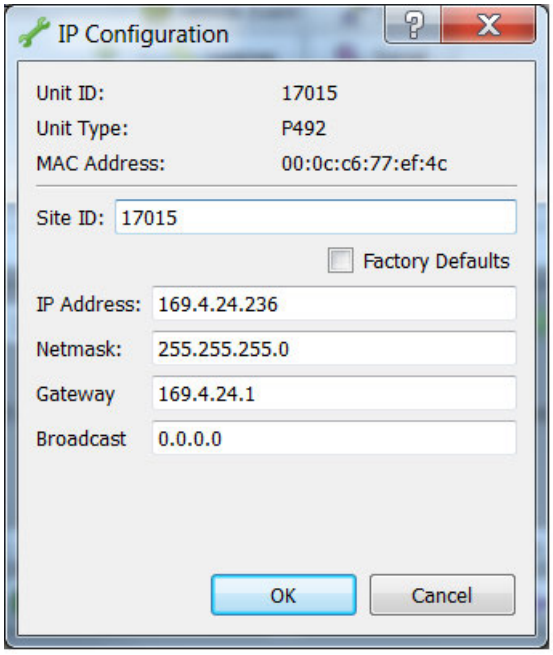
It is highly recommended that you get familiar with your P382, P392+ or P492 camera indoors prior to taking the camera to the roadside.

Connectivity



The PIPS ANPR Toolkit application should be installed on your PC, the camera connected to is often the easiest way to connect to the camera. If for some reason you cannot use this you will either need to connect via serial or via SSH and configure the network by hand the section called “Networking setup” [5].

Discovery



To use Discovery you will need to install the PIPS ANPR Toolkit (refer to Chapter 3, *PIPS ANPR Toolkit*[8]). If you connect the camera to the same ethernet as the PC on which you are running the toolkit and run the Toolkit you should be able to see the P382, P392+ or P492 in the list of discovered cameras.

Note

You can connect the camera to the same switch or hub, through multiple switches and hubs, or just use a cross over ethernet lead. However, the discovery protocol cannot traverse routers or gateways in your network.

If you start the application and select the network interface on your PC which matches the one to which the P382, P392+ or P492 is connected you should be able to see the camera. To identify the correct camera if you have multiple cameras on the network you should cross reference the serial number with that printed on the back of the camera. To configure the IP address of the camera click on `Change IP Address` edit the values displayed. Once you press OK, the camera will store the options and the address will change.

After around one minute you should be able to ping the camera and go on to configure the rest of the camera (see the section called “Connecting” [6]).

Serial RS-232

Full details on the console serial port are available in the hardware manual.

You will need a serial terminal, such as Kea! Term for Windows, PuTTY for Windows (see the section called “PuTTY” [142]), Minicom for Linux, or Hyperterminal for Windows (not recommended due to quirky behaviour). This should be connected at a line speed of 38,400 bits per second with 8 bits of data, no parity and 1 stop bit. This is often abbreviated to 38,400 8N1. No flow control is necessary. This should be connected to an appropriate serial port on the PC.

The system will boot into linux, eventually presenting you with the login prompt:

```
 * Starting portmap ...                                    [ ok ]
 * Mounting network filesystems ...                        [ ok ]
 * Starting sshd ...                                       [ ok ]
 * Starting vixie-cron ...                                 [ ok ]
 * Starting Webmin ...                                     [ ok ]
 * Starting local ...                                      [ ok ]

This is localhost.(none) (Linux i586 2.6.19.2) 01:42:51

localhost login:
```

If this is successful you can log in as root using by typing in **root** and then entering the root password (given in Appendix C, *Factory Defaults* [137].

Ethernet

As an alternative you can connect via ethernet. Knowledge of TCP/IP networking is assumed when reading this manual. The camera will be shipped from the factory with the settings specified in Appendix C, *Factory Defaults* [137]. If you can set up an SSH session to the camera then you do not need to use the serial port to configure the camera.

Networking setup

To use this section you are already logged into the camera via serial or SSH. You do not need to do this if you can use the IP discovery program (see the section called “Discovery”[4]). If you are not logged in, return to an earlier section to get a login prompt working. To set up networking we edit `/opt/config/current/netmon.xml`.

```
nano /opt/config/current/netmon.xml
```

Note

A guide to how to use nano is available in Appendix F, *Nano - text editor* [143]

Basic Configuration

In its basic form you can just edit the existing contents to change the IP address, netmask and gateway. The file should look like:

```
<?xml version="1.0"?>
<netmon>
  <main>
    <services>ethernet</services>
    <hostname>Camera</hostname>
  </main>
  <ethernet>
    <ip>aa.aa.aa.aa</ip>
    <netmask>bb.bb.bb.bb</netmask>
  </ethernet>
  <routes>
    <default>ethernet cc.cc.cc.cc</default>
  </routes>
</netmon>
```

Where `aa.aa.aa.aa` is the IP address you'd like to assign to the camera, `bb.bb.bb.bb` is the netmask, and `cc.cc.cc.cc` is the default gateway (remove this section if you don't want one). Under many circumstances this is acceptable.

Connecting

Although configuration is possible over the console serial port, the natural way to connect to the P382, P392+ or P492 is via the network, so we will get that working next. You may wish to skip this and move straight onto Chapter 5, *Configuration using Webmin* [13] to use the built in webserver to configure the camera.

SSH

Secure Shell or SSH is a secure networking protocol which can be used for many things, but here we will use it to provide a shell on the camera. It is running on the standard port, 22.

Many operating systems have an ssh client built in which can be invoked by typing ssh from the command line. Briefly:

`ssh` [*`user`*`@`] {*`hostname`*}
However Windows does not have one, we recommend PuTTY (see the section called “PuTTY” [142]). Any ssh client capable of SSH2 should work, feedback is welcomed on other implimentations. There is an SSH client available in Webmin under Others → SSH/Telnet Login which requires Java, but if you can see webmin I'd recommend you use that instead where possible as documented in Chapter 5, *Configuration using Webmin* [13]

Launch your ssh client to log into the camera, referring to Appendix C, *Factory Defaults* [137] for the root password. Once you have logged in you have the network working correctly and you can configure and use the camera.

You are logged into a Linux shell, and can use many normal Linux commands to navigate. A brief set of useful commands and arguments are given here.

- `ls` [-l] [*`directory`*]
  get a directory listing, similar to **dir** under DOS
- `pwd`
  display the current working directory
- `cd` {*`directory`*}

change directory to given directory. Use `..` to go up one directory

- `nano` {*`filename`*}
  edit a file. See Appendix F, *Nano - text editor* [143] for more details.
- `cat` {*`filename`*}
  quickly show a file.
- `less` {*`filename`*}
  display a file, so you can scroll up and down.
- `ftp` [*`ip_address`*]
  launch the FTP client to transfer files to or from a remote machine. TODO - xref

This is only a very brief list. A good list can be found online at http://www.ss64.com/bash/, and a comprehensive introduction which is worth reading at http://en.flossmanuals.net/command-line/. These links are not under our control and may expire with time.

Note

Manual pages are *not* installed on the camera so you cannot refer to them there. Sorry.

Restarting and Shutting Down

Due to the possibility of corrupting the filesystem, the following should as far as possible be adhered to for P382, P392+ and P492 cameras.

Restarting after changing settings

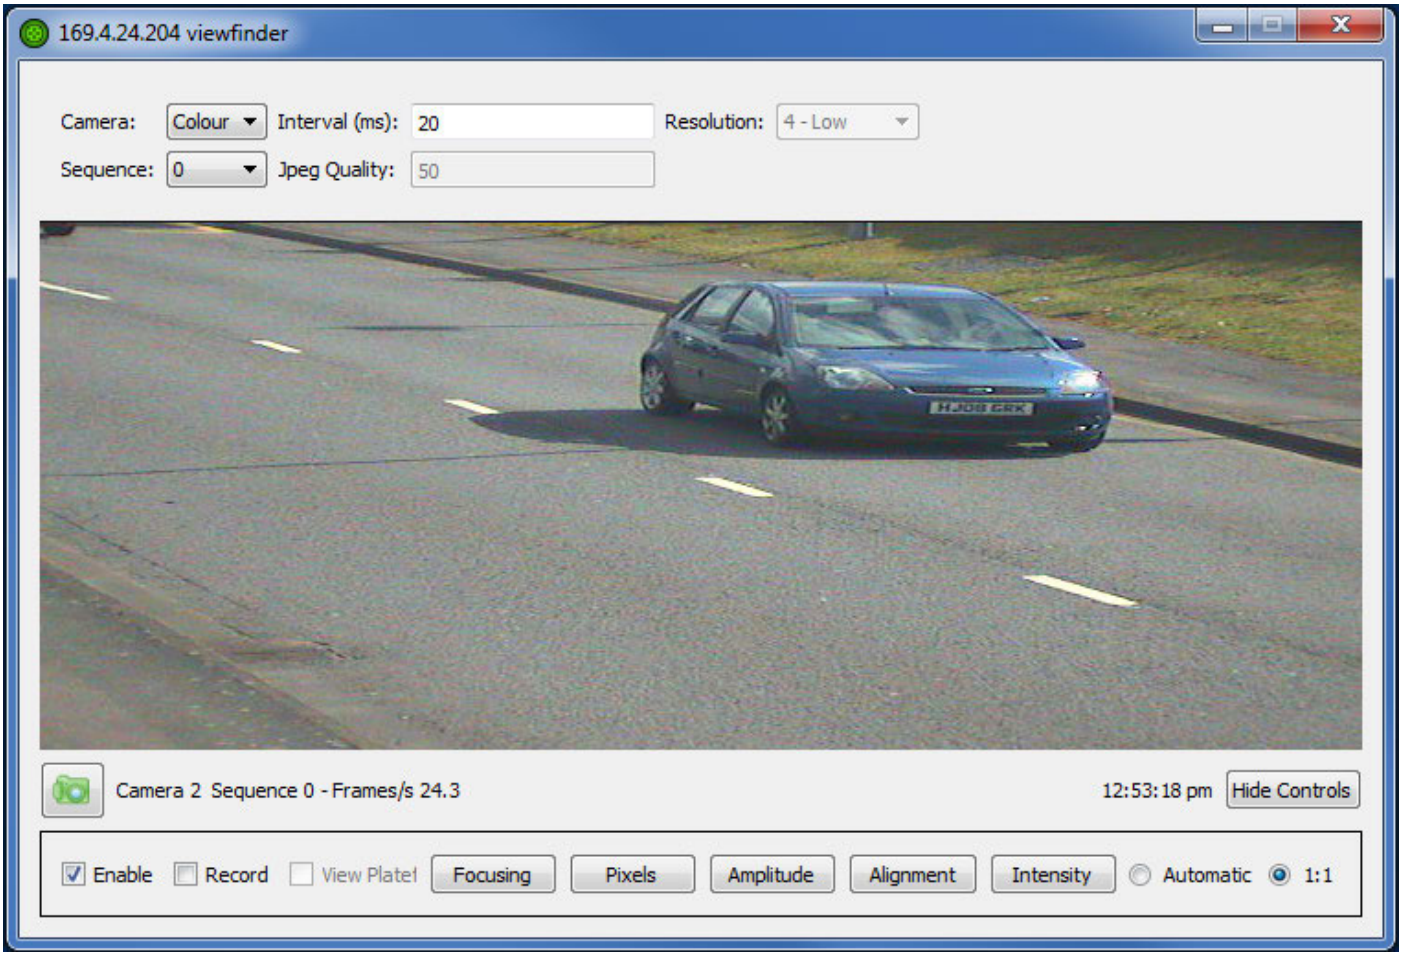
Some settings require that the camera is restarted before the change is applied. To do this, users must issue the reboot command via ssh or use the reboot button in webmin. Users must not switch off the power supply to the camera.

Switching off for planned maintenance

When wanting to switch off the camera, it is recommended that users do not simply remove the power from the camera or unplug the connector. Instead, best practice is to connect to the camera using ssh (eg. Putty) and issue the shutdown now command. After this, you should wait approximately 30 seconds for the camera to shut down, and then remove the power within a further 30 seconds.

Power-cycling

If you wish to power cycle the camera to attempt to recover from some error you should use the shutdown now command via ssh to cleanly shutdown the camera and remove power from the camera 30 seconds after issuing this command. Keep power off the camera for over 30 seconds before re-applying it.



If you are unable to issue the shutdown command due to the problem you are trying to resolve, you must still observe the long delay between removing power and re-applying it – re-applying power to the camera too quickly can cause problems.

Chapter 3. PIPS ANPR Toolkit

PIPS ANPR Toolkit (see the section called “PIPS ANPR Toolkit”[142]) is a valuable tool in diagnosing, setting up and maintaining your camera. To use it, launch the viewer from the Start → PIPS → Toolkit on Windows. You can then enter the IP address of the camera you wish to view, or select it from the drop down list if you have viewed it before.

Viewfinder

By pressing the **`Viewfinder`** button, you can launch a "through the camera" viewer.

From this you can select to view either camera, and whichever sequence number of the camera you wish (which are valid is dependent on the `numentries` parameter of the camera you are viewing, by changing the drop down list. Camera 1 is the infra-red camera, 2 is the colour one.

You can speed up or slow down the image rate dependent on your PC loading and network bandwidth - if you select a low interval it will cause more loading. Quality and Resolution have no effect on a P382, P392+ or P492.

The Enable checkbox connects or disconnects the viewfinder from the camera. If the Record box is checked then the Toolkit will record the received images. The radio buttons can be used to select the size of the images as displayed by the viewfinder.

The buttons along the bottom of the window provide access to other tools. The Enable checkbox connects or disconnects the viewfinder from the camera.

Vehicle Events

By pressing the **`Vehicle Events`** button, you can launch an event viewer, which shows each vehicle that the camera detects separately.

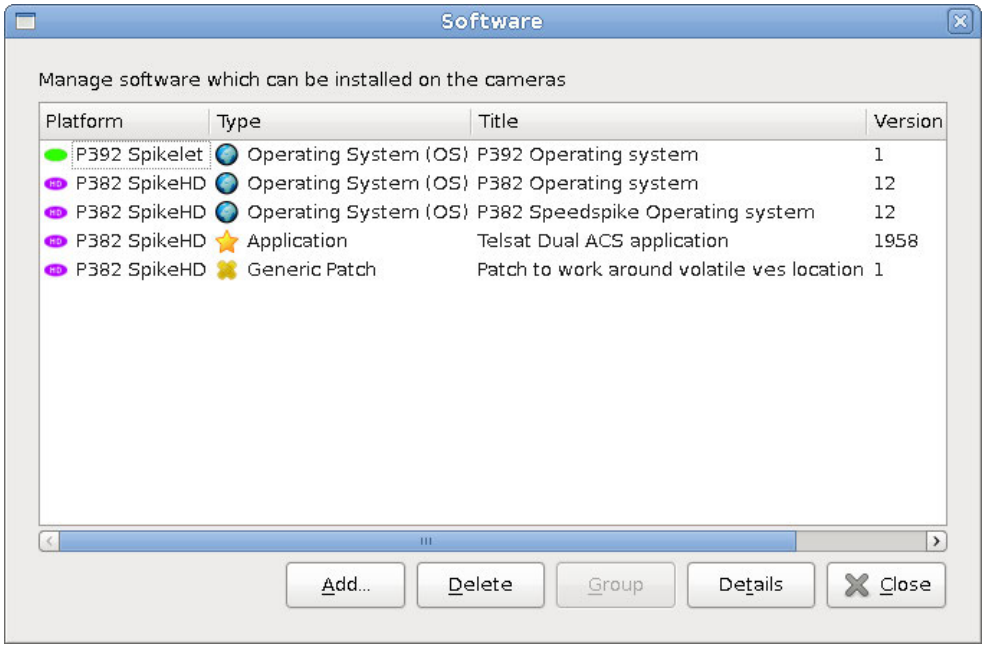
The Enable checkbox connects or disconnects the event viewer from the camera. If the Record box is checked then the Toolkit will record the received data and images.

The radio buttons are used to select the protocol used to connect to the camera. If the PIXI protocol is selected then the Configure PIXI button can be used to select the event data and image to display. The Expand All Show More option can be used to show additional data received via PIXI.

The trigger button can be used to send a TCP trigger to the camera. The trigger message can be configured using the Trigger Config tab.

The Clear button clears the display.

Review



In the viewfinder and vehicle events view you can select to disable or enable updates, and also record the data using the tick boxes in the lower left hand corner. If you have recorded events you can view them by pressing the **`Review`** button. This is currently functional but not complete.

Camera Software

The toolkit allows you to maintain the software on your cameras. There are two parts to this.

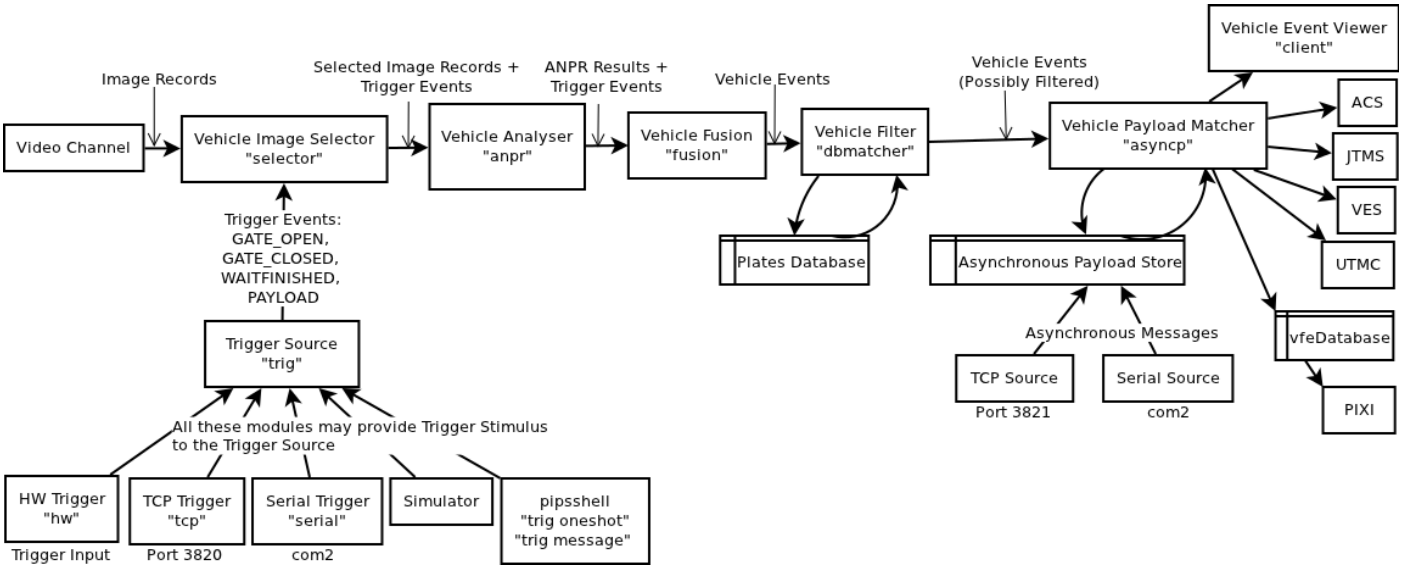
Software Management

By selecting Configure → Software from the menus of the toolkit you can *locally* manage software which you can install on the camera.

- Add: You can add software distributed from PIPS to your pool of available software to install. Mostly these will be .tar.lzma files, but also the libcardet files which are number plate reading engines can be placed here. The files will be copied and stored by the application in it's own private repository..
- Delete: Delete items from your local pool of files. Any groups which depend on these files also get deleted.
- Group: Group a set of items together for ease of installation. Once grouped together a set of files will behave like a single unit and can all be installed together to ease installation. Example uses are grouping an ANPR library with an application to install the two together, or adding a patch to an os to install as one.
- Close: Close the dialogue box.

Software Installation

Software can be installed on the camera by clicking on the small orange pencil. Some basic options as to what type of installation to do, and it will ask you to enter details for the camera so that it can connect. To perform an operating system installation you must be connected via a serial port and via ethernet.



A critical concept is that some software contains a 'complete operating system' (OS) and some does not. To install a complete operating system there is quite a lot more work required, so these software packages are separated from the non-OS components

Chapter 4. Camera technical overview

The P382, P392+ and P492 are very configurable, and complex to understand. This chapter will hopefully help you to understand the internals and what they do so that you can make wise choices in setting up.

This diagram shows the objects in the system and how they fit together. Each of the individual objects is documented more completely in the section called “PIPS Shell Commands”[15], but this overview will help you put those pieces together.

Figure 4.1. Objects in the system and how they fit together.

Interfaces: Output mechanisms

The P382, P392+ and P492 have various mechanisms for outputting the resulting data from their operation and delivering it to another system for processing. This chapter describes them each in brief to allow you to understand and choose what to use. Most of these systems can be used at the same time as one another.

- *ACS* stands for Access Control System. It is a simple network delivery of image and text files via FTP or SFTP. It is designed for production use, and is recommended as a simple way to get started. This simplicity does not mean it is unsuitable for large scale deployments, but it does require a reasonable amount of bandwidth. It is very flexible in which images are available and what metadata is contained in the text file and the filenames. More detail on configuring the system is available in the section called “ACS - Access Control System (acs)”[15] and the available metadata list is Chapter 7, *Format strings* [84]. I would recommend developing with ACS unless you have a reason why you cannot use it. You can use this delivery mechanism alongside others, such as PIXI. There is a separate ACS interface document available which is for legacy systems, and not particularly relevant to the P382, P392+ and P492.

- *PIXI* is an XML based interface for collecting information and controlling all aspects of the camera. It can flexibly push and pull data from the camera, and requires no configuration on the camera. All configuration can be done via this protocol. For more complex requirements that cannot be met with ACS we would encourage the use of this protocol, which is fully documented in Chapter 8, *PIXI Protocol* [98].

- *JTMS* stands for Journey Time Measurement System. This is a relatively simple TCP/IP mechanism for delivering data suitable for measuring journey times. It uses very little bandwidth, and is not flexible for other uses. It does not provide any images. More detail on configuring this system is available in the section called “JTMS - Journey Time Measurement System (jtms)” [49]

- *VES* stands for Violation Enforcement System. This is a complex TCP/IP mechanism for delivering data suitable for many uses. It can provide images, encryption and push and pull of data. There is a separate interface document

available under an NDA (Non-Disclosure Agreement) from Neology describing this interface in detail. For new developments, unless you need encryption we'd encourage the use of PIXI instead of VES.

- *UTMC* stands for Urban Traffic Management and Control. This is a web-base mechanism for delivering data. A camera can be configured to deliver data to one or more UTMC servers. Protocol versions 1.0 and 1.2 are supported.
- *SAP* is the serial application port. This provides delivery of the plate or other metadata via the second serial port on the camera (COM2). It is flexible, but obviously cannot deliver images. More detail on configuring the system is available in the section called “SAP - Serial Application Port (sap)”[57] and the available metadata list is Chapter 7, *Format strings* [84]. You may (as with all the other output systems) use this in conjunction with other output mechanisms listed here. The serial port may only be used for one function at once.
- *Image File Output* is a debugging system, and should not be used for any production system. It places fixed filename images on the local /storage device. It may have a performance impact on the system if it is used.
- *Viewfinder* is a legacy TCP/IP protocol for viewing live images from the camera. It does not guarantee the delivery of any images. The protocol is defined in Appendix H, *Viewfinder Protocol* [145]. This is used by the Toolkit.
- *Vehicle Event Viewer* is a legacy TCP/IP protocol for viewing read images from the camera. It does not guarantee the delivery of any images and is therefore not suitable for production use. The protocol is defined in Appendix I, *Vehicle Event Viewer Protocol* [149]. This is used by the Toolkit.

Chapter 5. Configuration using Webmin

The camera provides a web administration utility called webmin. You can access this from your web browser on

`https://camera.ip.address/`

You will need to log in, referring to Appendix C, *Factory Defaults* [137] for the root password.

From here you can configure many aspects of the camera. This manual will take you through some of the more important ones. You can break the camera using some of these options, don't play unless you understand what you are doing.

Note

The web interface is only available over the https protocol, not the http protocol. Ensure you put the s in the URL

On the P392+ and P492 cameras (and only these models) should have the /backup.pl script run from the command line after any change - once that change is determined to be satisfactory. Changes include:

- New OS and application installations
- Application upgrades, Cardet upgrades
- Configuration changes

Running backup ensures that should a file system corruption be recoverable via this mechanism, the recovery will be to the last backed up state.

Camera control

Initially you will be presented with the camera application interface to configure the camera aspects of the system. This is accessible under Others → Camera Application if you need to get back to it. This manual is available from this page (indeed, you may be reading it there right now!). As well as this all the configuration options and commands are available with online help. This help is also printed for reference in Chapter 6, *PIPS ANPR Shell* [15] should you need it.

Webmin allows all of the shell parameters and commands to be accessed, as listed in Chapter 6, *PIPS ANPR Shell* [15].

You can also manage the anpr libraries from here and upload new ones by selecting Spike II (382) Application → ANPR Vehicle Analyser → Library Manager → Manage number plate libraries

Network

The network configuration is available under Networking → Networking Configuration and allows control of the IP address parameters and the hostname of the camera. It is important to set up the hostname of the camera to something useful and unique as several subsystems use it to identify the camera. The factory default is the serial number of the camera.

You can also set up an on camera firewall Networking → Linux Firewall.

Caution

Incorrectly configuring the firewall can make the camera *completely unresponsive* to network control, including webmin and SSH, requiring you to access it via the RS232 port or return it to Pips.

Mounting network disks

The P382, P392+ and P492 have the ability to save files to disk, which can be remotely mounted over NFS. Most operating systems come with an NFS server, so you can just use those. Windows users may wish to see the section

called “NFS Server on Windows”[142]. You can also mount CIFS and SMB "Windows shares" from windows servers or workstations.

NFS

Once you have a directory exported so that the camera can see it you can mount it via the System → Disk and Network Filesystems menu option. Use the drop down list to select **`Network Filesystem (nfs)`** and make sure you fill in the Mounted As, NFS Hostname and NFS Directory to be **`/storage/`*`pre-created-directory`***, the IP address of the server and the directory you have entered in `/etc/exports` respectively.

Windows shares

There are so many versions of Windows, and depending upon what you have installed it is hard to tell if you will need to use CIFS. In theory it is downwards compatible, but you definitly need it for Windows 2003 server shares. If it fails try **`Windows Networking Filesystem`** instead of **`Common Internet Filesystem`** in the instructions below.

You can mount a windows share via the System → Disk and Network Filesystems menu option. Use the drop down list to select **`Common Internet Filesystem (cifs)`** and make sure you fill in the Mounted As, Server Name and ShareName to be **`/storage/`*`pre-created-directory`***, the IP address of the server and the share name you have shared respectively. I would not attempt to use server names rather than IP addresses, although it may work for you, it may be unreliable. You will almost definitly have to fill in Login Name and Login Password details.

Chapter 6. PIPS ANPR Shell

The shell is an alternative way to access and control the camera's parameters. You can start it whilst at the linux command prompt (either via SSH or on the console serial port) by typing

```
/opt/PIPS/PIPSshell

 Welcome to the PIPS ANPR Camera shell - 127.0.0.1
 Shell Version Version 4.7.9540 built at 13:06:54 on Mar 17 2015

 >>
```

The double chevrons are the prompt and you can type in commands here.

The model of commands is one of objects, which have properties and commands. Objects can be nested, and the sub-object's name is separated by a space from the parent. This may sound confusing, re-read it after you have read the list of commands.

- `help` [*`object`*]
  You can see a list of objects by typing **help** with no arguments, and see properties and commands of each object by giving the object name as an argument.
- `history`
  Display a list of old commands you have typed in. The command line supports full “GNU readline” command line editing and history. Basically the arrow keys work like you might hope.
- `quit`
  Leave the shell.

The complete list of objects with their properties and commands follows, but this may be out of date as with any printed material, and I suggest referring to the command line help.

The objects, properties and commands are not guaranteed to stay the same between software releases - although all functionality formally available will remain. Please consult with Neology of details on how to upgrade.

On the P392+ and P492 cameras (and only these models) should have the /backup.pl script run from the command line after any change - once that change is determined to be satisfactory.

PIPS Shell Commands

ACS - Access Control System (acs)

Available on platforms: All

The Access Control System is an output module which sends vehicle details to an external computer for processing. It will output a (configurable) number of jpeg images of the vehicle along with a text record describing the license plate event (LPR). This data may be sent as separate files, named according to the lpr_filename (with .lpr extension) and img_filename (with .jpg extension) properties. Alternatively, the data may be sent within a single packed file consisting of an XML header followed by the binary image data. In this case the filename will be the lpr_filename with a .axi extension and the LPR text record is contained withing the XML header. The XML header also contains data allowing the extraction of the image data.

Platforms	Name	Command	Default Value	Description
All	Append lpr text data	`acs set append_lpr {`*`value`*`}`	false	When using FTP/SFTP the LPR file can be appended onto an existing file if this option

Platforms	Name	Command	Default Value	Description
				is set to true. This can be used for example to create a single .csv file for all events delivered.
All	Buffer the transfer	`acs set buffer_transfers {value}`	true	Stores images in internal non-volatile storage to allow them to be transferred later should the file server be inaccssable for any reason.
All	Output Character Encoding for filenames	`acs set char_set {value}`	0	If in doubt, set this to 0. The character encoding used for strings for filepaths. 0 - ASCII-7bit 1 - ISO8859-1 2 - UTF-8 If using ASCII-7bit any special characters will be converted to nearest ASCII equivalents. If using anything other than ASCII-7, please ensure your server and other software is capable of handling the specific encoding
All	The Delivery Order	`acs set delivery_order {value}`	FIFO	The delivery order is a choise between First In First Out (FIFO) or Last In First Out (LIFO). (If switching between modes the data stored before switching will be lost). (If order is not FIFO or LIFO it will be treated as FIFO).
All	Enabled	`acs set enabled {value}`	false	Allows the ACS system to be enabled and disabled. Disable it unless you are using it.
All	Fast Ftp	`acs set fast_ftp {value}`	false	Accelerate FTP by ignoring what RFC1738 says and just transferring files directly into directories with STOR, rather than CWD first. Most off the shelf FTP servers will accept this happily, and it reduces latency.
All	Output Character Encoding For file Contents	`acs set file_char_set {value}`	0	If in doubt, set this to 0. The character encoding used for strings for LPR file contents. 0 - ASCII-7bit 1 - ISO8859-1 2 - UTF-8 If using ASCII-7bit any special characters will be converted to nearest ASCII equivalents. If using anything other than ASCII-7, please ensure your server and other software is capable of handling the specific encoding
All	Host	`acs set host {value}`		The IP address to which the files will be transferred. LPR files will be transferred last, after the jpeg files.

Platforms	Name	Command	Default Value	Description
All	Fallback Host	`acs set host2` {*value*}		Fallback IP address to which the files will be transferred if transfer to Host fails. LPR files will be transferred last, after the jpeg files.
All	Image filename	`acs set img_filename` {*value*}	%Jts%Id02u%Vm02u%Vd02u%Vh02u%Vn02u%Vs02u%Id02u,%Pps	A format string containing how to construct the image filename. You MUST put %Jtc in this string if you are outputting multiple images per event or else they WILL all have the same filename and overwrite each other. Note this property is only meaningful if transfer_packed is false
All	LPR contents	`acs set lpr_contents` {*value*}	%PNs\n%Pas\n%Pat%Jtu%Etx%Fnw	A format string containing how to construct the data you would like in the LPR file
All	LPR filename	`acs set lpr_filename` {*value*}	%Ei08X.lpr	A format string containing how to construct an LPR or AXI filename. If the transfer_packed property is set 1 (true) an AXI file is transferred. Otherwise an LPR file will sent with any required image files sent separately.
All	Maximum Disk Queue Length	`acs set nlog` {*value*}	100	The maximum number of ACS events which will be stored on the local filesystem before they are overwritten if it is not possible to contact the instation. Warning, arbitrarily setting this to a high value may fill up the device on which you are storing the files and then the system will lose the wrong data or may perform badly.
All	Password	`acs set pass` {*value*}		The password used to log in to the server or to unlock your private key, depending upon which method you're using to transfer.
All	Noread patch	`acs set patch_noread` {*value*}	false	When there is a no read there is also no patch. If you set this to true you'll get the full IR image output as a patch instead of no output.
All	Timeout	`acs set timeout` {*value*}	60	The timeout on operations over the file transfer link. NB: May not be what you expect from legacy systems.
All	Transfer overview context images	`acs set transfer_contexts` {*value*}	true	Transfer the overview context images (if any). The number and offsets of context images are configured under Contexts. Depending on the setting of transfer_packed this may be sent as a JPG file or within an AXI file
All	Transfer hazard IR images	`acs set transfer_hazard_ir` {*value*}	true	Transfer the full infra-red monochrome images. Depending on the setting of transfer_packed this may be sent as a JPG file or within an AXI file
All	Transfer hazard overview images	`acs set transfer_hazard_overview` {*value*}	true	Transfer the overview images (e.g. the colour images). Depending on the setting of transfer_packed this may be sent as a JPG file or within an AXI file
All	Transfer hazard patch images	`acs set transfer_hazard_patch` {*value*}	true	Transfer a small image of just the number plate patch. Depending on the setting of transfer_packed this may be sent as a JPG file or within an AXI file

Platforms	Name	Command	Default Value	Description
All	Transfer IR images	`acs set transfer_ir {value}`	true	Transfer the full infra-red monochrome images. Depending on the setting of transfer_packed this may be sent as a JPG file or within an AXI file
All	Transfer lpr text data	`acs set transfer_lpr {value}`	true	Transfer a text block containing metadata, called LPR data. Depending on the setting of transfer_packed this may be sent as an LPR file or within an AXI file
All	Transfer overview images	`acs set transfer_overview {value}`	true	Transfer the overview images (e.g. the colour images). Depending on the setting of transfer_packed this may be sent as a JPG file or within an AXI file
All	Transfer all data in a single AXI file	`acs set transfer_packed {value}`	false	Normally the data is transferred as separate LPR file and up to 3 image (JPG) files. Set this to true to transfer all required data in a single file (with file name lpr_filename.axi) consisting of an XML header followed by image data if required
All	Transfer patch images	`acs set transfer_patch {value}`	true	Transfer a small image of just the number plate patch. Depending on the setting of transfer_packed this may be sent as a JPG file or within an AXI file
All	Transfer path	`acs set transfer_path {value}`	%Shs/	A format string containing the path on theserver you'd like the files transferred to. This should contain / or \ as directory separators. It should end with a directory separator.
All	Transport	`acs set transport {value}`	sftp	The transport mechanism by which the system will transfer files. The options are sftp (recommended), scp, ftp, file. If you use scp the system is unable to create directories, so you must do that for it. File will deliver to the local filesystem under /storage.
All	Username	`acs set user {value}`		The username used to log in to the server

- `acs clearStats`

  Resets all Statistics. Platforms: All.

  Resets all Statistics

- `acs diskq_flush`

  Empty the Disk Queue. Platforms: All.

  All ACS events currently stored in the persistant Disk Queue will be deleted and will not be recoverable. Use this with care.

- `acs diskq_length`

  Length of Disk Queue. Platforms: All.

The number of ACS events stored in the persistant Disk Queue will be reported. Note this value may be non zero even if buffer_transfers is false. If buffer_transfers is false, the system still uses the disk queue, it just wont store items between reboots.

- `acs stats`

  Statistics. Platforms: All.

  Statistics for debugging

Specific Filenames (acs filenames)

Available on platforms: All

If you wish to have more control over the image filenames of the ACS output this section is for you, otherwise you can ignore it. You can specify filenames for each individual image that ACS outputs. If you leave the filenames blank then the standard ACS configuration will apply for that file. If you specify anything for a file, that file will be output with that filename. It will have the transfer_path prepended like with the standard naming scheme. If you want to output to different directories for each file, you can specify the path as part of the filename. If the transfer_path is blank you could output each file to a completely different directory. You cannot specify the lpr filename here as it is already available as a solo format string in the main ACS section.

Platforms	Name	Command	Default Value	Description
All	Hazard Full IR Filename	`acs filenames set haz_ir_filename {value}`		The format string used for the filename for the hazard full IR images.
All	Hazard Overview Filename	`acs filenames set haz_oview_filename {value}`		The format string used for the filename for the hazard overview images.
All	Hazard Patch Filename	`acs filenames set haz_patch_filename {value}`		The format string used for the filename for the hazard patch images.
All	Full IR Filename	`acs filenames set ir_filename {value}`		The format string used for the filename for the full IR images.
All	Overview Filename	`acs filenames set oview_filename {value}`		The format string used for the filename for the overview images.
All	Patch Filename	`acs filenames set patch_filename {value}`		The format string used for the filename for the patch images.

Context 1 (acs filenames context1)

Available on platforms: All

If you wish to have more control over the image filenames of the ACS output this section is for you, otherwise you can ignore it. You can specify filenames for each individual image that ACS outputs. If you leave the filenames blank then the standard ACS configuration will apply for that file. If you specify anything for a file, that file will be output with that filename. It will have the transfer_path prepended like with the standard naming scheme. If you want to output to different directories for each file, you can specify the path as part of the filename. If the transfer_path is blank you could output each file to a completely different directory. You cannot specify the lpr filename here as it is already available as a solo format string in the main ACS section.

Platforms	Name	Command	Default Value	Description
All	Contexts Filename			

Platforms	Name	Command	Default Value	Description
		`acs filenames context1 set filename {`*`value`*`}`		The format string used for the filename for this context images.

Context 2 (acs filenames context2)

Available on platforms: All

If you wish to have more control over the image filenames of the ACS output this section is for you, otherwise you can ignore it. You can specify filenames for each individual image that ACS outputs. If you leave the filenames blank then the standard ACS configuration will apply for that file. If you specify anything for a file, that file will be output with that filename. It will have the transfer_path prepended like with the standard naming scheme. If you want to output to different directories for each file, you can specify the path as part of the filename. If the transfer_path is blank you could output each file to a completely different directory. You cannot specify the lpr filename here as it is already available as a solo format string in the main ACS section.

Platforms	Name	Command	Default Value	Description
All	Contexts Filename	`acs filenames context2 set filename {`*`value`*`}`		The format string used for the filename for this context images.

Context 3 (acs filenames context3)

Available on platforms: All

If you wish to have more control over the image filenames of the ACS output this section is for you, otherwise you can ignore it. You can specify filenames for each individual image that ACS outputs. If you leave the filenames blank then the standard ACS configuration will apply for that file. If you specify anything for a file, that file will be output with that filename. It will have the transfer_path prepended like with the standard naming scheme. If you want to output to different directories for each file, you can specify the path as part of the filename. If the transfer_path is blank you could output each file to a completely different directory. You cannot specify the lpr filename here as it is already available as a solo format string in the main ACS section.

Platforms	Name	Command	Default Value	Description
All	Contexts Filename	`acs filenames context3 set filename {`*`value`*`}`		The format string used for the filename for this context images.

Context 4 (acs filenames context4)

Available on platforms: All

If you wish to have more control over the image filenames of the ACS output this section is for you, otherwise you can ignore it. You can specify filenames for each individual image that ACS outputs. If you leave the filenames blank then the standard ACS configuration will apply for that file. If you specify anything for a file, that file will be output with that filename. It will have the transfer_path prepended like with the standard naming scheme. If you want to output to different directories for each file, you can specify the path as part of the filename. If the transfer_path is blank you could output each file to a completely different directory. You cannot specify the lpr filename here as it is already available as a solo format string in the main ACS section.

Platforms	Name	Command	Default Value	Description
All	Contexts Filename			

Platforms	Name	Command	Default Value	Description
		`acs filenames context4 set filename {`*`value`*`}`		The format string used for the filename for this context images.

Context 5 (acs filenames context5)

Available on platforms: All

If you wish to have more control over the image filenames of the ACS output this section is for you, otherwise you can ignore it. You can specify filenames for each individual image that ACS outputs. If you leave the filenames blank then the standard ACS configuration will apply for that file. If you specify anything for a file, that file will be output with that filename. It will have the transfer_path prepended like with the standard naming scheme. If you want to output to different directories for each file, you can specify the path as part of the filename. If the transfer_path is blank you could output each file to a completely different directory. You cannot specify the lpr filename here as it is already available as a solo format string in the main ACS section.

Platforms	Name	Command	Default Value	Description
All	Contexts Filename	`acs filenames context5 set filename {`*`value`*`}`		The format string used for the filename for this context images.

Context 6 (acs filenames context6)

Available on platforms: All

If you wish to have more control over the image filenames of the ACS output this section is for you, otherwise you can ignore it. You can specify filenames for each individual image that ACS outputs. If you leave the filenames blank then the standard ACS configuration will apply for that file. If you specify anything for a file, that file will be output with that filename. It will have the transfer_path prepended like with the standard naming scheme. If you want to output to different directories for each file, you can specify the path as part of the filename. If the transfer_path is blank you could output each file to a completely different directory. You cannot specify the lpr filename here as it is already available as a solo format string in the main ACS section.

Platforms	Name	Command	Default Value	Description
All	Contexts Filename	`acs filenames context6 set filename {`*`value`*`}`		The format string used for the filename for this context images.

Context 7 (acs filenames context7)

Available on platforms: All

If you wish to have more control over the image filenames of the ACS output this section is for you, otherwise you can ignore it. You can specify filenames for each individual image that ACS outputs. If you leave the filenames blank then the standard ACS configuration will apply for that file. If you specify anything for a file, that file will be output with that filename. It will have the transfer_path prepended like with the standard naming scheme. If you want to output to different directories for each file, you can specify the path as part of the filename. If the transfer_path is blank you could output each file to a completely different directory. You cannot specify the lpr filename here as it is already available as a solo format string in the main ACS section.

Platforms	Name	Command	Default Value	Description
All	Contexts Filename			

Platforms	Name	Command	Default Value	Description
		`acs filenames context7 set filename {`*`value`*`}`		The format string used for the filename for this context images.

Context 8 (acs filenames context8)

Available on platforms: All

If you wish to have more control over the image filenames of the ACS output this section is for you, otherwise you can ignore it. You can specify filenames for each individual image that ACS outputs. If you leave the filenames blank then the standard ACS configuration will apply for that file. If you specify anything for a file, that file will be output with that filename. It will have the transfer_path prepended like with the standard naming scheme. If you want to output to different directories for each file, you can specify the path as part of the filename. If the transfer_path is blank you could output each file to a completely different directory. You cannot specify the lpr filename here as it is already available as a solo format string in the main ACS section.

Platforms	Name	Command	Default Value	Description
All	Contexts Filename	`acs filenames context8 set filename {`*`value`*`}`		The format string used for the filename for this context images.

Event Filter (acs filter)

Available on platforms: All

Platforms	Name	Command	Default Value	Description
All	Tag Regex	`acs filter set tag_regex {`*`value`*`}`	.*	

Using ACS

ACS uses various different file transfer protocols. It is recommended that you use SFTP as it is secure, can create directories, and has less network overhead than the FTP protocol. Historically ACS used the FTP protocol and that is also still possible. A suitable FTP server is required (FileZilla server is recommended for MS Windows platforms). SCP is also supported, but most platforms which work with SCP also work with SFTP which is able to create directories, wheras SCP is not.

Based on a number plate read event, ACS can transfer the following information:

- LPR data which consists of text metadata regarding the plate read event. LPR data will be transferred if **`transfer_lpr`** is set. The exact content of LPR text may be specified with the **`lpr_contents`** format string.
- A plate patch image in jpeg format. A patch image will be transferred if **`transfer_patch`** is set.
- A complete Infrared (IR) image in jpeg format. An IR image will be transferred if **`transfer_ir`** is set.
- A colour overview image in jpeg format. An overview image will be transferred if **`transfer_overview`** is set.

This ACS event data data may be transferred as separate files (up to 3 jpeg image files and an LPR textfile). These files are named according to the **`lpr_filename`** and **`image_filename`** properties.

Alternatively, if the **`transfer_packed`** property is set, all the required data is packed into a single AXI file. An AXI file consists of an XML header section followed by binary image data for whichever of the images are required. The advantage of using a packed AXI file is that there is less transfer overhead (a particular problem with normal FTP, a single transfer vs. up to four separate transfers) and may simplify processing at the receiver (no need to correlate the multiple files that relate to a single plate read event). One disadvantage with the packed format is that the file needs to be unpacked. However, the format is very simple (see the section called “ACS Event XML Schema”[23]) and should be easy to decode.

Older ACS systems only ever transferred separate files. Thus, for compatibility reasons, it may be necessary to disable the **`transfer_packed`** property.

Authentication

If you are using SFTP or SCP you can authenticate with your server in two ways.

- Conventional username and password, in a similar way to keyboard authentication. This is generally accepted as less secure, but is trivial to setup and may be good enough. To do this just set the **`user`** and **`pass`** properties and log in with those. This is the only option with conventional FTP.
- Using an SSH public key. You will need to create a public/private key pairing and install both of these onto your camera as `/opt/config/current/key_acs` and `/opt/config/current/key_acs.pub`. You can do this on the camera using **`ssh-keygen -t rsa`**. You must also give the public key to the server to allow it to authenticate - on a conventional openssh system this would be done by appending the public key into `~/.ssh/authorized_keys2` for the user you're going to transfer as. Once this is done you set up the user in the **`user`** field and if your private key has a passphrase enter that into the **`pass`** property.

ACS Event XML Schema

The packed AXI file format consists of an XML header followed by binary data for whatever images are required. The XML header part is a NULL terminated string. Binary data starts immediately after the NULL character. This XML header data contains the LPR text (if required) and, for each required image, the offset from the start of the binary data to the start of the image and the image length. This information is sufficient to extract the individual jpeg images.

The XML schema for the header is as follows:

axi.xsd

```
<?xml version="1.0" encoding="UTF-8"?>
<xs:schema xmlns:xs="http://www.w3.org/2001/XMLSchema" elementFormDefault="qualified">
  <xs:element name="acs_event_header">
    <xs:complexType>
      <xs:sequence>
        <xs:element minOccurs="0" maxOccurs="1" ref="lpr"/>
        <xs:element minOccurs="0" maxOccurs="1" ref="patch"/>
        <xs:element minOccurs="0" maxOccurs="1" ref="full"/>
        <xs:element minOccurs="0" maxOccurs="1" ref="overview"/>
        <xs:element minOccurs="0" maxOccurs="1" ref="hazardPatch"/>
        <xs:element minOccurs="0" maxOccurs="1" ref="hazardFull"/>
        <xs:element minOccurs="0" maxOccurs="1" ref="hazardOverview"/>
      </xs:sequence>
    </xs:complexType>
  </xs:element>
  <xs:element name="lpr" type="xs:string"/>
  <xs:element name="patch">
    <xs:complexType>
      <xs:attribute name="length" use="required" type="xs:integer"/>
      <xs:attribute name="offset" use="required" type="xs:integer"/>
    </xs:complexType>
  </xs:element>
  <xs:element name="full">
    <xs:complexType>
      <xs:attribute name="length" use="required" type="xs:integer"/>
      <xs:attribute name="offset" use="required" type="xs:integer"/>
    </xs:complexType>
  </xs:element>
  <xs:element name="overview">
    <xs:complexType>
      <xs:attribute name="length" use="required" type="xs:integer"/>
      <xs:attribute name="offset" use="required" type="xs:integer"/>
    </xs:complexType>
  </xs:element>
  <xs:element name="hazardPatch">
    <xs:complexType>
      <xs:attribute name="length" use="required" type="xs:integer"/>

```

ANPR Vehicle Analyser (anpr)

Available on platforms: All

This module processes images to read the number plates in them.

Platforms	Name	Command	Default Value	Description
All	Cardet Debugging	`anpr set debugging {value}`	false	Make the engine output debugging files to dlldeb
All	Prioritse Hazard	`anpr set hazard_priority {value}`	false	Only relevant if hazard plate reading engine is loaded. If set true, will try harder to read hazard plates and may therefore improve hazard reading performance. However setting true may cause overall performance to deteriorate slightly.
All	Maximum mean character height	`anpr set max_char {value}`	32	Maximum mean character height above which an exception will be generated
All	Maximum mean horizontal plate angle	`anpr set max_mhpa {value}`	5	Maximum mean horizontal plate angle above which an exception will be generated
All	Maximum mean vertical plate angle	`anpr set max_mvpa {value}`	10	Maximum mean vertical plate angle above which an exception will be generated
All	Maximum Syntax Error Ratio	`anpr set max_ser {value}`	40	The maximum syntax error ratio (as percentage) above which an exception will be generated
All	Minimum mean character height	`anpr set min_char {value}`	16	Minimum mean character height below which an exception will be generated
All	Minimum Mean Plate Quality	`anpr set min_mpq {value}`	2000	The minimum mean plate quality below which an exception will be generated
All	Minimum mean tag confidence	`anpr set min_mtc {value}`	90	Minimum mean tag confidence below which an exception will be generated.
All	Square Plates	`anpr set square {value}`	false	Tell the engine that you have a high number of square plates and to try harder to read these. If you have only a small number of these plates this may degrade overall performance. The system will still read long plates.
All	Threshold of Confidence	`anpr set threshold {value}`	60	The minimum read confidence that the system will pass on to further modules. Set this to zero to pass through images from triggers (in an externally triggered system) when the trigger fires even if we didn't manage to read any number plate.
All	Trigger Passthrough	`anpr set trigger_pass {value}`	true	If selected the system will always pass through an image during a trigger, guaranteeing that you see a picture of a vehicle from which we couldn't read anything when you trigger. This overrides the threshold for triggers only.

Platforms	Name	Command	Default Value	Description
All	White On Black	`anpr set whiteonblack {value}`	false	Tell the engine that you have a high number of white on black plates and to try harder to read these. If you have only a small number of these plates this may degrade overall performance. The system will still read black on white plates.

- `anpr clearstats`

  Clears Cumulative statistics. Platforms: All.

  Resets all statistics collection variables to initial values

- `anpr stats`

  Cumulative statistics. Platforms: All.

  Provides cumulative statistics of longterm vehicle processing

Lane Identification Control (anpr laneId)

Available on platforms: All

This control is for determining what lane a number plate is travelling in. There is a maximum of four lanes which is designated by the lanes property. There are a lines which is used to differentiate between different lanes. The user will need to ensure that the lines do not cross, if they do no lane information will be provided within the region, a programatic method to prevent crossing has not been provided to enhance the users ability to setup the lane id system.

Platforms	Name	Command	Default Value	Description
All	Lane 1 name	`anpr laneId set Lane1Name {value}`	1	This is the lane which is the left of line 1
All	Lane 2 name	`anpr laneId set Lane2Name {value}`	2	This is the lane which is the left of line 2 and right of line 1
All	Lane 3 name	`anpr laneId set Lane3Name {value}`	3	This is the lane which is the left of line 3 and right of line 2
All	Lane 4 name	`anpr laneId set Lane4Name {value}`	4	This is the lane which is the right of line 3
All	Bottom X position of line 1	`anpr laneId set Line1bottomX {value}`	2048	This is the position of line 1 at the bottom of the image.
All	Top X position of line 1	`anpr laneId set Line1topX {value}`	2048	This is the position of line 1 at the top of the image
All	Bottom X position of line 2	`anpr laneId set Line2bottomX {value}`	2048	This is the position of line 2 at the bottom of the image.
All	Top X position of line 2	`anpr laneId set Line2topX {value}`	2048	This is the position of line 2 at the top of the image
All	Bottom X position of line 3	`anpr laneId set Line3bottomX {value}`	2048	This is the position of line 3 at the bottom of the image.
All	Top X position of line 3	`anpr laneId set Line3topX {value}`	2048	This is the position of line 3 at the top of the image
All	Enables the lane identification system	`anpr laneId set enabled {value}`	false	Enables the lane identification system.

Platforms	Name	Command	Default Value	Description
All	Sets the number of lanes	`anpr laneId set lanes` {*value*}	1	Set the number of lanes the system will recognise

Library Manager (anpr library)

Available on platforms: All

Management of which library you are using for plate recognition. Different libraries are tuned for different regions of the world to enhance recognition of local plates correctly. Using the correct engine for the location and type of plates you are likely to see is important to ensure good read rates. The libraries live in /opt/pips/

Platforms	Name	Command	Default Value	Description
All	Colour Plate Reading Engine	`anpr library set colour` {*value*}	none	The filename of the libcardet colour plate reading engine in use
All	Plate Reading Engine	`anpr library set engine` {*value*}	none	The filename of the libcardet plate reading engine in use
All	Hazard Plate Reading Engine	`anpr library set hazard` {*value*}	none	The filename of the libcardet Hazard plate reading engine in use

- `anpr library list`

  List. Platforms: All.

  List all available engines on this camera

Overview Crop Control (anpr overviewCrop)

Available on platforms: All

Control the overview crop

Platforms	Name	Command	Default Value	Description
All	Overlay Overlay Crop	`anpr overviewCrop set enabled` {*value*}	false	Enables the overlay crop. This creates smaller, cropped, overview images. Ensure that the FocalLength values for cam1 and cam2 are correct if this feature is enabled.
All	Image Height	`anpr overviewCrop set height` {*value*}	480	The height in pixels of the area cropped from the overview image. A value of 0 will cause the images to be cropped to the height of the plate.
All	Horizontal Offset	`anpr overviewCrop set horizontalOffset` {*value*}	-240	The offset in pixels from left edge of the plate to the left edge of the cropped overview image. A negative value indicates that the left edge of the image is to the left of the plate. A positive value indicates that the left edge of the image is to the right of the plate.
All	Horizontal Scale	`anpr overviewCrop set horizontalScale` {*value*}	0	Reduces the width of the cropped image: 0, No scaling; 1, Half Scale; 2, Quarter Scale.
All	Vertical Offset	`anpr overviewCrop set verticalOffset` {*value*}	-400	The offset in pixels from top edge of the plate to the top edge of the cropped overview

Platforms	Name	Command	Default Value	Description
				image. A negative value indicates that the top edge of the image is above the plate. A positive value indicates that the top edge of the image is below the plate.
All	Vertical Scale	`anpr overviewCrop set verticalScale {value}`	0	Reduces the height of the cropped image: 0, No scaling; 1, Half Scale; 2, Quarter Scale.
All	Image Width	`anpr overviewCrop set width {value}`	752	The width in pixels of the area cropped from the overview image. A value of 0 will cause the images to be cropped to the width of the plate.

Asynchronous Payload Matching (asyncp)

Available on platforms: All

The payload matching system allows the system to match up Vehicle Events with asynchronously provided payloads (user supplied data).

This data may then be included with the final event sent to the user.

See also the %PA format specifier.

Platforms	Name	Command	Default Value	Description
All	Acknowledge	`asyncp set ack_enabled {value}`	false	To enable/disable the generation of acks. If enabled the whole message, exactly as sent, will be echoed back to you.
All	Serial Baud Rate	`asyncp set baud {value}`	115200	The serial port baud rate. For changes to take effect, disable then re-enable. Valid values 2400, 4800, 9600, 19200, 38400, 57600, 115200, 230400
All	Binary	`asyncp set binary {value}`	false	If set true, will allow binary data. Otherwise data must be XML legal ASCII
All	Drop unmatched	`asyncp set drop_unmatched {value}`	false	Allows the vehicle events to be surpressed if no matching payload is found.
All	Enabled	`asyncp set enabled {value}`	false	Allows the Filter system to be enabled and disabled. Disable it unless you are using it.
All	Event Match Regex	`asyncp set eventmatch_regex {value}`		A regular expression (matching the Perl Regular Expression Syntax). If set to anything other than an empty string, it will be used to select an appropriate matching payload for the read event. If set it will be used instead of time proximity. (Selecting by time proximity within the time window is the default behaviour). Unlike the above regex in that this one can use format specifiers to extract information from the vehicle read event - to match to the async payloads.

Platforms	Name	Command	Default Value	Description
All	Match Window in milliseconds	`asyncp set matchwindow {value}`	1000	The maximum period that the times of the async payload and vehicle event may differ and still be considered for matching
All	Maximum age	`asyncp set max_age {value}`	20000	The maximum time in milliseconds that payloads are kept in memory.
All	Payload Regular Expression	`asyncp set payload_regex {value}`	(.*)\n	A regular expression (matching the Perl Regular Expression Syntax) that the incoming string must match in order for a payload to be recognised and stored. The actual payload will be the concatination of those parts of the incoming string that match any subexpressions in the regex, as specified by ()'s. If no ()'s are present in the payload_regex, then the entire incoming string, that matches the regex, will be used as the actual stored payload. Note: If the binary flag is set to false then a payload may only contain XML legal ASCII. If it contains any illegal characters, the entire string will be discarded.
All	TCP Port	`asyncp set port {value}`	3821	The TCP port to be used to accept incoming connections.
All	Message Source	`asyncp set source {value}`	tcp	The source of the messages. Set to either tcp or serial

- `asyncp statistics`

  Cumulative statistics. Platforms: All.

  Provides cumulative statistics of longterm vehicle filter processing

BOF2 protocol (bof2)

Available on platforms: All

The module implements the BOF 2.2 Protocol

Platforms	Name	Command	Default Value	Description
All	Authenticate using username and password	`bof2 set authenticate {value}`	false	Authenticate using username and password
All	Camera Identifier	`bof2 set cameraId {value}`	1	Specified through the use of the a format string, if the value of the format string does not evaluate between -32768 and 32767 it will be 0.
All	Delivery Order	`bof2 set delivery_order {value}`	FIFO	The order in which events can be delivered, First in First Out (FIFO) or Last In First Out (LIFO). NB: Switching between modes deletes all data queued for delivery.

Platforms	Name	Command	Default Value	Description
All	Enabled	`bof2 set enabled {value}`	false	Allows the BOF2 system to be enabled and disabled. Disable it unless you are using it.
All	Feed Identifier	`bof2 set feedId {value}`	1	Also known as Force ID. Specified through the use of the a format string, if the value of the format string does not evaluate between -32768 and 32767 it will be 0.
All	Host	`bof2 set host {value}`	192.168.1.1:8080	IP address and port of the instation which will receive the BOF2.2 data.
All	Event Queue Size	`bof2 set nlog {value}`	100	The maximum number of events which will be enqueued for delivery. This delivery module uses the VFE Database, so events will get deleted based upon the rules set within the VFE database. If an event has been deleted we will continue on to the next in the queue
All	Camera Pan	`bof2 set pan {value}`	0	For CCTV cameras.
All	Password	`bof2 set password {value}`		Password for BOF transport user
All	Path	`bof2 set path {value}`	/bof2/services/InputCaptureWebService	The path on the http url.
All	Camera Preset Position	`bof2 set position {value}`	0	Used to indicate direction of travel on multi-use CCTV cameras
All	Send overview	`bof2 set send_overview {value}`	true	Allows sending of overview image to the BOF2 system to be enabled and disabled.
All	Send Patch	`bof2 set send_patch {value}`	true	Allows sending of patch image to the BOF2 system to be enabled and disabled.
All	Public Signature Of Sender	`bof2 set signature {value}`		Format not specified in BOF 2.2 spec, left as std::string for users
All	Source Identifier	`bof2 set sourceId {value}`	1	Specified through the use of the a format string, if the value of the format string does not evaluate between -32768 and 32767 it will be 0.
All	Camera Tilt	`bof2 set tilt {value}`	0	For CCTV cameras.
All	BOF2.2 transport	`bof2 set transport {value}`	HTTPS	HTTP or HTTPS
All	username	`bof2 set username {value}`	Unattended	Username for BOF user
All	Verify Peer	`bof2 set verifyPeer {value}`	true	Allows the verification of the BOF2 server certificate to be disabled when set to false.
All	Camera Zoom	`bof2 set zoom {value}`	0	For CCTV cameras.

- `bof2 clearStats`

  Resets all Statistics. Platforms: All.

  Resets all Statistics

- `bof2 diskq_flush`

  Empty the Disk Queue. Platforms: All.

All BOF events currently stored in the persistant Disk Queue will be deleted and will not be recoverable. Use this with care.

- `bof2 diskq_length`

  Length of Disk Queue. Platforms: All.

  The number of BOF events stored in the persistant Disk Queue will be reported.

- `bof2 stats`

  Statistics. Platforms: All.

  Statistics for debugging

IR Camera (cam1)

Available on platforms: All

Controls for managing the camera and images that it takes

Platforms	Name	Command	Default Value	Description
All	Sensor ADC gain	`cam1 set ADCgain {value}`	52	This sets the adc gain for the Overview sensor Warning don't alter this value. When finished commit will need to be run.
All	Lens Focal Length	`cam1 set FocalLength {value}`	35	The focal length of the lens in front of the IR sensor. This value must be set correctly if overview cropping is in use
All	Platefinder Regions of Interest Coordinates	`cam1 set ROICoordinates {value}`	(0,0),(2048,0),(2048,720),(0,720)	Region polygon(s) co-ordinates clockwise from Top Left. Region polygons are separated by a semi-colon.
All	Platefinder Regions of Interest	`cam1 set ROIEnabled {value}`	false	Sets whether Region of Interest polygon(s) is used or not.
All	Sensor Vramp	`cam1 set Vramp {value}`	109	This sets the Vramp value for the Overview sensor Warning don't alter this value. When finished commit will need to be run.
All	Points at front of vehicles	`cam1 set front_facing {value}`	true	Sets whether the camera is reading from the front of the vehicle. If you have bi-directional traffic set this false.
All	Horizontal Scale	`cam1 set horizontalScale {value}`	0	This will control the scale the channel (but not the plate patch), 0 = no scaling, 1 = half scaling, 2 = quarter scaling
All	Number of Exposure entries cycled in a sequence	`cam1 set numentries {value}`	0	Number of exposure entries cycled through. Set to 1 to disable exposure sequencing, just using the first entry. Otherwise each exposure will be taken with a different entry from the table.
All	Platefinder bottom plate width	`cam1 set platewidth_b {value}`	180	Sets the plate width for this channel in pixels at the bottom of the image. Try to get your plates to be between 180 and 220 pixels wide (for UK style plates), or 140-180 pixels (for US style plates). Getting this right will improve plate recognition.

Platforms	Name	Command	Default Value	Description
All	Platefinder top plate width	`cam1 set platewidth_t {value}`	180	Sets the plate width for this channel in pixels at the top of the image. Try to get your plates to be between 180 and 220 pixels wide (for UK style plates), or 140-180 pixels (for US style plates). Getting this right will improve plate recognition.
All	Fields of Retard	`cam1 set retard {value}`	0	Sets the number of fields of retard for this video channel. The video will be delayed by this number of fields .This feature is only useful in triggered systems. It adds flexibility by allowing compensation for a chronically late trigger. It is suggested that this feature only be used as a last resort.
All	Sharpening mode	`cam1 set sharpening {value}`	1	ENGINEERING USE ONLY:Then enables image sharpening - mode 0 off, mode 1 old sharpening mode, mode 2 a new sharpening mode
All	Vertical Scale	`cam1 set verticalScale {value}`	0	This will control the scale the channel (but not the plate patch), 0 = no scaling, 1 = half scaling, 2 = quarter scaling

- `cam1 commit`

  Commit the new ADC gain and V Ramp settings. Platforms: All.

  Commits the ADC gain and V Ramp to nand flash

Exposure Controller (cam1 exposure)

Available on platforms: All

An automated controller for the exposures on the camera. It will run with our triple flash system and adjust the sequence entries for shutter and gain appropriatly to optimise the image for plate reading.

Platforms	Name	Command	Default Value	Description
All	Brightness cutoff	`cam1 exposure set bright_cutoff {value}`	5	This value determines the percentage of pixels in the plate which differentiate between an underexposed and a correctly exposed plate .If brightness control is making your plates too bright lower this value or vice-versa. Also see the Brightness overexposure setting and set the two in parallel.
All	Exposure control enabled	`cam1 exposure set enabled {value}`	true	Allows you to switch the exposure controller on or off. It is recommended to use this system, if you disable it you should manually set up the exposure sequence.
All	Good DB Value	`cam1 exposure set good_db_value {value}`	2000	Not normally set by user except for testing purposes (it is automatically updated). This

Platforms	Name	Command	Default Value	Description
				determines at what brightness the system starts after a reboot. This value will be used to adjust the brightness when there is not enough traffic.
All	Maximum gain	`cam1 exposure set max_gain {value}`	11	Maximum gain value that is used by the exposure controller.
All	Maximum shutter length	`cam1 exposure set max_shutter {value}`	1000	Maximum shutter length in microseconds that the exposure controller will use. For most uses leave this at 1000, but if you are trying to read very high speed (>160kph) traffic all the time you can shorten this at the expense of all other traffic reads. This is not recommended.
All	Single Sequence Outside Trigger	`cam1 exposure set single_seq_outside_trig {value}`	false	

- `cam1 exposure info`

  Information. Platforms: All.

  Get detailed information of the status of the exposure controller. For debugging purposes.

- `cam1 exposure setBrightDBValue {dbValue}`

  Set absolute brightness DB value. Platforms: All.

  Instantly, manually set the brightness to a DB value. Mostly used for testing, if the exposure controller is on it will adapt the image again after you do this.

#	Name	Parameter	Description
1	Brightness to set to	dbValue	Brightness DB value.

- `cam1 exposure setbrightness {brightness}`

  Set Brightness. Platforms: All.

  Instantly, manually set the brightness to a value. Mostly used for testing, if the exposure controller is on it will adapt the image again after you do this.

#	Name	Parameter	Description
1	Brightness to set to	brightness	Brightness value.

Overlay Control (cam1 overlay)

Available on platforms: All

One overlay control per chanel

Platforms	Name	Command	Default Value	Description
All	Image Below	`cam1 overlay set below {value}`	false	Enables overlayed text on the Image. If not set the text will be above the image.

Platforms	Name	Command	Default Value	Description
All	Overlay Text Enable	`cam1 overlay set enabled {value}`	false	Enables additional text on the Image
All	Expand	`cam1 overlay set expand {value}`	true	Makes the image larger when the text is added. If not set the text will eat into the visible image area.
All	Text	`cam1 overlay set text {value}`	%Shs %Iy04u/ %Io02d/ %Id02u %Ih02u:%Im02u:%Is02u.%Ii03u	The format string for the overlayed text. This has limitations

Platewidth Control (cam1 platewidth)

Available on platforms: All

Automatically calculate and setup plate widths

Platforms	Name	Command	Default Value	Description
All	Plate width Control Enable	`cam1 platewidth set enabled {value}`	false	Enables Automatic Platewidth Control

- `cam1 platewidth info`

  Information. Platforms: All.

  Get detailed information of the status of the platewidth controller. For debugging purposes.

Sequence 1 (cam1 seq1)

Available on platforms: All

One exposure in the sequence for camera

Platforms	Name	Command	Default Value	Description
All	Gain	`cam1 seq1 set gain {value}`	48	Gain in the camera, which increases brightness (and noise) in the image. An aribrary but linear value.
All	Shutter length	`cam1 seq1 set shutter {value}`	16	Length of time that the shutter is open for, and the flash is fired for. This is 0 for 10 microseconds and 31 for 1 millisecond, linearly running between those values.

Sequence 2 (cam1 seq2)

Available on platforms: All

One exposure in the sequence for camera

Platforms	Name	Command	Default Value	Description
All	Gain	`cam1 seq2 set gain {value}`	48	Gain in the camera, which increases brightness (and noise) in the image. An aribrary but linear value.

Platforms	Name	Command	Default Value	Description
All	Shutter length	`cam1 seq2 set shutter {value}`	16	Length of time that the shutter is open for, and the flash is fired for. This is 0 for 10 microseconds and 31 for 1 millisecond, linearly running between those values.

Sequence 3 (cam1 seq3)

Available on platforms: All

One exposure in the sequence for camera

Platforms	Name	Command	Default Value	Description
All	Gain	`cam1 seq3 set gain {value}`	48	Gain in the camera, which increases brightness (and noise) in the image. An aribrary but linear value.
All	Shutter length	`cam1 seq3 set shutter {value}`	16	Length of time that the shutter is open for, and the flash is fired for. This is 0 for 10 microseconds and 31 for 1 millisecond, linearly running between those values.

Sequence 4 (cam1 seq4)

Available on platforms: All

One exposure in the sequence for camera

Platforms	Name	Command	Default Value	Description
All	Gain	`cam1 seq4 set gain {value}`	48	Gain in the camera, which increases brightness (and noise) in the image. An aribrary but linear value.
All	Shutter length	`cam1 seq4 set shutter {value}`	16	Length of time that the shutter is open for, and the flash is fired for. This is 0 for 10 microseconds and 31 for 1 millisecond, linearly running between those values.

Overview Camera (cam2)

Available on platforms: All

Controls for managing the camera and images that it takes

Platforms	Name	Command	Default Value	Description
All	Sensor ADC gain	`cam2 set ADCgain {value}`	52	This sets the adc gain for the Overview sensor Warning don't alter this value. When finished commit will need to be run.
All	Lens Focal Length	`cam2 set FocalLength {value}`	25	The focal length of the lens in front of the overview sensor. This value must be set correctly if overview cropping is in use
All	Sensor Vramp	`cam2 set Vramp {value}`	109	This sets the Vramp value for the Overview sensor Warning don't alter this value. When finished commit will need to be run.

Platforms	Name	Command	Default Value	Description
All	Automatic White Balance	`cam2 set autoWhiteBalance {value}`	true	Enables automatic white balance.
All	Exposure mode	`cam2 set auto_mode {value}`	true	The exposure mode settings, true - auto mode, false - manual mode.
All	Bayer Pattern	`cam2 set bayerOrder {value}`	1	0, 1, 2 or 3. For PIPS engineering use only.
All	Bypass the Bayer Filter	`cam2 set bypassBayer {value}`	false	For PIPS engineering use only.
All	Chroma Order	`cam2 set chromaOrder {value}`	1	0 = YCbCr, 1 = YCrCb, For PIPS engineering use only.
All	FPN removal enabled	`cam2 set fpnRemovalEnabled {value}`	false	Enables and disables FPN removal. Requires the camera to have had the removal image calibrated using calibrateFPN
All	Gain	`cam2 set gain {value}`	0	The gain value(0-15). This only can be set when in manual mode. Mainly for debug use.
All	Gamma Value	`cam2 set gammaCurve {value}`	2	Specifies the gamma correction value. 0 = 1.00, 1 = 0.45, 2 = 0.50 (recommended), 3 = 0.55.
All	Horizontal Scale	`cam2 set horizontalScale {value}`	0	This will control the scale of the whole channel (but not the overview crop), 0 = no scaling, 1 = half scaling, 2 = quarter scaling
All	Maximum Gain	`cam2 set max_gain {value}`	15	The maximum gain value. This camera will automatically set gain and shutter. Setting this higher will result in less blurring, but may cause more noise
All	Maximum shutter length	`cam2 set max_shutter {value}`	4	The maximum shutter length. This camera will automatically set gain and shutter. Setting this lower will give less blurring in the picture, but in low light you may not be able to see anything in the picture if you set it too low as it will not get enough light. Your hardware description must mention that you have a Overview Shutter Limiter for this to work. Values 1-8 are interpreted as milli-seconds. Other values are interpreted as micro-seconds
All	Colour Saturation	`cam2 set saturation {value}`	256	Sets the image saturation level. The recommended value is 256.
All	Sharpening Mode	`cam2 set sharpening {value}`	0	Selects the image sharpening algorithm. 0 = off (for PIPS engineering use only), 1 = the algorithm used in earlier releases, 2 = the improved algorithm (recommended).
All	Shutter length	`cam2 set shutter {value}`	5000	The shutter length in microseconds(16-7500). This only can be set when in manual mode. Mainly for debug use.
All	Target Brightness	`cam2 set target {value}`	110	The target brightness is value that the brightness controller will try and adjust the average pixel value to reach

Platforms	Name	Command	Default Value	Description
All	Vertical Scale	`cam2 set verticalScale {value}`	0	This will control the scale of the whole channel (but not the overview crop), 0 = no scaling, 1 = half scaling, 2 = quarter scaling
All	White Balance Blue Coefficient	`cam2 set whiteBalanceCoeffBlue {value}`	0	The blue coefficient for the white balance operation. This is a read-only value showing the output of auto white balance.
All	White Balance Red Coefficient	`cam2 set whiteBalanceCoeffRed {value}`	0	The red coefficient for the white balance operation. This is a read-only value showing the output of auto white balance.

- `cam2 calibrateFPN`

  Calibrate the Fixed Pattern Noise reference image. Platforms: All.

  Automatically builds a reference image of the Fixed Pattern Noise on the sensor, to allow this to be removed from the images.

- `cam2 ccm`

  Dump Colour Correction Matrix. Platforms: All.

  Dump Colour Correction Matrix

- `cam2 commit`

  Commit the new ADC gain and V Ramp settings. Platforms: All.

  Commits the ADC gain and V Ramp to nand flash

Overlay Control (cam2 overlay)

Available on platforms: All

One overlay control per chanel

Platforms	Name	Command	Default Value	Description
All	Image Below	`cam2 overlay set below {value}`	false	Enables overlayed text on the Image. If not set the text will be above the image.
All	Overlay Text Enable	`cam2 overlay set enabled {value}`	false	Enables additional text on the Image
All	Expand	`cam2 overlay set expand {value}`	true	Makes the image larger when the text is added. If not set the text will eat into the visible image area.
All	Text	`cam2 overlay set text {value}`	%Shs %Iy04u/%Io02d/%Id02u %Ih02u:%Im02u:%Is02u.%Ii03u	The format string for the overlayed text. This has limitations

Client vehicle event reporter (client)

Available on platforms: All

Reports individual vehicle events over the network to a client for live monitoring and diagnostics. Using the ClientView application you can see these images.

Platforms	Name	Command	Default Value	Description
All	Platefinder position instead	`client set platefinder {value}`	false	Show the plate patches from the hardware platefinder rather than the ANPR engine. This is for debugging purposes.

Contexts (contexts)

Available on platforms: All

Control for managing context images associated with an event

Platforms	Name	Command	Default Value	Description
All	Number of Context Images	`contexts set number {value}`	0	Number of context images associated with a vehicle event

Context 1 (contexts ctx1)

Available on platforms: All

An entry defining the offset of a single context image.

Platforms	Name	Command	Default Value	Description
All	Offset	`contexts ctx1 set offset {value}`	250	The offset in milliseconds from the actual read event time. Negative offset will give images prior to the read. Positive offset will give images after the read. Note, the images returned may not have the exact timestamps as specified by the offsets. They will however be the nearest time matching images available. Image timestamp best resolution is affected by the frame rate (for example 50fps implies images are 20ms apart). Images older than a certain period may also be subject to decimation due to limited RAM storage.

Context 2 (contexts ctx2)

Available on platforms: All

An entry defining the offset of a single context image.

Platforms	Name	Command	Default Value	Description
All	Offset	`contexts ctx2 set offset {value}`	250	The offset in milliseconds from the actual read event time. Negative offset will give

Platforms	Name	Command	Default Value	Description
				images prior to the read. Positive offset will give images after the read. Note, the images returned may not have the exact timestamps as specified by the offsets. They will however be the nearest time matching images available. Image timestamp best resolution is affected by the frame rate (for example 50fps implies images are 20ms apart). Images older than a certain period may also be subject to decimation due to limited RAM storage.

Context 3 (contexts ctx3)

Available on platforms: All

An entry defining the offset of a single context image.

Platforms	Name	Command	Default Value	Description
All	Offset	`contexts ctx3 set offset {`*`value`*`}`	250	The offset in milliseconds from the actual read event time. Negative offset will give images prior to the read. Positive offset will give images after the read. Note, the images returned may not have the exact timestamps as specified by the offsets. They will however be the nearest time matching images available. Image timestamp best resolution is affected by the frame rate (for example 50fps implies images are 20ms apart). Images older than a certain period may also be subject to decimation due to limited RAM storage.

Context 4 (contexts ctx4)

Available on platforms: All

An entry defining the offset of a single context image.

Platforms	Name	Command	Default Value	Description
All	Offset	`contexts ctx4 set offset {`*`value`*`}`	250	The offset in milliseconds from the actual read event time. Negative offset will give images prior to the read. Positive offset will give images after the read. Note, the images returned may not have the exact timestamps as specified by the offsets. They will however be the nearest time matching images available. Image timestamp best resolution is affected by the frame rate

Platforms	Name	Command	Default Value	Description
				(for example 50fps implies images are 20ms apart). Images older than a certain period may also be subject to decimation due to limited RAM storage.

Context 5 (contexts ctx5)

Available on platforms: All

An entry defining the offset of a single context image.

Platforms	Name	Command	Default Value	Description
All	Offset	`contexts ctx5 set offset {`*`value`*`}`	250	The offset in milliseconds from the actual read event time. Negative offset will give images prior to the read. Positive offset will give images after the read. Note, the images returned may not have the exact timestamps as specified by the offsets. They will however be the nearest time matching images available. Image timestamp best resolution is affected by the frame rate (for example 50fps implies images are 20ms apart). Images older than a certain period may also be subject to decimation due to limited RAM storage.

Context 6 (contexts ctx6)

Available on platforms: All

An entry defining the offset of a single context image.

Platforms	Name	Command	Default Value	Description
All	Offset	`contexts ctx6 set offset {`*`value`*`}`	250	The offset in milliseconds from the actual read event time. Negative offset will give images prior to the read. Positive offset will give images after the read. Note, the images returned may not have the exact timestamps as specified by the offsets. They will however be the nearest time matching images available. Image timestamp best resolution is affected by the frame rate (for example 50fps implies images are 20ms apart). Images older than a certain period may also be subject to decimation due to limited RAM storage.

Context 7 (contexts ctx7)

Available on platforms: All

An entry defining the offset of a single context image.

Platforms	Name	Command	Default Value	Description
All	Offset	`contexts ctx7 set offset {value}`	250	The offset in milliseconds from the actual read event time. Negative offset will give images prior to the read. Positive offset will give images after the read. Note, the images returned may not have the exact timestamps as specified by the offsets. They will however be the nearest time matching images available. Image timestamp best resolution is affected by the frame rate (for example 50fps implies images are 20ms apart). Images older than a certain period may also be subject to decimation due to limited RAM storage.

Context 8 (contexts ctx8)

Available on platforms: All

An entry defining the offset of a single context image.

Platforms	Name	Command	Default Value	Description
All	Offset	`contexts ctx8 set offset {value}`	250	The offset in milliseconds from the actual read event time. Negative offset will give images prior to the read. Positive offset will give images after the read. Note, the images returned may not have the exact timestamps as specified by the offsets. They will however be the nearest time matching images available. Image timestamp best resolution is affected by the frame rate (for example 50fps implies images are 20ms apart). Images older than a certain period may also be subject to decimation due to limited RAM storage.

Plate Database Matcher (dbmatcher)

Available on platforms: All

The database matching system allows the system to look up number plates in a database.

It is possible to filter out plates based on whether they are found or not.

It is also possible to collect a tag string for plates which are found which can be output by the delivery system.

No spaces or commas are allowed in the plate or tag string.

INSTALLING NEW DATABASE FILES:

Copy a file named [YourPlatesDatabaseName].install into the camera /storage/db/ directory.

For example, for the default plates.db name, you would copy a file named plates.db.install into the /storage/db/ directory.

The system should automatically detect this and install the new file. To confirm this, do a directory listing of the /storage/db/ directory and confirm:

1)That the plates.db.install you just copied in has disappeared (GUI Tool may need refreshing)

2)That the plates.db file md5sum matches the file you installed.

If for some reason this does not work, then copy your plates.db.install into /storage/

and then, using the linux command prompt, move this file into /storage/db/

mv /storage/plates.db.install /storage/db/.

and then verify as above.

Platforms	Name	Command	Default Value	Description
All	Enabled	`dbmatcher set enabled {value}`	false	Allows the Filter system to be enabled and disabled. Disable it unless you are using it.
All	Forward Event on match	`dbmatcher set forward_on_match {value}`	false	Will forward the plate read event only if a match is found in the database. May be enabled simultaneously with forward_on_nomatch. This will have the effect of all plates being forwarded but matching plates will carry their corresponding tags.
All	Forward Event on no match	`dbmatcher set forward_on_nomatch {value}`	false	Will forward the plate read event if no match is found in the database. May be enabled simultaneously with forward_on_match. This will have the effect of all plates being forwarded but matching plates will carry their corresponding tags.
All	Plate Database File Name	`dbmatcher set plates_filename {value}`	plates.db	Specify the filename of the plates SQLite database. This file may be pre-created and placed in the /storage/db/ directory. The SQL to create a compatible database is: CREATE TABLE plateDB(plate TEXT PRIMARY KEY ASC, tag TEXT);

- `dbmatcher insert {plate} {tag}`

  Insert a plate+tag. Platforms: All.

  Adds a plate+tag combination to the plates database.

#	Name	Parameter	Description
1		plate	The plate you wish to insert

#	Name	Parameter	Description
	Plate Entry to insert		
2	Plate Tag	tag	The tag associated with the plate you wish to insert

- `dbmatcher lookup` {*`plate`*}

  Lookup a plate. Platforms: All.

  Determines if a plate exists in the current database. Will confirm if the plate is found and print its tag value

#	Name	Parameter	Description
1	Plate Entry to lookup	plate	The plate you wish to find in the database

- `dbmatcher reload`

  Load the database file. Platforms: All.

  Load the file named by plates_filename. Use this command to reload the plates database file if it has been changed or replaced, or if you have changed the name.

- `dbmatcher remove` {*`plate`*}

  Remove a plate. Platforms: All.

  If the plate exists in the current database it (and its associated tag) will be removed.

#	Name	Parameter	Description
1	Plate Entry to remove	plate	The plate you wish to remove from the database

- `dbmatcher statistics`

  Cumulative statistics. Platforms: All.

  Provides cumulative statistics of longterm vehicle filter processing

Diagnostics and Exceptions Manager (diagnostics)

Available on platforms: All

Diagnostics and Exceptions

Platforms	Name	Command	Default Value	Description
All	Acknowledgents Enabled	`diagnostics set ack_enabled` {*`value`*}	true	If true, the delivery system will await acknowledgement
All	Diagnostic/ Exception ack wait timeout	`diagnostics set ack_timeout` {*`value`*}	30	Period in seconds to wait for an acknowledgement of a diagnostic or exception message
All	Minimum Samples for Diagnostics	`diagnostics set min_samples` {*`value`*}	10	Certain types of diagnostics (e.g. mean values or ratios) are only considered valid after a certain number of samples.

Platforms	Name	Command	Default Value	Description
All	Diagnostic period	`diagnostics set diagnostic_period {value}`	20	Period in minutes between diagnostic updates
All	Diagnostic Delivery Port	`diagnostics set diagnostic_port {value}`	5001	The TCP port that diagnostic messages will be delivered on. Set to
All	Disk Queue Length	`diagnostics set disk_queue_length {value}`	5	The number of diagnostic and exception events that are maintained in a persistent disk queue while the in station receiver is offline. Diagnostics are kept in a seperate queue to exceptions. This value applies to all queues
All	Diagnostics enabled	`diagnostics set enabled {value}`	false	Allows diagnostic and exception reporting to be enabled/disabled
All	Minimum Samples for Exceptions	`diagnostics set exception_min_samples {value}`	20	Certain types of exceptions (e.g. mean values or ratios) are only considered valid after a certain number of samples.
All	Exception Period	`diagnostics set exception_period {value}`	5	Period in minutes between (non-realtime) exception updates
All	Exception Delivery Port	`diagnostics set exception_port {value}`	5002	The TCP port that exception messages will be delivered on
All	Delivery Host	`diagnostics set host {value}`	10.1.1.1	The IP address to which the diagnsotic and exception messages will be transferred.
All	JTMS Compatible	`diagnostics set jtms {value}`	false	Generate JTMS compatible diagnostics instead of VES compatible diagnostics. The differences are small but significant.

File Logger (filelog)

Available on platforms: All

The logger which reports information to specified file. NB: A log file can grow to fill the disk. Use logrotate to manage log files.

Platforms	Name	Command	Default Value	Description
All	Enable file logging	`filelog set enabled {value}`	false	Enable logging to a file. NB, the camera does not manage the file size or archiving. Please use logrotate
All	Log File Name	`filelog set filename {value}`	/var/log/start382.log	Specify the filename to receive log output. NB: To avoid this file growing too large, please use logrotate
All	Print line/file	`filelog set lineFilePrint {value}`	true	Print Linenumber and Filename for logging messages
All	Print time	`filelog set timePrint {value}`	true	Print time for logging messages

Vehicle Fusion (fusion)

Available on platforms: All

The system may read multiple images of any given vehicle, and this subsystem merges those multiple vehicle reads into a single coherant result for output.

Platforms	Name	Command	Default Value	Description
All	Combine hazard and normal plates	`fusion set combine_hazard {value}`	false	If this is set true, an attempt will be made to match the hazard plate with the normal plate of the same vehicle. If successful, a combined event will be forwarded. If a hazard plate is read, it will normally be forwarded as an independant plate read.
All	Distance from edge	`fusion set distance {value}`	256	Distance from the edge specified in the selector parameter to the centre of the plate which will be used to try to select an appropriate plate for you (measured in pixels). May not be used if no distance selector in use.
All	Duplicate Level	`fusion set duplicate_level {value}`	60	Percentage match level at which the numberplates will be considered as duplicates for matching multiple reads of a vehicle together. 100 means they must be identical, and 0 means anything will match anything else (which makes the camera pretty useless).
All	Early result	`fusion set early {value}`	false	Output the first event from a vehicle even if it may well be wrong. Useful if the time between a vehicle being seen and the camera reporting it is critical, otherwise don't choose this
All	Maximum gap	`fusion set gap {value}`	700	Length of time after seeing a vehicle when we pass on the vehicle when we haven't seen it again for this long. Given in milliseconds.
All	Maximum age of vehicle	`fusion set max_age {value}`	2000	Maximum time the vehicle can be in the field of view before we pass it on anyway. Given in milliseconds.
All	No Event Timeout	`fusion set noevent_timeout {value}`	4294967295	If no vehicle event has been delivered within this timeout period (in seconds) a Vehicle Detect Timeout exception will be generated. This is a boolean exception and will be cleared as soon as a vehicle event is forwarded. This cannot be set below 10 seconds
All	Allow out of trigger images	`fusion set outoftrigger {value}`	false	If a vehicle arrives during a trigger we will only deliver images from within the trigger period unless you tick this box. This allows us to deliver better images from earlier.
All	Persistant event id	`fusion set persistantEventId {value}`	true	Set this value to true to keep the next event id in a separate file. Setting this value to false causes the camera to calculate the next event id using the data stored on the VFE database. It takes some time to update the VFE database and

Platforms	Name	Command	Default Value	Description
				the event id sequence may not be updated correctly if the camera app is restarted. If the VFE database is disabled then the event id sequence is reset to 0 when the camera app is restarted. Set this value to true if the uniqueness of event ids is important. Set the value to false if performance is important.
All	Repeating vehicles	`fusion set repeat {value}`	true	If a vehicle stays in the field of view we will pass it on every max_age milliseconds if this is set true, otherwise just once. In the presence of triggers, all vehicles are flushed when the trigger gate closes. Repeats may then still be experienced. In order to prevent repeats in the presence of triggers, set the repeat_on_trigger to false.
All	Repeating vehicles per trigger	`fusion set repeat_on_trigger {value}`	true	If true, a vehicle staying in the field of view we will be forwarded on every trigger (default). Otherwise the vehicle will only be forwarded the first time it is detected within a trigger period.
All	Plate Selector	`fusion set selector {value}`	0	This parameter will allow the system to select an appropriate plate for you. Sometimes we may not be able to select a plate which matches your criteria very well, but we will do what we can. 0=Best plate read. 1=Distance from top edge. 2=Distance from left edge. 3=Plate exposure quality, for better visibility of the non plate text details
All	Set reads forwarded from a trigger to 1	`fusion set single_read_on_trigger {value}`	false	Only applies to triggered systems. Will limit the maximum number of read events delivered per trigger to 1. The vehicle chosen for delivery will be decided according to read confidence. Beware of setting this as vehicles (such as adjacent vehicles) may be missed. Also, if set, a parked vehicle may prevent any other vehicles being read.
All	Supplementary IR Images	`fusion set supplementary_images {value}`	false	Only works for images within a trigger gate open period.

Platforms	Name	Command	Default Value	Description
				If true, up to two additional full IR image will be available for delivery. These will be alternatively exposed IR images (if alternative exposure sequence images are available). If no other sequence images are available the best exposed of the remaining IR images (if any) will be available. In the case where only one image was analysed for the vehicle, no additional image will be available.

- `fusion clearstats`

  Clears Cumulative statistics. Platforms: All.

  Resets all statistics collection variables to initial values

- `fusion stats`

  Cumulative statistics. Platforms: All.

  Provides cumulative statistics of longterm vehicle processing

- `fusion status`

  Current status. Platforms: All.

  Gets the current status of the vehicles being processed by the module

GPS Time Manager (gps)

Available on platforms: All

Manages GPS Time Sync

Platforms	Name	Command	Default Value	Description
All	Enabled	`gps set enabled` {*`value`*}	false	Enables gps time manager

- `gps status`

  Current status of GPS/PPS. Platforms: All.

  Gets the current status of the GPS and PPS time management

Heartbeat (heartbeat)

Available on platforms: All

Platforms	Name	Command	Default Value	Description
All	Heartbeat Content	`heartbeat set content` {*`value`*}	%Shs,%hsx,%fcm,%hfm	A format string specifying the content of the heartbeat message.

Platforms	Name	Command	Default Value	Description
All	Enabled	`heartbeat set enabled {value}`	false	Allows the Heartbeat system to be enabled and disabled. Disable it unless you are using it.
All	Delivery Host	`heartbeat set host {value}`	10.1.1.1	The IP address to which the heartbeat messages will be transferred.
All	Heartbeat period	`heartbeat set period {value}`	60	Period in seconds between heartbeats
All	Heartbeat Delivery Port	`heartbeat set port {value}`	10005	The TCP port that heartbeat messages will be delivered on.

Image File Outputter (ifo)

Available on platforms: All

Stores the images from the camera onto disk. These are just periodic images from the selected camera, like a video stream, not ones of particular interest, and they may or may not contain plates. If you have network mounted a disk this would be most useful, as otherwise you'll quickly fill up the internal storage of the camera. Look at mounting a disk in /storage to use this. This module is designed purely for testing and debugging, not for production systems. There is no guarantee that images will come out at all if the rest of the system is too busy. Image metadata is stored in the filename. The filename format may change without notice.

Platforms	Name	Command	Default Value	Description
All	Anpr Patches	`ifo set anprpatch {value}`	true	When looking at plates, output an extra file for the anpr patch. This file will have the prefix A
All	Bitmap	`ifo set bitmap {value}`	false	Enable this to output bitmap files, otherwise the output is jpeg format. Only works for monochrome images, colour ones are always jpeg format.
All	Colour	`ifo set colour {value}`	false	Enable this to store video images from the colour camera, otherwise look at the monochrome camera. Has no effect on plate images which are always monochrome.
All	Output Directory	`ifo set directory {value}`	/tmp	Directory to receive the files relative to the /storage directory. It is recommended you mount an external network disk here to collect the images.
All	Enabled	`ifo set enabled {value}`	false	Enable or disable the output of raw image files (e.g. this whole module). Should be turned off on production systems.
All	Minimum interval	`ifo set interval {value}`	1000	Minimum number of milliseconds between files, with a busy camera, filesystem or network this may not be adhered to.
All	Hardware Platefinder Patches	`ifo set pfpatch {value}`	false	When looking at plates, output an extra file for the platefinder patch. This file will have the prefix H
All	Plates	`ifo set plates {value}`	true	Enable or disable the output of plate images. These are images where we have read a plate. May be used simultaneously with video if you want. These files will have the prefix P

Platforms	Name	Command	Default Value	Description
All	PreFusion	`ifo set prefusion {value}`	false	When looking at plates, enable or disable looking at the plates prior to processing by the vehicle fusion, instead of after. These plates may be rubbish. If you have no idea what this means you will want it off, it is mainly for debugging.
All	Video	`ifo set video {value}`	false	Enable or disable the output of the video stream. This does not contain every field, just a periodic selection. Enabling this produces a LOT of data. These files will have the prefix V.

- `ifo burst`

  Burst Video. Platforms: All.

  Output a burst of consecutive video fields from the selected camera in the selected format. Will burst for a short while based upon the data rate we can write at. May upset the rest of the camera during the burst, so never do this on a production system. This will work even if the rest of this subsystem is disabled.

JPEG Service (jpegService)

Available on platforms: All

Controls the generation of JPEG images

Platforms	Name	Command	Default Value	Description
All	NASP compliant jpeg patch of 120x60	`jpegService set fixedPatch {value}`	false	Forces the size of the patch to match the requirement in the UK Govenments NASP specification of 120x60 pixels
All	Enable Histogram Stretching	`jpegService set histogramEnable {value}`	true	Set true to enable histogram stretching to improve contrast (recommended).
All	Lower Ignore	`jpegService set lowIgnoreAmount {value}`	300	100 times the percentage of dark pixels excluded from histogram stretching (e.g. 300 = 3%). Only change this value if you are familiar with image processing algorithms or under instruction from PIPS engineers.
All	Maximum Stretch Percentage	`jpegService set maxStretchPercent {value}`	80	Maximum amount to stretch the histogram (1-100%). Only change this value if you are familiar with image processing algorithms or under instruction from PIPS engineers.
All	Minimum Stretch Percentage	`jpegService set minStretchPercent {value}`	40	Minimum amount to stretch the histogram (1-100%). Only change this value if you are familiar with image processing algorithms or under instruction from PIPS engineers.
All	JPEG Target Size	`jpegService set size {value}`	192	Varies the target size of the jpegs, in KB, Patches will be 1/4 of the size
All		`jpegService set targetQuality {value}`	0	
All	Upper Ignore	`jpegService set upIgnoreAmount {value}`	200	100 times the percentage of bright pixels excluded from histogram stretching (e.g. 200 = 2%). Only change this value if you are

Platforms	Name	Command	Default Value	Description
				familiar with image processing algorithms or under instruction from PIPS engineers.

- `jpegService qualities`

  Display qualities. Platforms: All.

  Display the controller selected quality for each channel (or each exposure sequence of each channel) and for patches.

JTMS - Journey Time Measurement System (jtms)

Available on platforms: All

A system for delivering numberplates using very low bandwidth specifically for journey time measurement. Only minimal information is transmitted by the system. To use JTMS you must give your camera a 4 digit numerical hostname, which will be its site ID. This module only supplies tags, you should look at the diagnostics module to enable diagnostics and exceptions in jtms compatible format.

Platforms	Name	Command	Default Value	Description
All	Tag format	`jtms set binary` {*value*}	1	The format of the tag messages. 0 - human readable text messages. 1 - binary messages (more compact). 2 - Extended binary format with state/country, classification, confidence and 24 bit hashed tags.
All	Enabled	`jtms set enabled` {*value*}	false	Allows the JTMS system to be enabled and disabled. Disable it unless you are using it.
All	Host	`jtms set host` {*value*}	192.168.1.1	The IP address of the instation which will receive the JTMS data.
All	Merge Characters	`jtms set mergechars` {*value*}	true	Enable merging of possible ambiguous characters such as 8 and B prior to transmission
All	Maximum Files	`jtms set nlog` {*value*}	6	The maximum number of files which will be stored on the local filesystem before they are overwritten if it is not possible to contact the instation. Warning, arbitrarily setting this to a high value may fill up the device on which you are storing the files and then the system will lose the wrong data or may perform badly.
All	Tag Period	`jtms set period` {*value*}	5	The number of minutes between sending tag messages
All	Time Slot	`jtms set time_slot` {*value*}	0	Time slot which is used by this system for transmission. Use this to spread the network load of your outstations. This is a percentage value and is used as an offset from the beginning of the time which could be used for transmission verses the end of that transmission slot - e.g. 0 it will transmit at the very beginning of the slot, at 100 at the very end.
All	ACK Timeout	`jtms set timeout` {*value*}	60	Number of seconds to wait for an ACK (if ACKs are enabled). Set to zero to disable

- `jtms reset`

Reset statistics. Platforms: All.

Reset the statistics for this module

- `jtms statistics`

  Statistics. Platforms: All.

  Display statistics from this module

External Led Control (ledControl)

Available on platforms: All

Setting to Control the pips illuminator

Platforms	Name	Command	Default Value	Description
All	Length of flash in microseconds	`ledControl set flashTime` {*value*}	1000	Sets the length of the flash in microseconds
All	Enable internal Led's	`ledControl set internalEnable` {*value*}	true	Set this to false to disable the internal LED's
All	Set mode of external Led's	`ledControl set mode` {*value*}	0	Mode 0 = Off, Mode 1 = Synced to Cam1(triple sequence), Mode 2 = Synced to Cam2, Mode 3 = Fixed Length

Metadata store (metadata)

Available on platforms: All

This is an object for storing site metadata as string values. The information stored in here is NOT used by the system, and is just for you to use when creating format strings. The data will be output in the format strings unchanged, and allows you to put per-site data in here, keeping the format strings the same on all sites. You might wish to store lane IDs, zones, site direction or anything else similar in here. We would recommend setting the hostname as the unique site identifer which may be accessed though %Sh. It also provides a way of mapping from long event metadata into short codes for output with the %E* variables. You enter into map_a the long name of the variable you'd like available as %Ea. This part is probably not useful to you at the moment unless you understand this without further explanation.

Platforms	Name	Command	Default Value	Description
All	Mapping a	`metadata set map_a` {*value*}		Name of an event metadata string you'd like visible in %Ea.
All	Mapping b	`metadata set map_b` {*value*}		Name of an event metadata string you'd like visible in %Eb.
All	Mapping c	`metadata set map_c` {*value*}		Name of an event metadata string you'd like visible in %Ec.
All	Mapping d	`metadata set map_d` {*value*}		Name of an event metadata string you'd like visible in %Ed.
All	Mapping e	`metadata set map_e` {*value*}		Name of an event metadata string you'd like visible in %Ee.
All	Mapping f	`metadata set map_f` {*value*}		Name of an event metadata string you'd like visible in %Ef.
All	Mapping g	`metadata set map_g` {*value*}		Name of an event metadata string you'd like visible in %Eg.

Platforms	Name	Command	Default Value	Description
All	Mapping h	`metadata set map_h {value}`		Name of an event metadata string you'd like visible in %Eh.
All	Mapping i	`metadata set map_i {value}`		Name of an event metadata string you'd like visible in %Ei.
All	Mapping j	`metadata set map_j {value}`		Name of an event metadata string you'd like visible in %Ej.
All	Mapping k	`metadata set map_k {value}`		Name of an event metadata string you'd like visible in %Ek.
All	Mapping l	`metadata set map_l {value}`		Name of an event metadata string you'd like visible in %El.
All	Mapping m	`metadata set map_m {value}`		Name of an event metadata string you'd like visible in %Em.
All	Mapping n	`metadata set map_n {value}`		Name of an event metadata string you'd like visible in %En.
All	Mapping o	`metadata set map_o {value}`		Name of an event metadata string you'd like visible in %Eo.
All	Mapping p	`metadata set map_p {value}`		Name of an event metadata string you'd like visible in %Ep.
All	Mapping q	`metadata set map_q {value}`		Name of an event metadata string you'd like visible in %Eq.
All	Mapping r	`metadata set map_r {value}`		Name of an event metadata string you'd like visible in %Er.
All	Mapping s	`metadata set map_s {value}`		Name of an event metadata string you'd like visible in %Es.
All	Mapping t	`metadata set map_t {value}`		Name of an event metadata string you'd like visible in %Et.
All	Mapping u	`metadata set map_u {value}`		Name of an event metadata string you'd like visible in %Eu.
All	Mapping v	`metadata set map_v {value}`		Name of an event metadata string you'd like visible in %Ev.
All	Mapping w	`metadata set map_w {value}`		Name of an event metadata string you'd like visible in %Ew.
All	Mapping x	`metadata set map_x {value}`		Name of an event metadata string you'd like visible in %Ex.
All	Mapping y	`metadata set map_y {value}`		Name of an event metadata string you'd like visible in %Ey.
All	Mapping z	`metadata set map_z {value}`		Name of an event metadata string you'd like visible in %Ez.
All	String a	`metadata set string_a {value}`		A string, access in format strings as %Ma.
All	String b	`metadata set string_b {value}`		A string, access in format strings as %Mb.
All	String c	`metadata set string_c {value}`		A string, access in format strings as %Mc.
All	String d	`metadata set string_d {value}`		A string, access in format strings as %Md.

Platforms	Name	Command	Default Value	Description
All	String e	`metadata set string_e {value}`		A string, access in format strings as %Me.
All	String f	`metadata set string_f {value}`		A string, access in format strings as %Mf.
All	String g	`metadata set string_g {value}`		A string, access in format strings as %Mg.
All	String h	`metadata set string_h {value}`		A string, access in format strings as %Mh.
All	String i	`metadata set string_i {value}`		A string, access in format strings as %Mi.
All	String j	`metadata set string_j {value}`		A string, access in format strings as %Mj.
All	String k	`metadata set string_k {value}`		A string, access in format strings as %Mk.
All	String l	`metadata set string_l {value}`		A string, access in format strings as %Ml.
All	String m	`metadata set string_m {value}`		A string, access in format strings as %Mm.
All	String n	`metadata set string_n {value}`		A string, access in format strings as %Mn.
All	String o	`metadata set string_o {value}`		A string, access in format strings as %Mo.
All	String p	`metadata set string_p {value}`		A string, access in format strings as %Mp.
All	String q	`metadata set string_q {value}`		A string, access in format strings as %Mq.
All	String r	`metadata set string_r {value}`		A string, access in format strings as %Mr.
All	String s	`metadata set string_s {value}`		A string, access in format strings as %Ms.
All	String t	`metadata set string_t {value}`		A string, access in format strings as %Mt.
All	String u	`metadata set string_u {value}`		A string, access in format strings as %Mu.
All	String v	`metadata set string_v {value}`		A string, access in format strings as %Mv.
All	String w	`metadata set string_w {value}`		A string, access in format strings as %Mw.
All	String x	`metadata set string_x {value}`		A string, access in format strings as %Mx.
All	String y	`metadata set string_y {value}`		A string, access in format strings as %My.

Platforms	Name	Command	Default Value	Description
All	String z	`metadata set string_z {value}`		A string, access in format strings as %Mz.

OEM Modules (modules)

Available on platforms: All

Allows the specification of the supported OEM module types

Platforms	Name	Command	Default Value	Description
All	Number of ACS	`modules set num_acs {value}`	1	Number of ACS modules. Any change will require a restart to take effect. Set to 0 if you dont need ACS. If set to 1, will be called simply acs. If>1 will be called acs1, acs2 etc.
All	Number of BOF 2	`modules set num_bof2 {value}`	0	Number of BOF 2.2 Delivery modules. Any change will require a restart to take effect. Set to 0 if you dont need the Relay Output. Otherwise set to 1. Only a single Relay Output module is allowed.
All	Number of JTMS	`modules set num_jtms {value}`	1	Number of JTMS modules. Any change will require a restart to take effect. Set to 0 if you dont need JTMS. Otherwise set to 1. Only a single JTMS module allowed. .
All	Number of Relay Output	`modules set num_relayOut {value}`	0	Number of Relay Output modules. Any change will require a restart to take effect. Set to 0 if you dont need the Relay Output. Otherwise set to 1. Only a single Relay Output module is allowed.
All	Number of SAP	`modules set num_sap {value}`	0	Number of SAP modules. Any change will require a restart to take effect. Set to 0 if you dont need SAP. Otherwise set to 1. Only a single sap module allowed.
All	Number of UTMC	`modules set num_utmc {value}`	0	Number of UTMC modules. Any change will require a restart to take effect. Set to 0 if you dont need UTMC.

Platforms	Name	Command	Default Value	Description
				Otherwise set to 1. Only a single UTMC module allowed.
All	Number of UTMCV12	`modules set num_utmcv12 {value}`	0	Number of UTMC Version 1.2 modules. Any change will require a restart to take effect. Set to 0 if you dont need UTMC Version 1.2. Otherwise set to 1. Only a single UTMC Version 1.2 module allowed.
All	Number of VES	`modules set num_ves {value}`	1	Number of VES modules. Any change will require a restart to take effect. Set to 0 if you dont need VES. Otherwise set to 1. Only a single ves module allowed.

Network user interface manager (netuis)

Available on platforms: All

The manager for the network user interfaces. These are the interfaces which the web and shell connect to.

Platforms	Name	Command	Default Value	Description
All	To enable/disable the generation of exceptions	`netuis set exceptions {value}`	false	If true, will transmit an exception when a control connection is made. Will only count the first control connection and will only clear the condition when there have been no connections for 5 minutes

- `netuis status`

  Current status. Platforms: All.

  Display the status of the NetUI servers, how many are in use.

Network user interface (netuis netui1)

Available on platforms: All

Network user interface instance which communicates with users

Platforms	Name	Command	Default Value	Description
All	Print line/file	`netuis netui1 set lineFilePrint {value}`	true	Print Linenumber and Filename for logging messages
All	Print time	`netuis netui1 set timePrint {value}`	true	Print time for logging messages
All	Disconnect timeout	`netuis netui1 set timeout {value}`	300	Disconnect timeout in seconds, for when the interface is inactive

NTP Monitor (ntpMonitor)

Available on platforms: All

Monitors NTP status and generates exceptions if any issues detected.

Platforms	Name	Command	Default Value	Description
All	Allowed missed polls	`ntpMonitor set allowed_missed_polls {value}`	8	Number of allowed consecutive missed polls of NTP server before an exception is flagged. The NTP daemon itself flags after 8 missed polls, so that will always generate an exception. However, 8 polls may take quite some time to complete (hours). While system time should be stable and accurate during this period, some might prefer to know sooner if the NTP server has not been reached. This value is also for consecutive missed polls. Set this to between 0 and 8.

Licence options (options)

Available on platforms: All

Management of the licence file

- `options display`

  Display Licence. Platforms: All.

  Display current licence information

- `options load`

  Read Licence file. Platforms: All.

  Load a new licence file from /storage/options.txt, and install's to system licence information

- `options test {on_off}`

  Set System in test mode. Platforms: All.

  Enable test mode, allows 100 Reads before marking number plate unreadable

#	Name	Parameter	Description
1	Test Mode	on_off	Test mode enable / disable

Patch Overlay Control (patchoverlay)

Available on platforms: All

Specify whether the plateread patch has an overlay, and what its contents should be.

Platforms	Name	Command	Default Value	Description
All	Overlay Text Enable	`patchoverlay set enabled {value}`	false	Enables additional text on the Image
All	Text	`patchoverlay set text {value}`		The format string for the overlayed text. This has limitations

Platforms	Name	Command	Default Value	Description
			%Iy04d/%Io02d/%Id02d_%Ih02d:%Im02d:%Is02d\n%Shs_%Pps_%Pc02d	

PCI Camera Source (pciSource)

Available on platforms: All

The internal camera subsystem, connected via PCI to the processor. These controls are mostly for diagnostics.

- `pciSource clear`

  Reset interrupt latency statistics. Platforms: All.

  Reset counts of interrupts from the PCI camera.

- `pciSource irbufs`

  Dump IR Bufs in use. Platforms: All.

  Dump IR Bufs in use

- `pciSource latency`

  Display interrupt latency statistics. Platforms: All.

  Display details and counts of interrupts from the PCI camera.

PIXI Contexts (pixicontexts)

Available on platforms: All

Manages PIXI contexts

- `pixicontexts list`

  List PIXI Contexts. Platforms: All.

  List existing PIXI persistent LIFOS as well as their lengths.

Power Manager (power)

Available on platforms: All

Power Management subsystem, monitoring the power coming into the system and dealing with power down when the power is cut.

Relay Out (relayOut)

Available on platforms: All

Controls the relay according to plate read events

Platforms	Name	Command	Default Value	Description
All	Relay Action	`relayOut set action {value}`	close	

Platforms	Name	Command	Default Value	Description
All	Enabled	`relayOut set enabled` {*value*}	false	
All	Relay Pulse Period	`relayOut set period` {*value*}	250	
All	Tag Match Regular Expression	`relayOut set tag_regex` {*value*}	.*	

SAP - Serial Application Port (sap)

Available on platforms: All

Simple serial port output

Platforms	Name	Command	Default Value	Description
All	Serial Baud Rate	`sap set baud` {*value*}	9600	The serial port baud rate. For changes to take effect, disable then re-enable. Valid values 2400, 4800, 9600, 19200, 38400, 57600, 115200, 230400
All	Enabled	`sap set enabled` {*value*}	false	Allows the SAP system to be enabled and disabled. Disable it unless you are using it.
All	Message contents	`sap set msg_contents` {*value*}	%Pps\n	A format string specifying the message content. The default gives you the plate-read text followed by newline.

Vehicle Image Selector (selector)

Available on platforms: All

Selects images from the hardware platefinder for further analysis and ANPR by the rest of the software.

Platforms	Name	Command	Default Value	Description
All	Previous trigger frame	`selector set pre_trigger_frame` {*value*}	true	Allow the camera to select the frame before the trigger was recieved if it has a lower time proximity to the trigger than the event after
All	Selector queue length	`selector set queueLength` {*value*}	5	Do not chnge this without good reason. By Changing the length of the queue it may change the latency to delivery, but is very likely to affect the read rate
All	Trigger Overview	`selector set triggerOview` {*value*}	false	If this is set *when triggered* the overview will be coincident with the trigger start. If this is not set or the vehicle was not triggered then the overview image will be taken at the same time as the IR image.
All	Triggers Only	`selector set triggersOnly` {*value*}	false	If this is set we will only detect vehicles during the trigger period, otherwise we'll auto detect

Platforms	Name	Command	Default Value	Description
				vehicles all the time but explicitly pass them on when triggered

- `selector statistics`

  Cumulative statistics. Platforms: All.

  Provides cumulative statistics of longterm vehicle processing

Hardware Monitoring sensors (sensors)

Available on platforms: All

This module periodically polls the sensor values

- `sensors dump`

  Dump Current readings. Platforms: All.

  Displays the current readings of the sensors

Console Logger (stdout)

Available on platforms: All

The logger which reports information to the standard out (stdout) device (usually the console). This is probably of no use to you as you probably aren't looking at it.

Platforms	Name	Command	Default Value	Description
All	Print line/file	`stdout set lineFilePrint {`*`value`*`}`	true	Print Linenumber and Filename for logging messages
All	Print time	`stdout set timePrint {`*`value`*`}`	true	Print time for logging messages

System Details (system)

Available on platforms: All

An object for collecting lists of system details and objects.

Platforms	Name	Command	Default Value	Description
All	P392 Bracket Location	`system set bracketBottom {`*`value`*`}`	true	P392 mounted with bracket at the bottom is true otherwise the variable should be false
All	COM2 serial use	`system set com2 {`*`value`*`}`	disabled	This settings determines what the com2 second user available serial port is used for. Options are: 'trig_serial' - generic serial triggering with regex matching and variable baud rate. 'sap' - Serial text output of vehicle plateread events. 'vestrigger' - 19.2k STX delimited trigger messages for VES.

Platforms	Name	Command	Default Value	Description
				'gps' - GPS unit talking NMEA at 4.8k. 'disabled' - not in use.
All	Coordinates Valid	`system set coord_valid {value}`	false	A flag indicating whether these coordinates are valid or not
All	East (not West)	`system set east {value}`	true	Flag indicating whether the longitude value is East or West. 1->East, 0->West
All	North Degrees	`system set latitude {value}`	0	This is the latitude coordinate of this camera, and this is the degree portion of the coordinate. If you have a GPS system attached and working this will be automatically updated everytime we have a lock, otherwise it is manually enterable.
All	North Microdegrees	`system set latitude_micro {value}`	0	This is the latitude coordinate of this camera, and this is the microdegree portion of the coordinate. If you have a GPS system attached and working this will be automatically updated everytime we have a lock, otherwise it is manually enterable.
All	East Degrees	`system set longitude {value}`	0	This is the longitude coordinate of this camera, and this is the degree portion of the coordinate. If you have a GPS system attached and working this will be automatically updated everytime we have a lock, otherwise it is manually enterable.
All	East Microdegrees	`system set longitude_micro {value}`	0	This is the longitude coordinate of this camera, and this is the microdegree portion of the coordinate. If you have a GPS system attached and working this will be automatically updated everytime we have a lock, otherwise it is manually enterable.
All	North (not south)	`system set north {value}`	true	Flag indicating whether the latitude value is North or South. 1->North, 0->South
All	Relay output use	`system set relay {value}`	disabled	This setting determines what the relay input is used for. Options are: 'gpspower' - for use in switching on and off a gps unit (only usable with the serial port com2 also connected to the gps). 'disabled' - not in use.
All	Trigger input use	`system set trigger {value}`	disabled	This setting determines what the trigger input is used for. Options are: 'hwtrigger' - for a triggering vehicles detection. 'gpspps' - for the pulse per second signal from a gps unit (only useable with the serial port com2 also connected to the gps). 'exception' - generate exceptions when the line changes state. 'script' - run a user script on line state change. 'anpr_enable' - only perform anpr when trigger input circiut is completed. 'disabled' - not in use.

- `system crc`

  Display CRCs. Platforms: All.

Display CRCs of the system and configuration

- `system info`

  Display information. Platforms: All.

  Display general information about this camera. Always useful as a debugging aid.

- `system queues`

  Queues. Platforms: All.

  List all queues and their state

- `system reboot`

  Reboot camera. Platforms: All.

  Reboot the camera now unconditionally.

- `system relay`

  Toggle Relay. Platforms: All.

  Change the state of the relay

- `system relay_close`

  Close Relay. Platforms: All.

  Set the state of the relay to closed

- `system relay_open`

  Open Relay. Platforms: All.

  Set the state of the relay to open.

- `system relay_pulse` {*`closed`*} {*`period`*}

  Pulse Relay. Platforms: All.

  Set the relay to a specified state for a period

#	Name	Parameter	Description
1	Pulse Closed	closed	true to set relay closed, then, after period, open. Otherwise relay will open and, after period, close
2	Pulse Period	period	The relay pulse period in milliseconds

- `system restart`

  Restart application. Platforms: All.

  Attempt to restart the application without rebooting. May reboot camera under some circumstances.

Trigger Control (trig)

Available on platforms: All

External trigger control, for when you have wired an external vehicle detector into the camera. To use this you must set the Vehicle Image Selector filter to triggered rather than auto.

Platforms	Name	Command	Default Value	Description
All	Forward All Payloads	`trig set forward_all_payloads {value}`	false	For an already open gate, subsequent trigger stimuli will be processed for payload (while the gate is open). This will for example allow the hardware trigger to cause the gate to open and a TCP trigger (while the gate is open) could provide the payload. Please note that timing is important. If the payload-providing-trigger is late (arrives after the gate has closed) it will generate a new trigger rather than a payload to a current open trigger. See also the trigger payload format specifiers.
All	Trigger Latency	`trig set latency {value}`	0	Sets configurable delay from electrical signal edge to when we regard the trigger to have occurred.
All	Gate open period	`trig set open_period {value}`	250	Sets period during which we enable image processing for the triggering vehicle.
All	Appends the trigger id to all trigger acknowledgement messages	`trig set reply_with_trigger_id {value}`	false	
All	Simulated trigger period	`trig set simulated_period {value}`	1000	Sets the period between simulated triggers. Not for use in a production system.
All	Simulation Mode	`trig set simulation_mode {value}`	false	Enabling simulation mode causes software triggers to be generated at the rate determined by the simulated period
All	Variable Gate Open Period	`trig set variable_period {value}`	false	For an already open gate, the open period will be extended if further stimulus received (e.g. motion detection, physical trigger, TCP trigger). Under this mechanism the gate will always stay open for a minimum of the configured Gate Open Period and for no longer than 2 seconds.
All	Wait period	`trig set wait_period {value}`	700	Sets period after latency expires before we will accept another trigger. Can be used to prevent noisy triggers causing problems.

- `trig message {msg}`

  Single Simulated Trigger with content. Platforms: All.

Generates a single simulated trigger. Note, this will be generated regardless of whether simulation mode is enabled. It takes an argument which will populate the OEM trigger data field for the vehicle. How you next see this information is dependant upon your output mechanism.

#	Name	Parameter	Description
1	Message Content	msg	The OEM trigger data field.

- `trig oneshot`

  Single Simulated Trigger. Platforms: All.

  Generates a single simulated trigger. Note, this will be generated regardless of whether simulation mode is enabled.

- `trig statistics`

  Cumulative statistics. Platforms: All.

  Provides cumulative statistics of longterm trigger processing

Hardware Trigger (trig hw)

Available on platforms: All

This module manages the external trigger input on the rear of the camera. You must connect this up to a 12V external trigger input such as a loop or other vehicle detector for this to be of any use. To use this you must assign the trigger to be 'hwtrigger' in the system parameters.

Platforms	Name	Command	Default Value	Description
All	Debounce time	`trig hw set debounce {value}`	1	Number of milliseconds for which a trigger has to be stable before it is accepted by the system. Increasing this will remove false short triggers from the system at the expense of the same amount of latency in the trigger. It could also miss triggers if your trigger system produces very short pulses and you set it too high. This debounce parameter is applied for all uses of the trigger input, including scripts and exceptions.
All	Falling Edge	`trig hw set falling_edge {value}`	false	This chooses which edge of the signal will be used to trigger on, if unselected you will trigger on the rising edge of the signal. You will need to refer to the manual for your trigger source to determine which it produces when a vehicle enters the field of view.

- `trig hw clearcount`

  Clear Hardware trigger count. Platforms: All.

  Resets the count of number of hardware triggers recorded to 0

- `trig hw count`

  Hardware trigger count. Platforms: All.

Provides a count of number of hardware triggers recorded

- `trig hw status`

  Current trigger status. Platforms: All.

  Gets the current status of the trigger input signal

Serial Trigger (trig serial)

Available on platforms: All

This module manages Serial Triggers. These may be sent into com2.

Platforms	Name	Command	Default Value	Description
All	Acknowledge	`trig serial set ack_enabled` {*value*}	true	To enable/disable the generation of acks. If enabled the whole message as sent will be echoed back to you.
All	Serial Baud Rate	`trig serial set baud` {*value*}	115200	The serial port baud rate. For changes to take effect, disable then re-enable. Valid values 2400, 4800, 9600, 19200, 38400, 57600, 115200, 230400
All	Serial triggers enabled	`trig serial set enabled` {*value*}	false	If true, will detect and propogate triggers from com2.
All	Heartbeat Regular Expression	`trig serial set heartbeat_regex` {*value*}	disabled	If the string arriving on the trigger port matches this regex, it will NOT generate a trigger, it will simply echo the pattern back exactly as received. Notes: To disable it, set it to the string disabled. Heartbeat will work regardless of the ack_enabled setting
All	Trigger Regular Expression	`trig serial set trig_regex` {*value*}	(.*)\n	A regular expression (matching the Perl Regular Expression Syntax) that the incoming string must match in order for a trigger to be generated. The trigger payload will be the concatination of those parts of the incoming string that match any subexpressions in the regex, as specified by ()'s. If no ()'s are present in the trig_regex, then the entire incoming string, that matches the regex, will be used as the trigger payload. Note: A trigger payload may only contain XML legal ASCII. If it contains any illegal characters, no trigger will be generated.

TCP Trigger (trig tcp)

Available on platforms: All

This module manages TCP Triggers. These are sent in to a server socket on port 3820.

Platforms	Name	Command	Default Value	Description
All	Acknowledge	`trig tcp set ack_enabled {value}`	true	To enable/disable the generation of acks. If enabled the whole message, exactly as sent, will be echoed back to you.
All	TCP triggers enabled	`trig tcp set enabled {value}`	true	If true, will detect and propogate TCP Socket triggers.
All	Heartbeat Regular Expression	`trig tcp set heartbeat_regex {value}`	disabled	If the string arriving on the trigger port matches this regex, it will NOT generate a trigger, it will simply echo the pattern back exactly as received. Notes: To disable it, set it to the string disabled. Heartbeat will work regardless of the ack_enabled setting
All	Trigger Regular Expression	`trig tcp set trig_regex {value}`	(.*)\n	A regular expression (matching the Perl Regular Expression Syntax) that the incoming string must match in order for a trigger to be generated. The trigger payload will be the concatination of those parts of the incoming string that match any subexpressions in the regex, as specified by ()'s. If no ()'s are present in the trig_regex, then the entire incoming string, that matches the regex, will be used as the trigger payload. Note: A trigger payload may only contain XML legal ASCII. If it contains any illegal characters, no trigger will be generated.

Trigger Script (trigScript)

Available on platforms: All

This module will run a unix binary when the trigger input changes state. You must connect this up to an external trigger input for this to be of any use. To use this modules you must assign the trigger to 'script' in the system parameters. Note, each script must finish running before we will run the next script if the scripts take time to execute and the trigger makes fast transitions. The use of this feature is obviously unsupportable as you can cause anything to run which could cause the system to become unstable. It is suggested you get your script verified by PIPS if you do require support. These scripts will run a maximum of once every 5 seconds.

Platforms	Name	Command	Default Value	Description
All	Falling Edge	`trigScript set falling {value}`		This is the full path to a binary (usually a unix shell script) will be run on the falling edge of the trigger. If this is left blank or an invalid binary nothing will happen. This script will be run at bootup if the trigger input is low at bootup.

Platforms	Name	Command	Default Value	Description
All	Rising Edge	`trigScript set rising {value}`		This is the full path to a binary (usually a unix shell script) will be run on the rising edge of the trigger. If this is left blank or an invalid binary nothing will happen. This script will be run at bootup if the trigger input is high at bootup.

UTMC Delivery Module (utmc)

Available on platforms: All

The UTMC module is a delivery module which sends vehicle event data to an external computer (instation) using the UTMC protocol.

Platforms	Name	Command	Default Value	Description
All	Authenticate using username and password	`utmc set authenticate {value}`	false	authenticate
All	UTMC Camera ID	`utmc set cameraID {value}`	0	The UTMC camera ID
All	Minimum Samples for Diagnostics	`utmc set diagnostic_min_samples {value}`	10	Certain types of diagnostics (e.g. mean values or ratios) are only considered valid after a certain number of samples.
All	Diagnostic period	`utmc set diagnostic_period {value}`	20	Period in minutes between diagnostic updates
All	Diagnostics and Exceptions Enabled	`utmc set diagnostics_exceptions_enabled {value}`	false	Send diagnostics and exceptions.
All	Timeout (in seconds) for DNS caching	`utmc set dnsCacheTimeout {value}`	60	Selectable option to change the timeout used by the DNS cache within libCURL. 60 to maintain backwards compatability, or 0 to completely disable DNS caching.
All	Enabled	`utmc set enabled {value}`	false	Allows the UTMC system to be enabled and disabled. Disable it unless you are using it.
All	Minimum Samples for Exceptions	`utmc set exception_min_samples {value}`	20	Certain types of exceptions (e.g. mean values or ratios) are only considered valid after a certain number of samples.
All	Exception Period	`utmc set exception_period {value}`	5	Period in minutes between (non-realtime) exception updates
All	Host	`utmc set host {value}`	192.168.1.1:8080	IP address and port of the instation which will receive the UTMC data.
All	Maximum number of vehicles in a batch	`utmc set maxBatchSize {value}`	100	The Maximum number of vehicles that can be in a batch, if the number of vehicles becomes larger than this number we will send out a batch
All	Merge Characters	`utmc set mergechars {value}`	true	

Platforms	Name	Command	Default Value	Description
				Enable merging of possible ambiguous characters such as 8 and B prior to transmission (for tags only)
All	Maximum Files	`utmc set nlog {value}`	100	The maximum number of files which will be stored on the local drive if it is not possible to contact the instation. Once this number has been stored, the oldest will be overwritten. Warning, arbitrarily setting this to a high value may fill up the device on which you are storing the files and then the system will lose the wrong data or perform badly (or not at all).
All	Password for transport	`utmc set password {value}`		Password
All	Path	`utmc set path {value}`	utmc	The path on the http url.
All	Tag Period	`utmc set period {value}`	5	The number of minutes between sending tag messages
All	Send Tag	`utmc set sendTag {value}`	true	Send hashed plates
All	Send VRN	`utmc set sendVRN {value}`	false	Send raw plates (VRNs)
All	Time Slot	`utmc set time_slot {value}`	0	Time slot which is used by this system for transmission. Use this to spread the network load of your outstations. This is a percentage value and is used as an offset from the beginning of the time which could be used for transmission verses the end of that transmission slot - e.g. 0 it will transmit at the very beginning of the slot, at 100 at the very end.
All	ACK Timeout	`utmc set timeout {value}`	60	Number of seconds to wait for an ACK (if ACKs are enabled). Set to zero to disable
All	UTMC transport	`utmc set transport {value}`	HTTP	HTTP or HTTPS
All	Use Gzip	`utmc set useGzip {value}`	true	Encode with gzip to save bandwidth
All	Use SOAP	`utmc set useSOAP {value}`	true	Wrap with SOAP envelope
All	Username for transport	`utmc set username {value}`		Username

- `utmc clearstats`

  Clear statistics. Platforms: All.

  Reset the statistics for this module

- `utmc stats`

  Statistics. Platforms: All.

Display statistics from this module

UTMC V1.2 Delivery Module (utmcv12)

Available on platforms: All

The UTMC module is a delivery module which sends vehicle event data to an external computer (instation) using version 1.2 of the UTMC protocol.

Platforms	Name	Command	Default Value	Description
All	Authenticate using username and password	`utmcv12 set authenticate {value}`	false	authenticate
All	UTMCV1_2 Camera ID	`utmcv12 set cameraID {value}`	0	The UTMCV1_2 camera ID
All	Timeout (in seconds) for DNS caching	`utmcv12 set dnsCacheTimeout {value}`	60	Selectable option to change the timeout used by the DNS cache within libCURL. 60 to maintain backwards compatability, or 0 to completely disable DNS caching.
All	Enabled	`utmcv12 set enabled {value}`	false	Allows the UTMCV1_2 system to be enabled and disabled. Disable it unless you are using it.
All	Host	`utmcv12 set host {value}`	192.168.1.1:8080	The IP address and port of the instation which will receive the UTMCV1_2 data.
All	Merge Characters	`utmcv12 set mergechars {value}`	true	Enable merging of possible ambiguous characters such as 8 and B prior to transmission (for tags only)
All	Maximum Files	`utmcv12 set nlog {value}`	100	The maximum number of files which will be stored on the local drive if it is not possible to contact the instation. Once this number has been stored, the oldest will be overwritten. Warning, arbitrarily setting this to a high value may fill up the device on which you are storing the files and then the system will lose the wrong data or perform badly (or not at all).
All	Password for transport	`utmcv12 set password {value}`		Password
All	Path	`utmcv12 set path {value}`	utmc	The path on the http url.
All	Send ANPR Image	`utmcv12 set sendANPRImage {value}`	true	Send the ANPR Image (the image used for the ANPR.)
All	Send Asynchronous Payload	`utmcv12 set sendAsyncPayload {value}`	false	Manufacturer Specific. Will send the asynchrounous payload within the UTMC ManufacturerSpecific area.
All	Send Overview Image	`utmcv12 set sendOverviewImage {value}`	true	Send the overview image
All	Send Plate Patch Image	`utmcv12 set sendPlatePatch {value}`	true	Send patch Image

Platforms	Name	Command	Default Value	Description
All	Send Tag	`utmcv12 set sendTag {value}`	false	Send hashed plates
All	Send VRN	`utmcv12 set sendVRN {value}`	true	Send raw plates (VRNs)
All	ACK Timeout	`utmcv12 set timeout {value}`	60	Number of seconds to wait for an ACK (if ACKs are enabled). Set to zero to disable
All	UTMCV1_2 transport	`utmcv12 set transport {value}`	HTTP	HTTP or HTTPS
All	Use Gzip	`utmcv12 set useGzip {value}`	true	Encode with gzip to save bandwidth
All	Use SOAP	`utmcv12 set useSOAP {value}`	true	Wrap with SOAP envelope
All	Username for transport	`utmcv12 set username {value}`		Username
All	Async. Payload is XML	`utmcv12 set xmlPayload {value}`	false	Manufacturer Specific. The async payload contains further XML tags within the ManufacturerSpecific area.

- `utmcv12 clearstats`

  Clear statistics. Platforms: All.

  Reset the statistics for this module

- `utmcv12 stats`

  Statistics. Platforms: All.

  Display statistics from this module

VES - Violation Enforcement System (ves)

Available on platforms: All

Highly configurable system with many options. Please refer to VES Software Interface Specification

Platforms	Name	Command	Default Value	Description
All	Enable Ack	`ves set ack_enable {value}`	0	When set require ack from instation on summary and/or evidential records. Retry on ack failure. 0x01 - ack required on evidential records (ERs) 0x02 - ack required on individual summary records (SRs) 0x04 - ack required on diagnostics 0x08 - ack required on exceptions 0x10 - ack required when transferring a record from spikestore to instation

Platforms	Name	Command	Default Value	Description
				0x20 - ack required on batched summary records (BSRs)
All	Retry attempts	`ves set ack_retry {value}`	3	Retry transfers this many times before giving up
All	ack timeout	`ves set ack_timeout {value}`	500	Time to wait for an ack (mS). This timeout is used for longg transfer events. Specifically full ERs. On a system connected by hi speed links, system overhead may dominate so this and the short timeout may be identical. Where comms is slow, a separate timeout is beneficial.
All	Alternate Host	`ves set alt_host {value}`	10.1.1.1	Sets the IP address of the alternate instation.
All	Enforcement area	`ves set area {value}`	WEZ	The name of the enforcement zone. This is expected to be a three character field. However up to seven characters are accepted.
All	batched SR interval	`ves set bsr_interval {value}`	300	Interval (seconds) over which SRs are accumulated to build a batch. If no data is collected during the interval, then no batch is generated. The current batch is skipped.
All	batched SR max batches	`ves set bsr_nlog {value}`	12	Maximum number of historic SR batches which may be stored on the camera. When this number is exceeded the oldest batch will be overwritten.
All	batched SR port	`ves set bsr_port {value}`	10007	Port for transfer of batched SRs. This may be the same port as used by standard SRs.
All	Cabinet controller	`ves set cabinet {value}`		Sets the IP address the cabinet controller if present. Used to monitor the cabling and link to detect intrusions or failures.
All	cf age limit	`ves set cf_age_limit {value}`	48	Maximum time (hours) an evidential record may be retained on camera. Records older than this will be deleted.
All	No. of context images	`ves set context_count {value}`	2	Specify the number of supporting context images which must be captured. The permissable range is 0-8. The number must be even. If an odd number is entered, it will be interpreted as the next lower even number.
All	Context image offset	`ves set context_offset {value}`	250	Specify the approximate interval (mS) between context images.
All	Context image order	`ves set context_order {value}`	0	Specify whether context images are split equally before/after the event, all before the event or all after the event.
All	Country Code standard	`ves set country_code {value}`	0	Determines the standard used for country codes. 0 - PIPS ANPR Standard

Platforms	Name	Command	Default Value	Description
				2 - ISO 3166-1 Alpha 2 3 - ISO 3166-1 Alpha 3
All	D&E debug	`ves set de_debug {value}`	0	set debug flags for diagnostic and exceptions module
All	D&E Ping wait time	`ves set de_ping_wait {value}`	15000	Applicable to diagnistics & exceptions only. Amount of time the system should wait for a ping acknowledge message before giving up. The system usually pings the instation before connecting to it. Set to zero to disable these pre-transmission pings.
All	VES Debug	`ves set debug {value}`	0	Bit field specifying which code modules genetate debug information 0x00000001 - main VES process 0x00000002 - summary record transmission 0x00000004 - image (blob) record transmission 0x00000008 - session & initial key exchange 0x00000010 - message port 0x00000020 - heartbeat system 0x00000040 - DSRC trigger system 0x00000080 - NVT control port 0x00000100 - PING events 0x00000200 - show ping replies 0x00000400 - transmission of records from file buffer 0x00000800 - local file index management 0x00001000 - blob generation 0x00002000 - system timing 0x00004000 - match slots 0x00008000 - data cleanup 0x00010000 - encryption 0x00020000 - key exchange 0x00040000 - diagnostics

Platforms	Name	Command	Default Value	Description
				0x00080000 - oem specific 0x00100000 - oem specific 0x00200000 - context capture 0x00400000 - pull archtecture 0x00800000 - image synchronisation 0x01000000 - radar interface 0x02000000 - trajectory computations 0x04000000 - spikestore interface 0x08000000 - batch summary records 0x10000000 - clock drifts 0x20000000 - audit trail 0x40000000 - oem data record
All	Local Directory	`ves set directory {value}`	/ves	Directory where diagnostic and exception files will be created and stored locally on the system before transfer to the host.
All	VES Enabled	`ves set enabled {value}`	false	Enables/Disables VES. If enabled is false on camera startup, VES will not load. To get VES to load, set enabled to true and restart the camera. Once VES is loaded the enable flag has the effect of enabling/disabling the flow of events into VES.
All	Max ER file size	`ves set file_size {value}`	256	Size in kbytes to be preallocated for storage of ERs. Also sets the storage allocation on the Compact Flash device. ERs larger than this size will be discarded.
All	Heartbeat Port	`ves set hb_port {value}`	10005	The TCP/IP port number used for heartbeat messages.
All	Heartbeat period	`ves set heart_beat {value}`	0	The period in seconds between heart beat (hb) messages. If set to 0, no heart beat messages will be sent.
All	Host	`ves set host {value}`	10.1.1.1	Sets the IP address of the instation.
All	Image port	`ves set image_port {value}`	10000	port on host server expecting image data
All	Image port (background)	`ves set image_port_b {value}`	10000	port on host server expecting image data from background process. This may - and usually will - be exactly the same port as the foreground process.
All	Image Timeout	`ves set image_timeout {value}`	5	Timeout in seconds after which a camera as marked as having a possible problem
All	Switch overview to monochrome	`ves set jpeg_mono {value}`	0	Set to force overview image to monochrome

Platforms	Name	Command	Default Value	Description
All	Colour image scale factor	`ves set jpeg_scale {value}`	0	Set Colour image jpeg scale factor. Only applies to systems equiped with hardware jpeg accelerator. 0 - not scaled 1 - 360x288 2 - 180x144
All	Colour image file size	`ves set jpeg_size {value}`	22	Set Colour image jpeg file size (kbytes). Default is 22k. Only applies to systems equiped with hardware jpeg accelerator
All	Key Exchange port	`ves set key_port {value}`	10003	port on camera listening for session start and key exchange requests
All	Lane Name	`ves set lane {value}`	1	short machine name for this ANPR system. Format TBD.
All	Link Timeout	`ves set link_timeout {value}`	20	Timeout in seconds after which image or summary ports will be closed when inactive.
All	VES Site Location	`ves set location {value}`	test site description	A site specific location string. If using pipsshell and the string contains spaces, then quote the whole string with "".
All	Event match window	`ves set match_window {value}`	700	Only applicable to externally triggered systems. This window (mS) specifies the maximum time window between a trigger event and the matching image set. Alternatively, this window may be used when other events must be matched to an image event.
All	Enable trigger match	`ves set matched_trig {value}`	0	Set this parameter to configure the system to use lane controller messages 0-subsystem disabled 1-A message triggers the camera. The message is not retained. 2-A message must be assocciated with a plate event. Any plate event without an assocciated message is disgarded 3-A message triggers the camera and is subsequently associated with the plate event

Platforms	Name	Command	Default Value	Description
				Messages may arrive on either designated tcp/ip connection or on the serial port. However note that trigger events received via tcp/ip are subject to latencies beyond the control of the system and may be unusable in many circumstances
All	batched SR max count	`ves set max_batch_size {value}`	100	Maximum number of records in a SR batch. When this number is reached, the batch will be queued for transmission even if the interval has not expired.
All	Message Port	`ves set msg_port {value}`	10004	The TCP/IP port number used for messages.
All	Message Timeout	`ves set msg_timeout {value}`	60	Timeout in seconds after which the message port will be closed when inactive.
All	Camera Name	`ves set name {value}`	lane	short machine name for this ANPR system. Format TBD.
All	Number of Files	`ves set nlog {value}`	200	Number of image files to store on local disk.
All	Not Alive Counter	`ves set not_alive {value}`	10	If the heart beat process is running (heartbeat period>0) then if the heart beat fails to send its message (i.e. unable to establish a connection for this many attempts), then the system will attempt recovery action.
All	NVT control mode	`ves set nvt_mode {value}`	0	set nvt control channel mode
All	NVT port	`ves set nvt_port {value}`	10002	port on camera listening for NVT control connection
All	NVT channel timeout	`ves set nvt_timeout {value}`	5	Timeout in seconds after which the NVT port will be closed when inactive.
All	OEM contents	`ves set oem_contents {value}`	%PTs	A format string specifying how to construct the data you would like in the OEM field. NB: The OEM field is limited to 64 bytes. Excess data will be truncated.
All	Camera Direction	`ves set orientation {value}`	0	Set camera orientation according to cardinal compass point ie N, NW, W etc.
All	Ping Interval	`ves set ping_interval {value}`	300	Number of seconds interval between ping requests. These ping requests are used to establish whether and which server is online.
All	Ping Port	`ves set ping_port {value}`	10010	Selects the port on which UDP pings will be sent.
All	Ping Wait Time	`ves set ping_wait {value}`	100	Number of milliseconds to wait for a response to a ping request. Ping requests are sent before opening a connection to the host system.

Platforms	Name	Command	Default Value	Description
All	Reference image file	`ves set ref_file {value}`	mem:/ dummy.bin	The name of a file containing a set of reference jpeg images used to prepare dummy records.
All	Remote Network Router	`ves set router {value}`		Sets the IP address of the remote network router. May be used to monitor the cabling and link to detect failures.
All	Session control rules	`ves set rules {value}`	0xffff	Set the rules which specify which items will be checked before a session may be started. This may be hard coded in shipping systems but can be set to facilitate testing. Not all rules may apply to all system builds. 0x001 - check time sync 0x002 - check config crc 0x004 - check tamper switch 0x008 - check equipment 0x010 - only set secret from serial port 0x020 - terminate on network hack 0x040 - terminate on multiple password fail 0x080 - terminate on restart 0x100 - terminate on network tamper.
All	Disk Buffer scan interval	`ves set scan_interval {value}`	30	Interval in seconds between scans of disk buffer system to check for any oustanding files to transfer to host
All	ER transfer throttle	`ves set scan_throttle {value}`	500	throttle background transfer of ERs to approximately one record per this many mS. Set to 0 to disable the throttle
All	security level	`ves set security {value}`	3	This setting defines the security level used by the system 0x00 - no security 0x01 - HMAC - ERs will have an HMAC applied but are sent in clear text 0x02 - ERs are encrypted (AES256 with CBC) 0x04 - ERs are transferred with rolling keys 0x80 - Diagnostics and exceptions are encrypted NB: Batched SRs are always encryypted

Platforms	Name	Command	Default Value	Description
All	SER transfer throttle	`ves set ser_throttle {value}`	500	throttle background transfer of SERs to approximately one record per this many mS. Set to 0 to disable the throttle
All	Enable serial trigger	`ves set serial_trig {value}`	0	Set to enable serial trigger input. This will of course only be meaningfull if the hardware has a serial input available.
All	session options	`ves set session_opts {value}`	0	Set the session security level in use 0x00 - No sessions - no session security 0x01 - Sessions enabled, session control must pass CHAP 0x02 - Sessions enabled, session control is encrypted
All	short ack timeout	`ves set short_ack_timeout {value}`	500	Time to wait for an ack (mS) This timeout is used for short events. Specifically SRs SERs. On systems with slows comms benefit is gained by setting this to a more appropriate value.
All	Slot age limit	`ves set slot_age_limit {value}`	30	Maximum time (seconds) an event (summary and/or evidential record) will spend in ram before being transferred to Compact Flash store (or deleted if no CF store in use)
All	Media Source	`ves set source {value}`	NULL	The name of the media source type. This is expected to be a four character field. However up to seven characters are accepted.
All	SPIKEstore Account	`ves set store_account {value}`	vesstore	Username used for transfer of ERs to SPIKEstore.
All	SPIKEstore enable	`ves set store_enable {value}`	0	When a record is deleted from Compact Flash or ram buffers either through a specific delete request or through age expiry, an option exists to transfer the record to SPIKEstore. This store can provide very long term historical storage of records. Set this option to enable transfer to this store. NB: No facility exists to transfer these records to the host system. It is expected that this and any other housekeeping required will be the direct responsibility of the host system.
All	SPIKEstore Host IP	`ves set store_host {value}`	10.1.1.1	Sets the IP address of the SPIKEstore module.

Platforms	Name	Command	Default Value	Description
All	SPIKEstore Password	`ves set store_password {value}`	vesstore	Password used for transfer of ERs to SPIKEstore.
All	SPIKEstore Path	`ves set store_path {value}`		sub path in which files will be created on SPIKEstore server. NB: This path is NOT created on the host system by the camera software. It is assumed to exist. Transfers will fail if this path does not exist. The path, if set, should terminate in / or \ as appropriate for the SPIKEstore system. This path is used as a prefix to directories and files when they are created on the host.
All	Summary port	`ves set summary_port {value}`	10001	port on host server expecting summary data
All	Summary port (background)	`ves set summary_port_b {value}`	10001	port on host server expecting summary data from background process. This may - and usually will - be exactly the same port as the foreground process.
All	summary rate threshold	`ves set summary_rate {value}`	0	Set a control on transfer of summary records based on the outstanding count of evidential records. Set to zero to disable this control. Minimum active value:10 When set, if there are more outstanding ERs than this count, then transfer of summary records from backing store will be suspended. A hysteresis of 10% is applied.
All	Conf threshold	`ves set threshold {value}`	35	When transfer on threshold set, only ANPR reads with a threshold higher than this will be transferred to the host system.
All	Time slot	`ves set time_slot {value}`	0	Time slot which is used by this system for transmission of diagnostics & exceptions. Use this to spread the network load of your outstations. This is a percentage value and is used as an offset from the beginning of the time which could be used for transmission verses the end of that transmission slot - e.g. 0 it will transmit at the very beginning of the slot, at 100 at the very end.
All	Timeout	`ves set timeout {value}`	300	If no plate image is received on a camera for this many seconds, then a bit will be set in the status register. This may indicate a possible system failure e.g. camera fault or may indicate that a lane is closed.
All	Transfer	`ves set transfer {value}`	0x09f7	Bit field specifying which data must be transferred 0x00001 - transfer patch

Platforms	Name	Command	Default Value	Description
				0x00002 - transfer full IR 0x00004 - transfer scene 0x00008 - transfer context images 0x00010 - explicit delete required on PULL protocol 0x00020 - add text to patch & IR images 0x00040 - discard events below threshold 0x00080 - transfer ERs only on request (PULL protocol) 0x00100 - on tx failure buffer data to local disk 0x00200 - send M001 message 0x00400 - send M002 message 0x00800 - send WARNing messages 0x01000 - send ERRor messages 0x02000 - transfer Hearbeat as H001 messag 0x04000 - transfer session state messages 0x08000 - transfer summary records 0x10000 - create short evidential record 0x20000 - transfer batched summary records 0x40000 - Always transfer ERs via CF and background channel
All	TCPIP trigger port	`ves set trig_port {value}`	10006	TCP/IP Port on camera listening trigger messages. The protocol accepted on this port may be OEM specific.

Vehicle Event Database (vfeDB)

Available on platforms: All

Platforms	Name	Command	Default Value	Description
All	Enabled	`vfeDB set enabled` {*value*}	false	Enables the storage capability within the vfeDB
All	Maximum Age	`vfeDB set max_age` {*value*}	0	The Maximum age records are allowed to be specified in minutes. Set to 0 for no time restriction
All	Store Analysis Images	`vfeDB set store_analysis_images` {*value*}	true	This parameter is used to control if analysis images are stored
All	Store Context Images	`vfeDB set store_context_images` {*value*}	true	This parameter is used to control if context images are stored
All	Store Overview Images	`vfeDB set store_overview_images` {*value*}	true	This parameter is used to control if overview images are stored

Platforms	Name	Command	Default Value	Description
All	Store Patch Images	`vfeDB set store_patch_images {value}`	true	This parameter is used to control if patch images are stored
All	Store Supplementary Images	`vfeDB set store_supplementary_images {value}`	true	This parameter is used to control if supplementary images are stored

- `vfeDB statistics`

  Cumulative statistics. Platforms: All.

  Provides cumulative statistics

Logging bits

These commands can be used to turn on and off real time messages from the camera about its status. These are implemented for debugging purposes in the main, and may not be meaningful at all. Turning too many of these on may adversely impact the performance of the camera. It is recommended that you use a pipsshell over SSH to watch logging, rather than serial, as the serial port can become overloaded if you turn too many messages on.

Platforms	Command	Description
All	`log acs bufferdisk_append {on/off}`	Appends to buffer disk queue
All	`log acs bufferdisk_remove {on/off}`	Removals from buffer disk queue
All	`log acs disk {on/off}`	Disk interactions
All	`log acs events {on/off}`	ACS events
All	`log acs filenames {on/off}`	Filename details
All	`log acs images {on/off}`	Image aquisition status
All	`log acs inevents {on/off}`	Incoming events
All	`log acs overviews {on/off}`	Overview aquisition status
All	`log acs transfer {on/off}`	Transfer messages
All	`log anpr allreads {on/off}`	Reports all vehicle read events, may be very noisy
All	`log anpr colour {on/off}`	Reports on colour full screen retries
All	`log anpr laneId {on/off}`	Reports information for debugging and varifiying the lane identification system - Only works on supported platforms
All	`log anpr latency {on/off}`	Reports age of departing ImageRecords associated with events
All	`log anpr noreads {on/off}`	Reports vehicle noread events
All	`log anpr patches {on/off}`	Reports on patches and full screen retries
All	`log anpr performance {on/off}`	Reports time taken by AnprLib_run
All	`log anpr reads {on/off}`	Reports vehicle read events
All	`log asyncp incoming {on/off}`	Incoming vehicle events
All	`log asyncp matches {on/off}`	Reports on Matches made between the async payloads and vehicle events. Also reports failures to match
All	`log asyncpStore payloads {on/off}`	Reports payloads added to store
All	`log bof2 incoming {on/off}`	Incoming Events

Platforms	Command	Description
All	`log bof2 messages` {*on/off*}	BOF2.2 Message Log
All	`log bof2 verbose` {*on/off*}	Display error message from the BOF2.2 instation
All	`log cam2exposure brightness` {*on/off*}	Exposure process debugging
All	`log cam2exposure settings` {*on/off*}	Shutter and gain settings debugging
All	`log client connections` {*on/off*}	Connection events
All	`log client latency` {*on/off*}	Reports age of departing ImageRecords associated with events
All	`log client overviews` {*on/off*}	Overview aquisition status
All	`log client vehicles` {*on/off*}	Vehicle events
All	`log dbmatcher incoming` {*on/off*}	Incoming vehicle events
All	`log dbmatcher matches` {*on/off*}	Matches made by the duplicate matcher
All	`log dbmatcher notification` {*on/off*}	Reasons for passing on this image
All	`log diskDB deletes` {*on/off*}	log when an entity is deleted
All	`log exposure brightness` {*on/off*}	Brightness controller actions
All	`log exposure processing` {*on/off*}	Exposure process debugging
All	`log exposure statistics` {*on/off*}	Collect some data for analysis.
All	`log exposure vehicles` {*on/off*}	Number of vehicles checks
All	`log exposure voting` {*on/off*}	Voting by the exposure subsystem on getting brighter or dimmer
All	`log fusion best` {*on/off*}	Choices made by the best plate chooser
All	`log fusion hazard` {*on/off*}	Hazard Processing
All	`log fusion incoming` {*on/off*}	Incoming vehicle events
All	`log fusion latency` {*on/off*}	Latency of events through the system
All	`log fusion matches` {*on/off*}	Matches made by the duplicate matcher
All	`log fusion noread` {*on/off*}	Noread Processing
All	`log fusion notify` {*on/off*}	Reasons for passing on this image
All	`log fusion resetting` {*on/off*}	Resetting a vehicle
All	`log fusion supplementary` {*on/off*}	Supplementary Image Processing
All	`log fusion timers` {*on/off*}	Event timer details
All	`log fusion traj` {*on/off*}	Trajectory of vehicle
All	`log gps controller` {*on/off*}	GPS Controller status reported at poll interval
All	`log gps sentences` {*on/off*}	Echo GPS sentences
All	`log gps time` {*on/off*}	Time Management status reported at poll interval
All	`log heartbeat incoming` {*on/off*}	Incoming vehicle events
All	`log hwtrigger latency` {*on/off*}	Latency of triggers through the system
All	`log ifo outputName` {*on/off*}	Filenames of output
All	`log jpegService performance` {*on/off*}	Performance measurements on the JPEG system
All	`log jpegService retries` {*on/off*}	Report whether we are having to retry JPEG compressions to fit into the buffers
All	`log jpegService type` {*on/off*}	Reports whether JPEG processing is performed in hardware, or software and what type
All	`log jtms connection` {*on/off*}	Connection issues

Platforms	Command	Description
All	`log jtms incoming` {*on/off*}	Incoming events
All	`log jtms messages` {*on/off*}	See outgoing messages, (Text format only)
All	`log jtms outgoing` {*on/off*}	Outgoing events
All	`log jtms timing` {*on/off*}	Timing information
All	`log ntp peers` {*on/off*}	Logs extracted Peers values as stored internally.
All	`log ntp raw` {*on/off*}	Logs raw unparsed data as received from the ntpq script.
All	`log ntp reach` {*on/off*}	Logs NTP reach processing.
All	`log ntp values` {*on/off*}	Logs extracted NTP values.
All	`log pciSource capIR` {*on/off*}	Outputs periodic updates of IR capture count
All	`log pciSource capOview` {*on/off*}	Outputs periodic updates of overview capture count
All	`log pciSource initialisation` {*on/off*}	Initialisation of the cameras
All	`log platefinder groups` {*on/off*}	Groups process debugging
All	`log platefinder hwoutput` {*on/off*}	FPGA output debugging
All	`log platefinder plates` {*on/off*}	Found plates debugging
All	`log platefinder searchgroups` {*on/off*}	Search group debugging
All	`log platewidth processing` {*on/off*}	PlateWidth process debugging
All	`log platewidth samples` {*on/off*}	PlateWidth collected samples debugging
All	`log platewidth shape` {*on/off*}	PlateWidth plate shape debugging
All	`log power state` {*on/off*}	Power state changes
All	`log relayOut incoming` {*on/off*}	Incoming events
All	`log relayOut outgoing` {*on/off*}	Outgoing events
All	`log sap incoming` {*on/off*}	Incoming events
All	`log sap outgoing` {*on/off*}	Outgoing events
All	`log selector detects` {*on/off*}	Reports generated vehicle detect events
All	`log selector indrops` {*on/off*}	Drops on the input queue
All	`log selector latency` {*on/off*}	Reports generated vehicle detect events associated ImageRecord age
All	`log selector multi` {*on/off*}	Show how many vehicles were detected in each image
All	`log selector notify` {*on/off*}	Notification from selector
All	`log selector performance` {*on/off*}	Reports the time taken to do the software portion of platefinding, the tracking algorithm and disposal algorithm
All	`log selector platefinder` {*on/off*}	Platefinder output
All	`log selector queue` {*on/off*}	Show the internal queue adds and deletes
All	`log selector score` {*on/off*}	Show how vehicles are scored and dropped from the internal queue
All	`log selector score_detail` {*on/off*}	Show details on scoring
All	`log selector tracking` {*on/off*}	Show details of the vehicle tracking
All	`log sensors changes` {*on/off*}	Reports changes in sensor values - currently just voltage, but may be extended to temperature etc. in the future

Platforms	Command	Description
All	`log system crcs` {*on/off*}	Reports changes in CRCs
All	`log transport_2acs failure` {*on/off*}	Brief failure details
All	`log transport_2acs items` {*on/off*}	Items being transferred
All	`log transport_2acs verbose` {*on/off*}	Verbose transfer details
All	`log transport_acs failure` {*on/off*}	Brief failure details
All	`log transport_acs items` {*on/off*}	Items being transferred
All	`log transport_acs verbose` {*on/off*}	Verbose transfer details
All	`log transport_bof2 failure` {*on/off*}	Brief failure details
All	`log transport_bof2 items` {*on/off*}	Items being transferred
All	`log transport_bof2 verbose` {*on/off*}	Verbose transfer details
All	`log transport_utmc failure` {*on/off*}	Brief failure details
All	`log transport_utmc items` {*on/off*}	Items being transferred
All	`log transport_utmc verbose` {*on/off*}	Verbose transfer details
All	`log transport_utmcv12 failure` {*on/off*}	Brief failure details
All	`log transport_utmcv12 items` {*on/off*}	Items being transferred
All	`log transport_utmcv12 verbose` {*on/off*}	Verbose transfer details
All	`log trig events` {*on/off*}	Instruments the triggers events
All	`log trig timers` {*on/off*}	Instruments the trigger timers, probably not of much interest
All	`log trigScript script` {*on/off*}	Show the running of scripts.
All	`log utmc connection` {*on/off*}	Connection issues
All	`log utmc incoming` {*on/off*}	Incoming events
All	`log utmc messages` {*on/off*}	See outgoing messages, (Text format only)
All	`log utmc outgoing` {*on/off*}	Outgoing events
All	`log utmc timing` {*on/off*}	Timing information
All	`log vfeDB deletes` {*on/off*}	Log when database records are deleted
All	`log vfeDB incoming` {*on/off*}	Incoming vehicle events
All	`log vfeDB notification` {*on/off*}	Reasons for passing on this image
All	`log vfeDB overviews` {*on/off*}	Log Overview information
All	`log vfeDB retrievals` {*on/off*}	Log when database objects are retrieved
All	`log videoStore fails` {*on/off*}	Retrieval failures
All	`log videoStore requests` {*on/off*}	Retrieval requests
All	`log viewfinder connections` {*on/off*}	Connection events
All	`log viewfinder sessions` {*on/off*}	Session events

Notifications

These commands can be used to turn on and off real time notifications from the camera. These notifications may be seen via pipsshell or via file logging, but the most useful way to use these notifications is via PIXI. To turn the notifications on/off via pipshell, use the command 'notification <source> <type> [on/off]'.

Platforms	Source	Type	Description
All	acs	datasetComplete	Provides notification of the successful transfer of an entire data-set via ACS. This notification has an

Platforms	Source	Type	Description
			additional property of 'eventId' which identifies the event the data transferred relates to.
All	acs	fileComplete	Provides notification of the successful completion of the transfer of an individual file via ACS. The notification will have an additional 'eventId' property which indicates the event that the file relates to. The property 'destpath' includes the full destination URL of the file which has now been transferred.

Chapter 7. Format strings

Format strings are a powerful tool for configuring the output from the camera. Spend some time studying this chapter to understand how they work if you want to change them. They can be used to configure file names and the format of outputted data in many places. Familiarity with the C (or other languages which have copied it) *printf* command will help in understanding what is going on here.

Only configuration parameters which specify that they are a format string may use this syntax. Please notify us if you think we should make a string into a format string.

Caution

Beware, you can configure the system incorrectly so that you get bad filenames which then cannot transfer. Be especially careful of the characters : / \ and . in your filename strings. Also, most systems won't accept filenames with control characters in them.

A format string consists of any number of parts, but essentially there are three different types of data you can put in it.

- Ordinary characters: which will just be output as is. This is the simplest type of entry. For example: if you want your filename to end in .txt, then just put .txt in the format string at the end. Note, you cannot put a \ or % in the string this way, you need to use a control character to do this.
- Control characters: which are used for unprintable characters which you can't simply enter into your string, such as **\n** for end of line. There is more detail on these in the section called “Control Characters” [84].
- Replacement specifiers: these are completely replaced by other text or numbers which are dependant upon the current item the string is working with. For example **%Pps** would be replaced by the read number plate. This is where the real power of the format strings lies. There is more detail on these in the section called “Replacement specifier” [85].

Control Characters

Each one of these will be replaced by a single control character in the output. These do *not* make sense for filenames, and are likely to cause problems with filesystems and FTP if you try to use them. They are of most use in file contents where you may want to add carriage returns or tabs.

- **\a** Alert (bell) (not often used)
- **\b** Backspace (not often used)
- **\f** Form feed, or new page (not often used)
- **\r** Carriage return. Combined with \n this is the DOS style end of line marker (e.g. **\r\n**.
- **\n** New line. This is the unix style end of line marker.
- **\t** Tab (horizontal)
- **\v** Vertical Tab (not often used)
- **** Gives a single \. Remember to put in two of these when you only want one in the output
- _ Gives a single space. You can use space directly on the P382, P392+ and P492 but this is for compatiblilty with the P357/P372. You cannot currently enter spaces in the shell, only on the web pages, so you'll need to use this from pipsshell.
- **\%** Gives a single %. Otherwise we think the % is the start of a replacement specifier

This paragraph can be skipped if you do not understand it. The escape character is ****, and can be followed by a character to cause various outputs, see above. **\octal-number** as in **\077** and **\hex-number** as in **\x3f** are also supported to output other ascii values - both of those will give a question mark character in ASCII.

Replacement specifier

The real power of format strings is in these. They all start with a % sign and there are a multitude of options for formatting the value. You then specify what the value is you want, and then how you want it presented.

Note

The format differs from printf, in that we must say what we are trying to display in the % as well as how to display it. The minimum length for a replacement specifier is 4 characters, including the % sign

The format goes as follows:

%{*replacement value*}[*format detail*]{*format*}

- *%* indicates the start of a replacement specifier
- *replacement value* is a two character string indicating what it is we wish to display here
- *format detail* is an optional string indicating more detail on how we wish to display it
- *format* is a single character indicating how we wish to display the value, e.g. as a decimal or hexadecimal number. Some values only make sense when displayed with a certain format

Format

The following characters are valid as the format in the replacement specifiers. Not all printf formats are valid.

Table 7.1. Format characters

Character	Desrciption
c	A single character
d	A signed decimal integer
i	A signed decimal integer (the same as d)
o	An octal integer
s	A string
u	An unsigned decimal integer
x	A hexadecimal integer with lower case letters
X	A hexadecimal integer with upper case letters
t	Treat the entry as numeric, and convert it to a string using the asctime() call to give something like 'Wed Jun 30 21:49:08 1993'. Trailing carriage return will be stripped.

Format Detail

An integer value placed here will ensure that the output is at least that many characters long. It will be padded with spaces. If you precede the integer with a 0 then it will pad with zeros instead. This is totally optional.

For example **The plate is %Pp8s\n** Will pad the plate string with spaces so outputting for a plate N7CTR

```
The plate is    N7CTR
```

with 4 spaces between the s and the N.

List of replacement values

Format value C

The camera detail of the plate the vehicle was read on

Platforms	Detail	Data Type	Description
All	Ce	Number	The shutter setting used for this image
All	Cg	Number	The gain setting used for this image
All	Cn	Number	The camera number (starting at zero)
All	CN	Number	The camera number (starting at one)
All	Cs	Number	The sequence setting (starting at zero)
All	CS	Number	The sequence setting (starting at one)

Format value D

The camera detail of the hazard plate the vehicle was read on

Platforms	Detail	Data Type	Description
All	De	Number	The shutter setting used for this image
All	Dg	Number	The gain setting used for this image
All	Dn	Number	The camera number (starting at zero)
All	DN	Number	The camera number (starting at one)
All	Ds	Number	The sequence setting (starting at zero)
All	DS	Number	The sequence setting (starting at one)

Format value E

Unique information about delivery event, Not usable under all circumstances

Platforms	Detail	Data Type	Description
All	Ei	Number	The Event id, which uniquly identifies the event

Format value F

Associated file. Not useable under all circumstances. Primarily for use in ACS's LPR files.

Platforms	Detail	Data Type	Description
All	F1	String	The filename of context image 1
All	F2	String	The filename of context image 2
All	F3	String	The filename of context image 3
All	F4	String	The filename of context image 4
All	F5	String	The filename of context image 5
All	F6	String	The filename of context image 6
All	F7	String	The filename of context image 7
All	F8	String	The filename of context image 8
All	Fl	String	The lpr text filename
All	Fn	String	The IR image filename

Platforms	Detail	Data Type	Description
All	FN	String	The hazard IR image filename
All	Fp	String	The patch image filename
All	FP	String	The hazard patch image filename
All	Ft	String	The transfer path (which is not prepended to the other filenames)
All	Fw	String	The wide angle, overview image filename
All	FW	String	The hazard wide angle, overview image filename

Format value H

The read hazard plate from the vehicle

Platforms	Detail	Data Type	Description
All	Ha	Number	The anpr classification (not useful with many ANPR engines)
All	HA	String	The OEM asynchronous payload. Asynchronous messages injected via serial (or TCP) will be associated with messages based on a closest match within a window. Otherwise an empty string.
All	Hc	Number	The confidence of the hazard plate read
All	HC	Number	The confidence category of the hazard plate read
All	Hf	Number	The confidence of the hardware platefinder
All	HF	Number	The field number
All	Hn	Number	The nationality code (not generally useful, see HN which is)
All	HN	String	The nationality (country and state) of origin of this plate if known
All	Ho	Number	The time offset between the trigger time and the image associated with this read (milliseconds). If not triggered, will be 0
All	Hp	String	The text of the hazard plate
All	Hr	Number	The total number of reads associated with the trigger that caused this plateread (A single trigger can lead to >1 plateread event). For a NOREAD the value will still be 1.
All	Hs	Number	The syntax confidence of the hazard plate read. This is a measure of how confident we are that the hazard plate matched the syntax of the reported country or state.
All	Ht	String	The plate tag, as extracted from the vehicle filter database. Will be blank if no tag entered, the plate is not matched, or the filter is off
All	HT	String	The OEM trigger payload. If you are using serial (or TCP/IP) triggers, this will be the OEM content of those, otherwise it will be boring. Text 'auto' will be returned if not triggered
All	Hx	Number	The x position of the plate's left edge in pixels
All	HX	Number	The width of the plate in pixels
All	Hy	Number	The y position of the plate's top edge in pixels
All	HY	Number	The height of the plate in pixels

Format value h

The camera heartbeat delivery

Platforms	Detail	Data Type	Description
All	hc	Number	The count of heartbeat delivery attempts.

Platforms	Detail	Data Type	Description
All	hf	Number	The count of heartbeat delivery failures.
All	hs	Number	A camera status bitfield (legacy).

Format value l

The image timestamp, the moment the image for the vehicle was captured.

This is a local time and accounts for timezone and daylight saving

Platforms	Detail	Data Type	Description
All	la	String	The string am for the morning, pm for the afternoon
All	lc	Number	Seconds since midnight 1st of January 1970 (commonly known as C time). This is UTC always, included for completeness.
All	ld	Number	The day of the month
All	lD	Number	The day of the year, with January the 1st as zero
All	lh	Number	The hour, 24 hour clock
All	lH	Number	The hour, 12 hour clock
All	li	Number	Milliseconds
All	ll	Number	Indicates if time is locked via NTP
All	lL	String	Indicates if time is locked via NTP as a string
All	lm	Number	Minutes past the hour
All	lM	Number	Tens of minutes past the hour
All	lo	Number	Month of the year (January as one)
All	lO	String	Month of the year as a word, in English
All	lP	String	Month of the year as three letter shortened word, in English
All	ls	Number	Seconds past the minute
All	lt	Number	Tenths of seconds
All	lu	Number	Hundredths of seconds
All	lv	Number	One if daylight saving is in effect, zero otherwise
All	lw	Number	The day of the week as a number, with zero being Sunday
All	lW	String	The day of the week as a word, in English
All	lX	String	The day of the week as a three letter shortened word, in English
All	ly	Number	The year
All	lY	Number	The last two digits of the year

Format value i

The image timestamp, the moment the image for the vehicle was captured.

This is UTC time (like GMT)

Platforms	Detail	Data Type	Description
All	ia	String	The string am for the morning, pm for the afternoon
All	ic	Number	Seconds since midnight 1st of January 1970 (commonly known as C time)
All	id	Number	The day of the month

Platforms	Detail	Data Type	Description
All	iD	Number	The day of the year, with January the 1st as zero
All	ih	Number	The hour, 24 hour clock
All	iH	Number	The hour, 12 hour clock
All	ii	Number	Milliseconds
All	il	Number	Indicates if time is locked via NTP
All	iL	String	Indicates if time is locked via NTP as a string
All	im	Number	Minutes past the hour
All	iM	Number	Tens of minutes past the hour
All	io	Number	Month of the year (January as one)
All	iO	String	Month of the year as a word, in English
All	iP	String	Month of the year as three letter shortened word, in English
All	is	Number	Seconds past the minute
All	it	Number	Tenths of seconds
All	iu	Number	Hundredths of seconds
All	iv	Number	One if daylight saving is in effect, zero otherwise
All	iw	Number	The day of the week as a number, with zero being Sunday
All	iW	String	The day of the week as a word, in English
All	iX	String	The day of the week as a three letter shortened word, in English
All	iy	Number	The year
All	iY	Number	The last two digits of the year

Format value J

JPEG data. Not useable under all circumstances. Primarily for use in output filenames to distinguish between them.

Platforms	Detail	Data Type	Description
All	Jt	Character	The file type. Will be p for a patch, n for an IR image, and w for an overview wide angle image. Context images will be 1 (for context 1), 2 (for context 2). Currently up to 8 context images are supported.

Format value L

The location of the camera

Platforms	Detail	Data Type	Description
All	Ld	Number	The whole number of degrees of latitude (north or south). Will always be positive.
All	LD	Number	The whole number of degrees of longitude (east or west). Will always be positive.
All	Le	Number	The whole number of degrees north we are. Will be negative if we are south.
All	LE	Number	The whole number of degrees east we are. Will be negative if we are west.
All	Lf	Number	The number of millidegrees of latitude we are away from the nearest degree.
All	LF	Number	The number of millidegrees of longitude we are away from the nearest degree.
All	Lg	Number	The number of microdegrees of latitude we are away from the nearest degree.

Platforms	Detail	Data Type	Description
All	LG	Number	The number of microdegrees of longitude we are away from the nearest degree.
All	Ll	Character	A character for latitude, N (north) or S (south) depending upon which hemisphere the location represents.
All	LL	Character	A character for longitude, E (east) or W (west) depending upon which side of the meridian the location represents.
All	Lm	Number	The number of minutes of latitude (north or south) that we are away from the nearest whole degree. Will always be positive.
All	LM	Number	The number of minutes of longitude (east or west) that we are away from the nearest whole degree. Will always be positive.
All	Ln	Number	The number of minutes of latitude (north or south) that we are away from the equator. Will always be positive.
All	LN	Number	The number of minutes of longitude (east or west) that we are away from the equator. Will always be positive.
All	Lo	Number	The number of minutes north that we are away from the equator. Will be negative if we are south.
All	LO	Number	The number of minutes east that we are away from the equator. Will be negative if we are south.
All	Lp	Number	The number of milliminutes of latitude we are away from the nearest minute.
All	LP	Number	The number of milliminutes of longitude we are away from the nearest minute.
All	Lq	Number	The number of microminutes of latitude we are away from the nearest minute.
All	LQ	Number	The number of microminutes of longitude we are away from the nearest minute.
All	LV	String	The string Valid or Invalid depending upon whether the location is deemed good.

Format value M

Metadata strings from the Metadata object. This is purely here so you can have the same format strings on all sites, and just change the metadata in this store

Platforms	Detail	Data Type	Description
All	Ma	String	Metadata string a
All	Mb	String	Metadata string b
All	Mc	String	Metadata string c
All	Md	String	Metadata string d
All	Me	String	Metadata string e
All	Mf	String	Metadata string f
All	Mg	String	Metadata string g
All	Mh	String	Metadata string h
All	Mi	String	Metadata string i
All	Mj	String	Metadata string j
All	Mk	String	Metadata string k
All	Ml	String	Metadata string l
All	Mm	String	Metadata string m
All	Mn	String	Metadata string n
All	Mo	String	Metadata string o

Platforms	Detail	Data Type	Description
All	Mp	String	Metadata string p
All	Mq	String	Metadata string q
All	Mr	String	Metadata string r
All	Ms	String	Metadata string s
All	Mt	String	Metadata string t
All	Mu	String	Metadata string u
All	Mv	String	Metadata string v
All	Mw	String	Metadata string w
All	Mx	String	Metadata string x
All	My	String	Metadata string y
All	Mz	String	Metadata string z

Format value o

The time offsets of overview context images

Platforms	Detail	Data Type	Description
All	o1	Number	The offset (in milliseconds) of context image 1 measured from the vehicle event timestamp
All	o2	Number	The offset (in milliseconds) of context image 2 measured from the vehicle event timestamp
All	o3	Number	The offset (in milliseconds) of context image 3 measured from the vehicle event timestamp
All	o4	Number	The offset (in milliseconds) of context image 4 measured from the vehicle event timestamp
All	o5	Number	The offset (in milliseconds) of context image 5 measured from the vehicle event timestamp
All	o6	Number	The offset (in milliseconds) of context image 6 measured from the vehicle event timestamp
All	o7	Number	The offset (in milliseconds) of context image 7 measured from the vehicle event timestamp
All	o8	Number	The offset (in milliseconds) of context image 8 measured from the vehicle event timestamp

Format value P

The read number plate from the vehicle

Platforms	Detail	Data Type	Description
All	P2	String	The 2-character nationality of origin of this plate if known, as defined by ISO 3166-1
All	P3	String	The 3-character nationality of origin of this plate if known, as defined by ISO 3166-1
All	Pa	Number	The anpr classification (not useful with many ANPR engines)
All	PA	String	The OEM asynchronous payload. Asynchronous messages injected via serial (or TCP) will be associated with messages based on a closest match within a window. Otherwise an empty string.

Platforms	Detail	Data Type	Description
All	Pc	Number	The confidence of the plate read
All	PC	Number	The confidence category of the plate read
All	Pd	String	The direction of travel of the plate read. This will be one of the following strings: AWAY, TOWARD, NOTSET. If NOTSET it indicates the direction could not be determined.
All	PD	String	The subdivision of origin of this plate if known, as defined by ISO 3166-2
All	Pf	Number	The confidence of the hardware platefinder
All	PF	Number	The field number
All	Pg	String	The source of OEM trigger
All	Pi	String	The OEM trigger payload from the first TCP/IP trigger
All	PI	Number	The trigger identifier.
All	PL	String	The lane in which the plate is located.
All	Pn	Number	The nationality code (not generally useful, see PN which is)
All	PN	String	The nationality (country and state) of origin of this plate if known
All	Po	Number	The time offset between the trigger time and the image associated with this read (milliseconds). If not triggered, will be 0
All	Pp	String	The text of the plate
All	Pr	Number	The total number of reads associated with the trigger that caused this plateread (A single trigger can lead to >1 plateread event). For a NOREAD the value will still be 1.
All	Ps	Number	The syntax confidence of the plate read. This is a measure of how confident we are that the plate matched the syntax of the reported country or state.
All	PS	String	The OEM trigger payload from the first Serial trigger
All	Pt	String	The plate tag, as extracted from the vehicle filter database. Will be blank if no tag entered, the plate is not matched, or the filter is off
All	PT	String	The OEM trigger payload. If you are using serial (or TCP/IP) triggers, this will be the OEM content of those, otherwise it will be boring. Text 'auto' will be returned if not triggered
All	Px	Number	The x position of the plate's left edge in pixels
All	PX	Number	The width of the plate in pixels
All	Py	Number	The y position of the plate's top edge in pixels
All	PY	Number	The height of the plate in pixels

Format value R

The trigger timestamp, the moment the trigger started. You should probably be using T instead of this, as if the event was not a triggered one you will not get anything in the string with R.

This is a local time and accounts for timezone and daylight saving

Platforms	Detail	Data Type	Description
All	Ra	String	The string am for the morning, pm for the afternoon
All	Rc	Number	Seconds since midnight 1st of January 1970 (commonly known as C time). This is UTC always, included for completeness.
All	Rd	Number	The day of the month
All	RD	Number	The day of the year, with January the 1st as zero

Platforms	Detail	Data Type	Description
All	Rh	Number	The hour, 24 hour clock
All	RH	Number	The hour, 12 hour clock
All	Ri	Number	Milliseconds
All	Rm	Number	Minutes past the hour
All	RM	Number	Tens of minutes past the hour
All	Ro	Number	Month of the year (January as one)
All	RO	String	Month of the year as a word, in English
All	RP	String	Month of the year as three letter shortened word, in English
All	Rs	Number	Seconds past the minute
All	Rt	Number	Tenths of seconds
All	Ru	Number	Hundredths of seconds
All	Rv	Number	One if daylight saving is in effect, zero otherwise
All	Rw	Number	The day of the week as a number, with zero being Sunday
All	RW	String	The day of the week as a word, in English
All	RX	String	The day of the week as a three letter shortened word, in English
All	Ry	Number	The year
All	RY	Number	The last two digits of the year

Format value r

The trigger timestamp, the moment the trigger started. You should probably be using t instead of this, as if the event was not a triggered one you will not get anything in the string with r.

This is UTC time (like GMT)

Platforms	Detail	Data Type	Description
All	ra	String	The string am for the morning, pm for the afternoon
All	rc	Number	Seconds since midnight 1st of January 1970 (commonly known as C time)
All	rd	Number	The day of the month
All	rD	Number	The day of the year, with January the 1st as zero
All	rh	Number	The hour, 24 hour clock
All	rH	Number	The hour, 12 hour clock
All	ri	Number	Milliseconds
All	rm	Number	Minutes past the hour
All	rM	Number	Tens of minutes past the hour
All	ro	Number	Month of the year (January as one)
All	rO	String	Month of the year as a word, in English
All	rP	String	Month of the year as three letter shortened word, in English
All	rs	Number	Seconds past the minute
All	rt	Number	Tenths of seconds
All	ru	Number	Hundredths of seconds
All	rv	Number	One if daylight saving is in effect, zero otherwise
All	rw	Number	The day of the week as a number, with zero being Sunday

Platforms	Detail	Data Type	Description
All	rW	String	The day of the week as a word, in English
All	rX	String	The day of the week as a three letter shortened word, in English
All	ry	Number	The year
All	rY	Number	The last two digits of the year

Format value S

The site details for this unit

Platforms	Detail	Data Type	Description
All	Sh	String	The site's hostname, the recommended way of identifying a site
All	Sl	Number	The system's library version number
All	Sn	Number	The system's serial number
All	Sv	Number	The system's application version number

Format value s

The supplementary images details

Platforms	Detail	Data Type	Description
All	s1	Number	The offset (in milliseconds) of supplementary image 1 measured from the vehicle event timestamp
All	s2	Number	The offset (in milliseconds) of supplementary image 2 measured from the vehicle event timestamp
All	s3	Number	Supplementary image 1 sequence setting (starting at one)
All	s4	Number	Supplementary image 2 sequence setting (starting at one)
All	s5	Number	Supplementary image 1 shutter setting
All	s6	Number	Supplementary image 2 shutter setting
All	s7	Number	Supplementary image 1 gain setting
All	s8	Number	Supplementary image 2 gain setting

Format value T

The timestamp for the vehicle, which is the trigger timestamp if the vehicle was triggered (see R), or the image timestamp if it was not (see I).

This is a local time and accounts for timezone and daylight saving

Platforms	Detail	Data Type	Description
All	Ta	String	The string am for the morning, pm for the afternoon
All	Tc	Number	Seconds since midnight 1st of January 1970 (commonly known as C time). This is UTC always, included for completeness.
All	Td	Number	The day of the month
All	TD	Number	The day of the year, with January the 1st as zero
All	Th	Number	The hour, 24 hour clock
All	TH	Number	The hour, 12 hour clock

Platforms	Detail	Data Type	Description
All	Ti	Number	Milliseconds
All	Tm	Number	Minutes past the hour
All	TM	Number	Tens of minutes past the hour
All	To	Number	Month of the year (January as one)
All	TO	String	Month of the year as a word, in English
All	TP	String	Month of the year as three letter shortened word, in English
All	Ts	Number	Seconds past the minute
All	Tt	Number	Tenths of seconds
All	Tu	Number	Hundredths of seconds
All	Tv	Number	One if daylight saving is in effect, zero otherwise
All	Tw	Number	The day of the week as a number, with zero being Sunday
All	TW	String	The day of the week as a word, in English
All	TX	String	The day of the week as a three letter shortened word, in English
All	Ty	Number	The year
All	TY	Number	The last two digits of the year

Format value t

The timestamp for the vehicle, which is the trigger timestamp if the vehicle was triggered (see r), or the image timestamp if it was not (see i).

This is UTC time (like GMT)

Platforms	Detail	Data Type	Description
All	ta	String	The string am for the morning, pm for the afternoon
All	tc	Number	Seconds since midnight 1st of January 1970 (commonly known as C time)
All	td	Number	The day of the month
All	tD	Number	The day of the year, with January the 1st as zero
All	th	Number	The hour, 24 hour clock
All	tH	Number	The hour, 12 hour clock
All	ti	Number	Milliseconds
All	tm	Number	Minutes past the hour
All	tM	Number	Tens of minutes past the hour
All	to	Number	Month of the year (January as one)
All	tO	String	Month of the year as a word, in English
All	tP	String	Month of the year as three letter shortened word, in English
All	ts	Number	Seconds past the minute
All	tt	Number	Tenths of seconds
All	tu	Number	Hundredths of seconds
All	tv	Number	One if daylight saving is in effect, zero otherwise
All	tw	Number	The day of the week as a number, with zero being Sunday
All	tW	String	The day of the week as a word, in English
All	tX	String	The day of the week as a three letter shortened word, in English
All	ty	Number	The year

Platforms	Detail	Data Type	Description
All	tY	Number	The last two digits of the year

Examples

Here are a few example format specifiers which might help you concoct your own. All the example output assumes a plate of RG51BTV has been read with confidence 96, on shutter 50/gain 9 at 15:34:30.2234 on 2008/03/27 in the eastern european timezone (GMT+2) on hostname "testsite" and that we're looking at the IR image, and the system is not triggered.

%Shs/

Input	%Shs	/
Output	testsite	/

(example result `testsite/`) This is the default ACS transfer path, just putting the hostname into the path.

acs/%Shs/

Input	acs/	%Shs	/
Output	acs/	testsite	/

(example result `acs/testsite/`) Now we have shifted to putting it into an acs subdirectory, followed by a site dependant hostname.

acs\\%Shs

Input	acs\\	%Shs	\\
Output	acs\	testsite	\

(example result `acs\testsite\`) And this version uses windows style directory separators, which is necessary for some broken windows FTP servers. Note we need to escape the \ by putting \\ in the path.

%Shs/%Iy04d%Io02d%Id02d/%Ih02d%IMd0/

Input	%Shs	/	%Iy04d	%Io02d	%Id02d	/	%Ih02d	%Idm	0/
Output	testsite	/	2008	03	27	/	12	3	0/

(example result `acs/20080327/1230/`) And now we are storing the files in time and date subdirectories, with 10 minutes worth of files per directory. Note the use of %IMd0 at the end which gives us the digit for each of the ten minutes, followed by a 0 which is copied through unchanged.

%Jtc%Id02u%Io02u%Iy04u,%Ih02u%Im02u%Is02u%Iu02u,%Pps,%Pc02u.jpg

Input	%Jtc	%Id02u	%Io02u	%Iy04u	,	%Ih02u	%Im02u	%Is02u	%Iu02u
Output	n	27	03	2008	,	12	34	30	22

Input	,	%Pps	,	%Pc02u	.jpg
Output	,	RG51BTV	,	96	.jpg

(example result `n27032008,12343022,RG51BTV,96.jpg`) This is the default image filename for ACS images. It produces a string starting with a character to identify which type of image it is. Followed by the date in DDMMYYYY format, followed by the time with hundredths of seconds, follwed by the plate and then the confidence. All of these are separated by commas.

`%Jtc%Iy04u%Io02u%Id02u_%Ih02u%Im02u%Is02u%Iu02u_%Pps_%Pc02u.jpg`

Input	%Jtc	%Iy04u	%Io02u	%Id02u	_	%Ih02u	%Im02u	%Is02u	%Iu02u
Output	n	2008	03	27	_	12	34	30	22

Input	_	%Pps	_	%Pc02u	.jpg
Output	_	RG51BTV	_	96	.jpg

(example result `n20080327_12343022_RG51BTV_96.jpg`) Now we have changed the commas to underscores, and swapped the date around to be YYYYMMDD.

`%Jtc%ty04u%to02u%td02u%th02u%tm02u%ts02u%tu02u,%Pps,%Pc02u,%Ced,%Cgd.jpg`

Input	%Jtc	%td02u	%to02u	%ty04u	%th02u	%tm02u	%ts02u	%tu02u
Output	n	27	03	2008	10	34	30	22

Input	,	%Pps	,	%Pc02u	,	%Ced	,	%Cgd	.jpg
Output	,	RG51BTV	,	96	,	50	,	9	.jpg

(example result `n2703200810343022,RG51BTV,96,50,9.jpg`) This time we are using GMT trigger time if the system is triggered, instead of local time of the image. We're also putting the shutter and gain settings for the read into the plate. We have also gone back to commas, loosing the separator between the date and time.

Chapter 8. PIXI Protocol

Note

PIXI was formerly known as NetUI, but has been renamed as it has been extended and the old name became inappropriate for the functions delivered.

This is a highly technical appendix describing the raw protocol you can use to communicate with and control the camera. This is of no interest unless you want to do that.

Using this protocol you can implement anything that the pipsshell, web interface to the camera application or manual generation tools can do. It is able to query application parameters, set them, issue commands, watch logging parameters and find out other details from the camera application. You can also get the camera to push images and event data to you, and collect image and event data (pull) from the camera.

Protocol

This protocol is run over TCP/IP to the camera, on port 3382. On OS release version 8 or later this port is firewalled off from the outside world, you will have to add a firewall rule to allow your remote application to access the camera. The protocol is a simple encapsulation of XML documents within a couple of boundaries. The XML must be correctly formed, if it is not then nothing in the message will be processed. The messages are not compressed, nor are they encrypted in any way.

Warning

Opening this port up may be a security risk to the camera.

The suggested way of working is to set up an ssh tunnel into the camera which will provide a way around the firewall without compromising it, and requires zero setup. This will also encrypt the data on the wire.

The XML may refer to some extra binary data which will follow the XML data.

The basic packet format is

Table 8.1. PIXI Packet Format

Name	Bytes	Content
Head	2	1. 0x0000 if there are no binary blobs in this data 2. 0x0001 if there are one or more binary blobs in the data
Length	2	XML Document length in bytes, as 2 byte, big endian value. Maximum length that the camera will accept is 16k. This is only the XML document portion.
Data	as required	Fully formed XML document adhering to schema below
Binary Length	0 or 4	Length of the binary blob if marked as present by the header.
Binary Data	0 or as required	Zero or more binary blobs. The position and size of the individual may be determined from the XML content.
End	4	0xffffffff

The link observes the following:

1. Multiple documents can be passed down the same link.

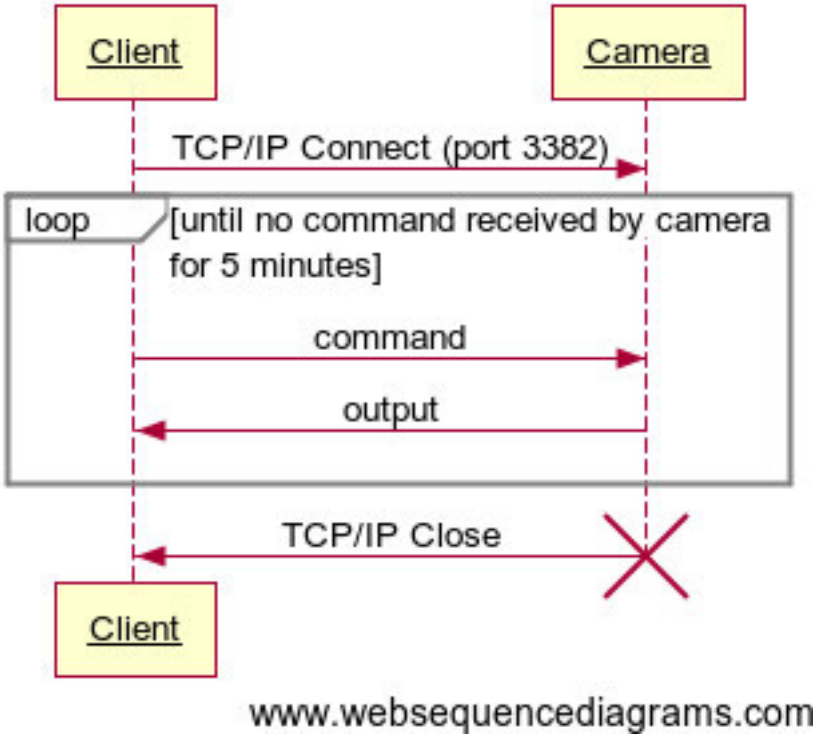
2. The link will stay open for a period of time, the camera will close it after 5 minutes of inactivity. To prevent this happening you can send heartbeat message which will be echoed back to you to show the camera is alive.

3. Either end can send a message unsolicited.

4. The camera responds to messages in the order in which the messages were received. This is on a per-connection basis, each connection can execute in parallel with others.

5. The camera will allow a maximum of 5 links at once.

Figure 8.1. Link with no heartbeat, camera will close when no command has been received for 5 minutes.



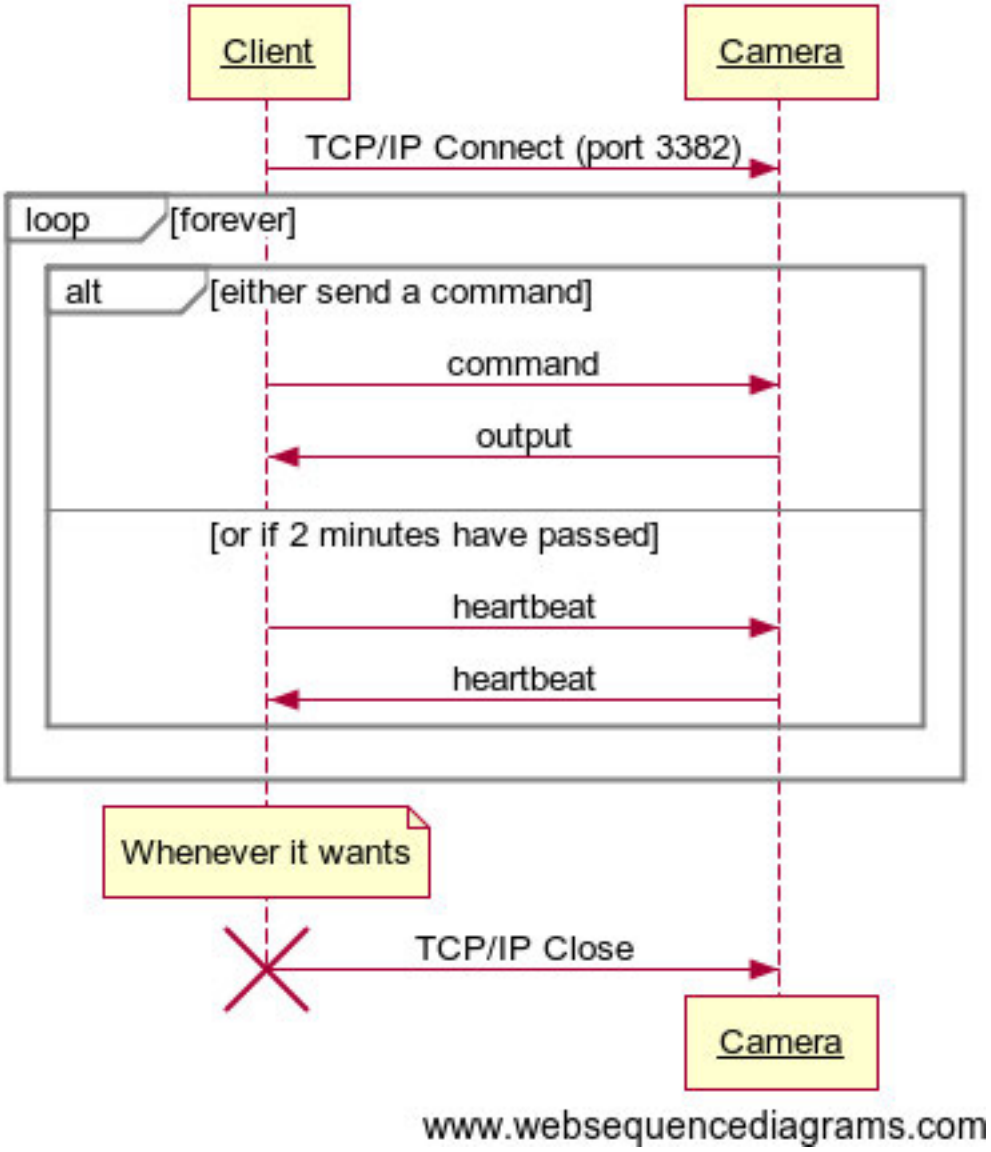


Figure 8.2. Link with heartbeat, client chooses when to end by closing the link.

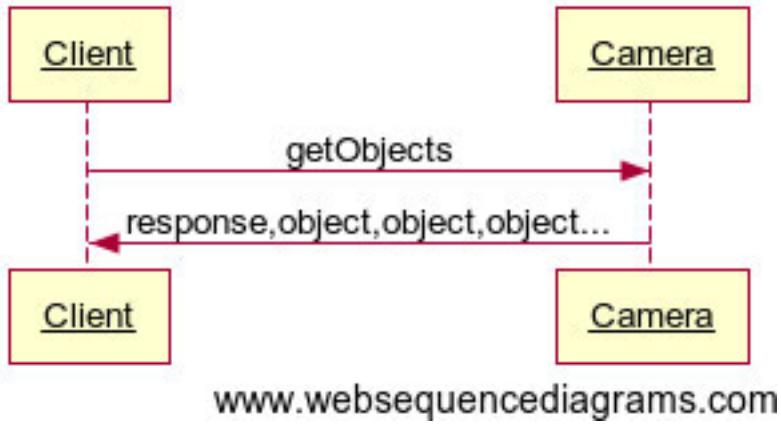
Example documents



Here are few example documents to help you with composing your own messages and developing an application. In each case the PC/Instation/Handheld/other device is referred to as the Client, and the end that is implemented in the P382, P392+ and P492 is the Camera.

Note

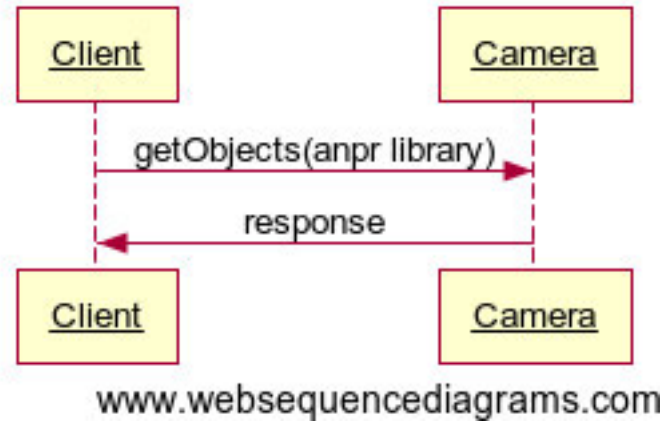
All examples are "pretty printed" with space and formatting to make them easier to read. The camera will actually respond with documents without formatting, and for efficiency reasons I would suggest also sending unformatted documents.

Root objects

Figure 8.3. Get Root Objects - a list of all configureable objects is collected, some may have subobjects

This command to gets the root objects from the camera:

```
<?xml version="1.0"?>
<commands>
  <getObjects name=""/>
</commands>
```



And the reply with the root objects

```
<?xml version="1.0"?>
<output>
  <response name="getObjects">

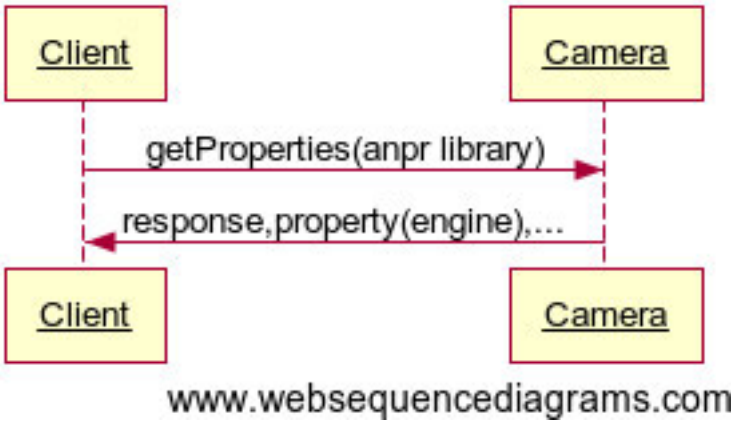
</output>
```

Subobjects

Figure 8.4. Get subobjects of an object - a list of all subobjects is collected, some may have subobjects. The list may be empty, as in the example

A command to get a subobject's objects



```
<?xml version="1.0"?>
<commands>
  <getObjects name="anpr library"/>
</commands>
```

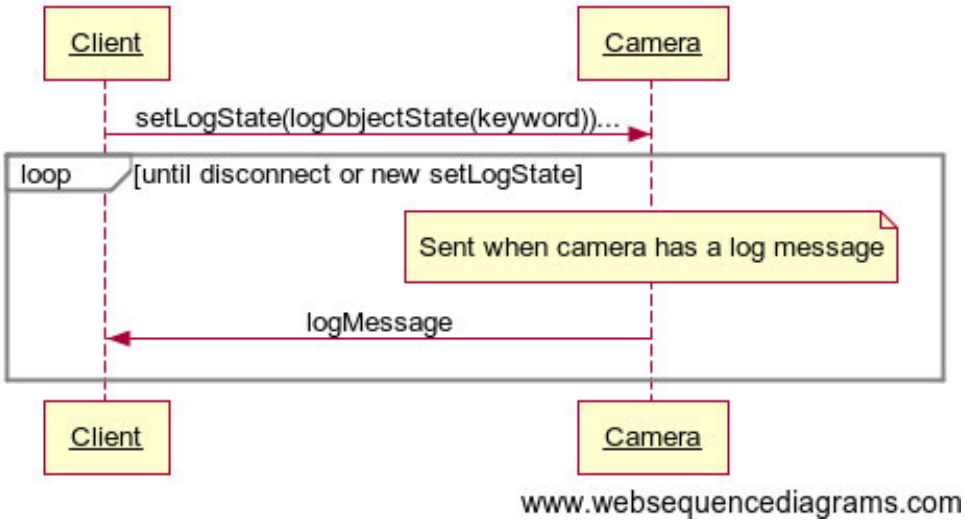
And the reply, with no subobjects

```
<?xml version="1.0"?>
<output>
  <response name="getObjects">
    <object>anpr library</object>
    <success>false</success>
  </response>
</output>
```

Properties

Figure 8.5. Get properties of an object - a list of all the properties of an object. The list may be empty.

And now getting the properties of an object



```
<?xml version="1.0"?>
<commands>
  <getProperties name="anpr library"/>
</commands>
```

And the reply, with just one property

```
<?xml version="1.0"?>
<output>
  <response name="getProperties">
    <object>anpr library</object>
    <success>true</success>
  </response>
  <property name="engine">
    <longName>Plate Reading Engine</longName>

  </keywordState>
</logObjectState>
<logObjectState name="pciInterface">
  <keywordState name="setup">
    <onoff>off</onoff>
  </keywordState>
</logObjectState>
<logObjectState name="pciSource">
  <keywordState name="capColour">
    <onoff>off</onoff>
  </keywordState>
  <keywordState name="capIR">
    <onoff>on</onoff>
  </keywordState>
  <keywordState name="initialisation">
    <onoff>off</onoff>
  </keywordState>
</logObjectState>
<logObjectState name="power">
  <keywordState name="state">
```

```
        <onoff>off</onoff>
      </keywordState>
    </logObjectState>
    <logObjectState name="selector">
      <keywordState name="detects">
        <onoff>off</onoff>
      </keywordState>
      <keywordState name="latency">
        <onoff>off</onoff>
      </keywordState>
      <keywordState name="multi">
        <onoff>off</onoff>
      </keywordState>
    </logObjectState>
    <logObjectState name="videoStore">
      <keywordState name="fails">
        <onoff>off</onoff>
      </keywordState>
    </logObjectState>
    <logObjectState name="viewfinder">
      <keywordState name="connections">
        <onoff>off</onoff>
      </keywordState>
      <keywordState name="sessions">
        <onoff>off</onoff>
      </keywordState>
    </logObjectState>
  </setLogState>
</commands>
```

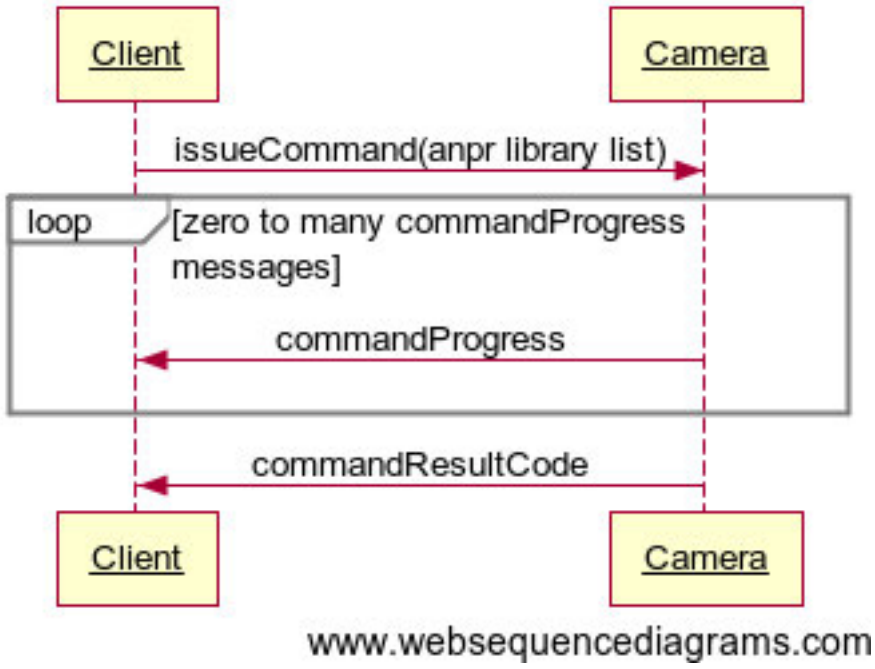
Notifications

Figure 8.7. Start notification messages. Asynchronous messages will be sent back by the Camera containing the notification messages of the requested events

To enable notifications, send a setNotificationState message listing the notifications that you wish to enable. Note that there will not be an immediate reply from this message.

```
<?xml version="1.0"?>
<commands>
 <setNotificationState name="self">
  <notificationObjectState name="acs">
   <keywordState name="fileComplete">
    <onoff>on</onoff>
   </keywordState>
   <keywordState name="datasetComplete">
    <onoff>on</onoff>
   </keywordState>
  </notificationObjectState>
 </setNotificationState>
</commands>
```

When an event for which you have registered a notification occurs, you will now receive an unsolicited notificationMessage



```
<?xml version="1.0"?>
<output>
 <notificationMessage>
  <source>acs</source>
  <type>fileComplete</type>
  <timeDate>2013-03-11T13:36:51.989154</timeDate>
  <destpath>ftp://10.20.13.120/11662/0008764A.lpr</destpath>
  <eventId>513dddf20008764a</eventId>
 </notificationMessage>
</output>
```

All notifications will have the source, type, and timeDate values, indicating when the notification was triggered, and what triggered it. Each notification type may have additional properties that are specific to that notification type. The available notifications are:

Platforms	Source	Type	Description
All	acs	datasetComplete	Provides notification of the successful transfer of an entire data-set via ACS. This notification has an additional property of 'eventId' which identifies the event the data transferred relates to.
All	acs	fileComplete	Provides notification of the successful completion of the transfer of an individual file via ACS. The notification will have an additional 'eventId' property which indicates the event that the file relates to. The property 'destpath' includes the full destination URL of the file which has now been transferred.

Issue Command

Figure 8.8. Issue a command and receive the responses.

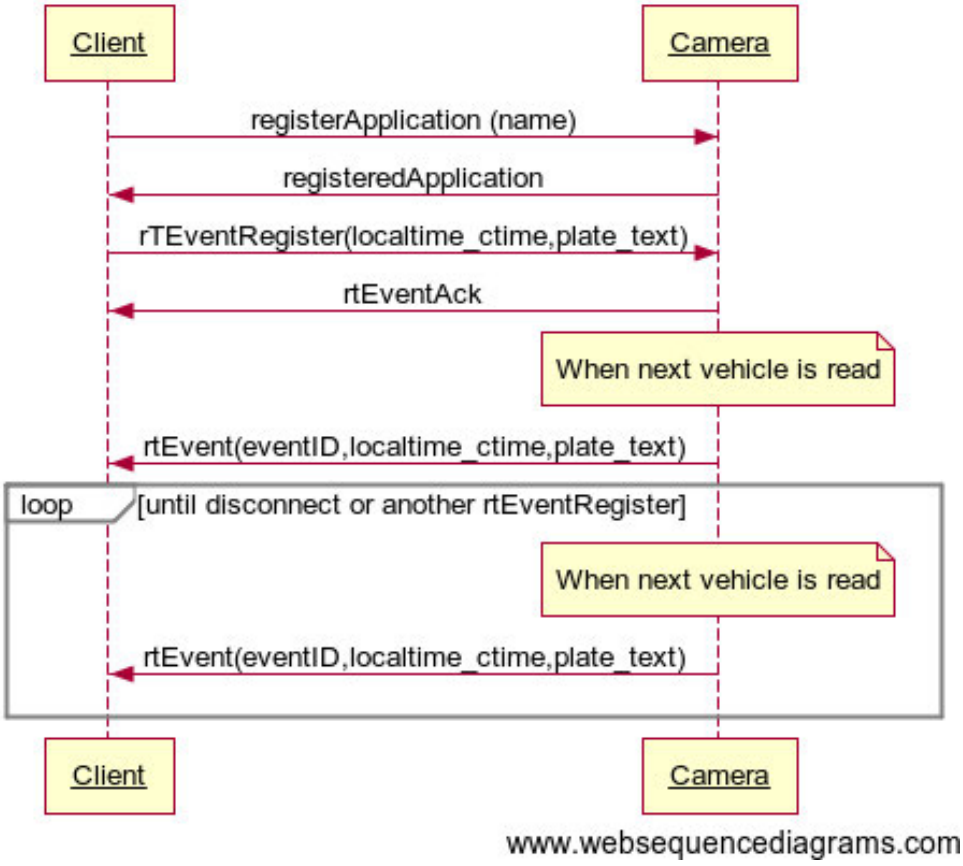
A command, which has 3 replies. Note: issueCommand will probably be deprecated in the future

```
<?xml version="1.0"?>
<commands>
  <issueCommand>anpr library list</issueCommand>
</commands>
```

The output, as the command is processed

```
<?xml version="1.0"?>
<output>
  <commandProgress>Available cardet libraries</commandProgress>
</output>

<?xml version="1.0"?>
<output>
  <commandProgress>UK, Ireland, France (version 2212) - libcardet.p382.so.1.2212.UK_IE</commandProgress>
</output>
```



Then the result, one (and only one) of which is guaranteed to arrive

```
<?xml version="1.0"?>
<output>
  <commandResultCode>OK</commandResultCode>
```

```
</output>
```

Event data

Figure 8.9. Connect to the camera and get events as it reads vehicles.

Here we need to register the application, prior to setting up and receiving events as they occur. We are receiving minimal information, just what would be required for say a journey time measurement system. You can request as much data as you like in the rtEventRegister, and it will all be sent on every event.

First we register the application.

```
<?xml version="1.0"?>
<commands>
  <registerApplication name="test">
    <description>A test application</description>
  </registerApplication>
</commands>
```

and receive a success response

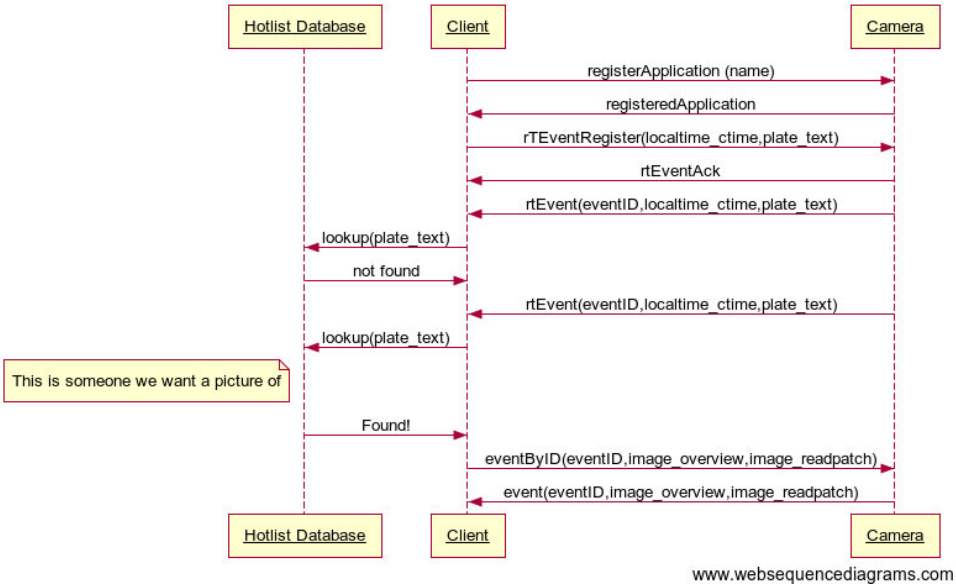
```
<?xml version="1.0"?>
<output>
  <response name="registerApplication">
    <object>test</object>
    <success>true</success>
  </response>
  <registeredApplication/>
</output>
```

And then we request real time events

```
<?xml version="1.0"?>
<commands>
  <rtEventRegister>
    <eventDetail>localtime_ctime</eventDetail>
    <eventDetail>plate_text</eventDetail>
  </rtEventRegister>
</commands>
```

Which come back like follows when they occur. Note the details *are not* in the same order as when they were requested.

```
<?xml version="1.0"?>
```



```
<output>
  <rtEvent>
    <eventID>4df5ee07000d6ae9</eventID>
    <eventData name="plate_text">
      <data>FJ05PKV</data>
    </eventData>
    <eventData name="localtime_ctime">
      <data>1308219250</data>
    </eventData>
  </rtEvent>
</output>
```

Alternatively, when registering to receive events you can specify an nlog parameter. This specifies a maximum number of events to buffer on the camera if the client application is not currently connected. This can be used to prevent data-loss should client applications disconnect.

```
<xi:include></xi:include>
```

Event data with pull

Figure 8.10. Here we are collecting (pulling) certain vehicle details when a particular vehicle is found.

As an extension to the section called “Event data” [109], here we have a database of vehicles we are particularly interested in and are requesting images for just particular vehicles. This will save bandwidth over pulling data for all vehicles.

The new message is an event request

```
<?xml version="1.0"?>
<commands>
  <eventByID>
    <eventID>4df5ee07000d6ae9</eventID>
    <eventDetail>image_overview</eventDetail>
    <eventDetail>image_readpatch</eventDetail>
  </eventByID>
</commands>
```

which gets a response indicating two binary data blobs are following the XML which can be extracted into JPEG files (JFIF).

```
<?xml version="1.0"?>
<output>
  <rtEvent>
    <eventID>4df5ee07000d6ae9</eventID>
    <eventData name="image_overview">
      <length>30412</length>
      <offset>0</offset>
    </eventData>
    <eventData name="image_readpatch">
      <length>4972</length>
      <offset>30412</offset>
    </eventData>
  </rtEvent>
</output>
```

PIXI Documents

The documents you can send across the link are in XML, as defined by the following schemas. You can send documents from the command.xsd schema, and expect to receive documents from the output.xsd schema. The definitive versions of the schemas are found on the camera under the following URLs:

1. `https://`*`camera.ip.address`*`/spikeapp/commands.xsd` - for commands to send to the camera

2. `https://`*`camera.ip.address`*`/spikeapp/output.xsd` - for output from the camera

3. `https://`*`camera.ip.address`*`/spikeapp/common.xsd` - a common file, included by both the other files

These are the definitive versions of these files, and should always be used, not any other versions. They are not generated on the fly, and will only change when software on the camera is changed.

The schemas *will* change between releases of the camera software and are not currently written as extensible. Adding the necessary text into the xsds to make them extensible also makes them confusing, so we have left it out, but consider that they will always be extended in logical ways - for example new parameters, result fields or command. We will maintain backwards compatibility, but rigid checks against historic schemas will fail.

There are a lot of correctly formed documents according to the schemas that are error conditions. For example asking for a non-existant object... for example it is required that you ask the camera for it's objects to verify that the object you want to talk about does exist.

commands.xsd

```
<?xml version="1.0" encoding="UTF-8" ?>
<xsd:schema xmlns:xsd="http://www.w3.org/2001/XMLSchema">
  <xsd:include schemaLocation="common.xsd"/>
  <xsd:element name="commands" type="commands"/>
  <xsd:complexType name="commands">
    <xsd:sequence minOccurs="1" maxOccurs="unbounded">
      <xsd:choice>
 <xsd:element name="heartbeat" type="heartbeat"/>
 <xsd:element name="getObjects" type="getObjects"/>
 <xsd:element name="getProperties" type="getProperties"/>
 <xsd:element name="getCommands" type="getCommands"/>
 <xsd:element name="setProperties" type="setProperties"/>
 <xsd:element name="issueCommand" type="issueCommand"/>
 <xsd:element name="getSystemInfo" type="getSystemInfo"/>

```

List of PIXI values

This is a list of all the eventDetails available on the camera and a description of them. The "image" types will return a length and offset, whereas the other types return data.

PIXI values image_*

The images from the cameras. Not all images are always available in all circumstances.

Platforms	Name	Type	Description
All	image_overview	image	The image from the overview taken at the same time as the plate was read, or at the same time as the trigger depending upon settings.
All	image_analysis	image	The full image from the camera from which the number plate was read. Usually this will be an infrared image.
All	image_readpatch	image	The image of the number plate, cropped so that the number plate is all that is visible.
All	image_hazoverview	image	The image from the overview taken at the same time as the hazard plate was read, or at the same time as the trigger depending upon settings.
All	image_hazanalysis	image	The full image from the camera from which the hazard plate was read. Usually this will be an infrared image.
All	image_hazreadpatch	image	The image of the hazard plate, cropped so that the hazard plate is all that is visible.

PIXI values cam_*

The camera detail of the plate the vehicle was read on

Platforms	Name	Type	Description
All	cam_shutter	xsd:integer	The shutter setting used for this image
All	cam_gain	xsd:integer	The gain setting used for this image
All	cam_cam0	xsd:integer	The camera number (starting at zero)

Platforms	Name	Type	Description
All	cam_cam1	xsd:integer	The camera number (starting at one)
All	cam_seq0	xsd:integer	The sequence setting (starting at zero)
All	cam_seq1	xsd:integer	The sequence setting (starting at one)

PIXI values hazcam_*

The camera detail of the hazard plate the vehicle was read on

Platforms	Name	Type	Description
All	hazcam_shutter	xsd:integer	The shutter setting used for this image
All	hazcam_gain	xsd:integer	The gain setting used for this image
All	hazcam_cam0	xsd:integer	The camera number (starting at zero)
All	hazcam_cam1	xsd:integer	The camera number (starting at one)
All	hazcam_seq0	xsd:integer	The sequence setting (starting at zero)
All	hazcam_seq1	xsd:integer	The sequence setting (starting at one)

PIXI values event_*

Unique information about delivery event, Not usable under all circumstances

Platforms	Name	Type	Description
All	event_id	xsd:integer	The Event id, which uniquly identifies the event

PIXI values file_*

Associated file. Not useable under all circumstances. Primarily for use in ACS's LPR files.

Platforms	Name	Type	Description
All	file_context1_file	xsd:string	The filename of context image 1
All	file_context2_file	xsd:string	The filename of context image 2
All	file_context3_file	xsd:string	The filename of context image 3
All	file_context4_file	xsd:string	The filename of context image 4
All	file_context5_file	xsd:string	The filename of context image 5
All	file_context6_file	xsd:string	The filename of context image 6
All	file_context7_file	xsd:string	The filename of context image 7
All	file_context8_file	xsd:string	The filename of context image 8
All	file_lpr	xsd:string	The lpr text filename
All	file_ir	xsd:string	The IR image filename
All	file_hazir	xsd:string	The hazard IR image filename
All	file_patch	xsd:string	The patch image filename
All	file_hazpatch	xsd:string	The hazard patch image filename
All	file_path	xsd:string	The transfer path (which is not prepended to the other filenames)
All	file_overview	xsd:string	The wide angle, overview image filename

Platforms	Name	Type	Description
All	file_hazoverview	xsd:string	The hazard wide angle, overview image filename

PIXI values hazard_*

The read hazard plate from the vehicle

Platforms	Name	Type	Description
All	hazard_classification	xsd:integer	The anpr classification (not useful with many ANPR engines)
All	hazard_asyncpayload	xsd:string	The OEM asynchronous payload. Asynchronous messages injected via serial (or TCP) will be associated with messages based on a closest match within a window. Otherwise an empty string.
All	hazard_readconfidence	xsd:integer	The confidence of the hazard plate read
All	hazard_readconfidencecat	xsd:integer	The confidence category of the hazard plate read
All	hazard_platefinderconfidence	xsd:integer	The confidence of the hardware platefinder
All	hazard_fieldnum	xsd:integer	The field number
All	hazard_natcode	xsd:integer	The nationality code (not generally useful, see HN which is)
All	hazard_nationality	xsd:string	The nationality (country and state) of origin of this plate if known
All	hazard_tiggeroffset	xsd:integer	The time offset between the trigger time and the image associated with this read (milliseconds). If not triggered, will be 0
All	hazard_text	xsd:string	The text of the hazard plate
All	hazard_numreads	xsd:integer	The total number of reads associated with the trigger that caused this plateread (A single trigger can lead to >1 plateread event). For a NOREAD the value will still be 1.
All	hazard_syntaxconfidence	xsd:integer	The syntax confidence of the hazard plate read. This is a measure of how confident we are that the hazard plate matched the syntax of the reported country or state.
All	hazard_tag	xsd:string	The plate tag, as extracted from the vehicle filter database. Will be blank if no tag entered, the plate is not matched, or the filter is off
All	hazard_triggerpayload	xsd:string	The OEM trigger payload. If you are using serial (or TCP/IP) triggers, this will be the OEM content of those, otherwise it will be boring. Text 'auto' will be returned if not triggered
All	hazard_xpos	xsd:integer	The x position of the plate's left edge in pixels
All	hazard_width	xsd:integer	The width of the plate in pixels
All	hazard_ypos	xsd:integer	The y position of the plate's top edge in pixels
All	hazard_height	xsd:integer	The height of the plate in pixels

PIXI values heartbeat_*

The camera heartbeat delivery

Platforms	Name	Type	Description
All	heartbeat_attemptcount	xsd:integer	The count of heartbeat delivery attempts.
All	heartbeat_failurecount	xsd:integer	The count of heartbeat delivery failures.
All	heartbeat_statusbits	xsd:integer	A camera status bitfield (legacy).

PIXI values imglocaltime_*

The image timestamp, the moment the image for the vehicle was captured.

This is a local time and accounts for timezone and daylight saving

Platforms	Name	Type	Description
All	imglocaltime_ampm	xsd:string	The string am for the morning, pm for the afternoon
All	imglocaltime_ctime	xsd:integer	Seconds since midnight 1st of January 1970 (commonly known as C time). This is UTC always, included for completeness.
All	imglocaltime_day	xsd:integer	The day of the month
All	imglocaltime_dayyear	xsd:integer	The day of the year, with January the 1st as zero
All	imglocaltime_hour	xsd:integer	The hour, 24 hour clock
All	imglocaltime_hour12	xsd:integer	The hour, 12 hour clock
All	imglocaltime_millisecond	xsd:integer	Milliseconds
All	imglocaltime_locked	xsd:integer	Indicates if time is locked via NTP
All	imglocaltime_locked_text	xsd:string	Indicates if time is locked via NTP as a string
All	imglocaltime_minute	xsd:integer	Minutes past the hour
All	imglocaltime_tenmin	xsd:integer	Tens of minutes past the hour
All	imglocaltime_month	xsd:integer	Month of the year (January as one)
All	imglocaltime_monthname	xsd:string	Month of the year as a word, in English
All	imglocaltime_monthnamesh	xsd:string	Month of the year as three letter shortened word, in English
All	imglocaltime_second	xsd:integer	Seconds past the minute
All	imglocaltime_tenthsecond	xsd:integer	Tenths of seconds
All	imglocaltime_hundredthsecond	xsd:integer	Hundredths of seconds
All	imglocaltime_daylight	xsd:integer	One if daylight saving is in effect, zero otherwise
All	imglocaltime_dayweek	xsd:integer	The day of the week as a number, with zero being Sunday
All	imglocaltime_dayweekname	xsd:string	The day of the week as a word, in English
All	imglocaltime_dayweeknamesh	xsd:string	The day of the week as a three letter shortened word, in English
All	imglocaltime_year	xsd:integer	The year
All	imglocaltime_year2	xsd:integer	The last two digits of the year

PIXI values imgutctime_*

The image timestamp, the moment the image for the vehicle was captured.

This is UTC time (like GMT)

Platforms	Name	Type	Description
All	imgutctime_ampm	xsd:string	The string am for the morning, pm for the afternoon
All	imgutctime_ctime	xsd:integer	Seconds since midnight 1st of January 1970 (commonly known as C time)
All	imgutctime_day	xsd:integer	The day of the month
All	imgutctime_dayyear	xsd:integer	The day of the year, with January the 1st as zero
All	imgutctime_hour	xsd:integer	The hour, 24 hour clock
All	imgutctime_hour12	xsd:integer	The hour, 12 hour clock
All	imgutctime_millisecond	xsd:integer	Milliseconds
All	imgutctime_locked	xsd:integer	Indicates if time is locked via NTP
All	imgutctime_locked_text	xsd:string	Indicates if time is locked via NTP as a string
All	imgutctime_minute	xsd:integer	Minutes past the hour
All	imgutctime_tenmin	xsd:integer	Tens of minutes past the hour
All	imgutctime_month	xsd:integer	Month of the year (January as one)
All	imgutctime_monthname	xsd:string	Month of the year as a word, in English
All	imgutctime_monthnamesh	xsd:string	Month of the year as three letter shortened word, in English
All	imgutctime_second	xsd:integer	Seconds past the minute
All	imgutctime_tenthsecond	xsd:integer	Tenths of seconds
All	imgutctime_hundredthsecond	xsd:integer	Hundredths of seconds
All	imgutctime_daylight	xsd:integer	One if daylight saving is in effect, zero otherwise
All	imgutctime_dayweek	xsd:integer	The day of the week as a number, with zero being Sunday
All	imgutctime_dayweekname	xsd:string	The day of the week as a word, in English
All	imgutctime_dayweeknamesh	xsd:string	The day of the week as a three letter shortened word, in English
All	imgutctime_year	xsd:integer	The year
All	imgutctime_year2	xsd:integer	The last two digits of the year

PIXI values jpeg_*

JPEG data. Not useable under all circumstances. Primarily for use in output filenames to distinguish between them.

Platforms	Name	Type	Description
All	jpeg_type	xsd:string length='1'	The file type. Will be p for a patch, n for an IR image, and w for an overview wide angle image. Context images will be 1 (for context 1), 2 (for context 2). Currently up to 8 context images are supported.

PIXI values location_*

The location of the camera

Platforms	Name	Type	Description
All	location_latitude	xsd:integer	The whole number of degrees of latitude (north or south). Will always be positive.

Platforms	Name	Type	Description
All	location_longitude	xsd:integer	The whole number of degrees of longitude (east or west). Will always be positive.
All	location_north	xsd:integer	The whole number of degrees north we are. Will be negative if we are south.
All	location_east	xsd:integer	The whole number of degrees east we are. Will be negative if we are west.
All	location_millideglat	xsd:integer	The number of millidegrees of latitude we are away from the nearest degree.
All	location_millideglong	xsd:integer	The number of millidegrees of longitude we are away from the nearest degree.
All	location_microdeglat	xsd:integer	The number of microdegrees of latitude we are away from the nearest degree.
All	location_microdeglong	xsd:integer	The number of microdegrees of longitude we are away from the nearest degree.
All	location_ns	xsd:string length='1'	A character for latitude, N (north) or S (south) depending upon which hemisphere the location represents.
All	location_ew	xsd:string length='1'	A character for longitude, E (east) or W (west) depending upon which side of the meridian the location represents.
All	location_minlatitude	xsd:integer	The number of minutes of latitude (north or south) that we are away from the nearest whole degree. Will always be positive.
All	location_minlongitude	xsd:integer	The number of minutes of longitude (east or west) that we are away from the nearest whole degree. Will always be positive.
All	location_minlatitudetotal	xsd:integer	The number of minutes of latitude (north or south) that we are away from the equator. Will always be positive.
All	location_minlongitudetotal	xsd:integer	The number of minutes of longitude (east or west) that we are away from the equator. Will always be positive.
All	location_minnorthtotal	xsd:integer	The number of minutes north that we are away from the equator. Will be negative if we are south.
All	location_mineasttotal	xsd:integer	The number of minutes east that we are away from the equator. Will be negative if we are south.
All	location_milliminuteslat	xsd:integer	The number of milliminutes of latitude we are away from the nearest minute.
All	location_milliminuteslong	xsd:integer	The number of milliminutes of longitude we are away from the nearest minute.
All	location_microminuteslat	xsd:integer	The number of microminutes of latitude we are away from the nearest minute.
All	location_microminuteslong	xsd:integer	The number of microminutes of longitude we are away from the nearest minute.
All	location_validity	xsd:string	The string Valid or Invalid depending upon whether the location is deemed good.

PIXI values globalmeta_*

Metadata strings from the Metadata object. This is purely here so you can have the same format strings on all sites, and just change the metadata in this store

Platforms	Name	Type	Description
All	globalmeta_a	xsd:string	Metadata string a
All	globalmeta_b	xsd:string	Metadata string b
All	globalmeta_c	xsd:string	Metadata string c
All	globalmeta_d	xsd:string	Metadata string d
All	globalmeta_e	xsd:string	Metadata string e
All	globalmeta_f	xsd:string	Metadata string f
All	globalmeta_g	xsd:string	Metadata string g
All	globalmeta_h	xsd:string	Metadata string h
All	globalmeta_i	xsd:string	Metadata string i
All	globalmeta_j	xsd:string	Metadata string j
All	globalmeta_k	xsd:string	Metadata string k
All	globalmeta_l	xsd:string	Metadata string l
All	globalmeta_m	xsd:string	Metadata string m
All	globalmeta_n	xsd:string	Metadata string n
All	globalmeta_o	xsd:string	Metadata string o
All	globalmeta_p	xsd:string	Metadata string p
All	globalmeta_q	xsd:string	Metadata string q
All	globalmeta_r	xsd:string	Metadata string r
All	globalmeta_s	xsd:string	Metadata string s
All	globalmeta_t	xsd:string	Metadata string t
All	globalmeta_u	xsd:string	Metadata string u
All	globalmeta_v	xsd:string	Metadata string v
All	globalmeta_w	xsd:string	Metadata string w
All	globalmeta_x	xsd:string	Metadata string x
All	globalmeta_y	xsd:string	Metadata string y
All	globalmeta_z	xsd:string	Metadata string z

PIXI values timeoffset_*

The time offsets of overview context images

Platforms	Name	Type	Description
All	timeoffset_context1	xsd:integer	The offset (in milliseconds) of context image 1 measured from the vehicle event timestamp
All	timeoffset_context2	xsd:integer	The offset (in milliseconds) of context image 2 measured from the vehicle event timestamp
All	timeoffset_context3	xsd:integer	The offset (in milliseconds) of context image 3 measured from the vehicle event timestamp
All	timeoffset_context4	xsd:integer	The offset (in milliseconds) of context image 4 measured from the vehicle event timestamp
All	timeoffset_context5	xsd:integer	The offset (in milliseconds) of context image 5 measured from the vehicle event timestamp
All	timeoffset_context6	xsd:integer	The offset (in milliseconds) of context image 6 measured from the vehicle event timestamp

Platforms	Name	Type	Description
All	timeoffset_context7	xsd:integer	The offset (in milliseconds) of context image 7 measured from the vehicle event timestamp
All	timeoffset_context8	xsd:integer	The offset (in milliseconds) of context image 8 measured from the vehicle event timestamp

PIXI values plate_*

The read number plate from the vehicle

Platforms	Name	Type	Description
All	plate_isoalpha2	xsd:string	The 2-character nationality of origin of this plate if known, as defined by ISO 3166-1
All	plate_isoalpha3	xsd:string	The 3-character nationality of origin of this plate if known, as defined by ISO 3166-1
All	plate_classification	xsd:integer	The anpr classification (not useful with many ANPR engines)
All	plate_asyncpayload	xsd:string	The OEM asynchronous payload. Asynchronous messages injected via serial (or TCP) will be associated with messages based on a closest match within a window. Otherwise an empty string.
All	plate_readconfidence	xsd:integer	The confidence of the plate read
All	plate_readconfidencecat	xsd:integer	The confidence category of the plate read
All	plate_direction	xsd:string	The direction of travel of the plate read. This will be one of the following strings: AWAY, TOWARD, NOTSET. If NOTSET it indicates the direction could not be determined.
All	plate_isosubdivision	xsd:string	The subdivision of origin of this plate if known, as defined by ISO 3166-2
All	plate_platefinderconfidence	xsd:integer	The confidence of the hardware platefinder
All	plate_fieldnum	xsd:integer	The field number
All	plate_trigsource	xsd:string	The source of OEM trigger
All	plate_tcppayload	xsd:string	The OEM trigger payload from the first TCP/IP trigger
All	plate_triggerId	xsd:integer	The trigger identifier.
All	plate_laneId	xsd:string	The lane in which the plate is located.
All	plate_natcode	xsd:integer	The nationality code (not generally useful, see PN which is)
All	plate_nationality	xsd:string	The nationality (country and state) of origin of this plate if known
All	plate_triggeroffset	xsd:integer	The time offset between the trigger time and the image associated with this read (milliseconds). If not triggered, will be 0
All	plate_text	xsd:string	The text of the plate
All	plate_numreads	xsd:integer	The total number of reads associated with the trigger that caused this plateread (A single trigger can lead to >1 plateread event). For a NOREAD the value will still be 1.
All	plate_syntaxconfidence	xsd:integer	

Platforms	Name	Type	Description
			The syntax confidence of the plate read. This is a measure of how confident we are that the plate matched the syntax of the reported country or state.
All	plate_serialpayload	xsd:string	The OEM trigger payload from the first Serial trigger
All	plate_tag	xsd:string	The plate tag, as extracted from the vehicle filter database. Will be blank if no tag entered, the plate is not matched, or the filter is off
All	plate_triggerpayload	xsd:string	The OEM trigger payload. If you are using serial (or TCP/IP) triggers, this will be the OEM content of those, otherwise it will be boring. Text 'auto' will be returned if not triggered
All	plate_xpos	xsd:integer	The x position of the plate's left edge in pixels
All	plate_width	xsd:integer	The width of the plate in pixels
All	plate_ypos	xsd:integer	The y position of the plate's top edge in pixels
All	plate_height	xsd:integer	The height of the plate in pixels

PIXI values triglocaltime_*

The trigger timestamp, the moment the trigger started. You should probably be using T instead of this, as if the event was not a triggered one you will not get anything in the string with R.

This is a local time and accounts for timezone and daylight saving

Platforms	Name	Type	Description
All	triglocaltime_ampm	xsd:string	The string am for the morning, pm for the afternoon
All	triglocaltime_ctime	xsd:integer	Seconds since midnight 1st of January 1970 (commonly known as C time). This is UTC always, included for completeness.
All	triglocaltime_day	xsd:integer	The day of the month
All	triglocaltime_dayyear	xsd:integer	The day of the year, with January the 1st as zero
All	triglocaltime_hour	xsd:integer	The hour, 24 hour clock
All	triglocaltime_hour12	xsd:integer	The hour, 12 hour clock
All	triglocaltime_millisecond	xsd:integer	Milliseconds
All	triglocaltime_minute	xsd:integer	Minutes past the hour
All	triglocaltime_tenmin	xsd:integer	Tens of minutes past the hour
All	triglocaltime_month	xsd:integer	Month of the year (January as one)
All	triglocaltime_monthname	xsd:string	Month of the year as a word, in English
All	triglocaltime_monthnamesh	xsd:string	Month of the year as three letter shortened word, in English
All	triglocaltime_second	xsd:integer	Seconds past the minute
All	triglocaltime_tenthsecond	xsd:integer	Tenths of seconds
All	triglocaltime_hundredthsecond	xsd:integer	Hundredths of seconds
All	triglocaltime_daylight	xsd:integer	One if daylight saving is in effect, zero otherwise
All	triglocaltime_dayweek	xsd:integer	The day of the week as a number, with zero being Sunday
All	triglocaltime_dayweekname	xsd:string	The day of the week as a word, in English

Platforms	Name	Type	Description
All	triglocaltime_dayweeknamesh	xsd:string	The day of the week as a three letter shortened word, in English
All	triglocaltime_year	xsd:integer	The year
All	triglocaltime_year2	xsd:integer	The last two digits of the year

PIXI values trigutctime_*

The trigger timestamp, the moment the trigger started. You should probably be using t instead of this, as if the event was not a triggered one you will not get anything in the string with r.

This is UTC time (like GMT)

Platforms	Name	Type	Description
All	trigutctime_ampm	xsd:string	The string am for the morning, pm for the afternoon
All	trigutctime_ctime	xsd:integer	Seconds since midnight 1st of January 1970 (commonly known as C time)
All	trigutctime_day	xsd:integer	The day of the month
All	trigutctime_dayyear	xsd:integer	The day of the year, with January the 1st as zero
All	trigutctime_hour	xsd:integer	The hour, 24 hour clock
All	trigutctime_hour12	xsd:integer	The hour, 12 hour clock
All	trigutctime_millisecond	xsd:integer	Milliseconds
All	trigutctime_minute	xsd:integer	Minutes past the hour
All	trigutctime_tenmin	xsd:integer	Tens of minutes past the hour
All	trigutctime_month	xsd:integer	Month of the year (January as one)
All	trigutctime_monthname	xsd:string	Month of the year as a word, in English
All	trigutctime_monthnamesh	xsd:string	Month of the year as three letter shortened word, in English
All	trigutctime_second	xsd:integer	Seconds past the minute
All	trigutctime_tenthsecond	xsd:integer	Tenths of seconds
All	trigutctime_hundredthsecond	xsd:integer	Hundredths of seconds
All	trigutctime_daylight	xsd:integer	One if daylight saving is in effect, zero otherwise
All	trigutctime_dayweek	xsd:integer	The day of the week as a number, with zero being Sunday
All	trigutctime_dayweekname	xsd:string	The day of the week as a word, in English
All	trigutctime_dayweeknamesh	xsd:string	The day of the week as a three letter shortened word, in English
All	trigutctime_year	xsd:integer	The year
All	trigutctime_year2	xsd:integer	The last two digits of the year

PIXI values site_*

The site details for this unit

Platforms	Name	Type	Description
All	site_hostname	xsd:string	The site's hostname, the recommended way of identifying a site

Platforms	Name	Type	Description
All	site_libver	xsd:integer	The system's library version number
All	site_serialnumber	xsd:integer	The system's serial number
All	site_appver	xsd:integer	The system's application version number

PIXI values supplementary_*

The supplementary images details

Platforms	Name	Type	Description
All	supplementary_1_offset	xsd:integer	The offset (in milliseconds) of supplementary image 1 measured from the vehicle event timestamp
All	supplementary_2_offset	xsd:integer	The offset (in milliseconds) of supplementary image 2 measured from the vehicle event timestamp
All	supplementary_1_seq1	xsd:integer	Supplementary image 1 sequence setting (starting at one)
All	supplementary_2_seq1	xsd:integer	Supplementary image 2 sequence setting (starting at one)
All	supplementary_1_shutter	xsd:integer	Supplementary image 1 shutter setting
All	supplementary_2_shutter	xsd:integer	Supplementary image 2 shutter setting
All	supplementary_1_gain	xsd:integer	Supplementary image 1 gain setting
All	supplementary_2_gain	xsd:integer	Supplementary image 2 gain setting

PIXI values localtime_*

The timestamp for the vehicle, which is the trigger timestamp if the vehicle was triggered (see R), or the image timestamp if it was not (see I).

This is a local time and accounts for timezone and daylight saving

Platforms	Name	Type	Description
All	localtime_ampm	xsd:string	The string am for the morning, pm for the afternoon
All	localtime_ctime	xsd:integer	Seconds since midnight 1st of January 1970 (commonly known as C time). This is UTC always, included for completeness.
All	localtime_day	xsd:integer	The day of the month
All	localtime_dayyear	xsd:integer	The day of the year, with January the 1st as zero
All	localtime_hour	xsd:integer	The hour, 24 hour clock
All	localtime_hour12	xsd:integer	The hour, 12 hour clock
All	localtime_millisecond	xsd:integer	Milliseconds
All	localtime_minute	xsd:integer	Minutes past the hour
All	localtime_tenmin	xsd:integer	Tens of minutes past the hour
All	localtime_month	xsd:integer	Month of the year (January as one)
All	localtime_monthname	xsd:string	Month of the year as a word, in English
All	localtime_monthnamesh	xsd:string	Month of the year as three letter shortened word, in English
All	localtime_second	xsd:integer	Seconds past the minute

Platforms	Name	Type	Description
All	localtime_tenthsecond	xsd:integer	Tenths of seconds
All	localtime_hundredthsecond	xsd:integer	Hundredths of seconds
All	localtime_daylight	xsd:integer	One if daylight saving is in effect, zero otherwise
All	localtime_dayweek	xsd:integer	The day of the week as a number, with zero being Sunday
All	localtime_dayweekname	xsd:string	The day of the week as a word, in English
All	localtime_dayweeknamesh	xsd:string	The day of the week as a three letter shortened word, in English
All	localtime_year	xsd:integer	The year
All	localtime_year2	xsd:integer	The last two digits of the year

PIXI values utctime_*

The timestamp for the vehicle, which is the trigger timestamp if the vehicle was triggered (see r), or the image timestamp if it was not (see i).

This is UTC time (like GMT)

Platforms	Name	Type	Description
All	utctime_ampm	xsd:string	The string am for the morning, pm for the afternoon
All	utctime_ctime	xsd:integer	Seconds since midnight 1st of January 1970 (commonly known as C time)
All	utctime_day	xsd:integer	The day of the month
All	utctime_dayyear	xsd:integer	The day of the year, with January the 1st as zero
All	utctime_hour	xsd:integer	The hour, 24 hour clock
All	utctime_hour12	xsd:integer	The hour, 12 hour clock
All	utctime_millisecond	xsd:integer	Milliseconds
All	utctime_minute	xsd:integer	Minutes past the hour
All	utctime_tenmin	xsd:integer	Tens of minutes past the hour
All	utctime_month	xsd:integer	Month of the year (January as one)
All	utctime_monthname	xsd:string	Month of the year as a word, in English
All	utctime_monthnamesh	xsd:string	Month of the year as three letter shortened word, in English
All	utctime_second	xsd:integer	Seconds past the minute
All	utctime_tenthsecond	xsd:integer	Tenths of seconds
All	utctime_hundredthsecond	xsd:integer	Hundredths of seconds
All	utctime_daylight	xsd:integer	One if daylight saving is in effect, zero otherwise
All	utctime_dayweek	xsd:integer	The day of the week as a number, with zero being Sunday
All	utctime_dayweekname	xsd:string	The day of the week as a word, in English
All	utctime_dayweeknamesh	xsd:string	The day of the week as a three letter shortened word, in English
All	utctime_year	xsd:integer	The year
All	utctime_year2	xsd:integer	The last two digits of the year

Appendix A. Technical Details

Communication

Console Serial RS-232

The console runs at a fixed line speed of 38,400 bits per second with 8 bits of data, no parity and 1 stop bit. This is often abbreviated to 38,400 8N1. Hardware flow control is not supported, Xon/Xoff can be used, but no flow control also works.

Ethernet

The ethernet port is wired to the four Ethernet wires.

The ethernet port is 100BASE-TX autosensing 10/100 Mbit/s and full/half duplex over twisted pair. You must use Category 5e cable to make full use of the bandwidth of the connection, and are limited to 100metres total cable length from the camera to the receiver. If you are having problems with the ethernet link being intermittent or unreliable do ensure your cable meets full Cat 5e specification. The camera will work with a hub or switch with a "straight through" cable (pin 1 to 1, pin 2 to 2) or with a "cross-over" cable directly into the back of a PC. The camera will *not* autosense the RX and TX pairs so you must use the correct cable type for the far end unless that will autosense.

Although the camera is capable of 100Base-TX Full Duplex and will often negotiate to that given an appropriate other end point, sometimes the cable in between is not up to Cat 5e standards and running over long distances will drop packets. It is possible to force the camera to slow down or change to half duplex using a linux command called mii-tool.

`mii-tool` {-F} {*`10baseT-HD`*}
will force set it to 10 Mbit/s and half duplex. mii-tool has many other options, which are detailed below in the manual page for it.

If you need to make a permanent change to the speed of the camera's ethernet link you can put the command into `/etc/conf.d/local.start`, either using nano or by going to the System → Bootup and Shutdown page of webmin where you can edit the same file.

mii-tool

view, manipulate media-independent interface status

`mii-tool` [-v, --verbose] [-V, --version] [-R, --reset] [-r, --restart] [-w, --watch] [-l, --log] [-A, --advertise=*`media,`* ...] [-F, --force=*`media`*] [*`interface`*...]

This utility checks or sets the status of a network interface's Media Independent Interface (MII) unit. Most fast ethernet adapters use an MII to autonegotiate link speed and duplex setting.

Most intelligent network devices use an autonegotiation protocol to communicate what media technologies they support, and then select the fastest mutually supported media technology. The `-A` or `--advertise` options can be used to tell the MII to only advertise a subset of its capabilities. Some passive devices, such as single-speed hubs, are unable to autonegotiate. To handle such devices, the MII protocol also allows for establishing a link by simply detecting either a 10baseT or 100baseT link beat. The `-F` or `--force` options can be used to force the MII to operate in one mode, instead of autonegotiating. The `-A` and `-F` options are mutually exclusive.

The default short output reports the negotiated link speed and link status for each interface. If an interface or interfaces are not specified on the command line, then **mii-tool** will check any available interfaces from *eth0* through *eth7*.

`-v`, `--verbose`	Display more detailed MII status information. If used twice, also display raw MII register contents.

`-V`, `--version`	Display program version information.
`-R`, `--reset`	Reset the MII to its default configuration.
`-r`, `--restart`	Restart autonegotiation.
`-w`, `--watch`	Watch interface(s) and report changes in link status. The MII interfaces are polled at one second intervals.
`-l`, `--log`	Used with `-w`, records link status changes in the system log instead of printing on standard output.
`-F` *media*, `--force=`*media*	Disable autonegotiation, and force the MII to either *100baseTx-FD*, *100baseTx-HD*, *10baseT-FD*, or *10baseT-HD* operation.
`-A` *media,...*, `--advertise=`*media,...*	Enable and restart autonegotiation, and advertise only the specified media technologies. Multiple technologies should be separated by commas. Valid media are *100baseT4*, *100baseTx-FD*, *100baseTx-HD*, *10baseT-FD*, and *10baseT-HD*.

Diagnostics

SIOCGMIIPHY on 'eth?' failed: Invalid argument	If the interface is not running (up), kernel will refuse to report its link state.
SIOCGMIIPHY on 'eth?' failed: Operation not permitted	Most kernels restrict access to root.
SIOCGMIIPHY on 'eth?' failed: No such device	This error is shown, if the kernel does not know about the named device.
SIOCGMIIPHY on 'eth?' failed: Operation not supported	The interface in question does not support MII queries. Most likely, it does not have MII transceivers, at all.

Network details

The P382, P392+ and P492 are network capable cameras which make extensive use of TCP/IP and UDP/IP. They also use raw ethernet packets with type 0xAC01 for local configuration of the IP address details (sometimes known as IP Discovery or Remote IP Configuration). In case you need to pass TCP/IP or UDP/IP through a firewall or network translation device this table lists the appropriate ports.

Table A.1. TCP/IP and UDP/IP Port numbers

Port used for	Port type	Port number
SSH Shell	TCP/IP Server	22
Webmin secure HTTP	TCP/IP Server	443
Viewfinder	TCP/IP Server	9000
Client	TCP/IP Server	3570
PIXI (Unsecured, recommend an SSH tunnel to access). Usually firewalled on camera.	TCP/IP Server	3382
ACS	when FTP Client	21 plus ephemeral data ports
ACS	when SCP/SSH Client	22
NTP (where used)	UDP Client	123
Portmapper (where used for NFS)	UDP and TCP Server	111
NFS (where used)	UDP and TCP	2049
VES	TCP Server	Configurable, defaults [redacted] through [redacted] inclusive)
UDP Ping (may be used by VES)	UDP	10010
Ping	ICMP	No port for ICMP
TCP Trigger	TCP	3820
UTMC	TCP Server	Configurable

Filesystem layout

As you may well discover, the camera's root filesystem is mounted read-only to prevent accidental corruption. This section of the manual documents how the file system is layed out, and what goes where. A base knowledge of linux filesystems, disks, partitions and nomeclature for these is expected to be able to read this section.

There are flash devices within the camera, the internal flash, and the compact flash/SD card (not user removable). The internal flash is no longer used. The other flash card may vary in size, but only any space over 512Mb is available for user storage. It is a build to order option to have storage space in the camera.

On the P382 The flash is `/dev/hda` and on the P392+/P492 is `/dev/mmcblk0` and is partitioned into 5 sections as follows:

- 1 - This is the boot device. On the P382 it contains GRUB, the bootloader and the kernels. On the P392+/P492 it doesn't contain very much - all the boot data is held in NOR flash which is not accessible from linux. It is vital for booting, and there is no alternative. It is not usually mounted, so should be safe from damage. When mounted it exists as `/boot`
- 2 - This is the root filesystem. It is normally mounted as `/` *read only*.
- 5 - It is mounted as `/var` and is used for storing logging information and other run time data.
- 6 - It is mounted as `/opt` and is used for storing the PIPS application, libraries and configuration information. `/opt/pips` contains the ANPR reading engine, the application, the shell and other application files. `/opt/config/current` is a symbolic link to the current configuration of the camera including the usual `/etc`. You should back up `/opt/config/current` to preserve the state of a camera.
- 7 - It is mounted as `/storage` and is used for storing PIPS application data. All output from the camera application goes into this directory. If you have not purchased a larger than 512Mb compact flash this area will be small and should not be used for storage. You can (and should if you want to do this) mount a network filesystem under this directory to store files off camera.

Partition 1 on disk hda is known as `/dev/hda1` and on disk mmcblk0 it is known as `/dev/mmcblk0p1`.

Most of the filesystem is “normal linux” and adheres to the Linux Filesystem Standard (see http://tldp.org/LDP/Linux-Filesystem-Hierarchy/html/). Here are a few highlights and P382, P392+ and P492 specifics:

- `/etc` contains system specific configuration.
  - `fstab` mounted filesystems, included those mounted at boot. You can manipulate this in webmin, see the section called “Mounting network disks” [13]
  - `init.d/` several startup scripts, including those used to start the application and network
- `/opt/pips` contains the PIPS specific code including the applications.
  - `camera_app` the camera application which does ANPR and runs all the output modules
  - `libpipslinux.so.*` the shared library written by PIPS, used by all our applications on the camera
  - `libcardet*` are the ANPR libraries for reading plates. See the section called “Camera control” [13] to manipluate these.
  - `s2driver*` the kernel module (think of it like a windows device driver) for the PCI interface to the cameras and platefinder.
  - `ipconfigd` the IPDiscovery responder, this is what you're using when you use IP Discovery. This is started from `/etc/conf.d/local.start`
  - `modempulse` simple application which assists in turning the modem (where fitted) on and off.
  - `*.msc, *.isc, xcf08p_vo_48_1532.bsd, prog_prom*, jdrive, instfpga.pl` Files for setting up the FPGA. `instfpga.pl` uses the other files appropriately to reprogram the FPGA. Once the FPGA is programmed the camera will need rebooting.
  - `pipsshell` is the camera application's shell, see Chapter 6, *PIPS ANPR Shell* [15].
  - `uid.pl` generates a unique ID for this camera for use in VES.
  - `netmon.pl` manages the network and NTP on the camera.
- `/opt/config` contains all local configuration.
  - `current` is a symbolic link to the current configuration. You can use this to quickly switch configurations if you understand how to maniplate symbolic links.
  - `current/state.xml` is the camera script, containing all the configuration used by the camera application. This is XML, and must be correct or we will discard it. Hand edits are possible, but do take care. You can check it with **`xmllint`**
  - `current/netmon.xml` is the network configuration script. This is XML, and must be correct or we will discard it. Hand edits are possible, but do take care. You can check it with **`xmllint`**
  - `current/etc` is the actual `/etc` which is linked to here
- `/var` writable area used by linux. In particular contains linux's log files, see `log/messages` in particular. Equivalent of the event log on the P372.
- `/storage` writable area used by our application. This is user storage and all paths you enter in the application are relative to this directory, so entering `foo` as a directory will store the files in `/storage/foo`. This will contain the compact flash storage size minus 500Mb.

Backup

On the P392+ and P492 cameras (and only these models) should have the /backup.pl script run from the command line after any change - once that change is determined to be satisfactory. Changes include:

- New OS and application installations
- Application upgrades, Cardet upgrades
- Configuration changes

Appendix B. Software installation and upgrades

This appendix covers software maintenance of the camera which you may need to do, including upgrading or changing the software installed on the camera.

The camera software has a version numbering scheme to help you decide what action to take when new versions become available. The format of a version number is *major.minor.revision*. The "revision" will be an increasing "revision" number, always larger for later releases. For bug fixes, "revision" will increase. For minor enhancements, "minor" will increase. For major new features, or architectural changes, "major" will increase.

Optionally we may append the characters 'a', 'b' or "rc" to indicate alpha, beta or release candidate.

If only the revision number is increased, backward compatibility is guaranteed without any config changes.

If the minor number is increased, backward compatibility *may* be affected if deemed absolutely necessary. This will be clearly highlighted in the release note.

If the major number is increased, backward compatibility *may* be affected if deemed necessary or desirable. This will be clearly highlighted in the release note.

In general we will always try to maintain backward compatibility where it makes sense. Always refer to the release notes for more details on the changes that have occurred.

The old mechanisms of manual installation and web based installation are no longer possible nor supported. All software installation is managed via the PIPS ANPR Toolkit which is documented in Chapter 3, *PIPS ANPR Toolkit* [8].

Appendix C. Factory Defaults

On the P382 the password for the root user is *382*

On the P392+/P492 the password for the root user is *392*

The default network configuration stored in(`/opt/config/current/netmon.xml`) is

Table C.1. Default IP configuration

IP address	`10.20.xxx.yy`
Network mask	`255.255.0.0`
Default gateway	`10.20.100.1`

where `xxx` are the first three digits of the serial number of the camera, and `yy` are the last two. The serial number is printed on a sticker on the rear of the P382, P392+ and P492

Caution

It is important to note any changes which you make to these parameters. Without these details it may be impossible to maintain the camera and it may have to be returned to Neology for servicing

Appendix D. File transfers

This section describes how to transfer files to or from the camera by various means. You can pick which of these you want to try, although not all are suitable for all situations.

SFTP

SFTP stands for Secure File Transfer Protocol. It is an encrypted protocol, and is a partner to SSH. Like you can log onto a system using SSH, you can use SFTP to transfer files in both directions. It is simple to use if you are familiar with the ubiquitous FTP, and plenty of front ends make it's use trivial. It is the recommended way of transferring files, requiring little setup to use.

Multiplatform — The filezilla program (see the section called “Filezilla” [142]) provides a two window commander style interface for accessing the camera via sftp.

Windows — The WinSCP program (see the section called “WinSCP” [142]) provides an explorer or commander style interface for accessing the camera via scp and sftp.

To use SFTP I recommend a graphical browser unless you're happy to train yourself in the use of a command line version.

SCP

SCP stands for Secure CoPy. It is an encrypted protocol, and is also a partner to SSH. Like you can log onto a system using SSH, you can use SCP to transfer files in both directions. It is simple to use, but does not provide directory listings or any other features you might expect - you will need to use SSH for directory listings as a partner to SCP. As SCP is available on most operating systems as a built in, and is also available on the camera for camera-to-camera copies it is useful to understand.

Windows — The WinSCP program (see the section called “WinSCP” [142]) provides an explorer style interface for accessing the camera via scp and sftp.

Windows — The PuTTY project (see the section called “PuTTY” [142]) also provides PSCP for Windows. If you want to use it, put it on your path, or current directory, and use **pscp** instead of **scp** in the command examples.

Mac OS X — scp is a built in command.

Linux — scp is provided if you have ssh installed, which you most likely will do.

SCP is used like the standard DOS or Unix copy commands. You specify a source and target file to transfer, just one of them happens to be on a remote computer.

- `scp {`*`SourceFile`*`} {`*`user@host:directory/TargetFile`*`}`
  to copy a file to the remote computer
- `scp {`*`user@host:directory/SourceFile`*`} {`*`TargetFile`*`}`
  to copy a file from the remote computer

Note

SCP can be used from on the camera too; if you have a computer with an SSH server you can scp out from the camera, or from one camera to another.

FTP

FTP stands for File Transfer Protocol. It is a simple open protocol, and is purely for transferring files. To use it you will need an FTP server installed on a PC accessible via the network from the camera. There are various options available

for each operating system. FTP is not recommended, but included here as people familiar with our older cameras will be familiar with FTP. This is a quick introduction to FTP, not a complete guide. There are books available on the subject, or guides on the internet.

Windows	For Windows we recommend the free FileZilla server, which is a download from http://filezilla-project.org/. This is simple to setup and enable users without requiring rights to add users to the PC.
Windows (alternative)	For Windows you can also use the FTP server which comes with the OS as part of IIS. You can install this from Start → Settings → Control Panel+Add/Remove Programs. It is tricky to set up correctly, and requires that you create a Windows user, and assign them correct permissions to work right. I do not recommend it as FileZilla is easier to use.
Mac OS X	MacOS X comes with an FTP server which can be enabled using the Sharing Pane.
Linux	Different distributions of Linux come with different FTP servers which are probably not installed or enabled by default. I recommend the ProFTPd software, but any FTP server should work correctly.

If you now connect to the camera's shell you should be able to ftp from the camera and transfer files. A typical session is shown below.

Note

The use of the bin command to enable all binary transfers may be necessary otherwise binary files may get corrupted, and does no harm so always do it.

```
pole ~ # ftp 80.177.196.175
Connected to 80.177.196.175 (80.177.196.175).
220 ProFTPD 1.3.1rc3 Server (Alan's ProFTPD) [::ffff:80.177.196.175]

150 Opening ASCII mode data connection for file list
-rw-r--r--   1 alan     alan      4553379 Oct 24 16:04 distrib.tbz2
226 Transfer complete
ftp> get distrib.tbz2
local: distrib.tbz2 remote: distrib.tbz2
200 PORT command successful
150 Opening BINARY mode data connection for distrib.tbz2 (4553379 bytes)
226 Transfer complete
```

```
4553379 bytes received in 0.741 secs (6e+03 Kbytes/sec)
ftp> quit
221 Goodbye.
pole ~ #
```

The **put** and **get** commands actually transfer files. **lcd** changes *local* directory, **cd** changes remote directory. **ls** will list files

Note

You cannot FTP from a remote computer into the P382, P392+ and P492

NFS

NFS stands for Network File System. This is an open protocol for sharing filesystems between computers. Unlike FTP and SCP this allows the camera to see remote files as if they were local files, rather than actually needing room to store them on its local storage. NFS is quite paranoid and must have all permissions correct before it will work. When it fails it doesn't usually give a helpful error message.

Windows see the section called “NFS Server on Windows” [142] to install nfs.

Mac OS X nfs is built in, but needs enabling.

Linux an nfs server is available for linux, see your distribution documentation to find out how to install it.

Setting up NFS involves editing /etc/exports and restarting the nfs server to pick up those changes. Once this is done you should be able to mount the exported filesystem from Webmin, as described in the section called “Mounting network disks” [13]. I'd suggest mounting the file system under /storage. Once this is done you should be able to list and access files on the remote PC as if they were local, using the standard **cd**, **ls** and **cp** commands.

CIFS/Samba (Windows shares)

CIFS is the latest version of Windows networking. It is available as samba for Linux and MacOS X, but it doesn't make as much sense as using NFS for those OSes.

Once you have a windows share set up you can mount the directories using webmin.

Transfer troubleshooting

A complete troubleshooting guide is beyond the scope of this manual, but I hope to give some hints and tips. Most problems boil down to one of two things, networking or permissions.

Network problems

- Can you ping the camera from the PC? If not then check your ethernet is correctly connected, networking settings are correct, and there is no firewall?
- Can you ping the PC from the camera? Both directions should work.
- Can you access the service on the PC from itself (not appropriate for all transfer types)? e.g. Can you FTP to the PC from itself?
- Is there a firewall running on the PC?
- Is there a second or third firewall running?
- Is there a firewall on the network in between?
- Or how about a NAT (network address translation) device?

- What happens if you telnet from either end to the service's port number? You should at least connect...

Permissions

- Do you have permissions to access the file you are trying to access? Can you read it locally on that machine?
- Do you have permissions to write to the file you are trying to write to?
- How about the directory that it is in?
- Do you have write permissions granted by the transport (e.g. FTP write permissions)? Or read permissions? *These permissions are separate from the permissions on the files... this often catches people out*
- Does the particular pairing of camera and PC allowed, lots of these services can restrict by IP address?

Appendix E. Software tools

This appendix lists some useful software tools you may wish to use with your camera

PIPS ANPR Toolkit

The PIPS ANPR Toolkit (P374) is available from PIPS. It consists of various software applications to install, diagnose and maintain PIPS cameras, including the P382, P392+ and P492. It is available as a package for Microsoft Windows 7.

Windows 7

To install the applications just double click on the installer executable and select the options you require.

PuTTY

PuTTY is a free terminal client. It can connect to the P382, P392+ and P492 via both the serial port and via SSH. It also provides the pscp SCP program. It is available from http://www.chiark.greenend.org.uk/~sgtatham/putty/download.html and is highly recommended. A version of PuTTY is installed with the PIPS ANPR Toolkit.

Filezilla

Filezilla is a commander like file transfer program for many platforms suitable for using with the camera. It is available from http://filezilla-project.org/.

WinSCP

WinSCP is an explorer like file transfer program for Windows suitable for using with the camera. It is available from http://winscp.net/.

NFS Server on Windows

Windows does not come with an NFS server, however one is available for free as part of the cygwin project, and it is compatible with the P382, P392+ and P492. To install it

1. Download setup.exe from http://www.cygwin.com.
2. You should run this and select the **`nfs-server`** and **`cygrunsrv`** components.
3. Start the shell that is installed to Start → Cygwin → Cygwin Bash Shell and run **`nfs-server-config`**.
4. Now edit *`CYGWIN_DIR`*`/etc/exports` to add a directory to export. Full documentation of the exports file format is available online, but an example would be

   ```
   /cygdrive/d/workspace      80.177.196.176(rw,async,no_root_squash,insecure,no_subtree_check)
   /cygdrive/c/workdir/fish   80.177.196.0/24(ro,async,no_root_squash,insecure,no_subtree_check)
   ```

   which will export `d:\workspace` and the camera at 80.177.196.176 and `c:\workdir\fish` to all 80.177.196.* read-only.
5. Now start the **`Cygwin nfsd`** and **`Cygwin mountd`** services from Start → Settings → Control Panel+Administrative Tools → Services. You will need to restart them if you change the `exports` file.

Appendix F. Nano - text editor

This is a short guide to using the recommended text editor on the P382, P392+ and P492 *nano*. More detailed documentation is available on the web at http://www.nano-editor.org/docs.php

Opening and creating files

Opening and creating files is simple in nano, simply type:

nano {*filename*}
You can start typing immediately to insert text, and move around with the cursor keys.

Saving and exiting

If you want to save the changes you've made, press **Ctrl**+**O**. To exit nano, type **Ctrl**+**C**. If you ask nano to exit from a modified file, it will ask you if you want to save it. Just press **N** in case you don't, or **Y** in case you do. It will then ask you for a filename. Just type it in and press **Enter**.

If you accidentally confirmed that you want to save the file but you actually don't, you can always cancel by pressing **Ctrl**+**C** when you're prompted for a filename.

Cutting and pasting

To cut a single line, you use **Ctrl**+**K**. The line disappears. To paste it, you simply move the cursor to where you want to paste it and punch **Ctrl**+**U**. The line reappears. To move multiple lines, simply cut them with several **Ctrl**+**K**s in a row, then paste them with a single **Ctrl**+**U**. The whole paragraph appears wherever you want it.

If you need a little more fine-grained control, then you have to mark the text. Move the cursor to the beginning of the text you want to cut. Hit **Ctrl**+**6** (or **Alt**+**A**). Now move your cursor to the end of the text you want to cut: the marked text gets highlighted. If you need to cancel your text marking, simply hit **Ctrl**+**6** again. Press **Ctrl**+**K** to cut the marked text. Use **Ctrl**+**U** to paste it.

Searching for text

Searching for a string is easy as long as you think "WhereIs" instead of "Search". Simply hit **Ctrl**+**W**, type in your search string, and press Enter. To search for the same string again, hit **Alt**+**W**.

Note

Note: In nano's help texts the **Ctrl**-key is represented by a caret (^), so **Ctrl**+**W** is shown as ^W, and so on. The Alt-key is represented by an M (from "Meta"), so **Alt**+**W** is shown as M-W.

Appendix G. rc-update

This is a short guide on how to use *rc-update*

Introduction

rc-update is a script for adding/removing/listing available scripts to the boot, default and nonetwork run levels of your computer. these scripts allow you to run programs at your computers boot time.

rc-update is very useful and can be used to start anything from your network card to your login manager.

rc-update commands

adding a script to a runlevel

rc-update add script runlevel

will add a script to that runlevel of your computer.

removing a script from a runlevel

rc-update del script runlevel

will remove a script from the runlevel.

list available scripts and their current runlevel

rc-update show

will show all available scripts and their currently set runlevel(s) if any.

runlevels

boot

default

nonetwork

more runlevels may be added to /etc/runlevels/

Examples

rc-update add pips_app default

This will start the camera application at the default runlevel

rc-update del pips_app default

This will remove the camera application at the default runlevel

Other information

rc update uses scripts in the /etc/init.d/ directory exclusively

Appendix H. Viewfinder Protocol

The Viewfinder Protocol is a method for accessing the camera's video stream. The Viewfinder can be accessed via TCP port 9000.

There are several protocol versions available on the cameras, versions 1, 2, 3 and 4. By default the Viewfinder will be configured to use version 1

To initiate a Viewfinder session, you need to connect to the viewfinder port, to end the session just disconnect.

The viewfinder protocol constantly sends images, but when a session is first opened the camera needs to be set before any data will be sent, this is done by using the VF run command. Data will only stop being sent once the session is closed. The VF run command can be used to change the data that is sent, there may also be a small amount of lag before the changeover happens.

Viewfinder commands

Command	Description
VF set version *`version`*\n	Sets the version specified by *`version`* The viewfinder protocol does not respond
VF get channels\n	Gets information on the channels. See example below for output. (Viewfinder Protocol Version 2 or above must be used) The Viewfinder protocol responds with an xml type response
VF run camera *`camera`* seq *`sequence`* interval *`interval`* quality *`quality`* scale *`scale`*	Initiates the video stream. camera: The camera which is used to stream video from, required sequence: The sequence which is to be viewed, must be 0 for colour camera, default = 0, optional interval: The time between each frame, specified in ms, default = 2000, optional quality: Not used, optional scale: Not used, optional Viewfinder protocol responds with an image type response

Note

Camera 0 = cam1 in user interface = IR Camera

Camera 1 = cam2 in user interface = Colour Camera

Note

sequence 0 = seq1 in user interface

sequence 1 = seq2 in user interface

sequence 2 = seq3 in user interface

sequence 3 = seq4 in user interface

sequence 4 = seq5 in user interface

sequence 5 = seq6 in user interface

sequence 6 = seq7 in user interface

sequence 7 = seq8 in user interface

Viewfinder messages

This section contains information about the responses from the Viewfinder server

Version 1

In version 1 VF run is the only command that can be used. The following example I will configure the run command to the the IR camera and sequence 0 with 2 frames per second

`VF run camera 0 sequence 0 interval 500\n`

The response from the camera will be the following:

```
VF 1 0 0 11000\n[binary-jpeg-data]
```

Note

The [binary_jpeg_data] is a standalone JFIF (JPEG file interchange format), the specification can be found here, http://www.w3.org/Graphics/JPEG/jfif3.pdf

Note

This will be repeated every 500ms

VF *`version camera sequence jpeg_length`*

Version 2

In version 2 VF run and VF get can be used.

The response from version 2 is as follows

VF *`version type data`*

`VF set version 2`

`VF run camera 0 sequence 0 interval 500\n`

```
VF 2 image 0 0 5265846397017522284 11008\n[binary_jpeg_data]
```

Note

The [binary_jpeg_data] is a standalone JFIF (JPEG file interchange format), the specification can be found here, http://www.w3.org/Graphics/JPEG/jfif3.pdf

The above example gives a type of image which can be decoded as follows

VF *`version`* image *`camera sequence 64Bit_TimeStamp jpeg_length\n[binary_jpeg_data]`*

The 64bit Time Stamp can be decoded as follows, [Upper 32 bit Time stamp].[Lower 32 bit Time stamp].

The upper 32 bit Time stamp is a normal UTC time stamp indicating the number of seconds since 00:00:00 1st January 1970

The lower 32 bit Time stamp is the number milliseconds since the start of the current second

The second example

VF set version 2

VF get channels

```
VF 2 xml 367
<?xml version="1.0"?>
<channels model="P382" count="2">
 <channel0 num_sequence_entries="1">
  <format raw_type="mono" rate="50" quality="fixed" resolution="fixed" pixel_width="1" pixel_height="1"/>
 </channel0>
 <channel1 num_sequence_entries="1">
  <format raw_type="colour" rate="50" quality="fixed" resolution="fixed" pixel_width="2" pixel_height="1"/>
 </channel1>
</channels>
```

Note

The above example has been formatted for readability

The above example give an xml type which can be decoded as follows

VF *version* xml *xml_length*\n[xml_file]

<channels model="P382" count="2">indicates that the camera we are using is a P382 and that there are two possible image sources.

<channel0 num_sequence_entries="1"> indicates on the first channel has only one sequence available

<format raw_type="colour" rate="50" quality="fixed" resolution="fixed" pixel_width="2" pixel_height="1"/>

raw_type indicates that this channel is in colour, this can also be mono, or unknown

rate is not used, and is fixed at 50

quality is fixed so this cannot be changed, if it could this would be a number between 1 and 99

resolution is fixed which means it cannot be changed otherwise it would be a number such as 1, 2 or 4 which would be a defined resolution

pixel_width and pixel_height if pixel_width and pixel_height are the same then no adjustment of the image needs to take place, if they are different i.e. pixel_width = 2 and pixel_height = 1 means that each pixel needs to be made half the width, to view the image correctly.

Version 3

In version 3 VF run and VF get can be used.

The response from version 3 is as follows

VF *version type data*

VF set version 3

VF run camera 0 sequence 0 interval 500\n

```
VF 3 image 0 2 6129809915063042098 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 1107 201 252 72 895 602 252 72 1023 92 252 72 93504\n[binary_jpeg_data]
```

Note

The [binary_jpeg_data] is a standalone JFIF (JPEG file interchange format), the specification can be found here, http://www.w3.org/Graphics/JPEG/jfif3.pdf

The above example gives a type of image which can be decoded as follows

VF *version* image *camera sequence 64Bit_TimeStamp PlateFindData jpeg_length\n[binary_jpeg_data]*

The 64bit Time Stamp can be decoded as follows, [Upper 32 bit Time stamp].[Lower 32 bit Time stamp].

The upper 32 bit Time stamp is a normal UTC time stamp indicating the number of seconds since 00:00:00 1st January 1970

The lower 32 bit Time stamp is the number milliseconds since the start of the current second

16 zeroes for future enhancement.

The plate find data describes up to 4 number plates found in the image. For each plate the x and y co-ordinates, width and height are displayed. This gives 16 data items in total.

Version 4

In version 4 VF run and VF get can be used.

The response from version 2 is as follows

VF *version type data*

VF set version 4

VF run camera 0 sequence 0 interval 500\n

```
VF 4 image 0 2 6129809915063042098 0 0 0 0 0 0 0 1107 201 252 72 5352 0 0 895 602 252 72 6737 0 0 1023 92 252 72 8941 0 0 93504\n[binary_jpeg_data]
```

Note

The [binary_jpeg_data] is a standalone JFIF (JPEG file interchange format), the specification can be found here, http://www.w3.org/Graphics/JPEG/jfif3.pdf

The above example gives a type of image which can be decoded as follows

VF *version* image *camera sequence 64Bit_TimeStamp PlateFindData jpeg_length\n[binary_jpeg_data]*

The 64bit Time Stamp can be decoded as follows, [Upper 32 bit Time stamp].[Lower 32 bit Time stamp].

The upper 32 bit Time stamp is a normal UTC time stamp indicating the number of seconds since 00:00:00 1st January 1970

The lower 32 bit Time stamp is the number milliseconds since the start of the current second

The plate find data describes up to 4 number plates found in the image. For each plate the x and y co-ordinates, width and height, plate find confidence, shape and clipped flag are displayed. This gives 28 data items in total.

The shape parameters indicate whether the plate is a number plate (0), a square number plate (1), a hazard plate (2) or a blank hazard plate (3).

The clipped flag indicates that the number plate may be partly obscured.

Appendix I. Vehicle Event Viewer Protocol

This section describes the PIPS Vehicle Event Viewer (aka "Client") protocol. It describes version 3 of the protocol as implemented by the cameras. The Vehicle Events can be accessed via TCP port 3570.

The Vehicle Event Viewer service runs on the camera and will be referred to as the "service". The service provides a stream of Vehicle Plate Read records (containing image and other data) for each vehicle plate read event created by the camera.

To initiate a Viewfinder session, you need to connect to the viewfinder port, to end the session just disconnect.

Entities may use TCP to connect to the camera and monitor this data stream. Any entity connecting to the "service" will be referred to as a "client".

Vehicle Event Viewer commands

Commands are sent to the service in ASCII text delimited by a Carriage Return character ('\r').

Currently, only a single command is recognised and this would normally only be issued once. The command (to select the version) is a string:

"vers[v]\r"

where v is the version "number", a single character in the ranges '1' to '9' or 'a' to 'z'.

The latest version supported on the cameras is 4 although it defaults to 2. If you connect to the service and issue no command, you will receive version 2 data. To switch to version 4, immediately on connection completion, the client should send the following string to the service: "vers4\r"

Vehicle Event Viewer data

The service starts streaming binary data to the client immediately on connection. It does not wait for anything from the client.

The data streamed from the service is binary. The binary data is streamed as a BLOB as follows:

1. Firstly a header structure which begins with a "start of block" pattern followed by information about the event, such as the plate string. It also contains information (lengths in bytes) allowing the end of the header and the start/endings of the subsequent jpeg images to be computed.

2. The header is immediately followed by the patch jpeg image - the length of which is contained in the header. The jpeg data is in JFIF format.

3. The patch jpeg is immediately followed by the colour overview jpeg image - the length of which is contained in the header. The jpeg data is in JFIF format.

Header Format

The header is a packed structure. Currently the cameras default to version 2, so the client must be able to recognise version 2 headers too. Since there is actually little difference between the versions, it is not difficult to support both.

Even if the client switches to version 3 immediately on connection, it is possible that one or more version 2 headers will be received first. Version 2 data may be used or ignored.

The difference between the version 2 and version 3 headers is that the version 3 header has two extra fields appended on the end - namely: utc_timestamp_s and utc_timestamp_ms.

The difference between the version 3 and version 4 headers is that the version 4 header has one extra field appended on the end - namely: m_plate.

The jpeg fields, if present, follow immediately after the header. Their location may be determined by the respective size fields in the header. The jpeg data is in JFIF format.

The version 3 header is shown below:

Note

Entries commented

```
//Not Used
```

are not currently used on the P382. It is possible that at some time in the future they may be used without causing a version number change. It will always be safe to ignore them).

```
struct PTFMPlateHeaderV3
{
 unsigned start; // start of message block indicator
 unsigned header_size; // size of header
 unsigned patch_size; // patch length
 unsigned overview_size; // overview length
 unsigned sum; //Not Used
 unsigned camera; //Not Used
 unsigned flash; //Not Used
 unsigned gain;
 unsigned shutter;
 unsigned seq; // exposure sequence number 0 - 2
 unsigned threshold; //Not Used
 unsigned platefinder_confidence;
 unsigned plateread_confidence;
 unsigned id; //Not Used
 unsigned ticks; // system tick counter at exposure time (ms)
 unsigned location; //Not Used
 unsigned mseq; //Not Used
 unsigned exp[3]; //Not Used
 unsigned event_count[4]; //Not Used
 char  plate_str[16];
 unsigned  utc_timestamp_s;
 unsigned  utc_timestamp_ms;
 char   m_plate[40];
};
```

Each field will be described below:

Note

All integer fields are transmitted in network byte order and will need to be converted back to host byte order before interpretation.

- *start:* A 4 byte pattern which identifies the start of the header. This will be 0x50544632 for version 2, 0x50544633 for version 3 and 0x50544634 for version 4.
- *header_size:* The size of the header (and only the header) in bytes. This will be different between versions. This value may be used to determine where the jpeg data begins.
- *patch_size:* The size in bytes of the patch jpeg. If this is non-zero, then this data begins immediately after the last header byte. (The patch jpeg is in jfif format).
- *overview_size:* The size in bytes of the overview jpeg. If this is non zero, this data begins immediately after the last byte of patch data. (The overview jpeg is in jfif format)
- *sum:*Currently unused
- *camera:* Currently unused
- *flash:* Currently unused. The flash period is equal to the shutter period.
- *gain:* The gain setting for this plate read event

- *shutter:* The shutter setting for this plate read event. A reported value of 0 indicates a shutter period 10us. The maximum value is 31 and indicates a shutter period of 1ms. In order to deduce in-between shutter period's note that there is a linear relationship between these reported values and actual shutter period.
- *seq:*The exposure sequence number, typically a number from 0 to 2 indicating which in a sequence of exposures was used to give this plate read event.
- *threshold:*Currently unused
- *platefinder_confidence:* The platefinder confidence value. This is not normally of much interest to an end user.
- *plateread_confidence:* The confidence of the plate read expressed as a number less than a 100 (where 100 would indicate absolute confidence).
- *id:*Currently unused
- *ticks:* A system monotonic tick count in milliseconds indicating the time of exposure. Has no meaning as an absolute time, but can be useful in relative terms - for example to measure elapsed time between two consecutive events. The tick value is strictly monotonic and therefore is unaffected by changes to the system time.
- *location:*Currently unused
- *mseq:* Currently unused
- *exp:* Currently unused
- *event_count:* Currently unused
- *plate_str:* Number plate string. Null terminated character string.
- *utc_timestamp_s:* (Version 3 and 4 only) UTC Timestamp of plate read image set (seconds). May be used together with utc_timestamp_ms (see below) to provide accurate UTC time.
- *utc_timestamp_ms:* (Version 3 and 4 only) UTC Timestamp of plate read image set (milliseconds)
- *m_plate:* (Version 4 only) The text read from the plate

Appendix J. Legal Notices

Copyright Notice

The information within this handbook is authorised for distribution to customers, authorised service centre personnel, and distributors of Neology. Every effort has been made to supply information within this handbook that is correct. However, Neology assumes neither responsibility for its use, nor any infringements of patents or other rights of third parties which would result. No licence is granted by the manufacturer under any patent or patent rights. The manufacturer reserves the right to modify and update the equipment at any time without prior notice.

No part of this publication may be reproduced, stored in a retrieval system or transmitted in any form or by any means to a third party without the prior consent of the copyright holder.

The manufacturer's warranty will be invalidated if untrained personnel operate the equipment or if any attempt is made to service the equipment by untrained personnel.

Warranty

Neology warrants products and spare parts of its own manufacture against faulty materials and workmanship for a period of 12 months, or as modified by the contract, from the date of purchase or on site acceptance, if installed by Neology authorised personnel.

The warranty excludes consumable materials and parts with an inherently limited life and excludes faults arising from misuse, neglect or vandalism.

Neology will replace or repair at its option and at no cost to the purchaser any faulty items reported to it within the warranty period.

Service

Service of this equipment by replacement of parts, on site repair or routine maintenance inspections is available. Please contact Neology for a quotation. There are no user serviceable parts inside the camera.

Technical Support

Should you require technical support, please contact Neology.

Users finding errors or omissions in this document are requested to advise Neology.

SAFETY INFORMATION

Please read, understand, and follow all safety information contained in this guide prior to any attempts to Install or use the Mobile ALPR System. Retain these instructions for future reference.

Intended System Use

The Mobile ALPR System is intended to provide Automatic License Plate Recognition (ALPR) to users by automatically “reading” number plate or license plate characters. It is expected that all users be fully trained in the safe operation of this Mobile ALPR System. Use in any other application is not condoned, may immediately void all warranties, and may lead to an unsafe condition.

RISK REDUCTION

This section lists the recommended best practices to take prior to the installation, during installation, and during operation or maintenance of the Mobile Platform. Failure to adhere to these recommendations may result in hazardous voltages, fire, property damage, and equipment failure due to impact as well as potential injury to installers and users.

Safety Prerequisites

- Refer to the vehicle's service manuals when performing vehicle equipment installation and follow accepted automotive mechanical and electrical installation procedures.
- Review the manufacturer's vehicle wiring diagram prior to the Mobile ALPR System installation to ensure the installation does not affect vehicle operation or mandated safety functions or circuits.
- Installation to be performed only by authorized personnel or certified and/or trained installers.
- Service to be performed only by authorized personnel in compliance with all local, regional, and national applicable motor vehicle codes.

Component Installation

- Do not interact with ALPR system while driving or in hazardous conditions.
- Use only the Mobile ALPR Processor, brackets, and cabling provided.
- Ensure all external electrical connections are protected from the environment.
- Do not kink or pinch cables when routing through the vehicle as this could damage the cable/system.
- Do not get metal shavings inside the Processor. Use an ESD-approved cover if drilling near unit cannot be avoided. After mounting, inspect area and remove any metal shavings.
- Do not co-locate the SX Processor within 18 inches (45.7 cm) of a radio antenna or transmitter.
- Clear both sides of vehicle structure when drilling. Remove burrs from drilled holes and use grommets for wiring. Use care when installing mounting screws.
- Do not mount cameras or components in unapproved locations or mounting brackets. Doing so may immediately void warranty and/or service contract.
- After installation of a component, ensure it is securely attached to the vehicle.
- Avoid placing a magnetic mounting bracket or other magnetic component next to an electronic device.
- Verify all component mounts, power connections and wiring are properly connected prior to powering On the system after installation, maintenance, and/or service.

Vehicle/Component Safety

- After installation, test all vehicle functions, including horn operation, vehicle safety functions, and vehicle lighting systems, to ensure proper operation.
- Ensure the installation has not affected the vehicle operation or changed any vehicle safety function or circuit.
- Locate any ALPR system controls so the vehicle can be operated safely under all driving conditions.
- Do not install equipment or route wiring in the deployment path of an air bag.
- After deployment, inspect ALPR System periodically to ensure proper operation and attachment to vehicle.

Maintenance

- Replace Mobile ALPR System fuses with same size, type, and rating specified in installation guide.
- Always keep the Mobile ALPR Processor vent areas clear.
- Keep the Mobile ALPR Processer in a dry location.
- Do not use cleaning solutions such as strong detergents, solvents, or petroleum-, alcohol-, or ammonia-based products. Use only a soft cloth and a mild soap and water solution.
- The Agency is required to open the Mobile ALPR Processor case in order to remove the battery prior to disposal.

NOTE: Opening the case of the Mobile ALPR Processor will void the warranty. Opening the case may adversely affect any future operation of the processor. Never open the case of the Mobile ALPR Processor unless authorized by PIPS Support or when removing the battery for disposal. All disposal operations must be performed within local guidelines and laws. It is the responsibility of the processer owner to ensure all local and regional regulations are followed for proper disposal.

General Safety Precautions

- Follow safe workplace practices during installation and maintenance.
- The ALPR cameras are Class 1M LED products and emit LED radiation. Do not view directly with the eye or optical instruments.
- Dispose of all system components in accordance with applicable local and government regulations.
- Dispose of lithium-ion batteries and electronic components according to all applicable recycling or waste regulations.
- Ensure to keep all fingers and items clear when mounting magnetic camera brackets.

PRODUCT OVERVIEW

This section discusses the general application, configuration, and ALPR system information.

Applications

- Law Enforcement
- Parking Enforcement
- Community Service Vehicles
- Private Security Vehicles

System Configurations

The PIPS ALPR Mobile SX Processor can be configured in two distinct ways; Client/Server or Stand Alone.

Client/Server (VPRelay) Mode:
The Client/Server configuration consists of a Mobile ALPR Processor, up to four ALPR cameras with mounting brackets, and a network connection to a Mobile Data Computer (MDC)/laptop in the front of the vehicle. The ALPR processor collects images and data for license plate recognition and relays it to the MDC over a static network connection. The primary advantage of the Client/Server configuration is that it allows a user to be notified of "alerts" while operating the vehicle. This is done through mobile ALPR software called "PAGIS" running on the laptop/MDC and displaying the ALPR data inside the vehicle.

Stand-Alone Mode:
The Stand-Alone configuration consists of a Mobile ALPR Processor, up to four mounted ALPR cameras, and a touchscreen monitor. The self-contained system performs all plate recognition and runs its own copy of the PAGIS software. The primary advantage of the Stand-Alone configuration is its deployment flexibility as it does not require the agency to own and maintain MDCs/laptops. Some utilization examples are speed trailers, parked covert vehicles, or in manned patrol units (when equipped with touchscreen monitors and a hotspot/cellular data network).

ALPR System Vehicle Power Draw

When off, the ALPR system should draw around 20miliamps. The chart below shows the power draw when operational.

Component	Current Draw	Total Draw
SX Processor	3.5 A @ 12VDC	3.5 A @12VDC
Camera 1	1.0 A @ 12VDC	4.5 A @12VDC
Camera 2	1.0 A @ 12VDC	5.5 A @12VDC
Camera 3	1.0 A @ 12VDC	6.5 A @12VDC
Camera 4	1.0 A @ 12VDC	7.5 A @12VDC

NOTE: *These calculations do NOT include load from the MDC, Touchscreen monitor, or GPS antenna*

Inventory Lists

Below are the two most common system architectures.

Mobile Law Enforcement Package (Client/Server architecture):

- Mobile ALPR Camera(s) with appropriate infrared illumination
- Mobile ALPR Processor with camera, HDMI, Display Port, and USB 3.0 ports
- Mobile ALPR Processor power cable (three wire)
- Camera cables/connector(s)
- Accessory Kit including Antennas (when applicable)
- Garmin GPS Antenna (16x HVS)
- CAT 5E network cable (25ft.)
- ALPR/OCR Engine specifically for customer region inside the SX4e
- Lightbar Mounting Bracket(s) and Plate(s) for approved lightbar assemblies
- OPTIONAL – Mobile Mounting Bracket
- OPTIONAL – Garmin 16 GPS mount, trunk clip

NOTE: *Approved lightbar assemblies include Federal Signal, Whelen Liberty, Justice and Edge, Code3 Defender, Tomar, and other 13.25-inch and 16.25-inch bars. Non-approved lightbar mounting designs are available but may incur a design charge. Please check with your Sales representative.*

Mobile Law Enforcement Package (Stand-alone architecture):

- Mobile ALPR Camera(s) with appropriate infrared illumination
- Mobile ALPR Processor with camera, HDMI, Display Port, and USB 3.0 ports
- Mobile ALPR Processor Power cable (three wire)
- Camera cable/connector(s)
- Accessory Kit including Antennas (when applicable)
- Garmin GPS Antenna (16x HVS)
- 10.4 Inch Touch Screen Monitor with HDMI and two USB cables (25ft. ea)
- DC-DC power adapter for the touch screen monitor
- License Plate Capture Software (PAGIS) on the SX Processor
- ALPR/OCR Engine specifically for customer region on the SX Processor
- Lightbar Mounting Bracket(s) and Plate(s) for approved lightbar assemblies
- OPTIONAL – Mobile Mounting Bracket
- OPTIONAL – Third party mounting bracket for 10.4 inch monitor (based on vehicle)

NOTE: *Approved lightbar assemblies include Federal Signal, Whelen Liberty, Justice and Edge, Code3 Defender, Tomar, and other 13.25-inch and 16.25-inch bars. Non-approved lightbar mounting designs are available but may incur a design charge. Please check with your Sales representative.*

PHYSICAL INSTALLATION

This section discusses the aspects of the unboxing and physical installation of the ALPR system and its components.

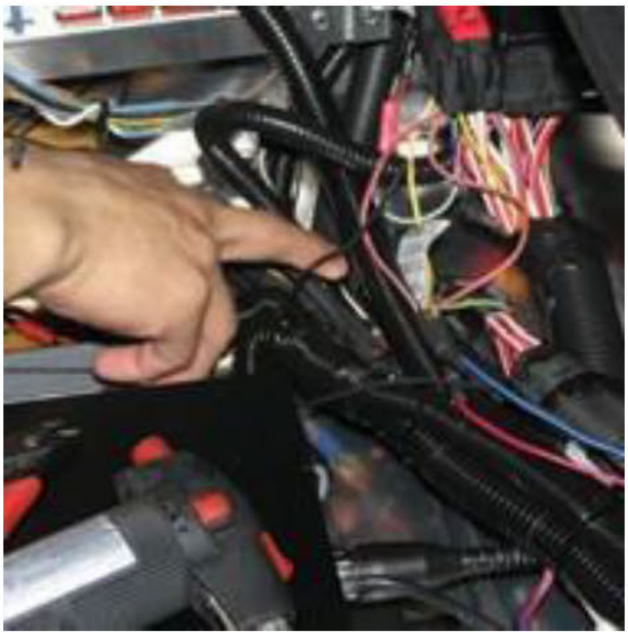
Unpacking the ALPR System

Carefully unbox the ALPR platform, its components, as well as any other products included in the shipment. Inspect each item for any damage caused by shipping prior to installation.

Damaged or Missing Item

If an ordered product is missing, or was damaged during shipping, it cannot be used for installation. Immediately call ALPR Support at (833) 747-7577 Option 2 or email Support@PIPSTechnology.com to generate a support case (Please reference the order number).

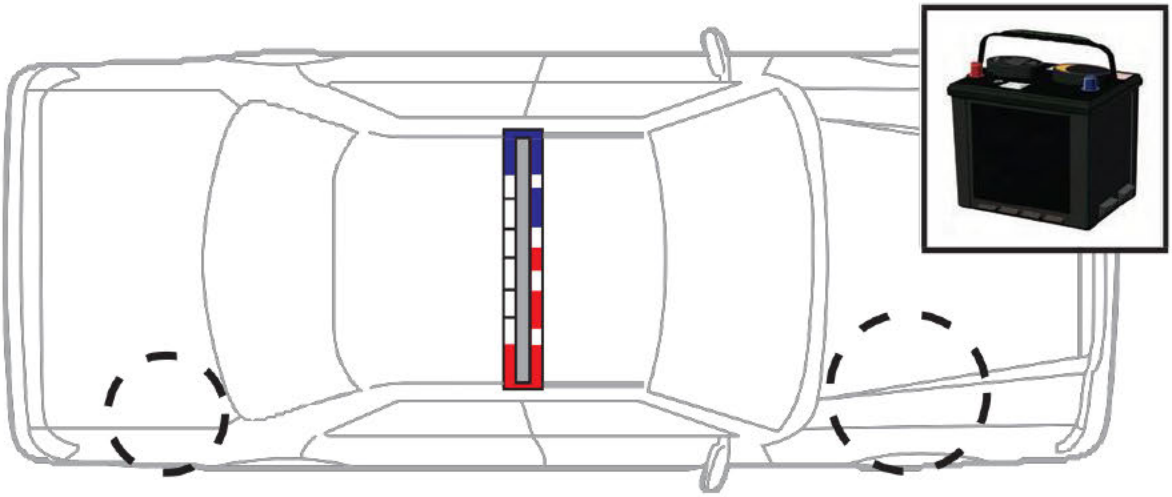
Planning the ALPR System Installation



Be sure to assess the vehicle type before moving forward with any installation. Certain vehicle types may require variations of the installation process. For example, the lengths of wiring/cabling needed for an SUV are generally greater than what's needed for a sedan. Understanding these details ahead of time are highly recommended.

Shown - Ford Police Interceptor Utility and Police Interceptor Sedan. Photo courtesy of Ford Motor Company.

Assess Existing On-Board Systems



Before any installation steps, the installer should fully understand how each on-board system, radio, laptop, lightbar, etc., has been wired in the vehicle. He/she should then plan the Mobile ALPR Processor installation to take advantage of any existing power taps, wire runs, or other outfitter wiring systems. **NOTE**: To prevent malfunction or potential electrical damage, the installer should also take care to not overload any of the existing vehicle circuits.

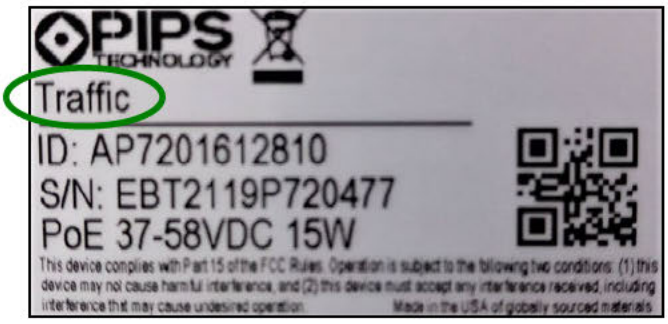
Assess Power Source

Most police package vehicles have power distribution in the trunk or in the back of the vehicle. This is the preferred power source for the Mobile Processor. If a power tap is not found, the power must be run to the battery. Be sure to add an in-line fuse at the battery. **NOTE**: For more detail refer to Appendix B and C

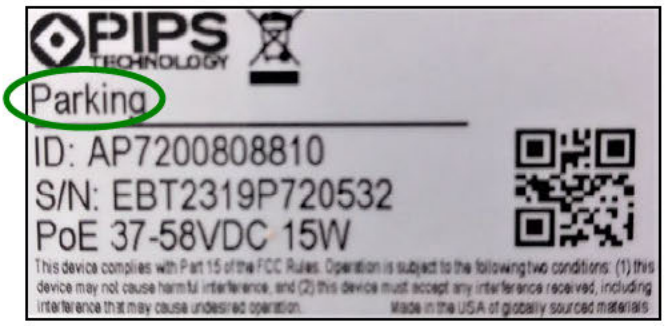
Unpacking the Mobile Cameras

Each camera and mounting bracket are packaged individually. Best practice recommends the agency keep the shipping box of each bracket and camera in the unlikely event the unit needs to be returned. If it's not possible to temporarily save the shipping containers, they should be sent to an appropriate recycling center.

Record Each Serial and Model Number



Note the serial and model numbers on the label of the product housing and record it for reference.
IMPORTANT: Please have the model and serial numbers available whenever Customer Support is contacted.



Identify Each Camera

Before mounting cameras to the vehicle, they should be checked for any damage, identified to confirm illumination uniformity, and assigned to the proper mounting locations based on lensing. The steps to identify the cameras and lensing are below:

1. Locate the Identification Label (Contains Serial and Model/ID Number)
2. The Label should say "Traffic" or "Parking"
    a. Traffic cameras are designed to view plates farther down the adjacent lanes
    b. Parking cameras are designed to view plates closer to the ALPR vehicle
3. Make note of the ID Number (This is the "Model Number")
4. Use ID/Model number information to select each camera position

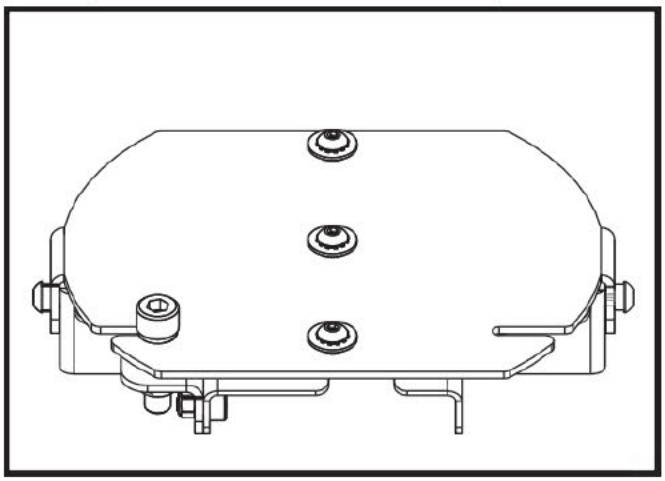
How to Read the ID/Model Number: Example: AP7201612810
[Product: AP720] + [IR Lens: 16] + [OV Lens: 12] + [Illumination Wavelength: 810]

General Camera Layout

The proper mounting location is extremely important to overall function. Placing a camera in the wrong position on the vehicle will reduce the ALPR performance to almost zero. Below is the most common mounting layout:

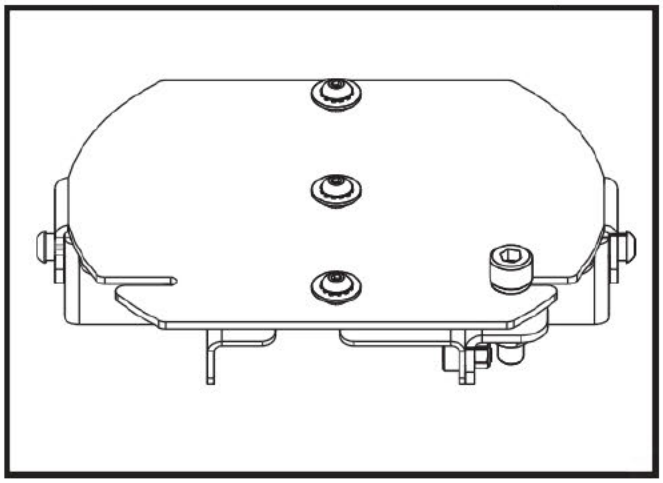
1. The front left, and front right cameras are nearly always Traffic cameras.
2. The right rear side camera is nearly always a Parking camera and aimed perpendicular to the vehicle.
3. The left rear side camera can either be a second perpendicular parking camera or it can be a rear facing traffic camera.
    a. The advantage of the rear facing camera is its ability to capture rear plates of opposing traffic. This is especially useful in rear license plate only states.

For more detailed mounting information, refer to the alignment section.



Preparing the Zero-Clearance Bracket

Once the proper camera configuration is determined for the vehicle, it's time to prepare the mounting brackets. There are two bracket configurations, a driver's side or left-handed bracket, and a passenger's side or right-handed bracket. When viewing the bracket from the rear and face up, the right-hand bracket will have the adjustment screw on the right. Since all brackets come this way, the installer will need to manually configure any required left-hand brackets.



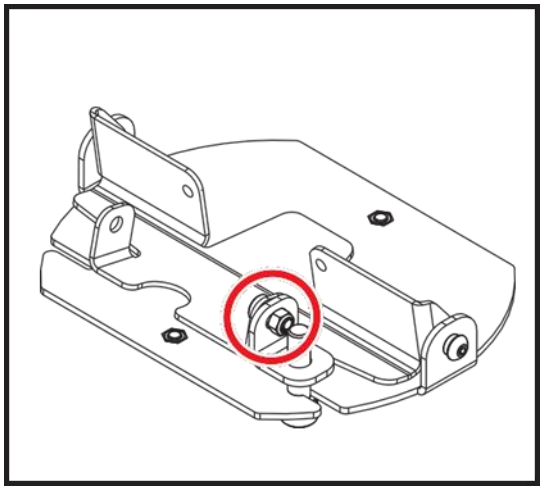
PRO-TIP: To assist with maintenance, PIPS recommends the use of an anti-seizing agent on all screws/bolts for the entire light bar and bracket system.

NOTICE: Zero-clearance brackets only ship with lightbar mounting configurations. Be sure to work with the Sales Department to procure the proper packages for each vehicle.

Left-Hand or Driver's Side Bracket

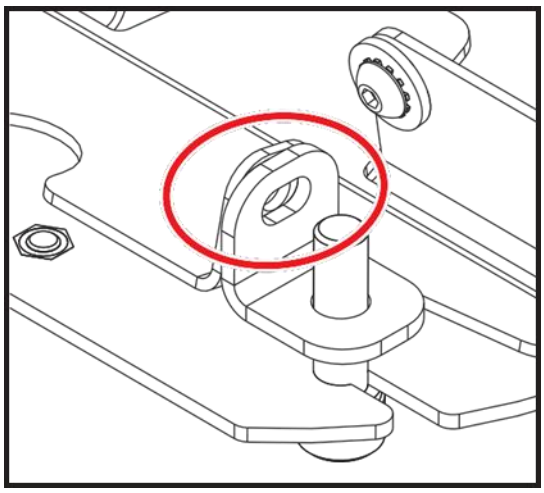
Right-Hand or Passenger's Side Bracket

Typical Camera and Bracket Configurations



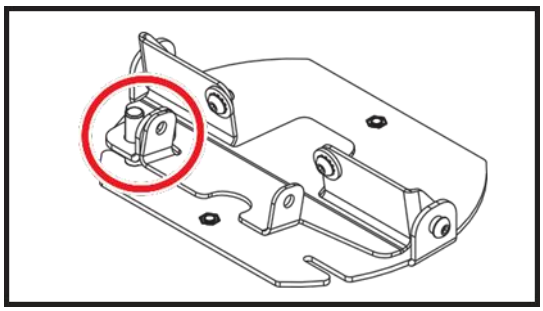
The chart below illustrates the combination of the camera position and the corresponding bracket configuration.

Camera location	Camera type	Bracket type	Camera number
Front/Left	Traffic	Left-hand	1
Front/Right	Traffic	Right-hand	2
Rear/Left	Traffic	Left-hand	3
Rear/Left	Parking	Left-hand	3
Rear/Right	Parking	Right-hand	4

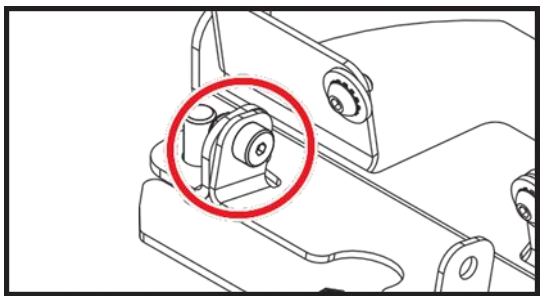


Changing the Orientation of the Zero-Clearance Bracket

In order to convert one or more of the right-hand brackets to left-hand brackets, follow the steps below:

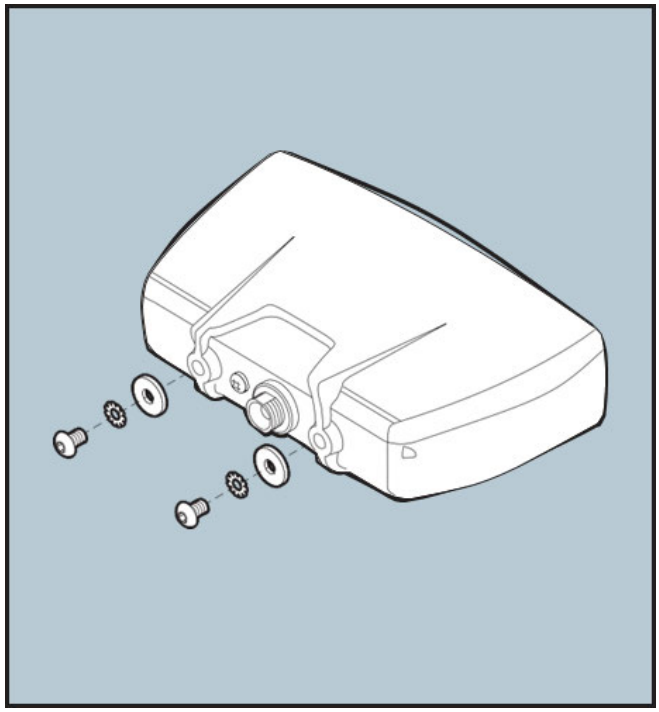


1. Locate the pivot screw on the bracket

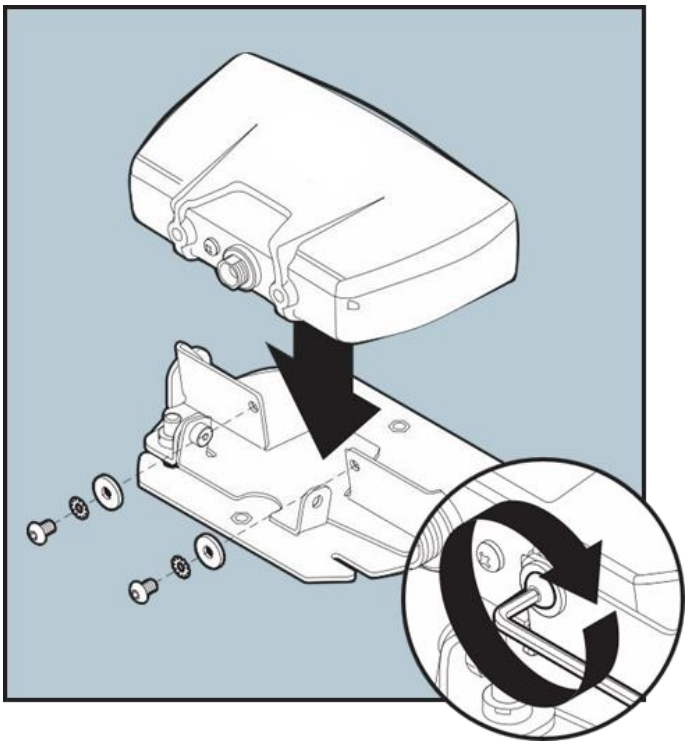


2. Remove the pivot screw from the bracket

3. Slide the pivot screw bracket from the slot and move it to the opposite side of the assembly



4. Reattach the pivot screw to complete the conversion



Attaching the Zero-Clearance Bracket to the Camera

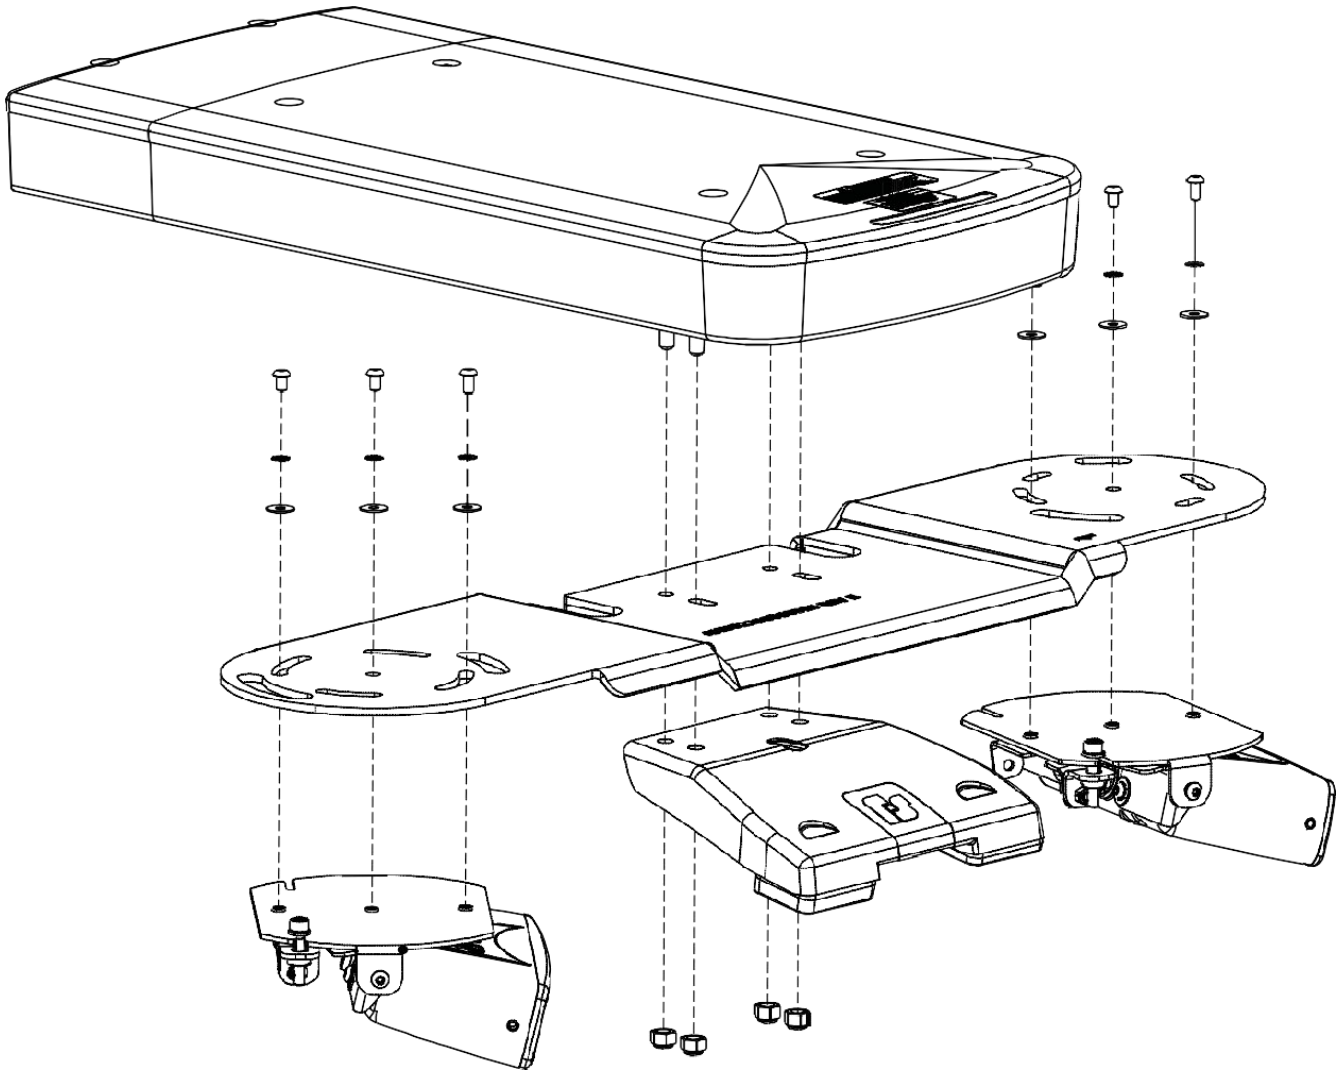
Once all the brackets are assembled, the mobile cameras should be mounted to the brackets.

1. Remove the screws, star washers, and flat washers from the mounting holes at the rear of the camera.

2. With the camera and bracket upside down, install the zero-clearance bracket by sliding the bracket tongue into the camera groove. The camera groove is located on the top rear of the camera.

3. When the tongue is fully seated in the groove, place the star washers and flat washers on the screws. Tighten the screws in the mounting holes.

Mobile ALPR Mounting Solutions



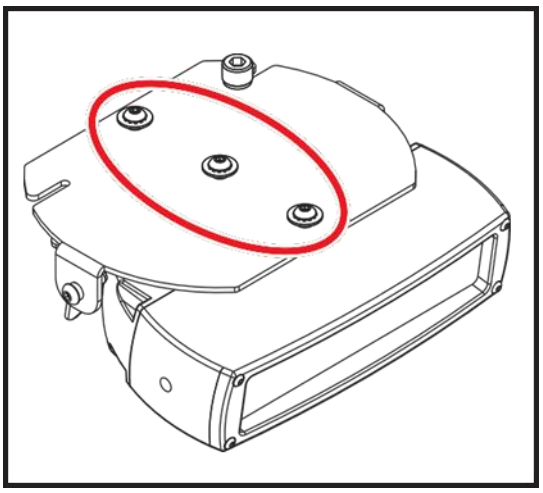
Below are examples of some of the mounting options available.

Supported Lightbar Mounting Options (Manufacturers):

- Federal Signal: Legend, Integrity, Argent, Vista, Raydian, Valor, Vision
- Code3: Defender 13.25 inch & 18 inch wide models
- Whelen: Edge, Justice, Liberty, Legacy, Freedom
- Tomar lightbars
- Unmarked Vehicle lightbar, Federal Signal product

Supported Non-Lightbar Mounting Options:

- Trunk Mount, Single or Dual Options
- Magnet Mounts (supports most vehicles with metallic/ferrous panels)
- Gutter Mounts (support Ford Police Interceptor models and Chevy Tahoe)

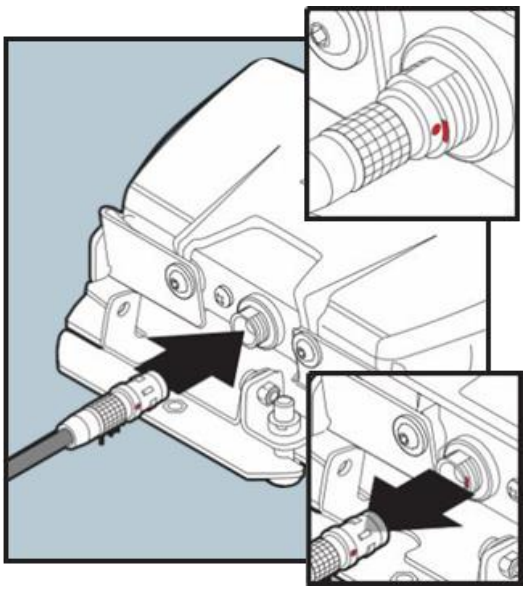


Shown - Classic Lightbar Bracket (Federal Signal "LEGEND")

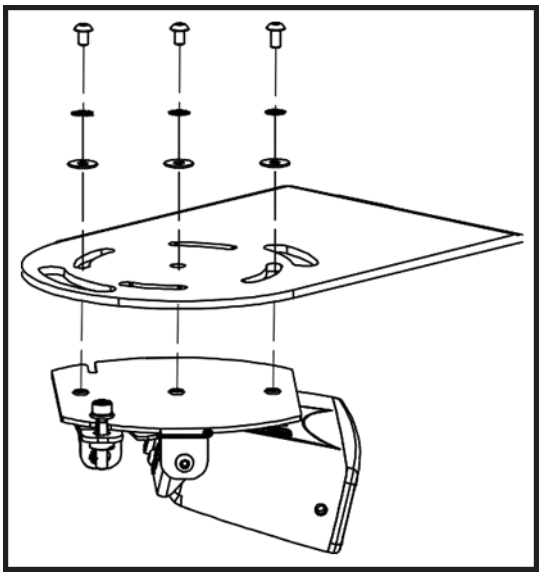
Mounting the Camera Assembly to the Vehicle

The camera mounting assembly is then installed to the mounting plate attached to the lightbar.

NOTE: Due to the large number of variations between lightbars and mounting plates, this document only illustrates how to attach the camera mounting assembly to an existing mounting plate



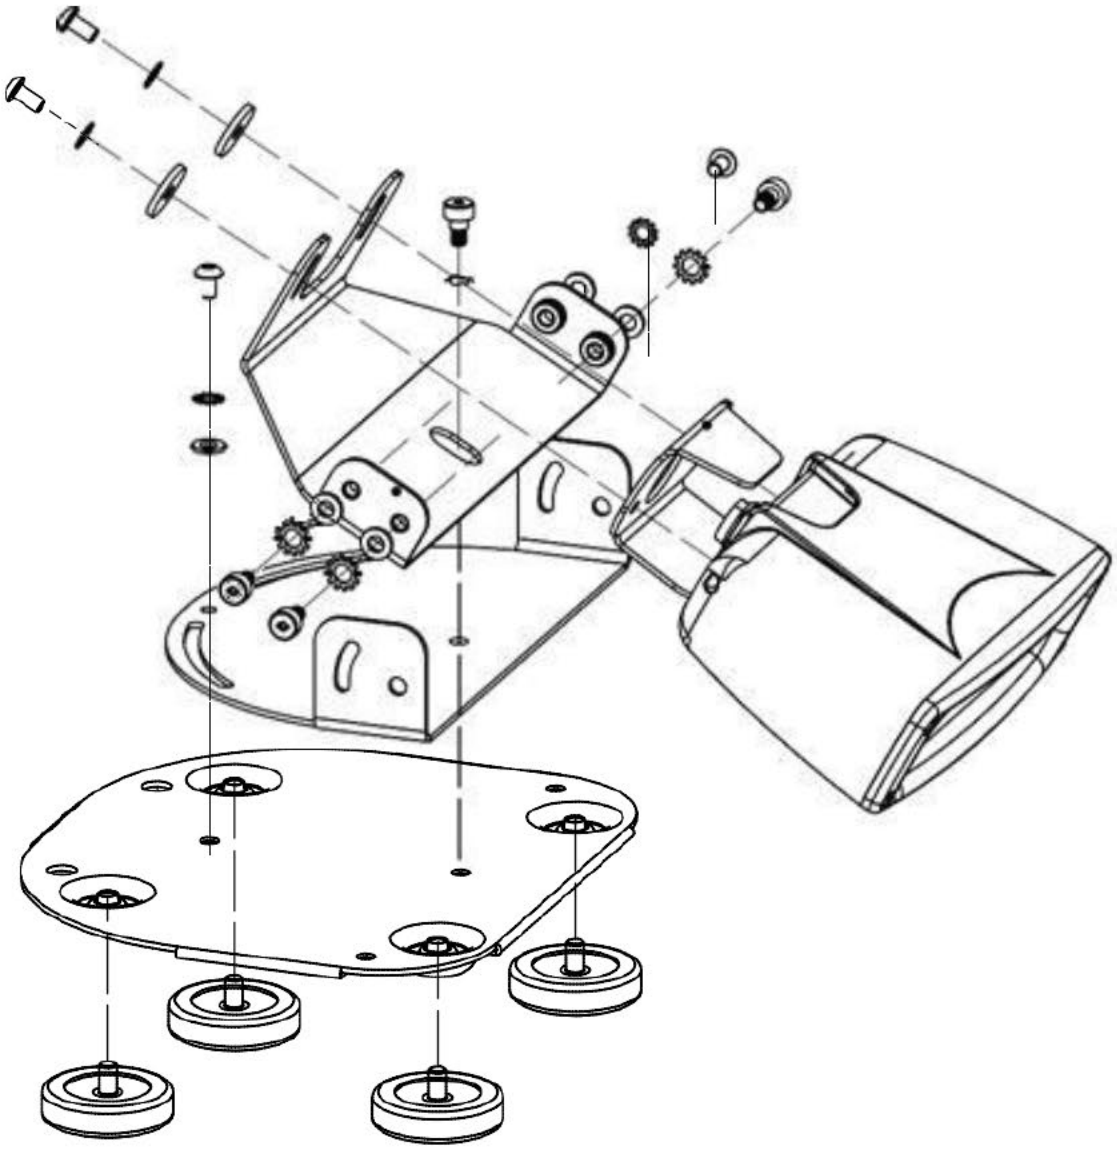
1. With the camera bracket attached to the camera, remove the three screws, star washers, and flat washers.



2. Connect the camera cable to the camera:
Align the red dot on connector with red mark on the port and connect using minimal force.

DO NOT FORCE OR TWIST THE CONNECTION. If the connector does not snap in easily, pull the connector out and realign.

PRO-TIP: PIPS recommends use of a bit of di-electric grease in and on the cable connectors.

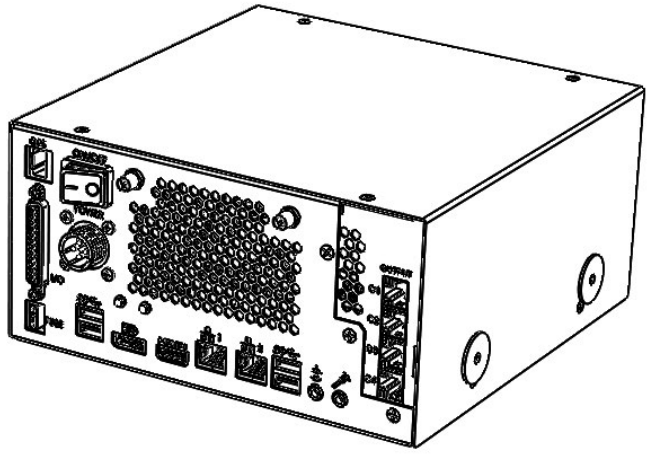


3. Attach the camera mounting assembly/plate to the lightbar bracket. **NOTE**: If the camera isn't perfectly secure, use the stabilizing foot included with the bracket to provide additional stability.

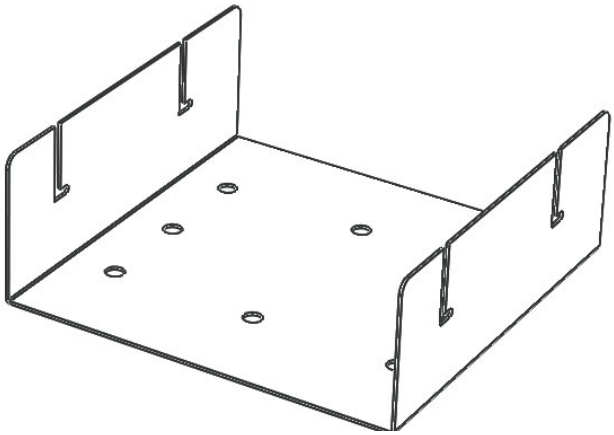
Attaching a Camera to Non-Lightbar Mounts

All Non-Lightbar mounting solutions utilize the Auxiliary 3 axis mounting plate. Once the camera is securely attached to the Aux mounting plate, attach it to the base plate of your bracket.

Shown – Magnet Mount



Mounting the Mobile Processor



Understanding the vehicle and its current systems is a must when selecting the mounting location of the SupeRex (SX) Processor. Below are the key considerations:

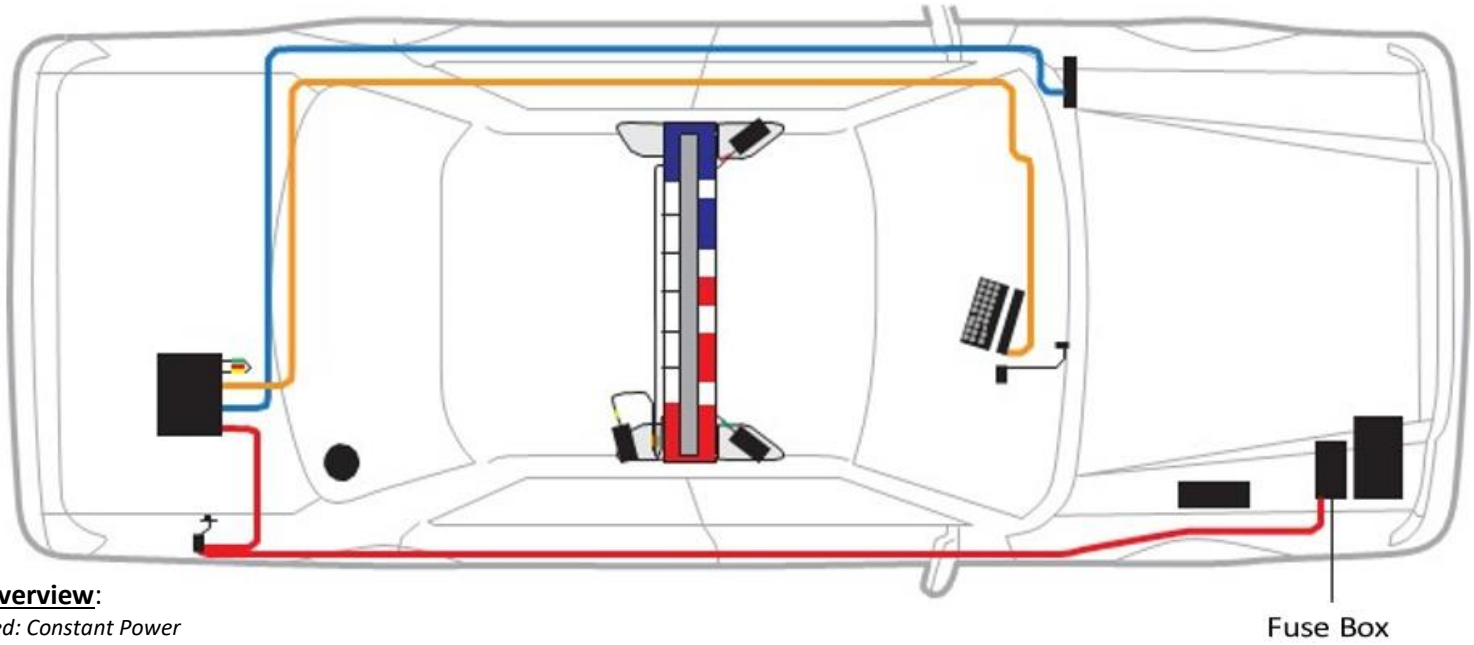
- If the vehicle does not have a utility drawer/tray, be certain of all vehicle systems before drilling or mounting.
- The SX Processor and its bracket can be safely mounted in any orientation.
- Mount the unit with easy access to the rear panel and cables for maintenance/service.
- Be sure to leave adequate room for ventilation, cabling, and any maintenance needs.
- If the vehicle has a utility drawer/tray, mount the SX with enough clearance for ventilation, cabling, and service.
- Before mounting, physically place the SX in the mounting space to properly assess clearance or any dangers.
- Mount the bracket first, then secure the Mobile Processor to the bracket.

Additional Mounting Bracket Considerations:

- The Mobile Processor bracket comes with eight pre-drilled holes (0.375 in dia.). Use at least four of them to mount the bracket to the utility tray or trunk surface.
- For utility tray mounting, secure the unit using at least four 1/4-20UFC-2A bolts with appropriate washers and lock nuts. Hardware not provided.
- For direct trunk surface mounting, secure the unit using at least four #14 (or #16) sheet metal screws with appropriate washers. Hardware not provided.

WIRING AND CONNECTIONS

This section discusses the proper wiring and physical connections to the Mobile Processor. PIPS highly recommends the agency review the owner's manual of the ALPR vehicle to be certain of how to safely run cables and avoid vehicle/equipment damage. The agency is also responsible to fully understand how to safely tie into the on-board electrical systems in the vehicle.



NOTE: Failure to adhere to this recommendation may immediately void all warranties and maintenance agreements.

The Power Wiring

The power cable provided with the Mobile Processor is a 3-wire connector. **NOTE**: The provided length of cable may not fit all vehicles. If wires must be extended, use 14 gauge or heavier. Min draw on 1 Cam system= 4.5AMPS, Max draw on 4 Cam system is 7.5AMPS.

1. Route the red wire (positive) from processor to a constant battery source. For example, a fused connection to the battery or to a vehicle power terminal block. Recommended fuse 20 amps.
2. Route the black wire (ground) from processor to vehicle ground tap.
3. Route the blue wire (remote) from processor to vehicle's ignition (key) source in the fuse panel or police packaging wiring harness. Recommended fuse 5 amps.

Overview:

Red: Constant Power
Blue: Remote/Ignition source
Black: Ground (barely visible off side of Processor)
Gold: Network (CAT5) to laptop or HDMI cable to front touchscreen

The GPS Antenna

The included GARMIN GPS antenna is a powerful omnidirectional receiver that can be mounted in any location with a line of sight to the sky.

1. Locate a position in, or on, the ALPR vehicle with a line of sight to the sky. Common zones are front dash, rear dash, rear window ledge, or on top of the vehicle.

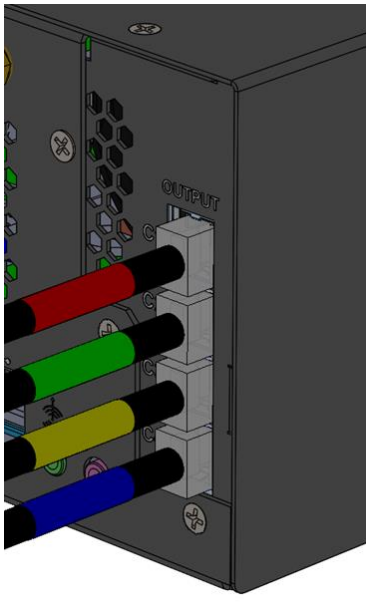
2. Attach the hook side of hook-and-loop take to the underside of the GPS module.

3. Mount the antenna and route the GPS cable to the SX Processor.

GPS 16xHVS: Black PVC-jacketed, 5-meter, foil-shielded, 8-conductor 28 AWG with RJ-45 termination is waterproof up to 1m. Standby Current: < 10 microAmps

The Mobile Camera Cables

As mentioned previously, it's extremely important to review the vehicle manual when running the mobile camera cables.



1. Locate the colored indicator rings that came with the Mobile Processor shipment.
2. Band and layout the camera cables to ensure the proper cables are going to the correct camera locations.
3. When run through the vehicle, be certain the cables do not get pinched or impede any of the vehicle airbags.

Color Coded Cable Rings:
Red: Front Left Camera
Green: Front Right Camera
Yellow: Rear Left Camera
Blue: Rear Right Camera

Connecting Camera Cables to the Processor

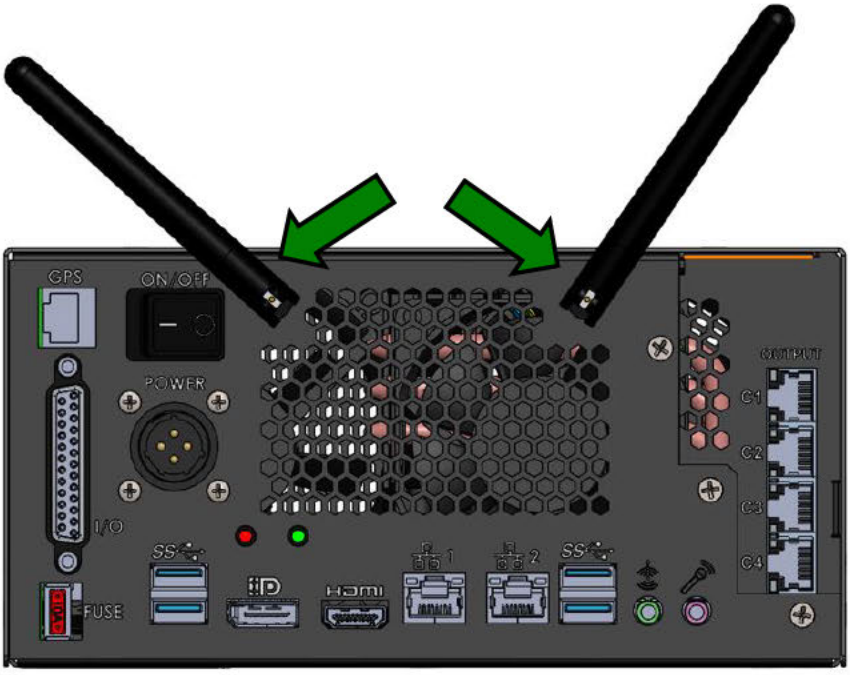
Connecting the P720 camera cables to the Mobile Processor is straight forward and as easy as plugging in a network cable. After the cables have been safely run through the vehicle, simply plug in the network (RJ45) connector to the appropriate camera port on the Processor (labeled C1-C4).

- Camera 1 Front Left (C1) = Red
- Camera 2 Front Right (C2) = Green
- Camera 3 Rear Left (C3) = Yellow
- Camera 4 Rear Right (C4) = Blue

Connecting the GPS Antenna to the Processor

After the antenna is placed with a line of site to the sky and its cable is securely run back to the Processor, simply plug in the RJ45 connection to the port labeled "GPS" located in the upper left corner of the rear I/O panel.

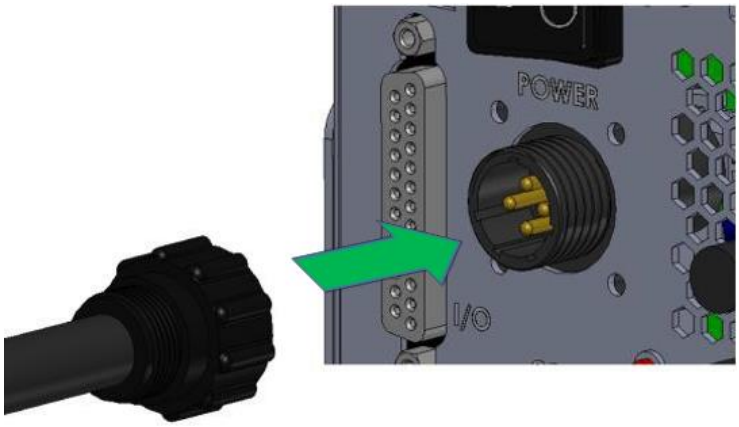
CAUTION: Plugging the GPS antenna into the wrong port may cause equipment damage and immediately void all warranties. Do **NOT** plug the GPS cable into a NIC or camera port. Do **NOT** plug a camera or network cable into the GPS port.



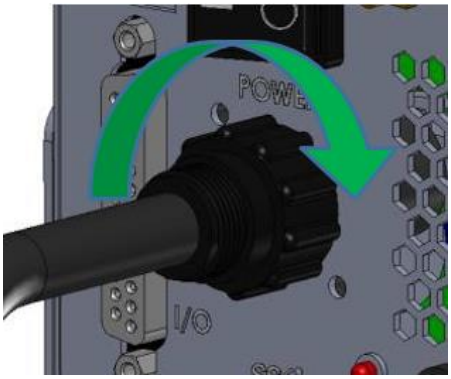
Connecting the Networking Elements to the Processor

The next step is to connect the networking option to the Processor. The most common method is a physical CAT5/6/7 cable from the Processor's NIC port 1 to an MDC/Laptop in the front of the vehicle.

NOTE: The on-board NICs are auto-switching. Meaning the agency can use either a standard network cable or a cross-over cable with no issues.



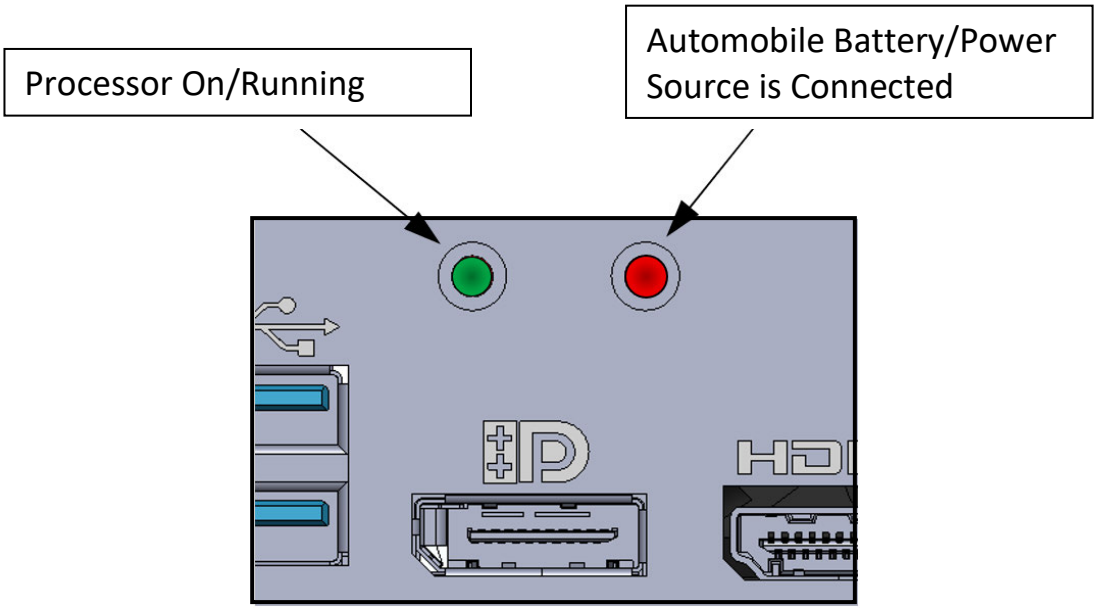
OPTION: In less than 1% of domestic orders, the Mobile Processor is built with Wi-Fi connectivity enabled. If the agency ordered this option, locate the two antennas from the accessories kit shipped with the Processor and install them to the Wi-Fi Networking Posts at the back of the Processor as shown below.



Connecting the Power Cable to the Processor

The last step in connecting all the cables to the Processor is to attach the power cable.

1. Align the notch on the power cable with the connection on the Processor
2. Insert the power cable onto the connection – DO NOT FORCE THE CABLE
3. After seating the cable properly, tighten the screw coupling/locking nut until snug – DON'T OVER TIGHTEN



Confirming the Power Status

With all the vehicle wiring complete and the cables connected to the Processor, flip the power switch on the Processor to the On position and start the vehicle. Information on the status lights is below.

- The ignition sensitive fuse (blue wire) will register the start of the vehicle and energize the Processor
- Both the Red and Green LED status lights should illuminate
- The unit will POST and play audible tones (and the fans should spin)
- When ignition power is removed, the Processor will begin its shutdown process, indicated by the green LED flashing
- When the shutdown timer has finished, the unit will completely shut down, indicated by the green LED going out
- Conversely when the ignition is activated, the green light will come on.

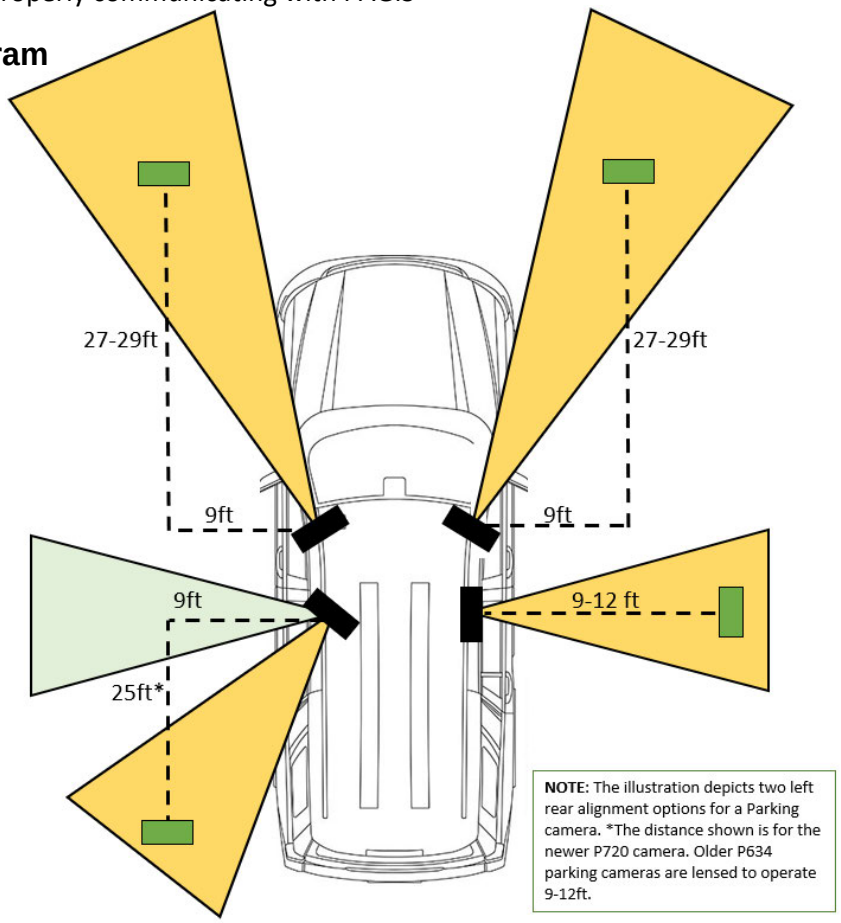
NOTE: It is normal for the red LED to stay illuminated. Expected power draw while in standby is roughly 20-40 milliamps.

ALIGNMENT

The purpose of this section is to provide the best practices for the proper alignment of the PIPS Mobile ALPR Dual-Lens Cameras. The more accurate the alignment and illumination, the more effective the ALPR system will be. The values below should be considered as a baseline for general alignment and positioning of the cameras. Based on varying agency vehicles, mounting locations, and use-case scenarios, some fine tuning may be required.

ALIGNMENT PROCEDURE

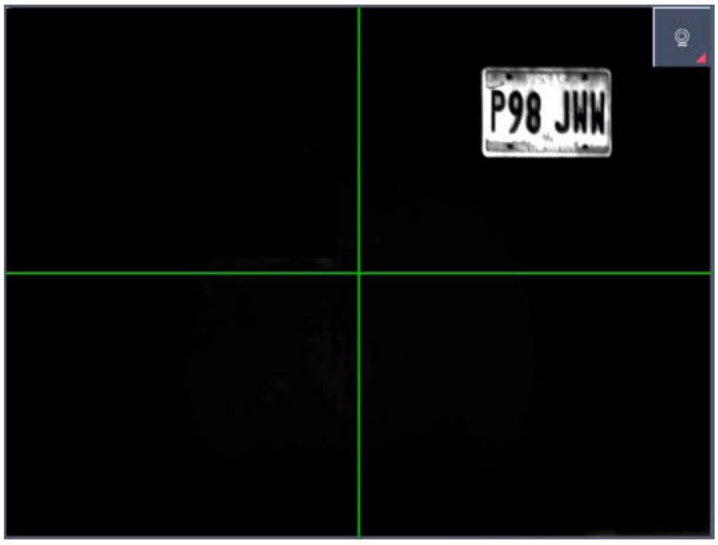
The steps below assume the ALPR system has been successfully installed, the SX Processor is properly communicating with the cameras, and PAGIS (or Mobile Toolkit) is properly configured and functioning. NOTE: The greater the care taken during this process, the more accurately the ALPR system will perform in the field.



Alignment Requirements

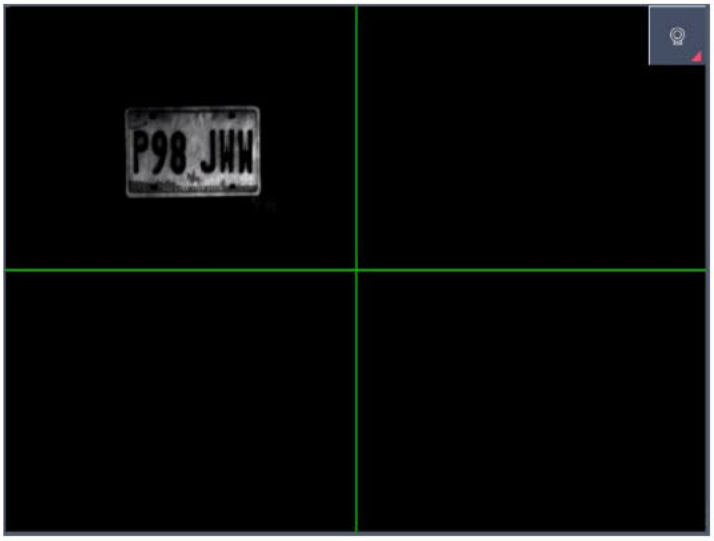
- Large flat area without incline/decline (Ideal dimensions: 30 feet wide by 50 feet deep)
- No atmospheric conditions like fog or rain
- MEASURE ALL DISTANCES FROM THE CAMERA (NOT THE VEHICLE)
- Tripods or stands are stable and place the center of the License Plate at 32 inches above the ground

Tools Required



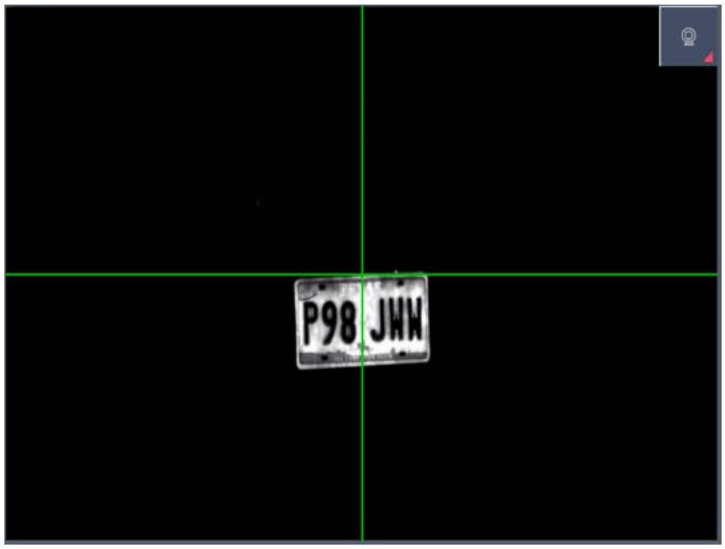
- Step Ladder
- #3, #3.5, and #4 hex/Allen wrench
- Chalk or Tape to mark the ground for template plate distances
- Tripod, tall parking cone, or box to secure test plates at 30-36” above the ground
- Tape measure or distance wheel
- Test license plate
- A configured MDC properly communicating with PAGIS

Distance Marker Diagram



Aligning the Front Left Camera

- Place the completed plate stand on the distance marker
- Launch PAGIS from the MDC
- Login with Admin rights
- Click the Settings button from the top navigation menu (PAGIS 2.12 and above)
- Scroll down on the right-side menu and select “Cam Setup”
- Click the camera name to be aligned
- Use the camera view toggle button to confirm the proper camera is selected then switch the view to Infrared (IR)
- Loosen the mounting screws on the camera bracket just enough to allow for movement
- While monitoring the IR camera feed, position the camera so the plate is viewed as shown below
- Once set, tighten the mounting screws on the bracket to lock the camera in place



Aligning the Front Right Camera

- Use the preparatory alignment steps from above
- While monitoring the IR camera feed, position the camera so the plate is viewed as shown below
- Once set, tighten the mounting screws to lock the camera in place

Aligning the Right Rear Parking Camera

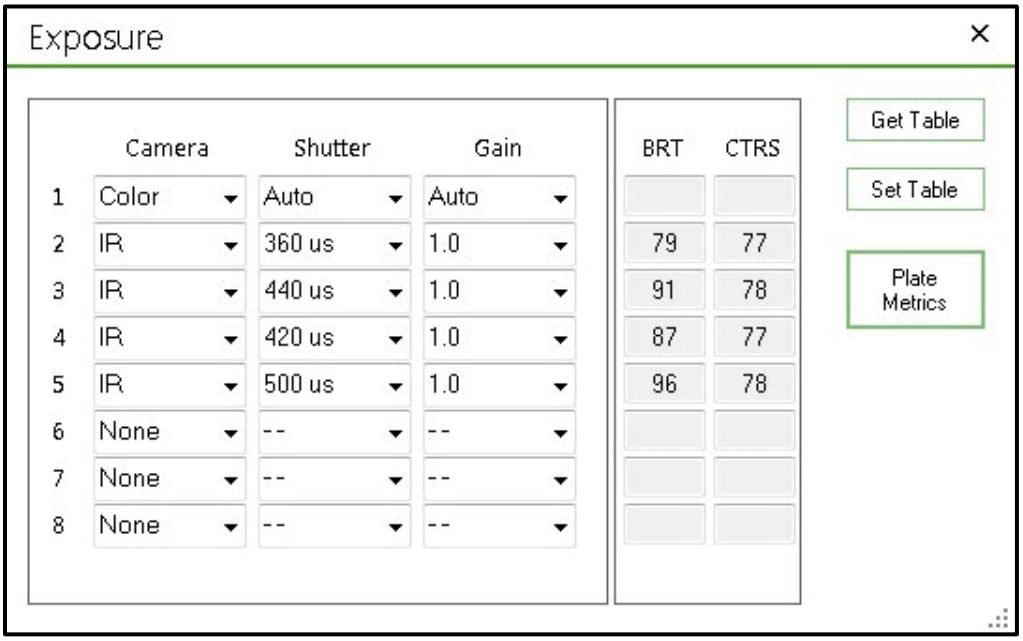
- Measure 10-12ft to the right side of the vehicle (from the parking camera)
- Place a completed plate stand at the mark
- Launch PAGIS from the MDC
- Login with Admin rights
- Click the Settings button from the top navigation menu (PAGIS 2.12 and above)
- Scroll down on the right-side menu and select "Cam Setup"
- Click the camera name to be aligned
- Use the camera view toggle button to confirm the proper camera is selected then switch the view to Infrared (IR)
- Loosen the mounting screws on the camera bracket just enough to allow for movement
- While monitoring the IR camera feed, position the camera so the plate is viewed as shown below
- Once set, tighten the mounting screws on the bracket to lock the camera in place

Aligning the Left Rear Camera

- Parking Option: Follow the steps for the Right Parking Camera
- Rear Facing Parking Camera Option: Measure 9 feet out and 25 feet down the lane
- Rear Facing (Third) Traffic Camera Option: Follow all steps for front left camera
    - Launch PAGIS from the MDC
    - Login with Admin rights
    - Click the Settings button from the top navigation menu (PAGIS 2.12 and above)
    - Scroll down on the right-side menu and select "Cam Setup"
    - Click the camera name to be aligned
    - Use the camera view toggle button to confirm the proper camera is selected then switch the view IR
    - Loosen the mounting screws on the camera bracket just enough to allow for movement
    - While monitoring the IR camera feed, position the camera so the plate is viewed as shown below
    - Once set, tighten the mounting screws on the bracket to lock the camera in place

CALIBRATING EXPOSURE TABLES

Proper plate illumination is necessary for the mobile ALPR system to function correctly. Administrators should take care not to under or over saturate the plate with Infrared (IR) light. Use the steps below to discover the plate "standard" and then select values just above, and just below that starting point to account for varied environmental conditions over time.



Exposure Table Best Practices

- Only calibrate 1 license plate at a time
- Only use a Gain setting of 1 or 1.5 (values above 1.5 amplify visual "noise" and could lead to misreads)
- Use 1 Color setting and 4 IR settings

Setting the Exposure Table/Plate Illumination

1. Remote Desktop to the SX4e
2. Open Tools from the Desktop
3. Launch Mobile Toolkit
4. The default view is the Infrared (IR) feed of the left front camera (Input 1)
5. Use the Input menu to navigate to the camera to be configured
6. Then from the Settings Menu, select "Exposure"
7. Be sure the plate is clearly viewable for the distance to be calibrated
8. Click the "Get Table" button to import the current exposure settings from the camera
9. Next, use the "Plate Metrics" button to analyze the current illumination
10. Adjust the exposure settings to increase or decrease illumination as necessary
    a. Increasing the Exposure will increase the Brightness (BRT) and Contrast (CTRS)
    b. Ideal BRT is above 60 **NOTE**: BRT over 90 begins to over-saturate the plate and could lead to misreads
    c. Ideal CTRS is roughly 80 (the higher the contrast the better)
11. Be sure to re-run Plate Metrics after each adjustment to the exposure table
12. Once the ideal value is discovered, fill in the other IR fields with values just above, and just below this ideal setting to account for varied atmospheric possibilities
13. Leave the Color setting to "Auto"
14. When all values are selected, click the "Set Table" button to save the changes
15. Then move on to the other cameras

NOTE: In order to read plates two lanes over, the exposure settings will need to be close to the maximum settings. This will over-expose some of the near lane plates and is the tradeoff made by agencies looking to expand ALPR coverage. An example of those settings is below.

MAINTENANCE AND SERVICE

This section discusses the general service and maintenance of the Mobile ALPR System.

Qualifications

To properly install or service the ALPR system, the technician must have a good understanding of automotive electrical systems as well as a proficiency in maintaining computer systems and networks in a mobile environment.

Servicing Mobile ALPR Cameras

Establishing a regular maintenance schedule for the Mobile ALPR cameras extends the life of the system and ensures safety. Periodically check the Mobile ALPR cameras to ensure the camera lenses are clean, all LEDs illuminate when the system is operating, and that all mounted hardware is securely fastened to the vehicle. Also, inspect the camera front cover for cracks, crazing (hairline cracks), discoloration, and other defects.

CAUTION: DO NOT open the camera housing. Each camera is nitrogen purged to remove moisture. If the camera is opened moisture will enter the camera resulting in potential damage to the electronics and accumulation on the lenses. If the camera is opened the warranty is void. For service, support, or replacement please contact Customer Support.

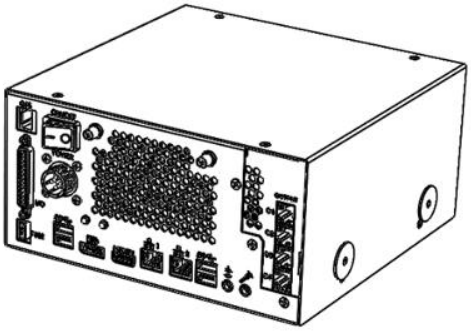
Cleaning Mobile ALPR Cameras

The lens of the camera should be cleaned before each use. Accumulation of insects, road grime, and other debris can obstruct the camera and reduce the plate read capability. To clean the lens, do not use an alcohol or ammonia based cleaner like Windex. Cleaners containing these compounds can damage the polycarbonate cover. PIPS Recommends use of a microfiber cloth and a mild soap and water solution.

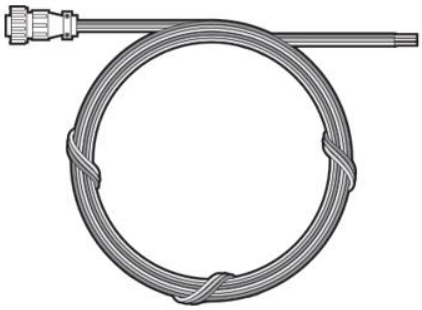
Servicing the Mobile ALPR Processor

The housing of each Processor is sealed. If the seals are broken, the warranty of the unit will be void. Software and firmware can be updated at the direction of Customer Support.

Servicing the 10.4 inch Touchscreen Monitor

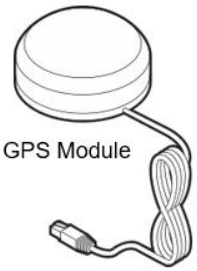


If monitor issues develop, first check the power and video connections. Make sure the cords are connected properly and are not twisted. Then clean the touchscreen. The touchscreen monitor should be cleaned before each use. Oils from fingers accumulate on the screen and can erode performance. To clean the screen DO NOT USE an alcohol or ammonia based cleaner. Cleaners containing these compounds can damage the touch screen. Use of an anti-fog, anti-static cleaner and a microfiber cloth.



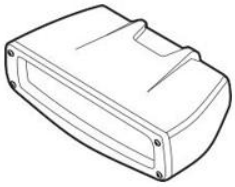
Cleaning the Vehicle

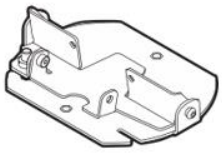
When washing the vehicle, it's best to avoid automatic car washes that use the older rotating nylon bristles. The fibers can become lodged in the camera brackets and misalign the cameras or damage the acrylic cover plate. Automatic car washes that use Soft Cloth or touchless (high pressure spray) can be used as they do not pose a risk to the cameras. For non-lightbar mounting solutions, it is not recommended to use rotating car wash systems for any brackets that use magnets to secure them to the vehicle.



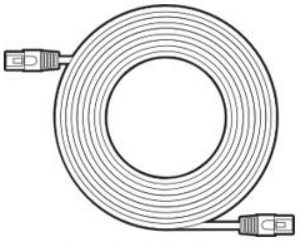
APPENDIX A – ALPR COMPONENTS

Standard Components

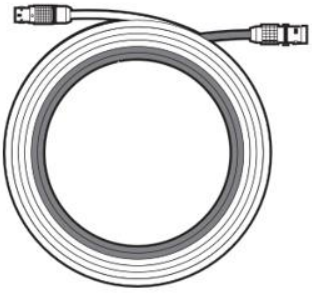




Mobile ALPR Processor
Power Cable



GPS Module

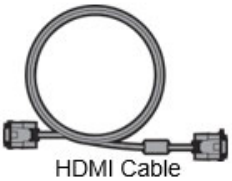


Camera
(1-4 per Processor)

Right-Hand Bracket
(1 per Camera)

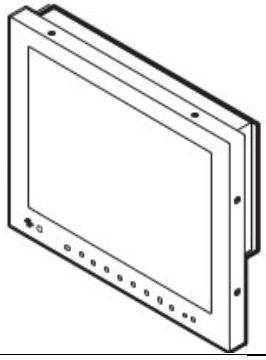
Mobile ALPR Processor
Ethernet Crossover Cable

Camera Cable
(1 per Camera)

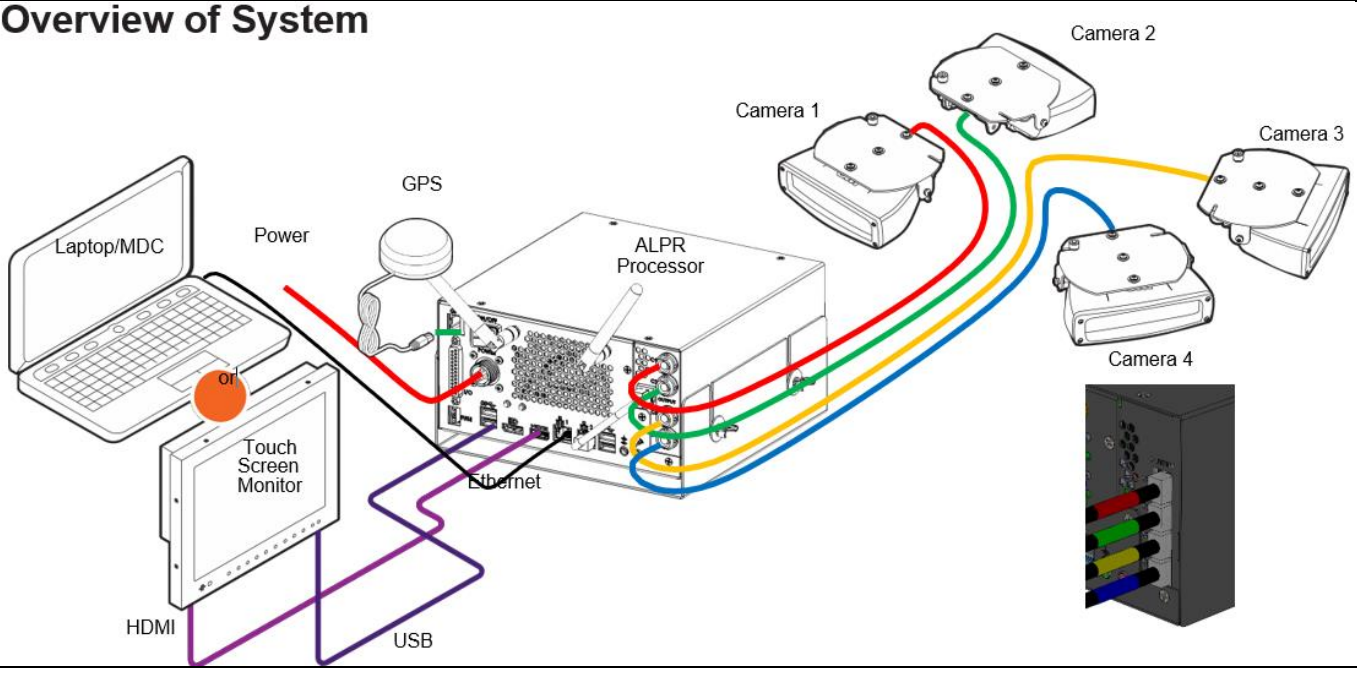


Optional with Stand-Alone Configuration

DC-DC Power Cable

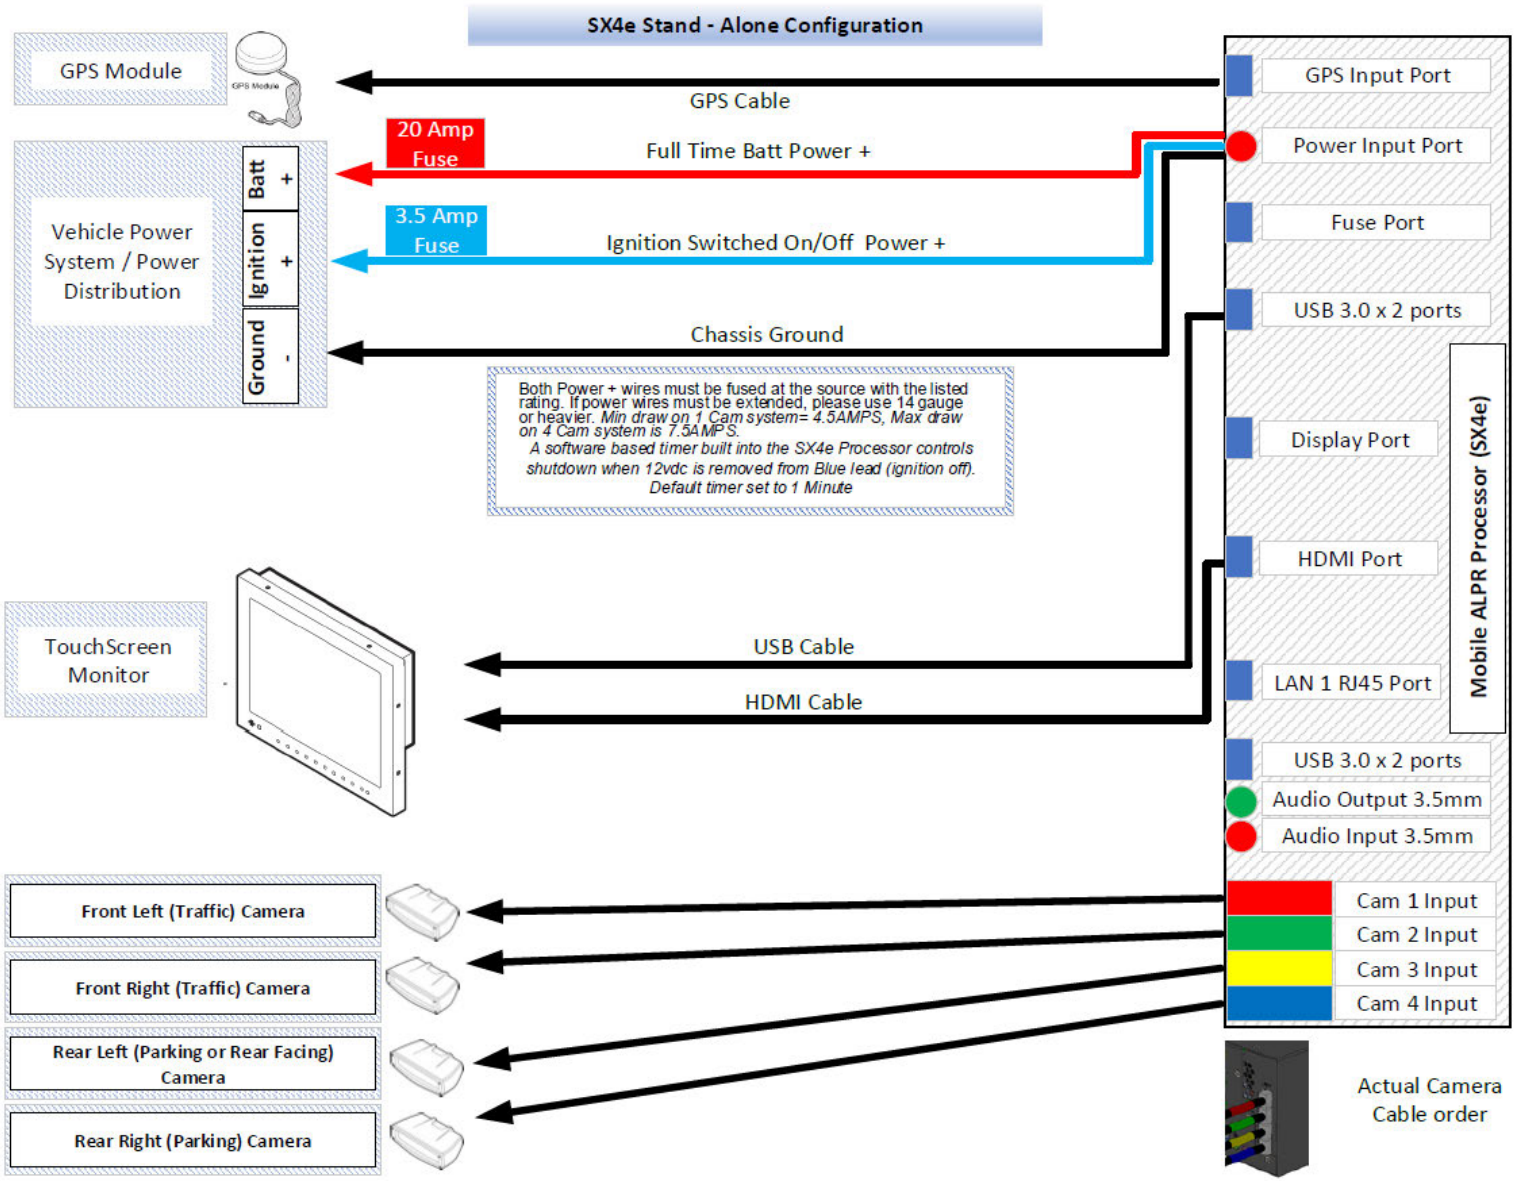


USB Cable
(2 per system)

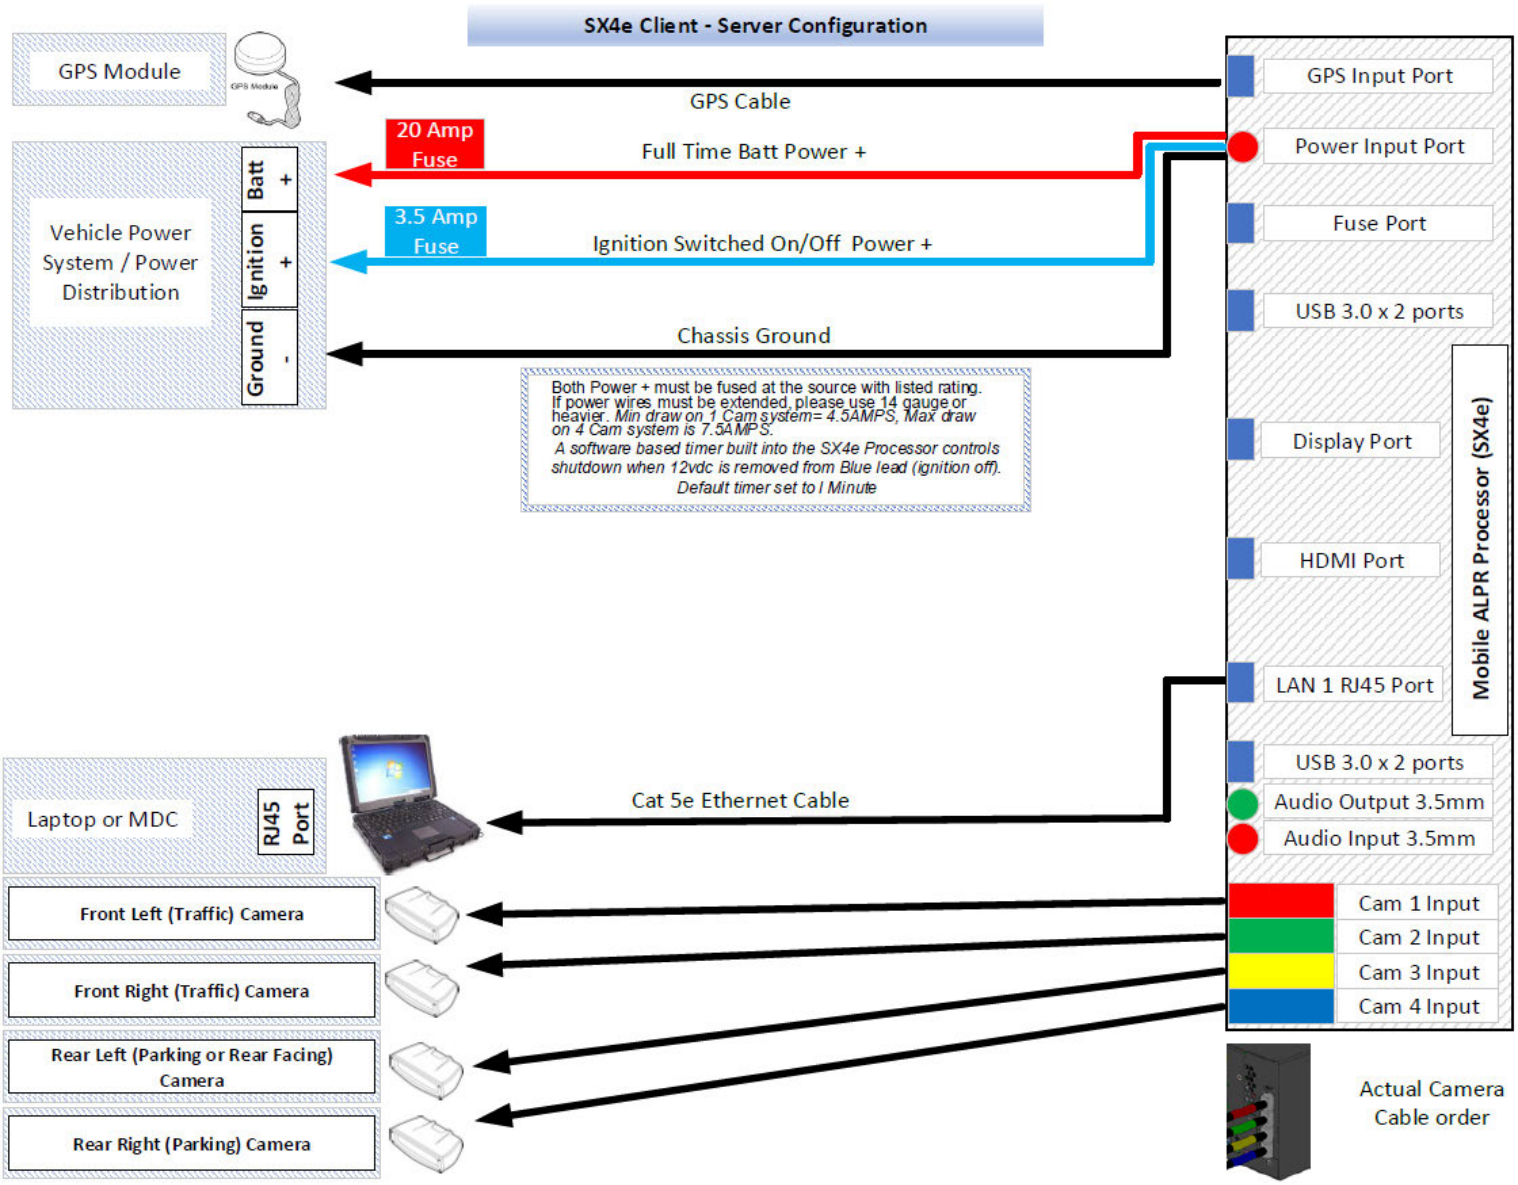


HDMI Cable

Touch Screen Monitor
(Mounting bracket provided by others)



Overview of System



APPENDIX B – WIRING DIAGRAM

Below is the wiring diagram for a Stand-Alone Processor.

APPENDIX C – WIRING DIAGRAM

Below is the wiring diagram for client/server (VPRelay mode) used with a laptop in the front of the vehicle.

1 Introduction

1.1 About this document

1.1.1 UTMC is a UK-led initiative which provides and maintains a technical framework for traffic management and related systems. It is geared to producing open specifications geared to the needs of real world projects, delivered through an efficient and innovative supply market. UTMC specifications are endorsed by the UK Department for Transport and are published on the UTMC website at: http://www.utmc.uk.com.

1.1.2 To help users get the best out of the UTMC Technical Specification, we provide a set of guidance documents addressing some of the associated issues, ranging from non technical aspects such as procurement policy and operations, to technical aspects such as database design and communications network configuration.

1.1.3 This document is a guidance document primarily for developers, and is concerned with expanding on the technical implementation of UTMC protocols within an ALPR system.

1.2 Status of this document

1.2.1 This document is based on the previous version, TR007 001b, produced by the UTMC ALPR Working Group (2009-2010).

1.2.2 UTMC gratefully acknowledges the work of the members of the Working Group in compiling this guidance and the associated elements of the Technical Specification.

1.3 Context

1.3.1 This protocol is for use by ALPR cameras when connecting to UTMC systems as used by numerous authorities across the UK, with the goal of achieving interoperability between suppliers. Although the primary aim has been to provide standardized ALPR data for journey time systems, the scope of the protocol includes the provision of additional data meeting NAAS requirements (for example images) to satisfy Police requirements in the event that Local Authorities and the Police wish to share cameras.

1.3.2 The UTMC ALPR protocol was developed within the following framework:

- This standard utilises non-proprietary elements and is based on XML. It is recognised that the communications costs associated with the use of XML may be higher at present than those for a less verbose protocol. However, it is hoped that the ease of use and the wide support of XML will lead to the ready exploitation of a forward-looking XML based open standard, particularly in the light of ongoing reductions in communication costs.

- The focus of this protocol is Camera to Instation and Instation to Camera communications. In parallel, a set of attribute extensions have been developed for the Common Database CCTV Data Object, which allow the Instation to add distilled ALPR data to the CDB. This document does not deal with Instation to Instation Journey Time Exchange.

- This protocol should be formed with some consideration of existing protocols and guidance – UTMC, Datex and possibly NTCIP.

- This protocol should be scalable. Elements such as image transfer may not be a requirement of all users. The protocol should be developed in a way to ensure that such additions are optional.

1.4 Web service interfaces

1.4.1 All web interfaces are SOAP (Simple Object Access Protocol) based and are described in WSDL (Web Services Description Language).

1.4.2 To summarise the Instation WSDL, the interface allows the camera to send XML element: <CameraToInstation> and in reply receives an XML element: <InstationToCamera>.

1.4.3 The camera WSDL allows the Instation to send XML element: <InstationToCamera>.

1.4.4 It should be noted that SOAP headers are not included in the UTMC ANPR WSDL files (camera.wsdl and instation.wsdl) or in the xml excerpts shown below. SOAP headers must therefore be generated for any SOAP-compliant implementation.

1.4.5 Both <CameraToInstation> and <InstationToCamera> elements have a mandatory version number attribute:

- SchemaVersion, indicating the version number of the element which contains it (SchemaVersion is a string containing dot-separated numbers (starting with 1.0). The first digit indicates a major revision, the second indicates updates to that revision.)

1.4.6 The xml excerpts shown below relate to V1.2 of the UTMC ALPR Protocol.

2 Camera to Instation

2.1 Introduction

2.1.1 This XML element is intended for transmitting all information from Camera to Instation. It allows for sending: plate data, ALPR and machine diagnostics, proprietary logs, images, current Camera configuration and request for configuration in any combination.

2.1.2 The option must be provided to use Gzip compression of the entire Camera to Instation element. The protocol does not provide for enabling or disabling this feature - it must be enabled or disabled by a commissioning engineer, either on-site or via a remotely connected engineering application.

2.1.3 Mandatory elements are:

- CameraID to identify the Camera
- TimeStamp which is the date and time of message creation

2.1.4 For clarity, each type of information payload is discussed separately; however messages may use any combination of elements.

2.1.5 All array elements include an optional attribute "ManufacturerSpecific" (not shown in the examples) which enables the communication of additional information outside the scope of the pre-defined attributes.

2.2 PlateRead

2.2.1 An optional array of plate read results may be included. For each entry in the array, the following are mandatory:

- InstanceID to identify the plate read event;
- TimeStamp which is the date and time of the sighting;
- LaneID representing the lane in which the plate was travelling;
- VehicleDirection representing the direction the vehicle was travelling in the lane;
- PlateNotRead, a flag to indicate a vehicle has been detected but no plate read.

2.2.2 The following is an example message containing a single plate read.

```
<?xml version="1.0" encoding="UTF-8" standalone="yes"?>
<CameraToInstation xmlns=" http://utmc.uk.com/anpr/schema_1-2" SchemaVersion="1.2">
    <CameraID>0</CameraID>
    <TimeStamp>2009-06-29T12:01:59.377+01:00</TimeStamp>
    <PlateReadArray>
        <PlateRead>
            <InstanceID>0</InstanceID>
            <TimeStamp>2009-06-29T12:01:59.379+01:00</TimeStamp>
            <TimeStampError>5</TimeStampError>
            <LaneID>0</LaneID>
            <VehicleDirection>U</VehicleDirection>
            <XYType>OSGB</XYType>
            <XCoord>123456.7</XCoord>
            <YCoord>654321.0</YCoord>
            <PlateNotRead>false</PlateNotRead>
            <VRN>A123BCD</VRN>
            <VRNConfidence>85</VRNConfidence>
```

```
                <Tag>1234</Tag>
                <TagConfidence>90</TagConfidence>
                <Classification>1</Classification>
                <Country>GBR</Country>
                <Make>Ford</Make>
                <Model>Focus</Model>
                <Colour>Red</Colour>
                <Velocity>50</Velocity>
                <VelocityError>5</VelocityError>
            </PlateRead>
        </PlateReadArray>
</CameraToInstation>
```

2.2.3 Where the Camera has been configured to send plate reads immediately, the <PlateReadArray> element will only contain a single <PlateRead> element. Where the Camera is configured to send batches of plate reads, multiple <PlateRead> elements will be present. It is mandatory that each <PlateRead> element contains at least one of <VRN> or <Tag>.

2.2.4 See section 4 for an explanation of the hashing algorithm which is used to convert the <VRN> element to a hashed tag (the <Tag> element) for the purposes of journey time or origin-destination applications.

2.2.5 These elements are described in more detail in Appendix 1.

2.3 ALPR diagnostics

2.3.1 An optional array of ALPR diagnostics may be included (one entry per lane). For each entry in the array, the following are mandatory:

- TimeStamp which is the date and time of end of the diagnostic period;
- DiagnosticType representing whether the entry is a routine diagnostic or an alarm;

2.3.2 The following is an example message containing all defined ALPR Diagnostic objects:

```
<?xml version="1.0" encoding="UTF-8" standalone="yes"?>
<CameraToInstation xmlns=" http://utmc.uk.com/anpr/schema_1-2" SchemaVersion="1.2">

    <ANPRDiagnosticArray>
        <ANPRDiagnostic>
            <TimeStamp>2009-06-29T12:01:59.379+01:00</TimeStamp>
            <DiagnosticType>routineDiagnostic</DiagnosticType>
            <LaneID>0</LaneID>
            <MeanVRNConfidence>82</MeanVRNConfidence>
            <MeanTagConfidence>85</MeanTagConfidence>
            <MeanPlateContrast>56</MeanPlateContrast>
            <MeanCharacterHeight>15</MeanCharacterHeight>
            <MeanHorizontalAngle>8</MeanHorizontalAngle>
            <MeanVerticalAngle>2</MeanVerticalAngle>
            <MeanTrajectoryOffset>2</MeanTrajectoryOffset>
            <MeanTrajectoryAngle>11</MeanTrajectoryAngle>
            <MeanVelocity>45</MeanVelocity>
            <MeanVelocityError>4</MeanVelocityError>
```

```
                <PlateToTriggerRatio>90</PlateToTriggerRatio>
                <PlatesNoCountryRatio>3</PlatesNoCountryRatio>
                <PlatesTowardsRatio>43</PlatesTowardsRatio>
                <PlatesAwayRatio>45</PlatesAwayRatio>
                <MeanIRLevel>53</MeanIRLevel>
                <MeanExposure>350</MeanExposure>
                <MeanGain>-10</MeanGain>
            </ANPRDiagnostic>
        </ANPRDiagnosticArray>
</CameraToInstation>
```

2.3.3 These elements are described in more detail in Appendix 2.

2.4 Machine diagnostics

2.4.1 An optional array of machine diagnostics (describing hardware, software and communications performance) may be included. For each entry in the array, the following are mandatory:

- TimeStamp which is the date and time of the end of the diagnostic period;
- DiagnosticType representing whether the entry is a routine diagnostic or an alarm;
- HostName representing the host to which communications diagnostics relate

2.4.2 The following is an example message containing all proposed Machine Diagnostic objects:

```
<?xml version="1.0" encoding="UTF-8" standalone="yes"?>
<CameraToInstation xmlns=" http://utmc.uk.com/anpr/schema_1-2" SchemaVersion="1.2">
    <CameraID>0</CameraID>
    <TimeStamp>2009-06-29T12:01:59.377+01:00</TimeStamp>
    <MachineDiagnosticArray>
        <MachineDiagnostic>
            <TimeStamp>2009-06-29T12:01:59.379+01:00</TimeStamp>
            <DiagnosticType>routineDiagnostic</DiagnosticType>
            <MeanCPUTemperature>56</MeanCPUTemperature>
            <MeanTotalCurrent>120</MeanTotalCurrent>
            <MeanIlluminatorTemp>70</MeanIlluminatorTemp>
            <MeanIlluminatorCurrent>90</MeanIlluminatorCurrent>
            <IlluminatorUsage>123</IlluminatorUsage>
            <MeanIlluminatorOutput>90</MeanIlluminatorOutput>
            <LastResetTime>2009-06-29T12:01:59.379+01:00</LastResetTime>
            <NoOfHardwareErrors>0</NoOfHardwareErrors>
            <MeanSignalStrength>-36</MeanSignalStrength>
            <HostName>192.168.1.1</HostName>
            <MeanCommsLag>23</MeanCommsLag>
            <WorstCommsLag>50</WorstCommsLag>
            <NoOfCommsResends>3</NoOfCommsResends>
            <NoOfCommsFailures>1</NoOfCommsFailures>
            <NoOfCommsReconnects>2</NoOfCommsReconnects>
            <MeanSyncDifference>40</MeanSyncDifference>
            <WorstSyncDifference>123</WorstSyncDifference>
            <LastSyncTime>2009-06-29T12:01:59.379+01:00</LastSyncTime>
            <SupplyVoltage>98</SupplyVoltage>
            <TamperAlarm>normal</TamperAlarm>
```

```
            </MachineDiagnostic>
        </MachineDiagnosticArray>
</CameraToInstation>
```

2.4.3 These elements are described in more detail in Appendix 3.

2.5 Logs

2.5.1 An optional array of log messages (representing logged events such as power up, configuration change or communication error) may be included. For each entry in the array, the following is mandatory:

- TimeStamp which is the date and time relating to the log message;

2.5.2 The following is an example message outlining the format of a Log Array:

```
<?xml version="1.0" encoding="UTF-8" standalone="yes"?>
<CameraToInstation xmlns=" http://utmc.uk.com/anpr/schema_1-2" SchemaVersion="1.2">
    <CameraID>0</CameraID>
    <TimeStamp>2009-06-29T12:01:59.377+01:00</TimeStamp>
    <LogArray>
        <Log>
            <TimeStamp>2009-06-29T12:01:59.379+01:00</TimeStamp>
            <InstanceID>0</InstanceID>
            <LogMessage>System Restart</LogMessage>
        </Log>
    </LogArray>
</CameraToInstation>
```

2.5.3 The <LogArray> element may contain any number of <Log> elements. LogMessage elements may contain XML or plain text in proprietary format, as long as XML formatting rules are strictly followed.

2.6 Images

2.6.1 An optional array of camera images may be included. For each entry in the array, the following are mandatory:

- TimeStamp which is the date and time at which the image was captured;
- ImageType representing the type of the image e.g. plate patch, ALPR image etc;

2.6.2 The following is an example message containing binary images. Five types of image can be sent: PlatePatch, ALPR Image, Overview Image, Context Image or Context Overview Image:

```
<?xml version="1.0" encoding="UTF-8" standalone="yes"?>
<CameraToInstation xmlns="http://utmc.uk.com/anpr/schema_1-2" SchemaVersion="1.2">
    <CameraID>0</CameraID>
    <TimeStamp>2009-06-29T12:01:59.377+01:00</TimeStamp>
    <ImageArray>
        <Image>
            <InstanceID>0</InstanceID>
            <TimeStamp>2009-06-29T12:01:59.379+01:00</TimeStamp>
```

```
            <VRN>A123BCD</VRN>
            <LaneID>0</LaneID>
            <ImageType>platePatch</ImageType>
            <ImageFormat>jpeg</ImageFormat>
            <BinaryImage>[IMAGE DATA]</BinaryImage>
        </Image>
        <Image>
            <InstanceID>0</InstanceID>
            <TimeStamp>2009-06-29T12:01:59.379+01:00</TimeStamp>
            <VRN>A123BCD</VRN>
            <LaneID>0</LaneID>
            <ImageType>ANPRImage</ImageType>
            <ImageFormat>gif</ImageFormat>
            <BinaryImage>[IMAGE DATA]</BinaryImage>
        </Image>
        <Image>
            <InstanceID>0</InstanceID>
            <TimeStamp>2009-06-29T12:01:59.379+01:00</TimeStamp>
            <VRN>A123BCD</VRN>
            <LaneID>0</LaneID>
            <ImageType>overviewImage</ImageType>
            <ImageFormat>tiff</ImageFormat>
            <BinaryImage>[IMAGE DATA]</BinaryImage>
        </Image>
    </ImageArray>
</CameraToInstation>
```

2.6.3 These elements are described in more detail in Appendix 4.

2.6.4 It should be noted that InstanceID is not required for an ad-hoc context image or any image that may be requested from the Instation where there is no association with a vehicle, and therefore no VRN has been collected with a corresponding Instance ID. However, where an image relates to a plate read, the InstanceID for the plate read is included in the image attributes.

2.7 Camera and Configuration

2.7.1 Optional Camera and Configuration elements may be included in response to a ConfigRequest issued by the Instation via the InstationToCamera element. The following is mandatory in the Camera element:

- HardwareUniqueID which represents a globally unique identifier for the camera

2.7.2 At least one Lane element per camera is mandatory. The following are mandatory in each Lane element:

- LaneID representing the lane relative to the camera to which the lane config applies
- LaneNumber representing the lane position in the carriageway
- LaneDirectionTypeID representing the direction of travel of the carriageway lane
- NormalVehicleDirection - whether vehicles normally travel towards or away from the camera

2.7.3 The following is an example message outlining a Camera and Configuration response to an Instation ConfigRequest, which includes both Camera and Configuration elements:

```
<?xml version="1.0" encoding="UTF-8" standalone="yes"?>
<CameraToInstation xmlns="http://utmc.uk.com/anpr/schema_1-2" SchemaVersion="1.2">
    <CameraID>0</CameraID>
    <TimeStamp>2009-06-29T12:01:59.377+01:00</TimeStamp>
    <Camera>
        < HardwareUniqueID>CA_Traffic:Evo8:7205/0219</ HardwareUniqueID>
        <ShortDescription>My Short description</ShortDescription>
        <LongDescription>My long description</LongDescription>
        <XYType>OSGB</XYType>
        <XCoord>123456.7</XCoord>
        <YCoord>654321.0</YCoord>
        <Height>3.5</Height>
        <TypeID>7</TypeID>
        <MobileCamera>false</MobileCamera>
        <SoftwareVersion>2.1.1</SoftwareVersion>
        <LaneArray>
            <Lane>
                <LaneID>0</LaneID>
                <LaneNumber>1</LaneNumber>
                <LaneDirectionTypeID>5</LaneDirectionTypeID>
                <NormalVehicleDirection>towards</NormalVehicleDirection>
            </Lane>
        </LaneArray>
    </Camera>
    <Configuration>
        <HostName>HOST1</HostName>
        <SendVRNs>true</SendVRNs>
        <SendTags>false</SendTags>
        <SendPlatePatches>false</SendPlatePatches>
        <SendANPRImages>false</SendANPRImages>
        <SendOverviewImages>false</SendOverviewImages>
        <SendPlatesNotRead>false</SendPlatesNotRead>
        <SendANPRDiagnostics>true</SendANPRDiagnostics>
        <SendMachineDiagnostics>true</SendMachineDiagnostics>
        <SendIncrementalLog>true</SendIncrementalLog>
        <SendPeriodicContextImage>true</SendPeriodicContextImage>
        <UseReportingOffset>false</UseReportingOffset>
        <SendHeartbeat>true</SendHeartbeat>
        <StreamPlates>false</StreamPlates>
        <HeartbeatInterval>300</HeartbeatInterval>
        <PlateSendInterval>60</PlateSendInterval>
        <ReportingOffset>15</ReportingOffset>
        <ANPRDiagsSendInterval>1800</ANPRDiagsSendInterval>
        <MachineDiagsSendInterval>3600</MachineDiagsSendInterval>
        <IncrementalLogInterval>600</IncrementalLogInterval>
        <ContextImagePeriod>900</ContextImagePeriod>
        <MaxPlatesToSend>200</MaxPlatesToSend>
        <MinANPRDiagnosticSamples>10</MinANPRDiagnosticSamples>
        <CurrentDateTime>2009-06-29T12:01:59.379+01:00</CurrentDateTime>
    </Configuration>
</CameraToInstation>
```

2.7.4 Elements that are part of the <Camera> element are not configurable by the instation and should be set up on installation of the physical camera by manufacturer specific means (for example pre-configured at the factory or entered by the commissioning engineer).

2.7.5 A number of different lanes may be configured for one camera, however note that the <Configuration> element has no attributes which are lane-specific.

2.7.6 In the <Camera> element, at least one <Lane> element is mandatory. It is anticipated that <Lane> attributes will be entered into the camera by the commissioning engineer – these are not downloadable from the Instation.

2.7.7 Where there are attributes in the <Configuration> element which are not supported by a particular camera, the camera may omit these from the response.

2.7.8 A camera must maintain separate Configuration objects for each host. It will only accept the Configuration for a particular host from that host itself, and will only push a Configuration to the host to which it applies.

2.7.9 The <Camera>, <Lane>, and <Configuration> elements are described in more detail in Appendix 5.

2.8 Configuration request

2.8.1 The following is an example message outlining a request by the Camera for an update of its current Configuration:

```
<?xml version="1.0" encoding="UTF-8" standalone="yes"?>
<CameraToInstation xmlns="http://utmc.uk.com/anpr/schema_1-2" SchemaVersion="1.2">
    <CameraID>0</CameraID>
    <TimeStamp>2009-06-29T12:01:59.377+01:00</TimeStamp>
    <ConfigRequest/>
</CameraToInstation>
```

2.8.2 This is an empty element used by the Camera for requesting the current configuration from the Instation, for example on Camera startup.

2.8.3 The ConfigRequest is directed to a particular host, which will return the Configuration relating only to that host. Where a camera is configured to report to multiple hosts, it is not permitted for one host to have the ability to change the Configuration of another.

2.9 Heartbeat message

2.9.1 The following is an example message outlining a heartbeat, which comprises a CameraToInstation element which is empty apart from the mandatory CameraID and Timestamp attributes:

```
<?xml version="1.0" encoding="UTF-8" standalone="yes"?>
<CameraToInstation xmlns="http://utmc.uk.com/anpr/schema_1-2" SchemaVersion="1.2">
    <CameraID>0</CameraID>
    <TimeStamp>2009-06-29T12:01:59.377+01:00</TimeStamp>
</CameraToInstation>
```

2.9.2 Where a Camera is connected via a network which does provide a fixed IP address (for example some mobile networks), it may not be possible for the Instation to initiate a data transaction with a Camera (it may be impossible to determine the IP address allocated by the network). The Camera should therefore be configured periodically to send a 'Heartbeat' message to allow the Instation to respond with a message to the Camera. This heartbeat message is essentially an empty message which must be sent if no other messages have been sent within a configurable period of time (<HeartbeatInterval>).

3 Instation To Camera

3.1 Introduction

3.1.1 The <InstationToCamera> element is intended primarily for transmitting information from the Instation to the Camera in response to a SOAP call containing the <CameraToInstation> element. It allows for any combination of: a camera configuration, a configuration request, an image request or a log request to be sent. None of these elements is mandatory, hence the <InstationToCamera> element may also be sent empty to provide a receipt acknowledgement.

3.1.2 The option must be provided to use Gzip compression of the entire Instation to Camera element. The protocol does not provide for enabling or disabling this feature - it must be enabled or disabled by a commissioning engineer, either on-site or via a remotely connected engineering application.

3.1.3 Whereas this element is used in response to a <CameraToInstation> element, it mostly contains requests for data from the camera, for the reason that cameras are often connected via mobile networks where the Instation is unable to initiate a TCP/IP connection. Requests for data are therefore 'piggybacked' onto the acknowledgements sent by the Instation to the Camera.

3.1.4 Where the network connection allows the Instation to initiate a TCP/IP connection, the <InstationToCamera> element may also be transmitted on an ad-hoc basis as a SOAP call from the instation to the camera.

3.1.5 All array elements include an optional attribute "ManufacturerSpecific" (not shown in the examples) which enables the communication of additional information outside the scope of the pre-defined attributes.

3.2 Configuration

3.2.1 The Instation may push a new or revised configuration to the camera either at will or in response to a <ConfigRequest> from the camera. It is only possible to push that configuration which is specific to the sending host.

3.2.2 The following is an example message outlining a Configuration response to a camera ConfigRequest (none of the <Configuration> elements is mandatory):

```
<?xml version="1.0" encoding="UTF-8" standalone="yes"?>
<InstationToCamera xmlns="http://utmc.uk.com/anpr/schema_1-2" SchemaVersion="1.2">
    <Configuration>
        <HostName>HOST1</HostName>
        <SendVRNs>true</SendVRNs>
        <SendTags>false</SendTags>
        <SendPlatePatches>false</SendPlatePatches>
        <SendANPRImages>false</SendANPRImages>
        <SendOverviewImages>false</SendOverviewImages>
        <SendPlatesNotRead>false</SendPlatesNotRead>
        <SendANPRDiagnostics>true</SendANPRDiagnostics>
        <SendMachineDiagnostics>true</SendMachineDiagnostics>
        <SendIncrementalLog>true</SendIncrementalLog>
        <SendPeriodicContextImage>true</SendPeriodicContextImage>
        <UseReportingOffset>false</UseReportingOffset>
        <SendHeartbeat>true</SendHeartbeat>
        <StreamPlates>false</StreamPlates>
```

```
            <HeartbeatInterval>300</HeartbeatInterval>
            <PlateSendInterval>60</PlateSendInterval>
            <ReportingOffset>15</ReportingOffset>
            <ANPRDiagsSendInterval>1800</ANPRDiagsSendInterval>
            <MachineDiagsSendInterval>3600</MachineDiagsSendInterval>
            <IncrementalLogInterval>600</IncrementalLogInterval>
            <ContextImagePeriod>900</ContextImagePeriod>
            <MaxPlatesToSend>200</MaxPlatesToSend>
            <MinANPRDiagnosticSamples>10</MinANPRDiagnosticSamples>
            <CurrentDateTime>2009-06-29T12:01:59.379+01:00</CurrentDateTime>
        </Configuration>
</InstationToCamera>
```

3.2.3 This is exactly the same <Configuration> element as used for the <CameraToInstation> child element for transmitting the camera's current configuration.

3.2.4 The protocol does not provide for the addition of new hosts to the camera - these must be added or removed by a commissioning engineer, either on-site or via a remotely connected engineering application.

3.2.5 Where there are attributes in the <Configuration> element which are not supported by a particular camera, they will be ignored by the camera.

3.3 Log request

3.3.1 The Instation may request log records from the camera for a specific time period. In the <LogRequest> element, the following (which are the only attributes) are mandatory:

- StartTime which is the date and time at which log records should start;
- EndTime which is the date and time at which log records should end.

3.3.2 The following is an example message containing a response request from the Instation for provision of a Log by the camera:

```
<?xml version="1.0" encoding="UTF-8" standalone="yes"?>
<InstationToCamera xmlns="http://utmc.uk.com/anpr/schema_1-2" SchemaVersion="1.2">
    <LogRequest>
        <StartTime>2008-11-14T10:50:30.952Z</StartTime>
        <EndTime>2008-11-14T10:50:30.952Z</EndTime>
    </LogRequest>
</InstationToCamera>
```

3.4 Configuration request

3.4.1 The following is an example message outlining a request by the Instation for a camera to upload its current Configuration:

```
<?xml version="1.0" encoding="UTF-8" standalone="yes"?>
<InstationToCamera xmlns="http://utmc.uk.com/anpr/schema_1-2" SchemaVersion="1.2">
    <ConfigRequest/>
</InstationToCamera>
```

3.4.2 The <ConfigRequest> is an empty element identical to the same child element of the <CameraToInstation> element. (see 2.8).

3.4.3 The <ConfigRequest> is issued by a particular host, and the camera will return only the Configuration relating only to that host.

3.5 Image request

3.5.1 The Instation may request (retrospectively) images related to plate reads which have been stored in a camera. It may also request ad-hoc context images which are not connected with plate reads. There are four different classes of request, depending on the criteria which the Instation wishes to use to identify the required images:

- TimeRangeImageRequest: request images from a specific time period
- PriorVRNImageRequest: request a specific quantity of the most recent images
- InstanceSetImageRequest: request the images for a specific list of plate reads
- ContextImageRequest: request immediate images from one or more camera sensors

3.5.2 Only one of these ImageRequest classes should be used per <InstationToCamera> response, otherwise the instation will not know to which request the images sent by the camera relate.

3.5.3 The following is an example outlining a request from an Instation to a camera requesting the provision of images from a specific time period:

```
<?xml version="1.0" encoding="UTF-8" standalone="yes"?>
<InstationToCamera xmlns="http://utmc.uk.com/anpr/schema_1-2" SchemaVersion="1.2">
    <TimeRangeImageRequest>
        <StartTime>2008-11-14T10:50:30.952Z</StartTime>
        <EndTime>2008-11-14T10:50:30.952Z</EndTime>
        <ImageTypeArray>
            <ImageType>platePatch</ImageType>
            <ImageType>overviewImage</ImageType>
        </ImageTypeArray>
    </TimeRangeImageRequest>
</InstationToCamera>
```

3.5.4 The following is an example outlining a request from an Instation to a camera requesting a specific quantity of recent images ending at a particular InstanceID:

```
<?xml version="1.0" encoding="UTF-8" standalone="yes"?>
<InstationToCamera xmlns="http://utmc.uk.com/anpr/schema_1-2" SchemaVersion="1.2">
    <PriorVRNImageRequest>
        <NoOfPriorVRNs>10</NoOfPriorVRNs>
        <EndInstanceID>123456</EndInstanceID>
        <ImageTypeArray>
            <ImageType>platePatch</ImageType>
            <ImageType>overviewImage</ImageType>
        </ImageTypeArray>
    </PriorVRNImageRequest>
</InstationToCamera>
```

3.5.5 The following is an example outlining a request from an Instation to a camera requesting the provision of images for a specific set of plate reads:

```
<?xml version="1.0" encoding="UTF-8" standalone="yes"?>
<InstationToCamera xmlns="http://utmc.uk.com/anpr/schema_1-2" SchemaVersion="1.2">
    <InstanceSetImageRequest>
        <InstanceIDArray>
            <InstanceID>123456</InstanceID>
            <InstanceID>123454</InstanceID>
            <InstanceID>123452</InstanceID>
        </InstanceIDArray>
        <ImageTypeArray>
            <ImageType>platePatch</ImageType>
            <ImageType>overviewImage</ImageType>
        </ImageTypeArray>
    </InstanceSetImageRequest>
</InstationToCamera>
```

3.5.6 The following is an example outlining a request from an Instation to a camera requesting immediate context images:

```
<?xml version="1.0" encoding="UTF-8" standalone="yes"?>
<InstationToCamera xmlns="http://utmc.uk.com/anpr/schema_1-2" SchemaVersion="1.2">
    <ContextImageRequest>
        <ImageTypeArray>
            <ImageType>contextImage</ImageType>
            <ImageType>contextOverviewImage</ImageType>
        </ImageTypeArray>
    </ContextImageRequest>
</InstationToCamera>
```

3.5.7 These elements are described in more detail in Appendix 6.

3.6 Acknowledgement

3.6.1 The following is an example message outlining an acknowledgement, which comprises an <InstationToCamera> element that is empty:

```
<?xml version="1.0" encoding="UTF-8" standalone="yes"?>
<InstationToCamera xmlns="http://utmc.uk.com/anpr/schema_1-2" SchemaVersion="1.2">
</InstationToCamera>
```

3.6.2 Where the Instation receives a <CameraToInstation> message and does not require any further information from the camera, the <InstationToCamera> response will be an empty element which provides the camera with an acknowledgment that its transmission has been received.

4 Tag Hashing algorithm

4.1 About the algorithm

4.1.1 Journey time systems based on ALPR require cameras to recognise a plate at two or more locations and to return the recognised plate details to the instation. Although the full plate registration number can be returned to the instation for character by character matching, this may be undesirable in some circumstances. Additionally, to maintain driver and vehicle anonymity, it may be desirable to encrypt or otherwise change the plate string such that the actual registration number cannot be recovered.

4.1.2 ALPR systems are never 100% accurate. Read errors do occur. It is desirable to minimise the effect on the system of these read errors. For example the character D may be read correctly at one location and then the same character may be read as an O at a subsequent location.

4.1.3 The hashing algorithm firstly reduces the possible effect of plate read errors by replacing any characters likely to be confused with one another by a single character. So for example any occurence of O, D, 0 or Q in a plate is replaced with the character O. The following table lists all such substitutions:

ALPR reads character	Reported as
O D 0 Q	O
I 1	I
S 5	S
V Y	V
3 8 B	3
2 Z	2
E F	E
G C	G
H M N W	H

4.1.4 The resultant plate string is then hashed down to a binary number of 24 bits. The hash algorithm chosen is "one_at_a_time_hash". This algorithm has been chosen after reviewing the performance of a large number of algorithms over a database of about 100,000 UK plates and selecting the algorithm which provided the best distribution of hash values.

4.1.5 The "one_at_a_time_hash" hash algorithm was developed by Bob Jenkins. The original reference for the algorithm is: http://www.burtleburtle.net/bob/hash/doobs.html

4.2 Example

4.2.1 Example code (C language) for character substitution and the hash process is shown below.

```
static const char *mixups[] =
{
    "OD0Q", "I1", "S5", "VY", "38B", "2Z", "EF", "GC", "HMNW",
};
#define    NMIXUPS    9

void merge_ambiguous_characters(char *plate)
{
short  i;
char   *cp;

    while(*plate)
    {
        for(i=0; i<NMIXUPS; ++i)
        {
            cp = mixups[i];
            if(ismember(*plate, cp))
            {
                *plate = *cp;
            }
        }
        ++plate;
    }
}

// this function returns the 24 bit hash value directly

unsigned long hash(const char *plate)
{
unsigned   len;
unsigned   hash, i;
const int  hashbits = 24;
char       merge_plate[12];
#define    hashsize(n) ((unsigned)1<<(n))
#define    hashmask(n) (hashsize(n)-1)

    strcpy(merge_plate,plate);
        merge_ambiguous_characters(merge_plate);
    len = strlen(merge_plate);
    for (hash=0, i=0; i<len; ++i)
    {
        hash += merge_plate[i];
        hash += (hash << 10);
        hash ^= (hash >> 6);
    }
    hash += (hash << 3);
    hash ^= (hash >> 11);
    hash += (hash << 15);
    return (hash & hashmask(hashbits));
}
```

Appendix 1 PlateRead Element

Attribute Name	Attribute Type	Description	Data Type	Man	Comments
InstanceID	DYNAMIC	A unique plate reference number for this camera. InstanceID should be incremented for each plate read until the holding variable (typically INT32) wraps, i.e. it is not just unique for a particular timestamp.	uInteger	Y	Combined with CameraID and TimeStamp at Instation to form a unique EventID
TimeStamp	DYNAMIC	ISO 8601 UTC date/timestamp for time of sighting	DateTime	Y	1ms resolution For dateTime format, see section 3.2.7 (dateTime) of W3C document “XML Schema Part 2 - Datatypes Second Edition“
TimeStampError	DYNAMIC	Estimated worst case timestamp error in ms	Integer		
LaneID	DYNAMIC	Camera Lane to which configuration item(s) relate	uInteger	Y	0 is the leftmost lane in the camera field of view. This ID is relative to the camera, not the actual lanes of the carriageway
VehicleDirection	DYNAMIC	Whether vehicle travelling toward or away from camera	Enumerated	Y	e.g. towards, away, unknown. i.e. towards = front plate, away = rear plate
XYType	STATIC	Reference co-ordinate system for XY location	Enumerated		e.g. OSGB or WGS84 (NB OSGB refers to OSGB36 datum)
XCoord	STATIC	X co-ordinate of camera location	Float		e.g. Longitude or Easting (Degrees + decimal degrees for longitude)
YCoord	STATIC	X co-ordinate of camera location	Float		e.g. Latitude or Northing (Degrees + decimal degrees for latitude)
PlateNotRead	DYNAMIC	A vehicle has been detected, but a plate cannot be found or, if found, cannot be recognised	Boolean	Y	Allows an InstanceID to be generated and a PlateRead record to be sent where no plate has been read.
VRN	DYNAMIC	Recognised licence number	Character		No whitespace characters
VRNConfidence	DYNAMIC	Probability that licence number is correct	Percent		0 to 100%
Tag	DYNAMIC	Hashed value formed from VRN	uInteger		In the range 0 to 2^{24} - 1

Attribute Name	Attribute Type	Description	Data Type	Man	Comments
TagConfidence	DYNAMIC	Probability that tag value is correct	Percent		0 to 100%
Classification	DYNAMIC	Class of the recognised vehicle e.g. car, van lorry	uInteger		Numeric values only representing a classification scheme determined by the user.
Country	DYNAMIC	ISO 3166-1 three character country code	Character		e.g. GBR, FRA, DEU
Make	DYNAMIC	Make of Vehicle (Manufacturer)	Character		
Model	DYNAMIC	Model of Vehicle	Character		May be text (e.g. Mondeo) or number (e.g. 520)
Colour	DYNAMIC	Colour of vehicle	Enumerated		See list of standard colours (table below)*
Velocity	DYNAMIC	Estimated vehicle speed in kph	uInteger		
VelocityError	DYNAMIC	Estimated velocity error (magnitude) in kph	uInteger		Mean of the magnitudes of the +ve and -ve error estimates at 95% confidence interval

* A standard set of colours is used as follows:

Red		Green		Dark Purple		Light Brown
Light Red		Light Green		Grey		Dark Brown
Dark Red		Dark Green		Light Grey		Magenta
Orange		Blue		Dark Grey		Turquoise
Light Orange		Light Blue		Gold		
Dark Orange		Dark Blue		Silver		
Yellow		Violet		White		
Light Yellow		Purple		Black		
Dark Yellow		Light Purple		Brown		

Appendix 2 ALPRDiagnostic Element

Attribute Name	Attribute Type	Description	Data Type	Man	Comments
TimeStamp	DYNAMIC	ISO 8601 UTC date/timestamp for end of diagnostic period	DateTime	Y	1ms resolution
DiagnosticType	DYNAMIC	Whether a routine diagnostic or an alarm (warning or fault)	Enumerated	Y	Enumerated type having values "routineDiagnostic", "alarmWarningSet", "alarmWarningClear", "alarmFaultSet","alarmFaultClear"
LaneID	DYNAMIC	Camera Lane to which the Diagnostics relate	uInteger		0 is the leftmost lane in the camera field of view. This ID is relative to the camera, not the actual lanes of the carriageway
MeanVRNConfidence	DYNAMIC	Average Probability that licence number is correct	Percent		0 to 100%
MeanTagConfidence	DYNAMIC	Average Probability that tag value is correct	Percent		0 to 100%
MeanPlateContrast	DYNAMIC	Average plate patch contrast	Percent		0 = all black, 100 = all white
MeanCharacterHeight	DYNAMIC	Average VRN character height in pixels	uInteger		
MeanHorizontalAngle	DYNAMIC	Average character angle to horizontal in degrees	Integer		±90 degrees
MeanVerticalAngle	DYNAMIC	Average character angle to vertical in degrees	Integer		±90 degrees
MeanTrajectoryOffset	DYNAMIC	Average trajectory distance from image centre	Integer		As a percentage of the horizontal image size. -ve for left of centre, +ve for right of centre
MeanTrajectoryAngle	DYNAMIC	Average angle of trajectory to horizontal in degrees	WholeDegrees		Horizontal right to left is zero, increasing anti-clockwise to 360. Values between 180 and 360 for vehicles travelling away from camera.
MeanVelocity	DYNAMIC	Average estimated vehicle speed in kph	uInteger		
MeanVelocityError	DYNAMIC	Average velocity error at 95% confidence interval	uInteger		Value in kph (mean of velocity error magnitude estimates)
PlateToTriggerRatio	DYNAMIC	Ratio of plates recognised to objects detected	Percent		0 to 100%

Attribute Name	Attribute Type	Description	Data Type	Man	Comments
PlatesNoCountryRatio	DYNAMIC	Ratio of plates with unidentified country to all plates	Percent		0 to 100%
PlatesTowardsRatio	DYNAMIC	Ratio of plates towards camera to total plates	Percent		0 to 100%
PlatesAwayRatio	DYNAMIC	Ratio of plates away from camera to total plates	Percent		0 to 100%
MeanIRLevel	DYNAMIC	Average illuminator output level (percentage of max)	Percent		For frames selected for plate recognition
MeanExposure	DYNAMIC	Average exposure time in microseconds	uInteger		For frames selected for plate recognition
MeanGain	DYNAMIC	Average camera gain in dB where max gain is 0dB	Integer		For frames selected for plate recognition

Appendix 3 MachineDiagnostic Element

Attribute Name	Attribute Type	Description	Data Type	Man	Comments
TimeStamp	DYNAMIC	ISO 8601 UTC date/timestamp for end of diagnostic period	DateTime	Y	1ms resolution
DiagnosticType	DYNAMIC	Whether a routine diagnostic or an alarm (warning or fault)	Enumerated	Y	Enumerated type having values "routineDiagnostic", "alarmWarningSet", "alarmWarningClear", "alarmFaultSet","alarmFaultClear"
MeanCPUTemp	DYNAMIC	Average processor board temperature in degrees	Integer		Can be +ve or -ve
MeanTotalCurrent	DYNAMIC	Average current drawn by camera including illuminator in mA	uInteger		Purpose: to identify reduction in illuminator current. Max value is 99,999mA
MeanIlluminatorTemp	DYNAMIC	Average illuminator temperature in degrees	Integer		Can be +ve or -ve
MeanIlluminatorCurrent	DYNAMIC	Average illuminator current in mA (during on-time)	uInteger		Max value is 99,999mA
IlluminatorUsage	DYNAMIC	Total illuminator usage (amps x hours) - cumulative	uInteger		As an indication of illuminator lifetime used
MeanIlluminatorOutput	DYNAMIC	Average illuminator light output as percentage of max when new	Integer		May be > 100%
LastResetTime	DYNAMIC	Date & Time of last CPU reset	DateTime		May be outside this diagnostic interval
NoOfHardwareErrors	DYNAMIC	Number of hardware errors detected	uInteger		
MeanSignalStrength	DYNAMIC	Average signal strength (wireless comms) in dB	Integer		Range is -999dB to 0dB
HostName	DYNAMIC	Name of host to which diagnostics relate	Character	Y	IP address or DNS name
MeanCommsLag	DYNAMIC	Average "round trip" communications delay in ms	uInteger		
WorstCommsLag	DYNAMIC	Worst case "round trip" communications delay in ms	uInteger		
NoOfCommsResends	DYNAMIC	Number of messages re-sent	uInteger		e.g. After failure to open host port
NoOfCommsFailures	DYNAMIC	Number of messages deleted from send buffer after repeated re-send failures	uInteger		
NoOfCommsReconnects	DYNAMIC	Number of reconnections to wireless network	uInteger		

Attribute Name	Attribute Type	Description	Data Type	Man	Comments
MeanSyncDifference	DYNAMIC	Average time correction upon re-synchronisation in ms	Integer		This is a signed value, where a negative difference means the camera clock was fast, and a positive difference means it was slow.
WorstSyncDifference	DYNAMIC	Worst case time correction upon re-synchronisation in ms	Integer		This is a signed value, where a negative difference means the camera clock was fast, and a positive difference means it was slow.
LastSyncTime	DYNAMIC	Date & Time of last successful re-synchronisation	DateTime		May be outside this diagnostic interval
SupplyVoltage	DYNAMIC	Percentage of nominal system SELV supply voltage	Integer		May be >100%
TamperAlarm	DYNAMIC	Indication of unauthorised access to the equipment	Enumerated		Has 3 enumerated values: "normal", "enclosureBreachAlarm", "unauthorisedCommunicationAlarm"

Appendix 4 Image Element

Attribute Name	Attribute Type	Description	Data Type	Man	Comments
InstanceID	DYNAMIC	Unique reference number for this camera to VRN record for a plate in the image	uInteger		
TimeStamp	DYNAMIC	ISO 8601 UTC date/timestamp	DateTime	Y	1ms resolution
VRN	DYNAMIC	Recognised licence plate number	Character		No whitespace characters. Allows images to be transmitted belatedly without the Host needing to refer to a database table referenced by InstanceID in order to associate VRN with images.
LaneID	DYNAMIC	Camera Lane to which image relates	uInteger		0 is the leftmost lane in the camera field of view. This ID is relative to the camera, not the actual lanes of the carriageway
ImageType	DYNAMIC	Whether the image is: a Plate patch (a close-cropped image of the plate as used for recognition) an ALPR image (the full image from which the plate patch has been taken) an Overview image (a visible image of the vehicle to which the plate read relates) a Context image (an uncropped image not related to a plate read) For cameras having separate ALPR and Overview sensors, context images by default relate to the ALPR sensor, but context images from the Overview sensor are also handled.	Enumerated	Y	Format: either "platePatch", "ALPRImage", "overviewImage", “contextImage” (from ALPR sensor) or “contextOverviewImage” (from Overview sensor).
ImageFormat	DYNAMIC	Encoding format of the image e.g. jpeg, tiff	Enumerated		Enumerated type having values "fits", "g3fax", "gif", "ief", "jp2", "jpeg", "jpm", "jpx", "t38", "tiff", "tiff-fx". (These formats are recognised MIME media types maintained in the IANA protocol registry: www.iana.org/assignments/media-types/image/).
BinaryImage	DYNAMIC	Jpeg image base-64 encoded	Binary		

Appendix 5 Camera Configuration Elements

A5.1 Camera Element

Attribute Name	Attribute Type	Description	Data Type	Man	Comments
CameraID	STATIC	Unique identifier for the camera within a system	Character	Y	Local to Instation/Database Cross-reference to definition unique within a system can be compared in use to a "local IP Address"
HardwareUniqueID	STATIC	Globally unique identifier for the camera	Character	Y	Variable length up to 256 characters. Comprises three colon-separated fields i.e. "ManufacturerName:Model:FreeText". Each field any length with no whitespace allowed. ManufacturerName is mandatory, Model is optional - if null is signified by consecutive colons "ManufacturerName::FreeText". Strings must be alphanumeric and may include punctuation marks except colon.
ShortDescription	STATIC	Brief description of camera location	Character		
LongDescription	STATIC	Detailed description of camera location	Character		
XYType	STATIC	Reference co-ordinate system for XY location	Enumerated		e.g. OSGB or WGS84 (NB OSGB refers to OSGB36 datum)
XCoord	STATIC	X co-ordinate of camera location	Float		e.g. Longitude or Easting Degrees + decimal degrees for longitude
YCoord	STATIC	Y co-ordinate of camera location	Float		e.g. Latitude or Northing Degrees + decimal degrees for latitude
Height	STATIC	Height of camera above local ground level	Float		Measured in metres e.g. Height above Lowest road surface in multi-level junction

Attribute Name	Attribute Type	Description	Data Type	Man	Comments
TypeID	STATIC	Type of equipment from generic list	uInteger		Generic ALPR = 5, IR = 6, IR+colour = 7, colour = 8
MobileCamera	STATIC	Whether the camera is mobile or fixed	Boolean		Assume fixed if attribute is absent
SoftwareVersion	STATIC	Software version number of the application generating the machine diagnostics (manufacturer specific)	Character		e.g. 3.5.15.72

A5.2 Lane Element

Attribute Name	Attribute Type	Description	Data Type	Man	Comments
LaneID	STATIC	Camera Lane to which configuration item(s) relate	uInteger	Y	0 is the leftmost lane in the camera field of view This ID is relative to the camera, not the actual lanes of the carriageway
LaneNumber	STATIC	Position of the Lane in relation to the total number of lanes in the carriageway	uInteger	Y	In the range 0 to 99 Lane 0 is the first lane on the left in the direction of travel
LaneDirectionTypeID	STATIC	Direction of the carriageway lane in which vehicles normally travel (Note that this attribute relates to the direction taken by vehicles, not the direction in which the camera is pointing.)	uInteger	Y	e.g. 3 = clockwise, 4 = anticlockwise, 5 = northbound etc Format: see Direction_TypeID in CCTV ALPR Extensions Global Support Object
NormalVehicleDirection	STATIC	Direction relative to the camera in which vehicles normally travel	Enumerated	Y	e.g. towards, away, both "Both" applies for a single track road or tidal lane in a multi-lane road

A5.3 Configuration Element

Attribute Name	Attribute Type	Description	Data Type	Man	Comments
HostName	CONFIG	Name of host to which configuration item(s) relate	Character		The fully qualified host URL or endpoint is set at time of commissioning.
SendVRNs	CONFIG	Whether to send VRN data (true/false)	Boolean		Following config items per host
SendTags	CONFIG	Whether to send Tag data (true/false)	Boolean		
SendPlatePatches	CONFIG	Whether to send plate patch images (true/false)	Boolean		
SendANPRImages	CONFIG	Whether to send full frame ALPR images (true/false)	Boolean		
SendOverviewImages	CONFIG	Whether to send full frame Overview images (true/false)	Boolean		
SendPlatesNotRead	CONFIG	Whether to send PlateRead records where PlateNotRead attribute is true	Boolean		See PlateRead attribute “PlateNotRead”
SendANPRDiagnostics	CONFIG	Whether to send ALPR diagnostics (true/false)	Boolean		
SendMachineDiagnostics	CONFIG	Whether to send machine diagnostics (true/false)	Boolean		
SendIncrementalLog	CONFIG	Whether to send an incremental log file (additions since last send)	Boolean		
SendPeriodicContextImage	CONFIG	Whether to send periodic context images (true/false)	Boolean		Note that in multiple sensor cameras, the sensor from which the context image is to be taken is determined by manufacturer-specific means. For example an image from the overview sensor may be returned during the day and an image from the ALPR sensor at night.

Attribute Name	Attribute Type	Description	Data Type	Man	Comments
UseReportingOffset	CONFIG	Whether the camera should utilise the ReportingOffset (true/false)	Boolean		If false, permits the randomisation of reporting times by another method (for example by starting reporting intervals relative to the last camera power-on or reset) without the need to configure each camera with an individual ReportingOffset. Avoids cameras all reporting at the same time if no ReportingOffset is configured or a default value is assumed.
SendHeartbeat	CONFIG	Whether a generic wrapper should be sent periodically irrespective of whether there is data to send (true/false)	Boolean		Allows the sending of heartbeats to be turned on and off explicitly, rather than relying on whether a HeartbeatInterval has been configured.
StreamPlates	CONFIG	Whether to send a PlateRead record as soon as a plate is recognised (true/false)	Boolean		
HeartbeatInterval	CONFIG	Send at least one generic wrapper during this interval in seconds	uInteger		Maximum value 86400 seconds (=1 day)
PlateSendInterval	CONFIG	Reporting interval for sending VRN and/or tag data in seconds	uInteger		The end of the PlateSendInterval should be aligned with the time of transmission determined by the ReportingOffset, to ensure that the latest plate data is always reported as soon as possible.
ReportingOffset	CONFIG	Reporting time offset as percentage of appropriate send interval	Percent		Relative to a reporting interval commencing at midnight
ANPRDiagsSendInterval	CONFIG	Reporting interval for sending ALPR diagnostics in seconds	uInteger		
MachineDiagsSendInterval	CONFIG	Reporting interval for sending machine diagnostics in seconds	uInteger		
IncrementalLogInterval	CONFIG	Reporting interval for sending incremental log in seconds	uInteger		
ContextImagePeriod	CONFIG	Time interval at which a single context image is returned in seconds	uInteger		Single image only - not a batch

Attribute Name	Attribute Type	Description	Data Type	Man	Comments
MaxPlatesToSend	CONFIG	Maximum number of VRNs/Tags to send per reporting interval	uInteger		Applies when StreamPlates is false - send up to this number of captured plates during a plate reporting interval.
MinANPRDiagnosticSamples	CONFIG	Minimum vehicles to be included in ALPR diagnostic averages	uInteger		Roll samples over from one interval to next
CurrentDateTime	CONFIG	DateTime value to set real time clock. The presence or absence of this attribute in the InstationToCamera response determines whether the Camera clock should be set or not.	DateTime		For dateTime format, see section 3.2.7 (dateTime) of W3C document “XML Schema Part 2 - Datatypes Second Edition“

Appendix 6 ImageRequest Elements

A6.1 TimeRangeImageRequest

Attribute Name	Attribute Type	Description	Data Type	Man	Comments
StartTime	DYNAMIC	ISO 8601 UTC date/timestamp	DateTime	Y	1ms resolution
EndTime	DYNAMIC	ISO 8601 UTC date/timestamp	DateTime	Y	1ms resolution
ImageTypeArray	DYNAMIC	Array element containing 0 to n ImageTypes (list of the types of images required)	Character		See ImageType attribute of Image element (contextImage and contextOverviewImage will be ignored)

A6.2 PriorVRNImageRequest

Attribute Name	Attribute Type	Description	Data Type	Man	Comments
NoOfPriorVRNs	DYNAMIC	Number of most recent VRN instances for which images are required	uInteger	Y	
EndInstanceID	DYNAMIC	The set of images to be sent should end with this InstanceID	uInteger		Used in conjunction with NoOfPriorVRNS to determine the latest InstanceID which should be sent in the set of images defined by these two attributes.
ImageTypeArray	DYNAMIC	Array element containing 0 to n ImageTypes (list of the types of images required)	Character		See ImageType attribute of Image element (contextImage and contextOverviewImage will be ignored)

A6.3 InstanceSetImageRequest

Attribute Name	Attribute Type	Description	Data Type	Man	Comments
InstanceIDArray	DYNAMIC	InstanceArray element containing 0 to n Instance IDs for this camera of VRN records of the plates for which images are required	uInteger	Y	
ImageTypeArray	DYNAMIC	Array element containing 0 to n ImageTypes (list of the types of images required)	Character		See ImageType attribute of Image element (contextImage and contextOverviewImage will be ignored)

A6.4 ContextImageRequest

Attribute Name	Attribute Type	Description	Data Type	Man	Comments
ImageTypeArray	DYNAMIC	Array element containing 0 to n ImageTypes (list of the types of images required)	Character		See ImageType attribute of Image element (anything other than contextImage or contextOverviewImage will be ignored)

EXECUTIVE OFFICE OF PUBLIC SAFETY AND SECURITY DEPARTMENT OF CRIMINAL JUSTICE INFORMATION SERVICES AUTOMATIC LICENSE PLATE RECOGNITION SYSTEMS CENTRAL REPOSITORY COMPANION POLICY

PURPOSE

To establish guidelines and best practices for data use, maintenance, training, and data storage associated with the usage of the Commonwealth Criminal Justice Information Automatic License Plate Recognition Systems Central Repository (Central Repository) by Massachusetts law enforcement agencies.

OVERVIEW

An Automatic License Plate Recognition (ALPR) system is a computerized system that uses high-speed digital cameras combined with sophisticated computer algorithms capable of converting the images of license plates to electronically readable data. The ALPR system captures an infrared image of a license plate and converts it to a text file using Optical Character Recognition (OCR) technology. The technology also compares the digital images of license plates to lists of known plates of interest. Currently, the ALPR is being utilized by many law enforcement and criminal justice agencies in the Commonwealth, which maintain the captured information in a database.

The Central Repository is a centralized data warehouse that stores ALPR information contributed by law enforcement and public safety agencies from the agency's database. By allowing the agencies to share and access the stored information, local, state and federal law enforcement agencies are provided accurate information to be used for official and legitimate law enforcement operations and public safety purposes. Guidelines for submission and retrieval of license plate data for all participating departments are included in the Commonwealth of Massachusetts Global Justice and Public Safety Information Sharing Policy of the Massachusetts Department of Criminal Justice Information Services (DCJIS), which is incorporated by reference, and this ALPR Central Repository Companion Policy. ALPR systems are dependent upon the networking system of Commonwealth's Criminal Justice Information System (CJIS) and all participating agencies and users agree to the terms of these policies.

DCJIS Enhancing Public Safety Through Information Exchange

POLICY

It is the policy of the DCJIS to utilize the technology only in furtherance of official and legitimate law enforcement operations and public safety. Recognizing privacy implications, it is further the policy of DCJIS to ensure the protection of data. Thus, all users of the Central Repository are expected to abide by the guidelines set forth herein when using the Central Repository.

ACRONYMS AND DEFINITIONS

Agency ALPR Administrator: An employee of a Participating Agency designated by that agency to be responsible for the management of its authorized users and the user accounts at the Participating Agency.

Authorized User: An individual designated by a law enforcement agency and properly trained in the use and operational protocols of the ALPR. Only authorized employees who have an approved login and password will be allowed to access or use information in the Central Repository.

Contributing Agency: An agency that contributes ALPR data to the Central Repository.

Non-Contributing Agency: An agency that may access, but does not contribute data to, a data application or system maintained or operated within the DCJIS network or system.

Participating Agency: Either a contributing or non-contributing party that utilizes the Central Repository.

Source Agency: The agency that originally recorded and contributed data to a data application or system maintained or operated within the DCJIS network or system.

PROCEDURES

1. Standard of Use

Central Repository ALPR data shall be accessed and used only for official and legitimate law enforcement operations and public safety and may only be used based on specific and articulable facts of a concern for safety, wrongdoing, criminal investigations, Department-related civil investigations, or pursuant to a court order.

Searches of historical Central Repository ALPR data shall be done in accordance with this policy.

Only users who have been designated by their law enforcement department and properly trained in the use and operational protocols of the ALPR systems shall be permitted to use the Central Repository. DCJIS administrators shall ensure that any changes in hardware, software or law are communicated to all participants. Only authorized employees who have an approved login and password (Central Repository Authorized Users) will be allowed to access or use information in the Central Repository.

When a enforcement action, investigation, or prosecution results from the Repository ALPR data, the information contained in it will be preserved by the agency accessing the information.

Requests for searches of Central Repository ALPR data may be made by authorized members of the Contributing Party or Non-Contributing party subject to the provisions of this policy.

2. Login Application Process

a) Each Contributing and Non-contributing Party shall designate an Agency ALPR administrator to be responsible for management of user accounts at that agency. All authorized users shall be limited to current employees who are legally authorized to review criminal justice information for crime prevention and detection purposes. Each potential user shall submit a request for a login and password to the Agency ALPR Administrator. The Agency ALPR Administrator shall have discretion to deny or revoke individual access.

3. Login Assignment

a) Each Authorized User will be issued a user login and a default password by the Agency ALPR Administrator. Upon logging into the Repository for the first time, each Authorized User shall change the default password to another DCJIS-compliant password.

b) Each Agency ALPR Administrator is responsible for the timely removal of any login accounts as Authorized Users leave their agency.

c) An Authorized User shall not access the Central Repository by using a name and password that was assigned to another user. An Authorized User shall not give his or her password to another person, including another user, to access the system.

4. ALPR Central Repository Data Query Logs

a) An automated log will be maintained for each transaction, which will include the name of the individual accessing the data, along with the date and time of access.

b) Requests to review stored ALPR data and search results will be recorded and maintained in appropriate case files.

c) ALPR Data Query Logs shall be maintained and secured.

d) Audits of the ALPR systems and the central repository shall be conducted by the DCJIS.

5. ALPR Data Sharing and Dissemination

a) Each Contributing Agency authorizes the release of its information as outlined in this Policy to any other criminal justice agency that may participate in the Central Repository in the future.

b) A Contributing Party that does not want certain information from its ALPR system to be shared is responsible for filtering out such information before entering it into the Central Repository.

c) The information contributed to the Central Repository is limited to ALPR data.

d) Central Repository ALPR data can be accessed, retrieved, or shared for official and legitimate law enforcement operations or public safety purposes only.

6. Ownership of Data

a) Each Contributing Party will retain sole responsibility, ownership, management control, and disposition over the information it contributes or allows access to. All system entries will be identifiable to the Contributing Party, and the content of the contributed information remains the sole responsibility of the Contributing Party and is under that Contributing Party's management control.

b) It shall be the responsibility of the party requesting or using the data to confirm the accuracy of the information with the Source Agency before taking any enforcement-related action.

7. Retention of Data

a) Data from field ALPRs will be transferred/uploaded to the Department's server at a time to be determined by the Agency ALPR Administrator.

b) ALPR data shall be stored in the Central Repository for a period of one year except in the following circumstances:

i) Alert data associated with an enforcement action, investigation, or prosecution shall be maintained for one year or until a final disposition has been reached in the particular case, whichever is longer.

ii) Alert data associated with an arrest will be maintained in the criminal case file and retained for the maximum period of time associated with such record.

iii) Alert data associated with criminal investigations will be maintained in the criminal case file and retained for the maximum period associated with such record.

iv) If it is reasonable to believe and the ALPR data will become evidence in a criminal or civil action, the record will be maintained until it is no longer reasonable to believe it will become evidence in a criminal or civil action.

v) Whenever otherwise directed by the ALPR Administrator.

CONFIDENTIALITY OF INFORMATION

Information in the Central Repository is confidential and is not subject to public disclosure, except as required by law. Only Authorized Users are allowed to view and use the information, otherwise, the information shall be kept confidential.

ACKNOWLEDGEMENT OF TERMS AND CONDITIONS OF USE

The Agency ALPR Administrator shall provide a copy of the terms and conditions of the Massachusetts Public Safety Information Sharing Global Policy and this ALPR Central Repository Companion System Policy to all Authorized Users when they are issued a login ID for the system. Each Authorized User shall sign an acknowledgement stating, "I have received a copy of the terms and conditions of usage of the Central Repository. I agree to comply with the terms and conditions and I understand that any violation of the terms and conditions may lead to disciplinary action and/or criminal prosecution." The Agency ALPR Administrator shall maintain the signed acknowledgements at all times.

POLICY REVIEW

The Commissioner of the Department of Criminal Justice Information Services is responsible for the annual review of this policy.

1 INTRODUCTION

This document serves as a user's manual for the PIPS Back Office System Software (BOSS) version 3.5 or above and describes the various features and functionality of the application. BOSS is a management and administration tool for the PIPS Automatic License Plate Recognition (ALPR; also known as ANPR, or Automatic License Number Recognition) systems. The BOSS server application provides an interface for user maintenance, data queries, import and export of data, and dispatch functions. BOSS lets an Administrator specify the databases used by both mobile and fixed camera installations. BOSS retrieves these databases on a regular schedule; manages the users of the PIPS PAGIS systems and BOSS Smart Client workstations; provides a central repository for data collected by mobile PAGIS deployments and fixed camera installation; provides reporting and data management tools; provides hit detection and dispatch functions for fixed camera installations; and allows for data mining and data sharing with other agencies.

The following schematic shows how the BOSS server application works together with Smart Client workstations, various data sources, PAGIS, and the full line of ALPR cameras to create a comprehensive solution.

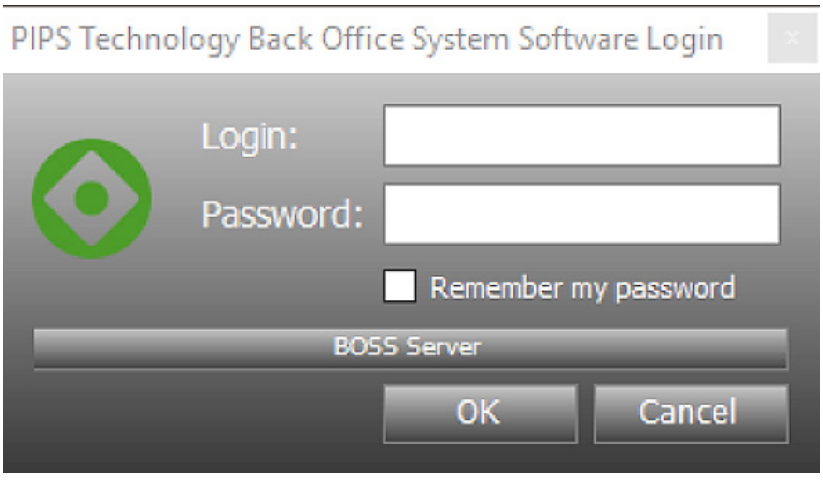
1.1 The Design of PIPS Back Office System Software Version 3.5 and Above

The design of BOSS version 3.5 or above offers ease of accessibility with a user-friendly look and feel. Large, easy-to-identify icons provide intuitive navigation, and the frequently used elements are readily available. The user interface (UI) is very recognizable and comfortable, particularly for users already familiar with Windows-based applications, including Microsoft® Office software, or the Mobile Pagis Software. In addition, users can enter a minimum amount of information to add a data object, with the ability to include more details if needed.

2 LOGGING IN

2.1. PIPS Back Office System Software Administrator Login

During each new installation of the PIPS Back Office System Software, a default user of “admin” is created, with the password of “admin1.” The installer or designated BOSS Administrator can log in with this account to create additional users and otherwise configure the system. It is important that the “admin” password be changed to protect the system’s security. Likewise, it is equally as important to keep this and all passwords confidential to protect the security of the BOSS system. Section 17, Installation and Configuration, offers more information on setting up users and passwords.



2.2 User Logins

The PIPS Back Office System Software will require a user to log in with a username and password only if there is no BOSS user matching the current Active Directory user login. In other words, if the username currently logged into Windows matches a username in the BOSS system, the user is automatically logged into the application when it is started, and no login screen will appear.

For example, if user “bsmith” is logged in using Windows Domain Authentication through Active Directory (“logged into Windows”), when the BOSS Smart Client is started, and a “bsmith” user exists within the BOSS system, no login screen will appear; the application will authenticate the user and load automatically. If a user logs onto Windows with a name that is not an exact match to a username in the BOSS system, or is not logged into the same Windows Domain, a login screen will appear. The user will then need to enter a correct BOSS user name and password in order to enter the application.

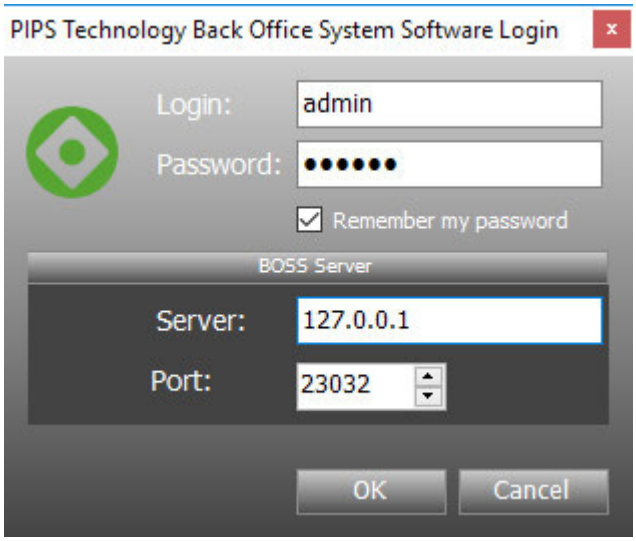
Note: In order for a user to be automatically logged into BOSS, the Active Directory user must be in the same Windows domain as the PIPS™ Back Office System Software server.

2.3 Login Dialog

1. Enter your username in the Login field.

2. Enter the correct password in the Password field.
Note: Passwords are case sensitive.

3. Click OK to complete the login process.

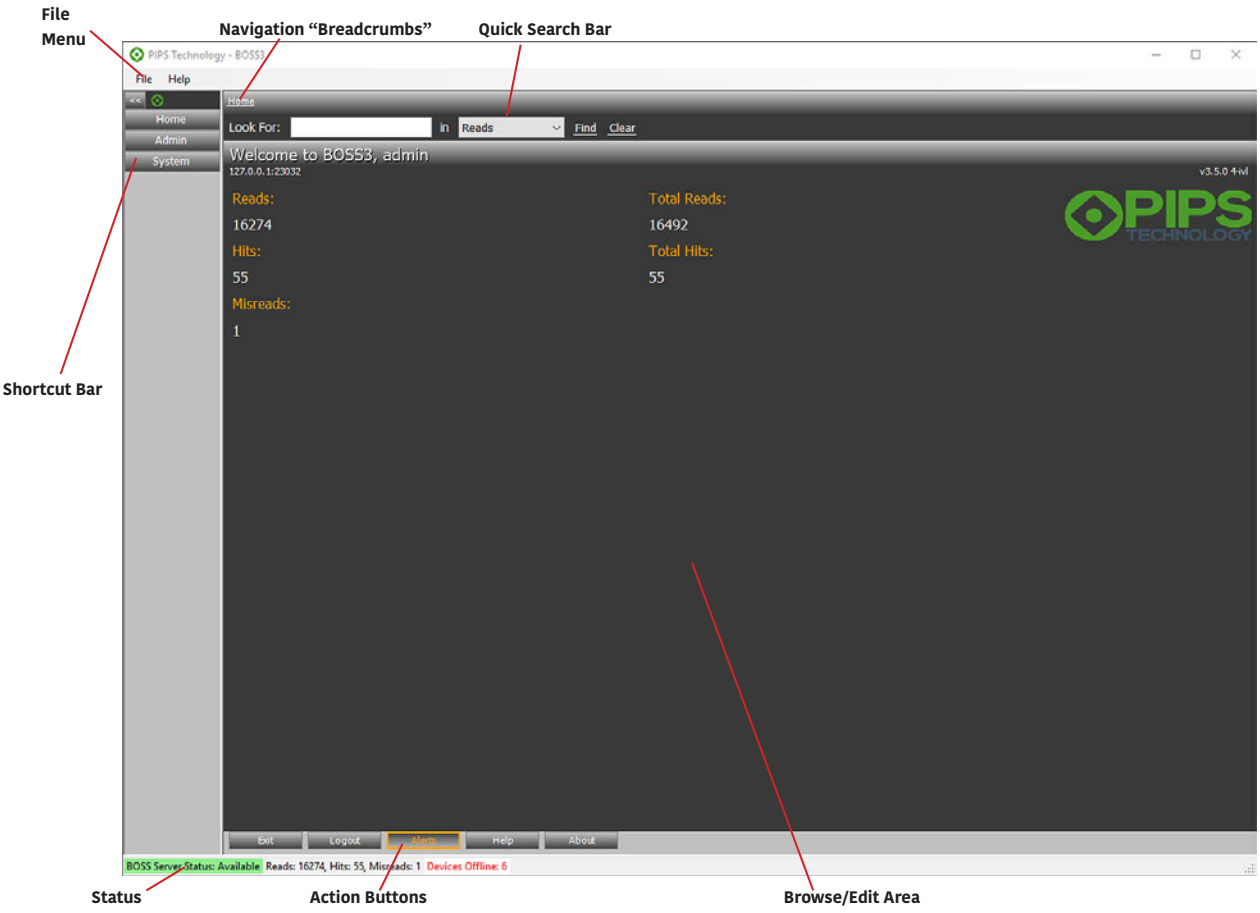


2.3.1 Storing Username and Password

Select the Remember my password option to save the password to the computer's local Windows registry and automatically fill in both Login and Password fields on subsequent logins.
Selecting this option only remembers the login information for the current Windows User on the local computer. It will not apply to a different Windows user logged in the same computer and will not apply to the same user logging in a different computer. This option need not be checked every time. Once checked, the option will stay that way until it is deselected during a login.

Note: The username and the password are stored in the Windows Registry. This can be a security risk. It is recommended that you not use the Remember my password option unless the Windows workstation can be secured against unauthorized access.

2.3.2 BOSS Client Connection Settings



Click the BOSS Server button on the Login screen to view or change the client connection settings.

Server – IP address, computer name, or DNS address can be used in the Server field as long as the client can reach the server using the value entered.
Port – The default port used for connecting to the BOSS server is 23032. This should only be changed here if the BOSS server has been configured to use a non-default port.

3 APPLICATION LAYOUT

3.1 Components of the BOSS Application Screen

File Menu – The File menu of the application resides in the very top left of the application window. The File menu is always visible and available regardless of the screen or shortcut selected. The Exit option is available through this menu.

Navigation – The navigation "breadcrumbs" appear at the top of the BOSS screen as different actions are selected. By clicking on the links it is possible to backtrack to a previous screen.

Shortcut Bar –The Shortcut bar (the panel on the left of the screen) contains icon buttons for the various operations available. The shortcut icons are divided into three categories: Home, Admin, and System. Each time the application is started, all of the categories are closed with no shortcuts displayed. Click on any of the three headings to access the shortcuts within that category. The actual categories and shortcuts that appear depend on the logged-in user's privileges.

The Shortcut bar can be collapsed entirely to provide a larger space for the Browse/Edit area by clicking the << button at the top left of the screen. To expand the Shortcut bar again, click the >> button.

Browse/Edit Area – The widest portion of the application window, the Browse/Edit area is where data is displayed for viewing or editing. The actual data displayed here depends upon the shortcut icon that is selected from the Shortcut bar.

Quick Search Bar – Directly above the Browse/Edit Area, the Quick Search bar allows for simple, immediate queries of BOSS data. Using the Quick Search bar simply involves typing the text to query in the Look For field and selecting the type of data (reads, hits, etc.) to search in the drop-down box.

Action Buttons – These are the buttons directly below the Browse/Edit area. These buttons will differ depending on the shortcut icon selected. The actual buttons that appear will also vary depending upon the user's privileges.

Status Bar – This is the area along the very bottom of the application window that displays the following system information:

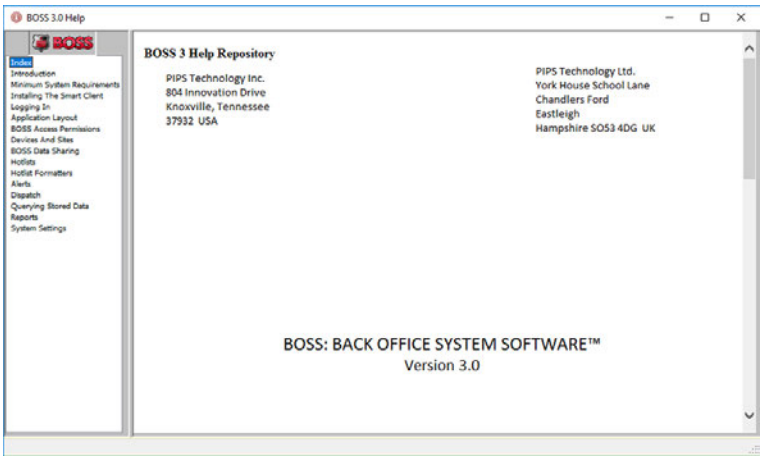
- **BOSS System State (Available or Offline):** "Available" status indicates that the client is currently communicating with the BOSS server application and the server is running. This status is highlighted with a green background. "Offline" status indicates that the client is currently not able to communicate with the BOSS server and is highlighted with a red background. In this event, the BOSS UI will continue to check for the BOSS server to become available again. After three attempts to reconnect, the user will be notified that the connection could not be re-established and will be provided further instructions on how to proceed.
- **Reads:** The total number of reads currently contained in the BOSS system.
- **Hits:** The total number of hits currently contained in the BOSS system.
- **Misreads:** The total number of misreads currently contained in the BOSS system.
- **Devices Offline:** The number of fixed camera devices that are currently identified as offline.

3.2 The BOSS Home Screen

The BOSS Home screen is displayed within the Browse/Edit area upon login. The top banner displays the username of the current BOSS user, the BOSS server address, and current system statistics. Statistics may take a few moments to update after login. The action buttons, described below, are displayed along the bottom of the screen. The actual buttons that display will vary depending upon the user's privileges.

Exit – Exit the BOSS application.

Logout – Log out from the current session to the Login screen.



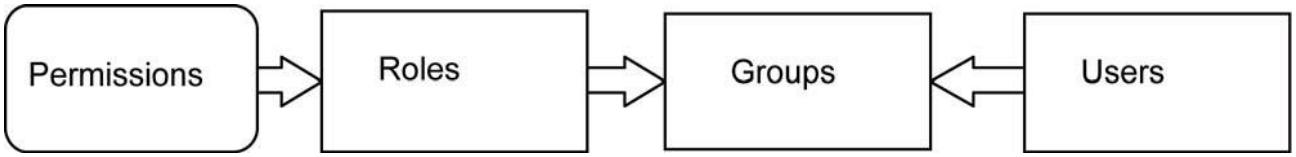
Alerts – Toggle dispatch alerts on (orange highlight) and off. This button will not be displayed if the user is not authorized to access the dispatch screen, or if the user has not chosen to receive dispatch alerts in Preferences (Section 5.3).

Help – Activate the help system.

About – Display application information.

3.3 Help Documentation

BOSS provides a help document accessible in the client application. To access help, select Help in the File menu area or press the F1 button. A help document will be displayed in a browser window and is indexed and searchable for ease of use.



3.4 Minimizing the BOSS Application

The BOSS application can be minimized to the Windows System Tray using the Windows minimize button on the right upper corner of the BOSS application window. To restore the BOSS application, click on the BOSS PIPS icon. When the application is minimized, real-time alerts will still be displayed.

4 BOSS ACCESS PERMISSIONS: USERS/GROUPS/ROLES

Access permissions to various functions (such as reports or dispatches) in BOSS are administered through users, groups, and roles. Each individual who will use the BOSS software must log in via a user account. Each user account is assigned to a group. Every group is assigned a role (such as Administrator or Dispatcher), which determines the set of functionality to which the group's members will have access:

The security parameters defined in a role apply to a user via the group to which the user belongs.

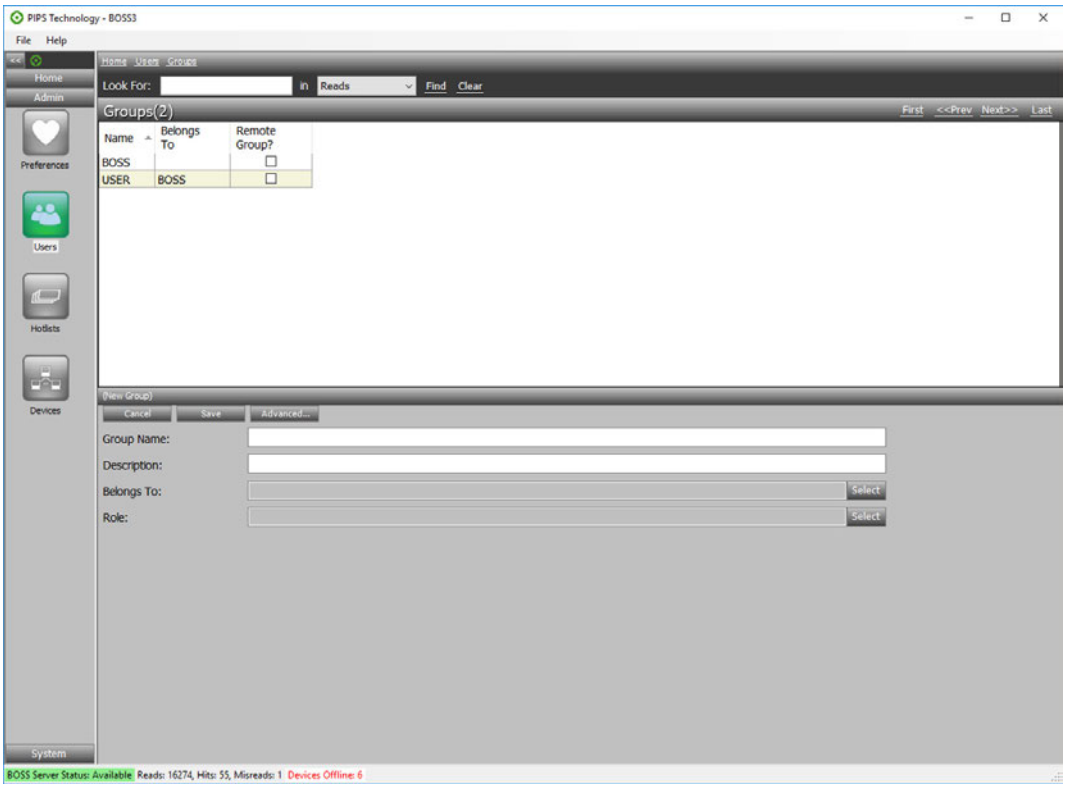
4.1 Permission Levels

The following table lists the levels that apply to permissions:

LEVEL	EXPLANATION
No Access*	No permissions to the function
Read Only	View-only permissions to the function. Add/Change/Delete are not permitted.
Full Access	Complete permissions to the function. View/Add/Change/Delete are permitted.

**When a user's effective permissions to a function are No Access, the function is not visible to the user. For example, if a user has No Access privileges to the System function, the System category is not displayed.*

4.2 Permissions



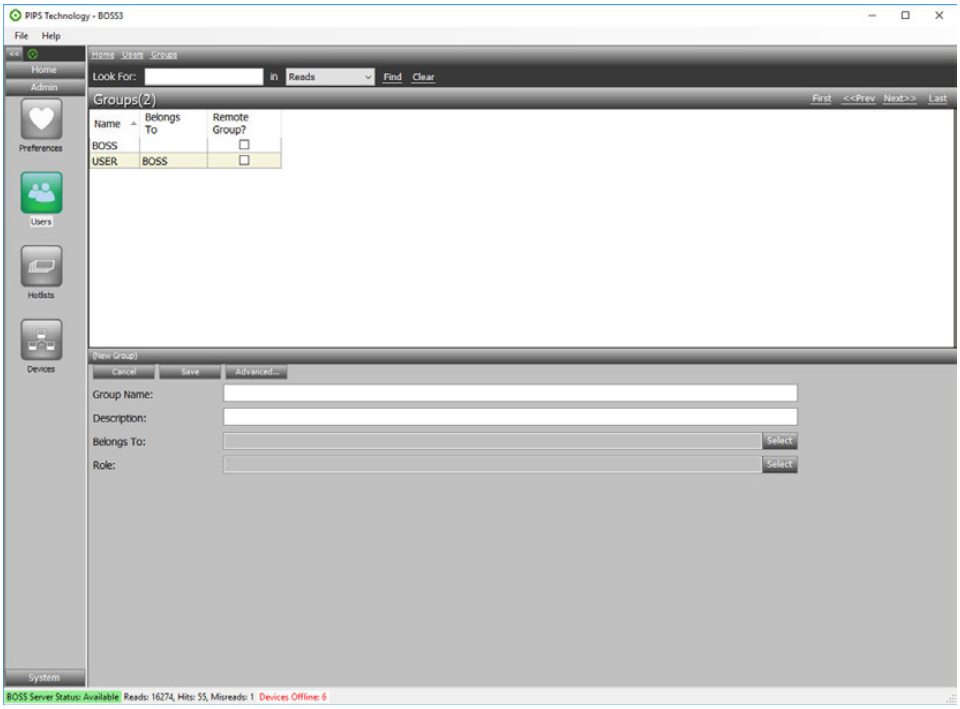
The following table lists the functions that are controlled by permissions levels:

PERMISSION	EXPLANATION
Reads	Plate read information
Dispatch	Real-time monitoring and hit alerts
Users	Groups and user accounts
Hotlists	Hotlists (plates of interest)
Devices	Sites and ALPR camera devices
System	System configuration options

See Section 15.4, Roles, for more information on setting permissions.

4.3 Roles

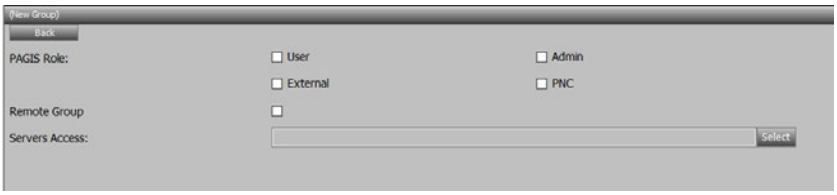
Roles are access permission profiles. BOSS comes with several predefined roles. A BOSS Administrator is able to add additional roles to the system. A BOSS Administrator is also able to alter and delete any roles. Roles define a permission level for different functions of the system. See Section 15.4, Roles, for additional information.



The following roles are installed by default in a BOSS system:

- System Administrators
- User
- Dispatcher
- Group Administrators
- Device Administrators
- Hotlist Administrators

See System Settings section for Role definitions and changes.



4.4 Groups

Groups are collections of users that have the same permissions. Groups provide an efficient way to organize users, for example by organizational units, and easily assign permissions to those users. Using groups is optional. A default group named “BOSS” automatically exists within a BOSS system, and user accounts will belong to the “BOSS” group by default. The BOSS group cannot be deleted.

4.4.1 Creating a New Group

1. Select the **Admin** category on the Shortcut bar.
2. Click the **Users** shortcut. A list of all current users will display in the Browse/Edit area.
3. Click the **Groups** button at the bottom of the Browse/Edit area. A list of all current groups will display in the Browse/Edit area.
4. Click the **New** button. The New Group Entry screen will display.
5. In the Group Name text box enter a name for the group. (**Note:** The group name must have a minimum of three characters.)
6. In the Group **Description** text box enter a description of the group (optional).
7. Each group, except for the default BOSS group, is required to have a parent group. In the Belongs To field, click the **Select** button to view a list of all existing groups. Click on the desired group and click the **Save** button to select. The name of the selected group will display in the Belongs To field as the parent group.
8. Assign a role to the group. In the Role field, click the **Select** button to select from the existing roles. Click the desired role from the list and click the **Save** button to make the selection. The name of the selected role will appear in the field.
9. Click the **Advanced**... button to access additional, optional settings for the new group.

4.4.1 Creating a New Group (continued)

PAGIS Role (User/Admin/External/PNC) – Check desired PAGIS roles to grant the new group for the associated permissions in Pagis. Please refer to the Pagis User's Manual for more information.

Remote Group – Select this option to designate the group as remote. When a BOSS Administrator wants to give access to another BOSS system for remote queries ("data sharing," see Section 6), a login must be created and assigned to a group that is flagged as a remote group. The remote BOSS Administrator will then create a remote site with credentials for that login.
Servers Access – This option allows for defining which, if any, sites will be accessible by this group. Click the Select button to access a list of sites.

Note: There are two sites defined by default: Manual Entries and Unassigned. If no additional sites have been defined, only the default values are available in this field. Click each desired site and click the **Save** button to complete the selection process. If one site is selected the name of that system will appear in the Server Access field. More than one site can be selected.

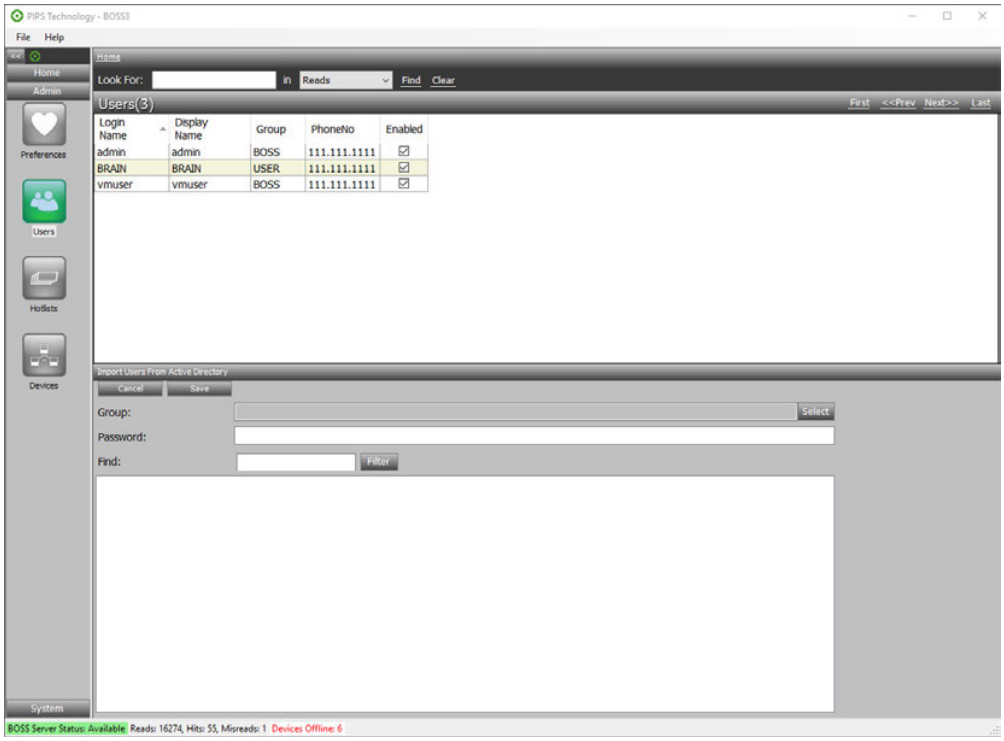
Log Queries – This option, when selected, will result in the logging of all queries made by all users of the group. This information is then available via the audits report. **WARNING:** *This can potentially be a very large amount of data. Select this option with care.*

a. Configure these Advanced User settings as desired.

b. Click the **Back** button to return to the main New Group Entry screen

10. Click **Save** to complete creating the new group, or click **Cancel** to clear the new group.

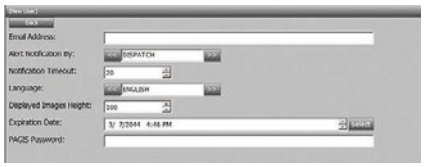
4.4.2 Parent Groups



When creating a new group, you must select a parent group (the Belongs To field). BOSS uses a parent-child group structure as an organizational mechanism. This allows the BOSS Administrator to arrange groups into collections based on location, job role, or any other applicable criteria. In BOSS, the parent group can be selected in order to easily reach the entire collection of groups under that parent. This can be especially helpful in large installations with a large number of groups.

4.4.3 Deleting a Group

1. Select the **Admin** category on the Shortcut bar.
2. Click the **Users** shortcut.
3. Click the **Groups** button at the bottom of the Browse/Edit area. A list of all existing groups will display in the Browse/Edit area.
4. Click to select the desired group from the list.
5. Click the **Delete** button.
6. Click **OK** in the confirmation dialog to complete the operation.



WARNING: Any users currently assigned to the deleted group will be assigned to the default "BOSS" group. You should empty the group by assigning all of its users to different groups prior to deleting it.

4.5 Users

4.5.1 Creating a New User

1. Select the **Admin** category on the Shortcut bar.
2. Click the **Users** shortcut. A list of all existing users will display in the Browse/Edit area.
3. Click the **New** button at the bottom of the Browse/Edit area. The New User Entry screen appears.
4. Enter a **Login Name** for the new user. This is the name the user will enter when logging into the BOSS application. (The login name must be at least three characters.)
5. Enter a **Display Name** for the new user (optional).
6. Enter a **Password** for the new user. (The password must be at least six characters with one Cap, one number and one special symbol.) The strong password requirement cannot be disabled.
7. Select a **Group** for the user. Click the **Select** button to access a list of all groups. Click on the desired group and click the **Save** button to complete the selection.
8. Enter a contact **Phone Number** for the user (optional). This field is for informational purposes only; in case the BOSS Administrator needs to contact the user.
9. Click the **Advanced**... button to access additional, optional settings for the new user. Configure these advanced user settings as desired.

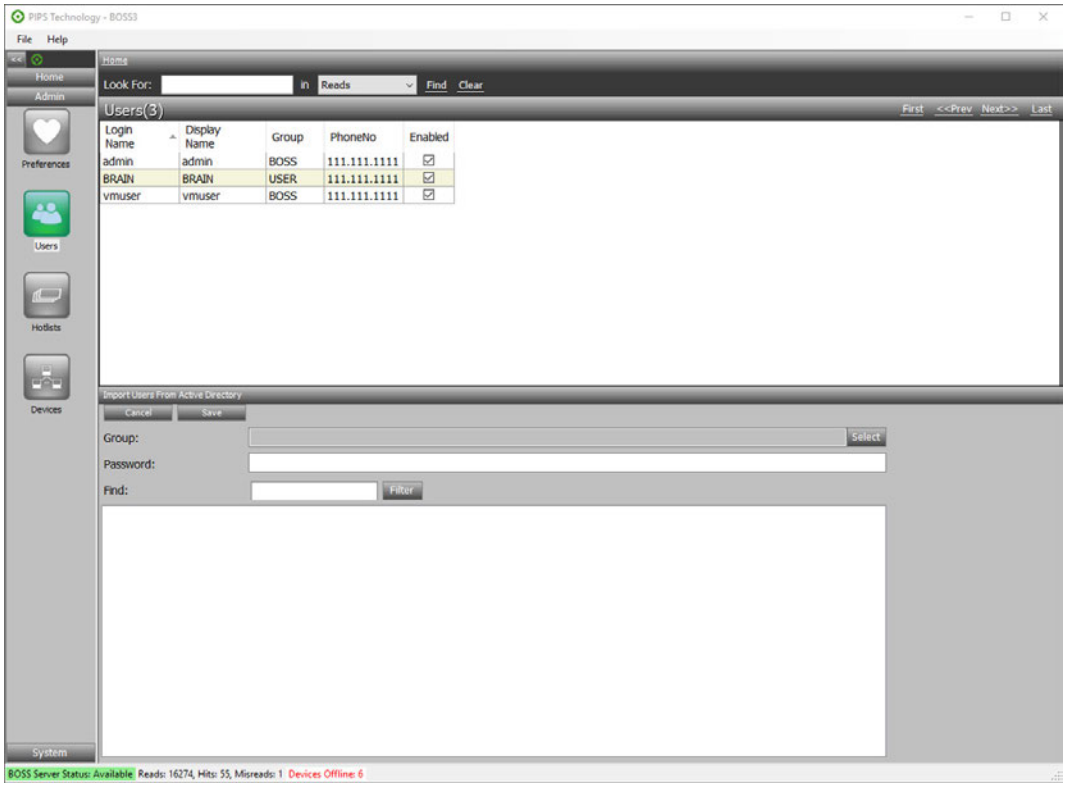
4.4.1 Creating a New Group (continued)

Email Address – Email address or addresses associated with the user. BOSS alerts for the user are sent to the email addresses specified here. Multiple addresses should be separated with a comma.
Alert Notification By – A user can be configured to receive BOSS alerts through the Dispatch application, email, or both. Click the <<
or >> buttons to cycle through the options, stopping at the desired selection.
Notification Timeout – The cutoff time from the time when a hit occurred after which an alert will no longer be sent to the user. For example, if the notification timeout is 20 minutes and a plate of interest is detected at 12:00 pm, notification is not sent to the user after 12:20 pm. This timeout prevents alerts being sent for events that are delayed in arrival to BOSS.
Language – The language preference for the user. The default value is English.
Displayed Images Height – This setting defines the vertical size in pixels of the images (reads and hits) that will display for the user on the Dispatch and Reads screens.
Expiration Date – Date for the user account to automatically be disabled. If no expiration is desired, simply leave this field at its default value (30 years from current date).
PAGIS Password – The user's Pagis password. Strong password requirement not utilized for this field.

Note: The user must be in a group that has been granted PAGIS permissions in order for the user to log in to PAGIS.

---

10. Click the **Back** button to return to the main New User Entry screen.
11. Click the **Save** button to complete creating the new user.



4.5.2 Deleting a User

1. Select the **Admin** category on the Shortcut bar.
2. Click the **Users** shortcut. A list of all existing Users will display in the Browse/Edit area.
3. Click the desired user in the list.
4. Click the **Delete** button at the bottom of the Browse/Edit area.
5. Click **Yes** to confirm the operation.

4.5.3 Importing Users from Active Directory

BOSS allows user logins to be imported from Microsoft Active Directory (AD) service.

1. Select the **Admin** category on the Shortcut bar.
2. Click the **Users** shortcut.
3. Click on the **Import** button.

4. Select the BOSS group that will receive the imported logins. Click the **Select** button to display available groups and **Save** to commit the selection.
5. Enter the default password for the imported logins in the Password field.
6. Browse for the desired users, **or** type in the desired login name (full or partial) in the Find field and press the **Filter** button.
7. Click on the checkbox in front of the desired usernames to select users to be imported to BOSS.
8. Click on **Save** to import the users from Active Directory.

Note: A Windows login cannot have any punctuation included or problems will occur with reads queries being performed.

4.6 Access Permissions Example

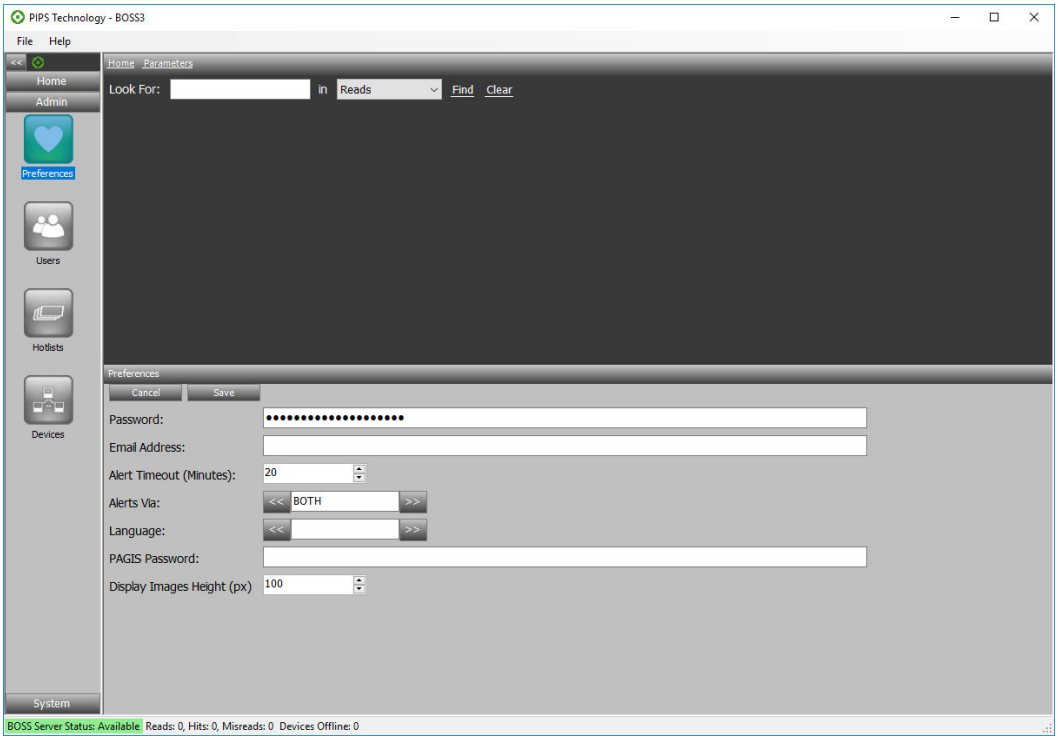
The previous sections have described how BOSS user security is designed, using roles, groups, and user accounts. This section presents a working example that integrates the information in this chapter.

A BOSS Administrator creates a role, names the role “Temporary Workers,” and defines the new role to have very limited permissions, as follows:

Reads	Read Only
Dispatch	Read Only
Users	No Access
Hotlists	No Access
Devices	No Access
System	No Access

Then the Administrator creates a group called “Temps.” When creating the group, a role is required. The Administrator selects the new role just created “Temporary Workers,” which assigns the permissions, defined above, to the new group.

Next, the Administrator creates a user account, “Jsmith,” for a temporary worker. While creating the new user, the Administrator is required to select a group for the user, and assigns the user to the “Temps” group just created. The user “Jsmith” has now been created with the permissions shown above because he belongs to the group called “Temps” and that group was assigned the “Temporary Workers” role.



As this example shows, this security design allows reusability of security roles because a BOSS Administrator can define a set of permissions in a role, and that role can be assigned to multiple groups.

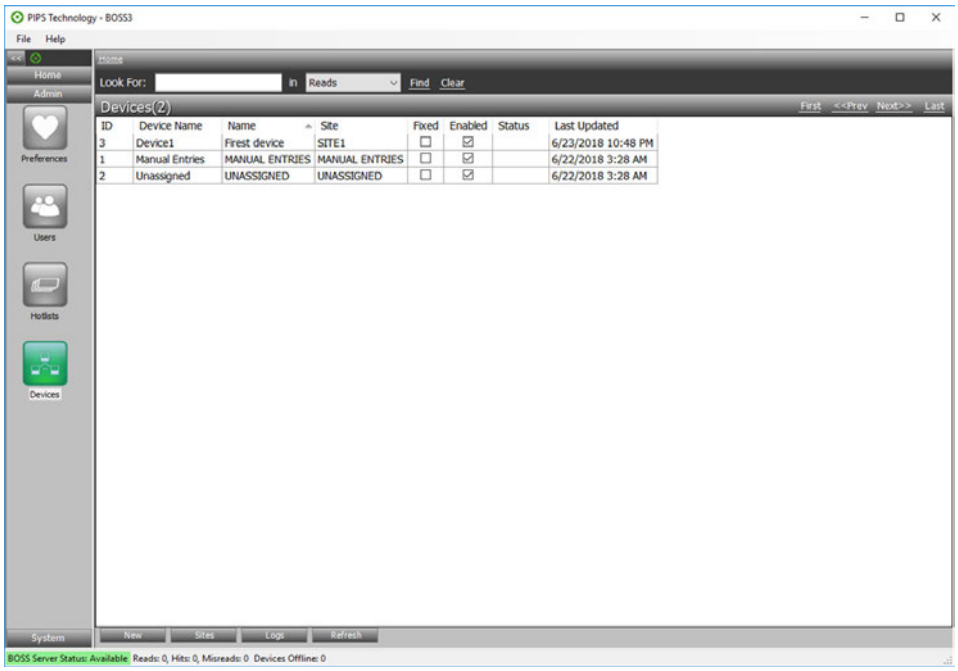
4.7 Preferences

The Preferences section allows for changing settings for the currently logged-on BOSS user, such as the password and email addresses.

4.7.1 Changing User Preferences

1. Select the **Admin** category on the Shortcut bar.
2. Click the **Preferences** shortcut. The Preferences Entry screen appears at the bottom of the Browse/Edit area.
3. Modify the preferences settings as desired and click the **Save** button.

Password – Login password for the BOSS user. For security purposes, the existing password does not display on screen.
Email Address – Email address or addresses associated with the user. BOSS alerts for the user are sent to the email addresses specified here. Multiple addresses should be separated with a comma.
Alert Timeout (Minutes) –The cutoff time for older hits to alert the user.
Alerts Via – A user can elect to receive BOSS alerts through the Dispatch screen, emails, or both.
Language – Language preference for the user. The default value is English.
PAGIS Password (PAGIS Password) – The Pagis Software password for the user.



Note: The user must be in a group that has been granted PAGIS permissions in order for the user to log in to PAGIS.

Display Images Height (px) – This setting defines the size in vertical pixels of the images (reads and hits) that will display for the user in the Dispatch and Reads Query sections.

5 DEVICES AND SITES

5.1 Devices

A BOSS device is any source that can input reads into the system. Typically, a device is a camera—either fixed or mobile. Another source for reads is manual entry, in which a BOSS user types the information for a read into the BOSS Dispatch screen .A new BOSS installation automatically contains two default devices, Manual Entries and Unassigned. A BOSS Administrator creates additional devices applicable to his/her organization.

5.1.1 Device Status

To see the current devices in your system with information about their status:

1. Select the **Admin** category on the Shortcut bar.
2. Click the **Devices** shortcut.

The devices will be listed in rows with the following column headings:

Device Name – The name assigned to the device, used in the device selections and is the description of the device. The list will always include Manual Entries and Unassigned.

Name – The name that is given to the device.

Site – The group of devices to which this device belongs. Sites can be grouped by geographical location or other criteria.

See Section 5.2, Sites.

Fixed – This box will be checked if the device is fixed camera, rather than a mobile camera. Enabled – This box will be checked if the device is currently enabled (see Section 5.1.4). Status – The Status field can display the following messages:

Device Added – If the device is newly added to the list, this message will display.

5.1.1 Default Devices (continued)

Offline – This device is a previously connected fixed camera that is not currently connected to BOSS.
Online Heartbeat – BOSS has detected a ping from a fixed camera.
Online Synced – The device's connection with BOSS has been established. This is shown for PAGIS mobile devices only and may not change when the device is offline.
Updated – Information has been sent from BOSS to the device, and the device is up to date.
Received Logins – Updates to the device included logins that were successfully sent to the device.
Received Source – BOSS has found the hotlist source file that it needs in order to send the updated hotlist to the device. Received Source may not be displayed due to timing or events.
Received Hotlist – The hotlist scheduled to be successfully sent has been sent to the device.
Received Hotplates – BOSS is sending "pages" of hotplates for a large hotlist, and the last page was successfully received.
Received Targets – The update to the device included targets that were successfully sent.

5.1.2 Defining a Device

Note: Devices will be defined automatically when a PIPS device, such as an ALPR camera, connects to BOSS the first time. Normally, there is no need to define devices in advance.

---

1. Select the **Admin** category on the Shortcut bar.
2. Click the **Devices** shortcut. A list of existing devices will appear in the Browse/Edit area.
3. Click the **New** button.
4. Enter a name for the new device. (The name must be at least three characters long.) Note that the name **CANNOT BE CHANGED** once the device has been created.
5. Enter a **Description** for the new device. (The description must be at least three characters long.)
6. Select **Mobile** or **Fixed** in the Type field. By default, **Fixed** is selected. To change the current selection, click the **left** or **right** arrow.
7. Select a **Site**. Click the **Select** button next to the Site field to display a list of all available sites. Click on the desired site in the list and click the **Save** button.

Note: In addition to the two default sites, Manual Entries and Unassigned, which are created automatically when a new BOSS system is installed, other sites can be created by an authorized BOSS user. See Section 5.2, Sites, for more information.

---

8. Select **Owners**. Owners are groups that can access this device. For PAGIS units, user logins are sent only to devices where the group is an owner of the device. Click the **Select** button next to the Owners field to display a list of all BOSS groups. Select each desired group by clicking the checkbox. When the desired groups are selected, click the **Save** button. The group name(s) selected will be displayed in the Owners field.

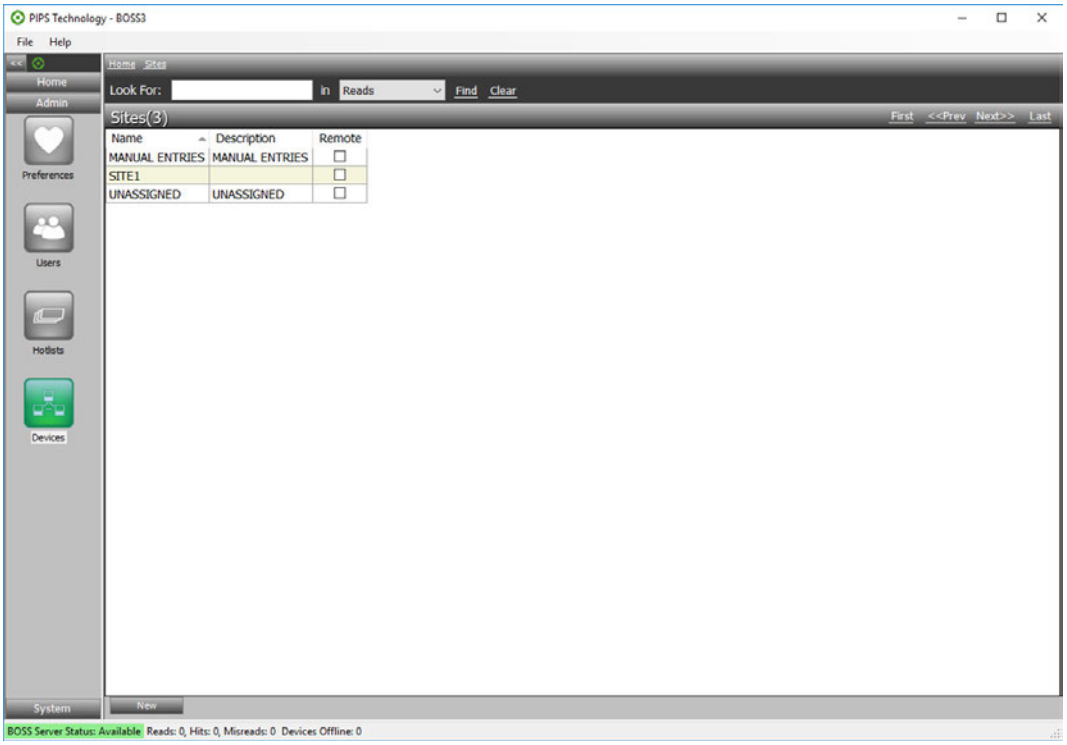
9. Select **Latitude** and **Longitude** values for the geographical location of a device by typing in a value or using the up and down controls on each field to increase or decrease the value. Note that some devices, such as PAGIS units with a GPS attached, will automatically send the latitude and longitude of the device to BOSS.
10. Click the **Advanced** button to display additional options for the device.
    No Reads Alert – Defines how long the device must remain with no reads coming in before the system shows the device as offline.
    Alert Email – The email address or addresses to which alerts associated with this device should be sent.
    Retain Reads – The length of time that reads from this device should be saved in the BOSS database. The Retain Reads setting must be longer or equal to the Retain Images setting.
    Retain Images – The length of time that pictures captured by this device should be saved in the BOSS database.
    Retain Hits – The length of time that hits captured by this device should be saved in the BOSS database.
    SpikeStore – The PIPS High Resolution ANPR/ALPR Camera P382 and the PIPS Compact ANPR/ALPR Camera P372 (formerly the Spike P382 and P372 cameras) allow captured images to be stored in an on-board USB flash drive to be retrieved on demand. Setting a device as a SpikeStore device causes BOSS to attempt to retrieve images from the storage device when the read is requested for viewing.
11. When Advanced Options have been set as desired, click **Back** to return to the New Device screen.
12. Click the **Save** button to complete creation of the new device. The new device will now appear in the devices list above.

5.1.3 Editing a Device

1. Select the **Admin** category on the Shortcut bar.
2. Click the **Devices** shortcut. A listing of all devices appears in the Browse/Edit area.
3. Click the desired device to select it. Details for the selected device appear in the Browse/Edit area.
4. Click the **Edit** button.
5. The Device Edit screen appears in the lower portion of the screen.
6. Modify fields as desired and click the **Save** button.

5.1.4 Enabling and Disabling a Device

1. Select the **Admin** category on the Shortcut bar.
2. Click the **Devices** shortcut. A listing of all devices appears in the Browse/Edit area.
3. Click the desired device to select it. Details for the selected device appear in the Browse/Edit area.
4. Click the **Edit** button.
5. The **Device** Edit screen appears in the lower half of the screen.
6. Click the **Disable/Enable** button. The change will immediately close the edit window and return to the Devices screen. It will also take effect immediately.



5.1.5 Deleting a Device

Note: It is strongly recommended that **devices are never deleted.** If a device is deleted, queries can no longer be performed using the device as a criterion. Instead of deleting a device, it should be disabled or given a new description.

1. Select the **Admin** category on the Shortcut bar.
2. Click the **Devices** shortcut. (A listing of all existing devices will display in the Browse/Edit area).
3. Click the desired device in the listing.
4. Click the **Edit** button.
5. Click the **Delete** button at the bottom of the Browse/Edit area.
6. Click **Yes** to confirm the operation.

5.2 Sites

A site is a mechanism for organizing devices. This allows a BOSS Administrator to arrange devices into groups according to convenience, such as geographical area or a facility. The ability to group or arrange devices can be quite useful in large installations where there are many devices. Each device created must be assigned to a site.

5.2.1 Default Sites

A new BOSS site automatically contains two default sites, Manual Entries and Unassigned. Normally, a BOSS Administrator will want to create additional sites applicable to an organization.

5.2.2 Creating a Site

1. Select the **Admin** category on the Shortcut bar.
2. Click the **Devices** shortcut.
3. Click the **Sites** button at the bottom of the screen. A list of existing sites will appear in the Browse/Edit area.
4. Click the **New** button at the bottom of the screen.
5. Enter a name for the new site. (The name must be at least three characters long.) Note that the name cannot be changed once the site is created.
6. Enter a description for the site. (The description must be at least three characters long.)
7. Select the parent site for the site. BOSS allows organizing sites into tree-like hierarchies. Click the **Select** button next to the Belongs To field, and select one site from the list. Click the **Save** button to complete the selection. The site name will appear in the Belongs to field.
8. Check the **Remote** option to designate the site as a remote site. (Remote sites are explained in Section 6, BOSS Data Sharing.)

5.2.3 Deleting a Site

Note: It is strongly recommended that sites are never deleted. If a site is deleted, queries can no longer be performed using the site as a criterion. Instead of deleting a site, it is recommended that devices assigned to it should be moved to another site.

---

1. Select the **Admin** category on the Shortcut bar.
2. Click the **Devices** shortcut. A listing of all existing devices will display in the Browse/Edit area.
3. Click the **Sites** button at the bottom of the screen. A listing of existing sites will appear in the Browse/Edit area.
4. Click the desired site in the listing and click the **Edit** button.
5. Click the **Delete** button at the bottom of the Browse/Edit area. Click **Yes** to confirm the operation.

6 BOSS DATA SHARING

BOSS allows "linking" of multiple BOSS systems for data-sharing purposes. When a user issues a query from the Smart Client application that includes a remote site, the query is submitted to the local BOSS server, which in turn makes a query to the remote BOSS server(s). The combined results from all the sites are then returned to the Smart Client. **Data from remote sites is not stored in the local BOSS server.**

The following configuration steps need to be taken to permit BOSS data sharing:

6.1 Configuring BOSS to Allow Remote BOSS Queries

1. Create a BOSS user for remote access. This user account is a "proxy" the local BOSS server will use for all requests from a remote site. This user account will have "Reads" privileges by default; no other privileges need to be given. The user must be assigned to a remote group. (See Section 4.4, Groups, for information about flagging a group as remote.)
2. Give the username and password for this "proxy" user to the BOSS Administrator at the remote BOSS system. The remote BOSS will need to be configured to access this BOSS system, described in the next section.

Note: It is best to create a dedicated user account for remote sites—one that will not be used by an actual user to log in and access the application.

6.2 Configuring BOSS to Access a Remote BOSS Server

1. Obtain username and password from BOSS Administrator at the remote site.
2. Create a site for the remote BOSS server and select the **Remote** option.
3. Enter the remote site IP address and BOSS service port (23032 by default).
4. Add the username and password provided.
5. For each group that is allowed to query the remote BOSS server, assign the remote server to the user via the **Servers Access** option. (See Section 4.4, Groups, for information on selecting Servers Access.)
6. Log out of the application.
7. Log back on using the provided username and password. The Remote BOSS server can then be queried by selecting the desired servers in the Reads Query screen.

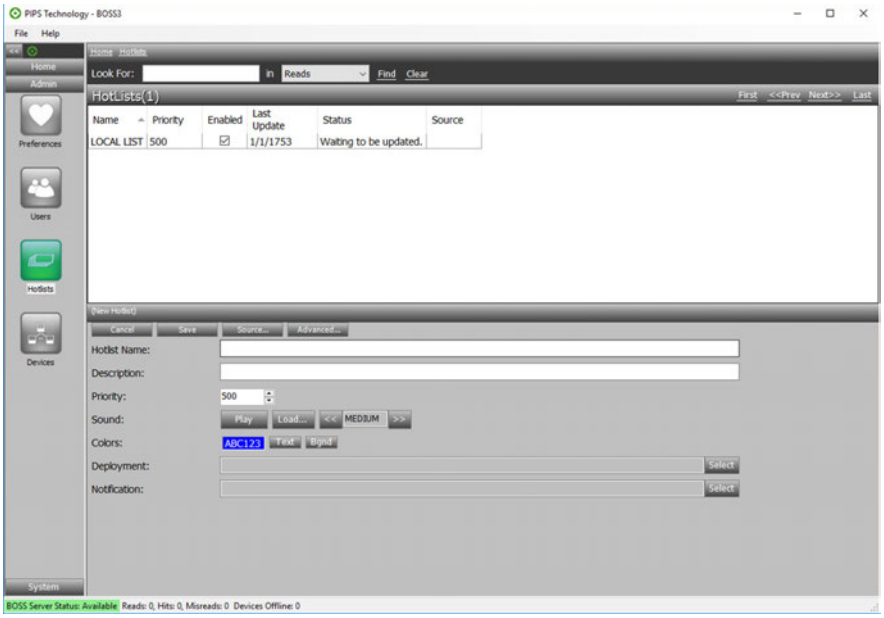
Note: BOSS version 3.2 and above only supports data sharing with servers running BOSS 3.0 and above.

---

7 HOTLISTS

A hotlist is a database that contains license plates of interest. When reads from license plate readers arrive at the BOSS server application, they are compared against hotlist records to find matches. Various hotlists can be enabled on a BOSS system and used in this comparison. In addition, hotlists can be assigned individually to specific devices. Only reads from those devices will be compared against these hotlist records. Typical hotlists include stolen vehicles, amber alerts, wants and warrants, etc. When the system reads in a plate that is determined to be a match to a hotlist entry in a hotlist, the BOSS application informs the user either with an alert sound and a pop-up window displaying a picture of the vehicle, or via email, depending on the user's preferences (see "Alerts via" in Section 5.3, Preferences).

A hotlist can be a database imported from an external source, such as another law enforcement agency. It can also be a list created by the local BOSS Administrator. For the BOSS server application to be able to understand how to import the hotlist records into the database, there are three different format types that exist in a BOSS system. In addition, there are several specific formats that are pre-defined and available by default when a new BOSS system is installed (see Section 8, Hotlist Formatters).



7.1 Creating a New Hotlist

There are three general areas to complete when creating a new hotlist:

- Configure basic settings
- Define a source file location with credentials when necessary.
- Define advanced settings (optional).

7.1.1 Configuring Basic Hotlist Settings

1. Select the **Admin** category on the Shortcut bar.
2. Click the **Hotlists** button. Currently existing Hotlists appear in the Browse/Edit area.
3. Click the **New** button at the bottom of the Browse/Edit area. The New Hotlist Entry form appears.

4. Enter a **Hotlist Name** for the hotlist. It must be at least three alphanumeric characters, and it cannot be an existing hotlist name.
5. Enter a **Description** for the hotlist (optional).

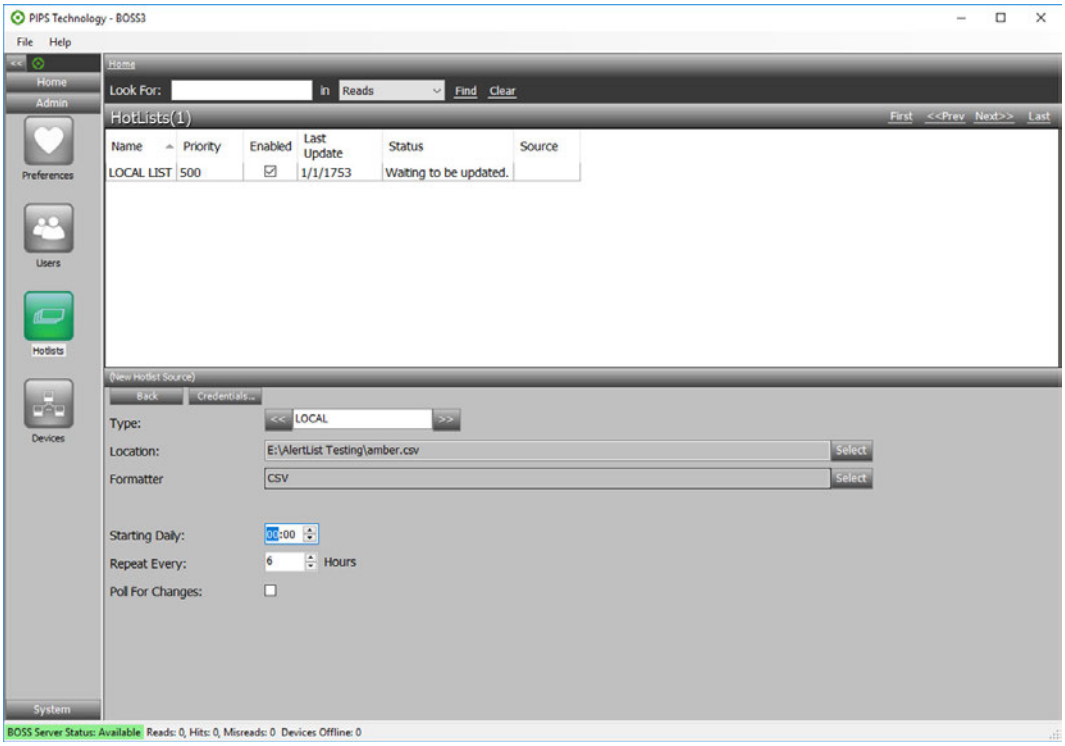
6. Select a **Priority** for the hotlist. When there are multiple hits/alerts, the priority determines which alert will occur first. (The lower the number, the higher the priority.)
7. Select a **Sound** for alerts resulting from this hotlist (optional). Click the **Load** button to select a wave sound file (*.wav). To test the selected sound, click the Play button. Optionally, one of the three default sounds may be selected, **Low, Medium**, or **High** alert.
8. Select **Colors** for the alert if desired (optional). The default is white text on a royal blue background. Custom color settings affect the entries in dispatch. The background color also applies to alerts given in PAGIS.
9. Click the **Text** button to select a color for the text.
10. Click the **Bgnd** (Background) button to select a color for the background.

Note: Currently selected text and background colors are displayed in the sample box (showing "ABC123").

---

11. Select devices for **Deployment**. Click the **Select** button to select devices from the list of those currently available. Click the checkbox next to a device in order to select it. When desired devices are checked, click the **Save** button to make the selection. One or more devices can be selected, and they will be displayed in the Deployment field.

Note: Deployment means distributing the hotlist to a device or devices. Only the devices where a hotlist is deployed will produce hits from the hotlist.



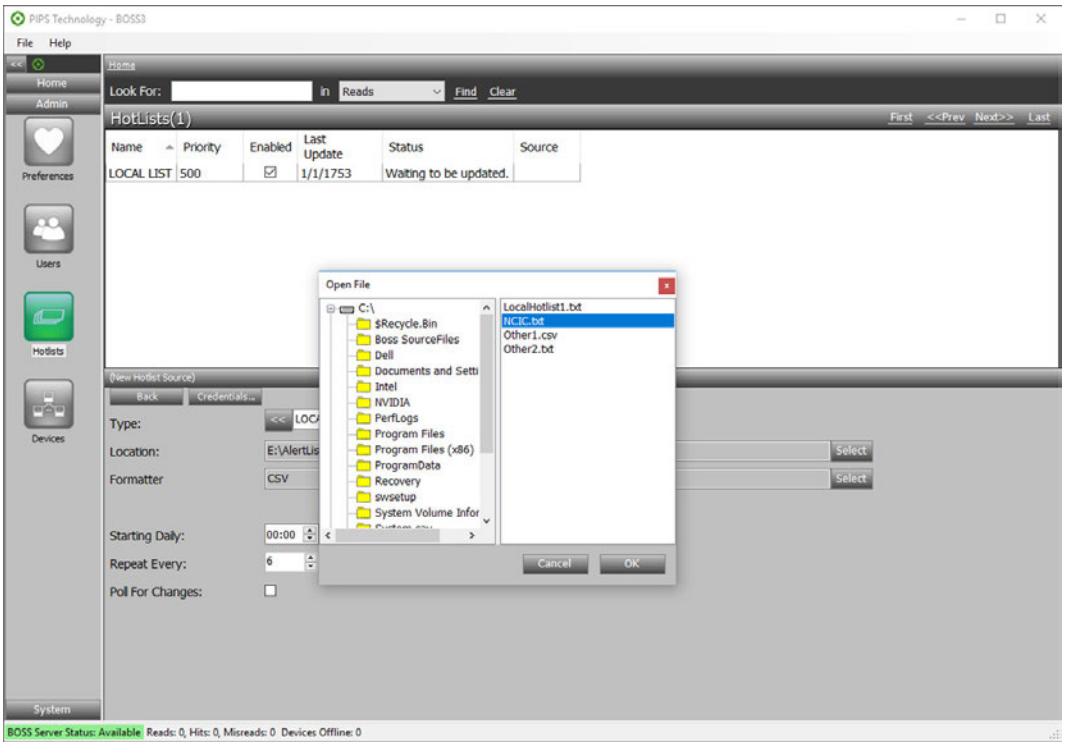
---

12. Select groups for Notification. Click the **Select** button to see a list of all BOSS groups. Click the checkbox next to a group to select the group. When you select a parent group, child groups are automatically selected. When desired groups are checked, click the **Save** button to make the selection.

Note: In order to receive alerts for hits on the hotlist, the user must be in the notification list of the hotlist. For more information see Section 7.1.5, Defining Hotlist Advanced Options.

7.1.2 Defining the Hotlist Data Source

1. On the New Hotlist Entry screen, click the **Source**... button to open the screen shown in the lower half of the following image:



2. Choose the appropriate entries for each of the fields that describe the new hotlist:
   Type (**Network** or **Local**) – A local source means that the file is stored on the BOSS server's Windows file system. A network source means that the hotlist source resides outside the BOSS server.

Note: If a Local source is selected, the source file location (folder) must be accessible to the Windows process running the BOSS server application ("PIPS BOSS3" Windows service).

Location – Enter the location of the hotlist file. Click the **Select** button to the right of the location field.

For a local source, a file dialog will display, allowing you to navigate to a path and select a file.

For a network source, select one of the default locations displayed (if applicable), **or** type in the location of the source:

HTTP – The location format must be in Hypertext Transfer Protocol (HTTP) format: “http://server:port/path.” There are a few predefined HTTP locations (such as CA DOJ) included in BOSS. These locations can be accessed with the **Select** button. Boss also supports FTP & SFTP, examples : “ftp://server:21/path” , : ftp://server:22/path.

Remote BOSS System – The location format must be “boss://server:port/hotlist,” where “hotlist” is the hotlist name on the remote system.

Note: The remote system hotlist name **MUST** be alphanumeric and **CANNOT** contain any spaces.

Formatter – Formatter defines the way a hotlist database file is parsed into discrete fields. Click the **Select** button next to the Formatter field. A list of available formatters appears. Click on the desired formatter and click the **Save** button to make the selection. The name of the selected formatter will appear in the field.

Note: Normally one of the several default formatters included with BOSS is sufficient. A new custom formatter can be created if necessary. See Section 8.1, Creating a New Formatter for Hotlists, for more information.

7.1.2 Defining the Hotlist Data Source (continued)

Starting Daily – Specify the time of day the hotlist should begin updating each day. The time is formatted as hours:minutes in the 24-hour clock, i.e., between 00:00 and 24:00 can be selected.
Repeat Every – Specify the time interval, in hours (1 – 24), between updates.

OR

Poll for Changes – If you choose this setting, BOSS will check for updates to the hotlist approximately every 30 seconds. When this option is selected, the **Starting Daily** and **Repeat Every** options are disabled.

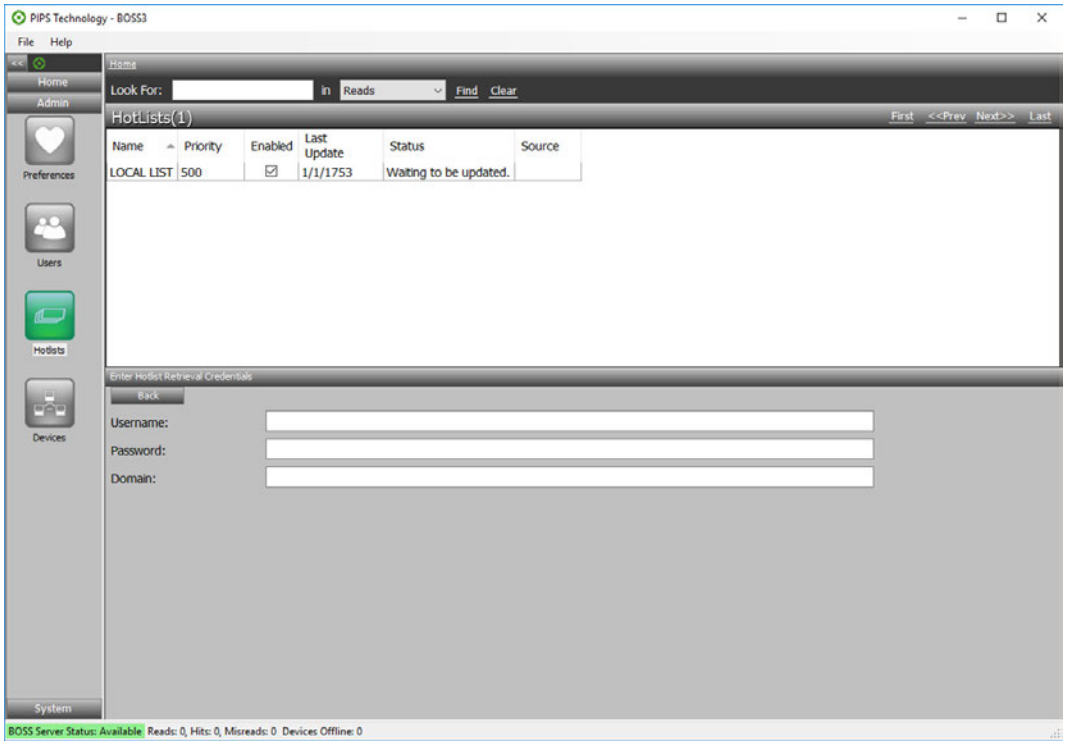
Note: If **Poll for Changes** is selected, and the hotlist source resides on the network, BOSS will attempt to make a network connection every 30 seconds. This frequency may add significantly to network traffic. Use with caution.

7.1.3 ZIP Compressed Hotlist Files

BOSS will automatically recognize and extract a hotlist data file contained in a ZIP archive file, such as Windows Explorer compressed (zipped) folder.

Note: There can be only one file in the ZIP archive.

7.1.4 Defining Hotlist Source Credentials



Some sources will require credential settings (e.g., login information) in order to allow BOSS to access that data. To enter the **Credentials** Settings screen from the Hotlist Source screen, click the Credentials button.
The credentials depend on the source type as follows:

Network-HTTP – If the HTTP (website) source defined requires login information, it should be entered in the Credentials Setting screen. This information will include username and password. The domain field may be necessary as well. Consult the Administrator of the HTTP source for required login information.

Network-Remote BOSS system – A username and password valid on the remote BOSS system must be entered (as in remote sites configuration, described in Section 6.0, BOSS Data Sharing). Consult the Administrator of the remote BOSS system for a username and password.

To set credentials for a source:

1. Click the **Credentials** button. The Credential Input screen appears.
2. Enter the username, password, and domain information applicable to the source you are specifying.
3. Click the **Back** button to return to the Source Entry form.
4. Click the **Back** button again to return to the New Hotlist Entry screen.

Advanced Options are values that allow you to further define details of the new Hotlist. To access the Advanced Options, click the **Advanced**... button.

Covert – A covert hotlist is one that contains sensitive information that should only be available to certain user groups. The effects of defining a hotlist as covert are as follows:

- A Hit on covert hotlist will not be alerted to users in mobile vehicle “Pagis”, unless the logged-in user is a Pagis administrator.
- A hit on the covert hotlist will not be alerted in the Boss application, regardless of the user’s alert preference. Hit alerts for covert hotlist can be send via email.
- When reads are queried, git information on covert hotlist will be displayed only to users in the Notification list for the hotlist. Other users will see that the read is a hit, but no information will be shown.
- Hit information for hits from covert hotlist will not be sent to remote Boss servers.

Whitelist – This option, when selected, defines the hotlist to be a whitelist, which works in reverse to a normal hotlist. A whitelist defines a list of plates that are **authorized** and not of concern. When a whitelist is active, license plates read that do **not** match an entry on the list will trigger a hit/alert.

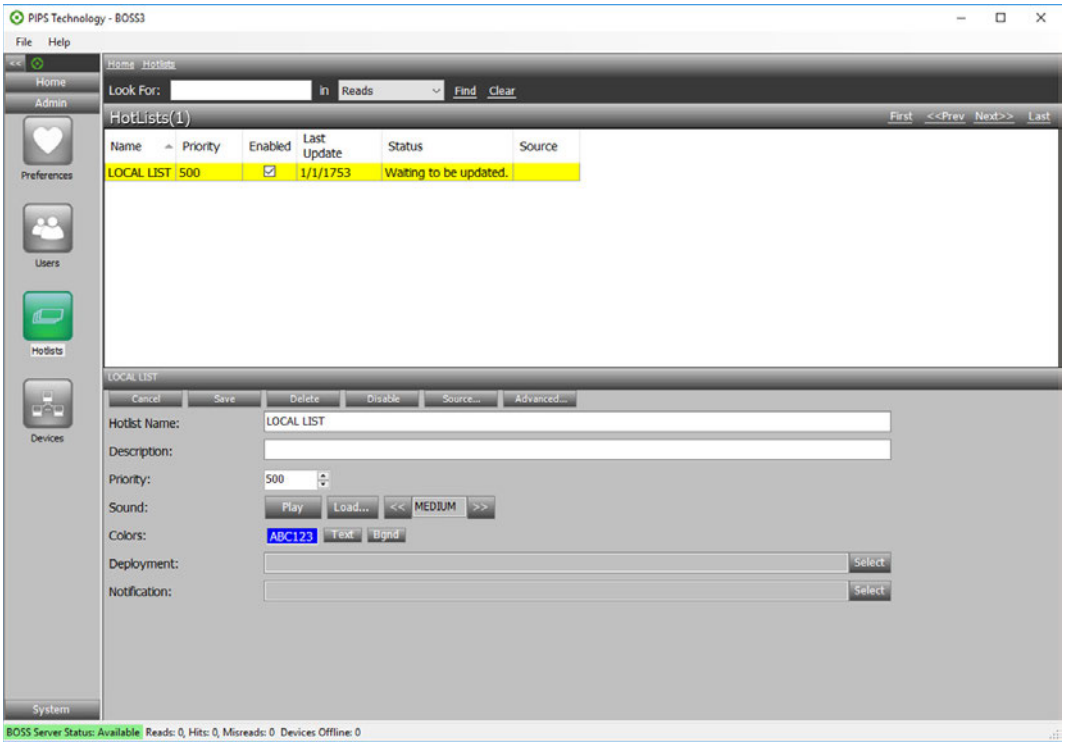
7.1.5 Defining Hotlist Advanced Options (continued)

An example of whitelist use might be a secure parking lot where fixed camera devices are monitoring vehicles entering. Authorized plates will match entries in a whitelist hotlist. If a plate is read that does not match an entry in the whitelist, an alert occurs.

Whitelists and hotlists can be active simultaneously for a device.

Note: Whitelist support in PAGIS requires a separate license. If you do not have the license and wish to use whitelists, please contact your PIPS sales representative for further information.

Ext Trigger – This option, when selected, sets the External Trigger flag on a hotlist when it is passed to PAGIS. It is only supported in PAGIS version 2.6.6 or above and will have no effect on earlier versions of the software.
One Time – This option, when selected, specifies that the hotlist data should only be accessed from its defined source one time; no subsequent updating will occur after the initial import.
Alert Timeout – This setting allows you to define how current a hit (from this hotlist) must be in order to cause an alert. This primarily pertains to information coming in from mobile units, where there may be a large delay. Alert Timeout can be specified in minutes, hours, days, or months.
Delete Inactive – BOSS updates hotlists in an incremental manner, and instead of deleting hotlist entries that no longer exist, non-existent entries are marked as "inactive." If the entry subsequently becomes valid, the entry is marked as active again. The Delete Inactive value determines how long inactive entries are kept in the BOSS hotlist database.
Notify Email – One or multiple email addresses may be defined to receive an alert when there is a hit. Multiple



Note: If PAGIS mobile units are used, this value should be set to the longest time between begin shift downloads to PAGIS.

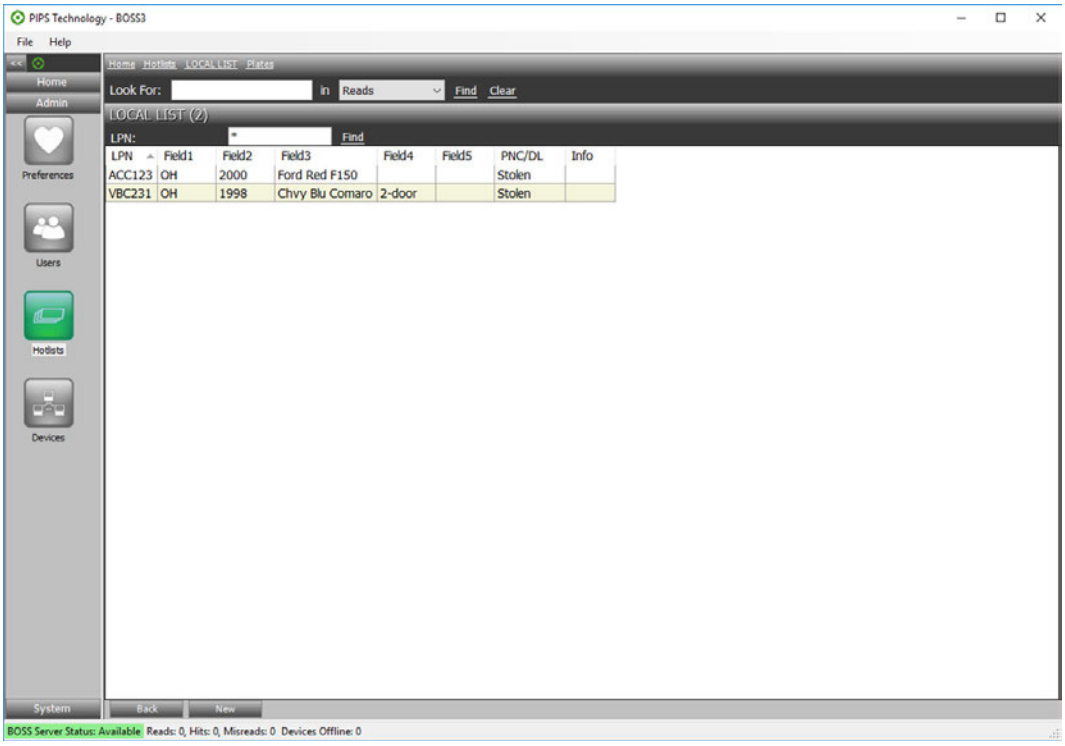
email addresses can be entered in the field, separated by a comma.
Remote Alerts To – Select the remote sites in which to send alerts. When a BOSS system sends an alert to a remote system, it is sent as a read; the remote BOSS system then determines whether to treat the read as a hit.

Note: This setting is only applicable if remote sites are defined.

Expires – Determines the date that the hotlist will stop importing data from its source. For a hotlist that is intended to be permanent, leave the expiration at the default value, 30 years from current date.

7.2 Enabling and Disabling a Hotlist

1. Select the **Admin** category on the Shortcut bar.
2. Click the **Hotlists** shortcut. A list of all hotlists appears in the Browse/Edit area.
3. Click the desired hotlist. Details for the selected hotlist appear in the Browse/Edit area.
4. Click the **Edit** button.
5. The Hotlist Edit screen appears in the lower half of the screen.
6. Click the **Disable** or **Enable** button.



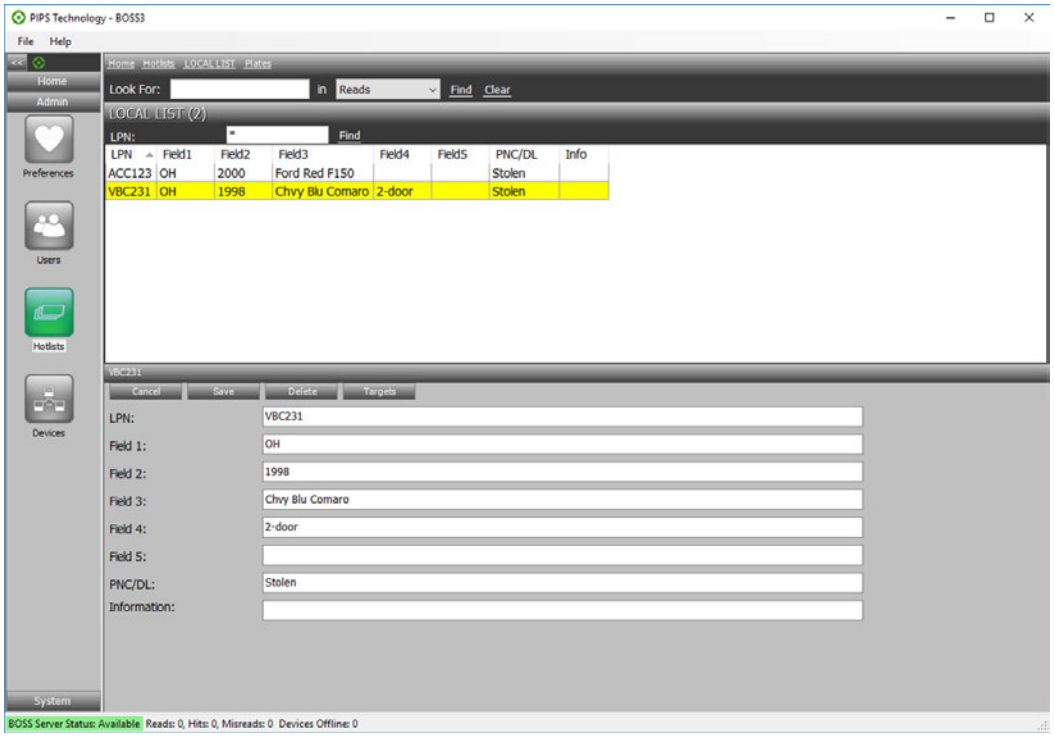
7.3 Modifying Hotlist Entries

BOSS allows viewing, adding, editing, and deleting hotlist entries.

Note: If the hotlist is set to update automatically, any changes to that hotlist made from within the BOSS User Interface application will be lost at the next automatic update.

7.3.1 Querying Hotlist Entries

1. Select the **Admin** category on the Shortcut bar.
2. Click the **Hotlists** shortcut. A listing of all hotlists appears in the Browse/Edit area.
3. Click the desired hotlist. Details for the selected hotlist appear in the Browse/Edit area.
4. Click the **Plates** button.
5. The Hotlist Plates screen will be displayed.



6. Type in the full or partial plate text to search for in the LPN field. (Wildcard searches are supported. See Section 11.1, Wildcards, for more information.)
7. Click on **Find**. License plates that match the criteria will be displayed. Note that only the first 1,000 matching license plates will be shown.

7.3.2 Editing a Hotlist Entry

1. Retrieve hotlist plates as instructed in the previous section.
2. Click on the row showing the desired plate.
3. The Plate Edit form will be displayed at the bottom of the screen.
4. Edit the field values as desired.
5. Click **Save** to save changes.

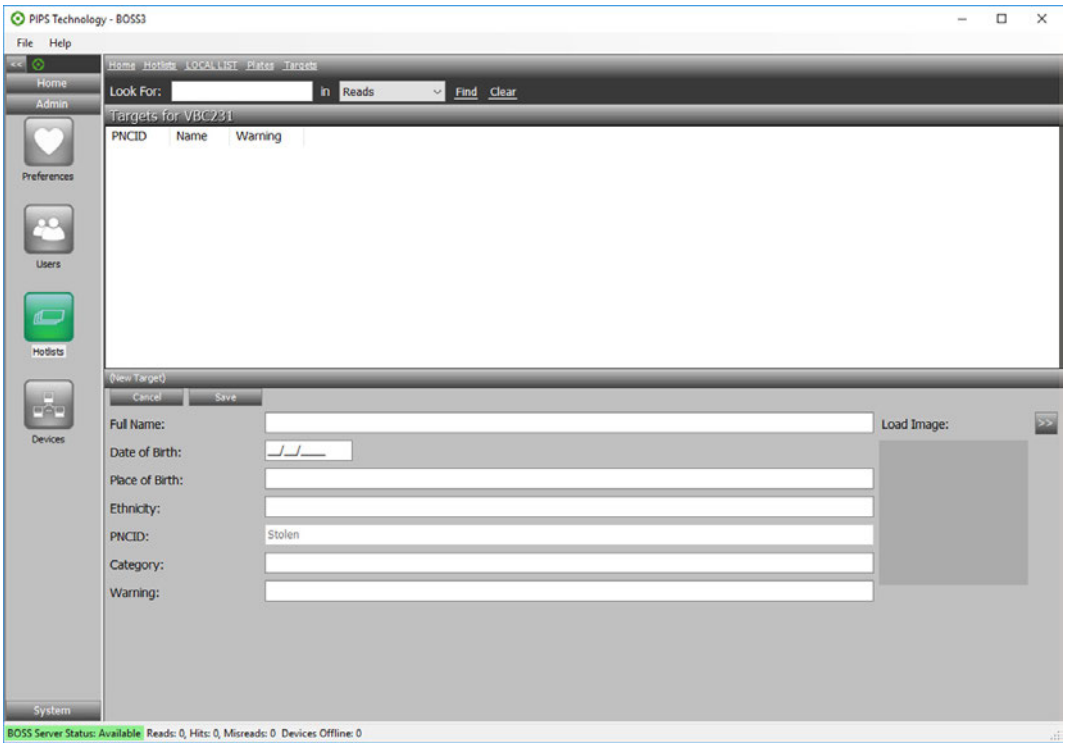
Note: Manually edited hotlist entries will be lost the next time the hotlist is updated.

7.3.3 Adding a Hotlist Entry Manually

1. Select the **Admin** category on the Shortcut bar.
2. Click the **Hotlists** shortcut. A listing of all hotlists appears in the Browse/Edit area.
3. Click the desired hotlist to select. Details for the selected hotlist appear in the Browse/Edit area.
4. Click the **Plates** button.
5. Click the **New** button. The Plate Edit form will be displayed at the bottom of the screen.
6. Enter the **LPN** (mandatory) and other fields (optional).
7. Click **Save** to save changes.

Note: Manually edited hotlist entries will be lost the next time the hotlist is updated.

7.3.4 Deleting a Hotlist Entry



1. Retrieve hotlist plates as instructed in the Querying Hotlists Entries section.
2. Click on the row showing the desired plate. The Plate Edit form will be displayed at the bottom of the screen.
3. Click the **Delete** button.
4. Click **Yes** to confirm the deletion.

Note: Manually deleted hotlist entries may be re-added the next time the hotlist is updated.

7.4 Targets

Targets are individuals of interest associated with a license plate. Target information is downloaded to the PAGIS mobile application from BOSS.

1. Retrieve hotlist plates as instructed in Section 7.3.1, Querying Hotlists Entries.
2. Click on the row showing the desired plate.
3. The Plate Edit form will be displayed at the bottom of the screen.
4. Click the **Targets** button. Information about the target will display.

7.4.1 Creating a New Target

1. Click the **New** button.
2. The Target Edit form will be displayed.
3. Fill in the fields, listed below, with appropriate values.

   Full Name – The first and last name of the target. Date of Birth – The date of birth of the target.

   Place of Birth – The location where the target was born.

   Ethnicity – The ethnicity (race or national origin) of the target.

   PNCID – This field can be used to enter any type of identification number that is available. In the UK this is the Police National Computer identification number of the target. This field is linked to the PNCID field in the hotlist information in the PAGIS application. *See the sample INI configuration file in Section 5 of the Pagis Software User's Manual.*

   Category – The category of the target, such as Felon, Suspect, etc.

   Warning – The warning information to display to the officer.

   Load Image – An image of the target, such as a DMV photo or "mugshot," can also be associated with the Target record. Upload an image by clicking on the Select button and browsing to the image file. Supported formats include JPG, GIF, or BMP.
4. Click the **Save** button.

7.4.2 Deleting a Target

1. Access the Targets screen as described above.
2. Click the row containing the target to be deleted.
3. The Target Edit form will be displayed.
4. Click the **Delete** button.
5. Click **Yes** to confirm deletion.

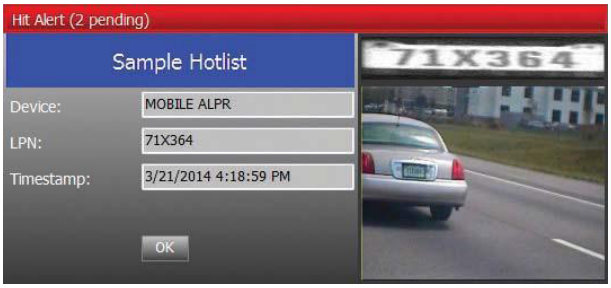
8 HOTLIST FORMATTERS

Hotlist Formatters define the structure of source data that is imported into BOSS Hotlists. BOSS includes several default formatters when the software is installed. There are three types of formatters:

CSV (comma-separated values) – A flat text file containing one line for every record. Each field in the record is separated by a comma.

Fixed Length – A flat text file containing records that are all the same length. No separator characters are used to determine where each field ends and another begins, but rather, field and record lengths are known up front. In a fixed length file, padding spaces are used where necessary, to accomplish the correct field length.

NCIC (United States National Crime Information Center) – The NCIC database is a computerized index of criminal justice information (i.e., criminal record history information, fugitives, stolen properties, missing persons, etc.), that is available to law enforcement agencies 24 hours a day, 365 days a year. Several NCIC import sources/formats exist within BOSS.



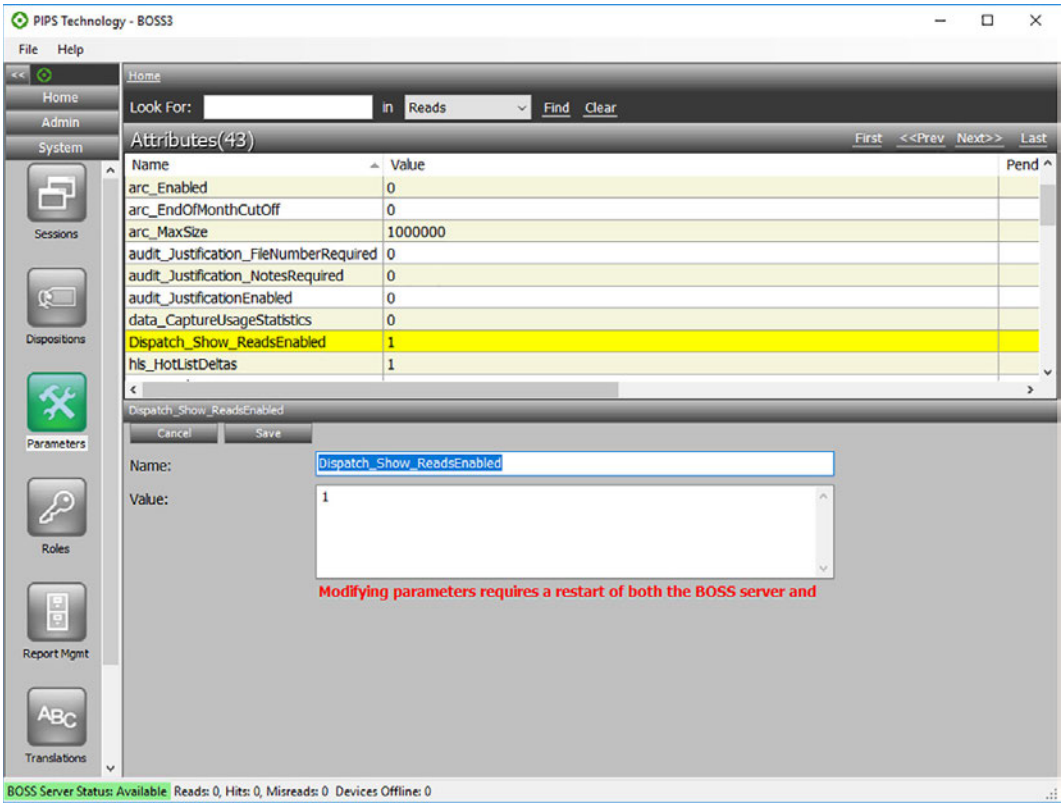
8.1 Creating a New Formatter for Hotlists

Normally, when creating a new hotlist, you will find that one of the default formatters can be used. However, BOSS does give you the flexibility to create new hotlist formatters. Creating a new formatter or modifying an existing formatter should be approached with caution and is beyond the scope of this manual. For more information, please contact PIPS™ Technical Support.

9 ALERTS

BOSS can provide real-time alerts on-screen, via the BOSS User Interface application, or through email. In order to receive alerts through the BOSS application, **the logged-on user must be in a group that is assigned the Dispatch permission**. Email alerts can be sent to any BOSS user or email recipient.

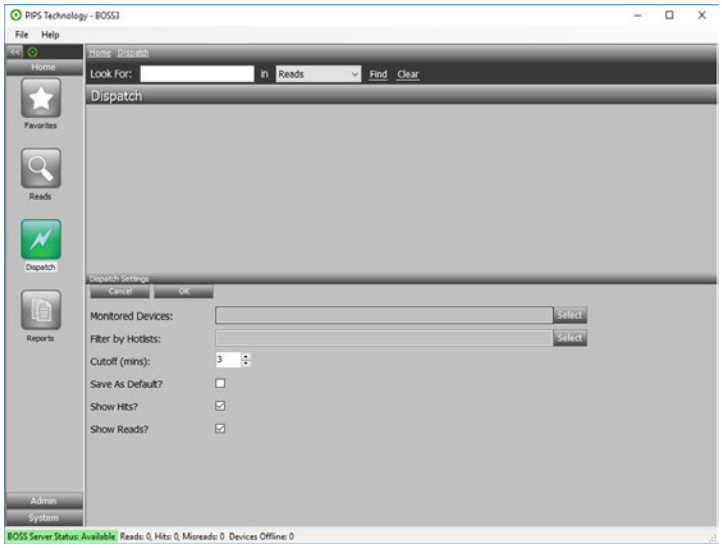
A real-time alert for a hit can pop up on the screen at any time when the BOSS application is running, regardless of which screen the user has active. A sound associated with the hit will be played. Alerts will be queued until the user acknowledges them by clicking **OK**. Real-time alerting in the BOSS application can be turned off by clicking on the **Alerts** toggle button on the BOSS Home screen. The settings for real-time alerts can be modified through the Dispatch screen, (see Section 10, Dispatch).



10 DISPATCH

The Dispatch screen is a tool often used by first responder dispatchers. It enables them to easily view hits, monitor reads, and correct license plates as they enter the BOSS system. The information displayed is as near to real time as possible. For ease of viewing, there are three configurations that can be set:

- If only the hits are set to display, they will appear on the whole screen.
- Similarly, if only the reads are set to display, they appear on the whole screen.
- Of the dispatcher is monitoring both hits and reads, then the hits will be displayed on the top half of the screen and the reads will be displayed on bottom half.



Note: By default, the ability to monitor reads via dispatch is disabled for new Boss installations, this feature can be turned back on by editing the Boss parameter “Dispatch_Show_ReadsEnabled” and setting the value to 1 for on. The Boss service must be restated for this to take effect.

10.1 Dispatch Settings

Dispatch Settings allow you to choose the information shown on the Dispatch screen.

1. Select the **Home** category in the Shortcut bar.
2. Click the **Dispatch** shortcut.
3. Click the **Settings** button in the bottom of the Browse/Edit area.

4. The following settings are available on the Dispatch screen. Change these settings as desired:

   Monitored Devices – Camera sources can be selected or deselected from a pick list to control which ones will supply reads (and resulting hits) to the Dispatch screen. Individual dispatchers can focus on particular camera inputs by selecting/deselecting any combination of sources (one, multiple, or all) for monitoring.

   In large BOSS systems, it may not be practical for a single dispatcher to monitor all sources simultaneously. An organization may choose to assign individual dispatcher personnel to different sources or may select to focus on particular sources during certain time periods or events.

   Filter by Hotlists – Hotlists may be selected to only show hits from designated hotlists. If there are no hotlists selected, hits from the monitored devices will be displayed.

   Cutoff (mins) – The cutoff setting determines how current from the present time a hit or read must be in order to display on the dispatch screen This setting determines the number of minutes before data is discarded from the on-screen display. The maximum time is 10 minutes.

   Save As Default – If checked, the current settings are saved and restored the next time the user logs in. Note that selected devices will always default to the devices where the user is configured to receive notifications in the Hotlist settings. See additional information on notifications in Section 7.1.1, Configuring Basic Hotlist Settings.

   Show Hits? – If checked, hits will display in rows in the top section of the Dispatch screen as they occur. If this option is deselected, rows of hits are not displayed in this section of the Dispatch screen. However, pop-up alerts will still display for hits, regardless of this setting.

Note: If the Alert Toggle button is set to the Off position, hits and reads will not display in the Dispatch screen. See Section 9, Alerts, for additional information.

   Show Reads? – If checked, all reads included in the devices selected in the Monitored Devices field display in the dispatch screen. By default, this option is not selected.

Note: Monitoring reads may slow down the BOSS server. It is recommended that reads are only monitored for diagnostics purposes.

5. Click the **Save** button for the changes to take effect.

10.2 Dispatch Hits

For each row, the columns displayed are:

Device – The device where the read originated.
LPN – The license plate characters read in by a camera or manually entered by a user.
Timestamp – Date and time when the read occurred.
Syntax – The state or region of the plate, if available.
Misread – If checked, indicates that the hit resulted from a read that was marked as a misread. Manual – If checked, indicates that the hit resulted from a manual entry (put in by a BOSS user). Patch – A thumbnail image of the license plate.
Overview – Color overview picture of the vehicle.
Hotlist – The name of the hotlist from which the hit occurred.
Field1 ... Field5 – Fields originating from the hotlist. The content and meaning of these fields vary depending on the composition of the hotlist.
PNC/DL – This field can be used for a driver's license (DL) number in US installations, but primarily used in United Kingdom installations for storing the UK Police National Computer identification number.
Info – Commonly contains additional text associated with the hit record. When the hotlist source contains additional fields, the information from those fields is all stored in this one field.
Priority – Priority assigned to the hotlist, with a lower number being given a higher priority.
Annotation – Notes associated with the read. Annotations are entered by BOSS users.

10.3 Dispatch Reads

For each row, the columns displayed are:

Device – The device where the read originated.
LPN – The license plate characters read in by a camera or manually entered by a user.
Syntax – The state or region of the plate, if available. Timestamp – The date and time when the read occurred. Patch – A thumbnail image of the license plate.
Overview – Color overview image of the vehicle.
Misread – If checked, indicates that this record was marked as a misread.
Hit – If checked, indicates this read resulted in a hit.
Manual – If checked, indicates this read was input manually by a BOSS user, rather than originating from a device.
Annotation – Notes associated with the read. Annotations are entered by BOSS users.

10.4 Manual Entries

There may be times when a read must be manually entered or when a camera does not correctly read a plate. For example, if there was an obstruction between the camera and the plate, then characters may be missed in the read. For this reason, manual entries can be completed by an authorized user via the Dispatch screen.

10.4.1 Adding a Manual Read

1. From the Dispatch screen, click the **Add** button. The Manual Entry screen appears in the lower half of the Browse/Edit area.

Note: The **Add** button will only be present if the logged in user has the Edit Access permission to reads.

2. Enter the plate characters in the LPN field.
3. Click the **Select** button to the right of the disposition field.
4. Select the desired disposition(s) and click the **Save** button to complete the selection.
5. Click the **Save** button to finish saving the manual entry. If the "Manual Entries" device is not being monitored, the manual entry will not appear in the Dispatch screen.

10.4.2 Correcting Reads

1. From the Dispatch screen, click the Add button. The Manual Entry screen appears in the lower half of the Browse/Edit area.
2. Enter the plate characters in the LPN field.
3. Click the **Select** button to the right of the disposition field.
4. Select the desired disposition(s) and click the **Save** button to complete the selection.
5. Click the **Save** button to finish saving the manual entry. If the "Manual Entries" device is not being monitored, the manual entry will not appear in the Dispatch screen.

11 QUERYING STORED DATA

The Reads screen allows for searching and viewing past read records on a local server or on a remote server that has granted access. Reads can be quickly searched by entering a license plate number. This screen also allows for more advanced queries where data can be filtered based on additional fields such as date ranges, location, and radius. Additionally, the Reads screen allows you to perform multiple queries with the use of tabs.

For the queried results returned, there are no limits to the number returned from a local server. To limit the impact on outside systems, there is a limit of 1,000 records returned from a remote server. A maximum of 1000 records will be displayed per page.

Note: Depending on factors such as the size of the BOSS database, the speed of the server, the bandwidth of the connection between client and server, and the parameters of the query, there may be a delay before the results are displayed. A status bar will display that shows that the query progress.

11.1 Wildcards

Wildcards are special characters that represent any alphanumeric character and can be used in searches and queries. Wildcards can make finding a match easier because they can define a portion of the criteria to be ambiguous. Wildcards supported in BOSS are described in the following table.

WILDCARD USED	REPRESENTS
a%	Any values that start with the letter “a”
a	Any values containing “a”
% or *	Any/all values
a_	Any values that are exactly two characters long and start with “a”
_a*b	Any values that have “a” as the second letter and end with “b”
[abc]*	Any values that start with “a”, “b” or “c”

11.2 Quick Search Bar

The Quick Search bar is always visible and available on the top of the BOSS screen regardless of the category or shortcut currently selected. This feature allows for quick, simple searches of various BOSS data.

1. Type the value to search for in the Look For field. This value can include wildcard characters. Multiple values can be entered separated by a comma (e.g., ABC123, XYZ234). However, wildcard values cannot be used when searching for multiple values.
2. In the “In” drop-down box select an area to search. The available options are **Reads**, **Hotlists**, **Users**, **Group Users**, **Groups**, **Devices**, and **Sites**. These areas are described below.
3. Click the Find link to initiate the search. The results will be displayed in the Browse/Edit area of the screen.

11.2.1 Quick Search Fields

When performing a query using the quick search feature, keep in mind that the search is performed in one significant area that can be selected. The search is then run against the significant field in that area, not all fields in that area. For example, when performing a quick search in Users, the text entered is compared against the Username field of all user records.

However, it is not compared to the display names for users. The following is a list of the fields used in the Quick Search:

SEARCH IN AREA	FIELD USED FOR SEARCH
Reads	LPN
Users	Username
Groups	Group Name
Site	Site Name
Hotlists	Hotlist Name
Group Users	Group Name
Devices	Device Name

11.3 Query Result Navigation Icons

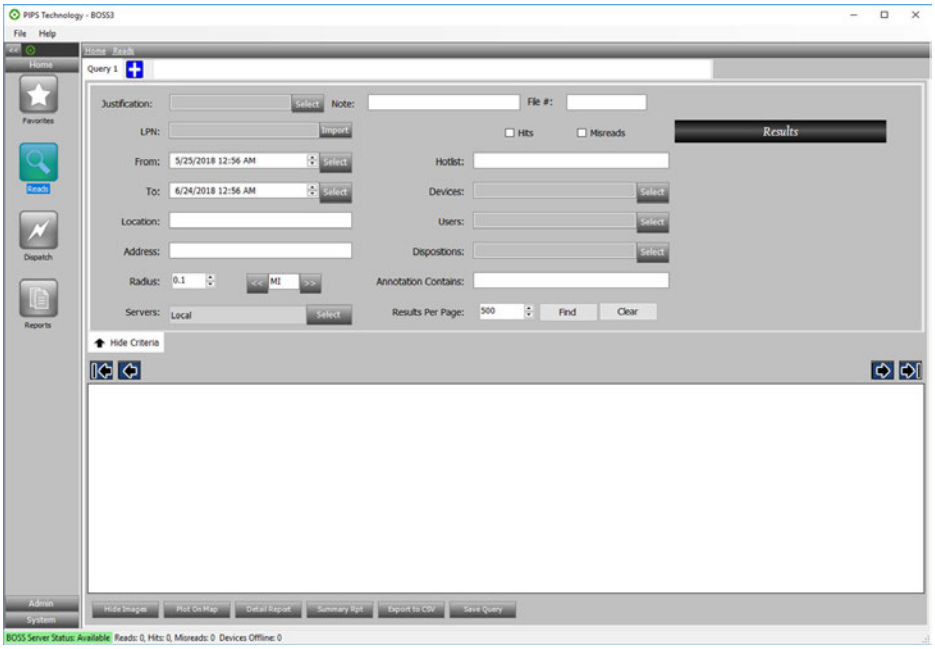
Just above the query results are navigation icons that facilitate moving through the data results. These icons can be very useful for larger result sets, providing an easy way to move through records.

Move to the very beginning of the data results, i.e., the first record.

Move forward through the data results.

Move backward through the data results.

Move the very end of the data results, i.e., the last record.



11.4 Advanced Reads Queries

The Reads screen allows for searching and viewing past read records. Reads can be quickly searched by entering a license plate number. The Reads screen also allows for more advanced read queries where data can be filtered based on additional fields such as date ranges, location, or radius. As indicated earlier, a maximum of 1000 records will be displayed.

11.4.1 Performing an Advanced Reads Query

1. Select the **Home** category on the Shortcut bar.
2. Click the **Reads** shortcut.
3. Enter desired query criteria (see the following section, 11.4.2, Entering Advanced Reads Query Criteria). All fields do not have to be filled in. Leaving a query field blank simply means there will be no filtering on that field.
4. Click the **Find** button to run the query.

11.4.2 Entering Advanced Reads Query Criteria

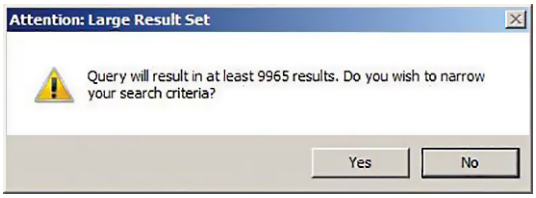
The query criteria fields are:

LPN – Full or partial (using wildcards) license plate number.
From – The start date and time for reads to be retrieved. Either click the **Select** button to display a calendar for quick selection, or type in the date.
To – The end date and time for reads to be retrieved. Either click the **Select** button to display a calendar for quick selection, or type in the date.
Location – The location as entered in the PAGIS application (see the Pagis Software User's Manual for more information).
Near Address – An address to use as the center of a radius search. The address format depends on the mapping system used but typically street name, house number, city and state, or zip code can be entered.
Radius – When a Near Address filter is entered, the search radius from the center point must be entered here.
Servers – Information can be queried from one or more remote BOSS servers. Click the Select button to display a list of authorized BOSS servers.
Justifications – Select the justification that best describes the purpose for the query being performed. This field will only be displayed if Justifications have been enabled in the System Parameters. See Sections 15.3.2, List of BOSS System Parameters, and 15.7, Justifications, for more information.
Justification Note – Enter any additional information necessary to more accurately document the query being performed. This field will only be displayed if Justifications have been enabled in the System Parameters. See Sections 15.3.2, List of BOSS System Parameters, and 15.7, Justifications, for more information.
Hits Only – If checked, only hits are queried.
Misreads Only – If checked, only reads that are marked as misreads are queried.
Hotlist – A search on hits can be limited to a specific hotlist, which can be entered here.
Devices – A query can be narrowed to reads originating from a particular device. Click the Select button to display a list of devices, select one or more.
Users – A query can be narrowed to reads originating by a particular user. Click the Select button to display a list of users and select one or more.

Note: The username can also be typed in.

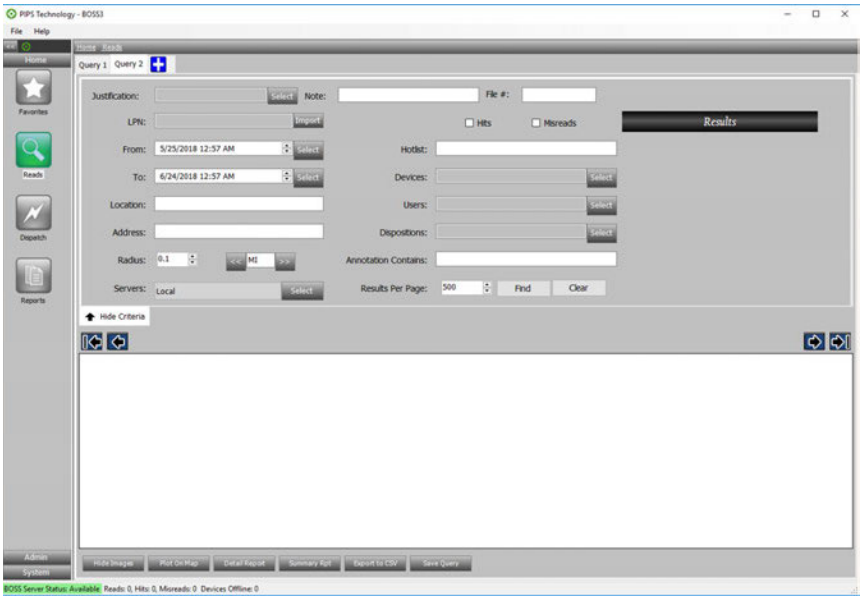
Dispositions – A query can be narrowed to reads with a particular disposition. Click the **Select** button to display a list of dispositions. Then select one or more dispositions.

Annotation Contains – If text is entered in this field, only reads that contain the text in the annotation field are queried.



Results Per Page – The maximum number of reads that will be displayed. The default is 500, the maximum is 1,000.

Clear – If clicked, the fields on the current tab will be returned to their default values.



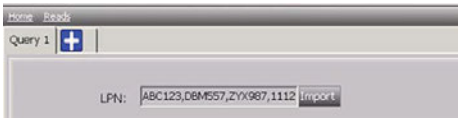
11.4.3 Managing Query Results

With the ability to obtain any number of results from a local server comes the option to narrow the potential results to be returned. If a large number of results will be returned based on the criteria entered, a message is displayed asking if the search criteria should be narrowed. If you select **Yes**, the search criteria is redisplayed offering the chance to make any necessary changes to reduce the results. If you select **No**, the query is performed based on the current criteria selections.

Note: A large number of results can take several minutes to be displayed.

11.5 Multiple Query Tabs

With Query tabs, users can perform multiple queries at a time. By clicking on the last tab, which contains the plus icon, you can access additional Reads Query screens. Enter the desired search criteria on each new screen to obtain additional information through the varying results. Each query can be given a descriptive name by right-clicking on the tab, and obsolete queries can be removed the same way.

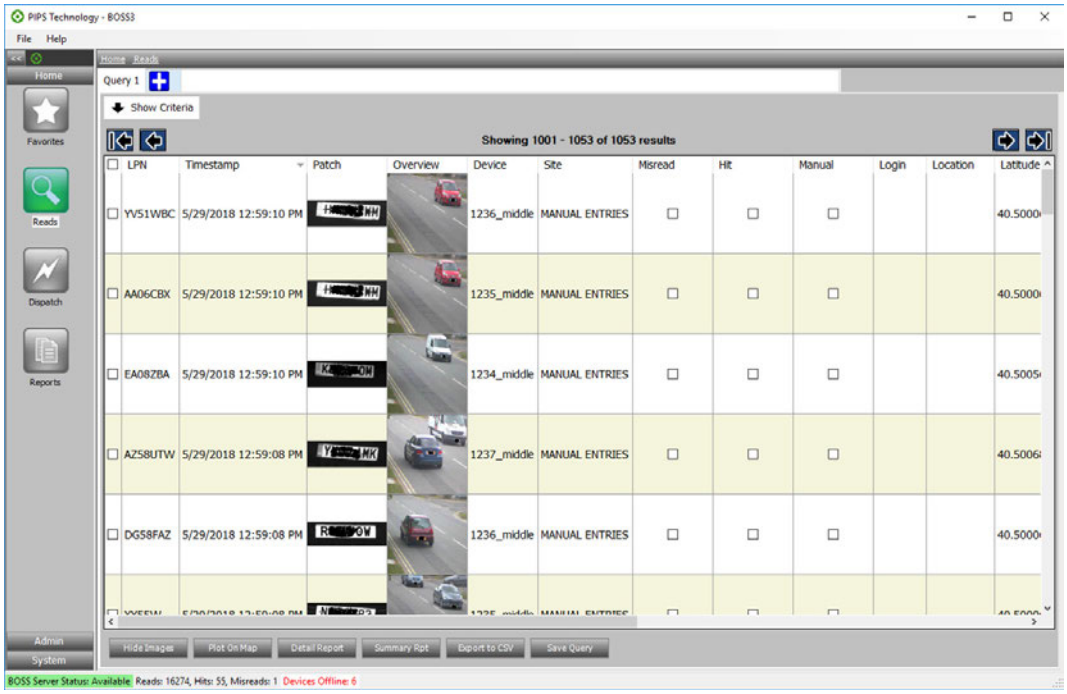


11.6 Cross-Referencing External Data

BOSS allows cross-referencing external data, such as DMV information. To query BOSS based on external information, take the following steps:

1. Create a CSV text file containing the license plate numbers to be cross-referenced. **The license plate number must be in the first field.**
2. Open the Reads Query screen.
3. Click the **Import** button next to the LPN field.

4. Click **Open** to import the plate numbers. A maximum of 50 plate numbers can be referenced at a time. Imported plate numbers will show up in the LPN field:



5. Enter other query criteria, as needed, and click **Find** to run the query.

11.7 Working with Queried Reads

11.7.1 Viewing Query Results

The results of both Quick Searches and Advanced Reads Queries are presented in the same manner.

The columns displayed are:

LPN – The plate text (characters) read in by a camera or manually entered by a user.
Timestamp – The date and time when the read occurred.
Patch – A thumbnail image of the license plate. Overview – The color overview picture of the vehicle. Device – The device where the read originated.
Site – The site where the read originated.
Misread – Indicates whether the read was marked as a misread by a user.
Hit – Indicates whether the read is a hit.
Manual – Indicates whether the read was entered manually.
Login – The username logged into the device at the time the read originated.
Location – The location entered in the PAGIS system. See the Pagis Software User's Manual for more information.
Latitude – The latitude coordinates of the device at the time the read originated. Longitude – The longitude coordinates of the device at the time the read was originated. Hotlist – The name of
the hotlist that produced the hit.
Field1 ... Field5, PCNID, Information – Information from the hotlist that produced the hit.
Annotation – Annotations entered for the read.
Server – The name of the server that has provided this information. This can be a local or remote server.

11.7.2 Query Results Actions

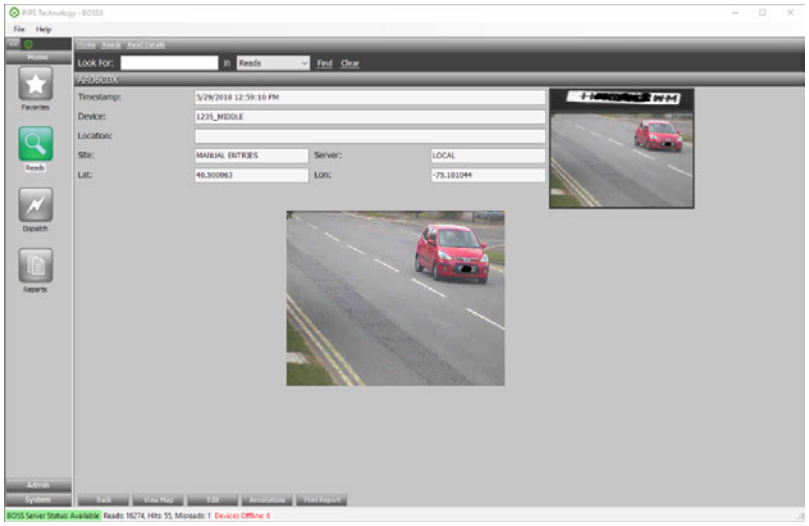
There are several button options available at the bottom of the Reads Query Results screen that offers additional uses of the data results.

Hide Images/Show Images – Used to remove the image columns, patch and overview, from the view. This can be done to provide more room for text fields to be displayed. When clicked, the Hide Images button's caption changes to Show Images. When the button is clicked again, images will again be displayed.

Plot On Map – When clicked, any selected records will be plotted on a map. One or multiple records can be selected by clicking the checkbox in the first column of the record. To select all of the records, click the checkbox in the headings column.

Detail Report – Click to generate a detailed report of selected reads. To select one or more records, click the checkbox in the first column of the record. To select all of the records on the current page, click the checkbox in the headings column. Use the navigation buttons to move to additional pages to select additional records.

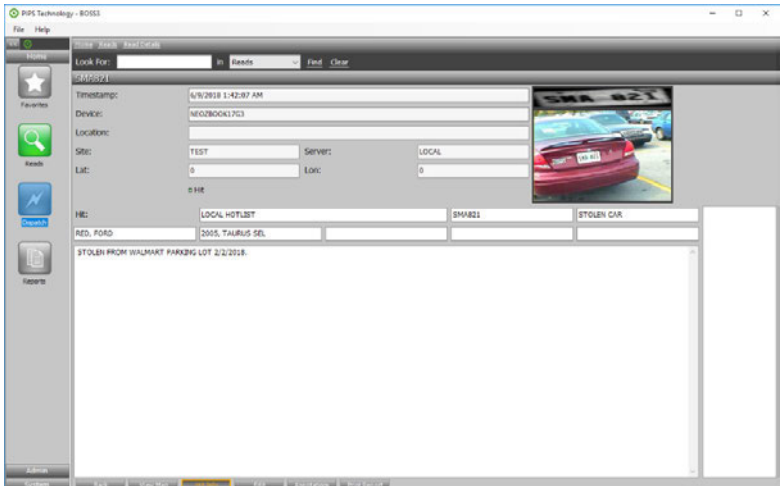
Summary Rpt – Click to get a summary report of selected reads. To select one or more records, click the checkbox in the first column of the record. To select all of the records on the current page, click the checkbox in the headings column. Use the navigation buttons to move to additional pages to select additional records. To include all results choose the All Results option in the Reads Summary Detail Report option box.



Export to CSV – Click to save the results to a file in a CSV format. Select to save the current page or all results provided. Use the navigation buttons to move to additional pages to select additional records.

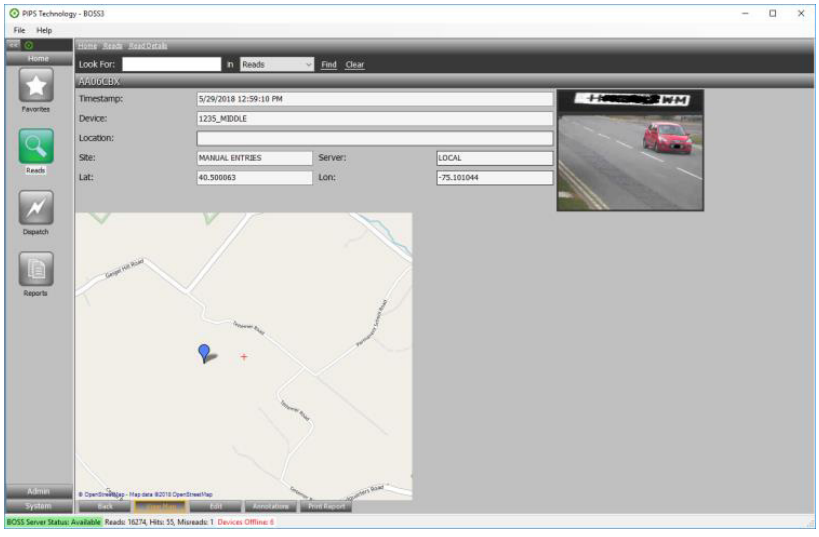
Save Query – Click to save the query criteria as a favorite for future use. See Section 11.8, Favorites, for more information.

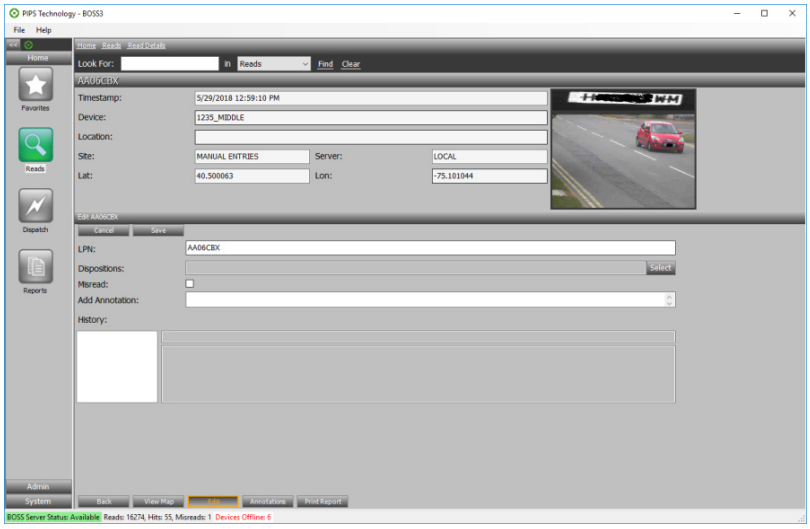
11.7.3 Viewing Read Details



Click a row in the query results to view the details of the record.

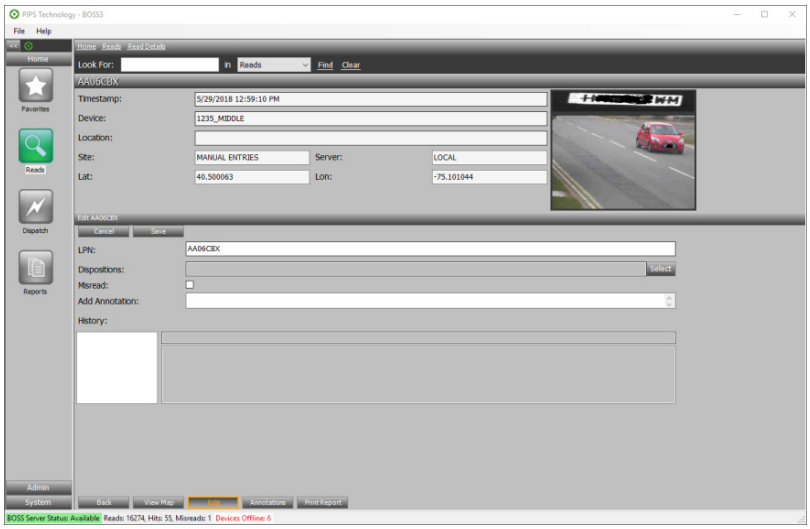
The Read Details screen displays the license plate text in the title. The timestamp, originating device, site, and geographical coordinates are displayed below. The plate patch and vehicle color overview images are on the right.



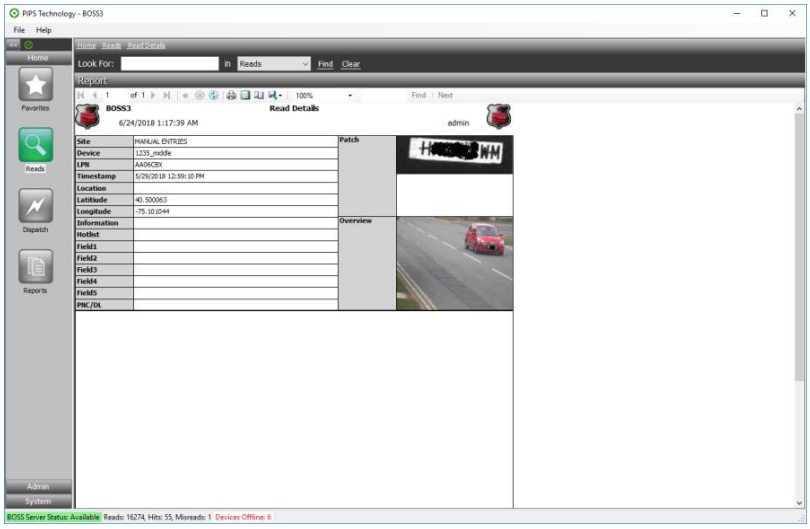


The vehicle color overview picture can be enlarged by clicking on the picture. Use a mouse scroll wheel or the cursor up and down keys to resize the image. Left-click on the enlarged image to close. Right-click on the image to copy the image to the Windows Clipboard.

If the read is a hit, details of the hit can be displayed by clicking on the Hit Info button at the bottom of the screen.



A map plotting the location where the read occurred can be displayed by clicking on the View Map button.



Use the Edit button to correct the plate text and/or assign a disposition and annotation to the read. Click on Save to save the changes. The plate text can also be marked as misread if the read information is found to be incorrect.

Annotations associated with the read can be viewed by clicking on the Annotations button.

A report containing the read's details can be printed by clicking on the Print Report button.

11.8 Favorites

Favorites are read queries that use specified criteria, which have been saved. Favorites can be reused, which allows the user to quickly perform frequently needed queries without having to define the parameters each time. Favorites are specific to each user.

11.8.1 Creating a New Favorite

1. Select **Home** on the Shortcut bar to access its icons.
2. Click on the **Read** shortcut.
3. Enter the desired query parameters in the Browse/Edit area (e.g., data range, location, radius, servers).
4. Click the **Go** button to run the query.
5. When the query results window appears, click the **Save Query** button.
6. A dialog box will appear, prompting for a name. Enter a descriptive name for the new favorite.
7. Select the Use Relative Date Range option if desired.

   Use Relative Date Range Option – If this option is selected when saving a query, and when the resulting favorite query is run in the future, it will use a From and To date and time range relative to the From and To date and time entered for the original query. It will not use the actual range entered in the original query. Also, it is important to remember that the time span between the From and To date and the time range used is relative to the date and time when the original query was run.

   Consider a query that is saved as a favorite and originally defined on 8/9/20xx to search reads between 8/02/20xx and 8/8/20xx (the prior week). If the Relative Date Range option is selected, the query is saved to always run against the prior week rather than those actual dates. If the Favorite option is invoked on 12/3/20xx, it will return results from 11/26/20xx through 12/2/20xx. It is important to note that the results will be relative to the actual time of the original query and when it is rerun. Suppose you run a query at 5 pm today to search for reads occurring between 9 am and 5 pm and save it as a favorite. When you run the query again tomorrow, it will search for reads that occurred eight hours **before** the current time, which may not necessarily fall between 9 am and 5 pm.
8. Click **OK** to complete. The query definition is now saved as a favorite and can be accessed at any time.

11.8.2 Activating a Favorite

1. Select the **Home** category in the Shortcut bar (if not already selected).
2. Click the **Favorites** shortcut.
3. A listing of all favorites is displayed in the Browse/Edit area.
4. Click the desired favorite. (The selected favorite will be highlighted in yellow.)
5. Click the **Go** button in the bottom area of the Browse/Edit area.
6. The query results will appear in the Browse/Edit area.

11.8.3 Deleting a Favorite

1. Select the **Home** category in the Shortcut bar (if not already selected).
2. Click the **Favorites** shortcut.
3. A listing of all favorites is displayed in the Browse/Edit area.
4. Click the desired favorite. The selected favorite will be highlighted in yellow.
5. Click the **Delete** button in the bottom area of the Browse/Edit area.
6. Press **Yes** to confirm deletion.

12 REPORTS

Several reports are included, automatically, with a new BOSS installation. These reports are available for use as soon as a BOSS Administrator assigns role permissions to the reports.

12.1 Running a System Report

1. Select the **Home** category on the Shortcut bar.
2. Click the **Reports** shortcut.
3. The Browse/Edit area will display a list of available reports. (Reports to which the user does not have permissions are not displayed.)
4. Click the desired report. The selected report is highlighted in yellow. Parameters for the report appear in the bottom of the Browse/Edit area.
5. Select **Date Range**. All reports call for From and To dates to define the time range for the report data. By default, the values in these fields define a report for the most recent two weeks. You can change these dates by typing different information into these fields, using the **Up/ Down** arrow keys to the right of the field or by clicking the **Select** button to the right of the field and selecting a date on the calendar and then clicking the **Save** button.
6. Some reports also permit you to filter report results by user(s). For example, the pictures report, which reports pictures taken in PAGIS, allows you to define one or more users to report on.
7. Once desired parameters are selected for the report, click the Go button. The report screen immediately displays, indicating that the server is generating the report until results are displayed.

12.2 Viewing and Printing Reports

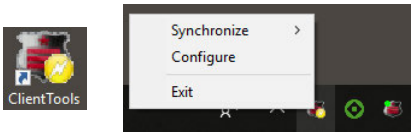
The Report screen displays the date and time the report was generated and the title of the report in the heading area. When you place your mouse above a shortcut on the Report Shortcut bar, a label appears indicating what the shortcut button does. Note that some of the buttons on the Shortcut bar are not relevant to BOSS reports and are therefore disabled.
The Report Results Shortcut bar icons are as follows:

First Page – Return to the first page of the report.
Previous Page – Go to the previous page of the report.
Page Input – In this text box, type in a particular page number to bring up on screen.
Next Page – Go to the next page of the report.
Last Page – Go to the last page of the report.
Stop Rendering – This button can be used to cancel the report processing. This can be helpful if a large report was initiated, but is no longer desired.
Refresh – Refresh the report using the most current BOSS data.
Print – Print the report.
Print Layout – Toggle between available print layouts.
Page Setup – Choose among the options for standard page setup, such as page orientation, and paper size.
Save As – Excel/PDF/Word – Save the current results to a Microsoft Excel (.xls), an Adobe Portable Document Format (.pdf) or a Microsoft Word (.doc) document.
Width Zoom Setting – This drop-down list allows you to select a zoom view for the report results on the screen.

12.2.1 Viewing the Login Statistics Report

1. Select the **Admin** category on the Shortcut bar.
2. Click the **Devices** shortcut.
3. Click the **Logs** button at the bottom of the screen.

4. Click **Go** to view the Login Statistics Report.
   Begin Date – Select the start date for the report.
   End Date – Select the end date for the report.
   Selected Users – Select the users to include in the report. Click the **Select** button. Click the checkbox of the desired user. Click on the **Save** button.



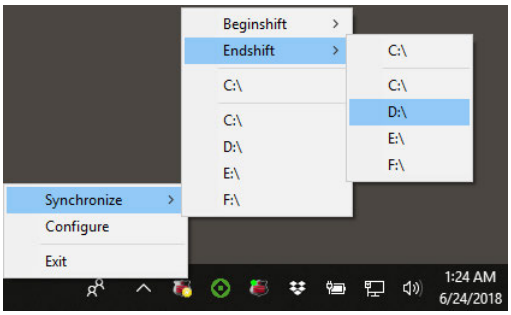
13 CLIENT TOOLS

The Client Tools utility is used to transfer any necessary files needed for a shift from BOSS to an PAGIS system that is being run in the Disk Sync mode. After the completion of a shift, Client Tools can then be used to transfer read data files captured during a shift into BOSS. The utility is configurable and processes files stored on a local, network, or USB flash drive. Like Smart Client, the Client Tools utility does not have to be run on the BOSS server; it can be configured to access the server via an IP Address.

Client Tools does not have a customary interface. Once the utility is started, the Client Tools icon will appear in the Windows System Tray.

Before use, Client Tools must be configured, which is described in Appendix 17. Once the Client Tools has been configured, it can now be used to synchronize information between BOSS and PAGIS:

1. To start, right-click on the **Client Tools** icon.



2. Select **Synchronize**. The next menu displayed is divided into three sections.

   a. The first section allows the user to select either **Create Begin Shift Files or Synchronize End Shift Files**. When either option is selected, the next menu is displayed. It is divided into two sections; it is the bottom two sections of the previous menu and functions the same way.

   b. The second section displays the path defined during configuration. This is a shortcut to perform Begin Shift and End Shift at the same time, storing the Begin Shift files in the defined location and processing the End Shift files at the defined location. If there are no End Shift files to process, this feature will be complete after the Begin Shift file is created. No error message will be displayed if the End Shift files are not found.

   c. The last section lists the drive letters currently on the workstation. If one is selected, Client Tools will perform a Begin Shift first and store the files at the root of the drive selected. Then Client Tools will check to see if there are End Shift files at that location. If found, the files will be processed. If not found, the synchronization process is complete. No error message will be displayed. This is an additional option if the configured drive is not currently available.

Note that once End Shift files have been processed, they are deleted.

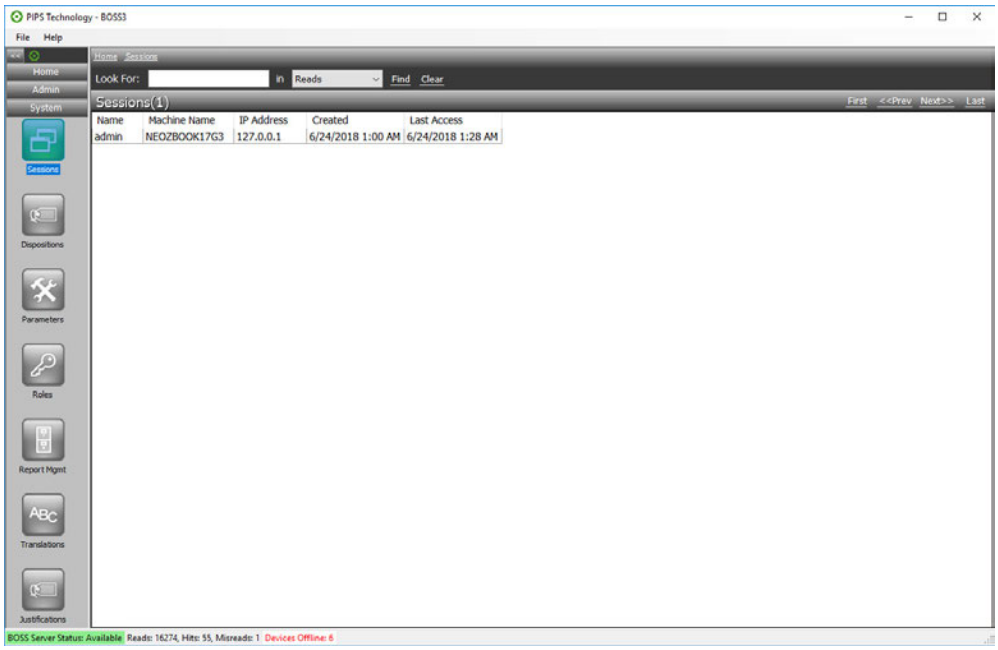
14 ARCHIVING DATA

It is possible to archive reads that have accumulated in the BOSS database. Based on settings that are configurable in System Parameters, reads that meet the specified criteria are transferred from the main BOSS database to an archived BOSS database. *(See Section 15.3.2, List of BOSS System Parameters, for additional information on configuring this feature.)*

Once enabled, this process is handled by the BOSS server. There should be no noticeable difference to a user logged into a BOSS Smart Client when reviewing or reporting on stored reads. The only indication in the BOSS Smart Client that reads have been archived will be on the BOSS Home screen. The user will be able to see a calculable difference between the reads and hits counts compared to the total reads and total hits counts. The difference between the values will be the number of reads and hits stored in the archived database.

15 SYSTEM SETTINGS

15.1 Sessions



The Sessions screen allows for viewing the current list of logged-on BOSS users. Each login on each computer utilizes a concurrent license of the software. Since BOSS is licensed per concurrent active session, a BOSS Administrator may need to have a session disconnected in order to release a session license. A BOSS Administrator can force a session disconnect in the Sessions screen.

Note: BOSS allows a single "admin" login to access BOSS even if the number of concurrent sessions has been exhausted. Please see Section 2.1, BOSS Administrator Login, for more information about the "admin" username.

15.1.1 Viewing and Disconnecting Sessions

1. Select the **System** category on the Shortcut bar.
2. Click the **Sessions** shortcut. A list of current user sessions appears in the Browse/Edit area.
3. The heading in the Browse/Edit area indicates the total number of current sessions.
4. Click on a session to see details in the bottom half in the Browse/Edit area.
5. To disconnect, click the **Disconnect** button that appears in the detail area, and click **OK**.

Note: You cannot disconnect your own session in this manner. To disconnect your own session, simply log off the BOSS application.

15.1.2 Workstation Power Management and Sessions

Using Windows Power Management to hibernate or suspend a workstation running the BOSS Smart Client will cause the session in BOSS to be terminated after five minutes. When the workstation is resumed from hibernation or a suspended state, the user will have to log in to BOSS again.

15.2 Dispositions

Dispositions are pre-defined classifications that can be assigned to hits. “Arrest Made,” “Vehicle Recovered,” “Surveillance Established” are examples of dispositions. A BOSS Administrator is able to define any number of dispositions for her system. Users can then use those dispositions to specify the action taken or the status of the hit. A new BOSS system will have a Default Disposition category that includes one disposition of “No Action.” Additional categories can be defined as needed.

15.2.1 Defining a New Disposition

1. Select the **System** category on the Shortcut bar.
2. Click the **Dispositions** shortcut. A list of all current dispositions appears in the top of the Browse/Edit area.
3. Click the **New** button in the bottom of the Browse/Edit area.
4. Enter a name for the disposition. If adding it to the default category, simply enter the name of the disposition. If adding it to a new category, the format of the name should be [Category : Disposition Name], i.e., **Auto :Vehicle Recovered**.
5. Enter a **Description** for the new disposition.
6. Specify a **Priorit**y for the disposition. (A lower number means a higher priority.)
7. Select the **Back Office Only** option if the disposition should not be available only in the Correct Reads screen in BOSS, and not exposed in PAGIS.

15.2.2 Deleting a Disposition

1. Select the **System** category in the Shortcut bar (if not already selected).
2. Click the **Dispositions** shortcut.
3. A list of all dispositions is displayed in the Browse/Edit area.
4. Click the desired Disposition. The selected disposition will be highlighted in yellow.
5. Click the **Delete** button in the bottom area of the Browse/Edit area.
6. Press **Yes** to confirm deletion.

15.3 System Parameters

System Parameters allow for configuration parameters for a BOSS system. System parameters only need to be configured during initial system configuration and normally do not need to be modified again after that.

15.3.1 Editing System Parameters

1. Select **System** from the left Shortcut bar.
2. Click on the **Parameters** button in the Shortcut bar.
3. Click on the desired parameter in the right Browse/Edit window. The bottom pane of the Browse/Edit window will display the entry field for the selected parameter.
4. Modify the parameter value as desired and click the **Save** button.

15.3.2 List of BOSS System Parameters

arc_ActiveRetentionDays – This setting dictates how long reads will be maintained in the BOSS database. After reads have been stored for this time, they will be moved to the archived database, creating space for additional reads in the main database. The default setting is 730 days but can be varied based on the size and needs of the system.
arc_ArchiveDBRetentionDays – This setting dictates how many days to retain an archived database. After an archived database has been stored for this time it will be removed, creating space for additional archived databases. The default setting is 0 days, which indicates that the archived databases will never be removed, but the number of days can be modified based on the size and needs of the system.
arc_DatabaseLocation – This setting allows the user to specify where the archived databases should be saved. A blank entry will save them in the SQL default location.
arc_Enabled – To allow the BOSS server to archive aged reads and free up space, enable archiving by setting this to 1. When archiving is not desired, this setting should be 0.
arc_EndOfMonthCutOff – This setting forces a restriction on the size of the archived databases, so that nothing will be added after the end of each month. The default setting is disabled (0). To enable the setting, change the value to 1.
arc_MaxSize – This setting allows the Administrator to determine the number of reads that can be stored in the archived database. The default value is 1 million and can be varied based on the size and needs of the system. Once an archived database has reached this maximum number of records, a new archived reads database will be created.
audit_Justification_FileNumberRequired – When this setting is enabled (1), users performing read queries are required to enter a file number.This information will also be listed in the audit report. The default setting is disabled (0).
audit_Justification_NotesRequired – When this setting is enabled (1), users performing read queries are required to enter a justification note. This information will also be listed in the audit report. The default setting is disabled (0).
audit_JustificationEnabled – When this setting is enabled (1), users performing read queries are required to select a pre-defined justification. This information will also be listed in the audit report. The default setting is disabled (0).
data_CaptureUsageStatistics – When this setting is enabled (1), information sent from a PAGIS device that has been modified due to Privacy settings will still be utilized to generate usage statistic reports. The default setting is disabled (0).
hls_HotListDeltas – When this setting is enabled (1), updated hotlists will be deployed in full. Changing the setting to disabled (0) will cause only the changes made in the updated hotlists to be deployed.
Password_Expiration_Days-Number of days a password is allowed to remain unchanged. Value “1”=enabled, “0”=disabled.

15.3.2 List of BOSS System Parameters (continued)

Proxy_uri/proxy_username /proxy_password/proxy_domain – These settings are only necessary if there is a proxy server involved that requires authentication for connection. Enter a valid Uniform Resource Identifier (URI), username, password, and domain in the associated fields to allow communication through the proxy server. Consult the network Administrator for proxy authentication information

purge_Minutes – This setting is the time, in minutes, between each session of purging or archiving. The default value is 15 minutes and is configurable to any value of 1 minute or greater.

purge_ReadCount – This setting is the number of records to be processed by the purging or archiving process per session. It can be any value, but setting it according to system limitations is recommended because the process can be resource intensive if set too high.

readQuery_fromDate – This setting allows the user to adjust the default From date on the Reads Query screen. Any value can be entered and it is used to decrement from today. Example – a value of 7 would result in a from date seven days earlier than today.

readQuery_toDate – This setting allows the user to adjust the default to date on the Reads Query screen. Any value can be entered and it is used to incremented from today. Example – a value of 7 would result in a to date seven days later than today.

Recent_Read_Time- Time in min. of how long to hold reads in the "Recent reads" table for hit evaluation.

Recent_Reads_Amt- Number of records to delete from "Recent reads" if older then Recent read time.

ResendEmailNotice- Resend Offline notification on Fixed Camera after this amount of time has expired.

rq_ReaperHours – This setting manages how long to retain a temporary database table created when running certain read queries. This allows the user to continue to review the results of those queries for a longer time. The default is a minimum of 48 hours, and there is no maximum value.

smtp_AlertTemplate- Default email template, definitions listed in table below.

smtp_SenderName – In order for the BOSS server to send alerts to email addresses, the SMTP settings must be configured correctly. The SMTP sender field should contain the username that will appear in the from field on an email generated by the BOSS system.

smtp_Server – The name or IP address of the SMTP server should be entered here. The name or address used here must be one by which the SMTP server can be reached from the BOSS server. This field must be populated correctly in order for the BOSS system to send any alerts to email addresses.

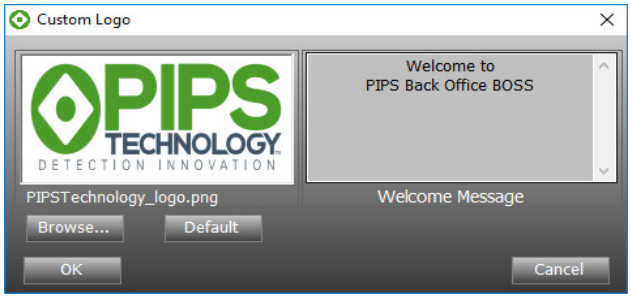
smtp_SSL – If Secure Sockets Layer (SSL) is used on your SMTP server, the value of this field should be set to 1. If you do not use SSL, this field should be set to 0.

smtp_SubjectTemplate – This field sets the subject line of alert emails generated by BOSS. The following entry in the field incorporates both static text and a BOSS field variable as well: BOSS alert FROM [SRC].

TOKEN	DESCRIPTION	TOKEN	DESCRIPTION
[LPN]	license plate	[FD1]	field1
[STE]	site	[FD2]	field2
[SRC]	device	[FD3]	field3
[LOC]	location	[FD4]	field4
[LAT]	latitude	[FD5]	field5
[LON]	longitude	[PNC]	PNCID/DL
[HOT]	hotlist name	[INF]	information

smtp_UserName/smtp_password – The SMTP username and password fields should contain a valid SMTP username and associated password for sending alerts through the SMTP (email) server. Normally, a BOSS Administrator coordinates with his SMTP Administrator to create a special SMTP user that will be used exclusively for BOSS alerts.

Soap variables- All are now legacy features not currently used.



verint_HotlistsMonitored- Enter hotlist by name separated by commas.

verint_NotificationConfigured- Indicates whether the Verint notifier should be used.

15.3.2 Branding

BOSS allows the BOSS Administrator to upload a logo image and a welcome message that is displayed to BOSS users on the Home screen. To define the image and message:

1. Select **System** from the left Shortcut bar.
2. Click on the **Parameters** button in the Shortcut bar.
3. Click on **Branding**.
4. If needed, click **Default** to remove current custom settings.
5. Pick the desired logo image using the **Browse**... button.
6. Type in a message in the Welcome Message box.

Browse – Select an image file (JPEG, GIF, BMP) to be displayed on the home screen. The largest recommended image size is 120 by 380 pixels.

Default – Remove the custom logos and texts.

Welcome Message – A custom welcome message can be typed in here.

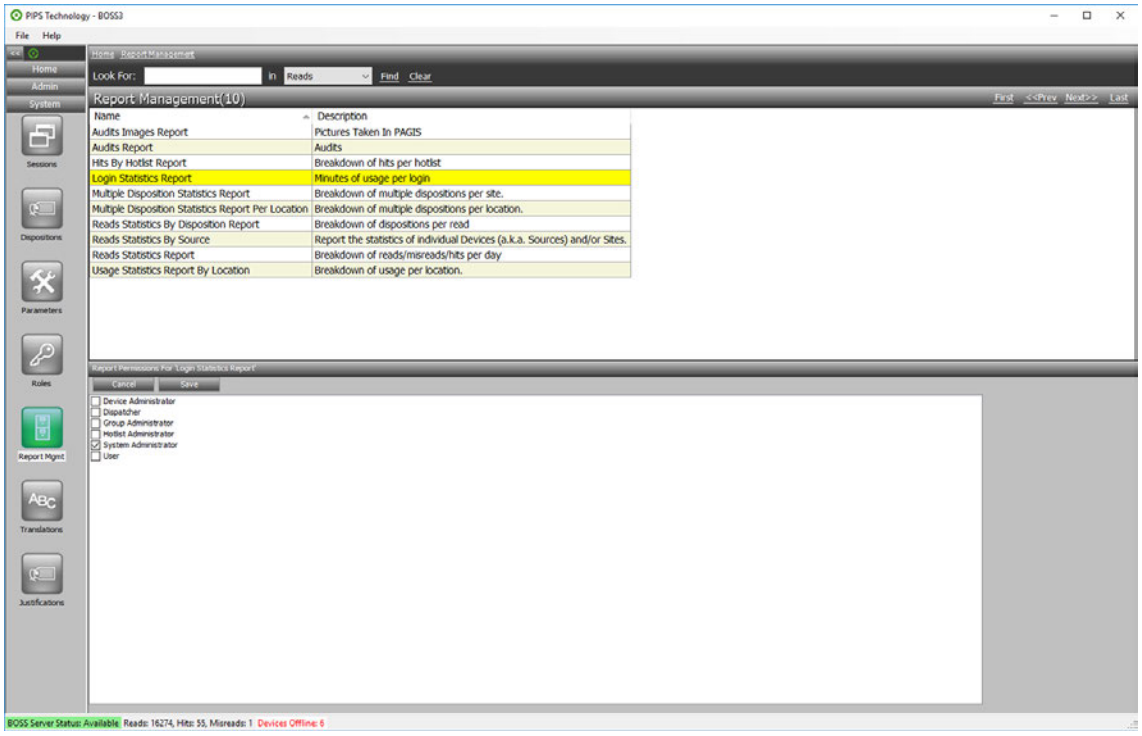
7. Click **OK** to save changes, or **Cancel** to discard changes.

15.4 Roles

In addition to the default roles that are automatically created by BOSS, the Administrator can create and configure custom roles as needed. *See Section 4.2, Permissions, for more information.*

15.4.1 Adding New Roles

1. Select the **System** category on the Shortcut bar.
2. 2. Click the **Roles** shortcut. The Browse/Edit area will display a list of existing roles.
3. 3. Click on the **New** button. The New Role entry window will be displayed in the bottom of the window.
4. 4. Enter the name of the new role and assign the desired permissions.
5. 5. Click the **Save** button.



15.4.2 Deleting Roles

1. Select the **System** category on the Shortcut bar.
2. 2. Click the **Roles** shortcut. The Browse/Edit area will display a list of existing roles.
3. 3. Click on an existing role and the edit window will be displayed in the bottom of the window.
4. 4. Click the **Delete** button. Click **Yes** when prompted to complete the operation.

15.5 Report Management

15.5.1 Assigning Permissions to Access Reports

1. Select the **System** category on the shortcut bar.
2. Click the **Reports Mgmt** shortcut. The Browse/Edit area will display a list of available reports.
3. Select a report by clicking the name in the list. The selected report will be highlighted in yellow.
4. Current report permissions for the type of report chosen display in the bottom of the Browse/Edit area. Each BOSS role is listed along with a checkbox. Click a role in the list to select. Click a second time to change an unchecked box to a checked box.
5. After selecting the desired permissions for the report, click the **Save** button.

15.6 Translations

Across various organizations and agencies, terminology related to BOSS can differ significantly. For this reason, a new function added in the BOSS version 3 series gives customers flexibility in naming conventions used in the application. The Translations function provides for changing wording on BOSS screens, which allows a customer to tailor screen labeling to correspond to their own vernacular. Text items in the translations editor correspond to labels on BOSS screens. Authorized users can change these text items as necessary.

Note: This feature is not intended as a replacement for language-specific versions of BOSS. For international versions of BOSS, please contact PIPS™ Technical Support.

15.6.1 Entering a New Translation

1. Select the **System** category on the Shortcut bar.
2. Click the **Translations** shortcut. A list of all current translations appears in the top of the Browse/Edit area.
3. Click the **New** button and the new Translations Entry screen appears in the bottom area.
4. Enter an existing label from the BOSS application in the Caption field, using the exact case and spelling that normally appears on the screen.
5. Enter the desired replacement text in the Translation field.
6. Click the **Save** button to complete the operation.

Note: The user must log off and on again for translation to take effect in the current session.

For Example: A customer preferring to see a label of “Plate” where the software normally uses the term “LPN” would use the translations feature to create the replacement for their installation. The translation Entry Caption field would contain “LPN,” while the Translation field would contain the replacement term “Plate.”

15.7 Justifications

To ensure that sensitive information is being kept secure, systems can be configured to require that users who are performing queries on reads have a valid reason for doing so. Enabling the audit Justification Enabled parameter requires users to justify their reason for querying reads. There are five justifications created by default: Audit, BOLO Post Scan Query, Crime Scene Query, Test and Trend Analysis. These queries will also be documented in audit reports.

15.7.1 Entering a New Justification

1. Select the **System** category on the Shortcut bar.
2. 2. Click the **Justifications** shortcut. A list of all existing justifications appears in the top of the Browse/Edit area.
3. 3. Click on the **New** button. The Justifications Entry screen appears in the bottom area.
4. 4. Enter a justification. There is no validation on the entry for this field.
5. 5. Click the **Save** button to complete the operation.

15.7.2 Deleting Justifications

1. Select the **System** category on the Shortcut bar.
2. 2. Click the **Justifications** shortcut. A list of all existing justifications appears in the top of the Browse/Edit area.
3. 3. Click on the justification to be deleted. The Justifications Edit screen appears in the bottom area.
4. 4. Click the **Delete** button. Click on **Yes** when prompted to complete the operation.

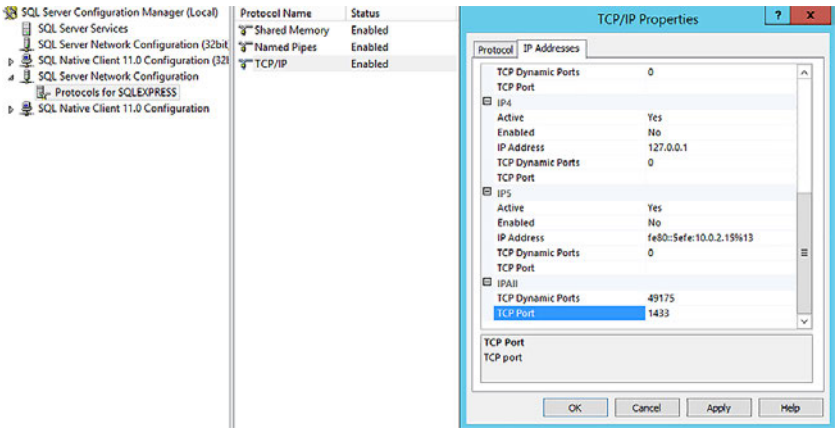
17 APPENDIX: INSTALLATION AND CONFIGURATION

This section is intended for authorized personnel in installation and configuration of a BOSS system. The information in this guide is organized sequentially, in the order that steps would be performed when initially setting up a new BOSS system, with the first section describing the software installation process, and the subsequent sections describing configuration options for a BOSS system.

Upon initial installation of a new BOSS system, the BOSS server application must be configured using the BOSS Controller application. BOSS Administrators may also find the need to modify configuration settings after the system has already been in use. Therefore, the configuration section can be used as an ongoing reference for authorized personnel responsible for maintaining the system.

Note: It is critical that only an IT Administrator or other knowledgeable personnel attempt configuration modifications to a BOSS system. Incorrect configuration settings can cause serious issues with operation and/or adversely affect data integrity. When in doubt, you should consult PIPS Technical Support before making system configuration changes.

OS feature requirements



- Windows server 2008 or newer.
- Net. TCP Port Sharing Service must be enabled and running.
- Framework .Net 4.0.

SQL Server Requirements

1. SQL version 2012 or newer required.
2. 2. SQL login account “NT AUTHORITY\SYSTEM” is required to be mapped to Boss3 database as db_owner. For system with existing “Boss3” databases this should be applied prior to Boss software installation. For new installation this can be applied after the Boss service has ran for the first time and created the Boss3 database. See- “Common issues”

Settings under SQL Server Configuration Manger:

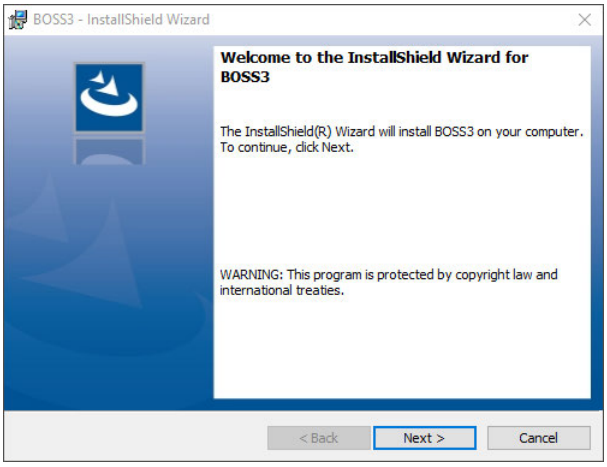
3. “SQL Server Network Configurations” Name Pips must be enabled.
4. “SQL Server Network Configurations” TCP/IP must be enabled, with “IP All” set to port 1433.
5. SQL restart required after changes.

17.1 Installing the BOSS Server Application Files

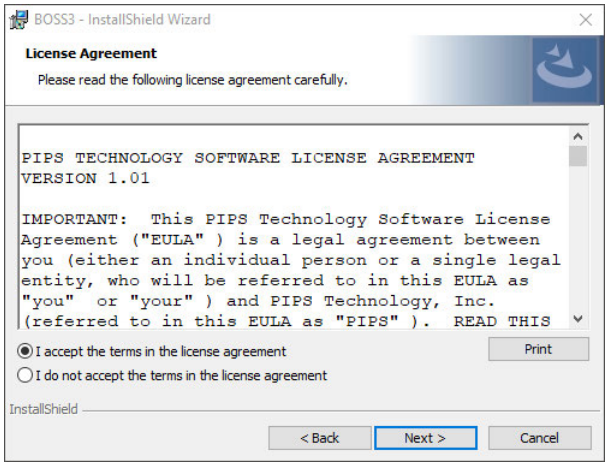
17.1.1 Running the Installer

This guide assumes that the Microsoft SQL Server 2012 or newer instance has already been installed and is available. If the SQL Server is not available, stop now and continue installation after the SQL Server has been installed. To install the Microsoft SQL Server, please follow the instructions provided by Microsoft.

Note: 1. It is recommended that antivirus utilities be disabled during the install.

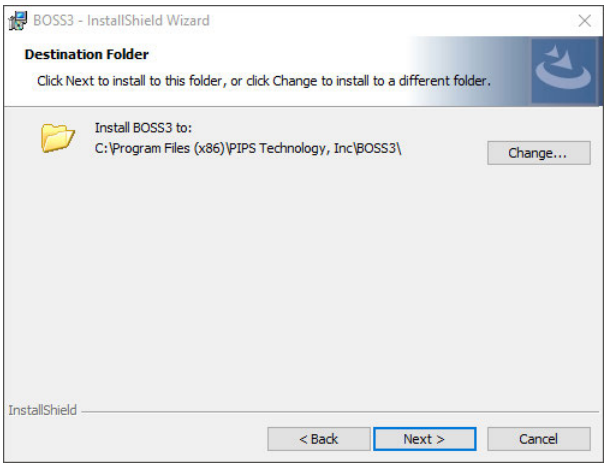


To commence the installation:

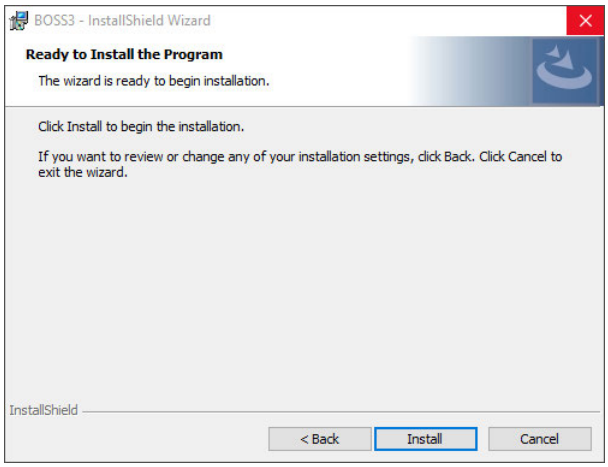


1. Select the link supplied by PIPS to the BOSS installation application.
2. Run the BOSS Setup executable.

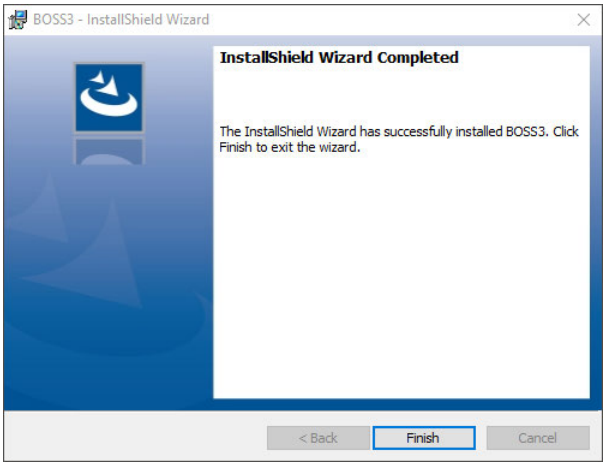
Note: Right-click on the installer icon and select Run As Administrator.



17.1.2 License Agreement

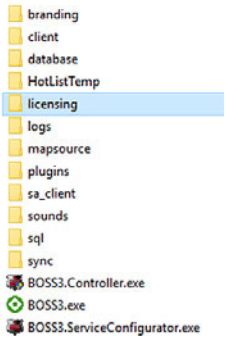


1. Click **Next** then check the license agreement checkbox to acknowledge agreement with the license terms.
2. Click **Next** to continue.

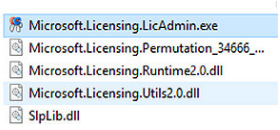


3. Accept the default installation file path or change.
4. Click “Next” to proceed to “Install”

5. When the Installation Complete message is displayed, click **Finish** to proceed to the Licensing.



17.2 License Key Management



17.2.1 Activating the License Key

Following a new installation, a valid BOSS license key must be entered. There are three options available discussed in the sections below that can be used to activate the license. For upgrades or reinstallation on same server this step is not required as the licensing tool will automagical re-acquire the licensing code.

1. Navigate to the licensing folder in the BOSS3 installation folder.

2. Start Microsoft License Manager (Microsoft.Licensing.LicAdmin.exe). This must be run as an Administrator.

3. In the License Manager User interface, select **File → Activation Wizard** to install the new license
4. When the Activation Wizard dialog opens select one of the following:
   a. I want to activate the software over the Internet. *See Section 17.2.1.1.*

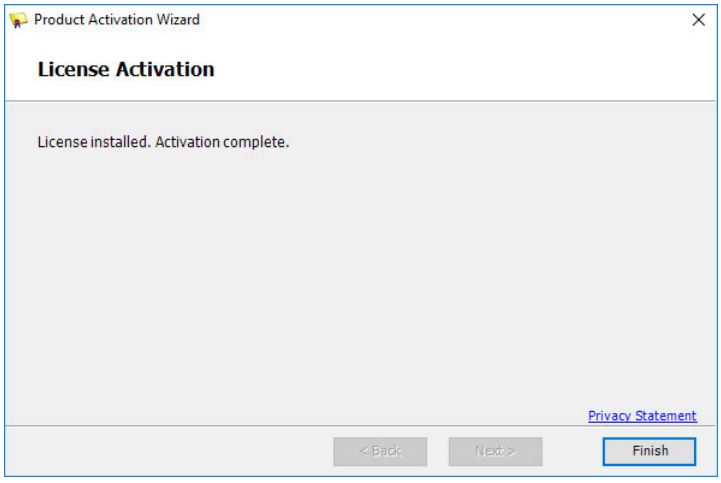
   or

   b. I have a license file I want to install. *See Section 17.2.1.2.*

   or

   c. I want to request a license file. *See Section 17.2.1.3.*

17.2.1.1 Activating the License Key over the Internet



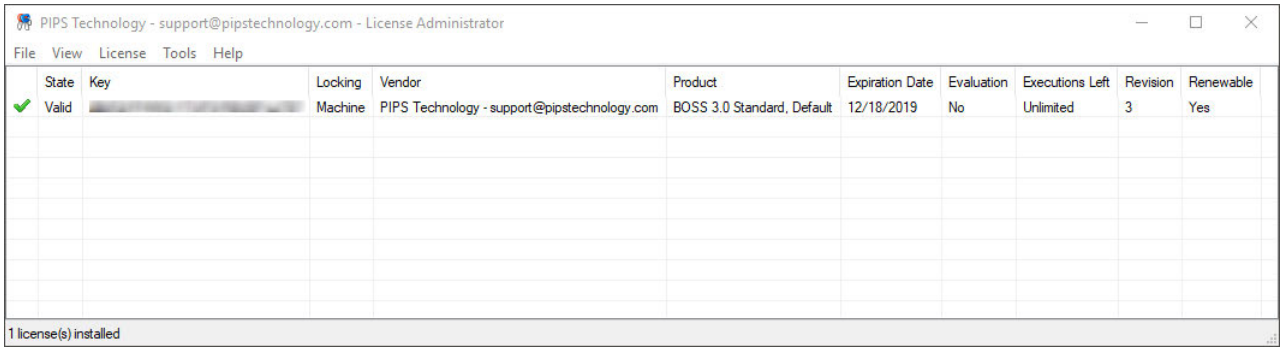
1. Check **I want to activate the software** over the Internet.
2. Click **Next** to continue.

3. Enter the activation key provided by PIPS and click **Next**.

4. The license key will be activated over the Internet. The following screen will display. Click **Finish** to continue.

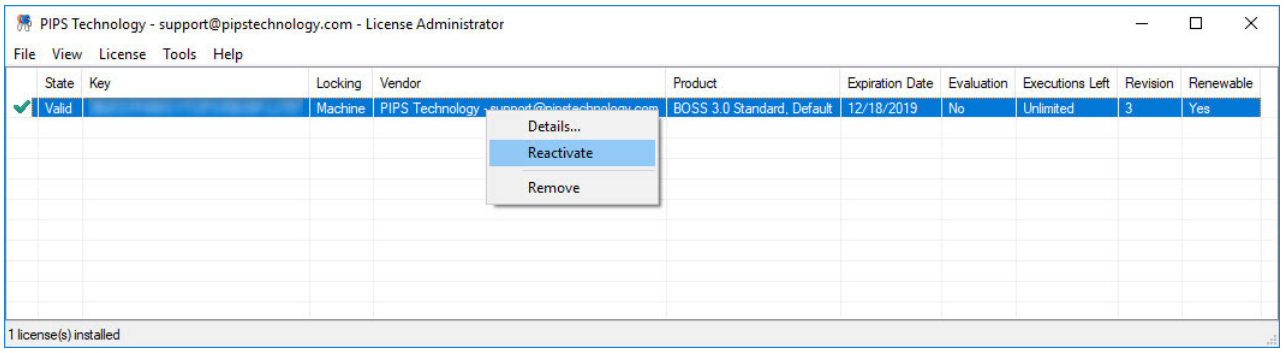
17.2.1.2 Activating the Software with a License File

1. Check I have a license file I want to install.
2. Click **Next** to continue.
3. Navigate to the location of the license file and select it.
4. Click **Next** to continue.
5. When the activation is completed click **Finish**.



17.2.1.3 Request a License File to Activate the License

1. Click **I want to request a license file**. Press Next.
2. Enter the license key you received previously. Press **Next**.
3. In the screen that displays, copy the text block highlighted (starts with "—BEGIN Request") to the clipboard and paste it into an email. Send the email to PIPS Technical Support (support@pipstechnology.com).
4. Close the Activation Wizard by clicking the **Finish** button.
5. You will be sent an activation file via email. Extract the license file (*.bin) and copy it to a folder on the computer where BOSS is installed. Return to Section 17.2.2 and follow the steps to activate the license.



17.2.2 Updating a License Key

If the BOSS license key becomes invalid, or if the license is upgraded, follow these steps to reactivate a BOSS license key:

1. Start Windows Explorer on the BOSS server.
2. Navigate to the folder where the BOSS server application is installed (by default C:\Program Files\PIPS Technology, Inc\BOSS3).
3. Locate the licensing folder as described in Section 17.2.1.
4. Open the folder and right click on the application Microsoft.Licensing.LicAdmin.exe. Select to run as the Administrator. You will see the following screen:

5. Select the license key. Right-click, and from the context menu, select Reactivate.

6. Click Next.
7. When the Installation Complete message is displayed, click Finish.

17.3 Map Display Options with BOSS

BOSS can display collected plate read information plotted on a map. There are two different mechanisms for displaying maps within the BOSS Smart Client application.

17.3.1 U.S. Census Bureau TIGER Maps

U.S Census Bureau TIGER Maps now discontinued.

17.3.2 Advanced Mapping with Internet Maps

PIPS provides an option to purchase an "Advanced Mapping" feature with BOSS. This option enables integration of Maps, an Internet-based service that BOSS can use to display maps in the Smart Client application.

Note: In order to use Advanced Mapping, the BOSS Smart Client will need an unimpeded Internet connection.

17.4 Configuring the BOSS Server Application

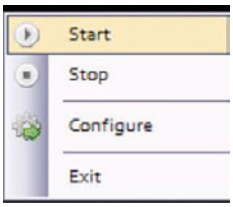
After the BOSS installation is completed, the application must be configured using the BOSS Controller program. The following sections explain how to use this program as well as the configuration settings that are available.

17.4.1 The BOSS Controller Application

17.4.1.1 Starting the Boss Controller

BOSS Controller (BOSS3.Controller.exe) is the application used to configure and control the BOSS service. The BOSS Controller is installed on the server computer along with the server application. After the installation is complete the Controller program will start automatically. If this is a new installation the license will need to be activated first. Choose to configure BOSS at a later time by clicking on Cancel.

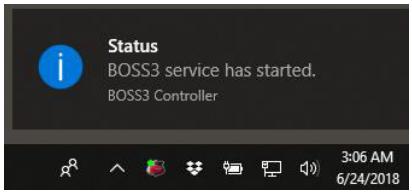
The shortcut to the BOSS Controller program can be found on the desktop or in the All Programs → PIPS Technology → BOSS3 menu. Right-click on the Controller icon and select Run As Administrator. When the BOSS Controller program is started an icon for the application will appear in the Windows System Tray at the lower right corner of the desktop.



17.4.1.2 Status Colors

The icon for the Controller program includes a "traffic light" that uses a color indicator to show the status of the BOSS service application. When the BOSS service application is running, the indicator is green. When the BOSS service application is not running, the indicator is red. Yellow color indicates that the application is changing state (starting or stopping).

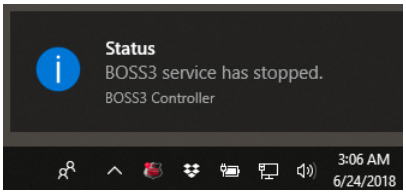
17.4.1.3 Right-Click Menu



When you right-click the BOSS Controller System Tray icon, a pop-up menu will appear:

Start	Start the BOSS service.
Stop	Stop the BOSS service.
Configure	Present the BOSS Configuration Wizard.
Exit	Close the BOSS Controller application. (Note: This closes the BOSS Controller program, but does not stop the BOSS Service.)

17.4.1.4 Starting the BOSS Service

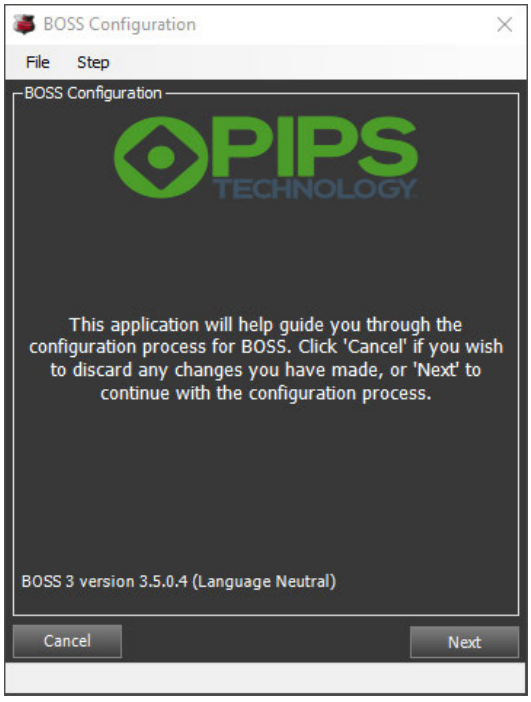


When the **Start** action is selected, and the service starts successfully, a Success message will be displayed:

The traffic light in the BOSS Controller icon will turn green to indicate the status.

17.4.1.5 Stopping the BOSS Service

When the **Stop** action is selected, and the service stops successfully, another Success message will be displayed, and the traffic light changes to red:



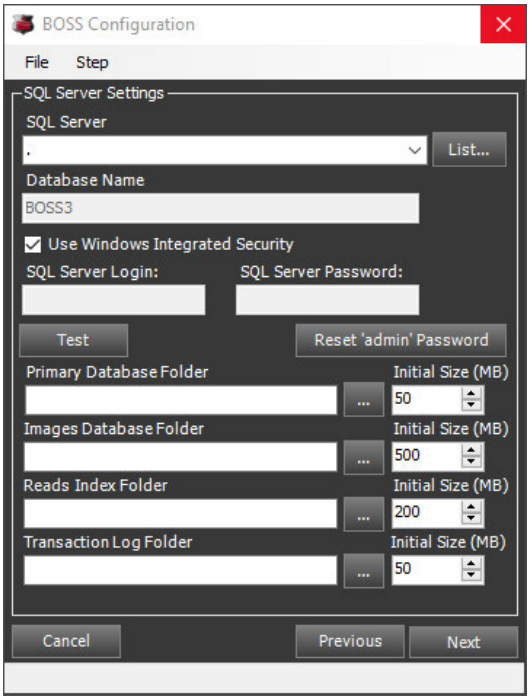
17.4.2 BOSS Configuration

17.4.2.1 Activating the Configuration Wizard

1. Right-click the **Controller System Tray** icon.
2. Select the **Configure** option. The Configuration Wizard options are explained in the following sections.

17.4.2.2 BOSS Configuration Wizard

Step through all configuration screens in the BOSS Configuration Wizard by simply clicking the **Next** button on this first screen. Click **Next** on each subsequent screen after entering in the desired settings. Note: This step-by-step process is recommended when you are configuring the system for the first time.



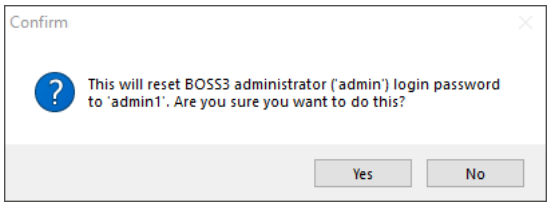
OR

Click the **Step** menu option to access the configuration menu and proceed to the step choice.

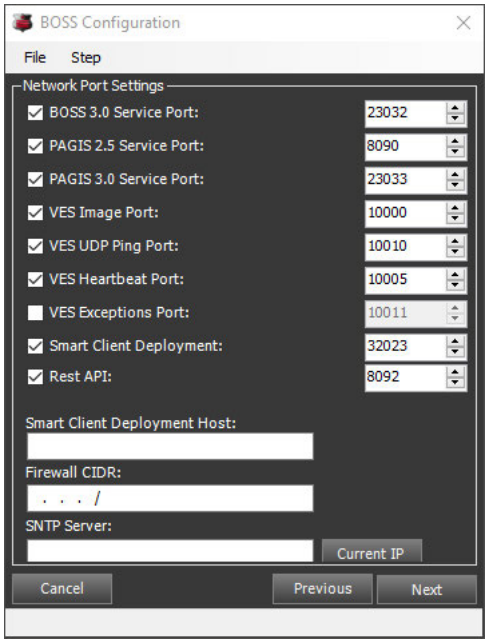
For each configuration step (described in Sections 17.4.2.3 – 17.4.2.9), clicking **Next** will take you to the next configuration screen, clicking **Previous** will take you to the previous one, and clicking Cancel will clear any changes you have made on the current screen.

17.4.2.3 SQL Server Configuration

SQL Server configuration is required for a new BOSS system, in order to specify the location and necessary authentication information for the SQL database.



SQL Server – Select the SQL Server instance for BOSS. Press **List** to choose from a list of available SQL Servers. The SQL Server Browser service must be running at this point. You may also type in the server IP address or host name. Enter a dot "." to use a local SQL Server that is running on the same machine as the BOSS service.
Use Windows Integrated Security – If checked, BOSS will use Windows Integrated Security to access the SQL Server database.
SQL Server Login and SQL Server Password – If Windows Integrated Security is not selected, enter the SQL Server username and password provided for BOSS to use to access the database.
Test – The **Test** button can be used to test the SQL Server settings currently in place. The Test button initiates a connection. A message box will appear to indicate whether the test connection fails or succeeds.
Database file locations: BOSS database can be divided among multiple locations as follows if necessary. When selecting a folder path for the database files keep in-mind that the folder path is referenced from the standpoint of the SQL server location.
Primary Database Folder – The drive and folder where the BOSS primary database will reside.
Images Database Folder – The drive and folder where the BOSS will store images.
Reads Index Folder – The drive and folder where BOSS will store database indices for stored plate reads.
Transaction Log Folder – The drive and folder where BOSS will store the database transaction log file.
Initial Database Sizes - By Default Boss will predefines the sizes as indicated in the controller.



17.4.2.4 Resetting the Administrator Password

If you have forgotten the BOSS administrator (admin) password, you can press the **Reset 'admin' password** button to reset the password to "admin1."

Pressing **Yes** will immediately reset the password.

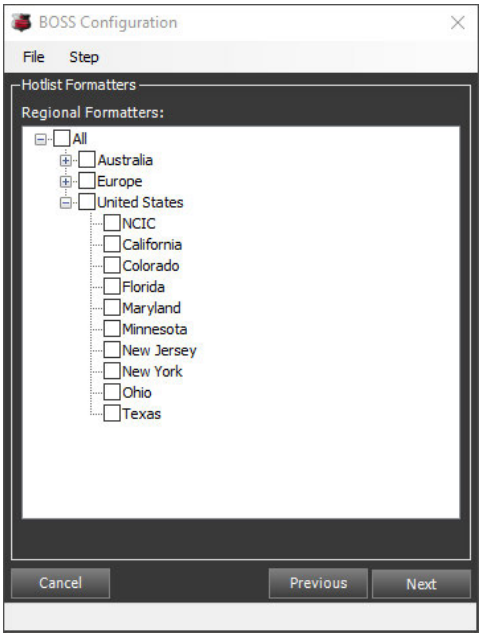
17.4.2.5 Network Port Settings

BOSS uses a number of TCP/IP and UDP network ports for communication between server and client applications and server and license plate reading devices.

17.4.2.5 Network Port Settings (continued)

FIELD	DESCRIPTION	DEFAULT PORT
BOSS 3.0 Service Port	TCP/IP port used to provide access for BOSS Smart Clients	**23032**
PAGIS 2.5 Service Port	TCP/IP port used to provide access for older mobile client versions older than Pagis 2.6.8	**8090**
PAGIS 3.0 Service Port	TCP/IP port used to provide access to various mobile client versions	**23033**
VES Image Port	TCP/IP port used to receive reads from fixed cameras	**10000**
VES UDP Ping Port	UDP port used to receive keep alive ping messages from fixed cameras	**10010**
VES Heartbeat Port	TCP/IP port used to receive heartbeat status messages from fixed cameras	**10005**
VES Exceptions Port	TCP/IP port used to receive exceptions messages from fixed cameras	**10011**
Smart Client Deployment	TCP/IP port used for BOSS client installations via BOSS server	**32023**
REST API Port	HTML port used for the communication between the BOSS service and newer versions of PAGIS	**8092**

If the checkbox in front of the port name is left unchecked, the corresponding connection will be disabled.



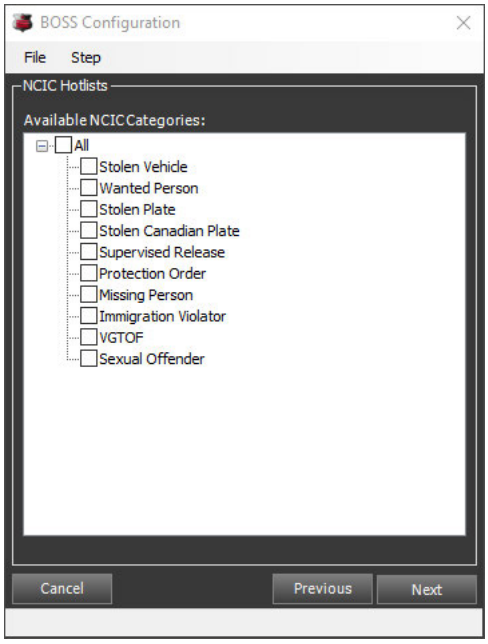
Smart Client Deployment Host – If this information is entered, BOSS Smart Clients will use the given hostname to distribute the smart client application. This can be left blank to use the local host name.

Firewall CIDR – BOSS provides a built-in firewall for incoming fixed camera connections. If a value is entered, only cameras with an IP address matching the CIDR will be allowed to connect. CIDR (Classless Inter-Domain Routing) is a standard industry method for specifying a range of included IP addresses. The format of the CIDR entry is A.B.C.D/N, in which the dotted decimal portion before the "/" is interpreted, like an IPv4 address, as a 32-bit binary number that has been broken into four octets. The value of N indicates the number of shared initial bits, counting from the left-hand side of the address.

For Example: For an entry of 10.200.200.255/24, the CIDR value 24 leaves 8 bits that can be changed. Therefore, addresses 10.200.200.x are permitted addresses.

SNTP Server – BOSS has a built-in time service. The fixed ANPR/ALPR cameras do not support automatic daylight savings time (DST) adjustment. The BOSS time service provides a customized SNTP service for these cameras in order to support DST. To use the built-in time service, Windows Time Service has to be disabled in the Services Control panel, and the BOSS time server IP address entered in this field.

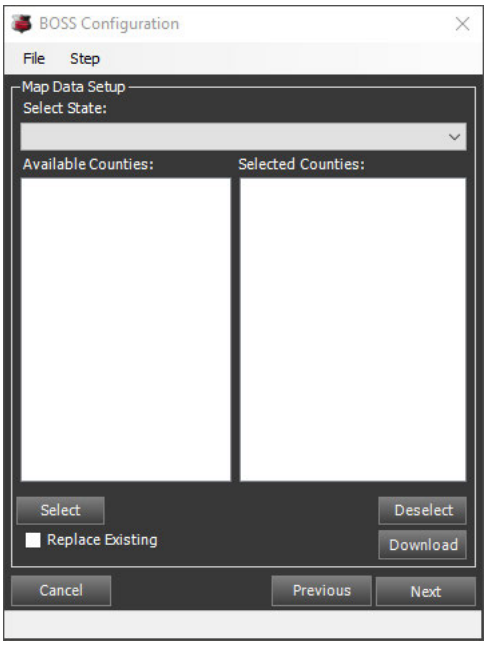
17.4.2.6 Regional Hotlist Formatters



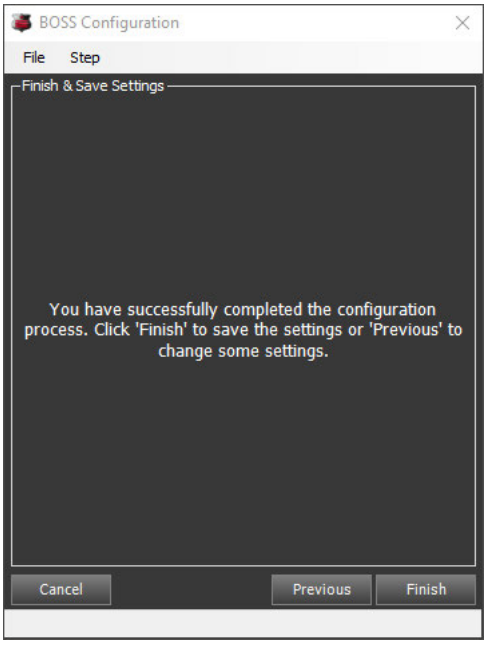
The BOSS allows the selection of predefined hotlist formatters. These formatters define the input format (structure) of hotlist data files. Custom formatters can be defined via the BOSS Smart Client application *(see Section 13 of this manual for more information)*. Also, when installing BOSS in the United States, National Crime Information Center (NCIC) data formatters can be selected for specific states (see section following).

To select or unselect formatters, click on the formatter title to add or remove a check mark. Additional formatters can be added to a system as needed. These will be provided by PIPS Technical Support upon request.

17.4.2.7 NCIC Hotlist Formatters



BOSS supports hotlist import in the United States National Crime Information Center data format. This option is available only in the United States.



To configure formatters for the desired categories, check those categories. Once the desired categories have been selected, press **Next** to proceed.

17.4.2.8 Map Data Setup

U.S Census Bureau TIGER Maps now discontinued. Do not utilize this section, click “Next”

17.4.2.9 Finishing Configuration

Click **Finish** to complete configuration. BOSS will save the chosen configuration.

17.5 Installing the BOSSUI Smart Client Application

17.5.1 Installation over the Web

To initiate a web installation on a workstation, start up Microsoft Internet Explorer and navigate to this web address: **http://{boss_server_ IP_address}:32023/publish.htm**, where {boss_server_IP_address} is the address of the server running the BOSS server application.

For Example: To install the Smart Client on the BOSS server itself, navigate to http://127.0.0.1:32023/publish.htm. The installation webpage will be presented. The advantage of installing the Smart Client over a web browser is that the application will automatically check for updated versions every time it is started.

17.5.2 Stand-Alone Installation

The BOSS Smart Client is a zero-administration desktop application meant for administration of the BOSS server application and querying data collected in the BOSS database as described in this manual. The BOSS Smart Client is installed as a single executable program. This program can be copied to any Windows workstation, or to a shared network drive.

To install the stand-alone application:

1. Start Windows Explorer on the BOSS server.
2. Navigate to the folder where the BOSS server application is installed (**by default C:\Program Files\PIPS Technology, Inc\BOSS3**)
3. Locate folder **sa_client.**
4. Copy the **sa_client** folder to the workstation or shared network folder of choice.

17.6 Configuring Client Tools

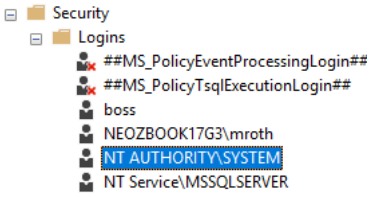
Client Tools is used to transfer any files needed during an Pagis shift from BOSS to an Pagis system that is being run in the Disk Sync mode. *See Section 13, Client Tools, and the Pagis Software User's Manual.*

Client Tools does not have a customary interface. Once the utility is started, the Client Tools icon will appear in the Windows System Tray. Before use, Client Tools must be configured and can be quickly completed with the simple configuration wizard provided:

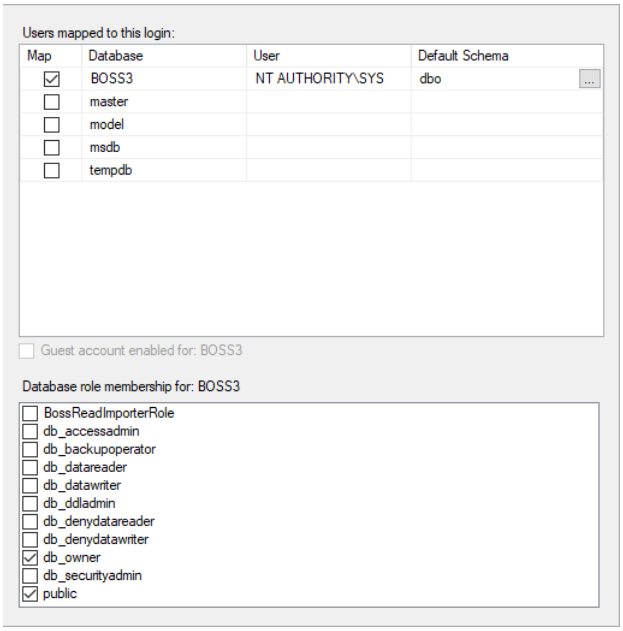
1. To start the wizard, right-click the icon and select **Configure**. The initial screen provides information about the tool.
2. Click **Next** to continue the configuration, or **Cancel** to exit the wizard.
3. Enter a path so that Client Tools knows where to store the files it creates and where to look for files to process. This path can be a local, network, or external drive. Enter the path or click on the … button and browse to the location.
4. If the Begin Shift files that Client Tools creates need to be encrypted, click **Encrypt Output**. Click **Previous** to return to the previous screen, or click **Next** to continue.
5. The data used to create the Begin Shift files is created and managed in BOSS. Client Tools needs to know where the BOSS Server is located. Enter the server IP and the port to use to connect to it. Click **Previous** to return to the previous screen, or click **Next** to continue.
6. The final screen provides additional information on how to use the wizard. Click **Previous** to return to the previous screen, or click **Finish** to save the changes and exit.

Common Issues

Missing Permissions on the database user



PIPS Boss service does not start: If the service does not start after two tries, go to the logs file located in "C:\Program files(x86)\PIPS Technology, Inc\BOSS3\logs", there look for the following message:



a. The server principal "user" is not able to access the database "BOSS3" under the current security context:
This problem is caused by missing permissions in the database user you are using.
To fix this problem you need to go to the Microsoft SQL Server Management Studio application and connect with a user with sysadmin privileges, inside the object explorer expand the folder Security, within the logins folder identify your user, right click on the user and select Properties. Inside "Server Roles" mark the sysadmin box.
After this restart the BOSS service.

The Underlying Provider failed

When a read query is made, the application shows the message **The Underlying Provider failed**

a. Inside the logs file, look for the line with the message "Login failed for user" identify the user, example- "Login failed for user 'NT AUTHORITY\SYSTEM". If this occurs log into SQL Studio Manager and map the BOSS3 Db to that account, also add the membership role of "db_owner" to the account.

Failed login

Check that the service is running, and the credentials are valid, also, check the server configurations, if you have localhost instead of 127.0.0.1 replace it for 127.0.0.1. If the problem persists go to the logs file and identify the error and contact PIPS customer support support@pipstechnology.com.

Relocating BOSS3 database

- When an upgrade requires you to move your existing BOSS3 database to a new location follow the recommend step in our "PIPS Relocate Boss Data Files" document for step by step instructions.

18 Appendix: Troubleshooting

When troubleshooting an issue, always start by looking for error messages in the Server log file, usually found at ...\PIPS Technology, Inc\ BOSS3\logs\BOSSServerLog.txt. Proceed based on the following information, recognizing that escalation may be necessary. If so, obtain a copy of the complete error message and include it with all escalated documentation.

ISSUE REPORTED	EXPLANATION	STEPS TO CORRECT
Just after an installation/upgrade, the UI won't start.	It takes several moments for the BOSS Server to be completely started and ready for information to be accessed.	After starting the BOSS server, wait for several moments before attempting to start the UI. If this is an upgrade this could be several minutes while the database is being updated.
I start the BOSS Controller, but it stops a moment later. The following error message may display "Error: Error in BOSS3 Controller. Please check the log files." (New installation scenario)	The license was not activated. When checking the BOSS Server Log, there will be two error messages : – 'Licensed for 0 concurrent clients' and – 'Failed to set registry parameter [_tmpbaliked a63] to value System.Byte[].'	Return to the licensing activation and updating checklist. (*See Section 17.2, BOSS Version 3.2 and Above License Key Management.*)
I start the BOSS Controller, but it stops a moment later. The following error message may display "Error: Error in BOSS3 Controller. Please check the log files." (Upgrade scenario)	The Upgrade Tool must be run before starting the Controller.	Run the Upgrade Tool. (*See Section 17.7 The BOSS Upgrade Tool.*)
I start the BOSS Controller, but it stops a moment later. The following error message may display "Error: Error in BOSS3 Controller. Please check the log files." (Other scenario)	If the Upgrade Tool has been run, there may be a problem with the database.	Look for error messages in the BOSS Server Log. Provide this information to Technical Support.
A fixed camera won't connect.	The firewall could be blocking the communications.	Ensure that the firewall is allowing communications through the VES ports, found in the BOSS Configuration Controller on the Ports screen.
PAGIS won't connect.	The firewall could be blocking the communications.	– Ensure that the firewall is allowing communications through the REST API (for PAGIS 2.7.x) and PAGIS 3.0 Service (for versions of PAGIS) ports, found in the BOSS Configuration Controller on the Ports screen. – Ensure that the device has been enabled in the BOSS UI Devices screen.
Hotlist will not update.	There is typically a problem with the source file.	– If it is a network hotlist, ensure that the site can be reached by entering the address in a browser. – If a local hotlist, ensure that the file is on the system and can be opened.
The NCIC Hotlist formatter that I need is not available. (New installation scenario)	The NCIC formatters were not added during the initial installation.	Stop the BOSS Service. Go to the Configure option on the BOSS Controller. Step to the NCIC screen. Select the desired NCIC formatters. Click **Save** and exit. Restart the BOSS Service. The formatters will now be available.

ISSUE REPORTED	EXPLANATION	STEPS TO CORRECT
I am unable to see reads/hits in the Dispatch screen.	The time on the read/hit coming in must be relatively close, within a couple of minutes, to the BOSS server time.	For a mobile ALPR system, correct the time on the laptop or ALPR processor. A fixed camera can be configured to use a time server. If issue persists, the server that BOSS is running on could also be configured to sync with a time server.
An error message, "Compressed method not supported," was found in the BOSS Server Log.	There are various reasons that this message can occur.	Obtain a copy of the complete error message. Provide this information to Technical Support.
An error message, "Transaction has aborted," was found in the BOSS Server Log.	There are various reasons that this message can occur.	Obtain a copy of the complete error message. Provide this information to Technical Support.
An error message. "Error #nn appeared in the db for Stored Procedure xxxx on line nn." was found in the BOSS Server Log.	An error occurred when running the stored procedure listed in the message.	Obtain a copy of the complete error message. Provide this information to Technical Support.
An error message, "Timeout expired. The timeout period elapsed prior to completion of the operation or the server is not responding," was found in the BOSS Server Log.	A SQL timeout error has occurred.	Obtain a copy of the complete error message. Provide this information to Technical Support.
An error message, "SNTP server not started, could not bind to InterNetwork 0.0.0.0:123," was found in the BOSS Server Log.	This is an expected error message that occurs when BOSS has not been configured to access a time server.	If no time server has been configured, this message can be ignored. If one has been configured, this needs to be escalated for further assistance.
After a new installation, the BOSS server stops running with an error message, "Failed in working with the database. Ensure connectivity is properly defined. Try running the BOSS Controller again and checking settings," was found in the BOSS Server Log.	When BOSS was started, there was a connection issue between it and the SQL Server.	Start by checking the information in the Controller. If that is all correct, then check to ensure that the SQL Server is running. If no issues are found there contact Technical Support Obtain a copy of the complete error message.
After a new installation, the BOSS Server stops with no error message in the BOSS Server Log.	The server needs to be run with Administrator privileges.	The server should be restarted in the Console as an Administrator. If running BOSS as a service then the BOSS Controller must be run as Administrator.
Error message in BOSS Server Log says that the file "httpconfig.exe" cannot be found.	This is an error that can occur when the system has not been updated in some time. It has been seen for other uncertain reasons as well.	Obtain a copy of the complete error message. Provide this information to Technical Support.
After a new installation, the BOSS Server starts but stops moments later. The BOSS Server Log contains the error message. "The system cannot find the file specified Additional Exception Message: Unhandled exception from 'Name:BOSS3.exe. There are no context policies." However, no file is listed in the message.	This typically occurs on older systems, especially Windows Server 2003, or systems that have not been updated for a while.	The file httpcfg.exe needs to be copied into the c\Windows\System32 directory.
The BOSS Server won't start, and there is an error message, "Transport Manager failed to listen on the supplied UIR using the NetTcpPortSharing service: failed to start the service because it is disabled," in the BOSS Server Log.	The NetTcpPortSharing Service is not running.	Obtain a copy of the complete error message. Provide this information to Technical Support.
The BOSS server stops running, and there is an error message, "Cannot open database "<Database Name>," in the BOSS Server Log.	There is an issue with the connection between the BOSS server and the SQL Server.	Start by checking the information in the Controller. If correct, then check to ensure that the SQL Server is running. If no issues are found contact Technical Support. Obtain a copy of the complete error message.

ISSUE REPORTED	EXPLANATION	STEPS TO CORRECT
The BOSS Server won't start and there is an error message "A file activation error occurred. The physical file name '<filename>' may be incorrect." in the BOSS Server Log.	There could be multiple reasons, but it is probably due to a database connection issue.	Obtain a copy of the complete error message. Provide this information to Technical Support.
When running the upgrade tool, an error message is displayed. A message is included in the BOSS Server Log: "Current upgrade state: One of the upgrade scripts failed to run as expected. Please contact support for direction."	This most likely occurred due to upgrading from an old version of BOSS.	Obtain a copy of the complete error message. Provide this information to Technical Support.
An unexpected response or behavior occurs in BOSS, and there is an error message, "Object reference not set to an instance of an object," in the BOSS Server Log.	This is a generic error message that can occur for various reasons.	Unless the issue has an obvious cause contact Technical Support. Obtain a copy of the complete error message.
The following error message, "Discarding tmp buffer because it's corrupted," has been found in the BOSS Server Log.	This message is associated with a database issue.	Obtain a copy of the complete error message. Provide the information to Technical Support.
The following error message, "SMTP server is not defined, email alerts disabled," has been found in the BOSS Server Log.	This message is informational indicating, as it states, that an email server has not been configured.	If attempts have been made to configure an email server and this error message occurs, recheck the settings and the server. If the error remains contact Technical Support.
The BOSS Service stops running, and the BOSS UI indicates that the server is not available. The following error message, "Cannot access a disposed object," is found in the BOSS UI Log.	This is an informational message provided by the UI confirming that it is no longer able to communicate with the BOSS server.	Restart the BOSS server and the BOSS UI will reconnect. If this does not correct the issue contact Technical Support.
The following error message, "The socket connection was aborted," is found in the BOSS UI Log.	This is an informational message provided by the UI confirming that it is no longer able to communicate with the BOSS server.	Restart the BOSS server, and the BOSS UI will reconnect. If this does not correct the issue contact Technical Support.
A problem occurs while adding a hotlist and the following error message "Invalid object name '<hotlist name here>'," has been found in the BOSS Server Log.	This indicates that there is an issue with the hotlist formatter being used.	Confirm that the correct formatter is being used. If so, confirm the source file is formatted correctly. If so, contact Technical Support. Provide a copy of the full error message.
While installing BOSS, an error message displays: "Error opening file for writing: <File Name>."	This indicates that the application listed in the error message is still running.	Check the Windows System Tray for any BOSS applications still running on the system. Close the application(s) and continue the installation.
The BOSS applications are installed under one user, but are not found when another user logs in.	The application was not installed using administrative privileges.	The application will need to be uninstalled and reinstalled using administrative privileges.
While using Client Tools to create Begin Shift files, an error message displays: "Client has not been activated on the server."	Mobile devices must be enabled on BOSS to synchronize data to it. This message is displayed the first time that Client Tools is used to create Begin Shift files because it has not been enabled yet.	Configure Client Tools on BOSS (see Section 17.6) so that BOSS adds Client Tools as a device.
When using Client Tools to synchronize End Shift files to BOSS, the following error message displays: "Error: Could not find <file and path name>."	Client Tools was unable to find the End Shift files to be processed at the defined path.	Check that the location assigned for the End Shift file matches the location chosen when Client Tools was configured. If it does not, move the file to the configured location.

19 Appendix: Plug-Ins

BOSS allows the use of third-party code via a plug-in that serves the needs of BOSS customers with specific data requirements. Once a plug- in is created and compiled, a copy of the DLL and any other necessary files can be copied to the plug-ins directory under BOSS. BOSS will automatically detect the existence of the plug-in at that point and permit reads to be passed to the ReceiveData method of your plug-in.

The functions of the currently available BOSS plug-ins are described in Sections 19.1 and 19.2. For more information and guidance on installing a plug-in, contact PIPS Technical Support for guidance.

19.1 The BOSS Truck Drayage Utility

Regulation of diesel-fueled heavy-duty trucks and a Drayage Truck Registry (DTR) were implemented by the California Air Resources Board (ARB) to help reduce both emissions from these vehicles and public exposure to contaminants in those emissions. Drayage trucks subject to regulation (Class 7 and Class 8) are registered and information about them is maintained on an ARB web service.

The Truck Drayage Utility is BOSS plug-in that provides access to the ARB web service. The utility is designed to contact the web service, retrieve data, and add it to a comma-separated values file. In BOSS, the Hotlist Administrator will then create a whitelist that uses this CSV file as the source file.

The connection to the ARB web service (managed by the Windows Task Scheduler) can be made once daily for a full download of the data, with subsequent connections allowed no more frequently then every 30 minutes for updates. This whitelist can then be deployed to a mobile or fixed camera in the monitored area. If a plate is read that is not included on the whitelist, a notification will be displayed in BOSS. Appropriate action can be taken at that time.

If the ARB web service is unavailable and downloads cannot be completed, the BOSS whitelist will not be updated. There will also be warning messages in the BOSS log such as “Could not connect to <web service address>. TCP error code nnnnn: <Error description>.” If this occurs, the utility will try again in 30 minutes. If the errors persist, it may be necessary to seek assistance.

19.2 The BOSS LPRD Plug-in

The BOSS LPRD plug-in relays the reads the BOSS server receives on to the national database at the Automated Regional Justice Information System (ARJIS), a joint powers agency that facilitates information-sharing among more than 70 law enforcement agencies—local, state, and federal—in the two California counties (San Diego and Imperial) that border Mexico. ARJIS operates a secure intranet (ARJISnet) with more than 11,000 users in San Diego County alone.

19.3 The BOSS DEA Plug-in

The BOSS DEA plug-in writes LPR messages to the file system as reads are received by the BOSS server. Those files will then be available for the Drug Enforcement Agency, DEA, File Transporter to act upon.

20 Appendix: BOSS Mantis

The Mantis service adds analytical analyses to new and existing read images within BOSS providing the user the ability to search based on vehicle Type, Brand, Color & Unique markings. BOSS Mantis is an additional PAID service that can be enabled on BOSS versions 3.6.x.x and above, older version of BOSS can support this feature by upgrading, providing they meet the system

20.1 How Dose Mantis Work

The service is hosted in the Amazon Web Services (AWS) Elastic Compute Cloud (EC2) platform, running in instances comprised mainly by Graphics Processing Units (GPUs). The only information sent to the Mantis endpoint is the vehicle image, known as the Overview image by the BOSS. Communication between BOSS and Mantis is performed as a client-server architecture, meaning the Mantis server uses the 443 (https) port to allow clients to reach the Mantis endpoint.

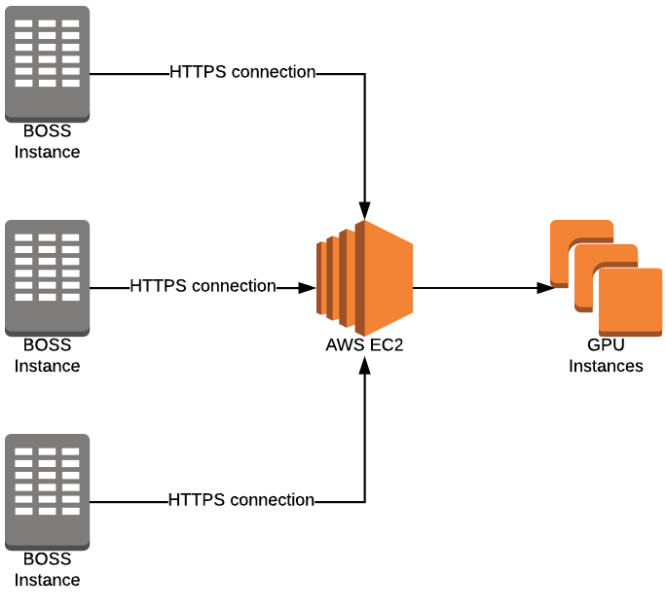


Figure 1 Multiple BOSS instances connected to the Mantis API.:

The information between BOSS and Mantis flows only in one way, this means that only BOSS clients can send data to Mantis, where it will be processed, and a response will be received by the BOSS server. Mantis cannot reach the BOSS Server or perform any kind of operations on the user's behalf over the data stored inside BOSS.

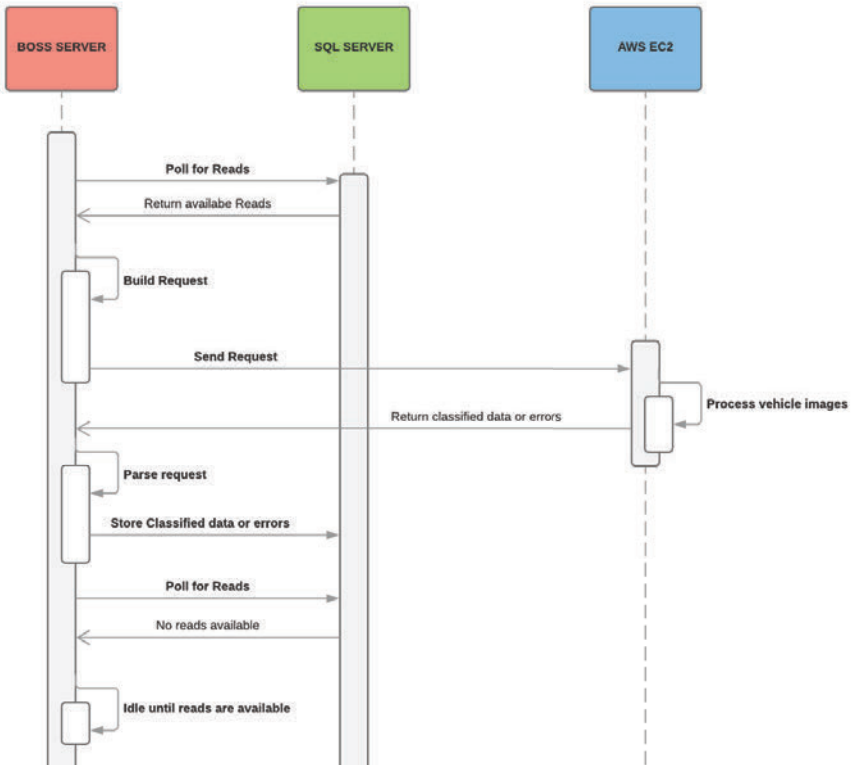

Figure 2 Sequence diagram for the current BOSS-Mantis Integration

20.2 Mantis Security and Encryption

As a summary description for the HTTPS protocol, its security is that of the underlying TLS (Transfer Layer Security) cryptographic protocol, where a certificate is used to authenticate the server, thus, the data flow between the client and the server is encrypted.

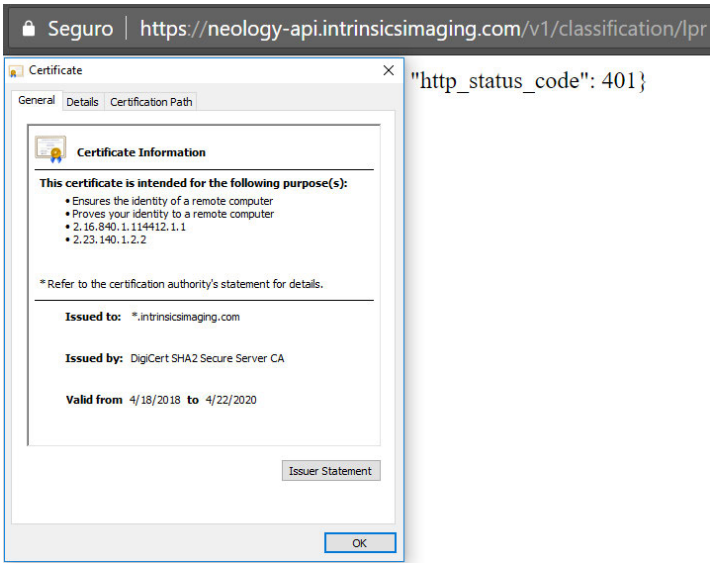

Figure 3 Available details for the certificate on the Mantis-Neology endpoint

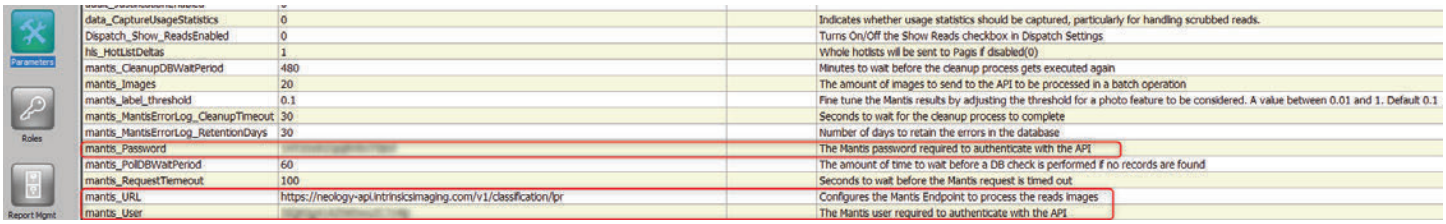
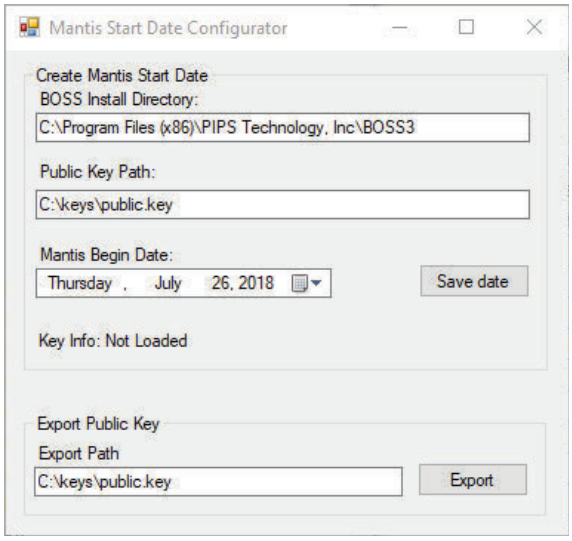
20.3 Mantis Requirements



1. BOSS version 3.6 or newer.
2. Open communication to Mantis API URL (https://neology-api.intrinsicsimaging.com/v1/classification/lpr) via port 443.
3. Mantis Licensing feature required.
4. A valid Mantis User name and password. User name and password provided at time of licensing purchase.

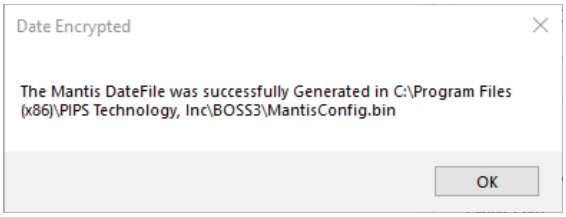
20.4 Mantis Installation



1. To upgrade or install Mantis version of BOSS follow the installation steps provide under Appendix 17. If upgrading from previous BOSS version you will also need to reactive your existing license to reflect the addition of the Mantis feature, see section 17.2.2.
2. Once BOSS is installed or upgraded, start the BOSS service to perform additional Mantis configurations.

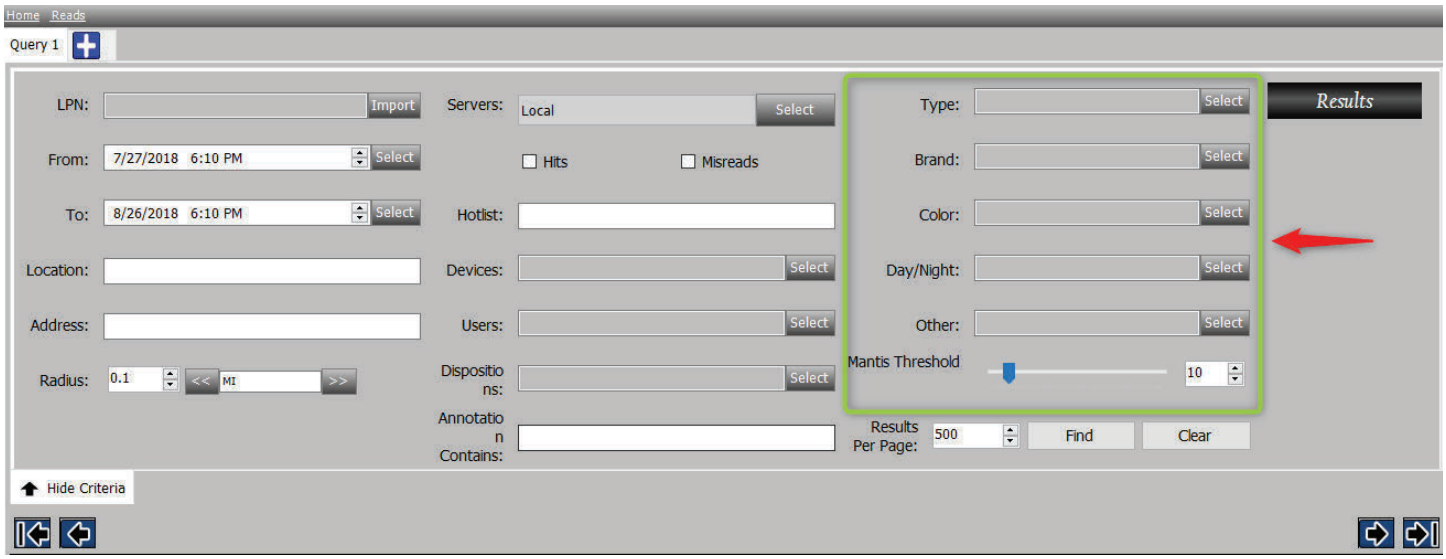
20.5 Mantis Configurations

1. Start and login to the BOSS UI, navigate to System > Parameters.
2. In the Attributes table, look for the entries with the following names:
    - **a. mantis_User:** Assign the provided Mantis user name here.
    - **b. mantis_password:** Assign the provided Mantis user password here.
    - **c. mantis_URL:** Set the Mantis URL here. https://neology-api.intrinsicsimaging.com/v1/classification/lpr



3. Additional parameters can be configured, see Mantis Parameters for details.
4. Once all the entries were assigned their corresponding values, close the BOSS UI and stop the BOSS service.
5. Download and place the “MantisStartDateGenerator.exe” file in the root BOSS3 folder, this executable is sperate from the BOSS installer and will need to be downloaded and placed manually.
6. Start the “MantisStartDateGenerator.exe” utility with administrator permissions.

7. Set the BOSS Install Directory to the Path of the folder where BOSS was installed.:



8. Set the Export Public Key path to a folder where you can access the generated public key, then click the Export button, and verify that the key was exported to the path.
9. Select a date that you want Mantis to take as the begin date for reads to be retrieved “Mantis Begin Date”. Reads that entered the system before this date, won’t be processed.
10. Click the Save date button to create the “MantisConfig.bin” file in the installation directory. A message confirming the file creation will appear.

11. Start the BOSS service.
12. When BOSS is started, the existing reads in the BOSS database will be sent to and processed by the Mantis API. The results will be stored on the local database.
13. Start and login to the BOSS UI.

20.6 Mantis Search Features

The Mantis fields should be visible in the right side of the reads panel in the BOSS UI. In case the fields are not available, diagnose the possible problems in the Mantis Configuration Troubleshoot section 20.8.

20.6.1 Mantis Search Definitions

- **Type=** Vehicle configuration style, i.e. Car, Box-Truck, Full-Size-Van, Hatchback, Minivan, Other-Truck, Pickup, Sedan, Suv.
- **Brand=** Vehicle manufacture.
- **Color=** Vehicle primary color.
- **Day/Night=** Vehicle capture in day or night.
- **Other=** Includes additional vehicle identifiers such a roof racks, spare-time, spoiler, ect...
- **Threshold=** Adjust the threshold slide bar to increase or decrease the confidences level of the Mantis search criteria based on selected filters, 1 being the lowest and 100 the highest confidence level available. When threshold is utilized in searches a new “Confidence” column will appear in the results, a user may now use this column to further sort the results by descending or ascending order.

20.7 Additional Mantis Parameters

As a summary description for the HTTPS protocol, its security is that of the underlying TLS (Transfer Layer Security) cryptographic protocol, where a certificate is used to authenticate the server, thus, the data flow between the client and the server is encrypted.

Parameter Name	Description	Default value
mantis_URL	The URL for the Mantis endpoint. The latest value should be available in this document. See Ports configuration for the corresponding value or ask a PIPS Technology representative.	None
mantis_User	Part of the credentials provided, it may be referenced also as the Mantis API key.	None
mantis_Password	Part of the credentials provided, it may be referenced also as the Mantis API password.	None
mantis_Images	The number of images to send to the API to be processed in a batch operation	20 images
mantis_PollDBWaitPeriod	The amount of time to wait before a DB check is performed if no records are found	60 seconds
mantis_RequestTiemeout	Seconds to wait before the Mantis request is timed out	100 seconds
mantis_MantisErrorLog_RetentionDays	Number of days to retain the errors in the database	30 days
mantis_MantisErrorLog_CleanupTimeout	Seconds to wait for the cleanup process to complete	30 seconds
mantis_CleanupDBWaitPeriod	Minutes to wait before the cleanup process gets executed again	480 minutes
mantis_label_threshold	Fine tune the Mantis results by adjusting the threshold for a photo feature to be considered. A value between 0.01 and 1.	10% (0.1)

20.8 Mantis Configuration Troubleshoot

To trouble shoot any Mantis issue, access to the BOSS Server logs is required. The logs are available inside the logs directory, inside the installation folder, e.g. "C:\Program Files (x86)\PIPS Technology, Inc\BOSS3\logs".

Inside this folder, there are two types of outputs:

- **BOSSMantisLog.txt.*:** This files contain Mantis Service specific information.
- **BOSSServerLog.txt.*:** This files contain overall BOSS Server information.

Known errors

L	Level	Error	Description
	INFO	**Mantis Service: Not available**	The Mantis feature was not enabled in the license key with which BOSS was activated
		Solution	Contact a Neology PIPS Technology agent for information on how to request the activation of the feature in your current license key
	INFO	**Mantis configuration not loaded, the service will not be started**	This error signals missing configuration Look for the additional messages described in the following rows.
	ERROR	**Mantis endpoint not configured, shutting down service**	The mantis URL parameter was not set properly, it cannot be a null or empty value.
		Solution	Review the ports configuration and set the mantis URL parameter to the given mantis URL. If you have an outdated version of this document, contact the Neology PIPS Technology support team to get the latest information.

	ERROR	**Mantis credentials are not configured, shutting down service**	Either the mantis_User or the mantis_password parameter was not set.
		Solution	Check that these values do not have a null or empty value. If you were not provided with these credentials, contact the Neology PIPS Technology support team.
	INFO	**Due to a request error, the next Mantis request will be performed in seconds**	There are three known errors related to mantis functionality: • **Mantis Failure**: Mantis failed to process the uploaded information. This error will not be retried because with the same image, Mantis will produce the same output. • **Connection error**: There was a problem establishing a connection with the server. This batch will be retried. • **Mantis Server Error**: An exception was received from the server. This error will be retried.
		Solution	For the above three errors, the possible solutions or actions to take are described below: • **Mantis Failure:** If too many instances of this error appear, contact the support team to diagnose the error. • **Connection error:** Verify that the appropriate rules for the firewall and whitelisting for URL and ports was set. See Mantis requirements for more details. • **Mantis Server Error:** If too many instances of this error appear, contact the support team to diagnose the error.

For a full list of all the messages produced by Mantis and a more detailed explanation about them, see the Mantis Log messages catalog.

20.8.1 Mantis Log Messages Catalog

Below is a description for the messages produced by the Mantis Service. Only applicable messages will have a solution appended to them.

Glossary

Term	Definition
ALPR	Automatic license plate recognition (also called automatic number plate recognition, or ANPR)
Annotation	A note or comment that can be made about and added to a read.
Deployment	The distribution or making available of a hotlist to a device
Device	A source of ALPR data; an PAGIS unit or a fixed or mobile camera
Disposition	The classification of a hit; e.g., a recovered stolen vehicle
Fixed Camera	An ALPR camera permanently mounted above a roadway
Group	A group of BOSS users that belong together administratively
Hit	A match on a plate read against a hotlist
Hotlist	A list or database of license plates of interest, e.g., the NCIC database
Justification	A purpose for running a query on the captured data. There are several justifications included in the system by default. The BOSS Administrator can also create custom justifications to be used.
LPN	License plate number; also known as the Vehicle Plate Number
PAGIS	PIPS™ Mobile Software, the ALPR Mobile application
Local Server	A server running on a local system, in relation to the SQL server or the BOSS UI Misread A read that was marked as a misread by a user
Mobile Unit	An ALPR system with cameras, a mobile processor, and software, such as Pagis Software, installed in a vehicle
Notification	Propagation or delivery of an alert resulting from a hit
Overview	A color image of the vehicle to which the license plate is attached
Patch	A small image of the license plate
Permission	Authorization to access specified functionality in BOSS
Read	A license plate detection event that results in the plate text optical recognition and pictures being taken
Remote Server	A BOSS server that is running in another location
Role	A position, such as Administrator, with the authorization to access specified functionality in BOSS
Site	A group of related devices
Translation	The interpretation from a word in English to a word in a selected language
User	An authorized BOSS user (with a username and password)
Whitelist	In BOSS a whitelist hit is the opposite of a hotlist hit. When a license plate read does not exist in an enabled whitelist database, the same Hits (Alert) screen will be displayed.

Infrastructure Security Monitoring, including annual penetration testing and patching where required			x
Proactive System Health Monitoring (database, application and infrastructure) to pre-empt incidents			x
Service Management reporting on quarterly basis			x
Out of Hours Support for Critical Severity Infrastructure Issues			x

Clear Form

BOSS4 Questionnaire

After completion and submission of this document, the delivery team will review and submit to you the recommended Systems Specifications. Further logistical planning shall proceed after delivery of the initial Systems Specifications.

BOSS4 Server Type		Software Upgrade	
On-Prem: ☐	Hosted (Cloud): ☐	BOSS Upgrade. Yes: ☐ No: ☐	Current BOSS Version:

Customer Information			
Agency Name:		Date:	
Point of Contact Name:			
Email Address:			
Phone Number:			

Items to Migrate When Upgrading					Not Applicable: ☐
Migrate Reads	Yes: ☐	No: ☐	Migrate Hits	Yes: ☐	No: ☐
Migrate Users	Yes: ☐	No: ☐	Migrate Groups	Yes: ☐	No: ☐
Migrate Roles	Yes: ☐	No: ☐	Migrate Devices	Yes: ☐	No: ☐
Migrate Sites	Yes: ☐	No: ☐	Migrate Hotlists	Yes: ☐	No: ☐

Current ALPR Data Statistics			Not Applicable: ☐
Average **Monthly Read** intake.		Average **Yearly Read** intake.	
Current number of **Devices.**		Current number of **Users.**	
Current number of **Hotlists.**		Current Data **Retention Policy.**	

5 Year Projected Growth - ALPR Statistics

Projected read estimates help us ensure the ALPR system specifications are properly configured over time. Example, if the agency currently reads 500,000 plates per month, and growth is expected to double that count in five years, the projected number would be 1,000,000 below.

Projected number of **Reads** per/month.		Projected number of **Devices.**	
Projected number of **Users.**		Projected Data **Retention Policy.**	

Data Integration

Are you planning or are you currently using any kind of third-party application to ingest data from the BOSS database? If so, please provide a detailed explanation of this process.

BOSS4 Cloud
Specifications for Requirements

Cloud Application Servers

Below, there are the minimal recommended configurations for different capacity configurations for BOSS4 hosted on Amazon Web Services infrastructure.

Application Servers Specifications				
Configuration	**Demo**	**Medium**	**Large**	**High Capacity**
ALPR Devices	1 to 3	3 to 50	50 to 150	Beyond 150
Average Daily Intake	Around 30,000 events	Around 500,000 events	Around 1,500,000 events	Beyond 1,500,000 events
Average of users querying data	3 users	15 users	25 users	Beyond 25 users
Alert list averaging	Around 1M records	Around 2M records	Around 2M records	Around 2M records
EC2 AWS Instances for Microservices	t3.small 2.5GHz Intel 2 cores 2 GB RAM Amazon Linux	t3.large 2.5GHz Intel 2 cores 8 GB RAM Amazon Linux	t3.xlarge 2.5GHz Intel 4 cores 16 GB RAM Amazon Linux	t3.2xlarge 2.5GHz Intel 5 cores 32 GB RAM Amazon Linux
EC2 AWS Instance for Controller	t2.small 3.3GHz Intel 1 core 2GB RAM Amazon Linux	t2.large 3.0GHz Intel 2 cores 8GB RAM Amazon Linux	t2.xlarge 3.0GHz Intel 4 cores 16GB RAM Amazon Linux	t2.2xlarge 3.0GHz Intel 8 cores 32GB RAM Amazon Linux
Fargate AWS Instance for Microservices	3.3GHz Intel 5 cores 8GB RAM	3.0GHz Intel 16 cores 32GB RAM	3.0GHz Intel 32 cores 32GB RAM	3.0GHz Intel 48 cores 128 GB RAM
Storage and Application Space	Amazon EBS gp2 SSD 128GB	Amazon EBS io1 SSD 256GB	Amazon EBS io1 SSD 320GB	Amazon EBS io1 SSD 512GB

BOSS4 On-Premise Specifications for Requirements

On-Premise Applications Server

Below, there are the minimal recommended configurations for different capacity configurations for BOSS4 On-Premise infrastructure.

Application Servers Specifications				
Configuration	**Demo**	**Medium**	**Large**	**High Capacity**
ALPR Devices	1 to 3	3 to 50	50 to 150	Beyond 150
Average Daily Intake	Around 30,000 events	Around 500,000 events	Around 1,500,000 events	Beyond 1,500,000 events
Average of users querying data	3 users	15 users	25 users	Beyond 25 users
Alert list averaging	Around 1M records	Around 2M records	Around 2M records	Around 2M records
Operating System	Amazon Linux / Amazon Linux 2 x64 Linux x64 (RHEL/CentOS, Ubuntu, Debian, SUSE) macOS x64 Windows 10 Professional x64 Windows Server 2016 x64			
Memory	16GB	32GB	64GB	192GB
Processor	x64 2.0 GHz 8 cores o better	Server Processor x64 (Intel Xeon Gold) 2 GHz 4 cores, 8 threads, 4MB cache	Server Processor x64 (Intel Xeon Platinum) 2.4 GHz 16 cores, 32 threads, 8MB cache	Server Processor x64 (Intel Xeon Platinum) 2.4 GHz 24 cores, 48 threads, 24MB cache
Hard Drive	7200 RPM SATA3	SSD SATA3	SSD SATA3 or NVMe PCI Express	SSD SATA3 or NVMe PCI Express
Application Space	128 GB of available space	256GB of available space	320GB of available space	512GB of available space

This document and its contents are intended for the recipient only. Copying, redistributing, or discussing with any other party outside of the intended recipient and Neology is prohibited.

On-Premise Database Server

BOSS4 uses the MongoDB Database Engine.

Specifications of the Database Server				
Configuration	**Demo**	**Medium**	**Large**	**High Capacity**
ALPR Devices	1 to 3	3 to 50	50 to 150	Beyond 150
Average Daily Intake	Around 30,000 events	Around 500,000 events	Around 1,500,000 events	Beyond 1,500,000 events
Average of users querying data	3 users	15 users	25 users	Beyond 25 users
Alert list averaging	Around 1M records	Around 2M records	Around 2M records	Around 2M records
Database Engine	Mongo DB Community	MongoDB Enterprise		
Operating System	Amazon Linux / Amazon Linux 2 x64 Linux x64 (RHEL/CentOS, Ubuntu, Debian, SUSE) macOS x64 Windows 10 Professional x64 Windows Server 2016 x64			
Processor	x64 2.0 GHz 8 cores o better	Server Processor x64 (Intel Xeon Gold) 2.5 GHz 4 cores, 8 threads, 4MB cache	Server Processor x64 (Intel Xeon Platinum) 2.4 GHz 16 cores, 32 threads, 16MB cache	Server Processor x64 (Intel Xeon Platinum) 2.4 GHz 24 cores, 48 threads, 24MB cache
Memory	N/A	32 GB	128GB	256GB
Hard Drive	7200 RPM SATA3 Not suitable for camera implantation with any kind of data retention expected	SSD SATA3 RAID level redundancy and scheduled DB backups recommended *See sizing chart for storage.*	SSD SATA3 or NVMe PCI Express RAID level redundancy and scheduled DB backups recommended *See sizing chart for storage.*	SSD SATA3 or NVMe PCI Express RAID level redundancy and scheduled DB backups recommended *See sizing chart for storage.*

BOSS4 On-Premise & Cloud Storage

The calculation of storage applies to Cloud and On-Premise configurations.

Assumptions for the calculation:

Storage of metadata per read event: 32KB
Storage of imagery per read event: 160KB

Events from Golden Eagle or P500 cameras			
# of records	Database size Metadata and indexes	Repository Size Imagery	Total
1 Million	32GB	153GB	**185GB**
5 Million	64GB	763GB	**827GB**
10 Million	320GB	1.5TB	**1.82TB**
50 Million	1.6TB	7.5TB	**6.1TB**
100 Million	3.2TB	15TB	**18.2TB**

The calculation for the storage is approximated and it can vary depending on the conditions for the processing of the indexes, Mantis Metadata, compression of the images, among others.

It is not considered the storage for the backup of the databases nor the imagery repository.

This document and its contents are intended for the recipient only. Copying, redistributing, or discussing with any other party outside of the intended recipient and Neology is prohibited.

MASSACHUSETTS STATE POLICE

EXECUTIVE OFFICE OF PUBLIC SAFETY AND SECURITY
HIGHWAY SAFETY DIVISION
FFY 2016 FUNDING PROPOSAL

ALPR TRAILER

PROBLEM STATEMENT

Law enforcement agencies throughout the nation and around the world are increasingly adopting Automated License Plate Recognition (ALPR) systems. In Massachusetts, ALPR is utilized by over 41 different public safety agencies including the MSP. ALPR systems function to automatically capture an image of the vehicle's license plate, transform that image into alphanumeric characters using optical character recognition or similar software, compare the plate number acquired to one or more databases of vehicles of interest to law enforcement and other agencies, and to alert the officer when a vehicle of interest has been observed. Currently the MSP utilize ALPR to enhance their enforcement and investigative capabilities, expand their collection of relevant data, and expedite the tedious and time consuming process of comparing vehicle license plates with lists of stolen, wanted, and other vehicles of interest.

GOALS & OBJECTIVES

ALPR is used every day in Massachusetts to generate investigative leads that assist law enforcement in solving murders, rapes, and serial property crimes, recover abducted children, detect drug and human trafficking rings, find stolen vehicles, apprehend violent criminal alien fugitives, and support terrorism investigations. With an aging population, an increasing amount of "Silver Alerts" are generated to located missing elderly individuals. Quite often these individuals are operating a motor vehicle when they become disoriented.

COUNTERMEASURE TO ADDRESS PROBLEM

To provide investigative support focusing on site specific locations and to augment security at large scale events the department proposes to deploy a trailer mounted covert ALPR system. This system would be enclosed within a speed or variable message board and deployed to such large scale events as the Boston Marathon or the July 4th Esplanade celebration. The message/speed board will provide a highway safety function while capturing the ALPR data and storing it in a central repository.

LINE ITEM BUDGET

One Kustom 850 VSM/Speed board prepped for ALPR
Two 3M model 492 ALPR Cameras

Total $50,000.00

MEASURING SUCCESS/EVALUATION METHOD

The qualitative assessment of ALPR utilization will focus on feedback from the involved stakeholders, to include local law enforcement, media, government agencies and the people we serve.

SELF-SUFFICIENCY PLAN

The Massachusetts Department of State Police supports the utilization of ALPR technology to assist in intelligence gathering in effort to prevent terrorist activity and solve criminal investigation. Without federal funding the Department cannot sustain and enhance its ALPR capabilities.

SUPPLANTING

Absent federal or grant funding, the Massachusetts State Police does not purchase ALPR equipment.

INSTITUTIONALIZED PLAN

ALPR Utilization is a fully institutionalized program of the Massachusetts State Police. It is incorporated into our daily patrol function and is enshrined in our policy and procedures.

Submitted by

Colonel Timothy P. Alben
Superintendent, Massachusetts State Police

PRINT NAME: ART KINSMAN	PRINT NAME:
PRINT TITLE: EXECUTIVE DIRECTOR, OFFICE OF GRANTS & RESEARCH	PRINT TITLE:

INTERDEPARTMENTAL SERVICE AGREEMENT (ISA) FORM
TERMS AND CONDITIONS

The following terms and conditions are incorporated by reference into any ISA.

Role of the Office of the Comptroller. All ISA fiscal transactions shall be made through the state accounting system as prescribed by the Office of the Comptroller (CTR). CTR will interpret 815 CMR 6.00 and applicable policies and take any fiscal or other actions necessary to ensure ISA compliance with state finance law, including but not limited to correcting accounting transactions, resolving ISA disputes and identifying corrective action by the Buyer/Parent or Seller/Child Departments.

Seller/Child Department Certifications. By executing an ISA the Seller/Child certifies that it is statutorily authorized to provide the type of performance sought by the Buyer/Parent, and shall at all times remain qualified to perform the ISA, that performance shall be timely and meet or exceed ISA standards, that the Seller/Child will not allow initial or amended performance to begin, may not authorize personnel or contractors to work, nor incur any obligation to be funded under an ISA prior to the execution of an ISA AND the availability of ISA funding in the Seller/Child account to support encumbrances and payments for performance. The Seller/Child will make encumbrances and payments (incuding payroll) only from the authorized ISA Seller/Child account(s) and shall not be entitled to transfer charges made from any other account not approved in writing in advance by CTR.** The Seller/Child must immediately notify CTR whenever a delay in funding is anticipated for which performance is expected. The Seller/Child is authorized to use ISA funding only for the actual costs of ISA performance and may not use ISA funds to supplement non-ISA related personnel or expenditures.

Buyer/Parent Department Certifications. Signature by the Buyer/Parent certifies that it is statutorily authorized or required to procure the type of performance required under this ISA, that the Buyer/Parent certifies it will ensure that sufficient funds are timely made available in the Seller/Child Seller/Child account(s), with the proper accounting codes, prior to the Seller/Child's need to begin intial or amended performance; that the Buyer/Parent will monitor and reconcile ISA performance in compliance with state appropriation language or federal grant requirements, communicate all fiscal information necessary for the set up of the Seller/Child account(s) including budget information, and if the ISA is funded with federal funds provide accurate accounting information in Attachment C, and immediately notify the Seller/Child of any changes in Attachment C (such as program codes) to ensure the ISA and Seller/Child account can be timely updated to avoid lapses in funding or the inability of the Seller/Child to make timely payroll and other expenditures from the Seller/Child account.

Chief Fiscal Officer. The Chief Fiscal Officer (CFO) for the Buyer/Parent and Seller/Child will be responsible for the fiscal management of ISAs within their Departments in accordance with these ISA Terms and Conditions, 815 CMR 6.00 and policies and procedures published by CTR.

ISA Manager. Both the Buyer/Parent and Seller/Childs are responsible for ensuring that the ISA Manager listed on the ISA, or ISA Amendment, is current and that the ISA Manager is an authorized signatory for the Department supported by the appropriate Security Profile. If the listed ISA Manager changes, the CFO shall be the ISA Manager until a replacement is identified in the same manner as other Written Notice.

Record-keeping and Retention, Inspection of Records. The Buyer/Parent and Seller/Child shall maintain all ISA records in such detail as necessary to support claims for payment, including reimbursement or federal financial participation (FFP), for at least seven (7) years from the last payment under an ISA Seller/Child account, or such longer period as is necessary for the resolution of any litigation, claim, negotiation, audit or other inquiry involving an ISA. In addition to any specific progress, programmatic or expenditure reports specified in Attachment A, the Seller/Child is required to provide the Buyer/Parent (and to CTR, the State Auditor and the House and Senate Ways and Means Committees upon request) with full cooperation and access to all ISA information.

Payments and Compensation. The Seller/Child may accept compensation only for performance delivered and accepted by the Buyer/Parent in accordance with the specific terms and conditions of the ISA. All ISA payments are subject to appropriation pursuant to M.G.L. C. 29, or the availability of sufficient non-appropriated funds for the purposes of an ISA. Overpayments or disallowed expenditures shall be reimbursed by the Seller/Child or may be offset from future ISA payments in accordance with state finance law and instructions from CTR.

ISA Termination or Suspension. An ISA shall terminate on the date specified, unless this date is properly amended prior to this date, or unless terminated or suspended under this Section upon prior written notice to the Seller/Child. The Buyer/Parent may terminate an ISA without cause and without penalty with at least thirty days prior written notice, or may terminate or suspend an ISA with reasonable notice if the Seller/Child breaches any material term or condition or fails to perform or fulfill any material obligation required by an ISA, or in the event of an elimination of an appropriation or availability of sufficient funds for the purposes of an ISA, or in the event of an unforeseen public emergency mandating immediate Buyer/Parent action. Upon immediate notification to the other party, neither the Buyer/Parent nor the Seller/Child shall be deemed to be in breach for failure or delay in performance due to Acts of God or other causes factually beyond their control and without their fault or negligence. Contractor failure to perform or price increases due to market fluctuations or product availability will not be deemed factually beyond the Seller/Child's control.

Written Notice. Any notice shall be deemed delivered and received when submitted in writing in person or when delivered by any other appropriate method evidencing actual receipt by the Buyer/Parent or the Seller/Child. Unless otherwise specified in the ISA, legal notice sent or received by the Buyer/Parent's ISA Manager or the CFO (with confirmation of actual receipt) through the listed fax number(s) or E-Mail address for the ISA Manager will satisfy written notice under the ISA. Any written notice of termination or suspension delivered to the Seller/Child shall state the effective date and period of the notice, the reasons for the termination or suspension, if applicable, any alleged breach or failure to perform, a reasonable period to cure any alleged breach or failure to perform, if applicable, and any instructions or restrictions concerning allowable activities, costs or expenditures by the Seller/Child during the notice period.

Confidentiality. The Seller/Child shall comply with M.G.L. C. 66A if the Seller/Child becomes a "holder" of "personal data". The Seller/Child shall also protect the physical security and restrict any access to personal or other Buyer/Parent data in the Seller/Child's possession, or used by the Seller/Child in the performance of an ISA, which shall include, but is not limited to the Buyer/Parent's public records, documents, files, software, equipment or systems. If the Seller/Child is provided access with any other data or information that triggers confidentiality requirements under FIPA, HIPPA or other federal or state laws, the Seller/Child shall be responsible for protection of this data as instructed by the Buyer/Parent.

Assignment. The Seller/Child may not assign, delegate or transfer in whole or in part any ISA, or any liability, responsibility, obligation, duty or interest under an ISA, to another Department or an outside contractor. Assumption of an ISA by a successor Department due to a legislative change in the Seller/Child or Buyer/Parent's department status shall be accomplished through the execution of a new ISA.

Subcontracting By Seller/Child. Since it is presumed that contracting through the Seller/Child is more cost effective and a better value than the Buyer/Parent directly contracting with an outside contractor(s), any subcontract entered into by the Seller/Child for the purposes of fulfilling the obligations under an ISA must be approved by the Buyer/Parent in advance of the ISA and justified as part of the ISA Attachment A. The Seller/Child is responsible for full state finance law and procurement compliance for all subcontracts, and shall supply a copy of any subcontract to the Buyer/Parent upon request.

Affirmative Action, Non-Discrimination in Hiring and Employment. In performing this ISA, the Seller/Child shall comply with all federal and state laws, rules, regulations and applicable internal state policies and agreements promoting fair employment practices or prohibiting employment discrimination and unfair labor practices and shall not discriminate in the hiring of any applicant for employment nor shall any qualified employee be demoted, discharged or otherwise subject to discrimination in the tenure, position, promotional opportunities, wages, benefits or terms and conditions of their employment because of race, color, national origin, ancestry, age, sex, religion, disability, handicap, sexual orientation or for exercising any rights afforded by law. The Seller/Child commits to, when possible, to purchasing supplies and services from certified minority or women-owned businesses, small businesses or businesses owned by socially or economically disadvantaged persons or persons with disabilities in accordance with the Commonwealth's Affirmative Market Program.

Waivers. Forbearance, indulgence or acceptance by the Seller/Child or Buyer/Parent of any breach or default in any form shall not be construed as a waiver and shall not limit enforcement remedies or allow a waiver of any subsequent default or breach.

Risk of Loss. The Seller/Child shall bear the risk of loss for any materials, deliverables, personal or other data that is in the possession of the Seller/Child or used by the Seller/Child in the performance of an ISA until is accepted by the Buyer/Parent.

Disputes. The Buyer/Parent and Seller/Child agree to take all necessary actions to resolve any dispute arising under the ISA within 30 calendar days including department head and secretariat involvement, but in no event shall a dispute remain unresolved beyond May 30th in any fiscal year, nor may the Buyer/Parent or Seller/Child allow a dispute to create a state finance law or other violation of ISA terms (such as a delay in funding, failure to timely communicate funding or program code changes, or failure to timely process ISA paperwork). Seller/Child and Buyer/Parent must immediately notify CTR to assist in resolution of the dispute and shall implement any actions required by CTR to resolve the dispute, which shall be considered final.

Interpretation, Severability, Conflicts with Law, Integration. Any amendment or attachment to any ISA that contains conflicting language or has the affect of deleting, replacing or modifying any printed language of the ISA shall be interpreted as superseded by the ISA Form as published. If any ISA provision is superseded by state or federal law or regulation, in whole or in part, then both parties shall be relieved of all obligations under that provision to the extent necessary to comply with the superseding law, provided however, that the remaining provisions of the ISA, or portions thereof, shall be enforced to the fullest extent permitted by law. The terms of this ISA shall survive its termination for the purpose of resolving any claim, dispute or other action, or for effectuating any negotiated representations and warranties.

4682

INTERDEPARTMENTAL SERVICE AGREEMENT (ISA) FORM
TERMS AND CONDITIONS

ATTACHMENT A – TERMS OF PERFORMANCE AND JUSTIFICATIONS:

This Attachment Form must be used. Insert (type or copy and paste) all relevant information using as many pages as necessary. Attach any additional supporting documentation as appropriate. If Amending the ISA, completion of Sections 1, 2 and 3 identifying what is being amended and the reasons for the amendments is required. For sections 4-9 enter only the amended language in the sections being amended.

1. [REQUIRED] Purpose and other performance goals of ISA, or as amended:

   - To decrease motor-vehicle fatalities 10% from the 2009-2013 calendar base year average of 354 to 319 by December 31, 2016.
   - To decrease the number of serious traffic injuries 10% from 4,134 in 2013 to 3,721 by December 31, 2016.
   - To decrease unrestrained vehicle occupant fatalities in all seating positions 10% from the 2009-2013 base calendar year average of 108 to 97 by December 31, 2016.

2. [REQUIRED] Identify in detail, the responsibilities of the parties, the scope of services and terms of performance under the ISA, or as amended:
   The MSP seeks to enhance their enforcement and investigative capabilities through the purchase of a portable trailer equipped with an Automated License Plate Recognition (ALPR) system.

   MSP will maintain an equipment database for the life of the property as required by EOPSS.

   The Division of Field Services will ensure that all MSP personnel assigned to EOPSS/HSD grant funded enforcement initiatives are familiar with the related goals and expectations.

   With EOPSS/HSD assistance, the MSP will acknowledge EOPSS as the funding source on all news releases.

3. [REQUIRED] Identify schedule of performance or completion dates or other benchmarks for performance, or as amended:

   See Section 1 & 2.

4. [REQUIRED] Justification that use of ISA is best value vs. contract with outside vendor:
   N/A

5. Will Seller/Child department state employees (AA Object Class) be fully or partially funded under this ISA? X No ___ Yes.
   If yes, justify necessity to use state employees for the ISA vs. use of contractors (contract employees or outside vendors).

6. Subcontractors. Since it is presumed that contracting through the Seller/Child is more cost effective and a better value than the Buyer/Parent directly contracting with an outside contractor(s), any subcontract entered into by the Seller/Child for the purposes of fulfilling the obligations under an ISA must be approved by the Buyer/Parent in advance of the ISA and justified as part of the ISA Attachment A, as follows: (enter "N/A" if subcontractors will not be funded with ISA funds)
   N/A

7. Identify any equipment that will be leased or purchased by the Seller/Child using ISA funds: (The Buyer/Parent shall determine ownership of equipment purchased by the Seller/Child with ISA funds. Enter "N/A" if equipment not included in ISA.)
   ALPR system with related trailer equipment.

8. [REQUIRED] Identify the format and timing of ISA reports to the Buyer/Parent Department. Include the type of reports (e.g., progress or status, data, etc.), timing of reports (e.g., weekly, monthly, final) and the medium for submission of reports (e.g., e-mail, Excel spreadsheet, paper, telephone):

The equipment will be purchased when funds become available in MMARS. All equipment must be purchased and received prior to the close of the federal fiscal year on September 30, 2016. Invoice(s) must be submitted to EOPSS' Highway Safety Division within 30 days of the purchase(s).

The MSP will submit an Annual Report outlining the deployment and utilization associated with the ALPR system.

9. Additional ISA Terms: [Insert Terms here. Do not refer to separate attachment(s)]

General Federal Grant Conditions

The basic federal grant conditions that follow apply to all federal grants, regardless of the federal department making the funds available.

- Audit Requirement of Federal Funds
  - 2 CFR 200 (formerly OMB Circular A-133) requirements apply to each non-profit organization, each institution of higher education, and local governments as a whole when they or one of their departments receives federal funds. Any non-profit organization, institution of higher education, or local government spending more than $750,000 in federal funds *from all sources* within a 12-month period must have an audit performed on the use of the funds. OGR defines the 12-month period as July 1 to June 30. The following webpage provides the full text of this basic federal grant requirement:

    http://www.gpo.gov/fdsys/pkg/FR-2013-12-26/pdf/2013-30465.pdf

- Data Universal Number System (DUNS) and Central Contractor Registration (CCR)
  - All subrecipients of federal funds must have a nine-digit DUNS number in order. For more information: 1-866-705-5711 or http://fedgov.dnb.com/webform.
  - All subrecipients of federal funds must maintain annual registration in the System for Award Management (SAM) database: www.sam.gov.

- Transparency Act Reporting for Federal Funds
  - The Federal Funding Accountability and Transparency Act (FFATA) requires EOPSS to report on a federal website specific award and subrecipient identifying information for each award greater than $25,000 OGR makes with federal funds it received after October 1, 2010. Prior to receiving funds, each affected subrecipient must report certain information to OGR so that EOPSS can fulfill its FFATA reporting requirements. Data reported by EOPSS may be viewed at www.USASpending.gov.

- Cost Principles for Federal Grants to *State and Local Governments*
  - 2 CFR Part 225 (formerly known as OMB Circular A-87) requirements apply only to state and local government subrecipients. These regulations list and define general categories of costs that are both allowable and unallowable. Examples are included below.
    - Supplanting, including: (a) replacing routine and/or existing State or local expenditures with Federal grant funds and/or (b) using Federal grant funds for costs of activities that constitute general expenses required to carry out the overall responsibilities of State, local, or Federally recognized Indian tribal governments is unallowable.
    - The cost of alcoholic beverages is unallowable.
    - Costs incurred by advisory councils are allowable.
    - Audit costs are allowable.
    - Compensation costs are allowable so long as they are consistent with that paid for similar work in other activities of the local government.
    - Entertainment costs are unallowable.

- Equipment costs are allowable with the prior approval of OGR. Equipment having a useful life of more than one year or a current per-unit fair market value of $5,000 or more must be tracked. When replacing equipment purchased with federal funds, the equipment to be replaced may be used as a trade-in or can be sold with the proceeds used to offset the cost of the replacement equipment. In addition, during the period of the contract with OGR, insurance on the equipment is allowable.
- Travel costs are allowable if pre-approved by OGR and if they are consistent with costs normally allowed in like circumstances for non-federally funded activities. The following webpage provides the full text of this basic federal grant requirement: http://www.whitehouse.gov/omb/fedreg/2005/083105_a87.pdf.
- If a subrecipient uses grant funds to pay its employees, the subrecipient must maintain timesheets for work performed with the grant funds. Timesheets must show the hours worked and must be signed by the employee paid with the grant funds.

- Cost Principles for Federal Grants to *Non-Profit Organizations and Institutions of Higher Education* requirements apply only to the non-profit and higher education subrecipients. The CFRs referenced below list and define general categories of costs that are allowable and unallowable. The links below provide the full text of these two basic federal grant requirements.
  - 2 CFR Part 220 pertains to Educational Institutions (formerly known as OMB Circular A-21): http://www.whitehouse.gov/omb/fedreg/2005/083105_a21.pdf.
  - 2 CFR Part 230 pertains to Non-profit Organizations (formerly known as OMB Circular A-122): http://www.whitehouse.gov/omb/fedreg/2005/083105_a122.pdf.

U.S. Department of Transportation Funds

The National Highway Traffic Safety Administration (NHTSA) of the U.S. Department of Transportation offers two documents that present requirements for the use of the funds and outline the purpose of each category of grants provided.

- Urls for the two programmatic and financial guide documents from NHTSA are below.
  - Highway Safety Grant Funding Policy: http://www.nhtsa.gov/nhtsa/whatsup/TEA21/GrantMan/HTML/GrantFundPolicy_mkm_revJuly07.pdf

    Pay particular attention to the sections on: (1) allowable costs for equipment, travel, training, and consultant services; and (2) unallowable costs for equipment, facilities and construction, training and program administration.

    A more complete document on administrative requirements is found in 49 CFR Part 18 - the Uniform Administrative Requirement for Grants as promulgated by the U.S. Department of Transportation.
  - Highway Safety Grant Management Manual: http://www.nhtsa.gov/nhtsa/whatsup/TEA21/GrantMan/HTML/00_Manl_Contents1_01.html. This document provides information on each of the grant programs including Sections 154, 164, 402, 405a, 405b, 405c, 405d, 405e, 405f and 405g grant programs.

Additional current NHTSA grants management resources may be found at:
http://www.nhtsa.gov/About+NHTSA/Programs+&+Grants/Resources+Guide

In Addition to the links above, recipients of NHTSA funding must also adhere to the following conditions:

INTERDEPARTMENTAL SERVICE AGREEMENT (ISA) FORM
TERMS AND CONDITIONS

- **NONDISCRIMINATION (APPLIES TO SUBRECIPIENTS AS WELL AS STATES):** The State highway safety agency will comply with all Federal statutes and implementing regulations relating to nondiscrimination. These include but are not limited to: (a) Title VI of the Civil Rights Act of 1964 (Pub. L. 88-352), which prohibits discrimination on the basis of race, color or national origin (and 49 CFR Part 21); (b) Title IX of the Education Amendments of 1972, as amended (20 U.S.C. 1681-1683 and 1685-1686), which prohibits discrimination on the basis of sex; (c) Section 504 of the Rehabilitation Act of 1973, as amended (29 U.S.C. 794), and the Americans with Disabilities Act of 1990 (Pub. L. 101-336), as amended (42 U.S.C. 12101, *et seq.*), which prohibits discrimination on the basis of disabilities (and 49 CFR Part 27); (d) the Age Discrimination Act of 1975, as amended (42 U.S.C. 6101-6107), which prohibits discrimination on the basis of age; (e) the Civil Rights Restoration Act of 1987 (Pub. L. 100-259), which requires Federal-aid recipients and all subrecipients to prevent discrimination and ensure nondiscrimination in all of their programs and activities; (f) the Drug Abuse Office and Treatment Act of 1972 (Pub. L. 92-255), as amended, relating to nondiscrimination on the basis of drug abuse; (g) the comprehensive Alcohol Abuse and Alcoholism Prevention, Treatment and Rehabilitation Act of 1970 (Pub. L. 91-616), as amended, relating to nondiscrimination on the basis of alcohol abuse or alcoholism; (h) Sections 523 and 527 of the Public Health Service Act of 1912, as amended (42 U.S.C. 290dd-3 and 290ee-3), relating to confidentiality of alcohol and drug abuse patient records; (i) Title VIII of the Civil Rights Act of 1968, as amended (42 U.S.C. 3601, *et seq.*), relating to nondiscrimination in the sale, rental or financing of housing; (j) any other nondiscrimination provisions in the specific statute(s) under which application for Federal assistance is being made; and (k) the requirements of any other nondiscrimination statute(s) which may apply to the application.

- **BUY AMERICA ACT 49 U.S.C 5323 (J) (APPLIES TO SUBRECIPIENTS AS WELL AS STATES):** Only steel, iron and manufactured products produced in the United States may be purchased with Federal funds unless the Secretary of Transportation determines that such domestic purchases would be inconsistent with the public interest, that such materials are not reasonably available and of a satisfactory quality, or that inclusion of domestic materials will increase the cost of the overall project contract by more than 25 percent. Clear justification for the purchase of non-domestic items must be in the form of a waiver request submitted to and approved by the Secretary of Transportation. **The Buy America Act does not apply to purchases under $5,000.**

- **Political Activity Act (Applies to Subrecipients as well as States):** The State will comply with provisions of the Hatch Act (5 U.S.C. 1501-1508) which limits the political activities of employees whose principal employment activities are funded in whole or in part with Federal funds.

- **Certification Regarding Federal Lobbying (Applies to Sunrecipients as well as States):** The authorized signatory certifies, to the best of his or her knowledge and belief, that:

  1. No Federal appropriated funds have been paid or will be paid, by or on behalf of the undersigned, to any person for influencing or attempting to influence an officer or employee of any agency, a Member of Congress, an officer or employee of Congress, or an employee of a Member of Congress in connection with the awarding of any Federal contract, the making of any Federal grant, the making of any Federal loan, the entering into of any cooperative agreement, and the extension, continuation, renewal, amendment, or modification of any Federal contract, grant, loan, or cooperative agreement.

  2. If any funds other than Federal appropriated funds have been paid or will be paid to any person for influencing or attempting to influence an officer or employee of any agency, a Member of Congress, an officer or employee of Congress, or an employee of a Member of Congress in connection with this Federal contract, grant, loan, or cooperative agreement, the undersigned shall complete and submit Standard Form-LLL, “Disclosure Form to Report Lobbying,” in accordance with its instructions.

  3. The undersigned shall require that the language of this certification be included in the award documents for all sub-award at all tiers (including subcontracts, subgrants, and contracts under grant, loans, and cooperative agreements) and that all subrecipients shall certify and disclose accordingly.

  This certification is a material representation of fact upon which reliance was placed when this transaction was made or entered into. Submission of this certification is a prerequisite for making or entering into this transaction imposed by section 1352, title 31, U.S. Code. Any person who fails to file the

required certification shall be subject to a civil penalty of not less than $10,000 and not more than $100,000 for each such failure.

- **Restrictions on State Lobbying (This Applies to Subrecipients as well as Sates):** None of the funds under this program will be used for any activity specifically designed to urge or influence a State or local legislator to favor or oppose the adoption of any specific legislative proposal pending before any State or local legislative body. Such activities include both direct and indirect (e.g., “grassroots”) lobbying activities, with one exception. This does not preclude a State official whose salary is supported with NHTSA funds from engaging in direct communications with State or local legislative officials, in accordance with customary State practice, even if such communications urge legislative officials to favor or oppose the adoption of a specific pending legislative proposal.

- **Certification Regarding Debarment and Suspension (This Applies to Subrecipients as well as States):**

  Instructions for Primary Certification
