REPORT SUSPICIOUS ACTIVITY TO THE NCRIC https://ncric.ca.gov (866) 367-8847
<image001.png>
<image003.png>

Incident Synopsis:

On Friday, June 19, the group "Distributed Denial of Secrets" (@DDoSecrets) posted a link on Twitter to law enforcement sensitive data that was exfiltrated from a compromised web site services company that hosts numerous law enforcement organizations' websites across the nation. The Houston FBI Office is the lead criminal investigative agency for the data breach. Distributed Denial of Secrets (@DDoSecrets) Twitter account has been suspended and the links to the site containing the stolen data are being blocked by Twitter.

The mitigation response for the breach is being coordinated through partners that represent the cybersecurity resources across the FBI, the National Network of Fusion Centers, HIDTAs, DHS CISA, MS-ISAC's CIS, Los Angeles Sheriff's Department (LASD) and other partners.

It is believed at this time that measures have been taken to reduce further compromise of the web service provider's systems. There is reporting that there may be additional unpublished data that will be posted to the dark web site in the future.

Potential data exposed includes:

- Membership information, and event or training registrations, including officer names, agency/employer, email, and phone numbers
- Past email distributions sent out through the system's e-mail builder, suspicious activity reports (SAR), requests for investigative case support, bulletins, threat assessments, and narcotics seizure data.

Data systems that were **not** directly exposed:

- Deconfliction systems.
- Intelligence management systems.
- Records management data sharing systems.
- ALPR systems.

The FBI is completing the scan of the systems of the web services provider and DHS CISA and the MS-ISAC's Center for Internet Security are standing by to provide support and additional scans of the web service provider's systems.

The service provider has activated two-factor authentication for all users that did not already have the feature activated.

Key Updates:

- **A notification will go out Monday for a call with all HIDTA directors, a separate call for all Fusion Center directors, and a joint call with all FBI Field Offices' Cyber ASACs/SSAs, Fusion Centers, HIDTAs, FBI OPE, DHS I&A, DHS CISA, MS ISAC-CIS, the National White Collar Crime Center, and other partners regarding data breach notification prioritization, coordination and deconfliction.**

The Los Angeles Sheriff's Department (LASD) and LA FBI are in the process of copying the fully downloaded, scanned, and indexed files from the dark web and they will be available next week. Due to the size of the files we are continuing to develop the best data sharing mechanism. Designated data breach points of contact should add their information to the Data Breach POC List. POC List access requests should be sent to ciosubcommittee@nfcausa.org.

- Legal and privacy experts will be developing recommendations for handling the FBI investigative case data as there may be privacy protection and public records act implications for those that download any files from the data breach.

- **As the dark web site contains potential malware, no one should attempt to download material without the proper cyber resources.**

- The Criminal Intelligence Coordinating Council's (CICC) Criminal Intelligence/Information Technology (CI/IT) **Crossroads Committee** will be working with federal partners and all of the major law enforcement associations in America to develop recommendations to enhance and promote nationwide best practices in the field of data breach mitigation and response strategy development. The recommendations will be provided through the CICC to the Global Justice Information Sharing Initiative (Global) for the consideration of and approval of the US Attorney General and other federal executives, including the leadership of DHS, FBI, ONDCP, and the ODNI. If your agency would like to know more about or participate in the Crossroads Committee, please send an email to Tim Best at TBest@iir.com.

For cyber mitigation coordination requests related to this breach please e-mail ciosubcommittee@nfcausa.org.

Hi Noah,

I just reread McCarthy (ALPR case) to see what the SJC might say/think.

Are you referring to a pen register? PRTT?

My cell phone is (G.L. c. 4.sec. 7.cl.26 (n)(security) Shoot me a text before calling, but I think I have you in my contacts already.

Good Afternoon, All -

The Commonwealth Fusion Center (MA) is respectfully requesting on behalf of the Massachusetts State Police Cape & Islands Detective Unit, that the below listed vehicle be run through any available Automated License Plate Recognition (ALPR/LPR) system pursuant to an active/ongoing narcotics investigation. Information received by investigators indicates that the suspect vehicle may have traveled from Cape Cod, Massachusetts to Philadelphia, Pennsylvania between 16 June 2020 - 30 June 2020. Investigators are hoping to corroborate this information via LPR data on the vehicle.

Did EOTSS give you access to the DB? Neology does not support direct access to the SQL nor do I recommend it, it could have unintended consequences to the systems ability to keep up with reads and alerts. The current supported method for sharing BOSS data is via a PIPS plugin. I am currently working with a cloud vendor and the plug in. If the cloud vendor I'm working with pans out we would have an API for you to use. I'll know more in a few weeks, please hold off if possible.

Industry standard tends to follow a two-year retention period for most systems, like Vigilant for example. Vigilant adheres to the retention policies of each respective client agency, who pays for their services.

In the federal government, the period is often shorter. For example, the LPRs employed at Ports of Entry by CBP's Office of Field Operations along the southwest and northern border as well as interior Checkpoints operated by the U.S. Border Patrol are on the same network and they only retain 18 months of data.

If you narrow it down to a state, the following link lists most state's laws/retention policies with respect to ALPR data and operation:

For example, the LPRs employed at Ports of Entry by CBP's Office of Field Operations along the southwest and northern border as well as interior Checkpoints operated by the U.S. Border Patrol are on the same network and they only retain 18 months of data.

Subject: [kloving] ALPR

Good Morning All!

Is anyone aware of an ALPR (License plate reader) system that would date back pretty far? I have a missing person MIA since 2007 and an associated vehicle without any hits on an NCIC Offline search.

Thanks!

Industry standard tends to follow a two-year retention period for most systems, like Vigilant for example. Vigilant adheres to the retention policies of each respective client agency, who pays for their services.

In the federal government, the period is often shorter. For example, the LPRs employed at Ports of Entry by CBP's Office of Field Operations along the southwest and northern border as well as interior Checkpoints operated by the U.S. Border Patrol are on the same network and they only retain 18 months of data.

If you narrow it down to a state, the following link lists most state's laws/retention policies with respect to ALPR data and operation:

Date: Thursday, May 14, 2020 10:09:00 AM

Hi Brian,

If possible, G.L. c. 4.sec. 7.cl.26 (n)(security) [redacted] It has recently been brought to our attention that a local Department's covert camera (running [redacted] was discovered and has been targeted by a reddit forum post and by members who appear to be actively looking for covert cameras. Are you available the first week in June for a meeting or should I direct this to someone else in TSS, I realize this would expand the scope.

Agenda could include:

- Overview of our long term goal to consolidate the current video management systems (BOSCH, View Commander, Vigilion, Genetec at the Watch, Genetec in Maynard) into the new Chelsea environment
- ALPR network – how to allow remote management and prepare for the cloud migration
- Covert Camera Network – how we currently handle cameras and could in the future. Can we bring in IPC to manage the TSU network?
- Can we build out one wireless MSP camera network, using sierra modems at the edge, VPN back to Chelsea and scale and store in the new environment.
- [redacted] cutover to the State Fiber (in discussions currently)
- Bandwidth, how much, what's currently in Maynard, what's available
- How we would access Evidence (video on disc)
- VMS networking limitations

Please let me know, Thanks Brian

Subject: RE: ALPR Cameras

Hi Brian,

I will be cutting over MassPort cameras tomorrow. We have the MassPort modems, I've updated the firmware and double checked connectivity back to the BOSS server from the MassPort SIMS and there is no firewall work needed. For your records, I've included the details below of the modems and IPs/Accounts.

If possible, I would like to review with you or a member of the TSS network Team using the same solution now in place for the new DHS Livescans. We feel this is a good solution for all the MSP LPRS and it would allow us both the remote management needed for the project. If there are no objection, I can reach out to IPC for a quote, but I would prefer to get on a quick call to discuss. Please advise.

Thanks, Brian

You are the correct, the current plan is VZW, no network changes required. This is a new request to review if the below would be a better solution long term for ALPR.

Subject: ALPR Cameras

Hi Rob,

As you are probably aware the MassPort project to migrate their ALPR Cameras over to the MSP is moving forward over Verizon Wireless. We have identified modems, data plans and purchased the accessories needed for the project and hope to begin cutting over in the next 2-3 weeks.

I wanted to run something by you and the team to review; we just completed the Sierra MP70 VPN project with IPC and it went well (thanks for your teams help - BTW). Do you want to use the same approach (OneNetwork) for these ALPRS? I think it would give us the same functionality originally discussed by pushing the traffic over MassPorts network back to the core, but we would run it over Verizon.

A couple of thoughts;

This could be a good long term approach for all ALPRs we are hosting, we've begun to standardized on MP70s
This could give us much needed remote access to the cameras
If we moved to the Neology Hosted solution, we could do a split tunnel and pipe the traffic straight over the internet, but only allow remote management via the tunnel.
IPC was the prime on the sierra project and work would be minimal to expand, we also want to begin leveraging them more for our other wire/ covert/camera networks we run down the road (when Jim decides to retire).
If MassPort wants us off Verizon (since they are paying for the data plans), they could get us a straight internet route and connect to the MP70 (Our MP70 establishes internet via a LAN Port, Wifi and Cell, all establishing the VPN tunnel after connection).

Let me know what you think and if you want to get on a call to discuss. Otherwise, we can just get MassPort done with the normal static plan.

Thanks, Brian

> I wanted to run something by you and the team to review; we just completed the Sierra MP70 VPN project with IPC and it went well (thanks for your teams help - BTW). Do you want to use the same approach (OneNetwork) for these ALPRS? I think it would give us the same functionality originally discussed by pushing the traffic over MassPorts network back to the core, but we would run it over Verizon.
>
> A couple of thoughts;

This could be a good long term approach for all ALPRs we are hosting, we've begun to standardized on MP70s
This could give us much needed remote access to the cameras
If we moved to the Neology Hosted solution, we could do a split tunnel and pipe the traffic straight over the internet, but only allow remote management via the tunnel.
IPC was the prime on the sierra project and work would be minimal to expand, we also want to begin leveraging them more for our other wire/ covert/camera networks we run down the road (when Jim decides to retire).
If MassPort wants us off Verizon (since they are paying for the data plans), they could get us a straight internet route and connect to the MP70 (Our MP70 establishes internet via a LAN Port, Wifi and Cell, all establishing the VPN tunnel after connection).

Let me know what you think and if you want to get on a call to discuss. Otherwise, we can just get MassPort done with the normal static plan.

Thanks, Brian

Hi Brian,

Is this different from the initial request? If I remember correctly the traffic was going to flow over the VZW network and no FW or Network configurations would need to be changed.

Thanks
Brian

Subject: ALPR Cameras

Hi Rob,

As you are probably aware the MassPort project to migrate their ALPR Cameras over to the MSP is moving forward over Verizon Wireless. We have identified modems, data plans and purchased the accessories needed for the project and hope to begin cutting over in the next 2-3 weeks.

I wanted to run something by you and the team to review; we just completed the Sierra MP70 VPN project with IPC and it went well (thanks for your teams help - BTW). Do you want to use the same approach (OneNetwork) for these ALPRS? I think it would give us the same functionality originally discussed by pushing the traffic over MassPorts network back to the core, but we would run it over Verizon.

A couple of thoughts;

This could be a good long term approach for all ALPRs we are hosting, we've begun to standardized on MP70s
This could give us much needed remote access to the cameras
If we moved to the Neology Hosted solution, we could do a split tunnel and pipe the traffic straight over the internet, but only allow remote management via the tunnel.
IPC was the prime on the sierra project and work would be minimal to expand, we also want to begin leveraging them more for our other wire/ covert/camera networks we run down the road (when Jim decides to retire).
If MassPort wants us off Verizon (since they are paying for the data plans), they could get us a straight internet route and connect to the MP70 (Our MP70 establishes internet via a LAN Port, Wifi

and Cell, all establishing the VPN tunnel after connection).

Let me know what you think and if you want to get on a call to discuss. Otherwise, we can just get MassPort done with the normal static plan.

Thanks, Brian

> The hotlist format is exactly the same as the manual import. Here is the information about that. This is the same information that was in the original manual.

Hotlists must be formatted as follows:

plate,state,category,message

abc1234,us-md,stolen,stolen car

- *Plate*
  - *Required*
- *State*
  - *Optional*
  - *Must be formatted as country code – state abbreviation ex. us-md us-fl*
- *Category*
  - *Optional*
  - *Will be displayed in the Alert Notification Area. Recommended to use short words like stolen, repossess, amber alert*
  - *If left blank Alert Notification area will just display HOTLIST*
- *Message*
  - *Optional*

Attached as well are some samples.

For the backend here is the information:

MAKE SURE YOU ARE USING INTERNET EXPLORER 11

To download the software cut and paste the following into your browser http://[redacted]9988/publish.htm once loaded you will need to configure the port and perhaps the IP address. Click on the “Boss server” which will open the box below and make sure you have the correct server/port info. Once you connect to the server you won’t have to do it again.

Your login [redacted]

You can change it after you logon.

You have Advanced User status which means you can create hot lists. It also means you can change other information in other users lists so please be careful.

User guide is attached. I'll send you a separate email with some helpful shortcuts.

If there is anyone else in your office that could benefit from having an account, please forward me their information and I'll be happy to set it up.

Please reach out to me with any issues, sometimes the first attempt to login in isn't always successful .

Thank you,

David M. Gallagher

Looking now and will get back to you shortly. Brian says the following with regard to the shut down cameras:

That is correct. cruiser mounted cameras are not shut down. All fixed are shut down. Central server is off, preventing access to data and submissions of new data. Mobiles could be on, collecting locally but not getting updates (hot files). or submitting data.

Good afternoon,

Attached please find the draft. I made one small change from DCJIS to the Public Safety Data Center to reflect location of the host server.

Thanks,
Agapi

Few comments;

- I received a number of errors during login, I sent John a few screenshots
- After successfully logging in using Edge, I can't re login using Edge and had to use Chrome
    - When I did login with chrome I had account error popups
- The naming conventions on filters is poor
    - Position should be simply location or address
    - Status, why would this be useful?
    - Hotlist, why would this be useful?
    - Users, why would this be useful? To search a device? why wouldn't I just search a device? is this mixing audit functions? If so, why isn't this contextual if it's for audits
    - No one knows or cares about brand name Mantis, this should have a more obvious title for vehicle description search
    - Remote server should not be a filter, if this section is to select reads from sharing sites its not a filter. It would be shown all the time and you would then filter it out, it appears opposite
    - To get the reads from the remote sever, it's not intuitive enough to have to run your search, then select the filter bubbles at the top of the page
        - If these are filters, then all results should be shown first and the filter bubbles would filter it
- The most important part is license plate search and the name is being truncated at the top (and I have a 30" monitor)
- Max export results is 5K, is this configurable, its not enough.
- On the date picker, "set" is unnecessary, should be one click
- When I logged back in using chrome, the page formatting is balled up and I cant search

Overall not impressed.

Since you do not have any cameras connected at this time we're giving you access to a test camera we have located in Nassau County, NY so you can "look" around the software. To access the Nassau County reads: Select READS on the title bar > SEARCH then select the green FILTER icon in the upper left. Select Remote Server on the left side under the Filter column and check the box for Nassau County in the pull down menu.

Give me a call when you access the software so I can give you a high-level run through.

Absolutely, sometimes direct is just better let's get on a call and go over it. There's a lot of good stuff in there too, I think the result preview and the theme looked really good.

On the date picker, “set” is unnecessary, should be one click
- When I logged back in using chrome, the page formatting is balled up and I cant search

Overall not impressed.

Since you do not have any cameras connected at this time we're giving you access to a test camera we have located in Nassau County, NY so you can "look" around the software. To access the Nassau County reads: Select READS on the title bar > SEARCH then select the green FILTER icon in the upper left. Select Remote Server on the left side under the Filter column and check the box for Nassau County in the pull down menu.

Give me a call when you access the software so I can give you a high-level run through.

PS -It's best to use CHROME

select the filter bubbles at the top of the page
    - If these are filters, then all results should be shown first and the filter bubbles would filter it
- The most important part is license plate search and the name is being truncated at the top (and I have a 30" monitor)
- Max export results is 5K, is this configurable, its not enough.
- On the date picker, "set" is unnecessary, should be one click
- When I logged back in using chrome, the page formatting is balled up and I cant search

Overall not impressed.

Chiefs
Commonwealth v. McCarthy (SJC 12750)€ click on that link to see the case
In this case the SJC ruled that police tracking D's car using 4 automatic license plate readers (ALPRs) at both ends of the Bourne and Sagamore Bridges was too limited to amount to a constitutional "search." The SJC declined to say exactly how detailed digital surveillance would have to be to constitute a search leaving that issue for future cases.

State Police maintain ALPRs including ones at both ends of the Bourne and Sagamore Bridges. (p.3) The ALPRs photograph vehicles' license plates; that data along with the date and time of the sighting is retained by EOPPS for a year. (p.3-4) Authorized users including police may put a license plate number on a "hot list" and receive an alert if that plate is sighted; reasons to put someone on the "hot list" include not only criminal investigations but also Amber alerts missing persons and BOLO alerts. (p. 3 25 n.13)

Through surveillance controlled buys and information from 4 Cis Barnstable police suspected that the co-D was se ling heroin out of his house in Barnstable. (p.4) Police saw a black Hyundai driven by D visit there briefly so they suspected that D was the co-D's supplier. Police put the Hyundai's license plate number on the State Police ALPR "hot list " so that they'd be notified whenever the Hyundai crossed one of the bridges. (p.5) After getting an alert that the Hyundai had crossed onto the Cape police followed both the Hyundai and the co-D to the buy location on a quiet residential street where D and co-D met for about 30 seconds but police could not see a physical exchange. (p.5) From the ALPR data police generated a spreadsheet showing that in mid-winter the Hyundai had crossed the bridges dozens of times sometimes more than once a day adding to police suspicion that D was the heroin supplier. (p.5-6) When police got a second alert that the Hyundai had crossed onto the Cape they again followed D and co-D to the buy location and saw a 30-second meeting but could not see any exchange. This time police stopped both cars handcuffed both co-D and D and read them Miranda. On co-D police found heroin; on D police found 2 cell phones and cash. (p.6-7) At the station police repeatedly told D he was "not under arrest " and D made statements.

D moved to suppress the ALPR data his statements and evidence obtained from the stop. A Superior Court judge found that the moment of arrest was when D and co-D were handcuffed at the scene of the traffic stop but denied the motion to suppress. (p.33) The SJC upheld the denial.

ALPRs and expectation of privacy in digital surveillance At some length the SJC discussed the constitutional issues raised by digital surveillance. (p.7-29) Police conduct amounts to a search if: (1) it intrudes on a D's expectation of privacy and (2) society is willing to recognize the expectation of privacy as reasonable. Here the SJC ruled D did have an expectation of privacy because D and co-D chose a buy location in a quiet residential area. (p.8 n.5) As to what expectation of privacy society recognizes as reasonable with regard to digital surveillance the SJC was guided by historical understandings of what was an unreasonable search and seizure when the U.S. and Mass. Constitutions were adopted in the late 1700s in reaction to redcoats' rummaging without restraint through colonists' homes. (p.8-10) New technologies like ALPRs raise difficult legal issues because they are easier and less expensive for police than traditional surveillance can be done secretly and permit police to search back in time for a vehicle's movements even before po ice suspicion arose. (p.12-14) Society does not recognize as reasonable an expectation of privacy in what someone knowingly exposes" to public view like a license plate – which by statute must be "displayed conspicuously." (p.15-16 & n.8) In older cases involving less advanced technology courts have held that a D did not have an expectation of privacy in contents of a phone conversation in a phone booth or a radio beeper" tracking a single journey. (p14-17) But technology like ALPRs GPS and CSLI are different because they may give police a **mosaic** of information where each piece may be public but when viewed together they create a picture that implicates someone's privacy interests like their political re igious or sexual associations. (p.17-21) The SJC was concerned that with enough ALPRs police could track someone's location everywhere which would be "creepy." (p.25) Exigent circumstances would likely justify using an ALPR in a situation involving an Amber alert or missing person. (p.25 n.13) The D urged the SJC to consider not just these four ALPRs on the Bourne and Sagamore Bridges but the hundreds of ALPRs across Massachusetts; the SJC declined to do so because that evidence is not in the record of this case. (p.26) The **limited number of cameras** here and their placements on the bridges was not enough to give D an expectation of privacy that society would recognize as reasonable. (p.26) The SJC declined to say how much digital surveillance would give such an expectation and admitted that its unwillingness to do so "**may bring some interim confusion**" until further cases develop the law on this issue. (p.28 n.15) Chief Justice Gants wrote a separate concurrence suggesting that one thing the SJC could do is to require police who want to search a vast amount of digital data to apply for a court order supported by an affidavit showing reasonable suspicion to do so. (concurrence p.3) This would be like a SW but with a lower standard than PC.

Written policy The SJC rejected D's argument that Barnstable PD should have had a written policy about ALPRs and the MSP policy on which Barnstable relied was not specific enough. (p.30) Written policies are required to justify certain exceptions to the SW requirement (like inventory searches and sobriety checkpoints) – they do not apply to the threshold question whether a search occurred in the first place. (p.31)

Miranda issues At the station police repeatedly told D that D was "not under arrest." But the motion judge found that the moment of arrest was when police handcuffed D at the traffic stop. (p.32) D argued that his statements should be suppressed because police tel ing him he was not under arrest amounted to "deceit or trickery" to get D to confess. The motion judge and the SJC rejected that argument saying that even if telling D he was not under arrest amounted to deceit or trickery it was just one factor to be used in determining voluntariness.

Bottom line: Police use of ALPRs at limited locations is not a constitutional search – but we don't know how many locations it'd have to be to amount to one. Using an ALPR in **exigent circumstances** like an Amber Alert is likely OK. Local police don't need a written policy to use ALPRs maintained by MSP. After a D has been handcuffed police should not tell D that D is "not under arrest" – po ice will likely be accused later of deceit and trickery.

A thought: There are news stories online that cell phones may be used to do contact tracing for people exposed to COVID-19. If lots of people willingly agree to let their cell phone data be used to track their whereabouts would that ever change courts' view of what society recognizes as a reasonable expectation of privacy? At some point if members of the public come to expect that they're being tracked should police be allowed to use that evidence too? Or at the very least should there be a jury instruction explaining that police have less access to the data than other entities (like software companies or public health agencies)?

As always email me with any questions. Wash your hands!

Subject: Comm v. McCarthy – scoring D's MV with ALPRs on Bourne/Sagamore Bridges not a "search"
Date: Friday, April 24, 2020 12:03:02 PM

https://reason.com/2020/04/22/automated-license-plate-readers-the-mosaic-theory-and-the-fourth-amendment/

Charli – this link is to a really interesting article by a University of California-Berkeley law professor analyzing (and disagreeing with) the SJC's opinion last week about ALPRs. The most interesting part:

> "This is a particularly challenging approach given the likely need for a warrant if a search is later found. *After* the data is collected the appellate courts will then look at the data figure out what it revealed and then say whether a warrant was needed *before* the government tried to collect it.
>
> Think of how it would work with a query into an existing database instead of a real-time query like the one in McCarthy. For example imagine the government wanted to know where McCarthy's car had been for the last 10 days. Maybe that query would reveal 10 hits from two cameras. Or maybe that query would reveal 1 000 hits from 300 cameras. If you're an officer you can't know whether your query wi l reveal a substantial picture of the defendant's public movements' until you know the results at which time you can find out if you needed a warrant before you ran the query you just finished. Or maybe more accurately you'll then have the information needed to ask a judge whether the judge finds the picture substantial' and therefore a search. Odd."

Subject: Comm v. McCarthy – scoring D's MV with ALPRs on Bourne/Sagamore Bridges not a "search"

[redacted]

Charli,
Commonwealth v. McCarthy (SJC-12750) ← click on that link to see the case
In this case the SJC ruled that police tracking D's car using 4 automatic license plate readers (ALPRs) at both ends of the Bourne and Sagamore Bridges was too limited to amount to a constitutional "search." The SJC declined to say exactly how detailed digital surveillance would have to be to constitute a search leaving that issue for future cases.

State Po ice maintain ALPRs including ones at both ends of the Bourne and Sagamore Bridges. (p.3) The ALPRs photograph vehicles' license plates; that data along with the date and time of the sighting is retained by EOPPS for a year. (p.3-4) Authorized users including police may put a license plate number on a "hot list " and receive an alert if that plate is sighted; reasons to put someone on the "hot list" include not only criminal investigations but also Amber alerts missing persons and BOLO alerts. (p. 3 25 n.13)

Through surveillance controlled buys and information from 4 Civ Barnstable police suspected that the co-D was selling heroin out of his house in Barnstable. (p.4) Police saw a black Hyundai driven by D visit there briefly so they suspected that D was the co-D's supplier. Police put the Hyundai's license plate number on the State Police ALPR "hot list " so that they'd be notified whenever the Hyundai crossed one of the bridges. (p.5) After getting an alert that the Hyundai had crossed onto the Cape police followed both the Hyundai and the co-D to the buy location on a quiet residential street where D and co-D met for about 30 seconds but police could not see a physical exchange. (p.5) From the ALPR data police generated a spreadsheet showing that in mid-winter the Hyundai had crossed the bridges dozens of times sometimes more than once a day adding to police suspicion that D was the heroin supplier. (p.5-6) When police got a second alert that the Hyundai had crossed onto the Cape they again followed D and co-D to the buy location and saw a 30-second meeting but could not see any exchange. This time police stopped both cars handcuffed both co-D and D and read them Miranda. On co-D police found heroin; on D police found 2 cell phones and cash. (p.6-7) At the station police repeatedly told D he was "not under arrest " and D made statements.

D moved to suppress the ALPR data his statements and evidence obtained from the stop. A Superior Court judge found that the moment of arrest was when D and co-D were handcuffed at the scene of the traffic stop but denied the motion to suppress. (p.33) The SJC upheld the denial.

ALPRs and expectation of privacy in digital surveillance At some length the SJC discussed the constitutional issues raised by digital surveillance. (p.7-29) Police conduct amounts to a search if: (1) it intrudes on a D's expectation of privacy and (2) society is willing to recognize the expectation of privacy as reasonable. Here the SJC ruled D did have an expectation of privacy because D and co-D chose a buy location in a quiet residential area. (p.8 n.5) As to what expectation of privacy society recognizes as reasonable with regard to digital surveillance the SJC was guided by historical understandings of what was an unreasonable search and seizure when the U.S. and Mass. Constitutions were adopted in the late 1700s in reaction to redcoats' rummaging without restraint through colonists' homes. (p.8-10) New technologies like ALPRs raise difficult legal issues because they are easier and less expensive for police than traditional surveillance can be done secretly and permit police to search back in time for a vehicle's movements even before police suspicion arose. (p.12-14) Society does not recognize as reasonable an expectation of privacy in what someone "knowingly exposes" to public view like a license plate – which by statute must be "displayed conspicuously." (p.15-16 & n.8) In older cases involving less advanced technology courts have held that a D did not have an expectation of privacy in contents of a phone conversation in a phone booth or a radio beeper" tracking a single journey. (p.14-17) But technology like ALPRs GPS and CSLI are different because they may give police a **mosaic** of information where each piece may be public but when viewed together they create a picture that implicates someone's privacy interests like their political religious or sexual associations. (p.17-21) The SJC was concerned that with enough ALPRs police could track someone's location everywhere which would be "creepy." (p.25) Exigent circumstances would likely justify using an ALPR in a situation involving an Amber alert or missing person. (p.25 n.13) The D urged the SJC to consider not just these four ALPRs on the Bourne and Sagamore Bridges but the hundreds of ALPRs across Massachusetts; the SJC declined to do so because that evidence is not in the record of this case. (p.26) The **limited number of cameras** here and their placements on the bridges was not enough to give D an expectation of privacy that society would recognize as reasonable. (p.28) The SJC declined to say how much digital surveillance would give such an expectation and admitted that its unwillingness to do so "**may bring some interim confusion**" until further cases develop the law on this issue. (p.28 n.15) Chief Justice Gants wrote a separate concurrence suggesting that one thing the SJC could do is to require police who want to search a vast amount of digital data to apply for a court order supported by an affidavit showing reasonable suspicion to do so. (concurrence p.3) This would be like a SW but with a lower standard than PC.

Written policy The SJC rejected D's argument that Barnstable PD should have had a written policy about ALPRs and the MSP policy on which Barnstable relied was not specific enough. (p.30) Written policies are required to justify certain exceptions to the SW requirement (like inventory searches and sobriety checkpoints) – they do not apply to the threshold question whether a search occurred in the first place. (p.31)

Miranda review At the station police repeatedly told D that D was "not under arrest." But the motion judge found that the moment of arrest was when police handcuffed D at the traffic stop. (p.33) D argued that his statements should be suppressed because police telling him he was not under arrest amounted to "deceit or trickery" to get D to confess. The motion judge and the SJC rejected that argument saying that even if telling D he was not under arrest amounted to deceit or trickery it was just one factor to be used in determining voluntariness.

Bottom line: Police use of ALPRs at limited locations is not a constitutional search – but we don't know how many locations it'd have to be to amount to one. Using an ALPR in **exigent circumstances** like an Amber Alert is likely OK. Local police don't need a written policy to use ALPRs maintained by MSP. After a D has been handcuffed police should not tell D that D is "not under arrest" – police will likely be accused later of deceit and trickery.

A thought: There are news stories online that cell phones may be used to do contact tracing for people exposed to COVID-19. If lots of people willingly agree to let their cell phone data be used to track their whereabouts would that ever change courts' view of what society recognizes as a reasonable expectation of privacy? At some point if members of the pub ic come to expect that they're being tracked should police be allowed to use that evidence too? Or at the very least should there be a jury instruction explaining that police have less access to the data than other entities (like software companies or public health agencies)?

As always email me with any questions. Wash your hands!

Subject: RE: Charles v. Norman - get a SW for ALL data if ELMO imposed as PTCOR
Date: Friday, June 26, 2020 3:24:41 PM

Charls

I've had a couple of questions about this case and I wanted to share with you the questions and my answers. The case seems to illustrate the mindset of some judges that technological advances like ELMO end up being an "unfair advantage" to police.

QUESTION #1: This illogical decision appears to create a set of circumstances where an unknown suspect's expectation of privacy cannot be known unt l after a search of ELMO data is completed which puts police in the position of not knowing whether it was reasonable or not until it's too late. It's reminiscent of the end of McCarthy where it was suggested that future LPR decisions may hinge on how much information comes back and not what was actually searched for.

However in light of this trend how would you expect a future case to play out where a suspect is not known (so it cannot be known if he has this new expectation of privacy) and po ice wish to query ELMO to develop a suspect. For example similar to Norman a home invasion occurs with no suspects po ice contact ELMO to query if any devices were in the area police learn that an ELMO bracelet was in the area police are given identity of suspect police attempt to determine whether suspect is wearing it as PTCOR or post-conviction police are given suspect's ELMO location history police investigate this new suspect. At what point would a search warrant likely be required?

Additionally do you think there is an avenue or benefit for probation to change the PTCOR form and procedure to specifically work in a suspect's voluntary consent?

ANSWER #1: Don't even get me started. The Norman case came down on March 17 the first day of the COVID lockdown and the irony is that that was right when the SJC was starting to tell judges to let more Ds out of jail on GPS bracelets. So we're going to let all of these people out on ELMO but then police can't search the ELMO data? And Ds will be out on ELMO on even more serious violent crimes in multiple cases?

I don't think it would help for probation to change the GPS consent form. What the SJC doesn't te l you in Norman is that the form says: "**Coordinates and other data related to your physical location while on GPS are recorded and may be shared with the court, probation, parole, attorneys and law enforcement. Data generated by GPS equipment assigned to you is not private and confidential.**" And in Norman D was represented by counsel when he signed it – how much more voluntary could it be?

The SJC's problem was that it did not think there was valid reason for GPS. The SJC pointed out (at fn.2) that the BMC arraignment had happened more than 4 years before and the transcript of it was no longer available. Since it's the Commonwealth's burden to prove D consented to GPS the SJC held that without the transcript the Comm couldn't prove it – D might've signed the consent form just to get out on bail. That seems like a stretch to me where D was represented by counsel. And it's annoying to read that fn.4 that says "there are some situations" where a D might consent to GPS but we're not going to tell you what they are. (I.ust like the ALPR in McCarthy) I am hopeful that in another situation with the arraignment transcript the Commonwealth would be able to prove that D did consent to GPS – from what I've seen defense attorneys beg for judges to put Ds on GPS rather than impose a higher bail especially because Ds don't want to go to jail because of COVID. But police aren't going to know all that when looking for the ELMO data.

We had a situation recently where police developed PC that a suspect was involved in a serious crime. On the suspect's BOP were open cases in several different courts with the abbreviation "PTCOR." A trooper called probation and they said the suspect is on ELMO and they'd send him the data without a SW. But because of Norman he got a SW. So I wanted to send this email around to warn police about the issue.

In general I would say that when police develop PC that a specific suspect was at the scene of the crime and they have reason to believe that the suspect was on ELMO as a PTCOR police should get a SW to search ELMO for the suspect's data. You're right that the tough situation is when police don't have a suspect. Maybe in a situation like a home invasion of a drug dealer's house police could write a SW affidavit for all ELMO data in the vicinity of the crime. (This would be kind of like a geofencing SW which authorizes a search for cell site location information for all phones that hit off cell towers at the specific time and the specific longitude/latitude of the crime scene.) It could say something like based on information that the Vs of this home invasion were involved in drug dealing there is PC that one or more persons in the area were wearing ELMO bracelets. Based on my training and experience I know that courts have increasingly been releasing defendants on pretrial conditions of release to wear ELMO including in drug-related crimes as a result of the COVID-19 pandemic." That is a stretch but if police have no other leads might be worth a try.

QUESTION #2: About the case you sent about Elmo information. I never ask about a specific person even if I have one in mind. As a matter of fact I had a B/E a few years ago and I just gave them time and location. I got a hit and it was not the guy I expected. My requests always say were there any Probationers in the vicinity of such location around this time? Does that sound like it would work? Sounds like enough or maybe if there answer is a pi:ctor then get warrant? I have told guys forever not to ask for specific person. No need and it limits you.

ANSWER #2: After this case if the suspect's BOP says "PTCOR " it is best to get a SW for the ELMO data. I hear you that it should be better for police to be open-minded and not specify a suspect. I suppose you could include in the SW affidavit the PC you have for suspect #1 and then ask for "data evidencing the presence of suspect #1 or any other probationer wearing an ELMO device in the vicinity of LOCATION on DATE at TIME." That way if the ELMO data comes back that it was someone other than your suspect you got that data pursuant to the SW – and data showing that suspect#2 was there would be evidence relevant to suspect#1 if it proves suspect#1 didn't do it.

Thanks for the questions – they help me figure out how much detail to put in my emails. Have a good weekend. –Marguerite

[redacted]

Charls

In this case the SJC ruled that electronic monitoring (ELMO) data placing D at the scene of a home invasion was properly suppressed because D did not consent to ELMO as a pretrial condition of release even though D signed a form agreeing to it. If you are seeking ELMO data from probation and ELMO was imposed as a pretrial condition of release get a SW.

In July 2015 D was arraigned in the BMC for possession of Class B and motor vehicle violations. As pretrial conditions of release (shown on a Mass. criminal record as "**PTCOR**") he was ordered to stay out of Boston and wear ELMO. D signed a form that said "I have read and understood the above conditions and **I agree to observe them**." A month later a home invasion and masked armed robbery occurred in Medford. Without any information linking D to those crimes police contacted probation to find out if any ELMO bracelets were at the Medford scene. They learned that D's ELMO bracelet was and immediately before and afterwards was at an address in Everett. Po lice got a SW for the Everett premises where they found evidence of the home invasion. A V of the home invasion ID'd D in a photo array.

A Superior Court judge allowed D's motion to suppress the ELMO data reasoning that D consented to ELMO only for the purposes of ensuring that D complied with the conditions of release (show up in court and stay out of Boston) not for general law enforcement purposes. The Commonwealth appealed. The SJC upheld the suppression. It ruled that because ELMO was imposed on D as a **pretrial condition,** D had a **greater** reasonable expectation of privacy than would a D who had it imposed after trial. The SJC ruled that "the only evidence of consent" was the fact that D signed the form agreeing to pretrial conditions of release and **D signing the form was not enough for the Commonwealth to meet its burden of proving D's consent**. The SJC noted that "there are some situations . . . where a pretrial condition of release would be justified by free and voluntary consent " but did not say what those would be. (fn.4) The SJC did not think there was a sufficient basis for imposing GPS at the BMC arraignment for drug and M/V crimes – GPS and the condition excluding D from Boston did not increase the likelihood of D showing up to court.

Bottom line: A D wearing ELMO as a pretrial condition of release has a reasonable expectation of privacy in the ELMO data. Before you get data from ELMO check to see f your suspect's BOP includes any open case with the abbreviation **PTCOR**. If so **get a SW** before obtaining any data from ELMO. Be forewarned the ELMO people may be perfectly willing to give you the data without a SW but after this case you need one if ELMO is imposed as a PTCOR. The situation may be different f D consented to ELMO by more than just signing the form or there's a stronger basis for ELMO than there was here – but usually you will have no way of knowing that. For example if a judge in a DV case imposed ELMO to enforce an order that D stay away from V and then D showed up at V's home there'd arguably be a much stronger basis for police to access ELMO – D's expectation of privacy would be less reasonable and often there'd be exigent circumstances for police to find D right away. If ELMO is imposed **after trial** it should be OK to search it. But most of the time you may not know much about why ELMO was imposed or how reasonable D's expectation of privacy was in agreeing to it. So if you see those five letters **PTCOR**" on the suspect's BOP get a SW for ELMO data.

As always email me with any questions. Wash your hands!

Subject: RE: Cowles v. Norman - get a SW for ELMO anyway @ PTCOR
Date: Monday, June 29, 2020 3:26:26 PM

Chiefs – some more follow-up on the ELMO case I sent around last week. Trooper Noah Pack had a great suggestion about how to seek information from ELMO in an investigation where there is no PC for a specific suspect. I highlighted his suggestion in red below. This case is frustrating. Stay safe Marguerite

Hi Marguerite

Thanks for your reply and discussion on the matter. Today I read the decision in greater detail and I'm even more frustrated than I was before. They start the decision by saying that the imposition of GPS in the first place was unsupported so they don't need to address the issue of the search. (Until recently that would be the end of it...right?) Then they thoroughly and by their own words unnecessarily address the issue of the ELMO search by police. I won't comment further on that aside to again point to how they also did that with McCarthy.

More to the point I struggle to accept that ELMO is essentially gone as an investigative tool because the SJC thinks it's humiliating to defendants and unpopular with the judiciary. The distinction between PTCOR and probationary use is reasonably clear from the decision and your emails and I'm not sure we can do much with that. However I think that a search warrant for ELMO in a case without a suspect is a stretch. "Fishing expedition" is what the Springfield DC clerks will invariably te l us as they deny the application.

The SJC cites Moore in their final paragraph stating **For a warrantless search to be permissible under art. 14, the legitimate governmental interests must outweigh the level of intrusion.**" I think a reasonable way to balance the government's need to identify a suspect in a violent crime against the privacy interests of a GPS assigned individual would be the following:

(1) contact ELMO and ask if any signals were located in the area in question.
(2) If no: move on.
(3) If yes: go get a search warrant to identify the owner of the bracelet and his relevant travel.

I would argue that this procedure dramatically reduces the intrusion on the individual as his name and location information is not disclosed to the government until a search warrant is obtained. Officers have merely gained enough anonymized information to know that some unknown suspect was there and to establish PC to get the warrant to identify him.

Your thoughts?

Respectfully

Noah

In general I would say that when police develop PC that a specific suspect was at the scene of the crime and they have reason to believe that the suspect was on ELMO as a PTCOR police should get a SW to search ELMO for the suspect's data. You're right that the tough situation is when police don't have a suspect. Maybe in a situation like a home invasion of a drug dealer's house police could write a SW affidavit for all ELMO data in the vicinity of the crime. (This would be kind of like a geofencing SW which authorizes a search for cell site location information for all phones that hit off cell towers at the specific time and the specific longitude/latitude of the crime scene.) It could say something like "based on information that the Vs of this home invasion were involved in drug dealing there is PC that one or more persons in the area were wearing ELMO bracelets. Based on my training and experience I know that courts have increasingly been releasing defendants on pretrial conditions of release to wear ELMO including in drug-related crimes as a result of the COVID-19 pandemic." That is a stretch but if police have no other leads might be worth a try.

QUESTION #2: About the case you sent about Elmo information. I never ask about a specific person even if I have one in mind. As a matter of fact I had a B/E a few years ago and I just gave them time and location. I got a hit and it was not the guy I expected. My requests always say were there any Probationers in the vicinity of such location around this time? Does that sound like it would work? Sounds like enough or maybe if there answer is a pricor then get warrant? I have told guys forever not to ask for specific person. No need and it limits you.

ANSWER #2: After this case if the suspect's BOP says "PTCOR " it is best to get a SW for the ELMO data. I hear you that it should be better for police to be open-minded and not specify a suspect. I suppose you could include in the SW affidavit the PC you have for suspect #1 and then ask for "data evidencing the presence of suspect #1 or any other probationer wearing an ELMO device in the vicinity of LOCATION on DATE at TIME." That way if the ELMO data comes back that it was someone other than your suspect you got that data pursuant to the SW – and data showing that suspect#2 was there would be evidence relevant to suspect#1 if it proves suspect#1 didn't do it.

Thanks for the questions – they help me figure out how much detail to put in my emails. Have a good weekend. –Marguerite

Chiefs

In this case the SJC ruled that electronic monitoring (ELMO) data placing D at the scene of a home invasion was properly suppressed because D did not consent to ELMO as a pretrial condition of release even though D signed a form agreeing to it. If you are seeking ELMO data from probation and ELMO was imposed as a pretrial condition of release get a SW.

In July 2015 D was arraigned in the BMC for possession of Class B and motor vehicle violations. As pretrial conditions of release (shown on a Mass. criminal record as "**PTCOR**") he was ordered to stay out of Boston and wear ELMO. D signed a form that said I have read and understood the above conditions and I **agree to observe them**." A month later a home invasion and masked armed robbery occurred in Medford. Without any information linking D to those crimes police contacted probation to find out if any ELMO bracelets were at the Medford scene. They learned that D's ELMO bracelet was and immediately before and afterwards was at an address in Everett. Police got a SW for the Everett premises where they found evidence of the home invasion. A V of the home invasion ID'd D in a photo array.

A Superior Court judge allowed D's motion to suppress the ELMO data reasoning that D consented to ELMO only for the purposes of ensuring that D complied with the conditions of release (show up in court and stay out of Boston) not for general law enforcement purposes. The Commonwealth appealed. The SJC upheld the suppression. It ruled that because ELMO was imposed on D as a **pretrial condition,** D had a **greater** reasonable expectation of privacy than would a D who had it imposed after trial. The SJC ruled that "the only evidence of consent" was the fact that D signed the form agreeing to pretrial conditions of release and **D signing the form was not enough for the Commonwealth to meet its burden of proving D's consent**. The SJC noted that "there are some situations . . . where a pretrial condition of release would be justified by free and voluntary consent " but did not say what those would be. (fn.4) The SJC did not think there was a sufficient basis for imposing GPS at the BMC arraignment for drug and MV crimes – GPS and the condition excluding D from Boston did not increase the likelihood of D showing up to court.

Bottom line: A D wearing ELMO as a pretrial condition of release has a reasonable expectation of privacy in the ELMO data. Before you get data from ELMO check to see if your suspect's BOP includes any open case with the abbreviation **PTCOR**. If so **get a SW** before obtaining any data from ELMO. Be forewarned: the ELMO people may be perfectly willing to give you the data without a SW but after this case you need one if ELMO is imposed as a PTCOR. The situation may be different if D consented to ELMO by more than just signing the form or there's a stronger basis for ELMO than there was here – but usually you will have no way of knowing that. For example if a judge in a DV case imposed ELMO to enforce an order that D stay away from V and then D showed up at V's home there'd arguably be a much stronger basis for police to access ELMO – D's expectation of privacy would be less reasonable and often there'd be exigent circumstances for police to find D right away. If ELMO is imposed **after trial** it should be OK to search it. But most of the time you may not know much about why ELMO was imposed or how reasonable D's expectation of privacy was in agreeing to it. So if you see those five letters **"PTCOR"** on the suspect's BOP get a SW for ELMO data.

As always email me with any questions. Wash your hands!

Subject: RE: Commonwealth v McCarthy - SJC Decision (the Sagamore bridge cam case)
Date: Thursday, April 16, 2020 1:05:02 PM

Good outcome and an interesting read. However, I fear the decision will encourage and produce more defense motions (and public record requests) for the specific number, location, and capabilities of MSP and municipal ALPR systems (not only in specific cases but as an entire network).

Good morning Colonel,

It is nice to share some good news for a change.
I know the Bridge cam case has wide State Police implications. Thought you would like to give it a read.
Another win for the Cape!
Stay healthy.

Hi Mike,

As you may be aware, the MSP and MassPort have been actively working towards migrating the MassPort ALPR cameras into the EOPSS BOSS server. The original plan was to physically network the cameras through F Troop's TSS infrastructure and into the new BOSS system. However, the new BOSS system has been delayed for a number of reasons. In an effort to move this project along I would like to cannibalize 6 cruisers MP70's identified from the below and push the ALPR data wirelessly to the data center. I consider this a phased approach and once the new BOSS system is up and running, we would then move forward with the original TSS networking and cut the ALPR off VZW. I have spoken with Alex at MassPort and with approval, we'd like to begin identifying the camera sectors to cut over. Please advise if you are ok the above approach and if you can assist in scheduling the removal of the devices by the Technical Services Unit.

Thanks, Brian

Hi Mike,

We were wondering if you could help answer a question. Do you know how many Massport cruisers had the Sierra wireless AVL installed but did not have a laptop? I trying to find out if there are any cars with both Sierra modems and geotab installed, but with no laptop or need for the Sierra device.

Thanks, Brian

I'm testing a new WMS hotlist workflow and setup your account to get emails. Can you test it out and let me know what you think? Its WMS matched with active registrations. I setup both your readers to relay to your email.

Yes I can.

We have got to get more around town, we had a Great b&e with good side shot of car but no plate. They would have went right by [redacted]. I've had 4 detectives checking addresses in 3 towns last 2 days crossing off possible vehicles. No doubt these things save time/money.

Brian,
I don't see the MSP on here, but there is a list of city's that you may be abel to share with. It looks like these funds can be used for ALPR's

Subject: Elsag ALPR / Barnstable MA Police ; 2020 JAG edward-byrne-memorial Grant for Massachusetts Police agencies Hi Craig,

Good to catch up with you last week. As discussed, I found a grant that might help with your goal to get a Mobile ALPR system for Barnstable Police ….

If you click on this link from Bureau of Justice https://urldefense.proofpoint.com/v2/url?u=https-3A__bja.ojp.gov_program_jag_fy-2D2020-2Dallocations-2Dand-2Ddisparate-2Dinformation&d=DwIGaQ&c=lDF7oMaPKXpkYvev9V-fVahWL0QWnGCCAfCDz1Bns_w&r=hNTkG2z4MCZ_SB-QH0EEKPBh4IX8nm64tlxI8vzFMhI&m=nF3oiRzulLrcME0WA8EOYnD2tlx-8Kssb0278nyA9-w&s=S06RkEFSSJzE8BFB0rFBtHkFEQhVqDi1cAgLM952omM&e=<https://urldefense.proofpoint.com/v2/url?u=https-3A__bja.ojp.gov_program_jag_fy-2D2020-2Dallocations-2Dand-2Ddisparate-2Dinformation&d=DwMFAg&c=lDF7oMaPKXpkYvev9V-fVahWL0QWnGCCAfCDz1Bns_w&r=hNTkG2z4MCZ_SB-QH0EEKPBh4IX8nm64tlxI8vzFMhI&m=oQvnXYpsTMAHiOFEUyG7Ml1ikBh_wo2MFBsZE8SsyzY&s=zYal0qbp2-8p_jJR5qj65DmQRm9xooNTRXV_ZD9cvus&e=> , click on the Massachusetts button and look on this list, you will see that Barnstable is eligible to apply for $15,240.00.

Our attached new MPH M7 system is $11,500 including all hardware and software. We could fully install it for you on one of your vehicles for $1250, so the total cost would be $12,750, well within the eligible grant of $15,240.00

I'm testing a new WMS hotlist workflow and setup your account to get emails. Can you test it out and let me know what you think? Its WMS matched with active registrations. I setup both your readers to relay to your email.

Yes I can.

We have got to get more around town, we had a Great b&e with good side shot of car but no plate. They would have went right by reader on 28 if we had one. I've had 4 detectives checking addresses in 3 towns last 2 days crossing off possible vehicles. No doubt these things save time/money.

Subject: Elsag ALPR / Barnstable MA Police ; 2020 JAG edward-byrne-memorial Grant for Massachusetts Police agencies Hi Craig,

Good to catch up with you last week. As discussed, I found a grant that might help with your goal to get a Mobile ALPR system for Barnstable Police ….

If you click on this link from Bureau of Justice https://urldefense.proofpoint.com/v2/url?u=https-3A__bja.ojp.gov_program_jag_fy-2D2020-2Dallocations-2Dand-2Ddisparate-2Dinformation&d=DwIGaQ&c=lDF7oMaPKXpkYvev9V-fVahWL0QWnGCCAfCDz1Bns_w&r=hNTkG2z4MCZ_SB-QH0EEKPBh4IX8nm64tlxI8vzFMhI&m=nF3oiRzulLrcME0WA8EOYnD2tlx-8Kssb0278nyA9-w&s=S06RkEFSSJzE8BFB0rFBtHkFEQhVqDi1cAgLM952omM&e=<https://urldefense.proofpoint.com/v2/url?u=https-3A__bja.ojp.gov_program_jag_fy-2D2020-2Dallocations-2Dand-2Ddisparate-2Dinformation&d=DwMFAg&c=lDF7oMaPKXpkYvev9V-fVahWL0QWnGCCAfCDz1Bns_w&r=hNTkG2z4MCZ_SB-QH0EEKPBh4IX8nm64tlxI8vzFMhI&m=oQvnXYpsTMAHiOFEUyG7Ml1ikBh_wo2MFBsZE8SsyzY&s=zYal0qbp2-8p_jJR5qj65DmQRm9xooNTRXV_ZD9cvus&e=> , click on the Massachusetts button and look on this list, you will see that Barnstable is eligible to apply for $15,240.00.

Our attached new MPH M7 system is $11,500 including all hardware and software. We could fully install it for you on one of your vehicles for $1250, so the total cost would be $12,750, well within the eligible grant of $15,240.00

* The Program overview link is : https://urldefense.proofpoint.com/v2/url?u=https-3A__bja.ojp.gov_funding_opportunities_bja-2D2020-2D17276&d=DwIGaQ&c=lDF7oMaPKXpkYvev9V-fVahWL0QWnGCCAfCDz1Bns_w&r=hNTkG2z4MCZ_SB-QH0EEKPBh4IX8nm64tlxI8vzFMhI&m=nF3oiRzulLrcME0WA8EOYnD2tlx-8Kssb0278nyA9-w&s=0URU95vtxRgZxAFjcJXMsEEo1j4rie4BCG9MvQl046c&e=<https://urldefense.proofpoint.com/v2/url?u=https-3A__bja.ojp.gov_funding_opportunities_bja-2D2020-2D17276&d=DwMFAg&c=lDF7oMaPKXpkYvev9V-fVahWL0QWnGCCAfCDz1Bns_w&r=hNTkG2z4MCZ_SB-QH0EEKPBh4IX8nm64tlxI8vzFMhI&m=oQvnXYpsTMAHiOFEUyG7Ml1ikBh_wo2MFBsZE8SsyzY&s=1W2-HkI_cz1jsQ3etfDe56uRHgnXuQyhGFluXeNQ6jk&e=>

* I suggest reviewing page 16-17 of RFP – the application checklist

* Deadline: August 19th at 11:59 PM EDT
* Administrative requirements: SAM.gov registration<https://urldefense.proofpoint.com/v2/url?u=https-3A__sam.gov_SAM_pages_public_index.jsf&d=DwMFAg&c=lDF7oMaPKXpkYvev9V-fVahWL0QWnGCCAfCDz1Bns_w&r=hNTkG2z4MCZ_SB-QH0EEKPBh4IX8nm64tlxI8vzFMhI&m=oQvnXYpsTMAHiOFEUyG7Ml1ikBh_wo2MFBsZE8SsyzY&s=e6dKFPtxucVTAvX0gXxt3c53fH8Vy4V2nzKdl5Ce8Ms&e=>, DUNS number<https://urldefense.proofpoint.com/v2/url?u=https-3A__www.dnb.com_duns-2Dnumber.html&d=DwMFAg&c=lDF7oMaPKXpkYvev9V-fVahWL0QWnGCCAfCDz1Bns_w&r=hNTkG2z4MCZ_SB-QH0EEKPBh4IX8nm64tlxI8vzFMhI&m=oQvnXYpsTMAHiOFEUyG7Ml1ikBh_wo2MFBsZE8SsyzY&s=wc7Vf9Hi2y1EvIM_A5X7cg-utlW-NIqRPzSaEQ2orJ8&e=>, GMS registration<https://urldefense.proofpoint.com/v2/url?u=https-3A__grants.ojp.usdoj.gov_gmsexternal_&d=DwMFAg&c=lDF7oMaPKXpkYvev9V-fVahWL0QWnGCCAfCDz1Bns_w&r=hNTkG2z4MCZ_SB-QH0EEKPBh4IX8nm64tlxI8vzFMhI&m=oQvnXYpsTMAHiOFEUyG7Ml1ikBh_wo2MFBsZE8SsyzY&s=T2bnfgMz1eVG6XA-WSxFz4bnW6iVgYd-U-ApHvkl-6I&e=> & SF-424 form<https://urldefense.proofpoint.com/v2/url?u=https-3A__www.ojp.gov_funding_apply_ojp-2Dgrant-2Dapplication-2Dresource-2Dguide-23completeApplication&d=DwMFAg&c=lDF7oMaPKXpkYvev9V-fVahWL0QWnGCCAfCDz1Bns_w&r=hNTkG2z4MCZ_SB-QH0EEKPBh4IX8nm64tlxI8vzFMhI&m=oQvnXYpsTMAHiOFEUyG7Ml1ikBh_wo2MFBsZE8SsyzY&s=NvE2xAM6-IZSDEkhr4lcxKx1VVKB9mwCbXcSKs2GYU0&e=>
* Category 1 under this solicitation allows for requests under $25,000 and allows for regional and single projects.
* No cost match required.

For this application, you, as a sworn agency, have to fill out the forms on-line directly with BJA OJP, but we can help you if you have questions about it. We also have a grant writing service who can give you direct assistance free of charge if you need that.

Please let me know if this is interesting for you to follow up on.

Best Regards, Ben

Application Deadline

Last Updated

03/04/2020

Summary

Overview: Through this announcement of the Availability of Grant Funds (AGF), the Massachusetts Executive Office of Public Safety and Security (EOPSS) is making a portion of the twenty-percent (20%) state-share of the U.S. Department of Homeland Security (DHS) FFY 2016 Homeland Security Grant Program (HSGP) funding available to eligible applicants. It is anticipated that up to approximately $2.0 million may be made available.

In general, eighty-percent (80%) of the HSGP funding allocated to Massachusetts is distributed to municipalities through the five Regional Homeland Security Advisory Councils. The remaining 20% is used to fund state priorities and administrative costs.
Eligibility: Massachusetts state government agencies and authorities, state institutions of higher education and non-profit organizations that support state homeland security needs and Sheriff's Offices. Municipalities are not eligible to apply for this funding.
Projects funded through this AGF must address:
* at least one capability target in the Massachusetts Threat and Hazard Identification and Risk Assessment (THIRA);
* a capability gap in the 2016 Massachusetts State Preparedness Report (SPR);
* an implementation step in the State Homeland Security Strategy (SHSS); and
* align with a Massachusetts HSGP State Priority.

Summary

Overview: Through this announcement of the Availability of Grant Funds (AGF), the Massachusetts Executive Office of Public Safety and Security (EOPSS) is making a portion of the twenty-percent (20%) state-share of the U.S. Department of Homeland Security (DHS) FFY 2016 Homeland Security Grant Program (HSGP) funding available to eligible applicants. It is anticipated that up to approximately $2.0 million may be made available.

In general, eighty-percent (80%) of the HSGP funding allocated to Massachusetts is distributed to municipalities through the five Regional Homeland Security Advisory Councils. The remaining 20% is used to fund state priorities and administrative costs.
Eligibility: Massachusetts state government agencies and authorities, state institutions of higher education and non-profit organizations that support state homeland security needs and Sheriff's Offices. Municipalities are not eligible to apply for this funding.
Projects funded through this AGF must address:
* at least one capability target in the Massachusetts Threat and Hazard Identification and Risk Assessment (THIRA);
* a capability gap in the 2016 Massachusetts State Preparedness Report (SPR);
* an implementation step in the State Homeland Security Strategy (SHSS); and
* align with a Massachusetts HSGP State Priority.

Subject: Elsag ALPR / Barnstable MA Police ; 2020 JAG edward-byrne-memorial Grant for Massachusetts Police agencies

Hi Craig,

Good to catch up with you last week. As discussed, I found a grant that might help with your goal to get a Mobile ALPR system for Barnstable Police ….

If you click on this link from Bureau of Justice https://bja.ojp.gov/program/jag/fy-2020-allocations-and-disparate-information , click on the Massachusetts button and look on this list, you will see that Barnstable is eligible to apply for $15,240.00.

Our attached new MPH M7 system is $11,500 including all hardware and software. We could fully install it for you on one of your vehicles for $1250, so the total cost would be $12,750, well within the eligible grant of $15,240.00

- The Program overview link is : https://bja.ojp.gov/funding/opportunities/bja-2020-17276
- RFP: https://bja.ojp.gov/sites/g/files/xyckuh186/files/media/document/bja-2020-17276.pdf
    - I suggest reviewing page 16-17 of RFP – the application checklist
- Deadline: **August 19th** at 11:59 PM EDT
- Administrative requirements: SAM.gov registration, DUNS number, GMS registration & SF-424 form
- Category 1 under this solicitation allows for requests under $25,000 and allows for regional and single projects.
- No cost match required.

For this application, you, as a sworn agency, have to fill out the forms on-line directly with BJA OJP, but we can help you if you have questions about it. We also have a grant writing service who can give you direct assistance free of charge if you need that.

Please let me know if this is interesting for you to follow up on.

>
> Overview: Through this announcement of the Availability of Grant Funds (AGF), the Massachusetts Executive Office of Public Safety and Security (EOPSS) is making a portion of the twenty-percent (20%) state-share of the U.S. Department of Homeland Security (DHS) FFY 2016 Homeland Security Grant Program (HSGP) funding available to eligible applicants. It is anticipated that up to approximately $2.0 million may be made available.
>
> In general, eighty-percent (80%) of the HSGP funding allocated to Massachusetts is distributed to municipalities through the five Regional Homeland Security Advisory Councils. The remaining 20% is used to fund state priorities and administrative costs.
> Eligibility: Massachusetts state government agencies and authorities, state institutions of higher education and non-profit organizations that support state homeland security needs and Sheriff's Offices. Municipalities are not eligible to apply for this funding.
> Projects funded through this AGF must address:
> * at least one capability target in the Massachusetts Threat and
> Hazard Identification and Risk Assessment (THIRA);
> * a capability gap in the 2016 Massachusetts State Preparedness Report
> (SPR);
> * an implementation step in the State Homeland Security Strategy
> (SHSS); and
> * align with a Massachusetts HSGP State Priority.

Sirs,

Are you ok with this email? I would like to send to EOPSS and EOTSS and Massport teams.

Respectfully,

DJQ

Good Morning,

I was hoping to get us all on the same page regarding a proposal to push Massport LPR data to the existing DCJIS BOSS server in Chelsea. Some time ago we (MSP) engaged with Massport regarding Automated License Plate Reader technology (LPR). As most of you know, MSP and DCJIS have been rolling out a very robust LPR network across the Commonwealth. This has been on going for the past several years. The LPR system has paid dividends in numerous criminal cases including crimes of violence, Amber and Silver alerts, and also in many missing/endangered/public well being events.

Our communications with Massport started when we were made aware that they would be purchasing an LPR system. We worked with our counterparts at Massport to make sure that the two systems would be compatible so that information could be shared across all law enforcement agencies through the MSP Fusion Center. Towards that end Massport partnered with Neology for their solution. This is the same vendor used by MSP and DCJIS.

Recently Massport has decided not to maintain its own ALPR BOSS database server. The database and application for LPR in Massachusetts is known as “BOSS” and is a Neology product. Massport would like to feed data from its cameras to the DCJIS BOSS server in Chelsea. Originally we had been discussing with Neology the potential for Massport’s cameras to write two records after scanning a plate, one to Massport BOSS and a duplicate to DCJIS BOSS. We think the current proposal to write all LPR records to the BOSS server located at DCJIS is a much better plan.

MSP has a grant to upgrade the current the current BOSS v3.6 application which is at end of life and no longer supported to version v4.0. We have also submitted a Service Now ticket asking for hardware upgrade costs to the existing BOSS server which MSP will try to acquire funding to upgrade.

I have received several calls from Massport looking to see where we are as far as being able to accept data from their cameras so that they can decommission their BOSS server. I believe their intent is to shut the Massport system down if the MSP and DCJIS are unable to accept the data. I have copied Hank Shaw from Massport into this thread in case I have misstated their intent.

To access the Massport data we will need to be able to pass data from the Massport network to the state network much like we do with case management data. An alternative would be to use 4G modems (like we do with many of our mobile units and cruiser mounted units) on the state network, but this may be an unnecessary cost. Obviously this decision would be driven by the EOTSS and Massport network teams.

I can't overstate the value that LPR data from Massport would have for MSP and law enforcement in general. Cases involving terrorism, money laundering, and drug trafficking all have significant ties to the port. Being able to hotlist and search on LPR data from Massport facilities would be a significant addition to the MSP Division of Homeland Security's technology tool set and would have immediate impact. Towards that end, we made be able to leverage Homeland Security grant funds for some of this project.

Respectfully,

Lieutenant Colonel Dermot J. Quinn #1765
Division Commander
Division of Homeland Security & Preparedness
Massachusetts State Police

Subject: RE: MassPort LPR Cameras

Hi Jim,

We are looking to consolidate the MassPort ALPR cameras into the main EOPSS ALPR server. After evaluating a number of options purposed by Neology, this appears to be the simplest approach. There is already a network presence at the barracks and it should be easy to point the cameras towards the centralized server. I've spoken to Alex at MassPort and he can volunteer a camera for testing. We could monitor network and server impact. Are you available to discuss?

Thanks Brian

Hello All,

I just wanted to follow up with this request to see what the next steps for this project are. I believe that we can make the connections to the EOPSS network, but will want to work within your desired IP scheme and ensure that there aren't any concerns around the network routing, security, etc. Let me know if we can have a quick call to discuss the details.

Respectfully,

~Alex

Hi John, Peter

Any issues with moving Massports cameras to the Chelsea DB?

Using the Boss calculator, I estimate that we would need 9-10 TB of storage.

Subject: MassPort LPR Cameras

Brian,

Thank you again for taking my call today. As discussed, I would like to explore the opportunity to swing all LPR cameras at Logan directly to the MSP BOSS server without the need for the InStation solution. My understanding is that the EOPSS network resides in both the ATCT as well as the [redacted] I would propose that we extend this network via Layer 2 to the main locations that the LPR system terminates to and cut the entire LPR network at MassPort over to EOPSS. Most of the [redacted] are fed to [redacted] network locations. MassPort can supply the necessary fiber paths and switch gear required to extend the EOPSS network to these locations. Currently we have [redacted] in production, with another [redacted] to come online within the next two months. I anticipate this number growing to approximately [redacted] within our campus over the next year. Let me know what you think the appropriate next steps would be.

Respectfully,

~Alex

Good Morning,

I was hoping to get us all on the same page regarding a proposal to push Massport LPR data to the existing DCJIS BOSS server in Chelsea. Some time ago we (MSP) engaged with Massport regarding Automated License Plate Reader technology (LPR). As most of you know, MSP and DCJIS have been rolling out a very robust LPR network across the Commonwealth. This has been on going for the past several years. The LPR system has paid dividends in numerous criminal cases including crimes of violence, Amber and Silver alerts, and also in many missing/endangered/public well being events.

Our communications with Massport started when we were made aware that they would be purchasing an LPR system. We worked with our counterparts at Massport to

make sure that the two systems would be compatible so that information could be shared across all law enforcement agencies through the MSP Fusion Center. Towards that end Massport partnered with Neology for their solution. This is the same vendor used by MSP and DCJIS.

Recently Massport has decided not to maintain its own ALPR BOSS database server. The database and application for LPR in Massachusetts is known as "BOSS" and is a Neology product. Massport would like to feed data from its cameras to the DCJIS BOSS server in Chelsea. Originally we had been discussing with Neology the potential for Massport's cameras to write two records after scanning a plate, one to Massport BOSS and a duplicate to DCJIS BOSS. We think the current proposal to write all LPR records to the BOSS server located at DCJIS is a much better plan.

MSP has a grant to upgrade the current the current BOSS v3.6 application which is at end of life and no longer supported to version v4.0. We have also submitted a Service Now ticket asking for hardware upgrade costs to the existing BOSS server which MSP will try to acquire funding to upgrade.

I have received several calls from Massport looking to see where we are as far as being able to accept data from their cameras so that they can decommission their BOSS server. I believe their intent is to shut the Massport system down if the MSP and DCJIS are unable to accept the data. I have copied Hank Shaw from Massport into this thread in case I have misstated their intent.

To access the Massport data we will need to be able to pass data from the Massport network to the state network much like we do with case management data. An alternative would be to use 4G modems (like we do with many of our mobile units and cruiser mounted units) on the state network, but this may be an unnecessary cost. Obviously this decision would be driven by the EOTSS and Massport network teams.

I can't overstate the value that LPR data from Massport would have for MSP and law enforcement in general. Cases involving terrorism, money laundering, and drug trafficking all have significant ties to the port. Being able to hotlist and search on LPR data from Massport facilities would be a significant addition to the MSP Division of Homeland Security's technology tool set and would have immediate impact. Towards that end, we made be able to leverage Homeland Security grant funds for some of this project.

Subject: RE: MassPort LPR Cameras

Hi Alex,

Can you please provide the updated reads per day? Previously you were interested in sharing G.L. c. 4.sec. 7.cl.26 (n)(s at approximately 75,000 reads per day.

Here is the G.L. c. 4.sec confi I mentioned.

Set host to boss G.L. c. 4.sec. 7.cl.26 (n)(security), G.L. c.
Set image G.L. c. 4.sec. 7.cl.26 (n)(s
Set number of G.L. c. 4.sec. 7.cl.26 (n)(security
Set Ping G.L. c. 4.sec. 7.cl.26 (n)(security),
Set udp ping G.L. c. 4.sec. 7.cl.26 (n)(s
Set ping G.L. c. 4.sec. 7.cl.26 (n)(security), G.L. c. 4.se
Set security G.L. c. 4.sec. 7.cl.26 (n)

I've looped in the network and server team from TSS on the thread.
Maybe we can schedule a call in the next week.
For an estimate on impact, the Caper cameras do between 80,000 to 120,000 per day. We average 337,944 reads per day.

-Brian

Subject: MassPort LPR Cameras

Brian,

Thank you again for taking my call today. As discussed, I would like to explore the opportunity to swing all LPR cameras at Logan directly to the MSP BOSS server without the need for the InStation solution. My understanding is that the EOPSS network resides in both the ATCT as well as the [redacted] I would propose that we extend this network via Layer 2 to the main locations that the LPR system terminates to and cut the entire LPR network at MassPort over to EOPSS. Most of the [redacted] are fed to [redacted] network locations. MassPort can supply the necessary fiber paths and switch gear required to extend the EOPSS network to these locations. Currently we have [redacted] in production, with another [redacted] to come online within the next two months. I anticipate this number growing to approximately [redacted] within our campus over the next year. Let me know what you think the appropriate next steps would be.

Respectfully,

~Alex

Subject: RE: LRP network ideas?

Hi John,
I compared the XML we are sending with the sample XML in the development package. I don't see any structural differences in them, but we are still getting reply indicating XML is not valid. Any help you can provide is appreciated.
Here is the XML we are sending for transaction type R1.
Thanks,
-Samson

---request begin----

```
<?xml version="1.0" encoding="UTF-8" standalone="yes"?>
<ns1:CJISRequestTransaction xmlns:ns2="http://www.it.ojp.gov/jxdm/3.0" xmlns:ns1="http://www.xfact.com/schemas/chsb/cjis/2.0">

John,
Here is the XML sent from our server to retrieve relevant data. The CJISMessageKey is set to R1. The response we got indicates the XML sent is invalid. Can you point me to what is not valid in the XML? By the way, I checked the XML syntax with an online XML validation tool which indicates the syntax is good.

Hey Brian,

Can we change the subject to Broker?
LPR is the license plate reader.

Subject: RE: LRP network ideas?

John,
Thank you for the information on the call this afternoon.

Samson/Billy,
We need to add some additional debug code into our service so we can see the full communication path and what is being sent and received. John is also in the process to check and make sure their three servers can reach back into our [redacted] I have also reattached the IP wireshark I did this morning.

John,
The 154 address is a load balancer for the services correct. As far as I know there should be no blocked traffic to the .171 but let me include Chris and Tim on this thread.

Regards,

Hi Brian,

I can check.

The broker will send responses from[redacted] Make sure you are allowing that traffic.

When you send in a request you will receive an xml document as the return value. The documents lists if the request was accepted and if it wasn't, why it wasn't. You should be checking those.

Bill,
I have the service send back a no data found so it looks like we are connecting. Can you check your logs to see if our request actually made it into your system.

I am sending the following test cycle from the[redacted] web server to our FR server

http:/[redacted]6060/CHSBReceiver/rest?ori=MAMSP0000&username=TEST&ssn=123123123&driversLicense=S32935254

Just so everybody is clear, this the is the connection path

[redacted] →[redacted]→[redacted]

Return path

[redacted]→[redacted]→[redacted]

Log of request:

2019-11-22 11:16:13,982 main DEBUG LoggerContext[name=MassLPRServlet, org.apache.logging.log4j.core.LoggerContext@59303963] started OK with configuration org.apache.logging.log4j.core.config.properties.PropertiesConfiguration@61e86192.
2019-11-22 11:16:13,982 main DEBUG Log4jServletContextListener ensuring that Log4j starts up properly.
2019-11-22 11:16:13,982 main DEBUG Log4jServletFilter initialized.

I think I see what might be part of the problem.

The R1 is either OLN or SSN, you can not send both at the same time.

There is No TEST SSN inquiry, use someone from MSP who is working on your project or if you have a developer who is from MA
The TEST OLN is S32935254

Hi Brian,

The broker is a web service. You need to create a client to connect. Requests are made by sending in an xml document.

Did I forget to send you the broker documentation? Let me know.

Subject: RE: LRP network ideas?

John,
I ran two queries through IE I don't see an acknowledge me in the logs. Below is what I am seeing. Do we have a valid Lic number that is in the system I can try, or valid SSN.

My test URLs are:"
http://[redacted]6060/CHSBReceiver/rest?ori=MAMSP0000&username=TEST&ssn=123123123&driversLicense=987654321

http://[redacted]6060/CHSBReceiver/rest?ori=MAMSP0000&username=TEST&ssn=123123123&driversLicense=987654321

In my access log I see a 200:

G.L. c. 4.sec. 7.cl.2- - [15/Nov/2019:13:02:50 -0500] "GET /CHSBReceiver/rest?ori=MAMSP0000&username=TEST&ssn=123123123&driversLicense=987654321 HTTP/1.1" 200 -
G.L. c. 4.sec. 7.cl.2- - [15/Nov/2019:13:03:05 -0500] "GET /CHSBReceiver/rest?ori=MAMSP0000&username=TEST&ssn=123123123&driversLicense=987654321 HTTP/1.1" 200 –

In my log stdout log I see this:

2019-11-15 13:0 G.L. c. 4.sec. 7.cl.26 (n)(security), G.L. c. 4.sec. 7. cl.26(f)(investigative)

Hey Brian,

When you send in a request, the return to that call is an acknowledgement. That is an xml document that will state if your request was accepted or not; and if it is not, what the reason is.

Are you seeing any acknowledgements?

John,
According to dev the message that is coming back: remote host not allowed. ignoring request. They are stating is a response from your system telling us we are not allowed. Is there anyway you and I can get on the

phone, I can try and send some responses and see if you see anything in your log files. I am wondering if they are forming the response to you correctly.

As for the WSDL this is what I see from the 184.171 server.

Hi Brian,

I have added your configuration on the test broker for R1 and RI.
Are there more queries/transactions you'd like to test? Michaela may have requirements for other queries.

The ORI is MAMSPF022
Your requests come from S-L-c-4-sec-7-cl-2 and responses will be sent back to http://S-L-c-4-sec-7-cl-2:6060/CHSBReceiver/CHSBService

Hay Brian,

That won't work. The broker accepts an xml document containing the request, as well as other information.
Attached is a sample R1 request.

By the way, I have your requests coming from [redacted]

In order to get responses, you need a web service on your end to receive the responses and I'll need to configure it on the broker side.

Hey Brian,

I'm not sure what is in the test system either. I believe a dl of 987654321 will work; at least it used to.
Try to find something in test CJISWeb.

Remember that all queries will send in an xml document and will receive a return acknowledgement stating success or failure. If the request failed, the reason will be in the acknowledgement.

At a later time, seconds or less, the response will be returned to your web service. You must return an acknowledgement to that also to let the system know that the response was received and the next response can be sent.

John,
Do you have a sample DL and ssn, we can try passing through the service to see if we can pull an image. According to dev we are just utilizing the XML out of R1 and Ri.

Regards,

Hi Brian,

All of the broker queries use the same method and accept an xml document. The contents of the xml direct what action the system should take. I have attached documentation for the broker. It's a 5 MB zip file.

If you can't accept zip files or 5 MB files let me know how to send the file.

Brian
What is the ORI that you are using for this setup? There is some configuration work that needs to be done on the broker side to allow your service to run transactions.
Thanks
Tim

Subject: RE: LRP network ideas?

Folks,
For the RMV pull, does anybody have an example image we can try and run through. All the connectivity looks good, I have tried a few ways to pull an image without success.

Our service
http://[redacted]6060/CHSBReceiver/CHSBService?wsdl refers to http://[redacted]6060/CJISService?wsdl

I can pull back the WSDL but want to send an image request to it to see if it actually pulls the image. I am looking for something like /GetPhoto?dl_num=20180061903&ss_num=2&type=M, the actually call method

To pull back the WSDL
<?xml version="1

Hi folks
The CJIS broker transactions will need to useG.L. c. 4.sec as that is what they have been configured for in the past.

We have discussed the LPR port request and we think that going with a higher port seems to be more acceptable to EOTSS to allow through their public access firewall. Would port 56446 (https) work? We will need to open a ticket with EOTSS to have them allow this port through.

Thanks

Hi Tim,

I spoke with Brian Kruger and he wants the RI image CJIS Broker return to go to the same port as the ALPR image results, are there any issues with that? If not, is your team picking the port or is CopLink? I've included his email request. It sounds like they want to use the same web service to simplify the two integrations (LPR & RMV Images).

Tks, Brian

Subject: LRP network ideas?

Brian/Tim,
Nick is almost done with the new LPR service that will remove the images from the database and have a tomcat app that host the images for a return to the UI. What I need to know:

<!--
[if
!supportLists]-
-
>1.
<!-
-
[endif]-
-
>The
Migration
will
sit
on
the
migration
server
and
needs
access
to
the
LPR
database
to
pull
out
the
metadata
and
create
the
URL
for
the
Image
links.
<!--
[if
!supportLists]-
-
>2.
<!-
-
[endif]-
-
>The
new
service
is
going
to
be
hosted
in
Tomcat,
so
this
service
will
need
access
to
the
LPR
database
for
images
and
both
application
servers
need
to
be
able
to

query this tomcat instance. I just need to know where to put it, I can host it on both severs or if we can set it up on the internal server and have a firewall rule that will allow the DMZ server to talk to the internal server. Let me know if you would like to have a call on this. I have attached a rough network diagram for visual reference.

Subject: RE: LRP network ideas?

John,
Thank you for the information on the call this afternoon.

Samson/Billy,
We need to add some additional debug code into our service so we can see the full communication path and what is being sent and received. John is also in the process to check and make sure their three servers can reach back into our [redacted] I have also reattached the IP wireshark I did this morning.

Hi Brian,

I'm not sure if [redacted] is a load balancer. I don't believe it is though. It doesn't matter though, that is where you will send requests. You will receive a synchronous response called an acknowledgement. That will let you know if your request was accepted or rejected.

Later, an asynchronous response will be sent from [redacted] or [redacted] to your web service.

Hi Brian,

I can check.

The broker will send responses from [redacted] or [redacted] on [redacted] Make sure you are allowing that traffic.

When you send in a request you will receive an xml document as the return value. The documents lists if the request was accepted and if it wasn't, why it wasn't. You should be checking those.

I think I see what might be part of the problem.

The R1 is either OLN or SSN, you can not send both at the same time.

There is No TEST SSN inquiry, use someone from MSP who is working on your project or if you have a developer who is from MA
The TEST [redacted]

Hi Brian,

The broker is a web service. You need to create a client to connect. Requests are made by sending in an xml document.

Did I forget to send you the broker documentation? Let me know.

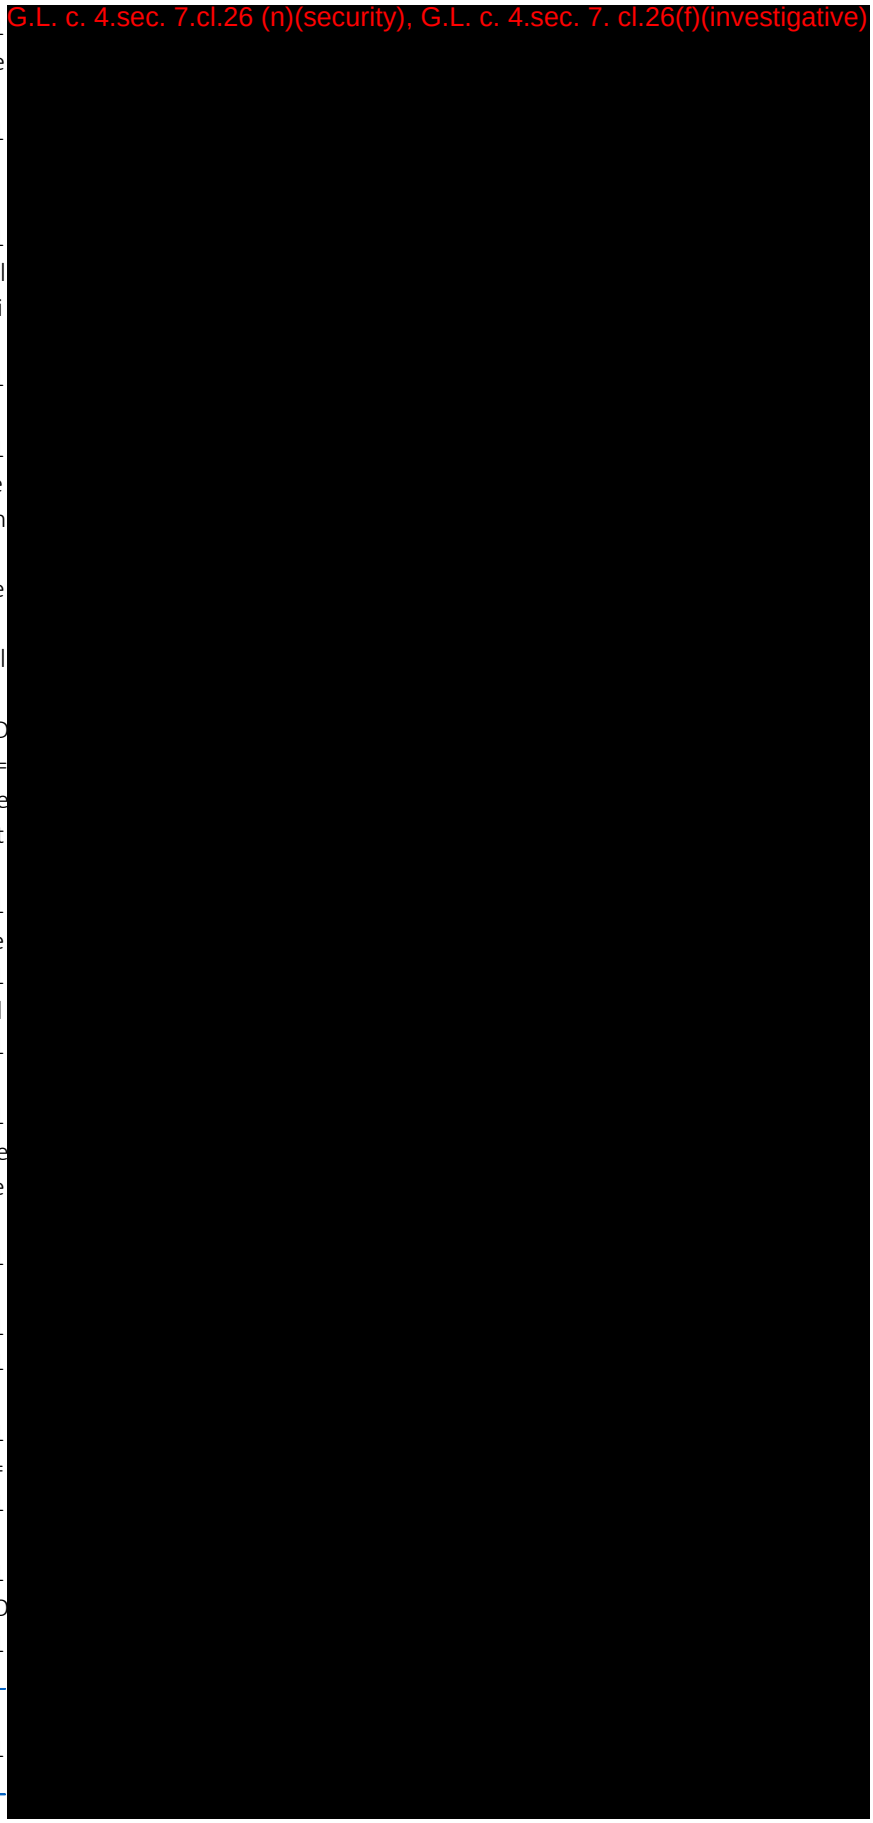
Subject: RE: LRP network ideas?

John,
I ran two queries through IE I don't see an acknowledge me in the logs.
Below is what I am seeing. Do we have a valid Lic number that is in the system I can try, or valid SSN.

My test URLs are:"
http://[redacted]6060/CHSBReceiver/rest?ori=MAMSP0000&username=TEST&ssn=123123123&driversLicense=987654321

http://[redacted]6060/CHSBReceiver/rest?ori=MAMSP0000&username=TEST&ssn=123123123&driversLicense=987654321

In my access log I see a 200:



[redacted] - - [15/Nov/2019:13:02:50 -0500] "GET /CHSBReceiver/rest?ori=MAMSP0000&username=TEST&ssn=123123123&driversLicense=987654321 HTTP/1.1" 200 -
[redacted] - - [15/Nov/2019:13:03:05 -0500] "GET /CHSBReceiver/rest?ori=MAMSP0000&username=TEST&ssn=123123123&driversLicense=987654321 HTTP/1.1" 200 –

In my log stdout log I see this:

Hey Brian,

When you send in a request, the return to that call is an acknowledgement. That is an xml document that will state if your request was accepted or not; and if it is not, what the reason is.

Are you seeing any acknowledgements?

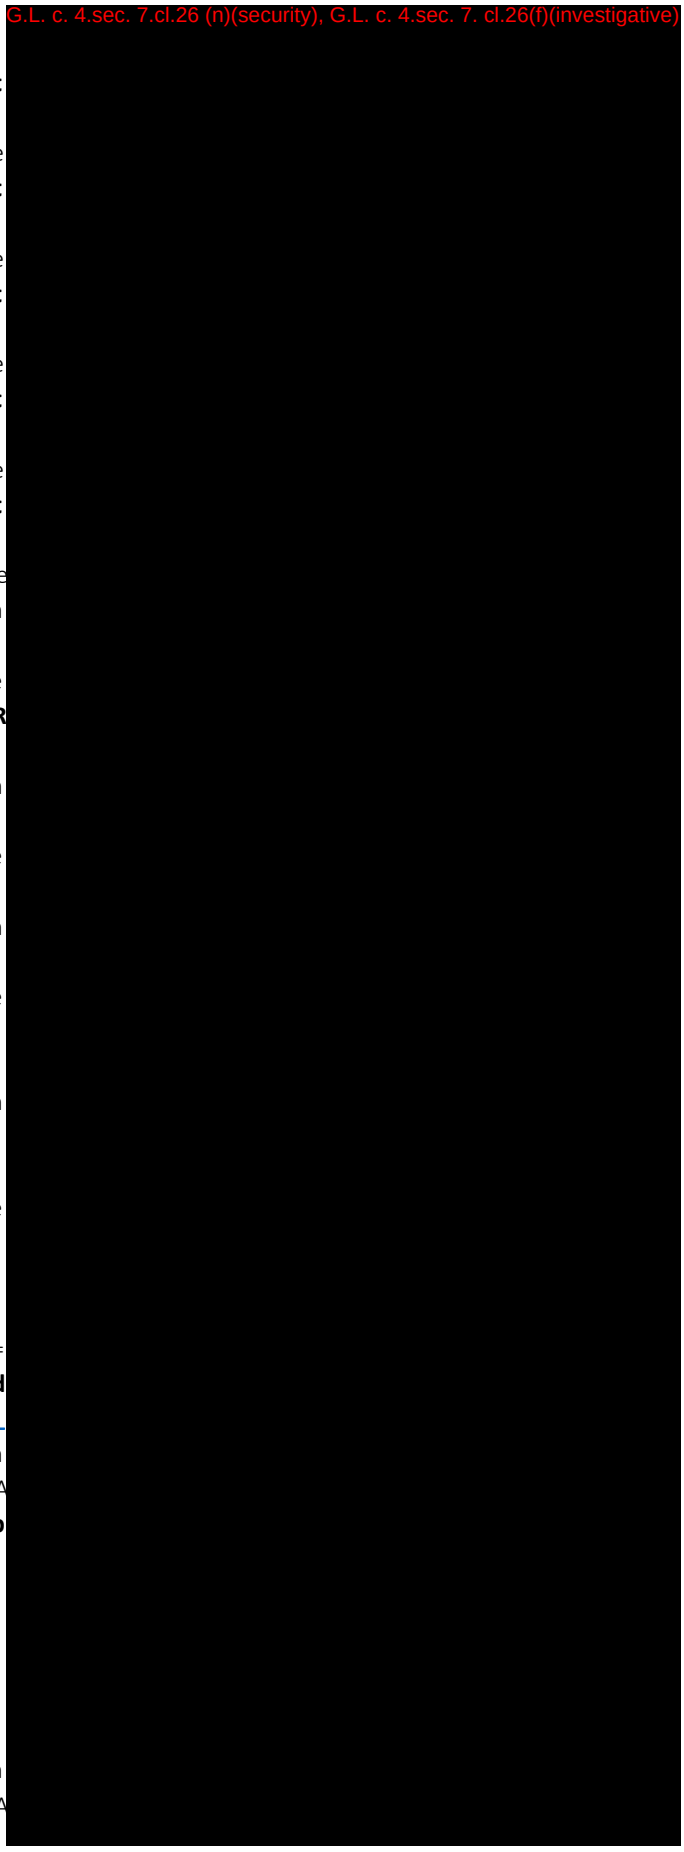
John,
According to dev the message that is coming back: remote host not allowed. ignoring request. They are stating is a response from your system telling us we are not allowed. Is there anyway you and I can get on the phone, I can try and send some responses and see if you see anything in your log files. I am wondering if they are forming the response to you correctly.



As for the WSDL this is what I see from the 184.171 server.

Hi Brian,

I have added your configuration on the test broker for R1 and RI.
Are there more queries/transactions you'd like to test? Michaela may have requirements for other queries.

The ORI is MAMSPF022
Your requests come from [redacted] and responses will be sent back to http://[redacted]6060/CHSBReceiver/CHSBService

Hay Brian,

That won't work. The broker accepts an xml document containing the request, as well as other information.
Attached is a sample R1 request.

By the way, I have your requests coming from [redacted]

In order to get responses, you need a web service on your end to receive the responses and I'll need to configure it on the broker side.

Hi Brian,

I haven't added your configuration to the test broker yet. Can you confirm the following:
For broker connections, we need the following:
IP Address for request: [redacted]
URL for responses:
http://[redacted]6060/CHSBReceiver/CHSBService
ORI: MAMSP0000
Queries: I need the list of queries/transactions you will be testing

You will submit to http://[redacted]6060/CJISService This call will return a synchronous acknowledgment.

Responses will come back from [redacted] or [redacted] on [redacted] You need to return a synchronous acknowledgement for each response.

Hey Brian,

I'm not sure what is in the test system either. I believe a [redacted] will work; at least it used to.
Try to find something in test CJISWeb.

Remember that all queries will send in an xml document and will receive a return acknowledgement stating success or failure. If the request failed, the reason will be in the acknowledgement.

At a later time, seconds or less, the response will be returned to your web service. You must return an acknowledgement to that also to let the system know that the response was received and the next response can be sent.

John,
Not yet, I don't know what is in the test system… are they actually dls or fake ones.

Our query against our service is going to look something like, that will translate to yours.

Hi Brian,

All of the broker queries use the same method and accept an xml document. The contents of the xml direct what action the system should take. I have attached documentation for the broker. It's a 5 MB zip file.

If you can't accept zip files or 5 MB files let me know how to send the file.

Brian
What is the ORI that you are using for this setup? There is some configuration work that needs to be done on the broker side to allow your service to run transactions.
Thanks

Yes you will need to run the transactions across to the test server first and DCJIS will need to approve it before you can run to the production server. I will check out the firewall rules today and let you know.

Hi folks
The CJIS broker transactions will need to use [redacted] as that is

what they have been configured for in the past.

We have discussed the LPR port request and we think that going with a higher port seems to be more acceptable to EOTSS to allow through their public access firewall. Would [redacted] work? We will need to open a ticket with EOTSS to have them allow this port through.

Subject: LRP network ideas?

Brian/Tim,
Nick is almost done with the new LPR service that will remove the images from the database and have a tomcat app that host the

images for a return to the UI. What I need to know:

1. The Migration will sit on the migration server and needs access to the LPR database to pull out the metadata and create the URL for the Image links.
2. The new service is going to be hosted in Tomcat, so this service will need access to the LPR database for images and both application servers need to be able to query this tomcat instance. I just need to know where to put it, I can host it on both severs or if we can set it up on the internal server and have a firewall rule that will allow the DMZ server to talk to the internal server. Let me know if you would like to have a call on this. I have attached a rough network diagram for visual reference.

Hi Brian,

I'm not sure if [redacted] balancer. I don't believe it is though. It doesn't matter though, that is where you will send requests. You will receive a synchronous response called an acknowledgement. That will let you know if your request was accepted or rejected.

Later, an asynchronous response will be sent from [redacted] or [redacted] to your web service.

John,
According to dev the message that is coming back: remote host not allowed. ignoring request. They are stating is a response from your system telling us we are not allowed. Is there anyway you and I can get on the phone, I can try and send some responses and see if you see anything in your log files. I am wondering if they are forming the response to you correctly.

As for the WSDL this is what I see from the 184.171 server.

Hay Brian,

That won't work. The broker accepts an xml document containing the request, as well as other information.
Attached is a sample R1 request.

By the way, I have your requests coming from [redacted]

In order to get responses, you need a web service on your end to receive the responses and I'll need to configure it on the broker side.

Hey Brian,

I'm not sure what is in the test system either. I believe a dl of 987654321 will work; at least it used to.
Try to find something in test CJISWeb.

Remember that all queries will send in an xml document and will receive a return acknowledgement stating success or failure. If the request failed, the reason will be in the acknowledgement.

At a later time, seconds or less, the response will be returned to your web

service. You must return an acknowledgement to that also to let the system know that the response was received and the next response can be sent.

Hi Brian,

All of the broker queries use the same method and accept an xml document. The contents of the xml direct what action the system should take. I have attached documentation for the broker. It's a 5 MB zip file.

If you can't accept zip files or 5 MB files let me know how to send the file.

Brian
What is the ORI that you are using for this setup? There is some configuration work that needs to be done on the broker side to allow your service to run transactions.
Thanks
Tim

Subject: RE: LRP network ideas?

Folks,

For the RMV pull, does anybody have an example image we can try and run through. All the connectivity looks good, I have tried a few ways to pull an image without success.

Our service http://[redacted]6060/CHSBReceiver/CHSBService?wsdl refers to http://[redacted]6060/CJISService?wsdl

I can pull back the WSDL but want to send an image request to it to see if it actually pulls the image. I am looking for something like /GetPhoto?dl_num=20180061903&ss_num=2&type=M, the actually call method

G.L. c. 4.sec. 7.cl.26 (n)(security), G.L. c. 4.sec. 7. cl.26(f)(investigative)

Yes you will need to run the transactions across to the test server first and DCJIS will need to approve it before you can run to the production server. I will check out the firewall rules today and let you know.

Chris,
I am guessing test first, that way we can validate the broker, unless the route is setup already for production and I can switch it out to that.

Brian E.,
Your thoughts?

Hi folks
The CJIS broker transactions will need to use [redacted] as that is what they have been configured for in the past.

We have discussed the LPR port request and we think that going with a higher port seems to be more acceptable to EOTSS to allow through their public access firewall. Would port 56446 (https) work? We will need to open a ticket with EOTSS to have them allow this port through.

Thanks

Hi Tim,

I spoke with Brian Kruger and he wants the RI image CJIS Broker return to go to the same port as the ALPR image results, are there any issues with that? If not, is your team picking the port or is CopLink? I've included his email request. It sounds like they want to use the same web service to simplify the two integrations (LPR & RMV Images).

Tks, Brian

Subject: LRP network ideas?

Brian/Tim,
Nick is almost done with the new LPR service that will remove the images from the database and have a tomcat app that host the images for a return to the UI. What I need to know:

1. The Migration will sit on the migration server and needs access to the LPR database to pull out the metadata and create the URL for the Image links.
2. The new service is going to be hosted in Tomcat, so this service will need access to the LPR database for images and both application servers need to be able to query this tomcat instance. I just need to know where to put it, I can host it on both severs or if we can set it up on the internal server and have a firewall rule that will allow the DMZ server to talk to the internal server. Let me know if you would like to have a call on this. I have attached a rough network diagram for visual reference.

>>>>> Subject: RE: MassPort LPR Cameras
>>>>> Good Morning,
>>>>> I was hoping to get us all on the same page regarding a proposal to push Massport LPR data to the existing DCJIS BOSS server in Chelsea. Some time ago we (MSP) engaged with Massport regarding Automated License Plate Reader technology (LPR). As most of you know, MSP and DCJIS have been rolling out a very robust LPR network across the Commonwealth. This has been on going for the past several years. The LPR system has paid dividends in numerous criminal cases including crimes of violence, Amber and Silver alerts, and also in many missing/endangered/public well being events.
>>>>> Our communications with Massport started when we were made aware that they would be purchasing an LPR system. We worked with our counterparts at Massport to make sure that the two systems would be compatible so that information could be shared across all law enforcement agencies through the MSP Fusion Center. Towards that end Massport partnered with Neology for their solution. This is the same vendor used by MSP and DCJIS.
>>>>> Recently Massport has decided not to maintain its own ALPR BOSS database server. The database and application for LPR in Massachusetts is known as “BOSS” and is a Neology product. Massport would like to feed data from its cameras to the DCJIS BOSS server in Chelsea. Originally we had been discussing with Neology the potential for Massport’s cameras to write two records after scanning a plate, one to Massport BOSS and a duplicate to DCJIS BOSS. We think the current proposal to write all LPR records to the BOSS server located at DCJIS is a much better plan.
>>>>> MSP has a grant to upgrade the current the current BOSS v3.6 application which is at end of life and no longer supported to version v4.0. We have also submitted a Service Now ticket asking for hardware upgrade costs to the existing BOSS server which MSP will try to acquire funding to upgrade.
>>>>> I have received several calls from Massport looking to see where we are as far as being able to accept data

from their cameras so that they can decommission their BOSS server. I believe their intent is to shut the Massport system down if the MSP and DCJIS are unable to accept the data. I have copied Hank Shaw from Massport into this thread in case I have misstated their intent.
>>>>> To access the Massport data we will need to be able to pass data from the Massport network to the state network much like we do with case management data. An alternative would be to use 4G modems (like we do with many of our mobile units and cruiser mounted units) on the state network, but this may be an unnecessary cost. Obviously this decision would be driven by the EOTSS and Massport network teams.
>>>>> I can't overstate the value that LPR data from Massport would have for MSP and law enforcement in general. Cases involving terrorism, money laundering, and drug trafficking all have significant ties to the port. Being able to hotlist and search on LPR data from Massport facilities would be a significant addition to the MSP Division of Homeland Security's technology tool set and would have immediate impact. Towards that end, we made be able to leverage Homeland Security grant funds for some of this project.

>>> Hi Jim,
>>> Regarding the Massport cameras; in the early days of AVL we installed [redacted] modem's in cruisers that did not have laptops. These cruisers now have Geo tab and no longer need the modem or data plan. Massport is currently paying for the data plan and bought the modems. Because Massport wants to move quickly to give us their data and knowing BOSS4.0 Is delayed; Why don't we ask Massport to let us use six of those modems and put one at each LPR Camera sector at Massport. We would next push the data back like we do everything else over Verizon. We wouldn't have to do any firewall work either because they have a 166. and communicate like all of the MDT's . Once the back get squared away with the new boss we can revisit the networking. After we migrate everything to the new environment we would them cut the Massport cameras over to the LAN and then give them back their data plans and modems.
>>> We would however need to anticipate expanding the existing sand and run the risk of overburdening the server.
>>> Let me know what you think, Lieutenant Colonel Quinn and I could make the request to Massport if needed.

Massport would like to feed data from its cameras to the DCJIS BOSS server in Chelsea. Originally we had been discussing with Neology the potential for Massport’s cameras to write two records after scanning a plate, one to Massport BOSS and a duplicate to DCJIS BOSS. We think the current proposal to write all LPR records to the BOSS server located at DCJIS is a much better plan.
>>>> MSP has a grant to upgrade the current the current BOSS v3.6 application which is at end of life and no longer supported to version v4.0. We have also submitted a Service Now ticket asking for hardware upgrade costs to the existing BOSS server which MSP will try to acquire funding to upgrade.
>>>> I have received several calls from Massport looking to see where we are as far as being able to accept data from their cameras so that they can decommission their BOSS server. I believe their intent is to shut the Massport system down if the MSP and DCJIS are unable to accept the data. I have copied Hank Shaw from Massport into this thread in case I have misstated their intent.
>>>> To access the Massport data we will need to be able to pass data from the Massport network to the state network much like we do with case management data. An alternative would be to use 4G modems (like we do with many of our mobile units and cruiser mounted units) on the state network, but this may be an unnecessary cost. Obviously this decision would be driven by the EOTSS and Massport network teams.
>>>> I can’t overstate the value that LPR data from Massport would have for MSP and law enforcement in general. Cases involving terrorism, money laundering, and drug trafficking all have significant ties to the port. Being able to hotlist and search on LPR data from Massport facilities would be a significant addition to the MSP Division of Homeland Security’s technology tool set and would have immediate impact. Towards that end, we made be able to leverage Homeland Security grant funds for some of this project.

>> Hi Jim,
>> Regarding the Massport cameras; in the early days of AVL we installed [redacted] modem's in cruisers

that did not have laptops. These cruisers now have Geo tab and no longer need the modem or data plan. Massport is currently paying for the data plan and bought the modems. Because Massport wants to move quickly to give us their data and knowing BOSS4.0 Is delayed; Why don't we ask Massport to let us use six of those modems and put one at each LPR Camera sector at Massport. We would next push the data back like we do everything else over Verizon. We wouldn't have to do any firewall work either because they have a 166. and communicate like all of the MDT's . Once the back get squared away with the new boss we can revisit the networking. After we migrate everything to the new environment we would them cut the Massport cameras over to the LAN and then give them back their data plans and modems.
>> We would however need to anticipate expanding the existing sand and run the risk of overburdening the server.
>> Let me know what you think, Lieutenant Colonel Quinn and I could make the request to Massport if needed.

>>> Subject: RE: MassPort LPR Cameras

>>> Good Morning,
>>> I was hoping to get us all on the same page regarding a proposal to push Massport LPR data to the existing DCJIS BOSS server in Chelsea. Some time ago we (MSP) engaged with Massport regarding Automated License Plate Reader technology (LPR). As most of you know, MSP and DCJIS have been rolling out a very robust LPR network across the Commonwealth. This has been on going for the past several years. The LPR system has paid dividends in numerous criminal cases including crimes of violence, Amber and Silver alerts, and also in many missing/endangered/public well being events.
>>> Our communications with Massport started when we were made aware that they would be purchasing an LPR system. We worked with our counterparts at Massport to make sure that the two systems would be compatible so that information could be shared across all law enforcement agencies through the MSP Fusion Center. Towards that end Massport partnered with Neology for their solution. This is the same vendor used by MSP and DCJIS.
>>> Recently Massport has decided not to maintain its own ALPR BOSS database server. The database and application for LPR in Massachusetts is known as "BOSS" and is a Neology product. Massport would like to feed data from its cameras to the DCJIS BOSS server in Chelsea. Originally we had been discussing with Neology the potential for Massport's cameras to write two records after scanning a plate, one to Massport BOSS and a duplicate to DCJIS BOSS. We think the current proposal to write all LPR records to the BOSS server located at DCJIS is a much better plan.
>>> MSP has a grant to upgrade the current the current BOSS v3.6 application which is at end of life and no longer supported to version v4.0. We have also submitted a Service Now ticket asking for hardware upgrade costs to the existing BOSS server which MSP will try to acquire funding to upgrade.
>>> I have received several calls from Massport looking to see where we are as far as being able to accept data from their cameras so that they can decommission their BOSS server. I believe their intent is to shut the Massport system down if the MSP and DCJIS are unable to accept the data. I have copied Hank Shaw from Massport into this thread in case I have misstated their intent.
>>> To access the Massport data we will need to be able to pass data from the Massport network to the state network much like we do with case management data. An alternative would be to use 4G modems (like we do with many of our mobile units and cruiser mounted units) on the state network, but this may be an unnecessary cost. Obviously this decision would be driven by the EOTSS and Massport network teams.
>>> I can't overstate the value that LPR data from Massport would have for MSP and law enforcement in general. Cases involving terrorism, money laundering, and drug trafficking all have significant ties to the port. Being able to hotlist and search on LPR data from Massport facilities would be a significant addition to the MSP Division of Homeland Security's technology tool set and would have immediate impact. Towards that end, we made be able to leverage Homeland Security grant funds for some of this project.

>>> Subject: RE: MassPort LPR Cameras
>>> Hi Jim,
>>> We are looking to consolidate the MassPort ALPR cameras into the main EOPSS ALPR server. After evaluating a number of options purposed by Neology, this appears to be the simplest approach. There is already a network presence at the barracks and it should be easy to point the cameras towards the centralized server. I've spoken to Alex at MassPort and he can volunteer a camera for testing. We could monitor network and server impact. Are you available to discuss?

>> Hi Jim,
>> Regarding the Massport cameras; in the early days of AVL we installed [G.L. c. 4.sec. 7.cl.26 (n)(security)] modem's in cruisers

that did not have laptops. These cruisers now have Geo tab and no longer need the modem or data plan. Massport is currently paying for the data plan and bought the modems. Because Massport wants to move quickly to give us their data and knowing BOSS4.0 Is delayed; Why don't we ask Massport to let us use six of those modems and put one at each LPR Camera sector at Massport. We would next push the data back like we do everything else over Verizon. We wouldn't have to do any firewall work either because they have a 166. and communicate like all of the MDT's . Once the back get squared away with the new boss we can revisit the networking. After we migrate everything to the new environment we would them cut the Massport cameras over to the LAN and then give them back their data plans and modems.
>> We would however need to anticipate expanding the existing sand and run the risk of overburdening the server.
>> Let me know what you think, Lieutenant Colonel Quinn and I could make the request to Massport if needed.

>>> Subject: RE: MassPort LPR Cameras

>>> Good Morning,
>>> I was hoping to get us all on the same page regarding a proposal to push Massport LPR data to the existing DCJIS BOSS server in Chelsea. Some time ago we (MSP) engaged with Massport regarding Automated License Plate Reader technology (LPR). As most of you know, MSP and DCJIS have been rolling out a very robust LPR network across the Commonwealth. This has been on going for the past several years. The LPR system has paid dividends in numerous criminal cases including crimes of violence, Amber and Silver alerts, and also in many missing/endangered/public well being events.
>>> Our communications with Massport started when we were made aware that they would be purchasing an LPR system. We worked with our counterparts at Massport to make sure that the two systems would be compatible so that information could be shared across all law enforcement agencies through the MSP Fusion Center. Towards that end Massport partnered with Neology for their solution. This is the same vendor used by MSP and DCJIS.
>>> Recently Massport has decided not to maintain its own ALPR BOSS database server. The database and application for LPR in Massachusetts is known as "BOSS" and is a Neology product. Massport would like to feed data from its cameras to the DCJIS BOSS server in Chelsea. Originally we had been discussing with Neology the potential for Massport's cameras to write two records after scanning a plate, one to Massport BOSS and a duplicate to DCJIS BOSS. We think the current proposal to write all LPR records to the BOSS server located at DCJIS is a much better plan.
>>> MSP has a grant to upgrade the current the current BOSS v3.6 application which is at end of life and no longer supported to version v4.0. We have also submitted a Service Now ticket asking for hardware upgrade costs to the existing BOSS server which MSP will try to acquire funding to upgrade.
>>> I have received several calls from Massport looking to see where we are as far as being able to accept data from their cameras so that they can decommission their BOSS server. I believe their intent is to shut the Massport system down if the MSP and DCJIS are unable to accept the data. I have copied Hank Shaw from Massport into this thread in case I have misstated their intent.
>>> To access the Massport data we will need to be able to pass data from the Massport network to the state network much like we do with case management data. An alternative would be to use 4G modems (like we do with many of our mobile units and cruiser mounted units) on the state network, but this may be an unnecessary cost. Obviously this decision would be driven by the EOTSS and Massport network teams.
>>> I can't overstate the value that LPR data from Massport would have for MSP and law enforcement in general. Cases involving terrorism, money laundering, and drug trafficking all have significant ties to the port. Being able to hotlist and search on LPR data from Massport facilities would be a significant addition to the MSP Division of Homeland Security's technology tool set and would have immediate impact. Towards that end, we made be able to leverage Homeland Security grant funds for some of this project.

The Technical Service Unit and I have completed cutting over all of the Massport LPR cameras and they are reporting back to boss and Chelsea.

>> Hi Jim,
>>
>> Regarding the Massport cameras; in the early days of AVL we installed [redacted] modem's in cruisers that did not have laptops. These cruisers now have Geo tab and no longer need the modem or data plan. Massport is currently paying for the data plan and bought the modems. Because Massport wants to move quickly to give us their data and knowing BOSS4.0 Is delayed; Why don't we ask Massport to let us use six of those modems and put one at each LPR Camera sector at Massport. We would next push the data back like we do everything else over Verizon. We wouldn't have to do any firewall work either because they have a 166. and communicate like all of the MDT's . Once the back get squared away with the new boss we can revisit the networking. After we migrate everything to the new environment we would them cut the Massport cameras over to the LAN and then give them back their data plans and modems.
>>
>> We would however need to anticipate expanding the existing sand and run the risk of overburdening the server.
>>
>> Let me know what you think, Lieutenant Colonel Quinn and I could make the request to Massport if needed.

>>> Subject: RE: MassPort LPR Cameras
>>>
>>> Good Morning,
>>>
>>> I was hoping to get us all on the same page regarding a proposal to push Massport LPR data to the existing DCJIS BOSS server in Chelsea. Some time ago we (MSP) engaged with Massport regarding Automated License Plate Reader technology (LPR). As most of you know, MSP and DCJIS have been rolling out a very robust LPR network across the Commonwealth. This has been on going for the past several years. The LPR system has paid dividends in numerous criminal cases including crimes of violence, Amber and Silver alerts, and also in many missing/endangered/public well being events.

>>>
>>> Our communications with Massport started when we were made aware that they would be purchasing an LPR system. We worked with our counterparts at Massport to make sure that the two systems would be compatible so that information could be shared across all law enforcement agencies through the MSP Fusion Center. Towards that end Massport partnered with Neology for their solution. This is the same vendor used by MSP and DCJIS.
>>>
>>> Recently Massport has decided not to maintain its own ALPR BOSS database server. The database and application for LPR in Massachusetts is known as “BOSS” and is a Neology product. Massport would like to feed data from its cameras to the DCJIS BOSS server in Chelsea. Originally we had been discussing with Neology the potential for Massport’s cameras to write two records after scanning a plate, one to Massport BOSS and a duplicate to DCJIS BOSS. We think the current proposal to write all LPR records to the BOSS server located at DCJIS is a much better plan.
>>>
>>> MSP has a grant to upgrade the current the current BOSS v3.6 application which is at end of life and no longer supported to version v4.0. We have also submitted a Service Now ticket asking for hardware upgrade costs to the existing BOSS server which MSP will try to acquire funding to upgrade.
>>>
>>> I have received several calls from Massport looking to see where we are as far as being able to accept data from their cameras so that they can decommission their BOSS server. I believe their intent is to shut the Massport system down if the MSP and DCJIS are unable to accept the data. I have copied Hank Shaw from Massport into this thread in case I have misstated their intent.
>>>
>>> To access the Massport data we will need to be able to pass data from the Massport network to the state network much like we do with case management data. An alternative would be to use 4G modems (like we do with many of our mobile units and cruiser mounted units) on the state network, but this may be an unnecessary cost. Obviously this decision would be driven by the EOTSS and Massport network teams.
>>>
>>> I can’t overstate the value that LPR data from Massport would have for MSP and law enforcement in general. Cases involving terrorism, money laundering, and drug trafficking all have significant ties to the port. Being able to hotlist and search on LPR data from Massport facilities would be a significant addition to the MSP Division of Homeland Security’s technology tool set and would have immediate impact. Towards that end, we made be able to leverage Homeland Security grant funds for some of this project.

Joe,

Thank you for getting back to me about the LPR work mentioned in the email thread below. I've been told that the remaining 2 locations are in areas that require Detail Support due to the length of time required to perform the work and the fact that partial lane closures are necessary.

Any information you could provide would be helpful so that we could figure out logistics (exact locations, how the detail areas will be set up and billing. As you can see, they would like to complete this work sometime in the next month.

I look forward to hearing from you.

Hi Sgt.,

Thanks for taking my call, as follow up:

· There are 2 sites remaining for cutover.

· I've included the MassPort IT contacts who can tell you specifically where the sites are located.

· I estimate the job to take between 2-6 hours per site.

· I'd like to do one site per day

· Afterhours would be preferred when traffic is lower and there are less eyeballs.

· Tuesday or Thursday eves are open for me now for the next 4 weeks

· A member of the Technical Services Unit will be onsite with me during the cutover in case we have a problem with one of the cameras (you do not need to include them in the detail, they will use TSU OT budget)

>> Hi Jim,
>>
>> Regarding the Massport cameras; in the early days of AVL we installed [G.L. c. 4.sec. 7.cl.26 (n)(security)] modem's in cruisers that did not have laptops. These cruisers now have Geo tab and no longer need the modem or data plan. Massport is currently paying for the data plan and bought the modems. Because Massport wants to move quickly to give us their data and knowing BOSS4.0 Is delayed; Why don't we ask Massport to let us use six of those modems and put one at each LPR Camera sector at Massport. We would next push the data back like we do everything else over Verizon. We wouldn't have to do any firewall work either because they have a 166. and communicate like all of the MDT's . Once the back get squared away with the new boss we can revisit the networking. After we migrate everything to the new environment we would them cut the Massport cameras over to the LAN and then give them back their data plans and modems.
>>
>> We would however need to anticipate expanding the existing sand and run the risk of overburdening the server.
>>
>> Let me know what you think, Lieutenant Colonel Quinn and I could make the request to Massport if needed.

>>> Subject: RE: MassPort LPR Cameras
>>>
>>> Good Morning,
>>>
>>> I was hoping to get us all on the same page regarding a proposal to push Massport LPR data to the existing DCJIS BOSS server in Chelsea. Some time ago we (MSP) engaged with Massport regarding Automated License Plate Reader technology (LPR). As most of you know, MSP and DCJIS have been rolling out a very robust LPR network across the Commonwealth. This has been on going for the past several years. The LPR system has paid dividends in numerous criminal cases including crimes of violence, Amber and Silver alerts, and also in many missing/endangered/public well being events.
>>>
>>> Our communications with Massport started when we were made aware that they would be purchasing an LPR system. We worked with our counterparts at Massport to make sure that the two systems would be compatible so that information could be shared across all law enforcement agencies through the MSP Fusion Center. Towards that end Massport partnered with Neology for their solution. This is the same vendor used by MSP and DCJIS.
>>>
>>> Recently Massport has decided not to maintain its own ALPR BOSS database server. The database and application for LPR in Massachusetts is known as “BOSS” and is a Neology product. Massport would like to feed data from its cameras to the DCJIS BOSS server in Chelsea. Originally we had been discussing with Neology the

potential for Massport's cameras to write two records after scanning a plate, one to Massport BOSS and a duplicate to DCJIS BOSS. We think the current proposal to write all LPR records to the BOSS server located at DCJIS is a much better plan.
>>>
>>> MSP has a grant to upgrade the current the current BOSS v3.6 application which is at end of life and no longer supported to version v4.0. We have also submitted a Service Now ticket asking for hardware upgrade costs to the existing BOSS server which MSP will try to acquire funding to upgrade.
>>>
>>> I have received several calls from Massport looking to see where we are as far as being able to accept data from their cameras so that they can decommission their BOSS server. I believe their intent is to shut the Massport system down if the MSP and DCJIS are unable to accept the data. I have copied Hank Shaw from Massport into this thread in case I have misstated their intent.
>>>
>>> To access the Massport data we will need to be able to pass data from the Massport network to the state network much like we do with case management data. An alternative would be to use 4G modems (like we do with many of our mobile units and cruiser mounted units) on the state network, but this may be an unnecessary cost. Obviously this decision would be driven by the EOTSS and Massport network teams.
>>>
>>> I can't overstate the value that LPR data from Massport would have for MSP and law enforcement in general. Cases involving terrorism, money laundering, and drug trafficking all have significant ties to the port. Being able to hotlist and search on LPR data from Massport facilities would be a significant addition to the MSP Division of Homeland Security's technology tool set and would have immediate impact. Towards that end, we made be able to leverage Homeland Security grant funds for some of this project.

Subject: RE: MassPort LPR Cameras

Hi Major,

I have finished cutting over the LPR cameras that were accessible off the road. [redacted] cameras (G.L. c. 4.sec. 7.cl.26 (n)(security) and needs inspection). G.L. c. 4.sec. 7.cl.26 (n)(security) need lane closures. G.L. c. 4.sec. 7.cl.26 (n)(security) [redacted] and G.L. c. 4.sec. 7.cl.26 (n)(security) I estimate needing 2-5 hours per site. Lt. Crouse has offered to assist in lane closures using unmarked vehicles, how would you like to proceeded in completing the cut over of the remaining sites.

Thanks, Brian

>> Hi Jim,
>>
>> Regarding the Massport cameras; in the early days of AVL we installed [redacted] modem's in cruisers that did not have laptops. These cruisers now have Geo tab and no longer need the modem or data plan. Massport is currently paying for the data plan and bought the modems. Because Massport wants to move quickly to give us their data and knowing BOSS4.0 Is delayed; Why don't we ask Massport to let us use six of those modems and put one at each LPR Camera sector at Massport. We would next push the data back like we do everything else over Verizon. We wouldn't have to do any firewall work either because they have a 166. and communicate like all of the MDT's . Once the back get squared away with the new boss we can revisit the networking. After we migrate everything to the new environment we would them cut the Massport cameras over to the LAN and then give them back their data plans and modems.
>>
>> We would however need to anticipate expanding the existing sand and run the risk of overburdening the server.
>>
>> Let me know what you think, Lieutenant Colonel Quinn and I could make the request to Massport if needed.

>>> Subject: RE: MassPort LPR Cameras
>>>
>>> Good Morning,
>>>
>>> I was hoping to get us all on the same page regarding a proposal to push Massport LPR data to the existing DCJIS BOSS server in Chelsea. Some time

ago we (MSP) engaged with Massport regarding Automated License Plate Reader technology (LPR). As most of you know, MSP and DCJIS have been rolling out a very robust LPR network across the Commonwealth. This has been on going for the past several years. The LPR system has paid dividends in numerous criminal cases including crimes of violence, Amber and Silver alerts, and also in many missing/endangered/public well being events.
>>>
>>> Our communications with Massport started when we were made aware that they would be purchasing an LPR system. We worked with our counterparts at Massport to make sure that the two systems would be compatible so that information could be shared across all law enforcement agencies through the MSP Fusion Center. Towards that end Massport partnered with Neology for their solution. This is the same vendor used by MSP and DCJIS.
>>>
>>> Recently Massport has decided not to maintain its own ALPR BOSS database server. The database and application for LPR in Massachusetts is known as “BOSS” and is a Neology product. Massport would like to feed data from its cameras to the DCJIS BOSS server in Chelsea. Originally we had been discussing with Neology the potential for Massport’s cameras to write two records after scanning a plate, one to Massport BOSS and a duplicate to DCJIS BOSS. We think the current proposal to write all LPR records to the BOSS server located at DCJIS is a much better plan.
>>>
>>> MSP has a grant to upgrade the current the current BOSS v3.6 application which is at end of life and no longer supported to version v4.0. We have also submitted a Service Now ticket asking for hardware upgrade costs to the existing BOSS server which MSP will try to acquire funding to upgrade.
>>>
>>> I have received several calls from Massport looking to see where we are as far as being able to accept data from their cameras so that they can decommission their BOSS server. I believe their intent is to shut the Massport system down if the MSP and DCJIS are unable to accept the data. I have copied Hank Shaw from Massport into this thread in case I have misstated their intent.
>>>
>>> To access the Massport data we will need to be able to pass data from the Massport network to the state network much like we do with case management data. An alternative would be to use 4G modems (like we do with many of our mobile units and cruiser mounted units) on the state network, but this may be an unnecessary cost. Obviously this decision would be driven by the EOTSS and Massport network teams.
>>>
>>> I can’t overstate the value that LPR data from Massport would have for MSP and law enforcement in general. Cases involving terrorism, money laundering, and drug trafficking all have significant ties to the port. Being able to hotlist and search on LPR data from Massport facilities would be a significant addition to the MSP Division of Homeland Security’s technology tool set and would have immediate impact. Towards that end, we made be able to leverage Homeland Security grant funds for some of this project.

Subject: RE: MassPort LPR Cameras

Hi Major,

I have finished cutting over the LPR cameras that were accessible off the road. [redacted] cameras ([redacted] G.L. c. 4.sec. 7.cl.26 (n)(security) and needs inspection). G.L. c. 4.sec. 7.cl.26 (n)(security) need lane closures. G.L. c. 4.sec. 7.cl.26 (n)(security) [redacted] and G.L. c. 4.sec. 7.cl.26 (n)(security) I estimate needing 2-5 hours per site. Lt. Crouse has offered to assist in lane closures using unmarked vehicles, how would you like to proceeded in completing the cut over of the remaining sites.

Thanks, Brian

>>
>> Hi Jim,
>>
>> Regarding the Massport cameras; in the early days of AVL we installed [redacted] modem's in cruisers that did not have laptops. These cruisers now have Geo tab and no longer need the modem or data plan. Massport is currently paying for the data plan and bought the modems. Because Massport wants to move quickly to give us their data and knowing BOSS4.0 Is delayed; Why don't we ask Massport to let us use six of those modems and put one at each LPR Camera sector at Massport. We would next push the data back like we do everything else over Verizon. We wouldn't have to do any firewall work either because they have a 166. and communicate like all of the MDT's . Once the back get squared away with the new boss we can revisit the networking. After we migrate everything to the new environment we would them cut the Massport cameras over to the LAN and then give them back their data plans and modems.
>>
>> We would however need to anticipate expanding the existing sand and run the risk of overburdening the server.
>>
>> Let me know what you think, Lieutenant Colonel Quinn and I could make the request to Massport if needed.

>>> Subject: RE: MassPort LPR Cameras
>>>
>>> Good Morning,
>>>
>>> I was hoping to get us all on the same page regarding a proposal to push Massport LPR data to the existing DCJIS BOSS server in Chelsea. Some time ago we (MSP) engaged with Massport regarding Automated License Plate Reader technology (LPR). As most of you know, MSP and DCJIS have been rolling out a very robust LPR network across the Commonwealth. This has been on going for the past several years. The LPR system has paid dividends in numerous criminal cases including crimes of violence, Amber and Silver alerts, and also in many missing/endangered/public well being events.
>>>
>>> Our communications with Massport started when we were made aware that they would be purchasing an LPR system. We worked with our counterparts at Massport to make sure that the two systems would be compatible so that information could be shared across all law enforcement agencies through the MSP Fusion Center. Towards that end Massport partnered with Neology for their solution. This is the same vendor used by MSP and DCJIS.
>>>
>>> Recently Massport has decided not to maintain its own ALPR BOSS database server. The database and application for LPR in Massachusetts is known as “BOSS” and is a Neology product. Massport would like to feed data from its cameras to the DCJIS BOSS server in Chelsea. Originally we had been discussing with Neology the potential for Massport’s cameras to write two records after scanning a plate, one to Massport BOSS and a duplicate to DCJIS BOSS. We think the current proposal to write all LPR records to the BOSS

server located at DCJIS is a much better plan.
>>>
>>> MSP has a grant to upgrade the current the current BOSS v3.6 application which is at end of life and no longer supported to version v4.0. We have also submitted a Service Now ticket asking for hardware upgrade costs to the existing BOSS server which MSP will try to acquire funding to upgrade.
>>>
>>> I have received several calls from Massport looking to see where we are as far as being able to accept data from their cameras so that they can decommission their BOSS server. I believe their intent is to shut the Massport system down if the MSP and DCJIS are unable to accept the data. I have copied Hank Shaw from Massport into this thread in case I have misstated their intent.
>>>
>>> To access the Massport data we will need to be able to pass data from the Massport network to the state network much like we do with case management data. An alternative would be to use 4G modems (like we do with many of our mobile units and cruiser mounted units) on the state network, but this may be an unnecessary cost. Obviously this decision would be driven by the EOTSS and Massport network teams.
>>>
>>> I can't overstate the value that LPR data from Massport would have for MSP and law enforcement in general. Cases involving terrorism, money laundering, and drug trafficking all have significant ties to the port. Being able to hotlist and search on LPR data from Massport facilities would be a significant addition to the MSP Division of Homeland Security's technology tool set and would have immediate impact. Towards that end, we made be able to leverage Homeland Security grant funds for some of this project.

>>
>> Hi Jim,
>>
>> Regarding the Massport cameras; in the early days of AVL we installed [redacted] modem's in cruisers that did not have laptops. These cruisers now have Geo tab and no longer need the modem or data plan. Massport is currently paying for the data plan and bought the modems. Because Massport wants to move quickly to give us their data and knowing BOSS4.0 Is delayed; Why don't we ask Massport to let us use six of those modems and put one at each LPR Camera sector at Massport. We would next push the data back like we do everything else over Verizon. We wouldn't have to do any firewall work either because they have a 166. and communicate like all of the MDT's . Once the back get squared away with the new boss we can revisit the networking. After we migrate everything to the new environment we would them cut the Massport cameras over to the LAN and then give them back their data plans and modems.
>>
>> We would however need to anticipate expanding the existing sand and run the risk of overburdening the server.
>>
>> Let me know what you think, Lieutenant Colonel Quinn and I could make the request to Massport if needed.

>>> Subject: RE: MassPort LPR Cameras
>>>
>>> Good Morning,
>>>
>>> I was hoping to get us all on the same page regarding a proposal to push Massport LPR data to the existing DCJIS BOSS server in Chelsea. Some time ago we (MSP) engaged with Massport regarding Automated License Plate Reader technology (LPR). As most of you know, MSP and DCJIS have been rolling out a very robust LPR network across the Commonwealth. This has been on going for the past several years. The LPR system has paid dividends in numerous criminal cases including crimes of violence, Amber and Silver alerts, and also in many missing/endangered/public well being events.
>>>
>>> Our communications with Massport started when we were made aware that they would be purchasing an LPR system. We worked with our counterparts at Massport to make sure that the two systems would be compatible so that information could be shared across all law enforcement agencies through the MSP Fusion Center. Towards that end Massport partnered with Neology for their solution. This is the same vendor used by MSP and DCJIS.
>>>
>>> Recently Massport has decided not to maintain its own ALPR BOSS database server. The database and application for LPR in Massachusetts is known as “BOSS” and is a Neology product. Massport would like to feed data from its cameras to the DCJIS BOSS server in Chelsea. Originally we had been discussing with Neology the potential for Massport’s cameras to write two records after scanning a plate, one to Massport BOSS and a duplicate to DCJIS BOSS. We think the current proposal to write all LPR records to the BOSS

server located at DCJIS is a much better plan.
>>>
>>> MSP has a grant to upgrade the current the current BOSS v3.6 application which is at end of life and no longer supported to version v4.0. We have also submitted a Service Now ticket asking for hardware upgrade costs to the existing BOSS server which MSP will try to acquire funding to upgrade.
>>>
>>> I have received several calls from Massport looking to see where we are as far as being able to accept data from their cameras so that they can decommission their BOSS server. I believe their intent is to shut the Massport system down if the MSP and DCJIS are unable to accept the data. I have copied Hank Shaw from Massport into this thread in case I have misstated their intent.
>>>
>>> To access the Massport data we will need to be able to pass data from the Massport network to the state network much like we do with case management data. An alternative would be to use 4G modems (like we do with many of our mobile units and cruiser mounted units) on the state network, but this may be an unnecessary cost. Obviously this decision would be driven by the EOTSS and Massport network teams.
>>>
>>> I can't overstate the value that LPR data from Massport would have for MSP and law enforcement in general. Cases involving terrorism, money laundering, and drug trafficking all have significant ties to the port. Being able to hotlist and search on LPR data from Massport facilities would be a significant addition to the MSP Division of Homeland Security's technology tool set and would have immediate impact. Towards that end, we made be able to leverage Homeland Security grant funds for some of this project.

>> Hi Jim,
>>
>> Regarding the Massport cameras; in the early days of AVL we installed [redacted] modem‘s in cruisers that did not have laptops. These cruisers now have Geo tab and no longer need the modem or data plan. Massport is currently paying for the data plan and bought the modems. Because Massport wants to move quickly to give us their data and knowing BOSS4.0 Is delayed; Why don’t we ask Massport to let us use six of those modems and put one at each LPR Camera sector at Massport. We would next push the data back like we do everything else over Verizon. We wouldn’t have to do any firewall work either because they have a 166. and communicate like all of the MDT‘s . Once the back get squared away with the new boss we can revisit the networking. After we migrate everything to the new environment we would them cut the Massport cameras over to the LAN and then give them back their data plans and modems.
>>
>> We would however need to anticipate expanding the existing sand and run the risk of overburdening the server.
>>
>> Let me know what you think, Lieutenant Colonel Quinn and I could make the request to Massport if needed.
>>

>>> Subject: RE: MassPort LPR Cameras
>>>
>>> Good Morning,
>>>
>>> I was hoping to get us all on the same page regarding a proposal to push Massport LPR data to the existing DCJIS BOSS server in Chelsea. Some time ago we (MSP) engaged with Massport regarding Automated License Plate Reader technology (LPR). As most of you know, MSP and DCJIS have been rolling out a very robust LPR network across the Commonwealth. This has been on going for the past several years. The LPR system has paid dividends in numerous criminal cases including crimes of violence, Amber and Silver alerts, and also in many missing/endangered/public well being events.
>>>
>>> Our communications with Massport started when we were made aware that they would be purchasing an LPR system. We worked with our counterparts at Massport to make sure that the two systems would be compatible so that information could be shared across all law enforcement agencies through the MSP Fusion Center. Towards that end Massport partnered with Neology for their solution. This is the same vendor used by MSP and DCJIS.
>>>
>>> Recently Massport has decided not to maintain its own ALPR BOSS database server. The database and application for LPR in Massachusetts is known as “BOSS” and is a Neology product. Massport would like to feed data from its cameras to the DCJIS BOSS server in Chelsea. Originally we had been discussing with Neology the potential for Massport’s cameras to write two records after scanning a plate, one to Massport BOSS and a duplicate to DCJIS BOSS. We think the current proposal to write all LPR records to the BOSS server located at DCJIS is a much better plan.
>>>

>>> MSP has a grant to upgrade the current the current BOSS v3.6 application which is at end of life and no longer supported to version v4.0. We have also submitted a Service Now ticket asking for hardware upgrade costs to the existing BOSS server which MSP will try to acquire funding to upgrade.
>>>
>>> I have received several calls from Massport looking to see where we are as far as being able to accept data from their cameras so that they can decommission their BOSS server. I believe their intent is to shut the Massport system down if the MSP and DCJIS are unable to accept the data. I have copied Hank Shaw from Massport into this thread in case I have misstated their intent.
>>>
>>> To access the Massport data we will need to be able to pass data from the Massport network to the state network much like we do with case management data. An alternative would be to use 4G modems (like we do with many of our mobile units and cruiser mounted units) on the state network, but this may be an unnecessary cost. Obviously this decision would be driven by the EOTSS and Massport network teams.
>>>
>>> I can't overstate the value that LPR data from Massport would have for MSP and law enforcement in general. Cases involving terrorism, money laundering, and drug trafficking all have significant ties to the port. Being able to hotlist and search on LPR data from Massport facilities would be a significant addition to the MSP Division of Homeland Security's technology tool set and would have immediate impact. Towards that end, we made be able to leverage Homeland Security grant funds for some of this project.

Subject: RE: MassPort LPR Cameras

Hi Major,

I have finished cutting over the LPR cameras that were accessible off the road. G.L. [redacted] cameras (G.L. c. 4.sec. 7.cl.26 (n)(security) and needs inspection). G.L. c. 4.sec. 7.cl.26 (n)(security) need lane closures. Site 1 is on the upper level

departures near terminal A and G.L. c. 4.sec. 7.cl.26 (n)(security) I estimate needing 2-5 hours per site. Lt. Crouse has offered to assist in lane closures using unmarked vehicles, how would you like to proceeded in completing the cut over of the remaining sites.

Thanks, Brian

>>
>> Hi Jim,
>>
>> Regarding the Massport cameras; in the early days of AVL we installed [redacted] modem's in cruisers that did not have laptops. These cruisers now have Geo tab and no longer need the modem or data plan. Massport is currently paying for the data plan and bought the modems. Because Massport wants to move quickly to give us their data and knowing BOSS4.0 Is delayed; Why don't we ask Massport to let us use six of those modems and put one at each LPR Camera sector at Massport. We would next push the data back like we do everything else over Verizon. We wouldn't have to do any firewall work either because they have a 166. and communicate like all of the MDT's . Once the back get squared away with the new boss we can revisit the networking. After we migrate everything to the new environment we would them cut the Massport cameras over to the LAN and then give them back their data plans and modems.
>>
>> We would however need to anticipate expanding the existing sand and run the risk of overburdening the server.

>>
>> Let me know what you think, Lieutenant Colonel Quinn and I could make the request to Massport if needed.
>>

>>> Subject: RE: MassPort LPR Cameras
>>>
>>> Good Morning,
>>>
>>> I was hoping to get us all on the same page regarding a proposal to push Massport LPR data to the existing DCJIS BOSS server in Chelsea. Some time ago we (MSP) engaged with Massport regarding Automated License Plate Reader technology (LPR). As most of you know, MSP and DCJIS have been rolling out a very robust LPR network across the Commonwealth. This has been on going for the past several years. The LPR system has paid dividends in numerous criminal cases including crimes of violence, Amber and Silver alerts, and also in many missing/endangered/public well being events.
>>>
>>> Our communications with Massport started when we were made aware that they would be purchasing an LPR system. We worked with our counterparts at Massport to make sure that the two systems would be compatible so that information could be shared across all law enforcement agencies through the MSP Fusion Center. Towards that end Massport partnered with Neology for their solution. This is the same vendor used by MSP and DCJIS.
>>>
>>> Recently Massport has decided not to maintain its own ALPR BOSS database server. The database and application for LPR in Massachusetts is known as “BOSS” and is a Neology product. Massport would like to feed data from its cameras to the DCJIS BOSS server in Chelsea. Originally we had been discussing with Neology the potential for Massport’s cameras to write two records after scanning a plate, one to Massport BOSS and a duplicate to DCJIS BOSS. We think the current proposal to write all LPR records to the BOSS server located at DCJIS is a much better plan.
>>>
>>> MSP has a grant to upgrade the current the current BOSS v3.6 application which is at end of life and no longer supported to version v4.0. We have also submitted a Service Now ticket asking for hardware upgrade costs to the existing BOSS server which MSP will try to acquire funding to upgrade.
>>>
>>> I have received several calls from Massport looking to see where we are as far as being able to accept data from their cameras so that they can decommission their BOSS server. I believe their intent is to shut the Massport system down if the MSP and DCJIS are unable to accept the data. I have copied Hank Shaw from Massport into this thread in case I have misstated their intent.
>>>
>>> To access the Massport data we will need to be able to pass data from the Massport network to the state network much like we do with case management data. An alternative would be to use 4G modems (like we do with many of our mobile units and cruiser mounted units) on the state network, but this may be an unnecessary cost. Obviously this decision would be driven by the EOTSS and Massport network teams.
>>>
>>> I can’t overstate the value that LPR data from Massport would have for MSP and law enforcement in general. Cases involving terrorism, money laundering, and drug

trafficking all have significant ties to the port. Being able to hotlist and search on LPR data from Massport facilities would be a significant addition to the MSP Division of Homeland Security's technology tool set and would have immediate impact. Towards that end, we made be able to leverage Homeland Security grant funds for some of this project.

Subject: RE: MassPort LPR Cameras

Hi Major,

I have finished cutting over the LPR cameras that were accessible off the road. [redacted] cameras (G.L. c. 4.sec. 7.cl.26 (n)(security) and needs inspection). G.L. c. 4.sec. 7.cl.26 (n)(security) need lane closures. Site 1 is on the upper level

departures near terminal A and G.L. c. 4.sec. 7.cl.26 (n)(security) I estimate needing 2-5 hours per site. Lt. Crouse has offered to assist in lane closures using unmarked vehicles, how would you like to proceeded in completing the cut over of the remaining sites.

Thanks, Brian

>>
>> Hi Jim,
>>
>> Regarding the Massport cameras; in the early days of AVL we installed [redacted] modem's in cruisers that did not have laptops. These cruisers now have Geo tab and no longer need the modem or data plan. Massport is currently paying for the data plan and bought the modems. Because Massport wants to move quickly to give us their data and knowing BOSS4.0 Is delayed; Why don't we ask Massport to let us use six of those modems and put one at each LPR Camera sector at Massport. We would next push the data back like we do everything else over Verizon. We wouldn't have to do any firewall work either because they have a 166. and communicate like all of the MDT's . Once the back get squared away with the new boss we can revisit the networking. After we migrate everything to the new environment we would them cut the Massport cameras over to the LAN and then give them back their data plans and modems.
>>
>> We would however need to anticipate expanding the existing sand and run the risk of overburdening the server.

>>
>> Let me know what you think, Lieutenant Colonel Quinn and I could make the request to Massport if needed.

>>> Subject: RE: MassPort LPR Cameras
>>>
>>> Good Morning,
>>>
>>> I was hoping to get us all on the same page regarding a proposal to push Massport LPR data to the existing DCJIS BOSS server in Chelsea. Some time ago we (MSP) engaged with Massport regarding Automated License Plate Reader technology (LPR). As most of you know, MSP and DCJIS have been rolling out a very robust LPR network across the Commonwealth. This has been on going for the past several years. The LPR system has paid dividends in numerous criminal cases including crimes of violence, Amber and Silver alerts, and also in many missing/endangered/public well being events.
>>>
>>> Our communications with Massport started when we were made aware that they would be purchasing an LPR system. We worked with our counterparts at Massport to make sure that the two systems would be compatible so that information could be shared across all law enforcement agencies through the MSP Fusion Center. Towards that end Massport partnered with Neology for their solution. This is the same vendor used by MSP and DCJIS.
>>>
>>> Recently Massport has decided not to maintain its own ALPR BOSS database server. The database and application for LPR in Massachusetts is known as “BOSS” and is a Neology product. Massport would like to feed data from its cameras to the DCJIS BOSS server in Chelsea. Originally we had been discussing with Neology the potential for Massport’s cameras to write two records after scanning a plate, one to Massport BOSS and a duplicate to DCJIS BOSS. We think the current proposal to write all LPR records to the BOSS server located at DCJIS is a much better plan.
>>>
>>> MSP has a grant to upgrade the current the current BOSS v3.6 application which is at end of life and no longer supported to version v4.0. We have also submitted a Service Now ticket asking for hardware upgrade costs to the existing BOSS server which MSP will try to acquire funding to upgrade.
>>>
>>> I have received several calls from Massport looking to see where we are as far as being able to accept data from their cameras so that they can decommission their BOSS server. I believe their intent is to shut the Massport system down if the MSP and DCJIS are unable to accept the data. I have copied Hank Shaw from Massport into this thread in case I have misstated their intent.
>>>
>>> To access the Massport data we will need to be able to pass data from the Massport network to the state network much like we do with case management data. An alternative would be to use 4G modems (like we do with many of our mobile units and cruiser mounted units) on the state network, but this may be an unnecessary cost. Obviously this decision would be driven by the EOTSS and Massport network teams.
>>>
>>> I can’t overstate the value that LPR data from Massport would have for MSP and law enforcement in general. Cases involving terrorism, money laundering, and drug

trafficking all have significant ties to the port. Being able to hotlist and search on LPR data from Massport facilities would be a significant addition to the MSP Division of Homeland Security's technology tool set and would have immediate impact. Towards that end, we made be able to leverage Homeland Security grant funds for some of this project.

Subject: RE: MassPort LPR Cameras

Hi Major,

I have finished cutting over the LPR cameras that were accessible off the road. [redacted] cameras ([redacted] and needs inspection). [redacted] need lane closures. [redacted] and [redacted] I estimate needing 2-5 hours per site. Lt. Crouse has offered to assist in lane closures using unmarked vehicles, how would you like to proceeded in completing the cut over of the remaining sites.

Thanks, Brian

>>
>> Hi Jim,
>>
>> Regarding the Massport cameras; in the early days of AVL we installed G.L. c. 4.sec. 7.cl.26 (n)(security) modem's in cruisers that did not have laptops. These cruisers now have Geo tab and no longer need the modem or data plan. Massport is currently paying for the data plan and bought the modems. Because Massport wants to move quickly to give us their data and knowing BOSS4.0 Is delayed; Why don't we ask Massport to let us use six of those modems and put one at each LPR Camera sector at Massport. We would next push the data back like we do everything else over Verizon. We wouldn't have to do any firewall work either because they have a 166. and communicate like all of the MDT's . Once the back get squared away with the new boss we can revisit the networking. After we migrate everything to the new environment we would them cut the Massport cameras over to the LAN and then give them back their data plans and modems.
>>
>> We would however need to anticipate expanding the existing sand and run the risk of overburdening the server.
>>
>> Let me know what you think, Lieutenant Colonel Quinn and I could make the request to Massport if needed.

>>> Subject: RE: MassPort LPR Cameras
>>>
>>> Good Morning,
>>>
>>> I was hoping to get us all on the same page regarding a proposal to push Massport LPR data to the existing DCJIS BOSS server in Chelsea. Some time ago we (MSP) engaged with Massport regarding Automated License Plate Reader technology (LPR). As most of you know, MSP and DCJIS have been rolling out a very robust LPR network across the Commonwealth. This has been on going for the past several years. The LPR system has paid dividends in numerous criminal cases including crimes of violence, Amber and Silver alerts, and also in many missing/endangered/public well being events.
>>>
>>> Our communications with Massport started when we were made aware that they would be purchasing an LPR system. We worked with our counterparts at Massport to make sure that the two systems would be compatible so that information could be shared across all law enforcement agencies through the MSP Fusion Center. Towards that end Massport partnered with Neology for their solution. This is the same vendor used by MSP and DCJIS.
>>>
>>> Recently Massport has decided not to maintain its own ALPR BOSS database server. The

database and application for LPR in Massachusetts is known as “BOSS” and is a Neology product. Massport would like to feed data from its cameras to the DCJIS BOSS server in Chelsea. Originally we had been discussing with Neology the potential for Massport’s cameras to write two records after scanning a plate, one to Massport BOSS and a duplicate to DCJIS BOSS. We think the current proposal to write all LPR records to the BOSS server located at DCJIS is a much better plan.
>>>
>>> MSP has a grant to upgrade the current the current BOSS v3.6 application which is at end of life and no longer supported to version v4.0. We have also submitted a Service Now ticket asking for hardware upgrade costs to the existing BOSS server which MSP will try to acquire funding to upgrade.
>>>
>>> I have received several calls from Massport looking to see where we are as far as being able to accept data from their cameras so that they can decommission their BOSS server. I believe their intent is to shut the Massport system down if the MSP and DCJIS are unable to accept the data. I have copied Hank Shaw from Massport into this thread in case I have misstated their intent.
>>>
>>> To access the Massport data we will need to be able to pass data from the Massport network to the state network much like we do with case management data. An alternative would be to use 4G modems (like we do with many of our mobile units and cruiser mounted units) on the state network, but this may be an unnecessary cost. Obviously this decision would be driven by the EOTSS and Massport network teams.
>>>
>>> I can’t overstate the value that LPR data from Massport would have for MSP and law enforcement in general. Cases involving terrorism, money laundering, and drug trafficking all have significant ties to the port. Being able to hotlist and search on LPR data from Massport facilities would be a significant addition to the MSP Division of Homeland Security’s technology tool set and would have immediate impact. Towards that end, we made be able to leverage Homeland Security grant funds for some of this project.

Cc: Crouse, David (POL) <david.crouse@pol.state.ma.us>
Subject: RE: MassPort LPR Cameras

Hi Major,

I have finished cutting over the LPR cameras that were accessible off the road. G.L. c. 4.sec. 7.cl.26 (n)(security) cameras (G.L. c. 4.sec. 7.cl.26 (n)(security) and needs inspection). G.L. c. 4.sec. 7.cl.26 (n)(security) need lane closures. G.L. c. 4.sec. 7.cl.26 (n)(security) and G.L. c. 4.sec. 7.cl.26 (n)(security) I estimate needing 2-5 hours per site. Lt. Crouse has offered to assist in lane closures using unmarked vehicles, how would you like to proceeded in completing the cut over of the remaining sites.

Thanks, Brian

>>
>> Hi Jim,
>>
>> Regarding the Massport cameras; in the early days of AVL we installed [redacted] modem's in cruisers that did not have laptops. These cruisers now have Geo tab and no longer need the modem or data plan. Massport is currently paying for the data plan and bought the modems. Because Massport wants to move quickly to give us their data and knowing BOSS4.0 Is delayed; Why don't we ask Massport to let us use six of those modems and put one at each LPR Camera sector at Massport. We would next push the data back like we do everything else over Verizon. We wouldn't have to do any firewall work either because they have a 166. and communicate like all of the MDT's . Once the back get squared away with the new boss we can revisit the networking. After we migrate everything to the new environment we would them cut the Massport cameras over to the LAN and then give them back their data plans and modems.
>>
>> We would however need to anticipate expanding the existing sand and run the risk of overburdening the server.
>>
>> Let me know what you think, Lieutenant Colonel Quinn and I could make the request to Massport if needed.

>>> Subject: RE: MassPort LPR Cameras
>>>
>>> Good Morning,
>>>
>>> I was hoping to get us all on the same page regarding a proposal to push Massport LPR data to the existing DCJIS BOSS server in Chelsea. Some time ago we (MSP) engaged with Massport regarding Automated License Plate Reader technology (LPR). As most of you know, MSP and DCJIS have been rolling out a very robust LPR network across the Commonwealth. This has been on going for the past several years. The LPR system has paid dividends in numerous criminal cases including crimes of violence, Amber and Silver alerts, and also in many missing/endangered/public well being events.
>>>
>>> Our communications with Massport started when we were made aware that they would be purchasing an LPR system. We worked with our counterparts at Massport to make sure that the two systems would be compatible so that information could be shared across all law enforcement agencies through the MSP Fusion Center. Towards that end Massport partnered with Neology for their solution. This is the same vendor used by MSP and DCJIS.
>>>
>>> Recently Massport has decided not to maintain its own ALPR BOSS database server. The database and application for LPR in Massachusetts is known as “BOSS” and is a Neology product. Massport would like to feed data from its cameras to the DCJIS BOSS server in Chelsea. Originally we had been discussing with Neology the potential for Massport’s cameras to write two records after scanning a plate, one to Massport BOSS and a duplicate to DCJIS BOSS. We think the current proposal to write all LPR records to the BOSS server located at DCJIS is a much better plan.
>>>
>>> MSP has a grant to upgrade the current the current BOSS v3.6 application which is at end of life and no longer supported to version v4.0. We have also submitted a Service Now ticket asking for

hardware upgrade costs to the existing BOSS server which MSP will try to acquire funding to upgrade.
>>>
>>> I have received several calls from Massport looking to see where we are as far as being able to accept data from their cameras so that they can decommission their BOSS server. I believe their intent is to shut the Massport system down if the MSP and DCJIS are unable to accept the data. I have copied Hank Shaw from Massport into this thread in case I have misstated their intent.
>>>
>>> To access the Massport data we will need to be able to pass data from the Massport network to the state network much like we do with case management data. An alternative would be to use 4G modems (like we do with many of our mobile units and cruiser mounted units) on the state network, but this may be an unnecessary cost. Obviously this decision would be driven by the EOTSS and Massport network teams.
>>>
>>> I can't overstate the value that LPR data from Massport would have for MSP and law enforcement in general. Cases involving terrorism, money laundering, and drug trafficking all have significant ties to the port. Being able to hotlist and search on LPR data from Massport facilities would be a significant addition to the MSP Division of Homeland Security's technology tool set and would have immediate impact. Towards that end, we made be able to leverage Homeland Security grant funds for some of this project.

>>
>> Hi Jim,
>>
>> Regarding the Massport cameras; in the early days of AVL we installed [redacted] modem's in cruisers that did not have laptops. These cruisers now have Geo tab and no longer need the modem or data plan. Massport is currently paying for the data plan and bought the modems. Because Massport wants to move quickly to give us their data and knowing BOSS4.0 Is delayed; Why don't we ask Massport to let us use six of those modems and put one at each LPR Camera sector at Massport. We would next push the data back like we do everything else over Verizon. We wouldn't have to do any firewall work either because they have a 166. and communicate like all of the MDT's . Once the back get squared away with the new boss we can revisit the networking. After we migrate everything to the new environment we would them cut the Massport cameras over to the LAN and then give them back their data plans and modems.
>>
>> We would however need to anticipate expanding the existing sand and run the risk of overburdening the server.
>>
>> Let me know what you think, Lieutenant Colonel Quinn and I could make the request to

Massport if needed.

>>> Subject: RE: MassPort LPR Cameras
>>>
>>> Good Morning,
>>>
>>> I was hoping to get us all on the same page regarding a proposal to push Massport LPR data to the existing DCJIS BOSS server in Chelsea. Some time ago we (MSP) engaged with Massport regarding Automated License Plate Reader technology (LPR). As most of you know, MSP and DCJIS have been rolling out a very robust LPR network across the Commonwealth. This has been on going for the past several years. The LPR system has paid dividends in numerous criminal cases including crimes of violence, Amber and Silver alerts, and also in many missing/endangered/public well being events.
>>>
>>> Our communications with Massport started when we were made aware that they would be purchasing an LPR system. We worked with our counterparts at Massport to make sure that the two systems would be compatible so that information could be shared across all law enforcement agencies through the MSP Fusion Center. Towards that end Massport partnered with Neology for their solution. This is the same vendor used by MSP and DCJIS.
>>>
>>> Recently Massport has decided not to maintain its own ALPR BOSS database server. The database and application for LPR in Massachusetts is known as “BOSS” and is a Neology product. Massport would like to feed data from its cameras to the DCJIS BOSS server in Chelsea. Originally we had been discussing with Neology the potential for Massport’s cameras to write two records after scanning a plate, one to Massport BOSS and a duplicate to DCJIS BOSS. We think the current proposal to write all LPR records to the BOSS server located at DCJIS is a much better plan.
>>>
>>> MSP has a grant to upgrade the current the current BOSS v3.6 application which is at end of life and no longer supported to version v4.0. We have also submitted a Service Now ticket asking for hardware upgrade costs to the existing BOSS server which MSP will try to acquire funding to upgrade.
>>>
>>> I have received several calls from Massport looking to see where we are as far as being able to accept data from their cameras so that they can decommission their BOSS server. I believe their intent is to shut the Massport system down if the MSP and DCJIS are unable to accept the data. I have copied Hank Shaw from Massport into this thread in case I have misstated their intent.
>>>
>>> To access the Massport data we will need to be able to pass data from the Massport network to the state network much like we do with case management data. An alternative would be to use 4G modems (like we do with many of our mobile units and cruiser mounted units) on the state network, but this may be an unnecessary cost. Obviously this decision would be driven by the EOTSS and Massport network teams.
>>>
>>> I can’t overstate the value that LPR data from Massport would have for MSP and law enforcement in general. Cases involving terrorism, money laundering, and drug trafficking all have significant ties to the port. Being able to hotlist and search on LPR data from Massport facilities would be a significant addition to the MSP Division of Homeland Security’s technology tool set and would have immediate impact. Towards that end, we made be able to leverage Homeland Security grant funds for some of this project.

>>
>> Hi Jim,
>>
>> Regarding the Massport cameras; in the early days of AVL we installed [G.L. c. 4.sec. 7.cl.26 (n)(security)] modem's in cruisers that did not have laptops. These cruisers now have Geo tab and no longer need the modem or data plan. Massport is currently paying for the data plan and bought the modems. Because Massport wants to move quickly to give us their data and knowing BOSS4.0 Is delayed; Why don't we ask Massport to let us use six of those modems and put one at each LPR Camera sector at Massport. We would next push the data back like we do everything else over Verizon. We wouldn't have to do any firewall work either because they have a 166. and communicate like all of the MDT's . Once the back get squared away with the new boss we can revisit the networking. After we migrate everything to the new environment we would them cut the Massport cameras over to the LAN and then give them

back their data plans and modems.
>>
>> We would however need to anticipate expanding the existing sand and run the risk of overburdening the server.
>>
>> Let me know what you think, Lieutenant Colonel Quinn and I could make the request to Massport if needed.

>>> Subject: RE: MassPort LPR Cameras
>>>
>>> Good Morning,
>>>
>>> I was hoping to get us all on the same page regarding a proposal to push Massport LPR data to the existing DCJIS BOSS server in Chelsea. Some time ago we (MSP) engaged with Massport regarding Automated License Plate Reader technology (LPR). As most of you know, MSP and DCJIS have been rolling out a very robust LPR network across the Commonwealth. This has been on going for the past several years. The LPR system has paid dividends in numerous criminal cases including crimes of violence, Amber and Silver alerts, and also in many missing/endangered/public well being events.
>>>
>>> Our communications with Massport started when we were made aware that they would be purchasing an LPR system. We worked with our counterparts at Massport to make sure that the two systems would be compatible so that information could be shared across all law enforcement agencies through the MSP Fusion Center. Towards that end Massport partnered with Neology for their solution. This is the same vendor used by MSP and DCJIS.
>>>
>>> Recently Massport has decided not to maintain its own ALPR BOSS database server. The database and application for LPR in Massachusetts is known as “BOSS” and is a Neology product. Massport would like to feed data from its cameras to the DCJIS BOSS server in Chelsea. Originally we had been discussing with Neology the potential for Massport’s cameras to write two records after scanning a plate, one to Massport BOSS and a duplicate to DCJIS BOSS. We think the current proposal to write all LPR records to the BOSS server located at DCJIS is a much better plan.
>>>
>>> MSP has a grant to upgrade the current the current BOSS v3.6 application which is at end of life and no longer supported to version v4.0. We have also submitted a Service Now ticket asking for hardware upgrade costs to the existing BOSS server which MSP will try to acquire funding to upgrade.
>>>
>>> I have received several calls from Massport looking to see where we are as far as being able to accept data from their cameras so that they can decommission their BOSS server. I believe their intent is to shut the Massport system down if the MSP and DCJIS are unable to accept the data. I have copied Hank Shaw from Massport into this thread in case I have misstated their intent.
>>>
>>> To access the Massport data we will need to be able to pass data from the Massport network to the state network much like we do with case management data. An alternative would be to use 4G modems (like we do with many of our mobile units and cruiser mounted units) on the state network, but this may be an unnecessary cost. Obviously this decision would be driven by the EOTSS and Massport network teams.
>>>
>>> I can’t overstate the value that LPR data from Massport would have for MSP and law enforcement in general. Cases involving terrorism, money laundering, and drug trafficking all have significant ties to the port. Being able to hotlist and search on LPR data from Massport facilities would be a significant addition to the MSP Division of Homeland Security’s technology tool set and would have immediate impact. Towards that end, we made be able to leverage Homeland Security grant funds for some of this project.

>>
>> Regarding the Massport cameras; in the early days of AVL we installed [redacted] M.G.L. c. 4.sec. 7.cl.26 (n)(security) modem‘s in cruisers that did not have laptops. These cruisers now have Geo tab and no longer need the modem or data plan. Massport is currently paying for the data plan and bought the modems. Because Massport wants to move quickly to give us their data and knowing BOSS4.0 Is delayed; Why don’t we ask Massport to let us use six of those modems and put one at each LPR Camera sector at Massport. We would next push the data back like we do everything else over Verizon. We wouldn’t have to do any firewall work either because they have a 166. and communicate like all of the MDT‘s . Once the back get squared away with the new boss we can revisit the networking. After we migrate everything to the new environment we would them cut the Massport cameras over to the LAN and then give them back their data plans and modems.
>>
>> We would however need to anticipate expanding the existing sand and run the risk of overburdening the server.
>>
>> Let me know what you think, Lieutenant Colonel Quinn and I could make the request to Massport if needed.

>>> Subject: RE: MassPort LPR Cameras
>>>
>>> Good Morning,
>>>
>>> I was hoping to get us all on the same page regarding a proposal to push Massport LPR data to the existing DCJIS BOSS server in Chelsea. Some time ago we (MSP) engaged with Massport regarding Automated License Plate Reader technology (LPR). As most of you know, MSP and DCJIS have been rolling out a very robust LPR network across the Commonwealth. This has been on going for the past several years. The LPR system has paid dividends in numerous criminal cases including crimes of violence, Amber and Silver alerts, and also in many missing/endangered/public

well being events.
>>>
>>> Our communications with Massport started when we were made aware that they would be purchasing an LPR system. We worked with our counterparts at Massport to make sure that the two systems would be compatible so that information could be shared across all law enforcement agencies through the MSP Fusion Center. Towards that end Massport partnered with Neology for their solution. This is the same vendor used by MSP and DCJIS.
>>>
>>> Recently Massport has decided not to maintain its own ALPR BOSS database server. The database and application for LPR in Massachusetts is known as “BOSS” and is a Neology product. Massport would like to feed data from its cameras to the DCJIS BOSS server in Chelsea. Originally we had been discussing with Neology the potential for Massport’s cameras to write two records after scanning a plate, one to Massport BOSS and a duplicate to DCJIS BOSS. We think the current proposal to write all LPR records to the BOSS server located at DCJIS is a much better plan.
>>>
>>> MSP has a grant to upgrade the current the current BOSS v3.6 application which is at end of life and no longer supported to version v4.0. We have also submitted a Service Now ticket asking for hardware upgrade costs to the existing BOSS server which MSP will try to acquire funding to upgrade.
>>>
>>> I have received several calls from Massport looking to see where we are as far as being able to accept data from their cameras so that they can decommission their BOSS server. I believe their intent is to shut the Massport system down if the MSP and DCJIS are unable to accept the data. I have copied Hank Shaw from Massport into this thread in case I have misstated their intent.
>>>
>>> To access the Massport data we will need to be able to pass data from the Massport network to the state network much like we do with case management data. An alternative would be to use 4G modems (like we do with many of our mobile units and cruiser mounted units) on the state network, but this may be an unnecessary cost. Obviously this decision would be driven by the EOTSS and Massport network teams.
>>>
>>> I can’t overstate the value that LPR data from Massport would have for MSP and law enforcement in general. Cases involving terrorism, money laundering, and drug trafficking all have significant ties to the port. Being able to hotlist and search on LPR data from Massport facilities would be a significant addition to the MSP Division of Homeland Security’s technology tool set and would have immediate impact. Towards that end, we made be able to leverage Homeland Security grant funds for some of this project.

>>> Subject: RE: MassPort LPR Cameras
>>>

>>> Good Morning,
>>>
>>> I was hoping to get us all on the same page regarding a proposal to push Massport LPR data to the existing DCJIS BOSS server in Chelsea. Some time ago we (MSP) engaged with Massport regarding Automated License Plate Reader technology (LPR). As most of you know, MSP and DCJIS have been rolling out a very robust LPR network across the Commonwealth. This has been on going for the past several years. The LPR system has paid dividends in numerous criminal cases including crimes of violence, Amber and Silver alerts, and also in many missing/endangered/public well being events.
>>>
>>> Our communications with Massport started when we were made aware that they would be purchasing an LPR system. We worked with our counterparts at Massport to make sure that the two systems would be compatible so that information could be shared across all law enforcement agencies through the MSP Fusion Center. Towards that end Massport partnered with Neology for their solution. This is the same vendor used by MSP and DCJIS.
>>>
>>> Recently Massport has decided not to maintain its own ALPR BOSS database server. The database and application for LPR in Massachusetts is known as “BOSS” and is a Neology product. Massport would like to feed data from its cameras to the DCJIS BOSS server in Chelsea. Originally we had been discussing with Neology the potential for Massport’s cameras to write two records after scanning a plate, one to Massport BOSS and a duplicate to DCJIS BOSS. We think the current proposal to write all LPR records to the BOSS server located at DCJIS is a much better plan.
>>>
>>> MSP has a grant to upgrade the current the current BOSS v3.6 application which is at end of life and no longer supported to version v4.0. We have also submitted a Service Now ticket asking for hardware upgrade costs to the existing BOSS server which MSP will try to acquire funding to upgrade.
>>>
>>> I have received several calls from Massport looking to see where we are as far as being able to accept data from their cameras so that they can decommission their BOSS server. I believe their intent is to shut the Massport system down if the MSP and DCJIS are unable to accept the data. I have copied Hank Shaw from Massport into this thread in case I have misstated their intent.
>>>
>>> To access the Massport data we will need to be able to pass data from the Massport network to the state network much like we do with case management data. An alternative would be to use 4G modems (like we do with many of our mobile units and cruiser mounted units) on the state network, but this may be an unnecessary cost. Obviously this decision would be driven by the EOTSS and Massport network teams.
>>>
>>> I can’t overstate the value that LPR data from Massport would have for MSP and law enforcement in general. Cases involving terrorism, money laundering, and drug trafficking all have significant ties to the port. Being able to hotlist and search on LPR data from Massport facilities would be a significant addition to the MSP Division of Homeland Security’s technology tool set and would have immediate impact. Towards that end, we made be able to leverage Homeland Security grant funds for some of this project.

>>>
>>> Hi Jim,
>>>
>>> We are looking to consolidate the MassPort ALPR cameras into the main EOPSS ALPR server. After evaluating a number of options purposed by Neology, this appears to be the simplest approach. There is already a network presence at the barracks and it should be easy to point the cameras towards the centralized server. I've spoken to Alex at MassPort and he can volunteer a camera for testing. We could monitor network and server impact. Are you available to discuss?

>> Hi Jim,
>>
>> Regarding the Massport cameras; in the early days of AVL we installed [redacted] modem's in cruisers that did not have laptops. These cruisers now have Geo tab and no longer need the modem or data plan. Massport is currently paying for the data plan and bought the modems. Because Massport wants to move quickly to give us their data and knowing BOSS4.0 Is delayed; Why don't we ask Massport to let us use six of those modems and put one at each LPR Camera sector at Massport. We would next push the data back like we do everything else over Verizon. We wouldn't have to do any firewall work either because they have a 166. and communicate like all of the MDT's . Once the back get squared away with the new boss we can revisit the networking. After we migrate everything to the new environment we would them cut the Massport cameras over to the LAN and then give them back their data plans and modems.
>>
>> We would however need to anticipate expanding the existing sand and run the risk of overburdening the server.
>>
>> Let me know what you think, Lieutenant Colonel Quinn and I could make the request to Massport if needed.

>>> Subject: RE: MassPort LPR Cameras
>>>

>>> Good Morning,
>>>
>>> I was hoping to get us all on the same page regarding a proposal to push Massport LPR data to the existing DCJIS BOSS server in Chelsea. Some time ago we (MSP) engaged with Massport regarding Automated License Plate Reader technology (LPR). As most of you know, MSP and DCJIS have been rolling out a very robust LPR network across the Commonwealth. This has been on going for the past several years. The LPR system has paid dividends in numerous criminal cases including crimes of violence, Amber and Silver alerts, and also in many missing/endangered/public well being events.
>>>
>>> Our communications with Massport started when we were made aware that they would be purchasing an LPR system. We worked with our counterparts at Massport to make sure that the two systems would be compatible so that information could be shared across all law enforcement agencies through the MSP Fusion Center. Towards that end Massport partnered with Neology for their solution. This is the same vendor used by MSP and DCJIS.
>>>
>>> Recently Massport has decided not to maintain its own ALPR BOSS database server. The database and application for LPR in Massachusetts is known as “BOSS” and is a Neology product. Massport would like to feed data from its cameras to the DCJIS BOSS server in Chelsea. Originally we had been discussing with Neology the potential for Massport’s cameras to write two records after scanning a plate, one to Massport BOSS and a duplicate to DCJIS BOSS. We think the current proposal to write all LPR records to the BOSS server located at DCJIS is a much better plan.
>>>
>>> MSP has a grant to upgrade the current the current BOSS v3.6 application which is at end of life and no longer supported to version v4.0. We have also submitted a Service Now ticket asking for hardware upgrade costs to the existing BOSS server which MSP will try to acquire funding to upgrade.
>>>
>>> I have received several calls from Massport looking to see where we are as far as being able to accept data from their cameras so that they can decommission their BOSS server. I believe their intent is to shut the Massport system down if the MSP and DCJIS are unable to accept the data. I have copied Hank Shaw from Massport into this thread in case I have misstated their intent.
>>>
>>> To access the Massport data we will need to be able to pass data from the Massport network to the state network much like we do with case management data. An alternative would be to use 4G modems (like we do with many of our mobile units and cruiser mounted units) on the state network, but this may be an unnecessary cost. Obviously this decision would be driven by the EOTSS and Massport network teams.
>>>
>>> I can’t overstate the value that LPR data from Massport would have for MSP and law enforcement in general. Cases involving terrorism, money laundering, and drug trafficking all have significant ties to the port. Being able to hotlist and search on LPR data from Massport facilities would be a significant addition to the MSP Division of Homeland Security’s technology tool set and would have immediate impact. Towards that end, we made be able to leverage Homeland Security grant funds for some of this project.

>>>
>>> Hi Jim,
>>>
>>> We are looking to consolidate the MassPort ALPR cameras into the main EOPSS ALPR server. After evaluating a number of options purposed by Neology, this appears to be the simplest approach. There is already a network presence at the barracks and it should be easy to point the cameras towards the centralized server. I've spoken to Alex at MassPort and he can volunteer a camera for testing. We could monitor network and server impact. Are you available to discuss?

>>> Hi Jim,
>>>
>>> Regarding the Massport cameras; in the early days of AVL we installed [redacted] modem's in cruisers that did not have laptops. These cruisers now have Geo tab and no longer need the modem or data plan. Massport is currently paying for the data plan and bought the modems. Because Massport wants to move quickly to give us their data and knowing BOSS4.0 Is delayed; Why don't we ask Massport to let us use six of those modems and put one at each LPR Camera sector at Massport. We would next push the data back like we do everything else over Verizon. We wouldn't have to do any firewall work either because they have a 166. and communicate like all of the MDT's . Once the back get squared away with the new boss we can revisit the networking. After we migrate everything to the new environment we would them cut the Massport cameras over to the LAN and then give them back their data plans and modems.
>>>
>>> We would however need to anticipate expanding the existing sand and run the risk of overburdening the server.
>>>
>>> Let me know what you think, Lieutenant Colonel Quinn and I could make the request to Massport if needed.

>>>> Recently Massport has decided not to maintain its own ALPR BOSS database server. The database and application for LPR in Massachusetts is known as “BOSS” and is a Neology product. Massport would like to feed data from its cameras to the DCJIS BOSS server in Chelsea. Originally we had been discussing with Neology the potential for Massport’s cameras to write two records after scanning a plate, one to Massport BOSS and a duplicate to DCJIS BOSS. We think the current proposal to write all LPR records to the BOSS server located at DCJIS is a much better plan.
>>>>
>>>> MSP has a grant to upgrade the current the current BOSS v3.6 application which is at end of life and no longer supported to version v4.0. We have also submitted a Service Now ticket asking for hardware upgrade costs to the existing BOSS server which MSP will try to acquire funding to upgrade.
>>>>
>>>> I have received several calls from Massport looking to see where we are as far as being able to accept data from their cameras so that they can decommission their BOSS server. I believe their intent is to shut the Massport system down if the MSP and DCJIS are unable to accept the data. I have copied Hank Shaw from Massport into this thread in case I have misstated their intent.
>>>>
>>>> To access the Massport data we will need to be able to pass data from the Massport network to the state network much like we do with case management data. An alternative would be to use 4G modems (like we do with many of our mobile units and cruiser mounted units) on the state network, but this may be an unnecessary cost. Obviously this decision would be driven by the EOTSS and Massport network teams.
>>>>
>>>> I can’t overstate the value that LPR data from Massport would have for MSP and law enforcement in general. Cases involving terrorism, money laundering, and drug trafficking all have significant ties to the port. Being able to hotlist and search on LPR data from Massport facilities would be a significant addition to the MSP Division of Homeland Security’s technology tool set and would have immediate impact. Towards that end, we made be able to leverage Homeland Security grant funds for some of this project.

There is already a network presence at the barracks and it should be easy to point the cameras towards the centralized server. I've spoken to Alex at MassPort and he can volunteer a camera for testing. We could monitor network and server impact. Are you available to discuss?

As discussed, I would like to explore the opportunity to swing all LPR cameras at Logan directly to the MSP BOSS server without the need for the InStation solution. My understanding is that the EOPSS network resides in both the ATCT as well as the [redacted] I would propose that we extend this network via Layer 2 to the main locations that the LPR system terminates to and cut the entire LPR network at MassPort over to EOPSS. Most of the [redacted] are fed to [redacted] network locations. MassPort can supply the necessary fiber paths and switch gear required to extend the EOPSS network to these locations. Currently we have [redacted] in production, with another [redacted] to come online within the next two months. I anticipate this number growing to approximately [redacted] within our campus over the next year. Let me know what you think the appropriate next steps would be.

>>> Hi Jim,
>>>
>>> Regarding the Massport cameras; in the early days of AVL we installed [redacted] modem's in cruisers that did not have laptops. These cruisers now have Geo tab and no longer need the modem or data plan. Massport is currently paying for the data plan and bought the modems. Because Massport wants to move quickly to give us their data and knowing BOSS4.0 Is delayed; Why don't we ask Massport to let us use six of those modems and put one at each LPR Camera sector at Massport. We would next push the data back like we do everything else over Verizon. We wouldn't have to do any firewall work either because they have a 166. and communicate like all of the MDT's . Once the back get squared away with the new boss we can revisit the networking. After we migrate everything to the new environment we would them cut the Massport cameras over to the LAN and then give them back their data plans and modems.
>>>
>>> We would however need to anticipate expanding the existing sand and run the risk of overburdening the server.
>>>
>>> Let me know what you think, Lieutenant Colonel Quinn and I could make the request to Massport if needed.

>>>> I was hoping to get us all on the same page regarding a proposal to push Massport LPR data to the existing DCJIS BOSS server in Chelsea. Some time ago we (MSP) engaged with Massport regarding Automated License Plate Reader technology (LPR). As most of you know, MSP and DCJIS have been rolling out a very robust LPR network across the Commonwealth. This has been on going for the past several years. The LPR system has paid dividends in numerous criminal cases including crimes of violence, Amber and Silver alerts, and also in many missing/endangered/public well being events.
>>>>
>>>> Our communications with Massport started when we were made aware that they would be purchasing an LPR system. We worked with our counterparts at Massport to make sure that the two systems would be compatible so that information could be shared across all law enforcement agencies through the MSP Fusion Center. Towards that end Massport partnered with Neology for their solution. This is the same vendor used by MSP and DCJIS.
>>>>
>>>> Recently Massport has decided not to maintain its own ALPR BOSS database server. The database and application for LPR in Massachusetts is known as “BOSS” and is a Neology product. Massport would like to feed data from its cameras to the DCJIS BOSS server in Chelsea. Originally we had been discussing with Neology the potential for Massport’s cameras to write two records after scanning a plate, one to Massport BOSS and a duplicate to DCJIS BOSS. We think the current proposal to write all LPR records to the BOSS server located at DCJIS is a much better plan.
>>>>
>>>> MSP has a grant to upgrade the current the current BOSS v3.6 application which is at end of life and no longer supported to version v4.0. We have also submitted a Service Now ticket asking for hardware upgrade costs to the existing BOSS server which MSP will try to acquire funding to upgrade.
>>>>
>>>> I have received several calls from Massport looking to see where we are as far as being able to accept data from their cameras so that they can decommission their BOSS server. I believe their intent is to shut the Massport system down if the MSP and DCJIS are unable to accept the data. I have copied Hank Shaw from Massport into this thread in case I have misstated their intent.
>>>>
>>>> To access the Massport data we will need to be able to pass data from the Massport network to the state network much like we do with case management data. An alternative would be to use 4G modems (like we do with many of our mobile units and cruiser mounted units) on the state network, but this may be an unnecessary cost. Obviously this decision would be driven by the EOTSS and Massport network teams.
>>>>
>>>> I can’t overstate the value that LPR data from Massport would have for MSP and law enforcement in general. Cases involving terrorism, money laundering, and drug trafficking all have significant ties to the port. Being able to hotlist and search on LPR data from Massport facilities would be a significant addition to the MSP Division of Homeland Security’s technology tool set and would have immediate impact. Towards that end, we made be able to leverage Homeland Security grant funds for some of this project.

As discussed, I would like to explore the opportunity to swing all LPR cameras at Logan directly to the MSP BOSS server without the need for the InStation solution. My understanding is that the EOPSS network resides in both the ATCT as well as the [redacted] I would propose that we extend this network via Layer 2 to the main locations that the LPR system terminates to and cut the entire LPR network at MassPort over to EOPSS. Most of the [redacted] are fed to [redacted] network locations. MassPort can supply the necessary fiber paths and switch gear required to extend the EOPSS network to these locations. Currently we have [redacted] in production, with another [redacted] to come online within the next two months. I anticipate this number growing to approximately [redacted] within our campus over the next year. Let me know what you think the appropriate next steps would be.

>> Hi Jim,
>>
>> Regarding the Massport cameras; in the early days of AVL we installed [redacted] modem's in cruisers that did not have laptops. These cruisers now have Geo tab and no longer need the modem or data plan. Massport is currently paying for the data plan and bought the modems. Because Massport wants to move quickly to give us their data and knowing BOSS4.0 Is delayed; Why don't we ask Massport to let us use six of those modems and put one at each LPR Camera sector at Massport. We would next push the data back like we do everything else over Verizon. We wouldn't have to do any firewall work either because they have a 166. and communicate like all of the MDT's . Once the back get squared away with the new boss we can revisit the networking. After we migrate everything to the new environment we would them cut the Massport cameras over to the LAN and then give them back their data plans and modems.
>>

>> We would however need to anticipate expanding the existing sand and run the risk of overburdening the server.
>>
>> Let me know what you think, Lieutenant Colonel Quinn and I could make the request to Massport if needed.

>>> Subject: RE: MassPort LPR Cameras
>>>
>>> Good Morning,
>>>
>>> I was hoping to get us all on the same page regarding a proposal to push Massport LPR data to the existing DCJIS BOSS server in Chelsea. Some time ago we (MSP) engaged with Massport regarding Automated License Plate Reader technology (LPR). As most of you know, MSP and DCJIS have been rolling out a very robust LPR network across the Commonwealth. This has been on going for the past several years. The LPR system has paid dividends in numerous criminal cases including crimes of violence, Amber and Silver alerts, and also in many missing/endangered/public well being events.
>>>
>>> Our communications with Massport started when we were made aware that they would be purchasing an LPR system. We worked with our counterparts at Massport to make sure that the two systems would be compatible so that information could be shared across all law enforcement agencies through the MSP Fusion Center. Towards that end Massport partnered with Neology for their solution. This is the same vendor used by MSP and DCJIS.
>>>
>>> Recently Massport has decided not to maintain its own ALPR BOSS database server. The database and application for LPR in Massachusetts is known as “BOSS” and is a Neology product. Massport would like to feed data from its cameras to the DCJIS BOSS server in Chelsea. Originally we had been discussing with Neology the potential for Massport’s cameras to write two records after scanning a plate, one to Massport BOSS and a duplicate to DCJIS BOSS. We think the current proposal to write all LPR records to the BOSS server located at DCJIS is a much better plan.
>>>
>>> MSP has a grant to upgrade the current the current BOSS v3.6 application which is at end of life and no longer supported to version v4.0. We have also submitted a Service Now ticket asking for hardware upgrade costs to the existing BOSS server which MSP will try to acquire funding to upgrade.
>>>
>>> I have received several calls from Massport looking to see where we are as far as being able to accept data from their cameras so that they can decommission their BOSS server. I believe their intent is to shut the Massport system down if the MSP and DCJIS are unable to accept the data. I have copied Hank Shaw from Massport into this thread in case I have misstated their intent.
>>>
>>> To access the Massport data we will need to be able to pass data from the Massport network to the state network much like we do with case management data. An alternative would be to use 4G modems (like we do with many of our mobile units and cruiser mounted units) on the state network, but this may be an unnecessary cost. Obviously this decision would be driven by the EOTSS and Massport network teams.
>>>
>>> I can’t overstate the value that LPR data from Massport would have for MSP and law enforcement in general. Cases involving terrorism, money laundering, and drug trafficking all have significant ties to the port. Being able to hotlist and search on LPR data from Massport facilities would be a significant addition to the MSP Division of Homeland Security’s technology tool set and would have immediate impact. Towards that end, we made be able to leverage Homeland Security grant funds for some of this project.

>>>
>>> Hi Jim,
>>>
>>> We are looking to consolidate the MassPort ALPR cameras into the main EOPSS ALPR server. After evaluating a number of options purposed by Neology, this appears to be the simplest approach. There is already a network presence at the barracks and it should be easy to point the cameras towards the centralized server. I've spoken to Alex at MassPort and he can volunteer a camera for testing. We could monitor network and server impact. Are you available to discuss?

>>
>> Hi Jim,
>>
>> Regarding the Massport cameras; in the early days of AVL we installed [redacted] modem's in cruisers that did not have laptops. These cruisers now have Geo tab and no longer need the modem or data plan. Massport is currently paying for the data plan and bought the modems. Because Massport wants to move quickly to give us their data and knowing BOSS4.0 Is delayed; Why don't we ask Massport to let us use six of those modems and put one at each LPR Camera sector at Massport. We would next push the data back like we do everything else over Verizon. We wouldn't have to do any firewall work either because they have a 166. and communicate like all of the MDT's . Once the back get squared away with the new boss we can revisit the networking. After we migrate everything to the new environment we would them cut the Massport cameras over to the LAN and then give them back their data plans and modems.
>>

>> We would however need to anticipate expanding the existing sand and run the risk of overburdening the server.
>>
>> Let me know what you think, Lieutenant Colonel Quinn and I could make the request to Massport if needed.

>>> Subject: RE: MassPort LPR Cameras
>>>
>>> Good Morning,
>>>
>>> I was hoping to get us all on the same page regarding a proposal to push Massport LPR data to the existing DCJIS BOSS server in Chelsea. Some time ago we (MSP) engaged with Massport regarding Automated License Plate Reader technology (LPR). As most of you know, MSP and DCJIS have been rolling out a very robust LPR network across the Commonwealth. This has been on going for the past several years. The LPR system has paid dividends in numerous criminal cases including crimes of violence, Amber and Silver alerts, and also in many missing/endangered/public well being events.
>>>
>>> Our communications with Massport started when we were made aware that they would be purchasing an LPR system. We worked with our counterparts at Massport to make sure that the two systems would be compatible so that information could be shared across all law enforcement agencies through the MSP Fusion Center. Towards that end Massport partnered with Neology for their solution. This is the same vendor used by MSP and DCJIS.
>>>
>>> Recently Massport has decided not to maintain its own ALPR BOSS database server. The database and application for LPR in Massachusetts is known as “BOSS” and is a Neology product. Massport would like to feed data from its cameras to the DCJIS BOSS server in Chelsea. Originally we had been discussing with Neology the potential for Massport’s cameras to write two records after scanning a plate, one to Massport BOSS and a duplicate to DCJIS BOSS. We think the current proposal to write all LPR records to the BOSS server located at DCJIS is a much better plan.
>>>
>>> MSP has a grant to upgrade the current the current BOSS v3.6 application which is at end of life and no longer supported to version v4.0. We have also submitted a Service Now ticket asking for hardware upgrade costs to the existing BOSS server which MSP will try to acquire funding to upgrade.
>>>
>>> I have received several calls from Massport looking to see where we are as far as being able to accept data from their cameras so that they can decommission their BOSS server. I believe their intent is to shut the Massport system down if the MSP and DCJIS are unable to accept the data. I have copied Hank Shaw from Massport into this thread in case I have misstated their intent.
>>>
>>> To access the Massport data we will need to be able to pass data from the Massport network to the state network much like we do with case management data. An alternative would be to use 4G modems (like we do with many of our mobile units and cruiser mounted units) on the state network, but this may be an unnecessary cost. Obviously this decision would be driven by the EOTSS and Massport network teams.
>>>
>>> I can’t overstate the value that LPR data from Massport would have for MSP and law enforcement in general. Cases involving terrorism, money laundering, and drug trafficking all have significant ties to the port. Being able to hotlist and search on LPR data from Massport facilities would be a significant addition to the MSP Division of Homeland Security’s technology tool set and would have immediate impact. Towards that end, we made be able to leverage Homeland Security grant funds for some of this project.

Not that I'm aware of, its our understanding that we submit them to the LTC. , then it goes over to Michelle and then IT. We've done tickets in the past but then were advised that the proper channel is a to/from through the chain.

Thanks, Brian

> Regarding the Massport cameras; in the early days of AVL we installed [redacted] modem's in cruisers that did not have laptops. These cruisers now have Geo tab and no longer need the modem or data plan. Massport is currently paying for the data plan and bought the modems. Because Massport wants to move quickly to give us their data and knowing BOSS4.0 Is delayed; Why don't we ask Massport to let us use six of those modems and put one at each LPR Camera sector at Massport. We would next push the data back like we do everything else over Verizon. We wouldn't have to do any firewall work either because they have a 166. and communicate like all of the MDT's . Once the back get squared away with the new boss we can revisit the networking. After we migrate everything to the new environment we would them cut the Massport cameras over to the LAN and then give them back their data plans and modems.
>
> We would however need to anticipate expanding the existing sand and run the risk of overburdening the server.
>
> Let me know what you think, Lieutenant Colonel Quinn and I could make the request to Massport if needed.

>> Subject: RE: MassPort LPR Cameras
>>
>> Good Morning,
>>
>> I was hoping to get us all on the same page regarding a proposal to push Massport LPR data to the existing DCJIS BOSS server in Chelsea. Some time ago we (MSP) engaged with Massport regarding Automated License Plate Reader technology (LPR). As most of you know, MSP and DCJIS have been rolling out a very robust LPR network across the Commonwealth. This has been on going for the past several years. The LPR system has paid dividends in numerous criminal cases including crimes of violence, Amber and Silver alerts, and also in many missing/endangered/public well being events.
>>
>> Our communications with Massport started when we were made aware that they would be purchasing an LPR system. We worked with our counterparts at Massport to make sure that the two systems would be compatible so

that information could be shared across all law enforcement agencies through the MSP Fusion Center. Towards that end Massport partnered with Neology for their solution. This is the same vendor used by MSP and DCJIS.
>>
>> Recently Massport has decided not to maintain its own ALPR BOSS database server. The database and application for LPR in Massachusetts is known as “BOSS” and is a Neology product. Massport would like to feed data from its cameras to the DCJIS BOSS server in Chelsea. Originally we had been discussing with Neology the potential for Massport’s cameras to write two records after scanning a plate, one to Massport BOSS and a duplicate to DCJIS BOSS. We think the current proposal to write all LPR records to the BOSS server located at DCJIS is a much better plan.
>>
>> MSP has a grant to upgrade the current the current BOSS v3.6 application which is at end of life and no longer supported to version v4.0. We have also submitted a Service Now ticket asking for hardware upgrade costs to the existing BOSS server which MSP will try to acquire funding to upgrade.
>>
>> I have received several calls from Massport looking to see where we are as far as being able to accept data from their cameras so that they can decommission their BOSS server. I believe their intent is to shut the Massport system down if the MSP and DCJIS are unable to accept the data. I have copied Hank Shaw from Massport into this thread in case I have misstated their intent.
>>
>> To access the Massport data we will need to be able to pass data from the Massport network to the state network much like we do with case management data. An alternative would be to use 4G modems (like we do with many of our mobile units and cruiser mounted units) on the state network, but this may be an unnecessary cost. Obviously this decision would be driven by the EOTSS and Massport network teams.
>>
>> I can’t overstate the value that LPR data from Massport would have for MSP and law enforcement in general. Cases involving terrorism, money laundering, and drug trafficking all have significant ties to the port. Being able to hotlist and search on LPR data from Massport facilities would be a significant addition to the MSP Division of Homeland Security’s technology tool set and would have immediate impact. Towards that end, we made be able to leverage Homeland Security grant funds for some of this project.

Not that I'm aware of, its our understanding that we submit them to the LTC. , then it goes over to Michelle and then IT. We've done tickets in the past but then were advised that the proper channel is a to/from through the chain.

Thanks, Brian

> Regarding the Massport cameras; in the early days of AVL we installed [redacted] modem's in cruisers that did not have laptops. These cruisers now have Geo tab and no longer need the modem or data plan. Massport is currently paying for the data plan and bought the modems. Because Massport wants to move quickly to give us their data and knowing BOSS4.0 Is delayed; Why don't we ask Massport to let us use six of those modems and put one at each LPR Camera sector at Massport. We would next push the data back like we do everything else over Verizon. We wouldn't have to do any firewall work either because they have a 166. and communicate like all of the MDT's . Once the back get squared away with the new boss we can revisit the networking. After we migrate everything to the new environment we would them cut the Massport cameras over to the LAN and then give them back their data plans and modems.
>
> We would however need to anticipate expanding the existing sand and run the risk of overburdening the server.
>
> Let me know what you think, Lieutenant Colonel Quinn and I could make the request to Massport if needed.

>> Subject: RE: MassPort LPR Cameras
>>
>> Good Morning,
>>
>> I was hoping to get us all on the same page regarding a proposal to push Massport LPR data to the existing DCJIS BOSS server in Chelsea. Some time ago we (MSP) engaged with Massport regarding Automated License Plate Reader technology (LPR). As most of you know, MSP and DCJIS have been rolling out a very robust LPR network across the Commonwealth. This has been on going for the past several years. The LPR system has paid dividends in numerous criminal cases including crimes of violence, Amber and Silver alerts, and also in many missing/endangered/public well being events.
>>
>> Our communications with Massport started when we were made aware that they would be purchasing an LPR system. We worked with our counterparts at Massport to make sure that the two systems would be compatible so

that information could be shared across all law enforcement agencies through the MSP Fusion Center. Towards that end Massport partnered with Neology for their solution. This is the same vendor used by MSP and DCJIS.
>>
>> Recently Massport has decided not to maintain its own ALPR BOSS database server. The database and application for LPR in Massachusetts is known as “BOSS” and is a Neology product. Massport would like to feed data from its cameras to the DCJIS BOSS server in Chelsea. Originally we had been discussing with Neology the potential for Massport’s cameras to write two records after scanning a plate, one to Massport BOSS and a duplicate to DCJIS BOSS. We think the current proposal to write all LPR records to the BOSS server located at DCJIS is a much better plan.
>>
>> MSP has a grant to upgrade the current the current BOSS v3.6 application which is at end of life and no longer supported to version v4.0. We have also submitted a Service Now ticket asking for hardware upgrade costs to the existing BOSS server which MSP will try to acquire funding to upgrade.
>>
>> I have received several calls from Massport looking to see where we are as far as being able to accept data from their cameras so that they can decommission their BOSS server. I believe their intent is to shut the Massport system down if the MSP and DCJIS are unable to accept the data. I have copied Hank Shaw from Massport into this thread in case I have misstated their intent.
>>
>> To access the Massport data we will need to be able to pass data from the Massport network to the state network much like we do with case management data. An alternative would be to use 4G modems (like we do with many of our mobile units and cruiser mounted units) on the state network, but this may be an unnecessary cost. Obviously this decision would be driven by the EOTSS and Massport network teams.
>>
>> I can’t overstate the value that LPR data from Massport would have for MSP and law enforcement in general. Cases involving terrorism, money laundering, and drug trafficking all have significant ties to the port. Being able to hotlist and search on LPR data from Massport facilities would be a significant addition to the MSP Division of Homeland Security’s technology tool set and would have immediate impact. Towards that end, we made be able to leverage Homeland Security grant funds for some of this project.

> Regarding the Massport cameras; in the early days of AVL we installed [redacted] modem's in cruisers that did not have laptops. These cruisers now have Geo tab and no longer need the modem or data plan. Massport is currently paying for the data plan and bought the modems. Because Massport wants to move quickly to give us their data and knowing BOSS4.0 Is delayed; Why don't we ask Massport to let us use six of those modems and put one at each LPR Camera sector at Massport. We would next push the data back like we do everything else over Verizon. We wouldn't have to do any firewall work either because they have a 166. and communicate like all of the MDT's . Once the back get squared away with the new boss we can revisit the networking. After we migrate everything to the new environment we would them cut the Massport cameras over to the LAN and then give them back their data plans and modems.
>
> We would however need to anticipate expanding the existing sand and run the risk of overburdening the server.
>
> Let me know what you think, Lieutenant Colonel Quinn and I could make the request to Massport if needed.

>> Subject: RE: MassPort LPR Cameras
>>
>> Good Morning,
>>
>> I was hoping to get us all on the same page regarding a proposal to push Massport LPR data to the existing DCJIS BOSS server in Chelsea. Some time ago we (MSP) engaged with Massport regarding Automated License Plate Reader technology (LPR). As most of you know, MSP and DCJIS have been rolling out a very robust LPR network across the Commonwealth. This has been on going for the past several years. The LPR system has paid dividends in numerous criminal cases including crimes of violence, Amber and Silver alerts, and also in many missing/endangered/public well being events.
>>
>> Our communications with Massport started when we were made aware that they would be purchasing an LPR system. We worked with our counterparts at Massport to make sure that the two systems would be compatible so that information could be shared across all law enforcement agencies through the MSP Fusion Center. Towards that end Massport partnered with Neology for their solution. This is the same vendor used by MSP and DCJIS.
>>
>> Recently Massport has decided not to maintain its own ALPR BOSS database server. The database and application for LPR in Massachusetts is known as “BOSS” and is a Neology product. Massport would like to feed data from its cameras to the DCJIS BOSS server in Chelsea. Originally we had been discussing with Neology the potential for Massport’s cameras to write two records after scanning a plate, one to Massport BOSS and a duplicate to DCJIS BOSS. We think the current proposal to write all LPR records to the BOSS server located at DCJIS is a much better plan.
>>
>> MSP has a grant to upgrade the current the current BOSS v3.6 application which is at end of life and no longer supported to version v4.0. We have also submitted a Service Now ticket asking for hardware upgrade costs to the existing BOSS server which MSP will try to acquire funding to upgrade.
>>
>> I have received several calls from Massport looking to see where we are as far as being able to accept data from their cameras so that they can decommission their BOSS server. I believe their intent is to shut the Massport system down if the MSP and DCJIS are unable to accept the data. I have copied Hank Shaw from Massport into this thread in case I have misstated their intent.

>>
>> To access the Massport data we will need to be able to pass data from the Massport network to the state network much like we do with case management data. An alternative would be to use 4G modems (like we do with many of our mobile units and cruiser mounted units) on the state network, but this may be an unnecessary cost. Obviously this decision would be driven by the EOTSS and Massport network teams.
>>
>> I can't overstate the value that LPR data from Massport would have for MSP and law enforcement in general. Cases involving terrorism, money laundering, and drug trafficking all have significant ties to the port. Being able to hotlist and search on LPR data from Massport facilities would be a significant addition to the MSP Division of Homeland Security's technology tool set and would have immediate impact. Towards that end, we made be able to leverage Homeland Security grant funds for some of this project.

>> Brian,
>>
>> Thank you again for taking my call today. As discussed, I would like to explore the opportunity to swing all LPR cameras at Logan directly to the MSP BOSS server without the need for the InStation solution. My understanding is that the EOPSS network resides in both the ATCT as well as the [redacted] I would propose that we extend this network via Layer 2 to the main locations that the LPR system terminates to and cut the entire LPR network at MassPort over to EOPSS. Most of the [redacted] are fed to [redacted] network locations. MassPort can supply the necessary fiber paths and switch gear required to extend the EOPSS network to these locations. Currently we have [redacted] in production, with another [redacted] to come online within the next two months. I anticipate this number growing to approximately [redacted] within our campus over the next year. Let me know what you think the appropriate next steps would be.

> Regarding the Massport cameras; in the early days of AVL we installed [G.L. c. 4.sec. 7.cl.26 (n)(security)] modem's in cruisers that did not have laptops. These cruisers now have Geo tab and no longer need the modem or data plan. Massport is currently paying for the data plan and bought the modems. Because Massport wants to move quickly to give us their data and knowing BOSS4.0 Is delayed; Why don't we ask Massport to let us use six of those modems and put one at each LPR Camera sector at Massport. We would next push the data back like we do everything else over Verizon. We wouldn't have to do any firewall work either because they have a 166. and communicate like all of the MDT's . Once the back get squared away with the new boss we can revisit the networking. After we migrate everything to the new environment we would them cut the Massport cameras over to the LAN and then give them back their data plans and modems.
>
> We would however need to anticipate expanding the existing sand and run the risk of overburdening the server.
>
> Let me know what you think, Lieutenant Colonel Quinn and I could make the request to Massport if needed.

>> Subject: RE: MassPort LPR Cameras
>>
>> Good Morning,
>>
>> I was hoping to get us all on the same page regarding a proposal to push Massport LPR data to the existing DCJIS BOSS server in Chelsea. Some time ago we (MSP) engaged with Massport regarding Automated License Plate Reader technology (LPR). As most of you know, MSP and DCJIS have been rolling out a very robust LPR network across the Commonwealth. This has been on going for the past several years. The LPR system has paid dividends in numerous criminal cases including crimes of violence, Amber and Silver alerts, and also in many missing/endangered/public well being events.
>>
>> Our communications with Massport started when we were made aware that they would be purchasing an LPR system. We worked with our counterparts at Massport to make sure that the two systems would be compatible so that information could be shared across all law enforcement agencies through the MSP Fusion Center. Towards that end Massport partnered with Neology for their solution. This is the same vendor used by MSP and DCJIS.
>>
>> Recently Massport has decided not to maintain its own ALPR BOSS database server. The database and application for LPR in Massachusetts is known as “BOSS” and is a Neology product. Massport would like to feed data from its cameras to the DCJIS BOSS server in Chelsea. Originally we had been discussing with Neology the potential for Massport’s cameras to write two records after scanning a plate, one to Massport BOSS and a duplicate to DCJIS BOSS. We think the current proposal to write all LPR records to the BOSS server located at DCJIS is a much better plan.
>>
>> MSP has a grant to upgrade the current the current BOSS v3.6 application which is at end of life and no longer supported to version v4.0. We have also submitted a Service Now ticket asking for hardware upgrade costs to the existing BOSS server which MSP will try to acquire funding to upgrade.
>>
>> I have received several calls from Massport looking to see where we are as far as being able to accept data from their cameras so that they can decommission their BOSS server. I believe their intent is to shut the Massport system down if the MSP and DCJIS are unable to accept the data. I have copied Hank Shaw from Massport into this thread in case I have misstated their intent.

>>
>> To access the Massport data we will need to be able to pass data from the Massport network to the state network much like we do with case management data. An alternative would be to use 4G modems (like we do with many of our mobile units and cruiser mounted units) on the state network, but this may be an unnecessary cost. Obviously this decision would be driven by the EOTSS and Massport network teams.
>>
>> I can't overstate the value that LPR data from Massport would have for MSP and law enforcement in general. Cases involving terrorism, money laundering, and drug trafficking all have significant ties to the port. Being able to hotlist and search on LPR data from Massport facilities would be a significant addition to the MSP Division of Homeland Security's technology tool set and would have immediate impact. Towards that end, we made be able to leverage Homeland Security grant funds for some of this project.

Subject: Re: MassPort LPR Cameras
Date: Wednesday, March 4, 2020 5:53:08 PM

Hi Jim,

Regarding the Massport cameras; in the early days of AVL we installed [redacted] modem's in cruisers that did not have laptops. These cruisers now have Geo tab and no longer need the modem or data plan. Massport is currently paying for the data plan and bought the modems. Because Massport wants to move quickly to give us their data and knowing BOSS4.0 Is delayed; Why don't we ask Massport to let us use six of those modems and put one at each LPR Camera sector at Massport. We would next push the data back like we do everything else over Verizon. We wouldn't have to do any firewall work either because they have a 166. and communicate like all of the MDT's . Once the back get squared away with the new boss we can revisit the networking. After we migrate everything to the new environment we would them cut the Massport cameras over to the LAN and then give them back their data plans and modems.

We would however need to anticipate expanding the existing sand and run the risk of overburdening the server.

Let me know what you think, Lieutenant Colonel Quinn and I could make the request to Massport if needed.

Subject: RE: MassPort LPR Cameras

Good Morning,

I was hoping to get us all on the same page regarding a proposal to push Massport LPR data to the existing DCJIS BOSS server in Chelsea. Some time ago we (MSP) engaged

with Massport regarding Automated License Plate Reader technology (LPR). As most of you know, MSP and DCJIS have been rolling out a very robust LPR network across the Commonwealth. This has been on going for the past several years. The LPR system has paid dividends in numerous criminal cases including crimes of violence, Amber and Silver alerts, and also in many missing/endangered/public well being events.

Our communications with Massport started when we were made aware that they would be purchasing an LPR system. We worked with our counterparts at Massport to make sure that the two systems would be compatible so that information could be shared across all law enforcement agencies through the MSP Fusion Center. Towards that end Massport partnered with Neology for their solution. This is the same vendor used by MSP and DCJIS.

Recently Massport has decided not to maintain its own ALPR BOSS database server. The database and application for LPR in Massachusetts is known as "BOSS" and is a Neology product. Massport would like to feed data from its cameras to the DCJIS BOSS server in Chelsea. Originally we had been discussing with Neology the potential for Massport's cameras to write two records after scanning a plate, one to Massport BOSS and a duplicate to DCJIS BOSS. We think the current proposal to write all LPR records to the BOSS server located at DCJIS is a much better plan.

MSP has a grant to upgrade the current the current BOSS v3.6 application which is at end of life and no longer supported to version v4.0. We have also submitted a Service Now ticket asking for hardware upgrade costs to the existing BOSS server which MSP will try to acquire funding to upgrade.

I have received several calls from Massport looking to see where we are as far as being able to accept data from their cameras so that they can decommission their BOSS server. I believe their intent is to shut the Massport system down if the MSP and DCJIS are unable to accept the data. I have copied Hank Shaw from Massport into this thread in case I have misstated their intent.

To access the Massport data we will need to be able to pass data from the Massport network to the state network much like we do with case management data. An alternative would be to use 4G modems (like we do with many of our mobile units and cruiser mounted units) on the state network, but this may be an unnecessary cost. Obviously this decision would be driven by the EOTSS and Massport network teams.

I can't overstate the value that LPR data from Massport would have for MSP and law enforcement in general. Cases involving terrorism, money laundering, and drug trafficking all have significant ties to the port. Being able to hotlist and search on LPR data from Massport facilities would be a significant addition to the MSP Division of Homeland Security's technology tool set and would have immediate impact. Towards that end, we made be able to leverage Homeland Security grant funds for some of this project.

Respectfully,

Lieutenant Colonel Dermot J. Quinn #1765
Division Commander
Division of Homeland Security & Preparedness
Massachusetts State Police

Hi Jim,

BOSS 3.6 is going end-of-life. We have grant funds to upgrade the EOPSS system's software. I have also submitted a ticket for requesting cost estimations for infrastructure. The below is still outstanding.

Hi Jim,

We are looking to consolidate the MassPort ALPR cameras into the main EOPSS ALPR server. After evaluating a number of options purposed by Neology, this appears to be the simplest approach. There is already a network presence at the barracks and it should be easy to point the cameras towards the centralized server. I've spoken to Alex at MassPort and he can volunteer a camera for testing. We could monitor

network and server impact. Are you available to discuss?

Thanks Brian

Hello All,

I just wanted to follow up with this request to see what the next steps for this project

are. I believe that we can make the connections to the EOPSS network, but will want to work within your desired IP scheme and ensure that there aren't any concerns around the network routing, security, etc. Let me know if we can have a quick call to discuss the details.

Respectfully,

~Alex

Hi John, Peter

Any issues with moving Massports cameras to the Chelsea DB?

Using the Boss calculator, I estimate that we would need 9-10 TB of storage.

The current app server
<image008.png>

Current DB server

Hi Alex,

Can you please provide the updated reads per day? Previously you were interested in sharing [redacted] at approximately 75,000 reads per day.

Here is the [redacted] confi I mentioned.

Set host to boss [redacted]
Set image [redacted]
Set number of [redacted]
Set Ping [redacted]
Set udp ping [redacted]
Set ping [redacted]
Set security [redacted]

I've looped in the network and server team from TSS on the thread. Maybe we can schedule a call in the next week.
For an estimate on impact, the Caper cameras do between 80,000 to 120,000 per day. We average 337,944 reads per day.

Subject: MassPort LPR Cameras

Brian,

Thank you again for taking my call today. As discussed, I would like to explore the opportunity to swing all LPR cameras at Logan directly to the MSP BOSS server without the need for the InStation solution. My understanding is that the EOPSS network resides in both the ATCT as well as the [redacted] I would propose that we extend this network via Layer 2 to the main locations that the LPR system terminates to and cut the entire LPR network at MassPort over to EOPSS. Most of the [redacted] are fed to [redacted] network locations. MassPort can supply the necessary fiber paths and switch gear required to extend the EOPSS network to these locations.

Currently we have [redacted] in production, with another [redacted] to come online within the next two months. I anticipate this number growing to approximately [redacted] within our campus over the next year. Let me know what you think the appropriate next steps would be.

Respectfully,

~Alex

>> Hi Jim,
>> Regarding the Massport cameras; in the early days of AVL we installed [redacted] modem's in cruisers that did not have laptops. These cruisers now have Geo tab and no longer need the modem or data plan. Massport is currently paying for the data plan and bought the modems. Because Massport wants to move quickly to give us their data and knowing BOSS4.0 Is delayed; Why don't we ask Massport to let us use six of those modems and put one at each LPR Camera sector at Massport. We would next push the data back like we do everything else over Verizon. We wouldn't have to do any firewall work either because they have a 166. and communicate like all of the MDT's . Once the back get squared away with the new boss we can revisit the networking. After we migrate everything to the new environment we would them cut the Massport cameras over to the LAN and then give them back their data plans and modems.

>> We would however need to anticipate expanding the existing sand and run the risk of overburdening the server.
>> Let me know what you think, Lieutenant Colonel Quinn and I could make the request to Massport if needed.

>>> Subject: RE: MassPort LPR Cameras
>>> Good Morning,
>>> I was hoping to get us all on the same page regarding a proposal to push Massport LPR data to

the existing DCJIS BOSS server in Chelsea. Some time ago we (MSP) engaged with Massport regarding Automated License Plate Reader technology (LPR). As most of you know, MSP and DCJIS have been rolling out a very robust LPR network across the Commonwealth. This has been on going for the past several years. The LPR system has paid dividends in numerous criminal cases including crimes of violence, Amber and Silver alerts, and also in many missing/endangered/public well being events.
>>> Our communications with Massport started when we were made aware that they would be purchasing an LPR system. We worked with our counterparts at Massport to make sure that the two systems would be compatible so that information could be shared across all law enforcement agencies through the MSP Fusion Center. Towards that end Massport partnered with Neology for their solution. This is the same vendor used by MSP and DCJIS.
>>> Recently Massport has decided not to maintain its own ALPR BOSS database server. The database and application for LPR in Massachusetts is known as “BOSS” and is a Neology product. Massport would like to feed data from its cameras to the DCJIS BOSS server in Chelsea. Originally we had been discussing with Neology the potential for Massport’s cameras to write two records after scanning a plate, one to Massport BOSS and a duplicate to DCJIS BOSS. We think the current proposal to write all LPR records to the BOSS server located at DCJIS is a much better plan.
>>> MSP has a grant to upgrade the current the current BOSS v3.6 application which is at end of life and no longer supported to version v4.0. We have also submitted a Service Now ticket asking for hardware upgrade costs to the existing BOSS server which MSP will try to acquire funding to upgrade.
>>> I have received several calls from Massport looking to see where we are as far as being able to accept data from their cameras so that they can decommission their BOSS server. I believe their intent is to shut the Massport system down if the MSP and DCJIS are unable to accept the data. I have copied Hank Shaw from Massport into this thread in case I have misstated their intent.
>>> To access the Massport data we will need to be able to pass data from the Massport network to the state network much like we do with case management data. An alternative would be to use 4G modems (like we do with many of our mobile units and cruiser mounted units) on the state network, but this may be an unnecessary cost. Obviously this decision would be driven by the EOTSS and Massport network teams.
>>> I can’t overstate the value that LPR data from Massport would have for MSP and law enforcement in general. Cases involving terrorism, money laundering, and drug trafficking all have significant ties to the port. Being able to hotlist and search on LPR data from Massport facilities would be a significant addition to the MSP Division of Homeland Security’s technology tool set and would have immediate impact. Towards that end, we made be able to leverage Homeland Security grant funds for some of this project.

Hello Brian,

Can you please let me know how many of the camera sites have been cut over to EOPSS? Also how many total cameras.

Thank you,
Joey Gilmore

Joe,
Later today Brian will send over the actual IMEI numbers that they are using for this project. Once received, can you please confirm if they are unlimited data plans?

Brian,
Joe Alves is in onsite Wednesday and Friday. He said the [redacted] is accessible without road closure and would make a good first install. Can you please reach out to him to arrange a time for Wednesday? Joe's cell number is [redacted]

Thank you,
Joey Gilmore

Hi Guys,

This meeting is to discuss the method of bringing Logan LPR cameras to the EOPSS network.

This is the last status update from Chute before he left:

"Currently MassPort has [redacted] After several iterations of the system architecture, it has been decided that the path of least resistance is to employ commercial carrier service on the MSP MPLS to the CJIS Datacenter in Chelsea. MSP is working to procure the necessary power adapter and antenna equipment while also identifying accounts and equipment that can be re-

purposed for this project. If/when it is feasible for this system to be networked through terrestrial means, MassPort has the switch infrastructure in place to make a direct connection to the EOPSS network at [redacted] ([redacted] I hope this gives a brief overview of where we are at, and please do not hesitate to reach out to me via my personal contact information if any questions come up."

We need a detail. Someone needs to call the detail officer at the SP here at Troop F. The detail should be billed to Massport IT Operations.

Thanks,
Bob

From: Egnitz, Brian (POL)
To: Alves, Joe
Subject: RE: MSP LPR
Date: Tuesday, May 26, 2020 9:54:00 AM

Hi Joe,

I'm not sure if this was too short notice. The 3rd & 4th also work.

-Brian

Subject: RE: MSP LPR

Can we schedule last two cut overs for 5/28 & 5/29. In speaking with Maj. Ryan, a coordinated road closure via the detail office is warranted.

Thanks, Brian

Joe,

Later today Brian will send over the actual IMEI numbers that they are using for this project. Once received, can you please confirm if they are unlimited data plans?

Brian,

Joe Alves is in onsite Wednesday and Friday. He said the[redacted] is accessible without road closure and would make a good first install. Can you please reach out to him to arrange a time for Wednesday? Joe's cell number is 781[redacted]

Thank you,

Joey Gilmore

Hi Guys,

This meeting is to discuss the method of bringing Logan LPR cameras to the EOPSS network.

This is the last status update from Chute before he left:

“Currently MassPort has [redacted]: After several iterations of the system architecture, it has been decided that the path of least resistance is to employ commercial carrier service on the MSP MPLS to the CJIS Datacenter in Chelsea. MSP is working to procure the necessary power adapter and antenna equipment while also identifying accounts and equipment that can be re-purposed for this project. If/when it is feasible for this system to be networked through terrestrial means, MassPort has the switch infrastructure in place to make a direct connection to the EOPSS network at [redacted]. I hope this gives a brief overview of where we are at, and please do not hesitate to reach out to me via my personal contact information if any questions come up.”

Hi All,

Just a quick update. Joe and I were able to move [redacted] from Airport Road inbound into the EOPSS data center. They are working correctly and are writing data in a timely manner to the BOSS Server. I would like to continue work on the remaining camera tomorrow or Friday. Once complete, I'd like to begin cutting over the cameras by the bus terminal near the barracks.

Thanks for the assistance, Brian

Just to recap:

The plan is to identify and remove [redacted] MP70 modems from Troop F cruisers. (MSP)
Validate these have unlimited data plans. (MPA – Joe A)
Wait for the power adapters. (MSP – Brian)
[redacted] at the LPR locations inside existing communication boxes and 1 as a spare/test unit. (MSP Harney/Brian & MPA Joe A)
MSP will access the BOSS system through State Police network.

Eventually these modems/routers will be hard wired into MPA network and get a policy that allows

VPN connection to MSP@Chelsea. (MSP Brian & MPA Network/Cyber)
After migration to hard wire, cellular data plans can be cancelled or used for something else at Logan if we want to preserve grandfathered unlimited plan.

Please let me know if I missed any important details.

Thank you,
Joey Gilmore

Hi Guys,

This meeting is to discuss the method of bringing Logan LPR cameras to the EOPSS network.

This is the last status update from Chute before he left:
"Currently MassPort has [redacted] After several iterations of the system architecture, it has been decided that the path of least resistance is to employ commercial carrier service on the MSP MPLS to the CJIS Datacenter in Chelsea. MSP is working to procure the necessary power adapter and antenna equipment while also identifying accounts and equipment that can be re-purposed for this project. If/when it is feasible for this system to be networked through terrestrial means, MassPort has the switch infrastructure in place to make a direct connection to the EOPSS network at [redacted] I hope this gives a brief overview of where we are at, and please do not hesitate to reach out to me via my personal contact information if any questions come up."

Subject: RE: Plate reader access
Date: Friday, October 23, 2020 9:17:00 AM

Did EOTSS give you access to the DB? Neology does not support direct access to the SQL nor do I recommend it, it could have unintended consequences to the systems ability to keep up with reads and alerts. The current supported method for sharing BOSS data is via a PIPS plugin. I am currently working with a cloud vendor and the plug in. If the cloud vendor I'm working with pans out we would have an API for you to use. I'll know more in a few weeks, please hold off if possible.

Good Morning,

I am contacting you in regards to the plate readers on the bridges. My office is curious about the status of those readers and if they are still picking up plates. I know we haven't been getting updates for some time now. We recently had an armed robbery in our town and would like to go throw some of that information if it is still available.

Thank you for your time.

Subject: RE: Quick alignment
Date: Thursday, December 17, 2020 9:12:35 AM

Yes, this was my thought to bring online

Short term:

For Fixed
- Disable all cameras in BOSS 3.6 On-Prem (EOPSS)
- Turn on system (allowing access to users)
- Patch each 492 & 525 Camera, configure new watermark and then enable the camera to send to backend system. (need confirmation that new "NTP Flag" metadata will work with 3.6, also if data without NTP lock is being sent)

For Mobiles
- write a new purge script to delete all Mobile data.
- Remove all of these mobiles from hotlists (except NCIC, RMV, Warrants etc.), ensuring no hits are generated.
- Inventory all SX4 &SX4e systems (2017-Present) to identify which systems can be upgraded
- Older systems will need to be decommissioned or configured not to send data to BOSS 3.6 and data would need to be purged.
- The SX4 &SX4e systems (2017-Present) will need to be Patched in order for reads to be sent to the back end. (still reviewing process, might be able to VNC remote)

Brian,

With pagis, I spoke to the team and we want to see if we can try a sql change that will prevent reads from going into the system until the patch is ready. The idea is to add a before_insert trigger that would block the reads from loading into boss. This means we can apply the setting to boss3 without having to reach out to every mobile unit for an update. The reason we are looking at this is that while we can block the silent sync, we do not have a method of preventing a user from hitting the end shift button.

Is this acceptable on your end?

Brian - that message hadn't quite finished....

Re: UK Mobile, we don't actually provide systems into UK forces which aren't part of a wider in-vehicle system. Typically this would involve speed measurement devices where we consume location data, and by their type approval nature, have a higher GPS accuracy/sensitivity.

Hope that makes sense,
Luke

Thanks Peter,

Can you please send me a link to download.

Also, what GPS antenna options are there for the mobiles beyond https://static.garmin.com/pumac/GPS_16x_tech_specs.pdf ? The Doc Luke sent earlier stated the UK requirement of 10 Meter accuracy for mobile, but the Garmin GPS 16 is GPS <15 meter accuracy without augmentation. Does the UK use a different puck? Also, do you guys calculate the accuracy or is it pulled from the GPS and is it available? I'd interested to know what NMEA sentences are being used.

>
> In several countries in Europe and Australia there are national standards for the use of ALPR/ANPR technology, especially around things like fit for purpose / maintainability / audit etc. See if you can get to the link below as this is the UK standards highlighting what the Police Forces must do when they a) procure technology but also b) maintain it for appropriate use.
>
> https://www.gov.uk/government/publications/national-anpr-standards
>
> Much of this is fairly straight forward – start with the 11page document rather than the 50 page one! Typically the Forces either choose to do the annual activities themselves (like the groundtruthing etc) or they have service contracts with vendors who fulfil this

on their behalf. We have numerous contracts with UK Agencies where we have to abide by these standards as part of annual servicing / inspection contracts and provide the evidence that the steps have been carried out.

May stimulate some thoughts on your side – would love to engage with a standards / best practise drive and whilst, unlike in other countries, I don't think we will ever see a Federal level standards / type approval situation in the US, even having something at a state -level would be great.

Thought it was worth sharing as FYI.

I think if you could take some of your work for that day from start to finish and walk us through it, that would be very helpful. I also have a list of things you do when we had to write it for the 960's. They want to know about all processes and duties so if there is something you don't do on a regular basis that's important, you may want to note it so that we cover it.

This is what I have below. I think its more the processes vs the what.

Chris Neville

- Intake, review, editing and redistribution of incoming email and outgoing intelligence to aid local investigators in identifying suspects and patterns of criminal activity to upwards of 2,000 individual recipients 365 days a year.
- Annual selective distribution by county, of approximately 4,000 emails to the email network which includes representatives of almost every State, Local and Federal Agency in Eastern and Central MA, neighboring states, Bank Industry Security Professionals and Retail Asset Protection Professionals.
- Participation in area detective's meetings to share intelligence regarding crimes and arrests of regional significance.
- Comprehensive review and re-distribution in excel spreadsheet format of Pawnshop Information provided by more than a dozen local agencies including highlighting of persons of interest.
- Statewide liaison to NABI (National Association of Bunco Investigators).
- Review and redistribution of Intelligence published by NESPIN and NEORCA.
- Complete responsibility for the addition, subtraction and update of email addresses stored in the 'listserv manager".
- Maintenance, upkeep and distribution of a home-grown Area Wide Detectives Contact List with email and telephone contact information from 1,800 sources.
- Routine access to CJIS systems to perform RMV, CJIS and NCIC related inquiries from law enforcement.
- Routine access to Coplink and other data sources (TLO) to assist local detectives in providing photographs, known associates, associated vehicles and prior incidents while assisting in investigations pertaining to email traffic.
- Routine access and review of ALPR's to provide investigative assistance and documentation to local Law Enforcement, specifically in connection with Organized Crime organizations based out of State but operating in MA and the surrounding New England States.

- Daily review of Area Crime Bulletins from municipal agencies including the BRIC, Cambridge, Everett, Lynn, and others as they are distributed. (Many of whom re-post information previously distributed on Macrimenet).

- Guest presenter to new area detectives providing an overview of what services the CFC provides for local law enforcement.

- Participation in area intelligence sharing meetings specifically directed to targeted crimes such as ATM B&E's, Robberies, Regional Check Frauds or outbreaks of commercial or residential B&Es.

- Daily review of national Crimedex Alerts to ascertain links to other incidents occurring across the country. (ie: Panera Bread Thefts, Felony Lane Gang, and Transient Scams).

Discover How to Optimize Call Data Records (CDR) Cleansing and Analysis Which Typically Results in Solving Cases Faster and Saving Analysts 97% of Time Spent on a Case.

Chorus is the leading provider of data cleansing and analysis software in the UK and is used by 80% of regional police forces, all Counter Terror Units and the Home Office. Chorus is now making its software available for North American law enforcement.

Chorus is exceptional at:

- **Rules-based data cleansing.** Taking communications data from providers such as T-Mobile, AT&T, Sprint and Verizon in the USA as well as Bell, Telus and Rogers Communications in Canada, removing the noise and normalizing it ready for analysis.
- **Connecting data.** Combining disparate data such as CDR, ALPR, RF surveys and device downloads and overlaying it with communications data to spot crucial connections using maps and charts.
- **Evidence quality reporting.** Maintaining data integrity so reports and maps can be used in court as evidence.
- **Integration with IBM® i2 products.**

Thursday, June 25, 2020
11:00 am ET | 8:00 am PT

Richard is a law enforcement veteran of 19 years. He will be presenting insights from his work as a Fingerprint Expert, Crime Scene Manager, and Forensics Manager for some of the busiest agencies in the world. Richard is an expert at cleansing, combining and connecting data to create evidence supported reports to close cases at record rates. He has been helping law enforcement solve their biggest challenges with criminal data for over 5 years.

Why Learn From Chorus Intelligence?

Chorus has been used in some of the highest profile operations in the UK, such as the Manchester bombing and the London Bridge attacks, answering key investigation questions and ultimately bringing offenders to justice. Learn from these leading-edge methods from former law enforcement.

Register for this fun and informative session to take your investigations to the next level and close cases faster.

Cannot make it on Thursday, June 25th at 11am EST?

Dear Police1 Member,

While technology has brought great benefits to our daily lives it has also facilitated the growth of digital crime. From ransomware to human trafficking, technology is being used for nefarious purposes in an online world that knows no borders. It can be challenging for police investigators to stay informed of trends and equipped with the products and software to apprehend online criminals.

With that in mind, here are two steps to take to combat cybercrime:

- Read our digital edition to find out how AI can improve investigations
- Download our "How to Buy Investigation Software" guide to help procure the latest investigation tech

How is technology helping or hindering your investigations? Email editor@police1.com.

— *The Police1 Team*

FEATURED CONTENT

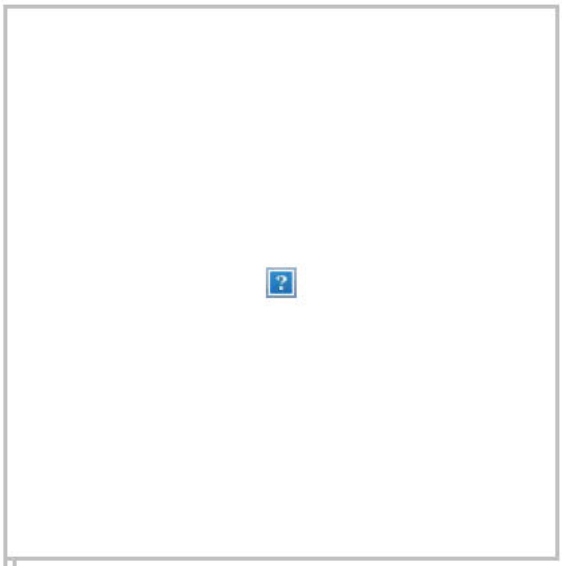
Using WEBINT and OSINT to tackle extremist groups

By Johnmichael O'Hare

Agencies that familiarize themselves with extremists' cyber haunts stand a better chance of uncovering potential problems before they materialize

How police can embrace the cloud to fight child sexual abuse

By Johann Hofmann



On-premise technology is increasingly inadequate for handling the scale of material associated with these cases

Guilty by association: How data linking strengthens investigations

By Joshua Lee, MLS, CFE, CCCI, CTFI, CCIE

With a few clicks of the mouse, an internet connection and the right know-how, police investigators can find crucial connections

Got Cameras? Get LPR

Your agency may be eligible for two free trial software licenses to add vehicle recognition capabilities to IP cameras in your jurisdiction.

Find out how

OTHER HIGHLIGHTS

How contactless technology

can help reduce bias, increase efficiencies and bolster safety

By Robert Berman

Real-time intelligence makes it easier for officers to be more strategic and safer in how they engage with suspects

Research review: Identifying the benefits of ALPR systems

By Tim Dees

How law enforcement agencies can use research findings to get community support and funding for ALPR systems

Dear Police1 Member,

While technology has brought great benefits to our daily lives it has also facilitated the growth of digital crime. From ransomware to human trafficking, technology is being used for nefarious purposes in an online world that knows no borders. It can be challenging for police investigators to stay informed of trends and equipped with the products and software to apprehend online criminals.

With that in mind, here are two steps to take to combat cybercrime:

- Read our digital edition to find out how AI can improve investigations
- Download our "How to Buy Investigation Software" guide to help procure the latest investigation tech

How is technology helping or hindering your investigations? Email editor@police1.com.

October 20, 2020 | View as webpage

Dear Police1 Member,

In the wake of the death of George Floyd, law enforcement has been inundated with demands for 'reform' with public officials nationwide reimagining public safety.

In Wednesday's Leadership Briefing newsletter, Police1 columnist Booker Hodges, who currently serves as assistant commissioner of law enforcement for the Minnesota Department of Public Safety, writes about the need to replace the term 'reform' with 'alignment' and shares three steps to help police departments better align with their communities.

Sign up today to ensure you receive a copy of the newsletter in your inbox.

Stay safe,

CEO Roundtables on ALPR Policy and The Future of UAV's

Our AI Ethics Board is preparing to release its recommendations on best practices and model policies for ALPR systems. This is your chance to get a preview of their recommendations — and, more importantly, to give your feedback on these important issues.

Rick Smith, Axon CEO and Founder, is hosting back-to-back technology roundtables on August 11th to share the draft report on ALPR best practices from our AI Ethics Board, followed by a session on the future of Unmanned Aerial Vehicles in Public Safety.

- **ALPR Ethics, Policy and Best Practices: August 11, 9 a.m. PT**
  Rick will discuss ethics-first design of ALPRs and how that aligns with police reform efforts and where the technology is going. Joining him will be Flock Safety CEO and Founder, Garret Langley. The Axon AI Ethics Board is an independent body that is rapidly gaining influence among both law enforcement and community/justice reform communities. This is a chance to make sure your voice is heard before their final report is issued.

- **Future of UAV's: August 11, 10:30 a.m. PT**
  Rick will be joined by Aydin Ghajar, who ran Uber's premium ride business before joining Axon as GM of Axon Air. This session will include a survey of emerging UAV technologies including potential partners that could be integrated into the Axon ecosystem.

These roundtables will run back-to-back for people interested in attending both sessions. There is a single registration link here:

Register Now

One registration gives you access to both events - simply join at 9 or 10:30 based on your interest area.

These sessions are closed to only sworn law enforcement attendees.

If you have any questions, please contact Jack Nolan at Axon.

Stay safe,
Axon

2. The names of agencies and organizations with which the Agency shares ALPR data;
3. The names of agencies and organizations with which the Agency receives ALPR data;
4. The names of agencies and organizations with which the Agency shares "hot list" information
5. What is "hot list" information and I would like my personal record of what shows up when my license plate is scanned – License Plate 289ve4, by MSP.

The Department considers your request as a submission under M.G.L. c. 66, §10, the Public Records Law. As you recall, the Department responded to your first request on April 21, 2020 and provided you with a fee estimate. The Department submits the following in response to requests 2-5. Please be advised that the Department does not use the system referenced in your request, however please note the following responses:

- #2 – The Agency shares ALPR data with State, Local, and Federal law enforcement agencies that are approved to access Public Safety data.
- #3 – The Agency shares data with any law enforcement agency that submits information to the server.
- #4 – The Agency shares Hotlist data, when appropriate, to State, Local, and Federal law enforcement Agencies that are approved to access Public Safety data.

As for request #5, the Department has identified the following definition as responsive:

> Hotlists are lists containing "[l]icense plate numbers of vehicles of interest, such as stolen vehicles, unregistered vehicles, vehicles owned by persons of interest, and vehicles associated with AMBER Alerts, Missing Child Alerts, Missing College Student Bulletins, Silver Alerts, Incapacitated or Endangered Persons, Be On Look Out (BOLO), Attempt To Locate (ATL), and Wanted or Missing Person broadcasts or bulletins in which a license plate number is included, or other license plate numbers of interest entered by the Department or an authorized officer."

As for your request for "[your] personal record of what shows up when [your] license plate is scanned," the Department asserts that this information is exempt under G.L. c. 4, §7 cl. 26(f) (investigative exemption), which specifically exempts from public disclosure investigatory materials necessarily compiled out of the public view by law enforcement or other investigatory officials the disclosure of which materials would probably so prejudice the possibility of effective law enforcement that such disclosure would not be in the public interest. The policy considerations underlying the exemption are well settled. *See Bougas v. Chief of Police*, 371 Mass. 59, 62 (1976) (among them "avoidance of premature disclosure of the Commonwealth's case prior to trial, the prevention of the disclosure of confidential investigative techniques, procedures, or sources of information, the encouragement of individual citizens to come forward and speak freely with police concerning matters under investigation, and the creation of initiative that police officers might be completely candid in recording their observations, hypotheses and interim conclusions"). The

general rule is that investigative materials may only be withheld if disclosure will affect investigative efforts in general.

Although under M.G.L. c. 66, § 6A, a records access officer is not "required to create a new public record in order to comply with a request," the Department asserts that the hotlist information is compiled out of the public view by law enforcement officials for the purpose of aiding in the investigation of the above-referenced situations and the entry of information in the hot file is based on the need identified by a criminal justice agency for purposes of investigation, promoting the situational awareness of law enforcement officers and addressing public safety issues. Similarly, the database in which this information is kept is investigative in nature. By disclosing "what shows up when [your] license plate is scanned," the Department is, in effect, disclosing whether or not your license plate number has been entered into the list by the Department or an authorized officer. Generally speaking, this type of disclosure would affect investigatory efforts in general in that it would allow any individual to determine whether a vehicle they are associated with is a vehicle of interest by simply submitting this type of request. With knowledge of this information, it would aid the individual's ability to circumvent law enforcement efforts and impede all types of investigations.

If you wish to challenge any aspect of this response, you may appeal to the Supervisor of Public Records following the procedure set forth in 950 C.M.R. 32.08, a copy of which is available at http://www.mass.gov/courts/case-legal-res/law-lib/laws-by-source/cmr/. You may also file a civil action in accordance with M.G.L. c. 66, § 10A. Please contact me if you have any questions or concerns. Thank you for your attention in this matter.

Your Technology Should Do More

Your first responders do more — why shouldn't your technology? By joining the power of license plate recognition to a WatchGuard 4RE In-Car system, your team can turn static data into actionable intelligence.

Several subscription options are available to maximize your current investments all while increasing your in-field data capturing capabilities. Choose the subscription that fits your agency's needs. Whether simply activating a current 4RE In-Car system with LPR capabilities, purchasing a new 4RE system with LPR, or adding Vigilant mobile LPR cameras to the system, your team can significantly enhance data capture, gain automated alerts, and leverage your technology to do more.

Department of State Police
Special Order

Effective Date	Number
October 1, 2019	**19-SO-12**

Subject

Distribution of General Orders

I. DISTRIBUTION OF GENERAL ORDER

Policy and Procedure
TRF-11 Automatic License Plate Recognition

The requirements for the distribution of the above listed General Order are:

√ Each employee shall follow the instructions within this Special Order.

√ Supervisors shall obtain a signature receipt from each employee acknowledging this General Order has been promulgated and posted on DocuShare.

√ Troop/Station/Section/Unit Commanders shall forward the *completed* signature receipt forms through channels to their respective Division Commanders on or before: November 1, 2019.

√ Division Commanders shall:

- Ensure that employees under their command have been notified of this General Order; and
- Maintain a file of all completed signature receipt forms for their Division.

II. DISTRIBUTION OF GENERAL ORDER INSTRUCTIONS

A. Instructions

Each employee shall acknowledge that the following General Order has been rescinded:

Policy and Procedure		Effective Date
TRF-11	Automatic License Plate Recognition	06/14/2018

III. DISTRIBUTION OF GENERAL ORDER INSTRUCTIONS

A. Instructions

It is the responsibility of each sworn and civilian employee to read promulgated directives. Sworn and civilian employees shall read and become familiar with the contents of all posted written directives.

Each employee shall acknowledge the following General Order has been promulgated and posted to DocuShare. Each employee is responsible for reading and becoming familiar with the following General Order:

Policy and Procedure		Effective Date
TRF-11	Automatic License Plate Recognition	10/01/2019

1 INTRODUCTION

This document serves as a user's manual for the PIPS Back Office System Software (BOSS) version 3.5 or above and describes the various features and functionality of the application. BOSS is a management and administration tool for the PIPS Automatic License Plate Recognition (ALPR; also known as ANPR, or Automatic License Number Recognition) systems. The BOSS server application provides an interface for user maintenance, data queries, import and export of data, and dispatch functions. BOSS lets an Administrator specify the databases used by both mobile and fixed camera installations. BOSS retrieves these databases on a regular schedule; manages the users of the PIPS PAGIS systems and BOSS Smart Client workstations; provides a central repository for data collected by mobile PAGIS deployments and fixed camera installation; provides reporting and data management tools; provides hit detection and dispatch functions for fixed camera installations; and allows for data mining and data sharing with other agencies.

The following schematic shows how the BOSS server application works together with Smart Client workstations, various data sources, PAGIS, and the full line of ALPR cameras to create a comprehensive solution.

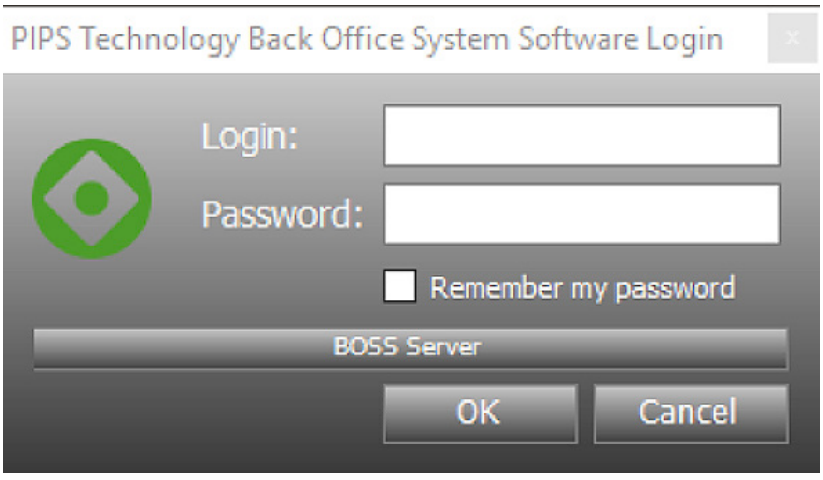
1.1 The Design of PIPS Back Office System Software Version 3.5 and Above

The design of BOSS version 3.5 or above offers ease of accessibility with a user-friendly look and feel. Large, easy-to-identify icons provide intuitive navigation, and the frequently used elements are readily available. The user interface (UI) is very recognizable and comfortable, particularly for users already familiar with Windows-based applications, including Microsoft® Office software, or the Mobile Pagis Software. In addition, users can enter a minimum amount of information to add a data object, with the ability to include more details if needed.

2 LOGGING IN

2.1. PIPS Back Office System Software Administrator Login

During each new installation of the PIPS Back Office System Software, a default user of “admin” is created, with the password of “admin1.” The installer or designated BOSS Administrator can log in with this account to create additional users and otherwise configure the system. It is important that the “admin” password be changed to protect the system’s security. Likewise, it is equally as important to keep this and all passwords confidential to protect the security of the BOSS system. Section 17, Installation and Configuration, offers more information on setting up users and passwords.



2.2 User Logins

The PIPS Back Office System Software will require a user to log in with a username and password only if there is no BOSS user matching the current Active Directory user login. In other words, if the username currently logged into Windows matches a username in the BOSS system, the user is automatically logged into the application when it is started, and no login screen will appear.

For example, if user “bsmith” is logged in using Windows Domain Authentication through Active Directory (“logged into Windows”), when the BOSS Smart Client is started, and a “bsmith” user exists within the BOSS system, no login screen will appear; the application will authenticate the user and load automatically. If a user logs onto Windows with a name that is not an exact match to a username in the BOSS system, or is not logged into the same Windows Domain, a login screen will appear. The user will then need to enter a correct BOSS user name and password in order to enter the application.

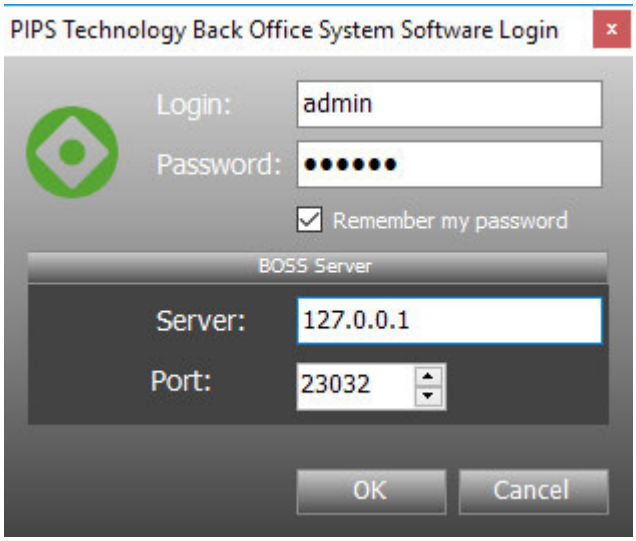
Note: In order for a user to be automatically logged into BOSS, the Active Directory user must be in the same Windows domain as the PIPS™ Back Office System Software server.

2.3 Login Dialog

1. Enter your username in the Login field.

2. Enter the correct password in the Password field.
Note: Passwords are case sensitive.

3. Click OK to complete the login process.

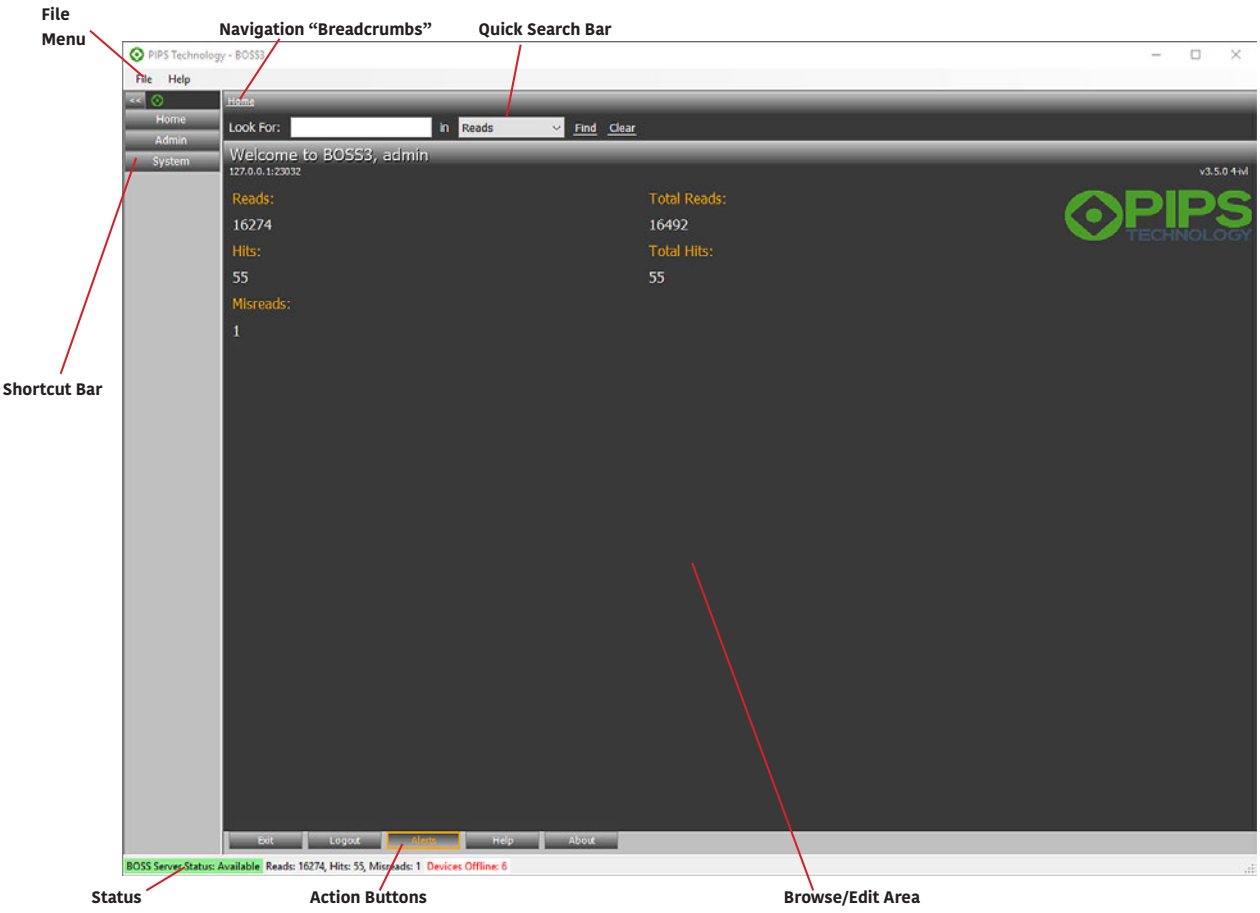


2.3.1 Storing Username and Password

Select the Remember my password option to save the password to the computer's local Windows registry and automatically fill in both Login and Password fields on subsequent logins.
Selecting this option only remembers the login information for the current Windows User on the local computer. It will not apply to a different Windows user logged in the same computer and will not apply to the same user logging in a different computer. This option need not be checked every time. Once checked, the option will stay that way until it is deselected during a login.

Note: The username and the password are stored in the Windows Registry. This can be a security risk. It is recommended that you not use the Remember my password option unless the Windows workstation can be secured against unauthorized access.

2.3.2 BOSS Client Connection Settings



Click the BOSS Server button on the Login screen to view or change the client connection settings.

Server – IP address, computer name, or DNS address can be used in the Server field as long as the client can reach the server using the value entered.
Port – The default port used for connecting to the BOSS server is 23032. This should only be changed here if the BOSS server has been configured to use a non-default port.

3 APPLICATION LAYOUT

3.1 Components of the BOSS Application Screen

File Menu – The File menu of the application resides in the very top left of the application window. The File menu is always visible and available regardless of the screen or shortcut selected. The Exit option is available through this menu.

Navigation – The navigation "breadcrumbs" appear at the top of the BOSS screen as different actions are selected. By clicking on the links it is possible to backtrack to a previous screen.

Shortcut Bar –The Shortcut bar (the panel on the left of the screen) contains icon buttons for the various operations available. The shortcut icons are divided into three categories: Home, Admin, and System. Each time the application is started, all of the categories are closed with no shortcuts displayed. Click on any of the three headings to access the shortcuts within that category. The actual categories and shortcuts that appear depend on the logged-in user's privileges.

The Shortcut bar can be collapsed entirely to provide a larger space for the Browse/Edit area by clicking the << button at the top left of the screen. To expand the Shortcut bar again, click the >> button.

Browse/Edit Area – The widest portion of the application window, the Browse/Edit area is where data is displayed for viewing or editing. The actual data displayed here depends upon the shortcut icon that is selected from the Shortcut bar.

Quick Search Bar – Directly above the Browse/Edit Area, the Quick Search bar allows for simple, immediate queries of BOSS data. Using the Quick Search bar simply involves typing the text to query in the Look For field and selecting the type of data (reads, hits, etc.) to search in the drop-down box.

Action Buttons – These are the buttons directly below the Browse/Edit area. These buttons will differ depending on the shortcut icon selected. The actual buttons that appear will also vary depending upon the user's privileges.

Status Bar – This is the area along the very bottom of the application window that displays the following system information:

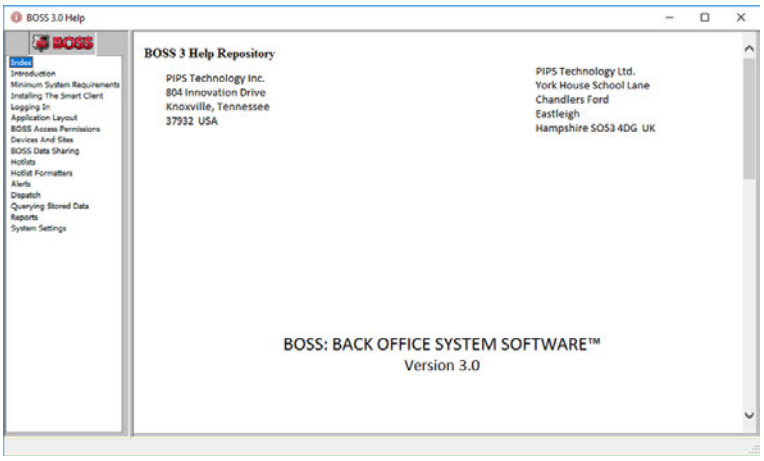
- **BOSS System State (Available or Offline):** "Available" status indicates that the client is currently communicating with the BOSS server application and the server is running. This status is highlighted with a green background. "Offline" status indicates that the client is currently not able to communicate with the BOSS server and is highlighted with a red background. In this event, the BOSS UI will continue to check for the BOSS server to become available again. After three attempts to reconnect, the user will be notified that the connection could not be re-established and will be provided further instructions on how to proceed.
- **Reads:** The total number of reads currently contained in the BOSS system.
- **Hits:** The total number of hits currently contained in the BOSS system.
- **Misreads:** The total number of misreads currently contained in the BOSS system.
- **Devices Offline:** The number of fixed camera devices that are currently identified as offline.

3.2 The BOSS Home Screen

The BOSS Home screen is displayed within the Browse/Edit area upon login. The top banner displays the username of the current BOSS user, the BOSS server address, and current system statistics. Statistics may take a few moments to update after login. The action buttons, described below, are displayed along the bottom of the screen. The actual buttons that display will vary depending upon the user's privileges.

Exit – Exit the BOSS application.

Logout – Log out from the current session to the Login screen.



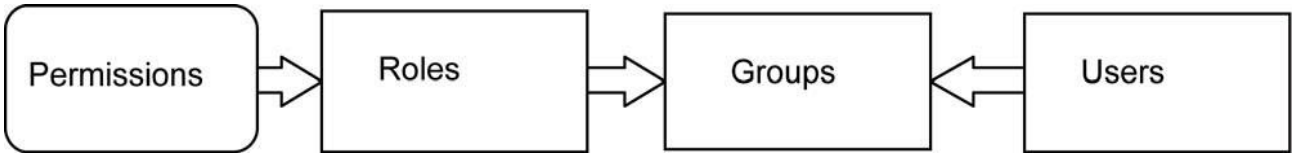
Alerts – Toggle dispatch alerts on (orange highlight) and off. This button will not be displayed if the user is not authorized to access the dispatch screen, or if the user has not chosen to receive dispatch alerts in Preferences (Section 5.3).

Help – Activate the help system.

About – Display application information.

3.3 Help Documentation

BOSS provides a help document accessible in the client application. To access help, select Help in the File menu area or press the F1 button. A help document will be displayed in a browser window and is indexed and searchable for ease of use.



3.4 Minimizing the BOSS Application

The BOSS application can be minimized to the Windows System Tray using the Windows minimize button on the right upper corner of the BOSS application window. To restore the BOSS application, click on the BOSS PIPS icon. When the application is minimized, real-time alerts will still be displayed.

4 BOSS ACCESS PERMISSIONS: USERS/GROUPS/ROLES

Access permissions to various functions (such as reports or dispatches) in BOSS are administered through users, groups, and roles. Each individual who will use the BOSS software must log in via a user account. Each user account is assigned to a group. Every group is assigned a role (such as Administrator or Dispatcher), which determines the set of functionality to which the group's members will have access:

The security parameters defined in a role apply to a user via the group to which the user belongs.

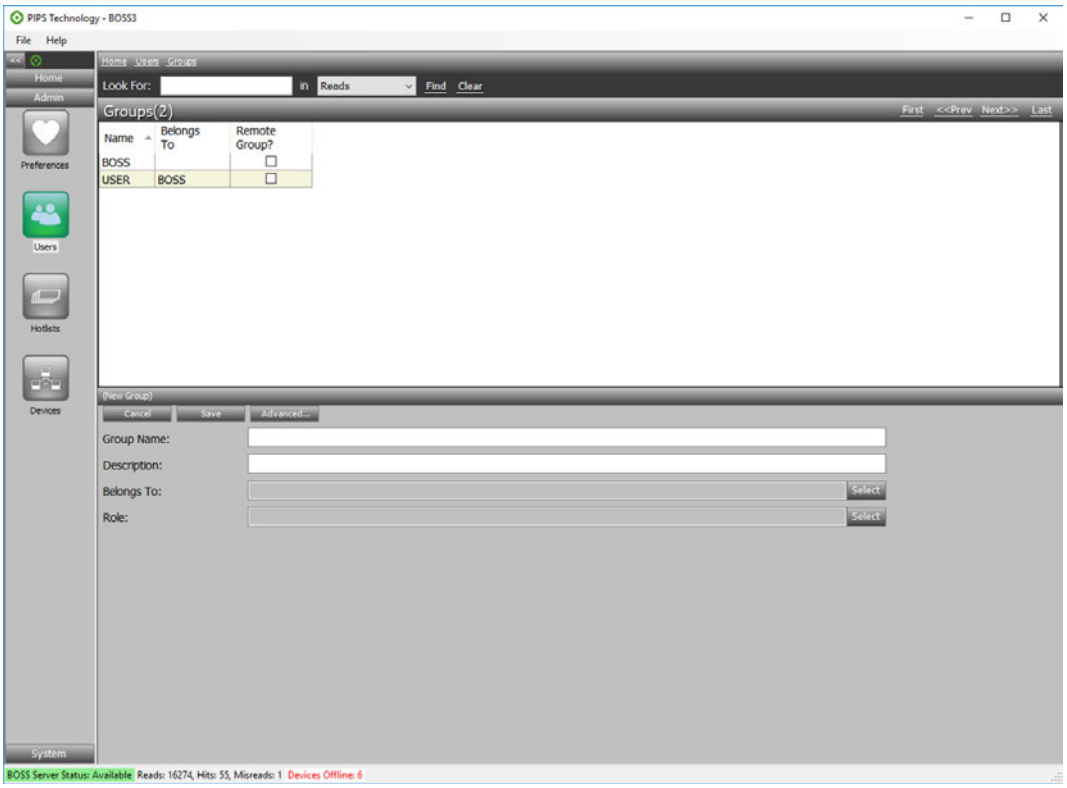
4.1 Permission Levels

The following table lists the levels that apply to permissions:

LEVEL	EXPLANATION
No Access*	No permissions to the function
Read Only	View-only permissions to the function. Add/Change/Delete are not permitted.
Full Access	Complete permissions to the function. View/Add/Change/Delete are permitted.

**When a user's effective permissions to a function are No Access, the function is not visible to the user. For example, if a user has No Access privileges to the System function, the System category is not displayed.*

4.2 Permissions



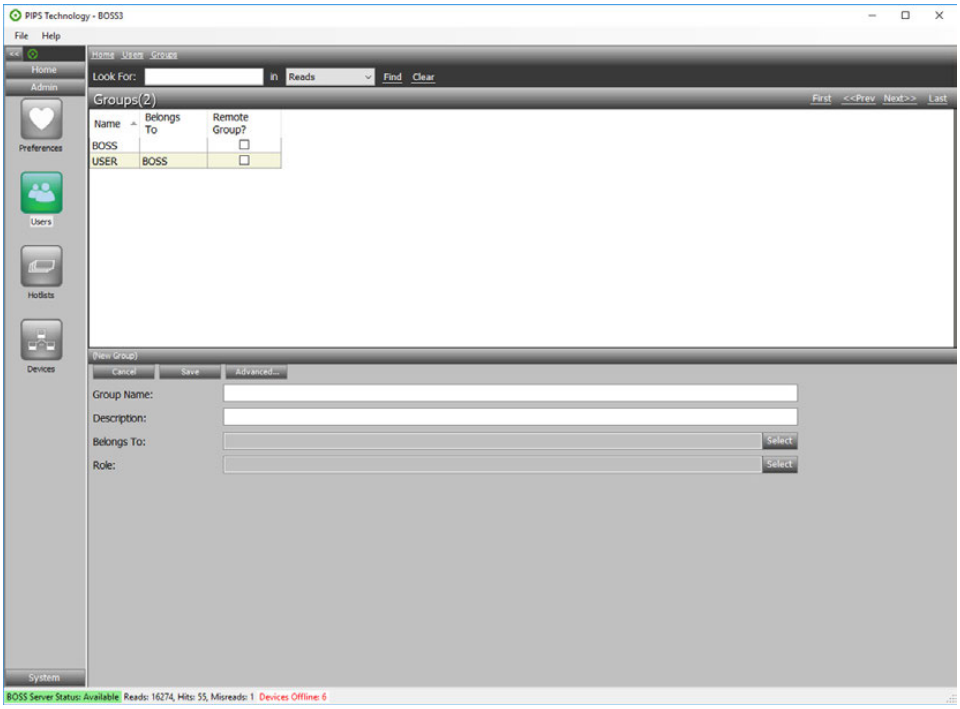
The following table lists the functions that are controlled by permissions levels:

PERMISSION	EXPLANATION
Reads	Plate read information
Dispatch	Real-time monitoring and hit alerts
Users	Groups and user accounts
Hotlists	Hotlists (plates of interest)
Devices	Sites and ALPR camera devices
System	System configuration options

See Section 15.4, Roles, for more information on setting permissions.

4.3 Roles

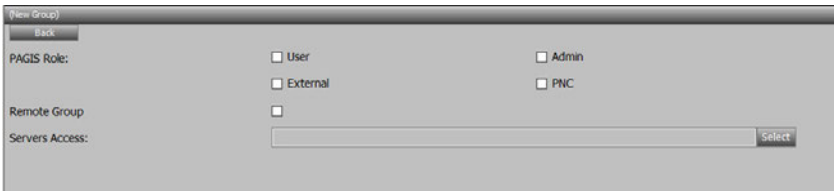
Roles are access permission profiles. BOSS comes with several predefined roles. A BOSS Administrator is able to add additional roles to the system. A BOSS Administrator is also able to alter and delete any roles. Roles define a permission level for different functions of the system. See Section 15.4, Roles, for additional information.



The following roles are installed by default in a BOSS system:

- System Administrators
- User
- Dispatcher
- Group Administrators
- Device Administrators
- Hotlist Administrators

See System Settings section for Role definitions and changes.



4.4 Groups

Groups are collections of users that have the same permissions. Groups provide an efficient way to organize users, for example by organizational units, and easily assign permissions to those users. Using groups is optional. A default group named “BOSS” automatically exists within a BOSS system, and user accounts will belong to the “BOSS” group by default. The BOSS group cannot be deleted.

4.4.1 Creating a New Group

1. Select the **Admin** category on the Shortcut bar.
2. Click the **Users** shortcut. A list of all current users will display in the Browse/Edit area.
3. Click the **Groups** button at the bottom of the Browse/Edit area. A list of all current groups will display in the Browse/Edit area.
4. Click the **New** button. The New Group Entry screen will display.
5. In the Group Name text box enter a name for the group. (**Note:** The group name must have a minimum of three characters.)
6. In the Group **Description** text box enter a description of the group (optional).
7. Each group, except for the default BOSS group, is required to have a parent group. In the Belongs To field, click the **Select** button to view a list of all existing groups. Click on the desired group and click the **Save** button to select. The name of the selected group will display in the Belongs To field as the parent group.
8. Assign a role to the group. In the Role field, click the **Select** button to select from the existing roles. Click the desired role from the list and click the **Save** button to make the selection. The name of the selected role will appear in the field.
9. Click the **Advanced**... button to access additional, optional settings for the new group.

4.4.1 Creating a New Group (continued)

PAGIS Role (User/Admin/External/PNC) – Check desired PAGIS roles to grant the new group for the associated permissions in Pagis. Please refer to the Pagis User's Manual for more information.

Remote Group – Select this option to designate the group as remote. When a BOSS Administrator wants to give access to another BOSS system for remote queries ("data sharing," see Section 6), a login must be created and assigned to a group that is flagged as a remote group. The remote BOSS Administrator will then create a remote site with credentials for that login.
Servers Access – This option allows for defining which, if any, sites will be accessible by this group. Click the Select button to access a list of sites.

Note: There are two sites defined by default: Manual Entries and Unassigned. If no additional sites have been defined, only the default values are available in this field. Click each desired site and click the **Save** button to complete the selection process. If one site is selected the name of that system will appear in the Server Access field. More than one site can be selected.

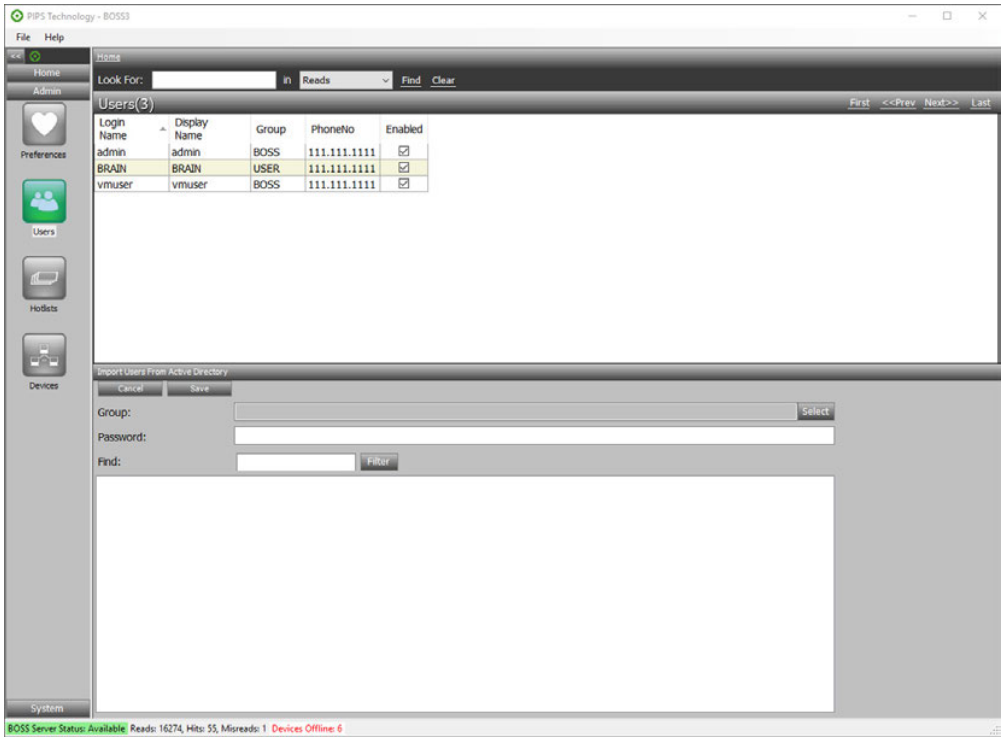
Log Queries – This option, when selected, will result in the logging of all queries made by all users of the group. This information is then available via the audits report. **WARNING:** *This can potentially be a very large amount of data. Select this option with care.*

a. Configure these Advanced User settings as desired.

b. Click the **Back** button to return to the main New Group Entry screen

10. Click **Save** to complete creating the new group, or click **Cancel** to clear the new group.

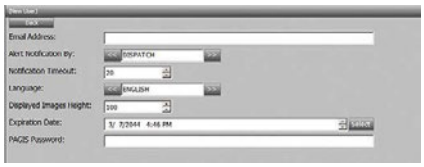
4.4.2 Parent Groups



When creating a new group, you must select a parent group (the Belongs To field). BOSS uses a parent-child group structure as an organizational mechanism. This allows the BOSS Administrator to arrange groups into collections based on location, job role, or any other applicable criteria. In BOSS, the parent group can be selected in order to easily reach the entire collection of groups under that parent. This can be especially helpful in large installations with a large number of groups.

4.4.3 Deleting a Group

1. Select the **Admin** category on the Shortcut bar.
2. Click the **Users** shortcut.
3. Click the **Groups** button at the bottom of the Browse/Edit area. A list of all existing groups will display in the Browse/Edit area.
4. Click to select the desired group from the list.
5. Click the **Delete** button.
6. Click **OK** in the confirmation dialog to complete the operation.



WARNING: Any users currently assigned to the deleted group will be assigned to the default "BOSS" group. You should empty the group by assigning all of its users to different groups prior to deleting it.

4.5 Users

4.5.1 Creating a New User

1. Select the **Admin** category on the Shortcut bar.
2. Click the **Users** shortcut. A list of all existing users will display in the Browse/Edit area.
3. Click the **New** button at the bottom of the Browse/Edit area. The New User Entry screen appears.
4. Enter a **Login Name** for the new user. This is the name the user will enter when logging into the BOSS application. (The login name must be at least three characters.)
5. Enter a **Display Name** for the new user (optional).
6. Enter a **Password** for the new user. (The password must be at least six characters with one Cap, one number and one special symbol.) The strong password requirement cannot be disabled.
7. Select a **Group** for the user. Click the **Select** button to access a list of all groups. Click on the desired group and click the **Save** button to complete the selection.
8. Enter a contact **Phone Number** for the user (optional). This field is for informational purposes only; in case the BOSS Administrator needs to contact the user.
9. Click the **Advanced**... button to access additional, optional settings for the new user. Configure these advanced user settings as desired.

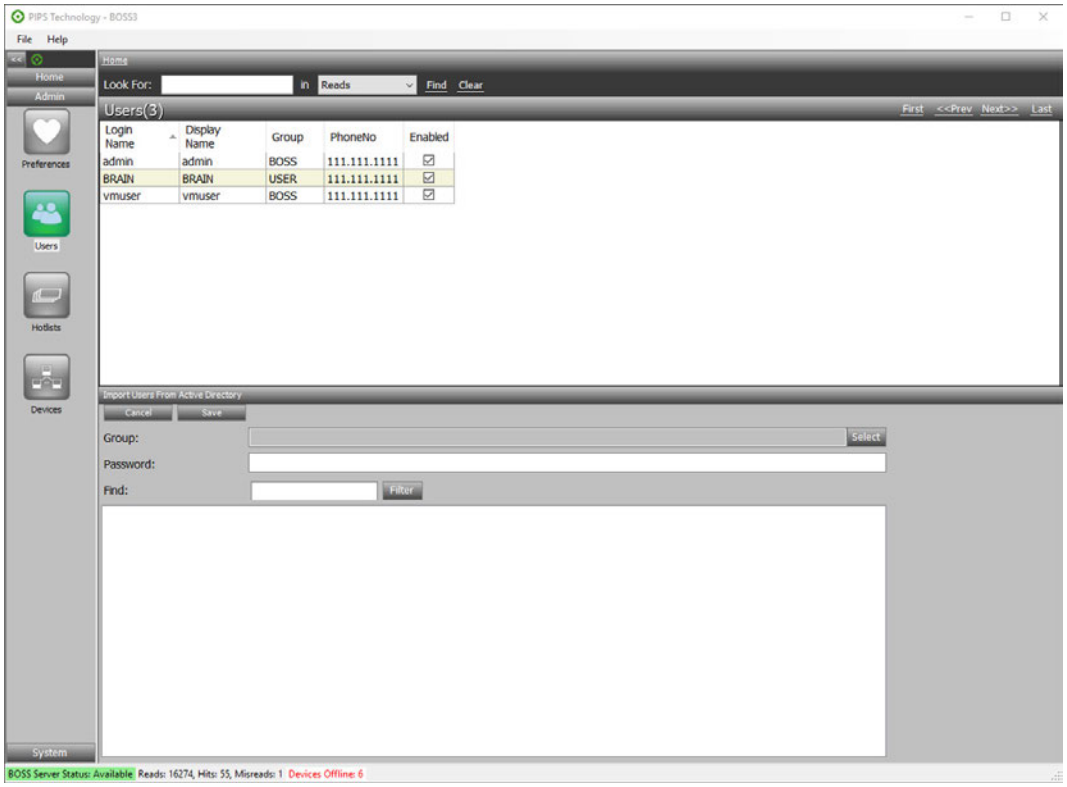
4.4.1 Creating a New Group (continued)

Email Address – Email address or addresses associated with the user. BOSS alerts for the user are sent to the email addresses specified here. Multiple addresses should be separated with a comma.
Alert Notification By – A user can be configured to receive BOSS alerts through the Dispatch application, email, or both. Click the <<
or >> buttons to cycle through the options, stopping at the desired selection.
Notification Timeout – The cutoff time from the time when a hit occurred after which an alert will no longer be sent to the user. For example, if the notification timeout is 20 minutes and a plate of interest is detected at 12:00 pm, notification is not sent to the user after 12:20 pm. This timeout prevents alerts being sent for events that are delayed in arrival to BOSS.
Language – The language preference for the user. The default value is English.
Displayed Images Height – This setting defines the vertical size in pixels of the images (reads and hits) that will display for the user on the Dispatch and Reads screens.
Expiration Date – Date for the user account to automatically be disabled. If no expiration is desired, simply leave this field at its default value (30 years from current date).
PAGIS Password – The user's Pagis password. Strong password requirement not utilized for this field.

Note: The user must be in a group that has been granted PAGIS permissions in order for the user to log in to PAGIS.

---

10. Click the **Back** button to return to the main New User Entry screen.
11. Click the **Save** button to complete creating the new user.



4.5.2 Deleting a User

1. Select the **Admin** category on the Shortcut bar.
2. Click the **Users** shortcut. A list of all existing Users will display in the Browse/Edit area.
3. Click the desired user in the list.
4. Click the **Delete** button at the bottom of the Browse/Edit area.
5. Click **Yes** to confirm the operation.

4.5.3 Importing Users from Active Directory

BOSS allows user logins to be imported from Microsoft Active Directory (AD) service.

1. Select the **Admin** category on the Shortcut bar.
2. Click the **Users** shortcut.
3. Click on the **Import** button.

4. Select the BOSS group that will receive the imported logins. Click the **Select** button to display available groups and **Save** to commit the selection.
5. Enter the default password for the imported logins in the Password field.
6. Browse for the desired users, **or** type in the desired login name (full or partial) in the Find field and press the **Filter** button.
7. Click on the checkbox in front of the desired usernames to select users to be imported to BOSS.
8. Click on **Save** to import the users from Active Directory.

Note: A Windows login cannot have any punctuation included or problems will occur with reads queries being performed.

4.6 Access Permissions Example

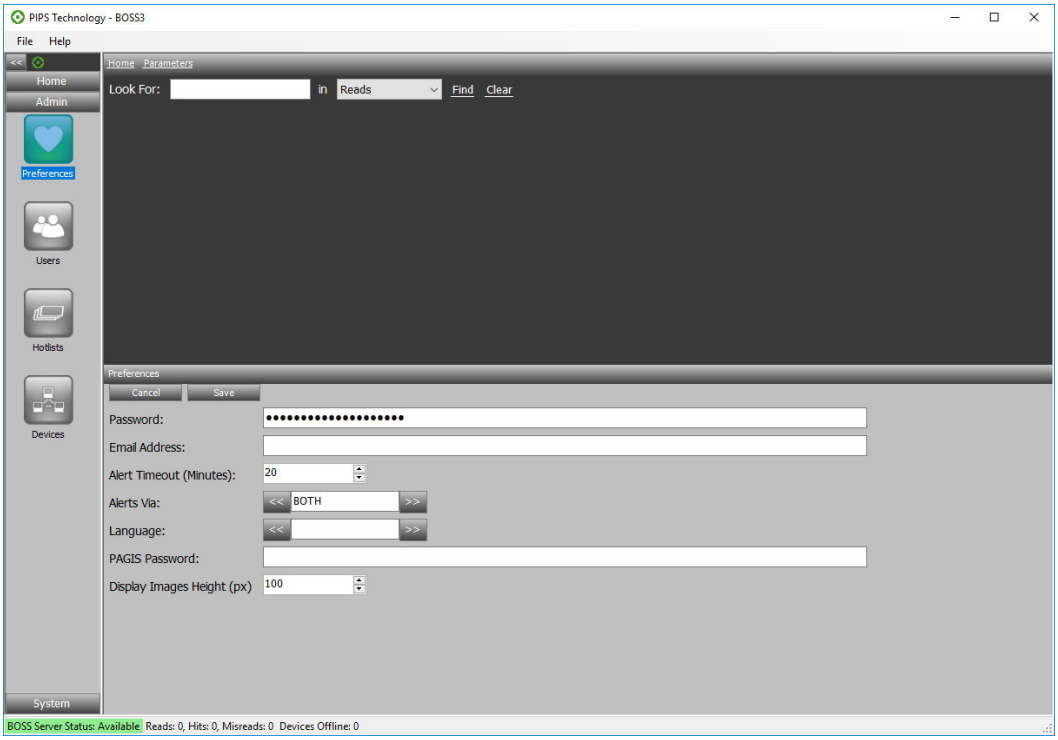
The previous sections have described how BOSS user security is designed, using roles, groups, and user accounts. This section presents a working example that integrates the information in this chapter.

A BOSS Administrator creates a role, names the role “Temporary Workers,” and defines the new role to have very limited permissions, as follows:

Reads	Read Only
Dispatch	Read Only
Users	No Access
Hotlists	No Access
Devices	No Access
System	No Access

Then the Administrator creates a group called “Temps.” When creating the group, a role is required. The Administrator selects the new role just created “Temporary Workers,” which assigns the permissions, defined above, to the new group.

Next, the Administrator creates a user account, “Jsmith,” for a temporary worker. While creating the new user, the Administrator is required to select a group for the user, and assigns the user to the “Temps” group just created. The user “Jsmith” has now been created with the permissions shown above because he belongs to the group called “Temps” and that group was assigned the “Temporary Workers” role.



As this example shows, this security design allows reusability of security roles because a BOSS Administrator can define a set of permissions in a role, and that role can be assigned to multiple groups.

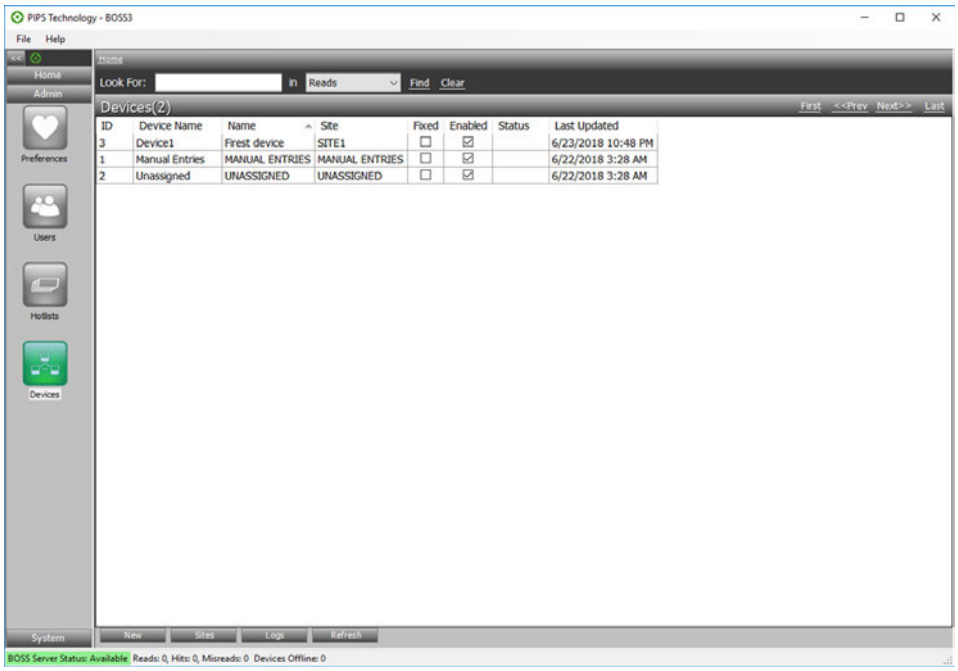
4.7 Preferences

The Preferences section allows for changing settings for the currently logged-on BOSS user, such as the password and email addresses.

4.7.1 Changing User Preferences

1. Select the **Admin** category on the Shortcut bar.
2. Click the **Preferences** shortcut. The Preferences Entry screen appears at the bottom of the Browse/Edit area.
3. Modify the preferences settings as desired and click the **Save** button.

Password – Login password for the BOSS user. For security purposes, the existing password does not display on screen.
Email Address – Email address or addresses associated with the user. BOSS alerts for the user are sent to the email addresses specified here. Multiple addresses should be separated with a comma.
Alert Timeout (Minutes) –The cutoff time for older hits to alert the user.
Alerts Via – A user can elect to receive BOSS alerts through the Dispatch screen, emails, or both.
Language – Language preference for the user. The default value is English.
PAGIS Password (PAGIS Password) – The Pagis Software password for the user.



Note: The user must be in a group that has been granted PAGIS permissions in order for the user to log in to PAGIS.

Display Images Height (px) – This setting defines the size in vertical pixels of the images (reads and hits) that will display for the user in the Dispatch and Reads Query sections.

5 DEVICES AND SITES

5.1 Devices

A BOSS device is any source that can input reads into the system. Typically, a device is a camera—either fixed or mobile. Another source for reads is manual entry, in which a BOSS user types the information for a read into the BOSS Dispatch screen .A new BOSS installation automatically contains two default devices, Manual Entries and Unassigned. A BOSS Administrator creates additional devices applicable to his/her organization.

5.1.1 Device Status

To see the current devices in your system with information about their status:

1. Select the **Admin** category on the Shortcut bar.
2. Click the **Devices** shortcut.

The devices will be listed in rows with the following column headings:

Device Name – The name assigned to the device, used in the device selections and is the description of the device. The list will always include Manual Entries and Unassigned.

Name – The name that is given to the device.

Site – The group of devices to which this device belongs. Sites can be grouped by geographical location or other criteria.

See Section 5.2, Sites.

Fixed – This box will be checked if the device is fixed camera, rather than a mobile camera. Enabled – This box will be checked if the device is currently enabled (see Section 5.1.4). Status – The Status field can display the following messages:

Device Added – If the device is newly added to the list, this message will display.

5.1.1 Default Devices (continued)

Offline – This device is a previously connected fixed camera that is not currently connected to BOSS.
Online Heartbeat – BOSS has detected a ping from a fixed camera.
Online Synced – The device's connection with BOSS has been established. This is shown for PAGIS mobile devices only and may not change when the device is offline.
Updated – Information has been sent from BOSS to the device, and the device is up to date.
Received Logins – Updates to the device included logins that were successfully sent to the device.
Received Source – BOSS has found the hotlist source file that it needs in order to send the updated hotlist to the device. Received Source may not be displayed due to timing or events.
Received Hotlist – The hotlist scheduled to be successfully sent has been sent to the device.
Received Hotplates – BOSS is sending "pages" of hotplates for a large hotlist, and the last page was successfully received.
Received Targets – The update to the device included targets that were successfully sent.

5.1.2 Defining a Device

Note: Devices will be defined automatically when a PIPS device, such as an ALPR camera, connects to BOSS the first time. Normally, there is no need to define devices in advance.

---

1. Select the **Admin** category on the Shortcut bar.
2. Click the **Devices** shortcut. A list of existing devices will appear in the Browse/Edit area.
3. Click the **New** button.
4. Enter a name for the new device. (The name must be at least three characters long.) Note that the name **CANNOT BE CHANGED** once the device has been created.
5. Enter a **Description** for the new device. (The description must be at least three characters long.)
6. Select **Mobile** or **Fixed** in the Type field. By default, **Fixed** is selected. To change the current selection, click the **left** or **right** arrow.
7. Select a **Site**. Click the **Select** button next to the Site field to display a list of all available sites. Click on the desired site in the list and click the **Save** button.

Note: In addition to the two default sites, Manual Entries and Unassigned, which are created automatically when a new BOSS system is installed, other sites can be created by an authorized BOSS user. See Section 5.2, Sites, for more information.

---

8. Select **Owners**. Owners are groups that can access this device. For PAGIS units, user logins are sent only to devices where the group is an owner of the device. Click the **Select** button next to the Owners field to display a list of all BOSS groups. Select each desired group by clicking the checkbox. When the desired groups are selected, click the **Save** button. The group name(s) selected will be displayed in the Owners field.

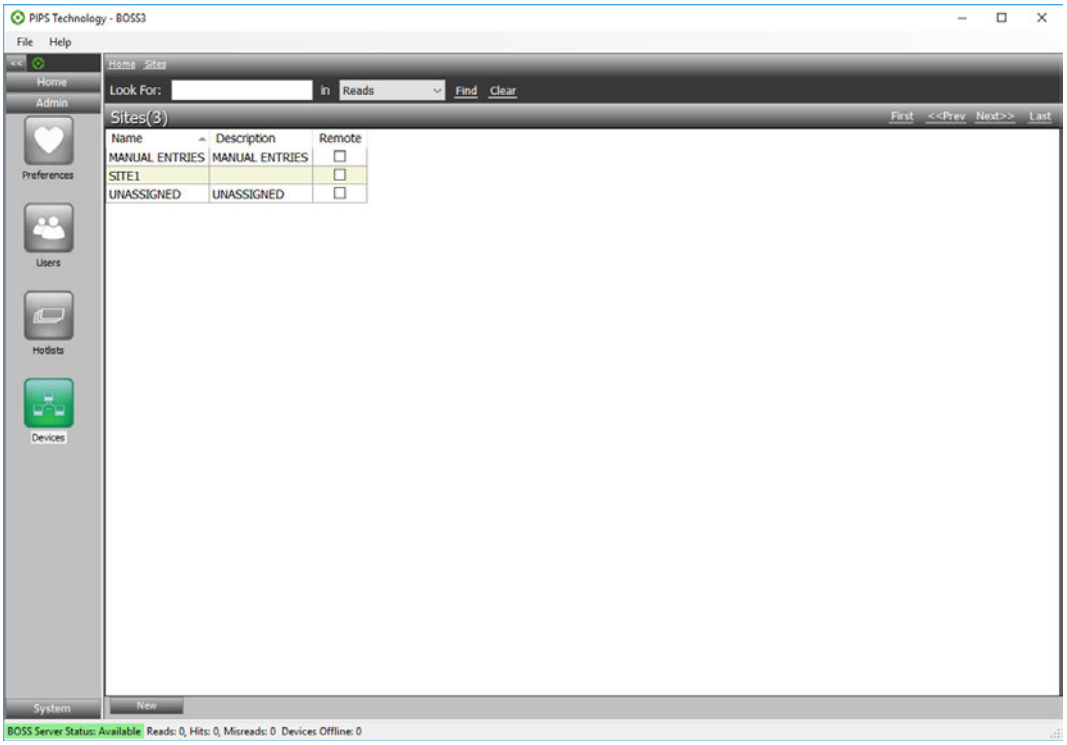
9. Select **Latitude** and **Longitude** values for the geographical location of a device by typing in a value or using the up and down controls on each field to increase or decrease the value. Note that some devices, such as PAGIS units with a GPS attached, will automatically send the latitude and longitude of the device to BOSS.
10. Click the **Advanced** button to display additional options for the device.
    No Reads Alert – Defines how long the device must remain with no reads coming in before the system shows the device as offline.
    Alert Email – The email address or addresses to which alerts associated with this device should be sent.
    Retain Reads – The length of time that reads from this device should be saved in the BOSS database. The Retain Reads setting must be longer or equal to the Retain Images setting.
    Retain Images – The length of time that pictures captured by this device should be saved in the BOSS database.
    Retain Hits – The length of time that hits captured by this device should be saved in the BOSS database.
    SpikeStore – The PIPS High Resolution ANPR/ALPR Camera P382 and the PIPS Compact ANPR/ALPR Camera P372 (formerly the Spike P382 and P372 cameras) allow captured images to be stored in an on-board USB flash drive to be retrieved on demand. Setting a device as a SpikeStore device causes BOSS to attempt to retrieve images from the storage device when the read is requested for viewing.
11. When Advanced Options have been set as desired, click **Back** to return to the New Device screen.
12. Click the **Save** button to complete creation of the new device. The new device will now appear in the devices list above.

5.1.3 Editing a Device

1. Select the **Admin** category on the Shortcut bar.
2. Click the **Devices** shortcut. A listing of all devices appears in the Browse/Edit area.
3. Click the desired device to select it. Details for the selected device appear in the Browse/Edit area.
4. Click the **Edit** button.
5. The Device Edit screen appears in the lower portion of the screen.
6. Modify fields as desired and click the **Save** button.

5.1.4 Enabling and Disabling a Device

1. Select the **Admin** category on the Shortcut bar.
2. Click the **Devices** shortcut. A listing of all devices appears in the Browse/Edit area.
3. Click the desired device to select it. Details for the selected device appear in the Browse/Edit area.
4. Click the **Edit** button.
5. The **Device** Edit screen appears in the lower half of the screen.
6. Click the **Disable/Enable** button. The change will immediately close the edit window and return to the Devices screen. It will also take effect immediately.



5.1.5 Deleting a Device

Note: It is strongly recommended that **devices are never deleted.** If a device is deleted, queries can no longer be performed using the device as a criterion. Instead of deleting a device, it should be disabled or given a new description.

1. Select the **Admin** category on the Shortcut bar.
2. Click the **Devices** shortcut. (A listing of all existing devices will display in the Browse/Edit area).
3. Click the desired device in the listing.
4. Click the **Edit** button.
5. Click the **Delete** button at the bottom of the Browse/Edit area.
6. Click **Yes** to confirm the operation.

5.2 Sites

A site is a mechanism for organizing devices. This allows a BOSS Administrator to arrange devices into groups according to convenience, such as geographical area or a facility. The ability to group or arrange devices can be quite useful in large installations where there are many devices. Each device created must be assigned to a site.

5.2.1 Default Sites

A new BOSS site automatically contains two default sites, Manual Entries and Unassigned. Normally, a BOSS Administrator will want to create additional sites applicable to an organization.

5.2.2 Creating a Site

1. Select the **Admin** category on the Shortcut bar.
2. Click the **Devices** shortcut.
3. Click the **Sites** button at the bottom of the screen. A list of existing sites will appear in the Browse/Edit area.
4. Click the **New** button at the bottom of the screen.
5. Enter a name for the new site. (The name must be at least three characters long.) Note that the name cannot be changed once the site is created.
6. Enter a description for the site. (The description must be at least three characters long.)
7. Select the parent site for the site. BOSS allows organizing sites into tree-like hierarchies. Click the **Select** button next to the Belongs To field, and select one site from the list. Click the **Save** button to complete the selection. The site name will appear in the Belongs to field.
8. Check the **Remote** option to designate the site as a remote site. (Remote sites are explained in Section 6, BOSS Data Sharing.)

5.2.3 Deleting a Site

Note: It is strongly recommended that sites are never deleted. If a site is deleted, queries can no longer be performed using the site as a criterion. Instead of deleting a site, it is recommended that devices assigned to it should be moved to another site.

---

1. Select the **Admin** category on the Shortcut bar.
2. Click the **Devices** shortcut. A listing of all existing devices will display in the Browse/Edit area.
3. Click the **Sites** button at the bottom of the screen. A listing of existing sites will appear in the Browse/Edit area.
4. Click the desired site in the listing and click the **Edit** button.
5. Click the **Delete** button at the bottom of the Browse/Edit area. Click **Yes** to confirm the operation.

6 BOSS DATA SHARING

BOSS allows "linking" of multiple BOSS systems for data-sharing purposes. When a user issues a query from the Smart Client application that includes a remote site, the query is submitted to the local BOSS server, which in turn makes a query to the remote BOSS server(s). The combined results from all the sites are then returned to the Smart Client. **Data from remote sites is not stored in the local BOSS server.**

The following configuration steps need to be taken to permit BOSS data sharing:

6.1 Configuring BOSS to Allow Remote BOSS Queries

1. Create a BOSS user for remote access. This user account is a "proxy" the local BOSS server will use for all requests from a remote site. This user account will have "Reads" privileges by default; no other privileges need to be given. The user must be assigned to a remote group. (See Section 4.4, Groups, for information about flagging a group as remote.)
2. Give the username and password for this "proxy" user to the BOSS Administrator at the remote BOSS system. The remote BOSS will need to be configured to access this BOSS system, described in the next section.

Note: It is best to create a dedicated user account for remote sites—one that will not be used by an actual user to log in and access the application.

6.2 Configuring BOSS to Access a Remote BOSS Server

1. Obtain username and password from BOSS Administrator at the remote site.
2. Create a site for the remote BOSS server and select the **Remote** option.
3. Enter the remote site IP address and BOSS service port (23032 by default).
4. Add the username and password provided.
5. For each group that is allowed to query the remote BOSS server, assign the remote server to the user via the **Servers Access** option. (See Section 4.4, Groups, for information on selecting Servers Access.)
6. Log out of the application.
7. Log back on using the provided username and password. The Remote BOSS server can then be queried by selecting the desired servers in the Reads Query screen.

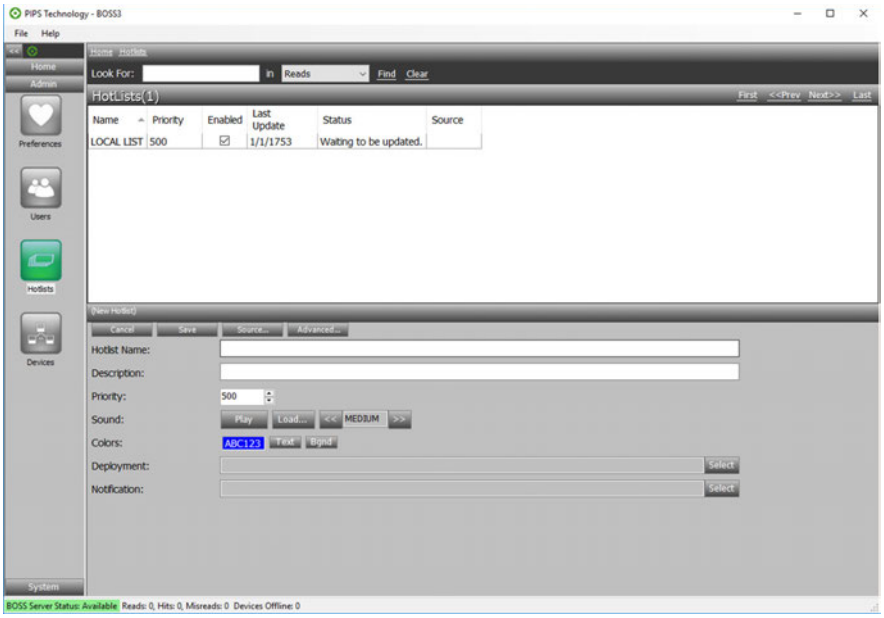
Note: BOSS version 3.2 and above only supports data sharing with servers running BOSS 3.0 and above.

---

7 HOTLISTS

A hotlist is a database that contains license plates of interest. When reads from license plate readers arrive at the BOSS server application, they are compared against hotlist records to find matches. Various hotlists can be enabled on a BOSS system and used in this comparison. In addition, hotlists can be assigned individually to specific devices. Only reads from those devices will be compared against these hotlist records. Typical hotlists include stolen vehicles, amber alerts, wants and warrants, etc. When the system reads in a plate that is determined to be a match to a hotlist entry in a hotlist, the BOSS application informs the user either with an alert sound and a pop-up window displaying a picture of the vehicle, or via email, depending on the user's preferences (see "Alerts via" in Section 5.3, Preferences).

A hotlist can be a database imported from an external source, such as another law enforcement agency. It can also be a list created by the local BOSS Administrator. For the BOSS server application to be able to understand how to import the hotlist records into the database, there are three different format types that exist in a BOSS system. In addition, there are several specific formats that are pre-defined and available by default when a new BOSS system is installed (see Section 8, Hotlist Formatters).



7.1 Creating a New Hotlist

There are three general areas to complete when creating a new hotlist:

- Configure basic settings
- Define a source file location with credentials when necessary.
- Define advanced settings (optional).

7.1.1 Configuring Basic Hotlist Settings

1. Select the **Admin** category on the Shortcut bar.
2. Click the **Hotlists** button. Currently existing Hotlists appear in the Browse/Edit area.
3. Click the **New** button at the bottom of the Browse/Edit area. The New Hotlist Entry form appears.

4. Enter a **Hotlist Name** for the hotlist. It must be at least three alphanumeric characters, and it cannot be an existing hotlist name.
5. Enter a **Description** for the hotlist (optional).

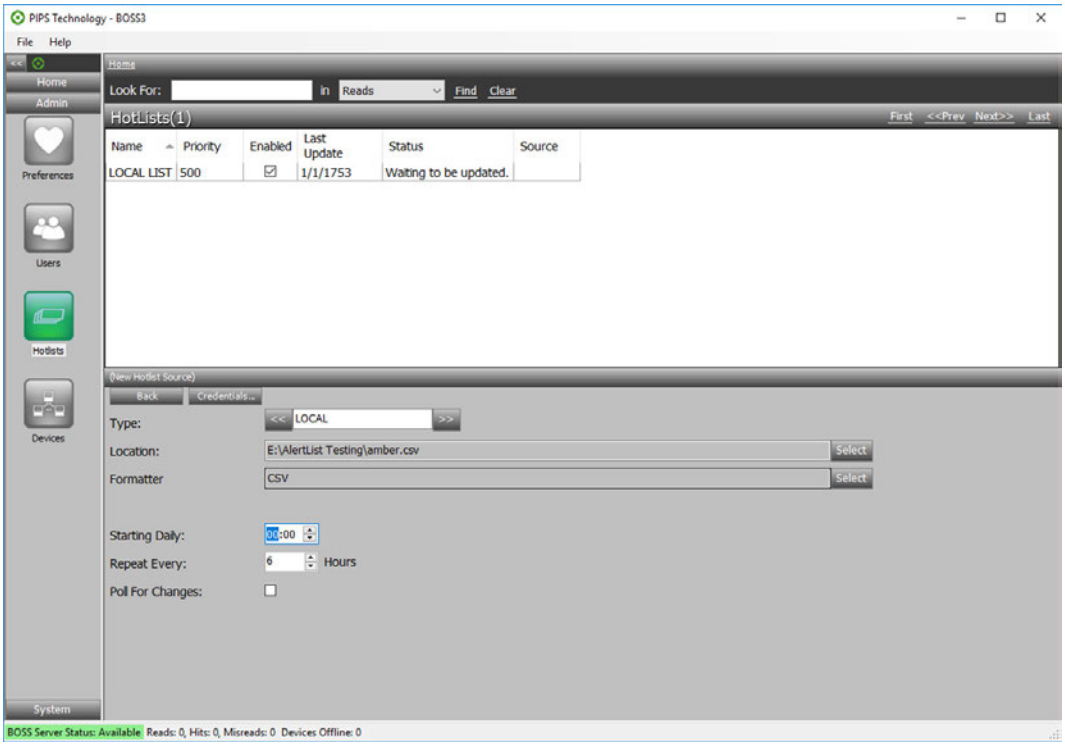
6. Select a **Priority** for the hotlist. When there are multiple hits/alerts, the priority determines which alert will occur first. (The lower the number, the higher the priority.)
7. Select a **Sound** for alerts resulting from this hotlist (optional). Click the **Load** button to select a wave sound file (*.wav). To test the selected sound, click the Play button. Optionally, one of the three default sounds may be selected, **Low, Medium**, or **High** alert.
8. Select **Colors** for the alert if desired (optional). The default is white text on a royal blue background. Custom color settings affect the entries in dispatch. The background color also applies to alerts given in PAGIS.
9. Click the **Text** button to select a color for the text.
10. Click the **Bgnd** (Background) button to select a color for the background.

Note: Currently selected text and background colors are displayed in the sample box (showing “ABC123”).

---

11. Select devices for **Deployment**. Click the **Select** button to select devices from the list of those currently available. Click the checkbox next to a device in order to select it. When desired devices are checked, click the **Save** button to make the selection. One or more devices can be selected, and they will be displayed in the Deployment field.

Note: Deployment means distributing the hotlist to a device or devices. Only the devices where a hotlist is deployed will produce hits from the hotlist.



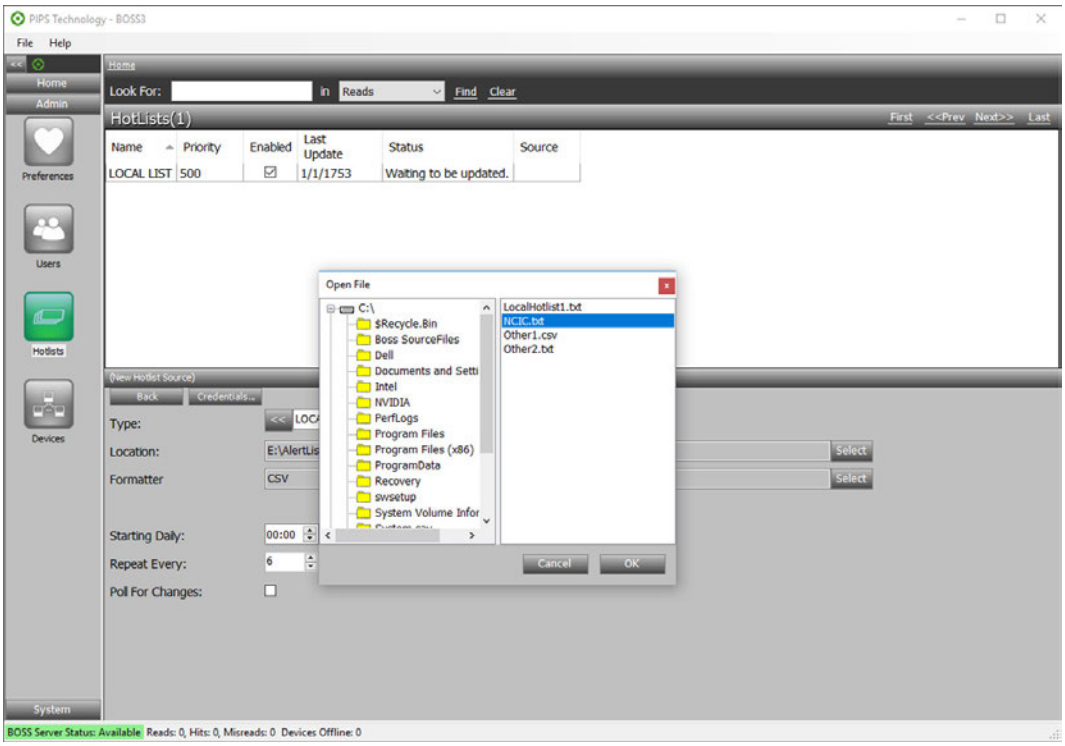
---

12. Select groups for Notification. Click the **Select** button to see a list of all BOSS groups. Click the checkbox next to a group to select the group. When you select a parent group, child groups are automatically selected. When desired groups are checked, click the **Save** button to make the selection.

Note: In order to receive alerts for hits on the hotlist, the user must be in the notification list of the hotlist. For more information see Section 7.1.5, Defining Hotlist Advanced Options.

7.1.2 Defining the Hotlist Data Source

1. On the New Hotlist Entry screen, click the **Source**... button to open the screen shown in the lower half of the following image:



2. Choose the appropriate entries for each of the fields that describe the new hotlist:
   Type (**Network** or **Local**) – A local source means that the file is stored on the BOSS server's Windows file system. A network source means that the hotlist source resides outside the BOSS server.

Note: If a Local source is selected, the source file location (folder) must be accessible to the Windows process running the BOSS server application ("PIPS BOSS3" Windows service).

Location – Enter the location of the hotlist file. Click the **Select** button to the right of the location field.

For a local source, a file dialog will display, allowing you to navigate to a path and select a file.

For a network source, select one of the default locations displayed (if applicable), **or** type in the location of the source:

HTTP – The location format must be in Hypertext Transfer Protocol (HTTP) format: “http://server:port/path.” There are a few predefined HTTP locations (such as CA DOJ) included in BOSS. These locations can be accessed with the **Select** button. Boss also supports FTP & SFTP, examples : “ftp://server:21/path” , : ftp://server:22/path.

Remote BOSS System – The location format must be “boss://server:port/hotlist,” where “hotlist” is the hotlist name on the remote system.

Note: The remote system hotlist name **MUST** be alphanumeric and **CANNOT** contain any spaces.

Formatter – Formatter defines the way a hotlist database file is parsed into discrete fields. Click the **Select** button next to the Formatter field. A list of available formatters appears. Click on the desired formatter and click the **Save** button to make the selection. The name of the selected formatter will appear in the field.

Note: Normally one of the several default formatters included with BOSS is sufficient. A new custom formatter can be created if necessary. See Section 8.1, Creating a New Formatter for Hotlists, for more information.

7.1.2 Defining the Hotlist Data Source (continued)

Starting Daily – Specify the time of day the hotlist should begin updating each day. The time is formatted as hours:minutes in the 24-hour clock, i.e., between 00:00 and 24:00 can be selected.
Repeat Every – Specify the time interval, in hours (1 – 24), between updates.

OR

Poll for Changes – If you choose this setting, BOSS will check for updates to the hotlist approximately every 30 seconds. When this option is selected, the **Starting Daily** and **Repeat Every** options are disabled.

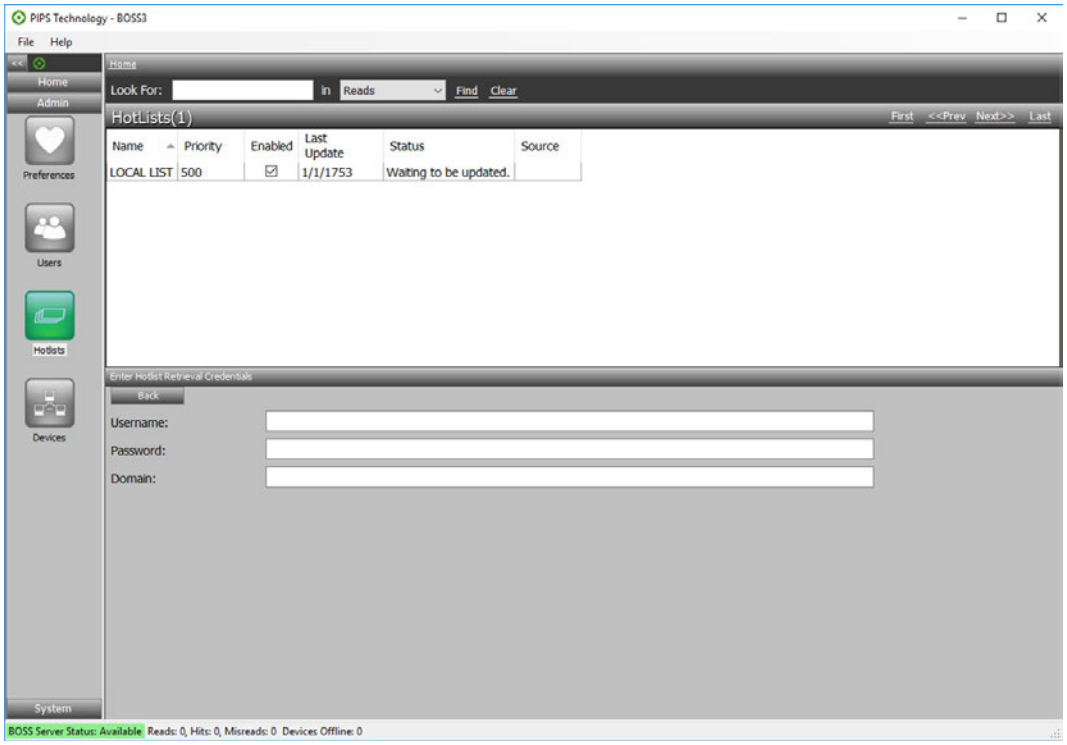
Note: If **Poll for Changes** is selected, and the hotlist source resides on the network, BOSS will attempt to make a network connection every 30 seconds. This frequency may add significantly to network traffic. Use with caution.

7.1.3 ZIP Compressed Hotlist Files

BOSS will automatically recognize and extract a hotlist data file contained in a ZIP archive file, such as Windows Explorer compressed (zipped) folder.

Note: There can be only one file in the ZIP archive.

7.1.4 Defining Hotlist Source Credentials



Some sources will require credential settings (e.g., login information) in order to allow BOSS to access that data. To enter the **Credentials** Settings screen from the Hotlist Source screen, click the Credentials button.
The credentials depend on the source type as follows:

Network-HTTP – If the HTTP (website) source defined requires login information, it should be entered in the Credentials Setting screen. This information will include username and password. The domain field may be necessary as well. Consult the Administrator of the HTTP source for required login information.

Network-Remote BOSS system – A username and password valid on the remote BOSS system must be entered (as in remote sites configuration, described in Section 6.0, BOSS Data Sharing). Consult the Administrator of the remote BOSS system for a username and password.

To set credentials for a source:

1. Click the **Credentials** button. The Credential Input screen appears.
2. Enter the username, password, and domain information applicable to the source you are specifying.
3. Click the **Back** button to return to the Source Entry form.
4. Click the **Back** button again to return to the New Hotlist Entry screen.

Advanced Options are values that allow you to further define details of the new Hotlist. To access the Advanced Options, click the **Advanced**... button.

Covert – A covert hotlist is one that contains sensitive information that should only be available to certain user groups. The effects of defining a hotlist as covert are as follows:

- A Hit on covert hotlist will not be alerted to users in mobile vehicle “Pagis”, unless the logged-in user is a Pagis administrator.
- A hit on the covert hotlist will not be alerted in the Boss application, regardless of the user’s alert preference. Hit alerts for covert hotlist can be send via email.
- When reads are queried, git information on covert hotlist will be displayed only to users in the Notification list for the hotlist. Other users will see that the read is a hit, but no information will be shown.
- Hit information for hits from covert hotlist will not be sent to remote Boss servers.

Whitelist – This option, when selected, defines the hotlist to be a whitelist, which works in reverse to a normal hotlist. A whitelist defines a list of plates that are **authorized** and not of concern. When a whitelist is active, license plates read that do **not** match an entry on the list will trigger a hit/alert.

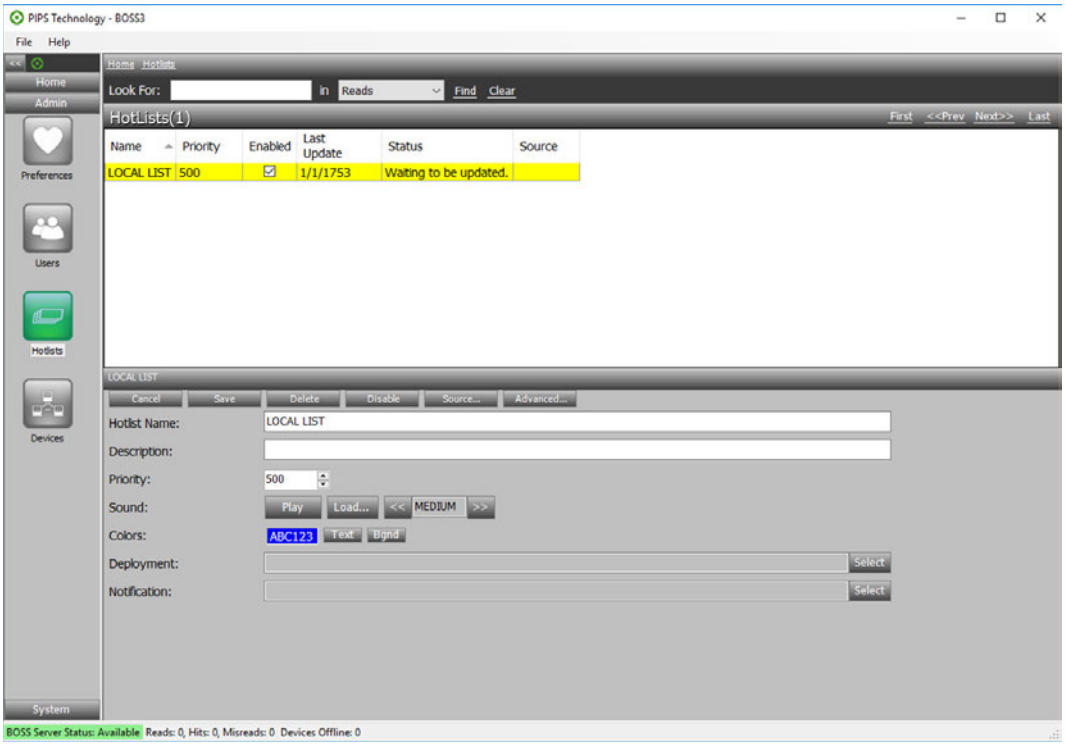
7.1.5 Defining Hotlist Advanced Options (continued)

An example of whitelist use might be a secure parking lot where fixed camera devices are monitoring vehicles entering. Authorized plates will match entries in a whitelist hotlist. If a plate is read that does not match an entry in the whitelist, an alert occurs.

Whitelists and hotlists can be active simultaneously for a device.

Note: Whitelist support in PAGIS requires a separate license. If you do not have the license and wish to use whitelists, please contact your PIPS sales representative for further information.

Ext Trigger – This option, when selected, sets the External Trigger flag on a hotlist when it is passed to PAGIS. It is only supported in PAGIS version 2.6.6 or above and will have no effect on earlier versions of the software.
One Time – This option, when selected, specifies that the hotlist data should only be accessed from its defined source one time; no subsequent updating will occur after the initial import.
Alert Timeout – This setting allows you to define how current a hit (from this hotlist) must be in order to cause an alert. This primarily pertains to information coming in from mobile units, where there may be a large delay. Alert Timeout can be specified in minutes, hours, days, or months.
Delete Inactive – BOSS updates hotlists in an incremental manner, and instead of deleting hotlist entries that no longer exist, non-existent entries are marked as "inactive." If the entry subsequently becomes valid, the entry is marked as active again. The Delete Inactive value determines how long inactive entries are kept in the BOSS hotlist database.
Notify Email – One or multiple email addresses may be defined to receive an alert when there is a hit. Multiple



Note: If PAGIS mobile units are used, this value should be set to the longest time between begin shift downloads to PAGIS.

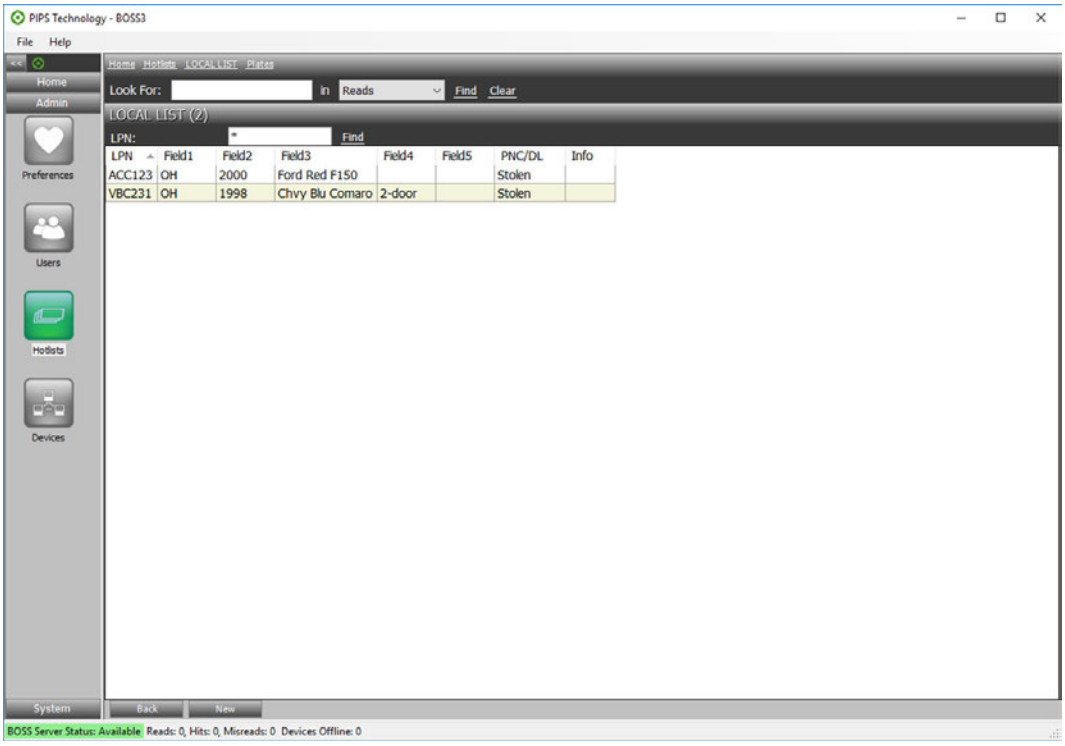
email addresses can be entered in the field, separated by a comma.
Remote Alerts To – Select the remote sites in which to send alerts. When a BOSS system sends an alert to a remote system, it is sent as a read; the remote BOSS system then determines whether to treat the read as a hit.

Note: This setting is only applicable if remote sites are defined.

Expires – Determines the date that the hotlist will stop importing data from its source. For a hotlist that is intended to be permanent, leave the expiration at the default value, 30 years from current date.

7.2 Enabling and Disabling a Hotlist

1. Select the **Admin** category on the Shortcut bar.
2. Click the **Hotlists** shortcut. A list of all hotlists appears in the Browse/Edit area.
3. Click the desired hotlist. Details for the selected hotlist appear in the Browse/Edit area.
4. Click the **Edit** button.
5. The Hotlist Edit screen appears in the lower half of the screen.
6. Click the **Disable** or **Enable** button.



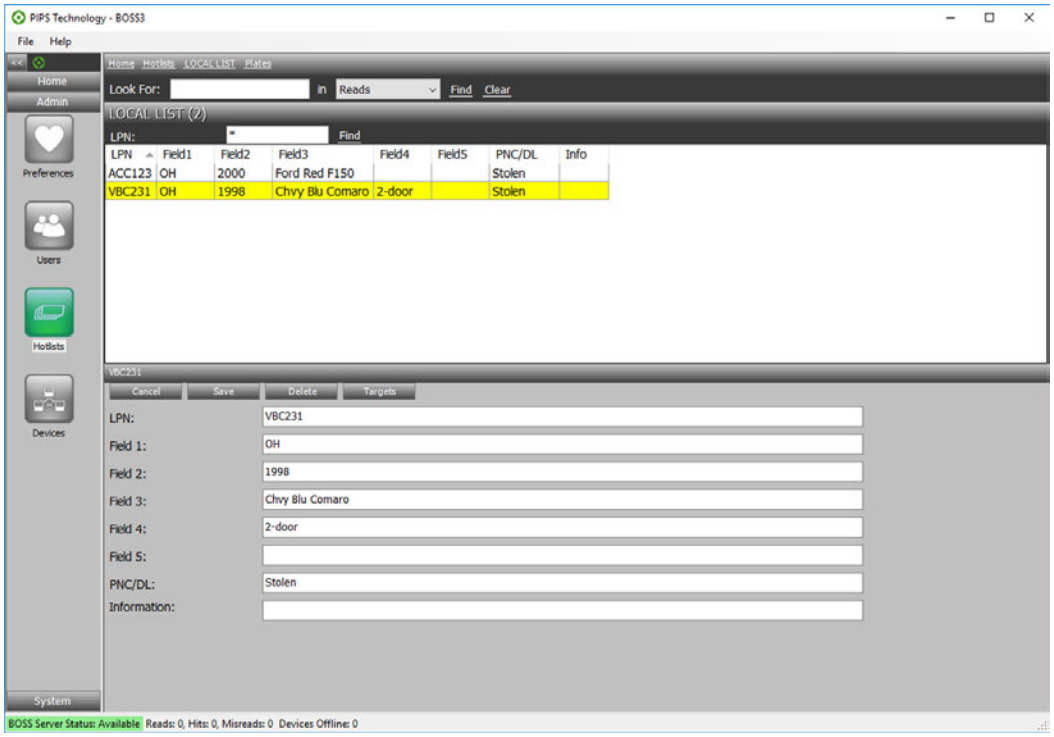
7.3 Modifying Hotlist Entries

BOSS allows viewing, adding, editing, and deleting hotlist entries.

Note: If the hotlist is set to update automatically, any changes to that hotlist made from within the BOSS User Interface application will be lost at the next automatic update.

7.3.1 Querying Hotlist Entries

1. Select the **Admin** category on the Shortcut bar.
2. Click the **Hotlists** shortcut. A listing of all hotlists appears in the Browse/Edit area.
3. Click the desired hotlist. Details for the selected hotlist appear in the Browse/Edit area.
4. Click the **Plates** button.
5. The Hotlist Plates screen will be displayed.



6. Type in the full or partial plate text to search for in the LPN field. (Wildcard searches are supported. See Section 11.1, Wildcards, for more information.)
7. Click on **Find**. License plates that match the criteria will be displayed. Note that only the first 1,000 matching license plates will be shown.

7.3.2 Editing a Hotlist Entry

1. Retrieve hotlist plates as instructed in the previous section.
2. Click on the row showing the desired plate.
3. The Plate Edit form will be displayed at the bottom of the screen.
4. Edit the field values as desired.
5. Click **Save** to save changes.

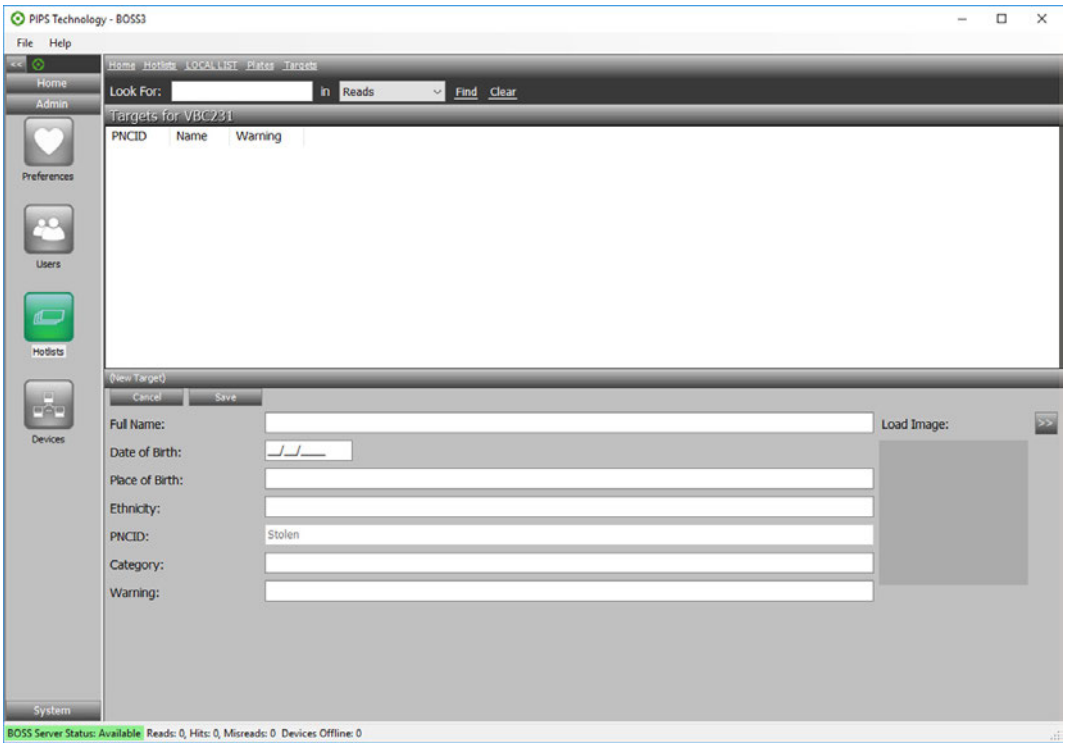
Note: Manually edited hotlist entries will be lost the next time the hotlist is updated.

7.3.3 Adding a Hotlist Entry Manually

1. Select the **Admin** category on the Shortcut bar.
2. Click the **Hotlists** shortcut. A listing of all hotlists appears in the Browse/Edit area.
3. Click the desired hotlist to select. Details for the selected hotlist appear in the Browse/Edit area.
4. Click the **Plates** button.
5. Click the **New** button. The Plate Edit form will be displayed at the bottom of the screen.
6. Enter the **LPN** (mandatory) and other fields (optional).
7. Click **Save** to save changes.

Note: Manually edited hotlist entries will be lost the next time the hotlist is updated.

7.3.4 Deleting a Hotlist Entry



1. Retrieve hotlist plates as instructed in the Querying Hotlists Entries section.
2. Click on the row showing the desired plate. The Plate Edit form will be displayed at the bottom of the screen.
3. Click the **Delete** button.
4. Click **Yes** to confirm the deletion.

Note: Manually deleted hotlist entries may be re-added the next time the hotlist is updated.

7.4 Targets

Targets are individuals of interest associated with a license plate. Target information is downloaded to the PAGIS mobile application from BOSS.

1. Retrieve hotlist plates as instructed in Section 7.3.1, Querying Hotlists Entries.
2. Click on the row showing the desired plate.
3. The Plate Edit form will be displayed at the bottom of the screen.
4. Click the **Targets** button. Information about the target will display.

7.4.1 Creating a New Target

1. Click the **New** button.
2. The Target Edit form will be displayed.
3. Fill in the fields, listed below, with appropriate values.

   Full Name – The first and last name of the target. Date of Birth – The date of birth of the target.

   Place of Birth – The location where the target was born.

   Ethnicity – The ethnicity (race or national origin) of the target.

   PNCID – This field can be used to enter any type of identification number that is available. In the UK this is the Police National Computer identification number of the target. This field is linked to the PNCID field in the hotlist information in the PAGIS application. *See the sample INI configuration file in Section 5 of the Pagis Software User's Manual.*

   Category – The category of the target, such as Felon, Suspect, etc.

   Warning – The warning information to display to the officer.

   Load Image – An image of the target, such as a DMV photo or "mugshot," can also be associated with the Target record. Upload an image by clicking on the Select button and browsing to the image file. Supported formats include JPG, GIF, or BMP.
4. Click the **Save** button.

7.4.2 Deleting a Target

1. Access the Targets screen as described above.
2. Click the row containing the target to be deleted.
3. The Target Edit form will be displayed.
4. Click the **Delete** button.
5. Click **Yes** to confirm deletion.

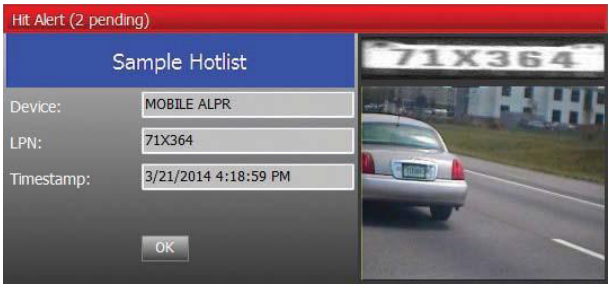
8 HOTLIST FORMATTERS

Hotlist Formatters define the structure of source data that is imported into BOSS Hotlists. BOSS includes several default formatters when the software is installed. There are three types of formatters:

CSV (comma-separated values) – A flat text file containing one line for every record. Each field in the record is separated by a comma.

Fixed Length – A flat text file containing records that are all the same length. No separator characters are used to determine where each field ends and another begins, but rather, field and record lengths are known up front. In a fixed length file, padding spaces are used where necessary, to accomplish the correct field length.

NCIC (United States National Crime Information Center) – The NCIC database is a computerized index of criminal justice information (i.e., criminal record history information, fugitives, stolen properties, missing persons, etc.), that is available to law enforcement agencies 24 hours a day, 365 days a year. Several NCIC import sources/formats exist within BOSS.



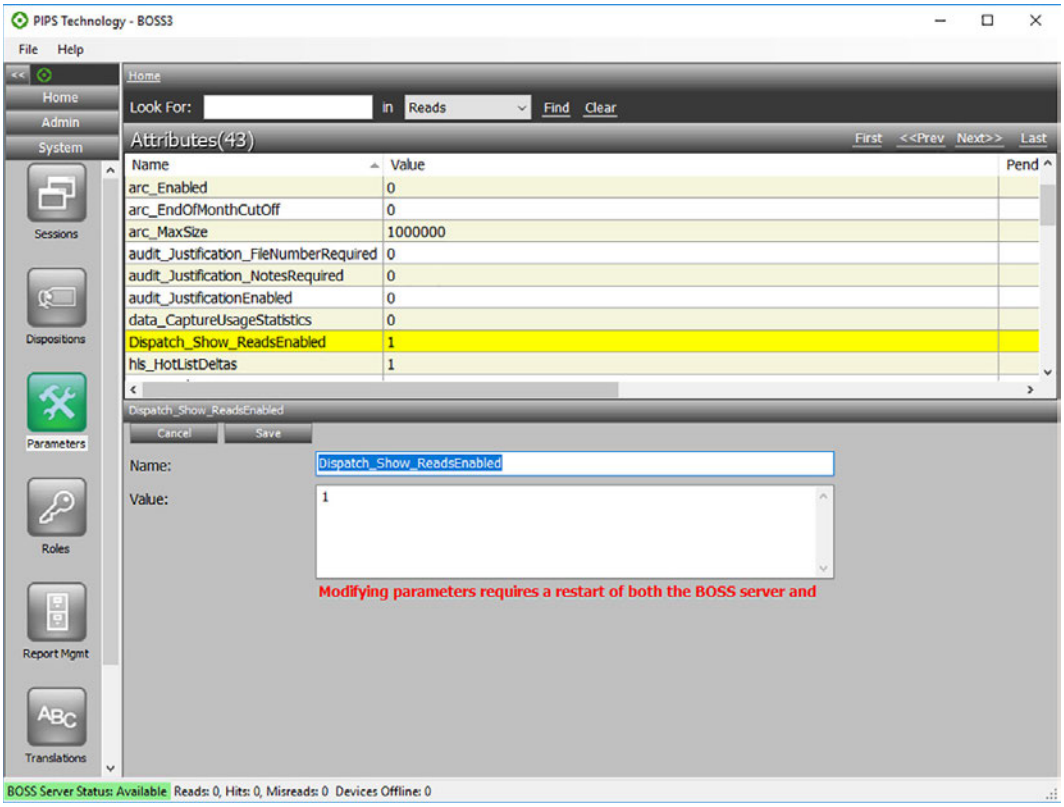
8.1 Creating a New Formatter for Hotlists

Normally, when creating a new hotlist, you will find that one of the default formatters can be used. However, BOSS does give you the flexibility to create new hotlist formatters. Creating a new formatter or modifying an existing formatter should be approached with caution and is beyond the scope of this manual. For more information, please contact PIPS™ Technical Support.

9 ALERTS

BOSS can provide real-time alerts on-screen, via the BOSS User Interface application, or through email. In order to receive alerts through the BOSS application, **the logged-on user must be in a group that is assigned the Dispatch permission**. Email alerts can be sent to any BOSS user or email recipient.

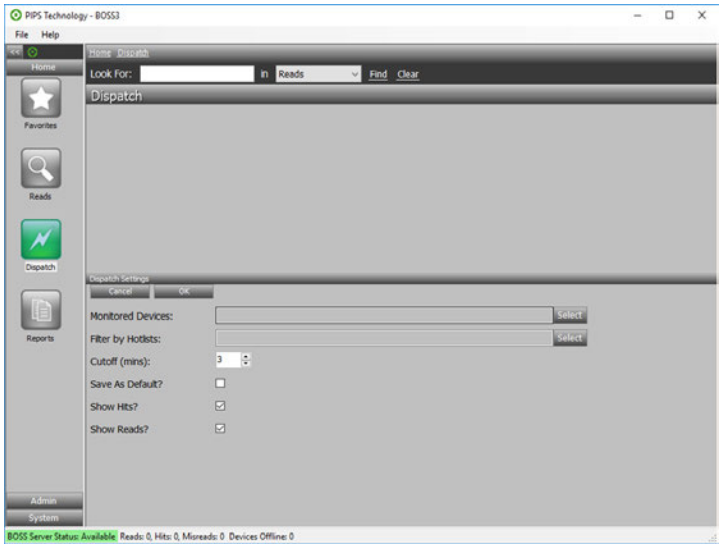
A real-time alert for a hit can pop up on the screen at any time when the BOSS application is running, regardless of which screen the user has active. A sound associated with the hit will be played. Alerts will be queued until the user acknowledges them by clicking **OK**. Real-time alerting in the BOSS application can be turned off by clicking on the **Alerts** toggle button on the BOSS Home screen. The settings for real-time alerts can be modified through the Dispatch screen, (see Section 10, Dispatch).



10 DISPATCH

The Dispatch screen is a tool often used by first responder dispatchers. It enables them to easily view hits, monitor reads, and correct license plates as they enter the BOSS system. The information displayed is as near to real time as possible. For ease of viewing, there are three configurations that can be set:

- If only the hits are set to display, they will appear on the whole screen.
- Similarly, if only the reads are set to display, they appear on the whole screen.
- Of the dispatcher is monitoring both hits and reads, then the hits will be displayed on the top half of the screen and the reads will be displayed on bottom half.



Note: By default, the ability to monitor reads via dispatch is disabled for new Boss installations, this feature can be turned back on by editing the Boss parameter “Dispatch_Show_ReadsEnabled” and setting the value to 1 for on. The Boss service must be restated for this to take effect.

10.1 Dispatch Settings

Dispatch Settings allow you to choose the information shown on the Dispatch screen.

1. Select the **Home** category in the Shortcut bar.
2. Click the **Dispatch** shortcut.
3. Click the **Settings** button in the bottom of the Browse/Edit area.

4. The following settings are available on the Dispatch screen. Change these settings as desired:

   Monitored Devices – Camera sources can be selected or deselected from a pick list to control which ones will supply reads (and resulting hits) to the Dispatch screen. Individual dispatchers can focus on particular camera inputs by selecting/deselecting any combination of sources (one, multiple, or all) for monitoring.

   In large BOSS systems, it may not be practical for a single dispatcher to monitor all sources simultaneously. An organization may choose to assign individual dispatcher personnel to different sources or may select to focus on particular sources during certain time periods or events.

   Filter by Hotlists – Hotlists may be selected to only show hits from designated hotlists. If there are no hotlists selected, hits from the monitored devices will be displayed.

   Cutoff (mins) – The cutoff setting determines how current from the present time a hit or read must be in order to display on the dispatch screen This setting determines the number of minutes before data is discarded from the on-screen display. The maximum time is 10 minutes.

   Save As Default – If checked, the current settings are saved and restored the next time the user logs in. Note that selected devices will always default to the devices where the user is configured to receive notifications in the Hotlist settings. See additional information on notifications in Section 7.1.1, Configuring Basic Hotlist Settings.

   Show Hits? – If checked, hits will display in rows in the top section of the Dispatch screen as they occur. If this option is deselected, rows of hits are not displayed in this section of the Dispatch screen. However, pop-up alerts will still display for hits, regardless of this setting.

Note: If the Alert Toggle button is set to the Off position, hits and reads will not display in the Dispatch screen. See Section 9, Alerts, for additional information.

   Show Reads? – If checked, all reads included in the devices selected in the Monitored Devices field display in the dispatch screen. By default, this option is not selected.

Note: Monitoring reads may slow down the BOSS server. It is recommended that reads are only monitored for diagnostics purposes.

5. Click the **Save** button for the changes to take effect.

10.2 Dispatch Hits

For each row, the columns displayed are:

Device – The device where the read originated.
LPN – The license plate characters read in by a camera or manually entered by a user.
Timestamp – Date and time when the read occurred.
Syntax – The state or region of the plate, if available.
Misread – If checked, indicates that the hit resulted from a read that was marked as a misread. Manual – If checked, indicates that the hit resulted from a manual entry (put in by a BOSS user). Patch – A thumbnail image of the license plate.
Overview – Color overview picture of the vehicle.
Hotlist – The name of the hotlist from which the hit occurred.
Field1 ... Field5 – Fields originating from the hotlist. The content and meaning of these fields vary depending on the composition of the hotlist.
PNC/DL – This field can be used for a driver's license (DL) number in US installations, but primarily used in United Kingdom installations for storing the UK Police National Computer identification number.
Info – Commonly contains additional text associated with the hit record. When the hotlist source contains additional fields, the information from those fields is all stored in this one field.
Priority – Priority assigned to the hotlist, with a lower number being given a higher priority.
Annotation – Notes associated with the read. Annotations are entered by BOSS users.

10.3 Dispatch Reads

For each row, the columns displayed are:

Device – The device where the read originated.
LPN – The license plate characters read in by a camera or manually entered by a user.
Syntax – The state or region of the plate, if available. Timestamp – The date and time when the read occurred. Patch – A thumbnail image of the license plate.
Overview – Color overview image of the vehicle.
Misread – If checked, indicates that this record was marked as a misread.
Hit – If checked, indicates this read resulted in a hit.
Manual – If checked, indicates this read was input manually by a BOSS user, rather than originating from a device.
Annotation – Notes associated with the read. Annotations are entered by BOSS users.

10.4 Manual Entries

There may be times when a read must be manually entered or when a camera does not correctly read a plate. For example, if there was an obstruction between the camera and the plate, then characters may be missed in the read. For this reason, manual entries can be completed by an authorized user via the Dispatch screen.

10.4.1 Adding a Manual Read

1. From the Dispatch screen, click the **Add** button. The Manual Entry screen appears in the lower half of the Browse/Edit area.

Note: The **Add** button will only be present if the logged in user has the Edit Access permission to reads.

2. Enter the plate characters in the LPN field.
3. Click the **Select** button to the right of the disposition field.
4. Select the desired disposition(s) and click the **Save** button to complete the selection.
5. Click the **Save** button to finish saving the manual entry. If the "Manual Entries" device is not being monitored, the manual entry will not appear in the Dispatch screen.

10.4.2 Correcting Reads

1. From the Dispatch screen, click the Add button. The Manual Entry screen appears in the lower half of the Browse/Edit area.
2. Enter the plate characters in the LPN field.
3. Click the **Select** button to the right of the disposition field.
4. Select the desired disposition(s) and click the **Save** button to complete the selection.
5. Click the **Save** button to finish saving the manual entry. If the "Manual Entries" device is not being monitored, the manual entry will not appear in the Dispatch screen.

11 QUERYING STORED DATA

The Reads screen allows for searching and viewing past read records on a local server or on a remote server that has granted access. Reads can be quickly searched by entering a license plate number. This screen also allows for more advanced queries where data can be filtered based on additional fields such as date ranges, location, and radius. Additionally, the Reads screen allows you to perform multiple queries with the use of tabs.

For the queried results returned, there are no limits to the number returned from a local server. To limit the impact on outside systems, there is a limit of 1,000 records returned from a remote server. A maximum of 1000 records will be displayed per page.

Note: Depending on factors such as the size of the BOSS database, the speed of the server, the bandwidth of the connection between client and server, and the parameters of the query, there may be a delay before the results are displayed. A status bar will display that shows that the query progress.

11.1 Wildcards

Wildcards are special characters that represent any alphanumeric character and can be used in searches and queries. Wildcards can make finding a match easier because they can define a portion of the criteria to be ambiguous. Wildcards supported in BOSS are described in the following table.

WILDCARD USED	REPRESENTS
a%	Any values that start with the letter “a”
a	Any values containing “a”
% or *	Any/all values
a_	Any values that are exactly two characters long and start with “a”
_a*b	Any values that have “a” as the second letter and end with “b”
[abc]*	Any values that start with “a”, “b” or “c”

11.2 Quick Search Bar

The Quick Search bar is always visible and available on the top of the BOSS screen regardless of the category or shortcut currently selected. This feature allows for quick, simple searches of various BOSS data.

1. Type the value to search for in the Look For field. This value can include wildcard characters. Multiple values can be entered separated by a comma (e.g., ABC123, XYZ234). However, wildcard values cannot be used when searching for multiple values.
2. In the “In” drop-down box select an area to search. The available options are **Reads**, **Hotlists**, **Users**, **Group Users**, **Groups**, **Devices**, and **Sites**. These areas are described below.
3. Click the Find link to initiate the search. The results will be displayed in the Browse/Edit area of the screen.

11.2.1 Quick Search Fields

When performing a query using the quick search feature, keep in mind that the search is performed in one significant area that can be selected. The search is then run against the significant field in that area, not all fields in that area. For example, when performing a quick search in Users, the text entered is compared against the Username field of all user records.

However, it is not compared to the display names for users. The following is a list of the fields used in the Quick Search:

SEARCH IN AREA	FIELD USED FOR SEARCH
Reads	LPN
Users	Username
Groups	Group Name
Site	Site Name
Hotlists	Hotlist Name
Group Users	Group Name
Devices	Device Name

11.3 Query Result Navigation Icons

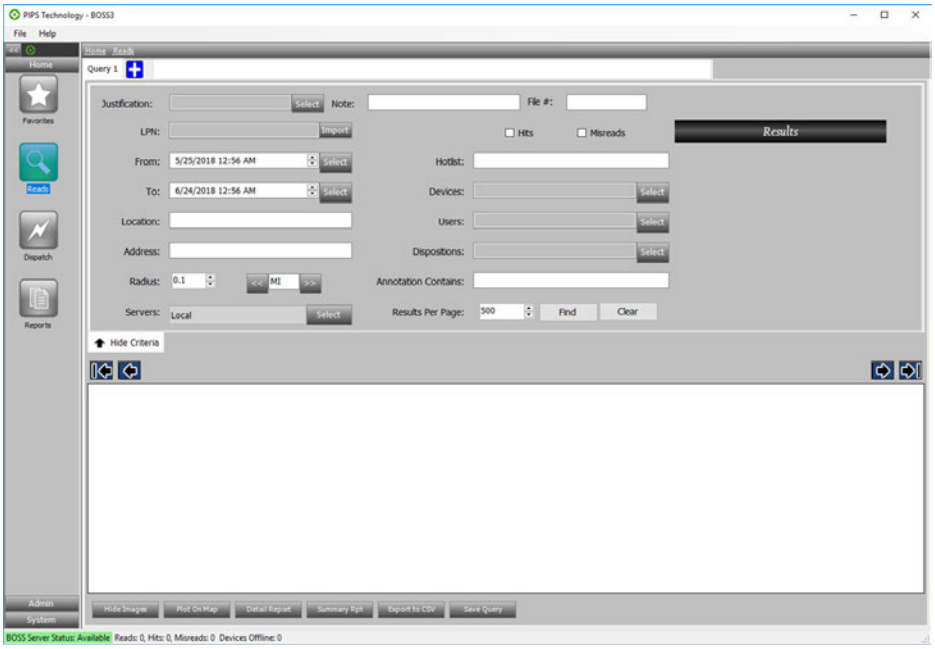
Just above the query results are navigation icons that facilitate moving through the data results. These icons can be very useful for larger result sets, providing an easy way to move through records.

Move to the very beginning of the data results, i.e., the first record.

Move forward through the data results.

Move backward through the data results.

Move the very end of the data results, i.e., the last record.



11.4 Advanced Reads Queries

The Reads screen allows for searching and viewing past read records. Reads can be quickly searched by entering a license plate number. The Reads screen also allows for more advanced read queries where data can be filtered based on additional fields such as date ranges, location, or radius. As indicated earlier, a maximum of 1000 records will be displayed.

11.4.1 Performing an Advanced Reads Query

1. Select the **Home** category on the Shortcut bar.
2. Click the **Reads** shortcut.
3. Enter desired query criteria (see the following section, 11.4.2, Entering Advanced Reads Query Criteria). All fields do not have to be filled in. Leaving a query field blank simply means there will be no filtering on that field.
4. Click the **Find** button to run the query.

11.4.2 Entering Advanced Reads Query Criteria

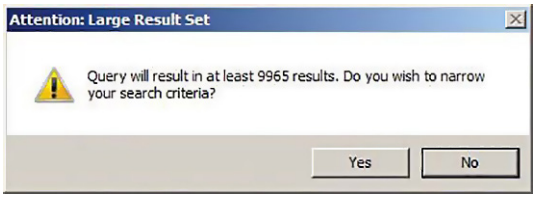
The query criteria fields are:

LPN – Full or partial (using wildcards) license plate number.
From – The start date and time for reads to be retrieved. Either click the **Select** button to display a calendar for quick selection, or type in the date.
To – The end date and time for reads to be retrieved. Either click the **Select** button to display a calendar for quick selection, or type in the date.
Location – The location as entered in the PAGIS application (see the Pagis Software User's Manual for more information).
Near Address – An address to use as the center of a radius search. The address format depends on the mapping system used but typically street name, house number, city and state, or zip code can be entered.
Radius – When a Near Address filter is entered, the search radius from the center point must be entered here.
Servers – Information can be queried from one or more remote BOSS servers. Click the Select button to display a list of authorized BOSS servers.
Justifications – Select the justification that best describes the purpose for the query being performed. This field will only be displayed if Justifications have been enabled in the System Parameters. See Sections 15.3.2, List of BOSS System Parameters, and 15.7, Justifications, for more information.
Justification Note – Enter any additional information necessary to more accurately document the query being performed. This field will only be displayed if Justifications have been enabled in the System Parameters. See Sections 15.3.2, List of BOSS System Parameters, and 15.7, Justifications, for more information.
Hits Only – If checked, only hits are queried.
Misreads Only – If checked, only reads that are marked as misreads are queried.
Hotlist – A search on hits can be limited to a specific hotlist, which can be entered here.
Devices – A query can be narrowed to reads originating from a particular device. Click the Select button to display a list of devices, select one or more.
Users – A query can be narrowed to reads originating by a particular user. Click the Select button to display a list of users and select one or more.

Note: The username can also be typed in.

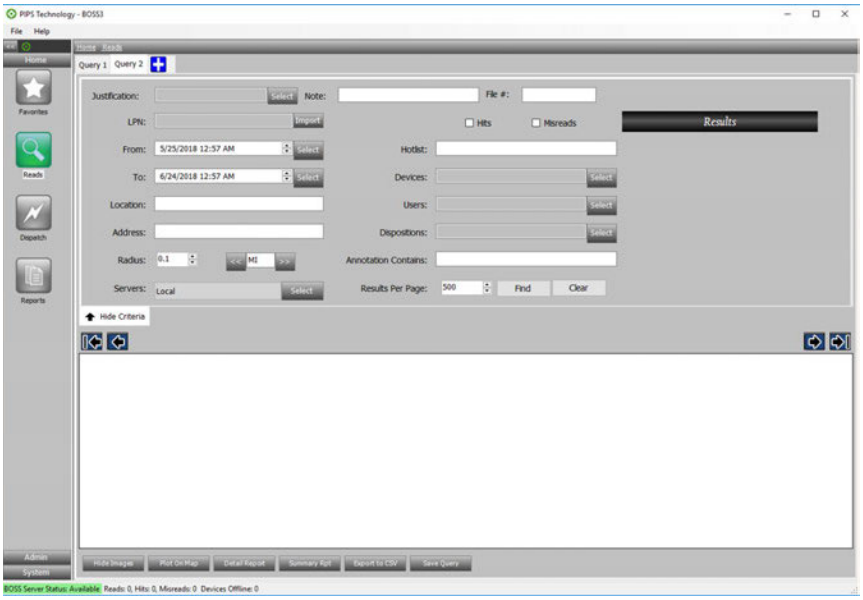
Dispositions – A query can be narrowed to reads with a particular disposition. Click the **Select** button to display a list of dispositions. Then select one or more dispositions.

Annotation Contains – If text is entered in this field, only reads that contain the text in the annotation field are queried.



Results Per Page – The maximum number of reads that will be displayed. The default is 500, the maximum is 1,000.

Clear – If clicked, the fields on the current tab will be returned to their default values.



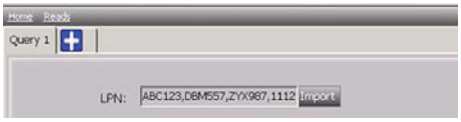
11.4.3 Managing Query Results

With the ability to obtain any number of results from a local server comes the option to narrow the potential results to be returned. If a large number of results will be returned based on the criteria entered, a message is displayed asking if the search criteria should be narrowed. If you select **Yes**, the search criteria is redisplayed offering the chance to make any necessary changes to reduce the results. If you select **No**, the query is performed based on the current criteria selections.

Note: A large number of results can take several minutes to be displayed.

11.5 Multiple Query Tabs

With Query tabs, users can perform multiple queries at a time. By clicking on the last tab, which contains the plus icon, you can access additional Reads Query screens. Enter the desired search criteria on each new screen to obtain additional information through the varying results. Each query can be given a descriptive name by right-clicking on the tab, and obsolete queries can be removed the same way.

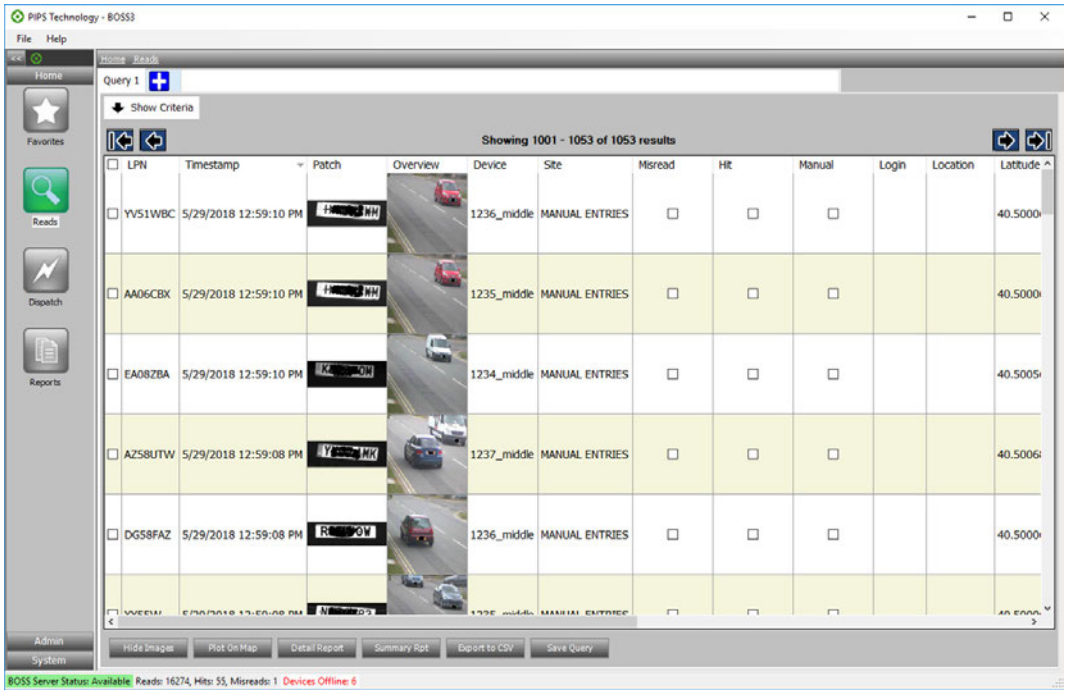


11.6 Cross-Referencing External Data

BOSS allows cross-referencing external data, such as DMV information. To query BOSS based on external information, take the following steps:

1. Create a CSV text file containing the license plate numbers to be cross-referenced. **The license plate number must be in the first field.**
2. Open the Reads Query screen.
3. Click the **Import** button next to the LPN field.

4. Click **Open** to import the plate numbers. A maximum of 50 plate numbers can be referenced at a time. Imported plate numbers will show up in the LPN field:



5. Enter other query criteria, as needed, and click **Find** to run the query.

11.7 Working with Queried Reads

11.7.1 Viewing Query Results

The results of both Quick Searches and Advanced Reads Queries are presented in the same manner.

The columns displayed are:

LPN – The plate text (characters) read in by a camera or manually entered by a user.
Timestamp – The date and time when the read occurred.
Patch – A thumbnail image of the license plate. Overview – The color overview picture of the vehicle. Device – The device where the read originated.
Site – The site where the read originated.
Misread – Indicates whether the read was marked as a misread by a user.
Hit – Indicates whether the read is a hit.
Manual – Indicates whether the read was entered manually.
Login – The username logged into the device at the time the read originated.
Location – The location entered in the PAGIS system. See the Pagis Software User's Manual for more information.
Latitude – The latitude coordinates of the device at the time the read originated. Longitude – The longitude coordinates of the device at the time the read was originated. Hotlist – The name of
the hotlist that produced the hit.
Field1 ... Field5, PCNID, Information – Information from the hotlist that produced the hit.
Annotation – Annotations entered for the read.
Server – The name of the server that has provided this information. This can be a local or remote server.

11.7.2 Query Results Actions

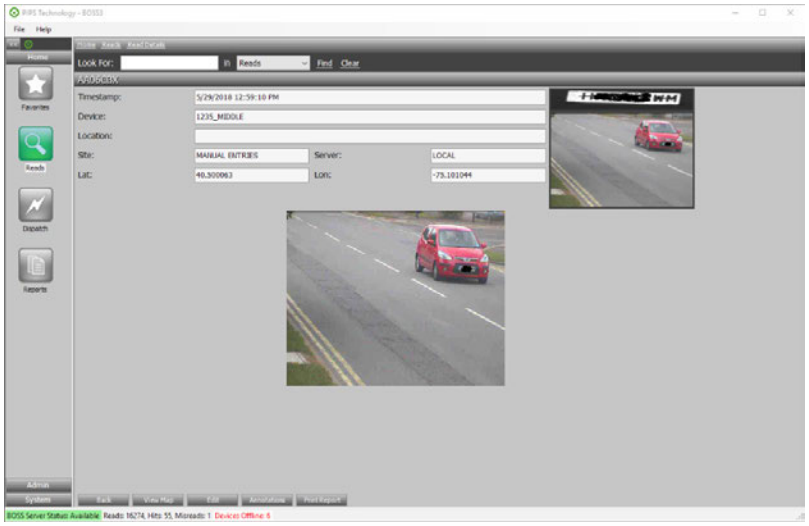
There are several button options available at the bottom of the Reads Query Results screen that offers additional uses of the data results.

Hide Images/Show Images – Used to remove the image columns, patch and overview, from the view. This can be done to provide more room for text fields to be displayed. When clicked, the Hide Images button's caption changes to Show Images. When the button is clicked again, images will again be displayed.

Plot On Map – When clicked, any selected records will be plotted on a map. One or multiple records can be selected by clicking the checkbox in the first column of the record. To select all of the records, click the checkbox in the headings column.

Detail Report – Click to generate a detailed report of selected reads. To select one or more records, click the checkbox in the first column of the record. To select all of the records on the current page, click the checkbox in the headings column. Use the navigation buttons to move to additional pages to select additional records.

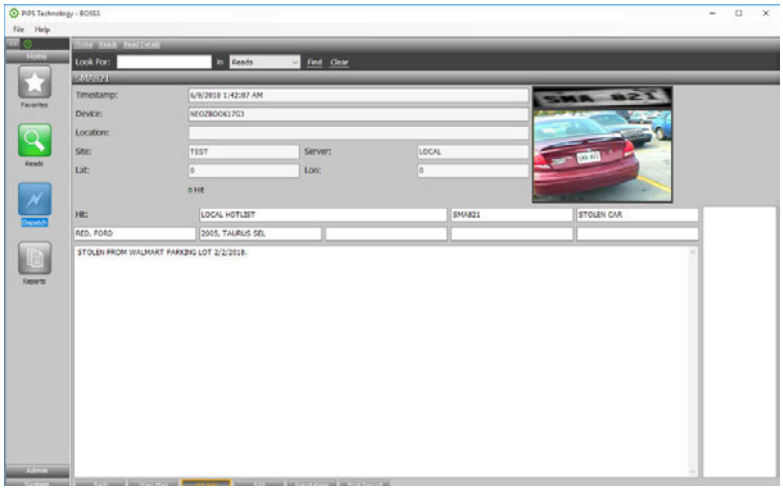
Summary Rpt – Click to get a summary report of selected reads. To select one or more records, click the checkbox in the first column of the record. To select all of the records on the current page, click the checkbox in the headings column. Use the navigation buttons to move to additional pages to select additional records. To include all results choose the All Results option in the Reads Summary Detail Report option box.



Export to CSV – Click to save the results to a file in a CSV format. Select to save the current page or all results provided. Use the navigation buttons to move to additional pages to select additional records.

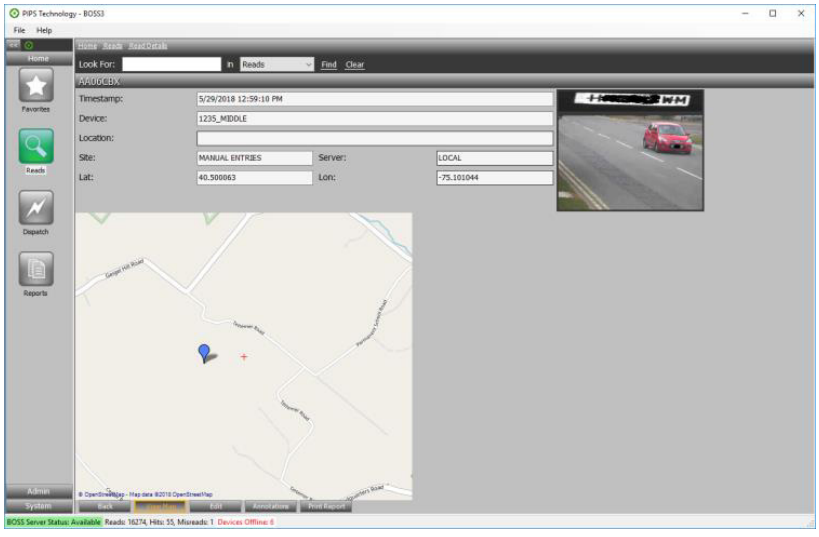
Save Query – Click to save the query criteria as a favorite for future use. See Section 11.8, Favorites, for more information.

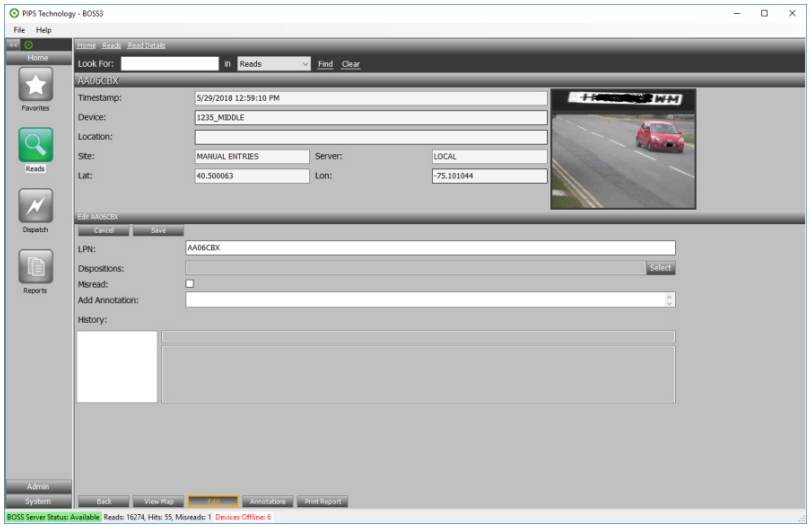
11.7.3 Viewing Read Details



Click a row in the query results to view the details of the record.

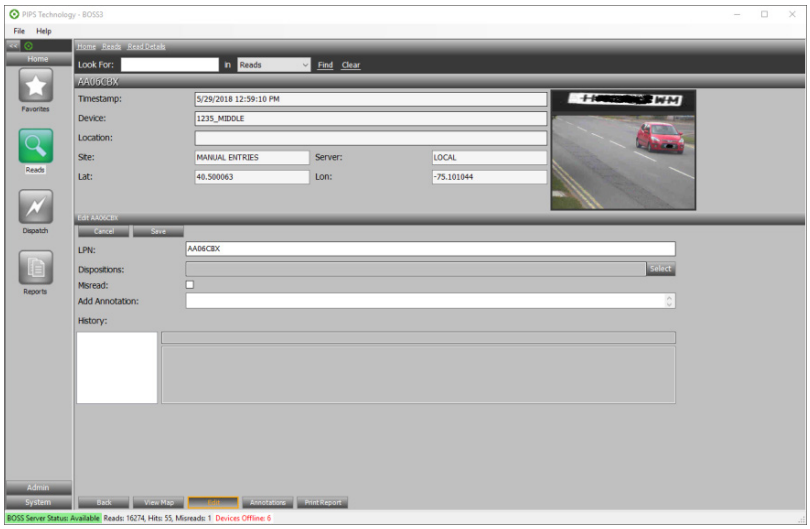
The Read Details screen displays the license plate text in the title. The timestamp, originating device, site, and geographical coordinates are displayed below. The plate patch and vehicle color overview images are on the right.



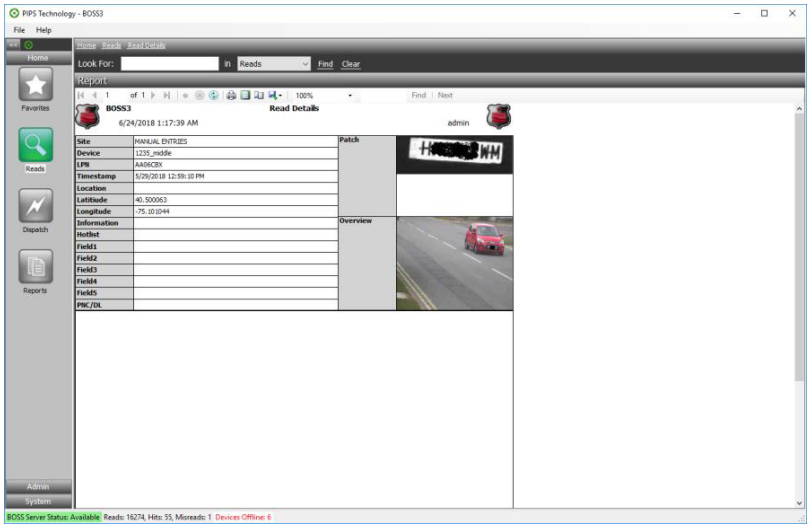


The vehicle color overview picture can be enlarged by clicking on the picture. Use a mouse scroll wheel or the cursor up and down keys to resize the image. Left-click on the enlarged image to close. Right-click on the image to copy the image to the Windows Clipboard.

If the read is a hit, details of the hit can be displayed by clicking on the Hit Info button at the bottom of the screen.



A map plotting the location where the read occurred can be displayed by clicking on the View Map button.



Use the Edit button to correct the plate text and/or assign a disposition and annotation to the read. Click on Save to save the changes. The plate text can also be marked as misread if the read information is found to be incorrect.

Annotations associated with the read can be viewed by clicking on the Annotations button.

A report containing the read's details can be printed by clicking on the Print Report button.

11.8 Favorites

Favorites are read queries that use specified criteria, which have been saved. Favorites can be reused, which allows the user to quickly perform frequently needed queries without having to define the parameters each time. Favorites are specific to each user.

11.8.1 Creating a New Favorite

1. Select **Home** on the Shortcut bar to access its icons.
2. Click on the **Read** shortcut.
3. Enter the desired query parameters in the Browse/Edit area (e.g., data range, location, radius, servers).
4. Click the **Go** button to run the query.
5. When the query results window appears, click the **Save Query** button.
6. A dialog box will appear, prompting for a name. Enter a descriptive name for the new favorite.
7. Select the Use Relative Date Range option if desired.

   Use Relative Date Range Option – If this option is selected when saving a query, and when the resulting favorite query is run in the future, it will use a From and To date and time range relative to the From and To date and time entered for the original query. It will not use the actual range entered in the original query. Also, it is important to remember that the time span between the From and To date and the time range used is relative to the date and time when the original query was run.

   Consider a query that is saved as a favorite and originally defined on 8/9/20xx to search reads between 8/02/20xx and 8/8/20xx (the prior week). If the Relative Date Range option is selected, the query is saved to always run against the prior week rather than those actual dates. If the Favorite option is invoked on 12/3/20xx, it will return results from 11/26/20xx through 12/2/20xx. It is important to note that the results will be relative to the actual time of the original query and when it is rerun. Suppose you run a query at 5 pm today to search for reads occurring between 9 am and 5 pm and save it as a favorite. When you run the query again tomorrow, it will search for reads that occurred eight hours **before** the current time, which may not necessarily fall between 9 am and 5 pm.
8. Click **OK** to complete. The query definition is now saved as a favorite and can be accessed at any time.

11.8.2 Activating a Favorite

1. Select the **Home** category in the Shortcut bar (if not already selected).
2. Click the **Favorites** shortcut.
3. A listing of all favorites is displayed in the Browse/Edit area.
4. Click the desired favorite. (The selected favorite will be highlighted in yellow.)
5. Click the **Go** button in the bottom area of the Browse/Edit area.
6. The query results will appear in the Browse/Edit area.

11.8.3 Deleting a Favorite

1. Select the **Home** category in the Shortcut bar (if not already selected).
2. Click the **Favorites** shortcut.
3. A listing of all favorites is displayed in the Browse/Edit area.
4. Click the desired favorite. The selected favorite will be highlighted in yellow.
5. Click the **Delete** button in the bottom area of the Browse/Edit area.
6. Press **Yes** to confirm deletion.

12 REPORTS

Several reports are included, automatically, with a new BOSS installation. These reports are available for use as soon as a BOSS Administrator assigns role permissions to the reports.

12.1 Running a System Report

1. Select the **Home** category on the Shortcut bar.
2. Click the **Reports** shortcut.
3. The Browse/Edit area will display a list of available reports. (Reports to which the user does not have permissions are not displayed.)
4. Click the desired report. The selected report is highlighted in yellow. Parameters for the report appear in the bottom of the Browse/Edit area.
5. Select **Date Range**. All reports call for From and To dates to define the time range for the report data. By default, the values in these fields define a report for the most recent two weeks. You can change these dates by typing different information into these fields, using the **Up/ Down** arrow keys to the right of the field or by clicking the **Select** button to the right of the field and selecting a date on the calendar and then clicking the **Save** button.
6. Some reports also permit you to filter report results by user(s). For example, the pictures report, which reports pictures taken in PAGIS, allows you to define one or more users to report on.
7. Once desired parameters are selected for the report, click the Go button. The report screen immediately displays, indicating that the server is generating the report until results are displayed.

12.2 Viewing and Printing Reports

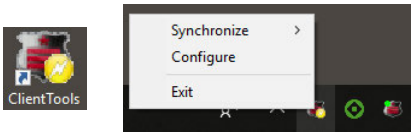
The Report screen displays the date and time the report was generated and the title of the report in the heading area. When you place your mouse above a shortcut on the Report Shortcut bar, a label appears indicating what the shortcut button does. Note that some of the buttons on the Shortcut bar are not relevant to BOSS reports and are therefore disabled.
The Report Results Shortcut bar icons are as follows:

First Page – Return to the first page of the report.
Previous Page – Go to the previous page of the report.
Page Input – In this text box, type in a particular page number to bring up on screen.
Next Page – Go to the next page of the report.
Last Page – Go to the last page of the report.
Stop Rendering – This button can be used to cancel the report processing. This can be helpful if a large report was initiated, but is no longer desired.
Refresh – Refresh the report using the most current BOSS data.
Print – Print the report.
Print Layout – Toggle between available print layouts.
Page Setup – Choose among the options for standard page setup, such as page orientation, and paper size.
Save As – Excel/PDF/Word – Save the current results to a Microsoft Excel (.xls), an Adobe Portable Document Format (.pdf) or a Microsoft Word (.doc) document.
Width Zoom Setting – This drop-down list allows you to select a zoom view for the report results on the screen.

12.2.1 Viewing the Login Statistics Report

1. Select the **Admin** category on the Shortcut bar.
2. Click the **Devices** shortcut.
3. Click the **Logs** button at the bottom of the screen.

4. Click **Go** to view the Login Statistics Report.
   Begin Date – Select the start date for the report.
   End Date – Select the end date for the report.
   Selected Users – Select the users to include in the report. Click the **Select** button. Click the checkbox of the desired user. Click on the **Save** button.



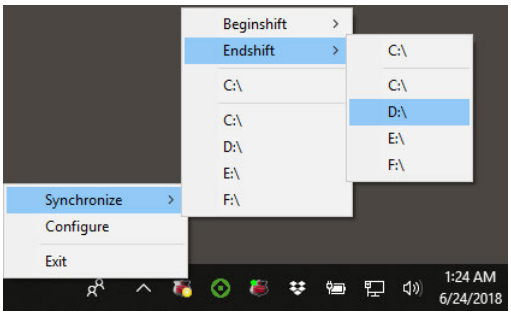
13 CLIENT TOOLS

The Client Tools utility is used to transfer any necessary files needed for a shift from BOSS to an PAGIS system that is being run in the Disk Sync mode. After the completion of a shift, Client Tools can then be used to transfer read data files captured during a shift into BOSS. The utility is configurable and processes files stored on a local, network, or USB flash drive. Like Smart Client, the Client Tools utility does not have to be run on the BOSS server; it can be configured to access the server via an IP Address.

Client Tools does not have a customary interface. Once the utility is started, the Client Tools icon will appear in the Windows System Tray.

Before use, Client Tools must be configured, which is described in Appendix 17. Once the Client Tools has been configured, it can now be used to synchronize information between BOSS and PAGIS:

1. To start, right-click on the **Client Tools** icon.



2. Select **Synchronize**. The next menu displayed is divided into three sections.

   a. The first section allows the user to select either **Create Begin Shift Files or Synchronize End Shift Files**. When either option is selected, the next menu is displayed. It is divided into two sections; it is the bottom two sections of the previous menu and functions the same way.

   b. The second section displays the path defined during configuration. This is a shortcut to perform Begin Shift and End Shift at the same time, storing the Begin Shift files in the defined location and processing the End Shift files at the defined location. If there are no End Shift files to process, this feature will be complete after the Begin Shift file is created. No error message will be displayed if the End Shift files are not found.

   c. The last section lists the drive letters currently on the workstation. If one is selected, Client Tools will perform a Begin Shift first and store the files at the root of the drive selected. Then Client Tools will check to see if there are End Shift files at that location. If found, the files will be processed. If not found, the synchronization process is complete. No error message will be displayed. This is an additional option if the configured drive is not currently available.

Note that once End Shift files have been processed, they are deleted.

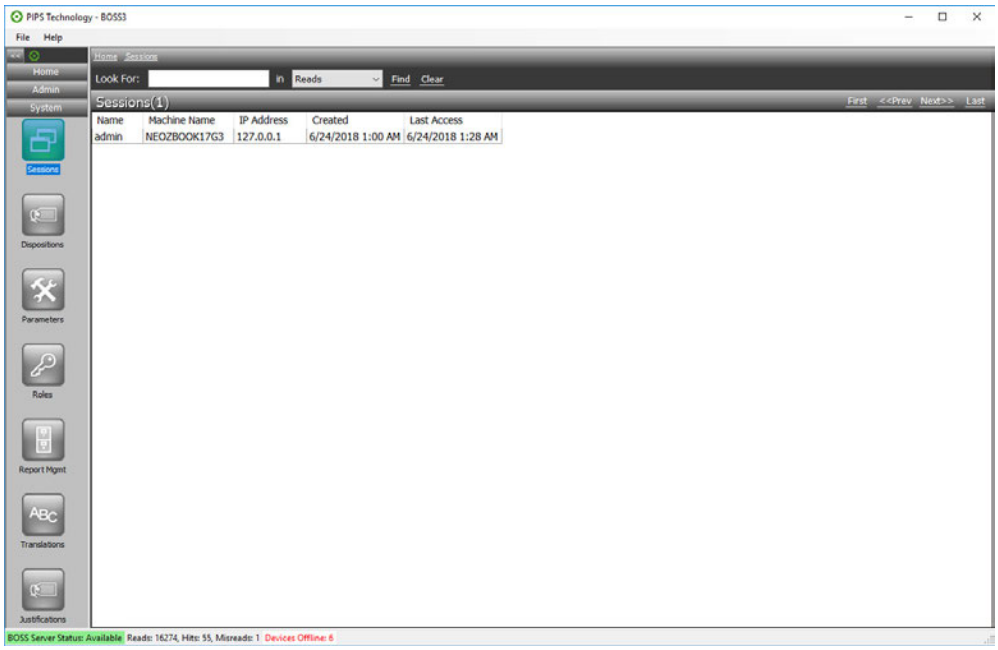
14 ARCHIVING DATA

It is possible to archive reads that have accumulated in the BOSS database. Based on settings that are configurable in System Parameters, reads that meet the specified criteria are transferred from the main BOSS database to an archived BOSS database. *(See Section 15.3.2, List of BOSS System Parameters, for additional information on configuring this feature.)*

Once enabled, this process is handled by the BOSS server. There should be no noticeable difference to a user logged into a BOSS Smart Client when reviewing or reporting on stored reads. The only indication in the BOSS Smart Client that reads have been archived will be on the BOSS Home screen. The user will be able to see a calculable difference between the reads and hits counts compared to the total reads and total hits counts. The difference between the values will be the number of reads and hits stored in the archived database.

15 SYSTEM SETTINGS

15.1 Sessions



The Sessions screen allows for viewing the current list of logged-on BOSS users. Each login on each computer utilizes a concurrent license of the software. Since BOSS is licensed per concurrent active session, a BOSS Administrator may need to have a session disconnected in order to release a session license. A BOSS Administrator can force a session disconnect in the Sessions screen.

Note: BOSS allows a single "admin" login to access BOSS even if the number of concurrent sessions has been exhausted. Please see Section 2.1, BOSS Administrator Login, for more information about the "admin" username.

15.1.1 Viewing and Disconnecting Sessions

1. Select the **System** category on the Shortcut bar.
2. Click the **Sessions** shortcut. A list of current user sessions appears in the Browse/Edit area.
3. The heading in the Browse/Edit area indicates the total number of current sessions.
4. Click on a session to see details in the bottom half in the Browse/Edit area.
5. To disconnect, click the **Disconnect** button that appears in the detail area, and click **OK**.

Note: You cannot disconnect your own session in this manner. To disconnect your own session, simply log off the BOSS application.

15.1.2 Workstation Power Management and Sessions

Using Windows Power Management to hibernate or suspend a workstation running the BOSS Smart Client will cause the session in BOSS to be terminated after five minutes. When the workstation is resumed from hibernation or a suspended state, the user will have to log in to BOSS again.

15.2 Dispositions

Dispositions are pre-defined classifications that can be assigned to hits. “Arrest Made,” “Vehicle Recovered,” “Surveillance Established” are examples of dispositions. A BOSS Administrator is able to define any number of dispositions for her system. Users can then use those dispositions to specify the action taken or the status of the hit. A new BOSS system will have a Default Disposition category that includes one disposition of “No Action.” Additional categories can be defined as needed.

15.2.1 Defining a New Disposition

1. Select the **System** category on the Shortcut bar.
2. Click the **Dispositions** shortcut. A list of all current dispositions appears in the top of the Browse/Edit area.
3. Click the **New** button in the bottom of the Browse/Edit area.
4. Enter a name for the disposition. If adding it to the default category, simply enter the name of the disposition. If adding it to a new category, the format of the name should be [Category : Disposition Name], i.e., **Auto :Vehicle Recovered**.
5. Enter a **Description** for the new disposition.
6. Specify a **Priorit**y for the disposition. (A lower number means a higher priority.)
7. Select the **Back Office Only** option if the disposition should not be available only in the Correct Reads screen in BOSS, and not exposed in PAGIS.

15.2.2 Deleting a Disposition

1. Select the **System** category in the Shortcut bar (if not already selected).
2. Click the **Dispositions** shortcut.
3. A list of all dispositions is displayed in the Browse/Edit area.
4. Click the desired Disposition. The selected disposition will be highlighted in yellow.
5. Click the **Delete** button in the bottom area of the Browse/Edit area.
6. Press **Yes** to confirm deletion.

15.3 System Parameters

System Parameters allow for configuration parameters for a BOSS system. System parameters only need to be configured during initial system configuration and normally do not need to be modified again after that.

15.3.1 Editing System Parameters

1. Select **System** from the left Shortcut bar.
2. Click on the **Parameters** button in the Shortcut bar.
3. Click on the desired parameter in the right Browse/Edit window. The bottom pane of the Browse/Edit window will display the entry field for the selected parameter.
4. Modify the parameter value as desired and click the **Save** button.

15.3.2 List of BOSS System Parameters

arc_ActiveRetentionDays – This setting dictates how long reads will be maintained in the BOSS database. After reads have been stored for this time, they will be moved to the archived database, creating space for additional reads in the main database. The default setting is 730 days but can be varied based on the size and needs of the system.
arc_ArchiveDBRetentionDays – This setting dictates how many days to retain an archived database. After an archived database has been stored for this time it will be removed, creating space for additional archived databases. The default setting is 0 days, which indicates that the archived databases will never be removed, but the number of days can be modified based on the size and needs of the system.
arc_DatabaseLocation – This setting allows the user to specify where the archived databases should be saved. A blank entry will save them in the SQL default location.
arc_Enabled – To allow the BOSS server to archive aged reads and free up space, enable archiving by setting this to 1. When archiving is not desired, this setting should be 0.
arc_EndOfMonthCutOff – This setting forces a restriction on the size of the archived databases, so that nothing will be added after the end of each month. The default setting is disabled (0). To enable the setting, change the value to 1.
arc_MaxSize – This setting allows the Administrator to determine the number of reads that can be stored in the archived database. The default value is 1 million and can be varied based on the size and needs of the system. Once an archived database has reached this maximum number of records, a new archived reads database will be created.
audit_Justification_FileNumberRequired – When this setting is enabled (1), users performing read queries are required to enter a file number.This information will also be listed in the audit report. The default setting is disabled (0).
audit_Justification_NotesRequired – When this setting is enabled (1), users performing read queries are required to enter a justification note. This information will also be listed in the audit report. The default setting is disabled (0).
audit_JustificationEnabled – When this setting is enabled (1), users performing read queries are required to select a pre-defined justification. This information will also be listed in the audit report. The default setting is disabled (0).
data_CaptureUsageStatistics – When this setting is enabled (1), information sent from a PAGIS device that has been modified due to Privacy settings will still be utilized to generate usage statistic reports. The default setting is disabled (0).
hls_HotListDeltas – When this setting is enabled (1), updated hotlists will be deployed in full. Changing the setting to disabled (0) will cause only the changes made in the updated hotlists to be deployed.
Password_Expiration_Days-Number of days a password is allowed to remain unchanged. Value “1”=enabled, “0”=disabled.

15.3.2 List of BOSS System Parameters (continued)

Proxy_uri/proxy_username /proxy_password/proxy_domain – These settings are only necessary if there is a proxy server involved that requires authentication for connection. Enter a valid Uniform Resource Identifier (URI), username, password, and domain in the associated fields to allow communication through the proxy server. Consult the network Administrator for proxy authentication information

purge_Minutes – This setting is the time, in minutes, between each session of purging or archiving. The default value is 15 minutes and is configurable to any value of 1 minute or greater.

purge_ReadCount – This setting is the number of records to be processed by the purging or archiving process per session. It can be any value, but setting it according to system limitations is recommended because the process can be resource intensive if set too high.

readQuery_fromDate – This setting allows the user to adjust the default From date on the Reads Query screen. Any value can be entered and it is used to decrement from today. Example – a value of 7 would result in a from date seven days earlier than today.

readQuery_toDate – This setting allows the user to adjust the default to date on the Reads Query screen. Any value can be entered and it is used to incremented from today. Example – a value of 7 would result in a to date seven days later than today.

Recent_Read_Time- Time in min. of how long to hold reads in the "Recent reads" table for hit evaluation.

Recent_Reads_Amt- Number of records to delete from "Recent reads" if older then Recent read time.

ResendEmailNotice- Resend Offline notification on Fixed Camera after this amount of time has expired.

rq_ReaperHours – This setting manages how long to retain a temporary database table created when running certain read queries. This allows the user to continue to review the results of those queries for a longer time. The default is a minimum of 48 hours, and there is no maximum value.

smtp_AlertTemplate- Default email template, definitions listed in table below.

smtp_SenderName – In order for the BOSS server to send alerts to email addresses, the SMTP settings must be configured correctly. The SMTP sender field should contain the username that will appear in the from field on an email generated by the BOSS system.

smtp_Server – The name or IP address of the SMTP server should be entered here. The name or address used here must be one by which the SMTP server can be reached from the BOSS server. This field must be populated correctly in order for the BOSS system to send any alerts to email addresses.

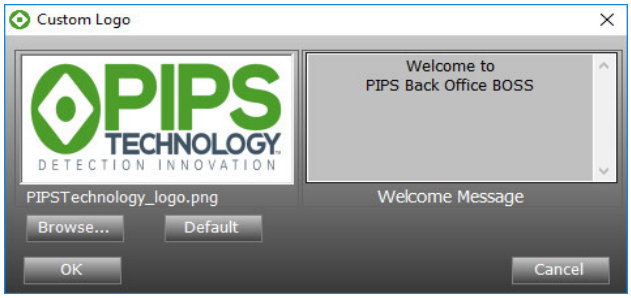
smtp_SSL – If Secure Sockets Layer (SSL) is used on your SMTP server, the value of this field should be set to 1. If you do not use SSL, this field should be set to 0.

smtp_SubjectTemplate – This field sets the subject line of alert emails generated by BOSS. The following entry in the field incorporates both static text and a BOSS field variable as well: BOSS alert FROM [SRC].

TOKEN	DESCRIPTION	TOKEN	DESCRIPTION
[LPN]	license plate	[FD1]	field1
[STE]	site	[FD2]	field2
[SRC]	device	[FD3]	field3
[LOC]	location	[FD4]	field4
[LAT]	latitude	[FD5]	field5
[LON]	longitude	[PNC]	PNCID/DL
[HOT]	hotlist name	[INF]	information

smtp_UserName/smtp_password – The SMTP username and password fields should contain a valid SMTP username and associated password for sending alerts through the SMTP (email) server. Normally, a BOSS Administrator coordinates with his SMTP Administrator to create a special SMTP user that will be used exclusively for BOSS alerts.

Soap variables- All are now legacy features not currently used.



verint_HotlistsMonitored- Enter hotlist by name separated by commas.

verint_NotificationConfigured- Indicates whether the Verint notifier should be used.

15.3.2 Branding

BOSS allows the BOSS Administrator to upload a logo image and a welcome message that is displayed to BOSS users on the Home screen. To define the image and message:

1. Select **System** from the left Shortcut bar.
2. Click on the **Parameters** button in the Shortcut bar.
3. Click on **Branding**.
4. If needed, click **Default** to remove current custom settings.
5. Pick the desired logo image using the **Browse**... button.
6. Type in a message in the Welcome Message box.

Browse – Select an image file (JPEG, GIF, BMP) to be displayed on the home screen. The largest recommended image size is 120 by 380 pixels.

Default – Remove the custom logos and texts.

Welcome Message – A custom welcome message can be typed in here.

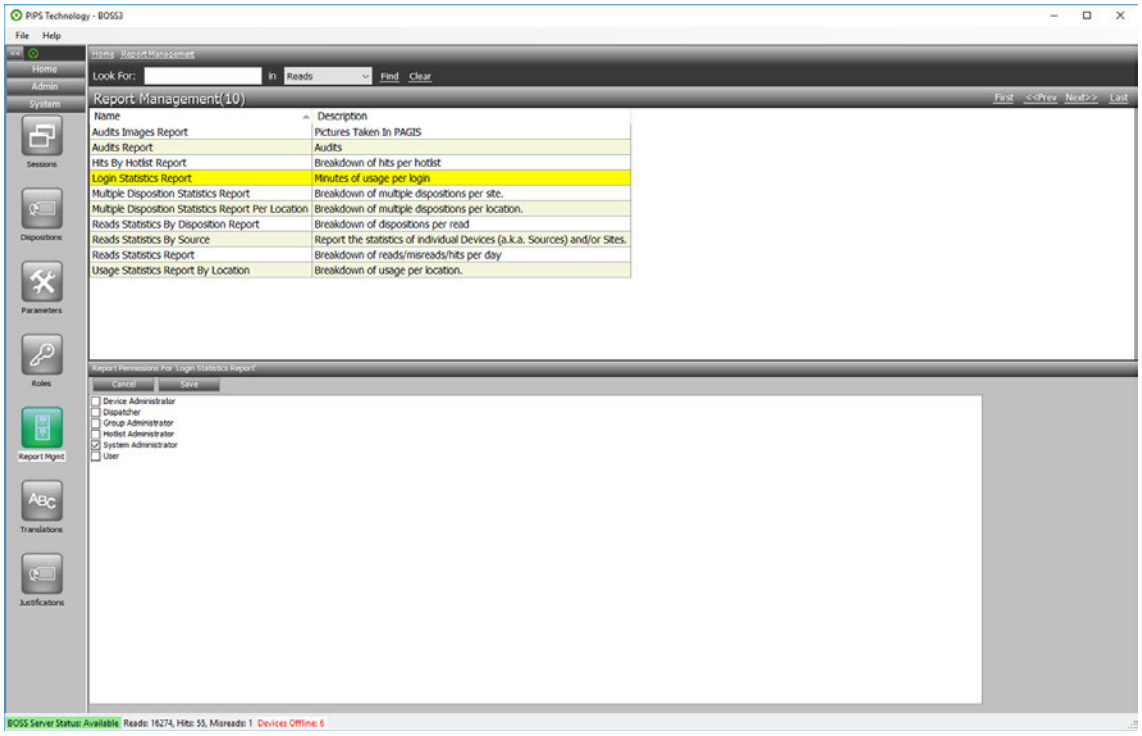
7. Click **OK** to save changes, or **Cancel** to discard changes.

15.4 Roles

In addition to the default roles that are automatically created by BOSS, the Administrator can create and configure custom roles as needed. *See Section 4.2, Permissions, for more information.*

15.4.1 Adding New Roles

1. Select the **System** category on the Shortcut bar.
2. 2. Click the **Roles** shortcut. The Browse/Edit area will display a list of existing roles.
3. 3. Click on the **New** button. The New Role entry window will be displayed in the bottom of the window.
4. 4. Enter the name of the new role and assign the desired permissions.
5. 5. Click the **Save** button.



15.4.2 Deleting Roles

1. Select the **System** category on the Shortcut bar.
2. 2. Click the **Roles** shortcut. The Browse/Edit area will display a list of existing roles.
3. 3. Click on an existing role and the edit window will be displayed in the bottom of the window.
4. 4. Click the **Delete** button. Click **Yes** when prompted to complete the operation.

15.5 Report Management

15.5.1 Assigning Permissions to Access Reports

1. Select the **System** category on the shortcut bar.
2. Click the **Reports Mgmt** shortcut. The Browse/Edit area will display a list of available reports.
3. Select a report by clicking the name in the list. The selected report will be highlighted in yellow.
4. Current report permissions for the type of report chosen display in the bottom of the Browse/Edit area. Each BOSS role is listed along with a checkbox. Click a role in the list to select. Click a second time to change an unchecked box to a checked box.
5. After selecting the desired permissions for the report, click the **Save** button.

15.6 Translations

Across various organizations and agencies, terminology related to BOSS can differ significantly. For this reason, a new function added in the BOSS version 3 series gives customers flexibility in naming conventions used in the application. The Translations function provides for changing wording on BOSS screens, which allows a customer to tailor screen labeling to correspond to their own vernacular. Text items in the translations editor correspond to labels on BOSS screens. Authorized users can change these text items as necessary.

Note: This feature is not intended as a replacement for language-specific versions of BOSS. For international versions of BOSS, please contact PIPS™ Technical Support.

15.6.1 Entering a New Translation

1. Select the **System** category on the Shortcut bar.
2. Click the **Translations** shortcut. A list of all current translations appears in the top of the Browse/Edit area.
3. Click the **New** button and the new Translations Entry screen appears in the bottom area.
4. Enter an existing label from the BOSS application in the Caption field, using the exact case and spelling that normally appears on the screen.
5. Enter the desired replacement text in the Translation field.
6. Click the **Save** button to complete the operation.

Note: The user must log off and on again for translation to take effect in the current session.

For Example: A customer preferring to see a label of “Plate” where the software normally uses the term “LPN” would use the translations feature to create the replacement for their installation. The translation Entry Caption field would contain “LPN,” while the Translation field would contain the replacement term “Plate.”

15.7 Justifications

To ensure that sensitive information is being kept secure, systems can be configured to require that users who are performing queries on reads have a valid reason for doing so. Enabling the audit Justification Enabled parameter requires users to justify their reason for querying reads. There are five justifications created by default: Audit, BOLO Post Scan Query, Crime Scene Query, Test and Trend Analysis. These queries will also be documented in audit reports.

15.7.1 Entering a New Justification

1. Select the **System** category on the Shortcut bar.
2. 2. Click the **Justifications** shortcut. A list of all existing justifications appears in the top of the Browse/Edit area.
3. 3. Click on the **New** button. The Justifications Entry screen appears in the bottom area.
4. 4. Enter a justification. There is no validation on the entry for this field.
5. 5. Click the **Save** button to complete the operation.

15.7.2 Deleting Justifications

1. Select the **System** category on the Shortcut bar.
2. 2. Click the **Justifications** shortcut. A list of all existing justifications appears in the top of the Browse/Edit area.
3. 3. Click on the justification to be deleted. The Justifications Edit screen appears in the bottom area.
4. 4. Click the **Delete** button. Click on **Yes** when prompted to complete the operation.

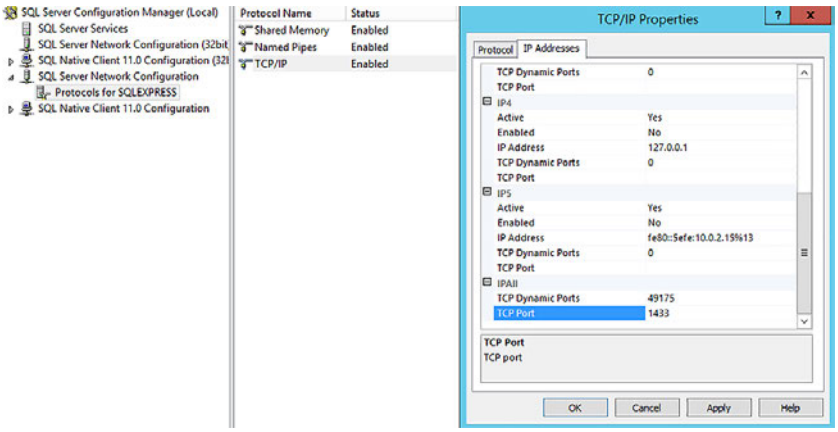
17 APPENDIX: INSTALLATION AND CONFIGURATION

This section is intended for authorized personnel in installation and configuration of a BOSS system. The information in this guide is organized sequentially, in the order that steps would be performed when initially setting up a new BOSS system, with the first section describing the software installation process, and the subsequent sections describing configuration options for a BOSS system.

Upon initial installation of a new BOSS system, the BOSS server application must be configured using the BOSS Controller application. BOSS Administrators may also find the need to modify configuration settings after the system has already been in use. Therefore, the configuration section can be used as an ongoing reference for authorized personnel responsible for maintaining the system.

Note: It is critical that only an IT Administrator or other knowledgeable personnel attempt configuration modifications to a BOSS system. Incorrect configuration settings can cause serious issues with operation and/or adversely affect data integrity. When in doubt, you should consult PIPS Technical Support before making system configuration changes.

OS feature requirements



- Windows server 2008 or newer.
- Net. TCP Port Sharing Service must be enabled and running.
- Framework .Net 4.0.

SQL Server Requirements

1. SQL version 2012 or newer required.
2. 2. SQL login account “NT AUTHORITY\SYSTEM” is required to be mapped to Boss3 database as db_owner. For system with existing “Boss3” databases this should be applied prior to Boss software installation. For new installation this can be applied after the Boss service has ran for the first time and created the Boss3 database. See- “Common issues”

Settings under SQL Server Configuration Manger:

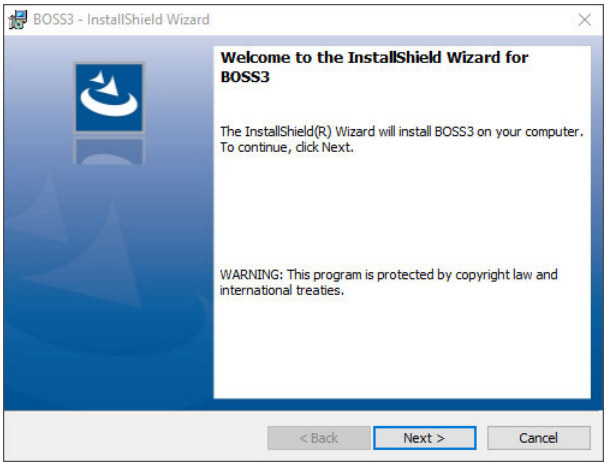
3. “SQL Server Network Configurations” Name Pips must be enabled.
4. “SQL Server Network Configurations” TCP/IP must be enabled, with “IP All” set to port 1433.
5. SQL restart required after changes.

17.1 Installing the BOSS Server Application Files

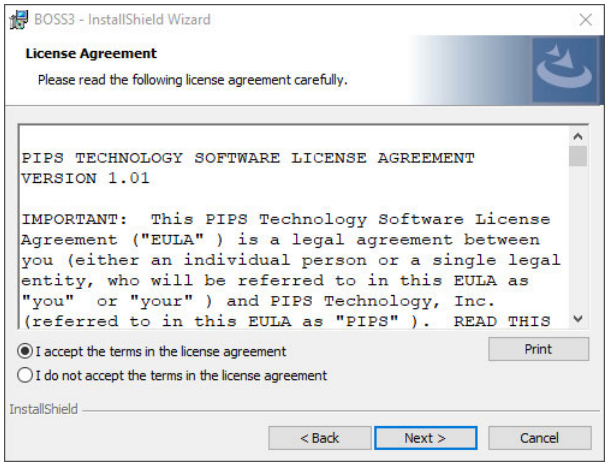
17.1.1 Running the Installer

This guide assumes that the Microsoft SQL Server 2012 or newer instance has already been installed and is available. If the SQL Server is not available, stop now and continue installation after the SQL Server has been installed. To install the Microsoft SQL Server, please follow the instructions provided by Microsoft.

Note: 1. It is recommended that antivirus utilities be disabled during the install.

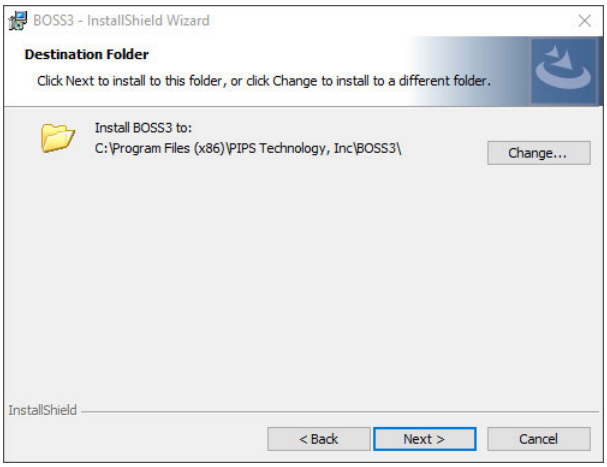


To commence the installation:

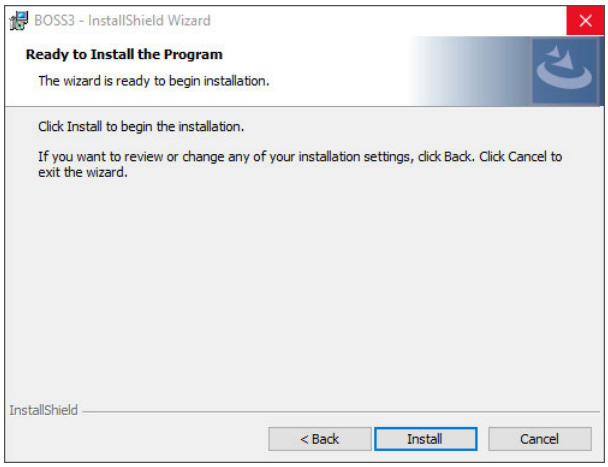


1. Select the link supplied by PIPS to the BOSS installation application.
2. Run the BOSS Setup executable.

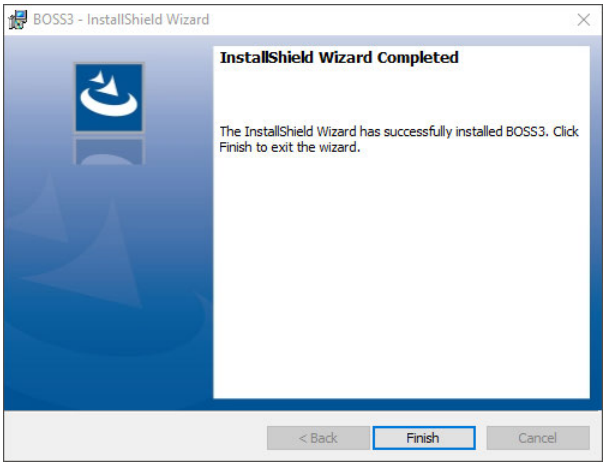
Note: Right-click on the installer icon and select Run As Administrator.



17.1.2 License Agreement

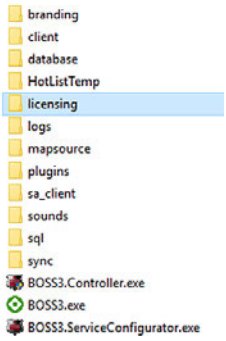


1. Click **Next** then check the license agreement checkbox to acknowledge agreement with the license terms.
2. Click **Next** to continue.

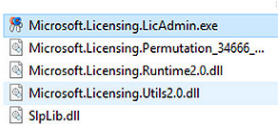


3. Accept the default installation file path or change.
4. Click “Next” to proceed to “Install”

5. When the Installation Complete message is displayed, click **Finish** to proceed to the Licensing.



17.2 License Key Management



17.2.1 Activating the License Key

Following a new installation, a valid BOSS license key must be entered. There are three options available discussed in the sections below that can be used to activate the license. For upgrades or reinstallation on same server this step is not required as the licensing tool will automagical re-acquire the licensing code.

1. Navigate to the licensing folder in the BOSS3 installation folder.

2. Start Microsoft License Manager (Microsoft.Licensing.LicAdmin.exe). This must be run as an Administrator.

3. In the License Manager User interface, select **File → Activation Wizard** to install the new license
4. When the Activation Wizard dialog opens select one of the following:
   a. I want to activate the software over the Internet. *See Section 17.2.1.1.*

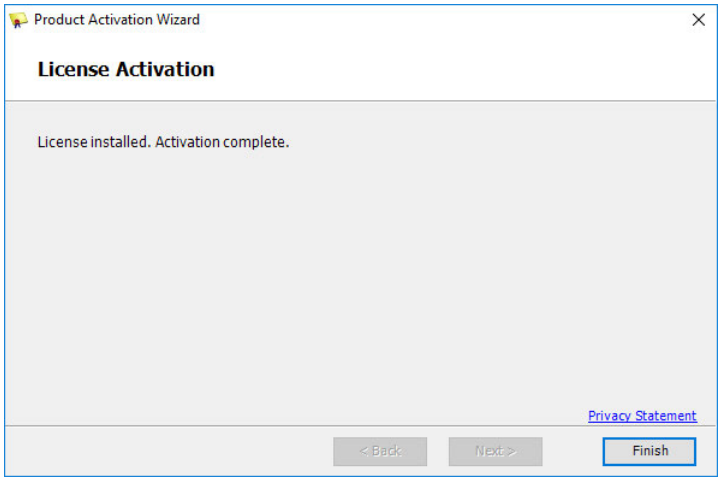
   or

   b. I have a license file I want to install. *See Section 17.2.1.2.*

   or

   c. I want to request a license file. *See Section 17.2.1.3.*

17.2.1.1 Activating the License Key over the Internet



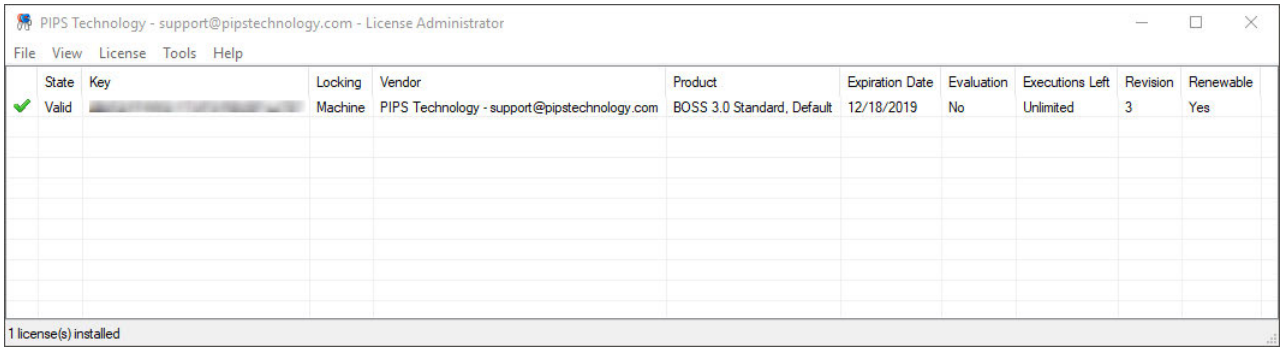
1. Check **I want to activate the software** over the Internet.
2. Click **Next** to continue.

3. Enter the activation key provided by PIPS and click **Next**.

4. The license key will be activated over the Internet. The following screen will display. Click **Finish** to continue.

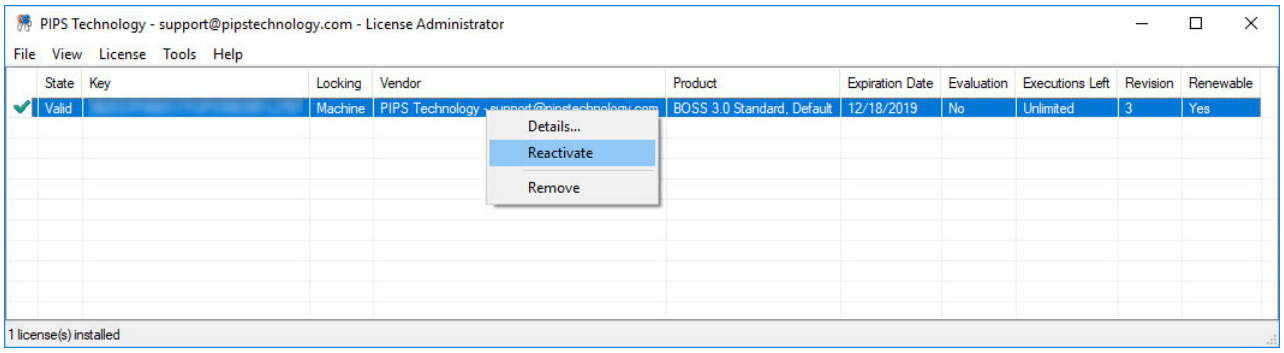
17.2.1.2 Activating the Software with a License File

1. Check I have a license file I want to install.
2. Click **Next** to continue.
3. Navigate to the location of the license file and select it.
4. Click **Next** to continue.
5. When the activation is completed click **Finish**.



17.2.1.3 Request a License File to Activate the License

1. Click **I want to request a license file**. Press Next.
2. Enter the license key you received previously. Press **Next**.
3. In the screen that displays, copy the text block highlighted (starts with "—BEGIN Request") to the clipboard and paste it into an email. Send the email to PIPS Technical Support (support@pipstechnology.com).
4. Close the Activation Wizard by clicking the **Finish** button.
5. You will be sent an activation file via email. Extract the license file (*.bin) and copy it to a folder on the computer where BOSS is installed. Return to Section 17.2.2 and follow the steps to activate the license.



17.2.2 Updating a License Key

If the BOSS license key becomes invalid, or if the license is upgraded, follow these steps to reactivate a BOSS license key:

1. Start Windows Explorer on the BOSS server.
2. Navigate to the folder where the BOSS server application is installed (by default C:\Program Files\PIPS Technology, Inc\BOSS3).
3. Locate the licensing folder as described in Section 17.2.1.
4. Open the folder and right click on the application Microsoft.Licensing.LicAdmin.exe. Select to run as the Administrator. You will see the following screen:

5. Select the license key. Right-click, and from the context menu, select Reactivate.

6. Click Next.
7. When the Installation Complete message is displayed, click Finish.

17.3 Map Display Options with BOSS

BOSS can display collected plate read information plotted on a map. There are two different mechanisms for displaying maps within the BOSS Smart Client application.

17.3.1 U.S. Census Bureau TIGER Maps

U.S Census Bureau TIGER Maps now discontinued.

17.3.2 Advanced Mapping with Internet Maps

PIPS provides an option to purchase an "Advanced Mapping" feature with BOSS. This option enables integration of Maps, an Internet-based service that BOSS can use to display maps in the Smart Client application.

Note: In order to use Advanced Mapping, the BOSS Smart Client will need an unimpeded Internet connection.

17.4 Configuring the BOSS Server Application

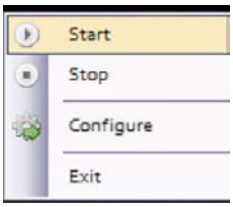
After the BOSS installation is completed, the application must be configured using the BOSS Controller program. The following sections explain how to use this program as well as the configuration settings that are available.

17.4.1 The BOSS Controller Application

17.4.1.1 Starting the Boss Controller

BOSS Controller (BOSS3.Controller.exe) is the application used to configure and control the BOSS service. The BOSS Controller is installed on the server computer along with the server application. After the installation is complete the Controller program will start automatically. If this is a new installation the license will need to be activated first. Choose to configure BOSS at a later time by clicking on Cancel.

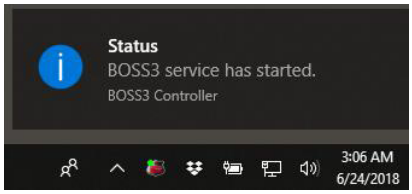
The shortcut to the BOSS Controller program can be found on the desktop or in the All Programs → PIPS Technology → BOSS3 menu. Right-click on the Controller icon and select Run As Administrator. When the BOSS Controller program is started an icon for the application will appear in the Windows System Tray at the lower right corner of the desktop.



17.4.1.2 Status Colors

The icon for the Controller program includes a "traffic light" that uses a color indicator to show the status of the BOSS service application. When the BOSS service application is running, the indicator is green. When the BOSS service application is not running, the indicator is red. Yellow color indicates that the application is changing state (starting or stopping).

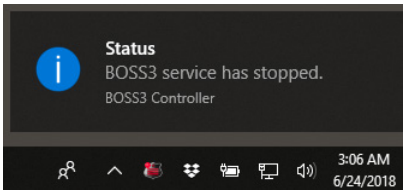
17.4.1.3 Right-Click Menu



When you right-click the BOSS Controller System Tray icon, a pop-up menu will appear:

Start	Start the BOSS service.
Stop	Stop the BOSS service.
Configure	Present the BOSS Configuration Wizard.
Exit	Close the BOSS Controller application. (Note: This closes the BOSS Controller program, but does not stop the BOSS Service.)

17.4.1.4 Starting the BOSS Service

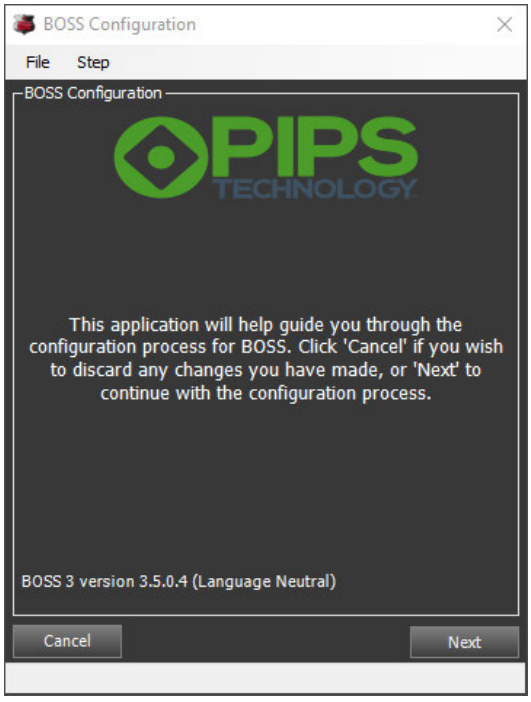


When the **Start** action is selected, and the service starts successfully, a Success message will be displayed:

The traffic light in the BOSS Controller icon will turn green to indicate the status.

17.4.1.5 Stopping the BOSS Service

When the **Stop** action is selected, and the service stops successfully, another Success message will be displayed, and the traffic light changes to red:



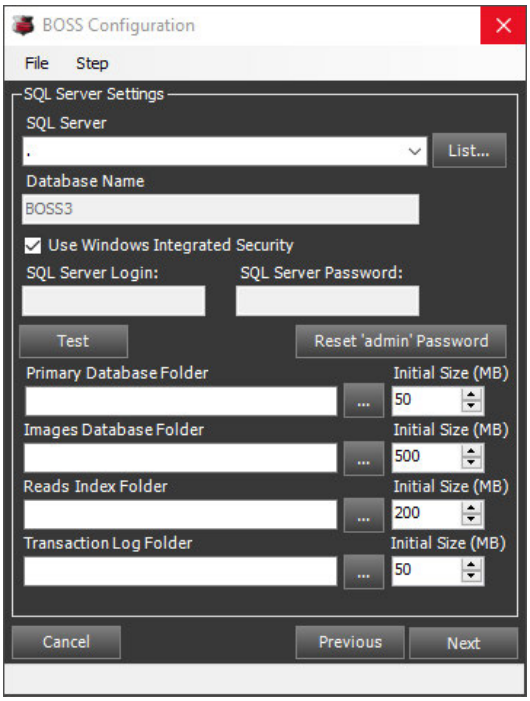
17.4.2 BOSS Configuration

17.4.2.1 Activating the Configuration Wizard

1. Right-click the **Controller System Tray** icon.
2. Select the **Configure** option. The Configuration Wizard options are explained in the following sections.

17.4.2.2 BOSS Configuration Wizard

Step through all configuration screens in the BOSS Configuration Wizard by simply clicking the **Next** button on this first screen. Click **Next** on each subsequent screen after entering in the desired settings. Note: This step-by-step process is recommended when you are configuring the system for the first time.



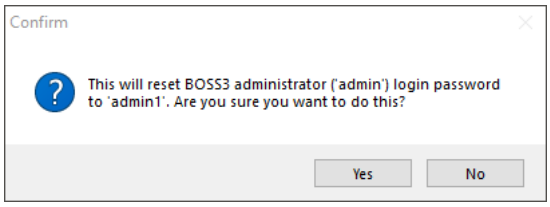
OR

Click the **Step** menu option to access the configuration menu and proceed to the step choice.

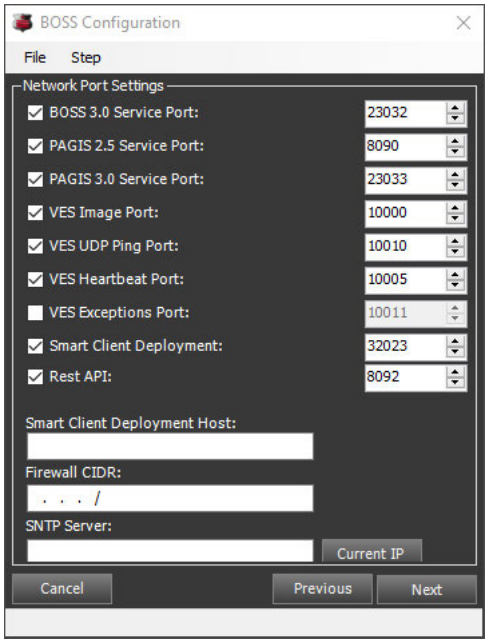
For each configuration step (described in Sections 17.4.2.3 – 17.4.2.9), clicking **Next** will take you to the next configuration screen, clicking **Previous** will take you to the previous one, and clicking Cancel will clear any changes you have made on the current screen.

17.4.2.3 SQL Server Configuration

SQL Server configuration is required for a new BOSS system, in order to specify the location and necessary authentication information for the SQL database.



SQL Server – Select the SQL Server instance for BOSS. Press **List** to choose from a list of available SQL Servers. The SQL Server Browser service must be running at this point. You may also type in the server IP address or host name. Enter a dot "." to use a local SQL Server that is running on the same machine as the BOSS service.
Use Windows Integrated Security – If checked, BOSS will use Windows Integrated Security to access the SQL Server database.
SQL Server Login and SQL Server Password – If Windows Integrated Security is not selected, enter the SQL Server username and password provided for BOSS to use to access the database.
Test – The **Test** button can be used to test the SQL Server settings currently in place. The Test button initiates a connection. A message box will appear to indicate whether the test connection fails or succeeds.
Database file locations: BOSS database can be divided among multiple locations as follows if necessary. When selecting a folder path for the database files keep in-mind that the folder path is referenced from the standpoint of the SQL server location.
Primary Database Folder – The drive and folder where the BOSS primary database will reside.
Images Database Folder – The drive and folder where the BOSS will store images.
Reads Index Folder – The drive and folder where BOSS will store database indices for stored plate reads.
Transaction Log Folder – The drive and folder where BOSS will store the database transaction log file.
Initial Database Sizes - By Default Boss will predefines the sizes as indicated in the controller.



17.4.2.4 Resetting the Administrator Password

If you have forgotten the BOSS administrator (admin) password, you can press the **Reset 'admin' password** button to reset the password to "admin1."

Pressing **Yes** will immediately reset the password.

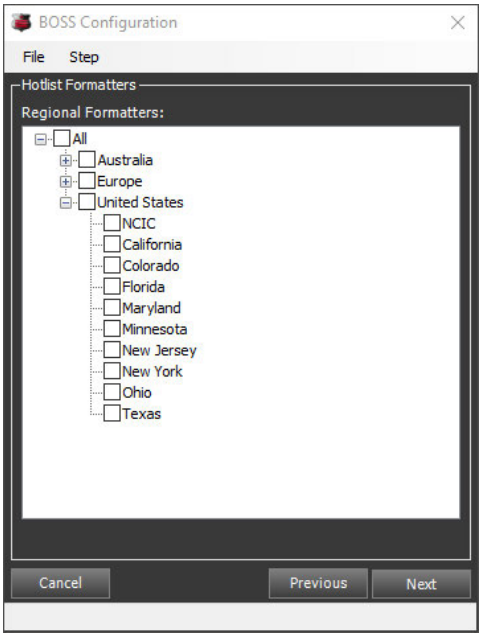
17.4.2.5 Network Port Settings

BOSS uses a number of TCP/IP and UDP network ports for communication between server and client applications and server and license plate reading devices.

17.4.2.5 Network Port Settings (continued)

FIELD	DESCRIPTION	DEFAULT PORT
BOSS 3.0 Service Port	TCP/IP port used to provide access for BOSS Smart Clients	**23032**
PAGIS 2.5 Service Port	TCP/IP port used to provide access for older mobile client versions older than Pagis 2.6.8	**8090**
PAGIS 3.0 Service Port	TCP/IP port used to provide access to various mobile client versions	**23033**
VES Image Port	TCP/IP port used to receive reads from fixed cameras	**10000**
VES UDP Ping Port	UDP port used to receive keep alive ping messages from fixed cameras	**10010**
VES Heartbeat Port	TCP/IP port used to receive heartbeat status messages from fixed cameras	**10005**
VES Exceptions Port	TCP/IP port used to receive exceptions messages from fixed cameras	**10011**
Smart Client Deployment	TCP/IP port used for BOSS client installations via BOSS server	**32023**
REST API Port	HTML port used for the communication between the BOSS service and newer versions of PAGIS	**8092**

If the checkbox in front of the port name is left unchecked, the corresponding connection will be disabled.



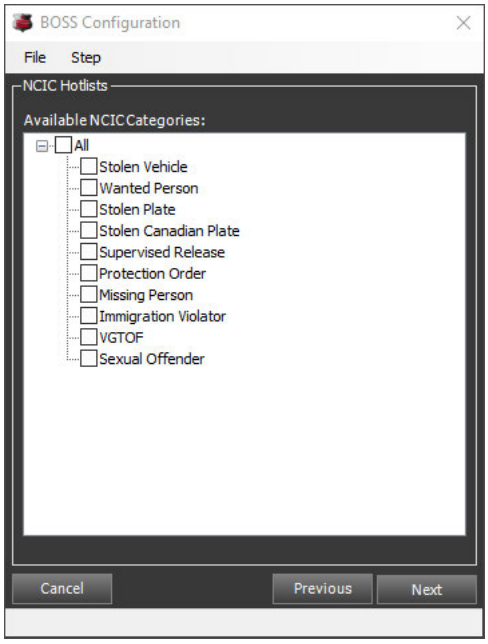
Smart Client Deployment Host – If this information is entered, BOSS Smart Clients will use the given hostname to distribute the smart client application. This can be left blank to use the local host name.

Firewall CIDR – BOSS provides a built-in firewall for incoming fixed camera connections. If a value is entered, only cameras with an IP address matching the CIDR will be allowed to connect. CIDR (Classless Inter-Domain Routing) is a standard industry method for specifying a range of included IP addresses. The format of the CIDR entry is A.B.C.D/N, in which the dotted decimal portion before the "/" is interpreted, like an IPv4 address, as a 32-bit binary number that has been broken into four octets. The value of N indicates the number of shared initial bits, counting from the left-hand side of the address.

For Example: For an entry of 10.200.200.255/24, the CIDR value 24 leaves 8 bits that can be changed. Therefore, addresses 10.200.200.x are permitted addresses.

SNTP Server – BOSS has a built-in time service. The fixed ANPR/ALPR cameras do not support automatic daylight savings time (DST) adjustment. The BOSS time service provides a customized SNTP service for these cameras in order to support DST. To use the built-in time service, Windows Time Service has to be disabled in the Services Control panel, and the BOSS time server IP address entered in this field.

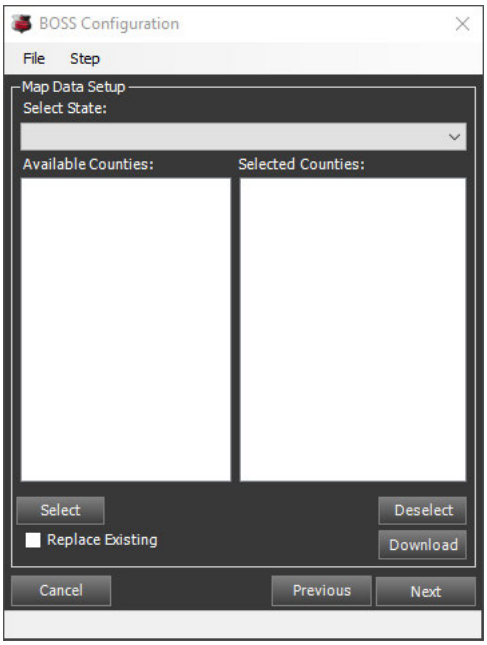
17.4.2.6 Regional Hotlist Formatters



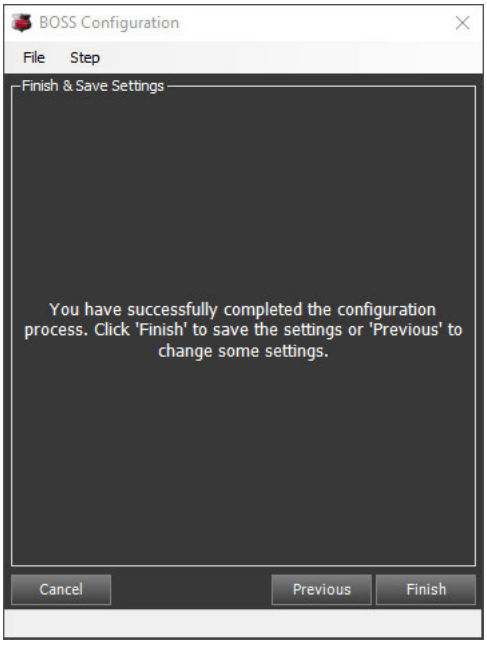
The BOSS allows the selection of predefined hotlist formatters. These formatters define the input format (structure) of hotlist data files. Custom formatters can be defined via the BOSS Smart Client application *(see Section 13 of this manual for more information)*. Also, when installing BOSS in the United States, National Crime Information Center (NCIC) data formatters can be selected for specific states (see section following).

To select or unselect formatters, click on the formatter title to add or remove a check mark. Additional formatters can be added to a system as needed. These will be provided by PIPS Technical Support upon request.

17.4.2.7 NCIC Hotlist Formatters



BOSS supports hotlist import in the United States National Crime Information Center data format. This option is available only in the United States.



To configure formatters for the desired categories, check those categories. Once the desired categories have been selected, press **Next** to proceed.

17.4.2.8 Map Data Setup

U.S Census Bureau TIGER Maps now discontinued. Do not utilize this section, click “Next”

17.4.2.9 Finishing Configuration

Click **Finish** to complete configuration. BOSS will save the chosen configuration.

17.5 Installing the BOSSUI Smart Client Application

17.5.1 Installation over the Web

To initiate a web installation on a workstation, start up Microsoft Internet Explorer and navigate to this web address: **http://{boss_server_ IP_address}:32023/publish.htm**, where {boss_server_IP_address} is the address of the server running the BOSS server application.

For Example: To install the Smart Client on the BOSS server itself, navigate to http://127.0.0.1:32023/publish.htm. The installation webpage will be presented. The advantage of installing the Smart Client over a web browser is that the application will automatically check for updated versions every time it is started.

17.5.2 Stand-Alone Installation

The BOSS Smart Client is a zero-administration desktop application meant for administration of the BOSS server application and querying data collected in the BOSS database as described in this manual. The BOSS Smart Client is installed as a single executable program. This program can be copied to any Windows workstation, or to a shared network drive.

To install the stand-alone application:

1. Start Windows Explorer on the BOSS server.
2. Navigate to the folder where the BOSS server application is installed (**by default C:\Program Files\PIPS Technology, Inc\BOSS3**)
3. Locate folder **sa_client.**
4. Copy the **sa_client** folder to the workstation or shared network folder of choice.

17.6 Configuring Client Tools

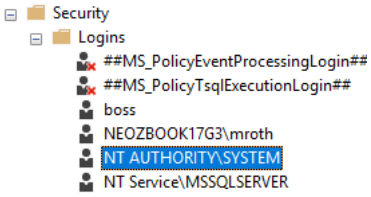
Client Tools is used to transfer any files needed during an Pagis shift from BOSS to an Pagis system that is being run in the Disk Sync mode. *See Section 13, Client Tools, and the Pagis Software User's Manual.*

Client Tools does not have a customary interface. Once the utility is started, the Client Tools icon will appear in the Windows System Tray. Before use, Client Tools must be configured and can be quickly completed with the simple configuration wizard provided:

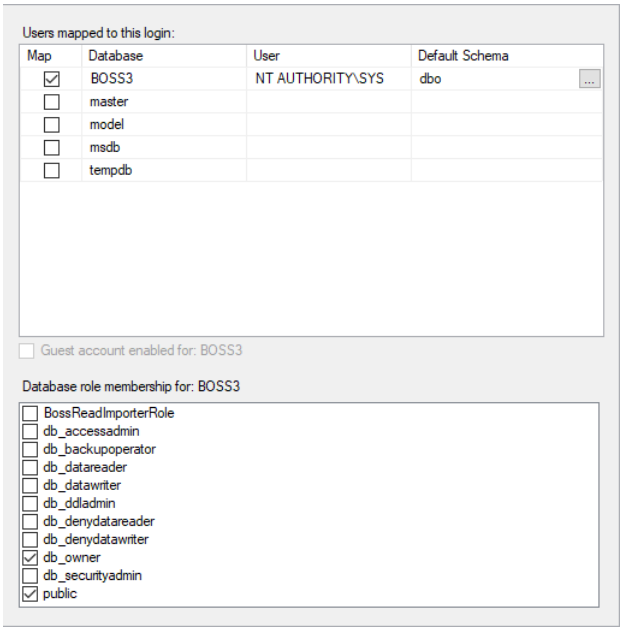
1. To start the wizard, right-click the icon and select **Configure**. The initial screen provides information about the tool.
2. Click **Next** to continue the configuration, or **Cancel** to exit the wizard.
3. Enter a path so that Client Tools knows where to store the files it creates and where to look for files to process. This path can be a local, network, or external drive. Enter the path or click on the … button and browse to the location.
4. If the Begin Shift files that Client Tools creates need to be encrypted, click **Encrypt Output**. Click **Previous** to return to the previous screen, or click **Next** to continue.
5. The data used to create the Begin Shift files is created and managed in BOSS. Client Tools needs to know where the BOSS Server is located. Enter the server IP and the port to use to connect to it. Click **Previous** to return to the previous screen, or click **Next** to continue.
6. The final screen provides additional information on how to use the wizard. Click **Previous** to return to the previous screen, or click **Finish** to save the changes and exit.

Common Issues

Missing Permissions on the database user



PIPS Boss service does not start: If the service does not start after two tries, go to the logs file located in "C:\Program files(x86)\PIPS Technology, Inc\BOSS3\logs", there look for the following message:



a. The server principal "user" is not able to access the database "BOSS3" under the current security context:
This problem is caused by missing permissions in the database user you are using.
To fix this problem you need to go to the Microsoft SQL Server Management Studio application and connect with a user with sysadmin privileges, inside the object explorer expand the folder Security, within the logins folder identify your user, right click on the user and select Properties. Inside "Server Roles" mark the sysadmin box.
After this restart the BOSS service.

The Underlying Provider failed

When a read query is made, the application shows the message **The Underlying Provider failed**

a. Inside the logs file, look for the line with the message "Login failed for user" identify the user, example- "Login failed for user 'NT AUTHORITY\SYSTEM". If this occurs log into SQL Studio Manager and map the BOSS3 Db to that account, also add the membership role of "db_owner" to the account.

Failed login

Check that the service is running, and the credentials are valid, also, check the server configurations, if you have localhost instead of 127.0.0.1 replace it for 127.0.0.1. If the problem persists go to the logs file and identify the error and contact PIPS customer support support@pipstechnology.com.

Relocating BOSS3 database

- When an upgrade requires you to move your existing BOSS3 database to a new location follow the recommend step in our "PIPS Relocate Boss Data Files" document for step by step instructions.

18 Appendix: Troubleshooting

When troubleshooting an issue, always start by looking for error messages in the Server log file, usually found at ...\PIPS Technology, Inc\ BOSS3\logs\BOSSServerLog.txt. Proceed based on the following information, recognizing that escalation may be necessary. If so, obtain a copy of the complete error message and include it with all escalated documentation.

ISSUE REPORTED	EXPLANATION	STEPS TO CORRECT
Just after an installation/upgrade, the UI won't start.	It takes several moments for the BOSS Server to be completely started and ready for information to be accessed.	After starting the BOSS server, wait for several moments before attempting to start the UI. If this is an upgrade this could be several minutes while the database is being updated.
I start the BOSS Controller, but it stops a moment later. The following error message may display "Error: Error in BOSS3 Controller. Please check the log files." (New installation scenario)	The license was not activated. When checking the BOSS Server Log, there will be two error messages : – 'Licensed for 0 concurrent clients' and – 'Failed to set registry parameter [_tmpbaliked a63] to value System.Byte[].'	Return to the licensing activation and updating checklist. (*See Section 17.2, BOSS Version 3.2 and Above License Key Management.*)
I start the BOSS Controller, but it stops a moment later. The following error message may display "Error: Error in BOSS3 Controller. Please check the log files." (Upgrade scenario)	The Upgrade Tool must be run before starting the Controller.	Run the Upgrade Tool. (*See Section 17.7 The BOSS Upgrade Tool.*)
I start the BOSS Controller, but it stops a moment later. The following error message may display "Error: Error in BOSS3 Controller. Please check the log files." (Other scenario)	If the Upgrade Tool has been run, there may be a problem with the database.	Look for error messages in the BOSS Server Log. Provide this information to Technical Support.
A fixed camera won't connect.	The firewall could be blocking the communications.	Ensure that the firewall is allowing communications through the VES ports, found in the BOSS Configuration Controller on the Ports screen.
PAGIS won't connect.	The firewall could be blocking the communications.	– Ensure that the firewall is allowing communications through the REST API (for PAGIS 2.7.x) and PAGIS 3.0 Service (for versions of PAGIS) ports, found in the BOSS Configuration Controller on the Ports screen. – Ensure that the device has been enabled in the BOSS UI Devices screen.
Hotlist will not update.	There is typically a problem with the source file.	– If it is a network hotlist, ensure that the site can be reached by entering the address in a browser. – If a local hotlist, ensure that the file is on the system and can be opened.
The NCIC Hotlist formatter that I need is not available. (New installation scenario)	The NCIC formatters were not added during the initial installation.	Stop the BOSS Service. Go to the Configure option on the BOSS Controller. Step to the NCIC screen. Select the desired NCIC formatters. Click **Save** and exit. Restart the BOSS Service. The formatters will now be available.

ISSUE REPORTED	EXPLANATION	STEPS TO CORRECT
I am unable to see reads/hits in the Dispatch screen.	The time on the read/hit coming in must be relatively close, within a couple of minutes, to the BOSS server time.	For a mobile ALPR system, correct the time on the laptop or ALPR processor. A fixed camera can be configured to use a time server. If issue persists, the server that BOSS is running on could also be configured to sync with a time server.
An error message, "Compressed method not supported," was found in the BOSS Server Log.	There are various reasons that this message can occur.	Obtain a copy of the complete error message. Provide this information to Technical Support.
An error message, "Transaction has aborted," was found in the BOSS Server Log.	There are various reasons that this message can occur.	Obtain a copy of the complete error message. Provide this information to Technical Support.
An error message. "Error #nn appeared in the db for Stored Procedure xxxx on line nn." was found in the BOSS Server Log.	An error occurred when running the stored procedure listed in the message.	Obtain a copy of the complete error message. Provide this information to Technical Support.
An error message, "Timeout expired. The timeout period elapsed prior to completion of the operation or the server is not responding," was found in the BOSS Server Log.	A SQL timeout error has occurred.	Obtain a copy of the complete error message. Provide this information to Technical Support.
An error message, "SNTP server not started, could not bind to InterNetwork 0.0.0.0:123," was found in the BOSS Server Log.	This is an expected error message that occurs when BOSS has not been configured to access a time server.	If no time server has been configured, this message can be ignored. If one has been configured, this needs to be escalated for further assistance.
After a new installation, the BOSS server stops running with an error message, "Failed in working with the database. Ensure connectivity is properly defined. Try running the BOSS Controller again and checking settings," was found in the BOSS Server Log.	When BOSS was started, there was a connection issue between it and the SQL Server.	Start by checking the information in the Controller. If that is all correct, then check to ensure that the SQL Server is running. If no issues are found there contact Technical Support Obtain a copy of the complete error message.
After a new installation, the BOSS Server stops with no error message in the BOSS Server Log.	The server needs to be run with Administrator privileges.	The server should be restarted in the Console as an Administrator. If running BOSS as a service then the BOSS Controller must be run as Administrator.
Error message in BOSS Server Log says that the file "httpconfig.exe" cannot be found.	This is an error that can occur when the system has not been updated in some time. It has been seen for other uncertain reasons as well.	Obtain a copy of the complete error message. Provide this information to Technical Support.
After a new installation, the BOSS Server starts but stops moments later. The BOSS Server Log contains the error message. "The system cannot find the file specified Additional Exception Message: Unhandled exception from 'Name:BOSS3.exe. There are no context policies." However, no file is listed in the message.	This typically occurs on older systems, especially Windows Server 2003, or systems that have not been updated for a while.	The file httpcfg.exe needs to be copied into the c\Windows\System32 directory.
The BOSS Server won't start, and there is an error message, "Transport Manager failed to listen on the supplied UIR using the NetTcpPortSharing service: failed to start the service because it is disabled," in the BOSS Server Log.	The NetTcpPortSharing Service is not running.	Obtain a copy of the complete error message. Provide this information to Technical Support.
The BOSS server stops running, and there is an error message, "Cannot open database "<Database Name>," in the BOSS Server Log.	There is an issue with the connection between the BOSS server and the SQL Server.	Start by checking the information in the Controller. If correct, then check to ensure that the SQL Server is running. If no issues are found contact Technical Support. Obtain a copy of the complete error message.

ISSUE REPORTED	EXPLANATION	STEPS TO CORRECT
The BOSS Server won't start and there is an error message "A file activation error occurred. The physical file name '<filename>' may be incorrect." in the BOSS Server Log.	There could be multiple reasons, but it is probably due to a database connection issue.	Obtain a copy of the complete error message. Provide this information to Technical Support.
When running the upgrade tool, an error message is displayed. A message is included in the BOSS Server Log: "Current upgrade state: One of the upgrade scripts failed to run as expected. Please contact support for direction."	This most likely occurred due to upgrading from an old version of BOSS.	Obtain a copy of the complete error message. Provide this information to Technical Support.
An unexpected response or behavior occurs in BOSS, and there is an error message, "Object reference not set to an instance of an object," in the BOSS Server Log.	This is a generic error message that can occur for various reasons.	Unless the issue has an obvious cause contact Technical Support. Obtain a copy of the complete error message.
The following error message, "Discarding tmp buffer because it's corrupted," has been found in the BOSS Server Log.	This message is associated with a database issue.	Obtain a copy of the complete error message. Provide the information to Technical Support.
The following error message, "SMTP server is not defined, email alerts disabled," has been found in the BOSS Server Log.	This message is informational indicating, as it states, that an email server has not been configured.	If attempts have been made to configure an email server and this error message occurs, recheck the settings and the server. If the error remains contact Technical Support.
The BOSS Service stops running, and the BOSS UI indicates that the server is not available. The following error message, "Cannot access a disposed object," is found in the BOSS UI Log.	This is an informational message provided by the UI confirming that it is no longer able to communicate with the BOSS server.	Restart the BOSS server and the BOSS UI will reconnect. If this does not correct the issue contact Technical Support.
The following error message, "The socket connection was aborted," is found in the BOSS UI Log.	This is an informational message provided by the UI confirming that it is no longer able to communicate with the BOSS server.	Restart the BOSS server, and the BOSS UI will reconnect. If this does not correct the issue contact Technical Support.
A problem occurs while adding a hotlist and the following error message "Invalid object name '<hotlist name here>'," has been found in the BOSS Server Log.	This indicates that there is an issue with the hotlist formatter being used.	Confirm that the correct formatter is being used. If so, confirm the source file is formatted correctly. If so, contact Technical Support. Provide a copy of the full error message.
While installing BOSS, an error message displays: "Error opening file for writing: <File Name>."	This indicates that the application listed in the error message is still running.	Check the Windows System Tray for any BOSS applications still running on the system. Close the application(s) and continue the installation.
The BOSS applications are installed under one user, but are not found when another user logs in.	The application was not installed using administrative privileges.	The application will need to be uninstalled and reinstalled using administrative privileges.
While using Client Tools to create Begin Shift files, an error message displays: "Client has not been activated on the server."	Mobile devices must be enabled on BOSS to synchronize data to it. This message is displayed the first time that Client Tools is used to create Begin Shift files because it has not been enabled yet.	Configure Client Tools on BOSS (see Section 17.6) so that BOSS adds Client Tools as a device.
When using Client Tools to synchronize End Shift files to BOSS, the following error message displays: "Error: Could not find <file and path name>."	Client Tools was unable to find the End Shift files to be processed at the defined path.	Check that the location assigned for the End Shift file matches the location chosen when Client Tools was configured. If it does not, move the file to the configured location.

19 Appendix: Plug-Ins

BOSS allows the use of third-party code via a plug-in that serves the needs of BOSS customers with specific data requirements. Once a plug- in is created and compiled, a copy of the DLL and any other necessary files can be copied to the plug-ins directory under BOSS. BOSS will automatically detect the existence of the plug-in at that point and permit reads to be passed to the ReceiveData method of your plug-in.

The functions of the currently available BOSS plug-ins are described in Sections 19.1 and 19.2. For more information and guidance on installing a plug-in, contact PIPS Technical Support for guidance.

19.1 The BOSS Truck Drayage Utility

Regulation of diesel-fueled heavy-duty trucks and a Drayage Truck Registry (DTR) were implemented by the California Air Resources Board (ARB) to help reduce both emissions from these vehicles and public exposure to contaminants in those emissions. Drayage trucks subject to regulation (Class 7 and Class 8) are registered and information about them is maintained on an ARB web service.

The Truck Drayage Utility is BOSS plug-in that provides access to the ARB web service. The utility is designed to contact the web service, retrieve data, and add it to a comma-separated values file. In BOSS, the Hotlist Administrator will then create a whitelist that uses this CSV file as the source file.

The connection to the ARB web service (managed by the Windows Task Scheduler) can be made once daily for a full download of the data, with subsequent connections allowed no more frequently then every 30 minutes for updates. This whitelist can then be deployed to a mobile or fixed camera in the monitored area. If a plate is read that is not included on the whitelist, a notification will be displayed in BOSS. Appropriate action can be taken at that time.

If the ARB web service is unavailable and downloads cannot be completed, the BOSS whitelist will not be updated. There will also be warning messages in the BOSS log such as “Could not connect to <web service address>. TCP error code nnnnn: <Error description>.” If this occurs, the utility will try again in 30 minutes. If the errors persist, it may be necessary to seek assistance.

19.2 The BOSS LPRD Plug-in

The BOSS LPRD plug-in relays the reads the BOSS server receives on to the national database at the Automated Regional Justice Information System (ARJIS), a joint powers agency that facilitates information-sharing among more than 70 law enforcement agencies—local, state, and federal—in the two California counties (San Diego and Imperial) that border Mexico. ARJIS operates a secure intranet (ARJISnet) with more than 11,000 users in San Diego County alone.

19.3 The BOSS DEA Plug-in

The BOSS DEA plug-in writes LPR messages to the file system as reads are received by the BOSS server. Those files will then be available for the Drug Enforcement Agency, DEA, File Transporter to act upon.

20 Appendix: BOSS Mantis

The Mantis service adds analytical analyses to new and existing read images within BOSS providing the user the ability to search based on vehicle Type, Brand, Color & Unique markings. BOSS Mantis is an additional PAID service that can be enabled on BOSS versions 3.6.x.x and above, older version of BOSS can support this feature by upgrading, providing they meet the system

20.1 How Dose Mantis Work

The service is hosted in the Amazon Web Services (AWS) Elastic Compute Cloud (EC2) platform, running in instances comprised mainly by Graphics Processing Units (GPUs). The only information sent to the Mantis endpoint is the vehicle image, known as the Overview image by the BOSS. Communication between BOSS and Mantis is performed as a client-server architecture, meaning the Mantis server uses the 443 (https) port to allow clients to reach the Mantis endpoint.

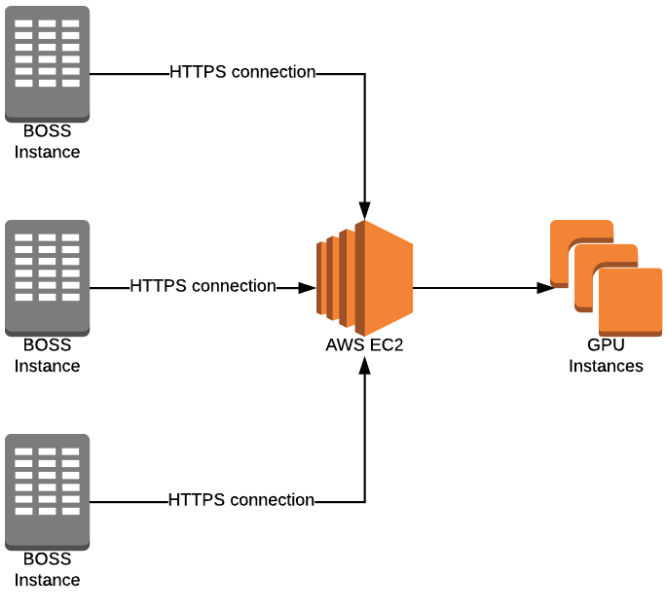


Figure 1 Multiple BOSS instances connected to the Mantis API.:

The information between BOSS and Mantis flows only in one way, this means that only BOSS clients can send data to Mantis, where it will be processed, and a response will be received by the BOSS server. Mantis cannot reach the BOSS Server or perform any kind of operations on the user's behalf over the data stored inside BOSS.

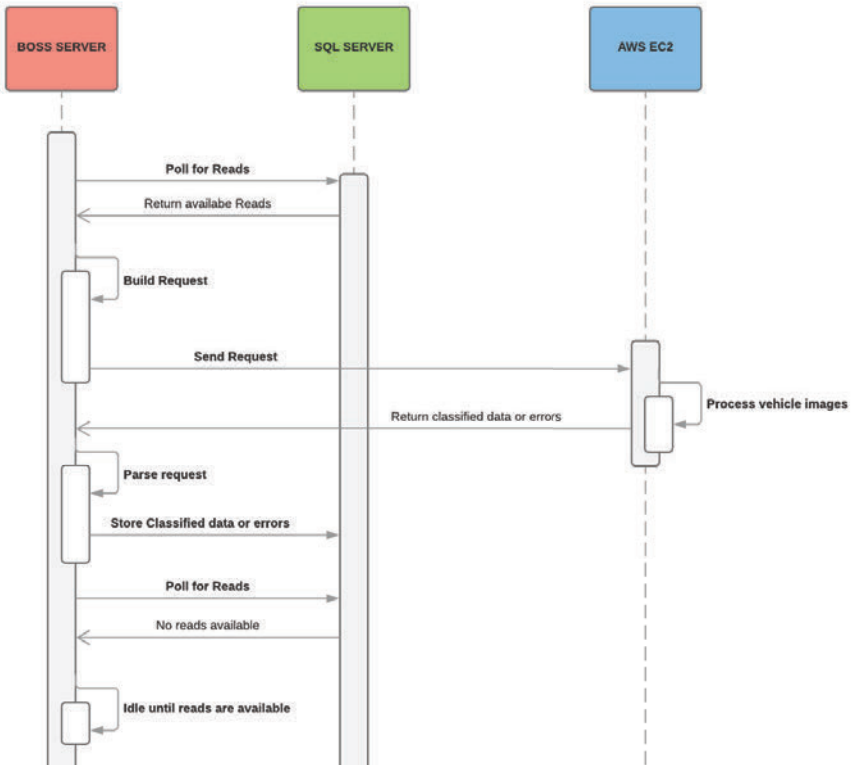

Figure 2 Sequence diagram for the current BOSS-Mantis Integration

20.2 Mantis Security and Encryption

As a summary description for the HTTPS protocol, its security is that of the underlying TLS (Transfer Layer Security) cryptographic protocol, where a certificate is used to authenticate the server, thus, the data flow between the client and the server is encrypted.

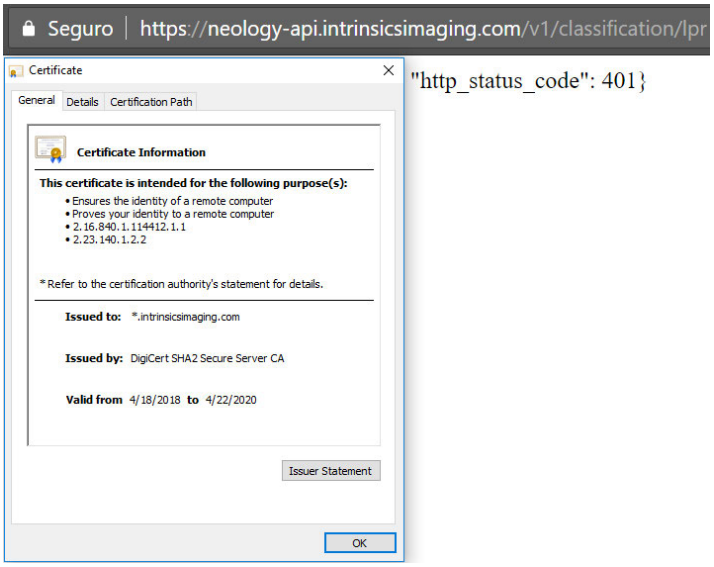

Figure 3 Available details for the certificate on the Mantis-Neology endpoint

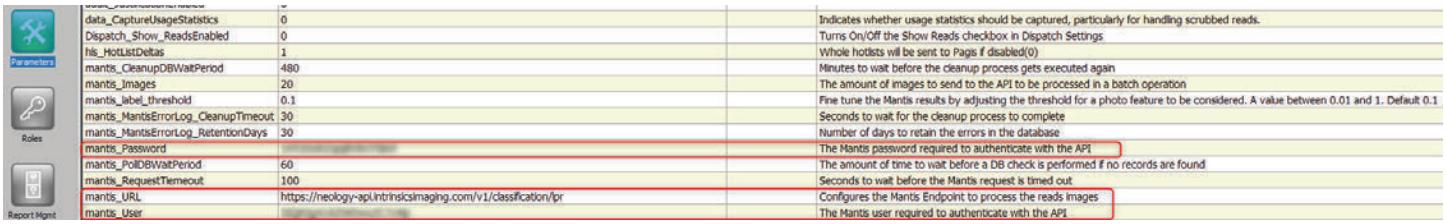
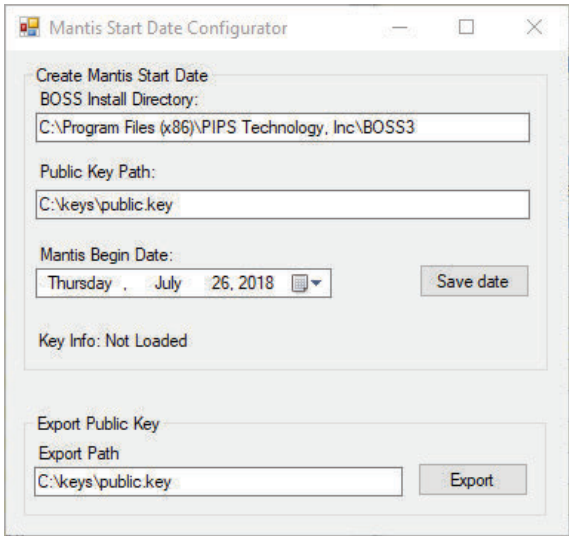
20.3 Mantis Requirements



1. BOSS version 3.6 or newer.
2. Open communication to Mantis API URL (https://neology-api.intrinsicsimaging.com/v1/classification/lpr) via port 443.
3. Mantis Licensing feature required.
4. A valid Mantis User name and password. User name and password provided at time of licensing purchase.

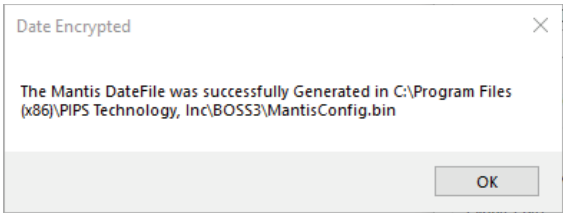
20.4 Mantis Installation



1. To upgrade or install Mantis version of BOSS follow the installation steps provide under Appendix 17. If upgrading from previous BOSS version you will also need to reactive your existing license to reflect the addition of the Mantis feature, see section 17.2.2.
2. Once BOSS is installed or upgraded, start the BOSS service to perform additional Mantis configurations.

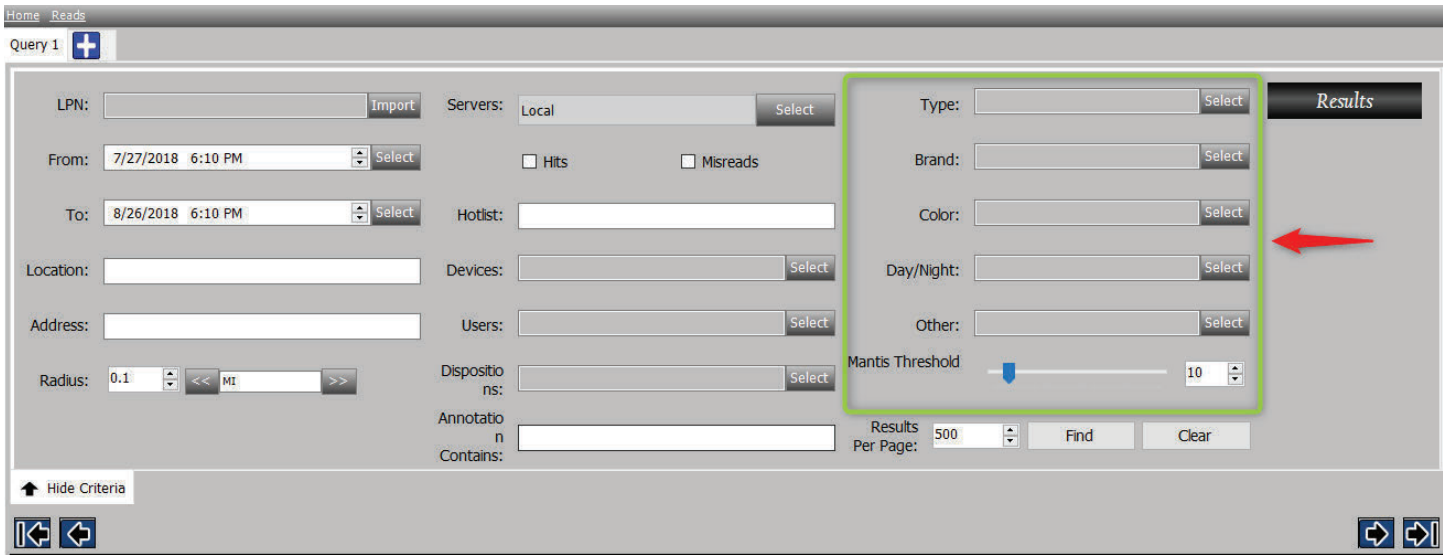
20.5 Mantis Configurations

1. Start and login to the BOSS UI, navigate to System > Parameters.
2. In the Attributes table, look for the entries with the following names:
    - **a. mantis_User:** Assign the provided Mantis user name here.
    - **b. mantis_password:** Assign the provided Mantis user password here.
    - **c. mantis_URL:** Set the Mantis URL here. https://neology-api.intrinsicsimaging.com/v1/classification/lpr



3. Additional parameters can be configured, see Mantis Parameters for details.
4. Once all the entries were assigned their corresponding values, close the BOSS UI and stop the BOSS service.
5. Download and place the “MantisStartDateGenerator.exe” file in the root BOSS3 folder, this executable is sperate from the BOSS installer and will need to be downloaded and placed manually.
6. Start the “MantisStartDateGenerator.exe” utility with administrator permissions.

7. Set the BOSS Install Directory to the Path of the folder where BOSS was installed.:



8. Set the Export Public Key path to a folder where you can access the generated public key, then click the Export button, and verify that the key was exported to the path.
9. Select a date that you want Mantis to take as the begin date for reads to be retrieved “Mantis Begin Date”. Reads that entered the system before this date, won’t be processed.
10. Click the Save date button to create the “MantisConfig.bin” file in the installation directory. A message confirming the file creation will appear.

11. Start the BOSS service.
12. When BOSS is started, the existing reads in the BOSS database will be sent to and processed by the Mantis API. The results will be stored on the local database.
13. Start and login to the BOSS UI.

20.6 Mantis Search Features

The Mantis fields should be visible in the right side of the reads panel in the BOSS UI. In case the fields are not available, diagnose the possible problems in the Mantis Configuration Troubleshoot section 20.8.

20.6.1 Mantis Search Definitions

- **Type=** Vehicle configuration style, i.e. Car, Box-Truck, Full-Size-Van, Hatchback, Minivan, Other-Truck, Pickup, Sedan, Suv.
- **Brand=** Vehicle manufacture.
- **Color=** Vehicle primary color.
- **Day/Night=** Vehicle capture in day or night.
- **Other=** Includes additional vehicle identifiers such a roof racks, spare-time, spoiler, ect...
- **Threshold=** Adjust the threshold slide bar to increase or decrease the confidences level of the Mantis search criteria based on selected filters, 1 being the lowest and 100 the highest confidence level available. When threshold is utilized in searches a new “Confidence” column will appear in the results, a user may now use this column to further sort the results by descending or ascending order.

20.7 Additional Mantis Parameters

As a summary description for the HTTPS protocol, its security is that of the underlying TLS (Transfer Layer Security) cryptographic protocol, where a certificate is used to authenticate the server, thus, the data flow between the client and the server is encrypted.

Parameter Name	Description	Default value
mantis_URL	The URL for the Mantis endpoint. The latest value should be available in this document. See Ports configuration for the corresponding value or ask a PIPS Technology representative.	None
mantis_User	Part of the credentials provided, it may be referenced also as the Mantis API key.	None
mantis_Password	Part of the credentials provided, it may be referenced also as the Mantis API password.	None
mantis_Images	The number of images to send to the API to be processed in a batch operation	20 images
mantis_PollDBWaitPeriod	The amount of time to wait before a DB check is performed if no records are found	60 seconds
mantis_RequestTiemeout	Seconds to wait before the Mantis request is timed out	100 seconds
mantis_MantisErrorLog_RetentionDays	Number of days to retain the errors in the database	30 days
mantis_MantisErrorLog_CleanupTimeout	Seconds to wait for the cleanup process to complete	30 seconds
mantis_CleanupDBWaitPeriod	Minutes to wait before the cleanup process gets executed again	480 minutes
mantis_label_threshold	Fine tune the Mantis results by adjusting the threshold for a photo feature to be considered. A value between 0.01 and 1.	10% (0.1)

20.8 Mantis Configuration Troubleshoot

To trouble shoot any Mantis issue, access to the BOSS Server logs is required. The logs are available inside the logs directory, inside the installation folder, e.g. "C:\Program Files (x86)\PIPS Technology, Inc\BOSS3\logs".

Inside this folder, there are two types of outputs:

- **BOSSMantisLog.txt.*:** This files contain Mantis Service specific information.
- **BOSSServerLog.txt.*:** This files contain overall BOSS Server information.

Known errors

L	Level	Error	Description
	INFO	**Mantis Service: Not available**	The Mantis feature was not enabled in the license key with which BOSS was activated
		Solution	Contact a Neology PIPS Technology agent for information on how to request the activation of the feature in your current license key
	INFO	**Mantis configuration not loaded, the service will not be started**	This error signals missing configuration Look for the additional messages described in the following rows.
	ERROR	**Mantis endpoint not configured, shutting down service**	The mantis URL parameter was not set properly, it cannot be a null or empty value.
		Solution	Review the ports configuration and set the mantis URL parameter to the given mantis URL. If you have an outdated version of this document, contact the Neology PIPS Technology support team to get the latest information.

	ERROR	**Mantis credentials are not configured, shutting down service**	Either the mantis_User or the mantis_password parameter was not set.
		Solution	Check that these values do not have a null or empty value. If you were not provided with these credentials, contact the Neology PIPS Technology support team.
	INFO	**Due to a request error, the next Mantis request will be performed in seconds**	There are three known errors related to mantis functionality: • **Mantis Failure**: Mantis failed to process the uploaded information. This error will not be retried because with the same image, Mantis will produce the same output. • **Connection error**: There was a problem establishing a connection with the server. This batch will be retried. • **Mantis Server Error**: An exception was received from the server. This error will be retried.
		Solution	For the above three errors, the possible solutions or actions to take are described below: • **Mantis Failure:** If too many instances of this error appear, contact the support team to diagnose the error. • **Connection error:** Verify that the appropriate rules for the firewall and whitelisting for URL and ports was set. See Mantis requirements for more details. • **Mantis Server Error:** If too many instances of this error appear, contact the support team to diagnose the error.

For a full list of all the messages produced by Mantis and a more detailed explanation about them, see the Mantis Log messages catalog.

20.8.1 Mantis Log Messages Catalog

Below is a description for the messages produced by the Mantis Service. Only applicable messages will have a solution appended to them.

Glossary

Term	Definition
ALPR	Automatic license plate recognition (also called automatic number plate recognition, or ANPR)
Annotation	A note or comment that can be made about and added to a read.
Deployment	The distribution or making available of a hotlist to a device
Device	A source of ALPR data; an PAGIS unit or a fixed or mobile camera
Disposition	The classification of a hit; e.g., a recovered stolen vehicle
Fixed Camera	An ALPR camera permanently mounted above a roadway
Group	A group of BOSS users that belong together administratively
Hit	A match on a plate read against a hotlist
Hotlist	A list or database of license plates of interest, e.g., the NCIC database
Justification	A purpose for running a query on the captured data. There are several justifications included in the system by default. The BOSS Administrator can also create custom justifications to be used.
LPN	License plate number; also known as the Vehicle Plate Number
PAGIS	PIPS™ Mobile Software, the ALPR Mobile application
Local Server	A server running on a local system, in relation to the SQL server or the BOSS UI Misread A read that was marked as a misread by a user
Mobile Unit	An ALPR system with cameras, a mobile processor, and software, such as Pagis Software, installed in a vehicle
Notification	Propagation or delivery of an alert resulting from a hit
Overview	A color image of the vehicle to which the license plate is attached
Patch	A small image of the license plate
Permission	Authorization to access specified functionality in BOSS
Read	A license plate detection event that results in the plate text optical recognition and pictures being taken
Remote Server	A BOSS server that is running in another location
Role	A position, such as Administrator, with the authorization to access specified functionality in BOSS
Site	A group of related devices
Translation	The interpretation from a word in English to a word in a selected language
User	An authorized BOSS user (with a username and password)
Whitelist	In BOSS a whitelist hit is the opposite of a hotlist hit. When a license plate read does not exist in an enabled whitelist database, the same Hits (Alert) screen will be displayed.

For additional information, assistance or maintenance questions please contact Neology ALPR/ANPR Support at:
PHONE: 833-PIPS-LPR (833-747-7577)

	BOSS 4 Annual License Subscription	MANTIS 4-D Vehicle Detection Annual Subscription	Hosted Subscription
BOSS 4 Standard Software Application For either on-premise or Neology Hosted option	x		
Free Periodic SW Enhancements and Maintenance release in line with Neology standard SW release cycle	x		
Unlimited Helpdesk Access for BOSS 4 SW Available from 08:00 to 17:00 Central Standard Time	x		
Vehicle Classification Add-in for all vehicle detections including: - Vehicle Type - Vehicle Brand - Vehicle Feature (Spoiler, roof rails etc) - Vehicle Color -		x	
Enhanced ALPR "Deep Learning" capability enabled on Neology's latest generation Mobile (Golden Eagle) and Fixed (IRIS) Camera		x	
Access to the latest OCR and Vehicle Classification algorithms for all Neology / PIPS legacy devices in line with Neology standard release cycle		x	
Application and Database Server(s) with corresponding network provided on CJIS compliant Infrastructure			x
Elastic Database retention and storage in line with subscription level			x

High Availability and Resilience to ensure 99.999% infrastructure availability with 4 layers of Severity Monitoring (Urgent, High, Medium, Low)			x
Infrastructure Security Monitoring, including annual penetration testing and patching where required			x
Proactive System Health Monitoring (database, application and infrastructure) to pre-empt incidents			x
Service Management reporting on quarterly basis			x
Out of Hours Support for Critical Severity Infrastructure Issues			x

Clear Form

BOSS4 Questionnaire

After completion and submission of this document, the delivery team will review and submit to you the recommended Systems Specifications. Further logistical planning shall proceed after delivery of the initial Systems Specifications.

BOSS4 Server Type		Software Upgrade	
On-Prem: ☐	Hosted (Cloud): ☐	BOSS Upgrade. Yes: ☐ No: ☐	Current BOSS Version:

Migrate Roles	Yes: ☐	No: ☐	Migrate Devices	Yes: ☐	No: ☐
Migrate Sites	Yes: ☐	No: ☐	Migrate Hotlists	Yes: ☐	No: ☐

Current ALPR Data Statistics			Not Applicable: ☐
Average **Monthly Read** intake.		Average **Yearly Read** intake.	
Current number of **Devices.**		Current number of **Users.**	
Current number of **Hotlists.**		Current Data **Retention Policy.**	

5 Year Projected Growth - ALPR Statistics

Projected read estimates help us ensure the ALPR system specifications are properly configured over time. Example, if the agency currently reads 500,000 plates per month, and growth is expected to double that count in five years, the projected number would be 1,000,000 below.

Projected number of **Reads** per/month.		Projected number of **Devices.**	
Projected number of **Users.**		Projected Data **Retention Policy.**	

Data Integration

Are you planning or are you currently using any kind of third-party application to ingest data from the BOSS database? If so, please provide a detailed explanation of this process.

BOSS4 Cloud
Specifications for Requirements

Cloud Application Servers

Below, there are the minimal recommended configurations for different capacity configurations for BOSS4 hosted on Amazon Web Services infrastructure.

Application Servers Specifications				
Configuration	**Demo**	**Medium**	**Large**	**High Capacity**
ALPR Devices	1 to 3	3 to 50	50 to 150	Beyond 150
Average Daily Intake	Around 30,000 events	Around 500,000 events	Around 1,500,000 events	Beyond 1,500,000 events
Average of users querying data	3 users	15 users	25 users	Beyond 25 users
Alert list averaging	Around 1M records	Around 2M records	Around 2M records	Around 2M records
EC2 AWS Instances for Microservices	t3.small 2.5GHz Intel 2 cores 2 GB RAM Amazon Linux	t3.large 2.5GHz Intel 2 cores 8 GB RAM Amazon Linux	t3.xlarge 2.5GHz Intel 4 cores 16 GB RAM Amazon Linux	t3.2xlarge 2.5GHz Intel 5 cores 32 GB RAM Amazon Linux
EC2 AWS Instance for Controller	t2.small 3.3GHz Intel 1 core 2GB RAM Amazon Linux	t2.large 3.0GHz Intel 2 cores 8GB RAM Amazon Linux	t2.xlarge 3.0GHz Intel 4 cores 16GB RAM Amazon Linux	t2.2xlarge 3.0GHz Intel 8 cores 32GB RAM Amazon Linux
Fargate AWS Instance for Microservices	3.3GHz Intel 5 cores 8GB RAM	3.0GHz Intel 16 cores 32GB RAM	3.0GHz Intel 32 cores 32GB RAM	3.0GHz Intel 48 cores 128 GB RAM
Storage and Application Space	Amazon EBS gp2 SSD 128GB	Amazon EBS io1 SSD 256GB	Amazon EBS io1 SSD 320GB	Amazon EBS io1 SSD 512GB

BOSS4 On-Premise & Cloud Storage

The calculation of storage applies to Cloud and On-Premise configurations.

Assumptions for the calculation:

Storage of metadata per read event: 32KB
Storage of imagery per read event: 160KB

Events from Golden Eagle or P500 cameras			
# of records	Database size Metadata and indexes	Repository Size Imagery	Total
1 Million	32GB	153GB	**185GB**
5 Million	64GB	763GB	**827GB**
10 Million	320GB	1.5TB	**1.82TB**
50 Million	1.6TB	7.5TB	**6.1TB**
100 Million	3.2TB	15TB	**18.2TB**

The calculation for the storage is approximated and it can vary depending on the conditions for the processing of the indexes, Mantis Metadata, compression of the images, among others.

It is not considered the storage for the backup of the databases nor the imagery repository.

This document and its contents are intended for the recipient only. Copying, redistributing, or discussing with any other party outside of the intended recipient and Neology is prohibited.

Oath of Office

Policy

All sworn members of the Department of State Police shall take and affirm an Oath of Office prior to the initial performance of duties.

Oath of Office

I, do solemnly swear, that I will bear true faith and allegiance to the Commonwealth of Massachusetts, and will support the Constitution thereof, so help me God.

I, do solemnly swear and affirm, that I will faithfully and impartially discharge and perform all the duties incumbent on me as a Massachusetts State Police Trooper: according to the best of my abilities and understanding, agreeably, to the rules and regulations of the Constitution, and the laws of this Commonwealth, so help me God.

I, do solemnly swear, that I will support the Constitution of the United States.

State Police Mission and Policy

Mission

As the principal statewide law enforcement agency in the Commonwealth, the Massachusetts State Police, in partnership with local communities, shall provide for the public safety by providing quality policing directed at achieving safer roadways, and reducing crime through investigations, education and patrol services, and by providing leadership and resources during natural disasters, civil disorders and critical incidents.

Policy

The Department of State Police, in cooperation with the Executive, Legislative, and Judicial branches of government, shall ensure that justice in a free society is perpetually prevalent.

Organizational Values

The value statements of the Massachusetts State Police are:

- Maintenance of the highest standards of integrity and ethics;
- Excellence and teamwork in the performance of duty;
- Protection of Constitutional Rights;
- Problem solving for continuous improvement;
- Continuous planning for the future; and
- Performing public service and law enforcement tasks so as to provide leadership to the police profession.

Subject

State Police Authority

Policy

Within the Commonwealth, sworn members shall exercise all the powers of police officers as authorized by law and exercise professional discretion when appropriate.

Limits of Authority

No member may be used or called upon for service at any industrial dispute unless actual violence has occurred therein, and then only by written order of the Governor.

Members shall not exercise police powers on a reservation or other property of the United States of America unless requested by the person in charge of the reservation or property.

No member shall serve civil process.

Discretion

When Rules and Regulations, Policy and Procedure, other Orders or Directives, fail to provide specific guidance, members shall exercise professional discretion that may be based upon:

- Training, experience, common sense;
- Principles, values, ethics;
- Advice from supervisors, senior officers; and
- Professionally accepted standards.

Discretionary measures may include:

- Application for complaint;
- Verbal or written warnings;
- Referral to other divisions, departments, or agencies;
- Guidance from the Attorney General/District Attorney; and
- Informal resolution.

Subject

Organizational Structure

Policy

The Department's organizational structure is arranged in a manner which simplifies the direction, coordination, and control of personnel.

Organizational Structure

The Superintendent does hereby establish the following operational Divisions for the effective and efficient delivery of services:

- Division of Field Services;
- Division of Investigative Services;
- Division of Administrative Services;
- Division of Standards and Training; and
- Division of Homeland Security and Preparedness.

Organizational Charts

Organizational charts graphically depict organizational entities, levels of command, lines of authority, and positions established for the duties of personnel.

The charts must be:

- Reviewed by each Division Commander prior to the next fiscal year; and
- Revised through the Office of the Superintendent.

Accountability

Each employee is accountable:

- For the use of their authority delegated to others; and
- For the performance of any personnel under their control.

Subject	Number
Organizational Structure	**ADM-05**

Chain of Command

The chain of command is the extension of authority and responsibility from the Colonel/Superintendent down to the level of execution.

Responsibility is accompanied by commensurate authority.

The chain of command for sworn members, in order of descending rank, shall be:

- Colonel/Superintendent;
- Lieutenant Colonel/Deputy Superintendent;
- Lieutenant Colonel;
- Major;
- Detective Captain;
- Captain;
- Detective Lieutenant;
- Lieutenant;
- Sergeant; and
- Trooper - The senior Trooper is in command, when necessary.

Command

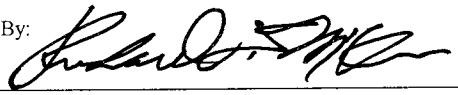
Each organizational entity shall be:

- Under the direct command of only one supervisor.

Each employee shall be:

- Accountable to only one supervisor at any given time; and
- Bound by the chain of command that is applicable to their position.

Supervisory ratio must be:



- Adequate to provide guidance and control, as determined by the Colonel/Superintendent.

Ranking personnel shall:

- Assume line control outside their own organizational entity when failure to do so would seriously endanger the Department's:
    1. Ability to maintain law and order; and
    2. Public image.

Command Staff Responsibilities

Policy

The Command Staff is responsible for the administrative and operational control of the Department. Each member of the Command Staff shall maximize their involvement in the operations of the Department to deliver the highest level of public safety services to the citizens of the Commonwealth.

Definition

The Command Staff shall include the following ranks:

- Colonel/Superintendent;
- Lieutenant Colonel/Deputy Superintendent;
- Lieutenant Colonel;
- Major; and

Civilian Member of the Command Staff:

- Chief Administrative Officer.

Responsibilities

Position	Duties
Superintendent	• Act as the Chief Executive Officer of the Department; • Assume full authority over the organization, administration and discipline of the Department; and • Promulgate all rules, regulations, policies, procedures, orders and directives.
Deputy Superintendent	• Act as the Chief Operating Officer of the Department; and • Assume command of the Department as assigned and during the absence of, or when so designated by the Colonel/Superintendent.
Division Commander	• Act as the Chief Operating Officer of a Division.

Subject	Number
Command Staff Responsibilities	**ADM-06**

Meetings

Staff meetings shall be conducted to encourage and support the exchange of information. This may include a weekly staff meeting between the Colonel and all Divisions. Information from these meetings shall be distributed to all affected personnel as directed by Colonel/Superintendent.

Department of State Police
General Order

Effective Date	Number
August 20, 2014	**ADM-07**

Subject

Written Directives, Schedules and Forms

Policy

The Department shall provide administrative direction and operational guidance through an internal written directive process.

Directive Format

Directive	Issued by	Reason
General Order	Superintendent	• To promulgate or rescind Policy & Procedure, Rules & Regulations or written directives.
Personnel Order	Superintendent	• Assignments • Transfers • Appointments • Discharges • Discipline • Commendations
Special Order	Superintendent	• Specific instructions for specific personnel; and/or • Dissemination of information relative to a particular topic or incident.
Superintendent's Memorandum	Superintendent	• Formal or informal clarification or inquiry.
Division Commander's Order	Division Commanders	• Administrative order issued for members under their command.
Administrative Notice	Superintendent/ Deputy Superintendent	• To inform members about general issues (crime, training, law updates, etc); and/or • Address item(s) not covered by the above directives.

Subject	Number
Written Directives, Schedules and Forms	**ADM-07**

Duration

All General Orders, Personnel Orders, and Superintendent's Memorandums shall:

- Remain in effect until rescinded by the Colonel/Superintendent; or
- Remain in effect until superseded by another General Order, Personnel Order, or Superintendent's Memorandum.

Division Commander's Orders shall:

- Remain in effect until rescinded by the Division Commander or Colonel/Superintendent; or
- Remain in effect until superseded by another Division Commander's Order or General Order promulgated by the Colonel/Superintendent.

All other written directives are valid for one (1) year, unless rescinded. New directives may be issued at any time.

Attendance Calendars

Duty Assignment Supervisors shall:

- Maintain **Original** Attendance Calendar(s) for each subordinate (sworn/civilian employee) under their command;
- Submit through channels to their respective Division Commanders by January 20th of each year, the **Original** Attendance Calendar(s) for the previous year for each subordinate under their command sorted alphabetically by last name;
- Provide to the member/civilian employee a copy of their **Original** Attendance Calendar for the previous year; and
- Retain copies of Attendance Calendar(s) at respective Troop/Station/Section/Units for record keeping purpose, but under no circumstances shall a copy be submitted to the respective Division Commander.
  Note: Any **Original** Attendance Calendar that is unable to be located shall be reported immediately to the respective Troop/Station/Section/Unit Commander.

Troop/Stations/Sections/Units or Stations/Sections/Units under the command of a Non-Commissioned Officer, shall have designated Commissioned Officers within the chain of command to:

- Ensure members/civilian employees Attendance Calendars are monitored, reviewed and properly completed on a bimonthly basis on even months; and
- Verify a review was conducted on the reverse side of the subordinate's Original Attendance Calendars beginning January 2015.

Continued next page.

Attendance Calendars (Continued)

Division Commanders shall:

- Forward all Division members/civilian employees Original Attendance Calendars to the Human Resources Section, as soon as practicable.

The Human Resources Section shall;

- Ensure that each Original Attendance Calendar is inserted into the respective members/civilian employees Personnel File; and
- Ensure that the Original Attendance Calendar is kept on file for each year of Department service.

The Master Vacation Schedule

Each Troop/Station/Section/Unit Commanding Officer shall:

- Submit through channels the Master Vacation Schedule for all sworn and civilian employees under their command to their Division Commander on or before February 14th of each year; and
- Ensure that all sworn and civilian employees have selected vacation week(s) according to their collective bargaining agreement.

Division Commanders shall:

- Retain submitted Master Vacation Schedules for the current year for all sworn and civilian employees under their command.

Office of the Superintendent/Strategic Planning Section shall:

- Post a blank copy of the Master Vacation Schedule to DocuShare prior to January 1st.

"SP" Forms

The Office of the Superintendent-Strategic Planning Section shall:

- Review, authorize and post to DocuShare, if applicable, any request received through channels concerning the creation of a new Department "SP" Form;
- Ensure the new form is assigned a number through the "SP" Numbering System and recorded into the "SP" Master Forms List.
  Note: The Forensic Services Group shall be excluded from compliance with this section, however they shall maintain a similar record for internal forms used.

Station/Section/Unit Forms strictly used within their station/section/unit for Department business and not forwarded to any outside entities, shall be excluded from the requirement of obtaining an "SP" number.

Subject	Number
Written Directives, Schedules and Forms	**ADM-07**

Archives

Departmental written directives, excluding Division Commander's Orders and Personnel Orders, shall be maintained by the Office of the Superintendent-Strategic Planning Section, including the signed "master copy" of all written directives.

Division Commanders and the Human Resources Section shall maintain the signed "master copy" of their Division Commander's Orders or Personnel Orders.

Publications

All Department written directives shall be published and archived on DocuShare.

If applicable, Troop/Section Commanders shall ensure that Department bulletin boards are maintained with up-to-date directives and are accessible to all personnel.

Changes

All written directives shall be amended to coincide with the terms of current Collective Bargaining Agreement(s), state and federal laws, and including Executive Orders.

The Strategic Planning Section shall review and post all written directives, except Division Commander's Orders and Personnel Orders.

Members are encouraged to make suggestions and recommendations to change or create written directives. Such suggestions/recommendations shall be written and forwarded, through channels, to the Office of the Superintendent-Strategic Planning Section for review.

Exclusive Directives

Commanding Officers may create written directives for the administration of their respective entities. Directives shall be filed with their appropriate Division Commander and shall remain in effect for one (1) year unless:

- Rescinded; or
- The directive conflicts with a General Order.

Standard Operating Procedures (SOP)

Section/Unit Commanders shall:

- Create and maintain an internal standard operating procedure (SOP) specific to their function; and
- Forward a copy through channels to their Division Commander for approval and filing.

Subject	Number
Written Directives, Schedules and Forms	**ADM-07**

Distribution

The Colonel/Superintendent shall ensure written directives are properly distributed and/or posted to DocuShare.

It is the responsibility of each sworn and civilian employee to read promulgated directives. Sworn and civilian employees shall:

- Read and become familiar with the contents of all posted written directives; and
- Familiarize themselves with Policy & Procedures and Rules & Regulations as issued.

Requesting Written Directives

To obtain a copy of a written directive, members shall access DocuShare. If unable to access DocuShare, members shall consult their commanding officer who shall make the request through channels to the Strategic Planning Section.

Responsibilities for Written Directives

Position	Duties
Division Commanders	• Ensure all Division Commander's Order are posted and archived accordingly; • Assign a member to review all current and proposed written directives; and • When applicable, forward approved proposals/drafts to the Office of the Superintendent-Strategic Planning Section.
Office of the Superintendent-Strategic Planning Section	• Create, edit or review proposed written directives; • Post promulgated written directives on DocuShare; and • Archive all written directives, excluding Division Commander's Orders and Personnel Orders.
Colonel/ Superintendent	• Sign and promulgate written directives.

Strategic Planning

Policy

In order to affectively manage, the Department shall continuously:

- Review written directives;
- Exercise oversight over the grant process; and
- Establish inter-divisional cooperative work groups regarding strategic plans.

Strategic Planning Responsibilities

The Strategic Planning Section shall:

- Prepare and update written directives;
- Instruct and assist members with the grant application process;
- Maintain oversight on grant program operations and reporting;
- Develop strategic plans;
- Conduct reviews and evaluations of programs when requested;
- Research emerging technologies and trends;
- Maintain the forms management process, including design, inventory, and implementation;
- Assist the Command Staff with the Department's administration and control through planning, research and coordination; and
- Report to the Office of the Superintendent.

Grant Approval Process

Policy

Whenever Department employees seek to obtain services and/or funding through private, public, state or federal entities; or to acquire or transfer equipment from an outside entity, the following procedures within this policy shall be adhered to.

Definitions

Grant requests can be any of the following:

1. *Grant*: An award of financial assistance from an external entity where no "substantial involvement" is anticipated between the awarding entity and the Department during performance of the agreed upon activity.
2. *Cooperative Agreement*: An agreement of financial assistance where there is "substantial involvement" anticipated between an external entity and the Department during the performance of an agreed upon activity. Cooperative agreements are often non-cash agreements involving services provided to or by the Department.
3. *Interagency Service Agreement* (ISA): An agreement between the Department and a state entity which is committing funds for a specific program.
4. *Equipment Acquisition Agreement*: Agreements, where upon the Department shall receive equipment to provide services, perform a specific function, or to use within its operations.

Match Money: The portion of funds that the Department shall provide to supplement the funding agency's contribution. The match is usually a percentage of the project's total budget.

Project Administrator: An employee appointed by their Division Commander to oversee a specific request/project and is responsible for the completion of all quarterly and annual reports.

Grants Manager: A manager from the Department's Fiscal Section, who is responsible for the grant fiscal oversight process through the Office of the State Comptroller and who ensures the timely submission of appropriate documentation as necessary to receive funding.

Continued next page.

Subject	Number
Grant Approval Process	**ADM-08A**

Definitions (Continued)

Grants Coordinator: A member from the Strategic Planning Section, who is responsible for monitoring the grants request process or equipment acquisitions and also assists members in the research, application, and reporting process.

Request Review Meeting: The initial meeting between the Project Administrator, the Grants Manager, and the Grants Coordinator to review the application requirements and to ensure the Department is eligible.

Review Committee: A Department committee which reviews existing programs to ensure their stated goals and objectives progress according to the best interest of the Department and forwards program recommendations to the Colonel/Superintendent.

SP 426 Grant/Agreement Approval Request Form: A form to be completed by employees requesting approval to initiate the application process for any services, funding and/or equipment acquisitions.

Process

Unless prior written approval has been granted from the Colonel/Superintendent, employees shall not:

- Enter into any grants, cooperative agreements, or interagency service agreements; or
- Solicit, submit an application, or accept funding and/or equipment from any outside entities.

Equipment

Project Administrators shall comply with ADM-30 Asset Management when receiving equipment through a grant request.

Grants Review Committee

The Grants Review Committee shall review existing funded programs throughout the year. The Review Committee shall consist of the following members:

- Grants Coordinator;
- Grants Manager;
- Deputy Chief Administrative Officer or designee; and
- Strategic Planning Section Commanding Officer or designee.

Subject	Number
Grant Approval Process	**ADM-08A**

Request Process

Position	Process
Employees	• Shall submit all requests through channels to the appropriate Division Commander or designee, **at least fifteen (15) days prior to the filing date deadline**; • Submitted requests shall include the following information: 1. A completed SP 426; 2. A copy of the original solicitation/application that identifies the funding source and requirements i.e. eligibility, application deadline, and matching amount requirements; 3. A program statement narrative that identifies the goals and objectives, as well as the intended outcome to be accomplished, and any supporting documentation; and 4. A budget which includes current information regarding personnel and/or equipment costs and the services to be performed and/or purchased.
Division Commander or Designee	• Shall review all requests; • Ensure adequate time is available to allow for modifications to the application before the filing deadline; • Endorse the SP 426; • Forward the request to the Strategic Planning Section; and • Designate a Project Administrator.
Strategic Planning Section Commander	• Shall immediately review the approved request; • Assign the request to the Grants Coordinator; • Ensure a Request Review Meeting is scheduled; and • Forward completed requests to the Colonel/Superintendent for approval.
Grants Coordinator	• Shall document approved requests; • Immediately schedule a Request Review Meeting with the designated Project Administrator; and • Notify the Grants Manager.
Grants Manager	• Shall record requests received from the Grants Coordinator; • Ensure the request budget is appropriate and accurate; and • Attend Request Review Meeting with the Grants Coordinator and the designated Project Administrator.

Subject

Line Inspection

Policy

Line Inspections shall be conducted to improve the operational readiness of the Department by ensuring that all members adhere to all established rules, regulations, policies, procedures, orders, directives, and general laws.

Members shall immediately correct unsatisfactory behavior and conditions in order to avoid the consequences which erode the trust and confidence of the public.

Procedure

Members from the rank of Captain through Trooper shall be inspected.

Members assigned to duties requiring civilian attire are exempt from the uniform/appearance portion of the inspection.

Troop/Section Commanders may require additional line inspection procedures within their respective commands.

Line Inspections

Troop/Section Commanders or designee, shall:

- Oversee the entire line inspection program for their command;
- Ensure that all members are inspected at least quarterly by their first line supervisor; and
- Ensure inspections are properly documented on PayStation.

First Line Supervisors Duties

First Line Supervisors shall:

- Conduct a inspection of all immediate subordinates at least quarterly, including their assigned cruisers and equipment; and
- Submit a report of the inspection, including an explanation of the inadequacies, via PayStation quarterly during the months of January, April, July, and October.

Minor deficiencies, which can be corrected during the course of a first line inspection, may be reported as adequate via PayStation. Repeated minor deficiencies shall be documented on an Employee Evaluation System (EES) form.

Continued next page.

Subject	Number
Line Inspection	**ADM-09**

First Line Supervisors' Duties (Continued)

Line Inspections shall include:

- Personnel: Uniform, equipment, appearance, cleanliness/neatness, jewelry, hygiene, cosmetics, and hair;
- Use of force equipment: All issued use of force equipment;
- Cruiser: General condition, issued equipment, cleanliness, and maintenance;
- Citations and audit sheets: Review citations and audit sheets, ensure documentation for racial profiling requirements are correctly submitted; and
- Licenses and Identification Cards e.g., Massachusetts Drivers License, License to Carry Firearms, and Department Identification Cards.

Reviewing Supervisor Duties

Each submitted inspection report shall be reviewed by a second level supervisor prior to approval via PayStation. The reviewing supervisor shall:

- Discuss any deficiencies noted within the report with the inspecting member prior to approving the report; and
- Take corrective action to ensure that all deficiencies and inadequacies are addressed.

Station/Unit Inspection

Station/Unit inspections shall be performed in conjunction with the Annual Fixed Assets Inventory. Station/Unit Commanders shall examine Department facilities and determine where there are inadequacies, deficiencies or areas not otherwise in compliance with Department rules, regulations, policies, procedures, orders, directives, and general laws.

Any written reports generated shall be forwarded to the Troop Commander through channels.

Annual inspections shall include at a minimum:

- Buildings and grounds of facility: Conduct a general inspection of the facility with attention to the condition of maintenance and safety issues;
- Entrances, exits, and security;
- Public accommodation: Parking, handicap access, toilet facilities/ public restrooms, and lobby area;
- Holding facilities: As required under PRI-04 Holding Facilities; and
- Employee cards/records: Are current and complete for all assigned employees.

Staff Inspections

Policy

The Department shall continuously audit and inspect all resources, facilities, equipment, personnel, practices and policies, in order to update the Command Staff on the quality of Department services.

Staff Inspections Protocols

To accomplish the mission of Staff Inspections, Inspectors shall have complete and unrestricted access to all Department records and properties.

Staff Inspections shall:

- Be performed on all resources, entities, and facilities within the Department;
- Be an open inspection conducted with the full knowledge and co-operation of everyone involved;
- Notify the appropriate Commanders of the intended date and scope of inspections, at least seven (7) days in advance of the inspection; and
- Include a list of those materials, files, and subjects to be reviewed or examined by the inspector.

Troop/Section Commanders shall work cooperatively with the Inspector, and shall prepare and provide all materials requested.

Upon request of the appropriate Division Commander, Staff Inspections may conduct unannounced inspections of any Department entity.

Routine Staff Inspections

Routine Staff Inspections may include:

- Narcotics, contraband and physical evidence;
- Seized monies/asset forfeiture;
- PayStation including overtime and details;
- Found/held property;
- Holding facilities;
- Racial Profiling compliance;
- Line inspections;
- Administrative journals and records;
- Issued Department equipment; and
- Other areas as directed by the Division Commander of Standards and Training.

Subject	Number
Staff Inspections	**ADM-09A**

Inspection Finding and Reports

Staff Inspectors shall prepare and submit a detailed report through channels to the Colonel/Superintendent within sixty (60) days of each inspection. This report shall include at a minimum:

- Findings and observations; and
- Opinions, recommendations and conclusions.

Copies of this report shall also be forwarded to the appropriate Division Commander.

Upon receipt of a Staff Inspection report, Troop/Section Commanders shall submit a report outlining the specific actions taken to ensure correction of all deficiencies noted. This report shall be submitted within thirty (30) days to the appropriate Division Commander, with a copy to be forwarded to the Division Commander of Standards and Training.

Awards

Policy

The Department shall make every effort to recognize the people whose actions assist the Department in carrying out its mission and who go beyond normal expectations or requirements.

EES Coordinator

The Employee Evaluation System (EES) Coordinator shall be a Commissioned Officer assigned within the Division of Standards and Training. The EES Coordinator shall be responsible for the Awards Board's administrative duties, preservation of all records, and shall not be a voting member of the Awards Board.

Standard Operating Procedure

The EES Coordinator shall develop a standard operating procedure that details:

- The Board's organization and procedures; and
- Board member duties and responsibilities.

Awards

State Police Members

Medal of Honor Gold Medal Blue/Yellow/Blue Ribbon	Established to honor Department members who have performed acts of extraordinary heroism above and beyond the call of duty. *Elements of consideration are:* • Actions that depict outstanding bravery, courage, and self sacrifice, or overriding concern for others; • Heroic actions taken for the rescue of life or in defense of another life; • Actions taken notwithstanding the potential of being killed; or • Valorous sacrifice (severe injury or loss of life).

Continued next page.

Awards (Continued)

Sworn Police Officers

Medal of Valor Silver Medal White/Red/Blue/Red/White Ribbon	Established to bestow recognition upon police personnel who have performed specific acts of bravery or have exhibited outstanding courage while performing their duties. *Elements of consideration are:* • An act characterized by courage, daring, and bravery; • The officer took immediate and decisive action to avert injury or loss of life to others; • While in a hazardous environment, the officer exhibited outstanding courage while performing their duties; • The officer rescued or defended another; or • Valorous sacrifice (severe injury or loss of life).
Medal of Merit Bronze Medal Blue/White Ribbon	Established to bestow recognition upon police personnel who have performed acts of outstanding achievement, far exceeding normal demands of the Department, which greatly contribute to the operation of the Department. *Elements of consideration are:* • Noteworthy achievements that greatly contributed to a Department operation or a community; • An exemplary act characterized by ingenuity, devotion, creativity, boldness, and outstanding professional conduct; or • Action(s) that reflects great credit to the member and the Department.
Medal of Lifesaving Bronze Medal Red/White Ribbon	Established to bestow recognition upon police personnel who undertake significant actions in the saving of another life. *Elements of consideration are:* • Actions were taken for the preservation of another life; and • The actions actually preserved life. Note: Documentation should be submitted supporting the life threatening nature of the injuries or circumstances.

Continued next page.

Sworn Police Officers and Members of the Public

Awards (Continued)

Superintendent's Commendation Plaque	Established to bestow recognition upon an employee of the Department, or a citizen, who has made an exceptional contribution to the Department. *Elements of consideration are:* • Extraordinary performance that clearly distinguishes the individual; • Performance that significantly contributes to Department operations; • Actions that significantly enhance the positive image of the Department; • Exceptional contribution(s) to the Department; or • Exceptional service to the community.
Division Commander's Commendation Certificate	Established to bestow recognition upon an employee of the Department, or a member of the public, who has made a significant contribution to a Division. *Elements of consideration are:* • Notable performance that clearly distinguishes the individual; • Performance that notably contributes to the Division's operations; • Actions that notably enhance the positive image of a Division; • Exceptional contribution(s) to a Division; or • Exceptional service to the community.
Troop/Section Commander's Commendation Certificate	Established to bestow recognition upon an employee of the Department, or a member of the public, who has made a significant contribution to their Station/Section/Unit. *Elements of consideration are:* • Notable performance that clearly distinguishes the individual, • Exceptional contribution(s) to the Station/Section/Unit; or • Exceptional service to the community.

Continued next page.

Awards (Continued)

Department Entities

Superintendent's Unit Citation Plaque	Established to bestow recognition upon the employees of a particular Station/Section/Unit who have made an exceptional contribution to the Department. *Elements of consideration are:* • Extraordinary performance that clearly distinguishes the Station/Section/Unit; • The successful conclusion or culmination of a significant investigation or achievement of a significant project; • The achievement of outstanding enforcement efforts by a Station/Section/Unit; • Superior support efforts to the Department; or • Actions that significantly increase the positive image of the Department.

Civilians

Distinguished Service Award Gold Medal Red/White/Blue Ribbon	Established as the highest award to bestow recognition upon an employee of the Department, or a member of the public, who has provided extraordinary assistance to the Department. *Elements of consideration are:* • Heroic actions were taken for the rescue of life, or in the defense of an officer or another; • The individual, while assisting the Department, imperiled himself/herself to the risk of great personal injury, or death; • The individual provided assistance to an officer in a critical situation and in need of help; or • The individual's extraordinary actions/achievements greatly contributed to a significant Department operation.
Lifesaving Award Red/White Lapel Pin	Established to bestow recognition upon an employee of the Department, or member of the public, who undertakes significant actions in the saving of another life. *Elements of consideration are:* • Actions were taken for the preservation of another life; and • The actions actually preserved life. Note: Documentation should be submitted supporting the life threatening nature of the injuries or circumstances.

Continued next page.

Awards (Continued)

Public Service Award Certificate	Established to recognize an employee of the Department, or a member of the public, who has provided outstanding assistance to the Department, or has significantly contributed to public safety. *Elements of consideration are:* • Significant actions contributing to Department objectives; • Significant actions contributing to the betterment of policing or public safety; • Noteworthy achievements that greatly contributed to a Department operation; or • Noteworthy achievements that greatly contributed to a community.

Nomination Procedures

Step	Action
1	Supervisors shall make nominations according to the following process: **Department Members** • Consult the list of the Awards Board criteria; • Complete and forward an EES Observation Report through channels to the Division Commander; and • Include any supporting documentation. **Department Civilian Employees or Non-Department Individuals** • Notify the appropriate Division Commander via a To/From letter.
2	Division Commanders shall: • Determine if the act is worthy of recognition; • Forward To/From award recommendations to the EES Coordinator; and • Present the award nominations to the Awards Board with the supporting documentation, if warranted.

Continued next page.

Nomination Procedures (Continued)

Step	Action
3	The Awards Board shall: • Meet monthly to review recommendations from the Division Commanders; • Make recommendations to the Colonel/Superintendent based upon a majority vote; and • Return recommendations, which do not rise to the level of an award, to the Division Commander.
4	The Colonel/Superintendent shall: • Review the monthly recommendations from the Awards Board; and • Notify the Awards Board of any changes to the recommendations.

Non-Department Nominations

Nominations for awards given by organizations outside the Department shall be forwarded to the Awards Board as outlined above.

Ceremony Procedures

Awards shall be presented at least biannually, at ceremonies scheduled during the months of April and October. The Colonel/Superintendent may hold additional ceremonies as deemed necessary.

Position	Duties
Awards Board	• Notify each Division Commander, in writing of all actions taken regarding the awards nominations for that Division; • Notify the Award recipients within thirty (30) days of the Board's decision; and • Notify Media Relations of the nominees at least forty-five (45) days before the next scheduled ceremony.
Media Relations	• Arrange for award ceremonies in April and October of each year; and • Ensure the award recipients have been notified, through the Office of the Superintendent, in writing at least thirty (30) days before the ceremony.
Human Resources	• Maintain a database containing all of the awards recipients' specifics; and • Place supporting award files in recipients' Personnel Files.
Colonel/ Superintendent	• Present the awards.

Continued next page.

Ceremony Procedures (Continued)

Division/Troop/Section Commander's Commendation ceremonies shall be held when necessary.

Position	Duties
Division Commander	• Present Division Commander Commendation Certificates to the recipient in hand; and • Forward a record of the award receipt to the EES Coordinator.
Troop/Section Commander	• Present Troop/Section Commendation Certificates to the recipient in hand; and • Forward a record of the award receipt to the EES Coordinator.

Awards Board Composition

The Awards Board shall be comprised of eight (8) employees with seven (7) voting members. Awards shall be approved based on a majority vote. Employees shall serve for a minimum term of one (1) year.

Representative	Rank/Position	Designated by
President	Major	Superintendent
Department Employee	Civilian	Deputy Superintendent
Field Services	Captain or lower	Division Commander
Investigative Services	Captain or lower	Division Commander
Standards and Training	Captain or lower	Division Commander
Administrative Services	Captain or lower	Division Commander
Homeland Security and Preparedness	Captain or lower	Division Commander
EES Coordinator	Commissioned Officer Non-Voting Member	Division Commander of Standards and Training

Subject	Number
Awards	**ADM-10**

Other Awards

Supervisors may establish:

- Other forms of recognition as necessary and forward documentation to the EES Coordinator for filing purposes.

These recognitions shall not be deemed to be a Department Award within the guidelines of this policy.

Exceptions

In extraordinary circumstances the Awards Board may:

- Vote to make an exception to this policy, providing the vote is unanimous; and
- Forward the exception to the Colonel/Superintendent for approval.

Subject

Sick Leave

Policy

The Department recognizes the importance of Sick Leave for its sworn members and their families.

The Department has a responsibility to monitor the use of Sick Leave to prevent abuses.

Sick Leave Credits

Sick Leave credits are granted in accordance with provisions of the applicable Collective Bargaining Agreement (CBA) and the Department's Rules and Regulations. The Collective Bargaining Agreement also provides guidelines for the administration of Sick Leave.

Granting Sick Leave

Sick Leave is granted at the discretion of the Colonel/Superintendent or their designee, to a sworn member when the member cannot perform their duties because they are incapacitated by:

- Personal illness or injury;
- The presence of the member at their work location would jeopardize the health of others, through exposure to a contagious condition; or
- The member's spouse, child, parent, or spouse's parent, or relative living in the member's household, is seriously ill. In this event, a limit to the amount of leave the member can use is set by the CBA and federal and state laws.

Calling On Sick Leave

A member shall notify their duty assignment of their intention to use Sick Leave as early as possible on the first day of absence. This shall be appropriately logged in the Daily Administrative Journal and shall only reflect the member's name, identification number, and type of Sick Leave.

Supervisors shall be informed of:

- The nature of the illness or injury, and anticipated duration of absence, if known;
- The location of their recuperation and a telephone number; and
- Any duties or scheduled court appearances that may require attention.

Subject	Number
Sick Leave	**ADM-11**

Sick Leave

Members who are granted Sick Leave shall not request or work overtime and/or details within twenty-four (24) hours from the start time of their regularly scheduled work shift, unless the members has:

- Worked at least four (4) or more consecutive hours during the first half of their shift for which Sick Leave was granted; or
- Worked at least four (4) or more consecutive hours during the second half of their shift for which Sick Leave was granted.

Members may utilize Sick Leave to attend doctor and dental appointments.

Note: Supervisors shall ensure compliance with ADM-19 Vehicle Management with regards to Department issued vehicles.

Calling Off Sick Leave

Members shall call in at least eight (8) hours before reporting back for their next shift.

If using Sick Leave in excess of five (5) consecutive work days, the member may be required to undergo a medical examination, or provide documentation from a licensed medical practitioner, to determine their fitness for duty.

Location of Recuperation

Members suspected of abusing Sick Leave may be ordered to remain at a reported place of recuperation. A reasonable time period away from this location is allowed to:

- Obtain services or products consistent with medical care;
- Vote or attend religious services;
- Attend to an emergency situation; or
- Attend to other matters with the permission of their supervisor.

Members using Sick Leave may only leave the Commonwealth of Massachusetts:

- With authorization of their Commanding Officer; and
- To obtain medical care as prescribed by their licensed medical practitioner.

Review of Sick Leave

- Supervisors at all levels are responsible for monitoring Sick Leave. Supervisors should review attendance records for signs of Sick Leave abuse, preferably in conjunction with the Employee Evaluation System (EES).

Continued on next page.

Subject	Number
Sick Leave	**ADM-11**

Review of Sick Leave (Continued)

Some potential signs of Sick Leave abuse are:

- Excessive use;
- Patterns of use, such as before or after days off, or on weekends;
- Use on or around a holiday;
- Use after working overtime, details, or extra shifts;
- Use when the member has indicated that they want time off;
- Use when the supervisor believes that the member is not sick; and
- When the Sick Leave repeatedly creates shortages, or overtime.

Review of Sick Leave (Continued)

When a supervisor has *reason to suspect* Sick Leave abuse, the supervisor has the following options:

- Reason to Suspect Abuse in General- Notify the member using SP 382 Abuse of Sick Leave form. This advises the member that future Sick Leave may be subject to extra scrutiny; or
- Reason to Suspect Abuse In a Particular Instance- Notify the member using SP 383 Submission of Medical Evidence form. The member is then required to produce satisfactory medical evidence by submitting SP 384 Request for Certification of Medical Condition form within seven (7) days.

Supervisors should have articulable reasons for suspecting abuse before filing SP 382 Abuse of Sick Leave form. Supervisors may call or visit the member at their place of recuperation to verify the use of Sick Leave. Calls or visits shall not occur between 2200 hours and 0800 hours.

Members who abuse Sick Leave or who are excessively absent from duty may be subject to administrative or disciplinary action and denial of Sick Leave.

Leave Benefits

Leave issues for members are addressed in the Collective Bargaining Agreement.

Commanding Officers shall consult applicable collective bargaining agreements for civilians under their charge.

Temporary Modified Duty

Policy

Temporary Modified Duty is designed to provide an alternative work assignment for members who are temporarily unable to meet some of the Department in-service standards. Members failing to meet in-service medical and physical fitness standards due to temporary injury, illness or incapacitation are eligible to undergo reexamination pursuant to M.G.L. c. 22C, §10. Requests for reexaminations shall be made in writing to the Colonel/Superintendent within the period prescribed by M.G.L. c. 22C, §10 or shall be waived.

Temporary Modified Duty

While on Temporary Modified Duty, members shall not:

- Wear a uniform;
- Work overtime;
- Work paid details; and
- Have contact with prisoners, the public in an enforcement capacity, or function as a desk officer in a sub-station.
  Exception: Emergency situations may require the immediate response of the member.

The Colonel/Superintendent may authorize members on Temporary Modified Duty to:

- Operate a Department vehicle; and/or
- Carry a Department issued firearm.

The immediate supervisor of a member on Temporary Modified Duty shall ensure compliance with ADM-19 Vehicle Management.

Eligibility

Eligibility for Temporary Modified Duty status shall:

1. Be recommended by the State Police Surgeon;
2. Require that the member's anticipated period of injury, illness or incapacitation be temporary in nature, meaning less than twelve (12) months in duration; and
3. Be determined by the Colonel/Superintendent.

Members who are not eligible for Temporary Modified Duty may:

- Remain or be placed on Sick Leave, Injured Leave, or other approved duty or leave status as appropriate.

Subject	Number
Temporary Modified Duty	**ADM-11A**

Evaluation By State Police Surgeon

Members who are eligible or assigned to Temporary Modified Duty shall be required to:

- Submit to periodic medical evaluation(s) of their condition as determined by the State Police Surgeon or by order of the Colonel/Superintendent.

Any member who has been assigned to Temporary Modified Duty for a period of twelve (12) months, shall be examined by the State Police Surgeon, who, after reviewing all medical information, shall recommend to the Colonel/Superintendent that the member:

- Remain on Temporary Modified Duty for a period as recommended by the State Police Surgeon and as determined by the Colonel/Superintendent;
- Submit to a medical examination as directed by the Department;
- Be placed on: Full Duty; No Duty; or Temporary Modified Duty; and/or
- Be discharged, separated and/or retired.

Member's Assignment to Temporary Modified Duty

The Colonel/Superintendent may assign a member to Temporary Modified Duty based upon a medical recommendation from the State Police Surgeon. A member may dispute such assignment by:

- Providing a written notification to the Colonel/Superintendent within ten (10) days; and
- Producing a written statement from the member's physician detailing the medical reasons the member cannot perform such assignment.

The Colonel/Superintendent upon receipt of such written notification may:

- Require the member to submit to an examination by a medical physician selected by the Department.

The medical physician selected by the Department shall:

- Examine the member to determine if the member can perform the duties of the proposed assignment; and
- Forward written documentation of the examination with recommendations to the Colonel/Superintendent.

The Colonel/Superintendent shall make all final determinations regarding a member's assignment to Temporary Modified Duty.

Subject	Number
Temporary Modified Duty	**ADM-11A**

Responsibilities

Position	Duties
Colonel/Superintendent	Shall establish and approve Departmental: • Duty Status; • Leave Status; • Medical Standards; and • In-service Standards.
State Police Surgeon	Shall evaluate members and recommend: • Eligibility for Temporary Modified Duty status; and • The frequency of medical evaluation periods.

Subject

Injury Reporting and Leave

Policy

The Department shall investigate and document each on-duty injury to a member. All duty related injury documentation shall be completed and forwarded to the proper authority in a timely manner.

Every injury shall be investigated in accordance with this policy.

Leave Status

Members incapacitated by an injury incurred on-duty shall:

- Be placed on *Injured Leave Pending* (ILP) status by their Commanding Officer or designee until examined by the State Police Surgeon; and
- Officially be placed on *Injured Leave Duty* (ILD) status when so determined and approved by the Board on Claims.

Payroll Information

A member who:

1. Remains on approved ILD into the next calendar year, or
2. Returns from approved ILD in the last quarter of the current calendar year may request:
    - The Colonel/Superintendent to convert excess vacation time credits to Sick Leave.

Members on approved ILD may request a tax exempt status letter through the Payroll Section.

Reporting

If injured while on-duty:

- Division of Field Services members shall immediately advise the Desk Officer who shall notify the Troop Duty Officer; or
- Non-Field Services members shall notify their Commanding Officer.

The nature and cause(s) of a member's injury shall be noted in the Daily Administrative Journal.

Supervisors shall ensure the procedures outlined in TRF-20 Department Vehicle Crashes are followed, if an injury is the result of a cruiser crash.

Subject	Number
Injury Reporting and Leave	**ADM-11B**

Investigation/ Documentation Protocols

The **Troop Duty Officer** (for DFS members) or the **Commanding Officer** (for non-DFS member) shall :

- Assign an investigating officer;
- Ensure that form SP 624 Initial Injury Report is completed; and
- Ensure that prior to the end of the shift, the SP 624 is sent via FAX to General Headquarters Division Commander and the Occupational Health Unit/Human Resources Section.

Injured members should, if necessary, seek emergency medical care or seek treatment from their own personal physician. All bills shall be:

- Made out in the injured member's name and home address;
- Itemized and initialed by the member; and
- Submitted to the investigating officer within seven (7) days.

Injured members (unless physically incapable) shall, within seven (7) days, complete and sign the following forms and submit to the investigating officer:

- Sections 1 through 7 of SP 37 Statement in Support of Claim;
- Commonwealth's Form 1 Notice of Injury;
- To/From Letter (including how the injury occurred and names of any witnesses and statements); and
- SP 625 Authorization for Release of Medical Records.

Investigating officers shall:
When the injured members are physically incapable:

- Prepare the appropriate forms (e.g. SP 37); and
- Forward same on the injured member's behalf.

Within seven (7) days of receipt of claim, submit to the Troop/Section/Unit Commander:

- Statement in Support of Claim, after completing Section 8;
- Notice of Injury;
- Injured member's To-From along with all supporting documentation;
- Any witness statements; and
- Medical records and medical bills, as available.

Troop/Section/Unit Commander shall:

- Complete Section 9 of the Statement in Support of Claim;
- Prepare a To/From letter to the President of the Board on Claims, which shall include a brief account of the facts concerning the injury and conclusions regarding the cause of the injury and forward:
  1. Investigating Officer's Report and documentation; and
  2. The Statement in Support of Claims.
- Forward a copy of the Board on Claims decision letter to the injured member.

Continued on next page.

Subject	Number
Injury Reporting and Leave	**ADM-11B**

Investigation/ Documentation Protocols (Continued)

Troop/Section/Unit Commanding Officer shall, if the injured member is unable to return to duty:

- Place the member on ILP (members who have a recurrence of a previous injury should be placed on Sick Leave); and
- Notify the Occupational Health Unit of the status and request an appointment with the State Police Surgeon.

The **State Police Surgeon** shall:

- Conduct an initial evaluation of the injured member to determine the member's duty status;
- Schedule periodical examinations as deemed necessary to determine the member's duty status;
- Determine and recommend a member's eligibility for Modified Duty; and
- Report to the Department when a member is medically able to return to full duty status.

Recurrent Injuries

All recurrent injuries shall be reported using the same process as new injuries.

Members with any recurrent injuries shall be placed on Sick Leave until officially approved and placed on ILD status.

While on Injured Leave

Members on Injured Leave may only leave the Commonwealth:

- With authorization of their Commanding Officer.

Supervisors shall ensure compliance with:

- ADM-19 Vehicle Management with regards to Department issued vehicles; and
- ADM-20 Weapons Management with regards to Department issued weapons.

Maternity Leave and Guidelines

Policy

The maternity policy is designed to provide notification and employment guidelines in order to prevent workplace discrimination on the basis of pregnancy.

Members shall:
- Not be required to disclose her pregnancy except in accordance with this policy.

The Department shall only take action when;
- Requested by the member; or
- The member's physician or obstetrician recommends work limitations.

Notification Requirements

A member shall notify her commanding officer that she is pregnant, when she has:
- Reached her third trimester of pregnancy;
- Requests modification, exemption, or leave from her assigned duties; or
- Been given physical restrictions or limitations by her physician or obstetrician that prohibits her from performing all aspects of her current assignment.

All notifications shall be made:
- In writing, and include the anticipated due date as well as the anticipated date of return to work (if known).

Subject	Number
Maternity Leave and Guidelines	**ADM-11C**

Notification Process

The member shall submit to her commanding officer:

- Within seven (7) days of the initial notification, a letter from her physician or obstetrician regarding her pregnancy; and
- Every thirty (30) days thereafter, a written update from her attending physician or obstetrician.

Each letter shall contain:

- Name, address and contact information for the attending physician or obstetrician;
- Any restriction or limitation on her current work assignment, if none, the letter shall explicitly state so;
- Anticipated due date;
- Anticipated date for return to work (if known); and
- Any other information the member or physician or obstetrician believes would be of assistance to the Department.

Duty Status

A member not placed on alternative duty shall:

- Perform all duties required of her in her current position until such time as other duties are assigned consistent with this policy.

If the member has not notified the Department of her pregnancy and sought alternative duty status under this policy, then her pregnancy:

- Cannot be a defense to any disciplinary action taken against her for failure to perform her duties.

A member may request in writing, at any time during her pregnancy, to be assigned to alternative duty. Alternative duty shall:

- Not affect the member's existing benefits;
- Be consistent with restrictions or limitations identified by her attending physician or obstetrician regarding:
  1. Overtime and paid details;
  2. Interaction with prisoners;
  3. Interactions with the public in an enforcement capacity; and
  4. Dangerous duty such as riots.

  Exception: Any emergency situation that may require the immediate response of the member.

Subject	Number
Maternity Leave and Guidelines	**ADM-11C**

Voluntary Alternative Duty

The Colonel/Superintendent or designee shall:

- Approve and determine a member's request for alternative duty assignment taking into consideration the pregnant member's current assignment and duties.

Eligibility for an alternative duty assignment:

- Does not entitle the member to be transferred to a different position or unit within the Department.

Alternative duty may be:

- A form of modified duties and/or an altered work shift at the request of the member; and
- Consistent with any restrictions or limitations set forth by her attending physician or obstetrician.

Eligible Members:

- Shall not be transferred or have their shift changed involuntarily as the result of seeking alternative duty; however
- A reasonable accommodation may require the member to accept temporary assignment in the geographic area of her current assignment or residence.

Involuntary Alternative Duty

The Department may involuntarily reassign a member to alternative duty based upon medical evidence that the member cannot safely perform her current duties.

A member may challenge such reassignment by:

- Providing a statement from her physician or obstetrician that she can perform such duties;
- Submit to an examination by a neutral obstetrician selected by the member from a list agreed upon by the Department and the representatives of the member's collective bargaining unit;
- Remain in her current duty assignment pending receipt of the opinion of the neutral obstetrician; and
- Be bound by the opinion of the neutral obstetrician.

The neutral obstetrician shall:

- Examine the member and determine whether she can perform the duties of her assigned position; and
- Render an opinion which shall be binding upon the Department and the member.

Subject	Number
Maternity Leave and Guidelines	**ADM-11C**

Duty Assignment

When an alternative duty assignment is unavailable within a member's current assignment, the Colonel/Superintendent or designee shall:

- Find appropriate alternative assignment within the member's immediate geographic area as defined by the Troop Area of her current assignment or her residence; and
- Ensure no member be denied such an assignment within her current assignment, or immediate geographic area.

If a member believes that she has been unreasonably denied such an assignment in violation of this policy, the member shall:

- Submit a To-From outlining the objections to the Colonel/Superintendent or designee.

The Colonel/Superintendent or designee shall:

- Endeavor to remedy the member's concerns within seventy-two (72) hours of receipt of the notice; or
- Respond, in writing, stating the position of the Department with respect to the request.

Department Standards

A member who has notified the Department of her pregnancy in accordance with this policy shall:

- Be exempt from weapons qualification requirements during the course of her pregnancy; and
- Be required, upon return to full duty status, to meet the Department's medical and in-service standards.

Department Issued Vehicles

A member who is placed on alternative duty shall be:

- Issued an unmarked vehicle while on an alternative duty status.

If the Department is unable to provide the member with an unmarked vehicle, the member shall be:

- Provided with a per diem rate in accordance with the same terms and conditions as apply to members of equal rank assigned to the Massachusetts Port Authority.

Members who are currently assigned an unmarked vehicle shall be allowed to continue to operate the vehicle.

Supervisors shall ensure compliance with:

- ADM-19 Vehicle Management with regards to Department issued vehicles.

Subject	Number
Maternity Leave and Guidelines	**ADM-11C**

Members Rights

The member retains all such rights available to her under the collective bargaining agreement, state and federal law to challenge the decision of the Colonel/Superintendent or designee with respect to such a determination by the Colonel/Superintendent or designee as to the implementation of this policy.

Subject

Leaves of Absence

Policy

The Department may grant sworn and civilian employees leaves of absence, with or without pay, as allowed by:

- Federal and state law;
- Commonwealth's Human Resources Division (HRD);
- Collective Bargaining Agreements (CBA), Personnel Administration Rules (PAR), HRD Red Book; or
- The Colonel/Superintendent.

Leave Coordinator

The Division of Administrative Services (DAS) Commander shall appoint a Leave Coordinator who shall be responsible for:

- Receiving and processing specified requests for leave;
- Assisting employees with paperwork requirements;
- Assisting and coordinating with commanding officers and the Colonel/Superintendent to evaluate requests for leave;
- Coordinating the requirements for employees returning from leave;
- Ensuring personnel records, payroll history, health insurance and other benefits are updated or administered as necessary; and
- Consulting with Office of Employee Relations and Legal Section regarding leave requests.

Approval of Leave

The Leave Coordinator shall forward all requests for leave to the Colonel/Superintendent. The Colonel/Superintendent may approve or deny leave based upon:

- Applicable federal and state laws, and collective bargaining agreements;
- Operational needs of the Department;
- The purpose of the leave; and
- Other factors that may exist.

The Leave Coordinator shall notify an employee, in writing, of the decision of the Colonel/Superintendent.

Conduct on Leave

An employee on a leave of absence for any duration shall:

- Adhere to and abide by all State Police Rules & Regulations, Policies & Procedures, applicable written directives, and collective bargaining agreements; and
- Not work any overtime, details or appear in court on behalf of the Department.

An employee who is on any form of leave in excess of thirty (30) days shall return the following issued equipment to their Troop/Section/Unit Commander:

- All issued Department firearms and ammunition;
- Assigned vehicle along with vehicle issued equipment;
- Department issued fuel card, transponder and snow gate access cards; and
- All issued electronic devices (e.g. cell phone, laptop).

Troop/Section/Unit Commanders shall contact the issuing section regarding storage.

Bereavement Leave

Employees are entitled to leave, without loss of pay or benefits, in recognition of the death of family members, or persons living in the household of the employee, in accordance with their respective collective bargaining agreements.

Blood Donation Leave

Employees

Are permitted a maximum of four (4) hours leave of absence with pay, subject to operational needs and the approval of their supervisor, specifically to enable the employee to donate blood. The decision of their supervisor cannot be appealed.

- Leave time is for:
  1. Travel from work to the donation site;
  2. Actual donation time;
  3. Recovery from donation; and
  4. Travel time back to work.

Leave Time

- Shall be taken on the day the donation occurs;
- Employees shall not accrue compensatory time in lieu of such leave;
- Blood Donation Leave is permitted for a maximum of five (5) times per federal fiscal year, the period of October 1 though September 30 each year.

Employees Blood Bank Form

In order to qualify for the Blood Donation Leave, an SP 635 Employees Blood Bank form shall:

- Be completed certifying the date, location, times and type of blood donation.

Education Leave

Purpose
Employees may be granted a paid leave of absence for educational purposes to attend conferences, seminars, briefing sessions, or other functions of a similar nature that are intended to improve or upgrade the individual's skills or professional ability.

Request Procedure
Shall be made in writing to the Leave Coordinator and at least thirty (30) days in advance of the desired leave, or if unforeseen, as soon as possible.

- Requests shall include:
  1. The anticipated start and end dates of training;
  2. A thorough description of the training accompanied by documentation from the institute hosting the training; and
  3. Rationale for the relationship of the training to the employee's work unit, and/or the Department as a whole.

Approval
Approval is entirely at the discretion of the Colonel/Superintendent, and is not subject to appeal.

- Considerations may include, but not be limited to:
  1. Costs and benefit of the training to the Department as a whole;
  2. Benefit of the training to the individual employee and their work unit; and
  3. The reasonable relationship of the training to the individual employee's work assignment.

Extended Illness Leave Bank (EILB)

Description
A voluntary program to assist employees who have expended their accrued paid leave due to an extended personal illness or injury, thereby enabling the employee to remain on paid leave within the limits of the program.

Program
1. To be eligible for membership, employees shall annually donate an amount of sick, vacation or personal leave credits to the EILB; and
2. Apply to withdraw from the EILB, up to one-hundred and twenty (120) days within a two (2) year period, when extended illness or injury have exhausted all their paid leave time.

Note: Employees seeking further information should contact the Leave Coordinator.

Family and Medical Leave (FMLA)

The Colonel/Superintendent shall grant employees who have completed their probationary period the following:

Family Leave-A leave of absence:

- For the birth, adoption, or placement of a child.

Medical Leave-A leave of absence:

- If an existing serious health condition prevents the employee from being able to perform the functions of their position; or
- To care for family members who have a serious health condition.

Intermittent Leave/Modified Work Schedules

- May be available to employees based on the operational needs of the work station/section/unit/.

Note: Employees shall consult their applicable collective bargaining agreements for specific benefits, durations, definitions, and other information for cited leave.

Request Procedure

Requests shall be made in writing to the Leave Coordinator at least thirty (30) days in advance of the desired leave, or if unforeseen, as soon as possible.

- The request shall contain the following:
    1. Anticipated start and end dates of leave, proposed intermittent usage of the leave or proposed modified work schedule;
    2. Specific reason for taking the leave (family or medical); and
    3. Appropriate documentation.
        i. For the birth, adoption, or placement of the child, a birth certificate or adoption/placement papers may be required.
        ii. For leave due to a serious health condition of the employee or other, a medical certification form provided by the Department in support of the request is required.

Note: Requests for Family and Medical Leave may be denied if the above requirements are not met.

Non-FMLA Family Leave

The Colonel/Superintendent may grant employees who have completed their probationary period, Non-FMLA Family Leave in accordance with the appropriate collective bargaining agreement.

Request Procedure
Requests shall be made in writing to the Leave Coordinator at least fourteen (14) days in advance of the desired leave, or if unforeseen, as soon as possible.

- The request shall contain the following:
  1. The anticipated start and end dates of leave, or the intended days for incremental use; and
  2. The specific reason for the requested leave and any documentation the employee may have in support of the leave request.

Note: Employees shall consult their applicable collective bargaining agreements for specific benefits, durations, definitions, and other information for cited leave.

Leave of Absence Without Pay

Authorization
The Colonel/Superintendent may grant employees authorized leave of absence for up to ninety (90) days and/or grant an extension of leave of absence upon written request filed by the employee.

Request Procedure
Requests for Leave of Absence Without Pay shall be made in writing to the Leave Coordinator at least thirty (30) days in advance of the desired leave, or if unforeseen, as soon as possible.

- The written request shall contain the following:
  1. Anticipated start and end dates of said leave;
  2. A detailed statement of the reason for the leave;
  3. In the event that the absence is illness/injury related, written requests shall be accompanied by substantiating proof of such illness.

Sworn Members – Return to Service Requirements

The Leave Coordinator shall inform sworn members of any requirements necessary for return to service from leave.

Returning to Service – FMLA-Medical Leave or Authorized Leave of Absence Without Pay

- Members returning to service due to their own illness/injury that exceeds ten (10) days shall:
  1. Notify their Commanding Officer to contact the Occupational Health Unit to schedule an appointment with the State Police Surgeon prior to returning to work; and
  2. Have a recommendation from the State Police Surgeon for return to service.

Continued next page.

Sworn Members – Return to Service Requirements (Continued)

Leaves or Break-In-Service

- Members returning from a leave or break in service that exceeds ninety (90) days shall be required to successfully complete:
  1. On-Line Academy; and
  2. An evaluation by the Division of Standards and Training Commander or designee regarding any additional training required.

- Members returning from a leave or break in service that exceeds one (1) year shall be required to successfully complete:
  1. A background investigation;
  2. A medical examination by the State Police Surgeon to include drug testing;
  3. Psychological testing; and
  4. An evaluation by the Division of Standards and Training Commander or designee regarding any additional training required.

- Former members wishing to return from a separation from service that exceeds three (3) years shall:
  1. Meet all requirements for reentry to the Department; and
  2. Successfully complete the Recruit Training for appointment to the position of Trooper.

Note: Failure to successfully complete the Recruit Training may affect pension benefits, if applicable.

Returning From Leave: Civilians

Return From Leave

- Employees returning from a leave that exceeds one (1) year shall be required to successfully complete:
  1. A background investigation;
  2. A drug test;
  3. A medical examination by the State Police Surgeon, as applicable, if returning from medical leave where the employee was the one that was ill; and
  4. Retraining, as determined by the employee's supervisor or the Human Resources Director.

Sworn Members Returning From Disability

In addition to the previously listed requirements, sworn members returning from disability retirement shall have a medical evaluation conducted in conformance with MGL c.32, and the standards of the Commonwealth of Massachusetts Public Employee Retirement Administration Commission.

Subject	Number
Leaves of Absence	**ADM-11E**

Benefits

Employees may be required to pay premiums for certain benefits while on Leave.

Military Leave

Refer to Policy and Procedure ADM-11D Military Leave.

Serious Injury/Death of a Member

Policy

The Department recognizes that the death or serious injury of a member is traumatic and shall provide assistance to the member's family, recognizing that the needs of the family generally take precedence over the wishes of the Department.

Department members shall:
- Ensure that whenever a member's next of kin calls, their questions are answered honestly and openly.

OFF-DUTY Death Notification Procedure

When any member becomes aware of the death of a current or retired member of the Department of State Police, or an immediate member of their family, they shall immediately:
- Notify the Office of the Superintendent through channels.

Information for notification shall include:
- Personal information on the deceased person;
- The circumstances of the death;
- Any funeral arrangements; and
- A family contact person.

The Office of the Superintendent shall notify:
- Members of the Department; and
- Special effort shall be made to contact the member's graduating class.

ON-DUTY Death Notification Procedure

If the death or life threatening injury occurs on-duty, the member's Commanding Officer or designee shall immediately notify:
- The Office of the Superintendent.

The Colonel/Superintendent shall immediately:
- Assign a ranking member to personally contact the member's immediate family; however
- Every effort shall be made to use a member of the Department who is a personal friend, along with the ranking member.

Subject	Number
Serious Injury/Death of a Member	**ADM-12**

Liaison Member

If the family chooses, the Colonel/Superintendent shall:

- Appoint a Department member as a liaison, to provide additional assistance to the immediate family of the deceased/injured member or retiree.

As a guide, the liaison member should:

- Assist the family in contacting clergy, friends, and relatives;
- Assist the family with funeral arrangements;
- Provide transportation assistance for the immediate family;
- Arrange for security needs of the home and screening of phone calls prior to and on the day of the funeral;
- Coordinate the family's efforts to determine the status and amounts of compensation to which the deceased member may be entitled; and
- Keep the Colonel/Superintendent informed of all arrangements and developments.

Honor Guard

The Colonel/Superintendent shall:

- Designate a member to be the Officer-in-Charge (OIC) of the funeral detail.

The OIC shall:

- Coordinate with the liaison member; and
- Adhere to GEN-04A Ceremonial Tributes regarding funeral details.

Subject

Notification of Medical Examiner and/or Next of Kin

Policy

The Department shall promptly and compassionately notify the nearest relative of victims who have sustained life threatening injuries, or passed away.

Notification of Medical Examiner

The Medical Examiner of jurisdiction shall be notified whenever a member of the Department becomes aware of a death (Specific circumstances appear in MGL c.38, s.4, 6.).

Responsibilities

Note: The District Attorney's Office or State Police Detective Unit of jurisdiction shall direct the investigation of all homicides, suicides, and unattended deaths (including traffic fatalities, as requested by the Office of the District Attorney of jurisdiction).

Position	Duties
First member at the scene	• Notify the Station Desk Officer. • For all homicides, suicides, and unattended deaths, secure the scene, pending arrival of the State Police Detective Unit (SPDU) of jurisdiction.
Station Desk Officer	• Immediately notify the Troop Duty Officer.
Troop Duty Officer	Immediately notify the appropriate: • SPDU of jurisdiction of all homicides, suicides, and unattended deaths, and take any action requested; and • Local Medical Examiner's (ME) Office, as requested by SPDU. If the ME declines to respond to the scene, request authority from the ME to remove the body. If the ME is unavailable, contact the Office of the Chief Medical Examiner at (617) 267-6767 and request authority to remove the body.

Continued next page.

Subject	Number
Notification of ME and/or Next of Kin	**ADM-13**

Responsibilities (Continued)

Position	Duties
Troop Commanders	Ensure that their Troop Duty Office has an updated list of Medical Examiners' phone numbers and addresses.

Next of Kin

Every effort should be made to locate the next of kin in the order of:

- Live-in spouse;
- Parents or legal guardian;
- Adult children;
- Brother or sister; or
- Other relatives.

Request for Notification

Members may be called upon to notify the next of kin that a family member or friend has been seriously injured or is deceased. Except under unusual circumstances, **this notification should be made in person.** No identifying information of the victim or their family shall be transmitted via radio.

Position	Responsibility
Members receiving request to notify the next of kin	1. Request as much information as possible, to include: • Cause of death and/or injuries; • Location of deceased or injured person; and • Contact person and telephone number. 2. If the member is unfamiliar with the caller, seek to confirm the information. 3. Notify Troop Duty Officer.
Troop Duty Officer	1. Notify the appropriate Detective Unit of all homicides, suicides, and unattended deaths (including traffic fatalities if so requested by the DA's Office of jurisdiction). 2. Determine who shall make the notification to the next of kin. 3. If the notification is not to be made in person, determine what means shall be used.

Subject	Number
Notification of ME and/or Next of Kin	**ADM-13**

District Attorney Offices

Whenever there is a homicide, suicide, or unattended death, the Division of Investigative Services shall determine the notification process. Members assigned to an Office of a District Attorney shall follow the protocols promulgated for their particular office.

All other notifications shall be made by the Division of Field Services.

Field Services Procedure

Whenever possible, two (2) members shall be sent to make a notification of serious injury, illness, or death.

The member who is making the notification should carefully prepare their message before speaking with the next of kin. When possible, members shall:

- Seek assistance from clergy, relative, or close friend of the family;
- Make the notification in a private setting, and ask the recipient to sit down;
- Deliver the information to the recipient in a gradual manner;
- Observe the recipient carefully as the information is given;
- If possible, do not leave the recipient alone. Members should attempt to contact a relative, friend, or neighbor to stay with the recipient; and
- When the recipient is operating a motor vehicle, the member shall ascertain if they are able to continue driving. If not, members may transport or make transportation arrangements for the recipient.

Personnel Investigations

Policy

To protect the integrity of the Department and to ensure continued public support:

- All Department employees shall adhere to the Department's Policy and Procedure regarding external complaints (including anonymous ones) against any employee, policy, procedure, or operation of the Department;
- All complaints shall be documented and investigated according to complaint intake procedures; and
- Complaints, when assigned, shall be investigated at the lowest appropriate organizational level, unless determined otherwise by the Division of Standards and Training Commander or designee.

Definition

Personnel Investigation: An investigation or an inquiry into the actions of an employee that may result in charges of misconduct.

Rights of the Accused Employee

An accused employee shall:

- Receive a copy of the complaint, including the name of the complainant, if known, prior to any employee interrogation;
- Be afforded full Constitutional and other legal protections; and
- Be afforded the protections applicable under the Collective Bargaining Agreements.

Rights of the Complainant

The Complainant shall:

- Be notified of the receipt of the complaint, and the steps to be taken;
- Be given a status report when requested; and
- Be notified of the final disposition classification.

Use of Examinations

If during an investigation it becomes necessary to request an employee to submit to an examination or required test(s), the Troop/Section/Unit Commander shall contact the Division of Standards and Training for approval.

The results of medical tests shall be afforded appropriate privacy rights according to applicable laws.

Complaint Intake Procedures

A complaint that requires <u>immediate attention</u> shall:

- Be immediately referred to the Troop/Section/Unit Commander, Duty Officer or Shift Supervisor.

External Complaints

External complaints are to be completed by the Complainant on a SP 340 Citizens Response Form. The Complainant may obtain a SP 340 in the following manner:

- Contacting a State Police facility for instructions;
- Arriving in person to a State Police facility and securing a copy of a SP 340;
- Downloading the SP 340 form from the State Police external website www.mass.gov/msp ; or
- Calling the Citizen Response Intake Line (508) 988-7003 and following the prompts.

When a Complainant calls or arrives at a State Police facility the following shall occur:

- The Desk Officer or employee who attends to a Complainant, either by telephone or in person, shall:
    1. If applicable to their work assignment, log only the name and address of the Complainant into the Daily Administrative Journal (DAJ), the Complainant should <u>not be asked</u> to identify the employee(s) named in the complaint, nor should any employee information pertaining to this complaint be included within the DAJ entry. <u>Note:</u> DAJ information would also include anonymous complaints or when the Complainant refuses to give their name;
    2. Give the Complainant a copy of the SP 340 form; or
    3. Instruct the Complainant on how to obtain a SP 340 form from the above options;
    4. Ensure the Complainant understands all options and the submission procedure; and
    5. Assure the Complainant that all complaints shall be addressed by the Department.

In instances where the Complainant demands to <u>immediately speak to a supervisor</u> the following shall occur:

- Division of Field Services employees shall notify the Troop Duty Officer of jurisdiction and then refer or forward the Complainant to the same Troop Duty Officer; or
- Division of Investigative Services, Division of Administrative Services, Division of Standards and Training, and Division of Homeland Security and Preparedness employees shall notify a Commissioned Officer from within their Division and then refer or forward the Complainant to the same Commissioned Officer.

Continued next page.

Complaint Intake Procedures (Continued)

The Troop Duty Officer or the Division Commissioned Officer shall:

- Record the Complainant within the DAJ, if applicable to their work assignment. Note: DAJ information would also include anonymous complaints or when the Complainant refuses to give their name;
- Explain the complaint intake procedure;
- Instruct the Complainant on how to obtain a SP 340 form from the above options; and
- Assure the Complainant that all complaints shall be addressed by the Department.

Employees who receive complaints about their own conduct shall immediately:

- Notify their Troop Duty Officer or a Commissioned Officer from within their Division; and
- Transfer or refer the Complainant to the same Troop Duty Officer or Commissioned Officer from within their Division.

Internal Complaints

Internal personnel complaints originating within the Department by any employee, shall be documented in a To/From format. The To/From shall be submitted in the following manner:

- Copy faxed to the Division of Standards and Training within twenty-four (24) hours from the date of the To/From;
- Copy submitted through channels to the appropriate Troop/Section/Unit Commander; and
- Original forwarded the to the Division of Standards and Training.

SP340 Citizens Response Form Submission

SP 340 Citizens Response Form shall be submitted in the following manner:

- Delivered in person to the Massachusetts State Police General Headquarters 470 Worcester Road Framingham, MA 01702 / Citizen Response Reports; or
- Faxed to: The Division of Standards and Training/ Citizen Response Reports 508-820-2149; or
- Emailed to: The Division of Standards and Training/ Citizen Response Reports at Citizensresponsereports@pol.state.ma.us ; or
- Mailed to: The Massachusetts State Police Division of Standards and Training/ Citizen Response Reports 470 Worcester Road Framingham, MA 01702.

Interviews

Reasonable arrangements shall be made to accommodate the schedules of the parties involved.

Interviews may be recorded mechanically or by a Department stenographer. The accused employee may independently record their own interview.

Subject	Number
Personnel Investigations	**ADM-14**

Investigation

Step	Action
1	Supervisors shall conduct assigned investigations within thirty (30) days.
2	The complaint shall be categorized as: • Employee's conduct; • Validity of the enforcement action taken; • Department policy, procedure, or operations; or • Other.
3	The investigating member shall make a conclusion of fact for each complaint, which shall be reviewed by the appropriate Troop/Section/Unit Commander. Dispositions shall be classified as: • **Unfounded**- Complaint or incident is false and not factual. • **Exonerated**- Incident occurred, but employee's action was lawful and proper. • **Not Sustained**- Insufficient evidence to prove or disprove the complaint. • **Sustained**- The complaint or incident is supported by sufficient evidence to prove employee misconduct.
4	Complaints classified as **EXONERATED, NOT SUSTAINED, or UNFOUNDED,** and not alleging serious misconduct, shall be filed within the Internal Affairs database. For **SUSTAINED** investigations the Troop/Section/Unit Commander shall: • Prepare a memorandum indicating the category of the complaint, and recommendations; then • Forward the memorandum, with all completed reports and correspondence, through channels to the Division of Standards and Training.
5	The affected employee and Complainant shall be notified of the final disposition classification by the Troop/Section/Unit Commander or the Division of Standards and Training Commander.
	<u>Note</u>: Nothing in this policy should prevent members from taking appropriate and timely action for any allegations of criminal activity or criminal acts.

Subject

Internal Affairs

Policy

The Internal Affairs Section investigates allegations of serious misconduct by employees of the Department or as ordered by the Office of the Superintendent or the Division of Standards and Training.

Organization

The Internal Affairs Section has the authority to report directly to the Office of the Superintendent.

Serious Misconduct Defined

Some examples of serious misconduct include:

- Corruption;
- Criminal conduct;
- Use of excessive force; and
- Civil rights violations.

Jurisdiction

Complaints are investigated at the lowest appropriate organizational level in accordance with ADM-14 Personnel Investigations. Internal Affairs may investigate any complaint when:

- Requested by the Troop/Section/Unit Commander, with approval from the Division of Standards and Training;
- Directed by the Office of the Superintendent or the Division of Standards and Training; or
- The complaint alleges serious misconduct.

Use of Examinations

Upon the approval of the Division of Standards and Training Commander or designee, any employee subject to an internal investigation may be asked to submit to tests, examinations, and/or disclosures. These procedures may include, but are not limited to, the following:

- Ballistics and Chemical Tests;
- Forensic and Polygraph Examinations;
- A Photograph Array or Line-Up; and
- Financial Disclosure Statements.

Continued on next page.

Subject	Number
Internal Affairs	**ADM-15**

Use of Examinations (Continued)

Examinations and/or tests shall be:

- Relevant and material to the matter at hand;
- Specifically directed and narrowly related to such investigation; and
- Completed within a reasonable time and according to professionally accepted standards.

A polygraph examination may be used in investigations of criminal conduct.

The results of medical tests shall be afforded appropriate privacy rights according to applicable laws.

Procedure for Internal Affairs Cases

Step	Action
1	Open an Internal Affairs case file.
2	Notify the affected employee regarding; • The nature of the investigation; • The employee's rights as legally required; and • The employee's responsibilities relative to the investigation. NOTE: Internal Affairs can request written authorization from the Division of Standards and Training not to notify the employee, if the notification could hinder the investigation. However, the employee must be informed of the nature of the investigation before any interrogation takes place with the employee.
3	Provide a notification to the employee's Commanding Officer, unless it would hinder the investigation.
4	Conduct the investigation in a timely manner.
5	Prepare a report on the investigation for the Division of Standards and Training, with supporting facts for each allegation and a classification of the complaint: • Unfounded; • Exonerated; • Not Sustained; or • Sustained.
6	The Division of Standards and Training Commander shall notify the affected employee in writing, through channels, of the decision(s).
7	All case files shall be permanently retained.

Notifying Prosecuting Agencies Regarding Evidence

Policy

Prosecuting agencies shall be notified of any and all Departmental investigations, to include personnel and/or internal affairs investigations, that are associated with an open criminal prosecution or investigation. Department employees who generate records, percipient witness statements, and/or evidence that relate to a criminal prosecution shall and must notify the appropriate agency prosecuting the case. The assigned lead Departmental investigator in any criminal or administrative investigation is responsible for ensuring such notification is made.

Definitions

Personnel Investigation: Pursuant to ADM-14 Personnel Investigations, any investigation or inquiry into the actions of an employee that may result in charges of misconduct.

Internal Affairs Investigation: Any investigation conducted pursuant to ADM-15 Internal Affairs.

Reporting

A Department investigator assigned to an investigation, to include personnel and/or internal affairs investigations, shall:

- Determine whether the investigation to which he or she is assigned relates to the same facts and circumstances of an open criminal prosecution or investigation;
- Notify the agency prosecuting the open criminal matter of the related Departmental investigation; and document the same in official Department records;
- Upon request of the prosecuting agency, provide any related Departmental records, percipient witness statements and/or evidence to said prosecuting agency, and advise their supervisor and the State Police Legal Section of documents/evidence being provided. The Legal Section will document and maintain a record of the documents or evidence that were provided.
- If the lead investigator believes such notification may adversely affect the investigation to which they are assigned, they shall immediately address the same in writing through their chain of command with a final determination documented in official Department records.

Employee Evaluation System

Policy

The Department shall continuously maintain an Employee Evaluation System (EES) to establish and measure performance expectations for sworn members.

The EES shall be conducted in accordance with the Department's EES Manual.

EES Coordinator

The Division of Standards and Training Commander or designee, shall designate a commissioned officer as the EES Coordinator.

EES Purpose

EES is a proven tool for continuous individual and organizational improvement. Some primary purposes of EES are to:

- Maintain continuous supervisor/employee communication and feedback;
- Motivate employees to improve by understanding their needs;
- Establish goals and objectives at all organizational levels;
- Evaluate the quality of performance; and
- Evaluate the readiness to handle greater responsibilities.

Subject:

Unlawful Harassment, Sexual Harassment and Discrimination

Policy

The Department shall promote and maintain a working environment free from unlawful harassment, sexual harassment and discrimination.

Purpose

This policy addresses all forms of sexual harassment and addresses discrimination and unlawful harassment based on race, color, religious creed, national origin, age (40 or older), sex (including pregnancy), gender identity or expression, sexual orientation, genetic information, ancestry, handicap (disability), active military or veteran status, participation in discrimination complaint-related activities or other protected class under law.
Note: The definitions found in 804 CMR 3.00, et seq., as amended (the MCAD's *Employment Discrimination Guidelines*), shall be applicable to, and are hereby incorporated into, this policy.

This policy does not address conduct, conflicts, or disagreements otherwise addressed through the chain of command or within Department Policy and Procedures. Internal complaints or concerns, which do not relate to an identified protected class or sexual harassment, will not be addressed under this policy. Such complaints may have another course of action such as in ADM-14 Personnel Investigations or SUP-12 Office of the Ombudsman.

Harassment Investigation Unit (HIU)

The Sexual Harassment Officer for the Department is the Division Commander of Standards and Training.

Harassment Investigation Officer(s) shall be Commissioned Officer(s) assigned by the Colonel/Superintendent and shall report to the Division of Standards and Training.

All reports of unlawful harassment, sexual harassment or discrimination shall be forwarded to the Harassment Investigation Unit (HIU). Upon receipt of such a report, the HIU will commence an investigation or recommend an alternative avenue for resolution. All HIU investigations shall remain confidential to the extent practicable.

All Supervisors (except for Supervisors assigned to the Office of the Ombudsman and/or Employee Assistance Unit) shall immediately report incidents of unlawful harassment, sexual harassment or discrimination to the Harassment Investigation Unit.

Subject	Number
Unlawful Harassment, Sexual Harassment and Discrimination	**ADM-18**

Discrimination Defined

Discrimination is the unequal and unlawful treatment of persons ***in employment related decisions*** because of race, color, religious creed, national origin, age (40 or older), sex (including pregnancy), gender identity or expression, sexual orientation, genetic information, ancestry, handicap (disability), active military or veteran status, participation in discrimination complaint-related activities and/or other protected class under law.

Discrimination Examples

Conduct may include, but is not limited to, when the Department:

- Bases employment decisions solely on the race of an applicant; or
- Makes assignments solely on the age of an employee.

Unlawful Harassment Defined

Unlawful harassment is unwelcome conduct that is based on race, color, religious creed, national origin, age (40 or older), sex (including pregnancy), gender identity or expression, sexual orientation, genetic information, ancestry, handicap (disability), active military or veteran status, participation in discrimination complaint-related activities and/or other protected class under law.

Harassment becomes unlawful when:

- Enduring the offensive conduct becomes a condition of continued employment; or
- The conduct is severe or pervasive enough to create a work environment that a reasonable person would consider intimidating, hostile, or abusive.

Unlawful Harassment Examples

Unlawful harassment may include, but is not limited to, conduct, based on race, color, religious creed, national origin, age (40 or older), sex (including pregnancy), gender identity or expression, sexual orientation, genetic information, ancestry, handicap (disability), active military or veteran status, participation in discrimination complaint-related activities and/or other protected class under law, that involves:

- Offensive jokes, slurs, epithets or name calling, or other derogatory comments;
- Physical assaults or threats, intimidation, ridicule or mockery, insults or put-downs, or other verbal or physical conduct that denigrates or shows hostility or aversion; or
- Objects, photographs, images, or demeaning gestures connected to an individual's membership in a protected class.

Subject	Number
Unlawful Harassment, Sexual Harassment and Discrimination	**ADM-18**

Sexual Harassment Defined

Sexual harassment is unwelcome sexual conduct such as: sexual advances, requests for sexual favors, and/or other verbal or physical conduct of a sexual nature, when:

- Submission to or rejection of such advances, requests or conduct is explicitly or implicitly made a term or condition of employment or as a basis for employment decisions;
- Such advances, requests or conduct have the purpose or effect of unreasonably interfering with an individual's work performance; or
- Such advances, requests or conduct have the purpose or effect of creating an intimidating, hostile, humiliating, or sexually offensive work environment.

It is not necessary to meet the threshold of sexual harassment as defined by law to be considered a violation of this policy.

Sexual Harassment Examples

Examples of sexual harassment, may include but are not limited to:

- Direct sexual advances or assaults;
- Sexual inquiries, jokes, and epithets;
- Derogatory comments about a person's sex, sexual orientation or gender identity or expression;
- Other forms of verbal abuse of a sexual nature, such as whistling or catcalling;
- Offensive or unnecessary touching, pinching, patting, etc.;
- The display of sexually suggestive posters, photographs, or objects; or
- An employee receiving job benefits contingent on sexual favors (quid pro quo).

Sexual Harassment Victims

Victims of sexual harassment <u>may</u> be…	**The harasser <u>may</u> be…**
Of the same or different gender as the harasser.	Of either gender.
A third person who is not the intended target of the sexual harassment or conduct.	Any employee or in certain circumstances someone who is not an employee (vendors, contractors).

Liability and Sanctions

Employees may be personally liable if they engage in unlawful harassment, sexual harassment or discrimination.

Any employee found to have engaged in unlawful harassment, sexual harassment, or discrimination in violation of this policy is subject to disciplinary action up to and including termination.

Supervisors may potentially be personally liable if they knew or should have known about incidents of sexual harassment, and did not take appropriate corrective action.

The Department may not be held responsible in cases of unlawful harassment, sexual harassment, and/or discrimination, if it can show that it took prompt and appropriate corrective action.

Subject	Number
Unlawful Harassment, Sexual Harassment and Discrimination	**ADM-18**

Complaint Procedure

Step	Action
1	Process for reporting incidents of unlawful harassment, sexual harassment discrimination, and/or retaliation: • Notify a supervisor, who shall assist in reporting the complaint to the Harassment Investigation Unit (HIU); • Fax a copy of the SP 387 *Unlawful Harassment, Sexual Harassment and Discrimination Complaint* form directly to the HIU at (508) 820-2149, or email to MSPHIU@MASSMAIL.STATE.MA.US; • Forward the original SP 387 to the HIU 470 Worcester Road, Framingham, MA 01702; and/or • Report Complaint to the Director of the Human Resources Section at GHQ.
2	The HIU shall promptly: • Respond to the complainant; • Review all available information pertaining to the complaint; • Determine if the aggrieved individual(s) is/are a member of a class protected under the law and this policy; • Determine if the alleged conduct meets the definition of unlawful harassment, sexual harassment or discrimination as defined in this policy; • Determine an appropriate course of action, including, but not limited to, alternative resolutions; • Conduct an investigation if warranted, to include, but not limited to, an interview with person(s) filing the complaint, any witnesses, and the person(s) alleged to have engaged in unlawful harassment, sexual harassment and/or discrimination; • To the extent practicable, ensure that all interviews are digitally recorded; • Consult procedures included within the Department's Resolution Process as outlined within the Affirmative Action Plan; and • Make a report of findings and forward report to the Commander of the Division of Standards and Training. Consistent with Commonwealth and Department Policy/Rules and Regulations, and in a manner determined by the Division Commander of Standards and Training, completed confidential reports will be made available for inspection to complainants and persons alleged to have committed unlawful harassment, sexual harassment, discrimination and/or retaliation upon request.

4	The Harassment Investigation Unit shall notify the Department's Office of Diversity and Equal Opportunity of complaints of unlawful harassment or discrimination.

Subject	Number
Unlawful Harassment, Sexual Harassment and Discrimination	**ADM-18**

Responsibilities

Position	Duties
Supervisors	• Aggressively monitor the workplace to prevent and detect unlawful harassment, sexual harassment, and discrimination; • Take appropriate corrective action to stop all types of unlawful harassment, sexual harassment, and discrimination; • Immediately report incidents of unlawful harassment, sexual harassment, or discrimination to the Harassment Investigation Unit; • Assist any employee in filing a complaint, or obtaining information on the Commonwealth's Sexual Harassment Policy; and • Contact the HIU for information and guidance pertaining to unlawful harassment, sexual harassment and/or discrimination.
All Employees	• Shall not engage in any harassment, sexual harassment, or discrimination; • Shall cooperate in investigations of any harassment, sexual harassment, and discrimination; • Shall actively participate in the Department's efforts to prevent and eliminate any harassment, sexual harassment, and discrimination; and • May contact the HIU for information and guidance pertaining to any harassment, sexual harassment and/or discrimination.

Office of the Ombudsman/ Employee Assistance Unit

All employees should be aware that conversations with the Office of the Ombudsman and/or Employee Assistance Unit are considered confidential and are not the proper venue to notify the Department of unlawful harassment, sexual harassment and/or discrimination complaints. Supervisors assigned to the Office of the Ombudsman or the Employee Assistance Unit are not required to report such complaints through the official chain of command.

Retaliation

Any retaliation against an individual who has complained about unlawful harassment, sexual harassment, discrimination or for cooperating with a complaint and/or investigation of harassment, sexual harassment, or discrimination is unlawful and shall not be tolerated. Any such retaliation shall be a violation of this policy. Incidents of such retaliation shall be reported to the HIU in To/From format.

Distribution of Policy

This policy shall be issued to each employee upon hiring and to all employees annually thereafter. This policy shall be continuously posted and available on DocuShare.

Statewide Policy

The Department shall adhere to the Commonwealth of Massachusetts Human Resources Division Sexual Harassment Policy.

Subject	Number
Unlawful Harassment, Sexual Harassment and Discrimination	**ADM-18**

Findings

In the event that an investigation is conducted regarding unlawful harassment, sexual harassment, discrimination, and/or retaliation, the findings shall be classified as one of the following:

- ***Unfounded*** - Complaint or incident is false and not factual;
- ***Exonerated*** - Incident occurred, but employee's action was lawful and proper;
- ***Not Sustained*** - Insufficient evidence to prove or disprove the complaint; or
- ***Sustained*** - Complaint or incident is supported by sufficient evidence to prove employee misconduct.

Cases in which the complainant has withdrawn the complaint shall be classified as withdrawn. Cases that are approved for an alternate resolution shall be classified as referred. In all cases, a record shall be made in the case file. All findings, withdrawals and referrals shall be reviewed and approved by the Division Commander of Standards and Training.

Any complaint which is sustained shall be deemed a violation of ADM-18 and/or the Rules and Regulations of this Department and shall be handled in accordance with Rules and Regulations of the Department, as applicable. Whether found to be a violation of ADM-18 or not, any inappropriate employee conduct, including but not limited to making or providing false claims, reports, information, statements and/or testimony, may be deemed a violation of Department Policy/Rules and Regulations and is subject to investigation under ADM-14 Personnel Investigations.

NOTE: Nothing in this policy should prevent members from taking appropriate and timely action for any allegations of criminal activity or criminal acts.

Vehicle Management

Policy

To establish a central management system for all vehicles owned or controlled by the Department in order to maintain a state of operational readiness.

Procurement

The Fleet Administrator shall authorize and be responsible for the procurement of all Department vehicles including:

- Vehicle specifications;
- Bidding process; and
- Equipment, parts and materials necessary for vehicle maintenance.

Fleet Administrator

The Fleet Administrator shall:

- Maintain a master vehicle inventory for computer/cruiser number, operator, operator assignment, vehicle model year, mileage, registration number, and condition;
- Ensure the annual reconciliation of the master inventory during the month of June;
- Maintain a sufficient inventory of parts, materials, and equipment at Fleet and the Troop/Section garages, subject to available funding;
- Issue parts and materials to Troop/Section garages according to need and availability;
- Maintain detailed vehicle maintenance records; and
- Notify Department personnel of manufacturer vehicle recalls.

Fleet Coordinator

Troop/Section Commander or designee shall act as the Fleet Coordinator:

- Ensure that monthly mileage and state inspection are submitted through established Departmental procedures.

Specialty Vehicles

Requests for specialized vehicles shall be forwarded through the respective Division Commander to the Fleet Administrator.

Specialty vehicles shall:

- Be purchased based on needs of the Department;
- Be assigned to personnel within the specialized sections/units; and
- Remain within the assigned section/unit unless otherwise authorized by the Fleet Administrator.

Subject	Number
Vehicle Management	**ADM-19**

Vehicle Status

Designation	Meaning
Active	Assigned and in-use.
Down*	Inoperable, requires repairs.
Out of Service*	Permanently disabled.
Spare	Unassigned and available for use.
* Vehicles designated "Down or Out of Service" **shall not be operated.**	

Vehicle Assignment

The Fleet Administrator or designee shall:

- Maintain control over vehicle assignment and re-assignment;
- Assign vehicles based on the year, condition, and mileage;
- Assign vehicles to individual personnel based upon availability and particular assignment; and
- Prior to the assignment or replacement of a vehicle:
  1. Analyze inventory reports of affected vehicle(s);
  2. Notify member(s) of scheduled vehicle assignment or appointment; and
  3. Inspect and verify vehicle being turned in for mileage, damage, operational status, cleanliness, and issued equipment.

Note: Personnel failing to report with their assigned vehicle and/or issued vehicle equipment shall not be issued a new or replacement vehicle.

Transfers

If members are…	Then members shall…
Transferred or promoted to a function requiring the same vehicle.	Retain currently assigned vehicle.
Transferred or promoted to a function requiring an alternate vehicle, i.e. marked, unmarked or specialty vehicle.	Contact the Fleet Section for vehicle re-assignment.

Vehicle Disposal

The Fleet Administrator shall:

- Maintain standards and criteria for determining when a vehicle is suitable for disposal;
- Ensure all usable equipment and parts are removed and the vehicle is appropriately prepared for disposal; and
- Provide the Commonwealth of Massachusetts Operational Services Division with the vehicle identification number of disposed vehicles.

Subject	Number
Vehicle Management	**ADM-19**

Extended Leave

Position	Responsibilities
Member	Shall return the following issued equipment to their Troop/Section/Unit Commander when on extended leave in excess of thirty (30) days: • Assigned vehicle along with issued vehicle equipment; and • Department issued fuel card, transponder and snow gate access cards.
Troop/Section Commander	• Shall notify the Fleet Administrator when issued vehicles and equipment are returned due to extended leaves; and • Advise the location of the vehicle and equipment.
Fleet Administrator	• Re-assign vehicle based upon the needs of the Department; and • If practicable, members returning to full duty should be re-assigned the same vehicle.

Forfeited/ Donated Vehicles

The Fleet Administrator has the authority to accept or reject vehicles on behalf of the Department.

Any vehicle accepted by the Department, shall be:

- Delivered to the Fleet Section with appropriate documentation, e.g. order of forfeiture, certificate of title;
- Inspected for mechanical and/or physical safety defects prior to acceptance and registration;
- Assigned a Fleet vehicle computer number; and
- Assigned by the Fleet Administrator based on the needs of the Department.

ADM-19A Vehicle Use and Maintenance

Promulgated By:

Department of State Police
General Order

Effective Date	Number
December 11, 2019	**ADM-19A**

Subject

Vehicle Use and Maintenance

Policy

Department vehicles shall be maintained in a safe, clean and serviceable condition at all times for reasons of safety and operational readiness, as well as to enhance the Department's public image.

Members assigned a vehicle belonging to various authorities or other governmental agencies, shall ensure they adhere to the vehicle use and maintenance policies of those authorities/agencies.

Required Equipment

Vehicles used for enforcement purposes shall be equipped with, at a minimum:

- Emergency lights and siren;
- Medical kit;
- Fire extinguisher;
- Radios;
- Prisoner safety barrier (marked, semi marked, low profile vehicles);
- Reflective chevrons displayed to the rear, and reflective pinstripe to both the front and rear, configured as determined by the Fleet Administrator (marked, semi marked, low profile vehicles);
- Conspicuous markings (marked, semi marked vehicles); and
- All other equipment issued with, or made part of the vehicle according to Department specifications.

Note: Cruiser equipment shall not be altered without prior approval of the Fleet Administrator.

Vehicle Inspection

Vehicles and equipment shall be inspected:

- Prior to the beginning of each shift by the vehicle operator;
- Before and after transporting prisoners for contraband and evidence;
- Quarterly by Station/Unit Commanders and documented according to Department procedures;
- For line or staff inspections; and
- When requested by the Fleet Administrator.

Employees shall immediately report, in writing, to their immediate supervisor and the Fleet Administrator, any damage or vandalism to Department vehicles.

Any damage to a Department vehicle caused by a person arrested or summonsed to court shall be immediately reported to the Fleet Section, in order to collect restitution. The Fleet Coordinator shall make arrangements for repairs through the Fleet Section.

Installation of Non-Issued Equipment, Adding or Removing Window Tint or Vehicle Alteration

Employees shall not install non-issued equipment and/or add or remove window tint in any Department vehicle without prior written authorization from the Fleet Administrator.

Employees requesting to install non-issued equipment and/or add or remove window tint in Department vehicles shall:

- Make written requests through the appropriate channels to the Troop/Section/Unit Commander;
- Agree in writing to assume all responsibility for the loss or theft of the equipment, and any damage caused to the vehicle associated with the installation or removal of the equipment;
- Assume all costs associated with the purchase, installation, and service and/or maintenance fees associated with the installed equipment;
- Notify the Fleet Administrator of the location where the professional installation of the equipment shall occur; and
- Immediately remove any equipment as directed by the Fleet Administrator or proper authority.

The Troop/Section/Unit Commander shall review all requests and forward approved requests to the Fleet Administrator or the proper authority.

The Fleet Administrator shall:

- Approve or deny all written requests; and
- Forward the written approval or denial to the appropriate Troop/Section Commander.

Vehicle Ornamentation

Employees shall not affix/install vehicle ornamentation on or in any Department vehicle, including vehicles assigned to various authorities or other governmental agencies, unless approved in advance, and in writing, by the Deputy Superintendent and the Fleet Administrator.

Vehicle Alteration

Employees shall not:

- Remove, cover, or obscure the display of the issued registration plates; or
- Remove cruiser markings from Department vehicles without prior authorization from the Fleet Administrator or proper authority.

Recalls

Recalls issued by the Department or the manufacturer regarding Department vehicles shall be posted by the Fleet Administrator, according to Department procedures. Employees who are assigned Department vehicles are responsible for checking recalls at least monthly. In the event a recall exists, the employee shall:

- Contact an authorized service center to schedule an appointment for service;
- Ensure the recall work is completed as ordered;
- Forward the repair order to the Fleet Section; and
- Retain a copy of the repair order.

Subject	Number
Vehicle Use and Maintenance	**ADM-19A**

Vehicle Use

Members shall operate Department vehicles in a cautious manner, and in conformance with Department Policy and Procedure, Rules and Regulations, and applicable Massachusetts General Laws.

Department vehicles shall be used for:

- Official use only;
- Commuting to and from home to assigned work location;
- Scheduled work assignments, callouts, or training; and
- Paid Details (undercover vehicles shall not be used at road construction sites.)

Employees (sworn and civilian) who use a Department vehicle shall:

- Notify their supervisor and receive authorization prior to using the vehicle outside of normal scheduled work hours, scheduled work assignments, callouts, training, details, or when on any type of time off or days off.

Supervisors shall:

- Only authorize an employee or member the use of a Department vehicle when the employee or member is on time off or days off for activities that are clearly indicative of official Department business; and
- Be responsible for documenting each request and authorization.

Maintenance

The operators of Department vehicles shall be responsible for:

- Maintaining a clean exterior and interior;
- Scheduling routine service and repairs with Fleet Section personnel, or at authorized service locations;
- Reporting all malfunctions to Department vehicles to the Fleet Administrator;
- Ensuring the vehicle registration is current;
- Ensuring the State Safety and Emission Inspection is current;
- Submitting monthly cruiser information according to Department procedures;
- Daily inspection checks; and
- The removal of snow and ice.

Daily Inspection Checks

The daily inspection check shall include, but not be limited to, the following checks:

- Fluid levels (oil, coolant, transmission, brake, steering and washer);
- Tires (pressure, wear and condition);
- Belts and hoses;
- Inspection and registration stickers; and
- Emergency equipment.

Scheduled Maintenance

All Department employees are required:

- To have their currently assigned Department vehicle routinely serviced; and
- To have an oil change at a Department Fleet Facility every 9,000 miles or six (6) months, whichever occurs first.

Appointments shall be made with each individual Fleet Facility prior to mileage/month deadline. No employee shall:

- Have their cruiser serviced at a third party commercial service center, unless the service is specifically pre-approved by the Fleet Administrator.

Troop/Station/Section/Unit Commanders that have specialty, spare, and/or pool vehicles assigned under their command shall ensure compliance.

Fuel Cards

Fuel cards issued to Department employees are restricted to the purchase of fuel for assigned Department vehicles. All purchases for items, other than fuel, shall result in the payment of restitution and/or disciplinary action. Employees utilizing fuel cards shall:

- Sign a receipt when issued fuel card;
- Enter Fleet vehicle computer number for PIN and current mileage when fueling;
- Immediately report lost or stolen cards in writing to the Fleet Section, through channels;
- Fuel vehicles at authorized facilities;
- Purchase regular unleaded fuel only, unless otherwise authorized;
- Use self-service facilities, whenever possible, to assist in controlling Department fuel expenditures;
- Ensure vehicle fuel tanks remain at least half full at all times; and
- Turn in fuel cards through channels to the Fleet Administrator upon any leave in excess of thirty (30) or more days.

Note: Employees shall comply with Massachusetts General Law c. 90 s. 13 by not leaving their vehicle-running while unattended, unless within the scope of their duties e.g. motor vehicle stops.

Transponders and Snow Gate Access Cards

Non-revenue Fast Lane Transponders and Snow Gate Access Cards shall only:

- Be utilized for official business in Department assigned vehicles within the Commonwealth of Massachusetts.

Employees traveling outside of the Commonwealth shall:

- Disable their transponders;
- Pay tolls with cash; and
- File for reimbursement through the standard employee expense reimbursement process.

Continued next page.

Transponders and Snow Gate Access Cards (Continued)

Electronic data associated with the use of these items shall be monitored to ensure compliance. Use of non-revenue Fast Lane Transponders and Snow Gate Access Cards constitutes express consent for the Department to monitor and/or inspect any data created in the course of such use.

Employees assigned non-revenue Fast Lane Transponders and Snow Gate Access Cards shall:

- Use the Fast Lane;
- Disable their transponders when traveling out of state;
- Immediately report lost or stolen transponders or Snow Gate Access Cards in writing to the Fleet Administrator, through channels; and
- Turn in non-revenue transponders and Snow Gate Access Cards through channels to the Fleet Administrator upon any leave in excess of thirty (30) or more days.

Emergency Operation and Response

Members responding in emergency vehicles shall operate vehicles with due care and regard for the safety of all persons and property.

Members, in an emergency and while in the performance of duty:

- May drive in excess of the applicable speed limit, if exercising caution and due regard under the circumstances; and
- May drive through an intersection, contrary to traffic signs or signals, **after coming to a full stop**, and then proceeding with caution; and
- **Shall never pass** a school bus that has stopped to allow pupils to alight or board and has its red lamps flashing.

Response	Action
Non-emergency/non-life threatening.	• Emergency lights and/or siren need not be used; and • Observe all traffic laws and regulations.
Emergency, but non-life threatening.	• Emergency lights and sirens may be utilized; and • May use discretion in approach.
Actual or potential life-threatening injuries or violent situations.	• Utilize emergency lights and sirens; • Expeditious response with due care and regard for public safety; and • May use discretion in approach.

Subject	Number
Vehicle Use and Maintenance	**ADM-19A**

Seatbelts

All occupants shall properly wear seatbelts while traveling in any state owned vehicles as mandated by Executive Order No. 241.

Airbags

No object shall be placed on or in the path of airbags for safety reasons. Airbag switches shall not be installed in any Department vehicle without the prior written approval of the Fleet Administrator.

Automated Vehicle Locator (AVL) Technology

Policy

The purpose of this policy is to establish guidelines and procedures for the use of the Department's Automated Vehicle Locator (AVL) Technology. AVL is designed to increase officer accountability and safety by enhancing the ability to rapidly locate and deploy Department personnel and resources. AVL technology also improves coordination and resource management during tactical situations, assists in improving response times to radio calls and increases situational awareness for all employees.

The Department's AVL utilizes global positioning system (GPS) to determine the location of Department personnel and resources.

AVL technology allows for real-time command and control of Department resources. Knowledge of resources that are in the vicinity of an incident improves officer safety, increases operational efficiency, and provides the Department with a more efficient and dependable means of enforcing work rules. Accordingly, it is the Department's goal and policy to utilize AVL in all marked Department cruisers and as many additional vehicles and resources, subject to operational demands and funding, as determined by the Colonel.

Accountability and safety are the primary focuses of the AVL system; however, AVL data shall be used for all relevant purposes including but not limited to the deployment of personnel, operational efficiency, patrol strategy, personnel and other investigations, the enforcement of work rules, regulations, policies, customs, practices, procedures, orders, commands, and/or directives.

Department employees are reminded that, in relation to the Department's receipt and use of AVL data, they have no expectation of personal privacy.

Subject	Number
Automated Vehicle Locator (AVL) Technology	**ADM-19B**

Definitions

On Duty – for the purposes of this General Order shall refer to any period of time that an employee of the Department is performing any Department function or using a Department vehicle or resource, to include, but not be limited to: the performance of duties, whether assigned or self-initiated or uniformed or plain clothed, patrol, investigative and administrative functions, reporting to and traveling to and from work assignment, court, paid detail or training, and/or commuting to and from home.

Automated Vehicle Locator Technology (AVL) – an electronic means for automatically determining and transmitting the geographic location of Department resources to include: personnel, vehicles and crafts. Examples of AVLs include, but are not limited to: GPS equipped radios, cellular devices, MDTs, and stand-alone hardware devices.

Global Positioning System (GPS) – a satellite system that provides geo-coordinates and time information to a GPS receiver.

Administration

All on duty Department personnel issued AVL Technology or a vehicle or resource equipped with AVL shall use AVL in accordance with all of the following:

- Unless expressly exempted by the Colonel or his/her designee, all on duty members equipped with AVL Technology shall, except where AVL is not self-activated, activate AVL systems or devices at the beginning of being on duty and shall keep it activated until off duty. This requirement includes activating GPS equipped portable radios, logging on to GPS equipped MDT, and activating assigned cellular devices and/or modems.

- A member shall report technical problems and or malfunctions relating to the operation of the AVL system immediately to his or her supervisor and to the Communications Section. The malfunction shall be recorded in the Daily Administrative Journal.

- Any member operating a Department vehicle or resource with a malfunctioning AVL system shall comply with the Officer/Vehicle Status notifications required by ADM-21 Communications.

- Supervisors and the Communications Section shall immediately report any malfunction of the AVL system to the Office of Technology and Information Services (OTIS).

- At least once during a shift, Troop/Section/Unit Commanders, or designees, shall determine the AVL systems of each on duty member, under their command, are working properly.

Subject	Number
Automated Vehicle Locator (AVL) Technology	**ADM-19B**

Equipment

- No member shall use or install any equipment or items that may interfere with Department authorized AVL equipment.
- Members shall not tamper with the AVL/GPS receiver, antenna, wiring, and/or software or attempt to hinder the systems designed performance. Any misuse, abuse, alteration or modification of the AVL software, hardware or any associated components or any violation of this General Order may result in disciplinary action.

Exemptions

The Colonel shall determine which vehicles and resources shall be equipped with AVL technology. A Division Commander, or designee, may authorize the temporary disabling of AVL equipment for members or resources under their command, and shall, when authorized, document the reasons for same in writing.

- Any member whose assignment would be adversely affected by having location information recorded/published may request authorization from the member's Division Commander, or designee, to temporarily disable the AVL system for as long as necessary to complete the assignment.

AVL Records

AVL data:

- Shall be the property of the Department of State Police;
- Shall not be disseminated without authorization from the Department;
- Shall not be accessed, copied, or released for non-law enforcement purposes;
- Shall be preserved and/or made available in compliance with all legal obligations and orders, for investigative and training purposes and other needs of the Department;
- Shall be securely stored and disposed of in accordance with state records retention laws; and
- May be preserved at the request of a Division Commander or designee or for any lawful reason.

Accessing AVL Data

Members and employees may only access Department AVL data when they are expressly authorized to access such data in the course of their assigned duties. Other requests for access to AVL data, live or stored, shall be made in writing and forwarded through channels to the member's Division Commander or designee.

Subject	Number
Automated Vehicle Locator (AVL) Technology	**ADM-19B**

Audits

The Colonel/Superintendent or designee may authorize audits of any AVL device to ensure system integrity and functionality.

The Colonel, Deputy Superintendent, Division Commanders and/or their designee(s) shall have access to AVL data for any lawful, relevant purpose, including but not limited to situational awareness, response times, analysis and improvement of patrol tactics, improvement of officer safety, criminal or personnel investigations, and the enforcement of existing work rules, regulations, policies, customs, practices, procedures, orders, commands, and/or directives.

Subject

Weapons Management

Policy

The Armorer shall provide oversight for the control and operational readiness of all Department weapons and ammunition, from acquisition to final disposition.

Members shall continually inspect all weapons and ammunition issued to them or under their control, to ensure cleanliness and operational readiness.

Definition

Firearms: All firearms, rifles, shotguns, and machine guns issued by the Department.

Armorer: A member designated by the Colonel/Superintendent, responsible for all weapons and ammunition under their control or in storage at the Armory.

Armorer

The Armorer shall:

- Maintain an accurate inventory of all weapons;
- Maintain all SP 9 Record of Issue and SP 255 Equipment Transfer/Disposition forms;
- Update the Department Soft Body Armor/Weapons Inspection database;
- Maintain an inventory of ammunition and firearms related supplies;
- Ensure that sufficient quantities of ammunition, parts, and supplies remain at the Armory for Department use;
- Coordinate all firearms repairs;
- Conduct training for all members;
- Ensure each Station/Section/Unit has a suitable bullet trap or body armor for use in unloading firearms; and
- Be available to provide temporary replacement firearms.

Firearms Issue or Transfer

Each firearm issuance and transfer shall be recorded on the SP 9. The Armorer shall ensure the correct information is updated on PayStation.

Continued next page.

Firearms Issue or Transfer (Continued)

Commanding Officers that have firearms assigned to the Station/Section/Unit shall complete a SP 255 form indicating:

- Description of firearms including serial number; and
- Date and location of assignment.

Commanding Officers shall forward one (1) copy to the Armorer and retain a copy for the Station/Section/Unit records.

Storage of Firearms and Ammunition

Commanding Officers that have firearms assigned to their Station/Section/Unit shall:

- Provide a secure, locked, and alarmed storage area;
- Keep all stored items in a state of operational readiness and available for emergency use at any time; and
- Permit immediate accessibility only to authorized members.

Seizure of Firearms

Upon seizure of a duty firearm, the supervisor shall contact the Armorer to:

- Determine if the member has additional issued firearms; and
- Coordinate storage of the seized duty firearms(s).

Disposal of Weapons

Upon determination that Department firearms or ammunition have become obsolete or inoperable, the Armorer shall complete a SP 255 indicating:

- Description of item;
- Reason and method of disposal (sale, trade-in, destruction); and
- Name of receiving agency/company and signature of receiving party.

The Armorer shall dispose of the item in accordance with the guidelines established by the Commonwealth of Massachusetts.

Inspections

During range qualification all firearms shall be inspected for condition and operational readiness by the Armorer or designee.

Supervisors shall ensure:

- A firearms inspection has been completed quarterly for all subordinates during the months of January, April, July, and October;
- A report of the inspection is documented on PayStation; and
- Members on leave during the quarterly period have their firearms inspected on the first day that the member returns to duty.

Only members trained in the inspection of specific firearms shall inspect that particular type of firearm.

Continued next page.

Subject	Number
Weapons Management	**ADM-20**

Inspections (Continued)

Members submitting a firearm for inspection shall:

- Ensure that the firearm is in a safe and unloaded condition with the magazine removed;
- Present the firearm with the slide locked in the open position;
- Shotguns shall be presented for inspection with the action in the open position; and
- Rifles, machine guns and submachine guns shall be presented for inspection in a safe manner as directed by the Inspector.

Weapons shall be unloaded in a safe manner consistent with training, using a suitable bullet trap or ballistic vest as a backdrop in a safe area approved by the Armorer.

Inspectors Duties

Only members trained in the inspection of specific firearms shall inspect that particular type of firearm. Inspectors may use a SP 608 Weapons Inspection form as a guideline during the inspection process.

Firearms Inspectors shall:

- Inspect all Department firearms as assigned and document on the Department database during the months of January, April, July, and October;
- Detail all inadequacies on the database; and
- Remove any weapon or ammunition found to be defective and forward to the Armorer for repair or replacement.

Temporary Firearms

Commanding Officers shall:

- Ensure that the member with the defective firearm is issued a temporary replacement firearm by the Armorer; and
- Document the issue of the temporary firearm on a SP 9.

The Armorer or designee shall issue temporary firearms. The Armorer may be contacted through the GHQ Communications Section.

Leave

Commanding Officers of a member who is on any leave in excess of thirty (30) days shall contact the Armorer for storage of Department issued firearms and ammunition.

Subject

Communications

Policy

The Department shall maintain an effective and efficient communications system to aid in the performance of its public safety mission.

The Department shall ensure continuous communication accessibility through a twenty-four (24) hour multi-channel radio system capable of two-way operation on joint public safety frequencies.

The Department shall comply with all Federal Communications Commission (FCC) procedures and requirements.

Positions and Responsibilities

Position	Duties
Colonel/Superintendent or designee	• Designate personnel to the Communications Staff positions.
Director of Communications	• Supervise all personnel assigned to the Communications Section.
Communications Officer (commissioned officer)	• Supervise members assigned to the Communications Section; • Oversee the administration of the audio recordings of Department radio frequencies; • Serve as "Keeper of the Records" for the Communications Section; and • Record and preserve E 911 Emergency Lines in accordance to general laws and codes for a period of one (1) year.
Director of Dispatch Services	• Supervise all personnel in the Dispatch Services Unit.
Communications Coordinator	• Provide technical expertise in the operation and implementation of Department radio systems.

Subject	Number
Communications	**ADM-21**

Audio Recordings

Requests for Audio Recordings

Audio recordings are available to comply with all legal requirements, for investigative and training purposes, or for other needs of the Department. Requests for audio recordings shall be:

- Forwarded through channels to the Communications Officer using SP 623 Cellular 911 & Radio Transmission Recording Request form.

Note: The indiscriminate or inappropriate play-back of the Department's recorded messages is strictly prohibited.

Communication Center GHQ

The Communications Officer shall:

- Assign a commissioned or non-commissioned officer as the General Headquarters (GHQ) Communications Desk Officer for each duty shift.

Communications Desk Officer shall:

- During emergencies and/or unusual occurrences that may affect the Department, immediately notify the Command Staff and properly implement on-call procedures and ensure requests for specialized services are processed;
- Physically secure the dispatch area; and
- Monitor GHQ complex.

Communication Facilities and Equipment

Access to the Department Communications Centers and equipment shall be:

- Restricted to authorized personnel.

Each Department facility is equipped with an alternative power source, sufficient enough to operate the radio systems and other vital equipment, in the event of a primary power source failure.

The alternative power source shall be:

- Accessible only to authorized personnel; and
- Inspected and tested weekly by the Troop/Station/Section Commander or designee, and documented.

Emergency Service Numbers

The Troop/Station/Section/Unit Commanders shall ensure:

- The telephone numbers and addresses of available emergency service agencies are up to date and readily available to dispatchers, desk officers, as well as other communications personnel; and
- That the tactical dispatching plans or emergency operational plans that may affect facilities within their specific jurisdiction, e.g., prisons, nuclear plants, sports facilities, are up to date and readily available.

Officer/Vehicle Status

Station Desk Officers and Dispatchers shall know which members are immediately available for service, therefore:

- Whenever a member engages in self-initiated patrol activities, they shall notify the desk officer or dispatcher of the exact location and purpose;
- Whenever a member is not available for normal patrol function, they shall notify the desk officer or dispatcher, and the appropriate status code shall be entered into the "officer assignment" section of the Daily Administrative Journal (DAJ); and
- Whenever a back-up officer is assigned to a call, an appropriate entry shall be made into the DAJ.

Radio Decorum

Department member(s) shall ensure:

- Department radio communications/messages have first priority;
- They properly identify themselves and use clear diction when communicating on the Department network; and
- When making requests for law enforcement information, the member shall do so via their assigned radio frequency, unless doing so would compromise an investigation or the member's safety.

Incident Command

The National Incident Management System (NIMS) has integrated existing best practices into a consistent, nationwide approach to domestic incident management at all jurisdictional levels and across functional disciplines.

Department member(s) involved at a complex critical incident shall:

- Use a clear spoken message-based on common terminology; and
- Refrain from using codes for radio communications.

Subject	Number
Communications	**ADM-21**

Radio Codes

To eliminate lengthy radio transmissions and maintain confidentiality, the following codes shall be used for all radio broadcasts, whenever practicable:

CODE 1	STANDBY FOR AN EMERGENCY - Cease and desist all unnecessary radio traffic. Only primary dispatchers and officers engaged in the emergency shall transmit messages.
CODE 2	TELEPHONE YOUR STATION
CODE 3	TELEPHONE (person) AT (number).
CODE 4	CRUISER OUT OF SERVICE Specify location and/or telephone number.
CODE 5	CRUISER NOW IN SERVICE
CODE 6	WHAT IS YOUR LOCATION?
CODE 7	RETURN TO YOUR STATION OR SPECIFIC LOCATION
CODE 8	STOPPING A SUSPICIOUS VEHICLE – Transmit vehicle make, model, color, registration number, number of occupants, and give EXACT LOCATION.
CODE 9	REQUEST LISTING ON-Transmit registration number and/or vehicle identification number of motor vehicle, and give EXACT LOCATION.
CODE 10	REQUEST STOLEN RECORD ON - Transmit registration number and/or vehicle identification number or serial number of suspected stolen property, and give EXACT LOCATION.
CODE 11	REQUEST LICENSE DATA ON - Transmit name, DOB, license number if known, and give EXACT LOCATION.
CODE 12	ANY MESSAGES FOR ME?
CODE 13	RADIO TEST CALL Give signal strengths as follows: R-1 Barely audible; R-7 Moderately strong signal; R-3 Weak signal; R-9 Strong signal loud and clear. R-5 Fairly good signal;
CODE 14	MISSING OR WANTED CHECK - Transmit name, race, sex, DOB, social security number, registration of vehicle if applicable, and give EXACT LOCATION.
CODE 15	OFFICER REQUESTING ASSISTANCE - Transmit EXACT LOCATION and, if able, reason for request.
CODE 16	CRASH INVESTIGATION (state type) AT (location)
CODE 17	CLEAR – From a previous assignment completed and now back on patrol and/or original assignment and available.
CODE 18	PERMISSION TO LEAVE ASSIGNED PATROL - Transmit EXACT LOCATION, reason and estimated time of absence.
CODE 20	INVESTIGATION (state type) AT (location)
CODE 22	CELLULAR CALLER ADVISEMENT/NOTIFICATION
CODE 30	**OFFICER IN TROUBLE/ TRANSMIT EXACT LOCATION**

Subject

Court Attendance and Fees

Policy

Department employees shall comply with all court orders and summons.

Employees shall be compensated for court attendance according to their applicable collective bargaining agreements.

Definitions

Day Off: Any regularly scheduled day off, including a holiday or an administrative day off.

Vacation Day: A paid vacation day within an approved scheduled vacation week.

Nighttime Shift: A regular duty assignment to the evening or midnight shift.

Court Officers: Shall be designated by a Troop Commander as the Officer-in-Charge of Instruments for Breath Alcohol Testing and be the Keeper of Records for their jurisdiction's Breath Alcohol Testing Devices.

Documentation

All court appearances, depositions, or consultations shall be accurately documented by appropriate log entries in the Daily Administrative Journal (DAJ) including the following:

- Case name;
- Type of appearance;
- Time in/out; and
- Court location.

All court entries within the DAJ shall be reviewed daily by the Station/Unit Commander or designee.

Payment for Court Appearances

Members may be entitled to payment of a court fee for attendance at a state or federal court if the member is on duty at night, on vacation or furlough, or on a regularly scheduled day off and is a:

- Witness testifying in court on behalf of the Commonwealth or United States;
- Subpoenaed witness in criminal court testifying in an official capacity; or
- Defendant in court in a civil rights case in which the member was acting in an official capacity within the scope of employment.

Continued next page.

Payment for Court Appearances (Continued)

Members may not receive a court fee or additional pay when:

- They are not a witness for the Commonwealth;
- They are the plaintiff in a case; or
- They are a witness, on behalf of another Department member, not acting in an official capacity.

Note: Except when on an approved scheduled vacation week, no member shall be granted paid time off which conflicts with a scheduled court appearance, or would result in overtime being generated for the court appearance.

Witness Fees

Any member entitled to a court witness fee may receive and accept such fee, in lieu of but not in addition to, any other type of compensation (MGL c.262, s.50.)

Members shall not receive a court witness fee when:

- Any other type of compensation is received during the period of time of court appearance;
- Appearing at a second court during a time for which the member is still receiving compensation for their appearance at the first court attended;
- Working a day shift;
- On sick, injured, or extended leaves; or
- They are not a witness for the Commonwealth.

Travel Fees

Members may be entitled to a travel allowance from the court when:

- A private vehicle is used to travel to and from court held in a city or town other than a city or town in which the member resides.

Note: Travel allowance is only authorized from the actual point of origin and actual point of return from court attendance.

Members are not entitled to any travel allowance if:

- A state-owned vehicle is used;
- Receiving mileage allowance from any other government or private source; or
- Duplication of mileage occurs from more than one (1) court within one (1) day.

Court Fees

Court appearance fees shall:

- Be computed from the start of the appearance, or the member's actual arrival time, whichever is later, until the end of the appearance;
- Be consistent with Massachusetts General Laws and collective bargaining agreements, unless it overlaps with a member's other duties; and
- Not be paid for member's travel time to or from court.

Injured Leave Status

Members on injured leave subpoenaed to appear in court shall:

- Notify their immediate supervisor and the Court Officer who issued the SP 189 Court Appearance Notification;
- Request a continuance or reschedule the appearance through the court officer of jurisdiction; or
- If a continuance is not granted, request authorization to appear from the Troop/Section Commander or designee.

Temporary Modified Duty Status

Members on Temporary Modified Duty notified to appear in court shall:

- Notify their immediate supervisor and the Court Officer who issued the SP 189;
- Request a continuance or reschedule the appearance; or
- If a continuance is not granted, request authorization to appear from the Troop/Section Commander or designee.

Extended Leave Status

Members on extended leave subpoenaed to appear in court shall:

- Notify their immediate supervisor and the Court Officer who issued the SP 189;
- Request a continuance or reschedule the appearance through the court officer of jurisdiction; and
- Not appear in court on behalf of the Department.

Court Responsibilities

Position	Responsibilities
Employees	• Check the Department email system every work shift, to remain apprised of newly assigned court cases or status changes to pending cases; • Print any emailed SP 189 Court Card Notifications; • Submit complaint applications to the Court Officer of jurisdiction; • If a summons is received directly from an authorized agent of the court, immediately submit the hard copy to the Court Officer of jurisdiction and request a SP 189; • Have any SP 189's signed by the required parties, if any overtime hours are generated by a court appearance; • The SP 189 shall be date/time stamped by the Clerk's Office at the conclusion of the case, if more than four (4) hours of overtime are generated by any court appearance on any single calendar day; • Have the Assistant District Attorney sign the SP 189, including the actual time of the member's appearance, if a date/time stamp is not available;

Continued next page

Court Responsibilities (Continued)

Position	Responsibilities
Employees	• Notify the Court Officer of jurisdiction of any continuances and the parties who requested the continuance; and • Enter information on the case disposition, sign, and submit the SP 189 to their assigned Station/Section /Unit.
Court Officer	• Schedule employee's court appearances in an effort to minimize overtime; • Immediately enter information from summonses, continuances, or cancellations into the Department court database; • Issue the SP 189 for proceedings not scheduled by other Court Officers (e.g., Grand Jury, Superior Court, Federal Court, depositions); • Immediately advise affected employees of court case assignment and status changes to pending cases using all available methods; • Advise the Station/Unit Commander of any court case requiring the appearance of three (3) or more members; • Enter all disposition information into the Department court database; • Shall be the Officer-in-Charge of Instruments for Breath Testing Devices according to TRF-14 Operating Under the Influence of Alcohol, and function as the Keeper of the Records; • Provide the Commanding Officer with a weekly list of court notifications; and • Immediately notify their Commanding Officer if a member: 1. Fails to appear for a scheduled court date; or 2. Appears at court without prior notification by a Court Officer; or 3. Is notified to return to court for additional information required by the court during an arraignment.
Commanding Officers	• Review and reconcile all submitted SP 189's prior to approving PayStation court overtime submissions; • Deny any court overtime submitted on PayStation without a proper and signed SP 189; • Retain all submitted Station/Unit court appearance notification forms for inspection for three (3) years;

Court Responsibilities (Continued)

Position	Responsibilities
Commanding Officers	• Review requests for court appearances involving three (3) or more members as notified by the Court Officer and consult with the appropriate court authority to determine if any members appearance is not critical to the case; and • Notify the Troop/Section Commander or designee immediately if a member: 1. Fails to appear for a scheduled court date; or 2. Appears at court without prior notification by a Court Officer; or 3. Is notified to return to court for additional information required by the court during an arraignment.
Troop Cases and Report Officers	• Conduct examinations of submitted PayStation and SP 189's for signs of inefficiency or abuse; • Maintain staff supervision of the Court Officers and conduct semi-annual staff inspections of Court Officer's files; • Report inspection findings and analysis to the Troop Commander; and • Assist Court Officers in addressing problems at their assigned courts, or with conflicts between the courts and the Department.
Troop/ Section Commanders or Designee	• Contact the appropriate court authority to confirm the necessity of the appearance of three (3) or more members on the same day; and • Conduct examinations of submitted PayStation and SP 189's for signs of inefficiency or abuse.

Non-Field Sections/Units

Commanding Officers shall create court appearance guidelines appropriate for their Section/Unit and file a copy with the appropriate Division Commander.

Promulgated By:

Department of State Police
General Order

Effective Date	Number
June 14, 2018	**ADM-24**

Subject

Department Radio Call Signs

Policy

The Department shall promote officer safety and efficiency using a standardized Radio Call Sign procedure.

Standardized Radio Call Signs, as referenced within this General Order, shall be used by all employees for all radio transmissions.

Protocol

Whenever a member requests information over the radio, such requests shall be preceded by or ended with the member's exact location.

All transmissions shall be conducted in a concise manner and in accordance with the formats indicated in this General Order. At the end of all transmissions, the receiving party shall acknowledge receipt of the transmission by saying "Received."

Call Sign Structure

The Department shall use the following categories for Radio Call Signs:

- The Executive Branch;
- The Executive Office of Public Safety and Security (EOPSS);
- The State Police Command Staff;
- Division Call Signs;
- Station Identifiers; and
- Specialty Vehicles.

Radio Call Sign Database

The Fleet Administrator shall:

- Maintain a database of assigned cruiser numbers, matching each cruiser number to a vehicle and employee; and
- Ensure Radio Call Signs assigned to Executive Branch, EOPSS, and Department Command Staff are included within the database.

Subject	Number
Department Radio Call Signs	**ADM-24**

Department Radio Call Signs

Department employees (sworn and civilian personnel), unless specifically identified within this General Order, shall:

- Use the Fleet Designated Cruiser Number assigned by the Fleet Administrator as their Radio Call Sign.

Employees assigned spare cruisers or pool vehicles shall:

- Use the assigned spare cruiser/pool vehicle's designated cruiser number as their Radio Call Sign; and
- Provide their name, Department ID number, and rank (if applicable).

Call Signs for the Executive Branch, EOPSS and Command Staff

The Department shall assign Radio Call Signs for the Executive Branch, EOPSS and Department Command Staff. The following Radio Call Signs shall be assigned:

Entity	Call Sign	Assignment
Executive Branch	S-1	Governor
	S-2	Lt. Governor
EOPSS	S-3	Secretary of Public Safety and Security
	S4-10	Available to EOPSS
Department Command Staff	1	Colonel/ Superintendent
	2	Lt. Colonel/ Deputy Superintendent
	3	Lt. Colonel/ Field Services
	4	Lt. Colonel/ Investigative Services
	5	Lt. Colonel/ Standards and Training
	6	Lt. Colonel/ Homeland Security and Preparedness
	7	Chief Administrative Officer
	10	Chief of Staff
	11-19	Majors -Division of Field Services (DFS), Non-Troop
	20-29	Majors and Detective Captains - Division of Investigative Services (DIS)
	30-39	Majors -Division of Standards and Training (DST)
	40-49	Majors and Detective Captains– Division of Homeland Security and Preparedness (DHS)
	50-59	Majors – Division of Administrative Services (DAS)

Division of Field Services

The Division of Field Services (DFS) shall adhere to the following protocol:

Troop Headquarters shall use the appropriate troop phonetic identifier preceded by the word "Station" as the radio call sign e.g., "Station H to 756." Sub-Stations shall use the appropriate phonetic identifier followed by the assigned numerical designation e.g., "B-1", "D-2" (Troops and Sub-Stations along with their corresponding phonetic identifiers are listed below in the "**Troop and Sub-Station Call-Sign**" table.)

Specialty vehicles shall be identified through Radio Call Signs as the name of the unit followed by the assigned number of the vehicle e.g., "Cycle 5."

All DFS personnel shall utilize their Fleet Designated Cruiser Number as their Radio Call Sign, except as follows:

Troop Commander:
- Number one (1) attached to the phonetic troop identifier e.g., "1A;"

Troop Executive Officer:
- Number two (2) attached to the phonetic troop identifier e.g., "2A;"

Troop Captains:
- Numbers three (3) through five (5) attached to the phonetic troop identifier, e.g., "3A," "4A," or "5A;"

Operations Officers:
- Numbers six (6) through eight (8) attached to the phonetic troop identifier, e.g., "6A," "7A," or "8A;"

Station Commanders:
- In numeric sequential order, beginning with the number 11 attached to the phonetic troop identifier e.g., "11A" for the Station Commander of A-1 and "15A" for the Station Commander of A-5; and

Special Operations Troop "S" Commanders shall be identified as:
- Special Operations Captains (2-4) e.g., "2S," or "3S," etc.;
- STOP Team Commander- "5S;"
- SERT Commander- "6S;"
- CVES Commander- "1T;" and
- Canine Unit Commander- "1K."

Personnel assigned to Troop F, the Commercial Vehicle Enforcement Section, and the Canine Unit, shall use:
- Their assigned Authority cruiser number or their Fleet Designated Cruiser Number as their Radio Call Sign, followed by the phonetic identifier "F," "T," or "K" respectively, e.g., "121F," "221T," or "437K."

The Division of Field Services Commander or designee shall ensure that the Radio Call Sign Database is updated accordingly for changes made to personnel within the Division.

Department Radio Call Signs	**ADM-24**

Division of Investigative Services

Radio Call Signs for Section/Units Members within the Division of Investigative Services (DIS), who make radio transmissions over the Troop Radio System, shall:

- Use plain language one word unit name followed by their assigned Fleet Designated Cruiser Number e.g., "Middlesex 1234 to Station A" or "VFAS 4321 to Station H".

Section/Unit Commanders/Executive Officers within DIS shall:

- Be assigned specific Radio Call Signs for their sections and units;
- Use the number "1" for the Commanding Officer preceded by the section/unit name e.g., "Middlesex 1 to Station A";
- Use the number "2" for the Executive Officer preceded by the section/unit name e.g., "VFAS 2 to Station H".

The Division Commander, the Division Majors, and Detective Captains are designated call signs in accordance with the "Department Command Staff" table on page 2 of this General Order.

The DIS Commander or designee shall ensure that the Radio Call Sign Database is updated accordingly for changes made to personnel within the Division.

Division of Standards and Training

The Division of Standards and Training personnel shall utilize:

- Their Fleet Designated Cruiser Number as their Radio Call Sign.

The Division Commander and the Division Major(s) are designated call signs in accordance with the "Department Command Staff" table on page 2 of this General Order.

Division of Administrative Services

The Division of Administrative Services personnel shall utilize

- Their Fleet Designated Cruiser Number as their Radio Call Sign.

The Division Commander and the Division Major(s) are designated call signs in accordance with the "Department Command Staff" table on page 2 of this General Order.

Division of Homeland Security and Preparedness

Radio Call Signs for Section/Units Members within the Division of Homeland Security and Preparedness (DHS), who make radio transmissions over the Troop Radio System, shall:

- Use plain language one word unit name followed by their assigned Fleet Designated Cruiser Number e.g., “Compliance 1234 to Station A”.

Section/Unit Commanders/Executive Officers within DHS shall:

- Be assigned specific Radio Call Signs for their sections and units;
- Use the number “1” for the Commanding Officer preceded by the section/unit name e.g., “Compliance 1 to Station A”;
- Use the number “2” for the Executive Officer preceded by the section/unit name e.g., “Compliance 2 to Station H”.

The only two exceptions to this are as follows:

- The Air Wing Commanding Officer will utilize “Whiskey 1” and the Marine Unit Commanding Officer will utilize “Mike 1”; and
- The Air Wing Executive Officer will utilize “Whiskey 2” and the Marine Unit Executive Officer will utilize “Mike 2”.

The Division Commander, the Division Majors, and Detective Captains are designated call signs in accordance with the “Department Command Staff” table on page 2 of this General Order.

The DHS Commander or designee shall ensure that the Radio Call Sign Database is updated accordingly for changes made to personnel within the Division.

GHQ/ COMSEC

The General Headquarters / Communications Section shall be identified with the phonetic letter “G.”

Specialty Vehicles

Specialty vehicles shall be identified through Radio Call Signs as:

- Name of the unit followed by the assigned number of the vehicle e.g., Marine 1, Air 3, and/or Cycle 5.

Portable Radio Call Signs

Members with a Fleet Designated Cruiser Number shall use that number when transmitting on the portable radio.

Members without a Fleet Designated Cruiser Number shall announce their name, rank, and ID number, if needed, while transmitting on the portable radio e.g., members who are assigned to Troop "F".

Subject	Number
Department Radio Call Signs	**ADM-24**

Incident Command

The National Incident Management System (NIMS) has integrated existing best practices into a consistent, nationwide approach to domestic incident management at all jurisdictional levels and across functional disciplines.

Department member(s) involved at a critical incident with multiple agencies shall use a clear spoken message, based on common terminology.

Subject

Paid Details

Policy

The Department may allow personnel, on full duty status or alternative duty status (as specified in ADM-11C Maternity Leave and Guidelines), to work paid details.

The Department recognizes the importance of maintaining safe and efficient traffic flow at roadway work sites and special events. The Department also recognizes that at major sporting, civic, special events, and other times, members may be required to provide crowd control and/or security.

Paid details may be worked by members:

- From the rank of Trooper through Detective Lieutenant inclusive; and/or
- From the rank of Captain/Detective Captain with approval of the Deputy Superintendent when:

1. The type of detail is "non-construction" i.e., stadium events, security details, in a supervisory capacity where they must supervise at least ten (10) officers; or
2. A vacancy exist on any type of detail after the primary and secondary detail lists of the respective troop have been completely exhausted of eligible members.
   Note: Once assigned to a detail, Captains/Detective Captains shall not be bumped by:
   - another commissioned officer; or
   - a non-commissioned officer or trooper within twenty-four (24) hours of the start time of the assigned detail.

Definitions

Paid Detail (detail): A voluntary assignment paid for by an outside entity, which has been authorized by the Colonel/Superintendent.

Scheduled Work Hours: A regular shift or tour of duty consisting of eight and one-half (8.5) hours.

Work: Shall be defined to include hours actually worked during regularly scheduled duty, overtime, court time and paid details.

Hours of Work

Members shall not schedule or work combinations of assignments and/or details which they know or should know will result in a direct violation of the "sixteen and one-half (16.5) hour rule" as contained within the Collective Bargaining Agreement (CBA) and this General Order (as further clarified in Superintendent's Memo *13-SM-10 Extension to the 16.5 Hour Rule Limitation*.)

Members shall not accept a detail if doing so would require the member not to work a regularly scheduled shift or attend other work obligations of which the member is aware.

Members shall not cancel a detail in order to accept another detail or overtime assignment.

In the event the detail hours exceed the hours of work allowed in any twenty-four (24) hour period, the member shall not be allowed to alter the starting time of their next assigned work shift, but shall use accrued personal leave or vacation leave credits to offset any conflicts with their scheduled work hours.

Members shall be paid for details in conformance with their applicable collective bargaining agreement.

A member shall receive time and one-half Detail pay for the actual hours worked on the calendar day of Thursday, Thanksgiving Day or December 25, Christmas Day.

Overlapping Time

Overlapping detail hours of any kind is strictly prohibited.

In order to prevent any overlapping of scheduled work hours, members shall utilize accrued personal or vacation leave to offset any overlap in conformance with the member's collective bargaining agreement.

Travel Time

Members are required to use at a minimum, one-half (1/2) hour of accrued personal or vacation leave as travel time to or from a detail when one of the following occurs:

1. The travel time overlaps with their scheduled work hours; or
2. The travel time from the duty assignment to the paid detail location, or the paid detail to a duty assignment location, is **greater** than one-half (1/2) hour.

   Note: Members not assigned to a specific sub-station, the geographical boundary for a section/unit is defined as the station of jurisdiction where their **regular reporting** location is sited. Temporary Duty Assignments (TDY) work locations shall be considered as the member's regular reporting location for administration of this General Order.

Continued next page.

Travel Time (Continued)

When a member is assigned to a paid detail they shall:

- Determine the need to use accrued personal or vacation leave to ensure prompt arrival to a detail or when reporting for their tour of duty assignment; or
- Decline the detail if they chose **not to use** the appropriate accrued personal or vacation leave.

Supervisors shall be held responsible:

- To ensure members are held accountable for taking appropriate accrued personal or vacation leave when reporting to or from a paid detail, if it effects their regular tour of duty assignment; and
- To ensure members accurately document and record accrued personal or vacation leave used for travel time to or from a paid detail when **greater** than one-half (1/2) hour.

Requests

Members shall not:

- Make duplicate/same day requests for details in different Troops; or
- Request or work overtime or details within twenty-four (24) hours from the start time of their regularly scheduled work shift when sick leave was taken for:
  1. Personal illness or injury;
  2. The presence of the member at their work location would jeopardize the health of others, through exposure to a contagious condition; or
  3. The member's spouse, child, parent, or spouse's parent, or relative living in the member's household, is seriously ill. In this event, a limit to the amount of leave the member can use is set by the CBA and federal and state laws.

Exception: A member who works at least four (4) or more consecutive hours of their regularly scheduled work shift, in which Sick Leave was granted as outlined in ADM-11 Sick Leave, shall remain eligible to work paid details and overtime.

Members may request only one troop as a primary choice on a SPD-3 Request for Paid Detail form. The primary choice for:

- Members assigned to Field Operations within the Division of Field Services shall be limited to the troop to which they are assigned, or to the troop where they reside;
- Members assigned to the Division of Field Services, but not assigned to a troop within Field Operations, may request any troop as their primary choice; and
- Troop F is reserved for members assigned to: Troop F, Office of the Superintendent, Division of Field Services (see above), Division of Administrative Services, Division of Investigative Services, Division of Standards and Training, and the Division of Homeland Security and Preparedness.

The SPD-3 shall be forwarded to the Paid Detail Officer of jurisdiction prior to the first of March each year or upon transfer.

Continued next page.

Requests (Continued)

Weekly requests for assignments shall be made according to a procedure approved by the Troop Commander. When requesting a detail, a member shall report all out-of-troop details worked for the previous five (5) weeks to the Paid Detail Officer of Jurisdiction.

Member Responsibilities

Members assigned to a road construction type detail shall maintain a professional presence and shall perform the following duties:

- Provide public and site safety;
- Be aware of, and visible to, oncoming traffic;
- Maintain uniform traffic flow through manual direction or other devices as necessary;
- Stand, facing traffic, unless otherwise directed or authorized;
- Wear proper field uniform and assigned traffic vest or raincoat with high visibility side out;
- Remain on the work site, except to perform enforcement duties, or at the direction of the state engineer, site foreman, appropriate authority, or in case of personal necessity; and
- Maintain radio contact with Troop of jurisdiction.

If radio contact is not possible with the Troop of jurisdiction then contact the nearest troop or station.

If more than one member is assigned to a detail then the members shall:

- Position themselves uniformly throughout the site or as directed by the state engineer, site foreman, or appropriate authority; and
- Dress alike, in the duty uniform of the day, or as prescribed by the officer-in-charge (OIC).

Members shall:

- Arrive and depart at the times posted and/or prescribed by the Paid Detail Officer, state engineer, site foreman, or appropriate authority;
- Reflect on the SPD-2 Paid Detail form:
    1. Detail's assigned hours;
    2. The actual hours worked while on the detail;
    3. The scheduled work shift for the day, if applicable; or
    4. The scheduled day-off for the day, if applicable; or
    5. The accrued time-off credits used to work the detail, if applicable.
- Enter into PayStation the detail information including the total amount of hours to be paid; and
- Enter into the Paystation "Comments" field the detail start and end time and the actual hours worked.

Continued next page.

Member Responsibilities (Continued)

Members assigned to a detail shall complete and submit a copy of the SPD-2 to both:

- The Paid Detail Officer of jurisdiction; and
- The supervisor authorizing the member's PayStation entries.

When a member is assigned a detail outside of that member's primary troop choice, the member shall make a photo copy of the SPD-2 and forward the copy to the member's primary Troop Detail Officer.

Failure to adhere to the requirements outlined in this General Order shall constitute unsatisfactory performance and the member may be disciplined under the Department Rules and Regulations. In such instances, the member may be removed from all detail lists until final disposition of the formal disciplinary process.

Supervisory Responsibilities

All supervisory personnel shall:

- Monitor all members assigned to details;
- Immediately address and remedy all observed violations of this General Order; and
- Document all violations on the SP 381 Paid Detail Inspection form, prior to the end of that shift.

The supervisor approving a member's weekly PayStation entry shall:

- Review the member's submitted SPD-2;
- Review the weekly entries made by the member in PayStation;
- Ensure that the submitted SPD-2 corresponds correctly to the PayStation weekly entries;
- Require the member to use accrued personal or vacation leave in order to ensure compliance with this General Order; and
- Report all violations of hours to their Commanding Officer.

Troop Commanders

Troop Commanders are directly responsible for the administration and supervision of this General Order and shall assign a supervisor to:

- Conduct inspections of detail sites within the Troop jurisdiction; and
- Submit SP 381 forms with all applicable findings.

Troop Commanders/Duty Officers of jurisdiction over the detail shall only authorize members to work in excess of 16.5 hours when:

- An emergency situation has arisen that requires the members' presence; or
- The member is on their last scheduled work day; or
- The member is on a day off and has no scheduling conflict.

Extension to the 16.5 Hour Rule

The Troop Commander or Troop Duty Officer of jurisdiction over the detail may grant an extension in order to allow member(s) to extend beyond the sixteen and one-half (16.5) hour limit under the following conditions:

- Member(s) shall not be granted more than one extension to the 16.5 hour rule in any forty-eight (48) hour period; and
- No more than a two (2) hour extension shall be granted without the member being required to take paid leave time, (vacation, personal), to ensure adequate rest before the start of their next assignment.

In no event shall the maximum number of weekly work hours as allowed by the Collective Bargaining Agreement be exceeded. Please refer to Superintendent's Memo *13-SM-10 Extension to the 16.5 Hour Rule Limitation* for further clarification.

Troop Inspections

The Troop Executive Officer shall maintain all SP 381 forms and ensure that those forms indicating unsatisfactory performance are brought to the attention of the Troop Commander.

Troop Inspections shall include:

- Site, time, members present, overall appearance, adherence to General Order;
- Verification of assigned members arrival and departure times with both SPD-2 and state engineer and/or site foreman; and
- Detail violation(s), if any.

Staff Inspections

Staff Inspectors shall conduct random inspections of detail sites and submit written reports to the appropriate Troop Commander of findings and recommendations to include:

- Site, time, members present, overall appearance, adherence to General Order;
- Verification of assigned members arrival and departure times with both SPD-2 and state engineer and/or site foreman;
- Detail violation(s), if any;
- Audit of actual and overall hours worked by assigned members; and
- Audit of Paid Detail Office.

Administration

Troop Commanders shall assign a supervisor as the Paid Detail Officer.

The Paid Detail Officer shall:

- Work an administrative day shift;
- Process requests for details;
- Determine and/or verify personnel assignments, arrival, and departure times;
- Maintain a primary list of eligible members updated according to personnel transfers, requests, and so forth;

Continued next page.

Administration (Continued)

- Establish and post, in the Troop Duty Office, an availability list according to details accrued and seniority for filling cancellations/vacancies;
- Establish a secondary list to fill overages;
- Post all detail assignments within jurisdiction not less than thirty-six (36) hours prior to the commencement of that week's details, except in the event of late scheduled details;
- Be responsible for all billing, payroll, and accounts receivable activities as they pertain to details; and
- Immediately notify the Legal Section if informed that a contractor has filed for bankruptcy protection or is going out of business.

Member assignments shall be made:

- From the primary list;
- According to the number of detail hours accrued within the previous five (5) weeks, and then by seniority;
- From the availability list if a cancellation occurs; and
- As close to the member's residence as reasonably possible.

Cancellations shall be made by assigned members:

- To the Paid Detail Officer, or the Troop Duty Officer of jurisdiction if the Paid Detail Officer is unavailable; and
- At least, twenty-four (24) hours in advance of assignment.

Cancellations and/or refusals by members, for reasons other than personal illness or official duties, shall count as a detail worked. In cases where details are cancelled because of court, the member shall provide a copy of a signed SP 189 Court Card to the respective Paid Detail Officer.

Cruisers

The Paid Detail Officer with the approval of the Troop Commander shall determine the number of vehicles at details.

Marked and unmarked vehicles shall:

- Have working emergency lighting activated, when appropriate;
- Be conspicuously and strategically placed between oncoming traffic and the work site; and
- Be properly fueled prior to the detail.

Undercover vehicles shall not be used at road construction sites.

Subject	Number
Paid Details	**ADM-25**

Commercial Motor Vehicle Escort Details

Prior to an escort detail, a member assigned to the Commercial Vehicle Enforcement Section, or the member assigned to the detail, shall inspect all oversized or overweight loads for:

- Permits;
- Load security;
- Vehicle condition; and
- Operator qualifications.

Breaks

To minimize impact on the work site, breaks shall be taken:

- At scheduled times in conjunction with vendor's/contractor's scheduled breaks; and
- Out of public view whenever possible.

Department of State Police
General Order

Effective Date	Number
June 25, 2020	**ADM-26**

Subject

Military Service

Purpose

To establish and define military service protocols for Department of State Police personnel.

Policy

The Department shall allow sworn and civilian employees who are members of a Reserve Component of the United States Armed Forces (i.e. the Army National Guard of the United States, the Air National Guard of the United States, the Army Reserve, the Navy Reserve, the Marine Corps Reserve, the Air Force Reserve, and the Coast Guard Reserve) to attend drills and other training as required.

The Department shall allow employees who are members of the Massachusetts Army and Air National Guard, called to emergency/contingency duty in the service of the Commonwealth, to perform their required duties in accordance with the provisions of M.G.L. c.33, Sections 38, 40, 41, 59, 59A, 60 and 61, and perform duties under Title 10 and 32 of the United State Code.

The Department shall allow employees who are members of the Army and Air National Guard of other states or U.S. territories, to perform active duty as required by the proper authority of the other state or territory.

The Department shall support and facilitate the transition of employees who are called to active service under Title 10 and Title 32 of the United States Code (USC) upon their activation/mobilization as well as their return from active duty. This will ensure that the employee is treated fairly and equitably in accordance with all applicable federal and Massachusetts state law pertaining to their service and employment rights.

Notifications

Employees shall notify Station, Section and/or Unit Commanders of Inactive Duty Training Drill (IDT Drill), Annual Training, emergency/contingency activation/mobilization, as well as any other service obligations that conflict with regular work schedules with as much advance notice as possible.

Notifications Procedure

1. All military orders, yearly drill schedules and military leave earning statements (LES) shall be submitted via email to polmilitaryleave@massmail.state.ma.us immediately upon your notification of military activation if eligible for pay difference during any portion of that military service.

Continued next page.

Notifications Procedure (Continued)

2. All military service orders and drill schedules will be reviewed by the Department's Human Resources Military Service Coordinator. Based on the military orders submitted, instructions will be provided to the employee and supervisor to ensure the proper weekly time reporting codes are utilized during the employee's military service. Payroll will not process any paid Military Service selections in the time reporting system without having received current military orders or drill schedules.
3. Until documentation is received and reviewed by the Human Resources Military Service Coordinator, the employee's payroll status will be "Military Leave/No Pay." Additionally, timely notice of pending military service shall be made through the chain of command via a "To/From." The notice shall include:
    - The timing and purpose of said service;
    - Reference of any applicable law; and
    - A copy of official orders or correspondence on official letterhead.
4. In the event the employee has not received written orders in hand, he/she shall submit their notification through the chain of command to the Office of the Superintendent/Deputy Superintendent and polmilitaryleave@massmail.state.ma.us with the following additional information:
    - The name and rank of the military commanding officer;
    - A contact phone number for such commanding officer; and
    - Notice that written orders will be forthcoming.

Time Reporting

Employees on Military Leave With or Without Pay shall be placed on an administrative schedule (i.e. a 5 & 2 schedule) for the duration of any individual or consecutive leaves in excess of thirty (30) consecutive/calendar days. All pertinent station, section and/or unit records must reflect such schedule. Please note that employees who are performing annual training, drill or related assemblies do not require this schedule change.

Station, Section and /or Unit Commanders shall ensure that the appropriate notations are entered into the time reporting system to reflect the employee's military leave/work status if the employee is unavailable to do so.

Authorized Leave

Refer to the accompanying <u>ADM-26 Military Leave – Matrix</u> that is incorporated into this policy.

Department Work While on Military Leave

While an employee is on a military leave of any duration, he/she:

- Is deemed to be separated from service with the Department; and
- Shall not work any overtime assignments, detail assignments, or be compelled by the Department to perform any other function on behalf of the Department or in the capacity of a Department employee.

Subject	Number
Military Leave	**ADM-26**

Leave Accrual, Seniority, and Other Pay Considerations for Employees on Military Leave

Employees who are called to military service that qualifies them for Military Leave With Pay (pursuant to M.G.L. c. 33, Sections 38,40 or 41) or Without Pay (under Title 10 or 32 USC or for service with the National Guard of another state or U.S. territory pursuant to M.G.L. c. 33, Section 13), shall:

- Retain all employment rights as stipulated in federal and Massachusetts state law;
- Suffer no loss of Department seniority or for retirement purposes;
- Continue to accrue all regularly accrued paid leave time (sick, vacation, and personal leave) as though still present for duty;
- Leave accrued while on active military leave status cannot be applied to that same unpaid military leave;
- Leave accrued while on active military leave status cannot, upon the employee's return to work, be applied retroactively to result in compensation for previously unpaid leave time;
- Employees on military leave without pay may request to use compensatory time and paid leave time accrued prior to the onset of the military leave without pay as a substitute for unpaid leave, provided that the employee does not qualify to receive pay difference. Such use of compensatory time earned and accrued leave shall be in accordance with regularly applied rules for use as set forth in the applicable CBA and Policies & Procedures;
- Personal leave accrued while on military leave remains use/lose time for that calendar year. There is no carry-over of personal leave;
- Vacation leave accrued while on military leave remains subject to annual carryover rules per the applicable CBA and state policies; and
- Employees on military leave with pay are only entitled to pay for benefits that are seniority based, not performance based, unless otherwise specified in the applicable CBA. (ex: shift differential, weekend differential, commuting differential, on-call or stand-by pay, clothing allowance, etc.).

Holidays and Administrative Days Off for Employees on Military Leave

Employees in the armed forces of the Commonwealth on Military Leave With Pay due to activation under M.G.L. c. 33, s. 38, 40 and/or 41 shall receive holiday pay as regularly compensated per the applicable CBA and state policies, however they shall not be eligible to accrue compensatory time or "holidays owed". On the Commonwealth's day of observance, the payroll code for Holiday – Did Not Work shall be entered into the time reporting system and recorded accordingly in station, section and unit records for the employee.

In accordance with the applicable CBA and state policies, employees who are on Military Leave Without Pay shall not receive holiday pay and are therefore are not eligible for accrual of compensatory time or "holidays owed" for legal holidays that occur while the employee is in leave of absence without pay status. Please be advised that the military pay difference for an employee in Military Leave Without Pay status does include compensation for holidays that occur during the leave period.

Administrative Days Off (ADOs) are equivalent to Days Off Regular and shall not be accrued.

Subject	Number
Military Leave	**ADM-26**

Time Limit for Return to Work

Time limits for returning to work from military service depend on the duration of the orders. The rules are:

Service of 1 – 30 days: the beginning of the next regularly scheduled work period on the first full day following completion of service and expiration of an eight-hour rest period.

Service of 31 – 180 days: application for reinstatement to duty through chain of command in To/From format to the Office of the Superintendent/Deputy Superintendent shall be submitted not later than 14 days after completion of military duty.

Service of 181 or more days: application for reinstatement to duty through chain of command in To/From format to the Office of the Superintendent/Deputy Superintendent shall be submitted not later than 90 days after completion of military duty.

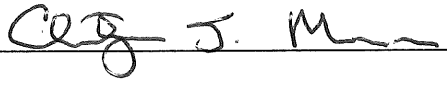
In the event an employee does not return to work in a timely manner, he/she is subject to the Department's Rules and Regulations, Policies and Procedures, and applicable provisions of CBA for unauthorized absences.

Requirements for Return to Department Service

Sworn members returning from any military leave that exceeds one year shall be required to successfully complete:

- A background investigation;
- A medical examination, to include drug testing, by the State Police Surgeon;
- Psychological testing; and
- A training evaluation by the Commandant of the Academy and any training required by him/her.

Civilian employees returning from any military leave that exceeds one year shall be required to successfully complete:



- A background investigation;
- A medical examination, to include drug testing, by the State Police Surgeon;
- Psychological testing; and
- Retraining, as determined by the employee's supervisor or the Human Resources Director.

Rules Governing Paid Leave for Managers and Confidential Employees (HRD Red Book)

[1] Pursuant to MGL c. 33, s.59 (a) employees of the Commonwealth "shall be entitled to receive pay without loss of ordinary remuneration as a public employee during service in the uniformed services, annual training under section 60 or drills and parades under section 61, not exceeding 40 days in any federal fiscal year, and shall not lose any seniority or any accrued vacation leave, sick leave, personal leave, compensation time or earned overtime." The proviso of 40 days is the maximum amount of paid military days that may be used by a Commonwealth employee in the service of a reserve component of the armed forces of the Unites States – to include the Army or Air National Guard of any state or territory under the jurisdiction of the United States – to cover absences due to military service for the period of October 1 to September 30 of any given year.

Reserve Component and Duty Status	Entitled to Pay Difference Per M.G.L. c. 33, §59?	Entitled to Accrue VAC/SIC/PER & Holiday Pay?	How Is The Employee Paid While On Military Leave?	SHORTCUT
MA NATIONAL GUARD Activation under Title 10 or 32 USC Includes Annual Training – AT,[1] Drills, IDT[2], military schooling, and other calls to active duty for members of a reserve component of the armed forces of the United States	YES	VAC/SIC/PER YES Holiday Pay NO[3] (See footnote on pay difference)	Per M.G.L c. 33, §59 (a), employees may use Military Leave with Pay for up to 40 paid days per federal fiscal year (i.e. 10/1 - 09/30) to cover time off from work for duty under Title 10 or Title 32. Per M.G.L c. 33, §59 (c), employees who are called to active duty under Title 10 or 32 are eligible for the pay difference from Day 1 of active duty. They may opt to defer receipt of the pay difference in order to use some or all of their 40 paid days first.	Up to 40 paid WORK days only for AT, Drills, IDT, military schooling and related activities, *and/or* paid leave accrued prior to the active duty orders per the cba; *then* pay difference
MA NATIONAL GUARD State Active Duty under MGL c. 33, §§38, 40 or 41	YES	VAC/SIC/PER YES Holiday Pay YES for holidays in the first 30 consecutive/ calendar days or pay difference	Per M.G.L. c. 33, §59 (b), employees may use Military Leave with Pay for the first 30 consecutive/calendar days of leave (*not DOR/ADOs in those 30 calendar days*). They are eligible for the pay difference after the first 30 consecutive/calendar days. The 40 days under Section 59(a) and (c) for activation under Title 10 or 32 USC are *not* eligible to be used for this military status.	Pay for WORK days only in the first 30 consecutive/ calendar days; *then* paid leave accrued prior to the active duty orders per the cba *or* pay difference
NATIONAL GUARD **Other U.S. States & Territories** State Active Duty by other U.S. State/ Territory	NO	VAC/SIC/PER NO Holiday Pay NO	Employees in this status cannot receive military pay from this Department nor can they use any Military Leave With Pay (to include the 40 paid days) to cover their absence from work. Employees receive pay from the National Guard of the U.S. state or territory for which they have been activated. They may use other paid leave credits per the cba (e.g. VAC, PER) acquired prior to the start of the military leave to cover time off payroll.	Unpaid Military Leave only. No paid military time permitted. May use paid leave accrued prior to the active duty orders per the cba

[1] 32 U.S. Code §503(a)(2) and §503c provides further clarification for training and duty.

[2] 32 U.S. Code §502b-502e provides definitions for assemblies and drills.

[3] Please be advised that the military pay difference for an employee in Military Leave Without Pay status does include compensation for holidays that occur during the leave period.
