Subject: NDAO Case Update - SJC ANNOUNCES NEW RULE FOR CELL TOWER DUMPS

Good afternoon:

Today, April 1, 2022 the Supreme Judicial Court issued a decision in Commonwealth v. Perry that discusses CSLI, tower dumps, and the particularity required in a search warrant affidavit. This case should be read by all prosecutors and officers who draft warrants or rely on cell site information. The case provides an explanation on CSLI (p. 4-8) and the Court's approach to determining whether a search occurred under the "mosaic theory" (p. 13-26).

Facts: Police obtained search warrants for 7 cellphone tower dumps, corresponding to the location of six robberies and an attempted robbery that resulted in a homicide over six dates in 2018 (Sept 22, Sept 27, Sept 28, Oct 4, Oct 6, Oct 25 and Oct 31). The robberies occurred in Boston, Canton and Cambridge. Because each of the robberies was perpetrated in a comparable manner by a man fitting a similar description, police suspected the same person was responsible for all seven incidents. Based on surveillance video and witness statements, police also believed the perpetrator was assisted by a coverturer who acted as the getaway driver.

Police sought search warrants to cross-reference the tower dumps to determine if any device had been near the scene of two or more incidents. After analyzing the information police discovered that a particular telephone number appeared near the scene of two robberies. Police determined, by searching a police database, that this number belonged to the defendant. The defendant was charged with committing all seven robberies and the homicide.

Search Warrants: The Court concluded that the seven town dumps were an intrusion of the defendant's reasonable expectation of privacy and constituted a search, triggering the need for a warrant.

1st warrant: On October 26, 2018 a FBI agent obtained a search warrant from a Federal magistrate judge for tower dumps corresponding to the robberies in Boston, Canton, and Cambridge on September 22, September 27, September 28, and October 4, 2018.

2nd warrant: On January 30, 2019 a Boston police detective obtained a search warrant from a BMC judge for tower dumps corresponding to the October 6, October 25, and October 31 robberies/homicide. This second warrant did not reference or otherwise rely upon evidence obtained from the execution of first warrant.

Both warrants sought the same categories of information. For each cellular telephone that connected to the relevant cell site, the providers were required to furnish (1) the location and sector of the cell site providing service; (2) the telephone number and unique identifier, either of which could be used to identify the owner of the telephone; (3) the type of communication initiated or received when the connection occurred; (4) the telephone number of the device initiating the communication (known as the "source number"); (5) the telephone number of the device receiving the communication (the "destination number"); and (6) the date, time, and duration of each communication.

The execution of the warrants produced information on over 50,000 telephone numbers.

The court found that the 1st warrant did not set-forth particularized information that the perpetrator or the coverturer owned a cellular telephone or communicated with one another from a distance and suppressed all evidence from those tower dumps. In comparison, the 2nd warrant contained particularized information and was upheld.

The differences in the warrants highlight the importance of careful drafting and precise language in a search warrant affidavit.

The **2nd warrant** described several notable similarities between the offenses. Each robbery was committed against a clerk at a store, almost always a convenience store, in or around Boston, sometime during the period between dusk and dark. The perpetrator always brandished a black semiautomatic pistol, which he held in his right hand. Witnesses consistently described the perpetrator as a light-skinned Black or Hispanic male, approximately six feet, two inches tall, with

a medium to thin build, dressed in a black hooded jacket, dark-colored pants, black gloves, black shoes, and a black or red mask. In addition, on two occasions, surveillance footage showed a hole or a light-colored blemish on the robber's jacket. Collectively, this evidence provided a substantial basis to believe, that the same individual had committed all of the offense.
The 2nd warrant also described evidence that a coventurer had acted as a getaway driver in at least three of the offenses. The robberies took place from two to eleven miles apart, and some of the locations were not near any public transportation. On October 4 the store clerk saw the perpetrator enter the passenger's side of a dark-colored sedan, without removing his mask, before quickly departing the scene. On October 6 a surveillance camera captured a dark colored sedan traveling at a high rate of speed along the perpetrator's path of flight. On October 31st police canines detected the perpetrator's scent along his reported flight path, but the scent ended abruptly in a public area with no nearby public transportation, which could have indicated that the perpetrator entered a vehicle. The affidavit also described facts suggesting some reason to believe the defendant and coventurer had communicated with one another from a distance, either prior to or after the commission of the offense. The detective seeking the search warrant averred that, based on his experience and training, violent crimes such as those at issue often require some level of coordination amongst coventurers.

The Court found that because there was reason to believe that the perpetrator used a cellular telephone to communicate with a coventurer around the time of the offenses, there also was probable cause to believe that either the perpetrator's telephone or the coventurer's telephone would have produced telephone call CSLI that would appear in the requested tower dumps, and likely in more than one of the tower dumps. This CSLI, in turn, would enable investigators to isolate potential suspects by determining which, if any, individuals had been near the scene of two or more of the offenses. The affidavit also explained that investigators sought to obtain the tower dumps in order "to identify and/or verify commonalities within [the] requested records." Where the warrant authorized the search of only a narrow subset of CSLI, for purposes of identifying a common suspect, it was sufficiently particular.

In comparison, the **1st warrant** did not discuss the need for coventurers to communicate when committing a robbery, nor did it point to any evidence that the perpetrator and the coventurer had been separated during the commission of the crime such that they would have had to communicate from a distance. The only ground in the first affidavit to conclude that the perpetrator had possessed or used a cellular telephone to aid in accomplishing the crimes was the affiant statement that "it is very common for a person to have a cellular telephone with them at all times." Without more, this was insufficient evidence and the evidence was suppressed.

The Court noted: When seeking a warrant to search CSLI, investigators need not establish that the defendant actually used or possessed his [or her] cell phone during the commission of the crimes, which they would be required to do in order to search its contents. Rather, the nexus requirement is satisfied as long as there is

a substantial basis to conclude that the defendant used his or her cellular telephone during the relevant time frame, such that there is probable cause to believe the sought after CSLI will produce evidence of the crime.

The Court also noted that limiting a search to an identified suspect is best practice where possible, **it is not required where the suspect's identity is unknown and the scope of the search is appropriately limited through other means**.

The SJC used this case to announce the following new rules.

NEW RULES FOR TOWER DUMPS: Before acquiring and analyzing a series of tower dumps, the Commonwealth must obtain a warrant from a judge. Only a judge may issue a search warrant for tower dumps. The warrant must also include protocols for the prompt and permanent disposal of any and all data that does not fit within the object of the search following the conclusion of the prosecution.

Please let me know if you have any questions.

If your department intends to apply for a warrant to search CSLI, tower dumps, or the contents of a cell phone, please don't hesitate to send your search warrant affidavits to my attention for review prior to submitting to the court.

Kindest Regards,

Dave, quotes to be shortly forthcoming for [redacted] camera system, with an option for gold and platinum support (0800-2000 vs 24/7/365). Will also include install, configuration, setup and training for administrators and users.

Also attached is our price book which explains the architecture and components. We have talked about Outpost and Outpost Mobile which we will demo tomorrow and have information around included. Once I know what the level of interest is there we can add those to the quote quickly.

Finally, we're waiting today on hardware quotes from Dell, but will have something for you by EOD today that will be for just the recording and management hardware that would sit on top of your existing storage since you have close to 1PB already.

Let me know what else we need, otherwise look forward to tomorrow.

v/r

Paul

Subject: Automated License Plate Reader (ALPR) training notes
Date: Wednesday, May 25, 2022 12:24:36 PM
Attachments: TRF-11 Automatic License Plate Recognition.pdf

Good morning,

Some notes about this morning's training from Sgt Noah Pack regarding the ALPR training. I'm sure you guys know more about this than I do but the training was definitely useful and well done.

MSP is looking to train all supervisors on this software and issued username / password to us for administrative purposes. Many of these formal requests can be done through the MSP Watch Center as we have in the past. Legal process (search warrant / GJ subpoena) may be needed if we are intend on using ALPR data in a court case.

Comm vs. McCarthy (2020) is the legal precedent essentially stating LE may use data points from ALPR for "limited circumstances". This was a Cape Cod narcotics case that used the Cape bridges ALPRs. It outlined that too much data retrieval, too broad geographical search or too vague a timeline can be construed as a search and therefore will be inadmissible.

Legal process for ALPR data should be obtained through a court-issued SW that then gets forwarded to EOPSS then to DOT. Strange, circuitous route but that's what Noah said. EOPSS is currently blocking the use of MSP cruiser-mounted cameras. In exigent circumstances, ALPR usage is widely acceptable. For investigative means, ALPR analysis should be case specific and time / geographical location sensitive. Apparently, the MA courts are really paying attention to these factors. ACLU is giving their standard pushback on the system as a whole.

[redacted] [ALPR link]
Username: [redacted]
PW: [redacted]

Note: Send me a quick email when/if you access the ALPR system with the above username & password. The onus of the specific searches are on the supervisors; we are trying to avoid negative case law that brings additional scrutiny on this useful LE tool.

As far as the ALPR (Neology / Boss 4) website goes, it's web-based and cloud-accessible so it will not have the MSP firewall. You can access it from anywhere. The ALPR is guided by MSP policy TRF-11 [attached]. The above user name and password is for our immediate unit only. If we are putting a case together where we are using ALPR often, we have the ability to add TFO & local officer access. Any outside agency looking for assistance, help them manually or refer them to the MSP Watch Center where they'll track and log all assistance on ACISS. Makes our lives

easier.

When you log on, you'll see 3 options on the main menu bar: (1) analytics (2) reads (3) system. Each has a drop down list and filtering abilities. If you want to practice, use your GSA vehicle plate. The options you should be most familiar with are:

"Reads" --> Search [justification, license plate, time frame, etc]
"Reads" --> Report [ordered report on suspect plate(s)/MV/etc]
"System" --> Hotlists [MVs you want on hotlist]
"System" --> Notifications [alert on suspect MVs]

The navigation within these options is relatively self-explanatory. You can type in case notes, case #, etc to stoke your memory if juggling multiple cases. The reports are kept for approximately 90 days.

When searching for a vehicle, play around with the filter option on the left, specifically "Mantis Vehicle ID". This options allows you to get more specific if the plate is unknown but the vehicle description and/or date & time is known. The "Device" filter allows you to navigate by location which may satisfy the courts specificity issues should the data become evidence.

The reports can be exported in an Adobe PDF form and/or Excel if applicable. Again, I'm sure much of this is old hat to you guys but give me a buzz with any questions.

Respectfully,

Sergeant Dennis D. Keeler #3132
Massachusetts State Police
SIU/FBI Violent Crimes Task Force

Exceptions and MSPA_Axon.pdf
Axon Pricing and Products - FINAL.xlsb
Terms and Conditions.pdf
RFR_SP22-AMMO-X86.doc

Good afternoon Eric,

I have a couple of questions (in red font) regarding the attached Axon "Exceptions and MSPA" document:

1. RFR Section 1.6. Anticipated Expenditures, Funding or Compensation:
Axon requests the following modifications. Pricing for five and ten year programs will be held firm for the term specified on the quote; however, we request the opportunity to adjust pricing changes during the 3 year term of the contract where justified.

[…] Contract Quoted prices will remain fixed during the ~~initial contract period~~ entire term of the quote. Contractors will have an opportunity to request a price increase if an option to renew is offered on a yearly basis. Contractors will need to submit written justification and supporting documentation with price increase requests. The Department of State Police does not guarantee that increase requests will be granted

MSP: Where are the five and ten year programs presented in the Axon bid response?
MSP: The attached FINAL pricing document does not specify how long the prices are held firm. The contract initial duration is 3 years.
MSP can be flexible regarding price increases during the initial 3 year contract duration, with justification.

2. RFR Section 2.2.9. Order Cancellation. Axon requests that this be clarified to specify that order cancellation will be limited to orders which have not been shipped. Once shipped, an individual order may be terminated in accordance with the termination procedure laid out in the contract.

MSP: which termination procedure are you referring to? TASER7 agreement?

3. Section 4.1. Contractor Terms. Axon respectfully requests that its TASER 7 Agreement, which contains terms specific to the licensing and subscription models and financing program associated with the hardware and software being offered in response to this solicitation, be incorporated as an exhibit into the final contract award. Axon agrees to negotiate these terms and conditions in good faith, and in the event of any conflict with the Commonwealth Terms and Conditions, the Commonwealth's terms and conditions will control.

MSP: Under review. Typically an agreement such as this would be incorporated into the actual purchase and attached to the Axon quote.
The contract award is to put bidders on a qualified list of contractors, the quote/purchase order is processed at a future date.

Regarding items 4, 5, and 6 from the Commonwealth Terms and Conditions:

The Commonwealth Terms and Conditions are jointly issued by the Executive Office for Administration and Finance (ANF), the Office of the Comptroller (CTR) and the Operational Services Division (OSD) for use by all Commonwealth of Massachusetts ("State") Departments and Contractors.
As its issued by three separate parent agencies with procurement oversight, we are simply unable to modify it.

MSP: which termination procedure are you referring to? Section 13 of the TASER7 agreement?

3. Section 4.1. Contractor Terms. Axon respectfully requests that its TASER 7 Agreement, which contains terms specific to the licensing and subscription models and financing program associated with the hardware and software being offered in response to this solicitation, be incorporated as an exhibit into the final contract award. Axon agrees to negotiate these terms and conditions in good faith, and in the event of any conflict with the Commonwealth Terms and Conditions, the Commonwealth's terms and conditions will control.

MSP: Under review. Typically an agreement such as this would be incorporated into the actual purchase and attached to the Axon quote.
The contract award is to put bidders on a qualified list of contractors, the quote/purchase order is processed at a future date.

Regarding items 4, 5, and 6 from the Commonwealth Terms and Conditions:

The Commonwealth Terms and Conditions are jointly issued by the Executive Office for Administration and Finance (ANF), the Office of the Comptroller (CTR) and the Operational Services Division (OSD) for use by all Commonwealth of Massachusetts ("State") Departments and Contractors.
As its issued by three separate parent agencies with procurement oversight, we are simply unable to modify it.

AG Guidelines Final.pdf

CAUTION: This email originated from a sender outside of the Commonwealth of Massachusetts mail system. Do not click on links or open attachments unless you recognize the sender and know the content is safe.

Noah,

Following up on our conversation the other day I attached a dated, but still relevant, ALPR guidelines that Bergen County instituted during the time when ALPR technology first began getting traction in law enforcement. This was a PowerPoint that was presented to all 70 local agencies that were connected to BOSS. He used to present before me in all training session to the local agencies to ensure they all utilized ALPR per the County guidelines. Marty Delaney had retired in 2020.

I'm not sure if the attached ALPR AG Guideline is the current version, but NJ is expected to releases the latest policy within the next few weeks.

I'm still waiting for the NJSP ALPR coordinator to okay that I give you his name to contact. NJSP is very secretive, but I don't he'll have any problem speaking with you.

Subject: RE: CJIS Agreement

Captain,

Attached is a copy of your most recent user agreement (not the global sharing agreement), but just your user agreement for CJIS.

That Global Sharing Agreement document that was attached is typically for the license plate readers, COPLINK, and a few others. I looked and it does not look like we have one of these on file for MSP. I am going to inquiry about whether we should moving forward, but right now it doesn't look like we do. I also attached a more recent Global Sharing Agreement that goes into a little more detail about the scope and need for the document.

Do you know what vendor (name) is asking for this document and the exact purpose. I understand they want to make sure you are authorized to access CJIS data. In my opinion, the user agreement does show you have the authority, I just want to confirm the vendor.

Thanks Captain!

-Ryan

Attachments: CJIS-REP GUIDE .doc

Good Morning,

I've attached a CJIS REP Guide for use during the training scheduled on Thursday, October 27th, 2022, 9:00a.m., at the MPTC located at 42 Thomas Petten Dr., Randolph, MA 02358. Please make a copy of the guide and bring it with you to the training. The CJIS Support Services Unit is looking forward to meeting everyone and providing this training. If you have any specific issues relating to CJIS that you have encountered and would like discussed send me a separate email so that I can research the issue prior to the training.

Thank you,

Dan Hutchinson

In this case, as in McCarthy, we are considering the import of a relatively small number of cameras, here, five. Only two of these cameras were targeted at Mora's and Suarez's residences. *369 The defendants nonetheless argue that all footage from any of the five cameras that captures their comings and goings must be suppressed under the mosaic theory. We do not agree. Rather, we conclude that the cameras installed to surveil the defendants' homes were of greater constitutional significance than those, as in McCarthy, that were directed at a public highway.
13141516A. Surveillance away from the defendants' home. To the extent that the pole cameras in this case surveilled the defendants away from their own homes, we conclude that this surveillance, like the ALPR use in McCarthy, was not a search in the constitutional sense. At most, it appears that Mora, Suarez, and Guerrero were each captured, on a few occasions, by two cameras directed at a different codefendant's residence. Such short-term, intermittent, and nontargeted video recording of a person away from his or her own home is little different from being captured by the security cameras that proliferate in public spaces. The United States Supreme Court recognized this traditional nontargeted use of video cameras when it referred to "security cameras" as among the "conventional surveillance techniques and tools" that were not called into question by its holding in Carpenter, 138 S. Ct. at 2220. Law enforcement officers appropriately have relied on security cameras, and other forms of nontargeted video surveillance, to identify and apprehend suspects, particularly in emergency **308 situations.[10] See, e.g., United States v. Tsarnaev, 53 F. Supp. 3d 450, 458 (D. Mass. 2014) (describing evidence obtained from privately-owned surveillance camera in investigation of Boston Marathon bombing). *370 See also Commonwealth v. Leiva, 484 Mass. 766, 770 & n.5, 146 N.E.3d 1093 (2020); Commonwealth v. Ferreira, 481 Mass. 641, 645, 119 N.E.3d 278 (2019); Commonwealth v. Boswell, 374 Mass. 263, 265-267, 372 N.E.2d 237 (1978).
17In the circumstances here, the limited pole camera surveillance of Mora and Suarez away from their homes did not collect aggregate data about the defendants over an extended period. Without such data, the cameras similarly did not allow investigators to generate a mosaic of the defendants' private lives that otherwise would have been unknowable. Cf. McCarthy, 484 Mass. at 502, 142 N.E.3d 1090. Therefore, as we held in McCarthy, this limited surveillance falls within the general rule that a person has no reasonable expectation of privacy in what he or she knowingly exposes to the public.

Commonwealth v. Mora, 150 N.E.3d 297, 307–08, 485 Mass. 360, 368–70 (Mass., 2020)

Whether Zachery's expectation of privacy is one that society is prepared to recognize is a more difficult question. We have recognized that "a privacy interest in the whole of one's public movements" exists. McCarthy, 484 Mass. at 502, 142 N.E.3d 1090.
See Riley v. California, 573 U.S. 373, 403, 134 S.Ct. 2473, 189 L.Ed.2d 430 (2014). This privacy interest can be implicated continually, as when the government affixes a location-tracking device to a suspect's vehicle. See Commonwealth v. Rousseau, 465 Mass. 372, 382, 990 N.E.2d 543 (2013). See also Jones, 565 U.S. at 404, 132 S.Ct. 945. Under the mosaic theory, it also can be implicated as a result of data aggregation.
See McCarthy, supra at 503, 142 N.E.3d 1090. Indeed, "[w]hen collected for a long enough

period, 'the cumulative nature of the information collected implicates a privacy interest on the part of the individual who is the target of the tracking.' " Id., quoting Augustine, 467 Mass. at 253, 4 N.E.3d 846. See *110 Mora, 485 Mass. at 373, 150 N.E.3d 297 ("our analysis under art. 14 turns on whether the surveillance was so targeted and extensive that the data it generated, in the aggregate, exposed otherwise unknowable details of a person's life"). 2223"The mosaic theory requires courts to apply the Fourth Amendment search doctrine to government conduct as a collective whole rather than in isolated steps." See Kerr, The Mosaic Theory of the Fourth Amendment, 111 Mich. L. Rev. 311, 320 (2012). Under the mosaic theory, while each individual piece of information collected may not amount to a search, the cumulative, aggregate nature of the data collected may. See id.
In McCarthy, 484 Mass. at 506, 142 N.E.3d 1090, we adopted the mosaic theory in the context of automatic license plate reader cameras. Although we held that four cameras located at the ends of two bridges did not reveal information that rose to the level of a search, we acknowledged that "[a] detailed account of a person's movements, drawn from electronic surveillance, encroaches upon a person's reasonable expectation of privacy because the whole reveals far more than the sum of the parts." Id. at 504, 142 N.E.3d 1090. Here, Zachery argues that the mosaic theory applies to the cumulative nature of **1105 the information collected from his CharlieCard. While we agree that an extensive record of an individual's MBTA activity could constitute a search under the mosaic theory, the minimal amount of data obtained in this case does not constitute a violation of art. 14 or the Fourth Amendment. Whether the aggregation of data collected by police implicates the mosaic theory depends on how much data police retrieved and the time period involved. See Mora, 485 Mass. at 370, 150 N.E.3d 297. See also Commonwealth v. Estabrook, 472 Mass. 852, 858, 38 N.E.3d 231 (2015). The MBTA has the ability to retain fourteen months of an individual's travel history through the individual's CharlieCard. There is no question that such extensive data, in certain circumstances, could create a "highly detailed profile." Commonwealth v. Connolly, 454 Mass. 808, 834, 913 N.E.2d 356 (2009) (Gants, J., concurring), quoting People v. Weaver, 12 N.Y.3d 433, 442, 882 N.Y.S.2d 357, 909 N.E.2d 1195 (2009). From this information, MBTA police also can search for and retrieve video footage.

Commonwealth v. Henley, 171 N.E.3d 1085, 1104–05, 488 Mass. 95, 109–10 (Mass., 2021)

9Here the pole camera, which was placed across the street from the defendant's residence, captured footage of the residence's exterior, including the front entrance, the left side of the building, and the driveway over the course of approximately fifteen days.[9] "[T]argeted long-term pole camera surveillance of the area surrounding a residence has the capacity to invade the security of the home," as it "captures ... revealing interactions at the threshold of a person's private and public life." Mora, 485 Mass. at 371, 373, 150 N.E.3d 297.
The camera allowed investigators either to monitor the defendant in real time as he arrived to and departed from the residence, or to search the footage by date and time. Thus, the investigators had the "ability to 'pick out and identify individual, sensitive moments that would otherwise be lost to the natural passage of time.' " Id. at 375, 150 N.E.3d 297, quoting Levinson-Waldman, Hiding in Plain Sight: A Fourth Amendment Framework for Analyzing Government Surveillance in Public, 66 Emory L.J. 527, 603 (2017). We conclude that under these circumstances the defendant's expectation of privacy was reasonable; thus, the pole camera surveillance constituted a search under art. 14.

Commonwealth v. Comenzo, 180 N.E.3d 453, 458, 489 Mass. 155, 160 (Mass., 2022)

The office was not limited to the plaintiff's exclusive use, and the over-all public exposure of the physical layout abrogated any expectation that her actions, while in the office, would be private. See generally *id.* at 179–180, and cases cited (noting that where the work area in question is not given over to an employee's exclusive use, this factor militates against an objectively reasonable expectation of privacy). Cf. *United States v. Taketa,* 923 F.2d 665, 673 (9th Cir.1991) (finding reasonable expectation of privacy in locked, private office). *536 Although, unlike the plaintiffs in the *Vega–Rodriguez* case, the plaintiff lacked notice of the defendants' surveillance of the office, the facts of this case, including the explicitly public nature of the work conducted by the SBDC and the ready visual and physical access that was afforded the public, all employees (including management) and volunteers by the SBDC, abrogated any objectively reasonable expectation of privacy. See, e.g., *Vega–Rodriguez v. Puerto Rico Tel. Co., supra* at 180 (Fourth Amendment does not preclude "management from observing electronically what it lawfully can see with the naked eye"). We **348 now turn to the remaining issues of the case.

Nelson v. Salem State College, 845 N.E.2d 338, 347–48, 446 Mass. 525, 535–36 (Mass.,2006)

Subject: Court Decision - Commonwealth v. Jerron Perry (Cell Towers, Search & Seizure, Expectation of Privacy) - April 1, 2022
Date: Friday, April 1, 2022 11:32:53 AM
Attachments: image001.png
Commonwealth v. Jerron Perry.pdf

Commonwealth v. Jerron Perry
Supreme Judicial Court – April 1, 2022
(Cell Towers, Search & Seizure, Expectation of Privacy)

In a lengthy and detailed decision, the Court addressed the constitutional implications of "tower dumps", which provide the cell site location information (CSLI) for all devices that connect to specific cell towers during a particular time period.

Background: The Commonwealth obtained search warrants for seven tower dumps, corresponding to the locations of six robberies and an attempted robbery which resulted in a homicide. The dumps spanned seven different days over the course of slightly more than one month; each tower dump was limited in time to the period immediately before and after the specific robbery for which the CSLI was sought. Investigators then cross-referenced the information obtained from the tower dumps to isolate particular telephone numbers that appeared at more than one location. Thereafter, investigators analyzed the CSLI associated with those telephone numbers, among them the defendant's telephone number, to "determine (1) the approximate location of the connecting cellular telephone, (2) the identity of the telephone's user, and (3) the identity of the person with whom the user was communicating." In total, police obtained information on over 50,000 distinct phone numbers. By cross referencing the data, police determined that the defendant's number appeared in the tower dump pertaining to the homicide on Oct. 6, 2018 and the robbery on Oct. 31, 2018. Police also learned "that, at around the time of the shooting on October 6, 2018, the defendant's telephone had been in communication with another device, which they suspected to have belonged to the getaway driver. Investigators were able to determine the identity of the suspected coventurer, as well as the fact that his cellular telephone number appeared in the tower dumps corresponding to the robberies on September 22, October 6, and October 31, 2018." The defendant moved to suppress all evidence obtained from the data towers, and when his motion was denied a single justice reserved and reported to the full court.

Holding: "We agree that the government's use of the seven tower dumps was an intrusion upon the defendant's reasonable expectation of privacy, and therefore constituted a search under art. 14 of the Massachusetts Declaration of Rights. We do not agree, however, that warrants for tower dumps are per se unconstitutional. Accordingly, investigators may use tower dumps so long as they comply with the warrant requirements of art. 14."

The Court exercised its powers pursuant to G.L. c. 211 s. 3 and held that going forward, before acquiring and analyzing a series of tower dumps, the "Commonwealth must obtain a warrant from a judge. Before issuing the requested warrant, the judge must ensure that it provides a protocol for the disposal of any data that falls outside the scope of the search." The Court also determined that "our holding applies prospectively and to those cases that are active or pending on direct review on the date of issuance of the rescript in this case."

Application: In determining whether the police use of technology to engage in long-term surveillance "constitute[d] a search under the mosaic theory, courts have considered 'whether the surveillance was so targeted and extensive that the data it generated, in the aggregate, exposed otherwise unknowable details of a person's life. … To answer this question, our limited precedent to date primarily has focused on three general concerns: the extent to which the surveillance reveals the whole of an individual's public movements; the character of the information obtained; and whether the surveillance could have been achieved using traditional law enforcement techniques. … While these factors have emerged as preeminent in the few cases in which we have applied the mosaic theory to date, we emphasize that the question whether electronic surveillance exposes otherwise unknowable details of a person's life must be answered in light of the totality of the circumstances in each case. Accordingly, these factors are not exhaustive, and no one factor is determinative." The Court found that here, the actions of the police--viewed in their entirety—provided police with information of a "highly personal and private nature" previously "unknowable" about the defendant's life. Therefore, the use of the seven tower dumps intruded upon the defendant's reasonable expectation of privacy.

It was undisputed that the Commonwealth had established probable cause to believe that the crimes described in the warrants had been committed. Therefore, the Court focused its analyses on whether the warrants established a substantial basis to believe that a search of the requested tower dumps would provide evidence of the crimes under investigation, or would aid in the apprehension of the perpetrator.

First Warrant:

Probable Cause: The affidavit did not set forth any particularized information that the perpetrator or the coventurer owned a cell phone or communicated with each other from a distance. "Moreover, the first warrant affidavit did not discuss the need for coventurers to communicate when committing a robbery, nor did it point to any

evidence that the perpetrator and the coventurer had been separated during the commission of the crime such that they would have had to communicate from a distance. Thus, the only ground in the first affidavit upon which to conclude that the perpetrator had possessed or used a cellular telephone to aid in accomplishing the crimes was the affiant officer's statement that "it is very common for a person to have a cellular telephone with them at all times." Therefore, the information from the first warrant "must be" suppressed.

Particularity: Not reached due to the finding of no probable cause.

Second Warrant:

Probable Cause: The Court found that the affidavit described several similarities between the offenses and evidence that a second co-venturer had acted as a getaway driver in at least three of the crimes. IT also contained information suggesting that the defendant and co-venturer had communicated with each other from a distance either before or after the crime. The second warrant did not rely on any data produced from the first warrant. "The evidence that the perpetrator and the coventurer communicated from a distance, when combined with the affiant's statements about the over-all ubiquity of cellular telephones, provided reasonable grounds to believe that the robber and the getaway driver had used cellular telephones to communicate. Because there was reason to believe that the perpetrator used a cellular telephone to communicate with a coventurer around the time of the offenses, there also was probable cause to believe that either the perpetrator's telephone or the coventurer's telephone would have produced telephone call CSLI that would appear in the requested tower dumps, and likely in more than one of the tower dumps. This CSLI, in turn, would enable investigators to isolate potential suspects by determining which, if any, individuals had been near the scene of two or more of the offenses. Accordingly, the second warrant was supported by probable cause."

Particularity: "The defendant's reasonable expectation of privacy was invaded not simply by law enforcement's possession of his anonymized CSLI, but also by the investigating officers' possession and analysis of that CSLI, the aggregate of which provided investigators with a revealing mosaic of the defendant's private life. Only those individuals whose CSLI was subject to further analysis – such as the defendant -- were subject to a search within the meaning of art. 14. The question, then, becomes whether the second warrant sufficiently limited the set of telephone numbers and their associated CSLI that investigating officers were permitted to analyze, and therefore to search." The Court found that while the scope of the warrant and particular items to be seized were not "entirely clear" and could have permitted investigators to "permissibly could select any telephone number from among the 50,000 provided and thereafter conduct a search by determining the identity of that individual, his or her location, and with whom he or she had been communicating, all without even an iota of suspicion", any defects were remedied by the supporting affidavit which adequately limited the scope of the search.

"Otherwise put, because the warrant authorized the search of only a narrow subset of the CSLI, for purposes of identifying a common suspect, it was sufficiently particular."

PRACTICE TIP: "Although limiting a search of CSLI to an identified suspect might be the better practice where possible, it is not required where, as here, the suspect's identity is unknown and the scope of the search is appropriately limited through other means."

NOTE: The Court distinguished this case from its 2015 holding in *Estabrook*-- a warrantless search of up to six continuous hours of CSLI was permissible—on the grounds that here the government obtained small increments of CSLI over the course of different days. "The rationale in *Estabrook* was that analyzing six hours or less of telephone call CSLI could not be a search 'because the duration is too brief to implicate the person's reasonable privacy interest.' While the court has determined that analyzing six continuous hours of CSLI does not intrude upon a reasonable expectation of privacy, analyzing small increments of CSLI over the course of several days does. Accordingly, although *Estabrook* enables the Commonwealth to obtain one or more tower dumps spanning six hours or less without a warrant, it provides no refuge where, as here, the tower dumps span multiple days."

Please see attached opinion and happy Friday!

Hi Lt. Bernstein,

Town of Dedham Police Department - Michael D'Entremont (Dee-an-tremont) mdentremont@police.dedham-ma.gov, his phone number is 781-603-6159 and he got the Speed Alert 18 ATS 3. The Speed Alert 18 is the one that does the Messaging and Radar (20 inches in height 30 inches wide). If you have any open time slots on November 9th and 10th, I'd be happy to show you the signs we have and answer any and all questions.

Thank you,

Matt

Subject:	Feature Request Update: Historical Search Time Limits and Device Visibility
Date:	Monday, August 8, 2022 8:24:45 PM
Attachments:	group level.PNG

Limit Historical Search Time

We are looking to restrict the amount of historical time that a user can search (ie, the full system retention or a lesser period, say 30 days). This feature request is coming up again because we are preparing to add dispatchers to the system, and we would prefer to restrict their access to a more limited time that is relevant to their duties. I think this makes the most sense to set at the group level (see attached "group level") by selecting to enforce a historical search limit and then entering the allowable days, similar to the hot plate expiration interface. This is a high priority for us.

Set Allowable Devices to See Results

We are still looking to add the ability to set which devices a tenant can see results from. Currently, the searching user in any tenant will see results from every device in the system from all other tenants and can manually see and select from ALL devices from all other tenants. There is no apparent way to restrict this, as we discussed early on during our transition.

Ideally, the system could be set to restrict cross-tenant visibility for devices or sites. This feature request is coming up again due to the addition of more local tenants to the system who we may want to restrict to seeing just their own devices and search results from their own devices as opposed to the entire system. This is probably easiest to set at the tenant level. This is a medium priority for us.

Why is this important?

Building in system level protections to manage user access to the amount and type of data that is relevant to their user group is an important step to protecting the integrity of the system and lowering the potential for accidental misuse.

Thank you. For the agenda to discuss…

Sergeant Noah H. Pack

Limit Historical Search Time

We are looking to restrict the amount of historical time that a user can search (ie, the full system retention or a lesser period, say 30 days). This feature request is coming up again because we are preparing to add dispatchers to the system, and we would prefer to restrict their access to a more limited time that is relevant to their duties. I think this makes the most sense to set at the group level (see attached) by selecting to enforce a historical search limit and then entering the allowable days, something similar to the hot plate expiration interface. This is a high priority for us.

Set Allowable Devices to See Results

We are still looking to restrict visibility of devices, including which devices a tenant can see results from. Currently, a searching user in any tenant will by default see results from every device in the system and can manually see and select from ALL devices from all other tenants using the device search filter. There is no apparent way to restrict this, as we discussed in the past during the earlier phase of our boss4 transition.

Ideally, the system should be set to allow administers to restrict cross-tenant visibility for devices or sites. This feature request is coming up again due to the addition of more local tenants to the system who we want to restrict to seeing just their own devices and search results from their own devices as opposed to the entire system. This feature is probably easiest to set at the agency/tenant level. This is a medium priority for us.

Why are these important?

Building in system level protections to manage user access to the amount and type of data that is relevant to their user group is an important step to protecting the integrity of the system and lowering the potential for accidental misuse.

Thank you. Please add to the agenda for our next update meeting.

Good afternoon Lt. Colonel Wilcox,

I was just advised that you had called in for a contact over at fusus. First, I want to apologize, I was advised that you had sent in the information online, I'm not sure what happened with that, so my apologies for taking so long to get back to you.

I'm told you were present for my brief overview of fusus at the IACP Tech Conference in Milwaukee, truly appreciate you reaching out. I just wanted to shoot you a quick email, I left you a voice message just a bit ago, please feel free to give me a call or email, whatever is convenient for you. As you know from my introduction in Milwaukee, I'm the retired Chief of Police from Manchester NH and I still live up there, although I grew up in Massachusetts and started my career at West Newbury PD in MA.

As you can see, I have attached Joe Del Duca to this email. Joe is part of the Northeast Team and covers your area. Joe is a retired Deputy Inspector from NYPD, with 28 years experience in Law Enforcement. Both Joe and I are FBINA Grads, I'm from 266 and Joe is from 263, I see you were just before us in 258.

Please feel free to reach out and we will take good care of you!! We would love an opportunity to come down and provide you with a full presentation so you can really see what fusus has to offer and how it can assist your agency. I have attached a digital pamphlet along with this YouTube link:

https://www.youtube.com/watch?v=o9WdtuMVh5E

hopefully it will provide you with some additional information.

Thanks again Lt. Col, We are looking forward to connecting. Appreciate your time and be safe out there,

Carlo

CAUTION: This email originated from a sender outside of the Commonwealth of Massachusetts mail system. Do not click on links or open attachments unless you recognize the sender and know the content is safe.

Dear Sgt. Pack/Noah:

I'm out of the office today, but I spoke with Bill Schwarz earlier and he told me you were at SPD to set up the access to the MSP ALPR.
A few weeks ago SPD Capt. Jeffrey Martucci (copied here) forwarded me the **SPD ALPR Policy** (attached). Is there a way to accommodate both policies in the MOU?
Bill said SPD can wait to start using the MSP system until this is worked out.
Sorry I didn't get back to you sooner- things are crazy busy these days with our fiscal year end. I can pick this back up next Tuesday 6/21 when I'm back in the office.

Best regards,
Kathy Breck 6/17/22

Good Afternoon Awilda,
Can we please issue Sgt. Noah Pack a cell phone, laptop/docking station/ monitor and keyboard/ VPN and MiFi.
Also please have MIS grant him local administrator privileges to allow him to update ALPR software on his laptop.
Thanks,

John

Subject: ALPR & 4RE Decision

CAUTION: This email originated from a sender outside of the Commonwealth of Massachusetts mail system. Do not click on links or open attachments unless you recognize the sender and know the content is safe.

Captain McCarthy,

Your email to the group was forwarded over to me from the WatchGuard staff so I just wanted to take a moment to respond. Thanks for meeting my colleague Ryan Garofano yesterday and evaluating the 4RE LPR solution. As you referenced, the field of view for the 4RE is too broad, and asking it to do both LPR + evidence collection has seemed to be a tough ask.

This was the first iteration of the integration we hope to achieve with our partnership with WatchGuard. We are building out a new version of this in the future and this feedback is extremely valuable.

One thing to clarify is that in your email you stated, "What it does underscore is that the Vigilant system needs a purpose-built camera for robust ALPR." I just wanted to note that we do in fact have a series of robust LPR cameras that we've been selling on the market, many of which have been deployed throughout the state of Massachusetts. With your LPR data subscription you'll be able to see both the commercial data *and* all of our cameras deployed by police departments around the country.

I attached some information on our fixed cameras, our solar/quick deploy option, mobile cameras,

and mobile app, all of which are integrated into our system. If you're open to further discussions about expanding, want some flexibility, or would like to demo our robust equipment, we would certainly welcome them. I understand you guys have utilized PIPS in the past, but with our recent updates I'm confident you would see an enhancement in both hardware and software functionality. Keep in mind we can always integrate your existing data to avoid having to use 2 separate backends.

If you ever have any questions, please feel free to reach out to either me or Ryan and we'd be happy to discuss.

Happy St. Patty's Day.

Sgt. Pack,

Please see our signed copy of the MOU for the LPR's. Is there anything else that will be required of our agency to have access the hot list and other functions needed to get us back up and running?

Thanks,
Sgt. K. Blackwell

Sgt. Pack,

Just following up on the last email. Is there anything else we need to be fully back up with our LPR's? Also looking for access to manage our users accounts. We have several new Officers that need to be able to use them, as well I would like to remove any that are no longer with our agency.

Thanks,
Sgt. K. Blackwell

Good afternoon Lt. Colonel Wilcox,

I was just advised that you had called in for a contact over at fusus. First, I want to apologize, I was advised that you had sent in the information online, I'm not sure what happened with that, so my apologies for taking so long to get back to you.

I'm told you were present for my brief overview of fusus at the IACP Tech Conference in Milwaukee, truly appreciate you reaching out. I just wanted to shoot you a quick email, I left you a voice message just a bit ago, please feel free to give me a call or email, whatever is convenient for you. As you know from my introduction in Milwaukee, I'm the retired Chief of Police from Manchester NH and I still live up there, although I grew up in Massachusetts and started my career at West Newbury PD in MA.

As you can see, I have attached Joe Del Duca to this email. Joe is part of the Northeast Team and covers your area. Joe is a retired Deputy Inspector from NYPD, with 28 years experience in Law Enforcement. Both Joe and I are FBINA Grads, I'm from 266 and Joe is from 263, I see you were just before us in 258.

Please feel free to reach out and we will take good care of you!! We would love an opportunity to come down and provide you with a full presentation so you can really see what fusus has to offer and how it can assist your agency. I have attached a digital pamphlet along with this YouTube link:

https://www.youtube.com/watch?v=o9WdtuMVh5E

hopefully it will provide you with some additional information.

Thanks again Lt. Col, We are looking forward to connecting. Appreciate your time and be safe out there,

Carlo

FSHSP20CFC FFY20 ISA POL CFC - ISA.doc

FYI
I'll review this on Friday and check equipment vs. the initial ISA.
I'll check MMARS BQ89 to see if there's a carryforward, maybe you can check too?
Thx

Subject: RE: FSHSP20CFC modification request

Hi Dianne:
Thanks – attached is the ISA moving items into equipment and UU.

The Bain quote looks like KK and the software and ALPR's, UU – do you agree?

If so, can you double check the attached?

Becky

From: Miller, Dianne (POL) <Dianne.Miller@pol.state.ma.us>

To: Rust, Rebecca (POL) <Rebecca.Rust@pol.state.ma.us>
Subject: RE: FSHSP20CFC modification request

I think she's decreasing AA and increasing UU.
So we need to make sure the UU total in column I adds up to what her quotes were for, and match her modification request letter.
Sorry, I didn't realize no carryforward was done. There's a spreadsheet in the V drive for carryforward so I assumed it was done.

To: Miller, Dianne (POL) <Dianne.Miller@pol.state.ma.us>
Subject: RE: FSHSP20CFC modification request

Hi Dianne:
The carryforward has not been processed yet. They only did a blanket 90,000 back in June.

If we are carrying forward what was budgeted, I will re-work attachment B to adjust for the change in payroll tax, indirect, and fringe. Do you know if Amy wants to change any of the budgeted amounts in each category? I initially kept it blank as I didn't know if Amy wanted to adjust the categories.

Becky

To: Rust, Rebecca (POL) <Rebecca.Rust@pol.state.ma.us>
Subject: RE: FSHSP20CFC modification request

Hi again,
If a carryforward was already processed by EOPSS, then column E for FY22 would have the actual amounts you have in Column I.
And the amounts in column G are the starting point for FY23 in column E (for example, AA should have 10563.39, EE conference space should start with $5K in column E ….etc)
Unless I'm mistaken….I think that's how we would do it. Then add & subtract FY23 lines as needed to get to Amy's modified budget in column I.
Di

To: Thibault, Amy (POL) <amy.thibault@pol.state.ma.us>; Rust, Rebecca (POL) <Rebecca.Rust@pol.state.ma.us>
Subject: RE: FSHSP20CFC modification request

Questions…
Becky, attached is a carryforward that was already processed?
If yes, I think the carryforward amounts from column G are the starting point in column E for FY23….then show the increases and decreases that result in Column I amounts for Amy to spend down.

Amy…is this a good time to attach a food quote for the faith-based seminar and make sure it's approved? There's $5K for conference space, so maybe we can incorporate it all and make sure it's covered?
Vicky already has your equipment quotes so maybe it's not a good idea to attach another one. Just a thought.

Hi Amy and Becky,
Usually I would do the attachment B and Amy would modify the language with red font and strikethroughs.
Right now, there is no language in there, so we need to copy and paste from the previous ISA.
Becky, did you want to do it or do you want me to?

To: Miller, Dianne (POL) <Dianne.Miller@pol.state.ma.us>
Subject: RE: FSHSP20CFC modification request

Hi Dianne:
Thanks – attached is the ISA moving items into equipment and UU.

The Bain quote looks like KK and the software and ALPR's, UU – do you agree?

If so, can you double check the attached?

Becky

From: Miller, Dianne (POL) <Dianne.Miller@pol.state.ma.us>
Sent: Wednesday, September 28, 2022 11:53 AM
To: Rust, Rebecca (POL) <Rebecca.Rust@pol.state.ma.us>
Subject: RE: FSHSP20CFC modification request

I think she's decreasing AA and increasing UU.
So we need to make sure the UU total in column I adds up to what her quotes were for, and match her modification request letter.
Sorry, I didn't realize no carryforward was done. There's a spreadsheet in the V drive for carryforward so I assumed it was done.

From: Rust, Rebecca (POL) <Rebecca.Rust@pol.state.ma.us>

To: Miller, Dianne (POL) <Dianne.Miller@pol.state.ma.us>
Subject: RE: FSHSP20CFC modification request

Hi Dianne:
The carryforward has not been processed yet. They only did a blanket 90,000 back in June.

If we are carrying forward what was budgeted, I will re-work attachment B to adjust for the change in payroll tax, indirect, and fringe. Do you know if Amy wants to change any of the budgeted amounts in each category? I initially kept it blank as I didn't know if Amy wanted to adjust the categories.

Becky

From: Miller, Dianne (POL) <Dianne.Miller@pol.state.ma.us>

To: Rust, Rebecca (POL) <Rebecca.Rust@pol.state.ma.us>
Subject: RE: FSHSP20CFC modification request

Hi again,
If a carryforward was already processed by EOPSS, then column E for FY22 would have the actual amounts you have in Column I.
And the amounts in column G are the starting point for FY23 in column E (for example, AA should have 10563.39, EE conference space should start with $5K in column E ….etc)
Unless I'm mistaken….I think that's how we would do it. Then add & subtract FY23 lines as needed to get to Amy's modified budget in column I.
Di

To: Thibault, Amy (POL) <amy.thibault@pol.state.ma.us>; Rust, Rebecca (POL) <Rebecca.Rust@pol.state.ma.us>
Subject: RE: FSHSP20CFC modification request

Questions…
Becky, attached is a carryforward that was already processed?
If yes, I think the carryforward amounts from column G are the starting point in column E for FY23….then show the increases and decreases that result in Column I amounts for Amy to spend down.

Amy…is this a good time to attach a food quote for the faith-based seminar and make sure it's approved? There's $5K for conference space, so maybe we can incorporate it all and make sure it's covered?
Vicky already has your equipment quotes so maybe it's not a good idea to attach another one. Just a thought.

[See instructions for Additional Guidance on completion. Insert as many additional lines as necessary.]

FSHSP20CFC FFY20 ISA POL CFC - ISA.doc

Hi Melissa,
Becky did the carryforward correctly last week…sorry Becky. I was thinking we needed to carry all the amounts forward to the same category first, and then modify.
In the past we used UU for solar trailers but KK makes sense too.

Hi Dianne:
Thanks – attached is the ISA moving items into equipment and UU.

The Bain quote looks like KK and the software and ALPR's, UU – do you agree?

If so, can you double check the attached?

Becky

To: Rust, Rebecca (POL) <Rebecca.Rust@pol.state.ma.us>
Subject: RE: FSHSP20CFC modification request

I think she's decreasing AA and increasing UU.
So we need to make sure the UU total in column I adds up to what her quotes were for, and match her modification request letter.
Sorry, I didn't realize no carryforward was done. There's a spreadsheet in the V drive for carryforward so I assumed it was done.

Hi Dianne:
The carryforward has not been processed yet. They only did a blanket 90,000 back in June.

If we are carrying forward what was budgeted, I will re-work attachment B to adjust for the change in payroll tax, indirect, and fringe. Do you know if Amy wants to change any of the budgeted amounts in each category? I initially kept it blank as I didn't know if Amy wanted to adjust the categories.

Subject: RE: FSHSP20CFC modification request

Hi again,
If a carryforward was already processed by EOPSS, then column E for FY22 would have the actual amounts you have in Column I.
And the amounts in column G are the starting point for FY23 in column E (for example, AA should have 10563.39, EE conference space should start with $5K in column E ….etc)
Unless I'm mistaken….I think that's how we would do it. Then add & subtract FY23 lines as needed to get to Amy's modified budget in column I.

Subject: RE: FSHSP20CFC modification request

Questions…
Becky, attached is a carryforward that was already processed?
If yes, I think the carryforward amounts from column G are the starting point in column E for FY23….then show the increases and decreases that result in Column I amounts for Amy to spend down.

Amy…is this a good time to attach a food quote for the faith-based seminar and make sure it's approved? There's $5K for conference space, so maybe we can incorporate it all and make sure it's covered?
Vicky already has your equipment quotes so maybe it's not a good idea to attach another one. Just a thought.

Hi Amy and Becky,
Usually I would do the attachment B and Amy would modify the language with red font and strikethroughs.
Right now, there is no language in there, so we need to copy and paste from the previous ISA.
Becky, did you want to do it or do you want me to?

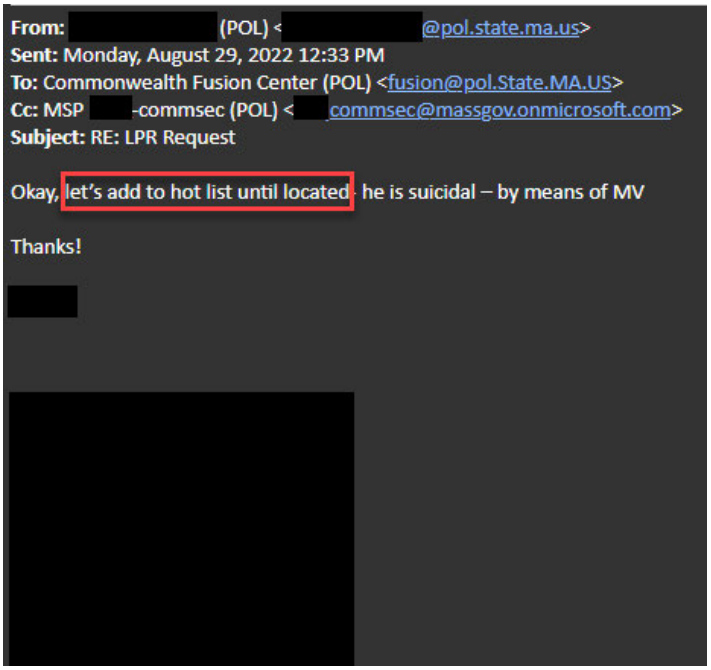
Subject: Re: Hotlists for Troop Dispatch

Good Morning, Sir -

*Weighing in because Justin is off for a couple of days and Lt. Brooks is not in yet. I don't want you to think we're all ignoring your email!

In looking through the plates currently in the various Troop Dispatch hotlists, it looks like most folks are generally utilizing the default expiration date when entering a plate. I will send out a reminder to our Analytical Staff to exercise some discretion/common sense when entering hotlists for Dispatch BOLOs.



As you are aware, some of the Troop Dispatch centers have developed strong opinions about the appropriate usage of the ALPR system. I certainly agree that in a perfect world, our Analytical Staff would be able to exercise 'best judgement' in setting hotlist expiration dates,

and a written policy would go a long way towards giving us some leverage to push back on requests that don't meet whatever threshold is decided on.

An example we received yesterday:

Missing / Potentially Q5 Party

- 12:29 - Request from Troop Dispatch for historical data
- 12:31 - CFC Response: No hits within past 24 hours
- 12:33 - Request from Troop Dispatch for hotlist (see below):

- 12:37 - After discussion between myself and the Analyst handling the request, we settled on a hotlist for 24 hours with the justification that if 24 hours pass, the party will likely either be located, or the Q5 risk will have been mitigated/unsubstantiated.
- 13:15 - Subject located.

In this case, the requestor asked for a hotlist 'until the subject is located'. TTL in this case ended up being less than an hour, so there was absolutely no need for a 30 day hotlist and 24 hours ended up being *more* than sufficient, possibly even still excessive.

My issue with a request like this is that we are trying to balance accommodating the requestor while also exercising an appropriate level of discretion. Without a written policy to cite, we don't have a lot of protection with which to push back, as evidenced by some of our recent issues and complaints we have received with the level of assistance rendered. We put that Q5 plate on a 24 hour hotlist. If that hotlist expires and the party hits on the LPR at hour 25 and kills themselves or somebody else at hour 26, we're in the glue because the requestor asked for a longer date and we exercised discretion to overrule them.

In absence of an updated written policy a la TRF-11, I think it would be very beneficial to have some of the Dispatch Centers who want to utilize the LPR system either directly or through the CFC, receive some training on authorized/appropriate usage and/or guidelines for submitting LPR requests.

Respectfully,

Sean Bender

Subject: Hotlists for Troop Dispatch

Sirs:

We are working on training and guidelines for dispatchers regarding LPR, and I'm looking for your feedback. At present, when a troop dispatch asks to put a license plate on a hotlist, please vet the reason for the entry and select the expiration date accordingly. (Do you do this now, or do you generally just enter it for the default period?) In many cases, such as when entering BOLOs or info for agencies reporting a real time event, **hotlist entry expiration of 24 hours or less is likely appropriate.** Recall that the default expiration date is 30 days unless adjusted when entering the plate. Leaving a stale BOLO in a dispatch hotlist, which could result in a broadcast to Troopers when the vehicle is no longer wanted or sought, is a situation we seek to avoid.

Example 1: a BOLO is put out for a vehicle involved in a shooting in Springfield. This matter will be investigated by Springfield PD, and they have access to the LPR system or can contact CFC/CWC directly to use it in their investigation. The active life of this BOLO is probably not more than a few hours or end of the working crew's shift, unless circumstances dictate otherwise.

Information changes quickly, and it is the responsibility (by policy) of the members entering or requesting the entries to remove them when no longer needed. It is not the duty of our dispatchers to stay abreast of ongoing investigations. Since they may be unaware if a plate needs to stay on the hotlist, it follows that they generally should not be requesting hotlist entries for an extended period of time.

Example 2: Brockton PD broadcasts info on a recently stolen vehicle. This vehicle hasn't yet been entered into NCIC. The active life of this BOLO is also probably not more than a few hours or end of

the working crew's shift. The vehicle will be entered into NCIC (and removed by the ORI when no longer stolen). Manual hotlist entries are not intended to serve as a long term means to identify and broadcast motor vehicle offenses over troop radios.

Please let know your thoughts on this, including any other common scenarios you find when field inquiries from dispatch. Once we get the appropriate guidelines here, we can push it out to your team and to the dispatchers in their training.

Subject: Re: Idi Investigative Platform

Good Morning!

I saw that Justin had forwarded this while I was going catching up to speed on last night. I was actually able to test idiCORE as part of a trial a few years back. It's very similar to CLEAR/TLO (and presumably Accurint/LexisNexus), and if memory serves, the company was actually started by persons who worked on TLO.

The database was pretty new when we tested it, but it did seem pretty good, especially with phone numbers, which seems to be the crux of their pitch.

Sgt. Noah Pack, who is now the ALPR Coordinator, was actually the one who I believe spearheaded the Department's trial, if anyone has any questions about it or was interested in looking into it further.

Marci,

Great speaking with you.

I'd like to extend an invitation to a **free 30-day pilot** of our investigative platform. With unlimited users & unlimited searches

We are a 100% cloud native platform, with some of the most accurate phone numbers, criminal information & addresses.

Either way our job only works by making yours easier and with this platform I truly believe we can help close some pending cases at a higher rate with the data we are able to provide for law enforcement and FC's

Thank you for your time & service.

Looking forward to hearing from you.

Senior Investigator Theobald,

In the interest of public safety and intelligence sharing, we are interested in coordinating with NYSIC regarding interagency sharing of ALPR systems for official and lawful purposes. Specifically, we respectfully request that NYSIC grant ALPR system access to the Commonwealth Fusion Center (CFC). Reciprocally, CFC would offer access to the MSP ALPR system to NYSIC. This agreement would benefit both agencies by allowing for the timely and efficient searching and sharing of information in critical incidents and investigations and by reducing the workload placed upon each agency's fusion center staff.

For further coordination, Major Mark D. Cyr of the Division of Homeland Security and Preparedness will be the command level point-of-contact for our agency. He can be reached at 978-451-3773 or via email at mark.cyr@pol.state.ma.us, and he is Cc'd on this message. Please advise if we should contact anyone else directly within your agency.

Thank you for your assistance, and we look forward to working with you.

Respectfully,

Noah

Subject: legal update - new rule for search warrants for CSLI tower dumps

Good afternoon.

Attached please find a legal update that was sent out this afternoon to all MPTC instructors and department training coordinators. The legal update is regarding the recent SJC decision Commonwealth v. Perry. In this case the court reviews two search warrants for tower dumps for CSLI data that were obtained to identify the perpetrator of six robberies and an attempted robbery that resulted in homicide. The court also announces a new rule with respect to search warrants for tower dumps. In the future, only a judge can issue a search warrant for tower dumps. In addition, the warrant must include protocols for the prompt and permanent disposal of data collected that does not fit within the object of the search. A copy of the case is attached to this email.

Please let me know if you have any questions.

Subject: MA State Police Dispatch Services Unit: FLOCK

Hi Captain O'Toole,

My name is Pete Cheverie, I run the MA State Police Troop A Dispatch Services Unit, located at our Danvers Headquarters. One of my dispatchers, Gary Ferguson, advised me of your conversations about the FLOCK LPR System and the user account you have set up for MSP. I wanted to thank you for your willingness to make this available to us; as we have had great success with Chelsea's Flock LPR system as well.

Before I authorize my team to access your account, I just have to confirm with you that in the interest of public safety, the Lynn Police Department is voluntarily granting MSP access an authorized user on your system. The MSP cannot currently commit to any financial responsibility or future reimbursement to the City of Lynn as a guest user of this resource. Additionally, the MSP cannot take on any primary responsibility for monitoring any alerts, BOLO's, or other notifications as designed by the Flock System. If you are okay with this, the MSP greatly appreciates your time and look forward to assisting your department in proving how useful Flock can be for your city.

Please reach out any time with any questions or concerns.

Respectfully,

Pete

Subject: MA State Police Dispatch Services Unit: FLOCK

Hi Captain O'Toole,

My name is Pete Cheverie, I run the MA State Police Troop A Dispatch Services Unit, located at our Danvers Headquarters. One of my dispatchers, Gary Ferguson, advised me of your conversations about the FLOCK LPR System and the user account you have set up for MSP. I wanted to thank you for your willingness to make this available to us; as we have had great success with Chelsea's Flock LPR system as well.

Before I authorize my team to access your account, I just have to confirm with you that in the interest of public safety, the Lynn Police Department is voluntarily granting MSP access an authorized user on your system. The MSP cannot currently commit to any financial responsibility or future reimbursement to the City of Lynn as a guest user of this resource. Additionally, the MSP cannot take on any primary responsibility for monitoring any alerts, BOLO's, or other notifications as designed by the Flock System. If you are okay with this, the MSP greatly appreciates your time and look forward to assisting your department in proving how useful Flock can be for your city.

Please reach out any time with any questions or concerns.

Respectfully,

Pete

Good morning Sgt. Pack,

The MSP-BainCor Inc. contract has been signed by both parties and is fully executed. I will send Mr. Bainter a copy for his file.

Looping in Pamela Biagi, Director of Fiscal Services.

Pam: this is a "piggyback" contract through MassDOT for a purchase of ALPR solar trailers. Also attached is the MassDOT contract for information purposes.

Thank you,
Brian

Subject: FW: massDOT question

Hi Sgt. Pack,

Good news. As I mentioned, I hadn't heard back from John Polcari over at MassDOT, but a contact I have over there got back to me almost immediately. Please see below. MSP has been approved to utilize the MassDOT contract with Baincor under sperate contract execution. MassDOT is going to send me a copy of the contract packet for our procurement file.

The last step will be for MSP to have an authorized signatory form Baincor sign a Standard Contract Form (SCF) and send it back to me for CAO Small's signature. I will have an SCF sent to the contract person at Baincor and keep you posted.

Thank you,
Brian

Hi Brian,

Happy New Year to you as well! Good to hear from you.

I have reviewed the RFR and I concur that it's open for use for POL under separate contract execution; request to use approved. I have contacted our contracts and records department and requested the contract packet, which will include the executed SCF. Once I receive it, I will pass it along to you.

Hi John,

Happy New Year! I hope all is well.

The MSP is looking to piggyback off a massDOT Telecommunications RFR/contract. We saw that Mr. Polcari was a point of contact on COMMBUYS. I emailed on Thursday and hadn't heard. Please see

the attached embedded thread. This is a bit of a rush on our end. Is there any way you could check on this for me or point me in the right direction?

Thanks John.

Hi Dan

I have granted POL permission to access the contract you see below. Can you please confirm if there is a MA for this and if there is can you please add POL as an authorized user and share the MA # with our friends from POL cc d here?

Thank you Dan.

Hi Brian

Happy New Year to you as well! Good to hear from you.

I have reviewed the RFR and I concur that it s open for use for POL under separate contract execution; request to use approved. I have contacted our contracts and records department and requested the contract packet which will include the executed SCF. Once I receive it I will pass it along to you.

Hi Sgt. Pack,

Good news. As I mentioned, I hadn't heard back from John Polcari over at MassDOT, but a contact I have over there got back to me almost immediately. Please see below. MSP has been approved to utilize the MassDOT contract with Baincor under sperate contract execution. MassDOT is going to send me a copy of the contract packet for our procurement file.

The last step will be for MSP to have an authorized signatory form Baincor sign a Standard Contract Form (SCF) and send it back to me for CAO Small's signature. I will have an SCF sent to the contract person at Baincor and keep you posted.

Thank you,
Brian

Hi Pam

FYI. This is a "piggyback" contract through MassDOT. Division of Homeland Security was hoping to use BainCor to purchase ALPR solar trailers.

MassDOT added us to their MA. Dianne included the MA number below.

As for the MBPO MassDOT does not create MBPO s in COMMBUYS currently. Only bid solicitations. Therefore Dianne did a direct PO to the vendor in this case referencing the MassDOT contract. Number below/attached.

Thank you
Brian

Dave, see attached download link, was just about to hit send. If you want to download this file to the desktop we can walk through the rest of it when we do the setup. Also, if you want to download our Mobile App on your iPhone or Android pull that down in advance and we can go through the setup then. The app is called Nexus Mobile on either store / marketplace with the icon being the orange airship on a black background. Also attached to this email are the user guides for EMS and the various client applications for further review if you have questions after we get everything up and running. Look forward to the discussion later today.

Thanks Paul. You mentioned previously that you would send a download link to save time. Is that something you still want to do, or shall we wait until our Zoom?

Dave

> As to LPRs, there may be several obstacles as to admissibility.
>
> First, it is unclear whether the amount of data would implicate the defendants' reasonable expectation of privacy to the extent that the records would be amenable to a MTS for lack of search warrant. The case on point is Commonwealth v. McCarthy, 484 Mass. 493 (2020). The SJC found that four cameras on a bridge was not enough. Factors in our favor is that the cameras appear to be on highways and spread out, so there is not a tracking of the intimate features of life under the mosaic theory. On the other hand, there is more separate places of tracking here than in McCarthy.
>
> Second, according to media reports, MSP discontinued this system as of Dec. 2020 (I believe we got the memo). Unclear what they are doing now. There was a reliability issue with the specific cameras as to the date and time. In McCarthy, the parties ended

up redoing the MTS, without the LPR info, which was allowed and the case np'd. I did not see any MA case on westlaw where LPRs had been admitted at trial.

Third, as to business records, subpoenas would likely have to go to the organizations that keep those records. Is it correct that the Fusion Center is a subscriber, but itself would not keep LPR records as a part of its business? We likely would need the originator (similar to a phone company). For the NYC, we would need someone from their PD. They keep records for five years unless marked as part of an investigation. See NYPD 2021 policy governing such use - license-plate-readers-lpr-nypd-impact-and-use-policy_4.9.21_final.pdf (nyc.gov)

Happy to discuss.

Hi Pam

FYI. This is a "piggyback" contract through MassDOT. Division of Homeland Security was hoping to use BainCor to purchase ALPR solar trailers.

MassDOT added us to their MA. Dianne included the MA number below.

As for the MBPO MassDOT does not create MBPO s in COMMBUYS currently. Only bid solicitations. Therefore Dianne did a direct PO to the vendor in this case referencing the MassDOT contract. Number below/attached.

Thank you
Brian

ALPR TENANT MOU.docx

Hi Jim,

I'm reaching out regarding your mobile LPR. We would like to get you switched over to the new system, as the old server will be shut down shortly.

I'd like to determine if your system has been updated by Kory Koster or another BCM tech or if that still needs to be done.

Additionally, there is an MOU required as part of the new system. I've the attached the MOU and our MSP policy for your review. When that is returned to us we can get you switched over. Please let me know if you have any questions.

Respectfully,

Noah

Good Afternoon Sir:
Attached, please find the most current datasheets on Genetec's LPR hardware. The SharpV is the camera that is used for fixed applications, while the SharpZ3 is used for mobile.

I'm working to find some relevant/representative information on the user interfaces (patroller and security desk), as the information on the partner portal is very bland/salesy.

I found an 'ALPR for Law Enforcement' product bulletin that wasn't too bad (a little dated…..still references the previous version mobile camera), and have attached that, as well.

I'll send along 'software info' as I find it.

Hi Noah,

I've received a few calls from local agencies (most recently Attleboro PD) wishing to connect their mobile systems to BOSS4. At present are they only allowed to connect to BOSS3 and download hotlists only with no reads being pushed to BOSS3, or assuming the local agencies have the latest mobile software (version 214.1.5 that has the time/date image watermark) I'm curious if the you are allowing the local agencies to connect to BOSS4 to push read data and download hotlists.

Thanks,

Subject: LPR Training for Dispatchers
Date: Thursday, September 29, 2022 12:13:14 PM
Attachments: Guidelines for DSU LPR 9-22.pdf

Good afternoon Ken and Matt,

Training Dates & Use Guidelines

The LPR guidelines have been approved; a copy is attached for your review and has also been sent by DHS Command to DAS Command. Please feel free to reach out with any questions.

Training will include how the system can be accessed, lawful and authorized uses, and guidelines regarding LPR data and searches for DSU. The training will be conducted via Teams and should take approximately 1 to 1.5 hours. This training is intended for dispatch supervisors, although any interested dispatchers may attend. The guidelines handout will be provided during the training. The dates are as follows:

October 6: 08:00
October 11: 13:00
October 11: 21:00

System Access

The primary resource for use of the LPR system will continue to be the Commonwealth Watch Center (CWC) at GHQ, which is staffed 24/7. DHS is able to provide some system accounts to dispatch supervisors to access the system consistent with policy and the attached guidelines. We are unable to provide unlimited accounts, so we will prioritize accounts for regional dispatch centers with LPRs in their AOR, including: AHQ, B-7, BHQ, CHQ, DHQ, FHQ, and HHQ. There are no MSP LPRs in the C-8 area, and CWC will handle requests for their co-located partners at GHQ.

Please disseminate the following link for members to select a training date:
https://forms.office.com/Pages/ResponsePage.aspx?id=Fh2GPrdIDkqYBowE2Bt7KliTEFUE4v1Fo2Vn2vowRlJUQTg4TE1GV05aRjQ4UVVZRjROTDQzRlI3Qi4u

Any user who will be receiving an account must attend one of the trainings. Once they have selected a training date, we will create their accounts and send further access instructions. Any dispatchers interesting in learning about LPR but who will not be getting an account may also attend but do not need to sign up in advance.

I look forward to working with your team soon.

Noah

Subject: RE: LPR Training for Dispatchers

Hi Noah,

Matt and I have discussed this, and we are good to go when you are. Just identify some dates and times for the training and I'll make sure our people attend. In keeping with our earlier conversation, three sessions scattered throughout a day would make it easier for mid and eve shift to attend. Perhaps 07:30/08;00, 13:00/13:30, and 21:00/21:30?

Here is a proposed list of user accounts. This includes all center and shift supervisors at our 9 communications centers. Some of our dispatch centers have a minimum staffing of one (1), so there will be occasions when a supervisor is unavailable. Perhaps we could include all dispatchers at GHQ? This would allow us to always have someone able to access the LPR when a supervisor is unavailable.

I'm in the office all day today and on cell tomorrow if you want to discuss.

Thanks!
~K

Subject: LPR Training for Dispatchers

Hi Matt and Ken,

DHS would like to bring the Dispatch Services Unit up to speed on the Department's license plate reader program. We are preparing a training and a handout that will include discussion of how the system can be accessed, lawful and authorized uses, and guidelines regarding LPR data and searches. The training will most likely be conducted via Teams and should take approximately 1 to 1.5 hours.

Within the next couple weeks, I would like to go over the training and guidelines with one or both of you to ensure we are on the same page and in compliance with any policy/procedure or union issues regarding your staff. In addition to the training, I have been authorized to set up system accounts for authorized dispatch supervisors. During our discussion about the training/guidelines, I'd also like to discuss the best way to set up and issue these accounts to your staff.

If this sounds acceptable, I look forward to discussing further in the near future.

Respectfully,

Noah

Noah,

At the moment you have the only P497 in the US….not even Cyrus has one yet. I'll check on the status of the installation manual; however aside from using a 18vdc nominal power supply it's wired up the same as a P492.

I've attached two pdfs are helpful until I get a finished copy of a P497 manual.

Feel free to email Cyrus (copied) for any assistance you may need in setting up the camera.

ALPR TENANT MOU, with SPD proposed edits.docx

Hi Jenn,

Sorry for the delay on this. Attached is the working version of our MOA with Springfield with their initial edits. Below is the latest email with the Springfield city solicitor's contact information if you need anything directly from them. Please let me know what else I can provide!

Dear Sgt. Pack/Noah:

I'm out of the office today, but I spoke with Bill Schwarz earlier and he told me you were at SPD to set up the access to the MSP ALPR.
A few weeks ago SPD Capt. Jeffrey Martucci (copied here) forwarded me the **SPD ALPR Policy** (attached). Is there a way to accommodate both policies in the MOU?
Bill said SPD can wait to start using the MSP system until this is worked out.
Sorry I didn't get back to you sooner- things are crazy busy these days with our fiscal year end. I can pick this back up next Tuesday 6/21 when I'm back in the office.

Best regards,
Kathy Breck 6/17/22

Hi Jenn,

Springfield City has responded to ask for further adjustments to the LPR MOU. They are now asking to incorporate their LPR policy (of which we were not previously aware) to the MOU. You can see the email from the city attorney below.

Any thoughts on this? For the sake of discussion, their policy does not look bad at all, but it would of course not reflect any future changes to ours. Sorry to be a broken record on this issue and thank you for your time.

Noah

Global Justice Public Safety Agreement FINAL 9-28-2020.docx

Captain,

Attached is a copy of your most recent user agreement (not the global sharing agreement), but just your user agreement for CJIS.

That Global Sharing Agreement document that was attached is typically for the license plate readers, COPLINK, and a few others. I looked and it does not look like we have one of these on file for MSP. I am going to inquiry about whether we should moving forward, but right now it doesn't look like we do. I also attached a more recent Global Sharing Agreement that goes into a little more detail about the scope and need for the document.

Do you know what vendor (name) is asking for this document and the exact purpose. I understand they want to make sure you are authorized to access CJIS data. In my opinion, the user agreement does show you have the authority, I just want to confirm the vendor.

Thanks Captain!

-Ryan

Cc: John Tedona <jtedona@neology.net>; Egnitz, Brian (POL) <brian.egnitz@state.ma.us>
Subject: Feature Request Update: Historical Search Time Limits and Device Visibility

Limit Historical Search Time

We are looking to restrict the amount of historical time that a user can search (ie, the full system retention or a lesser period, say 30 days). This feature request is coming up again because we are preparing to add dispatchers to the system, and we would prefer to restrict their access to a more limited time that is relevant to their duties. I think this makes the most sense to set at the group level (see attached) by selecting to enforce a historical search limit and then entering the allowable days, something similar to the hot plate expiration interface. This is a high priority for us.

Set Allowable Devices to See Results

-

We are still looking to restrict visibility of devices, including which devices a tenant can see results from. Currently, a searching user in any tenant will by default see results from every device in the system and can manually see and select from ALL devices from all other tenants using the device search filter. There is no apparent way to restrict this, as we discussed in the past during the earlier phase of our boss4 transition.

Ideally, the system should be set to allow administers to restrict cross-tenant visibility for devices or sites. This feature request is coming up again due to the addition of more local tenants to the system who we want to restrict to seeing just their own devices and search results from their own devices as opposed to the entire system. This feature is probably easiest to set at the agency/tenant level. This is a medium priority for us.

Why are these important?

Building in system level protections to manage user access to the amount and type of data that is relevant to their user group is an important step to protecting the integrity of the system and lowering the potential for accidental misuse.

Thank you. Please add to the agenda for our next update meeting.

I think she's decreasing AA and increasing UU.
So we need to make sure the UU total in column I adds up to what her quotes were for, and match her modification request letter.
Sorry, I didn't realize no carryforward was done. There's a spreadsheet in the V drive for carryforward so I assumed it was done.

Subject: RE: FSHSP20CFC modification request

Hi Dianne:
The carryforward has not been processed yet. They only did a blanket 90,000 back in June.

If we are carrying forward what was budgeted, I will re-work attachment B to adjust for the change in payroll tax, indirect, and fringe. Do you know if Amy wants to change any of the budgeted amounts in each category? I initially kept it blank as I didn't know if Amy wanted to adjust the categories.

Becky

Hi again,
If a carryforward was already processed by EOPSS, then column E for FY22 would have the actual amounts you have in Column I.
And the amounts in column G are the starting point for FY23 in column E (for example, AA should have 10563.39, EE conference space should start with $5K in column E ….etc)
Unless I'm mistaken….I think that's how we would do it. Then add & subtract FY23 lines as needed to get to Amy's modified budget in column I.

Subject: RE: FSHSP20CFC modification request

Questions…
Becky, attached is a carryforward that was already processed?
If yes, I think the carryforward amounts from column G are the starting point in column E for FY23….then show the increases and decreases that result in Column I amounts for Amy to spend down.

Amy…is this a good time to attach a food quote for the faith-based seminar and make sure it's approved? There's $5K for conference space, so maybe we can incorporate it all and make sure it's covered?
Vicky already has your equipment quotes so maybe it's not a good idea to attach another one. Just a thought.

Questions…
Becky, attached is a carryforward that was already processed?
If yes, I think the carryforward amounts from column G are the starting point in column E for FY23….then show the increases and decreases that result in Column I amounts for Amy to spend down.

Amy…is this a good time to attach a food quote for the faith-based seminar and make sure it's approved? There's $5K for conference space, so maybe we can incorporate it all and make sure it's covered?
Vicky already has your equipment quotes so maybe it's not a good idea to attach another one. Just a thought.

Hi Amy and Becky,
Usually I would do the attachment B and Amy would modify the language with red font and strikethroughs.
Right now, there is no language in there, so we need to copy and paste from the previous ISA.
Becky, did you want to do it or do you want me to?

Subject: Re: Hotlists for Troop Dispatch

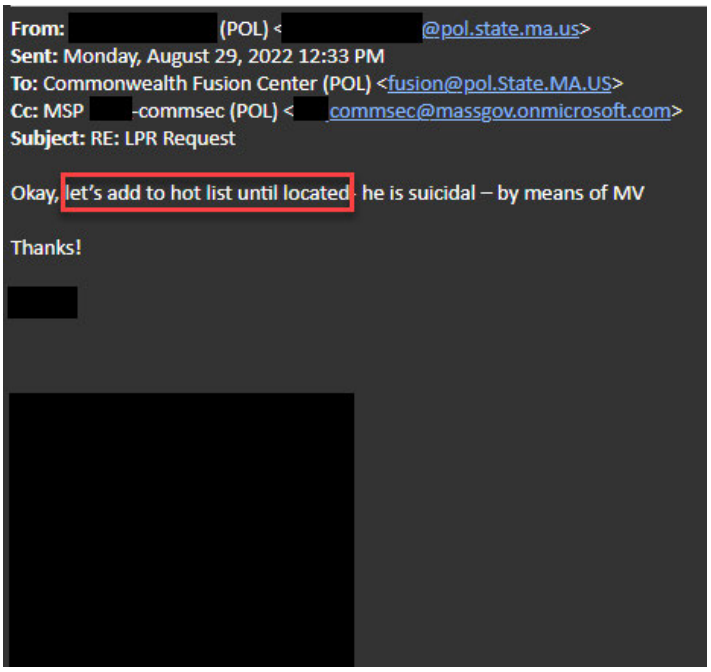
Good Morning, Sir -

*Weighing in because Justin is off for a couple of days and Lt. Brooks is not in yet. I don't want you to think we're all ignoring your email!



In looking through the plates currently in the various Troop Dispatch hotlists, it looks like most folks are generally utilizing the default expiration date when entering a plate. I will send out a reminder to our Analytical Staff to exercise some discretion/common sense when entering hotlists for Dispatch BOLOs.

As you are aware, some of the Troop Dispatch centers have developed strong opinions about the appropriate usage of the ALPR system. I certainly agree that in a perfect world, our Analytical Staff would be able to exercise 'best judgement' in setting hotlist expiration dates, and a written policy would go a long way towards giving us some leverage to push back on requests that don't meet whatever threshold is decided on.

An example we received yesterday:

Missing / Potentially Q5 Party

- 12:29 - Request from Troop Dispatch for historical data
- 12:31 - CFC Response: No hits within past 24 hours
- 12:33 - Request from Troop Dispatch for hotlist (see below):

From: [redacted] (POL) <[redacted]@pol.state.ma.us>
Sent: Monday, August 29, 2022 12:33 PM
To: Commonwealth Fusion Center (POL) <fusion@pol.State.MA.US>
Cc: MSP [redacted]-commsec (POL) <[redacted]commsec@massgov.onmicrosoft.com>
Subject: RE: LPR Request

Okay, let's add to hot list until located - he is suicidal – by means of MV

Thanks!

[redacted]

[redacted]

- 12:37 - After discussion between myself and the Analyst handling the request, we settled on a hotlist for 24 hours with the justification that if 24 hours pass, the party will likely either be located, or the Q5 risk will have been mitigated/unsubstantiated.
- 13:15 - Subject located.

In this case, the requestor asked for a hotlist 'until the subject is located'. TTL in this case ended up being less than an hour, so there was absolutely no need for a 30 day hotlist and 24 hours ended up being *more* than sufficient, possibly even still excessive.

My issue with a request like this is that we are trying to balance accommodating the requestor while also exercising an appropriate level of discretion. Without a written policy to cite, we don't have a lot of protection with which to push back, as evidenced by some of our recent issues and complaints we have received with the level of assistance rendered. We put that Q5 plate on a 24 hour hotlist. If that hotlist expires and the party hits on the LPR at hour 25 and kills themselves or somebody else at hour 26, we're in the glue because the requestor asked for a longer date and we exercised discretion to overrule them.

In absence of an updated written policy a la TRF-11, I think it would be very beneficial to have some of the Dispatch Centers who want to utilize the LPR system either directly or through the CFC, receive some training on authorized/appropriate usage and/or guidelines for submitting LPR requests.

Respectfully,

Sean Bender

Subject: Hotlists for Troop Dispatch

Sirs:

We are working on training and guidelines for dispatchers regarding LPR, and I'm looking for your feedback. At present, when a troop dispatch asks to put a license plate on a hotlist, please vet the reason for the entry and select the expiration date accordingly. (Do you do this now, or do you generally just enter it for the default period?) In many cases, such as when entering BOLOs or info for agencies reporting a real time event, **hotlist entry expiration of 24 hours or less is likely appropriate.** Recall that the default expiration date is 30 days unless adjusted when entering the plate. Leaving a stale BOLO in a dispatch hotlist, which could result in a broadcast to Troopers when the vehicle is no longer wanted or sought, is a situation we seek to avoid.

Example 1: a BOLO is put out for a vehicle involved in a shooting in Springfield. This matter will be investigated by Springfield PD, and they have access to the LPR system or can contact CFC/CWC directly to use it in their investigation. The active life of this BOLO is probably not more than a few hours or end of the working crew's shift, unless circumstances dictate otherwise.

Information changes quickly, and it is the responsibility (by policy) of the members entering or requesting the entries to remove them when no longer needed. It is not the duty of our dispatchers to stay abreast of ongoing investigations. Since they may be unaware if a plate needs to stay on the hotlist, it follows that they generally should not be requesting hotlist entries for an extended period of time.

Example 2: Brockton PD broadcasts info on a recently stolen vehicle. This vehicle hasn't yet been entered into NCIC. The active life of this BOLO is also probably not more than a few hours or end of the working crew's shift. The vehicle will be entered into NCIC (and removed by the ORI when no longer stolen). Manual hotlist entries are not intended to serve as a long term means to identify and broadcast motor vehicle offenses over troop radios.

Please let know your thoughts on this, including any other common scenarios you find when field inquiries from dispatch. Once we get the appropriate guidelines here, we can push it out to your team and to the dispatchers in their training.

idiCORE.pdf

Good Morning!

I saw that Justin had forwarded this while I was going catching up to speed on last night. I was actually able to test idiCORE as part of a trial a few years back. It's very similar to CLEAR/TLO (and presumably Accurint/LexisNexus), and if memory serves, the company was actually started by persons who worked on TLO.

The database was pretty new when we tested it, but it did seem pretty good, especially with phone numbers, which seems to be the crux of their pitch.

Sgt. Noah Pack, who is now the ALPR Coordinator, was actually the one who I believe spearheaded the Department's trial, if anyone has any questions about it or was interested in looking into it further.

Respectfully,

Sean Bender

Marci,

Great speaking with you.

I'd like to extend an invitation to a **free 30-day pilot** of our investigative platform. With unlimited users & unlimited searches

We are a 100% cloud native platform, with some of the most accurate phone numbers, criminal information & addresses.

Either way our job only works by making yours easier and with this platform I truly believe we can help close some pending cases at a higher rate with the data we are able to provide for law enforcement and FC's

Thank you for your time & service.

Looking forward to hearing from you.

Hi Patrick,

I believe I can get you a trail license issued for that with no issues.

I apologize for the delay and confusion we have gone through some changes that will allow us to demonstrate the software much easier.

We have also rolled out some lease pricing starting at $1,800 per camera, per year.

Would 30 days suffice?
Should the license be registered to your email?

Best,
John

Subject: RE: Introduction

Hi John,

We have been exploring the options provided by several vendors. As I recall, you indicated that Rekor was not willing to send us a demo unit unless we essentially committed to purchase afterwards. When I asked for a trial license to test the software, you told me to sign up online for the two-week trial and suggested that extending it beyond that would be difficult.

While this is markedly unhelpful, I attempted to sign up for a trial account anyways. However, the website does not present the option to select the trial option with Axis camera integration and is asking for a credit card to activate the trial.

If Rekor wishes to allow us to demo this hardware or software, please advise.

Sincerely,

Sergeant Noah H. Pack

Subject: Re: Introduction

Morning Noah,

I believe when moving the camera you would just need to update the GPS coordinates of the camera.
I will double check with my engineering department and confirm.

We do offer the ability to purchase as well. We understand that grants sometimes have stipulations. We are happy to work with you on those weather it is a purchase or a extended lease model.
Does the grant allow you to pay for SaaS services? In the currently model you do not of own the hardware you are just paying for the service I am not sure how that would affect the grant. Happy to discuss all options with you.

Purchasing 1 of the edge cameras would look roughly like this below. About 15K to own the hardware and have 5 years of service.

Edge300 - $6,950
5 YR Scout License $2,400
5-YR 4G LTE Communications $4,500
Install $500
Travel $750

Versus our Saas Model would be $6,000 over 5 years, per camera, and you don't have to maintain the hardware.

Happy to hop on a call this week to discuss if you would like.

Best,
John

Subject: Re: Introduction

Hi John,

Thanks for your time yesterday. Our team discussed this today, and we have a couple follow-up questions for you.

Some of our cameras are moved intermittently, at which time we update the location in the system for that camera. I understand that one of the reasons we could not go with Rekor in

the past was that the Rekor software cannot accurately accommodate these changes. Specifically, if Camera A is at Location A for July, then Camera A is at Location B for August, the system must be able to accurately reflect that history. It must not then appear that reads captured by Camera A in July were at Location B just because the camera was later moved there. Can you find out if this problem has been corrected and camera reads shows accurate historical locations even if devices are moved?

Additionally, as I'm sure you know, many LPR systems are purchased with grant funding. Grant funding is not ideal for subscription based services, as grants generally cannot be used to pay for subscriptions that run past the end of the grant period. Does Rekor have a sales package that accommodates this, such as buying the cameras/services outright?

Before pulling additional video and LPR, I want to just check in on the net we are casting and whether it would be better served down the road to get SWs for these cameras/videos which would then be the basis for our SWs going forward.

I have concerns with the language in McCarthy (attached) about how the Court wished the record was more developed as to how many cameras MSP had and how many of those cameras recorded the car. The Court implied this could impact their analysis in the future, but resolved the case on the record before them which only had 4 cameras. Henley (the MBTA card case) seems to suggest it is the data we ultimately search and seize. But I want to air on the side of caution given McCarthy is about ALPR.

I am in the office at x4867 and my cell is [redacted].

I didn't know if anyone had access to the IACP info so I attached their big resource book. I'm going to find out if there is a head of traffic safety at the IACP. I'd like to see studies rather than what people think is going on.

I think a survey to the Chiefs would be good start.

I think we need to remind officers who important traffic stops are as a preventative to poor behavior. We show a MADD video at our BT classes. One of the victims talks about an officer that pulled an OUI over and had him sleep it off. He left several minutes later and killed her daughter. We are trying to put in the minds of the officer that traffic safety makes a difference.

Just a thought.
Many chiefs go through the FBI Academy in Quantico, Virginia. I wonder if traffic safety is even mentioned. That might be a good start teaching administrators and stressing DDACTs and the benefits of traffic safety.

> Good morning all,

I will add to Jeff's list of reasons for waning enforcement.

It is curious to see that in NH, the SP is still carrying the load. That always used to be the case here in VT as well, before COVID came along. Now I would say that for the past two years it is the sheriffs' departments and a handful of local PDs that are carrying the load. ***In my opinion***, VSP leadership used COVID as an excuse to take a step back away from doing motor vehicle work for public health reasons but also as an opportunity to re-evaluate whether motor vehicle work is "worth the risk" (my words) of a potential bad outcome if some trooper somewhere has a bad stop and creates another national headline. Add to that the fact that none of the top commanders at VSP were ever strong "motor vehicle guys" in the early years of their respective careers, motor vehicle work is no longer made to be a priority in the department. And, we have many local PDs that will always follow VSP's lead... if the troopers aren't stopping cars then these local officers aren't going to stop them either. So now we have two years' worth of new hires that have come into the profession in an environment where motor vehicle work is not only not a priority, but outright frowned upon in some cases. We're going to have a very hard time to turn this ship around now.

Hi Tom,

We see it here too. We get very little effort for the money spent with most local PDs and the SP carries the load. If it weren't for share to local, we could be much more effective in our enforcement efforts.

SECTION 402 REQUIREMENTS:

4. At least 40 percent of all Federal funds apportioned to this State under 23 U.S.C. 402 for this fiscal year will be expended by or for the benefit of political subdivisions of the State in carrying out local highway safety programs (23 U.S.C. 402(b)(1)(C)) or 95 percent by and for the benefit of Indian tribes (23 U.S.C. 402(h)(2)), unless this requirement is waived in writing. (This provision is not applicable to the District of Columbia, Puerto Rico, the U.S. Virgin Islands, Guam, American Samoa, and the Commonwealth of the Northern Mariana Islands.)

That said, as we have discussed here, it would be better for the state of New Hampshire, and other states as well I am sure if, "will be **expended** by or for the benefit of", read "will be **allocated** to, for the benefit of" political subdivisions of the state. And not have it held against the state if those allocations were not

spent by those political subdivisions, as is currently the case.

Some reasons for waning enforcement, as I see it, for discussion:

1. Share to Local requirements/Poor Local PD effort
2. Negative media attention
3. Eroding political support from the top down
4. Public indifference
5. Poor generational work ethics
6. Recruitment difficulties/staffing problems
7. Lack of strong PD leadership/cautious leadership given 2 through 5.

Sorry for the rant. Have a great day!

Jeff

And another day passes with an additional fatality in Maine.

Great rant Jeff.

Topic for the meeting: Why is enforcement still down? We've blamed it on a new generation but there has to be more to it. We need to list all the reasons then discuss which ones we can successfully

address.

During a meeting yesterday I learned the 36 agencies using eCitations wrote 55% of the traffic violations this year, 10,327. That means the other 90 or so agencies wrote 45%.

Good morning Ted,

Hope you are well this morning.

It sounds to me like it could have been far worse! No seatbelt worn – ejected, no seatbelt worn – ejected, no seatbelts worn – all occupants ejected – driver fatality,…could have been worse!

I'm not a complete, cold and heartless bastard, as some might say, but why do I really have no sympathy here? In this day and age, no seatbelt worn, ejected? Not sure what more we, as highways safety professionals can do with this, over and above establishing primary laws, vigorously enforcing those laws, constant messaging and all that we are already doing.

A few things come to my mind here: You can lead a horse to water but you can't make it drink, and you can't fix stupid. Sucks to be you, rest in peace… stupid.

Sorry, I'm getting cynical in my old age!

Be smart, buckle up and have a great day folks!

- 6/12/22: Grafton, Townshend Rd. Single vehicle ran off road into tree. Driver fatality. No seatbelt worn; ejected.

- 6/12/22: Chester, Davidson Hill Rd. Single vehicle ran off road into tree. Driver fatality. No seatbelt worn; ejected.

--**2022** Fatalities: **34** Total – **27** vehicle operators, **4** passengers, **3** pedestrians, **0** bicyclists

As of **June 13 in each calendar year shown**:

Year	Fatalities (People)	Fatal Crashes
2022	34	31
2021	24	21
2020	15	15
2019	8	8
2018	22	20

Fatal Crash Data	2022*	2021*	2020	2019	2018	2017
Total Fatal Crashes	31	69	58	44	61	64
Total Fatalities (People)	34	74	62	47	69	70
Double Fatality Crashes	3	5	4	3	8	3
Triple Fatality Crashes	0	0	0	0	0	0
Quadruple Fatality Crashes	0	0	0	0	0	1
Operators Suspected as Driving under the Influence of Alcohol Only	2	10	11	5	5	6
Operators Suspected as Driving under the Influence of Drugs Only	1	18	14	15	13	18
Operators Suspected as Driving under the Influence of both Alcohol & Drugs	6	12	6	2	10	11
Active Cannabis - Delta 9 THC Confirmed**	1	20	12	13	14	16
Operators Suspected of Speeding	2	32	15	14	22	27
Operators with Suspended License/ No License	1	7	13	5	7	11
Junior License Operators involved in fatal crashes	1	3	2	1	4	2
"Older Drivers" involved in fatal Crashes (Older Driver is defined as any person age 65 or older. & "involved" does not imply "fault")	12	19	15	16	14	15
Crashes involving a Large Truck/Bus ("involving" does not imply "fault")	6	4	3	10	7	5
Motorcyclist Fatalities	4	16	10	8	7	13

2021 data is as of the date of this report. These numbers are subject to change.

***Active Cannabis - Delta-9 THC Confirmed is counted in the number of operators that had drugs only or alcohol & drugs.*

Fatalities by Vehicle Type and Restraint/Safety Equipment Used							
Road User Type	**Restraint/Safety Equipment**	**2022**	**2021**	**2020**	**2019**	**2018**	**2017**
Motor Vehicle Occupant	Unbelted	18	28	24	17	34	24
	- Driver	14	25	19	15	25	17
	- Passenger	4	3	5	2	9	6
	- UTV Driver					0	1
	Belted	9	18	17	18	21	22
	- Driver	9	13	12	14	15	15
	- Passenger		5	5	4	6	7
	Improper Belt Use/Child Restraint			0	0	0	1
Motorcyclist/ATV	Wearing Helmet	3	13	10	5	5	11
	Non-DOT Compliant Helmet/Improper		2	0	1	1	1
	No Helmet		2	2	2	1	2
Vulnerable Users	Pedestrians	3	8	8	3	6	9
	Bicyclists			1	0	0	0
Unknown	Unknown Belt/Helmet Use	1	3	0	1	1	1
% Unbelted*		66%	61%	58%	49%	62%	52%
Total Fatalities		**34**	**74**	**62**	**47**	**69**	**70**

*Of all fatalities: only occupants in vehicles equiped with seatbelts are used in the calculation for unbelted percentage. Excludes: motorcycles, ATVs, pedestrians, bicyclists and unknowns. (Sum of Belted" & "Unbelted", divided into "Unbelted")

Good morning Sgt. Pack,

The MSP-BainCor Inc. contract has been signed by both parties and is fully executed. I will send Mr. Bainter a copy for his file.

Looping in Pamela Biagi, Director of Fiscal Services.

Pam: this is a "piggyback" contract through MassDOT for a purchase of ALPR solar trailers. Also attached is the MassDOT contract for information purposes.

Thank you,
Brian

Subject: FW: massDOT question

Hi Sgt. Pack,

Good news. As I mentioned, I hadn't heard back from John Polcari over at MassDOT, but a contact I have over there got back to me almost immediately. Please see below. MSP has been approved to utilize the MassDOT contract with Baincor under sperate contract execution. MassDOT is going to

send me a copy of the contract packet for our procurement file.

The last step will be for MSP to have an authorized signatory form Baincor sign a Standard Contract Form (SCF) and send it back to me for CAO Small's signature. I will have an SCF sent to the contract person at Baincor and keep you posted.

Thank you,
Brian

Hi Brian,

Happy New Year to you as well! Good to hear from you.

I have reviewed the RFR and I concur that it's open for use for POL under separate contract execution; request to use approved. I have contacted our contracts and records department and requested the contract packet, which will include the executed SCF. Once I receive it, I will pass it along to you.

Hi John,

Happy New Year! I hope all is well.

The MSP is looking to piggyback off a massDOT Telecommunications RFR/contract. We saw that Mr. Polcari was a point of contact on COMMBUYS. I emailed on Thursday and hadn't heard. Please see the attached embedded thread. This is a bit of a rush on our end. Is there any way you could check on this for me or point me in the right direction?

Thanks John.

Subject: ALPR Project- Commercial Vehicle Enforcement Section
Date: Monday, March 14, 2022 5:07:53 PM

CAUTION: This email originated from a sender outside of the Commonwealth of Massachusetts mail system. Do not click on links or open attachments unless you recognize the sender and know the content is safe.

Good Afternoon Gentlemen:
Trying hard not to overstep too far, I wanted to reach out via a group email and see if the two of you could provide some guidance on several technical details related to the ALPR project for the Commercial Vehicle Enforcement Section.

The challenges of physical installation notwithstanding, we feel that the success and efficiency of the project will hinge heavily on the coordination and control of the project's IT-related details: many/most of which are outlined below.

When each of you has a minute, can you please let us know who at MSP will have responsibility for the following:

1. Confirming that each vehicle has "an MDT" that meets or exceeds the following requirements:
   - Intel i3 CPU at 2.0 GHz (or Higher)
   - Windows Operating System (Windows 7 - Windows 10)
   - Microsoft .NET Framework v3.5
   - 8GM of RAM
   - 1GB of Free Disk Space
   - SVGA Display w/Minimum Resolution of 800 X 600 Pixels
   - Available 10/100 Ethernet Port (Dedicated to Neology, Static IP)
   - Keyboard, Mouse or Touchscreen Monitor
   - Internet Access (for Mapping & Firmware Updates)

2. Confirming that each vehicle has an MDT with a built-in "air card"
3. Confirming that each MDT has an available wired NIC port that we can use to connect the MDT to the vehicle's new ALPR processor
4. Confirming that we will be given rights/privileges on the MDT that will allow us to change the IP address and subnet mask of the wired NIC port to allow/support communication between the MDT and the ALPR processor (this is how camera data is received)
5. Confirming that we will be given rights/privileges on the MDT that will allow us to make any Windows settings changes required to ensure that the MDT's "air card' has priority over the computer's NIC (the "air card" is responsible for all other communication and for communication between PAGIS and BOSS)
6. Confirming that the "air card" in each vehicle will allow/support internet access and allow TCP/IP communication over Port [redacted] (this is the port/protocol over which PAGIS communicates to BOSS)
7. Confirming that we will be given rights/privileges on the MDT that will allow us to load Neology's PAGIS Software to the MDT
8. Confirming that MSP does not run any anti-virus or security suites that will impede the operation of PAGIS
9. Confirming that we will be given administrator access to the PAGIS Software to allow/support the

setup and configuration of the vehicle's ALPR cameras

I believe that Sgt. Pack has already taken care of #7, above, but it isn't clear who will be coordinating the remaining details.

Any assistance/guidance that you can provide would be greatly appreciated.

Thanks,
Bob

Subject: Automatic License Plate Recognition (ALPR) For State and Municipal Applications – Free Webinar
Date: Friday, January 14, 2022 11:47:19 AM

Automatic License Plate Recognition (ALPR) is becoming an increasingly valuable tool for law enforcement agencies.

The ability to investigate, track, monitor and analyze data in real time has never been faster or easier. WSS Integrated Technologies is hosting a free webinar to demonstrate how ALPR can bring value to your state or municipality.

Here is what we will cover:

- **License plate verifications** - Verify license plate reads against hotlists and permit lists of vehicle plates to help you locate vehicles of interest and manage access to your parking space.
- **Suspicious vehicle pattern detection** - Trigger alarms and workflows when cameras repeatedly detect a vehicle of interest in an area according to pre-set thresholds.
- **Vehicle speed estimates** - Estimate the speed of vehicles to trigger alerts and reports to better detect road usage violations.
- **Vehicle classification and count** - Count and classify vehicles on the road by type for a better view of traffic volumes hourly, daily, monthly, and

annually.

- **Travel time reports** - Gather data needed to generate travel time reports based on an origin-destination matrix calculation.
- **Use Cases** – Demonstrate how other law enforcement agencies are using this technology to decrease cost and increases safety.

Register now to attend our free seminar on Tuesday, February 15th at 2:00pm EST by visiting our website under the COMPANY tab. Click the link below to go to directly to the registration form

Captain, is it possible to have an initial meeting with just you to have a higher level discussion and then return with our techies to delve into the technical details? That is our initial thought if that works for you.

Jim

Hi Captain, I am just following up per your request to see if you are free the week of 2/28 to have an initial discussion about the technology topics you mentioned. I am thinking the first meeting would be with just you to discuss MSP's requirements and goals along with a executive level discussion about ALPR, mobile video, and the "connected cruiser". I will have two individuals with me who are very knowledgeable on these topics and have a lot of experience with these technologies on the law enforcement side, both at the state and federal level (brief summary below). I thought we could meet in the morning from 9-11am and then have lunch if your schedule permits. Thanks.

Sam Rabadi: Former Secret Service Agent, ATF Special Agent in Charge (ret.), Senior Consultant Motorola Intelligence-Led Public Safety Team

Alan Melvin: Lieutenant Colonel / Director of Support Operations (ret.) - NC State Highway Patrol, Motorola Public Safety Intelligence-Led Public Safety Team

Captain, thank you for the additional details. I'll assemble the right technical resources so we can have a discussion about each of those areas.

Hi Captain, I just wanted to reach out as I understand that Kevin Coughlin had contacted you about his retirement last week. I expect his replacement will be announced in a few weeks. I will certainly set up a brief call with an introduction in Feb. If there is anything I can do to provide any assistance in the interim, please feel free to contact me.

I also wanted to ask if you may be able to forward a copy of the MSP body worn program policy. Another state agency in MA is considering use of BWCs and asked me if I could provide policy info. Thank you.

Subject: ALPR Project- Commercial Vehicle Enforcement Section

CAUTION: This email originated from a sender outside of the Commonwealth of Massachusetts mail system. Do not click on links or open attachments unless you recognize the sender and know the content is safe.

Good Afternoon Gentlemen:
Trying hard not to overstep too far, I wanted to reach out via a group email and see if the two of you could provide some guidance on several technical details related to the ALPR project for the Commercial Vehicle Enforcement Section.

The challenges of physical installation notwithstanding, we feel that the success and efficiency of the project will hinge heavily on the coordination and control of the project's IT-related details: many/most of which are outlined below.

When each of you has a minute, can you please let us know who at MSP will have responsibility for the following:

1. Confirming that each vehicle has "an MDT" that meets or exceeds the following requirements:
   - Intel i3 CPU at 2.0 GHz (or Higher)
   - Windows Operating System (Windows 7 - Windows 10)
   - Microsoft .NET Framework v3.5
   - 8GM of RAM
   - 1GB of Free Disk Space
   - SVGA Display w/Minimum Resolution of 800 X 600 Pixels
   - Available 10/100 Ethernet Port (Dedicated to Neology, Static IP)
   - Keyboard, Mouse or Touchscreen Monitor
   - Internet Access (for Mapping & Firmware Updates)

2. Confirming that each vehicle has an MDT with a built-in "air card"
3. Confirming that each MDT has an available wired NIC port that we can use to connect the MDT to the

vehicle's new ALPR processor

4. Confirming that we will be given rights/privileges on the MDT that will allow us to change the IP address and subnet mask of the wired NIC port to allow/support communication between the MDT and the ALPR processor (this is how camera data is received)
5. Confirming that we will be given rights/privileges on the MDT that will allow us to make any Windows settings changes required to ensure that the MDT's "air card' has priority over the computer's NIC (the "air card" is responsible for all other communication and for communication between PAGIS and BOSS)
6. Confirming that the "air card" in each vehicle will allow/support internet access and allow TCP/IP communication over Port [redacted] (this is the port/protocol over which PAGIS communicates to BOSS)
7. Confirming that we will be given rights/privileges on the MDT that will allow us to load Neology's PAGIS Software to the MDT
8. Confirming that MSP does not run any anti-virus or security suites that will impede the operation of PAGIS
9. Confirming that we will be given administrator access to the PAGIS Software to allow/support the setup and configuration of the vehicle's ALPR cameras

I believe that Sgt. Pack has already taken care of #7, above, but it isn't clear who will be coordinating the remaining details.

Any assistance/guidance that you can provide would be greatly appreciated.

Thanks,
Bob

Captain, is it possible to have an initial meeting with just you to have a higher level discussion and then return with our techies to delve into the technical details? That is our initial thought if that works for you.

Hi Captain, I am just following up per your request to see if you are free the week of 2/28 to have an initial discussion about the technology topics you mentioned. I am thinking the first meeting would be with just you to discuss MSP's requirements and goals along with a executive level discussion about ALPR, mobile video, and the "connected cruiser". I will have two individuals with me who are very knowledgeable on these topics and have a lot of experience with these technologies on the law enforcement side, both at the state and federal level (brief summary below). I thought we could meet in the morning from 9-11am and then have lunch if your schedule permits. Thanks.

Sam Rabadi: Former Secret Service Agent, ATF Special Agent in Charge (ret.), Senior Consultant Motorola Intelligence-Led Public Safety Team

Alan Melvin: Lieutenant Colonel / Director of Support Operations (ret.) - NC State Highway Patrol, Motorola Public Safety Intelligence-Led Public Safety Team

> The 4RE issue is looking at the logistics that surround using 4G to upload the video. To the best

of my understanding the equipment we have would allow that if coupled with the necessary 4G router in the cruiser. It's part of a larger look at the best way to approach cellular mobility in a cruiser coupled with the growing number of devices that need/could benefit from mobile connectivity. (i.e. mobile computing, AVL traffic, LPR, in-car video)

The Vigilant conversation is so the team can take another look at the Motorola offerings, so we can fully consider the solutions available as we roadmap out our LPR strategy.

Thank you as always for your attention and assistance.

> Two, there's been interest here in having a lanyard type mount for the V300 for some of our plainclothes officers. I've attached a photo of one I cobbled together from a broken mag clip. It's the front mount plate coupled with an adjustable breakaway mask lanyard. Would it be possible, presuming the order was sufficiently large, to obtain the front plate only sans magnets and levers, so we could fashion

some of these mounts?

Also, I've attached a Word version of the BWC policy for you to forward to the requesting agency.

Thanks,

Hi Captain, I just wanted to reach out as I understand that Kevin Coughlin had contacted you about his retirement last week. I expect his

replacement will be announced in a few weeks. I will certainly set up a brief call with an introduction in Feb. If there is anything I can do to provide any assistance in the interim, please feel free to contact me.

I also wanted to ask if you may be able to forward a copy of the MSP body worn program policy. Another state agency in MA is considering use of BWCs and asked me if I could provide policy info. Thank you.

Captain, thank you for the additional details. I'll assemble the right technical resources so we can have a discussion about each of those areas.

> The 4RE issue is looking at the logistics that surround using 4G to upload the video. To the best

of my understanding the equipment we have would allow that if coupled with the necessary 4G router in the cruiser. It's part of a larger look at the best way to approach cellular mobility in a cruiser coupled with the growing number of devices that need/could benefit from mobile connectivity. (i.e. mobile computing, AVL traffic, LPR, in-car video)

The Vigilant conversation is so the team can take another look at the Motorola offerings, so we can fully consider the solutions available as we roadmap out our LPR strategy.

Thank you as always for your attention and assistance.

Hi Captain, I just wanted to reach out as I understand that Kevin Coughlin had contacted you about his retirement last week. I expect his

replacement will be announced in a few weeks. I will certainly set up a brief call with an introduction in Feb. If there is anything I can do to provide any assistance in the interim, please feel free to contact me.

I also wanted to ask if you may be able to forward a copy of the MSP body worn program policy. Another state agency in MA is considering use of BWCs and asked me if I could provide policy info. Thank you.

Subject: MDT Image & Security Questions - MSP Cruiser project
Date: Thursday, January 6, 2022 3:03:21 PM

CAUTION: This email originated from a sender outside of the Commonwealth of Massachusetts mail system. Do not click on links or open attachments unless you recognize the sender and know the content is safe.

Peg

As we finalize our approach for the MSP cruiser as a mobile office project, we request some time on EOPSS calendars to discuss our approach and clarify a few areas around security, MDT imaging, and support. Below are a few of the areas that we would like to discuss with you and the team.

Thank you for your help- it is much appreciated

Carolyn

MDT Image

Current process: Could you explain how this process is handled today and what from you would like to see changed in this process?

Image- MSP would like us to image the MDT as part of the service. Would the Commonwealth provide us (or a partner such as panasonic) the image for the MDT? Or would you still want to image the MDTs and we would collect and install? What is included in the image? Will we need to provide antivirus/antimalware etc? Would ZIA be included?

Application Updates: We understand that the Commonwealth is using intune today provision/patch the MDTs.(is that correct?) If we are imaging the MDT, what would be the best process for EOTSS and Verizon to send any updates for state applications to the MDTs?

Applications being accessed: Our understanding is the following:

CJIS- accessed through a web browser

Other applications accessed- email (O365,), RAMS,ASIS, other state applications for time reporting etc These applications are accessed through centrify VPN session. Are we missing anything?

Identity creation & provisioning-

How are personnel onboarded and offboarded? We thought that the Commonwealth could create the identity and we would provision the MDT based on the policies defined by the Commonwealth- is that reasonable?

MDT Disposal & handling-

Just wanted to confirm the requirements before an MDT is sent for service- we are assuming the device is wiped by EOTSS/EOPSS today before it is sent for repair. At the end of the service term, Verizon would own the asset. Would there be any additional requirements beyond wiping the device?

Help Desk- if we are trouble shooting an issue and it appears to be a state application issue, what should be the process to engage and work with the Commonwealth help desk?

Security: Zero trust architecture

We were thinking about using ZScaler Private Access, building on the ZIA that the Commonwealth has already deployed. From our perspective it would offer the following benefits:

Increased visibility: This would provide Verizon and the Commonwealth with better application performance visibility for troubleshooting purposes to minimize trouble resolution time.

Cloud migration- As the Commonwealth migrates various applications to the cloud such as ALPR, this minimize user impact. Zscaler Private Access works the same in AWS, Azure and GCP as it does in a physical data center so any migration of Apps to the cloud would be seamless.

Build on existing investment- deployed on the user end through the Z App that the Commonwealth has installed.

We would like to understand the Commonwealth's ' perspective on this approach.

Implementation

If we were were to include ZScaler Private Access, we would need to plan the implementation for the pilot.

(***information from ZScaler below***)

We understand that required effort for new projects is a concern and wanted to provide some detail so that all parties can understand that the POV for enhanced secure cruiser testing can be up and running in as little as 2 hours in a working session. We would want to have a 1-hour planning session to understand and detail requirements, timing and gather a few other details. Very quickly after that, Zscaler could have the ZPA cloud instance provisioned and ready.

The Zscaler solution requires no hardware and for POV purposes we need just 1 to 2 virtual machines deployed in the State's data center environment. Beyond that an integration with Azure AD would be needed for authentication. All of this work is guided by an experienced Zscaler technical resource.

From the Cruiser perspective, Zscaler's ZIA service is currently running there on an already installed Zscaler client (Zscaler Client Connector) on the machine. We would simply activate the new (ZPA) service and at the next daily login any enrolled user would be able to use Zscaler to access private data center applications.

Lastly, the test POV tenant would convert to the State Police's permanent tenant. All work done for the POV will be preserved and used to quickly enable the entire user population

Captain, is it possible to have an initial meeting with just you to have a higher level discussion and then return with our techies to delve into the technical details? That is our initial thought if that works for you.

Hi Captain, I am just following up per your request to see if you are free the week of 2/28 to have an initial discussion about the technology topics you mentioned. I am thinking the first meeting would be with just you to discuss MSP's requirements and goals along with a executive level discussion about ALPR, mobile video, and the "connected cruiser". I will have two individuals with me who are very knowledgeable on these topics and have a lot of experience with these technologies on the law enforcement side, both at the state and federal level (brief summary below). I thought we could meet in the morning from 9-11am and then have lunch if your schedule permits. Thanks.

Hi Captain, I just wanted to reach out as I understand that Kevin Coughlin had contacted you about his retirement last week. I expect his replacement will be announced in a few weeks. I will certainly set up a brief call with an introduction in Feb. If there is anything I can do to provide any assistance in the interim, please feel free to contact me.

I also wanted to ask if you may be able to forward a copy of the MSP body worn program policy. Another state agency in MA is considering use of BWCs and asked me if I could provide policy info. Thank you.

Captain, is it possible to have an initial meeting with just you to have a higher level discussion and then return with our techies to delve into the technical details? That is our initial thought if that works for you.

Hi Captain, I am just following up per your request to see if you are free the week of 2/28 to have an initial discussion about the technology topics you mentioned. I am thinking the first meeting would be with just you to discuss MSP's requirements and goals along with a executive level discussion about ALPR, mobile video, and the "connected cruiser". I will have two individuals with me who are very knowledgeable on these topics and have a lot of experience with these technologies on the law enforcement side, both at the state and federal level (brief summary below). I thought we could meet in the morning from 9-11am and then have lunch if your schedule permits. Thanks.

Sam Rabadi: Former Secret Service Agent, ATF Special Agent in Charge (ret.), Senior Consultant Motorola Intelligence-Led Public Safety Team

Alan Melvin: Lieutenant Colonel / Director of Support Operations (ret.) - NC State Highway Patrol, Motorola Public Safety Intelligence-Led Public Safety Team

Sirs:

The State Police's Automatic License Plate Recognition system has been updated and transitioned to new software. We will provide a training session on this new system for your agencies on **June 28, 2022, at 10:30 AM** at the **Barnstable Police Department.**

Training will include an update on the program, account setup/familiarization, and hands-on use of the new system with discussion of strategies, best practices, and privacy considerations. Attendees will benefit immensely by bringing a computer to use during the training to set up their accounts. This training is intended for a limited number of individuals selected by the Dennis, Yarmouth, and Barnstable police departments to have access to search and enter plates into this new system.

We have been working full-time on getting this project back online and updated into the modern era of policing. During the training, we will welcome your feedback on how the ALPR system has or has not worked and how it might best serve its public safety purpose for your communities. I look forward to meeting you all soon.

Respectfully,

Noah

Hi Captain, I am just following up per your request to see if you are free the week of 2/28 to have an initial discussion about the technology topics you mentioned. I am thinking the first meeting would be with just you to discuss MSP's requirements and goals along with a executive level discussion about ALPR, mobile video, and the "connected cruiser". I will

have two individuals with me who are very knowledgeable on these topics and have a lot of experience with these technologies on the law enforcement side, both at the state and federal level (brief summary below). I thought we could meet in the morning from 9-11am and then have lunch if your schedule permits. Thanks.

Sam Rabadi: Former Secret Service Agent, ATF Special Agent in Charge (ret.), Senior Consultant Motorola Intelligence-Led Public Safety Team

Alan Melvin: Lieutenant Colonel / Director of Support Operations (ret.) - NC State Highway Patrol, Motorola Public Safety Intelligence-Led Public Safety Team

There are two things you can help me with.

The first is Kevin had set up a meeting with to discuss both Vigilant and sending 4RE video out via 4G. Unfortunately, COVID interfered and struck down part of your team. We are still interested in discussing these issues and would like to setup a virtual meet this month if possible.

Two, there's been interest here in having a lanyard type mount for the V300 for some of our plainclothes officers. I've attached a photo of one I cobbled together from a broken mag clip. It's the front mount plate coupled with an adjustable breakaway mask lanyard. Would it be possible, presuming the order was sufficiently large, to obtain the front plate only sans magnets and levers, so we could fashion some of these mounts?

Also, I've attached a Word version of the BWC policy for you to forward to the requesting agency.

Thanks,

SM

Hi Captain, I just wanted to reach out as I understand that Kevin Coughlin had contacted you about his retirement last week. I expect his replacement will be announced in a few weeks. I will certainly set up a brief call with an introduction in Feb. If there is anything I can do to provide any assistance in the interim, please feel free to contact me.

I also wanted to ask if you may be able to forward a copy of the MSP body worn program policy. Another state agency in MA is considering use of BWCs and asked me if I could provide policy info. Thank you.

Good morning Jim,

Looks like next Monday (2/28), is going to be the best day for the MSP team, hopefully that works for you and your folks.

Let me know,

SM

Detective Captain Steven McCarthy #1477
Division of Homeland Security and Preparedness
Massachusetts State Police

Hi Captain, I am just following up per your request to see if you are free the week of 2/28 to have an initial discussion about the technology topics you mentioned. I am thinking the first meeting would be with just you to discuss MSP's requirements and goals along with a executive level discussion about ALPR, mobile video, and the "connected cruiser". I will have two individuals with me who are very knowledgeable on these topics and have a lot of experience with these technologies on the law enforcement side, both at the state and federal level (brief summary below). I thought we could meet in the morning from 9-11am and then have lunch if your schedule permits. Thanks.

Sam Rabadi: Former Secret Service Agent, ATF Special Agent in Charge (ret.), Senior Consultant Motorola Intelligence-Led Public Safety Team

Alan Melvin: Lieutenant Colonel / Director of Support Operations (ret.) - NC State Highway Patrol, Motorola Public Safety Intelligence-Led Public Safety Team

cruiser coupled with the growing number of devices that need/could benefit from mobile connectivity. (i.e. mobile computing, AVL traffic, LPR, in-car video)

The Vigilant conversation is so the team can take another look at the Motorola offerings, so we can fully consider the solutions available as we roadmap out our LPR strategy.

Thank you as always for your attention and assistance.

forward to meeting them when they are available.

There are two things you can help me with.
The first is Kevin had set up a meeting with to discuss both Vigilant and sending 4RE video out via 4G. Unfortunately, COVID interfered and struck down part of your team. We are still interested in discussing these issues and would like to setup a virtual meet this month if possible.
Two, there's been interest here in having a lanyard type mount for the V300 for some of our plainclothes officers. I've attached a photo of one I cobbled together from a broken mag clip. It's the front mount plate coupled with an adjustable breakaway mask lanyard. Would it be possible, presuming the order was sufficiently large, to obtain the front plate only sans magnets and levers, so we could fashion some of these mounts?

Also, I've attached a Word version of the BWC policy for you to forward to the requesting agency.

Thanks,
SM

Hi Captain, I just wanted to reach out as I understand that Kevin Coughlin had contacted you about his retirement last week. I expect his replacement will be announced in a few weeks. I will certainly set up a brief call with an introduction in Feb. If there is anything I can do to provide any assistance in the interim, please feel free to contact me.

I also wanted to ask if you may be able to forward a copy of the MSP body worn program policy. Another state agency in MA is considering use of BWCs and asked me if I could provide policy info. Thank you.

Hi Captain, I just wanted to reach out as I understand that Kevin Coughlin had contacted you about his retirement last week. I expect his replacement will be announced in a few weeks. I will certainly set up a brief call with an introduction in Feb. If there is anything I can do to provide any assistance in the interim, please feel free to contact me.

I also wanted to ask if you may be able to forward a copy of the MSP body worn program policy. Another state agency in MA is considering use of BWCs and asked me if I could provide policy info. Thank you.

Jim

Hi Captain, I am just following up per your request to see if you are free the week of 2/28 to have an initial discussion about the technology topics you mentioned. I am thinking the first meeting would be with just you to discuss MSP's requirements and goals along with a executive level discussion about ALPR, mobile video, and the "connected cruiser". I will have two individuals with me who are very knowledgeable on these topics and have a lot of experience with these technologies on the law enforcement side, both at the state and federal level (brief summary below). I thought we could meet in the morning from 9-11am and then have lunch if your schedule permits. Thanks.

Sam Rabadi: Former Secret Service Agent, ATF Special Agent in Charge (ret.), Senior Consultant Motorola Intelligence-Led Public Safety Team

Alan Melvin: Lieutenant Colonel / Director of Support Operations (ret.) - NC State Highway Patrol, Motorola Public Safety Intelligence-Led Public Safety Team

Captain, is it possible to have an initial meeting with just you to have a higher level discussion and then return with our techies to delve into the technical details? That is our initial thought if that works for you.

Hi Captain, I just wanted to reach out as I understand that Kevin Coughlin had contacted you about his retirement last week. I expect his replacement will be announced in a few weeks. I will certainly set up a brief call with an introduction in Feb. If there is anything I can do to provide any assistance in the interim, please feel free to contact me.

I also wanted to ask if you may be able to forward a copy of the MSP body worn program policy. Another state

agency in MA is considering use of BWCs and asked me if I could provide policy info. Thank you.

Captain, is it possible to have an initial meeting with just you to have a higher level discussion and then return with our techies to delve into the technical details? That is our initial thought if that works for you.

Jim

Hi Captain, I am just following up per your request to see if you are free the week of 2/28 to have an initial discussion about the technology topics you mentioned. I am thinking the first meeting would be with just you to discuss MSP's requirements and goals along with a executive level discussion about ALPR, mobile video, and the "connected cruiser". I will have two individuals with me who are very knowledgeable on these topics and have a lot of experience with these technologies on the law enforcement side, both at the state and federal level (brief summary below). I thought we could meet in the morning from 9-11am and then have lunch if your schedule permits. Thanks.

Sam Rabadi: Former Secret Service Agent, ATF Special Agent in Charge (ret.), Senior Consultant Motorola Intelligence-Led Public Safety Team

Alan Melvin: Lieutenant Colonel / Director of Support Operations (ret.) - NC State Highway Patrol, Motorola Public Safety Intelligence-Led Public Safety Team

Hi Captain, I just wanted to reach out as I understand that Kevin Coughlin had contacted you about his retirement last week. I expect his replacement will be announced in a few weeks. I will certainly set up a brief call with an introduction in Feb. If there is anything I can do to

provide any assistance in the interim, please feel free to contact me.

I also wanted to ask if you may be able to forward a copy of the MSP body worn program policy. Another state agency in MA is considering use of BWCs and asked me if I could provide policy info. Thank you.

Jim

Captain, is it possible to have an initial meeting with just you to have a higher level discussion and then return with our techies to delve into the technical details? That is our initial thought if that works for you.

Hi Captain, I am just following up per your request to see if you are free the week of 2/28 to have an initial discussion about the technology topics you mentioned. I am thinking the first meeting would be with just you to discuss MSP's requirements and goals along with a executive level discussion about ALPR, mobile video, and the "connected cruiser". I will have two individuals with me who are very knowledgeable on these topics and have a lot of experience with these technologies on the law enforcement side, both at the state and federal level (brief summary below). I thought we could meet in the morning from 9-11am and then have lunch if your schedule permits. Thanks.

Sam Rabadi: Former Secret Service Agent, ATF Special Agent in Charge (ret.), Senior Consultant Motorola Intelligence-Led Public Safety Team

Alan Melvin: Lieutenant Colonel / Director of Support Operations (ret.) - NC State Highway Patrol, Motorola Public Safety Intelligence-Led Public Safety Team

Hi Captain, I am just following up per your request to see if you are free the week of 2/28 to have an initial discussion about the technology topics you mentioned. I am thinking the first meeting would be with just you to discuss MSP's requirements and goals along with a executive level discussion about ALPR, mobile video, and the "connected cruiser". I will have two individuals with me who are very knowledgeable on these topics and have a lot of experience with these technologies on the law enforcement side, both at the state and federal level (brief summary below). I thought we could meet in the morning from 9-11am and then have lunch if your schedule permits. Thanks.

Sam Rabadi: Former Secret Service Agent, ATF Special Agent in Charge (ret.), Senior Consultant Motorola Intelligence-Led Public Safety Team

Alan Melvin: Lieutenant Colonel / Director of Support Operations (ret.) - NC State Highway Patrol, Motorola Public Safety Intelligence-Led Public Safety Team

Captain, thank you for the additional details. I'll assemble the right technical resources so we can have a discussion about each of those areas.

Hi Captain, I just wanted to reach out as I understand that Kevin Coughlin had contacted you about his retirement last week. I expect his replacement will be announced in a few weeks. I will certainly set up a brief call with an introduction in Feb. If there is anything I can do to provide any assistance in the interim, please feel free to contact me.

I also wanted to ask if you may be able to forward a copy of the MSP body worn program policy. Another state agency in MA is considering use of BWCs and asked me if I could provide policy info. Thank you.

There are two things you can help me with.

The first is Kevin had set up a meeting with to discuss both Vigilant and sending 4RE video out via 4G. Unfortunately, COVID interfered and struck down part of your team. We are still interested in discussing these issues and would like to setup a virtual meet this month if possible.

Two, there's been interest here in having a lanyard type mount for the V300 for some of our plainclothes officers. I've attached a photo of one I cobbled together from a broken mag clip. It's the front mount plate coupled with an adjustable breakaway mask lanyard. Would it be possible, presuming the order was sufficiently large, to obtain the front plate only sans magnets and levers, so we could fashion some of these mounts?

Also, I've attached a Word version of the BWC policy for you to forward to the requesting agency.

Thanks,

Steve, we are good to go for 2/28. If we could schedule the session from 9:00am-11:00am, that would be appreciated. I can have boxed lunches brought in after our meeting if
that would be ok. Thanks again.

Captain, is it possible to have an initial meeting with just you to have a higher level discussion and then return with our techies to delve into the technical details? That is our initial thought if that works for you.

Hi Captain, I am just following up per your request to see if you are free the week of 2/28 to have an initial discussion about the technology topics you mentioned. I am thinking the first meeting would be with just you to discuss MSP's requirements and goals along with a executive level discussion about ALPR, mobile video, and the "connected cruiser". I will have two individuals with me who are very knowledgeable on these topics and have a lot of experience with these technologies on the law enforcement side, both at the state and federal level (brief summary below). I thought we could meet in the morning from 9-11am and then have lunch if your schedule permits. Thanks.

There are two things you can help me with.

The first is Kevin had set up a meeting with to discuss both Vigilant and sending 4RE video out via 4G. Unfortunately, COVID interfered and struck down part of your team. We are still interested in discussing these issues and would like to setup a virtual meet this month if possible.

Two, there's been interest here in having a lanyard type mount for the V300 for some of our plainclothes officers. I've attached a photo of one I cobbled together from a broken mag clip. It's the front mount plate coupled with an adjustable breakaway mask lanyard. Would it be possible, presuming the order was sufficiently large, to obtain the front plate only sans magnets and levers, so we could fashion some of these mounts?

Also, I've attached a Word version of the BWC policy for you to forward to the requesting agency.

Thanks,

SM

Hi Captain, I just wanted to reach out as I understand that Kevin Coughlin had contacted you about his retirement last week. I expect his replacement will be announced in a few weeks. I will certainly set up a brief call with an introduction in Feb. If there is anything I can do to provide any assistance in the interim, please feel free to contact me.

I also wanted to ask if you may be able to forward a copy of the MSP body worn program policy. Another state agency in MA is considering use of BWCs and asked me if I could provide policy info. Thank you.

Date: Wednesday, February 23, 2022 1:09:35 PM

Yes & yes. I advised the DCap that Fleet would like to attend. So for the larger group I arranged we can use either the Watch Center conference table or if necessary the HSOC main room will be empty.

Hi Captain, I am just following up per your request to see if you are free the week of 2/28 to have an initial discussion about the technology topics you mentioned. I am thinking the first meeting would be with just you to discuss MSP's requirements and goals along with a executive level discussion about ALPR, mobile video, and the "connected cruiser". I will have two individuals with me who are very knowledgeable on these topics and have a lot of experience with these technologies on the law enforcement side, both at the state and federal level (brief summary below). I thought we could meet in the morning from 9-11am and then have lunch if your schedule permits. Thanks.

them when they are available.

There are two things you can help me with.

The first is Kevin had set up a meeting with to discuss both Vigilant and sending 4RE video out via 4G. Unfortunately, COVID interfered and struck down part of your team. We are still interested in discussing these issues and would like to setup a virtual meet this month if possible.

Two, there's been interest here in having a lanyard type mount for the V300 for some of our plainclothes officers. I've attached a photo of one I cobbled together from a broken mag clip. It's the front mount plate coupled with an adjustable breakaway mask lanyard. Would it be possible, presuming the order was sufficiently large, to obtain the front plate only sans magnets and levers, so we could fashion some of these mounts?

Also, I've attached a Word version of the BWC policy for you to forward to the requesting agency.

Thanks,

SM

Hi Captain, I just wanted to reach out as I understand that Kevin Coughlin had contacted you about his retirement last week. I expect his replacement will be announced in a few weeks. I will certainly set up a brief call with an introduction in Feb. If there is anything I can do to provide any assistance in the interim, please feel free to contact me.

I also wanted to ask if you may be able to forward a copy of the MSP body worn program policy. Another state agency in MA is considering use of BWCs and asked me if I could provide policy info. Thank you.

Hi Captain, I am just following up per your request to see if you are free the week of 2/28 to have an initial discussion about the technology topics you mentioned. I am thinking the first meeting would be with just you to discuss MSP's requirements and goals along with a executive level discussion about ALPR, mobile video, and the "connected cruiser". I will have two individuals with me who are very knowledgeable on these topics and have a lot of experience with these technologies on

the law enforcement side, both at the state and federal level (brief summary below). I thought we could meet in the morning from 9-11am and then have lunch if your schedule permits. Thanks.

Sam Rabadi: Former Secret Service Agent, ATF Special Agent in Charge (ret.), Senior Consultant Motorola Intelligence-Led Public Safety Team

Alan Melvin: Lieutenant Colonel / Director of Support Operations (ret.) - NC State Highway Patrol, Motorola Public Safety Intelligence-Led Public Safety Team

Hi Captain, I am just following up per your request to see if you are free the week of 2/28 to have an initial discussion about the technology topics you mentioned. I am thinking the first meeting would be with just you to discuss MSP's requirements and goals along with a executive level discussion about ALPR, mobile video, and the "connected cruiser". I will have two individuals with me who are very knowledgeable on these topics and have a lot of experience with these technologies on the law enforcement side, both at the state and federal level (brief summary below). I thought we could meet in the morning from 9-11am and then have lunch if your schedule permits. Thanks.

Sam Rabadi: Former Secret Service Agent, ATF Special Agent in Charge (ret.), Senior Consultant Motorola Intelligence-Led Public Safety Team

Alan Melvin: Lieutenant Colonel / Director of Support Operations (ret.) - NC State Highway Patrol, Motorola Public Safety Intelligence-Led Public Safety Team

Steve, we are good to go for 2/28. If we could schedule the session from 9:00am-11:00am, that would be appreciated. I can have boxed lunches brought in after our meeting if
that would be ok. Thanks again.

Captain, is it possible to have an initial meeting with just you to have a higher level discussion and then return with our techies to delve into the technical details? That is our initial thought if that works for you.

Steve, we are good to go for 2/28. If we could schedule the session from 9:00am-11:00am, that would be appreciated. I can have boxed lunches brought in after our meeting if
that would be ok. Thanks again.

Jim

Hi Captain, I am just following up per your request to see if you are free the week of 2/28 to have an initial discussion about the technology topics you mentioned. I am thinking the first meeting would be with just you to discuss MSP's requirements and goals along with a executive level discussion about ALPR, mobile video, and the "connected cruiser". I will have two individuals with me who are very knowledgeable on these topics and have a lot of experience with these technologies on the law enforcement side, both at the state and federal level (brief summary below). I thought we could meet in the morning from 9-11am and then have lunch if your schedule permits. Thanks.

Hi Captain, I am just following up per your request to see if you are free the week of 2/28 to have an initial discussion about the technology topics you mentioned. I am thinking the first meeting would be with just you to discuss MSP's requirements and goals along with a executive level discussion about ALPR, mobile video, and the "connected cruiser". I will have two individuals with me who are very knowledgeable on these topics and have a lot of experience with these technologies on the law enforcement side, both at the state and federal level (brief summary below). I thought we could meet in the morning from 9-11am and then have lunch if your schedule

permits. Thanks.

Hi Captain, I just wanted to reach out as I understand that Kevin Coughlin had contacted you about his retirement last week. I expect his replacement will be announced in a few weeks. I will certainly set up a brief call with an introduction in Feb. If there is anything I can do to provide any assistance in the interim, please feel free to contact me.

I also wanted to ask if you may be able to forward a copy of the MSP body worn program policy. Another state agency in MA is considering use of BWCs and asked me if I could provide policy info. Thank you.

Hi Captain, I just wanted to reach out as I understand that Kevin Coughlin had contacted you about his retirement last week. I expect his replacement will be announced in a few weeks. I will certainly set up a brief call with an introduction in Feb. If there is anything I can do to provide any assistance in the interim, please feel free to contact me.

I also wanted to ask if you may be able to forward a copy of the MSP body worn program policy. Another state agency in MA is considering use of BWCs and asked me if I could provide policy info. Thank you.

Jim

Captain, is it possible to have an initial meeting with just you to have a higher level discussion and then return with our techies to delve into the technical details? That is our initial thought if that works for you.

Hi Captain, I am just following up per your request to see if you are free the week of 2/28 to have an initial discussion about the technology topics you mentioned. I am thinking the first meeting would be with just you to discuss MSP's requirements and goals along with a executive level discussion about ALPR, mobile video, and the "connected cruiser". I will have two individuals with me who are very knowledgeable on these topics and have a lot of experience with these technologies on the law enforcement side, both at the state and federal level (brief summary below). I thought we could meet in the morning from 9-11am and then have lunch if your schedule permits. Thanks.

Sam Rabadi: Former Secret Service Agent, ATF Special Agent in Charge (ret.), Senior Consultant Motorola Intelligence-Led Public Safety Team

Alan Melvin: Lieutenant Colonel / Director of Support Operations (ret.) - NC State

To the best of my understanding the equipment we have would allow that if coupled with the necessary 4G router in the cruiser. It's part of a larger look at the best way to approach cellular mobility in a cruiser coupled with the growing number of devices that need/could benefit from mobile connectivity. (i.e. mobile computing, AVL traffic, LPR, in-car video)

There are two things you can help me with.

The first is Kevin had set up a meeting with to discuss both Vigilant and sending 4RE video out via 4G. Unfortunately, COVID interfered and struck down part of your team. We are still interested in discussing these issues and would like to setup a virtual meet this month if possible.

Two, there's been interest here in having a lanyard type mount for the V300 for some of our plainclothes officers. I've attached a photo of one I cobbled together from a broken mag clip. It's the front mount plate coupled with an adjustable breakaway mask lanyard. Would it be possible, presuming the order was sufficiently large, to obtain the front plate only sans magnets and levers, so we could fashion some of these mounts?

Also, I've attached a Word version of the BWC policy for you to forward to the requesting agency.

Thanks,

SM

Hi Captain, I am just following up per your request to see if you are free the week of 2/28 to have an initial discussion about the technology topics you mentioned. I am thinking the first meeting would be with just you to discuss MSP's requirements and goals along with a executive level discussion about ALPR, mobile video, and the "connected cruiser". I will have two individuals with me who are very knowledgeable on these topics and have a lot of experience with these technologies on the law enforcement side, both at the state and federal level (brief summary below). I thought we could meet in the morning from 9-11am and then have lunch if your schedule permits. Thanks.

Sam Rabadi: Former Secret Service Agent, ATF Special Agent in Charge (ret.), Senior Consultant Motorola Intelligence-Led Public Safety Team

Alan Melvin: Lieutenant Colonel / Director of Support Operations (ret.) - NC State Highway Patrol, Motorola Public Safety Intelligence-Led Public Safety Team

The 4RE issue is looking at the logistics that surround using 4G to upload the video. To the best of my understanding the equipment we have would allow that if coupled with the necessary 4G router in the cruiser. It's part of a larger look at the best way to approach cellular mobility in a cruiser coupled with the growing number of devices that need/could benefit from mobile connectivity. (i.e. mobile computing, AVL traffic, LPR, in-car video)

The Vigilant conversation is so the team can take another look at the Motorola offerings, so we can fully consider the solutions available as we roadmap out our LPR strategy.

Thank you as always for your attention and assistance.

Hi Captain, I just wanted to reach out as I understand that Kevin Coughlin had contacted you about his retirement last

week. I expect his replacement will be announced in a few weeks. I will certainly set up a brief call with an introduction in Feb. If there is anything I can do to provide any assistance in the interim, please feel free to contact me.

I also wanted to ask if you may be able to forward a copy of the MSP body worn program policy. Another state agency in MA is considering use of BWCs and asked me if I could provide policy info. Thank you.

There are two things you can help me with.

The first is Kevin had set up a meeting with to discuss both Vigilant and sending 4RE video out via 4G. Unfortunately, COVID interfered and struck down part of your team. We are still interested in discussing these issues and would like to setup a virtual meet this month if possible.

Two, there's been interest here in having a lanyard type mount for the V300 for some of our plainclothes officers. I've attached a photo of one I cobbled together from a broken mag clip. It's the front mount plate coupled with an adjustable breakaway mask lanyard. Would it be possible, presuming the order was sufficiently large, to obtain the front plate only sans magnets and levers, so we could fashion some of these mounts?

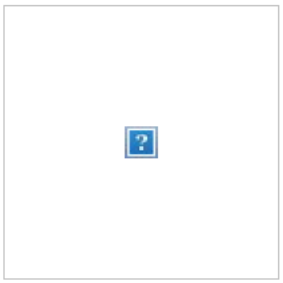
Subject: Webinar: ALPR: Addressing misconceptions and key considerations to select the best solution for your community
Date: Wednesday, October 19, 2022 11:31:15 AM



Register Now!

Automatic License Plate Recognition (ALPR) is an effective and intelligent tool to keep communities safe; however, there are many misconceptions amongst law makers and the communities they represent about how the technology works, how it is operated and how it impacts privacy. With the proliferation of this misinformation, it is becoming increasingly difficult for law enforcement to communicate that ALPR is a force for good that helps protect the communities they serve.

We're bringing together Lawrence Police Department Chief Gary Woodruff along with ALPR expert Andy Jessen of Utility to share insight into how to address misconception and misinformation about ALPR technology, as well as key considerations to select the right technology to allay community concerns and serve as a force multiplier. Join us to for key learnings including:

- An overview of LPR/ALPR technology of the past, present and future
- How to address common misconceptions about and unique community needs for ALPR, including privacy concerns and response times
- Key insights to consider when selecting ALPR technology
- The benefits of effective ALPR technology for agencies, district attorneys and communities
- Real-life examples of how ALPR technology supports agencies and communities

LEARN MORE

This Training Webinar was brought to you through collaboration between two leading organizations dedicated to Law Enforcement and the Communities they serve.

Cutting EDGE CRIME

Vetted Security Solutions

Vetted Security Solutions provides comprehensive solutions that enable public safety entities to prevent and solve crimes. Offering industry-leading manufacturers, as a single-source solutions provider Vetted can design, manufacture, install, and provide post-deployment support.

Our vast technology offering includes Fixed, Mobile, and Trailer ALPR systems,

facial recognition, video analytics, and more safety and surveillance solutions. For more than a decade, Vetted has proudly served law enforcement agencies, municipalities, commercial and Academic campuses with cutting-edge crime-fighting solutions for a safer community.

The VETTED ADVANTAGE

Needs assessments, site planning, and implementations are stressful enough without adding the complications of multiple service providers. As a premier integrator, Vetted provides support and management during all phases of the project.

LEARN MORE

Automated License Plate Recognition (ALPR)

Vetted's ALPR solutions include Fixed, Mobile, and Trailer systems to scan vehicles at various speeds to provide critical investigative data.

CCTV & Surveillance

Take your surveillance to the next level with Vetted's industry-leading optic solutions designed for day and night imaging.

Video Analytics

You can capture quality imaging, but what you do with the data is what matters. Transform your data into actionable intelligence.

Data Aggregation

finder

Link and share data with the most advanced information sharing and investigative lead generation platform for law enforcement.

Facial Recognition

Rapidly generate leads with facial recognition to identify suspects, witnesses, and victims to close cases faster than ever.

M E M O R A N D U M

From: Executive Office of Public Safety and Security

To: Criminal Justice Agencies and Criminal Defense Counsel in the Commonwealth of Massachusetts

Date: December 23, 2020

Re: Notice of ALPR Date/Time Reliability Issue

To Whom It May Concern:

This memorandum is intended to inform all criminal justice agencies and criminal defense counsel in the Commonwealth of Massachusetts of an issue regarding the reliability of date and time stamps from Automatic License Plate Reader ("ALPR") cameras used by the Massachusetts State Police ("MSP") and sourced from vendor Neology, Inc. ("Neology"). This memorandum applies to MSP ALPR cameras that are currently in a fixed position or can be moved to a fixed position. It does not apply to cruiser-mounted ALPR cameras.

The Executive Office of Public Safety and Security ("EOPSS") and MSP hereby notify all criminal justice agencies and criminal defense counsel that, for the reasons provided below and until further notice, a date and time recorded by a Neology ALPR camera in a fixed position between May 2015 to November 12, 2020, should not be relied upon in the absence of information supporting the accuracy of that date and time, such as upload date and time information recorded by the host server or other corroborative evidence.

The ALPR system is composed of a network of high-speed cameras located throughout the Commonwealth. The cameras in the network use computer algorithms capable of converting the images of license plates into electronically readable data. The ALPR records the date, time, and location that a car passes, and the camera takes a photograph of the license plate. The information and photograph are quickly uploaded to host servers at the Public Safety Data Center in Chelsea, and the host servers record the date and time of that upload. Those servers support a searchable database of the license plate data that is maintained by the Executive Office of Public Safety and Security. The information in the database is available to law enforcement agencies conducting criminal investigations.

In November 2020, while reviewing ALPR data, MSP discovered instances where the dates and times recorded by ALPR cameras did not align with the dates and times those photographs were uploaded to the cameras' host servers. MSP, working with Neology, has determined that these particular time gaps occurred when an ALPR camera that lost power reconnected with its power source and began taking pictures prior to connecting with its host server. During the time period after the ALPR was powered on, but before it connected with the host server, the ALPR could not update its date and time settings to the correct time. Once the ALPR connected with its server, its date and time settings were synchronized with the host server.

As a result, in any case where the ALPR lost power, the ALPR could have inaccurately recorded the date or time on which the picture was taken if that picture was taken prior to the ALPR establishing a connection with the host server. The issue is limited to the date and time recorded by the ALPR camera and not to the license plate data itself. The date and time of upload recorded by the host server is accurate and unaffected by this issue. Therefore, a comparison between the date and time recorded by the ALPR on the image and that recorded by the host server can indicate whether the ALPR-recorded information is accurate. For example, that accuracy might be shown where the time recorded by the ALPR camera is close in time to that recorded by the host server. Such comparison data is generally available from November 20, 2019, through the present, as a Department of Criminal Justice Information Services ("DCJIS") policy required MSP to retain that data for one year.

Shortly after learning of this issue on November 12, 2020, MSP suspended the use of fixed-position ALPR cameras and preserved all existing ALPR data. MSP will continue to preserve all ALPR data and fixed-position ALPR cameras will not be utilized until further notice. EOPSS and MSP will continue to work with Neology to address this issue and will provide updates.

To request server upload date and time data, please contact ALPRVerify@Mass.gov

To: Demers, Joanne (POL)
Subject: FW: LPR Access / DSU

Joanne,

All LPR queries can be run through Fusion/Watch until the next iteration of the plate reader software is made available and our access approved through chain-of-command to the Division Commander of Homeland Security. However, if we find that some of our personnel still have access to 3M/Boss, they should only be accessing the LPR for real-time incidents. Under no circumstances should they be creating or modifying alerts or hotlist entries without the oversight of Fusion/Watch.

Thanks,
Ken

Subject: Re: LPR Access / DSU

Hi Ken,

The Department's LPR system is partially back online. Any users who had accounts previously are able to access the system using the same credentials. We are in the process of transitioning to a new system in the coming months, and we will be in touch as that moves forward. We are not setting up new accounts in the old system at this time.

Please ensure that all historical query requests are directed to the Commonwealth Watch Center, which will ensure appropriate search procedures and tracking. The Watch is also available to assist with real-time queries and hotlist entries for BOLOs etc. Thank you for your interest, and Happy New Year.

Respectfully,

Noah

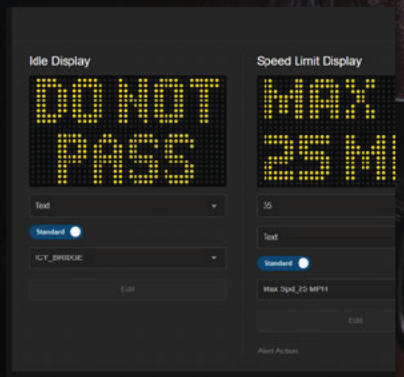
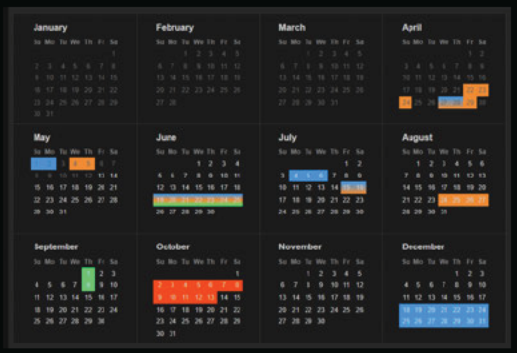
DID YOU KNOW?

Street Dynamics signs are powered by Stalker Radar- the same legendary radar technology used by over 85% of all Municipal, County, and State Police agencies.



STREET DYNAMICS PORTAL



PMG

Create custom text messages and graphics

The intuitive interface of Street Dynamics allows you to start creating text messages and graphics as soon as you log in to the portal. You can even arrange collections of these messages into looping sequences that convey more information than you can display on a single screen.

And to help you get started even faster, Street Dynamics comes pre-loaded with a wide variety of standard messages that you can start using with the click of a button.

Schedule messages to appear on your sign months or even years in advance

It is easy to assemble and schedule a sequence of messages and graphics to display on your PMG. The color-coded interface makes it easy to see at a glance exactly when your messages will appear.

"When road conditions change, so can our signs

Publish detailed reports from your traffic data

Your PMG collects traffic data 24/7. Our easy-to-configure reports turn these datapoints into useful, actionable information that you can use to guide enforcement efforts, observe driver behavior, and understand traffic patterns.

Combine multiple reports and charts to convey the exact information that you need to share with your agency, city, HOA, or other stakeholders. Print reports as PDFs or email them to an unlimited number of people.

The Web Portal to Safety

The Street Dynamics Web P rtal offers the convenience of re otely accessing all your connected PMGs

MC360

SAM

SAM-R

MC 360

ig Messages ith Big Impact

Get the attention of any driver with the MC360 - our largest messaging trailer. Available with or without radar speed tracking technology.

SAM

The SAM and SAM-R trailers are tough and durable while also being easy to move and quick to set up. They both feature speed limit signs with changeable numbers so they can be used on any street.

Put a Speed Sign Right Where You Need It

SAM-R

Slower Streets are Safer Streets

Radar speed signs and messaging trailers have been shown to consistently lower average traffic speeds by up to 9 MPH, and the effect lasts even years after the sign has been installed. Use them in school zones, work zones, transition zones between areas of high and low speeds, in parking lots, at events, and more.

"People are driving too fast in my neighborhood"

PMG

The PMG is our most versatile, all-in-one traffic calming device

- A radar speed sign that measures and display drivers' speeds
- A messaging sign that displays text messages and graphics
- A traffic data collector that captures and stores vehicle speed and traffic information internally or uploads it to the Street Dynamics Web Portal

DID YOU KNOW?

Speed is one of the top three contributors to traffic fatalities.

The PMG is the only NTCIP-Compliant radar speed sign available on the market today.

STREET DYNAMICS PORTAL

PMG

FLOOD SENSOR

Save Lives *(and resources)* with the PMG Flood Sensor

Many communities have “problem areas” where flooded roadways are more l kely to occur. Rather than manually monitoring each street, you can use our Flood Sensor to automatically trigger your PMG to display alerts such as “HIGH WATER”, “FLOOD AREA”, “ROAD CLOSED”, or any other customized message desired.

Up to 3 Flood Sensors can be attached to a single PMG, giving you the ability to escalate and de-escalate messages automatically as waters rise and recede.

PMG Flood Sensor
Automatically Detects High Water

"We can't monitor all

Not Just for City Streets

The Flood Sensor is great for notifying motorists about water on the road, but it is also perfect for keeping hikers, boaters, rafters, and other park visitors safe. Pair your PMG with optional solar panels for infinite operation.

In Case of Emergency

Welcome to the world of automated safety

Faster and clearer communication is key to creating more safety in your community, but when emergencies arise, you don't always have the time or resources available to spread the word.

Automation and remote access options allow Street Dynamics to handle your road safety so you can focus on everything else.

Trigger Warning

GPIO triggers expand the capabilities of your PMG. Now you can set up NTCIP-compliant "WRONG WAY" alerts - complete with strobes - for one-way streets and highway off-ramps, or you can automatically display a "STOP" message any time your fire trucks or emergency vehicles go out on a call.

of our flood zones at once, but Street Dynamics can"

Lead the Way

For a truly mobile alert system, pair a PMG with our hitch mount. Now your sign can go anywhere your vehicle can.

Instant Messaging

Change your PMG at a moment's notice using the Street Dynamics Web Portal. You can even use the Calendar feature to display a message for a specific amount of time, reverting to "regularly scheduled programming" automatically afterwards.

MC360

SAM

SAM-R

A Big Deal

Our flagship Messaging Trailer, the MC360 is capable of conveying any message you need to send. Its full-matrix MUTCD-compliant amber LED display is visible from up to 1,000 feet, and you can choose from four different sizes to suit your needs.

Crafted from durable steel and finished with rust- and graffiti-resistant paint in your choice of color, the MC360 can be customized with a variety of options, including:

- Radar speed detection
- Traffic data and statistics package
- Strobes
- Solar power
- ALPR/ANPR-ready
- Web-based remote access
- NTCIP- and MUTCD- compliant

When you really need to get drivers' attention

Big Problems Require Big Solutions

They Could Be Anywhere

Drivers don't just speed on one street and then choose to drive safely everywhere else. Having the ability to quickly move your radar speed signs to trouble-spots around your city is a game-changer. The SAM and SAM-R are compact enough that they can be easily towed and set up by just one person.

SAM

signs really do slow down traffic and make us safer"

Take It (Really) Slow

Some locations, such as warehouses, supply yards, boarding "no wake" areas, and other low speed, high-risk environments, need extra-slow speeds to ensure safety.

The new Low-Speed PMGs sensors are fine-tuned to be triggered by speeds as slow as 1 MPH.

SAM-R

TDC

EASY ANALYST

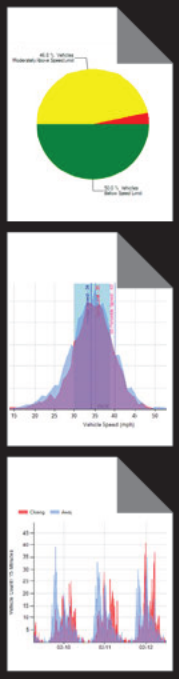
PMG

Hidden in Plain Sight

Traffic Data Collector (TDC)

Collect traffic data based on how drivers ***actually*** behave when they think that no one is watching. Load collected data into the included Stalker Easy Analyst software to create reports, charts, and graphics.

Runs for up to 7 days on battery power or choose the solar panel option for infinite field operation



The tamper-proof, lockable, and durable non-corroding housing mounts to any pole.

Reporting for Duty

Easy Analyst Software

The Stalker Easy Analyst software offers the same reporting capabilities as Street Dynamics for all of our traffic data-collecting speed signs and messaging trailers. Simply download the traffic data from your sign onto a USB thumb drive, upload it into Easy Analyst, and, in just a few clicks, create the reports and graphs you need.

It's as easy as 1, 2, 3.

1 RFR INTRODUCTION AND GENERAL DESCRIPTION

1.1 Procurement Scope and Description

The Massachusetts Department of Transportation (MassDOT) seeks vendors to provide specialized Equipment, Parts & Services for MassDOT's Transportation and Roadway Telecommunications, Intelligent Traffic systems (ITS), Integrated Project Control Systems (IPCS).

1.2 Background Information

MassDOT operates a wide array of transportation systems throughout the Commonwealth, many of which are integrated with Federal and neighboring states. Key Telecommunications, ITS, IPCS Systems are in place to keep these systems running efficiently, providing a safe system for all users. MassDOT seeks to place pre-qualified vendors under Master Service Agreement contracts to supply equipment, parts, and services for the systems in place as well as replacement systems potentially needed in future years, within the terms of this solicitation. See Section 3.0 below.

NOTE: MassDOT monitors closely products and vendors available through statewide contracts managed by the Operational Services Division (OSD)[1]. MassDOT does not seek to replace product or vendors currently available through OSD statewide contracts by this solicitation.

1.3 Applicable Procurement Law

This Bid is issued under the following laws: MGL c. 7, § 22; c. 30, § 51, § 52; 801 CMR 21.00

1.4 Number of awards

MassDOT intends to make a **MULTIPLE** awards.

1.5 Adding Contractors after Initial Contract Award

If, over the life of the Contract, MassDOT determines that additional contractors should be added, these may be drawn from qualified companies which responded to this solicitation but were not awarded contracts. If necessary to meet the needs of MassDOT, the solicitation may be reopened to obtain additional responses from interested vendors

1.6 Eligible Entities

~~Any contract resulting from this Bid will be open for use by **MassDOT** only.~~

Any contracts resulting from this RFR may be used by **all departments of MassDOT**, the Commonwealth, including all constitutional offices, the legislature, and the judiciary; cities, towns, municipalities, counties, and other political subdivisions of the Commonwealth, including schools, and other service districts; authorities, commissions, institutions of higher education, and quasi-public agencies, and Not for Profit contractors currently contracting with the Commonwealth to provide human and social services; and other eligible entities designated in writing by the State Purchasing Agent. All entities other than MassDOT must execute a separate contract that meets their own legal and business requirements.

[1] https://www.mass.gov/service-details/find-a-statewide-contract-user-guide

1.7 Acquisition Method(s)

This solicitation is for the pre-qualification of suitable vendors. Subsequent acquisitions from selected vendors will be through the purchase of goods and/or services.

1.8 Contract Duration

Contract Duration	Number of Options	Number of Years	Instructions
Initial Duration	N/A	Up to 5	The contract will be executed for this initial duration and will begin on the contract start date.
Renewal Options	2	Up to 3	Two options to renew for three years each.
Total Maximum Contract Duration		Up to 11	

Each contractor's performance will be evaluated on an ongoing basis and will be utilized in determining whether or not to exercise any option to renew. Renewal of contracts will be at the discretion of the agency and subject to a performance evaluation. This evaluation may include, but not limited to, the following criteria:

- Vendor has performed well on project assigned
- Vendor provided a key individual to serve as a liaison and provided contact information
- Vendor responds to agency inquiries on a timely basis
- Vendor communication is clear and helpful
- Vendor files invoices and reports on a timely basis
- Vendor skill sets remain in keeping with the expectations of the solicitation.
- Vendor assigned staff as presented in the original proposal (individuals and skill sets pledged)

The length of the contract, specifically the contract start date, is dependent upon receiving properly executed award paperwork from the vendor. If award paperwork is received late, the full contract length may be less than indicated above. The contract end date shall remain the same for all vendors. No agreements for services may be executed after the Contract has expired.

1.9 Estimated Value of the Contract

The estimated value of purchase(s) resulting from this Bid is $3.25 million over the life of the potential award, including renewals. MassDOT may add additional funding during the term of the contract.

MassDOT makes no guarantee that any commodities or services will be purchased from any contract resulting from this Bid. Any estimates or past procurement volumes referenced in this Bid are included only for the convenience of Bidders, and are not to be relied upon as any indication of future purchase levels. The estimated value is based on spending on previous, similar contracts.

2 ESTIMATED PROCUREMENT CALENDAR

EVENT	DATE
World Trade Organization (WTO) Notice Posted	5 March 2020
RFR Release Date	XXX
Deadline for Submission of Bid Response Form	Rolling Enrollment – Responses may be submitted ***at anytime***
Notification of Apparent Successful Bidder(s), if any	ongoing
Estimated Contract Start Date	ongoing

Times are Eastern Standard/Daylight Savings (US), as displayed on the COMMBUYS system clock displayed to Bidders after logging in. If there is a conflict between the dates in this Estimated Procurement Calendar and dates in the Bid's Header, the dates in the Bid's Header on COMMBUYS shall prevail. Bidders are responsible for checking the Bid record, including Bid Q&A, on COMMBUYS for Estimated Procurement Calendar updates.

2.1 Amendment Deadline

MassDOT reserves the right to amendment this solicitation after initial publication. It is each interested vendor's responsibility to check COMMBUYS for any amendments, addenda or modifications to this solicitation, and any related solicitation Q&A records. MassDOT accepts no responsibility and will provide no accommodation to Bidders who submit a response based on out-of-date posted information or on information received from a source other than COMMBUYS.

3 SPECIFICATIONS

3.1 Project Goal

MassDOT operates a wide array of transportation systems throughout the Commonwealth, many of which are integrated with Federal and neighboring states. Key Telecommunications, ITS, IPCS Systems are in place to keep these systems running efficiently, providing a safe system for all users. MassDOT seeks to place pre-qualified vendors under Master Service Agreement contracts to supply equipment, parts, and services for the systems in place as well as replacement systems potentially needed in future years, within the terms of this solicitation.

Two primary categories of needs are addressed by this solicitation:

Category 1: Equipment needs and services 43-20-0000

Equipment Purchases
Replacement parts for existing or specialized equipment
Equipment Upgrades
Operating Supplies
Maintenance and/or repair of equipment
Telecommunications/ITS/IPCS equipment parts for Telecommunications, ITS and IPCS Systems
Telecommunications/ITS/IPCS operational and specialized consumables

MassDOT seeks proposals providing anticipated hourly rates on services, maintenance and repair of equipment including percentage discounts from list price for equipment and parts, etc. Further, respondents must be aware that MassDOT requires service at all hours.

Category 2: Consulting and Design Services 81-16-1700

Telecommunications Engineering and Consulting Services
ITS Engineering and Consulting Services
IPCS Engineering and Consulting Services

An indicative list of equipment and systems in place include AFC, PLC, CO, Hydrocarbon, Access Control, Har, two-way radio, RTU, DWDM, fiber optic, Telephony, Traffic/Security CCTV, Ventilation, Automated Gate/Barrier Systems.

MassDOT reserves the right to request that the vendor provide additional related services or products during the term of any contract awarded under this RFR.

In providing services required by this RFR, the successful Bidder will be prepared to support the Commonwealth's conversion to a mile-based exit numbering system on its highways.

Prior to a contract award for this RFR, vendors may be required to present evidence to MassDOT that they have the necessary equipment, storage facilities, experience, ability, and capital to furnish the required materials in the manner prescribed and to perform the required work satisfactorily. ***Response time off-hours is expected to be accelerated and within 24 hours for emergency work. Pricing will be reviewed and approved by the Engineer based on the specifics of theemergency request.***

3.2 Funding of Contract

MassDOT is seeking proposals that demonstrate the best value for equipment, parts, and/or service purchased. Funding may come from a variety of budget sources.

3.3 Confidentiality and Security of Data

The Bidder may work with highly confidential information, sensitive security information, and other information protected from unauthorized disclosure. The Bidder and staff associated with the Contract will abide by MassDOT and other agency confidentiality and privacy provisions, all confidentiality provisions contained in the Contract Terms and Conditions, and all applicable state and Federal laws and regulations, now in effect, or which become effective during the terms of this contract.

3.3.1 Pricing

Vendor selection will include a consideration for product and/or service price. MassDOT will evaluate a percentage discount from list price as part of the pre-qualification process.

MassDOT reserves the right to negotiate price adjustments with any vendor during the term of the Master Service Agreement contract for reasons associated with circumstances beyond the control of the vendor. Proposals must be received 45 calendar days prior to the contract anniversary or extension date. The vendor must submit a formal written request on letterhead for any such adjustment to the MassDOT contract manager.

Proposals for price adjustments must include, but are not limited to:

- Identified price increase and their source, e.g., raw material, freight fuel labor.
- Copies of business publication(s), market quotations, or the trade journals generally recognized-as representative of the trade or industry that indicate market trends for the Contract Commodities.
- Copies of old and new price lists, if applicable, reflecting price changes.

The requested price adjustment(s) must contain a requested effective date. In the event that MassDOT rejects the price change, the Contractor may continue to perform under the extension option.

MassDOT reserves the right to negotiate price and product specifications at any time during the contract period for the best interests of MassDOT. MassDOT reserves the right to request additional information. MassDOT reserves the right to reject any requested price increases which they deem excessive. MassDOT also reserves the right to negotiate decreases in pricing.

3.4 Payment

All payments under this Agreement shall be made in accordance with the Commonwealth's bill paying policy as defined in the Terms and Conditions.

3.5 Subcontracts

Prior written approval from MassDOT is required for any subcontracted services required to meet the objectives of any Statement of Work for services issued under a Master Service Agreement issued as a result of this RFR. Contractors are responsible for the satisfactory performance and

adequate oversight of their subcontractors. MassDOT will hold the vendor responsible for meeting the requirements of the contract even if a subcontractor is performing specific services.

All proposed subcontractors must be disclosed in full. The information furnished must include a description of the work to be performed by each subcontractor and the percentage of the total effort that work represents.

Vendors are responsible for the compliance of its subcontractors and suppliers with all requirements arising under Federal, State and Municipal laws, ordinances, rules and regulations, as may be applicable.

Any consent to subcontract any part of the work shall not be construed to be an acceptance by MassDOT of the subcontract or any of its terms, but shall operate only as authorization to enter into the subcontract between the Bidder and the proposed subcontractor.

3.6 Bidder's Liability

The Bidder hereby agrees to release MassDOT from all liability in connection with the payment of damages, claims, freight charges, demurrage, cost of material and other claims or demands of whatever nature which may arise, during the Contractor's performance of work under any order issued pursuant to a contract awarded under this Request for Response.

The Bidder agrees that title, ownership and the incidents thereto of all materials to be purchased under any contract resulting from this solicitation shall not vest in MassDOT until such materials are delivered and accepted.

3.7 Contract Management (Service Provider's interface with MassDOT's Contract Manager)

Respondents shall provide a Vendor Account Manager. The Vendor Account Manager shall be responsible for oversight and management of contract performance and shall act as the contact person for receipt of notice and other communications between MassDOT and the Contractor. The Vendor Account Manager must respond within 24 hours to MassDOT if contacted.

Vendor Account Manager:

Respondents must provide in its submission the name of at least one individual who will be the Vendor Account Manager. This individual will be responsible for:

- Proper operation and administration of the contract by the vendor.
- Responding in a timely manner and in writing unless instructed otherwise, to all requests from the MassDOT Contract Manager.
- Supplying information and serving as liaison between the vendor and MassDOT.

MassDOT may require the vendor to relieve the Vendor Account Manager if:

- The Account Manager does not support the contract requirements.
- The Account Manager does not deliver work which conforms to the requirements demonstrated in this contract.
- Issues with the Account Manager that hinders effective functioning of the contract.

3.8 Vendor Warranty

Vendors shall honor all manufacturer warranties on materials purchases (equipment, parts, etc), providing for return free of any and all shipping/postage costs and free of the cost of shipping/delivery of any replacement item.

Service on MassDOT equipment shall be warrantied for a minimum of sixty (60) days. There will be no payments made for call-backs for the same issue within the 60 day period, unless manufacture's defect is demonstrated. In such cases, the item shall be replaced at no additional cost by the vendor per the terms of the manufacturer's warranty.

4 AUDIT

During the term of this Agreement and for a period of six (6) years thereafter, MassDOT, its auditors, the Office of the Inspector General or other authorized representatives shall be afforded access at reasonable times to selected vendor's accounting records, including sales information on any system, reports or files, in order to audit all records relating to goods sold or services performed pursuant to this Agreement. If such an audit indicates that the selected vendor has underperformed in providing goods or services to MassDOT, then the vendor shall remit the funds due and be responsible for payment of any costs associated with the audit.

5 EVALUATION CRITERIA

A Selection Committee comprised of employees from MassDOT and its subject matter experts will use the following process and criteria to evaluate proposals and select vendors based on overall best value:

Evaluation criteria include:

For parts and equipment

- Price - percent discount from list/catalogue

For service:

- Hourly rates
- Accessibility to facilities throughout the Commonwealth

For all

- Nature of business is consistent with the goals and needs of MassDOT
- Experience - Years in Business
- Proven experience/qualifications of the Vendor Account Manager
- Business References (Minimum of three relevant references required) [2]
- Prompt Payment Discount
- Supplier Diversity Commitment

The Selection Committee must be able to determine that the Bidder has the management, technical experience and capacity, and capabilities to perform the requirements of the scope of services. Failure to provide the information necessary to meet these requirements in their response may result in disqualification.

While price will be heavily valued in the evaluation criteria, MassDOT seeks best overall value. Awards will be made to the responsible Bidder whose proposal is most advantageous to MassDOT, but not necessarily to any particular vendor quoting the lowest dollar amount or lowest rates. MassDOT reserves the right to request clarification of responses following submission, and to determine that any non-compliance is insubstantial, can be corrected, or that an alternative proposed by the respondent is acceptable.

6 BID QUALIFICATIONS

MassDOT reserves the right to suspend, withdraw, or amend this RFR at any time, for any reason, and to reject any Proposal not submitted in conformance with the requirements of this solicitation. This RFR is not an offer, and it is not being issued by MassDOT under any statutory requirement.

Any response submitted in response to this RFR may be rejected if in MassDOT's sole judgment it fails to meet the requirements of the RFR, is incomplete, conditional, or obscure; contains additions, deletions, alterations, errors, or other irregularities; or is submitted by a vendor not experienced or capable of performing the scope of services or providing the items sought. MassDOT reserves the right to accept or reject any or all responses.

The successful Bidder must adhere to all Commonwealth and or Federal statutes, regulations, standards and policies related to data privacy and security breaches now in effect or implemented throughout the term of any contract entered into under this RFQ, including without limitation the policies listed hereunder:

EOTSS Security Policies and Standards

Other Terms and Conditions:

Accessibility: The successful Bidder shall comply with the accessibility requirements set forth below (see Accessibility Obligations for Bidders).

Cloud Procurement Terms: The successful Bidder shall comply with the Cloud Terms set forth below (see Cloud Procurement Terms below)

7 FORMS

The following items shall be submitted by Bidder as part of its proposal (also posted separately on COMMBUYS in connection with this RFR):

1. Telecomm Response Form
2. Authorized Signatory Listing Form
3. Executive Order 515, establishing an environmental purchasing policy/EPP plan
4. SDP Plan Form #1 – SDP Plan Commitment
5. Evidence that the vendor is listed under the Commonwealth of Massachusetts Secretary of State's website as licensed to do business in Massachusetts
6. Certificate of Insurance

The following items will form part of any contract entered into with a successful Bidder (posted separately on COMMBUYS in connection with this RFR):

i. MassDOT Standard Contract Form
ii. MassDOT Terms and Conditions
iii. Prompt Pay Discount Form
iv. Massachusetts Substitute W9 Form
v. Electronic Funds Transfer Form
vi. SDP Plan Form #2 – Declaration of SDP Partners

7.1 Supplier Diversity Program

Massachusetts Executive Order 565 reaffirmed and expanded the Commonwealth's policy to promote the award of state contracts in a manner that develops and strengthens certified Minority Business Enterprises (MBEs), Women Business Enterprises (WBEs), Minority and Women Nonprofit Organizations (M/WNPOs), Veteran Business Enterprises (VBEs), Service-Disabled Veteran-Owned Business Enterprises (SDVOBEs), Disability-Owned Business Enterprises (DOBEs), and Lesbian, Gay, Bisexual and Transgender Business Enterprises (LGBTBEs).

Partnerships with M/WBEs, M/WNPOs, VBEs and SDVOBEs: All bidders are **required** to make a significant financial commitment to partner with certified M/WBEs, M/WNPOs, VBEs and/or SDVOBEs certified or verified by the Supplier Diversity Office (SDO). Bidders must identify a commitment in the form of a specific percentage of sales made under the resulting contract that will be spent with an SDP Partner(s) on a Massachusetts fiscal year basis, using SDP Plan Form #1 – SDP Plan Commitment. This percentage commitment will extend for the life of any resulting contract.

This requirement extends to all bidders regardless of their certification status, and no bidder will be awarded a Contract unless and until the above requirement is met. Bidders may not list themselves or affiliates as SDP Partners. In order to ensure compliance with this section and encourage bidder participation, SDP Plans will be evaluated at 10% or more of the total evaluation score for all for Large Procurements (those with a total value of greater than $150,000). SDP Plan submission is encouraged but not required for Small Procurements (those with a total value equal to or less than $150,000).

Once an SDP commitment is approved, the agency will monitor the Contractor's performance, and use the Contractor's reported expenditures with M/WBEs, M/WNPOs, VBEs and SDVOBEs to fulfill their own SDP expenditure benchmarks. The Commonwealth reserves the right to contact SDP Partners at any time to request that they attest to the amounts reported to have been paid to them by the Contractor.

SDP Forms: Unless otherwise specified in the RFR, the following SDP forms are required to be submitted by the deadlines noted below in order to meet the mandatory participation requirements of the SDP:

SDP Plan Form #/Name	Submitted By	When Submitted
SDP Plan Form #1 – SDP Plan Commitment	All Bidders	With Bid Response
SDP Plan Form #2 – Declaration of SDP Partners	Newly Awarded Contractors	Within 30 days of contract execution
SDP Plan Form #3 – SDP Spending Report	Contractors	Within 45 days of the end of each quarter

During the life of the contract, the Commonwealth reserves the right to expand the range of certified business categories available for SDP partnerships to all those mentioned above and/or request reports on the Contractors' spending with such certified business categories.

Supplier Diversity Program (SDP) Resources:

- Lists of M/WBEs, M/WNPOs, VBEs, SDVOBEs, DOBEs and LGBTBEs certified or verified by the Supplier Diversity Office (SDO) are located at www.mass.gov/sdo.
- Resources to assist Prime Bidders in finding potential Certified Partners can be found at www.mass.gov/sdp.
- The Operational Services Division offers trainings on compliance with the SDP Plan requirements. Registration information for upcoming trainings can be found on the Supplier Diversity Program Trainings webpage.

8 HOW TO SUBMIT A RESPONSE

Interested vendors must submit their responses electronically using COMMBUYS. All records on COMMBUYS are comprised of multiple tabs, or pages. Each tab contains data and/or file attachments. All are incorporated into the Bid.

Useful links:

- Job aid on how to submit a quote: https://www.mass.gov/files/documents/2019/03/19/Create-Quote-In-COMMBUYS.pdf
- Webcast: How to Locate and Respond to a Bid in COMMBUYS, which will familiarize Bidders with COMMBUYS terminology, basic navigation, and provide guidance for locating bid opportunities in COMMBUYS and submitting an online quote.
- Bidder may contact the COMMBUYS Help Desk at COMMBUYS@state.ma.us or call during normal business hours (8AM – 5PM, Monday – Friday except on federal, state and Suffolk County holidays) at 1-888-MA-STATE.
- It is each vendor's responsibility to check COMMBUYS for:
    - Any addenda or modifications, by monitoring the Amendment tab, and
    - Any other records related to this Bid.

MassDOT accepts no responsibility and will provide no accommodation to vendors who submit a response based on an out-of-date Bid or on information received from a source other than COMMBUYS.

9 REQUIRED TERMS

9.1.1 Alterations

Vendors may not alter (manually or electronically) the RFR language or any solicitation component files, except as directed in this RFR. Modifications to the body of the RFR, specifications, terms and conditions, or which change the intent of this RFR are prohibited and may disqualify a response.

9.1.2 Ownership of Submitted Quotes

MassDOT shall be under no obligation to return any response or materials submitted by a vendor in response to this solicitation. All materials submitted by vendors become the property of MassDOT and will not be returned. MassDOT reserves the right to use any ideas, concepts, or configurations that are presented in a response, whether or not the response/vendor is selected for Contract award.

9.1.3 Prohibitions

Vendors are prohibited from communicating directly with any employee of MassDOT regarding this RFR except as specified in this RFR, and no other individual MassDOT employee or representative is authorized to provide any information or respond to any question or inquiry concerning this RFR. Vendors may contact the contact person using the information provided on the Header Information this solicitation in the event that this RFR is incomplete or information is missing. Vendors experiencing technical problems accessing information or attachments stored on COMMBUYS should contact the COMMBUYS Helpdesk (see the document cover page for contact information).

In addition to the certifications found in the MassDOT's Standard Contract Form, by submitting a response, the vendor certifies that any response or quote has been arrived at independently and has been submitted without any communication, collaboration, or without any agreement,

understanding or planned common course or action with, any other vendor/supplier of the commodities and/or services described herein.

9.2 Terms and Requirements Pertaining to Awarded Contracts

9.2.1 Commonwealth Tax Exemption

Invoices or invoices submitted to Massachusetts government entities must not include sales tax.

9.2.2 Vendor Contact Information

It is the vendor's responsibility of the to keep current the email address of the Bidder's contact person and prospective contract manager, if awarded a contract, and to monitor that email inbox for communications from MassDOT, including requests for clarification.

MassDOT assumes no responsibility if a prospective vendor's designated email address is not current, or if technical problems, including those with the vendor's computer, network or internet service provider (ISP), cause e-mail communications between the Bidder and MassDOT to be lost or rejected by any means including email or spam filtering.

9.2.3 Publicity

Any vendor awarded a contract under this RFR is prohibited from selling or distributing any information collected or derived from the contract or resultant purchase order, including lists of participating Eligible Entities, MassDOT employee names, telephone numbers or addresses, or any other information except as specifically authorized by MassDOT.

9.2.4 Standards of Performance and Qualifications

Each responding vendor affirms that it is qualified and shall at all times remain qualified to perform as anticipated by the stated goals/objectives of this solicitation. The performance shall be timely and meet or exceed industry standards for the performance required, and vendors shall obtain and maintain all requisite licenses, registrations, permits and resources for performance. Vendors further agree that all services provided will conform to the professional industry standards of care and practice customarily provided by comparable firms engaged in performing comparable services. The personnel furnishing the services will be qualified and competent to perform the services assigned to them. The recommendations, guidance and performance of these personnel will meet such standards of knowledge, judgment and care. Vendors further agree that the services will be free from errors that are the result of the Bidder's negligent failure to conform to those standards.

Each responding vendor must certify that it is listed under the Commonwealth of Massachusetts Secretary of State's website as licensed to do business in Massachusetts, as required by law.

10 INSURANCE

Bidders shall certify on letterhead their understanding and agreement that during the term of any contract arising out of this RFR, the successful Bidder shall continually maintain, with insurance carriers licensed to do business in the Commonwealth of Massachusetts:

i. Commercial General Liability insurance with limits at least equal to One Million Dollars ($1,000,000.00) per occurrence for bodily injury and property damage, One Million Dollars ($1,000,000.00) for personal injury and Two Million Dollars ($2,000,000.00) in the general aggregate. Coverage shall also include limits at least equal to Two Million Dollars ($2,000,000.00) for products and completed operations. All Commercial General Liability coverage shall continue for seven (7) years following completion of the contract. Coverage shall be equivalent to ISO Form CG 01 01 12 07. Coverage shall be provided on a first dollar basis without a deductible. Any Commercial General Liability policy subject to a deductible must be approved in writing in advance by MassDOT;

ii. Automobile Liability insurance with limits at least equal to One Million Dollars ($1,000,000.00) per accident, bodily injury and property damage combined. Coverage shall include non-owned and hired liability;

iii. Workers' Compensation insurance as follows:
   1) Coverage A Workers' Compensation: Statutory as required by Massachusetts law.

   2) Coverage B Employer's Liability: (i) bodily injury by accident One Million Dollars ($1,000,000.00) each accident, (ii) bodily injury by disease One Million Dollars ($1,000,000.00) each employee and (iii) bodily injury by disease One Million Dollars ($1,000,000.00) policy limit; and

iv. Umbrella insurance with limits at least equal to Ten Million Dollars ($10,000,000.00) per occurrence and Ten Million Dollars ($10,000,000.00) in the aggregate. Self-insured retention shall not exceed Ten Thousand Dollars ($10,000.00). Coverage shall be equivalent or broader than the coverage afforded on the underlying Commercial General Liability, Automobile Liability and Employer's Liability grant within the Workers' Compensation policy.

v. Errors and Omissions Liability Insurance with limits of not less than twice the value of the contract in aggregate for the period beginning with the effective date of the contract and ending on the date of final acceptance or the end of the warranty period whichever occurs later. The policy must include an endorsement that provides a discovery period of three (3)

years following the date of final acceptance, and its coverage must extend to and include liability for infringement of intellectual property rights, development and implementation of software that enables access to data over the Internet and the warranty obligations.

All policies shall have a minimum AM Best Rating of A. All policies shall contain a waiver of subrogation in favor of MassDOT and the Workers' Compensation policy shall be specifically endorsed to provide such waiver.

The successful Bidder shall provide certificates of insurance evidencing the foregoing coverage prior to the commencement of performance. The successful Bidder shall, through the term of the contract, provide to MassDOT certificates of insurance evidencing renewal and continuation of this insurance prior to the expiration of any policy. Each insurer will provide notification to MassDOT in writing thirty (30) days in advance of the cancellation, non-renewal, or material change in coverage of the policy.

The successful Bidder shall cause its subcontractors to purchase, carry, and maintain all insurance coverage and coverage limits that this RFR requires the successful Bidder to have.

The cost of the insurance that the successful Bidder and its subcontractors are required to purchase, carry, and maintain is an item that is included in the fixed proposal price.

11 OTHER SPECIFICATIONS

Issue Date: November 1, 2005
Refresh Date: June 6, 2016

The following RFR provisions appear in this section at the department's discretion. If a specification is selected by the department, it is required of the bidder.

Access to Security-Sensitive Information. This solicitation contains security-sensitive information which, pursuant to MGL c. 4, s. 7, cls. 26(n), is generally exempt from public disclosure under the Commonwealth's public records laws and must, for public safety purposes, be safeguarded from widespread public disclosure. This security-sensitive information is in the form of blueprints, plans, policies, procedures, schematic drawings, which relate to internal layout and structural elements, security measures, emergency preparedness, threat or vulnerability assessments, and/or any other records relating to the security or safety of persons (pursuant to M.G.L. c. 66A) or buildings, structures, facilities, utilities, transportation, information technology or other infrastructure located within the commonwealth.

Qualified prospective bidders that are interested in accessing this information for the purpose of preparing a bid response must, before being allowed to access the information, sign a confidentiality agreement, thereby agreeing to:

1. restrict the use of these sensitive records for any other purpose than as authorized and for the purpose of putting together a bid proposal;
2. safeguard the information while it is in their possession (consistent with Section 6 of the *Commonwealth Terms and Conditions*); and
3. return such records and materials to the Commonwealth upon completion of the project.

Alternatives. A response which fails to meet any material term or condition of the RFR, including the submission of required attachments, may lose points or be deemed unresponsive and disqualified. Unless otherwise specified, bidders may submit responses proposing alternatives which provide equivalent, better or more cost effective performance than achievable under the stated RFR specifications. These alternatives may include related commodities or services that may be available to enhance performance during the period of the contract. The response should describe how any alternative achieves substantially equivalent or better performance to that of the RFR specifications.

The department will determine if a proposed alternative method of performance achieves substantially equivalent or better performance. The goal of this RFR is to provide the best value of commodities and services to achieve the procurement goals of the department. Bidders that propose discounts, uncharged commodities and services or other benefits in addition to the RFR specifications may receive a preference or additional points under this RFR as specified.

Contractors may also propose alternatives for equivalent, better or more cost effective performance than specified under the contractor's original response to enable the department to take advantage of enhanced technologies, commodities or services which become available during the term of the contract.

Brand Name or Equal. Unless otherwise specified in this RFR, any reference to a particular trademark, trade name, patent, design, type, specification, producer or supplier is not intended to restrict this RFR to any manufacturer or proprietor or to constitute an endorsement of any commodity or service, and the department may consider clearly identified offers of substantially equivalent commodities and services submitted in response to such reference.

Debriefing. *(This specification is at the department's discretion for non-POS RFRs.)* Non-successful bidders may request a debriefing from the department. Department debriefing procedures may be found in the RFR. "POS" refers to Purchase of Service (POS) human and social services procured under *801 CMR 21.00, Procurement of Commodities or Services, Including Human and Social Services* and *808 CMR 1.00, Compliance, Auditing and Reporting and for Human and Social Services.*

Emergency Standby Commodities and/or Services. Due to a declaration of a state of emergency where the safety and well-being of Commonwealth citizens are at risk, the Commonwealth of Massachusetts may request specific commodities and/or services from its contractors. Contractors may be called upon to supply and/or deliver to the Commonwealth on a priority basis such commodities and/or services currently under contract.

Such accommodations may be requested from a contractor during an actual emergency. To accommodate such requests, contractors may be requested and must make every effort to service these requests from regular sources of supply at the rates set forth in any standard contract resulting from this RFR.

Environmentally Preferable Products and Services. The department and contractor(s) may negotiate during the contract term to permit the substitution or addition of Environmentally Preferable Products (EPPs) when such products are readily available at a competitive cost and satisfy the department's performance needs.

Estimated Provisions. The Commonwealth makes no guarantee that any commodities or services will be purchased from any contract resulting from this RFR. Any estimates or past procurement volumes referenced in this RFR are included only for the convenience of bidders, and are not to be relied upon as any indication of future purchase levels.

Performance and Payment Time Frames Which Continue Beyond the Duration of the Contract. All term leases, rentals, maintenance or other agreements for services entered into during the duration of this contract and whose performance and payment time frames extend beyond the duration of this contract shall remain in effect for performance and payment purposes (limited to the time frame and services established per each written agreement). No new leases, rentals, maintenance or other

agreements for services may be executed after the contract has expired. Any contract termination or suspension pursuant to this section shall not automatically terminate any leases, rentals, maintenance or other agreements for services already in place unless the department also terminates said leases, rentals, maintenance or other agreements for service, which were executed pursuant to the main contract.

Reverse Auction Participation and Payment. In addition to negotiations and Best and Final Offers (BAFOs) that may be conducted with bidders pursuant to 801 CMR 21.00, the SST will be conducting a Reverse Auction subsequent to the submission of proposals. After the conclusion of the reverse auction and the determination of the winning bidder(s), the winning bidder(s) will be responsible for paying the cost for this reverse auction, not to exceed $3,000 per event, directly to the Commonwealth's reverse auction contractor. That payment must be made within 30 days of the end of the auction event or of the contract award date, whichever is later. In the case of multiple winners, the department will determine how payments will be made in a fair and equitable manner. In addition, the SST reserves the right to employ the use of reverse auctions at any time during the contract term under the same payment terms as referenced above in this section.

12 MASSDOT TELECOMM RESPONSE FORM –

Equipment, Parts & Services for Telecommunications, ITS, IPCS Systems

The following requested information is a requirement of the Request for Response (RFR). Failure to complete all sections of this form may be cause for the bid to be deemed as non-responsive and may result in disqualification.

Once completed, save the file and submit via Commbuys using the following naming protocol: **2020_Telecomm_Response_Company.** ***(Note: Please be neat or type in responses – illegible responses will not be accepted!)***

Item	*Use this column for response*
Company Information Legal Company Name	
Address (Street, City, State, Zip)	
Main Phone Number	
Fax Number	
Massachusetts Vendor Code (if known)	VC

These will be considered as part of the evaluation.

Massachusetts Department of State Police
Automated License Plate Recognition (ALPR) System
Memorandum of Understanding and Agreement

THIS AGREEMENT, made and entered into this 28 day of July 2022 by and between the **Department of State Police**, hereinafter referred to as "Department," and the **Attleboro Police Department**, a public entity, hereinafter referred to as "Agency," collectively referred to as "Parties."

WHEREAS, the Department contracts the services of one or more vendors to host an Automated License Plate Recognition (ALPR) database to store ALPR data; and

WHEREAS, the Parties provide public safety services within their respective jurisdictions; and

WHEREAS, the Parties have found it to be of mutual benefit to provide for the most efficient utilization of their resources and services in the application to public safety efforts within their respective jurisdictions; and

WHEREAS, the Parties are committed to cooperation and coordination in providing the highest level of public safety services to the public, guided by the principle that performing cooperatively is in the best interest of the public; and

WHEREAS, the Agency desires to use the ALPR system contracted and managed by the Department to facilitate the storage of ALPR information generated by the Agency; and

WHEREAS, the Agency desires to share law enforcement information owned by the Agency under the conditions set forth in this Agreement.

NOW, THEREFORE, for and in consideration of the covenants contained herein, IT IS HEREBY AGREED, by and between the Parties as follows:

1. PURPOSE:

The purpose of this Agreement is to provide a standardized approach and method of storage, retention, sharing, and access of ALPR data between the Department and Public Safety Agencies hosting ALPR data on the Department's ALPR system.

2. COSTS:

The Department shall be responsible for the costs of purchasing and maintaining the ALPR system as long as such funding is available to the Department and authorized by the appropriate authorities of the Commonwealth. Participating agencies shall be responsible for the costs of purchasing, servicing, maintaining, repairing, and/or licensing the ALPR equipment used by their respective agency. The Department shall not be responsible for any costs incurred by the Agency for the purchasing, servicing, maintaining, repairing, and/or licensing of the ALPR equipment owned or used by the Agency. The Agency shall inspect the Agency's ALPR equipment on a regular basis and document each inspection. Any irregularities or malfunctions of any ALPR equipment owned by the Agency or of any ALPR information shall be reported to the Department immediately and shall be addressed and repaired by the Agency as soon as reasonably possible.

3. DATA ACCESS AND SECURITY REQUIREMENTS:

a. System Availability: The Department will work with the vendor(s) to keep the ALPR system software and servers online and available with downtime limited to necessary system maintenance activities or to any outages that are beyond the control of the Department.

b. Data Sharing: ALPR data contributed by the Agency will be accessible for official purposes to all Agencies that have entered into an ALPR Agreement with the Department. The Agency shall not otherwise share ALPR data with or provide ALPR data to any person, entity, or government agency, other than a law enforcement agency, unless such disclosure is authorized by policy or court order or unless such disclosure is required by the Massachusetts Rules of Criminal Procedure or Rules of Superior Court governing discovery in criminal matters.

c. Security Requirements: The Department and the Agency agree to enforce and maintain security requirements for the information stored in the ALPR system as specified in the Agreement. The Agency agrees that the information hosted in the ALPR system shall be used for law enforcement purposes only and that only law enforcement agency employees that have been subject to appropriate background screening shall be allowed access to the system.

   Background screenings must be fingerprint-based and include check of both the state and national criminal history repositories. If a felony conviction of any kind is found, access to ALPR system shall not be granted. The Agency agrees not to share passwords, user logins, or allow the ALPR software to be otherwise used by Agencies who have not entered into an Agreement with the Department allowing such activity.

An employee of the Agency may operate an ALPR unit that is connected to the Department's ALPR system or access the Department's ALPR system software only if the person has been designated as an authorized user by the Chief of the Agency or designee, and has received training from the Agency or the Department on the proper use and operation of ALPRs and any policy or procedures governing the use of ALPRs and ALPR data issued or adopted by the Agency.

4. IMPLEMENTATION OF POLICY:

The Agency shall, within 30 days of execution of this Agreement, adopt the Department's General Order TRF-11 as the policy and procedure document that will govern the Agency's use of and interaction with the Department's ALPR system. The Agency agrees that it has been provided with physical or electronic copy of General Order TRF-11, has had sufficient time to read, review, and understand the document in its entirety, and agrees to be bound by the provisions contained therein. The Department agrees to inform the Agency of any updates or modifications to General Order TRF-11, and the Agency understands and agrees that any updates to General Order TRF-11 will be binding upon the Agency unless the Agency elects to terminate the Agreement and withdraw from participation in the Department's ALPR system.

5. BENEFITS TO AGENCY:

a. Data Links: The centralized storage of ALPR data will provide a solution to the problem of inaccessible or irretrievable information due to disconnected ALPR systems and the difficulty in sharing information across jurisdictional boundaries.

b. Reduction of Costs: The centralized storage of ALPR data will reduce the financial burden to the Agency that is associated with purchasing and maintaining ALPR software.

6. RECORDS AND REPORTS:

The Department protects all ALPR information as personally identifiable information (PII) because ALPR information may be combined with other information to specifically identify a unique individual. As such, all information retained in the Department's ALPR system is the sole property of the Department. The Agency agrees that information stored in the ALPR system for the Agency may be subject to disclosure under certain circumstances. The Agency will refer to the Department for review all information requests for Agency information, including, but not limited to, public records requests, court orders, legal motions, subpoenas, and/or summonses. The Department's Legal Department shall determine the best manner of responding to all requests for Agency information.

7. RETENTION

All ALPR information obtained by the Agency from the Department's ALPR system shall be retained pursuant to the Department's General Order TRF-11.

8. AMENDMENTS:

Any changes and additions to this Agreement shall be made by written amendments to this Agreement and shall not be effective until approved in writing by the Parties. A joint review of this Agreement may be requested at any time by either of the Parties to identify needed changes, which may be amended by written mutual agreement of the Parties.

9. DURABILITY:

This Agreement shall become operational and effective upon execution by the Parties. Parties may terminate the Agreement at any time by giving written notice to the other Parties at least thirty (30) days prior to the effective date of termination. The Agreement may also be terminated by the Department without prior notice to the Agency in the event of executive, legislative, or judicial mandate which requires the unanticipated discontinuation or modification of the ALPR program. In the event of such termination, the Department will notify the Agency as soon as practicable.

10. BENEFITS:

The Parties shall agree that the provisions of this Agreement are not intended to directly benefit and shall not be enforceable by any person or entity not a party to this Agreement. This Agreement is not intended to confer any legal rights or benefits on any person or entity other than the Parties of this Agreement.

11. INDEMNIFICATIONS:

Parties shall defend, indemnify, and hold harmless every other party and its officers, agents, employees, and representatives from any and all losses, liability, damages, claims, suits, actions and administrative proceedings, and demands and all expenditures and cost relating to acts or omissions of the indemnitor, its officers, agents, or employees arising out of or incidental to the performance of any of the provisions of this Agreement. Parties do not assume liability for the acts or omissions of persons other than their respective officers, its employees, agents, and MOU officers.

The Agency releases the Department from any liability relating to the loss or destruction of data contributed by the Agency. The Agency further releases the Department from any liability relating to the loss of the Agency's access to the ALPR system due to system outage, commercial vendor failure or malfeasance, or executive, legislative, or judicial mandate which requires the unanticipated discontinuation or modification of the ALPR program. The Agency further releases the Department from any liability relating to the release of data or information contributed by the Agency pursuant to a lawful procedure or order.

12. ASSIGNMENT PROHIBITED:

Parties to this Agreement may not assign any right or obligation pursuant to this Agreement. Any attempted or purported assignment of any right or obligation pursuant to this Agreement shall be void and of no effect.

IN WITNESS WHEREOF, the parties hereto have executed this Agreement on the date as written below.

FROM: Paula T. Dow, Attorney General

DATE: December 3, 2010

SUBJECT: **Law Enforcement Directive Promulgating Attorney General Guidelines for the Use of Automated License Plate Readers (ALPRs) and Stored ALPR Data**

In order to fulfill the mission of protecting the public, the New Jersey law enforcement community must take full advantage of new crime-fighting technologies as they become available. Automated license plate readers (ALPRs) are now being used by a number of law enforcement agencies around the nation, and a number of police agencies in New Jersey have recently acquired these devices or are planning to do so in the near future. License plate recognition technology can be used to support a wide range of law enforcement operations and activities, including homeland security, criminal and terrorist suspect interdiction, revoked/suspended driver interdiction, stolen property recovery, stay-away order enforcement and, of course, the apprehension of individuals who are subject to an outstanding arrest warrant.

These devices enable police officers to recognize and take immediate action against vehicles and persons who are subject to an investigative detention or arrest based on a "Be on the Lookout" bulletin. The data collected by ALPRs can also provide solid investigative leads if, for example, a device happened to be scanning license plates near a crime scene, allowing police to locate potential suspects, witnesses, or victims by identifying vehicles that were in the vicinity at the time of the

offense. A careful analysis of stored ALPR data can also be used to detect suspicious activities that are consistent with the *modus operandi* of criminals. This new technology can in this way serve an especially important role in protecting our homeland from terrorist attack, as shown by the fact that many of the devices that are now or soon will be in operation in this State were purchased with homeland security grant monies.

While license plate recognition technology can help to protect public safety, the widespread deployment and use of ALPRs, and especially the collection and storage of data pertaining to individuals who are not reasonably believed to be involved in unlawful activity, raise legal and policy issues. Notably, the New Jersey Supreme Court has held that while police are permitted to "run the plates" of any vehicle they encounter while on patrol, and need not have a particularized reason before checking a vehicle's license plates against a government database, police in this State may not as a result of any such lookup be shown personal identifying information about a motorist unless there is a particularized basis for further police action. See State v. Donis, 157 N.J. 44 (1998). The Guidelines attached hereto are designed to protect the legitimate privacy interests of motorists by implementing the non-disclosure rule established in Donis and by adapting the Donis Court's rationale to the context and capabilities of ALPR technology.

Recognizing that our experience with this new and evolving technology is limited, and that we still have much to learn about how best to incorporate these devices into our arsenal of investigative techniques, it is appropriate for me as the State's chief law enforcement officer to issue uniform statewide guidelines to ensure that ALPRs are used only for *bona fide* law enforcement purposes, and that the data collected by these devices are used in accordance with substantive standards and procedural safeguards that appropriately balance the need for law enforcement agencies to prevent and respond to terrorism and other forms of crime against the legitimate privacy interests of persons operating motor vehicles on the roadways of this State.

THEREFORE, I, Paula Dow, Attorney General of the State of New Jersey, pursuant to the authority granted to me by the Constitution of the State of New Jersey and by the Criminal Justice Act of 1970, N.J.S.A. 52:17B-97 *et seq.*, and in consultation with the Director of the New Jersey Office of Homeland Security and Preparedness, hereby Direct the following:

1. Adoption of Guidelines

The "*Attorney General Guidelines for the Use of Automated License Plate Readers and Stored ALPR Data*" (dated December 3, 2010) attached to this Directive and incorporated by reference into this Directive are hereby adopted and shall be followed and enforced by all law enforcement agencies and officers operating under

the authority of the laws of the State of New Jersey.

2. Implementation

Every law enforcement agency operating under the authority of the laws of the State of New Jersey that possesses or uses one or more automated license plate readers shall, within 45 days of the issuance of this Directive, promulgate and enforce a rule, regulation, standard operating procedure, directive, or order, in a form as may be appropriate given the customs and practices of the agency, which shall comply with and implement the provisions of the attached Guidelines, and which shall provide that any sworn officer or civilian employee of the agency who knowingly violates the agency's rule, regulation, standard operating procedure, directive, or order shall be subject to discipline. A law enforcement agency operating under the authority of the laws of the State of New Jersey that purchases an automated license plate reader on or after the effective date of this Directive shall not operate the device without having promulgated a rule, regulation, standing operating procedure, directive, or order in accordance with this section.

3. Scope

The provisions of this Directive and of the attached Guidelines pertaining to stored ALPR data apply to all law enforcement agencies operating under the authority of the laws of the State of New Jersey that access or use stored ALPR data, even if the agency does not own or operate an ALPR.

4. Questions and Controversies

All questions concerning the interpretation, implementation, or enforcement of this Directive, or of the attached Guidelines, shall be addressed to the Attorney General or his or her designee.

5. Periodic Review

The Director of the Division of Criminal Justice, in consultation with the Superintendent of the New Jersey State Police, the Director of the Office of Homeland Security, the County Prosecutors, the County Sheriffs, and the New Jersey Association of Chiefs of Police, shall, within one year of the effective date of this

Directive, report to the Attorney General on the implementation of this Directive, and on any recommendations for revising the attached Guidelines.

6. Effective Date

This Directive shall take effect 45 days after it is issued in order to provide an opportunity for law enforcement agencies to comply with its requirements and to establish and enforce policies and procedures consistent with the attached Guidelines. Once effective, this Directive shall remain in force and effect unless and until a repealed, amended, or superseded by Order of the Attorney General.

Paula T. Dow
Attorney General

ATTORNEY GENERAL GUIDELINES FOR THE USE OF AUTOMATED LICENSE PLATE READERS (ALPRs) AND STORED ALPR DATA

(Issued December 3, 2010; Effective January 18, 2011)

1. PURPOSE AND SCOPE

1.1 Reasons for Promulgating Uniform Statewide Guidelines

The purpose of these Guidelines is to provide direction to law enforcement agencies and officers on the appropriate us e of Automated License Plate Readers (ALPRs) and the data that are collected by these devices and stored for future law enforcement use. These Guidelines are not intended to serve as a comprehensive operational manual. Rather, they are meant to ensure that ALPRs and ALPR-generated data are used in an appropriate manner and only for *bona fide* public safety purposes.

The following Guidelines, which are promulgated pursuant to Attorney General Law Enforcement Directive 2010-5, should be interpreted and applied so as to achieve the following objectives:

- to ensure that "BOLO lists" (the compilation of targeted license plates that an ALPR is "on the lookout" for) that are programmed into the internal memory of an ALPR or that are compared against stored ALPR data are comprised only of license plates that are associated with specific vehicles or persons for which or whom there is a legitimate and documented law enforcement reason to identify and locate, or for which there is a legitimate and documented law enforcement reason to determine the subject vehicle's past location(s) through the analysis of stored ALPR data;

- to ensure that data that are captured by an ALPR can only be accessed by appropriate law enforcement personnel and can only be used for legitimate, specified, and documented law enforcement purposes;

- to permit a thorough analysis of stored ALPR data to detect crime and protect the homeland from terrorist attack while safeguarding the personal privacy rights of motorists by ensuring that the analysis of stored ALPR data is not used as a means to disclose personal identifying information about an individual unless there is a legitimate and documented law enforcement reason for disclosing such personal information to a law enforcement officer or civilian crime analyst; and

- to ensure that stored ALPR data are purged after a reasonable period of time so as to

minimize the potential for misuse or accidental disclosure.

1.2 Applicability of Guidelines

These Guidelines apply to all law enforcement agencies that operate under the authority of the laws of the State of New Jersey that own or operate one or more ALPRs, that collect and maintain ALPR data, and/or that receive or are provided access to ALPR data collected by another agency.

1.3 Non-Enforceability of Rights by Third Parties

These Guidelines are issued pursuant to the Attorney General's authority under the Criminal Justice Act of 1970, N.J.S.A. 52:17B-97 *et seq.*, to ensure the uniform and efficient enforcement of the laws. These Guidelines impose limitations on the exercise of law enforcement discretion and the use of and access to ALPR-related data that may extend beyond the requirements of the United States and New Jersey Constitutions, and federal and state statutory law. Nothing in these Guidelines should be construed in any way to create any rights beyond those established under the Constitutions, statutes, and regulations of the United States and the State of New Jersey. The provisions of these Guidelines are intended to be implemented and enforced by law enforcement agencies that possess or use ALPRs, the New Jersey Office of Homeland Security and Preparedness, the County Prosecutors, and the Department of Law and Public Safety, and these provisions do not create any rights that may be enforced by any other persons or entities.

3. DEFINITIONS

As used in these Guidelines:

"Automated License Plate Reader" or "ALPR" means a system consisting of a camera, or cameras, and related equipment that automatically and without direct human control locates, focuses on, and photographs license plates and vehicles that come into range of the device, that automatically converts digital photographic images of scanned license plates into electronic text documents, that is capable of comparing scanned license plate text data with data files for vehicles on a BOLO (be on the lookout) list programmed into the device's electronic memory, and that notifies police, whether by an audible alert or by other means, when a scanned license plate matches the license plate on the programmed BOLO list. The term includes both devices that are placed at a stationary location (whether permanently mounted, or portable devices positioned at a stationary location) and mobile devices affixed to a police vehicle and capable of operating while the vehicle is in motion.

"BOLO (Be on the Lookout)" or "BOLO situation" refers to a determination by a law

enforcement agency that there is a legitimate and specific law enforcement reason to identify or locate a particular vehicle, or, in the case of a post-scan BOLO, there is a legitimate and specific reason to ascertain the past location(s) of a particular vehicle.

"BOLO list," sometimes referred to colloquially as a "hot list," is a compilation of one or more license plates, or partial license plates, of a vehicle or vehicles for which a BOLO situation exists that is programmed into an ALPR so that the device will alert if it captures the image of a license plate that matches a license plate included on the BOLO list. The term also includes a compilation of one or more license plates, or partial license plates, that is compared against stored license plate data that had previously been scanned and collected by an ALPR, including scanned license plate data that is stored in a separate data storage device or system.

"Initial BOLO list" refers to the BOLO list that was programmed into an ALPR at the time that the device was being used to scan license plates in the field.

"Post-Scan BOLO list" refers to a BOLO list that is compared against stored data collected by an ALPR, including scanned license plate data that has been transmitted to another device or data storage system.

"Stored data" refers to all information captured by an ALPR and stored in the device's memory or in a separate data storage device or system. The term includes the recorded image of a scanned license plate and optical character recognition data, a contextual photo (*i.e.*, a photo of the scanned vehicle and/or occupants), global positioning system("GPS") data (when the ALPR is equipped with a GPS receiver) or other location information, and the date and time of the scan. The term applies to both alert data and non-alert data that has been captured and stored by an ALPR or in a separate data storage device or system.

"Alert data" means information captured by an ALPR relating to a license plate that matches the license plate on an initial BOLO list or a post-scan BOLO list.

"Immediate alert" refers to an alert that occurs when a scanned license plate matches the license plate on an initial BOLO list and that is reported to the officer operating the ALPR, by means of an audible alarm or by any other means, at or about the time that the subject vehicle was encountered by the ALPR and its license plate was scanned by the ALPR.

"Non-encounter alert" refers to an immediate alert where the officer operating the ALPR is instructed to notify the agency that put out the BOLO without initiating an investigative detention of the subject vehicle or otherwise revealing to the occupant(s) of that vehicle that its location has been detected or that it is the subject of law enforcement attention (*e.g.*, a Violent Gang or Terrorist Organization File (VGTOF) alert).

"Personal identifying information" means information that identifies one or more specific individuals, including an individual's name, address, social security number, vehicle operator's

license number, or biometric records. The term includes personal identifying information that is included within the data comprising a BOLO list, as well as personal identifying information that is learned by checking a license plate scanned by an ALPR against the Motor Vehicle Commission database or any other data system that contains personal identifying information.

"Scan" refers to the process by which an ALPR automatically focuses on, photographs, and converts to digital text the license plate of a vehicle that comes within range of the ALPR.

"Authorized user"means a sworn or civilian employee of a law enforcement agency who has been authorized by the chief of the agency, or by the Attorney General or a county prosecutor or his or her designee, to operate an ALPR, or to access and use ALPR stored data, and who has successfully completed training provided by the agency on the agency's ALPR policy and on these Guidelines.

"Designated supervisor" means a superior officer assigned by the chief of a law enforcement agency to oversee and administer, or to assist in overseeing and administering, the agency's use of ALPRs and stored ALPR data. A law enforcement agency may have more than one designated supervisor.

"Chief" of a department or agency means the highest ranking sworn officer of a law enforcement agency.

"Post-Scan BOLO query" refers to the process of comparing a post-scan BOLO list against stored ALPR data.

"Crime scene query" refers to the process of accessing and reviewing stored ALPR data that had been originally scanned at or about the time and in the vicinity of a reported criminal event for the purpose of identifying vehicles or persons that might be associated with that specific criminal event as suspects, witnesses, or victims.

"Criminal event" means a specific incident, or series of related specific incidents, that would constitute an indictable crime under the laws of the State of New Jersey, whether or not the incident(s) have occurred or will occur within the State of New Jersey. The term includes an attempt or conspiracy to commit a crime, or actions taken in preparation for the commission of the crime, such as conducting a surveillance of the location to identify and evade or thwart security measures, or conducting a rehearsal of a planned crime. The term includes two or more separate criminal acts or episodes that are linked by common participants or that are reasonably believed to have been undertaken by a criminal organization or as part of an ongoing conspiracy.

"Crime trend analysis" refers to the analytical process by which stored ALPR data is used, whether alone or in conjunction with other sources of information, to detect crime patterns by studying and linking common elements of recurring crimes; to predict when and where future crimes may occur; and to link specific vehicles to potential criminal or terrorist activity. The term includes

an automated process in which a computer program analyzes stored data to identify potentially suspicious activity or other anomalies involving one or more scanned vehicles and where such automated analysis is done without disclosing personal identifying information about any individual to an authorized user or any other person except as may be authorized pursuant to Section 10.2.3 of these Guidelines.

4. DEPLOYMENT OF ALPRS

4.1 Restricted Uses

An ALPR and data generated by an ALPR shall only be used for official and legitimate law enforcement business.

4.2 ALPR Scanning Limited to Vehicles Exposed to Public View

An ALPR shall only be used to scan license plates of vehicles that are exposed to public view (*e.g.*, vehicles on a public road or street, or that are on private property but whose license plate(s) are visible from a public road, street, or a place to which members of the public have access, such as the parking lot of a shopping mall or other business establishment).

4.3 Supervisory Approval of All ALPR Deployments

An ALPR shall not be deployed in the field unless the deployment has been authorized by the chief of the department or a designated supervisor, or by the Attorney General or designee or a county prosecutor or designee. Such authorization may be given for repeated or continuous deployment of an ALPR (*e.g.*, mounting the device on a particular police vehicle, or positioning the ALPR at a specific stationary location), in which event the deployment authorization shall remain in force and effect unless and until rescinded or modified by the chief or designated supervisor, or the Attorney General or county prosecutor or designee.

4.4 Trained Operators and Analysts

A sworn officer or civilian employee of the department may operate an ALPR or access or use ALPR stored data only if the person has been designated as an authorized user by the chief of the department, or by the Attorney General or designee or a county prosecutor or designee, and has received training from the department on the proper use and operation of ALPRs, the requirements of Attorney General Law Enforcement Directive 2010-5, and these Guidelines, and any policies and

procedures governing the use of ALPRs and ALPR data issued by the department pursuant to Attorney General Directive 2010-5and Section 14 of these Guidelines.

5. MAINTENANCE OF RECORDS

5.1 Records Documenting the Deployment of ALPRs

Each department that owns or operates an ALPR shall maintain a written or electronic record that documents the following information:

date and time when the ALPR was deployed;

whether the ALPR was mobile, or was stationed at a fixed specified location;

the identity of the operator;

whether ALPR data was transferred to any other database or data storage device or system.

5.2 Records Documenting the Use of Stored ALPR Data

Each department that stores ALPR data shall maintain a record of all access to stored ALPR data. The department's ALPR data record keeping system, which may be automated, shall document the following information:

the date and time of access, and, in the case of access to stored non-alert data, the type of access authorized by Section 10.2 of these Guidelines (*i.e.*, post-scan BOLO query, crime scene query, or crime trend analysis);

the authorized user who accessed the stored data;

whether an automated software program was used to analyze stored data;

the designated supervisor who reviewed and approved any disclosure of personal identifying information based upon crime trend analysis when such approval is required by Section 10.2.3 of these Guidelines;

the designated supervisor who approved any use of an automated crime trend analysis computer program that would automatically alert and disclose personal identifying

information in accordance with Section 10.2.3;

any other information required to be documented pursuant to Section 10.2 or any other provision of these Guidelines.

5.3 Maintenance of Records

All written or electronic records of ALPR activity and access to ALPR data shall be maintained by the department for a period of five years, and shall be kept in a manner that makes such records readily accessible to any person authorized by these Guidelines to audit the department's use of ALPRs and ALPR-generated data. When a department employs an automated system to record any information that is required to be documented pursuant to these Guidelines, it shall not be necessary for the department to maintain duplicate records of any events or transactions that are documented by the automated record-keeping system.

6. CONTENT AND APPROVAL OF BOLO LISTS

6.1 Criteria for and Examples of Legitimate BOLO Situations

A license plate number or partial license plate number shall not be included in an ALPR initial BOLO list unless there is a legitimate and specific law enforcement reason to identify or locate that particular vehicle, or any person or persons who are reasonably believed to be associated with that vehicle. A license plate or partial license plate number shall not be included in a Post-Scan BOLO list unless there is a legitimate and specific law enforcement reason to ascertain the past locations(s) of that particular vehicle, or of any person or persons who are reasonably believed to be associated with that vehicle.

Examples of legitimate and specific reasons include, but are not limited to: persons who are subject to an outstanding arrest warrant; missing persons; AMBER Alerts; stolen vehicles; vehicles that are reasonably believed to be involved in the commission of a crime or disorderly persons offense; vehicles that are registered to or are reasonably believed to be operated by persons who do not have a valid operator's license or who are on the revoked or suspended list; vehicles with expired registrations or other Title 39 violations; persons who are subject to a restraining order or curfew issued by a court or by the Parole Board, or who are subject to any other duly issued order restricting their movements; persons wanted by a law enforcement agency who are of interest in a specific investigation, whether or not such persons are themselves suspected of criminal activity; and persons who are on any watch list issued by a State or federal agency responsible for homeland security.

6.2 Batch Downloading of BOLO List Data

BOLO list information may be downloaded in batch form from other databases, including but not limited to the National Crime Information Center (NCIC), National Insurance Crime Bureau, United States Department of Homeland Security, and Motor Vehicle Commission database.

6.3 Updates to BOLO Lists

An initial BOLO list may be revised at any time. In the event that an initial BOLO list is constructed, in whole or in part, with sets of data downloaded from another database, so as to account for any changes that may have been made in the data maintained in those other databases, updates to the initial BOLO list shall, in the case of a mobile unit attached to a police vehicle, be made at the start of each shift, and in the case of an ALPR positioned at a stationary location, be made as frequently as is practicable, and on not less than a daily basis. Information concerning any license plate that is referenced in an AMBER Alert activated by the New Jersey State Police shall be added to the initial BOLO list as expeditiously as possible, and shall remain in the initial BOLO list until the AMBER Alert expires or is withdrawn.

6.4 Special Instructions for Immediate Alert Response

When practicable, the reason for placing a vehicle on BOLO list shall be included with the BOLO and shall be disclosed to the officer who will react to an immediate alert. If for any reason an officer reacting to an immediate alert should not initiate an investigative detention (*e.g.*, where the license plate was included in the BOLO list because the department or any other agency wanted to be notified of the location of the subject vehicle without alerting the driver/occupants that they are the subject of law enforcement attention, such as in the case of Violent Gang or Terrorist Organization File (VGTOF) alert), to the extent feasible, the information attached to the license plate on the BOLO list shall be entered in such a way as to cause the ALPR to clearly designate an immediate alert as a "non-encounter" alert, and shall provide specific instructions to the officer as to who to notify of the alert. See Section 7, infra.

7. POLICE ACTIONS IN RESPONSE TO AN IMMEDIATE ALERT

When an officer operating a vehicle equipped with an ALPR receives an immediate alert, the officer shall take such action in response to the alert as is appropriate in the circumstances. An officer alerted to the fact that an observed motor vehicle's license plate is on the BOLO list may be required to make a reasonable effort to confirm that a wanted person is actually in the vehicle before

the officer would have a lawful basis to stop the vehicle. See State v. Parks, 288 N.J. Super. 407 (App. Div. 1996) (police do not have reasonable suspicion to justify a stop based on a computer check that shows that the operator's license of the registered owner of the vehicle is suspended unless the driver generally matches the owner's physical description (*e.g.*, age and gender)).

An officer reacting to an immediate alert shall consult the database to determine the reason why the vehicle had been placed on the BOLO list and whether the alert has been designated as a non-encounter alert. In the event of a non-encounter alert, the officer shall follow any instructions included in the alert for notifying the law enforcement or homeland security agency that had put out the BOLO. See Section 6.4, supra.

8. SECURITY OF STORED ALPR DATA

8.1 Physical Security and Limited Access

All ALPR stored data shall be kept in a secure data storage system with access restricted to authorized persons. Access to this stored data shall be limited to the purposes described in Section 10 of these Guidelines.

8.2 Differentiation of Stored Positive Alert Data From Non-Alert Data

Stored ALPR data shall be maintained electronically in such a manner as to distinguish alert data from non-alert data so as to ensure that access to and use of non-alert data and any disclosure of personal identifying information resulting from the analysis of non-alert data occurs only as may be authorized pursuant to section 10.2 of these Guidelines. Positive alert data may, as appropriate, be transferred to the appropriate active investigation file, see also Section 10.1, infra, and may as appropriate be placed into evidence in accordance with the department's evidence or records management procedures.

9. RETENTION PERIOD AND PURGING OF STORED DATA

Each law enforcement agency shall, pursuant to the provisions of Section 14 of these Guidelines, establish and enforce procedures for the retention and purging of stored ALPR data in accordance with this Section. ALPR stored data shall be retained for a period of five years, after which, the data shall be purged from the agency's data storage device or system. A law enforcement agency may purge ALPR data before the expiration of the five-year retention period only if the data has been transferred to the State Police Regional Operations Intelligence Center (R.O.I.C.)or any other system that aggregates and stores data collected by two or more law enforcement agencies in accordance with the provisions of these Guidelines. Any ALPR data transferred to another agency

shall indicate the date on which the data had been collected by the ALPR so that the receiving agency may comply with the five-year retention and purging schedule established in this Section. See also Section 11.1 and 11.2, infra.

10. LIMITATIONS ON ACCESS TO AND USE OF STORED ALPR DATA

10.1 Access to Positive Alert Data

An authorized user may access and use stored ALPR alert data as part of an active investigation or for any other legitimate law enforcement purpose, including but not limited to a post-scan BOLO query, a crime scene query, or crime trend analysis. A record shall be made of the access to the data, which may be an automated record, that documents the date of access, and the identity of the authorized user. An authorized user need not obtain approval from the chief or designated supervisor, or Attorney General or county prosecutor or designee, for each occasion on which he or she accesses and uses stored ALPR data. Once positive alert data has been accessed and transferred to an investigation file, it shall not be necessary thereafter to document further access or use of that data pursuant to these Guidelines.

10.2 Access to Non-Alert Data

Access to and use of stored non-alert ALPR data is limited to the following three purposes: a post-scan BOLO query, a crime-scene query, and crime trend analysis. An authorized user does not need to obtain approval from the chief or a designated supervisor, or Attorney General or county prosecutor or designee, for each occasion on which he or she accesses and uses stored non-alert data pursuant to this Section.

10.2.1 Post-Scan BOLO Query

A law enforcement agency is authorized to compare a post-scan BOLO list against stored ALPR data where the results of the query might reasonably lead to the discovery of evidence or information relevant to any active investigation or ongoing law enforcement operation, or where the subject vehicle might be placed on an active initial BOLO list. (For example, a law enforcement agency may review stored non-alert data to determine whether a specific vehicle was present at the time and place where the ALPR data was initially scanned for the purpose of confirming or dispelling an alibi defense, or to develop lead information for the purpose of locating a specified vehicle or person. A law enforcement agency may also check stored data to determine whether a vehicle that was only recently added to an initial BOLO list had been previously observed in the jurisdiction before it had been placed on an initial BOLO list.)

10.2.2 Crime Scene Query

a. A law enforcement agency is authorized to access and use stored non-alert data where such access might reasonably lead to the discovery of evidence or information relevant to the investigation of a specific criminal event as defined in these Guidelines. Note that if the law enforcement agency has reason to believe that a specific person or vehicle was at or near the location of the specific crime at the time of its commission, non-alert stored data might also be examined under the authority of Section 10.2.1 as part of post-scan BOLO query.

b. A crime scene query may not be conducted to review stored non-alert data based on general crime patterns (*i.e., e.g.*, to identify persons traveling in or around a "high crime area"), but rather is limited to situations involving specific criminal events as that term is defined in these Guidelines.

c. The crime scene query of non-alert stored data shall be limited in scope to stored non-alert data that is reasonably related to the specified criminal event, considering the date, time, location, and nature of the specified criminal event. For example, a crime that reasonably involves extensive planning and possible "rehearsals," such as a terrorist attack, would justify examining stored non-alert data that had been scanned and collected days or even weeks or months before the criminal event, and that may have been scanned at a substantial distance from the site of the crime or intended crime (*e.g.*, at any point along a highway leading to the intended crime site). A spontaneous crime, in contrast, might reasonably justify examination of stored non-alert data that was scanned and collected on or about the time of and in closer physical proximity to the criminal event.

d. The law enforcement agency shall document the specific crime or related crimes constituting the criminal event and the date(s) and location(s) of the specific crime(s).

10.2.3 Crime Trend Analysis

a. A law enforcement agency may access and use stored non-alert data for purposes of conducting crime trend analysis, as that term is defined in these Guidelines, when such access and analysis is approved by a designated supervisor and where such analysis is undertaken to produce analytical products that are intended to assist the agency in the performance of its duties. A designated supervisor may authorize one or more authorized users to conduct a method or methods of crime trend analysis on a repeated or continuous basis, in which event such authorization shall remain in force and effect unless and until modified or rescinded by the supervisor. A designated supervisor may also approve the use of an automated software program to analyze stored data to look for potentially suspicious activity or other anomalies that might be consistent with criminal or terrorist activity.

b. Crime trend analysis of stored non-alert data, whether automated or done manually, shall not result in the disclosure of personal identifying information to an authorized user or any other person unless:

1) the agency can point to specific and articulable facts that warrant further investigation of possible criminal or terrorist activity by the driver or occupants of a specific vehicle *(i.e.*, unusual behavior consistent with the *modus operandi* of terrorists or other criminals), and access to the personal identifying information based on those specific and articulable facts has been approved by a designated supervisor. Such approval may be given by a designated supervisor in advance when the crime trend analysis reveals the existence of specified suspicious circumstances that would warrant further investigation and that would justify disclosure of personal identifying information to the authorized user conducting the analysis under the "specific and articulable facts that warrant further investigation" standard of proof established in this Section. The supervisor shall document any and all specified suspicious circumstances for which disclosure of personal identifying information is pre-approved if those suspicious circumstances are revealed by authorized crime trend analysis. When an automated crime trend analysis computer program is used, specified suspicious circumstances that would warrant further investigation and that would justify disclosure of personal identifying information to an authorized user under this Section may also be pre-approved by a designated supervisor and built into the computer program so that if the program identifies the existence of the pre-determined suspicious circumstances, it will automatically alert the authorized user of the suspicious activity and provide to him or her the relevant personal identifying information in accordance with the "specific and articulable facts that warrant further investigation"standard of proof established in this Section; or

2) Disclosure of personal identifying information concerning any vehicle plate scanned by the ALPR is authorized by a grand jury subpoena.

c. Nothing in this Section shall be construed to prohibit a computer program from accessing and comparing personal identifying information of one or more individuals who are associated with a scanned vehicle as part of the process of analyzing stored non-alert data, provided that such personal identifying information is not disclosed to a person unless the "specific and articulable facts that warrant further investigation" standard is satisfied. The "specific and articulable facts that warrant further investigation" standard set forth in this Section applies only to the crime trend analysis of non-alert data, and nothing in this Section shall be construed to limit disclosure of personal identifying information of a person who is the registered owner of a vehicle that is on an initial or post-scan BOLO list (*i.e.*, alert data).

d. For the purposes of this Section, the "specific and articulable facts that warrant further investigation" standard required for the disclosure of personal identifying based upon crime trend

analysis of stored non-alert data is intended to be comparable to the "specific and articulable facts that warrant heightened caution" standard developed by the New Jersey Supreme Court in State v. Smith, 134 N.J. 599, 616-19 (1994) (establishing the level of individualized suspicion required before an officer may order a passenger to exit a motor vehicle stopped for a traffic violation).

e. The law enforcement agency accessing stored non-alert ALPR data for purposes of conducting crime trend analysis shall document: the nature and purpose of the crime trend analysis; the persons who accessed stored non-alert ALPR data for use in conducting that analysis; and the designated supervisor who approved access to ALPR non-alert data. In any instance where personal identifying information is disclosed based upon crime trend analysis of stored non-alert data, the agency shall document the specific and articulable facts that warrant further investigation and the designated supervisor who reviewed those facts and approved the disclosure of personal identifying information, or who pre-approved disclosure of personal identifying information based upon specified circumstances identified by an automated crime trend analysis computer program, or, where applicable, the fact that access to personal identifying information was authorized by a grand jury subpoena.

11. SHARED LAW ENFORCEMENT ACCESS TO STORED ALPR DATA

11.1 Authorization to Share and Aggregate Data

Any ALPR data that may in conformance with these Guidelines be accessed and used by the law enforcement agency that collected the data may be shared with and provided to any other law enforcement agency. Stored ALPR data may be combined with ALPR data collected by two or more law enforcement agencies (*e.g.*, collection of stored data by the State Police Regional Operations Intelligence Center), provided that such aggregated data shall only be retained, accessed, and used in accordance with the provisions of these Guidelines.

11.2 Record of Shared Access and Responsibilities of the Receiving Agency

When ALPR data is made accessible to or otherwise shared with or transferred to another law enforcement agency, the agency that collected the ALPR data shall document the identity of the other agency and the specific officer(s) or civilian employee(s) of that agency who were provided the information. When the transfer of stored ALPR data is done periodically as part of a system for aggregating data collected by two or more law enforcement agencies (*e.g.*, the scheduled and routine transmittal of data to the State Police Regional Operations Intelligence Center), each agency contributing data to the combined database shall maintain a record of the data transfer, which may be an automated record, and shall have and keep on file a memorandum of understanding or agreement or other memorialization of the arrangement for maintaining and populating a database comprised of stored ALPR data collected by multiple law enforcement agencies. Any agency

provided with access to or use of the ALPR data collected by another agency shall comply with all applicable provisions of these Guidelines concerning stored ALPR data and disclosure of personal identifying information.

13. RELEASE OF ALPR DATA TO NON-LAW ENFORCEMENT PERSONS OR AGENCIES

Stored ALPR data shall be treated as "criminal investigatory records" within the meaning of N.J.S.A. 47:1A-1 *et seq.*, and shall not be shared with or provided to any person, entity, or government agency, other than a law enforcement agency, unless such disclosure is authorized by a subpoena or court order, or unless such disclosure is required by the Rules of Court governing discovery in criminal matters. Any agency receiving a subpoena or court order for the disclosure of ALPR data shall, before complying with the subpoena or court order, provide notice to the County Prosecutor, or to the Division of Criminal Justice in the case of any state-level law enforcement agency.

14. PROMULGATION AND ENFORCEMENT OF DEPARTMENTAL POLICIES

14.1 Required Contents of Departmental Policies

Pursuant to the requirements of Attorney General Law Enforcement Directive 2010-5, every law enforcement agency that possesses or uses an ALPR must promulgate and enforce a rule, regulation, standing operating procedure, directive, or order that establishes a comprehensive policy governing the operation of ALPRs, and governing access to, use, and retention of all stored ALPR data. The ALPR policy promulgated by the department must be consistent with the standards and procedural safeguards established in these Guidelines, and each ALPR policy must include the following provisions:

a. The ALPR policy shall provide that the chief of the department will designate one or more superior officers to oversee and administer the agency's ALPR program. These designated supervisors will be authorized to: provide or oversee the training of all officers and civilian employees who are authorized to operate an ALPR or to access or use ALPR stored data; review and approve requests to access and use stored ALPR data to conduct crime trend analysis and/or to access personal identifying information based upon crime trend analysis; and generally to ensure compliance with the department's ALPR policy and these Guidelines.

b. The ALPR policy shall provide that the chief of the department shall designate all

authorized users, and that no officer or civilian employee will be authorized to operate an ALPR, or to access or use ALPR stored data, unless the officer or civilian employee has received training by the department on the proper operation of these devices, and on the provisions of the department's ALPR policy and these Guidelines.

c. The ALPR policy shall implement and enforce the five-years retention period for ALPR stored data established in Section 9 of these Guidelines, and must provide for the purging of all ALPR stored data at the expiration of the five-year term.

d. The ALPR policy shall provide for the documentation of all ALPR-related activities and decisions that are required to be documented by Section 5 or any other provision of these Guidelines, which may be done by an automated record-keeping system, and shall provide that such records documenting the use of ALPRs and ALPR stored data shall be maintained for 5 years and shall be kept in a place and in a manner as to facilitate a review and audit of the department's ALPR program by the County Prosecutor or by the Attorney General or his or her designee.

e. The ALPR policy shall provide that any sworn officer or civilian employee of the agency who knowingly violates the agency's policy, or these Guidelines, shall be subject to discipline.

f. The ALPR policy shall provide that all significant violations of the agency's policy, or of these Guidelines, including but not limited to all instances involving the unauthorized access or use of ALPR stored data, must be reported to the County Prosecutor, or to the Director of the Division of Criminal Justice in cases involving a state-level agency, upon discovery of the violation. Unless the County Prosecutor or Director elects to conduct or oversee the investigation of the violation, such notification of the violation shall be followed up with a report, approved by the chief of the department, explaining to the County Prosecutor, or to the Director, the circumstances of the violation, and the steps that are being taken to prevent future similar violations.

14.2 Notice of ALPR Policies and Revisions Provided to County Prosecutors or the Division of Criminal Justice

The chief of the department shall provide a copy of the agency's written ALPR policy to the County Prosecutor, or to the Division of Criminal Justice in the case of a state-level agency, at or before the time of promulgation, and shall provide to the County Prosecutor, or to the Division, copies of any amendments or revisions to the agency's ALPR policy at or before the time that such amendments take effect.

15. ALPR PROGRAM ACCOUNTABILITY

15.1 ALPR Program Audits

All ALPR records documenting the use of an ALPR, or access to or use of ALPR stored data, whether kept manually or by means of an automated record-keeping system, shall be subject to review and audit by the County Prosecutor, or by the Attorney General or his or her designee.

15.2 Handling of Complaints

Any complaints about a department's ALPR program made by any citizen or entity shall be forwarded to the appropriate County Prosecutor, or to the Director of the Division of Criminal Justice in the case of a State-level agency, for appropriate review and handling. The County Prosecutor, or Director, may conduct an investigation, or may direct the agency that is the subject of the complaint to conduct an investigation and to report back to the County Prosecutor or Director.

16. SANCTIONS FOR NON-COMPLIANCE

If the Attorney General or his or her designee has reason to believe that a law enforcement agency or officer or civilian employee is not complying with or adequately enforcing the provisions of these Guidelines, the Attorney General may temporarily or permanently suspend or revoke the authority of the department, or any officer or civilian employee, to operate an ALPR, or to gain access to or use ALPR stored data. The Attorney General or her designee may initiate disciplinary proceedings, and may take such other actions as the Attorney General in his or her sole discretion deems appropriate to ensure compliance with these Guidelines.

17. AUTHORITY OF ATTORNEY GENERAL TO GRANT EXEMPTIONS OR SPECIAL USE AUTHORIZATIONS

ALPRs, and all ALPR stored data, shall only be used and accessed for the purposes and in the manner authorized by these Guidelines. In recognition of the need to be able to address issues or circumstances that are not contemplated by these Guidelines, the Attorney General or his or her designee may grant an exemption from any provision of these Guidelines, and may authorize the specific use of an ALPR, or the data collected by or derived from an ALPR, that is not expressly authorized by these Guidelines. Any request by a department to use an ALPR or ALPR-generated data for a purpose or in a manner not authorized by these Guidelines shall be made to the Attorney

General or his or her designee through the Director of the Division of Criminal Justice or his or her designee, who shall make recommendations on whether to grant the agency's specific request for an exemption or special authorization. Such requests shall be made in writing unless the circumstances are exigent, in which event the request by the agency and approval or denial by the Attorney General or his or her designee may be given orally, in which event the circumstances of the request and the approval or denial shall be memorialized in writing as soon thereafter as is practicable.

GENERAL TERMS AND CONDITIONS

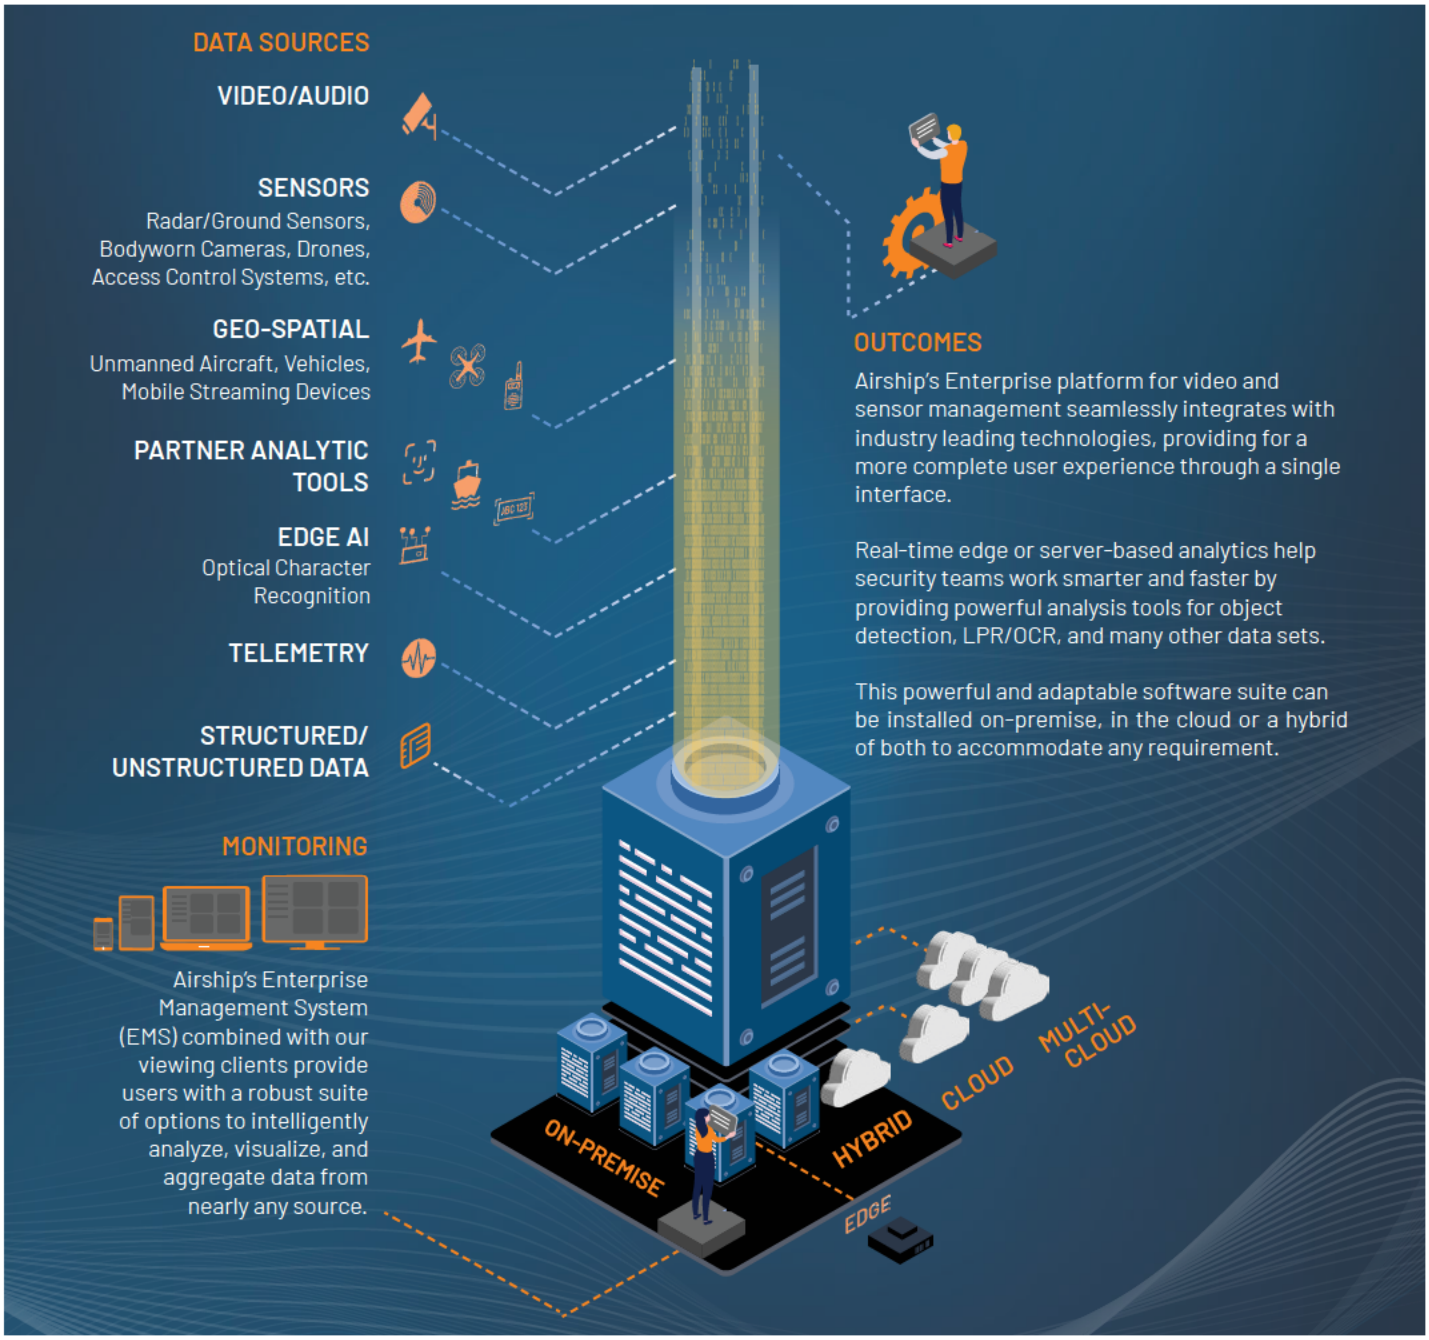
DISCLAIMER

Airship reserves the right to make adjustments to pricing, Products and Service offerings for reasons including, but not limited to, changing market conditions, Product discontinuation, Product unavailability, manufacturer price changes, supplier price changes and errors in advertisements. All orders are subject to Product availability and the availability of Personnel to perform the Services. Therefore, Seller cannot guarantee that it will be able to fulfill Customer's orders if the order is placed after quote expiration or without first consulting a sales representative prior to submitting a purchase order. If Services are being performed on a time and materials basis, any estimates provided by Seller are for planning purposes only.

VALIDITY

The prices are valid from July 01, 2022, and until further notice. All prices are in USD. All prices are manufacturer's suggested retail price (MSRP), excluding tax/VAT and shipment. Price list revision date: Dec 31, 2021.

END USER LICENSE AGREEMENT



The deployment and use of any Airship product is subject to the terms and conditions defined in the Airship End User License Agreement (EULA). Please read the EULA for full details on the terms and conditions applicable to the specific Airship product.

AIRSHIP PRODUCT PRICING

Airship's simplified deployment model utilizes camera license pricing only, w th Airship EMS and or any software components that come within the EMS AIO software stack being provided at no additional cost. Airship can either bundle the cost of support with licensing or price separately.

For those users that do not require Airship EMS, such as a small deployment of less than 64 cameras, Airship Recording Server will be provided to manage all the cameras locally, at no cost, regardless of the number of Airship Recording Server licenses being provided.

Software Ecosystem Overview

©2022 Airship Industries

AIRSHIP ADVANTAGE

Airship Advantage is Airship's customer service and support program that provides (at minimum) complete coverage of all procured Airship products and services through our US-based support center in Redmond, WA. Airship Advantage comes in two (2) different packages, depending on the level of support needed and the scope of the products and services being procured.

Each Airship Advantage package comes with unlimited updates, patches, fixes, and new Airship software releases that are released within the period of performance covered. Airship Advantage begins the day products and/or services are delivered to the customer (except when a Period of Performance is defined).

All initial purchases of Airship products and services require an Airship Advantage package to be purchased at the time of the order, covering at minimum the first year of the product and or services deployment. Airship provides single and multiple year coverage options, up to five (5) years from the initial purchase.

If, or when additional products or services are purchased after the initial Airship Advantage plan is implemented, Airship can provide pro-rated pricing for the new products and services so that they keep the same expiration date as the initial purchase. Alternatively, Airship can initiate a new coverage plan at the same or different coverage level with its own expiration date.

In the event that the customer allows the Airship Advantage coverage to lapse at any point and would like to get said products and or services back under coverage at a later date, Airship will provide a quote that covers the period of time that the products and services were out of coverage, which must be executed prior to or at the same time that the new coverage plan is instituted.

Advantage Program	Support Availability	Support Coverage
Airship Gold Support	08:00AM to 8:00PM (EST)	Lens-to-Server
Airship Platinum Support	24/7/365	Lens-to-Server

Airship Gold Support

Airship Advantage Gold provides 08:00AM to 8:00PM (EST) "lens-to-server" customer service through our 1-800 technical support telephone number. Airship Advantage Gold provides support starting at the camera or edge sensor all the way back through the network to where the Airship software is installed. Where Airship can, we will identify, diagnose, and provide insight and or assistance with how to resolve the underlying problem.

Airship Platinum Support

Airship Advantage Platinum provides 24/7/365 "lens-to-server" customer service through our 1-800 technical support telephone number. Airship Advantage Platinum provides support starting at the camera or edge sensor all the way back through the network to where the Airship software is installed, identifying, and diagnosing the problem across the entire ecosystem. Where Airship can resolve the issue, it will, regardless of whether the issue is with Airship provided products or services.

AIRSHIP CAMERA LICENSE(S)

Airship's interchangeable camera licenses allow a single device/sensor to connect to the Airship ecosystem. A single camera license is required for each newly connected device/sensor that is configured to live stream. Camera licenses are valid in perpetuity and can be reassigned as devices and sensors are replaced, as Airship does not tie licenses to device MAC addresses. Licenses are not required for cameras that are added to the system and are not actively streaming or being recorded.

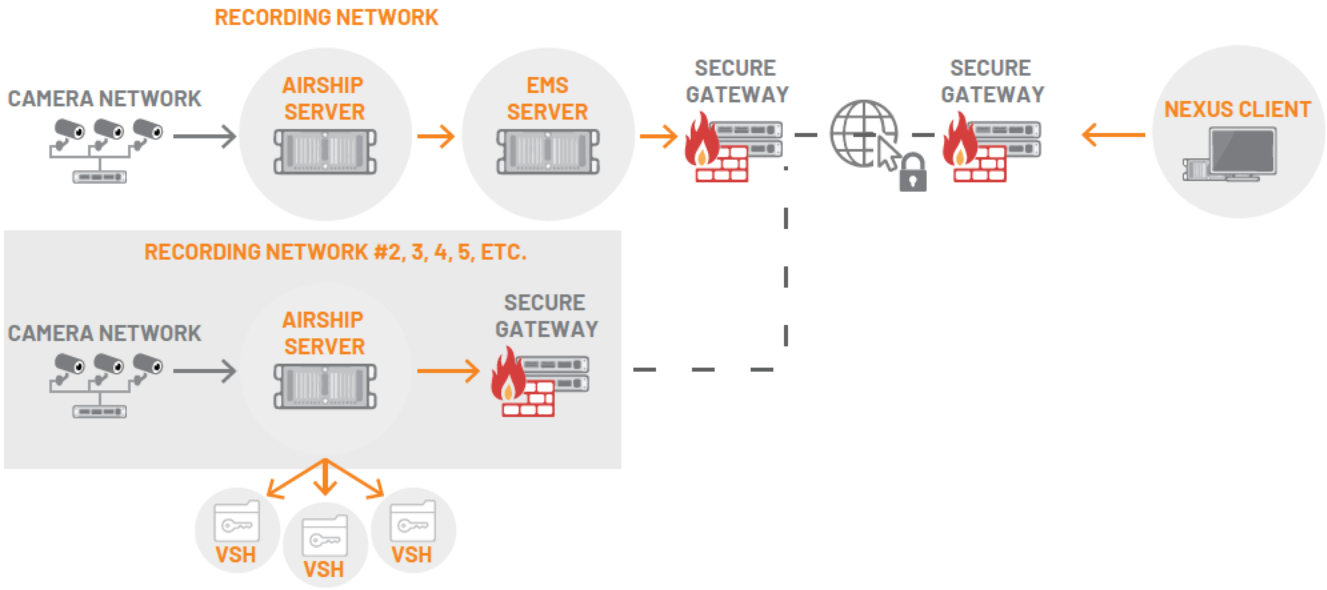
Airship camera and device licenses are offered in two (2) variations, Enterprise and Core. Airship Core licenses provide for a fully operational system for non-federated environments with standard camera and device integrations. Airship Enterprise licenses provide the same features and benefits as Professional licenses, with the additional benefits of enterprise federation, Case Management, LDAP Integration, Evidence Discover Server, advanced mapping features, and many more.

AIRSHIP ENTERPRISE MANAGEMENT SYSTEM (EMS)

Airship EMS connects unlimited cameras and devices within a single management interface, supporting single site locations, as well as global federated deployments. Airship EMS provides a simple and straight forward interface for managing cameras, devices / sensors, users, permissions, and system wide features such as fail-over and archiving, all from a wizard based graphical-user-interface (GUI).

Airship EMS is comprised of software components that can be installed physically or virtually as an all-in-one or broken out by component as desired by the customer to meet specific requirements. Airship's EMS software stack includes Airship Recording Server, Airship Nexus Video Portal, Airship Transcoding Server, Airship Relay Server, and other related components that may be required based on the customer's operating environment.

For more information about our Enterprise and Core software and licensing models please reach out to your Airship sales representative or email us at sales@airshipvms.com



©2022 Airship Industries

Airship Server

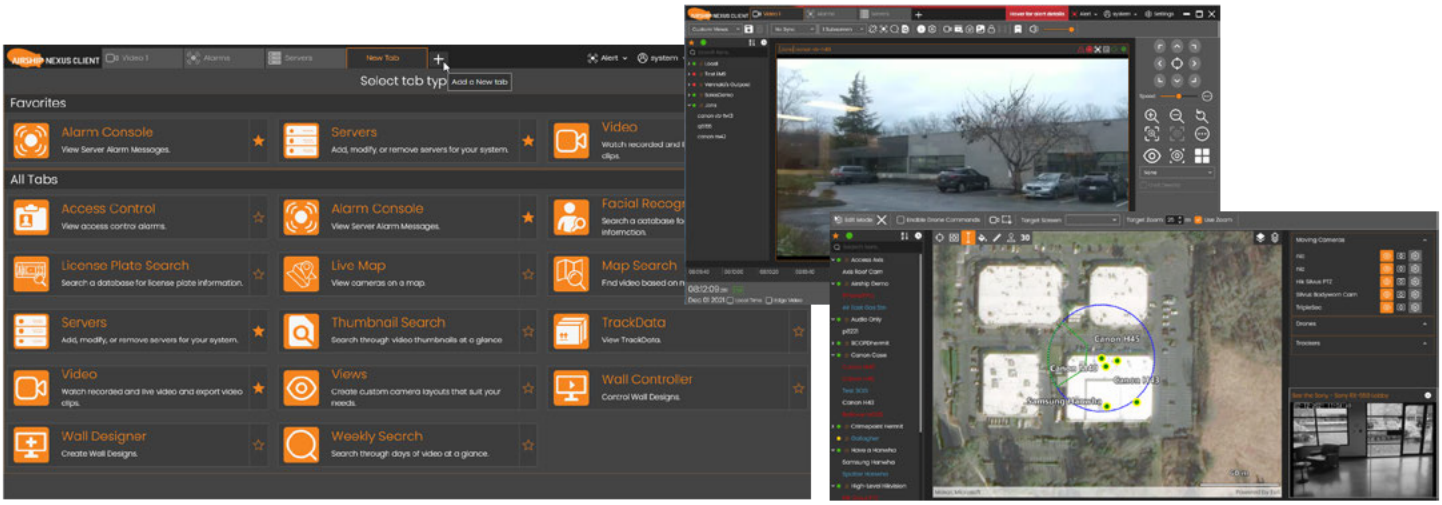
The Recording Server is central to **Airship**, as it connects to cameras, sensors, and other devices to collect and record video, audio, and meta-data for permission-based distribution. This robust software is scalable for many use cases, delivering improved video/audio monitoring in both real-time and playback situations without compromising quality.

Airship Server can be installed as a standalone system (above) or be paired with other Airship Servers in a Managed or Unmanaged fashion. With Airship Server in unmanaged mode, users, cameras, and permissions are locally managed per Server. Each Server may be added to Nexus Client and viewed from any location accessible by network.

Additionally, Virtual Server Hosts (VSH) are segregated instances within Airship Server which may have unique permissions and cameras associated with each instance, allowing for maximum compartmentalization. Servers can be installed and managed regionally in large-scale deployments to cut down on latency and local management.

EDS

In addition to our Enterprise Management Server, Airship offers the Evidence Discovery Server (EDS) as a comprehensive tool for managing digital electronic evidence in a secure on-premise or cloud-based environment.



It allows for video review by legal personnel in a scalable, isolated, and secured environment separated from the active production recording solution, preventing any possibility of compromising the active evidence collection, while allowing a user-friendly environment for full review of post-recording audio/video.

AIRSHIP CLIENT PRODUCTS

Airship Nexus Client

This feature-rich viewing client enables user to view live and recorded footage, access alarm metadata, remotely configure cameras, pan/tilt/zoom, and numerous other features essential to surveillance monitoring. Installed on a desktop computer or laptop, this Windows software requires either a direct connection to the server's network or a valid VPN connection. The goal of Nexus Client is full control of camera feeds being recorded by Airship Server, while also offering remote server configuration capability.

Automatic notifications alert your team to incidents. Nexus Client then provides you with a robust set of tools for response, including: video export, screenshots and bookmarking. Nexus Client is a reliable remote configuration tool to manage camera settings and server settings, record templates, apply alarm analytics and more in real time.

Airship Nexus Video Portal

Airship Nexus Video Portal is the thin-client version of Nexus Client, providing a feature rich interface for accessing attached sensors and devices. Nexus Video Portal runs on any Internet-enabled device, including mobile devices, without requiring any software to be installed.

Airship Nexus Mobile

Like Nexus Client, the Nexus Mobile application allows you to maintain full control of camera feeds managed by Airship Server from your iOS or Android device. PTZ presets or camera views can be called upon for quick control. Picture-in-picture mode allows users to view live footage while reviewing playback footage simultaneously while still giving full playback controls.

Users can double-tap the screen while viewing a camera to take a screenshot, or save footage as Hosted clips, available for playback on Nexus Client, Nexus Video Portal, or locally on the app. Hosted clips may also be downloaded directly to the devices' camera roll.

AIRSHIP EDGE PRODUCTS

Airship Outpost

Our Outpost AI device is a small form factor unit designed to increase high-quality data at the edge. Airship Outpost AI provides edge-based recording and encoding of video, audio, and sensor metadata from a wide range of devices. Airship Outpost AI utilizes a specialized video codec to encode and stream the edge-based sensor data back to a centrally managed server, providing a high level of efficiency and security. Outpost AI also records the native camera stream at the edge at a user defined recording profile, so that it can be retrieved physically later for evidentiary purposes or remotely pulled through the High-Resolution Download (HRDL) feature within Airship's Client software.

Airship Outpost Mobile

Airship Outpost Mobile is an installable application that runs on iOS and Android devices and can be found on Apple App Store or Google Marketplace. Outpost Mobile provides edge recording and encoding of video back to a central receive location, at a user-defined variable or fixed bit-rate, utilizing the tablet or handsets camera and microphone.

Outpost Mobile also records video locally at the edge to the tablet or handset, at a user-defined resolution and frame rate, which is then made available to the remote user via Airship's High Resolution Remote Download (HRDL) feature.

Airship Outpost Mobile is a separate licensed application, per edge deployment, and requires a corresponding Airship Camera License to receive the feed from the edge. Airship Outpost is purchased as a standalone software application and licensed for use on the system through EMS.

PRICING

AIRSHIP SOFTWARE PRICING

PART NUMBER	DESCRIPTION	PRICE
AIR-CAM-LIC-COR	Airship Core Device License. Includes Airship's Recording Server and underlying software applications required for a standard non-enterprise software deployment. Also includes standard camera and device drivers.	$200.00
AIR-CAM-LIC-ENT	Airship Enterprise Device License. Includes Airship's Enterprise Management System (EMS) application, and underlying software applications required for an enterprise software deployment. Also includes advanced device integrations, Case Management for technical operations, and Evidence Discovery Server.	$300.00
AIR-OUTPOST-MOBILE-LIC	Airship Outpost Mobile Encoder Device License. Allows connection of edge iOS or Android based device back to the Airship Enterprise Management System (EMS). Requires a managed camera license to stream, view and manage the stream.	$495.00
AIR-OUTPOST-SINGLE-LIC	Airship Outpost (software only) Single Device License. Allows connection of edge device running Outpost software back to Airship Enterprise Management System (EMS). Requires camera device license to receive and manage the stream being encoded at the edge.	$995.00
AIR-OUTPOST-MULTI-LIC	Airship Outpost (software only) Multi-Stream License. Up To eight (8) Streams. Allows connection of edge device running Outpost back to Airship Enterprise Management System (EMS). Requires matching number of camera device licenses to receive and manage the streams being encoded at the edge. All streams are individually encoded.	$2,495.00

IMPORTANT: All new software license purchases will require the purchase of Gold or Platinum Customer Care.

OUTPOST APPLIANCE PRICING

PART NUMBER	DESCRIPTION	PRICE
AIR-OUTPOST-1CH-CORE	Single Device License (Single Stream). Includes Airship Outpost running on small form factor NVIDIA edge compute device built by Airship in the US (fully NDAA compliant). Configured to run stand alone at the edge or be connected back to Airship EMS for ingest, display, and recording of video and audio recorded at the edge. Requires matching number of camera device licenses in EMS to receive and manage the streams being encoded at the edge.	$2,995.00
AIR-OUTPOST-MULTI-CORE	Multi Device License (Up to Eight Streams). Includes Airship Outpost running on small form factor NVIDIA edge compute device built by Airship in the US (fully NDAA compliant). Configured to run stand alone at the edge or be connected back to Airship EMS for ingest, display, and recording of video and audio recorded at the edge. Requires matching number of camera device licenses in EMS to receive and manage the streams being encoded at the edge.	$3,995.00
AIR-OUTPOST-1CH-AI	Single Device License (Single Stream). Includes Airship Outpost running on small form factor NVIDIA edge compute device built by Airship in the US (fully NDAA compliant). Includes AI driven edge object detection and recognition for common OCR character sets. Configured to connect back to Airship EMS for ingest, display, and recording of video and audio recorded at the edge along with edge analytic meta-data. Requires matching number of camera device licenses in EMS to receive and manage the streams being encoded at the edge.	$4,995.00

ALPR STREAM PRICING

PART NUMBER	DESCRIPTION	PRICE
AIR-ALPR-1CH	Single Device License (Single Stream). Requires EMS Server for management of video and meta-data, an ALPR Engine, as well as Nexus Client to view the meta-data results which include the OCR character set along with Make, Model, and Color for vehicles.	$700.00

NOTE: ALPR services must be renewed annually.

IMPORTANT: All new ALPR software license purchases will require the purchase of Gold or Platinum Customer Care. ALPR software requires additional hardware for operation. Contact your Airship sales representative for additional information.

ALPR SERVER PRICING

PART NUMBER	DESCRIPTION	PRICE
AIR-ALPR-5-1G	Airship ALPR Server, five (5) Camera Licenses, Requires EMS Server. Includes five (5) ALPR licenses. ALPR licenses are valid for one year from date of delivery. One year of Gold Customer care included.	$7,445.00
AIR-ALPR-10-1G	Airship ALPR Server, ten (10) Camera Licenses, Requires EMS Server. Includes five (10) ALPR licenses. ALPR licenses are valid for one year from date of delivery. One year of Gold Customer care included.	$12,175.00
AIR-ALPR-25-1G	Airship ALPR Server, twenty-five (25) Camera Licenses, Requires EMS Server. Includes five (25) ALPR licenses. ALPR licenses are valid for one year from date of delivery. One year of Gold Customer care included.	$30,135.00

NOTE: ALPR services must be renewed annually.

Massachusetts Department of State Police
Automated License Plate Recognition (ALPR) System
Memorandum of Understanding and Agreement

THIS AGREEMENT, made and entered into this _____ day of _____, 2022 by and between the Department of State Police, hereinafter referred to as "Department," and the

_____,
a public entity, hereinafter referred to as "Agency," collectively referred to as "Parties."

WHEREAS, the Department contracts the services of one or more vendors to host an Automated License Plate Recognition (ALPR) database to store ALPR data; and

WHEREAS, the Parties provide public safety services within their respective jurisdictions; and

WHEREAS, the Parties have found it to be of mutual benefit to provide for the most efficient utilization of their resources and services in the application to public safety efforts within their respective jurisdictions; and

WHEREAS, the Parties are committed to cooperation and coordination in providing the highest level of public safety services to the public, guided by the principle that performing cooperatively is in the best interest of the public; and

WHEREAS, the Agency desires to use the ALPR system contracted and managed by the Department to facilitate the storage of ALPR information generated by the Agency; and

WHEREAS, the Agency desires to share law enforcement information owned by the Agency under the conditions set forth in this Agreement.

NOW, THEREFORE, for and in consideration of the covenants contained herein, IT IS HEREBY AGREED, by and between the Parties as follows:

1. PURPOSE:

The purpose of this Agreement is to provide a standardized approach and method of storage, retention, sharing, and access of ALPR data between the Department and Public Safety Agencies hosting ALPR data on the Department's ALPR system.

2. COSTS:

The Department shall be responsible for the costs of purchasing and maintaining the ALPR system as long as such funding is available to the Department and authorized by the appropriate authorities of the Commonwealth. Participating agencies shall be responsible for the costs of purchasing, servicing, maintaining, repairing, and/or licensing the ALPR equipment used by their respective agency. The Department shall not be responsible for any costs incurred by the Agency for the purchasing, servicing, maintaining, repairing, and/or licensing of the ALPR equipment owned or used by the Agency. The Agency shall inspect the Agency's ALPR equipment on a regular basis and document each inspection. Any irregularities or malfunctions of any ALPR equipment owned by the Agency or of any ALPR information shall be reported to the Department immediately and shall be addressed and repaired by the Agency as soon as reasonably possible.

3. DATA ACCESS AND SECURITY REQUIREMENTS:

a. System Availability: The Department will work with the vendor(s) to keep the ALPR system software and servers online and available with downtime limited to necessary system maintenance activities or to any outages that are beyond the control of the Department.

b. Data Sharing: ALPR data contributed by the Agency will be accessible for official purposes to all Agencies that have entered into an ALPR Agreement with the Department. The Agency shall not otherwise share ALPR data with or provide ALPR data to any person, entity, or government agency, other than a law enforcement agency, unless such disclosure is authorized by policy or court order or unless such disclosure is required by the Massachusetts Rules of Criminal Procedure or Rules of Superior Court governing discovery in criminal matters.

c. Security Requirements: The Department and the Agency agree to enforce and maintain security requirements for the information stored in the ALPR system as specified in the Agreement. The Agency agrees that the information hosted in the ALPR system shall be used for law enforcement purposes only and that only law enforcement agency employees that have been subject to appropriate background screening shall be allowed access to the system.

   Background screenings must be fingerprint-based and include check of both the state and national criminal history repositories. If a felony conviction of any kind is found, access to ALPR system shall not be granted. The Agency agrees not to share

passwords, user logins, or allow the ALPR software to be otherwise used by Agencies who have not entered into an Agreement with the Department allowing such activity.

An employee of the Agency may operate an ALPR unit that is connected to the Department's ALPR system or access the Department's ALPR system software only if the person has been designated as an authorized user by the Chief of the Agency or designee, and has received training from the Agency or the Department on the proper use and operation of ALPRs and any policy or procedures governing the use of ALPRs and ALPR data issued or adopted by the Agency.

4. IMPLEMENTATION OF POLICY:

The Agency shall, within 30 days of execution of this Agreement, adopt the Department's General Order TRF-11 as the policy and procedure document that will govern the Agency's use of and interaction with the Department's ALPR system. The Agency agrees that it has been provided with physical or electronic copy of General Order TRF-11, has had sufficient time to read, review, and understand the document in its entirety, and agrees to be bound by the provisions contained therein. The Department agrees to inform the Agency of any updates or modifications to General Order TRF-11, and the Agency understands and agrees that any updates to General Order TRF-11 will be binding upon the Agency unless the Agency elects to terminate the Agreement and withdraw from participation in the Department's ALPR system.

5. BENEFITS TO AGENCY:

a. Data Links: The centralized storage of ALPR data will provide a solution to the problem of inaccessible or irretrievable information due to disconnected ALPR systems and the difficulty in sharing information across jurisdictional boundaries.

b. Reduction of Costs: The centralized storage of ALPR data will reduce the financial burden to the Agency that is associated with purchasing and maintaining ALPR software.

6. RECORDS AND REPORTS:

The Department protects all ALPR information as personally identifiable information (PII) because ALPR information may be combined with other information to specifically identify a unique individual. As such, all information retained in the Department's ALPR system is the sole property of the Department. The Agency agrees that information stored in the ALPR system for the Agency may be subject to disclosure under certain circumstances. The Agency will refer to the Department for review all information requests for Agency information, including, but not

limited to, public records requests, court orders, legal motions, subpoenas, and/or summonses. The Department's Legal Department shall determine the best manner of responding to all requests for Agency information.

7. RETENTION

All ALPR information obtained by the Agency from the Department's ALPR system shall be retained pursuant to the Department's General Order TRF-11.

8. AMENDMENTS:

Any changes and additions to this Agreement shall be made by written amendments to this Agreement and shall not be effective until approved in writing by the Parties. A joint review of this Agreement may be requested at any time by either of the Parties to identify needed changes, which may be amended by written mutual agreement of the Parties.

9. DURABILITY:

This Agreement shall become operational and effective upon execution by the Parties. Parties may terminate the Agreement at any time by giving written notice to the other Parties at least thirty (30) days prior to the effective date of termination. The Agreement may also be terminated by the Department without prior notice to the Agency in the event of executive, legislative, or judicial mandate which requires the unanticipated discontinuation or modification of the ALPR program. In the event of such termination, the Department will notify the Agency as soon as practicable.

10. BENEFITS:

The Parties shall agree that the provisions of this Agreement are not intended to directly benefit and shall not be enforceable by any person or entity not a party to this Agreement. This Agreement is not intended to confer any legal rights or benefits on any person or entity other than the Parties of this Agreement.

11. INDEMNIFICATIONS:

Parties shall defend, indemnify, and hold harmless every other party and its officers, agents, employees, and representatives from any and all losses, liability, damages, claims, suits, actions and administrative proceedings, and demands and all expenditures and cost relating to acts or omissions of the indemnitor, its officers, agents, or employees arising out of or incidental to the

performance of any of the provisions of this Agreement. Parties do not assume liability for the acts or omissions of persons other than their respective officers, its employees, agents, and MOU officers.

The Agency releases the Department from any liability relating to the loss or destruction of data contributed by the Agency. The Agency further releases the Department from any liability relating to the loss of the Agency's access to the ALPR system due to system outage, commercial vendor failure or malfeasance, or executive, legislative, or judicial mandate which requires the unanticipated discontinuation or modification of the ALPR program. The Agency further releases the Department from any liability relating to the release of data or information contributed by the Agency pursuant to a lawful procedure or order.

12. ASSIGNMENT PROHIBITED:

Parties to this Agreement may not assign any right or obligation pursuant to this Agreement. Any attempted or purported assignment of any right or obligation pursuant to this Agreement shall be void and of no effect.

IN WITNESS WHEREOF, the parties hereto have executed this Agreement on the date as written below.

ALL TRAFFIC
SOLUTIONS™

All Traffic Solutions

SPEED AND MESSAGE TRAILERS

AllTrafficSolutions.com

MADE IN THE USA

COMBAT YOUR TOUGHEST TRAFFIC, SAFETY AND MESSAGING CHALLENGES

With rugged, state-of-the-art trailers that are easy to maneuver as your needs change.

VERSATILITY

Our trailers are multipurpose tools that you can use to calm traffic, share information, collect traffic data, resolve speeding complaints, capture license plates, and more depending on which All Traffic Solutions (ATS) signs you choose to mount on them.

EASE OF USE

ATS trailers are thoughtfully engineered to be easy to use, transport, and deploy. The trailers feature a simple manual lever lift system for quick 1-person setup. No special equipment is needed to transport them— they can be towed by any size vehicle with a 2" receiver hitch.

RUGGED DURABILITY

Most ATS trailers are still in use after 10 or 15 years of year-round use. The continuous weld steel frame and marine-grade powder coat finish withstands heavy rain, snow, ice, and extreme temperatures without rusting.

ALPR-ready ATS 5 Trailer

SpeedAlert 18 on an ATS 3 Trailer

SpeedAlert 24 on an ATS 5 trailer

InstAlert 24 on an ATS 5 trailer

	Product Image	
ATS 3 TRAILER **Recommended Uses:** Traffic calming and sharing messages with drivers traveling at up to 45 miles per hour **Compatible Signs:** • Shield 12 and 15 radar speed signs • SpeedAlert 18 radar message sign • InstAlert 18 variable message sign		**Trailer-based Strobe Options:*** None **Dimensions:** 88.37" long × 56.43" wide × 84.4" tall **Sign Mounting:** Sign is mounted to a pole that can be rotated 360 degrees to point the sign in any desired direction
ATS 5 TRAILER **Recommended Uses:** Traffic calming and sharing messages with drivers traveling at up to 55 miles per hour **Compatible Signs:** • Shield 15 radar speed sign • SpeedAlert 18 and 24 radar message signs • InstAlert 18 and 24 variable message signs		**Trailer-based Strobe Options:*** Red and blue violator strobe bar **Dimensions:** 61.5" long x 62.5" wide x 90" tall **Sign Mounting:** Sign is stationary and forward-facing
ALPR-READY TRAILER **Recommended Uses:** Traffic calming, sharing messages with drivers traveling at up to 55 miles per hour, and capturing license plates **Compatible Signs:** • Shield 15 radar speed sign • SpeedAlert 18 and 24 radar message signs • InstAlert 18 and 24 variable message signs		**Trailer-based Strobe Options:*** Red and blue violator strobe bar **Dimensions:** 61.5" long x 62.5" wide x 90" tall **Sign Mounting:** Sign is stationary and forward-facing

AutoVu SharpV

Automatic License Plate Recognition System

Crystal clear automatic license plate recognition in all conditions

Whether you want to scan vehicles on busy roadways, or to keep track of those accessing your facilities, you need a reliable system that performs in challenging conditions. The Genetec AutoVu™ SharpV provides crisp, full HD captures at all times. Day or night, in slow local streets, or on fast multi-lane highways, you can rest easy that it's gathering the insights you need when you need it most.

The SharpV goes beyond license plate identification. Its suite of vehicle analytics supports your investigations and helps you close cases faster. And thanks to its simplified design, it can be up and running in no time, letting you focus on your mission.

Key features

- Superior performance and new analytics with high-performance onboard machine learning
- See everything clearly with two ultra-wide sensors that provide quality images and capture data across multiple lanes*
- Excellent night-time performance with high power pulsed illuminators and global shutter
- Reduce installation and maintenance costs with motorized lenses with auto-focus for remote zoom & focus configuration
- Deploy anywhere with built-in 4G/LTE cellular radio option*
- Integrate with induction loops using its onboard I/O

Key benefits

Intelligence at the Edge – With hardware-accelerated processing on-board, the SharpV doesn't rely on remote servers for analysis. This eliminates latency and reduces the impact of ALPR on your network. And since it doesn't rely on external hardware, it provides uninterrupted performance – even when connectivity is unavailable.

Simplify design & deployment – Don't limit your ability to gather necessary data based on local infrastructure. With its embedded 4G/LTE communication option, motorized lenses with auto-focus, and support for both 24Vdc and PoE++ power, deploying the SharpV is easy and free of headaches.

Tap other systems – Combine ALPR data with video surveillance, access control, and more with Genetec Security Center. Break down the silos between your systems to increase operational intelligence and situational awareness, and do more with your ALPR system.

Gather data when it matters most – Not all crimes happen in broad daylight. With its built-in illuminators, global shutter, and high-resolution sensors, the SharpV leads the industry in performance at night and in challenging conditions.

* To verify 4G/LTE and dual-lane feature availability in your region, contact your Genetec representative.

Specifications

ALPR camera sensor
1920 × 1200 @ 30 fps; monochrome; global shutter

Capture range
9–148* ft (3–45* m)

Dimensions
Height: 63 mm (2.5 in), 68.6 mm (2.7 in) high with sunshield for black version; 101.6 mm (4.0 in) high with front antenna
Width: 192 mm (7.6 in)
Length: 214 mm (8.5 in)

Weight
5.53 lb (2.51 kg)

Illuminator
Pulsed LED illuminator for effective use in 0 lux (total darkness) environments
940nm, 850nm, 740nm, and 590nm illumination wavelengths available

Context camera sensor
1920 × 1200 @ 30 fps; color; global shutter

Available color(s)
Security White / Black

Operating temperature
-40°F to 149°F (-40°C to 65°C) ambient
Storage Temperature: -40°F to 185°F (-40°C to 85°C)

On-board analytics
Vehicle type, vehicle color, speed estimation, direction of travel, virtual loop, plate origin (state and country**), etc.

Power supply
PoE++ (Power over Ethernet) 802.3bt Type 3: 27 W typical, 40 W max
24 V input option: 24 V dc +/-15%, 25 W typical consumption, 37 W max

Satellite positioning***
GPS, Glonass, Beidou, Galileo, QZSS

Sealing (water/dust protection)
IEC 60529: IP66/IP67

Still image compression
JPEG compression for ALPR and Context still images

Data interface
LAN: 1 × 10/100/1000 Base-T Ethernet port
WWAN (select models and territories): 4G/LTE Category 4

Video streaming
H.264 @ up to 30 fps

Vibration & shock
IEC 60068-2-64: 5~100Hz | 0.5 g rms
IEC 60068-2-27: 10g | 16ms half-sine
MIL-STD-810H §514.8
Category 4 – Composite two-wheeled trailer

Impact
IEC 62262: IK09

Electromagnetic immunity & emissions
FCC | ICES-003 Issue 4 | CISPR32 / EN55032 | CISPR35 / EN55035

EMC directive (CE marking)
2014/30/EU

Safety
IEC/EN 62471. Photobiological safety of lamps and lamp systems. Exempt group.

External I/Os
2 inputs / 2 outputs (opto-isolated)

Mounting
Pole and wall mount included

* Contact Genetec for additional details
** Available only for some regions and services. Talk to your Genetec representative for details.
*** Requires 4G/LTE option.

Contractors may not require any additional agreements, engagement letters, contract forms or other additional terms as part of this Contract without prior Department approval. Click on hyperlinks for definitions, instructions and legal requirements that are incorporated by reference into this Contract.

CONTRACTOR LEGAL NAME: Bain Cor Inc (and d/b/a):	DEPARTMENT NAME: Massachusetts Department of Transportation MMARS Department Code: DOT
Legal Address: (W-9, W-4,T&C): 763 South St, Holbrook, MA 02343	Business Mailing Address: 10 Park Plaza Suite 7410, Boston, MA 02116
Contract Manager: John Cordeiro	Billing Address (if different):
E-Mail: jcordeiro@baincor.com	Contract Manager: Tony Wade
Phone: 339-987-5525 Fax: 339-987-5528	E-Mail: Tony.Wade@dot.state.ma.us
Contractor Vendor Code: VC0000506451	Phone: Fax:
Vendor Code Address ID (e.g. "AD001"): AD001. (Note: The Address Id Must be set up for EFT payments.)	MMARS Doc ID(s): 111753 RFR/Procurement or Other ID Number: BD-20-1030-0P100-0P070-49476

X NEW CONTRACT

PROCUREMENT OR EXCEPTION TYPE: (Check one option only)

__ Statewide Contract (OSD or an OSD-designated Department)
__ Collective Purchase (Attach OSD approval, scope, budget)
X Department Procurement (includes State or Federal grants 815 CMR 2.00) (Attach RFR and Response or other procurement supporting documentation)
__ Emergency Contract (Attach justification for emergency, scope, budget)
__ Contract Employee (Attach Employment Status Form, scope, budget)
__ Legislative/Legal or Other: (Attach authorizing language/justification, scope and budget)

___ CONTRACT AMENDMENT

Enter Current Contract End Date *Prior* to Amendment: _____, 20___.
Enter Amendment Amount: $ _____. (or "no change")

AMENDMENT TYPE: (Check one option only. Attach details of Amendment changes.)

__ Amendment to Scope or Budget (Attach updated scope and budget)
__ Interim Contract (Attach justification for Interim Contract and updated scope/budget)
__ Contract Employee (Attach any updates to scope or budget)
__ Legislative/Legal or Other: (Attach authorizing language/justification and updated scope and budget)

The following MassDOT TERMS AND CONDITIONS (T&C) has been executed, filed with CTR and is incorporated by reference into this Contract.

X MassDOT Terms and Conditions

COMPENSATION: (Check ONE option): The Department certifies that payments for authorized performance accepted in accordance with the terms of this Contract will be supported in the state accounting system by sufficient appropriations or other non-appropriated funds, subject to intercept for MassDOT/Commonwealth owed debts under 815 CMR 9.00.
X Rate Contract (No Maximum Obligation. Attach details of all rates, units, calculations, conditions or terms and any changes if rates or terms are being amended.)
__ Maximum Obligation Contract Enter Total Maximum Obligation for total duration of this Contract (or ***new*** Total if Contract is being amended). $ _____

PROMPT PAYMENT DISCOUNTS (PPD): Commonwealth payments are issued through EFT 45 days from invoice receipt. Contractors requesting **accelerated** payments must identify a PPD as follows: Payment issued within 10 days 2 % PPD; Payment issued within 15 days _____ % PPD; Payment issued within 20 days _____ % PPD; Payment issued within 30 days _____% PPD. If PPD percentages are left blank, identify reason: __ agree to standard 45 day cycle __ statutory/legal or Ready Payments (G.L. c. 29, § 23A); __ only initial payment (subsequent payments scheduled to support standard EFT 45 day payment cycle. See Prompt Pay Discounts Policy.)

BRIEF DESCRIPTION OF CONTRACT PERFORMANCE or REASON FOR AMENDMENT: (Enter the Contract title, purpose, fiscal year(s) and a detailed description of the scope of performance or what is being amended for a Contract Amendment. Attach all supporting documentation and justifications.)
Vendors are to provide specialized Equipment, Parts & Services for Roadway Telecommunications, Intelligent Traffic systems (ITS), Integrated Project Control Systems (IPCS)

ANTICIPATED START DATE: (Complete ONE option only) The Department and Contractor certify for this Contract, or Contract Amendment, that Contract obligations:

__ 1. may be incurred as of the Effective Date (latest signature date below) and **no** obligations have been incurred **prior** to the Effective Date.
__ 2. may be incurred as of _____, 20__, a date **LATER** than the Effective Date below and **no** obligations have been incurred **prior** to the Effective Date.
X 3. were incurred as of **July 1, 2020**, a date **PRIOR** to the Effective Date below, and the parties agree that payments for any obligations incurred prior to the Effective Date are authorized to be made either as settlement payments or as authorized reimbursement payments, and that the details and circumstances of all obligations under this Contract are attached and incorporated into this Contract. Acceptance of payments forever releases the Commonwealth and MassDOT from further claims related to these obligations.

CONTRACT END DATE: Contract performance shall terminate as of **June 30, 2025**, with no new obligations being incurred after this date unless the Contract is properly amended, provided that the terms of this Contract and performance expectations and obligations shall survive its termination for the purpose of resolving any claim or dispute, for completing any negotiated terms and warranties, to allow any close out or transition performance, reporting, invoicing or final payments, or during any lapse between amendments.

CERTIFICATIONS: Notwithstanding verbal or other representations by the parties, the **"Effective Date"** of this Contract or Amendment shall be the latest date that this Contract or Amendment has been executed by an authorized signatory of the Contractor, the Department, or a later Contract or Amendment Start Date specified above, subject to any required approvals. The Contractor makes all certifications required under the attached Contractor Certifications (incorporated by reference if not attached hereto) under the pains and penalties of perjury, agrees to provide any required documentation upon request to support compliance, and agrees that all terms governing performance of this Contract and doing business in Massachusetts are attached or incorporated by reference herein according to the following hierarchy of document precedence, the MassDOT Terms and Conditions http://transnet/docs/ComApp/MassDOTTermsandConditions.doc, this Standard Contract Form including the Instructions and Contractor Certifications, the Request for Response (RFR) or other solicitation, the Contractor's Response, and additional negotiated terms, provided that additional negotiated terms will take precedence over the relevant terms in the RFR and the Contractor's Response only if made using the process outlined in 801 CMR 21.07, incorporated herein, provided that any amended RFR or Response terms result in best value, lower costs, or a more cost effective Contract.

AUTHORIZING SIGNATURE FOR THE CONTRACTOR:

X: John Cordeiro Date: 8/6/2020
(Signature and Date Must Be Handwritten At Time of Signature)
Print Name: JOHN CORDEIRO
Print Title: Vice President

AUTHORIZING SIGNATURE FOR MassDOT:

X: Joseph C. Foti Digitally signed by Joseph C. Foti Date: 2020.08.11 07:29:57 -04'00' Date:
(Signature and Date Must Be Handwritten At Time of Signature)
Print Name: Joseph Foti
Print Title: Deputy Administrator/Chief of Operations

INSTRUCTIONS AND CONTRACTOR CERTIFICATIONS

The following instructions and terms are incorporated by reference and apply to this Standard Contract Form. Text that appears underlined indicates a "hyperlink" to an internet or bookmarked site and are unofficial versions of these documents and Departments and Contractors should consult with their legal counsel to ensure compliance with all legal requirements. Using the Web Toolbar will make navigation between the form and the hyperlinks easier. Please note that not all applicable laws have been cited.

CONTRACTOR LEGAL NAME (AND D/B/A): Enter the **Full Legal Name** of the Contractor's business as it appears on the Contractor's W-9 or W-4 Form (Contract Employees only) **and** the MassDOT Terms and Conditions If Contractor also has a "doing business as" (d/b/a) name, BOTH the legal name and the "d/b/a" name must appear in this section.

Contractor Legal Address: Enter the Legal Address of the Contractor as it appears on the Contractor's W-9 or W-4 Form (Contract Employees only) **and** the MassDOT Terms and Conditions, which must match the legal address on the 1099I table in MMARS (or the Legal Address in HR/CMS for Contract Employee).

Contractor Contract Manager: Enter the authorized Contract Manager who will be responsible for managing the Contract. The Contract Manager should be an Authorized Signatory or, at a minimum, a person designated by the Contractor to represent the Contractor, receive legal notices and negotiate ongoing Contract issues. The Contract Manager is considered "Key Personnel" and may not be changed without the prior written approval of the Department. If the Contract is posted on COMMBUYS, the name of the Contract Manager must be included in the Contract on COMMBUYS.

Contractor E-Mail Address/Phone/Fax: Enter the electronic mail (e-mail) address, phone and fax number of the Contractor Contract Manager. This information must be kept current by the Contractor to ensure that the Department can contact the Contractor and provide any required legal notices. Notice received by the Contract Manager (with confirmation of actual receipt) through the listed address, fax number(s) or electronic mail address will meet any written legal notice requirements.

Contractor Vendor Code: The Department must enter the MMARS **Vendor Code** assigned by the Commonwealth. If a Vendor Code has not yet been assigned, leave this space blank and the Department will complete this section when a Vendor Code has been assigned. The Department is responsible under the Vendor File and W-9s Policy for verifying with authorized signatories of the Contractor, as part of contract execution, that the legal name, address and Federal Tax Identification Number (TIN) in the Contract documents match the state accounting system.

Vendor Code Address ID: (e.g., "AD001") The Department must enter the MMARS Vendor Code Address Id identifying the payment remittance address for Contract payments, which MUST be set up for EFT payments PRIOR to the first payment under the Contract in accordance with the Bill Paying and Vendor File and W-9 policies.

COMMONWEALTH DEPARTMENT NAME: Enter the full Department name with the authority to obligate funds encumbered for the Contract.

Commonwealth MMARS Alpha Department Code: Enter the three (3) letter MMARS Code assigned to this Commonwealth Department in the state accounting system.

Department Business Mailing Address: Enter the address where all formal correspondence to the Department must be sent. Unless otherwise specified in the Contract, legal notice sent or received by the Department's Contract Manager (with confirmation of actual receipt) through the listed address, fax number(s) or electronic mail address for the Contract Manager will meet any requirements for legal notice.

Department Billing Address: Enter the Billing Address or email address if invoices must be sent to a different location. Billing or confirmation of delivery of performance issues should be resolved through the listed Contract Managers.

Department Contract Manager: Identify the authorized Contract Manager who will be responsible for managing the Contract, who should be an authorized signatory or an employee designated by the Department to represent the Department to receive legal notices and negotiate ongoing Contract issues.

Department E-Mail Address/Phone/Fax: Enter the electronic mail (e-mail) address, phone and fax number of the Department Contract Manager. Unless otherwise specified in the Contract, legal notice sent or received by the Contract Manager (with confirmation of actual receipt) through the listed address, fax number(s) or electronic mail address will meet any requirements for written notice under the Contract.

MMARS Document ID(s): Enter the MMARS 20 character encumbrance transaction number associated with this Contract which must remain the same for the life of the Contract. If multiple numbers exist for this Contract, identify all Doc Ids.

RFR/Procurement or Other ID Number or Name: Enter the Request for Response (RFR) or other Procurement Reference number, Contract ID Number or other reference/tracking number for this Contract or Amendment and will be entered into the Board Award Field in the MMARS encumbrance transaction for this Contract.

NEW CONTRACTS (left side of Form):

Complete this section ONLY if this Contract is brand new. (Complete the CONTRACT AMENDMENT section for any material changes to an existing or an expired Contract, and for exercising options to renew or annual contracts under a multi-year procurement or grant program.)

PROCUREMENT OR EXCEPTION TYPE: Check the appropriate type of procurement or exception for this Contract. Only one option can be selected. See State Finance Law and General Requirements, Acquisition Policy and Fixed Assets, the Commodities and Services Policy and the Procurement Information Center (Department Contract Guidance) for details.

Statewide Contract (OSD or an OSD-designated Department). Check this option for a Statewide Contract under OSD, or by an OSD-designated Department.

Collective Purchase approved by OSD. Check this option for Contracts approved by OSD for collective purchases through federal, state, local government or other entities.

Department Contract Procurement. Check this option for a Department procurement including state grants and federal sub-grants under 815 CMR 2.00 and State Grants and Federal Subgrants Policy, Departmental Master Agreements (MA). If multi-Department user Contract, identify multi-Department use is allowable in Brief Description.

Emergency Contract. Check this option when the Department has determined that an unforeseen crisis or incident has arisen which requires or mandates immediate purchases to avoid substantial harm to the functioning of government or the provision of necessary or mandated services or whenever the health, welfare or safety of clients or other persons or serious damage to property is threatened.

Contract Employee. Check this option when the Department requires the performance of an Individual Contractor, and when the planned Contract performance with an Individual has been classified using the Employment Status Form (prior to the Contractor's selection) as work of a Contract Employee and not that of an Independent Contractor.

Legislative/Legal or Other. Check this option when legislation, an existing legal obligation, prohibition or other circumstance exempts or prohibits a Contract from being competitively procured, or identify any other procurement exception not already listed. Legislative "earmarks" exempt the Contract solely from procurement requirements, and all other Contract and state finance laws and policies apply. Supporting documentation must be attached to explain and justify the exemption.

CONTRACT AMENDMENT (Right Side of Form)

Complete this section for any Contract being renewed, amended or to continue a lapsed Contract. All Contracts with available options to renew must be amended referencing the original procurement and Contract doc ids, since all continuing contracts must be maintained in the same Contract file (even if the underlying appropriation changes each fiscal year.) "See Amendments, Suspensions, and Termination Policy.)

Enter Current Contract End Date: Enter the termination date of the Current Contract being amended, even if this date has already passed. (Note: Current Start Date is not requested since this date does not change and is already recorded in MMARS.)

Enter Amendment Amount: Enter the amount of the Amendment increase or decrease to a Maximum Obligation Contract. Enter "no change" for Rate Contracts or if no change.

AMENDMENT TYPE: Identify the type of Amendment being done. Documentation supporting the updates to performance and budget must be attached. **Amendment to Scope or Budget.** Check this option when renewing a Contract or executing any Amendment ("material change" in Contract terms) even if the Contract has lapsed. The parties may negotiate a change in any element of Contract performance or cost identified in the RFR or the Contractor's response which results in lower costs, or a more cost-effective or better value performance than was presented in the original selected response, provided the negotiation results in a better value within the scope of the RFR than what was proposed by the Contractor in the original selected response. Any "material" change in the Contract terms must be memorialized in a formal Amendment even if a corresponding MMARS transaction is not needed to support the change. Additional negotiated terms will take precedence over the relevant terms in the RFR and the Contractor's Response only if made using the process outlined in 801 CMR 21.07, incorporated herein, provided that any amended RFR or Response terms result in best value, lower costs, or a more cost effective Contract.

Interim Contracts. Check this option for an Interim Contract to prevent a lapse of Contract performance whenever an existing Contract is being re-procured but the new procurement has not been completed, to bridge the gap during implementation between an expiring and a new procurement, or to contract with an interim Contractor when a current Contractor is unable to complete full performance under a Contract.

Contract Employee. Check this option when the Department requires a renewal or other amendment to the performance of a Contract Employee.

Legislative/Legal or Other. Check this option when legislation, an existing legal obligation, prohibition or other circumstance exempts or prohibits a Contract from being competitively procured, or identify any other procurement exception not already listed. Legislative "earmarks" exempt the Contract solely from procurement requirements, and all other Contract and state finance laws and policies apply. Attach supporting documentation to explain and justify the exemption and whether Contractor selection has been publicly

posted.

MASSDOT TERMS AND CONDITIONS

The MassDOT Terms and Conditions has been executed by the Contractor and is incorporated by reference into this Contract. This Form is signed only once and recorded on the Vendor Customer File (VCUST). See Vendor File and W-9s Policy.

COMPENSATION

Identify if the Contract is a **Rate Contract** (with no stated Maximum Obligation) or a **Maximum Obligation Contract** (with a stated Maximum Obligation) and identify the Maximum Obligation. If the Contract is being amended, enter the new Maximum Obligation based upon the increase or decreasing Amendment. The Total Maximum Obligation must reflect the total funding for the dates of service under the contract, including the Amendment amount if the Contract is being amended. The Maximum Obligation must match the MMARS encumbrance. Funding and allotments must be verified as available and encumbered prior to incurring obligations. If a Contract includes both a Maximum Obligation component and Rate Contract component, check off both, specific Maximum Obligation amounts or amended amounts and Attachments must clearly outline the Contract breakdown to match the encumbrance.

PAYMENTS AND PROMPT PAY DISCOUNTS

Payments are processed within a 45 day payment cycle through EFT in accordance with the Commonwealth Bill Paying Policy for investment and cash flow purposes. Departments may NOT negotiate accelerated payments and Payees are NOT entitled to accelerated payments UNLESS a prompt payment discount (PPD) is provided to support the Commonwealth's and MassDOT's loss of investment earnings for this earlier payment, or unless a payments is legally mandated to be made in less than 45 days (e.g., construction contracts, Ready Payments under G.L. c. 29, s. 23A). See Prompt Pay Discounts Policy. PPD are identified as a percentage discount which will be automatically deducted when an accelerated payment is made. Reduced contracts rates may not be negotiated to replace a PPD. If PPD fields are left blank please identify that the Contractor agrees to the standard 45 day cycle; a statutory/legal exemption such as Ready Payments (G.L. c. 29, § 23A); or only an initial accelerated payment for reimbursements or start up costs for a grant, with subsequent payments scheduled to support standard EFT 45 day payment cycle. Financial hardship is not a sufficient justification to accelerate cash flow for *all* payments under a Contract. Initial grant or contract payments may be accelerated for the *first* invoice or initial grant installment, but subsequent periodic installments or invoice payments should be scheduled to support the Payee cash flow needs and the standard 45 day EFT payment cycle in accordance with the Bill Paying Policy. Any accelerated payment that does not provide for a PPD must have a legal justification in Contract file for audit purposes explaining why accelerated payments were allowable without a PPD.

BRIEF DESCRIPTION OF CONTRACT PERFORMANCE

Enter a brief description of the Contract performance, project name and/or other identifying information for the Contract to specifically identify the Contract performance, match the Contract with attachments, determine the appropriate expenditure code (as listed in the Expenditure Classification Handbook) or to identify or clarify important information related to the Contract such as the Fiscal Year(s) of performance (ex. "FY2012" or "FY2012-14"). Identify settlements or other exceptions and attach more detailed justification and supporting documents. Enter "Multi-Department Use" if other Departments can access procurement. For Amendments, identify the purpose and what items are being amended. Merely stating "see attached" or referencing attachments without a narrative description of performance is insufficient.

ANTICIPATED START DATE

The Department and Contractor must certify WHEN obligations under this Contract/Amendment may be incurred. Option 1 is the default option when performance may begin as of the Effective Date (latest signature date and any required approvals). If the parties want a new Contract or renewal to begin as of the upcoming fiscal year then list the fiscal year(s) (ex. "FY2012" or "FY2012-14") in the Brief Description section. Performance starts and encumbrances reflect the default Effective Date (if no FY is listed) or the later FY start date (if a FY is listed). Use Option 2 only when the Contract will be signed well in advance of the start date and identify a specific future start date. Do not use Option 2 for a fiscal year start unless it is certain that the Contract will be signed prior to fiscal year. Option 3 is used in lieu of the Settlement and Release Form when the Contract/Amendment is signed late, and obligations have already been incurred by the Contractor prior to the Effective Date for which the Department has either requested, accepted or deemed legally eligible for reimbursement, and the Contract includes supporting documents justifying the performance or proof of eligibility, and approximate costs. Any obligations incurred outside the scope of the Effective Date under any Option listed, even if the incorrect Option is selected, shall be automatically deemed a settlement included under the terms of the Contract and upon payment to the Contractor will release the Commonwealth and MassDOT from further obligations for the identified performance. All settlement payments require justification and must be under same encumbrance and object codes as the Contract payments. Performance dates are subject to G.L. c.4, § 9.

CONTRACT END DATE

The Department must enter the date that Contract performance will terminate. **If the Contract is being amended and the Contract End Date is not changing, this date must be re-entered again here.** A Contract must be signed for at least the initial duration but not longer than the period of procurement listed in the RFR, or other solicitation document (if applicable). No new performance is allowable beyond the end date without an amendment, but the Department may allow a Contractor to complete minimal close out performance obligations if substantial performance has been made prior to the termination date of the Contract and prior to the end of the fiscal year in which payments are appropriated, provided that any close out performance is subject to appropriation and funding limits under state finance law, and CTR may adjust encumbrances and payments in the state accounting system to enable final close out payments. Performance dates are subject to G.L. c.4, § 9.

CERTIFICATIONS AND EXECUTION

See Department Head Signature Authorization Policy and the Contractor Authorized Signatory Listing for policies on Contractor and Department signatures.

Authorizing Signature for Contractor/Date: The Authorized Contractor Signatory must (in their own handwriting and in ink) sign AND enter the date the Contract is signed. See section above under "Anticipated Contract Start Date". Acceptance of payment by the Contractor shall waive any right of the Contractor to claim the Contract/Amendment is not valid and the Contractor may not void the Contract. **Rubber stamps, typed or other images are not acceptable.** Proof of Contractor signature authorization on a **Contractor Authorized Signatory Listing** may be required by the Department if not already on file.

Contractor Name /Title: The Contractor Authorized Signatory's name and title must appear legibly as it appears on the **Contractor Authorized Signatory Listing**.

Authorizing Signature For Department/Date: The Authorized Department Signatory must (in their own handwriting and in ink) sign AND enter the date the Contract is signed. See section above under "Anticipated Start Date". **Rubber stamps, typed or other images are not accepted.** The Authorized Signatory must be an employee within the Department legally responsible for the Contract. See Department Head Signature Authorization. The Department must have the legislative funding appropriated for all the costs of this Contract or funding allocated under an approved Interdepartmental Service Agreement (ISA). A Department may not contract for performance to be delivered to or by another state department without specific legislative authorization (unless this Contract is a Statewide Contract). For Contracts requiring Secretariat signoff, evidence of Secretariat signoff must be included in the Contract file.

Department Name /Title: Enter the Authorized Signatory's name and title legibly.

CONTRACTOR CERTIFICATIONS AND LEGAL REFERENCES

Notwithstanding verbal or other representations by the parties, the "Effective Date" of this Contract or Amendment shall be the latest date that this Contract or Amendment has been executed by an authorized signatory of the Contractor, the Department, or a later Contract or Amendment Start Date specified, subject to any required approvals. The Contractor makes all certifications required under this Contract under the pains and penalties of perjury, and agrees to provide any required documentation upon request to support compliance, and agrees that all terms governing performance of this Contract and doing business in Massachusetts are attached or incorporated by reference herein:

MassDOT and Contractor Ownership Rights. The Contractor certifies and agrees that MassDOT is entitled to ownership and possession of all "deliverables" purchased or developed with Contract funds. A Department may not relinquish rights to deliverables nor may Contractors sell products developed with MassDOT resources without just compensation. The Contract should detail all MassDOT deliverables and ownership rights and any Contractor proprietary rights.

Qualifications. The Contractor certifies it is qualified and shall at all times remain qualified to perform this Contract; that performance shall be timely and meet or exceed industry standards for the performance required, including obtaining requisite licenses, registrations, permits, resources for performance, and sufficient professional, liability; and other appropriate insurance to cover the performance. If the Contractor is a business, the Contractor certifies that it is listed under the Secretary of State's website as licensed to do business in Massachusetts, as required by law.

Business Ethics and Fraud, Waste and Abuse Prevention. The Contractor certifies that performance under this Contract, in addition to meeting the terms of the Contract, will be made using ethical business standards and good stewardship of taxpayer and other public funding and resources to prevent fraud, waste and abuse.

Collusion. The Contractor certifies that this Contract has been offered in good faith and without collusion, fraud or unfair trade practices with any other person, that any actions to avoid or frustrate fair and open competition are prohibited by law, and shall be grounds for rejection or disqualification of a Response or termination of this Contract.

Public Records and Access The Contractor shall provide full access to records related to performance and compliance to the Department and officials listed under Executive Order 195 and G.L. c. 11, s.12 seven (7) years beginning on the first day after the final payment

under this Contract or such longer period necessary for the resolution of any litigation, claim, negotiation, audit or other inquiry involving this Contract. Access to view Contractor records related to any breach or allegation of fraud, waste and/or abuse may not be denied and Contractor can not claim confidentiality or trade secret protections solely for viewing but not retaining documents. Routine Contract performance compliance reports or documents related to any alleged breach or allegation of non-compliance, fraud, waste, abuse or collusion may be provided electronically and shall be provided at Contractor's own expense. Reasonable costs for copies of non-routine Contract related records shall not exceed the rates for public records under 950 C.M.R. 32.00.

Debarment. The Contractor certifies that neither it nor any of its subcontractors are currently debarred or suspended by the federal or state government under any law or regulation including, Executive Order 147; G.L. c. 29, s. 29F G.L. c.30, § 39R, G.L. c.149, § 27C, G.L. c.149, § 44C, G.L. c.149, § 148B and G.L. c. 152, s. 25C.

Applicable Laws. The Contractor shall comply with all applicable state laws and regulations including but not limited to the applicable Massachusetts General Laws; the Official Code of Massachusetts Regulations; Code of Massachusetts Regulations (unofficial); 801 CMR 21.00 (Procurement of Commodity and Service Procurements, Including Human and Social Services); 815 CMR 2.00 (Grants and Subsidies); 808 CMR 1.00 (Compliance, Reporting and Auditing for Human And Social Services); AICPA Standards; confidentiality of Department records under G.L. c. 66A; and the Massachusetts Constitution Article XVIII if applicable.

Invoices. The Contractor must submit invoices in accordance with the terms of the Contract and the Commonwealth Bill Paying Policy. Contractors must be able to reconcile and properly attribute concurrent payments from multiple Departments. Final invoices in any fiscal year must be submitted no later than August 15th for performance made and received (goods delivered, services completed) prior to June 30th, in order to make payment for that performance prior to the close of the fiscal year to prevent reversion of appropriated funds. Failure to submit timely invoices by August 15th or other date listed in the Contract shall authorize the Department to issue an estimated payment based upon the Department's determination of performance delivered and accepted. The Contractor's acceptance of this estimated payment releases the Commonwealth and MassDOT from further claims for these invoices. If budgetary funds revert due to the Contractor's failure to submit timely final invoices, or for disputing an estimated payment, the Department may deduct a penalty up to 10% from any final payment in the next fiscal year for failure to submit timely invoices.

Payments Subject To Appropriation. Pursuant to G.L. c. 29 § 26, § 27 and § 29, Departments are required to expend funds only for the purposes set forth by the Legislature and within the funding limits established through appropriation, allotment and subsidiary, including mandated allotment reductions triggered by G.L. c. 29, § 9C. A Department cannot authorize or accept performance in excess of an existing appropriation and allotment, or sufficient non-appropriated available funds. Any oral or written representations, commitments, or assurances made by the Department or any other Commonwealth representative are not binding. The Commonwealth and MassDOT have no legal obligation to compensate a Contractor for performance that is not requested and is intentionally delivered by a Contractor outside the scope of a Contract. Contractors should verify funding prior to beginning performance.

Intercept. Contractors may be registered as Customers in the Vendor file if the Contractor owes a Commonwealth debt. Unresolved and undisputed debts, and overpayments of Contract payments that are not reimbursed timely shall be subject to intercept pursuant to G.L. c. 7A, s. 3 and 815 CMR 9.00. Contract overpayments will be subject to immediate intercept or payment offset. The Contractor may not penalize any state Department or assess late fees, cancel a Contract or other services if amounts are intercepted or offset due to recoupment of an overpayment, outstanding taxes, child support, other overdue debts or Contract overpayments.

Tax Law Compliance. The Contractor certifies under the pains and penalties of perjury tax compliance with Federal tax laws; state tax laws including but not limited to G.L. c. 62C, G.L. c. 62C, s. 49A; compliance with all state tax laws, reporting of employees and contractors, withholding and remitting of tax withholdings and child support and is in good standing with respect to all state taxes and returns due; reporting of employees and contractors under G.L. c. 62E, withholding and remitting child support including G.L. c. 119A, s. 12; TIR 05-11; New Independent Contractor Provisions and applicable TIRs.

Bankruptcy, Judgments, Potential Structural Changes, Pending Legal Matters and Conflicts. The Contractor certifies it has not been in bankruptcy and/or receivership within the last three calendar years, and the Contractor certifies that it will immediately notify the Department in writing **at least 45 days prior** to filing for bankruptcy and/or receivership, any potential structural change in its organization, or if there is **any risk** to the solvency of the Contractor that may impact the Contractor's ability to timely fulfill the terms of this Contract or Amendment. The Contractor certifies that at any time during the period of the Contract the Contractor is required to affirmatively disclose in writing to the Department Contract Manager the details of any judgment, criminal conviction, investigation or litigation pending against the Contractor or any of its officers, directors, employees, agents, or subcontractors, including any potential conflicts of interest of which the Contractor has knowledge, or learns of during the Contract term. Law firms or Attorneys providing legal services are required to identify any potential conflict with representation of any Department client in accordance with Massachusetts Board of Bar Overseers (BBO) rules.

Federal Anti-Lobbying and Other Federal Requirements. If receiving federal funds, the Contractor certifies compliance with federal anti-lobbying requirements including 31 USC 1352; other federal requirements; Executive Order 11246; Air Pollution Act; Federal Water Pollution Control Act and Federal Employment Laws.

Protection of Personal Data and Information. The Contractor certifies that all steps will be taken to ensure the security and confidentiality of all Commonwealth/MassDOT data for which the Contractor becomes a holder, either as part of performance or inadvertently during performance, with special attention to restricting access, use and disbursement of personal data and information under G.L. c. 93H and c. 66A and Executive Order 504. The Contractor is required to comply with G.L. c. 93I for the proper disposal of all paper and electronic media, backups or systems containing personal data and information, provided further that the Contractor is required to ensure that any personal data or information transmitted electronically or through a portable device be properly encrypted using (at a minimum) Information Technology Division (ITD) Protection of Sensitive Information, provided further that any Contractor having access to credit card or banking information of Commonwealth/MassDOT customers certifies that the Contractor is PCI compliant in accordance with the Payment Card Industry Council Standards and shall provide confirmation compliance during the Contract, provide further that the Contractor shall immediately notify the Department in the event of any security breach including the unauthorized access, disbursement, use or disposal of personal data or information, and in the event of a security breach, the Contractor shall cooperate fully with the Commonwealth/MassDOT and provide access to any information necessary for the Commonwealth/MassDOT to respond to the security breach and shall be fully responsible for any damages associated with the Contractor's breach including but not limited to G.L. c. 214, s. 3B.

Corporate and Business Filings and Reports. The Contractor certifies compliance with any certification, filing, reporting and service of process requirements of the Secretary of the Commonwealth, the Office of the Attorney General or other Departments as related to its conduct of business in the Commonwealth; and with its incorporating state (or foreign entity).

Employer Requirements. Contractors that are employers certify compliance with applicable state and federal employment laws or regulations, including but not limited to G.L. c. 5, s. 1 (Prevailing Wages for Printing and Distribution of Public Documents); G.L. c. 7, s. 22 (Prevailing Wages for Contracts for Meat Products and Clothing and Apparel); minimum wages and prevailing wage programs and payments; unemployment insurance and contributions; workers' compensation and insurance, child labor laws, AGO fair labor practices; G.L. c. 149 (Labor and Industries); G.L. c. 150A (Labor Relations); G.L. c. 151 and 455 CMR 2.00 (Minimum Fair Wages); G.L. c. 151A (Employment and Training); G.L. c. 151B (Unlawful Discrimination); G.L. c. 151E (Business Discrimination); G.L. c. 152 (Workers' Compensation); G.L. c.153 (Liability for Injuries); 29 USC c. 8 (Federal Fair Labor Standards); 29 USC c. 28 and the Federal Family and Medical Leave Act.

Federal And State Laws And Regulations Prohibiting Discrimination including but not limited to the Federal Equal Employment Oppurtunity (EEO) Laws the Americans with Disabilities Act.; 42 U.S.C Sec. 12,101, et seq., the Rehabilitation Act, 29 USC c. 16 s. 794; 29 USC c. 16, s. 701; 29 USC c. 14, 623; the 42 USC c. 45; (Federal Fair Housing Act); G. L. c. 151B (Unlawful Discrimination); G.L. c. 151E (Business Discrimination); the Public Accommodations Law G.L. c. 272, s. 92A; G.L. c. 272, s. 98 and 98A, Massachusetts Constitution Article CXIV and G.L. c. 93, s. 103; 47 USC c. 5, sc. II, Part II, s. 255 (Telecommunication Act; Chapter 149, Section 105D, G.L. c. 151C, G.L. c. 272, Section 92A, Section 98 and Section 98A, and G.L. c. 111, Section 199A, and Massachusetts Disability-Based Non-Discrimination Standards For Executive Branch Entities, and related Standards and Guidance, authorized under Massachusetts Executive Order or any disability-based protection arising from state or federal law or precedent. See also MCAD and MCAD links and Resources.

Small Business Purchasing Program (SBPP). A Contractor may be eligible to participate in the SBPP, created pursuant to Executive Order 523, if qualified through the SBPP COMMBUYS subscription process at: www.commbuys.com and with acceptance of the terms of the SBPP participation agreement.

Limitation of Liability for Information Technology Contracts (and other Contracts as Authorized). The Information Technology Mandatory Specifications and the IT Acquisition Accessibility Contract Language are incorporated by reference into Information Technology Contracts. The following language will apply to Information Technology contracts in the U01, U02, U03, U04, U05, U06, U07, U08, U09, U10, U75, U98 object codes in the Expenditure Classification Handbook or other Contracts as approved by CTR or OSD. Pursuant to Section 11. Indemnification of the MassDOT Terms and Conditions, the term "other damages" shall include, but shall not be limited to, the reasonable costs the Commonwealth/MassDOT incurs to repair, return, replace or seek cover (purchase of comparable substitute commodities and services) under a Contract. "Other damages" shall not include damages to the Commonwealth/MassDOT as a result of third party claims, provided, however, that the foregoing in no way limits the Commonwealth's or MassDOT's right of recovery for personal injury or property damages or patent and copyright

infringement under Section 11 nor the Commonwealth's/MassDOT's ability to join the contractor as a third party defendant. Further, the term "other damages" shall not include, and in no event shall the contractor be liable for, damages for the Commonwealth's or MassDOT's use of contractor provided products or services, loss of Commonwealth or MassDOT's records, or data (or other intangible property), loss of use of equipment, lost revenue, lost savings or lost profits of the Commonwealth or MassDOT. In no event shall "other damages" exceed the greater of $100,000, or two times the value of the product or service (as defined in the Contract scope of work) that is the subject of the claim. Section 11 sets forth the contractor's entire liability under a Contract. Nothing in this section shall limit the Commonwealth's or MassDOT's ability to negotiate higher limitations of liability in a particular Contract, provided that any such limitation must specifically reference Section 11 of the MassDOT Terms and Conditions. In the event the limitation of liability conflicts with accounting standards which mandate that there can be no cap of damages, the limitation shall be considered waived for that audit engagement. These terms may be applied to other Contracts only with prior written confirmation from the Operational Services Division or the Office of the Comptroller. The terms in this Clarification may not be modified.

Northern Ireland Certification. Pursuant to G.L. c. 7 s. 22C for state agencies, state authorities, the House of Representatives or the state Senate, by signing this Contract the Contractor certifies that it does not employ ten or more employees in an office or other facility in Northern Ireland and if the Contractor employs ten or more employees in an office or other facility located in Northern Ireland the Contractor certifies that it does not discriminate in employment, compensation, or the terms, conditions and privileges of employment on account of religious or political belief; and it promotes religious tolerance within the work place, and the eradication of any manifestations of religious and other illegal discrimination; and the Contractor is not engaged in the manufacture, distribution or sale of firearms, munitions, including rubber or plastic bullets, tear gas, armored vehicles or military aircraft for use or deployment in any activity in Northern Ireland.

Pandemic, Disaster or Emergency Performance. In the event of a serious emergency, pandemic or disaster outside the control of the Department, the Department may negotiate emergency performance from the Contractor to address the immediate needs of the MassDOTeven if not contemplated under the original Contract or procurement. Payments are subject to appropriation and other payment terms.

Consultant Contractor Certifications (For Consultant Contracts "HH" and "NN" and "U05" object codes subject to G.L. Chapter 29, s. 29A). Contractors must make required disclosures as part of the RFR Response or using the Consultant Contractor Mandatory Submission Form.

Attorneys. Attorneys or firms providing legal services or representing MassDOT may be subject to G.L. c. 30, s. 65, and if providing litigation services must be approved by the Office of the Attorney General to appear on behalf of a Department, and shall have a continuing obligation to notify the Commonwealth of any conflicts of interest arising under the Contract.

Subcontractor Performance. The Contractor certifies full responsibility for Contract performance, including subcontractors, and that comparable Contract terms will be included in subcontracts, and that the Department will not be required to directly or indirectly manage subcontractors or have any payment obligations to subcontractors. .

EXECUTIVE ORDERS

For covered Executive state Departments, the Contractor certifies compliance with applicable Executive Orders (see also Massachusetts Executive Orders), including but not limited to the specific orders listed below. A breach during period of a Contract may be considered a material breach and subject Contractor to appropriate monetary or Contract sanctions.

Executive Order 481. Prohibiting the Use of Undocumented Workers on State Contracts: For all state agencies in the Executive Branch, including all executive offices, boards, commissions, agencies, Departments, divisions, councils, bureaus, and offices, now existing and hereafter established, by signing this Contract the Contractor certifies under the pains and penalties of perjury that they shall not knowingly use undocumented workers in connection with the performance of this Contract; that, pursuant to federal requirements, shall verify the immigration status of workers assigned to a Contract without engaging in unlawful discrimination; and shall not knowingly or recklessly alter, falsify, or accept altered or falsified documents from any such worker

Executive Order 130. Anti-Boycott. The Contractor warrants, represents and agrees that during the time this Contract is in effect, neither it nor any affiliated company, as hereafter defined, participates in or cooperates with an international boycott (See IRC § 999(b)(3)-(4), and IRS Audit Guidelines Boycotts) or engages in conduct declared to be unlawful by G.L. c. 151E, s. 2. A breach in the warranty, representation, and agreement contained in this paragraph, without limiting such other rights as it may have, MassDOT and the Commonwealth shall be entitled to rescind this Contract. As used herein, an affiliated company shall be any business entity of which at least 51% of the ownership interests are directly or indirectly owned by the Contractor or by a person or persons or business entity or entities directly or indirectly owning at least 51% of the ownership interests of the Contractor, or which directly or indirectly owns at least 51% of the ownership interests of the Contractor.

Executive Order 346. Hiring of State Employees By State Contractors Contractor certifies compliance with both the conflict of interest law G.L. c. 268A specifically s. 5 (f) and this order; and includes limitations regarding the hiring of state employees by private companies contracting with the Commonwealth/MassDOT. A privatization contract shall be deemed to include a specific prohibition against the hiring at any time during the term of Contract, and for any position in the Contractor's company, any state management employee who is, was, or will be involved in the preparation of the RFP, the negotiations leading to the awarding of the Contract, the decision to award the Contract, and/or the supervision or oversight of performance under the Contract.

Executive Order 444. Disclosure of Family Relationships With Other State Employees. Each person applying for employment (including Contract work) within the Executive Branch under the Governor must disclose in writing the names of all immediate family related to immediate family by marriage who serve as employees or elected officials of the Commonwealth. All disclosures made by applicants hired by the Executive Branch under the Governor shall be made available for public inspection to the extent permissible by law by the official with whom such disclosure has been filed.

Executive Order 504. Regarding the Security and Confidentiality of Personal Information. For all Contracts involving the Contractor's access to personal information, as defined in G.L. c. 93H, and personal data, as defined in G.L. c. 66A, owned or controlled by Executive Department agencies, or access to agency systems containing such information or data (herein collectively "personal information"), Contractor certifies under the pains and penalties of perjury that the Contractor (1) has read Commonwealth of Massachusetts Executive Order 504 and agrees to protect any and all personal information; and (2) has reviewed all of the Commonwealth **Information Technology Division's Security Policies**. Notwithstanding any contractual provision to the contrary, in connection with the Contractor's performance under this Contract, for all state agencies in the Executive Department, including all executive offices, boards, commissions, agencies, departments, divisions, councils, bureaus, and offices, now existing and hereafter established, the Contractor shall: (1) obtain a copy, review, and comply with the contracting agency's Information Security Program (ISP) and any pertinent security guidelines, standards, and policies; (2) comply with all of the Commonwealth of Massachusetts Information Technology Division's "Security Policies") (3) communicate and enforce the contracting agency's ISP and such Security Policies against all employees (whether such employees are direct or contracted) and subcontractors; (4) implement and maintain any other reasonable appropriate security procedures and practices necessary to protect personal information to which the Contractor is given access by the contracting agency from the unauthorized access, destruction, use, modification, disclosure or loss; (5) be responsible for the full or partial breach of any of these terms by its employees (whether such employees are direct or contracted) or subcontractors during or after the term of this Contract, and any breach of these terms may be regarded as a material breach of this Contract; (6) in the event of any unauthorized access, destruction, use, modification, disclosure or loss of the personal information (collectively referred to as the "unauthorized use"): (a) immediately notify the contracting agency if the Contractor becomes aware of the unauthorized use; (b) provide full cooperation and access to information necessary for the contracting agency to determine the scope of the unauthorized use; and (c) provide full cooperation and access to information necessary for the contracting agency and the Contractor to fulfill any notification requirements. Breach of these terms may be regarded as a material breach of this Contract, such that the Commonwealth and MassDOT may exercise any and all contractual rights and remedies, including without limitation indemnification under Section 11 of MassDOT's Terms and Conditions, withholding of payments, Contract suspension, or termination. In addition, the Contractor may be subject to applicable statutory or regulatory penalties, including and without limitation, those imposed pursuant to G.L. c. 93H and under G.L. c. 214, § 3B for violations under M.G.L c. 66A.

Executive Orders 523, 524 and 526. Executive Order 526 (Order Regarding Non-Discrimination, Diversity, Equal Opportunity and Affirmative Action which supersedes Executive Order 478). Executive Order 524 (Establishing the Massachusetts Supplier Diversity Program which supersedes Executive Order 390). Executive Order 523 (Establishing the Massachusetts Small Business Purchasing Program.) All programs, activities, and services provided, performed, licensed, chartered, funded, regulated, or contracted for by the state shall be conducted without unlawful discrimination based on race, color, age, gender, ethnicity, sexual orientation, gender identity or expression, religion, creed, ancestry, national origin, disability, veteran's status (including Vietnam-era veterans), or background. The Contractor and any subcontractors may not engage in discriminatory employment practices; and the Contractor certifies compliance with applicable federal and state laws, rules, and regulations governing fair labor and employment practices; and the Contractor commits to purchase supplies and services from certified minority or women-owned businesses, small businesses, or businesses owned by socially or economically disadvantaged persons or persons with disabilities. These provisions shall be enforced through the contracting agency, OSD, and/or the Massachusetts Commission Against Discrimination. Any breach shall be regarded as a material breach of the contract that may subject the contractor to appropriate sanctions.

Location: Statewide

Bain Cor, Inc.
763 South Street
Holbrook, MA 02343

Dear John Cordeiro,

Enclosed is a Certificate of Exemption Form ST-2 along with a Purchaser's Sales Tax Exempt Form (ST-5) for Bain Cor, Inc., which substantiates the Tax Exempt status of this Department under the provisions of Chapter 64H, s6 (d), (e), (f) or (tt). The duration of the tax forms are from July 1, 2020 until June 30, 2025.

All purchases of tangible personal property or services by this Department are exempt from taxation to the extent that such property or services are used in the conduct of the business of the purchaser.

If your contract is extended beyond the completion date on the Purchaser's Sales Tax Exempt Form (ST-5), please notify the Director of Contracts & Records for issuance of a new certificate.

Very truly yours,

Anna Dolata

Certificate of Exemption

MASSDOT
10 PARK PLAZA
BOSTON MA 02116

MA Taxpayer ID: 10037042
Certificate Number: 1310988288

This certifies that the organization named above is an exempt purchaser under Chapter 64H, section 6(d) or (e) of the Massachusetts General Laws. All purchases of tangible personal property by this organization are exempt from taxation to the extent that such property is used in the conduct of the business of the purchaser. Misuse of this certificate by any tax-exempt organization or unauthorized use of this certificate by any individual will lead to revocation. Willful misuse of this certificate is subject to criminal sanctions of up to one year in prison and $10,000 ($50,000 for corporations) in fines. This certificate is non-transferable and may be suspended or revoked for failure to comply with state laws and regulations.

General information

An exempt 501(c)(3) organization must have obtained a Certificate of Exemption (Form ST-2) from the Commissioner of Revenue certifying that it is entitled to exemption under G.L. c.64H, §6(e). The 501(c)(3) organization must submit to the vendor a properly completed Sales Tax Exempt Purchaser Certificate (Form ST-5) signed by the 501(c)(3) organization with a copy of its Form ST-2 attached.

Any person, group or organization purchasing as an agent on behalf of a 501(c)(3) organization must certify that it is doing so by presenting to the vendor a properly completed Form ST-5 signed by the 501(c)(3) organization. It must also present a copy of the 501(c)(3) organization's Form ST-2. The agent of the exempt 501(c)(3) organization must complete Part 2 of Form ST-5.

Any government organization is encouraged to obtain a Certificate of Exemption (Form ST-2) from the Commissioner of Revenue, certifying that it is entitled to exemption under G.L. c.64, § 6(d). The exempt government organization is encouraged to submit to the vendor a properly completed Sales Tax Exempt Purchaser Certificate (Form ST-5) with a copy of its Form ST-2 attached. If the government organization does not present Form ST-5, the vendor must maintain adequate documentation (generally, a copy of the government check) verifying that the purchaser is an exempt government agency.

Any person, group or organization purchasing on behalf of exempt government organizations must certify that they are doing so by presenting to the vendor a properly executed Form ST-5 when making such purchases. Part 1 of Form ST-5 should be filled out by the exempt government organization. If Part 1 is not completed by the exempt government organization, the agent must enter the name, address, and, if available, the exemption number of the government organization on whose behalf the purchases are being made. Also enter a description of the property purchased into Part 4. The agent must complete Part 2 when acting on behalf of the exempt government organization. The purchaser must attach to the Form ST-5 a copy of the exempt government organization's Form ST-2 if available. If it is not available, the purchaser must enter the exemption number of the exempt government organization.

Other information for vendors

Vendors should verify the validity of the certificate presented to them by checking the expiration date on the certificate. Vendors must **not** honor a Certificate of Exemption that has expired.

Government organization maintain Form ST-2 Certificates of Exemption that have an expiration date of "None."

Vendors should call the Customer Service Bureau at (617) 887-6367 if they have any questions regarding a Certificate of Exemption which is presented to them.

If you have any questions about completing this certificate, please contact: **Massachusetts Department of Revenue, Customer Service Bureau, 200 Arlington Street, Chelsea, MA 02150; (617) 887-6367.**

INTEROFFICE MEMORANDUM

TO: MA Comptroller Office

FROM: Christine Hurley-Barnes

DATE: August 20, 2020

RE: Contract # 111753, Bain Cor Inc

SUBJECT: Standard Contract – Anticipated Start Date

The attached signed MassDOT Standard Contract form includes an anticipated start date of July 1, 2020 which was prior to the effective date of August 20, 2020 for the contract award (Contract #111753.)

Due to delays in the execution of this award, this contract needed to proceed prior to the Effective Date of the contract to ensure continuity of contract service. There are no known obligations incurred from July 1, 2020 to August 20, 2020.

Ten Park Plaza, Suite 4160, Boston, MA 02116

COMMONWEALTH OF MASSACHUSETTS
Prompt Pay Discount Form
(Invoice discounts for receiving fast payments)

Revised 3/9/07

Bidder Name: Bain Cor
Vendor Code (VCUST): VC0000506451
Contract/RFR Number(s): 99522 111753

Prompt Payment Discounts (PPD). All contractors/vendors doing business with the Commonwealth must provide a Prompt Payment Discount (PPD) for receiving early payments unless the Contractor/vendor can provide compelling proof that providing a prompt pay discount would be unduly burdensome. Contractors benefit from PPD by increased, usable cash flow as a result of fast and efficient payments for commodities or services rendered. Contractors who agree to accept Electronic Funds Transfer (EFT) increase the prompt pay benefit by ensuring that funds are paid directly to their designated bank accounts, thus eliminating the delay of check clearance policies and traditional mail lead time. Payments processed through the state accounting system (MMARS) can be tracked and verified through the Comptroller's Vendor Web system using the Vendor/Customer Code assigned to you by a Commonwealth department.

The Commonwealth benefits because contractors reduce the cost of products and services through the applied discount. While Bidders/Contractors have flexibility in determining the actual % discount(s) offered to the Commonwealth, the discount(s) must be identified for 10, 15, 20 and/or 30 days for payment issuance in the column entitled "% Discount Off Proposed Price" below. The Commonwealth may use the prompt pay discounts submitted as a basis for selection and may negotiate discounts as deemed in the best interest of the Commonwealth. The requirement to offer PPD discounts may be waived by the Commonwealth on a case-by-case basis if participation in the program would be unduly burdensome, provided the specific reason for the hardship is outlined below.

All discounts offered will be taken in cases where the payment issue date is within the specified number of days listed below and in accordance with the Commonwealth's Bill Paying Policy. Payment days will be measured **from** the date goods are received and accepted / performance was completed OR the date an invoice is received by the Commonwealth, whichever is later **to** the date the payment is issued as an EFT (preferred method) or mailed by the State Treasurer. The date of payment "issue" is the date a payment is considered "paid" not the date a payment is "received" by a Contractor.

If internal Bidder/Contractor systems require an alternate method of measuring payment issue dates, the Bidder/Contractor must note the issues below or on an attached page if necessary to be considered by the PMT. In cases where the Bidder/Contractor considers that offering a Prompt Payment Discount would be a hardship, the Bidder must clearly define the issues and reasons for said hardship. *Providing volume discounts or other discounts on prices is not considered a hardship, since the PPD provides the additional benefit of early cash flow for the Contractor.*

Enter the Prompt Payment Discount percentage (%) off the invoice payment, for each of the payment issue dates listed, if the payment is issued within the specified Payment Issue days. For example:

5% - 10 Days
4% - 15 Days
3% - 20 Days
2% - 30 Days

If no discount is offered enter 0%

Prompt Payment Discount %	Payment Issue Date w/in
2 %	10 Days
%	15 Days
%	20 Days
%	30 Days

The Contractor is unable to provide a prompt payment discount due to the following hardship:

BIDDER CURRENT ENVIRONMENTALLY PREFERABLE PRODUCTS / PRACTICES FORM

Bidder Company Name: Bain Coe Inc Date: 4/9/20

This form is a standard evaluation tool. Questions 1- 6 apply to the operations of the Bidder (not the operations of a manufacturer or other company the bidder works with). Question 7 requests additional information about environmentally preferable product offerings.

The primary purpose of this form is to encourage potential Bidders to communicate existing business practices that foster a sustainable approach to conducting their operations. This may include one that has a reduced impact on the environment or public health, such as, but not limited to, creating less waste by using less packaging; eliminating the use substances and/or materials that are considered toxic; or using alternative fuel vehicles in the delivery fleet for the purpose of reducing air pollution and greenhouse gas emissions.

The Commonwealth considers such initiatives part of the "best value" of procurement. **Bidders have an opportunity to receive additional points in the evaluation phase of the RFR for the environmental initiatives they have identified.** However, bidders must substantiate all answers in the space provided below or in an attachment in order to receive any additional points. If reference is made to an attached document, or a website, list the specific page and line to which information is referenced.

1. **Sustainability Program/Environmental Business Practices**
   a) Does your firm have a corporate-wide sustainability policy? If yes, attach or provide a link to your sustainability policy AND summarize what your corporate sustainability policy directs your company to do: Click here to enter text.

   b) Indicate any other types of corporate sustainability policies AND attach policy in order to receive credit.
   ☐Climate Action Plan
   ☐Zero Waste Policy
   ☐Toxics Reduction Strategy
   ☐Green Fleet Policy
   ☐Sustainable Procurement Policy or Environmentally Preferable Purchasing Policy
   ☑Waste Prevention and/or recycling policy/program (describe and list types of materials you recycle) CARD BOARD BOXES, SHIPPING MATERIAL

   Briefly describe and list sustainable procurement practices and achievements as a result of the policies checked above: Click here to enter text.

   c) Does your company publish an annual Sustainability Report listing accomplishments and future goals? If yes, please attach (or provide a link to) your latest Sustainability Report. Please describe key elements and accomplishments (such as receiving sustainability awards). Click here to enter text.

   d) Please list individual steps not indicated above that your firm has taken to improve the sustainability at your own operations:
   ☐ Uses at least 50% remanufactured toner cartridges in printers (attach total annual spend on remanufactured and Original Equipment Manufacturer cartridges) Click here to enter text.
   ☐ Uses Green Cleaning products (certified by UL Ecologo, GreenSeal or SaferChoice) in all cleaning or janitorial services (attach copy of scope of work with cleaning services provider and types of green products used) Click here to enter text.

- ☐ Purchase appliances and equipment (printers, copiers, microwaves, etc.), that are Energy Star or EPEAT certified models. (list certified products) Click here to enter text.
- ☐ Incorporates green building design elements into all construction and renovation projects (list green design elements and provide documentation). Click here to enter text.
- ☐ Owns or leases buildings certified to LEED or another green building standard? (describe) Click here to enter text.
- ☐ Purchases or creates renewable electricity onsite (through solar or wind systems, for example)? Describe and indicate the % of energy that is derived from renewable sources: Click here to enter text.
- ☐ Has received a third party energy audit (usually through the utility) and implemented recommendations (attach audit recommendations and identify what has been completed). Click here to enter text.
- ☐ Has received a third party waste audit and implemented recommendations (attach audit recommendations and identify what has been completed). Click here to enter text.
- ☐ Please list other sustainable initiatives (e.g., waste reduction programs, green building management programs, other energy efficiency programs, etc.) and provide any measurable data: Click here to enter text.

2. **Packaging**:

Has your company implemented any of the following environmental packaging initiatives?

- ☑ All packaging contains post-consumer recycled materials. List post-consumer recycled content: Click here to enter text. BOXES, WRAP, Stuffed Paper and Styrofoam
- ☐ Eliminates the use (or reduces the size) of disposable containers (e.g., uses reusable shipping containers). Please describe: Click here to enter text.
- ☐ Packaging materials do not contain chemicals or materials of concern such as PVC (vinyl), BPA, etc.). Please describe: Click here to enter text.

3. **Shipping/Transportation:**

Describe in detail how your company has implemented environmentally sound shipping and transportation practices.

- ☐ Your firm uses electric, hybrid-electric, bicycles or other alternative fuel vehicles to transport products to your retail stores or other locations. (Describe program) Click here to enter text.
- ☐ Your firm is a US EPA SmartWay Partner. Attach partnership agreement. Click here to enter text.
- ☐ Has an anti-idling policy. Attach policy.
- ☐ Diesel vehicles are equipped with emission control devices. List device(s) here: Click here to enter text.
- ☐ Uses biodiesel in your vehicles. List estimated amount used in the last year: Click here to enter text.
- ☐ Use environmentally preferable products in its fleet program (e.g., retread tires, re-refined motor oil, low-VOC solvents, etc.). List products here: Click here to enter text.
- ☐ Encourages the use of public/green transit. Provide name and description of program(s): Click here to enter text.
- ☐ Minimizes shipping energy and environmental impacts in other ways? Please describe: Click here to enter text.

4. **Training and Education**

Describe how your company trains staff and educates customers on the products or service that involves an environmentally preferable component. Click here to enter text.

5. **Certifications**

Bidders should familiarize themselves with the various certifications for products and processes that are available within the industry in which they operate, with particular attention to those concerning environmental issues. Has your company or any of its manufacturers and/or subcontractors obtained any of the following product / industry certifications? In order to receive credit, please attach a copy certifications listed below:

- ☐ Is a reporting member of the WasteWise Program (EPA and Massachusetts) (attach most recent reporting).
- ☐ Has adopted an environmental management system that is geared to continuous improvement (e.g., ISO 14000) (attach copy of summary EMS audit).
- ☐ Certified as a Massachusetts Sustainable Business Leader through the Sustainable Business Leader Program (attach certification). Click here to enter text.
- ☐ Other industry environmental standards (where applicable), such as the CERES principles, LEED Certification, C2C Protocol, Responsible Care Codes of Practice or other similar standards (list standard) Click here to enter text.
- ☐ Other. Please describe: Click here to enter text.

6. **Other Environmental Criteria**

Bidders may provide additional information about environmentally preferable practices that are not indicated and explained above (attach any appropriate documentation to substantiate claim)
Click here to enter text.

7. **Environmental Product Offering:**

Bidders providing environmentally preferable options in the price sheet should also provide additional information about those options here. Please include a description of the product, how the product is environmentally preferable, how pricing compares to the conventional product counterpart, links to additional information, or if attaching product information, please reference names of files, and any additional information that would be helpful for reviewer:
Click here to enter text.

Supplier Diversity Program (SDP) Plan Commitment
SDP Plan Form #1

Contract/RFR Document Number: Click here to enter text.

Instructions: Completing all parts of this form is mandatory. Please read all sections of the Bid related to the SDP. Complete one form and submit with your Quote.

Important: Prime bidders that are certified as an M/WBE, M/WNPO, VBE, SDVOBE, DOBE and LGBTBE must also submit an SDP Plan Form and may not list themselves or their affiliates as SDP Partners.

Part I Bidder/Contractor Information (Required)			
Business Name: Bain Cor Inc	**Contact Name: John Cordeiro.**	**Phone #**: 339-987-5525.	**Email address**: 763 South St STE A Holbrook MA 02343

Part II Annual Financial Commitment (Required)	
Provide a specific percentage of Bidder/Contractor sales derived from this contract to be spent with all certified SDP Partners on a Massachusetts fiscal year (July 1-June 30) basis.	
Annual SDP Percentage Committed in Bid Response for Life of Contract:	**.05.%**

Supplier Diversity Program (SDP) Resources:

- Lists of M/WBEs, M/WNPOs, VBEs, SDVOBEs, DOBEs and LGBTBEs certified or verified by the Supplier Diversity Office (SDO) are located at www.mass.gov/sdo.
- Resources to assist Prime Bidders in finding potential Certified Partners can be found at www.mass.gov/sdp.

CONTRACTOR AUTHORIZED SIGNATORY LISTING

CONTRACTOR LEGAL NAME: Bain Cor, Inc.
CONTRACTOR VENDOR/CUSTOMER CODE: VC 0000506451

INSTRUCTIONS: Any Contractor (other than a sole-proprietor or an individual contractor) must provide a listing of individuals who are authorized as legal representatives of the Contractor who can sign contracts and other legally binding documents related to the contract on the Contractor's behalf. In addition to this listing, any state department may require additional proof of authority to sign contracts on behalf of the Contractor, or proof of authenticity of signature (a notarized signature that the Department can use to verify that the signature and date that appear on the Contract or other legal document was actually made by the Contractor's authorized signatory, and not by a representative, designee or other individual.)

NOTICE: ***Acceptance of any payment under a Contract or Grant shall operate as a waiver of any defense by the Contractor challenging the existence of a valid Contract due to an alleged lack of actual authority to execute the document by the signatory.***

For privacy purposes **DO NOT ATTACH** any documentation containing personal information, such as bank account numbers, social security numbers, driver's licenses, home addresses, social security cards or any other personally identifiable information that you do not want released as part of a public record. The Commonwealth reserves the right to publish the names and titles of authorized signatories of contractors.

AUTHORIZED SIGNATORY NAME	TITLE
Wayne Bainter	President
John Cordeiro	Vice President

I certify that I am the President, Chief Executive Officer, Chief Fiscal Officer, Corporate Clerk or Legal Counsel for the Contractor and as an authorized officer of the Contractor I certify that the names of the individuals identified on this listing are current as of the date of execution below and that these individuals are authorized to sign contracts and other legally binding documents related to contracts with the Commonwealth of Massachusetts on behalf of the Contractor. I understand and agree that the Contractor has a duty to ensure that this listing is immediately updated and communicated to any state department with which the Contractor does business whenever the authorized signatories above retire, are otherwise terminated from the Contractor's employ, have their responsibilities changed resulting in their no longer being authorized to sign contracts with the Commonwealth or whenever new signatories are designated.

Chorus

Empowerment Through Data

Law enforcement at a glance

The volume of digital data is growing and it is difficult to access, analyze, store and share. Law enforcement agencies are under immense pressure to leverage and control their digital data and stay ahead of the curve in tackling crime.

However, the strain on resources has never been more acute. Crime rates are rising and much of this can be attributed to digitally enabled crime, which is becoming ever more prevalent.

Agencies of all shapes and sizes are not equipped with the right tools to manage and leverage data to its full potential, which is why we created the Chorus Intelligence Suite (CIS).

Cloud-based and modular, the CIS equips anyone involved in digital investigations with the tools to self-serve and confidently turn data into intelligence and evidence.

One intelligence platform to empower your entire organization to tackle:

- Serious and organized crime
- Violent crime
- Domestic crime
- Gang-led crime
- Mass gatherings/civil unrest
- School safety issues
- Gun crime
- Human trafficking

Realize the full potential of your data

Analysts, Investigators, open-source experts and front-line officers are all empowered to carry out digital investigations through our intuitive and fully integrated software platform. Key capabilities include:

Save time
Conduct digital investigations from one intelligence platform

Empower multiple roles
Enable investigators and front-line officers to easily get answers from their data

Enrich evidence
Cleanse, combine and connect data to spot connections

Power up OSINT investigations
Search across 180+ data connectors & perform federated searches

Increase collaboration
Share intelligence with colleagues, partners and external organizations

Safe and secure
A Software as a Service (SaaS), platform, which protects your anonymity

The Chorus Intelligence Suite

Be empowered at every stage of a digital investigation to realize the full potential of your data.

A single data and case store

The CIS is a digital repository for all digital data related to an investigation. Browser-based, it can be securely accessed at any time.

FIND OUT MORE

Federated OSINT and consented data search

Perform federated searches across multiple social media and consented data sources alongside unstructured data held locally by your organization, from one user interface. Combine intelligence from multiple sources.

FIND OUT MORE

Internal data ingestion

In addition to leveraging OSINT and consented data, Chorus can tailor specific integrations to each organization where the requirement exists e.g. CAD/RMS and a plethora of other line of business systems.

FIND OUT MORE

Unstructured data upload

Uncover hidden intelligence across your disparate, internal, and legacy unstructured data. The CIS allows you to upload this, index it and make it searchable.

FIND OUT MORE

Cleanse, combine and connect analytical data

Use an intuitive and customizable dashboard to overlay different data types to identify patterns, make connections and answer key questions.

FIND OUT MORE

Security assurance

The CIS is a platform with security at its core. Deploy it using the AWS Government Cloud, built in line with CJIS standards.

FIND OUT MORE

A single data and case store

Combine and connect all digital data sources and store in one single location. Spot connections and share with colleagues, partners, and external agencies:

Key capabilities include:

- **Fully searchable content** - Any data that is captured or sourced across the CIS can be indexed and searched.
- **Bulk search data for cross-case analysis** – All content in the CIS is fully searchable and allows you to instantly bulk search data to reveal cross overs. Unlock intelligence held in your existing Chorus data, within both historical and operational files, and perform cross-case analysis to aid investigations.
- **Maintain a bird's eye view of activity** - View a timeline of when any searches, web captures, and activities are performed, by who and when.

  Automatic and manual redaction- The CIS recognizes keywords, telephone numbers or names from captured web pages. You can automatically or manually redact a file.
- **Extensive reporting suite -** Generate reports from all the data and intelligence that you have stored. This includes association charts, websites, social media pages, videos, and maps.

Store and share digital intelligence

Federated OSINT and consented data search

Bulk search across 180+ social media networks

Use the CIS to perform federated searches across multiple social media data sources, consented data sources and unstructured data held locally by your organization, to compare information.

This approach not only improves the effectiveness of data capture, it gives analysts, investigators and front line officers the best possible chance of finding key information about a subject or entity.

Overlay, analyze and compare this widely distributed data in multiple ways, to spot connections and prioritize what is important to your investigation.

"Evidence has now gone digital. We must get a grip on the vast tide of criminal data and find a way to use it to our advantage. Having one tool that helps us analyze this digital evidence and find answers makes a huge difference.

- Major Crime Investigator

OSINT Powered up by

SHADOWDRAGON

Key features include:

- **Bulk search across 180+ social media networks –** Including Facebook, Instagram, Twitter, LinkedIn, Snapchat, TikTok, Telegram, eBay, Cash App, YouTube, WhatsApp, TruthSocial and many more.
- **Search hashtags –** For people, places, upcoming events, mass gatherings or any search terms related to your investigation.
- **Go anonymous –** Embed and capture intelligence from your own undercover social media accounts in a discrete, secure and audited environment.
- **Auto-matching –** Identify data in one case that has been previously captured in another.

Key benefits include:

- **Never miss a connection -** Leave no stone unturned. Customize your connectors and bulk search across them to reveal unknown intelligence.
- **Enrich your investigations -** Expand your data sets and visualize in multiple ways to spot patterns.
- **Get the full picture -** Merge OSINT results with other data sources to aid the attribution process.
- **Stay ahead of the game –** Ensure that key new information is captured immediately via watchlist alerts.
- **Minimize risk –** Leverage hashtag searches to monitor emerging threats and/or for public safety planning purposes to determine appropriate resource allocation.

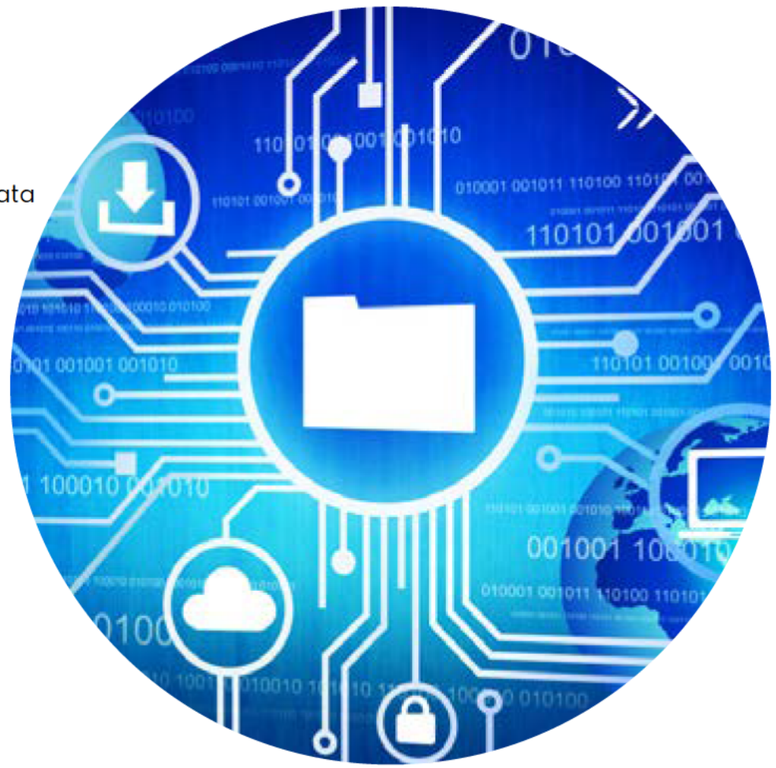
Bulk search 180+ social media networks

Untap the potential of your unstructured and internal data

Uncover hidden intelligence across your disparate, internal, and legacy data

When it comes to gathering intelligence for a case, law enforcement agencies will often have masses of useful digital data hidden in unstructured and disparate legacy files.

Make your legacy data searchable



Use the CIS to upload unstructured data files via a secure upload portal.

The CIS enables users to index and search this data ensuring that hidden and historic intelligence is made use of.

The CIS supports an extensive range of file types including image-based PDFs that are fully searchable.

Internal data interfaces

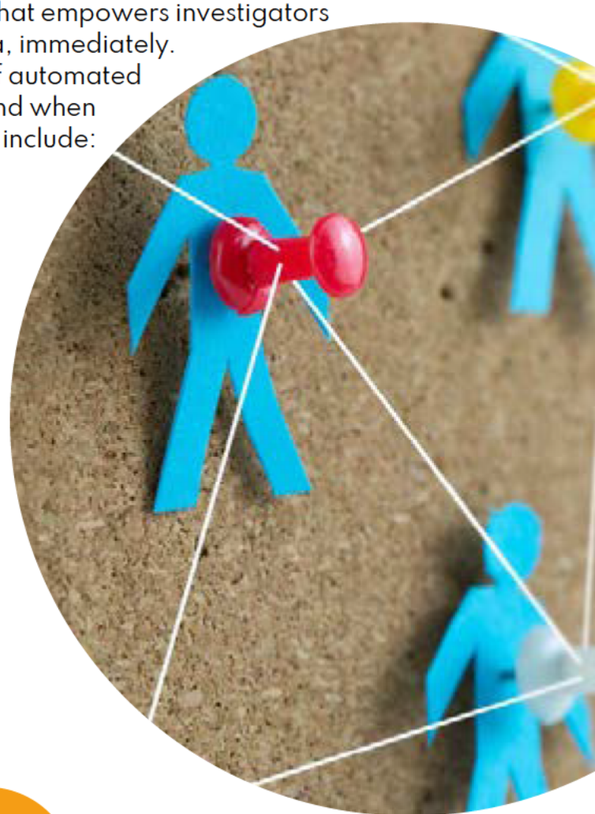
In addition to leveraging OSINT, consented data and unstructured data, Chorus can tailor specific integrations to each organization where the requirement exists e.g. Record Management Systems (RMS), Jail Management Systems (JMS), and a plethora of other line of business systems.

Cleanse, combine and connect your analytical data

Empower Investigators and front-line officers to get answers from digital data

With police departments under more pressure than ever to speed up investigations and secure convictions, having the means to democratize data analysis and alleviate the reliance on skilled analysts to investigate crimes has become a necessity.

The CIS features an intuitive dashboard capability that empowers investigators and front line officers to get answers from their data, immediately. Users can simply ingest data and take advantage of automated cleansing rules to work out the who, what, where and when of a digital investigation. Data types leveraged can include:



- Communications data (call data records)
- Handset downloads
- RF surveys
- ALPR
- Bank statements
- Chat, instant messaging and more

Visualize, enrich, and expand

Overlay these different data types to identify patterns, make connections and answer key investigative questions. Produce maps, timelines, event schedules and charts.

Customized reporting

Query the most frequently asked investigative questions and generate reports, to be used as potential evidence. For example, report on a suspect's top 10 interactions or identify potential meetings between individuals.

97% time saving

Cloud-based and modular deployment

Security assured

The CIS is a platform with security at its core. You can deploy it using the AWS Government Cloud, built in line with CJIS standards. Benefits include:

- **Full obfuscation** - Protect your anonymity whilst conducting online investigation searches in a fully obfuscated environment. Data is encrypted at rest and in transit.
- **Controlled user permissions -** Access to the CIS and the data within it is user permission controlled, from read-only through to full administration rights.
- **Audit logs** - Maintain comprehensive audit logs to see who has accessed what and when and also document the evidential chain of custody.

We do not own or access your data

The CIS allows users to search multiple data sources, including those held locally with full security access controls.

Demo and free trial

Try before you buy! take a 30-day trial of the Chorus Intelligence Suite

Our promise

To assess and realize the maximum benefits of the Chorus Intelligence Suite, we offer free 30-day trials for all our products, to be used on your own live cases.

Our entire organization is geared towards fully supporting you.

You will be assigned a Business Development Manager to scope your trial and to ensure your objectives are captured.

You will benefit from a dedicated Customer Success Manager to help you get the best out of the software. They will work with you to capture feedback, give you hints and tips, organize your implementation and schedule your training.

Our helpdesk will also be on hand to help you with any technical support.

Trial the CIS for free

A dedicated Customer Success Manager to support you every step of the way

Why Chorus?

About us

Chorus Intelligence is an award-winning international software company, providing law enforcement agencies with cutting-edge software.

The Chorus Intelligence Suite (CIS) supports agencies in reengineering their digital investigations, providing them with the tools to confidently collect, combine and connect data and turn it into intelligence and evidence.

Founded in 2011, Chorus is implemented throughout North America and is also used by 80% of UK police forces, all counter-terrorism units, and many government agencies.

Customer-focused

Over 90% of the functionality within the CIS can be directly linked back to a customer request.

We have an experienced professional services team for any customization or configuration of reports and interfaces.

Tailored training

Chorus provides accredited training courses to help our customers get maximum value out of the CIS.

The courses have been designed and written by experienced law enforcement and intelligence analysts who are experts in Chorus' suite of products. Chorus can also deliver custom training.

Our experts

Our entire team are experts in their field.

We combine former law enforcement Chiefs, Analysts, Investigators and open-source experts with software developers that specialize in police and financial data.

What our customers say

Trusted by North American law enforcement, over 80% of UK police forces and government agencies

"We set out to re-engineer our analytical capabilities and sought a solution that would support us in maximizing our operational effectiveness and time efficiency, while providing the best possible return on investment. The CIS will enable us to achieve this and set a precedent for intelligence-led, data-driven policing going forward."

- Chief Paul Neudigate, Virginia Beach Police Department

"The time spent analyzing data has been cut to a fraction of that used prior to having Chorus available."

- Investigator

"Chorus is by far the most significant aid to intelligence technology this century"

- Investigator

Without Chorus, the work I undertook would have been much more difficult and protracted, adding considerable time delays to the investigation and stress to the victims

- Lead Analyst

APPENDIX A - TERMS AND DEFINITIONS

APPENDIX B - CJIS ONLINE

APPENDIX C - FORMS AND AGREEMENTS

CJIS REP Responsibilities

The CJIS Representative is an agency representative designated by the administrative head of a criminal justice agency. The administrative head, or Agency Administrator, is an individual within a criminal justice agency who has authority over the ORI and may designate duties as well as exercise authority for the agency. The CJIS Rep is responsible for their agency's use of the Criminal Justice Information System (CJIS) data. When a new CJIS Rep is appointed at an agency, DCJIS must be notified by the agency administrator by mail, email, or fax. If an Alternate CJIS Rep is going to be assigned, the CJIS Rep or administrator must notify DCJIS by mail, email, or fax. The CJIS Rep is responsible for making sure all Users, Non-access Users, and Non-Users within their agency have fingerprint supported background checks completed.

DCJIS is responsible for assisting agencies with access to CJIS systems. DCJIS provides the NCIC Operating Manual, NCIC Code Manual, and Nlets Manual for these reasons. DCJIS also offers classroom instruction for training purposes.

The employing criminal justice agency agrees to abide by all present laws, administrative rules, policies, and procedures of CJIS data as adopted by the Massachusetts Legislature and approved by the Commissioner of Public Safety and State Attorney General.

Summary of CJIS REP Responsibilities

- Dissemination, privacy, security of all DCJIS files – Security Incident Reporting
- Criminal Justice Agency Agreement
- Agency ORI validation – TQ/QO
- Fingerprint Submissions for all Users/Non-users – Pre-Employment Screening
- Notifying DCJIS to create and delete accounts
- User and non-user Security Agreements – Non-Disclosure Agreements
- Training and testing all users – Nextest – CJIS Online - LASO
- Audits
- Policies and Procedures – Misuse of CJIS reporting
- Validations
- Attending Regional Working Group Conference
- Record Entry - Timeliness – Accuracy – Hit Confirmation

GUIDELINES AND PROCEDURES

Purpose: To assist the CJIS Representatives in meeting CJIS compliance policies as set forth in the CJIS User Agreement.

Contents: CJIS Major Compliance Policies
General Information
Training/Certification Program
Validation Program

COMPLIANCE POLICIES – ADMINISTRATIVE RESPONSIBILITIES OF THE CJIS REP

For your reference listed below are some of the major CJIS Compliance policies set-forth in the User Agreement. For a more complete list refer to the User Agreement on the DCJIS Extranet.

1. A CJIS Representative and Backup CJIS Representative shall be appointed by the head of each Terminal Agency. The agency head will allow the CJIS Representative sufficient time to perform all necessary duties related to CJIS Responsibilities. The CJIS Representative and his or her agency will be responsible for monitoring terminal use, enforcing system discipline, and assuring that CJIS Operating Procedures are followed by all terminal USERs, as well as other related duties outlined in the CJIS User Agreement. In the absence of the CJIS Representative, the Backup CJIS Representative will be responsible for performing the duties of the CJIS Representative.

2. "803 code of Massachusetts Regulations 7.05 states, in part, that the department head of each agency shall submit a new user agreement to the CJIS Support Services (CSS) Unit bi-annually, or within 10 days upon the designation of a new CJIS Representative, back-up Representative, or appointment of a new agency head."

3. "Each CJIS terminal must be under the management control of a Criminal Justice Agency. Management control is defined as the authority to set and enforce: (1) priorities; (2) standards for the selection, supervision, and termination of personnel; and (3) policy governing the operation of the CJIS terminal."

4. "The data stored in the CJIS is documented criminal justice information and must be protected to ensure correct, legal, and efficient dissemination and use. Information obtained either from or through CJIS can only be used by law enforcement and criminal justice personnel in the performance of their authorized criminal justice activities. It is therefore incumbent upon an agency operating a CJIS terminal to implement the necessary procedures to make that terminal secure from any unauthorized use. Any departure from this responsibility warrants the removal of the offending agency from further CJIS participation."

5. "Section 7.06 of 803 CMR, and CJIS, and FBI/NCIC policy, require each TA to conduct a criminal record check on all agency personnel who have access to the CJIS terminal. This process must include a fingerprint-supported check of the Massachusetts State Bureau of Identification and FBI Identification Files."

6. The CJIS Representative is responsible for ensuring that all CJIS terminal and mobile data

terminal (MDT/MDC) operators in his/her agency are trained, tested, and certified as terminal operators within six (6) months of employment. Additionally, the CJIS Representative is responsible for ensuring that all individuals with access to secure areas where CJIS terminals are located, and/or where CJI is processed are trained and certified. Additionally, the CJIS Representative is responsible to ensure all agency vendors with access to the network where CJIS is located are fingerprint supported background checked and have completed the CJIS Online training certification. The Local Agency Security Officer (LASO) must complete the training certification at CJIS Online.

7. "A log of all secondary dissemination of III data must be maintained. Secondary dissemination is defined as the dissemination of any III response to another Criminal Justice Agency or an individual within another criminal justice agency or to anyone legally entitled to receive such information who is outside the original receiving agency. Each log entry must be maintained for at least twelve (12) months."

8. "Each TA must ensure that documentation is available to assist in the state and national audit programs"

9. "Every TA which enters records into CJIS and NCIC must ensure that hit confirmation is available for those records 24 hours a day".

10. "Any terminal agency, which provides CJIS, services to one or more non-terminal agencies must execute a memorandum of understanding (MOU) with each non-terminal agency to which it provides services. The MOU must detail the scope of services to be provided and must specify each agency's responsibilities as they pertain to any records entered into CJIS, or services provided on behalf of the non-terminal agency. Each agency must forward a copy of each executed MOU to the CJIS Support Services Unit (CSS) within 14 days of execution. A new MOU must be executed each time a new agency head has been appointed. A standard MOU may be obtained from the DCJIS Extranet."

11. "Any server agency which provides CJIS services to one or more MDT/MDC via a regional network, the server agency (HOST) must execute a mobile data terminal (MDT) agreement with each user agency (user) to which it provides services. The (MDT) agreement must detail the scope of services to be provided and must specify each agency's responsibilities as they pertain to any records entered into CJIS, or services provided on behalf of the user agency. Each agency must forward a copy of each executed (MDT) agreement to the DCJIS's CJIS Support Services Unit (CSS) within 14 days of execution. A standard (MDT) agreement may be obtained from the DCJIS Extranet."

12. "Any agency which receives a record in response to a CJIS and NCIC inquiry must confirm the record prior to arresting a wanted person, detaining a missing person, or seizing stolen property."

13. "After confirming a record, the agency taking a person into custody or seizing property must place a locate on the corresponding CJIS and/or NCIC record. If an agency receives multiple CJIS only records in response to an inquiry, it must place a locate on each active record in CJIS."

14. "When an agency receives a telephone request for a status confirmation on one of its records, it must respond to that request immediately by either confirming or rejecting the validity of the record or providing an approximation of the period of time that will be required to confirm the record's validity."

15. "When an inquiry on an individual or a piece of property yields a valid positive response (hit), the

printout showing the record(s) on file should be retained for use in documenting probable cause for the detention of the missing person, arrest of the wanted person, or seizure of the property. The printout may also prove valuable in a civil suit alleging a false arrest, a false imprisonment, a civil rights violation, or an illegal seizure of property."

16. "When an inquiry yields a hit, the terminal operator making the inquiry should note on the printout the name of the person confirming the record (if confirmed by telephone), as well as the date and time that the record(s) was confirmed. In addition, the operator should note precisely how, when, and to whom the information was given, initial and date this notation, and forward the printout to the inquiring officer or agency for retention in the case file. This procedure establishes the chain of evidence for the communication should the arresting officer need to substantiate his or her actions in a judicial proceeding."

17. "Any TA having record entry capabilities must enter records into CJIS and NCIC which meet established criteria as soon as possible."

18. "M.G.L. c.22A, S.4, states that,"[W]henever a parent, guardian, or governmental unit responsible for a child, reports to any police officer or law enforcement official that a child is missing, such police officer or official shall immediately cause to be entered into the central register relevant information relative to said missing child. Such police officer or law enforcement official shall also immediately undertake to locate such missing child..."

19. "A complete record of any kind includes all information that was available on the person or property at the time of entry. An agency must consult with investigators, review case files, and make inquiries of the CJIS and NCIC Wanted, Missing, and Stolen Property, WMS, BOP, Triple I (III), Automated Name Index (ANI), and appropriate registry of motor vehicles files. The validation process must include a review of whether additional information has become available since the original entry was made. Any additional information must be added to the record when it is possible to do so."

20. "A second party must verify the accuracy of a CJIS and NCIC record. This second party check should include assuring that the required crosschecks (e.g., VIN and license plate number, etc.) were made, and that the data in the CJIS and NCIC entries match the data in the investigative report. Agencies lacking support staff for this cross-checking should require the case officer to check the record as he/she carries the primary responsibility for seeking the fugitive and/or stolen property."

21. "Immediately upon a warrant being issued and, for NCIC entry purposes, an extradition determination has been made by the district attorney's office, or the warrant meets the NCIC requirements for the use of 'NOEX' as outlined in the CJIS Operating Manual. The Date of Warrant (DOW) field must contain the date that these events occurred."

22. "A timely modification of any record is one made upon receipt of additional or different information."

23. "A timely removal of any record from CJIS and NCIC is one made immediately upon notification that a Wanted/Missing Person has been apprehended or located, or that Stolen Property has been recovered. In addition, a record must be cancelled when it cannot be properly validated."

24. "M.G.L. c.40, Section 36A, states, in part, the following: "Whenever a person in police custody attempts or threatens suicide at a lockup facility, the officer in charge of the lockup shall, within twenty-four hours of such incident, record in the criminal history systems board computer the name,

address, and the age of such person, the charge or reason for such detention and the nature and date of said attempt or threat..."

25. "Any person who attempts, or threatens to attempt, to commit suicide, while in the custody of a law enforcement or criminal justice agency, MUST be entered into the Suicide Risk file by that agency WITHIN 24 HOURS OF THE INCIDENT."

26. "An entry into the Suicide Risk file MUST be made for EACH threat or attempt made by an individual while in custody."

27. Each agency having records in CJIS and NCIC is required to validate a portion of those records each month. Records to be validated are obtained using the on-line validation program."

28. "Any TA which enters records for a non-terminal agency must ensure that those records are validated by the non-terminal agency in accordance with the above guidelines. The TA shall cancel any record(s) which the non-terminal agency fails to validate within a specified time period determined by the TA.

29. "The entering agency has the primary responsibility for the entry and maintenance of accurate, timely, and complete records. Accordingly, each terminal agency must institute appropriate and reasonable quality assurance procedures. Each TA must also implement security and personnel training standards which ensure valid and accurate records and appropriate dissemination of same."

30. "Each agency is responsible for its own records and must always have personnel available to make required corrections and changes. Alterations must be made immediately, and not be left for personnel working subsequent shifts. Each agency must have stringent procedures which ensure that all records are kept accurate, complete, and up to date."

31. "The CJIS Representative shall ensure that any publications distributed by the DCJIS are, in turn, distributed to appropriate personnel in his/her agency. Consistent with this provision, the CJIS Representative shall coordinate distribution within his/her agency of the CJIS Operating Manual, the NCIC code manual, and as requested, other publications provided to enhance effective use of the CJIS and NCIC systems."

32. "Each CJIS Representative and/or back up Representative shall attend the biannual regional working group meetings. If the Representative or back up Representative is not available to attend, the Representative may designate another agency employee to attend."

REGIONAL WORKING GROUPS - RWG

DCJIS has created seven (7) Regional Working Groups within the Commonwealth. Each terminal agency within each region shall appoint one (1) Representative to serve as a general member of the Regional Working Group. In addition, each Regional Working Group shall elect three (3) Representatives to serve as Chairperson, First Vice-Chairperson and Second Vice-Chairperson of the region. The Chairs for each region shall comprise a body known as the Advisory Policy Board (APB).

The twenty-one (21) member Advisory Policy Board (APB) shall elect three (3) Representatives to serve as its Officers; Chairperson, First Vice-Chairperson and Second Vice-Chairperson.

Regional working groups are formulated to:

- Improve the effectiveness of the criminal justice system through the efficient automated exchange of documented criminal justice information.

- To foster and cement relationships among diverse criminal justice professionals.

- To exchange ideas and information on changing technology within the criminal justice community.

Regional Work Groups hold meetings annually. These meetings shall take place in the Spring or Fall of each year. In addition, informal meetings may be held at the discretion of the region.

Representatives for each terminal agency shall be required to attend the Spring or Fall RWG meetings. Attendance at other meetings which may take place during the year shall be voluntary.

Each CJIS Representative MUST attend the annual RWG meetings. If the CJIS Representative is unable to attend, the Representative may designate a proxy from his/her agency to attend the meetings in his/her absence.

SYSTEM DISCIPLINE

1. To help ensure the proper operation of the CJIS/NCIC Systems, the standards, procedures, formats, and criteria mentioned in the CJIS Manual and the CJIS Training Guides must be strictly followed. In this respect, CJIS must not only follow the rules set forth but must also ensure that agencies they are servicing do the same.

2. Complete, accurate, and timely records are essential to ensure System Integrity. Users also are encouraged to enter records in a timely manner to afford the maximum protection to the law enforcement officer by providing up-to-date information. Although the use of CJIS/NCIC is voluntary, delayed entry of records reduces or eliminates the possibility of apprehending wanted persons, locating missing persons, and recovering stolen property.

3. Promptness in modifying, locating, or canceling records in the System will help to keep the System free of outdated information.

4. CJIS/NCIC provides information for decision making by investigators, patrol, officers, judges, prosecutors, and corrections officials. The information furnished by CJIS/NCIC must be evaluated along with other facts known to the officers, investigators, judges, prosecutors, and corrections officials.

5. When an agency receives a positive response from CJIS/NCIC and an individual is being detained or a piece of property can be seized, an immediate confirmation with the agency that originated the record in the System is necessary. This confirmation ensures the validity of the hit before an arrest or seizure is made. Likewise, the originating agency has the duty to respond promptly with the necessary confirmation and other pertinent details. (Refer to Hit Confirmation)

PERSONNEL SECURITY

Record Checks on Agency Personnel

Section 7.06 of 803 CMR, and CJIS and FBI/NCIC policy, require each TA to conduct a criminal record check on all agency personnel who have access to the CJIS Terminal. This process must include a fingerprint-supported check of the State Identification Section (SIS) and FBI Identification Files. Additionally, anyone with unescorted access within a secure area where a CJIS terminal is located also require a fingerprint supported background check. (This includes custodial staff).

Thorough personnel background screening by the employing agency is required for terminal operators, programmers, and other persons employed or utilized to effectuate access to, or initiate transmission of, CJIS/NCIC information. Appropriate background investigations, including submission of completed applicant fingerprint cards to the FBI Identification Division and the State Identification Section (SIS), must be conducted on all new CJIS terminal operators before system access is granted.

1. The employing agency must check state and national arrest and fugitive files.

2. If a record of any kind is found, the agency to which the applicant has applied for employment and/or CJIS access will be formally notified indicating CJIS access will be delayed pending review of arrest and fugitive records.

3. When identification of the applicant has been established by fingerprint comparison and he/she appears to be a fugitive or to have an arrest history for a felony or misdemeanor, an agency head or his/her designee will review the matter. If the applicant is found to be a fugitive from justice, or to have been convicted of a felony or misdemeanor, the matter will be referred to DCJIS' Field Services Unit.

4. If a determination is made that CJIS access by the applicant would not be in the public interest, such access will be denied, and the applicant's appointing authority will be notified in writing of the access denial.

Departments and agencies may submit one applicant card per applicant (Form I-9 blue and white card) to the SIS for criminal justice employment checks. All applicant cards submitted to the SIS must include a 13-character alphanumeric tracking number in the designated space on the card (see below example). Applicant tracking numbers must be **unique to the fingerprint card submission and cannot be re-used**. A Second FBI Applicant (Blue) card must be submitted through the SIS, who will forward to the FBI. These Applicant Cards MUST contain the ORI of the agency that requires the response to the record check.

In most cases the ORI on the print card will be the agency submitting the print card to the SIS.

Criminal Justice Employment (example):

- A (applicant)
- BOS (3 characters CJIS Agency Code)
- 2000 (4 characters indicating the year)
- 00001 (5 characters - sequential numbering beginning with first submission of calendar year)

Departments mailing or hand-delivering ten print cards must address/deliver them to:

Massachusetts State Police
Identification Section
59 Horse Pond Road
Sudbury, Massachusetts 01776

These submissions will be processed as received, and responses will be returned to the submitting department via fax. If you need additional ten print cards (criminal and applicant), please call 508-358-3171.

In the event an agency wishes to allow access to an individual who fails the screening criteria, a written request to the CSO requesting access must be submitted.

The written request must contain the following information:

a. Subject's name.

b. Subject's date of birth.

c. Subject's social security number.

d. Length of employment with agency.

e. Job title.

f. Type of CJIS access.

g. Arrest and disposition information along with copies of any documentation obtained by the agency regarding the disposition.

h. The request must also state that the agency has disciplinary procedures in place for misuse of CJIS information and the agency will accept responsibility and liability for any misuse of CJIS information initiated by the subject.

USER AGREEMENT

803 Code of Massachusetts Regulations 7.05 states, in part, that DCJIS as the CJIS Systems Agency (CSA) "shall cause each user of CJIS to execute a User Agreement."

This User Agreement sets forth the mutual responsibilities of the DCJIS and each terminal agency on the CJIS network.

Each terminal agency must submit a new User Agreement bi-annually.

Exception, when an agency designates a new CJIS Representative, Backup Representative, or if a new Agency Head has been appointed, then a new CJIS User Agreement will be submitted to CJIS, within ten (10) days."

The User Agreement is available via the CJIS Extranet.

SECONDARY DISSEMINATION

Secondary dissemination is defined as any dissemination of III (or any CORI information) response to another criminal justice agency or an individual within another criminal justice agency. An agency MUST record secondary dissemination either in its CORI Dissemination Log or in a separate III Log. Each log entry MUST be retained for at least one year.

This log shall contain at a minimum: the date and time of inquiry, the name and date of birth of the subject inquired on, and the name of the individual who is requesting the III record. Additionally, the log should also contain the item disseminated, the reason for dissemination, and the method of dissemination.

III/CORI INFORMATION DISPOSAL

When the retention of III records (or any CORI information) is no longer required, each agency must dispose of responses in a secure manner to preclude unauthorized access/use, this may be accomplished by shredding the information, etc.

III and CORI is sensitive and should be treated accordingly, an unauthorized request or receipt of such material could result in criminal proceedings.

SECOND PARTY CHECK

Every TA (terminal agency) which enters records into the CJIS and NCIC systems must have a policy in place to ensure a second party check.

A second party must verify the accuracy of a CJIS and NCIC record. This second party check should include assuring that the required cross-checks (e.g., VIN and license plate number, etc.) were made, and that the data in the CJIS and NCIC entries match the data in the investigative report. Agencies lacking support staff for this cross-checking should require the case officer to check the record as he/she carries the primary responsibility for seeking the fugitive and/or stolen property.

HIT CONFIRMATION

When an agency receives a request for a status confirmation on one of its records, it must respond to that request immediately by either confirming or rejecting the validity of the record or providing an approximation of the period that will be required to confirm the record's validity.

Every TA (terminal agency) which enters records into CJIS/NCIC must assure that hit confirmation is available for all records, except III records, 24 hours a day either at that agency or through a written agreement with another agency at its location.

CJIS MISUSE

Criminal Justice Information (CJI) is the term used to refer to all CJIS provided data necessary for law enforcement to perform their mission including, but not limited to biometric, identity history, biographic, property, and case/incident history data. Access to CJI is for official law enforcement purposes only. CJI must be used for the purpose for which it was provided and afforded the maximum protection. It is forbidden for agency personnel to request and/or perform inquiries for curiosity, including running your own personal information. Any inquiry other than a criminal justice purpose must be governed by a federal, state, or local statute(s).

There are several statutes and regulations may apply in the case of improper access to, or dissemination of CJIS. If the information involved access to CORI, there are both civil and criminal penalties. The civil penalties include up to a $5,000 fine issued by the DCJIS Criminal Record Review Board pursuant to MGL c. 6, s. 168. The criminal penalty for a CORI violation is set forth in MGL c. 6, s. 178 and includes up to one year and/or a $5,000 fine.

DCJIS regulation violations include a violation of 803 CMR 7.09 pertaining to improper access and use of CJIS data.

If the information involved access to FBI CHRI records, then it would also be a violation of federal regulation 28 CFR 20.33. Additionally, improper access and dissemination of RMV records is also a violation of 18 USC. 2721.

Lastly, there are also criminal penalties for improper use of a computer, see MGL c. 266, s. 120F."

RETENTION OF HARD COPY PRINTOUTS

When an agency receives a locate message on one of its records, or an inquiry on an individual or a piece of property yields a valid positive response (hit), the printout showing the record(s) on file should be retained for use in documenting probable cause for the detention of the missing person, arrest of the wanted person, or seizure of the property. The printout may also prove valuable in a civil suit alleging a false arrest, a false imprisonment, a civil rights violation, or an illegal seizure of property.

All hard copy printouts of record entry, modification to record, and/or a record cancellation message must be retained in the agency's case files.

The printouts should be retained for as long as there remains any possibility that the defendant will challenge the arrest, search, or other law enforcement action taken because of the information contained on the printout. Retain the printout until all possible levels of appeal are exhausted or the possibility of a civil suit is no longer anticipated.

CJIS/NCIC ERROR MESSAGES

Each agency is responsible for its own records and must always have personnel available to make required corrections and changes. Alterations must be made immediately, and not be left for personnel working subsequent shifts. Each agency must have stringent procedures which ensure that all records are kept accurate, complete, and up to date.

CJIS and NCIC monitor records for errors and when an error is detected, the entering agency will receive an Administrative Message from the CSS or Unsolicited Message from NCIC regarding the record in question. Where possible, the staff will assist in obtaining the correct information. The message will state that if the record is not cancelled or corrected within 24 hours, it will be removed from the CJIS and NCIC computer systems.

Twenty-four hours after the message is sent, the CSS will make an inquiry on the record in question. If the record has not been cancelled or corrected, the CSS will cancel the record.

Each agency is responsible for its own records and MUST always have personnel available to make required cancellations or corrections with the assistance of the CSS staff. Additionally, each agency must implement stringent procedures to ensure that all records are kept accurate, complete, and up to date.

PACKING THE RECORD

A complete record of any kind includes all information that was available on the person or property at the time of entry. An agency must consult with investigators, review case files, and make inquiries of the CJIS and NCIC Wanted, Missing, and Stolen Property, WMS, BOP, Triple I (III), Automated Name Index (ANI), and appropriate registry of motor vehicles files. Any additional information obtained after the time of entry must be added to the record.

MEMORANDUM OF UNDERSTANDING

Any terminal agency which provides CJIS services to one or more non-terminal agencies must execute a memorandum of understanding (MOU) with each non-terminal agency to which it provides services. The MOU must detail the scope of services to be provided and must specify each agency's responsibilities as they pertain to any records entered into CJIS, or services provided on behalf of the non-terminal agency. Each agency must forward a copy of each executed MOU to the DCJIS's CJIS Support Services Unit (CSS) within 14 days of execution. A new MOU must be executed each time a new agency head has been appointed. A standard MOU may be obtained from the CJIS CSS by calling 617-660-4710.

THE ANNUAL PURGE

Each January, the data center conducts the Annual Purge of the CJIS data files. This purge removes from the database all records which have passed their respective retention periods.

Any record which is removed as the result of the annual purge may be re-entered by the originating agency. The only exceptions to this option are License Plates and Boat Registrations which have expired, these MAY NOT be re-entered.

RECORD RETENTION PERIOD

Unless otherwise removed or located, records will be retained in file as follows:

Article File	-	Balance of the year entered plus one (1) year.
ATF Violent Felon File	-	Indefinitely or until ATF removes record.

Boat File	-	Balance of the year entered plus four (4) years.
Deported Felon File	-	Indefinitely or until removed by Immigration and Naturalization Service.
Foreign Fugitive File	-	Indefinitely or until removed by the ORI.
Gun File	-	Indefinitely or until removed by the ORI. Recovered weapons will remain for the balance of the year entered plus two (2) years.
III Records	-	Until the individual reaches the age of 99.
License Plate File	-	Records remain for one (1) year after the end of the plate's expiration year. Records for non-expiring license plates remain for the year of entry plus four (4) years.
Missing Person File	-	Indefinitely or until removed by the ORI.
ORI File	-	Indefinitely. If an agency no longer qualities for NCIC access, the ORI record is retired, but kept in an inactive status.
Parts File	-	Balance of the year entered plus four (4) years.
Securities File	-	Balance of the year entered plus four (4) years, except records for traveler's checks and money orders which are retained for the balance of the year entered plus two (2) years.
Suicide Risk File	-	Indefinitely.
Unidentified Person File	-	Indefinitely or until removed by the ORI.
US Secret Service Protection File	-	Until removed by the Secret Service.
Vehicle File	-	Balance of the year entered plus four (4) years. Felony Vehicle records and records not containing a VIN or OAN will remain for ninety (90) days after entry. License data in a vehicle record are purged one (1) year after the plate's expiration year.
Violent Gang and Terrorist Organization File	-	GMC records - are retained five (5) years unless removed by originating agency. Only records entered by Corrections agencies remain past five years. GRC records - Single Interest - indefinitely or until removed by originating agency. Multiple Interests - indefinitely or until **all** agencies remove their records.
Wanted Person File	-	Indefinitely or until removed by the ORI.

Temporary felony wanted records will be automatically removed after 48 hours.

OFF-LINE SEARCHES

An off-line search is a special technique to obtain from the CJIS and/or the NCIC database, information which cannot be obtained through your agency terminal. Off-line searches are performed for a variety of circumstances.

Off-line searches can be performed with a minimum amount of information (e.g., certain time frame, partial plate number, personal descriptors, partial VIN, etc.); however, searches including all available information may be more efficient and effective.

Searches may be run against two sources of data:

- Active Data; or
- Historical Data

To obtain an off-line search you must:

1. Complete the Off-Line Search Request form which is located on the DCJIS Extranet, or in exigent circumstances use agency stationary and explain the type of search you are requesting, including all available information to help narrow the search.
2. It must be signed by the Agency Head or designee.
3. Email the request to cjisoffline@mass.gov.
4. The report will be emailed secure to your agency.

Note: If you have a preference as to how you want to receive the results, it must be added to the letter of request.

SECURITY INCIDENT REPORTING

Massachusetts criminal justice agencies are reminded that any security incidents involving access, or potential access, to department systems or networks, or to criminal justice information of any kind, ***must*** be reported within forty-eight (48) hours to the Department of Criminal Justice Information Services (DCJIS), regardless of whether the incident involved the CJIS network or CJIS systems. This requirement is contained within the CJIS User Agreement, which is signed by the department Agency Head, CJIS Representatives, and CJIS Technical Contact. Specifically:

Incident Reporting – A security incident is violation or a potential violation of the

> confidentiality, integrity and/or the availability of state/FBI CJIS data. If such an incident should occur, the agency head shall submit a fax, on agency letterhead…to (617) 884-4601 within forty-eight hours with the following information:
>
> - Date & Location of incident
> - Systems affected
> - Method of detection & Nature of Incident
> - Description of the incident & Actions taken/resolution
> - Date & Contact information for the agency

Further, the FBI's CJIS Security Policy also has ***mandatory*** policy and reporting requirements for computer security breaches:

> Incident Response – …Agencies shall: (i) establish an operational incident handling capability for agency information systems that includes adequate preparation, detection, analysis, containment, recovery, and user response activities, (ii) track, document, and report incidents to appropriate agency officials and/or authorities.
>
> Reporting Information Security Events – The agency shall promptly report incident information to appropriate authorities. Information security events and weaknesses associated with information systems shall be communicated in a manner allowing timely corrective action to be taken. Formal event reporting and escalation procedures shall be in place. Wherever feasible, the agency shall employ automated mechanisms to assist in the reporting of security incidents. All employees, contractors and third-party users shall be made aware of the procedures for reporting the different types of events and weakness that might have an impact on the security of agency assets and are required to report any information security events and weaknesses as quickly as possible to the designated point of contact.

In lieu of the fax on agency letterhead described in the CJIS User Agreement, the DCJIS has created a Computer Incident/Security Form which must be used to notify the DCJIS of such events. The form is posted online on the DCJIS Extranet.

Please direct any questions about this procedure to the CJIS Support Services Unit at 617.660.4710 or via email at cjis.support@mass.gov.

FELONY FINGERPRINTING

Pursuant to M.G.L. c. 263, § 1A and 803 CMR 7.08, the Department of Criminal Justice Information Services ("DCJIS") is tasked with auditing law enforcement agencies to ensure compliance with the statutory requirement that any person arrested and charged with a felony be fingerprinted. Fingerprinting should be completed by the arresting agency or by another law enforcement agency on behalf of the arresting agency using the Originating Agency Identifier ("ORI") of the arresting agency.

Specifically, M.G.L. c. 263, § 1A states as follows:

> Whoever is arrested by virtue of process or is taken into custody by an officer and is charged with the commission of a felony shall be fingerprinted according to the system of the department of state police and photographed. The fingerprints and photographs shall

> be immediately forwarded to the department of state police to allow a biometric positive identification. The fingerprint record shall be suitable for comparison and shall include an offense-based tracking number, completed description of the offenses charged and other descriptors as required. The executive office of public safety and security may audit police departments for compliance with this section.

Following from this, 803 CMR 7.08(1)(b) requires that "[f]ingerprints shall be submitted to the Massachusetts State Police State Identification Section" for "any felony arrest by a law enforcement agency, as required by M.G.L. c. 263, § 1A." Further, 803 CMR 7.08(5) provides that:

> DCJIS may audit any [criminal justice agency ("CJA")]'s fingerprinting practices and procedures to ensure compliance with M.G.L. c. 263, § 1A, and 803 CMR 7.00. In connection with any such audit, a CJA is required to respond to audit questionnaires, complaints, and/or any other inquiries from DCJIS within the time specified by DCJIS.

When DCJIS conducts the Felony Fingerprint audit an Excel spreadsheet containing a list of felony arraignments for the arresting agency will be provided. The last column header of the spreadsheet is the "Offense-Based Tracking Number (OBTN)." All fingerprint submissions must include an offense-based tracking number tied to a specific arrest event.

On the spreadsheet please provide the OBTN for the arrest that led to each arraignment, or in the event the individual was not fingerprinted, provide the reason why in the same OBTN column.

Each felony arraignment will ultimately fall into one of the following four categories:

> **No Fingerprint Record Located** – No record found for the person being arraigned.
> **Complaint/Summons** – Individual not arrested, appeared in court via summons or complaint.
> **Fingerprinted** – Felony arrest fingerprinted by the arresting department.
> **Fingerprinted by another agency** – Felony arrest fingerprinted by another agency on behalf of the arresting agency.

Once the audit is completed DCJIS will send a data quality review letter to you, and a copy of the review will be retained in our files.

COMPLIANCE AUDIT

The Department of Criminal Justice Information Services (DCJIS) is mandated to audit law enforcement agencies that access the DCJIS network at a minimum of once every three years. The audit is designed as a process for improving the criminal justice information system, not for imposing penalties. The objective of this audit is to verify adherence to CJIS and NCIC policies and regulations and is called a Compliance Audit. Audits may be conducted on a more frequent basis should it be necessary. The audit cycle begins on July 1st of the scheduled audit cycle and ends June 30th 3 years later. The CJIS Representative, back-up Representative, and security officer are required to be involved in the compliance audit of their agency.

The compliance audit consists of four sections: 1- Comprehensive CJIS questionnaire, 2- Policy and Procedure review, 3- Data Quality Review (for NCIC entering terminal agencies), 4- Physical Security Walk through. Once the compliance audit is completed the DCJIS auditor will conduct a review of the

audit and note any findings that may have been identified during the audit process.

DCJIS Policies and Procedure forms are located on the DCJIS Extranet under the Audit Tab.

There may be times due to an agency's audit results, or per an agency's request that an agency on-site audit will be conducted at the CJIS agency by one or more Field Representatives from the CJIS Field Services Unit. The Auditor(s) will interview appropriate agency personnel, asking questions relative to the agency's policies and procedures in effect at the agency as they relate to the usage of the CJIS and the NCIC computer systems.

QUESTIONAIRRE:

To begin the audit process, the agency being audited should have received an initial email from the DCJIS auditor who will be conducting the on-site audit. This pre-audit questionnaire is the second step in completing the audit; therefore, it is essential to return the completed questionnaire no later than the date noted in the e-mail. The pre-audit questionnaire does several things to help the audit process. First, it provides the agency with a description of what to expect during the on-site audit, including a general idea of the topic areas that will be discussed. Second, it requests a list of documentation and questions to be completed by the agency to assist the auditor in preparing for the actual on-site review process. Finally, the information obtained from this questionnaire affords the auditor with a fundamental insight into the agency's policies and procedures as they relate to policy requirements. Consequently, the scope of the audit can be narrowed to address questions related to the agency during the on-site audit. In addition, it is used to inform and prepare the auditor of the policies/procedures and/or requirements as they relate to each of the local agencies selected for the audit.

POLICIES AND PROCEDURES REVIEW:

This section of the compliance audit will address required local agency CJIS polices and Memorandums of Understanding (MOUs). Refer to appendix C for a list of policies and MOUs that are required if applicable to your agency.

The next section covered will be Terminal Operator training and certification (Nextest). Additionally, training and certification (CJIS Online) will be reviewed for those individuals without direct access to CJIS, however, will have access to secure areas where CJIS terminals are located and/or Criminal Justice Information (CJI) is processed.

A walk through of the areas where CJIS terminals are located and where CJI is processed will be conducted. This is to ensure proper security measures have been taken to limit the access to only individuals required to be in those areas and terminals are located so that screens are not facing public areas. Also, to ensure CJI is properly secured, and access is limited to only those individuals required to be in that area.

DATA QUALITY REVIEW:

This part of the audit consists of reviewing a sample of the agencies NCIC entries for accuracy, timeliness, and completeness. Entries for Wanted Persons, Missing Persons, and Stolen Vehicle will be reviewed. A maximum of 25 records in each section will be reviewed. The NCIC record entered by the agency will be compared to the physical case file records to determine if the entry is accurate, entered in a timely fashion, and contains any additional information that is noted in the case file above and beyond the minimum required entry information (Packing the Record).

ACCURACY

Each CJIS and NCIC record must be error free. In addition, the TA must maintain necessary documentation as required by CJIS and NCIC policy. Documentation must also be available from non-terminal agencies accessing CJIS and NCIC through the TA.

COMPLETENESS

The information in each CJIS and NCIC record constitutes all pertinent and available information.

TIMELINESS

The entry, update, and removal of records must be completed as soon as information supporting an entry, update, or removal becomes available.

SECURITY

The TA must protect its information against unauthorized access, ensuring confidentiality of the information in accordance with State and Federal law and with CJIS and NCIC policy.

DISSEMINATION

DOCUMENTATION

Each TA must ensure that documentation is available to assist in the audit program.

When an agency receives a printout of records to be reviewed as part of the audit, they must compare the records against their agency's documentation (e.g., case files) and/or other information available at the agency. Instructions are included with the record printouts and must be followed exactly. An agency will receive a random sample of ten percent (10%) of their records in a particular file. Agencies, which have many records in a particular file, will receive no more than 25 records in that file. Agencies, which have a small number of records in a particular file, may receive them all.

RESPONSE TIMEFRAME

Agencies have a 20-day response timeframe in which to return to the CJIS Support Services Unit the completed Audit Questionnaire, including all required documentation as listed below:

1.) the completed questionnaire

2.) a newly signed User Agreement

3.) a copy of the TQ and QO with corrected information (if applicable) for NCIC and NLETS

4.) the list of certified personnel – Nextest certification reviewed and updated

5.) a copy of the current maintenance contract

6.) a copy of the agency's internal procedures relating to the CJIS terminal

7.) a copy of the record printouts with all notations as directed in the record review instructions

8.) Up to date Memorandums of Understanding and required agreements are prepared

9.) All CJIS Users and non-users with unescorted access have had a fingerprint supported background investigation completed upon hire and every five years thereafter

10.) Review of agency vendors for completed fingerprint supported backgrounds and vendor agency and vendor employee agreements of non-disclosure and FBI Security Addendum

Upon receipt of the required documentation and on site audit the CJIS Support Services auditor will prepare a written report of the audit results. The original report will be forwarded to the agency and a copy of the report will be maintained at the CJIS Support Services.

If an agency is found to be out-of-compliance in one or more areas of the audit it will be noted, and a response from the TA (terminal agency) will be required within 30 days as to what action was taken to ensure compliance.

COMPLIANCE AUDIT REVIEW WITH AGENCY:

Once the on-site audit is completed the auditor will review with the CJIS Representatives those areas of the audit that met NCIC audit requirements. The auditor will also discuss issues with non-compliant areas of the audit and what will be needed to make the appropriate corrections. Additionally, the auditor will provide suggestions for those areas of the audit which would improve operational requirements.

The auditor will provide a written report of the overall compliance audit to the agency head and CJIS Representatives noting those areas where non-compliant issues will need to be addressed and reported in writing by the agency to DCJIS.

THE VALIDATION PROGRAM

Record validation is one of the most important components of any data quality program. Since the users of CJIS and NCIC are the primary source of the information contained within these systems, each agency with records in the CJIS and NCIC databases is a vital contributor to the data quality process and is directly responsible for the accuracy of its records. Therefore, to assist agencies with this important and serious responsibility, the CJIS and NCIC validation programs were implemented.

CJIS and NCIC policy require that each agency with records in these systems have specific, step-by-step procedures for validating those records. To help users comply with these policies, the CJIS Support Services Unit has developed the following model validation procedures. Each agency is encouraged to

implement these model procedures. At the very least, each agency must develop its own set of procedures, which are as comprehensive as those contained in the model. The CJIS Support Services Unit is available to assist each agency in the creation of validation procedures, which are tailored to the needs of the specific agency.

VALIDATION DEFINITION

Validation obliges the ORI to confirm the record is complete, accurate, and still outstanding or active. Validation is accomplished by reviewing the original entry and current supporting documents. Recent consultation with any appropriate complainant, victim, prosecutor, court, motor vehicle registry files, or other appropriate source or individual also is required with respect to the Wanted Person, Missing Person, and Vehicle Files. In the event the ORI is unsuccessful in its attempts to contact the victim, complainant, etc., the entering authority must decide based on the best information and knowledge available whether to retain the original entry in the file. Validation procedures must be formalized, and copies of these procedures must be on file for review during an NCIC/CJIS audit.

VALIDATION RESPONSIBILITY

The integrity and validity of each record is clearly the responsibility of the agency that entered the record. Validation is one of many tools that assist the entering agency in maintaining the integrity of their records.

VALIDATION SCHEDULE

Each agency that enters records into the CJIS and NCIC systems is required to perform a monthly validation. The records to be validated each month are those which are 60-90 days old, 14-15 months old, 26-27 months old, 38-39 months old, etc. In other words, in April, an agency is required to validate all its records that were entered during the month of January of the current year and all previous years. The Validation Schedule is as follows:

VALIDATION MONTH:	RECORDS ENTERED MONTH:
JANUARY	OCTOBER
FEBRUARY	NOVEMBER
MARCH	DECEMBER
APRIL	JANUARY
MAY	FEBRUARY
JUNE	MARCH
JULY	APRIL
AUGUST	MAY
SEPTEMBER	JUNE
OCTOBER	JULY
NOVEMBER	AUGUST
DECEMBER	SEPTEMBER

VALIDATION NOTIFICATION

At the beginning of each validation cycle, the validation application within Messenger will generate an administrative message notification transaction to each ORI with records to validate providing a summary of the type and number of the records to be validated. In addition, DCJIS staff will send an e-mail message to the CJIS Representative and Back-up CJIS Representative notifying them that the current

validation is available for completion.

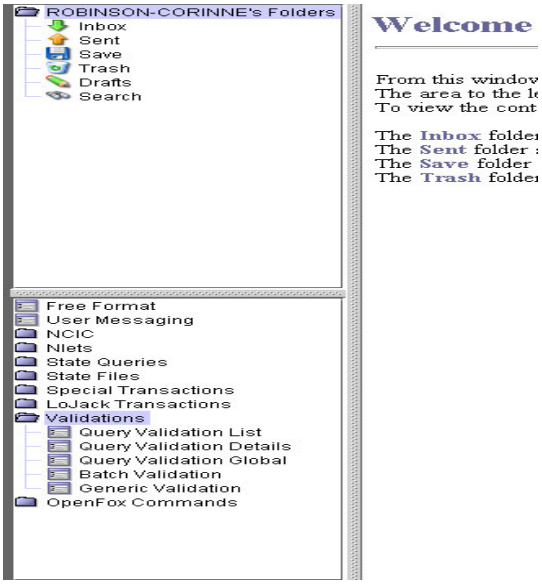
An example of the Messenger Notification message follows:

THIS MESSAGE SUMMARIZES THE JANUARY RECORDS REQUIRING VALIDATION BY ORI WITHIN 20 DAYS OF THIS NOTICE.

WANTED PERSON: 10
STOLEN VEHICLE: 20
PROTECTION ORDER: 5

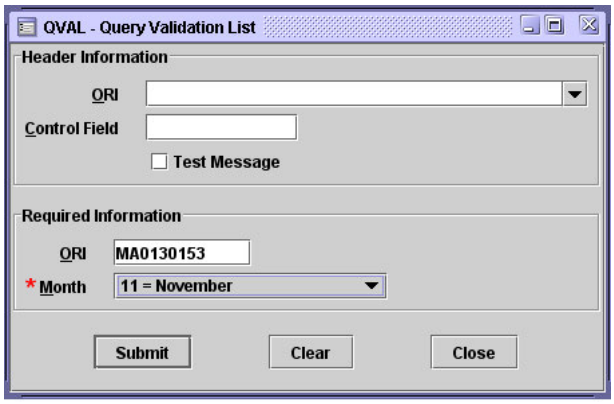
TOTAL RECORDS: 35

FOR ADDITIONAL INFORMATION, THE VALIDATION QUICK REFERENCE GUIDE CAN BE FOUND ON THE CJIS EXTRANET. IF YOU HAVE ANY QUESTIONS, PLEASE CONTACT THE CJIS SUPPORT SERVICES UNIT AT 617-660-4710.



OBTAINING THE VALIDATION RECORD SUMMARY

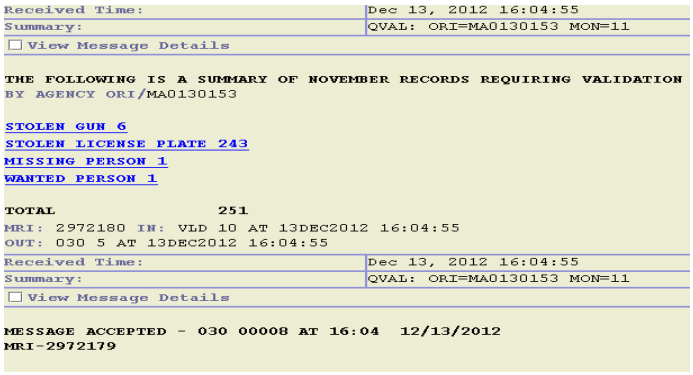
To obtain the details of the records to be validated, the user must first conduct a Query Validation List (QVAL) transaction.



1. Type QVAL in the quick query bar located at the bottom of the CJIS Messenger Desktop and hit the enter key. (SkiptoStep3)

Or

In the Messenger forms tree, double-click on the Validations folder.



2. Double-click the "**Query Validation List**" link. The QVAL-Query Validation List form will be displayed.

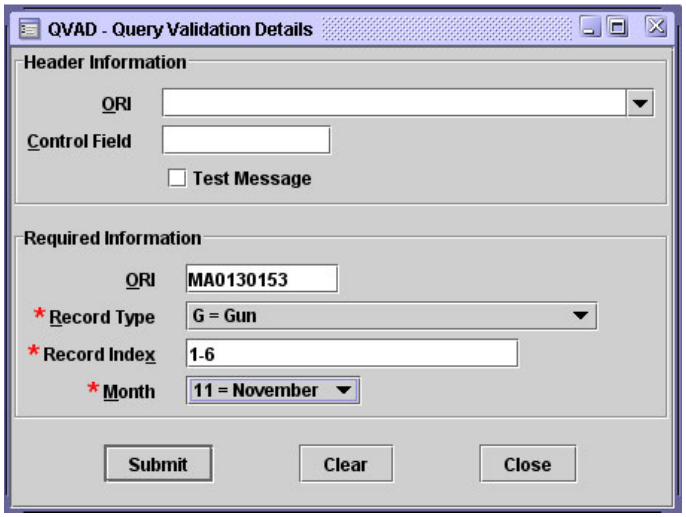
3. Enter the ORI of your agency and then select the current month in the Month drop-down list.

Important: To validate the correct records, you MUST select the current month in the Month drop=down list.

4. Click the Submit button. A summary of the records requiring validation will be returned to your inbox.

OBTAINING DETAILED REPORT OF RECORDS TO BE VALIDATED

To obtain the actual detail of each record requiring validation, click the link for each file type shown in the QVAL response.

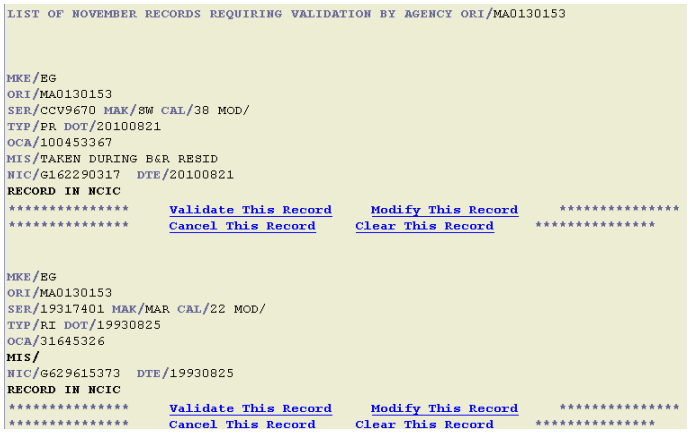


Alternatively, you may complete a Query Validation Detail (QVAD) transaction as follows:

1. Type QVAD in the quick query bar located at the bottom of the CJIS Messenger Desktop and hit the enter key. (Skip to Step 3)

   Or

   In the Messenger forms tree, double-click on the Validations folder.



2. Double-click the "**Query Validation Details**" link. The QVAD-Query Validations Details form will be displayed.

3. Enter the ORI of your agency, select the record type of the file you are validating, enter the record index (records 1-X of the records to be validated in the selected file), and select the current month in the Month drop-down list.

4. Click the Submit button. A detailed listing of each record to be validated in the selected file will be returned to your inbox.

Note: only the records entered in the record index will be returned. In the example above, records 1-6 in the gun file would be returned. You may have to conduct multiple QVAD transactions to see all of the records you need to validate in a given file.

CJIS MODEL VALIDATION PROCEDURES

The following validation procedures, developed pursuant to CJIS and NCIC policy requirements, must be followed exactly in order for an agency to properly validate its records. Failure to carefully execute these procedures could result in a costly civil, and possibly criminal, lawsuit.

For EACH record to be validated, you must do the following:

1. **FIND SOURCE DOCUMENTATION**

Pull the record's source document(s) (i.e., case file, physical warrant, arrest report, stolen vehicle report, etc.). ALL source documentation corresponding to EACH record being validated must be reviewed. Copies of CJIS and NCIC entries and/or worksheets are not proper source documentation.

Important: If source documentation cannot be found for the record, the record must be cancelled immediately from the CJIS and NCIC computer systems.

2. COMPARE THE RECORD WITH SOURCE DOCUMENTATION

Compare the information in the record with the information listed in the source document(s). You must check the following:

a.) **ACCURACY**: The information in the CJIS and NCIC records must match the information on the source document(s) exactly. Any error(s) in the CJIS and/or NCIC record must be corrected immediately using a modification message.

b.) **COMPLETENESS**: Each record entered into CJIS and NCIC must contain all available data. For example, such items such as Scars, Marks, Tattoos, Fingerprint Classification, and FBI Number must be added to a Wanted Person or Missing Person record when available.

If a case file contains information that has not been entered into the CJIS and NCIC record, you must modify the record so that it will reflect the additional information.

1.) It is suggested that, for wanted person records, the NCIC III file and the BOP file be checked for additional descriptors.

2.) For vehicle records, check with the RMV to confirm vehicle and license information.

IMPORTANT: Dental Records and Blood Type are CRITICAL components of a complete Missing Person entry.

3. OWNER, COURT, COMPLAINANT, DISTRICT ATTORNEY CONTACT

The next step in the validation process involves contacting the court that issued the warrant, the person that reported the vehicle or other property stolen, or the party that filed the missing person report. In the case of a warrant entered into NCIC, you must also contact the District Attorney in order to verify extradition (the exception to DA contact is a wanted person record which contains the code NOEX in the Remarks field). The underlying theory behind this process is that the appropriate owner, court, complainant, and DA are the ultimate sources for verifying the validity of a record. (**Note**: Warrant Management System (WMS) warrants that your agency has entered into NCIC can be validated by checking the warrant in the WMS.)

Contact can be made by:

1. Telephone call
2. Personal visit
3. Letter or postcard
4. Letter or memorandum to the courts or prosecutor

5. Letter, memorandum, or printout from the court or prosecutor identifying active warrants.

If contact cannot be made, a decision must be made by appropriate personnel whether or not to retain the record in the CJIS and NCIC computer systems.

IMPORTANT:

1.) If the District Attorney decides to narrow extradition limitations (e.g., New England States Only), then the Extradition Limitation (EXL) field must be modified immediately to reflect the new limits.

2.) If the District Attorney decides that extradition **will not** be authorized, then the EXL field must be modified immediately with the code of 4 for a felony offense or D for a misdemeanor offense.

3.) Extradition Limitations are as follows:

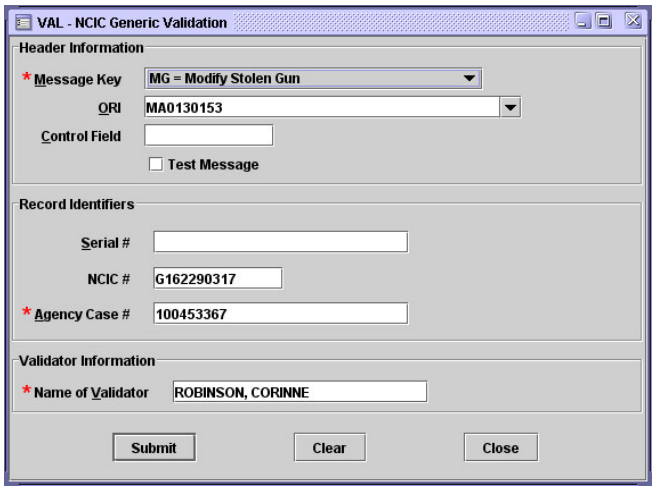
Felony Warrants

1 - Full Extradition unless otherwise noted in the MIS Field
2 - Limited Extradition see MIS Field (Requires data in the MIS Field)
3 - Extradition – Surround States Only
4 - No Extradition
5 - Extradition Arrangements Pending See MIS Field (Requires data in the MIS Field)
6 - Pending Extradition Determination

Section 32.2 Misdemeanor Warrants

A - Full Extradition
B - Limited Extradition See MIS Field (Requires data in the MIS Field)
C - Extradition – Surrounding States Only
D - No Extradition
E - Extradition Arrangements Pending See MIS Field (Requires data in the MIS Field)
F - Pending Extradition Determination

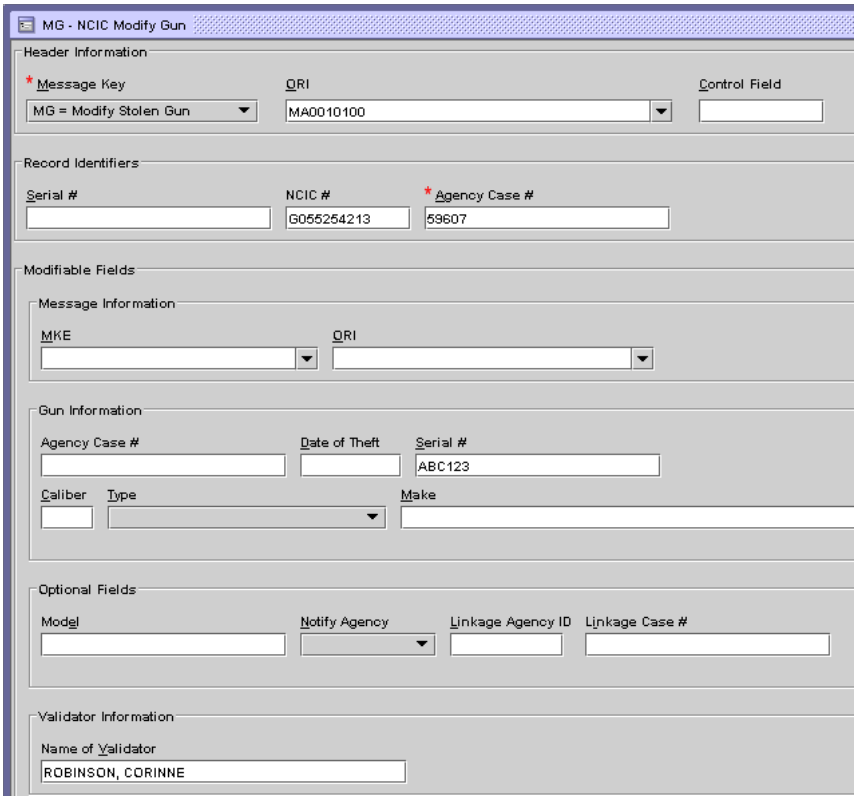
VALIDATING EACH RECORD



After reviewing the source documentation and after contact, or attempted contact, with the appropriate party(ies), the user must decide which of the following actions to take with the record:

- **Validate the Record** – The record is accurate, complete, and should remain in CJIS and NCIC.
- **Modify the Record** – The record must be modified due to the data being inaccurate and/or incomplete, or due to extradition limitations being changed.
- **Cancel the Record** – The record should have never been entered (e.g., the missing person report was falsely filed) or source documentation cannot be located.

- **Clear the Record** – The record should be removed as the stolen item has been recovered or wanted/missing person has been located.

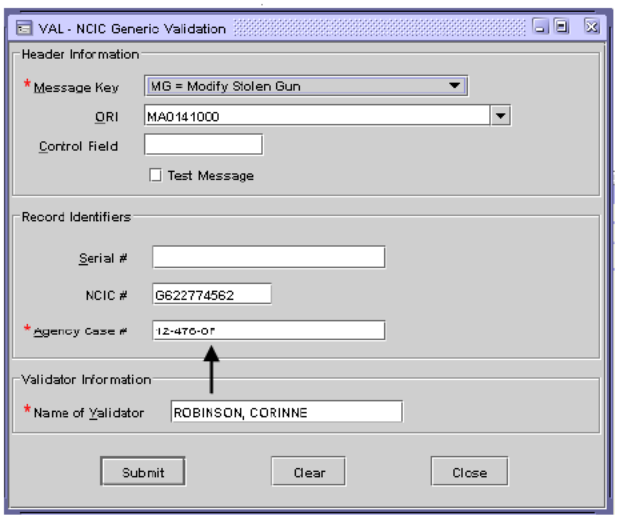


To complete the validation of each record:

1) Click the appropriate link for the action to be taken on the record. The associated form will be displayed with the Record Identifier fields populated and the Validator's Information displaying the username of the individual logged into the CJIS Messenger application. Note that the forms to Cancel and Clear records do not include Validator Information.

2) Click the Submit Button. The record is validated and the user may move on to the next record or file as necessary.

IMPORTANT: If modifying the record, enter the correct data to fix any errors, or add additional information to the record as required AND enter the Name of Validator information (Last name, First Name). See example below:



NOTE: The QVAL summary reduces each time a record is validated. When there are no records remaining to validate, the QVAL will return a notice like the following:

NO {MONTH} RECORDS PENDING FOR VALIDATION BY AGENCY ORI/MAMSP0000

RECORD VALIDATION TIPS:

1) NCIC 2000 may translate the letter O to a 0. If the VAL – NCIC Generic Validation pre-populated Agency Case # information does not match the record's OCA # exactly, the record will not validate. A user may get a record validated message from MACJIS while NCIC will return a Reject Not on File Message.

To ensure that the validation is successful, change the zero (0) to the Letter O and click submit.

SECURITY AWARENESS TRAINING

Security training is key to the human element of information security. All users with authorized access to CJI should be made aware of their individual responsibilities and expected behavior when accessing CJI and the systems which process CJI. Local Agency Security Officers (LASO) require enhanced training on the specific duties and responsibilities of those positions and the impact those positions have on the overall security of information systems. DCJIS utilizes Level One Security Awareness Training for all personnel with unescorted access where CJI is being accessed and/or process to include custodians. Level Four Security Awareness Training is for all personnel with physical and logical access to CJI and for all Information Technology personnel.

Basic Security Awareness Training

Basic security awareness training shall be required within six months of initial assignment, and biennially thereafter, for all personnel who have access to CJI to include all personnel who have unescorted access to a physically secure location. The agency head may accept the documentation of the completion of security awareness training from another agency. Accepting such documentation from another agency means that the accepting agency assumes the risk that the training may not meet a particular requirement or process required by federal, state, or local laws.

A significant number of topics can be mentioned and briefly discussed in any awareness session or campaign. To help further the development and implementation of individual agency security awareness training programs the following baseline guidance is provided.

Level One Security Awareness Training

At a minimum, the following topics shall be addressed as baseline security awareness training for all personnel who have unescorted access to a physically secure location:

1. Individual responsibilities and expected behavior regarding being in the vicinity of CJI usage and/or terminals.
2. Implications of noncompliance.
3. Incident response (Identify points of contact and individual actions).
4. Visitor control and physical access to spaces—discuss applicable physical security policy and procedures, e.g., challenge strangers, report unusual activity, etc.

Level Four Security Awareness Training

In addition to the above, the following topics at a minimum shall be addressed as baseline security awareness training for all authorized personnel with access to CJI both physical and logical, and Information Technology personnel (system administrators, security administrators, network administrators, etc.):

1. Media protection.
2. Protect information subject to confidentiality concerns — hardcopy through

destruction.

3. Proper handling and marking of CJI.

4. Threats, vulnerabilities, and risks associated with handling of CJI.

5. Social engineering.

6. Dissemination and destruction.

7. Rules that describe responsibilities and expected behavior regarding information system usage.

8. Password usage and management—including creation, frequency of changes, and protection.

9. Protection from viruses, worms, Trojan horses, and other malicious code.

10. Unknown e-mail/attachments.

11. Web usage—allowed versus prohibited; monitoring of user activity.

12. Spam.

13. Physical Security—increases in risks to systems and data.

14. Handheld device security issues—address both physical and wireless security issues.

15. Use of encryption and the transmission of sensitive/confidential information over the Internet—address agency policy, procedures, and technical contact for assistance.

16. Laptop security—address both physical and information security issues.

17. Personally owned equipment and software—state whether allowed or not (e.g., copyrights).

18. Access control issues—address least privilege and separation of duties.

19. Individual accountability—explain what this means in the agency.

20. Use of acknowledgement statements—passwords, access to systems and data, personal use, and gain.

21. Desktop security—discuss use of screensavers, restricting visitors' view of information on screen (mitigating "shoulder surfing"), battery backup devices, allowed access to systems.

22. Protect information subject to confidentiality concerns—in systems, archived, on backup media, and until destroyed.

23. Threats, vulnerabilities, and risks associated with accessing CJIS Service systems and services.

24. Protection from viruses, worms, Trojan horses, and other malicious code—scanning, updating definitions.

25. Data backup and storage—centralized or decentralized approach.

26. Timely application of system patches—part of configuration management.

27. Access control measures.

28. Network infrastructure protection measures.

LASO TRAINING

Local Agency Security Officer (LASO) training shall be required prior to assuming duties but no later than six months after initial assignment, and annually thereafter.

At a minimum, the following topics shall be addressed as enhanced security awareness training for a LASO:

1. The roles and responsibilities listed in CJIS Security Policy Section 3.2.9.
2. Additional state/local/tribal/federal agency LASO roles and responsibilities.
3. Summary of audit findings from previous state audits of local agencies.
4. Findings from the last FBI CJIS Division audit of the CSA.
5. Most recent changes to the CJIS Security Policy.

Security Training Records

Records of individual basic security awareness training and specific information system security training shall be documented, kept current, and maintained by the local agency.

SYSTEM AUDITING AND ACCOUNTABILITY

Agencies shall implement audit and accountability controls to increase the probability of authorized users conforming to a prescribed pattern of behavior. Agencies shall carefully assess the inventory of components that compose their information systems to determine which security controls are applicable to the various components.

Auditing controls are typically applied to the components of an information system that provide auditing capability (servers, etc.) and would not necessarily be applied to every user-level workstation within the agency. As technology advances, more powerful and diverse functionality can be found in such devices as personal digital assistants and cellular telephones, which may require the application of security controls in accordance with an agency assessment of risk.

Auditable Events and Content (Information Systems)

The agency's information system shall generate audit records for defined events. These defined events include identifying significant events which need to be audited as relevant to the security of the information system. The agency shall specify which information system components carry out auditing activities. Auditing activity can affect information system performance and this issue must be considered as a separate factor during the acquisition of information systems.

The agency's information system shall produce, at the application and/or operating system level, audit records containing sufficient information to establish what events occurred, the sources of the events, and the outcomes of the events. The agency shall periodically review and update the list of agency-defined auditable events. In the event an agency does not use an automated system, manual recording of activities shall still take place.

Events

1. Successful and unsuccessful system log-on attempts.

2. Successful and unsuccessful attempts to use:
   a. access permission on a user account, file, directory or other system resource;
   b. create permission on a user account, file, directory or other system resource;
   c. write permission on a user account, file, directory or other system resource;
   d. delete permission on a user account, file, directory or other system resource;
   e. change permission on a user account, file, directory or other system resource.

3. Successful and unsuccessful attempts to change account passwords.

4. Successful and unsuccessful actions by privileged accounts (i.e. root, Oracle, DBA, admin, etc.).

5. Successful and unsuccessful attempts for users to:
   a. access the audit log file;
   b. modify the audit log file;
   c. destroy the audit log file.

Content

The following content shall be included with every audited event:

1. Date and time of the event.

2. The component of the information system (e.g., hardware or software component) where the event occurred. (e.g., software component, hardware

3. Type of event.

4. User/subject identity.

5. Outcome (success or failure) of the event.

Response to Processing Failures

The agency's information system shall provide alerts to appropriate agency officials in the event of an audit processing failure. Audit processing failures include, for example: software/hardware errors, failures in the audit capturing mechanisms, and audit storage capacity being reached or exceeded.

Audit Monitoring, Analysis, and Reporting

The responsible management official shall designate an individual or position to review/analyze information system audit records for indications of inappropriate or unusual activity, investigate suspicious activity or suspected violations, to report findings to appropriate officials, and to take necessary actions. Audit review/analysis shall be conducted at a minimum once a week. The frequency of review/analysis should be increased when the volume of an agency's processing indicates an elevated need for audit review. The agency shall increase the level of audit monitoring and analysis activity within the information system whenever there is an indication of increased risk to agency operations, agency assets, or individuals based on law enforcement information, intelligence information, or other credible sources of information.

Time Stamps

The agency's information system shall provide time stamps for use in audit record generation. The time stamps shall include the date and time values generated by the internal system clocks in the audit records. The agency shall synchronize internal information system clocks on an annual basis.

Protection of Audit Information

The agency's information system shall protect audit information and audit tools from modification, deletion, and unauthorized access.

Audit Record Retention

The agency shall retain audit records for at least one (1) year. Once the minimum retention period has passed, the agency shall continue to retain audit records until it is determined they are no longer needed for administrative, legal, audit, or other operational purposes. This includes, for example, retention and availability of audit records relative to Freedom of Information Act (FOIA) requests, subpoena, and law enforcement actions.

APPENDIX A TERMS AND DEFINITIONS

Access to Criminal Justice Information - The physical or logical (electronic) ability, right or privilege to view, modify or make use of Criminal Justice Information.

Agency Administrator (AA) - An individual located within an agency that is ultimately responsible for security and compliance requirements.

Administrative Messages (AM) - A secure and documentable means of interagency communication. An AM may be used for any type of official law enforcement or public safety purpose as approved by Nlets and NCIC.

Assistant Terminal Agency Coordinator (ATAC) - An individual located within an agency designated to assist the terminal agency coordinator as liaison between the agency and the CSA.

Authorized Personnel/Criminal Justice Practitioner - A non-sworn or non-terminal operator that could receive or view hard copy CJIS/NCIC record information.

AUTHORIZED RECIPIENT (Civil Accounts) - (1) A non-governmental entity authorized by federal statute or federal executive order to receive CHRI for non-criminal justice purposes, or (2) a government agency authorized by federal statute, federal executive order, or state statute which has been approved by the United States Attorney General to receive CHRI for non-criminal justice purposes.

Authorized User/personnel - An individual, or group of individuals, who have been appropriately vetted (national fingerprint-based record check, a wants/warrant check and received appropriate training) and have been granted access to CJI.

CJIS Security Officer (CSO) - An individual located within the CSA responsible for the administration of CJIS for the CSA.

CJIS Security Policy - The FBI CJIS Security Policy document as published by the FBI ISO.

CJIS System Agency (CSA) - A state criminal justice agency providing access to its criminal justice users with respect to CJIS data. There can only be one CSA per state.

Confidentiality - The concept of ensuring that information is observable only to those who have been granted authorization to do so.

Contractor **and/or Vendor** - A private business, agency or individual which has entered into an agreement for the administration of criminal justice or noncriminal justice functions with a Criminal Justice or a Non-Criminal Justice Agency.

Criminal History Record Information (CHRI) - A subset of CJI. Any notations or other Written or electronic evidence of an arrest, detention, complaint, indictment, information, or other formal criminal charge relating to an identifiable person that includes identifying information regarding the individual as well as the disposition of any charges.

Criminal Justice Information (CJI) - Criminal Justice Information is the abstract term used to refer to all the DCJIS and FBI CJIS provided data necessary for law enforcement agencies to perform their mission and enforce the laws, including but not limited to biometric, identity history, person, organization, property, and case/incident history data. In addition, CJI refers to the DCJIS and FBI CJIS-provided data necessary for civil agencies to perform their mission; including but not limited to data used to make hiring decisions.

Criminal Justice Information Services Division (FBI CJIS or CJIS) — The FBI division Responsible for the collection, warehousing, and timely dissemination of relevant CJI to the FBI and to qualified law enforcement, criminal justice, civilian, academic, employment, and licensing agencies.

Department of Criminal Justice Information System (DCJIS) - The primary function of the Nevada Criminal Justice Information System is to provide an efficient and effective system for the expeditious exchange of criminal justice or related information.

Direct Access - (1) Having the authority to access systems managed by DCJIS and the FBI CJIS Division, whether by manual or automated methods, not requiring the assistance of, or intervention by, any other party or agency (28 CFR, Chapter 1, Part 20). (2) Having the authority to query or update national databases maintained by DCJIS and the FBI CJIS Division including national queries and updates automatically or manually generated by the CSA.

Dissemination -Disclosing records of criminal history or the absence of records of criminal history to a person or agency outside the organization which has control of the information.

Escorting - An unauthorized person in a physically secure area must be escorted by a person who is sufficiently familiar with the equipment in the area and the tasks being performed. The escort must be able to identify unauthorized act and alert security personnel. If the escort does not have this set of knowledge and skills, then the person cannot be an escort.

FBI - Federal Bureau of Investigation

Information Security Officer (ISO) - An individual designated by the CSO who has the responsibilities to establish and maintain information security policy, assesses threats and vulnerabilities, performs risk and control assessments, oversee the governance of security operations and establishes information security training and awareness programs. The ISO interfaces with security operations to manage implementation details and with auditors to verify compliance to established policies.

Interstate Identification Index (III) - The CJIS service that manages automated submission and requests for CHRI that is warehoused after the submission of fingerprint information. Subsequent requests are directed to the originating state as needed.

Law Enforcement National Data Exchange (N-DEx) - FBI CJIS division system providing law enforcement agencies with a shared investigative tool.

Local Agency Security Officer (LASO) - A point-of-contact designated as the liaison between their agency and the ISO who has access to the DCJIS network and provides any needed technical systems assistance to help assure the confidentiality, integrity, and availability of criminal justice information on the network.

National Crime Information Center (NCIC) - FBI information system which stores CJI which can be queried by appropriate Federal, state and local law enforcement, criminal justice and certain noncriminal justice agencies.

Nlets - The International Justice and Public Safety Network.

Non-Terminal Agency (NTA) - An agency having access to DCJIS/NCIC information through a terminal agency.

Non-Terminal Agency Coordinator - An individual located within an agency designated as the liaison between his or her agency and the CSA. The TAC administers DCJIS/CJIS systems programs within the local agency and oversees the agency's compliance with those policies.

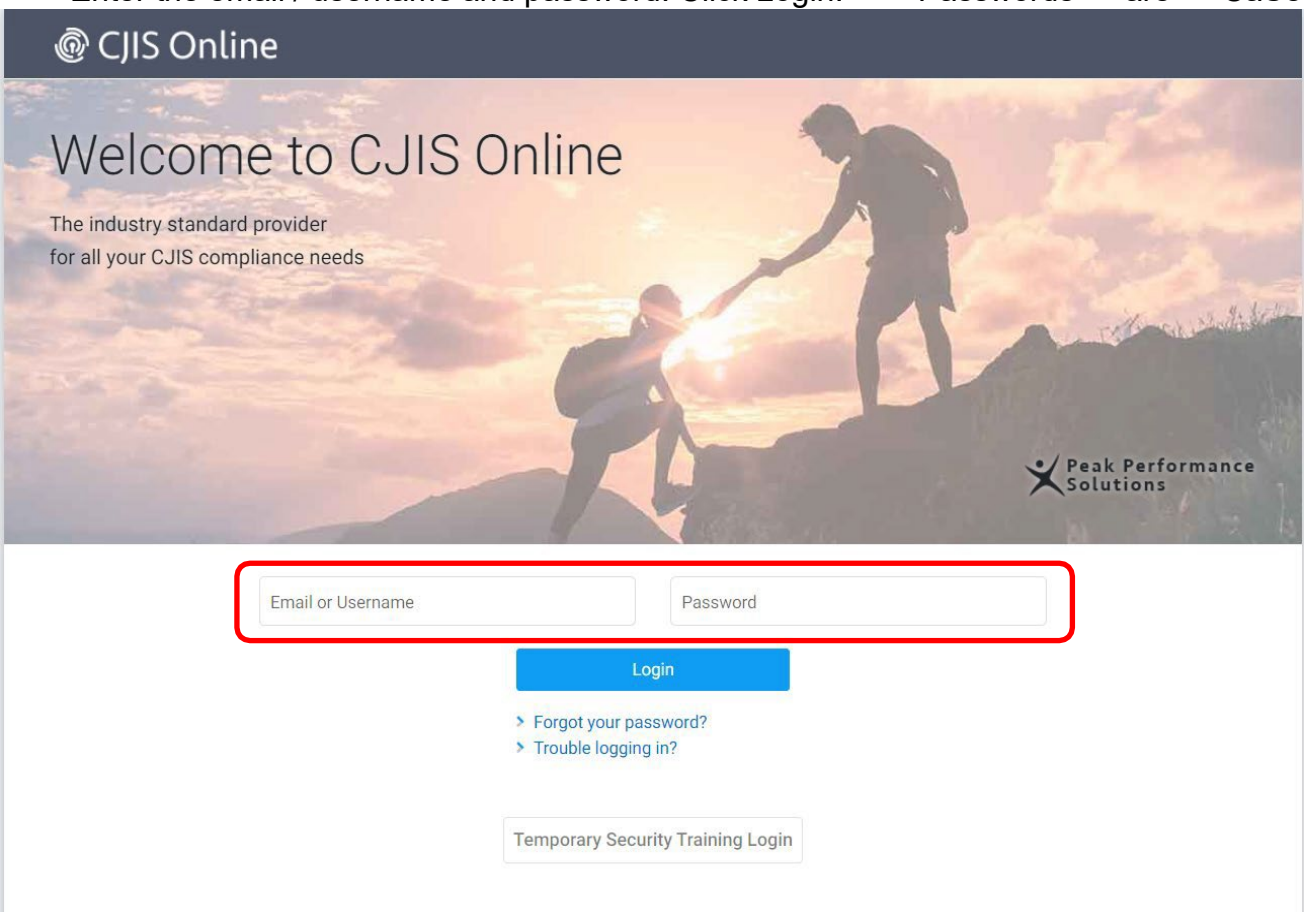
Originating Agency Identifier (ORI) - A unique alpha numerical

identifier authorized by the CSA.

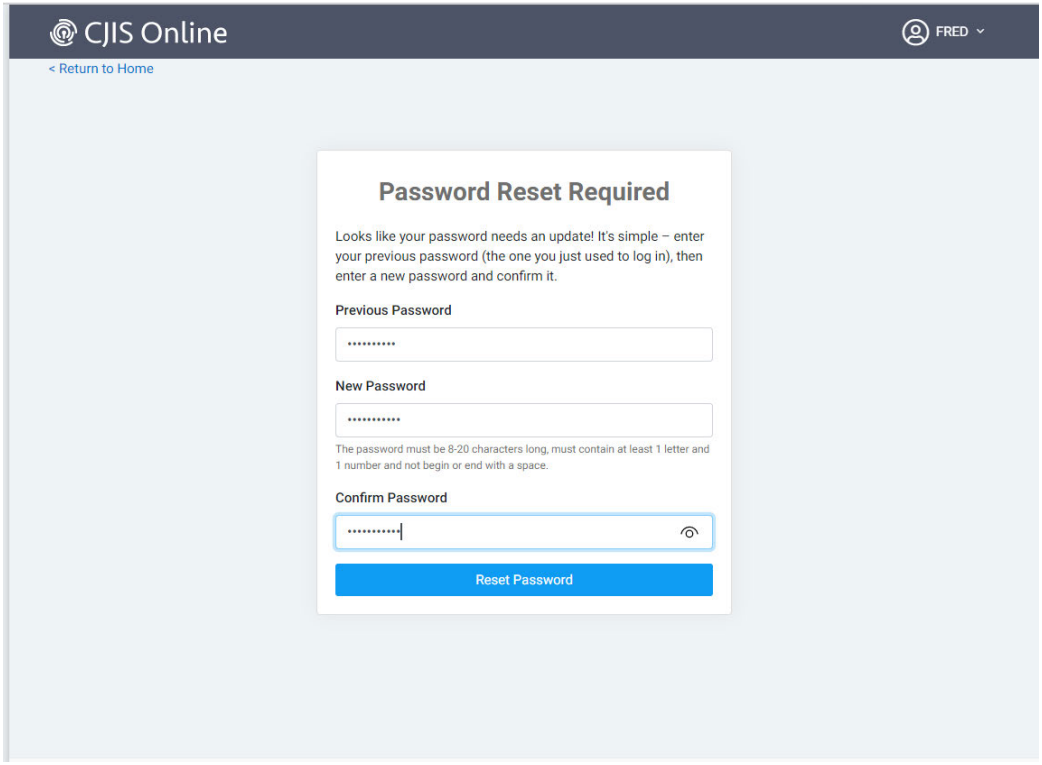
Physically Secure Location - A facility or an area, a room, or a group of rooms, within a facility with both the physical and personnel security controls sufficient to protect CJI and associated information systems.

Secondary Dissemination - The release of CHRI from one agency to an authorized recipient agency when the recipient agency's ORI was not used to run the transaction.

Terminal Agency (TA) - An agency that has direct computer access to the DCJIS/NCIC system.



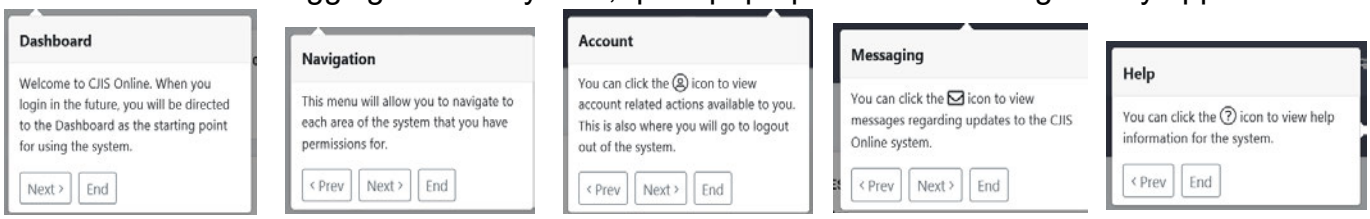
Terminal Agency Coordinator (TAC) - An individual located within an agency designated as the liaison between his or her agency and the CSA. The TAC administers DCJIS/CJIS systems Programs within the local agency and oversees the agency's compliance with those policies.



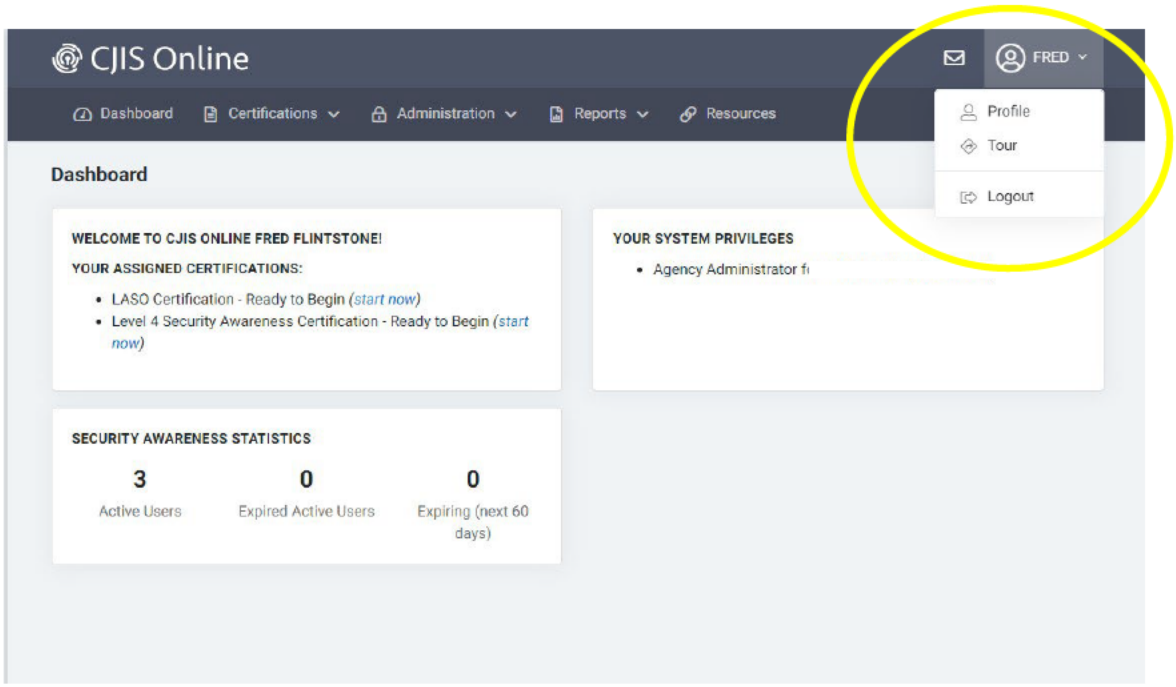
Terminal Operator - An individual, that transmits, receives and coordinates information through direct communication to the DCJIS system (DCJIS, NCIC, and Nlets in compliance with state and federal regulations.

APPENDIX B **CJIS ONLINE**

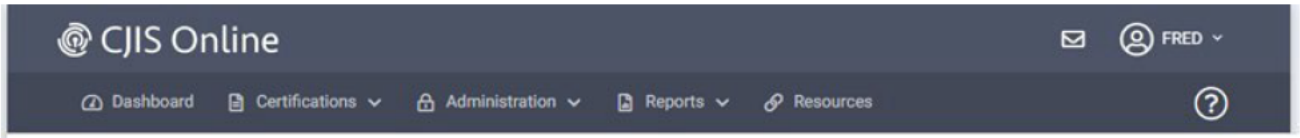
https://www.cjisonline.com



Enter the email / username and password. Click Login. Passwords are CaSe SeNsiTiVe.

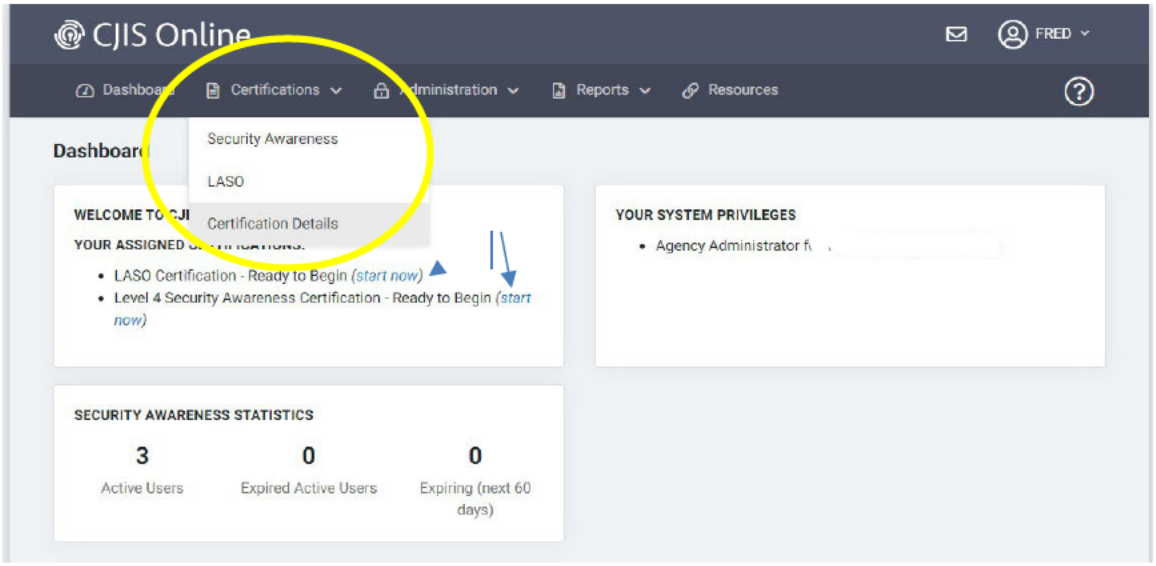


First time sign in, one may be prompted to change their password.
If needed, create a new password to continue. The fields are CaSe SeNsiTiVe.

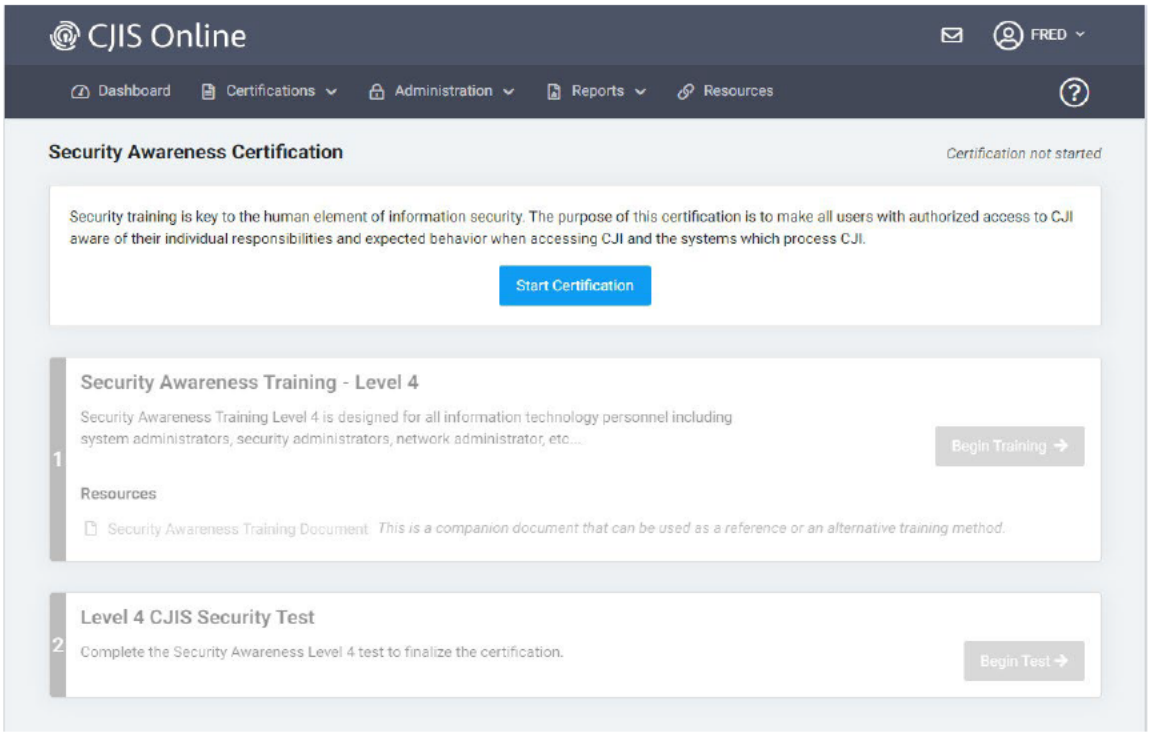


First time logging into the system, quick pop-up notes or messages may appear.

This is the main Dashboard providing quick stats. In the top right corner, click on the chevron symbol next to your name to view the pop-up notes again, **Edit** your Profile, view certificate details and history, and use **Logout** to leave the system.



The **Envelope** contains messages from the application.

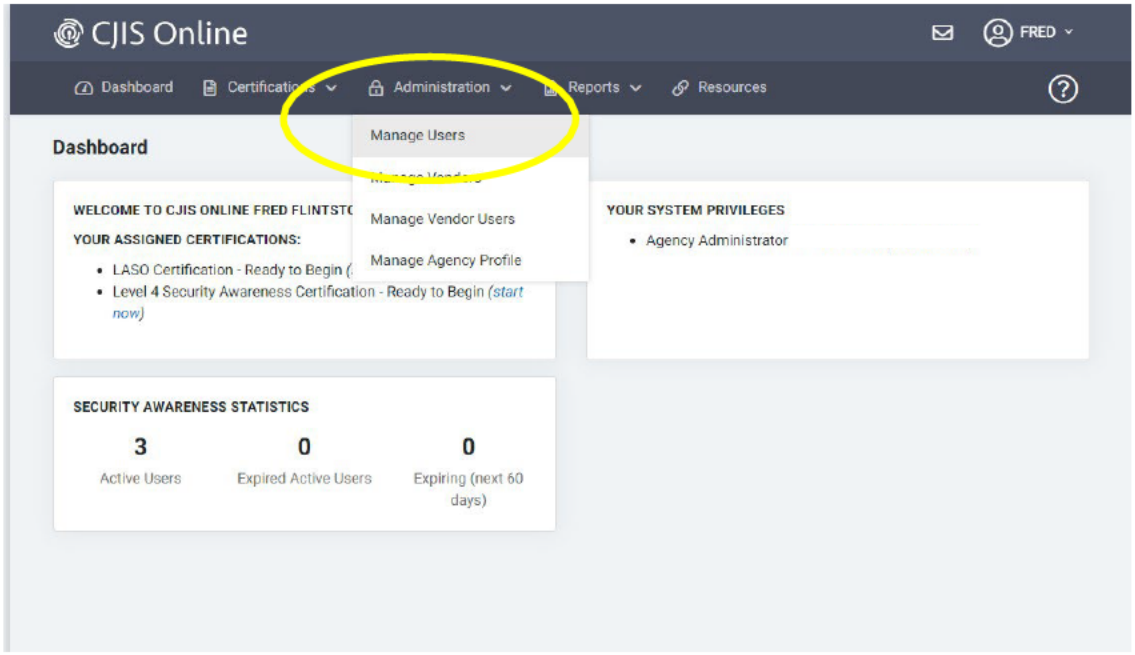


The task bar contains the main **Dashboard**, **Certifications** Menu, **Administration** Menu, **Reports** Menu,
Resources Menu and **?** for additional help.

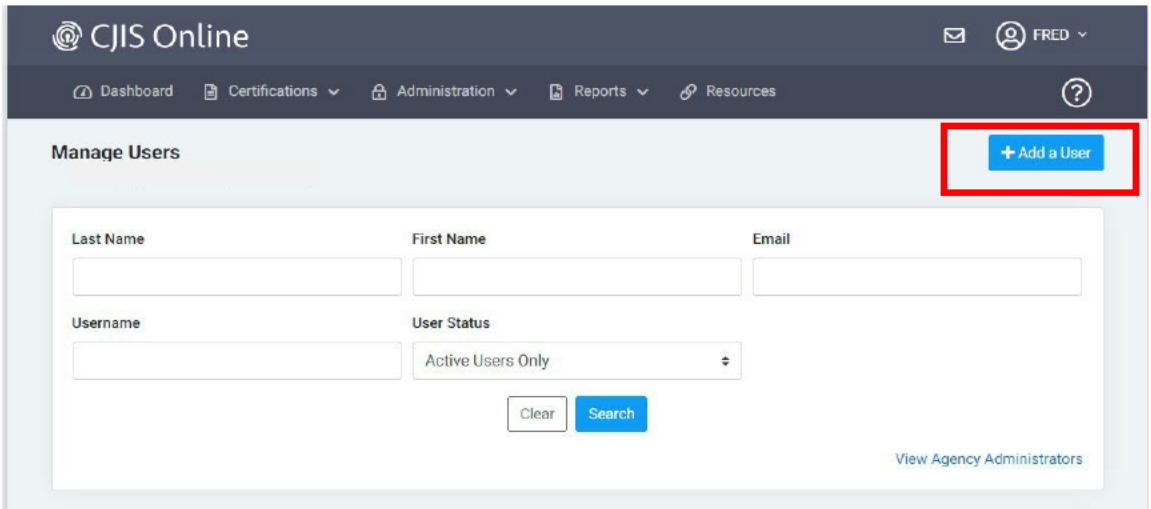
Let's get started!

Explore the Certifications Menu

From this menu quickly see Security Awareness, LASO and Certification Details. One can start Training and Testing by clicking on the **Start Certification** button like below from the Certifications Menu or from blue links on the main Dashboard.

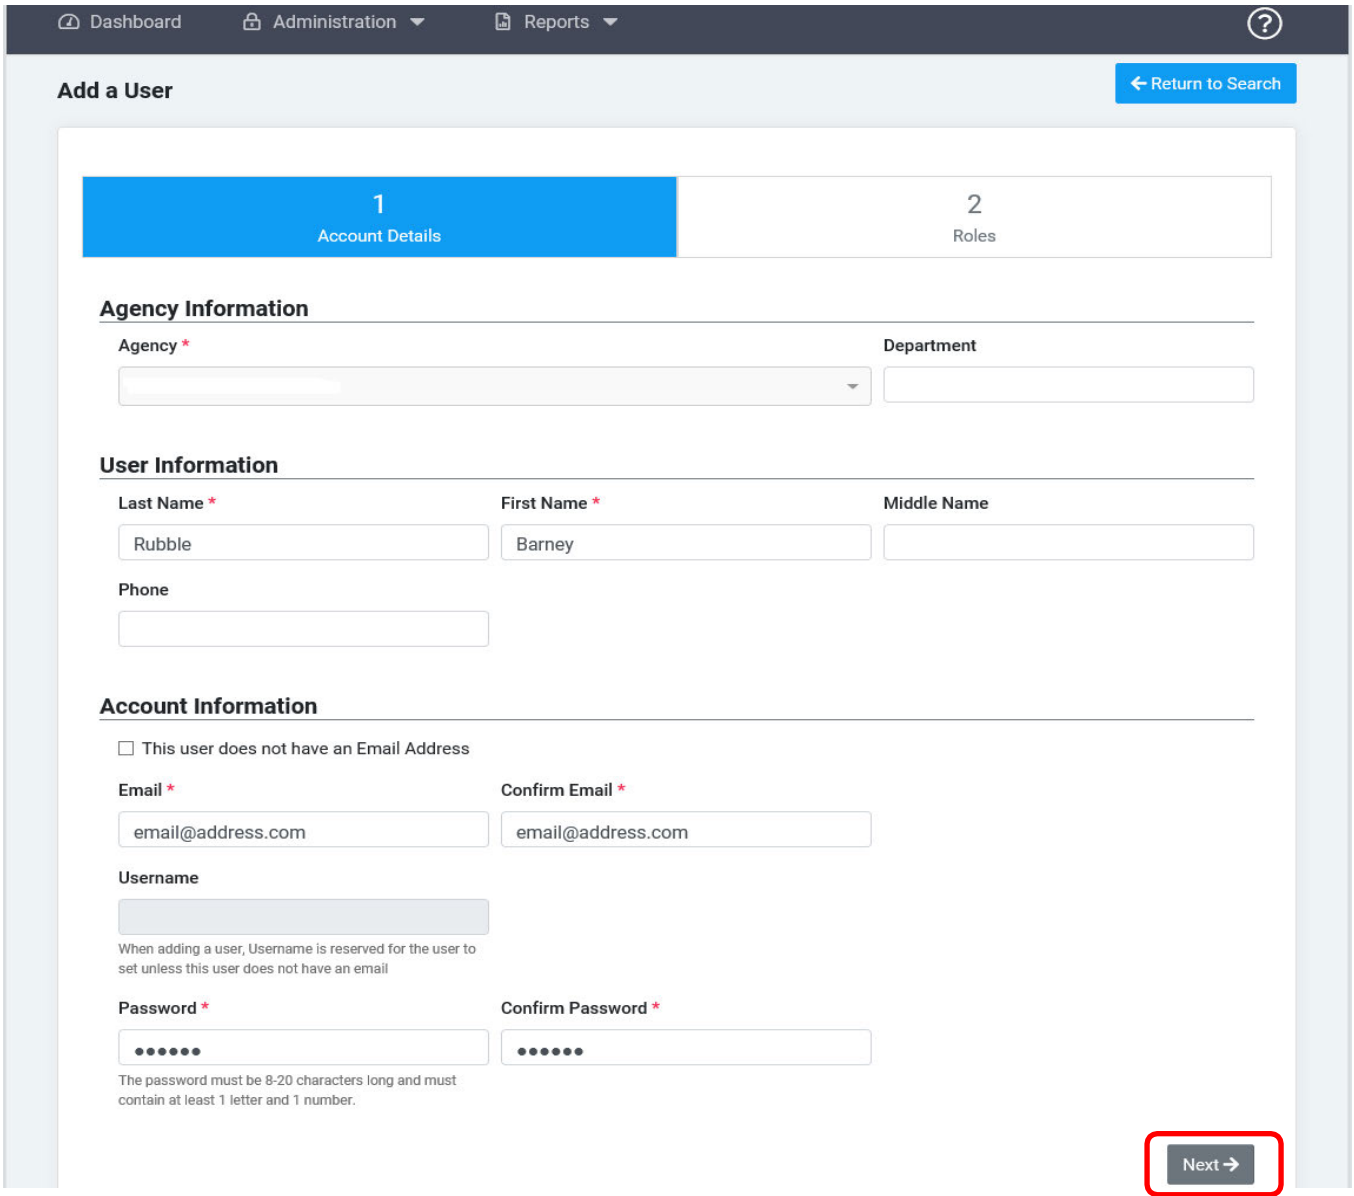


Sample of Security Awareness Certification page from the Certifications



Menu. An individual's training may appear differently per the varying training levels assigned by the Local Admin.

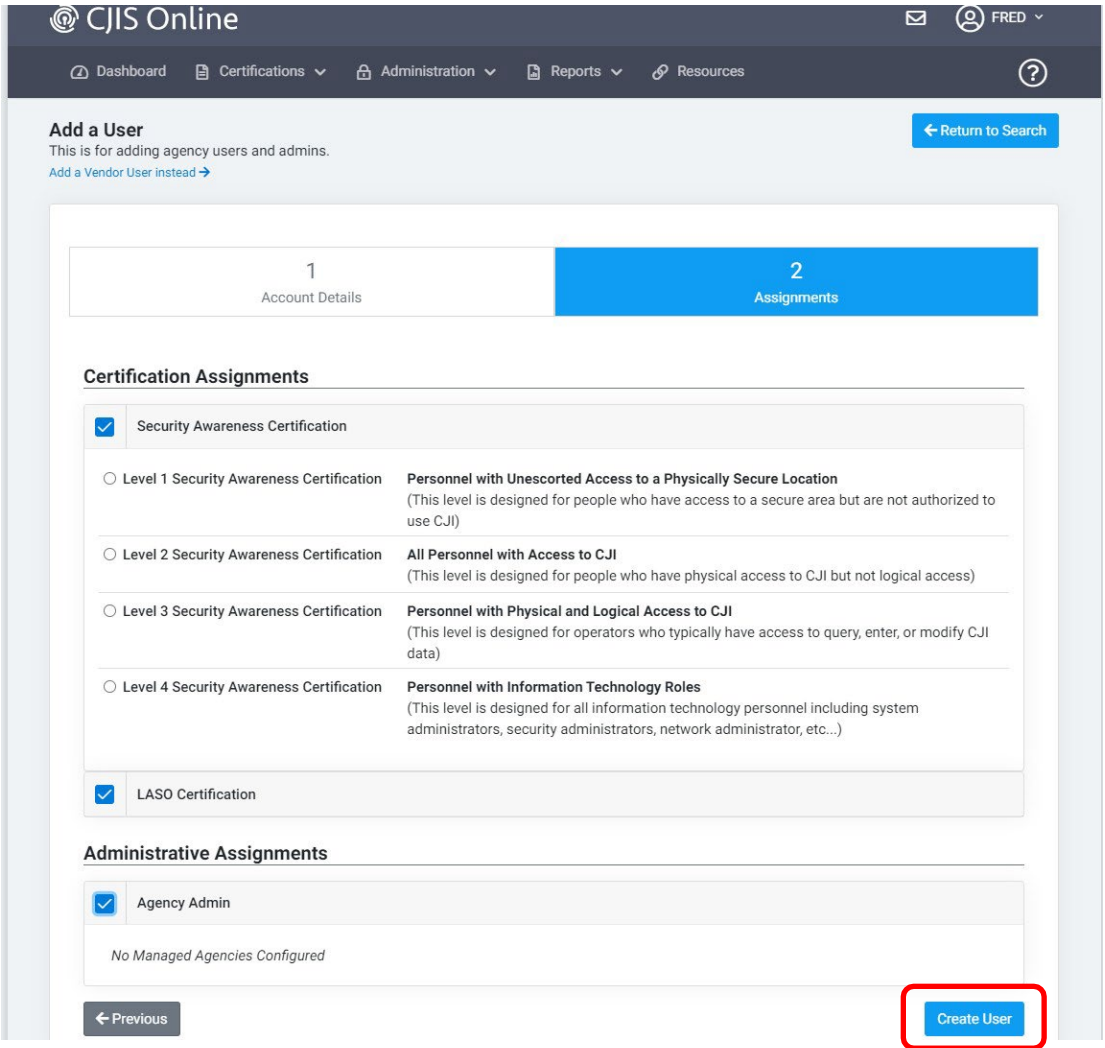
Accounts – adding new Local AGENCY users and updating user account information



Click on **Administration** then **Manage Users**.

To Add a New User Account

Click on **+Add a User** button.



All fields with an asterisk * are required. The ORI field should auto populate.
Enter **Last Name**, **First Name**, **Email**, **Confirm Email,** then enter and confirm an initial **password**.

If the individual does not have an email address, check the box next to “This user does not have an Email Address” then enter a unique **Username** instead. The individual *cannot* be notified when their training is expiring without an email address entered.

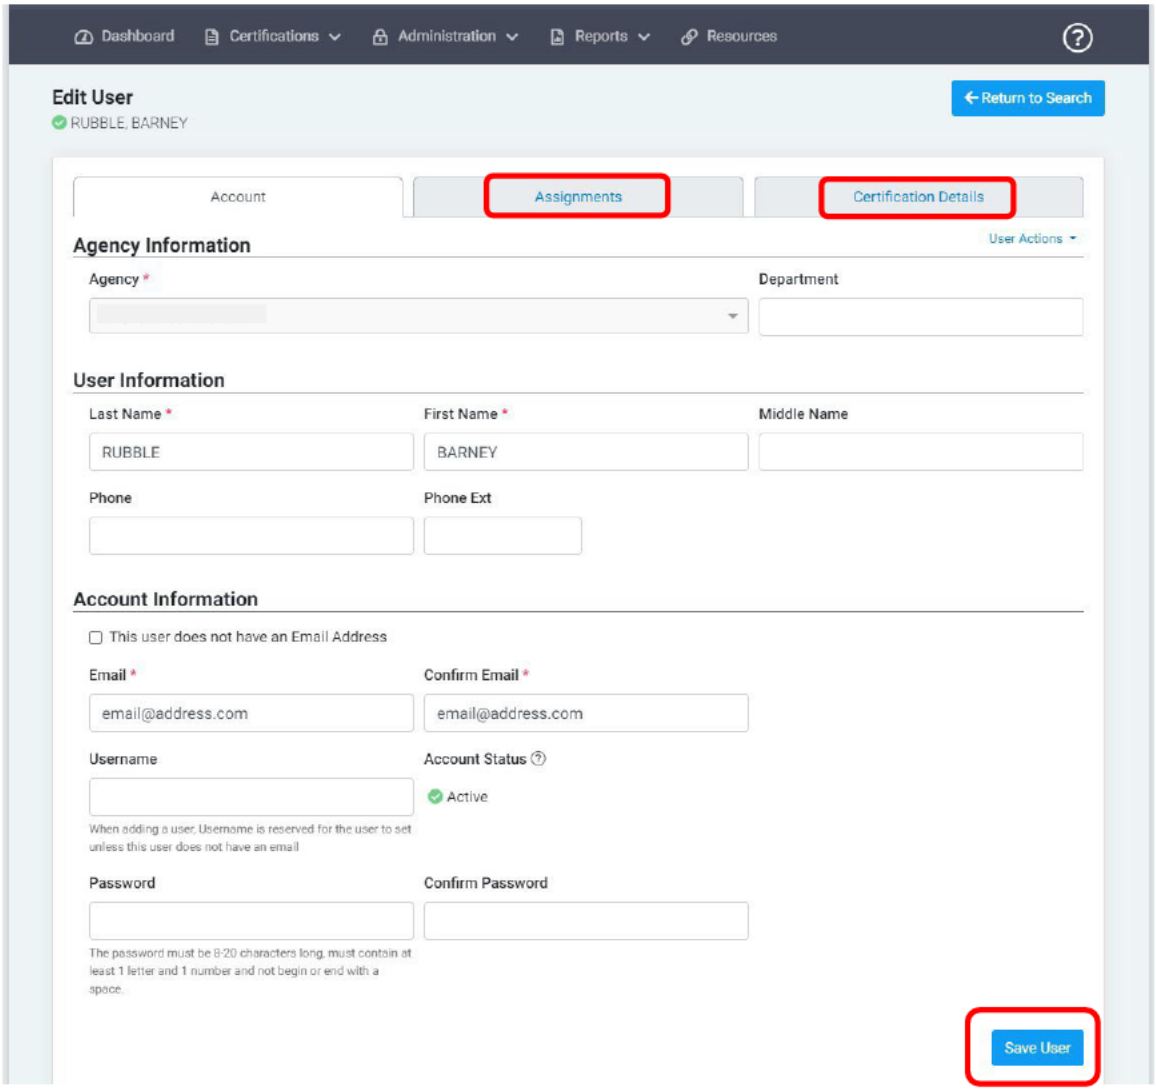
Your admin account allows you access to change passwords and edit fields on agency user and vendor user accounts. You may assign more Admin accounts and add LASO Training to accounts. Click **Next** when ready**.**

Note: Please remember the password you entered to provide to the end user so they may sign on. You will need to let the user know their initial password. Account information cannot be

deleted; only made inactive. Use caution when creating new accounts when personnel transferred in from other agencies, please contact us to check and move any existing records before creating new accounts as individuals may have completed training previously.

Click on the appropriate Security Awareness Training level needed. LASO and Agency Admin access can be added
to the user account on this screen. Click **Create User** when ready.
A quick pop-up message appears when the account was successfully created.

Security Awareness Training level examples:
Level 1 - personnel coming into the secured area – maintenance, admin
Level 4 – personnel with direct access to CJIS and/or have unescorted access where CJI is processed - personnel working on network and computers – internal/city/government IT staff



Level 2 and 3 – not used

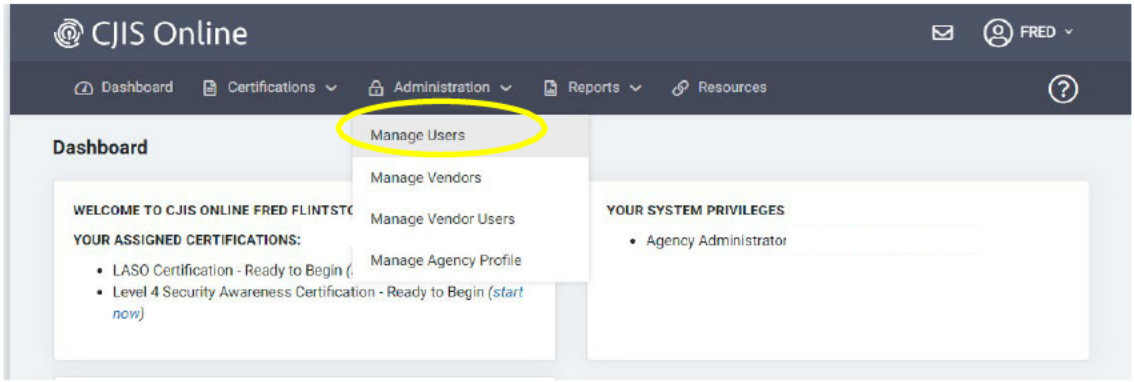
LASO – Local Agency Security Officer Training – person knowledgeable in computer security or network intricacies, account handling, system access given, incident handling - city/government IT staff, TAC

Agency Admin – Assign additional admin accounts for the agency. Admin accounts

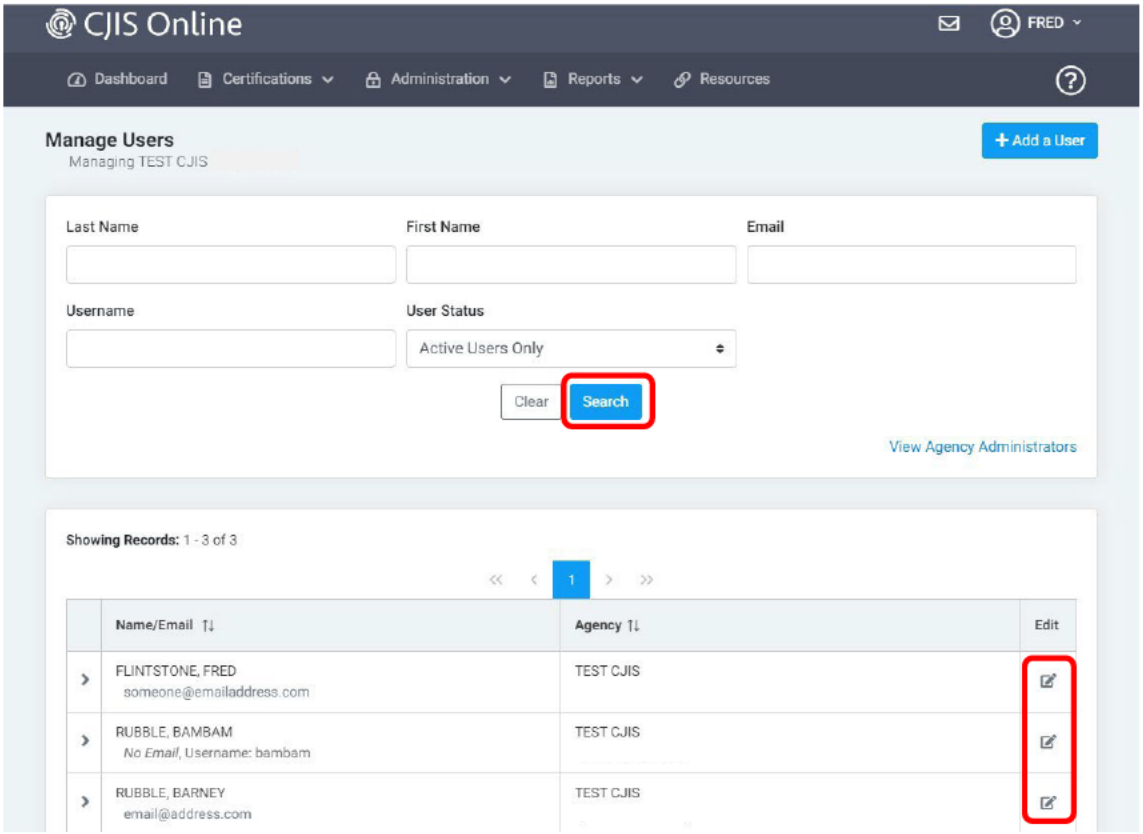
can add more accounts, change passwords, and edit fields on agency user and vendor user accounts. Account information cannot be deleted; only made inactive.

This screen returns for further user account editing if needed.

To edit the existing account created, click on **Assignments** to change training level, add LASO or Admin access.
Choose **Certification Details** to view testing records, then click the **>** greater than symbol on the certification name line to view/reprint certificates. Note: the Background checks section on the Certification Details tab is **not** required to be filled in. When done editing click **Save User.**



To add another new account, click on **+Add**

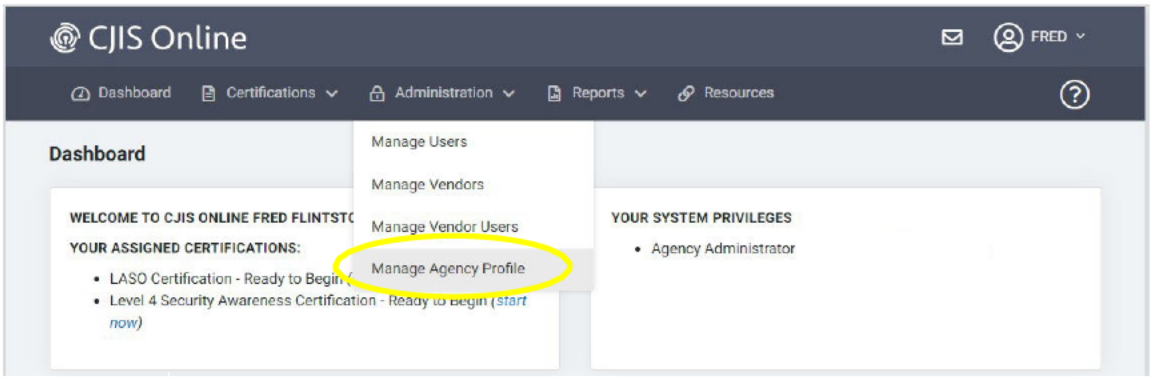


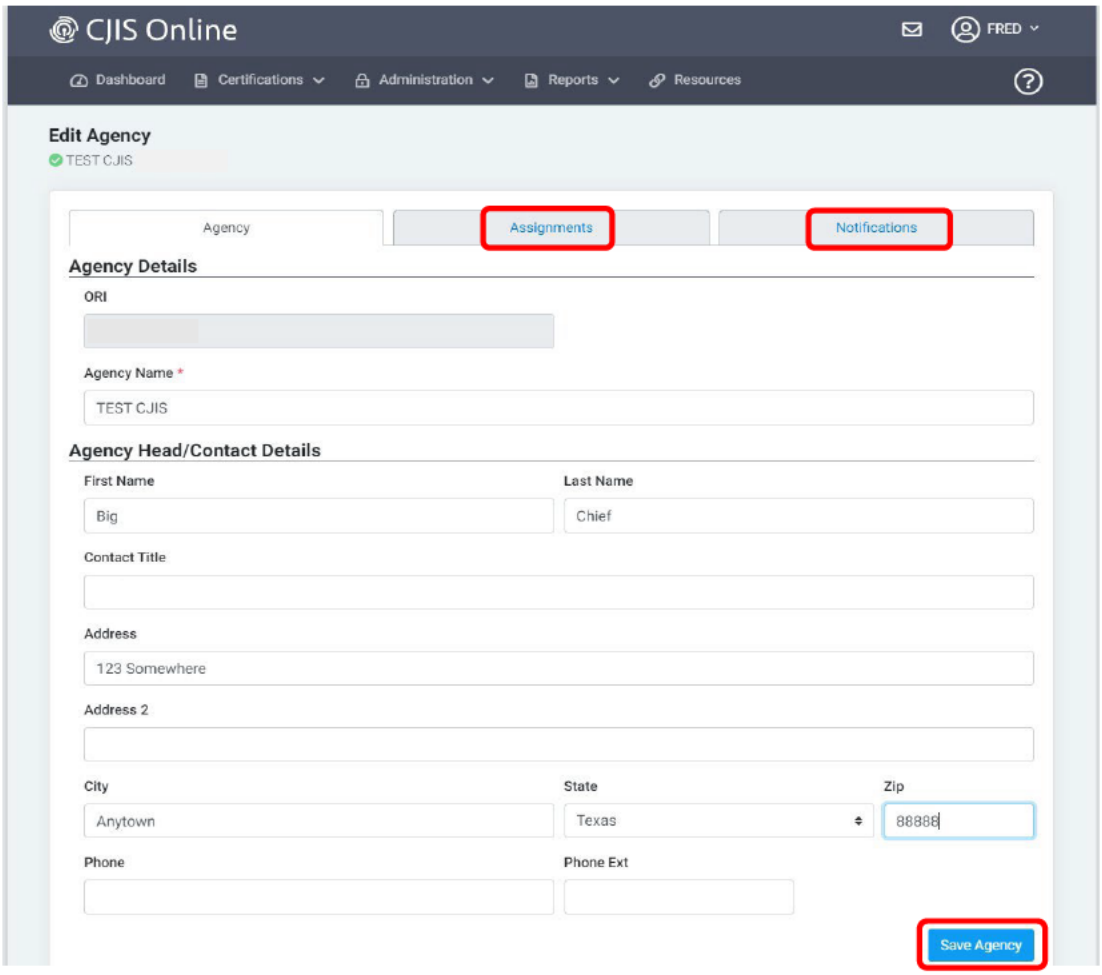
Another User button. To find an existing user to

edit, click <- **Return to Search** button.

To Search for Agency User Account

Click on **Administration** then **Manage Users**.





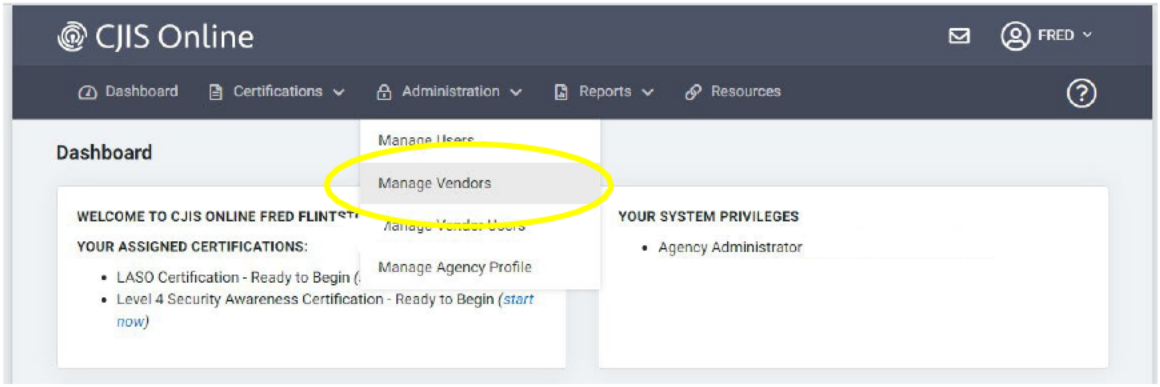
You can search by name, email address, user status (Active/Inactive/All) or role. Enter the search criteria and click on **Search** button.

Find the User account and click on Edit pencil & paper icon to edit the account. Remember to click **Save User** when done editing the account.

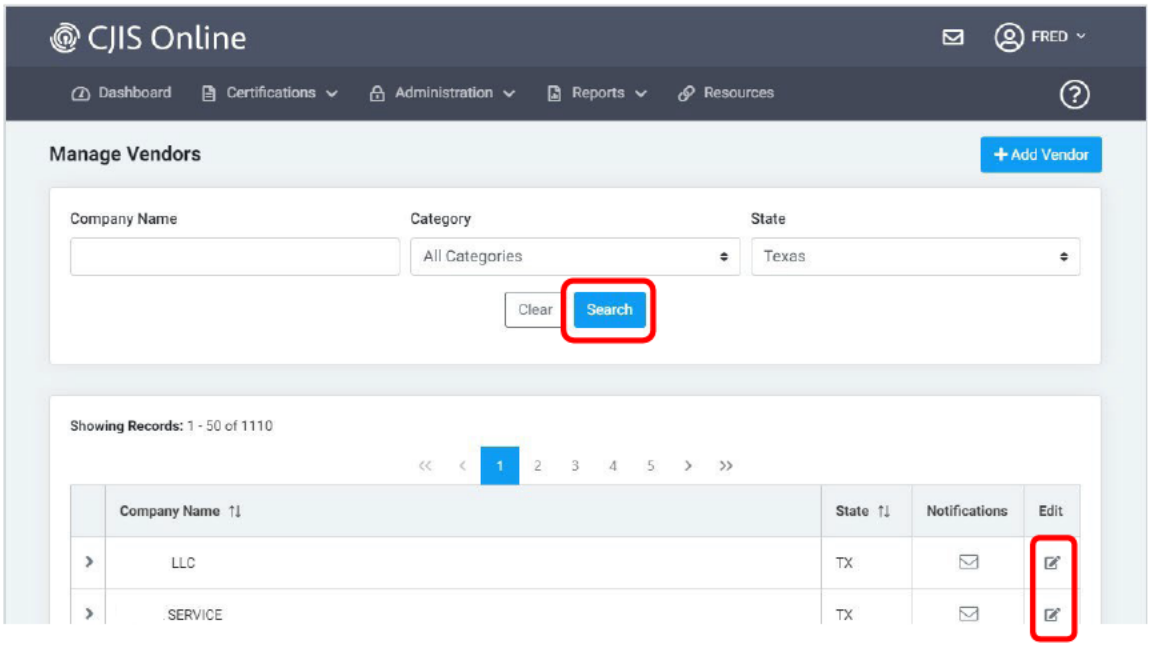
To Edit Your Agency Information

Click on **Administration** then **Manage Agency Profile**

Enter any changes needed. Fields with an



asterisk * are required. When done click **Save**

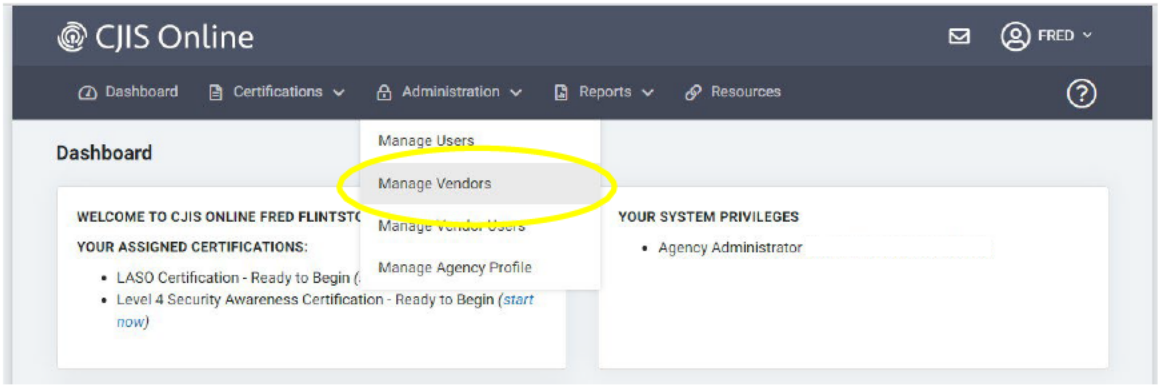


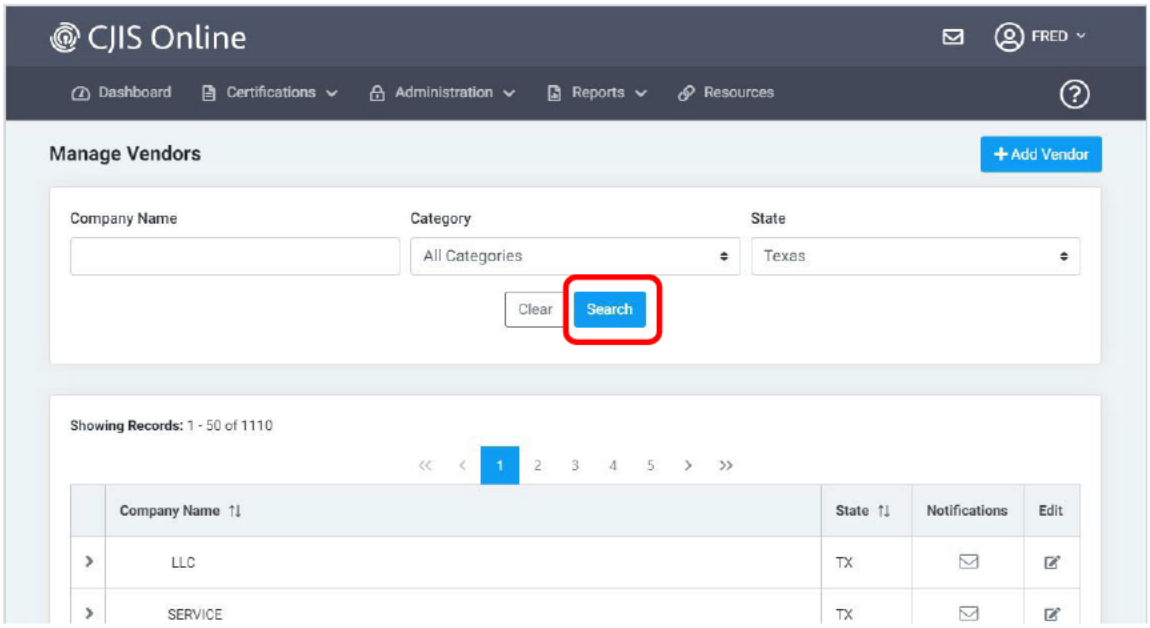
Agency.

From this screen you can choose to Edit Admin and LASO roles on the Assignments tab and choose other accounts to receive email notices on the Notifications tab.

To Search Vendor Records

Click on **Administration** then **Manage Vendors.**



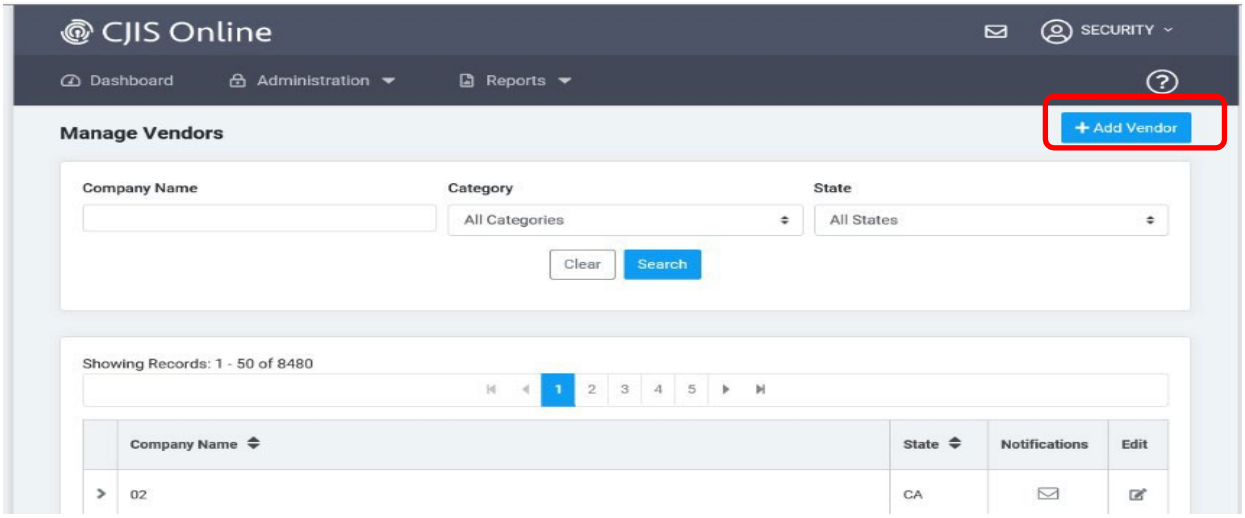


You can search by Company name, category and/or state. Click **Search**.

Find the Company Name and click on Edit pencil & paper icon to edit the account. Remember to save any changes when done.

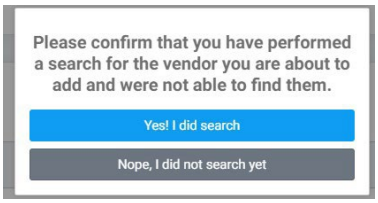
To Add a Vendor

! Only after you have extensively searched by company name (full or partial name) AND have searched by a known individual employed by the vendor, you may enter a new vendor record. Do NOT enter vendor employees as your agency employees as other agencies may use the same vendors. There is a different method to add Vendor Users.

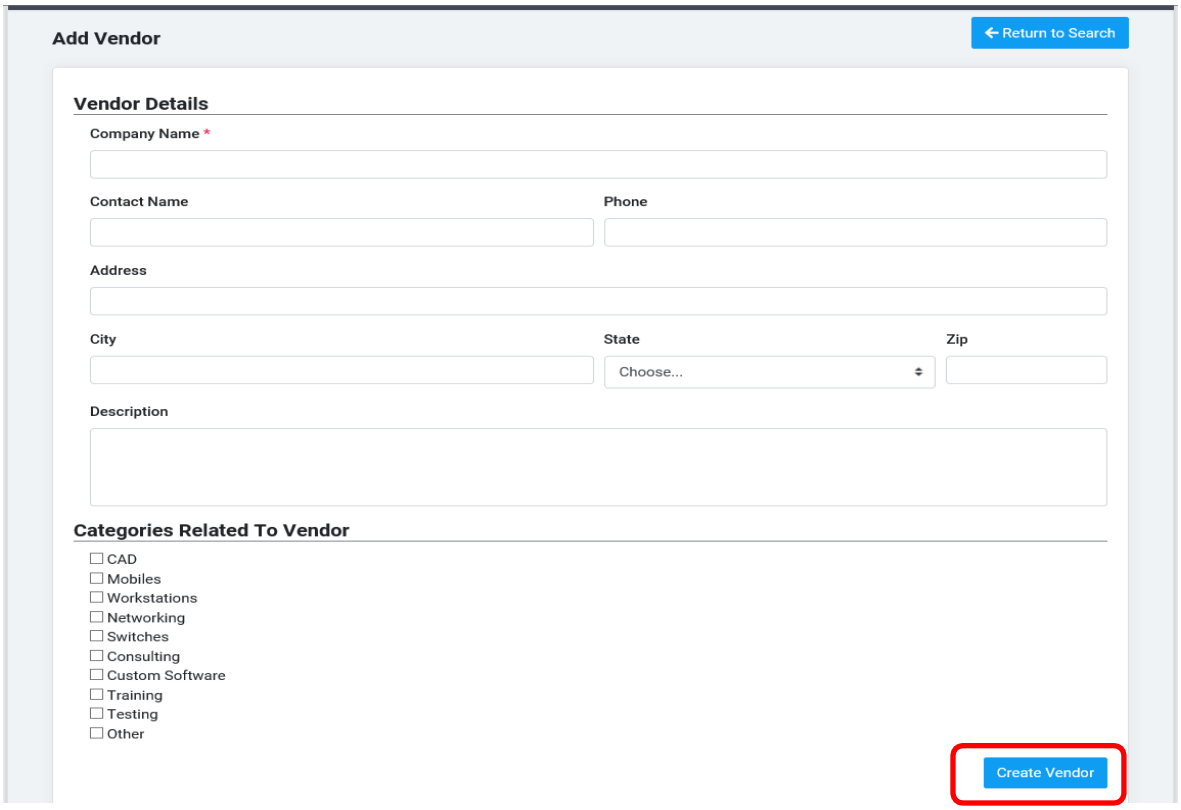


Enter a **Company Name** and click **Search**.
If no records are found, but you know the individual worked for this vendor in the past or works for another agency, Search for *Vendor User* Account instead and check company name spelling in user account settings Go to the section on *Vendor User Accounts* to search for an individual user account. The company name could have changed or is spelled differently.

If no results are found by username search, then you may proceed to



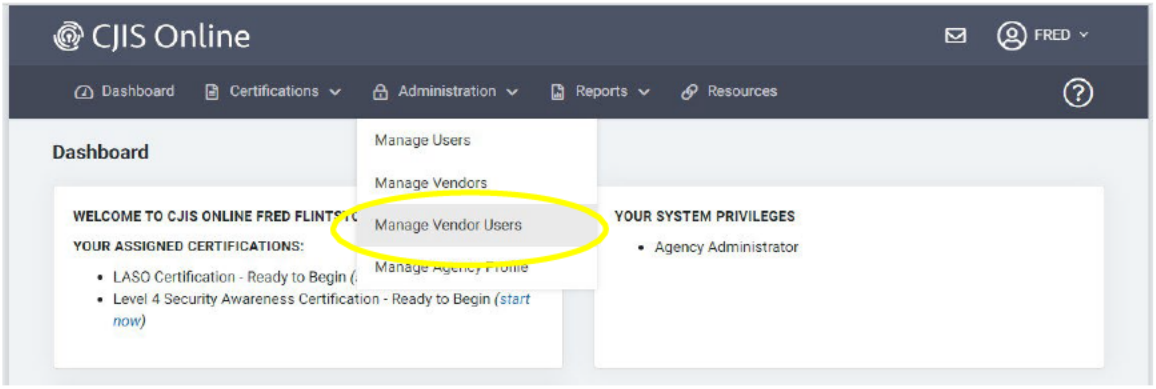
add a new Vendor.Note: If error message appears for email address is in use, this means the record exists.

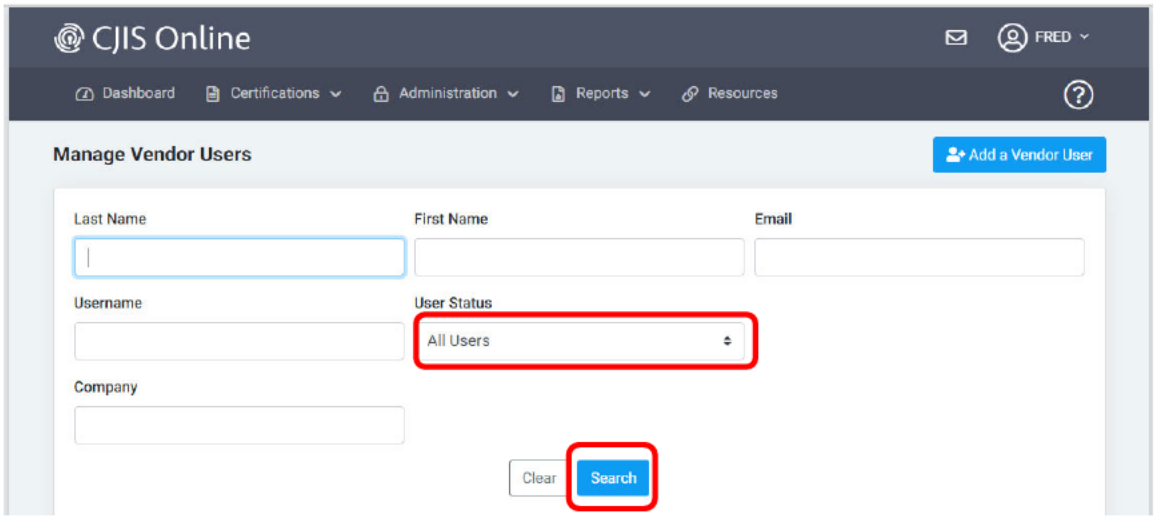


Click on **+Add Vendor.**

A prompt may appear to validate you have searched before entering a new record. Choose Yes or Nope to confirm.

You will not have the ability to disable or remove a vendor record if created in error.

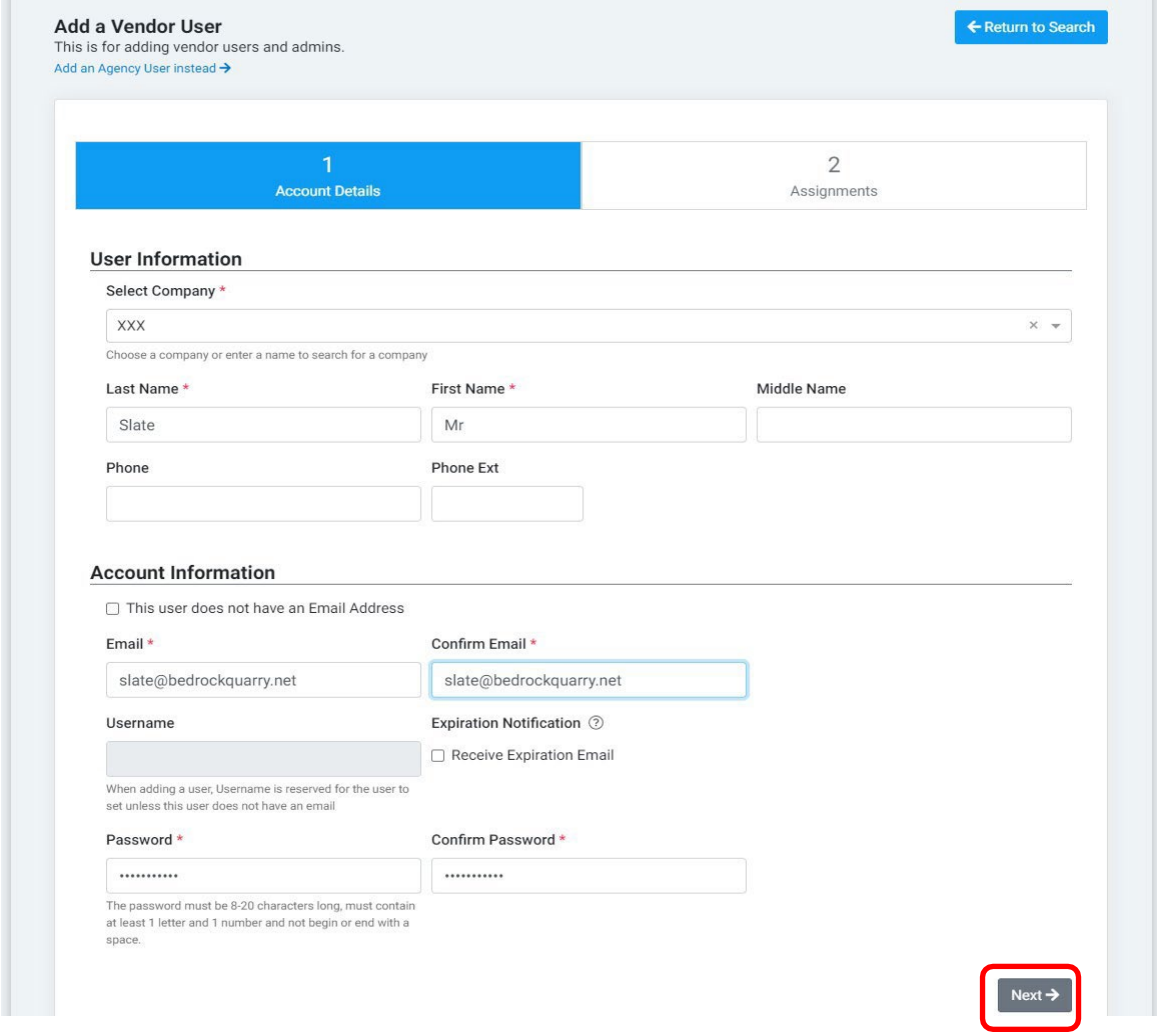




Enter a company name and pertinent information. Fields with an asterisk * are required. Click **Create Vendor.**

Vendor User Accounts – adding new VENDOR users and updating information

Click on **Administration** then **Manage Vendor Users.**

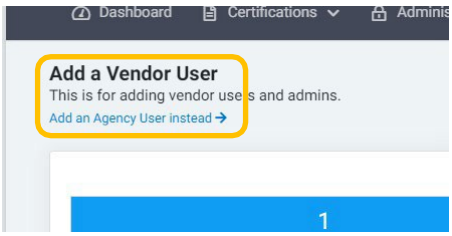


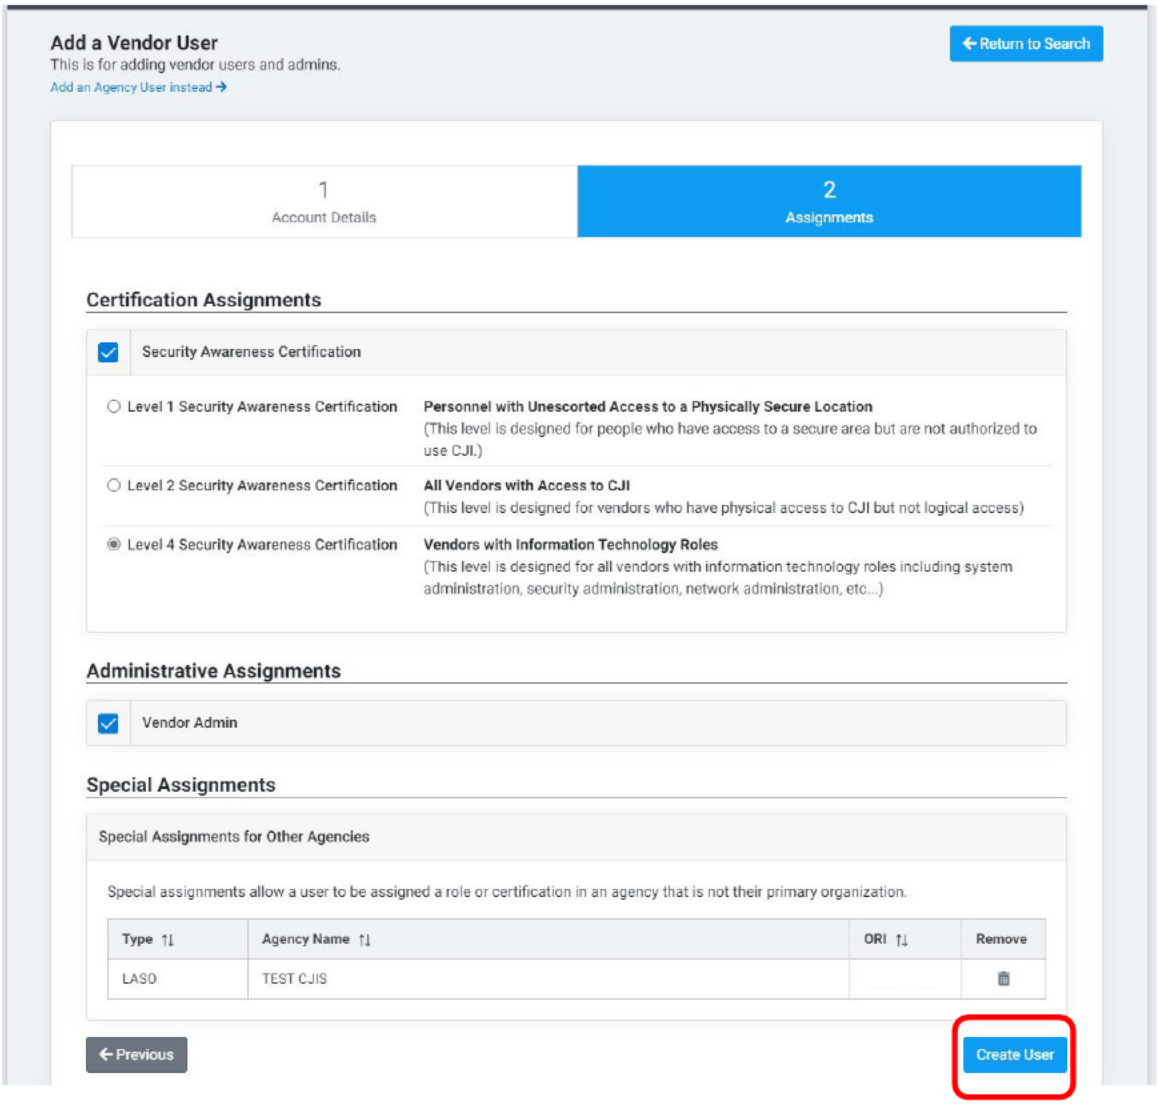
First, find if the user account exists!

Enter the individual's **Last Name**, **email** or **Company**. Choose *User Status* ***All Users*** and click **Search.**

If you do not see the record on the screen bottom, you may proceed to enter a new account. If there is a user record, the account exists.

Click on **+Add a Vendor User** button.





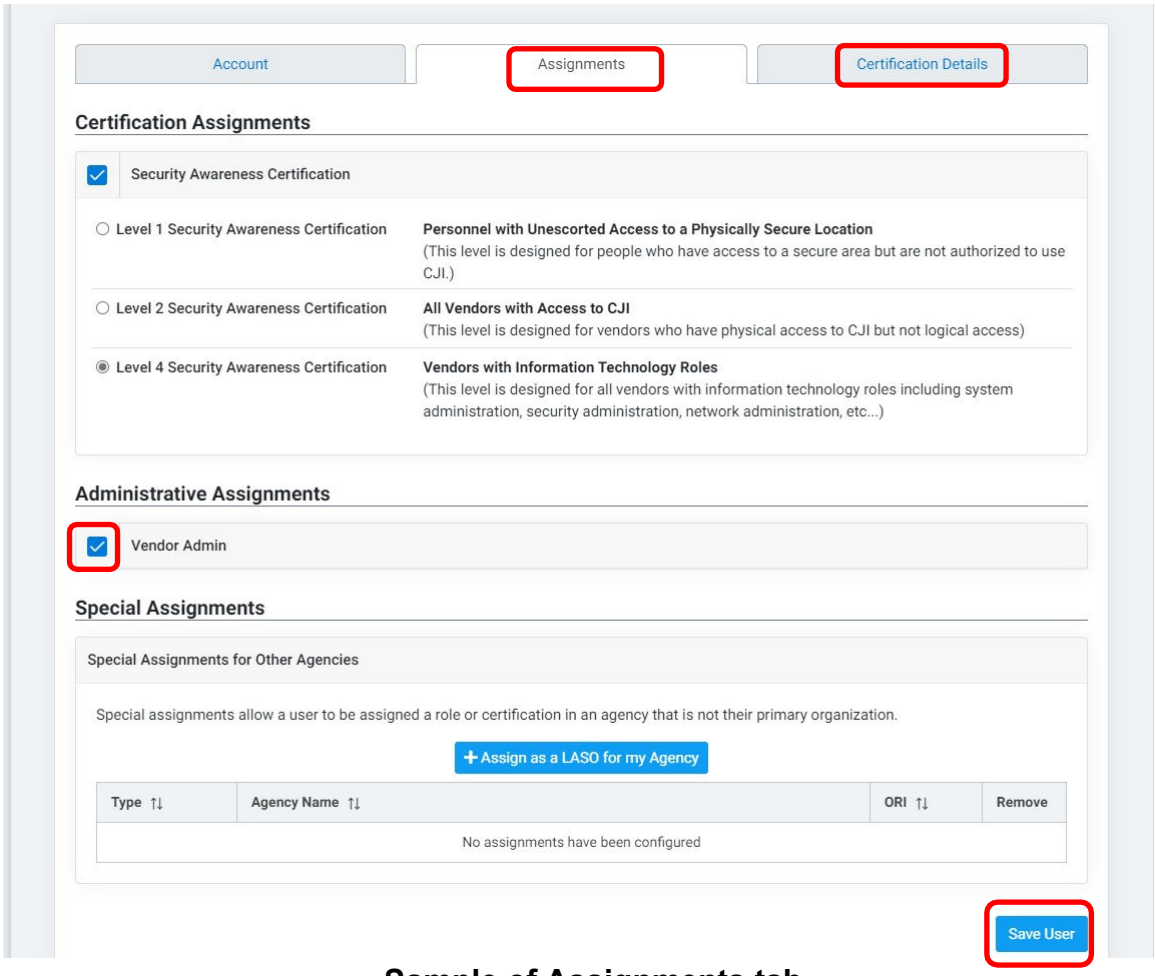
All fields with an asterisk * are required. Enter/search in the **Select Company** field. Enter **Last Name**, **First Name**, **Email, Confirm Email,** then enter and confirm an initial **password**.

If the individual does not have an email address, check the box next to “This user does not have an Email Address” then enter a unique **Username** instead. The person will *not* be notified when their training is expiring without an email

address entered. Click **Next.**

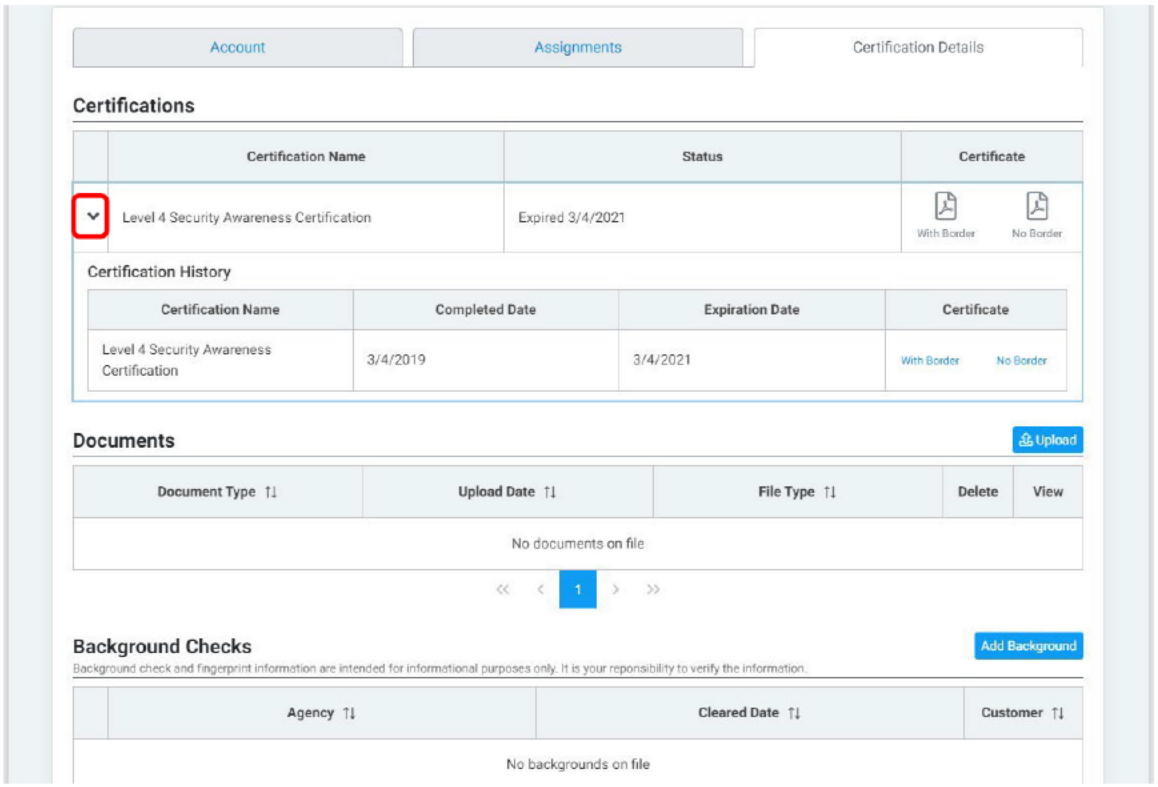
Note: Receiving a message account already exists means, the email is already in use and one will need to
Search again. Please remember the password you entered to provide to the end user so they may sign on. You will need to let the user know their initial password. If you really needed to add an *Agency User Account instead* of a vendor user, in the top left corner, choose ‘Add an Agency User instead-> ’ and the correct screen will appear.

Dashboard
Certifications
Add a Vendor User
This is for adding vendor use s and admins.
Add an Agency User instead
1



For IT/CAD/RMS/software/network/computer/remote access/ related vendors, choose **Level 4 CJIS Security Training**.

If the individual will have Admin Access to enter and administer their own employees, click on Vendor Admin Access.

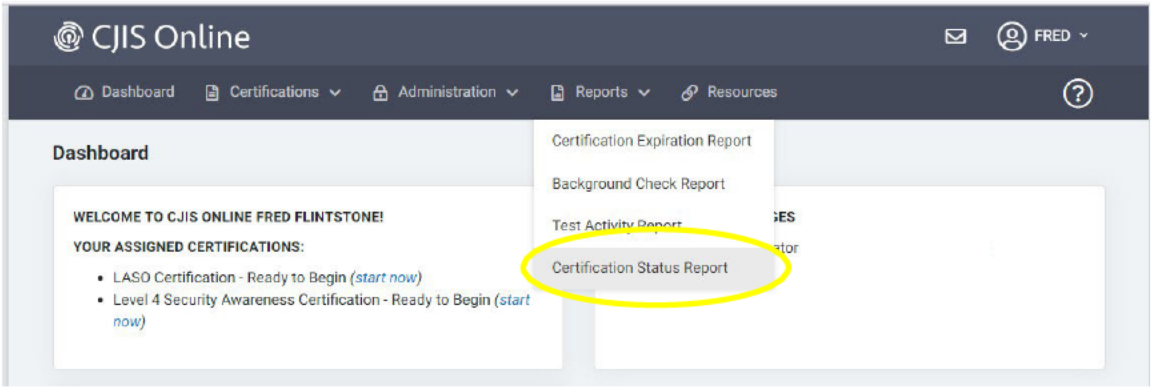


Click **Create User**. A quick pop-up message appears with the account was successfully created.

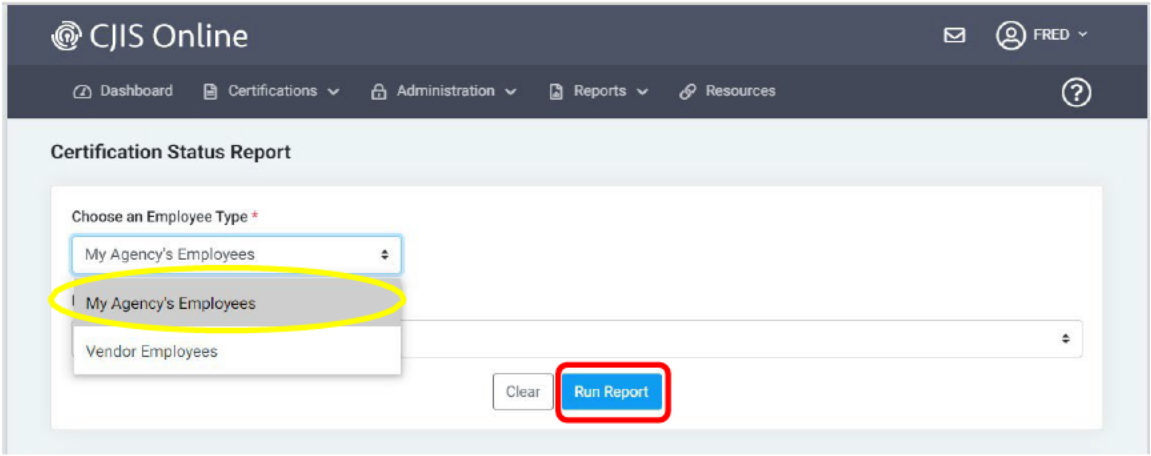
Vendors may have multiple admins. The agency can add the vendor user accounts or delegate this to the vendor company by creating them a Vendor Admin account, so the vendor may enter their own employees.

A summary of the account created appears for any final edits. Click on the **Assignments** tab or **Certification Details** tab to review this information too. Click **Save User** when done.

Sample of Assignments tab

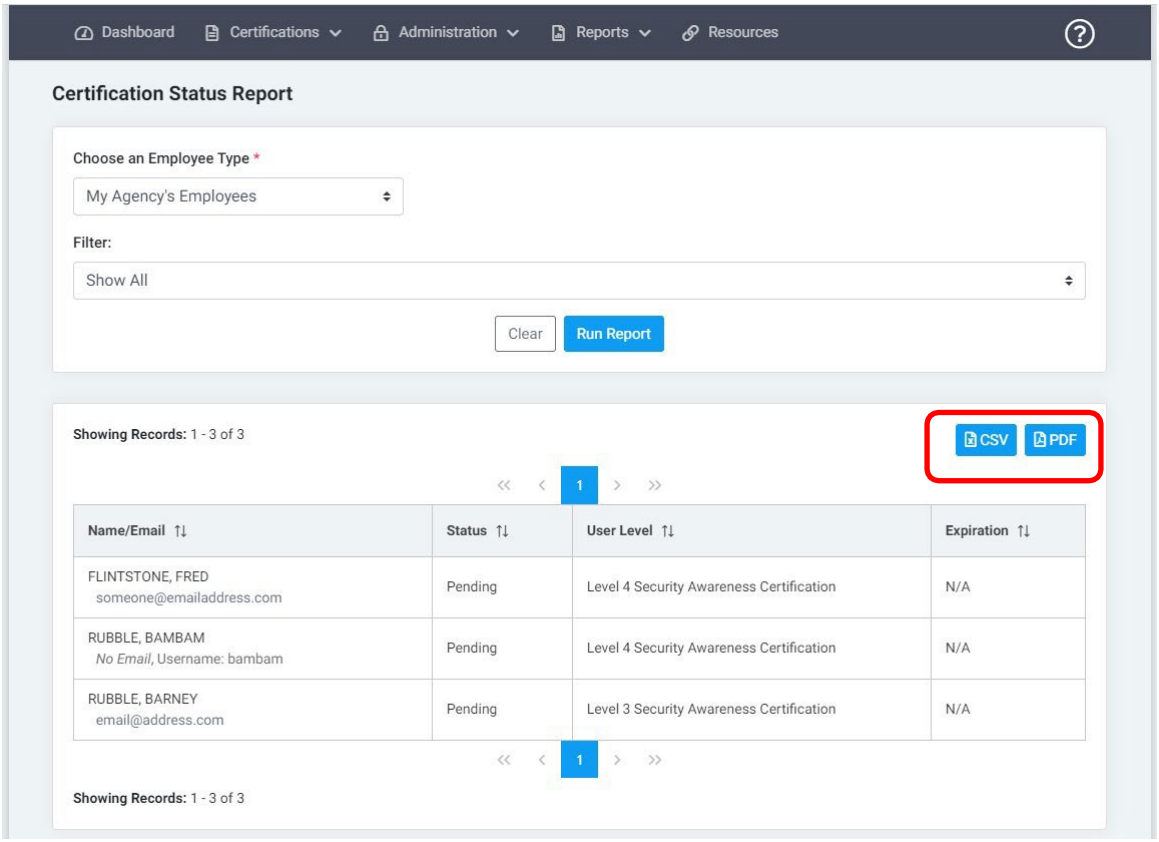


Sample of Certification Details tab.



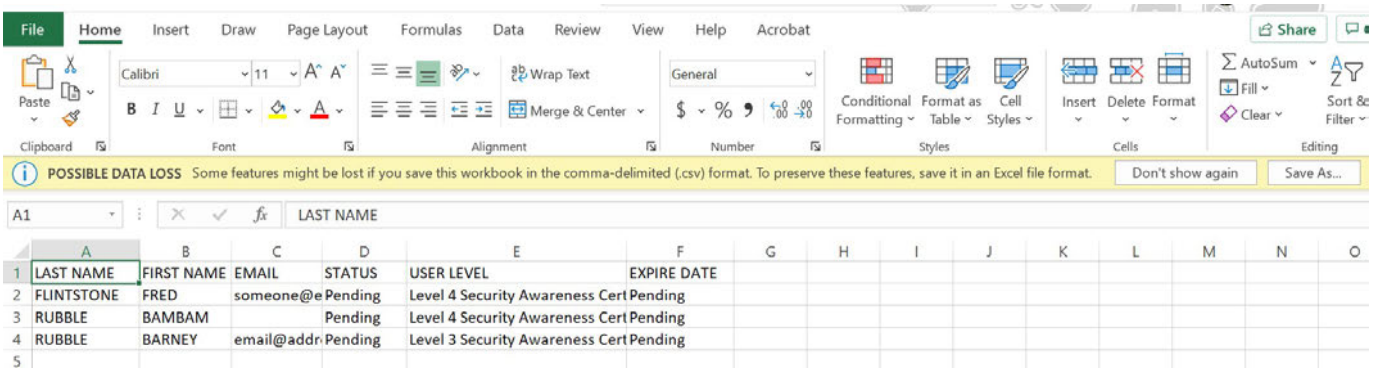
! Note: The *Background Checks* section on the Certification Details tab is **not** required to be filled in.

REPORTS

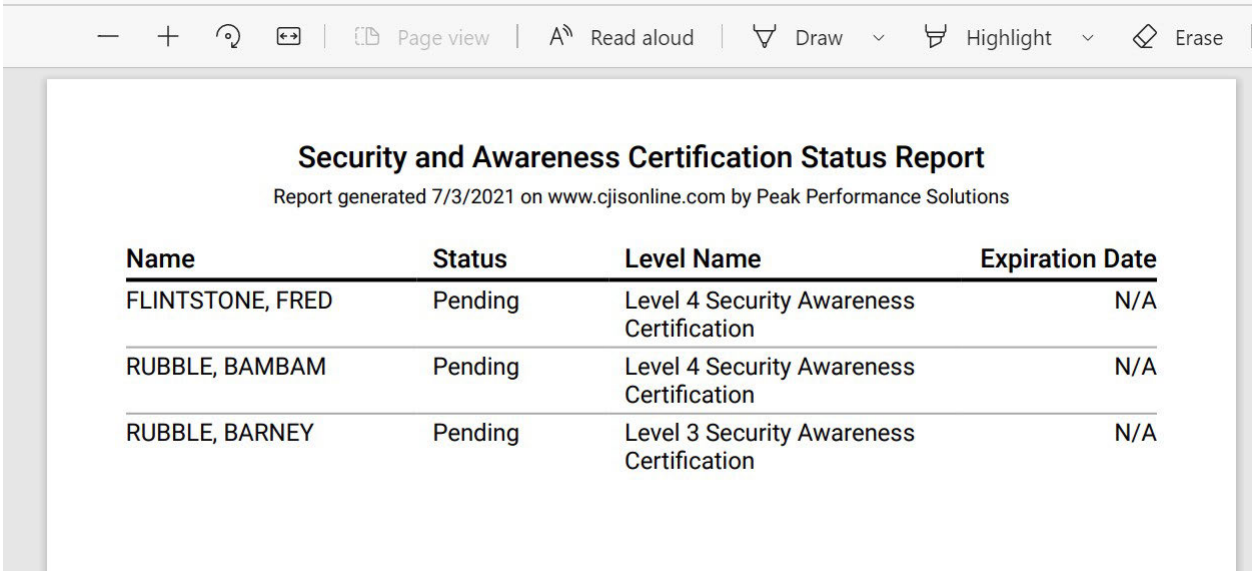


Click on **Reports.** Choose **Certification Status Report**.

To run a quick report of all employees.
Choose an Employee Type My *Agency's Employees.* Filter choose *Show All*
Click **Run Report.**

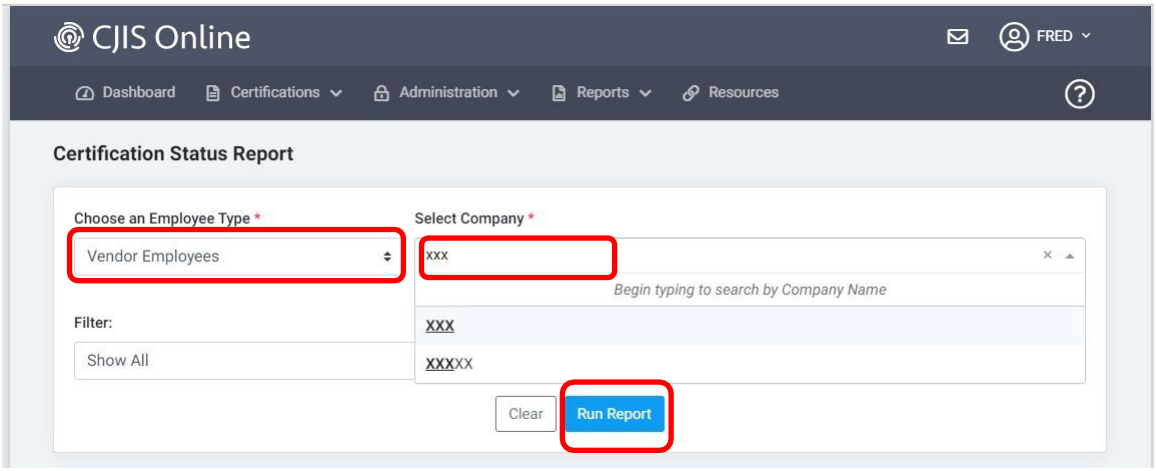


A viewable on-screen report appears.



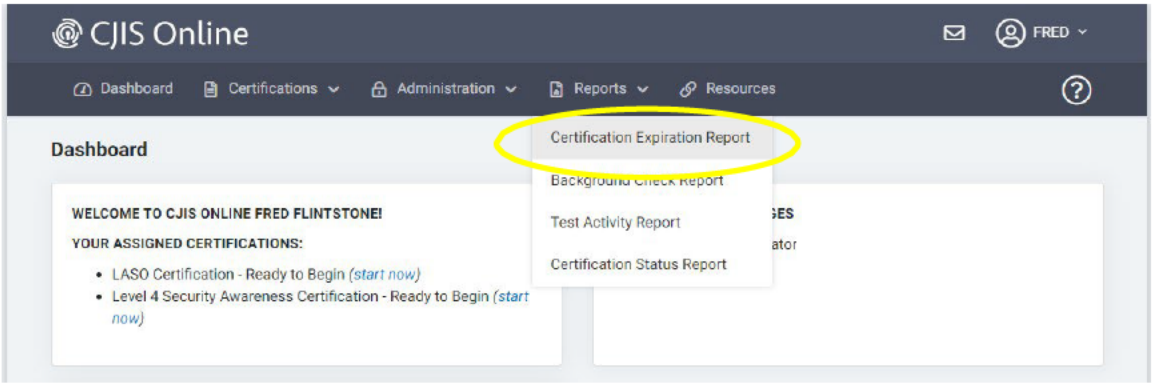
Sample of on-screen report.

To manange the records, the report can be made into an Excel sheet format for sorting the records or PDF version. Click on the **CSV** button for an Excel format or the **PDF** button for a read only PDF report.

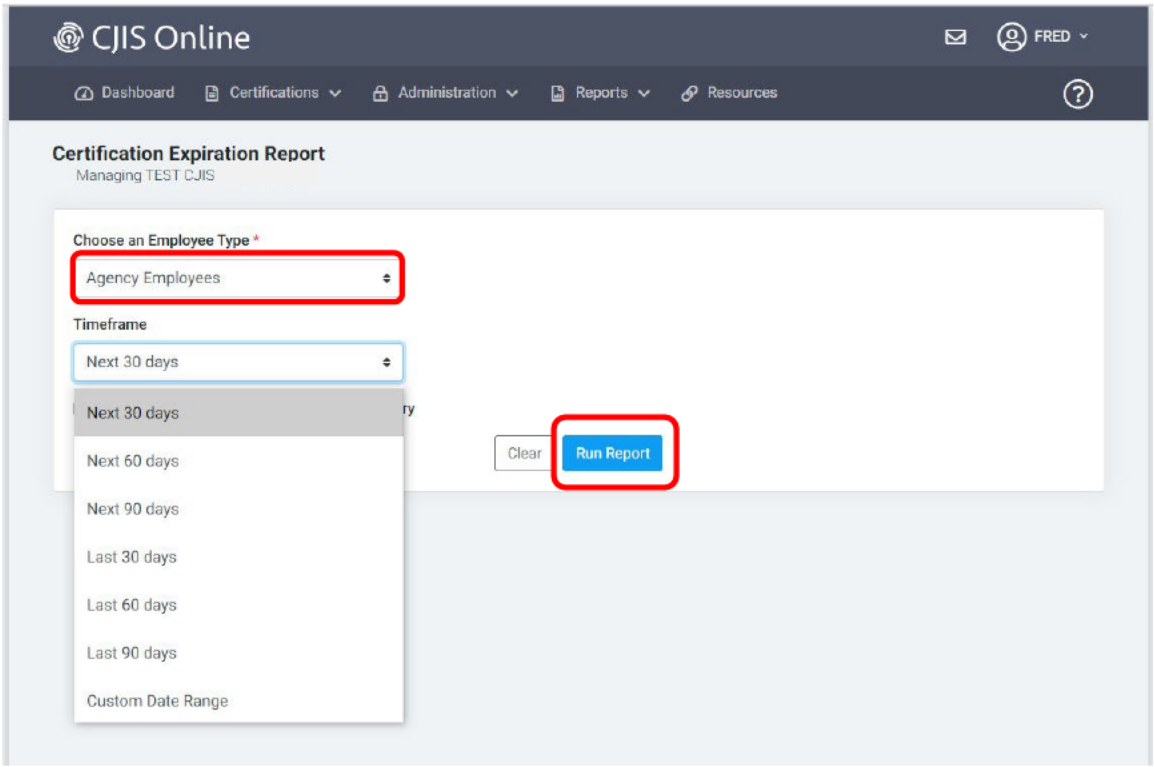


Sample of CSV Excel report. Save as an XLSX file on your computer.

Sample of a PDF report.



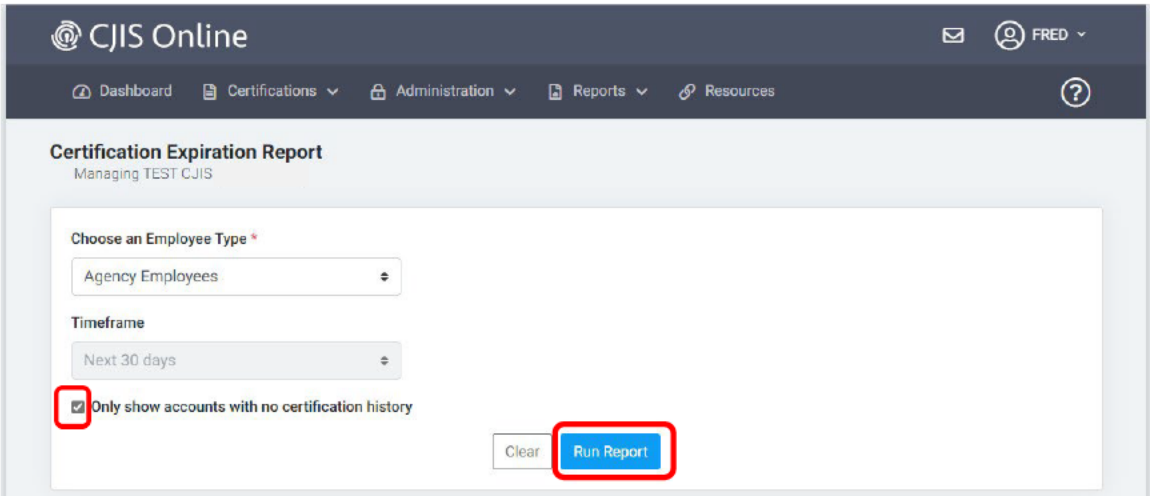
Similarly Vendor Reports can be run by choosing *Vendor Employees* from **Choose an Employee Type**
then start entering the company name in the **Select Company** box. After finding the company, **Run Report**.

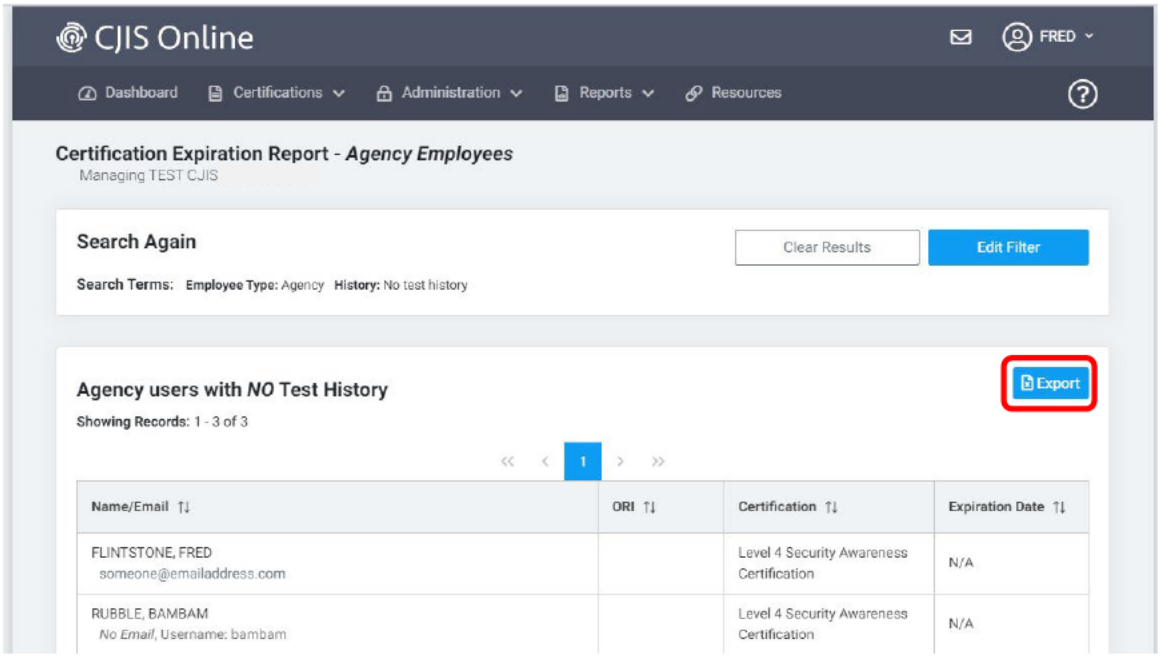


Sample of Vendor User Certification Status Report selection criteria on screen.

Run a Certification Expiration Report

Click on **Reports.** Choose **Certification Expiration report.**

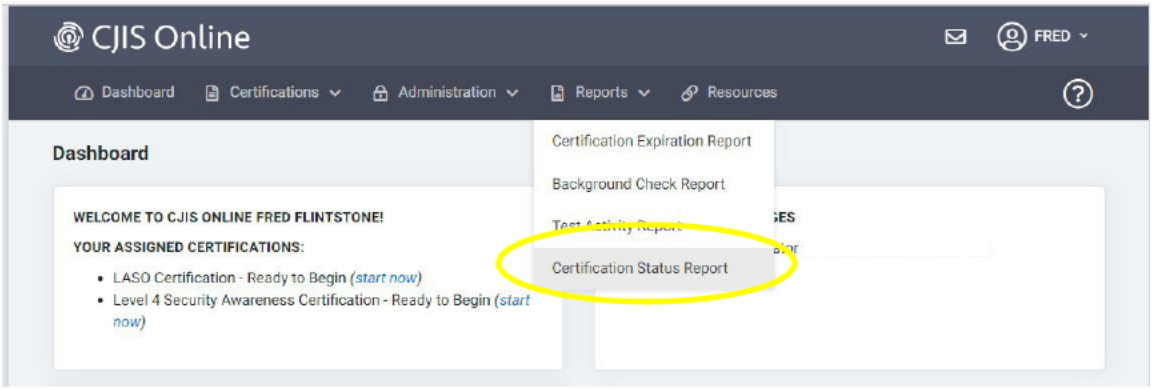




To run a report of all employee's certifications expiring; **Choose an Employee Type** *Agency Employees.*
Choose Timeframe from list or enter custom date range. Click **Run Report.**

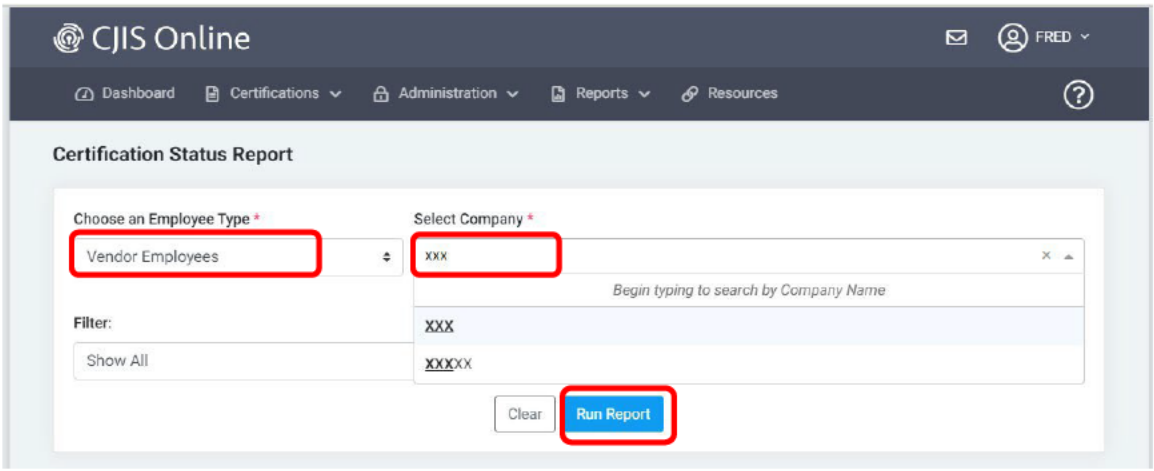
To find accounts with no certification history.

On **Certification Expiration report** screen. Check off 'Only show accounts with no certification history.'
Run report.



Sample of users with no test history report.

A result with N/A means there is no tests completed. Clicking the up/down arrows on the columnheadings allows the data to be sorted.



The **Export** button allows the data to be exported into an Excel Worksheet format. Click **Export** to put the data into an Excel sheet format. Remember to use File, Save As in Excel and save the worksheet on your computer.

To Run a vendor User Certification Expiration report

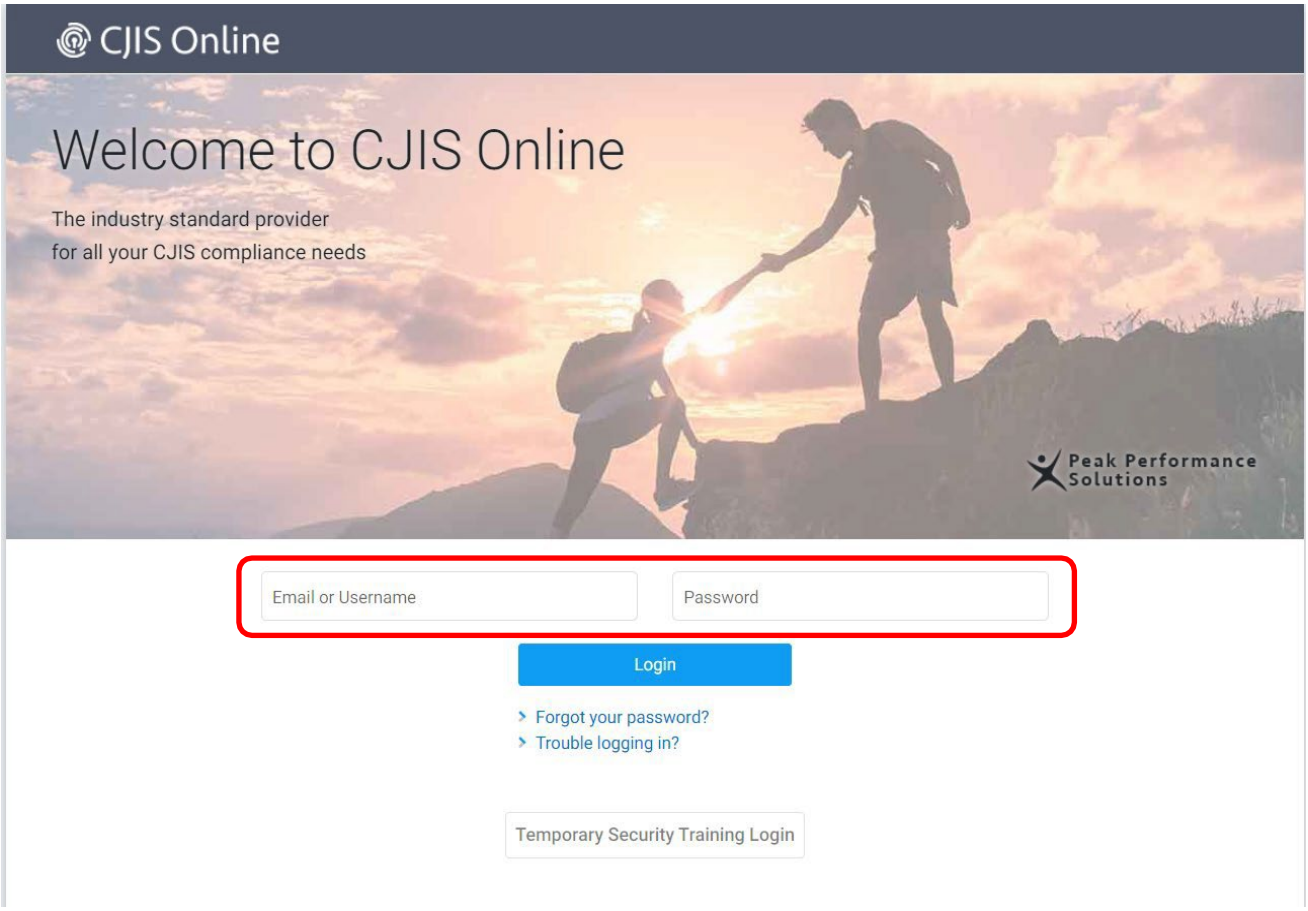
Click on **Reports.** Choose **Certification Expiration report.**

To run a quick report of a vendor's employees. Choose *Vendor Employees* from **Choose an Employee Type**
then start entering the company name in the **Select Company** box. After finding the company, **Run Report**.

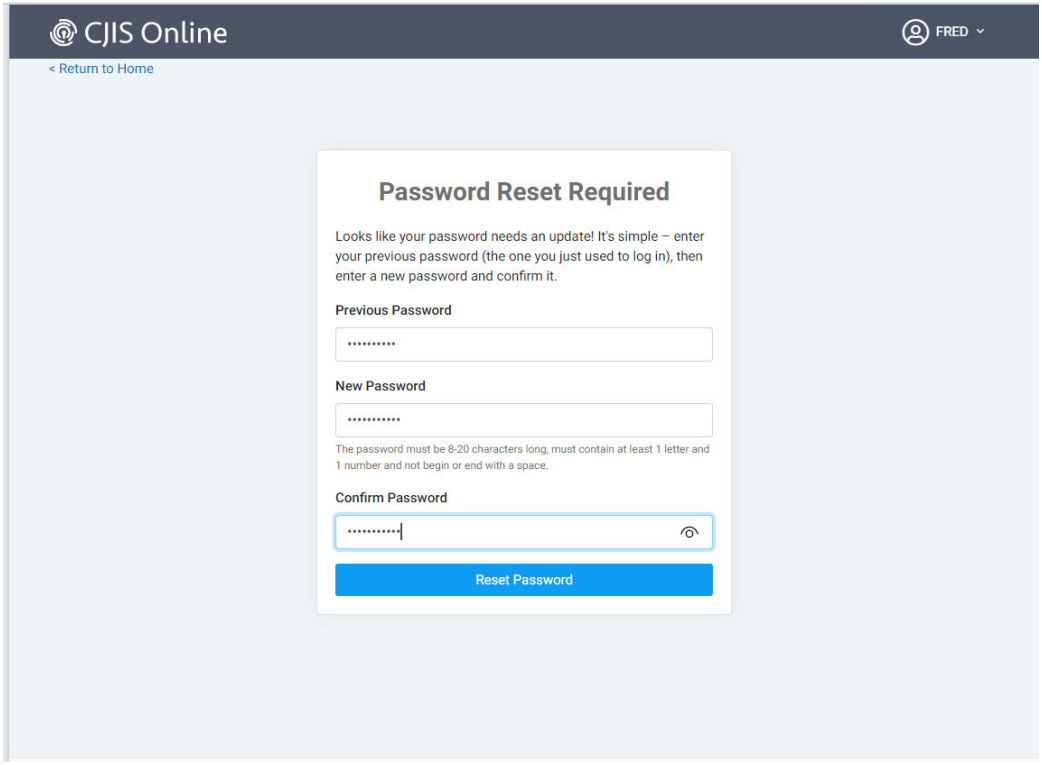
! Good tip: If your vendor provides a list of personnel completing training, it is the agency's responsibility to check ifthe report is current and accurate.

A result with N/A means there is no tests completed. Clicking the up/down arrows on the column headings allow the data to be sorted. The reports are similar in appearance to the

agency’s user reports.



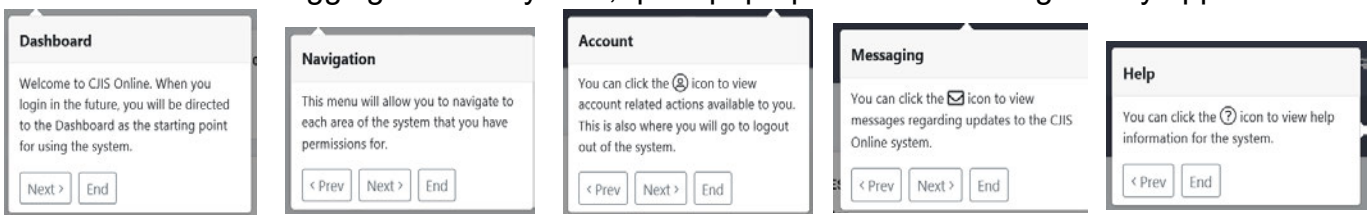
IT Staff & Agency User



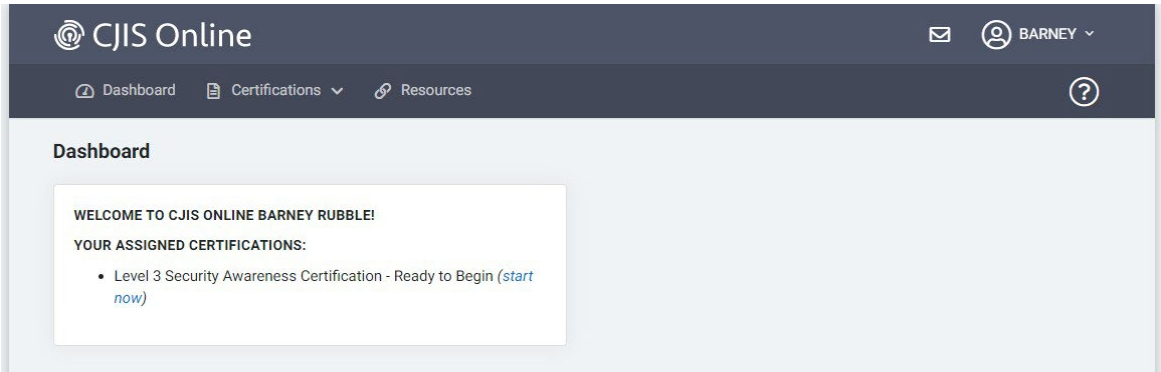
IT & Agency User Sign on

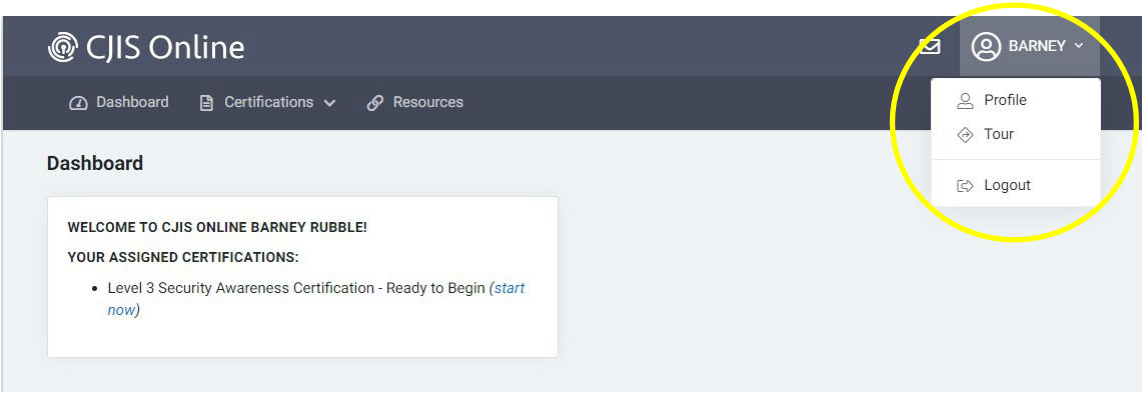
The individual will need their sign on information the agency Local Admin created to continue with training.

https://www.cjisonline.com



Enter the email / username and password. Click Login. Passwords are CaSe SeNsiTiVe.

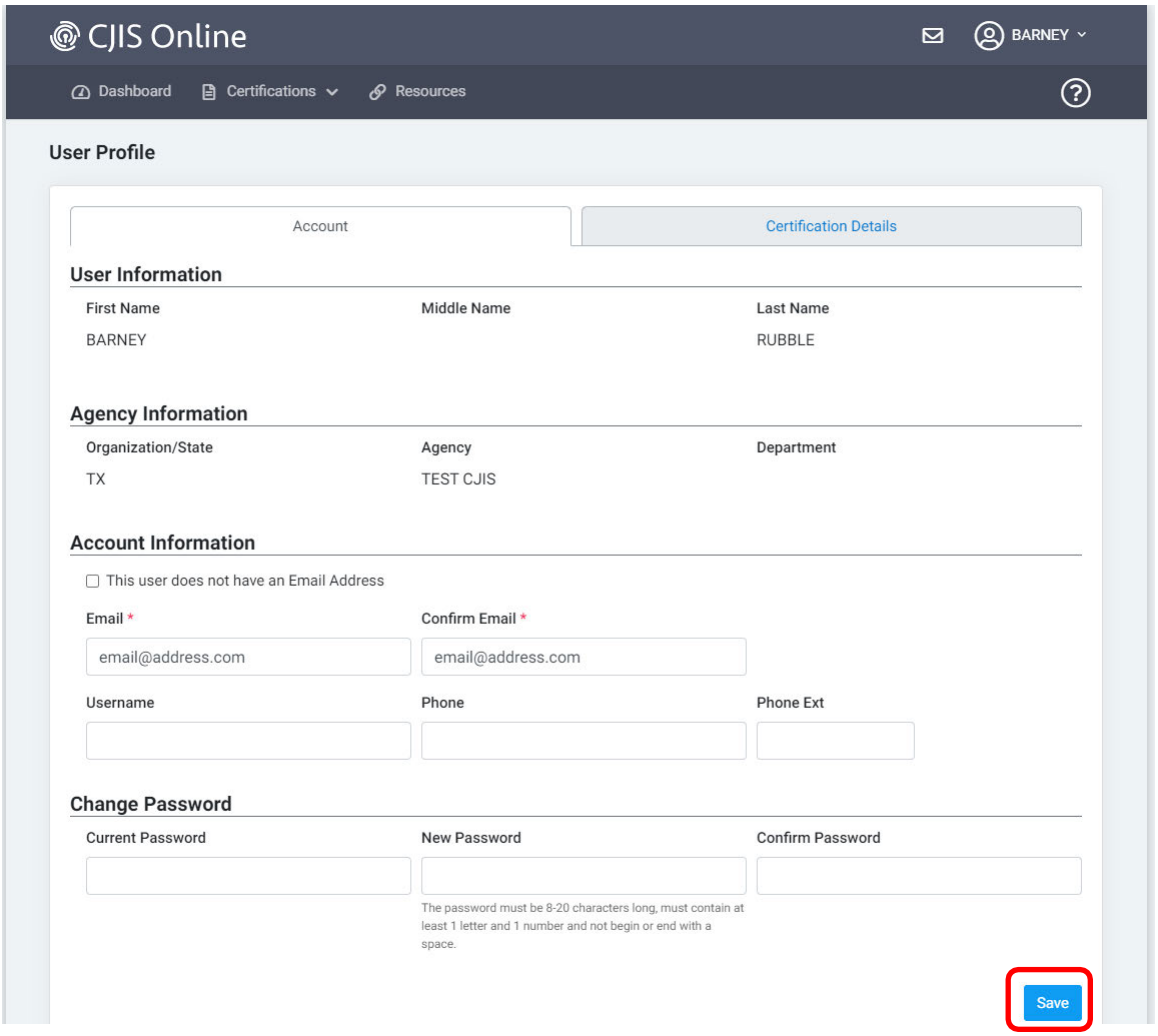




First time sign in, one may be prompted to change their password.
If needed, create a new password to continue. The fields are CaSe SeNsiTiVe.

First time logging into the system, quick pop-up notes or messages may appear.

This is the main Dashboard providing quick stats.

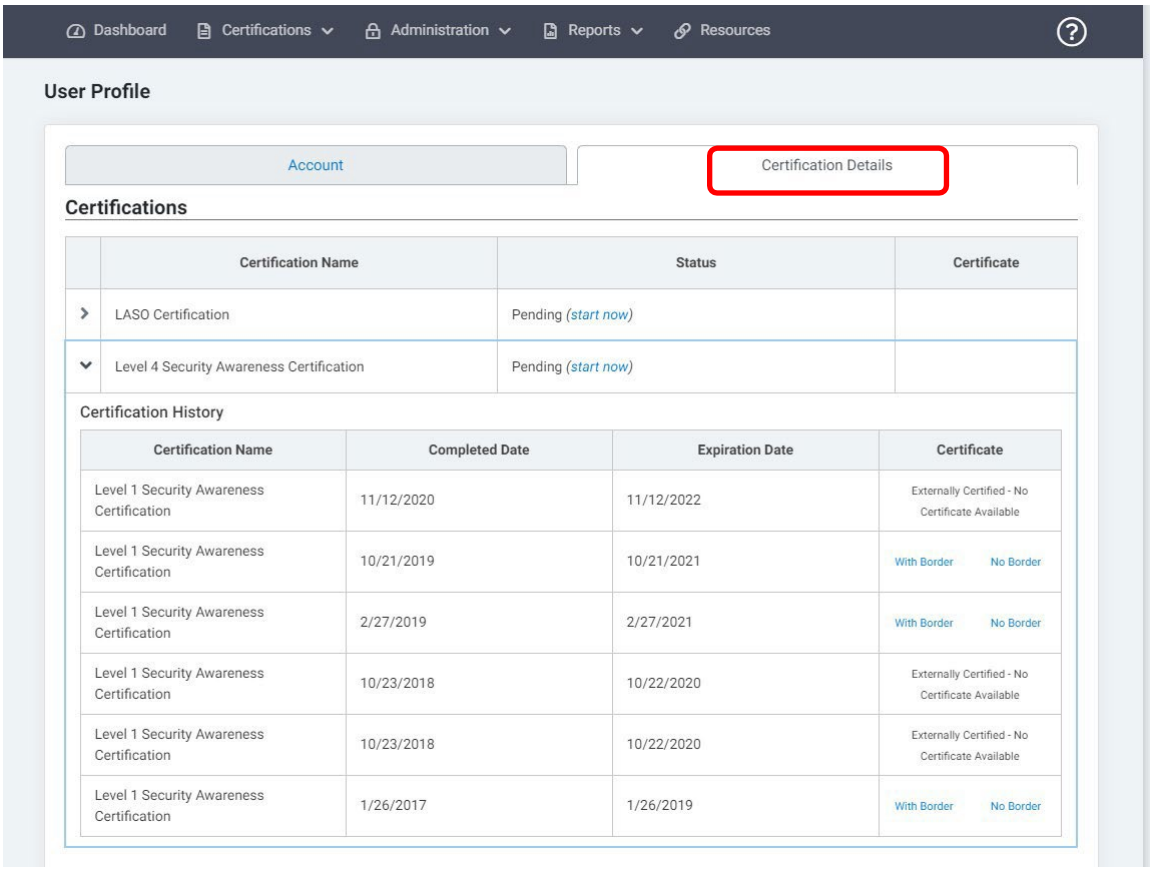


In the top right corner, click on the chevron symbol next to your name to view the Tour Notes again, **Edit** your Profile, view certificate details and certificate history, and use **Logout** to leave the system.

The **Envelope** contains messages from the application.

The task bar contains the main **Dashboard**, **Certifications** Menu, **Resources** Menu and **?** for additional help.

User Profile

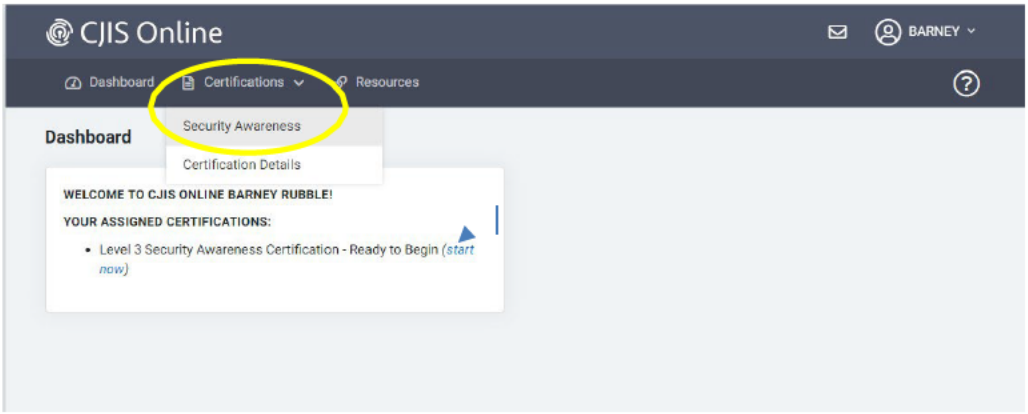


After clicking on **Profile,** the individual can only change account information pertaining to their account. Update email address, username, phone, and password then click **Save** when done.

Note: the account sign on is either the email address or username. Without a valid email address the userwill not be automatically notified to renew training.

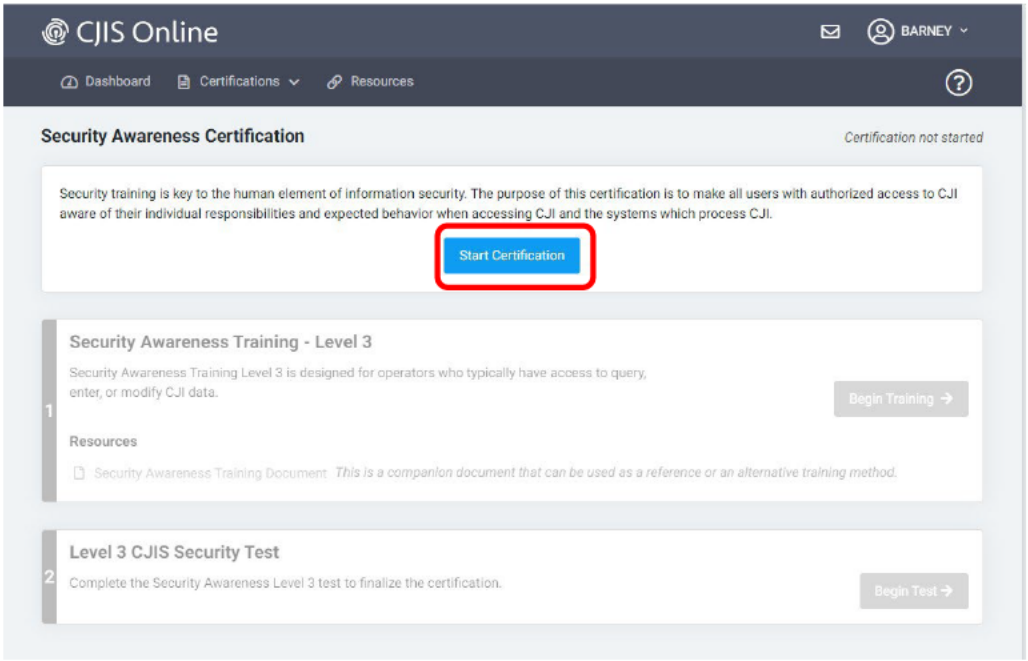
Certification Details

Click on **Certification Details** tab.



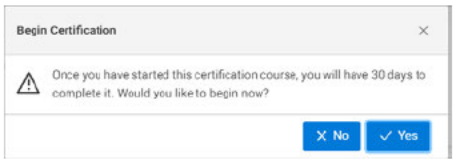
To view all the Certification history, click on the > greater than symbol, the symbol then points downward to open the history list. Find the available certificate in blue color, choose With Border or No Border.
Wait a few seconds for a screen to pop open with the certificate. After the screen opens, you may choose to print or save the certificate to your computer. If the certificate screen does not open, ensure pop-ups are not blocked by the browser and a supported Internet browser is being used.

The Local Agency Admin can also view and print certificates from their account.

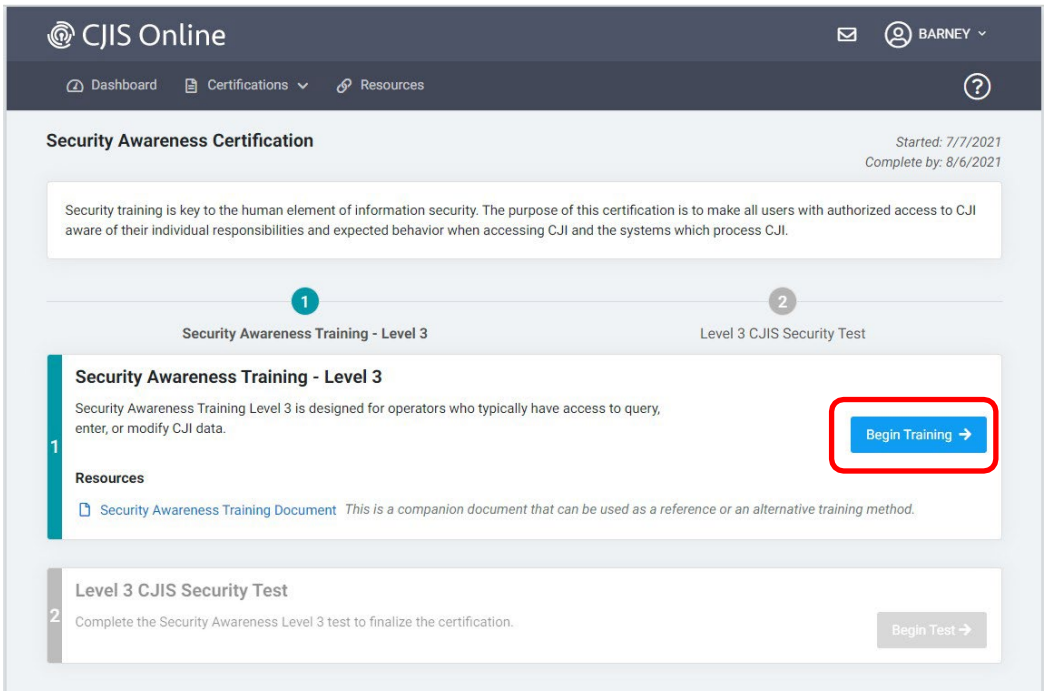


! Note: The *Background Checks* section on the Certification Details tab is **not** required to be filled in.

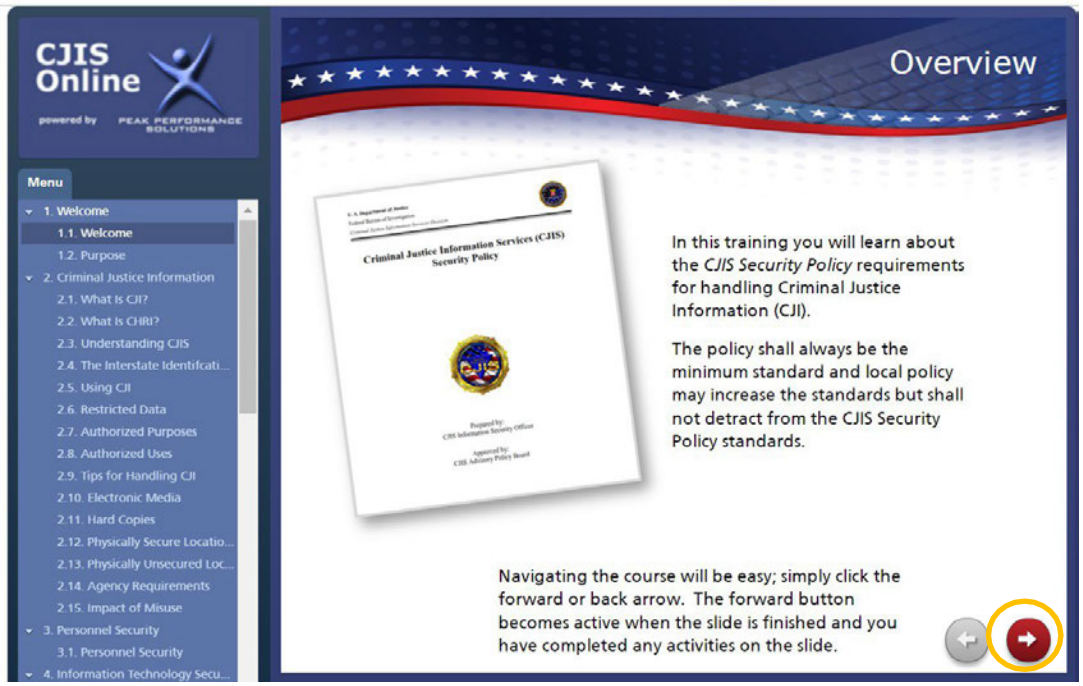
To Begin Training



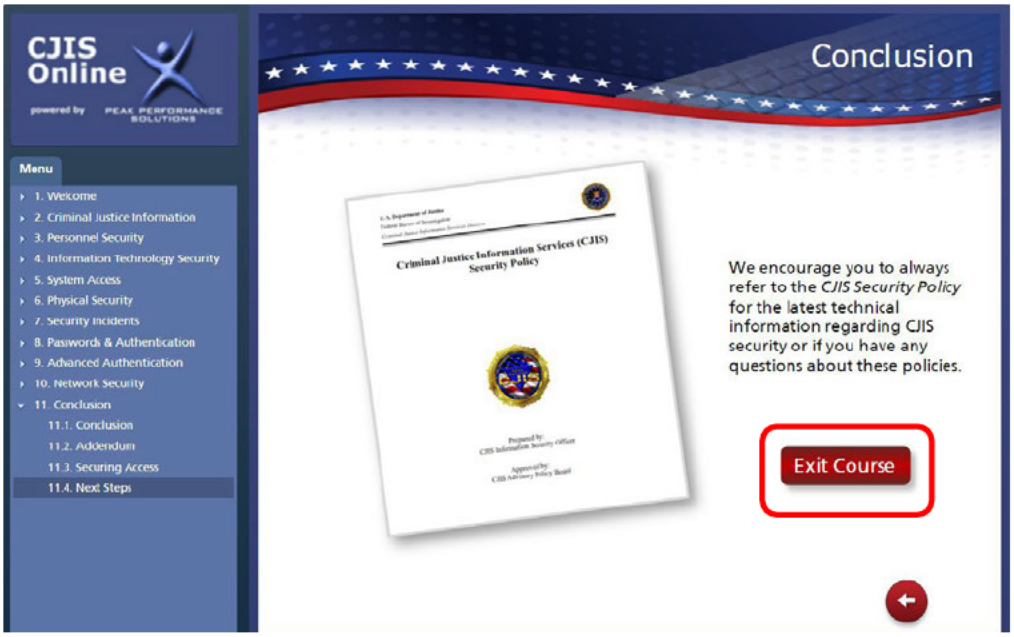
Click on **Certifications** then choose **Security Awareness**.

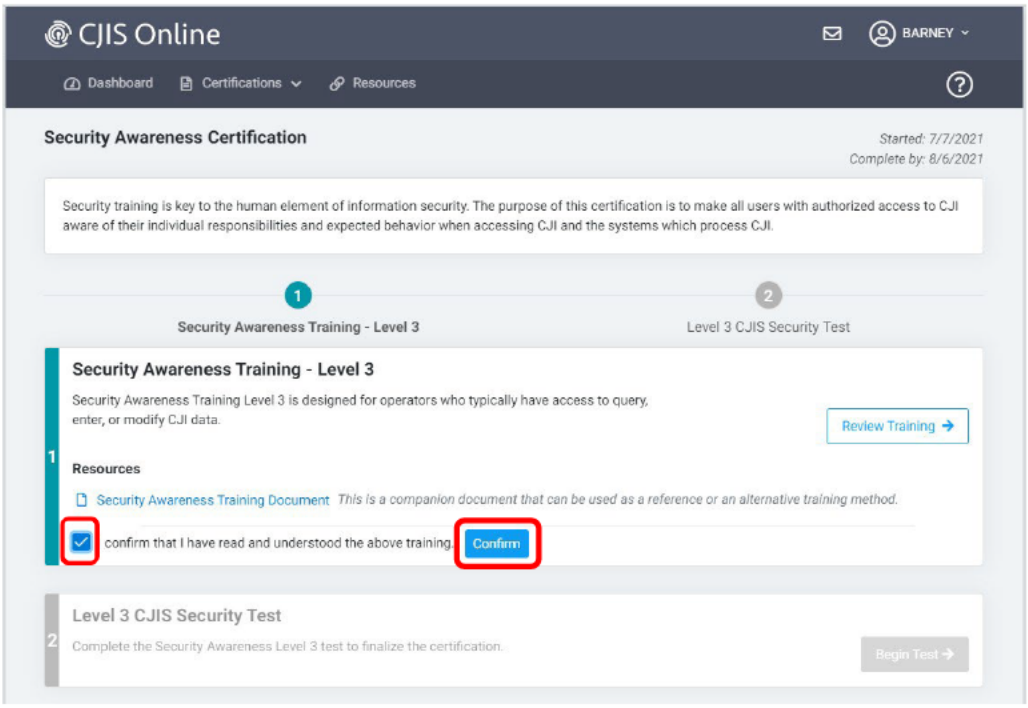


Alternate method: Click on the blue 'Start Now' on the main screen.

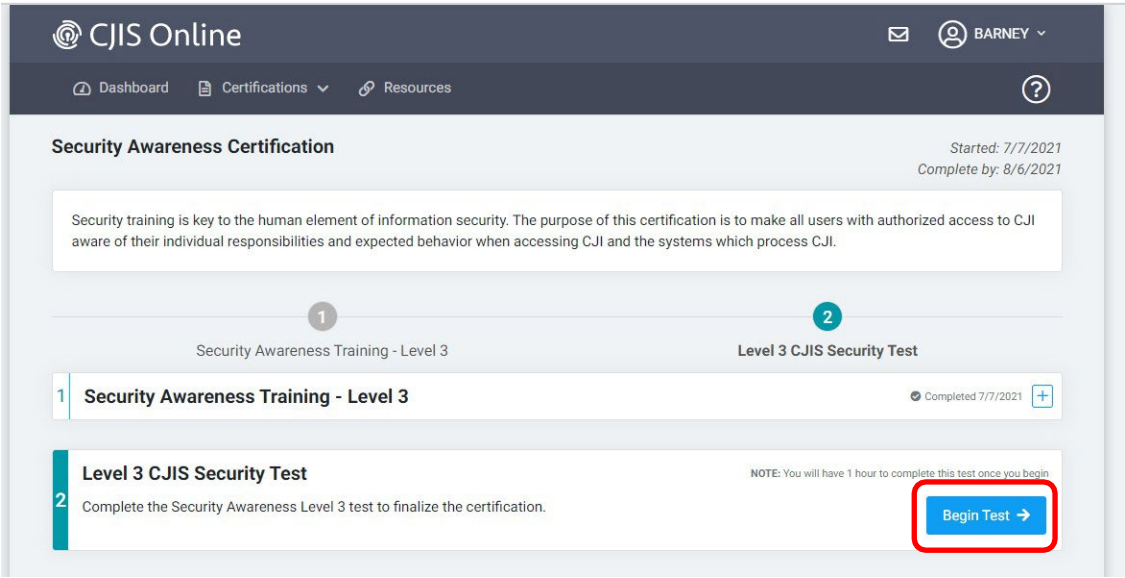


Click on the blue **Start Certification** button then confirm Yes or No.





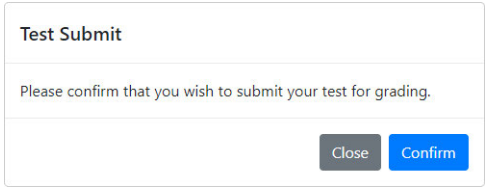
Click **Begin Training.**



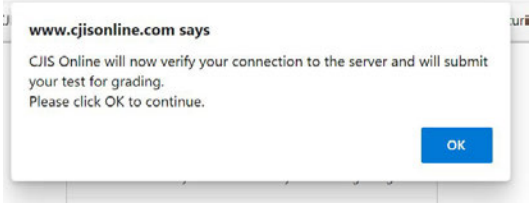
Read through the screens and click the arrows to get to the next screen.

Click **Exit Course** when done training and reviewing.

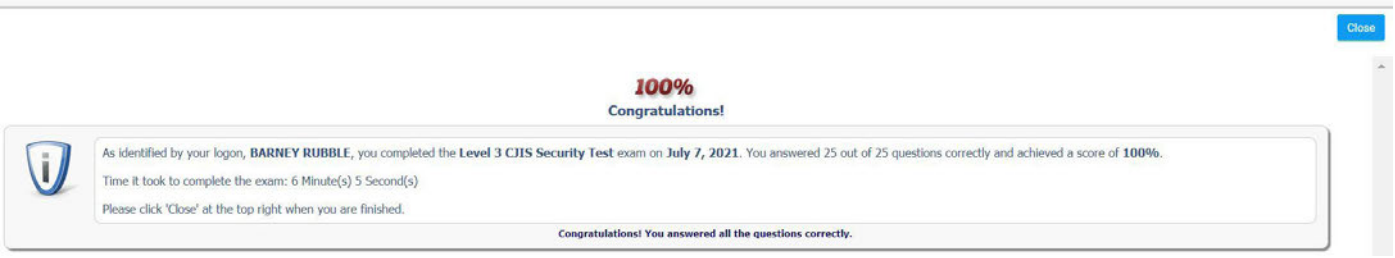
Check off the 'I Confirm…' box and then click on **Confirm** to continue.



Click on **Begin**

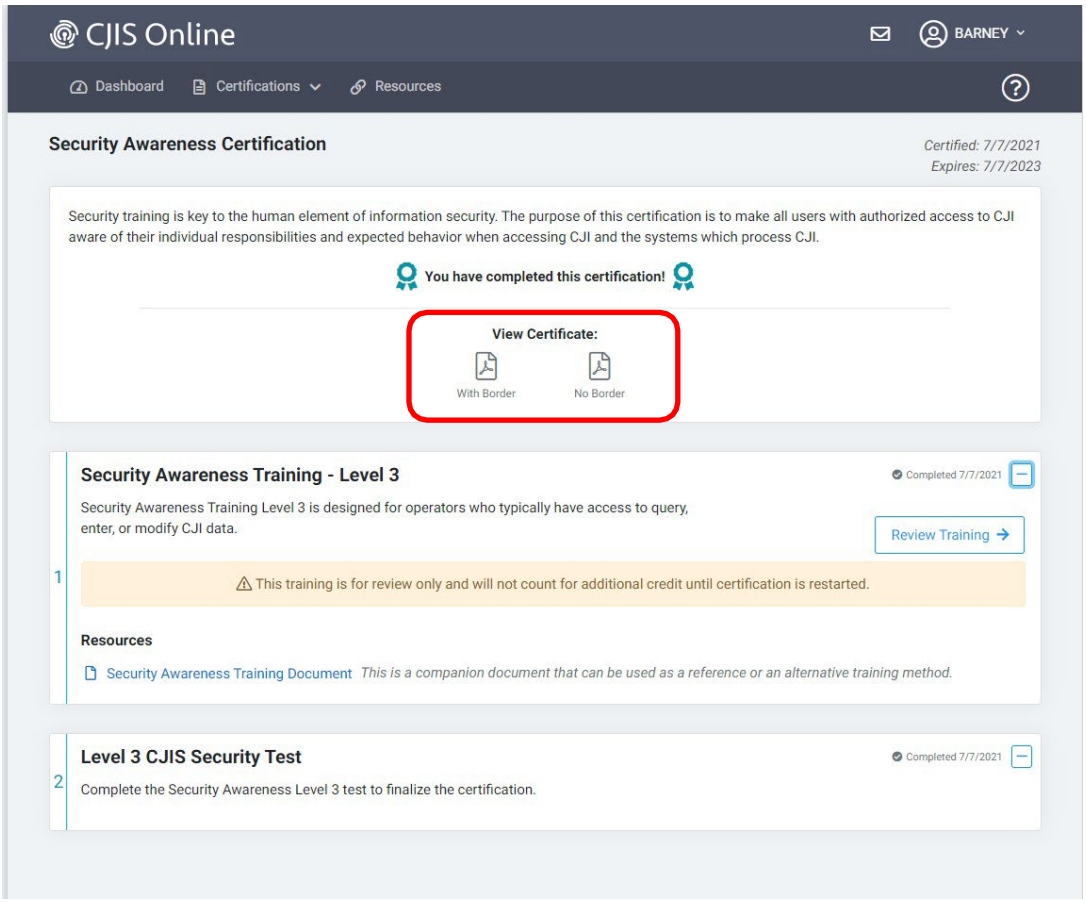


Test button. You will have 1 hour to

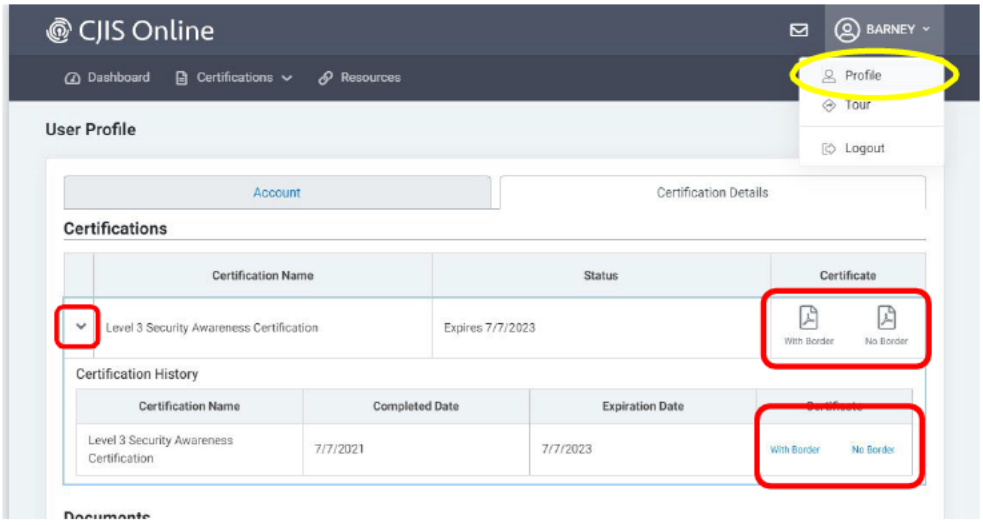


take the 25- question test.

To pass, you will need to achieve at least a 70 % (18 of 25 correct). After successful completion, this Certificate will be valid for two years.
If you do not pass, you will need to wait at least one hour before taking the test again. There are no limitations on how many times to retake the test.

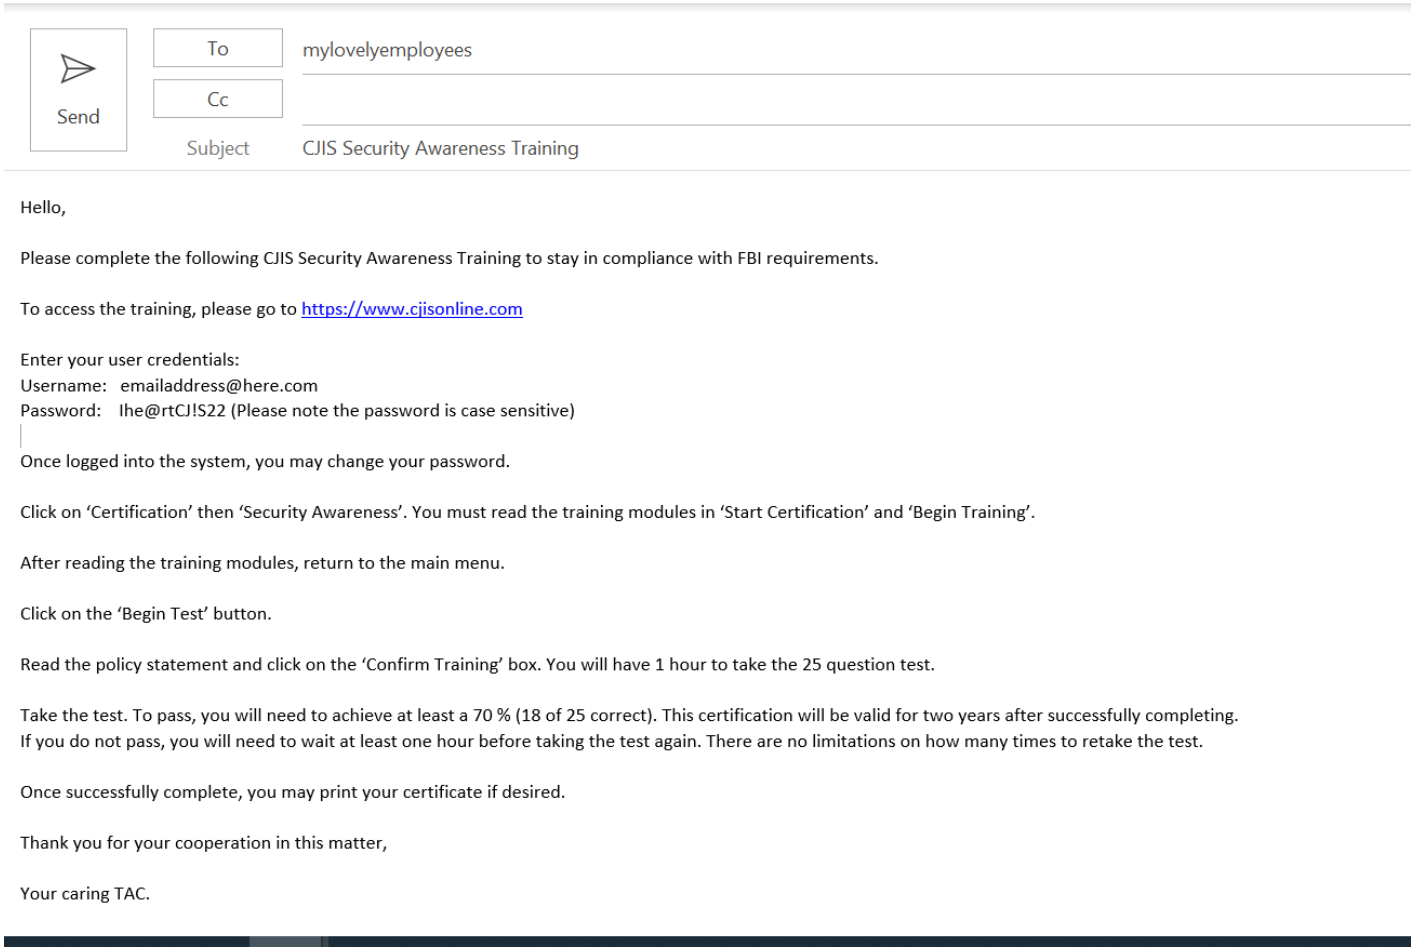


At the end of the test click **Confirm** button to submit test for grading then **OK** to message box below.



The test results appear and click **Close** button when done reviewing.

Once test successfully complete, you may print your certificate if desired. Under View Certificate section, click on With Border or No Border to view or print. Click on the printer or disk icon in top right corner to save or print certificate on next certificate screen.



To print/reprint a certificate. In the top right corner, click on the chevron symbol next to your name, choose **Profile**, click Certificate Details tab. In the Certification history, click on the **>** greater
than symbol, the symbol then points downward to open the history list. Find the available certificate in blue color, choose With Border or No Border. Wait a few seconds for a screen to pop open with the certificate. After the screen opens,

you may choose to print or save the certificate to your computer. If the certificate screen does not open, ensure pop-ups are not blocked by the browser and a supported Internet browser is being used.

Email sample to send users for training

Subject: CJIS Security Awareness Training

Hello,

Please complete the following CJIS Security Awareness Training to stay in compliance with FBI requirements.

To access the training, please go to https://www.cjisonline.com

Enter your user credentials:
Username: emailaddress@here.com
Password: Ihe@rtCJ!S22 (Please note the password is case sensitive)

Once logged into the system, you may change your password.

Click on 'Certification' then 'Security Awareness'. You must read the training modules in 'Start Certification' and 'Begin Training'.

After reading the training modules, return to the main menu.

Click on the 'Begin Test' button.

Read the policy statement and click on the 'Confirm Training' box. You will have 1 hour to take the 25 question test.

Take the test. To pass, you will need to achieve at least a 70 % (18 of 25 correct). This certification will be valid for two years after successfully completing.
If you do not pass, you will need to wait at least one hour before taking the test again. There are no limitations on how many times to retake the test.

Once successfully complete, you may print your certificate if desired.

Thank you for your cooperation in this matter,

Your caring TAC.

After creating a user account, you will need to provide the user an initial password and the link to get started. This is a sample of an email message to help with the planning.

Got questions, visit our web page for FAQs and other information to help.

APPENDIX C FORMS AND AGREEMENTS

MASSACHUSETTS DEPARTMENT OF CRIMINAL JUSTICE INFORMATION SERVICES GLOBAL JUSTICE AND PUBLIC SAFETY USER AGREEMENT

1.0 Purpose

This Global Justice and Public Safety User Agreement (hereinafter, "Agreement") establishes guidelines for the access, use, dissemination, and sharing of criminal justice information (CJI) collected and maintained within the systems and networks operated, maintained, and managed by the Executive Office of Public Safety and Security (EOPSS) and/or the Massachusetts Department of Criminal Justice Information Services (DCJIS).

2.0 Authority

This Agreement is established pursuant to M.G.L. c. 6, § 167A, M.G.L. c. 6, § 18 ¾, 803 CMR 7.00, and 28 C.F.R. Part 20.

3.0 Parties and designees

The parties to this agreement include EOPSS, DCJIS and the criminal justice agency noted in the signatory section below. The parties collectively agree to follow the terms of said agreement. EOPSS designates DCJIS as its designee with the authority to audit and provide oversight of Public Safety Data Enterprise Applications within the scope of the Agreement. Furthermore, EOPSS also appoints DCJIS as it designee to sign this Agreement on behalf of both DCJIS and EOPSS.

4.0 Scope

This Agreement is applicable to all sworn and non-sworn employees, contractors, interns, volunteers, and information technology support staff of all criminal justice and public safety agencies in the Commonwealth of Massachusetts who utilize or otherwise have access to any Public Safety Data Enterprise Application, software application, system or network maintained, or managed by EOPSS and/or DCJIS.

Public Safety Data Enterprise Applications within the scope of this agreement include the following:

Automated License Plate Reader (ALPR) technology is a system that allows for the automatic recognition of license plates by a portable or stationary unit. The license plate information is then compared against a locally stored list of plates called the CJIS-NCIC Hotfile database which consists of license plate numbers associated with suspended or revoked licenses, stolen vehicles, AMBER Alerts, Missing Child Alerts, Missing College Student Bulletins, Be On Look Out, and Wanted or Missing Person broadcasts where a license plate is included.

CopLink is a crime analytics platform application maintained by the Massachusetts State Police Fusion Center that allows for the inter-agency storage and sharing of various documents and information.

EOPSS Data Cross Tracking System is a data collection and reporting system for criminal justice agencies and the Trial Court, to

capture and report information on offenders and to report information relative to recidivism rates.

EOPSS National Incident Based Reporting System (NIBRS) Data Collection is a data collection and reporting system that criminal justice agencies submit incident and arrest data to in compliance with the Federal Bureau of Investigation (FBI) Uniform Crime Reporting (UCR) standards.

My License Office (MLO) is an application that allows for the retrieval and use of Massachusetts' driver's license photos for various reasons, including professional licenses and identification cards.

The **Victim Notification Registry (VNR)** is the electronic application that allows for the registration of crime victims to receive notification of an offender's release from incarceration and certain CORI information.

This agreement may be amended from time to time to update the listing of Public Safety Data Enterprise Applications within the scope of this agreement.

5.0 Duration of Agreement

This Agreement is in effect until modified or cancelled by EOPSS and/or DCJIS. Each Agency Head shall sign off on a copy of this Agreement as a condition of access to the systems and networks operated, maintained, or managed by the EOPSS and/or DCJIS. In addition, each Agency Head will sign off on a copy of the Companion System Agreement for each system for which such an agreement exists. An original, signed copy of this Agreement, along with original, signed copies of any Companion System Agreements, will be kept on file at the DCJIS. The Agency Head shall maintain a copy of the signed agreements. Facsimile and electronic signatures are acceptable as originals.

The Agency Head also agrees to execute a new Global Justice and Public Safety User Agreement and all relevant Companion System Agreements in accordance with 803 CMR 7.06 whenever there are changes to the Agency Head, the CJIS Representative , the backup CJIS Representative, or the CJIS Technical Representative. The new Agreement(s) is/ are to be executed within ten (10) business days of the effective date of the change(s) necessitating a new Agreement(s). Original, signed copies of the newly executed Agreement(s) will be forwarded to the DCJIS within ten (10) days of execution.

6.0 Definitions

Authorized User
A sworn or non-sworn justice or public safety employee, contractor, intern, volunteer, or IT support staff member who has been authorized by his/her agency head to access any software application, system, network, or CJI operated, maintained, or managed by the DCJIS.

Companion System Agreement
An addendum or "rider" to this Agreement. Each Companion System Agreement establishes rules and protocols for contributing CJI to, or accessing, using, or disseminating CJI from, a specific system or database operated, maintained, or managed by the DCIJS.

Criminal Intelligence System
A system that stores detailed intelligence or investigative information on the suspected criminal activities of subjects and/or which stores only information designed to identify individuals or organizations that are the subject of an inquiry or analysis.

Criminal Justice Information (CJI)
CJI is defined as all data obtained from or through the CJIS or companion public safety data enterprise application necessary for law enforcement agencies to perform their missions. CJI includes, but is not limited to, biometric, identity history, biographic, property, and case/incident history data.

Criminal Justice Information System (CJIS) Representative
The CJIS Representative serves as the primary agency point of contact for the DCJIS. Responsibilities include ensuring that all DCJIS system usage and security policies and procedures are being followed by the agency, training all agency personnel who access any system or network operated, maintained, or managed by the DCJIS or who use the CJI obtained from or through those systems and networks, and attending all DCJIS- sponsored meetings, seminars, and conferences.

Criminal Justice Information System (CJIS) Backup Representative
The Backup CJIS Representative shall be the DCJIS' secondary point of contact for the agency. The Backup CJIS Representative shall assume all of the duties and responsibilities of the CJIS Representative should the CJIS Rep representative be unable to perform those duties and responsibilities for any reason.

Criminal Justice Information System (CJIS) Technical Representative
The CJIS Technical Representative serves as the primary agency point of contact for the DCJIS on all technology-related matters. The Technical Representative's main responsibility is to ensure that the agency meets the requirements of the FBI CJIS Security Policy. The CJIS Technical Representative may also serve as either the CJIS Representative or the Backup CJIS Representative.

Criminal Justice Information System (CJIS) User-Access Model
A single-identity management model used to authenticate users of the software applications, systems, and networks operated, maintained, or managed by the DCJIS.

Public Safety Data Enterprise Application
A software application which criminal justice and public safety agencies use to contribute CJI to, or to access CJI from, databases or systems maintained by or accessed through the DCJIS.

Non-Contributing Agency
An agency that may access CJI from, but which does not contribute CJI to, a database or system operated, maintained, or managed by the EOPSS or DCJIS.

Source Agency
The agency that originally recorded and contributed data to a database or system operated, maintained, or managed by EOPSS or DCJIS.

7.0 Transaction Logs

An audit log of all transactions made by CJIS user agencies is maintained by the DCJIS and EOPSS for systems maintained by EOPSS or DCJIS. This log records the identity of the individual user and agency accessing the system, the date and time of access, and the data entered into, or retrieved from, any database or system operated, maintained, or managed by the EOPSS or DCJIS. An Agency Head may request a report of all transactions initiated by the users of his/her agency. All report requests must be submitted in writing to the DCJIS.

The DCJIS CSO, at his/her discretion, may, at any time, authorize additional audits of all databases and systems operated, maintained, or managed by the EOPSS or DCJI S.

8.0 Audits of CJI Users

The DCJIS will conduct audits of all agencies, both criminal justice/public safety and non-criminal justice, accessing or using the CJI stored within, or obtained through, the databases, systems, and networks operated, maintained, or managed by the DCJIS. The purpose of these audits is to ensure the integrity and security of the CJI, applications, and systems, to investigate potential inappropriate use of these resources, and to identify potential training needs. Each CJIS user agencies will be audited at least on a triennial basis (once every 3 years).

9.0 Public Safety CJI, System, and Network Usage Restrictions

Use of any CJI obtained from or through an application, database, system, or network operated, maintained, or managed by the EOPSS or DCJIS is limited to authorized criminal justice purposes within the scope of a user's employment and official duties.

EOPSS and DCJIS resources may not be used for personal gain or for personal use, or to assist another individual or entity that is not authorized to access, use, or receive CJI from these resources. Criminal intelligence systems may also be subject to 28 CFR Part 23. Where the provisions of this Agreement or its addenda conflict with 28 CFR Part 23, 28 CFR Part 23 shall supersede this Agreement and its addenda.

10.0 Misuse

An Agency Head is responsible for investigating all alleged incidents or allegations of misuse of any CJI or database, system, or network operated, maintained, or managed by EOPSS or DCJIS. If an Agency Head determines that someone within his/ her agency has misused any of these resources, he/she must, within 10 business days, notify the DCJIS CSO in writing of the circumstances surrounding the misuse, of the actions taken, or to be taken, to address and correct the misuse, and of the policy(ies) and procedures to be implemented to prevent future misuse. The DCJIS CSO may suspend or revoke access to any or all databases or systems operated, maintained, or managed by the DCJIS for the individual(s) involved in the misuse.

Misuse of any EOPSS or DCJIS provided CJI or resource may result in individual loss of access to the resources, agency loss of access to the resources, and/or state

and federal civil and criminal penalties, if applicable. Users are also subject to the rules and regulations of their respective agency.

11.0 Access to EOPSS and DCJIS Resources

Sworn and non-sworn justice and public safety employees, as well as the employees of non-criminal justice agencies, may be granted access to one or more DCJIS applications, systems, and networks as authorized by the Agency head.

Each individual accessing an EOPSS or DCJIS resource will be assigned a unique user identifier (User ID) and initial password. The individual will be required to change his/her password when logging into a resource for the first time. When possible, the same User ID and Password will enable a user to access multiple EOPSS and DCJIS resources. However, some applications may require a separate log in and/or a different User ID and Password.

All passwords used to access an EOPSS or DCJIS resource will meet the DCJIS and FBI security requirements in effect at the time the password is created/changed.

Authorized users shall not share their passwords and user identifications with any other individual. Each authorized user shall be responsible for all transactions conducted with his or her user identification and password.

Agencies are responsible for notifying the EOPSS or DCJIS, in writing, when a user is no longer authorized to access and EOPS or DCJIS resource. EOPSS or DCJIS will terminate or suspend user access depending on the user's status within his/her respective agency.

User IDs and passwords shall be reviewed by each agency on an annual basis. The Agency Head and agency CJIS Representative shall be responsible for this review. The purpose of this review is to confirm the continued authorization of all individuals accessing DCJIS resources. The Agency Head and CJIS Representative shall annually certify the accuracy of his/her agency's authorized user list to the DCJIS CSO.

12.0 Ownership of CJI Contained Within EOPSS or DCJIS Databases and Systems

The Source Agency will maintain ownership of, and responsibility for, the CJI it enters or modifies within any database or system operated, maintained, or managed by the EOPSS or DCJIS.

The Source Agency will exercise due diligence to ensure that the CJI it enters is current, complete, and accurate. Each Source Agency is also responsible for ensuring that the CJI it contributes is in compliance with all federal, state, and local laws.

User agencies shall communicate any errors found in CJI contained in any database or system operated, maintained, or managed by the DCJIS to the Source agency for that CJI as well as to the EOPSS or DCJIS.

13.0 Dissemination of CJI

CJI contained within, or obtained through, any database, system, or network operated, maintained, or managed by the EOPSS or DCJIS shall only be disseminated to other authorized agencies and individuals. In addition, the CJI obtained within, or obtained through, any DCJIS resource shall only be used for authorized criminal justice purposes.

14.0 Public Records

Records maintained within the databases and systems operated, maintained, or managed by the EOPSS or DCJIS are subject to the Massachusetts Public Records Law as defined in M.G.L. c. 4, s. 7(26).

All responses to public record requests for information contained in an EOPSS or DCJIS resource shall be referred to the Agency that contributed the relevant information for its response as the custodian of the record(s).

The EOPSS or DCJIS CSO may respond to a public records request for statistical data drawn from an EOPSS or DCJIS resource.

15.0 Data Submission and Retention Policy

Source Agencies shall contribute data to each EOPSS or DCJIS database or system pursuant to the schedule established in the Companion System Agreement for that database or system, if applicable. Companion System Agreements are attached to this Agreement as Addenda.

Data maintained in an EOPSS or DCJIS database(s) and system(s) shall be retained pursuant to the schedule established in the Companion System Agreement for that respective system, if applicable.

16.0 Data Submission Standards

For each system that requires the contribution of data by Source Agencies, those Agencies shall submit at least the minimum set of data as established in the guidelines or any Companion System Agreement if required, for the respective subject application.

17.0 Designation of an Agency Representatives

CJIS Representative:
Each agency accessing or using CJI obtained from or through the systems and networks operated, maintained, or managed by the EOPSS or DCJIS shall appoint a CJIS Representative. The CJIS Representative serves as the primary agency point of contact for the EOPSS and DCJIS. Responsibilities include ensuring that all EOPSS and DCJIS system usage and security policies and procedures are being followed by the agency, training all agency personnel who access any system or network operated, maintained, or managed by the EOPSS or DCJIS or who use the CJI obtained from or through those systems and networks, and attending all EOPSS or DCJIS- sponsored meetings, trainings, seminars, and conferences.

Backup CJIS Representative*:*
Each agency that accesses or uses CJI obtained from or through the systems or networks operated, maintained, or managed by the DCJIS shall also appoint a Backup CJIS Representative. The Backup CJIS Representative shall be the EOPSS

and DCJIS' secondary point of contact for the agency. In addition, the Backup CJIS Representative shall assume all the duties and responsibilities of the CJIS Representative should the CJIS Representative be unable to perform those duties and responsibilities for any reason.

CJIS Technical Representative:
Each agency accessing or using CJI obtained from or through the systems and networks operated, maintained, or managed by the DCJIS shall appoint a CJIS Technical Representative. The CJIS Technical Representative serves as the primary agency point of contact for the DCJIS on all technology-related matters. The Technical Representative's main responsibility is to ensure that the agency meets the requirements of the FBI CJIS Security Policy. The CJIS Technical Representative may also serve as either the CJIS Representative or the Backup CJIS Representative.

18.0 Technical Support

The Executive Office of Public Safety and Security (EOPSS) Office of Technology and Information Services (OTIS) shall provide technical support services for all applications, databases, systems, and networks, operated, maintained, or managed by the EOPSS or DCJIS.

19.0 Internal Agency Policies

Each agency obtaining CJI either directly from, or through, an application, database, system, or network operated, maintained, or managed by the EOPSS or DCJIS shall draft and adopt internal policies to inform and ensure that agency authorized users have read and agree to comply with the provisions of this Agreement and its Addenda.

20.0 Termination of Access

An agency may request termination of its access to one or more EOPSS or DCJIS resources by providing a written request to the DCJIS CSO.
The DCJIS CSO may also terminate access to a DCJIS resource pursuant to the terms of a Companion System Agreement.

21.0 Amendments

Any change in the provisions of this Agreement or in the provisions of a Companion System Agreement shall be incorporated by a written amendment approved by the EOPSS and DCJIS CSO.

22.0 Global Justice and Public Safety User Agreement Signoff

By signing this Agreement, the Agency Head acknowledges he/ she has read and understood its provisions and that he/she will comply with its terms and conditions.

MEMORANDUM OF UNDERSTANDING CRIMINAL JUSTICE AGENCYMOBILE DATA SHARING HOST/USER GUIDELINES

Once executed by all parties, this MOU must remain on file with the Host, the User, and the Department of Criminal Justice Information Services (DCJIS).

This Memorandum of Understanding (MOU) is entered into this _____day of_____, 20_____ by and between _____, a criminal justice agency hereafter referred to as the **Host,** and _____, a criminal justice agency hereafter referred to as the **User**.

This MOU is intended to define the terms, conditions, and mutual responsibilities of the parties hereto, for the purpose of enabling the User access, via the User's mobile data terminals, to the Massachusetts Criminal Justice Information System (CJIS), including access to Registry of Motor Vehicle (RMV) data and images, to FBI CJIS systems, including the National Crime Information Center (NCIC), and to the International Justice and Public Safety Network (Nlets), utilizing the Host's server, the Host's CJIS router, and other hardware and software necessary to operate wireless devices. This MOU incorporates by reference, and operates in conjunction with, the Massachusetts CJIS User Agreement and the FBI CJIS Security Policy. Both parties agree to adhere to all Massachusetts CJIS policies and to the policies of both the FBI and Nlets.

The User and Host agree:

a. To be bound by the conditions of this MOU and to notify each other and the DCJIS in the event that any of the conditions stated in this Agreement change in the future.
b. To execute this MOU with the DCJIS biennially as long as the Host/User relationship continues.
c. To notify the DCJIS of pending relationship termination immediately, as provided in the final paragraph of this MOU.
d. To develop and maintain a separate written agreement which includes procedures that clearly identifies the responsibilities of each agency when a mobile/wireless server is not functioning, and which department is responsible for managing the vendor response process. This agreement must detail the maintenance process and identify (1) who is responsible for contacting the DCJIS for service issues and (2) who is responsible for costs associated with the server and usage.
e. **That calls for service to the DCJIS must be made by the Host Agency;** and
f. That a violation of this MOU shall be considered a violation of the CJIS User Agreement between the violating party and the DCJIS.

The Host understands that the use of the Host's server by another criminal justice agency is not standard protocol and that the DCJIS only agrees to this arrangement where such access is necessary to aid the User criminal justice agency in the performance of the User's official criminal justice duties. The Host hereby agrees to:

a. Allow the User to utilize the Host's base system for access to any and all available information on the CJIS, RMV, FBI, and Nlets systems, via approved wireless devices, provided that the dissemination of such information would not be a violation of any laws or regulations of the United States or of the Commonwealth of Massachusetts.
b. Provide assistance in the furtherance of criminal justice information (CJI) processing and communications through record inquiry, message transmittals, or record entries

in keeping with all standards, and further agrees to limit access to such information to authorized employees of the User; and

c. Maintain an automated log of inquiries or transactions made by any of the User's wireless devices. The log must include the identification of the specific wireless device from which the inquiry was made, the operator of the device, the operator's department, and the date and time of the inquiry or transaction. Each log entry must be maintained by the Host for a minimum of one year and must be provided to the DCJIS and to the FBI upon request.

The User hereby acknowledges that it understands, and shall advise all its employees of, the penalties relating to unauthorized access to, or dissemination of CJI as defined in the Criminal Offender Record Information (CORI) Act (M.G.L. c. 6, § 167 et seq.), in 803 C.M.R. 2.00-9.00 et seq., in 28 CFR, in the CJIS User Agreement, and in the FBI CJIS Security Policy. The User agrees:

a. To abide by all laws of the United States and the Commonwealth of Massachusetts, as well as by the rules and regulations of the responsible administrative agencies, including the DCJIS as the FBI CJIS Systems Agency (CSA), and the FBI.
b. To abide by the standards and conditions of the CJIS User Agreement concerning the security, entry, collection, storage, verification, retrieval, access, and dissemination of CJI.
c. That the Host's system will be used for inquiries only; and
d. That all its personnel with access to wireless devices that will utilize the Host's base system have been trained, tested, and certified as required by the DCJIS and the FBI.

Either the Host or the User may, upon thirty days written notice to the other party and to the DCJIS, cancel this MOU in its entirety. Upon determination that the User has violated the terms of this MOU, the Host, in cooperation with the DCJIS, reserves the right to terminate this MOU with or without notice. The DCJIS may terminate this MOU at any time and without notice.

In witness thereof, the above-named parties have signed this document in full agreement on this _____day of_____, 20___.

MEMORANDUM OF UNDERSTANDINGUSE OF A CRIMINAL JUSTICE AGENCY CRIMINAL JUSTICE INFORMATION SYSTEM (CJIS) ROUTER and SWITCH BY A NON-CRIMINAL JUSTICE AGENCY

Once executed by all parties, this MOU must remain on file with the Host, the User, and the DCJIS.

This Memorandum of Understanding (MOU) is entered into this _____day of_____, 20___ by and between _____, a criminal justice agency, hereafter referred to as the **Host,** and _____, a non-criminal justice agency, hereafter referred to as the **User**.

This MOU defines the terms, conditions, and mutual responsibilities of the parties hereto, for the purpose of enabling the User to access the Host's/User's internal Computer-Aided Dispatch (CAD) system and/or Records Management System (RMS) via mobile data terminals utilizing the Host's CJIS router and switch. This MOU incorporates by reference, and operates in conjunction with, the standard Massachusetts CJIS User Agreement, which includes agreement by the Host to adhere to the Federal Bureau of Investigation's (FBI's) Criminal Justice Information System (CJIS) Security Policy (hereinafter, the CSP). It is the Host's responsibility to ensure that its CJIS User Agreement with the DCJIS is current and on file at the DCJIS Support Services Unit and with its Agency Head.

The User and Host agree:

a. To be bound by the conditions of this MOU and to notify each other and the DCJIS in the event that any of the conditions stated in this Agreement change in the future;
b. To execute a new MOU with the DCJIS once every two (2) years as long as the Host/User relationship continues;
c. To notify the DCJIS of pending termination immediately, as provided in the final paragraph of this MOU;
d. To develop and maintain a written agreement that includes a procedural statement that clearly identifies the responsibilities of each agency;
e. **That calls for service to the DCJIS must be made by the Host criminal justice agency;**
f. That a violation of this MOU shall be considered a violation of the CJIS User Agreement between the violating party(ies) and the DCJIS.

The Host understands that the use of the CJIS router and switch by a non-criminal justice agency is not standard protocol and that the DCJIS only agrees to this arrangement where such access is necessary to aid the User non-criminal justice agency in the performance of its official public safety duties.

The Host hereby agrees to only allow the User to utilize the CJIS router and switch to access User data systems in the performance of its public safety duties. Access to any CJIS or Criminal Offender Record Information (CORI) data systems is prohibited.

The Host hereby acknowledges an understanding of, and shall advise all its employees and user agency personnel of, the penalties relating to illegal actions with regard to criminal justice information, the Criminal Offender Record Information (CORI) Act as found in M.G.L. c. 6, § 167 et seq., the CJIS User Agreement, and the CSP.

The User agrees that the Host's CJIS router and switch will be used to access non-CJIS and/or non-CORI data only, which will aid in the performance of its official public safety duties, provided that the dissemination of such information would not be a violation of any laws or regulations of the United States or of the Commonwealth of Massachusetts.

Either the Host or the User may, upon thirty (30) days notice to the other party and to the DCJIS, in writing, cancel this MOU in its entirety. Upon determination that the Host or User has violated any law, rule, or regulation concerning criminal justice information or the use of the Host's CJIS router and/or switch, or violated the terms of this MOU, the Host or User, in cooperation with the DCJIS, reserves the right to terminate this MOU with or without notice. The DCJIS may terminate this MOU at any time and without notice.

MASSACHUSETTS DEPARTMENT OF CRIMINAL JUSTICE INFORMATION SERVICES
GLOBAL JUSTICE AND PUBLIC SAFETY USER AGREEMENT

2.0 Purpose

This Global Justice and Public Safety User Agreement (hereinafter, "Agreement") establishes guidelines for the access, use, dissemination, and sharing of criminal justice information (CJI) collected and maintained within the systems and networks operated, maintained, and managed by the Executive Office of Public Safety and Security (EOPSS) and/or the Massachusetts Department of Criminal Justice Information Services (DCJIS).

2.0 Authority

This Agreement is established pursuant to M.G.L. c. 6, § 167A, M.G.L. c. 6, § 18 ¾, 803 CMR 7.00, and 28 C.F.R. Part 20.

4.0 Parties and designees

The parties to this agreement include EOPSS, DCJIS and the criminal justice agency noted in the signatory section below. The parties collectively agree to follow the terms of said agreement. EOPSS designates DCJIS as its designee with the authority to audit and provide oversight of Public Safety Data Enterprise Applications within the scope of the Agreement. Furthermore, EOPSS also appoints DCJIS as it designee to sign this Agreement on behalf of both DCJIS and EOPSS.

4.0 Scope

This Agreement is applicable to all sworn and non-sworn employees, contractors, interns, volunteers, and information technology support staff of all criminal justice and public safety agencies in the Commonwealth of Massachusetts who utilize or otherwise have access to any Public Safety Data Enterprise Application, software application, system or network maintained, or managed by EOPSS and/or DCJIS.

Public Safety Data Enterprise Applications within the scope of this agreement include the following:

Automated License Plate Reader (ALPR) technology is a system that allows for the automatic recognition of license plates by a portable or stationary unit. The license plate information is then compared against a locally stored list of plates called the CJIS-NCIC Hotfile database which consists of license plate numbers associated with suspended or revoked licenses, stolen vehicles, AMBER Alerts, Missing Child Alerts, Missing College Student Bulletins, Be On Look Out, and Wanted or Missing Person broadcasts where a license plate is included.

CopLink is a crime analytics platform application maintained by the Massachusetts State Police Fusion Center that allows for the inter-agency storage and sharing of various documents and information.

EOPSS Data Cross Tracking System is a data collection and reporting system for criminal justice agencies and the Trial Court, to capture and report information on offenders and to report information relative to recidivism rates.

EOPSS National Incident Based Reporting System (NIBRS) Data Collection is a data collection and reporting system that criminal justice agencies submit incident and arrest data to in compliance with the Federal Bureau of Investigation (FBI) Uniform Crime Reporting (UCR) standards.

My License Office (MLO) is an application that allows for the retrieval and use of Massachusetts' driver's license photos for various reasons, including professional licenses and identification cards.

The **Victim Notification Registry (VNR)** is the electronic application that allows for the registration of crime victims to receive notification of an offender's release from incarceration and certain CORI information.

This agreement may be amended from time to time to update the listing of Public Safety Data Enterprise Applications within the scope of this agreement.

5.0 Duration of Agreement

This Agreement is in effect until modified or cancelled by EOPSS and/or DCJIS. Each Agency Head shall sign off on a copy of this Agreement as a condition of access to the systems and networks operated, maintained, or managed by the EOPSS and/or DCJIS. In addition, each Agency Head will sign off on a copy of the Companion System Agreement for each system for which such an agreement exists. An original, signed copy of this Agreement, along with original, signed copies of any Companion System Agreements, will be kept on file at the DCJIS. The Agency Head shall maintain a copy of the signed agreements. Facsimile and electronic signatures are acceptable as originals.

The Agency Head also agrees to execute a new Global Justice and Public Safety User Agreement and all relevant Companion System Agreements in accordance with 803 CMR 7.06 whenever there are changes to the Agency Head, the CJIS Representative, the backup CJIS Representative, or the CJIS Technical Representative. The new Agreement(s) is/are to be executed within ten (10) business days of the effective date of the change(s) necessitating a new Agreement(s). Original, signed copies of the newly executed Agreement(s) will be forwarded to the DCJIS within ten (10) days of execution.

6.0 Definitions

Authorized User
A sworn or non-sworn justice or public safety employee, contractor, intern, volunteer, or IT support staff member who has been authorized by his/her agency head to access any software application, system, network, or CJI operated, maintained, or managed by the DCJIS.

Companion System Agreement
An addendum or "rider" to this Agreement. Each Companion System Agreement establishes rules and protocols for contributing CJI to, or accessing, using, or disseminating CJI from, a specific system or database operated, maintained, or managed by the DCIJS.

Criminal Intelligence System
A system that stores detailed intelligence or investigative information on the suspected criminal activities of subjects and/or which stores only information designed to identify individuals or organizations that are the subject of an inquiry or analysis.

Criminal Justice Information (CJI)
CJI is defined as all data obtained from or through the CJIS or companion public safety data enterprise application necessary for law enforcement agencies to perform their missions. CJI includes, but is not limited to, biometric, identity history, biographic, property, and case/incident history data.

Criminal Justice Information System (CJIS) Representative
The CJIS Representative serves as the primary agency point of contact for the DCJIS. Responsibilities include ensuring that all DCJIS system usage and security policies and procedures are being followed by the agency, training all agency personnel who access any system or network operated, maintained, or managed by the DCJIS or who use the CJI obtained from or through those systems and networks, and attending all DCJIS- sponsored meetings, seminars, and conferences.

Criminal Justice Information System (CJIS) Backup Representative
The Backup CJIS Representative shall be the DCJIS' secondary point of contact for the agency. The Backup CJIS Representative shall assume all of the duties and responsibilities of the CJIS Representative should the CJIS Rep representative be unable to perform those duties and responsibilities for any reason.

Criminal Justice Information System (CJIS) Technical Representative
The CJIS Technical Representative serves as the primary agency point of contact for the DCJIS on all technology-related matters. The Technical Representative's main responsibility is to ensure that the agency meets the requirements of the FBI CJIS Security Policy. The CJIS Technical Representative may also serve as either the CJIS Representative or the Backup CJIS Representative.

Criminal Justice Information System (CJIS) User-Access Model
A single-identity management model used to authenticate users of the software applications, systems, and networks operated, maintained, or managed by the DCJIS.

Public Safety Data Enterprise Application
A software application which criminal justice and public safety agencies use to contribute CJI to, or to access CJI from, databases or systems maintained by or accessed through the DCJIS.

Non-Contributing Agency
An agency that may access CJI from, but which does not contribute CJI to, a database or system operated, maintained, or managed by the EOPSS or DCJIS.

Source Agency
The agency that originally recorded and contributed data to a database or system operated, maintained, or managed by EOPSS or DCJIS.

7.0 Transaction Logs

An audit log of all transactions made by CJIS user agencies is maintained by the DCJIS and EOPSS for systems maintained by EOPSS or DCJIS. This log records the identity of the individual user and agency accessing the system, the date and time of access, and the data entered into, or retrieved from, any database or system operated, maintained, or managed by the EOPSS or DCJIS.
An Agency Head may request a report of all transactions initiated by the users of his/her agency. All report requests must be submitted in writing to the DCJIS.

The DCJIS CSO, at his/her discretion, may, at any time, authorize additional audits of all databases and systems operated, maintained, or managed by the EOPSS or DCJI S.

8.0 Audits of CJI Users

The DCJIS will conduct audits of all agencies, both criminal justice/public safety and non-criminal justice, accessing or using the CJI stored within, or obtained through, the databases, systems, and networks operated, maintained, or managed by the DCJIS. The purpose of these audits is to ensure the integrity and security of the CJI, applications, and systems, to investigate potential inappropriate use of these resources, and to identify potential training needs. Each CJIS user agencies will be audited at least on a triennial basis (once every 3 years).

9.0 Public Safety CJI, System, and Network Usage Restrictions

Use of any CJI obtained from or through an application, database, system, or network operated, maintained, or managed by the EOPSS or DCJIS is limited to authorized criminal justice purposes within the scope of a user's employment and official duties.

EOPSS and DCJIS resources may not be used for personal gain or for personal use, or to assist another individual or entity that is not authorized to access, use, or receive CJI from these resources. Criminal intelligence systems may also be subject to 28 CFR Part 23. Where the provisions of this Agreement or its addenda conflict with 28 CFR Part 23, 28 CFR Part 23 shall supersede this Agreement and its addenda.

10.0 Misuse

An Agency Head is responsible for investigating all alleged incidents or allegations of misuse of any CJI or database, system, or network operated, maintained, or managed by EOPSS or DCJIS. If an Agency Head determines that someone within his/ her agency has misused any of these resources, he/she must, within 10 business days, notify the DCJIS CSO in writing of the circumstances surrounding the misuse, of the actions taken, or to be taken, to address and correct the misuse, and of the policy(ies) and procedures to be implemented to prevent future misuse. The DCJIS CSO may suspend or revoke access to any or all databases or systems operated, maintained, or managed by the DCJIS for the individual(s) involved in the misuse.

Misuse of any EOPSS or DCJIS provided CJI or resource may result in individual loss of access to the resources, agency loss of access to the resources, and/or state and federal civil and criminal penalties, if applicable. Users are also subject to the rules and regulations of their respective agency.

11.0 Access to EOPSS and DCJIS Resources

Sworn and non-sworn justice and public safety employees, as well as the employees of non-criminal justice agencies, may be granted access to one or more DCJIS applications, systems, and networks as authorized by the Agency head.

Each individual accessing an EOPSS or DCJIS resource will be assigned a unique user identifier (User ID) and initial password. The individual will be required to change his/her password when logging into a resource for the first time. When possible, the same User ID and Password will enable a user to access multiple EOPSS and DCJIS resources. However, some applications may require a separate log in and/or a different User ID and Password.

All passwords used to access an EOPSS or DCJIS resource will meet the DCJIS and FBI security requirements in effect at the time the password is created/changed.

Authorized users shall not share their passwords and user identifications with any other individual. Each authorized user shall be responsible for all transactions conducted with his or her user identification and password.

Agencies are responsible for notifying the EOPSS or DCJIS, in writing, when a user is no longer authorized to access and EOPS or DCJIS resource. EOPSS or DCJIS will terminate or suspend user access depending on the user's status within his/her respective agency.

User IDs and passwords shall be reviewed by each agency on an annual basis. The Agency Head and agency CJIS Representative shall be responsible for this review. The purpose of this review is to confirm the continued authorization of all individuals accessing DCJIS resources. The Agency Head and CJIS Representative shall annually certify the accuracy of his/her agency's authorized user list to the DCJIS CSO.

12.0 Ownership of CJI Contained Within EOPSS or DCJIS Databases and Systems

The Source Agency will maintain ownership of, and responsibility for, the CJI it enters or modifies within any database or system operated, maintained, or managed by the EOPSS or DCJIS.

The Source Agency will exercise due diligence to ensure that the CJI it enters is current, complete, and accurate. Each Source Agency is also responsible for ensuring that the CJI it contributes is in compliance with all federal, state, and local laws.

User agencies shall communicate any errors found in CJI contained in any database or system operated, maintained, or managed by the DCJIS to the Source agency for that CJI as well as to the EOPSS or DCJIS.

13.0 Dissemination of CJI

CJI contained within, or obtained through, any database, system, or network operated, maintained, or managed by the EOPSS or DCJIS shall only be disseminated to other authorized agencies and individuals. In addition, the CJI obtained within, or obtained through, any DCJIS resource shall only be used for authorized criminal justice purposes.

14.0 Public Records

Records maintained within the databases and systems operated, maintained, or managed by the EOPSS or DCJIS are subject to the Massachusetts Public Records Law as defined in M.G.L. c. 4, s. 7(26).

All responses to public record requests for information contained in an EOPSS or DCJIS resource shall be referred to the Agency that contributed the relevant information for its response as the custodian of the record(s).

The EOPSS or DCJIS CSO may respond to a public records request for statistical data drawn from an EOPSS or DCJIS resource.

15.0 Data Submission and Retention Policy

Source Agencies shall contribute data to each EOPSS or DCJIS database or system pursuant to the schedule established in the Companion System Agreement for that database or system, if applicable. Companion System Agreements are attached to this Agreement as Addenda.

Data maintained in an EOPSS or DCJIS database(s) and system(s) shall be retained pursuant to the schedule established in the Companion System Agreement for that respective system, if applicable.

16.0 Data Submission Standards

For each system that requires the contribution of data by Source Agencies, those Agencies shall submit at least the minimum set of data as established in the guidelines or any Companion System Agreement if required, for the respective subject application.

17.0 Designation of an Agency Representatives

CJIS Representative:
Each agency accessing or using CJI obtained from or through the systems and networks operated, maintained, or managed by the EOPSS or DCJIS shall appoint a CJIS Representative. The CJIS Representative serves as the primary agency point of contact for the EOPSS and DCJIS. Responsibilities include ensuring that all EOPSS and DCJIS system usage and security policies and procedures are being followed by the agency, training all agency personnel who access any system or network operated, maintained, or managed by the EOPSS or DCJIS or who use the CJI obtained from or through those systems and networks, and attending all EOPSS or DCJIS- sponsored meetings, trainings, seminars, and conferences.

Backup CJIS Representative*:*
Each agency that accesses or uses CJI obtained from or through the syst ems or networks operated, maintained, or managed by the DCJIS shall also appoint a Backup CJIS Representative. The Backup CJIS Representative shall be the EOPSS and DCJIS' secondary point of contact for the agency. In addition, the Backup CJIS Representative shall assume all of the duties and responsibilities of the CJIS Representative should the CJIS Representative be unable to perform those duties and responsibilities for any reason.

CJIS Technical Representative:
Each agency accessing or using CJI obtained from or through the systems and networks operated, maintained, or managed by the DCJIS shall appoint a CJIS Technical Representative. The CJIS Technical Representative serves as the primary agency point of contact for the DCJIS on all technology-related matters. The Technical Representative's main responsibility is to ensure that the agency meets the requirements of the FBI CJIS Security Policy. The CJIS Technical Representative may also serve as either the CJIS Representative or the Backup CJIS Representative.

18.0 Technical Support

The Executive Office of Public Safety and Security (EOPSS) Office of Technology and Information Services (OTIS) shall provide technical support services for all applications, databases, systems, and networks, operated, maintained, or managed by the EOPSS or DCJIS.

19.0 Internal Agency Policies

Each agency obtaining CJI either directly from, or through, an application, database, system, or network operated, maintained, or managed by the EOPSS or DCJIS shall draft

and adopt internal policies to inform and ensure that agency authorized users have read and agree to comply with the provisions of this Agreement and its Addenda .

20.0 Termination of Access

An agency may request termination of its access to one or more EOPSS or DCJIS resources by providing a written request to the DCJIS CSO.
The DCJIS CSO may also terminate access to a DCJIS resource pursuant to the terms of a Companion System Agreement.

21.0 Amendments

Any change in the provisions of this Agreement or in the provisions of a Companion System Agreement shall be incorporated by a written amendment approved by the EOPSS and DCJIS CSO.

22.0 Global Justice and Public Safety User Agreement Signoff

By signing this Agreement, the Agency Head acknowledges he/ she has read and understood its provisions and that he/she will comply with its terms and conditions.

MEMORANDUM OF UNDERSTANDING

USE OF A CRIMINAL JUSTICE AGENCY CRIMINAL JUSTICE INFORMATION SYSTEM (CJIS) ROUTER and SWITCH BY A NON-CRIMINAL JUSTICE AGENCY

Once executed by all parties, this MOU must remain on file with the Host, the User, and the DCJIS.

This Memorandum of Understanding (MOU) is entered into this _____day of_____, 20___ by and between _____, a criminal justice agency, hereafter referred to as the **Host,** and _____, a non-criminal justice agency, hereafter referred to as the **User**.

This MOU defines the terms, conditions, and mutual responsibilities of the parties hereto, for the purpose of enabling the User to access the Host's/User's internal Computer-Aided Dispatch (CAD) system and/or Records Management System (RMS) via mobile data terminals utilizing the Host's CJIS router and switch. This MOU incorporates by reference, and operates in conjunction with, the standard Massachusetts CJIS User Agreement, which includes agreement by the Host to adhere to the Federal Bureau of Investigation's (FBI's) Criminal Justice Information System (CJIS) Security Policy (hereinafter, the CSP). It is the Host's responsibility to ensure that its CJIS User Agreement with the DCJIS is current and on file at the DCJIS Support Services Unit and with its Agency Head.

The User and Host agree:

a. To be bound by the conditions of this MOU and to notify each other and the DCJIS in the event that any of the conditions stated in this Agreement change in the future;
b. To execute a new MOU with the DCJIS once every two (2) years as long as the Host/User relationship continues;
c. To notify the DCJIS of pending termination immediately, as provided in the final paragraph of this MOU;
d. To develop and maintain a written agreement that includes a procedural statement that clearly identifies the responsibilities of each agency;
e. **That calls for service to the DCJIS must be made by the Host criminal justice agency;**
f. That a violation of this MOU shall be considered a violation of the CJIS User Agreement between the violating party(ies) and the DCJIS.

The Host understands that the use of the CJIS router and switch by a non-criminal justice agency is not standard protocol and that the DCJIS only agrees to this arrangement where such access is necessary to aid the User non-criminal justice agency in the performance of its official public safety duties.

The Host hereby agrees to only allow the User to utilize the CJIS router and switch to access User data systems in the performance of its public safety duties. Access to any CJIS or Criminal Offender Record Information (CORI) data systems is prohibited.

The Host hereby acknowledges an understanding of, and shall advise all its employees and user agency personnel of, the penalties relating to illegal actions with regard to criminal justice information, the Criminal Offender Record Information (CORI) Act as found in M.G.L. c. 6, § 167

et seq., the CJIS User Agreement, and the CSP.

The User agrees that the Host's CJIS router and switch will be used to access non-CJIS and/or non-CORI data only, which will aid in the performance of its official public safety duties, provided that the dissemination of such information would not be a violation of any laws or regulations of the United States or of the Commonwealth of Massachusetts.

Either the Host or the User may, upon thirty (30) days notice to the other party and to the DCJIS, in writing, cancel this MOU in its entirety. Upon determination that the Host or User has violated any law, rule, or regulation concerning criminal justice information or the use of the Host's CJIS router and/or switch, or violated the terms of this MOU, the Host or User, in cooperation with the DCJIS, reserves the right to terminate this MOU with or without notice. The DCJIS may terminate this MOU at any time and without notice.

MEMORANDUM OF UNDERSTANDING
CRIMINAL JUSTICE AGENCY
MOBILE DATA SHARING HOST/USER GUIDELINES

Once executed by all parties, this MOU must remain on file with the Host, the User, and the Department of Criminal Justice Information Services (DCJIS).

This Memorandum of Understanding (MOU) is entered into this _____day of_____, 20_____ by and between _____, a criminal justice agency hereafter referred to as the **Host,** and _____, a criminal justice agency hereafter referred to as the **User**.

This MOU is intended to define the terms, conditions, and mutual responsibilities of the parties hereto, for the purpose of enabling the User access, via the User's mobile data terminals, to the Massachusetts Criminal Justice Information System (CJIS), including access to Registry of Motor Vehicle (RMV) data and images, to FBI CJIS systems, including the National Crime Information Center (NCIC), and to the International Justice and Public Safety Network (Nlets), utilizing the Host's server, the Host's CJIS router, and other hardware and software necessary to operate wireless devices. This MOU incorporates by reference, and operates in conjunction with, the Massachusetts CJIS User Agreement and the FBI CJIS Security Policy. Both parties agree to adhere to all Massachusetts CJIS policies and to the policies of both the FBI and Nlets.

The User and Host agree:

g. To be bound by the conditions of this MOU and to notify each other and the DCJIS in the event that any of the conditions stated in this Agreement change in the future.
h. To execute this MOU with the DCJIS biennially as long as the Host/User relationship continues.
i. To notify the DCJIS of pending relationship termination immediately, as provided in the final paragraph of this MOU.
j. To develop and maintain a separate written agreement which includes procedures that clearly identifies the responsibilities of each agency when a mobile/wireless server is not functioning, and which department is responsible for managing the vendor response process. This agreement must detail the maintenance process and identify (1) who is responsible for contacting the DCJIS for service issues and (2) who is responsible for costs associated with the server and usage.
k. **That calls for service to the DCJIS must be made by the Host Agency;** and
l. That a violation of this MOU shall be considered a violation of the CJIS User Agreement between the violating party and the DCJIS.

The Host understands that the use of the Host's server by another criminal justice agency is not standard protocol and that the DCJIS only agrees to this arrangement where such access is necessary to aid the User criminal justice agency in the performance of the User's official criminal justice duties. The Host hereby agrees to:

d. Allow the User to utilize the Host's base system for access to any and all available information on the CJIS, RMV, FBI, and Nlets systems, via approved wireless devices, provided that the dissemination of such information would not be a violation of any laws or regulations of the United States or of the Commonwealth of Massachusetts.
e. Provide assistance in the furtherance of criminal justice information (CJI) processing and communications through record inquiry, message transmittals, or record entries in

keeping with all standards, and further agrees to limit access to such information to authorized employees of the User; and

f. Maintain an automated log of inquiries or transactions made by any of the User's wireless devices. The log must include the identification of the specific wireless device from which the inquiry was made, the operator of the device, the operator's department, and the date and time of the inquiry or transaction. Each log entry must be maintained by the Host for a minimum of one year and must be provided to the DCJIS and to the FBI upon request.

The User hereby acknowledges that it understands, and shall advise all its employees of, the penalties relating to unauthorized access to, or dissemination of CJI as defined in the Criminal Offender Record Information (CORI) Act (M.G.L. c. 6, § 167 et seq.), in 803 C.M.R. 2.00-9.00 et seq., in 28 CFR, in the CJIS User Agreement, and in the FBI CJIS Security Policy. The User agrees:

e. To abide by all laws of the United States and the Commonwealth of Massachusetts, as well as by the rules and regulations of the responsible administrative agencies, including the DCJIS as the FBI CJIS Systems Agency (CSA), and the FBI.
f. To abide by the standards and conditions of the CJIS User Agreement concerning the security, entry, collection, storage, verification, retrieval, access, and dissemination of CJI.
g. That the Host's system will be used for inquiries only; and
h. That all its personnel with access to wireless devices that will utilize the Host's base system have been trained, tested, and certified as required by the DCJIS and the FBI.

Either the Host or the User may, upon thirty days written notice to the other party and to the DCJIS, cancel this MOU in its entirety. Upon determination that the User has violated the terms of this MOU, the Host, in cooperation with the DCJIS, reserves the right to terminate this MOU with or without notice. The DCJIS may terminate this MOU at any time and without notice.

In witness thereof, the above-named parties have signed this document in full agreement on this _____day of_____, 20___.

MEMORANDUM OF UNDERSTANDING
CRIMINAL JUSTICE AGENCY
MOBILE DATA SHARING HOST/USER GUIDELINES

Once executed by all parties, this MOU must remain on file with the Host, the User, and the Department of Criminal Justice Information Services (DCJIS).

This Memorandum of Understanding (MOU) is entered into this _____day of_____, 20_____ by and between _____, a criminal justice agency hereafter referred to as the **Host,** and _____, a criminal justice agency hereafter referred to as the **User**.

This MOU is intended to define the terms, conditions, and mutual responsibilities of the parties hereto, for the purpose of enabling the User access, via the User's mobile data terminals, to the Massachusetts Criminal Justice Information System (CJIS), including access to Registry of Motor Vehicle (RMV) data and images, to FBI CJIS systems, including the National Crime Information Center (NCIC), and to the International Justice and Public Safety Network (Nlets), utilizing the Host's server, the Host's CJIS router, and other hardware and software necessary to operate wireless devices. This MOU incorporates by reference, and operates in conjunction with, the Massachusetts CJIS User Agreement and the FBI CJIS Security Policy. Both parties agree to adhere to all Massachusetts CJIS policies and to the policies of both the FBI and Nlets.

The User and Host agree:

m. To be bound by the conditions of this MOU and to notify each other and the DCJIS in the event that any of the conditions stated in this Agreement change in the future.
n. To execute this MOU with the DCJIS biennially as long as the Host/User relationship continues.
o. To notify the DCJIS of pending relationship termination immediately, as provided in the final paragraph of this MOU.
p. To develop and maintain a separate written agreement which includes procedures that clearly identifies the responsibilities of each agency when a mobile/wireless server is not functioning, and which department is responsible for managing the vendor response process. This agreement must detail the maintenance process and identify (1) who is responsible for contacting the DCJIS for service issues and (2) who is responsible for costs associated with the server and usage.

q. **That calls for service to the DCJIS must be made by the Host Agency;** and
r. That a violation of this MOU shall be considered a violation of the CJIS User Agreement between the violating party and the DCJIS.

The Host understands that the use of the Host's server by another criminal justice agency is not standard protocol and that the DCJIS only agrees to this arrangement where such access is necessary to aid the User criminal justice agency in the performance of the User's official criminal justice duties. The Host hereby agrees to:

g. Allow the User to utilize the Host's base system for access to any and all available information on the CJIS, RMV, FBI, and Nlets systems, via approved wireless devices, provided that the dissemination of such information would not be a violation of any laws or regulations of the United States or of the Commonwealth of Massachusetts.

h. Provide assistance in the furtherance of criminal justice information (CJI) processing and communications through record inquiry, message transmittals, or record entries in keeping with all standards, and further agrees to limit access to such information to authorized employees of the User; and
i. Maintain an automated log of inquiries or transactions made by any of the User's wireless devices. The log must include the identification of the specific wireless device from which the inquiry was made, the operator of the device, the operator's department, and the date and time of the inquiry or transaction. Each log entry must be maintained by the Host for a minimum of one year and must be provided to the DCJIS and to the FBI upon request.

The User hereby acknowledges that it understands, and shall advise all its employees of, the penalties relating to unauthorized access to, or dissemination of CJI as defined in the Criminal Offender Record Information (CORI) Act (M.G.L. c. 6, § 167 et seq.), in 803 C.M.R. 2.00-9.00 et seq., in 28 CFR, in the CJIS User Agreement, and in the FBI CJIS Security Policy. The User agrees:

i. To abide by all laws of the United States and the Commonwealth of Massachusetts, as well as by the rules and regulations of the responsible administrative agencies, including the DCJIS as the FBI CJIS Systems Agency (CSA), and the FBI.
j. To abide by the standards and conditions of the CJIS User Agreement concerning the security, entry, collection, storage, verification, retrieval, access, and dissemination of CJI.
k. That the Host's system will be used for inquiries only; and
l. That all its personnel with access to wireless devices that will utilize the Host's base system have been trained, tested, and certified as required by the DCJIS and the FBI.

Either the Host or the User may, upon thirty days written notice to the other party and to the DCJIS, cancel this MOU in its entirety. Upon determination that the User has violated the terms of this MOU, the Host, in cooperation with the DCJIS, reserves the right to terminate this MOU with or without notice. The DCJIS may terminate this MOU at any time and without notice.

MEMORANDUM OF UNDERSTANDING
NON-CRIMINAL JUSTICE AGENCY ACCESS TO A
CRIMINAL JUSTICE AGENCY RECORDS MANAGEMENT SYSTEM

Once executed by all parties, this MOU must remain on file with the Host, the User, and the Department of Criminal Justice Information Services (DCJIS).

This Memorandum of Understanding (MOU) is entered into this _____day of_____, 20_____ by and between _____, a criminal justice agency hereafter referred to as the **Host,** and _____, a non-criminal justice agency hereafter referred to as the **User**.

This MOU is intended to define the terms, conditions, and mutual responsibilities of the parties hereto, for the purpose of enabling the User to access the Host's internal Records Management Systems (RMS). . This MOU incorporates by reference, and operates in conjunction with, the Massachusetts Criminal Justice Information System (CJIS) User Agreement and the FBI CJIS Security Policy. It is the Host's responsibility to ensure that its CJIS User Agreement with the DCJIS is current and on file at the DCJIS.

The User and Host agree:

a. To be bound by the conditions of this MOU and to notify each other and the DCJIS in the event that any of the conditions stated in this Agreement change in the future.
b. To execute an MOU with the DCJIS biennially as long as the Host/User relationship continues.
c. To notify the DCJIS of pending relationship termination immediately, as provided in the final paragraph of this MOU.
d. To develop and maintain a separate written agreement which includes procedures that clearly identify the responsibilities of each agency.
e. **That calls for service to the DCJIS must be made by the Host Agency;** and
f. That a violation of this MOU shall be considered a violation of the CJIS User Agreement between the violating party and the DCJIS.

The Host understands that the use of the state CJIS router and switch by a non-criminal justice agency is not standard protocol and that the DCJIS only agrees to this arrangement where such access is necessary to aid the User agency in the performance of its official public safety duties. Therefore, the Host hereby agrees to only allow the User agency to utilize the state CJIS router and switch to access Host data systems in the performance of its public safety duties. Access to any CJIS, FBI, or Criminal Offender Record Information (CORI) data or systems is prohibited.

The Host hereby acknowledges that it understands and shall advise all its employees and User personnel of the penalties relating to unauthorized access to, or dissemination of, CJI as defined in the Criminal Offender Record Information (CORI) Act (M.G.L. c. 6, § 167 et seq.), in 803 C.M.R. 2.00-9.00 et seq., in 28 CFR, in the CJIS User Agreement, and in the FBI CJIS Security Policy.

The User agrees that the Host's CJIS router and switch will be used to access non-CJIS and/or non-CORI data only to aid in the performance of its official public safety duties, provided that the dissemination of such information would not be a violation of any laws or regulations of the United States or of the Commonwealth of Massachusetts.

Either the Host or the User may, upon thirty days written notice to the other party and to the DCJIS, cancel this MOU in its entirety. Upon determination that the User has violated the terms of this MOU, the Host, in cooperation with the DCJIS, reserves the right to terminate this MOU with or without notice. The DCJIS may terminate this MOU at any time and without notice.

In witness thereof, the above-named parties have signed this document in full agreement on this _____day of_____, 20___.

{PLACE ON AGENCY LETTERHEAD}

This agreement is entered into this _____ day of _____ 20___ by and between the _____, hereafter referred to as the Agency, and the _____, hereafter referred to as the User. This Agreement identifies the duties and responsibilities of both the Agency and the User.

Agency Responsibilities:

The Agency hereby agrees to provide the User with access to all CJIS, FBI CJIS, and Nlets data and services available to the Agency, subject to the limits, if any, indicated below, which will aid the User in the performance of its official law enforcement or criminal justice duties, so long as the provision of these services and information would not be a violation of State or Federal laws, regulations, and/or policies.

(Include this section ONLY if the Agency and User agree to the provision of limited services)

Services to be provided:

The Agency agrees to provide the following to the User:

- {List the specific services or data to be provided here}

The Agency agrees to provide assistance to the User as may be requested in the furtherance of criminal justice information processing and communications through record inquiry, message transmittals, and/or record entry and maintenance in keeping with all standards and policies, and further agrees to limit access to services and CJI to authorized employees of the User.

User Responsibilities:

The User agrees to abide by all laws of the United States, the Commonwealth of Massachusetts, and the rules, policies, and regulations of the responsible administrative agencies concerning the collection, storage, retrieval, and dissemination of criminal justice information (CJI). The User specifically agrees to follow the rules, policies, and operating standards contained within the CJIS User Agreement and the FBI CJIS Security Policy. The User agrees that the services and CJI provided to it under this agreement will only be requested and used for authorized criminal justice purposes.

The User further agrees that it will only disseminate CJI to other legally authorized law enforcement and criminal justice personnel, or to other legally authorized individuals and entities. The User will log all such disseminations in a Secondary Dissemination Log.

The User will ensure that all personnel authorized to access CJIS, FBI CJIS, and Nlets services and information pursuant to this agreement are required to review the CJIS User Agreement and the FBI CJIS Security Policy. The User will retain an acknowledgement from each such authorized individual in its files. In addition, the User will ensure that each authorized individual is trained, tested, and certified within 6 months of employment and then once every two years thereafter. The User will notify the Agency and the DCJIS, in writing, within 5 days of any hires, transfers, or terminations of personnel authorized to access CJI pursuant to this agreement.

The User hereby acknowledges understanding, and shall advise all its employees, of the penalties relating to improper or illegal access to, or use of, CJI, including Criminal Offender Record Information (CORI) and criminal history record information (CHRI).

Nothing in this agreement shall be construed so as to give authority to any person, agency, corporation, or other legal entity to invade the privacy of any individual, as defined by State and Federal law.

Either the Agency or the User may, upon thirty (30) days written notice to the other party, cancel this agreement in its entirety. Either the Agency or User, after consulting with the Department of Criminal Justice Information Services, reserves the right to terminate this agreement with or without notice upon determining that the other party has violated any law, rule, or regulation concerning access to, or use of, CJI or has otherwise violated the terms of this agreement.

IN WITNESS WHEREOF, the above-named parties have set their hand and seal this _____ day of _____ 20___, in full agreement with this **Management Control Agreement** document, and so designate by execution on the following appropriate lines.*

Pursuant to the CJIS Security Policy Version 5, Sections 3.2.2 and 5.1, it is agreed that with respect to administration of that portion of computer systems and network infrastructure interfacing directly or indirectly with the state network (Network Name) for the interstate exchange of criminal history/criminal justice information, the (Criminal Justice Agency) shall have the authority, via managed control, to set and enforce:

(1) Priorities.
(2) Standards for the selection, supervision, and termination of personnel.
(3) Policy governing operation of justice systems, computers, access devices, circuits, hubs, routers, firewalls, and any other components, including encryption, that comprise and support a telecommunications network and related criminal justice systems to include but not limited to criminal history record/criminal justice information, insofar as the equipment is used to process or transmit criminal justice systems information guaranteeing the priority, integrity, and availability of service needed by the criminal justice community.
(4) Restriction of unauthorized personnel from access or use of equipment accessing the State network.
(5) Compliance with all rules and regulations of the (Criminal Justice Agency) Policies and CJIS Security Policy in the operation of all information received.

USER: _____ AGENCY: _____

"Responsibility for management of security control shall remain with the criminal justice agency."

This agreement covers the overall supervision of all (Criminal Justice Agency) systems, applications, equipment, systems design, programming, and operational procedures associated with the development, implementation, and maintenance of any (Criminal Justice Agency) system to include NCIC Programs that may be subsequently designed and/or implemented within the (Criminal Justice Agency).

MASSACHUSETTS CJIS USER AGREEMENT

1. User Agreement Introduction

1.1 This User Agreement sets forth the mutual responsibilities of the Department of Criminal Justice Information Services (DCJIS) as the CJIS Systems Agency (CSA) for the Commonwealth of Massachusetts and each user agency of the CJIS as it relates to the operation, maintenance and security of the systems and services provided. Authority for this agreement is granted by 803, Code of Massachusetts Regulations (CMR), 7.05, in accordance with M.G.L c. 6, §§ 168, 174 and 175, and 28, Code of Federal Regulations (CFR), 20.1.

1.2 The department head of each user agency shall submit a new User Agreement to the CJIS Support Services (CSS) Unit bi-annually, or within 10 days upon the designation of a new CJIS representative, back-up representative, or appointment of a new agency head. Said User Agreement will be due on March 1st of the designated year to renew. The CSS Unit will send a message on or about January 31st bi-annually, and once a week thereafter, to all user agencies reminding them to renew their User Agreements.

2. General Introduction

2.1 **Department of Criminal Justice Information Services (DCJIS)** – As an Executive Office of Public Safety and Security agency, the Massachusetts Department of Criminal Justice Information Services (DJCIS) provides twenty-four hour support, seven days a week to local, state, and national public safety agencies. Our Criminal Justice Information Systems (CJIS) Division operates a secure public safety data center and network that provides the critical infrastructure that supports information sharing and interoperability for the Commonwealth's criminal justice and law enforcement communities.

2.2 **Criminal Justice Information System (CJIS)** – The CJIS is the computerized network, services and applications that offer law enforcement and criminal justice agencies within the state and across the nation secure access 24 hours per day 7 days a week to state and interstate criminal history record information, protective orders, missing and wanted person files, drivers' license and motor vehicle information, firearms licensing and gun sales transactions and other critical criminal justice information. The CJIS provides access to the Board of Probation (BOP), the FBI's National Crime Information Center (NCIC) and Interstate Identification Index (III), the International Justice and Public Safety Network (Nlets), the Massachusetts Warrant Management System (WMS), and the Automated Licensing and Registration System (ATLAS) maintained by the Registry of Motor Vehicles (RMV).

2.3 The DCJIS is the CJIS Systems Agency (CSA) for the Commonwealth of Massachusetts. In this capacity, the DCJIS is responsible to the FBI CJIS Division for ensuring that user agencies are provided with twenty-four (24) hour access to national criminal justice information files such as missing and wanted persons, criminal history, Integrated Automated Fingerprint Identification System (IAFIS) and the Convicted Sexual Offender Registry File (CSORF).

2.4 To fulfill this responsibility the CJIS Support Services (CSS) Unit of the DCJIS provides the following services to its users:

- Policy review of matters pertaining to Massachusetts Criminal Offender Record Information (CORI and BOP files), NCIC, Interstate Identification Index (III), Nlets, state and national warrant, protective orders convicted sexual offender files and other enterprise applications available via CJIS;

- Training and certification in the use of the CJIS enterprise application to include BOP, WMS, RMV, NCIC and Nlets and the Massachusetts Instant Record Check System (MIRCS) application;

- Quality Control – It is the responsibility of the CSS Unit to ensure each user agency adheres to the NCIC policies in regards to maintaining the accuracy and integrity of records in the CJIS and NCIC systems.

- Auditing – A compliance audit is conducted approximately every three years to verify that user agencies are adhering to CJIS and NCIC policies and regulations. The purpose of the CJIS audit is to ensure that records in the system are accurate, active and timely, ensure that training is conducted, security standards are met, and to verify that the proper documentation is maintained and available for DCJIS and FBI NCIC auditing purposes;

- Off-line searches – For investigative purposes, at the request of a criminal justice agency, the CSS Unit may conduct an off-line search of the CJIS to obtain data regarding a person, vehicle or article that has been the subject of a previous CJIS query(s). This data is used by the requesting agency to determine what specific person(s) or what specific CJIS workstation(s) has run a query on the person/article of interest. Requests may also be used to gather information on a specific CJIS user or CJIS workstation.

3. Responsibilities/Expectations of User Agencies

3.1 Agency Head – The agency head is responsible for local management of the CJIS within his or her jurisdiction. Moreover, it is the responsibility of the agency head to develop formal written procedures regarding the operational use and security of CJIS to ensure compliance with CJIS and NCIC policy and regulations.

The agency head must also appoint a CJIS Representative(s), backup CJIS Representative(s), and a CJIS Technical Contact(s). The CJIS Technical Contact (s) should also be able to act as a security point of contact. Each representative chosen should be in a position to make decisions related to CJIS in a timely manner. Such information shall be provided to the DCJIS on the enclosed form bi-annually upon the renewal of the User Agreement and at any time CJIS Representatives and/or Technical Contact have changed.

NOTE: The CJIS Representative may serve as the technical and/or security

points of contact. See Appendix B for a more detailed list of responsibilities.

3.2 CJIS Representative(s) – The CJIS Representative(s) shall act as a liaison to DCJIS to ensure the proper administration of the CJIS at the agency level. The responsibilities of the CJIS Representative include:

- Ensuring that training is available to all authorized CJIS users within six (6) months of employment and every two (2) years thereafter.
- Providing certificates of achievement for the successful completion of training and a passing score on the appropriate CJIS examination. (Note: the appropriate examination depends on the hours of operation of the user agency as well as the access necessary for individual agency personnel. See Job description of CJIS Representative).
- Ensuring that the validation process is completed and is submitted to the CSS Unit on or before each month's specified due date.
- Proper password maintenance as required by CJIS security policy, including the disabling of accounts for individuals who have been suspended, fired, retired, or have voluntarily terminated their own employment.
- Attendance at the biannual Regional Working Group meetings. If neither the CJIS Representative nor his/her backup are able to attend, the agency head may designate another agency employee to be present.
- Timely responses to communications from the DCJIS.
- Distribution of publications to agency personnel as directed by the

DCJIS. See Appendix C for a more detailed list of responsibilities.

3.3 Technical Contact(s) – The CJIS Technical Contact(s) shall act as a liaison to DCJIS to ensure the proper technical/security administration of the CJIS at the local level. The responsibilities of the CJIS Technical Contact include:

- Ensuring that all problems experienced by user agencies regarding the CJIS and all CJIS equipment shall be reported to the Executive Office of Technology Services and Security (EOTSS) directly at (617) 660-4620 for troubleshooting and further escalation if necessary.

See Appendix D for a more detailed list of responsibilities.

The following are the duties and policies to which user agencies must be aware and follow in the administration of the CJIS.

3.4 Auditing – It is the intention of the CJIS Support Services (CSS) Unit to audit your agency once every three years via a mail survey or an in-person interview. The purpose of this audit is to ensure compliance with all Massachusetts CJIS and NCIC policies. Not adhering with any CJIS/NCIC policy will result in a letter of non-compliance and a time-frame to rectify the issue. If the problem is not resolved, your agency may be subject to penalty decided upon by the CJIS Systems Officer. See CJIS Operating Manual and NCIC 2000 Operating Manual for more information.

3.5 Criminal Ten-Print Record Submission – See M.G.L. c. 263, § 1A, M.G.L. c. 94C, § 45. M.G.L.
c. 127, § 23, and M.G.L. c. 127, § 28.

3.6 Dissemination of Criminal Justice Information:

3.6.1 Maintenance of criminal offender record information in electronic format; accessibility via world wide web; eligibility for access to database; use and dissemination of criminal offender record information - See M.G.L. c. 6, § 172.

3.6.2 Department of Criminal Justice Information Services – See 803 CMR 2.00 *et. seq.*

3.6.3 Proper access to and use of Criminal History Record Information (CHRI) – See the FBI
CJIS Security Policy.

3.6.4 Housing Authority Access of Criminal Offender Record Information (CORI) – See 803 CMR 5.00.

3.6.5 Housing Authority Access to Interstate Records – See 803 CMR 5.00 and 42 U.S.C. § 1437(d).

3.7 Electronic Fingerprint Record Submission:

3.7.1 Equipment and Procedures – See the Massachusetts Electronic Fingerprint Transmission Specification (MEFTS) and the FBI Fingerprint Transmission Specification (EFTS).

3.7.2 Equipment Maintenance – The agency head is responsible to ensure that all Electronic Fingerprint Submission equipment is subject to an up-to-date maintenance agreement with a DCJIS approved vendor.

3.7.3 Maintenance-Service Protocol – Problems experienced with the electronic fingerprinting equipment should be reported to the State Identification Section (SIS) at 508.358.3170.

3.8 Equipment and Maintenance - It is the responsibility of the agency head to ensure that all equipment connected to the CJIS Network has been approved by the DCJIS. In addition, the agency head shall be responsible for sustaining a maintenance agreement with a DCJIS approved vendor for each router, and switch the agency possesses.

Please do not touch, replace, relocate or reconnect any CJIS equipment without the consent of the DCJIS. Notification of any desired relocation, exchange, or replacement of a CJIS switch, or router, or any other CJIS related equipment must be made in writing to the CJIS Support Services (CSS) Unit a minimum of fifteen (15) business days prior to the planned relocation, exchange, or replacement. Moreover, if a problem arises with any CJIS related equipment, please contact EOTSS at 617-660-4620 before adjusting any devices or settings.

3.8.1 Mobile/Wireless Access to CJIS – Mobile/Wireless access to the CJIS is available through DCJIS approved equipment, provided that the FBI – NCIC & CJIS security requirements are met. A transaction log of all queries and responses must be maintained for a minimum of two years by the host agency, and made readily available upon the request of the DCJIS. See FBI *CJIS Security Policy* and the DCJIS CJIS Information Security Policies.

3.9 Hit Confirmation – Any agency which receives a record(s) in response to a CJIS or NCIC inquiry must confirm the hit on any record(s) which appears to have been entered for the person or property inquired upon prior to taking any adverse action. See NCIC 2000 Operating Manual.

3.10 Incident Reporting – A security incident is violation or a potential violation of the confidentiality, integrity and/or the availability of state/FBI CJIS data. If such an incident should occur, the agency head shall submit a fax, on agency letterhead, to the attention of the Department of Criminal Justice Information Services (DCJIS) Commissioner, CJIS Systems Officer/Information Security Officer to (617) 884-4601 within forty-eight hours with the following information:

- Date & Location of incident
- Systems affected
- Method of detection & Nature of Incident
- Description of the incident & Actions taken/resolution
- Date & Contact information for the agency

3.11 Locate – NCIC policy requires any agency, except the agency that entered the record, that apprehends or locates an individual or property to place a locate message on the record following confirmation with the original agency that entered the record. When placing a locate on a wanted person record, it is important to note that a locate should not be placed on a record if no extradition is indicated or the locating agency is outside the extradition limits set forth in the record. **Please note this also includes WMS and NCIC records.** See the NCIC 2000 Operating Manual.

3.12 Logging – Massachusetts CJIS User Agreement, based upon NCIC policy, requires that an automated log of all NCIC and III transactions be maintained for a minimum of two years. See the FBI *CJIS Security Policy.*

3.13 Memorandum of Understanding (MOU) – Any agency which provides certain CJIS services to one or more criminal justice agencies must execute a MOU with each agency to which it offers services. This agreement shall be implemented by the agency heads and must describe the services to be provided, outline the responsibilities of each party involved and be forwarded to the CSS unit within fourteen (14) day of its execution. Situations where an MOU shall be executed include, but are not limited to the following:

- Agencies which provide CJIS services to any non-terminal criminal justice agencies; and
- Agencies which provide CJIS services to any non-criminal justice agency (i.e. housing authority); and
- Agencies which provide CJIS services to any non-twenty-four (24) hour criminal justice agencies; and
- Any agency that provides CJIS services to one or more wireless devices (MDT/MDC) via a shared-server environment to another criminal justice agency;
- Any agency that submits arrest fingerprint cards, either manually or electronically to the State Police Identification Section on behalf of another agency.

3.14 Quality Assurance – Appropriate and reasonable procedures must be in place to ensure that records in the CJIS and NCIC systems are accurate, complete and valid. See the NCIC 2000 Operating Manual.

3.15 Screening – Pre-employment background screening must be conducted on all personnel who have authorized access to CJIS and FBI systems or data. Fingerprint based background checks must be conducted prior to initial hire and at least once every five years thereafter. Furthermore, if any agency employee has cause to enter the criminal justice system, or has improperly accessed or disseminated any CJIS or FBI data, all CJIS privileges shall be revoked and/or suspended and notification must be made to the CJIS Systems Officer (CSO) immediately. See FBI *CJIS Security Policy*.

3.16 Security – It is the agency head's responsibility to ensure that any area containing CJIS equipment, materials, and/or criminal justice information is physically secure from unauthorized use, viewing, or dissemination by all agency and contracted personnel. See the FBI *CJIS Security Policy* and the DCJIS CJIS Information Security Policies.

3.17 Timeliness - Appropriate and reasonable procedures must be in place to ensure that records in the CJIS and NCIC systems are entered, modified, and canceled in a timely manner to ensure maximum system effectiveness. See the CJIS Operating Manual and NCIC 2000 Operating Manual.

3.18 Training- It is the responsibility of the agency head to ensure that CJIS users are trained, tested, and certified within six (6) months of employment and every two (2) years thereafter.

3.19 Validation – Validation obliges the entering user agency to confirm that the record is complete, accurate, and still outstanding or active. See the NCIC 2000 Operating Manual.

3.20 Use of the System – ***Use of the CJIS including all applications, databases, equipment and services is for OFFICIAL CRIMINAL JUSTICE PURPOSES ONLY IN THE PERFORMANCE OF CRIMINAL JUSTICE DUTIES AS DEFINED BY APPLICABLE STATE AND FEDERAL LAWS.***

CJIS User Agreement – Acknowledgement

Type or Print Agency Name: _____ Date: _____

As a terminal agency utilizing the CJIS and NCIC systems, we hereby certify that we have read the User Agreement and acknowledge the duties and responsibilities as outlined in this document, as well as those documents incorporated by reference. We acknowledge that these duties and responsibilities have been developed and approved by the DCJIS in order to ensure the security, reliability, confidentiality, completeness and accuracy of all records contained in, or obtained by means of the CJIS and NCIC systems. We further acknowledge that failure to comply with these duties and responsibilities will subject this agency to various sanctions as approved by the DCJIS. These sanctions may include the termination of CJIS services.

Definitions

Advanced Authentication – Additional security functionality, in advance of the typical user identification and authentication, such as virtual private networks, biometric system, public key infrastructure, smart cards and token based devices.

Agency – Any housing agency of the federal, state or local government or a political subdivision, administering a subsidized housing program, or an organization under contract with such a public agency to administer a subsidized housing program.

Asymmetric Encryption – is the same as public-key cryptography, i.e., a form of cryptography in which each user has a public key and a private key. Messages are sent encrypted with the receiver's public key, and the receiver decrypts them using the private key. Using this method, the private key never has to be revealed to anyone other than the user.

CJIS Representative - The point of contact between the CJIS Support Services (CSS) unit and the CJIS user agency. Please see section (4.2) for a detailed list of administrative responsibilities to be executed by the CJIS Representative.

CJIS Systems Agency (CSA) - A CJIS Systems Agency (CSA) is a criminal justice agency which has overall responsibility for the administration and usage of the FBI CJIS Division Programs within a state, district, territory, or foreign country. This includes any federal agency that meets the definition and provides services to other federal agencies and/or whose users reside in multiple states or territories. There will be no more than one CJIS Systems Agency per state, district, territory, or foreign country.

CJIS Systems Officer (CSO) - A CJIS Systems Officer for each CJIS Systems Agency shall be appointed by the head of their respective agency. The CSO and his/her agency will be responsible for monitoring system use, enforcing system discipline and security, and assuring that CJIS operating procedures are followed by all users as well as other related duties outlined by the user agreements with the FBI's CJIS Division.

Encryption – The process of obscuring information to make it unreadable without special knowledge in order to protect data from unauthorized individuals.

Hit - A record(s) obtained through a CJIS workstation in response to an NCIC or CJIS inquiry.

International Justice and Public Safety Network (Nlets) - An international, computer-based message switching system that links together state, local, and federal law enforcement and criminal justice agencies for the purpose of information exchange.

Interstate Identification Index System (III) - The cooperative federal-state system for the exchange of criminal history records, and includes the National Identification Index, the National

Fingerprint File, and, to the extent of their participation in such system, the criminal history record repositories of the states and the FBI.

Local Housing Authority (LHA) – A local housing authority or regional housing authority which was created pursuant to M.G.L. c. 121B and operates there under, including Housing and Community Development (HCD) or its designated agent, to the extent that HCD is acting as a local housing authority pursuant to M.G.L. c. 121B, § 26A.

Management Control - Each CJIS workstation must be under the management control of a criminal justice agency.

Management control is defined as the authority to set and enforce:

(1) Priorities;
(2) Standards for the selection, supervision, and termination of personnel;
(3) Policy governing the operation of the CJIS workstation; and
(4) Policy regarding the physical security of the workstation as well as the building housing said workstation.

Memorandum of Understanding (MOU) - An agreement between any terminal agency and other criminal justice agency that details the scope of the services to be provided to the non- terminal agency and specifies each agency's responsibilities as they pertain to all services provided. (i.e. the entering of a missing person record into the CJIS and NCIC Networks by a terminal agency for a non – terminal agency.) Please see section (4.4) for the administrative responsibilities regarding MOU's.

National Crime Information Center (NCIC) - The computerized information system, which includes telecommunications lines and any message switching facilities that are authorized by law, regulation, or policy approved by the Attorney General of the United States to link local, state, tribal, federal, foreign, and international criminal justice agencies for the purpose of exchanging NCIC related information. The NCIC includes, but is not limited to, information in the III System.

National Fingerprint File (NFF) - A database of fingerprints, or other uniquely personal identifying information, relating to an arrested or charged individual maintained by the FBI to provide positive identification of record subjects indexed in the III System.

Non-Secure Location - A criminal justice facility, an area, a room, a group of rooms, or a police vehicle that does not satisfy the criteria of a physically secure location.

Non-Terminal Agency - Any criminal justice agency which does not have direct access to the NCIC and CJIS networks. These agencies must execute a Memorandum of Understanding (MOU) with a terminal agency in order to ensure that important criminal justice data is entered, modified, and cancelled in the NCIC and CJIS systems. See (3.11) for more details.

Non-Twenty-Four Hour Criminal Justice Agency - Any criminal justice agency which has a CJIS workstation that enables a user to enter, modify and cancel records, but which may not have staff available twenty-four hours a day to respond to hit confirmation requests as required by NCIC standards.

Physically Secure Location - A criminal justice facility, an area, a room, a group of rooms, or a police vehicle that is/are subject to criminal justice agency management control/security addendum and which contain hardware, software, and/or firmware (e.g., information system servers, controlled interface equipment, associated peripherals or communications equipment, wire closets, patch panels, etc.) that provide access to the CJIS network. Physical security perimeters shall be defined by the CSO. Law enforcement sensitive facilities and restricted/controlled areas shall be prominently posted and separated from non-sensitive facilities and non-restricted/controlled areas by physical barriers that restrict unauthorized access. Every physical access point to sensitive facilities or restricted areas housing information systems that access, process, or display CJIS data shall be controlled/secured in a manner which is acceptable to the CSO during both working and non-working hours.

Primary Entry CJIS Workstation – A CJIS workstation located within a user agency that has entry capabilities twenty-four (24) hours a day, seven (7) days a week and is used to enter, modify or cancel a record. Those agencies that do not have entry capabilities twenty-four (24) hours a day, seven (7) days a week should have a MOU with a user agency possessing those entering capabilities.

Record - Criminal justice data entered into CJIS and NCIC through a CJIS workstation regarding missing persons, wanted persons, and stolen property is contained in an electronic file with a unique reference number. This file may be “pulled” at a later time to modify or cancel depending upon whether different information is obtained or the person or property is located.

Regional Working Groups (RWG) - A geographic separation of the Massachusetts CJIS user community by region (seven regions in total) in order to more easily conduct meetings in which CJIS application and network updates are given, trainings may be provided and discussion for system improvement is encouraged.

Related Agency Doctrine – A legal principle providing for the re-dissemination of FBI criminal history record information (CHRI) by an authorized recipient. Agencies that have commonality of purpose and (typically) congruent responsibility, authorized by federal statute or executive order, or state statute approved by the Attorney General of the United States pursuant to Public Law 92-544 can receive FBI CHRI and exchange information with each other for the authorized purpose originally requested.

Terminal Agency - Any criminal justice agency which has direct access to the NCIC and CJIS networks through a CJIS workstation that enables a user to enter, modify, and cancel records containing important criminal justice data.

Symmetric Cryptography – Messages are sent and received using the same key for encryption and decryption.

Virtual Private Networks (VPNs) - VPNs use security mechanisms to effectively create a private network across a shared (usually public) communications backbone connecting distributed elements or members of a single organization. The interconnecting communications backbone may consist of leased lines, dial-up service, packet and cell switched connection-oriented networks, and/or routed connectionless networks. VPNs are also

useful in restricting distribution among subsets of the organization at large.

Typically VPNs may be utilized to securely communicate between:

(a) Site-to-site infrastructure across a public communications backbone.
(b) Local Area Network (LAN)-to-LAN subnets operating across a network that services other entities outside the VPN community.
(c) Host-to-host workstations across a shared network or subnet.

Appendix B
CJIS User Agency Head Description of Responsibilities

The Department of Criminal Justice Information Services (DCJIS) requires that each Agency Head ensure the policies and procedures of the Massachusetts Criminal Justice Information System (CJIS) and National Crime Information Center (NCIC) Systems are upheld and the efficiency of the aforementioned systems is maintained within his or her jurisdiction. This may be accomplished through the monitoring and assurance of proper use of the CJIS/NCIC network in addition to appointing qualified and experienced professionals as the CJIS Representative, backup Representative and CJIS Technical Contact(s).

Listed below are the responsibilities of the Agency Head:

- Must develop formal written procedures regarding the operational use and security of CJIS to ensure compliance with CJIS and NCIC policy and regulations. Compliance will be measured by CJIS Support Services (CSS) Unit audits which will occur once every two years via a mail survey or an in-person interview.

- Ensure that all equipment connected to the CJIS Network has been approved by the DCJIS. In addition, the agency head shall be responsible for sustaining a maintenance agreement with a DCJIS approved vendor for each router, and switch the agency possesses.

- If any problems should occur with the above referenced CJIS equipment, you must contact the Executive Office of Technology Services and Security (EOTSS) immediately at (617) 660-4620.

- Ensure that pre-employment background screening is conducted on all personnel who have authorized access to CJIS and FBI systems and data ,and, further, that fingerprint based background checks are conducted on all personnel; at least once every five years. In addition, if any individual or administrator who accesses or uses CJIS and/or FBI data is convicted of a misdemeanor or felony the Agency Head must immediately notify the Commonwealth's CJIS Systems Officer in writing of the circumstances. Access for any individual who is convicted of a felony must be suspended immediately. Access for any individual convicted of a misdemeanor must be suspended until the CJIS systems officer makes a determination as to whether or not access should be reinstated. Any individual that improperly accesses or disseminates data or information from any CJIS or FBI system shall have their access privileges suspended or terminated. Continue to uphold that the CJIS/NCIC system should only be utilized for criminal justice purposes only. Use of the CJIS/NCIC systems, including the Registry of Motor Vehicles for non criminal justice purposes, including transactions conducted for public and private educational establishments, municipal agencies, town government officials, etc. is strictly prohibited and is punishable by a fine, suspension of services and/or incarceration.

- Maintain that any area containing CJIS equipment, materials, and/or criminal justice information is physically secure from unauthorized use, viewing, or dissemination by all non- authorized agency and contracted personnel. See the FBI *CJIS Security Policy* and the DCIJS CJIS Information Security Policies.

- Ensure that CJIS Users are trained, tested, and certified within six (6) months of employment and every two (2) years thereafter.

Appendix C

Criminal Justice Information System Representative Description of Responsibilities

The Department of Criminal Justice Information Services (DCJIS) requires that each Agency Head ensure that the individuals he or she appoints as a CJIS Representative, backup Representative and Technical Contact possess the qualifications and knowledge necessary to act as a liaison between the CJIS department and your agency. This is to ensure the policies and procedures of the Massachusetts Criminal Justice Information System (CJIS) and National Crime Information Center (NCIC) Systems are upheld and the efficiency of the aforementioned systems is maintained.

According to the requirements stated in the CJIS User Agreement, listed below are the responsibilities of the CJIS Representative and backup Representative:

- Ensure that training is available to all authorized CJIS users within six (6) months of employment and every two (2) years thereafter. Authorized CJIS users can be defined as individuals who require direct access to CJIS/NCIC systems to perform criminal justice related functions.

- After the completion of the required training each user must take the CJIS Policy and Security Awareness Test located on the nexTEST online CJIS exam website.

- Provide certificates of achievement for the successful completion of training and a passing score of seventy (70) or above on the appropriate examination.

- Ensure that the validation process is completed and submitted to the CJIS Support Services (CSS) Unit on or before each month’s specified due date.

- Proper password maintenance as required by CJIS security policy, including the disabling of accounts for individuals who have been suspended, fired, retired, or have voluntarily terminated their own employment.

- Attendance at the biannual Regional Working Group meeting. If neither the CJIS Representative nor his/her backup are able to attend, the agency head may designate another agency employee to be present.

- Timely responses to communications from the DCJIS.

- Distribution of publications to agency personnel as directed by the DCJIS.

Appendix D

Criminal Justice Information System Technical / Security Contact Description of Responsibilities

The Department of Criminal Justice Information Services (DCJIS) requires that each Agency Head ensure that the individuals he or she appoints as a CJIS Representative, backup Representative and Technical Contact possess the qualifications and knowledge necessary to act as a liaison between the CJIS department and your agency. This is to ensure the policies and procedures of the Massachusetts Criminal Justice Information System (CJIS) and National Crime Information Center (NCIC) Systems are upheld and the efficiency of the aforementioned systems is maintained.

According to the requirements stated in the CJIS User Agreement, listed below are the responsibilities of the CJIS Technical Contact(s):

- The CJIS Technical/Security Contact(s) is responsible to ensure the proper technical/security administration of the CJIS at the local level.

- Ensure that due to the highly sensitive nature of the CJIS Network, no individual shall touch, replace, hinder or reconnect any CJIS equipment without the consent of DCJIS. Furthermore, you are required to provide notification of any desired relocation, exchange, or replacement of a CJIS switch, router or any other CJIS related equipment in writing to CJIS Support Services (CSS) Unit a minimum of fifteen (15) business days prior to the planned relocation, exchange, or replacement.

- Make certain that all problems experienced by user agencies regarding the CJIS and all CJIS equipment shall be reported to the Executive Office of Technology Services and Security (EOTSS) directly at (617) 660-4620 for troubleshooting and further escalation if necessary.

- For any mobile/wireless devices accessing the CJIS network you must ensure that transaction logs are maintained for a minimum of two (2) years and are readily available at the request of DCJIS or any other agency head.

- In the event a security incident, which is a violation or a potential violation of the confidentiality, integrity and/or the availability of state/FBI CJIS data occurs, you must ensure that the Agency Head submit a fax, on agency letterhead, to the attention of the Department of Criminal Justice Information Services (DCJIS) Commissioner, CJIS Systems Officer to (617) 884-4601 within forty-eight (48) hours with the following information:
  - Date & location of incident
  - System affected
  - Method of detection & nature of incident
  - Description of the incident & actions taken/resolution
  - Date & contact information for the agency

i2 Product Quotation

Jul 15, 2022

Dear Elly Smith,

Thank you for your inquiry about i2 offerings.

All prices herein are suggested prices only and are subject to change at i2's sole discretion. Products listed herein are subject to withdrawal or modification by i2 at any time at i2's sole discretion. Final coverage dates for new license, Software Subscription and Support reinstatement, and Software Subscription and Support renewal part numbers will be based upon i2's acceptance of the order, and as specified in the applicable agreements, irrespective of the dates which may appear in this quote.

This quotation is valid from Jul 15, 2022 and will expire on Sep 30, 2022.

Your order will be governed by and is subject to the terms of the agreement, as applicable, against which this transaction will be placed.

Data Processing Protection – i2's Data Processing Addendum (DPA) and the DPA Exhibit at www.i2group.com/legal apply to Client personal data, if and to the extent: i) the European General Data Protection Regulation (EU/2016/679); and ii) other data protection laws identified i2 data processing link apply.
If you need assistance with placing your order or wish to discuss your quote, please contact the i2 contact noted below.

Yours sincerely,
John Wintrow

NOTES 35

ABOUT THIS MANUAL

This document assumes that the reader has familiarity not only with the majority of the **Airship** software products but also with computer networks and operating procedures.

Further, this document assumes that the reader has previously installed a functional **EMS** and is an administrator on that **EMS** (with authority to make changes to that system and the network).

Version Requirements

As of this manual's publication, the following versions are available for **EMS**, **Airship Server** and **Nexus**:

- EMS 7.2.0
- Airship Server 7.2.0
- Nexus Client 7.2.0

Version Updates

- UI Redesign
- Improve timezone support for all assets
- Added additional columns for Operating System, Serial Number information for VMS assets
- Added ability to edit NVR type VMS assets (Managed Setup Tool)
- NVP export process are now logged as events in EMS
- Added licensing features for EDS portal
- Disable option to enable SMS 2FA if Twilio service is not configured
- Hide Login with Windows button if SSO is not configured
- Update required Java runtime from Java8 to Java11

The copyrights and intellectual property rights associated with this publication and its contents are protected by international copyright laws, with all rights reserved. Neither this manual nor any of the material contained herein, may be rewritten, reproduced or shown to the public without first receiving the written consent of **Airship**.

Disclaimer

The information in this document has been prepared by **Airship**'s current system policies and procedures and is subject to change without notice. **Airship** reserves the right to revise or amend this publication and make changes periodically, without any obligation to notify any person of such amendments or revisions.

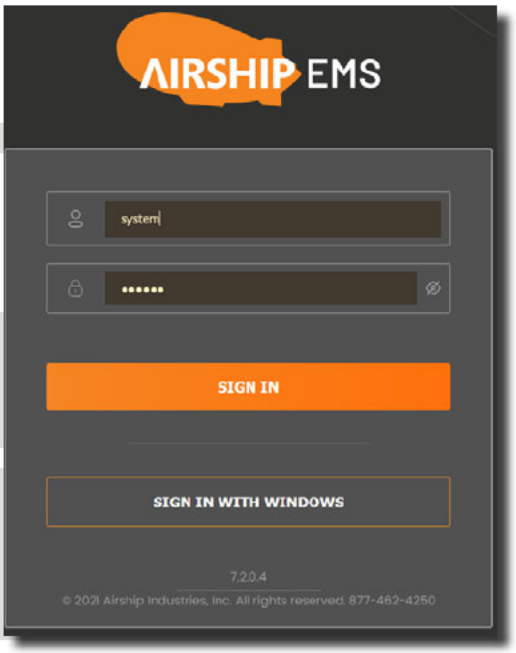
Airship makes no representations or warranties that the hardware will work properly in all environments and applications, and specifically disclaims any implied or express warranties with regard to the quality, performance, merchantability, or fitness for a particular purpose.

In no event shall the copyright owner or contributors to this manual be liable for any direct, indirect, incidental, special, exemplary, or consequential damages (including but not limited to procurement of substitute goods or services, loss of use, data, or profits, or business opportunity), however caused and arising out of any theory of recovery, arising out of the use of this software.

OVERVIEW

The **Enterprise Management System (EMS)** is a centralized management server that is used to map a set of **Airship Servers** and **Nexus Clients** into a central database for easy administration.

This manual outlines all the available options within EMS to a System Administrator. This includes creating Users, User Groups, custom Permission Levels for users, adding IP Cameras and other devices all through a web interface that is accessible from anywhere on the LAN.



This manual loosely follows standard workflow procedures dictated by navigating down through menu options.

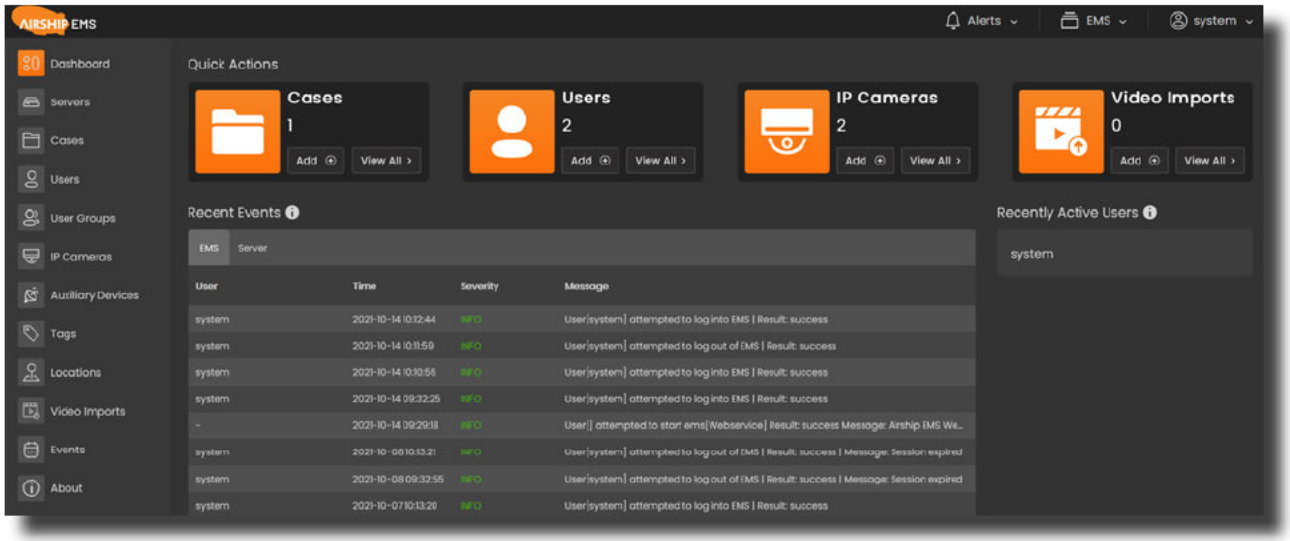
New Features

In the interest of improving ease-of-use, users upgrading from a prior version of **EMS** will notice the new wizard-style interface. Most workflow remains the same and any differences are covered within this manual.

Log In to EMS

Begin by accessing **EMS**. Open a web browser (Chrome or Firefox), and use the IP (or "localhost") and port followed by "/ems" as in the example below. The default port for **EMS** is 8080.

> ***EXAMPLE***: 127.0.0.1:8080/ems OR localhost:8080/ems



The default username is “system”, and the password is “system”. Click **Submit** to log in to the **EMS**.

> **IMPORTANT:** To use Windows credentials to log in to **EMS**, click the "Sign In with Windows" button. This feature is called Single Sign-On(SSO), and requires some setup before it can be used. For information on setup, see **Airship’s *‘SSO Quick Reference Guide’***.

> **NOTE**: Once logged in, if there are sections missing from your version of **EMS**, it is likely the proper license has not been imported. Call **Airship** Support to properly license **EMS**, or if you have a license already generated by Airship, upload into EMS by going to **About** > **License Info** and click **Add License**.

Dashboard

Access the most common action items in **EMS** by visiting the system’s Dashboard as shown in the screenshot below. To return to the Dashboard from any page in **EMS**, click Dashboard at the upper left.

©2021 Airship Industries

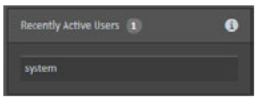
Quick Actions

The most common actions are located on the main dashboard for quick access. Users can add or view all cases, users, or IP cameras by clicking the links near the top of the dashboard.

Cases: Displays the number of cases created. See "Cases" on page 16.

Users: Lists the current number of Users created. See "Users" on page 8.

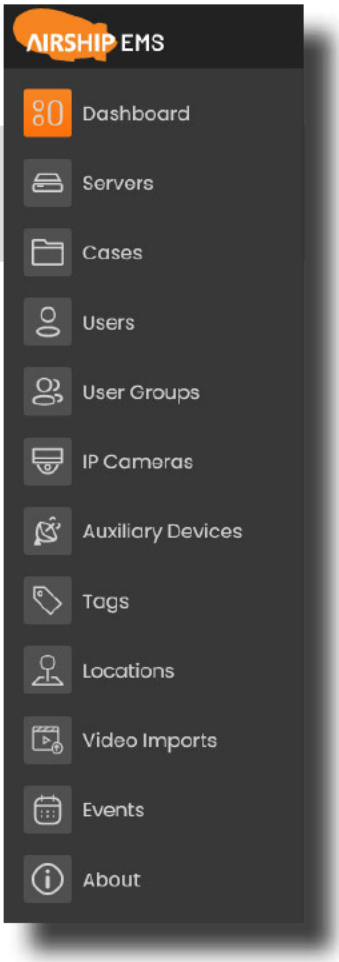
IP Cameras: Displays the number of Cameras connected to **EMS**. See "IP Cameras" on page 12.



Video Imports: Lists the number of Videos imported. See "Video Imports" on page 21.

Event Log

Below Quick Actions, an Event Log displays the most recent events triggered with **EMS**, **Failover**, or **Airship Server**.



Recently Active Users

Lists users that have logged in at least once within the past three (3) days.

Menu Options

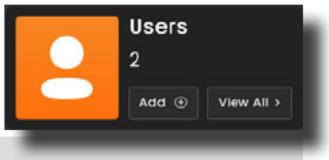
After logging in, the **EMS** has a list of menu options under **Dashboard**. Most capabilities of **EMS** are accessible with only a click or two from the left-hand navigation menu (pictured on right).

📖 **NOTE:** Administrators have additional access to advanced features by clicking the username located at the top right of the EMS window and selecting "Advanced". See "System Administrator Advanced Options" on page 23 for more information.

USERS

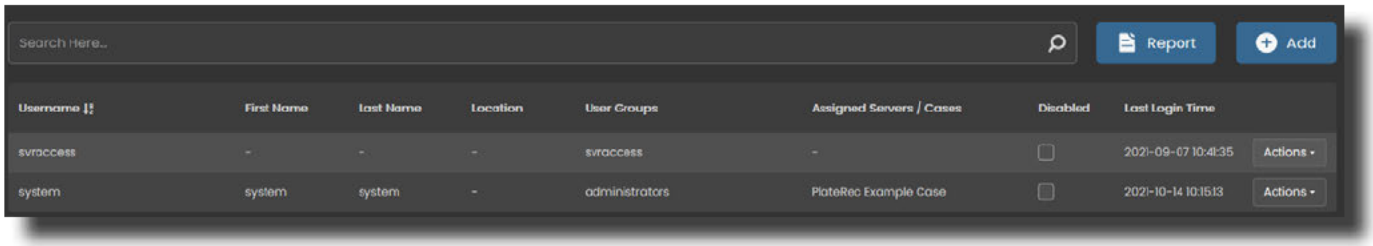
Users logged into **EMS** have varied levels of access depending on the User Group assigned to their username. A ***System Administrator*** may create new users and assign user groups.

- Every user created must belong to at least one user group or they may belong to multiple groups.
- Users can be assigned to the built-in user groups or you can create a new user group and assign users.



The built-in User Groups levels are as follows:

- **System Administrators** are able to make system-wide changes such as create users, IP devices, locations, tags, and more, which they can assign to power users and operators. Admins have access to additional advanced features in **EMS** (covered in "System Administrator Advanced Options" on page 23).
- **Power Users** are able to make some changes within **EMS** to the location to which they are assigned, such as create users and other assets.
- **Operators** (end-users) only use **Nexus** or **Video Portal** to view the cases, servers and the cameras to which they have access. These users do not have access to making changes within **EMS**.



Further custom Permission Levels may be assigned per group and managed by the ***System Administrator***.

Users List

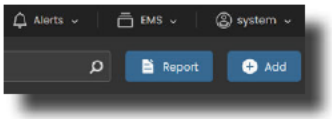
To access the list of users, either click **View All** from under the "Users" frame (pictured) located on the **Dashboard**, or click **Users** from the left-hand navigational menu. From this page, System Administrators may add, edit and delete users.

📖 **HELPFUL HINTS:** Click any one of the column headings to sort the order of the User's list.

Username: Displays the login name of the user.

First Name: Displays the first name of the user.

Last Name: Displays the last name of the user.



Location: Displays the user's system-related location.

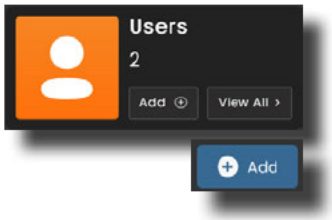
Disabled: Check this box to disable the user.

Actions:

- **Edit:** Click to modify the user information.
- **Delete:** Click to remove a user from the list. User will be prompted to confirm before deleting.

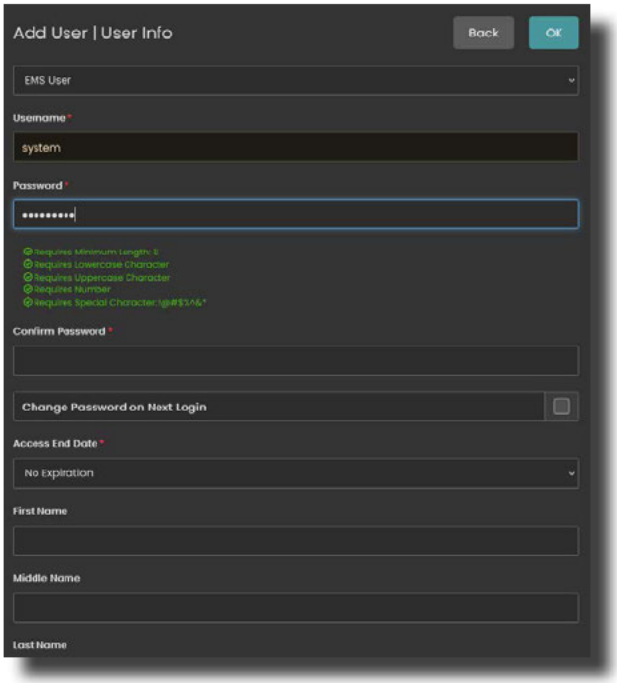
A full list of users can be generated by clicking the **Report** button in the top right corner.

A drop-down menu appears to either Export a list of users as a .csv file or View the Report of the selected users.



©2021 Airship Industries

Create a New User



Adding a user is as simple as creating a username/password and assiging a User Group to the new user. Additional fields may provide further detail if desired.

1. Click "Users" from the left-hand navigational menu; or click "Add" from the Dashboard located under the orange "Users" frame (pictured) and skip to step 3.

2. Click "Add" from the Users list.
3. Click "User Info".
4. With the "Add User | User Info" page open, enter or select the appropriate information.

📖 **IMPORTANT**: All the boxes with a red asterisk (*) are mandatory.

***Username:** Enter a login name for the user.

***Password:** Enter the password for the user to login.

📖 Password requires eight characters at a minimum, and at least one number, uppercase, lowercase, and a special character.

***Confirm Password:** Enter the password again to confirm it.

***Change Password on Next Log In:** Check this box to prompt the user to change their password upon their next login. User cannot log in to **EMS** until the password is changed.

***Access End Date:** By default, there is no expiration, to set a date for disabling the user, select a timeframe from the drop-down, or enter a custom range.

First, Middle, Last Name: Enter the name of the user in each field (not required).

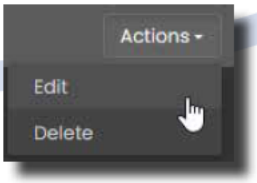
Location: Select a location from the list to add the user to a location.

📖 **HELPFUL HINTS:** When a Power User adds a new user, the Location list shows only that location to which the Power User belongs.

Description: If desired, a description of the user may be entered for future reference.

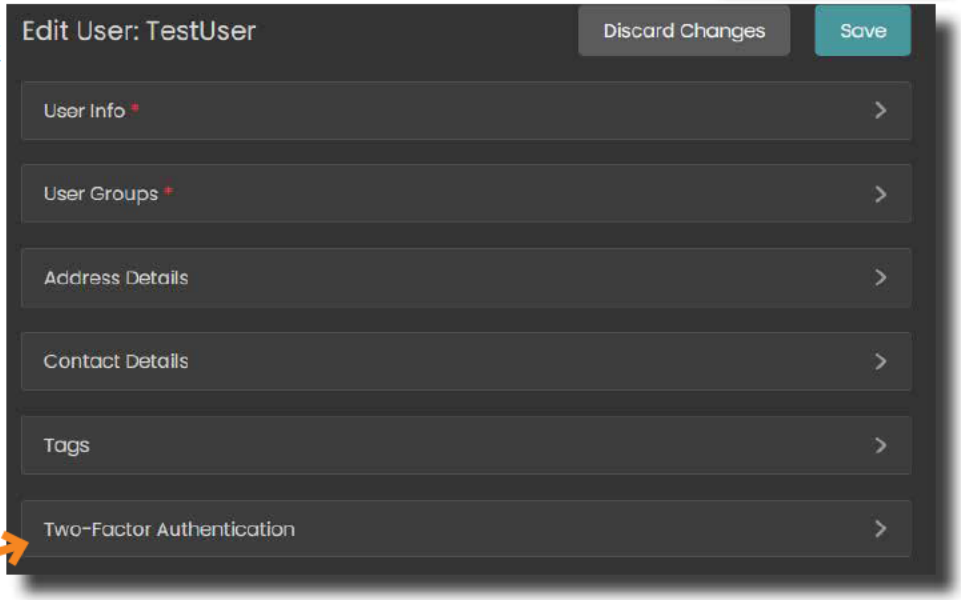
Service User: Service users are exempt from auto-lockout after login failures, expiration dates, and are not forced to reset their password if it surpasses the password age limit set. Check this box to set the user as a Service User.

Receive Email Notifications: Check this box for the selected user to receive notification of alarm events.



📖 **NOTE**: Set the email address for the User in the "Contact Details" section. Nexus Mobile notifications may be set via the App.

5. When details have been entered, choose **OK** or **Back** to advance.
6. Next, assign a User Group by clicking one of the available options and click **OK**. For adding new groups, please read the steps required found in the section below, User Groups.



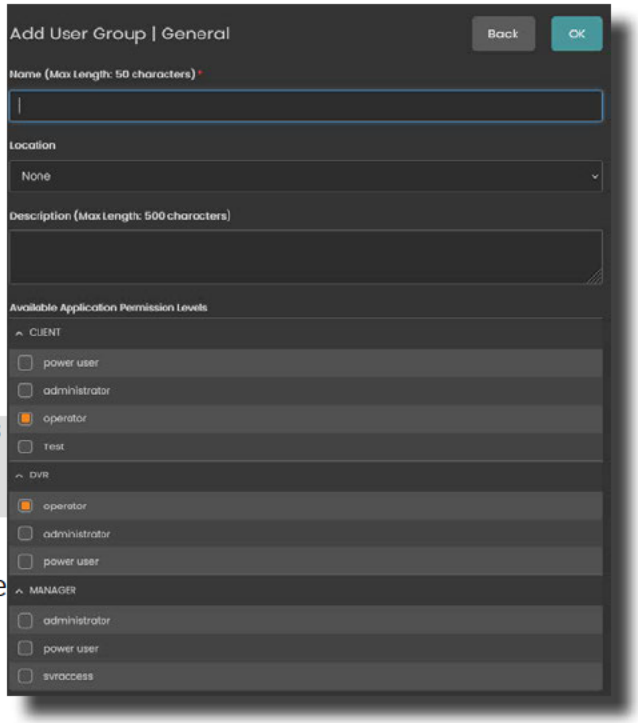
Edit a User

To edit an existing user:

1. From the Users List, select which user to edit.
2. In the **Actions** column, click **Edit** from the drop-down to open the **Edit User** page (similar to the **Add User** page).

3. Choose to edit User Info, User Groups, Address Details, Contact Details, Tags, or enable Two-Factor authentication for the selected user.

📖 **Two-Factor Authentication**: To enable Two-factor Authentication, set the Two-Factor Authentication Type in the Advanced Settings menu under General. After setup and upon next login, the user will be required to verify two-factor authentication with either a QR code reader app (such as Google Authenticator) and a 6-digit code, by Email only, or by Email and SMS. Non-admin Users may turn on/off 2FA, but only for their own account.



📖 **NOTE**: Adding users with LDAP authentication will require the System Administrator to navigate to "System Administrator Advanced Options" on page 23.

©2021 Airship Industries

User Groups

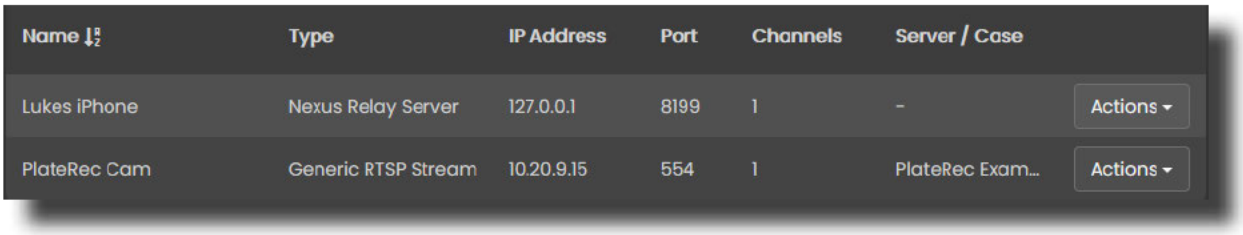
User Groups determine the level of access outlined above in the "Users" on page 8.

1. User Groups may be added by either clicking "User Groups", then "New Group" or click "New Group" while adding a new user.
2. While creating a New User Group, an admin selects the desired permission levels to applications such as Client (**Nexus**), DVR (**Server**), Manager (**EMS**) and then assigns the permission level per application.

📖 Further information regarding how to assign permissions is covered in the ***Airship Permission Levels Quick Reference Guide.***

3. Once a User Group is created, System Administrators may assign users to it by clicking the **Users** tab while editing the new Group.

4. To assign the User to the User Group, check the box next to the username, then click **OK**.
5. Click **Save**.



IP CAMERAS

Users can add IP cameras to **EMS** in three different ways. You can add a single IP device, add devices from a file, or add from an IP address range.

IP Camera List

Select **IP Camera** from the list to see all the IP cameras on **EMS**.

📖 **HELPFUL TIP:** Click any one of the column headings to change the order of the 'IP Camera List' in ascending or descending order.

The section below explains all the columns in the 'IP Cameras List'.

Name: Displays the name of the camera/device.

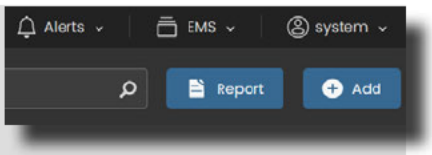
Type: Displays the manufacturer name of the camera.

IP Address: Displays the IP address of the camera/device.

Port: Displays the port number on the camera/device used to deliver video.

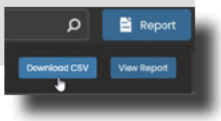
Channels: Displays the number of channels utilized by the camera/device.

Server/Case: Displays the case or server which the device is assigned.



Actions: ***Edit:*** Click this button to modify the camera information.

***Delete*:** Selecting this option will remove the camera/device. You will be prompted to confirm before deleting.

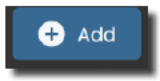


Assigning Cameras to a Case

IP cameras and other devices may be assigned to cases on VSHs. To assign a camera to case, see "Cases" on page 16.

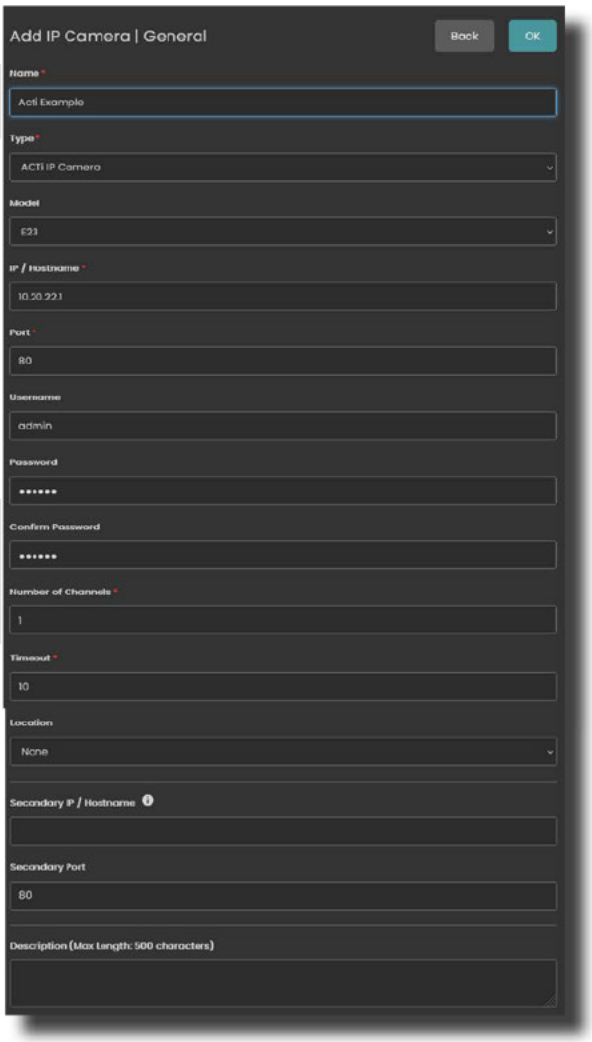
📖 A full list of IP devices can be generated by clicking the **Report** button in the top right corner.

A new page will populate the list of IP devices, which can be exported as a .csv file by clicking "Export CSV" in the top right corner of the Report page.



©2021 Airship Industries

Add an IP Device



To add a new IP Device such as a camera or an encoder:

1. Click **IP Cameras** from the left-hand navigational menu, and click the **Add** (+) button.

2. The **Add IP Camera** page opens. Enter or select the appropriate information:

📖 All the boxes with a red asterisk (*) are mandatory.

***Name:** Enter the name of the camera.

📖 Input camera names per standard naming convention.

***Type:** Select the camera type from the list of manufacturers supported by **Airship**.

Model: Based on the Type of camera, select the Model from the drop-down list (not required).

***IP/Hostname:** Enter the IP address of the camera.

***Port:** Enter the port number of the camera.

📖 Port information can be found on the web-based camera interface or in the camera manufacturer's documentation.

Username: Enter the camera's username to access the camera (most, but not all cameras require a username/ password).

Password: Enter the camera's password to access the camera.

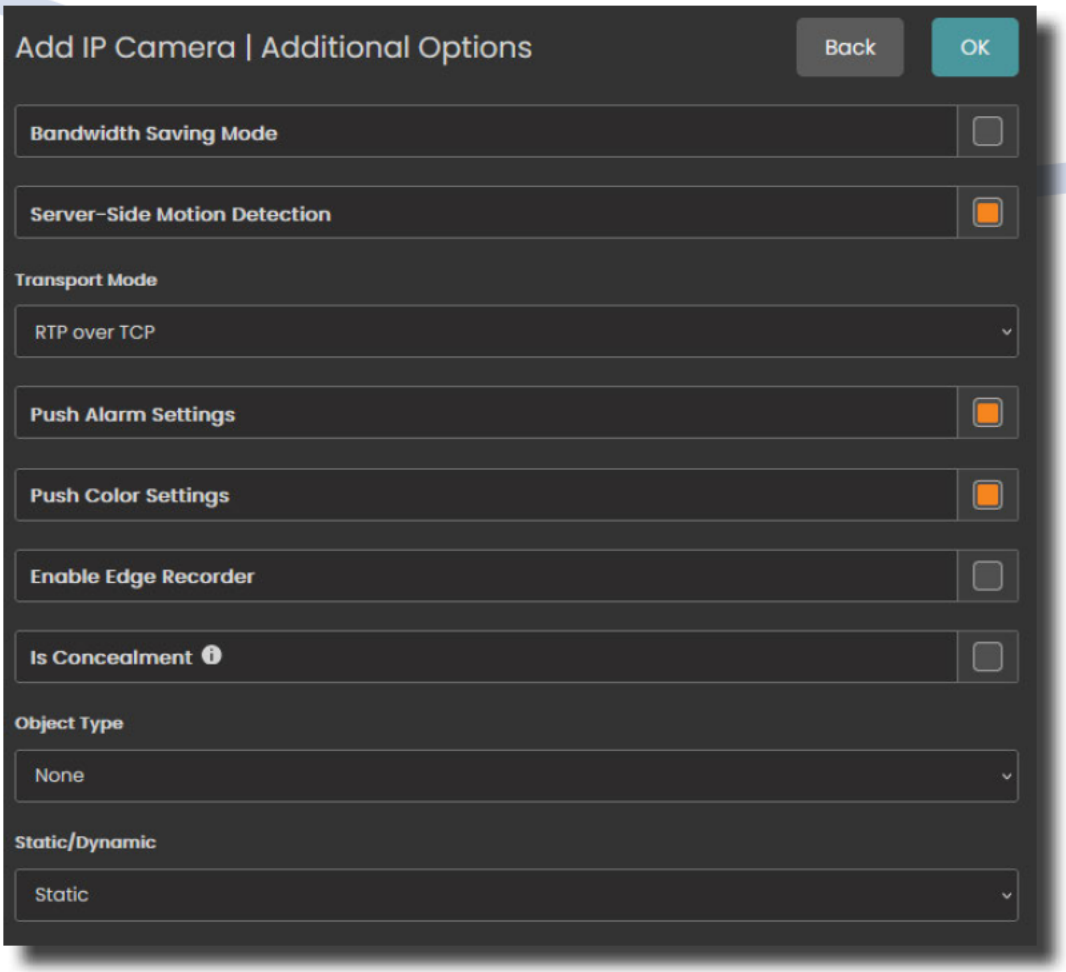
***Number of Channels:** Default is 1. If this IP device has more than one channel, ensure that the exact number of channels is entered; it cannot be changed after saving.

***Device Timeout:** Enter the value for time out; After the specified value of timeout, the server will stop connecting to the camera. Default is 10 seconds.

Location: Select a location from the list to add it to the IP camera.

📖 When a power user adds a new IP camera, the Locations list only shows the location to which the power user belongs.

Secondary IP & Port If the camera being added shares a secondary network & port, enter it here.



Alarm Inputs: Enter the number of 12v or RS-485 alarm inputs.

Alarm Outputs: Enter the number of 12v or RS-485 alarm outputs.

Description: Enter a short description of the camera.

3. Additional (optional) information and associations may be filled out by clicking through each section. Click Additional Options, Audio/Video Settings, Permission Levels, Tags or Auxiliary Devices to configure the IP device further.

Additional Options

Bandwidth Saving Mode: When enabled, the assigned VSH only connects to the camera when motion is detected by the camera or when Live View is requested by a client. The video stream disconnects when motion expires, and live view is disconnected.

Server-Side Motion Detection: Check this box to enable server-side motion detection, which measures changes in color each frame to determine if motion occurs. This feature is designed for use when no camera-side motion detection is supported at the cost of significantly higher CPU utilization.

Transport Mode: Select the streaming protocol used by the camera.

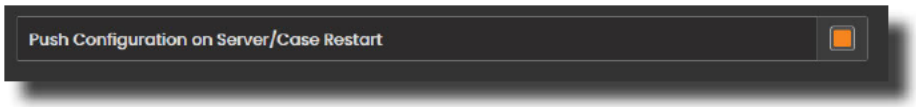
Push Alarm Settings: Check this box to enable EMS to push alarm settings to the camera.

Push Color Settings: Check this box to enable EMS to push color settings to the camera.

Enable Edge Recorder: When streaming bandwidth is limited, check this box to store footage directly at the device (Edge) and retrieve selected footage on demand.

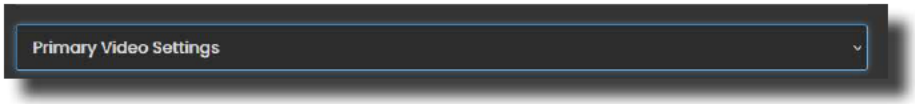
Is Concealment: Check to mark this IP device as a concealment for search purposes.

Object Type: Select to associate an icon with the object type when displayed on map features in Nexus Client.



Static/Dynamic: Select the IP Address as Static or Dynamic depending on your network.

©2021 Airship Industries

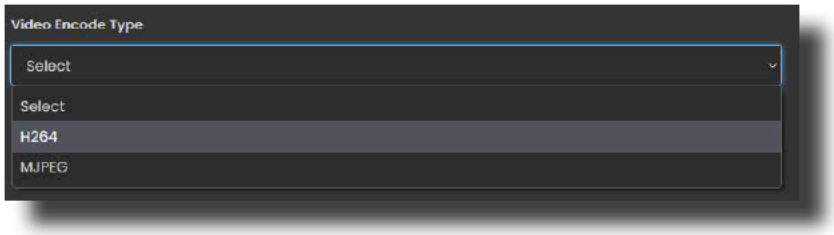


Audio/Video Settings

Audio and Video configuration options vary and are presented based upon the model device/camera added to **EMS**.

Push Configuration on Server/Case Restart: Settings made from this page can be pushed to the camera by selecting this box. These settings are pushed upon Server/Case restart.

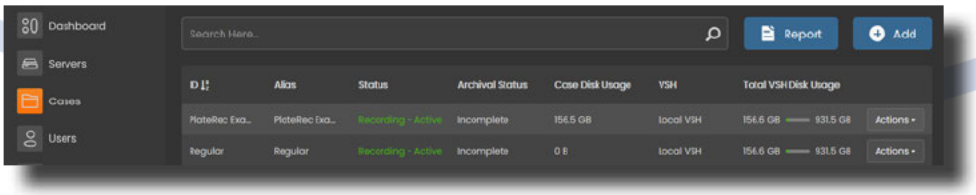
Configure Components: Select from the drop-down menu, which first selects "Primary Video Settings" in order to edit audio and video components native to the camera.



Each audio/video profile may be configured independently using this drop down menu.

Primary: The primary stream is what is recorded to disk by Airship Server. Select Primary for this camera in order to automatically stream the Primary video profile settings when the video is in focus.

Secondary: Select Secondary stream when trying to optimize viewing many video screens at once in Nexus Client.



Video Encode Type: Select the type of encoding performed on the streaming video. Options presented are based upon the features available model of the device.

CASES

Cases allow for individulized access to defined groupings of cameras and custom permission levels.

1. To begin setup, click **Cases** from the left-hand navigational menu.

🕮 The section below explains all the columns in the 'Case List'. To add a Virtual Server Host, see "VSHs" on page 25 below. Click any column to sort alphabetically.

ID: Displays the case ID. (example: ME123)

Alias: Displays the case alias of the case. (example: Main Entry Buidling 123)

VSH: Displays the VSH name to which the case is assigned.

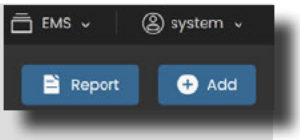
Status: Displays the current status of the case. Click **Transition** in the **Actions** column to change the case status.

Archival Status: ***Incomplete:*** The archival operation has not been performed. Refer to "Transitioning a Case" on page 18 for more information.

🕮 **NOTE:** Archival operation can be done on cases whose state is either Playback-Active or Deactivated.

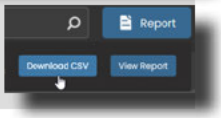
Complete: The archival operation is complete. Users can close a case only when its archival process is complete.

Disk Usage: Displays the current amount of space taken up by the case in the destination folder.



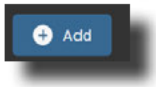
Total VSH Disk Usage: Displays the current total amount of space used by the VSH.

Actions: **Edit:** Select this option to modify the case information. You can edit only Recording-Active or Playback-Active cases.



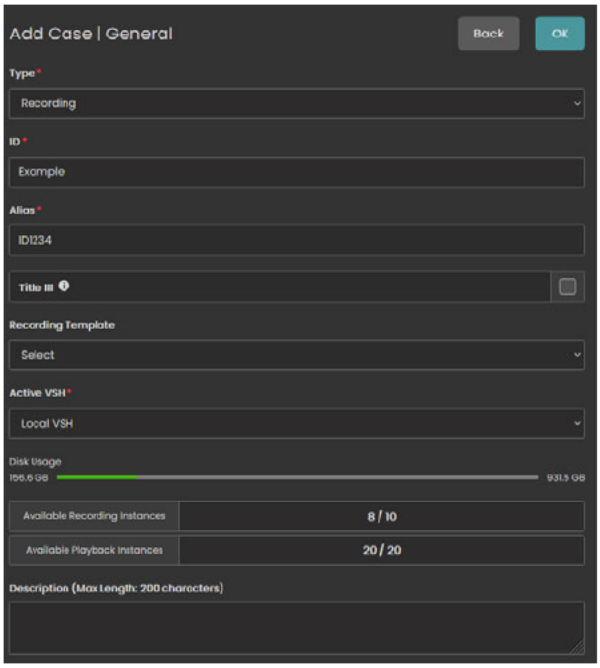
Restart: Select this option to restart a case. This option only works when in Recording-Active or Playback-Active.

Transition: Select this option to change the case status. Refer to "Transitioning a Case" on page 18 for more information.



🕮 A full list of cases can be generated by clicking the **Report** button in the top right corner.

Select to Download the report as a .csv file, or View the Report from a web page.



2. Click **Add** in the top-right corner, then begin setting up the case by clicking **General**.

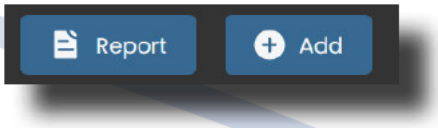
©2021 Airship Industries

3. Enter all necessary information.

📖 All boxes marked with a red asterisk (*) are mandatory.

***Case Type:**	Select Recording, Playback from Airship Archive, or Playback from Nexus Archive.
***ID:**	Enter a unique case ID such as "ME123"; IDs cannot be the same.
***Alias:**	Enter an alias for the case, such as "Main Entry Building 123".
Title III:	If enabled, all recordings on the case must be toggled manually to record from Nexus Client. After enabling, the option to always record will be presented.
Recording Template:	Click the drop-down menu to select from Motion, Recording 24-7, No Recording, or 24-7 Constant and Motion Recording.
***Active VSH:**	Click the **VSH** for which to assign the case.
Disk Usage:	Displays the space used and available for the selected **VSH**.
Available Recording Instances:	Displays the currently available Instances licensed for the selected **VSH**.
Available Playback Instances:	Displays the currently available Instances licensed for the selected **VSH**.
Description:	Enter a description for future reference if desired.

4. Click **OK**.
5. Assign devices to the case by clicking **Devices**.
6. Select the device to assign to the server(refer to "Add an IP Device" on page 13), click **Assign**, then **OK**.

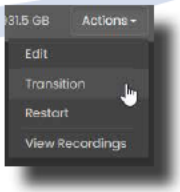


📖 When assigned to a case, IP devices may have their alias edited or used with an analytics engine.

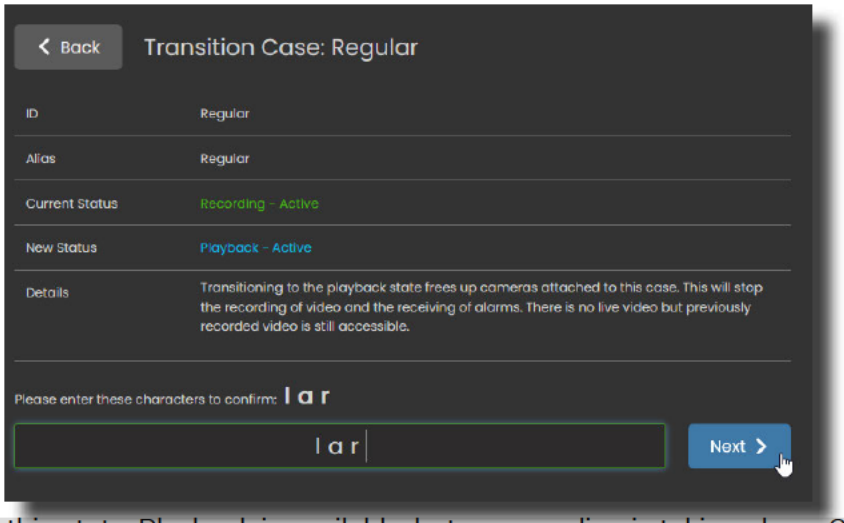
7. Assign who has access to the case by clicking **Permissions**.
8. Select the desired users or user groups who will have access, click **Assign**, then **OK**.
9. Assign Auxiliary Devices to monitor on the case, by clicking Auxiliary Devices.
10. Select the desired devices to assign to the case, click **Assign**, then **OK**.
11. Click **Save** to exit.

📖 **NOTE**: As the case initializes, the status will be Recording-Pending, then Record-Active once ready. When transitioning to playback mode, the status will be Playback-Pending, then Playback-Active once ready.

Export Disk Usage Reports



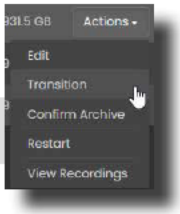
From the case list page, users may generate usage reports. For all available case disk usage information to export, click **Report** and the option to export to a .csv file will appear. To export reports for specific cases, type in a search entry, click **Report**, then **Download .CSV**.



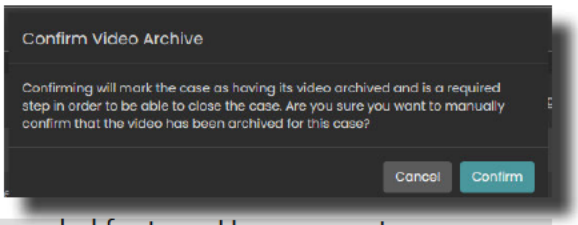
Transitioning a Case

Once case footage has been determined as completed, users may transition cases from active recording to playback mode. Playback cases may then be deactivated and archived before closing. **Airship's Video Archiver** must configured in order to archive footage. Refer to the ***Airship Archiver Quick Start Guide*** for setup instructions, or the ***Airship Archiver Quick Reference Guide*** for full archival process information.

1. To change the status of any case listed, click **Transition** in the **Actions** column.



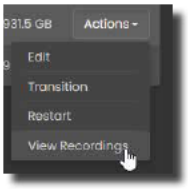
2. A prompt appears to confirm the status change to Playback-Active; enter the word above the open text field to confirm the transition, and click **Next**.



📖 **IMPORTANT:** In this state, Playback is available, but no recording is taking place. Cameras are free to be used elsewhere. This action cannot be undone; once a case has transitioned to playback mode, it cannot be set to record again.

3. A secondary confirmation is required, type "yes", then click **Transition**.
4. With the case status in **Playback-Active** mode, if it is desired to deactivate the case, click **Transition** once again.

📖 **IMPORTANT:** Select this option to stop and disable the case. Once deactivated, there is no way to go back to a previous state.

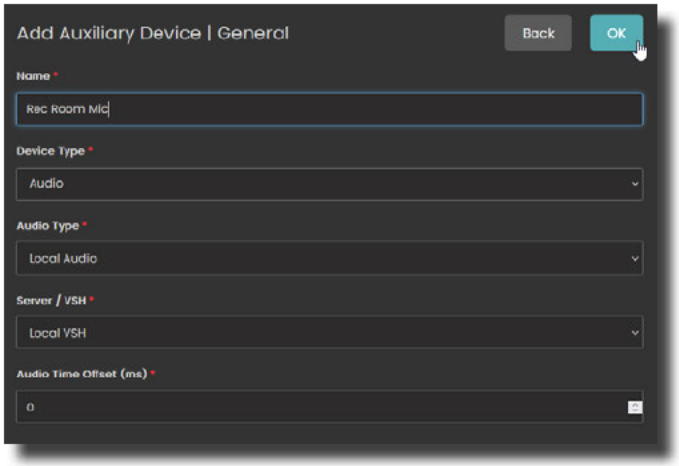


5. A confirmation message appears once again to confirm the transition to **Deactivated**.
6. With the case status in **Deactivated** mode, if it is desired to close the case, click **Confirm Archive**.
7. A warning message appears once again to confirm the transition to **Closed** (see image on right), click **Confirm**.

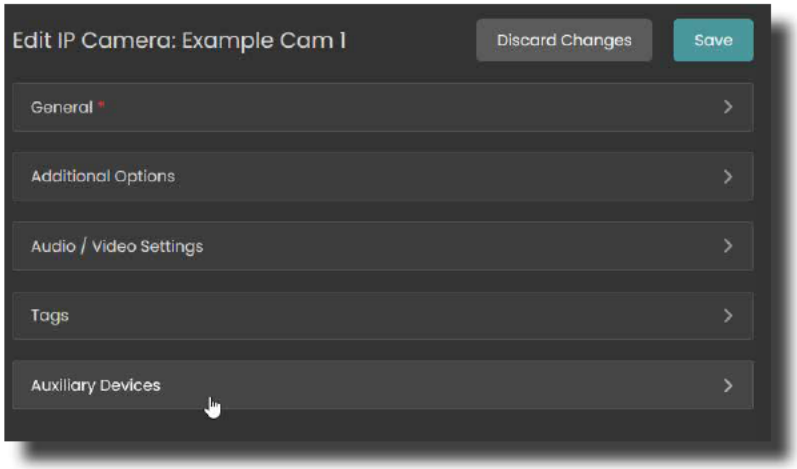
📖 **IMPORTANT:** Select this option to delete the case and all its recorded footage. Users cannot close the case until the recordings are archived. After the archival process is complete, choose this option to close the case. Closed cases cannot be re-opened.

Deleting Case Footage

From the case list page, click the **Actions** drop-down menu, and select **View Recordings**. The associated cameras assigned to the case will appear with each day of recording and may be selected individually or under the parent item. Select which items to delete, then click **Delete Recordings**.



©2021 Airship Industries

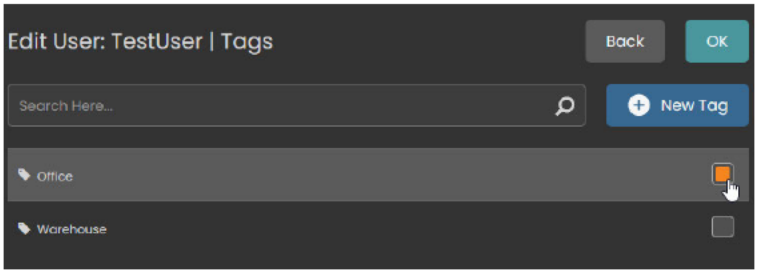


AUXILIARY DEVICES

Auxiliary devices such as microphones, PTT Radios, GPS-enabled device, or detectors may be added and assigned to IP cameras or cases, respectively.

1. From the main left-hand navigational menu, click **Auxiliary Devices**.
2. Click **Add**.
3. Enter a name and select the type of device to add. Select from Audio, GPS, Radio, or Detector (radars & sensors). Once the device is selected, options associated with that device appear.
4. Fill out all fields with a red asterick and click **OK,** then **Save**.

5. Assign the auxiliary device to an IP camera, case or VSH, respectively, by navigating to the desired instance, then click **Edit** from the **Actions** drop-down, then **Auxiliary Devices**.
6. Assign the device, then click **OK** and **Save**.



LOCATIONS AND TAGS

A system administrator can add locations and tags. Once locations and tags are created, they can be assigned to **VSHs**, **IP Cameras**, and **Users**. This enables searching assets by locations and/or tags.

Tags

Use tags to assist in sorting Users, IP Cameras or VSHs by the type of actions they take or the agency they are a part of. Examples might be "regional", "remote", the city and department, or countless other variations to help in sifting through large user lists.

1. Click **Tags** from the left-hand navigational menu.
2. Add a tag by clicking the **Add** button.
3. Name the tag, add a description if it is helpful for identification (not required), and click OK.
4. To assign the tag to a User, IP camera or VSH:
   - » Click **Users**, select the desired user, then click **Edit** from the **Actions** drop-down menu.
   - » Click **IP Cameras**, select the desired camera, then click **Edit** from the **Actions** drop-down menu.
   - » Open the **EMS Admin** menu, click **VSHs**, select the desired VSH, then click **Edit** from the **Actions** drop-down menu.
5. Click **Tags**.
6. Check the desired **Tags** for which to apply to the selected user, IP Camera or VSH, and click **OK**.

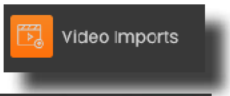
Locations

1. Click **Locations** from the left-hand navigational menu.

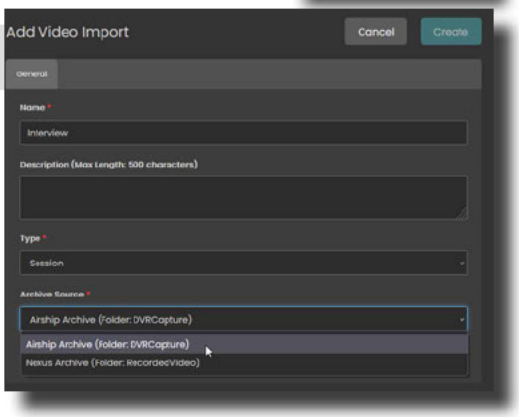
> 🕮 **IMPORTANT: Power Users** cannot create new locations. They can only see the location to which they belong.

2. Add a tag by clicking the **Add** button.
3. Name the location, add a description if it is helpful for identification (not required), and click OK.
4. To assign the location to a User, IP camera or VSH:
   - » Click **Users**, select the desired user, then click **Edit** from the **Actions** drop-down menu.
   - » Click **IP Cameras**, select the desired camera, then click **Edit** from the **Actions** drop-down menu.
   - » Open the **EMS Admin** menu, click **VSHs**, select the desired VSH, then click **Edit** from the **Actions** drop-down menu.
5. Click **General**.
6. Scroll down to select the desired **Locations** for which to apply to the selected user, IP Camera or VSH, and click **OK**.

©2021 Airship Industries



Locations Example

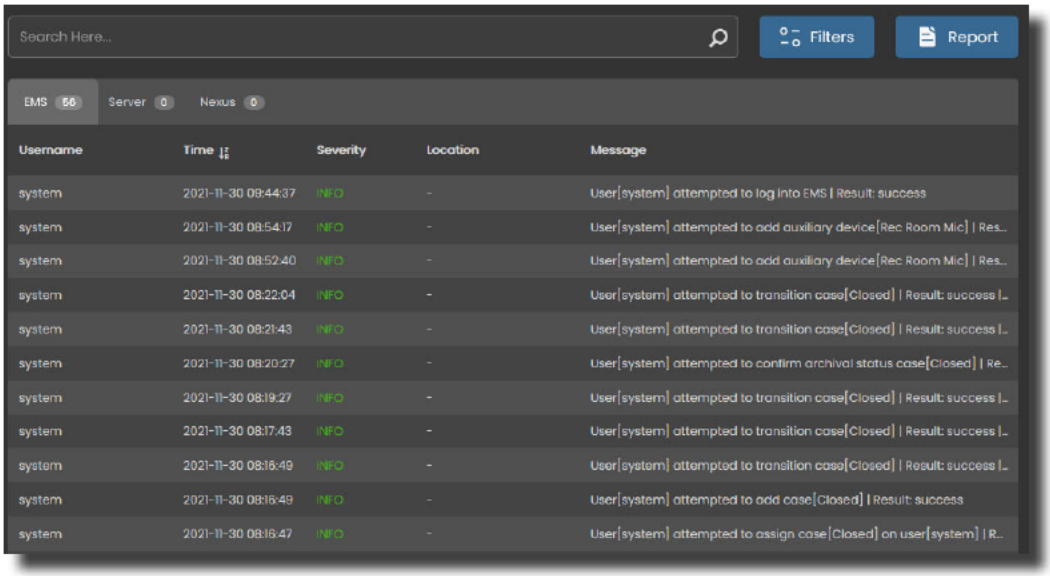


When many cameras, VSHs, and users are involved, locations can help to limit permissions to user-specific assigned locations. As an example, "Redmond" can be used as a location tag so that all users which are assigned to Redmond only have access to those defined cameras or virtual server hosts.

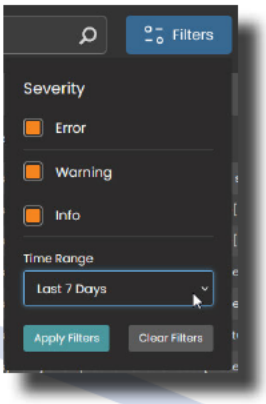
In order to set location-specific permissions, follow the directions above to assign a location to a VSH, then the desired cameras, then the user. When those three elements are in place, the assigned user can only access those cameras to which the location is assigned.

VIDEO IMPORTS

1. Click **Video Imports**, then click **+ Add**.
2. Enter a name for the video file.



> 🕮 Session video import allows Airship VMS or Nexus VMS recording to be uploaded as a new playback case.

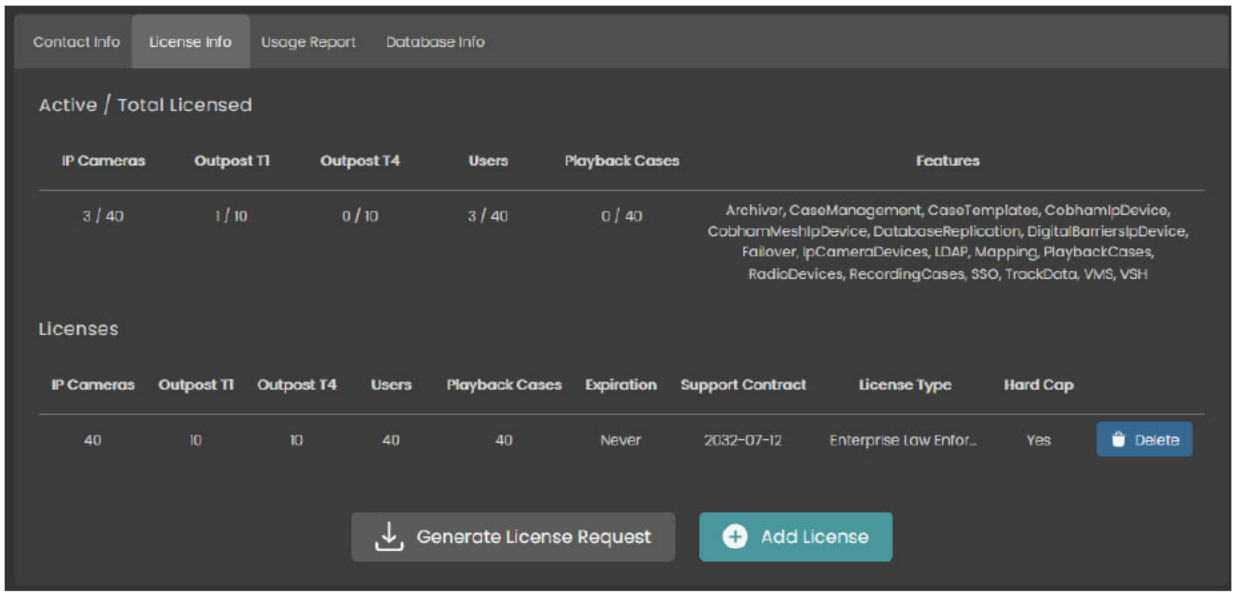


Interview video import allows MP4 clips to be viewable in Nexus Video Portal.

EVENTS

Logs are viewable in **EMS** in **Event Viewer** located on the left-hand navigational menu (click **Events**). Information regarding the user who triggered the event, the location it occurred in, as well as event time, severity, type, and message can all be found in the **EMS** Event Viewer. Also, the three tabs at the top allow the user to choose to view **EMS**, **Nexus Client**, or Server-related logs.

Click the **Filter +** Icon near the top-right corner to selectively filter the dates or type of alert for the selected application tab. Click **Error**, **Warning** or **Info**, select a time range, then click **Apply Filters**.



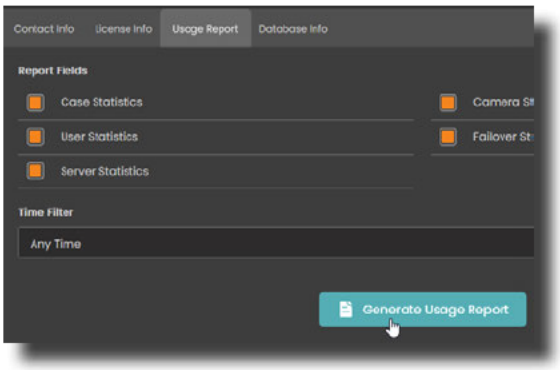
ABOUT

Contact Info

Contact Airship by phone or email using the provided contact information.

License Info

Information about the active license on EMS is displayed here. Under "Active/Total Licensed", each device has a maximum limit for licenses and displays the active devices in-use as a fraction. The number of active licenses, the start date, and type of contract is displayed under "Licenses".



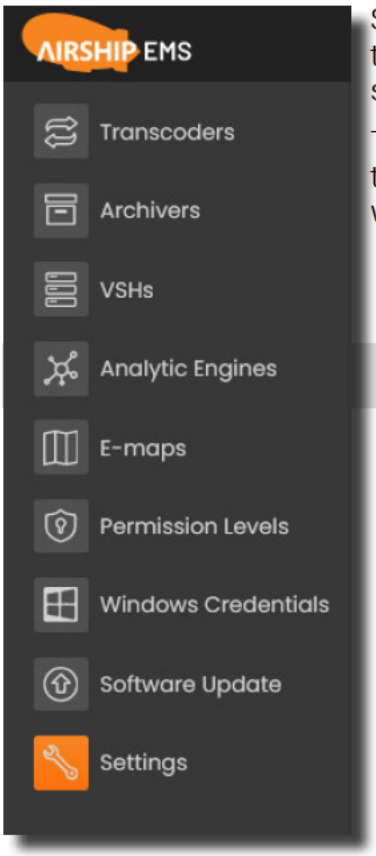
Genereate License Request: In order to add more servers, cameras, or Outpost devices to **EMS**, each user must have license. Click the **Generate License Request button** that will create a **LicenseRequest.dat** and Contact

📖 Contact **Airship** support to get your license validated.

Add License: After providing the **LicenseRequest.dat** file to **Airship** support, they will return a **managerlicensing.xml**. Save it to your desktop.

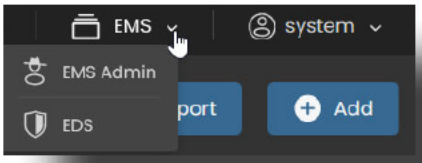
Usage Report

A CSV report may be exported for review purposes by clicking **Usage Report** > **Generate Usage Report** > **Export CSV**.



Database Information

Database Information is a tool that allows the user to see a list of all information about the current installation of the database.



©2021 Airship Industries

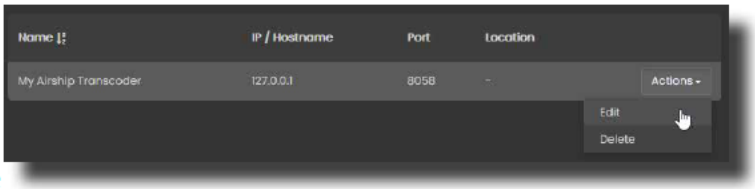
SYSTEM ADMINISTRATOR ADVANCED OPTIONS

System Administrators have exclusive access to advanced configuration options. In the interest of streamlining routine System Administrator tasks, **EMS** separates this section from the rest of the options available to Power Users.

To open the System Administrator's menu, locate the EMS drop-down in the top right of the EMS window, anc click **EMS Admin**.

📖 **NOTE**: To exit the **EMS Admin** menu and return to the main menu, click the Airship logo, or click the **EMS Admin** drop-down, and select **EMS**.

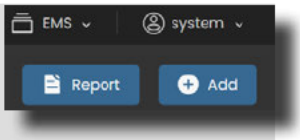
Adding System Components



Airship's **Managed Setup Tool** automatically adds network-connected Airship components to **EMS** and manages them. Airship components such as Servers, Virtual Server Hosts, Transcoders, and/or Video Archivers are automatically detected and recognized. These components are added to either the **EMS** on network or to a standalone **Airship Server**.

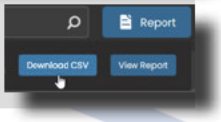
To manually add **Airship** components such as additional **Servers**, **Virtual Server Hosts, Transcoders,** or **Video Archiver**, please refer to **Airship's *Managed Setup Tool Quick Start Guide***.

Transcoders



Transcoders convert audio/video formatting to a streamable feed which can be viewed on multiple platforms such as **Nexus Mobile**, **Video Portal**, and other **Airship** applications.

To edit the name, location, description, or permissions on a Transcoder, click the **Actions** drop-down and click **Edit**. Click the delete button to remove a Transcoder from **EMS**.

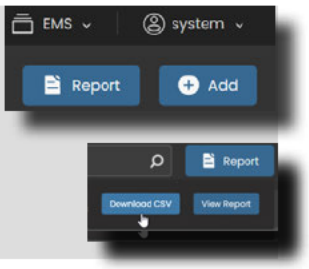


From the edit page, a System Administrator can edit the name, location, description, and **Permissions** assigned.

📖 A full list of Transcoders can be generated by clicking the **Report** button in the top right corner.

Select to download the report as a .csv file, or view the report from a web page.

Archivers



Archiver is installed automatically when **Airship Server** is installed on a specific computer, and is necessary for storing footage within cases. **Archiver** may be installed on any machine connected to the network and added with **EMS**.

1. To edit the name, location, description, or permissions on connected **Airship Archivers**, click **Archivers** from the **EMS Admin** menu.
2. From the list of available Archivers, and from the **Actions** drop-down, click **Edit** on the desired Archiver to edit.
3. From the edit page, a System Administrator can edit the name, location, description, and assign user **Permissions**.

📖 **IMPORTANT NOTE:** Make a note of the archiver computer's IP address as it will be entered into EMS settings.

📖 A full list of Archivers can be generated by clicking the **Report** button in the top right corner.

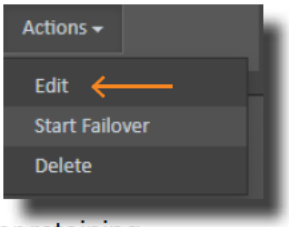
Select to download the report as a .csv file, or view the report from a web page.

Add Archiver to EMS:

Follow the prior section, "Adding System Components" on page 23 to add to **EMS** using **Managed Setup Tool**.

- When a new VSH is added, Video Archiver must be assigned in order to archive any videos from cases on that VSH. Administrators can add more than one VSH to a single Video Archiver if needed to archive videos from different cases.
- Archiving case video is mandatory before closing a case.
- Administrators can archive video (using **Airship's Archiver**) for any case currently in the Playback or Deactivated status.In **EMS**, users see the results of the archival operation.

Archiving Video

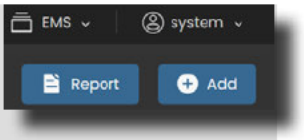


To export video to any external media device, connect the device before starting Archiver. Then follow the instructions in the ***Archiver Quick Reference Guide***.

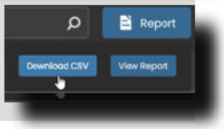
©2021 Airship Industries

VSHs

A Virtual Server Host does just what its name implies: it "hosts" one or more Cases (as many as the hardware and network can handle). To add a VSH, follow the section, "Adding System Components" on page 23.

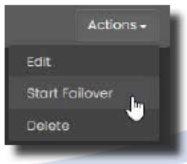


📖 **IMPORTANT**: VSHs can be managed to classic EMS, or to new EMS, not both.



1. To edit existing **Virtual Server Hosts**, access the **EMS Admin** menu, and click **VSHs**.
2. Click the **Action** drop-down for the desired VSH, and select **Edit**.
3. Select from the available options to edit the following:

General:	Edit the VSH Name, Location, Timezone and Description.
Associations:	Choose a Transcoder (for viewing on web clients), Video Archiver (for retaining Archived footage), Standby VSH (for failover), or Analytic Engine to assign.
Permissions:	Select which User Groups may view the selected VSH.
Tags:	Assign a Tags or click **New Tag** to reference the VSH.



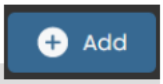
📖 A full list of VSHs can be generated by clicking the **Report** button in the top right corner.

Select to download the report as a .csv file, or view the report from a web page.

Failover Options

EMS provides the ability to failover an active/primary VSH which can be triggered either manually or automatically when the Airship Virtualization Agent stops communicating with **EMS** for a set number of minutes. When a failover occurs, the recording cases on the active/primary VSH will be initialized and started on a standby/failover VSH so that recording can continue. Upon recovering from a failover, the recording cases are stopped on the standby VSH and the active VSH will automatically handle the process of transferring the recording from the standby VSH to itself to keep everything together.

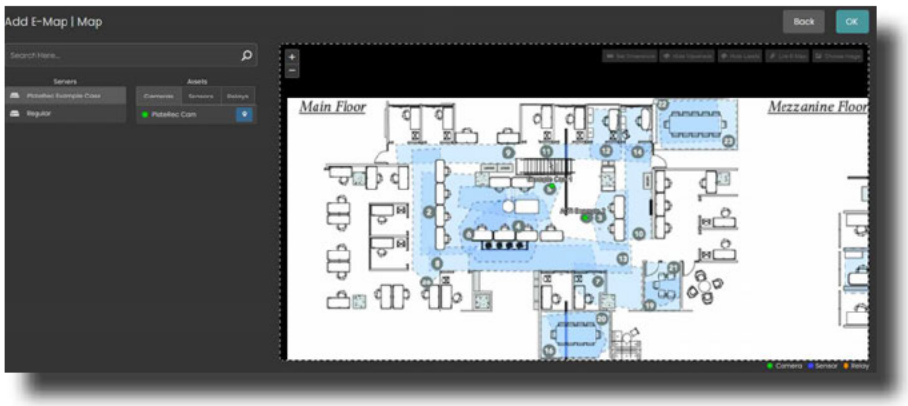
Failover setup and manual failover steps are covered in the ***Airship Failover Quick Reference Guide***.



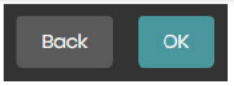
Analytic Engines

Airship integrates with leading edge detection software for facial recognition, license plate recognition, boat/hull and tail number recognition and continues to develop new partnerships. The analytic engines that process AI-based software can be added from the Analytic Engines section from the menu.
The process for adding analytic enginges for facial recognition or OCR capabilities are covered in the guides related to the associated integration feature, such as the ***Vintra Integration Quick Start Guide, or ALPR Setup Configuration Guide.***

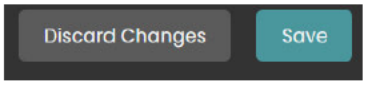
E-Maps



E-Maps are used to quickly picture camera orientation on a custom map. Users may upload an image by click E-maps, entering a name for the layout, and upload an image to later place cameras upon via **Nexus Client**. This feature is covered in detail in the **Nexus Client User Manual**, however a portion of this setup must be completed in **EMS**.

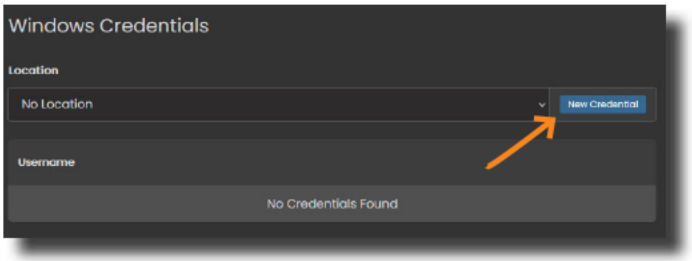


1. To upload a new map to place cameras upon in **Nexus Client**, click the blue **Add** button.

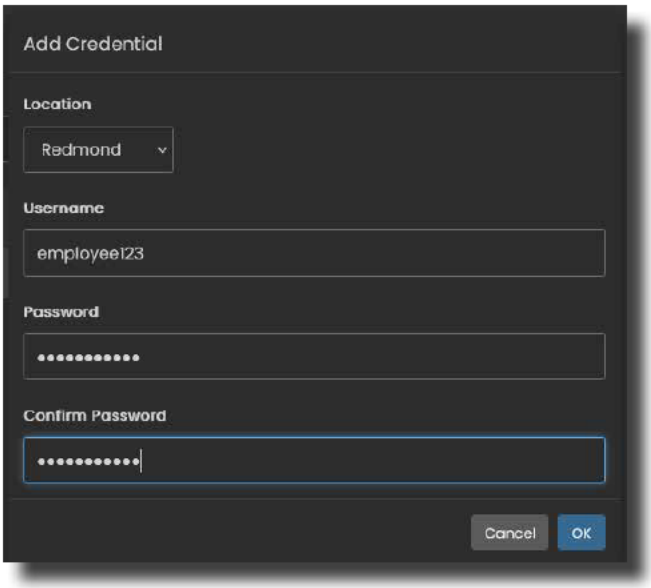


📖 If a map has already been added, click the **Actions** drop-down to edit.

2. Enter a name for the map, and click **OK**.
3. Click the outlined box on the right to upload an image to place cameras upon.
4. Select a Server or Case by clicking from the list on the left.
5. Click the box with a blue pin and then click again on the map to place orient the camera.
6. Click **OK**, then **Save**.

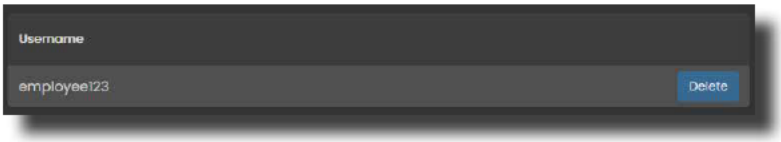


©2021 Airship Industries



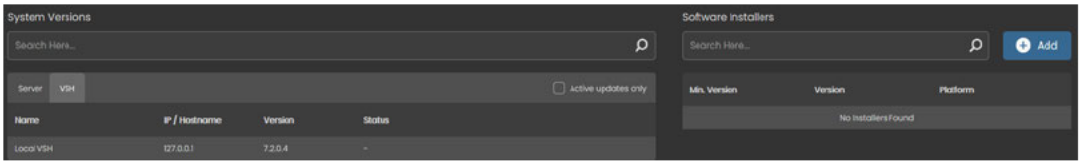
Windows Credentials

This page allows administrators to enter credentials that can be used for tasks such as encrypting tape archives through **Airship's Archiver** tool.



1. To add credentials, simply select a **Location**, and click **New Credential.**

2. Enter a username and password, and click **OK**.

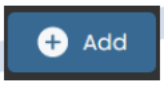


3. To remove a credential, simply choose the credential to be delete, and click the blue **Delete** button.

Software Update

The **Software Update** tab is used to upload new software versions from **EMS** to a given **VSH.** Upon uploading, EMS pushes the update to any VSH with an older software version.

System Versions



Click the **Software Update** option from the **EMS Admin** menu to display the list of softwares currently connected to **EMS**.

Name:	Displays the Server or VSH name.
IP/Hostname:	Displays the IP address or the hostname of the application.
Version:	Displays the version level of the application.
Status:	Displays the status messages about the application are available here.
Active Updates Only:	Check this box to show only those updates which are in progress.

Add Software Installers

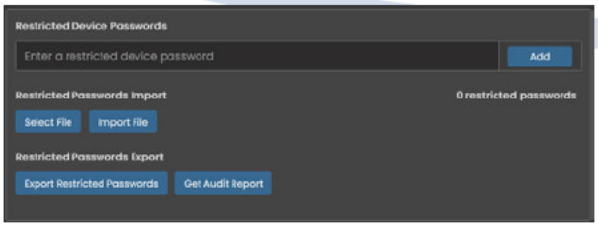
Software Installers may be manually uploaded to EMS to ensure all versions of a given application are up to date. Listed below **Software Installers** is a list of all the software update packages currently in deployment for your management system.

To add a new Software Installer, click the **Add** button from the top-right.

Application:	Select the application that will be upgraded by this package. **Client** refers to **Nexus Client**, **DVR** refers to **Airship Server**, while **VSH** refers to the virtualized version of **Airship Server**.
Platform:	Select the Windows platform version on the installed machine (x86 for 32-bit systems, x64 for 64-bit systems).
Min. Version:	Enter the lowest version level of software acceptable to leave running on the system.
Version:	Enter the current version level of the package which will upgrade the application.
Select Package:	Upload the installer package by clicking the **Choose File** button.
Description:	Describe the installer for future reference, if so desired.

©2021 Airship Industries

Settings



Click Settings from the left-hand navigational menu to view from the available options.

General

General settings for EMS requirements and options may be found by clicking "General" and are outlined below.

Manual Camera Numbering:	Check to allow manual entries for numbering cameras; otherwise camera numbers are automatically assigned. Nexus Client users may use camera numbers with keyboard shortcuts to call a camera.
Transcoder:	Select this option to disable transcoders from being added to EMS (not recommended).
Default EMS User:	Set to default Create User page to adding EMS Users, as opposed to LDAP (when enabled).
Require Locations:	Enable this to require a location to be entered for new users.
Require Case Archival:	Enable to require the automatic archival of all cases.
Inactive Session Timeout:	Set the desired length of inactivity – in minutes – before a user is logged out of **EMS**.
Enable Account Lockout:	Enabling this option locks out a user after a determined number of failed login attempts.
Custom Camera Fields:	This user-defined value can be anything which helps the user to identify specific information for the selected camera. Type an entry, then click **Add**. Click an entry, then **Remove** to delete entries.
Max Password Age:	Set the length in days until passwords expire. Setting this to 0 means this feature will not be used.
Enforced Password History Level:	The number of previous passwords that will be checked and disallowed when a user attempts to set a new one. Setting this to 0 means this feature will not be used.
Disable Inactive User:	Set the number of days until inactive users will be deactivated. Setting to 0 means this feature will not be used.
Days to Keep VMS Events:	Set the number of days to retain **VMS** triggered events in the database.
Days to Keep Nexus Events:	Set the number of days to retain **Nexus Client** triggered events on the server.
Days to Keep EMS Events:	Set the number of days to retain **EMS** triggered events on the server.
Automatic Failover Wait Time:	Set the number of minutes to wait for a VSH to come back online before automatically triggere a failover. Setting this to 0 means this feature is disabled.
Password Requirements:	Check this box for length, case, number, and character requirements; select the requirements below the box. ***Minimum Length*** (characters limit)***, Require Lowercase Character, Require Uppercase Character, Require Number, Require Special Number, Define Special Characters*** (defines characters to be considered "special")

Enable Device Password Restrictions: Passwords may be added to a list of restricted passwords to avoid commonly guessed or leaked passwords. Check the box, then either type in a password and click **Add** to disallow, or upload a complete list of passwords from a .csv file. To import a list of passwords, click **Select File**, then find the .csv to upload, and click **Import File**.

Further details may be found in the ***Airship Restricted Passwords Quick Reference Guide.***

Device Password Requirements: Check this box to enable password requirements for devices added to EMS, and select the desired requirements.

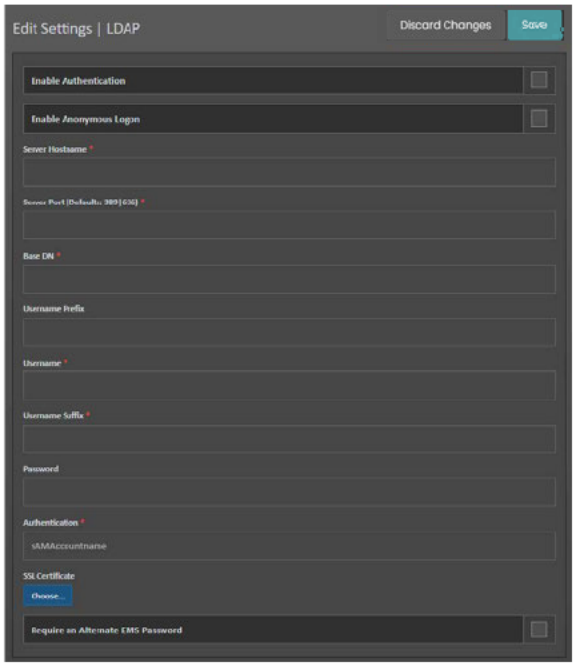
Two-Factor Authentication Type: Select the default authentication mode, using an Authenticator App such as Google Authenticator, by Email only, or Email and SMS, then see below.

Require Two-Factor Authentication: Set to require 2FA for users logging into **EMS**. Refer to "Two-Factor Authentication" on page 10. This requires the use of a QR scanning app and a 6-digit code entry.

Nexus Relay IP : The IP to be used for Outpost Mobile.

Nexus Relay Port: The port to be used for Outpost Mobile.

Use Local Nexus Relay IP: Check this box and enter the local IP if using Nexus Relay locally.



Default OCR Engine: Sets the default OCR Engine based upon what has been added from the Analytic Engines page.

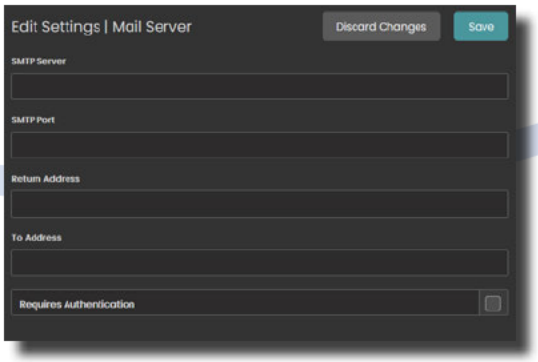
Default Person/Vehicle Engine: Sets the default Person/Vehicle Engine based upon what has been added from the Analytic Engines page.

©2021 Airship Industries

LDAP Settings

Administrators can link users and user groups from active directory to **EMS**. Once you have a successful connection to the LDAP server, you can create users and user groups that are associated with LDAP login credentials.

To create a new user, refer to the Users section of this manual. On the **Add a User** page, enter the **Name** of the user as it appears in the LDAP directory and click the **link** button to validate the user exists in LDAP. If the user exists, all the user information along with username is fetched from the LDAP server to **EMS** and the user is created.



Once the user information is ready, the user can be added to any of the available user groups and assigned permissions. If an LDAP user logs in to **EMS**, a client, or the web client, that user's information, such as username and password, are sent to the LDAP server for validation (and marked as an LDAP user).

- A system administrator can link the LDAP users directly to new or existing **EMS** user groups. Then each user under the LDAP user group can log in to **EMS**. (They do not have to added again to the Users list in **EMS**).
- All the users of that LDAP group will inherit the permissions of the **EMS** user group.

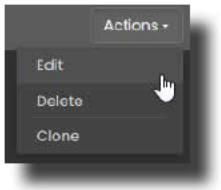
Enabled Authentication:	Check this box to enable LDAP authentication that will enable or disable LDAP as part of **EMS**'s authentication.
Enabled Anonymous Logon:	Enable this field if your LDAP server is set to accept anonymous querying of its Active Directory (AD). You do not have to enter the LDAP username and password if you enable this option.
Server Hostname:	Enter the host name for LDAP server. It is typically ldap://xxx.xxx.xxx.xxx.
Server Port (default of 389, 636):	Enter the port number for your LDAP server. Default ports are 389, and 636 for SSL.
Base DN:	Enter the domain name where LDAP users are available. ***EXAMPLE:*** if your domain is 'airship.com', the base dn will be entered as 'dc=airship, dc=com'.
Username Prefix:	Deprecated. If you need a name for the admin user, it is recommended to enter it in the username field.
Username:	Enter the administrator username for LDAP login. If you enable **Enabled LDAP Anonymous Logon** option, this option is grayed out.
Username Suffix:	Deprecated. If you need a suffix for the admin user, it is recommended to enter it in the username field.
Password:	Enter the password for LDAP login.
Authentication:	This field displays your login name. Leave this option unchanged unless you know the specific one for your AD/LDAP configuration.
SSL Certification:	If you use SSL on your LDAP server, upload your certificate here. Browse through your computer and select the SSL certification.
Require Alternate EMS Password:	Check this box to Require a different password for logging into **EMS** than for other Applications.

Mail Server

Full email notification setup instructions can be found in the ***Email Notifications Quick Setup Guide***. Some settings within **Nexus Client** including which cameras will trigger events must be setup before any notifications will occur.

SMTP Server:	Enter the hostname/IP address of your SMTP Mail Server. Your network administrator can provide this information.
Port:	Default port for SMTP connection is 25.
Return E-mail Address:	Enter the address from which emails will be sent.
To Address:	Enter the email address where you would like alarm emails to be sent.
Requires Authentication:	Check this box if you want SMTP Server to authenticate the sent emails that require SMTP login, then enter the Username and Password.
Username:	Enter the username associated with login if authentication is required.
Password:	Enter the password associated with login if authentication is required.

©2021 Airship Industries

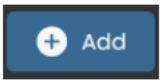


Permission Levels

Permissions to each application and each feature within applications may be individually assigned to existing user groups. To ***edit*** existing permission levels:

1. Click **Permission Levels** from the Advanced section of EMS.

📖 **NOTE**: Existing permission levels are assigned to each application. Hover the mouse over each permission to reveal tooltips explaining their uses.



2. From the desired permission level, click the Actions dropdown, and select **Edit**.
3. Select the features for which to allow or prohibit access to by checking the box next to the feature.
4. Click **OK**.
5. Return to the main Dashboard, click Users, and edit the desired User to assign the permission set.

Custom Permissions

For custom permission levels, first create a group for which to assign unique permissions.

1. Click **Permission Levels**, then click the **blue Add** button.
2. Select which options to enable or disable by checking or unchecking the individual feature.

📖 **NOTE:** All "Manager" permissions refer to accessible features and options within the **EMS** user interface (UI). All "Client" permissions refer to connecting clients such as Nexus Client, Nexus Video Portal or Nexus Mobile. Finally, all "DVR" permissions refer to the standalone Airship Server or service (non-virtualized).

3. Click OK.
4. Return to the main Dashboard, click **Users Groups**, and edit the desired User Group to assign the permission set.

📖 See the ***Airship Permissions Quick Reference Guide*** for more information on assigning permissions. Hover the mouse over each permission to reveal tooltips explaining their uses.

GLOSSARY

Airship Server

Central to **Airship VMS**, **Airship Server** connects to cameras, sensors and other devices to collect and record video, audio and metadata for permission based distribution. This robust software is scalable for many use cases. It can be paired with other **Airship Servers** or run as a standalone system, additionally, it is capable of running multiple virtual instances simultaneously to securely manage extensive video, audio, and metadata input.

Archiver

An **Airship Server** based application that can archive video evidence in its raw format to a multitude of storage mediums such as disk, DVD, LTO/WORM tape, and other external media. Archived footage can be viewed directly using the included **Nexus Player** stored on each archive. Integration with Rimage Systems is also available. *Prerequisites: Airship Server*

Cases

Allows compartmentalization of groups of cameras to create a tailored workflow of preserving evidence. Cases preserve resources utilizing virtual instances of **Airship Server**; **Virtual Server Hosts**.

EMS

Airship's Enterprise Management System enables users to create and control tiered access levels, configure software (within the **Airship** ecosystem), cameras, devices, permissions, and other settings. **Airship EMS** scales to the size of the enterprise, whether large or small, camera/user groups and other helpful tools help organize day-to-day surveillance tasks across their networks. *Prerequisites: Server*

Nexus Client

This feature-rich viewing client enables user to view live and recorded footage, access alarm metadata, remotely configure cameras, pan/tilt/zoom, and numerous other features essential to surveillance monitoring. Installed on a desktop computer or laptop, this Windows software requires either a direct connection to the server's network or a valid VPN connection. The goal of **Nexus Client** is full control of camera feeds being recorded by **Airship Server**, while also offering remote server configuration capability. *Prerequisites: Airship Server*

Mobile Encoder

Mobile Encoder is a secure mobile app which provides end users the ability to stream live video and audio over cell or WiFi using their ios enabled mobile device. When used in conjunction with an **Airship Relay Server** and **Airship Server**, the stream can be recorded for playback via **Nexus Client** or **Nexus Mobile**.
Prerequisites: Airship Server, Relay Server, Nexus Client, iOS device

Outpost

Airship's edge-recording software; records high-resolution at the edge while sending a transcoded lower quality stream to an **Airship Server** via **Relay Server**. Allows for adaptive steaming settings based on your network connection allowing for the end user to get the best streaming quality possible from their network connection.

Nexus Video Portal

Nexus Video Portal allows for viewing live and playback audio\video recorded by **Airship Server** over a secure web connection. **Nexus Video Portal** can be accessed using any device which supports a modern browser.

Relay Server

Allows the user to securely connect to **Outpost** enabled edge devices without requiring a static IP address at the edge recorder, providing additional security for edge based data streams. *Prerequisites: Airship Server, Outpost*

Transcoder

Included with **Nexus Video Portal, Airship Transcoder** allows users to adjust their stream quality to better suite their connection speed. *Prerequisites: Airship EMS, Transcoder, Airship Server*

VSH - Virtual Server Hosts

Virtual Server Hosts are virtualized instances of **Airship Server**, which may be managed via **Airship's Enterprise Management System (EMS)**.

Department of State Police
DIVISION COMMANDER'S ORDER

Issue Date	**Number**
May 3, 2022	**2022-DHS-002**
Subject: **Use of Non-Departmental ALPR Systems**	

The Division of Homeland Security and Preparedness is responsible for the administration of the Department's Automatic License Plate Recognition System (ALPR). The availability and use of ALPR technology provides opportunities to increase public and officer safety and to enhance the effectiveness of law enforcement agencies.

The Department shall only utilize ALPR technology in furtherance of official and legitimate law enforcement operations and public safety. The use of ALPR technology is governed by General Order TRF-11 "Automatic License Plate Recognition". In addition, the use of non-departmental ALPR systems shall be subject to the guidelines set forth in this Order until and unless superseded by General Order TRF-11.

In the course of their official duties, members may contact other law enforcement agencies to request assistance with information, records, or data from non-departmental ALPR systems.

Lieutenants and supervisory analysts assigned to the Commonwealth Watch Center/Commonwealth Fusion Center and the ALPR Administrator may access accounts with non-departmental ALPR systems for official law enforcement purposes as authorized by General Order TRF-11.

Other members, through their position with the Department, shall not obtain accounts with non-departmental ALPR systems unless authorized by the Division Commander of the Division of Homeland Security and Preparedness.

Members shall be mindful that non-departmental ALPR systems may use different technology and quality assurance standards than the Department's ALPR system.

_____

Christopher T. Wilcox
Lieutenant Colonel
Division of Homeland Security and Preparedness

NON-CRIMINAL JUSTICE AGENCY USER AGREEMENT
FOR ACCESS TO CRIMINAL HISTORY RECORD INFORMATION (CORI/CHRI)
between the
MASSACHUSETTS DEPARTMENT OF CRIMNAL JUSTICE INFORMATION SERVICES (DCJIS)
and

Agency Name		
Address		
City	State	ZIP Code
Full Name and Title of Agency Head		
Telephone Number		Fax Number
Email Address		

I. PURPOSE

This User Agreement identifies the duties and responsibilities of both the DCJIS and the non-criminal justice agency (hereinafter referred to as "NCJA" or "Agency") as they relate to the handling of requests and responses for state and national fingerprint-based criminal background checks.

The NCJA agrees to follow the terms of this agreement and will only submit requests for, review, and store CHRI background checks in accordance with 42 USC 16962, Public Law 92-544 and all other applicable federal and state laws and regulations.

II. THE PARTIES AGREE AS FOLLOWS

The DCJIS will:

1. Provide criminal history record information (CHRI) in response to submitted fingerprint-based background checks, either to the NCJA or to the appropriate agency that reviews criminal histories for the NCJA;

2. Provide assistance to the Agency in interpreting CHRI;

3. Work to ensure the completeness and accuracy of the CHRI;

4. Conduct audits to ensure compliance with this Agreement; and

5. Cease providing information to the Agency if this Agreement is violated or if the Agency is suspected of violating this Agreement.

The NCJA will:

1. Abide by the terms and conditions identified in this Agreement;

2. Abide by the terms of the current version of the FBI CJIS Security Policy (CSP) and any subsequent versions;

3. Comply with state and federal laws, rules, procedures, and policies, including those adopted by the DCJIS and the National Crime Prevention and Privacy Compact Council (Compact Council) regarding the use and dissemination of CHRI;

4. Use CHRI only for the purpose requested;

5. Submit requests for CHRI checks only as authorized by law;

6. Provide for the security of any criminal history record information received. This includes, but is not limited to:

    a. designating a Local Agency Security Officer (LASO) who is responsible for ensuring compliance with security procedures and this User Agreement.
    b. ensuring all personnel with access to CHRI are aware of the rules and responsibilities with regard to CHRI and have completed the required training.
    c. restricting access to physical or electronic copies of CHRI to authorized personnel. Physical copies shall be maintained in a controlled, secure environment, such as a locked cabinet in a room not accessible to all staff and visitors. Electronic copies shall be protected with at least 128-bit encryption. The relevant federal encryption standard is FIPS 140-2.
    d. sharing CHRI only when explicitly allowed by law and logging any CHRI dissemination. Logs shall include, at a minimum, the subject's name, the subject's date of birth, the date and time of dissemination, the name of the person to whom the CHRI was disseminated along with the name of the organization for which the person works, and the specific reason for dissemination.
    e. tracking and reporting information security incidents, such as the theft/loss of physical records or the penetration of electronic systems.
    f. disposing of CHRI in the required, secure manner. Physical media must be cross-shredded and/or burned, and electronic records must be deleted and repeatedly over-written with random 0s and 1s, or the media must be degaussed.

7. Understand this data is based on CHRI received by the DCJIS. If a person could be adversely affected by this data, the person must be given the opportunity to challenge and correct a record before a final decision is rendered on the basis of the CHRI;

8. Retain audit records for at least 365 days. Once the minimum retention time period has passed, the agency shall continue to retain audit records until they are no longer needed for administrative, legal, audit, or other operational purposes;

9. Allow the DCJIS and the FBI to conduct audits to ensure compliance with this Agreement; and

10. Respond to, and cooperate with, the investigation of any complaints alleging a violation of this agreement or of the laws, regulations, and policies regarding access to, and use of, CHRI information.

III. CRIMINAL HISTORY RECORD INFORMATION LIMITATIONS

The NCJA understands that CHRI has the following limitations:

1. CHRI is based solely upon arrest fingerprint cards submitted to the Massachusetts State Police (MSP) State Identification Section (SIS) and to the FBI. The arrest warrant file, sex offender file, or other databases maintained by the DCJIS are not part of the CHRI search.

2. CHRI is compiled from information submitted to the MSP SIS and to the FBI by law enforcement agencies (hereinafter referred to as contributing agencies). Although the MSP SIS makes reasonable efforts to ensure all information is submitted as required by State law, it is not responsible for omissions from contributing agencies.

3. Although the MSP SIS encourages the reporting of all arrests for felony, misdemeanor, and drug violations, Massachusetts law enforcement agencies are only required to submit fingerprints on felony and drug-related arrests.

4. CHRI is constantly being updated as new arrests and other information are entered into the system by contributing agencies. The record released is only valid as of the date the record check was performed.

5. Certain statutes allow for the suppression or deletion of records, and this information is not provided.

6. The MSP SIS retains records for the State of Massachusetts only. Most fingerprint-based background checks include a check through the FBI, which the MSP SIS will request on the NCJA's behalf as a normal part of the criminal background check, if allowed by law.

IV. PERSONNEL SECURITY AND TRAINING REQUIREMENTS

Individuals within the NCJA who have direct access to CHRI or to systems containing CHRI are subject to criminal history record checks performed by the DCJIS. The NCJA agrees to ensure that all affected personnel are screened as provided in this agreement.

Access will be denied if the individual has ever had a felony conviction of any kind, no matter when it occurred. Access may be denied if the individual has one or more recent misdemeanor convictions. In addition, an individual believed to be a fugitive from justice, or having an arrest history without convictions, will be reviewed to determine if access to CHRI is appropriate. The DCJIS will take into consideration extenuating circumstances where the severity of the offense and the time that has passed would support a possible variance.

In addition to the above, CHRI access will be discontinued for any person who is subsequently arrested for, or convicted of, a crime. The NCJA's Local Agency Security Officer (LASO) must report such incidents to the CJIS Systems Officer at the DCJIS for review before access may be reinstated. The NCJA further agrees that where authorized by law, support personnel, contractors, vendors, and custodial workers with access to controlled areas during CHRI processing will undergo state and/or national criminal background checks unless escorted by authorized personnel at all times.

The LASO will be responsible for reporting all personnel security clearance requests and issues to the DCJIS CSO within five (5) business days.

An informed review of CHRI results requires training. As such, the NCJA agrees that all authorized personnel, including those personnel with direct access to SAFIS-R and those that will access SAFIS results, will complete the required training and review all training materials made available by the DCJIS every two years. Furthermore, all authorized personnel must also execute a Criminal Record Information (CORI/CHRI) Individual Agreement of Non-Disclosure (AOND) form.

V. PHYSICAL AND ELECTRONIC SECURITY OF CHRI

The NCJA is responsible for ensuring the physical and electronic security of CHRI at all times. Therefore, the NCJA must adhere to the following:

1. CHRI shall only be processed in controlled areas with limited access.
2. Computers which provide access to CHRI data shall not be logged in when unattended.
3. Authorized users shall not share Usernames and Passwords.
4. Documents shall not be left out in the open as they could be viewed by unauthorized individuals.
5. Computer screens and CHRI shall not be viewable by unauthorized individuals.
6. File cabinets and record rooms shall be locked when unattended.

VI. INCIDENT RESPONSE REQUIREMENTS

A "security incident" is defined as (a) unlawful or unauthorized access to, and/or dissemination of, any CHRI stored on the NCJA's equipment or in the NCJA's facilities resulting in access to, or loss, disclosure, or alteration of, CHRI, or (b) unlawful or unauthorized access to such facilities or equipment resulting in access to, or loss, disclosure, or alteration of, CHRI.

The NCJA LASO shall report any and all security incidents to the DCJIS Information Security Officer (ISO) within 48 hours of the discovery of the incident.

VII. DOCUMENT SIGNOFF

This Agreement commences on the date the last signature is obtained below and continues until terminated by one of the parties. Written notice of one of the parties' intent to terminate this agreement must be submitted at least 14 days prior to the termination date. This Agreement may be terminated sooner by the DCJIS upon a violation of the terms of the Agreement.

THE MASSACHUSETTS DIGITAL EVIDENCE GUIDE

OFFICE OF THE ATTORNEY GENERAL
ATTORNEY GENERAL MAURA HEALEY

A PROJECT OF THE CRIMINAL BUREAU
DIGITAL EVIDENCE LABORATORY
APPEALS DIVISION

JUNE 2021

A NOTE TO READERS OF THE MASSACHUSETTS DIGITAL EVIDENCE GUIDE

The Massachusetts Digital Evidence Guide (hereinafter "Guide") is only to be used as an educational resource. This Guide is not legal advice. The purpose of this Guide is to provide the reader with an understanding of the Massachusetts statutes and cases impacting criminal investigations and prosecutions that involve technology or digital evidence. This Guide, and its provisions, are not policy. This Guide does not suggest modifying or replacing any existing agency practices or procedure(s). Readers should consult with appropriate authorities, prosecutors, or legal counsel for necessary legal advice, case or statutory interpretation, or implementation of the document for any internal use. Readers who intend to rely on cases and statutes cited in this Guide should consult with the source document, confirm the interpretation, and investigate subsequent history. Questions or comments about, or suggestions for this Guide can be e-mailed to agodel@mass.gov.

I. Investigation

A. The Search and Seizure of Digital Evidence

As with physical evidence, searches and seizures of digital evidence must be reasonable to be valid. This section provides a summary of Fourth Amendment law as it relates to the search and seizure of digital evidence. It also references Article Fourteen of the Massachusetts Declaration of Rights, which parallels the Fourth Amendment, but is sometimes more expansive.

The Fourth Amendment states:

> The right of the people to be secure in their persons, houses, papers, and effects, against unreasonable searches and seizures, shall not be violated, and no Warrants shall issue, but upon probable cause, supported by Oath or affirmation, and particularly describing the place to be searched, and the persons or things to be seized.

U.S. Const. amend. IV.

Article Fourteen (art. 14) of the Massachusetts Declaration of Rights is similar to the Fourth Amendment, but since 1985, the Supreme Judicial Court ("SJC") has interpreted it as providing broader protections than its federal counterpart. Commonwealth v. Upton, 394 Mass. 363, 373 (1985) ("We conclude that art. 14 provides more substantive protection to criminal defendants than does the Fourth Amendment in the determination of probable cause.").

To determine whether law enforcement action constitutes an unreasonable search or seizure, courts ask two questions. First, was the action a search or seizure within the meaning of the Fourth Amendment? E.g., Commonwealth v. Magri, 462 Mass. 360, 366 (2012) ("In deciding whether police conduct violates the Fourth Amendment or art. 14 of the Massachusetts Declaration of Rights, we first determine whether a search, in the constitutional sense, has taken place."). Second, was that search or seizure reasonable? See, e.g., Riley v. California, 134 S. Ct. 2473, 2482 (2014) ("[T]he ultimate touchstone of the Fourth Amendment is reasonableness." (internal quotation marks omitted)).

1. Was There a Search or Seizure?

"A search implicating the Fourth Amendment occurs 'when an expectation of privacy that society is prepared to consider reasonable is infringed' and a seizure of property for purposes of the Fourth Amendment occurs when 'there is some meaningful interference with an individual's possessory interests in that property.'" Commonwealth v. Connolly, 454 Mass. 808, 819 (2009) (quoting United States v. Karo, 468 U.S. 705, 712 (1984)) (finding installation and use of a GPS tracking device on a car to be a seizure under Massachusetts art. 14 because it requires entering the vehicle and using the electricity of the defendant's car).

a) Searches and the Reasonable Expectation of Privacy

For a search to implicate the Fourth Amendment, the defendant must have a "reasonable expectation of privacy" in the place to be searched. Katz v. United States, 389 U.S. 347, 360 (1967) (Harlan, J., concurring); see also United States v. Heckencamp, 482 F.3d 1142, 1146 (9th Cir. 2007) (finding a college student had a reasonable expectation of privacy in the contents of his personal computer because it was located in his dorm room, was protected by a password, and was not subject to regular university monitoring). A person's expectation of privacy is reasonable "if he can demonstrate a subjective expectation that his activities would be private, and he can show that his expectation was one that society is prepared to recognize as reasonable." Heckencamp, 482 F.3d at 1146 (internal quotation marks, brackets, and citations omitted). Individuals generally have a reasonable expectation of privacy in their personal computers and files. See id. at 1146–47 (listing cases to that effect). In Heckencamp, "[t]he salient question [was] whether the defendant's objectively reasonable expectation of privacy in his computer was eliminated when he attached it to the university network." Id. at 1146.

When challenging the constitutionality of a search, the defendant bears the initial burden of establishing that a search occurred. See Commonwealth v. D'Onofrio, 396 Mass. 711, 714-15 (1986); Commonwealth v. Alvarez, 480 Mass. 1017, 1018 (2018) (holding that a police officer observing a text message on the screen of a phone that was lawfully in his custody, when he glanced at the phone because it started ringing, was not a search absent evidence of further action by the officer).

The sections below explore the contours of the reasonable expectation of privacy, discussing: (1) standing; (2) one-party consent; (3) the third-party doctrine; (4) surveillance in public; (5) file sharing over networks; (6) reasonable expectations of privacy in data that is not one's own; and (7) diminished privacy expectations in the context of probationers, parolees, and court-ordered monitoring.

(1) Standing

Standing to challenge a warrantless search or seizure may be in question when the location or item searched or seized does not belong to the challenging party.

- Commonwealth v. Fredericq, 482 Mass. 70 (2019). The defendant, charged with trafficking cocaine, successfully suppressed CSLI data tracking the cell phone location of the driver of the car in which he was riding. Id. at 71. The Court held that the defendant had standing to challenge the CSLI search because he was "a passenger of the vehicle whose location was effectively being continually tracked through CSLI monitoring," and had a reasonable expectation of privacy in his movements. Id. at 77.

- Commonwealth v. Lugo, 482 Mass. 94 (2019). The court found that a juvenile defendant had no standing to challenge the "pinging" of another juvenile's cell phone in a second-degree murder case involving a botched robbery. Id. at 105, 107-08. After determining that the "pinging" of the defendant's and his cohort's cell phones were searches under Commonwealth v. Almonor, 482 Mass. 35 (2019), the SJC turned to the question of whether the defendant had standing to challenge those searches. Lugo, 482 Mass. at 107; see Almonor, 482 Mass. at 47-48 (causing a cell phone to reveal its real-time location constitutes a search under Article 14). The Court held that without a possessory interest in the other juvenile's cell phone, the defendant did not have

automatic standing to contest the search. Lugo, 482 Mass. at 107. Further, he did not have actual standing because, "[a]lthough the defendant was with [the other juvenile] when her location was searched, the period of the search—less than two hours—was not sufficiently significant to allow the defendant standing." Id. at 108. The Court found that the defendant did have standing to challenge the search of his own cell phone, but the information gathered from that search—the location of his residence—had already been gathered by other means, so no evidence came from the search. Id. at 108-09.

(2) One Party Consent

In Massachusetts, "one party consent" does not negate a reasonable expectation of privacy of the non-consenting party. While the Supreme Court held that warrantless electronic surveillance with "one party consent" does not implicate the Fourth Amendment, United States v. White, 401 U.S. 745, 751 (1971), the SJC found such surveillance impermissible under art. 14 of the Massachusetts Declaration of Rights, Commonwealth v. Blood, 400 Mass. 61, 70 (1987). Because it found there is a reasonable expectation of privacy in conversations that occur among "a narrow compass of known listeners" in private homes, the SJC concluded that the warrantless electronic surveillance was a violation of that constitutional provision. Id. Accordingly, "one party consent" did not obviate the need for a warrant under art. 14. Id.

(3) The Third-Party Doctrine

In United States v. Miller, 425 U.S. 435 (1976), and Smith v. Maryland, 442 U.S. 735 (1979), the Supreme Court articulated what has become known as the "third-party doctrine." Under this doctrine, "the Fourth Amendment does not prohibit the obtaining of information revealed [by a suspect] to a third party and conveyed by him to Government authorities," regardless of the suspect's expectation of how the information might be used. Miller, 425 U.S. at 443. Massachusetts has traditionally followed the Supreme Court's guidance on the third-party doctrine. See, e.g., Commonwealth v. Cote, 407 Mass. 827, 833–36 (1990) (holding that a defendant had no reasonable expectation of privacy in telephone message records held by a third-party answering service for the reasons cited in Miller).

- United States v. Jones, 565 U.S. 400 (2012). Unanimous decision holding that a Fourth Amendment "search" occurs where law enforcement places a GPS device on defendant's car. Id. at 411. The Court's opinion, authored by Justice Scalia, focused on the Government's intrusion on the defendant's physical property and applied "an 18th-century guarantee against unreasonable searches, which we believe must provide *at a minimum* the degree of protection it afforded when it was adopted." Id. In contrast, Justice Sotomayor's concurrence in Jones emphasized that "the Fourth Amendment is not concerned only with trespassory intrusions on property," id. at 954, and brought the issues later addressed by Carpenter v. United States, 138 S. Ct. 2206 (2018), to the forefront, see Jones, 565 U.S at 417 (Sotomayor, J., concurring) ("More fundamentally, it may be necessary to reconsider the premise that an individual has no reasonable expectation of privacy in information voluntarily disclosed to third parties. This approach is ill suited to the digital age…").

Carpenter v. United States, 138 S. Ct. 2206 (2018) and Commonwealth v. Augustine, 467 Mass. 230 (2014) modified the third-party doctrine for at least one specific type of information—cell site location information ("CSLI"). The holding of Carpenter is that law enforcement effects a Fourth Amendment "search" by obtaining at least one week's worth of a defendant's CSLI from a third-party cellular provider. See Carpenter, 138 S. Ct. 2206, 2217 n.3. The comparable holding from Augustine is that subpoenaing two weeks' of CSLI information is a "search." See Augustine, 467 Mass. 230, 233, 255 (2014).

- Carpenter v. United States, 138 S. Ct. 2206 (2018). The Government successfully applied for two court orders directing Carpenter's wireless carriers to disclose Carpenter's CSLI for select time periods within a four-month span. 138 S. Ct. at 2212. The first order sought 152 days of CSLI from MetroPCS, and the second order sought seven days of CSLI from Sprint. Id. Based in part off the information the Government acquired from Carpenter's CSLI, the Government charged Carpenter with six counts of robbery and six counts of carrying a firearm during a federal crime of violence. Id.

  The Supreme Court held that the Government's acquisition of Carpenter's CSLI was a search of Carpenter that required a warrant supported by probable cause even though the Government acquired the CSLI from third-party wireless carriers. Id. at 2221. The Court declined to apply an expansive version of the third-party doctrine to CSLI partly because the data can reveal immense amounts of intimate information about who a suspect has been associating with and where a suspect has been travelling. Id. at 2219 ("There is a world of difference between the limited types of personal information addressed in Smith and Miller and the exhaustive chronicle of location information casually collected by wireless carriers today."). Furthermore, because cell phones are a nearly ubiquitous part of daily life and virtually every activity on a phone generates CSLI, the Court rejected the claim that Carpenter voluntarily disclosed his CSLI to his wireless carriers. Id. at 2220 ("Neither does the second rationale underlying the third-party doctrine—voluntary exposure—hold up when it comes to CSLI. Cell phone location information is not truly 'shared' as one normally understands the term.").

  While the Court stated that its ruling was "a narrow one" that applied only to CSLI, id., the dissents argued that the decision will have far-reaching consequences, e.g., Carpenter, at 2234 (Kennedy, J., dissenting) ("The Court's decision also will have ramifications that extend beyond cell-site records to other kinds of information held by third parties."); see also id. at 2262 (Gorsuch, J., dissenting) ("Today the Court suggests that Smith and Miller distinguish between *kinds* of information disclosed to third parties and require courts to decide whether to 'extend' those decisions to particular classes of information, depending on their sensitivity." (emphasis in original)); cf. Commonwealth v. Augustine, 467 Mass. 230, 253 (2014) (holding that although "we do not reject categorically the third-party doctrine," some forms of electronic evidence require "a different approach"). Given Americans' increasing dependence on technological devices that generate large amounts of personal data, it is possible that the Supreme Court's reasoning in Carpenter will someday result in a larger overhaul of the third-party doctrine.

- Commonwealth v. Wilkerson, 486 Mass. 159 (2020). In a more recent case similar to Hobbs, considering retroactive application of Augustine's warrant requirement for CSLI data, the SJC again held constitutional a pre-Augustine CSLI request because the associated 18 U.S.C. § 2703 application satisfied the requisite probable cause standard. Id. at 166-72.

- Commonwealth v. Almonor, 482 Mass. 35 (2019). This case concerned an issue of first impression involving whether police action that causes an individual's cell phone to transmit its real-time location information violates any reasonable expectation of privacy. Id. at 41. Neither the Supreme Court's decision in Carpenter v. United States, 138 S. Ct. 2206, 201 L.Ed.2d 507 (2018) nor the SJC's decision in Commonwealth v. Augustine, 467 Mass. 230, 4 N.E.3d 846 (2014) addressed this precise issue. The Commonwealth charged the defendant with murder after he shot and killed an individual and subsequently fled the scene of the crime. After a witness gave them the defendant's phone number, the police filed a "mandatory information for exigent circumstance requests" form with the telephone service provider. The telephone service provider "pinged" the defendant's phone and revealed the defendant's GPS coordinates to the police. Id. at 38-39. The Court granted the defendant's motion to suppress the warrantless "pinging." Id. The SJC reversed, holding that the warrantless pinging of the defendant's phone constituted a search under the Article 14 of the Massachusetts constitution, but that the warrantless search was justified by exigent circumstances, namely that the defendant was at large and believed to be armed and dangerous. It noted that searches occur when the government intrudes on a person's reasonable expectation of privacy and concluded that the defendant had a reasonable expectation of privacy in his cellular location data. Id. at 43-44. The Court held that real-time location data serves as a "proxy for the real-time location of the individual" because "cell phones are an indispensable part of daily life and exist as almost permanent attachments to their users' bodies." Id. at 45 (internal quotations omitted).

- Commonwealth v. Hobbs, 482 Mass. 538 (2019). In 2011, the government received historical CSLI from defendant's cell service provider pursuant to a 18 U.S.C. § 2703 order, without a warrant — well before 2014, when Augustine first articulated the warrant requirement for historical CSLI requests. Id. at 542-44. The SJC held that the government could "still satisfy the warrant requirement if it can establish that its 'application for the § 2703[] order met the requisite probable cause standard of art. 14,'" i.e., the same probable cause standard required of an affidavit in support of a search warrant for historical CSLI. Id. at 544 (quoting Augustine, 467 Mass. at 256). (This also comports with Commonwealth v. Balboni, 89 Mass. App. Ct. 651 (2016), an earlier case considering retroactive application of Augustine to CSLI data obtained pre-Augustine pursuant to an 18 U.S.C. § 2703 order.)

- Commonwealth v. Fulgiam, 477 Mass. 20 (2017). In Fulgiam, the Commonwealth obtained recent text messages of the defendant pursuant to § 2703(a) of the Federal Stored Communications Act. Id. at 28; 18 U.S.C. § 2703(a) (2012). The Court held, on federal statutory and state constitutional grounds, that law enforcement required a warrant to obtain the text messages. See 477 Mass. at 31. An individual under Massachusetts state law has a "reasonable expectation of privacy in his text messages." Id. at 33. The third-party doctrine did not require

otherwise because "the nature of cellular telephone technology . . . [and] use in our current society render the third-party doctrine inapposite" in this context. Id. at 34.

- Commonwealth v. Estabrook, 472 Mass. 852 (2015). The SJC considered a request for CSLI and concluded that a defendant's reasonable expectation of privacy under art. 14 of the Massachusetts Declaration of Rights is not violated by a warrantless request for production of up to six (6) hours of historical CSLI. Id. at 854. It also established that the relevant consideration in determining the reasonable expectation of privacy is the length of time for which CSLI data is requested, not the time span ultimately sought to be introduced at trial. Id. at 858–59.

- Commonwealth v. Augustine, 467 Mass. 230 (2014). Police investigating a murder obtained the defendant's CSLI from his service provider pursuant to a 18 U.S.C. § 2703(d) order. Id. at 233. These orders are not warrants, so they cannot be used to effectuate a search for information protected by the Fourth Amendment or art. 14. The CSLI obtained helped police determine the defendant's location over the period they were investigating. See id. at 233–34. The Court considered but ultimately rejected the Commonwealth's argument that the third-party doctrine negated any reasonable expectation of privacy the defendant had in his CSLI. Id. at 241–56. It reasoned that art. 14 does not protect information voluntarily and intentionally transmitted to third parties (like the number dialed to initiate a call) but it does protect information incidentally transmitted (like the location information the cell phone provider acquires as a result of cell phone technology). Id. at 249–52. The Court found that the defendant therefore had a reasonable expectation of privacy in his CSLI, which, under art. 14, means that "the government must obtain a search warrant to obtain it." Id. at 252.

- United States v. Warshak, 631 F.3d 266 (6th Cir. 2010). Law enforcement obtained thousands of emails related to fraudulent marketing claims from the defendant's Internet Service Provider (ISP). Id. at 281. The defendant challenged such access to his email on Fourth Amendment grounds. Id. at 282. The Sixth Circuit agreed and held that "a subscriber enjoys a reasonable expectation of privacy in the contents of emails 'that are stored with, or sent or received through, a commercial ISP.'" Id. at 288 (quoting Warshak v. United States, 490 F.3d 455, 473 (6th Cir. 2007)). In finding that a reasonable expectation of privacy existed in this case, the Sixth Circuit analogized email transmitted via ISP to the contents of telephone conversations and closed letters, each of which received Fourth Amendment protection. See id. at 286–87. Rebutting the third-party doctrine argument, the Sixth Circuit—similar to the SJC in Augustine above—noted that the ISP in this case was an *intermediary* rather than the intended target of a conversation. Id. at 288. Thus, "[t]he government may not compel a commercial ISP to turn over the contents of a subscriber's emails without first obtaining a warrant based on probable cause." Id. Though binding only in the Sixth Circuit, this case has been cited by some of the largest email providers in requiring warrants to obtain the contents of email. See Brendan Sasso, *Facebook, email providers say they require warrants for private data seizures*, The Hill (Jan. 25, 2013), http://thehill.com/policy/technology/279441-facebook-email-providers-require-warrant-for-private-data. The Department of Justice also requires its prosecutors nationwide to follow this holding.

(4) Surveillance in Public: Public View Principle, Mosaic Theory, and More

Under the "public view" principle, individuals generally do not have a reasonable expectation of privacy in items or places that they expose to the public. California v. Ciraolo, 476 U.S. 207, 213 (1986) ("[t]he Fourth Amendment protection of the home has never been extended to require law enforcement officers to shield their eyes when passing by a home on public thoroughfares"). In particular, "the government, without… a warrant, may use electronic devices to monitor an individual's movements in public to the extent that the same result could be achieved through visual surveillance." Augustine, 467 Mass. at 252. (Note that this principle as stated in Augustine is in some tension with the SJC's decision in Mora, as discussed below.)

Courts have limited the public view principle in "constitutionally sensitive" settings (epitomized by the home) where individuals have a strong expectation of privacy that society is prepared to recognize, especially where technology has enabled previously infeasible collection of information about the inside of a home via surveillance technology situated outside the home (i.e., in public). See Kyllo v. United States, 533 U.S. 27 (2001) (holding warrantless surveillance of heat levels inside a home using thermal-imaging equipment outside the home to be an unconstitutional search).

Recent developments suggest that courts are increasingly recognizing constitutional warrant requirements in more situations involving surveillance in public places, when such surveillance is particularly expansive and detailed, or implicates "constitutionally sensitive" domains such as the home. The SJC has recognized the "mosaic theory" or "aggregation principle for the technological surveillance of public conduct," under which "'the cumulative nature of… information collected [when collected over a long enough period] implicates a privacy interest on the part of the individual who is the target of the tracking,'" even when the individual activities or data points surveilled would not enjoy constitutional protection taken alone. Commonwealth v. McCarthy, 484 Mass.493, 503-04 (2020)(quoting Augustine, 467 Mass. at 253); see also Jones, 565 U.S. at 416 (Sotomayor, J., concurring).

- Commonwealth v. McCarthy, 484 Mass. 493 (2020). The Court considered the constitutionality of warrantless use of automatic license plate readers (ALPRs), which are "cameras combined with software that allows them to identify and 'read' license plates on passing vehicles." Id. at 494. Drawing on the "mosaic theory," the SJC stated that "[a] detailed account of a person's movements, drawn from electronic surveillance, encroaches upon a person's reasonable expectation of privacy because the whole reveals far more than the sum of the parts," and noted that "[w]ith enough cameras in enough locations, the historic location data from an ALPR system in Massachusetts would invade a reasonable expectation of privacy and would constitute a search for constitutional purposes." Id. at 504, 506. On the facts of the case, however, the SJC found no constitutional violation: "[T]he analysis should focus, ultimately, on the extent to which a substantial picture of the defendant's public movements are revealed by the surveillance [at issue]. … [F]or this case, we consider the constitutional import of four cameras placed at two fixed locations… [and] conclude that the limited use of ALPRs in this case does not constitute a search within the meaning of either art. 14 or the Fourth Amendment." Id. at 506, 508,509.

Pole camera surveillance is a notable area where courts' approaches in applying the "public view" principle have been shifting recently, especially after Carpenter, 138 S. Ct. 2206, and Jones, 565 U.S. 400. While "[m]ost courts to have addressed pole camera surveillance have concluded that it does not infringe on any reasonable expectation of privacy" under the "public view" principle, "several courts have reassessed prolonged pole camera surveillance." Commonwealth v. Mora, 485 Mass. 360, 364-65 (2020) (citing as examples United States v. Vargas, No. CR-13-6025 (E.D. Wash. Dec. 15, 2014) (six weeks of pole camera surveillance was search); State v. Jones, 2017 S.D. 59 (2017) (two months was search); People v. Tafoya, 2019 COA 176 (Colo. App. 2019) (three months was search)). Mora is the most recent Massachusetts case on pole camera surveillance.

- Commonwealth v. Mora, 485 Mass. 360 (2020). Investigators installed pole cameras on public telephone and electric poles for the purpose of surveilling the defendants. Id. at 361. Most of the cameras were aimed at the homes of defendants or other individuals; one was aimed at a street that a defendant used to conduct his drug business. Id. at 362. The cameras had video but not audio recording capabilities, they could not view inside any residence, and they did not have infrared or night vision capabilities; however, investigators could remotely zoom and angle the cameras in real time. Id. The footage was stored in a searchable format that allowed officers to review previously-recorded events. Id. The SJC held that the pole camera surveillance of the defendants' homes was a warrantless search in violation of Article 14 of the Massachusetts Constitution. Id. at 370-76. Pole camera surveillance of public streets frequented by the defendants away from their homes was not subject to a warrant requirement, however, as defendants had no reasonable expectation of privacy in those locations. Id. at 369. The defendants' homes did not have fencing or other attempts to shield the residences from view, a fact that the court held immaterial to the constitutionality of surveillance. Id. at 366-67. The court noted that the Fourth Amendment might well require the same outcome, but declined to reach the federal constitutional question as the case could be resolved on state constitutional grounds. Id. at 361.

(5) Peer-to-Peer and Other Network File Sharing

The following cases illustrate when making data accessible to the public or certain networks via peer-to-peer file sharing techniques eliminates one's reasonable expectation of privacy.

- Commonwealth v. Kaupp, 453 Mass. 102 (2009). Defendant was an instructor at a high school's electronics shop. Police officers remotely observed pirated movies and child pornography in an open share folder of a computer named Joester7437, which was connected to the school's network. Id. at 103–05. [Note: Joester7437 was later determined to belong to a student. Id. at 105.] While searching the school for Joester7437, the police found a computer/server named "Nightcrawler." Id. at 105. Nightcrawler's screen displayed an open share folder with the same pirated movie as was found on Joester7437. Id. "The source of the open share was Sinister, another unauthorized computer logged onto the high school's network." Id. The police found Sinister in the defendant's office, but that computer was password protected. Id. They seized Sinister "on probable cause to believe that it contained child pornography and copyrighted intellectual property." Id. They then received a search warrant for it based on an affidavit

alleging: (1) both shared folders (in Joester7437 and Sinister) had a copy of the same pirated movie, (2) Joester7437's open share folder had child pornography, and (3) the defendant stated he could not guarantee there was no child pornography on his computer. Id. at 111. The defendant did not dispute that he had no reasonable expectation of privacy in files shared with the network. Id. at 107. Instead, the defendant argued that he did have a reasonable expectation of privacy in his *private* files and that there was no probable cause to search the private files for child pornography. Id. The Court held that the affidavit in support of the search warrant did not establish probable cause to believe that child pornography was located in the private files on the defendant's computer (Sinister). Id. at 111. The SJC noted: "None of these facts, even when considered together, provided a 'substantial basis' to believe that the defendant's private files contained child pornography." Id.

- Commonwealth v. Hay, 90 Mass. App. Ct. 1122 (2016) (unpublished). Defendant argued that the pre-warrant investigation was a "search" within the Fourth Amendment because the P2P [peer-to-peer] network was open only to a small group of known individuals, id. at *6, and because law enforcement used specialized SHA technology to identify a file on the defendant's computer that was likely to contain child pornography, id. at *7 (citing Kyllo v. United States, 533 U.S. 27, 40 (2001) (government's use of device not in general public use "to explore details of the home that would previously have been unknowable without physical intrusion" is a search)). The appeals court held that, though it is possible that a file-sharing network open only to a small group of known individuals might give rise to a reasonable expectation of privacy in the files, the defendant had not argued or shown that the network in question here (Gnutella), as used with the specific software client used by the defendant (LimeWire), was such a network. Id. at *7. The appeals court also held the investigation was not a search because the defendant offered no evidence that the SHA technology enabled law enforcement to learn any more about the files than could any other P2P user. Id.

- United States v. Borowy, 595 F.3d 1045 (9th Cir. 2010). Defendant shared child pornography over a peer-to-peer file sharing network that was being monitored by police using special forensic software. Id. at 1046–47. Police remotely downloaded the incriminating files from the defendant's folder on the peer-to-peer network. Id. at 1047. The Ninth Circuit held the defendant had no reasonable expectation of privacy in files that anyone who had access to the network could download. See id. at 1048. The court ruled this way notwithstanding the defendant's attempts to keep the files private because even though his subjective intent demonstrated a desire for privacy, it would be objectively unreasonable to uphold an expectation of privacy "in the face of such widespread public access." Id. The court also rejected the defendant's argument that the special forensic software used by investigators constituted a search. It cited several other cases supporting the proposition that special tools could be used to access already-public information, like the files in this case, because public information enjoys no Fourth Amendment protections. See id. at 1048.

- United States v. King, 509 F.3d 1338 (11th Cir. 2007). Defendant had child pornography on a personal computer connected to a military base network. Id. at 1339. His "files were 'shared' over

the entire base network," id. at 1342, and an airman searching the network remotely downloaded those files, id. at 1340–41. The defendant took several steps—ultimately unsuccessful—that he believed shielded his hard drive from access by others. Id. at 1341. Even though the defendant manifested a subjective expectation of privacy by attempting to secure the files, id., the court found that his failure to actually secure the files rendered that expectation objectively unreasonable, id. at 1342. In reaching this conclusion, the court analogized to a prior case holding that a defendant had no objectively reasonable expectation of privacy in the unsecured common area of a multi-unit apartment building. Id. In both cases, the fact of public access rendered any subjective expectation of privacy objectively unreasonable. Id.

- United States v. Ladeau, No. 09–40021–FDS, 2010 WL 1427523 (D. Mass. April 7, 2010). Defendant shared child pornography over a secured peer-to-peer network that allowed him to select who could download his files. Id. at *1. He allowed downloads by a private user who then turned his account over to the Royal Canadian Mounted Police. Id. The court held that even though the defendant manifested a subjective expectation of privacy through his actions, this expectation was not objectively reasonable because "a person has no legitimate expectation of privacy in information he voluntarily turns over to third parties." Id. at *4. "No matter how strictly Ladeau controlled who accessed his computer files, he had no control over what those people did with information about the files once he granted them access." Id. So, "[o]nce Ladeau turned over the information about how to access the network to a third party, his expectation of privacy in the network became objectively unreasonable." Id. at *5.

- United States v. Thomas, Nos. 5:12–cr–37, 5:12–cr–44, 5:12–cr–97, 2013 WL 6000484 (D. Vt. Nov. 8, 2013). Defendants in this case shared child pornography over peer-to-peer networks. Id. at *17. Police found the defendants by using automated scanning tools designed to detect child pornography shared on peer-to-peer networks. Id. After a lengthy explanation of file sharing, hash values, and investigative software and testing tools, id. at *2–6, the court held that the defendants had no reasonable expectation of privacy in files they shared publicly on a peer-to-peer network, id. at *19–20. In making this ruling, the court relied on United States v. Borowy, 595 F.3d 1045 (9th Cir. 2010), along with other circuit cases. Id. at *19. The defendants argued against the inclusion of partially downloaded files in the evidence used against them, saying they would not have shared those files once the download was complete, but the court rejected this argument because those files were nonetheless being shared when the police searched and were therefore publicly accessible. Id. at *17. [Note: This case contains clear and thorough explanations of peer-to-peer networks, hash values, and TLO's CPS suite of tools.]

(6) Expectation of Privacy in Data That Is Not One's Own

The following cases address claims of a reasonable expectation of privacy in data that, in some sense, is not the movant's.

- Commonwealth v. Fredericq, 482 Mass. 70 (2019). The defendant, charged with trafficking cocaine, successfully sought to suppress CSLI data tracking the cell phone location of the driver of the car in which he was riding. Id. at 71. The Court held that the defendant had standing to

challenge the CSLI search because he was "a passenger of the vehicle whose location was effectively being continually tracked through CSLI monitoring," and had a reasonable expectation of privacy in his movements. Id. at 77.

- Commonwealth v. Lugo, 482 Mass. 94 (2019). The court found that a juvenile defendant had no standing to challenge the "pinging" of another juvenile's cell phone in a second-degree murder case involving a botched robbery. Id. at 105,107-08. After determining that the "pinging" of the defendant's and his cohort's cell phones were searches under Almonor, the SJC turned to the question of whether the defendant had standing to challenge those searches. Lugo, 482 Mass. at 107; see Commonwealth v. Almonor, 482 Mass. 35, 47-48 (2019) (causing a cell phone to reveal its real-time location constitutes a search under Article 14). The Court held that without a possessory interest in the other juvenile's cell phone, the defendant did not have automatic standing to contest the search. Lugo, 482 Mass. at 107. Further, he did not have actual standing because "[a]lthough the defendant was with [the other juvenile] when her location was searched, the period of the search—less than two hours—was not sufficiently significant to allow the defendant standing." Lugo, 482 Mass. at 108. During the investigation, police became concerned that a second juvenile involved in the murder-robbery might be in danger, and contacted that individual's cell phone service provider, obtaining location data, and the names and numbers from recent calls. Id. at 106. Among these was the defendant's phone number, which police also "pinged," showing that he was at his residence with the second juvenile. Id. Police obtained a search warrant for the residence and "discovered evidence linking the defendant to the killing, including the murder weapon." Id. The SJC pointed out that, even if there had been no standing issue, the circumstances of police investigating a homicide and concerned for the cell phone user's safety would have rendered the defendant's challenge futile under the emergency aid exception. Id. at 108. The Court also held that, while the defendant had standing to challenge the search of his own cell phone, the information gathered from that search—the location of his residence—had already been gathered by other means, so no evidence came from the search. Id. at 109.

- Commonwealth v. Bryant, 447 Mass. 494 (2006). Law enforcement seized the "main file server" of a law firm pursuant to a warrant. See Commonwealth's Brief, 2005 WL 4062684, at *10 (Dec. 2005). The defendant, an employee of the firm, moved to suppress files he had worked on. See Bryant, 447 Mass. at 495. Denying the motion to suppress, the Supreme Judicial Court held that the defendant did not have a "reasonable expectation of privacy" in the firm's files and therefore did "not establish[] that he ha[d] standing to challenge the seizure of the files." See id. at 497.

(7) Probationers, Parolees, and Court-Ordered Monitoring

Probationers subject to court-ordered monitoring have a diminished expectation of privacy.

- Commonwealth v. Feliz, 481 Mass. 689 (2019) (decided on the same day as Commonwealth v. Johnson, 481 Mass. 710 (2019), infra). The SJC held that Mass. Gen. Laws ch. 256, § 47, which mandates GPS monitoring as a condition of probation in connection with most sex offense convictions, is "overinclusive" because "GPS monitoring will not necessarily constitute a

reasonable search for all individuals convicted of a qualifying sex offense." Id. at *1; Mass. Gen. Laws ch. 256, § 47 (2018). The Court held that, under Article 14 of the Massachusetts Declaration of Rights, an individualized determination of reasonableness is required for any search that is "more than minimally invasive," and "GPS monitoring is not a minimally invasive search." 2019 WL at *7. Thus, a judge must "conduct a balancing test that weighs the Commonwealth's need to impose GPS monitoring against the privacy invasion occasioned by such monitoring." Id. at *1. Whether the monitoring is determined to be reasonable "depends on a constellation of factors," and "no one factor will be dispositive in every case." Id. at *8. The fact that a probationer accedes to a contract of probation that requires GPS monitoring or signs a GPS equipment contract does not constitute consent that waives the probationer's Article 14 rights. Id. at *8. With respect to Mr. Feliz, the SJC held that "the Commonwealth's particularized reasons for imposing GPS monitoring . . . do not outweigh the privacy intrusion occasioned by the requirement of GPS monitoring." Id. at *8; accord id. at *10–13. In support of that conclusion, the Court noted that the defendant "was convicted of noncontact sex offenses," and that the Commonwealth "ha[d] not presented evidence sufficient to indicate that th[e] defendant pose[d] a threat of reoffending or otherwise violating the terms of his probation." Id. at *10.

- Commonwealth v. Johnson, 481 Mass. 710 (2019) (decided on the same day as Commonwealth v. Feliz, supra). At defendant's trial for breaking and entering and larceny, the Commonwealth introduced GPS location data recorded from a GPS monitoring device that the defendant was wearing as a condition of probation. Id. at *1. The historical GPS data had been retrieved and reviewed without a warrant after the defendant's probation was completed. Id. at *2–3, *6. Defendant argued that the trial court erred in admitting the GPS location data at trial. Id. at *3. The SJC held that (1) the original imposition of GPS monitoring as a condition of defendant's probation was a search, but it was reasonable "in light of the defendant's extensive criminal history and willingness to recidivate while on probation"; and (2) no subsequent search occurred because, "once the GPS device was attached to the defendant, he did not possess a reasonable expectation of privacy in data targeted by police to determine his whereabouts at the times and locations of suspected criminal activity that occurred during the probationary period." Id. at *1. The SJC noted that the police had conducted a narrow analysis to determine whether the defendant was present at times and places where crimes had been committed, and that a broader "indiscriminate rummaging" through months of GPS data "might raise different, more difficult constitutional questions about objective expectations of privacy, even for a probationer subjected to GPS monitoring." Id. at *10.

- Commonwealth v. Johnson, 91 Mass. App. Ct. 296 (2017). Police investigating a robbery "mapped" the location of a defendant wearing a GPS monitoring device while out on bail for a domestic violence offense. See id. at 298. This process revealed that the defendant was near the scene of the robbery at the time of the break-in. See id. The Commonwealth introduced the GPS evidence at trial and the defendant was convicted. Id. at 296–97. The Massachusetts Appeals Court affirmed, rejecting defendant's argument that he—subject to court ordered monitoring—retained a reasonable expectation of privacy in his movements and thus was subject to a Fourth Amendment "search". See id. at 306.

Parolees have a diminished expectation of privacy—lower even than that of probationers—both under the Fourth Amendment, Samson v. California, 547 U.S. 843, 850 (2006), and under art. 14, Commonwealth v. Moore, 473 Mass. 481, 485 (2016). In Moore, the SJC determined that, "at least with respect to a search of the parolee's home," the reasonable suspicion standard associated with stop and frisk is the appropriate standard for a warrantless search. Id. at 487. Reasonable suspicion for the search of the home was supplied here by an anonymous tip that the parolee was dealing drugs, coupled with evidence of the parolee's conduct consistent with that tip in light of the parole officer's experience with narcotics and with other parolees. Id. at 490.

b) Seizures and Interference with Possessory Interest

Police actions reaching an individual's property constitute a seizure when "there is some meaningful interference with an individual's possessory interests in that property." Commonwealth v. Connolly, 454 Mass. 808, 819 (2009) (internal quotation marks omitted). As Justice Stevens noted in Texas v. Brown, 460 U.S. 730 (1983), "a seizure is usually preceded by a search, but when a container is involved the converse is often true . . . for example, the seizure of a locked suitcase does not necessarily compromise the secrecy of its contents . . . ." Id. at 747–48 (Stevens, J., concurring). Relying on ample precedent from other courts, the Supreme Judicial Court has found the entire computer analogous to such a closed container for seizure purposes. See Commonwealth v. McDermott, 448 Mass. 750, 766 (2007) (agreeing with lower-court "judge's analogy to closed containers with respect to the seizure of the computers and disks"). Whether a seizure has occurred is usually obvious and rarely contested. The following cases concern less-common circumstances.

- Berger v. New York, 388 U.S. 41 (1967). The Court held that wiretaps "seize" conversations in violation of the Fourth Amendment. Id. at 59. The Court did not expand further on how it came to this conclusion, but this case is often cited for the proposition that intangibles (e.g., data) can be seized in the constitutional sense. See, e.g., LeClair v. Hart, 800 F.2d 692, 695 (7th Cir. 1986) ("Following Berger, it has been clear that the Fourth Amendment embraces more than just the forced physical removal of tangible objects . . . . Indeed, Berger stands for the proposition that the government may seize intangible items, such as the information contained in the financial documents which the IRS agents copied.").

- Commonwealth v. Connolly, 454 Mass. 808 (2009). As part of an investigation of a suspected drug dealer, police installed a GPS tracking device in his car. Id. at 10. To install the device, police opened the car's engine compartment, placed the tracking device inside, and attached it to the car's battery. See id. at 812. The Supreme Judicial Court held that installing the GPS device was a seizure within the context of art. 14 of the Massachusetts Declaration of Rights. Id. at 822. First, the installation and presence of the tracker constituted a physical intrusion on the defendant's property. Id. Second, the government's use of the vehicle to obtain information was itself an interference with the defendant's interest in it. Id. at 823 ("It is a seizure not by virtue of the technology employed, but because the police use private property (the vehicle) to obtain information for their own purposes.").

- United States v. Hicks, 438 F. App'x 216 (4th Cir. 2011). Defendant destroyed his hard drive after he found out he was under investigation for possession of child pornography. Id. at 18. After he was convicted of destroying records in a federal investigation, the defendant attacked his conviction on constitutional grounds. Id. One of these challenges was that by criminalizing his destruction of his hard drive, the government had interfered with his possessory interest in that hard drive, effectively seizing it in violation of the Fourth Amendment. Id. at 219. The Fourth Circuit found that there was no meaningful interference with the defendant's possessory interest because he did not have a property right in images of child pornography. Id. (citing Helton v. Hunt, 330 F.3d 242, 247 (4th Cir. 2003), for the proposition that there is no property right in contraband).

The case summarized below discusses the return of unlawfully seized property:

- Commonwealth v. Salmons, 96 Mass. App. Ct. 61 (2019). The defendant pled guilty to assault and battery by means of a dangerous weapon, intimidating a witness, strangulation, and other charges. The police had seized the defendant's three cell phones at the time of arrest, but the seizure was subsequently found unlawful based on the SJC's decision in Commonwealth v. White, 475 Mass. 583 (2016) (probable cause to seize or search a cell phone requires "information establishing the existence of particularized evidence likely to be found there," id. at 593). Salmons, 96 Mass. App. Ct. at 62. The defendant filed a motion for the return of his cell phones, which was granted. Id. at 62. Eight months later, the Commonwealth moved to wipe the content of two of the phones before returning them, because they contained "numerous and sexually explicit photographs and videos of the defendant and [the victim]." Id. The motion to wipe these phones was allowed, id. at 65, but the Appeals Court reversed. Relying on Commonwealth v. Sacco, 401 Mass. 204 (1987), the Court found that "when, as here, property is unlawfully seized without a warrant, cannot be used as evidence, and is not unlawful to possess, it should be returned, upon proper motion, to its undisputed owner or the owner's representative." Salmons, 96 Mass. App. Ct. at 68. There was no factual finding that harm to the victim would occur unless the phones were wiped. Id. at 69. Further, the Commonwealth's reliance on Beldotti v. Commonwealth, 41 Mass. App. Ct. 185 (1997) was misplaced because the public interest standard of G.L. c. 276, § 3 did not apply to property seized unlawfully and because the "connection between the crime and the property here [was] far more attenuated than in [Beldotti]." Id. at 69-70.

c) Private Party Searches

(1) Initial Search Made by Private Party

"[W]hen the state conducts a search in response to information that a private party obtained and communicated to the government, 'the legality of the governmental search must be tested by the scope of the antecedent private search.'" Commonwealth v. Cormier, 28 Mass. L. Rptr. 489, at *4 (Mass. Super. Ct. 2011) (quoting United States v. Jacobsen, 466 U.S. 109, 116 (1984)). Where the government searches something in which a private party has already eroded a suspect's expectation of privacy, the Fourth Amendment is not implicated. Id. (citing Jacobsen, 466 U.S. at 116). Crucially, police examination of

materials "initially discovered and viewed by a private party" can be more thorough than that private party's examination and still fall within the scope of the private party search. Id. at *5 (citing Commonwealth v. Raboin, 24 Mass. L. Rptr. 278, 282–83 (Mass. Super. Ct. 2008)). A more detailed analysis of Commonwealth v. Cormier below demonstrates how the private party search doctrine applies to digital evidence cases.

- Commonwealth v. Cormier, 28 Mass. L. Rptr. 489 (Mass. Super. Ct. 2011). Defendant brought a computer hard drive to a data recovery shop. Id. at *1. An employee at the shop copied the files from the damaged hard drive and viewed several of them at random to determine if they had been transferred successfully. Id. Some of the files he viewed contained child pornography. Id. Police then inspected several files from the hard drive to confirm the presence of child pornography before obtaining a search warrant for the drive and the defendant's house. Id. at *2. Police found more child pornography at the defendant's house, and he was later charged with possession. Id. The trial judge denied defendant's motion to suppress because the warrantless search conducted by police was within the scope of the preceding private party search. Id. at *4–6. Because the computer technician had previously viewed files from the hard drive, the court found that the defendant's expectation of privacy "had already been eroded," so the subsequent police search did not implicate the Fourth Amendment. Id. at *5.

(2) Warrantless Search: Private Citizen or State Actor

If the intent of a private party conducting a search is not independent of the government's intent, however, the private party becomes an agent of the government, implicating the Fourth Amendment and art. 14. See Commonwealth v. Leone, 386 Mass. 329, 333 (1982). A party becomes a state actor if the police do anything to "solicit, provoke, or tempt" that party into obtaining evidence for them. Commonwealth v. Brandwein, 435 Mass. 623, 631 (2002). The cases below examine the state actor issue in the digital evidence context.

- Commonwealth v. Cormier, 28 Mass. L. Rptr. 489 (Mass. Super. Ct. 2011). Defendant brought a computer hard drive to a data recovery shop. Id. at *1. An employee at the shop copied the files from the damaged hard drive and viewed several of them at random to determine if they had been transferred successfully. Id. Some of the files he viewed contained child pornography. Id. Police then inspected several files from the hard drive to confirm the presence of child pornography before obtaining a search warrant for the drive and the defendant's house. Id. The court found that the data recovery shop employee was not acting as a state agent because he was a private party not acting under the authority of the state. Id. at *4 (citing Commonwealth v. Leone, 386 Mass. 329, 333 (1982), for the proposition that "[e]vidence discovered and seized by private parties is admissible without regard to the methods used, unless State officials have instigated or participated in the search"). The court noted that the employee "made the decision to open the suspicious files . . . as a private citizen, while trying to repair the hard drive at [defendant's] request." Id. The court also found that authorities "did not know that [the defendant] asked [the employee] to repair his hard drive and did not instruct [the employee] to inspect the files." Id. They did nothing "to 'solicit, provoke, or tempt' [the employee] into viewing the files," so he was not a state actor. Id. (quoting Brandwein, 435 Mass. at 631).

- United States v. Lichtenberger, 19 F. Supp. 3d 753 (N.D. Ohio 2014). A private party called police after discovering child pornography on a computer, and the responding officer instructed that individual to boot up the laptop, enter the password, show the images, and gather other devices belonging to the defendant before seeking a warrant. Id. at 754–55. The court found these actions violated the Fourth Amendment because by giving instructions and directing the private party's actions, the police officer made that private party into a government agent. Id. at 758–59. The court therefore suppressed the evidence as having been collected in violation of the Fourth Amendment. Id. at 760.

(3) An ISP's Reporting Obligation Does Not Make it a State Agent

The reporting requirement of 18 U.S.C. §§ 2258A(a) and 2258B(a)—requiring an Internet service provider (ISP) to report any child pornography that it discovers—does not transform an ISP into a government agent when it chooses, voluntarily, to scan files sent on its network for child pornography. United States v. Stevenson, 727 F.3d 826, 829–30 (8th Cir. 2013).

2. Was a Search or Seizure Reasonable?

"The ordinary rule is that to be reasonable under the [Fourth] Amendment a search [or seizure] must be authorized by warrant issued by a magistrate upon a showing of probable cause." Almeida-Sanchez v. United States, 413 U.S. 266, 287 (1973); see also United States v. Carpenter, 138 S. Ct. 2206, 2221 ("In the absence of a warrant, a search is reasonable only if it falls within a specific exception to the warrant requirement.") (quoting Riley, 134 S. Ct. at 2482)). This section will lay out the requirements of a valid warrant in the cybercrime context and then highlight some applicable exceptions to the warrant requirement.

a) Warrants

"The Fourth Amendment to the United States Constitution and art. 14 of the Massachusetts Declaration of Rights require that a warrant be issued only on probable cause, supported by oath or affirmation." Commonwealth v. Nelson, 460 Mass. 564, 568 (2011). Massachusetts law specifically "require[s] an affidavit and an oath." Id. (citing Mass. Gen. Laws ch. 276, §§ 1 and 2B). A neutral magistrate must issue the warrant, see Coolidge v. New Hampshire, 403 U.S. 443, 453 (1971), and it must be particular as to the items to be seized and places to be searched, see Commonwealth v. Valerio, 449 Mass. 562, 566 (2007). Warrants must contain information that has not been rendered stale, see United States v. Morales-Aldahondo, 524 F.3d 115, 119 (1st Cir. 2008) (to evaluate staleness, courts "must assess the nature of the information, the nature and characteristics of the suspected criminal activity, and the likely endurance of the information"). In addition, officers must execute warrants in a timely fashion, see Commonwealth v. Ericson, 85 Mass. App. Ct. 326, 329–30 (2014) ("[e]very officer to whom a warrant to search is issued shall return the same to the court by which it was issued as soon as it has been served and in any event no later than seven days from the date of issuance thereof." (quoting Mass. Gen. Laws c. 276, § 3A)). Warrants must be executed in a reasonable manner. Preventive Medicine Associates, Inc. v. Commonwealth, 465 Mass. 810, 822 (2013). Finally, executing officers must have the signed

warrant with them when commencing the search. The sections below focus on probable cause, particularity, staleness, timely execution, and the manner of executing warrants in the digital evidence context.

(1) Probable Cause / Affidavit

"Under the Fourth Amendment and art. 14, probable cause requires a substantial basis for concluding that the items sought are related to the criminal activity under investigation, and that they reasonably may be expected to be located in the place to be searched at the time the search warrant issues." Commonwealth v. Kaupp, 453 Mass. 102, 110 (2009) (internal quotation marks and citations omitted) (detailed below). Further:

> The affidavit need not convince the magistrate beyond a reasonable doubt, but must provide a substantial basis for concluding that evidence connected to the crime will be found on the specified premises. Moreover, affidavits for search warrants should be interpreted in a commonsense and realistic fashion and read as a whole, not parsed, severed, and subjected to hypercritical analysis. All reasonable inferences which may be drawn from the information in the affidavit may also be considered as to whether probable cause has been established.

Commonwealth v. Donahue, 430 Mass. 710, 712 (2000) (internal quotation marks and citations omitted).

In order to establish probable cause, law enforcement officials must typically submit an affidavit to a magistrate. That magistrate's probable cause determination is confined to the "four corners" of the affidavit. Commonwealth v. Anthony, 451 Mass. 59, 68 (2008) (detailed below). Probable cause by definition deals with "probabilities," which "are the factual and practical considerations of everyday life on which reasonable and prudent men, not legal technicians, act." Id. (internal quotation marks and citations omitted). The following cases address probable cause and affidavits in the digital evidence context.

- Commonwealth v. Snow, 486 Mass. 582 (2021). The defendant and two other men were arrested in connection with a fatal shooting that occurred earlier on the night of the arrest. Id. at 583. Prior to trial, the defendant successfully moved to suppress evidence found on his cell phone. Id. He argued that there was no probable cause for the cell phone search warrant because the warrant affidavit failed to establish a sufficient nexus between the murder and the defendant's cell phone. Id. The Commonwealth appealed, and the SJC reversed, finding that there was probable cause for the search. Id. The warrant affidavit "provided a substantial basis to conclude both that the defendant had committed the homicide [with a] coventurer and that it was reasonable to expect that his cell phone would contain evidence related to that specific crime." Id. at 587. Here, unlike in Commonwealth v. White, 475 Mass. 583 (2016), there was specific evidence of a nexus between the crime and the defendant's cell phone. Id. at 589. This evidence included the following facts: "the defendant made a cell phone call soon after the shooting to the person who rented the car used in the murder, there [was] a reasonable inference that the crime was

preplanned, and there [were] records of threatening cell phone communications between [the defendant's [coventurer] and the victim." Id.

- Commonwealth v. Vasquez, 482 Mass. 850 (2019). The defendant was indicted on charges of murder in the first degree and two related firearms offenses. He moved to suppress witnesses' identification of him from surveillance footage, his statements to the police, as well as evidence obtained from the search of his phone and the CSLI. Id. at 851. The SJC found that the witness identification did not require suppression. But the SJC agreed with the trial court's finding that the Miranda warnings were rendered in Spanish "in such a fragmented and confusing manner so as to be incoherent." Id. at 862. More specifically, the improper translation rendered the warnings "inadequate to apprise the defendant of his rights, and [ ] the defendant's limited comprehension of English did not suffice to compensate for these deficiencies." Id. at 852. Because the Miranda warnings were insufficient and the search of the defendant's cell phone arose from the statements the defendant made after the defective warnings, the search was not sufficiently attenuated from the unwarned statements. Id. at 865. Further, without the tainted information from the unwarned statements (such as the defendant's disclosure of his phone number), the Commonwealth failed to establish "the requisite nexus between the commission of [the] crime and the CSLI for the defendant's device." Id. at 867. The Commonwealth also failed to establish a connection between the crime and the thirty-two days for which it sought CSLI. Id. In sum, the search warrant affidavit did not "support a determination of probable cause, and the CSLI obtained as a result must be suppressed." Id. at 868. The SJC remarked in a footnote, however, that CSLI evidence may be admissible later, if the Commonwealth could show by a preponderance of the evidence that there was an untainted source for the nexus between the crime and CSLI. Id. at 868 n. 27 (quoting Commonwealth v. Estabrook, 472 Mass. 852, 865 (2015)).

- Commonwealth v. Hobbs, 482 Mass. 538 (2019). Following conviction for first-degree murder, the defendant argued on appeal, among other things, that the motion judge erred in denying his pre-trial motion to suppress cell site location information (CSLI) that was introduced as evidence during his trial. Id. at 539. The defendant's brother had identified the defendant as the man leaving the crime scene in video footage, and provided police with a phone number he claimed belonged to the defendant. Id. at 541. Police then requested a court order requiring the service provider to produce CSLI from the cell phone for several months surrounding the day of the crime. Id. at 541. The CSLI placed the owner of the cell phone in the general vicinity of the crime at the time of the killing. Id. The Court ruled that, although it was a close call, the police affidavit in support of a search warrant for historical CSLI satisfied the requirement that "there be a substantial basis to believe that the sought-after CSLI 'will produce evidence of [the] offense or will aid in the apprehension of a person who the applicant has probable cause to believe has committed . . . such offense.'" Id. at 545-46 (quoting Commonwealth v. Augustine, 472 Mass. 448, 453 (2015)). The Court rejected the defendant's assertion that the police must demonstrate that the cell phone was used or possessed during the commission of a crime in order to show nexus between "the crime . . . the items sought, and the location to be searched." Id. at 546. This is not necessary because "[c]ell phones physically accompany their users everywhere such that tracking a cell phone results in near perfect surveillance of its user." Id. at 547 (quoting

Commonwealth v. Almonor, 482 Mass. 35, 45 (2019) (internal quotation marks omitted)). The defendant's brother's statement that the cell phone belonged to the defendant, together with subsequent corroboration by the defendant's former girlfriend, was enough to establish the requisite nexus. Id. at 548-49.

- Commonwealth v. Fencher, 95 Mass. App. Ct. 618 (2019). The indictments in this case alleged that the defendant and two co-conspirators broke into the defendant's uncle's home and beat him on the head and face with a crowbar. Id. at 618. The defendant was charged with home invasion, assault, and multiple other offenses. Id. at 618, n. 1. She moved to suppress the fruits of a search of her cell phone. The Superior Court allowed the motion, but the Appeals Court reversed, finding that the police had probable cause to seize the phone, and that the defendant voluntarily consented to an unlimited search of her phone. There was probable cause to seize the cell phone because the defendant told the police it contained videos that "could establish where, when, and with whom the defendant was in the hours before the home invasion." Id. at 623. The police were also aware of multiple facts connecting the defendant to the crime. For example, her car was seen near the victim's home less than two hours before the assault, she had a key to the victim's residence and there was no sign of forced entry, the victim had a restraining order against the defendant, and there were blood stains in the exterior of the defendant's car. Id. In sum, the seizure was lawful because the police had "a substantial basis for concluding" that the phone contained "evidence connected to the crime under investigation." Id. The court also ruled that the defendant's subsequent "consent to search her cell phone was without limitation." Id. at 625-26. The police communicated their intent to search the entire cell phone to the defendant, and she consented to the search, providing the police with passwords to the phone and to her Snapchat account. Id. at 626. Applying "a common sense interpretation" to the defendant's entire exchange with the police detective, the Appeals Court found that her "consent to search her cell phone was free, voluntary, and unlimited." Id.

- Commonwealth v. Cruzado, 480 Mass. 275 (2018). Police approached the defendant sleeping in the stairwell and seized a cell phone on the floor nearby. Id. at 282. There was probable cause to seize the phone because the police "had information that the defendant and victim had been together on the day of the murder, and also that [the murder victim's boyfriend] had recently overheard the defendant confessing to the murder to an unidentified person on a cell phone." Id.

- Commonwealth v. Martinez, 476 Mass. 410 (2017). State police used law enforcement version of P2P client to investigate sharing of child pornography, identified such activity coming from a Massachusetts IP address, and subpoenaed Comcast for information regarding the IP address for the 30-minute period on March 9, 2012, during which police downloaded four suspected child pornography video files shared from the account associated with the IP address. Id. at 411–13. The ISP gave police a name (Angel Martinez) and an address. Id. at 413. Local law enforcement then obtained a warrant to search the apartment located at the address for computers and related items connected to the suspected possession and distribution of child pornography. Id. The apartment was leased to the grandmother of the Comcast account holder and of the defendant (Adalberto Martinez). Id. at 413 n.2. Law enforcement seized two laptops belonging to the

defendant and found five videos containing child pornography on one of them. Id. The SJC held that the affidavit in support of the search warrant (containing information that a particular IP address was used to share child pornography and that this IP address had been assigned at the time to a subscriber at the specific physical address to be searched) was sufficient to establish probable cause for the search, even though the named subscriber was neither listed as, nor confirmed to be, living in the apartment searched, and even though police had no information before the search linking the defendant to the residence. According to the SJC, law enforcement did not have to verify that the account holder lived at the address searched. Id. at 418. Once the nexus between the crime and the service address was established, the names of the account holder and of the leaseholder were incidental. Id. The SJC rejected the argument that law enforcement had to show that the network was secure or that no one outside the address could access the network. Id. at 419. Where the warrant was for the search of a place (not for the arrest of a person), law enforcement needed only demonstrate a sufficient nexus between the criminal activity under investigation, the items sought, and a place to be searched. Id. Even assuming law enforcement could know a network was not secured, unauthorized use of the network did not negate the substantial basis to think the evidence would be located at the address. Id. at 420–21 ("[P]robable cause does not require investigators to 'establish to a certainty that the items to be seized will be found in the specified location,' nor does it require them to 'exclude any and all possibility that the items might be found elsewhere.'" (quoting Anthony, 451 Mass. at 70)).

The decision came with caveats. The SJC cautioned that its decision here does not mean that probable cause always exists any time investigators link illegal computer activity to an IP address and then link that IP address to a physical address. Martinez, 476 Mass. at 422. To support probable cause, law enforcement should use reliable methods—such as the administrative subpoena here—to connect the IP with a physical address, not IP address mapping services. Id. at 423. Additionally, some technologies (e.g., Tor exit relays, VPNs, and proxy server connections, which can mask originating IP addresses) may erode the connection between an IP and a physical address. Id. Law enforcement may be required to disclose in affidavits the possibility that one of these technologies was, or may have been, used based on facts known or reasonably knowable to investigators at the time. Id. "If such technologies become more common, it is entirely possible that we would require police to proceed in multiple steps, obtaining subpoenas related to each intermediary IP address or warrants to search each location hosting those IP addresses." Id. In some cases, law enforcement may be required to determine, by forensic examination of a wireless router, which devices were connected to it and when before searching particular computers. Id.

- Commonwealth v. Perkins, 478 Mass. 97 (2017). "Based on intercepted telephone conversations between defendant's alleged middleman and street-level distributor of cocaine, police surveillance of suspected drug transaction, and other information, the judge issued a warrant authorizing a search of the defendant's apartment for evidence including a cellular telephone and drug-related records." Id. at 99. The warrant also included authorization to seize currency, distribution paraphernalia, documentation about the premises and its contents, among other items. Id. at 101. The affidavit did not seek authorization to search for narcotics. Id. at 98. Police seized a large quantity of cocaine, several cell phones, drug paraphernalia, and ammunition. Id. at 101.

The SJC concluded that the affidavit justified searching the apartment for the defendant's phone. Id. at 105–06. They further concluded that the seizure of nine additional phones found in the apartment was supported by probable cause, but that the police did not have discretion to "search every portion" of these additional phones. Id. At 106. Instead, the plain terms of the warrant restricted their search to call activity and contact lists and did not authorize police to "rummage through the entirety of the defendant's cellular telephones." *Id*. At 106. With regards to searching the defendant's apartment for records, proceeds, and paraphernalia, however, the SJC held that the affidavit:

> did not contain sufficient particularized information to justify [such] a search of the defendant[']s apartment . . . . The affidavit included a single, conclusory statement that probable cause existed based on the affiant's "training and experience and the facts and circumstances learned during the course of this investigation," [but] contained no facts, or opinion based upon the affiant's considerable experience as a narcotics officer, that would have establish[ed] probable cause to believe that the defendant would be likely to store particular items of [drug-related records, proceeds, or paraphernalia] in his home.

Id. at 109.

- Commonwealth v. Jordan, 91 Mass. App. Ct. 743 (2017). In a murder investigation in which defendant was a suspect, police obtained search warrant for his CSLI, call details, text messages, and subscriber information for a six-week period surrounding the date of the homicide. Id. at 744. The Appeals Court found that the trial judge properly suppressed the text messages. Id. Although the affidavit in support of the warrant established probable cause to believe that the victim had been murdered (i.e., a crime had been committed), it made no connection between the defendant's use of his cell phone and his involvement in the crime, and thus did not establish probable cause to conclude that the text messages would provide evidence connected to the crime. Id. at 749–51. The affidavit did establish probable cause to conclude that the defendant committed the crime and showed that the defendant had a cell phone and that it was in use around the time of the murder, and so it established probable cause to believe that the CSLI would provide evidence of the defendant's involvement in the crime. Id. at 750–53. The SJC also held that the trial court had properly suppressed "contact information" insofar as that meant an address book or contact list because the affidavit failed to establish a nexus between the crime and the defendant's contact information. Id. at 753–54. However, if "contact information" meant subscriber information and call records, there was no basis for suppression. Id.

- Commonwealth v. Keown, 478 Mass. 232 (2017). Defendant was suspected of murdering his wife by poisoning her. In the course of the investigation, police obtained a warrant to search his computer and discovered evidence of incriminating Internet searches, which was introduced at trial. Id. at 234–37. The SJC held the affidavit established a sufficient nexus between the crime and the item sought where: (1) it established the defendant's sophistication with computers (he had worked as a Web designer), and showed that he had forged contracts and admissions letter/other communications from Harvard Business School (can infer he used computer); (2) it described forgeries related to the motive alleged in the affidavit, i.e., to kill his wife to prevent her

finding out about their impending financial ruin and his lies and to collect her life insurance benefits; (3) it specified that the victim had died from ethylene glycol poisoning which, the affiant noted, would likely have involved online research. Id. at 238–39.

- Commonwealth v. Broom, 474 Mass. 486 (2016). At the time of defendant's arrest for murder, his cell phone was seized. Id. at 494. Ten months later, law enforcement applied for and obtained a search warrant for its contents. Id. The affidavit contained information about the investigation and the fact that no CSLI information could be obtained for the time surrounding the murder but that the defendant's phone records showed he sent and received text messages and accessed the Internet at the relevant timeframe. Id. It then described the many types of data the detective wanted to search in order to uncover information pertinent to the investigation. Id. at 494–95. The SJC held the search was not supported by probable cause. Id. The Court held that "it is not enough that the object of the search *may* be found in the place subject to search. Rather, the affidavit must demonstrate that there is a reasonable expectation that the items sought *will* be located in the particular data file or other specifically identified electronic location that is to be searched." Id. at 496 (citations omitted) (emphasis in original). Police here already had the defendant's CSLI (except for the time period surrounding the murder) and call records and would have known that the victim's number did not appear in those records. Id. The warrant was also found to be too broad. Id. at 495, 496 n.13.

- Commonwealth v. White, 475 Mass. 583 (2016). A police investigation of an armed robbery and shooting led to the defendant as one of three suspects. Id. at 584. After suspicion focused on him, the detective located his phone, which was held by the defendant's school administrator pursuant to school policy. Id. The detective then "seized the telephone to prevent the defendant from retrieving it and removing evidence or destroying the device." Id. Police had no information at the time indicating that the phone had been used to plan, commit, or cover up the armed robbery they were investigating, or that it contained any evidence of the crime, but instead relied on knowledge that cell phones are frequently used when the offense involves multiple perpetrators. Id. Sixty-eight days after the seizure, police obtained a warrant to search the cell phone and found evidence that was later ordered suppressed. Id. The SJC held that the seizure was not supported by probable cause because probable cause may not be based solely on an officer's opinion that the device is likely to contain evidence of the crime under investigation. Id. at 584–85. "[E]ven where there is probable cause to suspect the defendant of a crime, police may not seize or search his or her cellular telephone to look for evidence unless they have information establishing the existence of particularized evidence likely to be found there." Id. at 590–91. A contrary decision would mean that, where probable cause to charge someone with a crime existed, the person's phone would almost always be subject to seizure and subsequent search. Id. at 591.

- Commonwealth v. Williams, 90 Mass. App. Ct. 1118 (2016) (unpublished). The victim was shot after a drug deal with two suspects. Id. at *1–2. Two witnesses testified that the victim had arranged the deal via phone. Id. Police zeroed in on an 857 (area code) number linked to a person named Patrick Malone. Id. Defendant was then identified as the second suspect and was interviewed by police; he stated that he had known Malone for twenty years and that they had a

phone conversation on the morning of the shooting. Id. at *3–4. Police seized the defendant's iPhone and secured it to get a warrant. Id. The Appeals Court held that "there was probable cause to believe that the defendant's iPhone would contain evidence linking his alleged coventurer Malone to the 857 number and thus to the shooting." Id. at *5. See also Commonwealth v. Perkins, 478 Mass. 97, 105–06 (2017), (where police had detailed and specific knowledge about the defendant's use of a cell phone to arrange drug transactions, and a particular phone number with which that cell phone had been in contact at a specific time, there was probable cause to believe that the defendant used a cell phone to arrange a drug sale and that he had done so on other occasions and the seizure of nine cell phones from his apartment was proper). But see Commonwealth v. Fulgiam, 477 Mass. 20, 34 (2017) (where warrant application established a personal relationship between defendant and victim and the circumstances of the murders suggested a connection to drugs, it did not, without more, justify intrusion into the content of the communications between defendant and victim).

- Commonwealth v. Finglas, 81 Mass. App. Ct. 1102 (2011) (unpublished). Police were sent information about the defendant, whose email address had received five images depicting child pornography. Id. at *1–2. On interlocutory appeal, the Appeals Court granted the defendant's motion to suppress evidence obtained as a result of a search of his residence. Id. at *3. It did so because the affidavit in support of the warrant was "inadequate to establish a timely nexus between the defendant and the location to be searched and to permit the determination that the particular items of criminal activity sought reasonably could be expected to be found there." Id. The Appeals Court held that the affidavit did not provide any evidence that a computer at the residence had been used to search for or download any child pornography or that the defendant had actually accessed the emailed images. Id. at *2. Further, a police officer's opinion about the common practices of child pornography collectors was not enough, without further facts, to support a finding that the defendant's computer likely contained child pornography. Id. at 3.

- Commonwealth v. Kaupp, 453 Mass. 102 (2009). Police observed pirated movies in the publicly shared folder of one of defendant's computers. Id. at 107. The publicly shared folder of a different computer nearby contained both pirated movies and child pornography. Id. at 103–05. Police seized the first computer and then received a search warrant for it based on an affidavit alleging: (1) both shared folders had a copy of the same pirated movie, (2) the second computer's shared folder had child pornography, and (3) the defendant stated he could not guarantee there was no child pornography on his computer. Id. at 105, 107–09. The Court invalidated the search warrant because it found police did not provide a "substantial basis" to believe there would be child pornography on the computer. Id. at 111. The Court found it unreasonable to infer that somebody interested in sharing a commercial movie would also be interested in sharing child pornography. Id. at 112. That the defendant had access to child pornography did not help the Commonwealth's case. Id. Nor was a suspicious statement, standing alone, enough to provide the substantial basis necessary for probable cause. Id. at 113.

- Commonwealth v. Anthony, 451 Mass. 59 (2008). Police received a tip about a person soliciting child pornography online. Id. at 60–62. They traced these solicitations to a library and arrested a

homeless suspect there. Id. at 62–63. Shortly after the arrest, the suspect took a receipt (along with other pieces of paper) out of his pocket and tore it up. Id. at 63. This receipt was from a repair shop for the repair of two laptops. Id. Police also determined he rented a storage locker. Id. at 64. Police sought and received a search warrant for the locker, the laptops, and a hard drive from the library. Id. at 65–66. A superior court judge granted the defendant's motion to suppress for lack of probable cause, however, and the Commonwealth pursued an interlocutory appeal. Id. at 67–68. The SJC reversed the motion judge's suppression of the warrant, finding the affidavit established probable cause. Id. at 73. Specifically, the Court found information about the suspect's prior conviction for child pornography, the outside tip, and the suspect's admission to viewing child pornography in violation of his probation established probable cause for the crime. Id. at 70–71. From there, it found the fact that a homeless individual rented a storage locker using a false address—along with the detective's experience that viewers of child pornography tend to collect it—supported the idea that the suspect might hide child pornography at his storage locker, the only space under his control. Id. at 71–72. The Court found the suspect tearing up the receipt supported the inference that he was trying to hide child pornography. Id. at 71. It emphasized that the affidavit did not rely solely on the opinions of the affiant with respect to general characteristics of collectors of child pornography. Id. at 72. Rather, the affidavit contained enough facts and inferences to support a nexus between the alleged crime and the locations to be searched. Id. 72–73.

(2) Independent Source Doctrine

- Commonwealth v. Wilson, 486 Mass. 328 (2020). The police initially obtained defendant's CSLI data pursuant to an § 2703 order, without a warrant, in 2010. Id. at 336. The CSLI placed the defendant in "the victim's hotel, at the commuter lot where the [victim's] rental vehicle was found, and in the location where the victim's body would later be discovered, at relevant times on the night of the murder." Id. at 331. In 2014, the police obtained the same CSLI information pursuant to a search warrant. The Court found that the 2014 warrant satisfied the "independent source doctrine," "a well-recognized exception to the exclusionary rule under both the Fourth Amendment and art. 14." Id. at 335. The doctrine provides that "evidence initially discovered as a consequence of an unlawful search may be admissible if later acquired independently by lawful means untainted by the initial illegality." Id. (quoting Commonwealth v. DeJesus, 439 Mass. 616, 624 (2003)). Here, the affidavit supporting the 2014 warrant for the CSLI was based on facts wholly independent of the CSLI data obtained in 2010. Id. at 336. These facts included the following: the defendant's public statements about having a firearm like the one used in the murder, his status as the likely father of the victim's unborn child, causing financial obligations to the victim and the "ire of the defendant's wife," the victim's statement to a friend that the defendant asked her to get an abortion, the cellphone communications between the defendant and the victim until shortly before the victim's cellphone activity ceased at 10:49 P.M. on the night of the murder, and a Facebook message from the victim's account after she was reported missing "claiming she was in the hospital after an abortion, although police determined that she was not a patient at any area hospitals." Id. at 337.

- Commonwealth v. Gosselin, 486 Mass. 256 (2020). The defendant appealed his conviction for first-degree murder, arguing, *inter alia*, that his trial counsel was ineffective for not moving to

suppress CSLI evidence, as such evidence provided probable cause for the search warrant for his home—the search of which produced critical inculpatory evidence. Id. at 264. The Court declined to resolve whether the § 2703 warrant was supported by probable cause, on the grounds that "the search warrant affidavit satisfied probable cause when excising the unconstitutionally obtained CSLI," such that the defendant failed to demonstrate prejudice and his trial counsel was not ineffective. Id. at 264-66 & n.9.

(3) Particularity / Scope

The Fourth Amendment, art. 14, and Mass. Gen. Laws ch. 276, § 2 all require that search warrant applications particularly describe the places to be searched and the items to be seized. See Commonwealth v. Valerio, 449 Mass. 562, 566 (2007). Massachusetts courts treat these provisions as coextensive. Id. The dual purpose of these requirements is (1) to protect people from general searches and (2) to provide the Commonwealth the opportunity to demonstrate to a court that officers' search authorization was properly limited. Id. Additionally, the requirement provides essential information to a person whose property is being searched. Id. (citing Katz v. United States, 389 U.S. 347, 356 (1967)). The cases below explore the tension between the particularity requirement and the amorphous nature of data in the digital era.

- Commonwealth v. Snow, 486 Mass. 582 (2021). The defendant and two other men were arrested in connection with a fatal shooting that occurred earlier on the night of the arrest. Id. at 583. Prior to trial, the defendant successfully moved to suppress evidence found on his cell phone. Id. He argued that there was no probable cause for the cell phone search warrant because the warrant affidavit failed to establish a sufficient nexus between the murder and the defendant's cell phone. Id. The Commonwealth appealed, and the SJC reversed, finding that there was probable cause for the search. Id. However, the Court concluded "that the search of the phone was not sufficiently particular because it lacked any temporal limit." Id. at 583. More specifically, the Court held "that (1) the correct remedy for the warrant lacking particularity in this case [was] partial suppression; (2) the search of text messages, call logs, and Snapchat video recordings was proper; yet (3) the lack of time restriction rendered the warrant impermissibly broad." Id. at 590. Accordingly, the SJC remanded the case to the Superior Court to determine whether "the proffered evidence fell outside what would have been a reasonable temporal limit." Id. First, as to partial suppression, the Court noted "that an overbroad warrant generally requires only partial suppression of the information for which there was not the requisite nexus, as long as the Commonwealth had not relied on or otherwise exploited it at trial. Id. at 591-92 (quotations and citations omitted). Second, because the police here had probable cause to search the defendant's cell phone for evidence of joint venture, the scope of the search properly included communications such as call logs, text messages, and Snapchat videos. Id. at 593. Third, a cell phone search warrant cannot be sufficiently particular without some temporal restriction that should "err on the side of narrowness." Id. at 594. Where the initial search provides probable cause to broaden the search, "nothing precludes" officers from requesting another, broader warrant. Id.

- Commonwealth v. Wilkerson, 486 Mass. 159 (2020). In a more recent case involving partial suppression of CSLI, the government requested 48 hours of a shooting suspect's CSLI around the time of the shooting, received 34 hours of CSLI in response to this request, and then had all but

three hours of CSLI ("covering the period approximately ninety minutes before and ninety minutes after the shooting") suppressed by the trial judge. Id. at 164. The SJC upheld this partial suppression of CSLI data, but noted in dicta that the "severance doctrine [of Hobbs] is not without limits," and that "where a warrant so lacks particularity or is so overbroad that it begins to resemble a general warrant, total suppression is required." Id. at 168-69. The court deemed the CSLI request at issue "not so overbroad on the facts of this case so as to be akin to a general warrant" and found it to "represent 'a reasonable period of time encompassing the commission of and flight from the crime.'" Id. at 169 (quoting Hobbs, 482 Mass. at 550). However, the SJC declined to provide further guidance on exactly "how overbroad a request for CSLI must be in order for total suppression to be appropriate." Id.

- Commonwealth v. Hobbs, 482 Mass. 538 (2019). The government requested three and a half months of historical CSLI from defendant's cell service provider, from December 1, 2010 to March 15, 2011, where defendant was a suspect in a December 16, 2010 killing. Id. at 543, 550. "This extended request was in part the result of the failure to identify the defendant as a suspect for nearly two and one-half months, and the absence of any evidence of his current location once he was identified as a suspect." Id. at 550. The SJC considered the question of whether "either the Fourth Amendment or art. 14 require[s] total suppression of the entire amount of CSLI collected," or whether "the proper remedy [is] to suppress only the CSLI for which there is not the requisite nexus to the crime," and concluded that "where the requisite nexus for probable cause clearly exists for a reasonable period of time" contained within the requested period, "the CSLI for [the relevant] period of time need not be suppressed so long as the CSLI for which there is not the requisite nexus to the crime is not relied on or otherwise exploited by the Commonwealth at trial." Id. However, the court suggested its holding was fairly narrow, noting that "[g]iven the uncertainty in the case law regarding overbroad requests for CSLI, we proceed cautiously on this issue." Id. The Court also "emphasized the significant constitutional issues raised by the collection of extended amounts of historical CSLI, and the importance of limiting the requests accordingly." Id. at 550 n.13.

- Commonwealth v. Holley, 478 Mass. 508 (2017). In a murder investigation, law enforcement examined the victim's call records and learned that the last call the victim answered before the shooting came from the defendant's telephone number. Id. at 511. Law enforcement then obtained cell phone records through a warrant served on the carrier and found multiple incriminating communications via text and call between the victim and the defendant's joint venturer. Id. The warrant for the phone records sought "subscriber information; billing records and detailed airtime; outbound call detail; call origination and termination location; stored GPS location information, and/or stored cellular tower records, cell tower sector information, range from cell tower information (RTT) and physical address of cell sites; and all stored contents of electronic or wire communications including stored or deleted voicemail, read, unread, deleted, or sent electronic mail or text messages, and stored files; and listing of all associated phone numbers, of a subscriber to or customer of such service" between October 1 and 18, 2012. Id. at 524–25. The broad scope of the search raised "significant concerns" for the SJC because it did not sufficiently limit the scope of the search so as to prevent "exploratory rummaging." Id. at 525,

528. But because the record was silent on how the provider conducted the search and on what information, if any, it provided to the Commonwealth beyond the text messages (it was even unclear whether the provider kept any stored content apart from text messages as part of its business records) and because the only communications used at trial were the defendants' redacted text messages from four and two days before the shooting, respectively, the day of the shooting, and the day after the shooting, the Court could find no error in the denial of the motions to suppress. Id. at 525 (noting that the "Commonwealth did not capitalize on the lack of particularity in the warrant").

- Commonwealth v. Molina, 476 Mass. 388 (2017). Police investigating a P2P network found child pornography shared by a Massachusetts IP address. They subpoenaed Verizon and obtained a name (Hermes Delcid) and service address. Id. at 390–91. Further investigation found the name on the mailbox outside of the address and RMV records showed Delcid at the address. Id. at 391. Police then obtained a search warrant for the apartment and in particular for electronic devices containing evidence of child pornography, evidence of child pornography in other formats, evidence related to access to the Verizon account and the P2P network, and evidence related to access to electronic devices at the apartment. Id. In a bedroom later identified as the defendant's, police observed the P2P program running on an open laptop (computer screen showed downloads and uploads of child pornography files in progress). Id. at 392. The search team seized numerous electronic devices from the apartment, including the defendant's laptop and desktop computers and his external hard drive. Id. On appeal, the defendant argued that the search warrant was impermissibly overbroad as to both places and "things" to be searched. Id. at 393. The SJC disagreed. Id. at 389. It found that the warrant appropriately substantiated a connection between the apartment and the evidence of child pornography reasonably expected to be located therein. Id. at 394. That the apartment was shared by multiple people was immaterial because the warrant authorized a search of the location associated with the IP address, not a search of any single associated subscriber. Id. at 395. Computer devices using the monitored IP could have been anywhere in the apartment, so where the defendant's unlocked bedroom showed no indicia of separate ownership from the rest of the apartment, the search of his bedroom was proper. Id. at 396. With regard to the things to be searched, the SJC made the following finding: "Because that evidence, in the form of electronic files, could be easily transferred between devices at the same location, police need not have limited the devices to be searched. Id. at 396. The SJC raised the reasonableness of the search *sua sponte.* Id. at 397. It found that where "multiple electronic devices that may well belong to multiple individuals are seized and searched, the reasonableness of the undertaking will be judged, at least in part, by whether the searches of those devices are conducted in a manner that seeks to limit the scope of the search as much as practicable in the particular circumstances." Id. at 397–98. The SJC may in the future "consider whether to require, as some courts have, a digital search protocol that would affirmatively demonstrate 'a high regard for rights of privacy and take all measures reasonable to avoid unnecessary intrusion.'" Id. at 398 (quoting Commonwealth v. Vitello, 367 Mass. 224, 262 (1975)).

- Commonwealth v. Keown, 478 Mass. 232 (2017). "The scope of the search authorized by the warrant included files on the laptop related to the health or death of the victim; other prominent

poisoning cases; ethylene glycol or other poisons; and the financial records, life insurance plans, and wills of the victim and the defendant." Id. at 240. The affidavit "established probable cause to search for evidence on the laptop computer relating to the defendant's role in his wife's death." Id. "These categories of evidence were related to the means of committing the crime and the motive of the defendant, and provided sufficient guidance to the examiners so that they were not on a fishing expedition." Id. In addition, the search was conducted reasonably. Id. at 241. Examiners used a list of 50 search terms that was later supplemented by 19 additional terms. While not part of the warrant application, the terms were related to the categories of evidence sought in the affidavit. "[T]he examiner only looked closely at approximately 325 files of the nearly 400,000 found on the laptop computer." Id. The search in this case "took place more than a decade ago in an entirely different technological landscape"; thus, the absence of an ex ante search protocol did not defeat particularity. Id. at 41.

- Commonwealth v. Dorelas, 473 Mass. 496 (2016). The defendant, who was a suspect in an assault and battery by means of a dangerous weapon (firearm) and an assault with intent to murder, was involved in a shooting. Id. at 497. Interviews with his family and friends indicated that prior to the shooting he had received threatening calls and texts. Id. at 498. Police believed the defendant's iPhone contained evidence linking the defendant and the other shooter to the assaults and obtained a warrant authorizing a search for, among other things, saved and deleted photographs. Id. at 498–99. The search resulted in the discovery and seizure of incriminating photographs. Id. at 499. The defendant contended that police only had probable cause for his call logs and text messages, but not his photographs. Id. at 500. On direct appellate review, the SJC reached the following holding: "Communications can come in many forms including photographic, which the defendant freely admits. So long as such evidence may reasonably be found in the file containing the defendant's photographs, that file may be searched." Id. at 503. Therefore, such a search is "neither outside the scope of the warrant nor unreasonable." Id. The defendant further argued that a search using the Universal Forensic Extraction Device (UFED) could have been conducted for communications, including photographic communications, without reviewing his photograph file. Id. at 504. The SJC held that such a retrieval method was not constitutionally required where the photographic evidence would also reasonably be found in the phone's photograph file. Id. The Court was concerned that texts and their attachments might be overwritten over time and the evidence would thus only be found in the photograph file. Id.

- Commonwealth v. McDermott, 448 Mass. 750 (2007). After a deadly mass shooting, police officers searched the defendant's apartment pursuant to a warrant for evidence linking him to the shooting. Id. at 764–65. They seized five computers and disks. Id. at 765. The defendant asserted that this was unlawful because the warrant did not specifically authorize the seizure of these items. Id. at 770. The warrant did authorize, however, seizure of several types of documents. Id. at 771. The Court held that the seizure of the computers was reasonable because they functioned as "closed containers" storing documents. Id. at 766, 771. [Note: In Preventative Medicine Assocs. v. Commonwealth, 465 Mass. 810 (2013), the SJC clarified that in McDermott, the fact that the warrant was issued before an indictment as part of an investigation and the Commonwealth's use of preset search terms during the preliminary review of the defendant's

files were important to its holding, id. at 830–32. The Court stated that it took "seriously the concern that a cursory review of every e-mail undermines the particularity requirement of the Fourth Amendment and art. 14, particularly where—as the Commonwealth appears to argue would be permissible and appropriate in this case—the cursory review is joined with the plain view doctrine to enable the Commonwealth to use against the defendants inculpatory evidence with respect to the pending indictments that it finds in the emails, even though such evidence may not actually fit within the scope of the search warrants obtained." Id. at 831–32. The SJC did not rule on these issues in Preventative Medicine, however, because a search had not yet been conducted in that case. Id. at 832.]

- Commonwealth v. Gousie, 13 Mass. L. Rptr. 585 (Mass. Super. Ct. 2001). Police received information that defendant was distributing child pornography over the Internet. Id. at *1. They obtained a warrant allowing them to seize the defendant's computers and associated storage devices, to bring those items to a search location, and to search them for "visual images depicting children in a state of nudity or sexual conduct." Id. at *8. The defendant challenged the warrant as not particular enough because it allowed for seizure and search of all files on the computer, many of which were not related to child pornography. Id. The court denied the defendant's motion, noting that "where the commingling of legitimate and illegitimate items makes an on-site examination impracticable, a temporary seizure of the whole is permitted." Id. (citing various federal cases to that effect). It noted that "[t]he investigators could not have known in what form—whether on the computer hard drive or other various storage devices—the defendant was storing the target images. To insulate such images from search and seizure merely because other, non-incriminating items may have sheltered the images would pervert the accepted purpose of the constitutional bar against general searches." Id. at *9.

- United States v. Schesso, 730 F.3d 1040 (9th Cir. 2013). Police received a tip that a Washington resident was sharing child pornography over a peer-to-peer networking site. Id. at 1043. They prepared a search warrant affidavit setting forth the information they had received about the suspect's IP address, the pornography he shared, general peer-to-peer network operations, data storage, and known characteristics of child pornography offenders. See id. The magistrate granted the warrant, which authorized seizure of all of the defendant's computers and data storage devices, and police discovered large quantities of child pornography. Id. at 1043–44. The trial judge suppressed the evidence reasoning that the warrant was facially overbroad. Id. at 1045. The Ninth Circuit reversed this decision. Id. at 1046. It based this ruling on the "practical, common-sense decision" judges make in issuing warrants. Id. at 1046. Specifically, the Ninth Circuit found that "[t]he government was faced with the challenge of searching for digital data that was not limited to a specific, known file or set of files" and reasoned that "[t]he government had no way of knowing which or how many illicit files there might be or where they might be stored, or of describing the items to be seized in a more precise manner." Id. Given this reasoning and supportive precedent, the court found the warrant permissible. Id. at 1047.

- In re a Warrant for All Content & Other Info. Associated with Email Account xxxxxxx@gmail.com Maintained at Premises Controlled by Google, Inc., 33 F. Supp. 3d 386

(S.D.N.Y. 2014). Federal agents investigating illegal money remitting applied for a search warrant to access a suspect's entire email account in search of specified emails. Id. at 388. The Magistrate considered and rejected the reasoning that such a search was akin to a general warrant and therefore failed the Fourth Amendment's particularity requirement. Id. at 390–91. First, the judge noted that extensive authority supported the proposition that investigators could briefly examine a wide variety of documents during a search in order to determine relevance. Id. at 391–92. Though that examination is essentially a seizure, it is also a practical necessity to determine which documents can be more permanently seized. Id. at 392–93. Next, he noted that courts have been more flexible with searches and seizures of electronic evidence because the large mass of undifferentiated information makes an on-site search impossible. Id. at 392. Courts have recognized the practical necessity of copying hard drives for later examination, allowing the government to access electronic information outside the scope of its search in order to effectuate that search. Id. at 393. Finally, the judge found that email provider employees would not be capable of performing the search themselves because they would not know enough about the investigation in order to properly recognize relevant emails. Id. at 395.

(4) Staleness of Information Supporting Probable Cause

In order to provide probable cause sufficient for a search warrant, the information contained in an affidavit supporting such a warrant must be sufficiently fresh. See United States v. Morales-Aldahondo, 524 F.3d 115, 119 (1st Cir. 2008) (detailed below). In assessing staleness, courts "do not measure the timeliness of information simply by counting the number of days that have elapsed" but rather "assess the nature of the information, the nature and characteristics of the suspected criminal activity, and the likely endurance of the information." Id. (citing United States v. Pierre, 484 F.3d 75, 83 (1st Cir. 2007)). This requirement should not be confused with the separate Massachusetts statutory requirement (examined next) that warrants be timely executed after they have been issued. The following cases address staleness in the digital evidence context.

- Commonwealth v. Guastucci, 486 Mass. 22 (2020). The defendant, charged with two counts of possession of child pornography, sought to suppress evidence seized from his laptop computer and flash drive. Id. at 25. He argued that affidavit in support of the warrant to search his home did not establish probable cause because it was based on stale information: namely, an image depicting child pornography that was uploaded from the defendant's computer to the Skype service seven months prior to the search. Id. Addressing the issue of staleness in the context of a search for evidence of child pornography for the first time (id. at 29), the Court found that "the information in the warrant affidavit was not stale when the warrant was filed," while noting that the seven-month delay "may be at the outer limit in these circumstances." Id. at 27. Generally, "the determination of staleness in investigations involving child pornography is unique" because "individuals who are interested in child pornography are likely to collect and retain such images." Id. at 29 (quotations and citations omitted). Relying on United States v. Raymonda, 780 F.3d 105 (2d. Cir. 2015), the Court identified several factors for determining that a suspect is a collector of child pornography, such as: "an admission or other evidence identifying the individual as a pedophile; paid subscriptions to child pornography sites or participation in peer to peer file sharing; and a past history of possessing or receiving child pornography." Id. at 31. Further, a

single incident of possession or receipt of child pornography could also lead to a reasonable inference that a suspect is interested in it, "where, for example, the images were obtained through 'a series of sufficiently complicated steps' suggesting a 'willful intention to view the files,' or where the suspect redistributed the file to others." Id. at 31 (quoting Raymonda, 780 F. 3d at 115). Here, the warrant affidavit alleged that the defendant "uploaded an image of child pornography to an Internet chat, talk, and file-share service [Skype]" – an act that required multiple, intentional steps. Id. at 32. In such circumstances, the seven month delay between the upload and the warrant application did not render the warrant stale. Id. at 27.

- Commonwealth v. Watkins, 98 Mass. App. Ct. 419 (2020). Defendant was convicted of unlicensed carrying of a firearm outside his residence or place of business. Id. at 420–21.The police obtained a search warrant based an affidavit that described (1) a series of images and videos of the defendant and an acquaintance handling a TEC-9 firearm at the acquaintance's house, which the two of them posted on Snapchat, and (2) location data from a GPS device that the acquaintance, Santos, who was subject to GPS monitoring, was wearing at the time of the Snapchat posts. Id. The defendant argued that because "Snapchat videos and images that are posted on a particular date may have been taken, created, or recorded at an earlier date and uploaded much later… the Commonwealth failed to prove that the information officers relied on from the timestamps on the defendant's and Santos's Snapchat uploads was not stale." Id. at 424. The court rejected the defendant's arguments on staleness, finding probable cause was established by a Snapchat post by Santos from two days before the search warrant was obtained and executed: an image of a TEC-9 (semiautomatic) firearm captioned "Shyt change on my block trust issues I got put all my trust in semi autos." Id. at 421, 424. The court characterized the caption as "a present tense statement about Santos's perceived need for semiautomatic weaponry[, g]iven [which] there was probable cause to believe that the Snapchat image was taken contemporaneously with its posting" (which, in turn, was only two days before the warrant was executed). Id. at 424. The court did not discuss whether, or under what circumstances, similar posts absent such a present-tense caption could have sufficed to establish probable cause.

- Commonwealth v. Cruzado, 480 Mass. 275 (2018). Police waited ten days to apply for a search warrant on a seized phone. See id. at 283. This delay was permissible because "the defendant's minimal possessory interest was far outweighed by the government's interest in obtaining evidence regarding a recent murder." Id.

- United States v. Morales-Aldahondo, 524 F.3d 115 (1st Cir. 2008). Defendant was convicted of possessing child pornography as a result of an investigation targeting a child pornography website and its subscribers. Id. at 117–18. The download information obtained from the website was over three years old by the time the search warrant in this case was issued. Id. at 119. On appeal, the court upheld the trial judge's denial of the defendant's motion to suppress for staleness. Id. Focusing on the characteristics of child pornography collections, the court found that the warrant application (along with testimony by the same officer during a subsequent Franks hearing) "provided considerable support for the government's position that customers of child

pornography sites do not quickly dispose of" their collection. Id. Given this support, the court found that three years was not so long a period that the information had become stale. Id.

- Commonwealth v. Gousie, 13 Mass. L. Rptr. 585 (Mass. Super. Ct. Sept. 26, 2001) (unpublished). In this case, the Attorney General's Office investigated the defendant based on a tip they had received from a New Hampshire police officer. Id. at *1. Using information from online exchanges the defendant had with the officer four months prior, the AG's Office obtained a search warrant for the defendant's premises where they located the evidence at issue in this case. Id. at *1, *6. The defendant alleged that the warrant was defective because, among other reasons, "there was no temporal proximity between the events constituting probable cause and the issuance of the warrant." Id. at *5. The court rejected this argument for two reasons. First, it found that the affidavit demonstrated continuous contact between the defendant and the undercover officer for several months. Id. at *6. Even though that information was itself four months old, the court found that it gave rise to an inference that the contact had continued. Id. Second, the court focused on the special circumstance of transmitting child pornography via computer. Id. at *7. Specifically, the affidavit described how computers retain data and how collectors of child pornography tended to retain those collections for long periods. Id. The court found that these descriptions "provided the magistrate with reason to conclude that the passage of time did not constitute a disabling tardiness." Id.

(5) Timely Execution of the Warrant

Mass. Gen. Laws ch. 276, § 3A, provides that "[e]very officer to whom a warrant to search is issued shall return the same to the court by which it was issued as soon as it has been served and in any event not later than seven days from the date of issuance thereof . . . ." Mass. Gen. Laws ch. 276, § 3A (2018); see also Fed. R. Crim. P. 41(e)(2)(A) (requiring return of a warrant within fourteen days in federal courts). Given the complexities inherent in searching digital devices, the requirement that warrants be executed within seven days of issue could prove burdensome when investigating computer crimes. Fortunately, Massachusetts courts have interpreted the provision liberally with regard to digital evidence, as the cases below demonstrate.

- Commonwealth v. Ericson, 85 Mass. App. Ct. 326 (2014). Defendant in this case texted with a young girl—and subsequently with the police officers to whom she gave her phone—asking for nude photos. Id. at 327–28. As part of this exchange, the defendant sent a photo of himself in a tank top from the waist up. Id. at 328. Upon obtaining the phone, police received a warrant to search for, among other things, the tank top image. Id. at 329. While examining the phone, they discovered three images of the defendant's penis, which served as the basis of his conviction for possession of matter harmful to minors with intent to disseminate. Id. at 329, 334. Relying on the reasoning in Commonwealth v. Kaupp, 453 Mass. 102 (2009), the court concluded that "if police have obtained a warrant to search and seize evidence from a cell phone in their custody, they must *attempt* but need not *complete* a forensic examination of the device within seven days of the warrant's issuance," id. at 330 (emphasis added) (Commonwealth v. Kaupp is summarized below). The court provided no guidance about what exactly constituted an "attempt" to conduct a forensic examination.

- Commonwealth v. Kaupp, 453 Mass. 102 (2009). Police observed pirated movies in the publicly shared folder of one of defendant's computers. Id. at 105, 107. The publicly shared folder of a different computer nearby contained both pirated movies and child pornography. Id. at 103–05. Police seized the first computer and then received a search warrant for it. Id. at 105–06. Though the Supreme Judicial Court invalidated the warrant on probable cause grounds, it noted that, had the warrant been valid, the fact that it took more than seven days to fully search the computer would not have required suppression. Id. at 114–15. The Court cited other jurisdictions in support of the proposition "that the police do not need to complete forensic analysis of a seized computer and other electronic data storage devices within the prescribed period for executing a search warrant." Id. at 115. The Court held that a written return listing the devices to be examined that was filed within seven days after the search warrant issued satisfied Mass. Gen. Laws ch. 276, § 3A. Id.

(6) Manner of Executing the Warrant

"Under both the Fourth Amendment to the United States Constitution and art. 14 of the Massachusetts Declaration of Rights, the manner in which a search is conducted must be reasonable." Preventive Medicine Associates, Inc. v. Commonwealth, 465 Mass. 810, 822 (2013). The cases below deal with this requirement in the digital evidence context.

- Preventive Medicine Associates, Inc. v. Commonwealth, 465 Mass. 810 (2013). This case dealt with the search of a defendant's email account after indictment, and the possibility of intercepting privileged communications. Id. at 811. The Court held that "[w]hen an indicted defendant's e-mails are the object to be searched by the Commonwealth, because there is a risk that they contain privileged communications . . . a search, to be reasonable, must include reasonable steps designed to prevent a breach of the attorney-client privilege." Id. The SJC distinguished McDermott in part on the ground that the warrant in that case was issued before an indictment as part of an investigation, and the Commonwealth used preset search terms during the preliminary review of the defendant's files. Id. at 831. The Court stated that it took

  > seriously the concern that a cursory review of every e-mail undermines the particularity requirement of the Fourth Amendment and art. 14, particularly where—as the Commonwealth appears to argue would be permissible and appropriate in this case—the cursory review is joined with the plain view doctrine to enable the Commonwealth to use against the defendants inculpatory evidence with respect to the pending indictments that it finds in the emails, even though such evidence may not actually fit within the scope of the search warrants obtained.

  Id. at 831–32. The SJC did not rule on these issues in Preventative Medicine, however, because a search had not yet been conducted in that case. Id. at 832.

- Commonwealth v. McDermott, 448 Mass. 750 (2007). After a deadly mass shooting, police officers searched the defendant's apartment pursuant to a warrant for evidence linking him to the

shooting. Id. at 751, 764–65. As part of that search, they seized computers and disks. Id. at 765. The Court upheld this seizure as reasonable because it recognized the impracticality of searching computers on-site. Id. at 776. It also analogized this seizure to that of a firearm, stating that it "must be listed in the inventory taken from the premises in the timely return of the warrant but it may be submitted for specialized examination at an off-site forensic setting for the further extraction of evidence." Id. (citation omitted). The Court stressed the need to minimize the intrusion caused by digital searches. Id. at 777. In this case, police met that burden through the procedure they employed: "A forensic duplicate was made of the . . . hard drives and storage media to preserve all original data," and investigators used a keyword search that "resulted in a cursory inspection of only approximately 750 files . . . which amounted to less than one per cent of the defendant's files." Id. The Court also suggested that "[i]n conducting the actual search . . . considerable discretion must be afforded to the executing officers regarding how best to proceed" and that "[a]dvance approval for the particular methods to be used in the forensic examination of the computers and disks is not necessary." Id. at 776.

b) Exceptions to the Warrant Requirement

"Warrantless searches are per se unreasonable unless they fall within one of the few narrowly-drawn exceptions to the warrant requirement." Commonwealth v. Durham, No. 9610398, 1998 WL 34064623, at *2 (Mass. Super. Ct. Oct. 13, 1998). "When a warrantless search is conducted, the Commonwealth has the burden of showing that the search, and any resulting seizure, falls within this narrow class of permissive exceptions." Id. The sections below examine searches incident to arrest, the plain view doctrine, and exigent circumstances in the digital evidence context.

(1) Search Incident to Arrest

One of the recognized exceptions to the warrant requirement is for searches made incident to a suspect's arrest. In Massachusetts, such searches are governed not only by the Fourth Amendment and art. 14 but also by Mass. Gen. Laws ch. 276, § 1, which is generally seen as more restrictive than the Fourth Amendment. See Commonwealth v. Blevines, 438 Mass. 604, 607 (2003). This statute permits searches incident to arrest "only (1) for the purpose of seizing evidence of the crime for which the arrest has been made in order to prevent its destruction or concealment or (2) for the purpose of removing any weapon the person arrested might use to resist arrest or to escape." Id. (quoting Commonwealth v. Wilson, 389 Mass. 115, 118 (1983) (internal quotation marks omitted)).

Whether the search is permissible is based on an objective standard, so an officer's subjective intent as to the search is irrelevant as long as the search could reasonably have been expected to uncover weapons or evidence facing destruction. Id. at 608 (permitting removal of defendant's car keys from his pocket during search because an officer "discovering a hard object in [a] defendant's rear pocket, [is] justified in retrieving that object as a potential weapon"). Further, having removed an item, "police need not ignore obvious aspects of or markings on" it, id. at 609 (citing Commonwealth v. Sullo, 26 Mass. App. Ct. 766, 770 (1989)), but "detailed scrutiny" is disallowed, id. The cases below involve digital evidence in the context of a search incident to arrest.

- Riley v. California, 134 S. Ct. 2473 (2014). In two consolidated cases, law enforcement officials inspected the contents of an arrestee's cell phone—citing the search incident to arrest (SITA) exception—and used information therefrom in aid of further investigation. Id. at 2480–82. The Supreme Court held that these searches did not fall within the SITA exception because the justifications undergirding the exception did not apply to cell phones. Id. at 2484–85. First, digital contents of a cell phone cannot pose an immediate risk of physical injury to an officer. Id. at 2485–86. Second, once the phone has been seized by law enforcement (which the Court did allow), the arrestee cannot hide or destroy any evidence thereon (at least according to the Court). Id. at 2486. Confronting the issues of automatic locking, encryption, and remote wiping, the Court expressed doubt that these issues were particularly common, drew a distinction between such actions and the arrestee-initiated destruction of evidence in a typical SITA exception case, and allowed police to employ other means of preventing such actions. Id. at 2486–88 (noting that police may power off the phone or block its network connection and hypothesizing that the police may be allowed to alter a phone's settings to prevent it from locking). Finally, the Court noted that in exceptional cases—such as an imminent threat that the phone will be remotely wiped—the exigent circumstances exception may apply on a case-by-case basis. Id. at 2487–88.

- Commonwealth v. Barillas, 484 Mass. 250 (2020). Defendant was arrested on outstanding warrants after a tip connecting him to a murder. Id. at 250. Police found defendant hiding in his home, conducted a patfrisk, and seized a cellphone from defendant's shorts pocket. Id. They took the defendant to the police station, along with his father Eduardo and 13-year-old brother James, who agreed to come along to be interviewed. Id. at 251–52. At the police station, James told the police that the cellphone they had seized belonged to him. Id. at 252. To check this claim, the police asked James for the code to open the cellphone, James provided it, and it worked to unlock the phone. Id. The police then presented a voluntary consent to search form for the device, which James and Eduardo signed. Id. A police officer immediately searched the phone and discovered a video of the defendant talking about the crime. Id. "A later forensic search revealed evidence of calls and text messages between the victim and the defendant on the night of the stabbing." Id. Defendant's motion to suppress all evidence derived from the cellphone's warrantless seizure and search was granted because "the seizure of the cell phone was proper but the search of the cell phone was not." Id. at 254. The court held that the seizure of the phone was lawful under the search incident to arrest exception. Id. at 255. However, the search was improper because the police "made investigative use of the cell phone" during the conversations with James at the police station before obtaining consent to search the phone. Id. at 258-59. Even if the police officer was at first "only attempting to establish ownership of the cell phone, the search exceeded the scope of and was inconsistent with the purposes underlying the inventory search exception" Id. at 259 (quotations and citations omitted).

- Commonwealth v. Mauricio, 477 Mass. 588 (2017). Defendant was arrested in connection with a breaking and entering. Id. at 589. Police conducted an inventory search of his backpack and found a digital camera. Id. at 589–90. Believing the camera to be stolen, police turned it on and looked at the images stored on it in order to identify the owner. Id. at 590. One of the images depicted the defendant holding a firearm later confirmed to have been stolen in a separate break-in. Id. The

image was used to convict the defendant of carrying a firearm without a license. Id. at 589. The SJC held that the warrantless search of the digital camera was not a valid search incident to arrest under art. 14 of the state constitution. Id. at 592–93; see also id. (declining to address the constitutionality of the search under the Fourth Amendment). The SJC applied Chimel and Riley and found the twin threats of "harm to officers and destruction of evidence" were not present with regard to the data on a digital camera. Id. at 592. The SJC reasoned that, once the camera was secured, the data on it posed no danger and the risk of destruction of evidence was mitigated (and was less of a concern with respect to digital cameras lacking network connectivity than with cell phones). Id. at 592–93.

- Commonwealth v. Dyette, 87 Mass. App. Ct. 548 (2015). Police apprehended the defendant after giving chase to two men. Id. at 550. Defendant claimed he was not one of the two men. Id. When asked why he was breathing heavily, he claimed to have been arguing on the phone with his girlfriend. Id. at 550–51. After he was booked, the defendant placed a phone call he claimed was to his girlfriend. Id. at 551. Police then examined his cell phone call log about five hours after the arrest, without obtaining a warrant; the log belied both of defendant's statements. Id. The booking sergeant testified that it could take several days to get a warrant, and that he was concerned that incoming calls would "push out" previous calls on the call log, which he believed permitted only a limited number of calls. Id. The SJC held that under Riley (described above), decided a year earlier, the search of the call log was not a proper search incident to arrest and was not justified by exigent circumstances. Id. at 557. The SJC found that—absent testimony suggesting the phone was password protected or that police were concerned about remote wiping—preservation of the call log could have been achieved by "turning the cell phone off, placing the cell phone in a Faraday bag, or securing the cell phone and seeking a warrant for it." Id. at 558–59.

(2) The Plain View Doctrine

Under the plain view doctrine, law enforcement may make a warrantless seizure of evidence when four conditions are met. See Commonwealth v. Ericson, 85 Mass. App. Ct. 326, 333 (2014) (explained below). First, the officers must lawfully be in a position to view the evidence. Id. Second, they must have a lawful right of access to the object. Id. Third, they must have a reason for seizing it. Id. In cases concerning (a) items possessed illegally, the incriminating character of the object should be immediately apparent. Id. (citing Horton v. California, 496 U.S. 128, 136 (1990) (explained below)). In cases concerning (b) other types of evidence, the particular evidence must plausibly be related to criminal activity of which the police are already aware. Id. (citing Commonwealth v. Sliech-Brodeur, 457 Mass. 300, 306–307 (2010)). Fourth, art. 14 requires that police come across the object inadvertently. Id. (citing Sliech-Brodeur, 457 Mass. at 307). The following cases address the plain view doctrine in the digital evidence context.

- Commonwealth v. Tarjick, 87 Mass. App. Ct. 374 (2015). Defendant's stepdaughter disclosed he abused her and took sexually explicit photos/made recordings of her. Id. at 375. Police obtained a warrant authorizing the search of the defendant's home and the seizure of the defendant's cell phone, the family computer, and the family video camera. Id. Three memory cards that were in the camcorders or digital cameras were also seized when the warrant was executed, though they

were not included in the warrant. Id. A second warrant was obtained to search the contents of the memory cards and evidence from the cards was later used at trial. Id. at 375–76. The Appeals Court held that the seizure was within the plain view exception. Id. at 378. The cards, though not included in the original warrant, were plausibly related to the crime. Id. "The officers were . . . aware that data may be freely transferred from one device to another through memory cards, and they could reasonably have concluded that the memory cards might have contained the alleged recordings." Id. The inadvertence requirement was also satisfied because there was "no indication that the police had probable cause to believe, prior to the search, that these specific memory cards or the cameras containing them would be found." Id.

- Commonwealth v. Ericson, 85 Mass. App. Ct. 326 (2014). Defendant in this case texted with a young girl—and subsequently with the police officers to whom she gave her phone—asking for nude photos. Id. at 327–28. As part of this exchange, the defendant sent a photo of himself in a tank top from the waist up. Id. at 328. Upon obtaining the phone, police received a warrant to search for, among other things, the tank top image. Id. at 329. While examining the phone, they discovered three images of the defendant's penis, which served as the basis of his conviction for possession of matter harmful to minors with intent to disseminate. Id. at 329, 334. On appeal, the court upheld this seizure under the plain view doctrine. Id. at 333. Fulfilling the first and second plain view requirements, the warrant authorizing seizure of the tank top image means the police "were lawfully situated to view and to secure the [penis] images" because police are authorized to conduct cursory inspection of computer files to determine whether they match items listed in the warrant. Id. at 333–34 (citing Commonwealth v. McDermott, 448 Mass. 750, 776–77 (2007)). Third, the images of the defendant's penis were plausibly related to criminal activity of which the police were aware. Id. at 334. The defendant's statements of intent to exchange pictures of his nude body with pictures of the minor gave police reasonable ground to believe the pictures were evidence of enticing the minor to pose in a state of nudity. Id. The same statements made it plausible that the pictures were evidence of possession of matter harmful to minors with intent to disseminate. Id. Fourth, police discovered the images inadvertently because they "lacked probable cause to believe, prior to the search, that specific items would be discovered during the search." Id. (quoting Commonwealth v. Balicki, 436 Mass. 1, 9–10 (2002)).

- United States v. Burdulis, No. 10–40003–FDS, 2011 WL 1898941 (D. Mass. May 19, 2011). Defendant in this case emailed a police officer impersonating a young boy an explicit image. Id. at *1. Police obtained a warrant to search the defendant's computer. Id. at *2. During their search of image files on the computer, police uncovered child pornography. Id. After finding the seizure of those images authorized by the initial warrant, the court held in the alternative that the plain view doctrine also authorized the use of those images in evidence. Id. at *11–12. First, the officer searching the computer was lawfully in a position to view the evidence because he was conducting a search pursuant to a warrant. Id. at *11. As he was looking for image files, he was authorized to briefly examine all images to determine if they were a match. Id. Second, by this same logic, the officer had a lawful right of access to the files. Id. at *12. Third, the prohibited nature of child pornography images would have been immediately apparent. Id. [The court did

not examine the fourth requirement—inadvertence—because it exists only under Massachusetts law. See above for more detail on inadvertence.]

(3) Exigent Circumstances

"One well-recognized exception [to the warrant requirement] applies when 'the exigencies of the situation make the needs of law enforcement so compelling that [a] warrantless search is objectively reasonable under the Fourth Amendment.'" Kentucky v. King, 563 U.S. 452, 460 (2011) (quoting Mincey v. Arizona, 437 U.S. 385, 394 (1978)). Among the exigencies that the Court has identified in the context of searching a home are "emergency aid" (entering a home to render assistance to an injured occupant), "hot pursuit" (chasing after a fleeing suspect), and the need to prevent the "imminent destruction of evidence." Id.

- Commonwealth v. Barrett, 97 Mass. App. Ct. 437 (2020). Police seized defendant's phone, then answered an incoming call to the phone approximately one hour and fourteen minutes after the seizure. Id. at 437–48. The Commonwealth argued that exigent circumstances justified answering the call, but it did not offer "any evidence that it was impracticable to obtain a search warrant before the call was received." Id. at 441. The court allowed defendant's motion to suppress the call and evidence derived from it, explaining that "because there [was] no evidence in the record that obtaining a warrant was impracticable here, the Commonwealth failed to meet its burden of showing exigency, and [the court was] constrained to conclude that the motion to suppress should have been allowed." Id. at 442. The court noted, however, that the burden to show that it was impracticable to obtain a search warrant in one hour and fourteen minutes was not a heavy one and could potentially have been met by an officer's testimony about the steps necessary to obtain a warrant. Id. This case indicates that courts are unlikely to treat a "one hour or two hour time frame" as *by itself* sufficient to justify a search under exigent circumstances, id. at 439, but leaves open the possibility that the same search might have been found justified had the government produced evidence showing why that short timeframe made obtaining a warrant impracticable. Id. at 442 (but see Alvarez, 480 Mass. 1017 (2018) (holding that a police officer observing a text message on the screen of a phone that was lawfully in his custody, when he glanced at the phone because it started ringing, was not a search absent evidence of further action by the officer and absent any argument by the defendant that "observation of the outside of the… phone constituted a search")).

- Commonwealth v. Cruzado, 480 Mass. 275 (Aug. 10, 2018). Police found a cell phone lying near the defendant in a stairwell. Id. at 282. Having probable cause, the police seized the cell phone. Id. The Supreme Judicial Court held that "exigent circumstances supported the warrantless seizure: the risk of someone taking or tampering with the cell phone. Left unattended, especially in an area to which many people had access, the cell phone would have been at the risk of theft or vandalism." Id. at 283.

- Commonwealth v. Dyette, 87 Mass. App. Ct. 548 (2015). Possible degradation of a call log on a cell phone was deemed not an exigent circumstance because such degradation could be prevented in a number of different ways, such as by turning off the phone. Id. at 558–59.

- Commonwealth v. Kaupp, 453 Mass. 102 (2009). Police observed pirated movies in the publicly shared folder of one of defendant's (a teacher) computers in a school classroom. Id. at 105, 107. The publicly shared folder of a different computer nearby contained both pirated movies and child pornography. Id. at 103–05. Police seized both computers and subsequently obtained a search warrant. Id. at 105. The Court upheld the seizure of defendant's computer as appropriate because of exigent circumstances. Id. at 105–06. Specifically, the Court noted that "impoundment of an object pending the issuance of a search warrant violates the Fourth Amendment . . . only if it is unreasonable," which "turns on the facts of each case, requiring courts to 'balanc[e] the need to search or seize against the invasion that the search or seizure entails.'" Id. at 106 (quoting Commonwealth v. Catanzaro, 441 Mass. 46, 55–56 (2004)). The Court held that "[g]iven the ease with which computer files may be accessed and deleted, and the disruption that would have been created by posting an officer in the defendant's office and preventing students from entering pending the issuance of a search warrant . . . the seizure was reasonable." Id. In a footnote, the Court noted that while exigent circumstances justified the seizure, they would not have justified the subsequent search had it been warrantless because "[t]he exigency necessitating [the computer's] seizure dissipated once the computer had been secured." Id. n.7.

(4) Emergency Aid Exception

The emergency aid exception to the warrant and probable cause requirements originated in the context of searching a home, "permit[ting] the police to enter a home without a warrant when they have an objectively reasonable basis to believe that there may be someone inside who is injured or in imminent danger of physical harm." Commonwealth v. Peters, 453 Mass. 818, 819 (2009). The exception has since been extended to "uphold warrantless searches of places other than homes, in order to find and assist a victim of serious physical harm or to prevent such harm from occurring," and most recently to searches of the digital information. Commonwealth v. Raspberry, 93 Mass. App. Ct. 633, 639-40 (2018).

- Commonwealth v. Raspberry, 93 Mass. App. Ct. 633 (2018). Police officers listening to a wiretap had "grave concerns about the defendant imminently causing serious bodily harm" to another with a firearm. Id. at 635 (internal quotation marks omitted). To locate the defendant and prevent the harm, police "asked AT&T to perform 'emergency pings' and give the police real-time CSLI about the approximate location of the defendant's cell phone." Id. The Commonwealth did not contest that a Fourth Amendment "search" took place, instead arguing that the "search" was "reasonable" under the emergency aid doctrine. See id. at 638, 640. The Massachusetts Appeals Court agreed. See id. at 641 ("We have no difficulty concluding that these standards were met here . . . What police did not know here, at the time of the call, was the whereabouts of the defendant. In the circumstances, it was objectively reasonable for the police to request real-time CSLI, in order to determine the defendant's current location and the direction in which she was moving, and thus to find and intercept her before she could shoot Dorsey.").

The emergency aid exception differs from the exigent circumstances exception: the former requires no probable cause to conduct a search, whereas the latter permits a warrantless search where probable cause exists but the circumstances make obtaining a warrant impracticable. Raspberry, 93 Mass. App. Ct. at 638, n. 8.

(5) Inventory Exception

Seizures of items on an arrestee's person may also be permissible, subject to police inventory policies. "[B]efore a person is placed in a cell, the police, without a warrant, but pursuant to standard written procedures, may inventory and retain in custody all items on the person . . . ." Commonwealth v. Seng, 436 Mass. 537, 550 (2002). For such seizure to be lawful, police must follow the rules of a written inventory policy that is "explicit enough to guard against the possibility that police officers would exercise discretion with respect to whether to open closed [containers] as part of their inventory search." Commonwealth v. Rostad, 410 Mass. 618, 622 (1991). "Inventory searches are intended to be noninvestigatory and are for the purpose of safeguarding the defendant's property, protecting the police against later claims of theft or lost property, and keeping weapons and contraband from the prison population." Barillas, 484 Mass. at 256. As such, "[i]n making an inventory — taking from the person, noting what is received, and placing it in safekeeping — the police are to act more or less mechanically, according to a set routine, for to allow then a range of discretion in going about a warrantless search would be to invite conduct which by design or otherwise would subvert constitutional requirements." Commonwealth v. Sullo, 26 Mass. App. Ct. 766, 772 (1989) (cited in Barillas, 484 Mass. at 259).

Investigatory use of items seized under the inventory exception is impermissible unless the police have a search warrant or "obtain consent from the appropriate person (as determined by the inventory policy)." Barillas, 484 Mass. at 257. Any evidence resulting from investigatory use of inventory items without consent or a warrant is subject to suppression. Id.

- Commonwealth v. Mauricio, 477 Mass. 588 (2017). Defendant was arrested in connection with a breaking and entering. Id. at 589. Police conducted an inventory search of his backpack and found a digital camera. Id. at 589–90. Believing the camera to be stolen, police turned it on and looked at the images stored on it in order to identify the owner. Id. at 590. One of the images depicted the defendant holding a firearm later confirmed to have been stolen in a separate break-in. Id. The image was used to convict the defendant of carrying a firearm without a license. Id. at 589. The SJC rejected the argument that the search of the camera was a valid inventory search, holding that it was instead investigatory in nature because the camera was suspected stolen and the search was meant to identify the owner. Id. at 595–96.

- Commonwealth v. Barillas, 484 Mass. 250 (2020). Defendant was arrested on outstanding warrants after a tip connecting him to a murder. Id. at 250. Police found the defendant hiding in his home, conducted a pat frisk, and seized a cellphone from defendant's shorts pocket. Id. They took the defendant to the police station, along with his father Eduardo and 13-year-old brother James, who agreed to come along to be interviewed. Id. at 251–52. At the police station, James told the police that the cellphone they had seized belonged to him. Id. at 252. To check this claim, the police asked James for the code to open the cellphone: James provided it and it worked to

unlock the phone. Id. The police then presented a voluntary consent to search form for the device, which James and Eduardo signed. Id. A police officer immediately searched the phone and discovered a video of the defendant talking about the crime. Id. "A later forensic search revealed evidence of calls and text messages between the victim and the defendant on the night of the stabbing." Id. Defendant's motion to suppress all evidence derived from the cellphone's warrantless seizure and search was granted because "the seizure of the cell phone was proper but the search of the cell phone was not." Id. at 254. The court held that the seizure of the phone was lawful under the search incident to arrest exception. Id. at 255. However, the search was improper because the police "made investigative use of the cell phone" during the conversations with James at the police station before obtaining consent to search the phone. Id. at 258-59. Even if the police officer was at first "only attempting to establish ownership of the cell phone, the search exceeded the scope of and was inconsistent with the purposes underlying the inventory search exception" Id. at 259 (quotations and citations omitted).

(6) Consent

Warrantless searches are permissible with appropriate advance consent.

- Commonwealth v. Barillas, 484 Mass. 250 (2020). Defendant was arrested on outstanding warrants after a tip connecting him to a murder. Id. at 250. Police found defendant hiding in his home, conducted a patfrisk, and seized a cellphone from defendant's shorts pocket. Id. They took the defendant to the police station, along with his father Eduardo and 13-year-old brother James, who agreed to come along to be interviewed. Id. at 251–52. At the police station, James told the police that the cellphone they had seized belonged to him. Id. at 252. To check this claim, the police asked James for the code to open the cellphone: James provided it and it worked to unlock the phone. Id. The police then presented a voluntary consent to search form for the device, which James and Eduardo signed. A police officer immediately searched the phone and discovered a video of the defendant talking about the crime. Id. "A later forensic search revealed evidence of calls and text messages between the victim and the defendant on the night of the stabbing." Id. Defendant's motion to suppress all evidence derived from the cellphone's warrantless seizure and search was granted because "the seizure of the cell phone was proper but the search of the cell phone was not." Id. at 254. The court held that the seizure was lawful under the search incident to arrest exception. Id. at 255.However, the search was improper because the police "made investigative use of the cell phone" during the conversations with James at the police station before obtaining consent to search the phone. Even if the police officer was at first "only attempting to establish ownership of the cell phone, the search exceeded the scope of and was inconsistent with the purposes underlying the inventory search exception" Id. at 259 (quotations and citations omitted).

- Commonwealth v. Fredericq, 482 Mass. 70 (2019). The defendant, charged with trafficking cocaine, successfully sought to suppress CSLI data tracking the cell phone location of the driver of the car in which he was riding. Id. at 71. The Court held that the defendant had standing to challenge the CSLI search because he was "a passenger of the vehicle whose location was effectively being continually tracked through CSLI monitoring," and had a reasonable

expectation of privacy in his movements. Id. at 77. The Court further held that the consent search of the defendant's residence was tainted by the illegal CSLI search. Id. at 71. Believing that the defendant and a second individual were transporting narcotics from Florida to Massachusetts, police obtained a court order pursuant to 18 U.S.C. § 2703 (2006) requiring the second individual's cellular service provider to "ping" the location of his cell phone. Id. at 73-74. After the two returned to Massachusetts, police knocked on the defendant's door and told him they knew he had just "purchased a large amount of narcotics" in Florida and was possibly storing it at his apartment. Id. at 74. The defendant then consented to a search, and police discovered a large amount of cash and two bricks of cocaine in his residence. Id. at 75. The SJC considered three factors in determining whether the defendant's consent was attenuated from the tainted CSLI data: "(1) the amount of time that elapsed between the defendant being confronted with the illegally obtained CSLI evidence and his grant of consent; (2) the presence of any intervening circumstances during that time period; and (3) the purpose and flagrancy of the official misconduct." Id. at 81-82 (internal quotes omitted). As to factors (1) and (2), the Court held that the lack of time and intervening events between the acquisition of the CSLI data and the police officer's confrontation with the defendant claiming that he had just returned from Florida with drugs weighed heavily against attenuation. Id. at 82-83. As to factor (3), while the Court "recognize[d] that the illegal police misconduct here was neither purposeful nor flagrant," it was still not dispositive in attenuating defendant's consent from the tainted CSLI data. Id. at 84. In her dissent, Justice Cypher explained that she would not reach the conclusion of the majority that a passenger in a tracked car has standing to challenge a CSLI search. Id. at 86 n.1 (Cypher, J., concurring in part and dissenting in part). In addition, she encouraged the SJC to adopt the good faith exception to the exclusionary rule in cases where the police acted under a "reasonable good faith belief that their conduct was lawful at the time." Id. at 92. While Justice Lowy agreed that Massachusetts should adopt a good faith exception, he did not believe the issue was properly raised by the Commonwealth in this case. Id. at 85-86 (Lowy, J., concurring).

3. The Exclusionary Rule

Generally, the exclusionary rule prohibits the introduction of evidence obtained as a result of a violations of the Fourth, Fifth and Sixth Amendments to the U.S. Constitution, and their counterparts under the Massachusetts Declaration of Rights. See Commonwealth v. Lora, 451 Mass. 425, 439 & n.26 (2008).

a) Good Faith / Substantial and Prejudicial

The Supreme Court has limited the application of the exclusionary rule in federal cases where officers acted in good faith, but Massachusetts does not recognize the good faith exception under art. 14. See Commonwealth v. Porter P., 456 Mass. 254, 273 (2010). Instead, it looks to "the foundational purpose of the rule—to deter unlawful police conduct . . . as a guiding principle" to determine whether evidence should be excluded. Commonwealth v. Maingrette, 86 Mass. App. Ct. 691, 697 (2014) (citing Commonwealth v. Wilkerson, 436 Mass. 137, 142 (2002)). Where:

> an arrest is wrongly made on the basis of mistaken information chargeable solely to the police, the burden is on the government to show . . . that the [government's] mistake was reasonable in the circumstances, and that the violation was minor or insubstantial and nonprejudicial and that exclusion of the evidence would not be likely to deter future police misconduct.

Id. (citations omitted).

b) Inevitable Discovery

> "Under the inevitable discovery doctrine, if the Commonwealth can demonstrate by a preponderance standard that discovery of the evidence by lawful means was certain as a practical matter, the evidence may be admissible as long as the officers did not act in bad faith to accelerate the discovery of evidence, and the particular constitutional violation is not so severe as to require suppression."

Commonwealth v. Fontaine, 84 Mass. App. Ct. 699, 709 (2014) (citation omitted). Though there are no Massachusetts cases applying this doctrine to a computer search, the First Circuit case below applying a slightly different federal test is instructive:

- United States v. Crespo-Rios, 645 F.3d 37 (1st Cir. 2011). In this case, the FBI searched the defendant's computer and external hard drive for evidence of chats between both him and an undercover agent and him and minors. Id. at 40–41. The search for these chats was conducted pursuant to a warrant that also listed, among other things, child pornography as something being sought. Id. at 40. During this search, agents found child pornography. Id. Following his indictment, the defendant moved to suppress the evidence, arguing that there was insufficient probable cause to support the overly-broad search warrant. Id. at 41. The First Circuit overturned the lower court by applying the inevitable discovery doctrine. Id. at 42-44. In searching the computer and hard drive for the chat evidence—for which there was undoubtedly probable cause—the court found that government agents would inevitably have discovered the child pornography because searching for computer files allows brief scanning of all possibly relevant files on the computer. Id. [This analysis is quite similar to that of the plain view doctrine, discussed elsewhere in this guide.]

B. Search of Electronic Service Providers

1. General Overview of Stored Communications Act

In 1986, Congress enacted the Stored Communications Act (SCA). See Pub. L. 99-508, 100 Stat. 1848, Title II. It provides limited privacy protections to the customers of "electronic communication service[s]" (ECS) and "remote computing services" (RCS). Orin S. Kerr, The Next Generation Communications Privacy Act, 162 U. Pa. L. Rev. 373, 383 (2014). ECS providers are email services like Gmail or Yahoo! along with certain elements of social media platforms, like a user's Facebook "wall." See generally Richard M. Thompson II, Cloud Computing: Constitutional and Statutory Privacy Protections, Congressional Research Service 8–11 (2013).

RCS providers are harder to define and include any company that provides "computer storage or processing services by means of" the Internet to the public. Pub. L. 99-508, 100 Stat. 1848, § 2710. Cloud storage providers like Dropbox clearly fit this definition. Jeffrey Paul DeSousa, Self-Storage Units and Cloud Computing, 102 Geo. L.J. 247, 250 n.19 (2013). Courts have also found that YouTube belongs in this category. Richard M. Thompson II, Cloud Computing: Constitutional and Statutory Privacy Protections, Congressional Research Service 11 (2013).

For a discussion of the argument that text messaging services are "remote computing services" under 18 U.S.C. § 2703(b) see Commonwealth v. Fulgiam, 477 Mass. 20, 31–33 (2017). The SJC held that the Commonwealth may not obtain the content of text messages without a warrant because text messaging is an "electronic communication service" subject to the requirements of § 2703(a). Id. at 32–33. The SJC also decided that a warrant supported by probable cause was also required for the content of text messages under art. 14. Id. at 33–34.

2. Search warrants served on out-of-state Internet service providers

Out-of-state corporations providing ECS or RCS to Massachusetts residents are subject to the jurisdiction of Massachusetts courts and must comply with search warrants issued by them. See Mass. Gen. Laws ch. 276, § 1B (2018); see also 18 U.S.C. § 2703 (2018) (outlining process by which state courts exercise jurisdiction over ECS and RCS providers).

C. Encryption and Self Incrimination

1. The Foregone Conclusion Doctrine

The Fifth Amendment to the United States Constitution states, in relevant part, that "[n]o person . . . shall be compelled in any criminal case to be a witness against himself." This does not mean that a defendant cannot be compelled to produce some types of incriminating evidence, however, because only compelled *testimonial* communication that incriminates is barred. See Commonwealth v. Gelfgatt, 468 Mass. 512, 519 (2014) (citing Fisher v. United States, 425 U.S. 391, 408 (1976)). Written or oral communication created in response to government demand is plainly testimonial. See id. at 520. Compelled action that communicates something can also be testimonial in nature. Id.

"Whether an act of production is testimonial depends on whether the government compels the individual to disclose 'the contents of his own mind' to explicitly or implicitly communicate some statement of fact." Gelfgatt, 468 Mass. at 520 (quoting United States v. Hubbell, 530 U.S. 27, 43 (2000)). For example, giving blood, producing a voice exemplar, or standing in a lineup are all nontestimonial because the suspect in question "is not required to disclose any knowledge he might have, or to speak his guilt." Id. at 521 (citations omitted). By contrast, complying with the government's demand could be testimonial "where [the act of production] is considered to be a tacit admission to the existence of the evidence demanded, the possession or control of such evidence by the individual, and the authenticity of the evidence." Id. (citing Hubbell, 530 U.S. at 36 & n.19).

Even in cases where the act of producing evidence that the government seeks to compel is testimonial, however, that production loses its testimonial character if the information that would be

disclosed by the production is a "foregone conclusion." Id. at 522. The forgone conclusion exception obtains "where the facts conveyed already are known to the government, such that the individual 'adds little or nothing to the sum total of the Government's information.'" Id. (quoting Fisher, 425 U.S. at 411). In other words, "the Commonwealth must establish that it already knows the testimony that is implicit in the act of the required production." Commonwealth v. Jones, 481 Mass. 540, 547 (2019).

Several State and Federal courts have "applied the foregone conclusion exception in the context of compelled decryption," but neither the United States Supreme Court nor the Circuit Courts of Appeal have ruled on the government's burden of proof that applies to the "foregone conclusion" exception under the Fifth Amendment. Jones, 481 Mass. at 550. One federal district court "concluded that the appropriate standard of proof under the Fifth Amendment is clear and convincing evidence. Id. (citing United States v. Spencer, No. 17-cr-00259-CRB-1, 2018 WL 1964588 (N.D. Cal. Apr. 26, 2018).

- In re a Grand Jury Investigation, 92 Mass. App. Ct. 531 (2017). During a grand jury investigation, a judge ordered petitioner to enter his personal identifying number (PIN) access code into his iPhone smartphone. Id. at 532. A warrant had previously issued for a search of the phone. Id. The Appeals Court held that production of the PIN was within the foregone conclusion exception to the Fifth Amendment. Id. at 534. To meet its burden under the doctrine, the prosecution had to demonstrate knowledge of the ownership and control of the cell phone and its contents, as well as "knowledge of the fact of [PIN code protection], and knowledge of the [existence of the PIN code]." Id. (quoting Commonwealth v. Gelfgatt, 468 Mass. 512, 524 (2014)). The prosecution was not required to show that it knew the specific content of the cell phone, but it did need to demonstrate knowledge of the existence and the location of the content. Id.

Article Twelve (art. 12) of the Massachusetts Declaration of Rights—analogous to the Fifth Amendment—provides that "[n]o subject shall . . . be compelled to accuse, or furnish evidence against himself." Article Twelve provides greater protection than the Fifth Amendment in some contexts, but this broader protection "does not change the classification of evidence to which the privilege applies," so only "testimonial or communicative" evidence is protected from compelled disclosure. Commonwealth v. Gelfgatt, 468 Mass. 512, 525 (2014) (citations omitted). Massachusetts also recognizes the "foregone conclusion" exception to art. 12. Id. at 526.

For the exception to apply in the context of an order compelling decryption of an electronic device, Article Twelve requires that "the Commonwealth . . . prove beyond a reasonable doubt that the defendant knows the password." Commonwealth v. Jones, 481 Mass. 540, 552. But the Commonwealth does not need to "prove any facts with respect to the contents" of the device to be decrypted. In addition, "the entry of the password alone does not convey the fact of 'ownership' of the device or its contents." Id. at 547 n.8.

2. Encryption

In an affidavit the Commonwealth submitted in Gelfgatt, the director of the Massachusetts Attorney General's computer forensics laboratory explained that "encryption" is:

> the process by which 'readable' digital media, that is, digital media or data that can be viewed and accessed, is scrambled in such a way as to render that digital media or data 'unreadable' without decryption. Encryption can be performed both by hardware and by means of software tools.

Commonwealth v. Gelfgatt, 468 Mass. 512, 516 n.9 (2014). The director described "decryption" as:

> the process by which encrypted, scrambled data is rendered 'readable' again. In order to decrypt data, the person seeking decryption performs some action such as the entering of a password, scanning of a fingerprint or [insertion of] a USB Thumb drive with a pass code key on it. The encryption software then translates this action into a 'key,' essentially a string of numbers or characters. The encryption software then applies this key to the encrypted data using the algorithm of the given encryption program. By funneling the encrypted data through the algorithm, the data is rendered 'readable' again.

Id. In Gelfgatt, the Commonwealth represented that the defendant's encryption software was virtually impossible to decrypt. Id. at 516–17. The Commonwealth represented that files thus encrypted could only be viewed if an authorized user entered a password. Id. at 517. But compelling the user to enter or disclose their password presents a possible violation of the Fifth Amendment and art. 12. The Gelfgatt court examined the interplay of these issues in Massachusetts:

- Commonwealth v. Gelfgatt, 468 Mass. 512 (2014). Defendant in this case was allegedly involved in a mortgage fraud scheme. Id. at 513. Law enforcement believed proof of that scheme would be found on the defendant's computers, and they obtained a search warrant, but encryption on the computers foiled their search. Id. at 516–17. When interviewed by police, the defendant admitted to owning multiple computers, stated that the police would be unable to access them because they were encrypted, and stated that he was able to decrypt the computers but refused to do so. Id. at 517. The lower court found that compelling him to do so would violate his Fifth Amendment and art. 12 rights against self-incrimination. Id. at 518–19. The SJC reversed and held that he could be compelled to enter his password in the circumstances presented by this case. Id. at 519–26.

  First, the Court stated that compelling a defendant to enter a decryption password, in the abstract, implicated the Fifth Amendment because the defendant would be implicitly "acknowledging that he has ownership and control of the computers and their contents," which could itself be relevant to the Commonwealth's case against him. Id. at 522. Next, the Court considered the "foregone conclusion" exception (explained above) and held that it applied because the defendant had already admitted to owning multiple computers, that their contents were encrypted, and that he was capable of decrypting them. Id. at 523-24. As a result, the facts that would have been communicated by compelling him to decrypt the computers were already known to the government,

making them a foregone conclusion. Id. Finally, the Court examined the issue under art. 12 but held that the same analysis applied. Id. at 524–26. [Note: Crucially, the Commonwealth proposed a protocol for decrypting the files that limited the scope of what was communicated through the compelled decryption. That protocol is outlined above.]

- Commonwealth v. Jones, 481 Mass. 540 (2019). Defendant was charged with trafficking a person for sexual servitude, Mass Gen. Laws ch. 265, § 50(a) (2018); id. at 541, and deriving support from the earnings of a prostitute, Mass. Gen. Laws ch. 272, § 7 (2018); id. at 541. The Commonwealth seized an LG cell phone from the defendant at his arrest and later obtained a warrant to search the phone. Id. at 541, 544. The LG phone had to be decrypted with the entry of a password before the search could be executed. Id. at 541. The Commonwealth moved for a Gelfgatt order, compelling the defendant to decrypt the LG phone under the "forgone conclusion" exception to the privilege against self-incrimination under the Fifth Amendment to the U.S. Constitution and Article 12 of the Massachusetts Declaration of Rights. Id. at 541–42. The SJC found that in order to obtain a Gelfgatt order compelling a defendant to decrypt an electronic device, the Commonwealth must "prove that the defendant knows the password beyond a reasonable doubt for the foregone conclusion exception to apply." Id. at 542–43. The Court also concluded that the Commonwealth met its burden in this case. Id. at 543. Finally, the SJC concluded that judges can consider new information in deciding renewed Gelfgatt motions, "without first finding that [the new information] was not reasonably available to the Commonwealth at the time the earlier Gelfgatt motion was filed." Id.

  To meet its burden of proving beyond a reasonable doubt that the defendant's knowledge of the password was a "foregone conclusion," the Commonwealth offered the following evidence: a witness testified to the defendant's regular use of the LG phone to answer calls and communicate through text messages (the record revealed several communications between the witness's phone and the LG phone related to prostitution); the defendant's phone number was listed with his name in the witness's contacts; the LG phone was in the defendant's possession at the time of arrest; the defendant had characterized the telephone number of the LG phone as his number to police when he was being booked following an arrest in an unrelated matter; police records showed that a backup number listed for the LG phone was registered to a person with the same name, social security number, and date of birth as the defendant; CSLI records revealed that the LG phone was in the same location at the same time as another phone that was found to be the defendant's phone. Id. at 556–57. All of this evidence, "taken together with the reasonable inferences drawn therefrom, prove[d] beyond a reasonable doubt that the defendant [knew] the password to the LG phone." Id. at 557 (noting that "it is hard to imagine more conclusive evidence" showing that the defendant knows the LG phone's password). The SJC also noted that even if the LG phone was used by more than one person, proof of ownership or exclusive control was not required. Id. at 547 n.8.

3. Sample Decryption Protocol

In Commonwealth v. Gelfgatt, the Commonwealth employed the following protocol to limit the amount of information that would be communicated by the compelled decryption:

> 1. The defendant, in the presence of his counsel, shall appear at the [Digital Evidence Laboratory] of Massachusetts Attorney General [Maura Healey] within 7 days from the receipt of this Order at a time mutually agreed upon by the Commonwealth and defense counsel;
>
> 2. The Commonwealth shall provide the defendant with access to all encrypted digital storage devices that were seized from him pursuant to various search warrants issued in connection with this case;
>
> 3. The defendant shall manually enter the password or key to each respective digital storage device in sequence, and shall then immediately move on to the next digital storage device without entering further data or waiting for the completion of the process required for the respective devices to 'boot up';
>
> 4. The defendant shall make no effort to destroy, change, or alter any data contained on the digital storage devices;
>
> 5. The defendant is expressly ordered not to enter a false or 'fake' password or key, thereby causing the encryption program to generate 'fake, prepared information' as advertised by the manufacturer of the encryption program;
>
> 6. The Commonwealth shall not view or record the password or key in any way; [and]
>
> 7. The Commonwealth shall be precluded from introducing any evidence relating to this Order or the manner in which the digital media in this case was decrypted in its case in chief. Further, the Commonwealth shall be precluded from introducing any such evidence whatsoever except to the extent necessary to cure any potentially misleading inferences created by the defendant at trial relating to this matter.

Id. at 517 n.10.

D. Searches Implicating Attorney-Client Privilege

Searches that may intercept privileged communications between a suspect and his lawyer should be handled with special care. See generally Preventative Med. Assocs., Inc. v. Commonwealth, 465 Mass. 810, 811 (2013). This problem is especially acute when a search is executed after a suspect has already been indicted and retained counsel. See, e.g., id. Even when a post-indictment search targets a different crime than the one for which the defendant was indicted, such a search runs a risk of encountering

privileged communications. Id. at 817–18. The section below detail how such a search should proceed in Massachusetts.

1. Post-Indictment Email and File Searches

The Commonwealth may seize emails of a defendant under indictment by means of an ex parte search warrant. See Preventative Med. Assocs., Inc. v. Commonwealth, 465 Mass. 810, 821–22 (2013). Because of the sensitive nature of such a seizure, however, "only a Superior Court judge may issue a search warrant seeking e-mails of a criminal defendant under indictment." Id. at 822. The affidavit supporting the warrant application must inform the judge at the outset that the subject of the email search is under indictment and must explain the connection, if any, between the indictment and the search warrant being sought. Id. Finally, the affidavit must explain why a search warrant rather than a rule 17(a)(2) summons is necessary to obtain the emails. Id. One possible explanation the SJC has suggested is cases where the Stored Communications Act requires a warrant, which it does for emails not yet opened that are 180 or less days old. See id. at 819 n.17 (citing 18 U.S.C. § 2703(a)), 822.

Once seized, emails possibly containing privileged material may be searched only after the Commonwealth receives a Superior Court judge's approval of a search protocol including specific procedures to protect against searches of privileged communications between a defendant and his attorneys. Id. at 823. One such procedure that the Court has approved is laid out below in the "Taint Team" section.

2. Taint Teams

A "taint team" is a group of attorneys or agents employed by a government office who have not at any time been involved in the investigation and/or prosecution of the defendants and who will not be assigned to any such investigation or prosecution in the future who sort the defendant's communications into privileged and unprivileged so that the latter group may be investigated by the government without eroding a defendant's attorney-client privilege. See Preventative Med. Assocs., Inc. v. Commonwealth, 465 Mass. 810, 824–25 (2013).

There is "widespread skepticism" about the ability of government agents to properly review privileged communications without affecting that privilege, id. at 825, but the SJC has concluded that taint teams can "offer adequate protection to the Commonwealth's citizens," id. at 827. To that end, the SJC has put in place a two-tiered set of requirements surrounding the use of taint teams.

First, before a judge may authorize a team that will use members of a prosecutor's office as its members, "the Commonwealth must establish the necessity of doing so" because "use of an independent special master offers a far greater appearance of impartiality and protection against unwarranted disclosure and use of an indicted defendant's privileged communications." Id. at 829. In ruling on the prosecution's request to use a taint team, "the judge may consider factors such as the number of documents to be searched, the relative cost of a special magistrate, and the Commonwealth's unique ability to perform such a search due to specialized computer forensic examiners in its employ." Id. Further, the judge will consider "the Commonwealth's ability to erect an impenetrable wall between members of the taint team and members of the prosecution team." Id. at 829–30. In making this

determination, the judge will consider "the size of the particular prosecutor's office," and the Court expressed "less confidence that a small District Attorney's office can screen off members of the taint team as effectively as the Attorney General's office may be able to do." Id. at 830.

> Second, to pass constitutional muster, the taint team must comply with each of four requirements:
>
> (1) the members of the taint team must not have been and may not be involved in any way in the investigation or prosecution of the defendants subject to indictment—presently or in the future; (2) the taint team members are prohibited from (a) disclosing at any time to the investigation or prosecution team the search terms submitted by the defendants, and (b) disclosing to the investigation or prosecution team any e-mails or the information contained in any e-mails, subject to review until the taint team process is complete and in compliance with its terms; (3) the defendants must have an opportunity to review the results of the taint team's work and to contest any privilege determinations made by the taint team before a Superior Court judge, if necessary, prior to any e-mails being disclosed to the investigation or prosecution team; and (4) the members of the taint team must agree to the terms of the order in writing.

Id. at 828.

3. Third Parties and Attorney-Client Privilege (e.g., CC'd Emails)

"'Generally, disclosing attorney-client communications to a third party undermines the privilege.'" Dahl v. Bain Capital Partners, LLC, 714 F. Supp. 2d 225, 227 (D. Mass. 2010) (quoting Cavallaro v. United States, 284 F.3d 236, 246–47 (1st Cir. 2002)).

"'An exception to this general rule exists for third parties employed to assist a lawyer in rendering legal advice,'" including CC'ed emails. Id. at 227 (quoting Cavallaro, 284 F.3d at 247). In order for the exception to obtain, three criteria must apply: (1) the communication must be "necessary, or at least highly useful" for effective consultation between client and lawyer; (2) the exception only applies if the third party is playing an interpretive role between the lawyer and client (e.g., an accountant if he is helping the lawyer understand complex financial information); and (3) the communication must be made for the purpose of rendering legal advice, and not business advice or otherwise. Id. at 227–28.

II. Evidentiary Matters

A. Judicial Discretion

1. Trial Judge's Discretion

"A judge has broad discretion in the admission" of "demonstrative aids, including digital photographs and computer-generated images." Renzi v. Paredes, 452 Mass. 38, 51–52 (2008) (citing Commonwealth v. Noxon, 319 Mass. 495, 536 (1946)).

For an example of related flawed evidentiary practice, see Commonwealth v. Mienkowski, 91 Mass. App. Ct. 668 (2017). At a trial for aggravated rape of a child, posing a child in a state of nudity, and of dissemination of matter harmful to minors, the defendant's cell phone was admitted into evidence. Id. at 669. After some initial ambiguity about how the jury could examine the phone during deliberation, the judge adopted the Commonwealth's position and instructed the jury to limit their examination to the evidence already admitted (screenshots of relevant text messages). Id. at 675–77. On appeal, the defendant argued that the judge's initial admission of the cell phone without limitation and statements he made at the charge conference led defense counsel to rely in her closing on the jury's ability to examine the cell phone unconstrained and then "cut the legs out from under" her argument. Id. at 677–78. The SJC found it was possible that "neither the litigants nor the judge fully had considered the plethora of difficult issues that may be raised when a cell phone containing troves of unidentified electronic data is delivered into a jury's hands." Id. at 678. Though it held that it would have been preferable to resolve the ambiguity earlier, the SJC found no reversible error in the judge's handling of the issue. Id. at 678–69.

2. Demonstrative Photographs

"When, as here, the demonstrative photograph is generated as a digital image or video image, the judge must determine whether the image fairly and accurately presents what it purports to be, whether it is relevant, and whether its probative value outweighs any prejudice to the other party." Renzi v. Paredes, 452 Mass. 38, 52 (2008) (citing Commonwealth v. Leneski, 66 Mass. App. Ct. 291, 294 (2006)). "Concerns regarding the completeness or production of the image go to its weight and not its admissibility." Id. (citing Leneski, 66 Mass. App. Ct. at 295–96).

B. Discovery

1. Pornographic Images in Child Pornography Cases

"That forensic examination of the computer data by an expert retained by the defense is an essential component of effective assistance of counsel" in a child pornography case "is self-evident." Commonwealth. v. Ruddock, No. 08–1439, 2009 WL 3400927, at *3 (Mass. Super. Ct. Oct. 16, 2009). If an expert's access to evidence for purposes of examination is limited to the Commonwealth's facilities in order to prevent dissemination of such materials, the defendant's right to effective assistance of counsel will be unduly burdened. Id. A copy of the mirror image of a seized drive, including pornographic

images, must be given to the defendant's counsel of record and expert forensic examiner under a protective order limiting access to defense counsel and the expert. Id. (citing Mass. R. Crim. P. 14(a)(6)).

2. Wiretap transcripts

- Commonwealth v. Tavares, 482 Mass. 694 (2019). The defendant was convicted of murder in the first degree. During the investigation, police had recorded conversations between the defendant and a confidential informant using a wiretap. Id at 698. Prior to trial, the defendant moved successfully to suppress the recordings because "the investigation was not in connection in with organized crime" and thus violated G. L. c. 272, § 99. Id. at 714. After he was convicted, the defendant filed a motion for a new trial, arguing that his counsel was ineffective for failing to seek suppression of evidence derived from the recordings, as well as a "motion for postconviction discovery to obtain copies or transcripts of the wiretap recordings." Id at 714. The trial court denied both motions. Id. "Under the Massachusetts wiretap statute, a criminal defendant 'may move to suppress the contents of any intercepted wire or oral communication or evidence derived therefrom' if the interception was made in violation of the statute." Id at 715 (quoting G. L. c. 272, § 99). On appeal, the SJC affirmed denial of the ineffectiveness motion, ruling that the defendant "failed to identify any specific evidence admitted at trial that was derived from the unlawful recordings." Id. But the Court reversed the denial of the motion for post-conviction discovery, concluding that the defendant is entitled to a copy of the wiretap transcript prior to any retrial. Id. at 715-716. The SJC found that the transcript would enable defense counsel to examine whether there is any improper reliance on the suppressed recordings at any future trial. Id.

3. Cell phone data

- R.C. v. Chilcoff, No. SJ-2020-0081, 2020 WL 8079734 (Mass. Dec. 15, 2020) (Cypher, J.). The defendant, indicted on one count of rape, filed a Mass. R. Crim. P. 17(a)(2) motion to obtain information from the victim-witness's cell phone relating to her electronic communications and use of social media over a twelve-day period beginning with the day of the incident. Id. at *2–3. The motion judge ordered the victim-witness to produce her cell phone and/or any "backups" for forensic examination to recover the sought-after information. Id. at *3. The judge also ordered that the victim-witness provide the names and login information for third-party service providers that possessed the information, and directed Facebook to provide Facebook and Instagram data associated with the victim-witness's accounts, including photographs and the contents of messages. Id. The victim-witness, joined by the Commonwealth, petitioned a single justice of the Supreme Judicial Court for relief from the order under G.L. c. 211, § 3, asking that (1) the twelve-day period for which cell phone data was sought be more narrowly tailored to the time of the incident, and (2) the order be vacated insofar as it required the victim-witness to provide the names and login information for third-party service providers. Id. The single justice granted the requested relief. First, the justice summarized the Lampron requirements for a successful Rule 17 motion: relevance, admissibility, necessity, and specificity. Id. at *4. The justice then noted that Massachusetts case law had yet to address the use of Mass. R. Crim. P. 17 to obtain a victim-witness's cell phone communications or third-party service providers. Id. Observing that "individuals have significant privacy interests at stake in their cell phones," the justice concluded

that, "when ruling on a request under Rule 17 for a victim-witness's cell phone or cell phone records, the judge must include a consideration of these inherent privacy concerns." Id. The justice also examined decisions in which other state and federal courts had confronted similar issues, including a Minnesota Supreme Court decision holding that the fact that a "cell phone could contain exculpatory information was insufficient to order its production for examination." Id. at *5 (citing In re B.H., 946 N.W.2d 860, 870-71 (Minn. 2020)). Finally, the justice noted that Rule 17 "is a rule of production, not a rule of discovery." Id. After taking the above factors into account, and in light of the fact that the defendant could only speculate that relevant evidence might be obtained from the broad sweep of sought-after information, the justice granted the victim-witness's requested relief.

C. Authentication

1. Generally

To find that evidence is authentic, a judge must determine whether, by a preponderance of the evidence, there is sufficient evidence, including "confirming circumstances," to permit a "reasonable jury to conclude that this evidence is what the proponent claims it to be." Commonwealth v. Purdy, 459 Mass. 442, 449 (2011). Confirming circumstances are other facts that imply that evidence is what the proponent represents it to be. See Commonwealth v. Amaral, 78 Mass. App. Ct. 671, 674–75 (2011).

2. Photographs and Digital Images, Videos, and CDs

Authentication of photographs and videos is "typically… done through one of two means—having an eyewitness testify that the [photo or] video is a fair and accurate representation of what he saw on the day in question, or having someone testify about the [recording] procedures and the methods used to store and reproduce the [photo or] video material." Commonwealth v. Connolly, 91 Mass. App. Ct. 580, 586 (2017) (citing Commonwealth v. Pytou Heang, 458 Mass. 837, 855 (2011); Commonwealth v. Rogers, 459 Mass. 249, 267 (2011)). Digital photographs and videos are treated as equivalent to their analog counterparts. See Commonwealth v. Leneski, 66 Mass. App. Ct. 291, 294–95 (2006).

These are not the only possible ways to authenticate photo and video evidence, however. Commonwealth v. Davis, 97 Mass. App. Ct. 633, 635–36 (2020). More generally, admissibility may be established by any "evidence sufficient to support a finding that the matter in question is what its proponent claims." Mass G. Evid. § 901(a). For example, a witness may authenticate a digital photograph or video by testimony about the process used to create it and "showing that it produces an accurate result." Mass. G. Evid. § 901(b)(9).

- Commonwealth v. Davis, 97 Mass. App. Ct. 633 (2020): An officer at the scene of a crime saw a surveillance camera mounted on the outside of a nearby building, aimed at the street intersection where the crime had occurred. Id. at 635. He spoke with a resident of the building, viewed a video recording taken by the surveillance camera, and learned that the camera had been pointed at the intersection at the time of the crime. Id. Neither the resident nor the officer knew how to transfer the surveillance video recording to another medium, so Carty used his cellphone to record a video of the surveillance video recording; this cellphone video was played to the jury. Id. The following

was held sufficient to authenticate the cellphone video: the officer testified (1) that he had seen the scene that appeared in the video ("a car, with its driver's side door open, that had crashed into a pole at the intersection of Quincy Street and Baker Avenue"); (2) that the surveillance camera was aimed at the intersection in question, and (3) that still photographs also in evidence were fair and accurate representations of the scene of the shooting, where the still photographs depicted multiple vehicles and a sign that also appeared the video. Id. at 636.

- Commonwealth v. Leneski, 66 Mass. App. Ct. 291 (2006): A witness sufficiently authenticated a CD containing digital images created by a digital camera system at a convenience store where that witness testified he had "viewed the images on the computer and 'burned' the CD copy; [and] testified as to the procedure he used in the surveillance process, the copying process, and to the contents of the CD." Id. at 295.

Testimony about a photo or video that is not introduced in court, but instead is described to the jury by a witness, is subject to the admissibility conditions as the original photo or video: that is, the testimony is admissible upon establishing that the photo or video the witness saw was a fair and accurate representation of the events in question. Commonwealth v. Connolly, 91 Mass. App. Ct. at 586–87.

3. Digitally Enhanced Images and Video

The SJC has indicated that even digital photographs that have been enhanced have some use as a demonstrative aid, so long as they accurately illustrate what a witness testifies about. See Renzi v. Paredes, 452 Mass. 38, 51–52 (2008) (citing 2 McCormick, Evidence § 214 (6th ed. 2006)).

When offering digitally enhanced photographs or videos, the type of media and the manner of enhancement will be relevant. See Iacobucci v. Boulter, 193 F.3d 14, 20 (1st Cir. 1999). Objections to evidence on the grounds that it lacks a proper foundation are allowed at the discretion of the judge. Id. In Iacobucci, where the audio portion of a video was enhanced with a high quality play-back system to increase the volume, the trial judge decided that this did not destroy the video's integrity and the video was properly authenticated. Id. Several witnesses positively identified the defendants' voices on the recording, and the jury had the opportunity to evaluate the identification on their own. Id. at 20–21.

Alternatively, "[f]or digitally enhanced images, it is unlikely that there will be a witness who can testify how the original scene looked if, for example, a shadow was removed, or the colors were intensified." Lorraine v. Markel Am. Ins. Co., 241 F.R.D. 534, 561 (D. Md. 2007). In such a case, there will need to be proof that the digital enhancement process produces reliable and accurate results. Id.

4. Transcripts of Recordings

A written transcript of a recorded conversation taken from an electronic transmitting device can be authenticated where a witness testifies that the transcript is a fair and accurate representation of the recording. See United States v. Anderson, 452 F.3d 66, 76–77 (1st Cir. 2006) (citing United States v. Ademaj, 170 F.3d 58, 65 (1st Cir. 1999)). That witness does not have to be the person who transcribed the recording. Id. at 77.

5. Email

"While e-mails and other forms of electronic communication present their own opportunities for false claims of authorship, the basic principles of authentication are the same." Commonwealth v. Purdy, 459 Mass. 442, 450 (2011) (citing United States v. Safavian, 435 F. Supp. 2d 36, 41 (D.D.C. 2006)). Email authentication does not require expert testimony or evidence of exclusive access or password protection, although they are relevant to the jury's assessment of the weight of the evidence. See id. at 451. Where the relevance or admissibility of emails depends on whether the defendant authored the emails, the judge must "determine whether the evidence [is] sufficient for a reasonable jury to find by a preponderance of the evidence that the defendant authored the e-mails." Id. at 447 (citing Commonwealth v. Leonard, 428 Mass. 782, 785–86 (1999); Mass. G. Evid. § 104(b)(1)).

However, where the contents of an email do not sufficiently authenticate it, it may be properly authenticated through confirming circumstances. Commonwealth v. Amaral, 78 Mass. App. Ct. 671, 674–75 (2011). Confirming circumstances imply that evidence is what the proponent represents it to be. Id. at 674. For example, the following confirming circumstances were sufficient to link a defendant to emails: (1) an email revealed that the sender would meet the email recipient at a certain place and time, and the defendant then appeared in that place at the time specified; (2) the sender of that email included his telephone number and a photograph of himself. Id. at 674–75. The defendant answered a call to that number, and emailed photograph depicted the defendant. Id.

Other confirming circumstances include: (1) emails originate from an account that bears the defendant's name and that the defendant admits having used; (2) emails are found on a computer hard drive that the defendant admits owning; (3) the defendant supplies all necessary passwords to access files on the computer; (4) emails contain an attached photograph of the defendant and/or describe the unusual circumstances or traits attributable to the defendant. Purdy, 459 Mass. 442, 450–51 (2011).

"Evidence that the defendant's name is written as the author of an e-mail or that the electronic communication originates from an e-mail or a social networking website such as Facebook or MySpace that bears the defendant's name is not sufficient alone to authenticate the electronic communication as having been authored or sent by the defendant. There must be some confirming circumstances sufficient for a reasonable jury to find by a preponderance of the evidence that the defendant authored the emails." Id. at 450 (citing Commonwealth v. Williams, 456 Mass. 857, 868–69 (2010)); see also Griffin v. State, 419 Md. 343, 357–58 (2011) (holding that authentication of a page printed from a social networking site requires more than a showing that a picture, birth date, and location of the alleged creator exist on the profile from which the page was retrieved).

Embedded e-mails will not be excluded because of the mere possibility that they can be altered without any specific evidence showing alteration. In Safavian, when "the trustworthiness of the emails particularly those . . . . emails that are included in a chain-either as ones that have been forwarded or to which another has replied" were challenged, the district court held that the "*possibility* of alteration does not and cannot be the basis for excluding e-mails as unidentified or unauthenticated as a matter of course any more than it can be the rationale for excluding paper documents (and copies of those documents)."

435 F. Supp. 2d at 41 (emphasis in original). The court added that the defendant would be entitled, however, to raise any issue of alteration with the jury. Id.

6. Chatrooms

Similar to the method of authentication by confirming circumstances allowed in the Commonwealth, "[c]ourts also have recognized that exhibits of chat room conversations may be authenticated circumstantially. For example, in [the Pennsylvania case] In re F.P., the defendant argued that the testimony of the internet service provider was required, or that of a forensic expert . . . . The court held that circumstantial evidence, such as the use of the defendant's screen name in the text message, the use of the defendant's first name, and the subject matter of the messages all could authenticate the transcripts." Lorraine v. Markel Am. Ins. Co., 241 F.R.D. 534, 556 (D. Md. 2007) (citing In re F.P., 878 A.2d 91, 93–94 (Pa. Super. Ct. 2005)).

7. Text Messages

- Commonwealth v. Alden, 93 Mass. App. Ct. 438 (2018). The victim received threatening text messages from a "telephone number [she] had used to communicate with the defendant . . . every few days for over one year." Id. at 439. The trial court held that "the Commonwealth had established by a preponderance of the evidence that the text messages were authentic" - i.e., that the messages came from the defendant. Id. at 440. The Massachusetts Appeals Court affirmed because "for over one year, [the victim] had contacted the defendant multiple times each week using the telephone number from which the threatening messages originated. When she called that number, the defendant answered. When she sent a text message to that number to arrange a meeting with the defendant, he appeared." Id. at 440–41. Moreover:

  > [t]he content of the text messages reinforced their link to the defendant. It is undisputed that at the time she received the text messages, [the victim] was a witness in a pending case against the defendant. In this context, where there was evidence that the text messages directed her to "keep her [explicative] mouth shut" and "leave their personal stuff out of the courtroom" or "people [would] come after [her] if [she] went to court," it was reasonable to infer that the defendant was responsible for sending the messages.

  Id. at 441.

8. Information Available on Websites and Social Networks

Evidence available on websites presents its own problems. "Courts often have been faced with determining the admissibility of exhibits containing representations of the contents of website postings of a party at some point relevant to the litigation." Lorraine v. Markel Am. Ins. Co., 241 F.R.D. 534, 555 (D. Md. 2007). "The issues that have concerned courts include the possibility that third persons other than the sponsor of the website were responsible for the content of the postings, leading many to require proof by the proponent that the organization hosting the website actually posted the statements or authorized their posting." Id. (citing United States v. Jackson, 208 F.3d 633, 638 (7th Cir. 2000)). In doing so, federal courts require the proponent of such evidence to show what was actually on the website, to show that the

exhibit or testimony accurately reflects that content, and to show that the content can be attributed to the owner of the site. Id. (citations omitted).

In the courts of the Commonwealth, "[e]vidence that the defendant's name is written as the author of an e-mail or that the electronic communication originates from an e-mail or a social networking Web site such as Facebook or MySpace that bears the defendant's name is not sufficient alone to authenticate the electronic communication as having been authored or sent by the defendant." Commonwealth v. Purdy, 459 Mass 442, 450 (2011) (citing Commonwealth v. Williams, 456 Mass. 857, 868–69 (2010)).

Circumstantial evidence can authenticate a social network page:

- Commonwealth v. Meola, 95 Mass. App. Ct. 303, No. 18-P-83, 2019 WL 2202909 (Mass. App. Ct. May 22, 2019). The Appeals Court affirmed the Superior Court's holding that sufficient evidence in the form of "confirming circumstances" established that the defendant attached an obscene video to a communication he sent to an underage victim. Following a jury waived trial, a Superior Court judge found the defendant guilty of disseminating obscene material to a minor in violation of G.L. c. 272, § 28. Id. at *1. The Appeals Court looked to the principles established by the SJC in Commonwealth v. Purdy, 459 Mass 442 (2011) regarding authenticating digital evidence (that is not self-authenticating). First, Purdy establishes that direct evidence is not necessary to determine that a defendant sent a digital communication. Rather, a judge "may consider circumstantial evidence and look to 'confirming circumstances' sufficient for a reasonable jury to find by a preponderance of the evidence that the defendant authored" the electronic communication. Meola, 2019 WL 2202909 at *5 (quoting Purdy, 459 Mass. at 450). Second, under Purdy, the "mere possibility that a digital communication was fraudulently sent by someone other than the person associated with a particular social media...account from which the communication originated is not a bar to its authentication." Meola, 2019 WL 2202909 at *5. Third, common-law principles concerning authenticity are applicable to digital communications. Id. In this matter, the trial judge's decision to exclude records proffered by the prosecutor, describing user information related to the Facebook account and the sender of the video, required the Commonwealth to rely on indirect evidence to authenticate the materials. Id. at *2. The Appeals Court concluded that the following facts offered sufficient indirect evidence of authenticity: the defendant's prior association with the victim (defendant had previously lived with her and her mother); the defendant's biological relation to the victim's half-sister; and the friend request the user of the account sent to the victim. Moreover, the Court determined that the trial judge did not err in finding the communications authentic because there was no evidence to suggest that the Facebook profile photo or the self-authored obscene video were publicly available. Id. at *6. Based on these facts, the Court affirmed the trial judge's determination that the defendant "purposefully disseminated matter harmful to a minor to the victim" with full knowledge that she was a minor. Id. at *7.

- Other jurisdictions have taken a similar approach. For example, in the Texas case Tienda v. State, MySpace webpages were admissible because there was sufficient evidence on them indicating that they "were what they purported to be." 358 S.W.3d 633, 646 (Tex. Crim. App. 2012). The court stated that, "as with the authentication of any kind of proffered evidence, the

best or most appropriate method for authenticating electronic evidence will often depend upon the nature of the evidence and the circumstances of the particular case." Id. at 639. The court held that there was "ample circumstantial evidence—taken as a whole with all of the individual, particular details considered in combination—to support a finding that the Myspace pages belonged to the appellant and that he created and maintained them." Id. at 645; see also Parker v. State, 85 A.3d 682 (Del. 2014) (holding that social media post was sufficiently authenticated by circumstantial evidence and by testimony explaining how the post was obtained); Simmons v. Commonwealth, No. 2012–SC–000064–MR, 2013 WL 674721 (Ky. Feb. 21, 2013) (holding that the print-outs of the defendant's Facebook messages were admissible because the messages were what they purported to be and the role of the judge, as a gatekeeper, was only to determine if an offering party has produced enough evidence for a reasonable jury to find authenticity).

9. Software Programs Used in Investigation

When a witness uses software to create information relevant to an investigation, that witness should testify in detail as to the nature of the tool, how the witness used it, and how it was created and maintained in order to authenticate the records. See Commonwealth v. Whitlock, 74 Mass. App. Ct. 320, 327 (2009) (citing Commonwealth v. Sheldon, 423 Mass. 373, 377 (1996)). In Whitlock, a police officer used a software program called ArcView, which is a computerized map that depicted the location and ownership of property within the city of Springfield. Id. at 325–26. The information provided by this software was used to show that the defendant was distributing a controlled substance within a school zone. Id. Where software provides information to a witness, for example software that measures and provides distances between real-world objects, it does not make a "statement," and therefore is not subject to the hearsay rule. Id. at 326–27.

10. GPS and Probation

The SJC has held GPS technology to be "widely used and acknowledged as a reliable relator of time and location data" under the Daubert-Lanigan standard for admission of scientific testimony. Commonwealth v. Thissell, 457 Mass. 191, 198 (2010); see also Daubert v. Merrell Dow Pharms., Inc., 509 U.S. 579, 592-3 (1993); Commonwealth v. Lanigan, 419 Mass. 15, 26 (1994). Judges may at their discretion admit testimony that "GPS data placed the defendant in particular locations at particular times" based on data from any GPS device whose positioning method has been demonstrated to be "no more than the application of existing and scientifically-accepted GPS monitoring technology -- a technology that has been accepted as reliable." Davis, 97 Mass. App. Ct. at 640. The fact, acknowledged by an appellate court, that GPS information is "subject to variations in accuracy depending upon atmospheric conditions, intervening obstacles, or reflection of the satellite signals from buildings, windows, or cars, [goes] to the weight of the evidence, not to the fundamental reliability of the GPS technology." Id. (citing Sacco v. Roupenian, 409 Mass. 25, 30 (1980); Rothkopf v. Williams, 55 Mass. App. Ct. 294, 299 (2002)). An appellate court has distinguished and left unresolved the issue of whether GPS records are also reliable indicators of speed (as opposed to location). Id. at 641.

Probationers' GPS records have been used as evidence of a defendant's location at particular times; evidence that can be relied on to show that the defendant violated conditions of probation or was at

the scene of a crime. Thissell, 457 Mass. at 198–99; Davis, 97 Mass. App. Ct. at 639–40. Official GPS records maintained by the Commonwealth and certified by an officer having legal custody of the record may minimize concerns about authenticity, Thissell, 457 Mass. at 199 ("recommend[ing] strongly that copies of GPS records offered in future revocation proceedings be properly attested and certified by an appropriate custodial officer"), but GPS-based information may also be authenticated on other ways. Davis, 97 Mass. App. Ct. at 637 (authenticating GPS data by the testimony of a GPS device manufacturer's manager of product development).

D. Technological evidence as the basis of criminal conviction

Evidence used as the basis of a conviction must be sufficient, viewed in the light most favorable to the government, for a rational trier of fact to find the essential elements of the crime beyond a reasonable doubt. Commonwealth v. Ayala, 481 Mass. 46, 51 (2018) (citing Commonwealth v. Latimore, 378 Mass. 671, 677-78 (1979). Thus, even evidence that meets the preponderance standard required to authenticate a piece of evidence, see § II.C, supra, may not be sufficient to support a conviction. The government bears the burden of explicit proof even for facts about technology that may be well known to the trier of fact, e.g., that a password is generally required to log in to and send messages from an Instagram account. Commonwealth v. McMann, 97 Mass. App. Ct. 558, 561 (2020). Such facts are not appropriate subjects of judicial notice. Id. at 561 n.4.

- Commonwealth v. McMann, 97 Mass. App. Ct. 558 (2020). Defendant was convicted of violating an abuse prevention order that prohibited him from contacting his ex-girlfriend. Id. While the order was in effect, the ex-girlfriend received an Instagram message from user "bigm617" that said "Yoooo." Id. at 559. She testified that she knew that "bigm617" was the defendant's account "because the associated account displayed pictures of the defendant, including one of him with the victim, and the victim and the defendant had previously 'liked' and commented on each other's Instagram posts." Id. The victim showed this Instagram message to a police officer, who met with the defendant later that day. Id. The defendant denied sending any message to the victim, 'wanted to show [the officer] that he never did[,]' and entered a passcode to unlock his cell phone. He then opened the Instagram application on his cell phone, and the 'Yoooo' message to the victim appeared on the screen. The officer observed that the defendant looked '[s]urprised.' Id. The appeals court held that "even assuming without deciding that the Instagram message was properly authenticated, the Commonwealth failed to… prov[e] beyond a reasonable doubt that the defendant was the person who wrote or sent the message to the victim. Although the evidence was sufficient to show that the Instagram account was the defendant's and that he could access it, there was no circumstantial evidence establishing authorship." Id. at 560. The court suggested the burden could have been met by "evidence that the message itself contained characteristics showing that the defendant wrote it, or through evidence establishing how secure Instagram accounts are and how the Instagram cell phone application works." Id. at 562.

E. Best Evidence Rule

1. Best Evidence Rule - Generally

"The best evidence rule provides that, where the contents of a document are to be proved, the party must either produce the original or show a sufficient excuse for its nonproduction." Commonwealth v. Ocasio, 434 Mass. 1, 6 (2001); see also Mass. G. Evid. § 1002. However, what constitutes a "document" has been narrowly construed such that "[t]he best evidence rule is applicable only to those situations where the contents of a *writing* are sought to be proved." Commonwealth v. Balukonis, 357 Mass. 721, 725 (1970) (emphasis added). Most photographs and videos depict objects rather than writings. Consequently, the best evidence rule does not typically apply, *inter alia*, to photographs or videotapes. See also Commonwealth v. Weichell, 390 Mass. 62, 77 (1983) (holding that the "enlarged photograph was a fair and accurate representation of the defendant at the time of his arrest"); Commonwealth v Leneski, 66 Mass. App. Ct. 291, 294 (2006) ("Videotapes, like photographs, are not subject to the best evidence rule."). Additionally, "digital images placed and stored in a computer hard drive and transferred to a compact disc are subject to the same rules of evidence as videotapes." Leneski, 66 Mass. App. Ct. at 294.

2. Digital Images

Digital image evidence is not subject to the best evidence rule in Massachusetts because these images are not writings. Commonwealth v. Leneski, 66 Mass. App. Ct. 291, 294 (2006) (citing Commonwealth v. Balukonis, 357 Mass. 721, 725 (1970)). The Leneski court held that digital images from a computer copied to a compact disk ("CD") would be considered as originals. Id. Testimony about authenticity, including how the disc was generated, the procedure used in the surveillance process, the copying process, and the contents of the CD, was deemed sufficient. Id. The Court noted that there was opportunity for cross-examination that went to the weight of the evidence on the subject of surveillance procedure and the method of storing and reproducing the data. Id.

This exception to the best evidence rule extends to images that have been transferred from a hard drive to other media such as CDs and DVDs. See id. at 294 (holding that "digital images placed and stored in a computer hard drive and transferred to a compact disc are subject to the same rules of evidence as videotapes").

3. Admission of Duplicate Evidence

> [W]here the original [of a document] has been lost, destroyed, or otherwise made unavailable, its production may be excused and other evidence of its contents will be admissible, provided that certain findings are made.
>
> As a threshold matter, the proponent must offer evidence sufficient to warrant a finding that the original once existed. . . . If the evidence warrants such a finding, the judge must assume its existence, and then determine if the original had become unavailable, otherwise than through the serious fault of the proponent . . . and that reasonable search

had been made for it. . . . If the judge makes these findings in favor of the proponent, the judge must allow secondary evidence to establish the contents of the lost writing.

Commonwealth v. Ocasio, 434 Mass. 1, 6 (2001) (quoting Fauci v. Mulready, 337 Mass. 532, 540–43 (1958) (internal citations and quotation marks omitted)).

4. Videos

The best evidence rule does not apply to digital videos. Commonwealth v. Leneski, 66 Mass. App. Ct. 291, 294 (2006). "Our courts have held that videos are 'on balance, a reliable evidentiary resource . . . .'" Id. (quoting Commonwealth v. Harvey, 397 Mass. 351, 359 (1986)). "[Videos] 'should be admissible as evidence if they are relevant, they provide a fair representation of that which they purport to depict, and they are not otherwise barred by an exclusionary rule.'" Id. (quoting Commonwealth v. Mahoney, 400 Mass. 524, 527 (1987)).

5. Email

It is unlikely that printed email communications are subject to the best evidence rule so long as their authenticity can be proven through circumstantial evidence. Commonwealth v. Amaral, 78 Mass. App. Ct. 671, 675–76 (2011). In Amaral, the court reasoned that the email server, or the computer itself, is not better evidence than directly printed emails, and that "[t]he significance of the best evidence rule has declined appreciably in recent decades." Id. at 675 (internal quotation marks omitted).

6. Summaries

Large volumes of digital evidence may be summarized and shown to a jury without running afoul of the best evidence rule.

In the Commonwealth, voluminous evidence that would be difficult for a jury to understand due to volume or complexity may be presented in the form of a written or testimonial summary or a chart, shown by testimony to accurately reflect the contents of the underlying documents, so long as the proponent does not unfairly emphasize portions of the summarized evidence. See Mass. G. Evid. § 1006; Commonwealth v. Mimless, 53 Mass. App. Ct. 534, 538 (2002) (quoting Welch v. Keene Corp. 31 Mass. App. Ct. 157, 165–66 (1991)) ("[C]are must be taken to insure that summaries accurately reflect the contents of the underlying documents and do not function as pedagogical devices that unfairly emphasize part of the proponent's proof.") (internal quotation marks omitted); Commonwealth v. Greenberg, 339 Mass. 557, 582 (1959) ("The witness was not allowed to state deductions and inferences of his own but could state only the results of his computations from the admitted evidence."). The summarized evidence should be made available to other parties in advance of trial, and the court may order that the originals be produced in court. See Mass. Guide to Evid. § 1006.

- Commonwealth v. Suarez, 95 Mass. App. Ct. 562 (2019). The defendant, who was convicted of assault with intent to rape and other charges, challenged on appeal the introduction at trial of a six-minute compilation of video surveillance footage from before, during and after the attack, and a timeline describing parts of the videos. Id. at 566-67, 570. Since the defendant did not object at

trial, the Appeals Court "examine[d] whether any abuse of discretion in admitting the exhibits created a substantial risk of a miscarriage of justice." Id. at 570-71. The Court found the individual underlying videos could not 'be conveniently examined in court.'" Id. at 571 (quoting Mass. G. Evid. § 1006). Though the Commonwealth played portions of the videos in the courtroom, "a deliberating jury would have found it difficult to master the technology necessary to find and view the relevant parts of the videos in the jury room." Id. at 571-72. Furthermore, the Court rejected the defendant's claim that the compilation was unfairly edited. Id. at 572. However, the Court did find certain improprieties in the compilation and timeline. In particular, it ruled that still photos, taken from a 7-Eleven store four hours after the attack, should not have been included in the compilation because the photos taken hours after the assault were not relevant to the crime itself. Id. The Court also ruled that the timeline describing the digital compilation "could and should have used a neutral heading" for a set of video clips. Id. at 574. The Court criticized the Commonwealth's use of the term "suspect" in the timeline to refer both to a person the defendant admitted was him, in certain video clips, and to the attacker, in other video clips, since use of that term suggested that they were the same person. Id at 573. The Court ruled, however, that these "limited errors in the compilation and the timeline" did not create a substantial risk of a miscarriage of justice because they had little, if any, impact on the case. Id. at 574.

F. Hearsay

When software merely provides information to a witness, the software does not make a "statement," and therefore is not subject to the hearsay rule. See Commonwealth v. Whitlock, 74 Mass. App. Ct. 320, 326–27 (2009) (holding that information provided by measuring software that indicated to the witness the distance between real-world objects were not statements subject to the hearsay rule) (citing Commonwealth v. Sheldon, 423 Mass. 373, 377 (1996)); see also Thissell, 457 Mass. at 197 n.13 (discussing the difference between computer-generated and computer-stored records in the context of the rule against hearsay); Commonwealth v. Royal, 89 Mass. App. Ct. 168, 171–72 (2016) (treating "computer-stored" records as hearsay, but treating "computer-generated" records as not hearsay); Commonwealth v. Woollam, 478 Mass. 493, 498 (2017) (holding that call logs are computer-generated records that do not raise hearsay concerns; admissibility thus only depends on authentication); Davis, 97 Mass. App. Ct. at 641–43 (holding that GPS logs and maps of the defendant probationer's location over time, which were created by a mapping company that added dots and the defendant's name to maps based on GPS location data, were not hearsay).

G. Business Records Exception

1. Email

A document from an email service provider that indicates that a specific login name is connected to a defendant's email address is admissible as a business record as long as it is supported by an affidavit from the service provider's custodian of records. Commonwealth v. Amaral, 78 Mass. App. Ct. 671, 673–74 (2011).

2. Computer Records

"[C]omputer records . . . are admissible under the business records exception to the hearsay rule, [Mass. Gen. Laws ch.] 233, § 78, if they were (1) made in good faith; (2) made in the regular course of business; (3) made before the action began; and (4) [it was] the regular course of business to make the record at or about the time of the transaction or occurrences recorded." McLaughlin v. CGU Ins. Co., 445 Mass. 815, 819 (2006) (quoting Beal Bank, SSB v. Eurich, 444 Mass. 813, 815 (2005) (internal quotation marks omitted)).

A lack of personal knowledge on behalf of the affiant, the maker, or custodian of records goes to the weight and not the admissibility of the business records. See Commonwealth v. Amaral, 78 Mass. App. Ct. 671, 674 (2011) ("[T]he personal knowledge of the entrant or maker affects only the weight of the record, not its admissibility.") (quoting and citing Note to Mass. Guide to Evid. § 803); see also McLaughlin, 445 Mass. at 819 (2006) ("[P]ersonal knowledge of the entrant or maker of a record is a matter affecting the weight rather than the admissibility of the record.").

A print-out of an electronic document is admissible as a business record as long as it is supported by an affidavit from the provider's custodian of record establishing that the requirements of the business records exception are met. Amaral, 78 Mass. App. Ct. at 673–74 n.4; McLaughlin, 445 Mass. at 8199 ("The affidavits plainly establish that the records satisfy these foundational requirements.").

H. Confrontation Clause

1. Software-generated information

"The confrontation clause bars the admission of testimonial out-of-court statements by a declarant who does not appear at trial unless the declarant is unavailable to testify and the defendant had an earlier opportunity to cross-examine him." Commonwealth v. Wilson, 94 Mass. App. Ct. 416, 417 n.1 (2018), (quoting Commonwealth v. Simon, 456 Mass. 280, 296 (2010).

When introducing software-generated information that is not hearsay as evidence, see § II.E, supra, the Confrontation Clause is not implicated. See Commonwealth v. Hurley, 455 Mass. 53, 65 n. 12 (2009) ("admission of a testimonial statement without an adequate prior opportunity to cross-examine the declarant… violates the confrontation clause only if the statement is hearsay…") (citing Crawford v. Washington, 541 U.S. 36, 59-60 & n. 9 (2004).

It is unclear whether the introduction of software-generated information that *is* hearsay (if that is possible at all) would implicate the Confrontation Clause. An appellate court has considered the question in dicta, and suggested that (1) software-generated information may not come from a "declarant" within the meaning of the Confrontation Clause at all, but (2) if a company involved in producing the information were treated as a declarant, then the requirements of the Confrontation Clause could be satisfied by having a representative of the company as a witness. Davis, 97 Mass. App. Ct. at 644.

2. Secondary Examiners

The Sixth Amendment's bar on the testimonial statements of a witness who does not appear at trial applies to forensic examiners because their explanation of the process and results of specific forensic examinations are testimonial statements. See United States v. Soto, 720 F.3d 51, 58–60 (1st Cir. 2013) (summarizing relevant Supreme Court cases).

A "surrogate" witness who is familiar with a lab's practices, but who has formed no independent opinion of the results is insufficient to satisfy the Sixth Amendment. Id. at 58 (citing Bullcoming v. New Mexico, 564 U.S. 647, 662–63 (2011)).

However, "[t]he government may ask an agent to replicate a forensic examination if the agent who did the initial examination is unable to testify at trial, so long as the [testifying] agent . . . conducts an independent examination and testifies [as] to his own results." Id. at 59; see, e.g., Commonwealth v. Chappell, 473 Mass. 191, 199–200 (2015) (substitute DNA expert testimony allowed because, as the second reader, she independently read all the raw data and the reports produced by the original analyst, made interpretations, and ensured that there was agreement between her findings and those the analyst, and therefore testified to her opinions or conclusions concerning the DNA).

- Commonwealth v. Seino, 479 Mass. 463 (2018). Defendant was convicted of first-degree murder. Id. at 464. On appeal, he asserted several confrontation claims. Id. at 466, 469–72. First, the defendant argued that it was improper for a doctor who did not perform the autopsy to refer during his trial testimony to statements in the autopsy report and death certificate, neither of which the testifying doctor authored. Id. at 466. The SJC held that it was appropriate for the testifying doctor to offer his opinion on the cause of death based on the case file and his own examination, but agreed with the defendant that the doctor should not have testified about statements in the autopsy report and death certificate. Id. at 466–67. The SJC found that the error was harmless beyond a reasonable doubt, however, because the improper testimony was cumulative, did not incriminate the defendant, and "did not contribute to the guilty verdicts." Id. at 467–68. Second, the defendant argued that his confrontation right was violated when two experts, as part of their trial testimony, used charts showing DNA testing data obtained by other analysts (who did not testify). Id. at 469–70. The SJC held that the data should not have been shown to the jury. Id. at 470. The Court also concluded, however, that there was no substantial likelihood of a miscarriage of justice "because the charts did not taint the analysts' independent opinions, which . . . were properly admitted." Id. at 471. [Note: The Court applied a miscarriage of justice standard because the defendant did not preserve an objection to the charts at trial. Id. at 470.] The SJC noted that the charts "merely displayed genetic locations, not any information regarding a match or the statistical probability thereof." Id. at 471. Third, the defendant argued that it was reversible error for an analyst to testify that the defendant's DNA profile matched a DNA profile developed by a different analyst from the victim's jeans. Id. The SJC rejected this claim, finding that the defendant had had the opportunity at trial to cross-examine the analyst who developed the defendant's DNA profile, the supervisor of the laboratory that developed the DNA profile from the jeans, and the analyst who compared the two profiles. Id. at 471–72.

- Commonwealth v. Scesny, 472 Mass. 185 (2015). An autopsy report and photographs from the victim's autopsy were introduced in evidence and a substitute medical examiner testified regarding findings in the report. Id. at 196–97. The SJC held the autopsy report was "'inadmissible hearsay whose admission violate[s] the defendant's right of confrontation under the Sixth Amendment to the United States Constitution,'" id. at 197 (quoting Commonwealth v. Emeny, 463 Mass. 138, 145 (2012)), and that a substitute medical examiner cannot testify about the facts and findings of the report on direct examination. Id. The autopsy photographs were properly admitted through a State police trooper who attended the autopsy. Id. at 198 n.25.

- Commonwealth v. Jones, 472 Mass. 707 (2015). At defendant's trial for rape, a chemist at the State police crime laboratory, who was not present during the "rape kit" examination and had no apparent connection to the hospital at which the swabs were taken, was allowed to testify on direct examination to her "understanding" of how the swabs had been collected. Id. at 711–12. The SJC held that allowing an expert witness who had not been present during the examination and had no apparent connection to the hospital where the examination occurred, to testify on direct examination to her "understanding" of how the swabs had been collected violated the defendant's confrontation right. Id. at 708. The SJC found that the "surrogate" expert's statements were testimonial for two main reasons: (a) in labeling the various swabs and completing the "rape kit" inventory list, the initial examiner made factual statements concerning how the swabs were collected, and (b) the purpose of a "rape kit" is to gather forensic evidence for use in a criminal prosecution,. Id. at 714. These statements would therefore only be admissible if they complied with the test established by Commonwealth v. Greineder, 464 Mass. 580, 593 (2013). Id. at 715. The Jones Court summarized the holding of Greineder as follows: "'[e]xpert opinion testimony, even if based on facts and data not in evidence, does not violate the right of confrontation, provided that the facts and data 'are independently admissible and are a permissible basis for an expert to consider in formulating an opinion,' and that two further conditions are met. First, the expert must 'not present on direct examination the specific information on which he or she relied'; second, the expert witness must have the capacity to 'be meaningfully cross-examined about the reliability of the underlying data.'" Id. at 713 (quoting Greineder, 464 Mass. 580) (other citations omitted). The statements in Jones did not meet either of these requirements in Greinder: (1) the underlying hearsay facts of how the swabs were collected came in on direct examination and (2) the expert could not meaningfully be cross-examined about the reliability of the representations of the "rape kit" examiner concerning the origins of the swabs and lacked the capacity to address chain of custody and evidence-handling protocols relevant to the process by which the swabs were collected. Id. at 715–16. The testimony thus failed to comply with Greineder and was therefore inadmissible. Id. at 715.

III. Cybercrimes

A. Possession of Child Pornography

1. Multiple Convictions Require Multiple "Caches"

In prosecuting possession of child pornography, each "cache" of pornography counts as one unit of prosecution. See Commonwealth v. Rollins, 470 Mass. 66, 73–75. That is, "a defendant's possession of a single cache of one hundred offending photographs in the same place at the same time gives rise to a single unit of prosecution pursuant to [Mass. Gen. Laws ch. 272,] § 29C" rather than one-hundred separate charges and convictions. Id. at 74. To support multiple prosecutions for possession of child pornography in compliance with the Double Jeopardy Clause, that possession must be "'sufficiently differentiated by time, location, or intended purpose.'" Id. at 73 (quoting Commonwealth v. Rabb, 431 Mass. 123, 130 (2000) (with internal quotation marks omitted)).

- Commonwealth v. Wassilie, 482 Mass. 562 (2019). The defendant, who was convicted on 15 separate indictments relating to secretly videotaping nude or partially nude adults and children, appealed, arguing that the judge erred in ruling that the proper units of prosecution were the individual victims rather than the individual episodes of surveillance. Id. at 563. The defendant concealed his cell phone in a unisex, one room bathroom without stalls at an angle that gave a clear view of the toilet. Id. at 563-564. He recorded two videos on the same day, and these videos captured "genitalia of children and adults, male and female"—a total of seventeen adults and five juveniles. Id. On appeal, the Court cited precedent that, for the purpose of determining whether particular conduct constitutes a single offense or multiple offenses, there are two categories of statutes. Id. at 567. "One category is focused upon the prevention of violence or physical injury to others." Id. In this category, a single incident can give rise to multiple indictments, based on the number of victims. Id. The other category is directed at "punishing the defendant for conduct offensive to society." Id. For this second category, separate indictments for separate victims are not appropriate. Id. at 568. Some crimes, like the one at issue here, do not fit neatly into either category. Id. The defendant argued that the statute reflects an intent to punish the physical act of recording, but the Court read the statute as punishing criminal acts that invade an individual's privacy. Id. The Court also rejected the defendant's reasoning on the grounds that his statutory interpretation would produce the "absurd result" of allowing people who take illicit photos of multiple people to be tried as if they had one victim. Id. at 571. Based on this statutory analysis, the Court upheld the lower court's decision to use a per victim unit of prosecution. Id. at 578.

2. Brief Possession is Sufficient

Brief possession of offending images is sufficient to sustain a violation of Mass. Gen. Laws ch. 272, § 29C. Commonwealth v. Hall, 80 Mass. App. Ct. 317, 329–30 (2011). Evidence of prolonged or continued control is not needed. Id. (citing Commonwealth v. Harvard, 365 Mass. 452, 458 (1969)). In Hall, although the defendant's cell phone no longer contained child pornography and though there was no confirmation that the defendant had viewed the pictures sent to him by the victim, the defendant was

found guilty of possession of child pornography because the fact that he had enticed and encouraged the victim combined with the fact that he received the images allowed a jury to find that he had possessed them. Id. at 327–29.

3. Receipt by Cell Phone is Sufficient

Confirmation that defendant's cell phone received picture messages from the victim, where the defendant enticed the victim to take and send the picture messages, is sufficient to show control and possession of such photos in violation of Mass. Gen. Laws ch. 272 § 29C. Commonwealth v. Hall, 80 Mass. App. Ct. 317, 327–29 (2011).

4. Malware and Computer Viruses Defense

The First Circuit notes that "we must be cognizant of 'the prevalence and sophistication of some computer viruses and hackers that can prey upon innocent computer users' by placing child pornography on their machines, but 'the specter of spam, viruses, and hackers must not prevent the conviction of the truly guilty.'" United States v. Rogers, 714 F.3d 82, 87 (1st Cir. 2013) (quoting United States v. Pruitt, 638 F.3d 763, 766–67 (11th Cir. 2011)). In Rogers, the possibility that the child pornography found on the defendant's computer was a result of malware was ruled out by forensic analysis (where an analyst installed the same malware on another computer and no child pornography was found) and corroborating evidence (child pornography found on another computer, browsing history matching an interest in child pornography, and evidence that some of the pornography had been deleted by the defendant). Id.

5. Probable cause / Staleness in Child Pornography Cases

- Commonwealth v. Guastucci, 486 Mass. 22 (2020). The defendant, charged with two counts of possession of child pornography, sought to suppress evidence seized from his laptop computer and flash drive. Id. at 25. He argued that the probable cause in the affidavit in support of the warrant to search his home was stale. Id. In Guastucci, police were investigating the upload of a single image of child pornography from the defendant's home to Skype seven months prior to the search. Id. Addressing the issue of staleness in the context of a search for evidence of child pornography for the first time, the Court found that "the information in the warrant affidavit was not stale when the warrant was filed," while noting that the seven-month delay "may be at the outer limit in these circumstances." Id. at 27. Generally, "the determination of staleness in investigations involving child pornography is unique" because "individuals who are interested in child pornography are likely to collect and retain such images." Id. at 29 (quotations and citations omitted). Relying on United States v. Raymonda, 780 F.3d 105 (2d. Cir. 2015), the Court separately identified several factors for determining that a suspect is a collector of child pornography, such as: "an admission or other evidence identifying the individual as a pedophile; paid subscriptions to child pornography sites or participation in peer to peer file sharing; and a past history of possessing or receiving child pornography." Id. at 31. Further, a single incident of possession or receipt of child pornography could also lead to a reasonable inference that a suspect is interested in it, "where, for example, the images were obtained through 'a series of sufficiently complicated steps' suggesting a 'willful intention to view the files,' or where the suspect redistributed the file to others." Id. at 31 (quoting Raymonda, 780 F. 3d at 115). Here, the warrant

affidavit alleged that the defendant "uploaded an image of child pornography to an Internet chat, talk, and file-share service [Skype]", an act that required multiple, intentional steps. Id. at 32. In such circumstances, the seven month delay between the upload and the warrant application did not render the warrant stale. Id. at 27.

B. Statutory Terms of Mass Gen. Laws ch. 272

1. "Dissemination"

"The definition of 'disseminate' includes 'publish, produce, print, manufacture, distribute, . . . exhibit or display.' The statutory emphasis is on the content of the material and the intent of the person disseminating such material; the draftsmen were not so much concerned with the manner in which the image was distributed, exhibited, or displayed. The statutes criminalize such dissemination whether accomplished by way of hand, mail, facsimile, or through the use of e-mail. The judiciary ought, absent constitutional inhibitions, give effect to the purpose of the law gleaned from the Legislature's choice of language." Commonwealth v. Gousie, 13 Mass. L. Rptr. 585, at *2 (Mass. Super. Ct. 2001) (quoting Mass. Gen. Laws ch. 272, § 31 (internal citation marks omitted)).

"Possession" is not an element of the crime of "dissemination." Commonwealth v. Moore, 90 Mass. App. Ct. 1106, at *4 (Sep. 22, 2016) (unpublished). To "disseminate" is defined as 'to import, publish, produce, print, manufacture, distribute, sell, lease, exhibit or display." Id. at *5 (quoting Mass. Gen. Laws ch. 272, § 31). In Moore, the appeals court held that "[t]o infer a requirement of possession would be to add a requirement not expressed by the Legislature." Id. The term "dissemination" also connotes some form of distributive act beyond showing something to another. Id. Consider Commonwealth v. McDonagh, 480 Mass. 131 (2018), where the defendant showed nude pictures on his computer to his minor son. The Commonwealth charged the defendant with various offenses, including dissemination of obscene matter (in violation of Mass. Gen. Laws ch. 272, § 29). Id. at 132. On appeal, the Commonwealth conceded that the evidence was insufficient to prove "dissemination." Id. at 144–45.

2. Computer "Depictions"

"The Legislature was unconcerned with how the photographically created image is stored or communicated." Commonwealth v. Hall, 80 Mass. App. Ct. 317, 326 (2011). "[T]he Legislature's creation of a separate and distinct category for 'depiction by computer' manifests an intent to give special treatment to the unique issues presented by computers, including the fact that stored data, although intangible in their unprocessed form, are readily transferrable to a graphic image." Id. at 327 (quoting Mass. Gen. Laws ch. 272, § 29C).

"Depiction by computer," as that phrase is used in § 29C, includes an unopened file on a hard drive—not only a file that is reduced to a hard copy, or one that is disseminated. Commonwealth v. Hinds, 437 Mass. 54, 63–64 (2002).

3. Child Enticement

"[I]n order to constitute enticement of a victim, the defendant need not physically meet the victim at the same place to which he entices the victim to go" given modern and electronic digital technology. Commonwealth v. Hall, 80 Mass. App. Ct. 317, 323 (2011). In Hall, the Appeals Court noted that the defendant's enticement of the victim via cell phone text messages to go to a private place and take naked photographs to send to him can qualify as enticement. Id. However, given the potentially duplicative offense of posing a child in a state of nudity, the court held that the defendant must lure the child to a place of his/her choosing, not the victim's choosing. Id at 324–25. As this element was missing in Hall, the defendant's enticement charge was set aside. Id. at 325.

4. "Visual Material"

"The Legislature's objective of including a broad range of 'visual material' in its proscription is further demonstrated by Section 31's second sentence which provides: '[u]ndeveloped photographs, pictures . . . and similar visual representations or reproductions may be visual materials notwithstanding that processing, development or similar acts may be required to make the contents thereof apparent.' Thus, in determining whether an image is a 'visual material' within Mass. Gen. Laws ch. 272, the manner of its dissemination is insignificant. Whether further acts are required to make the image apparent to the naked eye, by, for example, keying a computer board, does not render the image any less a 'visual material.'" Commonwealth v. Gousie, 13 Mass. L. Rptr. 585, at *3 (Mass. Super. Ct. 2001) (quoting Mass. Gen. Laws ch. 272, § 29C).

5. "Nudity" Under Mass. Gen. Laws ch. 272, § 31

The SJC examined the definition of "nudity" under §31 in Commonwealth v. Provost, 418 Mass. 416 (1994). In this case, the defendant took photographs of children in the pool and boys in the locker room. Id. at 417–18. One child struck different poses and his partially covered scrotal area was visible in two photographs. Several others showed the child displaying his bare buttocks ("mooning" the defendant). Id. at 418. The SJC provided the following analysis of the statutory meaning of "nudity": "The defendant claims that his activities do not fall within the ambit of § 29A(a). He first contends that the photographs do not depict a minor in a state of nudity within the meaning of, which defines 'nudity' as: 'uncovered or less than opaquely covered human genitals, pubic areas, . . . or the covered male genitals in a discernibly turgid state.' Although [the child] had his underwear on, in two of the photographs portions of his pubic and genital area are clearly visible. The statute does not require that the areas be completely uncovered. It is enough that a portion of the genital area is visible." Id. at 418 (quoting Mass. Gen. Laws ch. 272, § 31).

6. "Performance" Under Mass. Gen. Laws ch. 272. § 29A

A "performance" under Mass. Gen. Laws ch. 272, § 29A "does not expressly or implicitly require the physical presence of 'one or more persons.' In view of the advances in technology, a violation of the statute may occur without the defendant's physical presence." Commonwealth. v. Bundy, 465 Mass. 538, 545 (2013) (finding the statutory definition of performance satisfied by victim masturbating facing a

camera attached to a device that, through an Internet connection, resulted in the image being broadcast to the defendant for him to view).

A "performance" occurs "before one or more persons" even when the only audience member is the person who enticed or encouraged the performance because to hold otherwise would circumvent the plain meaning of "one." Id. at 544.

7. "Knowingly Permit" Under Mass. Gen. Laws ch. 272, § 29A

Mass. Gen. Laws ch. 272, § 29A(b), provides in relevant part: "Whoever . . . hires, coerces, solicits or entices, employs, procures, uses, causes, encourages, or knowingly permits such child to participate or engage in any act that depicts, describes, or represents sexual conduct for the purpose of representation or reproduction in any visual material, or to engage in any live performance involving sexual conduct, shall be punished . . . ." (quoted in Com. v. Bundy, 465 Mass. 538, 539 n.2 (2013)). In Bundy, the jury was instructed as follows on a charge under this statute:

> [I]n proving [the element of live performance], the Commonwealth must establish beyond a reasonable doubt that it was [the defendant's] specific intent to solicit, entice, cause, or encourage [the victim] to engage in a live performance involving sexual conduct. In determining whether the defendant possessed such a specific intent, [the jury] may consider all facts and circumstances, including the defendant's acts and statements. The statute also permits the Commonwealth to establish alternatively that the defendant knowingly permitted [the victim] to engage in a live performance involving sexual conduct.

Id. at 542.

The meaning of "knowingly permit" was at issue in Commonwealth. v. Provost, 418 Mass 416 (1994). The defendant in Provost asserted that "the depiction of [a victim's] pubic area was unintentional and that, since [the victim] voluntarily struck the various poses without instruction, [defendant] did not 'knowingly permit' him to pose in a state of nudity." Id. at 419. The court rejected this argument and held that:

> The photographs themselves suggest that the defendant knowingly permitted [the victim] to pose with a portion of his pubic region and genitals exposed. He took a series of well-focused photographs at various points in the process of [the victim's] dressing. [The victim's] genital area is prominent in many of the photographs. The defendant admitted that he sometimes took photographs of nude boys for sexual gratification. There was sufficient evidence, therefore, for the judge to conclude that the defendant knowingly permitted [the victim] to pose in a state of nudity. Furthermore, the fact that the defendant continued to take the photographs as [the victim] struck different poses certainly supports the inference that he "encouraged" [the victim] to pose in a state of nudity.

Id. at 419.

8. Lewdness

In Commonwealth v. Rex, 469 Mass. 36 (2014), during a standard cell inspection prisoner Rex was found in possession of seven photographs of naked children. Id. at 37. The photos were from National Geographic, a sociology textbook, and a naturist catalogue. Id. The Court held that the indictment for possession of child pornography was properly dismissed because the children depicted were not in unnatural poses and their genitals were not the focus of the photo. Id. at 47. Thus the photos did not depict lewdness—just nakedness. Id. at 47–48. "It is well settled that nudity alone is not enough to render a photograph lewd." Id. at 44 (quotation omitted).

C. Special Conditions of Probation

Special conditions of probation can be unconstitutionally vague — facially or as applied — if they do not give fair notice to a defendant of the scope of prohibited activity. Commonwealth v. Ruiz, 453 Mass. 474, 479 (2009). A defendant "cannot be found in violation of probationary conditions that might have been intended or would have made sense, only of those that are unambiguous and of which he has notice," Commonwealth v. King, 96 Mass. App. Ct. 703, 710(2019) (citing Commonwealth v. Lally, 55 Mass. App. Ct. 601, 603 (2002)), and "ambiguities in probation conditions are construed in favor of the defendant." Lally, 55 Mass. App. Ct. at 603 (citing Commonwealth v. Power, 420 Mass. 410, 421 (1995)).

- Commonwealth v. Hamilton, 95 Mass. App. Ct. 782 (2019). Defendant pled guilty to possessing child pornography and failing to register as a sex offender, and a judge placed a special condition on the defendant's probation that he "not possess pornography." Id., at 783. The judge defined pornography as "pictures or writings of sexual activity intended solely to excite lascivious feelings of a particularly blatant and aberrant kind." Id. The court found this sufficed to put the defendant on fair notice that possession of "explicit stories describing the rapes of young children" would violate his probation. Id. at 786-87. However, the court found that a reasonable person would not consider photographs of adults in their underwear or with their hands covering their genitals to be pornographic. Id. Therefore, they were not "so inarguably pornographic as to put the defendant on fair notice that he was violating probation by possessing them," where the photographs "depicted no sexual activity or nudity, and it [was] unclear whether the intent behind them was to arouse sexual excitement." Id. at 786.

  Commonwealth v. King, 96 Mass. App. Ct. 703 (2019). Defendant, who had pled guilty to possession of child pornography, was subject to special probation conditions which provided, in relevant part, that: "(3) The probationer shall not access any internet services from any handheld device (e.g., Palm Pilots, Blackberries, and mobile telephones)"; and "(4) The probationer shall not use, enter, visit, participate in, or remain in any online chat room, bulletin board service, message board service, social networking site or service (for example, Facebook.com, Twitter.com, Instagram.com), or any other online communication service, with the sole exception of electronic mail." Id. at 704. The discussion during the plea colloquy clarified the scope of these two conditions such that, in summary, the third condition prohibited any Internet access from

handheld devices, and the fourth condition prohibited the use of social media on any device (except email). Id. at 705. When read together, the two conditions appeared to permit non-social-media Internet access (including email) from non-handheld devices. Id. While on probation, the defendant accessed "images of young girls wearing scanty dance costumes in provocative poses" and annotated print-outs of these materials by hand with the girls' names, ages, information about their siblings, and smiley faces in some cases. Id. at 706. He accessed these and similar materials using search engines (e.g., Google) and Wikipedia on computers, and emailed some of them to himself. Id. at 705. While acknowledging that the defendant's conduct was "troubling," the appeals court held that "the evidence was insufficient to permit the judge to find that he violated special condition four," because "[s]pecial condition four did not prohibit the defendant from using the Internet generally, or downloading information from it." Id. at 710 ("the defendant cannot be found in violation of probationary conditions that might have been intended or would have made sense, only those that are unambiguous and of which he has notice.").

In dicta, the King court wrote: "with the benefit of appellate hindsight, one cannot help but ask whether special condition four should not have been written differently and, in particular, whether it should have expressly prohibited the defendant from using a computer to access images or information about children, whether via the Internet or otherwise." Id. at 710. Further, "recogniz[ing] both the importance and difficulty of drafting clear special conditions of probation, especially when they involve technology," the court suggested it would "be helpful to supplement existing sources with a set of model, nonbinding special conditions" "for sex offenders and those who use technology to commit crimes," among others. Id. at 711.

Special conditions of probation that refer to pornography may use the "common meaning" of pornography, and may prohibit constitutionally protected activity that may not be the basis of an independent criminal conviction. Hamilton, 95 Mass. App. Ct. at 787.

- Commonwealth v. Hamilton, 95 Mass. App. Ct. 782 (2019). Defendant pled guilty to possessing child pornography and failing to register as a sex offender, and a judge placed a special condition on the defendant's probation that he "not possess pornography,." Id. at 783. The judge defined pornography as "pictures or writings of sexual activity intended solely to excite lascivious feelings of a particularly blatant and aberrant kind." Id. Defendant argued that under Free Speech Coalition, which held facially unconstitutional a statute that criminalized possession of "sexually explicit images that appear[ed] to depict minors" but were actually "created by using adults who look like minors or by using computer imaging," Ashcroft v. Free Speech Coalition, 535 U.S. 234, 239–40 (2002), the explicit stories he posessed were not pornography because they were "'fantas[ies]' that [did] not involve actual children." Hamilton, 95 Mass. App. Ct. at 787. The court rejected defendant's argument, noting "that a probation condition is enforceable, even if it infringes on a defendant's ability to exercise constitutionally protected rights, so long as the condition is 'reasonably related' to the goals of sentencing and probation." Id. (quoting Commonwealth v. Lapointe, 435 Mass. 455, 459 (2001)). The court was not considering a facial challenge to a criminal statute, but rather had to decide the question of "whether a reasonable person in the defendant's circumstances would have known that the stories constitute

pornography in violation of his probation conditions." Id. Thus, "[t]he discussion in Free Speech Coalition [was] not germane to that question because the common meaning of pornography is not limited to materials depicting actual people. For example, had the defendant been found in possession of computer-generated images of what appeared to be children engaging in sexual activity, he indisputably would have been in violation of his probation, even though Free Speech Coalition says that those same images cannot be the basis of a criminal conviction." Hamilton, 95 Mass. App. Ct. at 787.

IV. Expert Testimony About Technology

Expert testimony is ordinarily required when the subject of the testimony "is beyond the common knowledge or understanding of the lay juror." Commonwealth v. Sands, 424 Mass. 184, 186 (1997). Even if a juror does not have personal experience of a technology, a lay juror, from common experience and knowledge, may understand the required concepts when provided sufficient non-expert testimony and evidence. Commonwealth v. Bundy, 465 Mass. 538, 546 (2013) (finding the victim's testimony and photographic evidence sufficient to keep jurors from engaging in conjecture about an Xbox and its accessories) (citing Commonwealth v. Sands, 424 Mass. 184, 186 (1997)).

- Commonwealth v. Javier, 481 Mass. 268 (2019). In this first-degree murder case, the defendant argued, among other things, that the trial judge erred in admitting opinion testimony by a cell phone company employee interpreting CSLI information. Id. at 269. The defendant argued that the employee, who was not an engineer, should not have been permitted to testify about how cell sites operate and how to locate a cell phone based on historical cell site information. Id. at 277, 285. The SJC noted that it had previously expressed some doubt—in an appeal by the defendant's co-venturer, see Commonwealth v. Gonzalez, 475 Mass. 396 (2016)—about the propriety of the phone employee's testimony in two respects. Javier, 481 Mass. at 286. In particular, the SJC explained in Gonzalez that the employee's testimony "'that calls are 'typically' transmitted through the closest cellular site, and that a call from [a particular] address was unlikely to have been transmitted through [a particular cell site] . . . may well have required a witness with greater technical expertise.'" Id. (quoting Gonzalez, 475 Mass. at 412 n.37). The Javier Court also noted, however, that the employee "properly qualified his testimony and explained that, even where a particular cellular telephone was most likely to connect to the nearest tower, there were many reasons why that might not happen," and therefore "the fact that he did not know or investigate the reasons why particular calls had connected to particular towers did not prejudice the defendant." Id. at 286. The SJC concluded that, "while it might have been better practice to exclude evidence that was of little assistance to the jury and that possibly could have been confusing, the judge did not abuse her discretion in allowing [the phone employee's] testimony about certain aspects of the CSLI." Id. at 286–87. Moreover, the portion of the employee's testimony "concerning the reasons that cellular telephones connect to cell towers, and what he 'expected' a particular telephone would be most likely to do here, would not have had any impact on the jury's verdict." Id. at 287.

- Commonwealth v. Moore, 90 Mass. App. Ct. 1106, at *3 (2016) (unpublished). In an appeal from convictions for possession and dissemination of child pornography claiming ineffectiveness of counsel for failure to object to the testimony of the Commonwealth's digital evidence analyst and to request a Daubert-Lanigan hearing to challenge the reliability and the admissibility of his testimony, the Appeals Court found the claim unfounded. Id. at *3. The prosecution's case was based on evidence found on the defendant's laptop. Id. at *1. The AGO analyst connected the laptop's hard drive to a "write blocker"—thus preventing any data additions or removals—and then created a duplicate image of the drive with a program called Encase. Id. A search of the duplicate image resulted in the discovery of three (3) peer-to-peer file sharing programs: "(1) LimeWire (containing more than 900 videos and images of child pornography); (2) eMule (containing more than 400 videos of child pornography); and (3) Ares (containing several search terms consistent with child pornography)." Id. at *1 The AGO analyst also examined the browsing history, text messages, and photographs on the laptop and the defendant's cell phone to corroborate his ownership and exclusive use of the two items. Id. The court found that the Commonwealth presented a strong case at trial and that "the defendant [did] little more than offer [u]nsupported speculation that further examination of the reliability and the admissibility of the prosecution's expert testimony would have undermined the prosecution's case." Id. at *3 (quotation and citation omitted).

V. List of Cases Organized by Device/Evidence Type

This section provides a quick reference list of the cases that appear elsewhere in this Guide, organized by device or evidence type. Case descriptions are in the respective sections where they are discussed.

A. Cell Phone Searches

- Riley v. California, 134 S. Ct. 2473 (2014).
- Commonwealth v. Barillas, 484 Mass. 250 (2020).
- Commonwealth v. Barrett, 97 Mass. App. Ct. 437 (2020).
- Commonwealth v. Fencher, 95 Mass. App. Ct. 618 (2019)

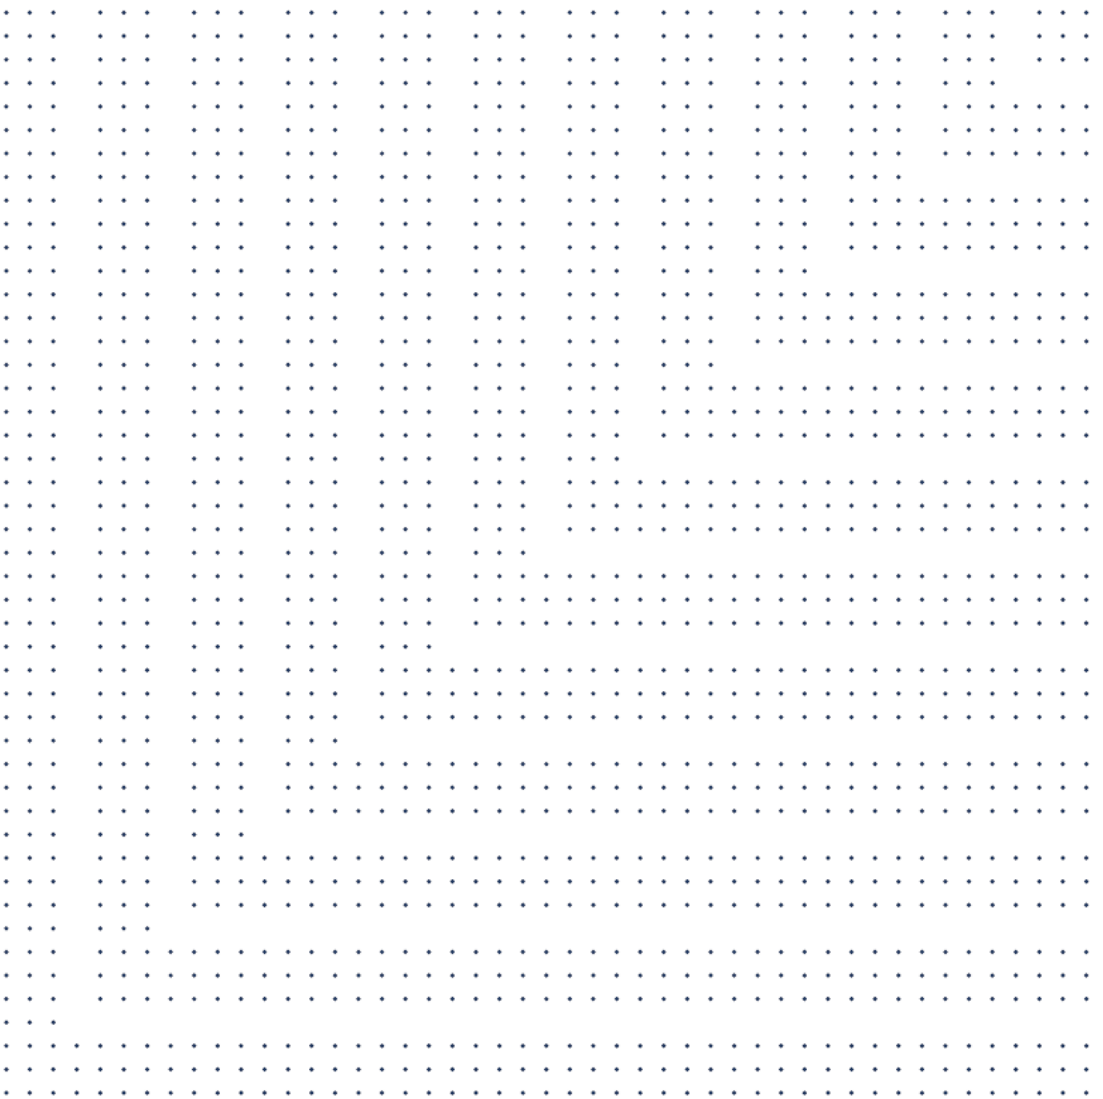
B. Search of Computer Files

- Commonwealth v. Ericson, 85 Mass. App. Ct. 326 (2014).
- Commonwealth v. McDermott, 448 Mass. 750 (2007).
- Commonwealth v. Kaupp, 453 Mass. 102 (2009).
- Commonwealth v. Gousie, 13 Mass. L. Rptr. 585 (Mass. Super. Ct. Sept. 26, 2001) (unpublished).

C. Email

- United States v. Warshak, 631 F.3d 266 (6th Cir. 2010).

D. CSLI, GPS, and Other Location Technologies



- Carpenter v. United States, 138 S. Ct. 2206 (2018).
- United States v. Jones, 565 U.S. 400 (2012).
- Commonwealth v. Gosselin, 486 Mass. 256 (2020).
- Commonwealth v. Wilson, 486 Mass. 328 (2020)
- Commonwealth v. Davis, 97 Mass. App. Ct. 633 (2020).
- Commonwealth v. Wilkerson, 486 Mass. 159 (2020).
- Commonwealth v. McCarthy, 484 Mass. 493 (2020).
- Commonwealth v. Mora, 485 Mass. 360 (2020).
- Commonwealth v. McMann, 97 Mass. App. Ct. 558 (2020).
- Commonwealth v. Watkins, 98 Mass. App. Ct. 419 (2020).
- Commonwealth v. Vasquez, 482 Mass. 850 (2019).
- Commonwealth v. Hobbs, 482 Mass. 538 (2019).
- Commonwealth v. Fredericq, 482 Mass. 70 (2019).
- Commonwealth v. Lugo, 482 Mass. 94 (2019).
- Commonwealth v. Almonor, 482 Mass. 35 (2019).
- Commonwealth v. Feliz, 481 Mass. 689 (2019).
- Commonwealth v. Johnson, 481 Mass. 710 (2019).
- Commonwealth v. Raspberry, 93 Mass. App. Ct. 633 (2018).
- Commonwealth v. Johnson, 91 Mass. App. Ct. 296 (2017).
- Commonwealth v. Balboni, 89 Mass. App. Ct. 651 (2016).
- Commonwealth v. Estabrook, 472 Mass. 852 (2015).
- Commonwealth v. Augustine, 467 Mass. 230 (2014).
- Commonwealth v. Collins, 470 Mass. 255 (2014).

E. Text Messages

- R.C. v. Chilcoff, No. SJ-2020-0081, 2020 WL 8079734 (Mass. Dec. 15, 2020) (Cypher, J.).
- Commonwealth v. Fulgiam, 477 Mass. 20 (2017).

Security Center AutoVu™

Automatic license plate recognition for public safety

Genetec™

Advancements in automatic license plate recognition (ALPR) technology have enabled police agencies worldwide to read thousands of plates effortlessly in each shift while improving the safety of those on duty. Choosing the right ALPR system is vital to ensure your officers apprehend more wanted suspects and recover more stolen vehicles.

Hardware

The SharpV and SharpX are designed to provide the most accurate plate reads even in bad weather, at poor angles and at high speeds. From vehicle mounted systems to fixed perimeter installations, AutoVu enables organizations to automate license plate identification, and share critical data amongst officers.

SharpV

- All-in-one device with on-board processing and illumination
- Power-over-Ethernet+ enabled device
- Plate capture up to speeds of 140 MPH (225 km/h)

SharpX

- Plate capture across three lanes of traffic
- Up to 5,000 plate captures per minute
- Plate capture at up to differential speeds of 200 MPH (320 km/h)

Software

Genetec™ Security Center & AutoVu Patroller connect to provide ALPR data to your office in the field and at the precinct to provide them with actionable information when responding to incidents.

Genetec Security Center

Security Center is a unified security platform that provides real-time monitoring of AutoVu events gathered from patrolling units in the field and from fixed AutoVu SharpV units. View video, reads and hits in dynamic maps, manage alarms, and generate advanced graphical reports in a single, versatile interface.

AutoVu Patroller

AutoVu Patroller is the intuitive, touch-based in-vehicle interface of the AutoVu system, providing easily accessible features for officers onboard, and allowing them to monitor incoming reads from ALPR cameras. With colour-coded and auditory notifications, your officer can safely know that vehicles of interest have been spotted without being distracted from the road.

5 reasons for choosing AutoVu

1 Highest accuracy in the industry

Backed by over 20 years experience in ALPR technology development, police agencies trust AutoVu to identify the most license plates within the camera's field of view. By combining state-of-the-art ALPR cameras and advanced software features, AutoVu provides officers with the best possible match of every license plate to maximize identification of vehicles of interest.

2 Ease of use

AutoVu is designed to automate and simplify the verification of license plates against multiple hotlists, and alert them when vehicles of interest are detected. AutoVu provides a user-friendly interface and features, including touch-enabled functions, graphical maps, associated image and time captures on every read.

3 Purpose-built, real-time surveillance

An ideal choice for police agencies requiring a field-proven ALPR solution, AutoVu users get real-time surveillance and identification of plates, while officers can also monitor the live ALPR information centrally using the Security Center client.

4 Deploy as a standalone or think bigger

AutoVu can easily be deployed as either a standalone system, or incorporated within a greater security or citywide surveillance environment. Through Security Center, cities and police agencies can manage and monitor their ALPR and video surveillance feeds, generate consolidated reports and centralize their alarm management.

5 Advanced reporting and data mining capabilities

When reviewing plate reads or receiving new vehicles of interest, officers can easily search for full or partial license plates from their vehicle. Operators can rapidly review each hit corresponding to searches, as well as any associated data, including geographic coordinates, context images and plate state when available.

AutoVu key features

Fuzzy matching

Fuzzy matching analyzes even imperfect or incomplete license plate reads, containing one or more errors, against a hotlist and alerts the officer case of any potential matches to optimize your patrol efficiency.

In-vehicle mapping

Accessible from within the vehicle or the backoffice, map displays provide operators an easier method to not only visualize the location of a read and correlate reads across multiple regions but also generates a specific location such as a street address.

Wildcard hotlists

When only partial license plate numbers are available to identify a suspect vehicle, officers can create a wildcard hotlist database in order to rapidly identify potential hits. Notifications of hotlist hits can be identified with different sounds, colors, and priority assignments than those of definite matches.

Covert hotlists

Covert hotlists allow you to ensure the discretion of an on-going investigation or special operation. When a hit is identified, only the authorized officer at the Security Center station will be notified, while the in-vehicle patroller will not be alerted. This enables enforcement officials to assign multiple objectives to the vehicle and backend systems, while not interrupting the priorities of officers on duty.

Automatic events and alarms

Officers can receive automated alarms and events from the AutoVu system when a black-listed, wanted, or stolen vehicle is detected. This allows officials to prioritize and rapidly respond to the incidents.

Live data transmission

The AutoVu system ensures officers are kept up-to-date with the latest information through the live update of ALPR reads and hits. Using the Security Center client, officers can remotely monitor one or more Patroller units, fixed SharpV cameras, and/or specific hotlists in real-time.

Third-party system integration

Through its advanced software development kit (SDK), AutoVu can integrate with other software applications to fit within existing workflows and operational processes.

Framingham, MA 01702

CHRISTOPHER S. MASON
COLONEL/SUPERINTENDENT

R. SCOTT WARMINGTON
DEPUTY SUPERINTENDENT

August 18, 2022

Vicky Mboka-Boyer
Program Coordinator
Executive Office of Public Safety and Security
Office of Grants and Research
Homeland Security Division
10 Park Plaza, Suite 3720-A
Boston, MA 02116

The Massachusetts State Police Commonwealth Fusion Center (CFC) was awarded $750,000 in FFY2020 funding for grant FSHSP20CFC.

The award was set to expire on 6/30/2022 and you previously approved an extension until July 31, 2023. This will allow us time to procure the equipment being requested through this modification. The Commonwealth Fusion Center continues to enhance intelligence and information sharing initiatives while sustaining the baseline capabilities for fusion centers. The CFC also continues to provide technological solutions to promote enhanced intelligence and information sharing.

As of 8/18/2022, there is approximately $570,000 remaining unspent in the grant. The CFC respectfully requests a reprioritization of approximately **$567,703** in grant funds for the FSHSP20CFC grant. The need for this reprioritization is due to numerous factors including:

- training and seminars that were not held and/or completed remotely due to the pandemic
- two contracted cybersecurity positions which we have not found a suitable candidate for (the position remains posted and we continue to interview viable candidates as they apply)
- ACISS time and materials funds which were not needed as anticipated
- subscriptions that were procured elsewhere

We propose the following modifications with the remaining funds. The purchase of the below equipment will continue to promote intelligence and information sharing utilizing LPR trailers and cameras. This equipment is intended to upgrade and/or replace trailers and cameras which are nearing end of life. In addition, upgrades to I2 Analyst Notebook Software will allow us to support cybersecurity and other criminal investigations.

Please note that pricing is accurate as of the writing of this memo and may be subject to change by the time procurement occurs.

1. Approximately $254,700 –AEL 12TR-00-TEQP
   To purchase approximately [redacted] battery mounted solar trailers designed for mounting equipment such as License Plate Reader cameras.

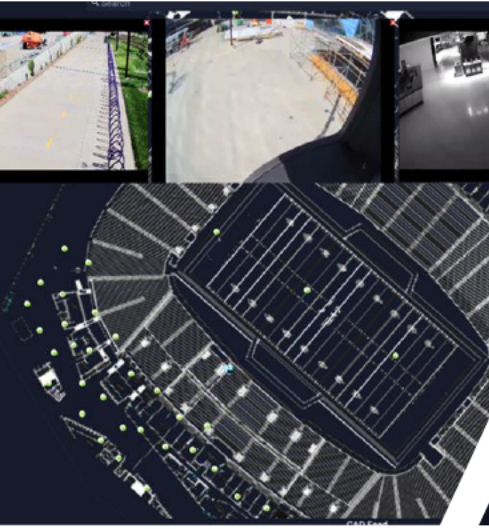
2. Approximately $151,959.89 - AEL 04MD-01-CMRA
   To purchase License Plate Reader Cameras – LPR cameras can be used for multiple public safety issues including: ensuring the safety of special events, amber alerts, silver alerts, or investigations such as the opiate crisis. The cameras we propose to purchase with these grant funds will be temporarily fastened to a fixed object, for example, a telephone pole, a sign board or trailer.

3. Approximately $160,650 – AEL 13IT-00-DFSN
   To purchase I2 Analyst Notebook Software Upgrade to I2 Analyst Notebook Premium
   This software allows link charting, timelines, and social network analysis which can be used for cybersecurity and criminal investigations.

4. Supplies - AEL 21GN-00-OCEQ
   It is requested that any funds remaining after the above purchases are made be used to purchase supplies to support the grant.

The proposed reprioritization of grant funds for the FSHSP20CFC grant falls within the scope, purpose and intent of the programmatic objectives of this grant. I respectfully request approval of this reprioritization request. Please let me know if I can provide further information.

Respectfully submitted,



Amy Thibault

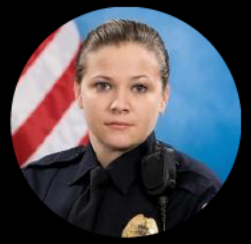
TESTIMONIALS.



“Fusus technology and the team that supports the Division of Police's implementation have been nothing short of outstanding, and the program has been a game changer not just for the City, but I believe for law enforcement in general. Their team has continued to be extremely responsive and easy to work with, and their real-time intelligence platform is able to easily scale to meet our continuing needs. In addition to video surveillance sharing the Division of Police is in the process of rolling out the mobile FususOPS app to Specialty Units for Field Operations.”

Larry Jones II, Assistant Commissioner, Cleveland Department of Public Safety

"In an emergency every second counts. Our deputies need to gather information quickly and accurately. Fusus provides us real-time access to video, allowing us to gather intel to help speed up our investigations and response. This service allows us to have access to the cameras of businesses that opt-in. The archive footage is a huge advantage in latent investigations and is key evidence for successful prosecutions. We are grateful for this partnership that helps us keep our community safe.“

Sheriff Chad Chronister, Hillsborough County Sheriff's Office

“Fusus is extremely responsive to the agency needs and has demonstrated the ability to be on the cutting edge of technology. For example, our SWAT team asked for a certain feature and almost within a week, the capability had been developed. Overall, Fusus has been extremely easy to work with and understands the needs of law enforcement. The fact that Fusus is CJIS compliant is a big plus for most IT personnel and law enforcement concerned about cyber security.”

Lieutenant Amy Gauldin, Winston-Salem Police Department

MASSACHUSETTS DEPARTMENT OF CRIMINAL JUSTICE INFORMATION SERVICES
GLOBAL JUSTICE AND PUBLIC SAFETY USER AGREEMENT

1.0 Purpose

This Global Justice and Public Safety User Agreement (hereinafter, "Agreement") establishes guidelines for the access, use, dissemination, and sharing of criminal justice information (CJI) collected and maintained within the systems and networks operated, maintained, and managed by the Executive Office of Public Safety and Security (EOPSS) and/or the Massachusetts Department of Criminal Justice Information Services (DCJIS).

2.0 Authority

This Agreement is established pursuant to M.G.L. c. 6, § 167A, M.G.L. c. 6, § 18 ¾, 803 CMR 7.00, and 28 C.F.R. Part 20.

3.0 Parties and designees

The parties to this agreement include EOPSS, DCJIS and the criminal justice agency noted in the signatory section below. The parties collectively agree to follow the terms of said agreement. EOPSS designates DCJIS as its designee with the authority to audit and provide oversight of Public Safety Data Enterprise Applications within the scope of the Agreement. Furthermore, EOPSS also appoints DCJIS as it designee to sign this Agreement on behalf of both DCJIS and EOPSS.

4.0 Scope

This Agreement is applicable to all sworn and non-sworn employees, contractors, interns, volunteers, and information technology support staff of all criminal justice and public safety agencies in the Commonwealth of Massachusetts who utilize or otherwise have access to any Public Safety Data Enterprise Application, software application, system or network maintained, or managed by EOPSS and/or DCJIS.

Public Safety Data Enterprise Applications within the scope of this agreement include the following:

Automated License Plate Reader (ALPR) technology is a system that allows for the automatic recognition of license plates by a portable or stationary unit. The license plate information is then compared against a locally stored list of plates called the CJIS-NCIC Hotfile database which consists of license plate numbers associated with suspended or revoked licenses, stolen vehicles, AMBER Alerts, Missing Child Alerts, Missing College Student Bulletins, Be On Look Out, and Wanted or Missing Person broadcasts where a license plate is included.

CopLink is a crime analytics platform application maintained by the Massachusetts State Police Fusion Center that allows for the inter-agency storage and sharing of various documents and information.

EOPSS Data Cross Tracking System is a data collection and reporting system for criminal justice agencies and the Trial Court, to capture and report information on offenders and to report information relative to recidivism rates.

EOPSS National Incident Based Reporting System (NIBRS) Data Collection is a data

collection and reporting system that criminal justice agencies submit incident and arrest data to in compliance with the Federal Bureau of Investigation (FBI) Uniform Crime Reporting (UCR) standards.

My License Office (MLO) is an application that allows for the retrieval and use of Massachusetts' driver's license photos for various reasons, including professional licenses and identification cards.

The **Victim Notification Registry (VNR)** is the electronic application that allows for the registration of crime victims to receive notification of an offender's release from incarceration and certain CORI information.

This agreement may be amended from time to time to update the listing of Public Safety Data Enterprise Applications within the scope of this agreement.

5.0 Duration of Agreement

This Agreement is in effect until modified or cancelled by EOPSS and/or DCJIS. Each Agency Head shall sign off on a copy of this Agreement as a condition of access to the systems and networks operated, maintained, or managed by the EOPSS and/or DCJIS. In addition, each Agency Head will sign off on a copy of the Companion System Agreement for each system for which such an agreement exists. An original, signed copy of this Agreement, along with original, signed copies of any Companion System Agreements, will be kept on file at the DCJIS. The Agency Head shall maintain a copy of the signed agreements. Facsimile and electronic signatures are acceptable as originals.

The Agency Head also agrees to execute a new Global Justice and Public Safety User Agreement and all relevant Companion System Agreements in accordance with 803 CMR 7.06 whenever there are changes to the Agency Head, the CJIS Representative , the backup CJIS Representative, or the CJIS Technical Representative. The new Agreement(s) is/ are to be executed within ten (10) business days of the effective date of the change(s) necessitating a new Agreement(s). Original, signed copies of the newly executed Agreement(s) will be forwarded to the DCJIS within ten (10) days of execution.

6.0 Definitions

Authorized User
A sworn or non-sworn justice or public safety employee, contractor, intern, volunteer, or IT support staff member who has been authorized by his/her agency head to access any software application, system, network, or CJI operated, maintained, or managed by the DCJIS.

Companion System Agreement
An addendum or "rider" to this Agreement. Each Companion System Agreement establishes rules and protocols for contributing CJI to, or accessing, using, or disseminating CJI from, a specific system or database operated, maintained, or managed by the DCIJS.

Criminal Intelligence System
A system that stores detailed intelligence or investigative information on the suspected criminal activities of subjects and/or which stores only information designed to identify individuals or organizations that are the subject of an inquiry or analysis.

Criminal Justice Information (CJI)
CJI is defined as all data obtained from or through the CJIS or companion public safety data enterprise application necessary for law enforcement agencies to perform their missions. CJI includes, but is not limited to, biometric, identity history, biographic, property, and case/incident history data.

Criminal Justice Information System (CJIS) Representative
The CJIS Representative serves as the primary agency point of contact for the DCJIS. Responsibilities include ensuring that all DCJIS system usage and security policies and procedures are being followed by the agency, training all agency personnel who access any system or network operated, maintained, or managed by the DCJIS or who use the CJI obtained from or through those systems and networks, and attending all DCJIS- sponsored meetings, seminars, and conferences.

Criminal Justice Information System (CJIS) Backup Representative
The Backup CJIS Representative shall be the DCJIS' secondary point of contact for the agency. The Backup CJIS Representative shall assume all of the duties and responsibilities of the CJIS Representative should the CJIS Rep representative be unable to perform those duties and responsibilities for any reason.

Criminal Justice Information System (CJIS) Technical Representative
The CJIS Technical Representative serves as the primary agency point of contact for the DCJIS on all technology-related matters. The Technical Representative's main responsibility is to ensure that the agency meets the requirements of the FBI CJIS Security Policy. The CJIS Technical Representative may also serve as either the CJIS Representative or the Backup CJIS Representative.

Criminal Justice Information System (CJIS) User-Access Model
A single-identity management model used to authenticate users of the software applications, systems, and networks operated, maintained, or managed by the DCJIS.

Public Safety Data Enterprise Application
A software application which criminal justice and public safety agencies use to contribute CJI to, or to access CJI from, databases or systems maintained by or accessed through the DCJIS.

Non-Contributing Agency
An agency that may access CJI from, but which does not contribute CJI to, a database or system operated, maintained, or managed by the EOPSS or DCJIS.

Source Agency
The agency that originally recorded and contributed data to a database or system operated, maintained, or managed by EOPSS or DCJIS.

7.0 Transaction Logs

An audit log of all transactions made by CJIS user agencies is maintained by the DCJIS and EOPSS for systems maintained by EOPSS or DCJIS. This log records the identity of the individual user and agency accessing the system, the date and time of access, and the data entered into, or retrieved from, any database or system operated, maintained, or managed by the EOPSS or DCJIS.
An Agency Head may request a report of all transactions initiated by the users of his/her agency. All report requests must be submitted in writing to the DCJIS.

The DCJIS CSO, at his/her discretion, may, at any time, authorize additional audits of all databases and systems operated, maintained, or managed by the EOPSS or DCJI S.

8.0 Audits of CJI Users

The DCJIS will conduct audits of all agencies, both criminal justice/public safety and non-criminal justice, accessing or using the CJI stored within, or obtained through, the databases, systems, and networks operated, maintained, or managed by the DCJIS. The purpose of these audits is to ensure the integrity and security of the CJI, applications, and systems, to investigate potential inappropriate use of these resources, and to identify potential training needs. Each CJIS user agencies will be audited at least on a triennial basis (once every 3 years).

9.0 Public Safety CJI, System, and Network Usage Restrictions

Use of any CJI obtained from or through an application, database, system, or network operated, maintained, or managed by the EOPSS or DCJIS is limited to authorized criminal justice purposes within the scope of a user's employment and official duties.

EOPSS and DCJIS resources may not be used for personal gain or for personal use, or to assist another individual or entity that is not authorized to access, use, or receive CJI from these resources. Criminal intelligence systems may also be subject to 28 CFR Part 23. Where the provisions of this Agreement or its addenda conflict with 28 CFR Part 23, 28 CFR Part 23 shall supersede this Agreement and its addenda.

10.0 Misuse

An Agency Head is responsible for investigating all alleged incidents or allegations of misuse of any CJI or database, system, or network operated, maintained, or managed by EOPSS or DCJIS. If an Agency Head determines that someone within his/ her agency has misused any of these resources, he/she must, within 10 business days, notify the DCJIS CSO in writing of the circumstances surrounding the misuse, of the actions taken, or to be taken, to address and correct the misuse, and of the policy(ies) and procedures to be implemented to prevent future misuse. The DCJIS CSO may suspend or revoke access to any or all databases or systems operated, maintained, or managed by the DCJIS for the individual(s) involved in the misuse.

Misuse of any EOPSS or DCJIS provided CJI or resource may result in individual loss of access to the resources, agency loss of access to the resources, and/or state and federal civil and criminal penalties, if applicable. Users are also subject to the rules and regulations of their respective agency.

11.0 Access to EOPSS and DCJIS Resources

Sworn and non-sworn justice and public safety employees, as well as the employees of non-criminal justice agencies, may be granted access to one or more DCJIS applications, systems, and networks as authorized by the Agency head.

Each individual accessing an EOPSS or DCJIS resource will be assigned a unique user identifier (User ID) and initial password. The individual will be required to change his/her password when logging into a resource for the first time. When possible, the same User ID and Password will enable a user to access multiple EOPSS and DCJIS resources. However, some applications may require a separate log in and/or a different User ID and Password.

All passwords used to access an EOPSS or DCJIS resource will meet the DCJIS and FBI security requirements in effect at the time the password is created/changed.

Authorized users shall not share their passwords and user identifications with any other individual. Each authorized user shall be responsible for all transactions conducted with his or her user identification and password.

Agencies are responsible for notifying the EOPSS or DCJIS, in writing, when a user is no longer authorized to access and EOPS or DCJIS resource. EOPSS or DCJIS will terminate or suspend user access depending on the user's status within his/her respective agency.

User IDs and passwords shall be reviewed by each agency on an annual basis. The Agency Head and agency CJIS Representative shall be responsible for this review. The purpose of this review is to confirm the continued authorization of all individuals accessing DCJIS resources. The Agency Head and CJIS Representative shall annually certify the accuracy of his/her agency's authorized user list to the DCJIS CSO.

12.0 Ownership of CJI Contained Within EOPSS or DCJIS Databases and Systems

The Source Agency will maintain ownership of, and responsibility for, the CJI it enters or modifies within any database or system operated, maintained, or managed by the EOPSS or DCJIS.

The Source Agency will exercise due diligence to ensure that the CJI it enters is current, complete, and accurate. Each Source Agency is also responsible for ensuring that the CJI it contributes is in compliance with all federal, state, and local laws.

User agencies shall communicate any errors found in CJI contained in any database or system operated, maintained, or managed by the DCJIS to the Source agency for that CJI as well as to the EOPSS or DCJIS.

13.0 Dissemination of CJI

CJI contained within, or obtained through, any database, system, or network operated, maintained, or managed by the EOPSS or DCJIS shall only be disseminated to other authorized agencies and individuals. In addition, the CJI obtained within, or obtained through, any DCJIS resource shall only be used for authorized criminal justice purposes.

14.0 Public Records

Records maintained within the databases and systems operated, maintained, or managed by the EOPSS or DCJIS are subject to the Massachusetts Public Records Law as defined in M.G.L. c. 4, s. 7(26).

All responses to public record requests for information contained in an EOPSS or DCJIS resource shall be referred to the Agency that contributed the relevant information for its response as the custodian of the record(s).

The EOPSS or DCJIS CSO may respond to a public records request for statistical data drawn from an EOPSS or DCJIS resource.

15.0 Data Submission and Retention Policy

Source Agencies shall contribute data to each EOPSS or DCJIS database or system pursuant to the schedule established in the Companion System Agreement for that database or system, if applicable. Companion

System Agreements are attached to this Agreement as Addenda.

Data maintained in an EOPSS or DCJIS database(s) and system(s) shall be retained pursuant to the schedule established in the Companion System Agreement for that respective system, if applicable.

16.0 Data Submission Standards

For each system that requires the contribution of data by Source Agencies, those Agencies shall submit at least the minimum set of data as established in the guidelines or any Companion System Agreement if required, for the respective subject application.

17.0 Designation of an Agency Representatives

CJIS Representative:
Each agency accessing or using CJI obtained from or through the systems and networks operated, maintained, or managed by the EOPSS or DCJIS shall appoint a CJIS Representative. The CJIS Representative serves as the primary agency point of contact for the EOPSS and DCJIS. Responsibilities include ensuring that all EOPSS and DCJIS system usage and security policies and procedures are being followed by the agency, training all agency personnel who access any system or network operated, maintained, or managed by the EOPSS or DCJIS or who use the CJI obtained from or through those systems and networks, and attending all EOPSS or DCJIS- sponsored meetings, trainings, seminars, and conferences.

Backup CJIS Representative*:*
Each agency that accesses or uses CJI obtained from or through the syst ems or networks operated, maintained, or managed by the DCJIS shall also appoint a Backup CJIS Representative. The Backup CJIS Representative shall be the EOPSS and DCJIS' secondary point of contact for the agency. In addition, the Backup CJIS Representative shall assume all of the duties and responsibilities of the CJIS Representative should the CJIS Representative be unable to perform those duties and responsibilities for any reason.

CJIS Technical Representative:
Each agency accessing or using CJI obtained from or through the systems and networks operated, maintained, or managed by the DCJIS shall appoint a CJIS Technical Representative. The CJIS Technical Representative serves as the primary agency point of contact for the DCJIS on all technology-related matters. The Technical Representative's main responsibility is to ensure that the agency meets the requirements of the FBI CJIS Security Policy. The CJIS Technical Representative may also serve as either the CJIS Representative or the Backup CJIS Representative.

18.0 Technical Support

The Executive Office of Public Safety and Security (EOPSS) Office of Technology and Information Services (OTIS) shall provide technical support services for all applications, databases, systems, and networks, operated, maintained, or managed by the EOPSS or DCJIS.

19.0 Internal Agency Policies

Each agency obtaining CJI either directly from, or through, an application, database, system, or network operated, maintained, or managed by the EOPSS or DCJIS shall draft and adopt internal policies to inform and ensure that agency authorized users have read and agree to comply with the provisions of this Agreement and its Addenda .

20.0 Termination of Access

An agency may request termination of its access to one or more EOPSS or DCJIS resources by providing a written request to the DCJIS CSO.
The DCJIS CSO may also terminate access to a DCJIS resource pursuant to the terms of a Companion System Agreement.

21.0 Amendments

Any change in the provisions of this Agreement or in the provisions of a Companion System Agreement shall be incorporated by a written amendment approved by the EOPSS and DCJIS CSO.

22.0 Global Justice and Public Safety User Agreement Signoff

By signing this Agreement, the Agency Head acknowledges he/ she has read and understood its provisions and that he/she will comply with its terms and conditions.

Table of Contents

I. Introductory Discussion
II. Policy
III. Acronyms and Definitions
IV. Procedures

I. INTRODUCTORY DISCUSSION

The use of the Automated License Plate Reader (ALPR) system will assist officers in the locating and investigation of vehicles whose license plate information is flagged in a national/state/local database. This system is intended to aid law enforcement in the timely recovery of stolen vehicles, investigations of missing persons and abducted children, and also to identify vehicles of interest in major crime investigations. This policy will further establish guidelines for the deployment and actions permissible when using the system.

II. POLICY

An ALPR system is a computer-based system that utilizes special cameras to capture license plate information. The ALPR system captures an infrared image of a license plate and converts it to a text file using Optical Character Recognition (OCR) technology. The text is compared to various hot lists generated by various law enforcement agencies, including the National Crime Information Center (NCIC) and the Springfield Police Department, and generates an alert when there is a hit. The ALPR system will identify a license plate and/or a motor vehicle. The ALPR system will not identify the person operating the motor vehicle. The Department may, as a separate step and for legitimate law enforcement purposes as set forth in this Policy, undertake to identify the owner of a vehicle in the event the ALPR system generates an alert, such as by running the license plate number through the database of the Massachusetts Registry of Motor Vehicles (RMV).

It shall be the policy of the Springfield Police Department that all department members abide by the policy and procedures set forth when using ALPRs to scan, detect, and identify vehicles or persons of interest, thereby increasing the efficiency and effectiveness of its public safety efforts in a manner that safeguards the privacy concerns of law-abiding citizens.

The ALPR system shall be restricted to legitimate law enforcement uses for the purpose of furthering legitimate law enforcement goals and enhancing public safety. Such uses and goals include, but are not limited to providing information to officers that will assist in on-going criminal investigations, crime prevention, crime detection, the apprehension of wanted persons, ensuring the safety of vulnerable individuals through the recovery of missing and endangered persons, and improving the quality of life in our community through

the identification and removal of stolen, unregistered and uninsured motor vehicles, and enforcement of certain parking rules and regulations.

The Department shall utilize hot lists that further the above-specified goals of the ALPR system where there is legitimate and specific law enforcement reason for identifying a vehicle or a person reasonably believed to be associated with the vehicle, such as: persons who are subject to an outstanding arrest warrant; missing persons; AMBER Alerts; stolen vehicles; vehicles that are reasonably believed to be involved in the commission of a crime; vehicles that are registered to or are reasonably believed to be operated by persons who do not have a valid operator's license or who are on the revoked or suspended list; vehicles with expired registrations; persons who are subject to a restraining order issued by a court or by the Parole Board, or who are subject to any other duly issued order restricting their movements; persons wanted by a law enforcement agency who are of interest in a specific investigation, whether or not such persons are themselves suspected of criminal activity; and persons who are on any watch list issued by a State of Federal Agency responsible for homeland security when information has been received concerning a specific individual or individuals who pose a potential public safety risk to the Springfield area.

In summary the ALPR system will aid officers in ensuring the safety of our community.

III. ACRONYMS AND DEFINITIONS

"Alert" shall mean a visual and/or auditory notice or alarm that is triggered when the ALPR receives a potential hit on a license plate.

"**Alert Data"** shall mean information captured by an ALPR relating to a license plate that matches the license plate on a hot list.

"**ALPR"** shall mean automated license plate reader.

"**ALPR Data"** shall mean scan files, alert date and any other documents or other data generated by or through utilization of the ALPR system.

"**ALPR System** shall mean the ALPR cameral and all associated equipment and databases.

"Hit" shall mean a read matched to a license plate that has previously been registered on an agency's vehicle plates hot list, such as those associated with vehicles that have been stolen or that are unregistered or uninsured, vehicles wanted for specific crimes, vehicle associated with, or that may assist with the identification of, suspects involved in criminal activity, and vehicles associated with parking scofflaws.

"**Hot-List"** shall mean data bases containing lists of license plate numbers of interest.

"**Non-Encounter Alert"** shall indicate to officers "Do not stop the vehicle based on this information alone". Only observe and report pertinent information to the requesting agency.

"OCR" shall mean optical character recognition.

"Read" shall mean digital images of license plates and associated metadata (e.g., date, time, and geographic coordinates associated with the vehicle image capture) that are captured by the ALPR system.

"**Scan File"** shall mean data obtained by an ALPR of license plates that were read by the device, including potential images of the plate and vehicle on which it was displayed, and information regarding the location of the police cruiser at the time of the ALPR read.

IV. PROCEDURES

A. Management

The Springfield Police Department, by and through its Police Commissioner, is solely responsible for the day-to day operation and management of the ALPR system and for all tasks ancillary to its operation and management. The Commissioner shall assign Department personnel to operate and manage the ALPR system on a day-to-day basis. The Commissioner or his/her designee may assign civilian personnel to perform any function or duty related to the operation and management of the ALPR system, including but not limited to, inventory, service and maintenance work.

The Commissioner shall ensure that the ALPR system is operated in conformity with this Policy and other Department policies, procedures, rules and regulations. The Commissioner shall enforce this Policy and shall act as the Department Head for all disciplinary and enforcement actions for any violations by Department personnel.

B. Operation

1. Installation and Functioning: The ALPR cameras will be mounted on a marked or unmarked cruiser or on fixed position locations in the city as determined by the Police Commissioner. The cruiser will engage in either directed patrol or routine patrol depending on the assignment given. The ALPR equipment will passively read the license plates of moving or parked motor vehicles using ALPR optical character recognition technology and compare them against various hot lists uploaded or created by the Police Department. Scanned data files collected by an officer will on an ongoing basis, be automatically uploaded from the ALPR in the cruiser to the Executive Office of Public Safety and Security (EOPSS). The ALPR system will not have sound recording capability.

2. Hot Lists: Designation of hot lists to be utilized by the ALPR system shall be made by the Commissioner or his/her designee. Hot lists shall be obtained or compiled from sources as may be consistent with the purposes of the ALPR system set forth in the Policy, which sources may include:

    a. NCIC Stolen Vehicle Files, as available;
    b. NCIC Stolen Plates and Stolen Canadian Plates, as available;
    c. NCIC Wanted Persons, as available;
    d. NCIC Missing or Endangered Person Files, as available;
    e. NCIC Supervised Release (Federal Probationers), as available;
    f. NCIS Nationwide Domestic Violence Protection Orders, as available;
    g. NCIC Violent Gang and Terrorist Organization File, as available;
    h. NCIC Sexual Offender;
    i. RMV Records of Suspended/Revoked Registrations;
    j. SPD Tow/Hold List;
    k. City of Springfield Parking Permit System; and
    l. Department –generated hot list(s) or manual entries of license plate numbers to existing hit list(s) created for purposes consistent with this Policy as may be authorized by the Commissioner or his/her designee.

    The Department shall regularly upload hot lists utilized by the ALPR system so that these hot lists remain reasonably current.

    Whenever a license plate number is manually entered into the ALPR system, the officer shall document the reason for doing so in the ALPR query screen.

3. Regular Operation: The Commanding Officer will assign as staffing permits, all available ALPR equipped vehicles for patrol.

4. Login/Log-Out Procedure: To ensure proper operation and facilitate oversight of the ALPR system, officers assigned to the ALPR vehicle shall login at the beginning of shift and log out at the end. Officers shall insure the system remains operational during their tour of duty.

C. Authorized Usage/Police Action

1. Authorized Users/Access: Only sworn officers and authorized civilian employees may operate the ALPR system or access or use stored ALPR data. Each authorized officer or civilian employee shall be issued an individual log-in ID and be required to utilize alphanumeric passwords consisting of a combination of upper and lower case, numbers and symbols.

2. Permitted/Impermissible Uses: The ALPR system is the property of the Springfield Police Department. Department personnel may only access and use the ALPR system and may access, use, release and/or disseminate hot list and scan file data only for official and legitimate law enforcement purposes consistent with this Policy.

The following uses of the ALPR system are specifically prohibited:

a. Invasion of Privacy**:** Except when done pursuant to a court order, it is a violation of the Policy to utilize the ALPR to record license plates except those of vehicles that are exposed to public view (e.g. vehicle on a public road or street, or that are on private property but whose license plate(s) are visible from a public road, street, or a place to which members of the public have access, such as the parking lot of a shop or other business establishment).

b. Harassment / Intimidation: It is a violation of this Policy to use the ALPR system or associated scan files or hot lists to harass and/or intimidate any individual or group.

c. Use Based on a Protected Characteristic: It is a violation of this Policy to use the ALPR system or associated scan files or hot lists solely because of a person's race, gender, ethnicity, sexual orientation, disability or other classification protected by law.

d. Personal Use: It is a violation of this Policy to use the ALPR system or associated scan files or hot lists for any personal purpose.

e. First Amendment Rights: It is a violation of this Policy to use the ALPR system or associated scan files or hot lists for the purpose of infringing upon First Amendment Rights.

Anyone who engages in an impermissible use of the ALPR system or associated scan files or hot lists may be subject to:

- criminal prosecution,
- liability, and/or
- administrative sanctions, including termination, pursuant to and consistent with the relevant collective bargaining agreements and department policies.

3. Required Steps Preliminary to Police Action: Hot lists utilized by the Department's ALPR system may be updated by agency sources more frequently than the Department may be uploading them, and the Department's ALPR system will not have access to real time data. Further, there may be errors in the ALPR's read of a license plate. Therefore, an alert alone shall

not be a basis for police action (other than following the vehicle of interest). Prior to initiation of a stop of a vehicle or other intervention based on an alert, an officer shall undertake the following:

a. Verification of Current Status on Hot List: An officer must receive confirmation, from a Springfield Police Department Dispatcher or other Department computer device, that the license plate is still stolen, wanted, or otherwise of interest before proceeding.

b. Visual Verification of License Plate Number: Officers shall visually verify that the license plate on the vehicle of interest matches identically with the image of the license plate number captured (read) by the ALPR, including both the alphanumeric characters of the license plate and the state of issue, before proceeding.

4. Stops: All stops of motor vehicles must be constitutionally valid and otherwise comply with the Department's Policy on Stop and Frisk and Threshold Inquiry. To assist with implementation of these obligations and in furtherance of the purpose of the ALPR system, the following requirements apply to traffic stops:

a. Completion of Preliminary Steps to Police Action: An officer must have Compiled with Section IV (C) (3) of this Policy prior to proceeding with a motor vehicle stop.

b. Non-Encounter Alerts: In the event that an alert is designated as a non-encounter alert, the officer shall follow any instructions included in the alert (e.g., notifying any applicable law enforcement or homeland security agency).

c. Persons of Interest: With regard to cases in which an alert may indicate a person of interest (such as a wanted person), officers are reminded that in some cases, the driver or occupant of the vehicle may not be the person with whom the license plate is associated (since vehicles may be loaned, e.g.). Therefore, officers must develop a reasonable belief that the operator or occupant is the person of interest included in a hot list prior to initiating a stop (e.g., by comparing the person's observed physical appearance with that of a physical description contained in the RMV database).

d. Independent Reason For Traffic Stop: An officer may stop a vehicle where he/she has an independent reason for doing so, such as an unrelated traffic violation.

e. Appropriate Police Action: Nothing in the Policy shall restrict or prohibit an officer from taking appropriate police action based on facts or reasons obtained independently from ALPR operation.

5. Use in Connection With Serious Crimes/Incidents: The ALPR should be considered to conduct license plate canvasses in the immediate wake of any homicide, shooting, robbery, kidnapping, sexual assault or AMBER ALERT and or other major crime or incident. Registration plates or partial plates potentially associated with any such major crimes or incidents

should be entered into the ALPR and compared against the scan file. Conversely, registration plate numbers may be used for exculpatory purposes (e.g., to corroborate a registrant's alibi).

6. Mutual Aid Requests: The Commanding Officer may approve a mutual aid request for use of the ALPR for purposes consistent with this Policy, as may be appropriate under the circumstances and as resources permit. Commanding Officers are encouraged to provide mutual aid to other communities when they become aware of a serious incident, as to which serious incident they reasonably believe the ALPR may be useful. Examples of serious incidents include homicides, shootings, kidnappings, sexual assaults or AMBER ALERTS, or other serious or violent felonies as to which suspect vehicle information is available. ALPR data may be shared under this Section IV (C) (6) only as is consistent with this Policy and to the extent necessary to supply duly approved mutual aid.

D. Security/Authorized Stored Data Access/Confidentiality:

ALPR data shall be kept in a secure data storage system with access restricted to authorized persons only.

a. Scan Files: Access to scan files will be secured and controlled by a login password-accessible system, which shall document who accessed the information by identity, date and time. Officers may only access data stored in the ALPR server based upon a reasonable belief that the scan file data may be related or useful as part of a specific official action or investigation. Requests for ALPR server data access must be in writing and be expressly authorized by the Police Commissioner, or designee(s), in advance of such access. Scan file data will be considered confidential information to the extent permitted by law.

b. Hot Lists: Security of the hot list data will be the responsibility of the officer using the ALPR or accessing the data. Hot list data will be considered confidential information to the extent permitted by law.

c. Designated Trained Officers: Officers trained in the use of ALPR software shall have access to ALPR data to conduct analysis of said data in order to comply with legitimate law enforcement requests.

E. Retention:

Scanned data files are transmitted to the ALPR server located at the Executive Office of Public Safety and Security will be deemed to be under their jurisdiction and time frame protocols. The Springfield police department will not retain scanned files or records.

F. Program Oversight/Evaluation/Audit Review:

1. Authorized personnel shall check equipment on a regular basis to ensure functionality and camera alignment. Any equipment that falls outside expected functionality shall be removed from service until deficiencies have been corrected. Officers shall not attempt to modify or change the ALPR equipment or software unless authorized to do so.

2. Inoperability, damage or other malfunctions to the equipment shall be documented in a written report and will be immediately reported to the Commanding Officer.

3. All successful uses of the ALPR shall be documented and forwarded to the Commanding Officer of the Information Technology Division or his/her designee. The Commanding Officer or designee will then compile statistics of these uses and provide monthly updates on such uses to the Police Commissioner.

4. The Information Technology Division will be responsible for conducting, reviewing and retaining audits of the ALPR system usage. Audits shall be completed on a semi-annual basis and shall determine the Department's adherence of the Policy and the procedures it establishes, as well as the maintenance and completeness of records contemplated by the Policy. At the completion of this audit, a full report on the outcome shall be forwarded to the Police Commissioner. Audit reports shall be considered to be public record to the extent consistent with the Public Records Law. Audits shall include, but not be limited to, review of the following.

    a. Records of ALPR operators and their ALPR usage, including vehicles of interest added to a hot list by individual officers.

    b. A listing of access to the Police Department's server, to include access, additions and/or searches of the scanned files, in order to verify security of that data and compliance with this Policy. All written requests for scanned file access will be retained for comparison against this audit record.

    c. Records of sharing ALPR data pursuant to Section IV (C) (6) of this Policy.

    d. Records of reproduction of scan files pursuant to Section IV (G) below.

    e. Hot lists entries shall be checked to ensure entries made are in compliance with this Policy.

5. Any officer becoming aware of a possible violation of this Policy, including but not limited to the unauthorized access, use, release and /or dissemination of ALPR data, shall refer the matter for an Administrative Investigation to the Police Commissioner.

G. Requests for Reproduction of Scan Files:

1. Authority to Request/Permissible Requests: Sworn Department personnel of the rank of Sergeant and higher are authorized to make a request to the Information Technology Division for a reproduction of scan files. Requests for reproduction may be made only for legitimate law enforcement purposes, as part of normal procedures for investigations and the handling of evidence or in furtherance of the purposes for the ALPR system stated in this Policy.

2. Prompt Request: All requests to reproduce a scan file shall be made promptly and in any event as soon as possible to ensure that needed data is available.

3. Reproduction Responsibility/Evidence: The Department's Information Technology Division shall be responsible for making reproductions of scan files. It shall make two copies of any reproduction. One copy shall be logged into the evidence system following the Evidence Policy and with maintaining the chain of custody for evidentiary materials. The second copy shall be reproduced to the requesting party utilizing the procedure described in Section IV (G) (4) below. The Information Technology Division shall document all requests for copies of scan files.

4. Reproduction Request Procedures:

    a. Authorized Department Requests (see Section IV (G) (1) above):

By submitting a completed Scan File Request Form (available on the "in-house" web-site) to the Information Technology Division (cc to the appropriate Department Division (e.g., Detective, Traffic or personnel for follow-up). Department personnel of the rank of Captain or higher may authorize disclosure of a copy of scan files to any federal, state, or municipal law enforcement agency in connection with an open investigation.

b. Court-Related Requests (e.g., Prosecutors, Defense Attorneys, Judges):
By submitting a completed Scan File Request Form to the court liaison (for the applicable court), who shall forward a copy to the Information Technology Division. The Information Technology Division shall send a copy of the requested reproduction to the court liaison, who shall send it to the requesting party.

c. Subpoena:
Except in connection with an open investigation as set forth in Section IV (G) (4)(a) above, by submitting a completed Scan File Request Form to the Department's Office of Information/Keeper of Records, with the responsibility for reproduction falling to the Information Technology Division.

d. Public Records Requests for Scan Files:
Scan files shall be considered to be non-public record to the extent consistent with the Public Records Law.

John R. Barbieri
Police Commissioner

JRB/

Dispatch Services Unit
ALPR Guidelines

Purpose:
To support the Dispatch Services Unit with the identification and broadcast of real-time public safety information to State Police assets in exigent or urgent situations by providing guidelines for interaction with ALPR systems and access to authorized DSU supervisors.

Search Criteria:
Authorized:
- Public safety matters investigated by or relevant to MSP, such as:
  - Missing person, kidnapping, endangered elderly, suicidal subject, etc.
  - Vehicle fleeing from a crime or involved in a pursuit
- Allowed search time period: up to **24 hours**

Unauthorized:
- Investigative historical queries or searches for outside agencies
- Vehicles not associated with an active, urgent public safety matter
- Non-official purposes or to violate any constitutional or civil rights

Hotlist Entries
- Requested through the Commonwealth Watch Center by email
- Public safety matters investigated by MSP only
- No requests for outside agency matters; the agency may request directly to CWC
- Shall be updated or removed by the requestor when no longer valid
- Expire the following day (approx. **24 hours)**
- Extensions may be requested by the investigating unit directly to CWC

Radio Guidelines
- Avoid broadcasting non-timely information (i.e., reads that are not recent or relevant)
- Avoid broadcasting law enforcement sensitive information (i.e., source of information and specific device locations)
  - *Example terminology:* "We have received information that…"

Outside LPR Systems
- No accounts or direct access to outside or third-party ALPR systems
- Searches, hotlists, and radio broadcasts shall conform to these guidelines

L5F FIXED LPR CAMERA SYSTEM

SEE FARTHER. SEE CLEARER. SCAN MORE.

Missed scans mean unsolved cases and unrecognized revenue. The L5F Fixed License Plate Recognition Camera System captures clearer images at greater distances on your high-speed, high-volume roadways. Paired with Vigilant PlateSearch or Vigilant ClientPortal, this solution enables you to receive real-time alerts, conduct comprehensive searches and leverage advanced analytics and parking tools to uncover new vehicle location insights that protect communities and generate revenue.

KEY BENEFITS

Scan More Than Before
Capture your clearest plate detections yet, at greater distance, on your most high-volume, high-speed roadways.

Rely On Better Basics
Beyond ensuring you've captured the best data, we make management, alerting and searching straight-forward.

Do More With More Data
Use patented analytics, specialized tools as well as easier data sharing and access to derive new intelligent insights.

MOTOROLA SOLUTIONS

L5F FIXED LPR CAMERA

The L5F Camera features a new state-of-the-art sensor that allows it to capture clearer images at greater distances on your high-speed, high-volume roadways.

CAMERA PERFORMANCE

Part Number	Optimal Focal Length	Capture Range*
VSR-5x-908	14 ft	6-27 ft
VSR-5x-916	40 ft	25-55 ft
VSR-5x-925	70 ft	55-85 ft
VSR-5x-935	95 ft	85-105 ft
VSR-5x-950	115 ft	105-125 ft

*Up to 2 lanes of traffic coverage in most scenarios.

OPTICS

Window	Shatterproof window	
Resolution	1440x1080 Monochrome global shutter	1440x1080 Color global shutter
Capture speed maximum	150 mph (241 kph)	

ILLUMINATION

Pulsed LED illumination	Zero lux environments *850nm and 750nm options

VIDEO STREAMING

ONVIF compliant	H.264/H.265, M JPEG

HOUSING

Size	6.9 x 6.5 x 2 in / 175 x 165 x 51 mm
Fixed mounting	3-axis (aim precision) lock in place, low profile, solid mount, and sun shield
Color	Matte black
Weight	3.5 lbs

ENVIRONMENTAL

Environmental protection	IP67 / NEMA4 compliant
Operational temperature	-40°F to 140°F (-40°C to 65°C)
Connector	IP67 rated

ELECTRICAL

Power consumption	12.95W nominal
Input voltage	POE (IEEE802.3 af PD)

CABLE MANAGEMENT

Cable length	Up to 328 ft (100 m)
Type	Cat6 STP 22-24 AWG
Connector	10 pin circular- all-weather, impact resistant

CAMERA ACCESSORIES

Part #	VS-UNI-POLE-MNT
Description	Single Fixed Camera Mount/Bracket

VLP COMMUNICATIONS BOX

The VLP Communications Box combines processing and power in a durable, ruggedized enclosure that is equipped with an all-in-one built-in processor with GPS and PoE for up to four cameras.

SYSTEM	
CPU	Intel Gen8 Core i7-8700T (12M Cache 2.4GHz up to 4.0GHz)
Memory	2 x 8GB DDR4 2400 MHz SO-DIMM
LAN Chipset	9 x Intel i210-AT and 1 x i219 (iAMT9.5 w/ i5, i7 only) Gb/s Ethernet Controllers Onboard Support PXE and WOL

I/O	
Serial Port	3 x RS 232/422/485 (Auto Direction Control)
USB Port	4 x USB 3.0 Ports
LAN	10 x RJ45 Ports for GbE (Optional for M12 connector and 8 x PoE total Max. 120W)
Video Port	3 x DP Ports
Wi-Fi Adapter	802.11n/g/b
4G LTE / GPS	Sierra Wireless EM7511-Dual Sim Support

POWER REQUIREMENT	
Power Input	120V AC
Power Protection	Automatic Recovery - Short Circuit Protection
Power Management	Remote/Ignition connection to toggle power
Power Off Control	Power off Delay Time Setting by BIOS and Software

SOFTWARE	
Operating System	Ubuntu 18.04 64bit

GRAPHICS	
Graphics	Intel® UHD Graphics 630
Resolution	Max Resolution (DP) : 4096x2304@60Hz

STORAGE	
Type	2 x 2.5" Drive Bay for SATA Type HDD/SSD RAID 0, 1, 5 1 x mSATA

ENVIRONMENTAL	
Operating Temp.	-40°C ~ 70°C, ambient w/ 0.6m/s airflow
Storage Temp.	-40°C ~ 80°C
Relative Humidity	10% RH – 90% RH (non-condensing)
Vibration (random)	EC60068-2-64, random, 2.5G@5~500Hz, 1hr/axis with SSD
Vibration Operating	MIL-STD-810G, Method 514.6, Procedure 1, Category 4
Shock	Operating: MIL-STD-810G, Method 516.6, Procedure 1, Trucks and semi-trailers=15G (11ms) with SSD
Certifications	CE, FCC Class A, E13

MECHANICAL	
Construction	Polycarbonate
Mounting	Wall or pole mount
Weight	34.5 lbs (15,649g)
Dimensions	356(L) x 305(W) x 178(D) mm

European Union (EU) Waste of Electrical and Electronic Equipment (WEEE) directive

The European Union's WEEE directive requires that products sold into EU countries must have the crossed out trash bin label on the product (or the package in some cases).

As defined by the WEEE directive, this cross-out trash bin label means that customers and end-users in EU countries should not dispose of electronic and electrical equipment or accessories in household waste.

Customers or end-users in EU countries should contact their local equipment supplier representative or service centre for information about the waste collection system in their country.

Notations Used in This Manual

Throughout the text in this publication, you notice the use of **Warning**, **Caution**, and **Notice**. These notations are used to emphasize that safety hazards exist, and the care that must be taken or observed.

WARNING: An operational procedure, practice, or condition, and so on, which may result in injury or death if not carefully observed.

CAUTION: An operational procedure, practice, or condition, and so on, which may result in damage to the equipment if not carefully observed.

NOTICE: An operational procedure, practice, or condition, and so on, which is essential to emphasize.

Special Notations

The following special notations are used throughout the text to highlight certain information or items:

Table 1: Special Notations

Example	Description
Menu key or **Camera** button	Bold words indicate a name of a key, button, or soft menu item.
The display shows `Settings Applied`.	Typewriter words indicate the MMI strings or messages displayed.
<required ID>	The courier, bold, italic, and angle brackets indicate user input.
Setup→Settings→All Settings	Bold words with the arrow in between indicate the navigation structure in the menu items.

Chapter 1

Hardware Overview

This section helps you to install a L5F Fixed LPR camera system.

Third-Party Hardware Components

The third-party installers provide the hardware components for installing the camera:

- ¾ in. cable for Cat6e/data to cameras.
- ½ in. liquid tight connectors and flex conduit for 120 VAC power.
- Two Metal banding and clips.[1]
- ½ in. or ¾ in. for metal cord grip for the camera cables that taps into the pole.
- Copper cabling to pull 120 VAC power from pole, photocell, or pedestal into the communications box (lengths vary by installation type).

If no premade CAT6e cables were ordered, the contractor will need to supply outdoor or UV rated Cat6e cable and RJ-45 connectors for each camera. Premade cables are available for order in 15 ft, 30 ft, and 60 ft lengths.

Additional Tools for Installation

The following additional tools are needed to perform the installation:

- Wire cutter or box cutter
- Cable stripping tool
- Needle nose pliers
- Crimp tool for shielded RJ-45 plugs with a removable die

Common Parts List

The following common parts list example are supplied by the installer:

Table 2: Item Parts List

Item	Part Number	Supplier	Quantity
Stainless Steel Banding	S-14377	ULINE	2 per box
Stainless Steel Banding Clips	S-14378	ULINE	2 per box
UV Rated Out-door Cat6e	J362404DB	Omni	15-60 ft per camera
Cat6e Metal Cord Connector	LPCG503	Arlington	1 per camera
½ in. Flexible Conduit	LTCUA050GY	Liquidtite	2-3 ft per box

[1] Simple banding is supplied for small diameter poles but most contractors opt to use their own banding rated for large diameter traffic poles.

Item	Part Number	Supplier	Quantity
½ in. Flexible Conduit Connector	NMLT50	Arlington	1 per box
¾ in. Flexible Conduit	LTCUA075GY	Liquidtite	2-3 ft per box
¾ in. Flexible Conduit Connector	NMLT75	Arlington	1 per box
UV Tie Wraps	DTP6	Dottie	Varies
1/4-20 Machine Screws	254 002	Everbilt	2 per camera
1/4-20 Locking Nuts	571 569	Everbilt	2 per camera

Table 3: Power Parts List

Item	Part Number	Supplier	Quantity
#12 Wire White	#12 Wire White	Southwire	Varies
#12 Wire Black	#12 Wire Black	Southwire	Varies
#12 Wire Green	#12 Wire Green	Southwire	Varies
Fuse Holder	Fuse Holder	Bussman	1 per box
Fuses 10 Amp	Fuses 10 Amp	Bussman	1 per box

Chapter 2

Shielded CAT6 Termination

Figure 1: Cat6e Connector

Specifications

- Connectors: RJ45 Plugs
- Rating: Cat6A
- Compatibility: 22–24 AWG stranded STP cable or ReaperHD Camera Cable

Tools

- Wire cutter or box cutter
- Cable stripping tool
- Needle nose pliers
- Crimp tool for shielded RJ45 plugs with a removable die

Cables

Table 4: Cable Pair Colors

Color Code	W	G	O	BL	BR
Description	White	Green	Orange	Blue	Brown

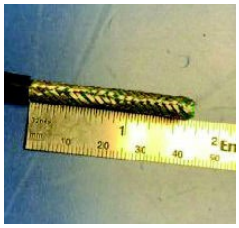
2.1
Terminating CAT6 Cable

Procedure:



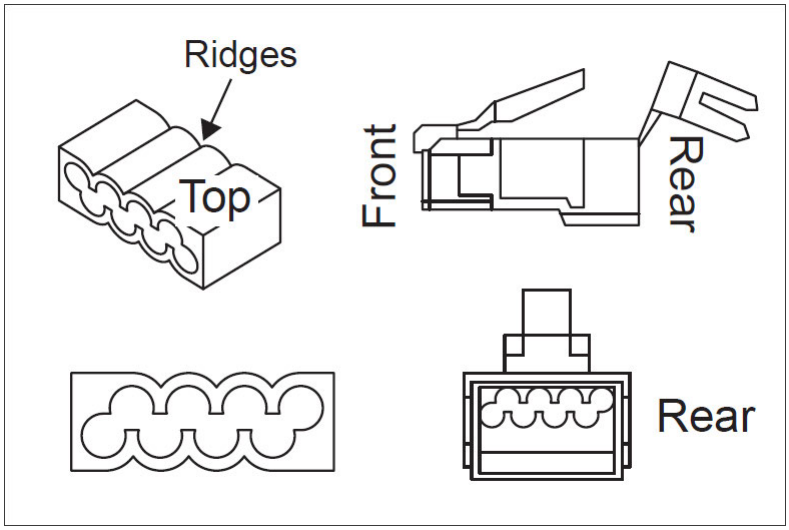
1. Slide the strain relief boot onto the cable and secure with removable tape.
2. Trim the cable jacket back about 1.5 in.

Figure 2: Trimming the Cable Jacket

3 Unbraid stranded ground wires, coil together, and move to the side.

Figure 3: Unbraiding the Stranded Ground Wires

4 Cut the center spline.



5 Trim the foil and green paper shielding.

Figure 4: Cutting the Center Spline and Trimming the Shielding

6 Orient the load bar to mate with the connector.

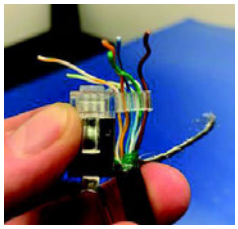


Figure 5: Orienting the Load Bar

7 Insert narrow end first and ensure that the ridges are facing up.

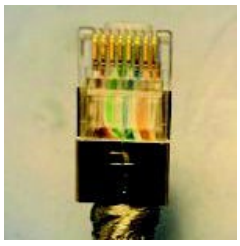
8 Trim the wires at an angle and gently insert the wires into the wide end.

Figure 6: Trimming the Wire

9 Trim the wires flush with the load bar.

Figure 7: Trimming the Wire Flush

10 Check if the cable jacket fits into the plug housing.



11 Insert the load bar and wires into the connector.

Figure 8: Inserting the Load Bar

12 Wrap the ground wire around the grounding collar.

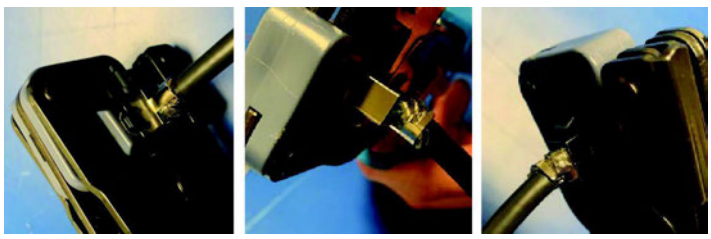


Figure 9: Wrapping the Ground Wire

13 Use a crimp tool with a removable punch die so the housing is not pierced.

14 Firmly crimp the connector.

Figure 10: Crimping the Connector

15 Visually check the wires are fully inserted.

NOTICE: For the wire color codes descriptions, see Table 5: Destination TS688 8-Position jack pin/pair assignments on page 7.

Figure 11: Fully Inserted Wires

16 Verify the ground collar is wrapped around the cable with pliers.

17 Pull the strain relief boot over the connector.

Figure 12: Pulling the Strain Relief Boot

Chapter 3

Hardware Assembly

This section helps you to perform the hardware assembly for the L5F Fixed LPR Camera System.

3.1 Camera Bracket

Figure 13: Dual-Pole Bracket

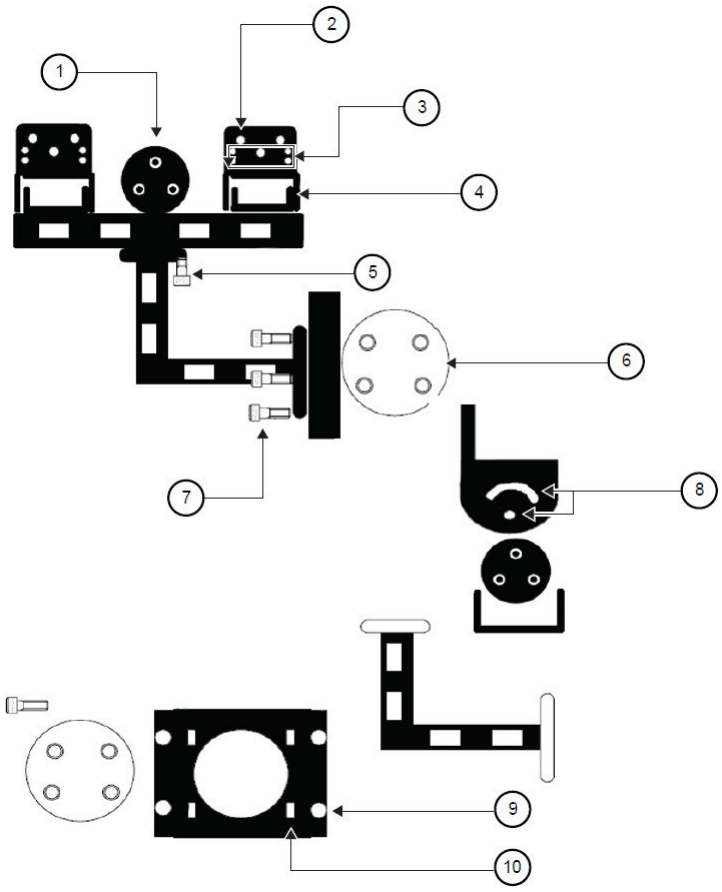

Table 6: Dual-Pole Bracket Parts Description

Parts	Description	Quantity
1	10-32 Hexagon Socket Head Cap Screws	3
2	M6-10 Button Socket Head Cap Screws.	3

Parts	Description	Quantity
3	R3 Camera Holes. Only used when mounting an R3 Camera.	n/a
4	10-32 Button Socket Head Cap Screws	8
5	10-32 Hexagon Socket Head Cap Screws. Use to mount rotating “U” shaped bracket	3
6	Round Aluminum Plate	n/a
7	5/16 in. Hexagon Socket Head Cap Screws	4
8	10/32 in. Button Socket Head Screw Caps	8 (for two cameras)
9	Use when mounting to a flat surface.	n/a
10	Use when mounting to poles; use straps provided according to pole dimensions.	n/a

3.1.1
Assembling Camera Bracket

Procedure:

1. To mount the camera to the bracket, screw down the three button socket head cap screws for each side.
2. Screw down the round bracket with three hexagon socket head cap screws.
3. To mount the bracket to the pole, use the round aluminum plate with the flat side against back of pole or wall mounting plate.
4. Screw down all all four hexagon socket head cap screws in position.
5. To mount the pole or wall mounting plate, perform one of the following actions:

Option	Actions
Mounting the plate to a wall.	Use the round screw hole.
Mounting the plate to a pole.	Use the rectangle screw hole.

Figure 14: Pole/Wall Mounting Plate

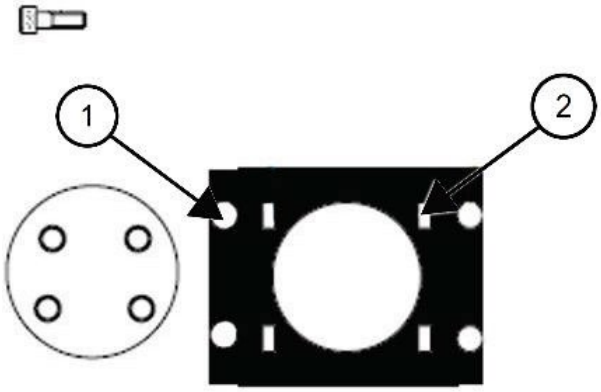

Table 7: Pole/Wall Mounting Plate Description

Number	Description
1	Round hole for wall mounting
2	Square hole for pole mounting

3.2 Uni-Pole Mount Assembly

This section describes the assembly process of mounting the camera to a uni-pole mounting kit.

The Uni-pole Mounting Kit (UNI-POLE-MNT REV.D) includes the the following mounting hardware:

Table 8: Uni-Pole Mounting Kit Parts

Parts	Quantity
¼ in. 20 Hex Screw	2
¼ in. 20 Self-clinching Nut	2
5/16 in. Hex Screw	2
5/16 in. Self-clinching Nut	2
6 in. Pole Strap	2
12 in. Pole Strap	2
Pole Bracket Base Plate	1
Mounting Arm	1
Knurl Ball	1

3.2.1
Mounting to a Vertical Pole

Procedure:

1. Use two 1/4 in.-20 Hex Screws to attach the Knurl Ball to the Mounting Arm.
2. Secure the 1/4 in.-20 Hex Screws with two 1/4 in.-20 Self-clinching Nuts.
3. Orient the Mounting Arm with the Knurl Ball facing up and the Pole Bracket Base Plate with the slots oriented horizontally as shown in the image.
4. Use two 5/16 in. Hex Screws to attach the Mounting Arm to the Pole Bracket Base Plate.
5. Secure the 5/16 in. Hex Screws with two 5/16 in. Self-clinching Nuts.
6. Slide two Pole Straps through the slots in the Pole Bracket Base Plate. The two shorter Pole Straps fit up to a 6 in. circumference pole. The longer Pole Straps fit up to a 12 in. circumference pole.

NOTICE: Make sure that the tightening screw on each Pole Strap is facing out.

3.2.2
Mounting to a Horizontal Pole

Figure 15: Mounting to a Horizontal Pole

Procedure:

1. Use two 1/4 in.-20 Hex Screws to attach the Knurl Ball to the Mounting Arm.

2 Secure the 1/4 in.-20 Hex Screws with two 1/4 in.-20 Self-clinching Nuts.

3 Orient the Mounting Arm with the Knurl Ball facing up and the Pole Bracket Base Plate with the slots oriented vertically as shown in the image.

4 Use two 5/16 in. Hex Screws to attach the Mounting Arm to the Pole Bracket Base Plate.

5 Secure the 5/16 in. Hex Screws with two 5/16 in. Self-clinching Nuts.

6 Slide two Pole Straps through the slots in the Pole Bracket Base Plate. The two shorter Pole Straps fit up to a 6 in. circumference pole. The longer Pole Straps fit up to a 12 in. circumference pole.

NOTICE: Make sure that the tightening screw on each Pole Strap is facing out.

3.2.3
Mounting to a Wall or Flat Surface

Figure 16: Mounting to a Wall or Flat Surface

Procedure:

1 Use two 1/4 in.-20 Hex Screws to attach the Knurl Ball to the Mounting Arm.

2 Secure the 1/4 in.-20 Hex Screws with the two 1/4 in.-20 Self-clinching Nuts.

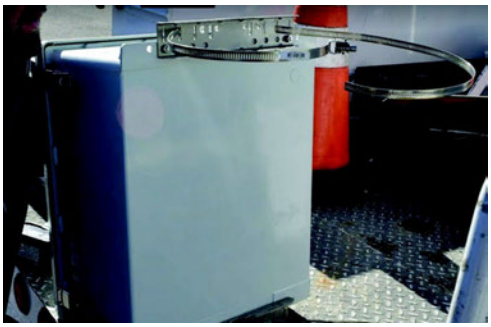
NOTICE: Screws for attaching the Mounting Arm to a wall or other flat surface are not provided. The installer must determine the appropriate fasteners for the surface that the Mounting Arm is being attached to.

3.2.4
Mounting to a Pole without the Mounting Arm

Figure 17: Mounting to a Pole without the Mounting Arm

Procedure:

1. Use the two 1/4 in.-20 Hex Screws to attach the Knurl Ball to the Pole Bracket Base Plate.
2. Secure the 1/4 in.-20 Hex Screws with the two 1/4 in.-20 Self-clinching Nuts.
3. Slide two Pole Straps through the slots in the Pole Bracket Base Plate. The two shorter Pole Straps fit up to a 6 in. circumference pole. The longer Pole Straps fit up to a 12 in. circumference pole.



NOTICE: Make sure that the tightening screw on each Pole Strap is facing out.

3.3
Installing VLP Communications Box

Procedure:

1. To set up the VLP Communications box, place straps through the top and bottom bracket.

   Figure 18: Strapping the VLP Communications Box

2. Once straps are run through the top and bottom bracket, raise the box to your preferred height.
3. Wrap both straps around the pole.

Figure 19: Wrapping the Strap

4 Once the desired configuration of the VLP Communications box is achieved, tighten both straps to secure the VLP Communications box.

Figure 20: Securing the VLP Communications Box

5 Once the straps are fully secured, route the power and camera cable connections into the box using conduit.

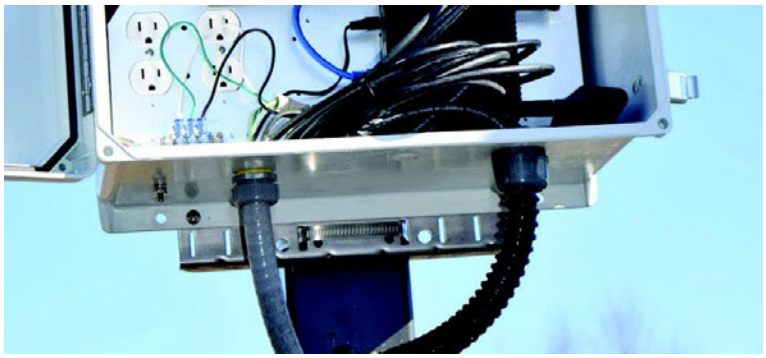


Figure 21: Routing the Power and Camera Cables

6 Use ½ in. liquid tight connectors and flex conduit for the incoming 120 VAC power connection.

7 Use ¾ in. liquid tight connectors and flex conduit for the incoming CAT6 L5F camera cables.

Figure 22: Installing the Liquid Tight Connectors

8 After the power has been connected to the box, the VLP Processor will startup.

9 Once the VLP Processor has fully booted, the L5F Fixed LPR Cameras will power up and start normal operation within 1–2 minutes.

10 Verify that each camera is operating by connecting UbuntuHD Control tool to the VLP Processor using a Windows computer.

Figure 23: Connecting UbuntuHD Control tool to the VLP Processor

11 Use UbuntuHD Control tool to configure the system for Vigilant PlateSearch. See Configuring System Using UbuntuHD Control on page 35.

Chapter 4

Software Installation

Windows Operating System Overview

For Windows Operating System, Vigilant CarDetector Fixed (Vigilant CDF) is installed as a client application with GUI that shows live video of connected cameras and lists accumulated plate detections with vehicle images. The Vigilant CarDetector Fixed application on Windows allows Target Alert Service (TAS) to connect directly to the VLP Processor inside the VLP Communications Box for expedited alerting on plates of interest (hits or plates on a hot list). The GUI can be monitored using remote desktop or using a display monitor, however it will also run unattended depending on user preference. A connection file created then exported from Vigilant PlateSearch (cloud, backend server), will need to be saved to the Vigilant CarDetector Fixed file directory

Linux Operating System Overview

The OCR application and Linux OS run on the VLP Processor inside the VLP Communnications Box. Cameras connect to the VLP Processor as it operates headless with no monitoring required or GUI available. The VLP Processor running Linux can be configured and diagnosed using an external windows PC with UbuntuHD Control tool (MiniCC) installed. MiniCC allows you to enter Vigilant PlateSearch credentials, change network scheme (ips, subnet, gateway, DNS), and view live video for aiming.

4.1
Vigilant CarDetector Fixed Configuration

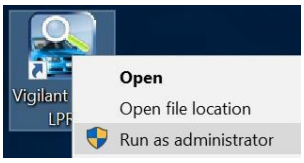
4.1.1
Installing the Application

Procedure:

1. Download the latest Vigilant CarDetector Fixed (CDF) installer at http://downloads.vigilantsolutions.com/Software/CDFS_Release.zip.
2. Right-click the setup.exe icon and select **Run as administrator**.

   Figure 24: Running the CDF Installer

3. Accept the license agreement.
4. Follow the prompts onscreen to select primary OCR region and optional GPS device settings.
5. Exit installer when prompted and find the application shortcut on your desktop.



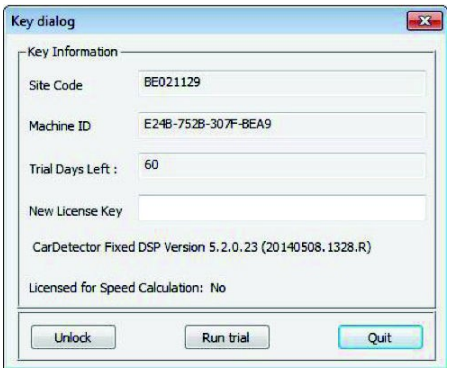
4.1.2
Configuring the Application

Procedure:

1. Right-click the application shortcut on your desktop.

2 Click **Run as administrator**.

Figure 25: Run the CDF Software



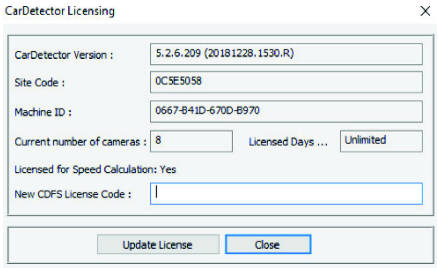
You will be prompted to enter a license key.

3 If you have not yet received the license for this system, click **Run trial**.

NOTICE: The trial installation will function for 60 days before requiring a license key.

4 If a machine has previously been licensed or already used up its trial license, this option will be disabled and a new license key will be required to proceed.

Figure 26: Key Dialog

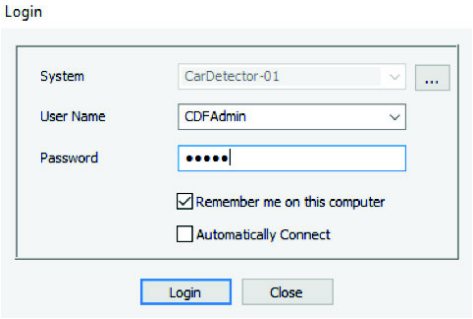


5 To request a new license key, fill out the form at: https://www.motorolasolutions.com/en_us/support/vigilant-license-key-request.html.

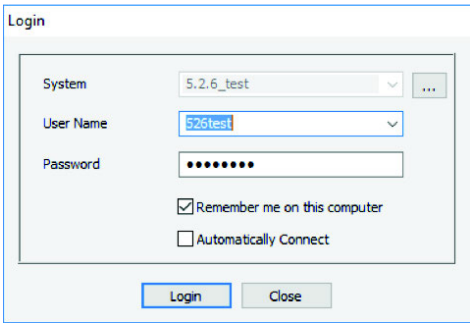
6 To enter the key, perform one of the following actions:

Option	Actions
Inserting the key during installation,	click **Unlock** in the dialog box to enter the key.
Inserting the key after installing and configuring Vigilant CarDetector Fixed,	**a** From the Help menu, click **CarDetector Licensing**. **b** Enter the new license key and click **Update License**.

Figure 27: CDF Licensing



4.1.3



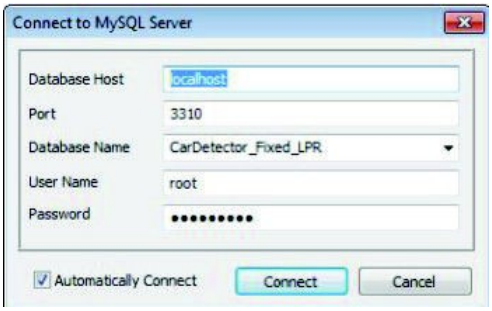
Logging Into the Application

Prerequisites: You can log into the application with or without connecting it to Vigilant PlateSearch.

Procedure:

1 Perform one of the following actions:

Option	Actions
Log in without a Vigilant PlateSearch connection,	**a** Select one of the two default usernames (CDFAdmin or CDFOperator) from the dropdown menu. **b** Enter the password and click **Login**. **NOTICE:** The default password for both logins is `12345`. **c** Select the **Automatically Connect** check box to avoid having to confirm these credentials on future logins. **Figure 28: Logging In to CDF Without Vigilant PlateSearch Connection**  **NOTICE:** When used without a Vigilant PlateSearch connection, Vigilant CarDetector Fixed will not upload your data to another server or synchronize hot list data automatically.
Log in with a Vigilant PlateSearch connection,	**a** Install your system connection file in this directory: `C:\Program Files (x86)\Vigilant Solutions\Vigilant CarDetector Fixed`. **b** Relaunch the application. **c** Select your username from the dropdown menu and log in using the Vigilant PlateSearch password. **d** Select the **Automatically Connect** check box to avoid having to confirm these credentials on future logins.



Option	Actions
	Figure 29: Logging In to CDF with Vigilant PlateSearch Connection 

4.1.4
Connecting to Database

Procedure:

1 In the **Connect to MySQL Server** window, connect the CDF software to a MySQL database.

Figure 30: Connect to MySQL Server

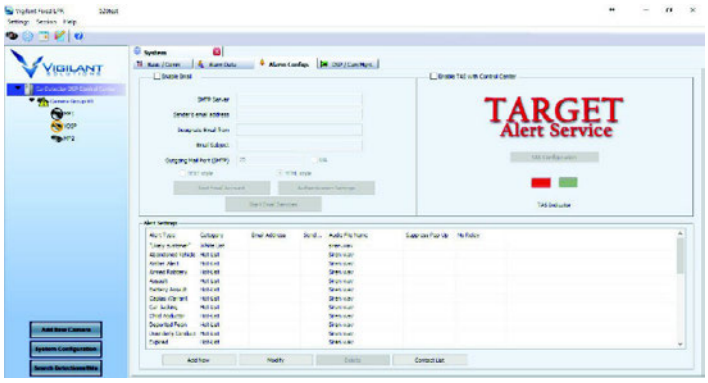
2 Perform one of the following actions:

Option	Actions
For new installation,	**a** Leave all default values in place except the database name that can be changed if desired. **b** Click **Connect**, then click **Yes** when prompted.
For existing system connection,	**a** Verify that the connection is live by clicking **System Configuration**. **Figure 31: Verify System Configuration** 

Figure 32: LEARN Connection

3 To verify your Vigilant Platesearch connection is active, click **Test Connection**.

4.1.5
Configuring TAS



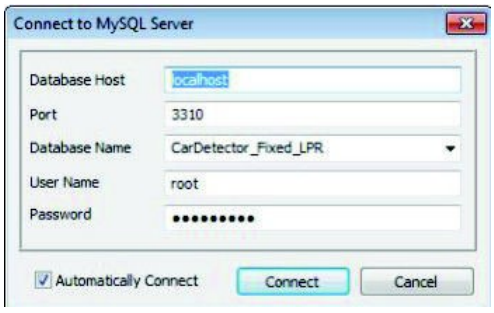
Procedure:

1 To configure TAS, click **System Configuration** and click on the **Alarm Configs** tab.

2 Select the **Enable TAS Control Center** check box.

3 Click **TAS Configuration**.

Figure 33: TAS Configuration



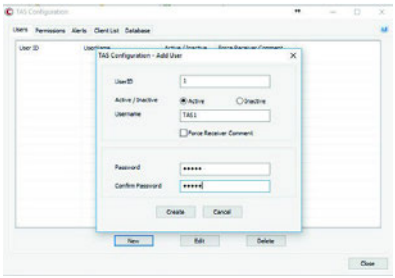
4 You will be prompted to create or connect to the TAS database.

5 If this is a new installation, leave all default values in place except database name which can be changed if desired.

6 Click **Connect**, then click **Yes** when prompted to create the new database.

Figure 34: Connect to MySQL Server

The TAS Configuration window will open.



7 On the Users tab, click **New** at the bottom left to add a TAS user.

8 UserID will start at one and increment for each user you add.

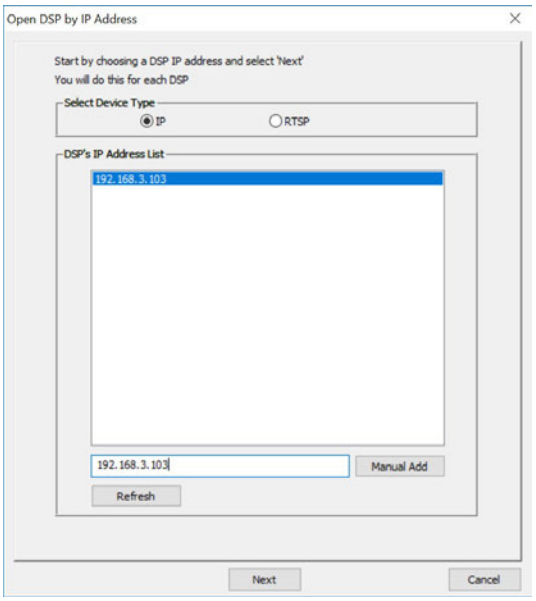
9 Enter the desired TAS username and password in the labeled blanks and click **Create** to add the user.

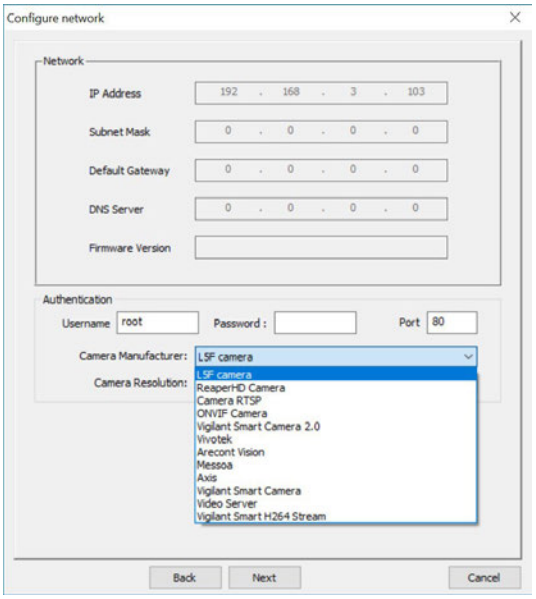
10 The user can now connect to this CDF server using TAS client.

Figure 35: TAS Configuration-Add New User

4.1.6 Adding Cameras

Procedure:





1 To add the first camera, click **Add New Camera**.

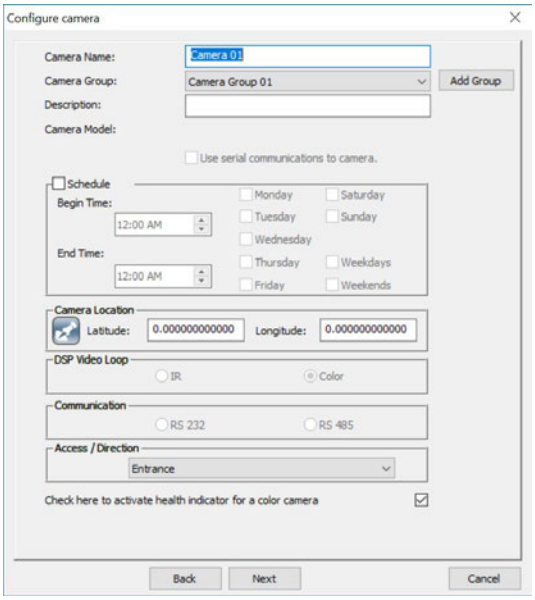


Figure 36: Add New Camera

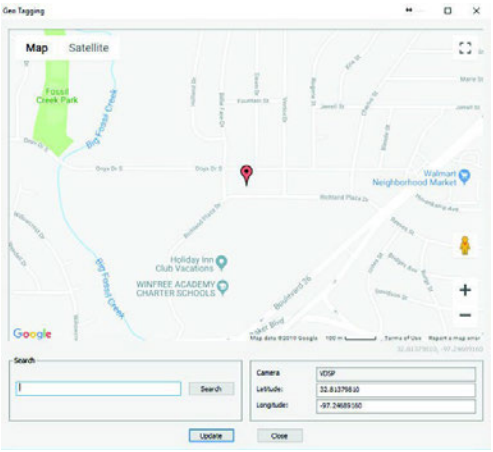
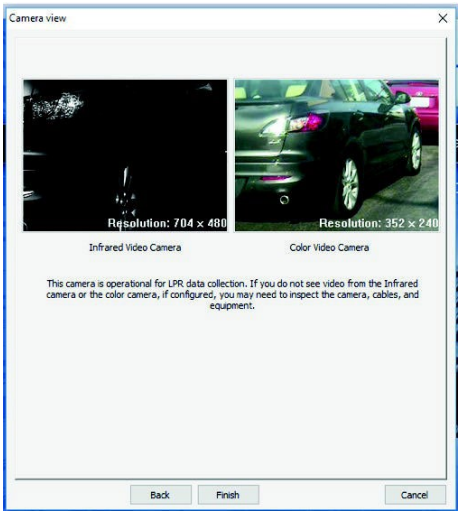
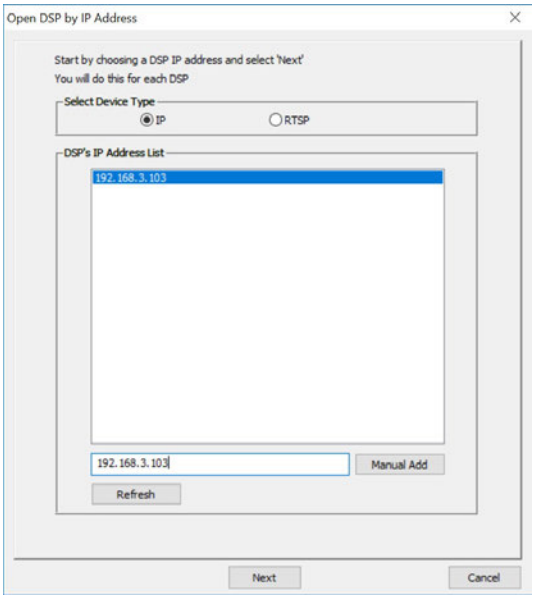
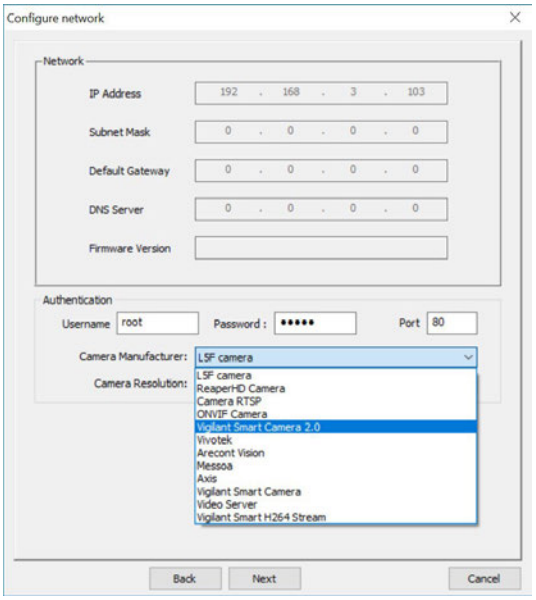
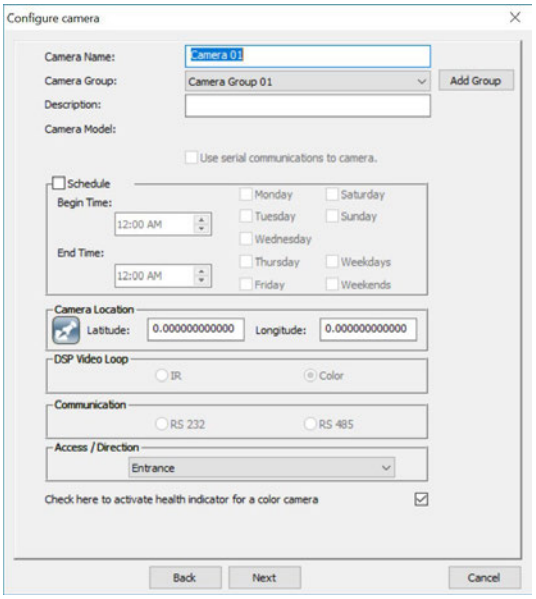






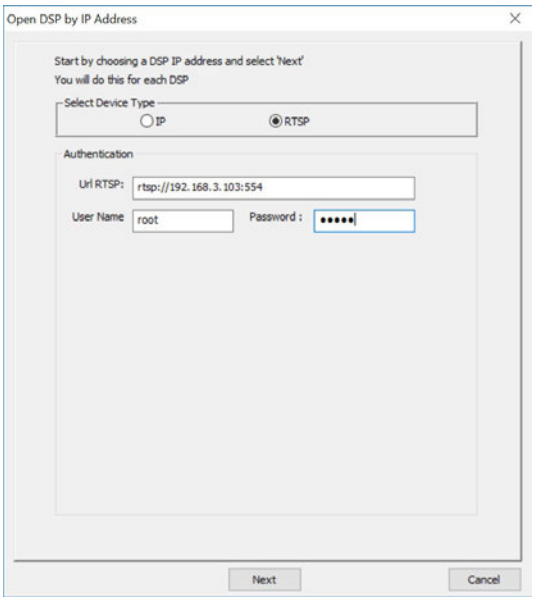
2 Depending on the type of camera that you want to add, perform one of the following actions:

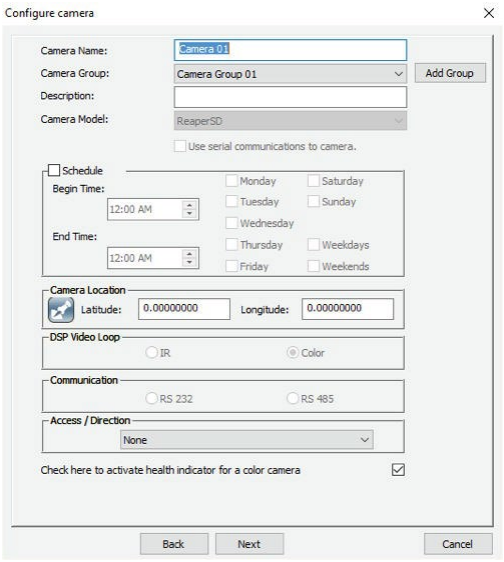




Option	Actions
Using L5F Cameras	**a** Select the **L5F** radio button. The IP addresses of all L5F cameras on the network appears in the box. **b** Select the desired camera and click **Next**. **c** If you do not see it in the list, enter the IP address of the L5F camera and click **Manual Add**. **d** Select the camera in the list and click **Next**.

Option	Actions
	Figure 37: Add L5F Camera  **e** Confirm that the boxes are populated and click **Next**. **f** If the boxes are not populated, double-check your IP address for the camera. **g** Connect to the camera from MiniCC and verify it is functioning and responding properly before continuing. **Figure 38: Configure Network**  **h** In the **Configure Camera** window, edit the text boxes as desired to configure Camera Name and Description.





Option	Actions
	i You can create camera groups to organize your cameras on a multicamera system. **j** If you want the camera to only operate at specific times, use the **Schedule** feature to configure those times. **Figure 39: Configure Cameras**  **k** Click the pin icon under Camera Location to open the GPS search screen. **l** To set GPS coordinates, type the nearest address to the camera in the Search box at the bottom left and click **Search**. **m** Results will be shown on the left side of the map. **n** Click the address you want to use, and the map will update to show the location selected. Adjust the position of the pin as necessary to mark the camera's location precisely. **o** Click **Update**, then click **Close** to save the coordinates you've selected.

Option	Actions
	Figure 40: Geo Mapping  **p** When you're done with name, schedule, and GPS setup, click **Next**. **q** Confirm that the camera is sending video to the CarDetector software. **r** In the Camera view window, you will see live video streams from both the IR and color overview cameras of the L5F. **s** Verify that both streams are live and click **Finish**. **Figure 41: Camera View**  **CAUTION:** The software will immediately update the firmware version on the L5F camera if an update is available. Do not interrupt or disconnect either device during the firmware update process. Doing so may seriously damage your L5F camera.

Option	Actions
Using Third-Party Camera	**a** To add the camera, select the **IP** radio button. **b** Enter the IP address of the Third-Party Camera and click **Manual Add**. If the device is on the network, it will appear in the box above. **c** Select the IP address in the box and click **Next**. **Figure 42: Third-Party Camera IP Address**  **d** Confirm that the Network boxes are populated. **e** Enter the camera's username, password, and http port (80 by default) in the provided boxes. **f** Select **Vigilant Smart Camera 2.0** from the dropdown menu and click **Next**.

Option	Actions
	Figure 43: Third-Party Camera Configure Network  **g** If the **Next** button is unavailable, the software cannot ping the camera. Try connecting to it in Internet Explorer to verify it's online and check your credentials. **h** Fill in camera name, schedule (optional), GPS coordinates, and access/direction (optional). **i** Click **Next**. **Figure 44: Third-Party Camera Configure Camera** 

Option	Actions
	j Confirm that the camera is sending video to the Vigilant CarDetector software. **k** Verify that the video stream in the window is live, then click **Finish**. **Figure 45: Third-Party Camera View**  **l** If the stream does not appear, verify you can connect to the camera and view the stream with Internet Explorer. **m** You will still need to configure your Third-Party Camera to optimize it for LPR performance (see separate documentation).
Using RTSP	**a** To add an RTSP camera, select the **RTSP** radio button. **b** Enter the RTSP URL of the camera. This is normally "rtsp://" followed by the IP address of the camera. **c** Enter the Username and Password of the camera. This information is normally included in the camera documentation. **d** When the information has been entered, click **Next**.

Option	Actions
	Figure 46: RTSP IP Address  **e** Fill in camera name, schedule (optional), GPS coordinates, and access/direction (optional) and click **Next**. **Figure 47: RTSP Configure Camera**  **f** Confirm that the camera is sending video to the LPR software. **g** Verify that the video stream in the window isinive, then click **Finish**. **h** If the stream does not appear, verify you can connect to the camera and view the stream with Internet Explorer.

Option	Actions
	Figure 48: RTSP Camera View 

3 Repeat step step 2 to add all of your cameras to the software.

4.2 Vigilant PlateSearch Camera Configuration

4.2.1 Checking Operating System

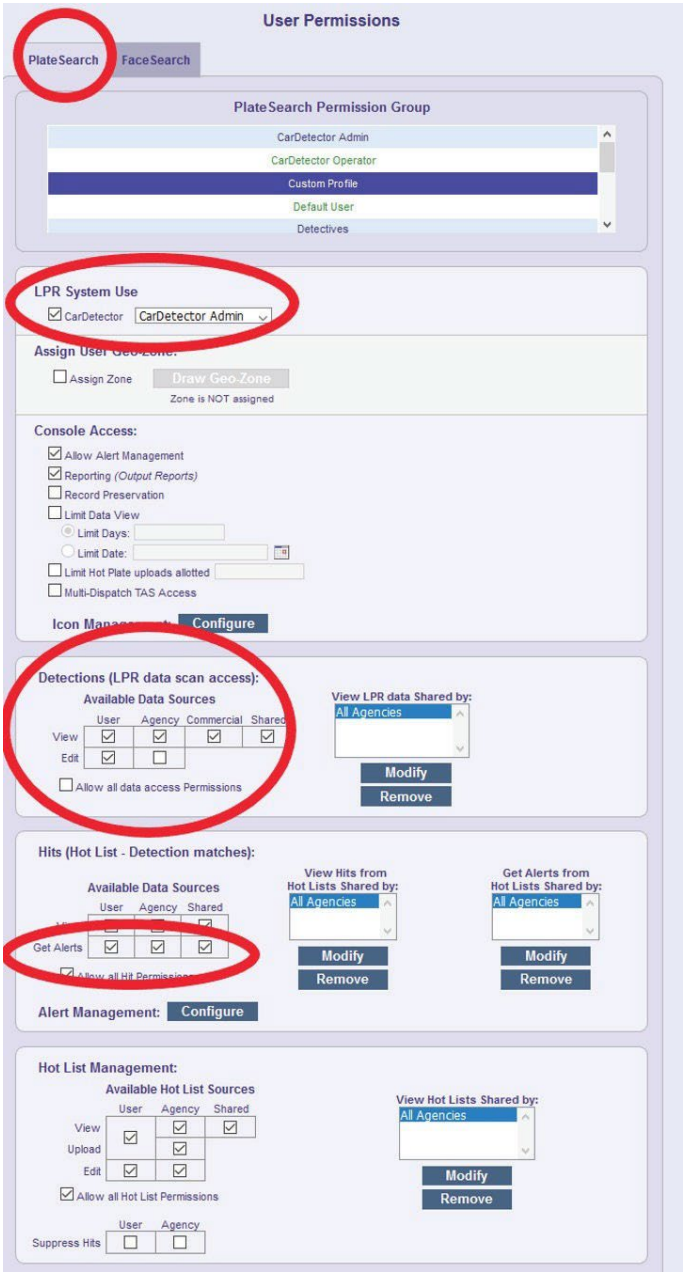
Procedure:

1 Check your purchase order documents.

If Vigilant CarDetector Fixed software is listed in the product description, the Operating System (OS) on the VLP is Windows.

2 Connect a monitor and keyboard.

For Windows OS, a blue login screen appears.



For Linux OS, a black command line, terminal screen appears.

4.2.2 Creating a User

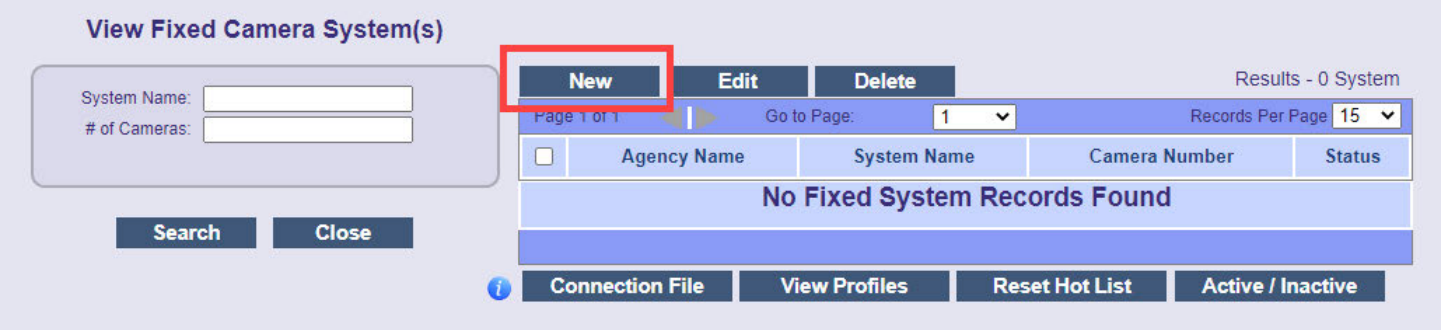
Procedure:

1 As an agency manager, go to **PlateSearch→User Management**.
2 Click **Add New User** or **Search/Modify Users** if the user already exists.
3 Ensure that the LPR System use is selected with **CarDetector Admin** in the dropdown menu.
4 To use this account to check data, enable the detection viewing settings.
5 To enable the user to generate alerts, turn on the alerting settings.
6 Click **Create**.

Figure 49: User Permissions

For Windows Operating System (OS), you will use the created user when logging into Vigilant CDF. If you have placed your connection file correctly, you should see the user as available choice from the login dropdown menu when starting Vigilant CDF.

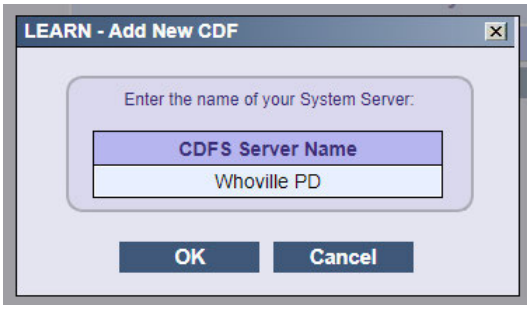
For Linux OS, save the name of the created user as you will need to enter it into the VL Processor using UbuntuHD Control later.



4.2.3
Creating a System

Prerequisites: This section is only applicable for the Agency Managers. To create a fixed system, ensure that the agency is already created in Vigilant Platesearch.

Procedure:



1 Go to **PlateSearch→Agency Management→Fixed Camera System→New**.

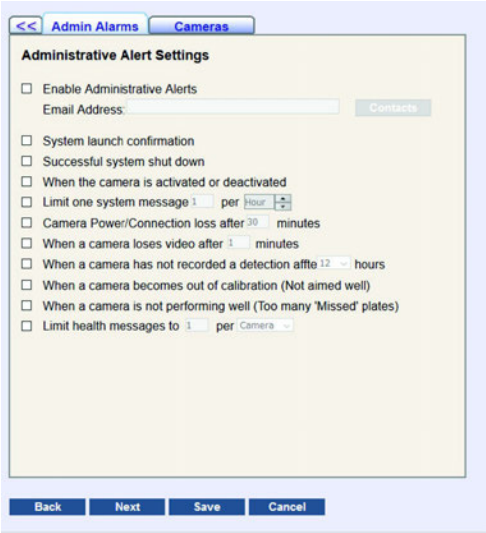
Figure 50: Create New Fixed System

2 Name the camera site appropriately.

Figure 51: New Fixed System Name

3 Set the OCR Region.

Figure 52: OCR Region



4 Based on the operating system that you are using, perform one of the following actions:

- For Windows OS, continue to step 5.
- For Linux OS, save the name of the system that you just created as you need to enter the system name into the VLP using UbuntuHD Control tool.

5 Click the **Admin Alarms** tab and ensure that the system is set up properly.

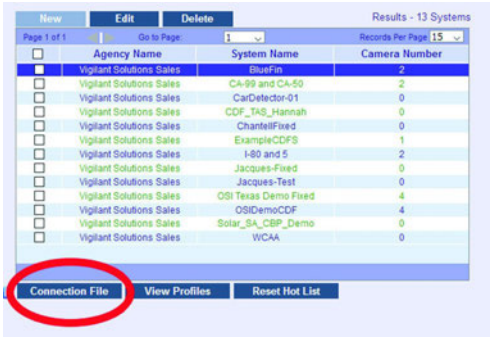


Figure 53: Admin Alarms

6 Click **Save**.

7 Download your connection file by highlighting your system and clicking **Connection File**.

Figure 54: Connection File

8 Save the connection file and transfer it to the VLP Processor inside the VLP Communications Box.

9 Place the file in the Root Directory of the Vigilant CarDetector Fixed Program: `C:\Program Files (x86)\Vigilant Solutions\Fixed LPR`.

4.2.3.1
Configuring System Using UbuntuHD Control

Procedure:

1 To configure the VLP Processor's connection to Vigilant LEARN, click **LEARN**.

2 Enter the username and password of the user created in Vigilant LEARN.

3 Enter your Agency name

4 Enter the System name.

5 Enter the Longitude and Latitude GPS coordinates by clicking the **Location** symbol.

6 Leave the other text boxes at the default values they have.

7 Click **Apply**, then click **Test Connect**.

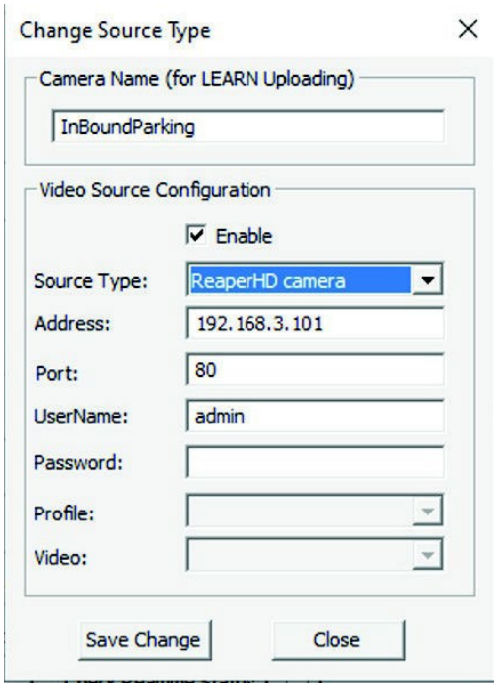
- If you get a success message, proceed to step step 8.
- If you get `Operation failed: Invalid Username/Password`, check the username and password.
- If you get `Operation failed: Unknown error`, go back to **Change IP** button and check the network configuration for ***<enp3s0>*** (IP, Subnet, Gateway, and DNS).

8 Close the **LEARN** window when complete.

9 To name each of the camera, click **Change Source Type**.

10 Check the box next to **Enable**.

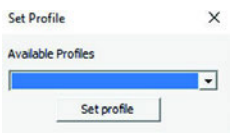
11 Enter the camera IP in the **Address** box.



NOTICE: By default, the IP addresses for cameras are 192.168.3.100-103.

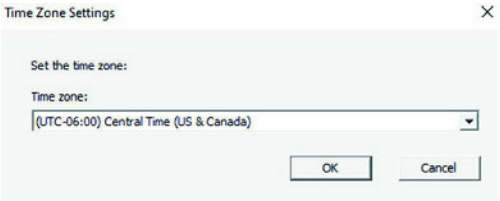
12 Enter a Camera Name (for Vigilant LEARN Uploading) that uniquely identifies this camera.

13 Use **Port** of `80`.



14 Leave the **UserName** as ***<admin>*** and leave the **Password** blank.

Figure 55: Configuring Source Type



15 To set the OCR profile, click **Set Profile** and select the correct state OCR profile.

Figure 56: Set Profile

16 To set the Time Zone, click **Set the time zone** and select the correct GMT.

Figure 57: Time Zone Setting

17 To set the Network Configuration, click **Change IP**.

a Select **enp3s0→Static**.

b Change the IP, Subnet, Gateway, and DNS to work with your router and network settings.

c Check **DHC** then click **Write to Broad**.

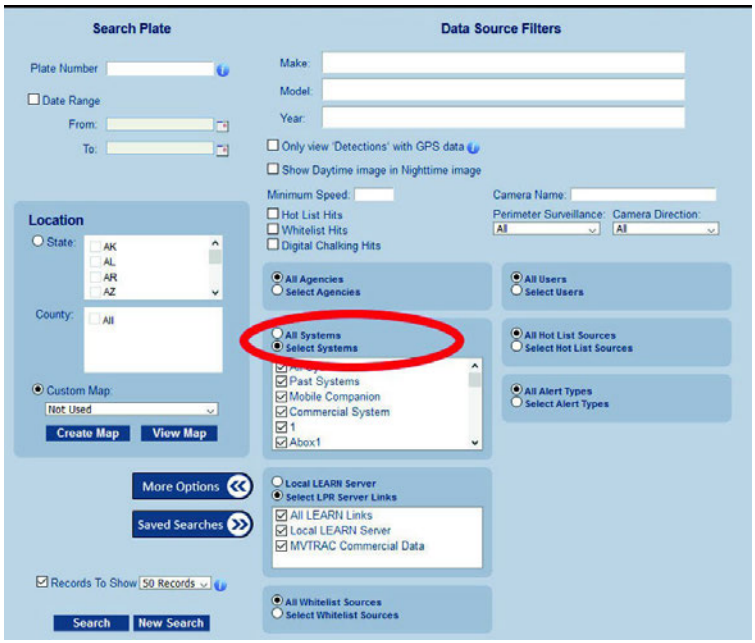
d The system will save settings and do a soft reboot. Wait for 60 seconds.

18 To check your configuration settings, click **Get Health Information**.

Verify that the following parameters are correct:

- **IP Configuration** shows the correct settings for your router.
- **Engine Profile** is the correct state profile you selected.
- **LEARN Account Information** shows the correct credentials.
- **Current Time** is accurate.
- **GPS Coordinates** is showing the correct values.
- Check **Scans Upload status**, **Total Scans Upload**, and **Total Plate in Vigilant PlateSearch queue** for the number of plates that you have scanned that should be sent to LEARN.

4.2.4 Verifying the System Connection



Prerequisites: Log in to Vigilant Platesearch using the credentials you just created.

Procedure:

1 Go to **PlateSearch→License Plate Query→More Options**.

2 Filter by the system you just created.

Figure 58: Verify System Connection

Returns generated will be plate detections from only this system.

If the system connection is created successfully, you are able to view the following results:

- Able to view the plate detections from the system.
- Vigilant CarDetector Fixed is connected.
- The detections are sent to the Vigilant Platesearch cloud server.

NOTICE: If the system connection is not created successfully, contact Vigilant Support.

L5Q

QUICK DEPLOY LICENSE PLATE RECOGNITION CAMERA SYSTEM

LICENSE PLATE RECOGNITION WITHIN REACH LIKE NEVER BEFORE

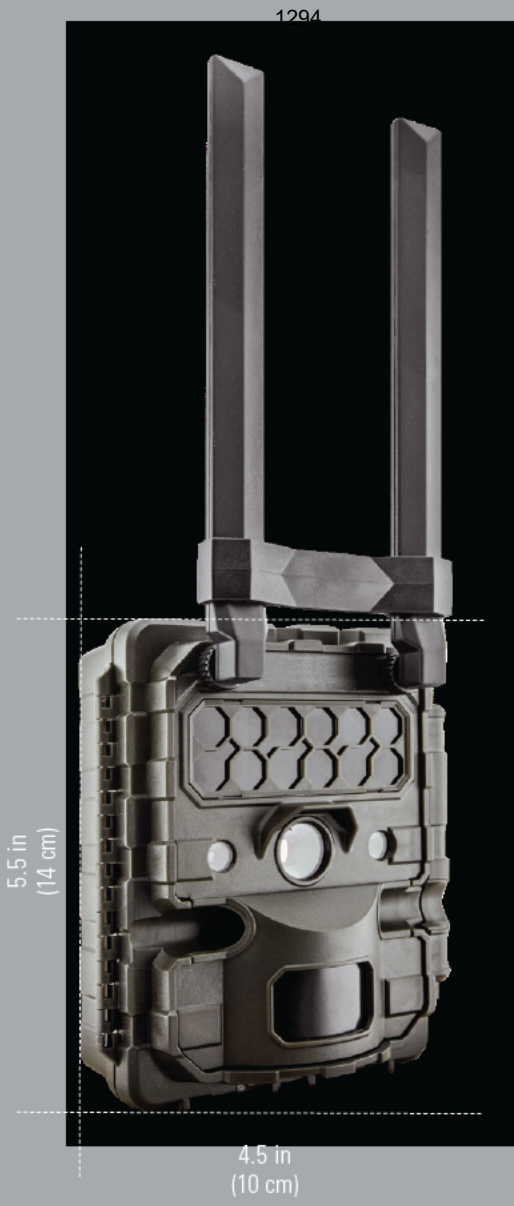
Build or expand an existing camera network with this affordable, easy-to-deploy-anywhere license plate camera system. This complete, quick deploy solution, paired with either Vigilant PlateSearch or Vigilant ClientPortal empowers you to receive real-time alerts, conduct comprehensive searches as well as leverage advanced analytics to uncover new insights and operate more efficiently.

KEY FEATURES

- Flexible power options - AC/DC or solar
- Built-in cellular communications
- Redeployable, all-in-one system design
- Rugged construction - IP66 rated
- Simple hot/shielded list management
- Robust, real-time alerting options
- Comprehensive search and reporting
- Configurable data retention settings
- Advanced vehicle location analytics
- Dedicated parking enforcement tools
- Customer-managed data access and sharing
- 3rd party LPR system integration

CAMERA SPECIFICATIONS

CAMERA PERFORMANCE	
Optimal focal length	50 ft (15 m)
Capture range	< 75 ft (23 m)



OPTICS	
Image	3 MP image sensor
Capture speed maximum	85 mph (recommended deployment speed 45 mph or less)

HOUSING	
Size	5.5"H x 4.5"W x 2.5"D (14 x 10 x 6.4 cm)
Fixed mounting	Low profile, pole mount bracket solution
Color	OD Green

ENVIRONMENTAL	
Environmental protection	IP66
Operational temperature	-20°F to 120°F (-29°C to 50°C)

CABLE MANAGEMENT	
Cable length	12 ft (4 m)
Type	Shielded power cable
Connector	Custom 12V barrel

SOLAR PANEL POWER UNIT	
Solar panel power	10W
Battery capacity	108 Wh
Product warranty	1 year
Dimensions	11.75"H x 12.0"W x 8.25"D (30 x 30.5 x 21 cm)
Included accessories	12 ft (4 m) shielded power cable

Fusion Center Increases Investigative Efficiency with idiCORE™

Overview

A law enforcement fusion center in the Southeastern United States protects one of the largest counties in America with full scope police and investigative services. The Center is responsible for all manner of crime enforcement, ranging from property crimes to violent crimes. In order to protect its citizens, it relies heavily on identity intelligence data to provide amplifying information that can efficiently and accurately support ongoing investigations.

We spoke with leading intelligence analysts and law enforcement officers about how identity intelligence is leveraged during investigations.

Challenge

> "We needed a system that could provide us with actionable intelligence we could rely on, without fidelity concerns of the data. False positives, specifically around phone number accuracy, were causing investigations to take more time than they should."
>
> – Criminal Intelligence Analyst

Often, knowing where to start in an investigation can present the most daunting challenge for law enforcement professionals. While interviewing witnesses and reviewing video evidence are always helpful, in today's hyper-connected world getting a deep understanding of who a suspect is, where they reside and who they associate with can make the difference in quickly solving a case or allowing a potential criminal to remain free.

Identity intelligence (unique information about individuals that helps prove who they are) is widely used by law enforcement agencies to bolster normal investigative tactics and government data sources, but legacy systems often return poor data and false positives resulting in more work and longer case resolution.

The Fusion Center, not satisfied with legacy providers, sought cloud-native identity intelligence providers to augment existing capabilities in order to more accurately and quickly support investigations.

Solution

Before deciding on the IDI solution, the Center evaluated other solutions but found that the precision and recall of their data was not sufficient.

The IDI solution, idiCORE, increases analytic efficiency!

idiCORE is powered by a cloud-native platform, utilizing machine learning algorithms that increase confidence that the first record is correct, limiting the need for multiple searches or pivoting to different records.

Phone Number Matching

Phone number matching was reported to be 30% better than legacy systems, giving analysts and officers much greater confidence in corroborating facts in fast-moving environments.

Familial Relationships

Familial relationships were reported to be 40% better than legacy systems, allowing investigators to glean deep insights into a suspect's 'pattern of life' and gain a deeper understanding of dynamic operating environments prior to real-world engagement.

Results

The Center estimates that the idiCORE solution has helped them reduce time spent on phone number analysis by 30% – leading to more cases cleared and with significantly greater accuracy than prior to deployment.

The idiCORE solution also has started to change internal interaction within the Center. The Intelligence Analysts at this Fusion Center reported that because of the data accuracy of idiCORE, their credibility with detectives and other sworn officers has improved.

"The idiCORE solution is much more user friendly, faster and more accurate than our existing providers. We've come to rely on idiCORE for any investigation that entails phone numbers given how accurate the matching is within the system.

Our investigators are very confident that the first search in idiCORE will return accurate results, which provides a real improvement in our investigative efficiency."

Criminal Intelligence Analyst

"Gone are the days of bad data leading to investigators wasting time and energy chasing leads that simply didn't exist. idiCORE™ gives us confidence in our identity intelligence data, enabling us to clear more cases more quickly, resulting in a much more efficient department overall."

Control Officer, Fusion Center

"Because of how accurate the data is and how quickly we can get it into the hands of investigators, we're seeing a significant increase in requests for analytic assistance in cases. It's been a real benefit not just to officers, but to the working relationship between analysts and sworn officials."

The Section Manager of the Center

For more information about this case study or to learn more about IDI and its solutions, please contact IDI at 855.842.1410 / sales@ididata.com or sign up for a FREE Trial.

LYNN FLOCK FIXED (ALPR) ACTIVITY

#	Report #	Date	Action - Incident	Result
1	N/A	11/13/21	Assist Providence RI, PD Homicide Investigation	On 11/15, Providence, RI PD investigators contacted LPD regarding a homicide reported there on this date. It is believed the homicide occurred on 11/13. The victim's phone was confirmed being in Lynn on this date. A check of the victim's license plate on the Flock database confirmed that the victim's vehicle passed an ALPR on 11/13. This assisted in the confirmation of the timeline on the matter and the ALPR in question was in the area of suspect's family residence.
2	21079094	11/17/21	Stolen M/V Recovery	LPD received stolen M/V alert for MA Reg. 324E10. Info. broadcast to Patrol Units of last location. Vehicle stopped at 41 Market St. – Complaint against operator Vehicle towed.
3	21079247	11/18/21	Assault with a Firearm	Subjects assaulted by male with a firearm at 124 Boston St. (2) suspects fled on motorcycles. Det. Hilton was able to ID the subjects and vehicles involved and bring charges against subject who brandished the fire.
4	N/A	12/1/21	Assist Everett PD Shooting Incident	On the evening of 12/1, there was a shooting incident at the casino in Everett. A specific vehicle was identified which had ties to Lynn. A query of the Flock ALPR system revealed that the vehicle entered Lynn via the Lynnway shortly after the shooting and exited a short time later via Boston St. into Saugus. The vehicle was later located in Saugus.
5	21082534	12/1/21	Shots Fired Incident	Shots fired in the area of 18 Alley St. Search was conducted of the ALPR cameras to try and ID suspect vehicle without success.
6	N/A	12/7/21	Wanted Subject	I created an alert for a vehicle believed to be in the possession of a subject with ties to Lynn wanted for an armed home invasion in Amesbury. The alert remains active as subject is still at large. The vehicle hit on an ALPR on 12/5/21.
7	21085558	12/14/21	Stolen M/V Recovery	LPD received stolen M/V alert for PA Reg. KKC1761. Info. broadcast to Patrol Units of last alert location. Vehicle located in parking lot nearby. Operator arrested, active narcotics user. Vehicle likely being used to commit other crimes.
8	21085936	12/15/21	Stolen M/V Recovery	LPD received stolen M/V alert for UT Reg 8NY611. Info. broadcast to Patrol Units of last alert location. Vehicle located in parking lot nearby. Vehicle was overdue rental – operator summonsed for Receiving a Stolen M/V.
9	21086903	12/19/21	Missing Person Homicide Investigation	A woman from Woburn reported missing on 12/19. She was last known to be with a male on the evening of 12/18 who was in possession of a particular vehicle that was registered at 49 Laighton St. LPD Flock ALPR's searched the database and vehicle hit on an ALPR outbound on Lynnfield St. on the evening of 12/18. Suspect l kely going to Woburn to pick up victim who was eventually found deceased and a victim of a homicide. ALPR information solidified a timeline which assisted investigation.
10	21086983	12/20/21	Shots Fired Incident	Shots fired in the area of 130 Union St. Vague description of vehicle involved provided. Search was conducted of the ALPR cameras to try and ID suspect vehicle without success.
11	21087401	12/21/21	Warrant Arrest	LPD received an alert that a subject associated with NH Reg. 4783893 had an active arrest warrant for narcotics charges from NH which they would rendite for. Information was broadcast to LPD Units and the vehicle was located and stopped at Lawton and Western Aves. The subject of the warrant was not in the vehicle, however, a male passenger had an active MA arrest warrant from Newburyport and he was arrested. Subjects involved likely in Lynn to engage in narcotics activity.
12	N/A	TBD	Hit & Run M/V	Sgt. Hunter reported that Flock ALPR used to solve a recent Hit-Run MVA. He searched the cameras for the time of the crash and vehicle hit on an ALPR minutes after the crash. He investigated and located vehicle. Spoke with owner who admitted to the crash. I will get report #, etc. from Sgt. Hunter.
13	21087444	12/22/21	Stolen M/V Recovery	LPD received stolen M/V alert for MA Reg. 1DNM444. Info. broadcast to Patrol Units of last alert location. Vehicle stopped on Spring St.

				Operator arrested for Receiving Stolen M/V. He was also found in possession of cocaine and he had multiple warrants. Vehicle likely used to traffic narcotics.

LYNN POLICE DEPARTMENT		Department Manual: Policy No. 22.1
Subject: **Automated License Plate Reader System**		
Reference: **Supersedes Policy No. 22**		
Effective Date: **August 15, 2011** **Updated:** **December 2, 2021**	**Issuing Authority** _____ **Christopher P. Reddy** **Chief of Police**	

22.1 PURPOSE

The purpose of this Policy is to establish guidelines and procedures for the proper use and application of Automated License Plate Recognition (ALPR) systems, the management of the data, and the maintenance of the equipment.

22.2 POLICY

The availability and use of (ALPR) systems have provided many opportunities for the enhancement of productivity and effectiveness, as well as increased safety to the public and law enforcement. It is the policy of the Lynn Police Department (LPD) to only utilize this technology in the furtherance of official and legitimate law enforcement operations and public safety. All members are expected to abide by the guidelines set forth herein when using an (ALPR) system.

22.3 ACRONYMS AND DEFINITIONS

22.3.1: *Alert*: A visual and/or auditory notice that is triggered when an (ALPR) system receives a potential hit on a license plate.

22.3.2 *(ALPR)*: Automated License Plate Recognition. Automated License Plate Recognition (ALPR technology uses high-speed cameras combined with sophisticated computer algorithms capable of converting the images of license plates to electronically readable data. The (ALPR) system captures an image of a license plate and converts it to a text file using Optical Character Recognition (OCR) technology. The technology also compares the digital images of license plates to the CJIS-NCIC Hot file database.

22.3.3 (ALPR) Operator: Trained Lynn Police Department personnel authorized to utilize (ALPR) systems and equipment.

22.3.4 (ALPR) Administrator: Designee of the Chief of Police responsible for compliance with all applicable laws and regulations pertaining to (ALPRs) as well as providing access and training to Department personnel in the operation of (ALPR) systems.

22.3.5 Alert Data: Information captured by an (ALPR) relating to a license plate that matches the license plate on a "hot list".

22.3.6 (ALPR) Data: Scan files, alert data, and any other documents or data generated by, or obtained through, utilization of an (ALPR) system.

22.3.7 (ALPR) Data Query Logs: A record of a search or query of (ALPR) data.

22.3.8 (ALPR) System: The (ALPR) camera and all associated equipment and databases operated by the Lynn Police Department. This includes fixed (ALPR) cameras that are attached to a structure, such as a pole, a traffic barrier, or a bridge, as well as mobile (ALPR) cameras that are deployed from a law enforcement vehicle or other equipment for mobile deployment.

22.3.9 (GPS): Global Positioning System.

22.3.10 "Hit": An alert that a license plate matches a record maintained in an (ALPR) database related to stolen vehicles, wanted vehicles, or other alert type files that support investigation or which have been manually registered by a user for further investigation.

22.3.11 "Hot List": License plate numbers of stolen cars, vehicles owned by persons of interest, and vehicles associated with AMBER Alerts that are regularly added to "hot lists" circulated among law enforcement agencies. "Hot List" information can come from a

variety of sources, including the Commonwealth of Massachusetts Department of Criminal Justice Information Services (DCJIS), the National Crime Information Center (NCIC), as well as national Amber Alerts and Department of Homeland Security watch lists. These lists serve an officer safety function as well as an investigatory purpose. In addition to agency supported "hot lists", users may also manually add license plate numbers to "hot lists" in order to be alerted if and when a vehicle license plate of interest is "read" by the ALPR system in accordance with a legitimate law enforcement purpose.

22.3.12 "Hot List" Download: The method by which the "hot list" data is transferred to a computer within a law enforcement vehicle or at a fixed terminal.

22.3.13 Optical Character Recognition (OCR): The technology that supports the automated reading and digitizing of images of license plates that are captured by an (ALPR) system.

22.4 PROCEDURES

22.4.1 General: (ALPR) systems and associated equipment and databases, whether owned or under the control of the Lynn Police Department, are authorized for official use only. Misuse of this equipment and associated databases or data may be subject to sanctions and/or disciplinary actions, as determined by the rules and regulations of the Department.

22.4.2 Administrative and Technical Support

- **Administrative Support:** The (ALPR) Administrator will oversee the Department's (ALPR) operations. The Captain of the Criminal Investigation Division shall serve in this capacity.

  Assigned duties shall include:

- Ensuring that the (ALPR) system is used only for appropriate Department business and in accordance with this policy;
- Monitoring the use of the (ALPR) and schedule periodic audits;
- Recommending updates to the (ALPR) policy;
- Keeping informed of legal decisions, trends, and case law concerning (ALPRs);
- Coordinating with other Department personnel regarding the maintenance and retention of data;

- Maintaining records identifying approved (ALPR) deployments and documenting their results, including appropriate documentation of significant incidents and arrests that are related to (ALPR) usage;
- Authorizing any requests for (ALPR) systems use or data access according to the policies and guidelines of this agency

Technical Support: The Sergeant assigned to the Traffic Unit shall be designated as the Program Technician. In his absence, the other Traffic Unit personnel may assist as needed. The duties of the Technician shall include:

- Training designated officers in the proper operation of (ALPR) systems;
- Documenting those trained as Operators and reporting this information to the Training Unit;
- Providing periodic equipment checks to ensure functionality and camera alignment. Any equipment that falls outside expected functionality shall be removed from services until repaired;
- Assist other department personnel as needed.
- Ensuring that designated and trained personnel examine equipment on a regular basis to ensure functionality and camera alignment and removing from service any equipment that falls outside expected functionality until deficiencies have been corrected;
- Ensuring the proper selection of the personnel approved to operate the (ALPR) system and maintaining an adequate number of trained and authorized users

22.4.3 Maintenance and Retention of Data

The Record Department OIC shall be responsible for the maintenance and retention of data stored by Lynn Police Department (ALPR) systems in accordance with MA Public Records Laws.

22.4.4 (ALPR) System Usage

- (ALPR) systems and information shall be accessed and used only for official and legitimate law enforcement operations and public safety related purposes, and may only be used based on specific and articulable facts of a concern for safety, wrongdoing, criminal investigations, Department-related civil investigations, or pursuant to a court order.

- Only users who have been designated by the (ALPR) Administrator and properly trained in the use and operational protocols of the (ALPR) system shall be permitted to use a system. Only those users with an approved login and password will be allowed access to an (ALPR) system.

- **Authorized User Alert Profile**: Personnel who have been designated as an **authorized user with an approved login and password for access to the Flock Safety ALPR System** must establish an alert profile at the time of initial login. In order to minimize disruption from excessive alerts, and to avoid alerts based on categories that are not actionable without a simple CJIS query, all personnel must comply with the following schedule for alert notifications:

    - **Authorized Categories:** The following categories for an alert profile are authorized:
        - Stolen Vehicle
        - Warrants
        - Missing Person
        - Protective Order
        - NCMEC Amber Alert
        - Missing Child
        - LPD hot list

    - **Prohibited Categories:** The following categories for an alert profile are prohibited:
        - Sex Offender
        - Stolen Plate
        - Gang Member or Suspected Terrorist
        - CPIC Data Records
        - Immigration Violator
        - Violent Person
        - Protective Interest
        - Supervised Release

Exceptions to these requirements for specific users may be authorized by the (ALPR) Administrator – the Captain of the Criminal Investigations Division. These exceptions shall only be made to further a specific investigation or other public safety purpose.

- Searches of historical (ALPR) data shall be done in accordance with established departmental policies and procedures.

- Requests to use an (ALPR) system during nontraditional deployments, i.e. special operations or criminal investigations, must be approved by the Administrator. In their absence, requests may be forwarded to a Deputy Chief or the Chief.

22.5 Operational Procedures

22.5.1 Manual Entry of Data

- Personnel may become aware of license plate numbers or vehicles of interest from a specific incident or investigation and may seek to have this information be entered into LPD (ALPR) systems. The entry of this information will trigger alerts to be forwarded to LPD personnel and other designated agencies. **This information may be entered only by an authorized Lynn Police Department supervisor and only for official and legitimate law enforcement or public safety operations.**

- For all manual license plate entries, a verification of the license plates shall be queried via CJIS to verify the plate to be entered is accurate.

- Manual entries may include, but should not be limited to, an AMBER Alert, Missing Child Alert, Missing College Student Bulletin, Be On Look Out (BOLO), Attempt To Locate (ATL), or Wanted or Missing Person broadcast or bulletin, in which a license plate number is included. Such manual entries must be manually updated when the information changes or is no longer current.

- Manual entries may also include specific descriptions of vehicles which are being sought for specific crimes or in accordance with investigations.

22.5.2 (ALPR) "Hits" and Alerts:

Prior to initiation of a stop based on a "hit" or alert:

- Users shall visually verify that the vehicle plate number matches the plate number queried by an (ALPR) system, including both alphanumeric characters of the license plate and the state of issuance.

- Users shall verify the current status of the plate through the Commonwealth's Criminal Justice Information System (CJIS), National Crime Information Center (NCIC) Department's Records Management System (RMS), or other appropriate source of data prior to a stop when circumstances allow or as soon as practicable. (Confirm the vehicle is stolen, etc.)

22.5.3 Mobile (ALPR) Procedures:

- At the start of each shift, personnel assigned to Department vehicles equipped with LPD mobile (ALPRs) shall ensure that the (ALPR) system has been updated with the most current hot lists available.

- At the beginning of each tour of duty, users should verify the aim of the (ALPR) camera(s) to ensure it is focused on the correct lanes of traffic.

- (ALPR) equipment should be cleaned and maintained according to the manufacturer's recommendations.

- Any damage to (ALPR) systems will be reported immediately according to the Department's established policy and procedures related to the loss of, or damage to, the Department's equipment.

- When not in use, (ALPR)-equipped vehicles should be secured.

22.6 INFORMATION MANAGEMENT

22.6.1 (ALPR) Data Query Records

- In accordance with agreements between the Lynn Police Department and contracted (ALPR) vendors, Department vendors will maintain a record for each transaction conducted on Department (ALPR) systems that will include the name of the individual accessing the data, along with the date and time of access, and the reason for the access.

- Audits shall be conducted at the discretion of the Chief of Police.

22.6.2 (ALPR) Sharing and Dissemination

- (ALPR) data can be accessed, retrieved, or shared, for

official and legitimate law enforcement operations or public safety purposes only.

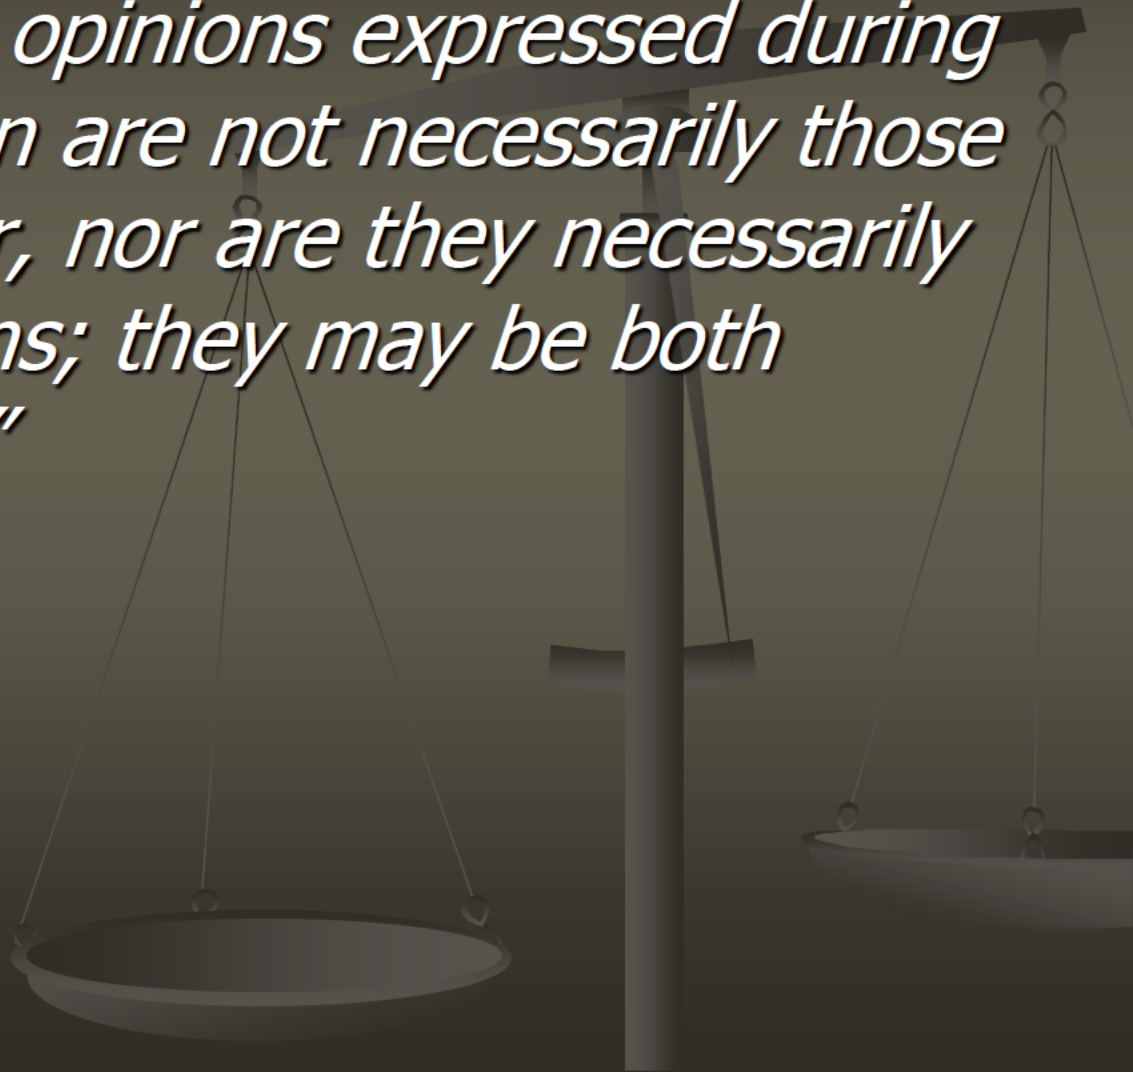
- Information sharing among law enforcement agencies, other than the DCJIS, should be governed by departmental policies or memoranda of understanding.

22.6.3 Retention

- Bulk data from (ALPRs) will not be stored on the Department's server and will only be stored by LPD (ALPR) vendors. Either by their own protocols or at the direction of the Department, LPD (ALPR) vendors shall not store bulk Department (ALPR) data for a period greater than (30) days.

- Department (ALPR) data may be downloaded and retained by Department personnel in accordance with legitimate law enforcement purposes including specific investigations. This data shall be retained in accordance with MA Public Records laws and maintained until a final disposition has been reached in the particular case.

22.7: POLICY REVIEW



The (ALPR) Administrator is responsible for the annual review of this Policy and the policies and procedures contained herein and for making recommendations to the Department head for any necessary amendments. This is a new technology and it may raise both legal and technological issues. As use of the technology progresses, the Department will continue to monitor and assess the appropriateness of this Policy.

INTERPRETING THE ATTORNEY GENERAL'S GUIDELINES

Plain Reading of the Guidelines; *plus*

Drafters' Intent.

Guidelines state all questions shall be address to the AG or his/her designee.

However, unless and until the courts get involved in interpreting the search & seizure ramifications of ALPR use, the answers are at best, educated speculation.

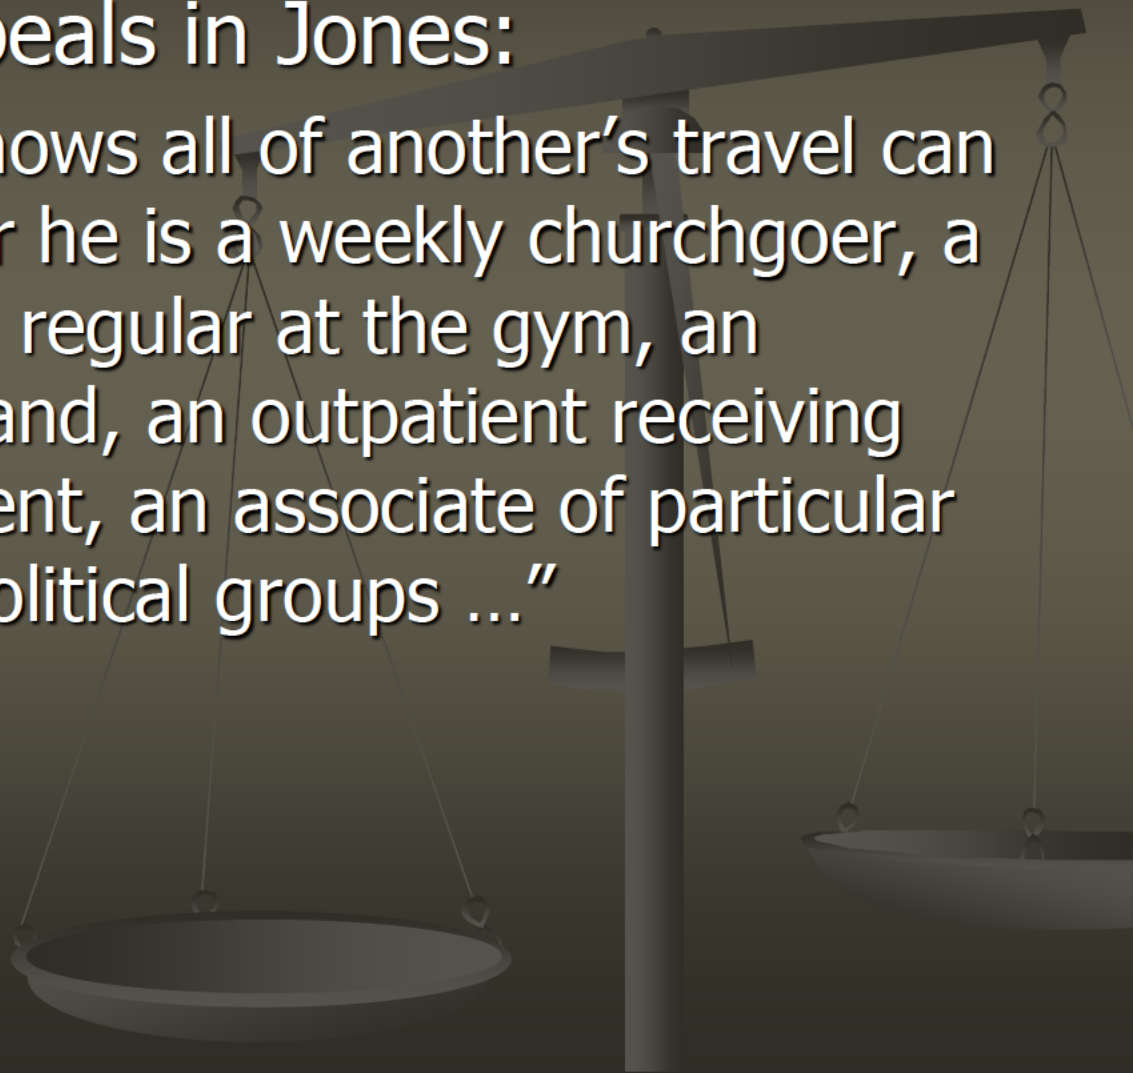
JUDICIAL REVIEW OF SEARCH & SEIZURE ISSUES

Law Enforcement's Need to Protect Public Safety

vs.

The Public's Legitimate Privacy Interest

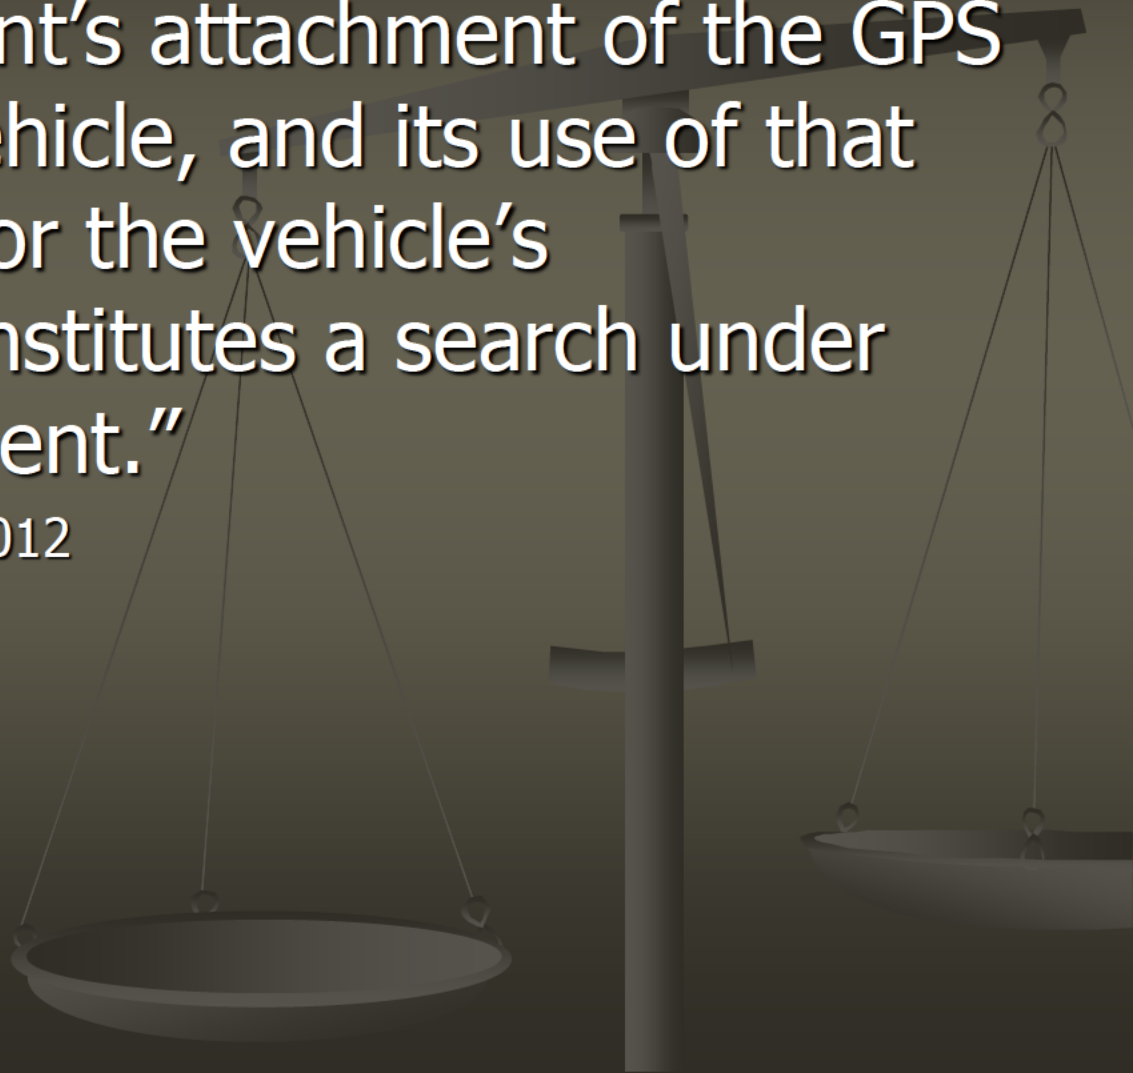
JUDICIAL REVIEW



- **Unites States v. Jones** (No. 10-1259)

  In November 2011 the US Supreme Court heard a case to decide if the US Constitution requires police to obtain a warrant to attach a GPS device to a suspect's car and track its movements.

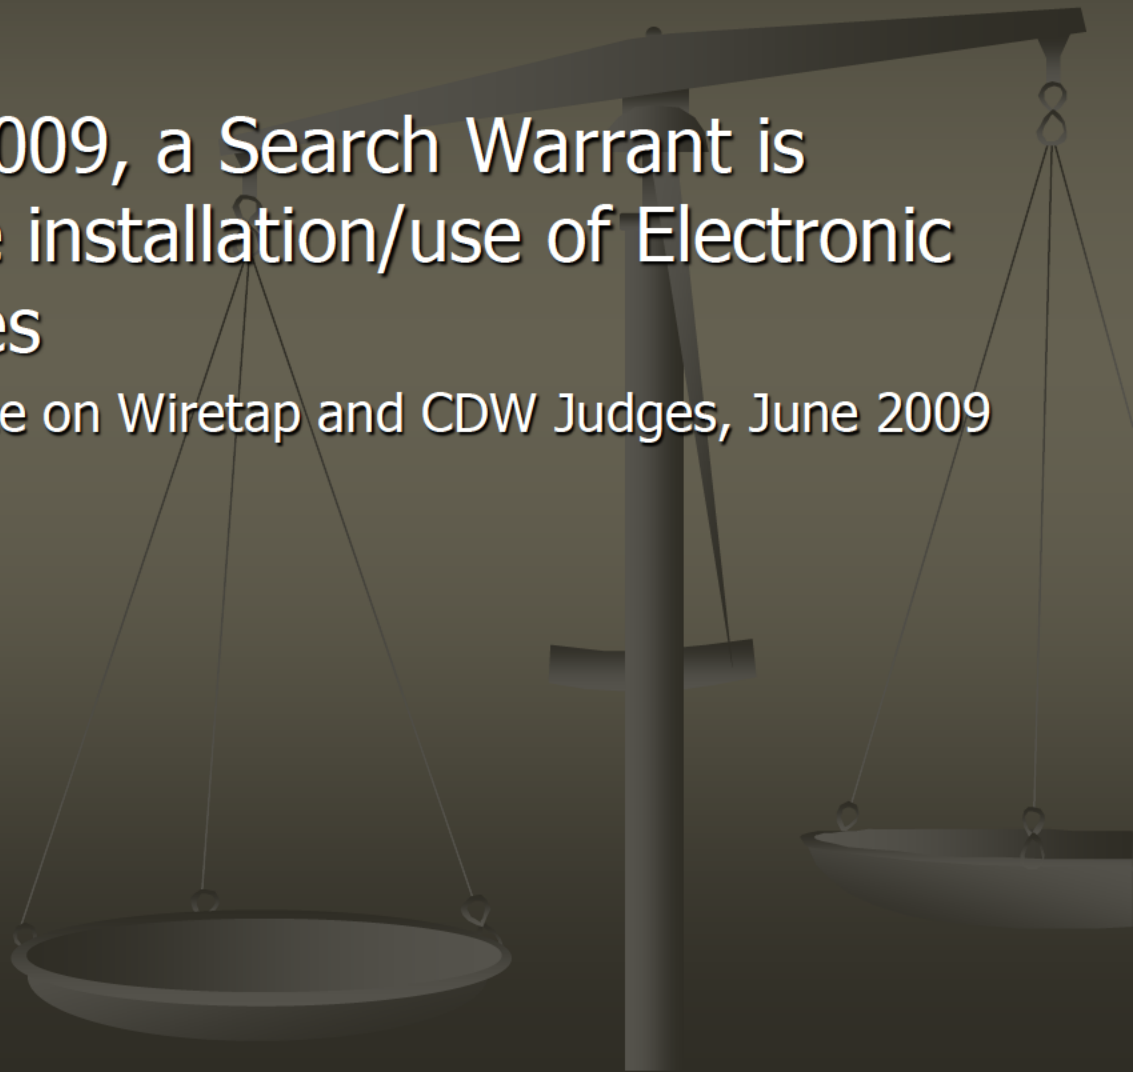
JUDICIAL REVIEW



- US Court of Appeals in Jones:

  "A person who knows all of another's travel can deduce whether he is a weekly churchgoer, a heavy drinker a regular at the gym, an unfaithful husband, an outpatient receiving medical treatment, an associate of particular individuals or political groups …"

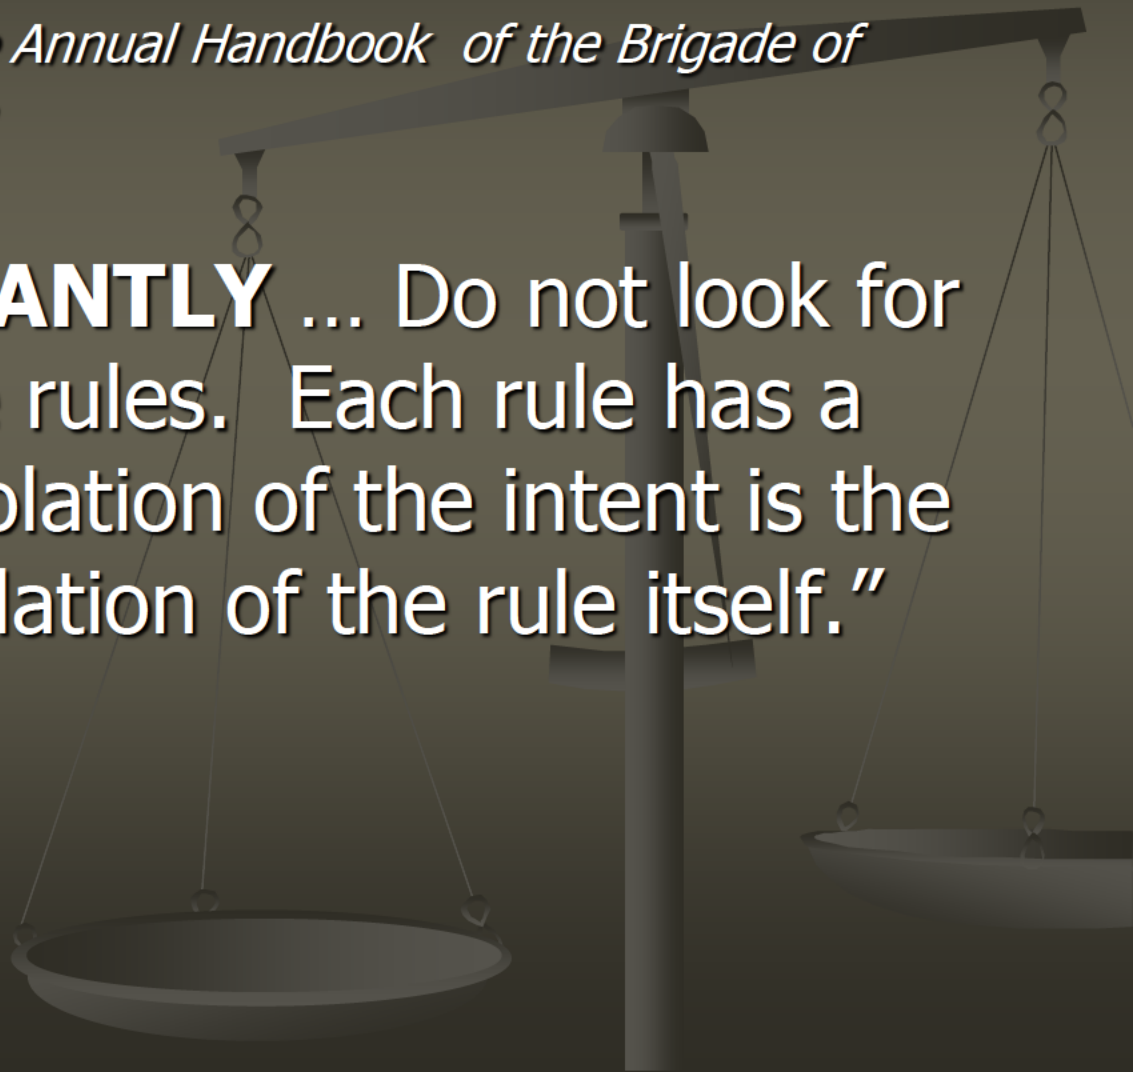
US Supreme Court



- "The Government's attachment of the GPS device to the vehicle, and its use of that device to monitor the vehicle's movements, constitutes a search under the 4th Amendment."
  - January 23, 2012

JUDICIAL REVIEW

New Jersey:



- Since at least 2009, a Search Warrant is required for the installation/use of Electronic Tracking Devices
  - Conference on Wiretap and CDW Judges, June 2009

DRAFTERS' INTENT & PLAIN READING

REEF POINTS, *The Annual Handbook of the Brigade of Midshipmen 100th Edition*

"**MOST IMPORTANTLY** … Do not look for loopholes in the rules. Each rule has a clear intent. Violation of the intent is the same as the violation of the rule itself."

DRAFTERS' INTENT

- ALPR technology supports the law enforcement mission.
- Guidelines are to ensure that "ALPRs are used only for *bona fide* law enforcement purposes."
- Also to "protect the legitimate privacy interests of motorists …" (*repeated throughout*).
- Guidelines provide for discipline/sanctions for any user who knowingly violates the guidelines.

PLAIN READING

- Each department must promulgate its own policy consistent with the AG's guidelines.
- North Arlington's policy was used as a template and conformed to fit both the AG's guidelines & the Bergen County system.

GUIDELINES/POLICY HIGHLIGHTS

- Section 1 Purpose & Scope:
  - emphasize throughout the importance of protecting privacy rights.
- Section 2 Definitions:
  - "Criminal Event" refers to Indictable Crimes ONLY.
  - Includes conspiracies and attempts, such as surveillance, planning and rehearsing, and/or the identification of security measures.

GUIDELINES/POLICY HIGHLIGHTS

- Section 3 Deployment of ALPR:
  - ONLY used by chief-authorized individuals;
  - Authorized user may be sworn officers and/or civilian employees;
  - Prior to use, all users must be trained in proper use of the ALPR system; and
  - Operation/Access is controlled by a secure, person-specific, log-on user identification and password.

GUIDELINES/POLICY HIGHLIGHTS

- Section 3 Deployment of ALPR:
  - Operation/Access is controlled by a secure, person-specific, log-on user identification and password.
  - Shall not be shared, transferred or used by any other individual(s).
  - Sharing log-in ID is a violation of the policy!

GUIDELINES/POLICY HIGHLIGHTS

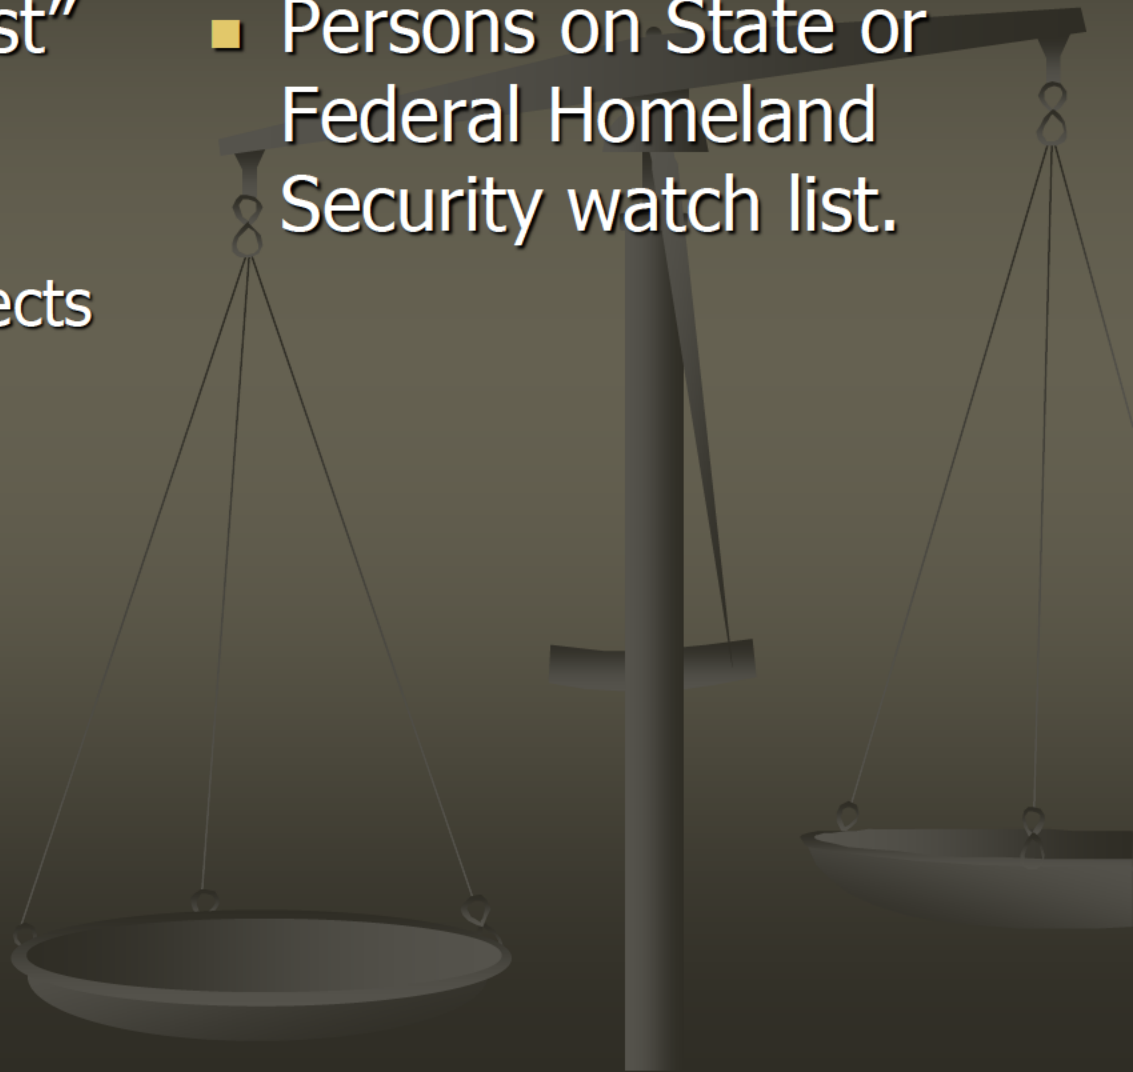
- Section 4 Maintenance of Records:
  - BCPO maintains all ALPR records.
  - Records maintained for 5 years.
  - Subject to random audits.

We do it for you, but all recordation is based upon the proper use of the individual user's secure, person-specific, log-on user identification and password.

GUIDELINES/POLICY HIGHLIGHTS

- Section 5 Content & Approval of BOLO Lists:
  - Entering a plate number (or partial) requires a *legitimate & specific law enforcement reason* to:
    - Identify or locate the vehicle; or
    - Identify or locate any person who is reasonably related with the vehicle.

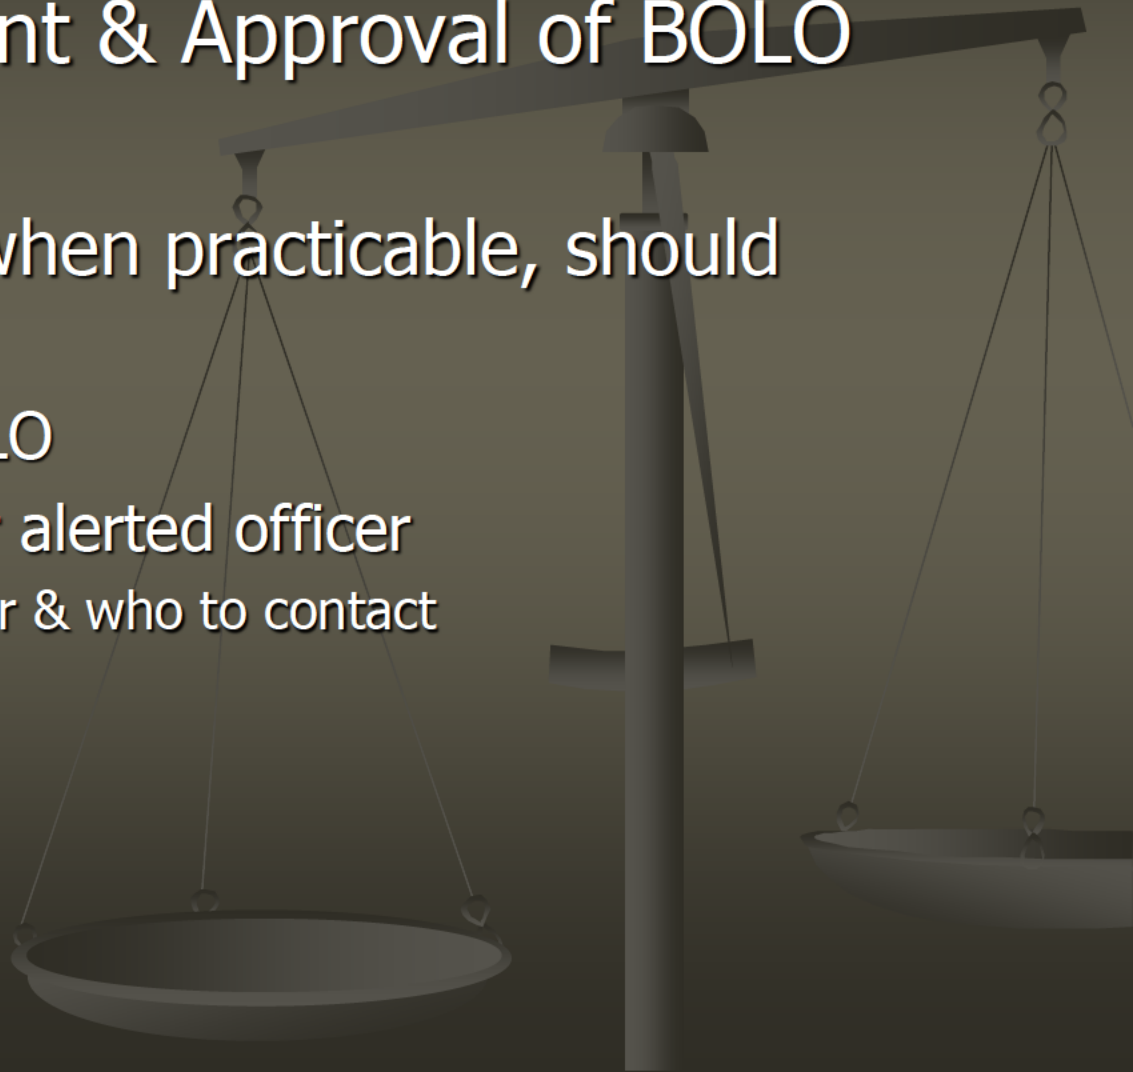
GUIDELINES/POLICY HIGHLIGHTS



- Section 5 Content & Approval of BOLO Lists:
  - Post-scan of a plate number (or partial) requires a *legitimate & specific law enforcement reason* to:
    - Identify the past locations of the vehicle; or
    - Identify the past locations of any person who is reasonably related with the vehicle.

Legitimate & Specific Reasons

- Person who are subject of outstanding arrest warrants.
- Missing Persons.
- AMBER alerts.
- Stolen vehicles.
- Vehicles involved in crimes or disorderly persons offenses.
- Vehicles operated by unlicensed, revoked or suspended drivers.
- Vehicles with expired registrations or other Title 39 violations.
- Individuals subjected to restricted movements (curfew, TRO, Parole, etc…)



Legitimate & Specific Reasons

- "Persons of interest" in a specific investigation.
  - Need not be suspects themselves.
- Persons on State or Federal Homeland Security watch list.

GUIDELINES/POLICY HIGHLIGHTS

- Section 5 Content & Approval of BOLO Lists:
  - BOLO entries, when practicable, should include:
    - Reason for BOLO
    - Instructions for alerted officer
      - Non-Encounter & who to contact

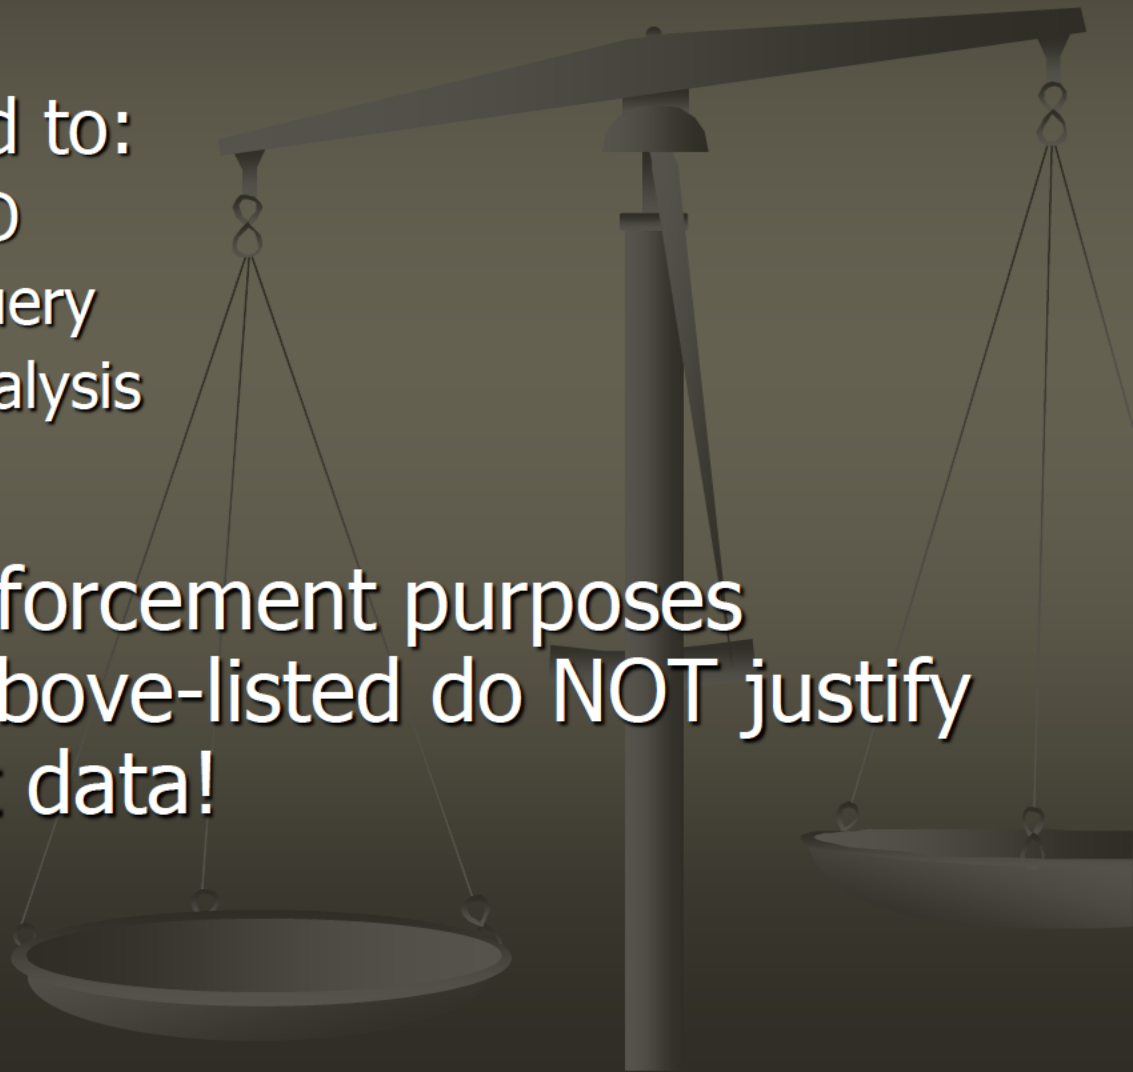
GUIDELINES/POLICY HIGHLIGHTS

- Section 6 Police Action to Alert:
  - Alert alone may not justify police action!
  - Officer shall take appropriate actions given the circumstances.
    - i.e., take reasonable effort to confirm wanted individual is actually in the vehicle.

GUIDELINES/POLICY HIGHLIGHTS

- Sections 7 & 8 Security, Retention & Purging of ALPR Data:
  - BCPO is responsible for all aspects of these sections.

We do it for you, but all recordation is based upon the proper use of the individual user's secure, person-specific, log-on user identification and password.



ACCESS & USE OF STORED ALPR DATA

- Positive Alert Data:
  - Authorized user may access for purposes of:
    - Post-scan BOLO query
    - Crime scene query
    - Crime trend analysis, via BCPO
    - Any other legitimate law enforcement purpose (whether part of an active investigation or not).

ACCESS & USE OF STORED ALPR DATA

- Non-Alert Data:
  - Access is limited to:
    - Post-scan BOLO
    - Crime-scene query
    - Crime trend analysis

Legitimate law enforcement purposes outside of the above-listed do NOT justify use of non-alert data!

NON-ALERT DATA & POST-SCAN BOLO QUERY

- Post-Scan BOLO of Non-Alert Data:
  - Authorized user may compare post-scan BOLO where query results might reasonably lead to:
    - Evidence/information related to investigation or law enforcement operation; or
    - When vehicle might be added to an active BOLO list.

(Ex: vehicle present at location to confirm or dispel an alibi defense.)

NON-ALERT DATA & POST-SCAN CRIME SCENE QUERY

- Crime Scene Query of Non-Alert Data:
  - Defined: accessing/reviewing stored ALPR data scanned at or about time/location or a reported *criminal event* to identify vehicles/persons associated as suspects, victims and/or witnesses.
  - Reasonably lead to evidence/information relevant to a *specific criminal event*.

NON-ALERT DATA & POST-SCAN CRIME SCENE QUERY

- Crime Scene Query of Non-Alert Data:
  - May not be reviewed for general crime patterns (who's in a high crime area?)
  - User must document the specific crime being investigated.
  - Review must be limited in scope to the event
    - Terrorist attack may justify weeks/months of review; a spontaneous crime may not

NON-ALERT DATA & CRIME TREND ANALYSIS

- Crime Trend Analysis Defined:

  "…stored ALPR data is used … to detect crime patterns by studying & linking common elements of recurring crimes …"

  and/or

  to predict when & where future crimes may occur; and/or

  to link specific vehicles to potential crimes or terrorist activity.

NON-ALERT DATA & CRIME TREND ANALYSIS

- Authorized user may access for crime trend analysis only if:

  Authorized by a trained supervisor (can be a standing order); and

  Where results of analysis are ***intended (not expected)*** to assist in the performance of the department's duties.

  Can include, if supervisor authorized, the use of automated software.

NON-ALERT DATA & CRIME TREND ANALYSIS

- SHALL NOT RESULT IN THE DISCLOSURE OF PERSONAL TO ANY AUTHORIZED USER … UNLESS:

(1) Authorized by Grand Jury subpoena; or

(1) Specific & Articulable facts of the analysis warrant further investigation; and

(2) A supervisor approves the release of the identifying information.

NON-ALERT DATA & CRIME TREND ANALYSIS

1337

- Authorized user accessing stored non-alert data for crime scene trend analysis shall document:
  - Nature & purpose of the analysis;
  - Identity of the person accessing data; and
  - Identity of the authorizing supervisor.

NON-ALERT DATA & CRIME TREND ANALYSIS

- Additionally, where there is disclosure of identifying information, user must document:
  - The facts warranting the disclosure;
  - Identity of the authorizing supervisor; and/or
  - The existence of the grand jury subpoena.

SHARED LAW ENFORCEMENT ACCESS TO STORED ALPR DATA

- May be shared and provided to any other ***law enforcement agency***.
- All sharing of information must be recorded:
  - Agency; and
  - Individual to whom information was provided.

SHARED NON-LAW ENFORCEMENT ACCESS TO STORED ALPR DATA

- Shall NOT be provided, unless:
  - Authorized by subpoena or court order
    - Prior to release notify Chief & Prosecutor;

    or
  - Required by the Rules of Court – discovery.

I. Investigation

A. The Search and Seizure of Digital Evidence

As with physical evidence, searches and seizures of digital evidence must be reasonable to be valid. This section provides a summary of Fourth Amendment law as it relates to the search and seizure of digital evidence. It also references Article Fourteen of the Massachusetts Declaration of Rights, which parallels the Fourth Amendment, but is sometimes more expansive.

The Fourth Amendment states:

> The right of the people to be secure in their persons, houses, papers, and effects, against unreasonable searches and seizures, shall not be violated, and no Warrants shall issue, but upon probable cause, supported by Oath or affirmation, and particularly describing the place to be searched, and the persons or things to be seized.

U.S. Const. amend. IV.

Article Fourteen (art. 14) of the Massachusetts Declaration of Rights is similar to the Fourth Amendment, but since 1985, the Supreme Judicial Court ("SJC") has interpreted it as providing broader protections than its federal counterpart. Commonwealth v. Upton, 394 Mass. 363, 373 (1985) ("We conclude that art. 14 provides more substantive protection to criminal defendants than does the Fourth Amendment in the determination of probable cause.").

To determine whether law enforcement action constitutes an unreasonable search or seizure, courts ask two questions. First, was the action a search or seizure within the meaning of the Fourth Amendment? E.g., Commonwealth v. Magri, 462 Mass. 360, 366 (2012) ("In deciding whether police conduct violates the Fourth Amendment or art. 14 of the Massachusetts Declaration of Rights, we first determine whether a search, in the constitutional sense, has taken place."). Second, was that search or seizure reasonable? See, e.g., Riley v. California, 134 S. Ct. 2473, 2482 (2014) ("[T]he ultimate touchstone of the Fourth Amendment is reasonableness." (internal quotation marks omitted)).

1. Was There a Search or Seizure?

"A search implicating the Fourth Amendment occurs 'when an expectation of privacy that society is prepared to consider reasonable is infringed' and a seizure of property for purposes of the Fourth Amendment occurs when 'there is some meaningful interference with an individual's possessory interests in that property.'" Commonwealth v. Connolly, 454 Mass. 808, 819 (2009) (quoting United States v. Karo, 468 U.S. 705, 712 (1984)) (finding installation and use of a GPS tracking device on a car to be a seizure under Massachusetts art. 14 because it requires entering the vehicle and using the electricity of the defendant's car).

a) Searches and the Reasonable Expectation of Privacy

For a search to implicate the Fourth Amendment, the defendant must have a "reasonable expectation of privacy" in the place to be searched. Katz v. United States, 389 U.S. 347, 360 (1967) (Harlan, J., concurring); see also United States v. Heckencamp, 482 F.3d 1142, 1146 (9th Cir. 2007) (finding a college student had a reasonable expectation of privacy in the contents of his personal computer because it was located in his dorm room, was protected by a password, and was not subject to regular university monitoring). A person's expectation of privacy is reasonable "if he can demonstrate a subjective expectation that his activities would be private, and he can show that his expectation was one that society is prepared to recognize as reasonable." Heckencamp, 482 F.3d at 1146 (internal quotation marks, brackets, and citations omitted). Individuals generally have a reasonable expectation of privacy in their personal computers and files. See id. at 1146–47 (listing cases to that effect). In Heckencamp, "[t]he salient question [was] whether the defendant's objectively reasonable expectation of privacy in his computer was eliminated when he attached it to the university network." Id. at 1146.

When challenging the constitutionality of a search, the defendant bears the initial burden of establishing that a search occurred. See Commonwealth v. D'Onofrio, 396 Mass. 711, 714-15 (1986); Commonwealth v. Alvarez, 480 Mass. 1017, 1018 (2018) (holding that a police officer observing a text message on the screen of a phone that was lawfully in his custody, when he glanced at the phone because it started ringing, was not a search absent evidence of further action by the officer).

The sections below explore the contours of the reasonable expectation of privacy, discussing: (1) standing; (2) one-party consent; (3) the third-party doctrine; (4) surveillance in public; (5) file sharing over networks; (6) reasonable expectations of privacy in data that is not one's own; and (7) diminished privacy expectations in the context of probationers, parolees, and court-ordered monitoring.

(1) Standing

Standing to challenge a warrantless search or seizure may be in question when the location or item searched or seized does not belong to the challenging party.

- Commonwealth v. Fredericq, 482 Mass. 70 (2019). The defendant, charged with trafficking cocaine, successfully suppressed CSLI data tracking the cell phone location of the driver of the car in which he was riding. Id. at 71. The Court held that the defendant had standing to challenge the CSLI search because he was "a passenger of the vehicle whose location was effectively being continually tracked through CSLI monitoring," and had a reasonable expectation of privacy in his movements. Id. at 77.

- Commonwealth v. Lugo, 482 Mass. 94 (2019). The court found that a juvenile defendant had no standing to challenge the "pinging" of another juvenile's cell phone in a second-degree murder case involving a botched robbery. Id. at 105, 107-08. After determining that the "pinging" of the defendant's and his cohort's cell phones were searches under Commonwealth v. Almonor, 482 Mass. 35 (2019), the SJC turned to the question of whether the defendant had standing to challenge those searches. Lugo, 482 Mass. at 107; see Almonor, 482 Mass. at 47-48 (causing a cell phone to reveal its real-time location constitutes a search under Article 14). The Court held that without a possessory interest in the other juvenile's cell phone, the defendant did not have

automatic standing to contest the search. Lugo, 482 Mass. at 107. Further, he did not have actual standing because, "[a]lthough the defendant was with [the other juvenile] when her location was searched, the period of the search—less than two hours—was not sufficiently significant to allow the defendant standing." Id. at 108. The Court found that the defendant did have standing to challenge the search of his own cell phone, but the information gathered from that search—the location of his residence—had already been gathered by other means, so no evidence came from the search. Id. at 108-09.

(2) One Party Consent

In Massachusetts, "one party consent" does not negate a reasonable expectation of privacy of the non-consenting party. While the Supreme Court held that warrantless electronic surveillance with "one party consent" does not implicate the Fourth Amendment, United States v. White, 401 U.S. 745, 751 (1971), the SJC found such surveillance impermissible under art. 14 of the Massachusetts Declaration of Rights, Commonwealth v. Blood, 400 Mass. 61, 70 (1987). Because it found there is a reasonable expectation of privacy in conversations that occur among "a narrow compass of known listeners" in private homes, the SJC concluded that the warrantless electronic surveillance was a violation of that constitutional provision. Id. Accordingly, "one party consent" did not obviate the need for a warrant under art. 14. Id.

(3) The Third-Party Doctrine

In United States v. Miller, 425 U.S. 435 (1976), and Smith v. Maryland, 442 U.S. 735 (1979), the Supreme Court articulated what has become known as the "third-party doctrine." Under this doctrine, "the Fourth Amendment does not prohibit the obtaining of information revealed [by a suspect] to a third party and conveyed by him to Government authorities," regardless of the suspect's expectation of how the information might be used. Miller, 425 U.S. at 443. Massachusetts has traditionally followed the Supreme Court's guidance on the third-party doctrine. See, e.g., Commonwealth v. Cote, 407 Mass. 827, 833–36 (1990) (holding that a defendant had no reasonable expectation of privacy in telephone message records held by a third-party answering service for the reasons cited in Miller).

- United States v. Jones, 565 U.S. 400 (2012). Unanimous decision holding that a Fourth Amendment "search" occurs where law enforcement places a GPS device on defendant's car. Id. at 411. The Court's opinion, authored by Justice Scalia, focused on the Government's intrusion on the defendant's physical property and applied "an 18th-century guarantee against unreasonable searches, which we believe must provide *at a minimum* the degree of protection it afforded when it was adopted." Id. In contrast, Justice Sotomayor's concurrence in Jones emphasized that "the Fourth Amendment is not concerned only with trespassory intrusions on property," id. at 954, and brought the issues later addressed by Carpenter v. United States, 138 S. Ct. 2206 (2018), to the forefront, see Jones, 565 U.S at 417 (Sotomayor, J., concurring) ("More fundamentally, it may be necessary to reconsider the premise that an individual has no reasonable expectation of privacy in information voluntarily disclosed to third parties. This approach is ill suited to the digital age…").

Carpenter v. United States, 138 S. Ct. 2206 (2018) and Commonwealth v. Augustine, 467 Mass. 230 (2014) modified the third-party doctrine for at least one specific type of information—cell site location information ("CSLI"). The holding of Carpenter is that law enforcement effects a Fourth Amendment "search" by obtaining at least one week's worth of a defendant's CSLI from a third-party cellular provider. See Carpenter, 138 S. Ct. 2206, 2217 n.3. The comparable holding from Augustine is that subpoenaing two weeks' of CSLI information is a "search." See Augustine, 467 Mass. 230, 233, 255 (2014).

- Carpenter v. United States, 138 S. Ct. 2206 (2018). The Government successfully applied for two court orders directing Carpenter's wireless carriers to disclose Carpenter's CSLI for select time periods within a four-month span. 138 S. Ct. at 2212. The first order sought 152 days of CSLI from MetroPCS, and the second order sought seven days of CSLI from Sprint. Id. Based in part off the information the Government acquired from Carpenter's CSLI, the Government charged Carpenter with six counts of robbery and six counts of carrying a firearm during a federal crime of violence. Id.

  The Supreme Court held that the Government's acquisition of Carpenter's CSLI was a search of Carpenter that required a warrant supported by probable cause even though the Government acquired the CSLI from third-party wireless carriers. Id. at 2221. The Court declined to apply an expansive version of the third-party doctrine to CSLI partly because the data can reveal immense amounts of intimate information about who a suspect has been associating with and where a suspect has been travelling. Id. at 2219 ("There is a world of difference between the limited types of personal information addressed in Smith and Miller and the exhaustive chronicle of location information casually collected by wireless carriers today."). Furthermore, because cell phones are a nearly ubiquitous part of daily life and virtually every activity on a phone generates CSLI, the Court rejected the claim that Carpenter voluntarily disclosed his CSLI to his wireless carriers. Id. at 2220 ("Neither does the second rationale underlying the third-party doctrine—voluntary exposure—hold up when it comes to CSLI. Cell phone location information is not truly 'shared' as one normally understands the term.").

  While the Court stated that its ruling was "a narrow one" that applied only to CSLI, id., the dissents argued that the decision will have far-reaching consequences, e.g., Carpenter, at 2234 (Kennedy, J., dissenting) ("The Court's decision also will have ramifications that extend beyond cell-site records to other kinds of information held by third parties."); see also id. at 2262 (Gorsuch, J., dissenting) ("Today the Court suggests that Smith and Miller distinguish between *kinds* of information disclosed to third parties and require courts to decide whether to 'extend' those decisions to particular classes of information, depending on their sensitivity." (emphasis in original)); cf. Commonwealth v. Augustine, 467 Mass. 230, 253 (2014) (holding that although "we do not reject categorically the third-party doctrine," some forms of electronic evidence require "a different approach"). Given Americans' increasing dependence on technological devices that generate large amounts of personal data, it is possible that the Supreme Court's reasoning in Carpenter will someday result in a larger overhaul of the third-party doctrine.

- Commonwealth v. Wilkerson, 486 Mass. 159 (2020). In a more recent case similar to Hobbs, considering retroactive application of Augustine's warrant requirement for CSLI data, the SJC again held constitutional a pre-Augustine CSLI request because the associated 18 U.S.C. § 2703 application satisfied the requisite probable cause standard. Id. at 166-72.

- Commonwealth v. Almonor, 482 Mass. 35 (2019). This case concerned an issue of first impression involving whether police action that causes an individual's cell phone to transmit its real-time location information violates any reasonable expectation of privacy. Id. at 41. Neither the Supreme Court's decision in Carpenter v. United States, 138 S. Ct. 2206, 201 L.Ed.2d 507 (2018) nor the SJC's decision in Commonwealth v. Augustine, 467 Mass. 230, 4 N.E.3d 846 (2014) addressed this precise issue. The Commonwealth charged the defendant with murder after he shot and killed an individual and subsequently fled the scene of the crime. After a witness gave them the defendant's phone number, the police filed a "mandatory information for exigent circumstance requests" form with the telephone service provider. The telephone service provider "pinged" the defendant's phone and revealed the defendant's GPS coordinates to the police. Id. at 38-39. The Court granted the defendant's motion to suppress the warrantless "pinging." Id. The SJC reversed, holding that the warrantless pinging of the defendant's phone constituted a search under the Article 14 of the Massachusetts constitution, but that the warrantless search was justified by exigent circumstances, namely that the defendant was at large and believed to be armed and dangerous. It noted that searches occur when the government intrudes on a person's reasonable expectation of privacy and concluded that the defendant had a reasonable expectation of privacy in his cellular location data. Id. at 43-44. The Court held that real-time location data serves as a "proxy for the real-time location of the individual" because "cell phones are an indispensable part of daily life and exist as almost permanent attachments to their users' bodies." Id. at 45 (internal quotations omitted).

- Commonwealth v. Hobbs, 482 Mass. 538 (2019). In 2011, the government received historical CSLI from defendant's cell service provider pursuant to a 18 U.S.C. § 2703 order, without a warrant — well before 2014, when Augustine first articulated the warrant requirement for historical CSLI requests. Id. at 542-44. The SJC held that the government could "still satisfy the warrant requirement if it can establish that its 'application for the § 2703[] order met the requisite probable cause standard of art. 14,'" i.e., the same probable cause standard required of an affidavit in support of a search warrant for historical CSLI. Id. at 544 (quoting Augustine, 467 Mass. at 256). (This also comports with Commonwealth v. Balboni, 89 Mass. App. Ct. 651 (2016), an earlier case considering retroactive application of Augustine to CSLI data obtained pre-Augustine pursuant to an 18 U.S.C. § 2703 order.)

- Commonwealth v. Fulgiam, 477 Mass. 20 (2017). In Fulgiam, the Commonwealth obtained recent text messages of the defendant pursuant to § 2703(a) of the Federal Stored Communications Act. Id. at 28; 18 U.S.C. § 2703(a) (2012). The Court held, on federal statutory and state constitutional grounds, that law enforcement required a warrant to obtain the text messages. See 477 Mass. at 31. An individual under Massachusetts state law has a "reasonable expectation of privacy in his text messages." Id. at 33. The third-party doctrine did not require

otherwise because "the nature of cellular telephone technology . . . [and] use in our current society render the third-party doctrine inapposite" in this context. Id. at 34.

- Commonwealth v. Estabrook, 472 Mass. 852 (2015). The SJC considered a request for CSLI and concluded that a defendant's reasonable expectation of privacy under art. 14 of the Massachusetts Declaration of Rights is not violated by a warrantless request for production of up to six (6) hours of historical CSLI. Id. at 854. It also established that the relevant consideration in determining the reasonable expectation of privacy is the length of time for which CSLI data is requested, not the time span ultimately sought to be introduced at trial. Id. at 858–59.

- Commonwealth v. Augustine, 467 Mass. 230 (2014). Police investigating a murder obtained the defendant's CSLI from his service provider pursuant to a 18 U.S.C. § 2703(d) order. Id. at 233. These orders are not warrants, so they cannot be used to effectuate a search for information protected by the Fourth Amendment or art. 14. The CSLI obtained helped police determine the defendant's location over the period they were investigating. See id. at 233–34. The Court considered but ultimately rejected the Commonwealth's argument that the third-party doctrine negated any reasonable expectation of privacy the defendant had in his CSLI. Id. at 241–56. It reasoned that art. 14 does not protect information voluntarily and intentionally transmitted to third parties (like the number dialed to initiate a call) but it does protect information incidentally transmitted (like the location information the cell phone provider acquires as a result of cell phone technology). Id. at 249–52. The Court found that the defendant therefore had a reasonable expectation of privacy in his CSLI, which, under art. 14, means that "the government must obtain a search warrant to obtain it." Id. at 252.
