COVER STORY

A Data-Driven Approach to Traffic Safety

Online cloud-based crash reporting solutions allow for better data access and analytics.

IN THIS ISSUE

Radar Speed Signs: A Small Solution to a Big Problem

Radar speed signs can help slow down traffic without taking up valuable manpower.

Keeping an Eye on Traffic with Automatic License Plate Readers

Automatic License Plate Readers (ALPR) can do much more than just capture numbers and letters on a plate.

Calling All Cars: Have Police Vehicle Supply Chain Issues Improved?

A global microchip shortage and supply chain issues caused delays on getting new vehicles to departments in 2022. Will 2023 be any better?

Learning the Hard

Glock 29SF

Way: Keeping Use-of-Force Training Safe

Tragedy struck three law enforcement training exercises late last year. Instructors discuss the lengths they go to for safety and how accidents can be prevented.

The Right Shield for the Job

Manufacturers have worked to create single-handed ballistic shields that can be used during active shooter incidents.

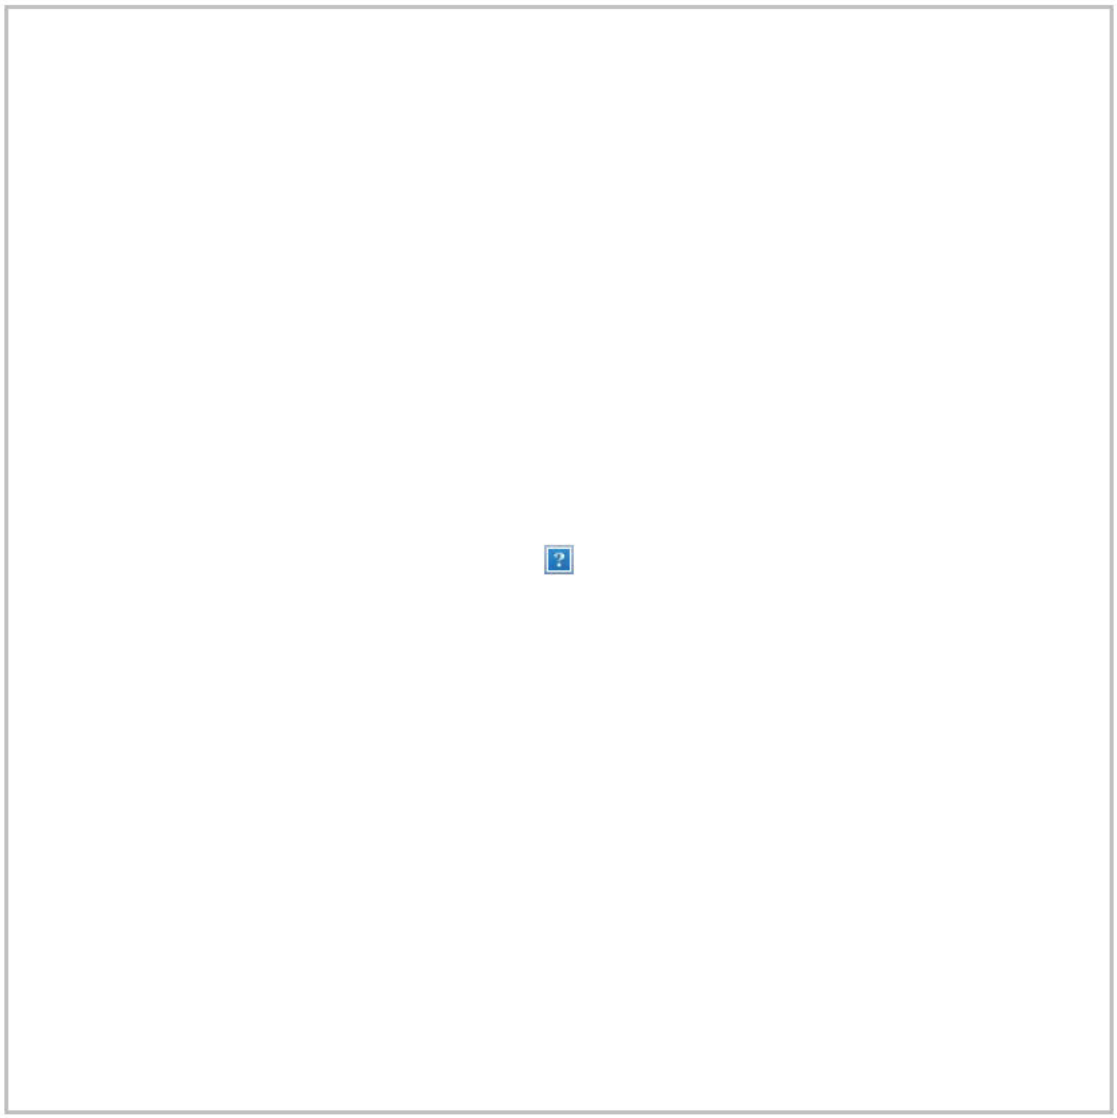
The Absurdities of the Job: Managing New Recruits' Expectations

New recruits to law enforcement agencies can come with unrealistic expectations, and it's up to departments to prepare them for the realities of the job ahead of them.

Review: Gun to Have Against a Charging Target

Despite the power of the 10mm cartridge, the Glock 29SF was easy to handle, comfortable to shoot and delivered accurate fire.

The Blurring of Body Armor vs Tactical Wear



A look at how body armor carriers have evolved to be more comfortable and healthier for the officers working 10-plus hour shifts.

How to Catch A Criminal: A Messy Separation Part I

This month, how a wife's scheme tears her marriage apart, literally.

NEW PRODUCTS

Subject: ALPR Read Time Verification
Date: Wednesday, November 8, 2023 1:26:50 PM

Hi Israel and team:

Prior to the system shut down in 2020, we understand that the system upload time for all reads in the system at the time of the shut down was preserved. We've been asked to assist with introducing a read in court from that time period, and we would like to check the system upload time for that read. Are you still able to access and check that data? We are told it was held by Neology.

Respectfully,

Noah

Subject: Cops save burglar shot by homeowner; LEO details burning car rescue
Date: Wednesday, February 1, 2023 1:34:44 PM

February 1, 2023 | View as webpage | Too many emails? Update Subscription Preferences

Dear Police1 Member,

Law enforcement officers are routinely exposed to highly stressful and potentially traumatizing events that can have lasting effects on their mental health. Unfortunately, the stigma of seeking mental health treatment among police and public safety personnel remains strong. Moreover, the prospect of talking to a therapist often conjures up fears of being evaluated by someone who doesn't understand the job.

Some agencies are fighting this stigma with a new program: mandatory annual mental wellness visits. Lexipol's upcoming webinar will explain what mental wellness visits are, how they can help reduce the stigma around mental health and how law enforcement agencies can develop a program.

Click here to reserve your seat.

Stay safe,

Connecting the dots from Genetec

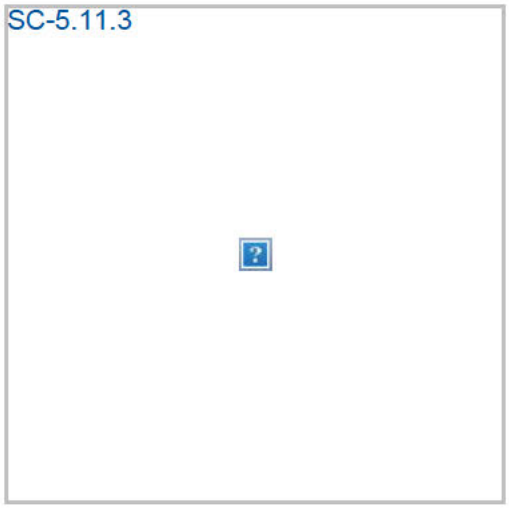
Hi Debora,

Everything you ever wanted to know about the Industrial Internet of Things (IIoT) is here! We even included real-life customer examples to give you ideas about how your team can connect IIoT sensors to get more from your physical security system.

Happy reading,



Julie Cadieux, **Senior Editor**

Subject: DRAFT/NOTES
Date: Thursday, October 12, 2023 4:55:22 PM

Hi John,

There were a number of changes to the policy in this update, and the organization of the document was changed to the point where a version to version comparison is not particularly illuminating. To help with this, here are some of the highlights:

Authorized/Prohibited Uses

- Revised authorized uses to emphasize the Department's prioritization of ALPR use for serious public safety and homeland security matters
- Added authorized use for motor vehicle pursuit follow-up, due to frequent pursuit termination for public safety and de-escalation
- Added explicit restriction against use for immigration enforcement

Legal Considerations

- Added section on legal considerations to address McCarthy case law

Search Procedures

- Revised section to provide clear guidelines on search justification & documentation
- Added requirement to limit searches to be reasonable and consistent with the geographic and temporal needs of the incident or investigation
- Added clear authorization for Fusion Center staff to deny overly intrusive or improper requests

Manual Hotlist Entries

- Reduced maximum expiration time from 1 year to 30 days, with built-in automatic expiration to prevent user error or misuse
- Added requirement for supervisory approval, unless exigent circumstances
- Added notice to give special attention to rental and short-term use vehicles and incidents that may be quickly resolved

Use Non-Departmental ALPR Systems:

- Added requirement that limits access to any outside systems

- Added cautionary notice on different technology/retention of other systems

Other Miscellaneous Updates:

- Added requirement that user training must include discussion of privacy considerations and best practices
- Improved and clarified section on verifying LPR hits prior to taking enforcement action
- Added that retained LPR data does not include any video or audio recordings or intentional photos of persons
- Added notice/requirement of system time verification protocols to ensure that accurate data can be confirmed and inaccurate data can be identified

FREE WEBINAR: NO TIME FOR DOWNTIME

Monitor the Health of IP Connected Devices and Minimize Downtime with FINDER Virtual Technician

DATE/TIME: Thursday, June 15, 2023 - 2:00pm EST

What happens when your field hardware devices go down? Whether it's a natural disaster or a system failure, no time is a good time to lose access to timely data that can be imperative in your investigations. FINDER Virtual Technician (FVT) is a web-based application that allows system administrators and authorized users to view the current status and health of their IP-connected ALPR, surveillance, and communications equipment in the field. Whether you have fixed or trailer-mounted systems, FVT monitors all the key hardware and software components of your security intelligence portfolio.

FINDER Software Solutions invites you to join them for a free webinar. We will discuss the following:

• Overview of real-life incidents. What could the outcome have been if they had FVT?

• Live demonstration of FVT that will show you how to limit field visits with customized monitoring and alerting.

FREE WEBINAR: NO TIME FOR DOWNTIME

Monitor the Health of IP Connected Devices and Minimize Downtime with FINDER Virtual Technician

DATE/TIME: Thursday, June 15, 2023 - 2:00pm EST

What happens when your field hardware devices go down? Whether it's a natural disaster or a system failure, no time is a good time to lose access to timely data that can be imperative in your investigations. FINDER Virtual Technician (FVT) is a web-based application that allows system administrators and authorized users to view the current status and health of their IP-connected ALPR, surveillance, and communications equipment in the field. Whether you have fixed or trailer-mounted systems, FVT monitors all the key hardware and software components of your security intelligence portfolio.

FINDER Software Solutions invites you to join them for a free webinar. We will discuss the following:

• Overview of real-life incidents. What could the outcome have been if they had FVT?

• Live demonstration of FVT that will show you how to limit field visits with customized monitoring and alerting.

FREE WEBINAR: NO TIME FOR DOWNTIME

Monitor the Health of IP Connected Devices and Minimize Downtime with FINDER Virtual Technician

DATE/TIME: Thursday, June 15, 2023 - 2:00pm EST

What happens when your field hardware devices go down? Whether it's a natural disaster or a system failure, no time is a good time to lose access to timely data that can be imperative in your investigations. FINDER Virtual Technician (FVT) is a web-based application that allows system administrators and authorized users to view the current status and health of their IP-connected ALPR, surveillance, and communications equipment in the field. Whether you have fixed or trailer-mounted systems, FVT monitors all the key hardware and software components of your security intelligence portfolio.

FINDER Software Solutions invites you to join them for a free webinar. We will discuss the following:

• Overview of real-life incidents. What could the outcome have been if they had FVT?

• Live demonstration of FVT that will show you how to limit field visits with customized monitoring and alerting.

FREE WEBINAR: NO TIME FOR DOWNTIME

Monitor the Health of IP Connected Devices and Minimize Downtime with FINDER Virtual Technician

DATE/TIME: Thursday, June 15, 2023 - 2:00pm EST

What happens when your field hardware devices go down? Whether it's a natural disaster or a system failure, no time is a good time to lose access to timely data that can be imperative in your investigations. FINDER Virtual Technician (FVT) is a web-based application that allows system administrators and authorized users to view the current status and health of their IP-connected ALPR, surveillance, and communications equipment in the field. Whether you have fixed or trailer-mounted systems, FVT monitors all the key hardware and software components of your security intelligence portfolio.

FINDER Software Solutions invites you to join them for a free webinar. We will discuss the following:

• Overview of real-life incidents. What could the outcome have been if they had FVT?

• Live demonstration of FVT that will show you how to limit field visits with customized monitoring and alerting.

ELSAG Radar Trailes

Find Grant Money to Pay for ELSAG® Automatic License Plate Reader Technology

We have partnered with PoliceGrantsHelp.com to help you access government grant dollars

ELSAG Plate Hunter ALPR systems bring incredible efficiencies to real-time policing, security and investigations. Our solutions include fixed, mobile, solar-powered, video-camera and custom plate readers. Each is purpose-built to provide maximum performance for the lowest investment to effectively aid your law enforcement missions. These force-multiplying systems are ideal for:

- Recovering stolen vehicles and license plates
- Removing unregistered vehicles and unlicensed drivers from roads
- Finding missing persons
- Finding vehicles suspected of involvement in unlawful activity
- Parking management and enforcement
- Collecting criminal intelligence
- Permit validation and tolling
- Collection of traffic data

Date: Wednesday, September 6, 2023 10:15:00 AM

Hi Elly,
I saw you weren't on here. Do you know if we're getting access to LEARN?
It looks like there is training below (I wonder if they can get them to stay past 3pm) and everyone will have to refresh themselves of TRF-11, especially the section below on Non-departmental ALPR Systems.

Use of Non-Departmental ALPR Systems
In the course of their official duties, members may contact other law enforcement agencies to request assistance with information, records, or data from non-departmental ALPR systems.
Supervisors and analysts assigned to the Commonwealth Watch Center/Commonwealth Fusion Center and the ALPR Administrator may access non-departmental ALPR systems for official law enforcement purposes as authorized by this policy. Other members, through their position with the Department, shall not obtain accounts with non-departmental ALPR systems unless authorized by the Division Commander of the Division of Homeland Security and Preparedness.

Members shall be mindful that non-departmental ALPR systems may use different technology, retention, and quality assurance standards than the Department's ALPR system. Members shall be mindful to preserve, export, or obtain copies of records or reports that are of known relevance to an incident or investigation prior to the expiry of the records.

Good Afternoon,

We are meeting with Motorola on 9/14/2023 @0900HRS to approximately 1500HRS at GHQ HSOC. This will be a training given by Motorola in regards to the ALPR System "LEARN". Moving forward, this training will be mandatory for access to the system. There is currently no tentative date for a second training at this time. We strongly recommend that anyone in your unit who has access to, or uses the ALPR system in their current job title attend this training.

Respectfully,
Ryan

Subject: Fw: Language Draft
Date: Thursday, March 2, 2023 11:11:22 AM

The Massachusetts Supreme Judicial Court has recognized that individuals have a reasonable expectation of privacy in the whole of their public movements (see *Commonwealth vs. McCarthy, 484 Mass. 493*). While the SJC indicated that the limited use of ALPR does not infringe upon a constitutional right, and therefore does not require legal process, the widespread or long-term use of ALPR may be sufficiently detailed to invade a reasonable expectation of privacy. Members should in active criminal investigations that do not involve exigent circumstances should be reviewed with a prosecutor of jurisdiction in the investigation for review of the potential necessity of a search warrant.

Sir, this is what I had in a draft (it is in the one I sent a few weeks ago) but was not in the one I sent them yesterday:

The Massachusetts Supreme Judicial Court has recognized that individuals have a reasonable expectation of privacy in the whole of their public movements (see *Commonwealth vs. McCarthy, 484 Mass. 493*). While the SJC indicated that the limited use of ALPR does not infringe upon a constitutional right, and therefore does not require a search warrant or other legal process, the widespread and long-term use of ALPR to investigate an individual may amount to a constitutional violation.

Combining this with their suggestions, it could look like:

The Massachusetts Supreme Judicial Court has recognized that individuals have a reasonable expectation of privacy in the whole of their public movements (see *Commonwealth vs. McCarthy, 484 Mass. 493*). While the SJC indicated that the limited use of ALPR does not infringe upon a constitutional right, and therefore does not require legal process, the extensive or long-term use of ALPR in active criminal investigations that do not involve exigent circumstances should be reviewed with a prosecutor of jurisdiction in the investigation for review of the potential necessity of a search warrant.

I'll review McCarthy again for other thoughts.

Subject: RE: MSP Request for Flock Subscription

Hi Gina:

I will be running point on the Flock subscription issue for GLO. Can we set up a time for a short briefing on this? Specifically, I'm interested in learning more about MSP's need for/objectives in using Flock, and your analysis with respect to how the use of this type of system would comport with the analysis set forth by the SJC in *Commonwealth v. McCarthy*, 484 Mass. 493, 505-508 (2020). This

will require some explanation as to the capabilities of the cameras used by Flock, the retention for data captured, etc. *See id*. at 508. It would be helpful for our Policy and Leg Affairs people (copied) to be in the room for this briefing so that we can all think collaboratively about this.

Thanks,

DZK

Subject: RE: MSP Request for Flock Subscription

Hi Jesse,

There's no specific timeline for this, but this is also related to a request that MSP/EOPSS made to MassDOT about hanging LPR cameras on MassDOT infrastructure. You may recall that you connected me with MassDOT attorneys over the summer about this. [redacted: G.L. c. 4.sec. 7.cl.26 (n)(security); G.L. c. 4.sec. 7. cl.26(f)(investigative)]
[redacted]
MSP has money, which needs to be spent this FY, that they would like to spend on those LPR cameras if MassDOT allows use of their gantries and structures—they would need to make those orders in the next few months.

In my mind, I see these two issues as related, so I wanted to raise that background. So, no timeline for Flock, but there is one related to the request to MassDOT. I would also note that this is a priority for MSP and I would also echo and support that sentiment at the EOPSS level.

Hope that helps.
Gina

Subject: MSP Request for Flock Subscription

Good Afternoon Jesse,

Attached for your consideration is a brief memo outlining MSP's request to obtain a subscription to Flock – a company that operates ALPR cameras throughout the state. Gina may have flagged this issue for you, but regardless she asked that I send it up for your (or your team's) review. It might make sense to have a brief meeting after you have a chance to take a look at the memo. We're happy to address any questions or concerns.

Thank you,

John Melander

Subject: RE: Quote for upgrades and repairs

Noah,

Thanks for all your efforts to help keep these systems up and running. So you are saying that the 2 brand new systems installed last September are both broken now and not covered under warranty to service them?

The product warranty does not cover service. I believe that we tried to include it, but the grant rules prohibited including the service package with the purchase. These units require a software update and general routine service from a technician, and despite some issues with the hardware in one of them, which was covered under warranty, I believe they can be back in service when that update is completed.

As of last November we had 9 systems operational. Do you have an updated spreadsheet that show the assignment and status of each?

The spreadsheet for the DFS units is up to date as to the general status of the units. Some of the units which were operational last year are older models (SX3s), and these no longer meet the standards to use with the system. There are four systems that meet the standard (SX4s), including the two new ones and two somewhat older ones that were reinstalled last year as hand me downs from CVES. The latter two have experienced failures of various components and require on site service. I believe we have the necessary parts for the repairs.

I also understand that these systems never received license suspension data from the RMV as was required by the grant agreement.

I'm unaware of any grant requirements stipulating this. Nonetheless, it was certainly a goal and we have been working with CJIS to get that set up for the traffic programs units. The new file was built, and CJIS has been working with the vendor to find a way to transfer and upload the file, which so far has not been resolved. This project also took a bit of a backseat since the units are off-line.

Based on all these facts I am extremely hesitant to ask for any additional funds towards these systems. You were looking at another vendor with a more reliable system, what is the status of that?

I would not fault you for that hesitation. These systems has proven complicated and time consuming to keep operational due to various hardware and software challenges. However, it's fair to say that the four units that are serviceable would be effectively abandoned if it were decided not to invest any further in them. In this case, some time could be bought with small money while future options are reviewed, such as a regular service package. These units will never be maintenance cost free as long as we seek to keep them running correctly. We are continuing to explore options, which we can discuss further on the phone if you'd like.

Perhaps we could have a conference call on Wednesday or Thursday to discuss?

We should be available for a call Wednesday between 9 and 10 AM and 12 and 3 PM. If that doesn't work Thursday morning may work as well.

Subject: Re: Quote for upgrades and repairs

Lt Bernstein,

Following up on the DFS LPRs. First a heads up: Sergeant Ryan Walczak of the Technical Services Unit is now the ALPR Administrator for the Department, and I am currently bringing him up to speed on the various aspects of the program.

Second, there are currently four cruisers in DFS (excluding CVES) which have ALPR systems which should be serviceable going forward. The older processors are no longer useable due to their age and capabilities. As these older cruisers are deadlined, the systems can be removed and will not be reinstalled.

All four of the newer units are currently out of service pending updates/service. Attached is a quote to service them. I also had him update the quote to include installing a system into a cruiser, which should allow us to use other equipment that we currently have available but not in service.

Please advise if you would like to write the request to fund these or if you would like us to.

Respectfully,

Noah

CAUTION: This email originated from a sender outside of the Commonwealth of Massachusetts mail system. Do not click on links or open attachments unless you recognize the sender and know the content is safe.

Dear Keri,

Hope this email finds you well.

I have been attempting to contact you several times in the past especially in my last mail on 2nd May'23 which elaborated our GeoShield RTCC Solution:

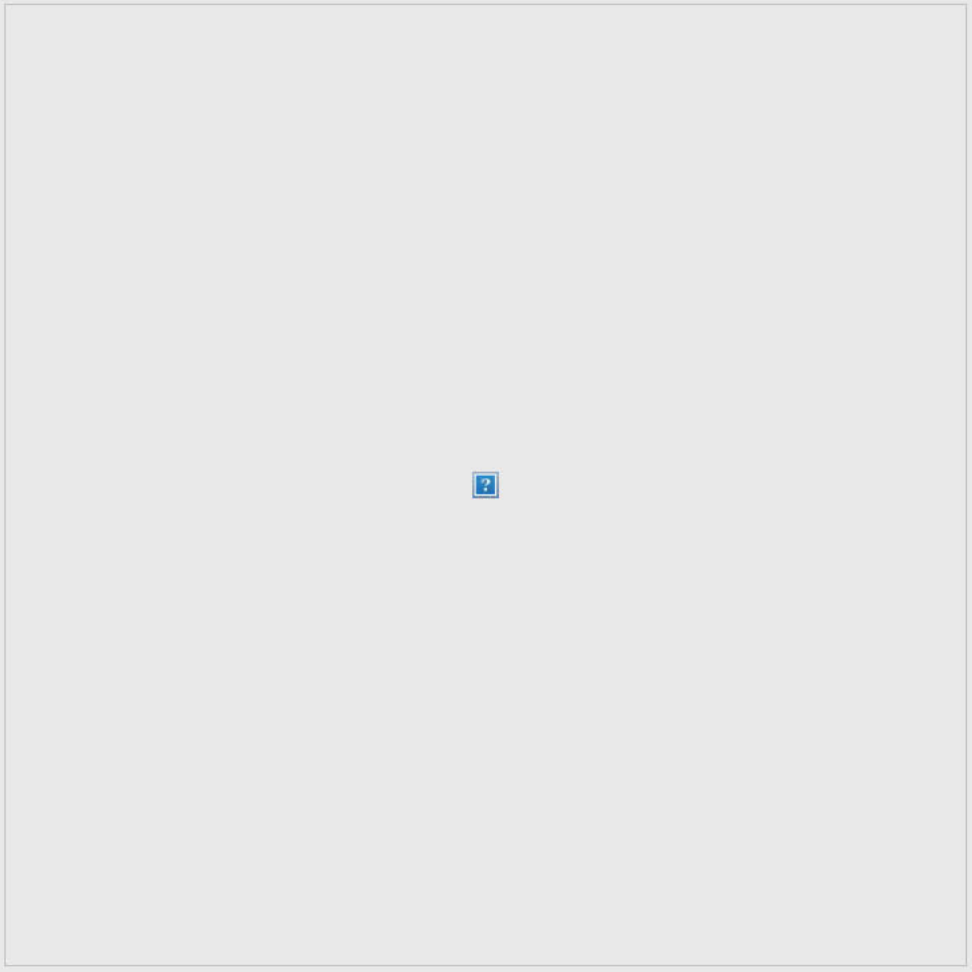
1. Uniquely connects multiple data sources like CAD, RMS, AVL, ALPR, etc.
2. Re-Designed Dashboard for Immersive Experience & Quick Access.
3. City Monitoring and Situational Awareness.
4. Advanced Mapping and Spatial Analytics.

My purpose in reaching out to you today is to inquire whether you anticipate a need for the RTCC Solution mentioned above within coming years.

Would like to offer our assistance by providing you a one-on-one interactive session with our experts to give you a better understanding of the potential scope of the Real-Time Crime Center initiatives for 2023-2024.

To facilitate this, would propose scheduling a call at a mutually convenient time.

Look forward to hearing from you soon.



Thank you.

Cheers,
Arunima Choudhary

Dear Police1 Member,

Welcome to this special edition of the Police1 member newsletter, dedicated to the complex issue of police response to active shooter incidents.

Active shooter incidents are unpredictable and evolve quickly. These high-stress situations require decisive AND rapid responses. Your commitment to ongoing training will help you to react swiftly, reduce casualties, neutralize threats and manage the aftermath more efficiently. Preparation today could make the difference between life and death tomorrow.

In today's newsletter, we explore a variety of approaches, tools and training utilized by police departments across the nation and share an inspiring story of a Massachusetts sergeant who single-handedly stopped an active shooter. We also take a retrospective look at several active shooter incidents. Through this analysis, we aim to understand what worked and what didn't, and how we can learn from these events to better prepare our response.

We hope this newsletter provides not only crucial information but also provokes thoughtful discussion. It's through continued dialogue, training and preparedness that we can collectively aim to handle these challenging scenarios more effectively.

Stay safe,

— *The Police1 Team*

PATROL RESPONSE

Breaching tools for every officer

By Philip Paz

The time has come for all law enforcement agencies to greatly expand their breaching tools and related training programs

Ballistic shields can improve officer safety

By Todd Fletcher

It's unacceptable to make patrol officers wait for a supervisor or SWAT

officer for a ballistic shield, so let's properly equip the first officers to arrive on scene

Patrol is SWAT during an active killer event

By Warren Wilson

Officers need to be trained to that level of response – and SWAT officers are the ideal training resource

How a Mass. sergeant singlehandedly stopped an active shooter

By Lt. Dan Marcou

"Train to the point where your training automatically kicks in when the situation starts," says Sergeant Nick Bettano

BOSS4 – Managed Service ALPR Solution

Intuitive searching and analytics, including powerful map-based, multi-location, searching capability. Our MANTIS 4-D Vehicle Recognition solution provides rich data mining capabilities to find the vehicles you are looking for.

From: Pack, Noah (POL)
To: Cyr, Mark (POL)
Subject: Language Draft
Date: Thursday, March 2, 2023 11:09:41 AM

Sir, this is what I had in a draft (it is in the one I sent a few weeks ago) but was not in the one I sent them yesterday:

The Massachusetts Supreme Judicial Court has recognized that individuals have a reasonable expectation of privacy in the whole of their public movements (see *Commonwealth vs. McCarthy, 484 Mass. 493*). While the SJC indicated that the limited use of ALPR does not infringe upon a constitutional right, and therefore does not require a search warrant or other legal process, the widespread and long-term use of ALPR to investigate an individual may amount to a constitutional violation.

Combining this with their suggestions, it could look like:

The Massachusetts Supreme Judicial Court has recognized that individuals have a reasonable expectation of privacy in the whole of their public movements (see *Commonwealth vs. McCarthy, 484 Mass. 493*). While the SJC indicated that the limited use of ALPR does not infringe upon a constitutional right, and therefore does not require legal process, the extensive or long-term use of ALPR in active criminal investigations that do not involve exigent circumstances should be reviewed with a prosecutor of jurisdiction in the investigation for review of the potential necessity of a search warrant.

I'll review McCarthy again for other thoughts.

Respectfully,

Noah

Dear Kristine,

Hope this email finds you well.

I have been attempting to contact you several times in the past especially in my last mail on 3rd May'23 which elaborated our GeoShield RTCC Solution:

1. Uniquely connects multiple data sources like CAD, RMS, AVL, ALPR, etc.
2. Re-Designed Dashboard for Immersive Experience & Quick Access.
3. City Monitoring and Situational Awareness.
4. Advanced Mapping and Spatial Analytics.

My purpose in reaching out to you today is to inquire whether you anticipate a need for the RTCC Solution mentioned above within the next two years.

Would like to offer our assistance by providing you a one-on-one interactive session with our experts to give you a better understanding of the potential scope of the Real-Time Crime Center initiatives for 2023-2024.

To facilitate this, would propose scheduling a call at a mutually convenient time.

Look forward to hearing from you soon.

Thank you.

Cheers,

1. Active Shooter Preparedness

Reply to Group Online | Reply to Sender Online

Apr 24, 2023 7:35 PM
Gerald G Wilkins

One of the questions I hear most often is, "how do I prepare my organization to respond to an All Hazard event:. I believe researching best practice is always a good place to start. FEMA classifies Active Shooter events as ALL Hazard events. So, I summarized the FEMA POETE framework as a potential good place to start.

POETE (Planning, Organization, Equipment, Training, and Exercise) is a framework used in emergency management and disaster response to ensure effective preparedness and response

activities. Here's how you can use POETE:

1. Planning: Develop a comprehensive emergency response plan that outlines the roles and responsibilities of all parties involved in the response effort. ***Identify potential hazards and risks, develop a communications plan, and establish procedures for resource allocation and coordination.***
2. Organization: ***Establish an organizational structure for your emergency response team, including a clear chain of command and designated roles and responsibilities for each member.*** This ensures that everyone knows their role and what they are responsible for during an emergency.
3. Equipment: ***Make sure that all necessary equipment and resources are available and ready for use.*** This includes communication devices, personal protective equipment, medical supplies, and vehicles, among others. Regular maintenance and testing of equipment should also be done to ensure that they are in good working condition.
4. Training: Ensure that all team members have the appropriate training and knowledge required for their roles. ***This includes training on emergency response procedures, the use of equipment, communication protocols, and the identification of potential hazards and risks.***
5. Exercise: ***Conduct regular training exercises to test and evaluate the emergency response plan and identify areas for improvement.*** This ensures that team members are prepared and can work together effectively in an emergency situation.

By utilizing POETE, organizations can better prepare for and respond to emergencies and disasters, ultimately helping to mitigate the impact on people and property.

If you are not sure if you have properly prepared for a All Hazard event at your facility simple take the highlighted statements and pose them as questions to your Security/Risk Management team.
I hope this was helpful!

4. Law enforcement recruitment

Reply to Group Online | Reply to Sender Online

Apr 24, 2023 2:04 PM
Dwayne M Gulsby

Police departments are coping with critical staffing shortages and struggling to fill their ranks. Which leaves those serving to work long hours and extra overtime to cover for the shortages.

The main reasons for the recruitment and retention crisis are related to multiple social and political forces, including generational

differences and a negative perception of policing. Just about every police department is looking for the same group of talented motivated individuals.

How do we turn the tide and shake off the negative perception to make the profession attractive to a new generation? Or are we at a new stage that must be adapted to with lower resources, less services and longer wait times?

Kevin Stranahan

Hello Dwayne

It's a great question. At the local level, I can say that some solutions can involve revisiting police-community partnerships and community relations. I attend my local Compstat meetings very other week and the NHPD is trying to return to many of these initiatives, even despite their short staffing. Much of it can also involve salary equity. In 1997, my starting salary with the NYPD was $27,838. More than twenty five years later, that same starting salary is now only around $42,500. Here in CT, some departments also did away with defined pension plans, which resulted in top talent leaving for other agencies.

The discussion has also (of course) impacted healthcare. In speaking with a CEO from Nuvance Health last week, she admitted to me having to resort to recruiting clinical staff from overseas in order to mitigate attrition in healthcare-critical positions.

The situation that you wrote about is further negatively impacted by the difficulty that the private sector has faced with hiring and retaining guard staff. This variable makes the dilemma more complex.

Salvatore A D'Agostino

So I put a lot of those cameras in toll booths and having a chain of custody and access control to the video makes a big difference if you are talking about evidence. Also be clear about the fact that the area is under surveillance, I am in the business and big proponent of signs that convey required and useful notice. Camera selection, leasing, lighting will depend, per usual on the scene conditions. And as mentioned by@Michael A Silva these are only a piece of the security system.

Traffic flow, lighting (sensor triggered, even a live display and saying that recording is taking place are some of the other considerations besides the sign. The sign itself should not simply say "area under surveillance", but also provide other useful information about applicable laws and also a point of contact, so that it is understood that there is something/someone responsible behind the camera.

PS, cameras have gotten a lot better wrt performance/price.

Subject: Deterrent value of Cameras at the entrance/exit of a Neighborhood.

A hot topic for many Neighborhood Homeowner Associations (HOAs) is the deterrent value of surveillance cameras at the entrance/exit to the HOA neighborhood. The questions are usually framed in terms of non-operating (i.e., fake) cameras being the most inexpensive but may carry liability issues, real cameras that provide low quality video of little evidentiary value in capturing and convicting a perpetrator, versus something like the more expensive License Plate Cameras (LPCs) that require well planned placement to actually capture the License Plate (sometimes requiring more cameras than originally anticipated and therefore at an increased cost because of performance design requirements).

I have even heard HOA members claim that since there was a break-in, if the HOA does not do something to improve security and there is another break-in the HOA can be sued for failing to act to improve security. I dismissed this as overreach. Even though an HOA is incorporated, it is different than a business that does have an obligation to act because they are inviting people into their establishment. Adding security to a public road is not an obligation of the HOA.

It is over 20 years since I considered this issue, so I am looking for any recent studies or standards.
My previous assessments and current opinion generally come down to the following:
1. Fake cameras are generally a bad idea because they do not actually provide anything of value and carry a liability issue (even if small, it outweighs the nearly nonexistent deterrent value).
2. Back when I previously looked at this issue, the average camera systems gave low quality images, and the recordings (often analog) made things even worse. The evidentiary value might point law enforcement in a direction (e.g., color of vehicle, maybe vehicle make and model, etc.). Unless the surveillance system was well designed, details were hard to observe.
3. Today we have LPCs that can easily capture the license number (sometimes

requiring vehicle information for definitive capture) and a toll bill is sent to the vehicle owner. This indicates a high evidentiary value, but again requires good system design. Its deterrent value will follow a history of effective use by law enforcement. If it is not effective in identifying perpetrators (or at least their vehicles) its deterrent value will be low just as it is with old analog cameras.

I still believe this today, and that the ultimate answer is in the cost/benefit. Do the HOA "members" want the benefit promised at the cost to achieve it.

Thank you all, in advance, for your time at weighing in.

For all ASIS members, Michael's observations on a better path to more effective security can be best understood, for all security practitioners from entry level to CPP, by spending 3.5 hours garnering the ASIS Enterprise Security Risk Management ESRM certificate. I believe all ASIS members, including CPP's, should use this educational opportunity to allow our membership to communicate more effectively when representing our profession. Overarching inclusive ESRM is our future.

Best, Felix

Cameras with out response or action are ... well that depends on the reason why the camera is being used... what is it supposed to be doing... why is it there? Proactive camera monitoring and response to incidents are the key. Utilizing a company or SOC that can monitor and respond to a situation seen on a camera IS the reactive means needed to deter future situations. The situation seen on camera IS happening, all that can be done once a situation happens is to respond and take action and make adjustments to deter a similar situation from happening again. A SOC, honestly like ours at St. Moritz Security Services, does that - responds accordingly. The key is the response, not the camera.

From: Michael Silva
Subject: Deterrent value of Cameras at the entrance/exit of a Neighborhood.

I am an independent security consultant that has done hundreds of security assessments at multifamily properties. I have written a book and many articles on the subject. It is my opinion that while cameras can be a useful tool in HOA settings, they are not a solution in themselves and should be only one small part of a comprehensive security program.

I feel that cameras have little deterrent effect. I have viewed countless hours of video recordings showing offenders blatantly committing crimes in front of cameras, some even laughing and waving their finger in the well-known manner towards the camera. Even if good quality recordings are obtained, the law enforcement agencies and prosecutors in many jurisdictions don't have the resources to locate, arrest, and prosecute criminals who commit minor property crimes. Most criminals know this and therefore have no reason to be deterred by a camera.

HOAs should review the extent of their security responsibilities with their legal counsel. While the responsibility for the security of individual homes is usually the responsibility of the homeowner, the security of common areas is often the responsibility of the HOA and failure to take adequate steps to protect these areas can result in lawsuits alleging "negligent security".

I feel that HOA's, like any other organization, need to take a comprehensive approach to security. This approach should include operational security measures (policies and procedures, training, security staffing, etc.), physical security (fencing, gates, lighting, landscaping, etc.), and security technology (access control, video surveillance, intrusion detection, etc.) I think that HOAs who put up a few cameras and expect these to solve all of their security problems are likely to be disappointed.

David,

I spent many years running the security programs at well over a hundred HOA's. During that time I maintained my certification as a manager of community associations (CMCA) through the Community Association Institute. I can tell you that your question regarding liability and case law is being asked and answered in that organization. I can tell you from legal seminars that I sat in (not legal counsel) that they gave many case law examples of HOA's loosing legal battles over the very situation you describe in your question, and that Duty of Care is a real thing for HOA's. If you want to hear for yourself, I recommend connecting with the professionals: www.caionline.org/Advocacy/LegalArena/Pages/...
Hope that helps.

Hi David,

You've brought up some valid points.

While an HOA is responsible for common area maintenance and enforcing community rules, they are generally not liable for criminal activity within the neighborhood. However, it is understandable that an HOA would want to take proactive measures to deter crime. Fake cameras offer little deterrent value and can create liability issues for the HOA.

One of the biggest challenges with implementing a surveillance system in an HOA is providing power and connectivity for retrieving the images. Once those issues are resolved, License Plate Cameras (LPCs) are relatively straightforward to use.

Another consideration is the requirement for front license plates in each state. Some states do not require or enforce front plates, which can affect camera placement and the number of cameras needed.

It's worth noting that A.I. based License Plate Recognition (LPR) is more forgiving than traditional Optical Character Recognition (OCR) based LPR. A.I. based LPR can capture plate images at difficult angles and even in low illumination. Additionally, A.I. LPR can provide searchable data such as plate number, state, vehicle make, body style, color, direction of travel, and more.

There are several A.I. LPR solutions available on the market, including Flock. However, these options can be expensive, with

leasing costing around $2,500 per year and installation and configuration ranging around $350 to $1,100 per camera. For an HOA, this cost can be prohibitive.

A more cost-effective option could be the Rekor Edge series, which allows the HOA to purchase the hardware and subscribe to the cloud-based A.I. service, Rekor Scout. Cellular and non-cellular models, as well as solar and battery kits, are also available.

Alternatively, individual homeowners could explore LPC/LPR options without involving the HOA.

I agree with Michael. In today's environment, offenders are actively performing in front of cameras. Rather than looking at it from a deterrent perspective, the key question should be on effectiveness of the system in identifying offenders for future apprehension and prosecution. Cameras should simply be one more layer of CPTED.

Jon Polly

Hello,

I am a security technology consultant with a background in policing and citywide surveillance.

Reasons for cameras in HOAs run the gambit, from those that want to "see" everything going on in the neighborhood to those that don't want to be "watched". Common areas such as clubhouses and entryways are typical locations where A) the HOA owns, and B) where crime is possible to happen; i.e. open areas where crowds can gather. This makes a good place to put cameras, but these are not deterrents to criminals as noted by

@Michael A Silva.

HOAs also tend to make decisions based on cost. Many times, the cameras that are installed are of fair quality cameras based solely on price and not quality. The outcome is that even in near-perfect conditions; the cameras are successful to get an image, but not one detailed enough to provide recognition or identification of a person. Recognition here is not a facial biometric, although it could be. Cameras should be placed in the clubhouse, areas where crowds congregate, and to view areas where someone could get hurt, i.e. playgrounds and pools. While there may be a function of deterrence, this is more for an insurance requirement in the event of damage or injury.

License Plate Capture (LPC) as noted has been marginally successful in HOAs. Most LPC cameras are standard 1080p (2MP) cameras running an Optical Character Recognition (OCR) software analytic. Unlike traditional Automated License Plate Recognition (ALPR) cameras which can run upwards of $25K before installation; LPC cameras are significantly cheaper at around $2K - $5K per camera. The reduced cost typically comes with reduced accuracy, using a traditional CCTV imager vs. a black-and-white imager. The LPC works best with slower speeds, in areas of good lighting, and in a closer field of view. Most HOAs have a slow-speed entrance, with plenty of lighting, and a short field of view for the camera to work. These are best-case scenarios and still, most LPCs have an 85% or less accuracy. Here are a couple of articles I have written on the subject of LPC cameras (www.securityinfowatch.com/video-surveillance/...) and (www.securityinfowatch.com/video-surveillance/...)

Property Management companies have little say in what systems they install but may point them to a system integrator. HOAs and Property Management company contracts fluctuate with the changing of the HOA board.

A few notes of specific things to help HOAs avoid problems others have faced.

Policy
To be successful, putting cameras in an HOA requires a well-crafted policy on how long the data will be retained, as well as how the data will be handled. Admirably, many HOAs want to share LPC and camera data with the local police department through a public-private partnership (P3). This is a great idea, however, there must be a defined policy in place on what and how that data is shared, so that those in the HOA who have an expectation of privacy do in fact have that privacy. Not that they are doing illegal actions, but that they give informed consent. The policy should be

reviewed by a legal expert to ensure that the HOA is legal in their actions to share data and that the HOA has a signed Memorandum of Understanding (MOU) with any law enforcement department they are sharing video with; even if a board member is a local law enforcement officer.

Depending on the types of analytics, i.e. facial recognition; a policy with an expressed opt-in by every resident and guest would be required.

Signage
Signage is critical. Signage is a public notice to all entering the property that they are under surveillance and that there is a limited expectation of privacy. It should be affixed to any LPC camera as well as any common areas that are in a camera field of view.

Lighting
Most cameras require a certain amount of ambient light. Law enforcement agencies want only color cameras, even cameras that have IR filters to turn black and white when the lighting is too low don't work because the person and their clothing are not identifiable. Installing cameras without the right amount of lighting is going to waste good money on a system that won't provide the detail desired. Better quality cameras may require less ambient light; the better the lighting, the better the camera image. LPC cameras specifically require a significant amount of ambient light.

Long Term Contracts
Speaking above about LPC cameras, buyer beware. Some of the LPC camera manufacturers (I won't disclose names), sell cameras at a simple yearly price but with required multi-year commitments. These multi-year commitments lock the HOA board in, even if the board changes. Many of these offer cloud services which again points back to data and data retention, locking the HOA board into needing to keep the service because of the data retained. As stated above, LPC cameras can be great tools, but HOAs can become a target of their own want to eliminate crime.

Security isn't just cameras
The term defense in depth still applies here. CPTED strategies, fencing, etc. are all still valid and should be considered as part of the security of the HOA, from multi-tenant buildings to housing neighborhoods.

Nelson Torres

I agree with your points regarding the limited deterrent effect of cameras and the need for a comprehensive security program in HOA settings.

However, nowadays, cameras can be used as a prevention tool. The advances in video analytics and artificial intelligence allow us to be more proactive than reactive. For instance, smart cameras linked to a video monitoring service can alert authorities when something is out of the ordinary or someone behaves suspiciously. The operator can then issue a warning and call the police immediately. The remote monitoring service can either trigger the warning manually or automate it.

Cameras are now more than just a means of recording video. They can be used in too many applications to prevent criminal activity, get business insights, and more.

Subject: Deterrent value of Cameras at the entrance/exit of a Neighborhood.

Interesting topic. Measuring the value of public security initiatives like the ones that are mentioned can only be done through crime and safety perception statistics.

I know of similar initiatives in North America and Europe like community policing, community surveillance patrols, security-related signs and CPTED that have been proven to have a deterrent value for criminal activities.

As for videosurveillance systems in public areas, I believe they are just part of a comprehensive security strategy that must take into account other factors. Sometimes such systems can turn into a problem if personal data treatment practices are not compliant with local regulations, etc.

Al Policano

The UL Fire Safety Research Institute (Home | UL's FSRI – Fire Safety Research Institute) has developed quite a few excellent articles/videos on the testing and research they have conducted in association with these types of batteries. The results are pretty staggering to say the least (thermal runaway can create extremely rapid fire growth resulting in much quicker flashover times, extremely difficult to extinguish, toxic fumes being produced, etc.). UL has been working very closely with multiple state fire officials including the FDNY and that partnership has recently resulted in a proposed ban of the sale of all e-bikes/scooters in the City of New York that are not UL-certified. Due to the population density, the amount of e-mobility devices in use, and the vast number of fires experienced already, NYC is taking steps to help ... but this of course is not some ultimate panacea.

Many other factors are at play including user responsibility and product use which will always be a variable. In particular with the impact and vibration that these batteries endure while employed in an e-bike/scooter, battery cells and their associated protection can degrade much more rapidly than the manufacturers have seemed to anticipate.

This topic needs to be treated with a much greater sense of urgency by federal, state, and local municipalities to address the current and future dangers associated with Lithium-Ion batteries, especially considering that these events have the potential to increase exponentially as more and more EV's and e-mobility devices continue to gain adoption with the public.

Subject: Electric Vehicle Fire Mitigation?

There have been a growing number of media reports about the issues that fire departments are having with electric vehicle fires that burn much hotter and longer. An interesting article from CNBC is pasted below. Where these are growing in popularity, the number of fires will likely grow.

Has anyone changed your facility response to a fire in one of these vehicles at one of your facilities, especially indoor parking facilities?

As a member of both NFPA and ICC, I know there are multiple conversations being held concerning EV's, ESS, and Lithium Ion batteries. Not only relating to FD and Security response but also manufacturing, storage, and recycling. Yes the Codes don't fully address all the issues we are facing but the groups are working hard to provide information in a timely fashion. Listed below are links for current resource material available.

Research background:

Matthew Beausoleil

Sami,

My field of expertise is Perimeter Fence Lighting and integration with security cameras, and motion sensors. Unsure if you are using our product currently, but I would be happy to help you if you want to reach out. mattb@cast-lighting.com

You can see our products in this video also
youtu.be/U024hiuIpiY

Short answer to your question regarding Color Temperature:

Security Lighting should be a balanced white light, 4400K - 4600K we found to be the optimal color temperature for nighttime camera color imaging and human eye facial recognition, 3000K is more of an architectural temperature for landscape lighting, and 5700K can make some colors appear bluer than they actually are, may mis represent colors under a camera.

The other factors that must be considered are things like "Uplight" this can be found in a BUG report, as lights with uplight that are below a camera can cause washout. And light distribution is also incredibly important, as often light is concentrated too much in a single area, and that makes calibration to a camera very difficult, causing washout. 4:1 is the gold standard as it follows the natural dissipation of light and prevents washout, 6:1 can cause washout problems.

I would love to talk to you about your project, we have worked with a few sites in Saudi Arabia.

Our products mount directly on the fence, with a 4:1 min max ratio for camera integration perfection, additionally for 240Watts you can install 25 of our Low power luminaires covering 150 Meters of fenceline, or 10 of our high powered luminaires which cover about 90 Meters. Cameras can achieve color imaging often at under 1 lux, while the NATO spec for fence lighting for Human Security is 5

Lux at 10 Meters, and in our testing, 2.5 lux is bright enough to read a news paper. All of our security luminaires are between 4400-4600K

We wrote the book on perimeter security lighting if you want a free ebook download check out the link below
cast-lighting.com/perimeter-ebooks/...

Thank you,

I feel it is a best practice, along with color coding. For example, one color for full-time employees, one for contractors, and another for visitors.

Although, there was a time when one of our managers tested the use of photos by creating a badge for himself with a completely different photo. He wore the badge for a week and was not questioned once.

Subject: Photos on access cards, good or bad for security?

This message was posted by a user wishing to remain anonymous

I'm struggling to understand the merits of putting employee photos on access cards for the purpose of security if it's not expected to be checked. If it's lost in the street, I can find it and target you. If it's forgotten at home, there's nothing for the guard to check. If it's in the employee's pocket all day, no one sees it. If it's around the employee's neck and no one's checking it, it's doesn't make a difference.

Any help here to agree or disagree would be great. I'm debating the point of introducing mobile phone as a card (has a digital photo, hard to loose, low environmental waste, works at every office and for traveling employees, easy to deactivate, etc.) instead of spending the time and dollars on photos on cards at every location.

Good Morning Michael,

I run security for 3 resorts in Myrtle Beach, South Carolina, about 900 rooms combined. We use Chargerback.com as our standalone L&F platform. They offer shipping through USPS, UPS and Fed Ex. The website is easy to manage. Their customer service and tech support are responsive. The one and only downside is they're a bit pricy. Another option is Ileftmystuff.com. Their prices are more reasonable and offer several different shipping options. Feel free to reach out to me to discuss 843-274-8846

Igor Keel

Hello Charles, I previously posted in your drone surveillance thread. Similarly, my recommendation is to evaluate cloud-based technology to potentially satisfy your ALPR requirements. In your situation, if an internet connection can be provided to existing cameras, their encrypted video feed can be extended directly to the cloud servers (public or private, your preference), for ALPR video post-processing with the option only to view the feed of recognized results as far back as you need, but also set customized alerts for preset plates, and perform textual search for previous results, with easy video event sharing abilities.

Per your request, Pros would be the ease of deployment to existing video security (no need to buy additional hardware or replace cameras), low monthly subscription fee to layer cloud-based intelligence, flexible video streaming requirements (the pictured camera in the example is an inexpensive 1 MP camera), extend to unlimited simultaneous viewing and administration stakeholders, and the only Con I can think of is that internet connectivity is required, though at least you can avoid the networking hassles of port forwarding or opening any firewall ports.

Igor Keel

Hello Anonymous poster, I believe what you're looking for are *webhooks*; alerts can be configured to trigger different hardware if your program allows settings up webhooks. Triggers can lead to automatic sequences programmed in popular solutions

such as Zapier and IFTTT. These services can make calls, send SMS, among many options, or trigger different hardware (often via a RasPi). It can be setup as simply or complex as you need it. For example, I have a sequence setup where when the predefined video intrusion is detected in my cloud cameras it triggers this smart outlet to turn on, which not only triggers on-site deterrence but alerts me by turning on certain lights. There are many similar *smart* devices to that plug which could also be useful. But if you simply want to be notified via SMS or an automated phone call, that could also be set up with a service like IFTTT, though be prepared to pay a service fee. I previously had the service call my phone in case my inbox received a predefined email and an automated voice read out the message which was emailed. Below is an example of the type of email which triggered the phone call. Latency must be prioritized if you want to receive the alerts in a timely manner, but in my case latency was sufficient as the platform delivered object-recognized alerts in sub-second latency and the call was made shortly thereafter.

alert

Alarm Notification by Email: Is it becoming more common for intrusion alarm activations to only be communicated by email? This may be better than no alarm at all; but it seems inefficient, and possibly ineffective (I.e. by the time I see the email on my phone, the burglary or intrusion is already well underway). Any comments or advice is appreciated.

Adding to the information on blurring for Google Maps. I read that other countries may or may not show the same blurring so you may wish to ask questions of Google Maps regarding that issue.

Hi Eric,

Echoing what Kristof posted: relatively easy to blur the facade of a building from Google Maps as long as you have the right to do so (e.g., you own the building). Redactions are permanent. You should also pursue other mapping services such as

Bing Maps.

I will definitely look into that. And of course as mentioned before. The example I gave was just for fun and we know it's just a mimic for now. But once the platform and the way you can input data is refined then the possibilities become quite staggering. We have software now that can look for insider threats and so on and if they'll continue to be effective once everyone has access to something like this is yet to be seen but it definitely feels like we're in the beginning of the next revolution for sure and I'm excited to see what comes next.

Shayne P Bates

Thanks for the thoughts Eric & others, it's an interesting topic to

me. I've been reading about ChatGPT for some time.

So far I've resisted jumping in to work with it, instead reading what others who are doing so have to say with their tests to leverage my understanding through their learning experiences and thoughts.

This approach is bearing fruit for me to understand the broader use cases and applications for the tool so far. What's even more interesting are the types of emergent AI tools and the various categories that they fit as perceived by the contributors.

In the case of ChatGPT, the comments also included whether it is the paid version or the freebie as both have different capabilities.

Along the way I've discovered an interesting FaceBook group entitled "ChatGPT Community". It has 224,000 members and growing. For those who want to join and see that in your feed, much of it you will want to scroll past, but several of these each day are an interesting read for education.

There are 3 images attached with this post. The first is a description about the group, while the second and third are images posted by others, which I found helpful. Remember, they are just opinions, not facts, but useful to see what others are saying.

All the best

From: Eric Davoine
Subject: ChatGPT and Security

Hello all,
I'm a bit surprised as I didn't notice any post on this topic so far (I may have missed one!). So... let's start!

I guess (hope!) you all heard about ChatGPT and it's an incredible AI based chatbot. I'm wondering who has already used/tried it and for which purpose.
So let's start. I asked several questions to the tool and I'm pleased to share its answers. You will see, regarding the Travel Security advices to Nigeria, the Building access control process or a Workplace violence program in Hospitals, that the outcomes are great! and it took an average of 3 to 8 seconds to produce them!
Of course, everybody can (and will, for sure !) criticize the lack of detail and precision. But bear in mind that the purpose of such a tool **is not** to give you an answer that you already know!

So, of course, there are some obvious caveats to take in consideration:
- time frame: the tool does not encompass 2022 data. So do not ask questions requiring such updates
- it's easier to work with threads as the tool keep the context for the following answers (if you plan to dig in a topic)
- and... a tool is a tool and should deserve a purpose... with a level of control!

I really thinks that the outputs incredible at this stage and I'm looking forward its results in 3 years ahead!

Any opinion? advice? Use case?

Best

Rafael Espinosa

Hi Charles,

There are several options when looking for an ALPR (automatic license plate reading) solution. The first and most obvious one is installing a specific number of videosurveillance cameras with ALPR software included. This solution works when you want only specific cameras to use ALPR without making your whole videosurveillance system have this capacity.

The second option is integrating an ALPR engine to your videosurveillance system as an “add-on”. This engine will identify license plate alphanumeric characters based on predefined algorithms that may vary from country to country (as license plates vary from country to country too). This feature may be used for all or part of your videosurveillance system depending on your needs.

As to specific solutions for ALPR, I believe that Genetec Autovu offers a good ALPR solution and advanced integration with other systems such as access control and intrusion detection, cartography, etc. However, the choice for the best solution shall depend on the scope of your project and the specific needs your organization may have.

A good systems integrator may be better suited to understand these needs and explain all the upsides and downsides of each solution.

Hope this is useful!

Felix A Giannini FPE

Charles,

I have used the Digital Watchdog LPR camera successfully. There are several important considerations including frame rate and camera angle. This is a link to the Digital Watchdog LPR Guide to LPR applications which applies to all brands.

I recommend using non exclusively distributed products so that as the end user you remain in control of the service of the product,

should you decided to change your vendor.

All camera manufacturing companies should be vetted for international watch lists, as some IP cameras and recorders are banned due to "back door" remote access.

I also recommend that all physical security systems be done in concert with a comprehensive ESRM program.

Best wishes,

Felix

Felix A Giannini FPE

These days, alarm notification (to the end user's internal responders) has many options including **phone call, text, email,** in any combination - and by each listed individual **and by SCADA**. Emergency responders are typically dispatched by a recorded phone call made by a qualified central station operator.

Personal Tip: Of critical importance is the "Zone Descriptor" for the individual alarm initiating point. This is often not given the thought it deserves. I believe carful choice *maximizing the allowable description characters* improves response and recovery! I call it "Concierge Monitoring" when zone descriptors go through a review process in an ESRM effort to improve system operability, response, (especially when the alarm if of a life safety concern) and recovery.

Happy to provide more information,

Felix

All,

This is a good discussion and I believe a protocol or Body of Knowledge (BoK) will be developed within our security field that will necessarily address some of the concerns you have already raised. I fear improper use by "unguided' security practitioners and HR professionals could open the door to liability suits depending on what action is taken by management.

As a professor, I am already seeing papers that I strongly suspect are not the students original work. Faculty have tools to check validity of content and plagiarism but ChatGPT (and others) opens a new concern. I am not certain yet how to challenge some of these students who I know did not write these papers. One of my mitigations last semester was to require all students always come to class with one of the "old school" blue, lined test booklets. I would give a writing quiz to be completed in class and collect the booklets. The embedded test here was to see how they write on their own so that I had a comparison. It is a lot of extra work and with foreign students whose native language is not English, it is even more difficult.

I thnk we hae a lot to consider on this topic and perhaps, am ASIS committee need to be formed and get everne ahead of the curve on this.

Cheers,

Reg

From: David Evans
Subject: ChatGPT and Security

Ive put ChatGPT through few scenarios now and one that i was interested in that will need some further investigation is using it to identify anomalies in transaction data. If we look at a typical insider threat metric such as 'irregular timings' it becomes clear that although its good, ChatGPT is not perfect.

Below are my prompts and the results. I generated hypothetical data.

David Evans: Below are the check-in and check-out times for and employee called John. Can you find any obvious anomalies?

8:50

17:15

8:02

17:00

8:00

16:50

9:15

17:16

8:14

22:10

8:03

17:50

8:01

17:10

8:15

17:00

7:50

17:01

8:50

17:02

8:02

17:06

8:14

17:20

8:14

23:01

8:14

17:00

ChatGPT:

Without additional context or information, it is difficult to determine any specific anomalies in the data. However, there are a few observations that can be made:

1. The check-in and check-out times generally follow a consistent pattern, with most of the times falling within a similar range.
2. The check-out time for entry 10 (22:10) is significantly later than the other check-out times. This could be a legitimate anomaly or a mistake in the data.
3. There are a few instances where the check-in and check-out times are only a few minutes apart (e.g. entry 5 and 6). While this could be legitimate if the

> employee was only at work for a short period, it is worth investigating further to ensure that the data is accurate.
>
> Overall, it may be helpful to review the data with the employee or their supervisor to clarify any discrepancies and ensure that the data is accurate. Additional context or information, such as the employee's work schedule or job responsibilities, could also be helpful in identifying any anomalies.
>
> **David Evans:** What were the times for entry 5 and 6?
>
> **ChatGPT:**
>
> Entry 5 was a check-in time of 8:00 and entry 6 was a check-out time of 16:50. This suggests that the employee was only at work for a period of 8 hours and 50 minutes, which could be legitimate depending on their work schedule or job responsibilities. However, it is worth investigating further to ensure that the data is accurate and that there are no discrepancies or anomalies.
>
> So you can see that although it picked up the general idea of what we were looking for it did make a few errors. But its a very interesting start

Subject: Active Shooter Preparedness

One of the questions I hear most often is, "how do I prepare my organization to respond to an All Hazard event:. I believe researching best practice is always a good place to start. FEMA classifies Active Shooter events as ALL Hazard events. So, I summarized the FEMA POETE framework as a potential good place to start.

POETE (Planning, Organization, Equipment, Training, and Exercise) is a framework used in emergency management and disaster response to ensure effective preparedness and response activities. Here's how you can use POETE:

1. Planning: Develop a comprehensive emergency response plan that outlines the roles and responsibilities of all parties involved in the response effort. ***Identify potential hazards and risks, develop a communications plan, and establish procedures for resource allocation and coordination.***
2. Organization: ***Establish an organizational structure for your emergency response team, including a clear chain of command and designated roles and responsibilities for each member.*** This ensures that everyone knows their role and what they are responsible for during an emergency.
3. Equipment: ***Make sure that all necessary equipment and resources are available and ready for use.*** This includes communication devices, personal protective equipment, medical supplies, and vehicles, among others. Regular maintenance and testing of equipment should also be done to ensure that they are in good working condition.
4. Training: Ensure that all team members have the appropriate training and knowledge required for their roles. ***This includes training on emergency response procedures, the use of equipment, communication protocols, and the identification of potential hazards and risks.***
5. Exercise: ***Conduct regular training exercises to test and evaluate the emergency response plan and identify areas for improvement.*** This ensures that team members are prepared and can work together effectively in an emergency situation.

By utilizing POETE, organizations can better prepare for and respond to emergencies and disasters, ultimately helping to mitigate the impact on people and property.

If you are not sure if you have properly prepared for a All Hazard event at your facility simple take the highlighted statements and pose them as questions to your Security/Risk Management team. I hope this was helpful!

Thank you for taking time to read the POETE summary I posted. With the liability associated with Hostile Events in the workplace failure to plan is not an option or defense. FEMA established Incident Command for dealing with the challenges associated with wildfires on the West Coast back in the late 60's. Incident Command is now the standard for responding to any "All Hazard" in the US and many countries around the world. When considering how to conduct a Threat Assessment the THIRA/SPR model which is covered in the FEMA CPG201 provides guidance in Threat Assessment process and assist in determining the GAPS by conducting an Stakeholder Preparedness Review (SPR). Planning and running drills can be done by following the guidance available thru Homeland Security Exercise and Evacuation Program (HSEEP). There are many "open source" documents that can assist in building resilience for any facility against losses and liability. Following industry "Best Practice" can prove to be a power tool for improving overall outcomes of catastrophic events.

Thank you for taking time to read the summary I posted. If you take a minute and analyze the formula below you can come up with some very insightful questions.

Risk Equation

R= Risk Outcome/Probability
T= What could Happen
V= What have we done or not done to protect our facility
I= What impact could this event have on our facility/people/reputation/share value
C= Countermeasures People/Process/Technology

Depending on the size of your system, it could be a number of

factors. Are you seeing lags with real time activity, trigger commands etc.? Or is it just laggy and sluggish to user input?

One of the first things to look at is the server architecture.

From: Kevin Stranahan
Subject: Law enforcement recruitment

Hello Dwayne

It's a great question. At the local level, I can say that some solutions can involve revisiting police-community partnerships and community relations. I attend my local Compstat meetings very other week and the NHPD is trying to return to many of these initiatives, even despite their short staffing. Much of it can also involve salary equity. In 1997, my starting salary with the NYPD was $27,838. More than twenty five years later, that same starting salary is now only around $42,500. Here in CT, some departments also did away with defined pension plans, which resulted in top talent leaving for other agencies.

The discussion has also (of course) impacted healthcare. In speaking with a CEO from Nuvance Health last week, she admitted to me having to resort to recruiting clinical staff from overseas in order to mitigate attrition in healthcare-critical positions.

Good morning, Dwayne

The 21st century presents new challenges for the law enforcement and public safety community because of the political climate, recent events and the COVID-19 Pandemic. The law enforcement and public safety community must adapt and improvise if we are to survive. First, we must identify the issues that impact those that we are trying to recruit/new generation. Second, Student loan/debt repayments and forgiveness programs are hot topics of debate. Third, The new generation is looking for room to grow/climb the ladder.

Moreover, the following can be marketed to the new generation;

1) "Tuition Reimbursement" coupled with "Room for Advancement" may be a motivating factor for the new generation,

2) Four (4) day work weeks can be marketed as work life balance,

3) Pensions

The following recommendations may assist with negative perceptions, job security, and make the profession more attractive to the new generation!

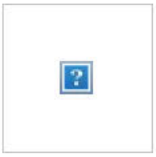
Subject: Law enforcement recruitment



Police departments are coping with critical staffing shortages and struggling to fill their ranks. Which leaves those serving to work long hours and extra overtime to cover for the shortages.
The main reasons for the recruitment and retention crisis are related to multiple social and political forces, including generational differences and a negative perception of policing. Just about every police department is looking for the same group of talented motivated individuals.
How do we turn the tide and shake off the negative perception to make the profession attractive to a new generation? Or are we at a new stage that must be adapted to with lower resources, less services and longer wait times?

Charles Jasper

Hey David, if I may chime in here

1. First and foremost, depending on the state or municipality these HOAs are in, people who are victims of crime or in traffic accidents outside these areas will subpoena the HOA for the footage, and when the camera is nonexistent, it opens up a can of worms nobody wants to deal with. In my corporate security days, that was a huge issue with some of our tenants. Additionally, there's a communication issue with the neighborhood. Residents need to know that these cameras either are, or are not proactively monitored (most likely the latter) and that they're for use in common area only. Furthermore, the cameras MUST NOT be capable, in any way, of violating the privacy of people in their own homes.
2. Correct, very few buildings or neighborhoods I've looked at have even remotely sufficient cameras and video monitoring systems, and they're just haphazardly thrown out there.
3. LPRs or LPCs have another privacy issue, and should only be used on gated communities.

Last but not least, signage! Clear signage that tells passersby they may be recorded by the system is a must.

From: David Olmstead
Subject: Deterrent value of Cameras at the entrance/exit of a Neighborhood.

A hot topic for many Neighborhood Homeowner Associations (HOAs) is the deterrent value of surveillance cameras at the entrance/exit to the HOA neighborhood. The questions are usually framed in terms of non-operating (i.e., fake) cameras being the most inexpensive but may carry liability issues, real cameras that provide low quality video of little evidentiary value in capturing and convicting a perpetrator, versus something like the more expensive License Plate Cameras (LPCs) that require well planned placement to actually capture the License Plate (sometimes requiring more cameras than originally anticipated and therefore at an increased cost because of performance design requirements).
I have even heard HOA members claim that since there was a break-in, if the HOA does not do something to improve security and there is another break-in the HOA can be sued for failing to act to improve security. I dismissed this as overreach. Even though an HOA is incorporated, it is different than a business that does have an obligation to act because they are inviting people into their establishment. Adding security to a public road is not an obligation of the HOA.
It is over 20 years since I considered this issue, so I am looking for any recent studies or standards.
My previous assessments and current opinion generally come down to the following:
1. Fake cameras are generally a bad idea because they do not actually provide anything of value and carry a liability issue (even if small, it outweighs the nearly nonexistent deterrent value).
2. Back when I previously looked at this issue, the average camera systems gave low quality images, and the recordings (often analog) made things even worse. The evidentiary value might point law enforcement in a direction (e.g., color of vehicle, maybe vehicle make

and model, etc.). Unless the surveillance system was well designed, details were hard to observe.

3. Today we have LPCs that can easily capture the license number (sometimes requiring vehicle information for definitive capture) and a toll bill is sent to the vehicle owner. This indicates a high evidentiary value, but again requires good system design. Its deterrent value will follow a history of effective use by law enforcement. If it is not effective in identifying perpetrators (or at least their vehicles) its deterrent value will be low just as it is with old analog cameras.

I still believe this today, and that the ultimate answer is in the cost/benefit. Do the HOA "members" want the benefit promised at the cost to achieve it.

Thank you all, in advance, for your time at weighing in.

Anthony Beattie

There are current studies that show cameras are no deterrent to crime, some show decreasing deterrence with offender age (ie, teenagers are the least deterred).
Apprehension, however, IS effective. So, as part of complete security package, cameras benefits are based off their capabilities.

K. Campbell

There is likely little to no deterrent value of cameras at the entrance/exist of a neighborhood.

I recently completed a risk assessment for an HOA (a large subdivision) and one of the main purposes of the assessment was to determine the deterrent value of the leased camera system. All but one of the installations were placed at the four entrances/exits to the subdivision. Based on police crime data for the subdivision, I found no evidence the camera system had deterrent value. In fact, when the HOA later requested I use crime data from before the camera system was installed (for a total of 11 years of crime data) to compare crime rates before and after the camera system's installation, I found that crime in the subdivision *increased* after the cameras' installation.

These findings are consistent with studies in the U.S. and elsewhere. The deterrent value of community cameras, including cameras owned and operated by police, is mixed at best. In some cases of police camera systems, crime *increased* after their installation. Some sources, including a DoJ-sponsored study:

1. University of Tennessee, Municipal Technical Advisory Service (MTAS), September 2016, *Is There Empirical Evidence that Surveillance Cameras Reduce Crime?* www.mtas.tennessee.edu/knowledgebase/...
2. The Urban Institute. September 2011, *Evaluating the Use of Public Surveillance Cameras for Crime Control and Prevention.* cops.usdoj.gov/RIC/Publications/cops-w0614-pub.pdf
3. Measuring the Effects of Video Surveillance on Crime in Los Angeles. CRB-08-007. Sacramento, CA: California Research Bureau. www.library.ca.gov/wp-content/uploads/crb-reports/....

Some folks in this discussion have mentioned these camera systems' value in *investigating* crime. For one, most wide-area cameras inherently have a low resolution due to their small focal lens. This results in resolution that's usually not suitable for recognition or identification of suspects. Most camera salespeople don't disclose these limitations to HOAs. It's even worse at night. In my risk assessment I included a real-world example of a video capture from the system at night after a serious crime. You can tell only that the subjects were two humans, even when they were only 30 feet away from the camera.

Finally, I find that homeowners have a significant overreliance and overconfidence in these community/neighborhood camera systems (again, many aren't aware of these cameras' limitations), and many homeowners take little, if any, responsibility for their own safety and security (home exterior lighting, landscaping, individual camera and alarm systems, etc.). In this recent risk assessment, I saw a direct correlation between several car thefts and non-existent landscaping (i.e., views of the street was completely blocked by tree branches and shrubbery).

From: Jon Polly
Subject: Deterrent value of Cameras at the entrance/exit of a Neighborhood.

Hello,

I am a security technology consultant with a background in policing and citywide surveillance.

Reasons for cameras in HOAs run the gambit, from those that want to "see" everything going on in the neighborhood to those that don't want to be "watched". Common areas such as clubhouses and entryways are typical locations where A) the HOA owns, and B) where crime is possible to happen; i.e. open areas where crowds can gather. This makes a good place to put cameras, but these are not

deterrents to criminals as noted by @Michael A Silva.

HOAs also tend to make decisions based on cost. Many times, the cameras that are installed are of fair quality cameras based solely on price and not quality. The outcome is that even in near-perfect conditions; the cameras are successful to get an image, but not one detailed enough to provide recognition or identification of a person. Recognition here is not a facial biometric, although it could be. Cameras should be placed in the clubhouse, areas where crowds congregate, and to view areas where someone could get hurt, i.e. playgrounds and pools. While there may be a function of deterrence, this is more for an insurance requirement in the event of damage or injury.

License Plate Capture (LPC) as noted has been marginally successful in HOAs. Most LPC cameras are standard 1080p (2MP) cameras running an Optical Character Recognition (OCR) software analytic. Unlike traditional Automated License Plate Recognition (ALPR) cameras which can run upwards of $25K before installation; LPC cameras are significantly cheaper at around $2K - $5K per camera. The reduced cost typically comes with reduced accuracy, using a traditional CCTV imager vs. a black-and-white imager. The LPC works best with slower speeds, in areas of good lighting, and in a closer field of view. Most HOAs have a slow-speed entrance, with plenty of lighting, and a short field of view for the camera to work. These are best-case scenarios and still, most LPCs have an 85% or less accuracy. Here are a couple of articles I have written on the subject of LPC cameras (www.securityinfowatch.com/video-surveillance/...) and (www.securityinfowatch.com/video-surveillance/...)

Property Management companies have little say in what systems they install but may point them to a system integrator. HOAs and Property Management company contracts fluctuate with the changing of the HOA board.

A few notes of specific things to help HOAs avoid problems others have faced.

Policy
To be successful, putting cameras in an HOA requires a well-crafted policy on how long the data will be retained, as well as how the data will be handled. Admirably, many HOAs want to share LPC and camera data with the local police department through a public-private partnership (P3). This is a great idea, however, there must be a defined policy in place on what and how that data is shared, so that those in the HOA who have an expectation of privacy do in fact have that privacy. Not that they are doing illegal actions, but that they give informed consent. The policy should be reviewed by a legal expert to ensure that the HOA is legal in their actions to share data and that the HOA has a signed Memorandum of Understanding (MOU) with any law enforcement department they are sharing video with; even if a board member is a local law enforcement officer.

Depending on the types of analytics, i.e. facial recognition; a policy with an expressed opt-in by every resident and guest would be required.

Signage

Signage is critical. Signage is a public notice to all entering the property that they are under surveillance and that there is a limited expectation of privacy. It should be affixed to any LPC camera as well as any common areas that are in a camera field of view.

Lighting
Most cameras require a certain amount of ambient light. Law enforcement agencies want only color cameras, even cameras that have IR filters to turn black and white when the lighting is too low don't work because the person and their clothing are not identifiable. Installing cameras without the right amount of lighting is going to waste good money on a system that won't provide the detail desired. Better quality cameras may require less ambient light; the better the lighting, the better the camera image. LPC cameras specifically require a significant amount of ambient light.

Long Term Contracts
Speaking above about LPC cameras, buyer beware. Some of the LPC camera manufacturers (I won't disclose names), sell cameras at a simple yearly price but with required multi-year commitments. These multi-year commitments lock the HOA board in, even if the board changes. Many of these offer cloud services which again points back to data and data retention, locking the HOA board into needing to keep the service because of the data retained. As stated above, LPC cameras can be great tools, but HOAs can become a target of their own want to eliminate crime.

Security isn't just cameras
The term defense in depth still applies here. CPTED strategies, fencing, etc. are all still valid and should be considered as part of the security of the HOA, from multi-tenant buildings to housing neighborhoods.

Sgt Pack,

Hope all is well. Just wanted to check in regarding the State's ALPR system. We have been trying to query the system several times over the past week but are not getting any data back. Is the system down or have there been any changes?

Thanks as always.

Subject: Re: ALPR Policy

Hi John,

To ensure that the Department has an up-to-date policy that reflects current law, best practices, and our public safety priorities, there were a number of changes in this update. The document was also reorganized, so a version to version comparison would not be particularly helpful. Here are some of the highlights:

Authorized/Prohibited Uses

- Revised authorized uses to emphasize the Department's prioritization of ALPR use for serious public safety and homeland security matters
- Added authorized use for motor vehicle pursuit follow-up, due to frequent pursuit termination for public safety and de-escalation
- Added restriction against use for immigration enforcement

Legal Considerations

- Added section on legal considerations to address McCarthy case law

Search Procedures

- Revised section to provide clear guidelines on search justification & documentation
- Added requirement to limit searches to be reasonable and consistent with the geographic and temporal needs of the incident or investigation
- Added authorization for Fusion Center staff to deny overly intrusive or improper requests

Manual Hotlist Entries

- Reduced maximum time from 1 year to 30 days, with built-in automatic expiration to prevent error or misuse
- Added requirement for supervisory approval, unless exigent circumstances
- Added cautionary notice to give special attention to rental and short-term use vehicles and incidents that may be quickly resolved

Use of Non-Departmental ALPR Systems:

- Added restrictions on access to outside systems
- Added cautionary notice on different technology/retention of other systems

Other Miscellaneous Updates:

- Added requirement that user training includes discussion of privacy considerations and best practices
- Improved section on verifying LPR hits prior to taking enforcement action
- Added that LPR data does not include any video or audio recordings or intentional photos of persons
- Added notice/requirement for time verification protocols to ensure that accurate data can be confirmed and inaccurate data can be identified

Please let me know if I can provide anything further.

Respectfully,

Noah

Hi John,

I am also unaware of any such EOPSS document. If it did exist, it predates my involvement. I think they most likely mean either MSP's policy or a DCJIS policy. To that end, the only DCJIS document I'm aware of that relates to this is the public safety information sharing policy, which does not appear to reference LPR specifically.

Hi all,

Yes, as John mentioned, it is desirable to narrow the search parameters. We have the database files separated in time ranges in AWS. We will need to start a SQL Server instance in the cloud and attach the correct set of files according to the date. I think we didn't back up the audits table, only the reads and images.

As Michael mentioned, if you still have the BOSS3 DB in place, we can help searching in the audits table.

I'll review the files and let you know what I find.

Hey Noah, it's possible if someone still has access to the old system and if Justifications was enabled at the time of the query. As for BOSS4 if that data had been transferred during the migration it is definitely gone due to the current retention policy on data and system audits.

We received a request from a partner agency looking to determine the search parameters that were used for what sounds like search of the Boss3 system on a read from 2020.

Is there any way to access that information, given the age of the request and the change in

software/server?

Respectfully,

Noah

I am troubleshooting this now, but if the update made any changes to user account settings or permissions, please advise so I can get the system working again for the end users.

>
> Hi all,
>
> Thank you for the meeting today morning. Here's a brief

summary of the events of this issue.

Last Tuesday it was found that the numbers of hits and reads were significantly lower than the previous week. It was confirmed in the purge metrics table that the retention microservice was deleting the data since last Saturday. As soon as this was detected, we stopped the retention microservice and started the recovery of the hits and reads.

Yesterday night, all the hits until May 6th (just before the purge started) are recovered successfully. The final portion of the hits will be recovered today. Regarding the reads, we are recovering them at this moment and we estimate 72-96 hours to fully recover them. There will be no loss of data. Right now the gap is from June 1st, 2022 until September 15th, 2022.

QA and Dev teams are testing the new retention microservice with the fix of this issue.

This is the technical summary of the issue:

Configuration:

a. Massachusetts Host has a staging site that is configured to preserve the reads from the cameras inside this agency for up to 2 days.
b. All the tenants, apart from the Host, are configured to keep the data of the cameras for up to 1 year.
c. All the operative cameras are placed in the tenant "Massachusetts State Police" (it has a retention policy of 1 year)

Steps that caused the issue

1. On May 6th after 15:00 hours, a new agency was created by a user in BOSS4.
2. The agency was created without retention policies, so it is supposed to take the retention policy configuration from the Regional Provider.
3. At 16:00 hours, the purge process was started automatically by the retention microservice.
    a. Due to a bug in the retention microservice, the retention policy of the Host (2 days) was used to purge data on all devices of the system.
4. The first kind of data that was deleted was the hits. Then the reads. The rate to delete reads was 1.5M per hour.
5. The reads deleted from the DB are recoverable using the Point In Time Restore of MongoDB. The Images are recoverable with the versioning of AWS S3.

Any questions, please let me know.

Hi all,

After further analysis in the morning, the team detected an abnormal situation that led to the deletion of reads and hits due to incorrect application of the retention policy.

It's a misapplied trading rule situation, similar to the one Noah mentions, which occurred in September of last year, but not exactly the same.

At this moment he is already in the process of recovering the information, first Hits and then the readings.

No loss of information is expected at all.

Israel will send a more complete report so that John can tell us what is the best way to communicate it to Noah.

Subject: RE: Boss4 Dashboard

Israel et al.

Noah's brief email from yesterday belies his frustration….he waits to vent his true frustration when he calls me. For some background: He had to respond to an OPRA (open public records request) for ALPR information last week. He recalled that there were around 27M reads and 80K hits at the time last week; however yesterday he noted that read and hit data was missing since he saw that there was only 27M reads and 60K hits on the dash board (I forget the exact numbers). He reminded me that this same issue happened 2 or 3 months ago and that we gave him assurance it wouldn't happen again.

This type of missing data has the potential to be non-recoverable in maintaining this account. For example if

he has to respond to a second OPRA and the data set is different than the data set from the previous request, MSP's ALPR data will be viewed as questionable and rendered as unusable in court. Hopefully as before this data can be recovered. Noah made it very clear to me that If we ever actually lose data it would cause MSP to dismantle their ALPR program.

Noah asked that we hold another status meeting next week. The invite to follow shortly.

Please put in place whatever checks and balances are necessary to prevent this from reoccurring.

Thanks

Hi Sergeant,

I have done a modification over the hits graph. The issue was a point that had a very high number of hits. We are still investigating why this spike happened.

Also, we are working on rebuilding the hits counter. It is related to the retention microservice. We will let you know more detail about this tomorrow.

Due to this, I'm deferring the update of the application.

Best regards

Hey Mark -

Looks like 24th & 25th are gonna be the dates. How does coffee on the 25th work? The afternoon of the 24th works as well, so just let me know what's easiest for you. We can meet at or near HQ or whatever is convenient. I'm thinking I might stay downtown since I've gotta hit BC, BU, Northeastern.

Enjoy your vacation!

Brian

Hey there Mark -

I was trading texts with Dermot the other day on the Orioles and it reminded me we hadn't touched base in a while. Hopefully the dust has settled a little from the Colonel's retirement. How is the search for a new Colonel going? I hope you're still in the running.

I was actually looking at the calendar and trying to get up your way in the next couple of

weeks. My daughter is interested in a couple schools up that way and I thought I'd try and catch dinner with Dermot one night. Heck, I'd love to catch up with Chris as well. I was thinking we could grab a coffee and you could give me the low down on things.

Also, are you planning on going to IACP this year? If so, we can talk about that as well.

Cheers,

Brian

Major,

With the recent issues involving Callyo products, VFAS members want to make sure that it's acceptable to utilize Flock. After a little research (I had limited knowledge of it because, personally, I never used it). My understanding is "Flock Safety" is the name of the company. It's an American Company that basically sells ALPR technology to law enforcement agencies and neighborhood associations. Flock's cameras read license plates and send instant alerts to law enforcement officers based on a populated list. (Stolen cars, vehicles of interest). Unlike many other ALPR Systems, Flock camera's allow searches based on the car's color and various other visual features. TFR-11 addresses **"Use of Non-Departmental ALPR Systems"** of page 5 (of 8)**.**
The policy allows MSP members to contact other agencies to request assistance with information. Additionally, the policy states that that Supervisors and analysts from Watch Center & ALPR Admin. can access non departmental systems. However, the policy specifically states that other members shall not obtain/utilize accounts with permission for Lt. Col. Cyr.

Currently, multiple members (VFAS Metro & North) have Flock Accounts that they are utilizing for fugitive investigations. Revere PD has set up accounts for the Metro Guys and I believe Lynn gave Scali one or he retained his when he left Lynn. Each account has a unique sign in to access the data in and leaves a footprint. Currently, the Flock Map lists Quincy, Lynn, Revere, Winthrop, Everett & Malden as participating. Each local police department has an administrator for flock & that Admin. can asked permission (vIa email) to view each other's FLock Cameras. As recent as last Sunday (July 30, 2023), Tpr. Diliegro was able to utilize the Winthrop Flock Camera to catch a Revere Stabbing Suspect that had just returned home after being on the run and was wanted.

VFAS is utilizing Flock Safety cameras to apprehend wanted fugitives. Members of VFAS are not using it to develop PC or in the furtherance of an ongoing investigation/case. I have included Sgt. Joe Keefe on this email because he is well versed in the Flock Camera specifics. Thanks,

From: Pack, Noah (POL)
To: Jeremy Workman
Subject: Re: Hotlist Notification Setup
Date: Monday, July 3, 2023 12:57:34 PM

Hi Jeremy,

Thanks for the response and the feedback.

It is advisable and CJIS best practices to have an associated account for each individual recipient for emails.

Having fewer user accounts is arguably a CJIS better practice, as setting up a number of ghost accounts just to enable an email gateway inflates user account numbers, administrative workload, and creates an increased number of avenues for improper system access or compromise, since these accounts are left active but will never be set up or logged into. Most users need to receive alerts for specific data of relevance to them, not to log in and access the system.

We offer an external email alert on a per Hot-Plate option, but is not provided for Automated large lists.

This is valuable on the hot-plate feature and will suffice for most of our day to day requests, but it is a functional gap that it cannot be used at the hot list level. It is a gap that does not exist in our current system, which means I have to identify a workable solution and make it available to our system users. There are a number of use cases for this beyond the first one mentioned, such as notifying patrol users of stolen vehicles in their area (installing and configuring TAS software on all of their computers is again wildly more cumbersome than enabling the LPR system to simply send them an email).

If you are looking for a workaround, the recommended solution is to have your IT setup an email distribution list of users to receive these alerts. Then we can configure a single User to configure the alerting options on a specific Alert type across a larger list.

This would be a good work around for a static user list. However this user list changes by incident and occasion and would not be under our LPR system administrators' control to update. It is not feasible to create multiple email distribution lists that are routinely changed or updated but that we can't control.

Jeremy, would you be willing to set up a call after the 4th to go over general updates and a few of the LEARN features like these that we are trying to navigate? This interface feels clunky and complicated, as we've mentioned before, and the mental gymnastics we've got to do to make it work is problematic. I know updates are in the works, but we are trying to migrate away from another vendor for issues like this, and I'm already getting push back from our small number of LEARN users that things are more difficult for them, not less. I've got to make this work, as this program is too important to fail. Your help would be

immeasurably valuable to this process.

Respectfully,

Noah

Hello Noah,

It is advisable and CJIS best practices to have an associated account for each individual recipient for emails. We offer an external email alert on a per Hot-Plate option, but is not provided for Automated large lists.

If you are looking for a workaround, the recommended solution is to have your IT setup an email distribution list of users to receive these alerts. Then we can configure a single User to configure the alerting options on a specific Alert type across a larger list.

Example:

Create a list of users with your IT under single Email distribution list: MSI.ALPR.TerroristWatchlist@state.ma.us

Within LEARN, create an account with the Distro Email and assign desired Hotlist on load (or all agency users) and configure the "Alert Management" section to receive the desired alert/s and desired locations.

Regards,

was met with another sorry we can't do that. I'm starting to get concerned by the limitations of the notification features in LEARN.

Could we set up a call in the near future to discuss some of the notification use cases here to see if we can work around or close these gaps? Thanks again for your time.

Subject: Hotlist Notification Setup

Another troubleshooting question for you guys:

We are looking to setup notifications to a group of email addresses to receive alerts from a specific category of hits from a specific device (and eventually set of devices). This is a common workflow for us across a variety of use cases, but it happens to be relevant now due to July 4th security operations.

Here's an example:

Goal: generate alerts to go out to email address of users without LEARN accounts
Alert type: one sub-category (i.e. terrorist watch list plates) from the automatically updated MA-NCIC hotlist file
Device restrictions: devices located in a certain region only; this is currently done by selecting specific devices but could also be done with a geo zone.

I called technical support to discuss this prior to reaching out to you guys, and they indicated they are unaware of how this can be done without setting up and configuring LEARN accounts and notification settings for all the recipients, which isn't a viable option for us, due at least in part to the complexity of setting up and configuring LEARN accounts and the

associated alerts.

Thank you for allowing me to contact you guys directly, as you are exceptional problem solvers with this stuff, and I appreciate your help as we work to transition into making Vigilant work for MSP.

Respectfully,

Noah

Hello Noah,

We can discuss some of the hurdles for alerting external non-users. When we assign Hot-Lists, we assign to Users, User Groups, or Agency Wide. Thus, when we set up single external Hot-Plate alerts, it is going to alert on all alerts by that vehicle and not limited to zone or location. The recommended solution of loading all users resolves this by allowing us to assign groups or specific Hot Lists to the set of users.

Here is an idea to float you, we can set up a series of users via Bulk-load that can have no LEARN-Permissions, other than to be assigned a Hotlist and get an Email alert on them. This essentially would be tantamount to just an Email list that is ported to LEARN in the form of user accounts with no permissions. They also can be configured to login and only see the "My Profile" icon to configure their desired alerts. This would allow LPR System Administrators to have ultimate control of adding, removing, and assigning desired alerts on a per-email address. The users can be bulk-loaded via a template under the bulk load option within User Management.

I set up a call to discuss Email alerting options next week and any other items we would need to navigate to see the success of this program for Massachusetts State Police.

Regards,

Most users need to receive alerts for specific data of relevance to them, not to log in and access the system.*
>
> We offer an external email alert on a per Hot-Plate option, but is not provided for Automated large lists.

This is valuable on the hot-plate feature and will suffice for most of our day to day requests, but it is a functional gap that it cannot be used at the hot list level. It is a gap that does not exist in our current system, which means I have to identify a workable solution and make it available to our system users. There are a number of use cases for this beyond the first one mentioned, such as notifying patrol users of stolen vehicles in their area (installing and configuring TAS software on all of their computers is again wildly more cumbersome than enabling the LPR system to simply send them an email).

If you are looking for a workaround, the recommended solution is to have your IT setup an email distribution list of users to receive these alerts. Then we can configure a single User to configure the alerting options on a specific Alert type across a larger list.

This would be a good work around for a static user list. However this user list changes by incident and occasion and would not be under our LPR system administrators' control to update. It is not feasible to create multiple email distribution lists that are routinely changed or updated but that we can't control.

Jeremy, would you be willing to set up a call after the 4th to go over general updates and a few of the LEARN features like these that we are trying to navigate? This interface feels clunky and complicated, as we've mentioned before, and the mental gymnastics we've got to do to make it work is problematic. I know updates are in the works, but we are trying to migrate away from another vendor for issues like this, and I'm already getting push back from our small number of LEARN users that things are more difficult for them, not less. I've got to make this work, as this program is too important to fail. Your help would be immeasurably valuable to this process.

Hello Noah,

It is advisable and CJIS best practices to have an associated account for each individual recipient for emails. We offer an external email alert on a per Hot-Plate option, but is not provided for Automated large lists.

If you are looking for a workaround, the recommended solution is to have your IT setup an email distribution list of users to receive these alerts. Then we can configure a single User to configure the alerting options on a specific Alert type across a larger list.

Example:

Create a list of users with your IT under single Email distribution list: MSI.ALPR.TerroristWatchlist@state.ma.us

Within LEARN, create an account with the Distro Email and assign desired Hotlist on load (or all agency users) and configure the "Alert Management" section to receive the desired alert/s and desired locations.

Subject: Hotlist Notification Setup

Another troubleshooting question for you guys:

We are looking to setup notifications to a group of email addresses to receive alerts from a specific category of hits from a specific device (and eventually set of devices). This is a common workflow for us across a variety of use cases, but it happens to be relevant now due to July 4th security operations.

Here's an example:

Goal: generate alerts to go out to email address of users without LEARN accounts
Alert type: one sub-category (i.e. terrorist watch list plates) from the automatically updated MA-NCIC hotlist file
Device restrictions: devices located in a certain region only; this is currently done by selecting specific devices but could also be done with a geo zone.

I called technical support to discuss this prior to reaching out to you guys, and they indicated they are unaware of how this can be done without setting up and configuring LEARN accounts and notification settings for all the recipients, which isn't a viable option for us, due at least in part to the complexity of setting up and configuring LEARN accounts and the associated alerts.

Thank you for allowing me to contact you guys directly, as you are exceptional problem solvers with this stuff, and I appreciate your help as we work to transition into making Vigilant work for MSP.

Hi Elly,
I saw you weren't on here. Do you know if we're getting access to LEARN?
It looks like there is training below (I wonder if they can get them to stay past 3pm) and everyone will have to refresh themselves of TRF-11, especially the section below on Non-departmental ALPR Systems.

Use of Non-Departmental ALPR Systems
In the course of their official duties, members may contact other law enforcement agencies to request assistance with information, records, or data from non-departmental ALPR systems.
Supervisors and analysts assigned to the Commonwealth Watch Center/Commonwealth Fusion Center and the ALPR Administrator may access non-departmental ALPR systems for official law enforcement purposes as authorized by this policy. Other members, through their position with the Department, shall not obtain accounts with non-departmental ALPR systems unless authorized by the Division Commander of the Division of Homeland Security and Preparedness.

Members shall be mindful that non-departmental ALPR systems may use different technology, retention, and quality assurance standards than the Department's ALPR system. Members shall be mindful to preserve, export, or obtain copies of records or reports that are of known relevance to an incident or investigation prior to the expiry of the records.

Sir, this is what I had in a draft (it is in the one I sent a few weeks ago) but was not in the one I sent them yesterday:

The Massachusetts Supreme Judicial Court has recognized that individuals have a reasonable expectation of privacy in the whole of their public movements (see *Commonwealth vs. McCarthy, 484 Mass. 493*). While the SJC indicated that the limited use of ALPR does not infringe upon a constitutional right, and therefore does not require a search warrant or other legal process, the widespread and long-term use of ALPR to investigate an individual may amount to a constitutional violation.

Combining this with their suggestions, it could look like:

The Massachusetts Supreme Judicial Court has recognized that individuals have a reasonable expectation of privacy in the whole of their public movements (see *Commonwealth vs. McCarthy, 484 Mass. 493*). While the SJC indicated that the limited use of ALPR does not infringe upon a constitutional right, and therefore does not require legal process, the extensive or long-term use of ALPR in active criminal investigations that do not involve exigent circumstances should be reviewed with a prosecutor of jurisdiction in the investigation for review of the potential necessity of a search warrant.

I'll review McCarthy again for other thoughts.

Good Morning,

Please be advised that the Department is transitioning to a different LPR system. If you are receiving this email, you currently have an account in the Department's legacy LPR system. The legacy system will effectively be discontinued as of close of

business, today Monday, October 23, 2023.

If you do not have a current account with the Departments new LPR system, you can contact the Commonwealth Watch Center (fusion@pol.state.ma.us) with all hotlist requests. Please refer to MSP Policy TRF-11 for guidance when requesting a hotlist. At this time, the Department is working to try and set up a future training date to allow users access into the new and current MSP system. If you have any questions or concerns please reach out to me directly.

Dear Robert,

Hope this email finds you well.

I have been attempting to contact you several times in the past especially in my last mail on 2nd May'23 which elaborated our GeoShield RTCC Solution:

1. Uniquely connects multiple data sources like CAD, RMS, AVL, ALPR, etc.
2. Re-Designed Dashboard for Immersive Experience & Quick Access.
3. City Monitoring and Situational Awareness.
4. Advanced Mapping and Spatial Analytics.

My purpose in reaching out to you today is to inquire whether you anticipate a need for the RTCC Solution mentioned above within coming years.

Would like to offer our assistance by providing you a one-on-one interactive session with our experts to give you a better understanding of the potential scope of the Real-Time Crime Center initiatives for 2023-2024.

To facilitate this, would propose scheduling a call at a mutually convenient time.

Look forward to hearing from you soon.

Thank you.

Cheers,

Dear Keri,

Hope this email finds you well.

I have been attempting to contact you several times in the past especially in my last mail on 2nd May'23 which elaborated our GeoShield RTCC Solution:

1. Uniquely connects multiple data sources like CAD, RMS, AVL, ALPR, etc.
2. Re-Designed Dashboard for Immersive Experience & Quick Access.
3. City Monitoring and Situational Awareness.
4. Advanced Mapping and Spatial Analytics.

My purpose in reaching out to you today is to inquire whether you anticipate a need for the RTCC Solution mentioned above within coming years.

Would like to offer our assistance by providing you a one-on-one interactive session with our experts to give you a better understanding of the potential scope of the Real-Time Crime Center initiatives for 2023-2024.

To facilitate this, would propose scheduling a call at a mutually convenient time.

Look forward to hearing from you soon.

Thank you.

Cheers,
Arunima Choudhary

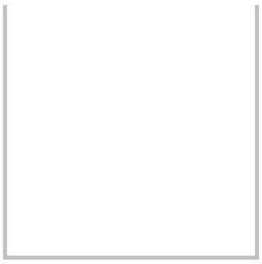
INDUSTRY NEWS



Sartell Adds Military Themed Squad Car to the Fleet

The Sartell Police Department (MN) unveiled a new, military service-themed squad car that will be used by police officers who are also military veterans.

The eye-catching design helps bring attention to the local organizations working with veterans fighting PTSD and working to prevent soldier and first responder suicide.

The emblems of the Invisible Wounds Project, Soldier's 6, and 23rd Veteran programs are prominently displayed on the squad car.

Sartell Police Chief Brandon Silgjord says he's honored to have the vehicle on active patrol and hopes it's a symbol to the community that no one fights alone.

Click for Full Story

Claremont PD Rolls Out New Electric Cruiser

The Claremont Police Department (NH) is showing off some new digs.

The department now has a fully electric F150 pickup truck in it's fleet, donated by the local dealership Ford of Claremont.

The department says it is the first municipality in the Northeast to use this type of vehicle on patrol. The Chief says it's a positive change for the department.

"You know we haven't had to put gas in the car so we have saved money right there. Right out of the gate. So, it is interesting, it is definitely something that we are getting used to," Chief Brent Wilmot said. "I think it is something that this profession, law enforcement in general will be getting used to in the coming years."

Ford of Claremont also donated a charging station and emergency lights. This is the second vehicle the business has donated to the department in recent years.

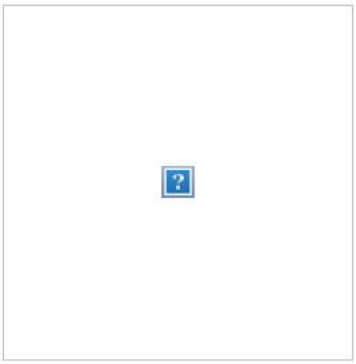
GM Presents In-Depth Overview Of 2024 Chevy Blazer EV Police Pursuit Vehicle

The 2024 Chevy Blazer EV was unveiled in July of 2022, with GM pulling the sheets on a new midsize crossover propelled by The General's latest all-electric vehicle technology.

While the 2024 Chevy Blazer EV will be available to civilians in a wide variety of configurations and trim levels, Chevy will also offer a Police Pursuit Vehicle (PPV) variant to law enforcement. Now, we're getting a thorough look at what the new 2024 Chevy Blazer EV PPV has to offer thanks to a recently released video.

Clocking in at 12 minutes and 26 seconds, the video provides an overview of all the features of the first pursuit-rated EV based on the GM Ultium platform. Highlights of the 2024 Chevy Blazer EV PPV include a 400-volt all-wheel-drive propulsion system. Maximum output is set at 498 horsepower and 531 pound-feet of torque. There's also an even 50/50 front-to-rear weight distribution for enhanced handling, while the onboard 105 kWh battery provides an estimated 250 miles of range on a full charge.



Upgraded heavy duty suspension and six-piston Brembo front brake calipers (matched to 15.3-inch rotors) help to handle the heft, while a set of underbody

skid plates protect the bits under the body. The police crossover also rides on 20-inch steel wheels wrapped in Firestone Firehawk Pursuit tires.

ADVERTORIAL | Stalker Radar

The LidarCam 2: Where Cutting-Edge Lidar Speed Enforcement Meets Undeniable Photo and Video Evidence Capture

Automatically collect a video + multiple high-resolution photos every time you capture a traffic violation. Built-in License Plate Reading Technology (ANPR/ALPR) can automatically check for wanted plates or other violations. Hand-held or mounted to a tripod, the Stalker LidarCam 2 is the next generation of photo enforcement.

Up to 1TB of internal storage allows you to save multiple days-worth of evidence onboard before you upload them into the included secure PC-based Evidence Manager software for viewing, processing, and sharing. AES-256 encryption comes standard, keeping your data secure.

The LidarCam 2 is equipped with built-in GPS, USB-C, and Wi-Fi, with optional 4G-LTE cellular connection available. Fully-remote wireless operation in real time on any platform - phone, tablet, or desktop - with no proprietary apps needed. Learn more at StalkerRadar.com/video-lidar or call us today at 1-800-STALKER.

PRODUCTS

Underseat Storage System From Pro-gard Products

Pro-gard Products LLC introduces the Under Seat Storage System for F-150 and Super Duty Crew Cabs, catering to law enforcement storage needs.

This advanced solution optimizes cargo space for equipment and weapons while ensuring secure, organized storage. Its dual compartments offer versatility with a removable divider and locking latches for weapon security. Constructed from durable steel with a textured black powder coat finish, it includes a rubber mat-lined floor for protection. Installation is effortless, attaching seamlessly to OEM holes without drilling.

Pro-gard's commitment to enhancing officer efficiency and safety shines throughout this innovative system.

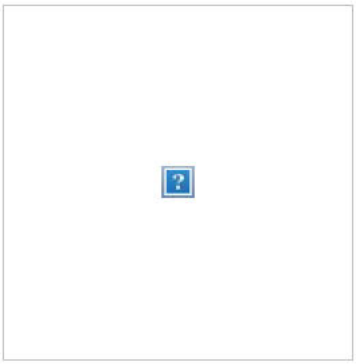
While the 2024 Chevy Blazer EV will be available to civilians in a wide variety of configurations and trim levels, Chevy will also offer a Police Pursuit Vehicle (PPV) variant to law enforcement. Now, we're getting a thorough look at what the new 2024 Chevy Blazer EV PPV has to offer thanks to a recently released video.

Clocking in at 12 minutes and 26 seconds, the video provides an overview of all the features of the first pursuit-rated EV based on the GM Ultium platform. Highlights of the 2024 Chevy Blazer EV PPV include a 400-volt all-wheel-drive propulsion system. Maximum output is set at 498 horsepower and 531 pound-feet of torque. There's also an even 50/50 front-to-rear weight distribution for enhanced handling, while the onboard 105 kWh battery provides an estimated 250 miles of range on a full charge.



Upgraded heavy duty suspension and six-piston Brembo front brake calipers (matched to 15.3-inch rotors) help to handle the heft, while a set of underbody

skid plates protect the bits under the body. The police crossover also rides on 20-inch steel wheels wrapped in Firestone Firehawk Pursuit tires.

The LidarCam 2: Where Cutting-Edge Lidar Speed Enforcement Meets Undeniable Photo and Video Evidence Capture

Automatically collect a video + multiple high-resolution photos every time you capture a traffic violation. Built-in License Plate Reading Technology (ANPR/ALPR) can automatically check for wanted plates or other violations. Hand-held or mounted to a tripod, the Stalker LidarCam 2 is the next generation of photo enforcement.

Up to 1TB of internal storage allows you to save multiple days-worth of evidence onboard before you upload them into the included secure PC-based Evidence Manager software for viewing, processing, and sharing. AES-256 encryption comes standard, keeping your data secure.

The LidarCam 2 is equipped with built-in GPS, USB-C, and Wi-Fi, with optional 4G-LTE cellular connection available. Fully-remote wireless operation in real time on any platform - phone, tablet, or desktop - with no proprietary apps needed. Learn more at StalkerRadar.com/video-lidar or call us today at 1-800-STALKER.

PRODUCTS

Underseat Storage System From Pro-gard Products

Pro-gard Products LLC introduces the Under Seat Storage System for F-150 and Super Duty Crew Cabs, catering to law enforcement storage needs.

This advanced solution optimizes cargo space for equipment and weapons while ensuring secure, organized storage. Its dual compartments offer versatility with a removable divider and locking latches for weapon security. Constructed from durable steel with a textured black powder coat finish, it includes a rubber mat-lined floor for protection. Installation is effortless, attaching seamlessly to OEM holes without drilling.

Pro-gard's commitment to enhancing officer efficiency and safety shines throughout this innovative system.

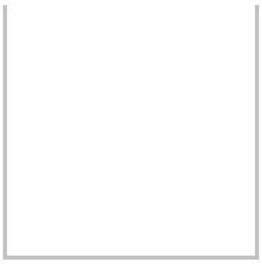
INDUSTRY NEWS



Sartell Adds Military Themed Squad Car to the Fleet

The Sartell Police Department (MN) unveiled a new, military service-themed squad car that will be used by police officers who are also military veterans.

The eye-catching design helps bring attention to the local organizations working with veterans fighting PTSD and working to prevent soldier and first responder suicide.

The emblems of the Invisible Wounds Project, Soldier's 6, and 23rd Veteran programs are prominently displayed on the squad car.

Sartell Police Chief Brandon Silgjord says he's honored to have the vehicle on active patrol and hopes it's a symbol to the community that no one fights alone.

Claremont PD Rolls Out New Electric Cruiser

The Claremont Police Department (NH) is showing off some new digs.

The department now has a fully electric F150 pickup truck in it's fleet, donated by the local dealership Ford of Claremont.

The department says it is the first municipality in the Northeast to use this type of vehicle on patrol. The Chief says it's a positive change for the department.

"You know we haven't had to put gas in the car so we have saved money right there. Right out of the gate. So, it is interesting, it is definitely something that we are getting used to," Chief Brent Wilmot said. "I think it is something that this profession, law enforcement in general will be getting used to in the coming years."

Ford of Claremont also donated a charging station and emergency lights. This is the second vehicle the business has donated to the department in recent years.

From: Police1 Roll Call
To: McCarthy, Steven (POL)
Subject: Slain LEO"s family wants judge to resign; NOPD"s Mardi Gras staffing woes
Date: Monday, January 9, 2023 2:28:34 PM

January 9, 2023 | View as webpage | Too many emails? Update Subscription Preferences

Dear Police1 Member,

Today is National Law Enforcement Appreciation Day (L.E.A.D.), established in 2014 by the Concerns of Police Survivors (C.O.P.S.) to encourage everyone to show support for the more than 800,000 law enforcement officers in America. Learn more here.

In honor of your courage and commitment to protect and serve our communities, today sees the launch of Police1's "50 states, 50 police heroes," our annual roundup of how law enforcement stepped up through acts of heroism to create some good this past year.

From an Alabama cop whose uniform melted off his body as he rescued a 3-year-old from a fire to the Wyoming LEOs who 'beefed up' patrol ahead of a holiday weekend to steer cattle away from oncoming traffic, click here to read about the amazing acts of bravery and kindness (with some fun moments too) that our nation's LEOs demonstrate every day.

Stay safe,

— The Police1 Team

Good afternoon,

New Mexico State Police is requesting information from other agencies for EVOC and TIMs programs.

More specifically, does your agency have full-time or part-time EVOC and TIMs units/instructors? If you have a full-time unit how many are on it and how is it structured? If your agency has part-time instructors, how is your agency conducting the instruction (i.e. frequency of instruction to department personnel, requirements for instructors)?

Do you have any policies or directives for this?

Thank you,

KC Pritchard

Good afternoon all:

The Kentucky State Police seem to be encountering more instances of becoming involved in pursuits traveling in the wrong direction on divided highways. We are hoping to obtain a copy of any policies, training materials, guidelines, legal decisions, or other information your agency may have specific to wrong-way driver pursuits. Please feel free to reply here or by email to emilym.perkins@ky.gov.

Thank you so much for your assistance with this topic.

Timothy Gould

Good afternoon,

The Vermont State Police strictly prohibit our Troopers from pursuing in a wrong way direction. Our pursuit intervention tactics policy has separate standards than engaging in a pursuit, so Troopers can still deploy intervention tactics if the circumstances warrant.

I have attached a copy of each policy.

Thank you,

Lt. Tim Gould
Professional Standards

Sarah Hurst

Hey Emily,

Our policy states the below language for wrong way pursuits. I have attached the entire policy as well. The below is on Page 9.

C. Patrol vehicles **shall only be used** for the purposes listed below **as a last resort and when deadly force is justified.**

The determination to use a patrol vehicle for the purposes listed below is the sole decision of the pursuing Member.

1. Pursuing a vehicle in a direction opposite to the flow of traffic on a divided highway, and
2. Ramming or forcing the suspect's vehicle off the roadway

Michael Hakey

Good morning/afternoon,

We are looking at revising our Report Writing Manual and report writing lesson plans. Currently, we have both a Writing Manual and a Report Writing Manual. The Writing Manual is more for standardized guidelines for general writing for both professional staff and sworn personnel in terms of memos and letters, staff studies, etc. Basically the writing process. The Police Report Writing Manual is specific to sworn personnel for mechanics of report writing, writing offense reports, supplemental reports, etc. The report writing lesson plan is a part of the training troopers go through during the academy.

We are requesting from other agencies:

1) Any similar type of writing manuals.

2) Any report writing lesson plans and/or training materials.

Please send any responses either to myself at mhakey@azdps.gov or directly to this community message board.

Thank you.

Kevin Burke

Hello,

SDHP qualifies on the regular duty sidearm with the state mandated course. All sworn members are must shoot and pass that course. We have an additional course for backup guns. We did drop two additional SDHP sidearm qualification courses per year to allow for more training courses to be conducted.

There is not state mandated rifle course and SDHP shoots their own qualification course once a year.

Please see attached courses and please contact me for any questions. Email will be sent to Sgt. Mc Mains as well.

Thanks, Kevin

Good afternoon,

Our Firearms Training Unit is requesting information about pistol and patrol rifle qualifications. We would like to know how many rounds are shot and what distance they are shot at for both pistol and patrol rifle qualifications. You can attach a qualification card (ours is attached) if it's easier.

We are asking for a tight turn-around of responses by February 17th. Please send your responses directly to Sgt. Dean McMains at dmcmains@azdps.gov.

You can also contact him directly at the same email or 602-223-2301 for any questions or if more information is required.

Thank you!

Good morning, Joe.

NSP has a collective bargaining unit for troopers, investigators and sergeants. As part of the regular contract negotiations every two years, the bargaining unit was able to negotiate a 22% pay increase, in part to our agency being ranked 17th in the state for LE agencies.

We do not have retention bonuses, though the above ranks get a staggered longevity payment bases on years of service.

We do not offer sign-on or hiring bonuses or a referral program.

Thank you,
Kevin

Subject: Agency Pay Adjustment

Good Afternoon Fellow Planners,

Louisiana State Police is in the process of preparing a request for a departmental pay adjustment, and is seeking information from other state agencies regarding the following information.

1. Have your agencies requested and/or received a pay adjustment within the past three years? What was the justification for the request?
2. Does your agency offer retention bonuses? If so, how are they structured?
3. Does your agency offer sign-on or hiring bonuses? How about an employee referral program where employees refer potential new hires, and the employee making the referral gets some "finder's fee" if employed?

As always we appreciate the communities assistance. Stay Safe!

6. Re: Pistol and Patrol Rifle Qualifications

Reply to Group | Reply to Sender

Feb 7, 2023 10:31 AM | view attached

Kevin Burke

Hello,

SDHP qualifies on the regular duty sidearm with the state mandated course. All sworn members are must shoot and pass that course. We have an additional course for backup guns. We did drop two additional SDHP sidearm qualification courses per year to allow for more training courses to be conducted.

There is not state mandated rifle course and SDHP shoots their own qualification course once a year.

Please see attached courses and please contact me for any questions. Email will be sent to Sgt. Mc Mains as well.

Thanks, Kevin

Subject: Pistol and Patrol Rifle Qualifications

Good afternoon,

Our Firearms Training Unit is requesting information about pistol and patrol rifle qualifications. We would like to know how many rounds are shot and what distance they are shot at for both pistol and patrol rifle qualifications. You can attach a qualification card (ours is attached) if it's easier.

We are asking for a tight turn-around of responses by February 17th. Please send your responses directly to Sgt. Dean McMains at dmcmains@azdps.gov.

You can also contact him directly at the same email or 602-223-2301 for any questions or if more information is required.

Thank you!

Michael Hakey

7. Re: Agency Pay Adjustment

Reply to Group Reply to Sender

Feb 7, 2023 7:52 AM
Kevin Ryan

Good morning, Joe.

NSP has a collective bargaining unit for troopers, investigators and sergeants. As part of the regular contract negotiations every two years, the bargaining unit was able to negotiate a 22% pay increase, in part to our agency being ranked 17th in the state for LE agencies.

We do not have retention bonuses, though the above ranks get a staggered longevity payment bases on years of service.

We do not offer sign-on or hiring bonuses or a referral program.

Thank you,
Kevin

Subject: Agency Pay Adjustment

Good Afternoon Fellow Planners,

Louisiana State Police is in the process of preparing a request for a departmental pay adjustment, and is seeking information from other state agencies regarding the following information.

1. Have your agencies requested and/or received a pay adjustment within the past three years? What was the justification for the request?
2. Does your agency offer retention bonuses? If so, how are they structured?
3. Does your agency offer sign-on or hiring bonuses? How about an employee referral program where employees refer potential new hires, and the employee making the referral gets some "finder's fee" if employed?

As always we appreciate the communities assistance. Stay Safe!

Good afternoon,

New Mexico State Police is requesting information from other agencies for EVOC and TIMs programs.

More specifically, does your agency have full-time or part-time EVOC and TIMs units/instructors? If you have a full-time unit how many are on it and how is it structured? If your agency has part-time instructors, how is your agency conducting the instruction (i.e. frequency of instruction to department personnel, requirements for instructors)?

Do you have any policies or directives for this?

Thank you,

KC Pritchard

Good afternoon all:

The Kentucky State Police seem to be encountering more instances of becoming involved in pursuits traveling in the wrong direction on divided highways. We are hoping to obtain a copy of any policies, training materials, guidelines, legal decisions, or other information your agency may have specific to wrong-way driver pursuits. Please feel free to reply here or by email to emilym.perkins@ky.gov.

Thank you so much for your assistance with this topic.

Timothy Gould

Good afternoon,

The Vermont State Police strictly prohibit our Troopers from pursuing in a wrong way direction. Our pursuit intervention tactics policy has separate standards than engaging in a pursuit, so Troopers can still deploy intervention tactics if the circumstances warrant.

I have attached a copy of each policy.

Thank you,

Lt. Tim Gould

Hey Emily,

Our policy states the below language for wrong way pursuits. I have attached the entire policy as well. The below is on Page 9.

C. Patrol vehicles **shall only be used** for the purposes listed below **as a last resort and when deadly force is justified.**

The determination to use a patrol vehicle for the purposes listed below is the sole decision of the pursuing Member.

1. Pursuing a vehicle in a direction opposite to the flow of traffic on a divided highway, and
2. Ramming or forcing the suspect's vehicle off the roadway

PARTNER ADVISORY

Flashpoint: Daily Standup - October 27, 2023

TLP:CLEAR Oct 27, 2023

YoroTrooper: Researchers Warn of Kazakhstan's Stealthy Cyber Espionage Group (TheHackerNews)

Target audience: CISO, Incident Response, Security Ops, Threat Intel/CTI

- Summary: A relatively new threat actor known as YoroTrooper is likely made up of operators originating from Kazakhstan. The assessment, which comes from Cisco Talos, is based on their fluency in Kazakh and Russian, use of Tenge to pay for operating infrastructure, and very limited targeting of Kazakhstani entities, barring the government's Anti-Corruption Agency. "YoroTrooper

attempts to obfuscate the origin of their operations, employing various tactics to make its malicious activity appear to emanate from Azerbaijan, such as using VPN exit nodes local to that region," security researchers Asheer Malhotra and Vitor Ventura said. The adversary is known to be active since at least June 2022, singling out various state-owned entities in the Commonwealth of Independent States (CIS) countries. Slovak cybersecurity firm ESET is tracking the activity under the name SturgeonPhisher.

- Analyst comment: State-sponsored advanced persistent threat (APT) groups have traditionally been limited to countries such as Iran, China, and Russia. However, in recent years an increasing number of additional nations have also formed state-sponsored cyber threat groups to facilitate cyberespionage, sabotage, or intellectual property campaigns that align with national interests or geopolitical strategies.

New iLeakage Attack Steals Emails, Passwords from Apple Safari (BleepingComputer)

Target audience: CISO, Security Ops, Threat Intel/CTI

- Summary: Academic researchers created a new speculative side-channel attack they named iLeakage that works on all recent Apple devices and can extract sensitive information from the Safari web browser. At core, it is a timerless Spectre attack that bypasses standard side-channel protections implemented by all browser vendors. iLeakage was developed by a team of academics from Georgia Tech, University of Michigan, and Ruhr University Bochum who examined Safari's side-channel resilience and managed to bypass existing countermeasures by implementing a timerless and architecture-agnostic method based on race conditions. By using speculative type confusion to bypass Apple's compressed 35-bit addressing and value poisoning countermeasures, the researchers could leak sensitive data from the target page, such as passwords and emails. The researchers used the same method to retrieve a

password for an Instagram test account that was auto-filled in the Safari web browser using the LastPass password management service. In another experiment, the researchers demonstrated how the iLeakage attacks also works on Chrome for iOS. They explain that Apple's policy forces all third-party iOS browsers to be overlays on top of Safari and use Apple browser's JavaScript engine.

- Analyst comment: According to Apple, the best preemptive mitigation strategy involves the following steps:

Enable Safari's hidden debug menu from Terminal.
Click on the debug menu in Safari.
Choose "WebKit Internal Features."
Check "Swap Processes on Cross-Site Window Open."

See also:

- iLeakage website

Nigerian Cybercrime Hub Shut Down with 6 Arrests (Dark Reading)

Target audience: Incident Response, Security Architects, Security Engineers, Security Ops, Threat Intel/CTI

- Summary: Nigerian police arrested six men they believe are associated with a cybercrime recruitment and mentoring hub. During interrogation, the six men - aged from 19 to 27 - admitted to activities including identity theft, hacking and trading of hacked Facebook accounts, romance scams, computer-related forgery, and other computer-related fraud, according to a statement from the Nigerian police force. Police also said intelligence reports indicated involvement by the syndicate in other high-level cybercrimes, including business email compromise and high-yield investment program fraud.
- Analyst comment: Internet scams and business email compromise operations have become increasingly sophisticated and organized as they are conducted by criminal syndicates that often operate similarly to regular companies, offering recruiting, training, and physical offices. The cybercrime and fraud syndicates often use their profits to bribe local law enforcement to ignore their illicit activities. However, it appears that the federal governments in Nigeria and some other countries have been cracking down on such operations.

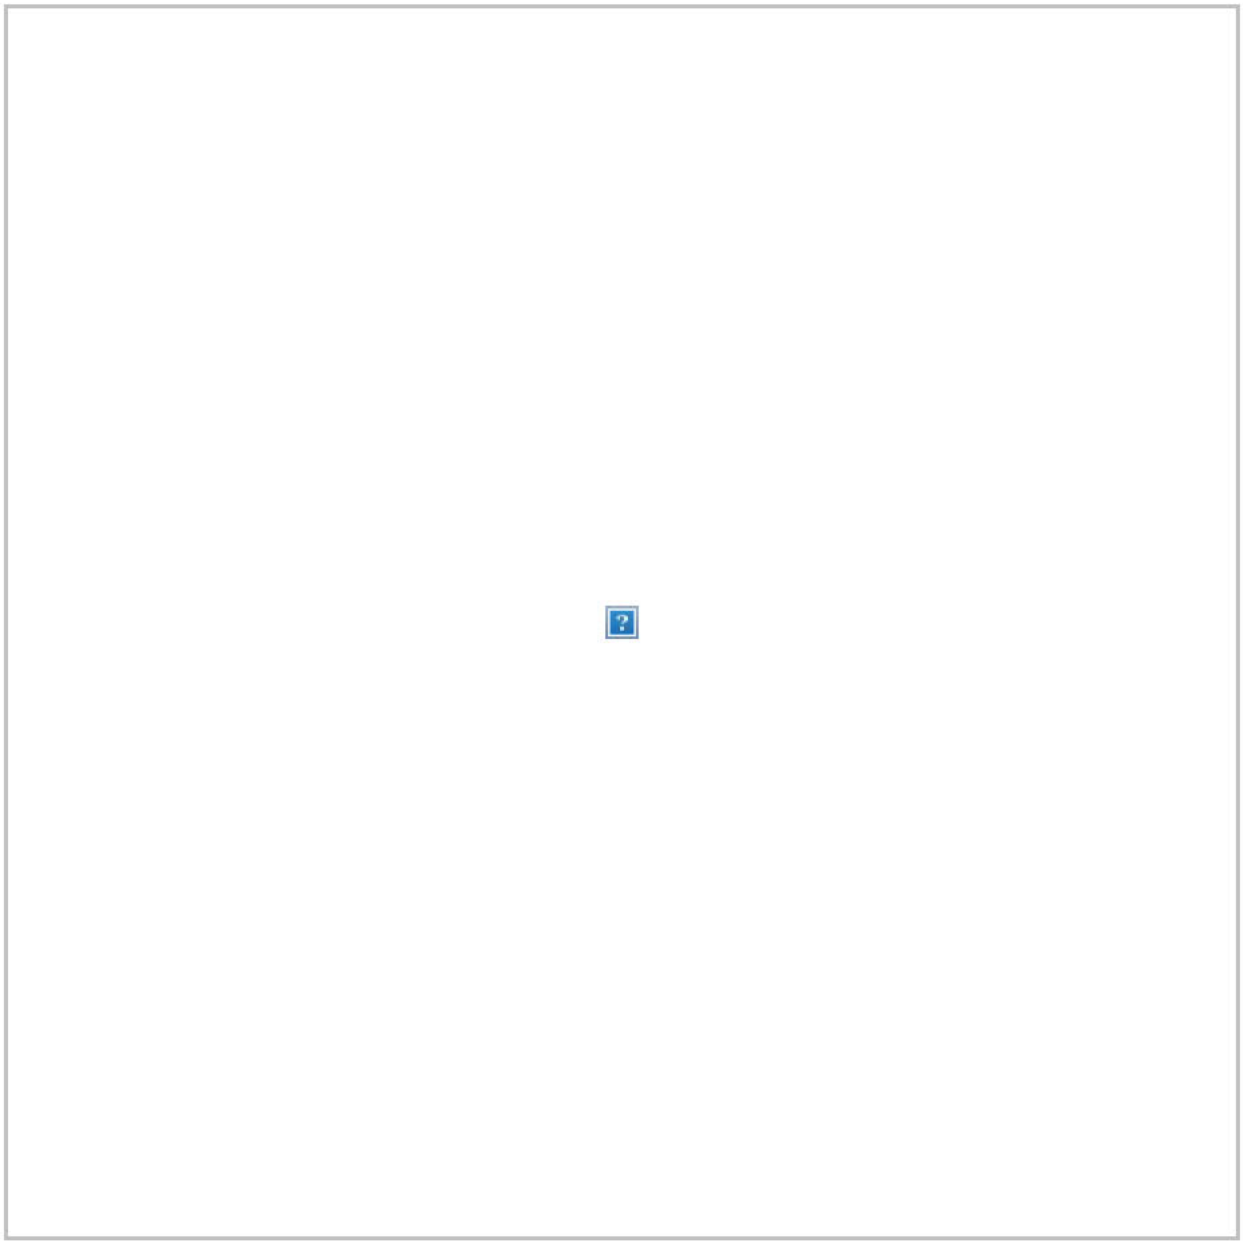
Dear Police1 Member,

Are you interested in learning new strategies and tactics to overcome wellness-related challenges?



Register for a free webinar on July 18 at 11 a.m. CT to learn how to leverage foundational, world-class leadership principles developed by U.S. retired Navy SEAL Jocko Willink and former U.S. Navy SEAL Leif Babin. These two experts will discuss the inherent challenges that first responders face, including high-pressure shift work, ever-changing job demands and daily exhaustion.

Moreover, participants can expect to learn about how a healthy lifestyle can produce physiological and psychological benefits that increase first responder readiness and resilience.

Reserve your seat here.

Stay safe,

— *The Police1 Team*

Dear Police1 Member,

In this special edition of the Police1 member newsletter, we focus on the importance of maintaining and honing your firearms skills.

As you know, proficiency with firearms is not just about hitting a target; it's a vital part of ensuring safety – for yourself, your fellow officers and the community you serve. This ability does not come without regular, mindful practice. The unpredictable nature of law enforcement calls for quick thinking and action. Regular firearms training enhances your ability to neutralize threats effectively and safely.

In addition, we review some of the latest firearms to hit the market and provide some buying resources for firearms training, optics and more.

Stay safe,

— *The Police1 Team*

Chris,

Attached is the Accreditation standard related to ALPR technology. I read the policy and all of the pertinent points are addressed within the policy. There is a small formatting issue under the hit/alert confirmation section, the sub-bullet should be an open circle bullet point, not the dash. Could you please add the standard # into the reference section as follows: MPAC: 41.3.9.

Any questions let me know.

Hi Sgt Pack.

We had one bid response to our request for quotes under PSE01 for ALPRs. Please see attached bid documents from Motorola. This purchase is funded with the FFY2020 COPS Heroin grant and the budget has $161,000 allocated.
The total of this quote is $171,549. You may need to reduce the number of cameras to be ordered or reach out to Motorola to see if they can sharpen their pencil. Please also confirm that the quote meets our requirements and includes everything needed. If there will be out-year costs, you should submit a To/From through your chain of command to request funds. Once you get the final quote, please have it approved/signed and return to me to issue a purchase order.
Let me know if I can be of any assistance.
Thank you.

Sups,

Please make the attached policy known to your dispatchers. As it reads, the Commonwealth Watch Center and the Commonwealth Fusion Center are the primary ALPR resources for the Department; and any non-Department ALPR Systems accounts are prohibited unless approved by the Division Commander of Homeland Security and Preparedness, through your chain of command.

If your center or any of its personnel have Department ALPR and/or non-Department ALPR accounts, please let me know by end-of-week so a determination can be made about access and use.

Thank you,
Ken

Good afternoon Jenn and Dan,

As LTC Cyr mentioned, we would like to review the ALPR policy and discuss potential updates. The attached draft includes several modifications and ideas for discussion, and its fair to say that they will need to be changed or removed based upon our discussion and your advice.

Once you've had time to review, would you be willing to meet to discuss before the EOPSS call on 2/21?

Respectfully,

Noah

Sergeant Noah H. Pack
Massachusetts State Police
Division of Homeland Security and Preparedness
Office of the Division Commander

---

Good afternoon Chris,
Please find attached the ALPR policy revision draft. I believe it will need some formatting. If possible, can we include it in this quarter's batch awaiting promulgation? Legal has already reviewed and approved. Please do not hesitate to reach out with any questions/concerns.

Thank you,
Mark

Notification of ALPR Policy Update

The Department's ALPR policy (TRF-11) was officially updated as of June 27, 2023. An updated copy is attached to this email. This policy governs the use of the ALPR systems by sworn and civilian members of MSP. Please review it to ensure you are familiar with the most recent version. Many of the updates directly reflect the best practices that we have already been using and teaching, such as limiting the scope of searches and the duration of manual hotlist entries.

One noteworthy update is that a manual hotlist entry request must be authorized by a supervisor, except in exigent circumstances/emergencies. This can be satisfied in one of two ways: (1) the request can come directly from a supervisor (Sgt. or above or civilian equivalent), or (2) the requestor can provide the name of the supervisor who has authorized the request. If you or a member of your unit submits a hotlist request to the Watch Center, they will respond with an inquiry about this authorization if it does not meet one of those criteria in the initial request.

As always please feel free to reach out with questions, comments, or success stories.

Respectfully,

Noah

Hi Noah,

Could you tell me what part of the attached policy was added/amended in June? I think the “Use of Non-Departmental ALPR System” was added, so just wondering if anything else changed in June. Maybe you have a redline?

Thanks!

Hello all:

Our records indicate that you are currently assigned to a DFS cruiser that has an ALPR system on it. That system is *NOT* currently in service (meaning working and allowed to connect to and receive alerts/hits). We are hopeful that funding will become available to conduct the necessary updates and/or maintenance to your device, and we hope to get your systems online in the reasonably near future.

In preparation, please review the attached training materials. For those who have not previously received it, a familiarization training either in-person or via remote meeting/call will also be provided.

You are required to review these materials prior to having the ALPR systems on your cruisers activated or re-activated:

1. General Order TRF-11, the Department's ALPR policy
2. Neology PAGIS 2.15 User Training, a pdf document

Please reply to this message, including Sergeant Ryan Walczak of the Technical Services Unit, indicating when you have reviewed the materials and if you understand them or have any questions.

Respectfully,

Sergeant Noah H. Pack
Massachusetts State Police

Noah,

I've attached the current status report slide deck that captures are reported bugs and planned features for your review. As shown in the slide deck we've made some significant progress in correcting bugs attributed to the overall system software, mobile hardware and GPS coordinate problem.

Highlights are:

- All bugs referenced on slide #3 in RC 58 and RC 59 are in their last steps in QA and are all scheduled to be released to BOSS4 v59 on March 6th

- PAGIS bugs referenced on slide #6, excluding the GPS coordinate issue, have gone through QA and have been corrected in PAGIS 2.15.2.12 All PAGIS bugs including the GPS coordinate issue will be corrected in PAGIS version 2.15.2.13 and will be released on Fed 27th.

- Reported issues where the SX4e processor seems to be functioning (lights on but not booting to PAGIS application) we have been able to a) replicate this and b) partially identify the cause. This is caused by a Windows10 "write-lock" feature which is enabled on the processor units. This write-lock is purposefully used, and has been in previous generations of SX4/SX3 generations to protect the configuration of the processor and its Operating System. In VP-relay mode, as is used by MSP (and others), this write lock has been replicated to show that in roughly 0.5% of restart/reboot cases that the Operating System will hang, meaning that PAGIS never gets to a boot status. Hence the reporting status that the processor seems to be working (lights on etc) but not being able to see Pagis. The work-around at the moment is a power-cycle when this happens which in all tested cases seems to clear the problem. In one situation the team had to power cycle the unit 3 times before it cleared however in every other case, a single power cycle resolved the lock. The engineering team at manufacturing are working through the configuration to better understand and identify what is causing this so we are able to provide a script to update the config to resolve this.

Hi Noah,

I've attached the latest status report slide deck that outlines resolved & open bugs and planned feature updates for your review.

Highlights are:

- As indicated on slide #3 RC 59 has been incorporated into and RC 58 and are in their last steps in QA and are scheduled to be released on March 6th.
- PAGIS (update) referenced on slide #6, eleven PAGIS issues have been resolved; however further Q&A testing uncovered four previously unknown issues. Recommendation is to delay the PAGIS software version two weeks (February 27th to March 13th) to ensure all issues are resolved.

Please let me know if I can provide any additional information.

Thanks,

John Tedona

Hi Carol,

We are rolling out our technology to the NH State Police and NH Attorney General's Office and I would like to see if you and your team would consider giving our intelligence platform a trial. There is no financial outlay or commitment to purchase. I would only ask for your honest feedback. I am local to you and would be happy to provide an in-house demonstration for you and your team at your convenience. I have attached our product brochure for your review, consideration, reference, and distribution as needed. I would only need about an hour of time. Please let me know what your schedule permits.

Subject: Court Decision - Commonwealth v. Jerron Perry (Cell Towers, Search & Seizure, Expectation of Privacy) - April 1, 2022

SUPPORTING MASSACHUSETTS PROSECUTORS
MDAA
Massachusetts District Attorneys Association

Commonwealth v. Jerron Perry
Supreme Judicial Court – April 1, 2022
(Cell Towers, Search & Seizure, Expectation of Privacy)

In a lengthy and detailed decision, the Court addressed the constitutional implications of "tower dumps", which provide the cell site location information (CSLI) for all devices that connect to specific cell towers during a particular time period.

Background: The Commonwealth obtained search warrants for seven tower dumps, corresponding to the locations of six robberies and an attempted robbery which resulted in a homicide. The dumps spanned seven different days over the course of slightly more than one month; each tower dump was limited in time to the period immediately before and after the specific robbery for which the CSLI was sought. Investigators then cross-referenced the information obtained from the tower dumps to isolate particular telephone numbers that appeared at more than one location. Thereafter, investigators analyzed the CSLI associated with those telephone numbers, among them the defendant's telephone number, to "determine (1) the approximate location of the connecting cellular telephone, (2) the identity of the telephone's user, and (3) the identity of the person with whom the user was communicating." In total, police obtained information on over 50,000 distinct phone numbers. By cross referencing the data, police determined that the defendant's number appeared in the tower dump pertaining to the homicide on Oct. 6, 2018 and the robbery on Oct.

31, 2018. Police also learned "that, at around the time of the shooting on October 6, 2018, the defendant's telephone had been in communication with another device, which they suspected to have belonged to the getaway driver. Investigators were able to determine the identity of the suspected coventurer, as well as the fact that his cellular telephone number appeared in the tower dumps corresponding to the robberies on September 22, October 6, and October 31, 2018." The defendant moved to suppress all evidence obtained from the data towers, and when his motion was denied a single justice reserved and reported to the full court.

Holding: "We agree that the government's use of the seven tower dumps was an intrusion upon the defendant's reasonable expectation of privacy, and therefore constituted a search under art. 14 of the Massachusetts Declaration of Rights. We do not agree, however, that warrants for tower dumps are per se unconstitutional. Accordingly, investigators may use tower dumps so long as they comply with the warrant requirements of art. 14."

The Court exercised its powers pursuant to G.L. c. 211 s. 3 and held that going forward, before acquiring and analyzing a series of tower dumps, the "Commonwealth must obtain a warrant from a judge. Before issuing the requested warrant, the judge must ensure that it provides a protocol for the disposal of any data that falls outside the scope of the search." The Court also determined that "our holding applies prospectively and to those cases that are active or pending on direct review on the date of issuance of the rescript in this case."

Application: In determining whether the police use of technology to engage in long-term surveillance "constitute[d] a search under the mosaic theory, courts have considered 'whether the surveillance was so targeted and extensive that the data it generated, in the aggregate, exposed otherwise unknowable details of a person's life. … To answer this question, our limited precedent to date primarily has focused on three general concerns: the extent to which the surveillance reveals the whole of an individual's public movements; the character of the information obtained; and whether the surveillance could have been achieved using traditional law enforcement techniques. … While these factors have emerged as preeminent in the few cases in which we have applied the mosaic theory to date, we emphasize that the question whether electronic surveillance exposes otherwise unknowable details of a person's life must be answered in light of the totality of the circumstances in each case. Accordingly, these factors are not exhaustive, and no one factor is determinative." The Court found that here, the actions of the police--viewed in their entirety—provided police with information of a "highly personal and private nature" previously "unknowable" about the defendant's life. Therefore, the use of the seven tower dumps intruded upon the defendant's reasonable expectation of privacy.

It was undisputed that the Commonwealth had established probable cause to believe that the crimes described in the warrants had been committed. Therefore, the Court focused its analyses on whether the warrants established a substantial

basis to believe that a search of the requested tower dumps would provide evidence of the crimes under investigation, or would aid in the apprehension of the perpetrator.

First Warrant:
Probable Cause: The affidavit did not set forth any particularized information that the perpetrator or the coventurer owned a cell phone or communicated with each other from a distance. “Moreover, the first warrant affidavit did not discuss the need for coventurers to communicate when committing a robbery, nor did it point to any evidence that the perpetrator and the coventurer had been separated during the commission of the crime such that they would have had to communicate from a distance. Thus, the only ground in the first affidavit upon which to conclude that the perpetrator had possessed or used a cellular telephone to aid in accomplishing the crimes was the affiant officer's statement that "it is very common for a person to have a cellular telephone with them at all times." Therefore, the information from the first warrant “must be” suppressed.

Particularity: Not reached due to the finding of no probable cause.

Second Warrant:
Probable Cause: The Court found that the affidavit described several similarities between the offenses and evidence that a second co-venturer had acted as a getaway driver in at least three of the crimes. IT also contained information suggesting that the defendant and co-venturer had communicated with each other from a distance either before or after the crime. The second warrant did not rely on any data produced from the first warrant. “The evidence that the perpetrator and the coventurer communicated from a distance, when combined with the affiant's statements about the over-all ubiquity of cellular telephones, provided reasonable grounds to believe that the robber and the getaway driver had used cellular telephones to communicate. Because there was reason to believe that the perpetrator used a cellular telephone to communicate with a coventurer around the time of the offenses, there also was probable cause to believe that either the perpetrator's telephone or the coventurer's telephone would have produced telephone call CSLI that would appear in the requested tower dumps, and likely in more than one of the tower dumps. This CSLI, in turn, would enable investigators to isolate potential suspects by determining which, if any, individuals had been near the scene of two or more of the offenses. Accordingly, the second warrant was supported by probable cause.”

Particularity: “The defendant's reasonable expectation of privacy was invaded not simply by law enforcement's possession of his anonymized CSLI, but also by the investigating officers' possession and analysis of that CSLI, the aggregate of which provided investigators with a revealing mosaic of the defendant's private life. Only those individuals whose CSLI was subject to further analysis – such as the defendant -- were subject to a search within the meaning of art. 14. The question, then,

becomes whether the second warrant sufficiently limited the set of telephone numbers and their associated CSLI that investigating officers were permitted to analyze, and therefore to search." The Court found that while the scope of the warrant and particular items to be seized were not "entirely clear" and could have permitted investigators to "permissibly could select any telephone number from among the 50,000 provided and thereafter conduct a search by determining the identity of that individual, his or her location, and with whom he or she had been communicating, all without even an iota of suspicion", any defects were remedied by the supporting affidavit which adequately limited the scope of the search. "Otherwise put, because the warrant authorized the search of only a narrow subset of the CSLI, for purposes of identifying a common suspect, it was sufficiently particular."

PRACTICE TIP: "Although limiting a search of CSLI to an identified suspect might be the better practice where possible, it is not required where, as here, the suspect's identity is unknown and the scope of the search is appropriately limited through other means."

NOTE: The Court distinguished this case from its 2015 holding in *Estabrook*-- a warrantless search of up to six continuous hours of CSLI was permissible—on the grounds that here the government obtained small increments of CSLI over the course of different days. "The rationale in *Estabrook* was that analyzing six hours or less of telephone call CSLI could not be a search 'because the duration is too brief to implicate the person's reasonable privacy interest.' While the court has determined that analyzing six continuous hours of CSLI does not intrude upon a reasonable expectation of privacy, analyzing small increments of CSLI over the course of several days does. Accordingly, although *Estabrook* enables the Commonwealth to obtain one or more tower dumps spanning six hours or less without a warrant, it provides no refuge where, as here, the tower dumps span multiple days."

Please see attached opinion and happy Friday!

Good Afternoon All,

I very much appreciate the time this week discussing our covert solution. Attached is the spec sheet on the two solutions and photos of the two enclosure types we are quoting. The two enclosures are turnkey with all optics, processors, and can be preconfigured to your LEARN account and setup for cellular if you provide your SIM card to us ahead of equipment shipping.

We expect lead time between 30-45 days from time the order is placed. There are no minimums unless there are requested changes to enclosure types or a new enclosure design. All enclosures come with a 1 year hardware manufactures warranty, the warranty statement is attached as well for your reference.

Please do not hesitate to let us know if you have any questions and our team will get the quote around to you shortly.

Thanks,

Ryan Barnett

Dear Dan

I did some quick looking this morning and I did not find any court challenges to CT police's use of license plate reader cameras. The ACLU has been vocal about their concerns re: privacy and retention, but the one bill proposed in 2012 that would have limited retention to 2 weeks did not pass the House.

Also, I couldn't find the 5-year retention period that my colleague referred to yesterday. Instead, I see that our own State Police A&O Manual policy lists retention at 90 days unless the footage is tagged as evidence. That is the same policy we use for all our camera footage.

I attached to this email some more materials that might be helpful. The newspaper article contains a link to a 2019 ACLU report that is over 1,000 pages; it may provide a glimpse into any potential challenges.

Please let me know what else I could look into to help you all with this.

Thank you,

Kate Ayers

---

Hey Corey,

Attached please find the DHS annual report section with my suggested cuts (contained in comments in the margins).

Please work your magic to further reduce the section so it doesn't end up being much more than 12 to 14 pages or so (the 2019 Annual Report contained 17 pages for DHS, and the 2021 report contained 8 pages). I also don't want cut language/information that you think is critical to keep.

I appreciate your help.

My best,
Doug

Hello Lieutenant,

As a follow up to the email below, please find attached presentation which gives you an overview of our Company, Technology and Clients.

ELSAG ALPR provides significant benefits to Police in support of their missions :

- Largest share in USA ALPR industry to Law Enforcement specific deployments serving over 3000 agencies in all 50 States.
- Federal Agencies : Only ALPR supplier to be trusted by all branches of the US Federal Government (including FBI, HIDTA, DEA, Secret Service, US Army, US Navy, US Marines, etc.)
- On site or 24/7 remote customer support (with facilities in Greensboro NC and Brewster NY … next to Danbury CT less than 2 hours drive from Mass)
- Highest quality in industry, Built Cop Tough with many systems +10 years deployed and still operating.

I look forward to speaking with you at your convenience.

Best Regards, Ben

Hi LaShawn:
I would just like to follow up on the below question. Our GAM included a request to increase the equipment line for pursuit mitigation equipment. These are covert tracking devices that also require a subscription, which would be categorized as "other". The cost for this one year of airtime and access to CovertTracking mapping is $1,620. Would this subscription be allowable under this GAM? If allowable, would the entire year's cost be allowable, or would we have to prorate the cost to align with the end date of the grant (06/30/2024)?

Thanks,

Rebecca Rust

Hi Gus,

Apologies for the delay getting back to you on this. Lieutenant Mike George and I discussed it yesterday.

We agree that this would be most efficiently done as a single invoice with an aligned expiration date, as you have it in that quote. The devices do not need to be split up; they will all fall under the DHS Technical Services Unit.

Respectfully,

Noah

Subject: RE: Airlink subscription renewal - TSU

Hi all

As a follow-up, I spoke with Peg Sullivan about this service who thought it may make sense to combine the renewal for these devices into a single quote/renewal each year. The attached quote includes a common end date for all devices on 9/30/24, now that the vendor bills in fixed increments rather than their previous "token" system for monthly activations.

If it is appropriate to use a single funding source for these devices, I can enter this as a new OPAS request, and Peg can close out the below 3 renewals. I can add comments that the service is used by Homeland Security and TSU.

If the cost should be split up, the rep can do that too. (We would need to know how these devices are shared/split in order to request two (2) quotes from BCM)

Thanks

Subject: RE: Airlink subscription renewal - TSU

Hi Noah and Lt. George

The devices on this quote are combined from several previous PO's (TSU and Homeland Security).

Devices on quote:

10 - *AirLink Basic Remote Device Management (July 1, 2023 to Sept 30, 2024)*

123 - *AirLink Basic Remote Device Management (Oct 1, 2023 to Sept 30, 2024)*

1 - *AirLink Basic Remote Device Management (Nov 1, 2023 to Sept 30, 2024)*

5 - *AirLink Basic Remote Device Management (May 1, 2024 to Sept 30, 2024)*

Previous PO's / renewals in OPAS:

1.

Narrative Description Of Request	Request Number	
AirLink Device Mgmt Service (ALMS)	OTIS24 - 0028	1 Year - AirLink Device Management Service for Ninety-one (91) Devices 91

Shipping Instruction

Attn: Technical Services Unit - D-Lt. Crouse

FY23 8100-4443 3810 U10 $2,866 50

2.

Item Description	Mai
Sierra MP70 Router (w/Wifi)	17
Sierra Power Adapter	25
Sierra Cellular Antennas	34
AirLink Device Management Service (77 Devices)	1

Sierra routers/AirLink Mgmt (ALMS)	OTIS24 - 0029	
AirLink Device Management Service (77 Devices)	1	**Attn:** Brian Egnitz **Email:** brian.egnitz@state.ma.us **Phone:** 9784513710

FY22 8100-4443 3810 $3,660.00

3.

Item Description	Date
Sierra Wireless AirLink Basic Remove Device Management - 1 year subscription	60

AirLink Basic Remote Device Management subscription	OTIS24 - 0030

Attn

Noah Pack

FY23 8100-1001 7000 (unit 7000 not used with std. appropriation in FY24) $1,890.00

I spoke with Matt at BCM who explained that the renewals are complicated, because the quantities do not match exactly due to devices expiring and also Sierra's previous "token" system, etc. Matt says this quote, however, covers all devices referenced in the above past renewal orders (91+77+60)

*as a reminder the 91 above is not related to the 91 Airlink devices for the Coastal Camera Project and is just a coincidence

Because the maintenance for all devices are now combined on a single quote, I want to confirm the funding source with the Budget office before we process the PO. Do you know if this renewal cost should be under Homeland Security, the TSU, or perhaps split?

Thanks

Hi Gus,

That quote appears to be accurate in terms of number of devices and expiration dates. For what it's worth, we are already in a state of service interruption on those ten devices, but it's an administrative service so it's not the end of the world while this gets sorted out.

Respectfully,

Noah

Hi Noah

I wanted to follow up on this when you have a chance. It appears only 10 devices are up for renewal today – the rep did mention to me however that there will be no chance of service interruption, but I would like to have the renewal PO generated once you confirm the details on the quote.

Please let me know if you have any questions or if there is any info I can provide from past Airlink PO's etc.

Thanks

Subject: RE: Airlink subscription renewal - TSU

Noah

Great, thanks. If the dates look correct to you (below), do you how the subscription end date of 6/30/23 decreased down to only 10 devices expiring next week? Reference last year's PO for 60 devices which noted a 6/30/23 end date.

10 - *AirLink Basic Remote Device Management (July 1, 2023*

123 - *AirLink Basic Remote Device Management (Oct 1, 2023*

1 - *AirLink Basic Remote Device Management (Nov 1, 2023 to*

5 - *AirLink Basic Remote Device Management (May 1, 2024 to*

I spoke with BCM about this briefly and understand Sierra / Airlink used to use a “token” system to apply subscription credit to devices. The orders would generate a “pool” or “bank” of tokens and they could be applied to different devices as needed for 1 month each. Could this be how the subscription dates may have been shifted? I understand Sierra moved away from the token subscription format.

Hi Noah

I don’t believe annual request letters are required here as they are renewals, and the renewal POs are processed each year by EOPSS.

I will research the PO history but believe that is the case here similar to Software maintenance renewals. Also, many To/From letters will also request future, recurring annual support to be funded on an ongoing annual basis.

Thanks

Hi Gus,

I will check this against our account and confirm. I think the idea here is so that we (Lt. George will be writing for this one) only have to write this renewal request letter once a year. If you want to split them up into multiple quotes, we will still want to include them all in one request letter. Any issues with that approach?

Respectfully,

Noah

Subject: RE: Airlink subscription renewal - TSU

Hi Noah

As you know, BCM generated the attached. Could you review for accuracy, and I can process the renewal PO for the devices which have a subscription ending on 6/30/23? (It appears to be 10 devices that are due for renewal)

I may need to have BCM split this up into multiple quotes, but it's a good idea to synchronize the end dates to be able to process them together for October 2024.

Subject: RE: Airlink subscription renewal - TSU

FYI Both these invoices are for existing and deployed Airlink modems.

The meeting we had yesterday on Coastal Camera Project cleared up this issue – the 91 airlink invoice is merely a coincidence with the exact amount of cameras ordered on the coastal project.

Sorry for the confusion.

Noah

I don't have visibility into the device subscriptions other than the PO copies (attached and below). Could you work with the BCM rep, Matt, to generate a quote for the renewals needed?

I spoke with Matt yesterday who was looking into this and thought the 91 devices on our July 2022 PO might be unrelated to the coastal camera project.

WORK ORDER NUMBER: #125854 **P.O. NUMBER:** SEE NOTES
PO: 2023BCMCCU12POL20043

Material order request for the following items:

QTY:(91)AIRLINK DEVICE MANAGEMENT (1 YEAR)

WORK ORDER NUMBER: #128361 **P.O. NUMBER:** see notes
PO: 2023BCMCCU12POL20358

Material order request for the following items:

QTY:(60)Sierra Wireless Airlink Basic Subscription (September 1, 2022- August 31, 2023)

Matthew Boschetto

30 Commerce Way, Woburn, MA 01801
O: 781-897-5178
C: 781-528-8344 | boschettom@bcmcontrols.com

I can assist with processing the renewal PO(s) as necessary – from what you can see in the ALMS account, it may be that a 2 month quote is needed for a partial quantity to cover from now until August 31st, and then we can generate another PO for September 1st , 2023 to August 31st , 2024 for the full amount, if they should all be combined.

Thanks

Subject: Re: Airlink subscription renewal - TSU

In our ALMS account, I see 122 Airlink basic devices that are set to expire in September and 17 devices which expired at the end of March.

60 airlink basic devices are covered by the LPR renewal. The 91 for the coastal camera project are not yet included in this system (correct?).

By my math we then need a renewal quote for at least 79 more devices. We also have a number of new devices that are slowly being added, but each of these should have a year included and won't come up for renewal until next year.

What's the status on the renewal of the other devices? Have we received any other renewal quotes? If not, should we have BCM amend the quote for 60 Airlink Basics to reflect a total 140? It would make sense to me to combine all the renewals on one schedule and one quote going forwards, but that decision would ultimately be yours, Lt, if you think that makes sense.

Sups,

Please make the attached policy known to your dispatchers. As it reads, the Commonwealth Watch Center and the Commonwealth Fusion Center are the primary ALPR resources for the Department; and any non-Department ALPR Systems accounts are prohibited unless approved by the Division Commander of Homeland Security and Preparedness, through your chain of command.

If your center or any of its personnel have Department ALPR and/or non-Department ALPR accounts, please let me know by end-of-week so a determination can be made about access and use.

Thank you,
Ken

All DHQ Dispatchers:

Please read the attached policy you should have all received in your work email and sign off on it (Front of the dispatch book) when you are next in. It is imperative that we log each entry we make and remove from active log once canceled. D Troop set the standard for this statewide and the policy reflects our diligence. Also be sure that all LPR request through the Fusion center are MSP related or BOLO's for D Troop. I will update the policy and procedure book once you all sign off you have read in its entirety.

Thank you for your time!!

Mobile Ops & Hit Confirm.jpg

Nick, please forward to all CVES users with ALPR cruisers. Thank you.

Notification of ALPR Policy Update

Each of you is assigned a cruiser with an ALPR system that is either in service or will hopefully be back in service soon. The Department's ALPR policy (TRF-11) was officially updated as of June 27, 2023. An updated copy is attached to this email.

There are no substantive updates that apply specifically to users of cruiser mounted ALPRs. The sections titled "**Mobile Operations**" and "**Hit/Alert Confirmation"** may be helpful to review, and screenshots are attached.

Respectfully,

Noah

There are no substantive updates that apply specifically to users of cruiser mounted ALPRs. The section on "**Hit/Alert Confirmation"** was reworded and may be helpful to review:

Prior to initiation of a stop or enforcement action based upon an ALPR hit or alert, members shall confirm the hit or alert, to include:

- Verify the *plate*: Visually verify that the vehicle plate matches the ALPR system's interpretation;
- Verify the *state*: Visually verify that the state of the vehicle plate matches the state of the plate in the Hot List information; and
- Verify the *status*: Verify the current status of the plate that generated the hit/alert (e.g., is the vehicle still stolen), through:
    - o Criminal Justice Information System (CJIS);
    - o National Crime Information Center (NCIC);
    - o Department's Records Management System (RMS); or
    - o Another appropriate source of data

Notification of ALPR Policy Update

The Department's ALPR policy (TRF-11) was officially updated as of June 27, 2023. An updated copy is attached to this email. This policy governs the use of the ALPR systems by sworn and civilian members of MSP. Please review it to ensure you are familiar with the most recent version. Many of the updates directly reflect the best practices that we have already been using and teaching, such as limiting the scope of searches and the duration of manual hotlist entries.

One noteworthy update is that a manual hotlist entry request must be authorized by a supervisor, except in exigent circumstances/emergencies. This can be satisfied in one of two ways: (1) the request can come directly from a supervisor (Sgt. or above or civilian equivalent),

or (2) the requestor can provide the name of the supervisor who has authorized the request. If you or a member of your unit submits a hotlist request to the Watch Center, they will respond with an inquiry about this authorization if it does not meet one of those criteria in the initial request.

As always please feel free to reach out with questions, comments, or success stories.

Subject: ALPR Update Materials

Hello all:

Our records indicate that you are currently assigned to a DFS cruiser that has an ALPR system on it. That system is *NOT* currently in service (meaning working and allowed to connect to and receive alerts/hits). We are hopeful that funding will become available to conduct the necessary updates and/or maintenance to your device, and we hope to get your systems online in the reasonably near future.

In preparation, please review the attached training materials. For those who have not previously received it, a familiarization training either in-person or via remote meeting/call will also be provided.

You are required to review these materials prior to having the ALPR systems on your cruisers activated or re-activated:

1. General Order TRF-11, the Department's ALPR policy
2. Neology PAGIS 2.15 User Training, a pdf document

Please reply to this message, including Sergeant Ryan Walczak of the Technical Services Unit, indicating when you have reviewed the materials and if you understand them or have any questions.

Respectfully,

Sergeant Noah H. Pack
Massachusetts State Police

Dear Dan

I did some quick looking this morning and I did not find any court challenges to CT police's use of license plate reader cameras. The ACLU has been vocal about their concerns re: privacy and retention, but the one bill proposed in 2012 that would have limited retention to 2 weeks did not pass the House.

Also, I couldn't find the 5-year retention period that my colleague referred to yesterday. Instead, I see that our own State Police A&O Manual policy lists retention at 90 days unless the footage is tagged as evidence. That is the same policy we use for all our camera footage.

I attached to this email some more materials that might be helpful. The newspaper article contains a link to a 2019 ACLU report that is over 1,000 pages; it may provide a glimpse into any potential challenges.

Please let me know what else I could look into to help you all with this.

Attachments: Commonwealth v. McCarthy_ 484 Mass. 493.pdf

Hi Erick,
Attached is the McCarthy decision regarding Automatic License Plate Readers issued in 2020.

Since I was chatting about it with SPDU, I'm CCing them as well and Lori too.

The decision is interesting and doesn't have a bright line, but gives a warning that my initial gut reaction that we should get a SW is on point.

Eyewitness surveillance for motor vehicle plates in the public does not implicate any reasonable expectation of privacy interest.

However, ALPR (automatic license plate readers) does and is analogous to cell site location information in cell towers. The Court opined that police surveillance using technology (as opposed to eye witness observations of plates in connection to traffic stops) does implicate privacy interests even though the vehicles are operating on public ways.

What the Court has termed as the "mosaic theory" that the Court developed in Augustine (which was the case where the Court held we need a SW for CSLI data) applies here. You don't need a SW for a one-time ping under exigency, because a one-time ping for CSLI doesn't show all the physical movements over a period of time. Similarly, the SJC in the McCarthy case found that the data from the ALPRs to be limited in scope since it was limited to the Bourne and Sagamore Bridges for a limited period of time.

However, under mosaic theory, when collected for a long period of time the "cumulative nature of the information collected implicates a privacy interest on the part of the individual who is the target of the trackings." The length of time that the CSLI is being requested is a factor that the investigator should get a SW. The Court holds in McCarthy that ALPR is analogous so that we would need to probably get a SW if you are requesting data for a longer period of time.

I think that if you were just looking at a distinct date/location for the sex offender's plate that under McCarthy you wouldn't need a SW.

However, now that you have told me that there's some indication that the child was in communication as far back as two years before she went missing when she was only 14 y.o., we need to request the longest possible period of time in which the Commonwealth keeps the ALPR data.

We aren't allowed to get CSLI data via a Grand Jury subpoena. Since the McCarthy court compares ALPR to CSLI data, I think that the Court would similarly rule that we cannot get that location data via a Grand Jury subpoena, so let's get a SW.

Also I think I'd rather go to Superior Court on this since it is a novel not typically every day thing that goes to District Court. Let's meet up next week to draft this SW together. If you could get info for how far back that this data is retained that would be helpful.

Great working with you.

Thanks,
~ Anne

Hi Paul,

I'm not sure if you are aware but wanted to share one of Genetec's products called Citigraf. I attached a general brochure as well as on overview.

In brief summary, it provides a real time crime center integrated to your CAD program as well as GIS and ESRI mapping……and of course being the same platform that you use for video surveillance, license plate recognition, access control, emergency communications and alarm monitoring.

I could coordinate a demonstration if there is any interest on your part.

Thank you.

Paul – for the Foxboro barracks you got the following PN/Model: SV-300E-16T-I5 (SV-300E model, 16 TB of Storage, i5 Intel Processor).
I've attached the datasheet for that specific model.

Let me know if you have any questions

Subject: Re: LPR Info

Good Afternoon,

I have attached a copy of the Department's ALPR policy, TRF-11, which outlines the requirements for requesting a historical query and/or hotlist. Below are the relevant sections.

Historical:

Search Procedures

The Commonwealth Watch Center (CWC) and Commonwealth Fusion Center (CFC) shall serve as the primary ALPR resource for the Department. Search requests submitted to the CWC/CFC shall include, at a minimum:

- Case number or reference;
- Type of investigation or reason for request;
- Plate number(s) and vehicle description (if available);
- Requested search time period; and
- Requested search area (devices or region).

Hotlist:

Manual Hot List Entries

Manual entries of a license plate onto a Hot List may include vehicles associated with:

- AMBER or Silver Alerts;
- Missing child, missing person, or kidnapping broadcasts or bulletins;
- Incapacitated or endangered persons;
- Be-On-Look-Out (BOLO) broadcasts or other public safety alerts;
- Investigation of terrorist or criminal offenses; or
- Wanted persons, arrest warrants, or search warrants.

Manual entries onto a Hot List shall be:

- Entered with the vehicle description, if available;
- Entered with a case number or reference;
- Updated or removed when information changes, is no longer current, or is no longer necessary or reasonable;
- Given special attention to rental and short-term use vehicles;
- Given special attention to incidents that may be quickly resolved;
- Entered with an automatic expiration date no longer than thirty (30) days; and
- Approved by a supervisor, except in exigent circumstances.

Respectfully,

Subject: Re: LPR Request

Good Morning, Joanne -

Firstly, I apologize for any inconvenience that may have been imposed by the below referenced exchange, however, I hope I can provide some clarity on the situation as it is something that we frequently experience and often results in some confusion / misunderstanding.

I will defer to Det. Lieutenant Brooks, Sergeant Ryan Walczak, and Sergeant Noah Pack to review the Watch Center's handling of the below referenced general BOLO, but I can assure that the intent of our personnel is not to cause a "*huge delay in service"*.

I would encourage all department members seeking to employ ALPR technology in their investigations to familiarize themselves with TRF-11, the Department's Automatic License Plate Recognition technology policy (attached). I have highlighted the relevant portions, which all Watch Center personnel have been instructed to follow during our related training.

Additionally, for your awareness, the Watch Center does also exercise discretion in reviewing both radio and teletype BOLOs for instances in which the exigency of the situation may preclude or supersede the provision of a related case or incident number, and in many instances, we ***will*** query and/or enter short-term hotlists for plates pro-actively with authorization of the duty Lieutenant assigned to the Watch Center. Examples of situations where the employment of ALPR technology for exigent circumstances include: Missing Persons/Silver Alerts/Homicides or other serious violent crimes/Kidnappings/Terroristic or other threats to life.

In this particular instance, I can also confirm that the registration in question ***was*** entered onto the MSP - Troop D - Dispatch hotlist, and remains in the system with a short term expiration date of 10/24/2023 (Ref: Bourne PD - Dom A/B). The

vehicle has not been observed by MSP ALPR since the date/time listed on the original submission.

I hope this helps clarify the reasons for the follow-up question(s) that may be posed by Watch Center personnel when a request for ALPR data and/or hotlist(s) is received. Please do encourage your Dispatchers to continue to submit requests for ALPR data and/or hotlist(s) when appropriate, just also please understand that we may be required (by departmental policy) to pose follow-up questions to ensure the continued and successful access to such a useful investigative tool.

? email from bottom up –

Hi, my dispatchers are not sure why this new rule is in place…. But a huge delay in service is happening if a report or incident number is needed before anyone can check LPR's???

I was originally told an email was enough to get these started. Has that changed?? I am worried as dispatchers don't get access to RAMS or report numbers and sometimes even the troopers don't have it at the start of an incident, they won't be sure to include the Fusion Center in these requests… I want them to work smarter not harder… The LPR hit in a timely fashion is what often gets things solved or resolved. We can follow up with numbers after the fact, but it is near impossible to expect a number before a request can be made…

Thanks for any help or feedback on this critical item!

Hi SGT Pack,

I will send out the SCF to Wayne Bainter at BainCor, Inc. I will cc you.

I apologize, can you refresh my memory? What is MSP purchasing from Baincor?

Thank you,
Brian

Subject: FW: massDOT question

Hi Sgt. Pack,

Good news. As I mentioned, I hadn't heard back from John Polcari over at MassDOT, but a contact I have over there got back to me almost immediately. Please see below. MSP has been approved to utilize the MassDOT contract with Baincor under sperate contract execution. MassDOT is going to send me a copy of the contract packet for our procurement file.

The last step will be for MSP to have an authorized signatory form Baincor sign a Standard Contract Form (SCF) and send it back to me for CAO Small's signature. I will have an SCF sent to the contract person at Baincor and keep you posted.

Thank you,
Brian

Hi Brian,

Happy New Year to you as well! Good to hear from you.

I have reviewed the RFR and I concur that it's open for use for POL under separate contract execution; request to use approved. I have contacted our contracts and records department and requested the contract packet, which will include the executed SCF. Once I receive it, I will pass it along to you.

Subject: massDOT question

Hi John,

Happy New Year! I hope all is well.

The MSP is looking to piggyback off a massDOT Telecommunications RFR/contract. We saw that Mr. Polcari was a point of contact on COMMBUYS. I emailed on Thursday and hadn't heard. Please see the attached embedded thread. This is a bit of a rush on our end. Is there any way you could check

on this for me or point me in the right direction?

Thanks John.

Subject: Re: MSP ALPR Procedures

Hi Dave,

I very much appreciate it. I've listed a few questions below, but please feel free to include any other comments as well.

We expect to have a story out this weekend. Would you be able to get back to me today?

- Has the hot list been a useful public safety tool, and how so?
- In what cases has the hot list been most helpful? Are there examples or anecdotes of where the hot list had been helpful in locating a person during an emergency?
- What goes into deciding whether to use the hot list? How do troopers determine whether to add a vehicle to the list? Are there cases where it doesn't make sense to use the hot list to find a missing or wanted person? Is the decision to add a vehicle to the hot list up to the State Police, or can local police departments request for vehicles to be added?
- Data privacy advocates have raised concerns about the sharing of location data with out-of-state police departments, out of fear that it could unwittingly expose a person who traveled to Massachusetts for something like reproductive health care. Has that concern been brought to the State Police? How would State Police verify the information it receives from out-of-state departments to ensure it is protecting the privacy of people who travel into this state?

If I can clarify any questions, don't hesitate to let me know.

All my best,
Will

Subject: MSP and DOT Equipment Collocation Request

Good afternoon U/S Kwon and Terrey,
I have attached a letter that I sent to Joe Foti and Tony Wade (MA DOT) on October 26, 2022, requesting collocation of equipment, specifically ALPR cameras. In this letter, I highlighted the criticality of this equipment as it pertains to our public safety mission and detailed the nature of the request, the responsibilities the MSP would assume, and the anticipated sites for deployment of the cameras.

As discussed yesterday, Mr. Wade recently informed Sgt. Pack the DOT has not historically allowed MSP access to State resources, and this request would require a "policy change."

For a better understanding and to assist with the next steps, I have attached a Word document outlining a history of the request to include why this request benefits the Commonwealth. Unfortunately, in order to enable a "policy change," the next step in this request may have to be facilitated through respective Secretariats.

Please let me know if you have any questions/concerns.

Thank you!
Mark

Subject: Pilot- Final Data summary

Good afternoon, in addition to any final reporting that you feel would be helpful to us we would like to see the following items:

1.) Overall data usage and broken down by troop for duration of pilot. (wi-fi vs cellular. Also if there is a breakdown of 5G vs LTE and by router type.)

2.) Aggregate map of the state for cellular connectivity for duration of pilot. Broken down by router.(we understand this may be limited due to lookback limitations)

3.) Amount of data transmitted via cellular specifically for CMC/BMC.

4.) Number of intakes to call center with time to resolution.

5.) HPUE usage overall and broken down by troop.

6.) Any possible info regarding the Hot Spot data usage?

7.) Any possible evidence of success in remote update / fix, or "application push" to the systems, cell phone and router? (I don't know if this is available, but may be nice to show remote fix capabilities)

8.) Pros/cons from vendor perspective of Sierra vs Cradlepoint and recommendation

9.) Pros/cons from vendor perspective of providing Help Desk support

10.) -Any possible info regarding the Hot Spot data usage?

11.) Any possible evidence of success in remote update / fix, or "application push" to the systems, cell phone and router? (I don't know if this is available, but may be nice to show remote fix capabilities)

12.)Any lessons learned each vendor would like to provide

Thank you,

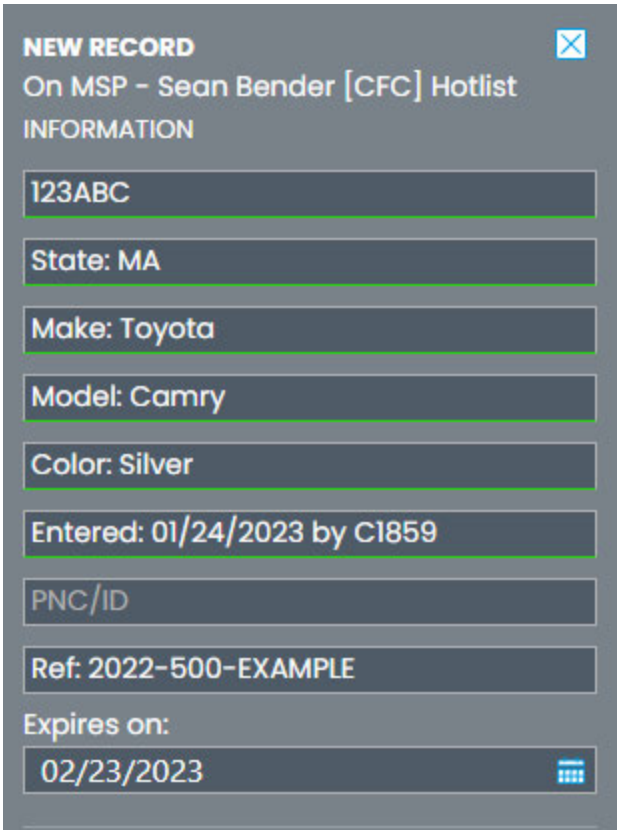
Subject: Reminder: Boss4

Good Morning, All -

Just a reminder, please ensure that when entering hotlists into Boss4, we are all complying with the Department's ALPR policy (TRF-11, attached), as well as the additional recommendations regarding data retention (24-72 hour vs. 30 day hotlist entries). Sgt. Pack **does** perform routine audits of the ALPR system and hotlist entries, and has recently brought to my attention a handful of entries that do not comply with departmental policy.



Minimum Requirements:

- Authorized purpose (refer to TRF-11)
  - *A case or reference number for a law enforcement investigation or legitimate public safety purpose is REQUIRED.*
- Update/Remove when information changes or is no longer current
  - 30 day expiration date for investigations, 24-72 hours for radio BOLOs, Dispatch requests, Public Safety hotlists etc. After the initial hotlist expires, the investigating officer is responsible for contacting the CFC for a longer term hotlist.
- Entered by:
  - Name or UserID of the user creating the hotlist, for audit purposes.

Additional Recommendations:

- State, Make, Model, Color
    - Including a physical description of the vehicle ensures that if a hit notification is received, recipients can confirm that the vehicle captured matches the suspect vehicle.
- Entered by (Date)
    - This helps us and the recipient to see how recent/relevant a hit notification may be. Agencies often forget to contact the CFC to remove the plate from the hotlist when it is no longer required.

In order to maintain compliance, uniformity, and consistency in our entries, I *highly* recommend utilizing the following format:

Please also ensure that when creating the notification profile that a hotlist is linked to the notification profile, otherwise, the plate may hit, but the user will not be notified. There are currently a number of notification profiles that are not linked to hotlists, or hotlists that are not linked to notification profiles. These hotlists will not function, even if the plate is captured by an ALPR device.

If you have any questions, please do not hesitate to reach out to myself, Justin, or Sgt. Pack.

Thank you.

Respectfully,

Sean Bender

Subject: RE: Utilization of Video Systems in the CWC

Col. Cyr,
Amy and I have reviewed the most recent draft. We noticed the term "systems" was removed from a few of the sections but still remains in other sections, including the title. For consistency purposes, we would recommend reinserting the term where it was removed or removing it from the policy altogether.

With respect to Cpt. Rudolph's suggestions:

(1) We agree with adding "and Security" to the EOPSS reference in the Grant Provision definition.

(2) Changing “are” to “is” would be appropriate of we remove the term “systems” from these sections. If we reinstert the term, it should remain “are.”
(3) With respect to the comma after the term “video,” we believe it should be left out so as to preserve “video data” as a single term.

I’d be happy to incorporate these suggestions into a new draft if you think it would be helpful.

Have a great weekend.

-Jason-

Cc: Tucker, Daniel T (POL) <Daniel.T.Tucker@pol.state.ma.us>
Subject: Re: Utilization of Video Systems in the CWC

I won't fool anyone into thinking I can judge the subject matter, but strictly from a proofreading standpoint if someone could please review the following 3 items in red:

1.) In the "Definition" section, I believe a couple words might have been inadvertently left out of the Grant Provisions bullet:

> *Grant Provisions*: *The provisions of the U.S. Department of Homeland Security / Federal Emergency Management Agency Port Security Grant (Sub Account No. EMW-*

*2020-PU-0056) awarded to the Massachusetts Executive Office of Public Safety **and Security** (EOPSS), effective on July 1, 2022, and any/all subsequent related grants or award(s).*

2.) In the section, "Authorized Access and Uses" (A and B) should it be "is" instead of "are" in these spots? I am not a grammar expert so feel free to tell me I'm wrong.

A. *Access to video viewable at the Commonwealth Watch Center that **are** not available to the general public shall be restricted to authorized Watch Center employees, Fusion Center employees, Department employees with Watch Center access, and other individuals authorized by the Commonwealth Watch Center supervisor, Fusion Center Commander, Division Commanders, or the Colonel or designee.*

*B. Use of video viewable at the Commonwealth Watch Center video **are** strictly limited...*

3.) In the Section "Prosecutorial & Court Ordered Restrictions" should there be a comma after "video"?

Commonwealth Watch Center video, data, and information are subject to state and federal laws...

Thank you,
-Jim

Utilization of Video Systems in the Commonwealth Watch Center (DRAFT) (highlighted changes JRS).docx
Commonwealth Watch Center Video Systems Policy (DRAFT) - JRS 01.06.23.docx

---

Amy,
I've highlighted Col. Cyr's latest draft to show the changes that were made since we submitted our draft in January. Both documents are attached for reference.

Regarding D. Capt. Rudolph's suggestions:

(1) Agree
(2) Given that they've removed the word "systems" from those paragraphs, I would agree to change "are" to "is."
(3) I would disagree with adding the comma. I believe "video data" should be its own term.

CFC-12 Utilization of Video Systems in the Commonwealth Watch Center (DRAFT - template) - 04.04.23.docx

---

Good morning Major Tucker,
LTC Cyr requested that Jason formalize this video policy as a CFC policy. It has been approved by legal. As the fusion center director, you are the authority for CFC policies. Please sign the policy and then we can have all personnel sign off that they have read and understand the policy.

Thank you,
Amy

Subject: RE: Utilization of Video Systems in the CWC

Col. Cyr,
Amy and I have reviewed the most recent draft. We noticed the term "systems" was removed from a few of the sections but still remains in other sections, including the title. For consistency purposes, we would recommend reinserting the term where it was removed or removing it from the policy altogether.

With respect to Cpt. Rudolph's suggestions:

(1) We agree with adding "and Security" to the EOPSS reference in the Grant Provision definition.
(2) Changing "are" to "is" would be appropriate of we remove the term "systems" from these sections. If we reinstert the term, it should remain "are."
(3) With respect to the comma after the term "video," we believe it should be left out so as to preserve "video data" as a single term.

I'd be happy to incorporate these suggestions into a new draft if you think it would be helpful.

Have a great weekend.

Cc: Tucker, Daniel T (POL) <Daniel.T.Tucker@pol.state.ma.us>
Subject: Re: Utilization of Video Systems in the CWC

I won't fool anyone into thinking I can judge the subject matter, but strictly from a proofreading standpoint if someone could please review the following 3 items in red:

1.) In the "Definition" section, I believe a couple words might have been inadvertently left out of the Grant Provisions bullet:

> *Grant Provisions*: *The provisions of the U.S. Department of Homeland Security / Federal Emergency Management Agency Port Security Grant (Sub Account No. EMW-2020-PU-0056) awarded to the Massachusetts Executive Office of Public Safety* ***and Security*** *(EOPSS), effective on July 1, 2022, and any/all subsequent related grants or award(s).*

2.) In the section, "Authorized Access and Uses" (A and B) should it be "is" instead of "are" in these spots? I am not a grammar expert so feel free to tell me I'm wrong.

A. *Access to video viewable at the Commonwealth Watch Center that* ***are*** *not available to the general public shall be restricted to authorized Watch Center employees, Fusion Center employees, Department employees with Watch Center access, and other individuals authorized by the Commonwealth Watch Center supervisor, Fusion Center Commander, Division Commanders, or the Colonel or designee.*

B. Use of video viewable at the Commonwealth Watch Center video ***are*** *strictly limited...*

3.) In the Section "Prosecutorial & Court Ordered Restrictions" should there be a comma after "video"?

> *Commonwealth Watch Center video, data, and information are subject to state and federal laws...*

Thank you,
-Jim

Subject: ALPR Policy Update

Notification of ALPR Policy Update

The Department's ALPR policy (TRF-11) was officially updated as of June 27, 2023. An updated copy is attached to this email. This policy governs the use of the ALPR systems by sworn and civilian members of MSP. Please review it to ensure you are familiar with the most recent version. Many of the updates directly reflect the best practices that we have already been using and teaching, such as limiting the scope of searches and the duration of manual hotlist entries.

One noteworthy update is that a manual hotlist entry request must be authorized by a supervisor, except in exigent circumstances/emergencies. This can be satisfied in one of two ways: (1) the request can come directly from a supervisor (Sgt. or above or civilian equivalent), or (2) the requestor can provide the name of the supervisor who has authorized the request. If you or a member of your unit submits a hotlist request to the Watch Center, they will respond with an inquiry about this authorization if it does not meet one of those criteria in the initial request.

As always please feel free to reach out with questions, comments, or success stories.

Respectfully,

Noah

CAUTION: This email originated from a sender outside of the Commonwealth of Massachusetts mail system. Do not click on links or open attachments unless you recognize the sender and know the content is safe.

Noah,

I just wanted to pass along a quick success story we had here in Barnstable. On May 27, 2023 we had 2 unknown individuals fire several rounds at a motor vehicle in the Craigville Beach parking lot at 8:30pm as beachgoers were in the area enjoying a nice sunset. Although no one was hit, the vehicle was struck 5 times and the community was immediately put on edge because of this brazen violent act.

As we were developing suspects we were able to identify the vehicle and plate of the car used to help the shooters flee the scene. Utilizing CSLI for the suspected occupants and plate reads from Yarmouth, Barnstable, and Sagamore we were able to show the vehicle and the suspects traveling together prior to and immediately after the shooting. Having access to the plate readers in the other communities was invaluable in this investigation and helped solidify the probable cause needed to obtain arrest warrants for the responsible parties.

Thank you again for keeping these readers up and running, they truly help more than you know.

Subject: LPR System User Updates

[EXTERNAL EMAIL] DO NOT CLICK links or attachments unless you recognize the sender and know the content is safe.

CAUTION: This email originated from outside your organization. Exercise caution when opening attachments or clicking links, especially from unknown senders.

Hello Boss4 users, please see the updates below regarding the Department's ALPR system.

Policy Update

The Department's ALPR policy (TRF-11) was officially updated as of June 27, 2023. An updated copy is attached to this email. This policy governs the use of the Department's ALPR systems by sworn and civilian members of MSP and our partner agencies who have completed MOUs with us. Please review it to ensure you are familiar with the most recent version. Many of the updates to this policy directly reflect the best practices that we have already been doing and teaching, such as limiting the scope of searches and the duration of manual hotlist entries.

One noteworthy update is that a manual hotlist entry request must be authorized by a supervisor, except in exigent circumstances/emergencies. This can be satisfied in one of two ways: (1) the request can come directly from a supervisor (Sgt. or above or civilian equivalent), or (2) the requestor can provide the name of the supervisor who has authorized the request.

Hotlist Entries

When entering a plate on a hotlist, information must be entered in the free text fields about the vehicle, the reason for the entry, the date of the entry, and who entered it. Please do not enter just a plate. For investigations, include enough information to identify what vehicle and case it refers to. For public safety entries, include enough info so that someone receiving the alert would know what to do or who to call if it alerts them. For all entries, there must be enough info so that we can identify an authorized use and specific case or incident when conducting an audit. An example of a solid entry would be:

LPN: 123ABC
Field 1: 2020
Field 2: Toyota
Field 3: Highlander
Field 4: White
Field 5: Entered 5/1/23 by #1234
Field 6: Homicide invest [OR] New Bedford kidnapping
Field 7: 2023-123-123 [OR] Contact New Bedford PD

Expiration dates: Manual hotlist entries must have an initial expiration date of no longer than 30 days and must be removed as soon as the information become invalid or is no longer needed for the investigation. For entries requested by a dispatch entity or for other short-term matters, such as a general BOLO, the entries must be set to expire no later than the following day (generally 24-48 hours). The intent of this is to avoid a plate being left on the hotlist for long after the short-term incident is resolved.

Searches:

When conducting a search, please be mindful of the temporal and geographic parameters that are reasonable and consistent with the needs of the investigation or incident. In short, this means to ask how much historical time and how much area (how many cameras) do we need to search, as these are among the questions being asked in court when assessing the reasonableness of LPR use in a particular case.

Historical data visibility is currently limited to **90 days**, but data is retained for 1 year by DCJIS policy. If you need to search further back than 90 days, please contact the Commonwealth Watch Center for assistance at fusion@mass.gov.

Successes:

LPR continues to provide critical information for major incidents and investigations, from shootings to kidnappings, all over the Commonwealth. Please continue to forward these

success stories to me or the Watch Center to help us document and defend the public safety value of this system. Feel free to also forward any suggestions on how we might improve the system.

Respectfully,

Noah

Hi Paul,

I'm not sure if you are aware but wanted to share one of Genetec's products called Citigraf. I attached a general brochure as well as on overview.

In brief summary, it provides a real time crime center integrated to your CAD program as well as GIS and ESRI mapping……and of course being the same platform that you use for video surveillance, license plate recognition, access control, emergency communications and alarm monitoring.

I could coordinate a demonstration if there is any interest on your part.

Thank you.

Please review this MassDOT comment approved by our law department:

MassDOT draft comment at 3:45 p.m.

- For how long does MassDOT store the license plate data collected at the electronic highway toll booths?

Answer: MassDOT maintains images on its EZPass toll enforcement system for up to 3 years and EZPass toll data for up to 10 years.

- Are vehicles automatically removed from the hot list after 30 days? Are there other methods to make sure they are taken off the hot list in a timely manner or once an emergency ends?

Answer: The Secretary of EOPSS, or their designee, verifies in writing which emergency situations warrant adding any license plate and/or transponder number to the Hot List. License plates and/or transponder numbers only remain on the Hot List for a maximum of 30 days. In most instances, EOPSS will notify MassDOT within hours or just days to cancel the Hot List activation. In the very rare instance when EOPSS does not notify MassDOT within 30 days, MassDOT will notify them that the Hot List activation is being deactivated in accordance with the regulation.

- When a request to add a vehicle to the hot list arrives from State Police or EOPSS, how do MassDOT staff verify that the information is accurate and tied to a permissible use of the hot list?

Answer: License plates and/or transponder numbers are only included on the Hot List in limited emergency situations involving imminent and immediate threat to the safety, health, and well-being of an individual or the public based on specific, reasonable intelligence sufficient to necessitate the need to provide this Hot List Data to law enforcement. Such emergency situations include terrorist threats, Amber Alerts, Silver Alerts, kidnappings, missing persons, and felons actively traveling to or from a crime scene. EOPSS will state in writing what the emergency situation is that warrants adding a license plate and/or transponder number to the Hot List.

- Our review of email records could not find an instance where MassDOT rejected a hot list request. Are you aware of any instances where that has happened?

Answer: We are not aware of an instance where MassDOT has rejected a Hot List request from EOPSS. EOPSS may have rejected some Hot List requests.

- Has the hot list system been audited before to ensure it is used correctly?

Answer: We are not aware of a MassDOT audit of the Hot List process.

###

DRAFT MSP recommended statement:

MSP Recommended Statement:
"The ability to query information about vehicles connected to serious crimes, through both the MSP's automated license plate readers and the DOT's tolling gantries, is a valuable tool to assist in capturing dangerous offenders, securing justice for their victims, and protecting public safety and homeland security. The MSP utilizes both systems judiciously and in accordance with state and federal laws and Constitutional rights of individuals," –**Mass State Police spokesperson**.

Background:

- Use of the MSP's ALPR system is governed by a rigorous Departmental policy, TRF-11.
- MSP investigators do not have direct access to the DOT gantry information and request such data from the DOT's legal division via a thorough process that ensures all relevant criteria and safeguards are met.

Subject: RE: Public Records Request

Including my most recent inquiry from Will. This is not a topic EOPSS sees regularly, so I need to do more work on my end to get a better handle on the subject matter. As I mentioned, EOPSS did not have any responsive documents to the reporter's PRR request for policies, memos, etc. Dave and I just spoke. Dave recommends providing reporter with MSP's policy on license plate readers (which is specific to MSP's LPRs). He is reviewing whether guidance is included about how to use the DOT's toll gantries. We will work on developing a statement that outlines the rare circumstances when the 'hot list' is used and note it's life-saving capabilities in an emergency and our dedication to balancing public safety and privacy.

From a 2016 Boston Globe story: "The state's new all-electronic tolling system will include a "hot list" feature capable of sending law enforcement officials instant alerts when cars with specified license plates or transponders pass under toll gantries. State transportation officials confirmed the technology is being installed on the Mass."

From Will:
I'd love to chat about the process of using the hot list, how requests are handled, what situations the hot list is most helpful in, and what successes they've had with it.

We'll have a story out this weekend on how the hot list has been used in recent years. If an interview isn't possible today, I would still love to chat with someone and can be available anytime early next week.

If that's the case, I want to make sure EOPSS' perspective is still included in our initial story this

weekend. Would you be able get back to me by the end of today about these questions?

- Has the hot list been a useful public safety tool, and how so? In what cases has the hot list been most helpful?
- Some data privacy advocates voiced concerns about the hot list's use in criminal investigations, since it does not require a warrant to use. How does EOPSS ensure the State Police's requests to add vehicles to the list are accurate and permissible under state regulations?

If you have any other comments you'd like to add, please feel free to include them. Just let me know if I can clarify the questions.

Thanks for your time and help on this.

Best,
Elaine

Thanks, Jacque,

We're planning to have a story out this weekend on how the hot list has been used over the past five years. I had a few questions that I wanted to make sure you had the chance to respond to.

1. For how long does MassDOT store the license plate data collected at the electronic highway toll booths?
2. Are vehicles automatically removed from the hot list after 30 days? Are there other methods to make sure they are taken off the hot list in a timely manner or once an emergency ends?
3. When a request to add a vehicle to the hot list arrives from State Police or EOPSS, how do MassDOT staff verify that the information is accurate and tied to a permissible use of the hot list?
4. Our review of email records could not find an instance where MassDOT rejected a hot list request. Are you aware of any instances where that has happened?
5. Has the hot list system been audited before to ensure it is used correctly?

Would you be able to get back to me today? Please feel free to give me a call if I can clarify the questions.

All my best,
Will

Hi Jacque,

I appreciate you checking.

When we reported in 2017 on the early uses of the hot list, there were records of at least a half-dozen hot lists requests from that year.

Is it possible these records and others from that time were purged from the MassDOT system, or is there another explanation for why the emails from before Oct. 2018 are no longer available?

Thanks very much for your help.

All my best,
Will

Will,

Please note regarding you questions in the email below:
The MassDOT Law Department ran a search for MassDOT emails with the date range of 10/28/2016 - 2/22/2023. Based on the search date range, it would appear there were no responsive records prior to October 2018.

Hi Jacque,

I hope all is well! I'm reaching out regarding the MassDOT Hot List records we received last month. After reviewing the records, it appears the oldest email provided was from Oct. 3, 2018. Our request sought emails dating back to Oct. 28, 2016. Wanted to confirm — does MassDOT not have records prior to Oct. 2018 related to our search?

All my best,
Will

Re: Public Records Request for:
"Between Oct. 28, 2016, and Feb. 22, 2023, the number of license plates and/or transponder numbers that have been added to the Massachusetts Department of Transportation's "hot list" as defined in 700 CMR 7.02 and 700 CMR 7.05(8).
The current number of license plates and/or transponder numbers that are on the Massachusetts Department of Transportation's "hot list" as defined in 700 CMR 7.02 and 700 CMR 7.05(8).
Between Oct. 28, 2016, and Feb. 22, 2023, all requests from the Executive Office of Public Safety and Security's Massachusetts State Police "hot list" designee to access hot list data, as defined in 700 CMR 7.05(8), and responses to those requests.
Between Oct. 28, 2016, and Feb. 22, 2023, emails from or to Jamey Tesler, Colleen Ogilvie, Matthew Landry, Michael Ariely, and Erin Deveney containing the following keywords: "Hot list" "Hot list data" "Check toll records" "Host database""

Our Reference No.: P000330-022223

Dear Mr. Katcher,

The records had been sent in August, but I am re-sending as it is my understanding you dod not receive them. The text of our initial response is below:

With regard to "the number of license plates and/or transponder numbers that have been added to the Massachusetts Department of Transportation's 'hot list'", we do not have additional records but the records attached contain all numbers that were added.

With regard to "[t]he current number of license plates and/or transponder numbers that are on the Massachusetts Department of Transportation's 'hot list'", there are zero.

Please be advised that a portion of your public records request seeks information that is exempt from disclosure under Massachusetts General Laws Chapter 4, Section 7(26) (c), which exempts materials or data "relating to a specifically named individual, the disclosure of which may constitute an unwarranted invasion of personal privacy". MassDOT has determined that the public interest in the release of this personal information does not outweigh the privacy interests of the individual(s) involved.

In addition, a portion of the records is exempt pursuant to Massachusetts General Laws Chapter 4, Section 7(26)(a), which is known as the "Statutory Exemption". This exemption provides that records are exempt from disclosure if they are "specifically or by necessary implication exempted from disclosure by statute". In this case, the statute in question is the federal Drivers Privacy Protection Act (18 U.S. Code § 2721) which states, in part, "a State department of motor vehicles, and any officer, employee, or contractor thereof, shall not knowingly disclose or otherwise make available to any person or entity, personal information about any individual obtained by the department in connection with a motor vehicle record...personal information includes the individual's photograph, social security number, driver identification number, name, address (but not the 5-digit zip code), telephone number, and medical or disability information". We cannot, therefore, provide this information as part of a public records request.

In the case of a denial of access to records, you have the right to an administrative appeal to the Supervisor of Records, pursuant to 950 CMR 32.08(1) (the Code of Massachusetts Regulations), and the right to seek judicial review by commencing an action in the Superior Court.

If you need additional information, or there is any other way we can assist you, please respond through the portal or contact our general public records line at (857) 368-8760. Please use our Reference No.: P000330-022223.

Sincerely,

William J. Doyle, Esq.
Records Access Officer
Office of the General Counsel

Introduction

Modern-day law enforcement relies on advanced technologies to enhance investigative capabilities. One example of these technologies is automated license plate reader (ALPR).[1] ALPR has been used for decades by law enforcement agencies throughout the United States, Canada, and across the globe to help generate leads and close cases. Law enforcement agencies that utilize ALPR continuously report that the technology is a critical tool that helps advance their efforts to fulfill law enforcement's ultimate mission of keeping our communities safe.

ALPR is a proven technology, but all law enforcement tools must be used ethically and appropriately. This product is designed to assist law enforcement agencies with developing and maintaining an ALPR program that respects citizens' Constitutional rights and privacy while maintaining ALPR's effectiveness as a tool to address crime.

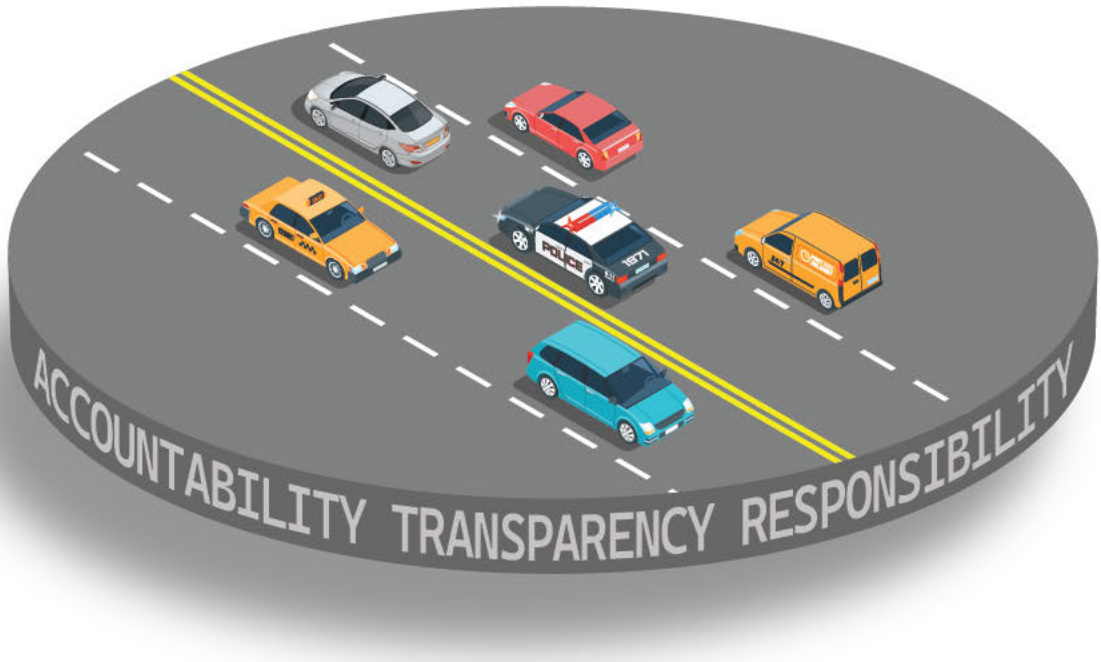
In October 2022, the Major Cities Chiefs Association (MCCA) established an ALPR Working Group composed of trusted technology partners, law enforcement agency stakeholders, and subject matter experts in the ALPR field to achieve this goal. The Working Group has created a set of best practices related to procurement, development, operation, data collection and reporting, and other elements instrumental in creating a well-balanced ALPR program. Like any other technology, ALPR will continue to evolve.

The product is a true public-private partnership, and the framework outlined in it will help law enforcement agencies seeking to utilize ALPR achieve the highest possible standards. However, it is essential to remember that every community is different, and what works in one community may not work in another. Therefore, while the Working Group's recommendations provide a strong foundation, agencies are encouraged to tailor them to meet the specific needs of their community as they develop, implement, and manage their ALPR program.

1 ALPR is also sometimes referred to as automated license plate recognition technology. For the purposes of this report these terms are used interchangeably.

1012

Executive Summary



In October 2022, the Major Cities Chiefs Association (MCCA) launched an ALPR Working Group composed of trusted technology partners, law enforcement agency stakeholders, and subject matter experts. The Working Group has developed a product that is designed to provide MCCA members and other law enforcement agencies with guidance on developing, deploying, and responsibly using ALPR technology. ALPR technology has proven to be a powerful tool to combat criminal activity, generate actionable investigative leads, and help close cases faster.

This product directly addresses the most critical aspects of ALPR technology, which can be subdivided into three main categories: accountability, responsbility, and transparency. The product outlines suggestions on ALPR program design, policy development, training considerations, and deployment strategies. The product also covers ALPR procurement. Finally, it addresses the ongoing management and oversight of the technology and provides an overview of relevant case law. While these suggestions and recommendations address the most critical aspects of ALPR, they leave sufficient room for agencies to develop programs that meet their specific needs.

Stakeholders concerned about ALPR typically focus on disparity of impact, infringement of privacy, and the effects on individual rights. However, the Working Group strongly believes these concerns can be sufficiently addressed and mitigated through thoughtful policy design, effective management, and proper oversight. Furthermore, it is important to note that recent case law differentiates the capabilities ALPR provides from those of other law enforcement technologies.

The guidance outlined in this product serves as a template for building and operating an ALPR program that is both effective in its use and responsible in its nature. By implementing the Working Group's suggestions and recommendations, law enforcement agencies can ensure their ALPR programs are helping to keep communities safe while protecting citizens' privacy, civil liberties, and Constitutional rights. In addition, this can help increase public trust and build support for using ALPR technology.

Finally, like all technology, ALPR will continue to change and evolve. For this reason, this product should be considered a living document rather than a finalized template for developing and implementing a balanced and responsible ALPR program. As the conversation surrounding ALPR progresses, so will the recommendations and suggestions included in this product.

1013

Key Recommendations

The following key recommendations serve to highlight the MCCA ALPR Working Group's most essential recommendations and considerations. They have been grouped by their applicability to three foundational principles regarding the deployment of advanced technologies in law enforcement.

ACCOUNTABILITY

- Agencies should develop a training program that establishes accountability guidelines, procedures for responsible use, and emphasizes transparency. The use of ALPR technology should be limited to trained personnel.
- The use of ALPR technology should be limited to criminal investigations or to address an articulable public safety concern.
- The procedures for the use of ALPR technology should emphasize the need to confirm the accuracy of the information presented prior to taking enforcement action.
- Careful consideration should be given to the data retention policies implemented by the agency. Data retention time frames should be developed by balancing community needs, benefits, and concerns.
- Audits of ALPR programs should be conducted regularly. Audits should monitor user activity to ensure appropriate use in accordance with established policies.

RESPONSIBILITY

- Sharing ALPR data among law enforcement agencies can enhance the effectiveness of ALPR deployments. A clear policy should be established prior to enabling data sharing to address data usage and deconfliction requirements.
- Deployment strategies should be reviewed regularly and evaluated to ensure the ALPR program and technology continues to operate within the established objectives and policies.
- Law enforcement agencies seeking to procure ALPR technology should consult with other agencies that have deployed ALPR during program development.
- Prior to the deployment of ALPR technology, agencies should assess existing technological deployments and consider how they can complement or enhance their specific program strategy.
- Law enforcement agencies must implement strict cybersecurity protections to prevent unauthorized access of ALPR data.

TRANSPARENCY

- Deployment plans should be informed by analyzing crime data, patterns, and trends to ensure the technology is deployed in an equitable and responsible manner.
- Agencies should consult with their local public works and other relevant stakeholders to ensure the ALPR deployment plan meets all permitting, legal, and other requirements.
- Comprehensive data collection and reporting will help maximize the benefits of ALPR technology by increasing transparency and empowering agencies to determine its impact on crime and public safety.

Methodology of Product

This product represents the comprehensive collection of the MCCA ALPR Working Group's recommendations and considerations regarding law enforcement's use of ALPR technology. The value of ALPR as a crime-fighting tool is well established. However, an effective program must include certain elements to ensure the technology is being used effectively and in a manner that maintains the trust and support of the community. This document will provide law enforcement agencies with a framework to develop, implement, and manage an ALPR program that is based on responsible use, helps keep the community safe, and respects privacy, civil rights, and civil liberties.

The MCCA ALPR Working Group includes technology vendors from various backgrounds, a diverse group of law enforcement professionals, and ALPR subject matter experts. In addition, the Working Group conducted in-depth research on ALPR technology from numerous perspectives. Finally, the Working Group leveraged the expertise of the individual participants to develop its recommendations and suggested best practices.

The information and data used to support the findings of this product include material provided by MCCA member agencies and technology vendors. The Working Group also reviewed products produced by other stakeholders on ALPR and the use of technology in policing more generally. Finally, the Working Group conducted regular internal discussions to finalize the recommendations and suggested best practices.

This product's outline and overarching topics were created collaboratively with input from all Working Group participants. Each participant was responsible for drafting a section of the report, and those drafts were circulated to the entire Working Group for review. All Working Group members approved the final product.

The final product represents the MCCA ALPR Working Group's findings, recommendations, and suggested best practices. These will help law enforcement agencies create, manage, and operate an effective and responsible ALPR program.

What is an Automated License Plate Reader?

ALPR, called Automated Number Plate Recognition (ANPR) in Europe, was invented in 1976 by the Police Scientific Development Branch to combat terrorism in the United Kingdom. While seen as a valuable tool, the associated cost and requisite experience stagnated the deployment and advancement of the technology until the first ALPR cameras were installed at the Dartford Tunnel and A1 Road in 1981. The Dartford Tunnel cameras resulted in ALPR's first arrest for a stolen vehicle. This slowly led to more widespread use of the technology, including as part of the "ring of steel" created around London in the early 1990s to protect against the Irish Republican Army (IRA) bombing campaigns. Later, ALPR technology was also deployed as part of another initiative entitled "Project Laser," which sought to "target criminals through their use of roads."[1]

The success of the "ring of steel" and "Project Laser" prompted the Police Standards Unit to create the National ANPR Data Centre (NADC) in 1997. The NADC allowed for the nationwide sharing of ALPR data across the United Kingdom and the Back Office Facility (BOF), the database where ALPR data was stored and analyzed. ALPR technology took off from here. Law enforcement first used ALPR to help solve a murder case in 2005, and by 2007, nearly half of all law enforcement agencies in the UK were using ALPR technology. American law enforcement agencies followed their British counterparts closely and started using ALPR in 1998.[2]

ALPR Hardware and Software

While the technology has advanced over the years, the main components of those early ALPR deployments and today's systems remain the same. At its core, an ALPR program consists of the camera hardware and the software used to store and analyze the generated data and alert the users when a detection of interest is made. In most cases, ALPR hardware consists of a camera, processor, power supply, and data transfer hardware. In addition, ALPR cameras are typically optimized in various ways to operate in a wide range of real-world conditions (low light, inclement weather, motion detection, etc.).

Once the camera captures the image, ALPR systems use software to read the license plate. Some systems process the image at the camera level. Other systems transfer (usually via a cellular network, but it may occur through other means) data from the camera to a dedicated ALPR-system computer for processing. The image is analyzed through Optical Character Recognition (OCR) software as part of the processing. OCR recognizes alpha-numeric numbers and letters, thereby allowing the ALPR system to successfully recognize and interpret any letters or numbers observed in the image captured by the camera.

Types of ALPR

Law enforcement uses various types of ALPR technology, including fixed, mobile, portable, and mobile applications. Below is a description of each kind of ALPR system:

- **Fixed ALPR** cameras are typically permanently mounted to infrastructure such as traffic signals, bridges, and light poles.
- **Mobile ALPR** cameras are typically mounted on vehicles. These cameras may be overtly or covertly deployed depending on the needs of the law enforcement agency.
- **Portable ALPR** cameras include mobile camera trailers which can be transported and deployed based on the law enforcement agency's operational needs.
- **Mobile Applications** leverage features built into cellular devices to create ALPR detections.

1 David J. Roberts and Meghann Casanova, Automated License Plate Recognition (ALPR) Systems: Policy and Operational Guidance for Law Enforcement, National Institute of Justice, U.S. Department of Justice, 2012. https://www.ojp.gov/pdffiles1/nij/grants/239605.pdf

2 B.A. Reaves, Local police departments, 2013: Equipment and Technology. Bureau of Justice Statistics, U.S. Department of Justice, July 2015. https://bjs.ojp.gov/library/publications/local-police-departments-2013-equipment-and-technology

The ALPR Detection Record

An ALPR record is generated when a vehicle license plate is detected, imaged, and processed to create a record. An individual ALPR record (or 'plate read') is generally composed of the following:

- An image of the license plate, which is a 'cropped' digital image of the license plate captured by the camera.
- The geo-location where the plate detection occurred, which can be determined from the GPS coordinates of a mobile reader or inferred from the location where fixed readers are placed.
- The time and date when the license plate detection occurred.
- The translated information from the plate, which is the alpha-numeric plate number and the issuing organization, typically a state. This translation can be accomplished by OCR or artificial intelligence.

In addition, an ALPR record may contain the following:

- A collateral image of the vehicle for which the ALPR read occurred.
- Metadata associated with the camera that identifies the camera unit, image settings, and other specific attributes.

Hotlist Sources

ALPR systems used by law enforcement can alert on detections of wanted vehicles. Two primary methods exist for creating a wanted vehicle within an ALPR system. First, ALPR systems allow for the manual entry of both a hotplate and a hotlist. Second, the ALPR system allows agencies to import National Crime Information Center (NCIC) records as an automated hotplate source. This is the most common method for populating hotlists.

Tactical vs. Investigative Uses

Law enforcement typically uses ALPR technology for both tactical and investigative purposes. Accordingly, agencies should consider both uses when developing their ALPR program's objectives. A tactical ALPR deployment includes placing cameras in strategically identified locations to generate information that warrants a rapid police response, such as stopping a wanted vehicle. These deployments usually seek to identify, locate, and recover a vehicle or its occupants to help address crime occurring in real time. An investigative use refers to utilizing ALPR cameras to collect license plate records that may have law enforcement interest but do not necessarily warrant an immediate police response. These detections are stored in the system and may later be queried. This information is generally used to create an investigative lead after a crime has occurred.

Business/Private Use

Since ALPR systems provide valuable data, private businesses and other organizations have also invested in ALPR technology. These uses may be for security, management, or operational needs. The following are examples of private sector use cases:

- Parking garages
- Hotels and casinos
- Homeowners associations
- Airports
- Convention centers
- Government traffic and transportation sites

Program Design and Development

ALPR has proven to be a successful law enforcement tool. Its unique ability to provide actionable leads and help close cases cannot be overstated. However, real and perceived concerns exist regarding this technology's use. Therefore, law enforcement must take careful steps to develop an ALPR program that is both effective and appropriate. Taking a thoughtful approach when designing and developing these programs is the best strategy to accomplish these goals. Some of these considerations include developing proper policies, creating comprehensive training material, and designing and implementing responsible deployment strategies.

Policy Development

Establishing clearly defined policies on how ALPR may be used is the most effective method to minimize risk to the agency and protect both department employees and the individual rights of the public. ALPR policy should direct the purpose, general use, and processes involving ALPR investigations. These policies will provide a framework by which an agency can simultaneously reap the benefits of the technology, all while respecting the privacy and civil rights of the public. Similarly, consistent policies will assist in protecting the integrity of criminal investigations, criminal intelligence collection, and justice system processes. The following components should be considered while developing ALPR policies and procedures:

- Community-directed statement on why the agency is establishing or maintaining an ALPR capability
- The purpose of the policy
- General use guidelines of the technology
- Clearly defined program oversight roles and responsibilities
- The ALPR vendor and deployment types
- Access, training, and usage requirements
- Investigative procedure requirements
- Clear guidance to department employees on being transparent on the use and reporting of the technology in court documents
- Auditing responsibilities and schedule
- Data retention and purging
- Statement affirming protections for constitutionally protected activities
- Rules governing the use of hotplates

State/Local Law Considerations

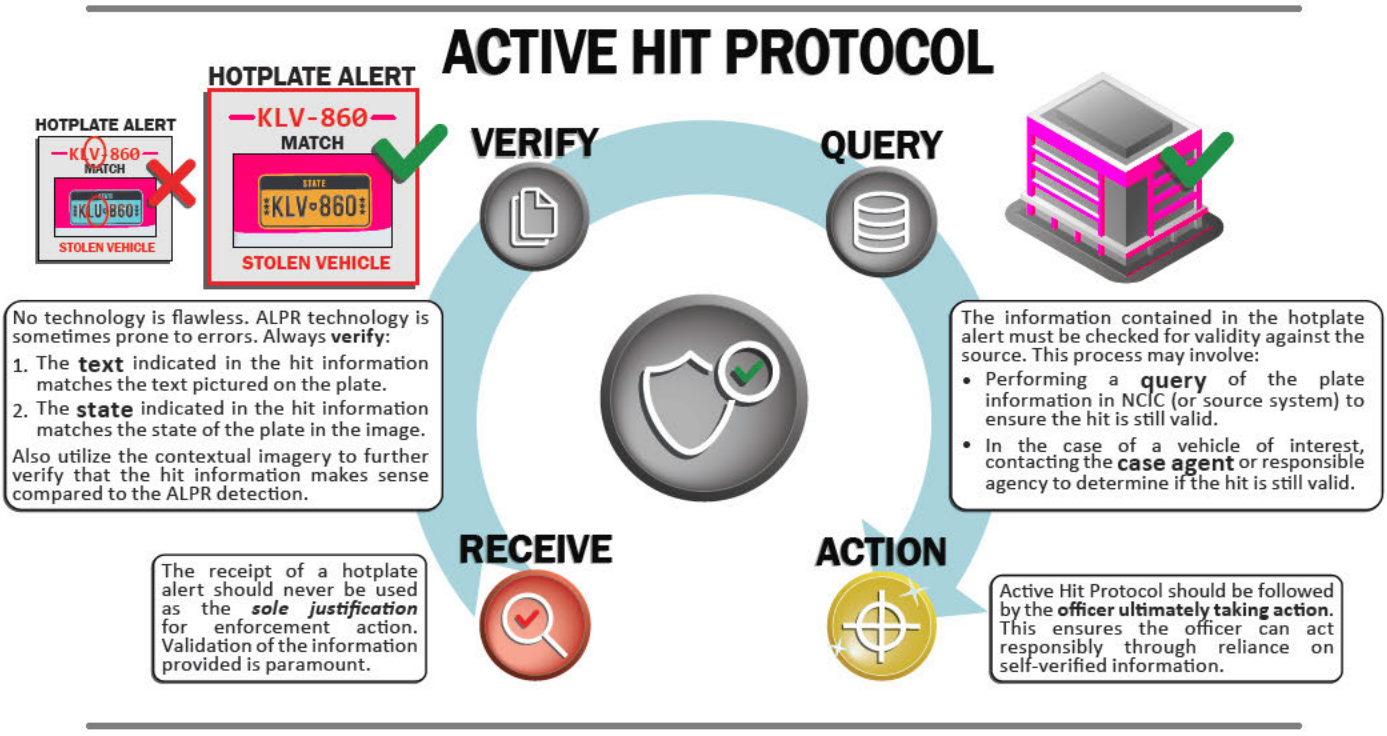
Many state legislatures have taken steps to regulate the use of ALPR technology in their states. These laws and regulations can directly impact the functioning of an ALPR program in those states, and they must be accounted for in agency policy. Examples of the types of rules and regulations implemented in several states can be found in Appendix C – State-Level Laws and Regulations.

Training Considerations

Ensuring a thorough training program is in place is critical. Users must receive training on the ALPR system before receiving access. This practice ensures ALPR systems are only used for official law enforcement purposes consistent with applicable legal limitations and department policy. The training program should address several topics to ensure that users of an ALPR system are proficient in the necessary skills, including:

- A review of the departmental policy and safeguards related to ALPR use
- Basic understanding of how the technology operates
- The ALPR data sources, vendor, type of systems, etc.
- Any significant capabilities and or limitations related to the technology
- Any potential hazards related to the technology

1018



- Who is authorized to access the system and any required training
- The role of the officer or investigator in leveraging and responding to ALPR hotplate detections
- Importance of being transparent with arresting documentation
- Any applicable laws and policies that govern the use of ALPR in the specific jurisdiction
- Use of the ALPR system as an investigative tool
- The data retention period
- Auditing responsibilities

An ALPR training program should include a tactical-level discussion of how to use the technology appropriately. For mobile units, this should consist of an initial check to ensure that the ALPR system is operating correctly at the beginning of each shift. This includes logging into the system, running any necessary diagnostics to determine that it is working correctly, and doing a quick physical inspection of the system (cameras, cables, connections). In addition, a program manager should conduct periodic checks of fixed ALPR sites to verify that the hardware is operational and communicating with the software as intended.

Field Officer Responsibilities

A critical piece of the officer training on ALPR should include an element that instructs how ALPR notifications are processed and the appropriate response protocols for those notifications. Some departments may have fixed ALPR hits reviewed and confirmed by the public safety answering point or real-time crime center before dispatching them to an officer to investigate. Other systems may provide an in-car alert on the car computer system.

Officers should be required to review hotplate detection, confirm the detections, and appropriately respond to actively wanted vehicles. This process can be referred to as "Active Hit Protocol."

Investigator Responsibilities

The ALPR system is a valuable investigative tool. It can be used to develop leads in cases involving vehicles where the license plate is unknown or to establish that a car was not in the vicinity during the time frame a crime occurred. An ALPR training program must include how to access the system and the criteria required before conducting a query, such as the reason for the search and the associated case number. Additionally, investigative tool training should address how to query the system, instructions on operating the various analytical tools within the system, how to interpret the data, how to preserve a record, and any required transparency, audit, or reporting requirements.

Types of Training

Training should be broken down into multiple categories:

- **New User Training:** This training will be detailed and define proper usage. In addition, this training should include policy, procedures, state and local laws, and an in-depth walk-through of the ALPR products and software.
- **Refresher Training:** This is considered a refresher of policy and procedures. It may also include changes to case law and examples of ALPR use. This training should ideally occur immediately after any changes to policy take place.

Authorized instructors should provide training on ALPR technology based on an established, accredited curriculum. An example of an accredited curriculum is one that has been approved by the state's Peace Officer's Standards and Training (POST) or equivalent body.

Deployment Strategies

Determining the ALPR deployment type and kind is one of the most critical decisions an agency will make concerning its ALPR program. Law enforcement is responsible for deploying advanced technology in a manner that is effective in its use and appropriate in its scope. Law enforcement also has a fiduciary duty to use public funds responsibly. For these reasons, ample consideration should be made when determining the type and kind of ALPR deployment.

ALPR Deployment Theories

As previously addressed, various types of ALPR technology exist, including fixed, mobile, portable, and smartphone applications, with each serving a unique purpose. Therefore, the kind of ALPR selected should be determined by the environment, infrastructure, and objectives for the ALPR deployment. Several ALPR deployment strategies are often considered when determining the value and placement of ALPR cameras. The most common of these strategies include the following:

- **High Traffic Areas:** The primary objective is to collect the maximum number of detections that can later be leveraged for investigative leads.
- **High Crime Areas:** This strategy focuses on producing information anticipated to be of investigative value instead of creating as many detections as possible.
- **Places of Interest:** This strategy is more of a hybrid between the first two. An example of this strategy would be deploying ALPR cameras around a shopping mall targeted by organized retail theft gangs or where assaults have occurred. Agencies may also place ALPR cameras in proximity to their community's major ingress/egress points and critical infrastructure or routes associated with gun, drug, or human trafficking.

1020

Deployment Considerations

Infrastructure and permitting are two common factors that can limit an agency's deployment strategy for ALPR systems. Agencies must carefully consider each physical deployment site. The infrastructure to mount the necessary hardware must exist for the technology to be successfully deployed. Furthermore, the owner and operator of the infrastructure or property must allow for the installation of ALPR hardware. Agencies must also ensure that the proposed site is appropriate for the type of power the ALPR utilizes. Some systems run on AC power. While this provides constant and consistent power, installing it can be more expensive. Others rely on solar energy, which may only provide enough power if the camera site receives sufficient sunlight to account for the traffic volume. Finally, this infrastructure must have access to a data transmission service, such as cellular, fiber optic, or Wi-Fi.

Once a deployment plan has been established, site locations have been determined, and in-person inspections of the sites have been completed, the agency will need to navigate any legal and permitting processes. Since permitting can vary significantly across jurisdictions, it is recommended that agencies consult with their local public works or other appropriate governmental entities to ensure all necessary procedures are being met. Engaging these entities earlier in the process will help secure their buy-in, which will be critical for a successful deployment.

Equitability Concerns

Deployment strategies must account for concerns over bias, surveillance or other threats to privacy, and potential chilling effects on First Amendment, defendant, or related rights. The following recommendations will help ensure ALPR technology is deployed in a manner that supports just and equitable policing:

- Deployment plans should be informed by analyzing crime data, patterns, and trends. The site selection process should be based on this information and account for any relevant privacy, equitability, or other concerns.
- Agencies should consult the community, other stakeholders, and appropriate oversight committees. This includes providing specific information on why and how the deployment sites were selected.
- Deployment strategies should regularly be reviewed and evaluated to ensure the ALPR program and technology continue s to operate within the established guidelines and policies.

Partner Technologies

While developing the deployment plan, it is important to consider other law enforcement technologies that may complement the ALPR system. Law enforcement agencies may deploy complementary technologies within the same area, which have different capabilities. Agencies can leverage these capabilities to increase their ability to suppress crime, create actionable leads, solve cases, and potentially deter future crimes. Potential partner technologies can be subdivided into two categories: tactical and investigative.

Tactical technologies include tools such as gunshot detection technology, public safety cameras, and drone detection technology. An example of investigative technology is a records management system (RMS). Integrating ALPR and RMS can join plate reads to hotlists, allow investigators to search plate reads within a familiar interface, and provide a direct link between case management and the ALPR database. Another example of investigative technology is crime analysis software. Bringing ALPR data into an agency's chosen analysis software can aid in ongoing investigations. For example, agencies can import ALPR data to help create accurate timelines for vehicle travel that can provide investigators with unseen leads and valuable knowledge.

1021

Procurement

Responsible procurement of ALPR technology is a critical component of an effective program. The importance of obtaining stakeholder feedback early in the procurement process cannot be understated. Program managers should make every effort to embrace a spirit of transparency, accept critical feedback, and attempt to address any concerns raised by stakeholders directly.

The procurement phase is also the appropriate time to begin building departmental policies, procedures, and protocols, as this will be crucial in gaining stakeholder buy-in. It is imperative that the stakeholders understand how these policies will protect the public's privacy and civil liberties. Agencies should also seek to mitigate any concerns that stakeholders raise about the proposed ALPR program through thoughtful policy design.

Vendor and Product Assessment

Before choosing a vendor for their ALPR program, law enforcement agencies should conduct an appropriate degree of market research. This should include a trial of the product and conversations with existing customers to evaluate its performance in a real-world setting. A trial period provides the opportunity to test the technology, the associated policies and procedures, and highlight initial successes. This can provide tangible examples that can be shared with stakeholders to show how ALPR serves to enhance public safety.

Should an agency engage in a pilot program, it is recommended that the community be notified. Agencies should also determine how any information collected may be used in investigations or other law enforcement operations until a final protocol and all other areas of the program are formalized.

When determining the best hardware for their ALPR program, law enforcement agencies should consider the following:

- Hardware requirements for specific sites
- The lenses, processor, and other technical specifications of the hardware
- Average detections per hour
- General cost
- The number of lanes of traffic a single camera can capture
- The maximum speed at which the camera can read a license plate

When determining the best software for their ALPR program, law enforcement agencies should consider the following:

- The accuracy of the OCR software and whether it's enhanced by artificial intelligence, machine learning, or another capability
- The technology's alerting system, including desktop, laptop, mobile, app-based, and in-car alerts
- The software's ability to connect and share data with other law enforcement analytical platforms

Technical Challenges

There are some challenges with ALPR software that agencies must acknowledge. For example, OCR technology analyzes all letter or number sequences in the imagery; it cannot specifically isolate only license plate images. Therefore, a detection can be created on something that is not a license plate. This includes billboards, signage, marketing material on vehicles, etc. Additionally, the full license plate letter and number sequence must be visible to create an accurate license plate detection. Occlusion, missing plates, and temporary paper plates may result in no detection, a partial detection, or a misread.

Misreads may occur for several reasons, but most are due to the incorrect translation of a letter or number. For example, the system may read an "8" as a "B" or a "K" as an "X." These technical challenges should be readily acknowledged by both the agency and a prospective ALPR vendor. Agencies must ensure their policies account for these challenges and contain sufficient safeguards to limit instances where officers act based on a misread or other error.

1022

Procurement Ethics

While local procurement ordinances vary across jurisdictions, agencies must follow those ordinances along with broader guiding principles when procuring an ALPR platform. The National Institute of Governmental Purchasing's (NIGP) Values and Guiding Principles of Public Procurement are one such set of broad principles that agencies can use to inform any ALPR procurement process. The NIGP principles are as follows:

- **Accountability:** Taking ownership and being responsible to all stakeholders for our actions. This value is essential to preserve public trust and protect the public interest.
- **Ethics:** Doing the right thing. This value is essential to deserve the public's trust.
- **Impartiality:** Unbiased decision-making and actions. This value is essential to ensure fairness for the public good.
- **Professionalism:** Upholding high standards of job performance and ethical behavior. This value is essential to balance diverse public interests.
- **Service:** Obligation to assist stakeholders. This value is essential to support the public good.
- **Transparency:** Easily accessible and understandable policies and processes. This value is essential to demonstrate the responsible use of public funds.[3]

3 Additional information on NIGP's Guiding Principles can be found here: https://www.nigp.org/our-profession/values-and-guiding-principles-of-public-procurement

Program Management and Oversight

An ALPR program's design and operational management are part of the framework of a successful program. Effective management and oversight of the program help ensure operational transparency and accountability and that ALPR technology is being used responsibly.

To ensure the program operates responsibly, agencies should assign a manager operational control of the ALPR program. This individual should be well versed in the technology, have a sound understanding of all significant components of the ALPR program, and be empowered to ensure the program follows protocols, policy, applicable law, and community and agency expectations.

A program manager's responsibilities include the following:

- Developing policies
- Overseeing training
- Ensuring appropriate use of the technology
- Managing data collection and reporting

A program manager is also responsible for staying current on technology changes and emerging ALPR trends. Similarly, they must ensure that their agency's ALPR policies and training are current and address technological changes or advancements. Finally, having a program manager establishes a clear point of contact between the law enforcement agency and the ALPR vendor. This can enhance the communication between the agency and vendor, which creates an opportunity to share and address any technological or other challenges.

Access and Appropriate Use

Law enforcement agencies are responsible for using ALPR data to uphold public safety, solve crimes, and prevent future crimes. Agencies have an opportunity to build public trust and support for the use of ALPR through transparency and responsible use. As such, agencies should carefully consider the circumstances under which using ALPR is appropriate and what personnel within the agency can access this tool.

Law enforcement agencies must scope their ALPR programs in a manner that ensures the agency is still able to conduct proper oversight and operate the program transparently. One method for achieving this is by limiting who can access the ALPR technology. For example, many law enforcement agencies restrict access to specialized personnel to ensure that the use of ALPR technology is adequately audited and controlled. Access should only be authorized once a user has completed the requisite training and demonstrates a baseline understanding and operational knowledge of the technology. Information on new user training, access, and use should be part of standard data collection and reporting related to the ALPR program.

Agencies that deploy ALPR must have written policies that outline the appropriate use of the technology. Several core principles should be incorporated into these policies to ensure the responsible use of the technology. First and foremost, ALPR technology should only be used as part of a criminal investigation or to address an articulable public safety concern. Secondly, the investigator must also have a legitimate "need to know" before querying any ALPR data. These guardrails will help prevent "curiosity checks" or other bad faith uses and ensure that privacy, civil rights, and civil liberties are respected.

Agency users must also demonstrate adherence to established policies when searching archived ALPR data. For example, if the ALPR software allows it, agency policy should require users to document the investigative purpose and case number associated with each query. Vague or ambiguous reasons for a search, such as "criminal subject" or "research," should be avoided. An agency's ALPR policies should also outline the potential consequences and corrective methods for improper use of the technology. Examples may include mandatory retraining, loss of access privileges, or other appropriate corrective punishments.

1024

Data Retention

Data retention policies are ultimately determined by the agency using ALPR technology. These policies are informed by various considerations, including the agency's objectives, stakeholders' expectations, and local laws or regulations. Therefore, it is essential that the ALPR technology, vendor, and any other relevant service providers support the agency's policies on retention.

While a general best practice is not to retain data any longer than is necessary, what constitutes "no longer than necessary" is not a simple determination since different use cases may benefit from different retention periods. For example, cold cases may benefit from years-old data, while other uses rely on more recent data.

Outside of specified legal requirements, the retention schedule for ALPR data is primarily determined by agency policy.[4] As such, law enforcement must work with the community and other stakeholders to determine appropriate retention periods for each type of ALPR data. Ideally, ALPR systems should allow agencies to define retention schedules and automatically purge any record not designated for retention by a registered user. In addition, regular system audits ensure retention standards are followed and instill confidence that system data is utilized appropriately.

Data Sharing

For good reason, law enforcement agencies worldwide are embracing ALPR technology. A 2013 Bureau of Justice Statistics study showed that 77% of agencies serving populations of 100,000 or more have access to ALPR technology.[5] Moreover, given ALPR technology's value to a single jurisdiction, law enforcement has begun to explore sharing ALPR data across jurisdictional boundaries. Sharing ALPR data amongst law enforcement agencies fosters a more collaborative approach to addressing public safety concerns across jurisdictional boundaries.

Benefits of Data Sharing

When law enforcement agencies share ALPR data across jurisdictions, the technology can provide more comprehensive data. A shared system creates more unified and robust coverage throughout a region. Several ALPR vendors currently provide their law enforcement customer base with the ability to share data with other law enforcement customers. The potential to cross-reference information between separate ALPR systems allows law enforcement to enhance their investigative capabilities and can reveal elements of illegal activity that may otherwise be unknown to the investigating agency. Several elements of ALPR data and systems can be shared, including the ALPR detections and user-created hotlists. Some ALPR vendors also allow agencies to establish data-sharing relationships between their products and other technology systems.

As a standard practice, law enforcement agencies should consider sharing ALPR data with one another to the extent that state or local laws and regulations permit. Agency policy should define what, if any, type of data sharing is in place, who is authorized to establish data-sharing relationships, and any procedures that govern the sharing of ALPR data. These procedures and data-handling agreements should be implemented in policy for both the sharing and receiving agencies.

The success of ALPR technology among law enforcement has led non-government entities to acquire the same technology. This includes retailers, property managers, towing and repossession companies, parking lot operators, homeowner associations (HOAs), and even individual households. Since the generated data is of the same format and often targets issues of mutual interest, ALPR vendors have created Public-Private Partnership (PPP) friendly user interfaces. These programs typically allow the unidirectional sharing of ALPR data from the non-government side to the law enforcement side only. These partnerships strengthen community relationships and ensure public investments are used responsibly.

4 David J. Roberts and Meghann Casanova, Automated License Plate Recognition (ALPR) Systems: Policy and Operational Guidance for Law Enforcement, National Institute of Justice, U.S. Department of Justice, 2012. https://www.ojp.gov/pdffiles1/nij/grants/239605.pdf

5 B.A. Reaves, Local police departments, 2013: Equipment and Technology. Bureau of Justice Statistics, U.S. Department of Justice, July 2015. https://bjs.ojp.gov/library/publications/local-police-departments-2013-equipment-and-technology

1025

Data Sharing Considerations

While data sharing benefits agencies, safeguards are needed to protect the agency that generates and owns the data. Data sharing guidelines can be specific to the type of shared data. For instance, if agency "A" shares ALPR detection data with agency "B," there may be no requirement for a formal agreement. In contrast, if agency "A" shares hotplates or agency-generated hotlists with agency "B," this scenario may require a formal agreement. This is because hotplates or hotlists are typically generated from a criminal investigation or law enforcement process or function that may require an officer to take action if there is a confirmed detection. Furthermore, the agency that receives the information should bear the responsibility and liability for their officers' actions in response to an alert.

Law enforcement agencies seeking to share or receive ALPR data must be aware of applicable federal, state, and local laws. As such, agencies should consult with their legal representatives to identify pending, proposed, or existing laws that may be relevant. For example, legislation is proposed annually at all levels of government which, if enacted, could limit law enforcement data sharing. Finally, agencies must consider any concerns from the community or other stakeholders before establishing multi-jurisdictional data-sharing relationships.

Auditing, Data Collection, and Reporting

Auditing and reporting an agency's use of ALPR technology is a critical component of a transparent and accountable ALPR program. The failure to operate a program in this manner will only exacerbate concerns related to misuse or contribute to the perception that ALPR technology is synonymous with increased surveillance. This will undoubtedly negatively impact police-community relations. Agencies should develop robust mechanisms to evaluate the efficacy of the technology and ensure it is being used appropriately.

Auditing Requirements

Regular audits on an ALPR system are one method for validating compliance with agency policies and applicable laws and regulations. As with other reporting requirements, the specific auditing measures, and the frequency of said audits, should be clearly defined in the ALPR program's governance documents. In general, audits should verify what ALPR information was accessed and by whom, in order to identify any improper or unauthorized uses of this data. Audits should also ensure that data within the system is being handled per agency policy, including information sharing agreements. They should also confirm that data is being purged as required under any applicable data retention schedules.

Data Collection and Reporting Considerations

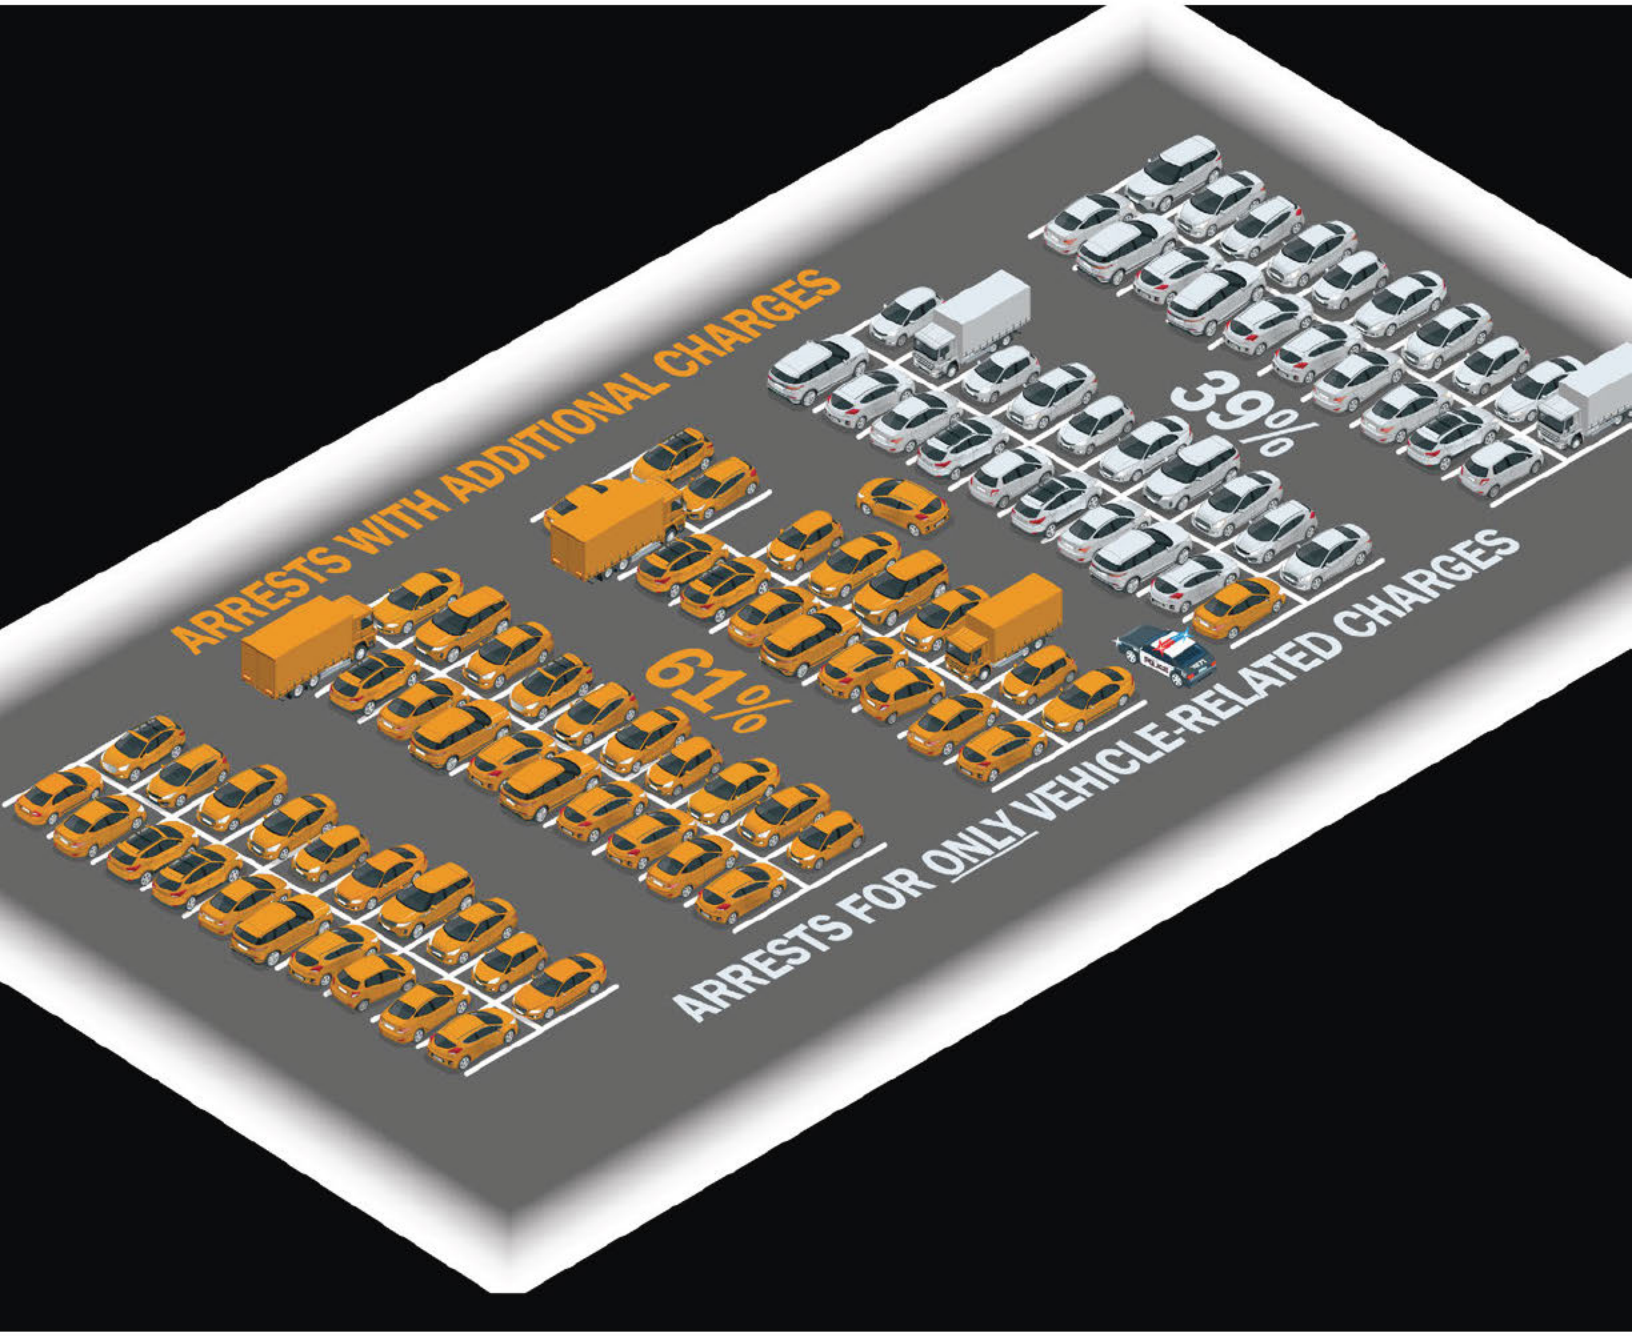
Studies have shown that ALPR technology is most effective when used systematically and when deployment sites are strategically selected.[6] In addition, comprehensive data collection and reporting will assist agencies with maximizing the benefits of ALPR technology. Finally, robust data collection and reporting will help increase transparency.

At a minimum, agencies using ALPR should collect and report the following information:

- Number of detections
- Number of hotplate hits
- Number of queries conducted by users
- Number of arrests directly attributed to ALPR hotplate detections
- Number of user-generated hotplates
- Breakdown of hotplate hit types
- Year-over-year analysis and trends

By analyzing this data, agency leaders and stakeholders can determine whether their ALPR system is meeting deployment goals and has significantly impacted crime or other areas of police operations. ALPR data collection and reporting also provide valuable insight into ALPR system adoption throughout the organization.

6 C. S. Koper and C. Lum, "The impacts of large-scale license plate reader deployment on criminal investigations," Police Quarterly, 22(3), 305–329, 2019. https://doi.org/10.1177/1098611119828039



1026

The Importance of Analysis and Reporting

Quantitative data is an excellent tool to measure the impact of law enforcement technology. The ability to answer the questions "how many" and "how often" is necessary to evaluate real-world outcomes. Additionally, the quantitative analysis of ALPR data can provide an agency and stakeholders with the information needed to determine the impact of the technology on community safety.

To explore the potential of quantitative reporting, an MCCA member agency recently analyzed the impact of a localized ALPR deployment. The data presented below represents a period of four months after the installation of ALPR cameras within the evaluated area. The types of charges related to any arrests resulting from an ALPR event were analyzed. The data suggests that ALPR technology generates leads and solves more types of crimes than those related to ALPR's most frequent use: the recovery of stolen vehicles.

It is important to capture and analyze the impact of any ALPR program to dispel misconceptions and demonstrate the impact of the technology.

1027

Data Stewardship

Throughout the design of an ALPR program, the hardware, software, and policies implemented will shape how ALPR data is collected and stored. Therefore, a comprehensive strategy should be developed to ensure all data collection aspects are secured and managed effectively.

Data Roles and Responsibilities

ALPR records are typically stored in databases that can be indexed, searched by individual or composite conditions, and analytically processed by applications that power ALPR use cases. This is an important and powerful compilation of data that must be managed judiciously. The two primary roles relative to this data are data owners and service providers.

The data owner is the organization that controls the data and decision-making authority. The data owner, typically the data's generator and user, determines how the data may be used, who it can be shared with, and its retention limits. For example, law enforcement is always the data owner for the ALPR data it generates. While this data may be shared with other law enforcement entities, the owner and provider of any particular data always retains control over all aspects of it. Therefore, other organizations that have received access to that data must act in accordance with the data owner's direction, such as adhering to retention limits established by the owner on the data.

A service provider is an entity that may take possession of data to store or process it on behalf of the data owner. The service provider operates at the behest of the data owner and enacts the owner's wishes and directions. This can include management of data sharing with other designated users, enforcing retention limits, etc. The service provider has no entitlement to the data and may not sell, derive secondary insights, or otherwise share it. Furthermore, they may only access the data to perform a function at the direction of the data owner. Law enforcement agencies often hire an outside company to be their service provider for ALPR data.

Storing and Processing ALPR Data

There are several general models for storing and processing ALPR data:

- The data is stored on-premises and processed by applications under the direct physical control of the organization that generates and uses the data.
- The data is stored off-premises by a cloud service provider and processed by applications in the cloud or on-premises under the direct control of the organization that generates and uses the data.
- The data is stored in the cloud or at an off site data center and is processed by a service provider.

In the first model, the data owner is effectively their own service provider, and there isn't necessarily a third party service-providing entity. The other two models imply some degree of a third party service provider. In those cases, the data may be held or accessed by another entity on behalf of the data owner. For ALPR systems, this could be either a cloud computing service or an ALPR technology vendor. However, in both cases, control of the data remains with the data owner.

Data Security

Law enforcement agencies should treat ALPR data like any other sensitive data it collects, uses, and manages. It should be protected as judiciously as law enforcement records, video, and other critical operational data. This includes ensuring responsible usage of the data by law enforcement personnel and vetting any service providers that may process the data. Law enforcement agencies must also apply rigorous cybersecurity practices to protect and secure the ALPR data it generates and uses. This includes, but is not limited to, proper authentication methods (multi-factor authentication is generally considered a best practice), data-sharing controls, and role-based access controls for users. Law enforcement agencies must ensure that their technology vendors provide adequate security practices to protect the ALPR data they possess and process on behalf of the agency.

Whether a service provider provides on-premise technology, stores data on behalf of a law enforcement agency, or hosts the processing applications, they have an important role in ensuring the secure and trustworthy operation of an ALPR program. The service provider is responsible for securing the data it processes to protect it from unauthorized access, theft, or misuse. They must provide the necessary capabilities, controls, and training to enable law enforcement agencies to enforce their own defined data governance policies, security standards, and procedures. This includes:

- **Enforcement of Retention Limits:** This may be applied absolutely or in a role-based fashion. For example, the absolute retention limit for ALPR data could be three years, but only cold case investigators may access data older than six months.
- **Positive Controls Over How Data is Shared:** Data must only be shared after law enforcement specifically enables it with individual partners at its discretion and under the auspices of its policies.
- **Enforcement of Personnel Controls:** These controls include system and user-level authorization, role-based access controls, and regular audits.

The FBI's Criminal Justice Information Services (CJIS) Security Policy provides a comprehensive reference and standard that agencies may use to design or measure data management for their program. For cases where service providers take possession of ALPR data from law enforcement agencies to store and process on their behalf, agencies should consider using the CJIS Security Policy to assess and set expectations of service providers.[7] An explanation of relevant sections of the CJIS Security Policy can be found in Appendix D – CJIS Security Policy.

As mentioned earlier, cloud services may be part of an agency's ALPR program. These services' security and integrity depend on the efficacy of the underlying cloud platform. Cloud service providers (or service providers that operate their own data center directly) should comply with ISO 9001:2015, an internationally recognized standard for Quality Management Systems. Compliance with this standard should be independently audited and verified for compliance under the Statement of Auditing Standards Number 70 [SOC 2 Report]. In addition, compliance with FedRAMP medium security controls provides an additional level of validation and may be required for information sharing with federal entities. Even though license plate detection records are not personally identifiable, they may be linked through other sources that may enable the end user to input data that could be viewed as personally identifiable or criminal justice information.

ALPR Reader Device Integrity

An ALPR reader that captures ALPR images and does local image processing contains instances of ALPR data. This data may be transient or stored on the device for extended periods. Since ALPR readers are often distributed in the environment and may be difficult to physically secure, it is increasingly important to consider the device's ability to locally secure ALPR data that is either at rest or in motion. FIPS (Federal Information Processing Standards) 140 standards are used to evaluate the hardware and software integrity of cryptographic modules. This applies to many devices, including ALPR readers, that need to encrypt data to secure it from compromise. FIPS 140-2 is broken into four, successively increasing levels of security.[8]

- FIPS 140-2 Level 1 is the lowest and imposes limited requirements.
- FIPS 140-2 Level 2 adds requirements for physical tamper-evidence and role-based authentication.
- FIPS 140-2 Level 3 adds requirements for physical tamper-resistance (making it difficult for attackers to gain access to the sensitive information contained in the module) and identity-based authentication, and for a physical or logical separation between the interfaces by which "critical security parameters" enter and leave the module, and its other interfaces.
- FIPS 140-2 Level 4 makes the physical security requirements more stringent and requires robustness against environmental attacks.

Depending upon the specific environment where it is deployed, the ALPR reading device should, at a minimum, support FIPS 140-2 Level 2. Aspects of FIPS 140-2 Level 3 are also becoming increasingly desirable and necessary, especially as ALPR technology advances.

ALPR Operations Infographic

Several aspects of the operation of ALPR technology can be better understood when put in the context of the technological workflow.

1030

ALPR Synergy with Other Law Enforcement Technologies

As law enforcement gains access to more information, technology will help ensure the data is organized so law enforcement officers can solve complex policing problems. Any single data source, such as ALPR, only answers one of many questions. It only tells law enforcement where a vehicle was at a given time. ALPR alone does not answer critical questions such as whom the car belongs to or who has been associated with it before, whether any of those individuals have a history of involvement in similar incidents, and other critical questions.

By integrating data across common law enforcement data sources, those questions can be asked and answered immediately, drastically increasing the odds of solving cases. Here are a few examples:

> *Consider a situation where CCTV footage captures a partial plate on a vehicle shortly after the commission of a crime. In an ideal scenario, an ALPR database may be queried to determine the rest of the characters on the license plate. Then a separate RMS system could be queried to determine if that license plate has ever been mentioned in a case report.*
>
> *A platform has ALPR, RMS, citation, and crash data integrated into one place. An ALPR detection can be searched and then linked to see if that plate has been named in an RMS case, vehicle citation, or crash report, along with any involved individuals. Links between vehicles, people, and incidents can be seen without having to search each database individually.*
>
> *An ALPR alert occurs in a platform that has CAD & CCTV integrated. As a result, an immediate CAD call can be created to accompany the alert, and any relevant CCTV footage in the area can be attached and sent to the responding officer, better preparing them to engage with the vehicle that triggered the alert.*

In these examples, a singular piece of information would have failed to fully identify the suspect vehicle. It is the utilization of an ALPR database in conjunction with other technologies produces an actionable investigative lead. For ALPR detections to be used to their fullest potential, that data must be connected to other relevant data sets.

The ultimate goal of connected data should be to allow for insights that are impossible to see currently or take too much time to consider. Departments should own all their data, including ALPR detections, and be able to link, connect, or integrate data sets as department leadership deems appropriate. When developing an ALPR program, agencies should ensure their vendors are aligned with this perspective and are capable of facilitating integrations with other law enforcement technology.

Beyond ALPR: AI-Enhanced Vehicle Detection

With advances in image processing technology, specifically those afforded by artificial intelligence and machine learning, it is becoming increasingly possible to identify a vehicle solely from an image. Artificial intelligence is able to focus on characteristics of a vehicle such as make, model, color, or distinguishing attributes/markings. These advanced image processing technologies improve the accuracy of ALPR systems and allow law enforcement to corroborate ALPR information. For example, they could assist with confirming that the vehicle associated with a detection matches the description in the registration record. Image-based detection and identification will continue to advance and improve the efficacy of ALPR technology.

Case Law Related to ALPR

License plates are required in every state to display proof of registration. Registration identifies a particular vehicle and confirms that it meets minimum state-mandated safety requirements to be operated on public roadways. In addition, operators of vehicles must be licensed to drive legally on public roads.

It is possible in many states to own a vehicle and, if it is never parked or operated on a public roadway, not be required to display license plates. Furthermore, one can own a car but have no authority to operate it, just as one can be licensed to drive a car but never actually own one. Collecting information related to people and vehicles are separate and distinct concepts, although not entirely mutually exclusive. The alpha-numeric characters of a license plate alone do not indicate who owns the vehicle or is licensed to operate it.

For more than 50 years, the United States Supreme Court, and many lower courts, have repeatedly acknowledged that vehicles are inherently subject to greater regulation when operated on public roadways. In the age of enhanced technology, ALPR invokes specific legal considerations:

- Reasonable privacy expectations of those in vehicles on public roadways
- Persistent tracking and the nature of ALPR technology
- The nexus between license plates and personally identifiable information
- Collecting and sharing ALPR data
- The degree of intrusion authorized by an ALPR hotplate detection

An examination of existing case law related to these concepts follows. There is often no bright-line precedent when considering emergent technology. In such instances, reasonable legal conclusions can be inferred from cases related to other technology and privacy issues already adjudicated by the courts.

Privacy Expectations on Public Roadways

In 1967, the U.S. Supreme Court clarified in *Katz v. U.S. (1967)* that "the Fourth Amendment protects people, not places." [9] The Fourth Amendment of the United States Constitution ensures:

> *[The] right of the people to be secure in their persons, houses, papers, and effects, against unreasonable searches and seizures, shall not be violated, and no Warrants shall issue, but upon probable cause, supported by Oath or affirmation, and particularly describing the place to be searched, and the persons or things to be seized.*

In *Cady v. Dombrowski (1973),* the U.S. Supreme Court noted that vehicles, while "effects," are constitutionally different from a person's home. The case also referenced the regularity with which police engage in activity unrelated to the enforcement of laws, such as maintaining the efficiency of the flow of traffic and ensuring the safety of those using the roadways. The Court acknowledged that this regular contact with automobiles contributes to police being more often in "plain view" of evidence, instrumentalities of a crime, or contraband.[10]

Delaware v. Prouse (1979) offers historic guidance concerning the constitutionality of stopping or seizing vehicles. The U.S. Supreme Court cites, "the permissibility of a particular law enforcement practice is judged by balancing its intrusion on the individual's Fourth Amendment interests against its promotion of legitimate governmental interests."[11] One can reasonably infer that photographing a plainly visible license plate, on a public roadway, or from a location plainly visible from a lawfully authorized location, with no intrusion upon the vehicle occupants or otherwise interfering with their movement or affecting any person's possessory interest in the vehicle or license plate, is not a seizure constitutionally.

Lower courts have routinely ruled that law enforcement officers may, without specific suspicion, check the status of a license plate against a law enforcement database.[12][13] Therefore, searching aggregated photographs, which contain no specific information about a particular vehicle owner or operator, even when correlated with additional information such as the time, date, and location of the photograph, does not constitute a search.

Is ALPR Persistent Tracking?

The notion that vehicle travel on public roadways is an unavoidable element of modern living merits consideration, given how ALPR is deployed. Recent U.S. Supreme Court rulings related to law enforcement's use of other technologies have considered the inescapable and automatic nature of data collection. An analysis of these rulings is offered to differentiate the substantially greater capabilities of such technologies compared to those of ALPR.

Two recent U.S. Supreme Court rulings merit particular consideration for the use of technology to investigate the historical movement of persons. In *U.S. v. Jones (2012)*, the U.S Supreme Court held that police need a search warrant to install a covert GPS tracking device on a vehicle to monitor its location for an extended period of time. In *Carpenter v. U.S. (2018),* The Court ruled that police must secure a warrant before obtaining cell-site location information from service providers regarding an individual's location history.

The theme of both cases concerns the capacity that modern technology affords the government to explore comprehensive, specifically personal location information, which was not possible until the advent of recent ubiquitous technology. GPS and cell-site location information enable persistent automated tracking of a targeted individual's activity with such detail and scope that the techniques constitute a search. In the case of *Carpenter v. U.S. (2018),* the Government obtained 12,898 location points cataloging Carpenter's movements. This extensive amount of information amounted to an average of 101 data points per day during the period they obtained historical records.[14]

An ALPR system cannot independently predict life patterns accurately or be used to conduct real-time surveillance of any person or vehicle. Even if police acted with willful disregard for the protections of the Fourth Amendment, it is impossible to accomplish such a degree of ongoing surveillance using ALPR technology. A fixed ALPR camera may be able to collect information about every car that passes its location. Still, the data is limited to an otherwise anonymous characteristic of the vehicle, not automatically attributable to any individual without accessing other restricted databases, and for only a single moment in time at a single location.

Images of plates stored in the ALPR database are retained and made available for specified queries. Tangential information may include the nature of a vehicle's location, direction of travel, and any criminal justice information associated with the detection. As to the question of whether a collection of images from multiple cameras, aggregated in a searchable database implicates Fourth Amendment considerations, the US Supreme Court has not taken up precisely to what extent ALPR coverage, or how robust an ALPR database is, may trigger specific Fourth Amendment implications.

In *Commonwealth v. McCarthy (2020)*, the Massachusetts Supreme Judicial Court concluded that "While the defendant has a constitutionally protected expectation of privacy in the whole of his public movements, an interest which potentially could be implicated by the widespread use of ALPRs, that interest was not invaded by the limited extent and use of ALPR data in this case." The case involved law enforcement's use of four ALPR devices on two bridges to investigate a defendant's movements during a period of two months. In that case, the court ruled that the limited use of ALPR data did not violate the defendant's reasonable expectation of privacy.[15]

License Plates & Personally Identifiable Information (PII)

Individuals (people) are licensed, but a vehicle is registered. A vehicle is registered with an organization (typically a state), which then authorizes the vehicle to be driven on public roads and highways by a licensed driver. For example, passenger and commercial vehicles must be registered as a condition of use on a public thoroughfare. Upon registration, the state department of motor vehicles then issues a license plate which must be attached to the vehicle and openly displayed for vehicle identification purposes. The purpose of a license plate is to identify a vehicle uniquely, and it does not include personally identifiable information of any individual. By itself, a license plate number is an anonymous code unless combined with other registration information containing owner/operator information (i.e., a department of motor vehicles database or an employee or homeowner registration). Thus, an ALPR record is generated from publicly available data and corresponds with detecting a vehicle, not an individual, at a specific location and time.

The federal *Driver's Privacy Protection Act (DPPA)* was enacted in 1994 to "protect the personal privacy and safety

1033

of licensed drivers consistent with the legitimate needs of business and government." DPPA made it "unlawful" to access, disseminate, or otherwise misuse information held by a state's motor vehicle office, including information related to both drivers and vehicles, without the owner's consent or for another legitimate, legally authorized purpose, such as criminal justice purposes. ALPR systems do not automatically link to data governed by DPPA. Law enforcement can only obtain such protected information from other secure, access-restricted criminal justice databases.

The case of *Harrison Neal v. Fairfax County Police (2020)* examined the use of an ALPR system to passively scan and retain license plates that were not on a hotlist to determine if such a practice violated the state's *Government Data Collection and Dissemination Practices Act.*

A key element of the case was whether an ALPR system constitutes an information system governed by the Code of Virginia. The court found that the ALPR system did not, noting that the ALPR database can be searched only by license plate number, not by any person's information. Furthermore, the system does not gather identifying information about the vehicle owner. To acquire such personal data, an officer must query a wholly separate criminal justice database via a different computer program.[16]

California Code 1798.29 specifically expands the meaning of "personal information" to include information or data collected through the use or operation of an ALPR system. While not adjudicated by any court, ALPR information is considered personal information in California due to unique state legislation.

Data Collection & Sharing

A license plate is a required government instrument specifically intended to identify the vehicle to which it is affixed publicly. In the case of *United States v. Ellison (2006)*, the Court noted:

> *This court has yet to address in a published opinion the question of whether an individual has a reasonable expectation of privacy regarding their license plate. In two unpublished decisions, however, this court has agreed with the other circuits that have decided this issue by holding that no such privacy interest exists. The reasoning of these opinions, as well as that of the Supreme Court in related cases, leads us to agree that a motorist has no reasonable expectation of privacy in the information contained on his license plate under the Fourth Amendment.*[17]

Publicly viewing or photographing a displayed license plate constitutes activity protected by the First Amendment of the United States. The cataloging and subsequent sharing of such data remain largely regulated by state or local legislation. In the case of *U.S. v. Yang (2020),* the Ninth Circuit ruled that the defendant did not have standing to challenge government queries of a vendor's ALPR database for records of his movement when he kept a rental car beyond the contract due date. The court noted that Yang failed to establish that he had a reasonable expectation of privacy in the historical location information of the vehicle that was the subject of the query. The Court declined to address any potential privacy interests related to the warrantless use of ALPR technology.[18]

ALPR Hits & Degrees of Intrusion

Several cases have affirmed that an ALPR hotplate detection, also referred to as a "hit," constitutes sufficient reasonable suspicion to affect a traffic stop. For example, in the case of *Hernandez-Lopez v. State (2013)*, the Georgia Court of Appeals held that an ALPR system merely aided the officer by augmenting his sensory faculties and that based on the alert provided by the ALPR, the officer had reasonable, articulable suspicion to conduct a traffic stop. [19]

Similarly, in the case of *Traft v. Commonwealth (2018)*, the Supreme Court of Kentucky held that an officer obtaining information linked to his license plate did not violate the defendant's rights under the Fourth Amendment. This information indicated that Traft had an outstanding bench warrant and, therefore, reasonable suspicion existed to stop the vehicle. Furthermore, the court noted that the license plate "was displayed in a place where he had no reasonable expectation of privacy."[20]

In the case of *Green v. City and County of San Francisco (2014)*, an ALPR system returned a hit based on a misread. The officer was transporting a prisoner at the time and could not verify the hit's validity. The image on the ALPR was "dark and blurry." The officer subsequently provided a description of the vehicle via police radio, including the incorrect license plate indicated by the ALPR system, not the actual plate displayed on the car. Dispatch ran the plate as provided and noted that it belonged on a pick-up truck.[21]

A second officer observed Green's sedan bearing the plate as broadcast by the first officer. However, this officer also failed to confirm whether the radioed license plate number matched the plates on Green's car. Consequently, Green was stopped, challenged at gunpoint by multiple officers, placed on the ground, and handcuffed. Green filed suit against the defendants, alleging claims under 42 U.S.C. 1983 and California state law for wrongful detention, false arrest, and excessive force. The Ninth Circuit ruled that "an unconfirmed hit on the ALPR does not, alone, form the reasonable suspicion necessary to support an investigatory detention."

While legally permissible to affect a stop based on an ALPR hit, independent verification of the validity of an ALPR alert should be considered a best practice. Verifying that the actual vehicle license plate and the read on the ALPR screen are safeguards against a potential unjustified intrusion upon any person. Such guidance should neither cause officers to hesitate when officer safety is a concern nor preclude officers from acting on indicators amounting to reasonable suspicion based on other observations coupled with their training and experience. However, inappropriate outcomes resulting from the use of law enforcement technology can have substantial repercussions on perceptions of police legitimacy and the continued availability of such tools.

In conclusion, ALPR systems detect license plates in public locations collecting information that is generally not considered private. Critical elements of an ALPR system, such as the extent of camera coverage, reasons for selecting fixed deployment locations, length of time that data is retained, and the extent to which the information is shared, may factor in with respect to if an ALPR system implicates Fourth Amendment considerations. The consistently responsible use and thoughtful deployment of ALPR technology will ensure that all civil rights and liberties are respected.

1035

Conclusion

As stated in the introduction, this product contains suggestions and recommendations, which, if adopted, will maximize ALPR technology's effectiveness while ensuring it is used ethically and responsibly. While this product provides a robust evaluation of the technology, it is impossible to cover every aspect of the technology. Therefore, the Working Group recommends that law enforcement use the tenets discussed in this document to help evaluate decisions regarding the use of ALPR technology. This must include the potential impact of ALPR technology on public trust and the community served. It is essential that, when implementing any technology program, law enforcement operate in a manner that is thoughtful, disciplined, and contextually mindful of its constituencies.

For those agencies wishing to implement an ALPR program but are still determining how to move forward, collaboration with other entities who have already developed robust, responsible programs is recommended. The sharing of best practices in crime-fighting technology among law enforcement has a history of beneficial impacts. Law enforcement must be good stewards of information and policies and be willing to share this with fellow law enforcement agencies wishing to begin using ALPR.

Law enforcement's use of ALPR is ubiquitous because the information these systems provide is advantageous. ALPR data has aided in countless successful criminal investigations and has proven to be one of the most valuable technologies available to law enforcement. Few technologies have aided law enforcement in keeping communities safe like ALPR. However, the capabilities of ALPR technology are continuously evolving, and the MCCA will continue to monitor it. The MCCA will remain engaged with all interested stakeholders and communicate the latest information with member agencies and the entire law enforcement profession so best practices can be adjusted as needed.

Acknowledgments

Major Cities Chiefs Association would like to extend a special thanks to the ALPR Working Group and its members listed below. The contents of this document would not be possible without the collaboration between these law enforcement professionals and the technology vendor participants.

Definitions

Automated License Plate Reader/Recognition (ALPR): ALPR systems comprise cameras that capture an image of a vehicle's license plate and use Optical Character Recognition (OCR) to automatically read license plate characters.

Contextual Photo/Image: An overview image of the area around a detection.

ALPR Record/Detection: Is generated when an instance of a vehicle license plate is detected, imaged, and processed to identify the plate.

Hit: A detection of a license plate that matches a plate previously registered on a hotlist or hotplate.

Hotlist: A file that contains the license plate numbers of stolen vehicles; AMBER, SILVER, or other law enforcement alerts; lists of license plate numbers known to be associated with specific individuals, such as wanted or missing individuals.

Hotplate: A license plate with a wanted status. It may also be entered into a system designed to provide a notification of future detections.

Misread: An incorrect translation of a license plate.

Fixed Camera: An ALPR camera that is affixed to a non-moving structure.

Mobile Camera: A vehicle-mounted camera.

Law Enforcement Data: ALPR data collected by law enforcement-owned ALPR cameras.

Data Retention: Refers to the amount of time that the collected data will be preserved.

Personally Identifiable Information (PII): Any representation of information that permits the identity of an individual to whom the information applies to be reasonably inferred by either direct or indirect means.[1]

National Crime Information Center (NCIC): An electronic clearinghouse of crime data, such as mug shots and crime records, available to virtually every criminal justice agency nationwide.[2]

Appendix A – Success Stories

Homicide

After committing a homicide, the suspect fled the scene by vehicle. During the investigation, investigators learned that the suspect drove a specific vehicle with damage to the body. Using the ALPR system, detectives created a geographic boundary around the crime location. While reviewing the historical ALPR detections from that immediate area, a vehicle matching the suspect's vehicle description was identified. Detectives then discovered the actual license plate registration information, which returned to the primary suspect. Another query of that vehicle through the ALPR system revealed that the suspect vehicle had fled the jurisdiction immediately after the homicide occurred. This was later confirmed and corroborated by the suspect's cell phone location records.

Homicide

During a road rage incident resulting in a shooting and murder, the suspect was reportedly driving a black hearse. Responding officers obtained the victim's license plate number and checked it through the ALPR system. The officers located an ALPR record of the victim's vehicle passing an ALPR deployment site three minutes before the shooting. The officers checked for other vehicles driving past the ALPR cameras around the same time as the victim. The vehicle driving directly behind the victim was a black hearse. The ALPR data, along with a tip from the public, were pivotal in the arrest. The suspect gave a full confession. The arrest occurred within only a few hours of the crime.

Homicide

The victim knocked on the suspect's hotel room door. Annoyed by the knocking, the suspect opened the door and immediately shot and killed the victim. Surveillance footage of the suspect and his associate leaving captured the type of vehicle used by the suspect but did not capture the license plate. An ALPR camera system was stationed just down the street from the hotel. Officers reviewed the ALPR database for the time frame around the homicide. One minute before the 911 call, the ALPR camera captured a detection of a vehicle matching the one observed in the hotel surveillance. Armed with the vehicle registration information, the vehicle's lien holder was contacted, which provided new investigative leads. Within 11 hours of the shooting, officers located the suspect's vehicle hidden in a home's garage. The suspect and his associate were detained, provided a confession, and later charged with homicide.

Burglary

A police agency used ALPR to identify two suspect vehicles involved in a burglary. Multiple suspects in two vehicles committed a residential burglary, with the resident shooting and killing one of the suspects. Doorbell camera videos were recovered, and homicide detectives used them to establish a timeline. ALPR searches focused on the timeline, which resulted in ALPR scans for both suspect vehicles. A subject associated with one of the vehicles was later determined to be involved and arrested for burglary.

Sexual Assault and Attempted Murder

A victim met the suspect at a bar. They left and the suspect drove them to the desert, where he sexually assaulted, beat, strangled, and ran her over. The vehicle plate from the bar where the incident began was queried in the ALPR system. Historical detections placed the suspect vehicle in the desert where the victim was assaulted and left behind, along with other areas where the victim reported they had driven before the assault. The ALPR data was critical in the arrest of this violent attacker.

Fatal Hit-and-Run Traffic Accident

ALPR was used to identify the suspect vehicle that left the scene of a fatal traffic accident after hitting two people. The make and model of the vehicle were identified but not the license plate. The license plate and other supporting evidence were discovered by leveraging the ALPR system. After the crime occurred, ALPR detection records showed significant damage to the suspect vehicle.

Kidnapping

A male subject attempted to grab a female in a business parking lot. Video surveillance captured the subject and his vehicle. Detectives used video footage to determine the suspect vehicle's make, model, and year range. A query of the ALPR system provided sufficient information to confirm the suspect vehicle and registration. The male was later identified. A records check revealed he had two prior arrests for sexual assaults. He was later located and arrested for the crime of kidnapping.

Arson

A subject set fire to the sign and lawn outside an FBI office building. Surveillance footage showed a gold Chevy Tahoe with distinctive damage to the passenger and rear sides of the vehicle. The license plate number was not visible. Analysts searched more than 6,000 images in the ALPR database, looking for Chevrolet SUVs similar to the one in the surveillance footage. After searching the ALPR database, analysts found a vehicle with matching damage, identified the registered owner, then disseminated a bulletin for officers to locate the vehicle. Initially, officers could not locate the registered owner, who was transient. A few days later, a patrol officer spotted the vehicle based on the bulletin and detained the suspect. The suspect was positively identified and linked to the original arson and another one in a different part of the state. Less than one month later, the suspect accepted the criminal prosecution agreement offered by the prosecutors.

1040

Appendix B – Myths and Misconceptions

A review of case law provides a snapshot of the legalities supporting the use of ALPR technology. In contrast, some misinformation exists on the use of ALPR technology by law enforcement. Therefore, reviewing and understanding the myths and misconceptions about ALPR in law enforcement is essential.

MYTH

ALPR detections contain private, personally identifying information.

REALITY

ALPRs are designed to capture three details when a vehicle passes through their view: a photograph of the vehicle, the characters on the license plate of the vehicle, and the location, date, and time when the vehicle passes the ALPR.

Publicly-owned ALPR systems read the license plates of vehicles on public roadways and capture information that is generally not considered private. For example, if an individual were to stand by the side of a public road and take a picture of every vehicle that passed them, write down its plate number, and record the date and time, they would be within their legal rights to do so. Likewise, a person could place a camera on their property facing a public throughway and capture the same information an ALPR does. In *U.S. v. Ellison (2006)*, the Court explained that not only is there no privacy interest in a license plate number, but a subsequent entry into a computer system to retrieve other non-private information does not constitute a search.[3] By states mandating each vehicle operating on the roadway publicly display a license plate and even illuminate it at night, the expectation is for the license plate to be read at any time while on a public roadway.

An ALPR system does not automatically capture or record restricted information contained in an individual's motor vehicle records, such as their name, address, phone number, Social Security Number, driver identification number, etc. *The Driver's Privacy Protection Act of 1994* requires all states to protect this personal information ensuring ALPR reads are anonymous until additional steps are taken to access separate statutorily regulated databases. Therefore, when a law enforcement officer needs to access motor vehicle records based on data captured by an ALPR, they would need to perform the same manual processes to retrieve this information as they would in other investigative circumstances. Additionally, adequate policies limit access to ALPR data by requiring justification for the review of individual ALPR records. This effectively ensures that most ALPR-captured data is never even accessed before it is purged.

Therefore, retrieving non-public information based on ALPR data requires law enforcement to adhere not only to the policies and laws regarding the ALPR data but also to the policies and laws for accessing the restricted databases housing driver's license and vehicle information. In summary, ALPR systems do not grant expanded access to any non-public records databases, nor do they circumvent the auditing processes that are in place to ensure restricted data is accessed only for official use and as permitted by law.

3 United States v. Ellison, 462 F.3d 557, 561, United States Supreme Court. (6th Cir. 2006). https://caselaw.findlaw.com/la-court-of-appeal/1717448.html

1041

MYTH

ALPR technology is a form of mass surveillance.

REALITY

Guided by proper policy and processes, ALPRs are effective tools for law enforcement to narrow the focus of investigations and limit negative collateral impacts when policing high-crime areas.

A scenario most major city police departments are familiar with is as follows: A motorist is stopped by police only to later be released and sent on their way in a case of mistaken vehicle identity. Their misfortune was caused by driving a vehicle matching the general description of one recently broadcasted of a suspect vehicle in a violent crime. Though the detention is usually short-lived, the trauma it causes may not be. This type of "wrong place, wrong time" scenario is most likely to occur when non-specific or incorrect information is relayed to officers during an in-progress incident. Even a single negative experience like this can spread quickly throughout a community, jeopardizing efforts to build trust. Unfortunately, these scenarios most commonly affect residents in neighborhoods disproportionately impacted by violent crime and gun violence. The use of ALPRs can help mitigate these occurrences.

ALPRs provide an additional mechanism to corroborate or refute witness accounts of suspect vehicles. This helps narrow the focus of law enforcement when canvassing and provides officers with the increased ability to bypass lookalike vehicles and only interact with the cars that truly contain the distinct characteristics of the vehicle suspected in the crime.

A common talking point designed to instill fear in ALPRs technology is that they "could" be used to track people involved in first amendment protected activities. The purpose of robust agency policy is to restrict use to legally permissible actions and ensure accountability if rules are broken. It must be noted that the same policies and laws governing law enforcement's actions without technology still apply when using technology. In fact, the audit trails in technology ensure that a hindsight review of any actions taken is afforded an even more detailed perspective than the actions taken without records produced by technology.

Appendix C – State-Level Laws and Regulations

At least 16 states have statutes regarding the use of ALPR or the retention of data collected by ALPR technology. This information was derived from a database maintained by the National Conference of State Legislatures.[4] The states and their laws are as follows:

Arkansas-Ark. Code §§ 12-12-1801 to 12-12-1808

Prohibits use of ALPRs by individuals, partnerships, companies, associations or state agencies. Provides exceptions for limited use by law enforcement, by parking enforcement entities or for controlling access to secure areas. Prohibits data from being preserved for more than 150 days.

California-Calif. Veh. Code § 2413

Provides that the California Highway Patrol (CHP) may retain data from a license plate reader for no more than 60 days, unless the data is being used as evidence in felony cases. Prohibits selling or making available ALPR data to non-law enforcement officers or agencies. Requires CHP to report to the legislature how ALPR data is being used.

California-Calif. Civil Code §§ 1798.29, 1798.90.5

Establishes regulations on the privacy and usage of automatic license plate recognition (ALPR) data and expands the meaning of "personal information" to include information or data collected through the use or operation of an ALPR system. Imposes privacy protection requirements on entities that use ALPR information, as defined; prohibit public agencies from selling or sharing ALPR information, except to another public agency, as specified; and require operators of ALPR systems to use that information only for authorized purposes.

Colorado-Colo. Rev. Stat. § 24-72-113

Requires that video or still images obtained by passive surveillance by governmental entities, such as images from monitoring cameras, must be destroyed within three years after the recording of the images. Specifies that the custodian of a passive surveillance record may only access the record beyond the first anniversary after the date of creation of the record if there has been a notice of claim filed, or an accident or other specific incident that may cause the passive surveillance record to become evidence in any civil, labor, administrative, or felony criminal proceeding. Creates exceptions allowing retention of passive surveillance records of any correctional facility, local jail, or private contract prison and passive surveillance records made or maintained as required under federal law.

Florida-Fla. Stat. § 316.0777

Creates a public records exemption for certain images and data obtained through the use of an automated license plate recognition system and personal identifying information of an individual in data generated from such images. Provides that images and data containing personal information obtained from automated license plate recognition systems are confidential. Allows for disclosure to criminal justice agencies and to individuals to whom the license plate is registered in certain circumstances.

Georgia-Ga. Code § 35-1-22

License plate data may be collected and accessed only for a law enforcement purpose. The data must be destroyed no later than 30 months after it was originally collected unless the data are the subject matter of a toll violation or for a law enforcement purpose. Allows sharing of captured license plate data among law enforcement agencies. Law enforcement agencies deploying an automated license plate recognition system must maintain policies for the use and operation of the system, including but not limited to policies for the training of law enforcement officers in the use of captured license plate data. License plate data collected by a law enforcement agency is not subject to public disclosure.

4 Automated License Plate Readers: State Statutes," National Conference of State Legislatures. https://www.ncsl.org/research/telecommunications-and-information-technology/state-statutes-regulating-the-use-of-automated-license-plate-readers-alpr-or-alpr-data.aspx

Maine-29-A M.R.S.A. § 2117-A(2)

Prohibits the use of automatic license plate recognition systems except for certain public safety purposes. Provides that data collected is confidential and may be used only for law enforcement purposes. Data collected may not be stored more than 21 days.

Maryland-Md. Public Safety Code § 3-509

Specifies the procedures and protocols that a law enforcement agency must follow in connection with the operation of an "automatic license plate reader system" and "captured plate data." Requires the State Police to adopt procedures to address who has access to the data and training for those individuals and to create an audit process. Provides that data gathered by an automatic license plate reader system are not subject to disclosure under the Public Information Act.

Minnesota- Minn. Stat. §§ 13.82,13.824, 626.8472

Relates to data practices; classifies data and provides procedures related to automated license plate readers; provides the data that may be collected by such readers; relates to requirements for the sharing of such data among law enforcement agencies; requires the maintenance of a public log recording the uses of such data; requires related records maintenance and the auditing of such records; requires written procedures governing access to the data; requires certain notification when setting up readers.

Montana-Mont. Code Ann. §§ 46-5-117 to -119

Prohibits the use of license plate readers by an agency or employee of the state or any subdivision of the state on any public highway. Provides exceptions for specific agencies or purposes, such as state or local law enforcement, if specified requirements are met. Except as provided, license plate data captured by law enforcement may not be preserved for more than 90 days after the date that the data is captured.

Nebraska- Neb. Rev. Stat. § 60-3201 to 3209

Requires any governmental entity that uses an automatic license plate reader (ALPR) system to adopt a policy governing use of the system. Governmental entities also must adopt a privacy policy to ensure that captured plate data is not shared in violation of this act or any other law. The policies must be posted on the internet or at the entity's main office. Requires annual reports to the Nebraska Commission on Law Enforcement and Criminal Justice on ALPR practices and usage. Provides that captured plate data is not considered a public record.

New Hampshire-N.H. Rev. Stat. Ann. §§ 261.75-b, 236.130

Restricts the use of automated license plate readers to local, county and state law enforcement officers, who shall only use the devices subject to specified conditions and limitations and for specified purposes. Provides that records of number plates read shall not be recorded or transmitted anywhere and shall be purged from the system within 3 minutes of their capture, unless the number resulted in an arrest, a citation or protective custody or identified a vehicle that was the subject of a missing or wanted person broadcast.

North Carolina-N.C. Gen. Stat. §§ 20-183.30 to .32

Requires state or local law enforcement agencies to adopt a written policy governing the use of an ALPR system that addresses databases used to compare data obtained by the system, data retention and sharing of data with other law enforcement agencies, system operator training, supervision of system use, and data security and access. Requires audits and reports of system use and effectiveness. Limits retention of ALPR data to no more than 90 days, except in specified circumstances. Provides that data obtained by the system is confidential and not a public record.

Oklahoma-Okla. Stat. §§ 47-4-606.1

Provides that participating law enforcement agencies may use automatic license plate reader systems to access and collect data for the investigation, detection, analysis or enforcement of the state's compulsory insurance law. States that data collected under the program may not be used by any individual or agency for purposes other than enforcement of the compulsory insurance law, prohibits sale of the data under the program, and provides that data is exempt from the Oklahoma Open Records Act, except when retained as evidence of a violation of the compulsory insurance law. These provisions do not prohibit the use of any other automated license plate reader system by an individual or private legal entity for lawful purposes.

Tennessee-Tenn. Code §§ 55-10-302, 10-7-504(a)

Provides that any captured automatic license plate data collected by a government entity may not be stored for more than 90 days unless they are part of an ongoing investigation, and in that case provides for data to be destroyed after the conclusion of the investigation. Captured plate data from automatic license plate reader systems must be treated as confidential and shall not be open for inspection by members of the public.

Utah-Utah Code §§ 41-6a-2001 to -2005

Provides that a governmental entity may not use an automatic license plate reader system except for specified uses, such as by law enforcement agencies for the purpose of protecting public safety or conducting criminal investigations and by other government entities for limited other purposes. Provides that captured plate data are a protected record under the Government Records Access and Management Act, if the captured plate data are maintained by a governmental entity. Provides that captured plate data may only be shared for specified purposes, may only be preserved for a certain time and may only be disclosed pursuant to specific circumstances such as a disclosure order or a warrant. Government entities may not use privately held captured plate data without a warrant or court order, unless the private provider retains captured plate data for 30 days or fewer. Allows an institution of higher education to use automatic license plate readers under certain circumstances.

Vermont- 23 V.S.A. §§ 1607, 1608

Requires a law enforcement officer to be certified in the use of an automated license plate reader to operate such a system. Provides that active system data may only be accessed by an officer with a legitimate law enforcement purpose for the data. A legitimate purpose includes a person's defense against certain charges and does not include enforcement of parking or traffic violations other than commercial motor vehicle violations. Limits retention and access to information gathered through the use of an ALPR system. Requires the Department of Public Safety to adopt rules to implement the law. Requires the Auditor of Accounts to examine requests for data to determine whether the request and the release complied with the law.

1045

Appendix D – CJIS Security Policy

Agencies that wish to use the CJIS Security Policy to assess the security practices of a service provider that will be handling ALPR data should consider the following sections:

- Private Contractor User Agreements and FBI-CJIS Security Addendum [5.1.5]: Private contractors who perform criminal justice functions for a Criminal Justice Agency (CJA) shall be permitted to access CJI pursuant to an agreement between the CJA and the contractor that incorporates the FBI-CJIS Security Addendum approved by the Director of the FBI.
- Agency User Agreements [5.1.1.6]: Fingerprint-based background checks and written agreement with the agency when required.
- Secondary Dissemination [5.1.3]: If data is released to another authorized agency and not part of a primary information exchange agreement, this shall be logged.
- Security Awareness Training [5.2]: All personnel with access to CJI (Criminal Justice Information) shall receive security awareness training within six months of assignment, and biennially thereafter.
- Security Training Records [5.2.3]: Records of security awareness training shall be kept current and maintained by a Security Officer (CSO).
- Reporting Structure and Responsibilities [5.3.1.1]: Establishment of a primary Point of Contact (POC) for CJIS incident handling and response.
- Events [5.4.1.1]: Description of the events that must be logged within the system.
- Audit Monitoring, Analysis and Reporting 5.4.3]: Responsibility for review and analysis of audit records, at a minimum of once a week, to look for inappropriate or unusual activity.
- Audit Record Retention [5.4.6]: The agency shall retain audit records for at least one year.
- Least Privilege [5.5.2.1]: The agency shall approve individual access privileges and enforce the most restrictive set of rights and privileges needed by users for the performance of specified tasks. Logs maintain access privilege changes for a minimum of one year or at least equal to the agency's record retention policy, whichever is greater.
- Access Control Mechanisms 5.5.2.4]: One or more of the following must be employed: access control lists (users, groups, machines), resource restrictions (permission sets), encryption and strong key management, application-level access control.
- Unsuccessful Login Attempts [5.5.3]: CJIS Security Policy requires that after five consecutive invalid attempts, the account shall be locked out for a minimum of 10 minutes.
- System Use Notification [5.5.4]: The system shall allow a notification message to be displayed to let users know a) they are accessing a restricted system, b) usage is monitored, recorded and subject to audit, c) unauthorized use is prohibited and may result in penalties, and d) use of the system indicated consent to monitoring.
- Session Lock [5.5.5]: CJIS Security Policy requires that the system shall prevent access via a session lock after a minimum of 30 minutes of inactivity.
- Remote Access [5.6]: Rules for monitoring and controlling remote access via the internet.
- Use of Originating Agency Identifiers in Transactions and Information Exchanges [5.6.1.1]: An FBI-issued ORI number shall be assigned at the agency level and attached to all activities by the agency's users.
- Password [5.6.2.1.1]: Requirements and standards for passwords.
- Personal Identification Numbers [5.6.2.1.2]: Best Practices on PIN use.
- Advanced Authentication [5.6.2.2]: Advanced Authentication requirements.
- Identifier Management [5.6.3]: Requirements of agencies to manage user identifiers.
- Network Diagram [5.7.1.2]: Requirements for a network topological diagram.

1046

- Media Protection [5.8]: Requirements for security and protection of electronic and physical media.
- Physical Protection [5.9]: Requirements for physical security and access controls around all hardware, software and media.
- System and Communication Protection and Information Integrity [5.10]: Prevent CJI from being transmitted unencrypted across the public network.
- Boundary Protection [5.10.1.1]: Ensure that failure of boundary protection mechanisms do not result in unauthorized release of information.
- Encryption [5.10.1.2]: Minimum of 128 bit encryption when CJI data is transmitted beyond the physical security boundary.
- Intrusion Detection Tools and Techniques [5.10.1.3]: Requirements for intrusion detection tools.
- Cloud Computing [5.10.1.5 and Appendix G.3]: Recommendations for use of cloud computing and assessment of cloud computing service providers.
- Partitioning and Virtualization [5.10.3]: Requirements for partitioning of data and virtualization of resources.
- Patch Management [5.10.4.1]: Requirements for management of software patches.
- Malicious Code Protection [5.10.4.2]: Virus Protection requirements.
- Spam and Spyware Protection [5.10.4.3]: Spam and Spyware Protection requirements.
- Security Alerts and Advisories [5.10.4.4]: Guidance for alerts and advisories.
- Personnel Security [5.12]: Fingerprint-based background checks and rules based on findings.
- Personnel Termination [5.12.2]: Terminated employees shall immediately have access revoked.
- Personnel Sanctions[5.12.3]: Process for employees failing to comply with security policies.
- Mobile Devices [5.13]: Where appropriate, the technology partner must support the agency's mobile device practices (patch management, etc.)

1047

Appendix E – ALPR Audit and Transparency Report Template

The following template provides a rudimentary example of the details and considerations in providing a published report about the performance and effectiveness of an ALPR program.

Automated License Plate Reader Program
Annual Transparency Report

Introduction

The introduction should provide context and background as to what the report is addressing. The introduction defines the specific objectives and purpose of the report. It indicates any problems that may exist and provides answers to problems explored. Finally, the introduction will preview the report and outline the report structure.

Discussion

This is the main body of the report, and it has two primary purposes. The first is to share and explain the conclusions. The second is to justify any recommendations that may be made in the report.

Specific data points that may be considered:

- Number of detections
- Number of hotplate hits
- Number of queries conducted by users
- Number of arrests directly related to ALPR
- Number of user-generated hotplates
- Breakdown of hotplate hit types
- Year-over-year analysis and trends

Conclusion

This section should relate to the information shared in the report. It should be specific to the objectives of the report. It may also address any issues that may be interpreted from the information shared. The conclusion should be brief, logical, and specific.

Recommendations

Recommendations shared should point to future action that can be completed. Recommendations should be feasible, action-oriented and arranged in order of importance.

Subject: Legal Talking Points/Fed Cameras on MassDOT properties
Date: Wednesday, November 1, 2023 10:25:00 AM
Attachments: image001.png

Sirs:

As requested, below are some legal talking points regarding why MassDOT should allow MSP cameras on MassDOT properties as opposed to federal cameras:

1. MSP must adhere not only to federal law with regard to camera surveillance, it must also adhere to Massachusetts law, which is much more restrictive than federal law. For example, in the case of Commonwealth v. McCarthy, 484 Mass. 493 (2020), the SJC adopted the "mosaic theory" when it comes to surveillance cameras, which holds that "with enough cameras in enough locations, the historic location data from an ALPR system in Massachusetts would invade a reasonable expectation of privacy and would constitute a search for constitutional purposes." Federal agencies are not bound by MA law.

2. MSP requires all of its law enforcement partners who are given permission to access MSP cameras, including federal agencies, to adhere to its ALPR policy and all MA laws. MSP's ALPR policy is regarded as the leading ALPR policy in the state, and it incorporates MA case law. Most other state law enforcement agencies have adopted MSP's policy or have relied on our policy when drafting their own.

3. There is no guarantee a federal agency would give MSP or any other state law enforcement agency access to its cameras should its cameras be placed on MassDOT property, which would be a large impediment for state investigations.

Let me know if you have any questions.

Hi Sgt. Donnelly,

Attached is a signed copy of the ALPR MOU for your agency's records.

I received your voicemail and apologize for the delay; I have been tied up in court over the past couple weeks. The new software did not come with the desired features and capabilities, and we do not yet have the ability to provide tenant users direct access their data in the way we had hoped. This feature is promised to us in the next update cycle to be released at the beginning of May. I will keep you in the loop when I have that update.

Respectfully,

Noah

CAUTION: This email originated from a sender outside of the Commonwealth of Massachusetts mail system. Do not click on links or open attachments unless you recognize the sender and know the content is safe.

Noah,

I just wanted to pass along a quick success story we had here in Barnstable. On May 27, 2023 we had 2 unknown individuals fire several rounds at a motor vehicle in the Craigville Beach parking lot at 8:30pm as beachgoers were in the area enjoying a nice sunset. Although no one was hit, the vehicle was struck 5 times and the community was immediately put on edge because of this brazen violent act.

As we were developing suspects we were able to identify the vehicle and plate of the car used to help the shooters flee the scene. Utilizing CSLI for the suspected occupants and plate reads from Yarmouth, Barnstable, and Sagamore we were able to show the vehicle and the suspects traveling together prior to and immediately after the shooting. Having access to the plate readers in the other communities was invaluable in this investigation and helped solidify the probable cause needed to obtain arrest warrants for the responsible parties.

Thank you again for keeping these readers up and running, they truly help more than you know.

Kevin

Hello Boss4 users, please see the updates below regarding the Department's ALPR system.

Policy Update

The Department's ALPR policy (TRF-11) was officially updated as of June 27, 2023. An updated copy is attached to this email. This policy governs the use of the Department's ALPR systems by sworn and civilian members of MSP and our partner agencies who have completed MOUs with us. Please review it to ensure you are familiar with the most recent version. Many of the updates to this policy directly reflect the best practices that we have already been doing and teaching, such as limiting the scope of searches and the duration of manual hotlist entries.

One noteworthy update is that a manual hotlist entry request must be authorized by a supervisor, except in exigent circumstances/emergencies. This can be satisfied in one of two ways: (1) the request can come directly from a supervisor (Sgt. or above or civilian equivalent), or (2) the requestor can provide the name of the supervisor who has authorized the request.

Hotlist Entries

When entering a plate on a hotlist, information must be entered in the free text fields about the vehicle, the reason for the entry, the date of the entry, and who entered it. Please do not enter just a plate. For investigations, include enough information to identify what vehicle and case it refers to. For public safety entries, include enough info so that someone receiving the alert would know what to do or who to call if it alerts them. For all entries, there must be enough info so that we can identify an authorized use and specific case or incident when conducting an audit. An example of a solid entry would be:

LPN: 123ABC
Field 1: 2020
Field 2: Toyota
Field 3: Highlander
Field 4: White
Field 5: Entered 5/1/23 by #1234
Field 6: Homicide invest [OR] New Bedford kidnapping
Field 7: 2023-123-123 [OR] Contact New Bedford PD

Expiration dates: Manual hotlist entries must have an initial expiration date of no longer than 30 days and must be removed as soon as the information become invalid or is no longer needed for the investigation. For entries requested by a dispatch entity or for other short-term matters, such as a general BOLO, the entries must be set to expire no later than the following day (generally 24-48 hours). The intent of this is to avoid a plate being left on the hotlist for long after the short-term incident is resolved.

Searches:

When conducting a search, please be mindful of the temporal and geographic parameters that are reasonable and consistent with the needs of the investigation or incident. In short, this means to ask how much historical time and how much area (how many cameras) do we need to search, as these are among the questions being asked in court when assessing the reasonableness of LPR use in a particular case.

Historical data visibility is currently limited to **90 days**, but data is retained for 1 year by DCJIS policy. If you need to search further back than 90 days, please contact the Commonwealth Watch Center for assistance at fusion@mass.gov.

Successes:

LPR continues to provide critical information for major incidents and investigations, from shootings to kidnappings, all over the Commonwealth. Please continue to forward these success stories to me or the Watch Center to help us document and defend the public safety value of this system. Feel free to also forward any suggestions on how we might improve the system.

Respectfully,

Noah

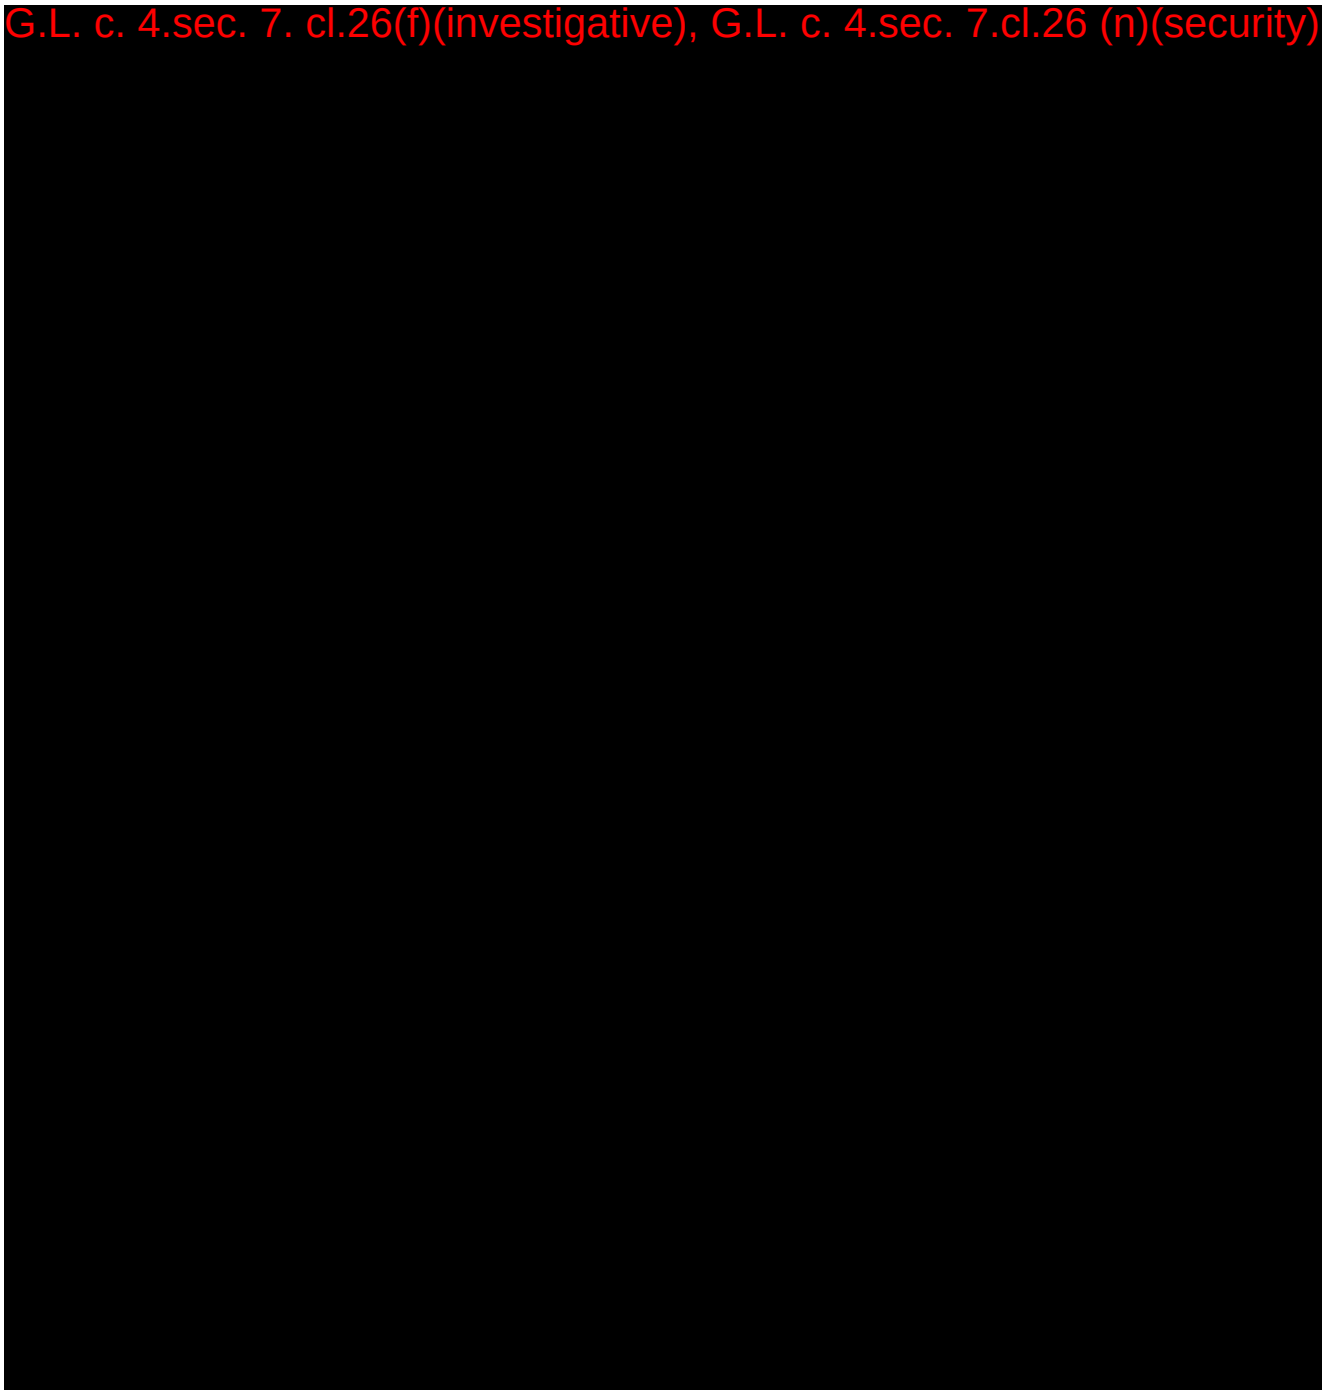
TRF-11 Nov21.pdf

Good afternoon Joe,

We now have the ability for outside agency users to be able to view data from cameras in their jurisdiction. Attached is a copy of the MOU and our current ALPR policy. If this is acceptable to your agency, please sign and return to us. We can then set up a training for a few members of your agency to get access.

All users must receive training, and we do not have the resources to manage a large or a constantly changing pool of users (this applies to our own staff as well). Therefore please select approximately 2-4 users from your agency (we recommend investigations level staff primarily due to their experience).

The training is tentatively scheduled for **June 7 at 10:00 AM**. It will take place remotely via Teams and will take about 1.5 hours. Users should ideally be at their computers and able to follow along. When available, please send me the names and email addresses of the users selected by your agency.



Respectfully,

Noah

Motorola/Vigilant LEARN

The Department's ALPR policy (TRF-11) was officially updated as of June 27, 2023. This policy governs the use of ALPR systems by sworn and civilian members. Please review it (attached) to ensure you are familiar with the most recent version. Many of the updates to this policy directly reflect the best practices that CWC has already doing, such as limiting the scope of searches and the duration of manual hotlist entries. The section titled "Search Procedures" would be particularly relevant to review.

One noteworthy update is that a manual hotlist entry request must be authorized by a supervisor, except in exigent circumstances/emergencies. This can be satisfied in two ways: (1) the request can come directly from a supervisor (Sgt. or above), or (2) the requestor can provide the name of the supervisor who has authorized the request. Until requestors get used to sending this info, you may find yourselves advising them of the requirement and asking for the supervisor's name. For example, something like this might work:

> "We have received your hotlist request. Pursuant to recent MSP policy updates, hotlist requests must be authorized by a supervisor. Please provide the name of the supervisor who has authorized this request."

ALPR Administrator

Thank you for your time and effort as we continue working to improve our Department's LPR system. Some of you know that I have been transferred to a new assignment, and DHS is in the process of selecting someone new to take over the ALPR Administrator role. I will continue to handle these duties through that transition, and as always please feel free to reach out with questions, comments, and success stories.

Sups,

Please share the above policy with your dispatchers. Under the current policy, the Commonwealth Watch Center and the Commonwealth Fusion Center are the primary ALPR resources for the Department. Also, non-Department ALPR Systems accounts are prohibited unless approved by the Division Commander of Homeland Security and Preparedness, through chain of command.

If your center or any of its personnel have Department ALPR and/or non-Department ALPR access, please let me know by end-of-week so a determination can be made to

Hello Lieutenant,

It was a pleasure to speak with you at the Massachusetts Chiefs Show on Wednesday. As discussed, we would be pleased to offer our technology and customer service to improve your ALPR deployments.

Since your main interest is Mobile ALPR for your cruisers, please find attached a copy of our MPH (Mobile Plate Hunter) M7 (7th generation) Mobile ALPR system for your review.

I will send a follow up email which gives you an overview of our company plus our role in and dedication towards ALPR for Law Enforcement and look forward to speaking with you again at your earliest convenience.

Subject: McCarthy
Date: Thursday, March 2, 2023 11:48:01 AM
Attachments: McCARTHY, COMMONWEALTH vs., 484 Mass. 493.pdf

Some salient points:

This court concluded that although the widespread use by Massachusetts police departments of
automatic license plate readers (ALPRs) could implicate constitutional protections against unreasonable searches, the positioning of four cameras in fixed positions on the ends of the two
bridges leading to Cape Cod did not provide a mosaic of location information that was sufficiently detailed to invade a reasonable expectation of privacy, and therefore, the limited use
of such ALPRs did not constitute a search within the meaning of art. 14 of the Massachusetts Declaration of Rights or the Fourth Amendment to the United States Constitution. [497-509] Gants, C.J., concurring.

-

We conclude that, while the defendant has a constitutionally protected expectation of privacy in the whole of his public movements, an interest which potentially could be implicated by the widespread use of ALPRs, that interest is not invaded by the limited extent and use of ALPR data in this case.

-

With enough cameras in enough locations, the historic location data from an ALPR system in Massachusetts would invade a reasonable expectation of privacy and would constitute a search for constitutional purposes. The one-year retention period indicated in the EOPSS retention policy certainly is long enough to warrant constitutional protection.

-

Of course, the constitutional question is not merely an exercise in counting cameras; the analysis should focus, ultimately, on the extent to which a substantial picture of the defendant's public movements are revealed by the surveillance. For that purpose, where the ALPRs are placed matters too. ALPRs near constitutionally sensitive locations -- the home, a place of worship, etc. -- reveal more of an

individual's life and associations than does an ALPR trained on an interstate highway. A network of ALPRs that surveils every residential side street paints a much more nuanced and invasive picture of a driver's life and public movements than one limited to major highways that open into innumerable possible destinations.

-

Similarly, with cameras in enough locations, the hot list feature could implicate constitutional search protections by invading a reasonable expectation of privacy in one's real-time location. If deployed widely enough, ALPRs could tell police someone's precise, real-time location virtually any time the person decided to drive, thus making ALPRs the vehicular equivalent of a cellular telephone "ping." .... Of course, no matter how widely ALPRs are deployed, the exigency exception to the warrant requirement would apply to this hot list feature.

-

The limited number of cameras and their specific placements, however, also are relevant in determining whether they reveal a mosaic of location information that is sufficiently detailed to invade a reasonable expectation of privacy. The cameras in question here gave police only the ability to determine whether the defendant was passing onto or off of the Cape at a particular moment, and when he had done so previously. This limited surveillance does not allow the Commonwealth to monitor the whole of the defendant's public
movements, or even his progress on a single journey. These particular cameras make this case perhaps more analogous to CSLI, if there were only two cellular telephone towers collecting data. Such a limited picture does not divulge "the whole of [the defendant's] physical movements," Carpenter, 138 S. Ct. at 2217, or track enough of his comings and goings so as to reveal "the privacies of life."

-

Conclusion. While we recognize that the widespread use of ALPRs in the Commonwealth could implicate constitutional protections against unreasonable searches, the limited use of the technology in this case does not.

-

NOTE: BELOW IS FROM GANTS J. CONCURRENCE AND MUSINGS ON THE FUTURE OF ALPR. THE IDEA OF LEGAL PROCESS OPTIONS COMES FROM THIS SECTION.

GANTS, C.J. (concurring). I agree with the court that, if the State police had obtained historical locational data regarding the defendant's vehicle from enough automatic license plate readers (ALRPs) in enough locations, the mosaic that such collection would create of the defendant's movements "would invade a reasonable expectation of privacy and would constitute a search for constitutional purposes." Ante at 506. I also agree with the court that the locational information regarding the defendant that was obtained from four ALPRs at two fixed locations on two bridges falls short of creating the type of mosaic that would constitute a search within the meaning of either art. 14 of the Massachusetts Declaration of Rights or the Fourth Amendment to the United States Constitution. And I agree that the court is correct to forbear from declaring in this case "precisely how detailed a picture of the defendant's movements must be revealed to invoke constitutional protections."

-

For instance, if the State police maintain 1,000 ALPRs at different locations throughout the Commonwealth, it matters whether they searched for a suspect's vehicle from the data yielded by all 1,000 cameras or only by four cameras, and it matters whether they gathered this data for one day or one hundred days.

-

Pragmatically, I submit we
have two alternatives. Our first option is to determine based on the facts of a particular case when the locational mosaic of a targeted individual's movements crosses the threshold of the reasonable expectation of privacy. A mosaic above that threshold would require a search warrant based on probable cause, but a mosaic below that threshold would not require any court authorization.

-

This second alternative would mean that law enforcement agencies would need to obtain court authorization more often before retrieving targeted individual historical locational information in their possession because queries that would not require a showing of probable cause might still require a showing of reasonable suspicion. But the benefit to law enforcement would be that, if the police sought a court order based on reasonable suspicion and a reviewing court determined that the query sought locational data that could yield a mosaic of movement requiring a showing

of probable cause, the search would not be found unconstitutional (and the information collected would not be suppressed) if the reviewing court found that the affidavit supported a finding of probable cause. In contrast, where no court order was obtained and a reviewing court determined that probable cause or reasonable suspicion was required to support the retrieval of historical locational information, the data retrieved from the query would have to be suppressed even if law enforcement could have met the applicable standard.

-

[Note 15] In declining to establish a bright-line rule for when the use of ALPRs constitutes a search, we recognize this may bring some interim confusion. We trust, however, that as our cases develop, this constitutional line gradually and appropriately will come into focus. "The judiciary risks error by elaborating too fully on the Fourth Amendment [or art. 14] implications of emerging technology before its role in society has become clear." Ontario v. Quon, 560 U.S. 746, 759 (2010).

Good afternoon LTC Cyr and Sgt. Pack,

I appreciate the time you took to meet this morning. As we discussed and given the current challenges and limitations within the state regarding LPR, if you are interested in a limited project utilizing a few of our new Falcon Highway cameras as well as our Falcon Flex camera which can be moved around for special applications I believe it would be a good starting point. I have attached a few informational sheets on these camera systems. Please let me know if you have any questions.

I am happy to set up a camera mapping call with my Solutions Consultant who is former law enforcement and ran the LPR program at his department in GA which included Flock. We can work together to select an area and show you how we would recommend deploying our cameras in order to effectively cover that location. If you have some time in the next few weeks please let me know and we can schedule a follow up meeting to go over what a small scale deployment would look like.

I suspect that I did not fully answer each question that was brought up regarding how we effectively engage the communities that our cameras are in so we can get ahead of any concerns about how many cameras are deployed and where they are located. I am happy to also set up a call with our legal and external affairs teams here at Flock that handles these situations so we can dive into this deeper.

Feel free to give me a call on my cell phone if you have any questions. [redacted]

Thank you,

Dan

Subject:	MSP and DOT Equipment Collocation Request
Date:	Wednesday, July 5, 2023 2:39:24 PM
Attachments:	MSP DHS DOT Collocation Request 10-2022 Letterheard (8).doc MSP DHS DOT Collocation Request 7-23 Notes Update.doc

Good afternoon U/S Kwon and Terrey,
I have attached a letter that I sent to Joe Foti and Tony Wade (MA DOT) on October 26, 2022, requesting collocation of equipment, specifically ALPR cameras. In this letter, I highlighted the criticality of this equipment as it pertains to our public safety mission and detailed the nature of the request, the responsibilities the MSP would assume, and the anticipated sites for deployment of the cameras.

As discussed yesterday, Mr. Wade recently informed Sgt. Pack the DOT has not historically allowed MSP access to State resources, and this request would require a "policy change."

For a better understanding and to assist with the next steps, I have attached a Word document outlining a history of the request to include why this request benefits the Commonwealth. Unfortunately, in order to enable a "policy change," the next step in this request may have to be facilitated through respective Secretariats.

Please let me know if you have any questions/concerns.

Thank you!
Mark

POL Pass-Through Statement - FY23 April.pdf
POL Charges - FY23 April.csv

Dear Kyra,

Attached is your April FY23 EOTSS Chargeback Invoice for POL.

April ITI's for EOTSS charges have been entered in MMARS. The Comptroller's policy requires that ITA's be processed for these charges within 30 days of issue.

Please ensure that your encumbrances (IE documents) for BCS, COR, PAS charges have sufficient funds encumbered for the remainder of the fiscal year. Per A&F notice, June 9th will be the deadline for new encumbrances or increases that total $75,000 or more. Our billing team can provide you a recent forecast of all IT Chargebacks for this fiscal year.

Also please contact the billing team (eotss-billing@mass.gov) to request an updated list of all approved BARS along with reviewing the attached Pass-through statement to ensure you have sufficient funds encumbered for all Pass-through charges.

Finally, as you process the ITA documents for BCS, COR, PAS charges please do not use any other object code other than U04 as these IT chargebacks should be coded to U04 object code as per the Comptroller's guidance. ITA documents for PAD charges should be coded as E05 object code.

If you have questions about these charges or require more detail, please email the billing team at EOTSS-Billing@mass.gov.

Sincerely,

The EOTSS Billing Team

TRF-11.pdf

Here is a proposed statement and two background points, plus the policy. I don't have any answers yet on numbers of times used.

Statement:
"The ability to query information about vehicles connected to serious crimes, through both the MSP's automated license plate readers and the DOT's tolling gantries, is a valuable tool to assist in capturing dangerous offenders, securing justice for their victims, and protecting public safety and homeland security. The MSP utilizes both systems judiciously and in accordance with state and federal laws and Constitutional rights of individuals."
-Me

Background:
-Use of the MSP's ALPR system is governed by a rigorous Departmental policy, TRF-11 (copy attached to this response).
-MSP investigators do not have direct access to the DOT gantry information, and request such data from the DOT's legal division via a thorough process that ensures all relevant criteria and safeguards are met.

Noah, I wanted to touch base and let you know that with Kory's help we were able to access CR.1772 and gather data on the GPS issues, were reviewing the logs. In the meantime I update that units to PAGIS version 2.15.2.11 that should resolve those hotlist issues and a few others. But lets keep a eye on his data and see if he still gets random GPS in the meantime, that system was pretty consistently showing bad GPS. We also have a fix for the B/W images with color ocr capture, I did not apply that fix to CR.1772 as I just received and its not been tested thoroughly yet. Will touch base in our meeting to discuss plans to update your mobiles.

TRF-11 Nov21.pdf

Good morning Chris,

The company responded yesterday night that they allowed the IP address we gave them. I don't yet see your device in the system. Please have someone turn it on today so it tries to connect. Let me know when that has been done and I'll check again.

Please note that Danvers PD will be responsible (per the MOU) for selecting and training personnel to use this system. The MOU requires that the provisions of our policy be observed, and I have attached the most recent version. Please let me know if you have any questions.

One important guideline is that an LPR hit/alert alone should not be used as RS/PC to stop a car or take enforcement action. In the event of a misread or a match to a different state, the officer must "weed" these out before taking action. A best practice is to do the following:

Prior to initiation of a stop or enforcement action based upon an ALPR hit or alert, confirm the hit or alert, to include:

- *Verify the plate:* Visually verify that the vehicle plate matches the ALPR system's interpretation;
- *Verify the state:* Visually verify that the state of the vehicle plate matches the state of the plate in the Hot List information; and
- *Verify the status:* Verify the current status of the plate that generated the hit/alert (e.g., is the vehicle still stolen), through:
    - Criminal Justice Information System (CJIS);
    - National Crime Information Center (NCIC);
    - Department's Records Management System (RMS); or
    - Another appropriate source of data

Similarly, documentation of an enforcement action after an LPR hit or alert should generally not indicate the hit or alert was the reason for the stop. If done correctly, it was not. The alert drew the officer's attention to the situation and vehicle, but the officer's direct observations and verification of the alert (i.e., a live CJIS query showing the vehicle was confirmed to be stolen) should provide the RS/PC. I am not suggesting to leave the LPR out of the report, of course, but to understand that it should be corroborated before taking action.

Hi Greg,

Just finished reading the policy you sent. Nicely done and contains a lot of material I think I can use to convince people that we don't need to reinvent the wheel up here.

The first document you attached dealt with "pandemic" issues. Could it be the wrong document? I also noticed the Policy had the five year retention language, and I recalled that you had mentioned it was changed to three.

Thanks again for sending the information my way.

Subject: RE: ALPR Directive

Hi Greg,

Thanks for the quick response. It is very much appreciated. I can't remember if we met before. I am friendly with several of the NJ team (Colonel Callahan,

Geoff Noble, Ray Guidetti, Joe Brennan, etc). We attended an ALPR meeting sponsored by NJSP and NYPD a few years back and I might have met you there.

I used to tell anyone who would listen that ALPR was our best bang for our technology buck that I had seen in a long time. We had a great opportunity to get it right, but like the "old" Red Sox, we constantly let the ball go between our legs.

When I was running DIS and DHS, I stressed out a lot about ALPR and I have some things that I'll discuss with you when we can talk. That being said, I was never able to get the state to take full advantage of this game changing technology. Ironically, being a man who rarely has an original idea, a lot of our program was based on what we learned in New Jersey and New York (I'll deny the New York part if questioned outside this group).

Now that I am retired and happily working in obscurity in a small office at a non-General Headquarters site, I want to take one more run at trying to point our state policy people in the right direction. Undoubtedly your input, along with Father James Sheehan from St.

Patrick's, will help put us on the right path.

All the best,

Dermot

Sir,

Attached you will find the ALPR directive which we updated (yes, I had to work directly with Sheehan on this for several weeks, in case you were wondering) in late 2022 and it was made effective January 2023. What we submitted to the AG's office was quite a bit longer and certainly more in depth, but the Deputy AG we worked with did a pretty good job of cutting it down as he wanted to keep it under 10 pages. There are some holes in the policy as a result, that we've been realizing over the past month, but overall it is a pretty good document. Also attached is our 2010 directive that was in effect until January of this year.

The state of play in New Jersey was not wholly unlike what you describe in Mass, but what the AG's office did for us is create a state ALPR coordinator who has the ability to make rules and run the whole program. Any law enforcement agency who uses ALPRs, either by deploying them or using the data, has to follow the directive, which also means following the state coordinator. Vendors who provide ALPR for law enforcement agencies in NJ must share their data into a central depository, among other things. We are attempting to create one place to search all ALPR reads in the state. This is still being built, and it is slow and painful, but we are going in the right direction for sure.

I would be happy to speak with you if you have further questions. I ran the NJSP ALPR program for about 6 years prior to my retirement in Jan 2021, and they have me back helping out a little bit now so I can answer most questions.

Thanks,

Greg

Ok Jim thanks.

My meeting is next Tuesday with our Executive Office of Public Safety. As usual in Massachusetts, the state has not provided guidance as far as LPR is concerned and we find ourselves exactly where we didn't want to be. The private sector is dealing directly with the cities and towns while state agencies struggle to get a clear direction as to what our policy is. We now have at least four different LPR systems and no single database.

Greg, anything you can provide would be helpful.

Thanks,

Dermot

DLt. Pinkes,

That is a different area than the cruiser mounted LPRs, which is the reason I inquired as the definition of an LPR operator in an earlier email. Is there a separate standard we should be considering related to that inquiry?

Respectfully,

Noah

Good afternoon,

Thank you for assisting me with this information. Recognizing that we are utilizing very limited numbers of cruiser mounted ALPR's, I would pose the same questions to ascertain compliance with stationary ALPR systems.

Could you advise the who/what/when related to training for the stationary systems.

Thank you in advance for your assistance gathering this information. Don't hesitate to reach out directly with any questions/concerns either of you may have. I appreciate your help.

Subject: RE: ALPR Operator Training

Good afternoon Sarge,

The standard does not define who an "operator" is. I would assume that it is anyone who is operating a cruiser mounted LPR system. This would be the training during issuance.

The standard below indicates training in the "operator responsibilities" I would view this as issuance including operation and policy responsibilities of the operators.

2.	The agency has a written directive governing the use of License Plate Readers.	**Y N**

3. The written directive addresses:

A	Guidelines for use	**Y N**
B	Operator responsibilities	**Y N**
C	Operator training	**Y N**
D	Data entries	**Y N**
E	Data storage and security	**Y N**
F	Access to data	**Y N**
G	Data retention	**Y N**
4	Agency provided documentation demonstrating LPR Operators received required training. Name(s) sampled:	

Any questions or if I am overlooking something let me know.

Thank you,
BP

Hi Sarge,

I have attached a copy of the full Accreditation standard for your reference. Training is required for all LPR operators.

I will need documentation of the training provided for compliance. This can be in the form of the materials presents (powerpoint, lesson plan, manual……) and a sign-in sheet or documentation of how you record the LPR operator has been trained (excel sheet?).

I have also attached a highlighted copy of our current policy that details MSP training requirements on page 7 (highlighted)

Please contact me with any questions you may have. Thank you for reaching out and I appreciate your assistance providing compliance for this issue.

DLt. Pinkes,

Just following up on this request. As the LPR program has been transitioned to new management and responsibility (now run by Sgt. Ryan Walczak of the Technical Services Unit), we are working through a number of transitional tasks, including this request regarding training documentation.

There are some other changes going on with the program that will impact user management and training which make this a bit more complicated than it might initially seem. We are working on it, in consideration of the revised definition of what you are looking for and the dynamic nature of the program, and should have something for you soon.

Respectfully,

Noah

Subject: RE: ALPR Operator Training

Good afternoon Sarge,

The standard does not define who an "operator" is. I would assume that it is anyone who is operating a cruiser mounted LPR system. This would be the training during issuance.

The standard below indicates training in the "operator responsibilities" I would view this as issuance including operation and policy responsibilities of the operators.

2.	The agency has a written directive governing the use of License Plate Readers.	**Y N**

3. The written directive addresses:

A	Guidelines for use	**Y N**
B	Operator responsibilities	**Y N**
C	Operator training	**Y N**
D	Data entries	**Y N**
E	Data storage and security	**Y N**
F	Access to data	**Y N**
G	Data retention	**Y N**
4	Agency provided documentation demonstrating LPR Operators received required training. Name(s) sampled:	

Any questions or if I am overlooking something let me know.

Thank you,
BP

DLt. Pinkes,

Can you please clarify what this standard refers to as an "LPR Operator"? The definition of this term would affect the records provided to satisfy this request.

Thank you,

Noah

Subject: RE: ALPR Operator Training

Hi Sarge,

I have attached a copy of the full Accreditation standard for your reference. Training is required for all LPR operators.

I will need documentation of the training provided for compliance. This can be in the form of the materials presents (powerpoint, lesson plan, manual……) and a sign-in sheet or documentation of how you record the LPR operator has been trained (excel sheet?).

I have also attached a highlighted copy of our current policy that details MSP training requirements on page 7 (highlighted)

Please contact me with any questions you may have. Thank you for reaching out and I appreciate your assistance providing compliance for this issue.

V/R,
Bill P.

Good afternoon,

As part of the Accreditation process I am required to provide a proof of compliance that the operators of our ALPR cruiser mounted units have received training.

Could you please provide me with a list of members assigned an ALPR and also a copy of the training/lesson plan provided to the member upon receipt of said equipment.

Should you have any questions, please contact me at your convenience. Thank you in advance for your assistance with this request.

Oh ya, SO FUN!!! I make sure to complain to Justin as much as possible about it so he also has to go through it

Maybe October is the sweet spot for the conference!! That's so awesome!!

And maybe it could be ok, but I just have a funny feeling about it. MACA is not the place for that kind of thing. We could have a panel with ALL vendors so questions could be asked and answered at the same time, but not just the two LPRs pitted against each other.

This is great news.

I think a general panel would be good. If they are not opposed to it perhaps they would allow someone from Flock on the panel along with someone local (MSP) who has used LPR for a long time.

We can say the presentation is sponsored by them as well.

This is great news.

I think a general panel would be good. If they are not opposed to it perhaps they would allow someone from Flock on the panel along with someone local (MSP) who has used LPR for a long time.

We can say the presentation is sponsored by them as well.

Well then ~ so this is the biggest exhibitor sponsor I think we've ever had in history of 23 conferences……..

I'll respond again including the packet which they can select from. I'm assuming their $5K sponsor includes their $700 registration fee.

I'll email her back stating such- we still have plenty of wiggle time. But I guess it's up for some further discussion ~

We would like to sponsor $5000 to the conference. How do we start that process? ALso wanted to know if we could have a panel or discussion time slot to talk about LPR/ALPR and how it helps solve crimes.

My Very Best,

Lisa

I agree- I don't think MACA is big enough for that and if done incorrectly it could backfire tremendously for us…..I have to review our contract. If we are up to 7 vendors- we are closed to anymore!

Oh ya, SO FUN!!! I make sure to complain to Justin as much as possible about it so he also has to go through it

Maybe October is the sweet spot for the conference!! That's so awesome!!

And maybe it could be ok, but I just have a funny feeling about it. MACA is not the place for that kind of thing. We could have a panel with ALL vendors so questions could be asked and answered at the same time, but not just the two LPRs pitted against each other.

I don't know if I'm a fan of Flock and Motorola on the same panel. In my opinion, it seems like we're encouraging a debate. They would likely be professional, but I can just see it getting a little hairy!

This is great news.

I think a general panel would be good. If they are not opposed to it perhaps they would allow someone from Flock on the panel along with someone local (MSP) who has used LPR for a long time.

We can say the presentation is sponsored by them as well.

Well then ~ so this is the biggest exhibitor sponsor I think we've ever had in history of 23 conferences……..

I'll respond again including the packet which they can select from. I'm assuming their $5K sponsor includes their $700 registration fee.

I'll email her back stating such- we still have plenty of wiggle time. But I guess it's up for some further discussion ~

We would like to sponsor $5000 to the conference. How do we start that process? ALso wanted to know if we could have a panel or discussion time slot to talk about LPR/ALPR and how it helps solve crimes.

My Very Best,

Lisa

image.png

Good Afternoon,

I have attached a copy of the Department's ALPR policy, TRF-11, which outlines the requirements for requesting a historical query and/or hotlist. Below are the relevant sections.

Historical:

Search Procedures

The Commonwealth Watch Center (CWC) and Commonwealth Fusion Center (CFC) shall serve as the primary ALPR resource for the Department. Search requests submitted to the CWC/CFC shall include, at a minimum:

- Case number or reference;
- Type of investigation or reason for request;
- Plate number(s) and vehicle description (if available);
- Requested search time period; and
- Requested search area (devices or region).

Hotlist:

Manual Hot List Entries

Manual entries of a license plate onto a Hot List may include vehicles associated with:

- AMBER or Silver Alerts;
- Missing child, missing person, or kidnapping broadcasts or bulletins;
- Incapacitated or endangered persons;
- Be-On-Look-Out (BOLO) broadcasts or other public safety alerts;
- Investigation of terrorist or criminal offenses; or
- Wanted persons, arrest warrants, or search warrants.

Manual entries onto a Hot List shall be:

- Entered with the vehicle description, if available;
- Entered with a case number or reference;
- Updated or removed when information changes, is no longer current, or is no longer necessary or reasonable;
- Given special attention to rental and short-term use vehicles;
- Given special attention to incidents that may be quickly resolved;
- Entered with an automatic expiration date no longer than thirty (30) days; and
- Approved by a supervisor, except in exigent circumstances.

Subject: LPR System

CAUTION: This email was sent from an external source. Please be extra vigilant when replying, opening attachments or clicking links.

Good afternoon Joe,

We now have the ability for outside agency users to be able to view data from cameras in their jurisdiction. Attached is a copy of the MOU and our current ALPR policy. If this is acceptable to your agency, please sign and return to us. We can then set up a training for a few members of your agency to get access.

All users must receive training, and we do not have the resources to manage a large or a constantly changing pool of users (this applies to our own staff as well). Therefore please select approximately 2-4 users from your agency (we recommend investigations level staff primarily due to their experience).

The training is tentatively scheduled for **June 7 at 10:00 AM**. It will take place remotely via

Teams and will take about 1.5 hours. Users should ideally be at their computers and able to follow along. When available, please send me the names and email addresses of the users selected by your agency.

Respectfully,

Noah

Motorola/Vigilant LEARN

[redacted] G.L. c. 4.sec. 7. cl.26(f)(investigative), G.L. c. 4.sec. 7.cl.26 (n)(security)

Policy Update

The Department's ALPR policy (TRF-11) was officially updated as of June 27, 2023. This policy governs the use of ALPR systems by sworn and civilian members. Please review it (attached) to ensure you are familiar with the most recent version. Many of the updates to this policy directly reflect the best practices that CWC has already doing, such as limiting the scope of searches and the duration of manual hotlist entries. The section titled "Search Procedures" would be particularly relevant to review.

One noteworthy update is that a manual hotlist entry request must be authorized by a supervisor, except in exigent circumstances/emergencies. This can be satisfied in two ways: (1) the request can come directly from a supervisor (Sgt. or above), or (2) the requestor can provide the name of the supervisor who has authorized the request. Until requestors get used to sending this info, you may find yourselves advising them of the requirement and asking for the supervisor's name. For example, something like this might work:

> "We have received your hotlist request. Pursuant to recent MSP policy updates, hotlist requests must be authorized by a supervisor. Please provide the name of the supervisor who has authorized this request."

ALPR Administrator

Thank you for your time and effort as we continue working to improve our Department's LPR system. Some of you know that I have been transferred to a new assignment, and DHS is in the process of selecting someone new to take over the ALPR Administrator role. I will continue to handle these duties through that transition, and as always please feel free to reach out with questions, comments, and success stories.

Subject: LPR Updates

Motorola/Vigilant LEARN

An LPR camera is now live in the Motorola/Vigilant LPR system, called LEARN, and additional cameras are expected to follow. G.L. c. 4.sec. 7.cl.26 (n)(security) [redacted] For the upcoming events, please be mindful that LPR data may be in one or both of these systems, and hotlist entries should made in both systems to ensure full coverage across the Department's assets.

Most CWC personnel have accounts in LEARN using your .pol email addresses. Please try logging in and setting this account up if you haven't yet done so. If you do not have an account, please go to this link (https://learn-nvls.com/LEARN/gui/index.aspx) and click "Register" to sign up using your .pol email. Agency manager roles have been assigned to DLt. Brooks, IA2 Bender, and IA2 Salvatore. They will be asked to assist with managing user accounts for CWC personnel, as they have done for Boss.

Motorola will be sending training staff to GHQ in August or September to provide in-person training. In the mean time, prior to using this system, please access the Motorola/Vigilant Training Academy via the following link: https://vigilant.policeoneacademy.com/ using your LEARN credentials to sign in.

The following short training courses should be completed to provide familiarity with this system and to satisfy our training obligations:

1. Vigilant Vehicle Manager Introduction and User Account Management (approx. 30 minutes)
2. Vigilant Vehicle Manager 101 (approx. 30 minutes)

There are several additional short courses that are optional but that you may find beneficial to your skill with this software. You will receive a certificate by email upon completion of each course. Please forward those to me to keep with training records.

Policy Update

The Department's ALPR policy (TRF-11) was officially updated as of June 27, 2023. This policy governs the use of ALPR systems by sworn and civilian members. Please review it (attached) to ensure you are familiar with the most recent version. Many of the updates to this policy directly reflect the best practices that CWC has already doing, such as limiting the scope of searches and the duration of manual hotlist entries. The section titled "Search Procedures" would be particularly relevant to review.

One noteworthy update is that a manual hotlist entry request must be authorized by a supervisor, except in exigent circumstances/emergencies. This can be satisfied in two ways: (1) the request can come directly from a supervisor (Sgt. or above), or (2) the requestor can provide the name of the supervisor who has authorized the request. Until requestors get used to sending this info, you may find yourselves advising them of the requirement and asking for the supervisor's name. For example, something like this might work:

> "We have received your hotlist request. Pursuant to recent MSP policy updates, hotlist requests must be authorized by a supervisor. Please provide the name of the supervisor who has authorized this request."

ALPR Administrator

Thank you for your time and effort as we continue working to improve our Department's LPR system. Some of you know that I have been transferred to a new assignment, and DHS is in the process of selecting someone new to take over the ALPR Administrator role. I will continue to handle these duties through that transition, and as always please feel free to reach out with questions, comments, and success stories.

Respectfully,

Noah

CAUTION: This email originated from a sender outside of the Commonwealth of Massachusetts mail system. Do not click on links or open attachments unless you recognize the sender and know the content is safe.

Greetings Nick, Happy New Year!

A few thoughts:

- As luck would have it we are working in Quincy all next week (Tues-Friday, 1/17-1/20) so we can meet in person or virtually. I will follow back up with you on some candidate dates/times. If you have a few candidate dates/times that are good for you guys, please let me know and we'll do our best to accommodate your schedule.
- Wanted to ask why you guys are closing out the grant on 2/1/23? The period of performance for this grant goes through the end of Sept 2023 (see attached). Plus there is an option to extend it another year through 9/30/2024. I believe that Mass already did the extension but I'm researching that. It's probably going to be necessary to do another ISA (between RMV & MSP) if the original one has expired.
- How much money is remaining after the camera purchases? How far do you think it can take you guys for keeping camera system up and running? I think the argument can be made that the expenses you are talking about below are part of this project for LPR deployment. We'll need to reach out to FMCSA to get their approval. John Toto is the new FMCSA rep for Mass.
- We are in the process of working with ITD program stakeholders for gathering projects for the 2023 HP-ITD grant application, so it might be that MSP wants to propose a project for O&M for the LPR systems? We can talk about this next week as well. We would need an annual cost estimate when we work on putting together the grant projects proposed for this next funding cycle.

P.S. I didn't respond to Kory since I'm not sure how much he needs to know right now about internal grant/funding discussions. Copying Gretchen for discussion of possible project for next grant cycle.

Dear FMCSA Financial Assistance Award Recipient:

As you may know, the recent Consolidated Appropriations Act, 2021 signed into law by the President on December 27, 2020, provided extensions to the period of performance (POP) to recipients of financial assistance awards (grants and cooperative agreements) that were issued by the Federal Motor Carrier Safety Administration (FMCSA) in ***fiscal years (FY) 2019 and 2020***. The new project period of performance end dates for these awards are as follows:

Grant Program	New FY 2019 POP End Date	New FY 2020 POP End Date
Motor Carrier Safety Assistance Program (MCSAP) ***(Year of Award + Following Two (2) Fiscal Years)***	9/30/2021	9/30/2022
High Priority Grant, Commercial Vehicle Safety (HP-CMV) ***(Year of Award + Following Three (3) Fiscal Years)***	9/30/2022	9/30/2023
High Priority Grant, Innovative Technology Deployment (HP-ITD) ***(Year of Award + Following Five (5) Fiscal Years)***	9/30/2024	9/30/2025
Commercial Driver's License Program Implementation (CDLPI) ***(Year of Award + Following Five (5) Fiscal Years)***	9/30/2024	9/30/2025
Commercial Motor Vehicle Operator Safety Training (CMVOST) ***(Year of Award + Following Two (2) Fiscal Years)***	9/30/2021	9/30/2022

Kind regards,

Sharon

Subject: MSP - ALPR Grant Finalizing before closeout 2-1-23

Good morning Richard and Sharon,

With the closeout of our ITD grant on 2/1/2023 pertaining to the ALPR, I would like to set up a video conference with our installer Kory Koster, Lt Noe, and you for some questions about the remainder of the money and grant fulfillment. During the last few months, we have seen the challenges of this equipment, and Kory has been very accommodating in fulfilling the needs of CVES. In brief, Kory has submitted a proposal of his services which I see necessary to keeping this ALPR program going. Below is Kory's proposal which we are completely unaware of if it would be applicable to the current grant. Please send us some dates for a video conference. Thank you.

"With the purchase of any technology product, consideration needs to be given to the services available to support the product's operation. Available services need to be matched with the product user's operational needs to ensure that investments are maximized through adoption and utilization. When the MA State Police (MSP) purchased the updated Automated License

Plate Recognition (ALPR) systems for its Commercial Vehicle Enforcement Section, efforts were made to ensure that the purchase included annual calibration and software update services to keep in-vehicle components properly aimed and focused and to keep in-vehicle software up to date.

Noticeably absent from MSP's existing service program is any sort of on-demand, component relocation, or user support services that the project's vendor likely did not know were necessary. To address the vendor's oversight, BSA Security, Inc. recommends that MSP consider a battery of additional services that will address the on-demand configuration & programming changes, product relocations/re-installations, and end-user support needs that are now understood to be necessary.

On-demand configuration, programming, and user support services would address the intermediate system change requests that have been experienced and would add on-demand support for active system users to keep systems online, operational, and optimized. Relocation/re-installation services are recommended to address the movement of ALPR components from one location or vehicle to the next due to changing program needs, vehicle accidents, user errors, user support needs, product failures, and or other mishaps."

Noah,

Great thanks!

Any word about testing the Moto system?

I was at the MA COP show last week and spoke to a rep from ELSAG. They provided the attached info.

If you think it is worth setting up a meeting with them, I have the sales reps info.

Good morning Sgt,

John is no longer with Rekor. I will be happy to set up a call with you.

I am available today anytime between 12.00-3.00PM. Please let me know if this works for you and I will send a teams meeting invite.

Thank you,

Erez Sharoni

Hi Patrick,

I believe I can get you a trail license issued for that with no issues.

I apologize for the delay and confusion we have gone through some changes that will allow us to demonstrate the software much easier.

We have also rolled out some lease pricing starting at $1,800 per camera, per year.

Would 30 days suffice?
Should the license be registered to your email?

Best,
John

Subject: RE: Introduction

Hi John,

We have been exploring the options provided by several vendors. As I recall, you indicated that Rekor was not willing to send us a demo unit unless we essentially committed to purchase afterwards. When I asked for a trial license to test the software, you told me to sign up online for the

two-week trial and suggested that extending it beyond that would be difficult.

While this is markedly unhelpful, I attempted to sign up for a trial account anyways. However, the website does not present the option to select the trial option with Axis camera integration and is asking for a credit card to activate the trial.

If Rekor wishes to allow us to demo this hardware or software, please advise.

Sincerely,

Sergeant Noah H. Pack

Subject: Re: Introduction

Morning Noah,

I believe when moving the camera you would just need to update the GPS coordinates of the camera.
I will double check with my engineering department and confirm.

We do offer the ability to purchase as well. We understand that grants sometimes have stipulations. We are happy to work with you on those weather it is a purchase or a extended lease model.
Does the grant allow you to pay for SaaS services? In the currently model you do not of own the hardware you are just paying for the service I am not sure how that would affect the grant. Happy to discuss all options with you.

Purchasing 1 of the edge cameras would look roughly like this below. About 15K to own the hardware and have 5 years of service.

Edge300 - $6,950
5 YR Scout License $2,400
5-YR 4G LTE Communications $4,500
Install $500
Travel $750

Versus our Saas Model would be $6,000 over 5 years, per camera, and you don't have to maintain the hardware.

Happy to hop on a call this week to discuss if you would like.

Best,
John

To: John Robling <jrobling@rekor.ai>
Subject: Re: Introduction

Hi John,

Thanks for your time yesterday. Our team discussed this today, and we have a couple follow-up questions for you.

Some of our cameras are moved intermittently, at which time we update the location in the system for that camera. I understand that one of the reasons we could not go with Rekor in the past was that the Rekor software cannot accurately accommodate these changes. Specifically, if Camera A is at Location A for July, then Camera A is at Location B for August, the system must be able to accurately reflect that history. It must not then appear that reads captured by Camera A in July were at Location B just because the camera was later moved there. Can you find out if this problem has been corrected and camera reads shows accurate historical locations even if devices are moved?

Additionally, as I'm sure you know, many LPR systems are purchased with grant funding. Grant funding is not ideal for subscription based services, as grants generally cannot be used to pay for subscriptions that run past the end of the grant period. Does Rekor have a sales package that accommodates this, such as buying the cameras/services outright?

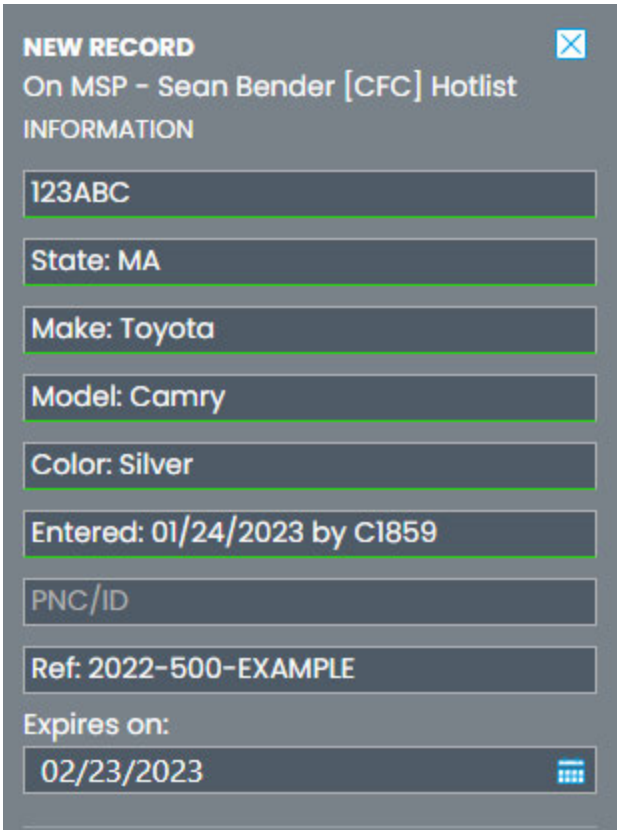
To: POL-DL-SPEAR <POL-DL-SPEAR@MassMail.State.MA.US>
Subject: Reminder: Boss4

Good Morning, All -

Just a reminder, please ensure that when entering hotlists into Boss4, we are all complying with the Department's ALPR policy (TRF-11, attached), as well as the additional recommendations regarding data retention (24-72 hour vs. 30 day hotlist entries). Sgt. Pack **does** perform routine audits of the ALPR system and hotlist entries, and has recently brought to my attention a handful of entries that do not comply with departmental policy.

Minimum Requirements:



- Authorized purpose (refer to TRF-11)
    - *A case or reference number for a law enforcement investigation or legitimate public safety purpose is REQUIRED.*

- Update/Remove when information changes or is no longer current
    - 30 day expiration date for investigations, 24-72 hours for radio BOLOs, Dispatch requests, Public Safety hotlists etc. After the initial hotlist expires, the investigating officer is responsible for contacting the CFC for a longer term hotlist.
- Entered by:
    - Name or UserID of the user creating the hotlist, for audit purposes.

Additional Recommendations:

- State, Make, Model, Color
    - Including a physical description of the vehicle ensures that if a hit notification is received, recipients can confirm that the vehicle captured matches the suspect vehicle.
- Entered by (Date)
    - This helps us and the recipient to see how recent/relevant a hit notification may be. Agencies often forget to contact the CFC to remove the plate from the hotlist when it is no longer required.

In order to maintain compliance, uniformity, and consistency in our entries, I *highly* recommend utilizing the following format:

Please also ensure that when creating the notification profile that a hotlist is linked to the

notification profile, otherwise, the plate may hit, but the user will not be notified. There are currently a number of notification profiles that are not linked to hotlists, or hotlists that are not linked to notification profiles. These hotlists will not function, even if the plate is captured by an ALPR device.

If you have any questions, please do not hesitate to reach out to myself, Justin, or Sgt. Pack.

Thank you.

> Hi Jim,
>
> It's our understanding that our purchase for the LPR cameras and enclosures to be provided by GTBM includes all associated costs for the purchased equipment (except for cellular service, which we will provide), and it will be fully operational and connected through the end of our existing contract period with Motorola for access to the LEARN database ending in March 2027.
>
> In regards to the LinC form, it appears to be a general statement of Motorola's fees for licensing outside cameras and purchasing cellular service, if desired. Based on this approved purchase, we do not expect and are not authorizing or agreeing to any additional fees/costs for the items in this purchase, including the continuation or institution of any recurring

fees after the end of the contract period or outside of the purchased equipment/services, as we would have to seek funding and approval for any such purchases.

If the above is correct and agreed by Motorola, we can return this form for your files.

Respectfully,

Noah

Noah, sorry this is taking a little longer than normal as several key people are traveling this week. I'll try to have completed asap.

On a different note, could you please sign the attached doc which our admin needs for the the licensing of the cameras GTBM is providing as part of the covert enclosures. Thanks.

Jim

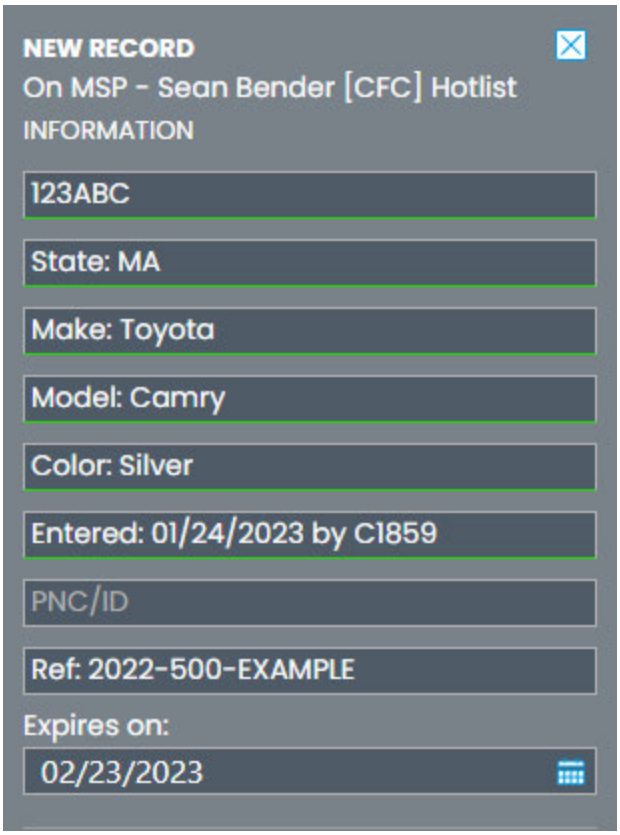
From: Bender, Sean (POL)
To: POL-DL-SPEAR
Subject: Reminder: Boss4
Date: Tuesday, January 24, 2023 6:54:52 AM
Attachments: TRF-11 Automatic License Plate Recognition (1).pdf
image.png

Good Morning, All -

Just a reminder, please ensure that when entering hotlists into Boss4, we are all complying with the Department's ALPR policy (TRF-11, attached), as well as the additional recommendations regarding data retention (24-72 hour vs. 30 day hotlist entries). Sgt. Pack **does** perform routine audits of the ALPR system and hotlist entries, and has recently brought to my attention a handful of entries that do not comply with departmental policy.



Minimum Requirements:

- Authorized purpose (refer to TRF-11)
  - *A case or reference number for a law enforcement investigation or legitimate public safety purpose is REQUIRED.*
- Update/Remove when information changes or is no longer current
  - 30 day expiration date for investigations, 24-72 hours for radio BOLOs, Dispatch requests, Public Safety hotlists etc. After the initial hotlist expires, the investigating officer is responsible for contacting the CFC for a longer term hotlist.
- Entered by:
  - Name or UserID of the user creating the hotlist, for audit purposes.

Additional Recommendations:

- State, Make, Model, Color
  - Including a physical description of the vehicle ensures that if a hit notification is received, recipients can confirm that the vehicle captured matches the suspect vehicle.
- Entered by (Date)
  - This helps us and the recipient to see how recent/relevant a hit notification may be. Agencies often forget to contact the CFC to remove the plate from the hotlist when it is no longer required.

In order to maintain compliance, uniformity, and consistency in our entries, I *highly* recommend utilizing the following format:

Please also ensure that when creating the notification profile that a hotlist is linked to the notification profile, otherwise, the plate may hit, but the user will not be notified. There are currently a number of notification profiles that are not linked to hotlists, or hotlists that are not linked to notification profiles. These hotlists will not function, even if the plate is captured by an ALPR device.

If you have any questions, please do not hesitate to reach out to myself, Justin, or Sgt. Pack.

Thank you.

Will, here is a statement (please attribute to me) and some background points. Our comprehensive ALPR policy is also included.

The ability to query information about vehicles connected to serious crimes, through both the MSP's automated license plate readers and the DOT's tolling gantries, is a valuable tool to assist in capturing dangerous offenders, securing justice for their victims, and protecting public safety and homeland security. The MSP utilizes both systems judiciously and in accordance with state and federal laws and Constitutional rights of individuals.
-Dave Procopio

Background:
-Use of the MSP's ALPR system is governed by a rigorous Departmental policy, TRF-11 (copy attached to this response).
-MSP investigators do not have direct access to the DOT gantry information, and request such data from the DOT's legal division via a thorough process that ensures all relevant criteria and safeguards are met.

Hi Sgt Pack,

We've been notified that we will be CJIS audited and one of the documents they will want to see is the ALPR MOUA.

I have a signed copy by my Chief, however, I do not have Colonel Mason's signature.

Who do I submit this MOUA to to have the Colonel's signature?

I attached the MOUA that is signed by my Chief.

Also, we currently have both cruisers sitting in our lot so we can attempt to get the ALPR system operative at some point.

Thank you,

PAUL

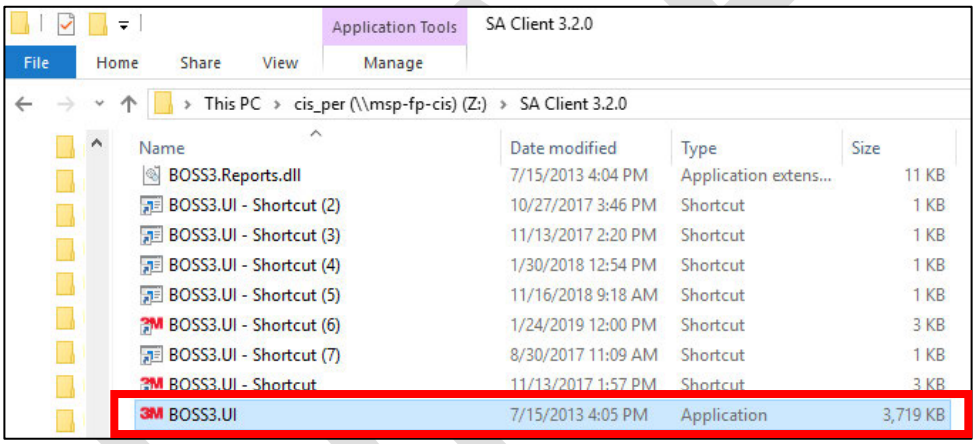
DRAFT

License Plate Readers (LPRs)

DRAFT

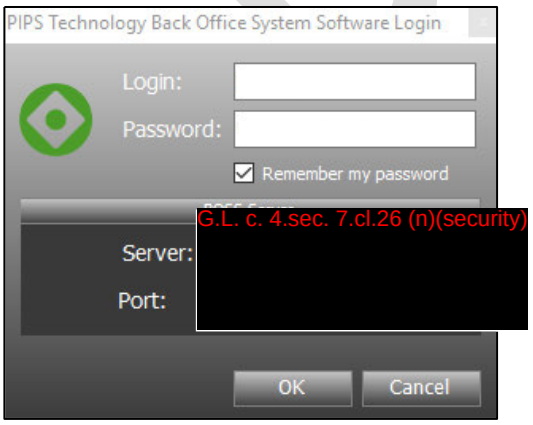
Vigilant LPR Reader

Vigilant is an LPR reader utilized by many departments; however, the CFC receives information only from Lynn and Chelsea.



- Refer to Section 2: Accounts – Databases & Systems for log in information.

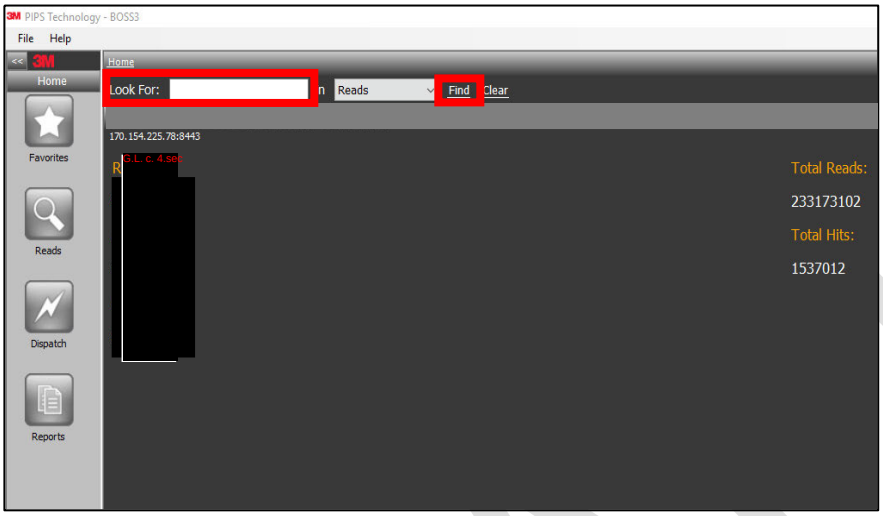
BOSS/3M LPR Reader



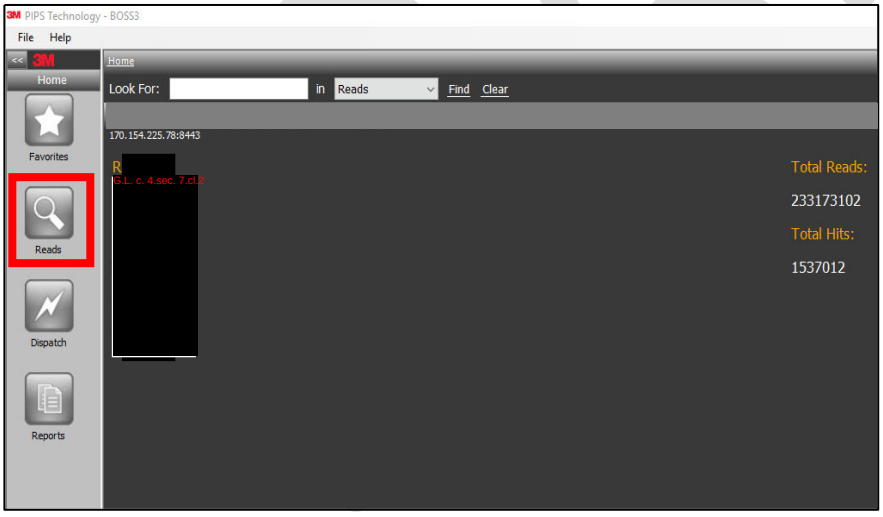
BOSS/3M is the primary LPR system utilized. The systems pulls information from LPRs controlled by MSP throughout the state.

1. **To install BOSS/3M on your computer, and add the shortcut, navigate to the "SA Client 3.2.0" on the M-Drive:** [redacted]

2. **Double click "BOSS3.IU" with "Application in the "Type" column to download the program**

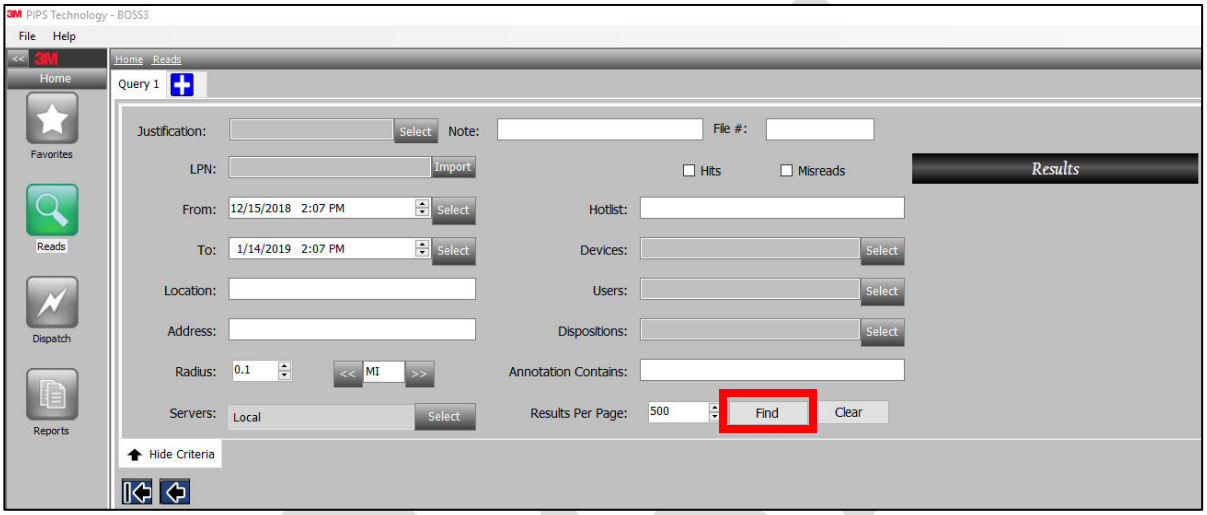


3. **Upon opening the program from your desktop, ensure the correct Server and Port are entered:**
   Server: 170.154.225.78 **Port:** 8443



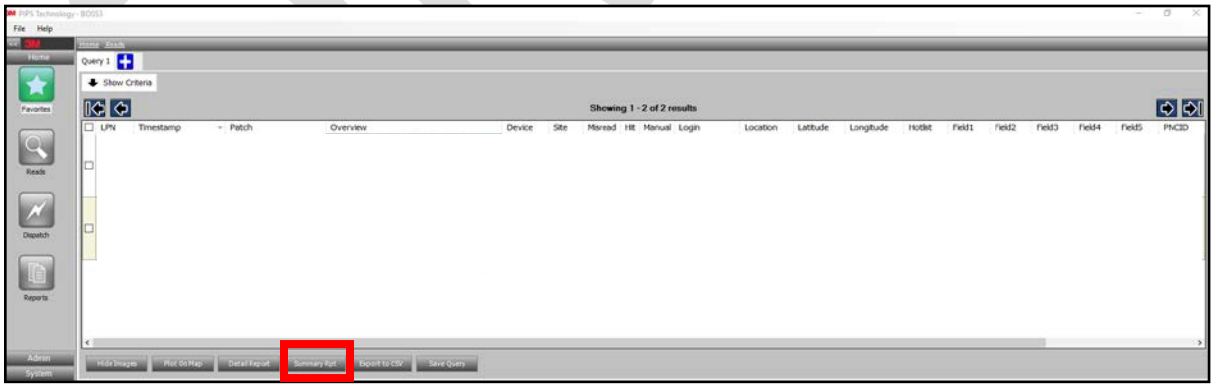
BOSS/3M LPR Reader - Searching a Plate

1. **Search a plate by typing the plate number into the “Look For:” box and clicking “Find”**



2. **Click “Reads” on the left tool bar to search a plate with more advanced parameters**

3. **The Reads page will display multiple search parameters, including:**
   - **Timeframe (dates and times)**
   - **Hotlist**
   - **LPR Device**
   - **Location**
   - **Address**
   - **Radius**



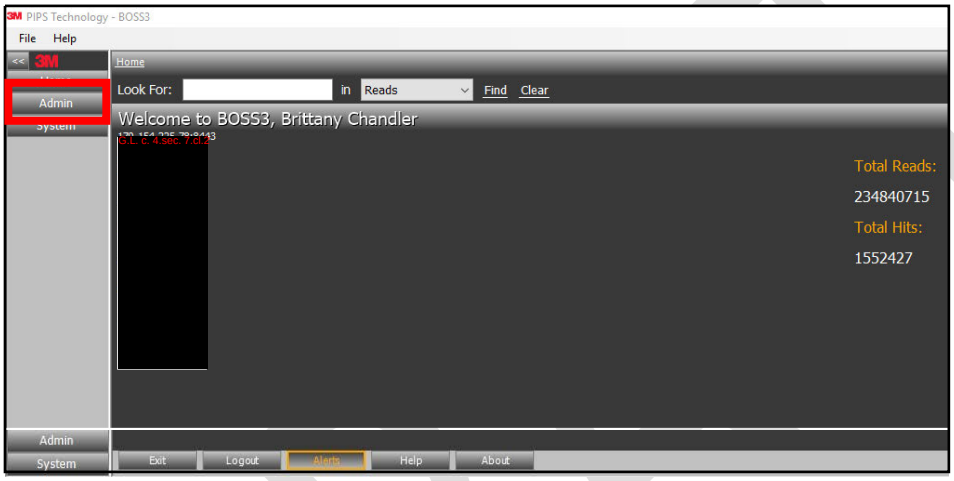
BOSS/3M LPR Reader - Searching a Plate (cont.)

4. **The Reads page will allow for multiple search parameters at once**
   - **Enter the plate number in "LPN"**
   - **Enter the appropriate parameters**
   - **Click "Find"**

BOSS/3M LPR Reader - Printing Results

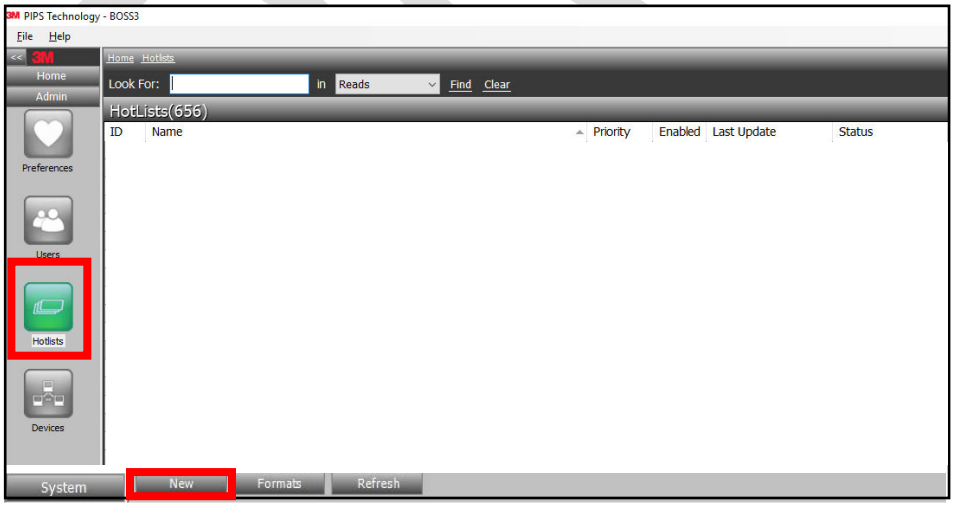
1. **On the results page click "Summary Rpt" on the bottom tool bar**

2. **A popup will appear, click "All Results" or "Current Page" then select "OK"**



3. **Once the report loads, click the printer icon along the top tool bar**

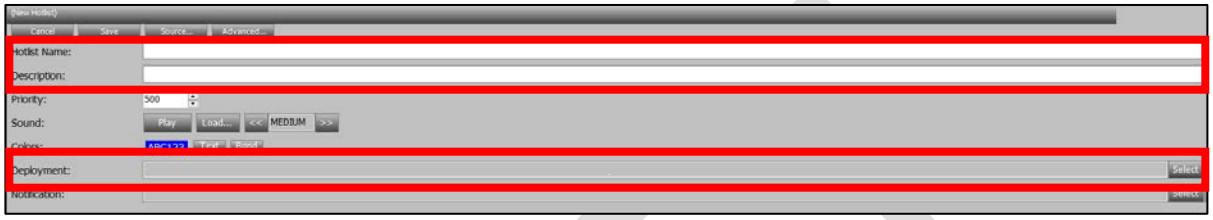
Creating an LPR Hotlist



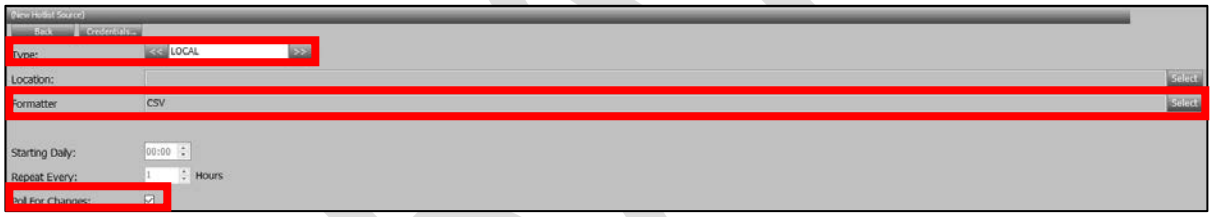
License plates of interest can be added to a Hotlist. When a Hotlist plate is read by an ALPR camera, an email will be sent to the requesting officer.

There are Two Steps to a Hotlist: Creating an LPR Hotlist and then Adding License Plates into an LPR Hotlist.

1. **From the main page, click "Admin" on the bottom of the left tool bar**

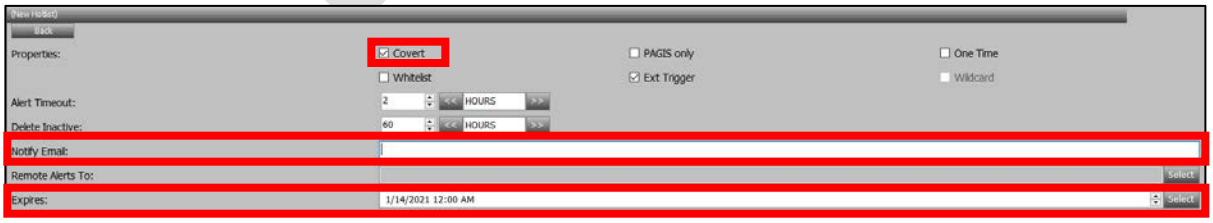


2. **The tool bars on the left and bottom will change, click "Hotlists" on the left toolbar then click "New" on the bottom tool bar**



Creating an LPR Hotlist (cont.)

3. **In the "New Hotlist" box enter the following:**
   - **Hotlist Name: Agency – Officer – Case Number**
   - **Description: Officer name – Contact Information**
   - **Deployment: Click "Select" and check ALL boxes, then click "Save"**



4. **Click "Source" and enter the following:**
   - **Type: Local (default)**
   - **Formatter: Select "Select" and select "CSV," then select "Save"**
   - **Poll for Changes: Check the box**

****Note: If not mentioned above, do not change****

5. **Click "Back"**

6. **Click "Advanced" and enter the following:**
   - **Covert: Check the box (Checking the box to ensures that passing ALPRs are NOT alerted)**
   - **Notify Email: Enter emails separated by commas with NO SPACES (Enter the Fusion Mailbox email with the requestor's email)**
   - **Expires: Three months from entry date**

****NOTE: Some requestors prefer text notifications, if so, follow the below steps****

DRAFT

Creating an LPR Hotlist (cont.)

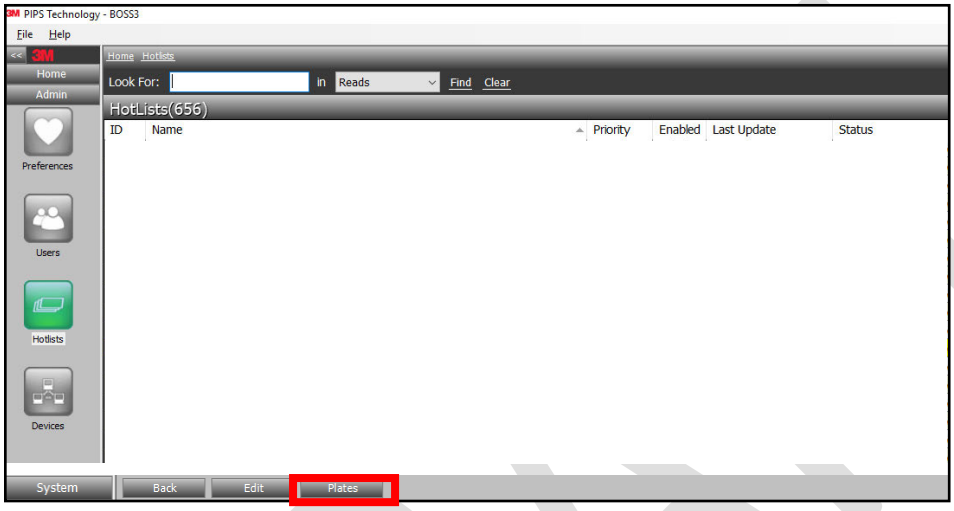
Ask the requestor for their phone carrier information for the number they wish to receive text notifications
- In the "Notify Email" field enter the cellular number followed by @ and the corresponding cellular carrier suffix:

Mobile Carrier	SMS Gateway Domain
Alltel	sms.alltelwireless.com
AT&T	txt.att.net
Boost Mobile	sms.myboostmobile.com
Cricket Wireless	sms.mycricket.com
MetroPCS	mymetropcs.com
Project Fi	msg.fi.google.com
Republic Wireless	text.republicwireless.com
Sprint	messaging.sprintpcs.com
T-Mobile	tmomail.net
U.S. Cellular	email.uscc.net
Verizon Wireless	vtext.com
Virgin Mobile	vmobl.com

Example: 5088202233@vtext.com

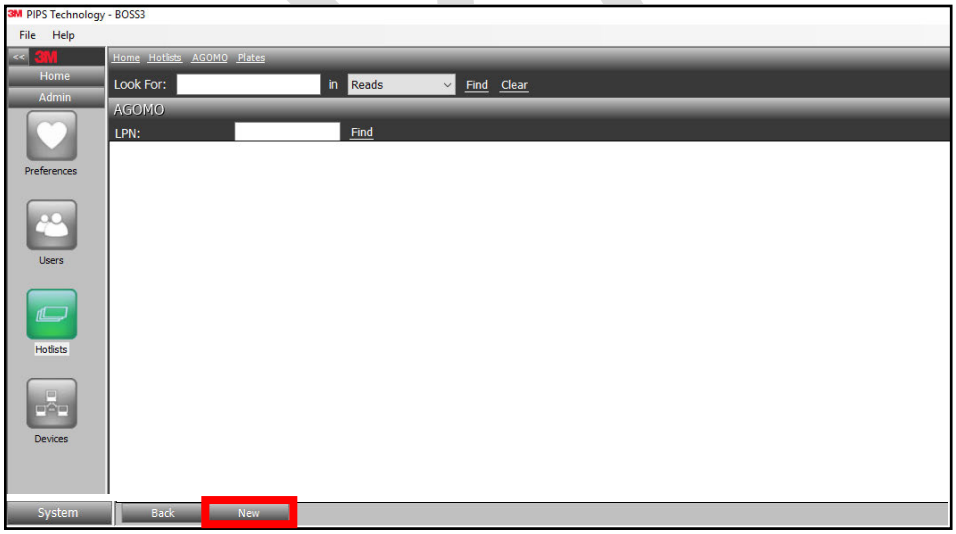
7. **Click "Back"**

8. **Click "Save" then click "Save" again**



9. **Click "Yes" on the "Source File Name" error message**

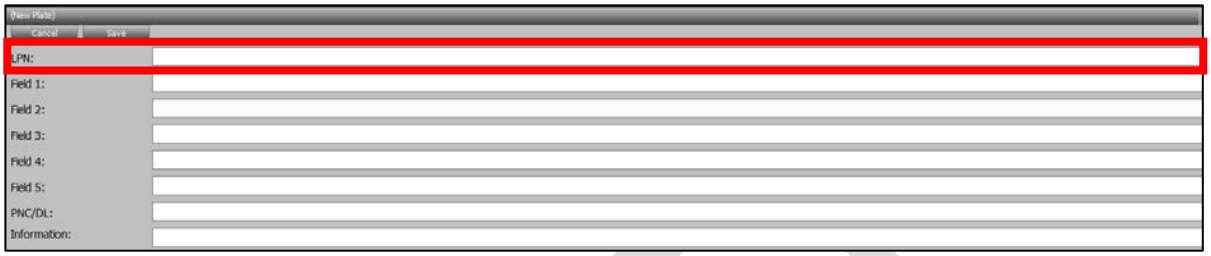
DRAFT



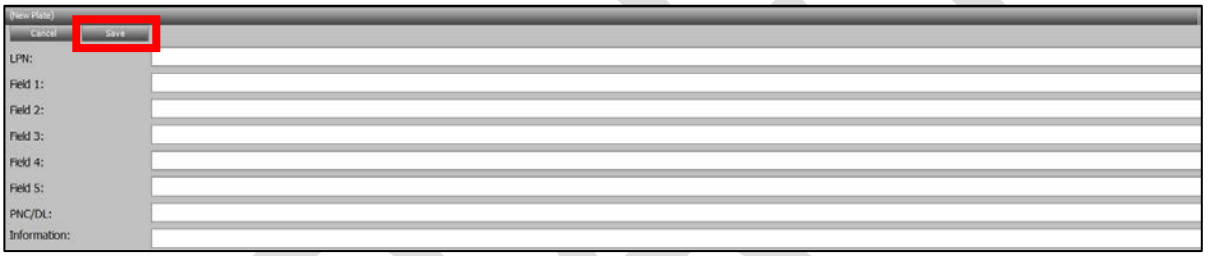
Adding a License Plate to an LPR Hotlist

1. **In the "Hotlist" section (Refer to Steps 1 and 2 above) click the appropriate Hotlist that needs a license plate added**

2. **Click "Plates" on the bottom tool bar**

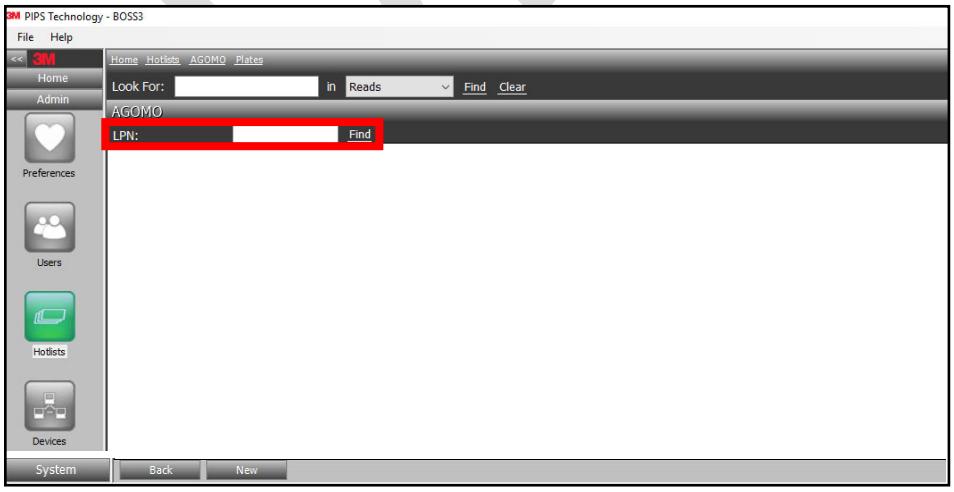


3. **Click "New" on the bottom tool bar**



Adding a License Plate to an LPR Hotlist (cont.)

4. **Enter the following:**
   - LPN: Plate number (number only, do NOT add the state)



5. **Click "Save"**

Searching a License Plate in an LPR Hotlist

1. **In the LPR Hotlist navigate to the "Plates" section (Refer to Steps 1 and 2 above)**

2. **In the "LPN" field, enter the plate number of interest or % to see ALL plates on the Hotlist then select "Find"**

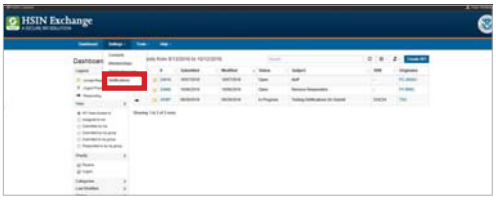
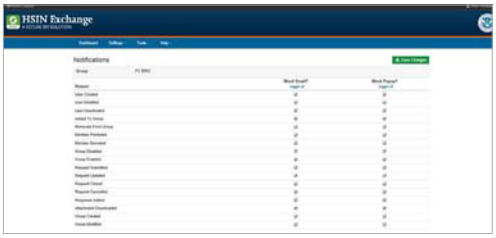
HSIN Quick Reference Guide

HSIN Exchange: Request For Information (RFI) Notifications



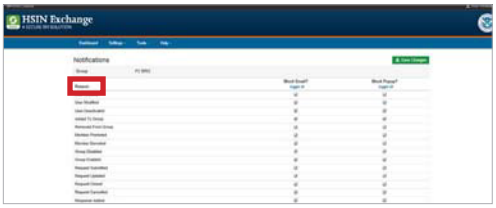
HSIN Exchange provides a tracking capability that will help fusion centers address requests for information (RFI) in a more efficient manner while providing quantitative metrics to assess and enhance their own operations. This quick reference guide provides an overview of how members can access and modify their notification settings. For additional information on HSIN Exchange, contact HSIN Outreach at HSIN.Outreach@hq.dhs.gov.

How to Access and Modify Notifications

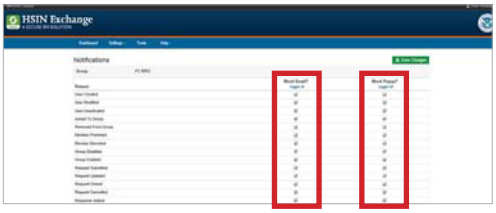


1. Navigate to HSIN Exchange (https://rfi.dhs.gov).
2. Click the **Settings** tab

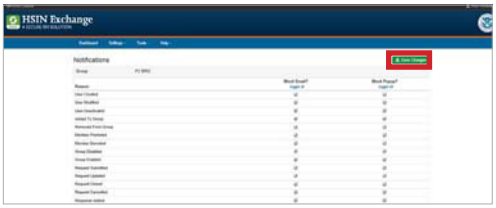
3. Select **Notifications**



4. The Notifications page opens.



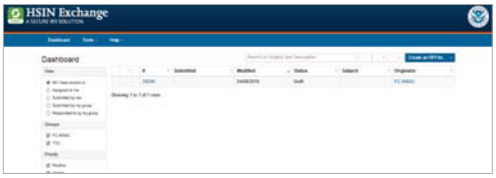
Note: There are 17 notifications that the system can send to a user. All notifications are sent by default to the user's email and through the browser if the user has an active session open.



5. Identify the notification setting (reason) you wish to update.

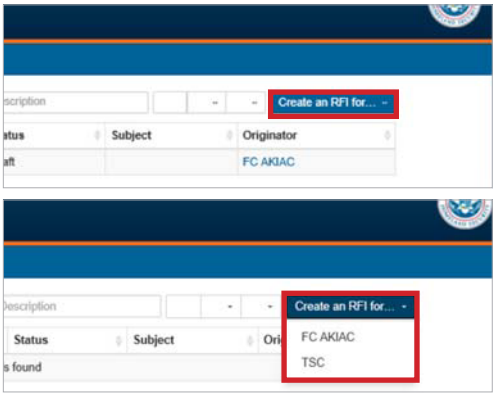
6. For notification settings (reason) you want sent via email or browser, check the appropriate box. For notifications settings (reason) you do not want sent via email or browser, deselect the appropriate box.

7. After making any desired changes, click **Save Changes**.



MEMBERS

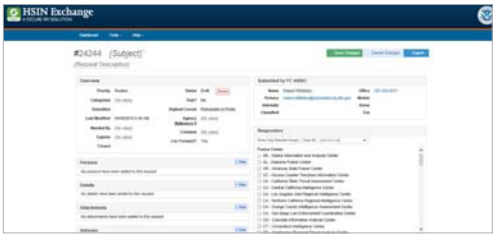
HSIN Quick Reference Guide



HSIN Exchange: How to Create and Submit an RFI

HSIN Exchange provides a tracking capability that will help fusion centers address requests for information (RFI) in a more efficient manner while providing quantitative metrics to assess and enhance their own operations. This quick reference guide provides an overview of how members can create and submit an RFI. For additional information on HSIN Exchange, contact HSIN Outreach at HSIN.Outreach@hq.dhs.gov.

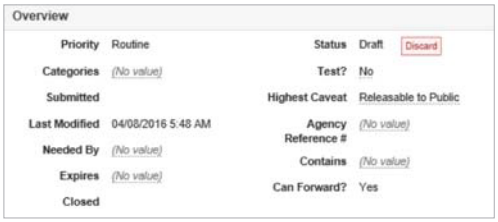
1. Navigate to HSIN Exchange (https://rfi.dhs.gov).



2. Click the **Create an RFI for** button.

Note: If you are a member of multiple groups, select the desired group to create a RFI.

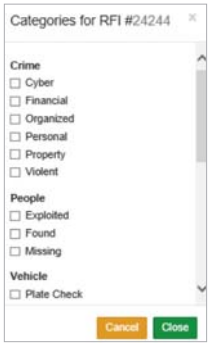
3. The RFI form appears.



Note: Different group types will have different forms. This QRG is using the Fusion Center RFI form.

4. **Subject and Description:** The subject is the RFI title that is displayed in the dashboard. The description field allows members to describe the nature of their RFI.

Note: Click "Subject" or "Request Description" to enter text.



5. **Overview:** The overview section provides key information about the RFI.

A member is able to populate information on:

a. **Priority** – A dropdown selection. Requestors may select from "Routine" or "Urgent".

b. **Categories** – A multi-select pop-up and will vary by group. To select a category, click into **No Value**. A pop-up window appears with the different categories.

c. **Submitted** – This field automatically populates based on when the RFI was submitted.

d. **Last modified** –This field automatically populates based on when the RFI was last modified.

e. **Needed By** – The date and time a response is required by.

f. **Expires** – The RFI can be set to automatically expire at a certain date and time. An RFI will close at 12 midnight on the expiration date.

g. **Closed** – This field automatically populates based on when the RFI was closed.

h. **Status** – The current status of the RFI. This can be either Draft, Open, In Progress, Canceled, Closed or Expired. If a member initiates an RFI but wants to delete it prior to submission, click the **Discard** button.

i. **Highest Caveat** – The highest level of data contained in the RFI. This can be either Releasable to Public, FOUO or LES.

j. **Agency/Case Reference #** – Free text field to allow a user to attach an agency case number to the RFI.

k. **Contains** – Checkboxes for USPER and LES attributes.

l. **Can Forward** – A "yes" or "no" selection lets recipients know whether they can or cannot send the RFI to another group.

6. **Persons:** The persons section allows user to enter specifics and/or comments related to a person(s) related to the request.

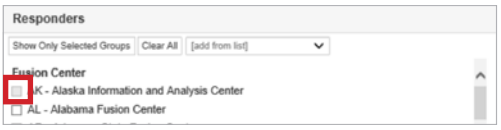
Note: The New button, or any Add button, indicates that you can add as many items as needed for a particular section.

7. **Details:** The details section allows users to enter specifics and/or comments related to the RFI.

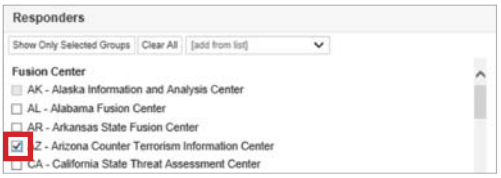
Note: The New button, or any Add button, indicates that you can add as many items as needed for a particular section.

8. **Attachments:** Members can attached any document type. Recommended file size is up to 16MB.

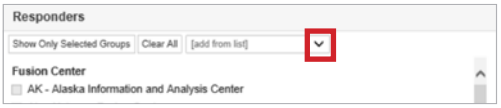
9. **Vehicles:** The section allows users to enter specifics and/or comments related to a vehicle(s).



10. **Submitted by:** Automatically provides the requestor's contact information and group affiliation. Members can update their information via the contact card.



11. **Responders:** The responders section allows members to select groups the RFI should be sent to.



a. To select group(s) that the RFI will be sent to, click the **Checkbox** next to the group name.

b. To remove group(s) from a request, click a **Marked Checkbox**.

c. To add groups from a distribution list, click the **Drop Arrow**.

12. Once the form is populated, click **Submit** located in the Overview section.

13. A HSIN Exchange Request message is sent to group members with the **Request Submitted** notifications feature enabled.

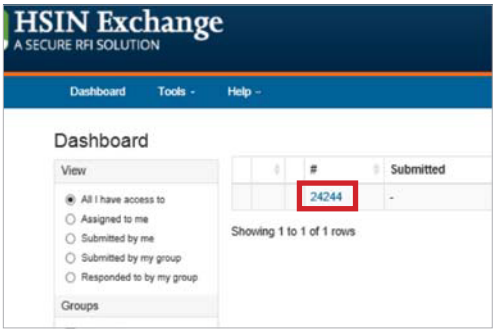
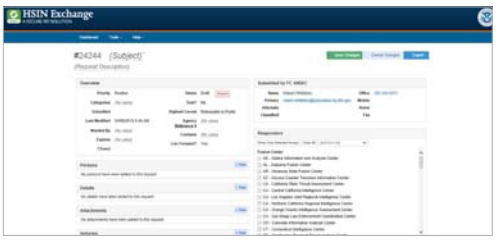
HSIN Quick Reference Guide



HSIN Exchange: How to Respond to an RFI

HSIN Exchange provides a tracking capability that will help fusion centers address requests for information (RFI) in a more efficient manner while providing quantitative metrics to assess and enhance their own operations. This quick reference guide provides an overview of how members can respond to an RFI. For additional information on HSIN Exchange, contact HSIN Outreach at HSIN.Outreach@hq.dhs.gov.



1. Navigate to HSIN Exchange (https://rfi.dhs.gov).

2. Click the **number** under the pound sign column. This number is automatically assigned to an RFI when it's created.

3. The RFI appears.

4. Find your designated group. Click **Respond**.

Note: If the responder has not responded to the RFI, this section will state "No responses."

5. Enter your response and add any attachments, then click **Submit Response**.

Note: Recommended file size is up to 16MB.

6. The new response appears.

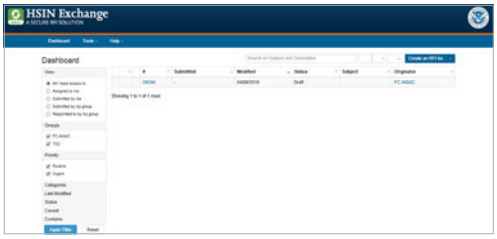
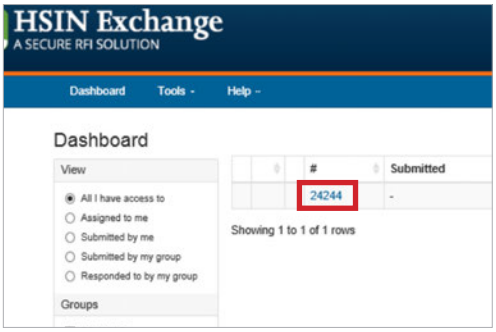
QRG



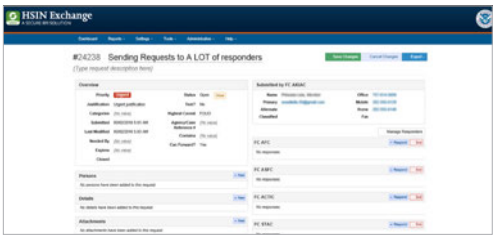
HSIN Quick Reference Guide

HSIN Exchange: How to Close an RFI and End an RFI Response Conversation

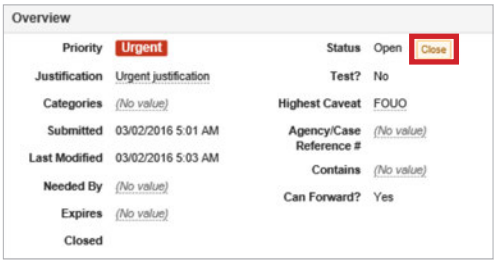


HSIN Exchange provides a tracking capability that will help fusion centers address requests for information (RFI) in a more efficient manner while providing quantitative metrics to assess and enhance their own operations. This quick reference guide provides an overview of how members can close an RFI and manage RFI response conversation strings as members of an originating group. For additional information on HSIN Exchange, contact HSIN Outreach at HSIN.Outreach@hq.dhs.gov.

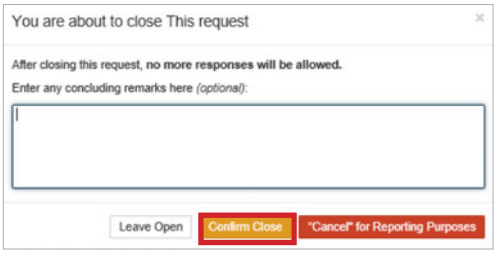
Close an RFI



1. Navigate to HSIN Exchange (https://rfi.dhs.gov).



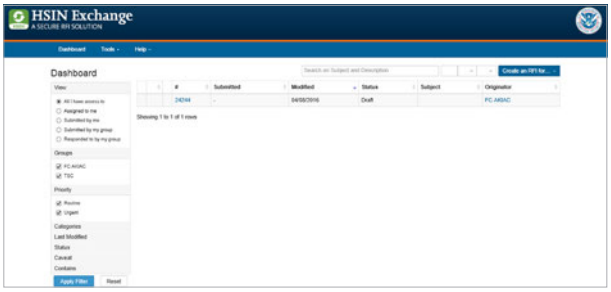
2. Click the **number** under the pound sign column. This number is automatically assigned to an RFI when it's created.



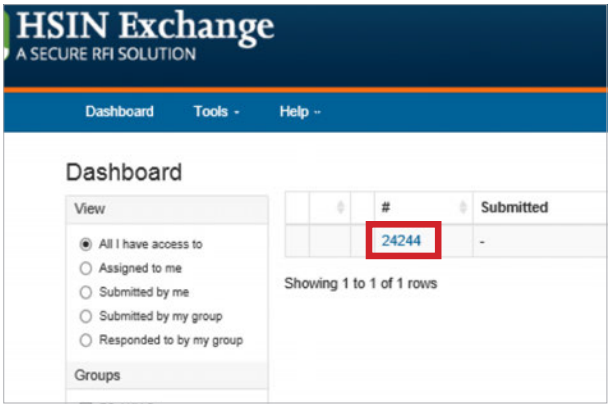
3. The RFI appears.

4. Under the Overview section, click **Close**.

5. Enter any concluding remarks. Click **Confirm Close**.

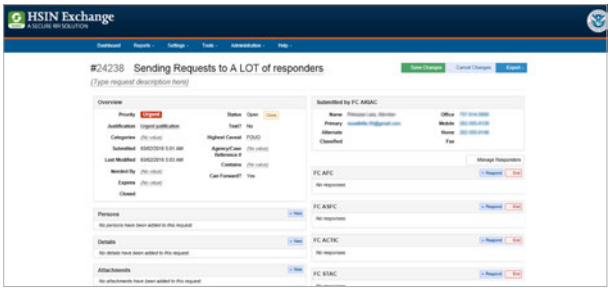


6. The RFI is now closed.

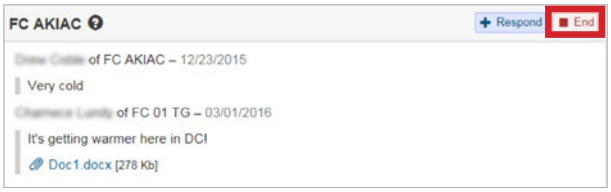


End an RFI Response(s)

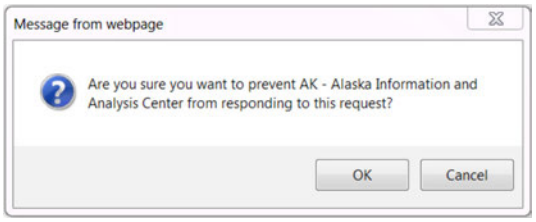
Note: Only members of the originating agency can end a response.



1. Navigate to HSIN Exchange (https://rfi.dhs.gov).



2. Click the **number** under the pound sign column.



3. The RFI appears.

4. Under **Manage Responders**, select your designated group and click **End**.

5. When prompted with "Are you sure you want to prevent…from responding to this request?" Click **OK**.

6. The conversation has ended.

FACT SHEET

HSIN-Intel Homeland Security Information Network Intelligence

Homeland Security Information Network-Intelligence (HSIN-Intel)

HSIN-Intel is a secure community that connects Federal, State, Local, Territorial and Tribal partners and promotes the exchange and analysis of controlled, unclassified intelligence and threat related information.

HSIN-Intel Purpose

- Foster community and coordination between fusion centers and homeland security partners across the nation
- Disseminate timely intelligence derived from SLTT, DHS, Federal partners and the Intelligence Community
- Exchange of raw information during national or regional incidents
- Provide a secure, single-access point to unclassified intelligence data which authorized stakeholders may access from anywhere at any time

HSIN-Intel Member Benefits

- Access to the national network of fusion centers analysts and intelligence professionals
- Access to sensitive "For Official Use Only" (FOUO) and Law Enforcement Sensitive (LES) shared by Fusion Centers, DHS, and other Federal Partners
- 24/7 situational awareness tools to ensure awareness and coordination during regional and national level incidents
- Ability to respond promptly to state and local partner requests for information

Minimum Eligibility Requirements

1. **Be a U.S. Citizen**
2. **Be a full-time, current employee of a law enforcement, criminal justice, intelligence, or homeland security government agency**
3. **Directly support information and intelligence analysis, sharing, or collection activities**
4. **Be associated with a fusion center, as verified by the fusion center, or other centralized intelligence capability (i.e. RISS center, HIDTA, EPIC, NORTHCOM, etc.) recognized by the HSIN-Intel Program Office**
5. **Have a government email address**

Governance

HSIN-Intel is governed by the HSIN Working Group, which is comprised of fusion center professionals represeting the four National Network of Fusion Center regions. Visit HSIN-Intel to view the HSIN-Intel Charter and see the current list of Working Group members representing your region. For more information about the Working Group, contact HSIN-Intel at HSIN.Intel.PMO@hq.dhs.gov.

uest Access to HSIN-Intel

To request access, please email your name, affiliated organization, email address and phone number, and a short justification to HSIN.Intel.PMO@hq.dhs.gov.

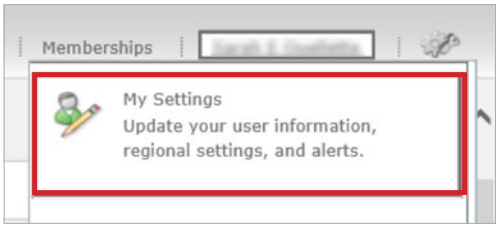
For more information, contact HSIN-Intel at HSIN.Intel.PMO@hq.dhs.gov or visit our website at https://hsin.dhs.gov/collab/intel.

Scan the QR code* or visit our website to learn more about how HSIN can help support your mission.

* You must have a QR code reader installed on your mobile device.

Update the HSIN Connect Display Name in HSIN Connect Meeting Room

QRG



Use this quick reference guide to learn how to update your display name in a HSIN Connect meeting room. The first exercise will be performed by all users, and the second will be performed by the meeting host.

1. The first exercise describes the steps to change your HSIN Connect display name. Users must create their HSIN Connect display name through their HSIN user profile. Once the name has been created or modified, it will take up to 24 hours for the name to update in the HSIN Connect meeting room.
2. The second exercise describes the next steps for the Meeting Host to modify preferences to share the updated display name in the HSIN Connect meeting room.

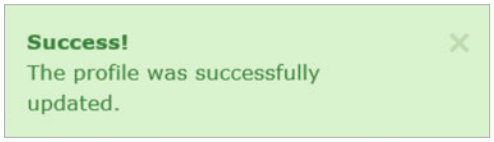
Once the HSIN Connect meeting room is updated, the HSIN Connect display name will appear in the Attendees pod. If the user chooses not create a HSIN Connect display name, the default will be the user's first name, last name. If the meeting Host changes the HSIN Connect display name during the meeting, the Chat pod will only reflect the changes going forward and the past chat history will not be changed.

Create a HSIN Connect Display Name in the User Profile

1. Navigate to HSIN Central https://hsin.dhs.gov
2. From the Universal Navigation bar, click **Your Name** and select **My Settings**

3. The User Profile page appears, click **Edit Profile**

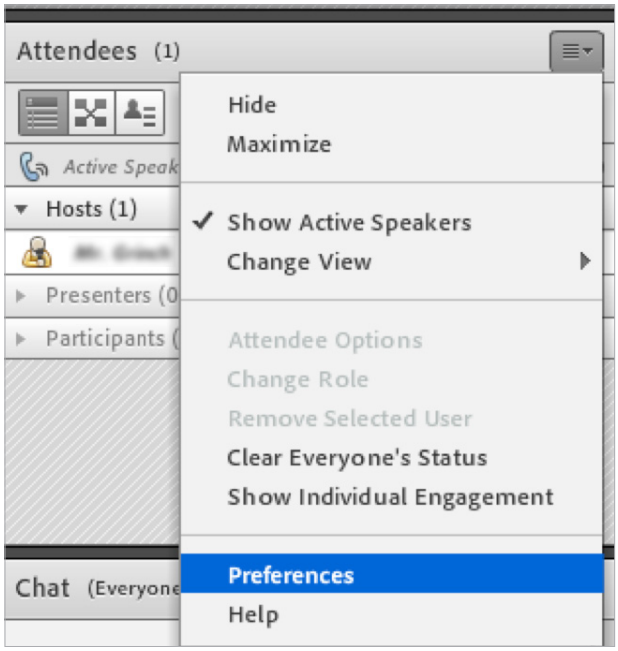
4. Scroll down to the **HSIN Connect Display Name** section and enter the desired name



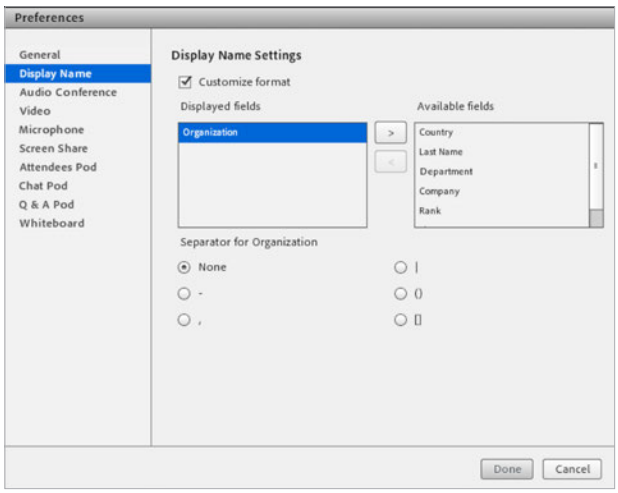
Note: HSIN-Intel Users must include your organization name before your first and last name (examples below):

- **State and local SitRoom members:** Enter your state abbreviation, your fusion center acronym and your first and last name (e.g., CA JRIC John Doe)
- **Federal agency SitRoom members:** Enter your agency acronym, your office acronym, and your first and last name (e.g., DHS I&A Jane Doe)

5. Click **Save** to save the change to the profile

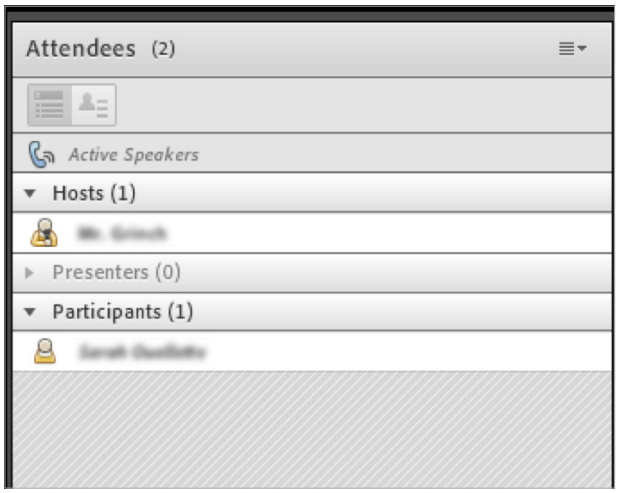


6. A confirmation message will appear



Display the HSIN Connect Display Name in a HSIN Connect Meeting Room

Note: The following exercise is to be performed by the Meeting Host.



1. Open a HSIN Connect meeting room as a Host
2. Click the **Attendees pod** to view the drop down menu, then select **Preferences**

3. Click **Display Name** and check the **Customize format** checkbox. Remove the 'First Name' and 'Last Name' fields from appearing under the Displayed fields, and then add the 'Organization' field to the Displayed fields.

4. Click **Done** to save the changes and view the HSIN Connect Display Name in the Attendees pod

FACT SHEET

National Situational Awareness Room (SitRoom)

The National Situational Awareness Room (SitRoom) is a collaboration tool and source for real-time information and intelligence sharing between fusion centers and homeland security partners concerning events and incidents having a regional or national-level impact.

Eligibility Requirements

Eligibility requirements mirror HSIN-Intel membership, as outlined in the HSIN-Intel charter, and are provided in accordance with the *Standard Operating Procedure on Nomination, Validation, and Access to HSIN-Intel*, and the *Standard Operating Procedure for the National Situational Awareness Room*.

- An active HSIN-Intel membership is a prerequisite, but is not the sole qualifying factor for access.
  - Be a U.S. citizen
  - Be a full-time, current employee of a law enforcement, criminal justice, intelligence, or homeland security government agency
  - Directly support information and intelligence analysis, sharing, or collection activities
  - Be associated with a fusion center, as verified by the fusion center, or other centralized intelligence capability (i.e. RISS Center, HIDTA, EPIC, NORTHCOM, etc.) recognized by the HSIN-Intel Program Management Office (PMO)
  - Maintain a government email address
- Access to SitRoom must be approved by the Fusion Center HSIN-Intel Coordinator in your area of responsibility (AOR).
- Federal personnel in the National Capital Region and those that support national-level missions (i.e., EPIC, NORTHCOM, etc.) may coordinate with HSIN-Intel PMO for access.
- Complete the required SitRoom 101 training hosted on the HSIN Learning Management System (HSIN Learn) at https://learn.dhs.gov/sitroom101/ *(All users must be approved members of HSIN-Intel to access the SitRoom 101 training).*

SitRoom Purpose

- Collaborate in advance of, during, and/or after a critical incident that has a regional or national-level impact, and where timely and accurate information is essential to maintain situational awareness and/or facilitate mitigation and response efforts
- Facilitate real-time, and often raw or unvetted, information and intelligence sharing between fusion centers during critical incidents – primarily via the AOR directly impacted by the incident
- During a critical incident, any shared information is owned and controlled by the lead fusion center or its designee
- Afford a secure, single-access point to sensitive but unclassified information, which authorized users may access from anywhere, at any time
- Active and operational twenty-four hours a day, seven days a week

Approved users can access SitRoom via the HSIN-Intel landing page or directly using the following link: https://share.dhs.gov/sitroom.

Please note that guest access is not authorized for SitRoom. Only vetted HSIN-Intel members that have been authorized for access and completed all required training are eligible to access SitRoom.

Request Access to SitRoom and/or HSIN-Intel

To request access to SitRoom and/or HSIN-Intel, contact the HSIN-Intel Coordinator located at the Fusion Center in your AOR, or email your name, affiliated organization, email address and phone number, and a short justification to HSIN.Intel.PMO@hq.dhs.gov.

For more information, contact HSIN-Intel at HSIN.Intel.PMO@hq.dhs.gov or visit our website at http://hsin.dhs.gov/collab/intel.

Search Warrant Process

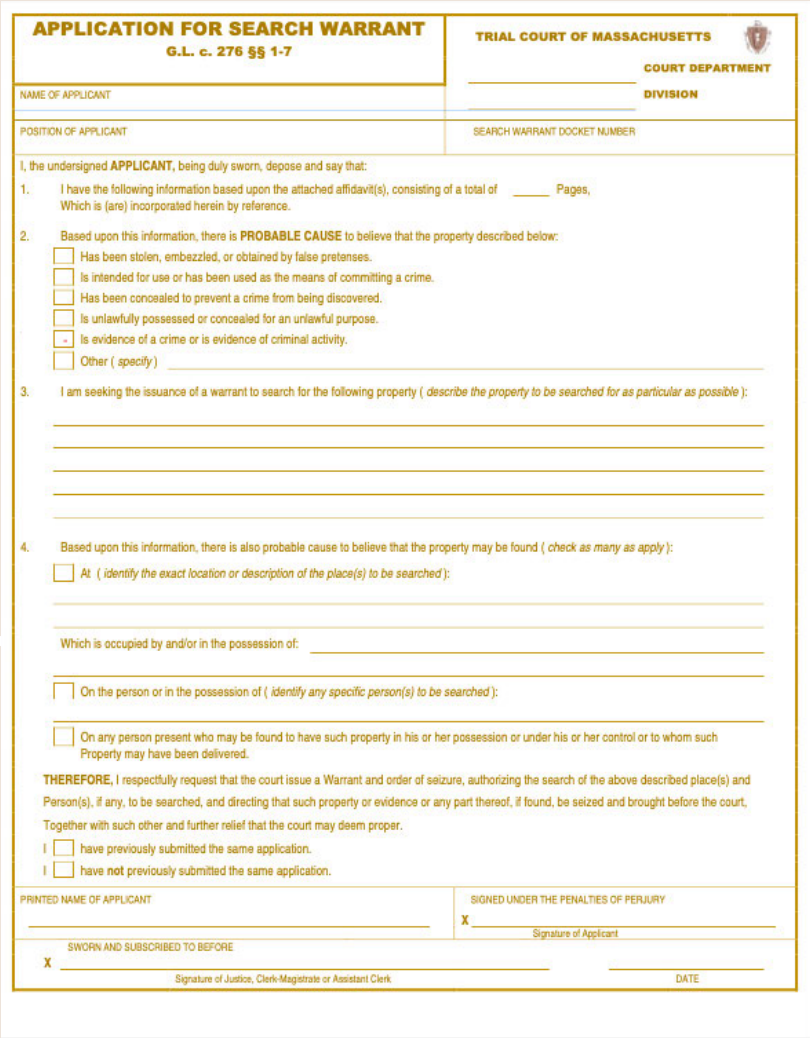
Tim Ferriter, Deputy Captain, Search Warrant Team
Christa Elliott, Assistant District Attorney, Search Warrant Team

G.L.[1288] c. 276, § 1: Massachusetts Search Warrant Statute

“A court or justice authorized to issue warrants in criminal cases may, upon complaint on oath that the complainant believes that any of the property or articles hereinafter named are concealed in a house, place, vessel or vehicle or in the possession of a person anywhere within the commonwealth and territorial waters thereof, if satisfied that there is probable cause for such belief, issue a warrant identifying the property and naming or describing the person or place to be searched and commanding the person seeking such warrant to search for the following property or articles . . . “

What is Required?

Legal Sufficiency:



1. Probable Cause to believe a crime has been committed;
2. Probable Cause to believe evidence - described with particularity - of that crime will be found; and
3. Reasonable likelihood that specified items will be found in the place to be searched (Nexus).
4. ALWAYS CONSIDER STALENESS.

Parts of a Search Warrant:

1. Application
2. Affidavit
3. Search Warrant
4. Search Warrant Return

Out of State Warrants

- If applying for a warrant that will be executed outside Massachusetts:
  - Apply in the normal course in Massachusetts;
  - Contact the local PD and DA's office in the executing state; and
  - Follow their instructions on how to proceed.

The Warrant

Remember - whether using carbon copy or fillable pdf, much of the information from the application automatically transfers to the warrant itself.

SEARCH WARRANT

G.L. c. 276 §§ 1-7

TRIAL COURT OF MASSACHUSETTS

COURT DEPARTMENT

DIVISION

SEARCH WARRANT DOCKET NUMBER

TO THE SHERIFFS OF OUR SEVERAL COUNTIES OR THEIR DEPUTIES, ANY STATE POLICE OFFICER, OR ANY CONSTABLE OR POLICE OFFICER OF ANY CITY OR TOWN, WITHIN OUR COMMONWEALTH:

Proof by affidavit, which is hereby incorporated by reference, has been made this day and I find that there is **PROBABLE CAUSE** to believe that the property described below:

- ☐ Has been stolen, embezzled, or obtained by false pretenses.
- ☐ Is intended for use or has been used as the means of committing a crime.
- ☐ Has been concealed to prevent a crime from being discovered.
- ☐ Is unlawfully possessed or concealed for an unlawful purpose.
- ☐ Is evidence of a crime or is evidence of criminal activity.
- ☐ Other (*specify*) _____

YOU ARE THERFORE COMMANDED within a reasonable time and in no event later than seven days from the issuance of this search warrant to search for the following property:

_____

_____

_____

_____

_____

☐ At :

_____

_____

Which is occupied by and/or in the possession of: _____

_____

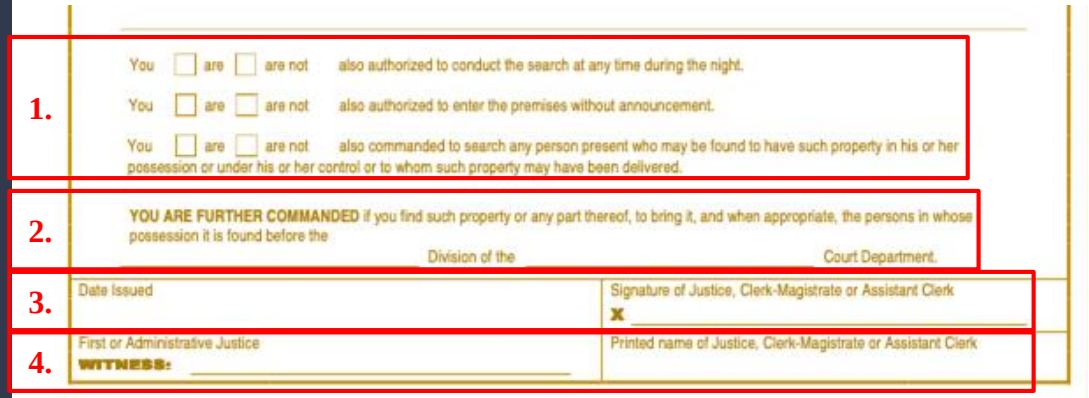
☐ On the person or in the possession of :

_____

You ☐ are ☐ are not also authorized to conduct the search at any time during the night.

You ☐ are ☐ are not also authorized to enter the premises without announcement.

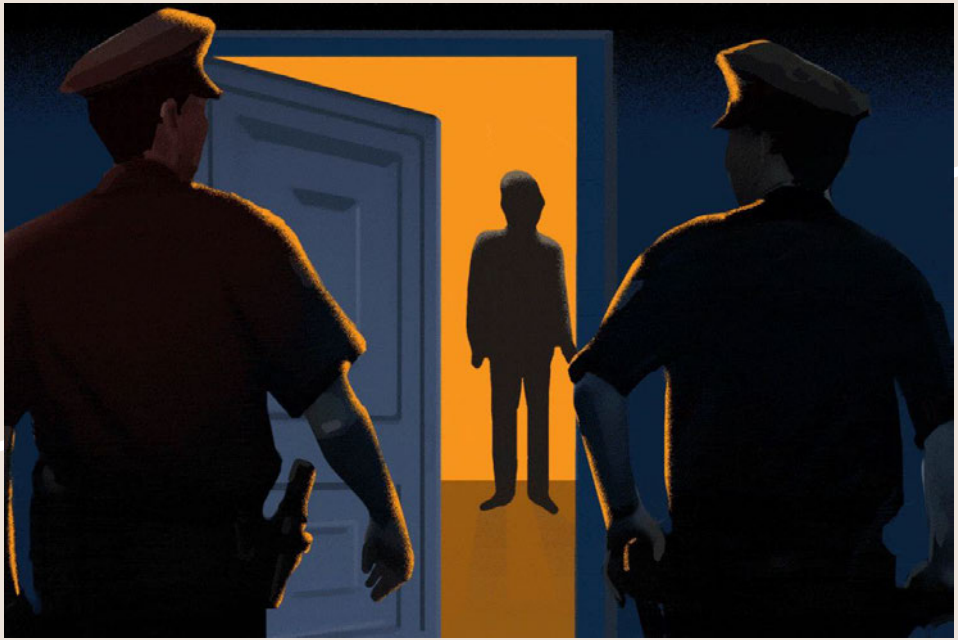
You ☐ are ☐ are not also commanded to search any person present who may be found to have such property in his or her possession or under his or her control or to whom such property may have been delivered.



YOU ARE FURTHER COMMANDED if you find such property or any part thereof, to bring it, and when appropriate, the persons in whose possession it is found before the _____ Division of the _____ Court Department.

Date Issued	Signature of Justice, Clerk-Magistrate or Assistant Clerk X _____
First or Administrative Justice **WITNESS:** _____	Printed name of Justice, Clerk-Magistrate or Assistant Clerk

1296

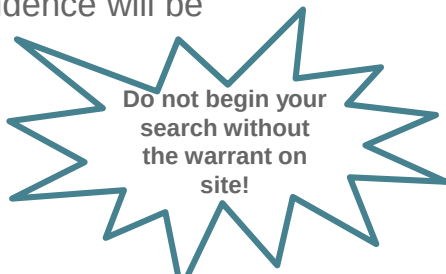


The Warrant

IMPORTANT - Make sure to attach the Addenda to the warrant. Failure to do so will result in suppression!

- ➔ Permissions - If your affidavit sets forth probable cause for a nighttime search, no knock warrant, or to search persons on the premises, be sure to check the appropriate boxes!
- ➔ District Court with jurisdiction over the crime - the Court to which the warrant will be returned.
- ➔ Signatures - Make sure the judge or clerk signs and dates the warrant in addition to the affidavit.
- ➔ Witness - For Superior Court warrant, print name of the Adminstrative Justice (currently Justice Heidi J. Brieger). For District Court, insert Presiding Justice of applicable District Court division.

Search Warrant Execution



Securing the Premises

Secure from Outside if:

- ➔ **Legitimate concerns evidence will be destroyed or removed** - secure perimeter of premises for a reasonable time while obtaining the Search Warrant;
- ➔ **No objectively reasonable belief the premises are occupied**; or
- ➔ **Occupants have left the premises**

Secure from Within ONLY IF:

- ➔ There is specific information (amounting to probable cause) supporting an objectively reasonable belief that evidence will be destroyed or removed.

Before You Execute the Warrant . . .

- The Search Warrant must be **on the premises** before the search may begin.
- Show the Search Warrant to the person in control of the premises (if possible), and a copy may be left at the scene.
- Double check that **ALL ADDENDA ARE ATTACHED TO THE SEARCH WARRANT.**

Entering the Premises

Requirements: Knock and announce presence and purpose

1300

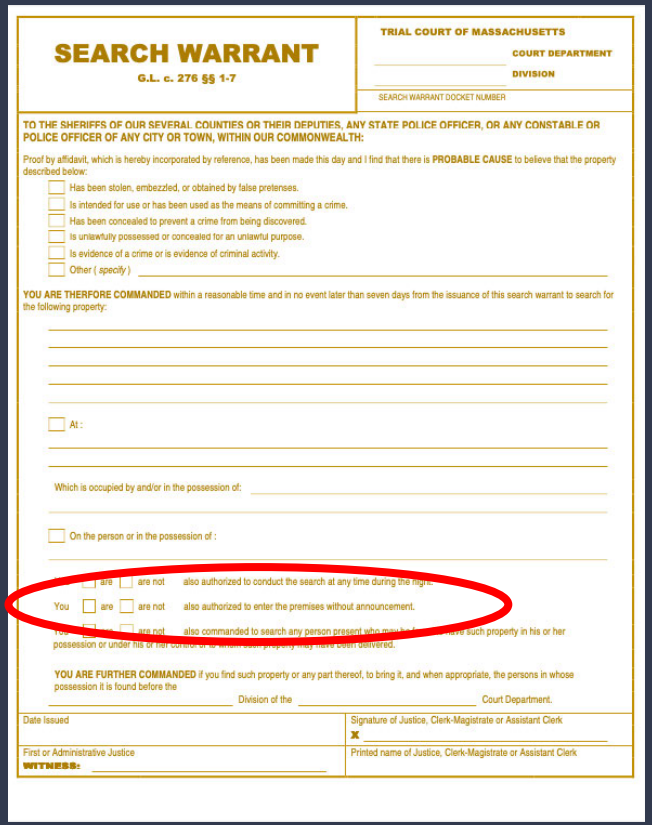
How Long to Wait After Knocking:

- ➔ Depends on circumstances. E.g., if you have knowledge of presence of weapons in small apartment, 5 seconds is sufficient

You May Use Forcible Entry ONLY IF:

- ➔ Occupant refuses to admit you;
- ➔ No response after waiting reasonable time;

Use of Ruse



- ➔ OK if used to decrease potential for violence

Detaining Occupants

- ➔ May detain during search but not while waiting for search warrant

1301

“No Knock” Entry

- ☐ Other (*specify*) _____

YOU ARE THERFORE COMMANDED within a reasonable time and in no event later than seven days from the issuance of this search warrant to search for the following property:

☐ At :

Which is occupied by and/or in the possession of: _____

☐ On the person or in the possession of :

You ☐ are ☐ are not also authorized to conduct the search at any time during the night.

You ☐ are ☐ are not also authorized to enter the premises without announcement.

You ☐ are ☐ are not also commanded to search any person present who may have such property in his or her possession or under his or her control or in which such property may have been delivered.

YOU ARE FURTHER COMMANDED if you find such property or any part thereof, to bring it, and when appropriate, the persons in whose possession it is found before the _____ Division of the _____ Court Department.

Date Issued	Signature of Justice, Clerk-Magistrate or Assistant Clerk X _____
First or Administrative Justice **WITNESS:** _____	Printed name of Justice, Clerk-Magistrate or Assistant Clerk

Permission for no knock MUST be requested on the Search warrant

- Mass. General Laws c.276 § 2D
  - Search Warrant affidavit must establish probable cause that if the law enforcement officer announces their presence their life or the lives of others will be endangered

AND

  - Include an attestation that the law enforcement officer filing the affidavit has no reason to believe that minor children or adults over the age of 65 are in the home, unless there is a credible risk of imminent harm to the minor or adult over the age of 65 in the home.

- Must conduct threshold reappraisal of probable cause at time of warrant execution.

1302

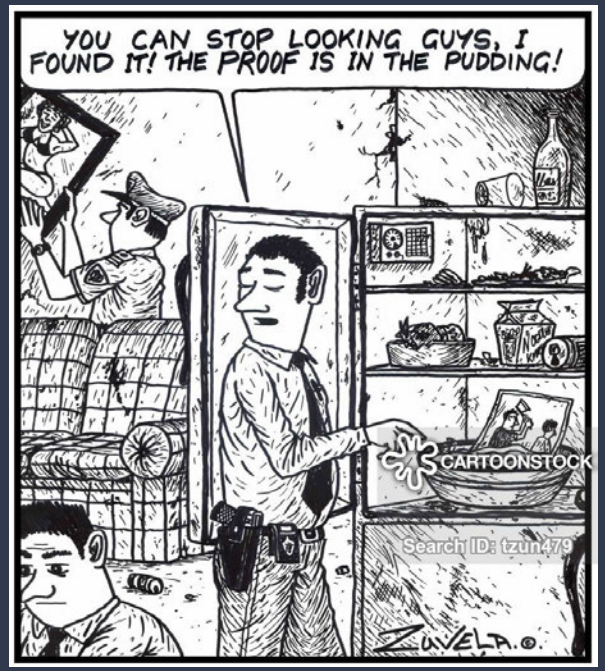
Documenting the Search

- Appoint one officer to be the “evidence officer” to:
    - take custody of evidence as it is found;
    - note type of evidence and location where found; and
    - photograph or facilitate photography of evidence before moving it from the place in which it was discovered.
- Video and Photography
    - Authority to videotape or photograph the search is limited to:
        - documenting evidence authorized to be seized by the warrant (or discovered in plain view) in order to preserve its condition and location and
        - Recording the condition of the search scene to protect police from allegations of damage.

Scope of the Search: Curtilage and Cars

An area is within the curtilage of a residence only when it is “so intimately tied to the home itself” that “an individual reasonably may expect that the area in question [will] be treated as the home itself.”

To assess whether an area is within the home’s curtilage, look at:



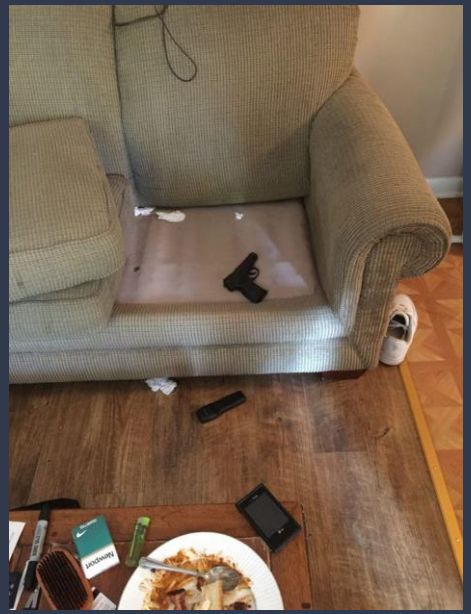
- ➔ The proximity of the area to the home;
- ➔ Whether the area is included within an enclosure surrounding the home;
- ➔ The use of the area; and
- ➔ Steps taken by resident to protect area from observations by passers-by

Automobiles: If an automobile is controlled by the owner of the residence and located within the curtilage, it may be searched.

TIP: When in doubt, include cars, outbuildings, and common areas to which the target has access in the warrant!

1304

Scope of the Search: Containers



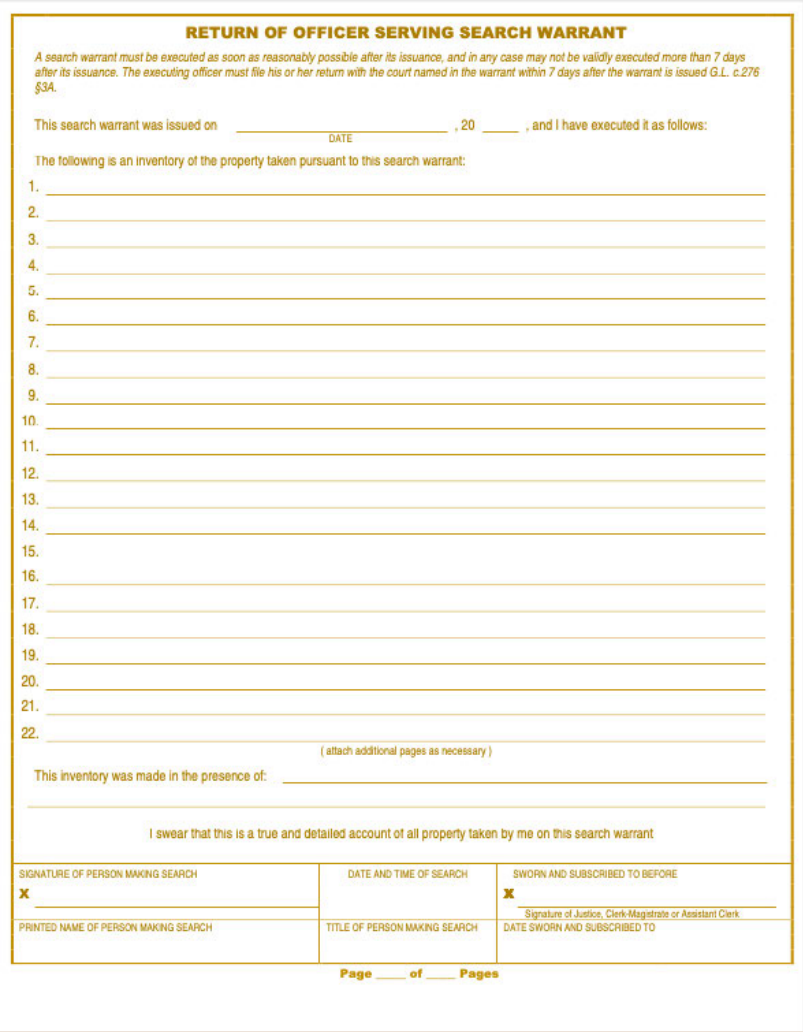
- ➔ Locked or unlocked containers on the premises that reasonably could contain or conceal an item described in the search warrant may be opened and searched.

- ➔ If necessary, police may damage or destroy property in order to execute a search warrant.

1305

Plain View Observations

In order to seize contraband NOT listed in the warrant:



- ➔ It must be readily apparent that the item is incriminating;
- ➔ The evidence must be observed from a location that police have a right to be; and
- ➔ The discovery of the item must be inadvertent.

TIP: If the contraband in plain view creates probable cause to believe there will be other related contraband in the area, **freeze the scene and apply for another warrant.**

Search Warrant Return

Return should be:

- Made to District Court with territorial jurisdiction over crime (required) and
- Made by officer present during execution of warrant (recommended).

RETURN OF OFFICER SERVING SEARCH WARRANT

A search warrant must be executed as soon as reasonably possible after its issuance, and in any case may not be validly executed more than 7 days after its issuance. The executing officer must file his or her return with the court named in the warrant within 7 days after the warrant is issued G.L. c.276 §3A.

This search warrant was issued on _____ (DATE), 20 ____, and I have executed it as follows:

Impoundment

Once the search warrant is returned, it becomes a public document unless we file a motion to impound!

- ➔ When is impoundment appropriate?
  - Preserving secrecy of ongoing investigation;
  - Protecting against potential dangers of pretrial publicity; and/or
  - Guarding privacy interests of victim or victim's family.

- ➔ How to impound the warrant:
  - Speak to the assigned ADA to determine if there are legal grounds to impound the warrant;
  - The ADA will draft a motion to impound to be presented to the judge either at the time of application or at the time of return.

TIP: When an affidavit seeks evidence in a sexual assault investigation, use the victim's name only ONCE and then refer to "victim" throughout the affidavit.

700 CMR 7.00: USE OF THE MASSACHUSETTS TURNPIKE AND THE METROPOLITAN HIGHWAY SYSTEM

Section

7.01: Scope and Effect
7.02: Definitions
7.03: Tolls
7.04: EZDriveMA Toll Collection
7.05: EZDriveMA Toll Enforcement
7.06: Limitations on Use of Ways
7.07: Special Limitations and Issuance of Special Permits
7.08: Limitations on Large Tandem Units
7.09: Traffic, Operation, and Safety
7.10: Motor Carrier Safety Act
7.11: Hazardous Materials
7.12: Repair or Removal of Vehicle
7.13: Penalties
7.14: Parking Violation Enforcement

7.01: Scope and Effect

(1) Scope. 700 CMR 7.00 regulates activity, and establishes procedures, requirements, and penalties, with respect to the use of ways under the jurisdiction of the Massachusetts Department of Transportation. A provision of 700 CMR 7.00 applies equally to each such way, whether or not the provision refers explicitly to a way, unless the provision states otherwise.

(2) Effect. The headings of 700 CMR 7.00 are provided for ease of reference only and should not be used to construe its provisions. A judicial determination that a provision of 700 CMR 7.00 is unenforceable does not affect another provision of 700 CMR 7.00 unless the provisions are integrally related and cannot be severed.

7.02: Definitions

The following terms and their grammatical counterparts are used in 700 CMR 7.00 as described in 700 CMR 7.02:

Abandoned Vehicle refers to a vehicle other than a disabled vehicle left on a way with neither the operator nor another responsible individual present.

Acceleration Lane refers to a special travel lane on a way that facilitates a change of speed by a vehicle entering a travel lane.

Account Holder is an E-ZPass MA or Pay By Plate customer who uses the EZDriveMA system in accordance with applicable rules, regulations and/or terms and conditions.

ALPR shall mean Automatic License Plate Recognition which are automated computer processes that identify a license plate number, state from which the license plate was issued, and/or license plate type using optical character recognition or similar software.

Apportioned Vehicle refers to a motor vehicle bearing a valid number plate with an "apportioned" designation issued by the Massachusetts Registrar of Motor Vehicles or an equivalent number plate.

Articulated Bus refers to the term "articulated bus" as defined in M.G.L. c. 90, § 1.

Auto Home refers to the term "auto home" as defined in M.G.L. c. 90, § 1.

Automobile Transporter refers to the term "automobile transporter" as defined in M.G.L. c. 90, § 1. A tractor-trailer or semi-trailer unit capable of transporting fully-assembled automobiles or other types of cargo within the enclosed trailer in a tractor-trailer unit or within the enclosed semi-trailer in a semi-trailer unit is not an "automobile transporter" for the purposes of 700 CMR 7.02.

7.02: continued

Axle refers to a supporting structure, upon which a pair or pairs of wheels revolve, that may be included between two parallel transverse vertical planes forty inches apart extending across the full width of the supported vehicle.

Balance Due the amount shown on invoices and/or other notices, which includes the amount due for tolls, fines, and other fees owed to MassDOT for use of the Massachusetts Turnpike, MHS, or MassDOT owned or MassDOT approved facilities.

Boat Transporter refers to the term "boat transporter" as defined in M.G.L. c. 90, § 1.

Boston Extension refers to the roadways and tunnels for vehicular traffic as defined in M.G.L. c. 6C, § 1.

Boston Extension Tunnel refers to the vehicular tunnel consisting of two roadways separated by a median under the air rights project between Dalton Street and Clarendon Street, including Interchange 22, in the city of Boston, and any additional area that the Department designates as such.

Breakdown Lane refers to a paved lane on a way to the right of the travel lanes and separated from them by a solid line.

Bridge Gross Weight Formula refers to the formula and definitions of terms set out in 700 CMR 7.07(3)(b).

Bus refers to a motor vehicle bearing a valid number plate with a "bus" designation issued by the Massachusetts Registrar of Motor Vehicles or an equivalent number plate.

Callahan Tunnel refers to the tunnel for vehicular traffic as described and defined in M.G.L. c. 6C, § 1.

Car Pool Vehicle refers to a private passenger motor vehicle, not for public hire, carrying three or more occupants, one of whom possesses a currently valid car pool identification card.

Chief Engineer refers to the Chief Engineer of the Department or an employee or employees of the Department designated by the Chief Engineer to carry out one or more of the responsibilities assigned to the Chief Engineer in accordance with 700 CMR 7.00.

Clerk shall mean MassDOT employees, hearing examiners, or persons employed by or under contract with MassDOT or its EZDriveMA system contractor, designated by MassDOT to review and to perform functions related to EZDriveMA such as processing transactions, invoicing, disputes, appeals and hearings, and to administer and/or enforce collections or other liabilities and tasks associated with the EZDriveMA system.

Commercial Vehicle shall mean any Motor Vehicle which is not a Private Passenger Motor Vehicle displaying a private passenger registration number plate issued by the Massachusetts Registrar of Motor Vehicles or other jurisdictions or an equivalent number plate and is not a Motorcycle displaying a Motorcycle registration number issued by the Massachusetts Registrar of Motor Vehicles or other jurisdictions or an equivalent number plate.

Creeper Lane refers to a special travel lane on a way provided for vehicles that cannot maintain the required rate of speed over travel lanes.

Cross-over refers to an area in a median used by a vehicle authorized in accordance with 700 CMR 7.09(10)(b) to cross a median.

Deceleration Lane refers to a special travel lane on a way that facilitates a change of speed by a vehicle leaving a travel lane.

Department or MassDOT refers to the Massachusetts Department of Transportation created by M.G.L. c. 6C.

7.02: continued

Department Vehicle refers to a vehicle owned by the Department and operated by one of its employees or a Massachusetts Troop E State Police officer.

Disabled Vehicle refers to a vehicle on a way that is incapable of movement under its own power or as to which movement is inadvisable because of a flat tire, mechanical breakdown, or other malfunction. A disabled vehicle is not an abandoned vehicle provided that it is not stopped on a way for a period of more than two hours and that the Massachusetts State Police have been notified that the vehicle is disabled.

Equivalent Number Plate refers to a type of number plate issued by the Registrar or department of motor vehicles or similar official or department of another jurisdiction in accordance with the law of that jurisdiction that is equivalent in function and designation to the specific type of number plate issued by the Massachusetts Registrar of Motor Vehicles that 700 CMR 7.00 requires a vehicle registered in Massachusetts to display.

EZDriveMA is the cashless, automated system installed on or operating with respect to the Massachusetts Turnpike, MHS, a way, or at other MassDOT owned or MassDOT approved facilities for the purpose of collecting tolls, fares, fees, fines or other transactions as determined by MassDOT. The EZDriveMA system consists of E-ZPass MA and Pay By Plate.

E-ZPass MA Equipped Motor Vehicle shall mean a motor vehicle properly equipped with and using a valid electronic device, such as a transponder, that MassDOT, or its E-ZDrive MA system contractor has issued or authorized for the purpose of transmitting information to the EZDriveMA system for collecting tolls, fares, fines, fees or other transactions electronically

E-ZPass MA shall mean the electronic toll collection system installed on or operating with respect to the Massachusetts Turnpike, a way, or at other MassDOT owned or MassDOT approved facilities for the purpose of collecting tolls, fares, fines, fees or other transactions through an electronic device, such as a transponder, as determined by MassDOT.

Explosive refers to any chemical compound, mixture, or device, the primary or common purpose of which is to function by explosion, *i.e.*, with substantially instantaneous release of gas and heat.

Fullmount refers to a smaller vehicle mounted completely on the frame of either the first or last vehicle in a saddlemount combination.

Gross Vehicle Weight Rating refers to the term "gross vehicle weight rating" as defined in M.G.L. c. 90, § 1.

Hazardous Material refers to the term "hazardous material" as defined in 49 CFR Parts 171 through 173 and 177.

Hearse refers to a motor vehicle bearing a valid number plate with a "hearse" designation issued by the Massachusetts Registrar of Motor Vehicles or an equivalent number plate.

Heavy Commercial Vehicle refers to a vehicle in excess of 2.5 tons that is used for the transportation of goods, wares, or merchandise.

High Occupancy Vehicle refers to a bus, a car pool vehicle, a pupil vehicle, a school bus, or a vanpool vehicle.

Hot List - a list of specific license plates and/or transponder numbers provided or identified by law enforcement to MassDOT pursuant to the standards and procedures in 700 CMR 7.05(8).

House Trailer refers to the term "house trailer" as defined in M.G.L. c. 90, § 1.

Interchange refers to a location that provides entry to and/or exit from a way.

7.02: continued

Irreducible Load or Vehicle refers to a load or vehicle exceeding applicable weight or length limitations under 700 CMR 7.07 that, if separated into smaller loads or vehicles, would compromise the intended use of the vehicle, *i.e.*, make it unable to perform the function for which it was intended; destroy the value of the load or vehicle, *i.e.*, make it unusable for its intended purpose; or require more than eight work hours to dismantle using appropriate equipment.

Irreducible Load Permit refers to a permit that the Department issues for use of a way in accordance with 700 CMR 7.07(3)(c)1. or (4)(c)1.

Lane refers to a longitudinal strip of roadway of sufficient width to accommodate the passage of a single line of vehicles, whether or not the bounds of the lane are indicated by pavement markings or longitudinal construction joints.

Large Tandem Unit refers to a tandem unit in which either the semi-trailer or trailer exceeds 28 feet in length.

Large Tandem Unit Permit refers to a permit that the Department issues in accordance with 700 CMR 7.08.

Late Fee is assessed by MassDOT on unpaid tolls and/or other transactions that have not been paid in full by the Payment Due Date shown on an invoice or notice.

Livery Vehicle refers to a motor vehicle bearing a valid number plate with a "livery" designation issued by the Massachusetts Registrar of Motor Vehicles or an equivalent number plate.

Marking refers to a line, legend, or other medium or device that is painted or placed by or at the direction of the Department on the surface of a way.

Massachusetts State Police Officer refers to a state police officer assigned to the Department under the provisions of M.G.L. c. 22C, § 29.

MassDOT or Department refers to the Massachusetts Department of Transportation created by M.G.L. c. 6C.

Median refers to the area separating traffic moving in opposite directions on a way.

Metropolitan Highway System (MHS) refers to the highway system that consists of the Boston Extension, the Callahan Tunnel, the Central Artery, the Central Artery North Area, the Sumner Tunnel, and the Ted Williams Tunnel, as defined in M.G.L. c. 6C, § 1.

Motorcycle refers to the term "motorcycle" as defined in M.G.L. c. 90, § 1.

Motor Vehicle refers to the singular of the term "motor vehicle" as defined in M.G.L. c. 90, § 1.

Non-revenue Vehicle refers to an official vehicle of the Department and any other vehicle that the Department designates as such.

Official Emergency Vehicle refers to an official police, fire, or health services vehicle of Massachusetts or any of its municipalities, political subdivisions, or instrumentalities.

Official Vehicle of the Department refers to a motor vehicle of a member, officer, or employee of the Department or of a person engaged in the performance of duties in connection with the operation of a way.

On The Go (OTG) is a prepaid toll payment option through use of a transponder or other electronic device issued by MassDOT or its EZDriveMA contractor, for use with the EZDriveMA system, and said device has not been registered with MassDOT or other agency or entity that has toll collection reciprocity with MassDOT.

7.02: continued

Operator refers to an individual who operates a motor vehicle.

Over-size Vehicle refers to a vehicle or vehicle combination that exceeds the maximum size designated for a vehicle or vehicle combination of its type as specified in 700 CMR 7.07(4)(a).

Over-weight Vehicle refers to a vehicle that exceeds the maximum weight designated for a vehicle of its type as specified in 700 CMR 7.07(3) and/or 7.08(4).

Parked Vehicle refers to a vehicle that is stopped or standing, whether occupied or not, except that a vehicle is not a parked vehicle if it has stopped temporarily because its movement is obstructed, the operator is following the direction of a Massachusetts State Police officer or a sign, or because it is a disabled vehicle.

Parking refers to the stopping or standing of a parked vehicle.

Pay By Plate (PBP) refers to the EZDriveMA payment option where photographic or video images of vehicles and license plates are used to either post toll transactions to a Registered Pay By Plate account or for obtaining the name and address of the registered owner of the vehicle from the Registry of Motor Vehicles/Department of Motor Vehicles (RMV/DMV) or other means, for purposes of collecting tolls, fees, fines, and other debts owed.

Pay By Plate Invoice refers to an itemized statement issued to a vehicle's registered owner of record or responsible party, where applicable, which provides a summary of toll usage, tolls due, balance, late and other fees, fines, penalties, and other amounts due associated with toll or other transactions, as well as payments made, and/or credits.

Pay By Plate Notice of Non-payment (NONP) is a statement issued to a vehicle's registered owner of record, or other responsible party, where applicable, when any portion of the Balance Due from the Pay By Plate Past Due Invoice is outstanding after the Pay By Plate Past Due Invoice Payment Due Date. The NONP may include any previous Balance Due and any current tolls, fees, fines, penalties and other amounts due, as well as payments made, credits, and/or other transactions.

Pay By Plate Notice of Liability (NOL) is a statement issued to a vehicle's registered owner of record when any portion of the Balance Due from the NONP is outstanding after the NONP Payment Due Date. The NOL may include any previous Balance Due and any current tolls, fees, fines and penalties, as well as payments made credits, and/or other transactions. The NOL demands immediate payment of NOL Balance Due.

Pay By Plate Past Due Invoice refers to a statement issued to a vehicle's registered owner or other responsible party, where applicable, when any portion of the Balance Due from the Pay By Plate Invoice is outstanding after the Pay By Plate Invoice Payment Due Date. Pay By Plate Past Due Invoice may include any previous Balance Due and any current tolls, fees, fines, penalties, and other amounts due, as well as payments made, credits, and/or other transactions.

Pay By Plate Registered Account refers to a payment option whereby a vehicle and its corresponding license plate is provided by the customer to be listed on an account for collecting tolls, fees, fines or other transactions as determined by MassDOT.

Payment Due Date is the date on which a payment must be received by MassDOT in accordance with an E-ZPass MA or Pay By Plate invoice or notice issued by MassDOT in order to avoid additional fees, fines, and/or penalties.

Person refers to an individual, firm, co-partnership, association, corporation, or other legal entity.

Private Passenger Motor Vehicle refers to the term "private passenger motor vehicle" as defined by the Registrar of Motor Vehicles in 540 CMR 2.05: *Vehicle Registration Requirements.*

Pupil Vehicle refers to a motor vehicle bearing a valid number plate with a "pupil" designation issued by the Massachusetts Registrar of Motor Vehicles or an equivalent number plate.

7.02: continued

Qualified Towing Contractor refers to a qualified emergency road-service provider having a service contract with the Department in accordance with 700 CMR 7.12(2)(c)3.

Recreational Vehicle refers to a private passenger motor vehicle that provides living accommodations for persons or an apportionable vehicle designed or converted and used exclusively for personal pleasure or travel by an individual or the individual's family.

Reducible Load refers to any load or object including the vehicle whose gross weight or dimensions can be practically reduced to a lesser gross weight or dimension as determined by the Chief Engineer.

Reducible Load Permit refers to a permit that the Department issues to an owner or lessee of a vehicle for which the chief engineer has issued a valid reducible load permit in accordance with 700 CMR 7.07(3)(c)3.

Registered Owner refers to a person registered by the Massachusetts Registrar of Motor Vehicles in accordance with M.G.L. c. 90, § 2, at the time of a violation of 700 CMR 7.03, 7.04, or 7.12 as the owner of the vehicle involved in the violation or who is so registered by the Registrar or department of motor vehicles or similar official or department of another jurisdiction in accordance with the law of that jurisdiction.

Roadway refers to that portion of a way consisting of travel lanes, including acceleration lanes and deceleration lanes, creeper lanes, and ramps or approaches to toll plazas.

Saddlemount Combination refers to a combination of vehicles in which a truck or tractor tows one or more trucks or tractors, each connected by a saddle to the frame or fifth wheel of the vehicle in front of it. The saddle is a mechanism that connects the front axle of the towed vehicle to the frame or fifth wheel of the vehicle in front of the towed vehicle and functions as a fifth wheel kingpin connection. When two vehicles are towed in this manner, the combination is called a double saddlemount combination, and, when three vehicles are towed in this manner, the combination is called a triple saddlemount combination.

School Bus refers to a motor vehicle bearing a valid number plate with a "school bus" designation issued by the Massachusetts Registrar of Motor Vehicles or an equivalent number.

Semi-trailer refers to the term "semi-trailer" as defined in M.G.L. c. 90, § 1. Semi-trailer unit refers to the term "semi-trailer unit" as defined in M.G.L. c. 90, § 1.

Service or Rest Area refers to an area that the Department designates along a way for the purpose of providing travelers on the way rest or refreshment or to provide services for vehicles using the way.

Shoulder refers to that part of the paved surface of a way lying outside solid traffic lines.

Sign refers to a sign, lights, signal, barrier, marker, marking, cone, barrel, or similar device or indicator, whether the means of display or indication is mechanical, electrical, acoustical, or another means, that the Department deploys or causes to be deployed for the purpose of regulating traffic, parking, or other activity on a way.

Small Tandem Unit refers to a tandem unit in which either the semi-trailer or trailer does not exceed 28 feet in length.

Small Tandem Unit Permit refers to a permit that the Department issues in accordance with 700 CMR 7.07(3)(c)(4).

Special Fuel refers to a liquefied petroleum gas, including propane, butane, LP Gas or LPG, a liquefied natural gas or LNG, and a compressed natural gas or CNG.

7.02: continued

Special Fuel Transportation Permit refers to a permit that the Department issues allowing a vehicle transporting a special fuel to travel on certain portions of a way in accordance with 700 CMR 7.07(6).

Special Permit refers to an irreducible load permit, a large tandem unit permit, a small tandem unit permit, a reducible load permit, a special permit for explosives, or a special fuel transportation permit.

Special Permit for Explosives refers to a permit that the Department issues allowing a vehicle transporting explosives to travel on certain portions of a way in accordance with 700 CMR 7.07(5).

Special Vehicle refers to a vehicle that is not otherwise a commercial vehicle or high-occupancy vehicle and that the Department designates as authorized to use the Tunnels in furtherance of a purpose or need consistent with the public welfare or necessity and with the safe and efficient use of the Tunnels.

Sumner Tunnel refers to the tunnel for vehicular traffic as defined in M.G.L. c. 6C, § 1.

Tandem Axles refers to two or more consecutive axles whose centers can be included between parallel transverse vertical planes spaced not less than 40 and not more than 96 inches apart, extending across the full width of the vehicle.

Tandem Unit refers to the term "tandem unit" as defined in M.G.L. c. 90, § 1.

Taxi refers to a motor vehicle bearing a valid number plate with a "taxi" designation issued by the Massachusetts Registrar of Motor Vehicles or an equivalent number plate.

Ted Williams Tunnel refers to the system of roadways, bridges, viaducts and tunnels for vehicular traffic as defined in M.G.L. c. 6C, § 1.

Toll shall mean the amount assessed by MassDOT for passage over the Massachusetts Turnpike and MHS.

Tractor refers to the non-cargo carrying power unit that operates in combination with a semi-trailer or trailer, except that the power unit of a semi-trailer unit engaged in the transportation of automobiles is also a tractor notwithstanding its use to carry motor vehicles.

Traffic refers to vehicles, either singly or together, using any portion of a way for the purpose of travel.

Traffic Control Signal refers to a device using colored lights whereby traffic may alternately be directed to slow down and proceed with caution, to stop, or to proceed.

Trailer refers to the term "trailer" as defined in M.G.L. c. 90, § 1.

Transponder refers to an electronic device used for the collection of tolls, fines, or other fees as determined by MassDOT.

Travel Lane refers to a lane used by traffic for ordinary travel.

Truck refers to a motor vehicle designed to carry goods.

Tunnels refers to all Tunnels owned and operated by the Department, Metropolitan Highway System Tunnels, including but not limited to the Callahan, Sumner, Ted Williams, Boston Extension as defined in M.G.L. c. 6C, § 1, including the roadway referred to as the Prudential Tunnel, I-90, I-93, and the Central Artery North Area (CANA) Tunnels, individually or collectively, including their access and egress ramps, each of which is a way.

7.02: continued

Turnpike refers to the term "turnpike" as defined in M.G.L. c. 6C, § 1.

U-turn refers to the backing or turning of a vehicle whereby its direction is reversed.

Vanpool Vehicle refers to a motor vehicle bearing a valid number plate with a "vanpool" designation issued by the Massachusetts Registrar of Motor Vehicles or an equivalent number plate.

Vehicle refers to a device in, upon, or by which individuals or property are or can be transported upon a way.

Vehicle Combination refers to any attached combination of a motor vehicle and vehicle or vehicles.

Vehicle Height refers to the height of a vehicle, including its load.

Vehicle Length refers to the length of a vehicle or vehicle combination, including its load and load-holding devices, but exclusive of safety and energy-conservation devices such as refrigeration units and air compressors, heating units, wind deflectors, flexible fender extensions, mud flaps and splash and spray suppressant devices, or other device that the Department determines is necessary for safe and efficient operation, provided that any such device is mounted, and extends beyond the nominally allowed length, in a manner and to the extent that the Department determines, and provided further that the device is not designed or used to carry cargo.

Vehicle Weight refers to the gross weight of a vehicle, including its load.

Vehicle Width refers to the width of a vehicle, including its load, but exclusive of load-induced tire bulge, rear view mirrors, turn signal lamps, hand holds for cab entry or egress, mud flaps and splash and spray suppressant devices, or other device that the Department determines is necessary for the safe and efficient operation of the vehicle, provided that any such device is mounted, and extends beyond the nominally allowed width, in such manner and to such extent as the Department determines, and provided further that in no event may such a device extend more than three inches beyond the maximum vehicle width on each side.

Way is defined as the Turnpike, the Metropolitan Highway System, tunnels, a service or rest area, that is located on property owned or controlled and under the jurisdiction of the Department, and includes the areas appurtenant to said way that are necessary for the operation, construction and maintenance of the way.

7.03: Tolls

(1) Vehicle Classification. The Department applies the vehicle classification schedules specified in 700 CMR 7.03(1): *Table 1*, to determine tolls for the use of a way for which the Department collects a toll. (*See* Note 1).

TABLE 1

Class	Type of Vehicle
2	Private Passenger 2 Axles
2	Resident Program Commuter ** 2 Axles
2	Commercial - 2 Axle
3	Any 3 Axle Vehicle
4	Any 4 Axle Vehicle
5	Any 5 Axle Vehicle

7.03: continued

Class	Type of Vehicle
6	Any 6 Axle Vehicle
7	Any 7 Axle Vehicle
8	Any 8 Axle Vehicle
9	Any 9 Axle Vehicle
10	Any 10 Axle Vehicle
11	Any 11 Axle Vehicle
12	Any 12 Axle Vehicle
13	Any 13 Axle Vehicle
14	Any 14 Axle Vehicle
15	Any 15 Axle Vehicle

* Motor Vehicle Description determined by type of registration (Massachusetts vehicles) or by image and/or type of vehicle (non Massachusetts vehicles).

Note 1. Toll Rates may vary for vehicles qualifying for specific toll rate Programs established by the Department.

(2) Payment of Toll. Each Operator shall pay the toll as established by MassDOT. MassDOT may obtain an image of the vehicle and/or vehicle license plate for purposes of assessing a toll, invoicing, assessing fees, fines, and/or penalties; evaluating transaction disputes and appeals; and toll collection and violation enforcement.

(3) Evasion of Toll. No person may commit, or attempt to commit, any act with the intent to evade the payment of a toll or to defraud the Department with respect to the payment of a toll. Refusal to pay a toll are both considered to be acts done with intent to evade the payment of a toll.

(4) Special Permit Fees. The operator of a motor vehicle requiring a special permit for use of a way shall pay the fee that the Department determines in accordance with the provisions of the permit and of 700 CMR 7.07.

(5) Car Pool Program. Only authorized E-ZPass MA equipped vehicles will be eligible for the car pool program. Qualifying individuals who choose to participate in the car pool program shall adhere to the E-ZPass MA terms and conditions and regulations governing the use of the EZDriveMA system and the car pool program. To be eligible for the car pool program, qualifying individuals shall renew on an annual basis. Qualifying individuals must submit on an annual basis a valid Massachusetts Registry of Motor Vehicles registration and/or lease agreement, and a valid driver's license. Failure to renew by the applicable expiration date will result in the loss of the car pool program discount. While not in the program, the subject individual shall be responsible for the full toll rate and the full, non discounted toll rate.

(6) Vehicle Classification. Each motor vehicle displaying a private passenger registration number plate or a motorcycle displaying a motorcycle registration number plate shall pay the toll established by MassDOT for a Private Passenger Motor Vehicle, provided such vehicles are listed on a Private Passenger Account. Each motor vehicle which does not display a private passenger registration number plate or a motorcycle registration number plate, or any private passenger registration or motorcycle that is listed on a Commercial Account shall pay the toll established by MassDOT for a Commercial Motor Vehicle. Toll rates may vary depending upon the method in which the toll was assessed.

7.03: continued

(7) Resident Discount Program. Only authorized E-ZPass MA equipped vehicles will be eligible for the resident discount program. Residents who qualify and choose to participate in the resident discount program shall adhere to the E-ZPass MA terms and conditions and regulations governing the use of the EZDriveMA system. To be eligible for the resident discount program, qualifying Boston residents shall renew on an annual basis. Eligible residents must submit on an annual basis a valid Massachusetts Registry of Motor Vehicles registration and/or lease agreement, a valid Massachusetts driver's license, and current proof of residency as determined by the Department. Failure to re-qualify by the applicable expiration date will result in the loss of the resident toll rate. While not in the program, the subject resident shall be responsible for the full toll rate and the full, non discounted toll rate will be posted to the subject E-ZPass MA account or invoiced as a Pay By Plate toll transaction.

St. 1995, c. 102, § 14 was enacted as a mitigation measure resulting from construction activities of the Central Artery/Tunnel Project and the increased amount of traffic passing through the affected communities of East Boston, the North End of Boston, and South Boston. In order to mitigate the impacts of construction and traffic on certain sections of the city of Boston most directly affected, St. 1995, c. 102, § 14 was enacted which states in pertinent part that the Department may not charge and collect tolls for transit through the Callahan tunnel, the Sumner tunnel or the Third Harbor tunnel by private passenger vehicles registered in the East Boston or South Boston sections of the city of Boston, that are greater than the tolls in effect for such vehicles at existing tunnel toll facilities on August 10, 1995; and further, that the Department may not charge and collect tolls for transit through the Callahan or Sumner tunnels to private passenger vehicles registered in the North End section of the city of Boston, that are greater than the tolls in effect for such transit through either the Sumner tunnel or Callahan tunnel for such vehicles on August 10, 1995.

(8) E-ZPass MA Requirement Two Axle Commercial Vehicles and Common Carriers.

(a) Two Axle Commercial Vehicles. All two axle Commercial Vehicles, as defined in 700 CMR 7.02, operating through the Sumner Tunnel, Callahan Tunnel, and/or the Ted Williams Tunnel in Boston, Massachusetts, shall be equipped with an E-ZPass MA device, as described within the provisions of 700 CMR 7.04, for the payment of the required toll in accordance with the appropriate vehicle classification contained in 700 CMR 7.03(9)(a).

(b) Common Carriers. All Common Carriers, as defined in M.G.L. c. 159A, operating on any way under the jurisdiction of the Department for which operation said Common Carrier must obtain a Common Carrier License from the Department in accordance with M.G.L. c. 159A, shall be equipped with an E-ZPass MA device, as described within the provisions of 700 CMR 7.04, for the payment of the required toll in accordance with the appropriate vehicle classification contained in 700 CMR 7.03(9)(b).

7.04: EZDriveMA Toll Collection

(1) EZDriveMA System. The Department from time to time establishes the terms and conditions governing the use of the E-ZDrive MA system and requires that all users of the EZDriveMA System accept these terms and conditions. The EZDriveMA system is comprised of E-ZPass MA and Pay By Plate.

(2) Use of the EZDriveMA System. No person may use or attempt to use the Department's EZDriveMA system unless:

(a) the vehicle driven is properly registered with the appropriate RMV/DMV;

(b) the vehicle license plate number, jurisdiction, and other identifying characters on the license plate are all clearly visible at all times and the license plate(s) is/are unobstructed and mounted in compliance with M.G.L. c. 90, § 6; and

(c) the person agrees to adhere to all laws, regulations and terms and conditions governing the use of the Massachusetts Turnpike, MHS and the EZDriveMA system.

(3) E-ZPass MA Account and Use of On the Go Device. No person may possess an electronic device for use with the EZDriveMA system unless:

(a) the person is duly registered with the Department or its designated EZDriveMA contractor as an Account Holder; or

7.04: continued

(b) the person is operating an authorized E-ZPass MA equipped Motor Vehicle with the permission of the Account Holder of the E-ZPass MA equipped Motor Vehicle; and
(c) the person has a valid OTG device and is using MassDOT facilities in accordance with applicable regulations and terms and conditions; or
(d) the person is using a valid electronic device of an electronic toll collection system of another jurisdiction that maintains reciprocity with the Department; and
(e) the person is operating a valid E-ZPass MA-equipped Motor Vehicle and that device is properly programmed to assess the appropriate toll charge as determined by the Department from time to time, for the classification of the vehicle that is using the E-ZPass MA System in accordance with the classification of that vehicle enumerated in 700 CMR 7.03;
(f) the vehicle is properly registered with the appropriate RMV/DMV; and
(g) the electronic device is properly mounted and operable and the associated account is in good standing.

(4) Pay By Plate Program. Driving on a MassDOT toll roadway without an E-ZPass MA account, Pay By Plate Registered account, or a toll account of another agency that has toll reciprocity with MassDOT, will result in an invoice issued to the registered owner or responsible party, where applicable, based on an image taken of the vehicle license plate or other identifying information. Pay By Plate invoices and notices will be issued according to the following processes:

(a) Pay By Plate Invoice is an itemized statement issued to the vehicle's registered owner of record, or other responsible party, where applicable, in accordance with 700 CMR 7.02. The Registered Owner or responsible party must pay the Balance Due by the Payment Due Date on the Pay By Plate Invoice.
(b) Pay By Plate Past Due Invoice is an itemized statement issued to the vehicle's registered owner of record, or other responsible party, in accordance with 700 CMR 7.02 The Balance Due must be received by MassDOT by the Payment Due Date on the Pay By Plate Past Due Invoice. Late fees, fines, or other penalties may be assessed when any portion of the Balance Due from the Pay By Plate Invoice is outstanding after the Pay By Plate Invoice Payment Due Date.
(c) Pay By Plate Notice of Non Payment (NONP) is an itemized statement issued to the vehicle's registered owner of record, or other responsible party, where applicable, in accordance with 700 CMR 7.02 The Balance Due must be received by MassDOT by the Payment Due Date on the Pay By Plate NONP. Late fees, fines, or other penalties may be assessed when any portion of the Balance Due from the Pay By Plate Past Due Invoice is outstanding after the Pay By Plate Past Due Invoice Payment Due Date.
(d) Pay By Plate Notice of Liability (NOL) is an itemized statement issued to the vehicle's registered owner of record, or other responsible party, where applicable, in accordance with 700 CMR 7.02. Late fees, fines, or other penalties may be assessed when any portion of the Balance Due from the Pay By Plate NONP is outstanding after the Pay By Plate NONP Payment Due Date. The Registered Owner must pay the NOL Balance Due immediately. The issuance of an NOL constitutes notification that enforcement action with the RMV/DMV has been taken in accordance with 700 CMR 7.05(4).
(e) MassDOT may assess a higher toll rate or other fee to a Pay By Plate customer, for the costs associated with administering the Pay By Plate program.

(5) Unauthorized Use. Only customers in good standing who comply with applicable terms and conditions and rules and regulations are authorized to use the EZDriveMA system. A person who operates a motor vehicle which is not an authorized E-ZPass MA equipped Motor Vehicle, listed on a Pay By Plate Registered account, or using an electronic toll collection device of another agency or entity that has toll collection reciprocity with MassDOT, shall be considered a Pay By Plate customer and shall be subject to the provisions of 700 CMR 7.04. A person who has been issued a Notice of Liability for failure to pay one or more Pay By Plate invoices, and said invoices remain unpaid, shall not be authorized to use the EZDriveMA system.

(6) Assessment of Toll. A motor vehicle that travels on the tolled portions of the Massachusetts Turnpike and/or the MHS will incur a toll. The Department assesses the appropriate toll charge against the corresponding E-ZPass MA Account Holder or for Pay By Plate account to the Registered Owner of record of the vehicle or responsible party, where applicable.

7.04: continued

(7) Evasion of Toll by Device or Method. No person may use or attempt to use any device or method, the intended result of which is the inability of the EZDriveMA system to assess or collect the toll due under 700 CMR 7.03 or the non payment of the toll. Failure to comply with 700 CMR 7.04(7) shall be considered toll evasion and/or unauthorized use of the EZDriveMA system.

(8) *Prima Facie* Responsibility. The registered owner of record of the motor vehicle is *prima facie* responsible for the payment of the tolls, fees, fines and/or penalties that the Department assesses with respect to the nonpayment of the toll unless:

(a) Stolen Vehicle. The registered owner of record has reported in a timely manner to a police agency that the subject vehicle has been stolen, and the subject vehicle remained stolen at the time of the toll transaction; or

(b) Leased or Rented Vehicle. The registered owner of record is in the business of leasing or renting motor vehicles and provides to MassDOT by the Payment Due Date on the Pay By Plate invoice, a copy of a lease, rental or similar contract document indicating that the vehicle was leased or rented at the time of the toll transaction and the identity, address and driver's license information of the person entitled to possession is discernible from the document, in which case that person is *prima facie* responsible for the payment of the fines or penalties that the Department assesses in accordance with 700 CMR 7.00.

(9) Toll Rate Discount. Pay By Plate customers and non-EZDriveMA customers shall not be eligible for the toll discount program provided for in M.G.L. c. 6C, § 13(b), Toll rate discounts shall only be available to two-axle passenger vehicles listed on passenger E-ZPass MA accounts.

7.05: EZDriveMA Toll Enforcement

(1) Enforcement. Operators who use the EZDriveMA system acknowledge and authorize MassDOT or its contractor to acquire the name and address of the Registered Owner of record of the vehicle for purposes of EZDriveMA toll collection and enforcement. A Clerk may enforce the provisions of 700 CMR 7.05.

(2) Designation of Clerks. MassDOT may designate one or more Clerks to perform the functions specified in 700 CMR 7.05(3) for MassDOT and for such finite or indefinite period as MassDOT deems desirable.

(3) Functions of the Clerks. The Clerks coordinate and administer the processing of EZDriveMA statements, invoices and notices, and any and all other duties and tasks associated with toll collection, toll enforcement, and the EZDriveMA system. MassDOT may hire or designate such personnel and organize such divisions as MassDOT may deem necessary, or contract for such services, in order to carry out the provisions of 700 CMR 7.05(3).

(4) Issuance and Content of Pay By Plate Invoices and Notices.

(a) Information Regarding the Balance Due. A Pay By Plate Invoice and notice include, but is not limited to, the following information: the registration number and state of issuance of the registration number of the vehicle involved; the name of the registered owner of the vehicle, or other responsible party where applicable; the lessee or renter as identified by 700 CMR 7.04(8)(b); the date, time and place of the transaction; the total amount owed; the applicable fines or penalties incurred that MassDOT has assessed; and such other information as MassDOT may deem appropriate.

(b) Notice of Requirement to Respond. A Pay By Plate invoice and notice states that the Registered Owner of record or responsible party where applicable, must pay the Balance Due by the Payment Due Date, appeal, or request a hearing for these items. The invoice and notice describes the means and content of the response for payment or appeal.

7.05: continued

(c) Delivery of Invoice and Notice. A Clerk issues and may certify invoices and notices as soon as practicable by mail to the Registered Owner of the vehicle or responsible party, where applicable at the address of the registrant on record with the Massachusetts Registry of Motor Vehicles, or, in the case of a motor vehicle registered under the laws of another state or jurisdiction, at the address of the registrant on record with the official in the state or other jurisdiction having charge of the registration of the vehicle, or as supplied by a third party provider under contract with the Department, or to the name and address of the lessee or renter in accordance with 700 CMR 7.04(8)(b). Notices of Liability shall be sent to the Registered Owner of the vehicle.

(d) *Prima Facie* Evidence of Notice. Delivery by mail of a copy of an Invoice or Notice is sufficient notice of the failure to pay the required toll and/or Balance Due. Certification of the invoice or notice by a Clerk is *prima facie* evidence of the facts contained therein and is admissible in any administrative or judicial proceeding to adjudicate the liability for the unpaid toll transactions, and related fees, fines and penalties. The Clerk shall maintain a docket of all copies of notices.

(5) Payment of Balance Due or Appeal. The Registered Owner of record or responsible party, where applicable, shall pay all tolls, fines, fees, and penalties that may be assessed by MassDOT by the Payment Due Date on the invoice or notice, or appeal in accordance with the procedures in 700 CMR 7.05.

(a) Payment. The registered owner or responsible party, where applicable, shall pay the tolls, fines, fees and penalties that may be assessed by MassDOT by the Payment Due Date as specified in the invoice and notice. Failure to do so may result in additional fees, fines and penalties.

(b) Appeal by Mail. The registered owner or responsible party, where applicable, may, without waiving the right to a hearing before a Clerk as provided by 700 CMR 7.05(5)(c), and also without waiving judicial review as provided by M.G.L. c. 30A, § 14, appeal the assessment of a toll, fine, fee or other penalty and receive a review and disposition from a Clerk by mail. The appeal by mail must contain a signed statement from the registered owner or responsible party, where applicable, explaining the basis for the appeal. The signed statement may be accompanied by signed statements from witnesses, police officers, government officials, or other relevant parties or photographs, diagrams, maps or other relevant documents that the registered owner determines to submit. Statements or materials sent to a Clerk for review must have attached to them the name and address of the registered owner as well as the invoice number of the notice and the date of the invoice. All information submitted by the registered owner becomes part of the record. Written appeals submitted by mail must be received by MassDOT within 120 days of the date the charge first appears on the invoice or notice., The Clerk or other MassDOT designee shall, within 60 days of receipt of such material, review the material and dismiss or uphold the issuance of the notice and notify the registered owner or appellant of the disposition of the appeal in writing. If the appeal by mail is denied, the Clerk shall explain the reasons for the determination. The review and disposition handled by mail is informal, the rules of evidence do not apply, and the decision of the Clerk is final subject to the hearing provisions provided by 700 CMR 7.05(5)(c) and to judicial review as provided by M.G.L. c. 30A, § 14.

(c) Request for Hearing. Consistent with the provisions of M.G.L. c. 30A, a person issued a notice regarding the assessment of a toll, fine, fee or other penalty may make a written request for an appeal hearing before a Clerk designated by MassDOT. Requests for a hearing must be received by MassDOT within 30 days of the issuance of the decision of the appeal by mail pursuant to 700 CMR 7.05(5)(b), in order to be entitled to a hearing. The Clerk then notifies the Registered Owner or appellant in writing by mail of the date, time, and place of the hearing. The hearing is informal, the rules of evidence do not apply, and the decision of the Clerk is final, subject to judicial review as provided by M.G.L. c. 30A, § 14. Parties are notified in person or by mail of the decision following the hearing. Each written appeal decision contains a statement of reasons for the decision including a determination of each issue of fact necessary to the decision. Failure to appear at the date, time, and place specified on the hearing notice automatically results in the denial of the appeal.

7.05: continued

(d) The provisions of 700 CMR 7.05 do not apply to Uniform Traffic Citations issued by Massachusetts State Police officers pursuant to M.G.L. c. 90C. A violation of MassDOT's regulations that results in the issuance of a Uniform Traffic Citation by a Massachusetts State Police officer under M.G.L. c. 90C, is subject to the procedures that M.G.L. c. 90C provides.

(6) Failure to Comply. Failure to comply with the requirements of 700 CMR 7.05(5) shall result in the following sanctions against the registered owner.

(a) Additional Fines or Penalties. MassDOT assesses the following additional fines, fees or penalties for late payment, failure to pay, or for otherwise failing to respond to a notice as provided by 700 CMR 7.05(5), in accordance 700 CMR 7.05(6): *Table 2*. Fines, fees and penalties for unpaid tolls associated with use of EZDriveMA system shall not exceed $500.00 per year, per registered vehicle.

(b) Pay By Plate Past Due Invoice Late Fees. Failure to pay the Balance Due on the Pay By Plate Invoice may result in the issuance of a Pay By Plate Past Due Invoice. Each toll trip included on the Pay By Plate Past Due Invoice may be charged a late fee in accordance with 700 CMR 7.05(6): *Table 2*.

(c) Pay By Plate Notice of Non Payment (NONP) Late Fees. Failure to pay the Balance Due on the Pay By Plate Past Due Invoice may result in the issuance of a NONP. Each toll trip included on the NONP may be charged a late fee in accordance with 700 CMR 7.05(6): *Table 2*.

(d) Failure to Respond after Issuance of a Notice of Non Payment. A registered owner or other responsible party, where applicable, who fails to pay the tolls, fines, fees or other penalties as specified in the NONP, shall be assessed an RMV/DMV fee of $20.00 and the registered owner shall be issued a Notice of Liability. The Clerk notifies the registered owner by mail of this Notice of Liability and, in addition, notifies the Registrar of Motor Vehicles of MA or other states, where applicable, who shall place the matter on record and, the Registrar shall not renew the registered owner's license to operate a vehicle or the registration of the vehicle until after notice from the Clerk that all such matters have been disposed of in accordance with applicable law or regulation. If the registered owner is a resident of another state or jurisdiction, the Registrar shall revoke the registered owner's right to operate a motor vehicle in the Commonwealth until the matter has been disposed of in accordance with applicable law or regulation. The source of the Registered Owner information may be from the Registrar or similar official or department of another jurisdiction in accordance with the law of that jurisdiction or a third party service contracted by MassDOT for providing Registered Owner information, or from vehicle images that display information identifying the vehicle owner.

(e) Pay By Plate Notice of Liability (NOL) Late Fees. Failure to pay the Balance Due on the Pay By Plate NONP may result in the issuance of a NOL. Each toll trip included on the NOL may be charged a late fee in accordance with 700 CMR 7.05(6): *Table 2*.

TABLE 2

Invoice/Notice Issued	Days to Pay Invoice/Notice	Days Outstanding	Late Fees Assessed
1st Invoice Issued	30	1-30	$0
Past Due Invoice	30	31-60	$1.00 for each overdue toll charge
Notice of Non-payment	30	61-90	An additional $1.00 for each overdue toll charge
Notice of Liability	Due Immediately	>90	An additional $1.00 for each overdue toll charge; Plus a $20.00 RMV/DMV Fee

* MassDOT may charge a higher toll rate or other fee to Pay By Plate customers in accordance with 700 CMR 7.04(4)(e).

7.05: continued

(f) Civil or Criminal Action. MassDOT may pursue such civil or criminal action as it deems appropriate to collect outstanding tolls, fees, and fines assessed as well as such additional fines or penalties as MassDOT may assess in accordance with 700 CMR 7.00.

(7) Confidentiality of Records. MassDOT shall maintain the confidentiality of all information including, but not limited to, photographs or other recorded images and credit and account data relative to Account Holders who utilize its EZDriveMA toll collection system. MassDOT shall maintain procedures consistent with M.G.L. c. 66A. For purposes of 700 CMR 11.06(7), all EZDriveMA customers, including customers of another agency or entity that may have toll collection reciprocity with MassDOT, are considered Account Holders.

(8) Hot List Data. Notwithstanding any other law or regulation, data and information such as name, location, time and date of travel, regarding Hot List license plates and/or transponders, while such license plates and/or transponders are on the Hot List (Hot List Data), shall be made available to a representative of the Massachusetts State Police, designated by the Secretary of the Executive Office of Public Safety and Security (EOPSS). License plates and/or transponder numbers *shall only be included on the Hot List in limited emergency situations involving imminent and immediate threat to the safety, health, and well-being of an individual or the public based on specific, reasonable intelligence sufficient to necessitate the need to provide this Hot List Data to law enforcement. Such emergency situations shall include, but are not limited to terrorist threats, Amber Alerts, Silver Alerts, kidnappings, missing persons, and felons actively traveling to or from a crime scene.* The Secretary of EOPSS, or his or her designee, shall verify in writing which emergency situations warrant adding any license plate and/or transponder number to the Hot List. License plates and/or transponder numbers shall only remain on the Hot List for 14 days unless the Secretary of EOPSS or his or her designee certifies and justifies the need to maintain the numbers on the Hot List for a longer period, but in no event shall such numbers remain on the list longer than 30 days.

(9) System Maintenance and Enforcement. Any electronic or other automated system of toll collection used by MassDOT is regularly tested and maintained to promote accurate and efficient determinations as to payment or non-payment of tolls. Any invoice or notice based in whole or in part upon inspection of any photograph or other recorded image of a motor vehicle and the written certification by a Clerk shall be prima facie evidence of the facts contained therein and shall be admissible in any administrative or judicial proceeding to adjudicate the liability for such invoice or notice.

(10) Fines. Whoever violates any provision of 700 CMR 7.00 is subject to a fine not exceeding the amount indicated in 700 CMR 7.00 and below in addition to other penalties as the laws of Massachusetts or federal law may provide. The section and general subject matter headings are provided for convenience only and do not amend or in any way affect the substance of the provisions to which they refer.

7.06: Limitations on Use of Ways

(1) One-way Restriction. Lanes on a way are used for one-way traffic unless a sign specifically indicates that two-way traffic is permitted. An operator of a motor vehicle may not travel on a way contrary to the direction indicated or intended for travel unless a Massachusetts State Police officer or a sign directs the operator to do so.

(2) Use of the Callahan Tunnel and the Sumner Tunnel. An operator of a motor vehicle traveling from Boston to East Boston shall use the Callahan Tunnel and an operator of a motor vehicle traveling from East Boston to Boston shall use the Sumner Tunnel unless a toll collector, a Massachusetts State Police officer, or a sign directs the operator otherwise.

(3) Entry to and Exit from a Way. An operator may not cause a vehicle to enter or leave a way except through an interchange or other authorized point of entry or exit or at the direction of a Massachusetts State Police officer.

7.06: continued

(4) Prohibited Entry to or Use of a Way. The Department prohibits the following vehicles from entering or using a way:

(a) Improperly Seated. A vehicle carrying an individual who is not properly seated within the confines of the vehicle.

(b) Flat or Inadequate Tire. A vehicle with a flat, bald, unduly or unevenly worn, solid, or metal tire mounted on a wheel in contact with the roadway surface or with a tire mounted on a wheel in contact with the roadway surface that poses a risk to individuals or property or may render the use of the way unsafe by disintegrating or partially disintegrating during travel and distributing tire debris upon the way.

(c) Obstructed Window. A motor vehicle having a window or windshield obstructed in a manner prohibited by M.G.L. c. 90, § 9D.

(d) Propelled by Muscle Power. A vehicle propelled by muscle power, including without limitation a bicycle or a vehicle drawn by a horse or other animal, or a motorized bicycle or moped.

(e) Construction and Similar Equipment. A vehicle in contact with a way that has caterpillar treads or that is a type of construction, agricultural, or similar equipment not designed for or employed in general highway travel, whether designed to be self-propelled or towed.

(f) Falling Debris. A vehicle upon or in which snow, ice, or other unsecured or improperly secured article or material (debris) has gathered or been placed such that the debris may fall from the vehicle and endanger individuals or property or render the use of the way unsafe.

(g) Inadequate Brakes. A vehicle with inadequate brakes.

(h) Over-weight Vehicle. An over-weight vehicle, except under, and in accordance with the terms of, a special permit that the Department issues pursuant to 700 CMR 7.07(3)(b) or (c).

(i) Over-size Vehicle. An over-size vehicle, except under, and in accordance with the terms of, a special permit that the Department issues pursuant to 700 CMR 7.07(4)(b) or (c).

(j) Propelled by a Special Fuel in the Tunnels. A vehicle propelled by a special fuel while traveling in the Tunnels, except a vehicle propelled by compressed natural gas, or propane, provided the tunnel exhaust fans are in operation, and so long as the vehicle has a maximum fuel capacity consistent with safe practice and national standards, including Federal Motor Vehicle Safety Standards #303 and #304, and is equipped with excess flow valves for fuel lines with an inner diameter larger than ½ ", and is identified by a blue-and-white diamond decal attached as specified in NFPA 52, and is not used to transport compressed natural gas or propane.

(k) Carrying an Explosive. A vehicle carrying an explosive except pursuant to a special permit for explosives that the Department issues in accordance with 700 CMR 7.07(5).

(l) Carrying a Special Fuel. A vehicle, however propelled and whether or not carrying a special fuel, used to carry a special fuel, except under a special fuel transportation permit that the Department issues pursuant to 700 CMR 7.06(6).

(m) Carrying a Hazardous Material. A vehicle carrying a hazardous material except as 700 CMR 7.11 permits; provided that a vehicle may carry individual packages containing non-hazardous materials and carbon dioxide in solid or dry ice form for refrigeration purposes.

(n) Vehicles Posing Special Risks in Tunnels. A tandem unit except as 700 CMR 7.07(3)(c)4. permits; a passenger vehicle or commercial vehicle carrying cargo which may pose a risk to public safety; a passenger vehicle or commercial vehicle used for carrying any amount of hazardous materials; a passenger vehicle or commercial vehicle carrying hazardous materials in the form of consumer goods (consumer goods are those goods used or bought primarily for use by individuals for personal, family or household purposes); an empty tank vehicle or a vehicle transporting empty containers which were last used for the transportation of hazardous materials. Hazardous materials is defined and listed in 49 CFR Chapter 1, Subchapter C.

(o) Other Prohibited Vehicles. A vehicle emitting an offensive or obnoxious odor; a vehicle emitting an excessive amount of smoke; or a vehicle towed by chain, rope, or other non-rigid device.

(5) Pedestrians and Animals. No pedestrian may enter or use a way, and no person may allow a horse or other animal not properly contained in an appropriate vehicle to enter or use a way.

7.06: continued

(6) Aircraft. Aircraft are prohibited from landing on a way except in an emergency. No aircraft may take-off in flight from any portion of a way except with the written approval of the Chief Engineer and the Massachusetts State Police. Removal of an aircraft from a way by means other than take-off in flight requires the approval of the Massachusetts State Police.

(7) Hitchhiking and Loitering. No individual may engage in the solicitation of a ride, commonly known as "hitchhiking," on a way. An individual who, for the purpose of soliciting a ride on a way, displays a sign, signals a moving vehicle, causes the stopping of a vehicle, or stands on property of the Department in view of a ramp or roadway of a way, may be arrested without a warrant. No person may loiter in or about a way for the purpose of "hitchhiking" or for any other purpose.

(8) Commercial Activity - Solicitation of Funds. No person may carry on any commercial activity, except the transportation of individuals or property, without the written permission of, or unless under contract with, the Department. No person may post, distribute, or display signs, advertisements, circulars, or printed or written matter without the written permission of the Department. No person may solicit funds for any purpose without the written permission of the Department.

7.07: Special Limitations and Issuance of Special Permits

(1) Scope and Organization.

(a) Over-weight Vehicles; Over-size Vehicles; Small Tandem Units; and Vehicles Carrying Reducible Loads, Explosives, and Special Fuel. 700 CMR 7.07 establishes limitations on use and provides for special permits with respect to: over-weight vehicles, 700 CMR 7.07(3); vehicles carrying reducible loads, 700 CMR 7.07(3); small tandem units, 700 CMR 7.07(3)(c)4.; over-size vehicles, 700 CMR 7.07(4); vehicles carrying explosives, 700 CMR 7.07(5); and vehicles carrying a special fuel, 700 CMR 7.07(6).

(b) Applicability to Large Tandem Units. The provisions of 700 CMR 7.07 apply to large tandem units except that 700 CMR 7.08(3) and (4) governing length and weight limitations, respectively, applicable to large tandem units, supersede any conflicting provisions of 700 CMR 7.07.

(2) Practices and Procedures Regarding Special Permits.

(a) Application to the Department. An owner or operator (applicant) may apply to the Department for a special permit on a written form (application) that the Department provides for this purpose. The Chief Engineer may approve an application on those terms or conditions, if any, as the Chief Engineer determines are consistent with the safe and efficient operation of the way over which permission to travel is sought. The Department accepts applications mailed or delivered to the office of the Chief Engineer and may, at its discretion, accept applications by facsimile transmission.

(b) Payment of Fees. An applicant must pay the fees that are specified in the application and in 700 CMR 7.07(3)(c)3.: *Table 5*. The Department specifies on the application the time and manner of payment.

(c) Approval or Disapproval. The Department notifies the applicant of the approval or disapproval of the application as soon as is reasonably practicable and in a manner specified on the application.

(d) Discretion of the Department. The Department may at any time decline to issue, with or without a prior hearing as it determines, any special permit. The Department may at any time suspend or revoke a special permit. The Department provides a hearing with respect to any such decision in the manner and to the extent required by law.

(e) Effect of Misrepresentation. A material misrepresentation as to the weight or the dimensions of a vehicle or its load, or the nature of the load, that an applicant or the applicant's agent, employee, or lessee makes to the Department voids the special permit under which the vehicle is operating. A Massachusetts State Police officer or an authorized employee of the Department may verify at any time the weight, dimensions, or load of a vehicle.

(f) Not Transferable. A special permit is valid only for the vehicle or vehicles that the Department approves in the special permit and is not transferable to another vehicle.

7.07: continued

(g) Emergency Suspension. The Department, acting by the responsible commanding officer of the Massachusetts State Police or, in the absence of the commanding officer, the officer's designee, may suspend the use of a special permit when road or weather conditions or the volume of traffic warrant doing so, as the commanding officer or designee determines.

(h) Restrictions on Irreducible Load Permits. An irreducible load permit is valid for a trip in one direction through one of the Tunnels or between specified interchanges on the Turnpike unless the permit specifies otherwise. The Department may restrict travel under an irreducible load permit to specified days or hours. The Department ordinarily does not issue an irreducible load permit for travel in the Sumner Tunnel or the Ted Williams Tunnel in the direction away from Logan Airport between 7:00 A.M. and 10:00 A.M. or in the Callahan Tunnel or Ted Williams Tunnel in the direction toward Logan airport between 3:00 P.M. and 7:00 P.M. The Department ordinarily does not issue an irreducible load permit for travel on the Turnpike between Interchange 11A in Westborough and Interchange 24 in Boston eastbound between 7:00 A.M. and 10:00 A.M. or westbound between 3:00 P.M. and 7:00 P.M.

(i) No Representation. The Department's issuance of a special permit does not constitute a representation by the Department of the adequacy of the way to support or accommodate the passage of a special permit vehicle with its load.

(j) Applicant's Responsibility. An applicant is responsible for injury to, or the death of, individuals and for damage to the Department or public or private property resulting directly or indirectly from the presence on a way of a special permit vehicle or its operation by the applicant, whether owner or lessee, or by the applicant's agents, employees, or contractors. By applying for and using a special permit, an applicant agrees to save the Department, its members, officers, and employees harmless from liability for any such injury, death, or damage. The Department requires that an applicant agree to indemnify the Department against damage or injury resulting from the operation of the special permit vehicle on the way and to maintain such insurance as the Department considers appropriate as specified in the application. By submitting an application for a special permit, an applicant agrees to these requirements and certifies that the required insurance is in force.

(k) Demonstration of Need for Irreducible Load Permit. An applicant for an irreducible load permit must demonstrate the number of work hours required to dismantle the load.

(l) Circumstances under Which a Special Permit Is Not Issued. The Department does not issue a special permit with respect to weight, and a vehicle may not use a way, if the vehicle weight exceeds the gross vehicle weight rating or the gross weight for which the vehicle is registered, except that the Department may issue a special permit for a vehicle having a vehicle weight in excess of its registered gross weight if it is owned or leased by a carrier that is not domiciled in the Commonwealth of Massachusetts.

(m) Tandem Units Not Permitted in the Tunnels. Except as provided in 700 CMR 7.07(3)(c)4. and notwithstanding any other provision of 700 CMR 7.07 to the contrary, tandem units are not permitted in the Tunnels.

(3) Limitations on Weight.

(a) Circumstances under Which No Special Permit Is Required. A vehicle does not require a special permit with respect to its weight if the vehicle weight does not exceed the maximum vehicle weight indicated in 700 CMR 7.07(3): *Table 2* for a vehicle of its type, except that a special permit may nonetheless be required in accordance with the provisions of 700 CMR 7.07(3)(b)2. or 3. A vehicle may not use a way if its vehicle weight does not conform to the requirements of 700 CMR 7.07.

TABLE 3

Type of Vehicle	Maximum Vehicle Weight
Motor Vehicle with two axles	46,000 lbs.
Vehicle or vehicle combination with three axles	73,000 lbs.
Vehicle or vehicle combination with four or more axles	87,000 lbs.
Vehicle or vehicle combination with five or more axles	99,000 lbs.

7.07: continued

(b) Circumstances under Which a Special Permit Is Required. A motor vehicle, vehicle, or vehicle combination requires a special permit if:

1. the vehicle weight exceeds the maximum vehicle weight as indicated in 700 CMR 7.07(3)(a): *Table 3*; or

2. the weight on any axle, measured at the ground, exceeds the maximum weight indicated in 700 CMR 7.07(3): *Table 4* for the applicable spacing between axles of the vehicle;

TABLE 4

Axle Spacing	Maximum Weight
A single axle or axles spaced less than six feet apart	18,000 lbs.
Axles spaced six feet or more apart	22,400 lbs.

or,

3. the overall gross weight on a group of two or more consecutive axles exceeds 80,000 pounds or the value of "W" produced by application of the Bridge Gross Weight Formula, whichever is less, except that two consecutive sets of tandem axles may carry a gross load of 34,000 pounds each, provided that the overall distance between the first and last axles of the consecutive sets of tandem axles is 36 feet or more.

Bridge Gross Weight Formula:

$W = 500 (LN/N-1 + 12N + 36)$

where:

"W" represents the overall gross weight in pounds on any group of two or more consecutive Axles to the nearest 500 pounds,

"L" represents the distance in feet between the extreme of any group of two or more consecutive Axles, and

"N" represents the number of Axles in the group under consideration.

(c) Types of Special Permits Issued (Over-weight and Small Tandem Units). The Department issues special permits for over-weight vehicles in accordance with the following provisions:

1. Irreducible Load Permit. The Department may issue an irreducible load permit for over-weight vehicles in accordance with the procedures and subject to the terms of 700 CMR 7.07(2) and subject to 700 CMR 7.07(2)(1) for vehicles weighing more than the maximum vehicle weight indicated in 700 CMR 7.07(3): *Table 3*, upon the approval of the Chief Engineer. The applicant must pay the fees that are specified in the permit application and in 700 CMR 7.07: *Table 5* and the toll charge based on the classification of the vehicle, under 700 CMR 7.03(1). In the case of an annual permit, multiple trips of a single vehicle or a convoy of vehicles, the fee specified on the permit application represents the total fee due up to a maximum number of trips of two or more as determined by the Chief Engineer, provided that the applicant specifies on the application referred to in 700 CMR 7.07(2)(a) the number of anticipated multiple trips, the time period in which they will be completed, and other information that the application or the Chief Engineer require.

2. Use of the Ted Williams Tunnel, Including the South Boston Bypass Road. A vehicle weighing more than the maximum vehicle weight indicated in 700 CMR 7.07(3): *Table 3* requires an irreducible load permit for use of the Ted Williams Tunnel, including the South Boston Bypass Road, for construction equipment for the vehicle, allowing the vehicle to operate at a vehicle weight greater than that indicated in 700 CMR 7.07(3): *Table 3*. The operator of the vehicle is responsible for the regular toll charge based on the classification of the vehicle under 700 CMR 7.03(1).

7.07: continued

3. Reducible Load Permit. The Department issues a reducible load permit in accordance with the procedures and subject to the terms of 700 CMR 7.07(2) and subject to 700 CMR 7.07(2)(1) for vehicles weighing not more than the maximum vehicle weight indicated in 700 CMR 7.07(3): *Table 4.*

TABLE 5

Type of Permit	Fee
Irreducible Load Permit - Exceeding Any Legal Limit for Size and Weight Pursuant to 700 CMR 7.00	$400.00 - Annually for Travel on Turnpike and MHS
Irreducible Load Permit - Exceeding Any Legal Limit for Size and Weight Pursuant to 700 CMR 7.00	$40.00 Per Trip on Turnpike and MHS
Reducible Load Permit - Exceeding Any Legal Limit for Size and Weight Pursuant to 700 CMR 7.00	$50.00 per 1,000 pounds exceeding the Federal Bridge Formula
Tandem Trailer Permit	$300.00 Application Fee $75.00 for First Card $25.00 for Each Additional Card
Explosives Permit	$300.00 Application Fee $75.00 for First Card $25.00 for Each Additional Card
Special Fuel Hauling	$300.00 Application Fee $75.00 for First Card $25.00 for Each Additional Card
Super Load Weight >130,000 pounds - Detailed Engineering Calculations Required	$300.00 Single Trip on Turnpike and MHS

TABLE 6

Type of Vehicle	Maximum Vehicle Weight
Vehicle or vehicle combination with three axles	73,000 lbs.
Vehicle or vehicle combination with four axles	87,000 lbs.
Vehicle or vehicle combination with five or more axles	99,000 lbs.

A reducible load permit issued to an owner or lessee may be used in connection with a valid sticker issued by the Registrar of Motor Vehicles in accordance with M.G.L. c. 90, § 19D. An original reducible load permit must be kept in an accessible place in the vehicle for which it was issued and must be presented to a toll collector, other official or employee of the Department, or Massachusetts State Police officer on demand. A copy of the original is not an acceptable substitute. In enforcing compliance with 700 CMR 7.07(3)(c)2. the Department provides an allowance of 5% above the maximum vehicle weights specified in 700 CMR 7.07(3): Table 6, rounded to the nearest 500 pounds. For example, a vehicle with five or more axles is deemed to be in compliance with the weight requirement of its reducible load permit provided that the vehicle and its load weighs not more than 105% of 99,000 pounds or 104,000 pounds.

7.07: continued

The applicant must pay the non-refundable fee that is specified on the permit application and in 700 CMR 7.07(3): *Table 5*. Upon application and payment of this fee, the Department issues the number of reducible load permits as the owner or lessee may request for the vehicles of the owner. The fee for a reducible load permit is in addition to the regular toll charge based on the classification of the vehicle under 700 CMR 7.03(1).

4. Small Tandem Unit Permit. The Department may issue a special permit for small tandem units in accordance with the procedures and subject to the terms of 700 CMR 7.07(2). An operator may operate a small tandem unit in the Prudential Tunnel and portions of the Seaport Access Tunnel (I-90 Connector Tunnel) in accordance with the conditions contained in said permit, only if the Department has issued a small tandem unit permit or any renewal thereof pursuant to 700 CMR 7.07 and the permit and any renewal thereof has not expired or been revoked.

The applicant must pay the fee that is specified on the permit application and in 700 CMR 7.07(3): *Table 5*. The fee is in addition to the regular toll charge based on the classification of the vehicle under 700 CMR 7.03(1).

An original annual permit for small tandem units must be kept in an accessible place in the vehicle for which it was issued and must be presented to a toll collector, other official or employee of the Department, or Massachusetts State Police officer on demand. The operator of the vehicle is responsible for the regular toll charge based on the classification of the vehicle under 700 CMR 7.03(1).

(4) Limitations on Size.

(a) Circumstances under Which No Special Permit Is Required. A vehicle does not require a special permit with respect to its size if the vehicle does not exceed any of the applicable maximum dimensions specified in 700 CMR 7.07(4)(a)1., 2., or 3.

1. Width. The vehicle width is no greater than eight feet, six inches for use of the Tunnels and the vehicle width is no greater than eight feet, six inches for use of a way other than the Tunnels.

2. Height. The vehicle height is no greater than the maximum vehicle height for the way upon which the vehicle is traveling as indicated in 700 CMR 7.07(4): *Table 7*.

TABLE 7

Way	Maximum Vehicle Height
Turnpike	13 feet 6 inches
Ted Williams Tunnel	13 feet 6 inches
Callahan Tunnel	12 feet 6 inches
Sumner Tunnel	12 feet 6 inches
Thomas P. O'Neill, Jr., Tunnel	13 feet 6 inches
Prudential Tunnel	13 feet 6 inches
CANA (City Square) Tunnels	13 feet 6 inches
Other Way Not Listed Above	13 feet 6 inches

3. Length. For use of the Tunnels, the vehicle length is no greater than the maximum vehicle length for a vehicle of its type as indicated in 700 CMR 7.07(4): *Table 8* and, in the case of a tandem unit operating on a way, as indicated in Note 4 to 700 CMR 7.07(4): *Table 8*. For use of a way other than the Tunnels, the vehicle length is no greater than 55 feet for a vehicle with more than two axles, except a bus; the vehicle length is no greater than 45 feet for a bus; and the vehicle length is no greater than 100 feet for a vehicle combination, except a vehicle combination listed in 700 CMR 7.06(4): *Table 8* and a vehicle subject to 700 CMR 7.08.

7.07: continued

TABLE 8

Type of Vehicle	Maximum Vehicle Length
Motor vehicle not of the type listed below in 700 CMR 7.07(4): *Table 8*	33 feet
Vehicle combination other than semi-trailer unit and not of a combination type listed below in 700 CMR 7.07(4): *Table 8*	60 feet (see note 1)
Articulated Bus	60 feet
Auto Home	40 feet
Automobile Transporter (traditional)	65 feet (*see* Note 2)
Automobile Transporter (stinger-steered)	75 feet (*see* Note 2)
Boat Transporter (traditional)	65 feet (*see* Note 2)
Boat Transporter (truck-trailer)	65 feet (*see* Note 2)
Boat Transporter (stinger-steered)	75 feet (*see* Note 2)
Bus or School Bus	45 feet
House Trailer	40 feet
Saddlemount Combination	75 feet (see Note 3)
Semi-trailer	53 feet
Tandem unit	(see Note 4)
Trailer in tractor-trailer combination	53 feet
Trailer not in tractor-trailer combination	33 feet
Truck	40 feet

Note 1: No overall length limitation applies to a semi-trailer unit with a semi-trailer up to 53 feet in length. For purposes of 700 CMR 7.07(4): *Table 8*, the combination of a motor vehicle designed for towing and a vehicle or combination of vehicles being towed because of disablement or emergency does not constitute a vehicle combination and thus is not subject as a vehicle combination to the length limitations of 700 CMR 7.07(4)(a)3., but a Massachusetts State Police officer or an official of the Department designated to make such decisions may preclude such a towing motor vehicle and towed vehicle or vehicle combination from using a way for reasons of safety.

Note 2: The vehicle length includes front and rear bumpers, but does not include a load overhang up to three feet beyond the foremost part of the front transporting vehicle or more than four feet beyond the rear bed of the rear vehicle.

Note 3: A number of vehicles may be transported in combination by means of saddlemount combination or fullmount mechanism. Vehicles using these mechanisms must conform to M.G.L. c. 90, § 19C.

Note 4: Subject to the restrictions that 700 CMR 7.07(4)(e) and 7.08 impose, a tandem unit may operate on a way without a special permit with respect to its length, provided that:

1. the overall total number of semi-trailers or trailers in the tandem unit is no greater than two;
2. each semi-trailer or trailer of the tandem unit does not exceed 28 feet in length, without regard to the overall length of the tandem unit; and
3. a tandem unit with semi-trailers or trailers that do not exceed 28½ feet in length, if such semi-trailers or trailers were actually and lawfully operating on December 1, 1982, as part of tandem units within a 65 foot overall length limit in any state, may similarly operate on a way without a special permit with respect to its length.

7.07: continued

(b) Circumstances under Which a Special Permit Is Required. A motor vehicle, vehicle, or vehicle combination requires a special permit with respect to its size only when compliance with the maximum size limitations specified in 700 CMR 7.07(4)(a)1., 2., or 3. is impossible or impractical.

(c) Type of Special Permit Issued (Over-size). The Department issues special permits for over-size vehicles in accordance with the following provisions:

1. Irreducible Load Permit. A vehicle requires an irreducible load permit if the vehicle width exceeds the maximum vehicle width permitted under 700 CMR 7.07(4)(a)1.; the vehicle height exceeds the maximum vehicle height permitted under 700 CMR 7.07(4)(a)2.; or, the vehicle length exceeds the maximum vehicle length allowed for a vehicle of its type as specified in 700 CMR 7.07(4)(a)3.

The Department does not issue an irreducible load permit if it believes that a load can be divided or arranged so as to conform with the limitations on its width, height, or length. The Department may prohibit an over-size vehicle from using a way if, in the opinion of the Chief Engineer, safety or the public convenience warrants the prohibition.

The Department may issue, upon the approval of the Chief Engineer, an irreducible load permit in accordance with the procedures and subject to the terms of 700 CMR 7.07(2) and (4)(f).

The applicant must pay the fee that is specified on the permit application and in 700 CMR 7.07(3): *Table 5*. This fee is in addition to the regular toll charge based on the classification of the vehicle under 700 CMR 7.03(1). In the case of multiple trips of a single vehicle or a convoy of vehicles, the fee represents the total fee due up to a maximum number of trips of two or more as determined by the Chief Engineer, provided that the applicant specifies on the application referred to in 700 CMR 7.07(2)(a) the number of anticipated multiple trips, the time period in which they will be completed, and any other information that the application or the Chief Engineer requires.

2. Use of the Ted Williams Tunnel, Including the South Boston Bypass Road. A vehicle that exceeds any of the applicable maximum dimensions specified in 700 CMR 7.07(4)(a)1., 2., or 3. requires an irreducible load permit for use of the Ted Williams Tunnel, including the South Boston Bypass Road for construction equipment. An original annual permit for construction equipment issued by the Department must be kept in an accessible place in the vehicle for which it was issued and must be presented to a toll collector, other official or employee of the Department, or Massachusetts State Police officer on demand. The operator of the vehicle is responsible for the regular toll charge based on the classification of the vehicle under 700 CMR 7.03(1).

(d) Pilot Car.

1. When Required. A pilot car must follow an over-size vehicle if: the overhang is four or more feet and the load consists of poles, masts, booms, or similar shapes or if the overhang is ten feet or more; the over-size vehicle is a drill rig with boom, a shovel, or a crane; the over-size vehicle is odd-shaped or has an odd-shaped load; or the over-size vehicle is not a tandem unit or a semi-trailer unit with a semi-trailer of not more than 53 feet and has a length of more than 80 feet and less than 95 feet or a width of more than 12 feet.

2. Convoy Pilot Car. If two or more over-size vehicles are in convoy, one may be pilot for the other, but a separate pilot car must follow the last over-size vehicle.

3. Preceding and Following Pilot Cars. If an over-size vehicle is not a tandem unit or a semi-trailer unit with a semi-trailer of not more than 53 feet and has a length of more than 95 feet or width of more than 13 feet, it must have pilot cars preceding and following it.

4. Requirements for a Pilot Car. A pilot car must be a truck with two axles and four wheels or a private passenger motor vehicle and must have two flashing amber lights visible from front and rear; 24 inch by 24 inch red flags on the right and left rear of the pilot car; and a sign reading: "Oversize Load."

5. State Police Escort. In addition to the requirements with respect to a pilot car as specified in 700 CMR 7.07(4)(d), an over-size vehicle, with its load, that is wider than 15 feet or longer than 135 feet must be escorted by two motor vehicles of the Massachusetts State Police. Any vehicle that, in the opinion of t he Chief Engineer, may be incapable of operating at a minimum speed such that it may pose a danger to individuals, property, or the safe operation of a way, may be required to be accompanied by motor vehicles of the Massachusetts State Police.

7.07: continued

6. Oversize Load Sign. An oversize vehicle that is not required to be accompanied by a pilot car must have a sign on the rear reading: "Oversize Load."

(e) Tandem Units and Certain Saddlemount Combinations Not Permitted in the Tunnels. Subject to 700 CMR 7.07(3)(c)4., and notwithstanding any other provision of 700 CMR 7.07 to the contrary, and irrespective of their length, tandem units, double saddlemount combinations, and triple saddlemount combinations are not permitted in the Tunnels.

(f) Height Indication. No vehicle that has a total height exceeding ten feet, excluding the height of its load, may be operated on a way unless the measurement of the total height is painted or printed in letters and numerals at least four inches high in a conspicuous place upon the side or front of the vehicle.

(g) Responsibility of Operator. The operator of an over-size vehicle is responsible for checking the clearance of the vehicle and its load through any toll lane or canopy and for checking structures on a way for available clearance with respect to movements by the oversize vehicle or by load movements. The operator is subject to the penalty provided in 700 CMR 7.13(3)(a) for failure to exercise this care. The Department imposes this penalty in addition to holding the operator liable for the damage resulting from failure to exercise this care.

(5) Limitations on the Transportation of Explosives.

(a) General Prohibition. No vehicle carrying explosives may enter or use a way unless specifically allowed to do so by a provision of 700 CMR 7.07(5) and only to the extent and upon the conditions so specified. Any specific prohibitions contained in other subsections of 700 CMR 7.07(5) do not limit the generality of 700 CMR 7.07(5)(a).

(b) Operation Prohibited in Tunnels. No vehicle carrying explosives may enter or use the Tunnels.

(c) Operation Prohibited on Ways Other than the Tunnels. No vehicle carrying explosives may enter or use the Turnpike at or between Interchange 15 in Weston and Interchange 24 in Boston.

(d) No Liquid Nitroglycerin. No vehicle carrying liquid nitroglycerin may enter or use a way.

(e) Ways upon Which Department May Issue Permit. No vehicle used to carry explosives may enter and use the Turnpike at or between Interchange 1 in West Stockbridge and Interchange 14 in Weston unless the Department has issued for the vehicle a special permit for explosives as provided in 700 CMR 7.07(5)(f) and the vehicle and its operation fully comply with those provisions, except that a vehicle carrying no explosives other than fireworks not in excess of ten pounds, or other than 1,000 blasting caps or fewer, may enter and use that portion of the Turnpike without obtaining a special permit for explosives.

(f) Special Permit for Explosives.

1. Application. An owner or operator of a vehicle who has determined to obtain a special permit for explosives may apply for one in accordance with and subject to the provisions of 700 CMR 7.07(2). Among other information required by the application, the applicant shall indicate the number of vehicles to be covered under the application.

2. Terms and Conditions. The Department may issue a special permit for explosives for any 12 month period, together with a separate certification card for each vehicle enumerated in the permit application, as evidence that the vehicle is covered by the permit, subject to the following terms and conditions: a vehicle for which the Department has issued a special permit for explosives and certification card may make an unlimited number of trips on a way in accordance with 700 CMR 7.07(5)(e) or a portion of a way as designated on the permit or certification card; the operator of the vehicle must carry an original, not a copy, of the certification card in an accessible place and must display it to a toll collector, other official or employee of the Department, or Massachusetts State Police officer on demand.

3. Fees. The applicant must pay the fee that is specified on the permit application and in 700 CMR 7.07(3): *Table 5*. The applicant shall also pay the fee for the first certification card referred to in 700 CMR 7.07(5)(f)2. and an additional fee for each additional certification card that the Department issues during the term of the permit. The applicant must submit with its application full payment for the application fee and for all additional fees for the number of vehicles specified in the application. All these fees are in addition to any regular toll charge that the Department assesses in accordance with 700 CMR 7.03.

7.07: continued

4. Minimum Separation of Vehicles. No vehicle carrying explosives may operate within 1,000 feet longitudinally of another vehicle carrying explosives or any vehicle transporting hazardous material as defined in 49 CFR Chapter I, Subchapter C.

5. No Stopping. No vehicle carrying explosives may stop on a way, including a service or rest area, unless the movement of the vehicle is obstructed; it is disabled; or the operator of the vehicle is following the directions or requirements of a Massachusetts State Police officer, a sign, or governing federal regulations.

6. Conformance with Law. The equipment, cargo, operator, and operation of a vehicle operating under a special permit for explosives must conform with all federal and state laws and regulations governing the transportation of explosive materials by a motor carrier.

(6) Limitations on the Transportation of Special Fuels.

(a) General Prohibition. No vehicle used to carry a special fuel, however propelled and whether or not containing a special fuel, may enter or use a way unless specifically allowed to do so by a provision of 700 CMR 7.07(6) and only to the extent and upon the conditions so specified. Any specific prohibitions contained in other subsections of 700 CMR 7.07(6) do not limit the generality of 700 CMR 7.07(6)(a).

(b) Operation Prohibited in Tunnels. No vehicle used to carry a special fuel, however propelled and whether or not containing a special fuel, may enter or use the Tunnels.

(c) Operation Prohibited on Ways other than the Tunnels. No vehicle used to carry a special fuel, however propelled and whether or not containing a special fuel, may enter or use the Turnpike at or between Interchange 15 in Weston and Interchange 24 in Boston.

(d) Ways upon Which Department May Issue Permit. No vehicle used to carry a special fuel, however propelled and whether or not containing a special fuel, may enter and use the Turnpike at or between Interchange 1 in West Stockbridge and Interchange 14 in Weston unless the Department has issued for the vehicle a special fuel transportation permit as provided in 700 CMR 7.07(6)(e) and the vehicle and its operation fully comply with those provisions.

(e) Special Fuel Transportation Permit.

1. Application. An owner or operator of a vehicle who has determined to obtain a special fuel transportation permit may apply for one in accordance with and subject to the provisions of 700 CMR 7.07(2). Among other information required by the application, the applicant shall indicate the number of vehicles to be covered under the application.

2. Terms and Conditions. The Department may issue a special fuel transportation permit for any 12 month period for the type of special fuel or fuels the Department designates on the permit application, together with a separate certification card for each vehicle enumerated in the permit application, as evidence that the vehicle is covered by the permit, subject to the following terms and conditions: a vehicle for which the Department has issued a special fuel transportation permit and certification card may make an unlimited number of trips on a way in accordance with 700 CMR 7.07(6)(d) or a portion of a way as designated on the permit or certification card; the operator of the vehicle must carry an original, not a copy, of the certification card in an accessible place and must display it to a toll collector, other official or employee of the Department, or Massachusetts State Police officer on demand; and a vehicle for which the Department has issued such a permit must conspicuously display, both before and after, signs with letters not less than six inches in height bearing appropriate words identifying the cargo, and, if empty, the cargo last carried.

3. Fees. The applicant must pay the fee that is specified on the permit application and in 700 CMR 7.07(3): *Table 5*. The applicant must submit with its application full payment for the application fee and for all additional fees for the number of vehicles specified in the application. All these fees are in addition to any regular toll charge that the Department assesses in accordance with 700 CMR 7.03.

4. Minimum Separation of Vehicles. No vehicle used to carry a special fuel, however propelled and whether or not containing a special fuel, may operate within 1,000 feet longitudinally of another vehicle carrying a special fuel.

7.07: continued

5. No Stopping. No vehicle used to carry a special fuel, however propelled and whether or not containing a special fuel, may stop on a way, including a service or rest area, unless the movement of the vehicle is obstructed; it is disabled; or the operator of the vehicle is following the directions or requirements of a Massachusetts State Police officer, a sign, or governing federal regulations.

6. Conformance with Law. The equipment, cargo, operator, and operation of a vehicle operating under a special fuel transportation permit must conform with all federal and state laws and regulations governing the transportation of special fuels by a motor carrier.

7.08: Limitations on Large Tandem Units

(1) Scope. 700 CMR 7.08 applies exclusively to large tandem units.

(2) Use of Ways. Tandem units are not permitted in the Tunnels. No operator may operate a large tandem unit on any way other than the Turnpike. An operator may operate a large tandem unit on the Turnpike only if the Department has issued a large tandem unit permit pursuant to 700 CMR 7.07(2).

(3) Configuration and Length. A complete large tandem unit consists of a tractor, first semi-trailer, dolly, and second semi-trailer. The length of either semi-trailer may not be in excess of 48 feet, and the total length of the combination, including the dolly and load, may not exceed 120 feet, provided, however, that the overall length of loaded tandem trailer automobile haulers may not exceed 108 feet and may be increased to 109 feet by load overhang.

(4) Maximum Gross Weight. A large tandem unit must be registered for the gross weight that it carries and certified by the original manufacturer to carry this weight. The vehicle weight of a large tandem unit may not exceed 127,400 pounds. The maximum gross weight of the tractor and first semi-trailer may not exceed 71,000 pounds. The maximum gross weight of each unit of dolly and semi-trailer may not exceed 56,400 pounds.

The maximum gross weight that may be carried upon any combination of units is limited by the maximum gross weight that can be carried upon each unit and its axles. The maximum gross weight for the unit of tractor and first semi-trailer is governed by this formula: 35,000 pounds plus 1,000 pounds per foot between the center of the foremost axle of the tractor and the center of the rearmost axle of the first semi-trailer. The gross load on a unit may not exceed the sum of the allowable gross loads on the axles, which are as follows:

Maximum gross weight on any one axle	22,400 pounds
Tandem axles on one vehicle (under ten feet apart) (Axles measuring less than 46 inches between axle centers are considered as one axle.)	36,000 pounds

The limit of 127,400 pounds permitted under 700 CMR 7.08(4) requires a minimum axle spacing of 92 feet, measured betwee n the center of the foremost axle of the tractor and the center of the rearmost axle of the rearmost semi-trailer. If the axle spacing is less, the permissible gross weight is correspondingly reduced.

(5) Size and Weight Limitations Generally. The provisions of 700 CMR 7.00 with respect to size and weight that are not inconsistent with 700 CMR 7.08(4) are applicable to large tandem units unless specifically excluded under the terms of a large tandem unit permit.

(6) Approval of Vehicle or Equipment Used to Tow. The owner or lessee of a large tandem unit must file a description of the tractor, dollies, and any semi-trailer used to tow another semi-trailer with the Department on Forms MTT-3, MTT-4, and MTT-5, respectively. The owner or lessee must obtain the Department's approval of the vehicles before they are used under a large tandem unit permit. The Department may withdraw its authorization to use the vehicles at any time at its sole discretion.

7.08: continued

(7) Certification of Tractors. No operator may operate a large tandem unit unless the Department has certified that the tractor of the unit is appropriate for the purpose. Both the tractor manufacturer of each tractor used in a large tandem unit and the owner or lessee of the unit must certify to the Department prior to the approval of the tractor that it is capable of hauling the maximum permissible gross load to be transported by the owner or lessee at a speed not less than 20 m.p.h. over the Turnpike. (The maximum grade on the Turnpike is 7.50%, and the length of the longest such grade is approximately 1.75 miles.) If it is determined after the tractor is in use as part of a large tandem unit that the tractor cannot meet this requirement, the Department's approval may be withdrawn, and, in that event, the tractor may not be used as part of a large tandem unit on the Turnpike until the gross loads are reduced, the tractor is modified, or other corrective measures are taken. Upon a new certification by both the tractor manufacturer and the owner or lessee that corrective measures have been taken and the tractor is now capable of complying with the minimum speed requirement, the Department may reinstate its approval of the tractor.

(8) Certification of Trailers. No operator may operate a large tandem unit unless the Department has certified that the trailer of the unit is appropriate for the purpose. In order to comply with 700 CMR 7.08(13), all semi-trailers, except the rear trailer used in tandem operation, must have sufficient structural strength to permit the satisfactory attachment of the coupling device (pintle hook or its equivalent) at the rear of the trailer, and each coupling device must be capable of towing a trailer and a dolly. The permittee shall certify to the Department that every trailer certified for use in tandem service is adequate for this service and, in addition, the trailer manufacturer on new equipment must certify the adequacy of the trailer. If the trailer has been modified to include a pintle hook, the fabricator must certify the adequacy of the pintle hook assembly. Every coupling dev ice must incorporate a no-slack design such as air take-up, fitted pin and socket, mechanical wedging, or similar coupler designs, that eliminate fore and aft slack in the coupling of dollies to semi-trailers. The no-slack feature of the coupler must be in constant operation while the tandem trailer combination is operated on the Turnpike. The coupler used on each semi-trailer, in conformance with 700 CMR 7.08(8), must be specified by the permittee on Form MTT-4, giving semi-trailer descriptions and the vehicle identification number on the permittee's records (company number) and must be filed with the Department in conformance with 700 CMR 7.08(6).

(9) Brakes.

(a) Compliance with Federal Regulations. The brakes on a vehicle or dolly converter or combination of vehicles used in a large tandem unit must comply with federal regulations as published in 49 CFR Part 393, Subpart C, as revised and effective on the date of the vehicle's entry upon or use of the Turnpike.

(b) Compliance with State Law. A vehicle or dolly converter or combination of vehicles used in a large tandem unit must meet the requirements of the provisions of the M.G.L. c. 90.

(c) Braking Devices Required. The brake application line of every large tandem unit certified on or after June 1, 1968, must be equipped with suitable devices to accelerate application and release of the brakes of the towed vehicles. These devices must be so arranged that the brake application signal does not pass directly through more than one trailer, but is dead-ended at the rear of the trailer or, alternatively, at the dolly, and the application signal then is retransmitted to the dolly and the second trailer. The devices required for retransmission of the application signal must be closely connected to and supplied by air reservoirs that have their air supplied to them by the emergency line. In the event of rupture of the application line on the towed vehicle of a large tandem unit, the loss of brake application must be limited upstream of the loss to those vehicles between the rupture and the first retransmission device.

(d) Brakes on Steering Axle. A tractor used in a large tandem unit must have brakes on the steering axle.

(10) Axles. A tractor used in a large tandem unit with a gross weight of more than 110,000 pounds must be equipped with tandem rear axles, each of which must be engaged to bear its full share of the load on the roadway surface.

7.08: continued

(11) Emergency Equipment. Each tractor used in a large tandem unit must be equipped at a minimum as follows:

(a) Federal Regulations. Emergency equipment as required by 49 CFR Part 393, Subpart H.

(b) Fuses. At least one spare fuse or other overload protective device, if the devices used are not of a reset type, for each kind and size used.

(c) Chains. One set of tire chains for at least one driving wheel on each side between October 15th and May 1st.

(d) Fire Extinguishers. Fire extinguishers that have an aggregate rating of 20 BC.

(12) Vehicle Identification. The owner or lessee shall stencil the tractor weight on the left side of each tractor used in a large tandem unit. The Department issues an identification number that the owner or lessee shall also stencil on the left side of each tractor used in a large tandem unit. The Department also issues a certificate bearing the complete description of a particular tractor, including the maximum permissible gross load to be transported, and the operator shall suitably protect and carry this certificate in the cab of the tractor that it describes. A vehicle certified for less than 127,400 pounds may not exceed the weight indicated on the certificate. The Massachusetts State Police and Department personnel may examine the certificate and compare its description with the vehicle in which the certificate is carried. A discrepancy between the description on the certificate and the actual description of the vehicle may result in the withdrawal of the approval of the particular tractor or all of the vehicles and equipment of the owner or lessee. Compliance with the Provisions Governing the Operation of Tandem Trailer Combinations of the New York State Thruway Department requiring the issuance of an identification number, its stenciling on the tractor, and the issuance of a certificate describing the tractor is compliance with the similar requirements of 700 CMR 7.08.

(13) Tandem Assembly. In the assembly of large tandem units prior to their operation on the Turnpike, the operator shall ascertain the total gross weight of each trailer of the proposed combination. In the event that the gross weights of the trailers vary by more than 20%, the operator shall couple them for each trip according to their gross weight, that is, with the heaviest trailer coupled to the tractor.

(14) Dollies, Safety Chains, and Cables.

(a) Converter Dolly. Every converter dolly certified on or after June 1, 1968, used to convert a semi-trailer to a full trailer may have either single or tandem axles. The operator shall couple the dolly with one or more safety chains or cables to the frame, or to an extension of the frame, of the motor vehicle by which it is towed. Attachment of these chains or cables to the pintle hook or to any other device on the towing vehicle to which the tow bar is attached does not meet this requirement; provided, however, that a separate place of attachment independent of the pintle hook on a pintle hook forging or casting may be used to attach the safety chains or cables to the towing vehicle.

(b) Slack in Chains or Cable. Safety chains or cables may have no more slack than is necessary to permit proper turning.

(c) Strength of Chain or Cable. Each chain or cable and each means of attachment must have an ultimate strength at least equal to the gross weight of the vehicle being towed.

(d) Connection of Chain or Cable. Chains or cables must be connected to the towed and towing vehicles and to the tow bar in a manner that prevents the tow bar from dropping to the ground in the event that the bar fails or becomes disconnected.

(e) Chain or Cable on Converter Dolly with Hinged Tow Bar. Every converter dolly with a hinged tow bar must be equipped with two safety chains, or cables, or a bridle arrangement of a single chain or cable, attached to its frame or axle at two points as far apart as the configuration of the frame or axle permits. These chains or cables must be either two separate pieces, each equipped with a hook or other means for attachment to the towing vehicle, or a single piece leading along each side of the tow bar from the two points of attachment on the towed vehicle and arranged into a bridle with a single means of attachment to be connected to the towing vehicle. When a single length of cable is used, a thimble and twinbase cable clamps must be used to form the forward bridle eye. The hook or other means of attachment to the towing vehicle must be secured to the chain or cables in a fixed position.

7.08: continued

(f) Chain or Cable on Converter Dolly without Hinged Tow Bar. Converter dollies with solid tongues and without hinged tow bars or other swivels between the fifth wheel mounting and the attachment joint of the tongue eye or other hitch device may be equipped with either one or two safety chains or cables, provided that, if only one chain or cable is used, it must be in line with the center line of the trailer tongue. The point of attachment of these chains or cables to a solid tongue converter dolly is optional provided only that the attachment is to the rear of the attachment of the tongue eye or other hitch device.

(g) Points of Attachment. Where two safety chains or cables are used and attached to the towing vehicle at separate points, the points of attachment on the towing vehicle must be located equally distant from, and on opposite sides of, the center line of the towing vehicle. Where two chains or cables are attached to the same point on the towing vehicle, and where a bridle or a single chain or cable is used, the point of attachment must be on the center line of the towing vehicle.

(h) Compliance with Federal Regulations. Coupling devices and towing devices must comply with the federal regulations as stated in 49 CFR Part 393, Subpart F, on the date of the large tandem unit or one of its component's entry upon or use of the Turnpike.

(15) Indication That Trailers Form One Unit. When the distance between the rear of the one semi-trailer and the front of the following semi-trailer is ten feet or more, the dolly must be equipped with a device, or the trailers must be connected along the sides with suitable material, that will indicate to other traffic that the trailers are connected and are operating as one unit. The Department must approve the type of device or connection prior to its use on a large tandem unit.

(16) Lighting. Each trailer in a tandem trailer combination must be equipped at a minimum with electric lamps and reflectors mounted on the vehicle as follows:

(a) Amber Clearance Lamps. Two amber clearance lamps on the front, one at each side of the trailer.

(b) Rear Lamps. On the rear: one red tail lamp; one red or amber stop lamp; two red clearance lamps, one on each side; two red reflectors, one on each side.

(c) Side Lamps. On each side: one amber side-marker lamp located at or near the front; one red side-marker lamp located at or near the rear, one amber reflector, located at or near the front; one red reflector, located at or near the rear.

(d) On Dolly Converter. Each dolly converter, when towed singly by another vehicle, and not as a part of a full Trailer, must be equipped with a minimum of one stop lamp, one tail lamp, and two reflectors on the rear.

(17) Equipment Inspection. The operator of a large tandem unit is responsible for ensuring that all certified tandem trailer equipment is systematically inspected and maintained by a competent mechanic and kept in first class condition. Inspection and maintenance of the equipment must be in accordance with the requirements outlined in 49 CFR 396.

After all of the component vehicles in a large tandem unit are completely hooked up, and prior to the departure of the large tandem unit from the assembly area, the operator, or a mechanic, shall, in addition to the pre-trip equipment inspection and use requirements set forth in 49 CFR 392.7 and 49 CFR 392.8, inspect the large tandem unit and make certain tests on the vehicle, equipment, and hook-up to determine whether each item is in safe and proper operating condition.

The items to be inspected and tests to be made include, but are not to be limited to, the following:

-Federal equipment inspection.
-Inspection of brake line to dolly and trailers.
-Inspection of electric lines to dolly and trailers.
-Inspection of coupling devices.

7.08: continued

Following this inspection and prior to departure from the assembly area, the operator shall complete and execute a tandem trailer inspection report form provided by the Department. A new inspection report must be prepared each time the component parts of the tandem trailer unit are rearranged, or the operator is replaced, or upon re-entry to the Turnpike after any valid departure. The operator shall keep an original inspection report in an accessible place in the vehicle for which it was prepared, and this original inspection report must be presented to an official or employee of the Department, or a Massachusetts State Police officer on demand.

(18) Registration of Operators. Proposed operators of large tandem units must be registered with the Department prior to operating such equipment on the Turnpike. Completed applications for registration must provide all specified driving, safety, and physical examination records and be accompanied by an official abstract of the driving record of the individual for whom it is being submitted. An applicant for registration as an operator of a large tandem unit must demonstrate to the Department that the applicant has a minimum of five years of tractor trailer driving experience. The Department issues a special identification card to each registered operator of a large tandem unit, and each registered operator shall carry this card and display it upon request to a Massachusetts State Police officer or Department personnel. A registered operator may hold a large tandem unit permit for two companies at the same time, provided that each company has filed an application for this permit with the Department and that the Department has approved this permit. The special identification card is valid only for the operation of tractors owned or leased by the company by whom the operator is employed. The Department may decline to register an applicant or cancel a registration at any time should the Department determine that operational or safety considerations warrant its doing so. An operator's qualification for and possession of a valid special identification card of the New York State Thruway Department satisfies the requirements of 700 CMR 7.08.

(19) Speed Regulations. The operator of a large tandem unit shall strictly comply with the speed regulations for these units. In particular, an operator of a large tandem unit shall strictly observe the 55 m.p.h. speed limit as well as any lower posted speed limit.

(20) Distance Between Vehicles. The operator of a large tandem unit shall maintain a minimum distance of 500 feet, or approximately two delineator spaces, under normal conditions between a large tandem unit and a vehicle traveling in front of it in the same travel lane, except when passing occurs.

(21) Insurance. In order to comply with the Department's insurance requirements for large tandem units, the permittee must supply the Department with either a duplicate copy of its automobile liability insurance policy or a certificate of insurance evidencing automobile liability coverage. The policy or certificate of insurance must include the insurance requirements found in the large tandem unit permit application or other applicable form or document provided by the Department.

(22) Passing. A large tandem unit may pass another vehicle traveling in the same direction only if the speed differential between the large tandem unit and the vehicle that the large tandem unit is overtaking is adequate to allow the large tandem unit to complete the passing maneuver and return to the unit's driving lane within a distance of one mile.

(23) Reports and Observation. The owner or lessee shall, upon request, furnish to the Department all data and information pertaining to an individual trip by a large tandem unit or the overall large tandem unit operations of the owner or lessee on the Turnpike. The owner or lessee shall afford representatives of the Department the opportunity to observe the large tandem unit operations on the Turnpike by riding in the cab of the tractor or using other prescribed methods, all in accord with governmental regulations and insurance requirements.

(24) Payment of Fees and Tolls. An applicant must pay the fees that are specified in the permit application and in 700 CMR 7.07(3): *Table 5*, and the toll charge. The toll for a large tandem unit is the toll charge based on the classification of the vehicle under 700 CMR 7.03(1).

7.08: continued

(25) Emergency Service and Towing Vehicles. An emergency service or towing vehicle that an owner or lessee uses to maintain its large tandem units may be certified for operation on the Turnpike on Form MTT-1, provided that the owner or lessee certifies on Form MTT-1 that:

(a) The emergency service or towing vehicle is completely equipped with emergency lighting equipment.

(b) The use of the emergency service or towing vehicle will conform to the provisions of 700 CMR 7.00.

(26) Renewal of Permits. The Department may renew a large tandem unit permit monthly or annually upon the owner's or lessee's submission of Form MTT-2 requesting renewal. Form MTT-2 must be accompanied by a letter, on company stationery, signed by a duly authorized designee of the owner or lessee requesting recertification of the equipment to be continued in use in the operation of the large tandem unit, which has been certified previously pursuant to 700 CMR 7.08(8). The letter must be substantially similar to and include the information set forth in the sample letter that the Department supplies entitled "Sample Letter for Recertification of Tandem Equipment". According to the following schedule, the Department may subject an owner or lessee of a large tandem unit to a probationary period or to a period of suspension of operations based on the owner's or lessee's cumulative violations of motor vehicle laws or regulations or 700 CMR 7.00 that occur within a permit's annual renewal period:

(a) three violations - six month renewal
(b) six violations - three month renewal
(c) nine violations - one month renewal
(d) 12 violations - suspension of large tandem unit permit

(27) Limitations on Permits. The Department may, at its sole discretion, and, in whole or in part, revoke or temporarily suspend at will a large tandem unit permit. The Department's issuance of a large tandem permit creates no property interest, and the Department retains the right to amend or repeal, in the Department's sole discretion and the exercise of its police or other powers, the provisions of 700 CMR 7.08 pursuant to which large tandem unit permits are issued. The Department may temporarily suspend large tandem unit operations at any time and for any reason. Should the Department temporarily suspend operations of large tandem units, for example, because of inclement weather, reconstruction, or other adverse operating conditions, an operator of a large tandem unit shall comply with the instructions of the Department or the Massachusetts State Police immediately or as promptly as safe operating practices permit.

(28) Makeup-breakup Areas. Tandem trailer units may be assembled and disassembled only in special makeup-breakup areas that the Department designates for this purpose. No combination consisting of a tractor, first semi-trailer and dolly, with or without a second semi-trailer, may leave the Turnpike and pass on to a public highway or road within the Commonwealth of Massachusetts unless permitted by law. The owner or lessee of a vehicle entering or leaving a makeup-breakup area shall supervise the movement of the vehicle across traffic to minimize the possibility of accidents. The owner or lessee of a tandem trailer unit shall employ appropriate and adequate protection devices, such as flags, flares, or lights, to warn and stop traffic while the vehicles are maneuvering. The owner or lessee of a tandem trailer unit is solely responsible for its vehicles and equipment, as well as their contents, while the vehicles and equipment are in a makeup-breakup area. Large tandem units or components of them, except dollies, may not be parked in makeup-breakup areas for more than eight hours. The use of makeup-breakup areas is restricted to trailers of registered owners or lessors that exceed 28 feet. A tandem trailer unit left in a makeup-breakup areas must be disassembled while parked in tandem lots. A trailer parked in a makeup-breakup area containing hazardous materials must have its cargo's shipping papers available in an accessible place on the front of the trailer for inspection by the Department or a Massachusetts State Police officer.

(29) Penalties. Whoever violates any provision of 700 CMR 7.08 shall be punished by a fine not exceeding $500 for every such offense.

7.09: Traffic, Operation, and Safety

(1) Signs and Orders.

(a) Signs. The Department erects signs on ways to implement the provisions of 700 CMR 7.00, for purposes of trial use, or in the event of an emergency. A person may not disobey a sign unless a Massachusetts State Police officer directs otherwise. A person may not purposefully strike, move, deface, injure, obstruct, or interfere with a sign. A person may not, in any manner or by any means, erect or otherwise deploy any sign, signal, marking, or any other device that would be a sign if the Department deployed it, except with the approval, and at the direction, of the Department.

(b) Orders. A person may not fail to comply with any lawful order, signal, or direction by voice, hand, whistle, or Massachusetts State Police officer.

(2) Traffic Control Signal. The operator of a motor vehicle approaching a traffic control signal exhibiting one or more colored lights shall obey the commands of the lights in accordance with their signification as specified in 700 CMR 7.09(2): *Table 9*.

TABLE 9

Description of Light	Meaning
Green Light	Proceed.
Green Arrow	Proceed as directed by arrow.
Red Light	Stop or lane closed to traffic.
Red X	Lane closed to traffic.
Amber Light (in any other location)	Proceed only as directed by a Massachusetts State Police officer.
Flashing Light	Reduce speed and proceed with caution and in compliance with any supplemental directions.

(3) Parking.

(a) General Parking Prohibitions and Conditions. No operator may leave a parked vehicle on a way, including in parking areas of a service or rest area, except within those areas where a sign indicates that parking is allowed. Any such sign may impose time limits or other restrictions as the Department deems appropriate. Unless otherwise indicated, parking in service area parking lots where the Department allows parking is limited to two hours. The Department may, if it determines that emergency measures are appropriate, immediately and without notice prohibit parking in areas previously opened to parking.

(b) Over-weight or Over-size Vehicles. Parking of an over-weight vehicle or an over-size vehicle is permitted only in service area parking lots. Parking of such vehicles in parking areas reserved for tandem units is prohibited.

(4) Parking Specifically Prohibited. Without limiting the scope or effect of 700 CMR 7.09(3)(a), parking is specifically prohibited in areas constituting, or designated by signs as constituting, any of the areas listed in 700 CMR 7.09(4): *Table 10*.

7.09: continued

TABLE 10

Type of Area	Limitation of Description. If Any
(a) No Parking area - posted	Sign posted or curb painted yellow for restricted area.
(b) No Parking area - tow zone	-
(c) No Stopping or Standing area	-
(d) Crosswalk	-
(e) Sidewalk	-
(f) Reserved area	-
(g) Area reserved for HP or DV plate parking	-
(h) Handicapped Ramp	-
(i) Median	-
(j) Designated truck or bus parking area	If the vehicle is not a truck or bus.
(k) Designated car parking area	If the vehicle is not a private passenger motor vehicle or motorcycle.
(l) Designated tandem trailer parking area	If the trailer is not part of the tandem unit.
(m) Hydrant area	If any portion of the vehicle is located within ten feet of a fire hydrant.
(n) Designated fire lane	
(o) Breakdown lane	Except as such parking is permitted in accordance with 700 CMR 7.12(1) and 700 CMR 7.12(2).
(p) Over Posted Time Limit	If the time that the vehicle has been parking exceed the time limit indicated on an applicable sign.
(q) Inspection Sticker	If the vehicle does not have a properly displayed, current, valid inspection sticker.
(r) Idling in excess of five minutes	-
(s) Emergency vehicle access	-
(t) Double parking	-
(u) Weather emergency	If the vehicle is parked on a way when an applicable sign prohibits parking during an issued or declared weather emergency.
(v) Outside of marked spaces	-
(w) Street cleaning	If the vehicle is parked on the day and time indicated on an applicable sign for street cleaning.

(5) Negligent Operation or Loading.

(a) Negligent Operation. An operator may not operate a vehicle carelessly or negligently or in disregard of the rights or safety of others or without due caution and circumspection.

(b) Negligent Loading. An operator may not operate a vehicle that is constructed, equipped, or loaded so as to endanger unreasonably or to be likely to endanger unreasonably individuals or property.

(6) Speed.

(a) In General: Reasonable and Proper. An operator may not operate a vehicle at a rate of speed greater than that is reasonable and proper, having due regard for traffic, the condition of the roadway, and the safety of the public and property.

(b) In General: Not Driving so as to Endanger. An operator may not operate a vehicle at a speed or in a manner so as to endanger unreasonably or to be likely to endanger unreasonably persons or property.

7.09: continued

(c) Maximum and Minimum Speed Limits. An operator may not operate a vehicle at a rate of speed greater than that of the maximum speed limit indicated in 700 CMR 7.09(6): *Table 11* for the way. An operator may not operate a vehicle in excess of any lesser maximum speed limit for the way that the Department has posted on a sign on the way. An operator may not operate a vehicle at a rate of speed less than that of the minimum speed limit indicated in 700 CMR 7.09(6): *Table 11* for the way except while traveling in a creeper lane, acceleration lane, or deceleration lane; over a portion of a way where the Department has posted a lesser minimum speed limit on a sign; when the vehicle is incapable of operation at the minimum speed because of mechanical failure; when weather or roadway conditions require traveling at a lesser speed; or if the vehicle is an over-weight vehicle or over-size vehicle operating in conformance with a special permit, in which case the vehicle must be capable of maintaining a minimum speed of 20 miles per hour unless the special permit provides otherwise.

TABLE 11

Way	Maximum Speed Limit	Minimum Speed Limit
Turnpike between the New York State border and Interchange 14 in Weston, eastbound, and from Interchange 15 in Newton to the New York State border, westbound	65 m.p.h	40 m.p.h
Turnpike, all other portions	55 m.p.h	40 m.p.h
Callahan and Sumner Tunnels	35 m.p.h	20 m.p.h
Ted Williams Tunnel	40 m.p.h	20 m.p.h
Prudential Tunnel	45 m.p.h.	-
Thomas P. O'Neill, Jr., Tunnel	45 m.p.h.	-
Any Other Way	As posted.	As posted.
Entrance and Exit Ramps; entries and exits to toll plazas; and all other entries, exits, and ramps	As posted.	-

(7) Entering a Way. Except as otherwise directed by a Massachusetts State Police officer or sign, no individual may operate, push, or otherwise cause to move a vehicle on a way except in the direction of traffic. An operator of a motor vehicle entering a service or rest area, interchange, shoulder, or deceleration lane shall enter from the right hand travel lane. An operator of a motor vehicle entering a travel lane from a service or rest area or interchange shall use the acceleration lane and shall enter the travel lane with caution so as not to interfere with or endanger traffic.

(8) Travel Lanes. An operator may not drive a motor vehicle across solid pavement markings separating travel lanes unless a Massachusetts State Police officer, or sign so directs, or in the case of an emergency, or if done in accordance with 700 CMR 7.09(9).

(9) Breakdown Lane. An operator of a motor vehicle may not use a breakdown lane unless authorized by a Massachusetts State Police officer or a sign or the motor vehicle is a disabled vehicle.

(10) Crossing a Median or Area Not Intended for Travel.

(a) General Prohibition. An operator may not drive a motor vehicle upon or across a median or any area that has not been constructed or intended for travel except at the direction of a Massachusetts State Police officer or sign or in conformance with 700 CMR 7.09(10)(b).

7.09: continued

(b) Use of Cross-over. An operator may not drive a motor vehicle across a cross-over unless the motor vehicle is a Department vehicle or a vehicle that the Department has authorized in writing to be driven across a cross-over. Before such a vehicle uses a crossover, except one located at a Massachusetts State Police barracks or an Department maintenance depot, the operator shall drive onto the right shoulder and stop until the pavement can be crossed in safety. After the vehicle, except one plowing snow or sanding a way, has entered the cross-over, the operator shall again stop the vehicle until entry can be made on to a travel lane without presenting a hazard to through traffic. The operator of a vehicle plowing snow or sanding a way shall cause the vehicle to remain stopped on the right shoulder until both roadways on either side of the cross-over can be crossed in safety in a single movement without presenting a hazard to through traffic.

(11) Restricted Areas.

(a) In General. An operator may not drive a motor vehicle upon any portion of a way when, by reason of construction, surface treatment, maintenance, or the like, or because of some unprotected hazard, the portion of the way is closed to travel or use as indicated by a sign or by a Massachusetts State Police officer.

(b) Left Lane Restrictions on the Turnpike. On the Turnpike between Interchange 14 in Weston and Interchange 9 in Sturbridge, in both directions, no operator of a heavy commercial vehicle other than a bus may, except in an emergency, use any travel lane other than the extreme right-hand travel lane or, when overtaking and passing another vehicle, the next adjacent travel lane. East of Interchange 15 of the Turnpike in Weston, in both directions, no operator of a heavy commercial vehicle, bus, or vehicle with anything in tow may use any travel lane other than the extreme right-hand travel lane, or, when overtaking and passing another vehicle, the next adjacent travel lane, except in an emergency or when access to or egress from the turnpike is provided by the extreme left lane, and, in this circumstance, the operator shall use the extreme left lane only to the extent reasonably necessary to enter or leave the Turnpike safely.

(12) Construction Zones. The Department posts signs notifying operators that they are entering a construction zone or maintenance work zone on a way, indicating the speed limit within the zone, and indicating the fine for speeding within the zone as provided in 700 CMR 7.13(3)(a).

(a) Excess Speed. An operator may not drive a vehicle in such a zone at a speed in excess of the posted speed limit. In accordance with M.G.L. c. 90, § 17, any person operating a motor vehicle through the parameters of a marked construction zone or construction area, at a speed which exceeds the posted limit, or at a speed that is greater than is reasonable and proper, shall be subject to a fine of two times the amount currently in effect for the violation issued.

(b) Excluded Zone. An operator may not drive a vehicle in areas within such a zone from which the vehicle is excluded as indicated by a sign.

(c) Careless Manner or Purposeful Interference. An operator may not operate a vehicle in such a zone in a careless manner, including striking, moving, or interfering with a sign.

(13) Keeping to the Right.

(a) In the Tunnels. The operator of a truck, bus, school bus, or slow-moving motor vehicle in the Tunnels shall drive only in the right-hand lane unless a Massachusetts State Police officer, or sign otherwise directs.

(b) On Ways Other than the Tunnels. The operator of a motor vehicle on a way other than the Tunnels shall drive in the lane nearest the right shoulder of the roadway, when that lane is available for ordinary travel, except when overtaking another vehicle in that lane or at the direction of a Massachusetts State Police officer or sign. When the lane nearest the right shoulder of the roadway is a creeper lane or breakdown lane, an operator shall drive in the lane adjacent to the creeper lane or breakdown lane, except when overtaking another vehicle in that lane or at the direction of a Massachusetts State Police officer or a sign.

7.09: continued

(14) Passing. An operator of a motor vehicle may not overtake, attempt to pass, or pass another vehicle in violation of 700 CMR 7.09(8). An operator of a motor vehicle overtaking another vehicle shall, when necessary, signal that vehicle and also any vehicle to the rear in sufficient time before attempting to pass to give ample warning of such movement. If both the overtaking vehicle and the vehicle being overtaken are in the same lane, the operator of the overtaking vehicle shall gradually cross to an adjacent lane, which may not be a paved shoulder or a creeper lane, so as to avoid a sudden turn and to allow the overtaking vehicle to pass the overtaken vehicle at a safe lateral distance. The operator of a motor vehicle about to be overtaken and passed by another vehicle shall continue in the lane then occupied by the overtaken vehicle and may not increase the speed of the vehicle until it is completely passed by the overtaking vehicle. An operator of a motor vehicle may overtake, attempt to pass, or pass another vehicle in the same lane.

(15) Space Between Vehicles. The operator of a motor vehicle may not follow another vehicle more closely than is reasonable and prudent, having due regard for the speed of the vehicle and traffic conditions.

(16) Coasting. No operator may operate a motor vehicle without engaging the gears of the motor vehicle's transmission.

(17) Stopping, Backing, or Turning.

(a) Restrictions on Stopping, Standing, or Parking. The operator of a vehicle may not stop, stand, or park the vehicle except in conformance with 700 CMR 7.09(3) or (4); when necessary to avoid injury or damage to individuals or property; in compliance with the direction of a traffic control signal or sign; in compliance with the direction or signal of a Massachusetts State Police officer; or because the vehicle is a disabled vehicle that is repaired or removed in conformance with 700 CMR 7.12(1) or (2).

(b) Backing and U-turns Prohibited. Except as provided in 700 CMR 7.09(10), no operator of a motor vehicle may back the motor vehicle or make a U-turn on a travel lane, acceleration lane, breakdown lane, creeper lane or ramp.

(c) Care in Stopping or Turning. An operator, before stopping a vehicle or making any turning movement that would affect the operation of any other vehicle, must give a plainly visible signal by activating the brake lights or directional lights or signal as provided on the vehicle. In the event that electrical or mechanical signals are not operating or not provided on the vehicle, the operator must make a plainly visible signal by means of the left hand and arm as follows:

Intention to turn to the left:	Hand and arm extended horizontally.
Intention to turn to the right:	Hand and arm extended upward.
Intention to stop or decrease speed:	Hand and arm extended downward.

(18) Repairs and Removal of Disabled Vehicles. No person may repair or remove a disabled vehicle except in accordance with the applicable provisions of 700 CMR 7.12.

(19) Over-height Vehicles. The operator of a vehicle that activates a red light signal or the sounding of a buzzer warning that the vehicle is over-height shall immediately bring the vehicle to a stop and may not proceed further unless a special permit that the Department issues authorizes such travel.

(20) Cutouts. No operator of a motor vehicle may use any cutout or other apparatus or device that allows exhaust gas to escape into the atmosphere without passing through a muffler or silencer.

(21) Horn. No operator may sound a vehicle's horn or other device or in any manner operate the vehicle so as to make a harsh, objectionable, or unreasonable noise.

7.09: continued

(22) Headlights.

(a) In the Tunnels. No operator may flash the headlights of a motor vehicle or operate the motor vehicle with its headlights on high beam in the Tunnels, except on surface or aboveground roads or ramps of the Tunnels, provided that such use is warranted for reasons of safety.

(b) On Ways Other than the Tunnels. Whenever there is sufficient light within the traveled portion of a way other than the Tunnels to make clearly visible to the operator of a vehicle all other vehicles, individuals, or substantial objects for a distance of 350 feet, or whenever the operator of a vehicle approaches an on-coming vehicle within 500 feet, the operator shall regulate or operate the headlights of the vehicle so that no dangerous or dazzling light when measured 75 feet or more ahead of the headlights on a surface of uniform grade, rises to a height greater than 42 inches above the grade.

(23) Adequate Fuel. No operator of a motor vehicle may enter a way unless the motor vehicle carries a fuel or energy supply in its main fuel reservoir or energy supply source sufficient to enable it to complete its passage on the way without stopping to refuel or re-energize, except at designated service areas.

(24) Disposal of Waste or Other Materials.

(a) Minor Waste Disposal. No individual may dispose of household or commercial garbage or refuse other than by placing it in a trash barrel that the Department has placed on a way for the convenience of the traveling public.

(b) Major Waste Disposal. No individual may willfully place or drop on or from a way an article that may cause injury or death to an individual or damage to property, or improperly dispose of an article or waste material of any kind or description.

(25) Defacing. No person may cut, mutilate or remove a tree, shrub, or plant located on a way. No person may paint, mark, or mar any wall, bridge, or other structure on a way.

(26) Inspection Stickers. No vehicle may travel on a way unless it properly displays a current, valid inspection sticker pursuant to M.G.L. c. 90, § 7A, or the law of another jurisdiction in which the vehicle is registered as indicated by the number plate displayed by the vehicle.

(27) Inadequate Equipment. No operator may operate a vehicle in a manner that would violate any requirement as to the use of brakes, directional signals, lights, or safety devices and equipment specified in M.G.L. c. 90 with respect to the operation of a similar vehicle operating upon a way of the commonwealth.

(28) Idling. An operator of a motor vehicle shall comply with the provisions of M.G.L. c. 90, § 16A, regarding the unnecessary operation of the engine of a motor vehicle.

(29) Transportation of Alcoholic Beverages. No vehicle may travel on a way unless the operator complies with the provisions of M.G.L. c. 138, § 22, regarding the transportation of alcoholic beverages.

(30) Inspection and Examination of Cargo. No motor carrier may travel on a way unless it complies with the provisions of M.G.L. c. 159B, § 14A, with respect to the inspection and examination of cargo and of papers relating to cargo.

(31) Interstate Transportation. No vehicle may travel on a way unless it complies with the provisions of M.G.L. c. 159B, § 10, regarding interstate transportation.

(32) Operator's Record of Duty Status. An operator who 49 CFR 395 (1997) requires to keep a record of duty status must maintain and carry this record and present it to a Massachusetts State Police officer or other Department official upon demand.

7.10: Motor Carrier Safety Act

The Department hereby adopts and incorporates by reference into 700 CMR 7.00, with full force and effect and subject to other applicable provisions of 700 CMR 7.00, 49 CFR 325, 390-393, 395-396, and 399 (1997), governing highway safety and noise emissions. All operators shall conform to the requirements of these provisions.

7.11: Hazardous Materials

(1) In the Tunnels. Passenger or commercial vehicles carrying any amount of hazardous material, excluding those permissible materials required for the actual operation of the vehicle, may not enter or use the Tunnels. Hazardous material is defined and listed in 49 CFR Chapter 1, Subchapter C. Official emergency vehicles, as defined in 700 CMR 7.02 are exempt.

(2) On Ways Other than the Tunnels. The Department adopts the regulations set forth in 49 CFR Parts 171, 172, 173, 177, 178, and 179 and 10 CFR Part 71, subject to the exclusions set forth in 700 CMR 7.11(3), for the purpose of governing the transportation of hazardous materials upon a way other than the Tunnels. The Department adopts 49 CFR Parts 171, 172, 173, 177, 178, and 179 and 10 CFR Part 71 as fully applicable to the transportation of hazardous materials upon a way other than the tunnels and without their limitation to transportation in commerce. No person may offer, accept, or transport a hazardous material upon a way other than the Tunnels unless the material is properly classed, described, packaged, marked, labeled, handled, placarded, and in proper condition for shipment in accordance with 49 CFR and 10 CFR on the date of the hazardous material's entry upon a way other than the Tunnels.

(3) Inapplicable Federal Regulations. The Department does not adopt under 700 CMR 7.11(2) the following regulations set forth in 49 CFR Parts 171, 172, 173, 177, 178, or 179:

(a) Those regulations that apply to the transportation of hazardous materials by air, water, rail, or pipeline; and,

(b) Those regulations that require the reporting of hazardous material incidents, including, but not limited to, 49 CRR Parts 171.15 and 171.16.

(4) Exemptions. The persons and vehicles identified in 700 CMR 7.11(4)(a) and (b) are exempt from the requirements of 700 CMR 7.11(2):

(a) A person properly operating under a valid exemption under 49 CFR Part 107, subpart B is in compliance with those portions of 700 CMR 7.00 to which the exemption applies.

(b) The operator of a cargo tank vehicle engaged in the retail delivery of fuel oil is exempt from the shipping paper requirements set forth in 49 CFR Part 172, subpart C. The operator of a cargo tank vehicle engaged in the retail delivery of fuel oil shall comply with the placarding requirements set forth in 49 CFR Part 172.

(5) Construction and Priority of Application. 700 CMR 7.11(2) established the minimum standards with which an operator and vehicle transporting hazardous materials must comply. In the event of a conflict between 700 CMR 7.11(2) and another provision of 700 CMR 7.00, the more stringent standard applies.

(6) Application in an Unusual Situation. The Department may determine not to apply a provision of 700 CMR 7.11 to an individual set of circumstances if, after consideration of the facts involved, the Department determines that its application of the provision would not be in the public interest.

7.12: Repair or Removal of Vehicle

(1) In the Tunnels.

(a) Repairs. Repairs to a disabled vehicle in the Tunnels are prohibited unless authorized by the Chief Engineer or a Massachusetts State Police officer to ensure the safe and efficient operation of the Tunnels.

(b) Removal. The Department may immediately remove, or cause to be removed, a disabled vehicle or abandoned vehicle in the Tunnels, and the Department may park, garage, or store the removed vehicle on property of the Department or elsewhere, all at the risk and expense of the owner of the removed vehicle.

7.12: continued

(2) On a Way Other than the Tunnels. The provisions of 700 CMR 7.12(2) apply only to activities involving a disabled vehicle or abandoned vehicle that is located on a way other than the Tunnels. Activities involving a disabled or abandoned vehicle in the Tunnels are governed by 700 CMR 7.12(1).

(a) Repairs. The operator of a disabled vehicle may repair it, or cause it to be repaired in accordance with 700 CMR 7.12(2)(c), provided that the wheels and projecting parts, including any load, of the disabled vehicle completely clear the nearest lane by a minimum of two feet; the operator does not leave the disabled vehicle unattended; and the repairs are completed within two hours.

(b) Removal.

1. Authorization. The Department may remove, or cause to be removed, an abandoned vehicle in accordance with 700 CMR 7.12(2)(c). The Department may remove, or cause to be removed, a disabled vehicle in accordance with 700 CMR 7.12(2)(c) if effective repairs in accordance with 700 CMR 7.12(2)(a) cannot be accomplished or if, at any time, a Massachusetts State Police officer or the Chief Engineer determine that the vehicle's removal is appropriate to ensure the safe and efficient operation of the way.

2. Immediate Procedure. Pending removal in accordance with 700 CMR 7.12(2)(c), the operator of a disabled vehicle shall, if practicable, move or cause to be moved the vehicle to the extreme right side of the pavement or to an interchange. A Massachusetts State Police officer may similarly move a disabled vehicle or an abandoned vehicle.

(c) Providers of Repair or Removal Services.

1. Removal Procedure and Terms. A provider of emergency road services, as authorized in 700 CMR 7.12(2)(c), removes a disabled vehicle or an abandoned vehicle by towing, pushing, or transporting the vehicle at the risk and expense of its owner to a convenient place of storage as determined by a Massachusetts State Police officer or the Chief Engineer. The Department does not permit such a vehicle to be removed from the place of storage until full payment has been made for storage, towing, and any other charges reasonably related to the vehicle's removal.

2. Providers Certified with Respect to Tandem Units. The operator or owner of a tandem unit that is a disabled vehicle may use an emergency road-service provider certified in accordance with 700 CMR 7.08(25) to repair or remove the disabled vehicle; provided, however, that the Department or a Massachusetts State Police officer may require the tandem unit owner or operator to use a qualified towing contractor as described in 700 CMR 7.12(2)(c)3. to remove or repair the disabled vehicle if, in the judgment of the Department or the Massachusetts State Police, safety, the efficient operation of the way or the public convenience requires its doing so.

3. Qualified Towing Contractor. If the provisions of 700 CMR 7.12(2)(c)2. do not apply, a disabled vehicle or abandoned vehicle may be repaired or removed by a qualified towing contractor having a service contract with the Department and called to the scene by the Massachusetts State Police or the Department. Towing and related service charges are established in the service contract with the Department, and the qualified towing contractor provides a schedule of its charges to the vehicle owner or operator. The Department may terminate a service contract with a qualified towing contractor if the contractor fails to provide services in accord with its contract. Any person may submit written comments to the Chief Engineer concerning emergency road service that a qualified towing contractor provides.

4. Other Qualified Emergency Road-service Provider. At the request of the operator or owner of a disabled vehicle or abandoned vehicle, the vehicle may be repaired or removed by a qualified emergency road-service provider other than a qualified towing contractor as described in 700 CMR 7.12(2)(c)3.; provided, however, that the Department or a Massachusetts State Police officer may require the vehicle operator or owner to use a qualified towing contractor as described in 700 CMR 7.12(2)(c)3. to remove or repair the vehicle if, in the judgment of the Department or the Massachusetts State Police, safety, the efficient operation of the way or the public convenience requires its doing so.

7.13: Penalties

(1) Exemptions. 700 CMR 7.13 does not apply to, and the Department does not impose a penalty with respect to, an operator of a vehicle acting in conformity with the direction of a Massachusetts State Police officer, to the operator of a vehicle actually engaged in work on a way when the requirements of the work necessitate a departure from any of the requirements of 700 CMR 7.00 and the departure does not endanger the safety of individuals or property, or to a Massachusetts State Police officer when engaged in the performance of duties that necessitates a departure from any of the requirements of 700 CMR 7.00, or to the operator of an official emergency vehicle when an emergency necessitates departure from any of the requirements of 700 CMR 7.00. These exemptions do not, however, relieve such an operator from other legal consequences of the operator's or individual's action.

(2) *Prima Facie* Responsibility for Violations. If a vehicle is operated on a way in violation of any provision of 700 CMR 7.00 or any other regulation or law of the Commonwealth of Massachusetts, and the identity of the operator of the vehicle cannot be determined, the person in whose name the vehicle is registered is deemed *prima facie* responsible for the violation. With regard to a violation of 700 CMR 7.03(10), the person in whose name the vehicle is registered is deemed prima facie responsible for the violation, regardless of whether the operator of the vehicle may be identified.

(3) Fines.

(a) Fines by Reference to 700 CMR 7.00. Whoever violates any provision of 700 CMR 7.00 is subject to a fine not exceeding the amount indicated in 700 CMR 7.13(3): *Table 12*, in addition to other penalties as the laws of the Commonwealth of Massachusetts or federal law may provide. The section title and general subject matter headings are provided for convenience only and do not amend or in any way affect the substance of the provisions to which they refer.

TABLE 12

Note 1: The fine for a violation of 700 CMR 7.04(1)(a) or 700 CMR 7.04(1)(b) or 700 CMR 7.03(10) is specified in 700 CMR 7.13(3)(b).

Note 2: The fine for exceeding the permissible weight is specified in 700 CMR 7.13(3)(c).

Note 3: The fine for exceeding the maximum speed limit is specified in 700 CMR 7.13(3)(d).

Note 4: The fine for idling is determined according to the provisions of M.G.L. c. 90, § 16A.

Note 5: The fine for speeding in a construction zone may be doubled in accordance with M.G.L. c. 90, § 17 and 700 CMR 7.09(12).

Note 6: The fine for a registered owner who fails to pay the fine specified in a violation notice or who fails to appeal a violation notice as provided by 700 CMR 7.14(1)(f) shall pay an additional penalty as indicated on the violation notice and/or in accordance with the amount in parenthesis in 700 CMR 7.07: *Table 11*.

(b) Fines for Failure to Pay Toll. The fine for a violation of 700 CMR 7.03(10) or 7.04(1)(a) or (b) is contained in 700 CMR 7.13: *Table 12*. Late payment fees may assessed in accordance 700 CMR 7.03(12) and 7.04(5).

(c) Fines for Over-weight Vehicles. Any operator who operates a vehicle, or any owner or bailee who requires or allows the operation of a vehicle, in violation of 700 CMR 7.06(5)(h) is subject to a fine of not less than $40.00 for each 1,000 pounds of weight or fraction thereof by which the vehicle weight of the vehicle as operated exceeds the maximum vehicle weight for a vehicle of its type as specified in 700 CMR 7.07(3): *Table 3*, or by a special permit that the Department issued for the vehicle for such operation, whichever is greater; provided, further, that, if the total of the excess weight is greater than 10,000 pounds, the rate of the fine is not less than $80.00 for each 1,000 pounds or fraction thereof over 10,000 pounds.

(d) Fines for Speeding. Any individual convicted of a violation of the maximum speed limit in violation of 700 CMR 7.09(6)(c) is subject to punishment by a fine of not less than $ 50.00. Where such conviction is for operating a motor vehicle at a rate of speed exceeding ten miles per hour over the speed limit, an additional fine of $10.00 for each mile per hour in excess of the ten miles per hour is assessed, to a maximum fine of $500.00.

(e) Fines for Other Violations. Whoever violates any provision of 700 CMR 7.00 not listed in 700 CMR 7.13(3): *Table 12* is subject to a fine not exceeding $500.00 for every such offense.

7.14: Parking Violation Enforcement

(1) Parking Violation Enforcement. The Department establishes regulations to address the public safety, environmental and related issues associated with the illegal parking of vehicles on properties owned, maintained or controlled by the Department.

(a) Enforcement. A violation or parking clerk may enforce the provisions of 700 CMR 7.14.

7.14: continued

(b) Designation of Violation Clerks. The Department may, from time to time, designate one or more violation or parking clerks to perform the functions specified in 700 CMR 7.14(1)(c) at the pleasure of the Department and for such finite or indefinite period as the Department deems desirable.

(c) Functions of the Violation Clerks. The State Police or a parking clerk designated by the Department will record and collect data to identify a violating vehicle and certify that such violation occurred. After the parking violation has been issued or affixed to the vehicle, copies of the parking violations are forwarded to the violation clerks for the processing of violation notices. The violation clerks may coordinate the processing of violation notices in accordance with 700 CMR 7.14(1). The Department may hire or designate such personnel and organize such divisions as the Department may deem necessary, or contract for such services, in order to carry out the provisions of 700 CMR 7.14.

(d) Content of Violation Notice.

1. Information Regarding the Specific Offense. A violation notice includes, but is not limited to, the following information: the registration number and state of issuance of the registration number of the vehicle involved; the make and color of the vehicle; the date, time and place of the violation; the specific violation charged by reference to the appropriate entry in 700 CMR 7.13(3): *Table 12*; the applicable fines or penalties that the Department has established; an identifier for the Department's designated representative who is certifying that the violation occurred; and instructions for the return of the tag; and such other information as the Department may deem appropriate.

2. Notice of Requirement to Respond. A parking violation notice states that the registered owner must pay the fine stated in the violation notice or appeal the violation within 60 calendar days after the date of the issuance of the violation notice and describes the means and content of the response for payment or appeal. Payments or appeals shall be received by the Department by the due date listed on the parking violation notice.

(e) Issuance of Violation Notice.

1. Delivery of Violation Notice. A parking violation notice shall be affixed securely to the motor vehicle. If it not possible to affix a parking violation notice to the motor vehicle, such notice shall be sent to the address of the registered owner of the motor vehicle, if the vehicle is registered in the Commonwealth of Massachusetts. If the motor vehicle is not registered in the Commonwealth, the parking violation notice shall be sent to the records of the official of the relevant state in charge of the registration of such motor vehicle.

2. *Prima Facie* Evidence of Notice. Notice affixed to a motor vehicle as provided in 700 CMR 7.14, shall be deemed a sufficient notice, and a certificate of the parking violation clerk affixing such notice that it has been affixed thereto, in accordance with 700 CMR 7.14, shall be deemed *prima facie* evidence thereof and the facts therein and shall be admissible in any judicial or administrative proceeding as to the facts contained therein.

(f) Payment or Appeal of Violation Notice. Within 60 calendar days after the date of the issuance of the parking violation notice, the registered owner to whom the violation notice is issued must make one of the following responses: pay the fine as provided by 700 CMR 7.14(f)1.; send a written dispute by mail as provided by 700 CMR 7.14(f)2.; or request a hearing as provided by 700 CMR 7.14(f)3.

1. Payment of Fine. The registered owner shall pay the fine as specified in the violation notice. Payment of the fine shall be received by the Department by the due date listed on the parking violation notice.

2. Appeal by Mail. The registered owner may, without waiving the right to a hearing before a violation clerk as provided by 700 CMR 7.14(f)3., and also without waiving judicial review as provided by M.G.L. c. 30A, § 14, appeal a parking violation and receive a review and disposition of the violation from a parking violation clerk by mail. The appeal by mail must contain a signed statement from the registered owner explaining the basis for the appeal. The signed statement may be accompanied by signed statements from witnesses, police officers, government officials, or other relevant parties or photographs, diagrams, maps or other relevant documents that the registered owner determines to submit. Statements or materials sent to a parking violation clerk for review must have attached to them the name and address of the registered owner as well as the number of the violation notice and the date of the violation. All information submitted

7.14: continued

by the registered owner becomes part of the violation record. Written appeals submitted by mail shall be received by the Department by the due date listed on the violation notice. The violation clerk shall, within 60 days of receipt of such material, review the material and dismiss or uphold the violation and notify the registered owner of the disposition of the hearing in writing by mail. If the appeal by mail is denied, the parking violation clerk shall explain the reasons for the determination. The review and disposition handled by mail is informal, the rules of evidence do not apply, and the decision of the violation clerk is final subject to the hearing provisions provided by 700 CMR 7.14(1)(f), and to judicial review as provided by M.G.L. c. 30A, § 14.

3. Request for Hearing. Consistent with the provisions of M.G.L. c. 30A, a person issued a violation notice may make a written request for an appeal hearing before a violation clerk designated by the Department. Requests for a hearing shall be received by the Department by the due date listed on the violation notice. The violation clerk then notifies the registered owner in writing by first class mail of the date, time, and place of the hearing. The hearing is informal, the rules of evidence do not apply, and the decision of the violation clerk is final, subject to judicial review as provided by M.G.L. c. 30A, § 14. Parties are notified in person or by mail of the decision following the hearing. Each written appeal decision contains a statement of reasons for the decision including a determination of each issue of fact necessary to the decision. Failure to appear at the date, time, and place specified on the hearing notice automatically results in the denial of the appeal.

(g) Failure to Comply. Failure to comply with the requirements of 700 CMR 7.14(1)(f) shall result in the following sanctions against the registered owner.

1. Additional Fines or Penalties. The Department may assess additional fines or penalties for late payment, failure to pay, or for otherwise failing to respond to a violation notice as provided by 700 CMR 7.14(1)(f).

Failure to Respond Within 60 Days after the Date of Issuance of a Violation Notice. A registered owner who fails to pay the fine specified in a violation notice or who fails to appeal a violation notice as provided by 700 CMR 7.14(1)(f) within 60 calendar days after the date of the issuance of the violation notice shall pay an additional penalty as indicated on the violation notice and/or 700 CMR 7.13(3): *Table 12*. The violation clerk notifies the registered owner by first class mail of this notice of liability and, in addition, notifies the Registrar of Motor Vehicles who shall place the matter on record and, upon receipt of a notice of liability, the Registrar shall not renew the registered owner's license to operate the vehicle or the registration of the vehicle until after notice from the violation clerk that all such matters have been disposed of in accordance with applicable law or regulation. If the registered owner is a resident of another state or jurisdiction, the Registrar shall revoke the registered owner's right to operate in the Commonwealth until the matter has been disposed of in accordance with applicable law or regulation.

2. Civil or Criminal Action. The Department may pursue such civil or criminal action as it deems appropriate to collect the fine initially assessed in the violation notice as well as such additional fines or penalties as the Department may assess in accordance with 700 CMR 7.14.

(2) Program Enforcement. Any violation notice based in whole or in part upon the written certification by the Department's designated representative for the purposes of recording such a violation, upon inspection of any photograph or other recorded image, and/or a violation clerk shall be *prima facie* evidence of the facts contained therein and shall be admissible in any administrative or judicial proceeding to adjudicate the liability for such violation. Nothing in 700 CMR 7.00 shall require a violation to be recorded by photographic or other recorded means, but a violation may be based in whole upon the written certification of the Department's designated representative that such violation has occurred.

7.14: continued

(3) *Prima Facie* Responsibility for Stolen Vehicle. The registered owner of any vehicle violating the provisions of 700 CMR 7.14 is *prima facie* responsible for the payment of the fines or penalties that the Department assesses in accordance with 700 CMR 7.13(3)(a) with respect to a violation of 700 CMR 7.14, unless the registered owner has reported in a timely manner to a police agency that the violating vehicle has been stolen, and the violating vehicle remained stolen at the time of the violation of 700 CMR 7.14.

Elaine M. Howle *State Auditor*

February 13, 2020
2019-118

The Governor of California
President pro Tempore of the Senate
Speaker of the Assembly
State Capitol
Sacramento, California 95814

Dear Governor and Legislative Leaders:

As directed by the Joint Legislative Audit Committee, my office conducted an audit of local law enforcement agencies' use of automated license plate readers (ALPR); the following report details the audit's findings and conclusions. In general, we determined that the law enforcement agencies we reviewed must better protect individuals' privacy through ensuring that their policies reflect state law. In addition, we found that these agencies must improve their ALPR data security, make more informed decisions about sharing their ALPR data, and expand their oversight of ALPR users.

We reviewed four agencies in detail that operate ALPR systems—Fresno Police Department, Los Angeles Police Department, Marin County Sheriff's Office, and Sacramento County Sheriff's Office. An ALPR system collects and stores license plate images of vehicles passing in its view and enables law enforcement to track a vehicle's movements over time; such a system raises privacy concerns. State law helps address these concerns by requiring agencies to have policies and safeguards in place to protect their ALPR systems from misuse. However, the agencies we reviewed either did not have ALPR policies or their policies were deficient, and they had not implemented sufficient safeguards. For example, none had audited searches of the ALPR images by their staff and thus had no assurance that the searches were appropriate. Furthermore, three of the four agencies have shared their ALPR images widely, without considering whether the entities receiving them have a right to and need for the images. The statewide survey of law enforcement agencies we conducted found that 70 percent operate or plan to operate an ALPR system, and this raises concerns that these agencies may share the deficiencies we identified at the four agencies we reviewed. Because many of the issues we identified link to the agencies' deficient ALPR policies we recommend that the Legislature direct the California Department of Justice to develop a policy template that local law enforcement agencies can use as a model for their ALPR policies.

Our statewide survey also showed that the period of time law enforcement agencies retain ALPR images varies widely. However, among the four agencies we reviewed none had considered the usefulness of the ALPR images to investigators over time when determining their retention periods. We recommend that the Legislature amend state law to specify a maximum retention period for ALPR images.

Respectfully submitted,

Elaine M. Howle

Summary

Results in Brief

To better protect the privacy of residents, local law enforcement agencies must improve their policies, procedures, and monitoring for the use and retention of license plate images and corresponding data. The majority of California law enforcement agencies (agencies) collect and use images captured by automated license plate reader (ALPR) cameras. The ALPR system is both a real-time tool for these agencies and an archive of historical images. Fixed cameras mounted to stationary objects, such as light poles, and mobile cameras mounted to law enforcement vehicles, capture ALPR images. Software extracts the license plate number from the image and stores it, with the date, time, and location of the scan and sometimes a partial image of the vehicle, in a searchable database. The software also automatically compares the plate number to stored lists of vehicles of interest, called *hot lists* then issues alerts, called *hits* if the plate number matches an entry on the hot list. Agencies compile these hot lists based on vehicles sought in crime investigations and vehicles connected to people of interest—for example, a list of stolen vehicles or of missing persons. We use the term *ALPR data* to describe all the information stored in an ALPR system, including license plate images and hot lists.

Because an ALPR system stores the plate number and image in a database even if the plate number does not match one on a hot list, the American Civil Liberties Union (ACLU) raised concerns in a 2013 report about law enforcement collecting and storing ALPR images related to individuals not suspected of crimes. The ACLU noted that law enforcement officers could inappropriately monitor the movements of individuals such as ex-spouses, neighbors, and other associates—actions that do not respect individuals' privacy. Although ALPR supporters contend that the images are collected in public places where there is no reasonable expectation of privacy, state law has made privacy a consideration when operating or using an ALPR system. Nonetheless, we found that the handling and retention of ALPR images and associated data did not always follow practices that adequately consider an individual's privacy.

Although law enforcement agencies collect ALPR images in public view, and there is no reasonable expectation of privacy regarding a license plate, the use and retention of those images raises privacy concerns. The four local law enforcement agencies we reviewed—Fresno Police Department (Fresno), Los Angeles Police Department (Los Angeles), Marin County Sheriff's Office (Marin), and Sacramento County Sheriff's Office (Sacramento)—have accumulated a large number of images in their ALPR systems, yet most of these images are unrelated to their criminal investigations.

Audit Highlights . . .

Our audit of the use of automated license plate readers (ALPR) at four local law enforcement agencies highlighted the following:

» *Local law enforcement agencies did not always follow practices that adequately consider the individual's privacy in handling and retaining the ALPR images and associated data.*

» *All four agencies have accumulated a large number of images in their ALPR systems, yet most of the images do not relate to their criminal investigations—99.9 percent of the 320 million images Los Angeles stores are for vehicles that were not on a* hot list *when the image was made.*

- *None of the agencies have an ALPR usage and privacy policy that implements all the legally mandated—since 2016—requirements.*
- *Three agencies did not completely or clearly specify who has system access, who has system oversight, or how to destroy ALPR data, and the remaining agency has not developed a policy at all.*
- *Two of the agencies add and store names, addresses, dates of birth, and criminal charges to their systems—some of these data may be categorized as criminal justice information and may originate from a system maintained and protected by the Department of Justice.*

continued on next page . . .

- *Three agencies use a cloud storage vendor to hold their many images and associated data, yet the agencies lack contract guarantees that the cloud vendor will appropriately protect the data.*
- *Three agencies share their images with hundreds of entities across the U.S. but could not provide evidence that they had determined whether those entities have a right or a need to access the images.*

» *Agencies may be retaining the images longer than necessary and thus increasing the risk to individuals' privacy.*

» *The agencies have few safeguards for creating ALPR user accounts and have not audited the use of their systems.*

For example, at Los Angeles only 400,000 of the 320 million images it has accumulated over several years and stores in its database generated an immediate match against its hot lists. In other words, 99.9 percent of the ALPR images Los Angeles stores are for vehicles that were not on a hot list at the time the image was made. Nevertheless, the stored images provide value beyond immediate hit alerts, as law enforcement personnel can search the accumulated images to determine the vehicles present at particular locations and to track vehicles' movements at particular times in order to gather or resolve leads in investigations.

Technology gives governments the ability to accumulate volumes of information about people, raising a reasonable question: How is an individual's privacy to be preserved? Effective in 2016 the California Legislature addressed privacy with respect to ALPR systems through Senate Bill 34 (Statutes of 2015, Chapter 532) (SB 34) by establishing requirements for these systems, including requiring detailed usage and privacy policies that describe the system's purpose, who may use it, how the agency will share data, how the agency will protect and monitor the system, and how long the agency will keep the data. Yet the agencies we reviewed have not implemented all of the requirements in that law.

Law enforcement agencies must first create policies that set clear guidelines for how they will use ALPR data. Setting certain expectations in writing through an ALPR usage and privacy policy helps ensure that agencies operate their ALPR programs in a manner that better protects individuals' privacy. However, none of the four agencies have an ALPR policy that contains all of the required information. In fact, Los Angeles has not developed an ALPR policy at all. The other three agencies did not completely or clearly specify who has system access, who has system oversight, or how to destroy ALPR data. Their poorly developed and incomplete policies contributed to the agencies' failure to implement ALPR programs that reflect the privacy principles in SB 34.

ALPR systems may contain data beyond license plate images. For example, we found that Sacramento and Los Angeles are adding names, addresses, dates of birth, and criminal charges to their ALPR systems, which are then stored in those systems. Some of these data may be categorized as criminal justice information; in addition, the data may originate from the California Law Enforcement Telecommunications System (CLETS), which the California Department of Justice (Justice) maintains. These various types of data require different levels of protection under the law. State law requires these agencies to maintain reasonable security procedures and practices to protect ALPR data from unauthorized access, destruction, use, modification, or disclosure. In addition, we believe that policy from the Criminal Justice Information Services

Division (CJIS) of the U.S. Federal Bureau of Investigation (FBI) models reasonable security measures for law enforcement agencies' ALPR data. CJIS policy specifies operational, administrative, technical, and physical safeguards for each of the areas specified in state law.

Fresno, Marin, and Sacramento use a cloud storage solution to hold their many ALPR images and associated data. Although the three agencies told us their systems comply with CJIS policy, none of them could demonstrate the vetting they performed to confirm that their cloud storage vendor did, in fact, meet the CJIS policy standards. Moreover, none of the contracts these three agencies have with their cloud storage vendors include all necessary data security safeguards. Thus, the agencies lack guarantees that the cloud vendor will provide appropriate protection of their data.

Law enforcement agencies of all types may benefit from guidance to improve their policies and data security practices. We surveyed 391 police and sheriff departments statewide, and of those using an ALPR system, 96 percent stated that they have ALPR policies, and nearly all reported that their ALPR data storage solution complies with CJIS policy. However, it is likely that many of the survey respondents have the same problems we identified at the four agencies we visited. Justice has experience guiding law enforcement agencies to help them adhere to state law and to improve their administrative practices. By developing guidance for local agencies on needed ALPR policy elements, Justice could help them improve the quality and completeness of their policies.

State law allows law enforcement agencies to share ALPR images only with public agencies, and it requires such sharing to be consistent with respect for individuals' privacy. Three of the reviewed agencies share their ALPR images widely using features in the ALPR systems that enable convenient sharing of images with minimal effort. Fresno and Marin have each arranged to share their ALPR images with hundreds of entities and Sacramento with over a thousand entities across the United States. However, we did not find evidence that the agencies had always determined whether an entity receiving shared images had a right and a need to access the images or even that the entity was a public agency. We are concerned that unless an agency conducts verifying research, it will not know who is actually using the ALPR images and for what purpose.

In addition, the agencies have not based their decisions regarding how long to retain their ALPR images on the documented usefulness of those images to investigators, and they may be retaining the images longer than necessary, increasing the risk to individuals' privacy. Fresno's policy is to retain ALPR images for

one year; Sacramento's and Marin's policies specify two years. Los Angeles does not have an ALPR policy, and the lieutenant who administers the ALPR program stated that its protocol is to retain the images for at least five years. However, when we reviewed the agencies' ALPR searches over a six-month period in 2019, we found that personnel for three of the four agencies typically searched for images zero to six months old. Nonetheless, the agencies keep the images far longer.

The agencies we reviewed have few safeguards for the creation of ALPR user accounts and have also failed to audit the use of their ALPR systems. Instead of ensuring that only authorized users access ALPR data for appropriate purposes, the agencies have left their systems open to abuse by neglecting to institute sufficient oversight. Over the years, the media has reported that some individuals within law enforcement used or could use data systems—and sometimes ALPR systems—to obtain information about individuals for their personal use, including to locate places they regularly visit, to determine their acquaintances, and to blackmail them based on this information. ALPR systems should be accessible only to employees who need the data, and accounts should be promptly disabled otherwise. However, the agencies often neglected to limit ALPR system access and have allowed accounts that should be disabled to remain active longer than is prudent. To further ensure that individuals with access do not misuse the ALPR systems, the agencies should be auditing the license plate searches that users perform, along with conducting other monitoring activities. Instead, the agencies have conducted little to no auditing and monitoring and thus have no assurance that misuse has not occurred.

Recommendations

Legislature

To better protect individuals' privacy and to help ensure that local law enforcement agencies structure their ALPR programs in a manner that supports accountability for proper database use, the Legislature should amend state law to do the following:

- Require Justice to draft and make available on its website a policy template that local law enforcement agencies can use as a model for their ALPR policies.

- Require Justice to develop and issue guidance to help local law enforcement agencies identify and evaluate the types of data they are currently storing in their ALPR systems. The guidance should include the necessary security requirements agencies should follow to protect the data in their ALPR systems.
- Establish a maximum data retention period for ALPR images.
- Specify how frequently ALPR system use must be audited and that the audits must include assessing user searches.

Law Enforcement Agencies

To address the shortcomings this audit identified, Fresno, Los Angeles, Marin, and Sacramento should do the following:

- Improve their ALPR policies.
- Implement needed ALPR data security.
- Update vendor contracts with necessary data safeguards.
- Ensure that sharing of ALPR images is done appropriately.
- Evaluate and reestablish data retention periods.
- Develop and implement procedures for granting and managing user accounts.
- Develop and implement ALPR system oversight.

Agency Comments

The four law enforcement agencies we reviewed responded to the draft audit report. Fresno responded that it will use the audit to work to achieve its goal of building trust in its community. Los Angeles responded that it respects individuals' privacy and believes it has policies in place to safeguard information. Nonetheless, it is working on an ALPR policy as required by state law and will perform periodic audits of users' searches. Marin stated it is committed to improvement and will consider the recommendations we made, although it disagreed with several of them. Sacramento stated that it had already begun implementing many of the recommendations, but that it did not agree with how we characterized some of the findings. Justice and the Sacramento County Department of Human Assistance also responded by acknowledging the draft report, although we did not have recommendations directed to either entity.

Introduction

Background

An automated license plate reader (ALPR) is a camera that captures color images of license plates within its field of view. Fixed cameras are mounted on stationary objects, such as light poles, while mobile cameras are mounted on moving objects, such as patrol cars. Software extracts the license plate numbers from the images and stores the images, plate numbers, and dates, times, and locations of the image captures in a searchable database. An *ALPR* system consists of the cameras, the software that reads and converts images of license plates into data, and the searchable database that stores the data. Although the primary focus of each image is the license plate, the image may also show part of the vehicle itself, including individuals within the vehicle, depending on the camera's position. ALPR technology has existed since the 1970s, yet widespread adoption by U.S. law enforcement agencies began only in the mid-2000s. Law enforcement agencies generally view ALPR technology as a valuable tool in achieving their missions.

We conducted a statewide survey of 391 police and sheriff departments, and the survey confirmed that ALPR use is widespread in California: 230 police and sheriff departments currently use an ALPR system, and 36 plan to use one. Table 1 provides an overview of the ALPR systems of the four law enforcement agencies we reviewed as part of this audit.

Table 1
ALPR Systems of Four Audited Law Enforcement Agencies

		NUMBER OF CAMERA SYSTEMS			
LAW ENFORCEMENT AGENCY	NUMBER OF AGENCY PERSONNEL WITH ACCESS TO ALPR DATA	FIXED	MOBILE	CURRENT ALPR VENDOR	DATE AGENCY BEGAN USING CURRENT ALPR VENDOR
Fresno	231	0	8	Vigilant Solutions, LLC	2016
Los Angeles	13,000	3	393	PIPS Technology*	2007
Marin	38	0	3	Vigilant Solutions, LLC	2010
Sacramento	539	33	27	Vigilant Solutions, LLC	2012

* Los Angeles uses PIPS Technology cameras and a user interface from Palantir Technologies, Inc.

An ALPR system is both a real-time tool for law enforcement agencies and an archive of historical information. After the ALPR system identifies a license plate number in an image, it compares the plate number to stored lists of license plate numbers from vehicles of interest, called *hot lists*. Figure 1 shows how an ALPR system uses hot lists to search stored images. Local law enforcement agencies create their own hot lists and also obtain hot lists from state and federal agencies. For example, the California Department of Justice (Justice) provides hot lists to local agencies that include license plate numbers associated with missing persons, gang members, and suspected terrorists. We use the term *ALPR data* to describe all the information stored in an ALPR system, including license plate images and hot lists. Regardless of whether a license plate number matches a plate on a hot list (a *hit*), an ALPR system stores the plate image in a database, creating a searchable archive. Officers may search the database in various ways. For example, they may search for a full license plate number to locate a specific vehicle, search for a partial license plate number to locate a group of vehicles, or search for all vehicles recorded at a particular location at specific times.

Law enforcement agencies can share ALPR data with other public agencies. In the ALPR systems we observed, the agency could choose to share ALPR images only, to share hot lists only, or to share both. Accessing ALPR images shared from other jurisdictions enables agencies to search a broader area, such as across county and state lines. In addition, even if an agency does not operate ALPR cameras itself, it can, through sharing agreements, access ALPR images other agencies collect. Our statewide survey showed that among agencies that operate ALPR systems, roughly 84 percent share their images. Sharing hot lists also enables broader search coverage. For example, an agency could share a hot list that provides license plates linked to wanted individuals with other entities in the region. These entities would then receive hit alerts if their cameras detected those plates.

Figure 1
How ALPR Systems Work

Source: Analysis of David J. Roberts and Meghann Casanova, *Automated License Plate Recognition Systems: Policy and Operational Guidance for Law Enforcement*, International Association of Chiefs of Police, Washington, D.C., 2012.

ALPR Vendors Most Commonly Used in California

Law enforcement agencies typically contract with a third-party vendor for an ALPR system. In our statewide survey, most—70 percent—of those that have an ALPR system reported using a company called Vigilant Solutions, LLC (Vigilant). Figure A.1 in Appendix A summarizes these responses. Three of the agencies we reviewed—the Fresno Police Department (Fresno), Marin County Sheriff's Office (Marin), and Sacramento County Sheriff's Office (Sacramento)—contract with Vigilant. The Vigilant ALPR system provides a user interface to search license plates and the option to share ALPR images and hot lists with other agencies through the Vigilant system. Fresno, Marin, and Sacramento all store their ALPR images on Vigilant's server, which is a cloud service, and share their images with other agencies that subscribe to Vigilant's services. Roughly 22 percent of the survey respondents that have ALPR systems use a company called PIPS Technology. One of the agencies we audited in depth, the Los Angeles Police Department (Los Angeles), purchased its cameras from PIPS Technology, but it stores the images on its own server. Los Angeles uses a software platform called Palantir for the user interface that allows for searches of its ALPR images, and it shares its ALPR images with other agencies in the region that use the Palantir user interface.

Key Elements Law Enforcement Agencies Must Include in Their ALPR Usage and Privacy Policy

- The authorized purpose for using the ALPR system and collecting, accessing, or using ALPR data.
- A description of the job title or other designation of the employees and independent contractors who are authorized to use or access the ALPR system, or to collect ALPR data.
- The training requirements for those employees and independent contractors authorized to use or access the ALPR system, or to collect ALPR data.
- A description of how the ALPR system will be monitored to ensure the security of the information and compliance with applicable privacy laws.
- The purposes of, process for, and restrictions on the sale, sharing, or transfer of ALPR data.
- The length of time ALPR data will be retained, and the process for determining if and when to destroy retained ALPR data.

Source: Analysis of state law.

State Laws Governing ALPR Systems and Data Sharing

With few exceptions, California law requires public agencies that operate and use ALPR systems to implement a usage and privacy policy. The Legislature passed Senate Bill 34 (Statutes of 2015, Chapter 532) (SB 34), effective January 1, 2016, to establish requirements regarding the operation and use of ALPR systems. This law generally requires public agencies, including law enforcement agencies, that operate or use an ALPR system to maintain reasonable security procedures and practices to protect ALPR data, to implement a usage and privacy policy, to make that policy available to the public, and to post that policy on its website should the agency have one, among other provisions. The text box describes required elements of an agency's ALPR usage and privacy policy.

SB 34 does not specify retention periods for ALPR data, although another state law limits the California Highway Patrol (CHP) to retaining its ALPR images for no more than 60 days, unless those images are being used for felony investigations or as evidence. Agencies implementing ALPR programs after January 1, 2016, must also provide an opportunity for public comment before implementing the program.

In 2018 another state law took effect that limits the information law enforcement agencies can share for immigration enforcement purposes and requires Justice to issue guidance to state and local law enforcement agencies regarding these limitations as they apply to law enforcement databases. In October 2018 Justice issued this guidance, which can also serve as best practices for law enforcement agencies on how to lawfully share ALPR images. The guidance encourages law enforcement agencies that maintain databases to inquire about the purpose for which the other law enforcement agency intends to use the information contained in the database. If a law enforcement agency intends to use the information for immigration enforcement purposes, Justice states that law enforcement agencies should require, as a condition of accessing the database, an agreement that stipulates that access will be made only in cases involving individuals with criminal histories, or for information regarding the immigration or citizenship status of an individual. Beyond this guidance and the hot lists Justice provides to local law enforcement agencies, as we describe earlier, Justice plays no other role in ALPR programs.

State law requires law enforcement agencies to maintain reasonable security procedures and practices to protect ALPR data from unauthorized access, destruction, use, modification, or disclosure. These requirements mean that ALPR data are sensitive. For comparison purposes, the California Department of Technology Office of Information Security defines *sensitive data* for state agencies as information that requires special precautions to protect it from unauthorized use, access, disclosure, modification, loss, or deletion. In addition to ALPR images and hot lists, a law enforcement agency can enter other information into its ALPR system, such as personal information and criminal justice information. *Personal information* is information that identifies or describes an individual, including name or physical description. SB 34—whose purpose was, in part, to institute reasonable privacy standards for the operation of ALPR systems—requires that ALPR data be protected with reasonable operational, administrative, technical, and physical safeguards to ensure their confidentiality. Thus, personal information in an ALPR system also requires appropriate and reasonable safeguards. *Criminal justice information*, as defined by the Criminal Justice Information Services Division (CJIS) of the U.S. Federal Bureau of Investigation (FBI), refers to data necessary

for law enforcement and civil agencies to perform their missions. This includes information about vehicles associated with crimes, when accompanied by personal information.

When CJIS provides criminal justice information to law enforcement agencies, it requires those agencies to comply with a minimum set of information technology (IT) security requirements to protect the information, and these requirements can serve as best practices for agencies to follow. Because an agency can enter personal information and criminal justice information into its ALPR system, either as part of a hot list or as a comment added as part of a license plate search, all ALPR data are sensitive and require appropriate safeguards.

Privacy Concerns Related to ALPR Systems

Although law enforcement agencies collect ALPR images in public view, and there is no reasonable expectation of privacy regarding a license plate, the use and retention of those images raises privacy concerns. The agencies we reviewed accumulate a large number of images in their ALPR systems. For example, Sacramento recorded 1.7 million images in one week, and Los Angeles currently has more than 320 million images in its ALPR database that it has accumulated over several years. The majority of these images do not generate hit alerts. For example, data from the Los Angeles system show that at the time of our review only 400,000 (0.1 percent) of the 320 million images Los Angeles has stored generated an immediate match against its hot lists for vehicles associated with car thefts, felonies, or warrants. However, the stored images provide value beyond immediate hit alerts, as law enforcement personnel can search the accumulated images to target the whereabouts of vehicles at particular times or locations. This storage, retention, and searching of the images, although valuable to law enforcement, has the potential to infringe on individuals' privacy.

Organizations such as the American Civil Liberties Union (ACLU) have criticized law enforcement agencies' collection of ALPR images because of the risks it poses to privacy. The ACLU stated that increasing numbers of cameras, long data retention periods, and sharing of ALPR images among law enforcement agencies allow agencies to track individuals' movements in detail, and it has voiced concerns that such constant monitoring can inhibit the exercise of free speech and association. The ACLU has also raised concerns that law enforcement officers could inappropriately monitor the movements of individuals such as ex-spouses, neighbors, and other associates. There have been occurrences of officers misusing law enforcement databases like those that contain ALPR images. In 2016 the Associated Press conducted a review that found more than

325 instances between 2013 and 2015 in which law enforcement officers who misused databases were fired, suspended, or resigned, and more than 250 instances of reprimands or lesser discipline related to such misuse. For example, the Associated Press reported on a police sergeant in Ohio who pleaded guilty to stalking his ex-girlfriend after he searched law enforcement databases for personal information about her and also the woman's mother, her close male friends, and students from a course she taught.

Law enforcement has recognized the privacy concerns posed by the operation of ALPR systems, yet it has also pointed to the usefulness of the systems. For example, the Police Executive Research Forum (police research forum) and the Mesa Police Department (Mesa) in Arizona conducted a study of the effectiveness of ALPR systems for Mesa's auto theft unit in 2011. They found that officers got nearly three times as many stolen vehicle hits and made about twice as many vehicle recoveries when using an ALPR system, compared to officers performing manual license plate checks. Law enforcement has also found ALPR systems useful for investigations. For example, the assistant chief of the Minneapolis Police Department told the police research forum in 2012 that the department located a vehicle associated with a domestic kidnapping case by searching ALPR images. With regard to the retention of ALPR images, the International Association of Chiefs of Police (chiefs' association) acknowledged the tension between long retention periods and privacy. The chiefs' association noted that a reluctance to destroy records may stem from investigators' experience that seemingly irrelevant or untimely information may acquire new significance as an investigation brings further details to light. However, the chiefs' association also recognized the privacy risks of ALPR images. In a 2009 report, it stated that mobile ALPR cameras could record license plate numbers of vehicles parked at addiction counseling meetings, doctors' offices, and staging areas for political protests. The chiefs' association argued that establishing policies regulating ALPR programs could mitigate privacy concerns, and it produced a report in 2012 offering guidance on developing such policies.

Federal Guidance on Privacy Protection

As far back as 1973, the federal government acknowledged that individuals' privacy needs to be protected from arbitrary and abusive record-keeping practices. The U.S. Department of Health, Education, and Welfare, as it was then known, identified principles for the fair collection, use, storage, and dissemination of personal information by electronic information systems. Over time the principles were adapted into information practices. According to the U.S. Government Accountability Office, a revised version of the information practices was published in 1980 by

the Organization for Economic Cooperation and Development (OECD)—an international organization that works with governments, policymakers, and citizens on social, economic, and environmental challenges—and with some variation, these practices form the basis of privacy laws in the United States and around the world. The OECD updated its eight information practices in 2013, and California's lawmakers included many of these information practices in SB 34. For example, the OECD's information practices describe the importance of an organization specifying the purposes for which it is collecting and using data; keeping data reasonably safe from the risk of unauthorized access, destruction, use, modification, and disclosure; being open about policies involving data; and being accountable for complying with the information practices.

The U.S. Supreme Court (court) has not directly decided a case that we could find addressing ALPR images, although it has decided cases involving other electronic surveillance. Because license plates are in plain view, the collection of license plate images by law enforcement is not a per se violation of the Fourth Amendment's prohibition against unreasonable searches and seizures. However, the court has found that certain electronic data that reveal individuals' movements over an extended period of time, if gathered, do at some point impinge on privacy. The court has specifically addressed these issues with respect to the use of global positioning system (GPS) data and cell-site location information, which is location information linked to cellphone use. Cell-site location information—similar to ALPR images—provides data on an individual's continuous movements over a potentially unlimited period of time. In a 2018 case involving cell-site location information, the court stated that "[a] person does not surrender all [privacy] protections by venturing into the public sphere." The court continued, "With access to [cell-site location information], the Government can now travel back in time to retrace a person's whereabouts," and noted that the information was collected on everyone, not only "persons who might happen to come under investigation." Thus, even though case law on electronic data that enable tracking of individuals' movements over an extended period of time is still evolving, the court has recognized that privacy implications exist for such data, which can include ALPR images.

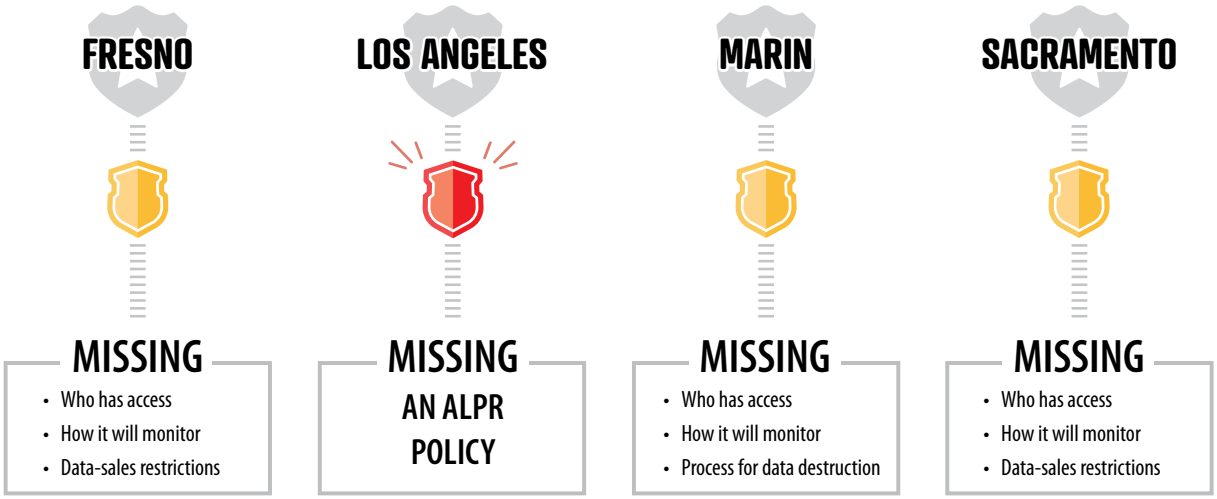
Audit Results

The Four Law Enforcement Agencies We Reviewed Have Not Consistently Fulfilled Requirements Designed to Protect Individuals' Privacy

California's lawmakers drafted current ALPR law to institute reasonable privacy standards for the operation of ALPR systems. As we discuss in the Introduction, technology gives governments the ability to accumulate significant amounts of information about people, raising the question of how individuals' privacy is to be preserved, and the federal and state governments and courts have issued laws and guidance—including, in the case of California, SB 34—related to the use of such information.

Yet local law enforcement agencies—specifically the four agencies we reviewed—have not done all they could to respect individuals' privacy by incorporating the requirements and concepts in SB 34 into their operations. With few exceptions, SB 34 requires a public agency that operates or uses an ALPR system to implement a usage and privacy policy that describes how the system will be used and monitored to ensure the security of the ALPR data accessed or used. The agencies we reviewed have mature ALPR programs—they have been using their current ALPR vendors since as far back as 2007. However, as we discuss later, we found that the agencies have risked individuals' privacy by not making informed decisions about sharing ALPR images with other entities, by not considering how they are using ALPR data when determining how long to keep it, by following poor practices for granting their staff access to the ALPR systems, and by failing to audit system use.

State law requires law enforcement agencies to administer ALPR programs in ways that respect individual's privacy and protect ALPR data. The law also requires the agencies to have a written usage and privacy policy that sets forth how they will operate and use their ALPR systems. These usage and privacy policies must include the following elements:



- Authorized purposes for using the ALPR system and collecting the data.
- A description of the job title or other designation of individuals who are authorized to use or access the ALPR system.
- Training requirements for the authorized individuals who will use or access the ALPR system.
- A description of how the agency will monitor the ALPR system to ensure the security of the data and compliance with privacy laws.

- The purpose of, process for, and restrictions on the sale, sharing, or transfer of ALPR data.
- The length of time the ALPR data will be retained and the process used to determine if and when to destroy retained ALPR data.

Agencies may expand on these required elements as needed to ensure that their collection, use, maintenance, sharing, and dissemination of ALPR data are consistent with respect for individuals' privacy.

None of the four agencies we reviewed have an ALPR policy that contains all of the required information, thereby contributing to the agencies' failure to implement programs that reflect the privacy principles in SB 34. Los Angeles has not developed an ALPR policy, and the policies of the other three agencies are deficient in various ways, as Figure 2 shows. For example, all have failed to fully address how they will monitor system use to ensure compliance with applicable privacy laws, which likely contributed to their failure to institute regular audits of user searches. The agencies could have avoided concerns such as those shown in Figure 2, which we describe later in this report if they had developed more thorough policies. Clear policies that define the purposes and procedures for monitoring ALPR systems help agencies meet their goals.

Figure 2
The Agencies' ALPR Policies Are Missing Required Key Elements for Respecting Individuals' Privacy

Source: State law and the agencies' ALPR policies as well as interviews with the agencies' management.

As a result of our audit, each of the four agencies is making or considering changes to its policies. The ALPR administrators at Fresno, Marin, and Sacramento agreed that their policies did not contain one or more elements required by state law. They also explained that they did not include certain policy requirements they believed did not apply to their use of ALPR data. For example, Sacramento's ALPR policy does not describe ALPR data-selling restrictions because, according to the ALPR administrator, Sacramento does not currently sell ALPR data. However, because their policies are incomplete and do not specify what personnel cannot do when interacting with their ALPR systems, these three agencies left out critical guidance to staff and increased the risk that staff would use the ALPR system inappropriately. The program administrators at Fresno, Marin, and Sacramento told us that they will consider changes to their policies subsequent to our audit. Although the lieutenant who serves as Los Angeles' program administrator initially believed that the agency's many IT policies covered the ALPR program, when we brought the deficiencies in oversight to his attention, he acknowledged the need for Los Angeles to have an ALPR policy and began drafting one in October 2019.

Fresno, Marin, and Sacramento have incomplete ALPR policies, which increases the risk that staff will use the ALPR systems inappropriately.

We are concerned that the policy deficiencies we found are not limited to the agencies we reviewed, and thus law enforcement agencies of all types may benefit from guidance to improve their policies. We surveyed 391 police and sheriff departments statewide about their ALPR programs, and many stated that they have ALPR policies and that these policies are publicly available. Because state law requires each agency that operates or uses an ALPR system to implement a usage and privacy policy, and to make the policy available to the public in writing and post it conspicuously on the agency's website, we inquired about how agencies throughout the State were adhering to these requirements. Of the law enforcement agencies using an ALPR system, 96 percent responded that they have ALPR policies. Of this group, at least 70 percent stated that they have posted their policy to their website. A breakdown of the law enforcement agencies' responses to our survey can be found at http://auditor.ca.gov/reports/2019-118/supplemental.html. However, we believe it is likely that many of the survey respondents will have the same problems with the quality and completeness of their policies as the four agencies we visited. As we discuss in the Introduction, Justice has issued guidance to law enforcement agencies to help them understand how to adhere to state law regarding the sharing of information for immigration enforcement purposes. Given Justice's experience and broad reach in the law enforcement community, developing guidance for local law enforcement agencies on needed policy elements could improve the quality and completeness of their policies.

The Law Enforcement Agencies Have Often Placed Their ALPR Data at Risk

Administering ALPR programs in ways that respect individuals' privacy requires a thoughtful and considered approach to data management that the agencies we reviewed have not always taken. Specifically, three of the agencies have agreed to share their images widely with little knowledge of the receiving entities and their need for the images. Moreover, the agencies have not based their decisions regarding retention of images on their actual usefulness to investigators and may be retaining the images longer than necessary, increasing the risk to individuals' privacy.

The Agencies May Not Be Adequately Protecting Their Sensitive ALPR Data

Law enforcement users can upload personal information and criminal justice information into the Vigilant system through hot lists and open text fields.

Law enforcement agency personnel can upload or enter sensitive information into their ALPR systems, which may require specific safeguards. As we discuss in the Introduction, this sensitive information could include personal information and criminal justice information. In addition, these data may originate from the California Law Enforcement Telecommunications System (CLETS)—a system that allows law enforcement agencies to obtain information from federal and state databases, such as arrests and fingerprint records from Justice. In reviewing multiple agencies' ALPR policies, we found several that stated that their ALPR systems may contain information obtained through CLETS. Additionally, in a security and compliance memorandum, Vigilant acknowledged that law enforcement users can upload personal information and criminal justice information into the Vigilant system through hot lists and open text fields.

For example, in addition to license plate images, Sacramento and Los Angeles add data to their systems such as criminal charges and warrant information, in combination with personal information such as names, addresses, dates of birth, and physical descriptions. The added data can be in the form of hot lists that agencies use to search for license plates of interest, as shown in Figure 1 in the Introduction, or they can be data that are entered into open text fields. By running an automated function each day, Sacramento extracts information from several databases and uploads the information as hot lists to its ALPR system. Los Angeles does not create its own hot lists, but it regularly downloads hot lists from Justice and the Los Angeles County Sheriff's Department, then uploads the hot lists to its ALPR system. Another way that information in addition to license plate images gets into an ALPR system is by users adding it to open text fields. Data entered into open text fields are generally associated with license plate searches.

When conducting a search, staff are prompted to enter a case number and the purpose of the search, and they may do so by typing in text. The ALPR systems store this open text in their audit logs, which detail user activity and the reasons for the activity.

In contrast to Sacramento and Los Angeles, Marin and Fresno occasionally upload hot lists into their ALPR systems. With regard to open text fields, we reviewed the audit logs for Marin and Fresno and did not find personal information in combination with other sensitive information in the six months of search records we studied. However, the possibility exists that law enforcement personnel could enter sensitive information into open text fields during ALPR searches.

When an IT system lacks sufficient security, the system is at risk of misuse and data breaches.

When an IT system lacks sufficient security, the system is at risk of misuse and data breaches. Systems containing personal information and criminal justice information must have adequate protections to assure individuals' privacy. However, as discussed in the Introduction, ALPR data can originate from different sources, and the source of the information may drive some of the required IT security protocols. On one hand, CJIS developed a policy that dictates the minimum standards that law enforcement agencies must follow to protect criminal justice information they obtain from the FBI (CJIS policy). On the other hand, users of Justice's CLETS system must follow the protections outlined in the CLETS *Policies, Practices and Procedures* document, which describes formal security measures law enforcement agencies must follow to access and protect CLETS information in addition to the CJIS policy requirements.

Further, it can be difficult to know what protections to apply to data from different sources. For example, an individual's address obtained by searching the Department of Motor Vehicles database through CLETS would be subject to Justice's data security requirements, but the same information obtained from a local law enforcement agency database would not. Moreover, the personal information Los Angeles and Sacramento have entered into their ALPR search records does not include its origin, making the required level of protection unclear.

Given these issues and the need to identify a standard that can be uniformly applied to ALPR data regardless of their source, we believe that CJIS policy provides reasonable security measures for law enforcement agencies to protect all of their ALPR data. State law requires these agencies to maintain reasonable security procedures and practices to protect ALPR information from unauthorized access, destruction, use, modification, or disclosure. CJIS policy specifies operational, administrative, technical, and physical safeguards for each of these areas. For example, CJIS policy

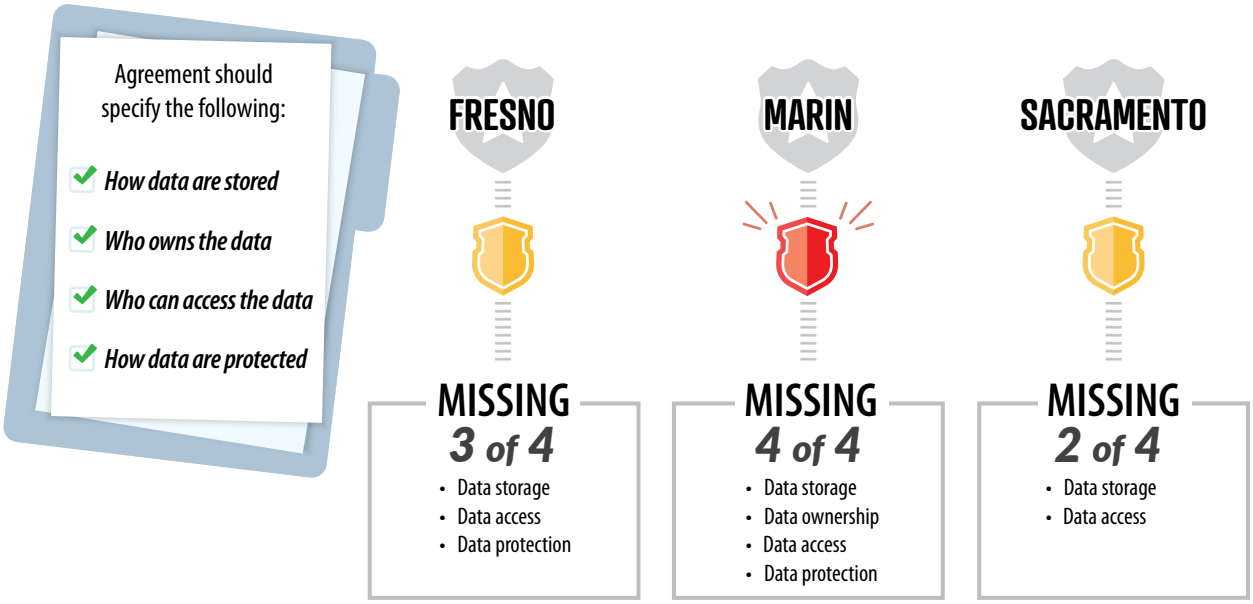
requires agencies to ensure that their sensitive data are encrypted, and it limits physical access to specific personnel authorized to access the data. Nearly all of the 230 agencies that reported using ALPR systems in response to our statewide survey—including Fresno, Los Angeles, Marin, and Sacramento—reported that their ALPR data storage solution complies with CJIS policy.

We are concerned that the agencies using Vigilant may not be protecting their ALPR data in conformity with CJIS policy standards.

Nevertheless, we are concerned that the agencies using Vigilant may not be protecting their ALPR data in conformity with CJIS policy standards. Fresno, Marin, and Sacramento store their ALPR data in Vigilant's cloud database, and CJIS policy requires agencies to ensure that the cloud vendors that store and process their criminal justice information comply with its security requirements. Such requirements include controlling physical access to sensitive data, encrypting the data, and conducting background checks and training for employees with access to criminal justice information. In addition, before providing sensitive data to a vendor, CJIS requires law enforcement agencies to identify necessary authentication and monitoring controls, such as two-factor authentication and activity logging. Because the Vigilant software is by default accessible via the Internet, an officer may be able to access it using his or her personal device. The ability to access ALPR data in this manner bypasses the agencies' network security safeguards and violates CJIS policy requiring agencies to monitor and control access to the data.

One way to prevent users from signing in to the Vigilant system using personal devices would be to implement authentication controls, such as two-factor authentication. Two-factor authentication involves a second level of verification, such as a passcode sent to a specific device, and allows agencies to require that the passcode be sent only to department-issued devices. Although Vigilant offers two-factor authentication, Marin, Fresno, and Sacramento do not use it. CJIS policy requires two-factor authentication only for systems that directly access federal systems. However, this requirement recognizes that two-factor authentication is more secure than a basic username and password login for systems like Vigilant that are accessible over the Internet. Thus, two-factor authentication could serve as a best practice for agencies to prevent inappropriate access to their ALPR systems.

In addition, monitoring the activity logs can alert program administrators to unauthorized access of their ALPR systems. CJIS policy requires agencies to monitor access to systems that contain criminal justice information. Vigilant provides its clients with logs of network addresses that have accessed their ALPR systems, and although Marin's ALPR program administrator stated that he reviews these logs, administrators from Sacramento and Fresno confirmed that they do not. Reviewing the logs of system access



could help the agencies monitor access to their ALPR systems and detect whether someone accesses the ALPR system from an unrecognized network address.

When law enforcement agencies provide sensitive information to ALPR vendors, their contracts should provide assurance that the vendor will adequately protect that information. CJIS policy recommends several provisions that law enforcement agencies should consider including in their contracts to ensure that cloud vendors adequately protect criminal justice information. For example, a contract that protects a law enforcement agency's data would make clear that the agency owns the data it uploads into the ALPR system, that the agency's data will not be stored outside of the United States or Canada, and that employees at the cloud vendor who have access to unencrypted criminal justice information will undergo training and background checks. Without these contract provisions, agencies lack guarantees that the cloud vendor will implement appropriate protections of their data.

We found that the three agencies storing ALPR data in Vigilant's cloud—Fresno, Marin, and Sacramento—do not have sufficient data security safeguards in their contracts.

We found that the three agencies storing ALPR data in Vigilant's cloud—Fresno, Marin, and Sacramento—do not have sufficient data security safeguards in their contracts. As Figure 3 shows, none of the agencies' contracts with Vigilant meet all of the CJIS data security requirements. For example, the agencies' contracts do not state that Vigilant will store their data in the United States or Canada. Marin's contract does not make clear that Marin owns the data it adds to the ALPR system. It is important to note that Vigilant claims to implement data security measures that comply with CJIS policy. In a security and compliance memorandum, Vigilant lists steps it takes to encrypt data that may contain criminal justice information, as well as physical and network security safeguards it has in place to prevent unauthorized access to its ALPR cloud. We have no basis to dispute Vigilant's claims, but without strong contract provisions requiring CJIS safeguards, the three agencies have no guarantee that Vigilant will protect their data. As CJIS policy states, ambiguous contract terms can lead to controversy over data privacy and ownership rights, whereas a contract that clearly establishes data ownership acts as a foundation for trust that the cloud vendor will protect the privacy of the agency's data.

Figure 3
The Agencies' Existing Agreements With Vigilant Do Not Contain Adequate Data Security Measures

Source: Agencies' agreements with Vigilant and CJIS policy requirements.

A lack of IT department involvement and outdated contracts likely contributed to the data security weaknesses we observed. Fresno, Marin, and Sacramento have IT units that administer their systems and ensure compliance with Justice's data security requirements. However, at Fresno and Marin, the IT units are responsible for network security and have little oversight of the ALPR systems' data security. According to Fresno's IT manager, Fresno's main IT unit does not manage user accounts or monitor access to the ALPR system. Fresno has an IT analyst separate from the main IT unit who currently helps administer user accounts and provides technical support for the ALPR system; however, his background is not in network security. A deputy in Marin's auto theft unit manages Marin's entire ALPR system—including user accounts and training. This arrangement is not ideal, since individuals outside of an agency's IT department may lack the expertise necessary to implement adequate data security safeguards. According to Sacramento's ALPR administrator, Sacramento's IT unit recently assumed responsibility for the ALPR system, but before about April 2019, an officer outside of the IT unit administered the ALPR system.

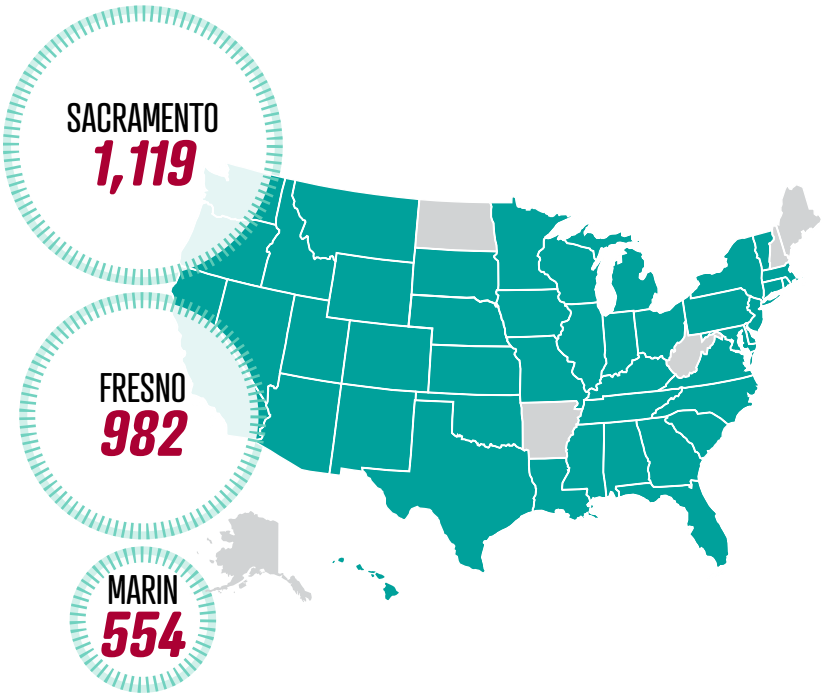
In addition, with the exception of Sacramento, the agencies have not updated their contract terms with Vigilant for several years. The agencies' contracts renew each year when the agencies pay a service fee to Vigilant. As a result, Fresno has not updated its contract for three years, and Marin for nine years. Sacramento updated

its contract terms with Vigilant in September 2019, after using its previous agreement for seven years. Agreements that are not kept current may reflect outdated practices or omit needed assurances, increasing the risk that data are not protected.

Los Angeles was not able to demonstrate that it has an agreement in place to protect its ALPR data from inappropriate access.

Los Angeles was not able to demonstrate that it has an agreement in place to protect its ALPR data from inappropriate access. Los Angeles stores its ALPR data in a city-controlled data center rather than in a vendor cloud like the agencies that use Vigilant. Nevertheless, Los Angeles contracts with Palantir for IT support, and the FBI's 2017 audit of Los Angeles' data security practices identified Palantir as an entity with access to criminal justice information; thus we expected Los Angeles' agreement with Palantir to meet CJIS policy requirements. CJIS policy requires agencies to enter into agreements with vendors that access their criminal justice information. The agreements are to include an FBI-drafted security addendum that outlines specific safeguards a vendor agrees to put in place to comply with CJIS policy and an acknowledgment by the vendor of the great harm that may arise from misusing sensitive data. However, in response to our request for its agreement with Palantir, Los Angeles produced two expired contracts and a 2018 commodities agreement extending its licensing and support for Palantir software. None of these documents contained the FBI-drafted security addendum. Thus Los Angeles was not able to demonstrate that its agreement with Palantir contains appropriate data protections to ensure that Palantir employees with access to Los Angeles' ALPR data will not use the data for unauthorized purposes.

The Agencies Have Not Made Informed ALPR Image-Sharing Decisions



A significant feature of ALPR systems is their ability to share information with users across other organizations. A variety of requirements and guidance exist regarding how law enforcement agencies should share ALPR data, including images. ALPR images contain the date, time, and location of the scanned license plate and largely relate to vehicles that are not linked to crimes. The risk that the images will be misused rises as the images are more widely distributed, and there are numerous examples of law enforcement officers misusing their access to various databases. For example, an Associated Press article from 2016 reported a case from the state of Georgia in which an officer accepted a bribe to search for a woman's license plate number to see whether she was an undercover officer. Although such an example of misconduct is not representative of all law enforcement personnel, it illustrates the need for appropriate safeguards over law enforcement tools. Once a license plate is tied to an individual's identity, which is easy for a law enforcement officer to do, ALPR images may make it possible to track that individual's movements.

State law allows local law enforcement agencies to share ALPR images only with public agencies and requires sharing to be consistent with respect for individuals' privacy. Further, guidance that Justice issued in October 2018 addresses the agencies' governance of databases in relation to immigration enforcement, and this guidance provides a best practice for sharing in general. In the guidance, Justice encourages law enforcement agencies to inquire regarding the purpose for which an agency seeking access to their database intends to use the information and then, as a condition for accessing the database, to require agreements ensuring appropriate use of the data if its purpose includes immigration enforcement. The chiefs' association also recommends that law enforcement agencies maintain ALPR image-sharing records that include information on how the requester intends to use the images. The four agencies we reviewed asserted that they share ALPR images with others on the principle that these entities have a right and need to know the information. Because following state law necessitates establishing an agency's identity, i.e., the right to know, and Justice's guidance suggests establishing the purpose, i.e., the need to know, for which an agency intends to use the images, the agencies' position seems consistent with state law and Justice's guidance.

However, we had difficulty determining whether the reviewed agencies have actually made informed decisions about sharing their ALPR images. Fresno and Marin have each approved sharing their ALPR images with hundreds of entities, and Sacramento with over a thousand. Many of these entities are within California, but they also span most of the other 49 states. Figure 4 shows the entities' locations, illustrating how widely distributed access to these ALPR images is. In addition, we could not always ascertain how the agencies determined whether an entity receiving access to images had a right and need to access them or even whether the entity was a public agency. We reviewed the lists of entities and found one that appeared to be a non-public entity and others that were unidentifiable because they were listed only by initials. For example, Fresno, Marin, and Sacramento all approved an entity listed as the Missouri Police Chiefs Association (Missouri Association); however, this is not a public agency but rather a professional organization that provides training opportunities and advocates for pro-law enforcement legislation. However, none of the agencies could demonstrate that they had evaluated the Missouri Association before sharing images, nor could they tell us why the Missouri Association had a right to those images. When we inquired with Vigilant, an official explained that despite the name, it is the Missouri State Highway Patrol—a law enforcement agency—that uses the account. The lists contain many other entities whose identities and law enforcement purposes are not immediately evident. Unless a law enforcement agency verifies each entity's identity and its right to view the ALPR images, the agency cannot know who is actually using them. Although the three agencies reviewed their sharing arrangements to varying degrees during our audit, none could demonstrate that they perform this kind of verification before sharing their ALPR images.

We could not always ascertain how the agencies determined whether an entity receiving access to images had a right and need to access them or even whether the entity was a public agency.

Figure 4
Three Agencies Have Authorized Sharing With Entities Located in States Across the Nation

Source: Analysis of data-sharing reports from the Vigilant system.

Similarly, even when an entity is a verified public agency, it is not always evident that agencies are making informed decisions by establishing the entity's need for the ALPR images. Fresno, Marin, and Sacramento all authorized sharing with the Honolulu Police Department, but given the distance between California and Hawaii and the limited instances of cars traveling between the two states, it is uncertain whether the Honolulu Police Department has a persuasive need for these ALPR images. Fresno's ALPR administrator agreed that not a great deal of thought went into its decision to share with the Honolulu Police Department, and he believes that it probably authorized the share because the entity was a law enforcement agency. In contrast, Marin's ALPR administrator believes that sharing ALPR images widely is important because the more information available to law enforcement, the more successful it can be in its mission. However, sharing decisions should also consider the importance of protecting individuals' privacy. Each authorized share exposes the ALPR images to greater risk of misuse; therefore, the agencies should approach each sharing request individually based on the requester's actual need for the images.

The three agencies have also relied on features in Vigilant's software rather than establishing their own practices for sharing their ALPR images. A sound approach to sharing would include establishing each requesting entity's need to know and right to know and keeping records of the assessment and resulting decision. However, none of these agencies maintain records outside of the Vigilant user interface of when or why they agreed to share with particular entities, and neither Marin nor Sacramento includes a process for approving sharing requests in their ALPR policies as state law requires. Fresno has outlined procedures that incorporate these elements, but it has not followed them. Fresno's ALPR administrator explained that its procedures require more information than an entity requesting a share provides in the Vigilant user interface, and there has been frequent turnover in the position responsible for approving sharing requests.

Current administrators at the three agencies have difficulty understanding when and how sharing occurred because the information the Vigilant user interface displays has changed over time. The status of a sharing relationship in the Vigilant system depends on whether the involved entities' accounts are *active* or *inactive*. Active entities have a current account with Vigilant while inactive entities do not. An agency may agree to share with an active entity that later becomes inactive. Images cannot be shared between active and inactive entities. However, unless an agency deliberately removes a sharing relationship with an inactive entity, that sharing relationship remains and would become operational if an inactive entity decided to renew its account with Vigilant and become active once more. Previously, Vigilant had structured its user interface so that inactive entities did not appear in the sharing report that shows a list of entities with whom an agency had agreed to share. Recently, Vigilant changed its interface to make inactive entities visible. Whether an entity is active is not apparent from the sharing report alone.

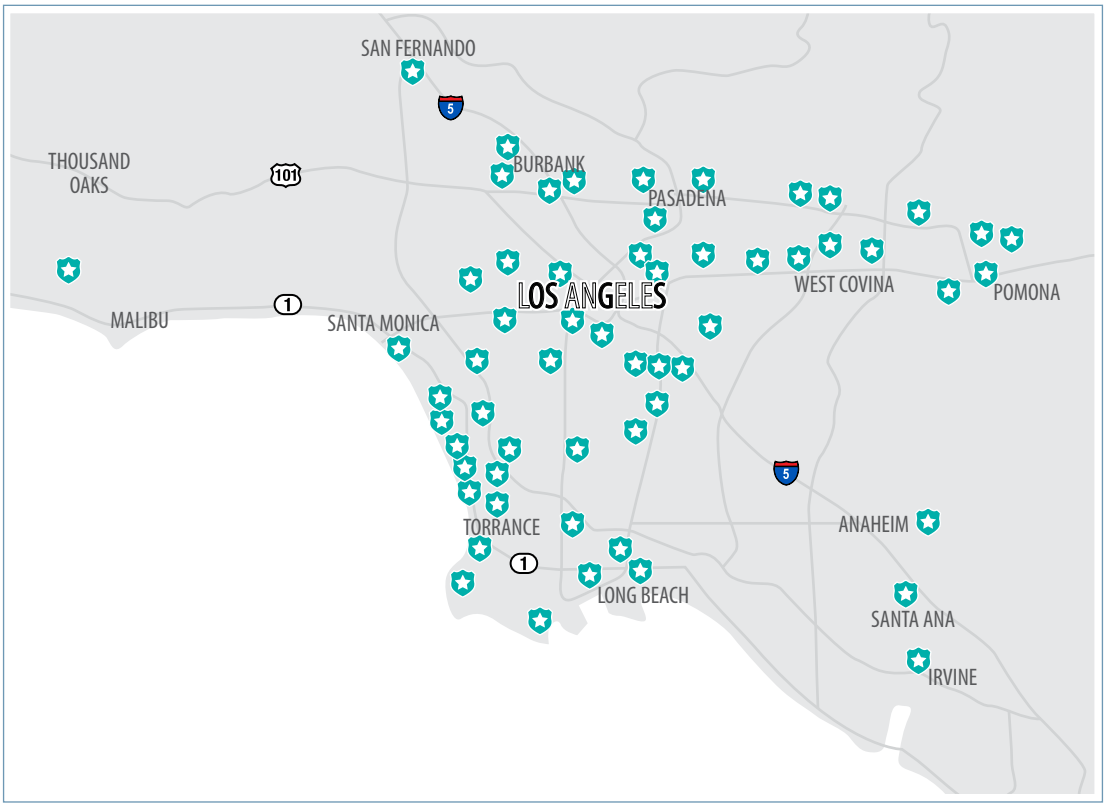
A change in the vendor's user interface and not keeping records of authorized shares made it difficult for ALPR administrators to track current sharing relationships.

This change in the user interface and the fact that agencies kept no records of the shares they have authorized made it difficult for ALPR administrators at the agencies to know the status of current sharing relationships. For example, in 2014 a prior ALPR administrator for Marin had agreed to share images with three U.S. Immigration and Customs Enforcement (ICE) agencies. In December 2018, Marin's current ALPR administrator used the Vigilant user interface to review the sharing report and noted that the report included no ICE agencies. However, when he reviewed the report again in August 2019—at our request—three ICE agencies appeared on the list. We discussed this discrepancy with Vigilant, which explained that the three ICE agencies were currently inactive. When Marin's ALPR administrator reviewed the sharing report in December 2018, inactive agencies did not appear on the report, but Vigilant subsequently changed its user interface so that inactive

agencies did appear. Although the ICE agencies could not access Marin's ALPR images because they were inactive, to effectively end the share, Marin needed to remove the authorization for sharing with the ICE agencies, which Marin has since done.

According to Marin's ALPR administrator, it is now the department's position that it will not share images with ICE, but if it had remained unaware that the sharing relationships existed and the ICE agencies had become active again, it would have been sharing its ALPR images with them without knowing it was doing so. Had Marin kept its own records of the sharing to which it had agreed, it would have been aware that it had agreed to share with ICE in the past, and it would have been able to remove those shares promptly. Sacramento had also authorized sharing to ICE agencies in the past. When the current ALPR administrator reviewed the list of entities with which it shared images with in response to our audit, he removed those shares as well. In contrast, Fresno had never authorized any sharing relationship with an ICE agency.

Although none of the agencies using Vigilant currently share with ICE agencies, all three had authorized shares with entities with border patrol duties. Despite not having implemented any agreements related to this sharing since Justice issued its guidance in October 2018, the three agencies were all sharing with the San Diego Sector Border Patrol of U.S. Customs and Border Protection at the start of our audit. During our audit, Sacramento removed the share to this agency. Marin and Sacramento had also authorized sharing with an agency listed as "California Border Patrol," and although Sacramento removed this share at the same time it removed the shares to ICE, Marin continues to share with this entity. Fresno continues to share with the Customs and Border Protection National Targeting Center. Although Sacramento had also authorized a share to this entity, it removed this share during our audit. All of these entities' duties could potentially intersect with immigration enforcement. Justice's guidelines for sharing data are particularly relevant in these cases, yet the agencies were either unaware of these guidelines or had not implemented them for their ALPR systems.



Justice's guidelines for sharing data are particularly relevant, yet Fresno, Marin, and Sacramento were either unaware of these guidelines or had not implemented them for their ALPR systems.

Of the four agencies we reviewed, only Fresno and Sacramento share hot lists they create, and they do so through a more controlled process than for sharing ALPR images. Vigilant's user interface enables hot-list sharing in addition to sharing ALPR images. In contrast to its wide sharing of ALPR images, Fresno shares the hot lists it occasionally uploads with only three law enforcement agencies in the nearby region. Sacramento has agreed to share six hot lists with eight law enforcement agencies in California. With each agency, Sacramento took the additional step of developing a memorandum of understanding providing guidelines for sharing the hot lists and the signature of the chief official at each agency.

Although the memorandum does not specify which hot lists Sacramento will share, it does provide a record of the entities with which hot-list sharing occurred, unlike its sharing of ALPR images for which no independent records exist outside the Vigilant user interface.

In contrast with the other reviewed agencies, Los Angeles has limited its sharing of ALPR images to entities within a regional structure established for its ALPR program through a federal grant that helped fund its ALPR program. As Figure 5 shows, Los Angeles shares ALPR images with 58 other law enforcement agencies in the region. It does not have agreements to share its ALPR images with any federal agencies, including ICE. According to the lieutenant who administers the ALPR program, Los Angeles decided to share images only with entities using the same software so that it could maintain greater control over its ALPR images. It has a formal agreement with each agency, which provides a record of its sharing decisions.

Figure 5
Los Angeles Shares Images With 58 Law Enforcement Agencies

Source: Analysis of data-sharing memorandums of agreement.

The Agencies' Image Retention Decisions Are Unrelated to How They Use the Images

The four agencies we reviewed retain ALPR images for varying periods of time. Our review determined that with the exception of CHP, state law does not mandate a specific retention period for ALPR images collected, accessed, or used by public agencies, nor does state law delineate the factors public agencies should use in determining those periods. Instead, state law requires that public agencies other than CHP that use or operate ALPR systems specify, in the agency's usage and privacy policy, the length of time ALPR data will be retained and the process that the agency will use to determine if and when to destroy retained ALPR data. Fresno's policy is to retain ALPR images for a minimum of one year, Sacramento's policy is to retain ALPR images for a minimum of two years, and Marin's policy is to retain images for two years. Although the agencies' policies describe their retention periods as minimums, in practice the agencies have configured their ALPR systems to delete images older than their specified retention periods. Fresno and Sacramento each download and retain images for longer than their prescribed retention policies if the images are relevant to investigations. Los Angeles does not have an ALPR policy, but the lieutenant who administers the ALPR program stated that it adheres to the city's Administrative Code, which requires data to be retained for a minimum of five years.

None of the agencies considered the images' utility over time when establishing their retention periods.

None of the agencies considered the images' utility over time when establishing their retention periods. Fresno based its ALPR image retention period on state law, which allows some cities to destroy certain video monitoring records after one year. Marin did not cite state law in its policy; its former ALPR administrator stated that when setting a two-year retention period, he considered other agencies' retention periods and the retention requirements for litigation related to investigations. Both Marin's and Fresno's ALPR administrators stated that they were not aware of any studies of how useful older images in their ALPR systems were to their personnel. In its ALPR policy, Sacramento cited a general state law that prohibits some cities from destroying records less than two years old. The lieutenant who oversees Sacramento's ALPR program acknowledged that the agency has not conducted any statistical analysis to determine how long it needs to retain ALPR images. However, he stated that, although he was not involved in drafting the original policy, two years made sense considering federal regulations, which permit retention of criminal intelligence information for no longer than five years. The lieutenant cited those federal regulations as a best practice for retaining sensitive data, connecting the ALPR images to a tenet of federal regulations that law enforcement agencies should keep criminal intelligence information as long as it is useful, even though ALPR data are not criminal intelligence.

To develop a retention policy that better protects individuals' privacy, an agency might begin by considering the time period during which ALPR data are most useful to law enforcement. To assess the usefulness of these images over time, we reviewed the four agencies' ALPR searches over a six-month period—between late January and September 2019, depending on when we visited the agencies—and found that personnel at three of the four agencies typically searched for ALPR images zero to six months old. When searching ALPR systems, investigators can enter search dates to target specific periods of interest. For example, on March 29, 2019, a Sacramento investigator searched for ALPR images from six days earlier—March 23—indicating that images less than one week old were relevant to that search. As Table 2 shows, we found that the searches agency personnel at the three agencies performed infrequently included older images. In fact, when investigators at Fresno, Marin, and Sacramento specified date ranges, most searches were of ALPR images that were less than six months old. In contrast, Los Angeles had a relatively even distribution of searches between those less than one year and those more than one year old. The Vigilant system defaults to showing the 50 most recent records when investigators do not specify a search date range. We analyzed 46,000 records for searches that did not specify a date range and found that investigators for Marin, Fresno, and Sacramento frequently did not seek further than the 50 default records, indicating that they generally were not interested in older ALPR images.

Table 2
The Agencies Usually Search for ALPR Images That Are Six Months Old or Less

			PERCENTAGE OF SEARCHES FOR IMAGES OF A SPECIFIED AGE			
	RETENTION PERIOD	TOTAL SEARCHES OVER 6-MONTH PERIOD ANALYZED	0 TO 6 MONTHS	6+ MONTHS TO 1 YEAR	1+ TO 2 YEARS	MORE THAN 2 YEARS
Fresno*	1 year	850	92%	6%	1%	1%
Los Angeles	**5 years**	28,874	42	8	29	21
Marin*	2 years	26	88	8	0	4
Sacramento*	2 years	4,262	84	4	11	1

Source: Analysis of search records from the agencies' ALPR systems between late January and September 2019, depending on when we visited the agency.

* The percentage of searches listed in this table beyond an agency's retention period are likely from their personnel searching data belonging to other agencies with longer retention periods.

Other states have established retention periods that are generally shorter than the lengths of time California's local law enforcement agencies are retaining ALPR images. The National Conference of State Legislatures identified at least 13 states that mandate maximum ALPR image retention periods. As the text box shows, these vary widely, from three minutes in New Hampshire to three years in Florida. Nevertheless, the majority of these states have retention periods that do not exceed six months.

In contrast, 230 California agencies responding to our survey reported that they use ALPR systems, and nearly 80 percent of these—180 agencies—stated that they retain their ALPR images for more than six months. About 20 of those agencies indicated that they retain ALPR images for more than five years. Figure A.2 in Appendix A summarizes these responses.

ALPR Image Retention Periods for 13 States

New Hampshire	***3 minutes***
Maine	21 days
Minnesota	60 days
Montana	90 days
North Carolina	90 days
Tennessee	90 days
Arkansas	150 days
Nebraska	180 days
-------- LONGER THAN SIX MONTHS --------	
Utah	270 days
Colorado	365 days
Vermont	540 days
Georgia	900 days
Florida	***3 years***

Source: National Conference of State Legislatures, *Automated License Plate Readers: State Statutes,* March 15, 2019, and review of the listed states' ALPR laws and guidelines.

Note: These states allow retention for longer periods for specific reasons, such as data used in investigations.

The length of time law enforcement agencies need to retain ALPR images will vary depending on how they use the images. Narrow use—for one purpose only, such as locating stolen cars—could dictate a short retention window. Personnel we interviewed at each of the four agencies stated that investigators rely primarily on recent images to investigate some types of crimes, such as auto theft. In contrast, using ALPR images to solve complex crimes could necessitate a longer retention window. For example, first-degree murder can be prosecuted at any time; therefore, a homicide investigator may be able to use ALPR images of any age to help solve a case. The four agencies we reviewed have access to information they can use to evaluate whether their ALPR retention periods are reasonable. Their systems record each time personnel search ALPR images, and these search records show the date of the search and the parameters used to narrow the search, such as location, date, and time. Agency administrators can analyze these activity logs to understand the images personnel are searching for and their relative ages.

Marin and Sacramento have allowed expired hot lists to remain in their ALPR systems for far longer than their specified retention periods. Unlike ALPR images, hot lists cannot be automatically deleted by the Vigilant system. Instead, the agencies define a period after which the hot list becomes inactive—meaning the ALPR system no longer generates alerts from the list—but the list remains stored in Vigilant's servers until the agency deletes it. We found that Marin and Sacramento are retaining hot lists longer than necessary because their administrators were unaware of the need to manually delete them. They assumed that their Vigilant system would automatically delete inactive hot lists according to the designated purge schedule, as it does ALPR images. For example, Marin retained an inactive hot list of sex offenders for five years—three years longer than its two-year retention period for ALPR images. Sacramento has retained multiple hot lists for as long as six years—four years longer than its retention period for ALPR images. The types of lists ranged from a hot list of Sacramento County sex offenders to a warrants hot list. When we brought the inactive hot lists to the agencies' attention,

the administrators at Marin and Sacramento acknowledged that the age of the hot lists exceeded the agency's retention period, and they were willing to delete the hot lists.

Law enforcement agencies should consider both the usefulness of the ALPR images and individuals' privacy when deciding how long to retain the images. Cost, however, is not a factor. According to the lieutenant who oversees Los Angeles' ALPR program, the images are useful to investigators and the cost of storing ALPR images is not a significant factor in determining how long to store them. Nevertheless, two studies by a consultant to the National Institute of Justice and the chiefs' association concluded that law enforcement agencies must consider the trade-offs between privacy concerns and the utility of retaining the ALPR images they capture and store.

The Law Enforcement Agencies Have Failed to Monitor Use of Their ALPR Systems and Have Few Safeguards for Creating ALPR User Accounts

Instead of ensuring that only authorized users access their ALPR data for appropriate purposes, the agencies we reviewed have made abuse possible by neglecting to institute sufficient monitoring. ALPR systems should be accessible only to employees who need the data and who have been trained in using the system. However, the agencies often neglected to limit ALPR system access, to provide appropriate training to individuals with access, or to monitor accounts. Similarly, to ensure that individuals with access do not misuse the system, the agencies should audit the license plate searches users perform. Instead, the agencies conduct little to no auditing and thus have no assurance that misuse has not occurred.

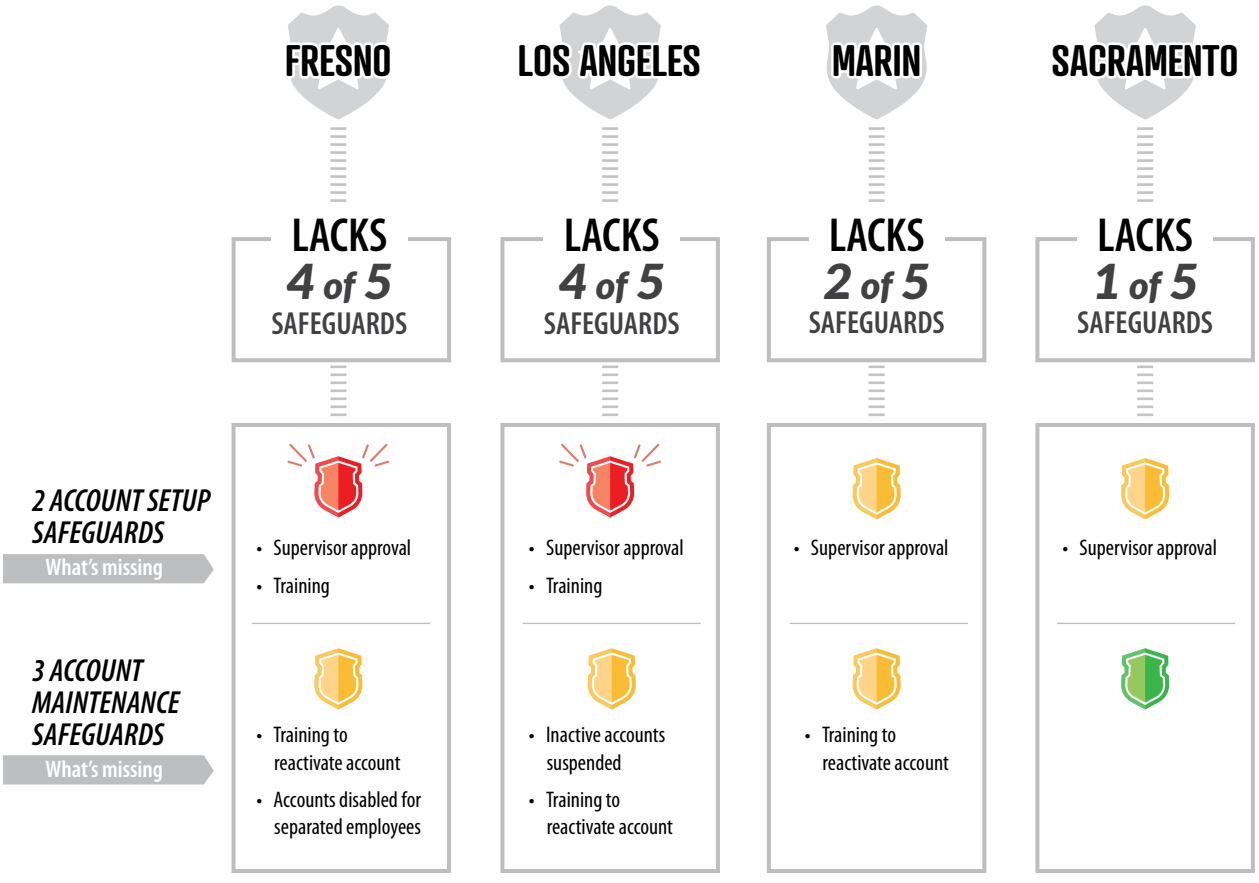
Best Practice Safeguards for Establishing and Managing User Accounts

Account Setup

- Supervisor approval is a prerequisite for account access.
- ALPR training is a prerequisite for account access.

Account Maintenance

- Accounts defined as *inactive* are suspended.
- ALPR training is required for users linked to inactive accounts to regain active status.
- Accounts are deleted when employees separate from the agency.



Source: CJIS policy and the *State Administrative Manual*.

The Agencies Need Stronger User-Access Safeguards

The four agencies we reviewed all failed to follow one or more best practices related to user access. State law requires agencies to maintain reasonable security procedures and practices to protect ALPR data from unauthorized access, and the text box lists five best practices for user access, from initiating an account to disabling it when an employee separates from the agency. Figure 6 shows the four agencies' status in implementing these best practices. Each ALPR administrator stressed the concept of "need to know, right to know" as a key for data security; however, no agency followed all of the best practices that would help establish the need to know and right to know. For example, no agency had a requirement

that supervisors approve staff requests for creating ALPR user accounts. Such a step would provide assurance that the staff member receiving the account had both a need and a right to access the information in the ALPR system. Los Angeles is particularly lax in this area because the protocol of its IT division is to include its ALPR software on each computer it assigns to staff, regardless of their position. Thus, staff who do not perform functions related to the ALPR system nevertheless have access to the system. In contrast, Sacramento follows all but one of the best practices listed in the text box. In doing so, it requires staff to prove their initial and continued need for ALPR data, among other access requirements.

Figure 6
The Agencies Lack Many Best Practice Safeguards for Establishing and Managing User Accounts

Source: Agencies' policies, applicable procedures and protocols, and interviews with the agencies' management.

Agencies could reduce instances of unnecessary access by ensuring that only those staff whose current work assignments require access to ALPR data have that access. The ALPR administrators at Marin and Los Angeles believe that supervisory approval is unnecessary

because ALPR users are already privy to data they consider more confidential than ALPR data, such as criminal justice information. However, these views do not consider that ALPR systems capture images indiscriminately, irrespective of the criminal history of the individual who is driving the vehicle, and the images allow law enforcement to track individuals. Given that agencies retain these images for several months or years, a user could combine them with personal information from separate data sources to produce a great number of details about someone's life, such as his or her political or religious affiliation. Without proper safeguards, staff could conduct this form of surveillance on any driver. In fact, the chiefs' association acknowledged this possibility and warned that increasing ALPR use and data sharing would enhance the potential for surveillance. Thus, as the chiefs' association concluded, limiting ALPR access to employees with the needs and the rights to access these data is a good step toward protecting the individuals whose privacy would be violated if the data were misused.

Limiting ALPR access to employees with the needs and the rights to access these data is a good step toward protecting the individuals whose privacy would be violated if the data were misused.

Ensuring that ALPR users are properly trained is another weakness among the agencies we reviewed. Three of the agencies do not ensure that all of their ALPR users are properly trained. The chiefs' association called the training of authorized ALPR users "a critical accountability measure." However, as Figure 6 shows, neither Fresno nor Los Angeles requires all ALPR users to complete ALPR training before initially obtaining system access. Although Los Angeles offers ALPR training, the detective who conducts this training confirmed that it is not required before users can access the ALPR system. Fresno's policy encourages such training; however, its ALPR administrator confirmed that the agency does not provide training to all of its users. Further, Marin's ALPR administrator stated that although Marin provides training when staff first receive access to the ALPR system, it does not require staff to renew their training in order to reactivate their accounts following long periods of not using the system. Without sufficient training, there is little assurance that ALPR users know and understand agency ALPR policies, including recent changes, or are aware of the limits on how they may use ALPR data.

Although the Fresno ALPR administrator agrees that the agency's safeguards surrounding user access are currently inadequate and plans to improve them, the ALPR administrators at Los Angeles, Marin, and Sacramento believe their current practices are acceptable. The administrators at Marin and Los Angeles are reluctant to alter their agencies' existing practices because they believe ALPR data are not as sensitive as other law enforcement data. We disagree with these views because, as we mention previously, ALPR data are sensitive and state laws require reasonable security procedures and practices to protect them. A basic protection for data that must be treated as sensitive is to limit who can access them.

In addition, as we mention earlier, the ALPR images law enforcement agencies collect largely involve vehicles that are not associated with crimes, and if the images were analyzed, the data could reveal behavior patterns and preferences that law enforcement could use to conduct surveillance on individuals. For example, according to a 2012 newspaper article, the New York Police Department collected license plate numbers of vehicles parked near a mosque. The department was purportedly trying to identify terrorist activities. Although the department justified this data collection as part of its strategy to identify potential criminal activities, it targeted mosques and collected license plate numbers at times without any leads or proof of terrorist connections. Given the sensitivity of the information collected in this example, access safeguards would ensure that only those staff who have a need and right to access an ALPR system would possess that privilege.

Law enforcement agencies could further improve safeguards by disabling employees' accounts once they separate or after long periods of nonuse. We reviewed Marin's and Sacramento's processes for disabling accounts of separated employees. Both agencies follow a similar approach, relying on one part of the organization providing information to another. Sacramento produces a personnel transfer and separation list every two weeks, and the IT security group uses it to identify accounts to close. Although the IT security group generally disabled accounts promptly after receiving the list, we found that the contents of the list were not always current. For example, in one instance, a separated employee did not appear on the list until 46 days after his separation date in June 2019. According to a human resources specialist, employees submit their resignation paperwork late at times, which causes human resources to not process this paperwork until after an employee has left the department. Marin's ALPR administrator said that he removes ALPR accounts once he receives a department-wide email notifying him of an employee's resignation or termination. He also stated that he checks ALPR accounts every few months to verify that active accounts match active employees. However, for one employee, the administrator did not disable his ALPR access until two months after he resigned in October 2019. In fact, the administrator did not disable this employee's access until our office pointed out that the account was still active. The fact that Marin and Sacramento did not disable some accounts as necessary is problematic because the former employees could log into their accounts and access ALPR data from the web-based version of the ALPR systems on any Internet-capable device, not just office devices.

The fact that Marin and Sacramento did not disable some accounts as necessary is problematic because the former employees could log into their accounts and access ALPR data from the web-based version of the ALPR systems on any Internet-capable device, not just office devices.

With regard to Los Angeles and Fresno, Los Angeles' network manager described an automated process for deleting accounts linked to overall network access, which reasonably aligned with best practices. Conversely, Fresno's ALPR administrator said that

he periodically reviews the names of employees with user accounts but started doing so only in September 2019 when he learned of our audit. We did not test deleted accounts at either agency. Deleting accounts prevents separated employees from continuing to access ALPR data and is thus critical to protecting ALPR data and individuals' privacy.

The Agencies Have Failed to Audit ALPR Users' Searches to Ensure That Individuals' Privacy Is Protected

State law requires law enforcement agencies that operate, access, or use ALPR systems to protect their ALPR data—including ALPR images—from unauthorized access, destruction, use, modification, or disclosure. The law specifically requires them to describe and implement a policy detailing how they will monitor their ALPR systems. According to state law, agencies that access or use ALPR systems must also conduct periodic system audits. In its reports on managing ALPR systems, the chiefs' association stated that conducting audits aids in discouraging unnecessary or inappropriate use of the data; in addition, when agency policies include a strong auditing requirement, this reassures the public that their privacy interests are recognized and respected.

Even though law enforcement agencies that use or access ALPR systems can monitor searches simply by reviewing search records for red flags, they should also conduct audits as required by state law.

A primary form of auditing to prevent misuse is reviewing the searches users conduct in the ALPR systems. Users conduct searches for specific license plates. Even though law enforcement agencies that use or access ALPR systems can monitor searches simply by reviewing search records for red flags, such as an unknown user account, they should also conduct audits as required by state law. An audit entails a more rigorous approach, including evaluating risk and randomly selecting test items for review. Developing an audit of license plate searches, for example, would involve determining how many searches to review, how to select test items, and how frequently to conduct the audit. Law enforcement agencies have often found evidence of misuse of their databases, showing the need for auditing. For example, a news article reported that CHP investigated 11 cases of database misuse in 2018, including three involving officers improperly looking up information on license plates through CLETS without a need to know the information. The large datasets of ALPR images, dating back at least one year, that the four reviewed agencies maintain can be analyzed to reveal the daily patterns of vehicles that can be linked to individuals and their activities—most of whom have not engaged in criminal activity. A member of law enforcement could misuse ALPR images to stalk an individual or observe vehicles at particular locations and events, such as doctors' offices or clinics and political rallies. Despite these risks, the agencies we reviewed conduct little to no auditing of users' searches.

We asked key officials at the three agencies using the Vigilant system why they had not audited the searches users performed and found that either they were unaware of the auditing requirement in state law or the auditing they did conduct did not include user searches. Fresno's policy states that it should conduct audits on a regular basis, but the ALPR administrator told us he believed audits are the responsibility of the Audits and Inspections Division within the department. However, the sergeant responsible for audits and inspections—who took charge in January 2018—responded that he was not aware of the requirement until our audit. Similarly, the Marin ALPR administrator was unaware of the state law requiring audits of ALPR systems until our audit and thus had not been conducting them. At Sacramento, the policy states that the ALPR administrator will conduct periodic audits of user searches. Even though Sacramento administrators had been monitoring some system functions, they had not audited searches of the older ALPR images. The officer administering the ALPR program until April 2019 said that she did not conduct these audits because her predecessor had not informed her that it was necessary. The ALPR program transferred to a new division in April, and according to the current ALPR administrator, limited staff resources have prevented him from instituting these audits.

Although the agencies have not been conducting audits, we considered the possibility that an agency employee or member of the public may have reported instances of ALPR misuse. We searched each agency's records of internal affairs investigations from January 1, 2016, to the present for cases involving ALPR misuse and did not find any such cases. However, we do not consider this proof that no instances of ALPR misuse occurred. Given that the agencies were not regularly auditing their systems, ALPR misuse may have occurred and gone unnoticed and unreported.

All four agencies must address the quality of information they will need to audit user searches. In Sacramento, for 66 percent of searches, users left case number and search reason fields blank.

To engage in meaningful auditing of their system users, all four agencies need to address the quality of the information users enter into the system as part of their searches. Before allowing users to conduct searches, Fresno, Los Angeles, and Marin require users to enter case numbers and reasons for the search; however, this is not happening consistently. We reviewed six months of user queries at the three agencies and found that users entered a wide variety of information in the case number field. For example, users at Los Angeles simply entered "investigation" into this field as well as descriptions of vehicles and actual case numbers. In contrast, Sacramento does not require users to enter either case numbers or reasons. Our review showed that in 66 percent of searches, Sacramento's users left both fields blank. When users fail to enter any information or fail to include appropriate detail, identifying misuse through audits becomes nearly impossible.

Los Angeles faces additional hurdles in performing meaningful auditing because its ALPR administrators do not have immediate access to data on user searches. Instead, according to the chief data officer, administrators need to request that a software engineer from Los Angeles' ALPR software contractor build and run a query in the system to obtain these data. In 2015 Los Angeles recognized a need to fix this software limitation to enable administrators to audit user searches. The chief data officer for Los Angeles stated that, although an initial upgrade provided an audit dashboard tool for administrators, subsequent software upgrades made this tool unusable, and the company that provides the software is developing a new one. He said that it is Los Angeles' goal to have a new audit dashboard tool by the end of the first quarter of 2020, at which point he will work with the appropriate division within the department to develop an audit plan. Although we agree that an audit tool will facilitate audits, we believe it was entirely possible for Los Angeles to obtain the data on user searches, and thus it could have implemented a process for periodic system audits as state law requires, despite the difficulties.

Fresno, Marin, and Sacramento do not have adequate policies or processes in place for conducting meaningful audits.

The other three agencies also do not have an adequate policy or process in place for conducting meaningful audits. For example, Fresno's ALPR policy states that it should conduct periodic audits, but its policy does not specify how frequently it will audit its ALPR system, who will perform those audits, who will review and approve the audit results, and how long it will retain the audit documents. Specifics such as these provide a clear road map for planning, conducting, documenting, and resolving audits. When followed, the agencies will have records demonstrating their necessary oversight. Marin's latest policy—dated July 2019—also fails to cover these necessary details. Fresno and Marin began reviewing user queries subsequent to the beginning of our audit, but in the absence of an adequate policy or formal plan, their methodologies are lacking. For example, although Fresno began conducting audits that included a random sample of user searches, staff have not developed a formal plan and provided us only with handwritten notes on their methodology. Marin's ALPR administrator has not instituted audits and is simply monitoring license plate searches by looking for instances in which the user did not enter a reason for the search or entered a reason that does not make sense, such as an investigation that does not exist. In addition, at both Fresno and Marin, the individual conducting the audits or monitoring is also a system user, creating a conflict when acting as a system monitor or auditor. Without sound methodologies, the agencies cannot be confident that they have sufficient protocols in place to detect misuse.

Other Areas We Reviewed

To address all the audit objectives approved by the Joint Legislative Audit Committee (Audit Committee), we reviewed two additional subject areas: whether the agencies offered opportunities for the public to comment on their ALPR programs and whether the Sacramento County Department of Human Assistance (Human Assistance) continues to operate an ALPR program.

Three Agencies Provided Information to the Public on Their ALPR Programs

State law requires that public agencies implementing ALPR programs after January 1, 2016, offer an opportunity for the public to comment about those programs. These opportunities increase public awareness that law enforcement agencies are using electronic means to collect information about vehicles in the community and offer a way for the public to provide feedback about the programs. The four agencies we reviewed began using ALPR before 2016 and consequently were not required to offer an opportunity for public comments. Nonetheless, three of the agencies took some steps to communicate with the public about their ALPR programs. Los Angeles and Sacramento published documents describing their ALPR programs, and at a Fresno City Council meeting, the public had an opportunity to comment on the selected ALPR vendor before the council voted on a new contract. The minutes from that meeting reflect that the public made no comments. This transparency helps foster public trust in law enforcement and government as a whole.

Human Assistance No Longer Operates an ALPR Program

Our audit scope included reviewing the ALPR program of Human Assistance, which provides Sacramento County residents with employment assistance and supportive services. Human Assistance contracted with Vigilant for three years to access ALPR images. Human Assistance did not operate its own cameras, and it used the ALPR images to investigate welfare fraud. According to the administrator of its ALPR program, Human Assistance ended its program in 2018 after determining that investigative staff rarely searched the images, so the program could not justify the cost. On November 1, 2018, Human Assistance deleted its ALPR user accounts, leaving the administrator's account active for internal review. On May 31, 2019, Human Assistance's ALPR agreement with Vigilant expired, and the administrator no longer has access to the account. Therefore, we did not perform any additional audit work pertaining to Human Assistance.

Recommendations

Legislature

- To better protect individual's privacy and to help ensure that local law enforcement agencies structure their ALPR programs in a manner that supports accountability for proper database use, the Legislature should amend state law to do the following:
  - Require Justice to draft and make available on its website a policy template that local law enforcement agencies can use as a model for their ALPR policies.
  - Require Justice to develop and issue guidance to help local law enforcement agencies identify and evaluate the types of data they are currently storing in their ALPR systems. The guidance should include the necessary security requirements agencies should follow to protect the data in their ALPR systems.
  - Establish a maximum data retention period for ALPR images. The Legislature should also establish a maximum data retention period for data or lists, such as hot lists, that are used to link persons of interest with license plate images.
  - Require periodic evaluation of a retention period for ALPR images to ensure that the period is as short as practicable.
  - Specify how frequently ALPR system use must be audited and that the audits must include assessing user searches.
  - Specify that those with access to ALPR systems must receive data privacy and data security training. The Legislature should require law enforcement agencies to include training on the appropriateness of including certain data in an ALPR system, such as data from CLETS.

Law Enforcement Agencies

- To ensure that their ALPR policies contain all of the required elements as specified in state law, by August 2020, Fresno, Los Angeles, Marin, and Sacramento should review their policies and draft or revise them as necessary. Also by August 2020 these agencies should post their revised policies on their websites in accordance with state law.

- To protect ALPR data to the appropriate standard, Fresno, Los Angeles, Marin, and Sacramento should do the following:
  - By August 2020, identify the types of data in their ALPR systems and, as they review or draft their ALPR policies, ensure that they clarify the types of information their officers may upload into their ALPR systems, such as, but not limited to, information obtained through CLETS.
  - By August 2020, perform an assessment of their ALPR systems' data security features, and make adjustments to their system configurations where necessary to comply with CJIS policy best practices based on that assessment.
- To ensure that the agreements with their cloud vendor offers the strongest possible data protections, by August 2020, Fresno, Marin, and Sacramento should enter into new contracts with Vigilant that contain the contract provisions recommended in CJIS policy.
- To ensure that ALPR images are being shared appropriately, the specific agencies noted should do the following:
  - By April 2020, Fresno, Marin, and Sacramento should review the entities with which they currently share images, determine the appropriateness of this sharing, and take all necessary steps to suspend those sharing relationships deemed inappropriate or unnecessary.
  - As Los Angeles develops its ALPR policy, it should be certain to list the entities with which it will share ALPR images and the process for handling image-sharing requests.
  - By August 2020, Marin and Sacramento should each develop a process for handling ALPR image-sharing requests that includes maintaining records separate from the Vigilant system of when and with whom they share images. The process should verify a requesting agency's law enforcement purpose for obtaining the images and consider the requesting agency's need for the images. The process should be documented in the agency's ALPR policy and/or procedures.
  - By August 2020, Fresno should revise its written procedures for ALPR image-sharing, as necessary, to ensure that it follows those procedures.

- To minimize the privacy risk of retaining ALPR images for long periods of time, Fresno, Los Angeles, Marin, and Sacramento should do the following:

  - By August 2020, review the age of the ALPR images their personnel are searching for and ensure that their retention periods for ALPR images are based on department needs. Each agency should reflect in its ALPR policy the updated retention period and state in its policy that it will reevaluate its retention period at least every two years.

  - Include in their ALPR policies a retention period for data or lists, such as hot lists, used to link persons of interest with license plate images, and create necessary processes to ensure that those data unrelated to ongoing investigations are periodically removed from their ALPR systems.

- To ensure that ALPR system access is limited to agency staff who have a need and a right to use ALPR data, Fresno, Los Angeles, Marin, and Sacramento should do the following:

  - By April 2020, review all user accounts and deactivate accounts for separated employees, inactive users, and others as necessary.

  - Ensure that their ALPR policies specify the staff classifications, ranks, or other designations that may hold ALPR system user accounts and that accounts are granted based on need to know and right to know.

  - By August 2020, develop and implement procedures for granting and managing user accounts that include, but are not limited to, requiring that supervisors must approve accounts for users, providing training to users before granting accounts, suspending users after defined periods of inactivity, and requiring regular refresher training for active users and training for users before reactivating previously inactive accounts. Each agency should also ensure that it has procedures in place to deactivate an account immediately for an account holder who separates from the agency or who no longer needs a user account.

- To enable auditing of user access and user queries of ALPR images, Fresno, Los Angeles, Marin, and Sacramento should do the following:

  - By April 2020, assess the information their ALPR systems capture when users access them to ensure that the systems' logs are complete and accurate and that they form a reasonable basis for conducting necessary, periodic audits.

  - Ensure that their ALPR policies make clear how frequently they will audit their ALPR systems, who will perform those audits, who will review and approve the audit results, and how long they will retain the audit documents. Each agency should have in place by February 2021 an audit plan that describes its audit methodology, including, but not limited to, risk areas that will be audited, sampling, documentation, and resolution of findings.

  - By June 2021, implement their audit plans and complete their first audits.

We conducted this performance audit under the authority vested in the California State Auditor by Government Code 8543 et seq. and in accordance with generally accepted government auditing standards. Those standards require that we plan and perform the audit to obtain sufficient, appropriate evidence to provide a reasonable basis for our findings and conclusions based on our audit objectives. We believe that the evidence obtained provides a reasonable basis for our findings and conclusions based on our audit objectives.

Respectfully submitted,

Elaine M. Howle

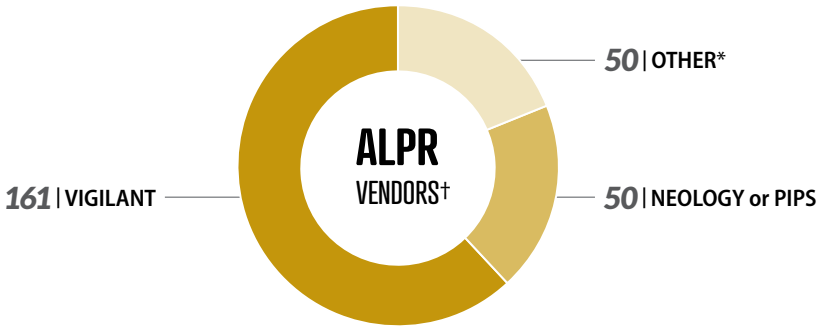
Appendix A

Summary of ALPR Survey Responses

The Audit Committee requested that we determine ALPR use among law enforcement agencies statewide. Specifically, the Audit Committee asked us to determine whether agencies use ALPR information, what vendors they use, and whether law enforcement agencies have policies and procedures to govern their use and sharing of ALPR information. We surveyed 391 county sheriffs and municipal police departments statewide. We relied upon information from the California State Sheriffs' Association, the California Police Chiefs Association, and the FBI to obtain assurance that our list of statewide local law enforcement was reasonably comprehensive.

Agencies That Did Not Respond to Our Survey

- Anderson Police Department
- Barstow Police Department
- Del Norte County Sheriff's Office
- Lakeport Police Department
- Lodi Police Department
- Mendocino County Sheriff's Office
- Mount Shasta Police Department
- Oceanside Police Department
- San Francisco Sheriff's Department
- Siskiyou County Sheriff's Department



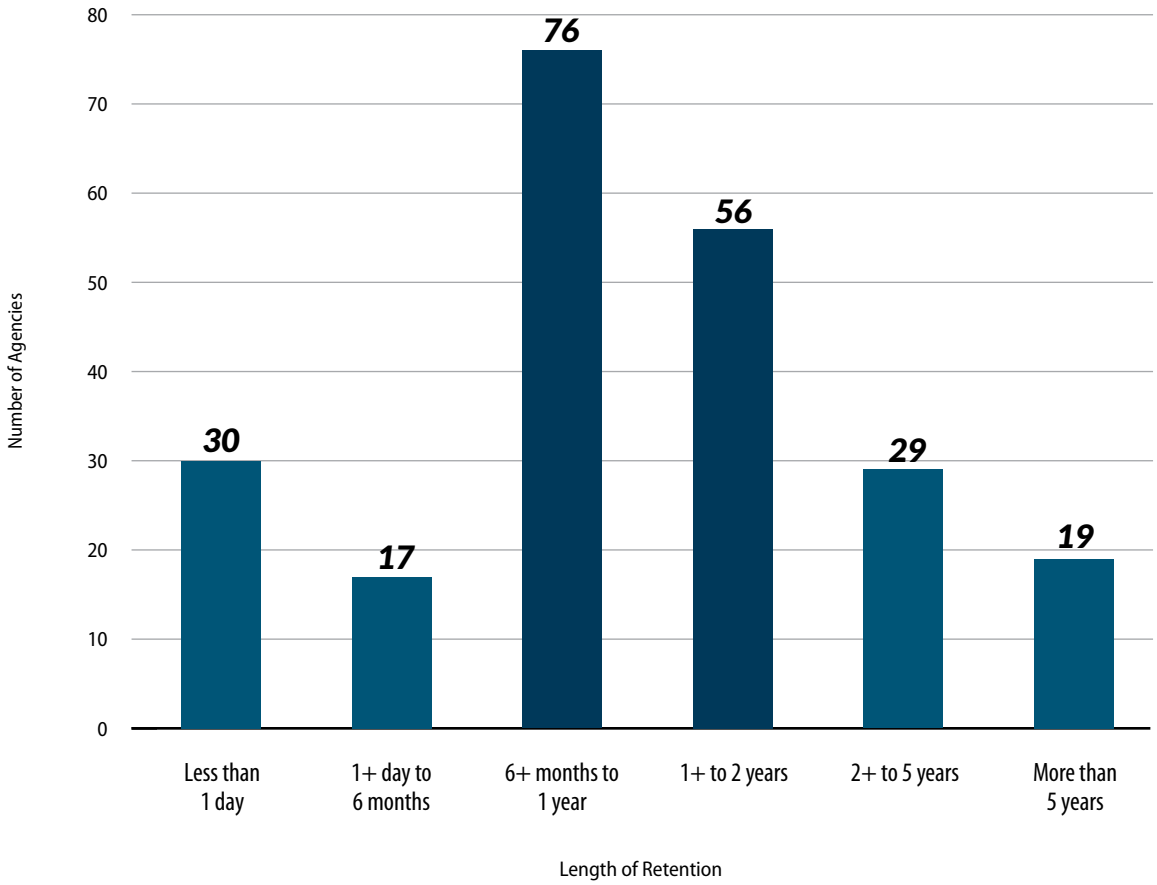
Source: Analysis of survey responses.

We received 381 responses (97 percent) to the 391 surveys we sent. Ten agencies we surveyed did not respond. The text box lists those agencies. A breakdown of the law enforcement agencies' responses to our statewide survey can be found at http://auditor.ca.gov/reports/2019-118/supplemental.html. The discussion here summarizes the survey results.

Summary of Results From Agencies That Reported Using ALPR Systems

In responding to our survey, law enforcement agencies indicated whether they use ALPR systems and, if so, what vendors' systems they use to collect and access ALPR information. Of the agencies that responded, 60 percent, or 230 agencies, reported that they currently operate or access information from ALPR systems. Of those agencies, 96 percent said they have an ALPR usage and privacy policy. Vigilant is the most common vendor for the agencies that reported using ALPR systems. Figure A.1 summarizes which vendors the 230 law enforcement agencies reported that they use. Finally, 9 percent, or 36 of the agencies we surveyed, stated that they are implementing or planning to implement ALPR systems.

Figure A.1
Vigilant Is the ALPR Vendor the Majority of Law Enforcement Agencies Use



Source: Analysis of survey responses.

* The *Other* category includes vendors such as Genetec, ELSAG, and All Traffic Solutions.

† The total number of ALPR vendors used is greater than the 230 agencies that said they use ALPR systems because some agencies use more than one vendor.

Law enforcement agencies that reported using ALPR systems also answered questions related to their retention and sharing of ALPR information. We asked how long the agencies retain ALPR information not related to ongoing investigations or litigation. As Figure A.2 shows, the retention periods varied, but the majority of law enforcement agencies reported retention periods between six months and two years. Additionally, we asked agencies that operate ALPR systems if they share or sell the information they collect with other law enforcement or public agencies. Seventy-three percent, or 168 agencies that use ALPR systems, reported that they share ALPR images with other law enforcement agencies; only three of those agencies also reported that they share ALPR images with other public agencies that are not law enforcement. None of the agencies we surveyed reported selling images to other law enforcement or public agencies.

Figure A.2
A Majority of Agencies Generally Retain ALPR Information for Between Six Months and Two Years

Source: Analysis of survey responses.

Note: Three responding agencies that use ALPR systems did not indicate a retention period for their information: Bakersfield Police Department, Fountain Valley Police Department, and Pasadena Police Department.

Appendix B

Scope and Methodology

The Audit Committee directed the California State Auditor to conduct an audit of the extent to which local law enforcement agencies are complying with existing law regarding the use of ALPR systems. The analysis the Audit Committee approved contained five objectives. We list the objectives and the methods we used to address them in Table B.

Table B
Audit Objectives and the Methods Used to Address Them

	AUDIT OBJECTIVE	METHOD
1	Review and evaluate the laws, rules, and regulations significant to the audit objectives.	Reviewed relevant state laws, regulations, and other background materials applicable to the use and operation of ALPR systems by local law enforcement.
2	To the extent possible, determine the following for law enforcement agencies statewide: a. Whether they use ALPR information and, if so, what vendors they use to access this information. b. Whether they have policies and procedures in place governing the use and sharing of ALPR information.	• Surveyed 391 county sheriff and municipal police departments statewide. • Obtained and verified a list of statewide local law enforcement agencies, using information from the California State Sheriffs' Association, the California Police Chiefs Association, and the FBI. • Questioned agencies regarding their use of ALPR systems, including whether they use or are planning to use an ALPR system; if they share or sell the ALPR information; if their ALPR storage is CJIS-compliant; which system they use to store, share, or access ALPR information; if they have a usage and privacy policy and post the policy on their website; how long they retain ALPR information; how many department personnel have access to the ALPR data; and how many total personnel their department has. Full questions and a breakdown of the responses are on our website at http://auditor.ca.gov/reports/2019-118/surveys.html. • Created an interactive graphic to display responses by county, assembly district, and senate district at http://auditor.ca.gov/reports/2019-118/supplemental.html. • The survey responses were self-reported, and we did not verify their accuracy.

continued on next page . . .

	AUDIT OBJECTIVE	METHOD
3	Examine the use of ALPRs by the Sacramento County Sheriff's Office and Department of Human Assistance, the Los Angeles Police Department, the Fresno Police Department, and the Marin County Sheriff's Office by performing the following:	
	a. Determine whether they have policies and procedures in place regarding ALPR systems and whether those policies contain the elements state law requires.	• Interviewed the agencies' ALPR administrators. • Obtained and reviewed ALPR policies and procedures and determined whether each agency met state law requirements in this area.
	b. Determine whether they have followed state law regarding all required public notifications related to ALPR systems and information, including required public hearings.	• Interviewed the agencies' public information officers. • Obtained evidence of public notifications and public hearings and determined whether each agency met state requirements in this area.
	c. Determine whether they maintain records of access to ALPR information from both within and outside the agency that includes all required documentation and whether they have ensured that ALPR information has only been used for authorized purposes.	• Interviewed the agencies' ALPR administrators. • Reviewed access records from the agencies' ALPR systems. • Determined whether the agencies conducted any audits or monitoring by interviewing ALPR administrators, staff of internal audit divisions, and executive staff of any oversight entities. We also reviewed relevant policies and procedures. • Reviewed the agencies' internal affairs files for any cases involving ALPR misuse. • Reviewed Justice's and the FBI's audits of the agencies' IT security and the safeguards those audits identified.
	d. Determine whether they have sold, shared, or transferred ALPR information only to other public agencies, except as otherwise permitted by law, and whether they have properly documented these activities.	• Interviewed the agencies' ALPR administrators. • Reviewed reports and records about data sharing from the agencies' ALPR systems. • Reviewed existing memorandums of agreement and understanding for data sharing. • Interviewed executive staff at Vigilant regarding ALPR system functionality and their procedures for verifying the law enforcement purpose of client agencies.
	e. Determine the nature of any contracts with third-party vendors related to ALPR information.	• Interviewed Justice staff responsible for protecting criminal justice information. • Evaluated the agencies' contracts with third-party vendors and determined whether the contracts contained adequate protections for information in the agencies' ALPR systems.
4	Evaluate whether current state law governing ALPR programs can be enhanced to further protect the privacy and civil liberties of California residents.	• Interviewed agencies' investigators and ALPR program administrators. • Reviewed the information in the agencies' ALPR systems and identified the necessary protections for that information. • Obtained the agencies' justifications for their ALPR data retention periods. • Analyzed six months of the agencies' ALPR search records— between late January and September 2019, depending on when we visited the agencies—to determine how often the agencies' personnel searched for older data in their ALPR systems. • Reviewed other states' ALPR data retention laws based on a report from the National Conference of State Legislatures and identified best practices for data retention. • Analyzed laws pertaining to privacy, personal information, and criminal justice information and determined whether changes to current ALPR law would further protect the privacy and civil liberties of California residents.
5	Review and assess any other issues that are significant to the audit.	Reviewed informational material produced by law enforcement agencies, nonprofit organizations, and other entities to identify concerns surrounding privacy and ALPR systems.

Source: Analysis of state law, policies, information, and documentation identified in the table column titled Method.

Assessment of Data Reliability

The U.S. Government Accountability Office, whose standards we are statutorily obligated to follow, requires us to assess the sufficiency and appropriateness of computer-processed information that we use to support our findings, conclusions, and recommendations. In performing this audit, we relied on electronic data files we obtained from Fresno, Los Angeles, Marin, and Sacramento. These files included reports from the agencies' ALPR systems. Because the agencies relied on remote third-party systems to produce the reports, our analysis of these reports was limited to verifying that we had received the information we requested. We did so by reviewing source materials such as user manuals, interviewing vendor staff, and confirming with the agency staff that the number of records in the files we received were correct. We also used electronic lists from the California Police Chiefs Association and the California State Sheriffs' Association to compile a list of statewide police and sheriff departments for our survey. We verified the nature of the data with the associations' staffs, and we also verified record counts by comparing the provided lists with FBI crime-reporting data. We found the data to be sufficiently reliable for our purposes.

Re: Draft Audit Report - California State Auditor Report 2019-118; Automated License Plate Readers (ALPR)

Dear Ms. Howle:

The Department of Justice (DOJ) appreciates the opportunity to review the above-mentioned draft audit report. DOJ currently has no program in place to provide policy template and guidance to law enforcement agencies for their ALPR programs. Express authority from the Legislature and funding are needed to implement the recommendations.

If you have any questions or concerns regarding this matter, you may contact me at the telephone number listed above.

Sincerely,

Joe Dominic, Chief
California Justice Information Services Division

Fresno, CA 93715-1271

January 27, 2020

Elaine Howle
California State Auditor
621 Capitol Mall, Suite 1200
Sacramento, CA 95814

Dear Ms. Howle:

On behalf of the men and women of the Fresno Police Department, allow me the opportunity to thank you and your team for the time and effort in completing the Automated License Plate Reader (ALPR) audit at the request of the Joint Legislative Audit Committee. The Fresno Police Department always strives to ensure we maintain excellence and utilize best practices in all facets of service to the community especially concerning personal privacy. Building trust in the community is paramount to our agency as we continue our on-going efforts to be a model community policing agency. We will utilize this audit to ensure those goals are achieved.

The following are the Fresno Police Department's response to the audit recommendations included in the report.

1. *"To ensure that agency ALPR policies contain all of the required elements as specified in state law, by August 2020 Fresno should review their ALPR policies and draft or revise them as necessary. Also by August 2020 post their revised policies on their websites in accordance with state law:*

   The Fresno Police Department has already began reviewing and updating our ALPR policy. In fact, it is nearly complete and will be completed well in advance of the August 2020 recommended timeline.

2. *"To protect ALPR data to the appropriate standard, Fresno should do the following:"*
   a. *By August 2020 identify the types of data in their ALPR systems, and as they review or draft their policies, ensure that they clarify the types of information their officers may upload into their ALPR systems such as, but not limited to information obtained through CLETS."*

   As the audit showed, the Fresno Police Department has not entered personal data into the ALPR system; however we will continue to review data and incorporate into policy the parameters for types of data which can be entered.

   b. *By April 2020 perform an assessment of their ALPR systems data security features, and make adjustments to their system configurations where necessary to comply with CJIS policy best practices based on that assessment.*

The Fresno Police Department IT Manager will assess the ALPR system and ensure it is in compliance with CJIS Security Policy best practices.

3. *"To ensure that the agreement with their cloud vendor offers the strongest possible data protections, by August 2020 Fresno should enter into new contracts with Vigilant that contain the contract provisions recommended in CJIS policy."*

The Fresno Police Department IT Manager will review the Vigilant contract and ensure the contract is updated and in compliance with CJIS Security policy.

4. *To ensure that ALPR images are being shared appropriately:*
    a. *By April 2020 Fresno should review the entities with which they currently share images, determine the appropriateness of this sharing, and take all necessary steps to suspend those sharing relationships deemed inappropriate or unnecessary.*

The Fresno Police Department has suspended most sharing and now only shares images with bordering states.

    b. *By August 2020 Fresno should revise its written procedures for ALPR image sharing, as necessary, to ensure that it follows these procedures.*

The Fresno Police Department will incorporate these changes into the updated policy.

5. To minimize the privacy risk of retaining ALPR images for long periods of time, Fresno should do the following:
    a. *By August 2020 review the age of the ALPR images their personnel are searching for and ensure their retention periods for ALPR images are based on department needs. {REDACTED} reflect in its ALPR policy the updated retention period in its policy the updated retention period and state in its policy that it will reevaluate its retention period at least every two years.*

Based on the results of the audit, the Fresno Police Department will amend our current practice of retaining images for one year to six months which is consistent with the time frame the majority of the searches occur.

    b. *Include in their ALPR policies a retention period for data or lists such as hot lists, used to link persons of interest with license plate images, and create necessary processes to ensure that those data unrelated to ongoing investigations are periodically removed from their ALPR systems.*

The Fresno Police Department will maintain active hot lists for 90 days. If an investigator requires a longer period, approval will be obtained from a commander. This will be incorporated in the revised ALPR policy.

6. To enable monitoring of user access and user queries of ALPR images, Fresno should do the following:
    a. *By April 2020 assess the information their ALPR systems capture when users access them to ensure that the systems' logs are complete and accurate and that they form a reasonable basis for conducting necessary, periodic audits.*

This is already being done and is part of the quarterly audit process.

    b. *Ensure their ALPR policies make clear how frequently they will audit their ALPR systems, who will perform those audits, who will review and approve the audit results, and how long they will retain the audit documents. [REDACTED] have in place by February 2021 an audit plan that describes its audit methodology, including, but not limited to, risk areas that will be audited, sampling, documentation, and resolution of findings.*

A quarterly audit process has been put in place. The audit process, methodology and responsibilities will be included in the updated ALPR policy.

    c. *By June 2021 implement their audit plans and complete their first audits.*

The audit process is already in place and audits were completed for the last two quarters of 2019.

7. To ensure that ALPR access is limited to agency staff who have a right and a need to use ALPR data, Fresno [REDACTED] should do the following:
    a. *By April 2020 review all user accounts and deactivate accounts for separated employees, inactive users, and others as necessary.*

This has been completed. Separated employees are removed upon notification of their separation. The ALPR system automatically deactivates accounts for users who have been inactive for 365 days.

    b. *Ensure that their ALPR policies specify the staff classifications, ranks, or other designations that may hold ALPR system user accounts and that accounts are granted based on need to know and right to know.*

This will be incorporated into the revised ALPR Policy. Access will be granted on a need to know and right to know basis for sworn department members and crime specialists who have investigative responsibility.

    c. *By August 2020 develop and implement procedures for granting and managing user accounts that include, but are not limited to, requiring that a supervisor must approve an account for a user, providing training to users before granting an account, suspending users after defined periods of inactivity, and requiring regular refresher training for active users and training for users before reactivating previously*

inactive accounts. [REDACTED] ensure that it has procedures in place to deactivate accounts immediately for account holders who separate from the agency or who no longer need a user account.

The Fresno Police Department will incorporate supervisor approval for new accounts and minimum training requirements for new users in the revised policy.

Sincerely,

Andrew J. Hall, Chief of Police
Fresno Police Department

February 4, 2020

Elaine Howle*
California State Auditor
621 Capitol Mall, Suite 1200
Sacramento, CA 95814

Dear Ms. Howle:

In response to your draft report titled "Automated License Plate Readers: To Better Protect Individuals' Privacy, Law Enforcement Must Increase Its Safeguards Over the Data It Collects," I would like to inform you that the Los Angeles Police Department (LAPD) has the utmost respect for individuals' privacy and currently has policies and procedures in place to safeguard personal information stored on the Automated License Plate Reader (ALPR) Systems. Personnel who utilize ALPR data have been through extensive training on accessing and using the data on a right to know and need to know basis. The LAPD continuously reviews all user accounts and deactivates accounts for separated employees, while allowing ALPR access to all active employees who have attended the training. ① ②

Although our dedication to protecting individuals' privacy is covered in our day to day operations and procedures, the Department is currently working on an ALPR policy to ensure that the protection of those rights is also memorialized in our Department Manual. The aforementioned ALPR policy will be completed by April 2020 and posted on the Department website once it is completed, as required by state law. The policy will address the types of information personnel may upload into the ALPR systems, as well as the retention period for the data or lists (i.e., hot lists used to link persons of interest with license plate images). The LAPD will perform an assessment of the systems' data security features and retention periods for ALPR images to evaluate the need for adjustment, prior to publishing of the ALPR policy. Furthermore, the policy will list the entities the Department shares ALPR images with and the process for handling image-sharing requests.

To ensure the ALPR policy is up to date and our ALPR systems are capturing proper information, the Department will perform periodic audits to assess the information the systems capture when accessed by the Department users. Per the recommendations listed in your audit draft report, the Department will have a plan that describes the periodic audits by February 2021 and will complete the first audit by June 2021.

Should you have any questions concerning this matter, please contact Sergeant Monica Tokoro, at (213) 486-0197.

Very truly yours,

MICHEL R. MOORE
Chief of Police

Comments

CALIFORNIA STATE AUDITOR'S COMMENTS ON THE RESPONSE FROM THE LOS ANGELES POLICE DEPARTMENT

To provide clarity and perspective, we are commenting on the response to our audit report from the Los Angeles Police Department. The numbers below correspond with the numbers we have placed in the margin of its response.

Los Angeles is the only one of four agencies we audited that did not have the ALPR policy state law requires. As we describe on page 15, state law requires law enforcement agencies to have written usage and privacy policies and for the policies to include various elements. As we describe on page 17, the program administrator for Los Angeles initially believed that the agency's many IT policies cover the ALPR program, but we identified deficiencies in the policies he shared with us. When we brought those deficiencies to the administrator's attention, he acknowledged the need for Los Angeles to have an ALPR policy. ①

We stand by our conclusion that Los Angeles does not follow best practices for granting users ALPR system access. As we describe on page 33, of the four agencies we reviewed Los Angeles was the most lax in its approach to authorizing user accounts. The protocol its IT division follows is to include its ALPR software on each computer it assigns to staff, regardless of their position. Thus, staff who do not perform functions related to the ALPR system and possibly have not had training, nevertheless have access to the system. Moreover, on page 34 we state that the detective who conducts ALPR training confirmed that Los Angeles has not required training before users can access the ALPR system. ②

Elaine M. Howle, CPA*
California State Auditor
621 Capitol Mall, Suite 1200
Sacramento, CA 95814

Dear Ms. Howle:

The Marin County Sheriff's Office appreciates the opportunity to respond to your draft report entitled, Automated License Plate Readers: To Better Protect Individuals' Privacy, Law Enforcement Must Increase Its Safeguards Over the Data It Collects.

The Marin County Sheriff's Office is pleased to note that although your draft report includes recommendations to the Marin County Sheriff's Office regarding its use of automated license plate reader (ALPR) cameras, your audit team did not find any evidence of abuse or misuse of ALPR data by the Marin County Sheriff's Office. (1)

Nevertheless, the Marin County Sheriff's Office is and remains committed to the need for further improvement and as stated in your draft report, will consider your report's recommendations. However, based on some of the redactions in the draft report, it is difficult, at times, to determine which findings and conclusions are in reference to the Marin County Sheriff's Office as opposed to the other confidential law enforcement agencies discussed in your draft report. (2)

Accordingly, in responding to the issues discussed in your draft report with additional details and/or context, the Marin County Sheriff's Office will address sections which may not apply to it because it is unable to distinguish which law enforcement agency is being implicated. (2)

The following is the Marin County Sheriff's Office response:

Recommendation No. 1: Improve their ALPR polices.

Response to Recommendation No. 1: While the Marin County Sheriff's Office agrees that its current policy regarding the ALPR system does not specifically describe a "process for periodic system audits," the Marin County Sheriff's Office's policy does state that user/data query audits would be performed. Moreover, although the audit team contends that the ALPR data collected by the

* California State Auditor's comments begin on page 67.

PG. 2 OF 4

Marin County Sheriff's Office qualifies as personal information, this is not the case. The draft report readily admits that there is no personally identifiable information contained in a license plate capture. Further, the audit team's erroneous belief is based on a free text box in the ALPR system wherein a user *could* enter a person's name in this text box and attach personal information to the images of license plates captured by the ALPR system. However, the Marin County Sheriff's Office does not utilize this free text box and does not enter any other personal information to be associated with the images taken by its ALPR system. In fact, the draft report concedes this fact as it states in regard to the Marin County Sheriff's Office and open text fields, the audit team "did not find personal information in combination with other sensitive information in the six months of search records [it] studied."

Recommendation No. 2: Implement needed ALPR data security.

Response to Recommendation No. 2: As noted in the draft report, the Marin County Sheriff's Office contracts with a third-party vendor Vigilant Solutions (Vigilant) regarding its ALPR system. While the audit team is critical of Vigilant, all access to Vigilant for the Marin County Sheriff's Office is activity logged and auditable as noted in the draft report, even if the user accesses the system via the internet with a personal device, and those logs are reviewed by the Marin County Sheriff's Office ALPR program administrator; all data on Vigilant is stored on secure servers in the United States as recommended by the audit team; and Vigilant only permits credentialed law enforcement officers with a valid Originating Agency Identifier (ORI) number issued by the Criminal Justice Information System (CJIS) Division of the Federal Bureau of Investigation (FBI). Additionally, as part of its services, Vigilant maintains it is compliant with all relevant requirements set forth in the FBI-CJIS Security Policy as recommended by the audit team.

Recommendation No. 3: Update vendor contracts with necessary data safeguards.

Response to Recommendation No. 3: As discussed above, while not explicitly stated in the Marin County Sheriff's Office's contract with Vigilant, Vigilant warrants in its services that the data captured by an agency remains the property of the agency; all data is stored on secure servers in the United States; and it conforms with all relevant requirements set forth in the FBI-CJIS Security Policy.

Recommendation No. 4: Ensure that sharing of ALPR images is done appropriately.

Response to Recommendation No. 4: As discussed above, the Marin County Sheriff's Office has confirmed with Vigilant that it has and continues to verify that it only permits credentialed law enforcement officers with a valid ORI number issued by the CJIS Division of the FBI access to the data on its hosted

PG. 3 OF 4

server. While the audit team was critical of the Marin County Sheriff's Office sharing information with agencies such as the Honolulu Police Department, such cooperation with this particular law enforcement agency was done properly and with consideration as to the multiple matters which have in the past involved both agencies. (6)

As for ICE access, any prior approval by the Marin County Sheriff's Office with Vigilant was before any of the relevant state law went into effect. As noted in the draft report, Vigilant confirmed that the recent viewing of ICE accounts in question were not active and that these inactive agencies were not previously visible to the Marin County Sheriff's Office. (6)

Recommendation No. 5: Evaluate and reestablish data retention policies.

Response to Recommendation No. 5: The Marin County Sheriff's Office's two-year retention policy is based on the statute of limitations for most crimes in the State of California. The audit team states that it would like the Marin County's Sheriff's Office to have a more detailed policy regarding retention based on usefulness of images to investigators and even suggest that the retention of the images should be based on whether the images are for minor crimes versus complex crimes. However, it would be impossible for the Marin County Sheriff's Office to know whether the captured images would be used in a minor criminal case or a major felony case at the time the images were taken or at any time afterwards. Indeed, as noted in the draft report, there is no statute of limitations for the crime of murder. (7)

Recommendation No. 6: Develop and implement procedures for granting and managing user accounts.

Response to Recommendation No. 6: The audit team believes that the Marin County Sheriff's Office should require supervisory approval for all users of its ALPR system. As noted above and in the draft report, at this time the Marin County Sheriff's Office does not believe that this particular requirement is appropriate for the following reasons: there is no personal information associated with the images taken by the Marin County Sheriff's Office; as discussed in the draft report, all users of the ALPR system receive training before they are permitted access to the ALPR system; and the Marin County Sheriff's Office regularly audits the use of the ALPR system. (8)

Recommendation No. 7: Develop and implement ALPR system oversight.

Response to Recommendation No. 7: In the draft report, the audit team identifies an incident in which it claims it brought to the Marin County Sheriff's Office's attention an active account for a resigned employee. However, this is not accurate. The system administrator was notified about deactivating the account on the same day the audit team informed him about this account. However, the (9)

ALPR administrator had deactivated the account *prior* to the audit team discussing this particular account with him. Moreover, the ALPR administrator does not solely rely on a department-wide email notification regarding resigned or terminated employees as discussed in the draft report. In addition to the audits he regularly performs, the ALPR administrator also performs periodic spot checks to verify that active accounts match active employees.

Should you have any questions regarding this response, including any comments and clarifications made herein, please do not hesitate to contact us directly.

Sincerely,

Kerry L. Gerchow
Deputy County Counsel

Comments

CALIFORNIA STATE AUDITOR'S COMMENTS ON THE RESPONSE FROM THE MARIN COUNTY SHERIFF'S OFFICE

To provide clarity and perspective, we are commenting on the response to our audit report from the Marin County Sheriff's Office. The numbers below correspond with the numbers we have placed in the margin of its response.

Marin's response correctly notes that our review of its internal affairs investigations records did not identify evidence of abuse or misuse of ALPR data. However, as we state on page 37, we do not consider this absence as proof that no instances of ALPR misuse occurred. There is the possibility that misuse occurred and went unnoticed and unreported, particularly since Marin does not conduct audits of its ALPR system. (1)

During our exit conference, we specifically informed Marin that we would send it only those portions of the draft report that were relevant to it. The text that we redacted pertains to the other entities that were part of the audit and that we are required by law to keep confidential. Further, during its review of the draft report, Marin did not communicate with us to seek clarification regarding the report content we provided, despite our providing multiple opportunities for it to do so. (2)

Marin is incorrect in stating that we contend that the license plate images Marin collects qualify as personal information. On page 11, we note that a law enforcement agency can enter additional information, such as personal information, into its ALPR system. However, we do not assert that the ALPR image alone contains personal information. (3)

Marin has mischaracterized our finding. In its response, Marin states that we based our conclusion on a free-text box wherein a user could enter an individual's name and attach it to a license plate image. However, as we describe on pages 18 and 19, we based our conclusion on information that users enter into open text fields as part of license plate searches, specifically the fields for case numbers and purpose for the searches. On page 37, we note that Marin requires users to enter both case numbers and reasons for the search before allowing such searches. Although we did not find evidence users had entered personal information in combination with other sensitive information in the six months of search records we studied, the fact that these text fields exist means that users could enter such information during ALPR searches, as we point out on pages 18 and 19. Moreover, Marin's ALPR policy does not prohibit users from entering personal information in combination with other sensitive information in its ALPR system. (4)

5 We disagree with the focus of Marin's response, which implies that the vendor's security controls are a suitable substitute for specific contract safeguards. As we show in Figure 3 on page 22, Marin's contract does not contain any of the safeguards CJIS policy recommends for contracts with cloud vendors. We note on page 21 that CJIS policy states that ambiguous contract terms can lead to controversy over data privacy and ownership rights, whereas a contract that clearly establishes data ownership acts as a foundation for trust that the cloud vendor will protect the privacy of the agency's data.

6 We disagree with Marin's belief that it has managed its image sharing appropriately. Although Marin described in its response the type of information that it could maintain to document its image-sharing decisions, it did not provide such evidence documenting why it made past sharing decisions, and its ALPR policy does not include a process for approving image-sharing requests, as we state on page 26. Moreover, Marin acknowledged in its response the issue we describe on page 26 regarding ICE and the fact that the status of Marin's sharing relationship with ICE was not always visible to Marin. This issue underscores the need for Marin to maintain records regarding sharing decisions.

7 Marin appears to miss the point of our recommendation. As we state on page 29, we concluded that Marin did not establish its retention period based on when it uses the ALPR images it captures. On page 31, we mention minor and complex crimes as examples of ALPR data being used narrowly, such as for the single purpose of locating stolen vehicles, or broadly, such as for investigation of crimes in addition to stolen vehicles. Our recommendation—based on our analysis of Marin's search activity as referenced on page 30—provides a method for Marin to better align how long it retains ALPR data with whether it actually uses the data as they age.

8 The reasons Marin cites in its response for not adopting our recommendation are not valid. Requiring a supervisor to approve a user for an ALPR account is a meaningful step in establishing that user's need to access ALPR data and right to know what the data portray in an effort to avoid the ALPR data being misused. In point 4 above, we describe that the existence of text fields in the ALPR system allows for personal information to be linked to license plate images. Further, we note that Marin has no policy prohibiting its users from entering personal information in its ALPR system. In addition, despite Marin's claim of training all users, we state on page 34 that Marin does not require staff to renew their training when reactivating their user accounts following long periods of not using the ALPR system. Finally, we found that contrary to Marin's assertion, it had not regularly audited its system. As we discuss

on page 37, Marin's ALPR administrator was unaware of the state law requiring audits of ALPR systems, so he had not been conducting them. Despite recent efforts to institute some form of monitoring, as we describe on page 38, the limitations in its approach led us to conclude that Marin does not have sufficient protocols in place to detect the misuse of user accounts.

Marin's assertion is incorrect. As we describe on page 35, we reviewed Marin's processes for disabling the accounts of separated employees. Although Marin's ALPR administrator informed us of his approach for deactivating an account when he receives an all-staff email that an employee is separating from the department, we found such an email dated August 6, 2019, after which one separated employee continued to hold an active account as of October 22, 2019. After we informed the administrator of this employee's continued access, the administrator acknowledged that the account was still active, and we directly observed him deactivating the account. ⑨

SUBJECT: License Plate Readers Audit Response

Dear Ms. Howle:

We are writing in response to the draft findings of your report, titled Automated License Plate Readers: To Better Protect Individuals' Privacy, Law Enforcement Must Increase Its Safeguards Over the Data It Collects.

The Department of Human Assistance (DHA) appreciates the work performed by the California State Auditor. No recommendations were issued in the report, and DHA agrees with the results of the audit.

If you have any questions regarding this matter, please contact Lane Ruddick, Program Integrity Chief, by telephone at (916) 875-1275, or by email at ruddickl@saccounty.net.

Sincerely,

Ann Edwards
Director

SACRAMENTO COUNTY SHERIFF'S OFFICE

Scott R. Jones
Sheriff

January 28, 2020

Elaine M. Howle, CPA*
California State Auditor
621 Capitol Mall, Suite 1200
Sacramento, CA 95814

Dear Ms. Howle:

I am in receipt of the draft report entitled *Automated License Plate Readers: To Better Protect Individuals' Privacy, Law Enforcement Must Increase Its Safeguards Over the Data It Collects, which* includes recommendations for the Sacramento County Sheriff's Office to revise and improve some of our Automated License Plate Reader program (ALPR) processes.

While I agree with some of your findings, I disagree with some of the characterizations made. ① As the Sheriff of Sacramento County, I take seriously the protection of our citizens, including their personal privacy. Within our role as guardians of the data we collect, my staff works diligently to develop and consistently apply security protocols that maintain the integrity of our systems.

The Summary (Results in Brief) section of the report was clearly written separately or prior to ① the completion of the main body of the report, because it fails to present your teams' actual conclusions. Let me address each point.

Recommendation #1 – Review and revise policies

Before the Audit began, the Sacramento County Sheriff's Office began reviewing and revising policies governing a wide range of service deliverables. Although the Sacramento County Sheriff's Office existing policy contains the majority of the requirements outlined in California Civil Code section 1798.90.51, it does not list the restriction on selling ALPR data. As expressed during the interviews, my staff did say that the restriction on selling data is not listed in the policy because the Sacramento Sheriff's Office does not sell any data. The lack of specifically addressing this fact in the ALPR policy is an oversight.

* California State Auditor's comments begin on page 77.

Elaine M. Howle, CPA
January 28, 2020
Page 2

Recommendation #2 – Identify types of data and perform a security assessment

As you learned during the audit, the Sacramento County Sheriff's Office began reorganizing ALPR related security over two years ago. The initial step of this process was securing funding to hire a fulltime Information Technology Analyst in hopes of increasing program administration because this employee's primary job will be the continuous development of ALPR related security protocols that either meet or exceed these recommendations.

Recommendation #3 – Ensure the vendor offers the strongest possible data protections

The Sacramento County Sheriff's Office completed extensive research in the use of cloud storage systems and CJIS security. I am aware your team received the latest contract between the Sacramento County Sheriff's Office and Vigilant Solutions and the Vigilant CJIS Security Policy Guide. Both the contract and comprehensive policy provide a thorough explanation regarding compliance including agreeing to participate in any Technical Security Compliance Audit performed by the FBI-CJIS Division. ②

Recommendation #4 – Develop a process for handling ALPR image-sharing requests

③ Although the existing policy does provide language on how sharing data can occur, the Sacramento County Sheriff's Office began developing a ticketing system for handling various technology requests over four years ago. As such, the natural progression was to utilize the same request, approval, and record retention system used by the entire organization.

Recommendation #5 – Review the retention periods of ALPR images and data

The Sacramento County Sheriff's Office is continually reviewing data retention practices. Although, a simple review of searches provides a small subset of activity, the success of an ALPR program could only come from tracking and identifying which cases provided leads or convictions of data. During the audit, my understanding is your team was told this very fact. As ④ the agency prepares to transition to a new report writing system, I request our crime analysts to conduct a multi-year study that will provide a realistic view of how long ALPR images provide usefulness in the criminal justice system.

Recommendation #6 – Enable monitoring of user access and user queries of ALPR images

Throughout the audit your team requested a substantial number of reports and logs showing when accounts were activated, deactivated, or changes occurred. The ability to provide these reports demonstrated the robust nature of the logging system. Although your team learned the

Elaine M. Howle, CPA
January 28, 2020
Page 3

Sacramento County Sheriff's Office has no reported incidents of ALPR misuse, I have directed my program administrator to make certain fields mandatory to ensure proper documentation of usage. With the addition of a dedicated IT Analyst, the expansion of audits already occurring will surely continue.

Recommendation #7 – Ensure that ALPR access is limited to agency staff who have a right and a need to know

Not only is this recommendation listed in the Sacramento County Sheriff's Office policy, it is the way the organization operates with all data systems. As this directly relates to ALPR, only 561 employees, out of a department of 2,170, have access to the system. While I understand your position that a supervisor should approve each account, there were over 5,880 personnel moves during 2019. The Sacramento County Sheriff's Office uses Role Based Access Controls. Rather than rely solely on a supervisor to approve a request, the application of Role Based Access Control is how the Security Operations unit of the Sacramento Sheriff's Office processes access to this and all other law enforcement data systems. Role Based Access Controls are addressed by the National Institute of Standards and Technology as a best practice. (5)

In Conclusion

In the end, we are not opposed to implementing many of your recommendations and in fact, are already in the process of doing so. Throughout the process, which was long and took many staff hours, we made every effort to cooperate with the auditor's requests for information and tried to anticipate the types of problems they would find while trying to understand the actual uses and practices within the ALPR program.

During interviews and based on some of the requests, we felt concern that there was a bias toward a particular outcome, intended or otherwise. (6) Because this report contains many redacted sections, there is still some concern about what has not been shown to us. Nonetheless, we await your full findings about Sacramento and the other agencies covered in this report. (7)

Very truly yours,

Scott Jones

Comments

CALIFORNIA STATE AUDITOR'S COMMENTS ON THE RESPONSE FROM THE SACRAMENTO COUNTY SHERIFF'S OFFICE

To provide clarity and perspective, we are commenting on the response to our audit report from the Sacramento County Sheriff's Office. The numbers below correspond with the numbers we have placed in the margin of its response.

We stand by the language we use to describe Sacramento's ALPR program. Our report provides appropriate context and sufficient evidence to support our findings. Further, the Results in Brief section of the report serves as a summary of the report as a whole and as such it represents the overall conclusions for this report. The details of our findings and conclusions are included in the Audit Results section of the report. ①

We disagree with Sacramento's contention that the department's current contract is thorough. On pages 22 and 23, we acknowledge that Sacramento updated its contract with Vigilant in September 2019. In reviewing that latest version, we determined that it is missing some of the best practices outlined in CJIS policy, as we show in Figure 3 on page 22. On page 21, we note that CJIS policy states that a contract that clearly establishes data ownership acts as a foundation for trust that the cloud vendor will protect the privacy of the agency's data. ②

Sacramento's response implies that a process for approving image-sharing requests and maintaining records outside of the Vigilant system was already in place. However, although Sacramento states that it began developing a ticketing system for handling technology requests more than four years ago, as we discuss on page 26, Sacramento could not provide any evidence of records outside of the Vigilant user interface demonstrating when or why it agreed to share with particular entities. As we further point out on page 26, Sacramento's ALPR policy currently does not include a process for approving sharing requests. ③

Sacramento's proposed study of ALPR images may benefit its ALPR program. Our analysis of the search records from the agencies we reviewed—summarized on page 30 and in Table 2—presents one method of identifying the age of the data personnel are using. We point out on page 31 that the agencies' existing ALPR systems provide the ability to conduct such an analysis. Nevertheless, our recommendation does not preclude the type of analysis Sacramento describes in its response. ④

⑤ We stand by our recommendation that Sacramento should have a policy that clearly states the staff classifications, ranks, or other designations that may hold ALPR system user accounts and that accounts are granted based on a need to know and a right to know. As we state on page 32, each ALPR administrator, including Sacramento's, stressed the concept of "need to know, right to know." Assigning an individual an ALPR account based strictly on his or her classification or role—the practice Sacramento follows—does not ensure that an individual has a need to know because of their specific assigned work.

⑥ Sacramento's concern about bias is unfounded. To meet generally accepted government auditing standards, which my office is obligated to comply with, we have and follow policies and procedures for all audits to ensure that we identify and rectify any threats to our independence, including bias. Moreover, we follow quality control procedures on every audit that ensure that we have sufficient and appropriate evidence to support our findings and conclusions.

⑦ Sacramento received draft text that was relevant to our findings about it. State law requires us to keep confidential information about an unpublished audit. Consequently, we cannot share with one agency information about another. Sacramento received a draft audit report with redacted information regarding other agencies as necessary to maintain confidentiality. During our exit conference, we stressed that staff should contact us with questions they might have about the draft report during the formal review period; Sacramento did not contact us. We also contacted Sacramento's ALPR administrator during the formal review period to inquire about questions staff may have, and he did not return our call.

AUTOMATED LICENSE PLATE READER INITAITIVE

PROGRAM ADMINISTRATION AND GUIDELINES

STATE OF NEW JERSEY
FY21 AMERICAN RESCUE PLAN ACT CSFRF
AUTOMATED LICENSE PLATE READER INITAITIVE
PROGRAM ADMINISTRATION AND GUIDELINES

I. ADMINISTRATION

This document has been compiled to assist in the application, program development, and implementation processes, as well as the reporting and compliance requirements, of the FY21 ARP CSFRF Automated License Plate Reader Initiative.

The State of New Jersey, Department of Law & Public Safety, Office of the Attorney General (OAG), Division of Criminal Justice (DCJ) received funds from the FY21 ARP CSFRF to administer the Automated License Plate Reader Initiative. A total of $9,750,000 will be awarded to New Jersey law enforcement agencies for use by November 30, 2024.

The goal is to use this technology to not only investigate the increase of stolen cars, but to assist in investigating their connections to the increase in violent crime, including gun violence. Intelligence gathered through the use of this technology will assist law enforcement in identifying suspects, improving solve rates of theft offenses, identifying patterns and criminal enterprises, building more sophisticated cases to deter and prosecute organized criminal activity, and will assist in implementing prevention strategies and operations

Under the ARP CSFRF License Plate Reader Initiative, law enforcement agencies with jurisdiction in the State of New Jersey are eligible to apply for grant funding for the investment in new, and expansion of existing, technology and software system integration of ALPRs. Specifically, funding would cover the cost of purchasing or enhancing ALPR units for law enforcement agencies across New Jersey, as well as initial software, storage, and maintenance for 5 years.

It is anticipated that ALPRs will be installed in fixed locations on the New Jersey Turnpike, Parkway, Atlantic City Expressway, I-195, US Highway 1 and 9, and Routes 21, 22, 78, 80, 280, and 287; in addition to other major highways. Due to these roadways being within the primary investigative jurisdiction of NJSP, $5,000,000 of the grant funds will be allocated to the NJSP to establish this statewide network. The remaining $4,750,000 will be awarded, via a competitive process, to eligible law enforcement agencies for the purchase, installation, and expansion of additional units and systems, in strategic locations throughout the communities they serve. Grant funding will be allocated to both installation at strategic locations, as well as mobile units. Mobile units can be used where there is the greatest need at any given time.

The OAG/DCJ will award, administer, and monitor awards made under the ARP CSFRF ALPR Initiative. Staff from OAG/DCJ will be available to provide technical assistance during the award process and award period.

Funds will be awarded on a competitive basis, supported by statistical data, and awarded pursuant to the quality of the application submitted and the pending availability of funds. The number of awards available and the funding amount of each award will depend upon the number of applications received and the funding amounts requested by each applicant. Funding decisions will be made to ensure the broadest and deepest level of service coverage practicable, taking into account the type of services to be delivered, the desired outcomes, and the geographical location of the project in comparison with crime statistics and data.

The funding period is December 1, 2022 through November 30, 2024; extensions will not be granted. All grant funding must be obligated by November 30, 2024.

All inquiries concerning the grant award process should be addressed to:

Office of the Attorney General
Grant Operations
Phone: 609-376-2445
E-mail address: ALPRGrant@njdcj.org

II. APPLICATION AND AWARD REQUIREMENTS

A. PARTICIPATION and SUBMISSION

Any New Jersey law enforcement agency wishing to participate in the ARP CSFRF Automated License Plate Reader Initiative must complete an application package and submit via e-mail to ALPRGrant@njdcj.org, no later than **11:59pm October 15, 2022**. Late or incomplete applications will **not** be considered for funding.

B. GRANT APPLICATION

Applicants must complete and return the following:

1. Applicant Information Form
2. Application Authorization
3. Program Application Narrative
4. Project Work Plan
5. Budget Detail Worksheet and Narrative
6. New Jersey Single Audit Requirements Certification
7. Federal Single Audit Requirements Certification
8. Proof of Federal Single Audit
9. DLPS Debarred and Suspended Certification
10. Assurances

C. GRANT AWARD

Recipient will be notified of awards on or about November 30, 2022. Award packages will be sent out upon notification of award.

Recipients must complete and return the following:

1. Award Contract
2. Resolution & Certification
3. General and Special Conditions

III. PROGRAM GUIDELINES

The Applicant agrees to adhere to the following guidelines. Failure to do so may result in suspension or termination of a grant award.

- Funding is to be used for purchasing or enhancing ALPR units for law enforcement agencies across New Jersey, as well as initial software, storage, and maintenance for 5 years.
- New Jersey law enforcement recipients will be diligent in communicating with community members to gauge whether changes are needed in coverage area or any other issues related to the implemented technology. Effectiveness of the technology will be primarily driven by any change in data related to violent crime in the various cities, and from feedback from community stakeholders. It will be important to analyze whether the technology is a key tool in gun violence prevention.
- For purposes of insuring compliance with interagency compatibility, all technology and software acquisitions purchased under the grant will require preapproval by the New Jersey State Police. Questions about compatibility can be directed to ALPR@NJSP.ORG.
- Award recipients must be willing to participate in data studies and violence suppression pilot studies being conducted by the DPLS if such participation is requested

IV. APPLICATION AUTHORIZATION

The submission of any grant application requires the signature of the applicant's Authorized Official (see Application Authorization Form) indicating that the application is authorized by the agency or unit of government. The signature of the Authorized Official indicates that the information provided within the application is truthful, accurate, and complete; that the applicant intends to comply with all requirements regarding the use of grant funds; and the applicant will use the grant funds to carry out the project as described in the application.

The Authorized Official also acknowledges that they are responsible for authorizing expenditures and disbursing grant funds. The Applicant certifies that all grant funds will be used exclusively for the purposes specified in the grant award; and it will pay for all costs in excess of the grant award.

V. PROGRAM APPLICATION NARRATIVE

The following scored components must be included in your Program Narrative.

1. Agency Background, Mission, Experience and Capability (10 Points)
Describe in detail the agency's mission, background, and experience as it relates to the purpose and objectives of the proposed project. Explain the agency's knowledge and capability to carry out the project, based on demonstrated experience.

2. Problem Statement/Needs Assessment (25 Points)
Identify the specific problem(s), target population, and geographic area that the proposed project will address. Describe the needs and characteristics of the target population; local needs and conditions; describe existing services and identify gaps and/or barriers in services. Include current statistics and relevant crime data to substantiate the need. Applicants must provide statistics that demonstrate a rise in violenct crime, including gun violence, since the start of the Coronavirus Pandemic.

3. Goals, Objectives and Implementation; Project Work Plan (30 Points)
Specify a clear, realistic goal for the proposed project. Identify objectives that are concise, measurable, and directly relate to the goal, problem statement/needs assessment, and target population. Describe in detail the project's approach or strategy for attaining each objective. Include a project work plan (template to be provided) that specifies each objective along with the major activities, responsible staff, and feasible time frames for each objective and activity.

4. Key Project Staff (10 Points)
Identify all project management and staff. Describe how personnel are uniquely qualified to manage and implement the project.

5. Data Collection/Performance Measures/Evaluation (10 points)
Provide a description of how you will collect data, measure performance, and complete an overall evaluation of the project.

6. Budget Detail and Narrative (15 points)
Applicants must provide an itemized list of costs and a narrative explanation as to why those costs are necessary to the success of the project. Costs must be specific and tied to the project objectives.

VI. BUDGET DETAIL WORKSHEET

Applicant must list all requested budget items on the Budget Detail Worksheet. Costs must be specific and tied to the project objectives. A budget narrative justifying proposed expenditures is also required. The budget narrative should explain why the costs are necessary for the success of the project.

A. Budget Categories:

1. SALARIES

List each position by title and name of employee, if available. Show the annual salary rate and the percentage of time to be devoted to the project. Compensation paid for employees engaged in grant activities must be consistent with that paid for similar work within the applicant organization, and qualifications must be substantiated in the individual's resume. Include a description of the responsibilities and duties of each position in relationship to fulfilling the project goals and objectives.

2. FRINGE BENEFITS

Fringe benefits should be based on actual known costs or an approved negotiated rate. Attach a copy of the fringe benefit policy. Fringe benefits are for the personnel listed in the personnel section of the budget and only for the percentage of time devoted to the project. Fringe benefits on overtime hours are limited to FICA, Workman's Compensation and Unemployment Compensation.

If salaries are being reflected in the budget as a cost of the project, the corresponding fringe should also be included.

3. TRAVEL

Itemize travel expenses of staff personnel by purpose (e.g., staff to training, travel to meetings). Describe the purpose of each travel expenditure in reference to the project objectives. Identify the location of travel, if known; or if unknown, indicate "location to be determined."

Travel costs are allowable if permitted under the current State Travel Circular, 20-04-OMB, as amended, which is located at the following website:
https://www.nj.gov/infobank/circular/
Mileage reimbursement cannot be charged in excess of the New Jersey State maximum of $.47 per mile, per State Treasury Circular Letter, Automobile Mileage Reimbursement Rate, 23-02-OMB.

4. EQUIPMENT

List non-expendable items that are purchased (Note: Organization's own

capitalization policy for classification of equipment should be used.) Expendable items, with a cost less than $1,000, should be included in the "Supplies" category. Applicants should analyze the cost benefits of purchasing versus leasing equipment, especially high cost items and those subject to rapid technological advances. Rented or leased equipment costs should be listed in the "Contractual" category. Explain how the equipment is necessary for the success of the project, and describe the procurement methods to be used.

OAG may approve the purchase of equipment deemed appropriate and essential to the successful operation of projects. Requests for equipment should contain adequate cost specifications, including equipment type, quantity and estimated costs. Specific brand names should be excluded.

Equipment purchased and used commonly for two or more programs should be appropriately divided among each activity. Equipment that has already been purchased and charged to other activities of the organization is not an allowable expense to the award.

5. SUPPLIES

List items by type (office supplies, postage, training materials, copying paper, and expendable equipment items costing less than $1,000, such as books, hand held tape recorders) and show the basis for the computation, Generally, supplies include any materials that are expendable or consumed during the course of the project.

6. CONSULTANTS/CONTRACTS/SUBAWARDS

Provide a description of the product or service to be procured by contract and estimate of the cost. Applicants are encouraged to promote free and open competition in awarding contracts/subawards.

If the application includes a subrecipient(s) to assist in providing services outlined in the scope of work, during the contract award process, special conditions will be added to acknowledge your compliance with the requirements of a pass-through agency for engaging services of a subrecipient agency.

Consultant fees: For each consultant enter the name, if known, service to be provided, hourly or daily fee (8-hour day), and estimated time on the project.

Consultant expenses: List all expenses to be paid from the grant to the individual consultants in addition to their fees (i.e. travel, meals, lodging, etc.). This includes travel expenses for anyone who is not an employee of the applicant such as participants, volunteers, partners, etc.

7. OTHER COSTS

List items by major type and the basis of the computation. For example, provide the square footage and the cost per square foot for rent or provide a monthly rental cost and how many months to rent (rent/lease agreement must be submitted). Only

the cost of facilities used for the project activities are permissible, such as office space, maintenance costs, landlines, and utilities.

VII. RESOLUTION

Applicants must return a certified Resolution with their Award Package.

The Resolution must contain all data requirements listed on the Required Resolution & Certification Checklist which is provided as a reference document in the Award Package.

VIII. LEGAL COMPLIANCE

Applicants and their contractors are required to comply with the New Jersey Law Against Discrimination, N.J.S.A. 10:5-1 et seq. Applicants are expected to comply with all applicable New Jersey regulations, policies, and guidelines.

IX. DEBARMENT

Applicants and their subcontractors should not obtain goods and services from other agencies which are debarred, suspended or disqualified from doing business with the State of New Jersey.

Applicants are also expected to comply with state Executive Order No. 34 (March 17, 1976), and state circular letter OMB 93-13-GSA regarding debarments, suspensions, and disqualifications. The State Department of Treasury has an on-line, searchable database of those individuals, corporations, and agencies, who are debarred from conducting business with the State of New Jersey: http://www.state.nj.us/treasury/revenue/debarment/index.shtml. In the performance of any grant, recipients cannot conduct business with ineligible firms or individuals who are considered debarred, suspended, or disqualified.

X. NEW JERSEY PENALTIES FOR CORRUPTION OF PUBLIC RESOURCES

While enacting ethics and government corruption reforms, the New Jersey Legislature enacted Public Law 2007, Chapter 158, which makes knowingly misusing public resources for an unauthorized purpose a crime. N.J.S.A. 2C:27-12. Under the Crime of Corruption of Public Resources, an individual commits a crime if (1) the public resource is subject to an obligation to be used to perform or facilitate the performance of a governmental function or public service, (2) a person knowingly uses a public resource for an unauthorized purpose, or (3) a person makes a material representation that is false to a government agency . . . to obtain or retain a public resource, or with the purpose to mislead or deceive any person as to the use or disposition of a public resource. Id. The Legislature defines a public resource as including grants awarded by the

government. Id. Convictions under this act could result in a 20-year prison term and $200,000 fine. Id. The Legislature also enhanced public corruption penalties under the Public Corruption Profiteering Penalty Act, N.J.S.A. 2C:30-8, which subjects individuals convicted under public corruption laws, including N.J.S.A. 2C:27-12, to fines up to $500,000. Under N.J.S.A. 2A:32C-3, a person shall also be subject to civil penalty and treble damages for making false claims under New Jersey's False Claims Act.

XI. RECIPIENT OFFICIAL FILE

Recipients are required to maintain a master file for grant documents. The following documents must be available for on-site review by OAG program monitors and auditors:

A. Copy of approved application and award package for the grant including: Applicant Information Form; Application Authorization; Program Narrative; Budget Detail Worksheet; Award Letter; Grant Award Contract; General and Special Conditions; the Resolution; and related written approvals from OAG.

B. Copies of all Requests for Reimbursements.

C. Banking Information: Cash verification, receipts documentation, check register, canceled checks, and bank statements. (if applicable)

D. Copies of all Grant Adjustment requests and approvals.

XII. REPORTING PROCEDURES

A. PROGRAMMATIC REPORTS

Recipients are required to submit quarterly programmatic progress reports to OAG describing project activities for the duration of the award period. Reports are to be submitted to OAG within fifteen (15) calendar days of the end the quarter. Recipients will receive reporting forms with their copy of the executed contract/award document.

B. FINANCIAL REPORTS

Recipients are required to submit financial expenditure reports, or Detailed Cost Statements (DCS), comparing actual expenditures with the OAG Approved Project Budget.

Recipients are required to submit quarterly DCS's. DCS reports must be submitted to your analyst at OAG, via e-mails, within fifteen (15) calendar days of the end of each quarter. The DCS for the last quarter shall be marked as final. For each funding request, a separate State of New Jersey Payment Voucher must be submitted.

1. SOURCE DOCUMENTATION REQUIREMENT

All costs charged to state grant awards must be adequately documented. All recipients must provide supporting source documentation (e.g. invoices, hotel receipts, timesheets, payroll records, purchase orders) with their reimbursement requests. Recipients should be ensuring that their costs are allowable, mathematically accurate and correlate to the source documentation provided. OAG grant staff will review all recipient source documentation prior to approving reimbursement requests. Costs lacking sufficient support may not be reimbursed.

XIII. BUDGET REVISION AND MODIFICATION

The grant budget is the approved financial plan to carry out the purpose of the grant. This plan is the financial representation of the project as approved during the grant application and award process.

Recipients are required to report deviations from the approved budget and receive prior written approvals for budget revisions and modifications in excess of one (1) percent of the total award amount. To request a budget revision, recipients are required to submit a written explanation (Justification Letter) and an OAG Grant Adjustment Request Form (GARF).

XIV. AUDIT REQUIREMENTS

The Recipient must comply with audit requirements located in the State Treasury Department, State Circular, Single Audit Policy for Recipients of Federal Grants, State Grants and State Aid, 15-08- OMB, 2 CFR Part 200, Subpart F, Audit Requirements (2 C.F.R. § 200.500, et seq.), and the Government Accountability Office's Generally Accepted Government Auditing Standards (also known as the Yellow Book).

1. Applicants that expend Federal and/or State financial assistance of $100,000 or more, but less than $750,000 of Federal or State financial assistance during their fiscal year (including federal pass-through funds), must have either:

    a. A financial statement audit performed in accordance with Government Auditing Standards (Yellow Book); or
    b. A program specific audit performed in accordance with 2 C.F.R. § 200.500, et seq., and state policy.

2. For applicants that expend Federal or State financial assistance, (including funds received from the Federal Government or federal funds passed through state agencies) of $750,000 or more during their fiscal year must have:

    a. A single audit performed; or

b. A program specific audit performed in accordance with 2 C.F.R. § 200.500, et seq., and state policy.

3. For applicants receiving less than $100,000 of State and/or Federal financial assistance, no audit is required.

The recipient must maintain a bookkeeping system, records, and files to account for all monies spent implementing the project. While a preferred system is not specified, recipients are expected to conform to accepted accounting standards.

XV. MONITORING OF PROGRAM PERFORMANCE

A. The recipient must assure that performance goals are being achieved.

B. The recipient shall inform OAG of the following types of conditions which affect program objectives and performance as soon as they become known:

Problems, delays, or adverse conditions which will materially impair the ability to attain program objectives, prevent meeting time schedules and goals, or preclude the attainment of project work units by established time periods. This disclosure shall be accompanied by a statement of the action taken, or contemplated, and any OAG assistance required to resolve the situation.

C. OAG may, at its discretion, make site visits to:

1. Review program accomplishments and management control systems.
2. Provide such technical assistance as may be required.
3. Perform fiscal reviews to ensure grant funds are being properly expended in a timely manner.

OAG may also request documents related to the above independent of a site visit. In all cases, Applicant is obligated to comply with requests associated with site visits or document production.

Commonwealth of Massachusetts

Office of the
Middlesex District Attorney

Appeals & Training Bureau

2022-2023
POLICE TRAINING MANUAL

UPDATED THROUGH SEPTEMBER 30, 2022

receive the responsive records. In most cases, that contact is the affiant; therefore, the warrant should list the police department, contact name, address, phone & fax number, along with an email address to which the provider can send the requested records.

Because the fourteen-day period statutorily provided for production of the requested records (along with "an affidavit from the person in custody of those records certifying that they are true and complete") is longer than the seven-day return period for a search warrant, the Middlesex District Attorney's Office offers the following as sample language for the search warrant return:

> On [DATE], I, Officer [NAME] of the _____ Police Dept., served warrant no. _____ upon [CORPORATION] at [ADDRESS] by [WHAT MEANS (mail/fax/delivery service)]. It is expected that [CORPORATION] will transmit the records authorized by the warrant to local law enforcement officers in compliance with G.L. c. 276, § 1B. Copies of all such records produced pursuant to the warrant will be provided to the defense in the pretrial discovery process.

The service and return process for search warrants applies generally to all companies that provide electronic communication or remote computing services, including cell phone companies. Note that, pursuant to G.L. c. 276, § 1B, search warrants seeking records from such companies can be served via fax or email regardless of where the headquarters are located.

VIII. DIGITAL SURVEILLANCE TECHNOLOGY & THE MOSAIC THEORY

In recent years, technological developments have resulted in the proliferation, increased ease of use, and affordability of numerous surveillance tools. See Commonwealth v. Perry, 489 Mass. 436, 444 (2022) ("advancements in technology have resulted in a quantity and quality of surveillance that never could have been imagined, let alone realized, at the time of the founding"). Law enforcement's access to these "extraordinarily powerful" surveillance tools has prompted the Supreme Judicial Court and the United States Supreme Court "to guard against the 'power of technology to shrink the realm of guaranteed privacy[.]'" Commonwealth v. McCarthy, 484 Mass. 493, 498 (2020), quoting Commonwealth v. Almonor, 482 Mass. 35, 41 (2019). In Massachusetts, this response has taken the form of the adoption of the "mosaic theory" to

determine whether electronic surveillance intrudes upon a reasonable expectation of privacy such that a warrant is required (or an exception thereto).

The mosaic theory is an "aggregation principle for the technological surveillance of public conduct" grounded in the recognition of an individual's "privacy interest in the whole of one's public movements." McCarthy, 484 Mass. at 502, 503. See also Commonwealth v. Henley, 488 Mass. 95, 108-114 (2021); Commonwealth v. Mora, 485 Mass. 360, 368 (2020). The theory recognizes that while a person's isolated movements in public are not typically a subject of constitutional protection, when viewed in the aggregate over a prolonged period of time, such detailed location data can encroach upon a person's reasonable expectation of privacy. McCarthy, 484 Mass. at 504, 508. See also Katz v. United States, 389 U.S. 347, 351 (1967) ("the whole of one's movements, even if they are all individually public, are not knowingly exposed in the aggregate"); Commonwealth v. Connolly, 454 Mass. 808, 833-834 (2009) (Gants, J., concurring) (aggregated location data reveals "a highly detailed profile, not simply of where we go, but by easy inference, of our associations – political, religious, amicable and amorous, to name only a few – and of the pattern of our professional and avocational pursuits"). "[R]ather than 'asking if a particular act is a search, the mosaic theory asks whether a series of acts that may not be searches in isolation amount to a search when considered as a group.'" Perry, 489 Mass. at 445, quoting Kerr, The Mosaic Theory of the Fourth Amendment, 111 Mich. L. Rev. 311, 320 (2012).

The mosaic theory is a totality of the circumstances test, looking to several factors in an attempt to discern whether electronic surveillance (which includes the search of digital evidence such as CSLI) "was so targeted and extensive that the data it generated, in the aggregate, exposed otherwise unknowable details of a person's life." Id., quoting Mora, 485 Mass. at 373. These factors include the duration and degree of comprehensiveness of the surveillance, the extent to which the surveillance tends to reveal highly intimate or personal details, and whether the electronic surveillance generated a category or quantity of information that could not have been obtained using traditional law enforcement surveillance. Perry, 489 Mass. at 445-449. In considering this last factor, courts pay particular attention to the ability of law enforcement to reconstruct past movements, as well as the degree to which the comparable traditional

surveillance method would have been prohibitively expensive or impractical. Id. at 449. However, "these factors are not exhaustive, and no one factor is determinative." Id.

In creating a vague, multi-factor test and refusing to draw bright-line rules with respect to different surveillance technologies, the SJC has put the onus on law enforcement to determine when electronic surveillance crosses the threshold into an impermissible search that infringes on an individual's reasonable expectation of privacy. See, e.g., Mora, 485 Mass. at 376; McCarthy, 484 Mass. at 509 n.15 ("In declining to establish a bright-line rule for when the use of ALPRs constitutes a search, we recognize this may bring some interim confusion"). As demonstrated infra, the court has provided some guidance with respect to certain technologies. However, the analysis will inherently be fact-specific, and the Middlesex District Attorney's Office recommends consulting with an Assistant District Attorney before determining whether to proceed with or without a warrant.

A. Automatic License Plate Readers (ALPR's)

In McCarthy, 484 Mass. at 508-509, the first case to address and adopt the mosaic theory, the SJC held that police did not intrude on a defendant's reasonable expectation of privacy where they used information obtained from four ALPR's in fixed positions on either side of two bridges to determine when, over a period of three months, a defendant crossed the bridges. While recognizing that ALPR's provided police with surveillance capabilities that exceeded what would have been possible using traditional law enforcement techniques, the court reasoned that the limited number of ALPR's, positioned on public highways leading to and from the Cape Cod peninsula, did not "allow the Commonwealth to monitor the whole of the defendant's public movements" or otherwise "reveal 'the privacies of life.'" McCarthy, 484 Mass. at 508-509, quoting Carpenter v. United States, 138 S. Ct. 2206, 2217 (2018).

The court was clear, however, that a broader network of cameras capturing additional details about a defendant's movements would trigger the warrant requirement, particularly where the system in question retains historical data for a prolonged period, allowing authorities to reconstruct past movements. See McCarthy, 484 Mass. at 506 ("A network of ALPR's that surveils every residential side street paints a much more nuanced and invasive picture of a driver's life and public movements than one limited to major

highways that open into innumerable possible destinations"). The court also cautioned that even a limited number of ALPR's located near "constitutionally sensitive locations," such as the home or a place of worship, could intrude upon one's reasonable expectation of privacy because they "reveal more of an individual's life and associations." Id. at 506. Thus, for example, it is likely that a network of cameras stationed at tollbooths tracking the defendant's movements from Worcester to downtown Boston and back around the time of a suspected crime would implicate the mosaic theory. The same outcome is likely if a network of traffic cameras in a particular city or town tracked a suspect's specific movements through the city throughout the course of week or even (perhaps) a day. The McCarthy court was clear that "the amount of data that the government collects or to which it gains access" is the relevant barometer for whether a particular form of electronic surveillance implicates a mosaic. 484 Mass. at 505-506 ("our constitutional analysis ideally would consider every ALPR record of a defendant's vehicle that had been stored and collected by the government up to the time of the defendant's arrest"). Thus, in crafting requests for ALPR's, particularly when dealing with larger networks of cameras, authorities should specifically set forth particular areas or particular cameras of interest.

B. Pole Cameras

The SJC next turned its attention to pole camera surveillance, an investigatory tool that had, for decades, evaded art. 14 scrutiny. In Commonwealth v. Mora, 485 Mass. 360 (2020), the court addressed whether prolonged pole camera surveillance targeting a suspect's residence amounted to a constitutional search under art 14. Concluding that targeted long-term pole camera surveillance "has the capacity to invade the security of the home," an area traditionally entitled to heightened constitutional protection, the SJC held that the duration in question – a period of two months – required a warrant. See Mora, 485 Mass. at 371-372 ("even when pole cameras do not see into the home itself, by tracking who comes and goes over long periods of time, investigators are able to infer who is in the home, and with whom the residents of the home meet, when, and for how long"). The SJC subsequently narrowed this period to roughly two weeks. See Commonwealth v. Comenzo, 489 Mass. 155, 160 n.9 (2022) (pole camera monitoring residence for period of thirteen days amounted to search under art. 14). Crucially, the

Falcon Flex™

Location-flexible license plate recognition camera designed for fast, easy deployment

Leverage the same Vehicle Fingerprint ™ technology available on Flock Safety's stationary LPR with the Falcon Flex, an infrastructure-free, location-flexible license plate reader camera. Simple, mobile installation makes this vehicle detection device ideal for your ever-changing investigative needs. Less time to install means faster leads and increased case clearance.

Evidence Capture Simplified

Combine the power of Vehicle Fingerprint recognition with lightweight, adaptable mounting options, and a complementary LTE service is ideal for temporary installation virtually anywhere.

- 1 Falcon License Plate Reader Camera
- 1 Portable mount with varying sized band clamps
- 1 Charger for internal battery
- Unlimited LTE data service + software licenses

Smarter Reads for Actionable Leads

Not every vehicle has a plate. Search by license plates and unique vehicle characteristics including:

- Build type
- Make
- Color
- License plate state
- Missing and covered plates
- Bumper stickers
- Decals
- Roof racks
- & more

Capture More. Recharge Less.

The Falcon Flex camera captures 30,000 license plates and Vehicle Fingerprint attributes of vehicles traveling up to 100 MPH at a maximum distance of 90 feet on a single battery charge.

Activate From the Palm of Your Hand

On-site installation is made quick and easy with the mobile installation app for all your Android and iOS devices, including a DIY installation walkthrough and QR reader for device linking.

Sophisticated Software Outsmarts Crime

Like all Flock Safety detection devices, the Falcon Flex license plate reader camera integrates with Flock Safety's suite of software solutions. With unlimited user licenses, every member of your agency can conduct complex searches, receive Hot List alerts, access 1B+ license place reads each month via our nationwide network of footage sharing and more.

Trustworthy technology that delivers

30K

Plate reads on a single battery charge

120

Stolen plate and vehicle hits every hour

30%

More accurate than legacy ALPR

Camera Specifications

DESIGN
Dimensions: 8.75" x 3"
Weight: 3 lbs
IP65 Waterproof

POWER
14Ah Battery - Rechargeable

DATA
16GB local storage, ~2 weeks

MOTION
Passive Infrared Motion Detection

CONNECTIVITY
Embedded Cellular LTE Connection
Cellular service provider depends on area

PRODUCTION
Designed & manufactured in the U.S.

NIGHT VISION
850nm Custom IR Array

CLOUD STORAGE
30 days storage (Amazon Web Services)
Accessible via secure website
Images can be downloaded and stored by department

Camera Performance

MOTION
NCIC, AMBER Alert & Custom Notifications Average of 10-15 seconds Includes time, location, plate, and vehicle image Includes state-specific alerts based on image

PROCESSING POWER
1.4GHz
64-bit quad-core CPU

IMAGE CAPTURE
Up to 100 ft from vehicles
Up to 2 lanes of traffic per camera
Date and time with camera location
Plate (state, partial, paper, and none)
Vehicle details (Make, type, color, etc.)

Pricing

$3,000/camera per year

Field Technician maintenance is not included; If a camera is lost, stolen, or damaged, a new device can be purchased discounted price of $1500.

flock safety

Law Enforcement

YOUR PARTNER IN ELIMINATING CRIME

Flock Safety provides 1000+ law enforcement agencies in over 2000 cities a scalable solution for public safety that reduces crime by up to 60%. Spend less time chasing investigative leads; leverage Flock Safety's automatic license plate recognition (ALPR) and Vehicle Fingerprint™ technology to get actionable, objective evidence that drives results in your community for less than the cost of hiring an additional officer.

ALPR CAMERAS THAT GO ANYWHERE

Our devices are infrastructure-free with solar power and LTE connectivity, so we can install them quickly where they make the most impact on crime.

CAPTURE MORE THAN LICENSE PLATES

Search footage with Vehicle Fingerprint™ technology. Access vehicle type, make, color, license plate state, missing / covered plates, and other unique features like bumper stickers, decals, and roof racks.

MULTIPLY YOUR FORCE WITH LESS

$2,500 per camera/year includes hardware, software, solar power, data, cloud storage, ongoing maintenance, and access to 1B+ plate reads/month.*

PARTNER WITH YOUR COMMUNITY

Thousands of communities use privately-funded Flock Safety cameras nationwide. This means law enforcement has access to more footage without the additional cost.

INTEGRATED AUDIO DETECTION

Uncover more than shell casings; get from "shots fired" to a suspect vehicle in real-time with the Raven™ audio detection device, an accessory for your ALPR that identifies crimes in progress before 911 is called.

1000+
Agency Re ationships Nationwide

120
Hot List Notifications Per Hour

1B+
License P ate Reads Per Month

2000+
Cities with Private Cameras

Flock Safety's public safety operating system includes fixed license plate reading cameras and software for unlimited users to access footage and receive Hot List notifications.

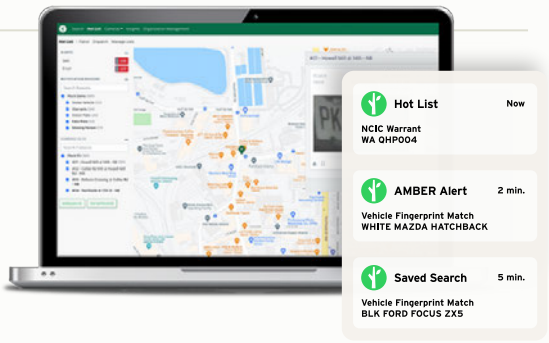
Increase Case Clearance for Your Agency with Flock OS



1 DETECT OBJECTIVE EVIDENCE 24/7

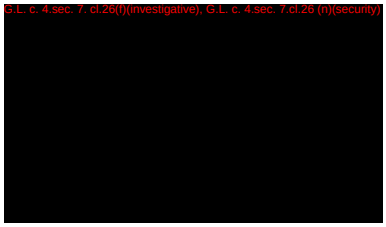
Scale public safety without growing your force or exceeding your budget. Instead of knocking on doors after a crime occurs, proactively deploy ALPR cameras or transform existing IP cameras into cameras that see like a detective 24/7 without overtime pay.

2 DECODE FOOTAGE TO UNCOVER LEADS

Our software identifies body type, make, color, license plate (partial, missing, or covered plates), temporary plates, license plate state, and unique features like decals, bumper stickers, and accessories that create a traceable Vehicle Fingerprint.

3 DELIVER ACTIONABLE DATA TO YOUR AGENCY

Give Dispatch a birds-eye view of your jurisdiction and empower your Patrol Officers to be more effective in the field with real-time notifications related to active investigations.



> This technology provides officers the investigative leads necessary to go after suspects immediately, which is great for morale.
