THE COMMONWEALTH OF MASSACHUSETTS
TRAVEL AUTHORIZATION FORM (Form TAF)

1. Date of Request:	2. Travel Request #:	3. Department/Division:	4. DEPT/ORGN:	5. Appropriation No.:
5/9/2023		MSP/CIIS	POL	

6. Name of Traveler:	7. Title(s):	8. Dates of Travel:
Joel Zayas	Critical Infrastructure Asset Management Analyst	5/16-5/17 2023

9. Travel Itinerary and Justification

Supporting documentation, i.e. Agendas or brochures.

The Amtrak Police Department RAILSAFE partner training course that is available to select individuals. It is a one and half day program designed to strengthen coordination and integration between Amtrak and partner first responder and emergency management agencies. The course is hosted by Amtrak. The training course is being held in Boston, MA (more details TBD). As the Critical Infrastructure Asset Management Analyst assigned to the Commonwealth Fusion Center's (CFC) Commonwealth Critical Infrastructure Program (CCIP), this training will benefit the Commonwealth as I will be able to use this knowledge to assist critical infrastructure owners and operators in enhancing security and resilience, leading to a more secure Commonwealth.

10. Expenses	Personal Funds	MA State Funds	Federal/ Other State Funds
Transportation: (check all that apply) ☐ Rail ☐Bus ☐Airfare ☑Car: ☐ State ☑Personal ☐Rental ☐Taxi ☐Other:		Mileage 2.4 miles (one way) x 4 = 9.6 miles x .62/mile = $5.95	
Lodging:			
Meals:			
Other: (please list): Parking		Parking $19.80/day = $39.60	
Sub Total(s):			

GRAND TOTAL: $45.55

11. Certifications and Authorizations (See G.L. c. 30, §25B)

I hereby certify under the pains and penalties of perjury that, to the best of my knowledge, the above information is true and correct.
Signature of Traveler: Date: 5/9/2023

I hereby certify that sufficient funds are available for the above described travel accommodations.
Signature of Agency CFO: Date:

I hereby authorize the anticipated travel described above and related expenses listed in this form.
Signature of Traveler's Appointing Authority: Title: Date:

I hereby authorize the anticipated travel described above and related expenses listed in this form.
Signature of the Traveler's Cabinet Secretary Date:

12. Travel Funded By Private Entity, Foreign Government Entity, or Federally Recognized Tribe:

Travel Funded By Private Funds: ☐Yes ☐No
If Yes: $_____ Source (Contact Information):_____

TRAVEL FUNDED BY PRIVATE SOURCES MUST BE DISCLOSED TO AND AUTHORIZED BY APPOINTING AUTHORITY PURSUANT TO 930 CMR 5.08 (2)(d)(1). FOR THE APPROPRIATE FORM GO TO: https://www.mass.gov/disclosure-forms

13: Upon final approval, the Cabinet Secretary shall ensure that a copy of this form is distributed to:
☐ A&F Budget Director & The Office of the Comptroller (please check once complete)

AirLink® RV55: Industrial LTE-A Pro Router

The AirLink® RV55 delivers LTE and Wi-Fi connectivity for vehicles and remote fixed assets operating in harsh environments. With ultra-low power consumption, the RV55 is ideal for solar/battery powered installations.

AirLink® RV55
Rugged LTE-A Pro router capable of 600Mbps download and 150 Mbps upload. Wi-Fi optional.

AirLink® RV55 – Router Specifications

	North America	EMEA	Global
CELLULAR			
Peak D/L	**RV55 LTE** – Up to 150 Mbps, Cat 4 (WP7610 | WP7607) **RV55 LTE-A PRO** – Up to 600 Mbps, Cat 12 (EM7511 | EM7565)	**RV55 LTE** – Up to 150 Mbps, Cat 4 (WP7610 | WP7607) **RV55 LTE-A PRO** – Up to 600 Mbps, Cat 12 (EM7511 | EM7565)	**RV55 LTE** – Up to 150 Mbps, Cat 4 (WP7610 | WP7607) **RV55 LTE-A PRO** – Up to 600 Mbps, Cat 12 (EM7511 | EM7565)

Contract Summary

This is a Statewide Contract for Security surveillance and detection. This contract covers the acquisition of Security Systems and Related Services to include, but not limited to, Video, Access Control, Integrated Video Management, Visitor Management, Locks, Alarms, Monitoring Services/Systems, Catalog Sales, Service, and Maintenance.

Contract Categories

This contract includes 4 categories as listed below.

Category 1: Catalog Sales
Category 2: Security Systems Integration (Equipment and Related Services)
Category 3: Security Systems Monitoring Services
Category 4: Locks, Locksmiths, Door Closures, and Related Hardware

Benefits and Cost Savings

Statewide contracts are an easy way to obtain benefits for your organization by leveraging the Commonwealth's buying power, solicitation process, contracting expertise, vendor management and oversight, and the availability of environmentally preferable products.

- Competitive discounts on a wide range of security products
- Competitive hourly wage rates and markups over prevailing wage
- Prompt payment discount opportunities
- Certified Supplier Diversity Office vendors
- Multiple vendors in each category for competition
- Ability to add new products/manufacturers that fit the scope of the RFR

Find Bid/Contract Documents

- To find all contract-specific documents, including the Contract User Guide, RFR, specifications, price sheets and other attachments, visit COMMBUYS.com and search for ITC71 to find related Master Blanket Purchase Order (MBPO) information.
- To find all contract-specific documents, including the Contract User Guide, RFR, specifications, and other attachments, visit COMMBUYS.com and search for ITS71 to find related Master Blanket Purchase Order (MBPO's) information. All common contract documents are located in the "Master Contract Record" Master Blanket Purchase Order (MBPO) for ITC71 and can be accessed directly by visiting Master Blanket Purchase Order PO-19-1080-OSD03-SRC3-16463.

Who Can Use This Contract

Applicable Procurement Law

Executive Branch Goods and Services: MGL c. 7, § 22; c. 30, § 51, § 52; 801 CMR 21.00;

Eligible Entities

Please see the standard list of Eligible Entities on our Eligible Entities Which May Use Statewide Contracts webpage.

Subcontractors

The awarded vendor's use of subcontractors is subject to the provisions of the Commonwealth's Terms and Conditions and Standard Contract Form, as well as other applicable terms of this Statewide Contract. Prior approval of the customer is required for any subcontracted service of the Contract. Contractors are responsible for the satisfactory performance and adequate oversight of their subcontractors.

Construction Requirements

This contract may be used for construction, reconstruction, alteration, installation, demolition, maintenance or repair services and, if needed, associated materials. **All construction or construction related labor provided under this contract is limited to $50,000 or less per engagement.** Any services provided that would exceed $50,000 in labor costs must go out to a public bid.

Eligible Entities will be allowed to contract with any Contractor under Statewide Contract ITC71 for services for building or public works construction projects estimated to cost **less than $10,000** without the need to solicit multiple written price quotations when procuring these services, unless required by the Eligible Entity's internal procurement policies and requirements. Eligible Entities must use sound business practices which require a record that includes, at a minimum, the name and address of the person from whom the services were procured.

If using Statewide Contract ITC71 for building construction or public works projects estimated to cost **between $10,000 and $49,999** (this amount is capped for construction or construction-related labor only), **Eligible Entities are required to solicit a minimum of at least three (3) responses from ITC71 Contractors and MUST receive two (2) written responses from ITC71 Contractors**, provided that the contract shall be awarded to the responsible person offering to perform the contract at the lowest price quotation. If the project requires additional equipment/parts/materials the costs associated with such materials may exceed $50,000.

Tip: Buyers should request that vendors itemize their quotes so that the construction and/or construction-related services are isolated and easily identifiable. Only the labor costs are counted against the thresholds.

For purposes of construction procurement thresholds, **the act of pulling cables or wiring through existing conduits is not considered a construction activity**. The labor is however subject to prevailing wage law.

In instances where Statewide Contract ITC71 is used for construction or construction related labor in excess of $25,000, M.G.L c.149 s.29 **payment bonds** are required from the selected Contractor. It is the responsibility of the Eligible Entity to enforce this requirement when soliciting quotes. Eligible Entities may require additional performance and payment bonds from the Contractor, which would be detailed in the Statement of Work

The terms "Construction" and "constructed" are defined by M.G.L c. 149 s.27D. It is the responsibility of the Eligible Entity to consult their legal counsel for assistance determining whether installation work includes construction as defined by M.G.L. c.149 or M.G.L. c.30 s.39M. Information concerning specific construction requirements may be found in the Office of the Inspector General's Public Procurement Charts. Chapter 30B Procurement Assistance from the Office of the Inspector General is available at mass.gov/ig/procurement-assistance. Contact the 30B Hotline at 617-722-8838 or 30BHotline@mass.gov.

Supplier Diversity Requirements

When selecting contractors and placing orders, Executive departments shall utilize diverse and small businesses to the extent possible based on contract terms, SDO and departmental policies, laws, and regulations. Additionally, departments shall make a preference for contractors with higher SDP commitments and/or performance whenever such information is available (or is requested from contractors by the department) and the preference is feasible.

OSD provides up-to-date information on the availability of diverse and small businesses on statewide contracts through the Statewide Contract Index available on the COMMBUYS home page. See the "Programs (SDO and SBPP)" tab for current certification and small business status of contractors on this contract.

When soliciting quotes, the following requirements apply:

Expected annual value of the RFQ	RFQ process requirements
Less than or equal to $250,000/year	• **Notify at least two small businesses** capable of providing the product or service of the opportunity, if available. • Include SBPP contract language and place it prominently within the RFQ. • Evaluate bids received from, and award a contract to, an SBPP-participating small business that meets the department's best value criteria. • Award to a large business only if there is no SBPP participating business meeting departments' best value criteria. • Conduct a clarification/BAFO/negotiation before disqualifying an SBPP-participating business based on price or desirable criteria. • See the Best Value Evaluation of Responses to Small Procurements: A Guide for Strategic Sourcing Teams for additional guidance.
More than $250,000/year	• **Notify at least two diverse and/or small businesses** capable of providing the product or service of the opportunity, if available. • Make a preference for contractors with higher SDP commitments and/or performance whenever such information is available (or is requested from contractors by the department) and the preference is feasible. • **Note**: Departments may ask the prime Contractor for an additional SDP commitment specifically related to the Department's purchase or engagement. SDP spending for such a purchase or engagement must be reported by the Contractor using the SDP Reporting Form directly to the Department and may not be included in any other SDP reporting filed by the Contractor.

OSD provides up-to-date information on the availability of diverse and small businesses on statewide contracts through the Statewide Contract Index available on the COMMBUYS home page. See the "Programs (SDO and SBPP)" tab for current certification and small business status of contractors on this contract.

Pricing, Quote and Purchase Options

Pricing Options

- **Ceiling/Not-to-Exceed:** Contract discounts and other pricing published under the contract represents "ceiling" or "not-to-exceed" pricing, and may be further negotiated.

- **Category 1 – Catalog Sales**
  - Discount % off of MSRP or List price.
- **Category 2 – Security Systems Integration (Equipment and Related Services)**
  - Products: discount % off MSRP or List price for products.
  - Services: mark-up % over prevailing wage or hourly wage rates.
- **Category 3 – Security Systems Monitoring Services**
  - Service rates.
- **Category 4 – Locks, Locksmiths, Door Closures, and Related Hardware**
  - Products: discount % off MSRP or List price for products.
  - Services: mark-up % over prevailing wage or hourly wage rates.

Product/Service Pricing and Finding Vendor Price Files

Pricing is available for download from the Master Contract Record page.

Purchasing Options

The purchase options identified below are the only acceptable options that may be used on this contract:

- Purchases made through this contract will be direct, outright purchases

Category 2, 3 and 4 may include fee for service

Setting Up a COMMBUYS Account

COMMBUYS is the Commonwealth's electronic Market Center supporting online commerce between government purchasers and businesses. If you do not have one already, contact the COMMBUYS Help Desk to set up a COMMBUYS buyer account for your organization: (888)-627-8283 or OSDhelpdesk@mass.gov.

When contacting a vendor on statewide contract, always reference ITS71 to receive contract pricing.

Quick Search in COMMBUYS

Log into COMMBUYS, and use the Search box on the COMMBUYS header bar to locate items described on the MBPO or within the vendor catalog line items. Select Contract/Blanket or Catalog from the drop-down menu.

Obtaining Quotes

Contract users should always reference "ITC71" when contacting vendors to ensure they are receiving contract pricing. For non-construction related purchasing it is recommended that buyers solicit multiple quotes for purchases under this statewide contract. For projects involving construction or construction related labor, please review the Example Quoting Scenarios for Category 2 or 4.

For a full description of how to complete a quote in COMMBUYS visit the *Job Aids for Buyers* webpage, and select:

- The *COMMBUYS Purchase Orders* section, and choose *Request Quotes From Vendors on Statewide Contracts* job aid.

Instructions for MMARS Users

MMARS users must reference the MA number in the proper field in MMARS when placing orders with any contractor.

Emergency Services

Many statewide contracts are required to provide products or services in cases of statewide emergencies. ML - 801 CMR 21 defines emergency for procurement purposes. Visit the Emergency Response Supplies, Services and Equipment Contact Information for Statewide Contracts list for emergency services related to this contract.

Delivery/Returns

Delivery must be F.O.B. destination with no delivery or travel expenses paid by the Eligible Entity with the exception of deliveries to Dukes and Nantucket Counties. Contractor must deliver all purchases or initiate installation within thirty (30) business days after receipt of written order or at a time mutually agreed upon by the Eligible Entity.

Services and products/materials provided by Contractors must meet all federal, state, and local standards for quality and safety requirements. Services and products/materials not meeting standards will be deemed unacceptable and returned to a Contractor for credit at no charge to the Commonwealth.

Prevailing Wage Requirements

Services performed under Categories 2 and 4 may be subject to prevailing wage laws. Eligible Entities that utilize this contract will be considered the "awarding authority". Eligible Entities are required to request prevailing wage rate sheets at https://www.mass.gov/prevailing-wage-program (or by calling 617-626-6975) and provide these to the vendor. Vendors are responsible for complying with the Prevailing Wage law.

Category 4 – Locksmiths

Per the Massachusetts Department of Labor Standards, when covered by the prevailing wage, locksmith work falls under the carpenter rate.

Example Quoting Scenarios for Category 2 or 4

Example 1 – Construction or Construction Related Labor UNDER $10,000

You are an Eligible Entity soliciting quotes for a Category 2 or 4 project involving construction or construction related labor. Your quote for the construction or construction related labor costs are $8,500. Additional parts and materials will cost $12,000. The total estimated cost of this project will be $20,500.

STEP(S):

1. Select a vendor based on sound business practice/best value.

Example 2 – Construction or Construction Related Labor BETWEEN $10,000 and $50,000

You are an Eligible Entity soliciting quotes for a Category 2 or 4 project involving construction or construction related labor. Your quote for the construction or construction related labor costs are $35,000 and another $20,000 for pulling cables through existing conduits in your building. Additional parts and materials will cost $80,000. The total estimated cost of this project will be $135,000.

STEP(S):

1. **MANDATORY**: Request quotes from *at least three (3)* vendors on ITC71 within the same category.

2. **MANDATORY**: Receive *at least two (2) written responses* from vendors on ITC71 within the same category.
3. **MANDATORY**: Award project to the ITC71 vendor with the *lowest responsible response*.

Example 3 – Construction or Construction Related Labor GREATER THAN $50,000

You are an Eligible Entity soliciting quotes for a Category 2 or 4 project involving construction or construction related labor. Your quote for the construction or construction related labor costs are $75,000. Additional parts and materials will cost $150,000. The total estimated cost of this project will be $225,000.

STEP(S):

1. **MANDATORY**: Eligible Entity *must* go out to public bid and *cannot* use ITC71 due to labor costs being greater than $50,000.

How to Purchase From the Contract in COMMBUYS

Setting up a COMMBUYS Account

COMMBUYS is the Commonwealth's electronic Market Center supporting online commerce between government purchasers and businesses. If you do not have one already, contact the COMMBUYS Help Desk to set up a COMMBUYS buyer account for your organization: 888-627-8283 or COMMBUYS@mass.gov.

Directly purchase a non-fixed price item ($0 line item) through COMMBUYS

All vendor MBPO pages have a $0.00 line item for each category they are awarded. When placing an order in COMMBUYS a contract user needs to type in the total cost of the order and may add invoice/quote information as reference either by typing in the information or attaching as a file.

Solicit quotes and select and purchase quoted item in COMMBUYS

ITC71 has "Solicitation Enabled" category MBPO pages on COMMBUYS. This feature allows COMMBUYS users to obtain quotes from multiple vendors at once from the same category. The buyer would create a Release Requisition, and then convert it to a Bid. After approval by the buyer approving officer, the bid is then sent to selected vendors to request quotes.

For more information on how to complete this purchase in COMMBUYS, visit the *Job Aids for Buyers* webpage.

Additional Information/FAQs

Banning of Dahua and Hikvision

In response to the ban enacted by H.R.5515 - John S. McCain National Defense Authorization Act for Fiscal Year 2019, Section 889 on Hangzhou Hikvision Digital Technology Company and Dahua Technology Company (or any subsidiary or affiliate of such entities) products from both manufacturers are forbidden on ITC71.

Proprietary Product Exclusion

Purchase of any software package for any security purpose that is unique to one Contractor or proprietary in any manner is strictly prohibited. All included hardware and software provided by Contractors must be serviceable by companies other than the Contractor and shall be designed for service and maintenance by others. It is the goal of the

Commonwealth to procure off the shelf platforms that can be serviced by multiple Contractors at the option of the Commonwealth. Eligible Entities may request program codes specific to each system as well as the platform on which the codes reside on.

Negotiation

Eligible Entities have the right to negotiate pricing or other aspects of purchases within the scope of the contract and are encouraged to do so.

Pre-Installation

It is the Vendor's responsibility, prior to delivery, to survey and review the particular installation location to ensure the existing proposed location will meet the manufacturer's established installation criteria. Should the proposed installation location not meet established installation criteria, the Vendor and the Eligible Entity will attempt to locate an alternate mutually agreeable location for the equipment at the particular site.

Vendors not familiar with any location are strongly advised to personally view those locations prior to delivery. A lack of familiarity with an installation location will in no way relieve a vendor from its responsibility to fulfill its contractual obligations.

Compliance with Regulatory Requirements

Vendor must maintain full compliance with all Regulatory Licensure Boards' (State Board of Electrical Examiners, Department of Public Safety) licensing requirements for all work.

Post-Installation

Vendor must be responsible for all installation of equipment and/or supplies and removal of all package material from the premises in coordination with the Eligible Entities instructions. For off-site monitoring services, Vendor must ensure there are systems current to meet the needs of the Commonwealth and remain current against intrusive/invasive systems that could compromise the installed system(s).

Anticipated Service Disruption

Vendor must coordinate with the Eligible Entity for any anticipated service disruption. If anticipated disruption is scheduled the Vendor must provide a minimum of 24 hours' notice to the Eligible Entity.

Training and Training Materials

Vendors must provide significant training to designated personnel within the Eligible Entity during the final system testing and start-up phase of a project. The vendor and Eligible Entity shall mutually agree on the duration as well as the location and schedule of the training. Training materials include, but are not limited to books, handouts, software, or customized training videos will be provided by the vendor and will be given to the Eligible Entity at no additional cost, as agreed upon by the parties.

Software Licenses

Where applicable, the cost of software licenses should be included in the Service Maintenance Agreement. Eligible Entities may also purchase software licenses separate from any Service Maintenance Agreements.

Warranties

Vendors must provide a standard warranty for all equipment of at least 1 year in length. Eligible Entities may purchase extended warranties with vendors at negotiated pricing. Please review the ITC71 price file on COMMBUYS for information regarding the availability of extended warranties. Vendor must affix a label or decal to the control device for any equipment at the time of installation showing warranty period by dates, and the name, address, and telephone number of the OEM or Reseller responsible for warranty service of the equipment. A successful installation is constituted by the product, equipment or system being fully capable of functioning to its fullest capacity and according to its design and is unencumbered by flaws resulting from poor installation. System Acceptance (final sign-off) will be provided by the user entity acknowledging final acceptance of a successful installation. System Acceptance cannot be unreasonably withheld by any entity, the contract manager or the project manager.

No pre-payments

Vendor may not request any form of pre-payments by the Eligible Entity before the service is rendered. For special projects implemented in phases, by mutual agreement of the Eligible Entity and the Vendor, invoices must be issued after each phase is completed to the Eligible Entity's satisfaction.

No Minimum Charge

Contractors are paid only for hours worked on location. Labor charges begin at job location and end at job location. Eligible Entity will not pay for any additional labor charges away from job location.

No Additional Fees and Surcharges

Contractors are not allowed to charge additional fees or surcharges with the exception of deliveries to Dukes and Nantucket Counties. This includes, but is not limited to, charges for permits, set-up, cleaning, freight, shipping, quotes, travel, transportation, delivery, commuting, fuel, energy, insurances, meals, lodging, and any other fee.

Statement of Work Example

Eligible Entities should provide a clear Statement of Work to the vendors at the time of the request for quote. The following are some elements to consider including in a statement of work:

Important Elements of the Statement of Work:

- Reference to the Statewide Contract ITC71
- Prevailing wage sheets, as applicable to the job
- Work schedules and performance dates
    - Release Date of the Request for Quote
    - Walkthrough requirements, if required
    - Response Date of Request for Quote
    - Date of Vendor Selection
- Responsibilities of the Vendor
    - Agrees to fulfill all provisions of the ITC71 statewide contract
    - Responsible for complete design, measurements, and drawings
    - Delivery, installation, testing, training, design and start up
    - Replace, modify, or upgrade existing hardware as necessary

    - Include the cost of any software licenses in bid
- Whether sub-contractors will be allowed
- Eligible Entity Reserves right to negotiate and modify requirements with awarded Vendor
- Submittal Requirements
    - Narrative – how proposer will complete scope of work
    - Estimated timeline from release of purchase order to system live
    - Drawing Requirements
- Service/Maintenance Agreements
    - Response time guarantees desired
- Up time guarantee

Appendix B: Contract Categories

Category 1: Catalog Sales

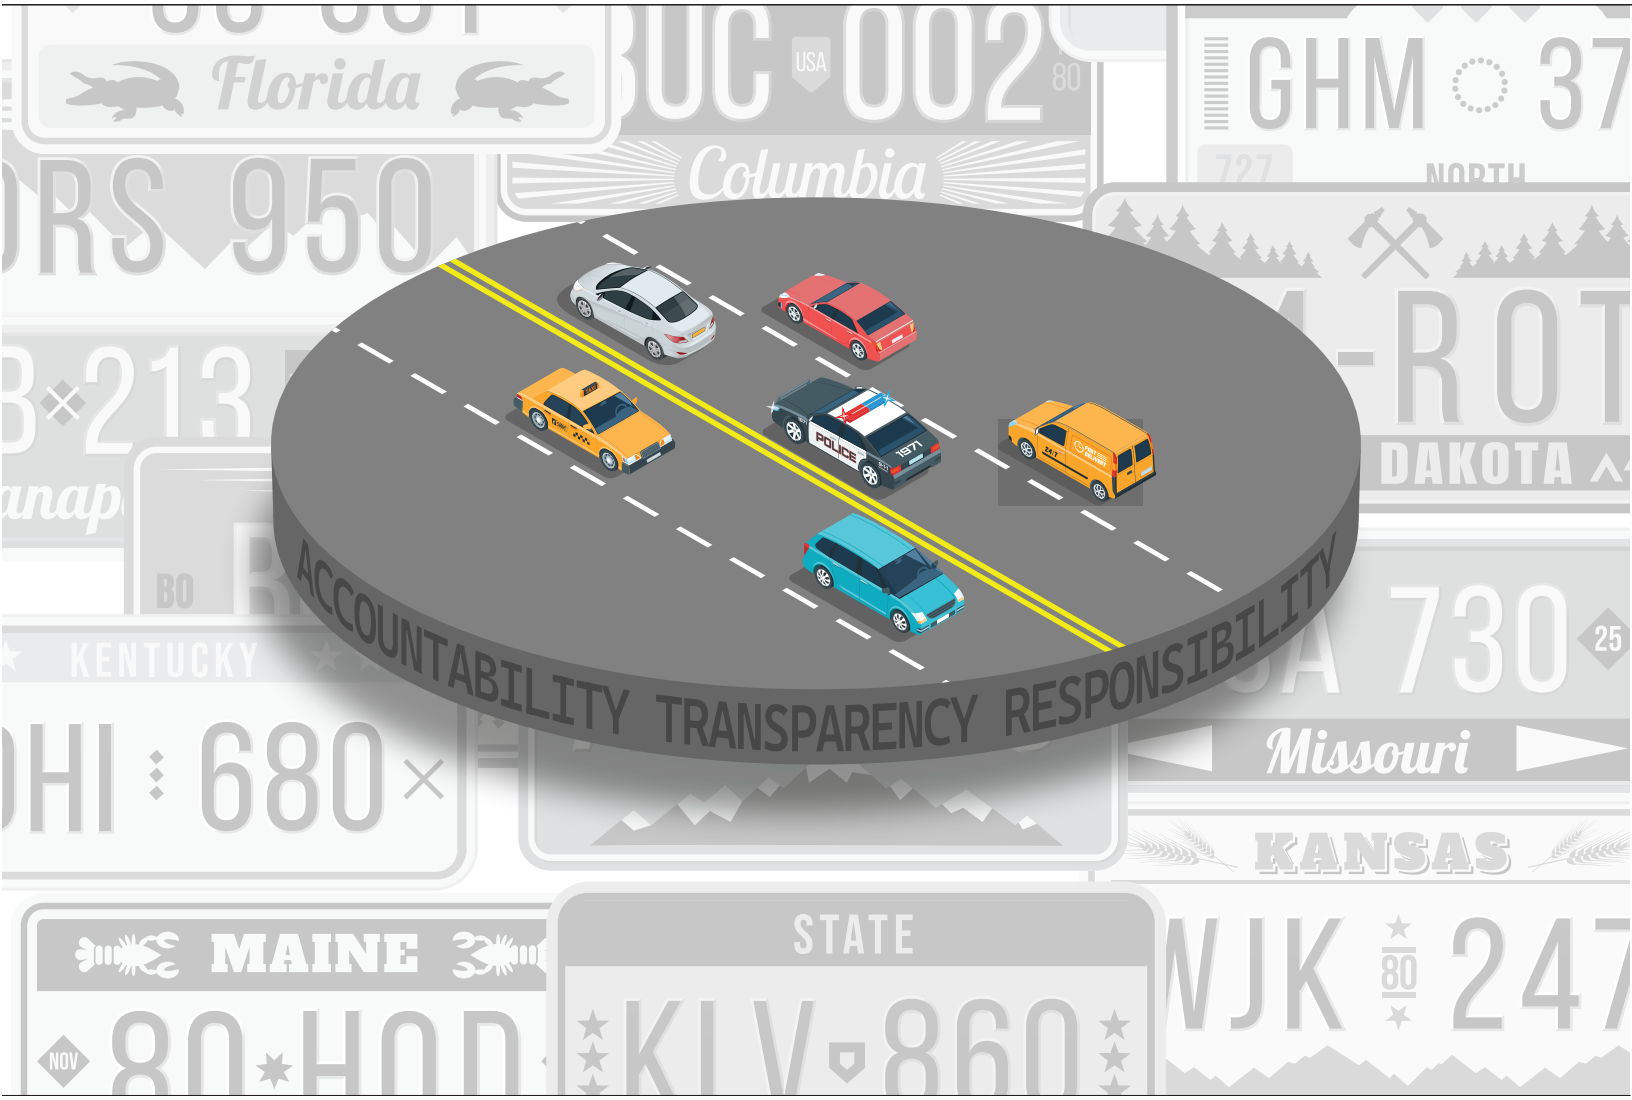
This category is only for catalog sales for security equipment and supplies that is within the scope of this contract.

Category 2: Security Systems Integration (Equipment and Related Services)

This category is to provide security integration services; specifically the Contractor must be able to provide equipment, systems, supplies, installation, design services, training, service and maintenance, and technical support for all equipment and related services. This includes, but is not limited to: configuration and integration of security, camera, access control, or ID systems and supplies; lobby turnstiles; vehicle access barriers; command centers; detection systems (including x-ray machines, metal detectors, full-body scanners, explosives, narcotics, vehicle-borne, environmental, buried cable, fence, or infrared detection systems); racks, housings, security consoles, mounts, stand-alone computers, secured data storage (local and/or cloud), encrypted data transmission (wired, wireless, and/or cloud-based) and the ability to track encrypted data transmissions; and furniture/fixtures when designed or purchased for use in a security application.

Category 3: Security Systems Monitoring Services

This category is to provide security systems monitoring services in following types of locations: facilities (buildings, garages, tunnels, etc.), campuses (groups of buildings, that may include fencing and gates, etc.), and residential group homes. Category 3 is for system monitoring services ONLY. Contractors wishing to provide both monitoring and installation services must submit proposals under both Category 2 and Category 3.



Category 4: Locks, Locksmiths, Door Closures, and Related Hardware

This category is to provide full-service installation, maintenance, and catalog sales of locks, accessories, and related equipment. This includes, but is not limited to padlocks, locks, keys, mortis locks, lock cylinders, auxiliary, deadbolt, door closures, key making machines, supplies and repair parts, handicap door openers, panic bars, hasps and hasp locks, institutional locks and door systems (paracentric locks, high security mogul locks, sliding door operators-institutional) and accessories, safes, and locksmith tools or security supplies.

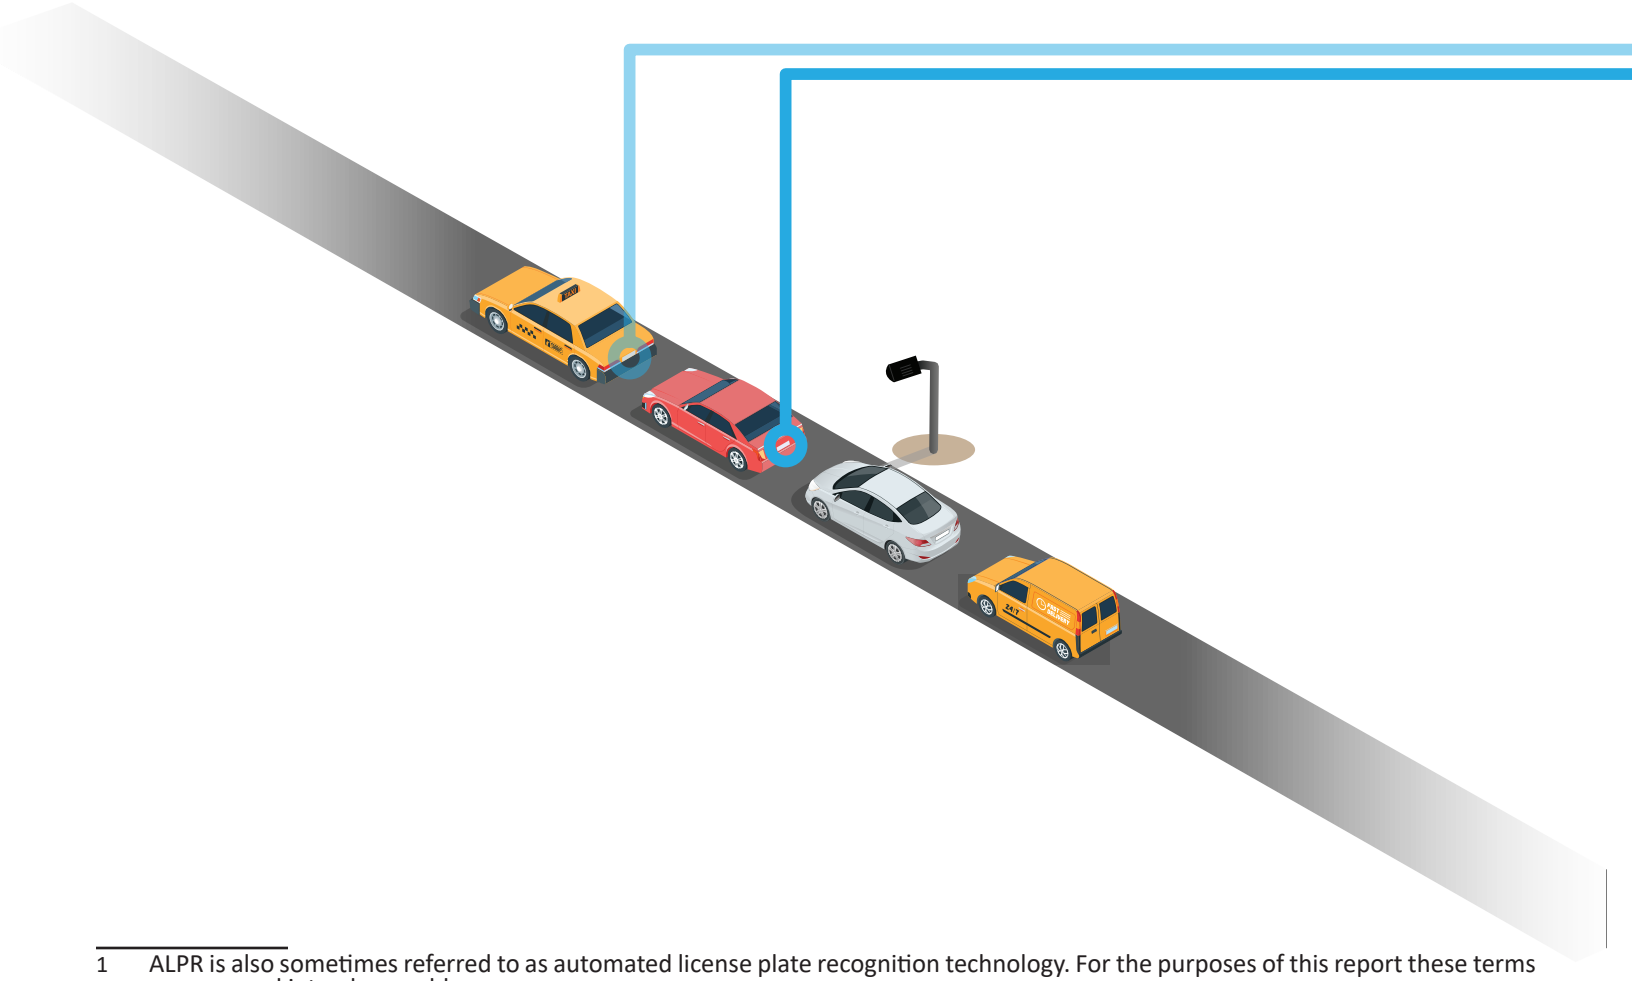
2618



Introduction

Modern-day law enforcement relies on advanced technologies to enhance investigative capabilities. One example of these technologies is automated license plate reader (ALPR).[1] ALPR has been used for decades by law enforcement agencies throughout the United States, Canada, and across the globe to help generate leads and close cases. Law enforcement agencies that utilize ALPR continuously report that the technology is a critical tool that helps advance their efforts to fulfill law enforcement's ultimate mission of keeping our communities safe.

ALPR is a proven technology, but all law enforcement tools must be used ethically and appropriately. This product is designed to assist law enforcement agencies with developing and maintaining an ALPR program that respects citizens' Constitutional rights and privacy while maintaining ALPR's effectiveness as a tool to address crime.

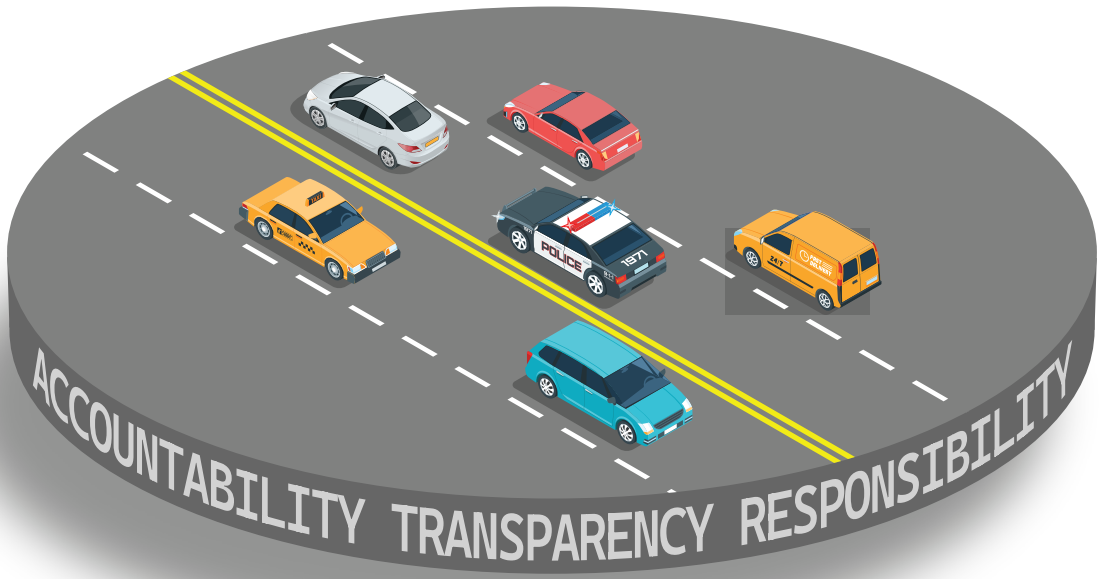
In October 2022, the Major Cities Chiefs Association (MCCA) established an ALPR Working Group composed of trusted technology partners, law enforcement agency stakeholders, and subject matter experts in the ALPR field to achieve this goal. The Working Group has created a set of best practices related to procurement, development, operation, data collection and reporting, and other elements instrumental in creating a well-balanced ALPR program. Like any other technology, ALPR will continue to evolve.

The product is a true public-private partnership, and the framework outlined in it will help law enforcement agencies seeking to utilize ALPR achieve the highest possible standards. However, it is essential to remember that every community is different, and what works in one community may not work in another. Therefore, while the Working Group's recommendations provide a strong foundation, agencies are encouraged to tailor them to meet the specific needs of their community as they develop, implement, and manage their ALPR program.

1 ALPR is also sometimes referred to as automated license plate recognition technology. For the purposes of this report these terms are used interchangeably.

2619

Executive Summary



In October 2022, the Major Cities Chiefs Association (MCCA) launched an ALPR Working Group composed of trusted technology partners, law enforcement agency stakeholders, and subject matter experts. The Working Group has developed a product that is designed to provide MCCA members and other law enforcement agencies with guidance on developing, deploying, and responsibly using ALPR technology. ALPR technology has proven to be a powerful tool to combat criminal activity, generate actionable investigative leads, and help close cases faster.

This product directly addresses the most critical aspects of ALPR technology, which can be subdivided into three main categories: accountability, responsbility, and transparency. The product outlines suggestions on ALPR program design, policy development, training considerations, and deployment strategies. The product also covers ALPR procurement. Finally, it addresses the ongoing management and oversight of the technology and provides an overview of relevant case law. While these suggestions and recommendations address the most critical aspects of ALPR, they leave sufficient room for agencies to develop programs that meet their specific needs.

Stakeholders concerned about ALPR typically focus on disparity of impact, infringement of privacy, and the effects on individual rights. However, the Working Group strongly believes these concerns can be sufficiently addressed and mitigated through thoughtful policy design, effective management, and proper oversight. Furthermore, it is important to note that recent case law differentiates the capabilities ALPR provides from those of other law enforcement technologies.

The guidance outlined in this product serves as a template for building and operating an ALPR program that is both effective in its use and responsible in its nature. By implementing the Working Group's suggestions and recommendations, law enforcement agencies can ensure their ALPR programs are helping to keep communities safe while protecting citizens' privacy, civil liberties, and Constitutional rights. In addition, this can help increase public trust and build support for using ALPR technology.

Finally, like all technology, ALPR will continue to change and evolve. For this reason, this product should be considered a living document rather than a finalized template for developing and implementing a balanced and responsible ALPR program. As the conversation surrounding ALPR progresses, so will the recommendations and suggestions included in this product.

2620

Key Recommendations

The following key recommendations serve to highlight the MCCA ALPR Working Group's most essential recommendations and considerations. They have been grouped by their applicability to three foundational principles regarding the deployment of advanced technologies in law enforcement.

ACCOUNTABILITY

- Agencies should develop a training program that establishes accountability guidelines, procedures for responsible use, and emphasizes transparency. The use of ALPR technology should be limited to trained personnel.
- The use of ALPR technology should be limited to criminal investigations or to address an articulable public safety concern.
- The procedures for the use of ALPR technology should emphasize the need to confirm the accuracy of the information presented prior to taking enforcement action.
- Careful consideration should be given to the data retention policies implemented by the agency. Data retention time frames should be developed by balancing community needs, benefits, and concerns.
- Audits of ALPR programs should be conducted regularly. Audits should monitor user activity to ensure appropriate use in accordance with established policies.

RESPONSIBILITY

- Sharing ALPR data among law enforcement agencies can enhance the effectiveness of ALPR deployments. A clear policy should be established prior to enabling data sharing to address data usage and deconfliction requirements.
- Deployment strategies should be reviewed regularly and evaluated to ensure the ALPR program and technology continues to operate within the established objectives and policies.
- Law enforcement agencies seeking to procure ALPR technology should consult with other agencies that have deployed ALPR during program development.
- Prior to the deployment of ALPR technology, agencies should assess existing technological deployments and consider how they can complement or enhance their specific program strategy.
- Law enforcement agencies must implement strict cybersecurity protections to prevent unauthorized access of ALPR data.

TRANSPARENCY

- Deployment plans should be informed by analyzing crime data, patterns, and trends to ensure the technology is deployed in an equitable and responsible manner.
- Agencies should consult with their local public works and other relevant stakeholders to ensure the ALPR deployment plan meets all permitting, legal, and other requirements.
- Comprehensive data collection and reporting will help maximize the benefits of ALPR technology by increasing transparency and empowering agencies to determine its impact on crime and public safety.

2621

Methodology of Product

This product represents the comprehensive collection of the MCCA ALPR Working Group's recommendations and considerations regarding law enforcement's use of ALPR technology. The value of ALPR as a crime-fighting tool is well established. However, an effective program must include certain elements to ensure the technology is being used effectively and in a manner that maintains the trust and support of the community. This document will provide law enforcement agencies with a framework to develop, implement, and manage an ALPR program that is based on responsible use, helps keep the community safe, and respects privacy, civil rights, and civil liberties.

The MCCA ALPR Working Group includes technology vendors from various backgrounds, a diverse group of law enforcement professionals, and ALPR subject matter experts. In addition, the Working Group conducted in-depth research on ALPR technology from numerous perspectives. Finally, the Working Group leveraged the expertise of the individual participants to develop its recommendations and suggested best practices.

The information and data used to support the findings of this product include material provided by MCCA member agencies and technology vendors. The Working Group also reviewed products produced by other stakeholders on ALPR and the use of technology in policing more generally. Finally, the Working Group conducted regular internal discussions to finalize the recommendations and suggested best practices.

This product's outline and overarching topics were created collaboratively with input from all Working Group participants. Each participant was responsible for drafting a section of the report, and those drafts were circulated to the entire Working Group for review. All Working Group members approved the final product.

The final product represents the MCCA ALPR Working Group's findings, recommendations, and suggested best practices. These will help law enforcement agencies create, manage, and operate an effective and responsible ALPR program.

2622

What is an Automated License Plate Reader?

ALPR, called Automated Number Plate Recognition (ANPR) in Europe, was invented in 1976 by the Police Scientific Development Branch to combat terrorism in the United Kingdom. While seen as a valuable tool, the associated cost and requisite experience stagnated the deployment and advancement of the technology until the first ALPR cameras were installed at the Dartford Tunnel and A1 Road in 1981. The Dartford Tunnel cameras resulted in ALPR's first arrest for a stolen vehicle. This slowly led to more widespread use of the technology, including as part of the "ring of steel" created around London in the early 1990s to protect against the Irish Republican Army (IRA) bombing campaigns. Later, ALPR technology was also deployed as part of another initiative entitled "Project Laser," which sought to "target criminals through their use of roads."[1]

The success of the "ring of steel" and "Project Laser" prompted the Police Standards Unit to create the National ANPR Data Centre (NADC) in 1997. The NADC allowed for the nationwide sharing of ALPR data across the United Kingdom and the Back Office Facility (BOF), the database where ALPR data was stored and analyzed. ALPR technology took off from here. Law enforcement first used ALPR to help solve a murder case in 2005, and by 2007, nearly half of all law enforcement agencies in the UK were using ALPR technology. American law enforcement agencies followed their British counterparts closely and started using ALPR in 1998.[2]

ALPR Hardware and Software

While the technology has advanced over the years, the main components of those early ALPR deployments and today's systems remain the same. At its core, an ALPR program consists of the camera hardware and the software used to store and analyze the generated data and alert the users when a detection of interest is made. In most cases, ALPR hardware consists of a camera, processor, power supply, and data transfer hardware. In addition, ALPR cameras are typically optimized in various ways to operate in a wide range of real-world conditions (low light, inclement weather, motion detection, etc.).

Once the camera captures the image, ALPR systems use software to read the license plate. Some systems process the image at the camera level. Other systems transfer (usually via a cellular network, but it may occur through other means) data from the camera to a dedicated ALPR-system computer for processing. The image is analyzed through Optical Character Recognition (OCR) software as part of the processing. OCR recognizes alpha-numeric numbers and letters, thereby allowing the ALPR system to successfully recognize and interpret any letters or numbers observed in the image captured by the camera.

Types of ALPR

Law enforcement uses various types of ALPR technology, including fixed, mobile, portable, and mobile applications. Below is a description of each kind of ALPR system:

- **Fixed ALPR** cameras are typically permanently mounted to infrastructure such as traffic signals, bridges, and light poles.
- **Mobile ALPR** cameras are typically mounted on vehicles. These cameras may be overtly or covertly deployed depending on the needs of the law enforcement agency.
- **Portable ALPR** cameras include mobile camera trailers which can be transported and deployed based on the law enforcement agency's operational needs.
- **Mobile Applications** leverage features built into cellular devices to create ALPR detections.

2623

The ALPR Detection Record

An ALPR record is generated when a vehicle license plate is detected, imaged, and processed to create a record. An individual ALPR record (or 'plate read') is generally composed of the following:

- An image of the license plate, which is a 'cropped' digital image of the license plate captured by the camera.
- The geo-location where the plate detection occurred, which can be determined from the GPS coordinates of a mobile reader or inferred from the location where fixed readers are placed.
- The time and date when the license plate detection occurred.
- The translated information from the plate, which is the alpha-numeric plate number and the issuing organization, typically a state. This translation can be accomplished by OCR or artificial intelligence.

In addition, an ALPR record may contain the following:

- A collateral image of the vehicle for which the ALPR read occurred.
- Metadata associated with the camera that identifies the camera unit, image settings, and other specific attributes.

Hotlist Sources

ALPR systems used by law enforcement can alert on detections of wanted vehicles. Two primary methods exist for creating a wanted vehicle within an ALPR system. First, ALPR systems allow for the manual entry of both a hotplate and a hotlist. Second, the ALPR system allows agencies to import National Crime Information Center (NCIC) records as an automated hotplate source. This is the most common method for populating hotlists.

Tactical vs. Investigative Uses

Law enforcement typically uses ALPR technology for both tactical and investigative purposes. Accordingly, agencies should consider both uses when developing their ALPR program's objectives. A tactical ALPR deployment includes placing cameras in strategically identified locations to generate information that warrants a rapid police response, such as stopping a wanted vehicle. These deployments usually seek to identify, locate, and recover a vehicle or its occupants to help address crime occurring in real time. An investigative use refers to utilizing ALPR cameras to collect license plate records that may have law enforcement interest but do not necessarily warrant an immediate police response. These detections are stored in the system and may later be queried. This information is generally used to create an investigative lead after a crime has occurred.

Business/Private Use

Since ALPR systems provide valuable data, private businesses and other organizations have also invested in ALPR technology. These uses may be for security, management, or operational needs. The following are examples of private sector use cases:

- Parking garages
- Hotels and casinos
- Homeowners associations
- Airports
- Convention centers
- Government traffic and transportation sites

2624

Program Design and Development

ALPR has proven to be a successful law enforcement tool. Its unique ability to provide actionable leads and help close cases cannot be overstated. However, real and perceived concerns exist regarding this technology's use. Therefore, law enforcement must take careful steps to develop an ALPR program that is both effective and appropriate. Taking a thoughtful approach when designing and developing these programs is the best strategy to accomplish these goals. Some of these considerations include developing proper policies, creating comprehensive training material, and designing and implementing responsible deployment strategies.

Policy Development

Establishing clearly defined policies on how ALPR may be used is the most effective method to minimize risk to the agency and protect both department employees and the individual rights of the public. ALPR policy should direct the purpose, general use, and processes involving ALPR investigations. These policies will provide a framework by which an agency can simultaneously reap the benefits of the technology, all while respecting the privacy and civil rights of the public. Similarly, consistent policies will assist in protecting the integrity of criminal investigations, criminal intelligence collection, and justice system processes. The following components should be considered while developing ALPR policies and procedures:

- Community-directed statement on why the agency is establishing or maintaining an ALPR capability
- The purpose of the policy
- General use guidelines of the technology
- Clearly defined program oversight roles and responsibilities
- The ALPR vendor and deployment types
- Access, training, and usage requirements
- Investigative procedure requirements
- Clear guidance to department employees on being transparent on the use and reporting of the technology in court documents
- Auditing responsibilities and schedule
- Data retention and purging
- Statement affirming protections for constitutionally protected activities
- Rules governing the use of hotplates

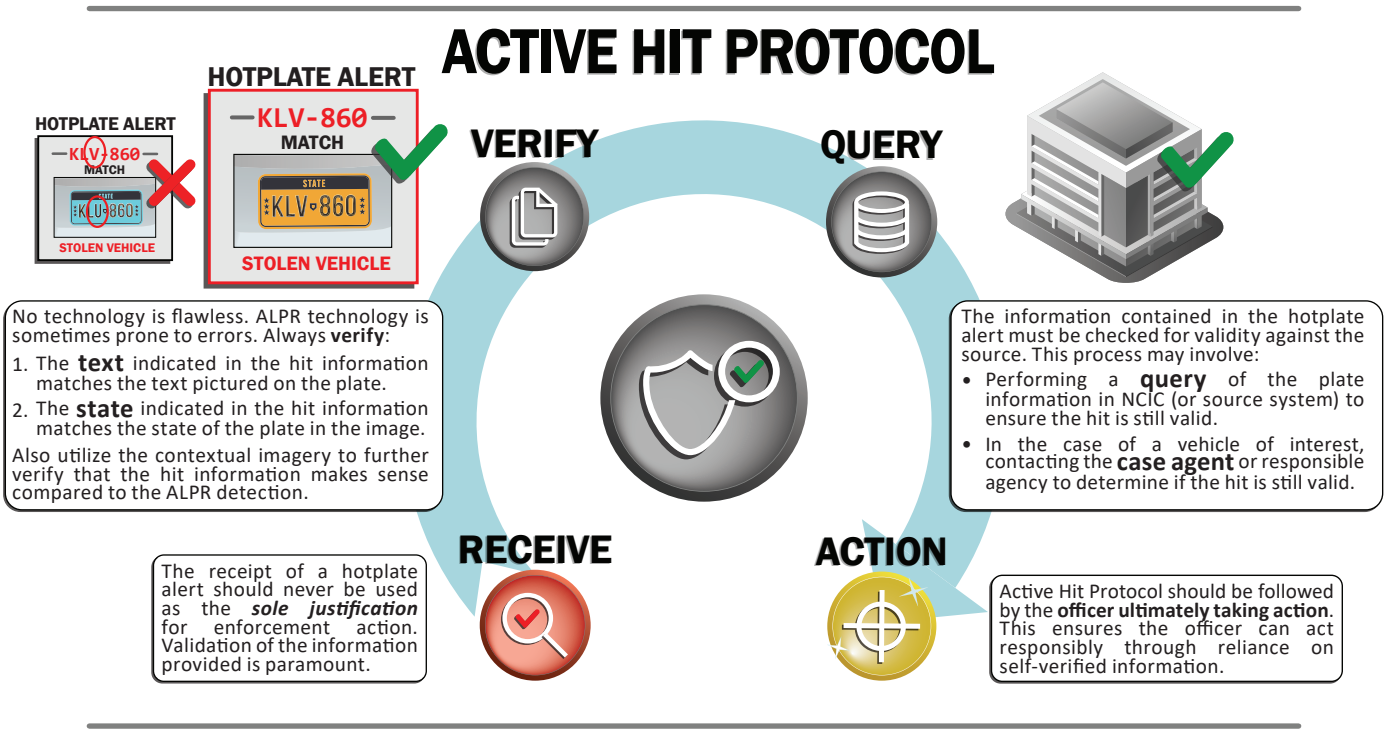
State/Local Law Considerations

Many state legislatures have taken steps to regulate the use of ALPR technology in their states. These laws and regulations can directly impact the functioning of an ALPR program in those states, and they must be accounted for in agency policy. Examples of the types of rules and regulations implemented in several states can be found in Appendix C – State-Level Laws and Regulations.

Training Considerations

Ensuring a thorough training program is in place is critical. Users must receive training on the ALPR system before receiving access. This practice ensures ALPR systems are only used for official law enforcement purposes consistent with applicable legal limitations and department policy. The training program should address several topics to ensure that users of an ALPR system are proficient in the necessary skills, including:

- A review of the departmental policy and safeguards related to ALPR use
- Basic understanding of how the technology operates
- The ALPR data sources, vendor, type of systems, etc.
- Any significant capabilities and or limitations related to the technology
- Any potential hazards related to the technology



- Who is authorized to access the system and any required training
- The role of the officer or investigator in leveraging and responding to ALPR hotplate detections
- Importance of being transparent with arresting documentation
- Any applicable laws and policies that govern the use of ALPR in the specific jurisdiction
- Use of the ALPR system as an investigative tool
- The data retention period
- Auditing responsibilities

An ALPR training program should include a tactical-level discussion of how to use the technology appropriately. For mobile units, this should consist of an initial check to ensure that the ALPR system is operating correctly at the beginning of each shift. This includes logging into the system, running any necessary diagnostics to determine that it is working correctly, and doing a quick physical inspection of the system (cameras, cables, connections). In addition, a program manager should conduct periodic checks of fixed ALPR sites to verify that the hardware is operational and communicating with the software as intended.

Field Officer Responsibilities

A critical piece of the officer training on ALPR should include an element that instructs how ALPR notifications are processed and the appropriate response protocols for those notifications. Some departments may have fixed ALPR hits reviewed and confirmed by the public safety answering point or real-time crime center before dispatching them to an officer to investigate. Other systems may provide an in-car alert on the car computer system.

Officers should be required to review hotplate detection, confirm the detections, and appropriately respond to actively wanted vehicles. This process can be referred to as “Active Hit Protocol.”

Investigator Responsibilities

The ALPR system is a valuable investigative tool. It can be used to develop leads in cases involving vehicles where the license plate is unknown or to establish that a car was not in the vicinity during the time frame a crime occurred. An ALPR training program must include how to access the system and the criteria required before conducting a query, such as the reason for the search and the associated case number. Additionally, investigative tool training should address how to query the system, instructions on operating the various analytical tools within the system, how to interpret the data, how to preserve a record, and any required transparency, audit, or reporting requirements.

Types of Training

Training should be broken down into multiple categories:

- **New User Training:** This training will be detailed and define proper usage. In addition, this training should include policy, procedures, state and local laws, and an in-depth walk-through of the ALPR products and software.
- **Refresher Training:** This is considered a refresher of policy and procedures. It may also include changes to case law and examples of ALPR use. This training should ideally occur immediately after any changes to policy take place.

Authorized instructors should provide training on ALPR technology based on an established, accredited curriculum. An example of an accredited curriculum is one that has been approved by the state's Peace Officer's Standards and Training (POST) or equivalent body.

Deployment Strategies

Determining the ALPR deployment type and kind is one of the most critical decisions an agency will make concerning its ALPR program. Law enforcement is responsible for deploying advanced technology in a manner that is effective in its use and appropriate in its scope. Law enforcement also has a fiduciary duty to use public funds responsibly. For these reasons, ample consideration should be made when determining the type and kind of ALPR deployment.

ALPR Deployment Theories

As previously addressed, various types of ALPR technology exist, including fixed, mobile, portable, and smartphone applications, with each serving a unique purpose. Therefore, the kind of ALPR selected should be determined by the environment, infrastructure, and objectives for the ALPR deployment. Several ALPR deployment strategies are often considered when determining the value and placement of ALPR cameras. The most common of these strategies include the following:

- **High Traffic Areas:** The primary objective is to collect the maximum number of detections that can later be leveraged for investigative leads.
- **High Crime Areas:** This strategy focuses on producing information anticipated to be of investigative value instead of creating as many detections as possible.
- **Places of Interest:** This strategy is more of a hybrid between the first two. An example of this strategy would be deploying ALPR cameras around a shopping mall targeted by organized retail theft gangs or where assaults have occurred. Agencies may also place ALPR cameras in proximity to their community's major ingress/egress points and critical infrastructure or routes associated with gun, drug, or human trafficking.

Deployment Considerations

Infrastructure and permitting are two common factors that can limit an agency's deployment strategy for ALPR systems. Agencies must carefully consider each physical deployment site. The infrastructure to mount the necessary hardware must exist for the technology to be successfully deployed. Furthermore, the owner and operator of the infrastructure or property must allow for the installation of ALPR hardware. Agencies must also ensure that the proposed site is appropriate for the type of power the ALPR utilizes. Some systems run on AC power. While this provides constant and consistent power, installing it can be more expensive. Others rely on solar energy, which may only provide enough power if the camera site receives sufficient sunlight to account for the traffic volume. Finally, this infrastructure must have access to a data transmission service, such as cellular, fiber optic, or Wi-Fi.

Once a deployment plan has been established, site locations have been determined, and in-person inspections of the sites have been completed, the agency will need to navigate any legal and permitting processes. Since permitting can vary significantly across jurisdictions, it is recommended that agencies consult with their local public works or other appropriate governmental entities to ensure all necessary procedures are being met. Engaging these entities earlier in the process will help secure their buy-in, which will be critical for a successful deployment.

Equitability Concerns

Deployment strategies must account for concerns over bias, surveillance or other threats to privacy, and potential chilling effects on First Amendment, defendant, or related rights. The following recommendations will help ensure ALPR technology is deployed in a manner that supports just and equitable policing:

- Deployment plans should be informed by analyzing crime data, patterns, and trends. The site selection process should be based on this information and account for any relevant privacy, equitability, or other concerns.
- Agencies should consult the community, other stakeholders, and appropriate oversight committees. This includes providing specific information on why and how the deployment sites were selected.
- Deployment strategies should regularly be reviewed and evaluated to ensure the ALPR program and technology continue s to operate within the established guidelines and policies.

Partner Technologies

While developing the deployment plan, it is important to consider other law enforcement technologies that may complement the ALPR system. Law enforcement agencies may deploy complementary technologies within the same area, which have different capabilities. Agencies can leverage these capabilities to increase their ability to suppress crime, create actionable leads, solve cases, and potentially deter future crimes. Potential partner technologies can be subdivided into two categories: tactical and investigative.

Tactical technologies include tools such as gunshot detection technology, public safety cameras, and drone detection technology. An example of investigative technology is a records management system (RMS). Integrating ALPR and RMS can join plate reads to hotlists, allow investigators to search plate reads within a familiar interface, and provide a direct link between case management and the ALPR database. Another example of investigative technology is crime analysis software. Bringing ALPR data into an agency's chosen analysis software can aid in ongoing investigations. For example, agencies can import ALPR data to help create accurate timelines for vehicle travel that can provide investigators with unseen leads and valuable knowledge.

2628

Procurement

Responsible procurement of ALPR technology is a critical component of an effective program. The importance of obtaining stakeholder feedback early in the procurement process cannot be understated. Program managers should make every effort to embrace a spirit of transparency, accept critical feedback, and attempt to address any concerns raised by stakeholders directly.

The procurement phase is also the appropriate time to begin building departmental policies, procedures, and protocols, as this will be crucial in gaining stakeholder buy-in. It is imperative that the stakeholders understand how these policies will protect the public's privacy and civil liberties. Agencies should also seek to mitigate any concerns that stakeholders raise about the proposed ALPR program through thoughtful policy design.

Vendor and Product Assessment

Before choosing a vendor for their ALPR program, law enforcement agencies should conduct an appropriate degree of market research. This should include a trial of the product and conversations with existing customers to evaluate its performance in a real-world setting. A trial period provides the opportunity to test the technology, the associated policies and procedures, and highlight initial successes. This can provide tangible examples that can be shared with stakeholders to show how ALPR serves to enhance public safety.

Should an agency engage in a pilot program, it is recommended that the community be notified. Agencies should also determine how any information collected may be used in investigations or other law enforcement operations until a final protocol and all other areas of the program are formalized.

When determining the best hardware for their ALPR program, law enforcement agencies should consider the following:

- Hardware requirements for specific sites
- The lenses, processor, and other technical specifications of the hardware
- Average detections per hour
- General cost
- The number of lanes of traffic a single camera can capture
- The maximum speed at which the camera can read a license plate

When determining the best software for their ALPR program, law enforcement agencies should consider the following:

- The accuracy of the OCR software and whether it's enhanced by artificial intelligence, machine learning, or another capability
- The technology's alerting system, including desktop, laptop, mobile, app-based, and in-car alerts
- The software's ability to connect and share data with other law enforcement analytical platforms

Technical Challenges

There are some challenges with ALPR software that agencies must acknowledge. For example, OCR technology analyzes all letter or number sequences in the imagery; it cannot specifically isolate only license plate images. Therefore, a detection can be created on something that is not a license plate. This includes billboards, signage, marketing material on vehicles, etc. Additionally, the full license plate letter and number sequence must be visible to create an accurate license plate detection. Occlusion, missing plates, and temporary paper plates may result in no detection, a partial detection, or a misread.

Misreads may occur for several reasons, but most are due to the incorrect translation of a letter or number. For example, the system may read an "8" as a "B" or a "K" as an "X." These technical challenges should be readily acknowledged by both the agency and a prospective ALPR vendor. Agencies must ensure their policies account for these challenges and contain sufficient safeguards to limit instances where officers act based on a misread or other error.

2629

Procurement Ethics

While local procurement ordinances vary across jurisdictions, agencies must follow those ordinances along with broader guiding principles when procuring an ALPR platform. The National Institute of Governmental Purchasing's (NIGP) Values and Guiding Principles of Public Procurement are one such set of broad principles that agencies can use to inform any ALPR procurement process. The NIGP principles are as follows:

- **Accountability:** Taking ownership and being responsible to all stakeholders for our actions. This value is essential to preserve public trust and protect the public interest.
- **Ethics:** Doing the right thing. This value is essential to deserve the public's trust.
- **Impartiality:** Unbiased decision-making and actions. This value is essential to ensure fairness for the public good.
- **Professionalism:** Upholding high standards of job performance and ethical behavior. This value is essential to balance diverse public interests.
- **Service:** Obligation to assist stakeholders. This value is essential to support the public good.
- **Transparency:** Easily accessible and understandable policies and processes. This value is essential to demonstrate the responsible use of public funds.[3]

3 Additional information on NIGP's Guiding Principles can be found here: https://www.nigp.org/our-profession/values-and-guiding-principles-of-public-procurement

2630

Program Management and Oversight

An ALPR program's design and operational management are part of the framework of a successful program. Effective management and oversight of the program help ensure operational transparency and accountability and that ALPR technology is being used responsibly.

To ensure the program operates responsibly, agencies should assign a manager operational control of the ALPR program. This individual should be well versed in the technology, have a sound understanding of all significant components of the ALPR program, and be empowered to ensure the program follows protocols, policy, applicable law, and community and agency expectations.

A program manager's responsibilities include the following:

- Developing policies
- Overseeing training
- Ensuring appropriate use of the technology
- Managing data collection and reporting

A program manager is also responsible for staying current on technology changes and emerging ALPR trends. Similarly, they must ensure that their agency's ALPR policies and training are current and address technological changes or advancements. Finally, having a program manager establishes a clear point of contact between the law enforcement agency and the ALPR vendor. This can enhance the communication between the agency and vendor, which creates an opportunity to share and address any technological or other challenges.

Access and Appropriate Use

Law enforcement agencies are responsible for using ALPR data to uphold public safety, solve crimes, and prevent future crimes. Agencies have an opportunity to build public trust and support for the use of ALPR through transparency and responsible use. As such, agencies should carefully consider the circumstances under which using ALPR is appropriate and what personnel within the agency can access this tool.

Law enforcement agencies must scope their ALPR programs in a manner that ensures the agency is still able to conduct proper oversight and operate the program transparently. One method for achieving this is by limiting who can access the ALPR technology. For example, many law enforcement agencies restrict access to specialized personnel to ensure that the use of ALPR technology is adequately audited and controlled. Access should only be authorized once a user has completed the requisite training and demonstrates a baseline understanding and operational knowledge of the technology. Information on new user training, access, and use should be part of standard data collection and reporting related to the ALPR program.

Agencies that deploy ALPR must have written policies that outline the appropriate use of the technology. Several core principles should be incorporated into these policies to ensure the responsible use of the technology. First and foremost, ALPR technology should only be used as part of a criminal investigation or to address an articulable public safety concern. Secondly, the investigator must also have a legitimate "need to know" before querying any ALPR data. These guardrails will help prevent "curiosity checks" or other bad faith uses and ensure that privacy, civil rights, and civil liberties are respected.

Agency users must also demonstrate adherence to established policies when searching archived ALPR data. For example, if the ALPR software allows it, agency policy should require users to document the investigative purpose and case number associated with each query. Vague or ambiguous reasons for a search, such as "criminal subject" or "research," should be avoided. An agency's ALPR policies should also outline the potential consequences and corrective methods for improper use of the technology. Examples may include mandatory retraining, loss of access privileges, or other appropriate corrective punishments.

Data Retention

Data retention policies are ultimately determined by the agency using ALPR technology. These policies are informed by various considerations, including the agency's objectives, stakeholders' expectations, and local laws or regulations. Therefore, it is essential that the ALPR technology, vendor, and any other relevant service providers support the agency's policies on retention.

While a general best practice is not to retain data any longer than is necessary, what constitutes "no longer than necessary" is not a simple determination since different use cases may benefit from different retention periods. For example, cold cases may benefit from years-old data, while other uses rely on more recent data.

Outside of specified legal requirements, the retention schedule for ALPR data is primarily determined by agency policy.[4] As such, law enforcement must work with the community and other stakeholders to determine appropriate retention periods for each type of ALPR data. Ideally, ALPR systems should allow agencies to define retention schedules and automatically purge any record not designated for retention by a registered user. In addition, regular system audits ensure retention standards are followed and instill confidence that system data is utilized appropriately.

Data Sharing

For good reason, law enforcement agencies worldwide are embracing ALPR technology. A 2013 Bureau of Justice Statistics study showed that 77% of agencies serving populations of 100,000 or more have access to ALPR technology.[5] Moreover, given ALPR technology's value to a single jurisdiction, law enforcement has begun to explore sharing ALPR data across jurisdictional boundaries. Sharing ALPR data amongst law enforcement agencies fosters a more collaborative approach to addressing public safety concerns across jurisdictional boundaries.

Benefits of Data Sharing

When law enforcement agencies share ALPR data across jurisdictions, the technology can provide more comprehensive data. A shared system creates more unified and robust coverage throughout a region. Several ALPR vendors currently provide their law enforcement customer base with the ability to share data with other law enforcement customers. The potential to cross-reference information between separate ALPR systems allows law enforcement to enhance their investigative capabilities and can reveal elements of illegal activity that may otherwise be unknown to the investigating agency. Several elements of ALPR data and systems can be shared, including the ALPR detections and user-created hotlists. Some ALPR vendors also allow agencies to establish data-sharing relationships between their products and other technology systems.

As a standard practice, law enforcement agencies should consider sharing ALPR data with one another to the extent that state or local laws and regulations permit. Agency policy should define what, if any, type of data sharing is in place, who is authorized to establish data-sharing relationships, and any procedures that govern the sharing of ALPR data. These procedures and data-handling agreements should be implemented in policy for both the sharing and receiving agencies.

The success of ALPR technology among law enforcement has led non-government entities to acquire the same technology. This includes retailers, property managers, towing and repossession companies, parking lot operators, homeowner associations (HOAs), and even individual households. Since the generated data is of the same format and often targets issues of mutual interest, ALPR vendors have created Public-Private Partnership (PPP) friendly user interfaces. These programs typically allow the unidirectional sharing of ALPR data from the non-government side to the law enforcement side only. These partnerships strengthen community relationships and ensure public investments are used responsibly.

2632

Data Sharing Considerations

While data sharing benefits agencies, safeguards are needed to protect the agency that generates and owns the data. Data sharing guidelines can be specific to the type of shared data. For instance, if agency "A" shares ALPR detection data with agency "B," there may be no requirement for a formal agreement. In contrast, if agency "A" shares hotplates or agency-generated hotlists with agency "B," this scenario may require a formal agreement. This is because hotplates or hotlists are typically generated from a criminal investigation or law enforcement process or function that may require an officer to take action if there is a confirmed detection. Furthermore, the agency that receives the information should bear the responsibility and liability for their officers' actions in response to an alert.

Law enforcement agencies seeking to share or receive ALPR data must be aware of applicable federal, state, and local laws. As such, agencies should consult with their legal representatives to identify pending, proposed, or existing laws that may be relevant. For example, legislation is proposed annually at all levels of government which, if enacted, could limit law enforcement data sharing. Finally, agencies must consider any concerns from the community or other stakeholders before establishing multi-jurisdictional data-sharing relationships.

Auditing, Data Collection, and Reporting

Auditing and reporting an agency's use of ALPR technology is a critical component of a transparent and accountable ALPR program. The failure to operate a program in this manner will only exacerbate concerns related to misuse or contribute to the perception that ALPR technology is synonymous with increased surveillance. This will undoubtedly negatively impact police-community relations. Agencies should develop robust mechanisms to evaluate the efficacy of the technology and ensure it is being used appropriately.

Auditing Requirements

Regular audits on an ALPR system are one method for validating compliance with agency policies and applicable laws and regulations. As with other reporting requirements, the specific auditing measures, and the frequency of said audits, should be clearly defined in the ALPR program's governance documents. In general, audits should verify what ALPR information was accessed and by whom, in order to identify any improper or unauthorized uses of this data. Audits should also ensure that data within the system is being handled per agency policy, including information sharing agreements. They should also confirm that data is being purged as required under any applicable data retention schedules.

Data Collection and Reporting Considerations

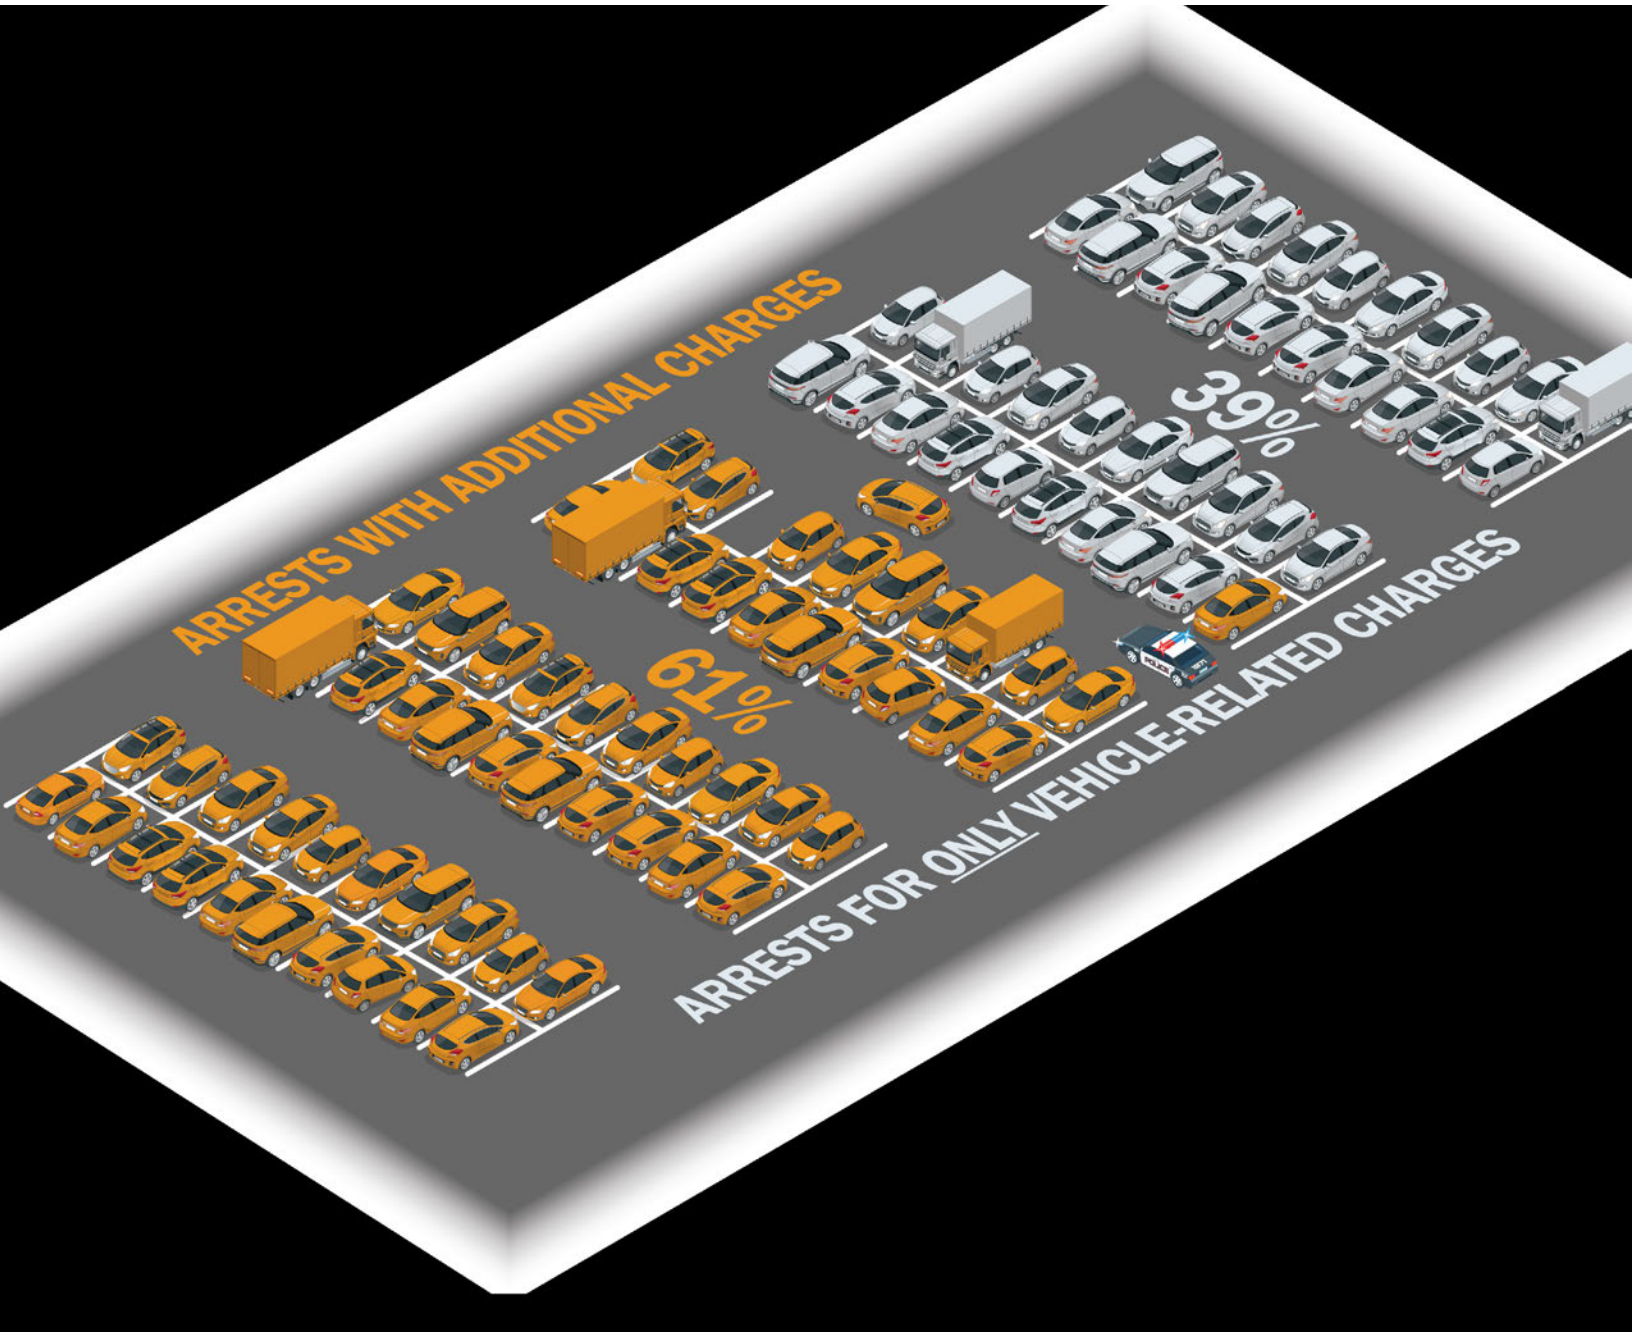
Studies have shown that ALPR technology is most effective when used systematically and when deployment sites are strategically selected.[6] In addition, comprehensive data collection and reporting will assist agencies with maximizing the benefits of ALPR technology. Finally, robust data collection and reporting will help increase transparency.

At a minimum, agencies using ALPR should collect and report the following information:

- Number of detections
- Number of hotplate hits
- Number of queries conducted by users
- Number of arrests directly attributed to ALPR hotplate detections
- Number of user-generated hotplates
- Breakdown of hotplate hit types
- Year-over-year analysis and trends

By analyzing this data, agency leaders and stakeholders can determine whether their ALPR system is meeting deployment goals and has significantly impacted crime or other areas of police operations. ALPR data collection and reporting also provide valuable insight into ALPR system adoption throughout the organization.

6 C. S. Koper and C. Lum, "The impacts of large-scale license plate reader deployment on criminal investigations," Police Quarterly, 22(3), 305–329, 2019. https://doi.org/10.1177/1098611119828039



2633

The Importance of Analysis and Reporting

Quantitative data is an excellent tool to measure the impact of law enforcement technology. The ability to answer the questions “how many” and “how often” is necessary to evaluate real-world outcomes. Additionally, the quantitative analysis of ALPR data can provide an agency and stakeholders with the information needed to determine the impact of the technology on community safety.

To explore the potential of quantitative reporting, an MCCA member agency recently analyzed the impact of a localized ALPR deployment. The data presented below represents a period of four months after the installation of ALPR cameras within the evaluated area. The types of charges related to any arrests resulting from an ALPR event were analyzed. The data suggests that ALPR technology generates leads and solves more types of crimes than those related to ALPR’s most frequent use: the recovery of stolen vehicles.

It is important to capture and analyze the impact of any ALPR program to dispel misconceptions and demonstrate the impact of the technology.

2634

Data Stewardship

Throughout the design of an ALPR program, the hardware, software, and policies implemented will shape how ALPR data is collected and stored. Therefore, a comprehensive strategy should be developed to ensure all data collection aspects are secured and managed effectively.

Data Roles and Responsibilities

ALPR records are typically stored in databases that can be indexed, searched by individual or composite conditions, and analytically processed by applications that power ALPR use cases. This is an important and powerful compilation of data that must be managed judiciously. The two primary roles relative to this data are data owners and service providers.

The data owner is the organization that controls the data and decision-making authority. The data owner, typically the data's generator and user, determines how the data may be used, who it can be shared with, and its retention limits. For example, law enforcement is always the data owner for the ALPR data it generates. While this data may be shared with other law enforcement entities, the owner and provider of any particular data always retains control over all aspects of it. Therefore, other organizations that have received access to that data must act in accordance with the data owner's direction, such as adhering to retention limits established by the owner on the data.

A service provider is an entity that may take possession of data to store or process it on behalf of the data owner. The service provider operates at the behest of the data owner and enacts the owner's wishes and directions. This can include management of data sharing with other designated users, enforcing retention limits, etc. The service provider has no entitlement to the data and may not sell, derive secondary insights, or otherwise share it. Furthermore, they may only access the data to perform a function at the direction of the data owner. Law enforcement agencies often hire an outside company to be their service provider for ALPR data.

Storing and Processing ALPR Data

There are several general models for storing and processing ALPR data:

- The data is stored on-premises and processed by applications under the direct physical control of the organization that generates and uses the data.
- The data is stored off-premises by a cloud service provider and processed by applications in the cloud or on-premises under the direct control of the organization that generates and uses the data.
- The data is stored in the cloud or at an off site data center and is processed by a service provider.

In the first model, the data owner is effectively their own service provider, and there isn't necessarily a third party service-providing entity. The other two models imply some degree of a third party service provider. In those cases, the data may be held or accessed by another entity on behalf of the data owner. For ALPR systems, this could be either a cloud computing service or an ALPR technology vendor. However, in both cases, control of the data remains with the data owner.

Data Security

Law enforcement agencies should treat ALPR data like any other sensitive data it collects, uses, and manages. It should be protected as judiciously as law enforcement records, video, and other critical operational data. This includes ensuring responsible usage of the data by law enforcement personnel and vetting any service providers that may process the data. Law enforcement agencies must also apply rigorous cybersecurity practices to protect and secure the ALPR data it generates and uses. This includes, but is not limited to, proper authentication methods (multi-factor authentication is generally considered a best practice), data-sharing controls, and role-based access controls for users. Law enforcement agencies must ensure that their technology vendors provide adequate security practices to protect the ALPR data they possess and process on behalf of the agency.

Whether a service provider provides on-premise technology, stores data on behalf of a law enforcement agency, or hosts the processing applications, they have an important role in ensuring the secure and trustworthy operation of an ALPR program. The service provider is responsible for securing the data it processes to protect it from unauthorized access, theft, or misuse. They must provide the necessary capabilities, controls, and training to enable law enforcement agencies to enforce their own defined data governance policies, security standards, and procedures. This includes:

- **Enforcement of Retention Limits:** This may be applied absolutely or in a role-based fashion. For example, the absolute retention limit for ALPR data could be three years, but only cold case investigators may access data older than six months.
- **Positive Controls Over How Data is Shared:** Data must only be shared after law enforcement specifically enables it with individual partners at its discretion and under the auspices of its policies.
- **Enforcement of Personnel Controls:** These controls include system and user-level authorization, role-based access controls, and regular audits.

The FBI's Criminal Justice Information Services (CJIS) Security Policy provides a comprehensive reference and standard that agencies may use to design or measure data management for their program. For cases where service providers take possession of ALPR data from law enforcement agencies to store and process on their behalf, agencies should consider using the CJIS Security Policy to assess and set expectations of service providers.[7] An explanation of relevant sections of the CJIS Security Policy can be found in Appendix D – CJIS Security Policy.

As mentioned earlier, cloud services may be part of an agency's ALPR program. These services' security and integrity depend on the efficacy of the underlying cloud platform. Cloud service providers (or service providers that operate their own data center directly) should comply with ISO 9001:2015, an internationally recognized standard for Quality Management Systems. Compliance with this standard should be independently audited and verified for compliance under the Statement of Auditing Standards Number 70 [SOC 2 Report]. In addition, compliance with FedRAMP medium security controls provides an additional level of validation and may be required for information sharing with federal entities. Even though license plate detection records are not personally identifiable, they may be linked through other sources that may enable the end user to input data that could be viewed as personally identifiable or criminal justice information.

ALPR Reader Device Integrity

An ALPR reader that captures ALPR images and does local image processing contains instances of ALPR data. This data may be transient or stored on the device for extended periods. Since ALPR readers are often distributed in the environment and may be difficult to physically secure, it is increasingly important to consider the device's ability to locally secure ALPR data that is either at rest or in motion. FIPS (Federal Information Processing Standards) 140 standards are used to evaluate the hardware and software integrity of cryptographic modules. This applies to many devices, including ALPR readers, that need to encrypt data to secure it from compromise. FIPS 140-2 is broken into four, successively increasing levels of security.[8]

- FIPS 140-2 Level 1 is the lowest and imposes limited requirements.
- FIPS 140-2 Level 2 adds requirements for physical tamper-evidence and role-based authentication.
- FIPS 140-2 Level 3 adds requirements for physical tamper-resistance (making it difficult for attackers to gain access to the sensitive information contained in the module) and identity-based authentication, and for a physical or logical separation between the interfaces by which "critical security parameters" enter and leave the module, and its other interfaces.
- FIPS 140-2 Level 4 makes the physical security requirements more stringent and requires robustness against environmental attacks.

Depending upon the specific environment where it is deployed, the ALPR reading device should, at a minimum, support FIPS 140-2 Level 2. Aspects of FIPS 140-2 Level 3 are also becoming increasingly desirable and necessary, especially as ALPR technology advances.

2636

ALPR Operations Infographic

Several aspects of the operation of ALPR technology can be better understood when put in the context of the technological workflow.

2637

ALPR Synergy with Other Law Enforcement Technologies

As law enforcement gains access to more information, technology will help ensure the data is organized so law enforcement officers can solve complex policing problems. Any single data source, such as ALPR, only answers one of many questions. It only tells law enforcement where a vehicle was at a given time. ALPR alone does not answer critical questions such as whom the car belongs to or who has been associated with it before, whether any of those individuals have a history of involvement in similar incidents, and other critical questions.

By integrating data across common law enforcement data sources, those questions can be asked and answered immediately, drastically increasing the odds of solving cases. Here are a few examples:

> *Consider a situation where CCTV footage captures a partial plate on a vehicle shortly after the commission of a crime. In an ideal scenario, an ALPR database may be queried to determine the rest of the characters on the license plate. Then a separate RMS system could be queried to determine if that license plate has ever been mentioned in a case report.*
>
> *A platform has ALPR, RMS, citation, and crash data integrated into one place. An ALPR detection can be searched and then linked to see if that plate has been named in an RMS case, vehicle citation, or crash report, along with any involved individuals. Links between vehicles, people, and incidents can be seen without having to search each database individually.*
>
> *An ALPR alert occurs in a platform that has CAD & CCTV integrated. As a result, an immediate CAD call can be created to accompany the alert, and any relevant CCTV footage in the area can be attached and sent to the responding officer, better preparing them to engage with the vehicle that triggered the alert.*

In these examples, a singular piece of information would have failed to fully identify the suspect vehicle. It is the utilization of an ALPR database in conjunction with other technologies produces an actionable investigative lead. For ALPR detections to be used to their fullest potential, that data must be connected to other relevant data sets.

The ultimate goal of connected data should be to allow for insights that are impossible to see currently or take too much time to consider. Departments should own all their data, including ALPR detections, and be able to link, connect, or integrate data sets as department leadership deems appropriate. When developing an ALPR program, agencies should ensure their vendors are aligned with this perspective and are capable of facilitating integrations with other law enforcement technology.

Beyond ALPR: AI-Enhanced Vehicle Detection

With advances in image processing technology, specifically those afforded by artificial intelligence and machine learning, it is becoming increasingly possible to identify a vehicle solely from an image. Artificial intelligence is able to focus on characteristics of a vehicle such as make, model, color, or distinguishing attributes/markings. These advanced image processing technologies improve the accuracy of ALPR systems and allow law enforcement to corroborate ALPR information. For example, they could assist with confirming that the vehicle associated with a detection matches the description in the registration record. Image-based detection and identification will continue to advance and improve the efficacy of ALPR technology.

2638

Case Law Related to ALPR

License plates are required in every state to display proof of registration. Registration identifies a particular vehicle and confirms that it meets minimum state-mandated safety requirements to be operated on public roadways. In addition, operators of vehicles must be licensed to drive legally on public roads.

It is possible in many states to own a vehicle and, if it is never parked or operated on a public roadway, not be required to display license plates. Furthermore, one can own a car but have no authority to operate it, just as one can be licensed to drive a car but never actually own one. Collecting information related to people and vehicles are separate and distinct concepts, although not entirely mutually exclusive. The alpha-numeric characters of a license plate alone do not indicate who owns the vehicle or is licensed to operate it.

For more than 50 years, the United States Supreme Court, and many lower courts, have repeatedly acknowledged that vehicles are inherently subject to greater regulation when operated on public roadways. In the age of enhanced technology, ALPR invokes specific legal considerations:

- Reasonable privacy expectations of those in vehicles on public roadways
- Persistent tracking and the nature of ALPR technology
- The nexus between license plates and personally identifiable information
- Collecting and sharing ALPR data
- The degree of intrusion authorized by an ALPR hotplate detection

An examination of existing case law related to these concepts follows. There is often no bright-line precedent when considering emergent technology. In such instances, reasonable legal conclusions can be inferred from cases related to other technology and privacy issues already adjudicated by the courts.

Privacy Expectations on Public Roadways

In 1967, the U.S. Supreme Court clarified in *Katz v. U.S. (1967)* that "the Fourth Amendment protects people, not places." [9] The Fourth Amendment of the United States Constitution ensures:

> *[The] right of the people to be secure in their persons, houses, papers, and effects, against unreasonable searches and seizures, shall not be violated, and no Warrants shall issue, but upon probable cause, supported by Oath or affirmation, and particularly describing the place to be searched, and the persons or things to be seized.*

In *Cady v. Dombrowski (1973),* the U.S. Supreme Court noted that vehicles, while "effects," are constitutionally different from a person's home. The case also referenced the regularity with which police engage in activity unrelated to the enforcement of laws, such as maintaining the efficiency of the flow of traffic and ensuring the safety of those using the roadways. The Court acknowledged that this regular contact with automobiles contributes to police being more often in "plain view" of evidence, instrumentalities of a crime, or contraband.[10]

Delaware v. Prouse (1979) offers historic guidance concerning the constitutionality of stopping or seizing vehicles. The U.S. Supreme Court cites, "the permissibility of a particular law enforcement practice is judged by balancing its intrusion on the individual's Fourth Amendment interests against its promotion of legitimate governmental interests."[11] One can reasonably infer that photographing a plainly visible license plate, on a public roadway, or from a location plainly visible from a lawfully authorized location, with no intrusion upon the vehicle occupants or otherwise interfering with their movement or affecting any person's possessory interest in the vehicle or license plate, is not a seizure constitutionally.

Lower courts have routinely ruled that law enforcement officers may, without specific suspicion, check the status of a license plate against a law enforcement database.[12][13] Therefore, searching aggregated photographs, which contain no specific information about a particular vehicle owner or operator, even when correlated with additional information such as the time, date, and location of the photograph, does not constitute a search.

Is ALPR Persistent Tracking?

The notion that vehicle travel on public roadways is an unavoidable element of modern living merits consideration, given how ALPR is deployed. Recent U.S. Supreme Court rulings related to law enforcement's use of other technologies have considered the inescapable and automatic nature of data collection. An analysis of these rulings is offered to differentiate the substantially greater capabilities of such technologies compared to those of ALPR.

Two recent U.S. Supreme Court rulings merit particular consideration for the use of technology to investigate the historical movement of persons. In *U.S. v. Jones (2012)*, the U.S Supreme Court held that police need a search warrant to install a covert GPS tracking device on a vehicle to monitor its location for an extended period of time. In *Carpenter v. U.S. (2018),* The Court ruled that police must secure a warrant before obtaining cell-site location information from service providers regarding an individual's location history.

The theme of both cases concerns the capacity that modern technology affords the government to explore comprehensive, specifically personal location information, which was not possible until the advent of recent ubiquitous technology. GPS and cell-site location information enable persistent automated tracking of a targeted individual's activity with such detail and scope that the techniques constitute a search. In the case of *Carpenter v. U.S. (2018),* the Government obtained 12,898 location points cataloging Carpenter's movements. This extensive amount of information amounted to an average of 101 data points per day during the period they obtained historical records.[14]

An ALPR system cannot independently predict life patterns accurately or be used to conduct real-time surveillance of any person or vehicle. Even if police acted with willful disregard for the protections of the Fourth Amendment, it is impossible to accomplish such a degree of ongoing surveillance using ALPR technology. A fixed ALPR camera may be able to collect information about every car that passes its location. Still, the data is limited to an otherwise anonymous characteristic of the vehicle, not automatically attributable to any individual without accessing other restricted databases, and for only a single moment in time at a single location.

Images of plates stored in the ALPR database are retained and made available for specified queries. Tangential information may include the nature of a vehicle's location, direction of travel, and any criminal justice information associated with the detection. As to the question of whether a collection of images from multiple cameras, aggregated in a searchable database implicates Fourth Amendment considerations, the US Supreme Court has not taken up precisely to what extent ALPR coverage, or how robust an ALPR database is, may trigger specific Fourth Amendment implications.

In *Commonwealth v. McCarthy (2020)*, the Massachusetts Supreme Judicial Court concluded that "While the defendant has a constitutionally protected expectation of privacy in the whole of his public movements, an interest which potentially could be implicated by the widespread use of ALPRs, that interest was not invaded by the limited extent and use of ALPR data in this case." The case involved law enforcement's use of four ALPR devices on two bridges to investigate a defendant's movements during a period of two months. In that case, the court ruled that the limited use of ALPR data did not violate the defendant's reasonable expectation of privacy.[15]

License Plates & Personally Identifiable Information (PII)

Individuals (people) are licensed, but a vehicle is registered. A vehicle is registered with an organization (typically a state), which then authorizes the vehicle to be driven on public roads and highways by a licensed driver. For example, passenger and commercial vehicles must be registered as a condition of use on a public thoroughfare. Upon registration, the state department of motor vehicles then issues a license plate which must be attached to the vehicle and openly displayed for vehicle identification purposes. The purpose of a license plate is to identify a vehicle uniquely, and it does not include personally identifiable information of any individual. By itself, a license plate number is an anonymous code unless combined with other registration information containing owner/operator information (i.e., a department of motor vehicles database or an employee or homeowner registration). Thus, an ALPR record is generated from publicly available data and corresponds with detecting a vehicle, not an individual, at a specific location and time.

The federal *Driver's Privacy Protection Act (DPPA)* was enacted in 1994 to "protect the personal privacy and safety

14 Carpenter v. United States, United States Supreme Court. 585 (2018). https://supreme.justia.com/cases/federal/us/585/16-402

15 Commonwealth v. McCarthy, 484 Massachusetts Supreme Judicial Court (2020). https://cases.justia.com/massachusetts/supreme-court/2020-sjc-12750.pdf

2640

of licensed drivers consistent with the legitimate needs of business and government." DPPA made it "unlawful" to access, disseminate, or otherwise misuse information held by a state's motor vehicle office, including information related to both drivers and vehicles, without the owner's consent or for another legitimate, legally authorized purpose, such as criminal justice purposes. ALPR systems do not automatically link to data governed by DPPA. Law enforcement can only obtain such protected information from other secure, access-restricted criminal justice databases.

The case of *Harrison Neal v. Fairfax County Police (2020)* examined the use of an ALPR system to passively scan and retain license plates that were not on a hotlist to determine if such a practice violated the state's *Government Data Collection and Dissemination Practices Act.*

A key element of the case was whether an ALPR system constitutes an information system governed by the Code of Virginia. The court found that the ALPR system did not, noting that the ALPR database can be searched only by license plate number, not by any person's information. Furthermore, the system does not gather identifying information about the vehicle owner. To acquire such personal data, an officer must query a wholly separate criminal justice database via a different computer program.[16]

California Code 1798.29 specifically expands the meaning of "personal information" to include information or data collected through the use or operation of an ALPR system. While not adjudicated by any court, ALPR information is considered personal information in California due to unique state legislation.

Data Collection & Sharing

A license plate is a required government instrument specifically intended to identify the vehicle to which it is affixed publicly. In the case of *United States v. Ellison (2006)*, the Court noted:

> *This court has yet to address in a published opinion the question of whether an individual has a reasonable expectation of privacy regarding their license plate. In two unpublished decisions, however, this court has agreed with the other circuits that have decided this issue by holding that no such privacy interest exists. The reasoning of these opinions, as well as that of the Supreme Court in related cases, leads us to agree that a motorist has no reasonable expectation of privacy in the information contained on his license plate under the Fourth Amendment.[17]*

Publicly viewing or photographing a displayed license plate constitutes activity protected by the First Amendment of the United States. The cataloging and subsequent sharing of such data remain largely regulated by state or local legislation. In the case of *U.S. v. Yang (2020),* the Ninth Circuit ruled that the defendant did not have standing to challenge government queries of a vendor's ALPR database for records of his movement when he kept a rental car beyond the contract due date. The court noted that Yang failed to establish that he had a reasonable expectation of privacy in the historical location information of the vehicle that was the subject of the query. The Court declined to address any potential privacy interests related to the warrantless use of ALPR technology.[18]

2641

ALPR Hits & Degrees of Intrusion

Several cases have affirmed that an ALPR hotplate detection, also referred to as a "hit," constitutes sufficient reasonable suspicion to affect a traffic stop. For example, in the case of *Hernandez-Lopez v. State (2013)*, the Georgia Court of Appeals held that an ALPR system merely aided the officer by augmenting his sensory faculties and that based on the alert provided by the ALPR, the officer had reasonable, articulable suspicion to conduct a traffic stop. [19]

Similarly, in the case of *Traft v. Commonwealth (2018)*, the Supreme Court of Kentucky held that an officer obtaining information linked to his license plate did not violate the defendant's rights under the Fourth Amendment. This information indicated that Traft had an outstanding bench warrant and, therefore, reasonable suspicion existed to stop the vehicle. Furthermore, the court noted that the license plate "was displayed in a place where he had no reasonable expectation of privacy."[20]

In the case of *Green v. City and County of San Francisco (2014)*, an ALPR system returned a hit based on a misread. The officer was transporting a prisoner at the time and could not verify the hit's validity. The image on the ALPR was "dark and blurry." The officer subsequently provided a description of the vehicle via police radio, including the incorrect license plate indicated by the ALPR system, not the actual plate displayed on the car. Dispatch ran the plate as provided and noted that it belonged on a pick-up truck.[21]

A second officer observed Green's sedan bearing the plate as broadcast by the first officer. However, this officer also failed to confirm whether the radioed license plate number matched the plates on Green's car. Consequently, Green was stopped, challenged at gunpoint by multiple officers, placed on the ground, and handcuffed. Green filed suit against the defendants, alleging claims under 42 U.S.C. 1983 and California state law for wrongful detention, false arrest, and excessive force. The Ninth Circuit ruled that "an unconfirmed hit on the ALPR does not, alone, form the reasonable suspicion necessary to support an investigatory detention."

While legally permissible to affect a stop based on an ALPR hit, independent verification of the validity of an ALPR alert should be considered a best practice. Verifying that the actual vehicle license plate and the read on the ALPR screen are safeguards against a potential unjustified intrusion upon any person. Such guidance should neither cause officers to hesitate when officer safety is a concern nor preclude officers from acting on indicators amounting to reasonable suspicion based on other observations coupled with their training and experience. However, inappropriate outcomes resulting from the use of law enforcement technology can have substantial repercussions on perceptions of police legitimacy and the continued availability of such tools.

In conclusion, ALPR systems detect license plates in public locations collecting information that is generally not considered private. Critical elements of an ALPR system, such as the extent of camera coverage, reasons for selecting fixed deployment locations, length of time that data is retained, and the extent to which the information is shared, may factor in with respect to if an ALPR system implicates Fourth Amendment considerations. The consistently responsible use and thoughtful deployment of ALPR technology will ensure that all civil rights and liberties are respected.

2642

Conclusion

As stated in the introduction, this product contains suggestions and recommendations, which, if adopted, will maximize ALPR technology's effectiveness while ensuring it is used ethically and responsibly. While this product provides a robust evaluation of the technology, it is impossible to cover every aspect of the technology. Therefore, the Working Group recommends that law enforcement use the tenets discussed in this document to help evaluate decisions regarding the use of ALPR technology. This must include the potential impact of ALPR technology on public trust and the community served. It is essential that, when implementing any technology program, law enforcement operate in a manner that is thoughtful, disciplined, and contextually mindful of its constituencies.

For those agencies wishing to implement an ALPR program but are still determining how to move forward, collaboration with other entities who have already developed robust, responsible programs is recommended. The sharing of best practices in crime-fighting technology among law enforcement has a history of beneficial impacts. Law enforcement must be good stewards of information and policies and be willing to share this with fellow law enforcement agencies wishing to begin using ALPR.

Law enforcement's use of ALPR is ubiquitous because the information these systems provide is advantageous. ALPR data has aided in countless successful criminal investigations and has proven to be one of the most valuable technologies available to law enforcement. Few technologies have aided law enforcement in keeping communities safe like ALPR. However, the capabilities of ALPR technology are continuously evolving, and the MCCA will continue to monitor it. The MCCA will remain engaged with all interested stakeholders and communicate the latest information with member agencies and the entire law enforcement profession so best practices can be adjusted as needed.

Definitions

Automated License Plate Reader/Recognition (ALPR): ALPR systems comprise cameras that capture an image of a vehicle's license plate and use Optical Character Recognition (OCR) to automatically read license plate characters.

Contextual Photo/Image: An overview image of the area around a detection.

ALPR Record/Detection: Is generated when an instance of a vehicle license plate is detected, imaged, and processed to identify the plate.

Hit: A detection of a license plate that matches a plate previously registered on a hotlist or hotplate.

Hotlist: A file that contains the license plate numbers of stolen vehicles; AMBER, SILVER, or other law enforcement alerts; lists of license plate numbers known to be associated with specific individuals, such as wanted or missing individuals.

Hotplate: A license plate with a wanted status. It may also be entered into a system designed to provide a notification of future detections.

Misread: An incorrect translation of a license plate.

Fixed Camera: An ALPR camera that is affixed to a non-moving structure.

Mobile Camera: A vehicle-mounted camera.

Law Enforcement Data: ALPR data collected by law enforcement-owned ALPR cameras.

Data Retention: Refers to the amount of time that the collected data will be preserved.

Personally Identifiable Information (PII): Any representation of information that permits the identity of an individual to whom the information applies to be reasonably inferred by either direct or indirect means.[1]

National Crime Information Center (NCIC): An electronic clearinghouse of crime data, such as mug shots and crime records, available to virtually every criminal justice agency nationwide.[2]

Appendix A – Success Stories

Homicide

After committing a homicide, the suspect fled the scene by vehicle. During the investigation, investigators learned that the suspect drove a specific vehicle with damage to the body. Using the ALPR system, detectives created a geographic boundary around the crime location. While reviewing the historical ALPR detections from that immediate area, a vehicle matching the suspect's vehicle description was identified. Detectives then discovered the actual license plate registration information, which returned to the primary suspect. Another query of that vehicle through the ALPR system revealed that the suspect vehicle had fled the jurisdiction immediately after the homicide occurred. This was later confirmed and corroborated by the suspect's cell phone location records.

Homicide

During a road rage incident resulting in a shooting and murder, the suspect was reportedly driving a black hearse. Responding officers obtained the victim's license plate number and checked it through the ALPR system. The officers located an ALPR record of the victim's vehicle passing an ALPR deployment site three minutes before the shooting. The officers checked for other vehicles driving past the ALPR cameras around the same time as the victim. The vehicle driving directly behind the victim was a black hearse. The ALPR data, along with a tip from the public, were pivotal in the arrest. The suspect gave a full confession. The arrest occurred within only a few hours of the crime.

Homicide

The victim knocked on the suspect's hotel room door. Annoyed by the knocking, the suspect opened the door and immediately shot and killed the victim. Surveillance footage of the suspect and his associate leaving captured the type of vehicle used by the suspect but did not capture the license plate. An ALPR camera system was stationed just down the street from the hotel. Officers reviewed the ALPR database for the time frame around the homicide. One minute before the 911 call, the ALPR camera captured a detection of a vehicle matching the one observed in the hotel surveillance. Armed with the vehicle registration information, the vehicle's lien holder was contacted, which provided new investigative leads. Within 11 hours of the shooting, officers located the suspect's vehicle hidden in a home's garage. The suspect and his associate were detained, provided a confession, and later charged with homicide.

Burglary

A police agency used ALPR to identify two suspect vehicles involved in a burglary. Multiple suspects in two vehicles committed a residential burglary, with the resident shooting and killing one of the suspects. Doorbell camera videos were recovered, and homicide detectives used them to establish a timeline. ALPR searches focused on the timeline, which resulted in ALPR scans for both suspect vehicles. A subject associated with one of the vehicles was later determined to be involved and arrested for burglary.

Sexual Assault and Attempted Murder

A victim met the suspect at a bar. They left and the suspect drove them to the desert, where he sexually assaulted, beat, strangled, and ran her over. The vehicle plate from the bar where the incident began was queried in the ALPR system. Historical detections placed the suspect vehicle in the desert where the victim was assaulted and left behind, along with other areas where the victim reported they had driven before the assault. The ALPR data was critical in the arrest of this violent attacker.

Fatal Hit-and-Run Traffic Accident

ALPR was used to identify the suspect vehicle that left the scene of a fatal traffic accident after hitting two people. The make and model of the vehicle were identified but not the license plate. The license plate and other supporting evidence were discovered by leveraging the ALPR system. After the crime occurred, ALPR detection records showed significant damage to the suspect vehicle.

2646

Kidnapping

A male subject attempted to grab a female in a business parking lot. Video surveillance captured the subject and his vehicle. Detectives used video footage to determine the suspect vehicle's make, model, and year range. A query of the ALPR system provided sufficient information to confirm the suspect vehicle and registration. The male was later identified. A records check revealed he had two prior arrests for sexual assaults. He was later located and arrested for the crime of kidnapping.

Arson

A subject set fire to the sign and lawn outside an FBI office building. Surveillance footage showed a gold Chevy Tahoe with distinctive damage to the passenger and rear sides of the vehicle. The license plate number was not visible. Analysts searched more than 6,000 images in the ALPR database, looking for Chevrolet SUVs similar to the one in the surveillance footage. After searching the ALPR database, analysts found a vehicle with matching damage, identified the registered owner, then disseminated a bulletin for officers to locate the vehicle. Initially, officers could not locate the registered owner, who was transient. A few days later, a patrol officer spotted the vehicle based on the bulletin and detained the suspect. The suspect was positively identified and linked to the original arson and another one in a different part of the state. Less than one month later, the suspect accepted the criminal prosecution agreement offered by the prosecutors.

2647

Appendix B – Myths and Misconceptions

A review of case law provides a snapshot of the legalities supporting the use of ALPR technology. In contrast, some misinformation exists on the use of ALPR technology by law enforcement. Therefore, reviewing and understanding the myths and misconceptions about ALPR in law enforcement is essential.

MYTH

ALPR detections contain private, personally identifying information.

REALITY

ALPRs are designed to capture three details when a vehicle passes through their view: a photograph of the vehicle, the characters on the license plate of the vehicle, and the location, date, and time when the vehicle passes the ALPR.

Publicly-owned ALPR systems read the license plates of vehicles on public roadways and capture information that is generally not considered private. For example, if an individual were to stand by the side of a public road and take a picture of every vehicle that passed them, write down its plate number, and record the date and time, they would be within their legal rights to do so. Likewise, a person could place a camera on their property facing a public throughway and capture the same information an ALPR does. In *U.S. v. Ellison (2006)*, the Court explained that not only is there no privacy interest in a license plate number, but a subsequent entry into a computer system to retrieve other non-private information does not constitute a search.[3] By states mandating each vehicle operating on the roadway publicly display a license plate and even illuminate it at night, the expectation is for the license plate to be read at any time while on a public roadway.

An ALPR system does not automatically capture or record restricted information contained in an individual's motor vehicle records, such as their name, address, phone number, Social Security Number, driver identification number, etc. *The Driver's Privacy Protection Act of 1994* requires all states to protect this personal information ensuring ALPR reads are anonymous until additional steps are taken to access separate statutorily regulated databases. Therefore, when a law enforcement officer needs to access motor vehicle records based on data captured by an ALPR, they would need to perform the same manual processes to retrieve this information as they would in other investigative circumstances. Additionally, adequate policies limit access to ALPR data by requiring justification for the review of individual ALPR records. This effectively ensures that most ALPR-captured data is never even accessed before it is purged.

Therefore, retrieving non-public information based on ALPR data requires law enforcement to adhere not only to the policies and laws regarding the ALPR data but also to the policies and laws for accessing the restricted databases housing driver's license and vehicle information. In summary, ALPR systems do not grant expanded access to any non-public records databases, nor do they circumvent the auditing processes that are in place to ensure restricted data is accessed only for official use and as permitted by law.

3 United States v. Ellison, 462 F.3d 557, 561, United States Supreme Court. (6th Cir. 2006). https://caselaw.findlaw.com/la-court-of-appeal/1717448.html

MYTH

ALPR technology is a form of mass surveillance.

REALITY

Guided by proper policy and processes, ALPRs are effective tools for law enforcement to narrow the focus of investigations and limit negative collateral impacts when policing high-crime areas.

A scenario most major city police departments are familiar with is as follows: A motorist is stopped by police only to later be released and sent on their way in a case of mistaken vehicle identity. Their misfortune was caused by driving a vehicle matching the general description of one recently broadcasted of a suspect vehicle in a violent crime. Though the detention is usually short-lived, the trauma it causes may not be. This type of "wrong place, wrong time" scenario is most likely to occur when non-specific or incorrect information is relayed to officers during an in-progress incident. Even a single negative experience like this can spread quickly throughout a community, jeopardizing efforts to build trust. Unfortunately, these scenarios most commonly affect residents in neighborhoods disproportionately impacted by violent crime and gun violence. The use of ALPRs can help mitigate these occurrences.

ALPRs provide an additional mechanism to corroborate or refute witness accounts of suspect vehicles. This helps narrow the focus of law enforcement when canvassing and provides officers with the increased ability to bypass lookalike vehicles and only interact with the cars that truly contain the distinct characteristics of the vehicle suspected in the crime.

A common talking point designed to instill fear in ALPRs technology is that they "could" be used to track people involved in first amendment protected activities. The purpose of robust agency policy is to restrict use to legally permissible actions and ensure accountability if rules are broken. It must be noted that the same policies and laws governing law enforcement's actions without technology still apply when using technology. In fact, the audit trails in technology ensure that a hindsight review of any actions taken is afforded an even more detailed perspective than the actions taken without records produced by technology.

Appendix C – State-Level Laws and Regulations

At least 16 states have statutes regarding the use of ALPR or the retention of data collected by ALPR technology. This information was derived from a database maintained by the National Conference of State Legislatures.[4] The states and their laws are as follows:

Arkansas-Ark. Code §§ 12-12-1801 to 12-12-1808

Prohibits use of ALPRs by individuals, partnerships, companies, associations or state agencies. Provides exceptions for limited use by law enforcement, by parking enforcement entities or for controlling access to secure areas. Prohibits data from being preserved for more than 150 days.

California-Calif. Veh. Code § 2413

Provides that the California Highway Patrol (CHP) may retain data from a license plate reader for no more than 60 days, unless the data is being used as evidence in felony cases. Prohibits selling or making available ALPR data to non-law enforcement officers or agencies. Requires CHP to report to the legislature how ALPR data is being used.

California-Calif. Civil Code §§ 1798.29, 1798.90.5

Establishes regulations on the privacy and usage of automatic license plate recognition (ALPR) data and expands the meaning of "personal information" to include information or data collected through the use or operation of an ALPR system. Imposes privacy protection requirements on entities that use ALPR information, as defined; prohibit public agencies from selling or sharing ALPR information, except to another public agency, as specified; and require operators of ALPR systems to use that information only for authorized purposes.

Colorado-Colo. Rev. Stat. § 24-72-113

Requires that video or still images obtained by passive surveillance by governmental entities, such as images from monitoring cameras, must be destroyed within three years after the recording of the images. Specifies that the custodian of a passive surveillance record may only access the record beyond the first anniversary after the date of creation of the record if there has been a notice of claim filed, or an accident or other specific incident that may cause the passive surveillance record to become evidence in any civil, labor, administrative, or felony criminal proceeding. Creates exceptions allowing retention of passive surveillance records of any correctional facility, local jail, or private contract prison and passive surveillance records made or maintained as required under federal law.

Florida-Fla. Stat. § 316.0777

Creates a public records exemption for certain images and data obtained through the use of an automated license plate recognition system and personal identifying information of an individual in data generated from such images. Provides that images and data containing personal information obtained from automated license plate recognition systems are confidential. Allows for disclosure to criminal justice agencies and to individuals to whom the license plate is registered in certain circumstances.

Georgia-Ga. Code § 35-1-22

License plate data may be collected and accessed only for a law enforcement purpose. The data must be destroyed no later than 30 months after it was originally collected unless the data are the subject matter of a toll violation or for a law enforcement purpose. Allows sharing of captured license plate data among law enforcement agencies. Law enforcement agencies deploying an automated license plate recognition system must maintain policies for the use and operation of the system, including but not limited to policies for the training of law enforcement officers in the use of captured license plate data. License plate data collected by a law enforcement agency is not subject to public disclosure.

4 Automated License Plate Readers: State Statutes," National Conference of State Legislatures. https://www.ncsl.org/research/telecommunications-and-information-technology/state-statutes-regulating-the-use-of-automated-license-plate-readers-alpr-or-alpr-data.aspx

2650

Maine-29-A M.R.S.A. § 2117-A(2)

Prohibits the use of automatic license plate recognition systems except for certain public safety purposes. Provides that data collected is confidential and may be used only for law enforcement purposes. Data collected may not be stored more than 21 days.

Maryland-Md. Public Safety Code § 3-509

Specifies the procedures and protocols that a law enforcement agency must follow in connection with the operation of an "automatic license plate reader system" and "captured plate data." Requires the State Police to adopt procedures to address who has access to the data and training for those individuals and to create an audit process. Provides that data gathered by an automatic license plate reader system are not subject to disclosure under the Public Information Act.

Minnesota- Minn. Stat. §§ 13.82,13.824, 626.8472

Relates to data practices; classifies data and provides procedures related to automated license plate readers; provides the data that may be collected by such readers; relates to requirements for the sharing of such data among law enforcement agencies; requires the maintenance of a public log recording the uses of such data; requires related records maintenance and the auditing of such records; requires written procedures governing access to the data; requires certain notification when setting up readers.

Montana-Mont. Code Ann. §§ 46-5-117 to -119

Prohibits the use of license plate readers by an agency or employee of the state or any subdivision of the state on any public highway. Provides exceptions for specific agencies or purposes, such as state or local law enforcement, if specified requirements are met. Except as provided, license plate data captured by law enforcement may not be preserved for more than 90 days after the date that the data is captured.

Nebraska- Neb. Rev. Stat. § 60-3201 to 3209

Requires any governmental entity that uses an automatic license plate reader (ALPR) system to adopt a policy governing use of the system. Governmental entities also must adopt a privacy policy to ensure that captured plate data is not shared in violation of this act or any other law. The policies must be posted on the internet or at the entity's main office. Requires annual reports to the Nebraska Commission on Law Enforcement and Criminal Justice on ALPR practices and usage. Provides that captured plate data is not considered a public record.

New Hampshire-N.H. Rev. Stat. Ann. §§ 261.75-b, 236.130

Restricts the use of automated license plate readers to local, county and state law enforcement officers, who shall only use the devices subject to specified conditions and limitations and for specified purposes. Provides that records of number plates read shall not be recorded or transmitted anywhere and shall be purged from the system within 3 minutes of their capture, unless the number resulted in an arrest, a citation or protective custody or identified a vehicle that was the subject of a missing or wanted person broadcast.

North Carolina-N.C. Gen. Stat. §§ 20-183.30 to .32

Requires state or local law enforcement agencies to adopt a written policy governing the use of an ALPR system that addresses databases used to compare data obtained by the system, data retention and sharing of data with other law enforcement agencies, system operator training, supervision of system use, and data security and access. Requires audits and reports of system use and effectiveness. Limits retention of ALPR data to no more than 90 days, except in specified circumstances. Provides that data obtained by the system is confidential and not a public record.

2651

Oklahoma-Okla. Stat. §§ 47-4-606.1

Provides that participating law enforcement agencies may use automatic license plate reader systems to access and collect data for the investigation, detection, analysis or enforcement of the state's compulsory insurance law. States that data collected under the program may not be used by any individual or agency for purposes other than enforcement of the compulsory insurance law, prohibits sale of the data under the program, and provides that data is exempt from the Oklahoma Open Records Act, except when retained as evidence of a violation of the compulsory insurance law. These provisions do not prohibit the use of any other automated license plate reader system by an individual or private legal entity for lawful purposes.

Tennessee-Tenn. Code §§ 55-10-302, 10-7-504(a)

Provides that any captured automatic license plate data collected by a government entity may not be stored for more than 90 days unless they are part of an ongoing investigation, and in that case provides for data to be destroyed after the conclusion of the investigation. Captured plate data from automatic license plate reader systems must be treated as confidential and shall not be open for inspection by members of the public.

Utah-Utah Code §§ 41-6a-2001 to -2005

Provides that a governmental entity may not use an automatic license plate reader system except for specified uses, such as by law enforcement agencies for the purpose of protecting public safety or conducting criminal investigations and by other government entities for limited other purposes. Provides that captured plate data are a protected record under the Government Records Access and Management Act, if the captured plate data are maintained by a governmental entity. Provides that captured plate data may only be shared for specified purposes, may only be preserved for a certain time and may only be disclosed pursuant to specific circumstances such as a disclosure order or a warrant. Government entities may not use privately held captured plate data without a warrant or court order, unless the private provider retains captured plate data for 30 days or fewer. Allows an institution of higher education to use automatic license plate readers under certain circumstances.

Vermont- 23 V.S.A. §§ 1607, 1608

Requires a law enforcement officer to be certified in the use of an automated license plate reader to operate such a system. Provides that active system data may only be accessed by an officer with a legitimate law enforcement purpose for the data. A legitimate purpose includes a person's defense against certain charges and does not include enforcement of parking or traffic violations other than commercial motor vehicle violations. Limits retention and access to information gathered through the use of an ALPR system. Requires the Department of Public Safety to adopt rules to implement the law. Requires the Auditor of Accounts to examine requests for data to determine whether the request and the release complied with the law.

2652

Appendix D – CJIS Security Policy

Agencies that wish to use the CJIS Security Policy to assess the security practices of a service provider that will be handling ALPR data should consider the following sections:

- Private Contractor User Agreements and FBI-CJIS Security Addendum [5.1.5]: Private contractors who perform criminal justice functions for a Criminal Justice Agency (CJA) shall be permitted to access CJI pursuant to an agreement between the CJA and the contractor that incorporates the FBI-CJIS Security Addendum approved by the Director of the FBI.
- Agency User Agreements [5.1.1.6]: Fingerprint-based background checks and written agreement with the agency when required.
- Secondary Dissemination [5.1.3]: If data is released to another authorized agency and not part of a primary information exchange agreement, this shall be logged.
- Security Awareness Training [5.2]: All personnel with access to CJI (Criminal Justice Information) shall receive security awareness training within six months of assignment, and biennially thereafter.
- Security Training Records [5.2.3]: Records of security awareness training shall be kept current and maintained by a Security Officer (CSO).
- Reporting Structure and Responsibilities [5.3.1.1]: Establishment of a primary Point of Contact (POC) for CJIS incident handling and response.
- Events [5.4.1.1]: Description of the events that must be logged within the system.
- Audit Monitoring, Analysis and Reporting 5.4.3]: Responsibility for review and analysis of audit records, at a minimum of once a week, to look for inappropriate or unusual activity.
- Audit Record Retention [5.4.6]: The agency shall retain audit records for at least one year.
- Least Privilege [5.5.2.1]: The agency shall approve individual access privileges and enforce the most restrictive set of rights and privileges needed by users for the performance of specified tasks. Logs maintain access privilege changes for a minimum of one year or at least equal to the agency's record retention policy, whichever is greater.
- Access Control Mechanisms 5.5.2.4]: One or more of the following must be employed: access control lists (users, groups, machines), resource restrictions (permission sets), encryption and strong key management, application-level access control.
- Unsuccessful Login Attempts [5.5.3]: CJIS Security Policy requires that after five consecutive invalid attempts, the account shall be locked out for a minimum of 10 minutes.
- System Use Notification [5.5.4]: The system shall allow a notification message to be displayed to let users know a) they are accessing a restricted system, b) usage is monitored, recorded and subject to audit, c) unauthorized use is prohibited and may result in penalties, and d) use of the system indicated consent to monitoring.
- Session Lock [5.5.5]: CJIS Security Policy requires that the system shall prevent access via a session lock after a minimum of 30 minutes of inactivity.
- Remote Access [5.6]: Rules for monitoring and controlling remote access via the internet.
- Use of Originating Agency Identifiers in Transactions and Information Exchanges [5.6.1.1]: An FBI-issued ORI number shall be assigned at the agency level and attached to all activities by the agency's users.
- Password [5.6.2.1.1]: Requirements and standards for passwords.
- Personal Identification Numbers [5.6.2.1.2]: Best Practices on PIN use.
- Advanced Authentication [5.6.2.2]: Advanced Authentication requirements.
- Identifier Management [5.6.3]: Requirements of agencies to manage user identifiers.
- Network Diagram [5.7.1.2]: Requirements for a network topological diagram.

- Media Protection [5.8]: Requirements for security and protection of electronic and physical media.
- Physical Protection [5.9]: Requirements for physical security and access controls around all hardware, software and media.
- System and Communication Protection and Information Integrity [5.10]: Prevent CJI from being transmitted unencrypted across the public network.
- Boundary Protection [5.10.1.1]: Ensure that failure of boundary protection mechanisms do not result in unauthorized release of information.
- Encryption [5.10.1.2]: Minimum of 128 bit encryption when CJI data is transmitted beyond the physical security boundary.
- Intrusion Detection Tools and Techniques [5.10.1.3]: Requirements for intrusion detection tools.
- Cloud Computing [5.10.1.5 and Appendix G.3]: Recommendations for use of cloud computing and assessment of cloud computing service providers.
- Partitioning and Virtualization [5.10.3]: Requirements for partitioning of data and virtualization of resources.
- Patch Management [5.10.4.1]: Requirements for management of software patches.
- Malicious Code Protection [5.10.4.2]: Virus Protection requirements.
- Spam and Spyware Protection [5.10.4.3]: Spam and Spyware Protection requirements.
- Security Alerts and Advisories [5.10.4.4]: Guidance for alerts and advisories.
- Personnel Security [5.12]: Fingerprint-based background checks and rules based on findings.
- Personnel Termination [5.12.2]: Terminated employees shall immediately have access revoked.
- Personnel Sanctions[5.12.3]: Process for employees failing to comply with security policies.
- Mobile Devices [5.13]: Where appropriate, the technology partner must support the agency's mobile device practices (patch management, etc.)

2654

Appendix E – ALPR Audit and Transparency Report Template

The following template provides a rudimentary example of the details and considerations in providing a published report about the performance and effectiveness of an ALPR program.

Automated License Plate Reader Program
Annual Transparency Report

Introduction

The introduction should provide context and background as to what the report is addressing. The introduction defines the specific objectives and purpose of the report. It indicates any problems that may exist and provides answers to problems explored. Finally, the introduction will preview the report and outline the report structure.

Discussion

This is the main body of the report, and it has two primary purposes. The first is to share and explain the conclusions. The second is to justify any recommendations that may be made in the report.

Specific data points that may be considered:

- Number of detections
- Number of hotplate hits
- Number of queries conducted by users
- Number of arrests directly related to ALPR
- Number of user-generated hotplates
- Breakdown of hotplate hit types
- Year-over-year analysis and trends

Conclusion

This section should relate to the information shared in the report. It should be specific to the objectives of the report. It may also address any issues that may be interpreted from the information shared. The conclusion should be brief, logical, and specific.

Recommendations

Recommendations shared should point to future action that can be completed. Recommendations should be feasible, action-oriented and arranged in order of importance.

Legal Updates

Melissa Johnsen
Deputy Chief, Appeals & Training Bureau

February 8, 2023

Agenda

- 9:30-10:00 Legal Updates
- 10:00-10:55 Search Warrant Process
- 11:00-12:00 Drafting the Affidavit
- 12:00-12:45 Lunch
- 12:45-1:45 Legal Processes for Obtaining Information from Cell Phone & Internet Service Providers
- 1:55-2:55 Search Warrants for Digital Storage Devices & Evidence
- 3:05-4:00 Special Considerations for Digital Device Searches & Warrants

Search Warrants for Blood: Moreau & Bohigian

- Scenario: Defendant is in the hospital following a car crash -- either under arrest or not -- and medical personnel has withdrawn his blood for treatment purposes
- Can police get a warrant to seize the blood and test it themselves?
- Answer: Yes, but the BAC results will not be admissible in a straight OUI prosecution without the defendant's consent
- CW v. Moreau, 490 Mass. 387 (2022): under c. 90 § 24(1)(e), police need the defendant's consent to test blood already drawn by the hospital for the results of a blood alcohol analysis to be admitted in straight OUI prosecution under (1)(a)

Search Warrants for Blood: Moreau & Bohigian

- NOTE: consent requirement of § 24(1)(e) appears to only apply to straight OUI prosecutions under (1)(a), NOT OUI-SBI, OUI-MVH, OUI-Drugs, or Neg Op – results still admissible in those prosecutions (no appellate decision yet)

- Police should still obtain a preservation order and ultimately a warrant to seize the blood and test it – particularly if there are victims involved
  - Charging decision may not be finalized at this juncture
  - Police will likely be obtaining search warrant for medical records in any event

- Police may still attempt to obtain consent, particularly if they are certain that defendant will only be charged with straight OUI-Liquor
  - defendant's license will be suspended for 180+ days if he refuses and is under arrest

Search Warrants for Blood: Moreau & Bohigian

- Scenario: Blood has not been previously drawn by the hospital
- Can the police get a warrant to draw the defendant's blood?
- Answer: No, the police cannot force the defendant to undergo a blood draw to analyze its alcohol content against his will, even if they have obtained a search warrant
- § 24(1)(f)(1) & CW v. Bohigian, 486 Mass. 209, 214 (2020)
- if the police have requested that the defendant submit to a blood draw and he refuses, nothing more can be done other than suspending his license if he is under arrest
- This applies to all OUI-Liquor-related prosecutions (but appears not to apply to OUI-Drugs -- no appellate decision yet)

Juvenile Arrest & Detention

- When a juvenile is arrested, the arresting officer must promptly notify the parent/guardian -- before the juvenile is booked if possible

- In general, a juvenile should only be held at the police station for as long as it takes to notify the parent and to complete the identification & booking process

- Once the booking process is completed, the following should occur:
  - *If the Juvenile Court is in session,* the juvenile should be transported to court for his/her initial appearance
  - *If the Juvenile Court is not in session*, the juvenile should either be:
    - Released to his/her parent, or
    - Transported to the Overnight Arrest Program

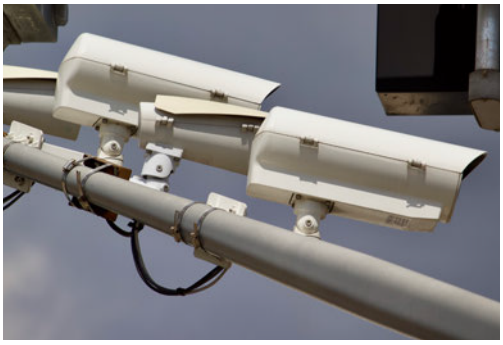
Juvenile Arrest & Detention

Where booking is completed <u>while the Juvenile Court is in session</u>:

- c. 119, § 66: child < 18 cannot be detained at station pending arraignment unless court is not in session (§ 67)
- In general, this means that <u>during court hours</u>, juvenile must be transported to Juvenile Court for his/her initial appearance right after booking
- BUT if parent/guardian is present and <u>both</u> juvenile and parent are advised of requirement of prompt arraignment, police may ask juvenile and parent if juvenile would submit to interview prior to being transported to court
- If both juvenile and parent agree to delay transport to court to be interviewed, then prompt arraignment waiver <u>and</u> *Miranda* waiver should be executed
- Once both parent and juvenile indicate that they understand rights, police should inform parent that opportunity is being furnished for them to confer about juvenile's rights, and then leave them alone
- If interview ends after court is closed, juvenile should be released to parent upon written promise that parent will ensure juvenile's appearance in court
- If release is not appropriate, police should ensure interview ends in time to transport juvenile to court
- If juvenile declines to be interviewed, he/she must be brought to court for his/her initial appearance as soon as is reasonably possible

Juvenile Arrest & Detention

Where booking is completed <u>while the Juvenile Court is not in session</u>:



- § 67: police must immediately notify juvenile's parent/guardian when juvenile is arrested and court is not in session
- Pending notification of parent, juvenile is detained in DYS-approved facility separate from adults
- The officer-in-charge determines whether juvenile should be released to parent (exception: juvenile **12 or 13 YO** <u>must</u> be released to parent)
- If release is appropriate, juvenile may be released to parent *upon the parent's written promise that they will ensure juvenile's presence in court*
- If the parent is present, police may ask juvenile and parent if juvenile would submit to interview prior to being released to parent
- If both juvenile and parent agree to be interviewed, *Miranda* warnings should be given to both, and officer should ensure that both understand rights
- Once both parent and juvenile indicate that they understand rights, police should inform parent that opportunity is being furnished for them to confer about juvenile's rights, and then leave them alone
- Juvenile may be briefly detained to secure any biological/chemical evidence as long as there is probable cause to seize such evidence and exigent circumstances dictate that it must be seized without delay
    - Police should document the reasons for the exigency

Executive Summary

Since their inception more than a century ago, license plates have primarily been used to display information for fast and accurate identification of motor vehicles and to demonstrate compliance with motor vehicle registration laws.

In support of their highway and public safety missions, License Plate Readers (LPRs) provide law enforcement with the ability to check license plates against various databases. Tolling and parking enforcement authorities also rely on LPR technology for the collection of tolls and enforcing parking regulations.

Law enforcement agencies can build meaningful LPR system policies that respect individuals' privacy rights while providing authorized users with the information necessary to ensure the public's safety.

More than a decade ago, it was recognized that inconsistent business rules used by license plate issuing authorities were resulting in alarmingly high "misreads," diminishing law enforcement's ability to identify and apprehend suspected criminals and terrorists, recover stolen vehicles, and assist people in need of assistance. Similarly, tolling and parking authorities are hampered in their revenue collection mandates that are critical to maintaining infrastructure and ensuring parking regulations are not flouted. In addition, license plate misreads hamper Customs and Border Protection's ability to correctly identify vehicles crossing international borders.

In response to this issue, in 2012, AAMVA published a *Best Practices Guide for Improving Automated License Plate Reader Effectiveness Through Uniform License Plate Design & Manufacture*. At the time, AAMVA did not have a License Plate Standard. Since that time, AAMVA has published a License Plate Standard (2016) and a License Plate Standard, Edition 2 (2020).

In 2020, the AAMVA Law Enforcement and Vehicle Standing Committees determined the 2012 LPR document should be retained but with content now covered in the License Plate Standard removed and the remaining material updated and added to as appropriate. This guide has been renamed *License Plate Reader Program Best Practices Guide* and has been refocused on best practices in the administration of LPR Programs for state and provincial law enforcement, although much of the content is applicable to tolling and parking enforcement authorities alike.

Chapter 1 Introduction

License Plate Readers (LPRs) are an effective law enforcement and traffic safety tool and are critical to government entities—such as tolling and parking enforcement authorities—who use the technology to enforce the law and collect revenue. LPRs enhance public safety and security by providing law enforcement the ability to check license plates against databases such as the National Crime Information Center. The databases searched are at the discretion of each law enforcement agency using LPR technology.

Federal, state, local, and tribal public safety agencies rely on accurate and timely license plate information to effectively and efficiently perform the multiple tasks required in the performance of their duties. Information is available in multiple formats, including hot lists (e.g., stolen vehicle), Be On the Look Out (BOLO), Attempt to Locate (ATL), officer safety information, AMBER Alerts for at-risk children, SILVER Alerts for at-risk adults, and more. Much of this information can be, and often is, associated with a vehicle's license plate. The ability of LPRs to quickly and accurately scan thousands of license plates is critical to the men and women of law enforcement who contact hundreds of thousands of people throughout the U.S. and Canada every day, as well as to Customs and Border Protection officers and agents monitoring international ports of entry. When LPRs misread license plates, law enforcement is hampered in its mission to protect and to serve, and government entities lose revenue from uncollected tolls.

The International Association of Chiefs of Police conducted a 2021 survey of police agencies across the U.S. about their use of LPR systems. More than 1,200 agencies responded to the survey measuring LPR use, policy considerations, data retention and management, and more.[1]

Among all respondents:

- **40%** reported currently using LPR systems in their departments.
- Cost was the biggest barrier to LPR use.
- Larger agencies were more likely to use LPR systems than smaller agencies were.
- Mobile units were the most common form of LPR system used.

Among agencies using LPR:

- **75%** owned their own LPR system. Others contracted use of their LPR system or leveraged another agency's LPR system.
- **63%** shared their system with another agency, and **84%** shared their LPR data with other agencies.
- **64%** reported full control of the data in their LPR system.
- **44%** of the agencies using LPR stored their data on the cloud, and **43%** stored their data on agency servers or other government resources.

A study conducted by the Police Executive Research Forum[2] concluded that LPRs increased license plate reads by a factor of more than eight. What the study did not, and could not reveal, is the number of hits "missed" because of license plate misreads. Regardless of the misread rate in a particular jurisdiction, there

1 As of this printing, these represent preliminary estimates only.

2 Combating Auto Theft in Arizona: A Randomized Experiment with License Plate Recognition Technology: Police Executive Research Forum, December 2011.

is no refuting that misreads occur. And when they do, the potential exists to miss opportunities to arrest a suspected criminal or terrorist, to recover a stolen vehicle, or to collect toll revenue.

A completely effective "ecosystem" is needed to ensure as close to 100% as possible accurate license plate read rate is achieved by LPRs. Multiple stakeholders share the responsibility for maintenance of the ecosystem. Motor vehicle agencies having license plate design and manufacture administration oversight responsibility should ensure their issued license plates align with the AAMVA License Plate Standard (see Appendix B). LPR manufacturers have a responsibility to develop and implement state of the art technology to accurately read the multi-variant license plates that exist. Law enforcement and other government entities using LPR are responsible for ensuring they have policies and training that align with the most current best practices available.

AAMVA published a *Best Practices Guide for Improving Automated License Plate Reader Effectiveness Through Uniform License Plate Design & Manufacture*. At the time, AAMVA did not have a License Plate Standard. Since that time, AAMVA has published a License Plate Standard (2016) and a License Plate Standard, Edition 2 (2020) (see Appendix B).

This LPR Program Best Practices document, combined with the AAMVA License Plate Standard, Edition 2; License Plate Policy Statements; and License Plate Verification Program all serve to assist jurisdictions in shaping of jurisdiction laws and regulations and operational policies ensuring license plate readability and integrity.

In 2020, the AAMVA Law Enforcement and Vehicle Standing Committees determined the 2012 document should be retained but with content now covered in the License Plate Standard removed and the remaining material updated and added to as appropriate. This guide has been renamed *License Plate Reader Program Best Practices Guide* and has been refocused on best practices in the administration of LPR Programs for state and provincial law enforcement, although much of the content is applicable to tolling parking enforcement authorities alike.

AAMVA also has four policy statements addressing license plates (see Appendix B).

In 2020, AAMVA launched the License Plate Verification Program (LPVP). The LPVP allows jurisdictions to submit up to four license plates per fiscal year for examination and comparison with the AAMVA License Plate Standard, at no cost to the jurisdiction. The examination is conducted by an independent third-party laboratory under contract with AAMVA. A written report is provided to the submitting jurisdiction outlining areas where their license plate(s) do, and do not, align with the License Plate Standard. The report identifies for jurisdictions areas for potential improvement in the readability of their license plates.

Chapter 2 License Plate History

Introduction

Since their inception more than a century ago, license plates have primarily been used to display information for fast and accurate identification of motor vehicles and to demonstrate compliance with motor vehicle registration laws. The advancement of manufacturing technology has resulted in more colorful and detailed graphics on plates, which can be used to promote a jurisdiction or organization but at times have created an identification challenge for law enforcement and a readability challenge for camera technology. Most jurisdictions now have numerous plate types and designs available to the public.

Hand-Made, Horse-Drawn

The first record of a registration plate in the U.S. was in Philadelphia, Pennsylvania, in the 1850s. Even then, legibility of plates was a concern, and horse-drawn vehicles required registration to be identified with numbers "not less than four inches high." Among other things, these numbers provided a means of identification when reporting an incident involving inappropriate or reckless driving. Today, only the state of Indiana still requires a license plate on a horse-drawn carriage.

The construction of these early registration plates was left to the innovation of the vehicle owner; wood, brass, or other metals affixed to leather backings were common materials used. During the next 50 years, many cities required registration, and they frequently required payment of a modest registration fee.

Plate Production and Issuance

In the early 1900s with the advent of motorized vehicles, jurisdictions took responsibility for registration and standardization of plate issuance.

In 1901, New York became the first state to require license numbers on motor vehicles. In 1903, Massachusetts was the first state to issue a standard statewide plate. Others soon followed, but issuance of plates remained inconsistent.

California also began requiring plates in 1903 but did not produce them; the Automobile Club of Southern California (an early AAA organization) issued license plates—called mouse ears—to members for $1.00. The state assumed this responsibility in 1910.

On March 22, 1905, the Maine senate debated House Document 552, which required automobiles to be registered and plates to be issued. A senator argued in favor of the plate by stating: "The point upon this bill comes is upon the matter of registration. What does it mean? The matter of registration does not prevent the violation of the law, but the matter of registration, and the law compelling the carrying in a conspicuous position, of a certain number, which leads to the registration and which may lead to the detection or recognition of a violation of the law, is all that registration can amount to as to guarding the safety of the public against accidents from automobiles."

As the debate continued, another senator voiced his support for the display of a number on automobiles so that the operator could be identified when it frightened a horse. In part he stated, "I do not own

an automobile, and do not ever expect to. I do own a cheap horse and have a wife and three girls that drive it. What is the result now? They do not dare to go out. I have a safe horse, but when one of those reckless fellows comes along (*in an automobile*), they are likely to get tipped out, as many have in the State of Maine."

The debate continued, the bill passed and became public law Chapter 147. It required the Secretary of State to license operators, to register automobiles and motorcycles, and to issue plates. The law also required the Secretary of State to "furnish the applicant two enameled iron plates containing the word 'Maine' and the number of the registration in Arabic numerals not less than four inches in height. The number plates must be attached to the front and back of the automobile and one number plate must be attached to the back of motorcycles."

Maine plate, 1905 to 1911. The width changed based on the number of characters on the plate.

Starting in 1903, "mouse ear" plates were sold for $1 by the Automobile Club of Southern California.

By 1915, nearly all jurisdictions issued license plates on an annual basis and charged a registration fee that allowed a vehicle to be driven on public roads. Government officials recognized early on that a registration system provided for vehicle identification and a source of transportation revenue. However, license plate design continued down an inconsistent path. It wasn't until 1956 that a standard plate size (12" x 6") was introduced at the request of automobile manufacturers to make it easier to incorporate license plates.

Integrating Safety Concepts

With the rapid increase in the motor vehicle population in the 1920s and 1930s, traffic crashes increased dramatically, leading to the need to improve not only vehicle identification but also vehicle safety. License plates became one means to improve safety by providing a device that improved the night visibility of motor vehicles. The first retro-reflective license plates in the U.S. were issued by New Mexico in 1936.

As retro-reflective technology advanced, fully retro-reflective plates became possible and the first was issued by Connecticut in 1947 followed by Maine in 1949. Delaware followed suit in 1950 followed by Rhode Island and Oregon in 1951.

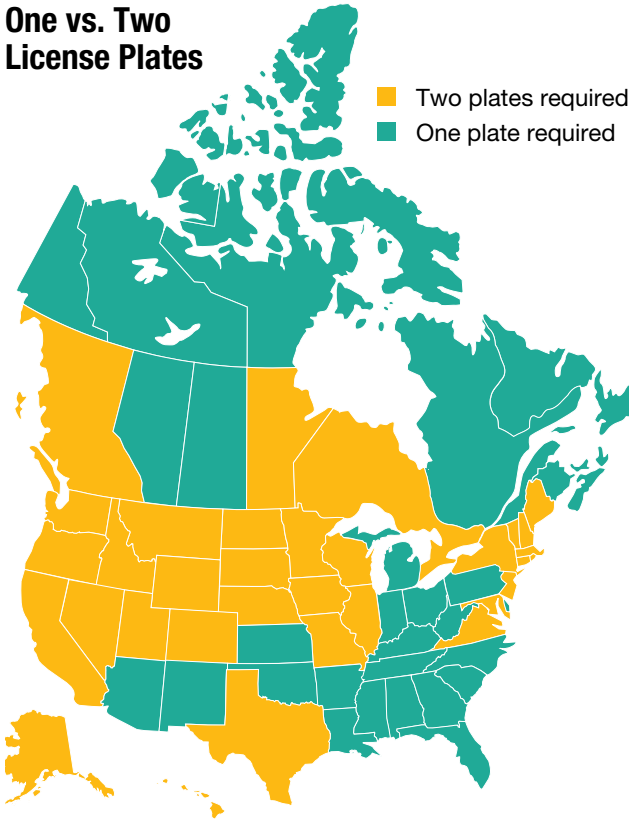
During the 1950s, relatively new sheeting gave retro-reflective plates their biggest boost. Minnesota had the distinction of being the first state to use the sheeting on automobile license plates.

The effect that retro-reflective plates had on nighttime motor vehicle crashes was dramatic, and it did not go unnoticed. In 1956, the first year of use in Minnesota, deaths caused by automobile crashes in rural areas dropped from 24% to 9%. Urban area fatalities involving parked vehicles decreased from 28% to 7%.

Standards Materialize

Tiny San Marino—the smallest republic in Europe, with an area of only 24 square miles—had the distinction of being the first country on that continent to make reflective license plates mandatory on all 2,500 of its automobiles. In the other hemisphere, the South and Central American countries of Peru and Costa Rica also became pioneers in retro-reflective license plates. In Canada, the provinces of Newfoundland and Alberta led the way. Today, all 50 U.S. states and most other countries in the world use retro-reflective plates.

With the advent of retro-reflective license plates, law enforcement realized a benefit in improved legibility.



Although one of the original intents of a vehicle registration number was to aid law enforcement, the reality was that non-reflective plates could only be easily read during daylight hours. Retro-reflection provided greatly improved legibility at night, and even today fully retro-reflective plates continue to have strong endorsement from U.S. law enforcement officials, who advocate fully retro-reflective plates on both the front and rear of vehicles for improved safety and law enforcement efficiency.

Although early license plates were often homemade or devised of porcelain, steel became the predominant base material for plates during the first half of the 20th century. Today, aluminum dominates as the material used in license plate manufacture.

After 1945, most states returned to the pre-war practice of requiring two plates per vehicle. Since then some states have moved from two plates to one or vice versa. States typically move to one plate with the intent to save on the cost of the second plate. During the late 1980s, Connecticut was the last state to move from one plate to two plates. Law enforcement effectiveness was cited as the primary reason for the change. The U.S. and Canada are two of a small number of countries that allow one plate. The following chart identifies the North American jurisdictions that require either one or two license plates.

Within the U.S. and Canada, each jurisdiction is responsible for issuing license plates for vehicles registered in their jurisdiction. To create a plate unique and easily recognizable to that jurisdiction, combinations of colors were originally used. Plate background color and colors of the alphanumeric were varied, along with the characters, to create the necessary combinations needed for vehicle classifications and to differentiate plates among the jurisdictions. With increases in vehicle populations and registration classifications, color alone was not enough. Graphic technology became available in the early 1970s that allowed another level of differentiation of license plates. In 1973, Illinois was the first state to use graphics preprinted on the reflective sheeting, for a special plate for disabled veterans. South Dakota quickly followed with the first general issue graphic of Mount Rushmore National Monument. Today all jurisdictions use graphic plate design. When first introduced, graphic design plates were viewed as attractive and as a mechanism to enhance the image of the jurisdiction.

One vs. Two License Plates

Three Canadian jurisdictions require two plates and 10 require one plate. Thirty U.S. States and the District of Columbia require two plates and 20 states require one plate. NOTE: The five U.S. Territories are not included.

However, since the proliferation of graphic plate designs, law enforcement is no longer able to easily recognize the issuing jurisdiction. The widespread use of graphics and colors frequently makes legibility of the plate characters a challenge for law enforcement.

Modern Features, Security, and Function

Until the 1990s, all the U.S. and Canada and most of the rest of the world produced license plates with raised (embossed) alphanumeric characters. In the late

1990s, digital printing technology was introduced, resulting in flat, digitally printed license plates. Today, many states are issuing flat plates. Some jurisdictions issue a combination of embossed and flat plates.

As a result of increasing concern with the use of counterfeit license plates used to perpetrate crimes, security features were added to license plate. These security features allow for easy recognition of fraudulent plates and provides one more obstacle for criminals to overcome.

The following functions of a license plate have been, and continue to be, the most important over the past century:

- Display of information necessary for fast and accurate identification of a motor vehicle and compliance with motor vehicle registration laws
- A validation sticker is issued in most jurisdictions, often rotating the color, to indicate a current and valid registration
- Provide an added margin of visibility and safety by making vehicles more visible

More recently, additional functions of license plates have emerged to

- Provide revenue for highway funds and sponsoring organizations (specialty and vanity plates)
- Use images of plates to improve and increase toll collection, parking fees, and fines
- Provide a way for individuals to express their pride or to promote various causes
- Provide access control to parking, facilities, and gated communities.

Alternative Vehicle License Plates

Two nontraditional license plate technologies have recently emerged: digital license plates and front license plate wraps. These alternative vehicle license plates are intended to replace traditional aluminum or metal license plates.

Digital license plates are reflective but not retro-reflective, creating challenges for law enforcement, tolling authorities, and others that read license plates in all light conditions and rely on License Plate Reader (LPR) technology, which is currently programmed to read retro-reflective license plates.

A license plate wrap is an adhesive license plate applied to a vehicle's bumper. Wraps, where currently authorized for purchase, are only allowed to be applied to the front of a vehicle.

A curved, indented, or otherwise non-flat surface could render the wrap unreadable to LPRs or the human eye.

For a fuller explanation of both the benefits and challenges associated with nontraditional license plates, see the AAMVA License Plate Standard, Edition Two, Chapter 5 – Alternative Vehicle License Plate Displays.

Chapter 3 License Plate Reader Fundamentals

Introduction

This section provides an overview of License Plate Readers (LPRs), the license plate reading process, and key challenges faced by LPR systems.

Typical applications for LPR technology by law enforcement, motor vehicle administrations, and other entities include but are not limited to:

- Law enforcement stolen vehicle and other "hot list" files
- AMBER, BLUE (violent criminal who has killed or injured a law enforcement officer), and SILVER Alerts
- Open road tolling (pay by plate)
- Congestion pricing
- Parking enforcement
- Access control
- Traffic studies
- Automated speed enforcement
- On-street parking enforcement
- Travel or journey time calculations

As the demand for LPR systems expands in both law enforcement and commercial applications, LPR technology continues to evolve. LPR provides cost-efficient approaches in varied environments that include both environmental challenges (e.g., mobile-based platforms, high-speed traffic) and license plate challenges (e.g., introduction of new designs, fonts, and so on across multiple jurisdictions).

The reads from LPR systems, namely the license plate number and in some applications the license plate jurisdiction, are primarily used as input into downstream systems to support the intended application. For example, whereas in open road tolling systems, the license plate number and jurisdiction are used to support the collection of toll revenues, in federal and state law enforcement systems, the license plate number and jurisdiction are used to support law enforcement queries against both large-scale (e.g., National Crime Information Center) and local data sources.

In some applications, manual verification or certification of LPR results is required at some point in the process. To the extent LPR systems can improve and retain a high degree of accuracy, operational costs can be reduced. In some applications, LPR system service-level objectives call for a 95% accuracy rate in correctly identifying both the license plate number and jurisdiction when the license plate is completely visible in the license plate image. The most significant challenge to maximizing license plate read rate accuracy is the ability of LPR system vendors to quickly adapt to the introduction of jurisdictional license plate designs with varying fonts, graphical designs, stacked letters, and so on.

License Plate Reader Systems

LPR systems include deployment of fixed, portable, mobile, and mobile application platforms.

Fixed Platforms

Fixed LPR platforms are permanently mounted on fixed infrastructure such as overhead gantries or roadside bollards. LPR fixed platforms are commonly used in open road tolling, commercial vehicle weigh station operations, and some federal and local law enforcement applications.

Fixed LPR in weigh station operations.

Fixed LPR in Customs and Border Protection inbound.

Portable Platforms

Portable LPR systems can be transported between locations, assembled, operated, and then disassembled. Once deployed, they operate as a fixed platform. Examples include portable trailers, traffic barrels, and other platforms configured with or containing LPR equipment.

Portable department of transportation trailer with LPR.

Speed trailer with LPR.

Mobile Platforms

Mobile LPR systems are defined as any LPR system that is mounted on a vehicle, whether a police car, tow truck, street sweeper, parking enforcement vehicle, and so on. These systems can include one to four camera configurations and are typically mounted on the roof or trunk, or they are custom manufactured.

Typical components of mobile systems include cameras that obtain images of the plate and vehicle, which in turn are passed to a processor mounted in the trunk. The processor locates the license plate in the image and extracts the license plate number. It then compares the textual license plate read against selected data sources and sends the output in the form of an alert to a mobile data terminal (screen) and an operator in the cab. The alert typically contains the name of the data source to which the image was compared such as an expired license or registration system, an infrared (IR) image of the license plate, and a color overview image of the vehicle in question. Data generated from mobile LPR systems can also be stored or transmitted via a back-office software application.

Patrol vehicle roof-mounted LPR.

Parking enforcement roof-mounted LPR.

Mobile LPR Applications (Apps)

Mobile LPR applications are defined as LPR systems that are held and operated by individuals using devices such as barcode readers, ruggedized PDAs, and smart phones that provide other capabilities (e.g., communications, internet access). These technologies provide mobile LPR capabilities and rely on the user to point the imager toward the location of the license plate.

LPR application on a mobile device.

Use of these devices is limited to speed applications typically less than 45 mph and are subject to unique challenges such as shadows, low ambient light, distance or angle to the license plate surface, and non-reflective surfaces. These limits can be overcome using techniques to light or IR illuminators resident in the device. Because IR imagers are not typically available on commercial general-purpose handheld devices, overcoming readability of non-reflective surfaces using a color imager generally requires special Optical Character Recognition (OCR) techniques. The accuracy of these OCR devices is dependent on the specific device and environment in which it is being used.

Handheld platforms are useful because they are easily deployed and can be used in parking enforcement, covert applications, portable checkpoints, and more. Benefits include portability, relatively low cost, and tactical use. The biggest drawback is that when the LPR application is used, it drains the device battery much faster than normal usage.

LPR Camera Technology

Two primary approaches are used to capture images from which the license plate information can be extracted. One approach is to capture a single still image of the license plate at an "optimal" distance from the camera, where the illumination, lens settings, and field of view can all be controlled to yield the best possible images under any ambient lighting and weather conditions. Another approach is to capture multiple images as the vehicle travels through the field of view of the camera. In this approach, near-instantaneous adjustments to the flash, shutter, and gain settings are performed to optimize the license plate image for different environmental conditions.

Monochrome (black and white), color, and IR cameras are used in various solutions. Monochrome cameras tend to yield the best resolution, can work with most types of visible light illumination, and are generally less costly. Color cameras are useful when the color information can be used to improve

the separation between characters and background and for identification of the jurisdiction. Color cameras require white light to produce accurate color information and are of very limited value at night without the use of additional illumination.

IR cameras are tuned to respond to IR illumination. IR cameras tend to be most sensitive at night and tend to be fitted with a band-pass filter designed to block visible light (to limit the effect of headlights and sunlight). This tuned IR illumination is effective at reflecting off the reflective background finish of the plate and not reflecting off the non-reflective characters (or vice versa).

Additional cameras are often used as part of the solution so that both a plate image and a vehicle image can be simultaneously captured to provide context and for investigative purposes. Multiple cameras are also useful when multiple bandwidths of light are used. For example, the fusing of white light and NIR (near-IR) light imagery adds significant information during the OCR and jurisdiction determination.

License Plate Recognition Process

The license plate recognition process begins when a vehicle is detected by an LPR system and ends when an LPR system information has been collected, analyzed, and handed off to backend systems for further processing.

The key steps of the LPR process are to

- Detect the vehicle and/or license plate.
- Locate the license plate in the image(s).
- Extract license plate characters from the background.
- Identify the license plate number.
- Determine the license plate jurisdiction *(optional).*
- Hand off LPR results to backend systems.

The following paragraphs describe each of the LPR steps in detail.

Detecting the Vehicle and/or License Plate

External triggers such as through-beam IR sensors, retro-reflective license plate sensors, ground-based induction loops, laser range sensors, and so on can be used to detect the presence of a vehicle in the field of view of the ALPR system. These types of triggers are primarily used in fixed-platform ALPR systems. Alternatively, the ALPR system detects the presence of a license plate by analyzing the camera's video signal (which may capture up to 60 images per second) and looking for potential license plate candidates. This type of detection is primarily used in mobile platform ALPR systems and can support vehicle speeds up to 140 mph. When the vehicle is detected, the ALPR captures one or more images containing the license plate that will be used to support the subsequent license plate number and jurisdiction determination.

Locating the License Plate in the Image

After one or more images containing a license plate are captured, a "license plate finder" algorithm is used to determine the exact location of the license plate in the image. This may be accomplished by searching for license plate characteristics (e.g., high-contrast objects) or character strings in the image that indicate the presence of a license plate. This process is one of the most difficult steps of the LPR process because the license plate must be located in potentially conflicting images that contain other information that may appear as license plates (e.g., bumper stickers, other writing, contrasting graphic designs). In addition, the type and condition of the license plate (e.g., retro-reflective, non-reflective, license plate frames and covers, license plate orientation) may require the use of special lighting and camera technologies to both locate and present the optimal license plate image to the character recognition algorithms.

As shown in the picture below, LPR cameras can vary flash, shutter, and gain settings to capture multiple images per vehicle over a wide range of ambient and environmental conditions.

Camera Arrangement	Resulting Image with Unchanged Ambient Conditions
Flash Duration = 130 µs Shutter Duration: = 200 µs Gain = 2	
Flash Duration = 390 µs Shutter Duration: = 500 µs Gain = 2	
Flash Duration = 780 µs Shutter Duration: = 1000 µs Gain = 2	

By varying camera settings and controlling illumination, the ability to locate a license plate within an image can be greatly improved. In addition, the 'best' image can also be used to improve the accuracy of the subsequent character extraction and license plate number determination.

License plate that has been located in the larger vehicle image captured by an LPR camera.

Extracting the Characters from the Background (Segmentation)

After the license plate is identified in the images(s), the region around the license plate may be further analyzed to extract the characters from the background. In the following example, pixels making up the candidate region are separated into foreground and background pixels to provide a more suitable candidate image used by the OCR algorithms to translate a character string image into an alphanumeric value that constitutes the license plate number. This is made more difficult when there is little contrast between the license plate number and the plate background.

The segmented or pre-processed license plate image is then passed off to OCR software, where the images are converted to individual alphanumeric characters.

Determining the License Plate Number

Challenge: Poorly designed fonts and variations in fonts themselves, additional symbols, half-height characters, location of registration stickers, license plate frames and covers, and holograms on characters all increase the complexity of OCR algorithms used to determine the alphanumeric characters of a license plate.

In the following example, you can see the software cannot discern whether the first character is a "B" or and "8" and whether the third character is a "6" or a "G."

In the following license plate examples, the ascender and descender of the letter 'Q' takes on different characteristics that may require specifically tuned or trained OCR engines depending on the region or jurisdiction in which the LPR system is deployed. The number '4' in the first license plate compared with the '4' in the second photo below provides another example of inconsistent fonts used between jurisdictions, making the same number look different. Note that the image processing and segmentation steps described must discern the actual license plate number from other alphanumeric information such as vehicle registration tabs and jurisdiction names and logos.

Determining the License Plate Types and Jurisdiction

Some LPR systems can identify the license plate type and the jurisdiction of origin by recognizing key features on the plate such as the jurisdiction logo, background graphics, special symbols, unique character font features, and so on. Other techniques include applying syntax rules and other regionalization rules to provide additional clues to determine the license plate jurisdiction. Use of white light for this process significantly improves the accuracy of jurisdiction identification. Many of the jurisdiction specific features are lost when imaging the license plate in the NIR light spectrum.

Handing Off LPR Results to Backend System

After the license plate number and, in some cases, the jurisdiction, are determined, the information is handed off to backend systems in support of the intended LPR system application. These systems may compare the license plates with watch lists or other law enforcement systems to allow interdiction or other actions to occur in near real time. Sometimes these actions are not for interdiction purposes but merely to allow vehicles to gain access to secure locations, parking garages, and so on.

In some cases, the LPR data—along with supplemental data such as scene and driver images, vehicle location, and date and time stamps—are stored in highly scalable and searchable data sources to support intelligence analysis, bill generation, or other processes that may occur at a later date.

LPR systems are often configured to automatically communicate or transmit all the collected data to a backend data archive or server. Communication methods can include any conventional networking protocols, including cellular, Wi-Fi, hardwire, and thumb drives, all with a variety of security protocols. In many cases, this communication process occurs in the background without any effort from the system user.

After the data have been inserted into the backend data management software, they are immediately available for review and search. These systems are generally web based and can support numerous workstations simultaneously. Often the software solutions used to manage data sources allows information to be queried in a multitude of ways, by location, time, plate number, and so on.

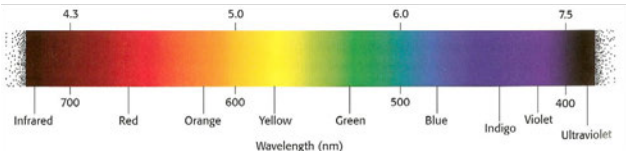
In addition, the image captured and the results generated by the ALPR system can be digitally signed and encrypted to enable a third party to verify that the data was collected at a specific time and location and that no one has tampered with it. This approach also provides for a chain of custody for legal evidence purposes.

Challenges Associated with License Plate Reading

Certain steps of the LPR process present unique challenges that require continuous innovations in hardware and software technologies. A key challenge is the constant introduction of new and varied license plate designs that greatly expands the types of license plates

that LPR systems are required to process. Some of those challenges and the current techniques being applied to address these challenges include the following.

Detecting the Vehicle and/or License Plate



Challenge: LPR systems operate in outdoor environments subject to constantly changing conditions, including lighting, weather, varying vehicle speed and acquisition angles, and varying distances from cameras.

Techniques: LPR camera locations, focal points, illumination controls, and vehicle detection sensors are carefully controlled to help ensure the capture of optimal images used for subsequent license plate location and OCR. Often ALPR cameras are sequencing illumination levels or acquisition parameters to counteract the constantly changing conditions in which they are operating.

Locating the License Plate in the Image(s)

Challenge: Low-contrast license plates, license plate frames and covers, and other noise in the image (e.g., bumper stickers) all impact the ability of license plate detection algorithms to locate the license plate in the larger image captured by the LPR system.

Techniques: Commercial LPR systems typically use a narrow band of IR illumination to light the plate for detection purposes in nearly all weather and lighting conditions. This band ranges from 750 nanometers (nm), which has a visible bright red glow, to 810, 850, 940, and 950 nm. A 950-nm IR illumination is completely invisible to the naked eye.

The purposes in using several bands of IR light are to filter out the effects of background graphics and to highlight the alphanumeric characters for OCR software systems. To help overcome graphic-heavy backgrounds, a spectral analysis can be performed automatically on a plate-by-plate basis to determine which IR illumination is best suited for each plate at the time it is read by the LPR. In general, lower IR bands such as 750 nm handle heavier graphics, and higher IR bands of light are more effective with lower density graphic backgrounds.

Extracting License Plate Characters

Challenge: License plates with conflicting backgrounds or graphics that encroach on the character fields present conditions that make it difficult to recognize specific license plate characters.

Technique: To address these challenges, LPR systems can use different illumination techniques to improve the contrast between characters and background. Also, specialized segmentation algorithms are used to segment the characters from the background. Many LPR systems use neural networks that are trained to find characters correctly in cases of low contrast between characters and background.

In this example, the R could be read as an A and the Q as an O.

The first photo shows a plate with three stacked characters (the AAMVA License Plate Standard calls for no more than two characters to be stacked). The second photo shows appropriate half-height stacked characters. In some jurisdictions, the stacked characters are considered part of the plate number, but in other cases, they are not.

When characters are located too close to the plate's edge, license plate frames can easily prevent the plate number from being read by an LPR.

Chapter 4 License Plate Reader Benefits

Introduction

Prior to the introduction of License Plate Reader (LPR) technology, a law enforcement officer could run a minimal number of plates per shift. LPR technology allows an officer to "read" more than eight times the license plates than officers conducting only manual checks. LPR systems may be used in targeted areas such as crime hot spots, assisting law enforcement in obtaining valuable information of vehicles that may be involved in criminal activity. Moreover, by eliminating the manual check process, not only is officer efficiency increased, but it allows officers to focus more on their surroundings, which improves both officer and public safety.

In studies supported by the National Institute of Justice, research was conducted as to the effectiveness of LPR use for law enforcement patrol and investigations. The first study was conducted in a large suburban jurisdiction in designated hot spots for a period of four months. Officers who used LPR were found to be much more likely to recover stolen vehicles than officers who did not use LPR. The second study examined how LPR could be used for investigations and was focused on a large city with nearly 100 LPRs in fixed locations. After two years, researchers noted 4,000 incidents were documented, including auto theft, missing persons, and homicide cases. LPRs were found to provide information that contributed somewhat to resolving roughly one in five incidents.[1]

Misreads of license plates by LPRs or illegible license plates causing no reads by LPRs do occur.

1 Christopher S. Koper and Cynthia Lum, "Effectiveness of License Plate Readers for Patrol and Investigations," Research in Brief, Police Chief 85, no. 9 (2018): 14–15.

Research conducted by one major toll authority from December 2020 indicated that 9% of toll revenue was lost because of unbillable revenue from misread or illegible license plates.

Gantry mounted LPR technology commonly used for automated toll collection.

When they do occur, the potential for arresting the wrong person, missing an opportunity to arrest a suspected criminal or terrorist, recover a stolen vehicle, or miss toll revenue exists. Research conducted by one major toll authority from December 2020 indicated that 9% of toll revenue was lost because of unbillable revenue from misread or illegible license plates.[2]

Challenges to Law Enforcement

In the past, a law enforcement officer could be familiar with all 50 states' license plates. Today with the proliferation of license plate designs, specialty, and vanity plates—in some cases into the hundreds in a single jurisdiction—it is virtually impossible for instant visual recognition for today's police officer. The issue

2 E470 Public Highway Authority Quarterly Dashboard Report December 31, 2020.

is exacerbated by the introduction of additional new license plate designs each year. Moreover, novelty plates that closely resemble official license plates have added to the difficulty law enforcement contends with in determining plate validity.

A sampling of eight states illustrates the significant growth in the number of license plate designs in circulation in the U.S.

This table represents a sample of the growth in license plate designs:

Jurisdiction	2009	2012	2021
Arizona	52	64	75
California	106	117	167
Maryland	800	935	1,365
Missouri	172	200	269
Montana	152	177	350
Pennsylvania	245	310	582
South Carolina	385	417	429
Texas	225	376	499
8 state totals	2,137	2,596	3,736
% Increase from 2009 to 2021			57%

Officer Safety Benefits

Safety is of paramount concern for any law enforcement officer initiating a "routine" traffic stop. Officers in patrol vehicles that are not equipped with LPR technology may not be as informed about the vehicle and its occupants as those who have the technology.

LPR technology provides the ability to check the vehicle plate number automatically and rapidly against selected databases. License plates are often "flagged" when the owner is associated with certain information (e.g., wanted, attempt to locate, be on the lookout for, stolen car). With LPR technology, officers stopping drivers for sometimes minor traffic offenses can be made aware of this type of information, which allows them to use the appropriate officer safety tactics given the information they have instead of unknowingly walking into a dangerous encounter.

Traffic Safety Benefits

One significant example of a traffic safety benefit involves suspended, *revoked, or otherwise ineligible* drivers. *Across North America, at any given time, approximately 7% of all drivers are suspended, and it is estimated as many as 75% of these people continue to drive.*[1] Moreover, 19% of all fatal crashes involve an unlicensed or suspended driver. These drivers pose a significant threat to highway safety. LPR technology has the capability to quickly identify vehicles whose registered owners have suspended or revoked licenses or registrations, making it much faster and easier for law enforcement officers to detect and apprehend suspended drivers.

Benefits to Law Enforcement: Beyond Traffic Safety

LPR's are at the forefront of discussions about the impact of technology on improving traffic and public safety. In the field of auto theft recovery and investigation, the LPR is a force multiplier for officers in the field. The technology enables reading and checking the status of thousands of license plates in a single shift, all while the investigator can watch his or her surroundings for activity, malevolent or benign. The LPR is a tireless partner, constantly on the watch

1 The National Cooperative Highway Research Program, Report 500, Volume 2.

for stolen vehicles and wanted subjects, AMBER Alerts, missing persons, and more. This technology is even more effective when there is a front and rear license plate for the LPR to read.

Many police agencies use LPR-equipped vehicles to collect plate information as they respond to bank robberies and other major crimes to capture plate numbers of vehicles leaving the area as police respond to the scene of the crime. There have been many instances when these reads have led to the identification of suspect vehicles and suspect arrests.

Public Safety Benefit

As mentioned in the previous Benefits subsections, LPR-equipped law enforcement vehicles can scan thousands of plates an hour, thus increasing the chances of finding a particular vehicle quickly, enhancing highway and public safety. One example was provided by the Utah Department of Motor Vehicles Enforcement Division, which prior to installing LPRs on their police vehicles, averaged

One example was provided by the Utah Department of Motor Vehicles Enforcement Division, which prior to installing LPRs on their police vehicles, averaged 400 stolen vehicle recoveries annually. After LPR deployment, they now scan 45,000 plates monthly and are now recovering more than 1,000 stolen vehicles annually. See Chapter 7 – License Plate Reader Success Stories for many more examples.

400 stolen vehicle recoveries annually. After LPR deployment, they now scan 45,000 plates monthly and are now recovering more than 1,000 stolen vehicles annually. See Chapter 7 – License Plate Reader Success Stories for many more examples.

It should be noted that there are circumstances when the lack of a front license plate limits the effectiveness of LPR on front-facing traffic. This is also an issue for school bus drivers who report drivers who fail to stop for the buses while loading or unloading students. These drivers often rely on the presence of a front license plate to be able to report these violations. Some tolling authorities also rely on the front plate for both revenue collection and enforcement.

Homeland Security Enhancements

LPR technology has also become an important national security tool. LPR technology is used to query the license plate numbers of vehicles entering and departing the U.S. to identify potential threats to national security. LPR units are also set up in locations in proximity to critical infrastructure to identify potential threats.

Chapter 5 License Plate Readers as a Tool to Improve Toll, Commercial Motor Vehicle, and Border Operations

Introduction

This chapter discusses how License Plate Reader (LPR) systems benefit public mobility but also have become core to the way many electronic toll systems collect tolls and enforcing payment. LPR has made it possible for the toll industry to move increasingly toward all-electronic cashless toll operations, which are permitting free-flow traffic to pay tolls at highway speeds, improving roadway efficiency, improving the customer experience, and mitigating adverse environmental impacts. Road and bridge toll collection helps provide revenue assurance for highway lane management, maintenance, and improvement.

LPR systems are also effective in commercial vehicle enforcement, which results in efficiencies in safety and traffic flow near weigh station and inspection facilities. These systems help officers identify and focus resources on the vehicles and drivers that are most likely to present safety risks.

LPR systems are also deployed by Customs and Border Protection along the U.S. borders with Canada and Mexico to improve and enhance traveler mobility across these borders.

The introduction of electronic toll collection (ETC) has reduced the dependence on toll collection personnel and manual cash transactions at toll points. Although ETC has improved traffic flow and efficiency, it has also introduced a new challenge—toll evasion and revenue loss.

Mobility and Toll Collection

Collection of user fees on roads, bridges, and tunnels—or tolls—has served as an important means of financing key transportation projects and funding ongoing operations and maintenance for as long as roads have existed. Tolls provide a direct approach to funding highways, bridges, and tunnels without increasing local or state taxes, and they ensure that those who use and benefit the most from these projects pay for them directly.

For toll facilities to be effective, however, tolls must be collected. Historically, toll collection involved staff at a gate or in a toll booth collecting cash directly from motorists and making change at strategic points along the roadway. This process required each vehicle to stop in the tolling zone for a brief period to tender a cash toll payment. When the collection site becomes a choke point – risks of rear impact and chain reaction crashes increase. Toll chokepoints also reduce the efficiency of the corridor where collection takes place. Additionally, when toll collection slows traffic, the reduced efficiency adds emissions into the environment and increases the time required to move people and commercial goods.

Over the past three decades, most toll operators modernized their toll collection systems with technology that allows for prepaid toll accounts using in-vehicle transponders to identify valid toll account holders. The introduction of electronic toll collection (ETC) has reduced the dependence on toll collection personnel and manual cash transactions at toll points. Although ETC has improved traffic flow and efficiency, it has also introduced a new challenge—toll evasion and revenue loss. Toll violators

include motorists who travel through an ETC-only lane without a transponder or unfunded toll account, creating unpaid toll transactions. This not only reduces the funding available for roadway operations and maintenance but also adversely affects fairness to those who pay their tolls, potentially eroding public support for tolling. In an ETC environment, there is a cash payment option for motorists without a transponder and prepaid toll account. LPR technology is used to capture license plate images of vehicles without toll transponders in ETC toll lanes to enforce the toll payment from the registered vehicle owner.

In recent years, toll operators are increasingly adopting all-electronic tolling (AET) operations, in which the cash payment option is eliminated entirely. Cashless AET operations offer the benefit of allowing free-flow tolling, often permitting all vehicles to move through the tolling point at the posted speed limit without stopping or slowing. AET operations are reducing the need to separate cash payment and ETC vehicles and the associated roadside infrastructure required to do so. Instead, AET operations often use overhead gantries with electronic toll equipment (e.g., antennas, transponder readers, and LPR cameras) to process the toll transaction with all vehicles.

This not only reduces the funding available for roadway operations and maintenance but also adversely affects fairness to those who pay their tolls, potentially eroding public support for tolling.

Vehicles with in-vehicle transponders pay their tolls through their toll accounts, just as they do in an ETC environment. Vehicles without toll transponders in an AET environment have their license plate images captured, and toll bills are sent to the registered owners of the vehicles to arrange payment of the toll due. In an AET tolling environment, more transactions are being processed based on LPR technology. For commercial motor vehicles, the Federal Motor Carrier Safety Administration estimates a truck will save approximately $10 per facility each time a truck is able to legally bypass a weight station or inspection facility.

Today as motor vehicle transportation solutions orient their designs toward improved mobility, reduced congestion, and more reliable levels of service, the use of LPR technologies has increased substantially. The conundrum in this development is that as LPR technologies improve, license plates continue to take on increasingly complex designs, making accurate license plate reading problematic.

According to the Federal Highway Administration (FHWA), jurisdictions throughout the U.S. are installing managed lanes (e.g., high occupancy/toll [HOT] lanes) in response to increased congestion. Managed lanes are intended to lessen congestion and provide greater mobility than the adjacent general-purpose lanes of state highways or interstate highways located in urban areas. In some cases, it is also used to enforce High Occupancy Vehicle (HOV) violations automatically, without the need of a law enforcement officer to visually detect violations. LPR also assists transportation officials to understand and influence traffic patterns and set flexible pricing based on traffic levels to reduce congestion, resulting in fewer roadway incidents and increased mobility.

Today as motor vehicle transportation solutions orient their designs toward improved mobility, reduced congestion, and more reliable levels of service, the use of LPR technologies has increased substantially. The conundrum in this development is that as LPR technologies improve, license plates continue to take on increasingly complex designs, making accurate license plate reading problematic.

Another feature of the move to LPR-related open road tolling is the use of enforcement-intended data access for revenue collection that is not law enforcement related. In jurisdictions where overhead tolling is

introduced, the department of motor vehicles should be consulted in the means by which vehicle and vehicle operator data may be obtained.

Revenue Loss

License plate designs, license plate obstruction, and purposeful avoidance to register and title vehicles are the most significant contributors to revenue losses for authorities using LPR systems. License plates that align with the AAMVA License Plate Standard will improve the effectiveness of LPRs and subsequently increase toll collections.

One toll agency with years of experience in operating a cashless AET operation that depends on license plate images to collect tolls from motorists without toll transponders indicates the following experience:

	2017		2018		2019	
Total Image Transactions	**36.930M**		**39.092M**		**41.143M**	
Reject Reason	**Total**	**%**	**Total**	**%**	**Total**	**%**
Unreadable Plate	2.058M	5.6%	2.139M	5.5%	1.901M	4.6%
Temporary Plate	1.063M	2.9%	723K	1.8%	667K	1.6%
No DMV Record	1.116M	3.0%	801K	2.0%	780K	1.9%
Other	784K	2.1%	1.061M	2.7%	978K	2.4%
Unenforceable Totals	**5.021M**	**13.6%**	**4.724M**	**12.1%**	**4.326M**	**10.5%**
Lost Revenue	**$23.1 Million**		**$25.8 Million**		**$25.3 Million**	

Although the unrecoverable revenue is significant, it should also be noted that even through a 12.1% growth in image-based transactions over three years, there was a 13.8% decline in unenforceable images. This is indicative of what the industry has experienced in terms of improvements in hardware, software, and business practices improving overall outcomes. That said, easily identifiable license plates can further mitigate lost revenue in the transportation industry as well as other businesses and enforcement models that use imagery and license plate information as the core of their revenue enforcement efforts.

Lost toll revenues amounted to $23.1 million in 2017, $25.8 million in 2018, and $25.3 million in 2019.

Mobility at U.S. Borders with Canada and Mexico

Currently, Customs and Border Protection (CBP) has three programs that use LPR to expedite entry to the U.S.—NEXUS, Secure Electronic Network for Travelers Rapid Inspection (SENTRI), and Free And Secure Trade (FAST). NEXUS is used at the Canadian border and SENTRI, is used at the Mexican border. FAST is a commercial clearance program for low-risk shipments entering the U.S. from Canada and Mexico. Each of these programs has dedicated lanes, and users are vetted.

All vehicles and persons entering the U.S. are subject to inspection. Every vehicle and every person entering at a land border port must be queried through various law enforcement databases before they can enter the U.S. Although the inspection process encompasses more than just queries, each query takes time to perform, and time is a factor in vehicle wait times. CBP, through the Western Hemisphere Travel Initiative (WHTI), has installed technology at most ports of entry that automates many functions previously done manually. This automation has resulted in reduced vehicle inspection times while maintaining the integrity of the inspection process.

Other LPR Applications That Benefit Mobility

Commercial Vehicle Enforcement

Commercial Vehicle Enforcement entities use LPR. Several specialized companies have emerged that use LPRs to read license plates and compare the plate number to federal safety data sources to ensure trucks are in compliance with federal and state motor carrier safety programs. Some systems also verify various state and federal credentials required to operate in the jurisdiction, check for out-of-service violations, and check for wants or warrants associated with vehicles.
Municipal Parking Enforcement

LPR camera in use at a roadside truck scale.

Municipal Parking Enforcement

On-street parking enforcement efficiencies have been gained by using LPR technology. With these systems, parking scofflaws who fail to pay their parking citations or fines are placed in a data source that is downloaded to an LPR-equipped vehicle. The LPR quickly identifies those who have failed to pay, which allow municipalities to boot vehicles, ensuring parking revenues are recaptured.

Mobile LPR camera mounted on parking enforcement vehicle.

In a 30-day trial conducted during 2020 using one LPR-equipped vehicle, the Long Beach Police Department in southern California identified nearly 300 scofflaws who had five or more unpaid parking citations, capturing nearly $200,000 in unpaid fines. In addition, seven arrests not associated with a parking citation were made.

Chapter 6 License Plate Reader Program Best Practices for Law Enforcement

Introduction

A properly organized and managed license plate reader (LPR) program can greatly enhance the effectiveness of patrol operations and criminal investigations. The best LPR programs are built on a foundation of good policy and training.

The measurement of success for an LPR program is subjective. Recovering stolen vehicles; arresting subjects with active warrants; and recovering AMBER, SILVER, and BLUE Alert subjects are some measures of success. However, in an era of transparency and civilian oversight, a true measure of success should include an agency's ability to collect, store, and delete millions of LPR reads in an efficient and secure manner. It should also be noted that LPR systems are only as good as the data they rely on. Ensuring that the hot lists they access are kept current is critical to limiting the possibility that users will act on erroneous information.

Policy

Law enforcement agencies can build meaningful LPR system policies that respect individuals' privacy rights while providing authorized users with the information necessary to ensure the public's safety. Policies should include LPR program goals and objectives and should not be too restrictive as to limit 'operators' ability to perform law enforcement functions yet still be protective of the massive amounts of data an LPR system collects.

Because LPR equipment and accounts can have broad permissions, policies should contain language defining what functions an operator can and cannot perform with an assigned LPR account or LPR equipment. Having operators sign an acceptable use statement is a method of tracking and ensuring each user has been made aware of the policies set forth. In addition to the policies already explained, the following specific topics and their relationship to the use of LPRs should also be reflected in policy:

- **Data retention and dissemination** – Data usage policies should conform with jurisdiction laws governing the agencies legal authority to collect, retain, disseminate, and dispose of LPR data. Agencies should have a data retention period in policy (whether it is included in jurisdiction law or not) with justification for the data retention period they choose.
- **Freedom of Information Act (FOIA)** – An agency's FOIA policy should be examined to reflect the legal standards of FOIA.
- **Data security** – Operator passwords, system lockouts, system audits, and user audits should all be addressed in policy. Many of these are already established within an agency or by an overarching governing body. Assurances should be made to maintain compliance with these existing policies.
- **Memorandums of understanding (MOU)** – Many agencies and jurisdictions may decide to work together to establish one large LPR network. This reduces the cost per agency, and the burden of responsibility is shared. An established MOU identifies the roles and responsibilities between the agencies.

See Appendix (C) for Sample LPR Policies from Ohio, Utah, and Virginia.

Training

In addition to having sound policy, formalized training should be in place that conveys the policy content to LPR system operators. Training is a fundamental component of an LPR system. Without properly documented training, operators have no direction for which to properly set up, use, and troubleshoot LPR equipment. Training should emphasize policy (and case law) surrounding data retention. This can serve to assure the public that data are being collected, stored, used, and deleted in a manner consistent with established legal guidelines and policy.

LPR training can be divided into three sections: operations, data analysis, and technical support. All sections of training should be recurring and culminate in a test. This ensures new material is presented and operators remain vigilant in the use of the LPR system.

Operations training should focus on the daily operator of an LPR-equipped vehicle. Like speed-measuring devices, the operator of an LPR-equipped vehicle should be able to set up, operate, and troubleshoot a vehicle-mounted LPR system.

Data analytics could be considered the second most important function of an LPR system.(the most important function being data collection). Having the training necessary to analyze a target vehicle across a network of LPR cameras relies on consistent and thorough training.

The last section of training which that be included in an LPR program is technical support. This section of training encompasses the logistical support staff most agencies will use to up-fit LPR patrol vehicles, monitor fixed sites, perform server maintenance, and perform system upgrades.

LPR Program Staffing

An LPR program should be adequately staffed to provide proper program support, oversight, and planning. Prior to determining staffing levels, a decision should be made if the LPR program will fall under the management and leadership of an existing police hierarchy (such as Operations or Investigations) or if it will be autonomous (specialty unit).

If an agency has fixed LPR equipment in its program, the program should be staffed sufficiently to maintain 24-hour operations to respond to any received alert, such as AMBER Alerts.

An LPR program needs enough employees to install and fix the equipment and employees who can manage both the system and equipment. If agency staffing is limited, employees can effectively multitask and meet the needs of multiple positions at once. If an agency does not have the number of employees or expertise to complete all the required aspects of running an efficient program, contractors can be employed to conduct one or more critical functions of the LPR program.

Equipment

Like staffing, LPR equipment needs to encompass all aspects of the program. A comprehensive, but non-inclusive list of equipment needed for an effective LPR program follows (mobile, fixed, and portable platforms):

MOBILE LPR	FIXED-SITE LPR	PORTABLE PLATFORM
Vehicle-mounted readers	Overhead or pole-mounted readers	Platform: commonly a trailer
Connecting wires from readers to trunk box	Continuous power supply	Continuous power supply (solar combined with battery)
Trunk box	Cellular or fiberoptic network	Cellular network
Mobile systems software	Systems software	Systems software
Mobile computer capable of operating mobile systems software		
GPS-capable antenna		

Vehicle-mounted reader.

Pole-mounted reader.

Trailer-mounted reader.

Roof-mounted LPR.

Trunk-mounted LPR.

There are many LPR manufacturers that produce reliable and durable LPR equipment. Purchasing agents need to consider the proprietary nature of LPR equipment and be aware that some products are not interoperable with others. It is critical for LPR data to properly communicate from the point of collection

(reader) to a central computer (server). LPR data must be securely protected and accessible by operators, most commonly from a desktop- or vehicle-based computer system. Legal considerations need to be addressed before purchasing equipment. For example, a cloud-based data storage system may not be compliant with a jurisdiction's data storage laws.

The specific type of LPR equipment chosen should be driven by agency mission and priorities. Whereas some agencies may prefer only mobile LPR, others may also use fixed-site LPR's, covert equipment, or portable platforms to create a robust LPR program.

When selecting LPR equipment, anticipate and plan for program expansions and logistical support needs. Items such as spare parts, storage facilities, and ancillary equipment should be considered as well.

Summary

A well-thought-out and well-executed LPR program provides law enforcement an additional tool in providing essential public safety services. Establishing an LPR program is a task that should be completed with careful consideration, planning, and organization.

Chapter 7 License Plate Reader Success Stories

Introduction

What follows are documented examples of how License Plate Reader (LPR) technology has benefited law enforcement in the performance of their public safety mission.

On **January 7, 2021**, Kristin Walker from Alabama was putting fuel into her vehicle with her two children in the backseat when a subject jumped into the driver seat to steal the vehicle. Walker was able to remove her children from the vehicle before it was highjacked. With the use of LPR technology, the Rankin County, Mississippi, Sheriff's Office was able to spot the vehicle a short time later and arrest the two subjects involved.

In **December 2020**, a North Carolina DMV License & Theft Bureau Law Enforcement Agent observed a Volkswagen traveling in a toll lane at a high rate of speed and attempted to stop the vehicle. The vehicle operator failed to stop, and with speeds near 130 mph, the pursuit was called off. LPR information was obtained from the North Carolina Turnpike Authority that included photographs of the driver, vehicle, and license plate information. The violator was located, apprehended, and charged with several serious traffic violations.

On **December 19, 2019**, A Delaware guidance counselor allegedly sexually assaulted a minor teenage boy while in Ocean City, Maryland. The victim alleged Allen Reese drove him from Delaware into Ocean City, where he sexually assaulted him. Using Ocean City's LPR, detectives were able to confirm that Reese's vehicle crossed the Route 90 bridge as well as entry and exit times consistent with the dates and times of the assault provided by the victim. Based on the evidence from the victim corroborated by the LPR system, detectives scheduled an interview with the suspect to execute a warrant and collect DNA samples. However, detectives were notified by Homeland Security that a flight to Casablanca, Morocco, had been booked for Mr. Reese. Because it appeared that he was preparing to flee the country to avoid the sexual assault charges, a warrant was immediately issued for Mr. Reese. He was quickly located and held without bond on charges of sexual abusing a minor and third-degree sexual offense.

In **August 2019**, police with Duck, North Carolina, Police Department (an Outer Banks Island community) deployed their LPR systems to find residents who stayed on the island during a mandatory evacuation during Hurricane Dorian. LPR cameras recorded the plate numbers of vehicles exiting the island to determine which registered vehicles did not leave. The homes associated with those vehicles were visited by police to warn those residents of the risks of remaining on the island.

On **July 24, 2019**, a woman put her dog Happy into her car in Baltimore's Guilford neighborhood. She was just getting into the driver's seat when she was forcibly pulled her from her car and several suspects got into her car and sped off. Happy was still in the car when the suspects fled. The woman notified police, and the Baltimore Police Department immediately placed the license plate on an LPR hotlist as a carjacked vehicle. Soon after a patrol officer passed by the vehicle, which

was parked and unoccupied, and received an alarm on the LPR system he was operating. He approached the car and saw that Happy was still inside with the windows closed and doors locked. Because it was a hot July day, the officer smashed a window and rescued Happy before he was overcome from the heat. The woman and Happy were soon reunited.

On **July 15, 2020**, a man shot and killed his ex-girlfriend in the parking lot of her workplace in Springfield, Tennessee. Two days later, the suspect drove through Mt. Juliet, where a Mt. Juliet Police Department (MJPD) vehicle equipped with an LPR system detected the suspect vehicle license plate, alerting the officers who arrested the suspect.

According to MJPD Chief James Hambrick, "It's amazing the stuff that you wouldn't know travels through your city … is actually traveling through your city." That's one of many success stories to come out of the MJPD's use of LPR, Chief Hambrick said.

On **June 30, 2018**, a subject in Sacramento, California, was attempting to cross a street in his wheelchair and was hit and killed by a passing motorist who failed to stop and render aid. The license plate belonging to the vehicle that left the scene was detected by LPR, and the driver was arrested for felony hit and run.

On **March 15, 2018**, James Allen Hayes plead guilty in federal court to committing multiple bank robberies over the course of five months throughout California. Hayes was apprehended as a result of LPR detecting his vehicle traveling between robbery locations.

Robert Sheets was accused of shooting a man on **August 13, 2017**, in Manor Township, Pennsylvania. Sheets returned to the suspect the next day and discovered him still alive. He then shot the victim again, leaving him for dead and fleeing the area. Miraculously, the victim survived and was able to identify the man who tried to kill him as Sheets. The vehicle driven by Sheets was immediately filed in National Crime Information Center as a felony vehicle, which resulted in a hotlist entry on LPR systems across the U.S.

A few days later, in Fairfax County, Virginia, an LPR alerted officers that Sheets was connected to a 2007 Ford Edge heading west on I-66. Fairfax police cruisers pulled in behind Sheets, and after a 38-mile pursuit, Sheets was apprehended.

On **August 26, 2015**, a gunman shot and killed a news anchor and cameraman from a local news station (Alison Parker and Adam Ward) while they were doing a report in Roanoke, Virginia. The license plate number of the shooter was broadcast statewide. Several Virginia State Police patrol vehicles were equipped with LPR. Five hours later and approximately 200 miles away from the shooting scene, Virginia State Police Trooper Pam Neff entered the license plate number into her LPR and discovered the LPR had just read the suspect license plate three minutes prior. Trooper Neff was able to catch up to the suspect vehicle and when back-up was in position proceeded with the apprehension. Trooper Neff was recognized by AAMVA during the AAMVA Annual International Conference in Williamsburg, Virginia, in August 2016.

For more news stories about law enforcement LPR successes from September 2017 to September, 2018, go to https://www.theiacp.org/sites/default/files/ALPR%20Success%20News%20Stories%202018.pdf

Appendix A Significant License Plate Reader Court Cases and Applicable Federal Statutes

United States Court of Appeals for the Ninth Circuit
United States v. Jay Yang,
958 F.3d 851 (9th Cir. 2020).
May 4, 2020
https://law.justia.com/cases/federal/appellate-courts/ca9/18-10341/18-10341-2020-05-04.html

Jay Yang was observed stealing mail from U.S. mail collection boxes on surveillance cameras driving a rented GMC vehicle beyond the rental contract due date. The license plate number was observed and searched in a License Plate Reader (LPR) database, which helped lead investigators to his home. Yang claimed because his rental agreement was past due and the contract was no longer valid when the plate was observed by LPR, the LPR data were invalid, and anything obtained from the search of his residence was not admissible. The court ruled there is no expectation of privacy of a license plate regardless if rental contract was expired. The LPR database did not reveal all the defendant's movements and therefore did not infringe on reasonable expectation of privacy.

United States Court of Appeals for the Eleventh Circuit
United States v. Larry Lamar Wilcox,
415 F. App'x 990 (11th Cir. 2011).
February 28, 2011
https://law.justia.com/cases/federal/appellate-courts/ca11/10-13031/201013031-2011-02-28.html

Larry Wilcox argued the use of LPR technology amounted to unconstitutional surveillance violating his reasonable expectation of privacy. The defendant said the district court erred in denying a motion to suppress, stating an Atlanta police officer's use of LPR technology violated his Fourth Amendment right to be free from an unreasonable search.

The Court of Appeals ruled that the Supreme Court had concluded in similar contexts visual surveillance of vehicles in plain view does not constitute an unreasonable search for Fourth Amendment purposes. Given the Supreme Court's Fourth Amendment precedent, the Court of Appeals ruled the district court did not commit plain error in concluding Wilcox did not have a reasonable expectation of privacy in the plainly visible license plate and the officers' use of LPR did not violate the Fourth Amendment.

United States Supreme Court
United States v. Knotts,
460 U.S. 276, 103 S.Ct. 1081, 75 L.Ed.2d 55 (U.S. 1983).
December 1983
https://supreme.justia.com/cases/federal/us/460/276/

Tristian Armstrong was being investigated for stealing chemicals to manufacture illegal drugs. Agents attached a radio transmitter to a container of chemical sold to Armstrong, which tracked the location of where methamphetamine was being produced by Leroy Knotts. A search warrant was obtained, and an illegal drug manufacturing lab was discovered.

Knotts was convicted in district court, but the U.S. Court of Appeals reversed the conviction, stating Knotts' Fourth Amendment rights were violated by use of the tracking device, and the evidence could be suppressed. The U.S. Supreme Court held the initial conviction, ruling the tracking device did not invade any legitimate expectation of privacy and was neither a "search" nor a

"seizure" by grounds of the Fourth Amendment. The movement of a person traveling on a public highway does not afford an expectation of privacy of the movements. Nothing indicated the tracking device was used to gather information from within the private area.

Privacy and Fourth Amendment

Authority for Police to Check License Plates
United States Court of Appeals for Ninth Circuit
***United States v. Ismael Diaz-Castaneda*,**
494 F.3d 1146 (9th Cir. 2007).
July 18, 2007
https://caselaw.findlaw.com/us-9th-circuit/1468527.html

An officer ran the license plate on a pickup traveling in front of him in traffic. The plate information response indicated that the driver's license of the registered vehicle owner, Solia Diaz, was suspended. The officer, believing the operator fit the description of Diaz, stopped the vehicle. Diaz was arrested for driving while under suspension. The vehicle passenger, Ismael Diaz-Castaneda, was found to have an immigration detainer on him and was arrested.

Diaz-Castaneda argued the stop violated his Fourth Amendment rights, and any subsequent evidence should be withheld. The court held a license plate check does not constitute a Fourth Amendment search, and evidence should not be suppressed.

U.S. Court of Appeals for Sixth Circuit
United States v. Curtis Ellison,
462 F. 557 (6th Cir. 2006).
September 5, 2006
https://caselaw.findlaw.com/us-6th-circuit/1031532.html

A Farmington Hills, Michigan, police officer ran a license plate of a parked vehicle through a police telecommunication system belonging on a vehicle operated by Curtis Ellison. Information returned revealed the registered owner was a "wanted person." Ellison was determined to be a passenger in the vehicle and was arrested. District court originally ruled the officer did not have probable cause to run the plate because the van was not parked illegally, and therefore Ellison Fourth Amendment Rights were violated. The court determined what a person exposes publicly is not subject to Fourth Amendment protection, and observing a license plate displayed in plain view does not constitute a search.

Validity of License Plate Reader Technology

United States Court of Appeals for the Third District
***United States v. Marcus White*,**
504 F. App'x 168 (3d Cir. 2012).
November 15, 2012
https://law.justia.com/cases/federal/appellate-courts/ca3/11-4035/11-4035-2015-04-29.html

Marcus White was convicted in Pennsylvania for his involvement in robberies of a post office and convenience stores. White's vehicle had been reported stolen and was detected by a Maryland state police trooper by an alert from an LPR while on patrol. During the suppression hearing, the District Court noted "the technology used by the license [plate] reader is verifiable and acceptable technology." White did not challenge this conclusion.

Use of License Plate Reader Data

Supreme Court of Virginia
Opinion of Justice Stephen R. McCullough
Harrison Neal v. Fairfax County Police Department, ET AL,
299 Va. 253, 849 S.E.2d 123 (Va. 2020).
October 22, 2020
https://law.justia.com/cases/virginia/supreme-court/2020/191127.html

In a prior ruling, the Virginia Court of Appeals ruled the "passive use" of LPR data by Fairfax County, Virginia, police violated the Virginia Data Act. Neal

argued the police department could not collect and store passively obtained LPR data without suspicion of criminal activity. Neal claimed the Virginia Data Act prohibited the gathering of personal information unless justified by law. The court initially ruled the LPR data provided a link to identify the vehicle owner and therefore LPR data was subject to the Virginia Data Act.

In a later ruling from the Virginia Supreme Court, the court stated the LPR system did not qualify as an information system because it did not contain name, personal number, or other identifying particulars of data for a subject. The court further stated the plate, vehicle photo, date, time, and GPS location did not bring the Data Act into play because the LPR system did not contain all the components and operations of a record keeping process. The court found the police department's passive use of the LPR system was legal.

Massachusetts Supreme Court
***Commonwealth of Massachusetts v. McCarthy*,**
484 Mass. 493, 142 N.E.3d 1090 (Mass. April 16, 2020).
https://law.justia.com/cases/massachusetts/supreme-court/2020/sjc-12750.html

Law enforcement officers were investigating Jason McCarthy's suspected illegal drug activity and deployed LPRs on bridges to track his activity. Police used data from the LPRs and received real-time alerts, which led to the arrest of McCarthy. McCarthy filed motion to suppress the LPR data because it violated his constitutional right to privacy of his public movements. The court ruled the defendant's privacy was not violated because of the limited extent and use of the LPR data.

Reasonable Suspicion for Vehicle Stop Based on License Plate Reader Information

United States Court of Appeals for the Ninth Circuit
Denise Green v. City and County of San Francisco,
751 F.3d 1039 (9th Cir. 2014).
May 12, 2014
https://caselaw.findlaw.com/us-9th-circuit/1666208.html

An LPR operated by a San Francisco Police officer indicated a license plate displayed on Denise Green's vehicle was on a stolen vehicle. A high-risk felony stop occurred, and Green was held at gunpoint, handcuffed, and detained. Eventually, officers ran the actual plate to confirm stolen and determined the LPR misread the plate, and the vehicle was not stolen; Green was released.

San Francisco Police Department officers are trained that an LPR hit does not automatically justify a vehicle stop. Officers are directed to verify validity of the identified hit before executing a stop. Officers are instructed to verify the plate being read by the LPR is truly the plate on the vehicle and to confirm the stol-en "hit" with their police telecommunications system. **The court ruled an unconfirmed LPR "hit" does not form a reasonable suspicion to support an investigatory detention of subject.**

Georgia Court of Appeals
Hernandez-Lopez v. The State of Georgia,
319 Ga. App. 662, 738 S.E.2d 116 (Ga. Ct. App. 2013).
February 5, 2013
https://caselaw.findlaw.com/ga-court-of-appeals/1622591.html

An LPR in use by an officer with the Gwinnett County, Georgia, Police Department indicated a plate belonged to a "wanted person" by the name of Eloy

Hernandez-Lopez. The officer noted a warrant was for an adult male, which matched the warrant identifying information. The vehicle was stopped and the subject operating the vehicle was determined to be Salomon Hernandez-Lopez, and he was arrested for operating without a license.

Hernandez-Lopez claimed the officer lacked reasonable suspicion to conduct a traffic stop based on the LPR information. The court held the officer did in fact have reasonable suspicion based on the LPR information indicating the license plate belonged to a "wanted person." This would be the same as if an officer ran the license plate through the Georgia police telecommunications system directly. **The court ruled an LPR "hit" provides an officer with reasonable suspicion to justify an investigatory stop.**

New York Supreme Court
***People of the State of New York v. Luis Davila, Jr.*, 27 Misc.3d 921, 901 N.Y.S.2d 787 (N.Y. Sup. Ct. 2010), *aff'd*, 137 A.D.3d 655, 26 N.Y.S.3d 862 (N.Y. App. Div. 2016).**
April 1, 2010
https://law.justia.com/cases/new-york/other-courts/2010/2010-20111.html

A New York Police Department LPR mounted on a police vehicle alerted officers to a suspended plate, and the vehicle was stopped. An officer observed what appeared to be a weapon in possession of a vehicle occupant and subsequently arrested the subject for possession of a firearm. Davila contested the arrest, arguing the officer failed to follow department policy by first verifying the LPR data had been updated in the past 24 hours and did not verify the information against the department database. The court ruled the department policies are guidelines and not required by law; therefore, use of LPR to detect the vehicles registration as suspended was lawful.

Related Federal Statutes

28CFR Part 23 Criminal Intelligence Systems Operating Policies
28 CFR Part 23 contains policy standards for law enforcement agencies operating federally funded multijurisdictional criminal intelligence systems. The standards specifically provide guidance for the submission, entry, security, inquiry, dissemination, review, and purge of criminal intelligence information.

2 CFR § 200.79 Personally Identifiable Information (PII).
LPR information is NOT PII
PII is information considered capable of identifying an individual either by itself or with other identifying information. LPR systems contain information consisting of vehicle license plates, vehicle photos, dates, times, and GPS locations—information generally not considered PII. Therefore, LPR information may not be restricted by statutes concerning maintaining PII but can become PII if additional information is included that is defined as PII. Case-by-case assessment is recommended when developing LPR system data maintenance and use.

Driver's Privacy Protection Act (DPPA) of 1994, 18 U.S.C. 2721
The Driver's Privacy Protection Act (DPPA), 18 U.S.C.A. §§ 2721-25 also supports the premise that a license plate number alone is not PII. Enacted in 1994, the DPPA is a federal law that regulates how state motor vehicle departments release information contained in their records. DPPA addresses the prohibition on release and use of certain personal information from state motor vehicle records. Collected LPR information contains no PII that may be used to connect a license plate detection to an individual. It is only with permissible purpose law enforcement may make this connection (using motor vehicle records).

Appendix C Sample License Plate Reader Policies

Introduction

The core business values that License Plate Reader (LPR) promises can only be achieved through proper planning, implementation, training, deployment, use, and management of the technology and the information it provides. Like all tools and technologies available to law enforcement, LPR must also be carefully managed. Agencies must clearly articulate their strategic goals and tactical objectives for the technology, and this strategy should be tightly aligned with the broader strategic plans of the agency. Thorough and ongoing training is required to ensure that the technology performs effectively and that users are well versed in the operational policies and procedures defined and enforced by the agency.

Policies must be developed and strictly enforced to ensure the quality of the data, the security of the system, compliance with applicable laws and regulations, and the privacy of information gathered. Building robust auditing requirements into agency policies will help enforce proper use of the system and reassure the public that their privacy interests are recognized and respected.[1]

Three agency sample policies follow:

Ohio State Highway Patrol

Utah Tax Commission, Motor Vehicle Enforcement Division

Virginia State Police

1 IACP ALPR Policy & Operational Guidance (see Appendix B).

OHIO STATE HIGHWAY PATROL POLICY

Summary of Revisions

Revisions are in red, bold, italics throughout.

Purpose

To provide guidelines for the implementation, installation, and use of mobile and stationary Automatic Plate Reader (APR) technology and equipment at selected locations to scan, detect, and identify license plate numbers appears on selected "Hot Lists."

Policy

A. **STATEMENT OF POLICY –** The Ohio State Highway Patrol will utilize APR technology in patrol cars and at stationary locations to accurately identify license plates ***linked to criminal activity and/or commercial motor vehicle administrative violations.***

B. **FUNCTIONALITY AND OPERATION <41.3.9a>**

1. **Installation –** Stationary and mobile scanners will be installed at selected locations and on selected marked and unmarked vehicles. ***GHQ electronic technicians are responsible for maintaining a list of all locations and vehicles equipped with APR technology.***

2. Data Sources for "hits" – All APRs have the ability to match a captured image to two categories of databases: criminal violations and commercial motor vehicle violations. Officers and MCEIs have the ability to match images with one or both types of databases simultaneously.

a. Criminal Databases: Both mobile and stationary APRs can match captured images with LEADS and NCIC entries with an associated license plate (e.g., stolen motor vehicles, felony warrants, missing persons, protection orders, etc.)

b. Commercial Motor Vehicles – Both mobile and stationary APRs can match captured images with the Federal Motor Carrier Safety Administration PRISM database for commercial motor vehicles placed out of service and ones with an "Inspect" or "Possible" score in the Inspection Selection System (ISS).

3. General Operation – The Division's automatic plate readers capture images of numbers and letters resembling license plates and match those captured images to the current "hot list." The "hot list" is the master index of license plates entered in both data sources listed above. The criminal database "hot list" is updated twice daily and the commercial motor vehicle database "hot list" is updated once daily.

4. Units assigned to enforcement vehicles equipped with mobile APR systems shall ***verify the receipt of*** the most recent "Hot List" from the applicable databases at the beginning of each shift.

5. **Probable Cause** – An APR "hit" from the criminal databases shall not be used as probable cause for a traffic stop or enforcement contact. Contact with the vehicle and occupants shall only be made after the "hit" is confirmed through LEADS/NCIC.

6. **Manual Entry by User into "Hot List" Database** – ***The system does not obtain real***

time information from LEADS/NCIC; therefore, there may be situations which require an officer or dispatcher to manually enter a vehicle registration into the database. These situations include, but are not limited to: active Amber Alerts, Ohio Blue Alerts, endangered missing child alerts, endangered missing adult alerts, BOLOs, and other emergency messages/alerts. Manual entry of a plate into the "Hot List" shall only be done with supervisor approval. See User Manual for entry procedures.

A "hit" on a BOLO that is manually-entered into the system shall not be used as probable cause for a traffic stop or enforcement contact.

7. **'O' vs. Zero** – Because of standardized NCIC formats, a letter 'O' and a zero in a license plate number are synonymous in NCIC records. Therefore, the "hot list," NCIC, and the APR read the letter 'O' as a zero. Any plate entry, including any manually entered by an officer or a dispatcher with an 'O' is automatically converted to a zero.

8. **Fixed Point and APR Notification** – When a license plate entered in the "Hot List" is detected by a stationary APR, a notification is automatically sent by the APR system to an OSP dispatch facility equipped to receive the notifications. When a mobile APR detects a "Hot List" entry, the officer receives an audible and visual notification on the in-car MCT.

9. **Case Documentation** – A record of the APR "hit" shall be included in the case/incident report. All "hits" captured by the APR system shall be stored for 30 days and will then be automatically purged. All "hits" will be stored electronically in the ELSAG system. Access to the ELSAG system is limited to authorized personnel only. <41.3.9b,d>

10. **Storage of "Non-Hits"** – All "non-hit" APR captures shall be automatically purged from the system within a 24-hour period. APR captures shall not be collected, stored, or shared with the intent of data mining. Dispatchers assigned to Cleveland and the Statehouse shall query the system for plates older than 24-hours on a quarterly basis to ensure "non-hit" captures are being deleted in accordance with this policy. Troopers assigned APR equipped enforcement vehicles shall perform the same query as part of the semi-annual vehicle inspection. <41.3.9d>

11. **Training –** Dispatchers, sworn officers, electronic technicians, motor carrier enforcement inspectors, and network administrators shall receive appropriate training from qualified OSP staff or vendor representatives prior to using or maintaining the APR equipment. <41.3.9c>

C. **USER MANUALS –** The manufacturer's user manuals, which provide operational procedures for both the Mobile Auto-Detector User and Operations Center Personnel are attached to this policy.

D. **GUIDELINES FOR USE <41.3.9a>**

1. **Stationary APRs**

   a. **Notification** – After receiving a "hit" through LEADS/NCIC, the dispatcher will verify the APR "hit" on the plate matches the image and follow established procedures to check NCIC/LEADS. The dispatcher will then dispatch an officer to intercept the vehicle. Two officers will be dispatched to verify "hits" at the Statehouse Garage. The officer(s) will be notified of the reason for the "hit," that the dispatch is a result of the APR and that the "hit" has been verified through NCIC.

   b. **Verification of Hit** – If, for any reason, the APR "hit" cannot be verified through LEADS/NCIC, the vehicle is not to be stopped based solely on the APR. If the

Ohio State Highway Patrol Policy (continued)

dispatcher cannot read the digital image sufficiently to verify the license plate number and state, an officer may be dispatched to intercept the vehicle, however the intercepting officer must first verify the "hit" through NCIC prior to stopping the vehicle.

c. **Turnpike Gate Personnel** – If an officer is unavailable to immediately intercept a valid "hit," the dispatcher may notify additional personnel to be on the lookout for the suspect vehicle. Ability to identify the vehicle, reason for the "hit," and known direction of travel should all be used to determine whether additional personnel should be notified. If the vehicle is observed, they should be instructed to notify the dispatch facility of the route and direction of travel.

d. Officers and dispatchers should use their discretion based on hazards, proximity of assisting officers, type of "hit," etc.

e. **Cleveland Dispatch Center / Capitol Square Parking Facility**

i. The APR system will be checked by the dispatcher at the beginning of the shift and the information will be logged on the OTIS HP-53 using File 1 – Sub Category "APR."

ii. The Statistical Analysis function will determine if the APR is functioning correctly. The system should indicate a number of plates that have been checked. If there are no plates indicated, the system is not functioning. If the system shows that plates are being scanned, the system is working correctly.

iii. The Statistical Analysis section is found in section 6 of the User's Guide.

2. ***Mobile APRs***

a. Mobile APRs are operational as long as the officer is logged in to the MCT in the vehicle.

b. Officers have the ability to toggle between the Criminal and Commercial databases or they can activate both. If both databases are active, the mobile APR will indicate a "hit" on a violation in either system.

c. Officers must verify the "hit" through LEADS/NCIC prior to stopping the vehicle. If, for any reason, the APR "hit" cannot be verified, the vehicle is not to be stopped based solely on the APR. Officers only need to verify that the plate matches the "hit" in the FMCSA database.

d. Officers and MCEIs should use their discretion based on hazards, proximity of assisting officers, type of "hit," etc.

e. Motor Carrier Enforcement Inspectors may not stop a commercial motor vehicle for the sole purpose of a LEADS/NCIC "hit".

3. **Infrastructure Specialist and Electronic Technicians are responsible for:** <41.3.9b>

a. Equipment and software deployment and installation

b. Coordinating maintenance and repair

c. Coordinating the establishment of parameters for download of NCIC and LEADS

Ohio State Highway Patrol Policy (continued)

data, pick-up radius restrictions, misdemeanor and/or felony warrants.

d. Ensure all captures on stationary and mobile APRs follow the appropriate retention schedule.

4. **Public Affairs -** All media contacts will be coordinated through the Public Affairs Unit, which shall be consulted prior to releasing any information to the news media.

5. **Licensing and Commercial Standards**

   a. LCS units may stop commercial motor vehicles for the purpose of inspection based on hits received from the PRISM file "Hot List."

   b. The reason code LPRI (License Plate Reader Inspection) will be used in ASPEN for all inspections conducted based on a PRISM hit.

Policy

Utah Motor Vehicle Enforcement Division
Po icy Manua

Automated License Plate Readers (ALPRs)

410.1 PURPOSE AND SCOPE

ALPR is a computer-based system that utilizes special cameras to capture a color image, as well as an infrared image, of the license plate of a passing vehicle. The infrared image is converted into a text file utilizing Optical Character Recognition (OCR) technology. The text file is automatically compared against an “informational data file” containing information on stolen or wanted vehicles as well as vehicles associated with AMBER alerts, warrant subjects or other criteria. If a match is found, the user is notified of the vehicle “hit” by an audible alert and an associated notation on the user’s computer screen.

ALPR cameras can be mobile (mounted on vehicles) or on fixed positions such as freeway overpasses or traffic signals. ALPR systems mounted on vehicles have all the necessary equipment to scan plates, notify the user of a vehicle hit, and store the plate scan data for uploading into the ALPR server at a later time. ALPR fixed positions transmit plate scan data to the ALPR server as they are scanned and notify a central dispatch, such as a station desk, of any vehicle hit.

ALPR cameras can photograph thousands of plates in a shift. All plate scan data collected from the ALPR cameras are transmitted to an ALPR server. The ALPR server resides within the State of Utah Data Network Center. In addition to software applications that are used to run the ALPR server, the ALPR server also houses the “informational data file” containing wanted, stolen, or vehicles of interest, as well as all the plate scans captured by the ALPR cameras.

The informational data file is comprised of information from the Stolen Vehicle File (SVF), “HOT FILE” (HF), Wanted Persons File (WPF), Stolen Plate File (SPF), Revoked Registration File (RRF), Cancelled Registration File (CRF), Expired Registration File (ERF), Out of Service (OS), and user defined “hot lists.“ The Informational data file is updated throughout the day with different data sources being “refreshed” at different intervals. SVF/WPF/SPF/RRF/ERF/OS data is refreshed from the state database daily, HF data is refreshed from the Bureau of Criminal Investigation hourly, CRF data is refreshed weekly, and hot list data is refreshed upon input into the ALPR server. It is important that ALPR users take into account the amount of lag time between receiving an ALPR hit notification and the last updating of the informational data file within the mobile ALPR unit database. When possible, confirm that the mobile ALPR unit hit information is still valid, either through your Communication Center (CC) or via your laptop computer (LC) prior to taking police action. Confirmation can be deferred in rare circumstances (i.e. special investigative units) when compelling circumstances may exist that, if CC is contacted, it could jeopardize the investigation and/or officer safety.

Fixed ALPR cameras have a continuous connection to the ALPR server. They are capable of uploading plate scan data to the ALPR server as the scans occur. ALPR scans can be compared against the informational data file immediately when the data sources are updated. Mobile ALPR units do not have a continuous connection to the ALPR server. In order to facilitate the exchange of data, air cards are used which will allow connectivity to the ALPR server via wireless transmission.

Utah Motor Vehicle Enforcement Division

Po icy Manua

Automated License Plate Readers (ALPRs)

If the air card in the vehicle is connected to a service, the ALPR will continually “sync” which will upload plate scan information from the vehicle to the ALPR server and/or download the latest informational data file from the ALPR server to the vehicle. It is imperative that mobile ALPR users sync their mobile units at least once at the beginning of their shift to ensure they have the latest informational data available.

410.2 POLICY AND PROCEDURES

Mobile ALPR unit users receiving an alert shall confirm the status of the vehicle by running the license plate either manually via the LC or over the radio via CC, unless compelling circumstances are present or officer safety issues make it unsafe to do so.In such cases, Officers shall confirm the status of the alert as soon as possible. When requesting CC to confirm the status of an ALPR alert, the officer shall advise CC the request is for an ALPR alert.

In the case of a stolen vehicle alert, personnel may regard the vehicle as a known stolen vehicle, while awaiting a secondary confirmation. If the decision is made to initiate a “felony stop” due to an ALPR alert on a stolen vehicle, officers shall advise CC they are following a vehicle due to an ALPR stolen vehicle alert prior to receiving a secondary confirmation by LC/CC.

Officers shall adhere to the Department’s pursuit policy as described in the Manual of Policy and Procedures. CC shall immediately provide secondary confirmation or advise the unit that the vehicle is not reported as stolen.

When Desk Personnel receive an alert from a fixed ALPR system, which is the result of an image taken from a fixed camera, they shall confirm the current status of the vehicle via their CAD terminal or via CC. While waiting for confirmation, desk personnel will advise field patrol units of the ALPR alert, the location, the vehicle description, request aero bureau, and coordinate responding field units.

410.2.1 HOT LISTS

Hot lists are comprised of user defined data that is manually input into the informational data file so that ALPR users will be alerted whenever a “vehicle of interest” is located.Hot lists can be loaded into a specific station area vehicle or to ALPR all vehicles countywide.

Hot lists can be input into the ALPR server informational data file only by ALPR administrators. Unit commanders, or their designees, must approve hot list information that is intended for use solely in their area cars. With the exception of AMBER alert information, hot list information intended for Department-wide use must have the approval of the Division Director, or his designee.Mobile ALPR users can input individual license plates into their patrol vehicle’s ALPR system for use during their shift, however, the information will be deleted from that mobile ALPR unit once user performs an “end shift” and the vehicle syncs with the ALPR server. An ALPR vehicle alert identified via hot list information does not automatically provide ALPR users with sufficient justification to pullover or detain vehicle occupants. Often times, these hotlists will identify a “vehicle of interest” which is not necessarily wanted for a crime (ex: sex offender vehicle).

Copyright Lexipol, LLC 2020/08/26, All Rights Reserved.
Published with permission by Utah Motor Vehicle Enforcement Division

Utah MVED Policy (continued)

Personnel must use discretion and in some cases have independent information justifying a traffic stop.

410.3 ALPR OPERATION

Use of an ALPR is restricted to the purposes outlined below. Department personnel shall not use or allow others to use, the equipment or database records for any unauthorized purpose.

(a) An ALPR shall only be used for official and legitimate law enforcement business (Utah Code 41-6a-2003).

(b) An ALPR may be used in conjunction with any routine patrol operation or official investigation. Reasonable suspicion or probable cause is not required before using an ALPR.

(c) While an ALPR may be used to canvass license plates around any crime scene, particular consideration should be given to using ALPR-equipped cars to canvass areas around homicides, shootings and other major incidents. Partial license plates reported during major crimes should be entered into the ALPR system in an attempt to identify suspect vehicles.

(d) No member of this department shall operate ALPR equipment or access ALPR data without first completing department-approved training.

(e) If practicable, the investigator should verify an ALPR response through the Utah Department of Public Safety (DPS) law enforcement information system or other appropriate database before taking enforcement action that is based solely upon an ALPR alert.

(f) No ALPR operator may access the DPS database or other system unless otherwise authorized to do so.

410.4 ALPR DATA COLLECTION AND RETENTION

All data and images gathered by an ALPR are for the official use of the Utah Motor Vehicle Enforcement Division and because such data may contain confidential information, it is not open to public review. ALPR information gathered and retained by this department may be used and shared with prosecutors or others only as permitted by law (Utah Code 41-6a-2004).

The Administration Lieutenant is responsible to ensure proper collection and retention of ALPR data, and for transferring ALPR data stored in department vehicles to the department server on a regular basis, not to exceed 30 days between transfers.

All ALPR data downloaded to the server should be stored for the minimum period established by department records retention guidelines and thereafter should be purged unless it has become, or it is reasonable to believe it will become, evidence in a criminal or civil action. In no event shall data be maintained longer than nine months unless it is subject to a warrant, preservation request or disclosure order (Utah Code 41-6a-2004). Data that will not be purged should be downloaded from the server onto portable media and booked into evidence.

Copyright Lexipol, LLC 2020/08/26, All Rights Reserved.
Published with permission by Utah Motor Vehicle Enforcement Division

410.4.1 NON-GOVERNMENTAL AGENCY ALPR
ALPR data captured by a non-governmental agency device may only be obtained pursuant to a warrant or a court order (Utah Code 41-6a-2005).

410.5 ACCOUNTABILITY AND SAFEGUARDS
All saved data will be closely safeguarded and protected by both procedural and technological means. The Utah Motor Vehicle Enforcement Division will observe the following safeguards regarding access to and use of stored data:

(a) All non-law enforcement requests for access to stored ALPR data shall be referred to the Office Manager and processed in accordance with applicable law.

(b) All ALPR data downloaded to the mobile workstation and server shall be accessible only through a login/password-protected system capable of documenting all access of information by name, date and time.

(c) Persons approved to access ALPR data under these guidelines are permitted to access the data for legitimate law enforcement purposes only, such as when the data relate to a specific criminal investigation or department-related civil or administrative action.

(d) Such ALPR data may be released to other authorized and verified law enforcement officials and agencies at any time for legitimate law enforcement purposes.

(e) ALPR system audits should be conducted on a regular basis.

Virginia State Police Policy

Virginia Department of State Police

General Order OPR 1.20 **License Plate Reader Operating Procedures**

Purpose: To establish uniform guidelines for License Plate Reader operations by Department personnel.

1. The License Plate Reader (LPR) program is intended to enhance law enforcement operations related to homeland security and terrorist watch lists, stolen vehicles and license plates, sex offender violators, wanted and missing persons, and other vehicle-related crimes that impact the safety of citizens.

2. The Director of the Bureau of Field Operations (BFO) shall appoint a Statewide LPR Program Coordinator who shall be responsible for the daily operations of the LPR Program.

Guidelines for Use

3. The Department's LPR system shall be used for official law enforcement purposes only. No employee may use, or authorize the use of, the equipment or database records for any other reason. Misuse of equipment or database records may result in disciplinary action.

4. LPR units will be installed in Department vehicles as determined by the Director of BFO or his/her designee. The Director of BFO must pre-approve the transfer of an LPR unit to another Area. Otherwise, if a sworn employee assigned a vehicle equipped with an LPR unit is transferred, promoted or resigns, the vehicle will be reassigned to another sworn employee and retained in the original Area.

5. LPR-equipped vehicles may be used for routine patrol or during special events. In all instances, LPR-equipped vehicles shall be operated in accordance with Department policies regarding vehicle operations.

6. Each employee assigned an LPR unit is responsible for ensuring they are operating with the most current "Hotlist" at the beginning of each shift. The Statewide LPR Program Coordinator should be contacted immediately if problems are encountered with the updating of the LPR units.

7. Upon receiving an alarm or hit, the sworn employee shall verify the accuracy of the information by contacting the Communications Center per established Department policy.

Effective Date – 10/1/2018 Review Date – 7/1/2022
BFO

General Order OPR 1.20

a. An LPR alarm alone is NOT sufficient probable cause to warrant a stop or arrest.

b. Sworn employees are required to confirm a positive hit prior to any enforcement action being taken.

8. Sworn employees are required to ensure that all positive hits on the Terrorist Watch List are reported to the Terrorist Screening Center (TSC) and Virginia Fusion Center (VFC) immediately. All Terrorist Watch List hits will be handled by MDT or telephone. There will be no radio traffic concerning terrorist hits except in the case of emergencies.

9. Special circumstances, such as AMBER Alerts or critical incidents, may require immediate manual updating of the LPR system "hot list." Sworn employees in possession of license plate information related to such circumstances will immediately enter the data into the LPR system. The Virginia Fusion Center (between 0600 and 2200 hours) and/or Statewide LPR Program Coordinator will ensure that new information is uploaded or relayed to all active LPR units. If a critical situation requires manual entry of license plate data, the Communications Center shall immediately notify all LPR users of the new data in the Division and document this action in the CAD system. LPR users shall manually enter the license plate information associated with the critical incident. The Communications Center shall also contact the Virginia Fusion Center and provide the information so that the data may be entered into the statewide list.

10. Terrorist organizations have openly voiced their desire to attack venues where large crowds gather, such as major sporting events, large festivals, etc. Because of the potential of just such an incident, stationary, mobile, and covert LPR use is permitted for such events. Prior to utilizing LPRs at these venues, the affected Division Commander shall submit a letter, through channels, to the Superintendent describing the event, potential threat, and parameters under which the LPRs will be utilized. The decision to grant the approval rests with the Superintendent's Office.

11. Fixed and/or covert LPR units may be used to support on-going criminal investigations or approved venues. The use of fixed and/or covert LPR units shall be coordinated with the Statewide LPR Program Coordinator.

12. At the end of each month, Monthly Plate Reader Activity Logs will be submitted to the appropriate Area Office and Division LPR Coordinator by personnel using an LPR unit.

General Order OPR 1.20

a. At the Area office, a separate file will be maintained for each LPR unit assigned to the Area. Each file will include all Monthly Plate Reader Activity Logs submitted after LPR system usage. These logs will be handled as Department-governed non-records (DGNRs) and shall be retained for two years after the end of the calendar year.

b. At the Division headquarters, all Monthly Plate Reader Activity Logs will be reviewed by the Division LPR Coordinator and consolidated into one Monthly Plate Reader Activity Report. The report shall be reviewed by the Division Commander and forwarded to the Statewide LPR Program Coordinator by the 5th of each month. The Division is the record holder for the Monthly Plate Reader Activity Reports, and these reports shall be included on the Division's file list. Monthly Plate Reader Activity Reports shall be retained for two years after the end of the calendar year.

Data Security and Access

13. The Statewide LPR Program Coordinator is responsible for overall operations of the program, including:

    a. controlling access of sworn personnel to the LPR system and hot file data;

    b. ensuring stored data are purged from the LPR system server as required;

    c. approving or denying in writing requests to access and/or use LPR data; and,

    d. designating personnel who will be authorized to access the server and conduct data queries.

14. The Department's Data Center will house the Department's LPR System Operations Center, which is the central database for all license plates scanned by the Department's LPR units.

    a. All collected data will be maintained on an independent server that is not connected to, or shared with, other law enforcement databases.

    b. The Data Center will provide an inquiry tool, history tracking, and reporting protocols for the entire LPR program.

    c. The Data Center will provide a secure intranet site, allowing only approved personnel password-protected access to collected data. This access shall be restricted to:

(1) searching for a license plate or partial license plate;

(2) viewing the image and location of matches on the "hot list";

(3) viewing maps showing the location of alarms or hits;

(4) viewing statistical reports on alarms or hits; and,

(5) searching for matches for a specific geographical location and/or time frame.

Operator Training

15. All users must receive standardized training prior to operating the LPR system.

a. The Statewide LPR Program Coordinator is responsible for providing initial training of all Department personnel who utilize the LPR system.

b. Additional training will be provided as needed and as determined by the Statewide LPR Program Coordinator.

c. The Training Division will be responsible for maintaining and updated all training records associated with the LPR program.

Data Storage and Retention

16. Per the Virginia Attorney General's Opinion #12-073, "License Plate Readers – Use and Storage of Data," the Department may not passively collect and store plate read data for potential use in future investigations.

a. The collection and use of stored data to help solve future crime are prohibited under the Opinion and existing Virginia law.

b. The Department may continue to use the LPRs to compare active reads to existing lists, such as stolen vehicles or Amber Alerts. Only the reads that are directly related to the intended purpose (i.e., stolen plate) may be retained beyond the use session of the LPR. All other non-relevant, passive reads should be deleted at the end of that day's use.

c. The Department may collect, store, and analyze data that relates to a specific, on-going, active investigation. That data shall be made part of the criminal investigative file and may not be used for other purposes.

General Order OPR 1.20

d. The Department may collect and temporarily store data that relates to special events as enumerated in paragraphs 10 and 11 of this General Order. This data will only be stored during the event and will be disposed of immediately following the event if it has been determined no applicable criminal investigation has been initiated. If an applicable criminal investigation is initiated, the data will be handled in accordance with paragraph 16.c. of this General Order.

- Armed home invasion

Terminology

- *Automatic License Plate Recognition (ALPR)*: AKA Automated License Plate Reader; cameras capture images of license plates and computer algorithms such as Optical Character Recognition (OCR) to convert the images to readable text data.

- *Read:* A scan of a license plate observed by an ALPR camera.

- *Hit*: A match between a license plate observed by an ALPR camera and a record maintained on a Hot List.

- *Hot List*: License plate numbers of vehicles of interest, such as vehicles associated with missing or endangered persons, AMBER & Silver alerts, kidnappings, wanted fugitives, including vehicles which are the subject of ongoing public safety or criminal investigations.

ALPR in 2023

- Nationwide trends
- Judicial/legislative trends
- Comm. v. McCarthy (2020)
- Exigent vs. investigative use

2753

Effective Date:	Number:
June 27, 2023	**TRF-11**
Subject: **Automatic License Plate Recognition**	

Policy

- Review policy (provided and available in PowerDMS)
- Authorized and unauthorized uses detailed in TRF-11
- System queries are subject to review/audit
- Unauthorized use will result in loss of access & discipline

Searches

- Searches may have legal implications
- Geographic and temporal parameters
- Minimization & privacy considerations
- Watermark & time sync verification
- Data retained per DCJIS policy
- Data visibility may be further restricted
- Preserve or export records needed for case

Hot Lists

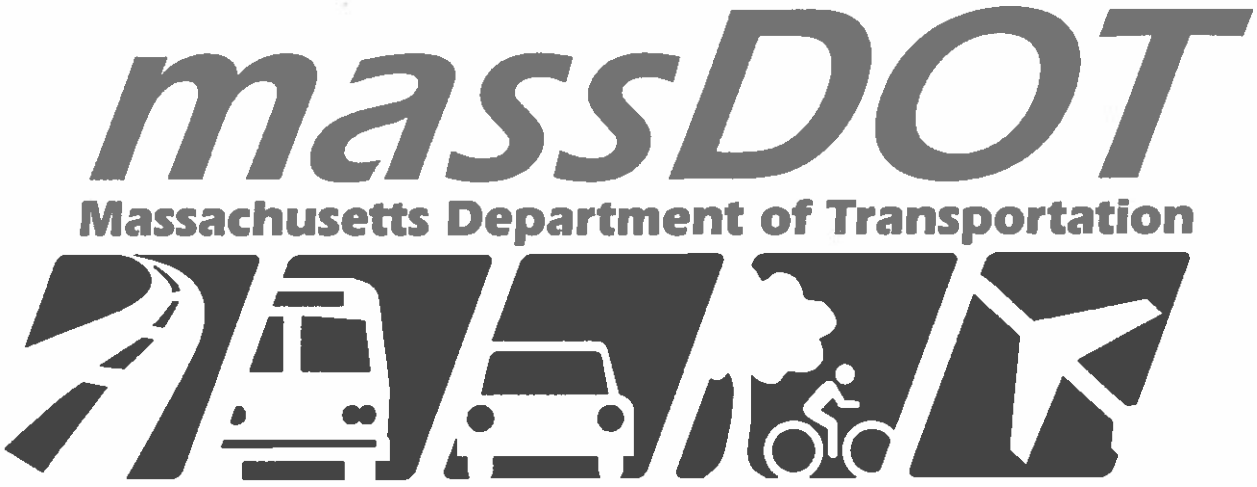
- Entries should include:
  - Vehicle description, if available
  - Case number or reference and justification
- Entries expire automatically
- Remove when no longer needed/valid
- Special attention to rentals and short-term use
- May require supervisor authorization, see TRF-11

Alert/Hit Confirmation

Before taking enforcement action from an alert:

Verify the plate:

- Visually verify that the plate matches the OCR interpretation;



Verify the state:

- Visually verify that the state matches the Hot List information; and

Verify the status:

- Verify the current status of the plate (is the subject still wanted or vehicle still stolen?)

MASSACHUSETTS
STATE
POLICE

MASSACHUSETTS DEPARTMENT OF TRANSPORTATION (MassDOT)
10 PARK PLAZA
BOSTON, MA 02116

REQUEST FOR RESPONSE (RFR)

Equipment, Parts & Services for Telecommunications, ITS, IPCS Systems

COMMBUYS Bid: BD-20-1030-0P100-0P070-49476
Project Info #: 111753

Date: Revised 9 July 2020

Rolling Enrollment: ***Bidders may submit qualifications response at anytime***

Please Note: This is a single document associated with a complete Bid (also referred to as Solicitation) that can be found on www.COMMBUYS.com. All Bidders are responsible for reviewing and adhering to all information, forms and requirements for the entire Bid, which are all incorporated into the Bid. Bidders may also contact the COMMBUYS Helpdesk at COMMBUYS@state.ma.us or the COMMBUYS Helpline at 1-888-MA-STATE. The Helpline is staffed from 8:00 AM to 5:00 PM Monday through Friday Eastern Standard or Daylight time, as applicable, except on federal, state and Suffolk county holidays.

1 RFR INTRODUCTION AND GENERAL DESCRIPTION

1.1 Procurement Scope and Description

The Massachusetts Department of Transportation (MassDOT) seeks vendors to provide specialized Equipment, Parts & Services for MassDOT's Transportation and Roadway Telecommunications, Intelligent Traffic systems (ITS), Integrated Project Control Systems (IPCS).

1.2 Background Information

MassDOT operates a wide array of transportation systems throughout the Commonwealth, many of which are integrated with Federal and neighboring states. Key Telecommunications, ITS, IPCS Systems are in place to keep these systems running efficiently, providing a safe system for all users. MassDOT seeks to place pre-qualified vendors under Master Service Agreement contracts to supply equipment, parts, and services for the systems in place as well as replacement systems potentially needed in future years, within the terms of this solicitation. See Section 3.0 below.

NOTE: MassDOT monitors closely products and vendors available through statewide contracts managed by the Operational Services Division (OSD)[1]. MassDOT does not seek to replace product or vendors currently available through OSD statewide contracts by this solicitation.

1.3 Applicable Procurement Law

This Bid is issued under the following laws: MGL c. 7, § 22; c. 30, § 51, § 52; 801 CMR 21.00

1.4 Number of awards

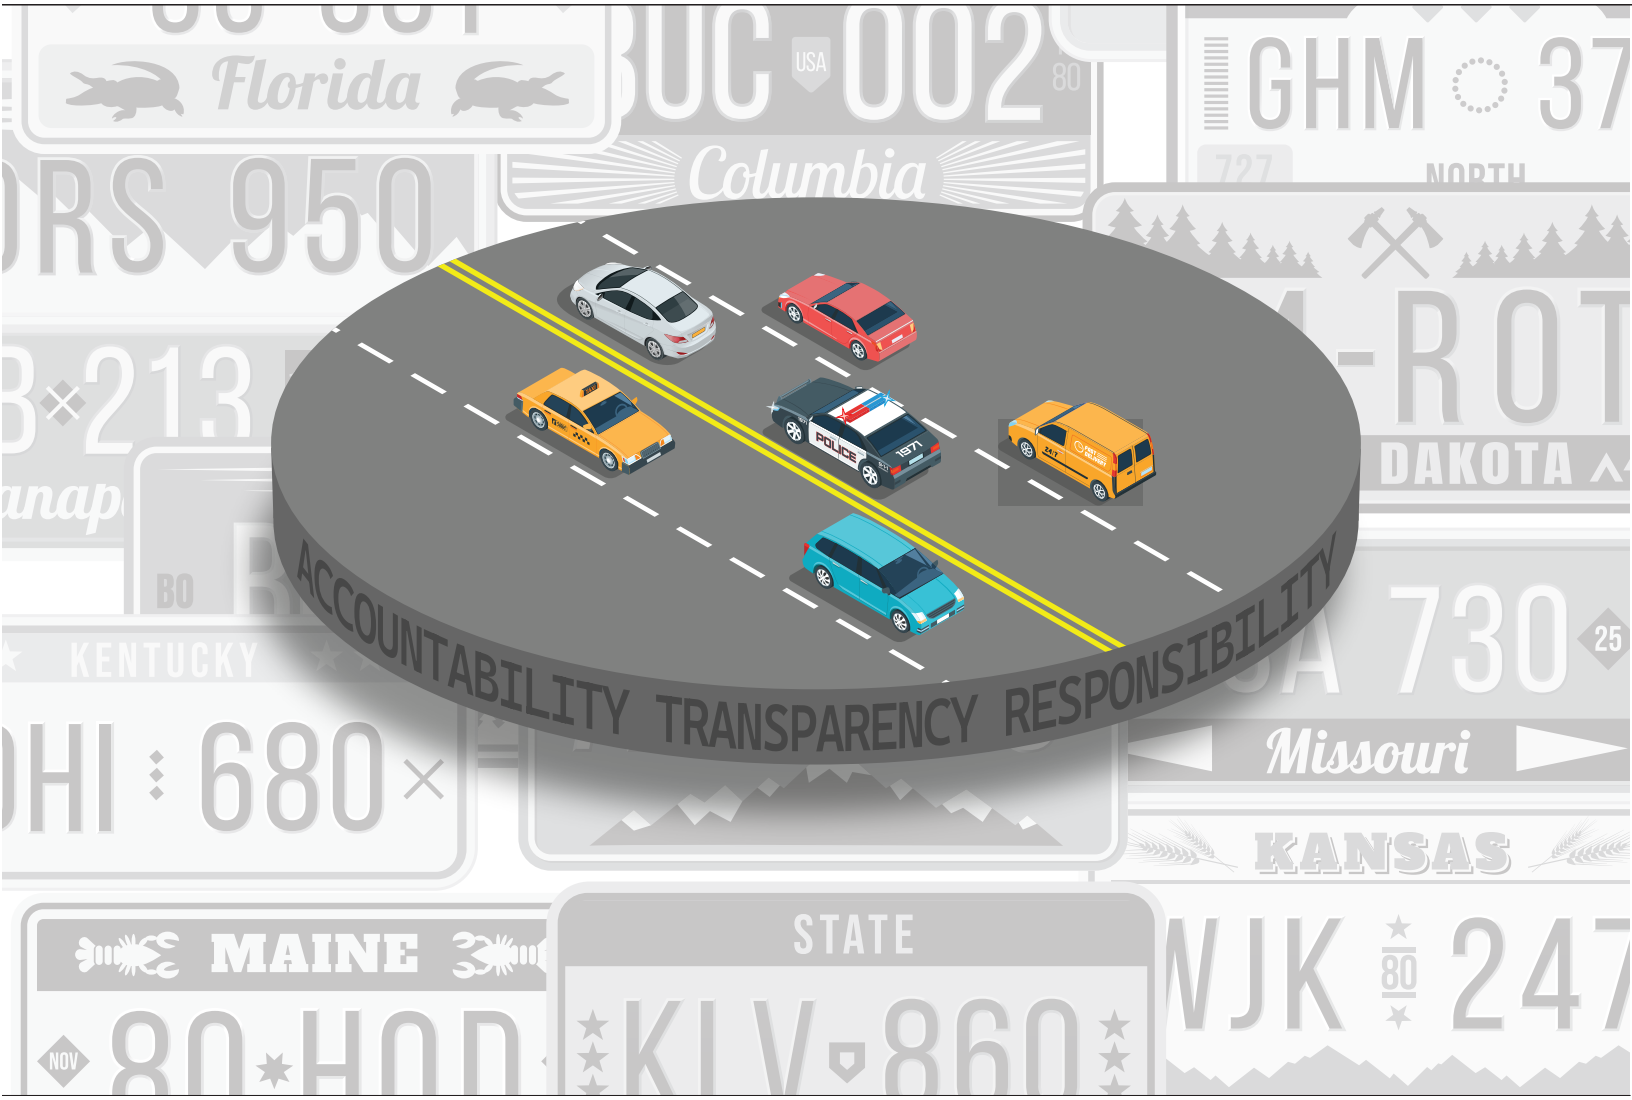
MassDOT intends to make a **MULTIPLE** awards.

1.5 Adding Contractors after Initial Contract Award

If, over the life of the Contract, MassDOT determines that additional contractors should be added, these may be drawn from qualified companies which responded to this solicitation but were not awarded contracts. If necessary to meet the needs of MassDOT, the solicitation may be reopened to obtain additional responses from interested vendors

1.6 Eligible Entities

~~Any contract resulting from this Bid will be open for use by **MassDOT only**.~~



Any contracts resulting from this RFR may be used by **all departments of MassDOT**, the Commonwealth, including all constitutional offices, the legislature, and the judiciary; cities, towns, municipalities, counties, and other political subdivisions of the Commonwealth, including schools, and other service districts; authorities, commissions, institutions of higher education, and quasi-public agencies, and Not for Profit contractors currently contracting with the Commonwealth to provide human and social services; and other eligible entities designated in writing by the State Purchasing Agent. All entities other than MassDOT must execute a separate contract that meets their own legal and business requirements.

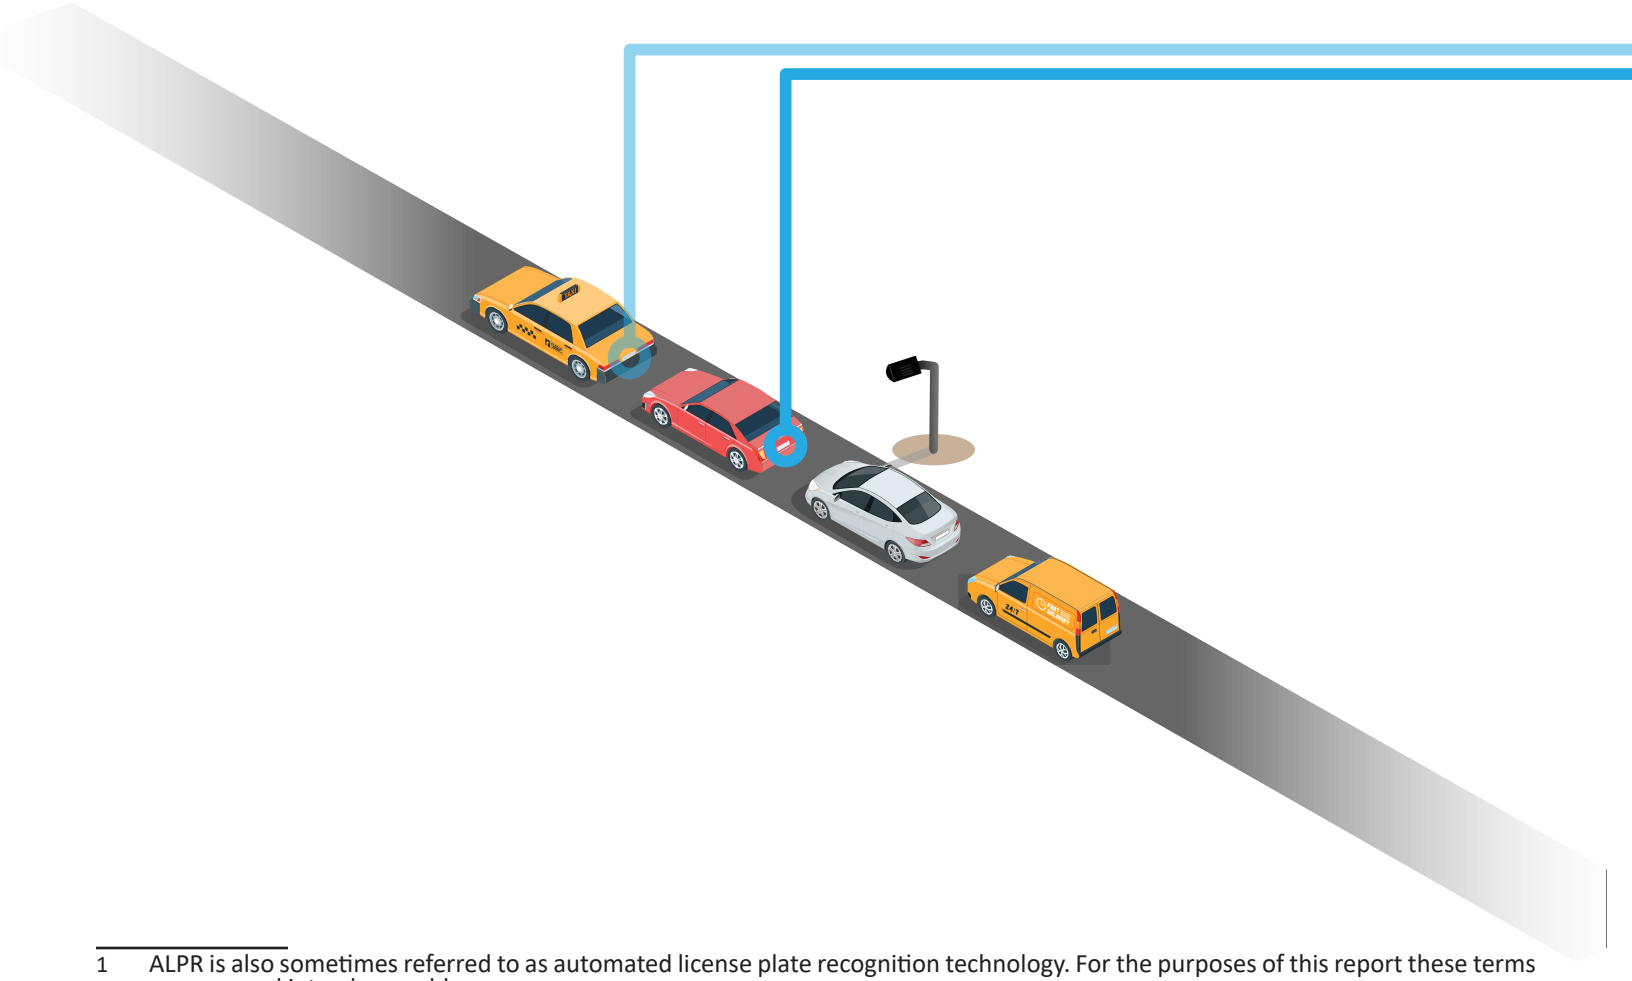
2762



Introduction

Modern-day law enforcement relies on advanced technologies to enhance investigative capabilities. One example of these technologies is automated license plate reader (ALPR).[1] ALPR has been used for decades by law enforcement agencies throughout the United States, Canada, and across the globe to help generate leads and close cases. Law enforcement agencies that utilize ALPR continuously report that the technology is a critical tool that helps advance their efforts to fulfill law enforcement's ultimate mission of keeping our communities safe.

ALPR is a proven technology, but all law enforcement tools must be used ethically and appropriately. This product is designed to assist law enforcement agencies with developing and maintaining an ALPR program that respects citizens' Constitutional rights and privacy while maintaining ALPR's effectiveness as a tool to address crime.

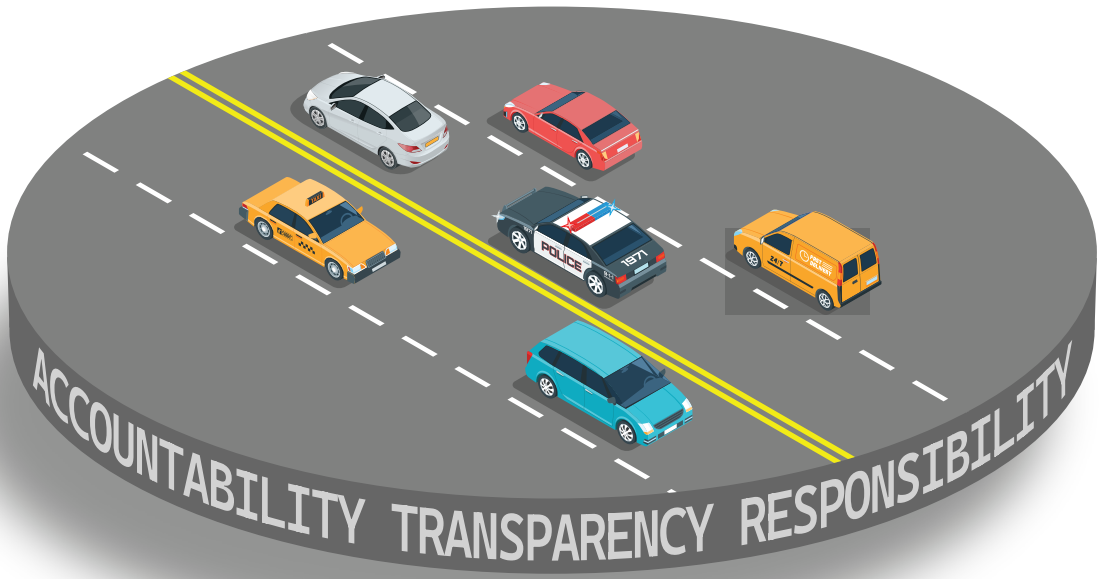
In October 2022, the Major Cities Chiefs Association (MCCA) established an ALPR Working Group composed of trusted technology partners, law enforcement agency stakeholders, and subject matter experts in the ALPR field to achieve this goal. The Working Group has created a set of best practices related to procurement, development, operation, data collection and reporting, and other elements instrumental in creating a well-balanced ALPR program. Like any other technology, ALPR will continue to evolve.

The product is a true public-private partnership, and the framework outlined in it will help law enforcement agencies seeking to utilize ALPR achieve the highest possible standards. However, it is essential to remember that every community is different, and what works in one community may not work in another. Therefore, while the Working Group's recommendations provide a strong foundation, agencies are encouraged to tailor them to meet the specific needs of their community as they develop, implement, and manage their ALPR program.

1 ALPR is also sometimes referred to as automated license plate recognition technology. For the purposes of this report these terms are used interchangeably.

2763

Executive Summary



In October 2022, the Major Cities Chiefs Association (MCCA) launched an ALPR Working Group composed of trusted technology partners, law enforcement agency stakeholders, and subject matter experts. The Working Group has developed a product that is designed to provide MCCA members and other law enforcement agencies with guidance on developing, deploying, and responsibly using ALPR technology. ALPR technology has proven to be a powerful tool to combat criminal activity, generate actionable investigative leads, and help close cases faster.

This product directly addresses the most critical aspects of ALPR technology, which can be subdivided into three main categories: accountability, responsbility, and transparency. The product outlines suggestions on ALPR program design, policy development, training considerations, and deployment strategies. The product also covers ALPR procurement. Finally, it addresses the ongoing management and oversight of the technology and provides an overview of relevant case law. While these suggestions and recommendations address the most critical aspects of ALPR, they leave sufficient room for agencies to develop programs that meet their specific needs.

Stakeholders concerned about ALPR typically focus on disparity of impact, infringement of privacy, and the effects on individual rights. However, the Working Group strongly believes these concerns can be sufficiently addressed and mitigated through thoughtful policy design, effective management, and proper oversight. Furthermore, it is important to note that recent case law differentiates the capabilities ALPR provides from those of other law enforcement technologies.

The guidance outlined in this product serves as a template for building and operating an ALPR program that is both effective in its use and responsible in its nature. By implementing the Working Group's suggestions and recommendations, law enforcement agencies can ensure their ALPR programs are helping to keep communities safe while protecting citizens' privacy, civil liberties, and Constitutional rights. In addition, this can help increase public trust and build support for using ALPR technology.

Finally, like all technology, ALPR will continue to change and evolve. For this reason, this product should be considered a living document rather than a finalized template for developing and implementing a balanced and responsible ALPR program. As the conversation surrounding ALPR progresses, so will the recommendations and suggestions included in this product.

2764

Key Recommendations

The following key recommendations serve to highlight the MCCA ALPR Working Group's most essential recommendations and considerations. They have been grouped by their applicability to three foundational principles regarding the deployment of advanced technologies in law enforcement.

ACCOUNTABILITY

- Agencies should develop a training program that establishes accountability guidelines, procedures for responsible use, and emphasizes transparency. The use of ALPR technology should be limited to trained personnel.
- The use of ALPR technology should be limited to criminal investigations or to address an articulable public safety concern.
- The procedures for the use of ALPR technology should emphasize the need to confirm the accuracy of the information presented prior to taking enforcement action.
- Careful consideration should be given to the data retention policies implemented by the agency. Data retention time frames should be developed by balancing community needs, benefits, and concerns.
- Audits of ALPR programs should be conducted regularly. Audits should monitor user activity to ensure appropriate use in accordance with established policies.

RESPONSIBILITY

- Sharing ALPR data among law enforcement agencies can enhance the effectiveness of ALPR deployments. A clear policy should be established prior to enabling data sharing to address data usage and deconfliction requirements.
- Deployment strategies should be reviewed regularly and evaluated to ensure the ALPR program and technology continues to operate within the established objectives and policies.
- Law enforcement agencies seeking to procure ALPR technology should consult with other agencies that have deployed ALPR during program development.
- Prior to the deployment of ALPR technology, agencies should assess existing technological deployments and consider how they can complement or enhance their specific program strategy.
- Law enforcement agencies must implement strict cybersecurity protections to prevent unauthorized access of ALPR data.

TRANSPARENCY

- Deployment plans should be informed by analyzing crime data, patterns, and trends to ensure the technology is deployed in an equitable and responsible manner.
- Agencies should consult with their local public works and other relevant stakeholders to ensure the ALPR deployment plan meets all permitting, legal, and other requirements.
- Comprehensive data collection and reporting will help maximize the benefits of ALPR technology by increasing transparency and empowering agencies to determine its impact on crime and public safety.

2765

Methodology of Product

This product represents the comprehensive collection of the MCCA ALPR Working Group's recommendations and considerations regarding law enforcement's use of ALPR technology. The value of ALPR as a crime-fighting tool is well established. However, an effective program must include certain elements to ensure the technology is being used effectively and in a manner that maintains the trust and support of the community. This document will provide law enforcement agencies with a framework to develop, implement, and manage an ALPR program that is based on responsible use, helps keep the community safe, and respects privacy, civil rights, and civil liberties.

The MCCA ALPR Working Group includes technology vendors from various backgrounds, a diverse group of law enforcement professionals, and ALPR subject matter experts. In addition, the Working Group conducted in-depth research on ALPR technology from numerous perspectives. Finally, the Working Group leveraged the expertise of the individual participants to develop its recommendations and suggested best practices.

The information and data used to support the findings of this product include material provided by MCCA member agencies and technology vendors. The Working Group also reviewed products produced by other stakeholders on ALPR and the use of technology in policing more generally. Finally, the Working Group conducted regular internal discussions to finalize the recommendations and suggested best practices.

This product's outline and overarching topics were created collaboratively with input from all Working Group participants. Each participant was responsible for drafting a section of the report, and those drafts were circulated to the entire Working Group for review. All Working Group members approved the final product.

The final product represents the MCCA ALPR Working Group's findings, recommendations, and suggested best practices. These will help law enforcement agencies create, manage, and operate an effective and responsible ALPR program.

2766

What is an Automated License Plate Reader?

ALPR, called Automated Number Plate Recognition (ANPR) in Europe, was invented in 1976 by the Police Scientific Development Branch to combat terrorism in the United Kingdom. While seen as a valuable tool, the associated cost and requisite experience stagnated the deployment and advancement of the technology until the first ALPR cameras were installed at the Dartford Tunnel and A1 Road in 1981. The Dartford Tunnel cameras resulted in ALPR's first arrest for a stolen vehicle. This slowly led to more widespread use of the technology, including as part of the "ring of steel" created around London in the early 1990s to protect against the Irish Republican Army (IRA) bombing campaigns. Later, ALPR technology was also deployed as part of another initiative entitled "Project Laser," which sought to "target criminals through their use of roads."[1]

The success of the "ring of steel" and "Project Laser" prompted the Police Standards Unit to create the National ANPR Data Centre (NADC) in 1997. The NADC allowed for the nationwide sharing of ALPR data across the United Kingdom and the Back Office Facility (BOF), the database where ALPR data was stored and analyzed. ALPR technology took off from here. Law enforcement first used ALPR to help solve a murder case in 2005, and by 2007, nearly half of all law enforcement agencies in the UK were using ALPR technology. American law enforcement agencies followed their British counterparts closely and started using ALPR in 1998.[2]

ALPR Hardware and Software

While the technology has advanced over the years, the main components of those early ALPR deployments and today's systems remain the same. At its core, an ALPR program consists of the camera hardware and the software used to store and analyze the generated data and alert the users when a detection of interest is made. In most cases, ALPR hardware consists of a camera, processor, power supply, and data transfer hardware. In addition, ALPR cameras are typically optimized in various ways to operate in a wide range of real-world conditions (low light, inclement weather, motion detection, etc.).

Once the camera captures the image, ALPR systems use software to read the license plate. Some systems process the image at the camera level. Other systems transfer (usually via a cellular network, but it may occur through other means) data from the camera to a dedicated ALPR-system computer for processing. The image is analyzed through Optical Character Recognition (OCR) software as part of the processing. OCR recognizes alpha-numeric numbers and letters, thereby allowing the ALPR system to successfully recognize and interpret any letters or numbers observed in the image captured by the camera.

Types of ALPR

Law enforcement uses various types of ALPR technology, including fixed, mobile, portable, and mobile applications. Below is a description of each kind of ALPR system:

- **Fixed ALPR** cameras are typically permanently mounted to infrastructure such as traffic signals, bridges, and light poles.
- **Mobile ALPR** cameras are typically mounted on vehicles. These cameras may be overtly or covertly deployed depending on the needs of the law enforcement agency.
- **Portable ALPR** cameras include mobile camera trailers which can be transported and deployed based on the law enforcement agency's operational needs.
- **Mobile Applications** leverage features built into cellular devices to create ALPR detections.

2767

The ALPR Detection Record

An ALPR record is generated when a vehicle license plate is detected, imaged, and processed to create a record. An individual ALPR record (or 'plate read') is generally composed of the following:

- An image of the license plate, which is a 'cropped' digital image of the license plate captured by the camera.
- The geo-location where the plate detection occurred, which can be determined from the GPS coordinates of a mobile reader or inferred from the location where fixed readers are placed.
- The time and date when the license plate detection occurred.
- The translated information from the plate, which is the alpha-numeric plate number and the issuing organization, typically a state. This translation can be accomplished by OCR or artificial intelligence.

In addition, an ALPR record may contain the following:

- A collateral image of the vehicle for which the ALPR read occurred.
- Metadata associated with the camera that identifies the camera unit, image settings, and other specific attributes.

Hotlist Sources

ALPR systems used by law enforcement can alert on detections of wanted vehicles. Two primary methods exist for creating a wanted vehicle within an ALPR system. First, ALPR systems allow for the manual entry of both a hotplate and a hotlist. Second, the ALPR system allows agencies to import National Crime Information Center (NCIC) records as an automated hotplate source. This is the most common method for populating hotlists.

Tactical vs. Investigative Uses

Law enforcement typically uses ALPR technology for both tactical and investigative purposes. Accordingly, agencies should consider both uses when developing their ALPR program's objectives. A tactical ALPR deployment includes placing cameras in strategically identified locations to generate information that warrants a rapid police response, such as stopping a wanted vehicle. These deployments usually seek to identify, locate, and recover a vehicle or its occupants to help address crime occurring in real time. An investigative use refers to utilizing ALPR cameras to collect license plate records that may have law enforcement interest but do not necessarily warrant an immediate police response. These detections are stored in the system and may later be queried. This information is generally used to create an investigative lead after a crime has occurred.

Business/Private Use

Since ALPR systems provide valuable data, private businesses and other organizations have also invested in ALPR technology. These uses may be for security, management, or operational needs. The following are examples of private sector use cases:

- Parking garages
- Hotels and casinos
- Homeowners associations
- Airports
- Convention centers
- Government traffic and transportation sites

2768

Program Design and Development

ALPR has proven to be a successful law enforcement tool. Its unique ability to provide actionable leads and help close cases cannot be overstated. However, real and perceived concerns exist regarding this technology's use. Therefore, law enforcement must take careful steps to develop an ALPR program that is both effective and appropriate. Taking a thoughtful approach when designing and developing these programs is the best strategy to accomplish these goals. Some of these considerations include developing proper policies, creating comprehensive training material, and designing and implementing responsible deployment strategies.

Policy Development

Establishing clearly defined policies on how ALPR may be used is the most effective method to minimize risk to the agency and protect both department employees and the individual rights of the public. ALPR policy should direct the purpose, general use, and processes involving ALPR investigations. These policies will provide a framework by which an agency can simultaneously reap the benefits of the technology, all while respecting the privacy and civil rights of the public. Similarly, consistent policies will assist in protecting the integrity of criminal investigations, criminal intelligence collection, and justice system processes. The following components should be considered while developing ALPR policies and procedures:

- Community-directed statement on why the agency is establishing or maintaining an ALPR capability
- The purpose of the policy
- General use guidelines of the technology
- Clearly defined program oversight roles and responsibilities
- The ALPR vendor and deployment types
- Access, training, and usage requirements
- Investigative procedure requirements
- Clear guidance to department employees on being transparent on the use and reporting of the technology in court documents
- Auditing responsibilities and schedule
- Data retention and purging
- Statement affirming protections for constitutionally protected activities
- Rules governing the use of hotplates

State/Local Law Considerations

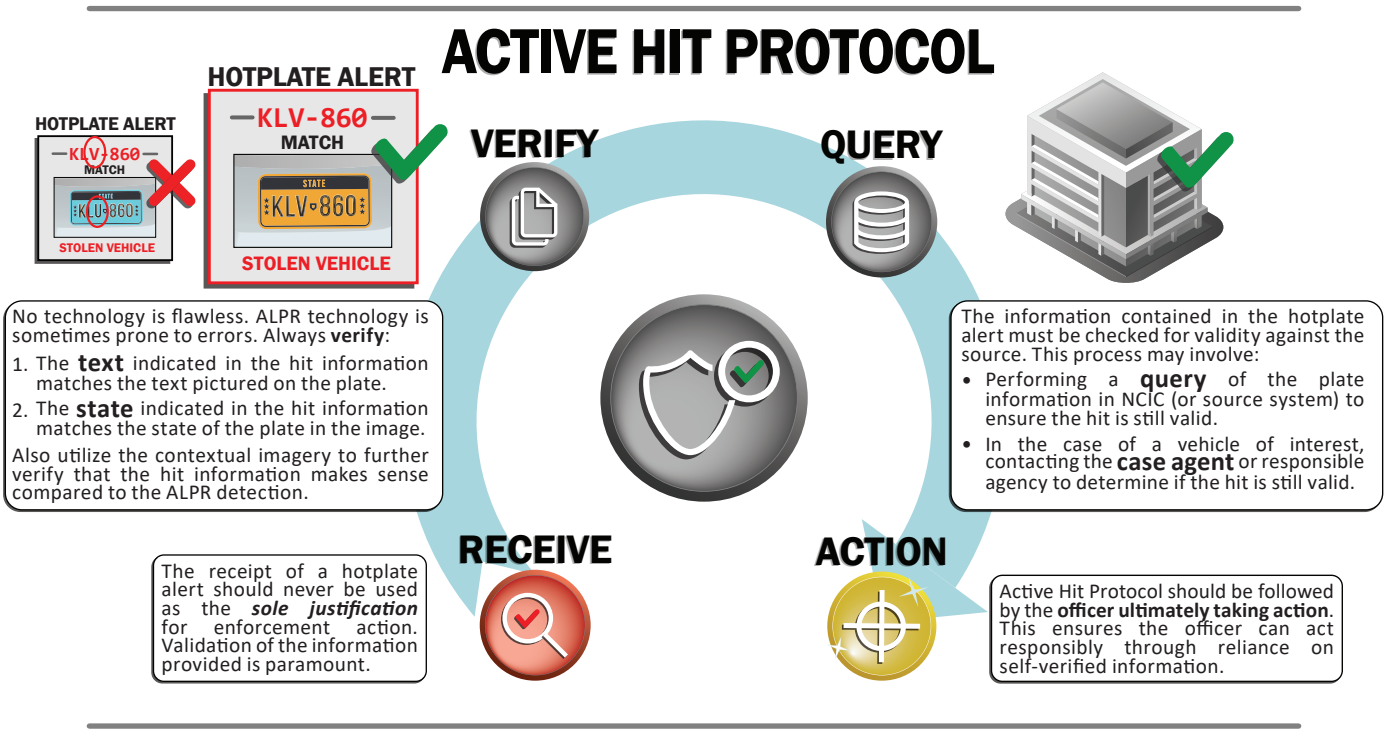
Many state legislatures have taken steps to regulate the use of ALPR technology in their states. These laws and regulations can directly impact the functioning of an ALPR program in those states, and they must be accounted for in agency policy. Examples of the types of rules and regulations implemented in several states can be found in Appendix C – State-Level Laws and Regulations.

Training Considerations

Ensuring a thorough training program is in place is critical. Users must receive training on the ALPR system before receiving access. This practice ensures ALPR systems are only used for official law enforcement purposes consistent with applicable legal limitations and department policy. The training program should address several topics to ensure that users of an ALPR system are proficient in the necessary skills, including:

- A review of the departmental policy and safeguards related to ALPR use
- Basic understanding of how the technology operates
- The ALPR data sources, vendor, type of systems, etc.
- Any significant capabilities and or limitations related to the technology
- Any potential hazards related to the technology

2769



- Who is authorized to access the system and any required training
- The role of the officer or investigator in leveraging and responding to ALPR hotplate detections
- Importance of being transparent with arresting documentation
- Any applicable laws and policies that govern the use of ALPR in the specific jurisdiction
- Use of the ALPR system as an investigative tool
- The data retention period
- Auditing responsibilities

An ALPR training program should include a tactical-level discussion of how to use the technology appropriately. For mobile units, this should consist of an initial check to ensure that the ALPR system is operating correctly at the beginning of each shift. This includes logging into the system, running any necessary diagnostics to determine that it is working correctly, and doing a quick physical inspection of the system (cameras, cables, connections). In addition, a program manager should conduct periodic checks of fixed ALPR sites to verify that the hardware is operational and communicating with the software as intended.

Field Officer Responsibilities

A critical piece of the officer training on ALPR should include an element that instructs how ALPR notifications are processed and the appropriate response protocols for those notifications. Some departments may have fixed ALPR hits reviewed and confirmed by the public safety answering point or real-time crime center before dispatching them to an officer to investigate. Other systems may provide an in-car alert on the car computer system.

Officers should be required to review hotplate detection, confirm the detections, and appropriately respond to actively wanted vehicles. This process can be referred to as “Active Hit Protocol.”

2770

Investigator Responsibilities

The ALPR system is a valuable investigative tool. It can be used to develop leads in cases involving vehicles where the license plate is unknown or to establish that a car was not in the vicinity during the time frame a crime occurred. An ALPR training program must include how to access the system and the criteria required before conducting a query, such as the reason for the search and the associated case number. Additionally, investigative tool training should address how to query the system, instructions on operating the various analytical tools within the system, how to interpret the data, how to preserve a record, and any required transparency, audit, or reporting requirements.

Types of Training

Training should be broken down into multiple categories:

- **New User Training:** This training will be detailed and define proper usage. In addition, this training should include policy, procedures, state and local laws, and an in-depth walk-through of the ALPR products and software.
- **Refresher Training:** This is considered a refresher of policy and procedures. It may also include changes to case law and examples of ALPR use. This training should ideally occur immediately after any changes to policy take place.

Authorized instructors should provide training on ALPR technology based on an established, accredited curriculum. An example of an accredited curriculum is one that has been approved by the state's Peace Officer's Standards and Training (POST) or equivalent body.

Deployment Strategies

Determining the ALPR deployment type and kind is one of the most critical decisions an agency will make concerning its ALPR program. Law enforcement is responsible for deploying advanced technology in a manner that is effective in its use and appropriate in its scope. Law enforcement also has a fiduciary duty to use public funds responsibly. For these reasons, ample consideration should be made when determining the type and kind of ALPR deployment.

ALPR Deployment Theories

As previously addressed, various types of ALPR technology exist, including fixed, mobile, portable, and smartphone applications, with each serving a unique purpose. Therefore, the kind of ALPR selected should be determined by the environment, infrastructure, and objectives for the ALPR deployment. Several ALPR deployment strategies are often considered when determining the value and placement of ALPR cameras. The most common of these strategies include the following:

- **High Traffic Areas:** The primary objective is to collect the maximum number of detections that can later be leveraged for investigative leads.
- **High Crime Areas:** This strategy focuses on producing information anticipated to be of investigative value instead of creating as many detections as possible.
- **Places of Interest:** This strategy is more of a hybrid between the first two. An example of this strategy would be deploying ALPR cameras around a shopping mall targeted by organized retail theft gangs or where assaults have occurred. Agencies may also place ALPR cameras in proximity to their community's major ingress/egress points and critical infrastructure or routes associated with gun, drug, or human trafficking.

Deployment Considerations

Infrastructure and permitting are two common factors that can limit an agency's deployment strategy for ALPR systems. Agencies must carefully consider each physical deployment site. The infrastructure to mount the necessary hardware must exist for the technology to be successfully deployed. Furthermore, the owner and operator of the infrastructure or property must allow for the installation of ALPR hardware. Agencies must also ensure that the proposed site is appropriate for the type of power the ALPR utilizes. Some systems run on AC power. While this provides constant and consistent power, installing it can be more expensive. Others rely on solar energy, which may only provide enough power if the camera site receives sufficient sunlight to account for the traffic volume. Finally, this infrastructure must have access to a data transmission service, such as cellular, fiber optic, or Wi-Fi.

Once a deployment plan has been established, site locations have been determined, and in-person inspections of the sites have been completed, the agency will need to navigate any legal and permitting processes. Since permitting can vary significantly across jurisdictions, it is recommended that agencies consult with their local public works or other appropriate governmental entities to ensure all necessary procedures are being met. Engaging these entities earlier in the process will help secure their buy-in, which will be critical for a successful deployment.

Equitability Concerns

Deployment strategies must account for concerns over bias, surveillance or other threats to privacy, and potential chilling effects on First Amendment, defendant, or related rights. The following recommendations will help ensure ALPR technology is deployed in a manner that supports just and equitable policing:

- Deployment plans should be informed by analyzing crime data, patterns, and trends. The site selection process should be based on this information and account for any relevant privacy, equitability, or other concerns.
- Agencies should consult the community, other stakeholders, and appropriate oversight committees. This includes providing specific information on why and how the deployment sites were selected.
- Deployment strategies should regularly be reviewed and evaluated to ensure the ALPR program and technology continue s to operate within the established guidelines and policies.

Partner Technologies

While developing the deployment plan, it is important to consider other law enforcement technologies that may complement the ALPR system. Law enforcement agencies may deploy complementary technologies within the same area, which have different capabilities. Agencies can leverage these capabilities to increase their ability to suppress crime, create actionable leads, solve cases, and potentially deter future crimes. Potential partner technologies can be subdivided into two categories: tactical and investigative.

Tactical technologies include tools such as gunshot detection technology, public safety cameras, and drone detection technology. An example of investigative technology is a records management system (RMS). Integrating ALPR and RMS can join plate reads to hotlists, allow investigators to search plate reads within a familiar interface, and provide a direct link between case management and the ALPR database. Another example of investigative technology is crime analysis software. Bringing ALPR data into an agency's chosen analysis software can aid in ongoing investigations. For example, agencies can import ALPR data to help create accurate timelines for vehicle travel that can provide investigators with unseen leads and valuable knowledge.

2772

Procurement

Responsible procurement of ALPR technology is a critical component of an effective program. The importance of obtaining stakeholder feedback early in the procurement process cannot be understated. Program managers should make every effort to embrace a spirit of transparency, accept critical feedback, and attempt to address any concerns raised by stakeholders directly.

The procurement phase is also the appropriate time to begin building departmental policies, procedures, and protocols, as this will be crucial in gaining stakeholder buy-in. It is imperative that the stakeholders understand how these policies will protect the public's privacy and civil liberties. Agencies should also seek to mitigate any concerns that stakeholders raise about the proposed ALPR program through thoughtful policy design.

Vendor and Product Assessment

Before choosing a vendor for their ALPR program, law enforcement agencies should conduct an appropriate degree of market research. This should include a trial of the product and conversations with existing customers to evaluate its performance in a real-world setting. A trial period provides the opportunity to test the technology, the associated policies and procedures, and highlight initial successes. This can provide tangible examples that can be shared with stakeholders to show how ALPR serves to enhance public safety.

Should an agency engage in a pilot program, it is recommended that the community be notified. Agencies should also determine how any information collected may be used in investigations or other law enforcement operations until a final protocol and all other areas of the program are formalized.

When determining the best hardware for their ALPR program, law enforcement agencies should consider the following:

- Hardware requirements for specific sites
- The lenses, processor, and other technical specifications of the hardware
- Average detections per hour
- General cost
- The number of lanes of traffic a single camera can capture
- The maximum speed at which the camera can read a license plate

When determining the best software for their ALPR program, law enforcement agencies should consider the following:

- The accuracy of the OCR software and whether it's enhanced by artificial intelligence, machine learning, or another capability
- The technology's alerting system, including desktop, laptop, mobile, app-based, and in-car alerts
- The software's ability to connect and share data with other law enforcement analytical platforms

Technical Challenges

There are some challenges with ALPR software that agencies must acknowledge. For example, OCR technology analyzes all letter or number sequences in the imagery; it cannot specifically isolate only license plate images. Therefore, a detection can be created on something that is not a license plate. This includes billboards, signage, marketing material on vehicles, etc. Additionally, the full license plate letter and number sequence must be visible to create an accurate license plate detection. Occlusion, missing plates, and temporary paper plates may result in no detection, a partial detection, or a misread.

Misreads may occur for several reasons, but most are due to the incorrect translation of a letter or number. For example, the system may read an "8" as a "B" or a "K" as an "X." These technical challenges should be readily acknowledged by both the agency and a prospective ALPR vendor. Agencies must ensure their policies account for these challenges and contain sufficient safeguards to limit instances where officers act based on a misread or other error.

2773

Procurement Ethics

While local procurement ordinances vary across jurisdictions, agencies must follow those ordinances along with broader guiding principles when procuring an ALPR platform. The National Institute of Governmental Purchasing's (NIGP) Values and Guiding Principles of Public Procurement are one such set of broad principles that agencies can use to inform any ALPR procurement process. The NIGP principles are as follows:

- **Accountability:** Taking ownership and being responsible to all stakeholders for our actions. This value is essential to preserve public trust and protect the public interest.
- **Ethics:** Doing the right thing. This value is essential to deserve the public's trust.
- **Impartiality:** Unbiased decision-making and actions. This value is essential to ensure fairness for the public good.
- **Professionalism:** Upholding high standards of job performance and ethical behavior. This value is essential to balance diverse public interests.
- **Service:** Obligation to assist stakeholders. This value is essential to support the public good.
- **Transparency:** Easily accessible and understandable policies and processes. This value is essential to demonstrate the responsible use of public funds.[3]

Program Management and Oversight

An ALPR program's design and operational management are part of the framework of a successful program. Effective management and oversight of the program help ensure operational transparency and accountability and that ALPR technology is being used responsibly.

To ensure the program operates responsibly, agencies should assign a manager operational control of the ALPR program. This individual should be well versed in the technology, have a sound understanding of all significant components of the ALPR program, and be empowered to ensure the program follows protocols, policy, applicable law, and community and agency expectations.

A program manager's responsibilities include the following:

- Developing policies
- Overseeing training
- Ensuring appropriate use of the technology
- Managing data collection and reporting

A program manager is also responsible for staying current on technology changes and emerging ALPR trends. Similarly, they must ensure that their agency's ALPR policies and training are current and address technological changes or advancements. Finally, having a program manager establishes a clear point of contact between the law enforcement agency and the ALPR vendor. This can enhance the communication between the agency and vendor, which creates an opportunity to share and address any technological or other challenges.

Access and Appropriate Use

Law enforcement agencies are responsible for using ALPR data to uphold public safety, solve crimes, and prevent future crimes. Agencies have an opportunity to build public trust and support for the use of ALPR through transparency and responsible use. As such, agencies should carefully consider the circumstances under which using ALPR is appropriate and what personnel within the agency can access this tool.

Law enforcement agencies must scope their ALPR programs in a manner that ensures the agency is still able to conduct proper oversight and operate the program transparently. One method for achieving this is by limiting who can access the ALPR technology. For example, many law enforcement agencies restrict access to specialized personnel to ensure that the use of ALPR technology is adequately audited and controlled. Access should only be authorized once a user has completed the requisite training and demonstrates a baseline understanding and operational knowledge of the technology. Information on new user training, access, and use should be part of standard data collection and reporting related to the ALPR program.

Agencies that deploy ALPR must have written policies that outline the appropriate use of the technology. Several core principles should be incorporated into these policies to ensure the responsible use of the technology. First and foremost, ALPR technology should only be used as part of a criminal investigation or to address an articulable public safety concern. Secondly, the investigator must also have a legitimate "need to know" before querying any ALPR data. These guardrails will help prevent "curiosity checks" or other bad faith uses and ensure that privacy, civil rights, and civil liberties are respected.

Agency users must also demonstrate adherence to established policies when searching archived ALPR data. For example, if the ALPR software allows it, agency policy should require users to document the investigative purpose and case number associated with each query. Vague or ambiguous reasons for a search, such as "criminal subject" or "research," should be avoided. An agency's ALPR policies should also outline the potential consequences and corrective methods for improper use of the technology. Examples may include mandatory retraining, loss of access privileges, or other appropriate corrective punishments.

Data Retention

Data retention policies are ultimately determined by the agency using ALPR technology. These policies are informed by various considerations, including the agency's objectives, stakeholders' expectations, and local laws or regulations. Therefore, it is essential that the ALPR technology, vendor, and any other relevant service providers support the agency's policies on retention.

While a general best practice is not to retain data any longer than is necessary, what constitutes "no longer than necessary" is not a simple determination since different use cases may benefit from different retention periods. For example, cold cases may benefit from years-old data, while other uses rely on more recent data.

Outside of specified legal requirements, the retention schedule for ALPR data is primarily determined by agency policy.[4] As such, law enforcement must work with the community and other stakeholders to determine appropriate retention periods for each type of ALPR data. Ideally, ALPR systems should allow agencies to define retention schedules and automatically purge any record not designated for retention by a registered user. In addition, regular system audits ensure retention standards are followed and instill confidence that system data is utilized appropriately.

Data Sharing

For good reason, law enforcement agencies worldwide are embracing ALPR technology. A 2013 Bureau of Justice Statistics study showed that 77% of agencies serving populations of 100,000 or more have access to ALPR technology.[5] Moreover, given ALPR technology's value to a single jurisdiction, law enforcement has begun to explore sharing ALPR data across jurisdictional boundaries. Sharing ALPR data amongst law enforcement agencies fosters a more collaborative approach to addressing public safety concerns across jurisdictional boundaries.

Benefits of Data Sharing

When law enforcement agencies share ALPR data across jurisdictions, the technology can provide more comprehensive data. A shared system creates more unified and robust coverage throughout a region. Several ALPR vendors currently provide their law enforcement customer base with the ability to share data with other law enforcement customers. The potential to cross-reference information between separate ALPR systems allows law enforcement to enhance their investigative capabilities and can reveal elements of illegal activity that may otherwise be unknown to the investigating agency. Several elements of ALPR data and systems can be shared, including the ALPR detections and user-created hotlists. Some ALPR vendors also allow agencies to establish data-sharing relationships between their products and other technology systems.

As a standard practice, law enforcement agencies should consider sharing ALPR data with one another to the extent that state or local laws and regulations permit. Agency policy should define what, if any, type of data sharing is in place, who is authorized to establish data-sharing relationships, and any procedures that govern the sharing of ALPR data. These procedures and data-handling agreements should be implemented in policy for both the sharing and receiving agencies.

The success of ALPR technology among law enforcement has led non-government entities to acquire the same technology. This includes retailers, property managers, towing and repossession companies, parking lot operators, homeowner associations (HOAs), and even individual households. Since the generated data is of the same format and often targets issues of mutual interest, ALPR vendors have created Public-Private Partnership (PPP) friendly user interfaces. These programs typically allow the unidirectional sharing of ALPR data from the non-government side to the law enforcement side only. These partnerships strengthen community relationships and ensure public investments are used responsibly.

2776

Data Sharing Considerations

While data sharing benefits agencies, safeguards are needed to protect the agency that generates and owns the data. Data sharing guidelines can be specific to the type of shared data. For instance, if agency "A" shares ALPR detection data with agency "B," there may be no requirement for a formal agreement. In contrast, if agency "A" shares hotplates or agency-generated hotlists with agency "B," this scenario may require a formal agreement. This is because hotplates or hotlists are typically generated from a criminal investigation or law enforcement process or function that may require an officer to take action if there is a confirmed detection. Furthermore, the agency that receives the information should bear the responsibility and liability for their officers' actions in response to an alert.

Law enforcement agencies seeking to share or receive ALPR data must be aware of applicable federal, state, and local laws. As such, agencies should consult with their legal representatives to identify pending, proposed, or existing laws that may be relevant. For example, legislation is proposed annually at all levels of government which, if enacted, could limit law enforcement data sharing. Finally, agencies must consider any concerns from the community or other stakeholders before establishing multi-jurisdictional data-sharing relationships.

Auditing, Data Collection, and Reporting

Auditing and reporting an agency's use of ALPR technology is a critical component of a transparent and accountable ALPR program. The failure to operate a program in this manner will only exacerbate concerns related to misuse or contribute to the perception that ALPR technology is synonymous with increased surveillance. This will undoubtedly negatively impact police-community relations. Agencies should develop robust mechanisms to evaluate the efficacy of the technology and ensure it is being used appropriately.

Auditing Requirements

Regular audits on an ALPR system are one method for validating compliance with agency policies and applicable laws and regulations. As with other reporting requirements, the specific auditing measures, and the frequency of said audits, should be clearly defined in the ALPR program's governance documents. In general, audits should verify what ALPR information was accessed and by whom, in order to identify any improper or unauthorized uses of this data. Audits should also ensure that data within the system is being handled per agency policy, including information sharing agreements. They should also confirm that data is being purged as required under any applicable data retention schedules.

Data Collection and Reporting Considerations

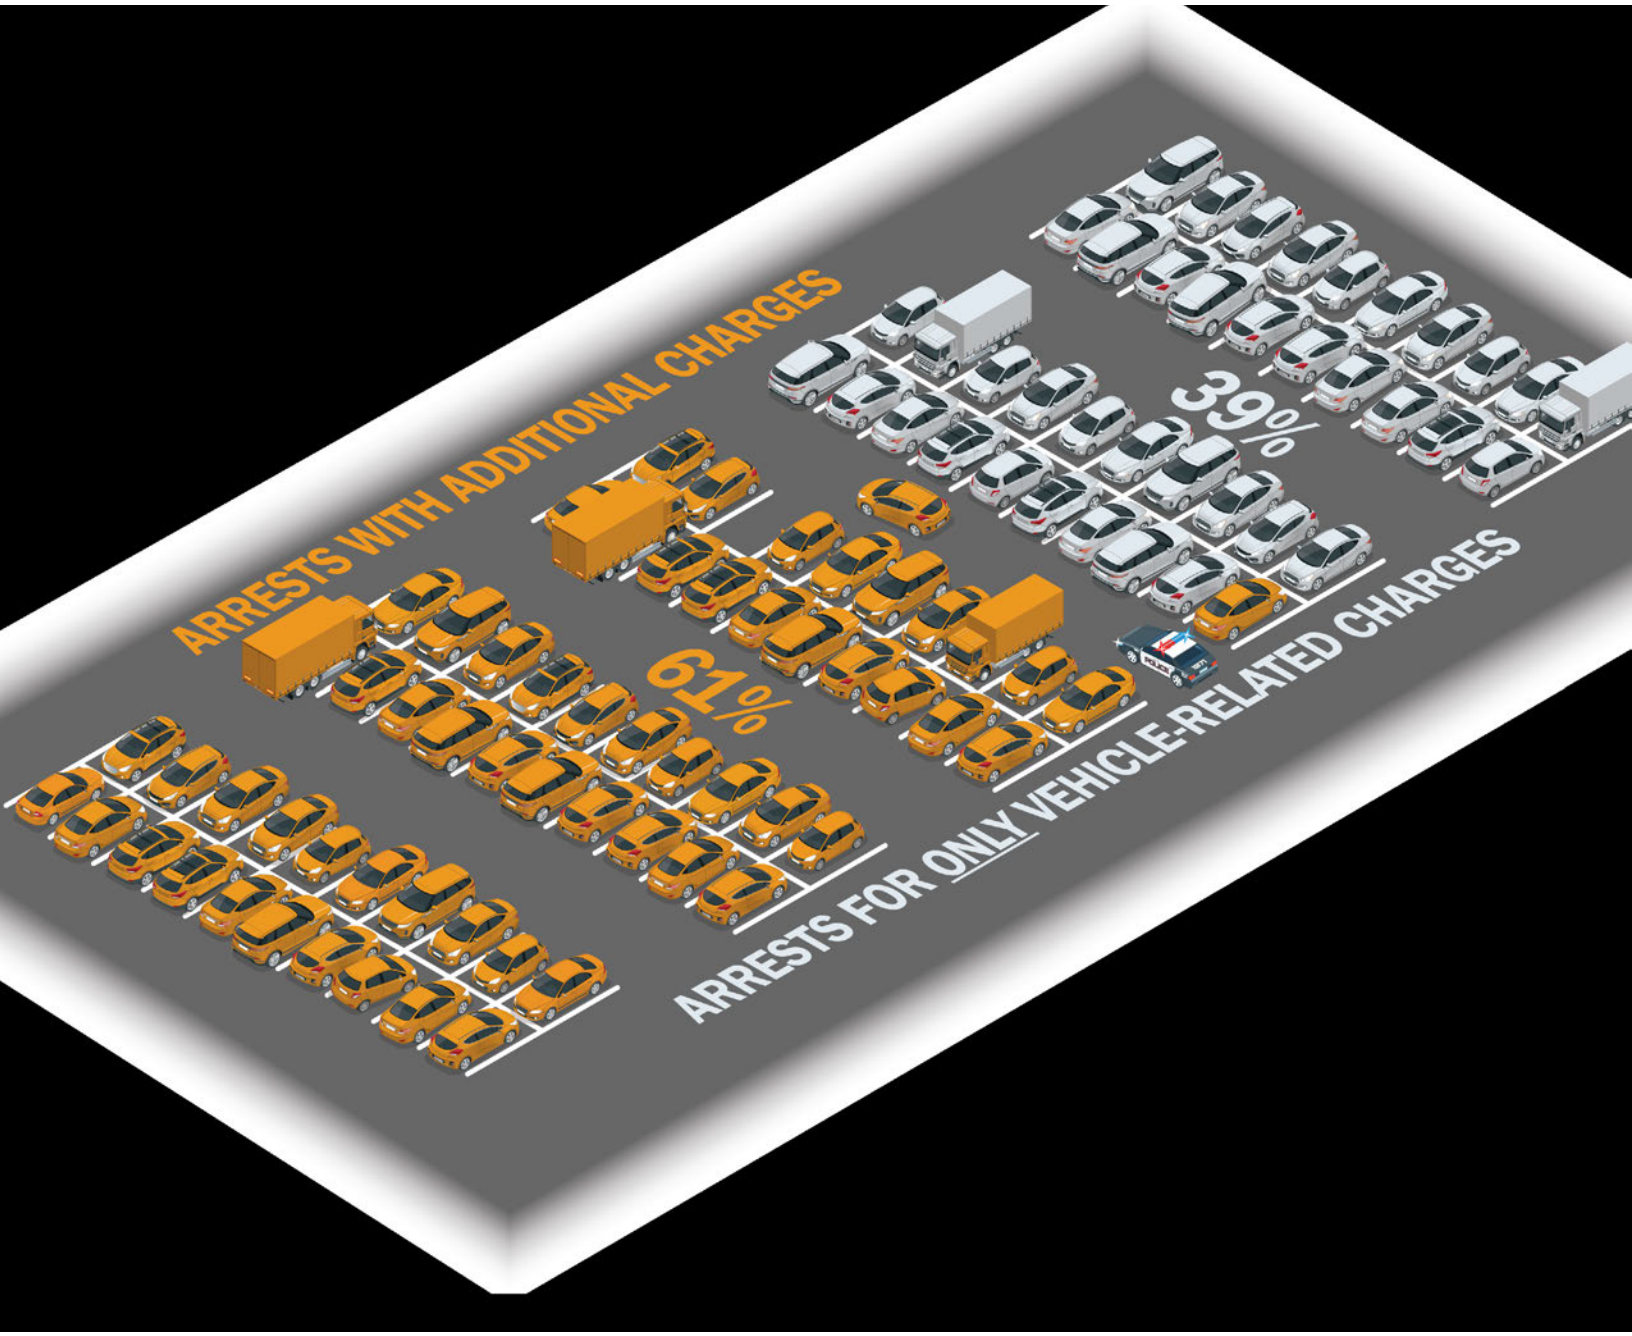
Studies have shown that ALPR technology is most effective when used systematically and when deployment sites are strategically selected.[6] In addition, comprehensive data collection and reporting will assist agencies with maximizing the benefits of ALPR technology. Finally, robust data collection and reporting will help increase transparency.

At a minimum, agencies using ALPR should collect and report the following information:

- Number of detections
- Number of hotplate hits
- Number of queries conducted by users
- Number of arrests directly attributed to ALPR hotplate detections
- Number of user-generated hotplates
- Breakdown of hotplate hit types
- Year-over-year analysis and trends

By analyzing this data, agency leaders and stakeholders can determine whether their ALPR system is meeting deployment goals and has significantly impacted crime or other areas of police operations. ALPR data collection and reporting also provide valuable insight into ALPR system adoption throughout the organization.

6 C. S. Koper and C. Lum, "The impacts of large-scale license plate reader deployment on criminal investigations," Police Quarterly, 22(3), 305–329, 2019. https://doi.org/10.1177/1098611119828039



2777

The Importance of Analysis and Reporting

Quantitative data is an excellent tool to measure the impact of law enforcement technology. The ability to answer the questions “how many” and “how often” is necessary to evaluate real-world outcomes. Additionally, the quantitative analysis of ALPR data can provide an agency and stakeholders with the information needed to determine the impact of the technology on community safety.

To explore the potential of quantitative reporting, an MCCA member agency recently analyzed the impact of a localized ALPR deployment. The data presented below represents a period of four months after the installation of ALPR cameras within the evaluated area. The types of charges related to any arrests resulting from an ALPR event were analyzed. The data suggests that ALPR technology generates leads and solves more types of crimes than those related to ALPR’s most frequent use: the recovery of stolen vehicles.

It is important to capture and analyze the impact of any ALPR program to dispel misconceptions and demonstrate the impact of the technology.

2778

Data Stewardship

Throughout the design of an ALPR program, the hardware, software, and policies implemented will shape how ALPR data is collected and stored. Therefore, a comprehensive strategy should be developed to ensure all data collection aspects are secured and managed effectively.

Data Roles and Responsibilities

ALPR records are typically stored in databases that can be indexed, searched by individual or composite conditions, and analytically processed by applications that power ALPR use cases. This is an important and powerful compilation of data that must be managed judiciously. The two primary roles relative to this data are data owners and service providers.

The data owner is the organization that controls the data and decision-making authority. The data owner, typically the data's generator and user, determines how the data may be used, who it can be shared with, and its retention limits. For example, law enforcement is always the data owner for the ALPR data it generates. While this data may be shared with other law enforcement entities, the owner and provider of any particular data always retains control over all aspects of it. Therefore, other organizations that have received access to that data must act in accordance with the data owner's direction, such as adhering to retention limits established by the owner on the data.

A service provider is an entity that may take possession of data to store or process it on behalf of the data owner. The service provider operates at the behest of the data owner and enacts the owner's wishes and directions. This can include management of data sharing with other designated users, enforcing retention limits, etc. The service provider has no entitlement to the data and may not sell, derive secondary insights, or otherwise share it. Furthermore, they may only access the data to perform a function at the direction of the data owner. Law enforcement agencies often hire an outside company to be their service provider for ALPR data.

Storing and Processing ALPR Data

There are several general models for storing and processing ALPR data:

- The data is stored on-premises and processed by applications under the direct physical control of the organization that generates and uses the data.
- The data is stored off-premises by a cloud service provider and processed by applications in the cloud or on-premises under the direct control of the organization that generates and uses the data.
- The data is stored in the cloud or at an off site data center and is processed by a service provider.

In the first model, the data owner is effectively their own service provider, and there isn't necessarily a third party service-providing entity. The other two models imply some degree of a third party service provider. In those cases, the data may be held or accessed by another entity on behalf of the data owner. For ALPR systems, this could be either a cloud computing service or an ALPR technology vendor. However, in both cases, control of the data remains with the data owner.

Data Security

Law enforcement agencies should treat ALPR data like any other sensitive data it collects, uses, and manages. It should be protected as judiciously as law enforcement records, video, and other critical operational data. This includes ensuring responsible usage of the data by law enforcement personnel and vetting any service providers that may process the data. Law enforcement agencies must also apply rigorous cybersecurity practices to protect and secure the ALPR data it generates and uses. This includes, but is not limited to, proper authentication methods (multi-factor authentication is generally considered a best practice), data-sharing controls, and role-based access controls for users. Law enforcement agencies must ensure that their technology vendors provide adequate security practices to protect the ALPR data they possess and process on behalf of the agency.

2779
Whether a service provider provides on-premise technology, stores data on behalf of a law enforcement agency, or hosts the processing applications, they have an important role in ensuring the secure and trustworthy operation of an ALPR program. The service provider is responsible for securing the data it processes to protect it from unauthorized access, theft, or misuse. They must provide the necessary capabilities, controls, and training to enable law enforcement agencies to enforce their own defined data governance policies, security standards, and procedures. This includes:

- **Enforcement of Retention Limits:** This may be applied absolutely or in a role-based fashion. For example, the absolute retention limit for ALPR data could be three years, but only cold case investigators may access data older than six months.
- **Positive Controls Over How Data is Shared:** Data must only be shared after law enforcement specifically enables it with individual partners at its discretion and under the auspices of its policies.
- **Enforcement of Personnel Controls:** These controls include system and user-level authorization, role-based access controls, and regular audits.

The FBI's Criminal Justice Information Services (CJIS) Security Policy provides a comprehensive reference and standard that agencies may use to design or measure data management for their program. For cases where service providers take possession of ALPR data from law enforcement agencies to store and process on their behalf, agencies should consider using the CJIS Security Policy to assess and set expectations of service providers.[7] An explanation of relevant sections of the CJIS Security Policy can be found in Appendix D – CJIS Security Policy.

As mentioned earlier, cloud services may be part of an agency's ALPR program. These services' security and integrity depend on the efficacy of the underlying cloud platform. Cloud service providers (or service providers that operate their own data center directly) should comply with ISO 9001:2015, an internationally recognized standard for Quality Management Systems. Compliance with this standard should be independently audited and verified for compliance under the Statement of Auditing Standards Number 70 [SOC 2 Report]. In addition, compliance with FedRAMP medium security controls provides an additional level of validation and may be required for information sharing with federal entities. Even though license plate detection records are not personally identifiable, they may be linked through other sources that may enable the end user to input data that could be viewed as personally identifiable or criminal justice information.

ALPR Reader Device Integrity

An ALPR reader that captures ALPR images and does local image processing contains instances of ALPR data. This data may be transient or stored on the device for extended periods. Since ALPR readers are often distributed in the environment and may be difficult to physically secure, it is increasingly important to consider the device's ability to locally secure ALPR data that is either at rest or in motion. FIPS (Federal Information Processing Standards) 140 standards are used to evaluate the hardware and software integrity of cryptographic modules. This applies to many devices, including ALPR readers, that need to encrypt data to secure it from compromise. FIPS 140-2 is broken into four, successively increasing levels of security.[8]

- FIPS 140-2 Level 1 is the lowest and imposes limited requirements.
- FIPS 140-2 Level 2 adds requirements for physical tamper-evidence and role-based authentication.
- FIPS 140-2 Level 3 adds requirements for physical tamper-resistance (making it difficult for attackers to gain access to the sensitive information contained in the module) and identity-based authentication, and for a physical or logical separation between the interfaces by which "critical security parameters" enter and leave the module, and its other interfaces.
- FIPS 140-2 Level 4 makes the physical security requirements more stringent and requires robustness against environmental attacks.

Depending upon the specific environment where it is deployed, the ALPR reading device should, at a minimum, support FIPS 140-2 Level 2. Aspects of FIPS 140-2 Level 3 are also becoming increasingly desirable and necessary, especially as ALPR technology advances.

ALPR Operations Infographic

Several aspects of the operation of ALPR technology can be better understood when put in the context of the technological workflow.

2781

ALPR Synergy with Other Law Enforcement Technologies

As law enforcement gains access to more information, technology will help ensure the data is organized so law enforcement officers can solve complex policing problems. Any single data source, such as ALPR, only answers one of many questions. It only tells law enforcement where a vehicle was at a given time. ALPR alone does not answer critical questions such as whom the car belongs to or who has been associated with it before, whether any of those individuals have a history of involvement in similar incidents, and other critical questions.

By integrating data across common law enforcement data sources, those questions can be asked and answered immediately, drastically increasing the odds of solving cases. Here are a few examples:

> *Consider a situation where CCTV footage captures a partial plate on a vehicle shortly after the commission of a crime. In an ideal scenario, an ALPR database may be queried to determine the rest of the characters on the license plate. Then a separate RMS system could be queried to determine if that license plate has ever been mentioned in a case report.*
>
> *A platform has ALPR, RMS, citation, and crash data integrated into one place. An ALPR detection can be searched and then linked to see if that plate has been named in an RMS case, vehicle citation, or crash report, along with any involved individuals. Links between vehicles, people, and incidents can be seen without having to search each database individually.*
>
> *An ALPR alert occurs in a platform that has CAD & CCTV integrated. As a result, an immediate CAD call can be created to accompany the alert, and any relevant CCTV footage in the area can be attached and sent to the responding officer, better preparing them to engage with the vehicle that triggered the alert.*

In these examples, a singular piece of information would have failed to fully identify the suspect vehicle. It is the utilization of an ALPR database in conjunction with other technologies produces an actionable investigative lead. For ALPR detections to be used to their fullest potential, that data must be connected to other relevant data sets.

The ultimate goal of connected data should be to allow for insights that are impossible to see currently or take too much time to consider. Departments should own all their data, including ALPR detections, and be able to link, connect, or integrate data sets as department leadership deems appropriate. When developing an ALPR program, agencies should ensure their vendors are aligned with this perspective and are capable of facilitating integrations with other law enforcement technology.

Beyond ALPR: AI-Enhanced Vehicle Detection

With advances in image processing technology, specifically those afforded by artificial intelligence and machine learning, it is becoming increasingly possible to identify a vehicle solely from an image. Artificial intelligence is able to focus on characteristics of a vehicle such as make, model, color, or distinguishing attributes/markings. These advanced image processing technologies improve the accuracy of ALPR systems and allow law enforcement to corroborate ALPR information. For example, they could assist with confirming that the vehicle associated with a detection matches the description in the registration record. Image-based detection and identification will continue to advance and improve the efficacy of ALPR technology.

Case Law Related to ALPR

License plates are required in every state to display proof of registration. Registration identifies a particular vehicle and confirms that it meets minimum state-mandated safety requirements to be operated on public roadways. In addition, operators of vehicles must be licensed to drive legally on public roads.

It is possible in many states to own a vehicle and, if it is never parked or operated on a public roadway, not be required to display license plates. Furthermore, one can own a car but have no authority to operate it, just as one can be licensed to drive a car but never actually own one. Collecting information related to people and vehicles are separate and distinct concepts, although not entirely mutually exclusive. The alpha-numeric characters of a license plate alone do not indicate who owns the vehicle or is licensed to operate it.

For more than 50 years, the United States Supreme Court, and many lower courts, have repeatedly acknowledged that vehicles are inherently subject to greater regulation when operated on public roadways. In the age of enhanced technology, ALPR invokes specific legal considerations:

- Reasonable privacy expectations of those in vehicles on public roadways
- Persistent tracking and the nature of ALPR technology
- The nexus between license plates and personally identifiable information
- Collecting and sharing ALPR data
- The degree of intrusion authorized by an ALPR hotplate detection

An examination of existing case law related to these concepts follows. There is often no bright-line precedent when considering emergent technology. In such instances, reasonable legal conclusions can be inferred from cases related to other technology and privacy issues already adjudicated by the courts.

Privacy Expectations on Public Roadways

In 1967, the U.S. Supreme Court clarified in *Katz v. U.S. (1967)* that "the Fourth Amendment protects people, not places." [9] The Fourth Amendment of the United States Constitution ensures:

> *[The] right of the people to be secure in their persons, houses, papers, and effects, against unreasonable searches and seizures, shall not be violated, and no Warrants shall issue, but upon probable cause, supported by Oath or affirmation, and particularly describing the place to be searched, and the persons or things to be seized.*

In *Cady v. Dombrowski (1973),* the U.S. Supreme Court noted that vehicles, while "effects," are constitutionally different from a person's home. The case also referenced the regularity with which police engage in activity unrelated to the enforcement of laws, such as maintaining the efficiency of the flow of traffic and ensuring the safety of those using the roadways. The Court acknowledged that this regular contact with automobiles contributes to police being more often in "plain view" of evidence, instrumentalities of a crime, or contraband.[10]

Delaware v. Prouse (1979) offers historic guidance concerning the constitutionality of stopping or seizing vehicles. The U.S. Supreme Court cites, "the permissibility of a particular law enforcement practice is judged by balancing its intrusion on the individual's Fourth Amendment interests against its promotion of legitimate governmental interests."[11] One can reasonably infer that photographing a plainly visible license plate, on a public roadway, or from a location plainly visible from a lawfully authorized location, with no intrusion upon the vehicle occupants or otherwise interfering with their movement or affecting any person's possessory interest in the vehicle or license plate, is not a seizure constitutionally.

Lower courts have routinely ruled that law enforcement officers may, without specific suspicion, check the status of a license plate against a law enforcement database.[12][13] Therefore, searching aggregated photographs, which contain no specific information about a particular vehicle owner or operator, even when correlated with additional information such as the time, date, and location of the photograph, does not constitute a search.

Is ALPR Persistent Tracking?

The notion that vehicle travel on public roadways is an unavoidable element of modern living merits consideration, given how ALPR is deployed. Recent U.S. Supreme Court rulings related to law enforcement's use of other technologies have considered the inescapable and automatic nature of data collection. An analysis of these rulings is offered to differentiate the substantially greater capabilities of such technologies compared to those of ALPR.

Two recent U.S. Supreme Court rulings merit particular consideration for the use of technology to investigate the historical movement of persons. In *U.S. v. Jones (2012)*, the U.S Supreme Court held that police need a search warrant to install a covert GPS tracking device on a vehicle to monitor its location for an extended period of time. In *Carpenter v. U.S. (2018),* The Court ruled that police must secure a warrant before obtaining cell-site location information from service providers regarding an individual's location history.

The theme of both cases concerns the capacity that modern technology affords the government to explore comprehensive, specifically personal location information, which was not possible until the advent of recent ubiquitous technology. GPS and cell-site location information enable persistent automated tracking of a targeted individual's activity with such detail and scope that the techniques constitute a search. In the case of *Carpenter v. U.S. (2018),* the Government obtained 12,898 location points cataloging Carpenter's movements. This extensive amount of information amounted to an average of 101 data points per day during the period they obtained historical records.[14]

An ALPR system cannot independently predict life patterns accurately or be used to conduct real-time surveillance of any person or vehicle. Even if police acted with willful disregard for the protections of the Fourth Amendment, it is impossible to accomplish such a degree of ongoing surveillance using ALPR technology. A fixed ALPR camera may be able to collect information about every car that passes its location. Still, the data is limited to an otherwise anonymous characteristic of the vehicle, not automatically attributable to any individual without accessing other restricted databases, and for only a single moment in time at a single location.

Images of plates stored in the ALPR database are retained and made available for specified queries. Tangential information may include the nature of a vehicle's location, direction of travel, and any criminal justice information associated with the detection. As to the question of whether a collection of images from multiple cameras, aggregated in a searchable database implicates Fourth Amendment considerations, the US Supreme Court has not taken up precisely to what extent ALPR coverage, or how robust an ALPR database is, may trigger specific Fourth Amendment implications.

In *Commonwealth v. McCarthy (2020)*, the Massachusetts Supreme Judicial Court concluded that "While the defendant has a constitutionally protected expectation of privacy in the whole of his public movements, an interest which potentially could be implicated by the widespread use of ALPRs, that interest was not invaded by the limited extent and use of ALPR data in this case." The case involved law enforcement's use of four ALPR devices on two bridges to investigate a defendant's movements during a period of two months. In that case, the court ruled that the limited use of ALPR data did not violate the defendant's reasonable expectation of privacy.[15]

License Plates & Personally Identifiable Information (PII)

Individuals (people) are licensed, but a vehicle is registered. A vehicle is registered with an organization (typically a state), which then authorizes the vehicle to be driven on public roads and highways by a licensed driver. For example, passenger and commercial vehicles must be registered as a condition of use on a public thoroughfare. Upon registration, the state department of motor vehicles then issues a license plate which must be attached to the vehicle and openly displayed for vehicle identification purposes. The purpose of a license plate is to identify a vehicle uniquely, and it does not include personally identifiable information of any individual. By itself, a license plate number is an anonymous code unless combined with other registration information containing owner/operator information (i.e., a department of motor vehicles database or an employee or homeowner registration). Thus, an ALPR record is generated from publicly available data and corresponds with detecting a vehicle, not an individual, at a specific location and time.

The federal *Driver's Privacy Protection Act (DPPA)* was enacted in 1994 to "protect the personal privacy and safety

14 Carpenter v. United States, United States Supreme Court. 585 (2018). https://supreme.justia.com/cases/federal/us/585/16-402

15 Commonwealth v. McCarthy, 484 Massachusetts Supreme Judicial Court (2020). https://cases.justia.com/massachusetts/supreme-court/2020-sjc-12750.pdf

2784

of licensed drivers consistent with the legitimate needs of business and government." DPPA made it "unlawful" to access, disseminate, or otherwise misuse information held by a state's motor vehicle office, including information related to both drivers and vehicles, without the owner's consent or for another legitimate, legally authorized purpose, such as criminal justice purposes. ALPR systems do not automatically link to data governed by DPPA. Law enforcement can only obtain such protected information from other secure, access-restricted criminal justice databases.

The case of *Harrison Neal v. Fairfax County Police (2020)* examined the use of an ALPR system to passively scan and retain license plates that were not on a hotlist to determine if such a practice violated the state's *Government Data Collection and Dissemination Practices Act.*

A key element of the case was whether an ALPR system constitutes an information system governed by the Code of Virginia. The court found that the ALPR system did not, noting that the ALPR database can be searched only by license plate number, not by any person's information. Furthermore, the system does not gather identifying information about the vehicle owner. To acquire such personal data, an officer must query a wholly separate criminal justice database via a different computer program.[16]

California Code 1798.29 specifically expands the meaning of "personal information" to include information or data collected through the use or operation of an ALPR system. While not adjudicated by any court, ALPR information is considered personal information in California due to unique state legislation.

Data Collection & Sharing

A license plate is a required government instrument specifically intended to identify the vehicle to which it is affixed publicly. In the case of *United States v. Ellison (2006)*, the Court noted:

> *This court has yet to address in a published opinion the question of whether an individual has a reasonable expectation of privacy regarding their license plate. In two unpublished decisions, however, this court has agreed with the other circuits that have decided this issue by holding that no such privacy interest exists. The reasoning of these opinions, as well as that of the Supreme Court in related cases, leads us to agree that a motorist has no reasonable expectation of privacy in the information contained on his license plate under the Fourth Amendment.[17]*

Publicly viewing or photographing a displayed license plate constitutes activity protected by the First Amendment of the United States. The cataloging and subsequent sharing of such data remain largely regulated by state or local legislation. In the case of *U.S. v. Yang (2020),* the Ninth Circuit ruled that the defendant did not have standing to challenge government queries of a vendor's ALPR database for records of his movement when he kept a rental car beyond the contract due date. The court noted that Yang failed to establish that he had a reasonable expectation of privacy in the historical location information of the vehicle that was the subject of the query. The Court declined to address any potential privacy interests related to the warrantless use of ALPR technology.[18]

2785

ALPR Hits & Degrees of Intrusion

Several cases have affirmed that an ALPR hotplate detection, also referred to as a "hit," constitutes sufficient reasonable suspicion to affect a traffic stop. For example, in the case of *Hernandez-Lopez v. State (2013)*, the Georgia Court of Appeals held that an ALPR system merely aided the officer by augmenting his sensory faculties and that based on the alert provided by the ALPR, the officer had reasonable, articulable suspicion to conduct a traffic stop. [19]

Similarly, in the case of *Traft v. Commonwealth (2018)*, the Supreme Court of Kentucky held that an officer obtaining information linked to his license plate did not violate the defendant's rights under the Fourth Amendment. This information indicated that Traft had an outstanding bench warrant and, therefore, reasonable suspicion existed to stop the vehicle. Furthermore, the court noted that the license plate "was displayed in a place where he had no reasonable expectation of privacy."[20]

In the case of *Green v. City and County of San Francisco (2014)*, an ALPR system returned a hit based on a misread. The officer was transporting a prisoner at the time and could not verify the hit's validity. The image on the ALPR was "dark and blurry." The officer subsequently provided a description of the vehicle via police radio, including the incorrect license plate indicated by the ALPR system, not the actual plate displayed on the car. Dispatch ran the plate as provided and noted that it belonged on a pick-up truck.[21]

A second officer observed Green's sedan bearing the plate as broadcast by the first officer. However, this officer also failed to confirm whether the radioed license plate number matched the plates on Green's car. Consequently, Green was stopped, challenged at gunpoint by multiple officers, placed on the ground, and handcuffed. Green filed suit against the defendants, alleging claims under 42 U.S.C. 1983 and California state law for wrongful detention, false arrest, and excessive force. The Ninth Circuit ruled that "an unconfirmed hit on the ALPR does not, alone, form the reasonable suspicion necessary to support an investigatory detention."

While legally permissible to affect a stop based on an ALPR hit, independent verification of the validity of an ALPR alert should be considered a best practice. Verifying that the actual vehicle license plate and the read on the ALPR screen are safeguards against a potential unjustified intrusion upon any person. Such guidance should neither cause officers to hesitate when officer safety is a concern nor preclude officers from acting on indicators amounting to reasonable suspicion based on other observations coupled with their training and experience. However, inappropriate outcomes resulting from the use of law enforcement technology can have substantial repercussions on perceptions of police legitimacy and the continued availability of such tools.

In conclusion, ALPR systems detect license plates in public locations collecting information that is generally not considered private. Critical elements of an ALPR system, such as the extent of camera coverage, reasons for selecting fixed deployment locations, length of time that data is retained, and the extent to which the information is shared, may factor in with respect to if an ALPR system implicates Fourth Amendment considerations. The consistently responsible use and thoughtful deployment of ALPR technology will ensure that all civil rights and liberties are respected.

2786

Conclusion

As stated in the introduction, this product contains suggestions and recommendations, which, if adopted, will maximize ALPR technology's effectiveness while ensuring it is used ethically and responsibly. While this product provides a robust evaluation of the technology, it is impossible to cover every aspect of the technology. Therefore, the Working Group recommends that law enforcement use the tenets discussed in this document to help evaluate decisions regarding the use of ALPR technology. This must include the potential impact of ALPR technology on public trust and the community served. It is essential that, when implementing any technology program, law enforcement operate in a manner that is thoughtful, disciplined, and contextually mindful of its constituencies.

For those agencies wishing to implement an ALPR program but are still determining how to move forward, collaboration with other entities who have already developed robust, responsible programs is recommended. The sharing of best practices in crime-fighting technology among law enforcement has a history of beneficial impacts. Law enforcement must be good stewards of information and policies and be willing to share this with fellow law enforcement agencies wishing to begin using ALPR.

Law enforcement's use of ALPR is ubiquitous because the information these systems provide is advantageous. ALPR data has aided in countless successful criminal investigations and has proven to be one of the most valuable technologies available to law enforcement. Few technologies have aided law enforcement in keeping communities safe like ALPR. However, the capabilities of ALPR technology are continuously evolving, and the MCCA will continue to monitor it. The MCCA will remain engaged with all interested stakeholders and communicate the latest information with member agencies and the entire law enforcement profession so best practices can be adjusted as needed.

Acknowledgments

Major Cities Chiefs Association would like to extend a special thanks to the ALPR Working Group and its members listed below. The contents of this document would not be possible without the collaboration between these law enforcement professionals and the technology vendor participants.

Definitions

Automated License Plate Reader/Recognition (ALPR): ALPR systems comprise cameras that capture an image of a vehicle's license plate and use Optical Character Recognition (OCR) to automatically read license plate characters.

Contextual Photo/Image: An overview image of the area around a detection.

ALPR Record/Detection: Is generated when an instance of a vehicle license plate is detected, imaged, and processed to identify the plate.

Hit: A detection of a license plate that matches a plate previously registered on a hotlist or hotplate.

Hotlist: A file that contains the license plate numbers of stolen vehicles; AMBER, SILVER, or other law enforcement alerts; lists of license plate numbers known to be associated with specific individuals, such as wanted or missing individuals.

Hotplate: A license plate with a wanted status. It may also be entered into a system designed to provide a notification of future detections.

Misread: An incorrect translation of a license plate.

Fixed Camera: An ALPR camera that is affixed to a non-moving structure.

Mobile Camera: A vehicle-mounted camera.

Law Enforcement Data: ALPR data collected by law enforcement-owned ALPR cameras.

Data Retention: Refers to the amount of time that the collected data will be preserved.

Personally Identifiable Information (PII): Any representation of information that permits the identity of an individual to whom the information applies to be reasonably inferred by either direct or indirect means.[1]

National Crime Information Center (NCIC): An electronic clearinghouse of crime data, such as mug shots and crime records, available to virtually every criminal justice agency nationwide.[2]

Appendix A – Success Stories

Homicide

After committing a homicide, the suspect fled the scene by vehicle. During the investigation, investigators learned that the suspect drove a specific vehicle with damage to the body. Using the ALPR system, detectives created a geographic boundary around the crime location. While reviewing the historical ALPR detections from that immediate area, a vehicle matching the suspect's vehicle description was identified. Detectives then discovered the actual license plate registration information, which returned to the primary suspect. Another query of that vehicle through the ALPR system revealed that the suspect vehicle had fled the jurisdiction immediately after the homicide occurred. This was later confirmed and corroborated by the suspect's cell phone location records.

Homicide

During a road rage incident resulting in a shooting and murder, the suspect was reportedly driving a black hearse. Responding officers obtained the victim's license plate number and checked it through the ALPR system. The officers located an ALPR record of the victim's vehicle passing an ALPR deployment site three minutes before the shooting. The officers checked for other vehicles driving past the ALPR cameras around the same time as the victim. The vehicle driving directly behind the victim was a black hearse. The ALPR data, along with a tip from the public, were pivotal in the arrest. The suspect gave a full confession. The arrest occurred within only a few hours of the crime.

Homicide

The victim knocked on the suspect's hotel room door. Annoyed by the knocking, the suspect opened the door and immediately shot and killed the victim. Surveillance footage of the suspect and his associate leaving captured the type of vehicle used by the suspect but did not capture the license plate. An ALPR camera system was stationed just down the street from the hotel. Officers reviewed the ALPR database for the time frame around the homicide. One minute before the 911 call, the ALPR camera captured a detection of a vehicle matching the one observed in the hotel surveillance. Armed with the vehicle registration information, the vehicle's lien holder was contacted, which provided new investigative leads. Within 11 hours of the shooting, officers located the suspect's vehicle hidden in a home's garage. The suspect and his associate were detained, provided a confession, and later charged with homicide.

Burglary

A police agency used ALPR to identify two suspect vehicles involved in a burglary. Multiple suspects in two vehicles committed a residential burglary, with the resident shooting and killing one of the suspects. Doorbell camera videos were recovered, and homicide detectives used them to establish a timeline. ALPR searches focused on the timeline, which resulted in ALPR scans for both suspect vehicles. A subject associated with one of the vehicles was later determined to be involved and arrested for burglary.

Sexual Assault and Attempted Murder

A victim met the suspect at a bar. They left and the suspect drove them to the desert, where he sexually assaulted, beat, strangled, and ran her over. The vehicle plate from the bar where the incident began was queried in the ALPR system. Historical detections placed the suspect vehicle in the desert where the victim was assaulted and left behind, along with other areas where the victim reported they had driven before the assault. The ALPR data was critical in the arrest of this violent attacker.

Fatal Hit-and-Run Traffic Accident

ALPR was used to identify the suspect vehicle that left the scene of a fatal traffic accident after hitting two people. The make and model of the vehicle were identified but not the license plate. The license plate and other supporting evidence were discovered by leveraging the ALPR system. After the crime occurred, ALPR detection records showed significant damage to the suspect vehicle.

2790

Kidnapping

A male subject attempted to grab a female in a business parking lot. Video surveillance captured the subject and his vehicle. Detectives used video footage to determine the suspect vehicle's make, model, and year range. A query of the ALPR system provided sufficient information to confirm the suspect vehicle and registration. The male was later identified. A records check revealed he had two prior arrests for sexual assaults. He was later located and arrested for the crime of kidnapping.

Arson

A subject set fire to the sign and lawn outside an FBI office building. Surveillance footage showed a gold Chevy Tahoe with distinctive damage to the passenger and rear sides of the vehicle. The license plate number was not visible. Analysts searched more than 6,000 images in the ALPR database, looking for Chevrolet SUVs similar to the one in the surveillance footage. After searching the ALPR database, analysts found a vehicle with matching damage, identified the registered owner, then disseminated a bulletin for officers to locate the vehicle. Initially, officers could not locate the registered owner, who was transient. A few days later, a patrol officer spotted the vehicle based on the bulletin and detained the suspect. The suspect was positively identified and linked to the original arson and another one in a different part of the state. Less than one month later, the suspect accepted the criminal prosecution agreement offered by the prosecutors.

2791

Appendix B – Myths and Misconceptions

A review of case law provides a snapshot of the legalities supporting the use of ALPR technology. In contrast, some misinformation exists on the use of ALPR technology by law enforcement. Therefore, reviewing and understanding the myths and misconceptions about ALPR in law enforcement is essential.

MYTH

ALPR detections contain private, personally identifying information.

REALITY

ALPRs are designed to capture three details when a vehicle passes through their view: a photograph of the vehicle, the characters on the license plate of the vehicle, and the location, date, and time when the vehicle passes the ALPR.

Publicly-owned ALPR systems read the license plates of vehicles on public roadways and capture information that is generally not considered private. For example, if an individual were to stand by the side of a public road and take a picture of every vehicle that passed them, write down its plate number, and record the date and time, they would be within their legal rights to do so. Likewise, a person could place a camera on their property facing a public throughway and capture the same information an ALPR does. In *U.S. v. Ellison (2006)*, the Court explained that not only is there no privacy interest in a license plate number, but a subsequent entry into a computer system to retrieve other non-private information does not constitute a search.[3] By states mandating each vehicle operating on the roadway publicly display a license plate and even illuminate it at night, the expectation is for the license plate to be read at any time while on a public roadway.

An ALPR system does not automatically capture or record restricted information contained in an individual's motor vehicle records, such as their name, address, phone number, Social Security Number, driver identification number, etc. *The Driver's Privacy Protection Act of 1994* requires all states to protect this personal information ensuring ALPR reads are anonymous until additional steps are taken to access separate statutorily regulated databases. Therefore, when a law enforcement officer needs to access motor vehicle records based on data captured by an ALPR, they would need to perform the same manual processes to retrieve this information as they would in other investigative circumstances. Additionally, adequate policies limit access to ALPR data by requiring justification for the review of individual ALPR records. This effectively ensures that most ALPR-captured data is never even accessed before it is purged.

Therefore, retrieving non-public information based on ALPR data requires law enforcement to adhere not only to the policies and laws regarding the ALPR data but also to the policies and laws for accessing the restricted databases housing driver's license and vehicle information. In summary, ALPR systems do not grant expanded access to any non-public records databases, nor do they circumvent the auditing processes that are in place to ensure restricted data is accessed only for official use and as permitted by law.

3 United States v. Ellison, 462 F.3d 557, 561, United States Supreme Court. (6th Cir. 2006). https://caselaw.findlaw.com/la-court-of-appeal/1717448.html

MYTH

ALPR technology is a form of mass surveillance.

REALITY

Guided by proper policy and processes, ALPRs are effective tools for law enforcement to narrow the focus of investigations and limit negative collateral impacts when policing high-crime areas.

A scenario most major city police departments are familiar with is as follows: A motorist is stopped by police only to later be released and sent on their way in a case of mistaken vehicle identity. Their misfortune was caused by driving a vehicle matching the general description of one recently broadcasted of a suspect vehicle in a violent crime. Though the detention is usually short-lived, the trauma it causes may not be. This type of "wrong place, wrong time" scenario is most likely to occur when non-specific or incorrect information is relayed to officers during an in-progress incident. Even a single negative experience like this can spread quickly throughout a community, jeopardizing efforts to build trust. Unfortunately, these scenarios most commonly affect residents in neighborhoods disproportionately impacted by violent crime and gun violence. The use of ALPRs can help mitigate these occurrences.

ALPRs provide an additional mechanism to corroborate or refute witness accounts of suspect vehicles. This helps narrow the focus of law enforcement when canvassing and provides officers with the increased ability to bypass lookalike vehicles and only interact with the cars that truly contain the distinct characteristics of the vehicle suspected in the crime.

A common talking point designed to instill fear in ALPRs technology is that they "could" be used to track people involved in first amendment protected activities. The purpose of robust agency policy is to restrict use to legally permissible actions and ensure accountability if rules are broken. It must be noted that the same policies and laws governing law enforcement's actions without technology still apply when using technology. In fact, the audit trails in technology ensure that a hindsight review of any actions taken is afforded an even more detailed perspective than the actions taken without records produced by technology.

2793

Appendix C – State-Level Laws and Regulations

At least 16 states have statutes regarding the use of ALPR or the retention of data collected by ALPR technology. This information was derived from a database maintained by the National Conference of State Legislatures.[4] The states and their laws are as follows:

Arkansas-Ark. Code §§ 12-12-1801 to 12-12-1808

Prohibits use of ALPRs by individuals, partnerships, companies, associations or state agencies. Provides exceptions for limited use by law enforcement, by parking enforcement entities or for controlling access to secure areas. Prohibits data from being preserved for more than 150 days.

California-Calif. Veh. Code § 2413

Provides that the California Highway Patrol (CHP) may retain data from a license plate reader for no more than 60 days, unless the data is being used as evidence in felony cases. Prohibits selling or making available ALPR data to non-law enforcement officers or agencies. Requires CHP to report to the legislature how ALPR data is being used.

California-Calif. Civil Code §§ 1798.29, 1798.90.5

Establishes regulations on the privacy and usage of automatic license plate recognition (ALPR) data and expands the meaning of "personal information" to include information or data collected through the use or operation of an ALPR system. Imposes privacy protection requirements on entities that use ALPR information, as defined; prohibit public agencies from selling or sharing ALPR information, except to another public agency, as specified; and require operators of ALPR systems to use that information only for authorized purposes.

Colorado-Colo. Rev. Stat. § 24-72-113

Requires that video or still images obtained by passive surveillance by governmental entities, such as images from monitoring cameras, must be destroyed within three years after the recording of the images. Specifies that the custodian of a passive surveillance record may only access the record beyond the first anniversary after the date of creation of the record if there has been a notice of claim filed, or an accident or other specific incident that may cause the passive surveillance record to become evidence in any civil, labor, administrative, or felony criminal proceeding. Creates exceptions allowing retention of passive surveillance records of any correctional facility, local jail, or private contract prison and passive surveillance records made or maintained as required under federal law.

Florida-Fla. Stat. § 316.0777

Creates a public records exemption for certain images and data obtained through the use of an automated license plate recognition system and personal identifying information of an individual in data generated from such images. Provides that images and data containing personal information obtained from automated license plate recognition systems are confidential. Allows for disclosure to criminal justice agencies and to individuals to whom the license plate is registered in certain circumstances.

Georgia-Ga. Code § 35-1-22

License plate data may be collected and accessed only for a law enforcement purpose. The data must be destroyed no later than 30 months after it was originally collected unless the data are the subject matter of a toll violation or for a law enforcement purpose. Allows sharing of captured license plate data among law enforcement agencies. Law enforcement agencies deploying an automated license plate recognition system must maintain policies for the use and operation of the system, including but not limited to policies for the training of law enforcement officers in the use of captured license plate data. License plate data collected by a law enforcement agency is not subject to public disclosure.

4 Automated License Plate Readers: State Statutes," National Conference of State Legislatures. https://www.ncsl.org/research/telecommunications-and-information-technology/state-statutes-regulating-the-use-of-automated-license-plate-readers-alpr-or-alpr-data.aspx

2794

Maine-29-A M.R.S.A. § 2117-A(2)

Prohibits the use of automatic license plate recognition systems except for certain public safety purposes. Provides that data collected is confidential and may be used only for law enforcement purposes. Data collected may not be stored more than 21 days.

Maryland-Md. Public Safety Code § 3-509

Specifies the procedures and protocols that a law enforcement agency must follow in connection with the operation of an "automatic license plate reader system" and "captured plate data." Requires the State Police to adopt procedures to address who has access to the data and training for those individuals and to create an audit process. Provides that data gathered by an automatic license plate reader system are not subject to disclosure under the Public Information Act.

Minnesota- Minn. Stat. §§ 13.82,13.824, 626.8472

Relates to data practices; classifies data and provides procedures related to automated license plate readers; provides the data that may be collected by such readers; relates to requirements for the sharing of such data among law enforcement agencies; requires the maintenance of a public log recording the uses of such data; requires related records maintenance and the auditing of such records; requires written procedures governing access to the data; requires certain notification when setting up readers.

Montana-Mont. Code Ann. §§ 46-5-117 to -119

Prohibits the use of license plate readers by an agency or employee of the state or any subdivision of the state on any public highway. Provides exceptions for specific agencies or purposes, such as state or local law enforcement, if specified requirements are met. Except as provided, license plate data captured by law enforcement may not be preserved for more than 90 days after the date that the data is captured.

Nebraska- Neb. Rev. Stat. § 60-3201 to 3209

Requires any governmental entity that uses an automatic license plate reader (ALPR) system to adopt a policy governing use of the system. Governmental entities also must adopt a privacy policy to ensure that captured plate data is not shared in violation of this act or any other law. The policies must be posted on the internet or at the entity's main office. Requires annual reports to the Nebraska Commission on Law Enforcement and Criminal Justice on ALPR practices and usage. Provides that captured plate data is not considered a public record.

New Hampshire-N.H. Rev. Stat. Ann. §§ 261.75-b, 236.130

Restricts the use of automated license plate readers to local, county and state law enforcement officers, who shall only use the devices subject to specified conditions and limitations and for specified purposes. Provides that records of number plates read shall not be recorded or transmitted anywhere and shall be purged from the system within 3 minutes of their capture, unless the number resulted in an arrest, a citation or protective custody or identified a vehicle that was the subject of a missing or wanted person broadcast.

North Carolina-N.C. Gen. Stat. §§ 20-183.30 to .32

Requires state or local law enforcement agencies to adopt a written policy governing the use of an ALPR system that addresses databases used to compare data obtained by the system, data retention and sharing of data with other law enforcement agencies, system operator training, supervision of system use, and data security and access. Requires audits and reports of system use and effectiveness. Limits retention of ALPR data to no more than 90 days, except in specified circumstances. Provides that data obtained by the system is confidential and not a public record.

2795

Oklahoma-Okla. Stat. §§ 47-4-606.1

Provides that participating law enforcement agencies may use automatic license plate reader systems to access and collect data for the investigation, detection, analysis or enforcement of the state's compulsory insurance law. States that data collected under the program may not be used by any individual or agency for purposes other than enforcement of the compulsory insurance law, prohibits sale of the data under the program, and provides that data is exempt from the Oklahoma Open Records Act, except when retained as evidence of a violation of the compulsory insurance law. These provisions do not prohibit the use of any other automated license plate reader system by an individual or private legal entity for lawful purposes.

Tennessee-Tenn. Code §§ 55-10-302, 10-7-504(a)

Provides that any captured automatic license plate data collected by a government entity may not be stored for more than 90 days unless they are part of an ongoing investigation, and in that case provides for data to be destroyed after the conclusion of the investigation. Captured plate data from automatic license plate reader systems must be treated as confidential and shall not be open for inspection by members of the public.

Utah-Utah Code §§ 41-6a-2001 to -2005

Provides that a governmental entity may not use an automatic license plate reader system except for specified uses, such as by law enforcement agencies for the purpose of protecting public safety or conducting criminal investigations and by other government entities for limited other purposes. Provides that captured plate data are a protected record under the Government Records Access and Management Act, if the captured plate data are maintained by a governmental entity. Provides that captured plate data may only be shared for specified purposes, may only be preserved for a certain time and may only be disclosed pursuant to specific circumstances such as a disclosure order or a warrant. Government entities may not use privately held captured plate data without a warrant or court order, unless the private provider retains captured plate data for 30 days or fewer. Allows an institution of higher education to use automatic license plate readers under certain circumstances.

Vermont- 23 V.S.A. §§ 1607, 1608

Requires a law enforcement officer to be certified in the use of an automated license plate reader to operate such a system. Provides that active system data may only be accessed by an officer with a legitimate law enforcement purpose for the data. A legitimate purpose includes a person's defense against certain charges and does not include enforcement of parking or traffic violations other than commercial motor vehicle violations. Limits retention and access to information gathered through the use of an ALPR system. Requires the Department of Public Safety to adopt rules to implement the law. Requires the Auditor of Accounts to examine requests for data to determine whether the request and the release complied with the law.

2796

Appendix D – CJIS Security Policy

Agencies that wish to use the CJIS Security Policy to assess the security practices of a service provider that will be handling ALPR data should consider the following sections:

- Private Contractor User Agreements and FBI-CJIS Security Addendum [5.1.5]: Private contractors who perform criminal justice functions for a Criminal Justice Agency (CJA) shall be permitted to access CJI pursuant to an agreement between the CJA and the contractor that incorporates the FBI-CJIS Security Addendum approved by the Director of the FBI.
- Agency User Agreements [5.1.1.6]: Fingerprint-based background checks and written agreement with the agency when required.
- Secondary Dissemination [5.1.3]: If data is released to another authorized agency and not part of a primary information exchange agreement, this shall be logged.
- Security Awareness Training [5.2]: All personnel with access to CJI (Criminal Justice Information) shall receive security awareness training within six months of assignment, and biennially thereafter.
- Security Training Records [5.2.3]: Records of security awareness training shall be kept current and maintained by a Security Officer (CSO).
- Reporting Structure and Responsibilities [5.3.1.1]: Establishment of a primary Point of Contact (POC) for CJIS incident handling and response.
- Events [5.4.1.1]: Description of the events that must be logged within the system.
- Audit Monitoring, Analysis and Reporting 5.4.3]: Responsibility for review and analysis of audit records, at a minimum of once a week, to look for inappropriate or unusual activity.
- Audit Record Retention [5.4.6]: The agency shall retain audit records for at least one year.
- Least Privilege [5.5.2.1]: The agency shall approve individual access privileges and enforce the most restrictive set of rights and privileges needed by users for the performance of specified tasks. Logs maintain access privilege changes for a minimum of one year or at least equal to the agency's record retention policy, whichever is greater.
- Access Control Mechanisms 5.5.2.4]: One or more of the following must be employed: access control lists (users, groups, machines), resource restrictions (permission sets), encryption and strong key management, application-level access control.
- Unsuccessful Login Attempts [5.5.3]: CJIS Security Policy requires that after five consecutive invalid attempts, the account shall be locked out for a minimum of 10 minutes.
- System Use Notification [5.5.4]: The system shall allow a notification message to be displayed to let users know a) they are accessing a restricted system, b) usage is monitored, recorded and subject to audit, c) unauthorized use is prohibited and may result in penalties, and d) use of the system indicated consent to monitoring.
- Session Lock [5.5.5]: CJIS Security Policy requires that the system shall prevent access via a session lock after a minimum of 30 minutes of inactivity.
- Remote Access [5.6]: Rules for monitoring and controlling remote access via the internet.
- Use of Originating Agency Identifiers in Transactions and Information Exchanges [5.6.1.1]: An FBI-issued ORI number shall be assigned at the agency level and attached to all activities by the agency's users.
- Password [5.6.2.1.1]: Requirements and standards for passwords.
- Personal Identification Numbers [5.6.2.1.2]: Best Practices on PIN use.
- Advanced Authentication [5.6.2.2]: Advanced Authentication requirements.
- Identifier Management [5.6.3]: Requirements of agencies to manage user identifiers.
- Network Diagram [5.7.1.2]: Requirements for a network topological diagram.

2797

- Media Protection [5.8]: Requirements for security and protection of electronic and physical media.
- Physical Protection [5.9]: Requirements for physical security and access controls around all hardware, software and media.
- System and Communication Protection and Information Integrity [5.10]: Prevent CJI from being transmitted unencrypted across the public network.
- Boundary Protection [5.10.1.1]: Ensure that failure of boundary protection mechanisms do not result in unauthorized release of information.
- Encryption [5.10.1.2]: Minimum of 128 bit encryption when CJI data is transmitted beyond the physical security boundary.
- Intrusion Detection Tools and Techniques [5.10.1.3]: Requirements for intrusion detection tools.
- Cloud Computing [5.10.1.5 and Appendix G.3]: Recommendations for use of cloud computing and assessment of cloud computing service providers.
- Partitioning and Virtualization [5.10.3]: Requirements for partitioning of data and virtualization of resources.

Appendix E – ALPR Audit and Transparency Report Template

The following template provides a rudimentary example of the details and considerations in providing a published report about the performance and effectiveness of an ALPR program.

Automated License Plate Reader Program
Annual Transparency Report

Introduction

The introduction should provide context and background as to what the report is addressing. The introduction defines the specific objectives and purpose of the report. It indicates any problems that may exist and provides answers to problems explored. Finally, the introduction will preview the report and outline the report structure.

Discussion

This is the main body of the report, and it has two primary purposes. The first is to share and explain the conclusions. The second is to justify any recommendations that may be made in the report.

Specific data points that may be considered:

- Number of detections
- Number of hotplate hits
- Number of queries conducted by users
- Number of arrests directly related to ALPR
- Number of user-generated hotplates
- Breakdown of hotplate hit types
- Year-over-year analysis and trends

Conclusion

This section should relate to the information shared in the report. It should be specific to the objectives of the report. It may also address any issues that may be interpreted from the information shared. The conclusion should be brief, logical, and specific.

Recommendations

Recommendations shared should point to future action that can be completed. Recommendations should be feasible, action-oriented and arranged in order of importance.

Massachusetts Department of State Police
Automated License Plate Recognition (ALPR) System
Memorandum of Understanding and Agreement

THIS AGREEMENT, made and entered into this 01 day of June, 2022 by and between the Department of State Police, hereinafter referred to as "Department," and the

Taunton Police Department, a public entity, hereinafter referred to as "Agency," collectively referred to as "Parties."

WHEREAS, the Department contracts the services of one or more vendors to host an Automated License Plate Recognition (ALPR) database to store ALPR data; and

WHEREAS, the Parties provide public safety services within their respective jurisdictions; and

WHEREAS, the Parties have found it to be of mutual benefit to provide for the most efficient utilization of their resources and services in the application to public safety efforts within their respective jurisdictions; and

WHEREAS, the Parties are committed to cooperation and coordination in providing the highest level of public safety services to the public, guided by the principle that performing cooperatively is in the best interest of the public; and

WHEREAS, the Agency desires to use the ALPR system contracted and managed by the Department to facilitate the storage of ALPR information generated by the Agency; and

WHEREAS, the Agency desires to share law enforcement information owned by the Agency under the conditions set forth in this Agreement.

NOW, THEREFORE, for and in consideration of the covenants contained herein, IT IS HEREBY AGREED, by and between the Parties as follows:

1. PURPOSE:

The purpose of this Agreement is to provide a standardized approach and method of storage, retention, sharing, and access of ALPR data between the Department and Public Safety Agencies hosting ALPR data on the Department's ALPR system.

2. COSTS:

The Department shall be responsible for the costs of purchasing and maintaining the ALPR system as long as such funding is available to the Department and authorized by the appropriate authorities of the Commonwealth. Participating agencies shall be responsible for the costs of purchasing, servicing, maintaining, repairing, and/or licensing the ALPR equipment used by their respective agency. The Department shall not be responsible for any costs incurred by the Agency for the purchasing, servicing, maintaining, repairing, and/or licensing of the ALPR equipment owned or used by the Agency. The Agency shall inspect the Agency's ALPR equipment on a regular basis and document each inspection. Any irregularities or malfunctions of any ALPR equipment owned by the Agency or of any ALPR information shall be reported to the Department immediately and shall be addressed and repaired by the Agency as soon as reasonably possible.

3. DATA ACCESS AND SECURITY REQUIREMENTS:

a. System Availability: The Department will work with the vendor(s) to keep the ALPR system software and servers online and available with downtime limited to necessary system maintenance activities or to any outages that are beyond the control of the Department.

b. Data Sharing: ALPR data contributed by the Agency will be accessible for official purposes to all Agencies that have entered into an ALPR Agreement with the Department. The Agency shall not otherwise share ALPR data with or provide ALPR data to any person, entity, or government agency, other than a law enforcement agency, unless such disclosure is authorized by policy or court order or unless such disclosure is required by the Massachusetts Rules of Criminal Procedure or Rules of Superior Court governing discovery in criminal matters.

c. Security Requirements: The Department and the Agency agree to enforce and maintain security requirements for the information stored in the ALPR system as specified in the Agreement. The Agency agrees that the information hosted in the ALPR system shall be used for law enforcement purposes only and that only law enforcement agency employees that have been subject to appropriate background screening shall be allowed access to the system.

   Background screenings must be fingerprint-based and include check of both the state and national criminal history repositories. If a felony conviction of any kind is found, access to ALPR system shall not be granted. The Agency agrees not to share

passwords, user logins, or allow the ALPR software to be otherwise used by Agencies who have not entered into an Agreement with the Department allowing such activity.

An employee of the Agency may operate an ALPR unit that is connected to the Department's ALPR system or access the Department's ALPR system software only if the person has been designated as an authorized user by the Chief of the Agency or designee, and has received training from the Agency or the Department on the proper use and operation of ALPRs and any policy or procedures governing the use of ALPRs and ALPR data issued or adopted by the Agency.

4. IMPLEMENTATION OF POLICY:

The Agency shall, within 30 days of execution of this Agreement, adopt the Department's General Order TRF-11 as the policy and procedure document that will govern the Agency's use of and interaction with the Department's ALPR system. The Agency agrees that it has been provided with physical or electronic copy of General Order TRF-11, has had sufficient time to read, review, and understand the document in its entirety, and agrees to be bound by the provisions contained therein. The Department agrees to inform the Agency of any updates or modifications to General Order TRF-11, and the Agency understands and agrees that any updates to General Order TRF-1I will be binding upon the Agency unless the Agency elects to terminate the Agreement and withdraw from participation in the Department's ALPR system.

5. BENEFITS TO AGENCY:

a. Data Links: The centralized storage of ALPR data will provide a solution to the problem of inaccessible or irretrievable information due to disconnected ALPR systems and the difficulty in sharing information across jurisdictional boundaries.

b. Reduction of Costs: The centralized storage of ALPR data will reduce the financial burden to the Agency that is associated with purchasing and maintaining ALPR software.

6. RECORDS AND REPORTS:

The Department protects all ALPR information as personally identifiable information (PII) because ALPR information may be combined with other information to specifically identify a unique individual. As such, all information retained in the Department's ALPR system is the sole property of the Department. The Agency agrees that information stored in the ALPR system for the Agency may be subject to disclosure under certain circumstances. The Agency will refer to the Department for review all information requests for Agency information, including, but not

limited to, public records requests, court orders, legal motions, subpoenas, and/or summonses. The Department's Legal Department shall determine the best manner of responding to all requests for Agency information.

7. RETENTION

All ALPR information obtained by the Agency from the Department's ALPR system shall be retained pursuant to the Department's General Order TRF-11.

8. AMENDMENTS:

Any changes and additions to this Agreement shall be made by written amendments to this Agreement and shall not be effective until approved in writing by the Parties. A joint review of this Agreement may be requested at any time by either of the Parties to identify needed changes, which may be amended by written mutual agreement of the Parties.

9. DURABILITY:

This Agreement shall become operational and effective upon execution by the Parties. Parties may terminate the Agreement at any time by giving written notice to the other Parties at least thirty (30) days prior to the effective date of termination. The Agreement may also be terminated by the Department without prior notice to the Agency in the event of executive, legislative, or judicial mandate which requires the unanticipated discontinuation or modification of the ALPR program. In the event of such termination, the Department will notify the Agency as soon as practicable.

10. BENEFITS:

The Parties shall agree that the provisions of this Agreement are not intended to directly benefit and shall not be enforceable by any person or entity not a party to this Agreement. This Agreement is not intended to confer any legal rights or benefits on any person or entity other than the Parties of this Agreement.

11. INDEMNIFICATIONS:

Parties shall defend, indemnify, and hold harmless every other party and its officers, agents, employees, and representatives from any and all losses, liability, damages, claims, suits, actions and administrative proceedings, and demands and all expenditures and cost relating to acts or omissions of the indemnitor, its officers, agents, or employees arising out of or incidental to the

performance of any of the provisions of this Agreement. Parties do not assume liability for the acts or omissions of persons other than their respective officers, its employees, agents, and MOU officers.

The Agency releases the Department from any liability relating to the loss or destruction of data contributed by the Agency. The Agency further releases the Department from any liability relating to the loss of the Agency's access to the ALPR system due to system outage, commercial vendor failure or malfeasance, or executive, legislative, or judicial mandate which requires the unanticipated discontinuation or modification of the ALPR program. The Agency further releases the Department from any liability relating to the release of data or information contributed by the Agency pursuant to a lawful procedure or order.

12. ASSIGNMENT PROHIBITED:

Parties to this Agreement may not assign any right or obligation pursuant to this Agreement. Any attempted or purported assignment of any right or obligation pursuant to this Agreement shall be void and of no effect.

IN WITNESS WHEREOF, the parties hereto have executed this Agreement on the date as written below.

Colonel Christopher S. Mason Massachusetts State Police	Chief Edward J. Walsh Taunton Police Department
	06/06/2022
Date	Date

Department of State Police
General Order

Effective Date:	Number:
November 10, 2021	**TRF-11**
Subject:	
Automatic License Plate Recognition	

Policy

The availability and use of the Automatic License Plate Recognition (ALPR) System provides opportunities for enhancing the productivity and effectiveness of law enforcement agencies. The ALPR System also provides opportunities to increase public and officer safety.

The Department shall only utilize the technology in furtherance of official and legitimate law enforcement operations and public safety. All Department Employees shall abide by the guidelines set forth herein when using the ALPR System.

Purpose

To establish guidelines and procedures for the proper use and application of the ALPR System within the Department of State Police, and to provide guidelines and principles for the collection, access, use, dissemination, and retention of ALPR information by members to ensure that this information is used only for legitimate law enforcement purposes and the privacy, civil rights, and civil liberties of individuals are not violated.

Definitions and Acronyms

Alert: A visual and/or auditory notice that is triggered when the ALPR System receives a potential hit on a license plate.

Alert Data: Information captured by an ALPR relating to a license plate that matches the license plate on a hot list.

ALPR Data: Scan files, alert data, and any other documents or data generated by, or obtained through, utilization of the ALPR System.

ALPR Data Query Logs: A record of a search or query of ALPR data.

Automatic License Plate Recognition (ALPR): Automatic license plate recognition technology uses high-speed cameras combined with sophisticated computer algorithms capable of converting the images of license plates to electronically readable data. The ALPR System captures an image of a license plate and converts it to a text file using Optical Character Recognition (OCR) technology. The technology also compares the digital images of license plates to the CJIS-NCIC Hot file database. The ALPR System is configured as either fixed, mobile, or portable.

Definitions and Acronyms, continued

Hit: An alert that a license plate matches a record maintained in the ALPR database related to stolen vehicles, wanted vehicles, or other alert type files that support investigation or which have been manually registered by a user for further investigation.

Hot List: License plate numbers of vehicles of interest, such as stolen vehicles, unregistered vehicles, vehicles owned by persons of interest, and vehicles associated with AMBER Alerts, Missing Child Alerts, Missing College Student Bulletins, Silver Alerts, Incapacitated or Endangered Persons, Be On Look Out (BOLO), Attempt To Locate (ATL), and Wanted or Missing Person broadcasts or bulletins in which a license plate number is included, or other license plate numbers of interest entered by the Department or an authorized officer.

Hot List Download: The method by which the hot list data is transferred to a computer within a law enforcement vehicle.

Optical Character Recognition (OCR): The technology that supports the automated reading and digitizing of images of license plates that are captured by the ALPR System.

Authorized Uses

The provisions of this policy are provided to support authorized uses of ALPR information. Authorized uses may include, but are not limited to, the following:

- Investigation and prosecution of suspected criminal (including terrorist) incidents; the resulting justice system response; the enforcement of sanctions, orders, or sentences; or the prevention of crime;
- Enhance Department's AMBER/SILVER or other law enforcement alerts and real-time response capability by deploying and networking ALPRs across the state to more rapidly identify and locate vehicles related to potential child-abduction or other serious crimes;
- Alert law enforcement that a particular license plate on a "hot list" (e.g., a stolen vehicle or a vehicle associated with a wanted individual) is in close proximity to an ALPR to dramatically reduce the recovery time of stolen vehicles and assist in locating dangerous and wanted individuals;
- Identify plates associated with potential witnesses and/or victims of crime;
- Support the Department's homeland security mission by protecting critical infrastructure from subjects who intend to damage or disrupt the systems and locations that allow for travel and the free flow of commerce;

Authorized Uses, continued

- Identify vehicles linked to stolen license plates or other motor vehicle traffic violations;
- Provide situational awareness for law enforcement related to public safety or otherwise relevant to their authorized duties;
- Support local, state, federal, and tribal public safety departments in the identification of subjects associated with/as targets of criminal investigations;
- Support law enforcement response to critical incident responses and special events;
- Support special operations, such as high-crime-area patrols, gang investigation/suppression, operating under the influence initiatives, enforcement details, directed criminal investigations, and other investigations; and
- Support emergency and public safety situations including, but not limited to terrorist threats, kidnappings, missing persons, and felons actively traveling to or from a crime scene.

ALPR Administrator

The Division Commander of Field Services (DFS) shall:

- Designate a Commissioned Officer as the ALPR Administrator; and
- Ensure the ALPR Administrator has oversight for the ALPR System deployment, operations, and maintenance.

The ALPR Administrator shall:

- Ensure the proper selection of personnel approved to operate the ALPR System and maintain an adequate number of trained and authorized users;
- Authorize any requests for ALPR System use or data access according to Department policy;
- Coordinate with all Divisions to ensure resources are available and deployed to meet Departmental investigative needs;
- Ensure that designated, trained personnel check equipment on a regular basis to ensure functionality, camera alignment, and removing from service any equipment that falls outside expected functionality until deficiencies are corrected;
- Designate users who have been properly trained in the use and operational protocols of the ALPR System;
- Allow access to the ALPR System for those users with an approved login and password; and
- Ensure that any changes in hardware, software, policy, or law are the subject of continuing in-service training or bulletins.

Subject: Automatic License Plate Recognition	Number: TRF-11

ALPR Procedures

The use of ALPR technology shall be approved by the Colonel/Superintendent or designee.

ALPR System and information shall be:

- Accessed and used only for official and legitimate law enforcement purposes;
- Used for searches of historical ALPR data, in accordance with this policy and other Department policies or regulations where applicable; and
- Used for searches of ALPR data by members of this Department or by other law enforcement agencies through the ALPR Administrator.

ALPR Operations

Members using the ALPR System shall:

- Ensure, at the start of each shift, the ALPR System has been updated with the most current hot lists available;
- Verify, prior to use, the aim of the ALPR camera(s) to ensure it is focused on the correct lanes of traffic;
- Ensure ALPR equipment is cleaned and maintained according to the manufacturer's recommendations; and
- Notify the ALPR Administrator of any malfunctions promptly.

ALPR Alerts/Hits

The member shall, prior to initiation of a stop based on an ALPR Hit or Alert:

- Visually verify that the vehicle plate number matches the plate number run by the ALPR System, including both:
  - Alphanumeric characters of the license plate; and
  - The state of issue.
- Verify the current status of the plate through:
  - The Commonwealth's Criminal Justice Information System (CJIS), or
  - National Crime Information Center (NCIC), or
  - Department's Records Management System (RMS), or
  - Another appropriate source of data, as soon as practicable.

ALPR Alerts/Hits, continued

License plate numbers and date/time location collected through an ALPR, when taken alone, may not be sufficient to identify the individual associated with the vehicle. The Department may be able to link the ALPR information to an individual through, or in combination with, additional information from other sources, such as a check of vehicle registration. It is thus the investigative process that ultimately identifies individuals and not solely a reliance on the information obtained from the ALPR system's automated collection of license plate numbers.

Manual Entry of Data/Manual Hot List

Manual entries may include, but should not be limited to:

- AMBER Alerts;
- Missing Child Alerts;
- Missing College Student Bulletins;
- Silver Alerts;
- Be On Look Out (BOLO);
- Investigative needs;
- Attempt To Locate (ATL); or
- Wanted or Missing Person broadcast or bulletin in which a license plate number is included.

Manual entries entered into the ALPR System shall be:

- Manually updated when the information changes or is no longer current;
- Documented with the specific reason by the member;
- Documented with agency case number; and
- Given a retention date of one (1) year or less.

ALPR Data: Logs, Sharing, Dissemination, and Retention

The following process shall apply to ALPR Data:

- A Query Log is internally maintained by each instrument for each transaction;
- Data can be accessed, retrieved, or shared for official and legitimate law enforcement business only; and
- Retention of data shall be determined by the Department of Criminal Justice Information Services (DCJIS) Policy.

The Department will prohibit access, use, or dissemination of ALPR information for:

- Any purpose that violates the Constitutions or laws of the United States or the Commonwealth of Massachusetts, including the protections of the Fourth Amendment;

ALPR Data: Logs, Sharing, Dissemination, and Retention, continued

- Based solely on an individual's or organization's religious, political, or social views or activities; their participation in a particular noncriminal organization or lawful event; or their race, ethnicity, citizenship, place of origin, age, disability, gender, gender identity, sexual orientation, or other classification protected by law;
- Non-law enforcement or personal purposes;
- The purpose of prohibiting, infringing upon, or deterring individual activities protected by the First Amendment, such as freely practicing one's religion, freedom of speech and peaceful assembly, freedom of the press, and the right to petition the government for the redress of grievances;
- Harassing and/or intimidating any individual or group;
- Targeting of any individual or group by means of camera placement or data use in a discriminatory manner; and
- Any other access, use, disclosure, or retention that would violate applicable law, regulation, or policy.

The Department protects all ALPR information as personally identifiable information (PII) beeause ALPR information may be combined with other information to specifically identify a unique individual (i.e., the identity of an individual could be directly or indirectly inferred by using information that is linked or linkable to that individual).

Information Quality Assurance

Original ALPR information will not be altered, changed, or modified in order to protect the integrity of the data. Any changes will be maintained as a separate and additional record, and such record will be identified as having been modified.

The Department will correct, notate, delete, or refrain from using ALPR information the Department originated and found to be erroneous or deficient. Originating agencies external to the Department are responsible for reviewing the quality and accuracy of the ALPR information provided to the Department and must take reasonable steps to correct or amend the information upon learning that it is inaccurate or deficient.

The Department will advise the appropriate point of contact, in writing or electronically, when the Department's ALPR information is alleged, suspected, or found to be erroneous or deficient.

Security

The following shall apply to ALPR system and information security:

- The Department of Criminal Justice Information Services of the Executive Office of Public Safety and Security will operate ALPR servers in a secure facility protected from external intrusion and will utilize secure internal and external safeguards against network intrusions. Any access to DCJIS ALPR information from outside the facility will be allowed only over secure networks;
- The Department and DCJIS will store ALPR information in a manner that ensures that it cannot be added to, modified, accessed, or purged except by personnel authorized to take such actions;
- Access to Department ALPR information will be granted only to personnel whose positions and job duties require such access and who have successfully completed a background check and training;
- Usernames and passwords to ALPR information are not transferrable, must not be shared by Department personnel, and must be kept confidential;
- Queries made to the Department's ALPR information will be logged into the system identifying the user initiating the query. All user access, including participating agency access, and queries are subject to review and audit; and
- The Department and DCJIS will maintain an audit trail of accessed, requested, or disseminated Department-held ALPR information. The audit trail will be retained for a minimum of one year. It will include all requests for access to ALPR information, the specific purposes for each request, and what ALPR information was disseminated to each individual in response to that request.

State Central Repository

The Department has agreed to:

- Electronically submit captured ALPR data to the state repository maintained by the DCJIS at the Commonwealth's Public Safety Data Center.

The Department and its users agree to the terms of this policy and to the Commonwealth of Massachusetts *Global Justice and Public Safety Information Sharing Policy* of the DCJIS.

Policy Review

The ALPR Administrator shall:

- Annually review this General Order and the procedures contained herein; and
- Make recommendations for any necessary amendments through channels to the Colonel/Superintendent or designee.

Because existing technology may progress and new technology may develop, giving rise to both legal and technological issues, the Department will monitor and assess the appropriateness of this policy, and make amendments as necessary.

MSP

Status report

Feb 10th

2816 Delivery Actions

- Completed:
  - Preventive Monitoring:
    - Scripts for monitoring storage and memory consumption with automatic restart (PAGIS microservice when the memory consumption is above 80% for example)
    - Scripts for monitoring the microservices restart – After implementing the Workaround, there have been no more service interruptions.
- Completed:
  - Improve memory monitoring of PAGIS micro-services for debugging purposes to allow us to identify which objects produce the memory leak problem
  - The delivery team is reviewing release 57 in the staging environment in order to deploy to MSP on Thursday 1/12 – Released on Thursday 1/19
    - Search screen - Increase search pagination from 15 to 60
    - Offline Notifications - Device offline notifications to include a "no reads received" option.
    - Reports - This to include bigger picture, Device, System and User time stamp.
    - Notification Sort - Profile sorting by Name
    - Time access filters - Ability to permission trim a user group to access only a certain amount of historical data, i.e., 24 hours or 30 days.
    - Addressed all of the issues above.

Development

RC 58

Move to QA on 1/17 for the next 2 weeks
Resolve the 16 bugs:

- Read Search Filter Stops Working
- Devices Save Function Not Working
- Wildcard Searches Timing Out
- Device List Scroll Broken
- Filters randomly disappear

The RC is in QA and those reported on Friday Jan 20th will be added, which are:

- Aspect ratio in the image of the report
- Last modified field to update only when configuration changes
- Notification profile order - Hotlist names are not complete displayed

All the bugs reported are in the RC 58 (in QA)

RC 59

Start on 1/17 and ends on 1/27

Resolve the last 3 bugs:

- Mantis Day & Night filters
- Interoperability
- Mobile Covert hotlist

This concludes the bugs registered for MSP

- The Sprint has already started

All the bugs are in QA

RC60 to RC75

In each sprint the plan is to implement at least 2 requirements and enhancements to conclude the 26 tickets registered.

The plan is to finish at the beginning of October

In the RC 60 is added:
- Change the date component to one that allows typing editing
- Date and time are seen on top
- Hotlist screen date move when zooming
- In the read report the text will be changed so that it is not doubly denied

- RC 60 - In progress

The plan is to deploy a new release every two months starting in March with the version that closes the 8 (plus 8 that are added with the feedback received on Friday Jan 20th) bugs open at this point.

MSP

Status report

March 6th

2823 Delivery Actions

- Completed:
  - Preventive Monitoring:
    - Scripts for monitoring storage and memory consumption with automatic restart (PAGIS microservice when the memory consumption is above 80% for example)
    - Scripts for monitoring the microservices restart – After implementing the Workaround, there have been no more service interruptions.
  - The delivery team is reviewing release 57 in the staging environment in order to deploy to MSP on Thursday 1/12 – Released on Thursday 1/19
    - Search screen - Increase search pagination from 15 to 60
    - Offline Notifications - Device offline notifications to include a "no reads received" option.
    - Reports - This to include bigger picture, Device, System and User time stamp.
    - Notification Sort - Profile sorting by Name
    - Time access filters - Ability to permission trim a user group to access only a certain amount of historical data, i.e., 24 hours or 30 days.
    - Addressed all of the issues above.
  - Release 58
    - Improve memory monitoring of PAGIS micro-services for debugging purposes to allow us to identify which objects produce the memory leak problem (in QA with RC58)
    - RC58 was deployed in Staging and Demo environments (3/2)
  - In progress:
    - During March 6 and 7, the deployment in MSP (Scripts and Database update) will be prepared.
    - The version will be deployed in MSP on Wednesday the 8th at night.
    - The RC60 is in progress (It is planned to release in May)

Development

2824

RC 58

Resolve the 15 bugs:

- Read Search Filter Stops Working
- Devices Save Function Not Working
- Wildcard Searches Timing Out
- Device List Scroll Broken
- Filters randomly disappear
- Aspect ratio in the image of the report
- Last modified field to update only when configuration changes
- Notification profile order - Hotlist names are not complete displayed
- Mantis Day & Night filters
- Interoperability
- Mobile Covert hotlist
- Change the date component to one that allows typing editing
- Date and time are seen on top
- Hotlist screen date move when zooming
- In the read report the text will be changed so that it is not doubly denied

The release Is now in QA

RC 60

Planned to be deployed in May 2023

In progress:
- Hotlist Auto-notification
- Reads visibility based on permits and roles
- Improve in suspicious traveller

To-Do:
- Reports Total Day
- Change name of filters
- Search improvements
- Improvements on Hotlist Frontend

RC61 to RC75

In each sprint the plan is to implement at least 2 requirements and enhancements to conclude the 26 tickets registered.

The plan is to finish at the beginning of October 2023.

Note: RC58 and RC59 were merged.

RC58 in procees to be deploye this week.

Release plan (Bugs Pagis) - updated 3/5

2828

Summary	Priority	Status	Type	Version	Release Date
Delayed Login due to hotlist purge cycle. • This would also cause missing hotlist. • Very long delays at login.	Medium	Released	Bug	2.15.2.12	1/25/23
Hotlist Overflow database. • Special characters in Hotlist names causing exceptions in PAGIS.	Medium	Released	Bug	2.15.2.12	1/25/23
PAGIS crashing. • Due to large number of hotlist and hotplates.	High	Released	Bug	2.15.2.12	1/25/23
Black & white image in overview. • Caused when color capture is enabled.	High	Released	Bug	2.15.2.12	1/25/23
Windows display scaling effects. • Causing OCR and Overview image to be clipping.	Medium	Released	Bug	2.15.2.12	1/25/23
Inconsistent and random GPS coordinates, including random characters in S/N watermark.	High	Released	Bug	2.15.2.13	2/27/23
Alert delays. • Caused by PAGIS duplicating hotplates in the database. • This would also cause delayed hit notifications. • General slowness in the system.	High	In Q&A by Michael Roth	Bug	2.15.2.14	1/03/23
• Covert Hotlist Showing Hits	High	In Q&A by Michael Roth	Bug	2.15.2.15	2/24/23 3/3/23 – Installer released to MRoth

Copyright © 2021 Neology, All Rights Reserved.

- PAGIS Release 2.15.2.14
  - Released to QA on Febrary 20th
  - Fixes included in this version:
    - NTPStatusLocked flag behavior for MDC was fixed.
    - Default US Datetime format
    - Alert sound is still played when Mute option in PAGIS is enabled
    - Delay when closing session was fixed
    - Delay when saving sync settings was fixed
- In progress (next release:
  - Covert hotlist is showing & sounding hits in single pane mode, Dual screen mode plays hit sound. expected behavior it to show no signs of hits from covert hotlist. (Reported 2/22)

Q&A Process

2830

- The immediate actions are:
  - Review the unit testing process – in progress (March 15th)
  - Re-implement a peer code review process on the development team – in progress (February 28th)
  - Implement load and stress tests for each release – in progress (March 31th)
    - First Load and Stress test is in progress during this week 2/27
  - Review in detail the manual testing process – in progress (April 30th)
  - Review in detail the automatic testing process – in progress (April 30th)
  - Perform a root cause analysis of each error that reaches production - Done
  - Add usability test for every change in UI – Completed (February 15th)

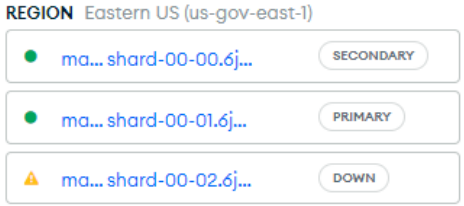
SX4e[2831] Hardware / RMA

- Deep dive analysis on SX4e RMA's is on-going;
- Initial analysis shows no immediate / obvious clustering of same source
  - Dead CMOS Battery; Power Cable Shorted; Win10 Image issues



- Current recommendation is to ensure all units are running latest Software image (at least upgrade from NE220311 to NE220701 image)

- As interim, in addition to Service Spares already provided to MSP, an additional SX4e (with current imaging, extended production soak etc) shall be provided as hot spare to MSP to minimize Mobile Unit downtime.

1/24[2832] – Incident Overview - Closed

- Partial Outage of BOSS4 User-Interface with degraded service caused by one (of three) nodes being unresponsive
- Impact was seen on one microservice (API Gateway) linked to User Interface although all other parts of the system continued to function. No additional impact since 1/24.
- Automatic restarts and reconnection is built into this part of the system however continued instability resulted in manual intervention by Neology Tech Support team
- Total length of incident from initial automated activity through to restoration and completion of system health checks was 1hr 41min.
- On-going analysis of log files continues – initial analysis noted Node/Cluster restarts and rebalancing. Involving 3rd line team in analysis
- Suggestion made that where user interruption / outage is noted that Neology is provided with MSP User Email Group so notifications can be sent out to avoid users routing via Noah.
- Actions
  - Today 1/25 The incident will continue to be analyzed by the Solutions Delivery team
  - The case with Mongo will also be escalated because the incident occurred on the database side. Tech support case was created (1081)
  - An improvement in monitoring will be analyzed and implemented to identify this case in a more timely and automatic manner (Feb 10th). In deployment, additional scripts created to manage the log files.
  - The micro-service will be improved so that if the connection to the default node of the database cluster fails, it will try it with the next one (will be released with RC60 in May).

QA IN DEVELOPMENT PROCESS

2833

neology

Definitions	Share with the team	Start coding	Send to develop environment	Internal Test (New)
STEP1	STEP2	STEP3	STEP4	STEP5
				
1- Meetings with Product Owner 2- Create tickets on Jira 3-Create documents requirements/user stories	1- Internal meeting with develop team 2- Share documentation: • jira ticket • Requirements • User stories • Criteria of acceptance	1- Analyze the requirement 2-Modify existing code or create new branches 3- Develop unit test	1-Pull request to send to dev 2- Peer code review process 3- Sonar scan	1- Validate the changes based on acceptance criteria 2- End user testing by our UX Designer
			In the peer code review process the other developers review the new code and validate if the code is secure, correct, good practices are followed if the new code is approved with the CI CD process the changes are injected to dev	
Still working in reimplement unit testing scope	Sonar is a tool that scan the last changes to search vulnerabilities in the code if sonar does not find problems with the change the push is correctly integrated on dev		Now only back end developers can approve the back end changes and front end changes only can be approve by front end developers (new)

MSP

Status report

Feburary 22nd

2839 Delivery Actions

- Completed:
  - Preventive Monitoring:
    - Scripts for monitoring storage and memory consumption with automatic restart (PAGIS microservice when the memory consumption is above 80% for example)
    - Scripts for monitoring the microservices restart – After implementing the Workaround, there have been no more service interruptions.
  - The delivery team is reviewing release 57 in the staging environment in order to deploy to MSP on Thursday 1/12 – Released on Thursday 1/19
    - Search screen - Increase search pagination from 15 to 60
    - Offline Notifications - Device offline notifications to include a "no reads received" option.
    - Reports - This to include bigger picture, Device, System and User time stamp.
    - Notification Sort - Profile sorting by Name
    - Time access filters - Ability to permission trim a user group to access only a certain amount of historical data, i.e., 24 hours or 30 days.
    - Addressed all of the issues above.
- In progress:
  - Improve memory monitoring of PAGIS micro-services for debugging purposes to allow us to identify which objects produce the memory leak problem (in QA with RC58)
  - Release 58 is in QA planned to deployment on Monday March 6th (Detail in the next slide)

Development

2840

RC 58

Resolve the 15 bugs:

- Read Search Filter Stops Working
- Devices Save Function Not Working
- Wildcard Searches Timing Out
- Device List Scroll Broken
- Filters randomly disappear
- Aspect ratio in the image of the report
- Last modified field to update only when configuration changes
- Notification profile order - Hotlist names are not complete displayed
- Mantis Day & Night filters
- Interoperability
- Mobile Covert hotlist
- Change the date component to one that allows typing editing
- Date and time are seen on top
- Hotlist screen date move when zooming
- In the read report the text will be changed so that it is not doubly denied

The release Is now in QA

RC 60

Planned to be deployed in May 2023

In progress:
- Hotlist Auto-notification
- Reads visibility based on permits and roles
- Improve in suspicious traveller

To-Do:
- Reports Total Day
- Change name of filters
- Search improvements
- Improvements on Hotlist Frontend

RC61 to RC75

In each sprint the plan is to implement at least 2 requirements and enhancements to conclude the 26 tickets registered.

The plan is to finish at the beginning of October 2023.

Note: RC58 and RC59 were merged.

- RC 59 has been incorporated into RC 58
- March Release (RC58) will close the 15 bugs reported.

PAGIS 2843 (update)

- Q&A testing of latest build confirms the following items have been resolved
  - NTP Status Locked flag behavior sometimes not working
  - Hotlist disappearance
  - Hotlist crashing PAGIS
  - Hit delays
  - B/W in overview
  - Random GPS
  - Alert sound is not playing when “Capture Mute” option is enabled
  - Default US Datetime format
  - Delay when closing session was fixed
  - Delay when saving sync settings was fixed
  - Default BOSS sync timing set to 60sec
- Q&A Testing revealed additional items:

Recommendation to extend release date two weeks to 3/13/23

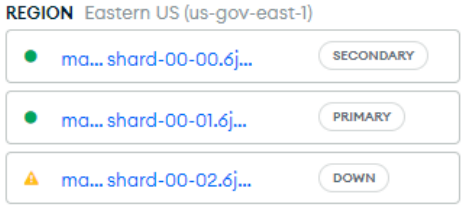
  - Undesirable covert hit behavior in PAGIS, covert hit would display hit info in single pane mode. This initially was flagged as BOSS bug but testing revealed its related to PAGIS
  - Dual screen not showing indication of hit when pop-up is disabled
  - Maximizing icon in PAGIS window not active
  - Add additional sync timer control to differentiate between download and upload timings

Copyright © 2021 Neology, All Rights Reserved.

Q&A Process 2844

- Immediate actions are:
  - Review the unit testing process – in progress (March 15th)
  - Re-implement a peer code review process on the development team – in progress (February 28th)
  - Implement load and stress tests for each release – in progress (March 31th)
    - First Load and Stress test is in progress during this Sprint
  - Review in detail the manual testing process – in progress (April 30th)
  - Review in detail the automatic testing process – in progress (April 30th)
  - Perform a root cause analysis of each error that reaches production - Done
  - Add usability test for every change in UI – Completed (February 15th)

Copyright © 2021 Neology, All Rights Reserved.



SX4e[2845] Hardware / RMA

- Deep dive analysis on SX4e RMA's is on-going;
- Initial analysis shows no immediate / obvious clustering of same source
  - Dead CMOS Battery; Power Cable Shorted; Win10 Image issues
- Current recommendation is to ensure all units are running latest Software image (at least upgrade from NE220311 to NE220701 image)
- As interim, in addition to Service Spares already provided to MSP, an additional SX4e (with current imaging, extended production soak etc) shall be provided as hot spare to MSP to minimize Mobile Unit downtime.

Copyright © 2021 Neology, All Rights Reserved.

1/24[2846] – Incident Overview - Closed

- Partial Outage of BOSS4 User-Interface with degraded service caused by one (of three) nodes being unresponsive
- Impact was seen on one microservice (API Gateway) linked to User Interface although all other parts of the system continued to function. No additional impact since 1/24.
- Automatic restarts and reconnection is built into this part of the system however continued instability resulted in manual intervention by Neology Tech Support team
- Total length of incident from initial automated activity through to restoration and completion of system health checks was 1hr 41min.
- On-going analysis of log files continues – initial analysis noted Node/Cluster restarts and rebalancing. Involving 3rd line team in analysis
- Suggestion made that where user interruption / outage is noted that Neology is provided with MSP User Email Group so notifications can be sent out to avoid users routing via Noah.
- Actions
  - Today 1/25 The incident will continue to be analyzed by the Solutions Delivery team
  - The case with Mongo will also be escalated because the incident occurred on the database side. Tech support case was created (1081)
  - An improvement in monitoring will be analyzed and implemented to identify this case in a more timely and automatic manner (Feb 10th). In deployment, additional scripts created to manage the log files.
  - The micro-service will be improved so that if the connection to the default node of the database cluster fails, it will try it with the next one (will be released with RC60 in May).

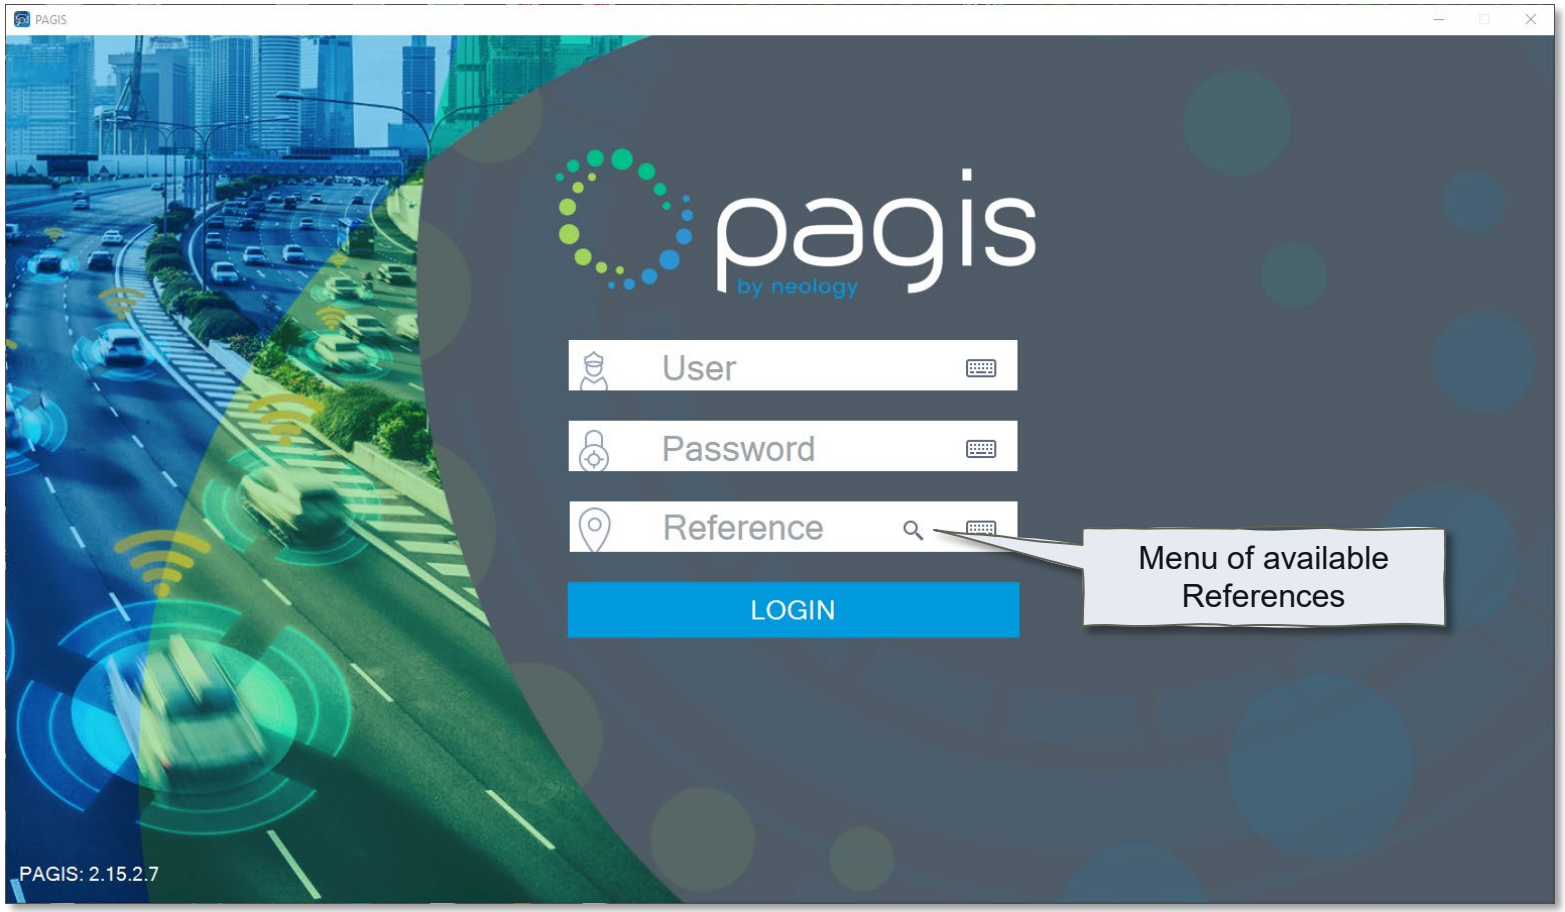
PAGIS User & Administrator Training

Police ALPR Graphical Interface Software

PAGIS Ver. 2.15



Rev. 06/20/22

Starting PAGIS

To start, double click the **PAGIS** icon on desktop.

- **User-** Enter assigned username.
- **Password-** Enter assigned password.
- **Reference-** Select or Enter department, location or activity specific reference. Each license plate read will have this label associated with it when the field is populated, this field can be used as an additional search filter to sort data in BOSS reports.
- **Keypad-** Available throughout PAGIS where keyboard symbol is present.
- **LOGIN-** Initiate login.

Copyright © 2021 Neology, All Rights Reserved.

Main View Screen

PAGIS System Control Features.

Infrared plate patch
(IR plate Read or “patch”)

OCR text translation of plate patch.

NTP GPS Lock/Unlocked watermark.

Color Overview
Captures are displayed as static images.

GPS Status/Coordinates and Camera Name

Capture panes are blank until camera captures plate.

Copyright © 2021 Neology, All Rights Reserved.

Watermark- About 2851

GPS Locked displayed on images that have confirmed GPS signal.

GPS Not Locked displayed on images that have lost GPS signal.

Watermark stamp is placed on both IR & Color images patch.

Color Patch Watermark Contains:

I. NTP Status: Locked or Not Locked.

II. UTC format: M/DD/YYYY HH:mm:ss.fff.

III. GPS Coordinates Locked or Not Locked.

IV. Computer name of PAGIS client and the mobile processor serial number.

IR Patch Watermark Contains:

I. M/DD/YYYY HH:MM:SS.

II. OCR Plate number & Confidence level.

III. NTP Locked or Not Locked status.

IR patch watermark not shown in live view, only shown in review. See below image.

IR Watermark as seen in review.

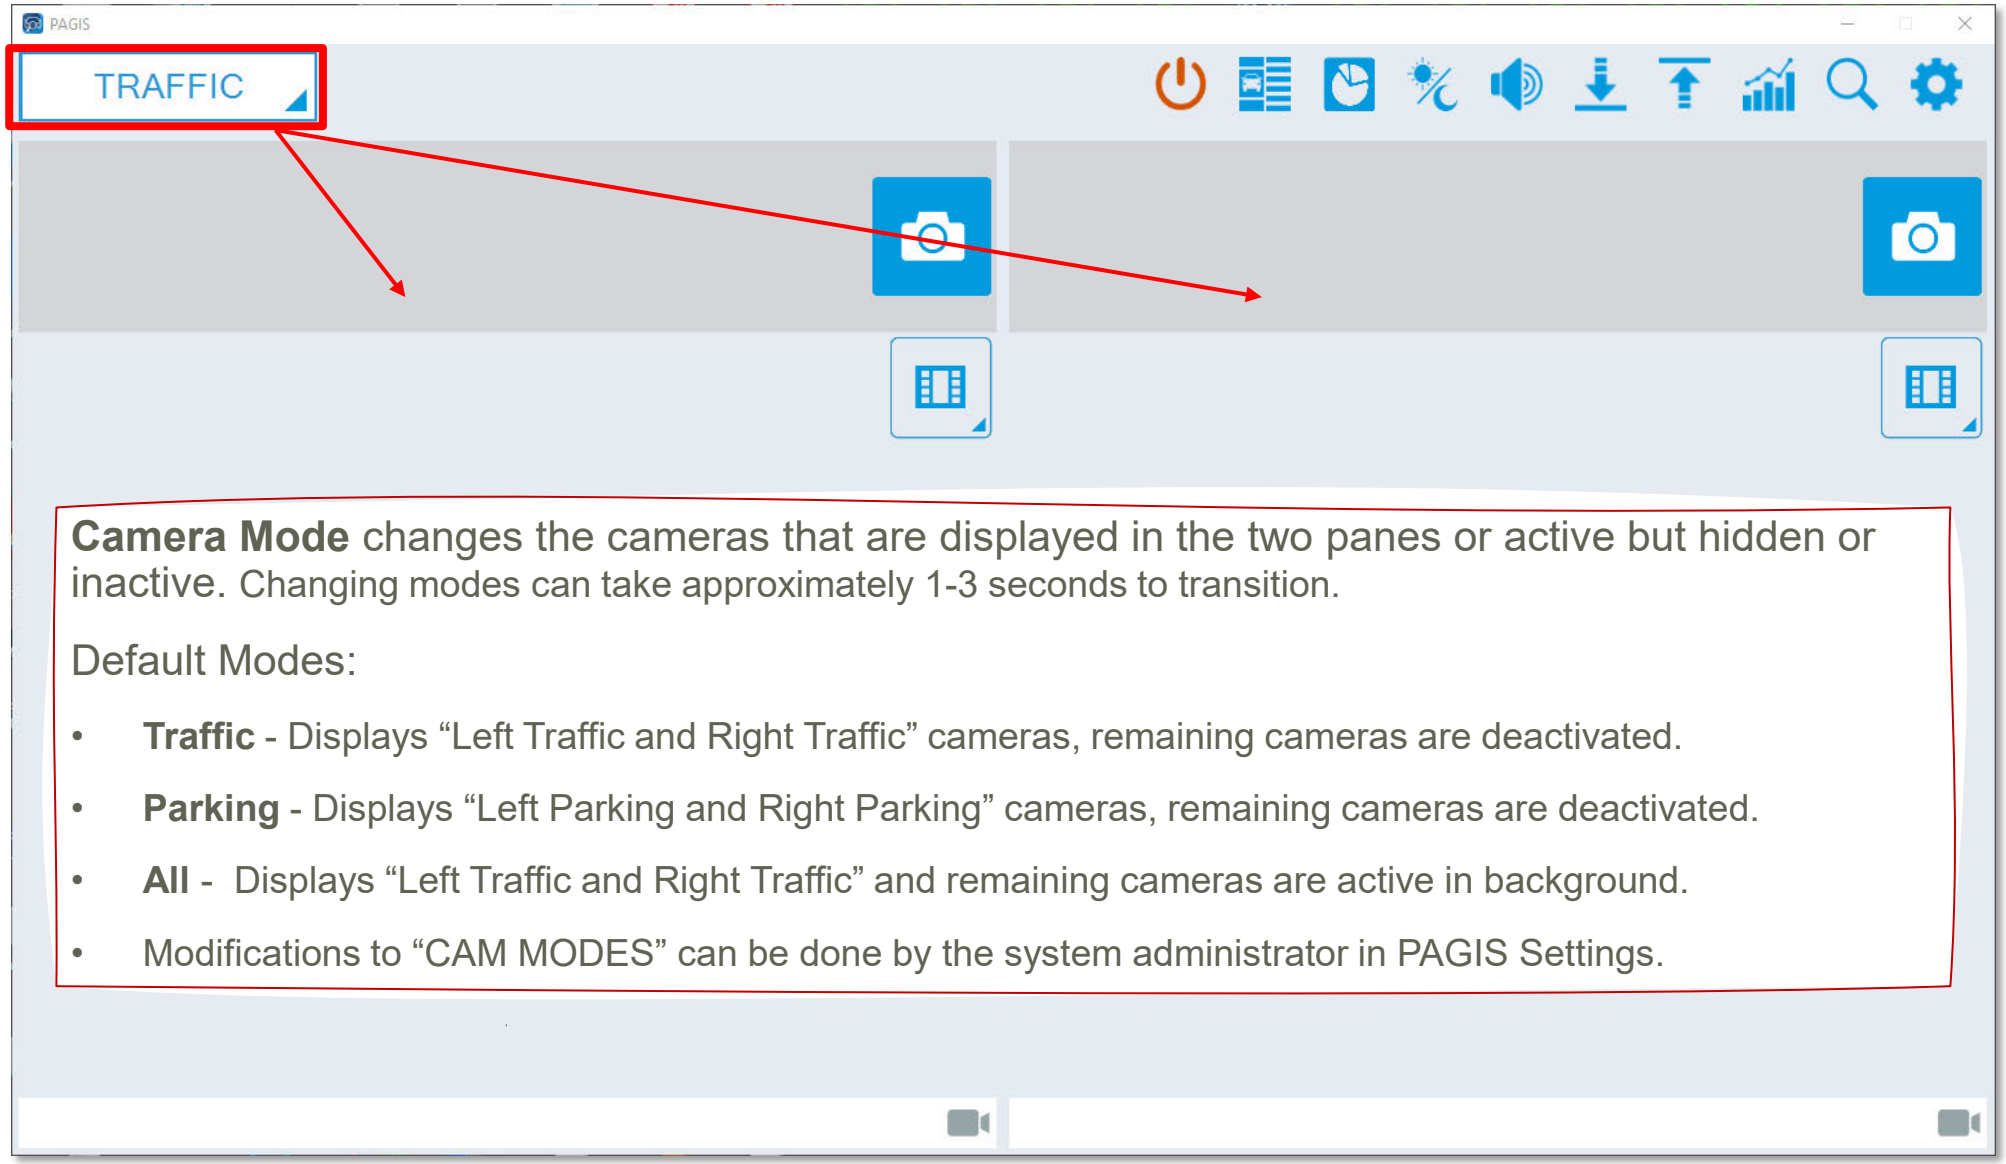
Auto Screen Scaling

2852

PAGIS 2.15 support auto scaling to various screen resolutions and orientations.

Copyright © 2021 Neology, All Rights Reserved.



System Controls

	**Logoff button:** When selected, the user will be logged out of PAGIS and return to the login screen. When Auto-login is enabled, this will close PAGIS.
	**Panel Mode:** Switch between Dule or Single panel modes in main live view screen.
	**System Status:** The system status screen provides an area where users can check on the available resources that effect PAGIS performance.
	**Day/Nite mode:** Switch PAGIS between day & night mode screen skins.
	**Sound button**: When selected, this will toggle the PAGIS Read capture sound On or Off, alert sounds will remain active.
	**Begin Shift / Download button:** Performs an BeginShift sequence that downloads Hotlist, Hotplate, Users credentials and targets from the Host. **End Shift / Upload button:** Performs an Endshift sequence that uploads captured Reads, Hits and PAGIS Audit information to the connected Host.
	**Statistics/Review button:** When selected the user can review Alert list, Reads, Hits, Targets, and other PAGIS information.
	**Search button**: Research all available Reads/Hits as well as manually add hotplates to PAGIS's local Hotlist list known as "Manual Reports".
	**Settings button:** Available to Users with administrator rights to modify PAGIS configurations.
	**Firmware & Software update:** This icon will appear when PAGIS detects a new software or camera firmware version is available. All user types are notified, but only Admins can apply the update.

Camera Mode – Dule Pane Mode

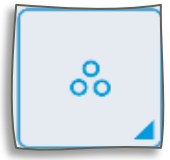
Camera Mode changes the cameras that are displayed in the two panes or active but hidden or inactive. Changing modes can take approximately 1-3 seconds to transition.

Default Modes:

- **Traffic** - Displays “Left Traffic and Right Traffic” cameras, remaining cameras are deactivated.
- **Parking** - Displays “Left Parking and Right Parking” cameras, remaining cameras are deactivated.
- **All** - Displays “Left Traffic and Right Traffic” and remaining cameras are active in background.
- Modifications to “CAM MODES” can be done by the system administrator in PAGIS Settings.

Copyright © 2021 Neology, All Rights Reserved.

2855 Camera Panel Controls



Take Pic: Just above the Camera View Selector button is “Take Pic”. This button allows the user to quickly take a picture from the camera in the current view.

Static View: This is the default state at login showing the Static View of captured events.
(NOTE: PAGIS does not automatically display a live feed.)

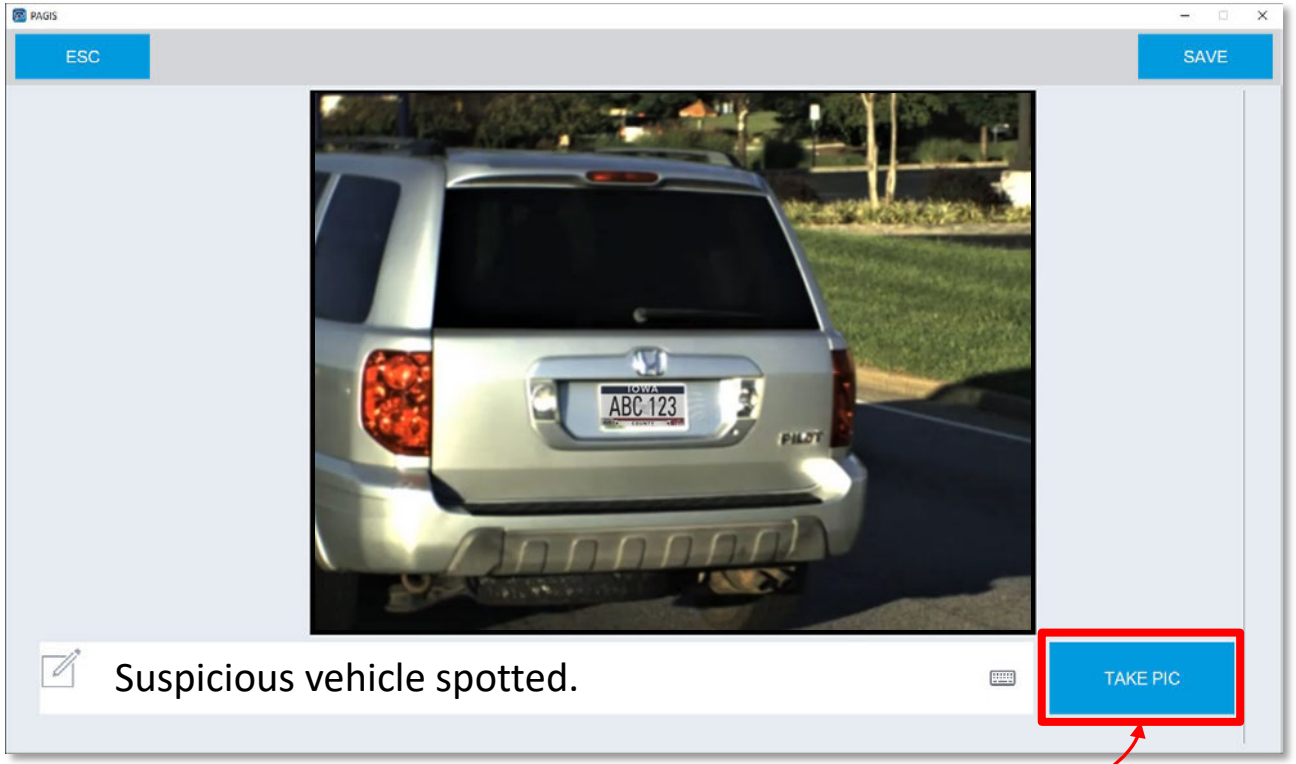
Color View: Clicking the Camera View selector button once, will switch to the Color feed. This displays the current live view of the color camera and will time out after 60 seconds or until the next capture event, which ever occurs first.

IR View: Clicking the Camera View Selector button twice, will switch to the Infrared (IR) feed. This displays the current live view of the IR camera and will time out after 60 seconds or until the next capture event, which ever occurs first.

Copyright © 2021 Neology, All Rights Reserved.

Take Picture

2856



Take a Picture:

- From the Main View Screen, press the Take Pic button from the desired camera.
- The image taken will be displayed.
- Enter a description of the picture in the text field at the bottom of the screen.
- To save picture click the SAVE button, ESC to cancel. Either action will return you to Main View Screen.

NOTE: The picture will not save if a description is not entered into the text box.

View Saved Images:

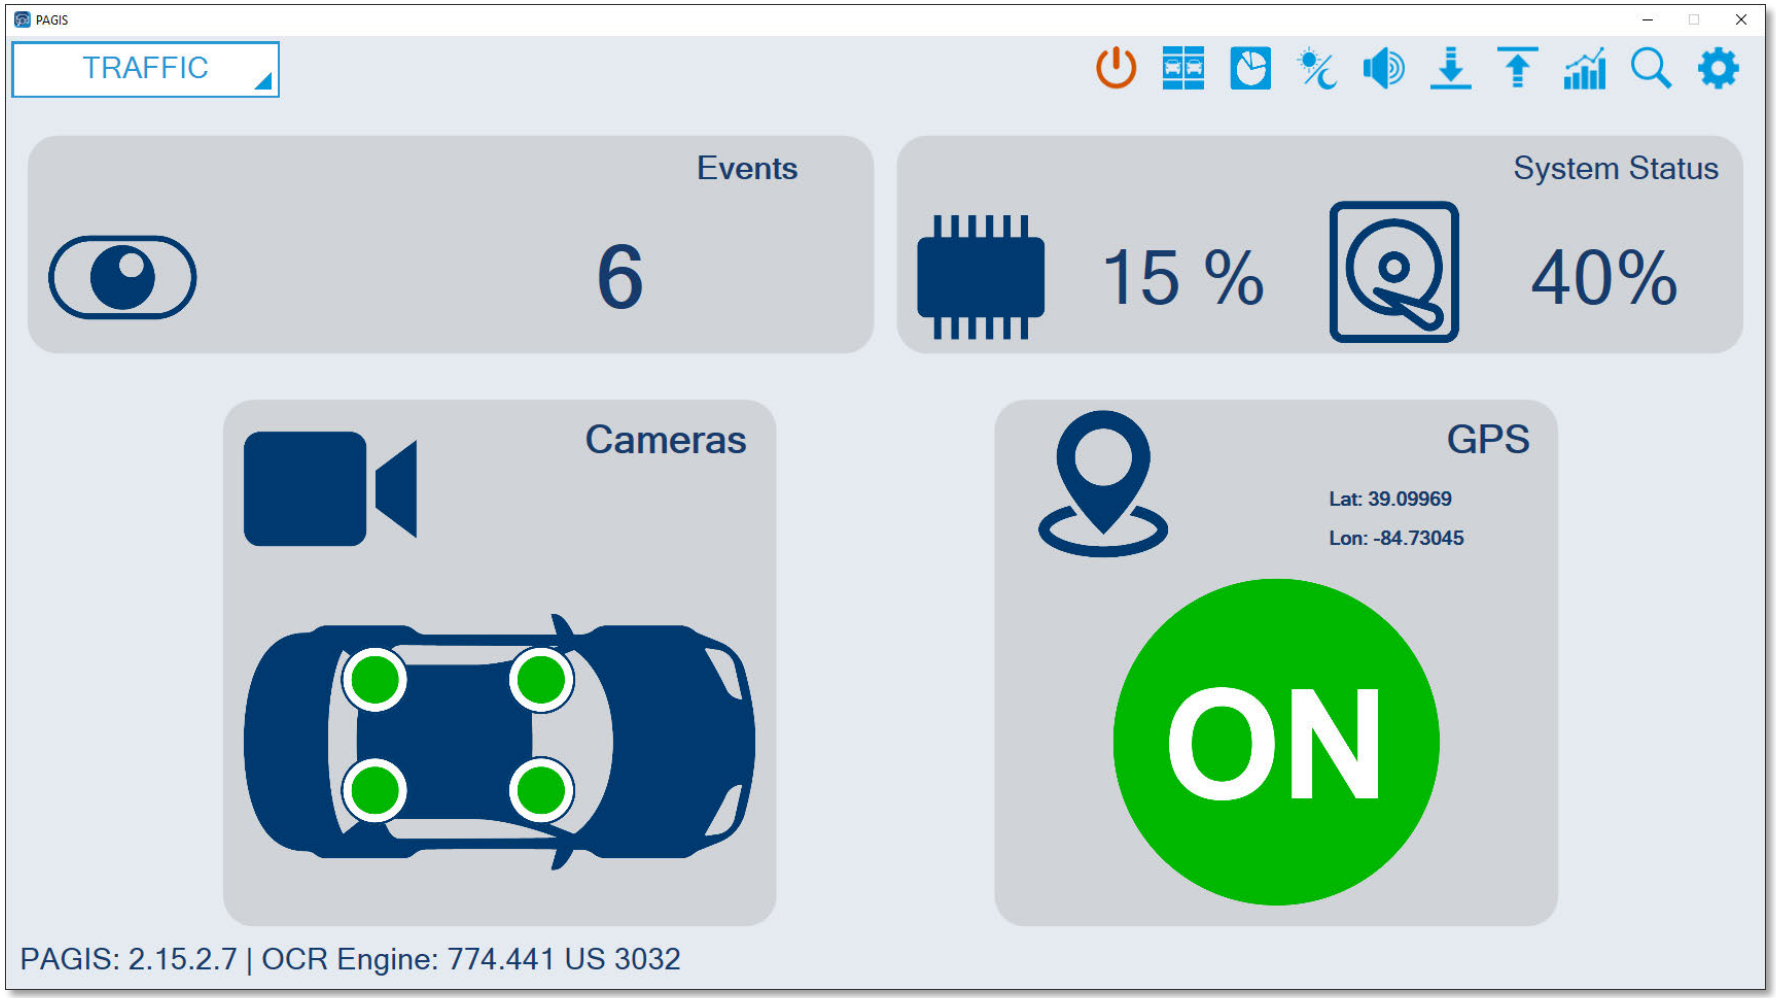
- Navigate to the Review menu in PAGIS.
- Select Audits.
- The user will be able to see a thumbnail of the image and the saved notes.
- In order to review the saved images after purge, the user will need to run the Audit Image Report from BOSS.

Toggle “Take Pic” button to activate live and capture mode.

Copyright © 2021 Neology, All Rights Reserved.

Camera Mode – Single Pane Mode

Single Pane: The single pane displays has one large active capture area on the left of the screen, this area will display all current captures in real-time. The panel on the right show you past captures, updates populate from the top down.

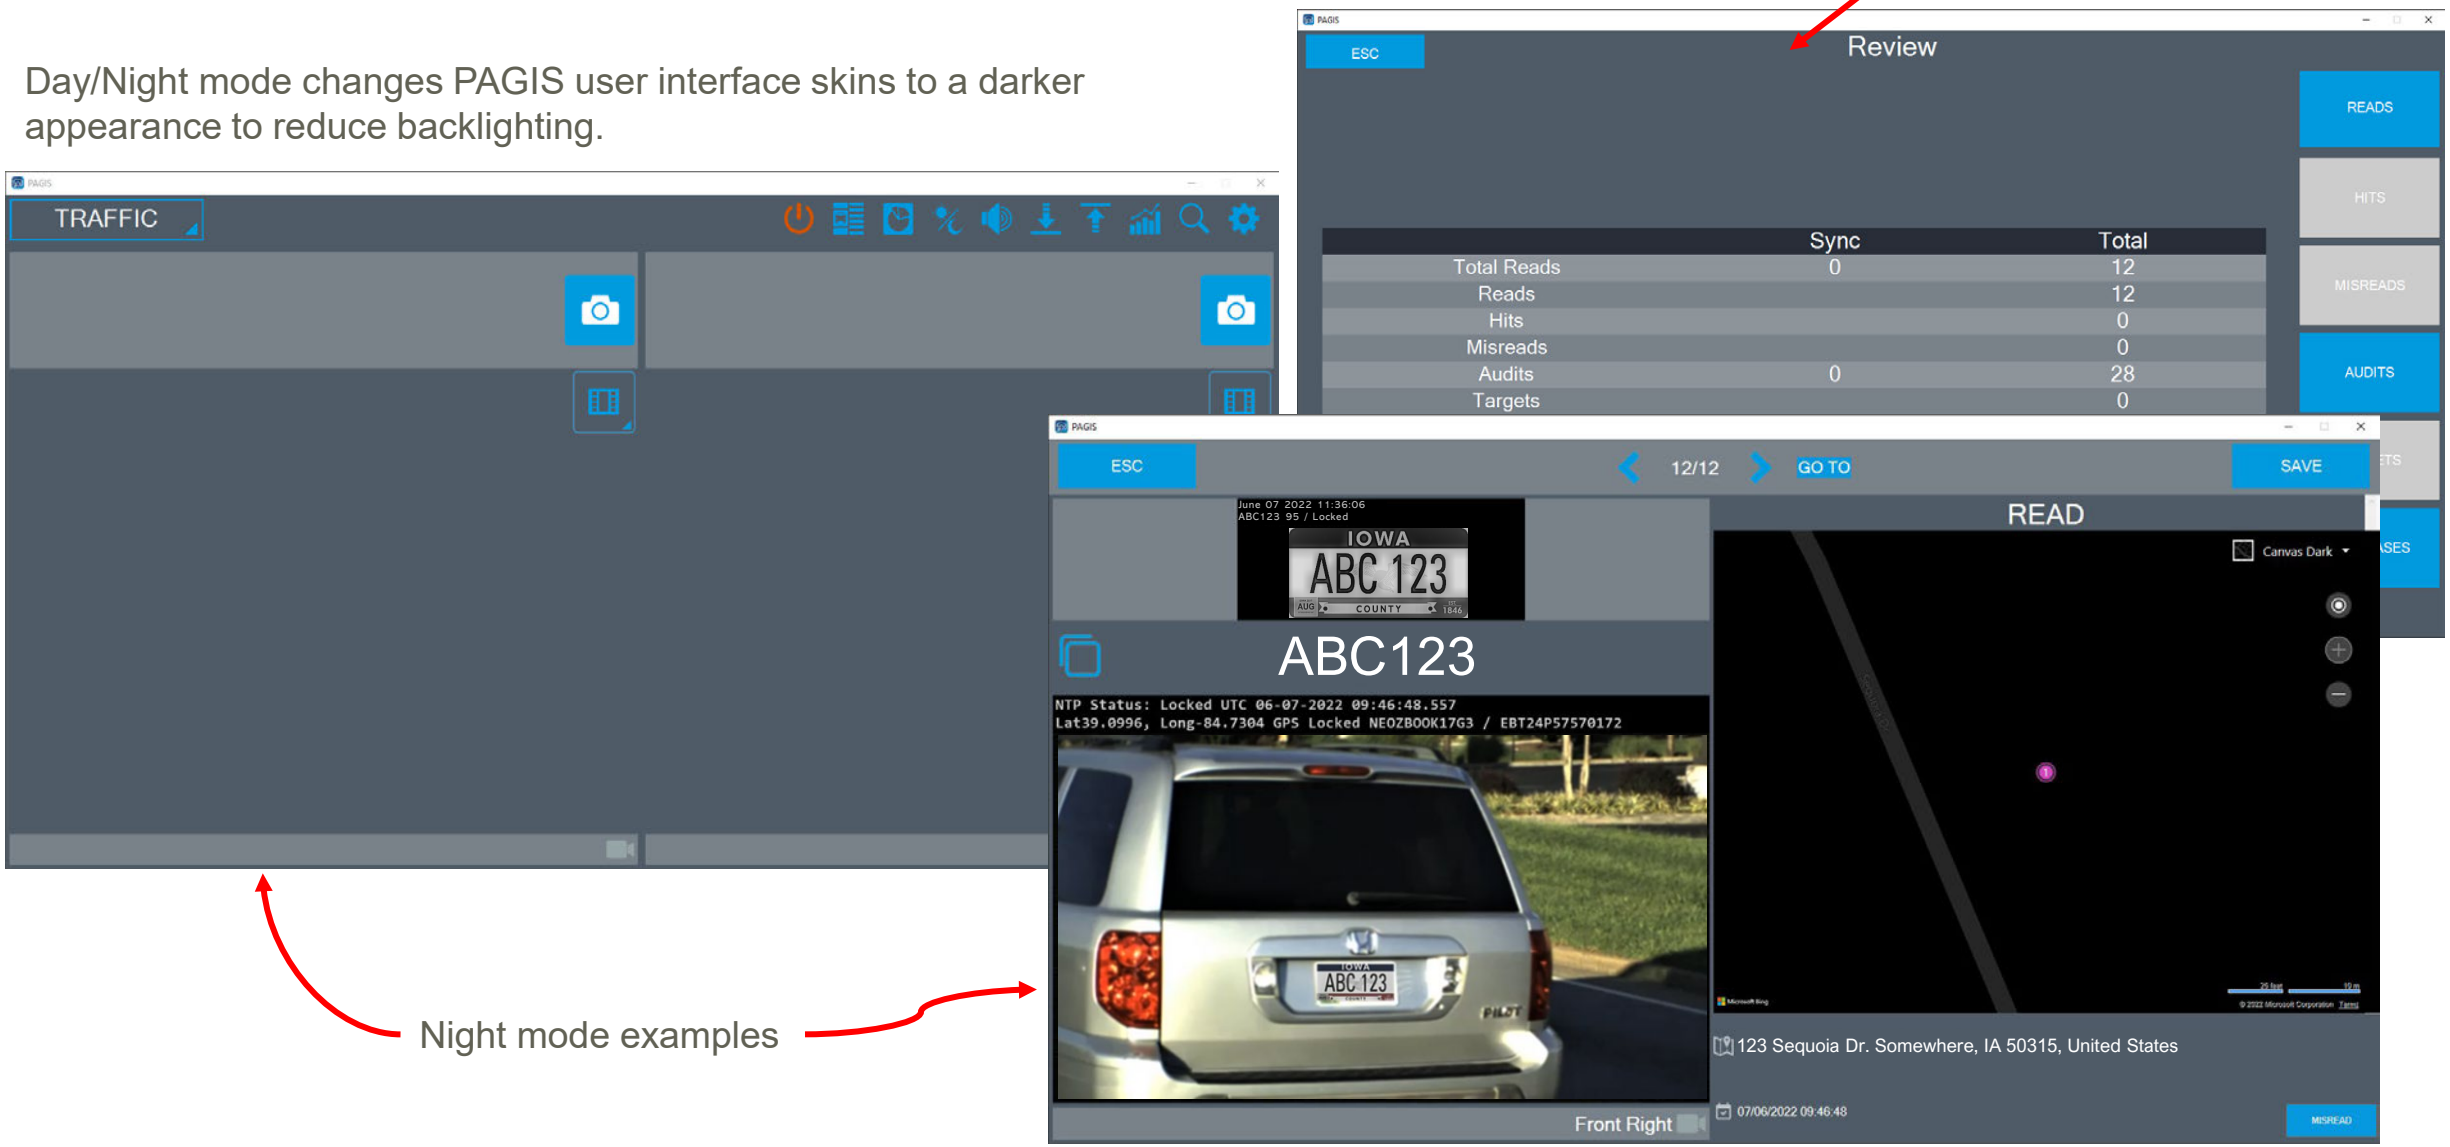


- **Cam Mode:** Controls which cameras are active in the main display.
- **Last / Live:** Set the active capturer panel to static or live view. The Live mode alters the panel arrangement slightly, showing only two primary cameras on the left w/ no image patches.
- **All Reads / Hits:** Toggles to show only hits or reads in the history panel.

Copyright © 2021 Neology, All Rights Reserved.

PAGIS Status View

Status View



The status panel provides a means of monitoring key system resources important to PAGIS operations.

- **Events-** The events show the current number of captured plates in PAGIS.
- **System Status-** Displays the amount of RAM & DISK usage of the computer PAGIS is running on.
- **Cameras-** This indicates which cameras are active from the selected “CAM MODE”.
- **GPS-** Displays if PAGIS currently has an active GPS signal.
- PAGIS and OCR Engine versions shown in bottom left.

Copyright © 2021 Neology, All Rights Reserved.

Night Mode Screens

Day/Night mode changes PAGIS user interface skins to a darker appearance to reduce backlighting.

Night mode examples

Copyright © 2021 Neology, All Rights Reserved.

Data Synchronization

2860

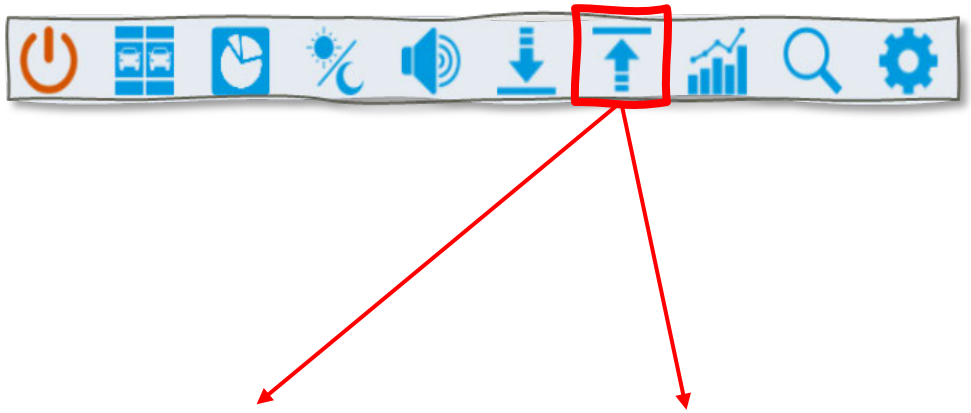
Data synchronization can be configured one of three ways depending on usage type. Its important to understand which option PAGIS is configured, as they dictate different user interaction.

USB Sync- This method of synchronization requires that the PAGIS user manually activate the upload/download button to send/retrieve data from an external USB drive.

Boss Sync without Purge- When “Boss-Sync” is enabled all data will be automatically synchronization between PAGIS and BOSS, this included Users, Alert-List, Reads/Hits & Audit data. The exception in this option is that locally stored data remains accessible in PAGIS, this includes Reads/Hits & Manual Reports entries, they will remain local until the Upload button is activated upon which those data sets will be purged from PAGIS.

Boss Sync with Purge- When “Boss-Sync” is enabled all data will be automatically synchronization between PAGIS and BOSS, this included Users, Alert-List, Reads/Hits and Audit data. With the Purge setting enabled it is not necessary for the PAGIS user to manually activate the Upload button to purge locally stored data as this will be maintained by PAGIS based on purge Privacy settings configured, purging occurs each time PAGIS is started.

Typ. Download Status Messages



- Performing beginshift synchronization...
- Session started, checking for updates!
- Retrieving plates for COUNTY WARRANTS

Typ. Upload Status Messages

- Exporting endshift read data at event 0 of 28...
- Purging audit data. This may take a while, please do not power off!
- Endshift synchronization succeeded!

Copyright © 2021 Neology, All Rights Reserved.

First Time PAGIS Activation 2861

Newly activated mobile devices must be enabled and configured at the BOSS software once the primary host IP has been entered and saved into PAGIS.

- Activating the download button will manually initiate communication with BOSS, during this process the user will see sync status messages. First time synchronization BOSS will acknowledge the communication with a rejection message titled “HttpStatusCode Unauthorized” signifying BOSS has seen the request, created the device listing but rejected the communicated pending user activation in BOSS.
- The PAGIS auto sync feature will also attempt communication with BOSS on a reoccurring cycle, about once every 10-20 seconds, the device listing will still appear in BOSS, but the PAGIS user will not see any dialog box’s indicating the status.

BOSS acknowledgement and rejection message	Failure to communicate with BOSS message
Performing beginshift synchronization...	Performing beginshift synchronization...
Error Synchronizing Data. Please check log for more information.	Error Synchronizing Data. Please check log for more information.
HttpStatusCode Unauthorized; unable to get data	Error syncing data with BOSS. Please check wireless connection and try again.

Review Section

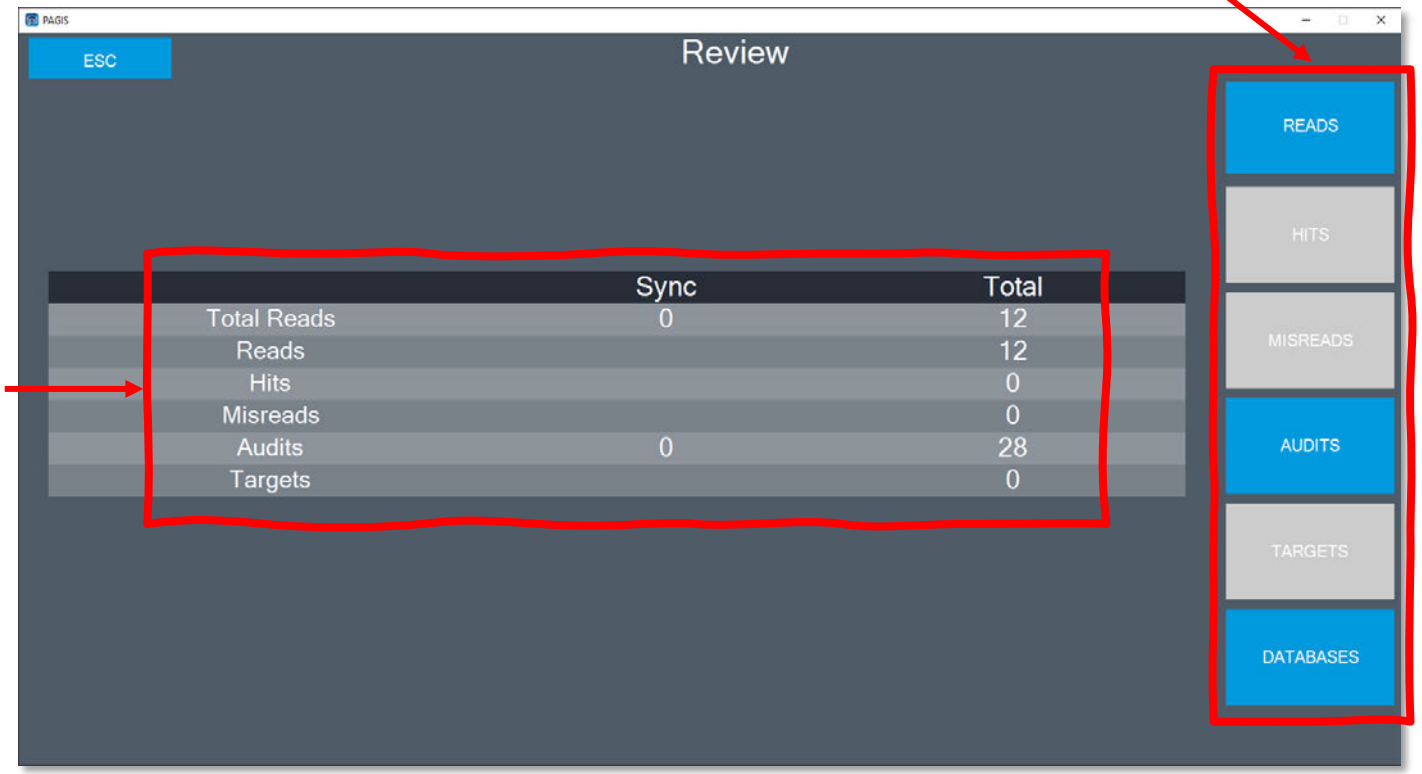
Reads- Review all plate detections that have occurred since the last upload or data purge cycle.

Hits- Review Hit alerts that occurred since the last upload or data purge cycle.

Misreads- Review Reads that have been manually flagged during the shift as misreads.

Audits- Review failed and successful login's, any manual data entered during the shift, pictures taken and all manual license plate searches.

Targets- Review targets that have been synchronized from Boss.



Databases- Review the all the databases currently in PAGIS.

Click Review from the Main View screen to display additional options for reviewing data.

- **Total Reads-** Shows the total number of Reads/Hits collected and the amount synced.
- **Reads-** Shows only the total number of collected Reads.
- **Hits-** Shows only the total number of collected Hits.
- **Misreads-** Shows only the total number of Reads marked as misreads.
- **Audits-** Shows the total number of collected Audits and the number that have synced with BOSS.
- **Targets-** Shows only the number of targets downloaded, they do not sync as they originated from the Boss application.

Note: When PAGIS is setup for Disk-Sync the "Sync" column dose not apply.

Review - Hits

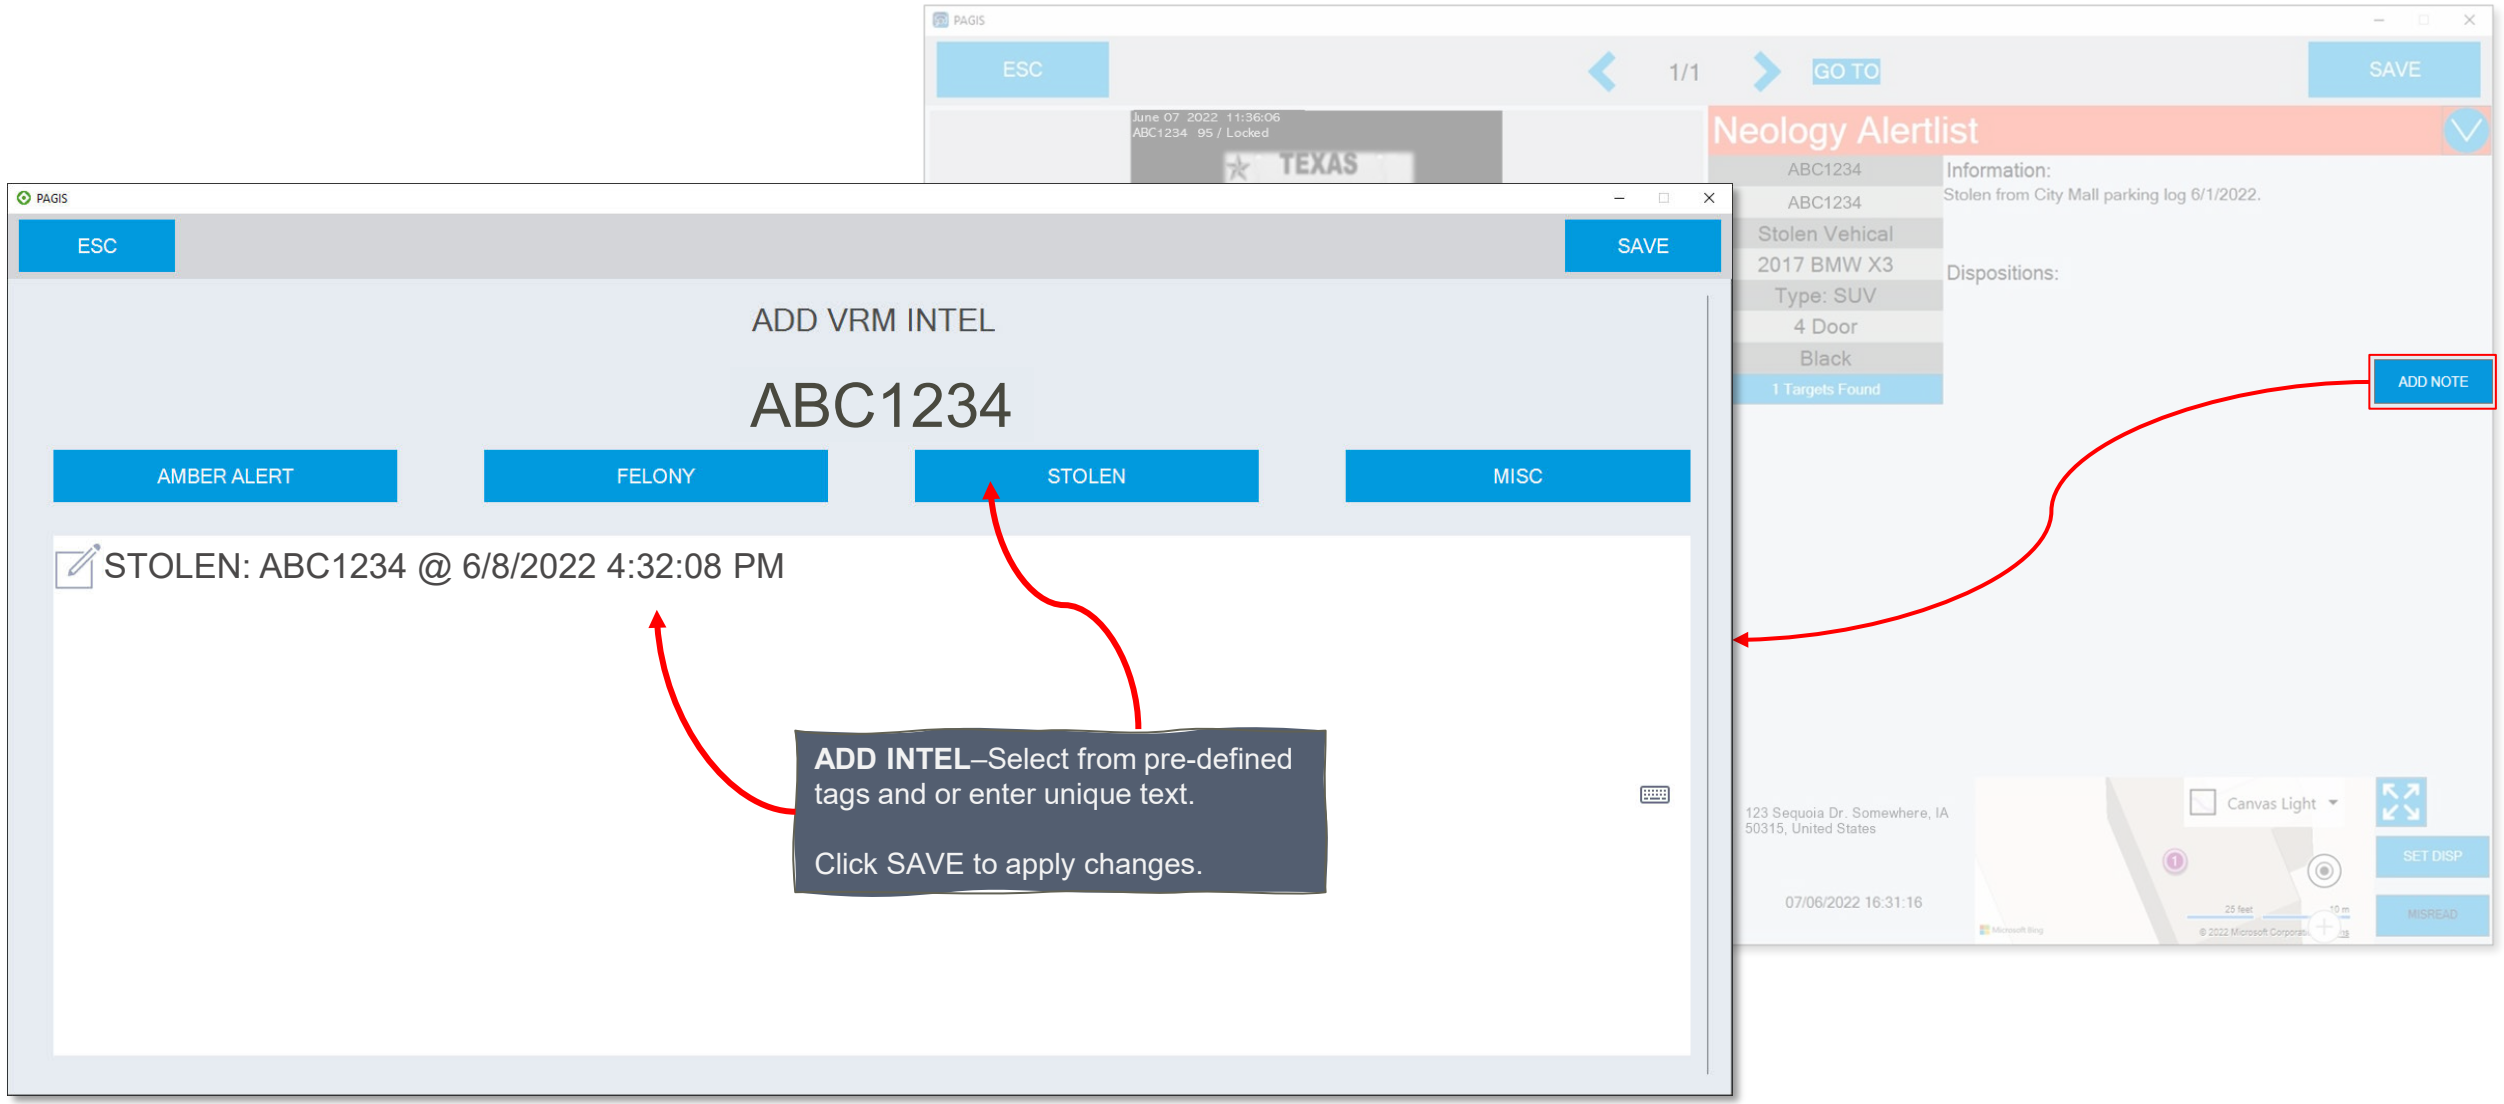
2864

The **Current / Total** indicates which HIT out of all totals you are reviewing, clicking the arrows on the left or right will let you flip between other registered HITS.

SAVE changes made to notes, dispositions or misread corrections.

Hide/Show hit information.

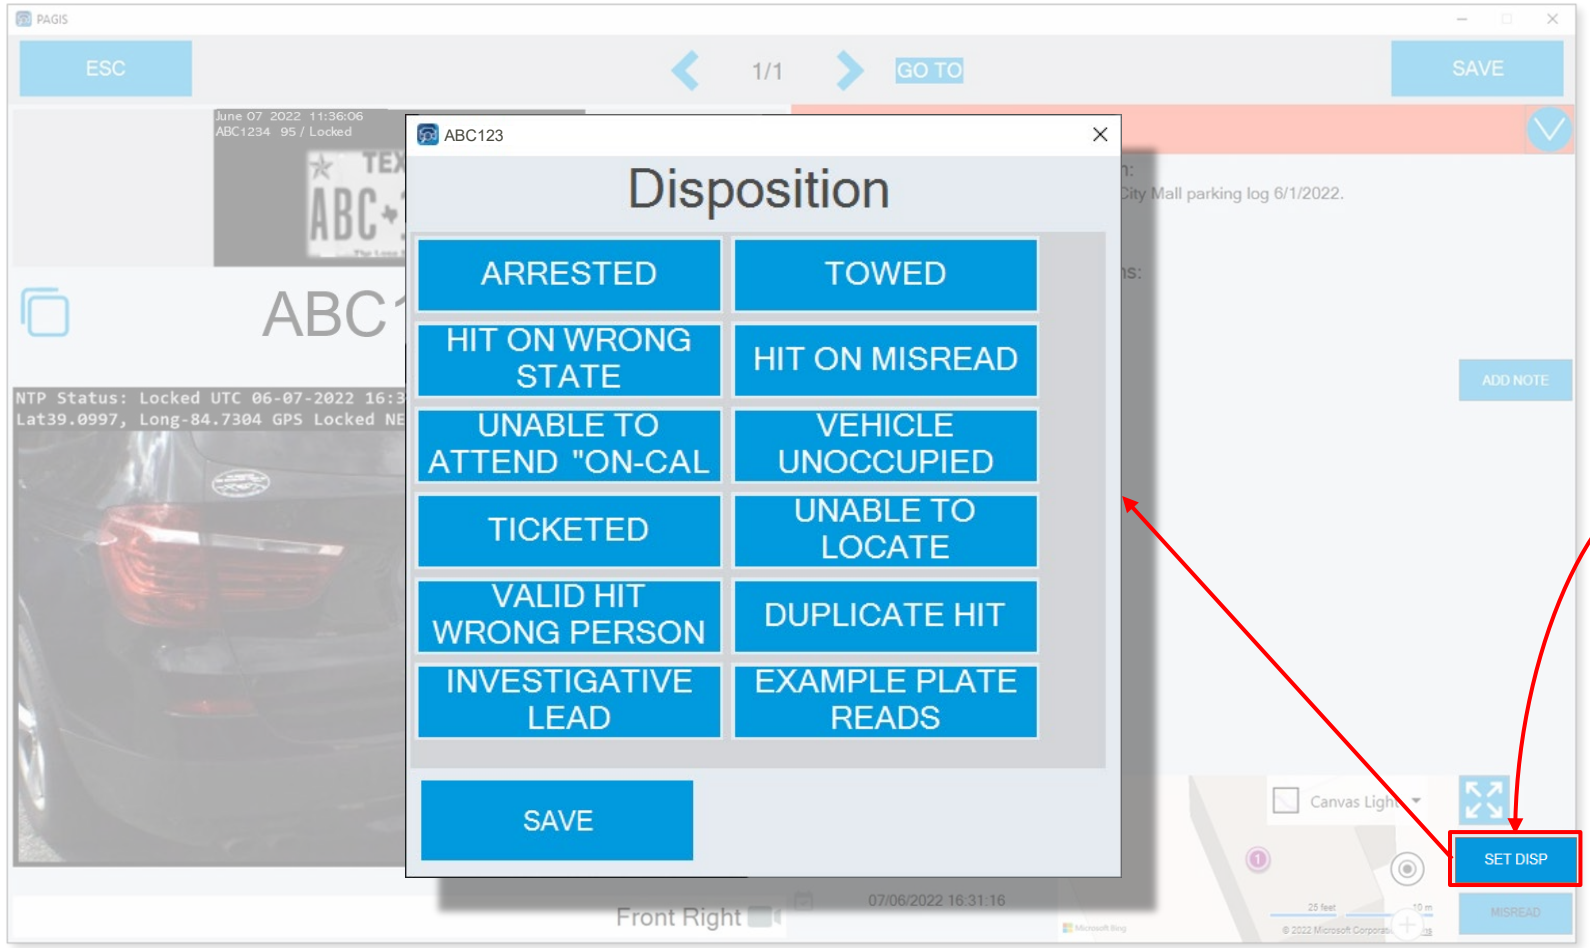
ADD NOTES – Add information about a particular Hit prior to synchronization to BOSS. For instance, you might add information about the arrest or violation.



Expand MAP

SET DISP –Report the disposition of a Hit in one of the categories defined by your Boss system administrator, *(Arrest Made, Vehicle Recovered, Surveillance Established, Towed, etc.)*. Dispositions appear in sperate selection window, these dispositions are reported to BOSS and allow for more detailed classification when running a Hit reports.

MISREAD– Add information about a particular Hit prior to synchronization to BOSS. For instance, you might add information about the arrest or violation.

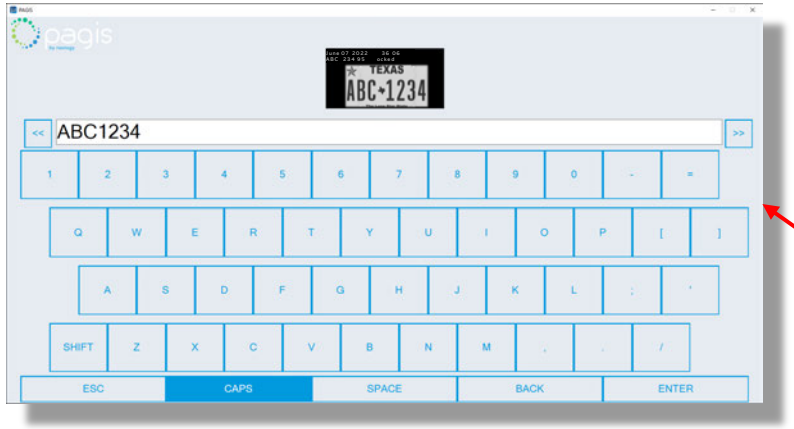


Copyright © 2021 Neology, All Rights Reserved.

2865 Review- Hits- Add Notes

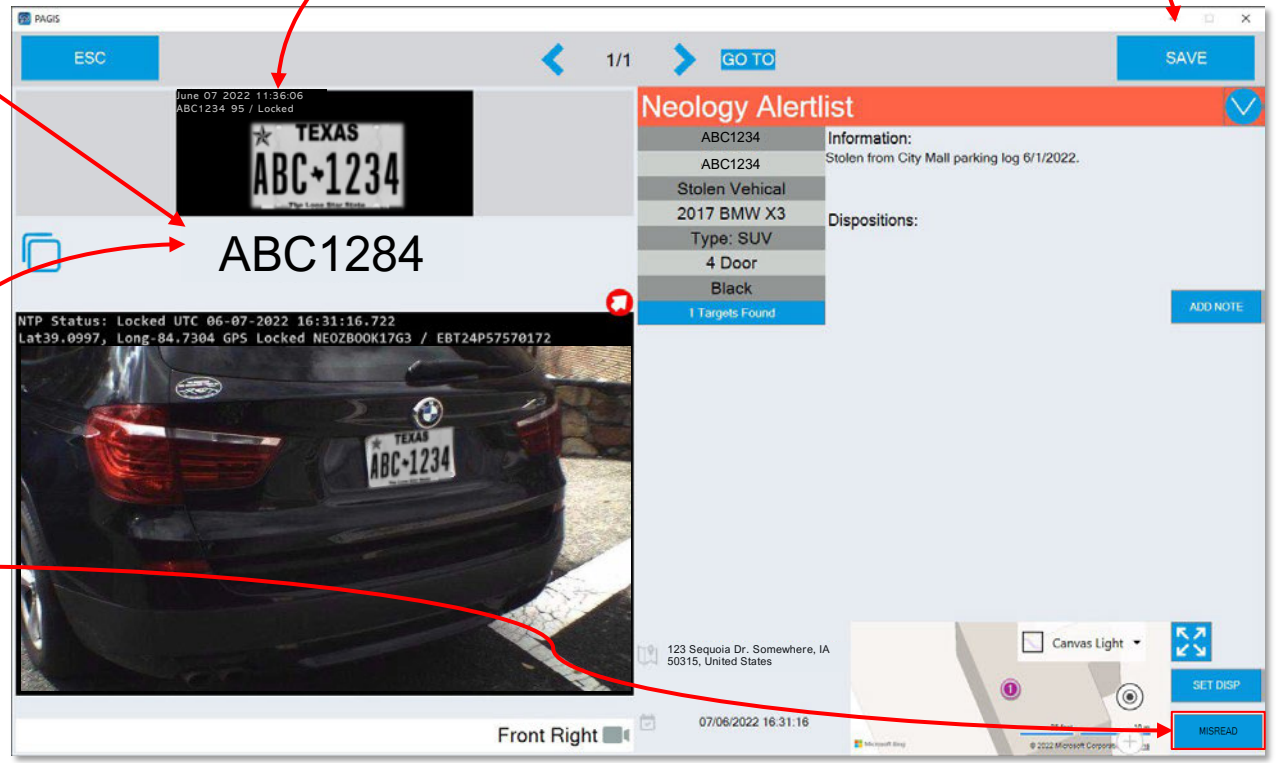
Copyright © 2021 Neology, All Rights Reserved.

2866 Review- Hits- Disposition



Set Disp –Report on the disposition of the Hit from the deployed categories.
Note: Dispositions are managed by BOSS, additions or edits must be done by system admins.

- Select **One** or **Multiple**.
- **SAVE** to apply selection.



Copyright © 2021 Neology, All Rights Reserved.

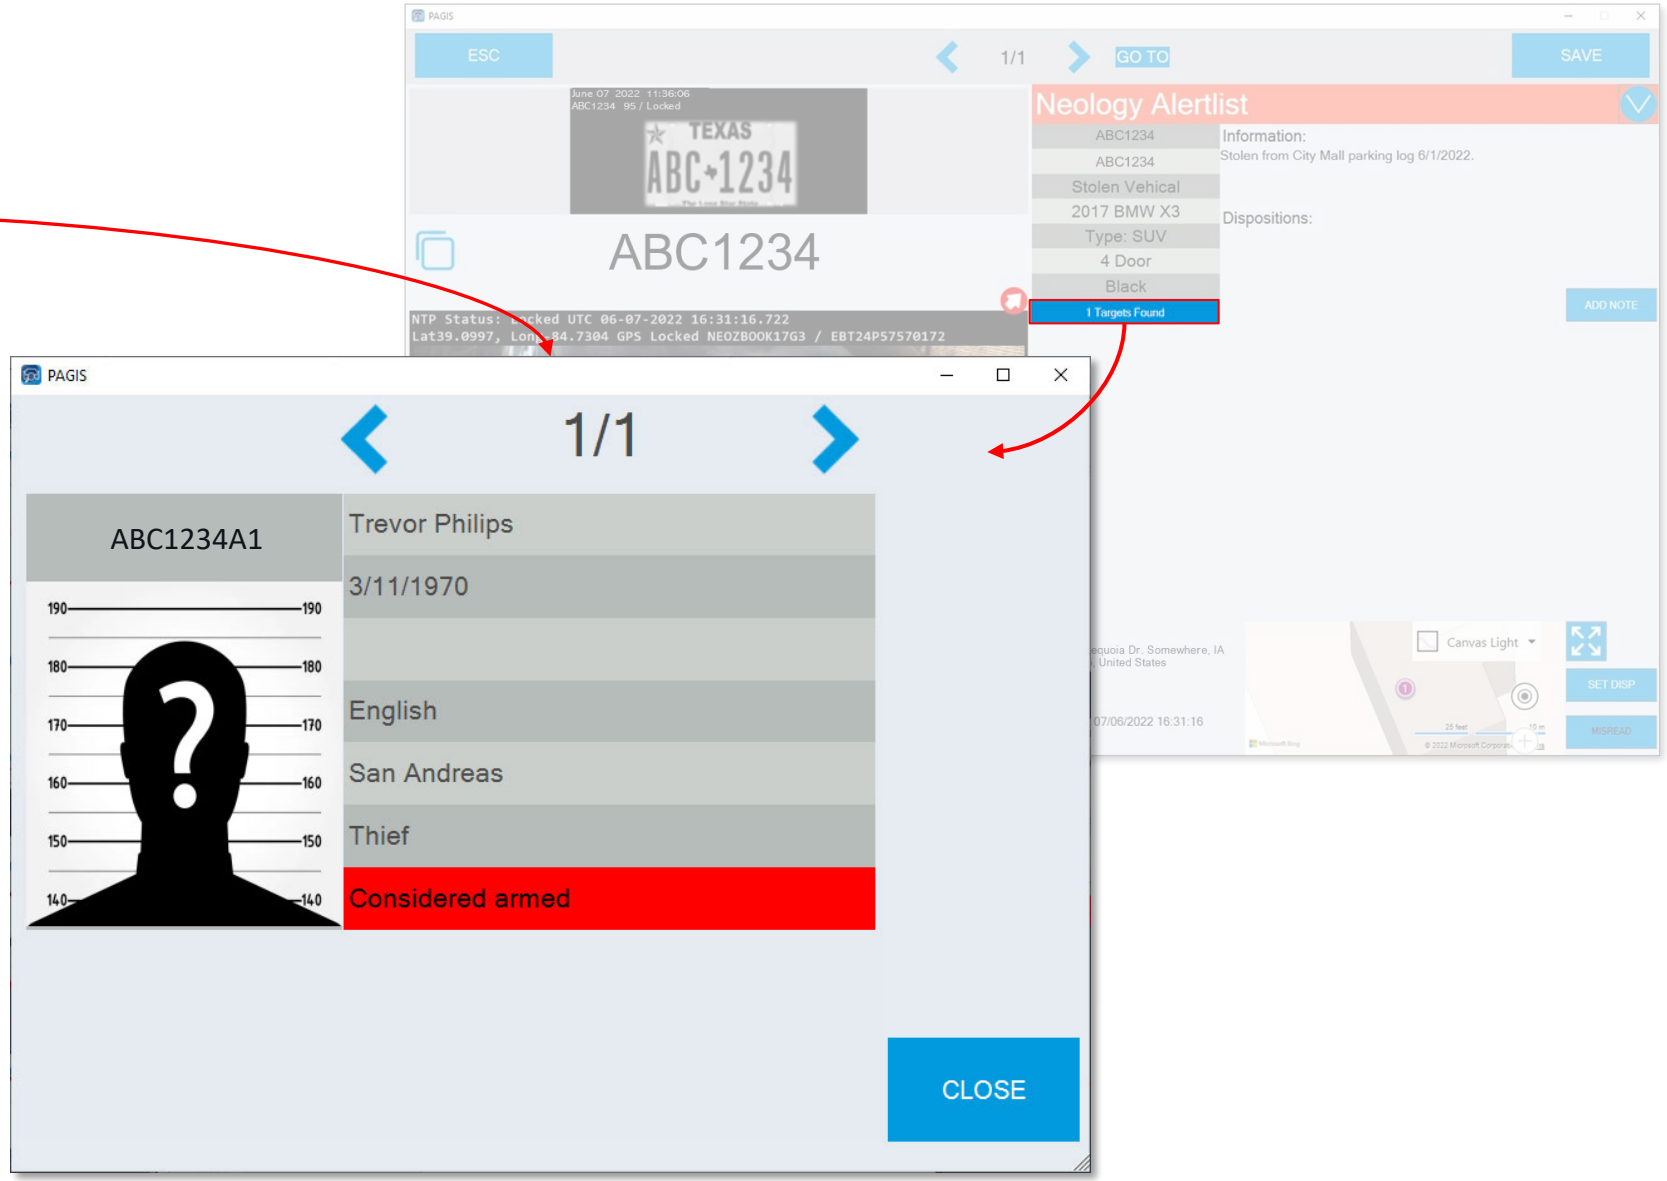
2867 Review- Hits/Reads- Misread Correction

"Misread Plate"

Save changes

Correct or tag Read/Hit that have been misread.

- *Click OCR Patch to manually correct a misread, "ENTER" to save.*
- *Click* MISREAD *button to instantly tag event as "Misread" without editing plate number "SAVE" to apply changes.*
- *Hits tagged as misread are demoted to Read and no longer counted as Hit.*

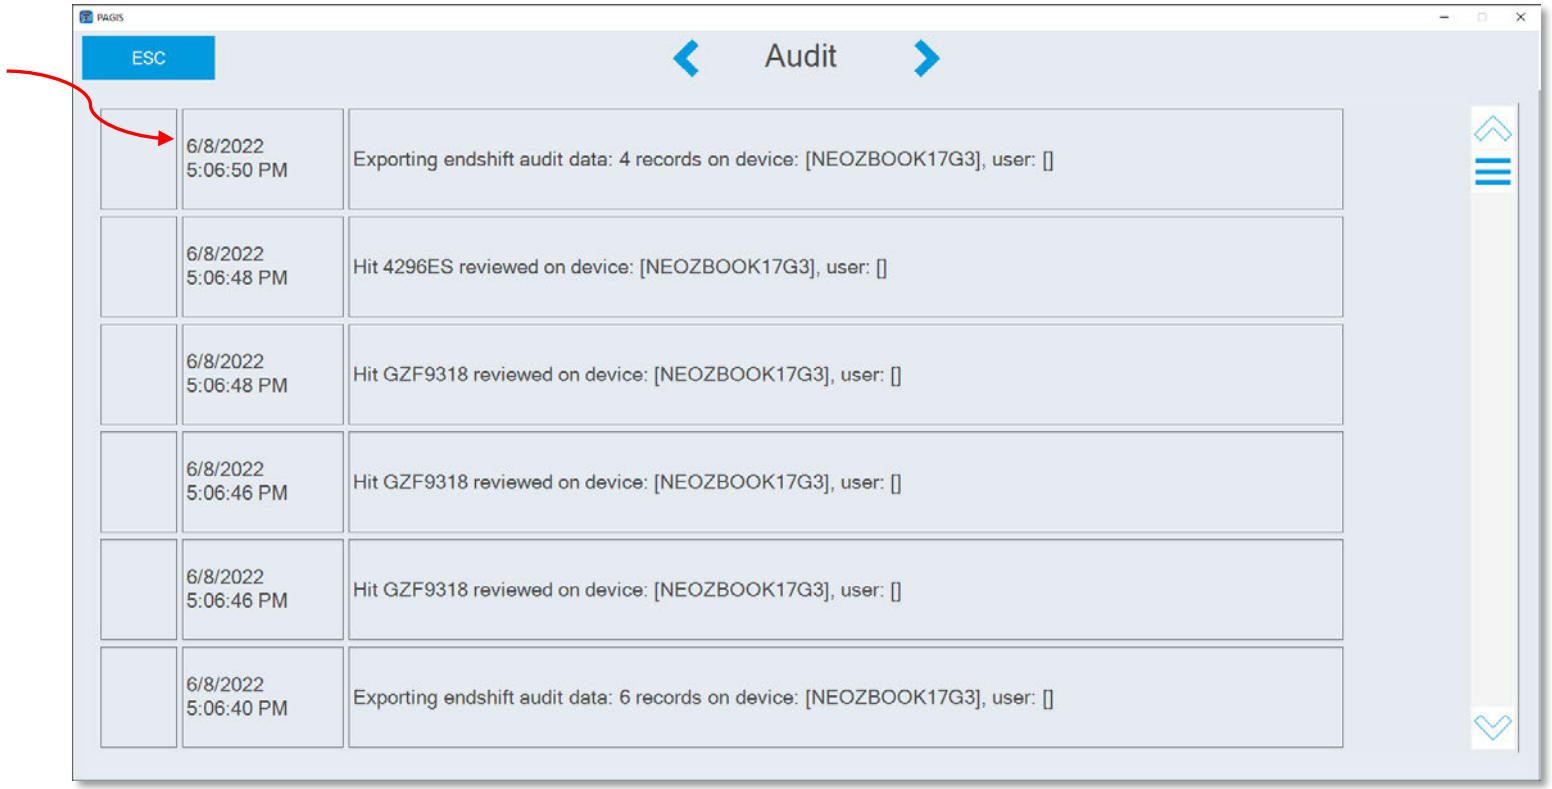


Copyright © 2021 Neology, All Rights Reserved.

Review- Hits-Targets 2868

- **Target Profile**–Target screen displays information about suspects matched with a license plates. Targets are downloaded into PAGIS from the Back Office System Software (BOSS).

- < 1/2 > Click left or right arrows to view additional targets associated with this hit. Number to left is current view, number to right is total targets available.



- **Close** – Returns to previous screen.

Copyright © 2021 Neology, All Rights Reserved.

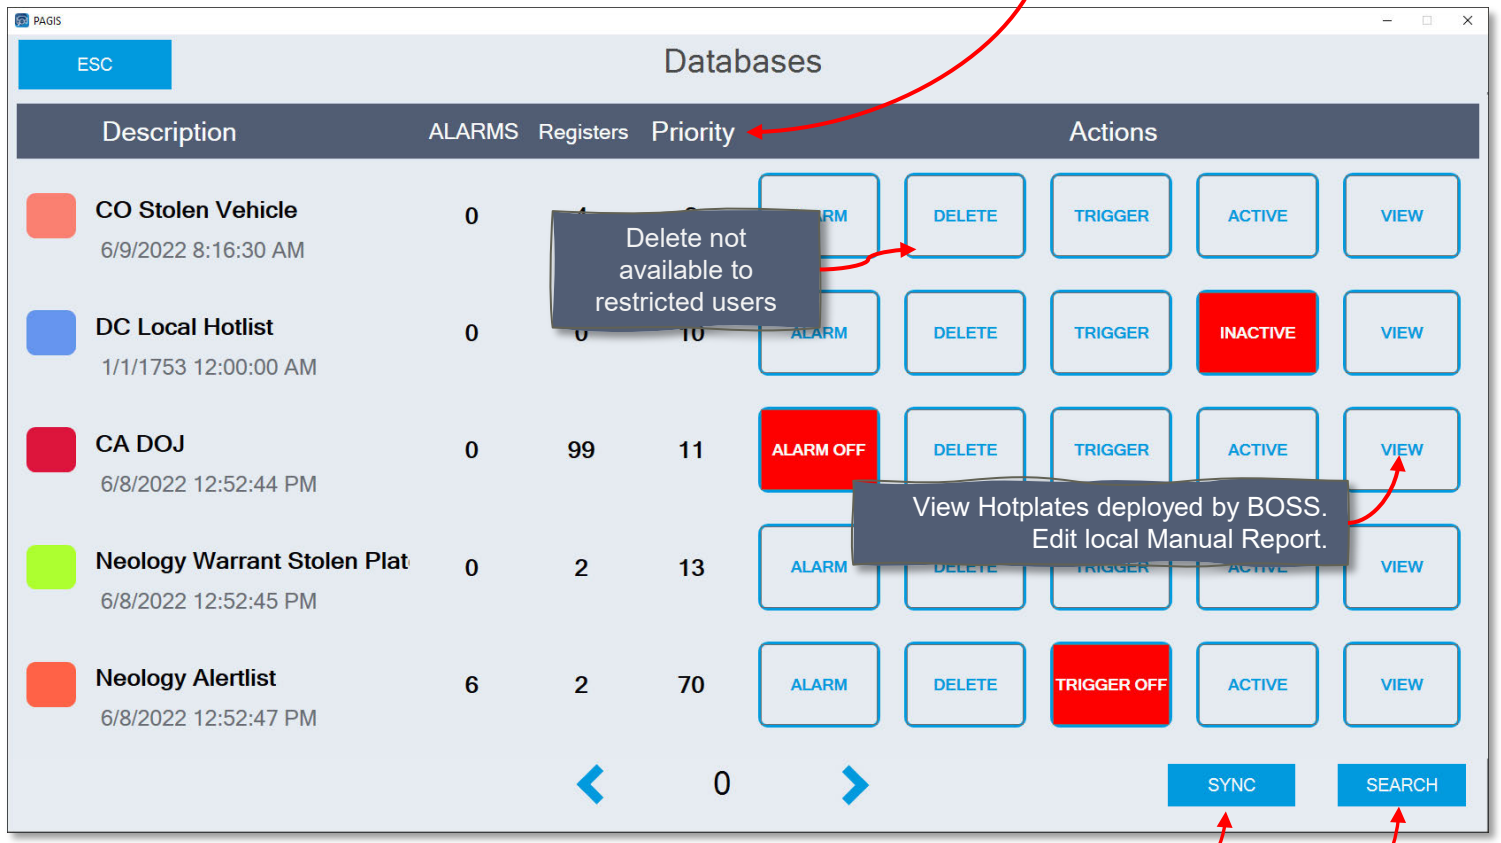
2869 Review- Audits

- The Audits screen provides a log of various actions taken during the current PAGIS session, including searches, synchronizations, Hits, etc. The Audit logs are transmitted back to BOSS during PAGIS Auto-Sync or during a manual Upload cycles. The Audit trail is reset during Upload or Auto purge cycle.
- **Esc-** Return to previous screen.
- **< >-** Cycle thought all available audit log by page, left arrow is previous, right arrow is next.
- **Scroll-** Scroll up/down thought all available Audits.

Copyright © 2021 Neology, All Rights Reserved.

2870 Review- Databases 1 of 2

Database Name – Displays the name and color code of the Alert List, along with Date\Time showing the last synchronization update.



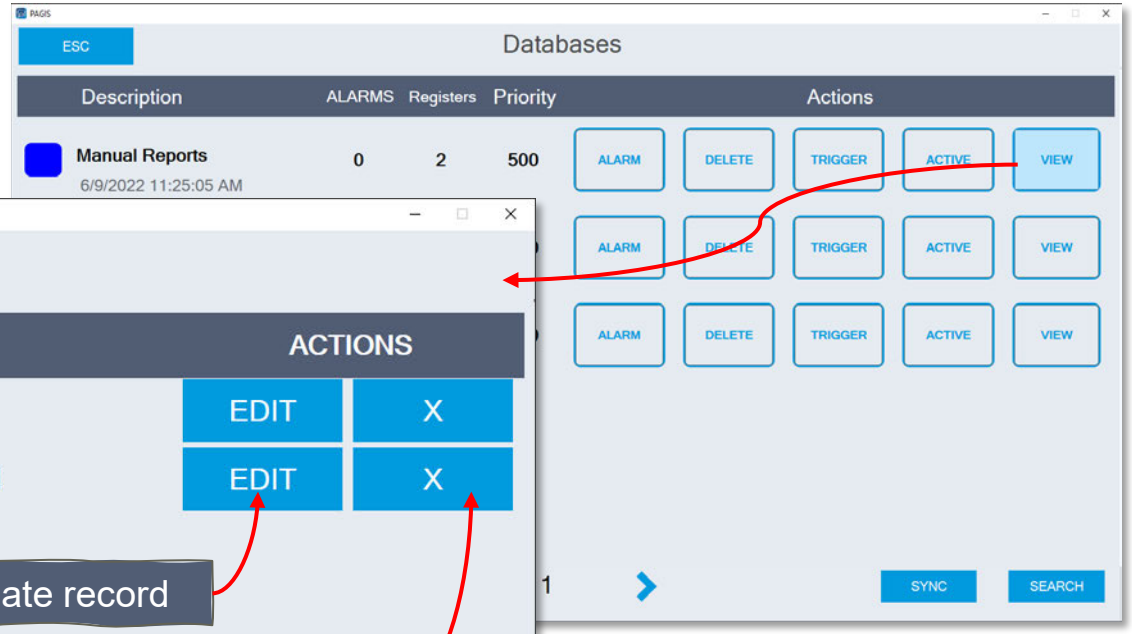
Alarm / Alarm Off- When this button is clicked it will switch from “Alarm” or to “Alarm off” depending on its previous state. “Alarm” means the PAGIS user will be alerted if a Hit occurs. If “Alarm off” is displayed the PAGIS user will not be notified of alert, but the alert will still register.

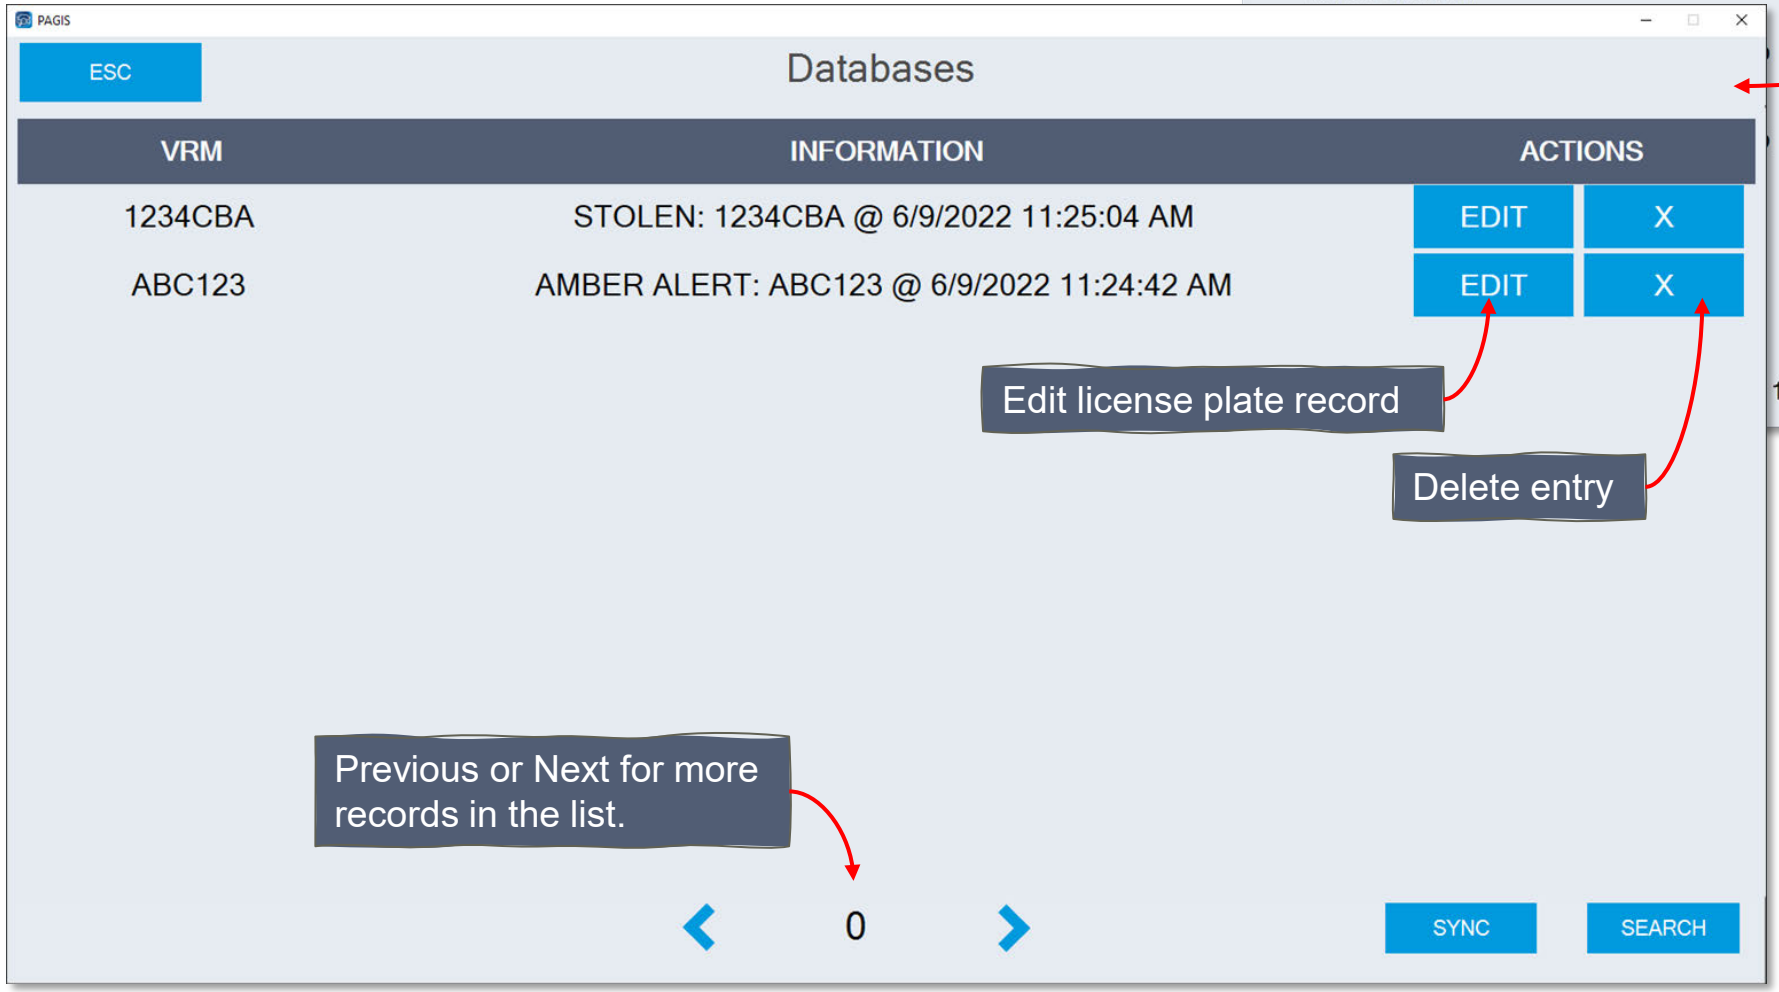
Delete – Removes the Hotlist from the current session. Because some databases may be managed in BOSS, if deleted and has not been removed from the BOSS deployment list, it will be added back on the next synchronization via Auto-Sync or during the next Download cycle.

Trigger / Trigger Off– If Trigger is on, the software sends a signal to a data com port on the mobile processor and any device (such as a light or siren) connected through this port will active the device during an alert.

Active / Inactive– Database status indicator. A red button shows that the Alert List is inactive, and Hits will not be generated from that Alert List in PAGIS.

Priority – Database priority provides PAGIS a means of displaying Hits with higher priority first if multiple Hits occurs from a single event. Values can be (1-999) as determined by BOSS System Administrator. The lower the number, the higher the Alert List priority. By default, the “Manual Reports” Alert List created by PAGIS has a priority of 500.





Sync- Begin/End Shift combined without data purge.

Search- Shortcut to Search Entry

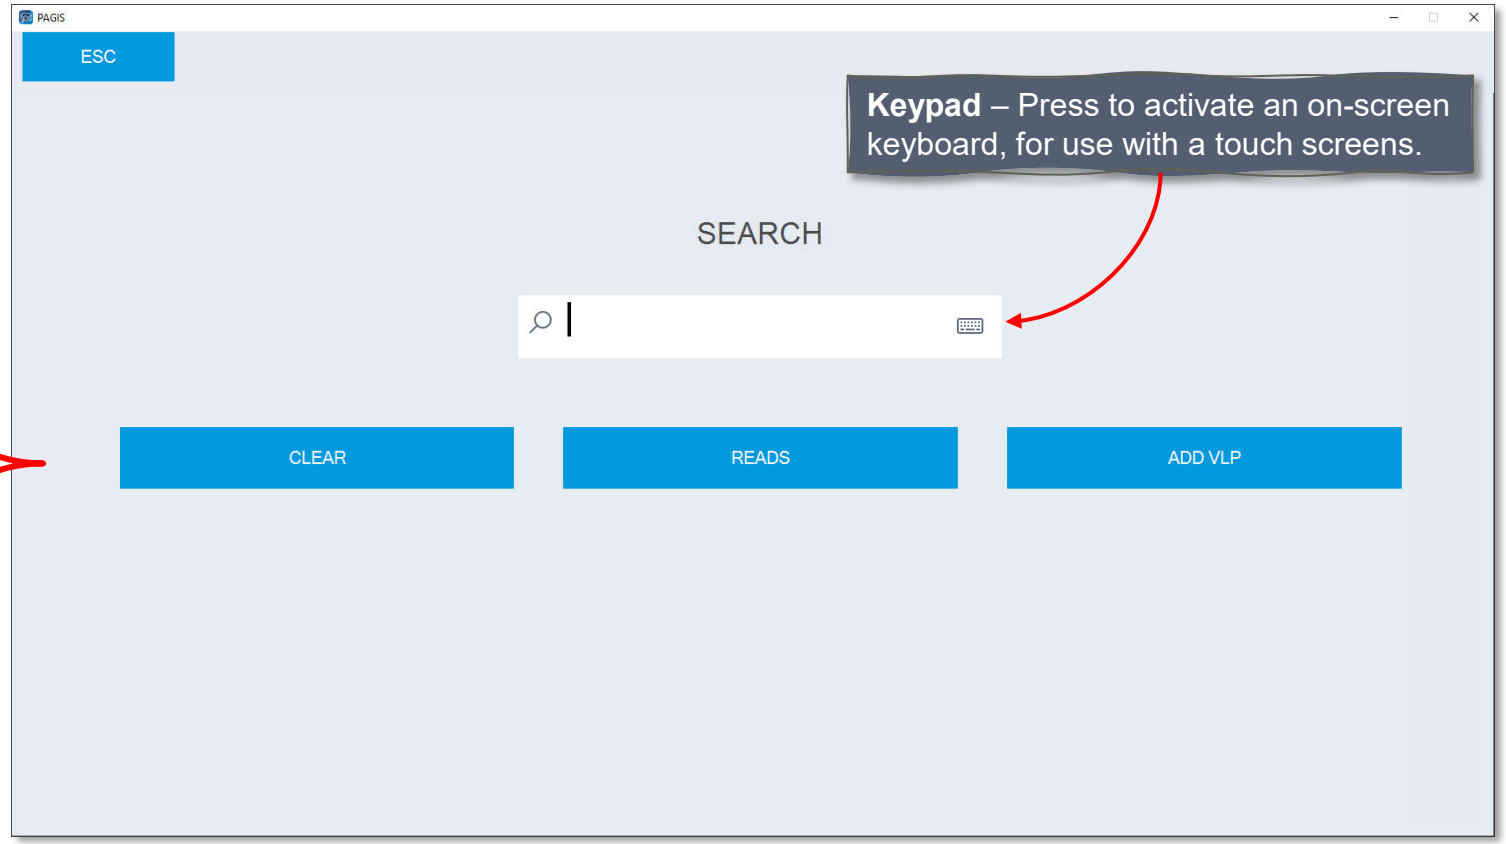
Copyright © 2021 Neology, All Rights Reserved.

2871 Review- Edit Database 2 of 2

VIEW –Hotlist has two function based on origin of hotlist.

- Hotlist deployed to PAGIS via BOSS cannot be edited, only the hotplates list can be viewed. Editing/updates are indented to be managed via BOSS.
- Hotlist created in PAGIS, i.e., “Manual Reports” can be managed by PAGIS users, allowing for changes or deletion of the hotplates contained within the hotlist.

Copyright © 2021 Neology, All Rights Reserved.



2872 Search Entry 1 of 3

Search Entry Button

Click Search Entry from the Main View screen to display Search features.

- **Text Field** – Enter alphanumeric string to search. Accepted wildcards are Asterisk “*” or Underscore “_”.
- **Clear** – Clear the content of the text box.
- **Reads** – Search for plate number with Reads and Hits currently stored in the PAGIS.
- **Add VLP** – Add hotplate to “Manual Reports” Alert List or check existing hotlist for the entered license plate. Partial plates or wildcards not accepted.
- **Esc** – Return to the previous screen.

Copyright © 2021 Neology, All Rights Reserved.

Search Entry- Reads 2 of 3

READS Searching against collected license plate data in PAGIS.

- Search criteria can include exact text or text and wildcards. Wildcards are special characters that represent any / all potential characters and can be used in searches and queries.

- Wildcard searches can be performed using the * and _ characters. The asterisk (*) designates an unknown number of characters while the underscore (_) indicates a single missing or unknown character. To search for a plate number with the characters 3 and C, entering *3_C* will display all records containing 3 and C separated by one character.

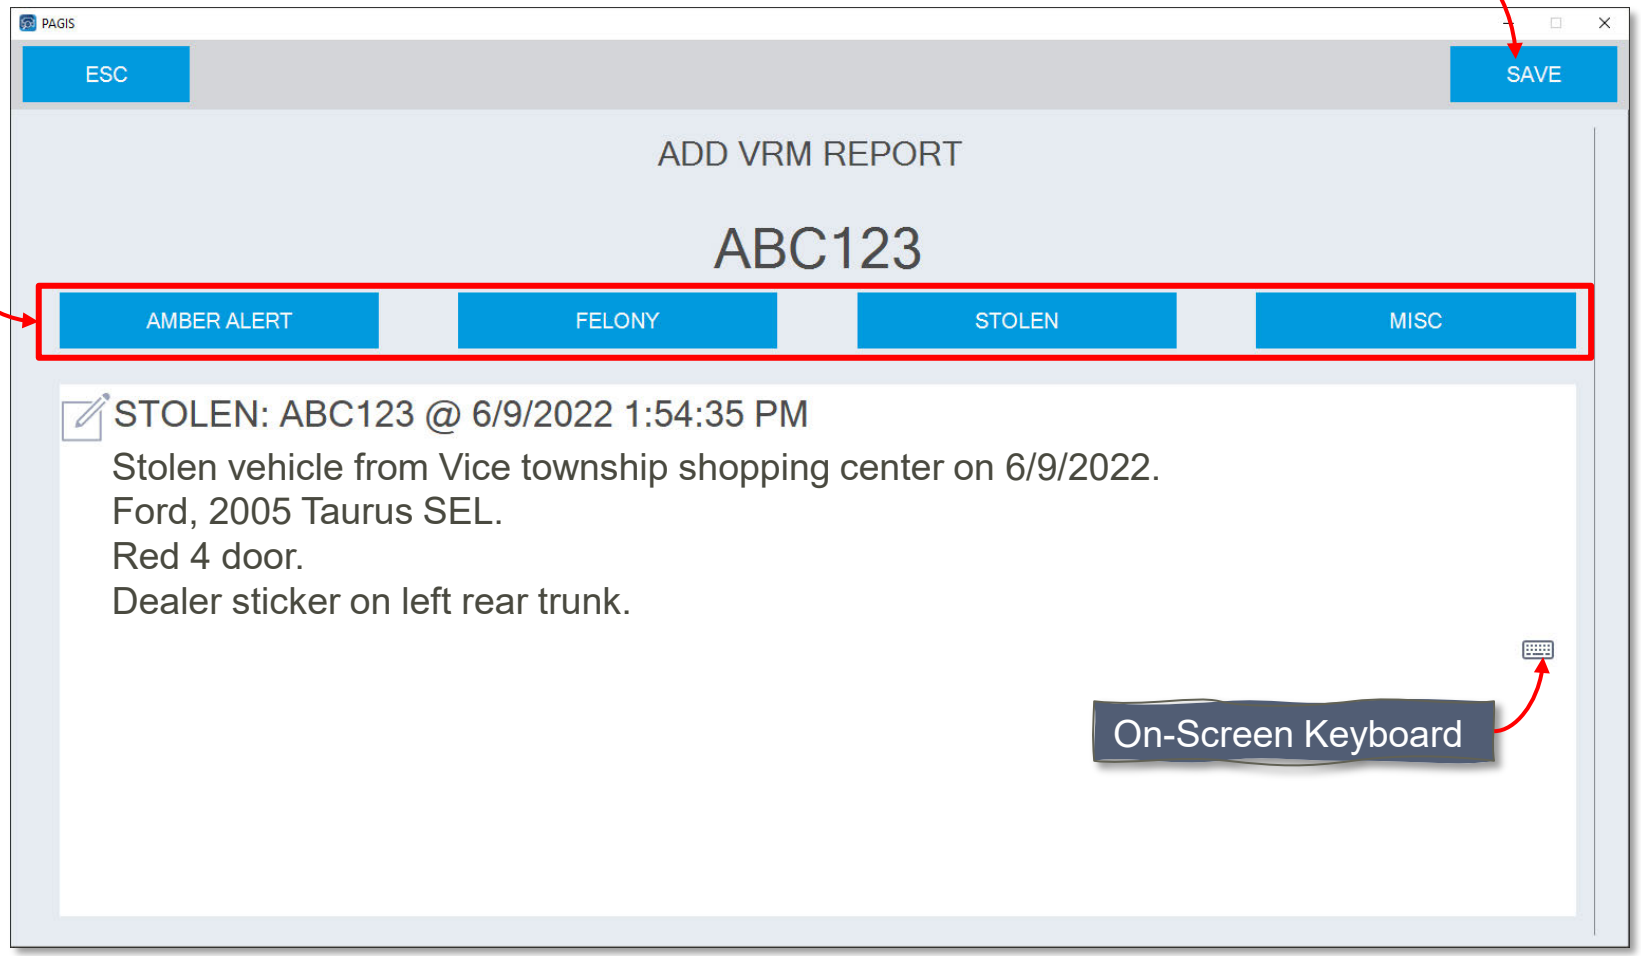
2875 Search Entry- ADD VLP 1 of 2

Add a plate to “Manual Reports” Hotlist or check for existence of plate in Hotlist download from BOSS.

- Manual Reports is a PAGIS standalone Alert List designed for manual entries by the PAGIS operator.
- Manual Reports Alert List do not transfer to BOSS or other mobile units utilizing PAGIS.
- Manual Reports Alert List are cleared out during a manual “upload” or during Purge cycle.

Enter plate into the text field, click “Add VLP”.

- If plate already exist, a message will applier indicating the Alert List it was found in. Otherwise, you will be prompted in the next screen to classify your entry.
- Wildcards or partial plates not accepted when adding hotplates.



Copyright © 2021 Neology, All Rights Reserved.

Search Entry- ADD VLP 2 of 2

2876

ADD VLP Report:

- Select one of the four pre-defined classifications.
- Type in additional information about the vehicle.
- There is no limit to the number of manual entries that can be added to the Manual Report Alert List.
- Entries can be edited or deleted individually in the review Database section.
- All entries in the Manual Report Alert List will be discarded when a manual End Shift is performed.

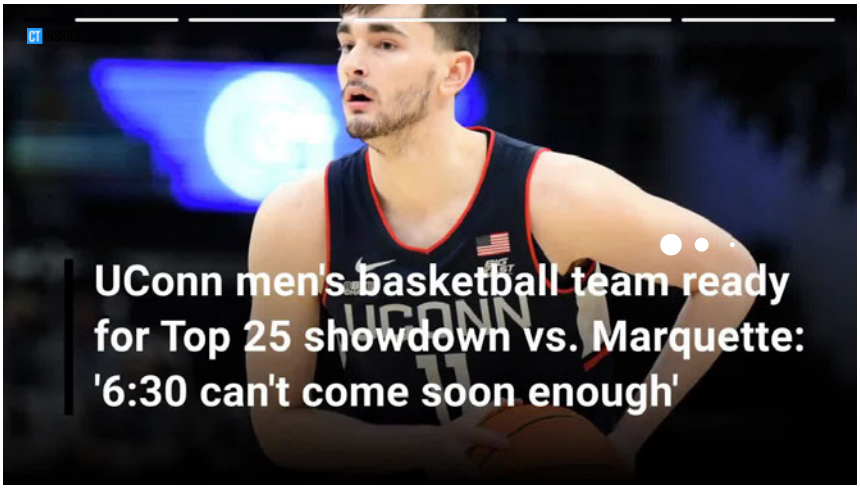
Federals funds have helped some municipalities expand the use of license plate readers.

Facebook/Bristol Connecticut Police Department

New Canaan recently became the latest Connecticut municipality to approve the use of license plate readers, with officials there citing an increase in stolen cars as the main impetus for purchasing the cameras.



2879

ADVERTISEMENT
Article continues below this ad

This kind of surveillance technology has become prolific across Connecticut, with at least a handful of municipalities in the past year approving new license plate readers to be placed at stationary locations throughout towns or adding to their existing network of cameras.

In some cases, municipalities used federal stimulus funds to purchase the equipment, which enabled towns with smaller police budgets to acquire the technology and expedited the purchase of the camera systems in other cities.

ONLY 99¢! Get Access to Your Trusted Source for Local News. ACT NOW

New Haven is spending $12 million for 500 new video surveillance cameras and to expand its ShotSpotter gunshot detection system. New London and Norwich also purchased new camera systems. Stamford is installing 50 cameras at 30 different locations in the city. Glastonbury is also considering purchasing the devices.

"I'm definitely noticing more public displays of the use of surveillance technology in Connecticut. More and more towns are hopping on that bandwagon," said Claudine Constant, public policy and advocacy director for the Connecticut chapter of the American Civil Liberties Union.

Law enforcement and local officials who have approved funding for the systems have described the cameras as tools to help combat and solve crimes. Police have credited the cameras with helping to apprehend stolen vehicles, tracking down a missing person, and helping to arrest a juvenile suspect in a fatal shooting.

"Look at some of the challenges in law enforcement right now. There are staffing shortages pretty much across the board. These can be a bit of a force multiplier for us," said Town of Groton Police Chief Louis J. Fusaro Jr., a vice president of the Connecticut Police Chiefs Association. "They're like police officers at the corner that work 24/7, 365 days. They don't get sick. They don't get paid overtime."

But the networks of cameras in many towns and cities have generated privacy concerns from organizations such as the ACLU and residents. A 2019 report from the ACLU found that police in Fairfield, Westport, Stratford, Trumbull and Norwalk had helped U.S. Immigration and Customs Enforcement monitor "potential targets" through an extensive database of individuals and their locations collected by automated license plate readers.

2881

Fusaro said Flock Safety, one of the most popular private companies selling the readers, has a retention policy that automatically deletes the data after 30 days unless police indicate the information is part of an active investigation.

“We don’t want to surveil the public. The First Amendment is critical to us. We want to make sure we utilize technology in a way that’s ethical, legal and transparent,” he said.

The ACLU has also critiqued the opaqueness surrounding the technology’s use. For example, police in Connecticut are not required to detail how they are using the information nor where the cameras are located.

Some officials have announced generally where the cameras will be installed but not specified the exact locations. In Stamford, for example, the public safety director said the cameras would be “spread out throughout the city.” New Canaan officials said the readers will be placed at various, strategic locations around the town's borders. lack of transparency over how the technology is use.

ADVERTI EMENT
Arti le ontinues below this ad

At least 16 states have laws re ulatin the use of license plate readers or how the information collected from the devices is stored Some states prohibit the use of the devices except for limited public safety purposes or limit the types of investi ations

The readers capture the license plate number and every scan's date, time, and location. The information collected can be compared against a so-called "hot list," which can include the plate numbers of stolen cars and cars associated with Amber and Silver alerts.

The cameras have been a fixture on police cruisers in Connecticut for at least 10 years, but in recent years, more municipalities have installed them in physical locations such as on road signs, light poles and bridges.

Connecticut lawmakers have shown little interest in regulating the scanners. The Connecticut chapter of the ACLU advocated for legislation in 2012 and 2013 that would have required the deletion of license plate scan data, but the effort failed to get traction in the General Assembly.

It's unknown exactly how many of these readers exist throughout Connecticut as there's no reporting requirement for municipalities, so there's no centralized list detailing which cities and towns are using the technology. The cameras have also become popular with private businesses and homeowner associations.

Efforts at the local level to regulate the devices have also been unsuccessful. Constant, who previously served on the Hartford City Council, said several years ago, she was part of an effort to create a policy to regulate the hundreds of license plate readers throughout the city. But there "wasn't an appetite" among council members to impose any regulation or limitations on the use of the devices.

At the state level, Constant said the ACLU would continue to push lawmakers to allot more funding toward education, public health and economic growth, particularly as the General Assembly prepares to convene in early January for a budget-writing legislative session.

"A budget is a statement of values," Constant said. "To have lawmakers value people over surveillance and surveillance technology would be a beautiful thing."

MOTOROLA SOLUTIONS

Non-MSI LPR Camera Services (LinC), Fees and Payment Provision

I License Key:

The LinC Camera License Key (CLK) means an electronic license key that will permit the use of MSI's LPR software to be used with non-MSI branded / non-MSI issued LPR cameras (one CLK per camera) and select MSI Software Products.

II Offer Services:

This Offer includes the following Software Services / Software Products:

- LPR Software Services / Software Products:
- MSI Managed/Hosted LPR Account
- CarDetector Fixed LPR Software w/ all updates
- Target Alert Service
- Optional Services
- Cellular Data Service (Optional / Additional)

III Annual Service Fees:

The Service Fees applicable to each Annual Service Period for this Offer shall be as follows:

Annual Fee Schedule	
LinC CLK (Edge Camera)	$750.00
LinC CLK (Server Camera)	$500.00
Annual Cellular Data Plan per Camera (Optional)	$1,200.00

2895

INTRODUCTION

Neology's Automated License Plate Recognition (ALPR) software solution called PAGIS utilizes dual-channel, dual-lens, cameras to "read" plates. Our software is optimized to run on the Mobile Processor itself or in conjunction with a mobile data computer (MDC). Our mobile software is compatible with Microsoft Windows 7, 8 and 10. The Mobile ANPR/ALPR Processor comes equipped with Microsoft Windows 10 Embedded.

The PAGIS Software processes the infrared plate image provided by any of the cameras and then interprets the plate number through Optical Character Recognition (OCR) via the mobile processor. The PAGIS application then searches for any matches of the plate with those listed in the databases, or "hotlists," distributed from the Back Office System Software (BOSS) or other external sources.

WARNING: To reduce the risks associated with impact, which if not avoided, could result in serious injury or death: Do Not interact with the ALPR system while driving in hazardous situations. The PIPS mobile camera series and License Plate Capture Software are not intended for use in hazardous environments, so that the User and/or others are not put at risk for personal injury and/or property damage.

1.1 Dual Lens Color and Infrared Camera

The Mobile ALPR System allows for a maximum of four (4) dual-lens cameras to be installed on each ALPR vehicle provided that the vehicle supports the additional mounting equipment.

Each dual-lens mobile camera uses visible light to take color overview pictures of the vehicle and uses infrared (IR) illumination to capture the license plate's alphanumeric characters. IR illumination offers the best capture performance of reflective license plate characters for the following reasons:

- State issued license plates are designed to be highly reflective to IR light.
- Cameras using IR capture technology do not depend on the presence of visible light to function.
- Cameras using IR capture technology are not negatively impacted by the effects of headlights, solar glare, or total darkness.
- IR light penetrates rain and fog better than visible light.
- Due to these attributes, the system can be used 24 hours a day, seven days a week.

1.1.1 Available Products

Additional information about this and other Neology applications, cameras, and solutions are available on the PIPS web site: http://www.pipstechnology.com

1.2 Using This Manual

The section overview of this software manual is as follows:

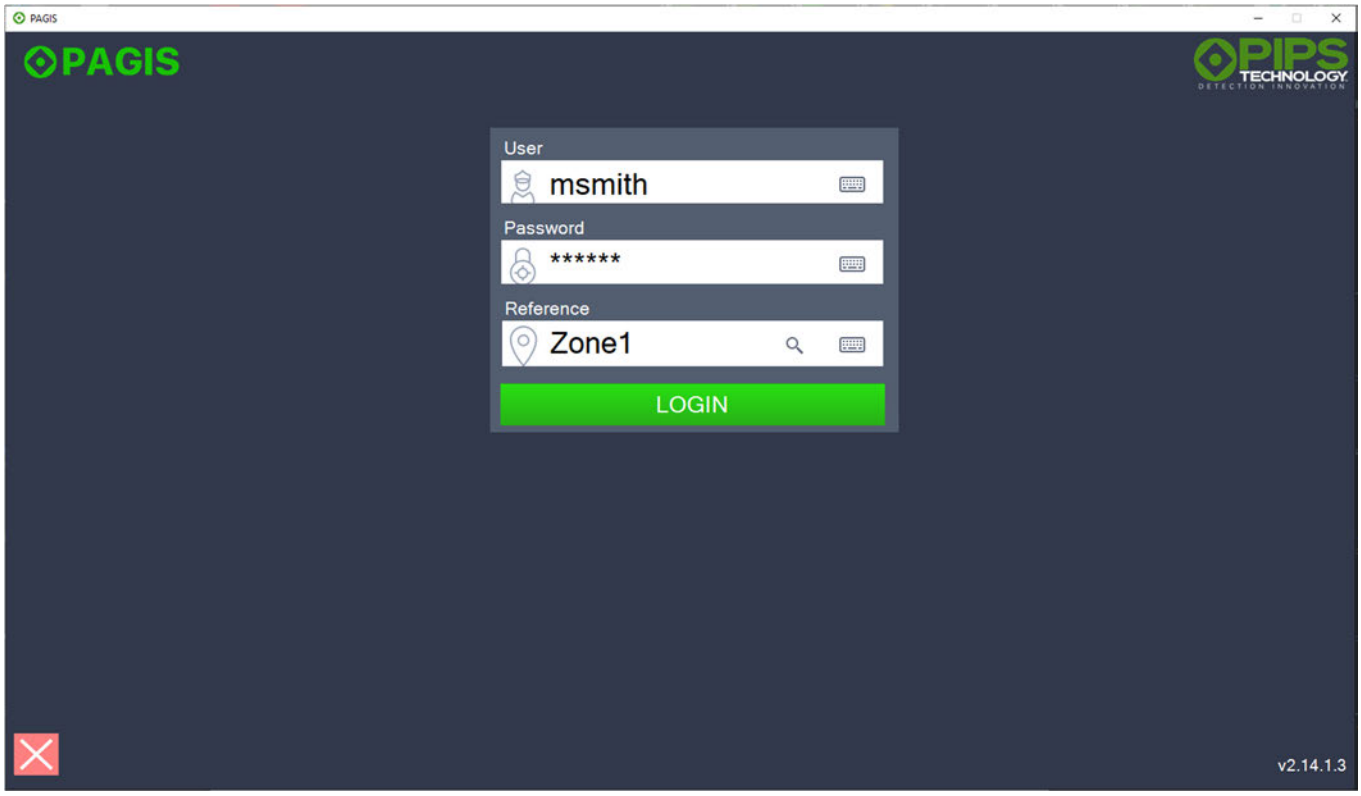
Section 1: The Introduction and Basics

Section 2: PAGIS User's Section: Explains screen function and User Operations in the PAGIS Software

Section 3: Troubleshooting Tips

Section 4: Software Administrator's Guide: Explains how to install and configure the PAGIS Software

Section 5: Additional Information and Troubleshooting Tips



Section 6: Initial BOSS configuration for new PAGIS devices (MDCs)

Appendices: Additional features and details

2897

SCREEN REFERENCE

This section guides the user through the PAGIS Software screens and the available options. Screens are grouped according to function. When a button is grayed out or missing, the option is not available, or no information has been accrued to activate it.

2.1 The PAGIS Software Login Screen

The PAGIS Software allows users with various access privileges to use the same MDC. For users with touch screen monitors, the Keypad button immediately to the right of any text box gives the user access to an on-screen keyboard for data entry.

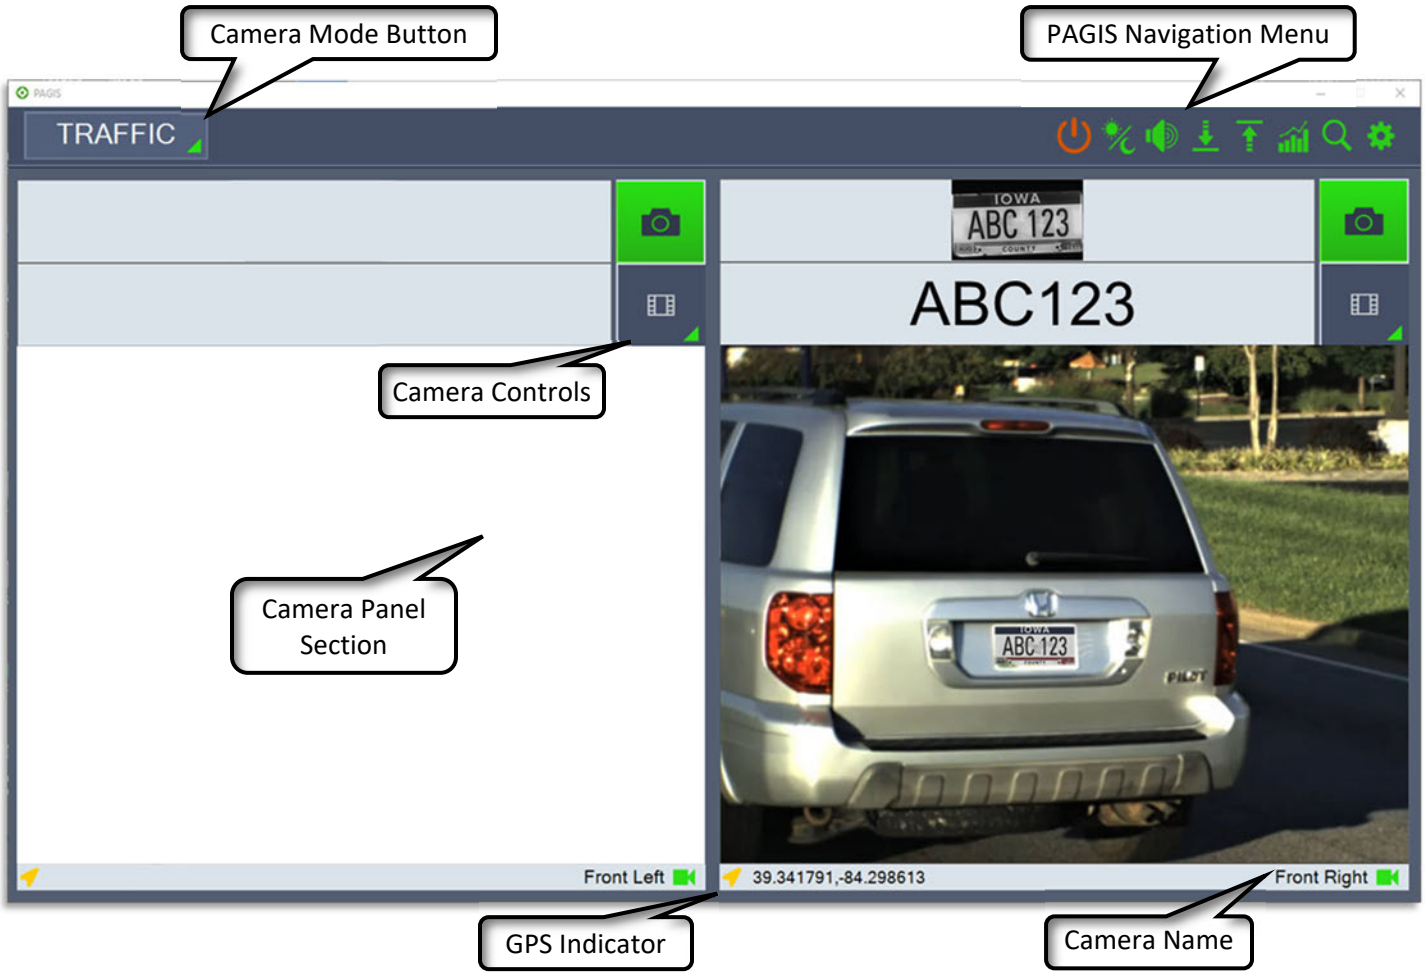
User Field: The alphanumeric string assigned to identify the user. Usernames are not case sensitive.
Password Field: Password of the assigned user logging in. Passwords are case sensitive.
Reference Field: This is an optional field utilized to fit a number of use cases. A user can manually enter a reference at logon, leave the field blank, or select list of unique tags that will be associated with all data captured while logged in. If the Administrator has configured a default reference tags, that information will be displayed automatically. Otherwise, it will be blank.
Login Button: Submits the username and password to attempt a login.
Exit Button: By clicking the X icon in the lower left-hand corner, the user can exit/close the PAGIS Software.

2.1.1 Logging on with the Default Administrative Account

The PAGIS Software includes a default administrative account that can be used for the initial configuration. To do so, simply click the **Login** button with the User and Password fields blank.

NOTE: System Administrators are strongly encouraged to configure users for PAGIS just before, or soon after the installation and setup. PAGIS users accounts are created and maintained in BOSS. Once Users are established by the BOSS System Administrator, the default user account is automatically disabled. Best practices are to be certain at least one User account has administrative privileges.

2.2 Main Screen - Live View



Upon a successful login, the user will see the Main screen (Live View). This is the default view and starting place of all PAGIS Software features. (NOTE: Access to features is based on user group rights established in BOSS.)

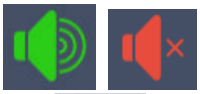
The Main Screen is also the place users will monitor read images and ALPR “hits”. At the initial startup of the system it is normal to see only a blank/grey screen for a few seconds. Once a connection has been established with the mobile cameras, white boxes will be displayed showing the live-feed camera panels. At this point, the system is ready to capture reads/plates.

2.2.1 Getting Started in PAGIS

By default, PAGIS loads into a static view. This means live video will not automatically appear in the camera panels (white boxes) until a plate has be captured or the user selects one of the live feed options.

Once a plate is “seen” by a camera assigned to the current viewing mode (Traffic vs Parking), it will display the captured information in the corresponding camera panel. Each plate capture is also accompanied by a short “Beep” to audibly alert the user a read has taken place. (NOTE: If the user is in the Traffic Mode at the time a parking camera reads a plate, there will be a sound effect, but no plate image will be displayed on screen unless that plate is on a synchronized Hotlist or until the user switches to Parking Mode.)

2.3 The PAGIS Navigation Buttons



This section provides a quick reference guide to the available navigation buttons of the Live View screen.

The Camera Mode button is located in the upper left corner and is used to switch between the configured camera modes. Once configured, the name will change to a selected mode. The default values are “ALL”, “Traffic” and “Parking”.

The Logoff button is located in the upper right of the window. When selected, the user will be logged out of PAGIS and return to the login screen.

The Sound button is located to the right of the Logoff button. When selected, this button with toggle the PAGIS system sounds On and Off.

Day/Nite mode switches PAGIS between day & night mode screen skins.

The Begin Shift Synchronization button is located to the right of the Sound button. When selected, this will reach out to the BOSS server to download users, hotlists, and other system settings.

The End Shift Synchronization button is located to the right of the Begin Shift Button. When selected, this will upload any previously unsent reads, images, and audits to the BOSS server.

The Statistics/Review button is located to the right of the End Shift Button. When selected the user is able to review Databases/Hotlists, Reads, Targets, and other PAGIS information.

The Search button is located to the right of the Review Button. When selected the user can search his/her reads as well as manually add a license plate to a temporary hotlist.

The Admin/Settings button is located in the upper right corner of the screen. This button is only viewable to Admin level users and allows for system configuration changes and setup.

Firmware update icon will atomically appear when PAGIS detects a new firmware is available for the P720 mobile cameras. All user types are notified, but only Admins can apply the update.

2.3.1 Camera Control Buttons

The dual-lens cameras can capture both color and an infrared image. Formerly, there were a total of three buttons that allowed the user to view the IR and color feed as well as capture a picture directly from PAGIS. Now there is a toggle button to switch between color and IR views and a separate button to take a picture. These buttons are displayed on the main Live Screen as shown below:

The Camera View Selector button: This is the default state at login showing the Static View. (**NOTE**: PAGIS does not automatically display a life feed.)

Color View: by clicking on the Camera View Selector button once, the user will switch to the Color View Mode. This displays the current view of the color camera and will time out after 60 seconds.

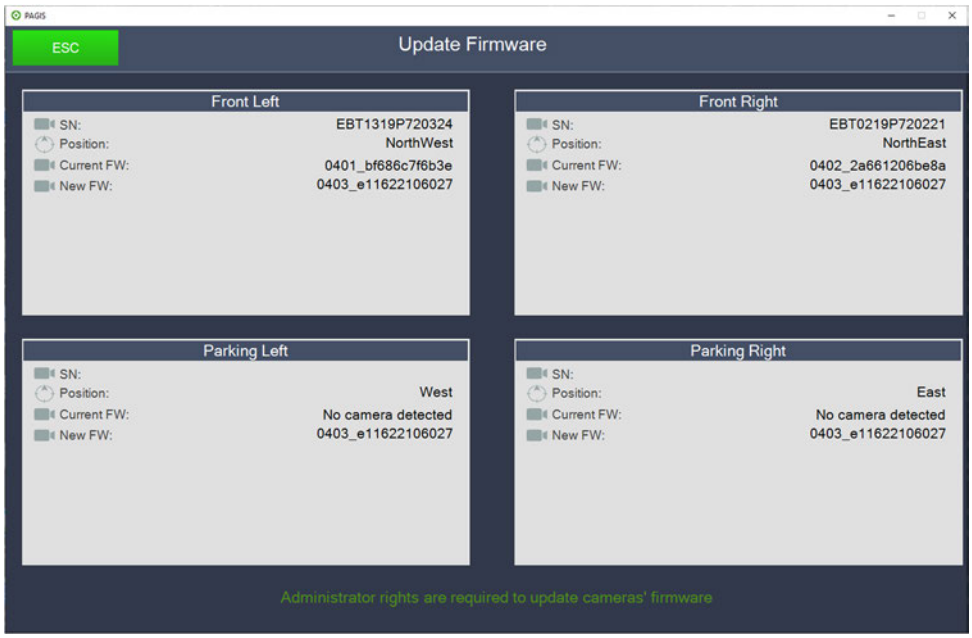
IR View: by clicking on the Camera View Selector button twice, the user will switch to the Infrared (IR) View Mode. This displays the current view of the IR camera and will time out after 60 seconds.

The Take Pic button: Just above the Camera View Selector button is the “Take Pic” button. This button allows the user to quickly take a picture from the camera currently viewed.

2.3.2 GPS Indicators

GPS is stamped on each read and hit as capture events take place by the system. The signal strength and location indicators are located underneath the camera panels at the bottom of the Live Screen.

39.341788,-84.298518 Shows an example of the Location Indicator displaying the Lat/Long on the most recent read



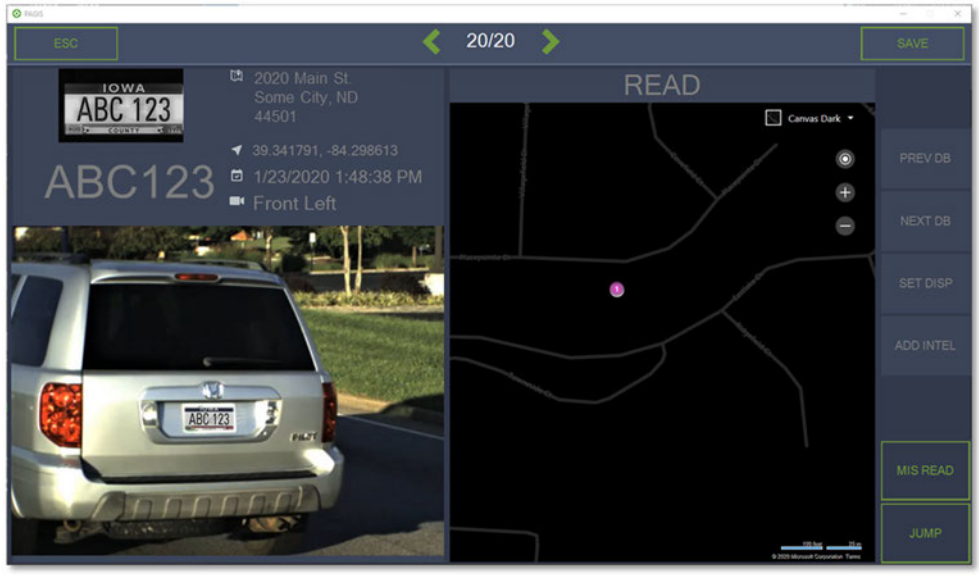
A green or yellow indicator shows a strong or medium strength GPS lock.

A red indicator shows there is no available GPS information.

2.3.3 Camera Firmware Update (Restricted Users)

Camera firmware update provides a means for Neology to update the camera software to enhance and or correct camera performance. The frimware icon will only apper when update is avialable.

- The firmware update process only updates camera that are attached and function on the mobile processor.
- Restricted PAGIS users are only notified and displayed update information, only a PAGIS administrator can apply the FW update.



Firmware Updater Window List.

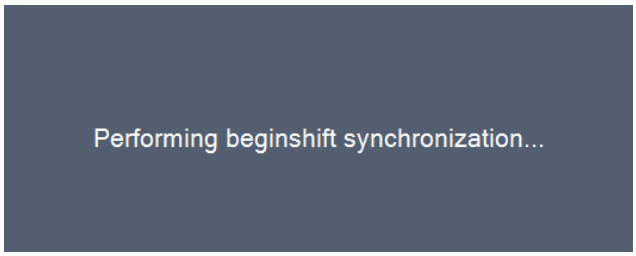
- Title “Camera Name”.
- Camera serial number.
- Position.
- Current FW version.
- New FW version available.

2.3.4 Day/Night Mode

Day/Night mode changes PAGIS user interface skins to a darker appearance to reduce illuminating the vehicle interior.

2901

2.4 Begin Shift



Begin Shift is thought of as the first step for all PAGIS users. From the Live View Screen, the PAGIS user must click the Begin Shift button twice. Once to select the function and once more to launch the Sync. With most agencies, this action utilizes a wireless network to import all the necessary data used during a shift (Hotlists, Dispositions, and Targets) directly from the BOSS Server. However, agencies can also configure their systems to perform this function via Thumb drive or a local source file.

2.4.1 Sync via USB Thumb drive (or Local Source)

Depending on the agency network, some alter the default PAGIS/BOSS configuration mode to use a USB Thumb drive or locally stored file on the MDC/Laptop instead of the wireless Sync. In order to synchronize effectively, the user must first confirm he/she has access to the source location before initiating Begin Shift. **NOTE**: All synchronizations using this method must be performed manually. To learn more about this process, refer to the "Client Tools" section of the BOSS Manual.

2.4.2 Sync via Wireless Network

Synchronizations over a wireless network provide the agency with additional automated features. Best practices recommend the user manually launch Begin Shift from the Live View Screen at the beginning of every patrol shift. However, it is possible for users to allow PAGIS to synchronize via its auto-sync settings. When a manual Begin Shift is launched, the Main View Screen removes the camera feeds and displays a status window of the Sync process. Once the Begin Shift operation is complete, PAGIS will return to the normal Main View Screen.

2.4.3 PAGIS Auto-Sync Settings

PAGIS auto-sync settings are best thought of as how PAGIS receives additional updates and maintains the downloaded ALPR data throughout the entire patrol shift. This prevents the need for the officer to manually perform Begin Shift functions multiple times a day. The auto-sync occurs every 30 seconds and receives data in small batches. The batches are not to exceed 1MB in size for every minute of download. In addition to receiving data, the auto-sync function also uploads a copy of data collected by PAGIS and sends it to BOSS for reporting/processing.

2.4.4 Begin Shift – Additional Information

By default, the synchronizations in PAGIS receive only what has been changed to the ALPR data since the last Sync. Meaning, if some plates have been removed from a Hotlist and others have been added, the system will only transfer that data instead of downloading the entire Hotlist each time the Begin Shift is launched. This helps to reduce the amount of data transferred over the agency's network. **NOTE**: Begin and End Shift synchronization, as well as all auto-sync features, are dependent upon stable communication to the BOSS server via an active data connection.

2.5 End Shift

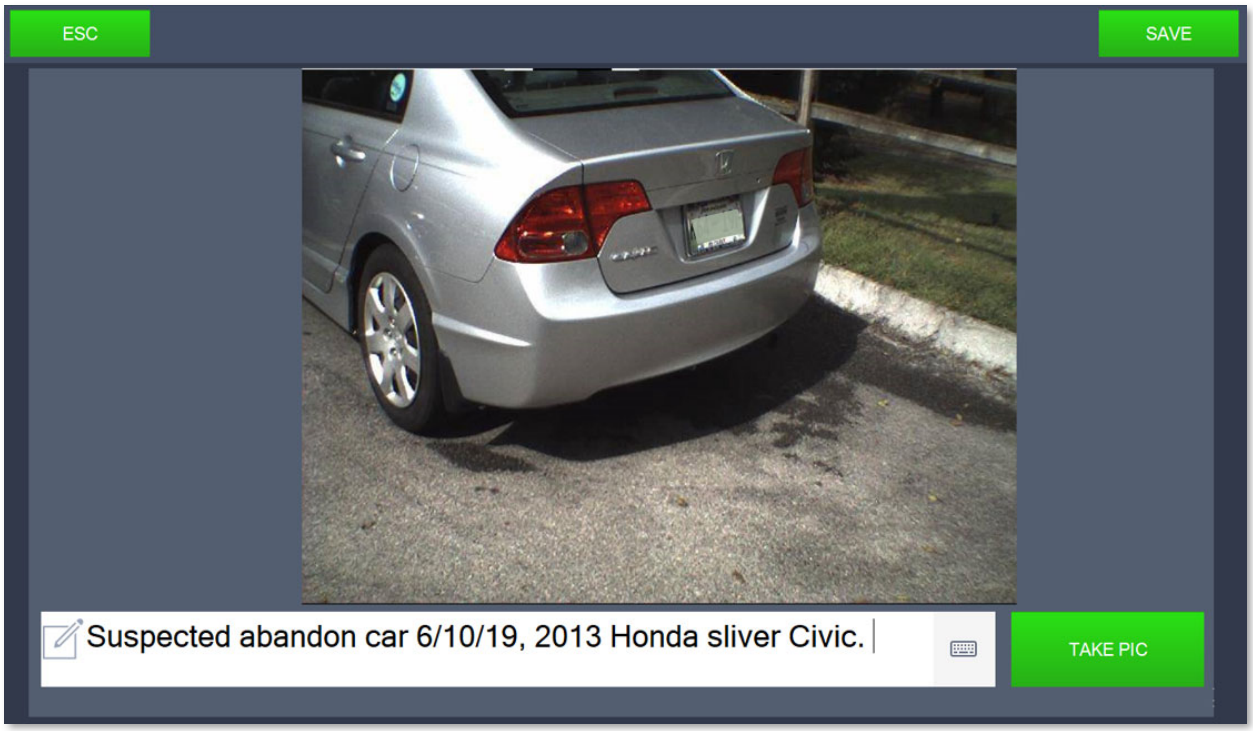
End Shift in PAGIS is the process in which all the collected ALPR data (Reads, Hits, and Images) from the recent shift is uploaded to the BOSS server and cleared from the local cache. As with Begin Shift, the agency has two options. They can choose to Sync via USB Thumb drive or via wireless connection. Best practices recommend users perform an End Shift Sync at the end of every patrol.

2.5.1 Sync to BOSS

At the end of every shift, the accrued ALPR data should be exported to BOSS. Just like with Begin Shift, the user must click the button twice to launch it (once to select it and once more to execute the Sync). During the Sync, PAGIS uploads any Reads, Hits, and Images not already synchronized to BOSS and purges these items from the local cache on the MDC's hard drive. Completing an End Shift also removes any VLP entries manually added to PAGIS during the shift.

2902

2.6 Cam Mode Button



Clicking the Cam Mode button in the upper left corner of the Live View Screen allows the user to cycle through the different camera modes configured by the PAGIS Administrator. Changing the camera mode changes which cameras are displayed on the Main Screen.

2.6.1 Camera Modes

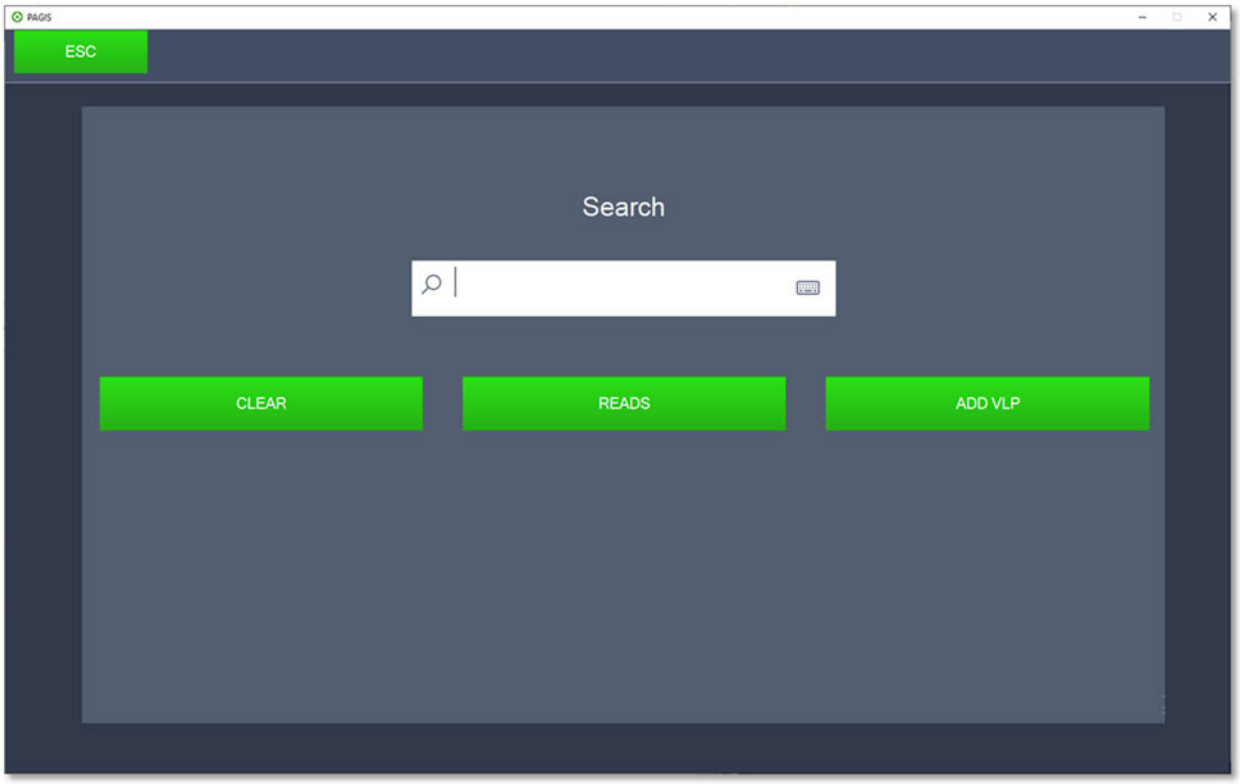
By default, PAGIS provides “Parking” and “Traffic” as the two configuration modes. Users often switch these modes to suit their current use-case. For example, an officer in a parking lot will often switch the mode to “Parking” so s/he can see the parking cameras on the Live View Screen. They can then switch back to “Traffic” when monitoring city streets.

2.7 Taking a Picture

The PAGIS software has ability to quickly take a picture from one of the currently displayed ALPR cameras on the Live Screen. The user only needs to click on the Take Pic button. 

To Take a Picture:

1. From the Live View Screen, press the Take Pic button from the desired camera
2. The image taken will be displayed
3. Enter a description of the picture in the text field at the bottom of the screen
4. Press Save to save the picture or Escape to cancel. Either action will return you to Live View.



NOTE: The picture will Not be saved if a description/note is not entered in the text box.

To View the Saved Images:

1. Navigate to the Review menu in PAGIS
2. Select Audits
3. The user will be able to see a thumbnail of the image and the saved text/note
4. In order to review the saved images at a later time, the user will need to run the Audit Report from BOSS.

2.8 Search Entry Screen

Pressing the Search button icon from the Live View screen or SEARCH from the Databases window allows the user to search all manually entered plates as well as all BOSS synchronized databases (Hotlists) for license plate and target information. Users can also search all locally stored reads/images accrued since the last End Shift by clicking the Reads button instead of pressing the Enter key.

2.8.1 Searching Synchronized Hotlists for License Plates

By entering a vehicle license plate number (VLP) and pressing the Enter key or the ADD VLP button, the user can quickly search all the stored plate information locally collected as well as the information from all synchronized hotlists distributed from the BOSS server. **NOTE**: Hotlists can only be searched by entering complete VLPs. Wildcards and partial plate numbers will not return results.

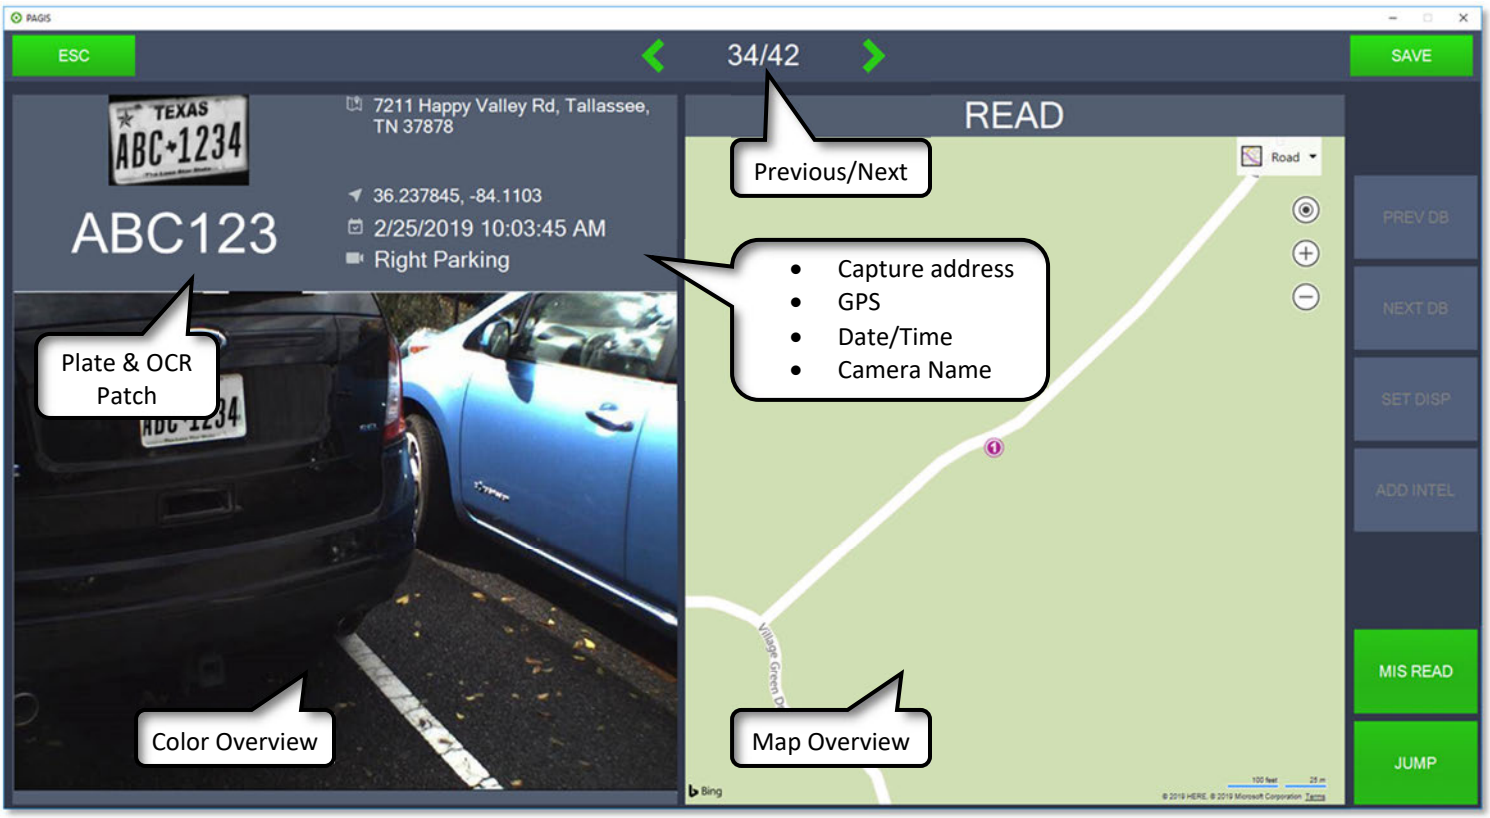
Search Box: The text field used to enter the desired plate search via alphanumeric characters and/or wild card symbols.

Clear Button: Clears the contents of the search box.

Driver's License Info: The search field can also check the Hotlists for any DL information stored (Not available all countries).

Reads Button: This button searches for a match from all the reads/hits locally stored on the MDC/Laptop.

ADD VLP: Searches all locally stored hotlists for the plate and if there's no match, allows the user to add the plate to the "Manual Reports" alert list for use in the field. **NOTE**: All manual entries are cleared with each End Shift



ESC: The Escape button allows the user to exit to the Main/ Live View screen.

2.8.2 Searching Locally Stored Reads and Hits

As mentioned previously, this search function allows users to find reads and hits directly from their recent patrols using the search field and the Reads button. These searches pull only the reads and hits locally gathered/stored since the last time the user completed an End Shift. **NOTE**: The search results are specific to each Windows User Profile and do NOT pull images from the BOSS server.

2.8.2.1 Searching for a Match

- From the Search field, users may enter a plate (or partial plate with wildcards) and then click the **READS** button.
- Results are displayed with the data gathered at the time the read was taken (See example below).
- Each result should display the infrared (IR) image of the plate as well as the color overlay of the vehicle for review.
- Each result shows the GPS data, Closest address point, Time and Date, and the Camera that read the plate.
- If there are multiple results, the user can cycle through them by clicking the left and right navigation arrows.

2.8.3 Wild Card Symbols

The use of wild card symbols in the Search box allows greater flexibility for the user, but may return a larger set of results.

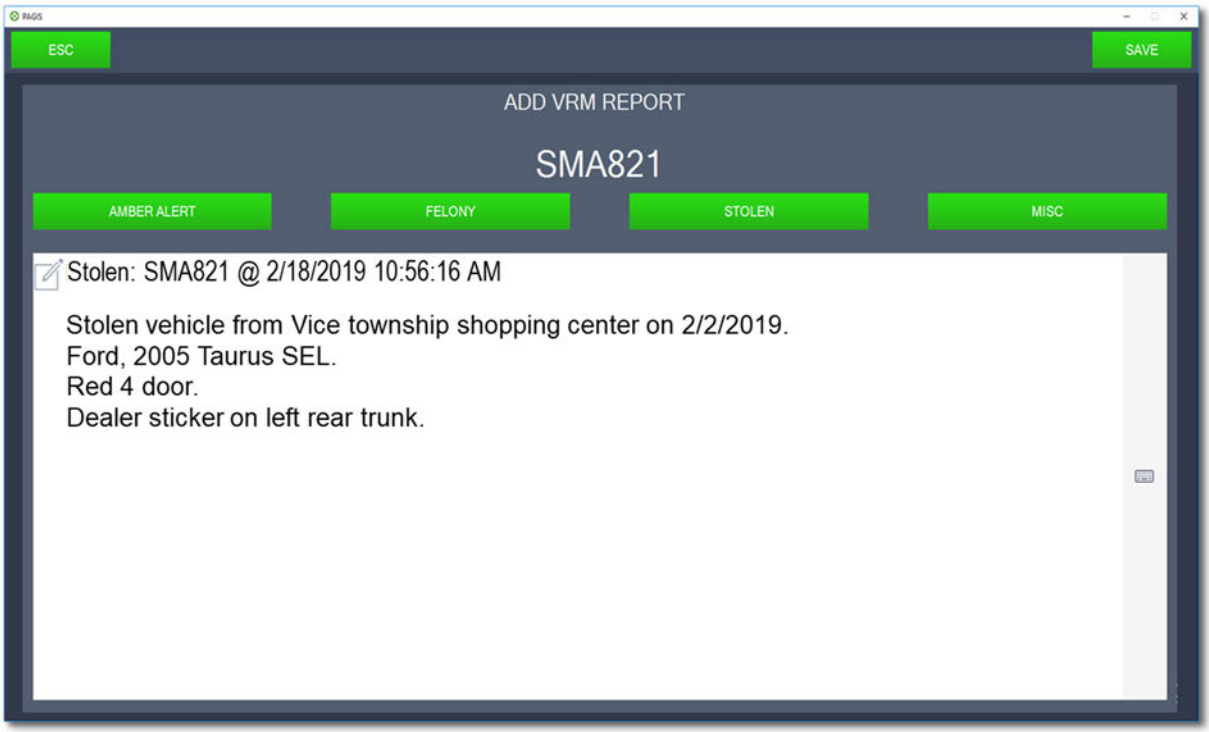
- Wild card searches performed using the asterisk (*) designates an unknown number of characters.
- Wild card searches performed using the underscore (_) indicates a single missing or unknown character.
- Searches can be performed using one, both or no wild card symbols.

Example: The officer received an alert from Dispatch looking for a vehicle plate containing the letter J and the number 8 separated by one character. Because the officer doesn't know how many characters there are before or after the J and 8, he enters *J_8* in the search box to review all possible matches of J and 8 separated by only one digit.

2905

2.8.4 Manually Adding a Plate to PAGIS

PAGIS allows users to manually add a plate of interest directly into the software as needed. Once saved, these entries are stored as part of the Manual Reports alert list and work just like any other Hotlist synchronized from the BOSS server.
NOTE: These additions are designed to be temporary and are cleared from the software with each End Shift.



2.8.4.1 ADD VLP Query

Before an entry is added to the Manual Reports Hotlist in PAGIS, the software searches all stored databases for a match. If a match occurs, a message will display under the search box showing which Hotlist(s) it has been found in. If the VLP query does not return a match, the "ADD VRM REPORT" screen appears.

2.8.4.2 ADD VRM Report Screen

If the desired plate does not already reside in another Hotlist, the ADD VRM Report Screen becomes accessible to the user.

1. From the Search Entry Screen, enter the desired plate to add.
2. Click the ADD VLP button. If no match is found on any other hotlist, the "Add VRM Report" screen will appear.
3. Click to select the applicable alert type (AMBER ALERT , FELONY , STOLEN , or MISC)
4. Either leave the default information or add additional detail.
5. Click Save at the top right to add the plate to the Manual Entries Hotlist

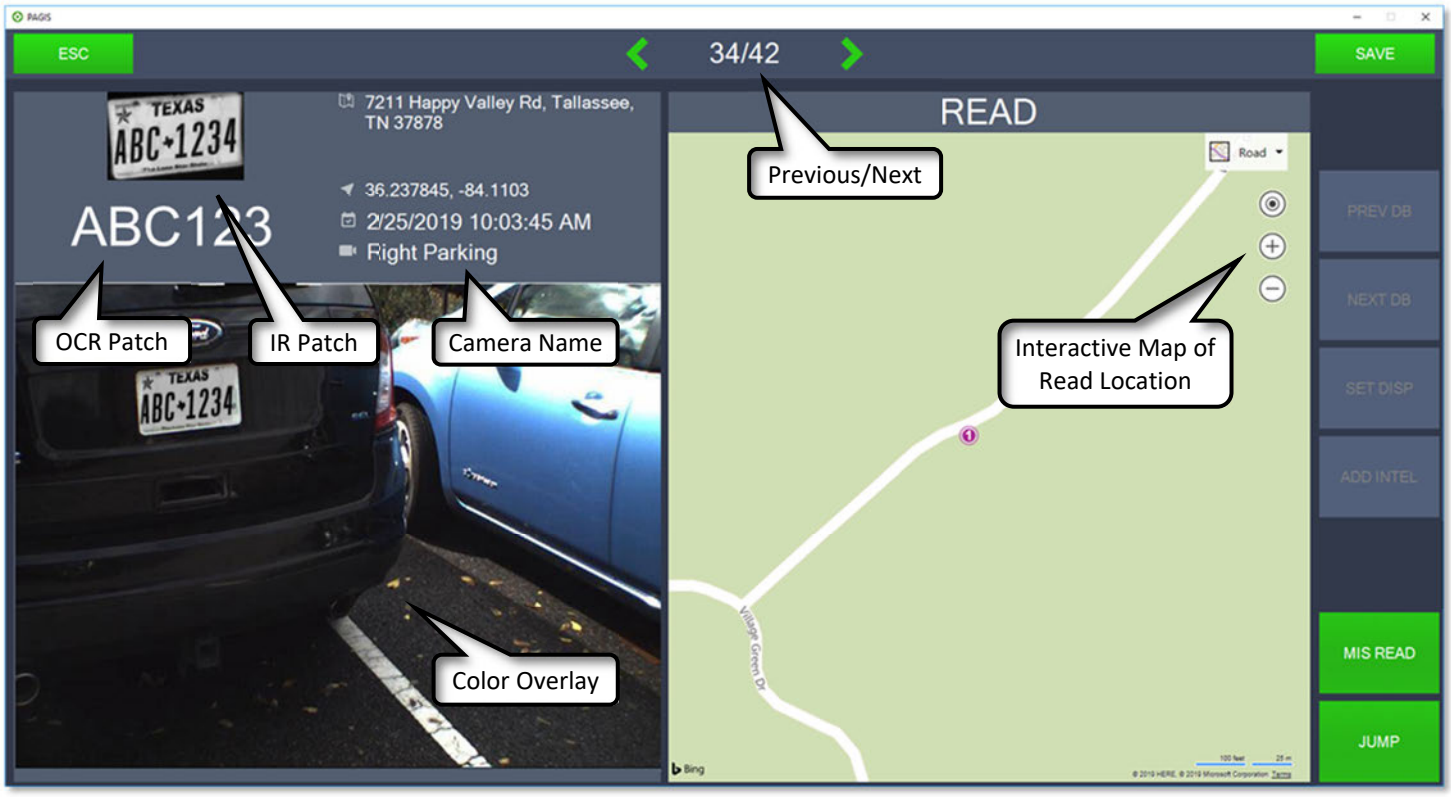
2.9 The Review Screen

PAGIS allows users to review all locally stored data from one easy location. Clicking the Review icon from the Main Screen launches Review. This screen is divided into the Summary View Chart and sub-section navigation buttons to the right.

2.9.1 Summary Review Section

The Summary View Chart is divided into five categories and allows a user to review the information collected during their shift at a glance.

Total Reads: Shows the total number of Reads/Hits synced to BOSS and the total number of reads captured during the shift.
Reads: Shows the total number of reads synced to BOSS and the total number of reads captured during the shift.
Hits: Shows the total number of hits synced to BOSS and the total number captured during the shift.
Misreads: Shows the total number of reads marked as a "misread" synced to BOSS and the total marked during the shift.
Audits: Shows the total number of audits synced to BOSS and the total number of audits during the shift.
Targets: Shows only the number of targets downloaded from BOSS.
(NOTE: The Sync value will always be zero for customers using Disk Sync mode/Client Tools.)



2.9.2 Review Navigation Buttons

The navigation buttons allow the user to review specific sets of information gathered during the shift.

Reads: Review all plate detections that have occurred since the last End Shift synchronization.
Hits: Review the hit alerts for Vehicle License Plate (VLP) reads that matched a Hotlist.
Misreads: Review reads and/or hits that have been manually flagged during the shift as misreads, where the plate number in the image does not match the OCR interpretation of the plate (e.g., a letter O misread as a Q or zero).
Audits: Review failed and successful logons, any manual data entered during the shift, pictures taken and all manual license plate searches.
Targets: Review targets that have been synchronized/downloaded from Boss.
Databases: Review all the Hotlists currently distributed to this PAGIS laptop/MDC.
Esc: Returns the user to the previous screen.

2.9.3 Reads

From the Main Screen, the user can review his or her accumulated Reads (those gathered since the last End Shift was completed) by clicking on the Review icon and then selecting the Reads Navigation button. The Read Review Screen is divided into two main sections. The left side displays the information gathered at the time of the read and the right side displays an interactive map of the GPS location.

NOTE: Buttons that are greyed out indicate options that are not available in the current view. For example, the Reads and Hits review screens share the same layout but different on-screen options.

2.9.3.1 Reads Result Screen Navigation Buttons

Read Count: The left number is the current record. The right number is the total available for review.

Next/Previous button: The arrows on either side of the read count allow the user to navigate back and forth to review reads/results.

MisRead button: When the button is green it indicates the record has NOT been edited as a Misread by a user. Once a Misread is saved, this button will turn grey and the record title will update.

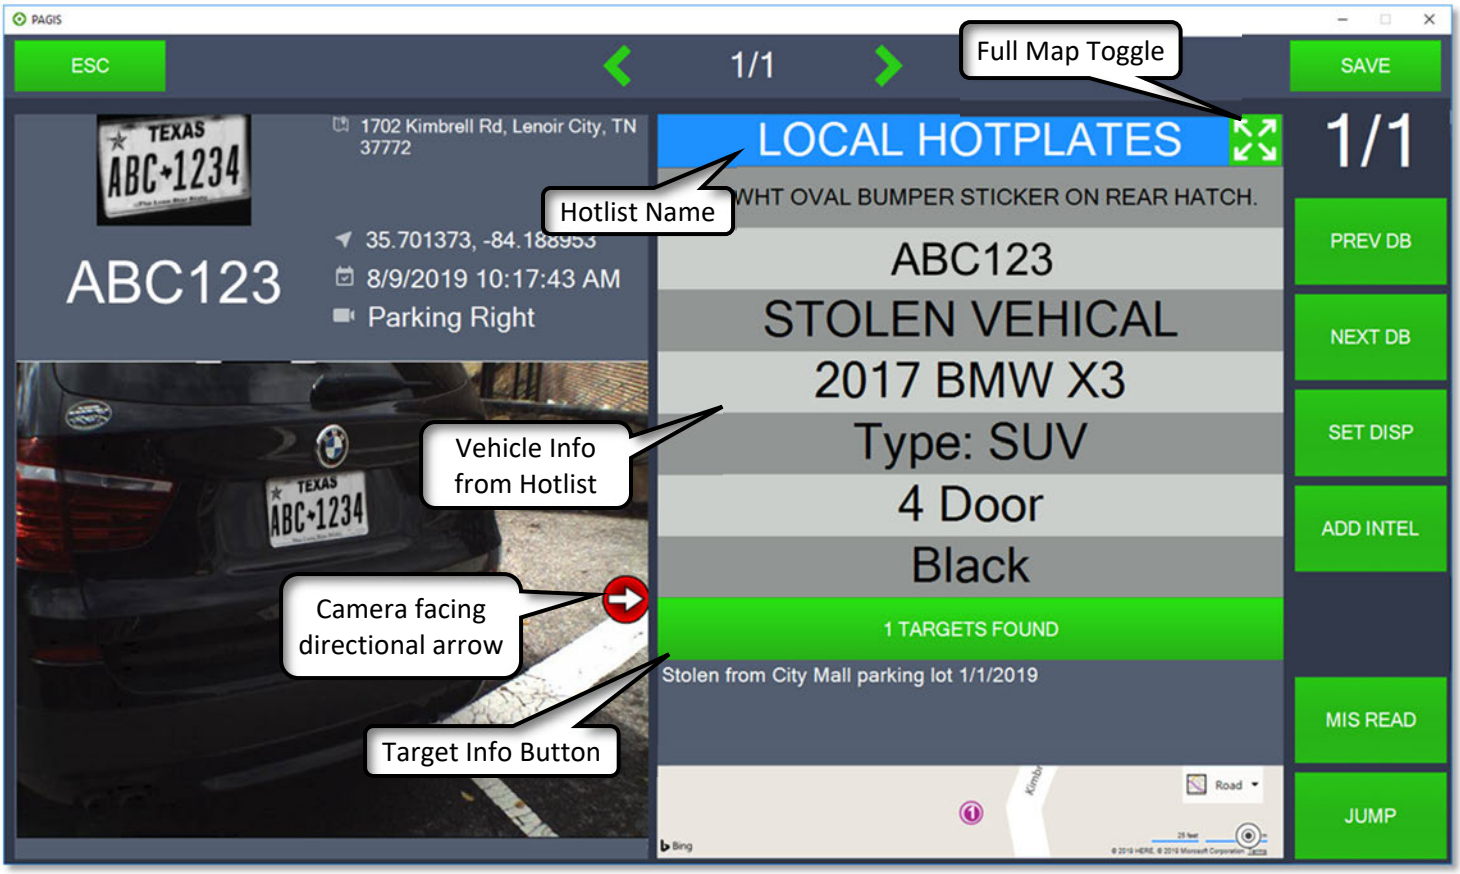
Jump button: Allows the user to "jump" to a specific record without the need to navigate one record at a time using the Next/Previous buttons.

Save button: Apply any changes/edits and return to the Main Screen.

Escape button: Returns the user to the Main Screen.

2.9.3.2 Interactive Buttons – Reads Screen

From the Reads Review, the user can interact with the following:



- IR Patch: The user can click on the IR "Patch" plate image to open a full-screen view.
- OCR Patch: The user can click on the OCR "Patch" image to edit the license plate number if necessary/Misread.
- Color OV Image: The user can click on the color image to open a full-screen view.
- Map: The user can manipulate the interactive map of the read location (Map Type, Scroll, and Zoom).

2908

2.9.4 Hits

Users can manually access the Hits Section by first selecting the Review icon from the Live View Screen and then clicking the Hits Button. The Hits Screen is also divided into two main sections. The left side displays the information gathered from the ALPR equipment during the read. And the right side displays the information provided by the associated alert list.

NOTE: Each time a VLP matches a Database value (a license plate read by the system matches a Hotlist entry), PAGIS plays an audible tone and automatically displays the Hit Screen to alert the user.

2.9.4.1 Hit Screen Attributes

Hit Count and Navigation Buttons: Displays the total Hit count as well as the Next/Previous navigation buttons.

IR Patch Image: A thumbnail image of the license plate from the IR camera.

OCR Text: The character string the OCR engine generated from the current plate.

GPS Location: The GPS coordinates at the time of the hit. (If a GPS device is not attached, the Lat/Long is displayed as 0,0).

Date and Timestamp: The date and time when the read/hit was captured.

Overview Image: The overview image of the vehicle from the Color Camera. (**NOTE**: Color images require visible light)

Camera Name: The name of the camera that captured the read ("Right Parking" in the screenshot).

Hotlist Name: This is the name of the Hotlist or "Database" where the plate was matched.

Target Button: When available, this indicates a person of interest is associated with the Hit and opens the Targets Screen.

Vehicle Information: The area of grey bars will display the related vehicle information from the Hotlist. Any information added manually by the user will appear in the Text Box near the bottom of the screen.

Interactive Map: Shows the location the Hit took place. Users can access full-screen view by clicking the map or the toggle .

2909

2.9.4.2 Hit Screen Function Buttons

The Hit Count Indicator: shows how many Hotlists the current Hit has registered against.

Previous DB button: This button moves the user to the previous Database/Hotlist that produced a Hit.

Next DB button: Pressing this button moves the user to the next Database/Hotlist that produced a Hit.

The Set Disposition button: prompts the user to report the disposition of the hit by selecting one of the approved codes assigned in BOSS by the Administrator.

The Add Intel button: allows the user to add additional information regarding the current Hit.

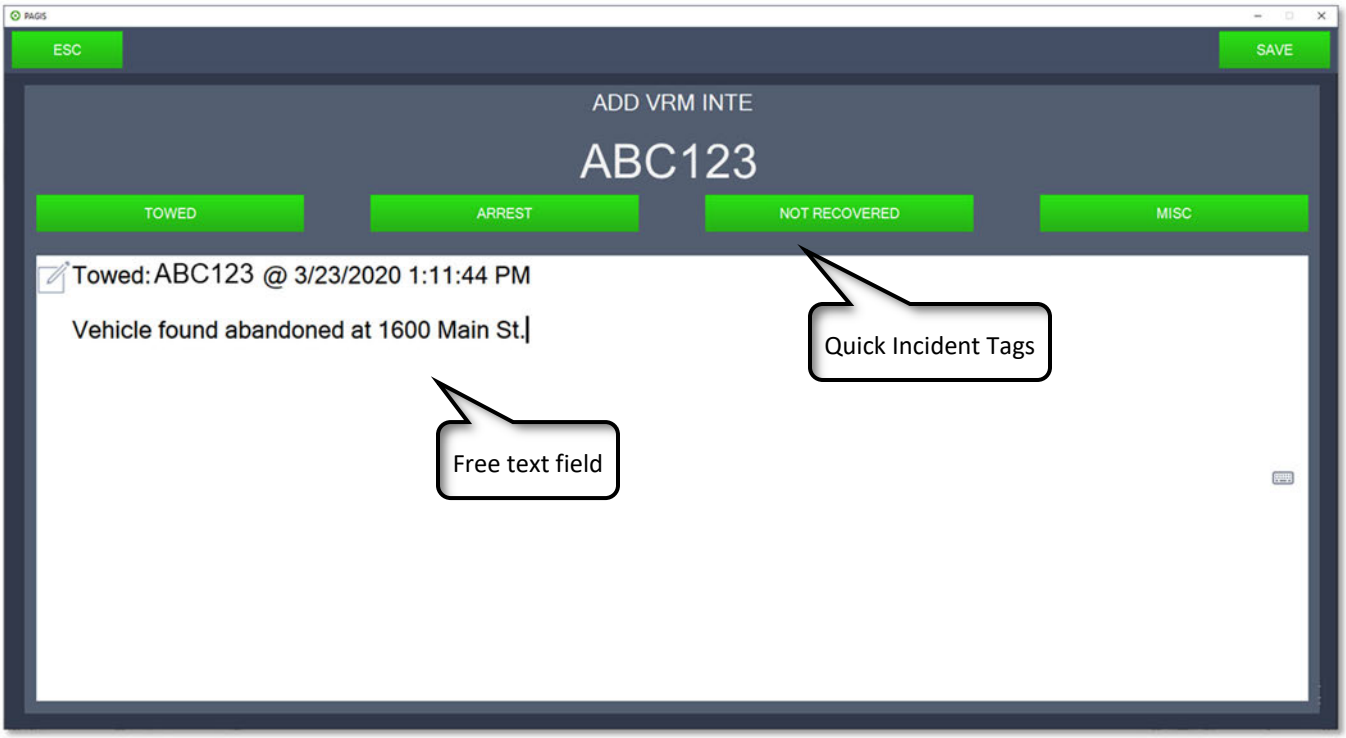
The Misread button: allows the user to flag the Hit as a misread.

The Jump button: Allows the user to "jump" to a specific Hit instead of navigating one at a time.

2.9.4.3 Interactive Buttons – Hits Screen

- IR Patch: The user can click on the IR "Patch" image to open a full-screen view.
- OCR Patch: The user can click on the OCR "Patch" image to edit the license plate number if necessary/Misread.
- Target Button: Shows associated person(s) of interest and opens the Targets Screen.
- Color OV Image: The user can click on the color image to open a full-screen view.
- Map: The user can manipulate the interactive map of the read location (Map Type, Scroll, and Zoom).

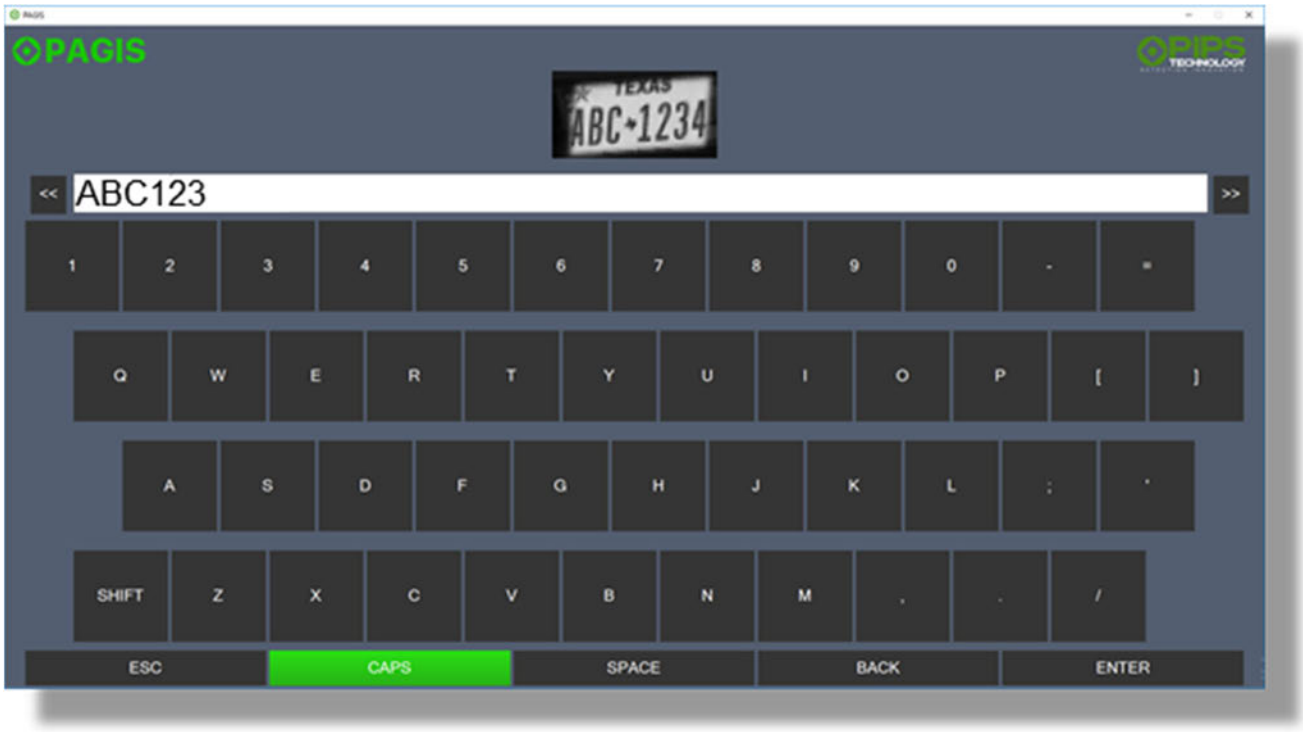
2.9.4.4 Set Disposition – Additional Detail



PAGIS allows for additional information to be added to a record in the form of a Disposition. Once Hits are flagged with a disposition code, the Agency is capable of running a "Reads Statistics by Disposition Report" in BOSS. Thus, providing valuable metrics and understanding to leadership in regard to their ALPR Enterprise.

When the "Set Disp" button is selected, the user is prompted to choose from a list of predefined values set by the Agency/BOSS Administrator. Once a disposition is selected and Saved, the disposition is reported to BOSS and will also show up in the Hits Review Screen text box in PAGIS on the next alert notification.

2.9.4.5 Add Intel – Additional Detail



The Add Intel button launches the Intel screen. The user is prompted to assign one of four values: Towed, Arrest, Not Recovered, and Misc. by clicking the associated button at the top of the screen. The user may also enter additional detail regarding the license plate/vehicle. After clicking the Save button, the intel will now appear in the Hits Screen text box.

2.9.5 Misreads

PAGIS allows the user to mark Reads and Hits with incorrect OCR translations as a Misread. This is most commonly done by Agencies for Hits only as users typically don't have time to review every single Read from their shift. Once an errant Hit is corrected, the system updates the record to show it as a Misread and thus improves Agency Hit Reporting.

Correcting a plate read can be accomplished by clicking on the "OCR Patch" in either the Hits or Reads review screen. When the user clicks on the OCR Patch, the OCR Edit Screen opens and allows the user to update the Vehicle License Plate (VLP) data.

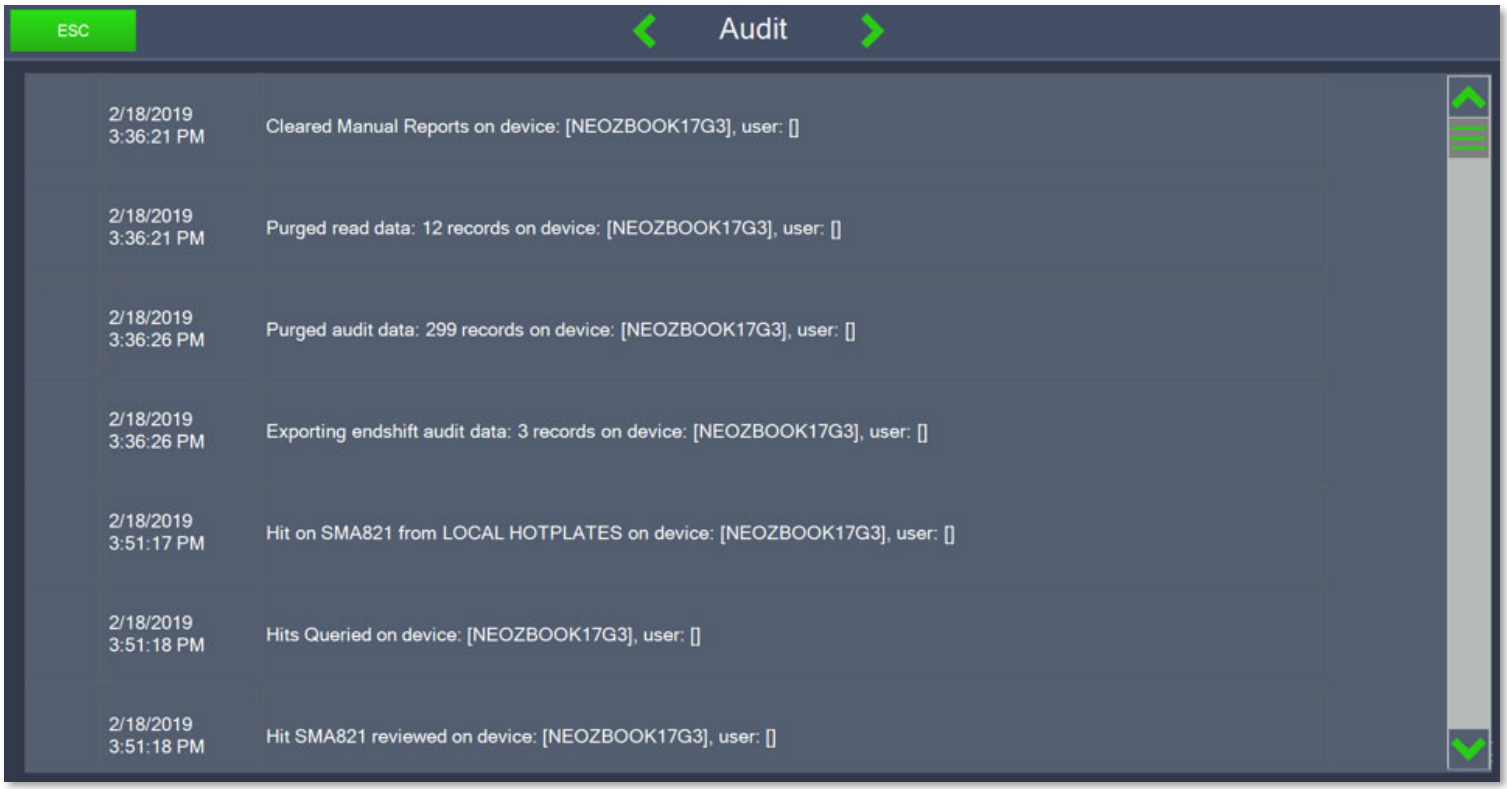
2911

2.9.5.1 Marking a Record as a Misread:

The user can mark a record as a Misread from both Reads or Hits Review Screen. Each user can either simply flag the record as a Misread or update the OCR Patch information. **NOTE**: This ability is only available until the user has performed an End Shift function.

Manually Flagging a Read or Hit as a Misread:

1. Navigate to either the Reads or Hits Review Screen
2. Click on the Misread button on the Right
3. Click Save
4. Take note that the record title has now changed from “Read” to “Misread”



Updating the Read/Hit OCR Patch:

1. Navigate to either the Reads or Hits Review Screen
2. Click on the OCR Patch (Text just under the IR Plate Image)
3. Use the keyboard or on-screen keypad to update the Vehicle License Plate Number
4. Click the Enter Button to Save the changes (and exit back to the Review Screen)
5. When the user saves the changes to the OCR Patch, the record (Read/Hit) is automatically flagged as a Misread

2.9.6 Audits

PAGIS logs both user and key system activity during each use of the software. The audit log captures various information like Read searches, synchronizations, hits, and user login attempts. The Audit Report is viewed in PAGIS by navigating to the Review section and selecting “AUDITS”.

NOTE: Performing an End Shift or syncing the database clears the current log.

2.9.7 Targets

PAGIS has the ability to display information regarding Persons of Interest in response to a Hit alert. Targets are created by BOSS/Hotlist Administrators, and typically provide detailed information about owners of a registered vehicles. When configured, Target data is always linked to unique VLP data (a specific License Plate). If PAGIS registers a Hit on a Plate with a target ID, the Target Information Button is displayed in the Hit Alert window and allows the user to access the Target Screen.

2.9.7.1 The Targets Screen

When a PAGIS user clicks the Target Information Button from a Hit Alert, the Targets Screen opens. This screen displays the information from the BOSS server about the Person(s) of Interest matched to the Hit (license plate).

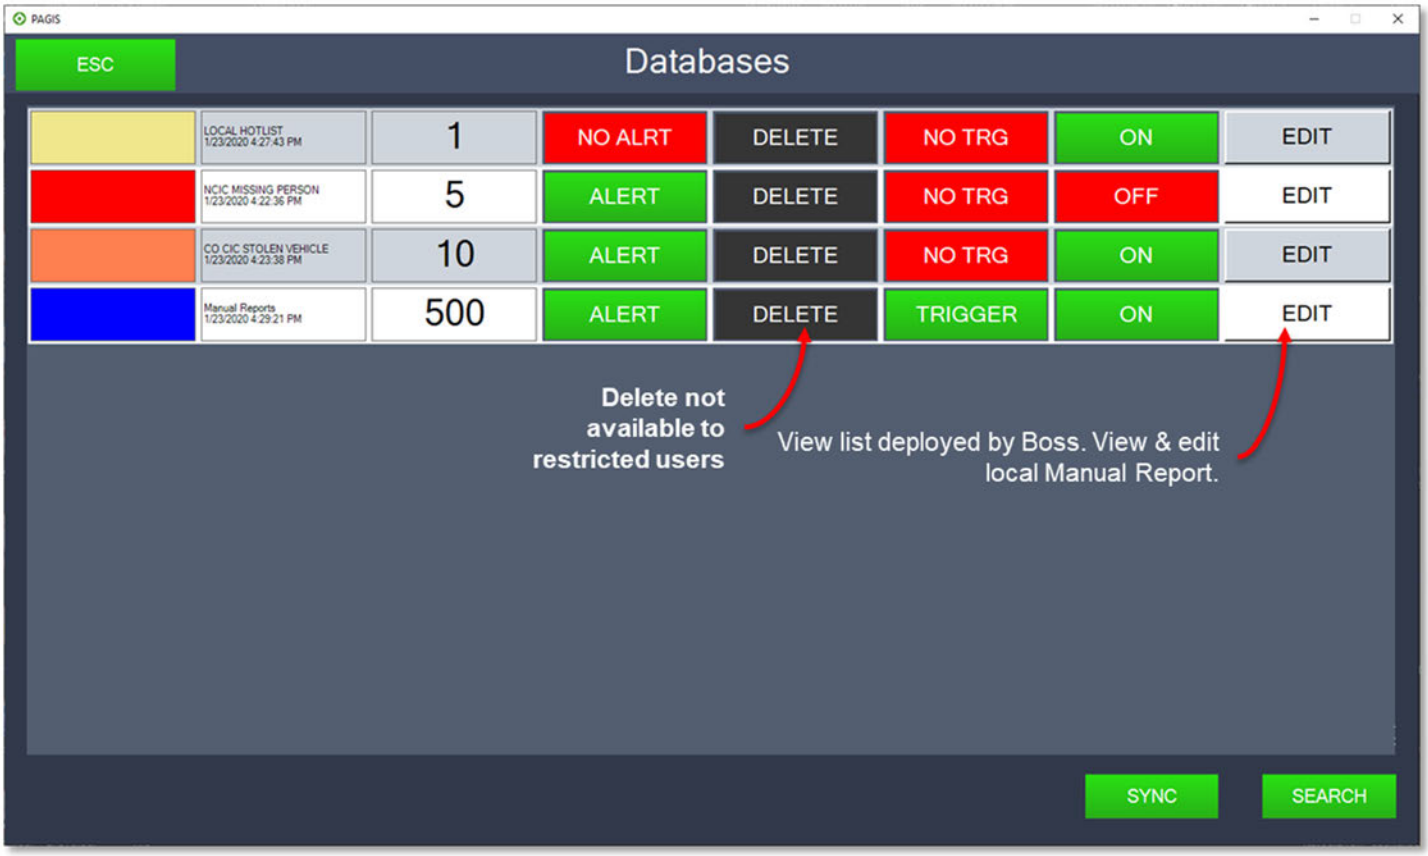
2.9.7.2 Targets Screen Navigation Buttons

If a Hit alert has more than one Target associated with it, the PAGIS user can navigate all Target information with the buttons described below:

Target Count: The left number is the current record. The right number is the total available for review.

Next/Previous button: Arrows on either side of the target count allow the user to navigate back and forth to review the various targets.

Jump button: Allows the user to "jump" to a specific record without the need to navigate one record at a time using the Next/Previous buttons.



Close button: Returns the user to the previous screen.

2914

2.9.8 Databases

Users can review Hotlists in PAGIS by navigating to the Review section and selecting “DATABASES” on the right. From the Databases Screen, users can toggle Hotlists functions On and Off based on their rights.

NOTE: User rights and Hotlist attributes are configured in BOSS.

2.9.8.1 Databases Screen Functions

Hotlist Color Code: The color attributed to each Hotlist by the BOSS Administrator.

Hotlist Name: The name of the Hotlist given by the BOSS Administrator. Also shows the time/date of the last synchronization.

Hotlist Priority: The priority of the Hotlist assigned by the BOSS Administrator. The lower the number between 1 and 999, the higher the priority. If a plate resides on multiple Hotlists, the list with the higher priority will be displayed first.

Alert Button: Toggles audible alerts On and Off for each Hotlist until the next synchronization.

Delete Button: Based on user rights, allows the user to temporarily delete a Hotlist from PAGIS until the next synchronization. To delete a hotlist, the user must click the button twice (it turns green and then deletes the list).

Trigger Button: Toggles external triggers On and Off. An example of an external trigger is a light bar.

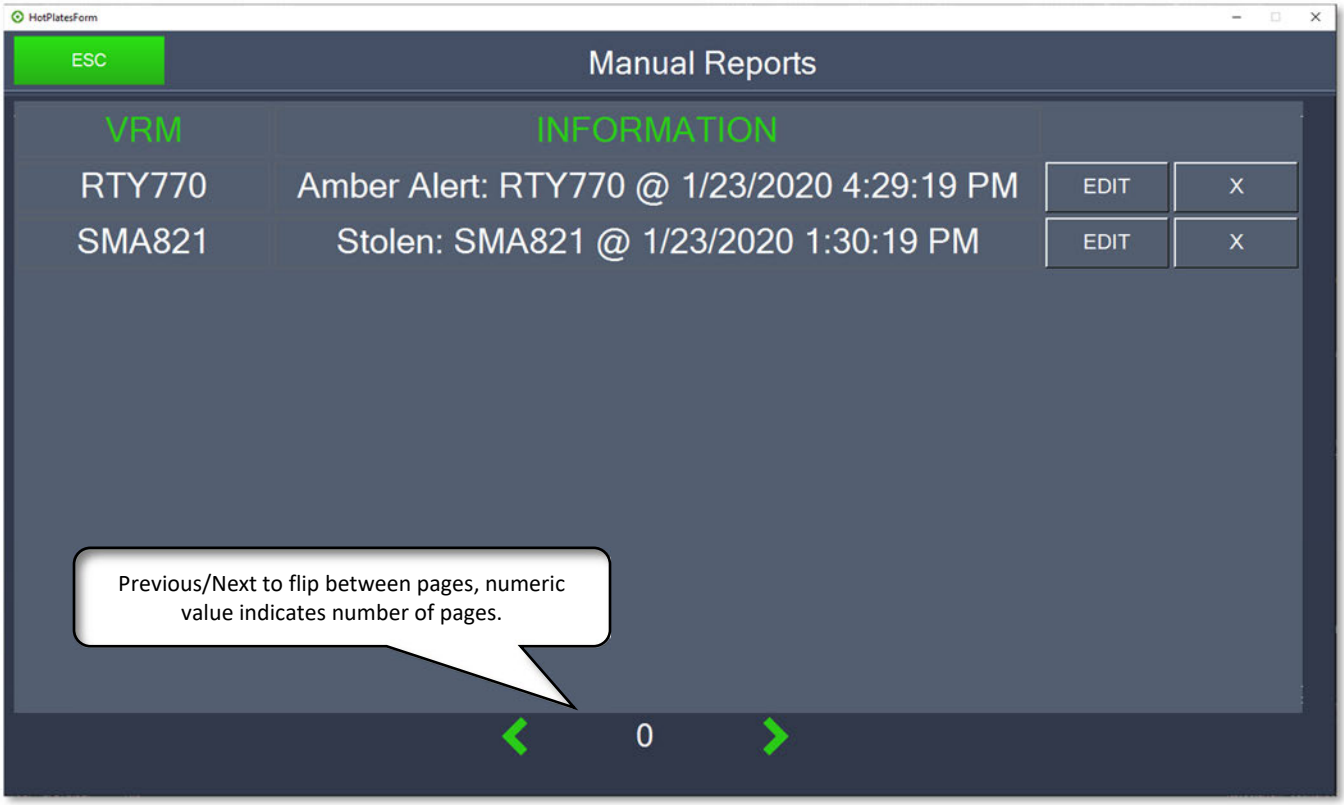
On/Off Button: Disables and enables each Hotlist (each Hotlist is set to On by default).

Edit: View and edit localy created hotplates with a given hotlist, Hotlist/Hotplates deployed via BOSS can only be viewed.

NOTE: Hotlist settings altered in PAGIS will be reset to their default configuration during the next Sync or End Shift. The default configurations are assigned by the BOSS Server/Administrator.

2.9.8.2 Databases Screen Navigation Buttons

SYNC — **Sync button**: Synchronizes PAGIS with the BOSS server in order to update the Hotlists.



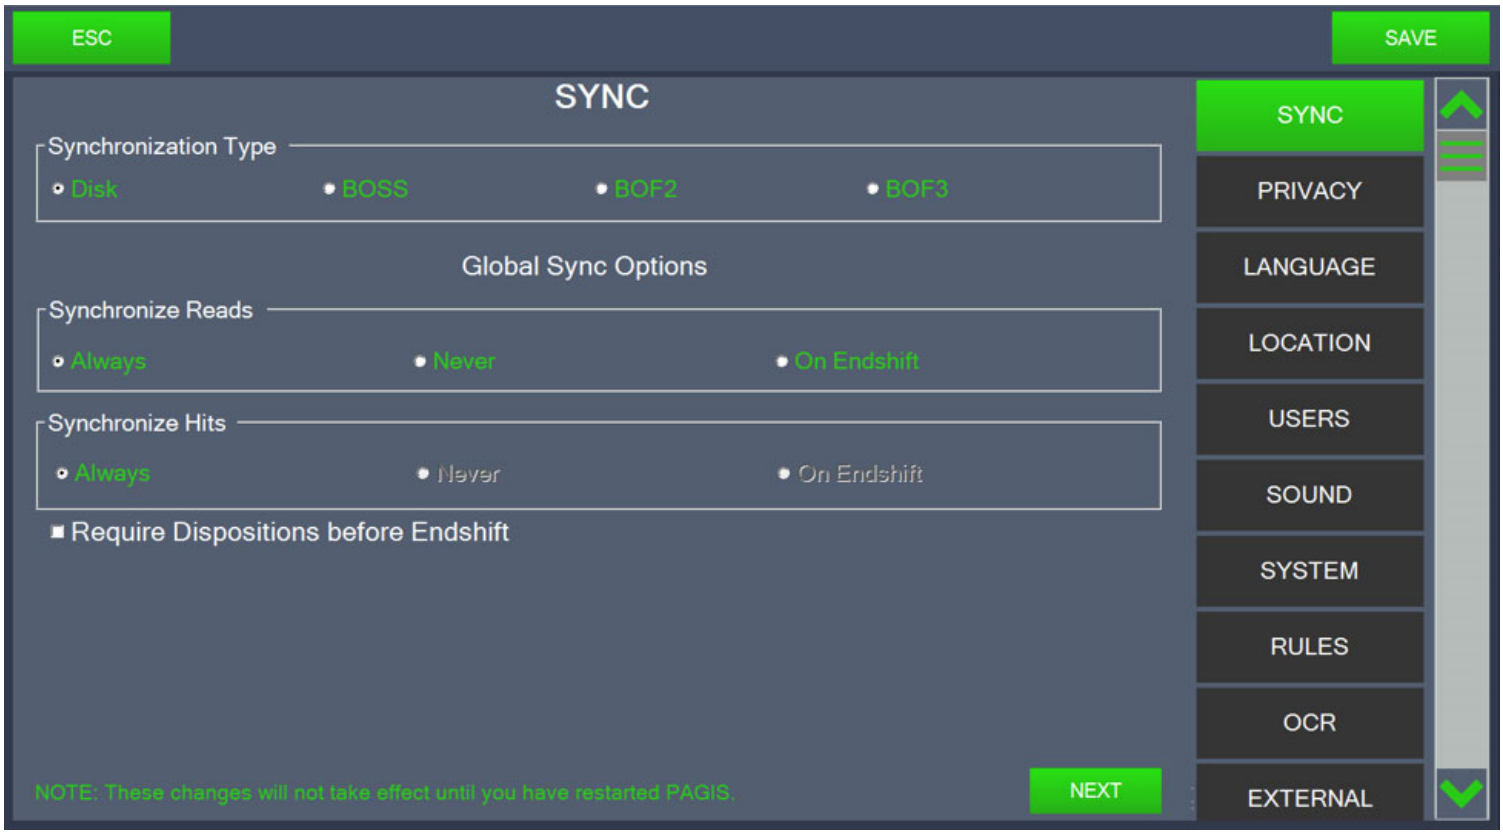
SEARCH — **Search button**: Open the Search Entry Screen (See section 2.8 for more information).

2915

2.9.8.3 Databases Edit- “Manual Reports”

Editing Hotlist has two function based on origin of hotlist.

- Hotlist deployed to PAGIS via BOSS cannot be edited, only the hotplates list can be viewed. Editing/updates are indented to be managed via BOSS.
- Hotlist created in PAGIS, i.e. “Manual Reports” can be managed by PAGIS users, allowing for changes or deletion of the hotplates contained within the hotlist.



EDIT Button: Make changes to the indicustly hotplate information including licanse plate nuamber.
X Button: Remove indivualy hotlist from hotlist.
Previous/Next Button: Scroll thought lising of hotplates contaned within the hotlist. The numeric value indicates the number of pages.

ADMIN SETTINGS

The Settings Menu is the central location for configuring PAGIS Software functions endpoint by endpoint. Users with Admin level rights in PAGIS can see and click on the Settings Button from the Live View Screen. Launching Settings opens the menu to the Sync Options Screen by default. **NOTE**: Users without Admin level access will not see this icon on the Live View Screen.

3.1 Sync Options Screen

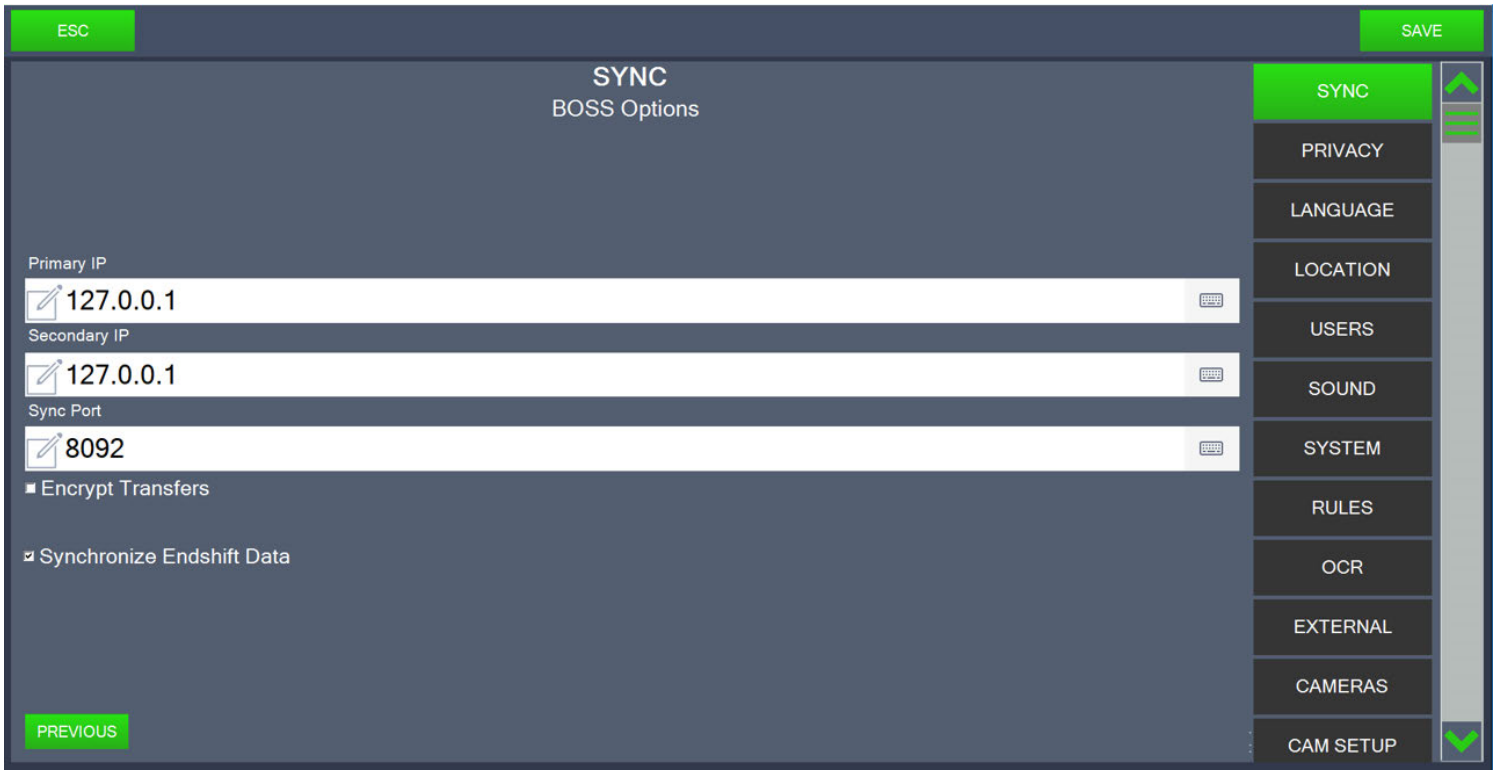
As mentioned previously in sections 2.4 and 2.5, PAGIS uses various sync options to store, update, and synchronize ALPR data to and from the BOSS server. On the Sync Screen, Administrators configure the synchronization method and options.
NOTE: Configuration changes will not take effect until they are saved and the PAGIS Software has been restarted.

3.1.1 Synchronization Types

- **Disk**: Uses local storage of Sync files in conjuction with a USB flashdrive to manually Sync to and from BOSS.
- **BOSS**: Uses a wireless data network to Sync files to and from the BOSS server.
- **BOF2**: Used predominantly in Europe (see regional guide for support).
- **BOF3**: Used predominantly in Europe (see regional guide for support).

3.1.1.1 Synchronization to Disk (Local Storage)

Sync to Disk is a manual two-part process most commonly used with a USB Thumb drive. To use Begin Shift, the user accesses a centralized terminal (Ex. Patrol Room PC) to download the files from BOSS and then inserts the Thumb drive in the laptop to perform Begin Shift. At the end of the day, the user then Performs End Shift from the laptop/MDC connected to the Thumb drive and uploads those files to BOSS via the central terminal (See the "Client Tools" section of the BOSS Manual).
NOTE: From the Sync Menu, select "Disk" and click the Next button at the bottom to configure the drive location.



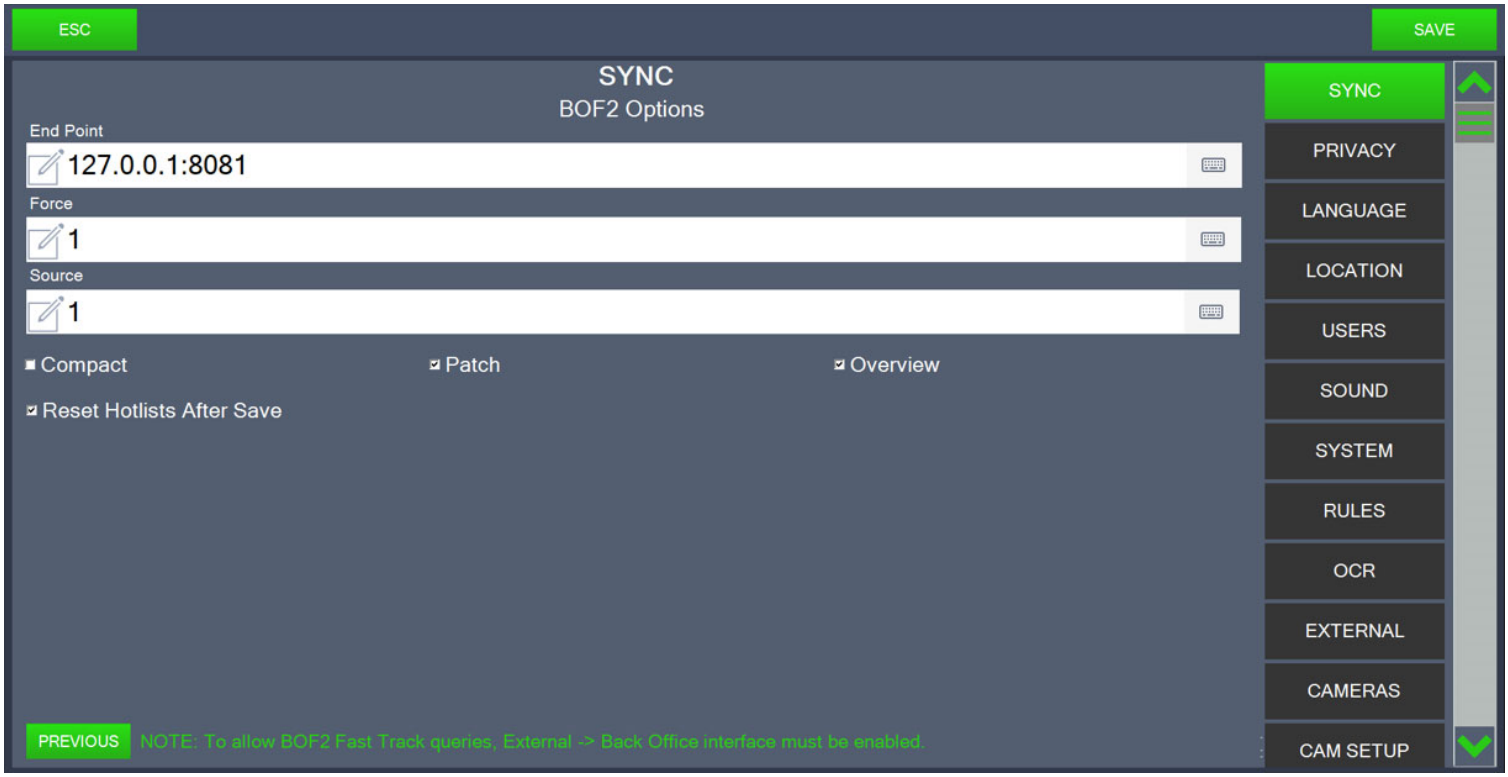
- **Delete Beginshift Data on Sync**: The sync folder on the Flash Drive is deleted once all Begin Shift data has been imported to PAGIS. This is on by default to help prevent false alerts.
- **Encrypt Endshift Data**: All uploaded End Shift data created in PAGIS is encrypted. This is off by default.
- **Copy Endshift Data on Sync**: If unchecked, no End Shift data will be transferred from PAGIS to the Drive location.
- **Keep Only Updated Databases**: Removes any Hotlists from PAGIS that were not updated during Begin Shift as "outdated". This is off by default.

Sync to Disk Setup:
In the text box, enter the drive path or letter to be used with Disk Sync. Folder name is not required as PAGIS creates the required folder(s). Once entered, select the desired options and then click the Previous button. Click Save to retain the settings.

3.1.1.2 Synchronization with BOSS

Sync to BOSS is a streamlined method for updating ALPR data to the field units and the server. Additionally, selecting this option enables the PAGIS auto-sync features that synchronize data throughout the shift without user involvement. However, this does require a stable data connection as well as some network configuration before it can be utilized.

Sync to BOSS Screen:

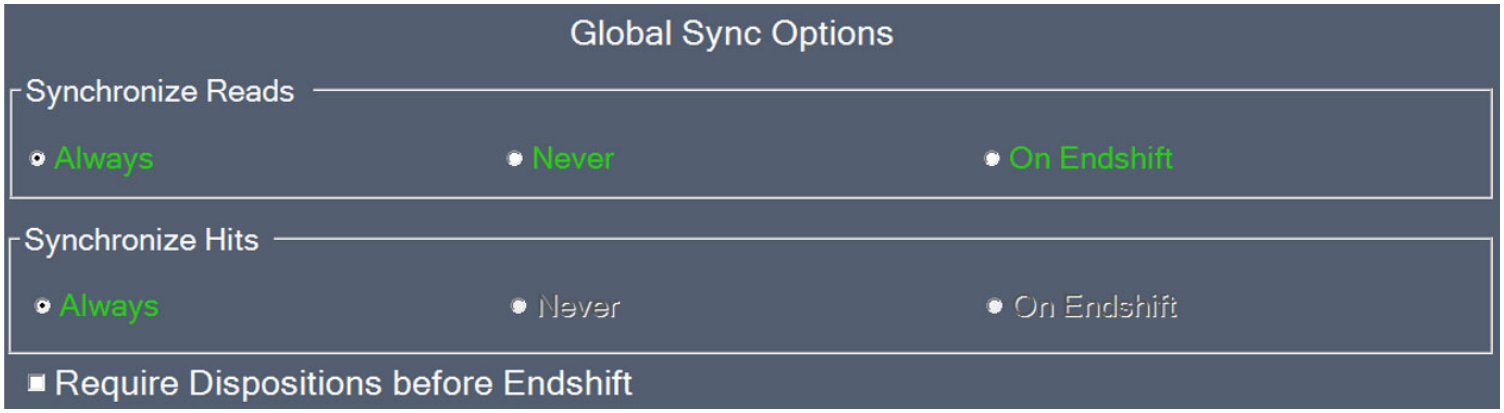


- **Primary IP**: The IP address of the BOSS server. This can also be the DNS name (**NOTE**: using DNS adds an additional failure point via the Domain Controllers and is not recommended as the best option).
- **Secondary IP**: Used for a secondary IP in cases where users switch from a cellular network to a Domain APN thus routing to BOSS from either an internal or external IP. This field can be left blank or with the primary IP as well.
- **Encrypt Transfers**: When enabled, data transfers to BOSS will be encrypted.
- **Synchronize Endshift Data**: On by default, this enables PAGIS to sync to BOSS when End Shift is performed by the user.

Sync to BOSS Prerequisites:
To establish the wireless sync to BOSS, the Agency Network Administrator will need to open TCP 8092 to the BOSS server as well as define the internal and/or external IP address(es).

Sync to BOSS Setup:
From the Sync Settings Menu, the Admin must select the BOSS option and click the Next button. Then s/he will update the Primary and Secondary IP fields as necessary and de/select any options. Once configured, click the Previous button and then click Save to retain the changes. (For more information on PAGIS Auto-Sync settings, refer to section 2.4.3)
NOTE: After synchronizing to BOSS, data is flagged in the database to prevent duplicate values on future synchronizations.

3.1.1.3 Sync to "Instation" (Formerly BOF2 and BOF3)

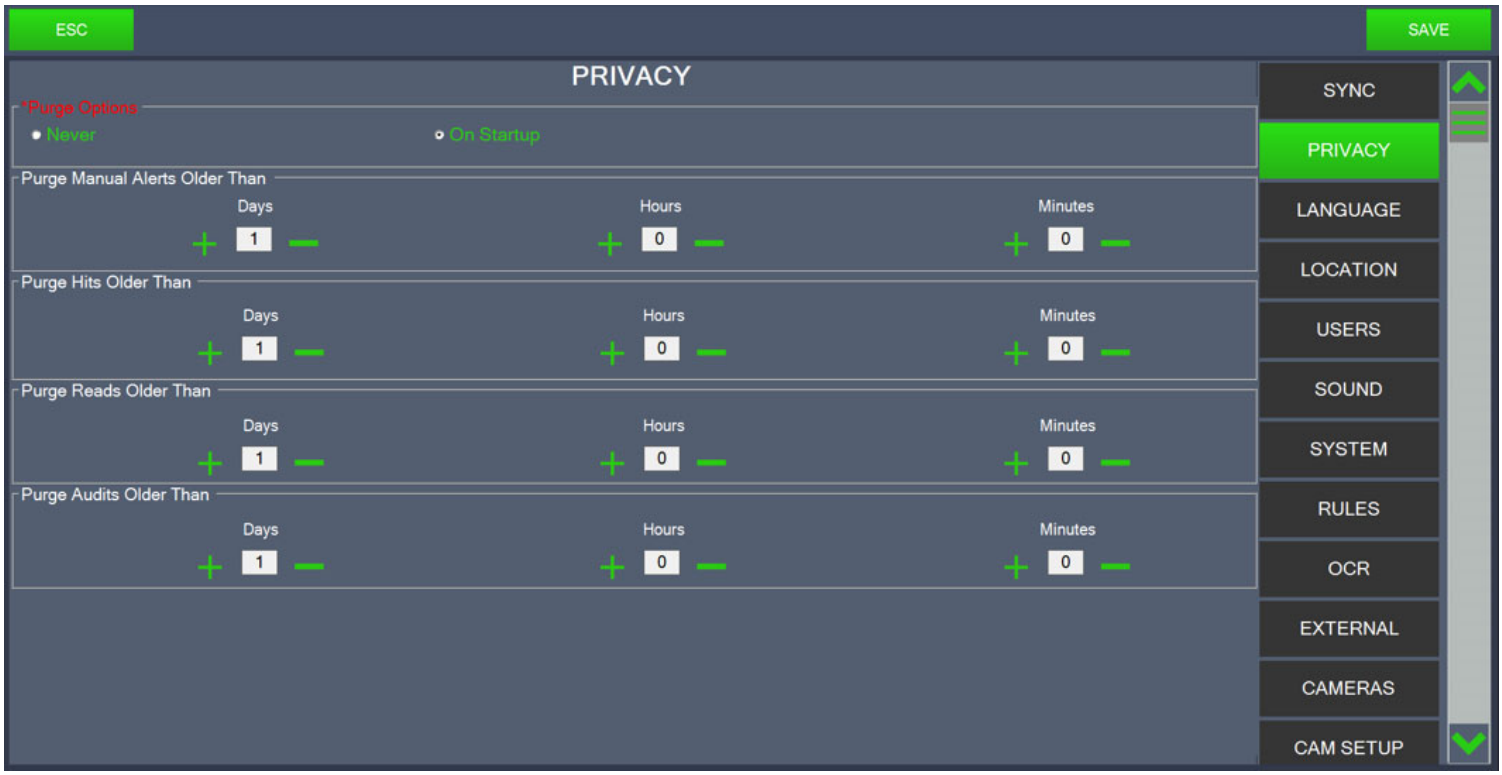


The Instation software was formerly known as BOF2 & BOF3 and was developed by Anite PLC. It is a web-based Back Office software suite used in European markets to provide similar features as the BOSS server and UI Client.
NOTE: These options are NOT used in the Domestic United States.

- **End Point**: The IP Address of the Instaion website. Format must be [IP Address:Port]
- **Force/Source**: Unique codes assigned to each police force.
- **Compact**: This option minimizes data transfer to Instation. Images will be deselected by default when in use.
- **Patch**: Refers to the image of the plate pulled from the read. This is on by default.
- **Overview**: Refers to the color overlay image from the read. This is on by default.
- **Reset Hotlists After Save**: When the software syncs to Instation, this will reset the hotlist tracking.

3.1.2 Global Sync Options

Global Sync settings control how PAGIS synchronizes ALPR data during Begin and End Shift cycles and applies to both manually launched synchronizations as well as Auto-Sync functions. The two sections are Synchronize Reads and Synchronize Hits.



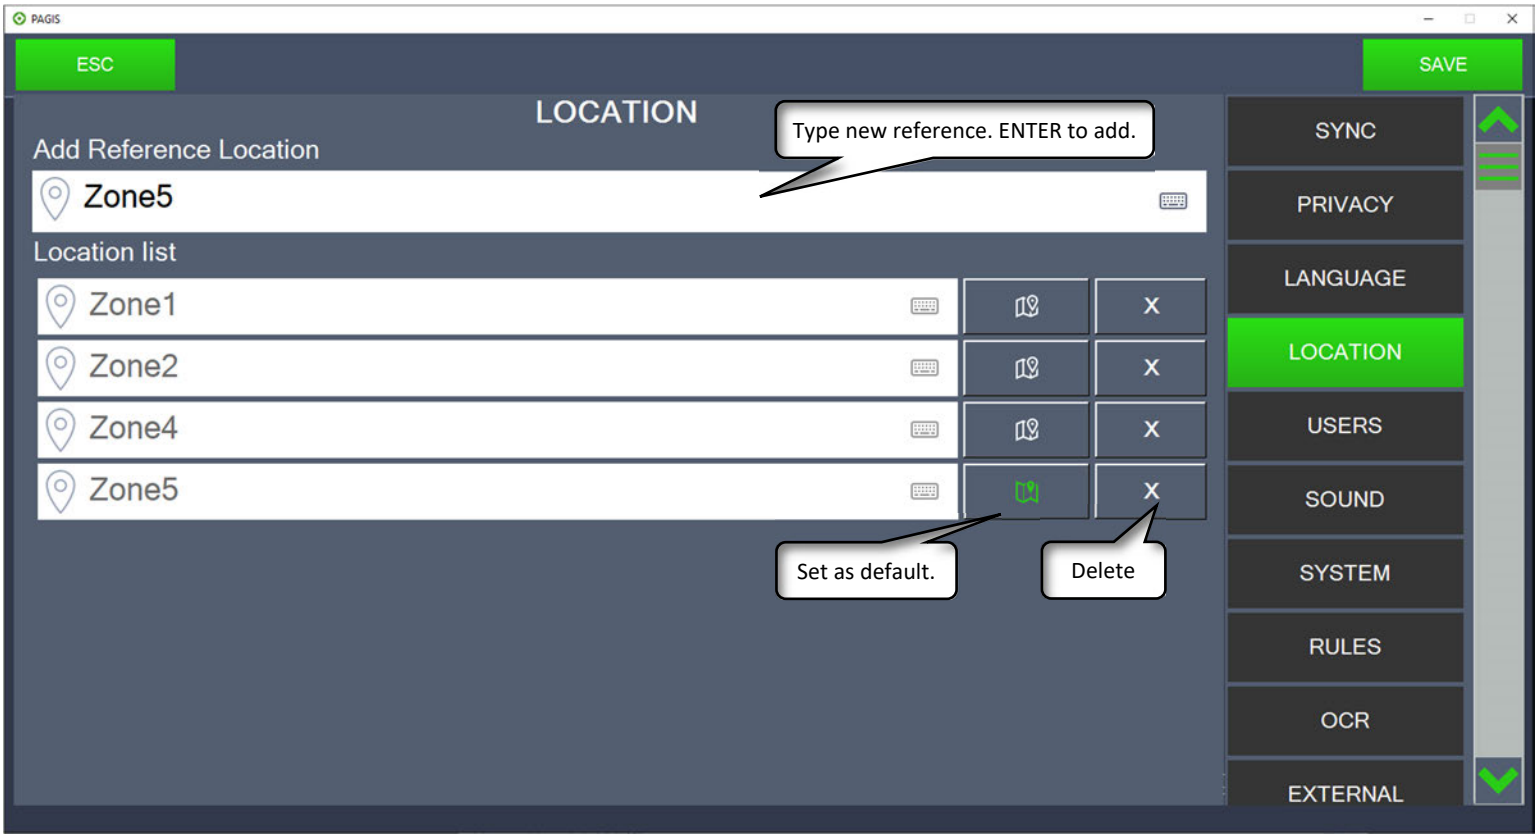
NOTE: All Hits are Reads, but not all Reads are Hits. A "hit" is a read that coincides with an Alert List. Due to this, the Options selected in the "Synchronize Reads" section dictate what options are available in the "Synchronize Hits" section. Unavailable options are greyed out.

- **Always**: Reads and Hits are synchronized to BOSS as close to real-time as the data network and PC processing allow.
- **Never:** The information gathered during the shift will be "sanitized" with each launch of End Shift. The corresponding data and images will NOT be sent to the BOSS server.
- **On End Shift**: Synchronization to BOSS will only occur when the user manually launches End Shift.
- **Require Dispositions before Endshift**: Requires the user to select a disposition code for each Hit registered in the PAGIS software since the last End Shift was completed before the Synchronization is processed.

3.2 PAGIS Privacy Settings (Local Data Retention)

Although most commonly configured in BOSS, the PAGIS Software allows the Admin to configure the data retention settings for the local endpoint by minutes, hours, or days. This feature ensures the data captured/stored on the MDC is sanitized by the software itself (this is important for customers without BOSS). **NOTE**: To enable the Privacy settings, the Admin must select the "On Startup" purge option and then set at least one value in each row. Rows left with all Zero will not be sanitized or purged.

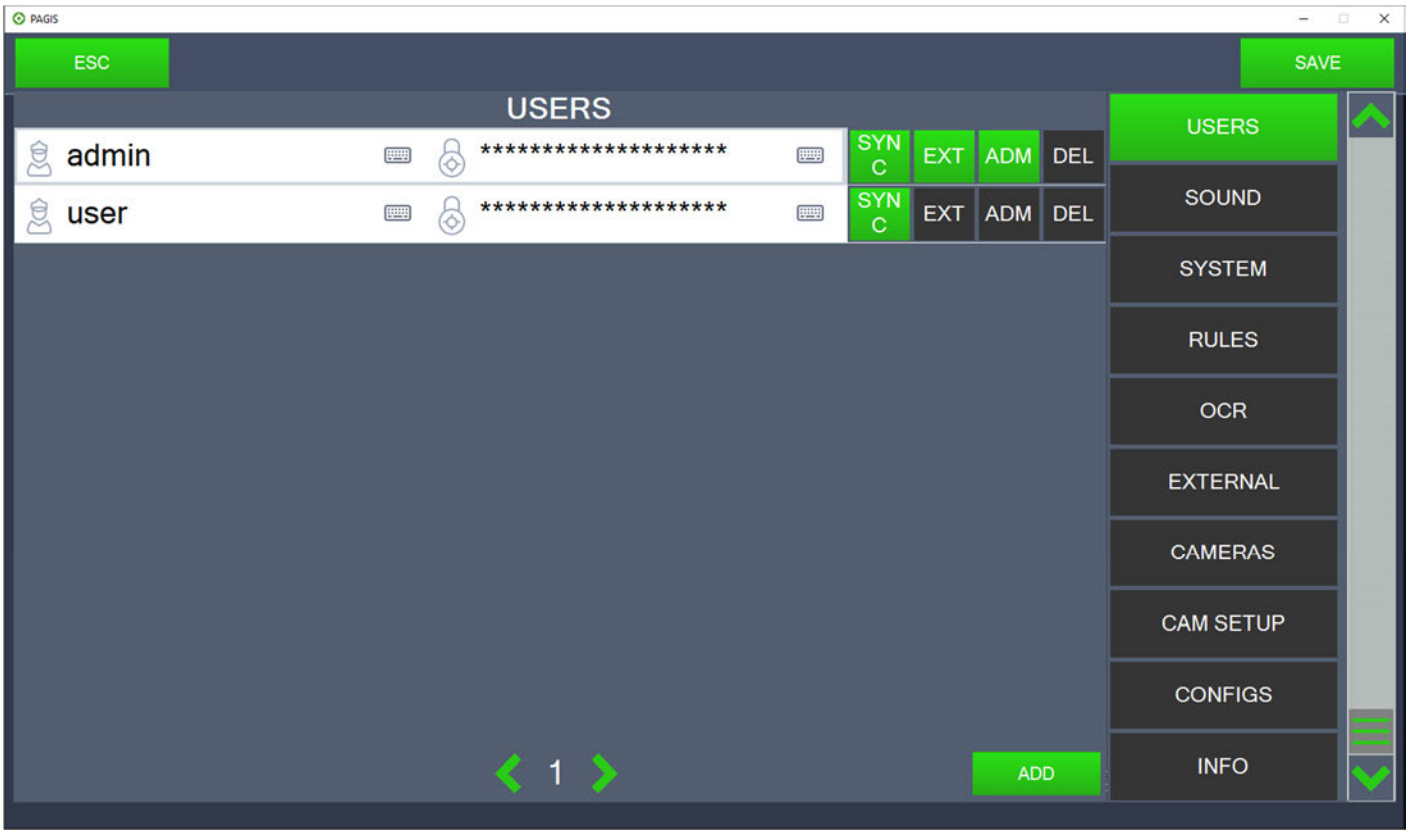
- **Never**: Selected by default, this option disables the PAGIS privacy settings and uses only those set in BOSS.
- **On Startup**: This option must be selected in order to enable the PAGIS privacy settings. Once enabled, PAGIS looks to purge/sanitize the system each time it's launched or restarted.
- **Purge Manual Alerts Older Than**: Controls how frequently all of the Databases/Hotlists in PAGIS are purged. The purge rate is calculated from the timestamp of the Hotlist. Once the retention value is surpassed, the Hotlist is deleted. Hotlists distributed from BOSS will be re-downloaded on the next Sync.
- **Purge Hits Older Than**: Controls how frequently all Hits in PAGIS are purged. The purge rate is calculated from the timestamp of read. Once the retention value is surpassed, the Hit is removed the next time PAGIS is restarted.
- **Purge Reads Older Than**: Controls how frequently all Reads in PAGIS are purged. The purge rate is calculated from the timestamp of read. Once the retention value is surpassed, the Read is removed the next time PAGIS is restarted.
- **Purge Audits Older Than**: Controls how frequently all Audits in PAGIS are purged. The purge rate is calculated from the timestamp of audit. Once the retention value is surpassed, the audit is removed the next time PAGIS is restarted.



NOTE: Once the hits, reads, databases, or audits have been purged, they can no loner be viewed in the PAGIS software.

3.3 Language

The Language screen allows the Admin to change the language assignment used in the PAGIS Software. Available languages are listed in the drop-down list and are added during the installation process.



3.4 Location

Updates to the location field will auto-fill the “Reference” section of the PAGIS Login Screen. These are often used to specify a patrol region (Examples: “North Patrol” or “A2”). Once designated all reads/hits will show this designation. Muiltiple “Referance” location can be added, the available list can then be selected from the login screen.

3.5 Users 2022

User accounts, credentials, and rights are generally administered from BOSS and then distributed to the MDC. However, PAGIS does allow for Administrators to add and delete users as well as set their privileges directly from PAGIS.

NOTE: Adding user directly in PAGIS should be limited to customers not utilizing a BOSS server. User accounts created directly in PAGIS by customers with BOSS will be overwritten/removed during the next sync.

Adding a User in PAGIS:

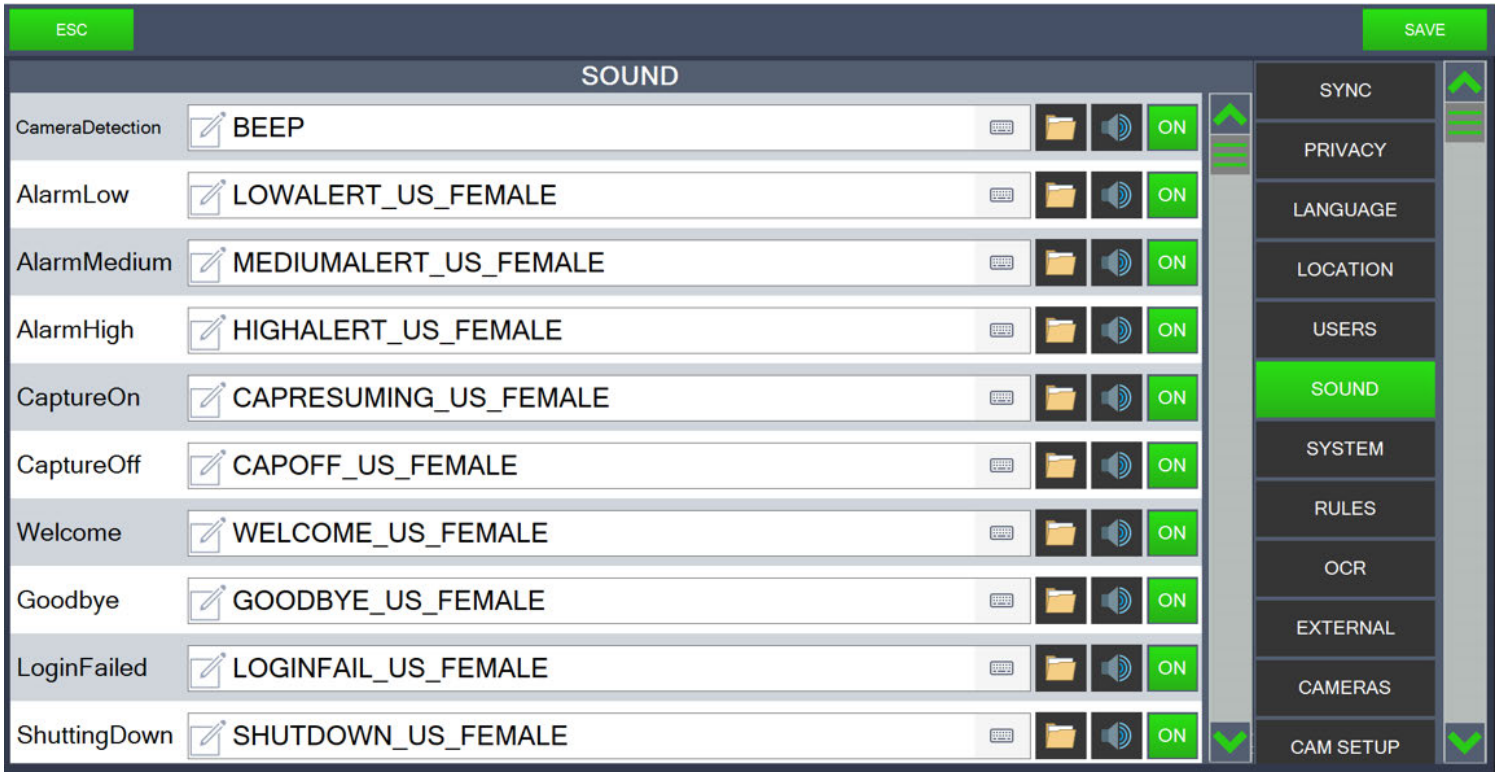
1. From the Admin Screen, select the Users Button on the Right
2. Click the Add Button ADD
3. Enter the case sensitive username in the Username Field (max of 15 alphanumeric characters)
4. Enter the case sensitive password in the Password Field (max of 15 alphanumeric characters)
5. Select the User's privileges
6. Click the Save Button SAVE

3.5.1 User Privileges

These are the "rights" the new user will have in the PAGIS software (When selected, each button turns green).

SYNC — **Sync:** Allows users to synchronize data.

EXT — **External**: Allows the user to access external databases.



ADM — **Admin**: Provides the user Admin rights and allows him/her to configure the PAGIS Software.

DEL — **Delete**: Allows the Admin to delete a User from the list. Click once to select and the save button to delete.

NOTE: Creating a new user in PAGIS automatically deactivates the default user account settings (Section 2.1.1).

3.6 Sound 2023

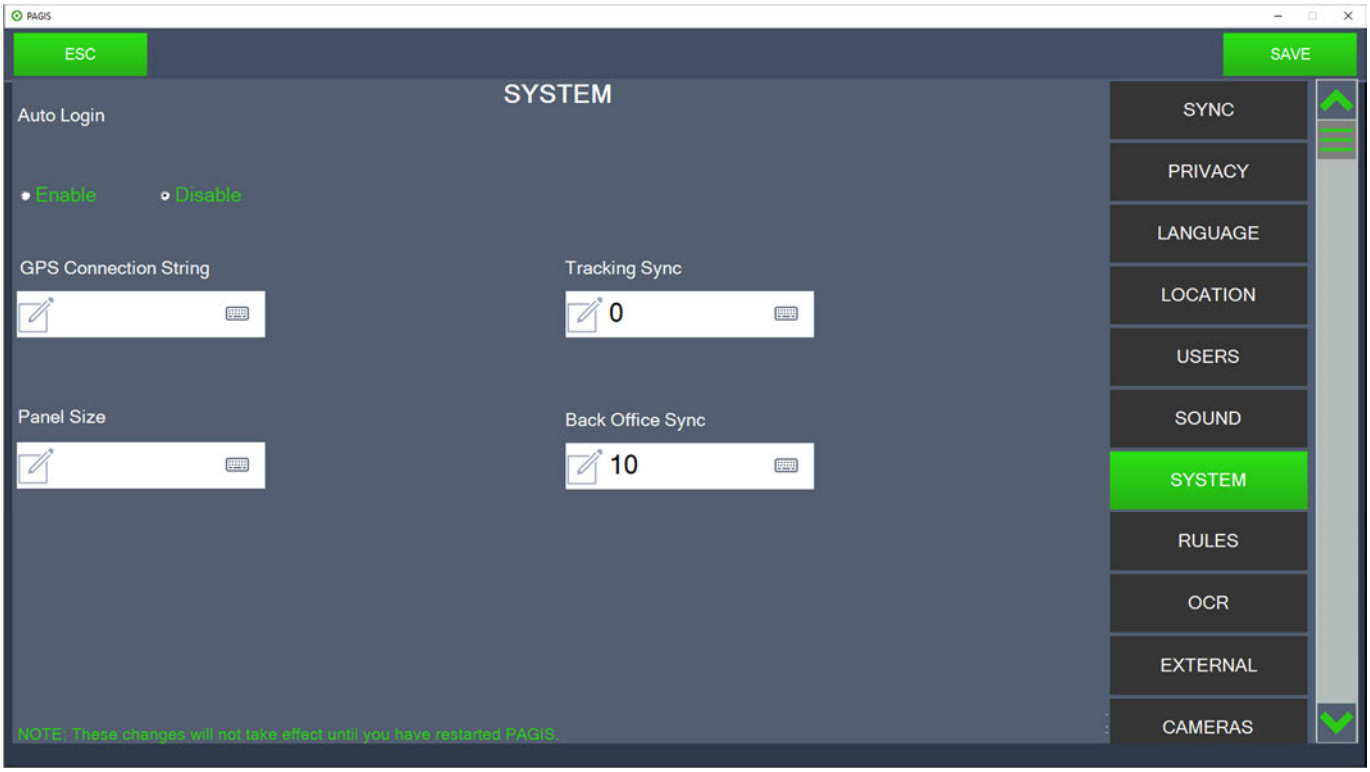
Sounds in PAGIS mirror the user or software activity (Ex. Login, Audible alert from a “Hit”, and Logout) and are On by default. PAGIS Administrators can adjust the sounds from the available presets and/or load unique .wav files onto each MDC for custom use. **NOTE**: The default storage path is C:\Program Files (x86)\PIPS Technology, Inc\PAGIS2\sounds

3.6.1 Configuration Buttons

The sounds listed on the configuration screen can be altered or updated by PAGIS administrators using the buttons below. **NOTE**: Changes to any sounds must be saved before they can be played in PAGIS.

Click to browse to the sounds folder. This is used to select a new sound file.

Click to Test/Play the selected sound.



Shows the status of that sound. Click to turn each sound Off.

Shows the status of that sound. Click to turn each sound On.

3.7 System

The System screen determines external system connections. The primary external connection is the GPS antenna. The GPS connection string will accept TCP/IP ports or COM port designations. This section also contains control of the PAGIS "Auto Login" feature (which is set to Off by default).

- **Auto Login**: Enabling this feature will ignore existing user account information and login to PAGIS as the Admin. This feature is recommended only for unattended use (Speed-Trailer applications and Covert Drop and Go deployments).
- **GPS Connection String**: This value is utilized by PAGIS to acquire the GPS feed from its source. The default is traditionally either blank (no entry) or 6.
- **Tracking Sync**: Controls the sync intervals in (Sec.) that PAGIS communicates with BOSS4 to update tracking status. Default off=Zero, values can range from 1-9999. BOSS4 Back Office Software requiered for this feature.
- **Panel Size**: Controls the resolution of the color image displayed on the Live View Screen. By default this is blank as PAGIS controls the aspect ratio. However a PAGIS Admin can assign custom resolutions in WxL format (720x1024) to assist with non-standard dispalys.
- **Back Office Sync**: This setting controls the sync timing that PAGIS sends data back to BOSS3/BOSS4, Timing is in (Sec.), default is 10sec, values can range from 0-9999.

NOTE: All changes must be saved and will not take effect until PAGIS is restarted.

2925

3.8 Rules

Rules in PAGIS allow Administrators to force the software to process plate reads in specific ways. For example, in states that allow for both O and 0 (zero) on their license plates, a rule can be set to read any zero as an O and any O as a zero. This provides PAGIS greater flexibility to the standard OCR functions.

Adding a Rule to PAGIS:

1. Click the Add Button ADD
2. Enter the desired alphanumeric characters (Ex. 0 and O) into the text field
3. Click the Save Button SAVE at the top right of the screen

Deleting a Rule:

1. Locate the rule to be removed from PAGIS
2. Click the Delete Button DELETE to the right of the rule (It will turn green when selected)
3. Click the Save Button to complete the removal

3.8.1 Rules – Additional Clarifications

1. Rules are processed based on the first character entered. So in order to read any O as a zero, the Admin will need to add rule “O0”. And in order to read any zero as an O, a second rule must be entered as “0O”.
2. Rules are NOT designed to overhaul OCR function. Any consistently misread values should first be brought the attention of Neology Support for review. And only those cases where further adjustments to the OCR software are impossible would rules be recommended.
3. Adding rules to PAGIS will make it less likely to miss a Hit Alert. However, it will increase the number of Hit Notifications that require the Officer to visually confirm the OCR read (“IR Patch”) and the Hotlist Alert match.

2926

3.9 OCR

The OCR Section in PAGIS provides Administrators some additional options on how they would like PAGIS to process plate reads.

- **JPEG Images**: On by default, this forces PAGIS to use compressed .JPG images instead of the full resolution Bitmap images each time a read is taken. This settings minimizes data storage requirements and preserves MDC drive space.
- **Inverse Plates**: Off by default, this setting is only used in States where plates with light color lettering over a dark background are prevalent. Enabling this option increases processing load and should remian disabled unless required.
- **Square Plates**: Off by default, this setting adjusts the read area plates that are square instead of retangular.
- **Disable Duplicate Read**: On by default, this setting helps PAGIS prevent duplicate plate reads. If a VLP is read by more than one camera within a short period, the duplicate read is ignored. This minimizes data storage requirements and improves overall system metrics related to numbers of Hits and Reads.

NOTE: Once changes are made, the Admin must click the Save Button SAVE button in the upper right corner to retain them.

2927

3.10 External

The External Screen allows the Admin to connect PAGIS to an external database or device via XML Datastream. This feature is Off by default and any changes must be saved before they will be available.

Enabling the Datastream:

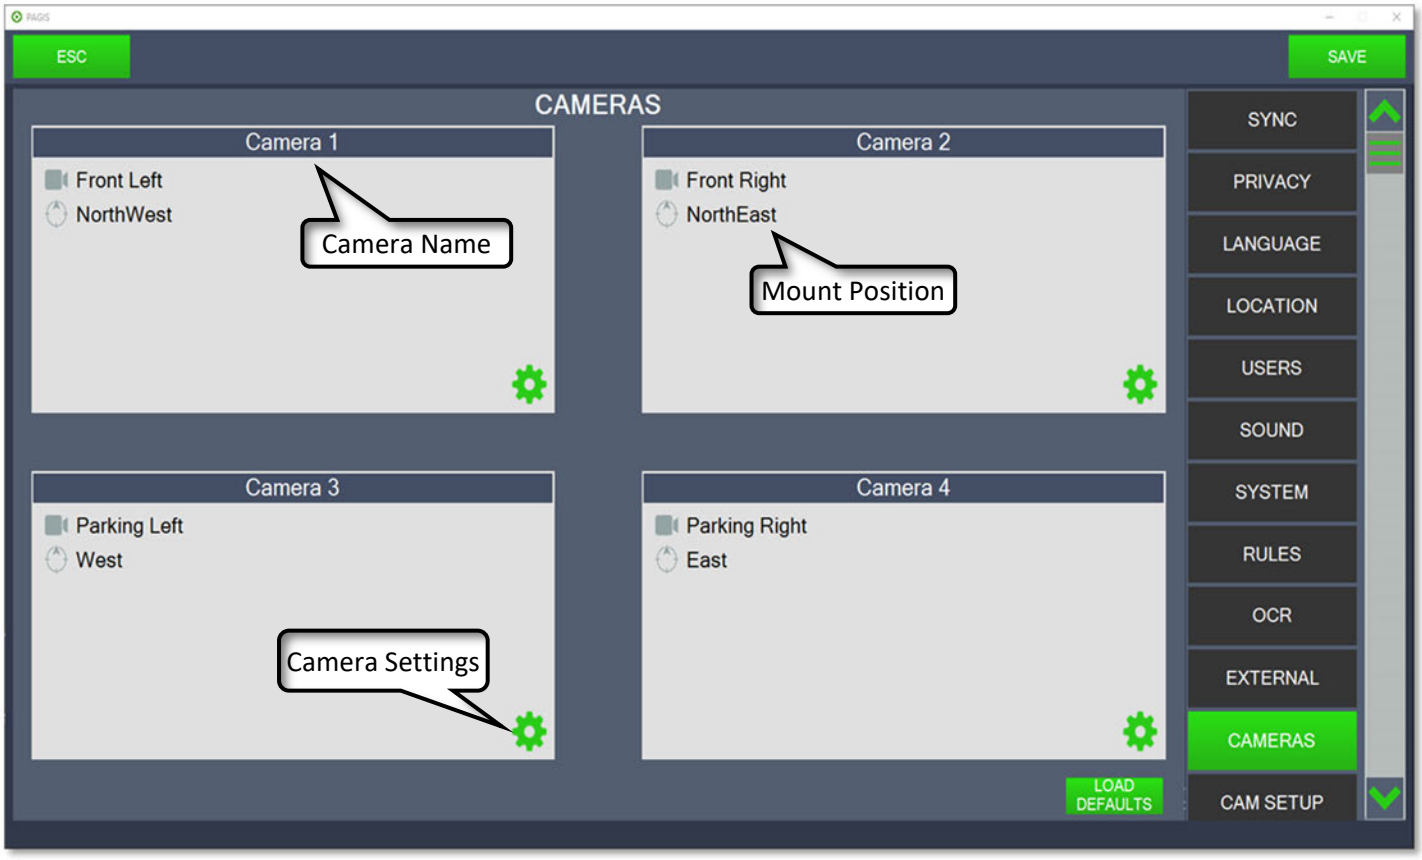
1. Click the Off Button OFF to toggle to On ON
2. Click the Save button in the upper right corner
3. Close and reopen PAGIS

NOTE: Enabling this feature will reduce the overall performance of the PAGIS Software.

3.10.1 XML Datastream Ports

Administrators will need to configure their external device or database to utilize two specific TCP ports:

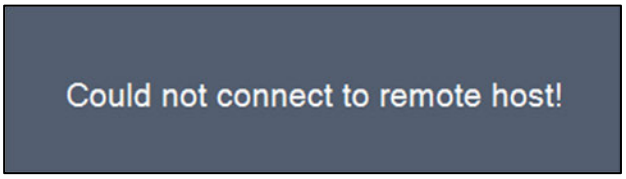
1. Query Port: TCP 7000
2. XML Datastream/Heartbeat: TCP 10100



NOTE: Greater detail on the XML Datastream can be found in Appendix D

2928

3.11 Cameras



The Cameras Section provides the Administrator the means to add/delete, identify, and configure the ALPR cameras. Although the PAGIS Software comes preloaded with a default layout, best practices advise the Admin to fully review, and completely configure at least one MDC by hand in order to tailor the setup for the Agency's unique attributes.

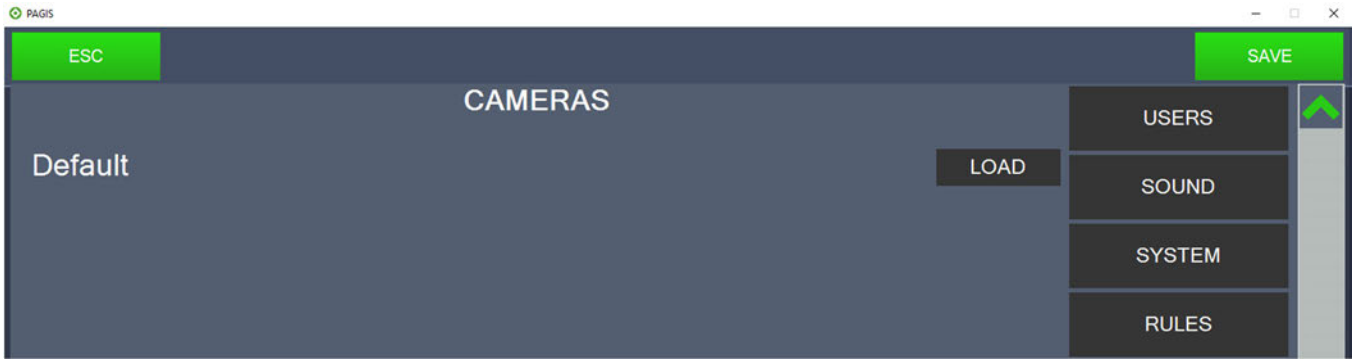
IMPORTANT: The configuration steps completed here will dictate the available camera mode options in the Configs Section.

3.11.1 Checking the Connection

In order to configure the cameras, the PAGIS Software and the SX Processor (Black Box) must be able to communicate. If they cannot, the Administrator will receive the error message below as soon as he or she clicks on the Cameras Button CAMERAS indicating that PAGIS cannot "see" the cameras.

3.11.2 Troubleshooting Camera Connections

The most common troubleshooting steps have been included below for convenience. If these don't resovle the issue, please contact Neology Support for additional assistance. **NOTE**: For more information see Appendix C – The Mobile FAQ

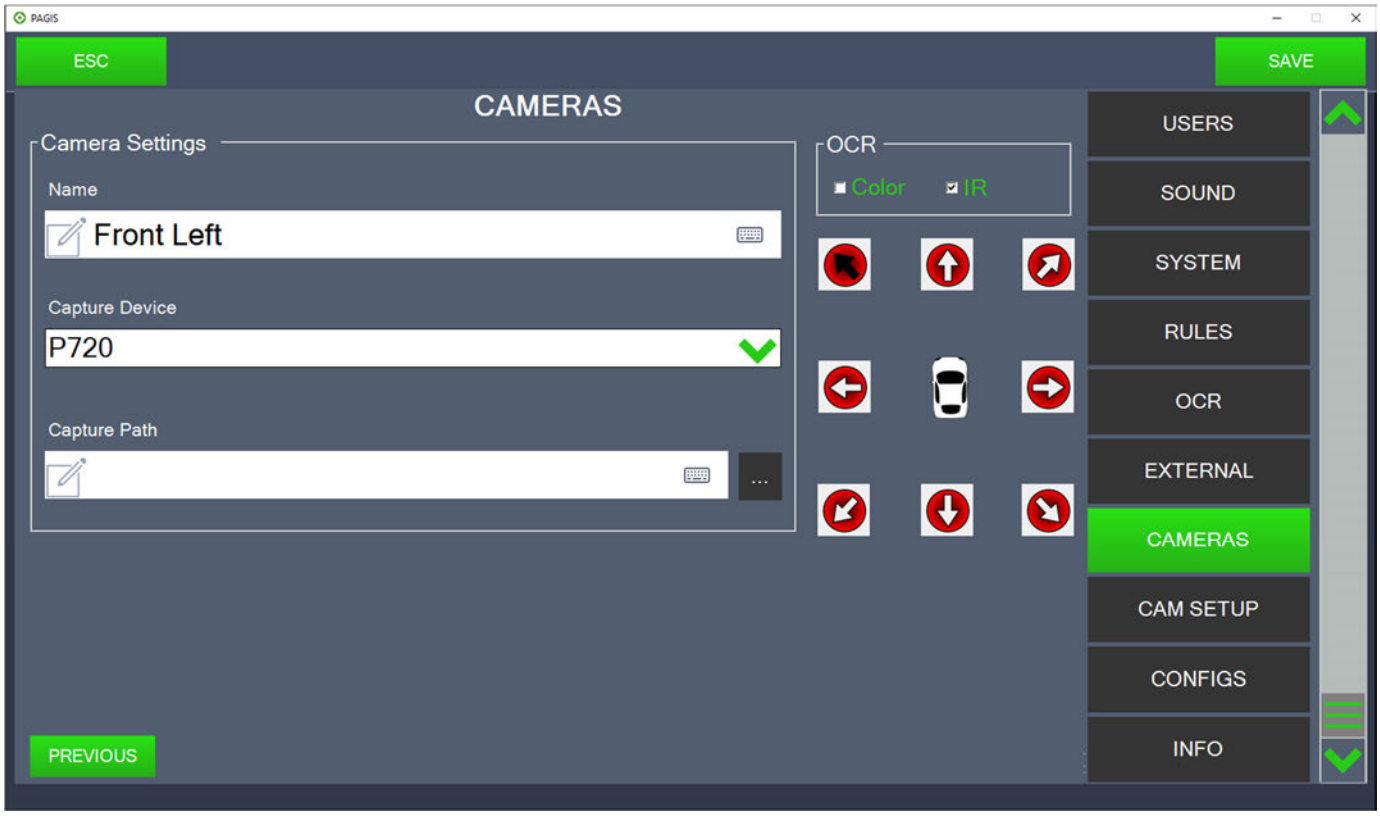


1. Start the vehicle and confirm power to the Processor. Confirm the SX switch, and any added in-line switch, is set to On.
2. Confirm the network adapter settings on the laptop match the proper Static IP scheme for the SX Processor in use.
3. Disable the local Windows Firewall, VPN software, and any real-time monitoring software one at a time.
4. Use a different network cable ensuring it's properly seating in NIC port on the SX as well as the MDC or Docking Station.
5. Docking Stations can also impede communication. Test by removing the laptop from thhe dock, directly connect the network cord to the laptop, and then reconfigure the network adapter settings as needed.

2929

3.11.3 Configuring the Cameras in PAGIS

This section will assist with the general configuration of the cameras. Administrators can begin by selecting the Settings Icon  to edit each of the existing cameras or by selecting the Load Defaults Button  . This manual will start with Load Defaults.

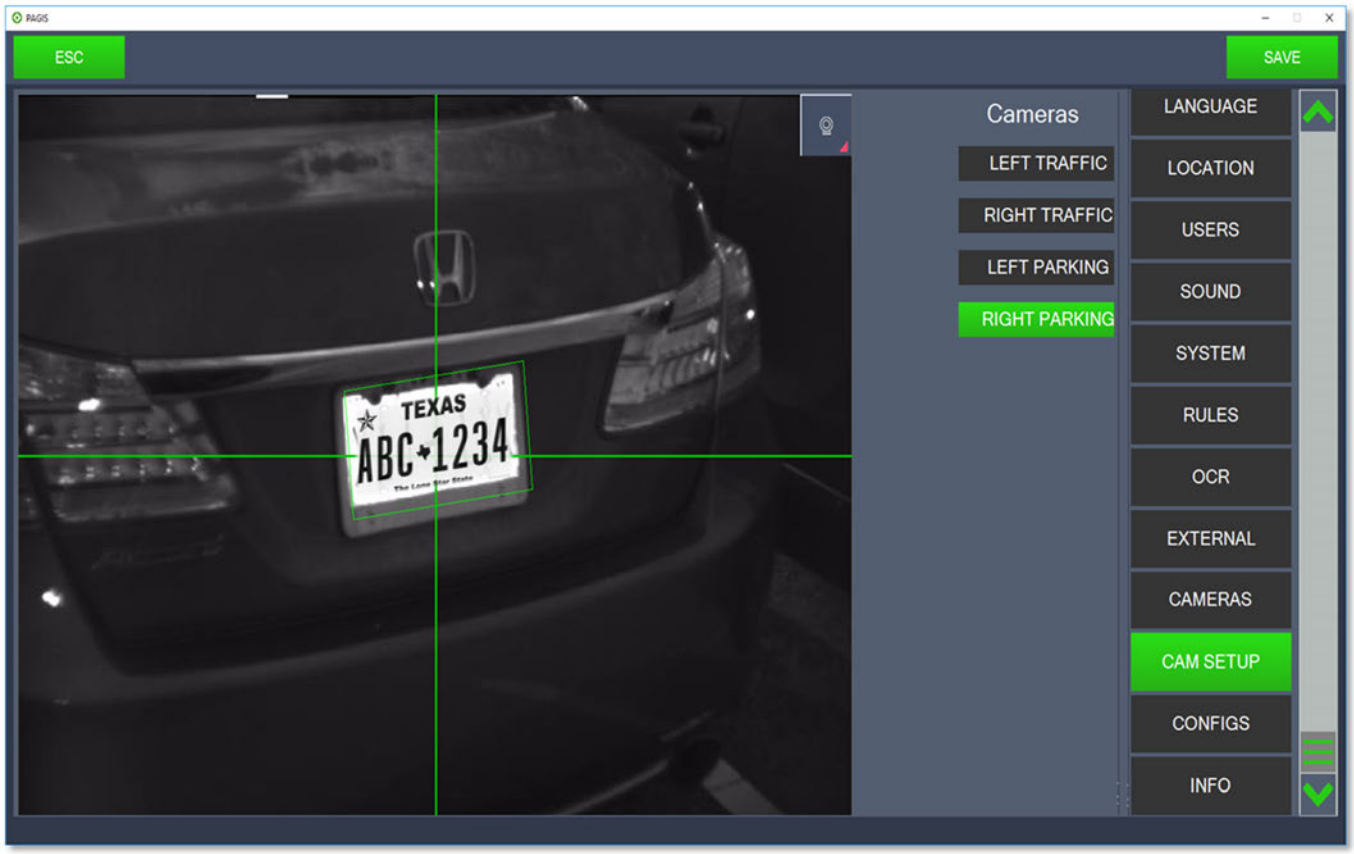


Gettings Started – Load Defaults:

1. Click the Load Defaults Button in the lower right portion of the Cameras Screen
2. Locate "Default" and click the Load Button 
3. Once it's selected (and turned Green), click the Save Button (This returns the Admin to the Cameras Screen)
4. Click the Settings Icon  to inspect and configure each camera one at a time

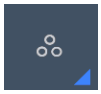
The Camera Settings (Edit) Screen:

This provides the Admin a single screen to edit the name, confirm the capture device, assign camera position, and confirm OCR.



1. Confirm/Update the Camera Name **NOTE**: Use Camera Names with 11 characters or less to avoid various UI anomalies
2. Confirm the "Capture Device" field was auto-detected. If not, use the drop down to select the only Pxxx value on the list
3. Leave "Capture Path" blank (This is an optional field)
4. Select the camera mount position indicating the direction the camera is facing. The arrows turn black when selected 
5. Ensure the OCR is set to IR. The color camera is used for OCR in only rare situations and will increase system load as well as the likelihood of false alerts. Use this setting with caution
6. Click the Save Button to retain the changes

2930



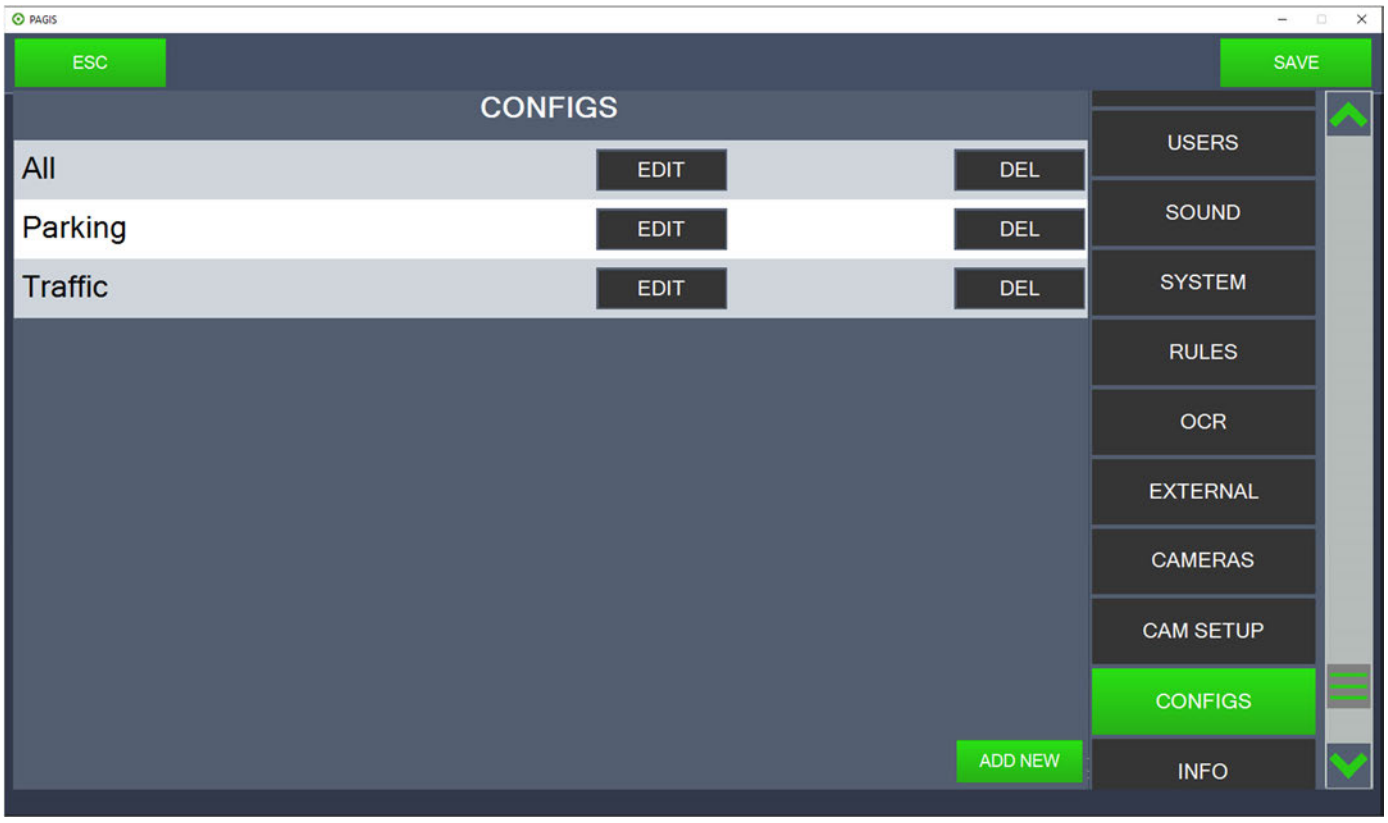
3.12 Cam Setup

The Cam Setup Screen presents Administrators with a live preview of the configured cameras. This section also allows the Admin to switch view modes from Color to IR to ensure the system is functioning properly. **NOTE**: This screen can also be utilized as a means to align newly mounted cameras when RDP access to the SX Processor is limited or unknown.

3.12.1 Cam Setup Navigation Buttons

The Admin may view the output of each camera by clicking on the camera name. When a camera is selected, the button will turn green to indicate it has been selected. In order to switch view modes, the Admin must use the following buttons:

Color View: The Color View Mode is the default view when the Admin first enters Cam Setup. This displays a live preview of the color camera.



IR View: By clicking on the Camera View Selector button, the Admin will switch to the Infrared (IR) View Mode. This displays a live preview of the IR camera.

NOTE: Unlike the main Live View Screen, the camera feed shown on the Cam Setup page will not time out when in use. This feature makes it easier for the Administrator to review and align the mobile cameras.

2931

3.13 Configs (Camera View Modes)

The Configs Screen allows the Admin to construct how the cameras will be displayed on the Live View Screen for the user. This section also allows agencies to create multiple viewing configurations to meet specific environmental needs or to add greater functionality to the software. By default, the Configs layout provides the agency with three camera modes, “ALL”, “Traffic” and “Parking”. All mode dipalys the front two cameras and rear two are activated, Traffic mode only displays the front two cameras and rear cameras are off, Parking mode only displays rear two cameras and front cameras are off.

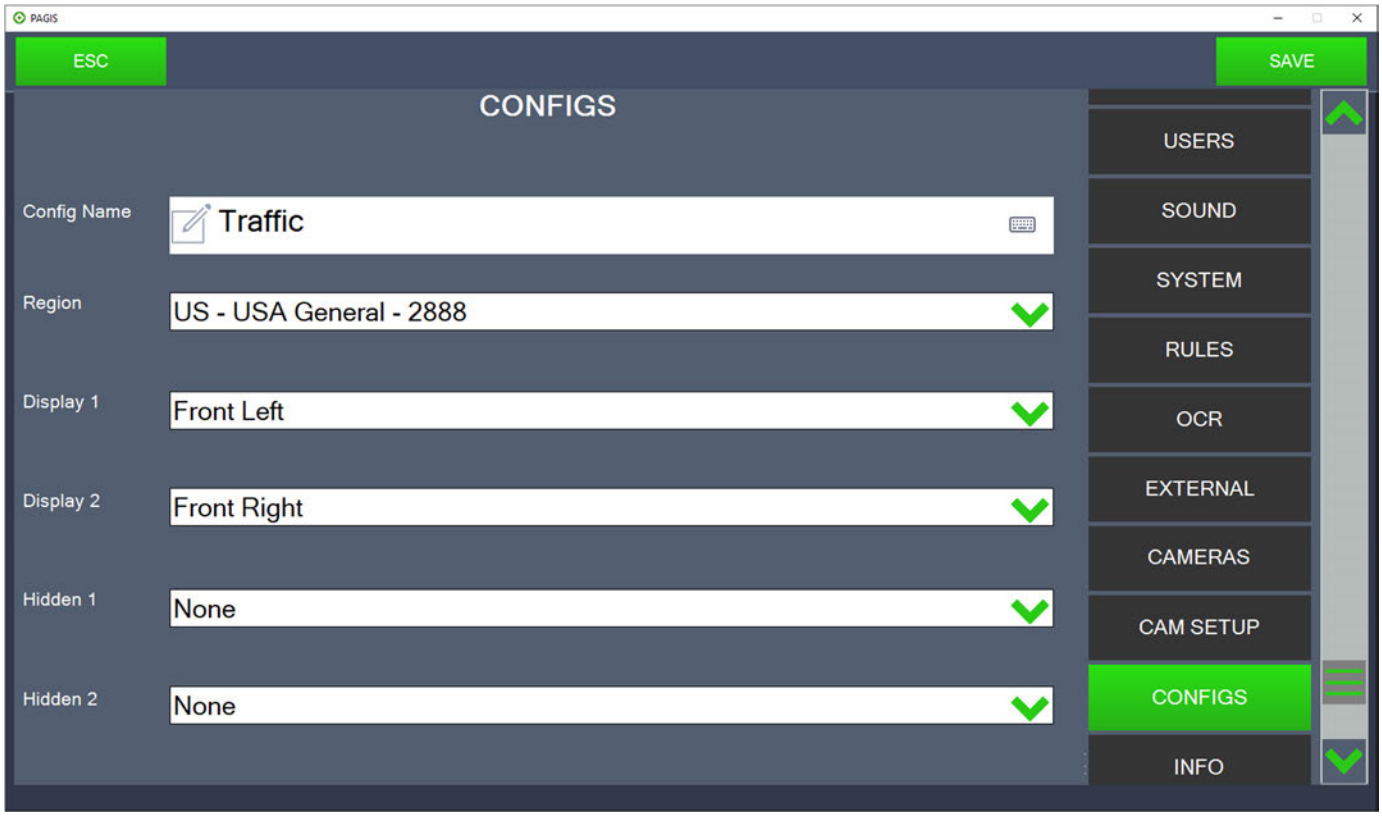
3.13.1 Configs Navigation Buttons

To properly configure the camera modes used in PAGIS, the Admin will navigate this section with the following:

To delete a config/camera mode, click the DEL button to select it (turns Green) and then click Save

To review, edit, or modify a camera mode, click the EDIT button

To preserve changes or finalize a deletion, click the SAVE button



To add a new camera mode, click the ADD NEW button

NOTE: The number of Configs equals the number of Camera Modes available to the user from the Live View Screen. Each camera mode untilizes the Config name established in this section. Users cycle through the modes on the Live View Screen by clicking the Mode Selection Button in the upper left corner.

2932

3.13.2 Reviewing and Modifying Existing Modes

When getting started, most Administrators will begin by simply modifying the existing camera modes or “configs”. The following example will demonstrate the standard configuration of a four-camera mobile unit.

1. Click the EDIT Button EDIT from the main Configs Screen to modify a mode
2. Review/Update the name of the Mode **NOTE**: The name should be intuitive for all users as this becomes the label of the mode selection button on the Live View Screen
3. Click the drop down arrow on the Region field to select the best local option (Adds additional accuracy to OCR)
4. Confirm the camera listed in the Display 1 field. This camera will be displayed on the left side of the Live View Screen
5. Confirm the camera listed in the Display 2 field. This camera will be displayed on the right side of the Live View Screen
6. Confirm the Hidden 1 field shows one of the other cameras not listed in the Display fields
7. Confirm the Hidden 2 field shows the last available camera not yet listed (Leave field as “NONE” for 3-cam systems)
8. Click the Save button to retain the changes
9. Click the Configs Button from the menu to access the other Mode(s)
10. Perform steps 1-8 for all Configs/Camera Modes available

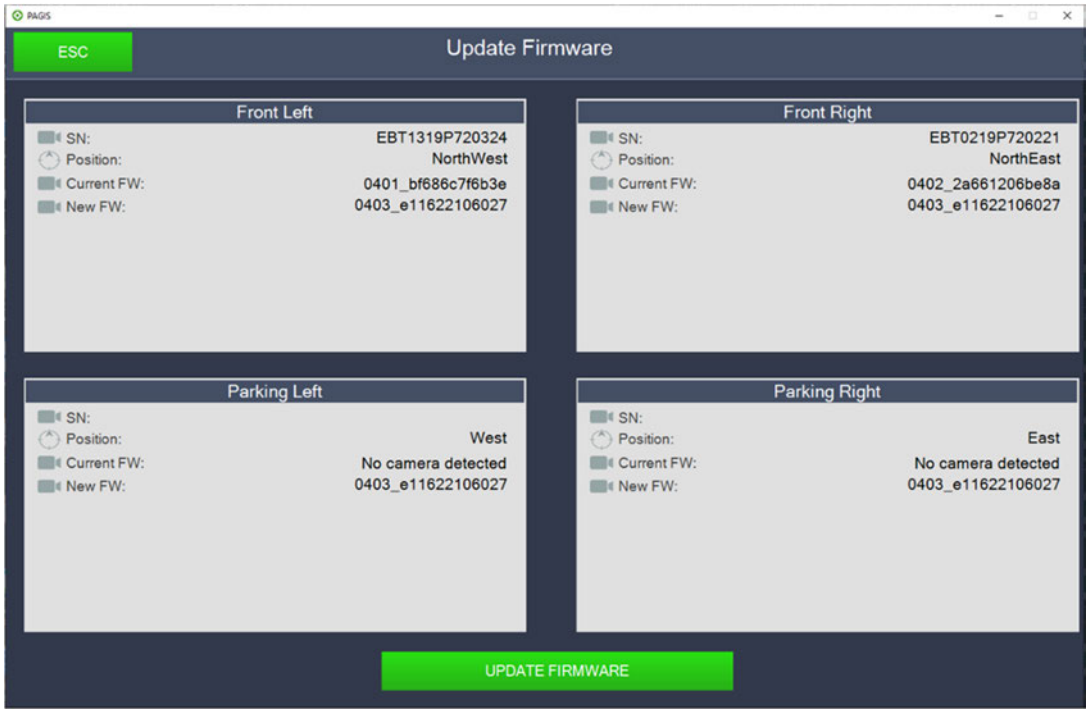
NOTE: Cameras listed in the Hidden fields will function, perform OCR, and capture plate reads, but they will not be displayed to the user while in the named camera mode (unless a Hit is detected opening the Alert Screen). For ALPR units with more than two cameras, best practices dictate the Admin utilize these fields.

3.13.3 Adding a New Camera Mode

When the two default modes provided in the PAGIS software do not offer the agency all the functionality desired, the Administrator can use the Configs Screen to add additional camera modes. For example, if officers request a mode to view only the cameras on the left side of the vehicle while stopped on the side of the road, the PAGIS Adminstrator can build that functionality from this screen.

1. Enter a name for the new Mode (Ex. “Left Side”)
2. Click the drop down arrow on the Region field to select the best local option (Adds additional accuracy to OCR)
3. Confirm the camera listed in the Display 1 field. This camera will be displayed on the left side of the Live View Screen
4. Confirm the camera listed in the Display 2 field. This camera will be displayed on the right side of the Live View Screen
5. Confirm the Hidden 1 field shows one of the other cameras not listed in the Display fields
6. Confirm the Hidden 2 field shows the last available camera not yet listed (Leave field as “NONE” for 3-cam systems)
7. Click the Save button to retain the changes

3.14 Info2934



The Info screen displays additional information including the version number of the current installation. This information is helpful when contacting Technical Support.

3.15 Camera Firmware Update, (Admin)

Camera firmware update provides a means for Neology to update the camera software to enhance and or correct camera performance. The frimware icon  will only apper when a update is avialable.

- The firmware update process only updates camera that are attached and function on the mobile processor.
- Administrator must log into PAGIS and apply the FW update. The update process takes around 4min and should not be interrupted or risk permanently damaging the cameras, PAGIS will return to normal opertaion after update.
- Once the "UPDATE FIRMWARE" button is clicked PAGIS will switch to full gray screen with message indicating "Camera Firmware is Updating", during this process you'll will notice small command windows opening on top of PAGIS, these windows represent the firmware being applied to each active camera so you may notice one or server depending. Once completed a message will appear "Firmware Updated Successfully" then PAGIS will return to normal operation.
- After FW completion and return to "Live View", its requiered to cycle thought the "Cam Mods" to refresh cameras.

Firmware Updater Window List.

- Title "Camera Name".
- Camera serial number.
- Position.
- Current FW version.
- New FW version available.

4.1 PAGIS System Requirements

The PAGIS Software requires the following minimum system requirements for the mobile data computer:

- Intel I3 CPU at 2.0 GHz or higher.
- Windows Operating System (Win7-Win10).
- Microsoft .NET Framework 3.5.
- 8 GB of RAM.
- At least 1 GB of free disk space.
- SVGA display with a minimum resolution of 800 x 600 pixels.
- Available 10/100 Ethernet port.
- Keyboard and mouse, or a touch screen monitor.
- Internet access needed for mapping and Firmware update.

4.2 PAGIS Prerequisites

Prerequisites:

1. Ability to install software.
2. Ability to configure the network adapter.
3. PAGIS 2.12 and above are only compatible with SX4 and SX4e Processors.

Network Adapter Settings:

The Neology mobile processor operates based on a static IP and is preassigned the IP address of 192.168.200.201. When connecting laptop/MDC to the mobile processor your computer must be on the same IP network as the mobile processor, in fact the connecting compute must adopt one octet lower than the assigned IP of the processor in order for MDC installed PAGIS to connect to the mobile processor and receive data from the ALPR cameras. Below are the steps to configure your computer.

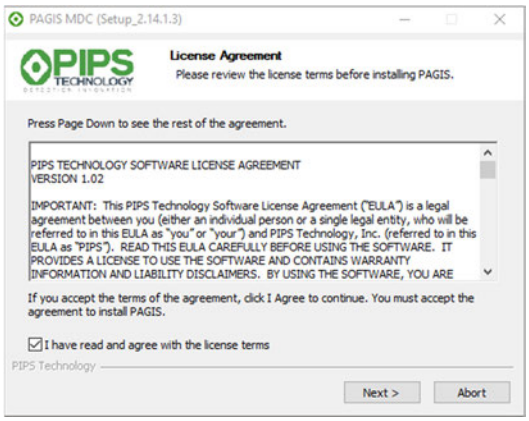
1. Navigate to Adapter Options in Windows and right click on the adapter and select properties.
2. Click to select IPv4 and click Properties
3. Click the radio button “Use the following IP Address” to set the Static IP address.
4. Enter 192.168.200.200 in “IP address” section.
5. Enter 255.255.255.0 in “Subnet mask” section.
6. Either leave the “Default gateway” blank or enter 192.168.200.201.
7. Click OK to save changes.

NOTE: The Mobile processor is pre-configured to relay its camera data connection to the 192.168.200.200 IP address, using alternative IP’s on MDC/Laptop will result in the software’s failure to communicate with the cameras when using VPRelay mode.

Alternative IP Network:

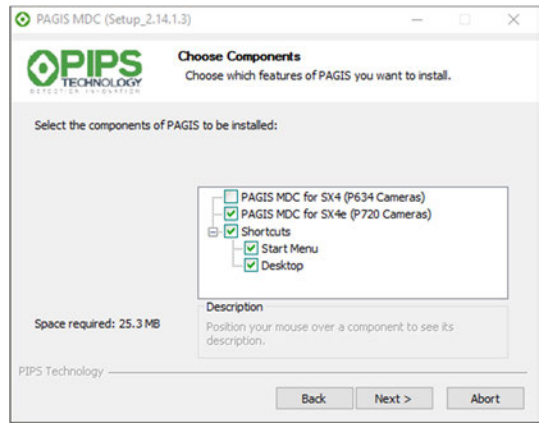
It is possible to configure the Neology mobile processor to utilize a different IP network in conjunction with MDC/Laptop. Typical scenario would be when mobile processor and MDC/Laptop are connected through an onboard modem that has an Ethernet switch with available ports. Below are the general steps to changing IP network.

1. Follow the step above to connected to Neology mobile processor.
2. Remote desktop to Neology mobile processor and login using credentials provided in SX4 or SX4e manual.
3. In Windows “Services” find and stop the “PIPS VPRELAY” service.
4. Navigate to “C:\PIPSTechnology\VPRelay” and located file “anpr2.ini and open in notepad.
5. Alter “Address=192.168.200.102” to the IP your MDC/Laptop will assume after change to new network, save and close. The “PIPS VPRELAY” service will use this IP address to send camera data to PAGIS running on MDC/Laptop.
6. Alter Neology mobile processors “Ethernet adapter 1” to new IP, refer to SX4 or SX4e manual for instruction on disabling the “WFManager” so change made to Ethernet are permanently saved.
7. Reboot mobile processor and enable “WFManager”.
8. Reassign IP on MDC/Laptop.
9. Start PAGIS on MDC/Laptop and confirm camera connectivity, if issues refer to FAQ’s in this manual for troubleshooting tips.

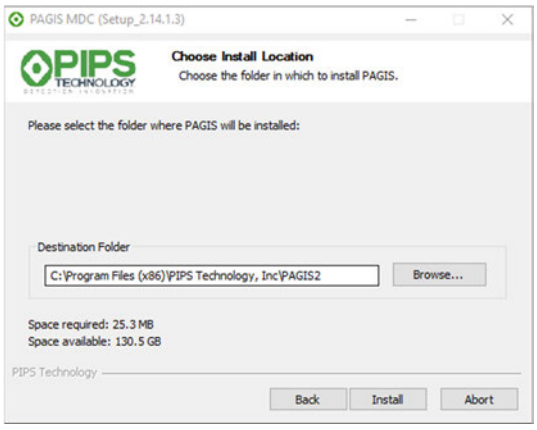


2936

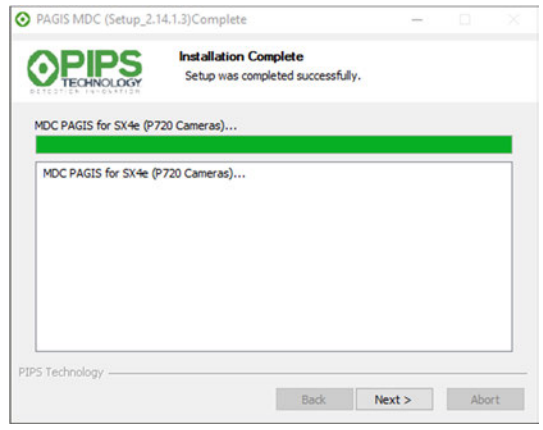
4.2.2 PAGIS Software Installation (MDC)



1. If PAGIS exist on your computer, it must be version 2.9 or 2.12 for installer to update. If your version of PAGIS is older it is recommended you “EndShift” any existing data, then uninstall PAGIS.
2. It is recommended you “EndShift” any existing data if upgrading a previous version of PAGIS.
3. Prior to software installation, take the time to figure out what version of Neology mobile processor you have as the software installation requires you to select options so it can properly configure the camera settings based on processor type. PAGIS version 2.14 supports processor versions SX4 & SX4e only, you can either look at the product tag located on the processor or look at the camera IO ports on the back of the processor. If the 4 camera IO ports are vertically arranged RJ45’s then it’s a **SX4e(P720)**, if they are vertically arranged circular shaped “LEMO” connectors then it’s a **SX4(P634)**. Horizonal arranged circular shaped “LEMO” connectors is a SX3 and is not compatible with PAGIS 2.14.
4. Upgrading to PAGIS V2.14.x.x also requires that the Neology mobile processor be updated to same version in order to take advantage of the Firmware updater feature.



5. Place the PAGIS installer on your computer’s desktop, “PAGIS_Setup_MDC_2.14.x.x.exe”.
6. Right click the PAGIS installer executable and select “Run as administrator”.



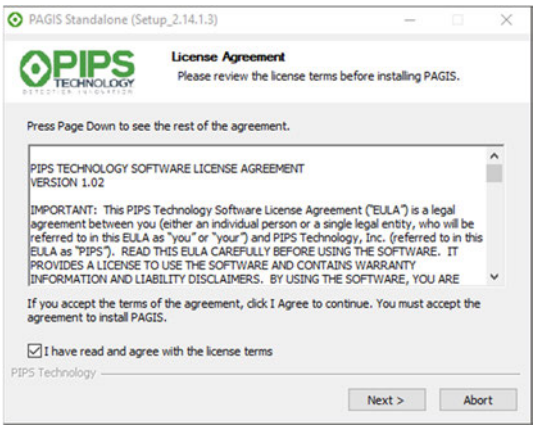
7. Check the license agreement box, then click Next.

8. Select the mobile processor type and alter “Shortcuts” if needed. Next to continue.

9. Confirm path if upgrading, click Install to proceed.

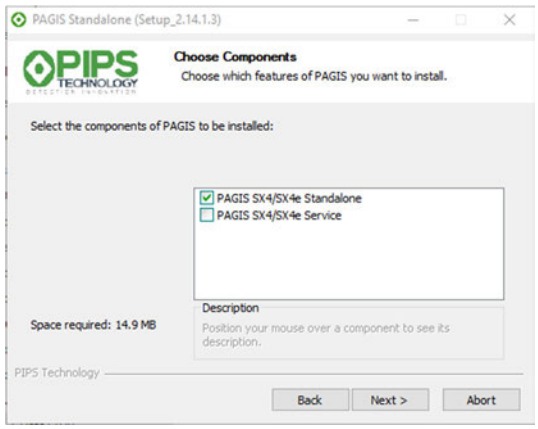
10. Installation Compete, Next to proceed.
11. Click Finish.
12. Click Yes to reboot if you would like to test PAGIS auto start at login if selected during installation, otherwise click No as its not required for PAGIS to run.

Note: See Appendix A for terminology definitions.

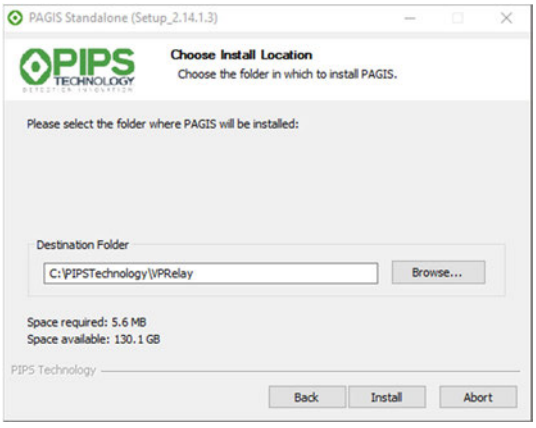


4.2.3 PAGIS Software Installation (Mobile Processor)

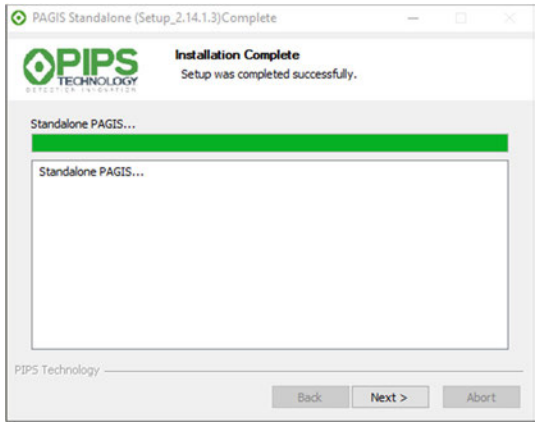
1. PAGIS v2.14.x.x updater is only compatible with Neology mobile processors SX4 & SX4e.
2. The PAGIS updater only updates existing versions of PAGIS on mobile processor, version 2.9 and newer.
3. Update required for both “Standalone” & “Service/VPRelay” to support some of the newer features.
4. The processor must be in its respective mode to update that option as the folder path are hidden when not active, see “Change Mode” in SX4 or SX4e manual.



NOTE: If processor is in Service/VPRelay mode you MUST stop the “PIPS VPRELAY” service before running the updater.



5. Remote desktop into processor or utilize attached monitor/keyboard.
6. Place the updater in C:\PIPSTechnology folder on the PIPS mobile processor.
7. Execute PAGIS Updater.



8. Check the license agreement box, then click Next.

9. Select option to update, next to continue.
   - Standalone= PAGIS login from Processor.
   - Service= PAGIS login from connected Laptop.

10. Change the default path presented by updater, see below.
    - For “Service” C:\PIPSTechnology\VPRelay.
    - For “Standalone” C:\PIPSTechnology\Standalone.

11. Installation Compete, Next to proceed.
12. Click Finish.
13. Click Yes to reboot.

Note: See Appendix A for terminology definitions.

2938

TROUBLESHOOTING TIPS

This section provides some basic troubleshooting tips and information

5.1 Troubleshooting & Tips

- The first login to PAGIS after the new install of an unconfigured version does not require a username or password. Simply click Login to be granted Admin access to the software.
- A good means to test the communication from the MDC to BOSS is ping or telnet (over TCP 8092) through the command prompt.
- A good means to test the communication from the MDC to the SX Processor is ping or telnet (over TCP 9000) via command prompt.
- For many other troubleshooting tips, see Appendix C – Frequently Asked Questions

5.1.1 PAGIS with NetMotion VPN

Agencies utilizing NetMotion VPN software on the MDC will need to apply the following passthrough steps:

1. Login to the NetMotion server as administrator
2. Click Settings > Then select Client > Select Global Client Settings > Then select Passthrough List
3. Click the “Add…” button on the right > Select “Network Address”
4. Enter the following settings (as shown):
    A. IP address:192.168.200.0 (the zero is correct, it's an IP address “range”) Subnet Mask: 255.255.255.0.
    B. Keep all other settings default (as shown) and click OK.
5. The MDC must then disconnect from NetMotion and reconnect again for the settings to be applied locally.

5.1.2 Cisco VPN Client:

Make sure Stateful Firewall is unchecked and "Allow Local LAN".

5.1.3 Microsoft .NET 3.5 Installation

The PAGIS Software requires Microsoft .NET Framework 3.5 specifically. If the MDC doesn’t have .NET, it can be downloaded from the Microsoft website.

5.1.4 Firewall Settings for Client-Server Installations

For client-server installations, the Windows Firewall needs to allow the SX Processor and the MDC to communicate. If the MDC is maintained by a Network Administrator, he or she should be contacted before making changes to the firewall. The command prompt commands for the exceptions are below

Option 1: Allow Microsoft Windows Version 8 or newer to auto-detect the launch of the PAGIS.exe application and use the wizard to add the PAGIS.EXE to the exception list (making note of Public or Private Network settings as necessary).

Option 2: Add PAGIS to the exception list manually by browsing to the install path of PAGIS. The default is below for reference: C:\Program Files (x86)\PIPS Technology, Inc\PAGIS2\PAGIS.exe

Option 3: Add the communication ports manually:
TCP in/out 8092 = Pagis sync port to BOSS back office software.
TCP in/out 9000 = Mobile processor camera feed port.
TCP in/out 9001 = Mobile processor camera snapshot port.
TCP in/out 32023 = Mobile processor camera setup port.
TCP in/out 10000 = Mobile processor data capture port.
NOTE: XML Datastream uses TCP 10100 and TCP 7000

2939

PAGIS/BOSS3 CONFIGURATION

In order for the PAGIS software to function properly, the device must be built, enabled, and configured in BOSS3 before being deployed for service in the field.

6.1 Creating a New Device in BOSS3

Once network communication to BOSS3 has been established from the vehicle, the new device must be "built" or added to the Device List in BOSS3 before it can be used. The approved way to do this, is to simply perform a Begin Shift from the PAGIS software. **NOTE**: The computer name is what will be displayed in BOSS as device name.

1. At the PAGIS Live View Screen, click the Begin Shift button once to select it, and then click again to launch the sync.
2. If the laptop has previously been setup to communicate with BOSS and is already enabled, the sync transfer window should appear in the middle of the Live View Screen.
3. If this is a new/disabled device, a message indicating "HttpStatusCode" will be displayed.
4. This indicates the BOSS3 server has received the sync request but has rejected it due to device status.
5. Once the BOSS Admin has enabled the device, the Status Code error will not appear again, and syncs should complete as configured in BOSS3.

6.2 Enabling a New Mobile System in BOSS3

Installing PAGIS and configuring the network settings is only the first step in making the ALPR unit operational. Once PAGIS is configured to work with or on the SX Processor and the mobile cameras, it must then be enabled in BOSS3 before synchronizations can take place. **NOTE**: By default, every new device recognized by the BOSS3 server is disabled until the Admin enables it. This is done for security.

1. Log into the BOSS3 UI Client Software with Admin privileges.
2. Click the Admin button on the left to expand the options.
3. Click the Devices button. The new device should now be listed to the right.
4. Click the name of the Device to select it. (This will open the device details screen)
5. Click the Edit button at the bottom of the window.
6. Click the Enable button from the Edit window.
7. This will enable the device and return the Admin to the Device List.

NOTE: If desired, the Admin can re-enter the Edit window to assign an alternate name in BOSS3 for the new device. The Admin will need to update the "Description" field and then click the Save button. Agencies commonly use this field to signify the Unit number, Car name, or Patrol Shift. The "Name" field is the device/host name and cannot be edited in BOSS3.

NOTE: Once the Device is enabled the Admin needs to assign ownership and hotlist distribution.

6.3 Assigning Ownership to a Device in BOSS3

Every new device added to BOSS3 allows for Admin level access into PAGIS without the use of a username or password. In order to password protect the PAGIS software, the BOSS Administrator must assign "Owners" to the device in BOSS3.
NOTE: For more detail on Users, User Groups, Sites, and Roles, refer to the BOSS3 manual.

1. Login to the BOSS3 UI with Admin credentials.
2. Click the Admin button on the Left to expand the options.
3. Click Devices to review the list.
4. Click on the Device Name to open the device details screen.
5. Click on the Edit button.
6. Locate the "Owners" field. Click the Select button to the right.
7. Check the box(es) for the appropriate Site(s)/User Group(s). **NOTE**: This tells BOSS3 which sets of users will have rights to login to PAGIS from this specific device.
8. Notice the Select button has changed to a Save button. Click Save to retain changes.
9. Confirm the changes show in the Owners Field.
10. Click the Save button at the top left of the Edit window.

2940

6.4 Assigning Hotlists to a Device in BOSS3

In order for the PAGIS users to receive alerts, one or more of the stored hotlists in BOSS3 must be distributed to the new device. **NOTE**: For more information on building and configuring Hotlists, refer to the BOSS3 manual.

1. Login to the BOSS3 UI with Admin credentials.
2. Click the Admin button on the Left to expand the options.
3. Click the “Hotlists” button to review the list of configured alert lists.
4. Click the Hotlist Name to select the first alert list. This will open the Details screen.
5. Click the Edit button at the bottom of the window.
6. Locate the “Deployment” field. Then click the Select button to the right.
7. Check the box next to the name of the new device.
8. Notice the Select button has changed to a Save button. Click Save to retain the changes.
9. Confirm the changes show in the Deployment Field.
10. Click the Save button at the top left of the Edit window.
11. Perform these steps again for all remaining Hotlists necessary for this device.

PAGIS/BOSS4 CONFIGURATION

In order for the PAGIS software to function properly, the device must be built, enabled, and configured in BOSS4 before being deployed for service in the field.

7.1 Creating a New Device in BOSS4

Once network communication to BOSS4 has been established from the vehicle, the new device must be “built” or added to the Device List in BOSS4 before it can be used. The approved way to do this, is to simply perform a Begin Shift from the PAGIS software. **NOTE**: The computer name is what will be displayed in BOSS as device name.

1. At the PAGIS Live View Screen, click the Begin Shift button once to select it, and then click again to launch the sync.
2. If the computer has previously been setup to communicate with BOSS and is already enabled, the sync transfer window should appear in the middle of the Live View Screen.
3. If this is a new/disabled device, a message indicating “HttpStatusCode” will be displayed.
4. This indicates the BOSS4 server has received the sync request but has rejected it due to device status.
5. Once the BOSS Admin has enabled the device, the Status Code error will not appear again, and syncs should complete as configured in BOSS4.

7.2 Enabling a New Mobile System in BOSS4

Installing PAGIS and configuring the network settings is only the first step in making the ALPR unit operational. Once PAGIS is configured to work with or on the SX Processor and the mobile cameras, it must then be enabled in BOSS4 before synchronizations can take place. **NOTE**: By default, every new device recognized by the BOSS4 server is disabled until the Admin enables it. This is done for security.

1. Log into the BOSS4 URL with Admin privileges.
2. Navigate to the Resources pulldown menu.
3. Select Devices from the menu options. The new device should now be listed.
4. Click the name of the Device to select it. (This will open the device details windows on the left)
5. Click the Enable slide toggle to enable device, located in upper right of device edit window then click save.
6. This will enable the device, synchronization between BOSS4 and PAGIS is allowed.

NOTE: Once the Device is enabled the Admin needs to assign ownership and hotlist distribution.

2941

7.3 Assigning Ownership to a Device in BOSS4

Every new device added to BOSS4 allows for Admin level access into PAGIS without the use of a username or password. In order to password protect the PAGIS software, the BOSS Administrator must assign “Owners” to the device in BOSS4.

NOTE: For more detail on Users, User Groups, Sites, and Roles, refer to the BOSS4 manual.

1. Login to the BOSS4 URL with Admin credentials.
2. Navigate to the Resources pulldown menu.
3. Select Devices from the menu options. The new device should now be listed.
4. Click the name of the Device to select it. (This will open the device details windows on the left)
5. Locate the “Owner” field. Click in the Owner filed, and a list of all available Groups will appear.
6. Select group by clicking on it, it will then automatically be added to owners, see list below “Owner”.
7. To add mode groups, repeat step 15.
8. Confirm the changes show in the Owner Field.
9. Click the Save button at the bottom right of the Edit window.

7.4 Assigning Hotlists to a Device in BOSS4

In order for the PAGIS users to receive alerts, one or more of the stored hotlists in BOSS4 must be distributed to the new device.

NOTE: For more information on building and configuring Hotlists, refer to the BOSS4 manual.

1. Login to the BOSS4 URL with Admin credentials.
2. Navigate to the System pulldown menu.
3. Select Hotlists from the menu options
4. Click the Hotlist Name to select the first alert list. This will open the Details screen.
5. Locate the “Deployment” field.
6. Check the box next to the name of the new device listed.
7. Click the Save button at the bottom right of the Edit window.
8. Perform these steps again for all remaining Hotlists necessary for this device.

APPENDIX A: THE GLOSSARY

ALPR/ANPR	"Automatic License Plate Recognition/Automatic Number Plate Recognition".
BOSS	"Back Office System Software". This is the ALPR server.
GPS	"Global Positioning System".
GUI	"Graphical User Interface".
Hotlist	A database or list that contains vehicle license plates of interest ("alert list").
IR	Infrared light.
License Plate	Also called a tag or number plate.
MDC	"Mobile Data Computer". This is the tablet or laptop in the vehicle.
OCR	"Optical Character Recognition" (also referred to as a "cardet").
OS	"Operating System".
PAGIS	This is the License Plate Capture Software most commonly used in an ALPR vehicle.
Service	Operation mode of the PAGIS software. Service or "VPRelay" is used to refer to PAGIS instance that is running directly on the Neology mobile processor without a GUI interface, this mode is intended to run in conjunction with MDC version of PAGIS installed on laptop connected via Ethernet.
Standalone	Operation mode of the PAGIS software. Standalone is used to refer to PAGIS instance that is running directly on the Neology mobile processor with a GUI interface. Same a "Service"
SX	SX is a short notation referencing Neology mobile processor, commonly the SX is followed by the generation number of the processor, i.e. SX3, SX4 & SX4e.
UI	A "User Interface" is the means in which the user can access and navigate the software.
USB Flash Drive	Also called a thumb drive or memory stick.
VLP	"Vehicle License Plate".
VPN	"Virtually Protected Network".
VPRelay	Operation mode of the PAGIS software. VPRelay or "Service" is used to refer to PAGIS instance that is running directly on the Neology mobile processor without a GUI interface, this mode is intended to run in conjunction with MDC versions of PAGIS installed on laptop connected via Ethernet.
Whitelist	Opposite of a standard BOSS Hotlist. This is a list of license plates that should not trigger an alert.

2943

APPENDIX B: PAGIS SOFTWARE DATABASE FILE

This section is used to configure the PAGIS Software when it's not being used with the Back Office System Software (BOSS). Comma-separated value (CSV) format is the only format the PAGIS Software supports for importing data into the vehicles for the purpose of matching against the captured license plate data. PAGIS will support CSV files with any number of columns, called "fields", as long as the first field is the VLP (Vehicle License Plate). **NOTE**: The CSV format is standard ASCII.

Example CSV Files:

1. *ABC123, Red, Ford, Explorer, 1996, WANTED XYZ456, Blue, Audi, A4, 2001, MURDER*
2. *45ABC234, Vehicle wanted in associated with a kidnapping on 12/5/2005 995BD233, Vehicle reported stolen from Liz's Lounge at 6am on 12/1/2005*
3. *UIO223 ABC123*

General Function:

PAGIS calls/utilizes files in pairs. Each database in PAGIS is created using two files; a CSV file, and an INI configuration file. Without both of these files, the database will not load and PAGIS will not "see" it. Each CSV file/hotlist must have the exact same name as the INI configuration file. Example: Stolen.ini and Stolen.csv will work. Stolen.ini and Plates.csv will not.

Reading an INI Configuration File

Lines that appear in brackets [] are called "Headings". The labels that appear inside the headings, are called "values". Values will always contain an equal sign (=). If a line starts with a semicolon, it is considered to be a comment and is not read by the software. There is no limit to the number of comments in the INI file.

The [SETTINGS] Heading

The values in the Settings heading are: NumFiles, DbName, DbColor, Priority, Covert, Alarm, and NumFields.

- NumFiles: Determines how many database files the system should split the specified hotlist into. Generally, this value is set to 1. But for larger hotlists (200,000+ lines), a number of 2-5 may be more desirable.
- DbName: Tells the PAGIS Software what the displayed name of the hotlist should be.
- DbColor: Sets the display color of the hotlist. This is merely an esthetic setting and not a functional setting. The right-hand side of the equal sign is the HEX value representing the ARGB values for the color. If this value is unknown, the Admin should simply leave this line out of the file.
- Priority: Designates the priority of this hotlist in relation to other hotlists in the system. The highest priority database is 1 and the lowest is 999. **NOTE**: if a plate resides on multiple lists the higher priority will be alerted first.
- Covert: Determines whether standard PAGIS Software users are alerted when a hit is made from the database. Covert database can be used for hotlists that are included for information-gathering purposes rather than eliciting user intervention. The system can also be configured to notify via email or SMS message when a hit is made from a covert hotlist.
- Alarm: Sets the audible alert to be played in PAGIS when a hit is made from the hotlist. Values for Alarm are LOW, MED, HIGH
- NumFields: Indicates how many fields (columns) are in the CSV file. If this value is less than the actual number of fields in a file, then the additional fields are placed in the general information area. This value also determines the number of headings of the [Field x] present in the file. For example, if NumFields=2 then there will be two additional headings, [Field 0] and [Field 1]. **NOTE**: Adding "Creation =" will place the timestamp the hotlist was added to the Begin Shift file.

2944

The [FIELD X] Heading

Under the Field heading, there are two configurable values, “Name” and “PAGIS”.

- Name: Tells the system what the name of this field is. If no name is specified, then no name given to the field. The format is Name = <field>
- PAGIS: Specifies how to display the field in the GUI/PAGIS Software.
  - If no value is defined, the field is placed as general information.
  - Values 1-5 represent special fields for the PAGIS Software that translate to the information being displayed in a box of its own when a hit is processed.
  - A value of 6 represents an ID number to cross reference the vehicle from the hotlist with a person from the wanted list.
  - A value of 7 is identical to leaving the value undefined.

Sample INI Configuration File

[Settings] NumFiles=1
DbName=Stolen Vehicles DbColor=ffffff00 Priority=5 Covert=False Alarm=MED NumFields=8
;PAGIS Values
;0 is VRM / VLP (Not User Definable, always Field 0)
;1 is Special Field 1
;2 is Special Field 2
;3 is Special Field 3
;4 is Special Field 4
;5 is Special Field 5
;6 is ID Number (PNC ID, Driver’s License, Social Security Number, etc.)
;7 is General Info (Default for all undefined fields) [Field 0]
PAGIS=VRM

Sample INI Configuration File

[Field 0] Name=VRM
[Field 1] Name=Color
PAGIS=3 [Field 2]
Name=Make PAGIS=1
[Field 3] Name=Model
PAGIS=2 [Field 4]
Name=Action PAGIS=4
[Field 5] Name=Warning
PAGIS=5 [Field 6]
Name=PNCID PAGIS=6
[Field 7] Name=Intelligence PAGIS=7

To deploy a locally created hotlist to PAGIS without BOSS.

1. Create a folder called “beginshift” (Without Quotes) on the root drive of whatever drive media your using that PAGIS has access to, remember only on root drive, no subdirectory’s. Example C:\beginshift.
2. Place the .CSV & .INI in the newly created beginshift folder.
3. Log into PAGIS and configure Sync to access the drive where your file/files are located. When setting disk drive letter in PAGIS no need to indicate folder path as PAGIS assumes by default that “beginshift” exist on the root drive your selecting, refer to section 3.1 in this manual.
4. Go back to main screen and do beginshift.

2945

APPENDIX C: FAQ

Q: **HOW DO I ENTER A SUPPORT CASE?**
A: We have a webform you can use here, you can email our Support Team at Alpr_support@neology.net, or you can call us on the phone Monday-Friday 8am to 4pm Central Time (9am-5pm Eastern) at (833) 747-7577 Option 2.

Q: **HOW DO WE CREATE USERS IN PAGIS?**
A: The agency BOSS Administrator creates all users, both for BOSS and for PAGIS. Once the user is created in BOSS, the Admin would click the user's name to select/edit the user. Then click the Advanced button and update the PAGIS specific password. Please note that the username and password fields are both case sensitive and the PAGIS users need to be added to a group with the Role that allows them to use PAGIS/LPCS.

If you have any further questions, please feel free to enter a request for support here.

Q: **WHERE DO USERS CHANGE THEIR LOGIN PASSWORD IN PAGIS?**
A: User passwords are created and updated in BOSS via the UI client software. For the majority of our customers using both the PAGIS Software and BOSS, any user accounts or passwords created in the PAGIS Software itself will be overwritten by the user information defined in BOSS during the next sync.

If you have any further questions, please feel free to enter a request for support here.

Q: **HOW DO WE REQUEST AN RMA REPAIR?**
A: To assist with this, please navigate here to review our RMA procedure as well as to download the request form. Please keep in mind that once submitted, all repairs are reviewed for age of equipment and warranty status before final processing takes place. Additionally, incomplete forms and those without much detail often result in processing delays.

If you have any further questions, please feel free to enter a request for support here.

Q: **WE GOT NEW MDC LAPTOPS IN THE PATROL CARS, HOW DO WE ADD THOSE DEVICES TO BOSS?**
Q: **HOW DO WE EDIT THE DEVICE NAMES IN BOSS?**
A: The initial device template/skeleton is automatically created in BOSS the first time the device attempts to Sync from the field. Devices should NEVER be created manually. For PAGIS laptops, this is done after PAGIS is installed and configured and Begin Shift is launched. However, if the agency would like to organize the device list by updating the "Device Name" field, those steps are below:
1. Login to the BOSS UI with Admin rights
2. Navigate to Admin > Devices
3. Click on a device name to select it > Click Edit
4. Update the name of the device in the "Description" field (Name field cannot be altered)
5. Click Save > This will take you back to the Device Summary List. The "Device Name" field should show the new name

If these troubleshooting steps did not resolve the issue, please feel free to enter a request for support here.

Q: **WE HAVE A NEW MOBILE COMPUTER/MDC THAT'S NOT SYNCING WITH BOSS.**
Q: **WE KEEP SEEING AN HTTP_STATUS_CODE ERROR WHEN RUNNING BEGIN SHIFT.**
A: This error most commonly means that a new device in the field (laptop/tablet) can "see" the BOSS server, but that it hasn't been enabled yet to "talk" with it. Follow the general steps below to address this issue:
1. The agency BOSS Administrator will need to login to the BOSS UI client and Select Admin
2. Then select Devices and from there, left click on the device/computer name of that MDC to edit it
3. Once in the Edit screen, Enable the device. This will take you back to the Device List.
4. Click the name to edit the device again. Now assign users/Owners and save.
NOTE: The Select button becomes a Save button when selecting which Groups/Users should have access to login to this device

5. Once that is done, navigate to Admin > Hotlists
6. From here, click on each hotlist one at a time to distribute them to the new device being sure to Save the changes next to the Distribution field. Note again that the Select button becomes a Save button. And there's another Save button at the top left of the edit window.
7. After this is complete, perform Begin Shift from the field unit/MDC and confirm there are no further errors.

If these troubleshooting steps did not resolve the issue, please feel free to enter a request for support here.

Q: **NEW PAGIS USER CAN'T LOGIN BUT OTHERS CAN.**
Q: **USERS CAN LOGIN TO PAGIS WITH NO CREDENTIALS AT ALL.**
A: Entry or login to the PAGIS software in the field is partially controlled by the Device settings in BOSS. The users themselves must also be properly setup with an LPCS/PAGIS password. To check the current device settings/ access, perform the following steps:
1. Login to BOSS UI (with Administrator rights)
2. Select the Admin Section
3. Select Devices and then Select the Device in question by PC name
4. Once selected click on the Edit button near the bottom
5. Locate and inspect the "Owners" Field (this is a list of users/groups that have access to login to the device)
NOTE: If this field is blank, the device is in an open configuration mode allowing admin level access simply by clicking login (any credentials would also be accepted).
6. To update the device owners, click the "Select" button next to the Owners field (notice it changes to a Save button)
7. Check which Users/Groups of Users should be able to login to PAGIS from this device
8. Click the Save button next to the field
9. And then click Save in the upper left portion of the Edit window
10. Have a previous user or Admin login to PAGIS and perform Begin Shift to sync the new data
11. A PAGIS Admin can confirm by navigating to Admin, Admin, and then Users to review the list
12. Another test would be to have the new user attempt to login

If these troubleshooting steps did not resolve the issue, please feel free to enter a request for support here.

Q: **WHEN USERS LOGIN TO PAGIS, THEY ONLY SEE A GREY SCREEN.**
Q: **CAMERAS AREN'T SHOWING UP IN PAGIS ANYMORE.**
SEE ALSO: "THE LINK LIGHTS ON OUR ALPR COMPUTER/MDC WON'T TURN ON OR FLASH"
A: Below are some basic troubleshooting steps you'll want to follow before creating a support ticket.
1. Doublecheck the physical power switch on the black box/Processor is On. In many vehicles, there is also an in-line switch in the front of the vehicle that needs to be switched On. When the units are properly powered and on, you should see lights and hear fans running.
2. Confirm that the network adapter settings on the laptop match the proper Static IP scheme for the SX Processor in use. The older scheme is 192.200… and the newer scheme is 192.168…. NOTE: the adapter status in Windows should say "unidentified network". If it says "cable unplugged" the laptop can't "see" the SX.
3. If the power and Static IP settings are good and things still aren't working, test further by disabling the three main software related culprits. Turn off/bypass the local Windows firewall, antivirus, and VPN software one at a time.
4. If you're still not able to see the camera feed after that, you may want to use a different network cable as those can get damaged over time and then confirm that the cord is properly plugged into the ports.
5. If the network cord from the SX Processor is routed through a docking station, then it's possible the dock is preventing the traffic. You should contact the dock's manufacturer for the most recent firmware. To test for this, remove the laptop from the dock, directly connect the network cord to the laptop, and then reconfigure the network adapter settings (remove the static settings from the dock's adapter/ and assign the static IP to the laptop's NIC adapter).

If these troubleshooting steps did not resolve the issue, please feel free to enter a request for support here.
Q: **THE LEFT FRONT CAMERA ON OUR ALPR VEHICLE IS NO LONGER SHOWING IN PAGIS**?
Q: **HOW DO WE TROUBLESHOOT MOBILE CAMERAS**?
A: Below are the main troubleshooting steps to test the camera(s) and cable(s) on a system where only one or two cameras are

no longer displaying images.
Step 1: Confirm MDC/SX communication - steps shown in section “Cameras aren’t showing up in PAGIS anymore.”
Step 2: Access the SX Processor – RDP or directly connect a monitor, keyboard, and mouse to the SX. Contact Neology Support for help with RDP if the credentials are unknown to the agency.
Step 3: Confirm camera activity – Launch Tools. Then open P6Utility or Mobile Toolkit. Check the camera feeds/function by switching the Input menu to the camera(s) in question
Step 4: Unplug and Reattach the Camera Cables – Note, the cables DO NOT TWIST. The metal locking nut on the cable slides back about a millimeter and the cable comes straight out. Do this at the SX Processor and the Camera. You may need to remove the camera from the mount in order to unplug the cable successfully (most brackets use a #3.5 Hex/Allen Wrench)
Step 5: Swap Port on SX Processor – At the SX Processor, swap the camera cables from the non-working camera to a port with a working port (Take care to note the swap so the cables get back to their original ports). If the camera outage stays at the port site, the issue is most likely the capture card on the SX Processor and will require RMA (Example: working Left cam is swapped to port of non-working Right cam and no longer functions. AND the previous non-working Right cam starts working once it’s plugged into the Left cam’s port). If the fault/error stays with the camera regardless of SX port, continue to Step 6.
Step 6: Physically Swap Camera Locations – Once all other items are checked, move the camera itself to a working position in order to test the cable. (Example: physically move Left cam to the Right cam position on the top of the vehicle) Connect the cable at the new position and test feed in Tools > P6Utility/Mobile Toolkit. If the camera works at the new location, the issue is most likely a bad cable. If the camera still does not work, the issue is most likely a faulty camera in need of repair/RMA.

If these troubleshooting steps did not resolve the issue, please feel free to enter a request for support here.

Q: **WE’RE NO LONGER GETTING GPS IN PAGIS.**
Q: **WE’RE NOT SEEING GPS DATA FROM SOME OF OUR FIELD UNITS IN BOSS.**
A: Below are the basic troubleshooting steps for checking the GPS of field units:
1. Login to PAGIS (as Admin)
2. Navigate to Admin section, then click the Admin button
3. Select “System” on the left pane
4. Confirm/Set the button at top to “Default”
5. Remove any value(s) stored in the GPS Connection String field. Leave ‘5’ in the Computer String.
6. Click the Save button to retain changes made.
7. Close PAGIS fully and relaunch and log back in to test (Note: GPS will only show with test reads/hits)
8. For versions of PAGIS 2.9 and up, test with a GPS Connection String of 6 if the blank field doesn’t work. Save the changes. Log out. Close the software and then relaunch to test.

Please be advised, that some GPS issues can be caused by local or domain firewall settings, antivirus software, or any other software package monitoring/transmitting network data. To test these, disable or bypass those software options on the MDC and retest.

If these initial troubleshooting steps did not resolve the issue, please feel free to enter a request for support here.

Q: **HOW DO I INSTALL THE PAGIS SOFTWARE?**
Q: **I JUST LOADED PAGIS ON A MACHINE AND IT CRASHES WITH A .DLL ERROR WHEN I TRY TO LAUNCH IT.**
A: The most common installation of PAGIS is Client/Server or “VPRelay Mode”. The .dll error is caused by the installer not being run from the HDD and/or the wrong install option being selected (Example: SupeRex instead of MDC). The best practices for the installation are below. (Note, this does not cover MDC or PAGIS configuration, only the act of installation)
1. Always copy the installer over to the HDD/Desktop of the MDC. Never run it from a thumb-drive or network share
2. Regardless of how you're logged in to Windows, right click the installer and select "run as Admin" or "run with elevated privileges"
3. Continue through the message/error about OS compatibility
4. Click next on the wizard and then be sure to select the MDC option (to use with VPRelay)
5. After that, it's next, next, next, finish the reboot is not necessary

If these steps did not resolve the issue, please feel free to enter a request for support here.

Q: **USERS ARE GETTING HITS/ALERTS ON PREVIOUSLY RECOVERED STOLEN PLATES.**
Q: **USERS AREN'T GETTING HITS FROM KNOWN ACTIVE PLATES.**
Q: **THE HOTLISTS IN PAGIS DON'T SHOW TODAY'S DATE.**
Q: **THE HOTLISTS AREN'T SYNCING WITH BEGIN/END SHIFT.**
A: Whether it's from data latency or just use over time, the local file structure can get some minor corruption and will need to be refreshed. The steps below show the best practices:
1. Login to Windows with Admin rights (ability to uninstall/delete software)
2. Login to PAGIS and perform an End Shift
3. When complete without error, Logout of PAGIS and then Exit/Close the program
NOTE: If the End Shift fails or displays an error, contact Support for additional assistance.
4. If there were no errors, locate the PAGIS icon on the desktop.
5. Right click on the icon and select "Open File Location" (This should open a window where the program was installed)
6. Scroll up and locate the folder labeled "data". Double-click it to open it
7. Select and delete everything in here EXCEPT for "Attributes.db"
8. Once that's complete, Login to the PAGIS software again
9. Perform a Begin Shift. This will pull down fresh data from the server
NOTE: Once complete, the files in the data subfolder as well as the Databases section of PAGIS should be restored.

If these troubleshooting steps did not resolve the issue, please feel free to enter a request for support here.

Q: **IS PAGIS COMPATIBLE WITH OUR NEW WINDOWS 10 LAPTOPS?**
A: Although there's a warning about compatibility during the install of PAGIS on any Windows OS after XP, it is compatible with all them. However, we have seen errors occur when agencies copy and paste folder structures from previous installations. This of course is not recommended.

Q: **THE LINK LIGHTS ON OUR ALPR COMPUTER/MDC WON'T TURN ON OR FLASH.**
Q: **OUR WINDOWS 10 MDC WAS WORKING BUT HAS STOPPED COMMUNICATING TO THE SX PROCESSOR.**
A: There are many variables with troubleshooting any network connection. And the connection from the ALPR computer to the SX Processor is no different. The following troubleshooting list highlights the most common:
1. The physical network cord is bad/damaged.
A: Test with a different cable and confirm that it is plugged in fully

2. The network adapters are not configured or have incorrect static IPs
A: Confirm the Static IP scheme in use and properly configure the network adapters

3. Local and/or Domain Firewall rules have prevented the flow of communication
A: Disable or bypass these and test again

4. VPN, Anti-Spyware, Antivirus, or other monitoring software has blocked communication
A: Disable or bypass these one at a time and test after each to find the culprit(s)

5. Docking Station Firmware can be incompatible with some newer computers or become corrupt
A: Test by running the network cord straight to the MDC and then configuring the network adapters (NOTE: It would also be a good idea to contact station manufacturer to see what the latest firmware version is and upgrade as necessary)

6. The NIC Drivers have become corrupt
A: Update the specific Networking drivers in use on the MDC through the Device Manager in Windows

7. Turn off all power saving settings of the Ethernet Adapter in the device manager
A: Uncheck "Allow the computer to turn off this device to save power"

8. Check for Windows 10 update 1709 and 1803 as this update will not allow the NIC and Cellular Aircard to run simultaneously

A: Settings > Update and Security > Windows Update > “Update History” link – if there, see the steps in the FAQ 2949

If these troubleshooting steps did not resolve the issue, please feel free to enter a request for support here.

Q: **AS SOON AS WE DOCK OUR MDC, WE LOSE CONNECTION TO THE WIRELESS.**
Q: **OUR WINDOWS 10 LAPTOP LOSES CONNECTION TO THE INTERNET WHEN THE NETWORK CABLE IS PLUGGED IN.**
Q: **OUR MDC HAS MICROSOFT VERSION 1709 OR 1803 AND CAN’T CONNECT TO WIFI WHEN DOCKED.**
A: Microsoft Updates (1709 and 1803) prevent the Wireless connection as soon as a Network cable is plugged into the device. This also occurs for MDCs/laptops that are docked (where the Network cable from the SX Processor is run through the docking station). As of January 2019, the steps to correct this are below.
WIN10 version 1803
1. Open Regedit
2. Expand HKEY_LOCAL_MACHINE
3. Navigate to Software > Policies > Microsoft > WcmSvc > Local
4. Right click on Local > Hover over New > Select “DWORD (32-bit)”
5. Name the new value “fMinimizeConnections”
6. Right click the on the new name > select Modify > Set value data to 1 (leave base Hex) > Click OK
7. Reboot Windows and test

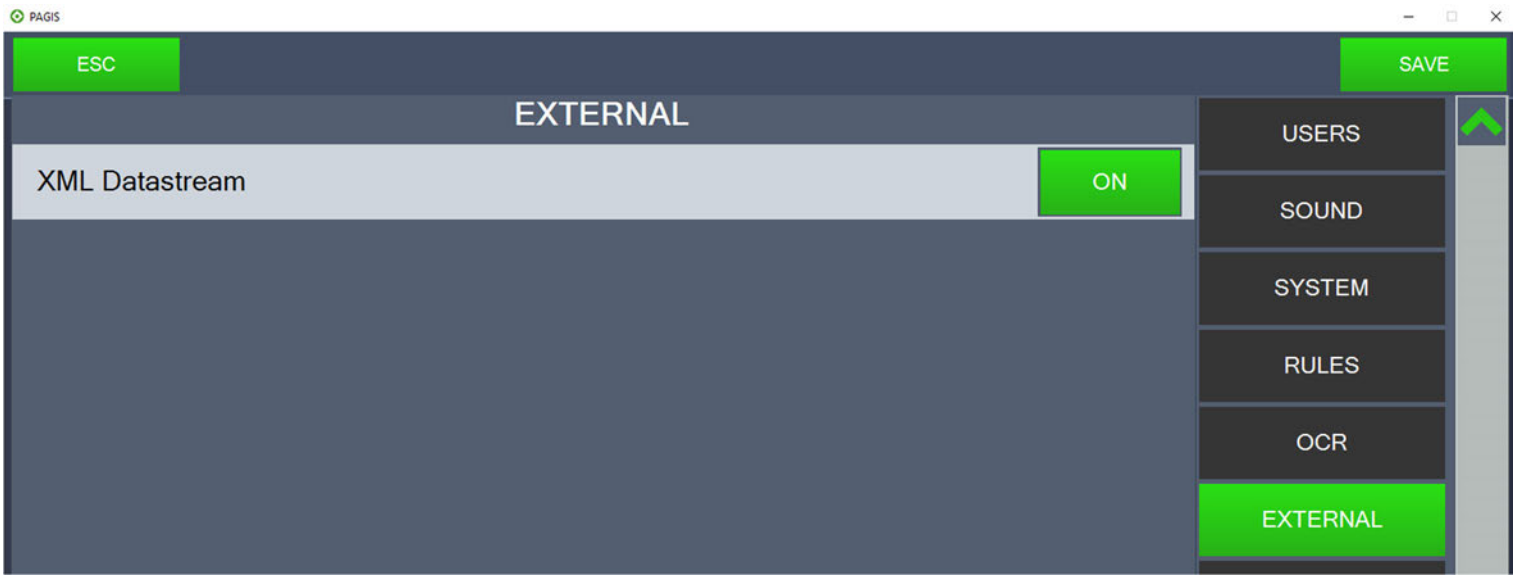
WIN10 version 1709 - Microsoft fixed this with Update KB 4284822. But if you still have issues, the registry steps are below:
1. Open Regedit
2. Navigate to HKEY_LOCAL_MACHINE > Software > Policies > Microsoft > WcmSvc > Local
3. Right click on Local > Hover over New > Select “DWORD (32-bit)”
4. Name the new value “fMinimizeConnections”
5. Right click the on the new name > select Modify > Set value data to 0 (leave base Hex) > Click OK
6. Then Navigate to HKEY_LOCAL_MACHINE\Software\Microsoft\Wcmsvc
7. Right click on Wcmsvc > Hover over New > Select DWORD (32-bit)
8. Name the value “IgnoreNonRoutableEthernet”
9. Right click on the new value > Modify > Set value data to 1 (leave base in Hex) > OK
10. Reboot Win10 and test

If the steps above did not resolve the issue, you may need to address this with Microsoft. Their support site is here.

APPENDIX D: XML DATASTREAM

Overview

The XML Datastream can be used to push the current data from a running PAGIS system to another application. The data available via the Datastream includes reads, hits and current images. The connection to the Datastream is a TCP/IP socket (default port: 10100). When initially connecting, an XML packet is passed to the PAGIS Software to subscribe to the Datastream. The data connection is configured as "push only" and doesn't allow receipt of additional external data. The current image stream is pushed periodically whereas reads and hits are passed as close to real-time as possible.



PAGIS Port

By default, the PAGIS.exe.config file has a key for defining the port number for the XML Datastream. The default value is 10100. This setting does not need to be changed unless the default port is unavailable.
The key has the following format:

```
<!--XML Datastream Settings/-->
<add key="XML.Datastream.Port" value="10100"/>
```

PAGIS Admin Setting

To utilize this feature, the XML Datastream needs to be enabled in PAGIS. To do this, navigate to Settings > Admin > External. The "XML Datastream" option should be turned on as shown in the image below and then saved.

XML Subscription

When initially connecting to PAGIS, the Datastream subscriber will receive only a Heartbeat XML packet (see example below) until PAGIS receives a subscription packet from the subscriber. The properly formed subscription packet defines the specific data that the subscriber wishes to receive.

Heartbeat XML Packet

The Heartbeat Packet is sent once every 10 seconds. The purpose of the heartbeat packet is to let the subscriber know that the communications channel is working between PAGIS and the subscriber. The timestamp is sent in the format of "`YYYY-MM-DDThh:mm:ss`".

Sample of the Subscription XML Packet

```
<?xml version="1.0" encoding="utf-8"?>
<pips-datastream-heartbeat>
  <timestamp>2011-10-13T09:41:56Z</timestamp>
</pips-datastream-heartbeat>
```

Subscription XML Packet

A properly formed subscription packet will have all of the data being requested from PAGIS. To receive a specific datatype, a tag must be added to the subscription to define the desired datatype. The valid entries for datatype are: Reads, Hits, and CurrentImage.

- Subscribing to Reads will send all plates that are detected by PAGIS regardless of whether or not it has an associated hit.
- Subscribing to Hits will send all plates detected by PAGIS that are on a hotlist and the associated Read data for that Hit.
- Subscribing to the CurrentImage Datastream offers two additional attributes that may be passed as well. The "camera" attribute can be set to determine which camera the image is coming from. If no value is passed for "camera" the value defaults to zero. The "milliseconds" attribute determines how long the system waits between sending the current image. The default value for milliseconds is 1000. If a value of zero is sent, the system will send a single snapshot.

Sample of the Subscription XML Packet

```
<?xml version="1.0" encoding="utf-8"?>
<pips-datastream-subscription>
  <datatype>Reads</datatype>
  <datatype>Hits</datatype>
  <datatype>HitTrigger</datatype>
  <datatype camera="0" milliseconds="1000">CurrentImage</datatype>
</pips-datastream-subscription>
```

HitTrigger

The HitTrigger packet is used to alert other systems that a hit has occurred on the PAGIS system. The packet is greatly simplified from the Reads/Hits XML packet and only contains the license plate text, timestamp and a description of the hit. The description will contain the name of the hotlist that originated the hit and may be used to send additional information.

Sample of the HitTrigger XML Packet

```
<?xml version="1.0" encoding="utf-8"?>
<pips-datastream-hittrigger>
  <timestamp>2011-10-13T09:41:56Z</timestamp>
  <vrm>SBX989</vrm>
  <hotList name='Alpha'>
    <field1><![CDATA[This is Alpha Field 1]]></field1>
    <field2><![CDATA[This is Alpha Field 2]]></field2>
    <field3><![CDATA[This is Alpha Field 3]]></field3>
    <field4><![CDATA[This is Alpha Field 4]]></field4>
    <field5><![CDATA[This is Alpha Field 5]]></field5>
  </hotList>
</pips-datastream-hittrigger>
```

Reads/Hits XML Packet

The Reads/Hits packet contains information about the plate that was detected. This information includes:

- Source – The device that detected the plate
- Camera – The camera on the device that detected the plate
- Read – The Information about the plate that was captured
- VRM – The plate translated to text
- Timestamp – When the read occurred
- GPS – The location coordinates where the read took place
- ImagesPatch – The image of plate in infrared (IR)
- Overview – The image of scene/car in Color
- Hits – The associated hotlist(s) data

Sample of the Current Image XML Packet

NOTE: The Current/Live Image XML Packet contains the current image from the camera. It is sent every 5 seconds.

```
<?xml version="1.0" encoding="utf-8"?>
<pips-datastream-currentimage>
  <timestamp>2011-10-13T09:41:56</timestamp>
  <data>(Image data here)</data>
</pips-datastream-currentimage>
```

2952

Sample Read with Hits XML

```
<?xml version="1.0" encoding="utf-8"?>
<pips-datastream-reads>
  <reads>
    <source>
      <name>PAGIS_90210</name>
      <software name="PAGIS" version="2.6.8" />
      <camera name="Front Left">
        <read>
          <state>TN</state>
          <vrm>SBX989</vrm>
          <confidence>97.5</confidence>

Version

This manual demonstrates the attributes of the Neology PAGIS Software Version 2.15.2.8 and was last updated in June 2022.

2957 INTRODUCTION

Neology's Automated License Plate Recognition (ALPR) software solution called PAGIS utilizes dual-channel, dual-lens, cameras to "read" plates. Our software is optimized to run on the Mobile Processor itself or in conjunction with a mobile data computer (MDC). Our mobile software is compatible with Microsoft Windows 7, 8, 10 and 11. The Mobile ANPR/ALPR Processor comes equipped with Microsoft Windows 10 Embedded.

The PAGIS Software processes the infrared plate image provided by any of the cameras and then interprets the plate number through Optical Character Recognition (OCR) via the mobile processor. The PAGIS application then searches for any matches of the plate with those listed in the databases, or "hotlists," distributed from the Back Office System Software (BOSS) or other external sources.

WARNING: **To reduce the risks associated with impact, which if not avoided, could result in serious injury or death: Do Not** interact with the ALPR system while driving in hazardous situations. The PIPS mobile camera series and License Plate Capture Software are not intended for use in hazardous environments, so that the User and/or others are not put at risk for personal injury and/or property damage.

1.1 Dual Lens Color and Infrared Camera

The Mobile ALPR System allows for a maximum of four (4) dual-lens cameras to be installed on each ALPR vehicle provided that the vehicle supports the additional mounting equipment.

Each dual-lens mobile camera uses visible light to take color overview pictures of the vehicle and uses infrared (IR) illumination to capture the license plate's alphanumeric characters. IR illumination offers the best capture performance of reflective license plate characters for the following reasons:

- State issued license plates are designed to be highly reflective to IR light.
- Cameras using IR capture technology do not depend on the presence of visible light to function.
- Cameras using IR capture technology are not negatively impacted by the effects of headlights, solar glare, or total darkness.
- IR light penetrates rain and fog better than visible light.
- Due to these attributes, the system can be used 24 hours a day, seven days a week.

1.1.1 **Available Products**

Additional information about this and other Neology applications, cameras, and solutions are available on the Neology web site: https://www.neology.net

2958

1.2 **Using This Manual**

The section overview of this software manual is as follows:

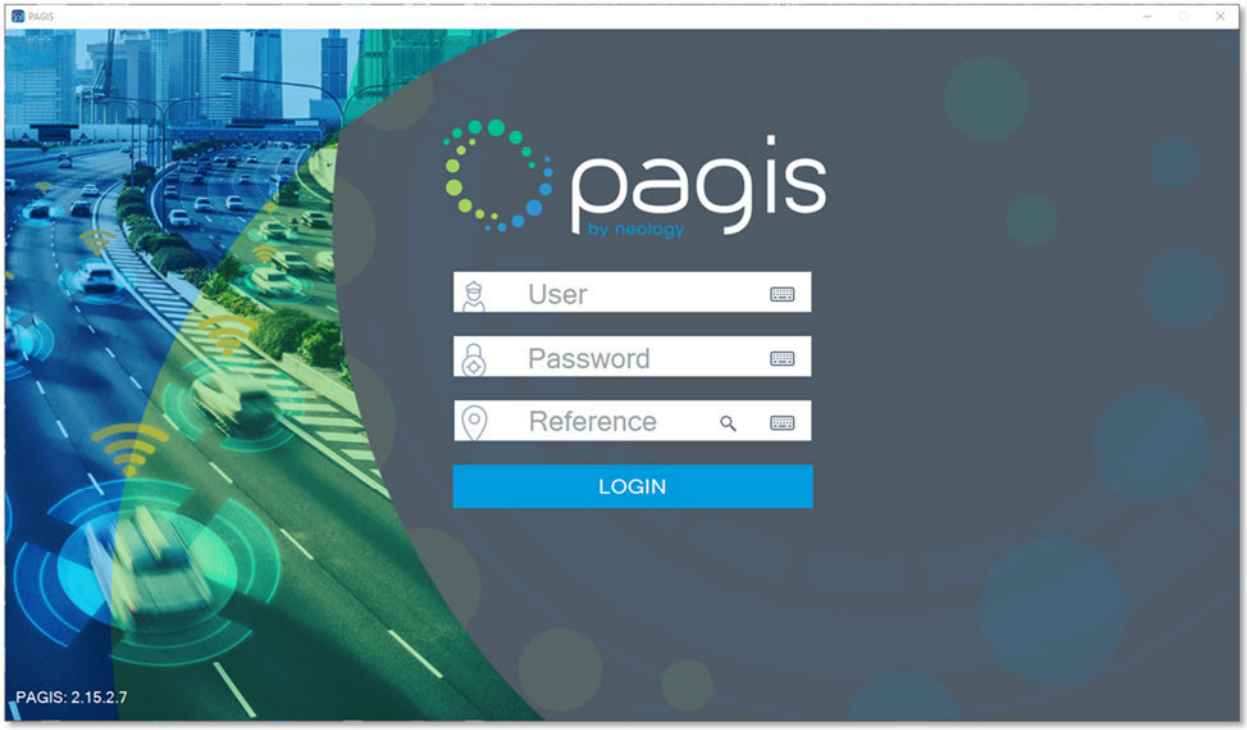
Section 1: The Introduction and Basics

Section 2: PAGIS User's Section: Explains screen function and User Operations in the PAGIS Software

Section 3: Software Administrator's Guide.

Section 4: PAGIS installation.

Section 5: Additional Information and Troubleshooting Tips



Section 6: Initial BOSS configuration for new PAGIS devices (MDCs)

Appendices: Additional features and details

2959

SCREEN REFERENCE

This section guides the user through the PAGIS Software screens and the available options. Screens are grouped according to function. When a button is grayed out or missing, the option is not available, or no information has been accrued to activate it.

2.1 The PAGIS Software Login Screen

The PAGIS Software allows users with various access privileges to use the same MDC. For users with touch screen monitors, the Keypad button immediately to the right of any text box gives the user access to an on-screen keyboard for data entry.

User Field: The alphanumeric string assigned to identify the user. Usernames are not case sensitive.
Password Field: Password of the assigned user logging in. Passwords are case sensitive.
Reference Field: This is an optional field utilized to fit several use cases. A user can manually enter a reference at logon, leave the field blank, or select list of unique tags that will be associated with all data captured while logged in. If the Administrator has configured a default reference tags, that information will be displayed automatically. Otherwise, it will be blank.
Login Button: Submits the username and password to attempt a login.

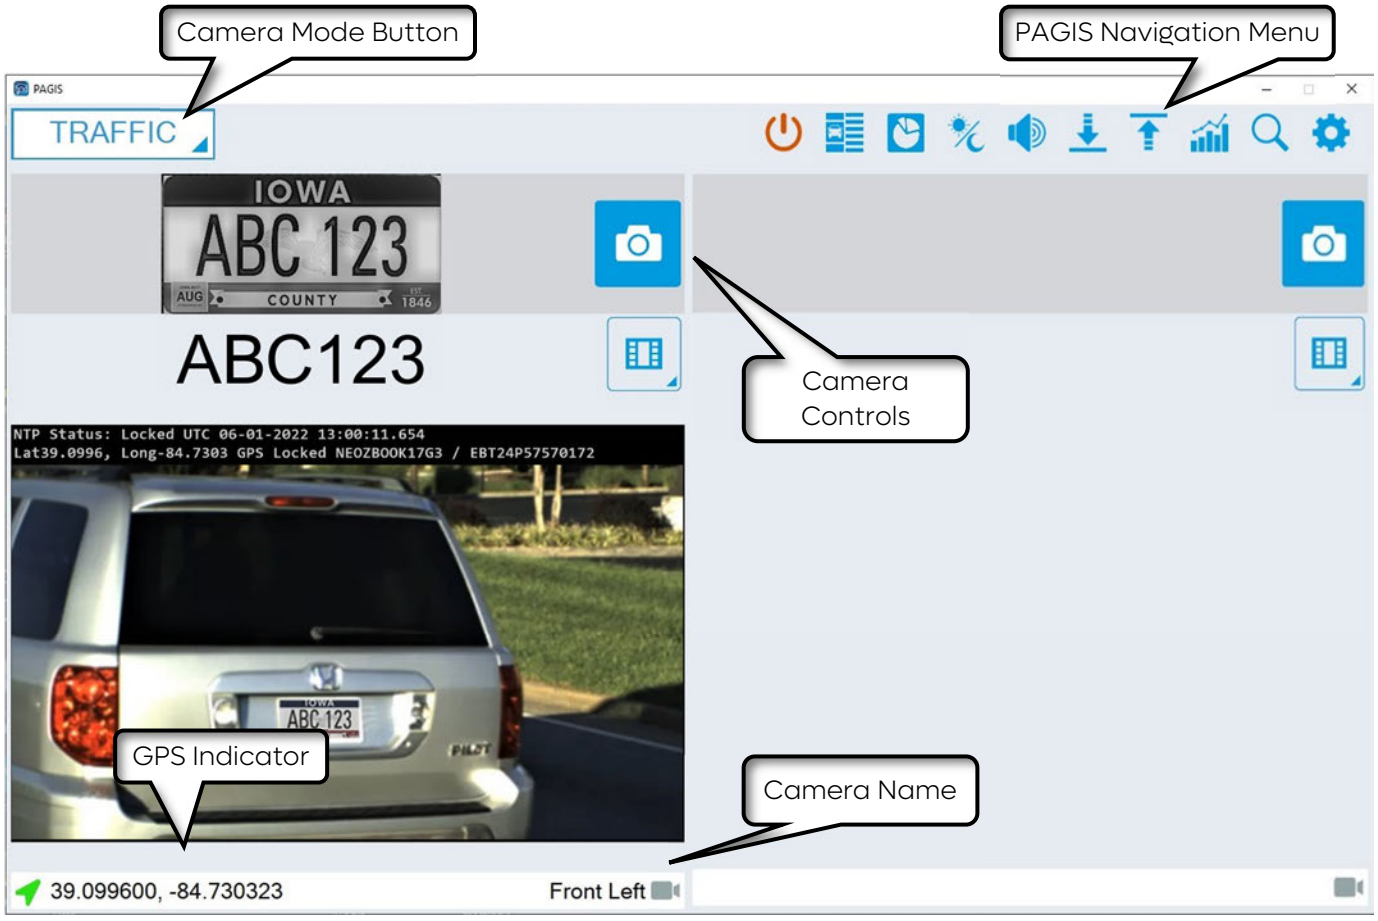
2.1.1 Logging on with the Default Administrative Account

The PAGIS Software includes a default administrative account that can be used for the initial configuration. To do so, simply click the Login button with the User and Password fields blank.

NOTE: System Administrators are strongly encouraged to configure users for PAGIS just before, or soon after the installation and setup. PAGIS users accounts are created and maintained in BOSS. Once Users are established by the BOSS System Administrator, the default user account is automatically disabled. Best practices are to be certain at least one User account has administrative privileges.

2960

2.2 Main Screen - Live View

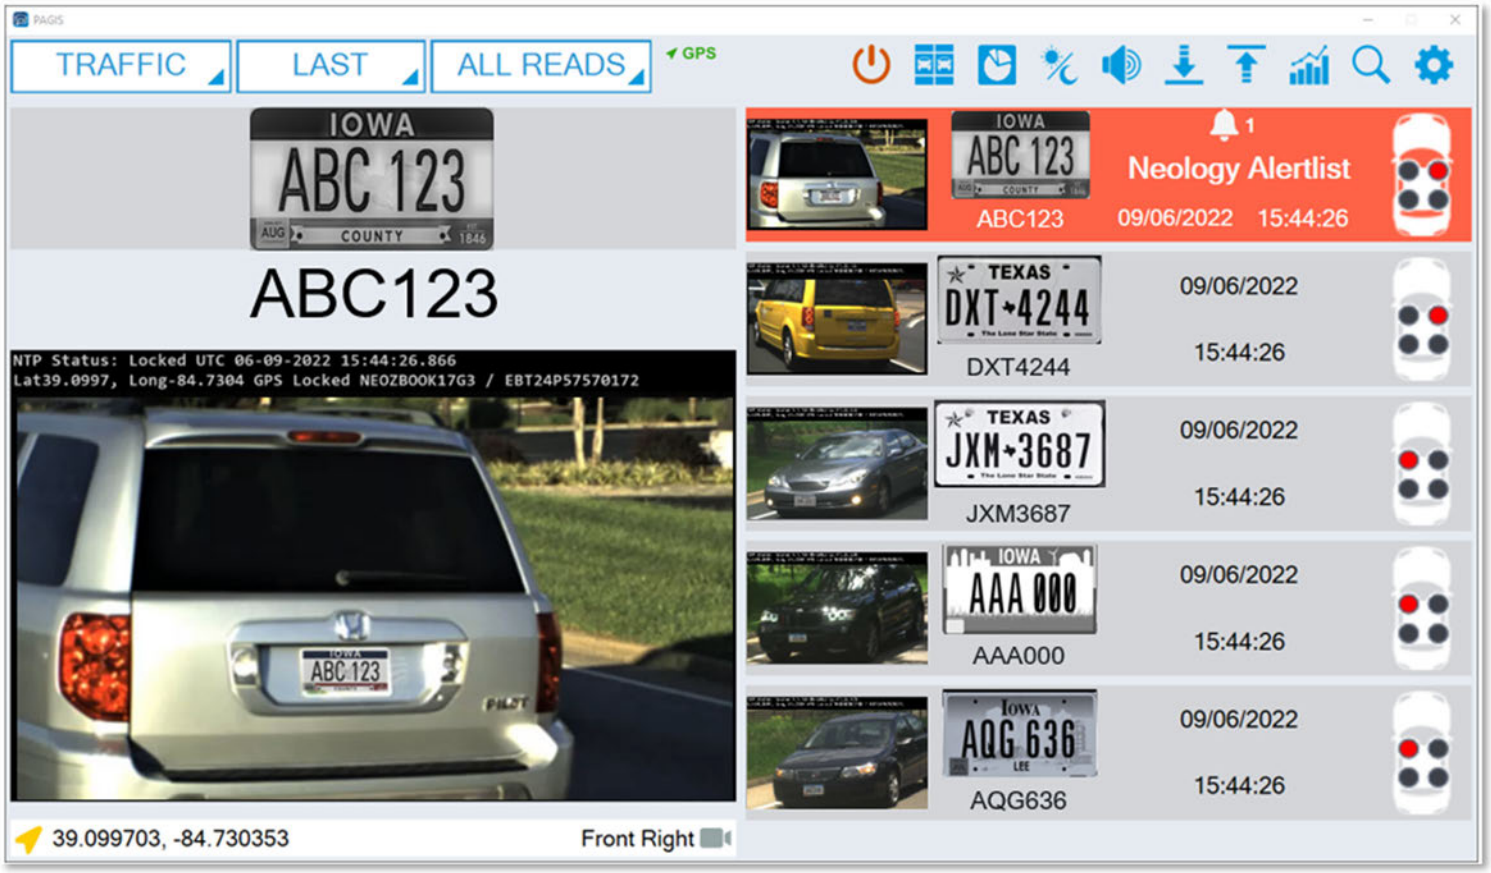


Upon a successful login, the user will see the Main screen (Live View). This is the default view and starting place of all PAGIS Software features. (NOTE: Access to features is based on user group rights established in BOSS.)

The Main Screen is also the place users will monitor read images and ALPR "hits". At the initial startup of the system, it is normal to see only a blank/grey screen for a few seconds. Once a connection has been established with the mobile cameras, white boxes will be displayed showing the live-feed camera panels. At this point, the system is ready to capture reads/plates.

PAGIS Dule Mode View

By default, PAGIS loads into a static view. This means live video will not automatically appear in the camera panels (white boxes) until a plate has been captured or the user selects one of the live feed options.

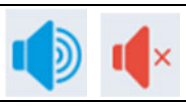


Once a plate is "seen" by a camera assigned to the current viewing mode (Traffic vs Parking), it will display the captured information in the corresponding camera panel. Each plate capture is also accompanied by a short "Beep" to audibly alert the user a read has taken place. (NOTE: If the user is in the Traffic Mode at the time a parking camera reads a plate, there will be a sound effect, but no plate image will be displayed on screen unless that plate is on a synchronized Hotlist or until the user switches to Parking Mode.)

2961

PAGIS Single Pane View

The single pane displays has one large active capture area on the left of the screen, this area will display all current captures in real-time, depending on Cam Mode selected. The panel on the right show you past captures and Hits, this area updates from the top down.



Single Pane Controls

- **Cam Mode:** Controls which cameras are active in the main display.
- **Last / Live:** Set the active capturer panel to static or live view. The Live mode alters the panel arrangement slightly, showing only the two primary cameras on the left without image patches.
- **All Reads / Hits:** Toggles to show only hits or reads in the history panel.

2.3 The PAGIS Navigation Buttons

This section provides a quick reference guide to the available navigation buttons of the Live View screen.

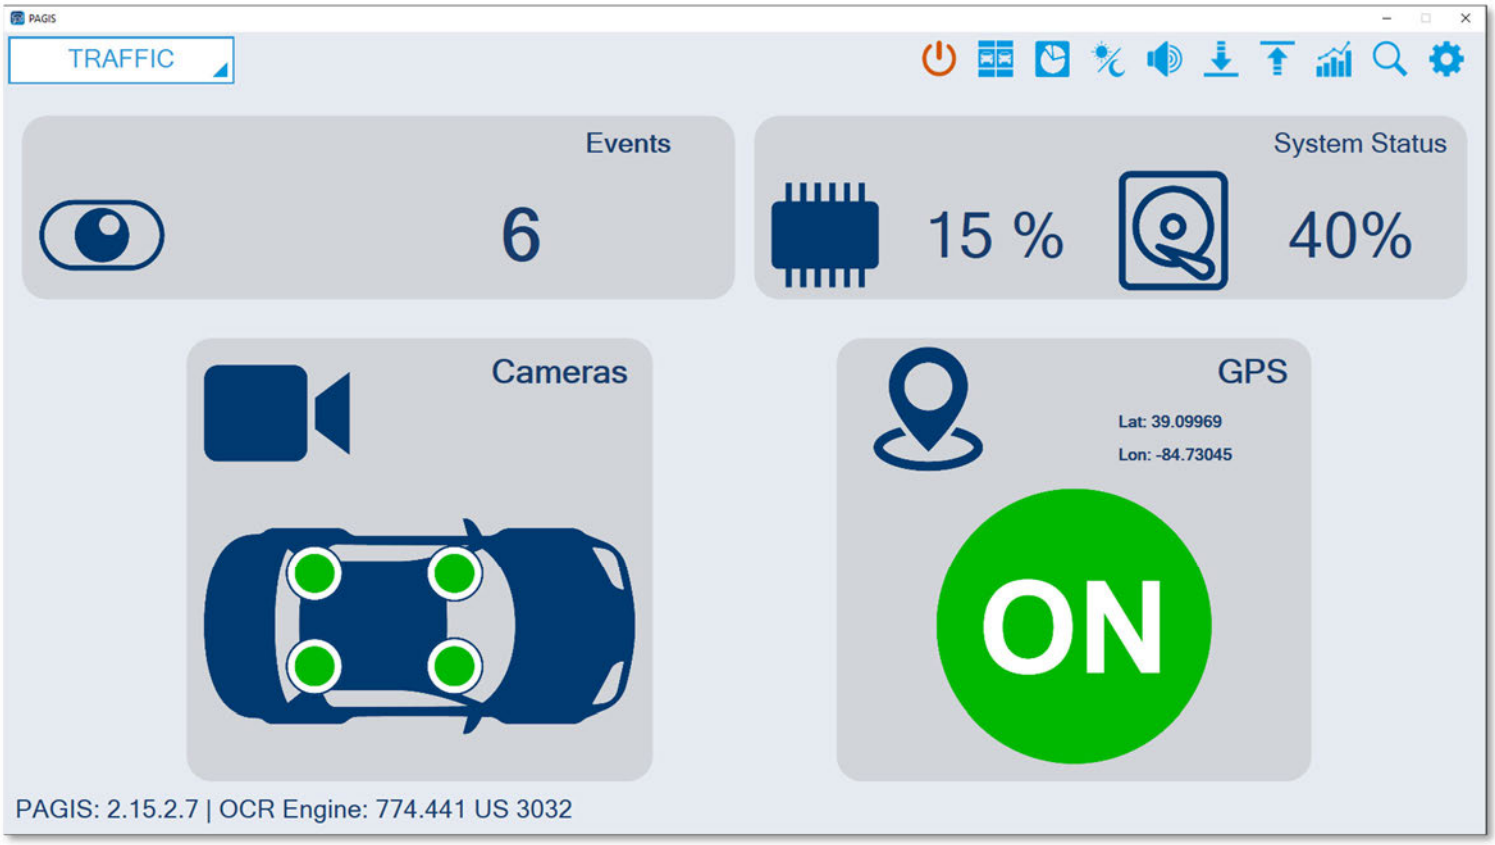
	The Camera Mode button is in the upper left corner and is used to switch between the configured camera modes. Once configured, the name will change to a selected mode. The default values are "ALL", "Traffic" and "Parking".
	**Logoff button:** When selected, the user will be logged out of PAGIS and return to the login screen. When Auto-login is enabled, this will close PAGIS.
	**Panel Mode:** Switch between Dule or Single panel modes in main live view screen.
	**System Status:** The system status screen provides an area where users can check on the available resources that effect PAGIS performance.
	**Sound button:** When selected, this will toggle the PAGIS Read capture sound On or Off, alert sounds will remain active.
	**Day/Nite mode:** Switch PAGIS between day & night mode screen skins.
	**Begin Shift / Download button:** Performs an BeginShift sequence that downloads Hotlist, Hotplate, Users credentials and targets from the Host. **End Shift / Upload button:** Performs an Endshift sequence that uploads captured Reads, Hits and PAGIS Audit information to the connected Host.
	**Statistics/Review button:** When selected the user can review Alert list, Reads, Hits, Targets, and other PAGIS information.
	**Search button:** Research all available Reads/Hits as well as manually add hotplates to PAGIS's local Hotlist list known as "Manual Reports".
	**Settings button:** Available to Users with administrator rights to modify PAGIS configurations.
	**Firmware & Software update:** This icon will appear when PAGIS detects a new software or camera firmware version is available. All user types are notified, but only Admins can apply the update.

Camera Control Buttons

The dual-lens cameras can capture both color and an infrared image. Formerly, there were a total of three buttons that allowed the user to view the IR and color feed as well as capture a picture directly from PAGIS. Now there is a toggle button to switch between color and IR views and a separate button to take a picture. These buttons are displayed on the main Live Screen as shown below.

	**The Camera View Selector button:** This is the default state at login showing the Static View. (NOTE: PAGIS does not automatically display a life feed.)
	**Color View:** by clicking on the Camera View Selector button once, the user will switch to the Color View Mode. This displays the current view of the color camera and will time out after 60 seconds.
	**IR View:** by clicking on the Camera View Selector button twice, the user will switch to the Infrared (IR) View Mode. This displays the current view of the IR camera and will time out after 60 seconds.
	**The Take Pic button:** Just above the Camera View Selector button is the "Take Pic" button. This button allows the user to quickly take a picture from the camera currently viewed.

2963



2.3.2 GPS Indicators

GPS is stamped on each read and hit as capture events take place by the system. The signal strength and location indicators are located underneath the camera panels at the bottom of the Live Screen.

39.341788,-84.298518 Shows an example of the Location Indicator displaying the Lat/Long on the most recent read
A green or yellow indicator shows a strong or medium strength GPS lock.
A red indicator shows there is no available GPS information.

2.3.3 PAGIS Status View

The status panel provides a means of monitoring key system resources in real-time important to PAGIS operations.

Status View Features

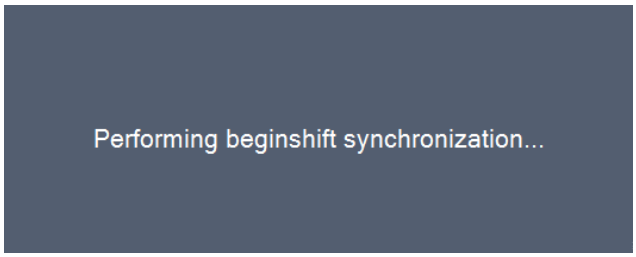
- **Events:** The events show the current number of captured plates in PAGIS.
- **System Status:** Displays the amount of RAM & DISK usage of the computer.
- **Cameras:** This indicates which cameras are active from the selected "CAM MODE".
- **GPS:** Displays if PAGIS currently has an active GPS signal. In Standalone mode the GPS area becomes clickable with the option to quickly change active COM ports for GPS communication.
- PAGIS and OCR Engine versions shown in bottom left.

2964

2.3.4 Day/Night Mode

Day/Night mode changes PAGIS user interface skins to a darker appearance to reduce illuminating the vehicle interior.

2.3.5 Begin Shift / Download



From the system menu, the PAGIS user can click the Begin Shift button . With most agencies, this action utilizes a cellular network to import all the necessary data used during a shift (Hotlists, Dispositions, and Targets) directly from the BOSS Server. However, agencies can also configure their systems to perform this function via Thumb drive or a local source file.

2.3.6 Sync via USB Thumb drive (or Local Source)

Depending on the agency network, some alter the default PAGIS/BOSS configuration mode to use a USB Thumb drive or locally stored file on the MDC/Laptop instead of the wireless Sync. To synchronize effectively, the user must first confirm he/she has access to the source location before initiating Begin Shift. NOTE: All synchronizations using this method must be performed manually.

2.3.7 Sync via Wireless Network

Synchronizations over a wireless network provide the agency with additional automated features. Best practices recommend the user manually launch Begin Shift from the Live View Screen at the beginning of every patrol shift. However, it is possible for users to allow PAGIS to synchronize via its auto-sync settings. When a manual Begin Shift is launched, the Main View Screen removes the camera feeds and displays a status window of the Sync process. Once the Begin Shift operation is complete, PAGIS will return to the normal Main View Screen.

2965

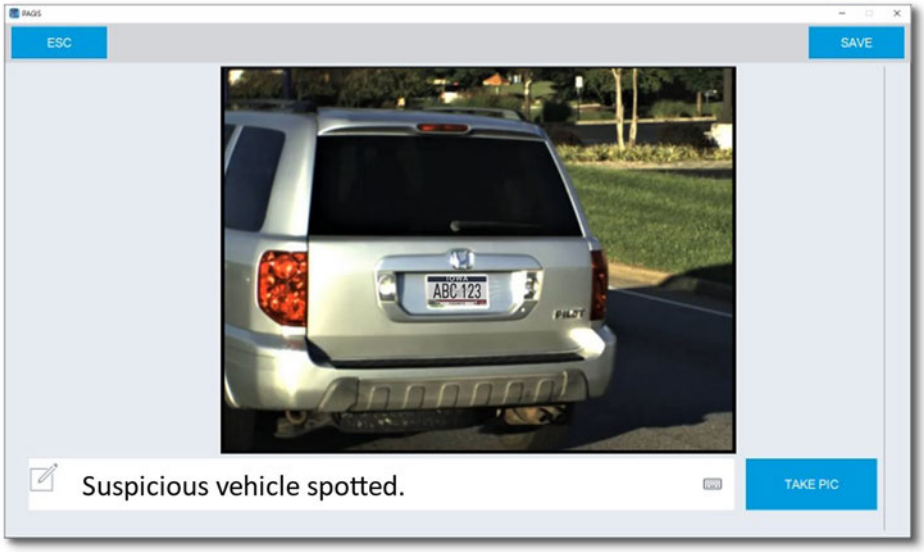
PAGIS Auto-Sync Settings

PAGIS auto-sync settings are best thought of as how PAGIS receives additional updates and maintains the downloaded ALPR data throughout the entire patrol shift. This prevents the need for the officer to manually perform Begin Shift functions multiple times a day. The auto-sync occurs every 10 seconds and receives data in small batches. The batches are not to exceed 1MB in size for every minute of download. In addition to receiving data, the auto-sync function also uploads a copy of data collected by PAGIS and sends it to BOSS.

Begin Shift – Additional information

By default, the synchronizations in PAGIS receive only what has been changed to the ALPR data since the last Sync. Meaning, if some plates have been removed from a Hotlist and others have been added, the system will only transfer that data instead of downloading the entire Hotlist each time the Begin Shift is launched. This helps to reduce the amount of data transferred over the agency's network. NOTE: Begin and End Shift synchronization, as well as all auto-sync features, are dependent upon stable communication to the BOSS server via an active data connection.

End Shift



End Shift in PAGIS is the process in which all the collected ALPR data (Reads, Hits, and Images) from the recent shift is uploaded to the BOSS server and cleared from the local cache. As with Begin Shift, the agency has two options. They can choose to Sync via USB Thumb drive or via wireless connection. Best practices recommend users perform an End Shift Sync at the end of every patrol unless the "Privacy" setting is enabled, in this case the End Shift action is not required as PAGIS will purge locally stored data based on the privacy schedule. During the Sync, PAGIS uploads any Reads, Hits, and Images not already synchronized to BOSS and purges these items from the local cache on the MDC's hard drive. Completing an End Shift also removes any VLP entries manually added to PAGIS during the shift.

2.4 Cam Mode Button

Clicking the Cam Mode button in the upper left corner of the Live View Screen allows the user to cycle through the different camera modes configured by the PAGIS Administrator. Changing the camera mode changes which cameras are displayed on the Main Screen. By default, PAGIS provides "Parking" and "Traffic" as the two configuration modes. Users often switch these modes to suit their current use-case. For example, an officer in a parking lot will often switch the mode to "Parking" so s/he can see the parking cameras on the Live View Screen. They can then switch back to "Traffic" when monitoring city streets.

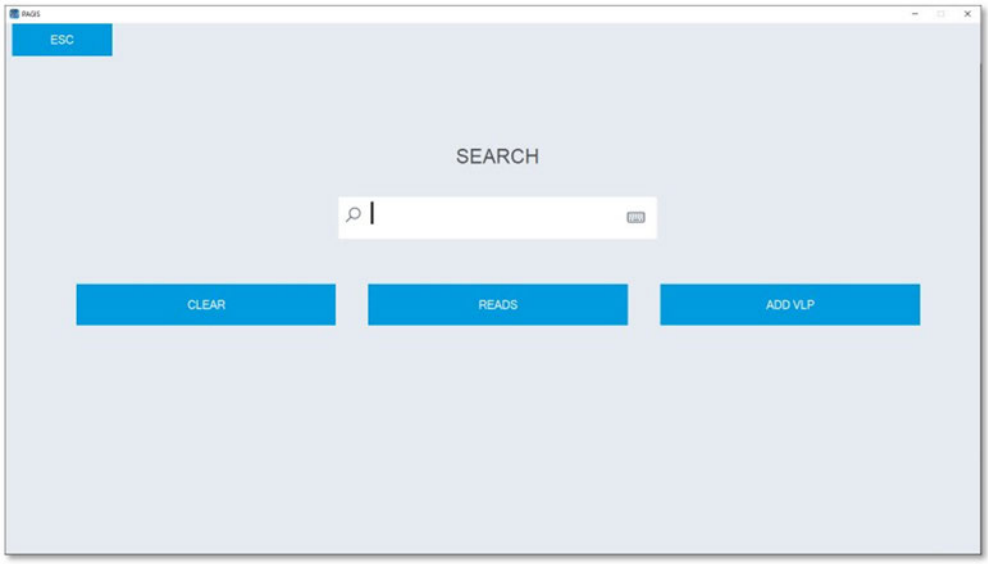
2.5 Taking a Picture

The PAGIS software has ability to quickly take a picture from one of the currently displayed ALPR cameras on the Live Screen. The user only needs to click on the Take Pic button.

2966

To Take a Picture:

1. From the Live View Screen, press the Take Pic button from the desired camera
2. The image taken will be displayed
3. Enter a description of the picture in the text field at the bottom of the screen
4. Press Save to save the picture or escape to cancel. Either action will return you to Live View.



NOTE: The picture will not be saved if a description/note is not entered in the text box.

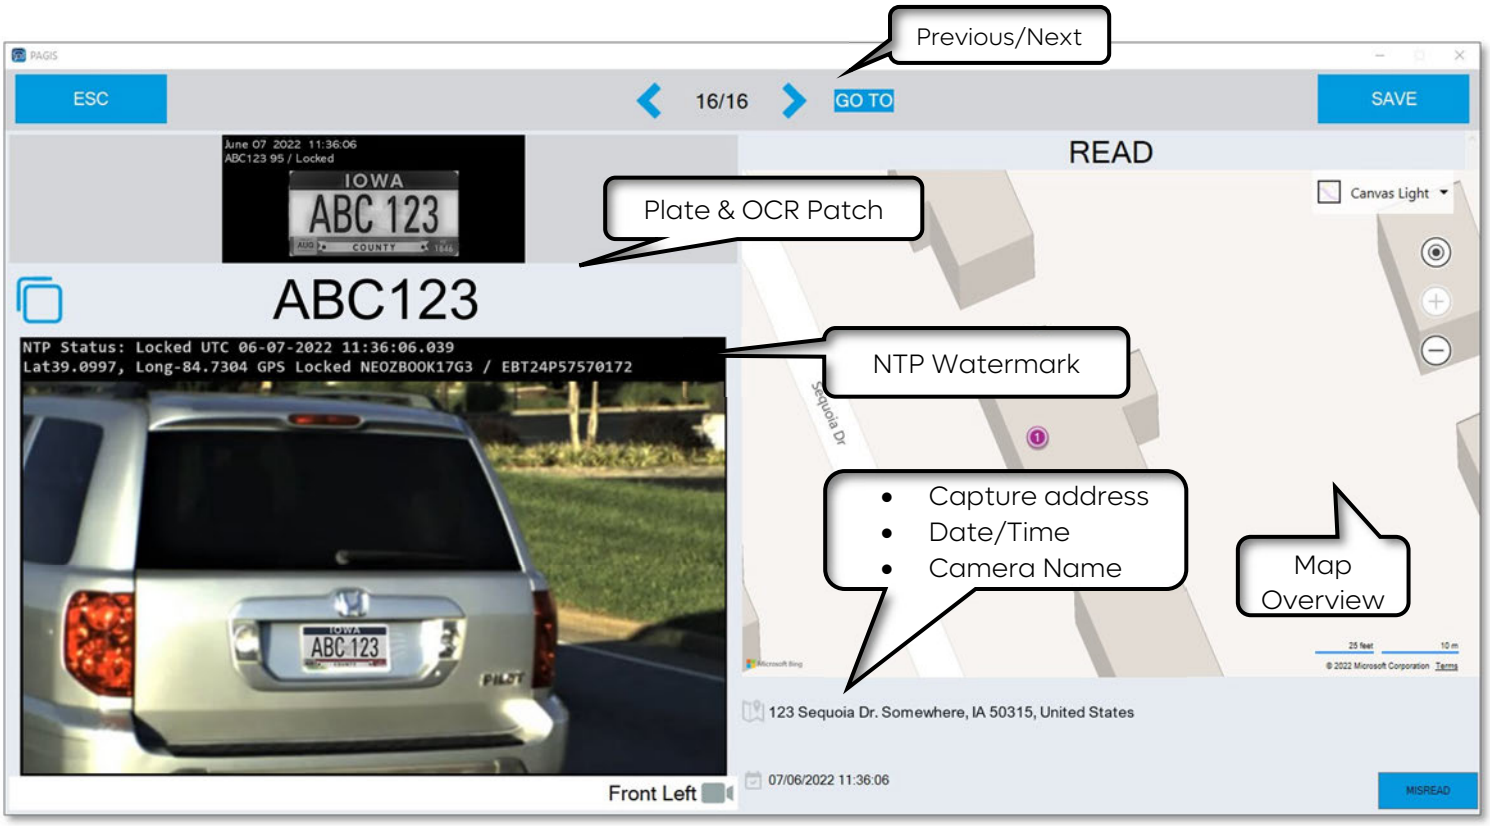
To View the Saved Images:

1. Navigate to the Review menu in PAGIS
2. Select Audits
3. The user will be able to see a thumbnail of the image and the saved text/note
4. To review the saved images later, the user will need to run the Audit Images Report from BOSS.

2.6 Search Entry Screen

Pressing the Search button icon from the Live View screen or Search from the Databases window allows the user to search all manually entered plates as well as all BOSS synchronized databases (Hotlists) for license plate and target information. Users can also search all locally stored reads/images accrued since the last End Shift by clicking the Reads button instead of pressing the Enter key.

Search Box: The text field used to enter the desired plate search via alphanumeric characters and/or wild card symbols, acceptable wildcards are the Asterisk * and Underscore _.
Clear Button: Clears the contents of the search box.
Reads Button: This button searches for a match from all the reads/hits locally stored in PAGIS.
ADD VLP: Searches all locally stored hotlists for the plate and if there's no match, allows the user to add the plate to the "Manual Reports" alert list for use in the field. NOTE: Wildcards are not permitted when using "ADD VLP".
ESC: The Escape button allows the user to exit to the Main/ Live View screen.



2967

Searching Locally Stored Reads and Hits

As mentioned previously, this search function allows users to find reads and hits directly from their recent patrols using the search field and the Reads button. These searches only apply to reads and hits locally gathered/stored in PAGIS that have not been purged due to Endshift or by the privacy purge schedule.

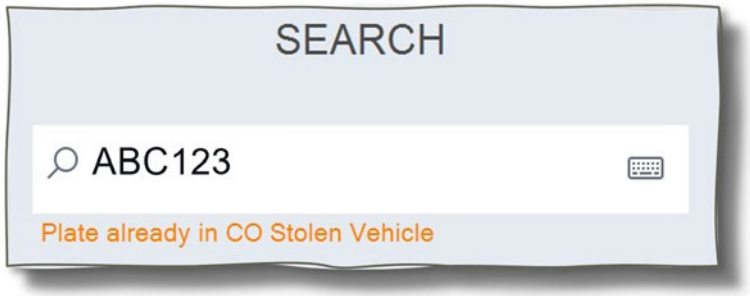
Searching for a Match

- From the Search field, users may enter a plate (or partial plate with wildcards) and then click the READS button.
- Results are displayed with the data gathered at the time the read was taken (See example below).
- Each result should display the infrared (IR) image of the plate as well as the color overlay of the vehicle along with the NTP status watermark.
- Each result shows the GPS data, Closest address point, Time and Date, and the Camera that read the plate.
- If there are multiple results, the user can cycle through them by clicking the left and right navigation arrows.

Wild Card Symbols

The use of wild card symbols in the Search box allows greater flexibility for the user, but may return a larger set of results.
Wild card searches performed using the asterisk (*) designates an unknown number of characters.
Wild card searches performed using the underscore (_) indicates a single missing or unknown character.
Searches can be performed using one, both or no wild card symbols.

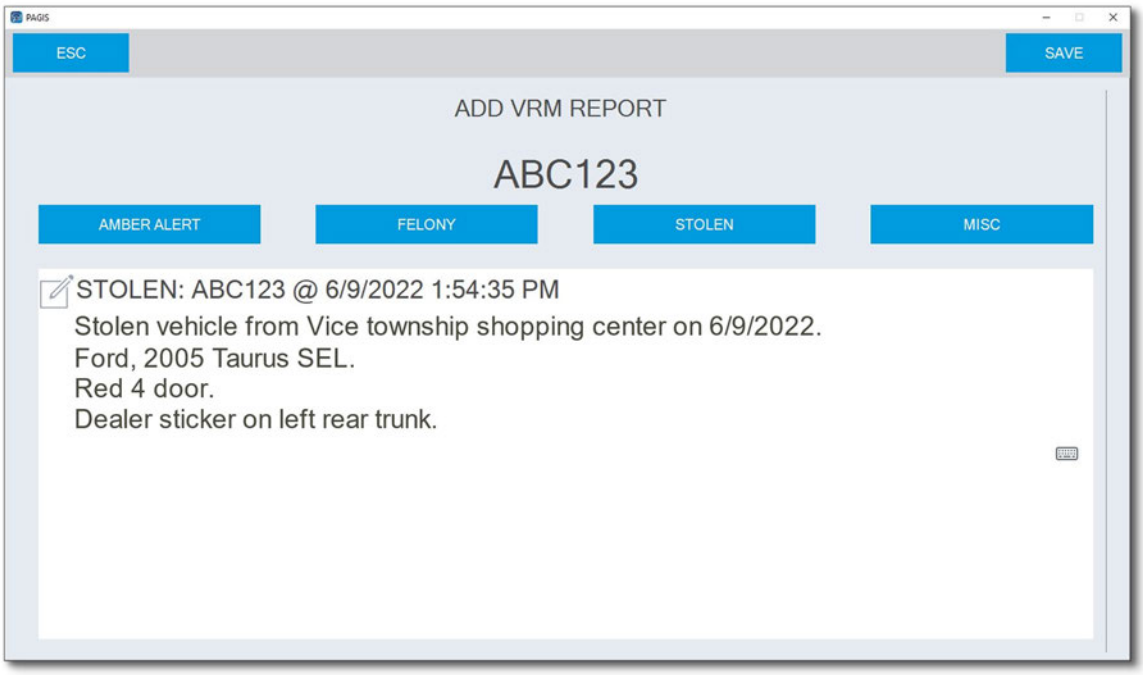
Example: The officer received an alert from Dispatch looking for a vehicle plate containing the letter J and the number 8 separated by one character. Because the officer doesn't know how many characters there are before or after the J and 8, he enters *J_8* in the search box to review all possible matches of J and 8 separated by only one digit.



2968

2.7 ADD Hotplates

PAGIS allows users to manually add a plate of interest directly into the software as needed. Once saved, these entries are stored as part of the Manual Reports Hotlist and work just like any other Hotlist synchronized from the BOSS server, however this local Manual Report hotlist is isolated to PAGIS, and dose not transfer to BOSS or any other mobile systems. These hotplate additions are designed to be temporary and are cleared from the software with each End Shift.

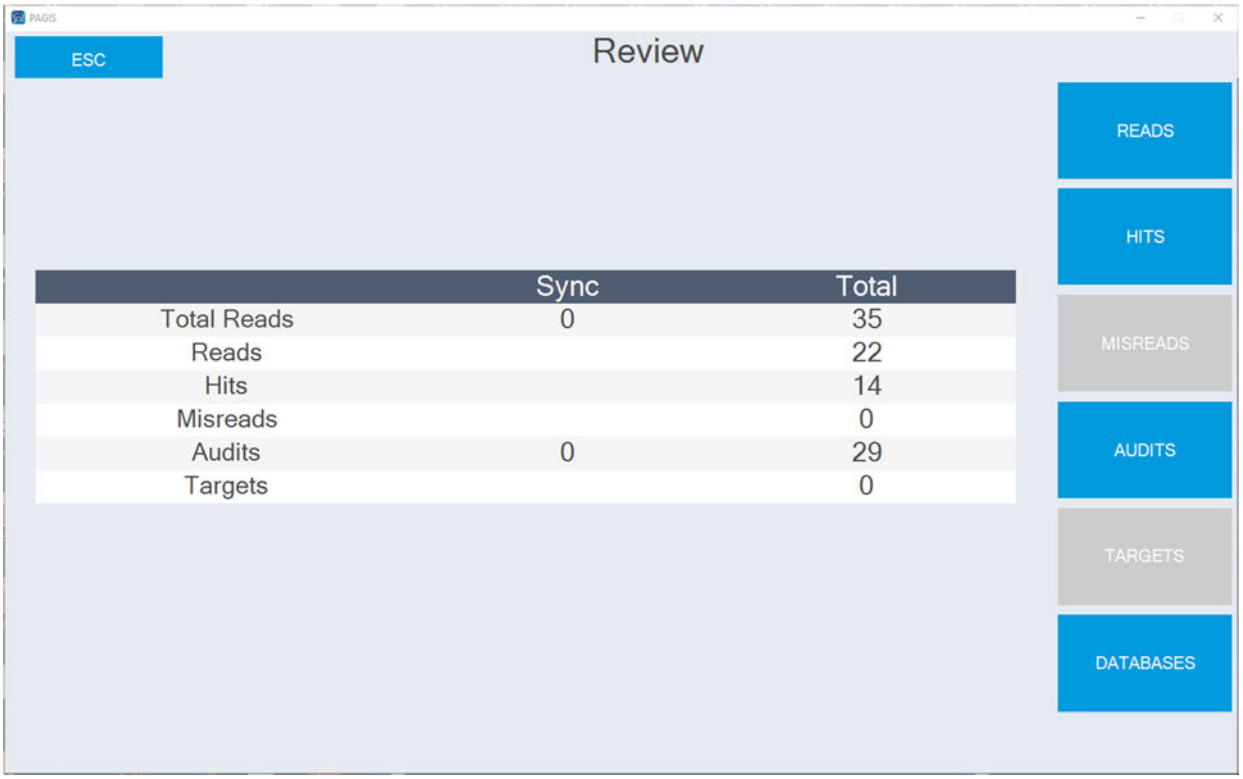


ADD VLP Query

Before an entry is added to the Manual Reports Hotlist in PAGIS, the software searches all stored databases for a match. If a match occurs, a message will display under the search box showing which Hotlist(s) it has been found in. If the VLP query does not return a match, the "ADD VRM REPORT" screen appears.

ADD VRM Report Screen

If the desired plate does not already reside in another Hotlist, the ADD VRM Report Screen becomes accessible.



1. From the Search Entry Screen, enter the desired plate to add.
2. Click the ADD VLP button. If no match is found on any other hotlist, the "Add VRM Report" screen will appear.
3. Click to select the applicable alert type (AMBER ALERT, FELONY, STOLEN or MISC)
4. Either leave the default information or add additional detail by typing in the text filed below.
5. Click SAVE at the top right to add the plate to the Manual Entries Hotlist.

2969

2.8 The Review Screen

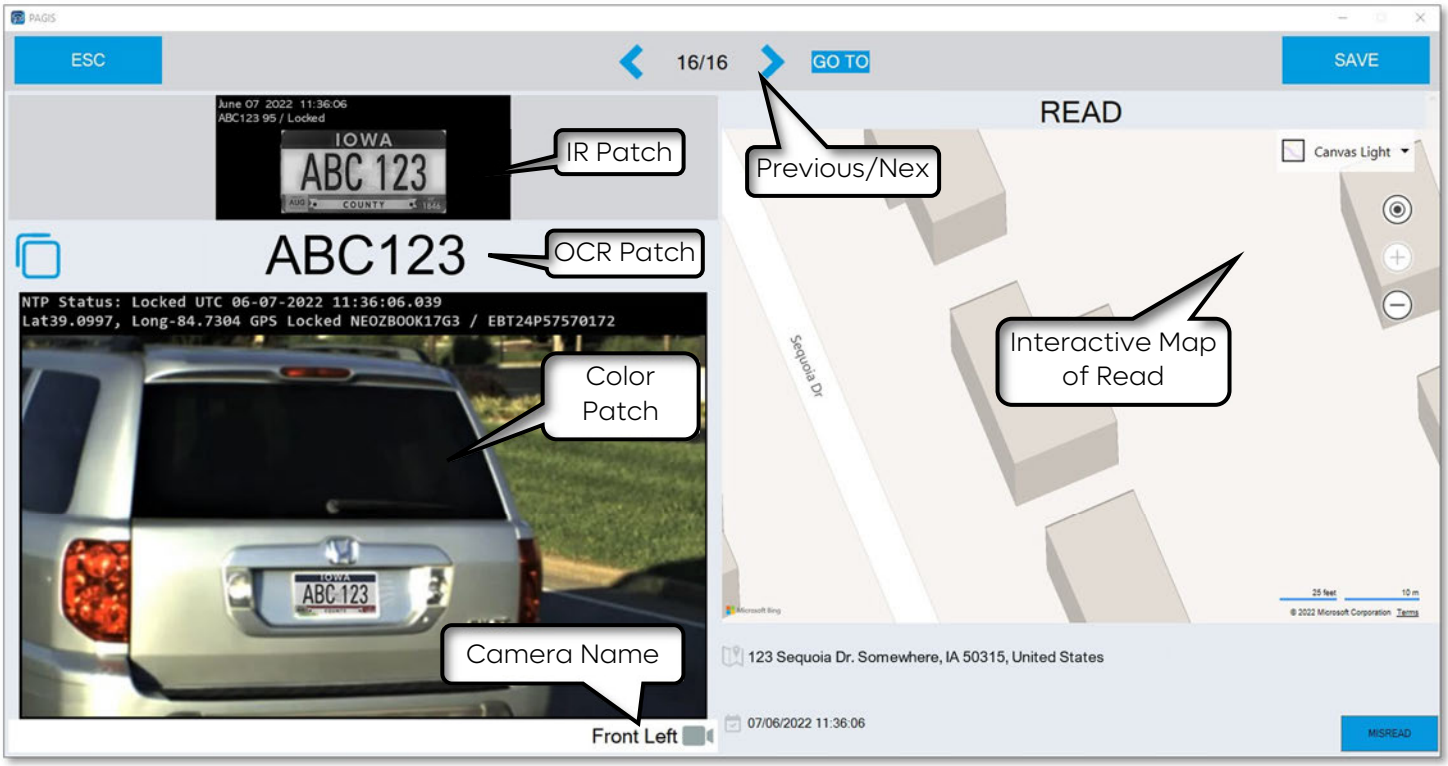
PAGIS allows users to review all locally stored data from one easy location. Clicking the Review icon from the Main Screen launches Review. This screen is divided into the Summary View Chart and sub-section navigation buttons to the right.

Summary Review Section

The Summary View Chart is divided into five categories and allows a user to review the information collected during their shift.

Total Reads: Shows the total number of Reads/Hits synced to BOSS and the total number of reads captured.
Reads: Shows the total number of reads only captured.
Hits: Shows the total number Hits captured.
Misreads: Shows the total number of Reads/Hits marked as a "misread".
Audits: Shows the total number of audits synced to BOSS and the total number of audits during the shift.
Targets: Shows only the number of targets downloaded from BOSS.
(NOTE: The Sync value will always be zero for customers using Disk Sync mode/Client Tools.)

Review Navigation Buttons



The navigation buttons allow the user to review specific sets of information gathered during the shift.

Reads: Review all plate detections that have occurred since the last End Shift synchronization.
Hits: Review the hits that matched a Hotlist.
Misreads: Review reads and/or hits that have been manually flagged as misreads, where the plate number in the image does not match the OCR interpretation of the plate (e.g., a letter O misread as a Q or zero).
Audits: Review failed and successful logons, any manual data entered during the shift, pictures taken and all manual license plate searches.
Targets: Review targets that have been synchronized from BOSS.
Databases: Review all the Hotlists currently distributed to PAGIS.
Esc: Returns the user to the previous screen.

2970

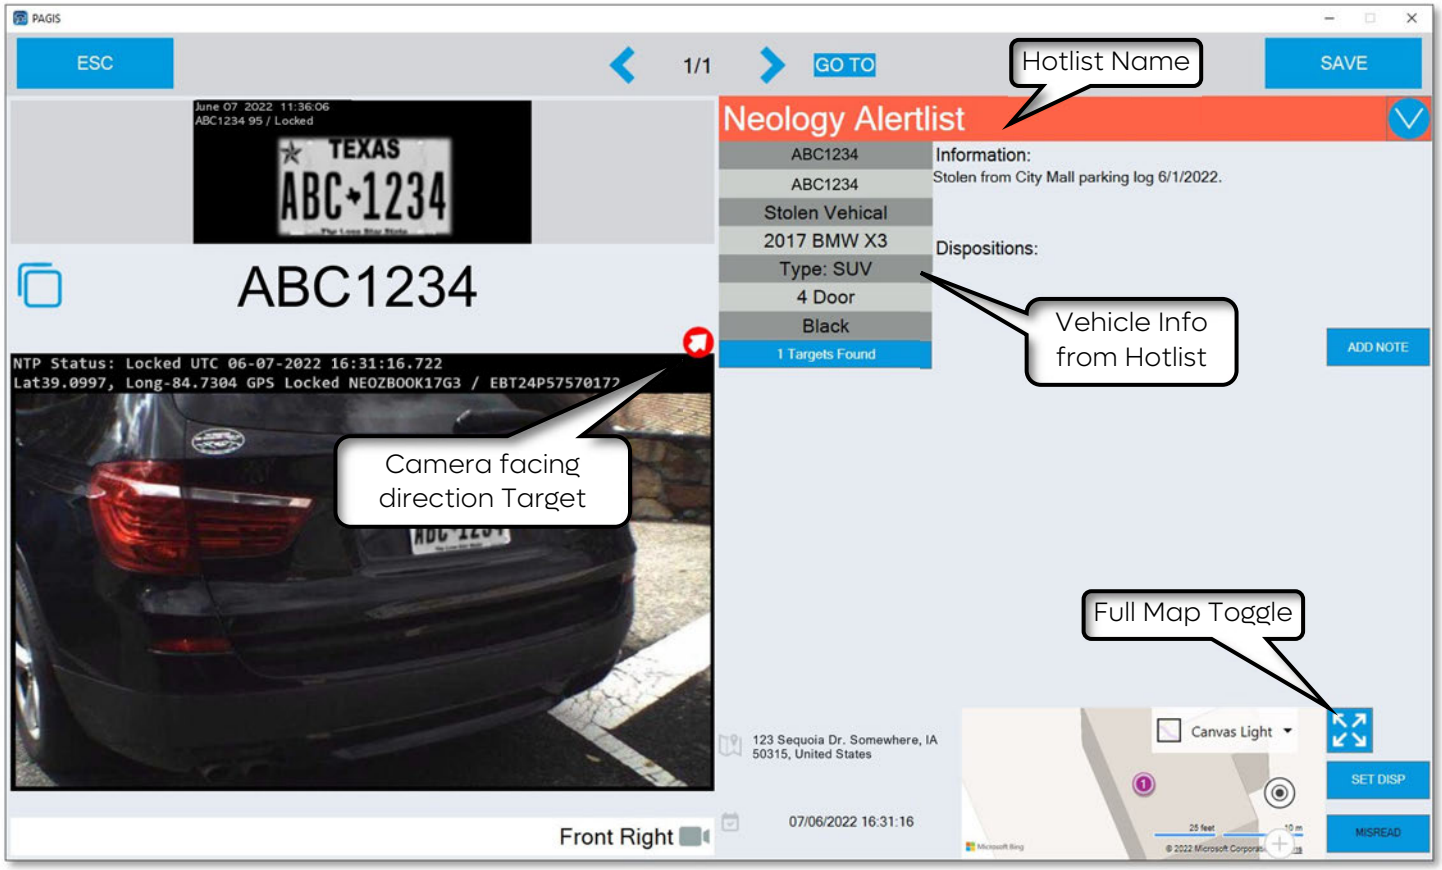
2.9 Reads

The Read Review Screen is divided into two main sections. The left side displays the information gathered at the time of the read and the right side displays an interactive map of the GPS location.

NOTE: Buttons that are greyed out indicate options that are not available in the current view. For example, the Reads and Hits review screens share the same layout but different on-screen options.

Interactive Buttons – Reads Screen

From the Reads Review, the user can interact with the following:



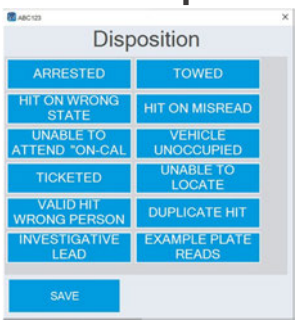
- **IR Patch:** The user can click on the IR "Patch" plate image to open a full-screen view.
- **OCR Patch:** The user can click on the OCR "Patch" image to edit the license plate number if necessary/Misread.
- **Color OV Image:** The user can click on the color image to open a full-screen view.
- **Map:** The user can manipulate the interactive map of the read location (Map Type, Scroll, and Zoom).
- **Misread:** Tags the event as a misread without correcting the plate number.

2971

2.10 Hits Review

Users can manually access the Hits Section by clicking the Hits Button from the review screen. The Hits Screen is also divided into two main sections. The left side displays the information gathered from the ALPR equipment during the read. And the right side displays the information provided by the associated alert list.

NOTE: Each time a VLP matches a Database value (a license plate read by the system matches a Hotlist entry), PAGIS plays an audible tone and automatically displays the Hit Screen to alert the user, however the popup behavior can be disabled by a system administrator.

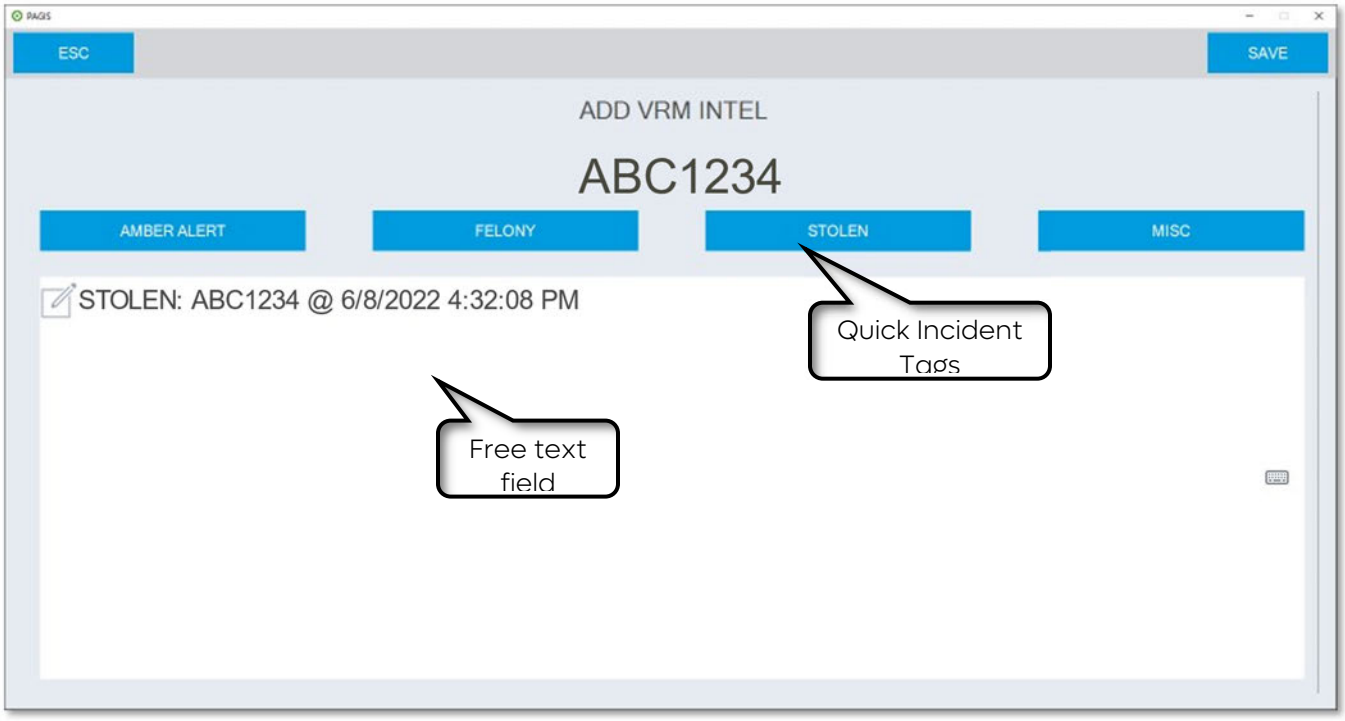


Hit Screen Attributes

Hit Count and Navigation Buttons: Displays the total Hits from this plate as well as the Next/Previous navigation buttons to view other hits this plate registered against.
IR Patch Image: The user can click on the IR "Patch" plate image to open a full-screen view.
OCR Text: The user can click on the OCR "Patch" image to edit the license plate number if necessary/Misread.
NTP Watermark: The NTP watermark allows for a confirmed GPS time/date stamp to be applied to the digital photos taken by the mobile cameras at the time of capturer, this applies to both the IR and Color patch images. The watermark helps to confirm the captures authenticity if a time/date discrepancy should arise among the various equipment platforms that make up the mobile ALPR system.
Overview Image: The user can click on the color image to open a full-screen view.
Camera Name: The name of the camera that captured the hit.
Hotlist Name: This is the name of the Hotlist or "Database" where the plate was matched.
Target Button: When available, this indicates a person of interest is associated with the Hit.
Vehicle Information: The area of grey bars will display the related vehicle information from the Hotlist. Any information added manually by the user will appear in the Text Box near the bottom of the screen.
Interactive Map: Shows a map location the Hit took place. Users can access full-screen view by clicking the expand map button.

2972

2.10.1 Set Disposition – Additional Detail

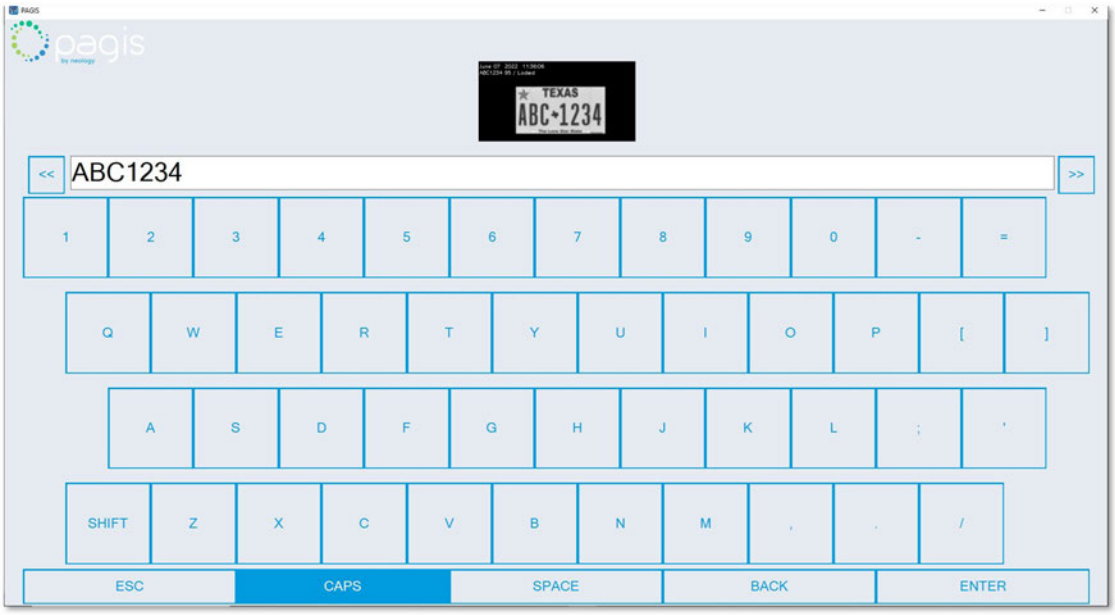


PAGIS allows for additional information to be added to a record in the form of a Disposition. Once Hits are flagged with a disposition code, the Agency can run a "Reads Statistics by Disposition Report" in BOSS. Thus, providing valuable metrics and understanding to leadership regarding their ALPR Enterprise.

When the "Set Disp" button is selected, the user is prompted to choose from a list of predefined values set by the Agency/BOSS Administrator. Once a disposition is selected and saved, the disposition is reported to BOSS and will also show up in the Hits Review Screen text box in PAGIS on the next alert notification.

2.10.2 Add Notes – Additional Detail

The Add Note button launches the Intel screen. The user is prompted to assign one of four values: Towed, Arrest, Not Recovered, and Misc. by clicking the associated button at the top of the screen. The user may also enter additional detail regarding the license plate/vehicle. After clicking the Save button, the intel will now appear in the Hits Screen text box.



2973

2.10.3 Misreads

PAGIS allows the user to mark Reads and Hits with incorrect OCR translations as a Misread. This is most done by Agencies for Hits as users typically don't have time to review every single Read. Once an errant Hit is corrected, the system updates the record to show it as a Misread and will demote a registered hit as a misread, thus improves Agency Hit Reporting.

Correcting a plate read can be accomplished by clicking on the "OCR Patch" in either the Hits or Reads review screen. When the user clicks on the OCR Patch, the OCR Edit Screen opens and allows the user to update the Vehicle License Plate (VLP) data.

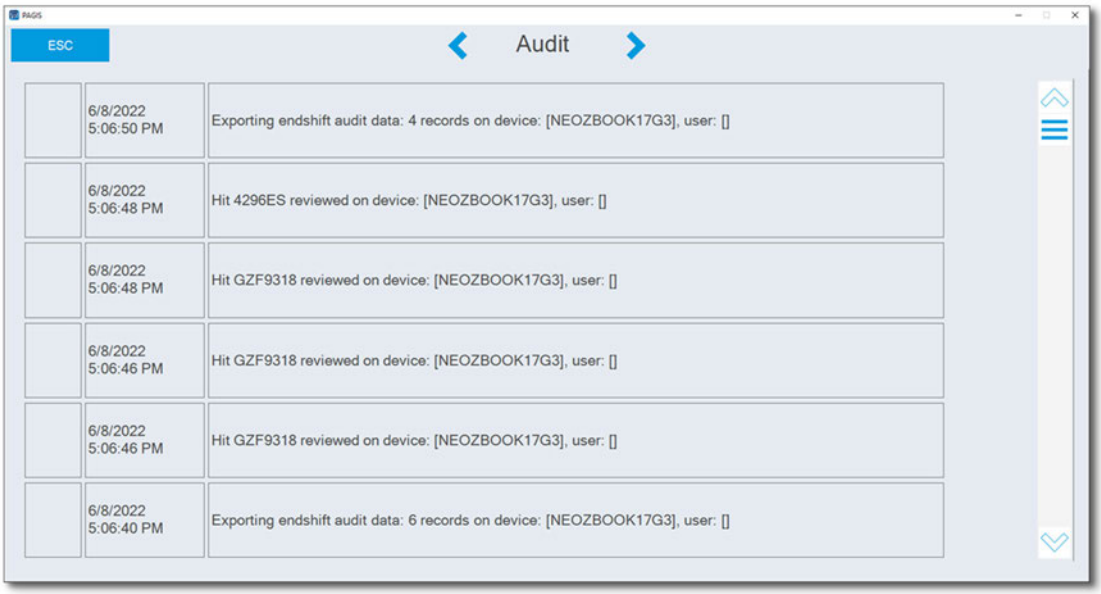
Marking a Record as a Misread:

The user can mark a record as a Misread from both Reads or Hits Review Screen. Each user can either simply flag the record as a Misread or update the OCR Patch information. NOTE: This ability is only available until the user has performed an End Shift function.

Manually Flagging a Read or Hit as a Misread:

1. Navigate to either the Reads or Hits Review Screen
2. Click on the Misread button on the Right
3. Click Save
4. Take note that the record title has now changed from "Read" to "Misread"

Updating the Read/Hit OCR Patch:



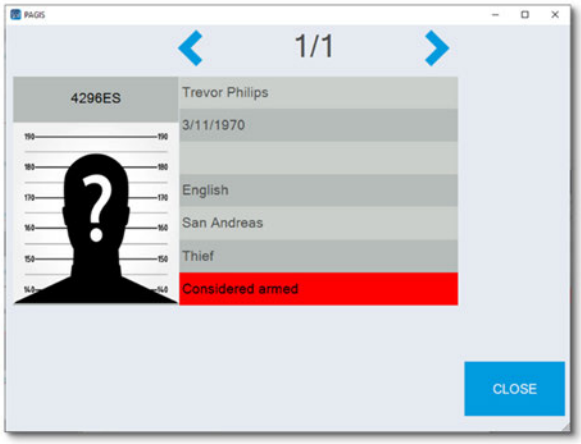
1. Navigate to either the Reads or Hits Review Screen
2. Click on the OCR Patch (Text just under the IR Plate Image)
3. Use the keyboard or on-screen keypad to update the Vehicle License Plate Number
4. Click the Enter Button to Save the changes (and exit back to the Review Screen)
5. When the user saves the changes to the OCR Patch, the record (Read/Hit) is automatically flagged as a Misread

2974

2.11 Audits

PAGIS logs both user and key system activity during each use of the software. The audit log captures various information like Read searches, synchronizations, hits, and user login attempts. The Audit Report is viewed in PAGIS by navigating to the Review section and selecting AUDITS.

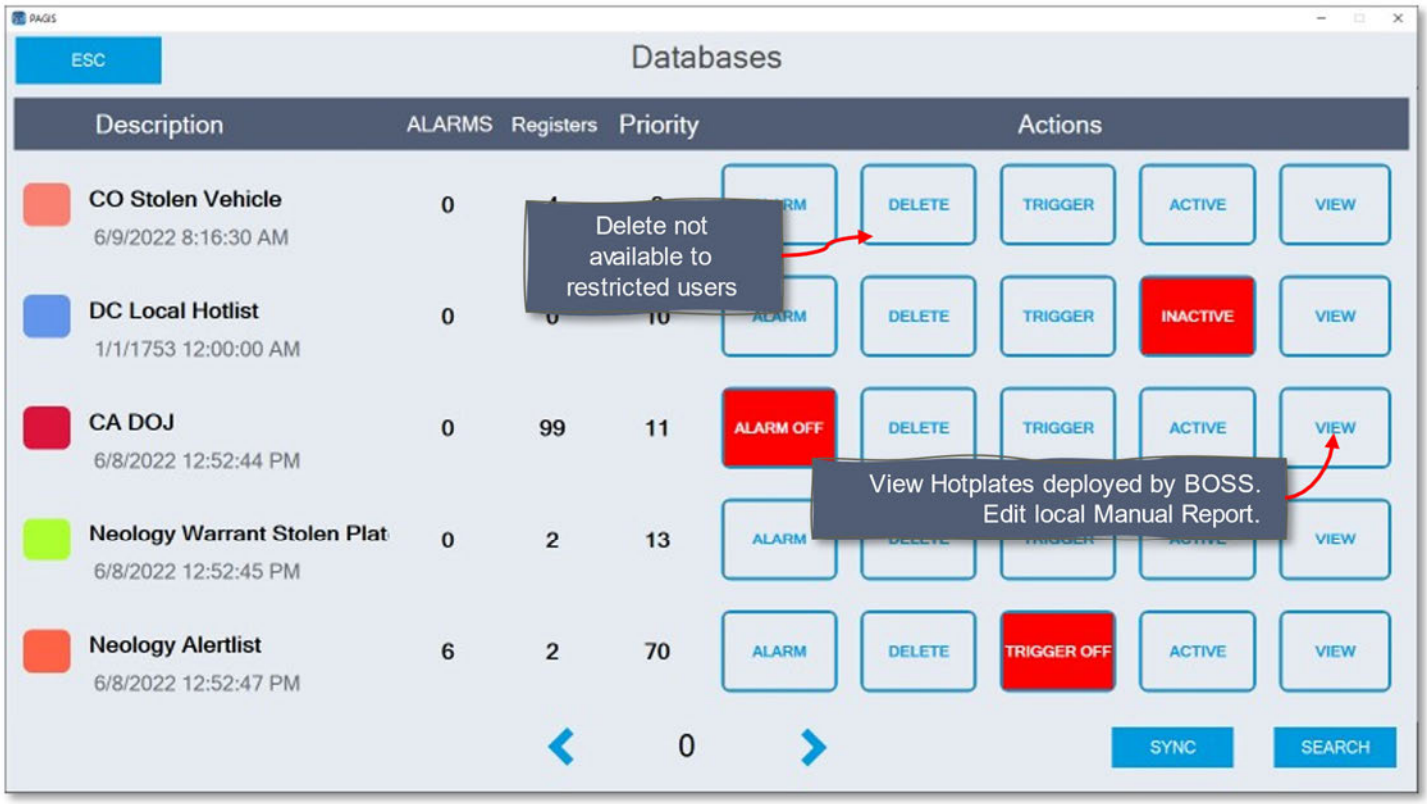
NOTE: Performing an End Shift or syncing the database clears the current log.



2.12 Targets

PAGIS can display information regarding Persons of Interest in response to a Hit alert. Targets are created by BOSS/Hotlist Administrators, and typically provide detailed information about owners of a registered vehicles. When configured, Target data is always linked to unique VLP data (a specific License Plate). If PAGIS registers a Hit on a Plate with a target ID, the Target Information Button is displayed in the Hit Alert window and allows the user to access the Target Screen.

The Targets Screen



When a PAGIS user clicks the Targets Found Button from a Hit, the Targets Screen opens. This screen displays the information from the BOSS server about the Person(s) of Interest matched to the Hit.

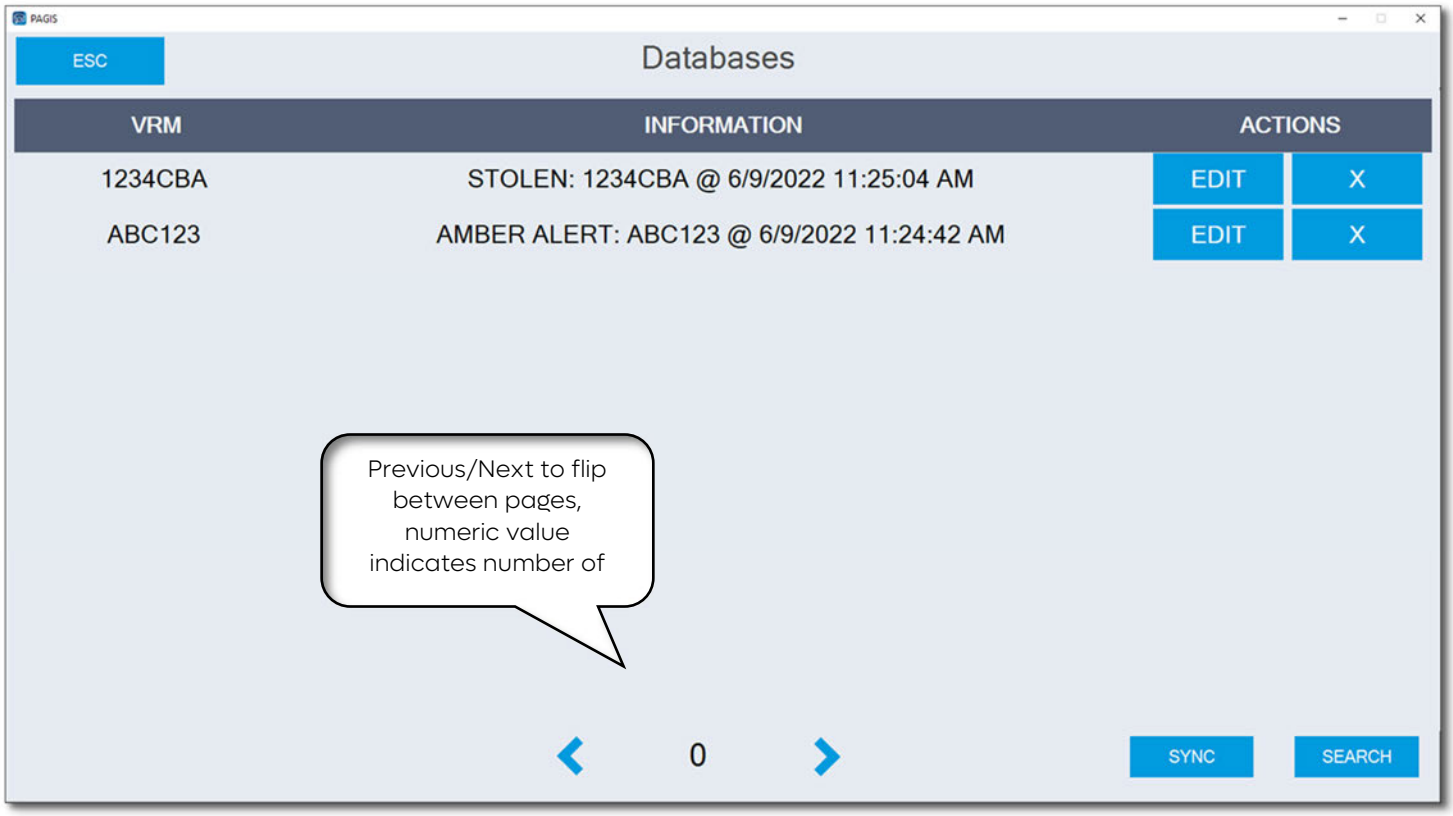
2975

2.13 Databases

Users can review Hotlists in PAGIS by navigating to the Review section and selecting DATABASES button on the right. From the Databases Screen, users can toggle Hotlists functions such as disabling alters .

Databases Functions

Hotlist Color Code: The color attributed to each Hotlist by the BOSS Administrator.
Hotlist Name: The name of the Hotlist given by the BOSS Administrator. Also shows the time/date of the last updated.
Alarms: Indicated the number of hits currently assiated with a hotlist, this only pertains to data stored in PAGIS.
Registers: Indicated the number of hotplate in a hotlist.
Priority: The priority of the Hotlist assigned by the BOSS Administrator. The lower the number between 1 and 999, the higher the priority. If a plate resides on multiple Hotlists, the list with the higher priority will be displayed first.
Alarm Button: Toggles audible alerts On and Off for each Hotlist until the next synchronization.
Delete Button: Based on user rights, allows the user to temporarily delete a Hotlist from PAGIS until the next synchronization with exception of the Manual Reports. Click delete button to confrim, then save to apply.
Trigger Button: Toggles external triggers On and Off. An example of an external trigger is a light bar.
Active Button: Disables and enables each Hotlist (each Hotlist is set to On by default).
View: View and edit localy created hotplates with a given hotlist, Hotlist/Hotplates deployed via BOSS can only be viewed.
SYNC button: Synchronizes PAGIS with the BOSS server to update the Hotlists.
SEARCH button: Open the Search Entry Screen (See section 2.8 for more information).
< >: View previous and next page of hotlist.



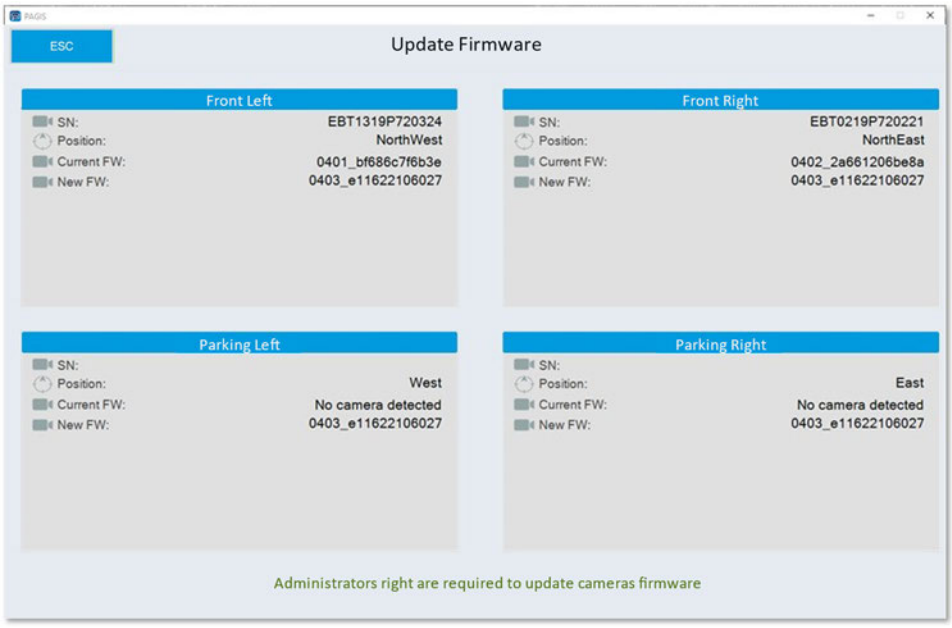
NOTE: Hotlist settings altered in PAGIS will be reset to their default configuration during the next Sync or End Shift. The default configurations are assigned by the BOSS Server/Administrator.

2976

2.14 Databases Edit- “Manual Reports”

Editing Hotlist has two function based on origin of hotlist.

- Hotlist deployed to PAGIS via BOSS cannot be edited, only the hotplates list can be viewed. Editing/updates are indented to be managed via BOSS.
- Hotlist created in PAGIS, i.e. “Manual Reports” can be managed by PAGIS users, allowing for changes or deletion of the hotplates contained within the hotlist.

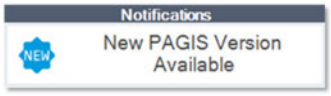


EDIT Button: Make changes to the indicustly hotplate information including licanse plate nuamber.
X Button: Remove indivualy hotlist from hotlist.
Previous/Next Button: Scroll thought lising of hotplates contaned within the hotlist. The numeric value indicates the number of pages.

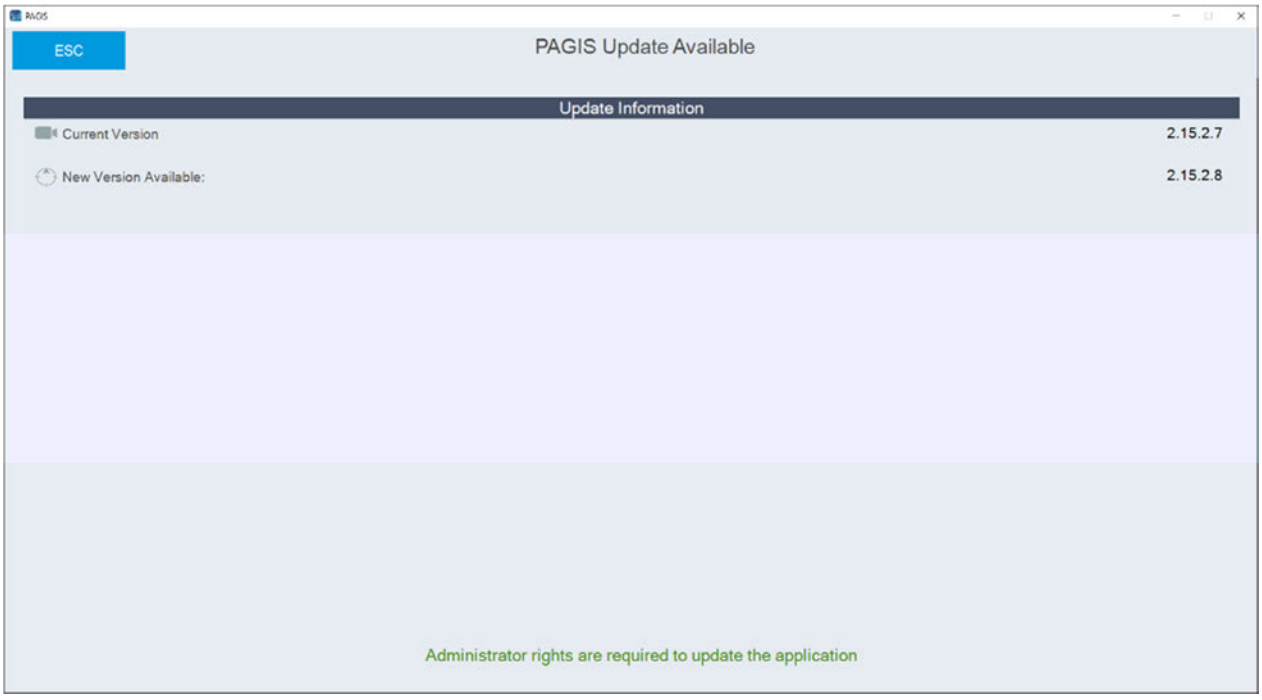
2977

2.15 Software & Camera Firmware Update (Restricted Users)

Software and Camera firmware update provides a means for Neology to update the PAGIS and camera software to enhance and or correct performance. The Update icon will only apper when updates are avialable.



- The firmware update process only updates camera that are attached and function on the mobile processor.
- Restricted PAGIS users are only notified and displayed update information, only a PAGIS administrator can apply the FW update.



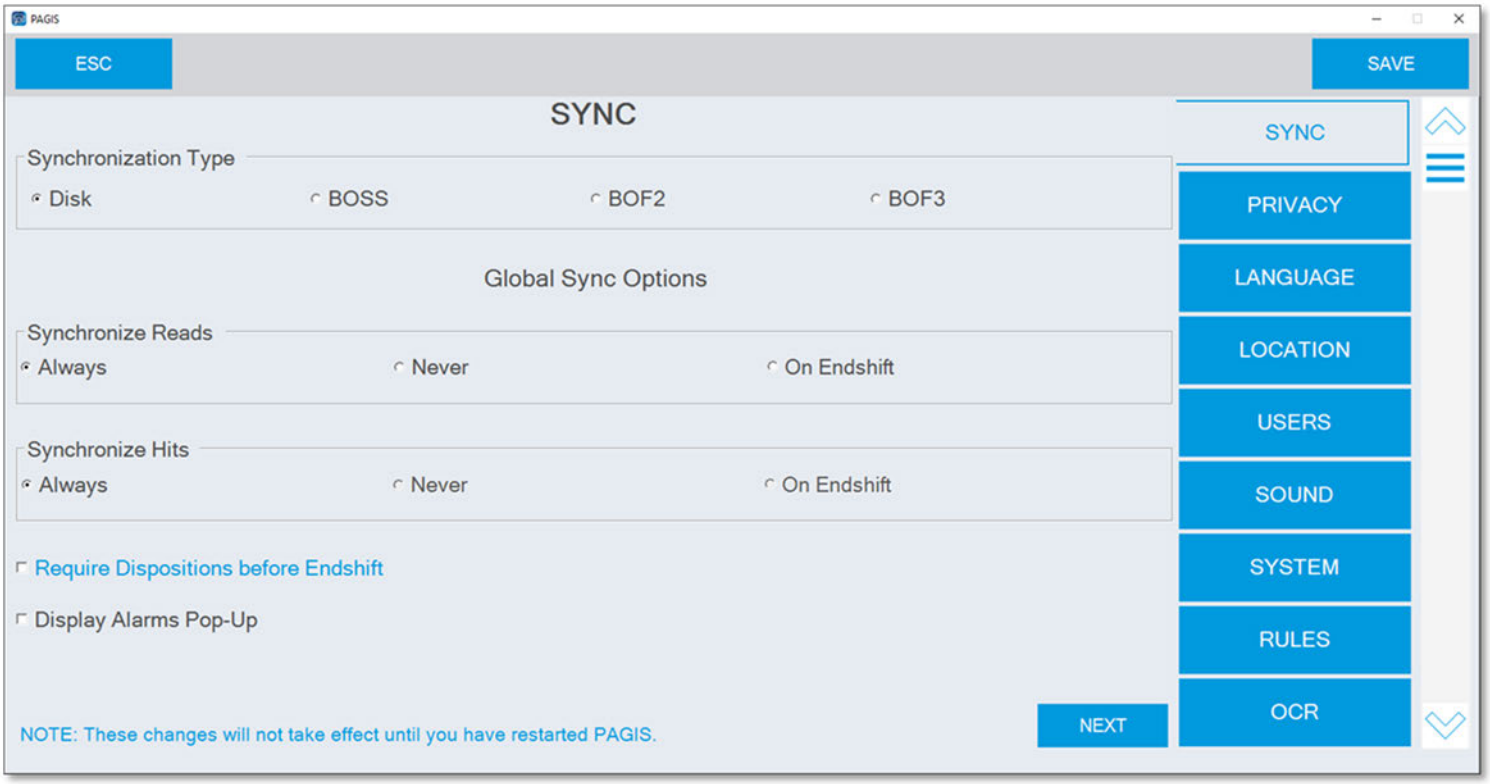
Firmware Updater Window List.

- Title “Camera Name”.
- Camera serial number.
- Position.
- Current FW version.
- New FW version available.

PAGIS Software Update

- When PAGIS update is available, you will see a notification banned.
- After clicking the notification banner, you will see the current PAGIS version and the newer version available.
- Administrator right are required to perform the update.

2978



ADMIN SETTINGS

The Settings Menu is the central location for configuring PAGIS Software functions endpoint by endpoint. Users with Admin level rights in PAGIS can see and click on the Settings Button from the Live View Screen. Launching Settings opens the menu to the Sync Options Screen by default. NOTE: Users without Admin level access will not see this icon on the Live View Screen.

3.1 Sync Options Screen

As mentioned previously in sections 2.4 and 2.5, PAGIS uses various sync options to store, update, and synchronize ALPR data to and from the BOSS server. On the Sync Screen, Administrators configure the synchronization method and options.

NOTE: Configuration changes will not take effect until they are saved and the PAGIS Software has been restarted.

Synchronization Types

- **DISK**: Used to Sync standalone hotfiles directly into PAGIS or used to sync data with BOSS in offline mode.
- **BOSS:** Uses a wireless data network to Sync files to and from a BOSS server.
- **BOF2:** Used predominantly in Europe (see regional guide for support).
- **BOF3:** Used predominantly in Europe (see regional guide for support).

2979

Global Sync Options

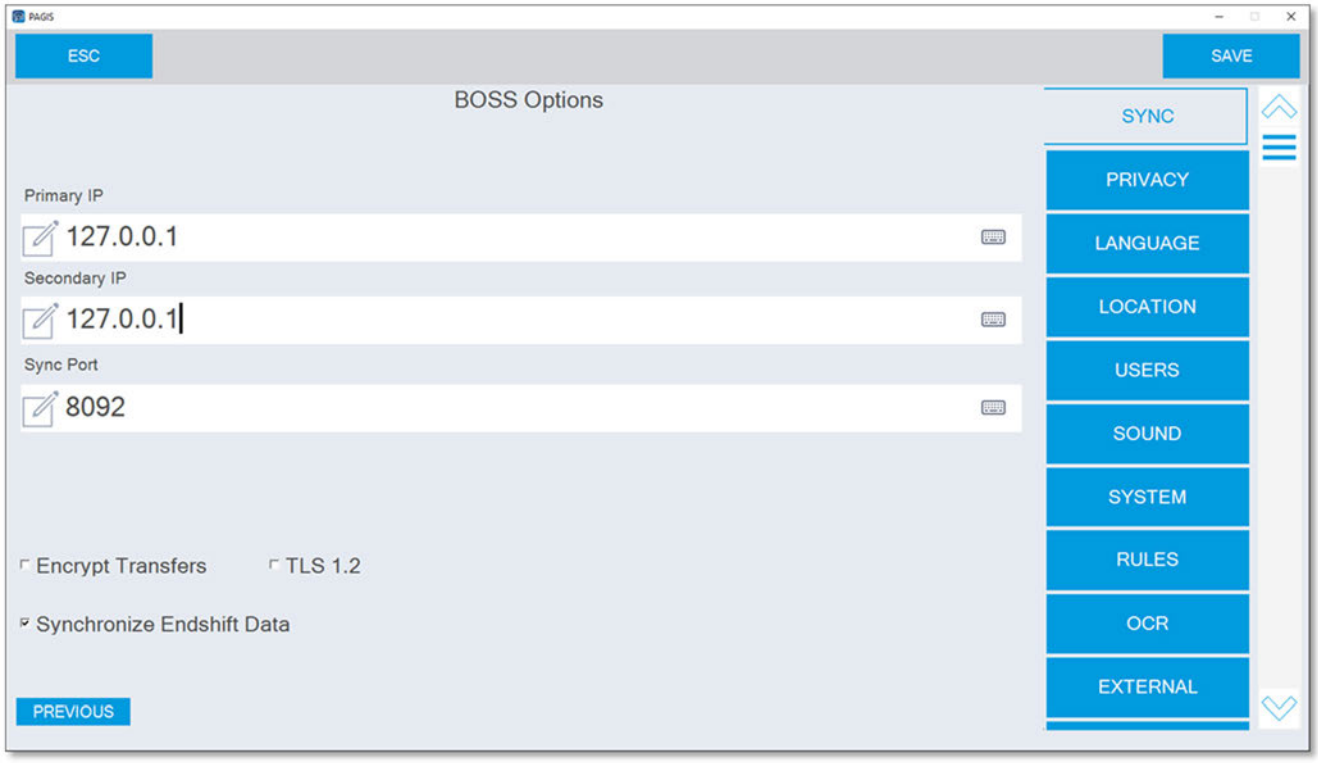
Global Sync settings control how PAGIS synchronizes ALPR data during Begin and End Shift cycles and applies to both manually launched synchronizations as well as Auto-Sync functions. The two sections are Synchronize Reads and Synchronize Hits.

NOTE: All Hits are Reads, but not all Reads are Hits. A "hit" is a read that coincides with an Alert List. Due to this, the Options selected in the "Synchronize Reads" section dictate what options are available in the "Synchronize Hits" section. Unavailable options are greyed out.

- **Always:** Reads and Hits are synchronized to BOSS as close to real-time as the data network and PC processing allow.
- **Never:** The information gathered during the shift will be "sanitized" with each launch of End Shift. The corresponding data and images will NOT be sent to the BOSS server.
- **On End Shift:** Synchronization to BOSS will only occur when the user manually launches End Shift.
- **Require Dispositions before Endshift:** Requires the user to select a disposition code for each Hit registered in the PAGIS software since the last End Shift was completed before the Synchronization is processed.

3.1.1 Synchronization to Disk

Sync to Disk can support two distinct modes of operations. One mode is to only sync manual created hotlist into PAGIS using a defined set of rules, defined in Appendix B of this manual. The second mode is to manual synchronized data between PAGIS and BOSS when cellular or wireless data connection is not possible.



- **Drive Path:** In this text filed you must enter the correct drive path PAGIS will look for to sync data when using disk sync option. Do not include folder paths in this filed as PAGIS is expecting root patch for the Begin and EndShift folders.
- **Delete Beginshift Data on Sync:** The sync folder on the Flash Drive is deleted once all Begin Shift data has been imported to PAGIS. This is on by default to help prevent false alerts.
- **Encrypt Endshift Data:** All uploaded End Shift data created in PAGIS is encrypted. This is off by default.
- **Copy Endshift Data on Sync:** If unchecked, no End Shift data will be transferred to the Drive location.
- **Keep Only Updated Databases:** Removes any Hotlists from PAGIS that were not updated during Begin Shift as "outdated". This is off by default.
- **BOSS Files:** Must be enabled when syncing data with BOSS4 back office when using offline disk sync option.

2980

3.1.2 Synchronization with BOSS

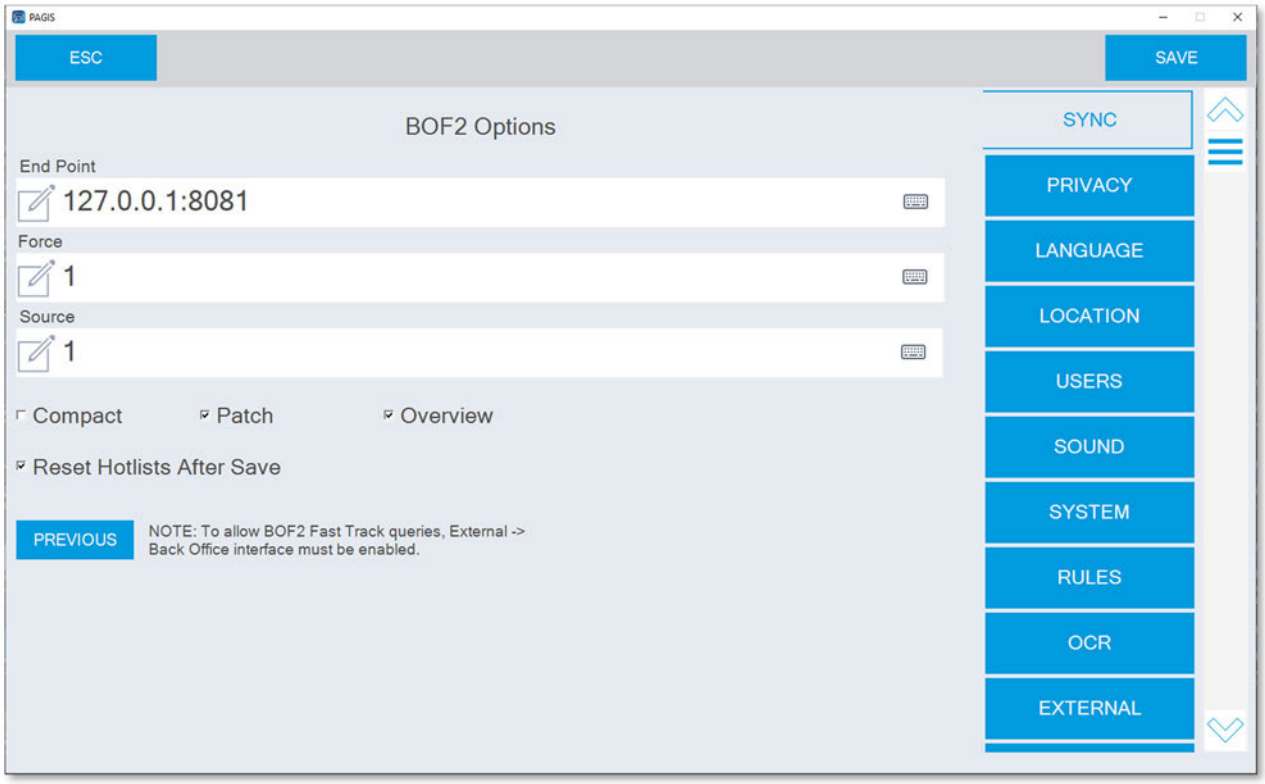
Sync to BOSS is a streamlined method for updating ALPR data to the field units and the server. Additionally, selecting this option enables the PAGIS auto-sync features that synchronize data throughout the shift without user involvement.

BOSS Options Screen:

- **Primary IP:** The IP address of the BOSS server. This can also be the DNS name (NOTE: using DNS adds an additional failure point via the Domain Controllers and is not recommended as the best option).
- **Secondary IP:** Used for a secondary IP in cases where users switch from a cellular network to a Domain APN thus routing to BOSS from either an internal or external IP. This field can be left blank if not needed.
- **Encrypt Transfers:** When enabled, data transfers to BOSS will be encrypted.
- **Synchronize Endshift Data:** On by default, this enables PAGIS to sync to BOSS when End Shift is performed by the user.
- **TLS 1.2:** By default, PAGIS communicates using TLS 1.0 in its encryption layer, the TLS 1.2 option is provided as a mean for PAGIS to communicate on networks that are actively blocking the older TLS 1.0 & 1.1 protocols.

Sync to BOSS Prerequisites:

To establish the wireless sync to BOSS, the Agency Network Administrator will need to open TCP port 8092 to the BOSS server as well as define the internal and/or external IP address(es).



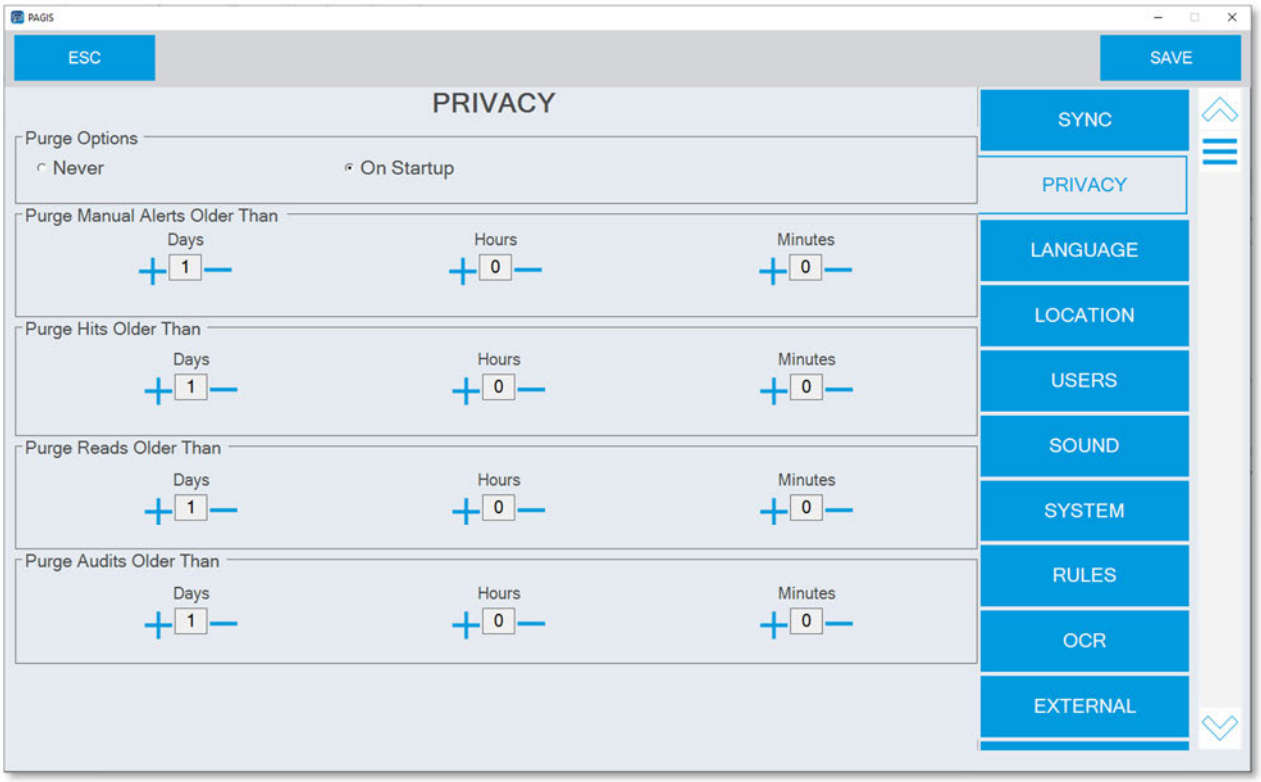
Sync to BOSS Setup:

From the Sync Settings Menu, the Admin must select the BOSS option and click the Next button. Then s/he will update the Primary and Secondary IP fields as necessary and de/select any options. Once configured, click Save to retain the changes. (For more information on PAGIS Auto-Sync settings, refer to section 2.4.3)

2981

3.1.3 Sync to "Instation" (Formerly BOF2 and BOF3)

The Instation software was formerly known as BOF2 & BOF3 and was developed by Anite PLC. It is a web-based Back Office software suite used in European markets to provide similar features as the BOSS server and UI Client.
NOTE: These options are NOT used in the Domestic United States.



- **End Point:** The IP Address of the Instaion website. Format must be [IP Address:Port]
- **Force/Source:** Unique codes assigned to each police force.
- **Compact:** This option minimizes data transfer to Instation. Images will be deselected by default when in use.
- **Patch:** Refers to the image of the plate pulled from the read. This is on by default.
- **Overview:** Refers to the color overlay image from the read. This is on by default.
- **Reset Hotlists After Save:** When the software syncs to Instation, this will reset the hotlist tracking.

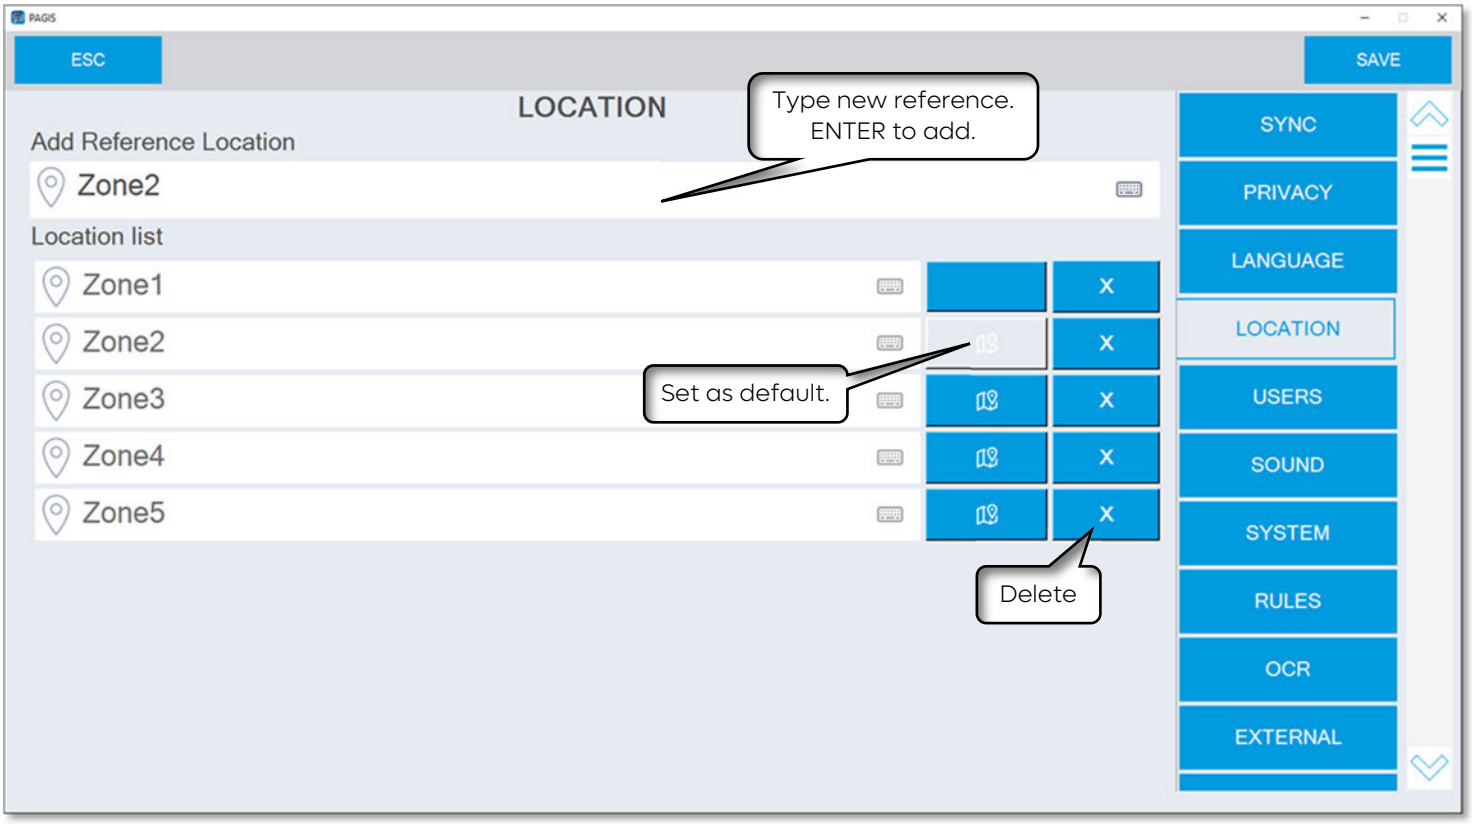
2982

3.2 PAGIS Privacy Settings (Local Data Retention)

PAGIS Software allows the Admin to configure the data retention settings for the local endpoint by minutes, hours, or days. This feature ensures the data captured/stored on the MDC is sanitized by the software itself (this is important for customers without BOSS). NOTE: To enable the Privacy settings, the Admin must select the "On Startup" purge option and then set at least one value in each row. Rows left with all Zero will not be sanitized or purged.

- **Never:** Selected by default, this option disables the PAGIS privacy settings and uses only those set in BOSS.
- **On Startup:** This option must be selected in order to enable the PAGIS privacy settings. Once enabled, PAGIS looks to purge/sanitize the system each time it's launched or restarted.
- **Purge Manual Alerts Older Than:** Controls how frequently all of the Databases/Hotlists in PAGIS are purged. The purge rate is calculated from the timestamp of the Hotlist. Once the retention value is surpassed, the Hotlist is deleted. Hotlists distributed from BOSS will be re-downloaded on the next Sync.
- **Purge Hits Older Than:** Controls how frequently all Hits in PAGIS are purged. The purge rate is calculated from the timestamp of the Hit. Once the retention value is surpassed, the Hit is removed the next time PAGIS is restarted.
- **Purge Reads Older Than:** Controls how frequently all Reads in PAGIS are purged. The purge rate is calculated from the timestamp of read. Once the retention value is surpassed, the Read is removed the next time PAGIS is restarted.
- **Purge Audits Older Than:** Controls how frequently all Audits in PAGIS are purged. The purge rate is calculated from the timestamp of the audit. Once the retention value is surpassed, the audit is removed the next time PAGIS is restarted.

NOTE: Once Reads, Hits, Hostlist or Audits have been purged, they can no loner be viewed in the PAGIS software.

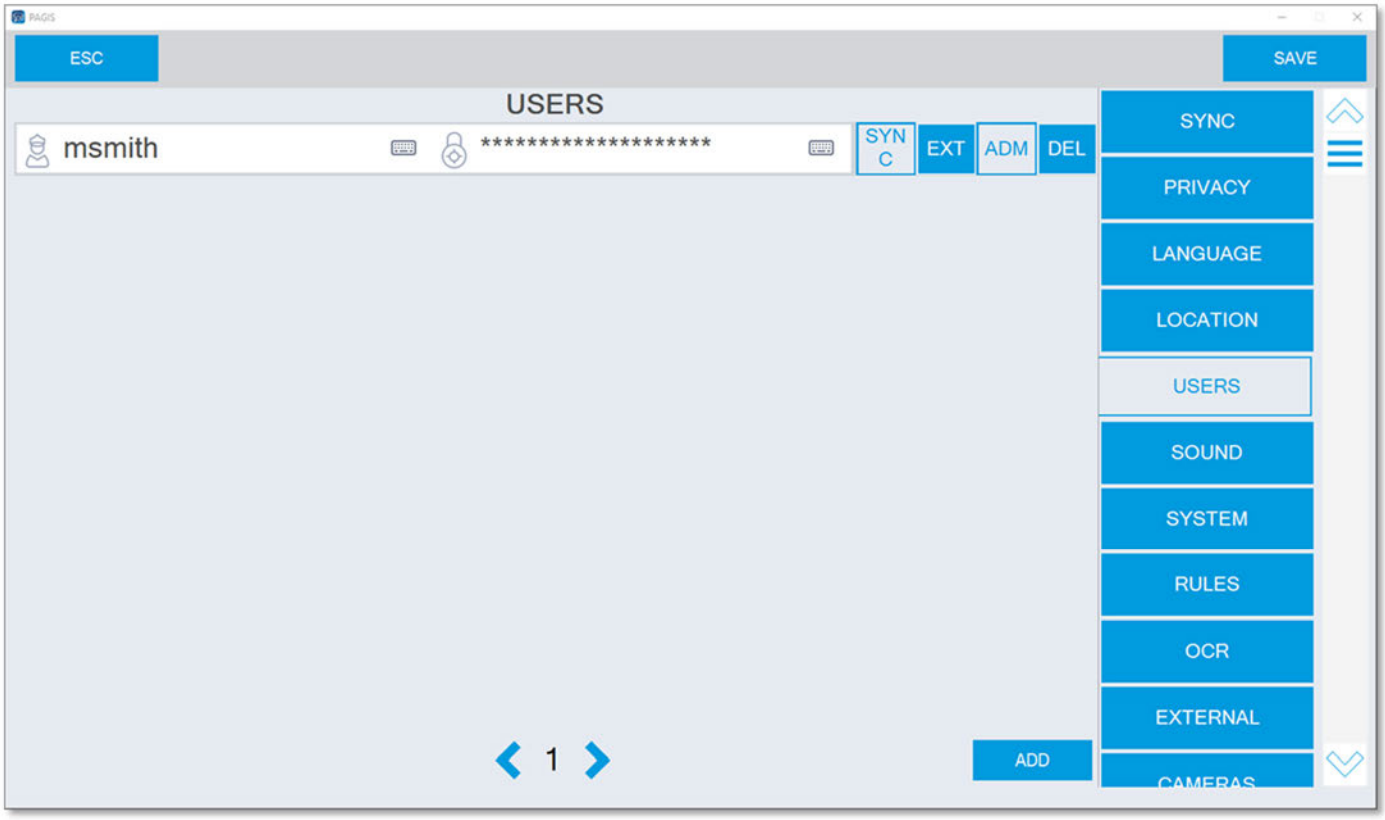


2983

3.3 Language

The Language screen allows the Admin to change the language assignment used in the PAGIS Software. Available languages are listed in the drop-down list and are added during the installation process.

3.4 Location



Updates to the location field will auto-fill the "Reference" section of the PAGIS Login Screen. These are often used to specify a patrol region (Examples: "North Patrol" or "A2"). Once designated all reads/hits will show this designation. Muiltiple "Referance" location can be added, the available list can then be selected from the login screen.

2984

3.5 Users

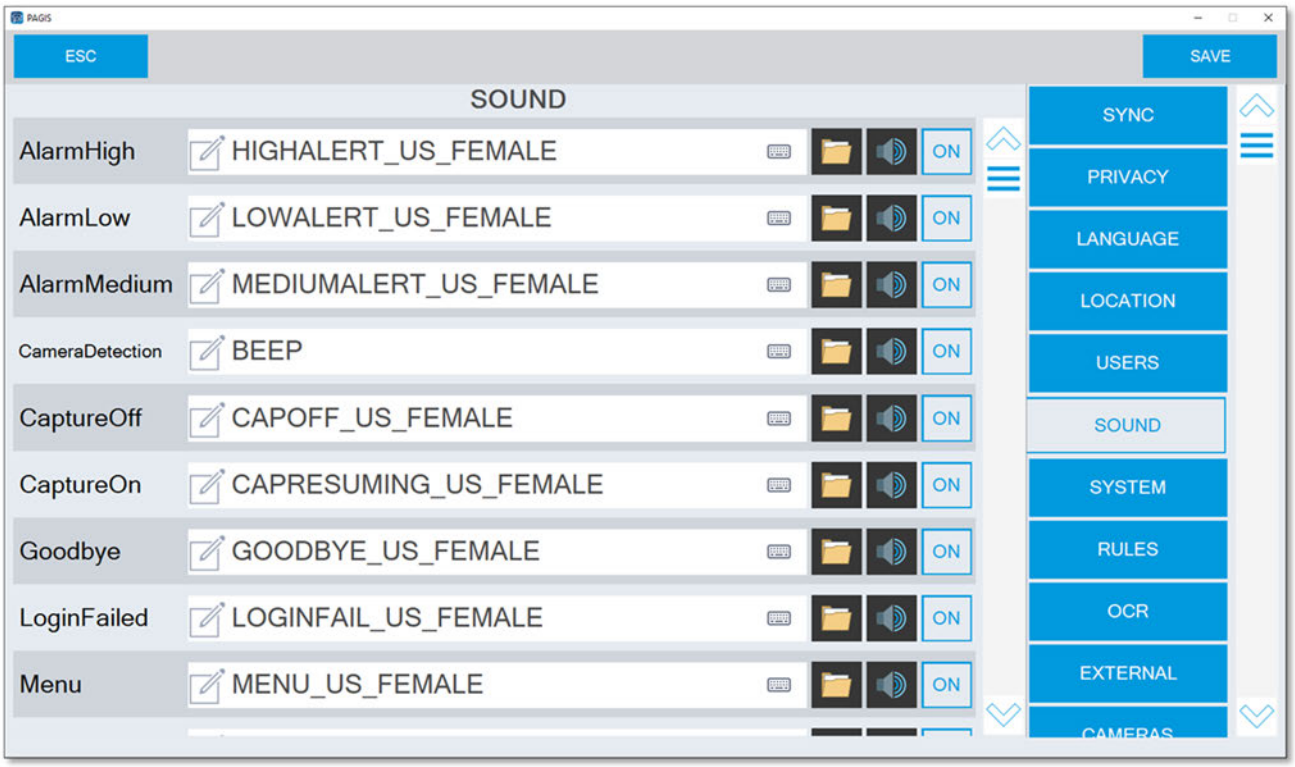
User accounts, credentials, and rights are generally administered from BOSS and then distributed to the PAGIS via the syncrniztion process. However, PAGIS does allow for Administrators to add and delete users as well as set their privileges directly from PAGIS.

NOTE: Adding user directly in PAGIS should be limited to customers not utilizing a BOSS server. User accounts created directly in PAGIS by customers with BOSS will be overwritten/removed during the next sync.

Adding a User in PAGIS:

1. From the Settings Screen, select the USERS Button on the Right.
2. Click the ADD Button.
3. Enter the case sensitive username in the Username Field (max of 15 alphanumeric characters).
4. Enter the case sensitive password in the Password Field (max of 15 alphanumeric characters).
5. Select the User's privileges
6. Click the SAVE Button to apply the changes.

User Privileges



SYNC: Allows users to manualy synchronize data.
EXT: Allows the user to import external Hotlist from disk sources..
ADM: Provides the user Admin rights and allows him/her to configure the PAGIS Software.
DEL: Allows the Admin to delete a User from the list. Click once to select and the save button to delete.

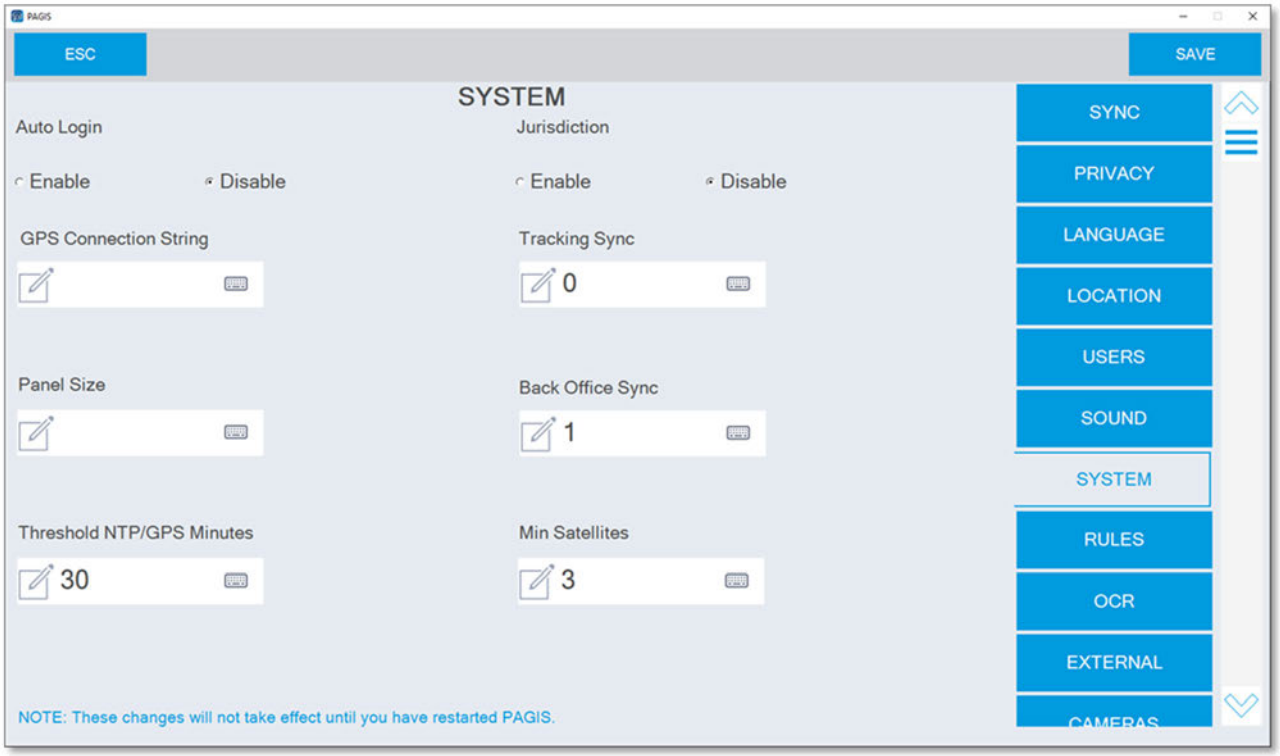
NOTE: Creating a new user in PAGIS automatically deactivates the default user account settings (Section 2.1.1).

2985

3.6 Sound

Sounds in PAGIS mirror the user or software activity (Ex. Login, Audible alert from a "Hit", and Logout) and are On by default. PAGIS Administrators can adjust the sounds from the available presets and/or load unique .wav files onto each PAGIS for custom sounds. **NOTE:** The default storage path is "C:\Program Files\PlateReader\MDC\sounds".

Configuration Buttons



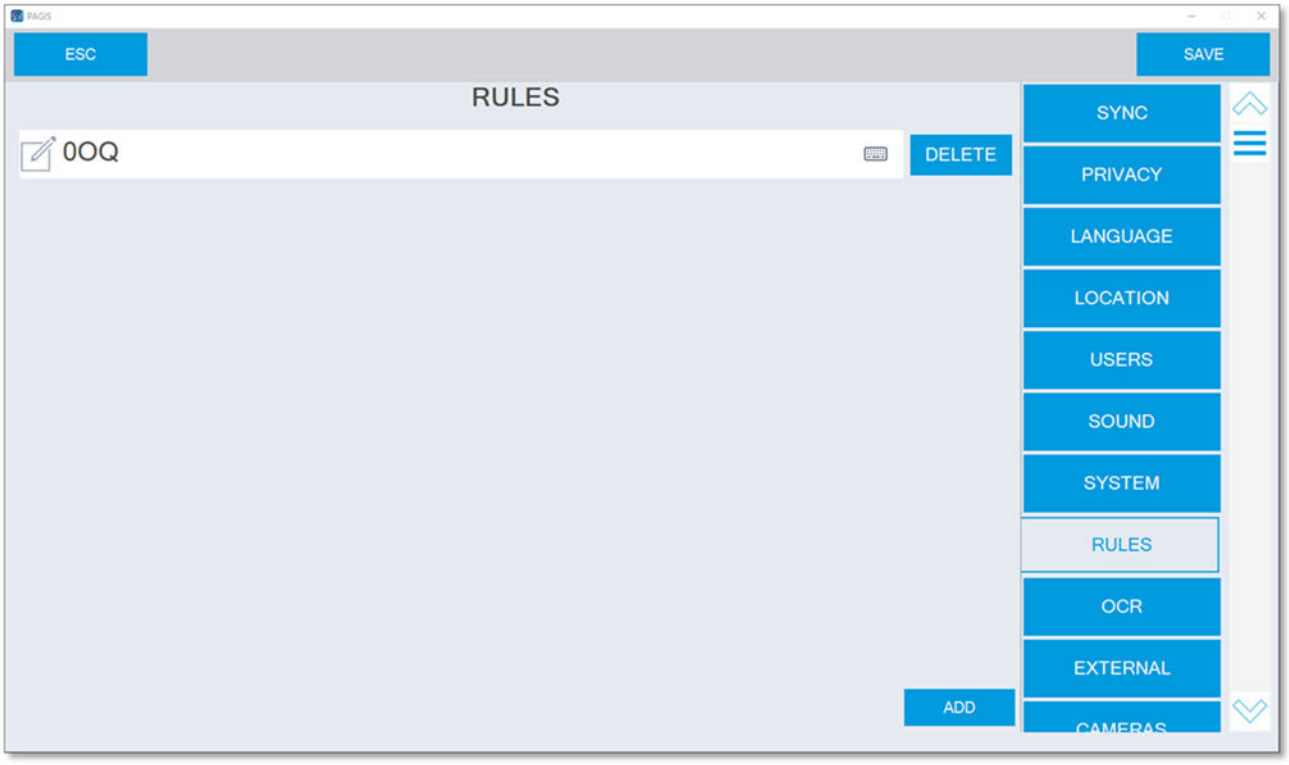
The sounds listed on the configuration screen can be altered or updated by PAGIS administrators using the buttons below. **NOTE:** Changes to any sounds must be saved before they can be played in PAGIS.

	Click to browse to the sounds folder. This is used to select a new sound file.
	Click to Test/Play the selected sound.
	Shows the status of that sound. Click to turn each sound Off.
	Shows the status of that sound. Click to turn each sound On.

2986

3.7 System

The System screen determines external system connections, Login behaviour, Panel size.



- **Auto Login:** Enabling this feature will disable the login screen and login to PAGIS as the Admin automaticaly. This feature is recommended only for unattended use Speed-Trailer applications and Covert Drop and Go deployments. **Note:** If PAGIS login accounts are deployed to PAGIS, it will disable the auto login feature.
- **GPS Connection String:** The GPS string is utilized to redirect PAGIS to acquire GPS feed from different source. Defaults for client PAGIS (MDC) is no value and 6 for Standalone. The GPS connection string defaults to a COM port value, although it may also refer to TCP/IP: Port option if IP is included in the connection string, example (127.0.0.1:8080).
- **Panel Size:** Controls the resolution of the color image displayed on the Live View Screen. By default this is blank as PAGIS controls the aspect ratio. However a PAGIS Admin can assign custom resolutions in WxL format (720x1024) to assist with non-standard dispalys.
- **Threshold NTP/GPS Minutes:** This setting controls the behavior of the GPS lock status. If the threshold value (which is obtained by calculating the difference between the time of the last packet received from GPS and the current time) is greater than the value configured in minutes, then GPS status will change to Not Locked indicating it did not receive an updated GPS signal.
- **Jurisdiction:** This feature enables State recognition of the captured plate origin. Note- *This is a BATA feature and Neology makes no claims on its performance capabilities.*
- **Tracking Sync:** Controls the sync intervals in (Sec.) that PAGIS communicates with BOSS4 to update tracking status. Default off=Zero, values can range from 1-9999. BOSS4 Back Office Software requiered for this feature.
- **Back Office Sync:** This setting controls the sync timing that PAGIS sends data back to BOSS3/BOSS4, Timing is in (Sec.), default is 10sec, values can range from 0-9999.
- **Min Satellites:** This setting controls the behavior of the GPS lock status if the minimum number of Satellites set is not met, when value is not met the GPS status will change to Not Locked.

NOTE: All changes must be saved and will not take effect until PAGIS is restarted.

2987

3.8 Rules

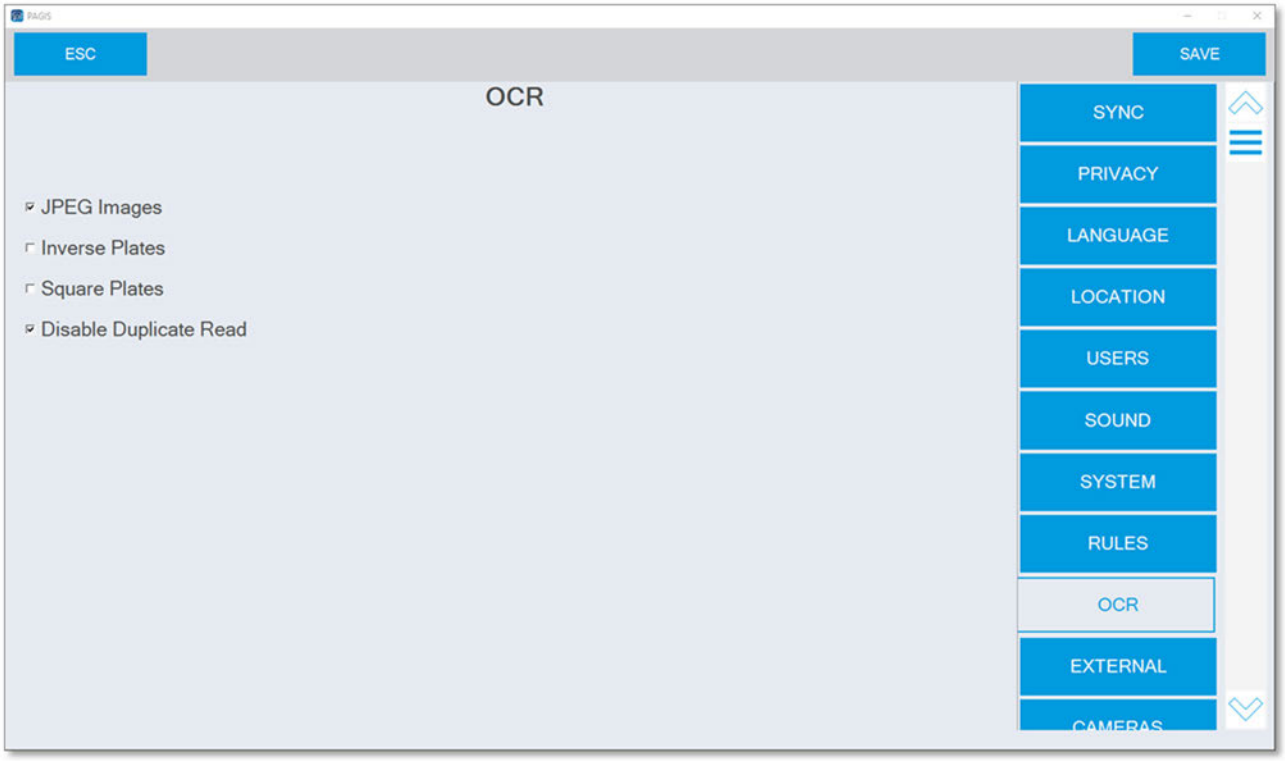
Rules provide a way to check for commonly misread character by creating a set of rules for checking against available Hotlist. For instance, "8" and "B" are sometimes mistaken. If the OCR engine reports a plate as ABC123, you might want PAGIS to check both ABC123 and A8C123 against all Hotlist to find a match. While PAGIS is less likely to miss a Hit, the process can also produce more false Hits.

Adding a Rule to PAGIS:

1. Click the ADD Button.
2. Enter the desired alphanumeric characters (Ex. 0 and O) into the text field.
3. Click the Save Button at the top right of the screen to confrim the rule.

Deleting a Rule:

1. Locate the rule to be removed from PAGIS.
2. Click the DELETE Button to the right of the rule.
3. Click the Save Button to complete the removal.



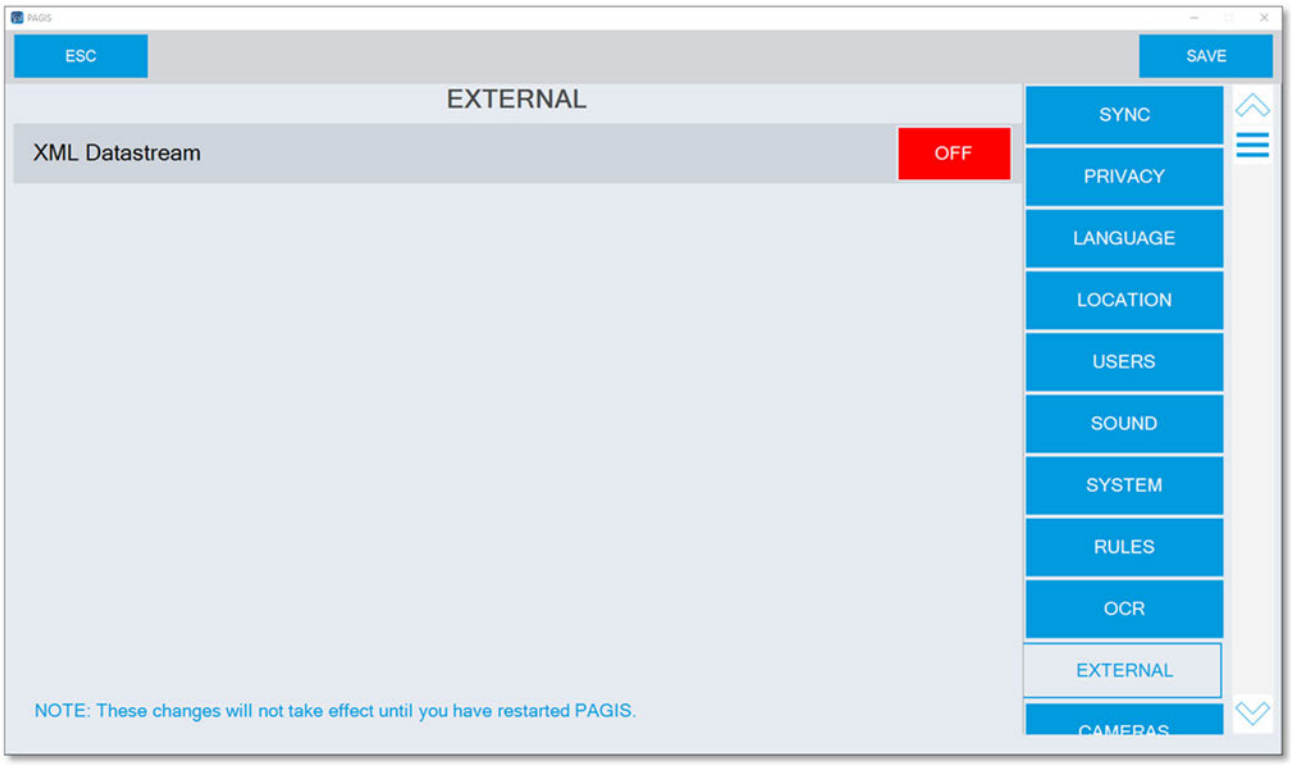
Rules – Additional Clarifications

1. Rules are processed based on the first character entered. So in order to read any O as a zero, the Admin will need to add rule "O0". And in order to read any zero as an O, a second rule must be entered as "0O".
2. Rules are NOT designed to overhaul OCR function. Any consistently misread values should first be brought the attention of Neology Support for review. And only those cases where further adjustments to the OCR software are impossible would rules be recommended.
3. Adding rules to PAGIS will make it less likely to miss a Hit Alert. However, it will increase the number of Hit Notifications that require the Officer to visually confirm the OCR read ("IR Patch") and the Hotlist Alert match.

2988

3.9 OCR

The OCR Section in PAGIS provides Administrators some additional options on how they would like PAGIS to process plate reads.



- **JPEG Images:** On by default, this forces PAGIS to use compressed .JPG images instead of the full resolution Bitmap images each time a read is taken. This settings minimizes data storage requirements and preserves disk drive space.
- **Inverse Plates:** Off by default, this setting is only used in States where plates with light color lettering over a dark background are prevalent. Enabling this option increases processing load and should remian disabled unless required.
- **Square Plates:** Off by default, this setting adjusts the read area plates that are square instead of retangular.
- **Disable Duplicate Read:** On by default, this setting helps PAGIS prevent duplicate plate reads. If a VLP is read by more than one camera within a short period, the duplicate read is ignored. This minimizes data storage requirements and improves overall system metrics related to numbers of Hits and Reads.

NOTE: Once changes are made, the Admin must click the Save Button in the upper right corner to retain them.

2989

3.10 External

The External Screen allows the Admin to connect PAGIS to an external database or device via XML Datastream. This feature is Off by default and any changes must be saved before they will be available.

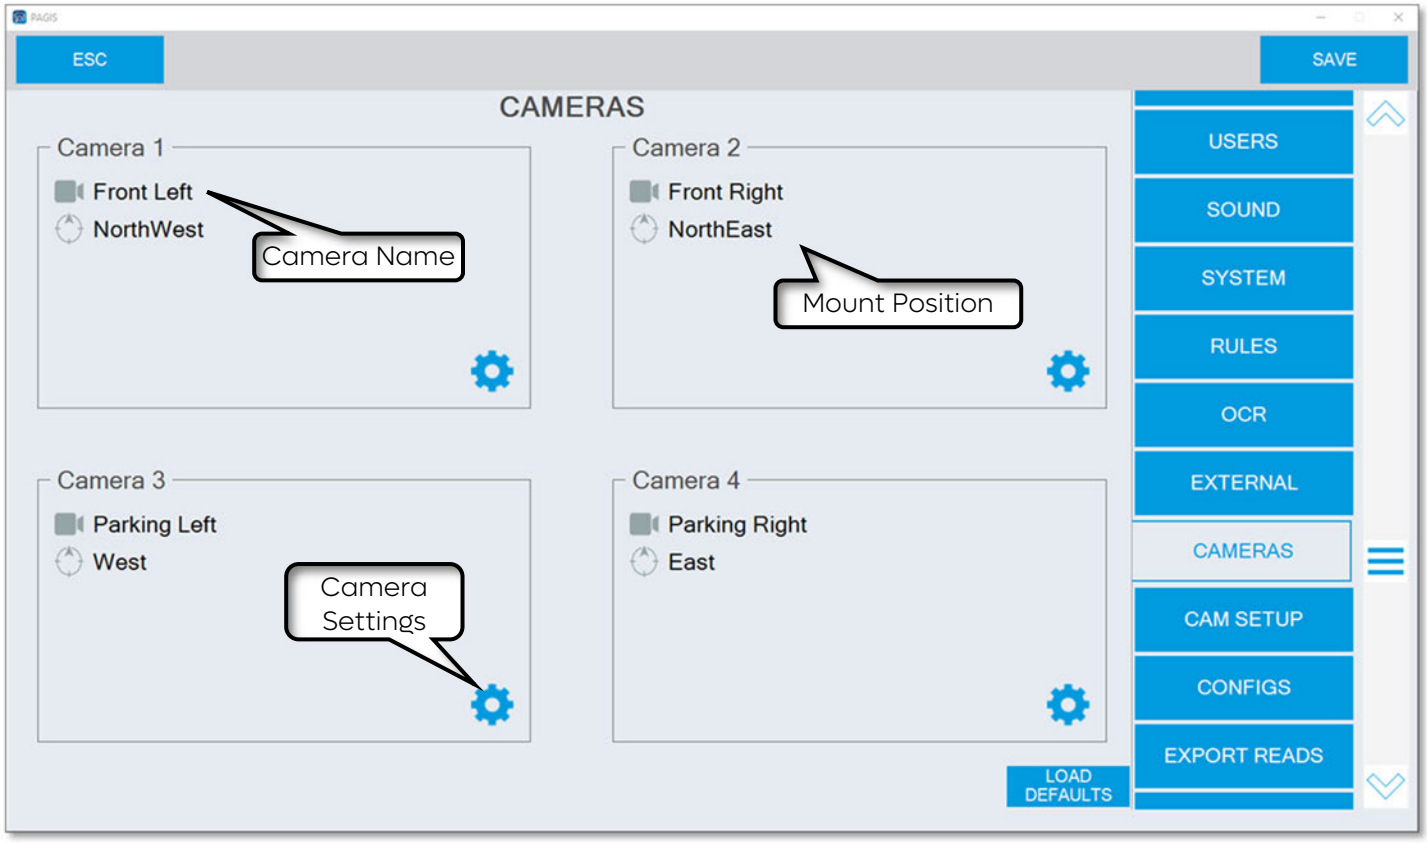
Enabling the Datastream:

1. Click the OFF Button to toggle to ON.
2. Click the Save button in the upper right corner to apply.
3. Restart PAGIS.

NOTE: Enabling this feature will reduce the overall performance of the PAGIS Software.

XML Datastream Ports

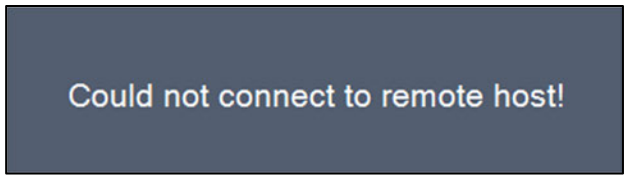
The connection to the datastream is via TCP/IP ports. Metadata is passed in real time and images are pushed periodically.



1. Query Port: TCP 7000
2. XML Datastream/Heartbeat: TCP 10100

NOTE: Greater detail on the XML Datastream can be found in Appendix D

2990

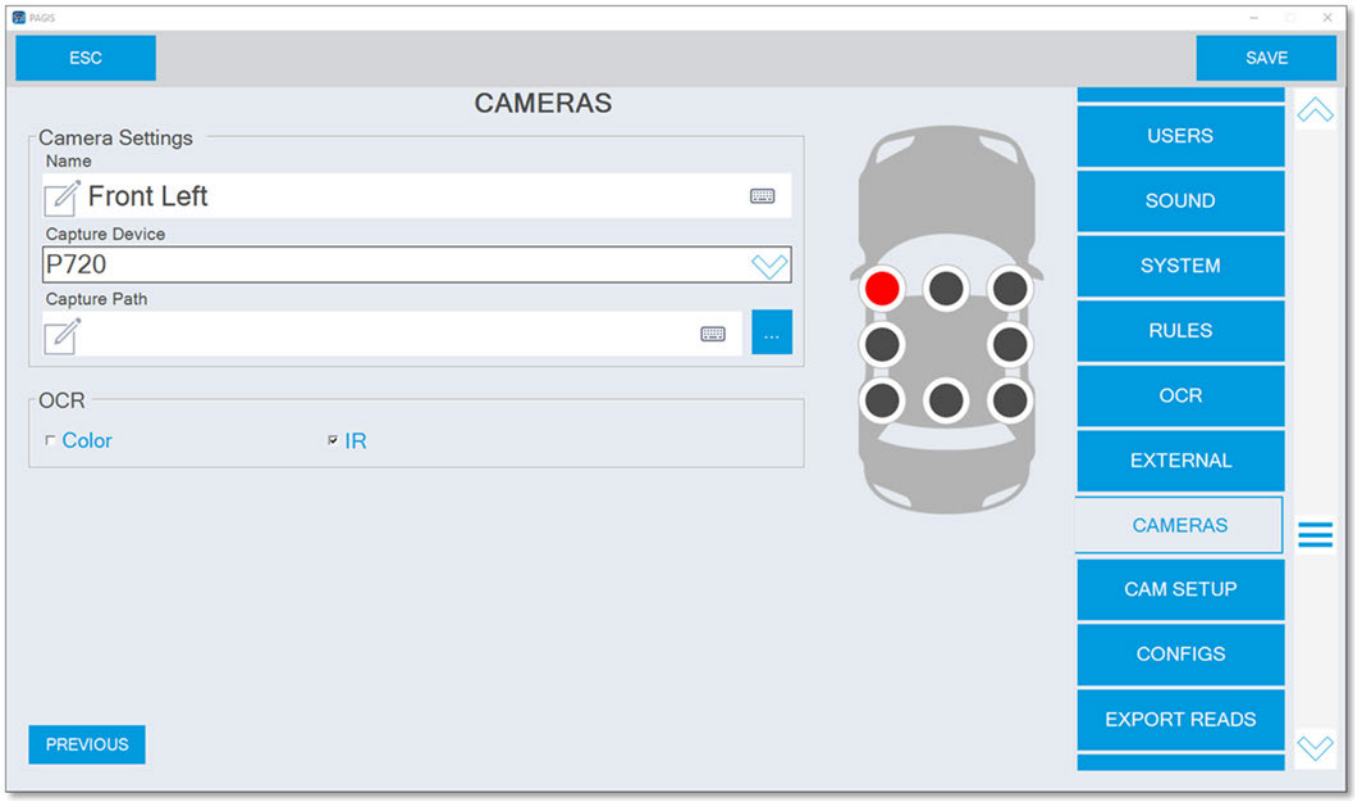


3.11 Cameras

The Camera setting panels are a software representation of the physical camera ports located on the mobile processor. Each camera panel has its own unique settings that can be altered to accommodate custom application.

Camera Connection

In order to configure the cameras, the PAGIS Software and the Processor must be able to communicate. If they cannot, the Administrator will receive the error message below as soon as he or she clicks on the CAMERA Button indicating that PAGIS cannot "see" the cameras. See Appendix C FAQ for troublshooting tips.



2991

3.12 Cameras Settings

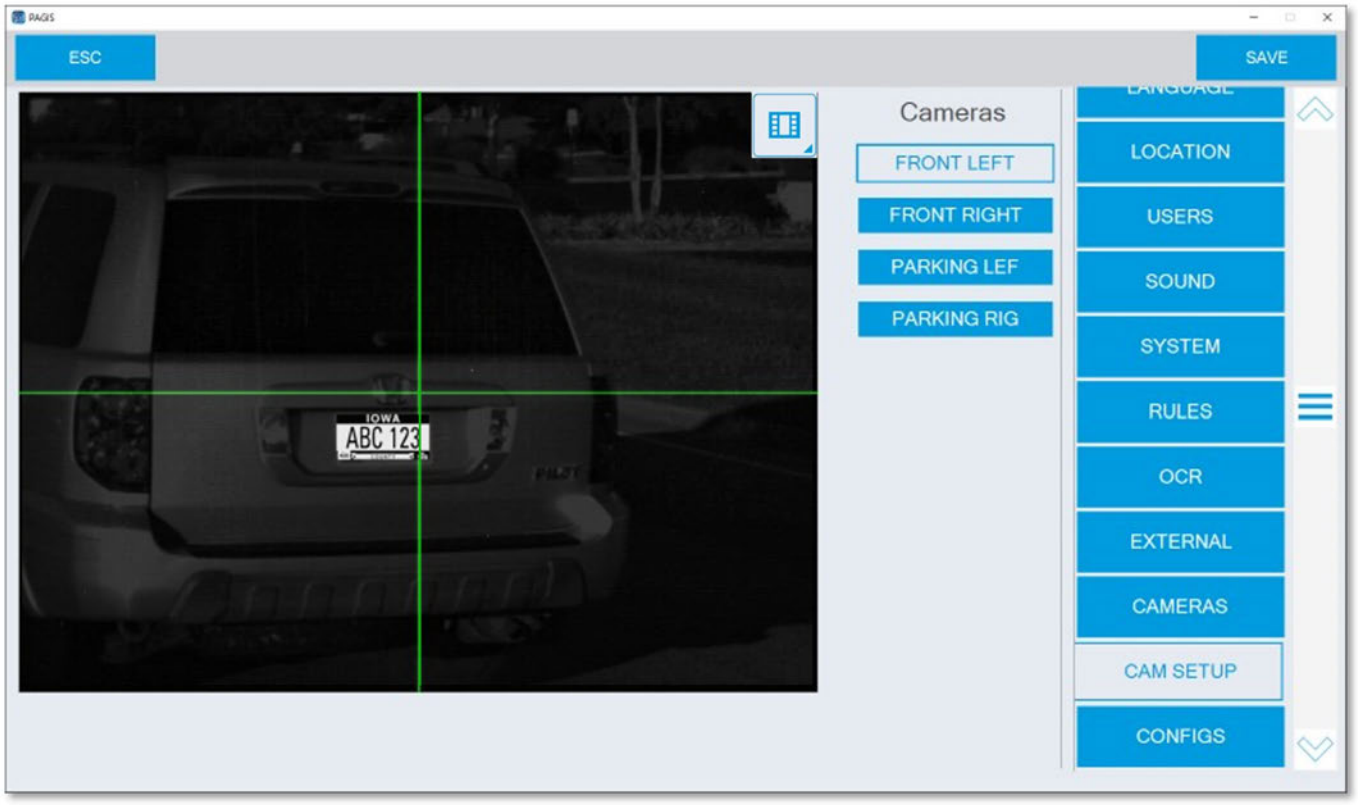
This section will assist with the general configuration of the cameras. Administrators can begin by selecting the Settings Icon to edit each of the existing cameras or by selecting the Load Defaults Button.

Camera Settings (Edit) Screen

This provides the Admin a single screen to edit the name, confirm the capture device, assign camera position, and confirm OCR settings.

- **Name:** The Camera Name field accepts 50 characters, but PAGIS will only display 11 characters on the Main View screen.
- **Capture Device:** The connected mobile processor delivers the device type to PAGIS when entering the "Camera" settings section, options are P720 for SX4e and P442 for SX4 models. Other options are video files, user feed and client for development use only.
- **Capture Path:** Configure PAGIS to aspect IP based video feeds and .AVI video file paths, for development use only.
- **OCR:** Activate OCR for Color or IR cameras or both.
- **Camera Position:** This Symbol indicator is for the alert screen to indicated camera placement direction.
- Click the Save Button to retain the changes.

Cameras Settings (Load Defaults):



Load defualt camera setting will overwrite any existing cameras and config setting to thiere factory defualt vaules.

1. Click the LOAD DEFAULT Button in the lower right portion of the Cameras Screen.
2. Locate "Default" and click the LOAD Button.
3. Click Save to apply, (This returns the Admin to the Cameras Screen).
4. Click the Camera Settings Icon to inspect and configure each camera one at a time if needed.

2992

3.13 Cam Setup

The Cam Setup Screen presents Administrators with a live preview of the configured cameras. This section also allows the Admin to switch view modes from Color to IR to ensure the system is functioning properly. This screen can also be utilized as a means to align newly mounted cameras.

Cam Setup Navigation Buttons

The Admin may view the output of each camera by clicking on the camera name. When a camera is selected, the button will turn grey to indicate it has been selected. In order to switch view modes, the Admin must use the following buttons:

	**Color View:** The Color View Mode is the default view when entering Cam Setup. This displays a live preview of the color camera video feed
	**IR View:** By clicking on the Camera View Selector button, this will switch to the Infrared (IR) View Mode. This displays a live preview of the IR camera video feed.

NOTE: Unlike the main Live View Screen, the camera feed shown on the Cam Setup page will not time out when in use. This feature makes it easier for the Administrator to review and align the mobile cameras.

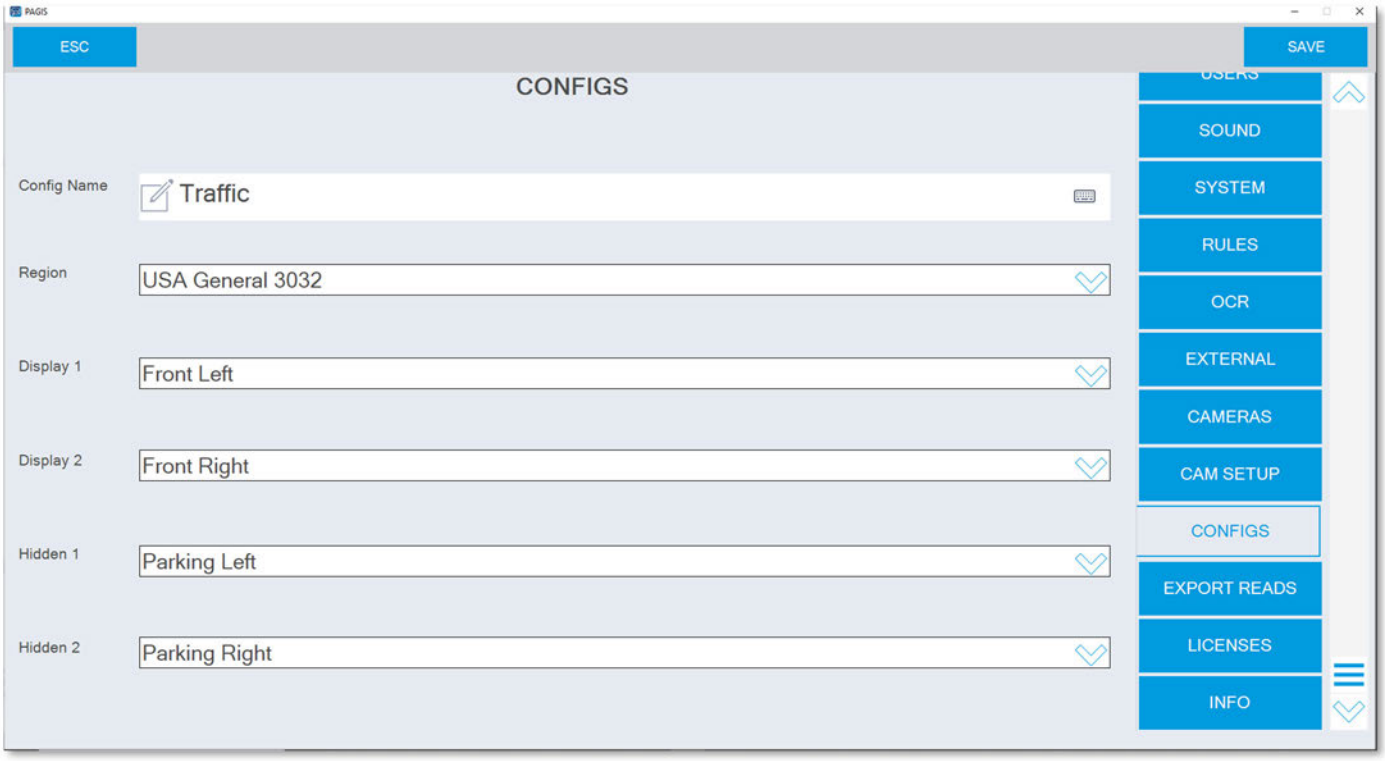
2993

3.14 Configs (Camera View Modes)

The Configs Screen allows the Admin to construct how the cameras will be displayed on the Live View Screen for the user. This section also allows agencies to create multiple viewing configurations to meet specific environmental needs or to add greater functionality to the software. By default, the Configs layout provides the agency with three camera modes, "ALL", "Traffic" and "Parking". All mode dipalys the front two cameras and rear two are activated, Traffic mode only displays the front two cameras and rear cameras are off, Parking mode only displays rear two cameras and front cameras are off.

Configs Navigation Buttons

To properly configure the camera modes used in PAGIS, the Admin will navigate this section with the following.



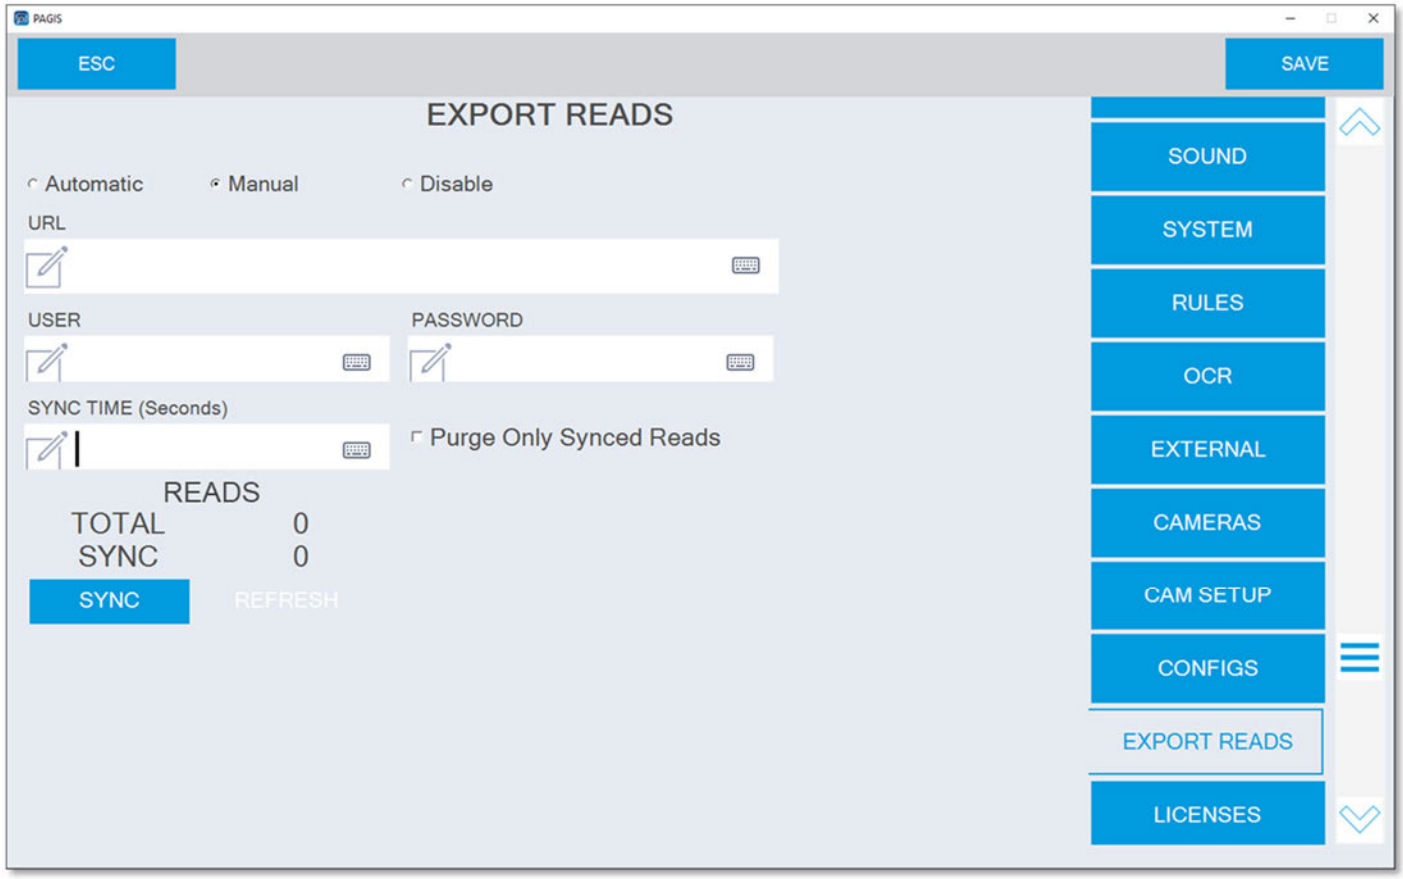
- EDIT: Modify the mode settings for the selected configuration, including selecting a region OCR and selecting which cameras are displayed or hidden.
- DEL: Removes the current configuration from PAGIS.
- ADD NEW: Creates a new config mode.

NOTE: The number of Configs equals the number of Camera Modes available to the user from the Live View Screen. Each camera mode untilizes the Config name established in this section. Users cycle through the modes on the Live View Screen by clicking the Mode Selection Button in the upper left corner.

2994

3.15 Config Settings

When getting started, most Administrators will begin by simply modifying the existing camera modes or "configs". The following example will demonstrate the standard configuration of a four-camera mobile unit.



- **Config Name:** The name of the configuration mode.
- **Region:** Select region file to be used, these are preloaded at the time of purchase. This setting must be applied on first setup or cameras will not capture plates.
- **Display 1:** This camera is always displayed on the left-hand side of the Main View screen.
- **Display 2:** This camera is always displayed on the right-hand side of the Main View screen.
- **Hidden 1 and 2:** When populated, these cameras are functioning and performing OCR, but the images are not visible to the user. Hits and Reads will still be generated by these cameras and alert still notify users.

NOTE: In situation were the cameras need to be temporarily turned off, you can create a mode called GoDark, select region but do not select any cameras. Once this mode is select in PAGIS the cameras will go into standby, turning off the cameras LED's.

2995

3.16 Export Reads

The PAGIS data export feature allows for the ability to export data to a RestAPI service for distrabution redirect. This feature is licensed and will not display in the PAGIS menu until the licensing is applied.

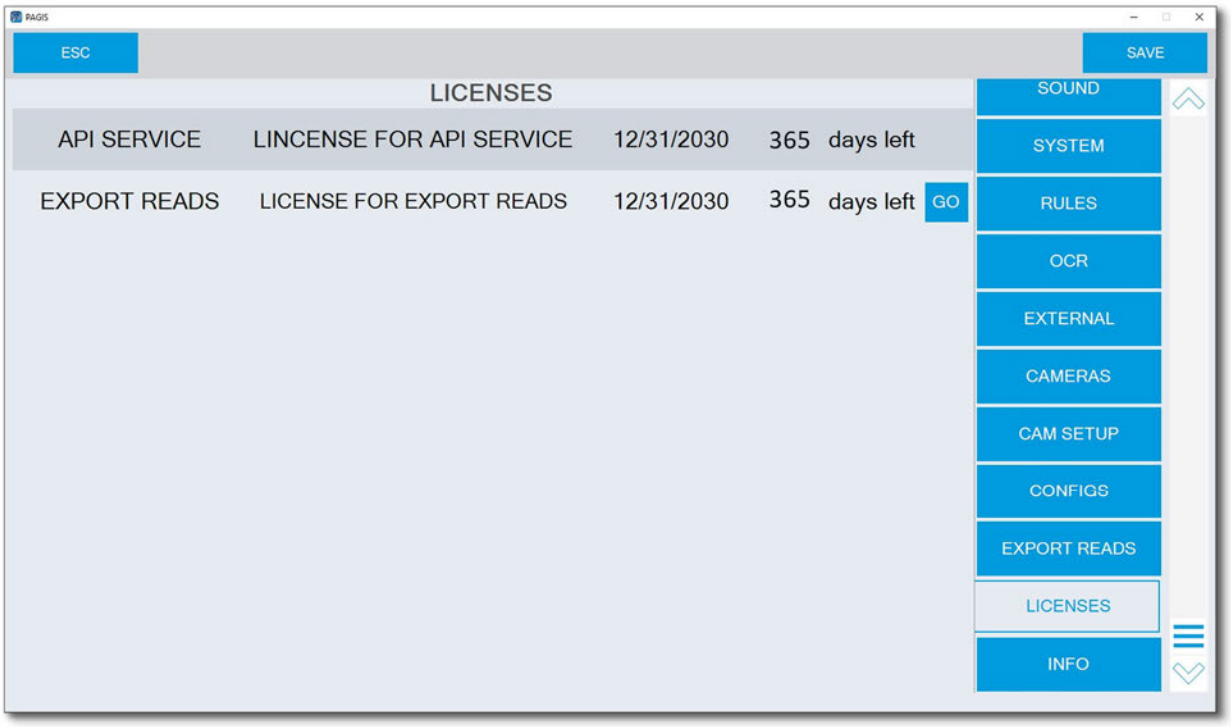
Feature Requirement:

- Must obtain License file to enable this feature.
- Must place license file into Licenses folder where PAGIS is installed, typically "C:\Program Files\PlateReader\MDC\Licenses".
- Must have a working RestAPI service ready to except posted data from this feature. The Export Reads feature is a POST method only.

Set Sync Behavior:

I. **Automatic:** Set data to sync automatically in specified time intervals. REFRESH button will update the READS status indicator.
II. **Manual:** Set data to sync manually using the SYNC button.
III. **Disable:** Disable export.

Feature Settings:



- **URL**: Specify the fully quialifed URL to the API service HTTP or HTTPS.
- **User/Password:** Set credentials for service.
- **Sync Time:** Set automatic data sync times in seconds.
- **Purge Only Synced Reads:** Prevents reads from being deleted from PAGIS regardless of back-office sync status, data will remain until synced with the RestAPI service.

2996

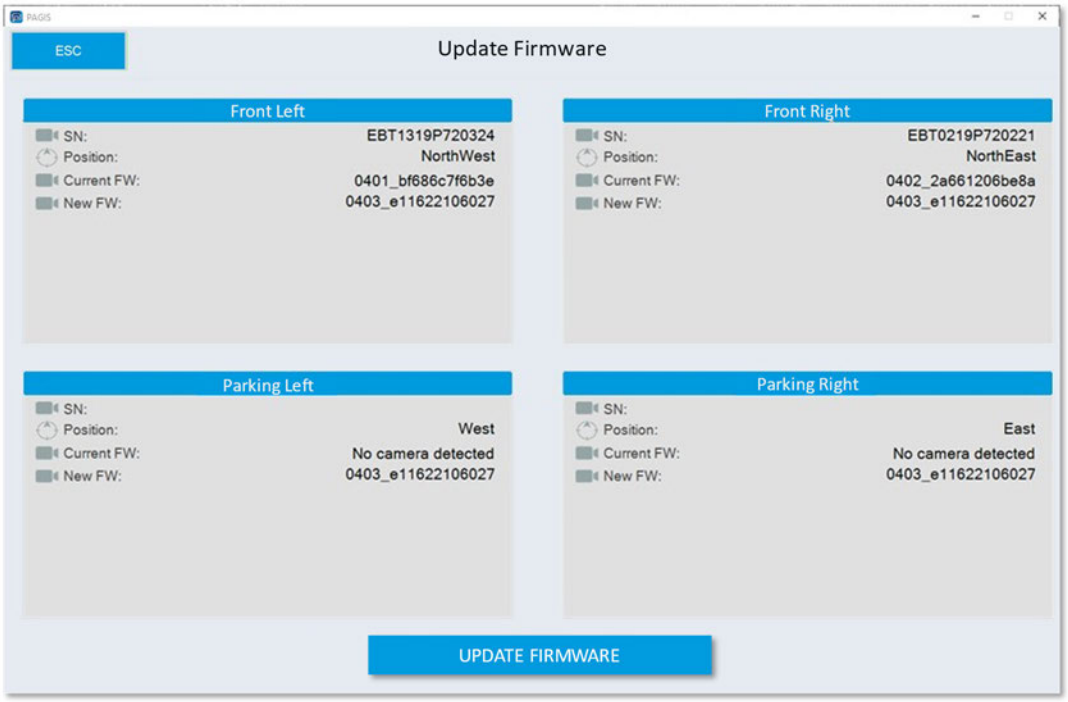
3.17 Licenses

PAGIS 2.15 requires Licensed activation on the following features to be activated. Once the license file is applied, PAGIS will display which feature is enabled and the time limit left on the activation. The licensing come in the form of a physical file that is coded to your DISK S/N number PAGIS is installed on. The licenses file must be place in the "C:\Program Files\PlateReader\MDC\Licenses" folder. License files are not transferable.

- **Hotlist API:** This API allows for the addition and modifications of Hotlist and Hotplates via API commands. The modifications do not apply to BOSS deployed hotlist, only for hotlist created by the API.
- **Export Reads:** Allows for the ability to export data to external RestAPI. The GO button will redirect the user to this features configuration screen.

3.18 Info

The Info screen displays additional support contact information including the PAGIS version number and OCR engine. This information is helpful when contacting Technical Support.



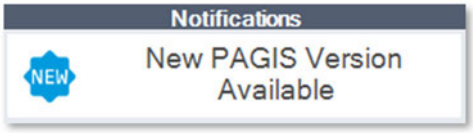
2997

3.19 Camera Firmware Update, (Admin)

Camera firmware update provides a means for Neology to update the camera software to enhance and or correct camera performance. The software nitifcation icon will only apper when a update is avialable.

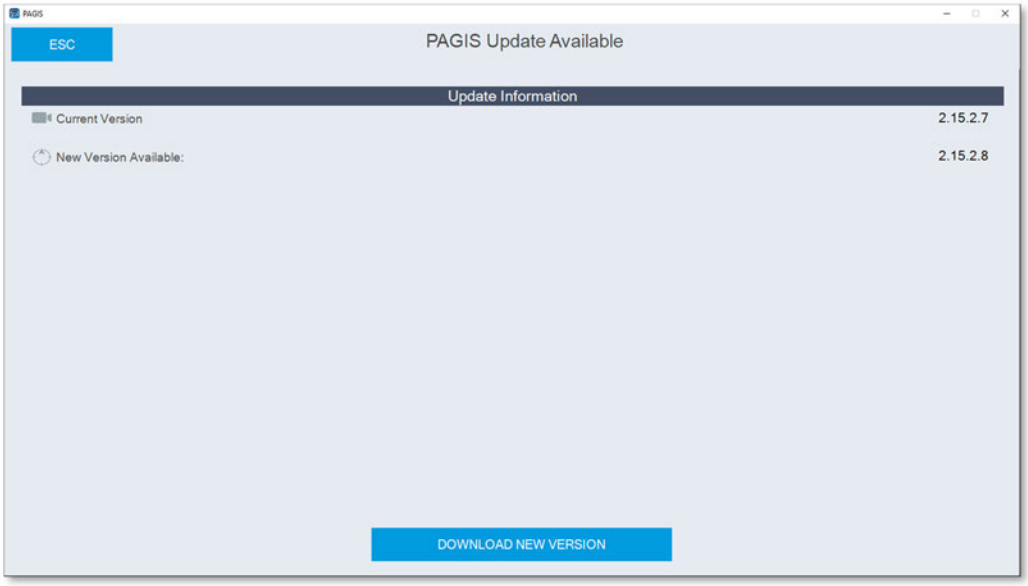
- The firmware update process only updates camera that are attached and function on the mobile processor.
- Administrator must log into PAGIS and apply the FW update. *The update process takes around 4min and should not be interrupted or risk permanently damaging the cameras, PAGIS will return to normal opertaion after update.*
- Once the UPDATE FIRMWARE button is clicked PAGIS will switch to full gray screen with message indicating "**Camera Firmware is Updating**", during this process you'll will notice small command windows opening on top of PAGIS, these windows represent the firmware being applied to each active camera so you may notice one or server depending. Once completed a message will appear "**Firmware Updated Successfully**" then PAGIS will return to normal operation. *After FW completion and return to "Live View", its requiered to cycle thought the "Cam Mods" to refresh cameras.*

Firmware Updater Window List.



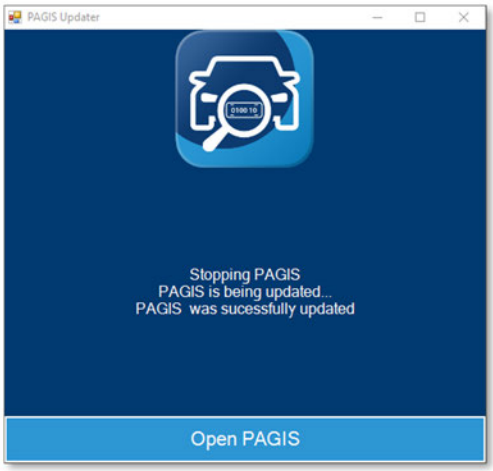
- Title "Camera Name".
- Camera serial number.
- Position.
- Current FW version.
- New FW version available.

2998



3.19.1 PAGIS Software Update, (Admin)

New in version 2.15 is the ability to remotely update the PAGIS software. Provided that the Client or Standalone PAGIS has internet access, updates are accessible.



- In Client/Server confriguration the administrator must make sure that PAGIS is activly communication to the prcessor, essentaly the mobile system is in working order.
- When update avilable PAGIS will display the SW notifcation icon  in the system menu. Clicking the notifcation icon will indicate to the user weather it's a SW or FW update, for PAGIS update uniqe badge will apper indicating PAGIs has a newer version avilable.

- To continue the PAGIS update, clicking the update badge will open the update information screen indicating your current and newer version of PAGIS available.

- To start the software update, click the DOWNLOAD NEW VERSION button. PAGIS will indicate to the user that the software is updating and do not power off the system, please wait.
- Once the update is completed a new window will appear saying the update was completed successfully and give the user the option to open PAGIS.

2999

PAGIS INSTALLATION GUIDE

4.1 PAGIS System Requirements

The PAGIS Software requires the following minimum system requirements for the mobile data computer:

- Intel I3 CPU at 2.0 GHz or higher.
- Windows Operating System (Win10& 11).
- Microsoft .NET Framework 4.8.
- 8 GB of RAM.
- At least 1 GB of free disk space.
- SVGA display with a minimum resolution of 800 x 600 pixels.
- Available 10/100/1000 Ethernet port.
- Keyboard and mouse, or a touch screen monitor.
- Internet access needed for mapping and Firmware update.

4.2 PAGIS Prerequisites

Prerequisites:

1. Ability to install software.
2. Ability to configure the network adapter.
3. PAGIS 2.15 and above are only compatible with SX4 and SX4e Processors.

Network Adapter Settings:

The Neology mobile processor operates based on a static IP and is preassigned the IP address of 192.168.200.201. When connecting laptop/MDC to the mobile processor your computer must be on the same IP network as the mobile processor, in fact the connecting compute must adopt one octet lower than the assigned IP of the processor for MDC installed PAGIS to connect to the mobile processor and receive data from the ALPR cameras. Below are the steps to configure your computer.

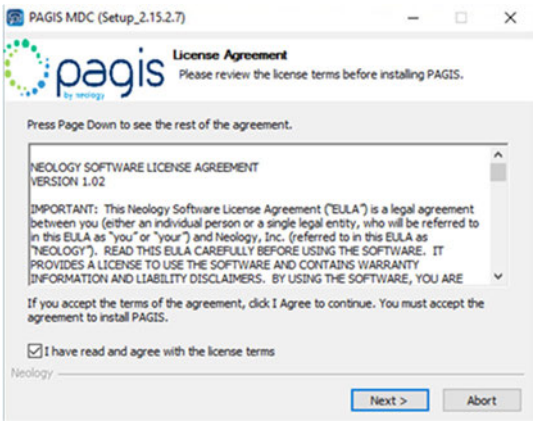
1. Navigate to Adapter Options in Windows and right click on the adapter and select properties.
2. Click to select IPv4 and click Properties
3. Click the radio button "Use the following IP Address" to set the Static IP address.
4. Enter 192.168.200.200 in "IP address" section.
5. Enter 255.255.255.0 in "Subnet mask" section.
6. Either leave the "Default gateway" blank or enter 192.168.200.201.
7. Click OK to save changes.

NOTE: The Mobile processor is pre-configured to relay its camera data connection to the 192.168.200.200 IP address, using alternative IPs on MDC/Laptop will result in the software's failure to communicate with the cameras when using VPRelay mode.

3000

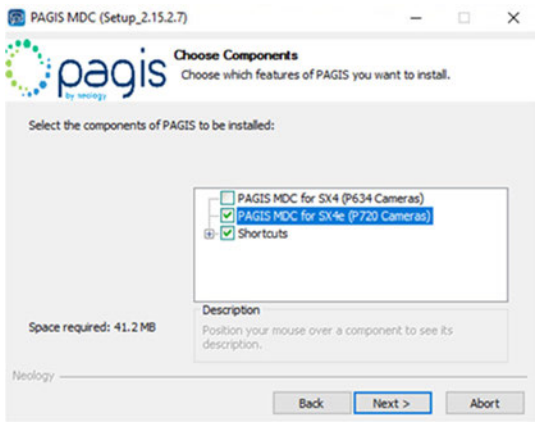
Alternative IP Network:
It is possible to configure the Neology mobile processor to utilize a different IP network in conjunction with MDC/Laptop. Typical scenario would be when mobile processor and MDC/Laptop are connected through an onboard modem that has an Ethernet switch with available ports. Below are the general steps to changing IP network.

Win10 variant of SX4e Instructions:

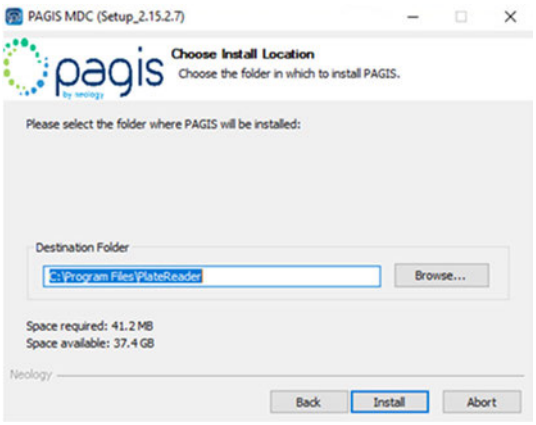


1. Follow the step above to connected to Neology mobile processor.
2. Remote desktop to Neology mobile processor and login using credentials provided in the SX4e manual.
3. In Windows "Services" find and stop the "VPRELAY" service.
4. Navigate to "D:\PlateReader\VPRelay" and located file "anpr2.ini and open in notepad.
5. Alter "Address=192.168.200.102" to the IP your MDC/Laptop will assume after change to new network, save and close. The "VPRELAY" service will use this IP address to send camera data to PAGIS running on MDC/Laptop.
6. Alter Neology mobile processors "Ethernet adapter 1" to new IP, refer to SX4e manual for instruction on disabling the "WFManager" so change made to Ethernet are permanently saved.
7. Reboot mobile processor and enable "WFManager".
8. Reassign IP on MDC/Laptop.
9. Start PAGIS on MDC/Laptop and confirm camera connectivity. Refer to FAQs in this manual for troubleshooting tips.

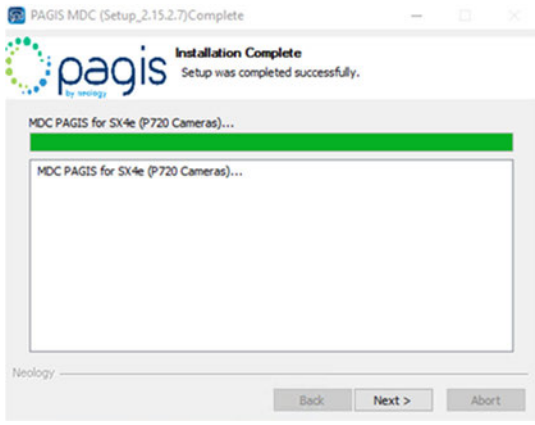
4.2.2 PAGIS Software Installation (MDC)



1. If PAGIS exist on your computer, it is recommended you "EndShift" any existing data, then uninstall PAGIS.
2. PAGIS 2.15 natively only supports Win10 OS versions of the SX4e mobile processor. However, it is possible to update Win7 OS version of SX4 and SX4e with PAGIS 2.15 provide some additional services are installed.
3. Upgrading to Client PAGIS 2.15 also requires that the PAGIS Service i.e. "VPRelay" on the mobile processor be updated to same version.



4. Place the PAGIS installer on your computer's desktop, "PAGIS_Setup_MDC_2.15.x.x.exe".
5. Right click the PAGIS installer executable and select "Run as administrator".



6. Check the license agreement box, then click Next.

7. Select the mobile processor type and alter "Shortcuts" if needed. Next to continue.

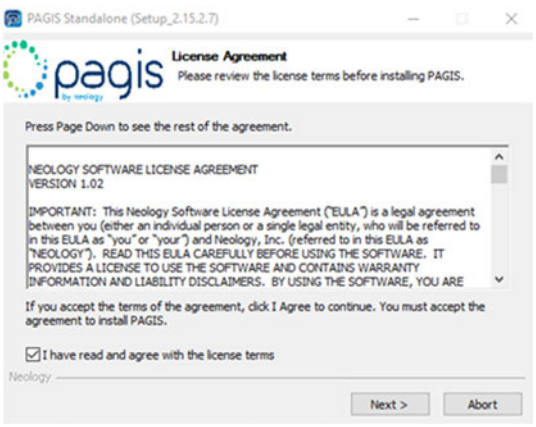
8. Confirm path if upgrading, click Install to proceed.

9. Installation Compete, Next to proceed.
10. Click Finish.

Note: See Appendix A for terminology definitions.

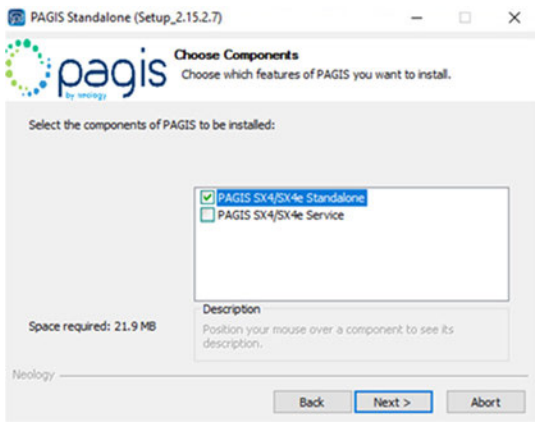
3002

4.2.3 PAGIS Software Installation (Win10 Mobile Processor)

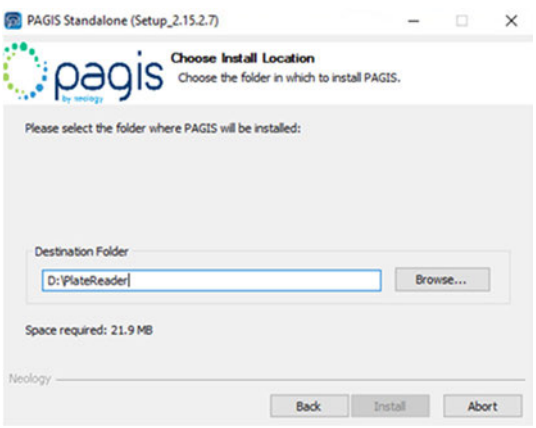


1. PAGIS 2.15 natively only supports Win10 OS versions of the SX4e mobile processor. However, it is possible to update Win7 OS version of SX4 and SX4e units with PAGIS 2.15 provide additional services are installed.
2. PAGIS can only update existing 2.15 versions of PAGIS that reside on the mobile processor. Older PAGIS versions folders should be renamed as backup.
3. The processor must be in its respective mode to update that option as the folder path is hidden when not active, see "Change Mode" in SX4e manual.

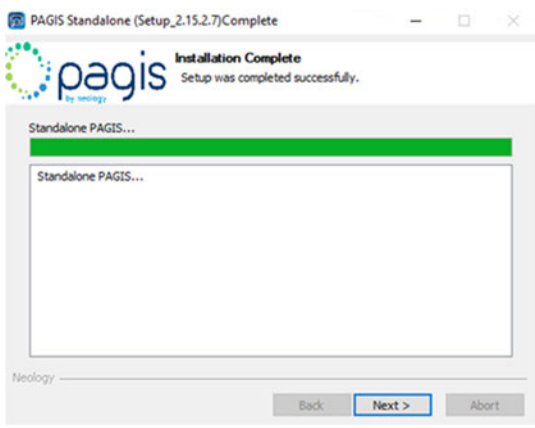
NOTE: If processor is in Service/VPRelay mode you MUST stop the "VPRELAY" service before running the updater.



NOTE: If installing PAGIS 2.15 on any processor that was previously running PAGIS versions older than 2.15, the user MUST obtain an 64bit version of the OCR Cardet file for the cameras to operate properly. This can be accomplished by reaching out to customer support PRIOR to installation at alpr_support@neology.net.



4. Remote desktop into processor or utilize attached monitor/keyboard.
5. Place the installer in D:\ drive on the mobile processor.
6. Execute PAGIS installer.



7. Check the license agreement box, then click Next.

8. Select option to update, next to continue.
   - Standalone= PAGIS login from Processor.
   - Service= PAGIS login from connected Laptop.

- Accept the default path for Win10 OS version of SX4e.
- Win7 path is "C:\PIPSTechnology"

9. Installation Compete, Next to proceed.
10. Click Finish.

Note: See Appendix A for terminology definitions.

3003

4.2.4 PAGIS Software Installation (Win7 Mobile Processor)

PAGIS 2.15 requires .NET 4.8, C++ & updated drives that are not natively present in Windows 7 processors, the following components need to be added before PAGIS 2.15 will work correctly.

1. The WFManger write protection on the processor must be "DISABLED" prior to installing the below items, see the appropriate processor SX4 or SX4e for instructions.
2. Install .NET 4.8 "**ndp48-x86-x64-allos-enu.exe**". https://go.microsoft.com/fwlink/?linkid=2088631
3. Install C++ Ver 14.28 or newer "**VC_redist.x64.exe**". https://aka.ms/vs/17/release/vc_redist.x64.exe
4. Install Drivers "**WDT_DIO_Setup_v2.2.9.1(x64).**exe" or newer. https://www.neousys-tech.com/en/support-service/resources/category/57-nuvo-2000-driver?download=319:wdt-dio&start=10
5. The user MUST obtain an 64bit version of the OCR Cardet file for the cameras to operate properly. This can be accomplished by reaching out to customer support PRIOR to installation at alpr_support@neology.net.
6. In all component installations, follow the default prompts they provide to install the programs.
7. Once all the addtinal components are installed, restart the processor.
8. Install PAGIS 2.15 as described in section 4.2.3.
9. MAKE SURE you have added the 64bit version of the Cardet file to either the VPRelay or Standalone folder on the mobile processor, depending on which operational mode you're using.
10. Once PAGIS operation is confirmed, re-enable the WFManger write protection.

3004

TROUBLESHOOTING TIPS

This section provides some basic troubleshooting tips and information

5.1 Troubleshooting & Tips

- The first login to PAGIS after the new install of an unconfigured version does not require a username or password. Simply click Login to be granted Admin access to the software.
- A good means to testing the communication from the MDC to BOSS is to telnet (over TCP 8092) via command prompt.
- A good means to testing the communication from the MDC to the SX Processor is to telnet (over TCP 9000) via command prompt.
- For many other troubleshooting tips, see Appendix C – Frequently Asked Questions

5.1.1 PAGIS with NetMotion VPN

Agencies utilizing NetMotion VPN software on the MDC will need to apply the following passthrough steps:

1. Login to the NetMotion server as administrator
2. Click Settings > Then select Client > Select Global Client Settings > Then select Passthrough List
3. Click the "Add..." button on the right > Select "Network Address"
4. Enter the following settings (as shown):
    A. IP address:192.168.200.0 (the zero is correct, it's an IP address "range") Subnet Mask: 255.255.255.0.
    B. Keep all other settings default (as shown) and click OK.
5. The MDC must then disconnect from NetMotion and reconnect again for the settings to be applied locally.

5.1.2 Cisco VPN Client:

Make sure Stateful Firewall is unchecked and "Allow Local LAN". If utilizing

5.1.3 Microsoft .NET 4.8 or newer Installation

The PAGIS 2.15 Software requires *Microsoft .NET Framework 4.8* or newer. If the MDC doesn't have .NET, it can be downloaded from the Microsoft website.

5.1.4 Firewall Settings for Client-Server Installations

For client-server installations, the Windows Firewall needs to allow the SX Processor and the MDC to communicate. If the MDC is maintained by a Network Administrator, he or she should be contacted before making changes to the firewall. The command prompt commands for the exceptions are below

Option 1: Allow Microsoft Windows Version 8 or newer to auto-detect the launch of the PAGIS.exe application and use the wizard to add the PAGIS.EXE to the exception list (making note of Public or Private Network settings as necessary).

Option 2: Add PAGIS to the exception list manually by browsing to the install path of PAGIS. The default is below for reference: "C:\Program Files\MDC\PAGIS.exe".

Option 3: Add the communication ports manually:
TCP in/out 8092 = Pagis sync port to BOSS back-office software.
TCP in/out 9000 = Mobile processor camera feed port.
TCP in/out 9001 = Mobile processor camera snapshot port.
TCP in/out 32023 = Mobile processor camera setup port.
TCP in/out 10000 = Mobile processor data capture port.
NOTE: XML Datastream uses TCP 10100 and TCP 7000

3005 PAGIS/BOSS4 CONFIGURATION

For PAGIS to function properly, it must have an open network connection to the host back office.

6.1 Creating a New Device in BOSS4

Once network communication to BOSS4 has been established from the vehicle, a new device must be "built" or added to the Device List in BOSS4 before it can be used. The approved way to do this, is to simply perform a Begin Shift from the PAGIS software. NOTE: The computer name is what will be displayed in BOSS as device name.

1. At the PAGIS Live View Screen, click the Begin Shift button to launch a manual the sync.
2. If the computer has previously been setup to communicate with BOSS and is already enabled, the sync transfer window should appear in the middle of the Live View Screen.
3. If this is a new/disabled device, a message indicating "HttpStatusCode Unauthorized" will be displayed. This indicates the BOSS4 server has received the sync request but has rejected it due to device status.
4. Once the BOSS Admin has enabled the device, the Status Code error will not appear again, and syncs should complete as configured in BOSS4.

6.2 Enabling a New Mobile System in BOSS4

Installing PAGIS and configuring the network settings is only the first step in making the ALPR unit operational. Once PAGIS is configured to work with or on the SX Processor and the mobile cameras, it must then be enabled in BOSS4 before synchronizations can take place. NOTE: By default, every new device recognized by the BOSS4 server is disabled until the admin enables it. This is done for security reasons to prevent unauthorized communications.

1. Log into the BOSS4 URL with Admin privileges and navigate to the Resources pulldown menu.
2. Find the Devices from the menu options. The new device should now be listed.
3. Click the Enable slide toggle to enable device, located in the same row in column title "Enabled".
4. This will enable the device, synchronization between BOSS4 and PAGIS is allowed.

NOTE: Once the Device is enabled the admin needs to assign Users and Hotlist distribution.

6.3 Assigning Ownership to a Device in BOSS4

Every new device added to BOSS4 allows for Admin level access into PAGIS without the use of a username or password. To password protect the PAGIS software, the BOSS Administrator must deploy Users and or Groups of Users to the new device in BOSS4.

NOTE: For more detail on Users, User Groups, Sites, and Roles, refer to the BOSS4 manual.

1. Login to the BOSS4 URL with Admin credentials and navigate to the Resources pulldown menu.
2. Select Devices from the menu options. The new device should now be listed.
3. Click the name of the Device to select it. (This will open the device details windows on the left)
4. Locate the "Groups and Users" button and a list of all available Groups of Users will appear.
5. Select the users to be assigned to the device.
6. Click the Save button at the bottom right of the Edit window.

6.4 Assigning Hotlists to a Device in BOSS4

For the PAGIS users to receive alerts, one or more of the stored hotlists in BOSS4 must be distributed to the new device. NOTE: For more information on building and configuring Hotlists, refer to the BOSS4 manual.

1. Login to the BOSS4 URL with Admin credentials and navigate to the Resources pulldown menu.
2. Select Devices from the menu options.
3. Click the Deployment hotlist button and select the desired hotlist to be deployed.
4. Click the Save button at the bottom right of the Edit window.

3006

APPENDIX A: THE GLOSSARY

ALPR/ANPR	"Automatic License Plate Recognition/Automatic Number Plate Recognition".
BOSS	"Back Office System Software". This is the ALPR server.
GPS	"Global Positioning System".
GUI	"Graphical User Interface".
Hotlist	A database or list that contains vehicle license plates of interest ("alert list").
IR	Infrared light.
License Plate	Also called a tag or number plate.
MDC	"Mobile Data Computer". This is the tablet or laptop in the vehicle.
OCR	"Optical Character Recognition" (also referred to as a "cardet").
OS	"Operating System".
PAGIS	This is the License Plate Capture Software most commonly used in an ALPR vehicle.
Service	Operation mode of the PAGIS software. Service or "VPRelay" is used to refer to PAGIS instance that is running directly on the Neology mobile processor without a GUI interface, this mode is intended to run in conjunction with MDC version of PAGIS installed on laptop connected via Ethernet.
Standalone	Operation mode of the PAGIS software. Standalone is used to refer to PAGIS instance that is running directly on the Neology mobile processor with a GUI interface. Same a "Service"
SX	SX is a short notation referencing Neology mobile processor, commonly the SX is followed by the generation number of the processor, i.e. SX3, SX4 & SX4e.
UI	A "User Interface" is the means in which the user can access and navigate the software.
USB Flash Drive	Also called a thumb drive or memory stick.
VLP	"Vehicle License Plate".
VPN	"Virtually Protected Network".
VPRelay	Operation mode of the PAGIS software. VPRelay or "Service" is used to refer to PAGIS instance that is running directly on the Neology mobile processor without a GUI interface, this mode is intended to run in conjunction with MDC versions of PAGIS installed on laptop connected via Ethernet.
Whitelist	Opposite of a standard BOSS Hotlist. This is a list of license plates that should not trigger an alert.

APPENDIX B: PAGIS SOFTWARE DATABASE FILE

This section is used to configure the PAGIS Software when it's not being used with the Back Office System Software (BOSS). Comma-separated value (CSV) format is the only format the PAGIS Software supports for importing data into the vehicles for the purpose of matching against the captured license plate data. PAGIS will support CSV files with any number of columns, called "fields", as long as the first field is the VLP (Vehicle License Plate). NOTE: The CSV format is standard ASCII.

Example CSV Files:

1. *ABC123, Red, Ford, Explorer, 1996, WANTED XYZ456, Blue, Audi, A4, 2001, MURDER*
2. *45ABC234, Vehicle wanted in associated with a kidnapping on 12/5/2005 995BD233, Vehicle reported stolen from Liz's Lounge at 6am on 12/1/2005*
3. *UIO223 ABC123*

General Function:

PAGIS calls/utilizes files in pairs. Each database in PAGIS is created using two files: a CSV file, and an INI configuration file. Without both files, the database will not load and PAGIS will not "see" it. Each CSV file/hotlist must have the exact same name as the INI configuration file. Example: Stolen.ini and Stolen.csv will work. Stolen.ini and Plates.csv will not.

Reading an INI Configuration File

Lines that appear in brackets [] are called "Headings". The labels that appear inside the headings, are called "values". Values will always contain an equal sign (=). If a line starts with a semicolon, it is a comment and is not read by the software. There is no limit to the number of comments in the INI file.

The [SETTINGS] Heading

The values in the Settings heading are: NumFiles, DbName, DbColor, Priority, Covert, Alarm, and NumFields.

- NumFiles: Determines how many database files the system should split the specified hotlist into. Generally, this value is set to 1. But for larger hotlists (200,000+ lines), a number of 2-5 may be more desirable.
- DbName: Tells the PAGIS Software what the displayed name of the hotlist should be.
- DbColor: Sets the display color of the hotlist. This is merely an esthetic setting and not a functional setting. The right-hand side of the equal sign is the HEX value representing the ARGB values for the color. If this value is unknown, the admin should simply leave this line out of the file.
- Priority: Designates the priority of this hotlist in relation to other hotlists in the system. The highest priority database is 1 and the lowest is 999. NOTE: if a plate resides on multiple lists the higher priority will be alerted first.
- Covert: Determines whether standard PAGIS Software users are alerted when a hit is made from the database. Covert database can be used for hotlists that are included for information-gathering purposes rather than eliciting user intervention. The system can also be configured to notify via email or SMS message when a hit is made from a covert hotlist.
- Alarm: Sets the audible alert to be played in PAGIS when a hit is made from the hotlist. Values for Alarm are LOW, MED, HIGH
- NumFields: Indicates how many fields (columns) are in the CSV file. If this value is less than the actual number of fields in a file, then the additional fields are placed in the general information area. This value also determines the number of headings of the [Field x] present in the file. For example, if NumFields=2 then there will be two additional headings, [Field 0] and [Field 1]. NOTE: Adding "Creation =" will place the timestamp the hotlist was added to the Begin Shift file.

3008

The [FIELD X] Heading

Under the Field heading, there are two configurable values, "Name" and "PAGIS".

- Name: Tells the system what the name of this field is. If no name is specified, then no name given to the field. The format is Name = <field>
- PAGIS: Specifies how to display the field in the GUI/PAGIS Software.
    - If no value is defined, the field is placed as general information.
    - Values 1-5 represent special fields for the PAGIS Software that translate to the information being displayed in a box of its own when a hit is processed.
    - A value of 6 represents an ID number to cross reference the vehicle from the hotlist with a person from the wanted list.
    - A value of 7 is identical to leaving the value undefined.

Sample INI Configuration File

[Settings] NumFiles=1
DbName=Stolen Vehicles DbColor=ffffff00 Priority=5 Covert=False Alarm=MED NumFields=8
;PAGIS Values
;0 is VRM / VLP (Not User Definable, always Field 0)
;1 is Special Field 1
;2 is Special Field 2
;3 is Special Field 3
;4 is Special Field 4
;5 is Special Field 5
;6 is ID Number (PNC ID, Driver's License, Social Security Number, etc.)
;7 is General Info (Default for all undefined fields) [Field 0]
PAGIS=VRM

Sample INI Configuration File

[Field 0] Name=VRM
[Field 1] Name=Color
PAGIS=3 [Field 2]
Name=Make PAGIS=1
[Field 3] Name=Model
PAGIS=2 [Field 4]
Name=Action PAGIS=4
[Field 5] Name=Warning
PAGIS=5 [Field 6]
Name=PNCID PAGIS=6
[Field 7] Name=Intelligence PAGIS=7

To deploy a locally created hotlist to PAGIS without BOSS.

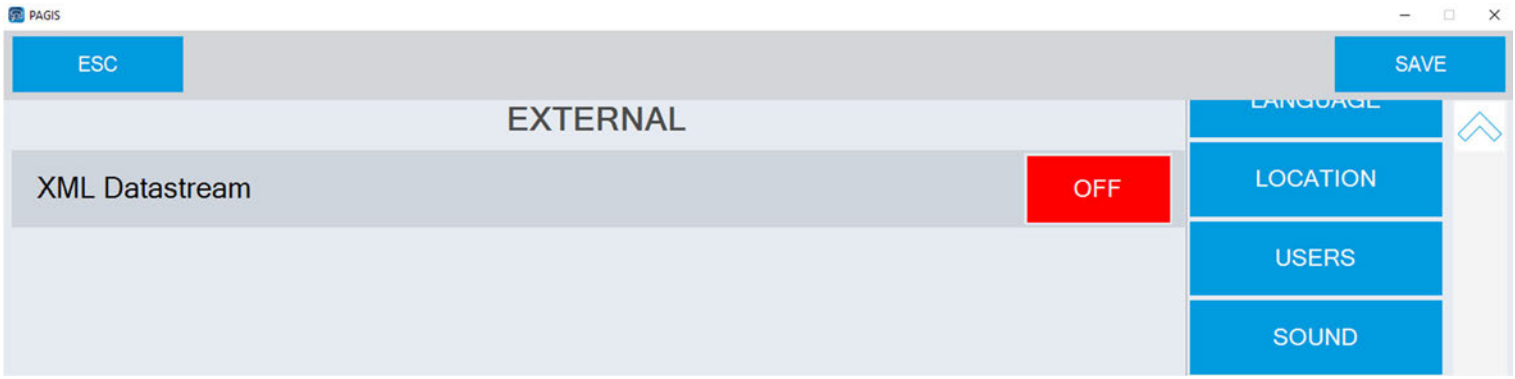
1. Create a folder called "beginshift" (Without Quotes) on the root drive of whatever drive media you're using that PAGIS has access to, remember only on root drive, no subdirectories. Example C:\beginshift.
2. Place the .CSV & .INI in the newly created beginshift folder.
3. Log into PAGIS and configure Sync to access the drive where your file/files are located. When setting disk drive letter in PAGIS no need to indicate folder path as PAGIS assumes by default that "beginshift" exist on the root drive your selecting, refer to section 3.1 in this manual.
4. Go back to main screen and do beginshift.

3009

APPENDIX C: XML DATASTREAM

Overview

The XML Datastream can be used to push the current data from a running PAGIS system to another application. The data available via the Datastream includes reads, hits, and current images. The connection to the Datastream is a TCP/IP socket (default ports: 10100 & 7000). When initially connecting, an XML packet is passed to the PAGIS Software to subscribe to the Datastream. The data connection is configured as "push only" and doesn't allow receipt of additional external data. The current image stream is pushed periodically whereas reads and hits are passed as close to real-time as possible.



PAGIS Port

By default, the PAGIS.exe.config file has a key for defining the port number for the XML Datastream. The default value is 10100 & 7000. This setting does not need to be changed unless the default ports are unavailable.
The key has the following format:

```
<!--XML Datastream Settings/-->
        <add key="External.TCP.Querier.Port" value="7000" />
        <add key="XML.Datastream.Port" value="10100" />
```

PAGIS Admin Setting

To utilize this feature, the XML Datastream needs to be enabled in PAGIS. To do this, navigate to Settings > Admin > External. The "XML Datastream" option should be turned on as shown in the image below and then saved.

XML Subscription

When initially connecting to PAGIS, the Datastream subscriber will receive only a Heartbeat XML packet (see example below) until PAGIS receives a subscription packet from the subscriber. The properly formed subscription packet defines the specific data that the subscriber wishes to receive.

Heartbeat XML Packet

The Heartbeat Packet is sent once every 10 seconds. The purpose of the heartbeat packet is to let the subscriber know that the communications channel is working between PAGIS and the subscriber. The timestamp is sent in the format of "`YYYY-MM-DDThh:mm:ss`".

Sample of the Subscription XML Packet

```
<?xml version="1.0" encoding="utf-8"?>
<pips-datastream-heartbeat>
  <timestamp>2011-10-13T09:41:56Z</timestamp>
</pips-datastream-heartbeat>
```

3010

Subscription XML Packet

A properly formed subscription packet will have all the data being requested from PAGIS. To receive a specific datatype, a tag must be added to the subscription to define the desired datatype. The valid entries for datatype are: Reads, Hits, and Current Image.

- Subscribing to Reads will send all plates that are detected by PAGIS regardless of whether it has an associated hit.
- Subscribing to Hits will send all plates detected by PAGIS that are on a hotlist and the associated Read data for that Hit.
- Subscribing to the Current Image Datastream offers two additional attributes that may be passed as well. The "camera" attribute can be set to determine which camera the image is coming from. If no value is passed for "camera" the value defaults to zero. The "milliseconds" attribute determines how long the system waits between sending the current image. The default value for milliseconds is 1000. If a value of zero is sent, the system will send a single snapshot.

Sample of the Subscription XML Packet

```
<?xml version="1.0" encoding="utf-8"?>
<pips-datastream-subscription>
  <datatype>Reads</datatype>
  <datatype>Hits</datatype>
  <datatype>HitTrigger</datatype>
  <datatype camera="0" milliseconds="1000">CurrentImage</datatype>
</pips-datastream-subscription>
```

Hit Trigger

The HitTrigger packet is used to alert other systems that a hit has occurred on the PAGIS system. The packet is greatly simplified from the Reads/Hits XML packet and only contains the license plate text, timestamp, and a description of the hit. The description will contain the name of the hotlist that originated the hit and may be used to send additional information.

Sample of the HitTrigger XML Packet

```
<?xml version="1.0" encoding="utf-8"?>
<pips-datastream-hittrigger>
  <timestamp>2011-10-13T09:41:56Z</timestamp>
  <vrm>SBX989</vrm>
  <hotList name='Alpha'>
    <field1><![CDATA[This is Alpha Field 1]]></field1>
    <field2><![CDATA[This is Alpha Field 2]]></field2>
    <field3><![CDATA[This is Alpha Field 3]]></field3>
    <field4><![CDATA[This is Alpha Field 4]]></field4>
    <field5><![CDATA[This is Alpha Field 5]]></field5>
  </hotList>
</pips-datastream-hittrigger>
```

Reads/Hits XML Packet

The Reads/Hits packet contains information about the plate that was detected. This information includes:

- Source – The device that detected the plate
- Camera – The camera on the device that detected the plate
- Read – The Information about the plate that was captured
- VRM – The plate translated to text
- Timestamp – When the read occurred
- GPS – The location coordinates where the read took place
- ImagesPatch – The image of plate in infrared (IR)
- Overview – The image of scene/car in Color
- Hits – The associated hotlist(s) data

3011

Sample of the Current Image XML Packet

NOTE: The Current/Live Image XML Packet contains the current image from the camera. It is sent every 5 seconds.

```
<?xml version="1.0" encoding="utf-8"?>
<pips-datastream-currentimage>
  <timestamp>2011-10-13T09:41:56</timestamp>
  <data>(Image data here)</data>
</pips-datastream-currentimage>
```

Sample Read with Hits XML

```
<?xml version="1.0" encoding="utf-8"?>
<pips-datastream-reads>
  <reads>
    <source>
      <name>PAGIS_90210</name>
      <software name="PAGIS" version="2.6.8" />
      <camera name="Front Left">
        <read>
          <state>TN</state>
          <vrm>SBX989</vrm>
          <confidence>97.5</confidence>
          <timestamp>2011-09-30T09:30:10Z</timestamp>
          <username><![CDATA[shronski]]></username>
          <gps>
            <latitude>-87.4567</latitude>
            <longitude>98.7654</longitude>
          </gps>
          <images>
            <image name='Patch'>
              <type>IR</type>
              <data>

<![CDATA[/9j/4AAQSkZJRgABAQAAAQABA.....................................................................................

APPENDIX D: Hotlist API

Overview

Hotlist API allows for the addition and modifications of Hotlist and Hotplates via API commands. The modifications do not apply to BOSS deployed hotlist, only for hotlist created by the API.

1. API features only applies to PAGIS version 2.15.2.5 and newer. This newer version of PAGIS includes the first version of the licensing which we can enable or disable the Hotlist API feature.
2. We generate the license using the serial number of the disk PAGIS is running from. That value can be obtained from the PAGIS interface by clicking twice on the version number at the login screen or in the system status view in the software, CTRL-C to copy the S/N into clipboard.
3. Send the captured disk S/N into Neology support at alpr_support@neology.net, titling your request as "PAGIS API License Request" and you must reference a case# or customer the request is linked to.
4. The license should be placed in the Licenses Folder in the PAGIS Directory, PAGIS will read that file and enable the API service.
5. Future licensing features will have the option to enable specific features in the API.

This API includes the following methods to add, remove or modify PAGIS Hotlist and Hotplates databases.

- The API is run locally in PAGIS, once it's started.
- API exposed port is TCP/IP 8080.
- Port number used can be changed by editing the PAGIS file "PAGIS.exe.config" file in section <configurations> under <appsettings>, value is <add key="APIPort" value="8080" />.
- HTTP request URL syntax is http://127.0.0.1:8080/api/v1/hotlist, this URL can also be used in a browser to initially test if API is operational.

  Hotlist:
  - GET (return all hotlists or one)
  - POST (Insert Hotlist)
  - PATCH (Update hotlists content partially)
  - PUT (Update entire content of hotlists)
  - DELETE (Remove Hotlists from database)

  Hotplates:
  - GET (return all hotplates or one from a specific hotlist)
  - POST (Insert Hotplates in a hotlist)
  - PATCH (Update hotplate content partially from a specific hotlist)
  - PUT (Update entire hotplate content from a specific hotlist)
  - DELETE (Remove Hotplate from a specific hotlist)

3013

API Hotlists Commands

Process hotlists information stored in PAGIS

1.1 GET Hotlists

Summary GET Hotlists:	
Service Name	**getHotlists**
URL	**/api/v1/hotlists**
Description	**This method returns all hotlists stored in PAGIS database.**

Parameters: = No parameters

Responses:

Code	Description

201	{
	"Data": [
	{
	"Id": 3,
	"Name": "Stolen Vehicles",
	"Color": "#2A4454FF",
	"Alarm": "MED",
	"Priority": 100,
	"Timestamp": "637822639495249351",
	"isCovert": false,
	"isExternal": false,
	"isWhitelist": false,
	"type": 0
	}
	]
	}

500	**Internal Server Error**

3014

1.2 POST Hotlists:

Summary POST Hotlists:	
Service Name	**addHotlist**
URL	**/api/v1/hotlists**
Description	**Insert a new hotlist to PAGIS database**

Parameters:	
Name	**Description**

HotlistsItem (body)	<pre>{
	  "Name": "Stolen Vehicles",
	  "Color": "#2A4454FF",
	  "Alarm": "MED",
	  "Priority": 100,
	  "Timestamp": "637822639495249351",
	  "isCovert": false,
	  "isExternal": false,
	  "isWhitelist": false,
	  "type": 0,
	  "Id": 54
	}</pre> **Parameter content type: application/json**

Note: the "Timestamp" variable, regardless of value set, the timestamp in PAGIS will read 1/1/1753. You must use the PATCH hotlist command to update timestamp, typically after adding hotplate.

Responses:	
Code	**Description**
201	**Hotlist created**
500	**Internal Server Error**

1.3 PUT Hotlists

Summary PUT Hotlist	
Service Name	PUTHotlist
URL	/api/v1/hotlists
Description	Update entire hotlist content

Parameters:

Name	Description

HotlistsItem (body)	{
	"Id": 3,
	"Name": "Stolen Vehicles",
	"Color": "#2A4454FF",
	"Alarm": "MED",
	"Priority": 100,
	"Timestamp": "637822639495249351",
	"isCovert": false,
	"isExternal": false,
	"isWhitelist": false,
	"type": 0
	}
	Parameter content type: application/json

Responses:

Code	Description
200	Hotlist Updated
404	Hotlist does not exist in PAGIS database
500	Internal Server Error

1.4 GET Hotlist

Summary GET Hotlists:	
Service Name	GetHotlist
URL	/api/v1/hotlists/{id}
Description	Get hotlist content from ID

Parameters:	
Name	Description
Id *required *Integer* (Path)	Identifier of the hotlist

Responses:	
Code	Description

200	• {
	"Data": {
	"Name": "Stolen Vehicles",
	"Color": "#2A4454FF",
	"Alarm": "MED",
	"Priority": 100,
	"Timestamp": "637822639495249351",
	"isCovert": false,
	"isExternal": false,
	"isWhitelist": false,
	"type": 0
	}
	}

404	Hotlist does not exist in PAGIS database
500	Internal Server Error

3017

1.5 PATCH Hotlist

Summary PATCH Hotlists:	
Service Name	**PatchHotlist**
URL	**/api/v1/hotlists/{id}**
Description	**Modifies partial content of hotlist stored in PAGIS database**

Parameters:	
Name	**Description**
Id *required ***Integer** **(Path)**	**Identifier of the hotlist**

HotlistsItem
(body)
	Hotlist item parameters to update
	• {
	"Color": "#2A4454FF",
	"Alarm": "MED",
	"Priority": 100
	"Timestamp": "5/26/2022 4:11:11 PM"
	}
	Parameter content type: text/plain

Note: Please note the time/date format to use when updating the "Timestamp"

Responses:	
Code	**Description**
200	**Hotlist was modified**
404	**Hotlist does not exist in PAGIS database**
500	**Internal Server Error**

3018

1.6 Delete Hotlist

Summary DELETE Hotlists	
Service Name	DeleteHotlist
URL	/api/v1/hotlists/{id}
Description	Deletes hotlist stored in PAGIS database from id

Parameters:	
Name	Description
Id *required *Integer* (Path)	Identifier of the hotlist

Responses:	
Code	Description
200	Hotlist was deleted
404	Hotlist does not exist in PAGIS database
500	Internal Server Error

API Hotplate Commands

Process hotplate information stored in PAGIS

2.1 GET Hotplates

Summary GET Hotplates	
Service Name	**getHotplates**
URL	**/api/v1/hotlists/{hotlistId}/hotplates**
Description	**The user can get all hotplates stored in a specific hotlist.**

Parameters:	
Name	**Description**
HotlistId *required ***Integer*** **(Path)**	**Identifier of the hotlist**

Responses:	
Code	**Description**

200	{
	"Data": [
	{
	"Id": 32,
	"VRM": "ABC123",
	"Field1": "Toyota",
	"Field2": "Corolla",
	"Field3": "2016",
	"Field4": "Red",
	"Field5": "CA",
	"PNCID": "13123",
	"Information": "Stolen vehicle",
	"BOSSID": " "
	}
	]
	}

404	**Hotlist does not exist**
500	**Internal Server Error**

3020

2.2 POST Hotplate

Summary POST Hotplates	
Service Name	**AddHotplates**
URL	**/api/v1/hotlists/{hotlistId}/hotplates**
Description	**The user can insert a hotplate into a hotlist**

Parameters:	
Name	**Description**
HotlistId *required ***Integer** **(Path)**	**Identifier of the hotlist**

hotplates
(body)
	{
	"hotplates":[
	{
	"VRM": "ABC123",
	"Field1": "Toyota",
	"Field2": "Corolla",
	"Field3": "2016",
	"Field4": "Red",
	"Field5": "CA",
	"PNCID": "13123",
	"Information": "Stolen vehicle",
	"BOSSID": 114
	}
	]
	}
	Parameter content type: application/json

Responses:	
Code	**Description**
200	**Hotplate Inserted**
404	**Hotlist does not exist**
500	**Internal Server Error**

3021

2.3 GET Hotplate

Summary GET Hotplates	
Service Name	**GetHotplate**
URL	**/hotlists/{hotlistId}/hotplate/{hotplateId}**
Description	**The user can get the hotplate stored in a specific hotlist**

Parameters:	
Name	**Description**
HotlistId *required ***Integer*** **(Path)**	**Identifier of the hotlist**
HotplateId *required ***Integer*** **(Path)**	**Identifier of the Hotplate**

Responses:	
Code	**Description**

200	{
	"Data": {
	"Id": 32,
	"VRM": "ABC123",
	"Field1": "Toyota",
	"Field2": "Corolla",
	"Field3": "2016",
	"Field4": "Red",
	"Field5": "CA",
	"PNCID": "13123",
	"Information": "Stolen vehicle",
	"BOSSID": " "
	}
	}

404	**Hotlist does not exist**
500	**Internal Server Error**

3022

2.4 PATCH Hotplate

Summary PATCH Hotplates	
Service Name	**PatchHotplate**
URL	**/hotlists/{hotlistId}/hotplate/{hotplateId}**
Description	**Modifies partial content of hotlplate stored in PAGIS database**

Parameters:	
Name	**Description**
HotlistId *required ***Integer*** **(Path)**	**Identifier of the hotlist**
HotplateId *required ***Integer*** **(Path)**	**Identifier of the Hotplate**

**HotlistsItem
(body)**
	Hotplate parameters to update
	{
	"Field1": "Toyota",
	"Field2": "Corolla",
	"Field3": "2016"
	}
	Parameter content type: text/plain

Responses:	
Code	**Description**
200	**Hotplate was modified**
404	**Hotlist or hotplate does not exist in PAGIS database**
500	**Internal Server Error**

3023

2.5 Delete Hotplate

Summary DELETE Hotplates	
Service Name	DeleteHotplate
URL	/api/v1/hotlists/{hotlistId}/hotplate/{hotplateId}
Description	Deletes hotlplate from a specific hotlist stored in PAGIS database.

Parameters:	
Name	Description
HotlistId *required *Integer* (Path)	Identifier of the hotlist
HotplateId *required *Integer* (Path)	Identifier of the Hotplate

Responses:	
Code	Description
200	Hotplate was Deleted
404	Hotlist or hotplate does not exist in PAGIS database
500	Internal Server Error

3024

2023 AXON ROADSHOW

The Axon Roadshow is coming! Axon is excited to visit your area as part of our 2023 Axon Roadshow. Join us for a day of low-stress demos and of course some free lunch and swag–see you on the road!

TUESDAY – OCTOBER 31ST 10:00 AM – 2:00 PM

HOST:
Plymouth Police Department

LOCATION:
20 Long Pond Rd, Plymouth, MA 02360

- **VIRTUAL REALITY**
- **TASER 7**
- **AXON BODY 3**
- **EVIDENCE.COM**
- ***TASER 10**

- **AXON AID**
- **CAMERA MOUNT SWAP**
- **FLEET 3 + ALPR**
- **AXON AIR/DRONES**
- **AXON BODY 4**

** COME EXPERIENCE THE START OF A NEW ERA IN LESS-LETHAL TECHNOLOGY. DEPLOY A TASER ENERGY WEAPON AT NEARLY DOUBLE THE DISTANCE OF OUR PREVIOUS WEAPONS.*

WHO SHOULD ATTEND:

If you work in Law Enforcement, Fire, EMS, Corrections, Public Safety, and local government, we encourage you to attend. Roadshow events give you hands-on time with technology built to make you and your community safer.

For more information contact: roadshow@axon.com

The Benefits of ALPL

Supporting Police Work

- ❖ Recovery of stolen vehicles
- ❖ Motorway monitoring
- ❖ Disrupting major crime and Terrorism
- ❖ Surveillance
- ❖ Border control
- ❖ Homeland Security initiatives

EOC
ENTERPRISE OPERATIONS CENTER

Criminal Intelligence

Target profiling

Crime Scene Investigations

Criminal Pattern Analysis

Critical Infrastructure

Watch-list Development

Terrorist Interdiction

Managing Today's Work → Preventing Tomorrow's Threat

Advantages of ELSAG Quality

Hardware :

• 100% immersion of cameras during manufacturing in 1 meter water

• 100% testing in hot/cold chamber from room temp to +60C to -40C

• 100% camera final seal in nitrogen vacuum for weatherproof performance

• Advanced Digital Progressive Scan HD cameras (not analogue) for highest accuracy

• Technology started with Mobile then progressed to Fixed; most advanced in speed, capture rate, viewing angle and real time transmission in ALPR/ANPR industry

Software :

• Industry leading OCR Optical Character Recognition Algorithms

• Web based XMPP real time meta data for fastest analytic results

• OCR Protocols started with USA Plates

(with multiple characters, artwork, anomalies)

resulting in most flexible, robust OCR in industry.

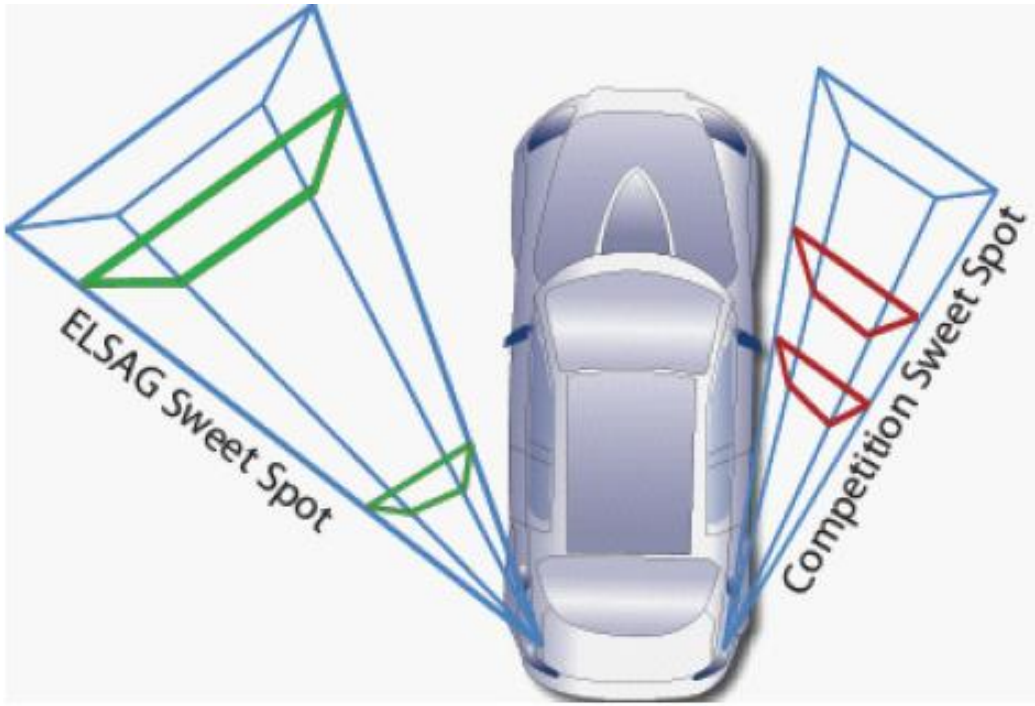
ELSAG's Mobile ALPR Deployments

MPH
Mobile Plate Hunter

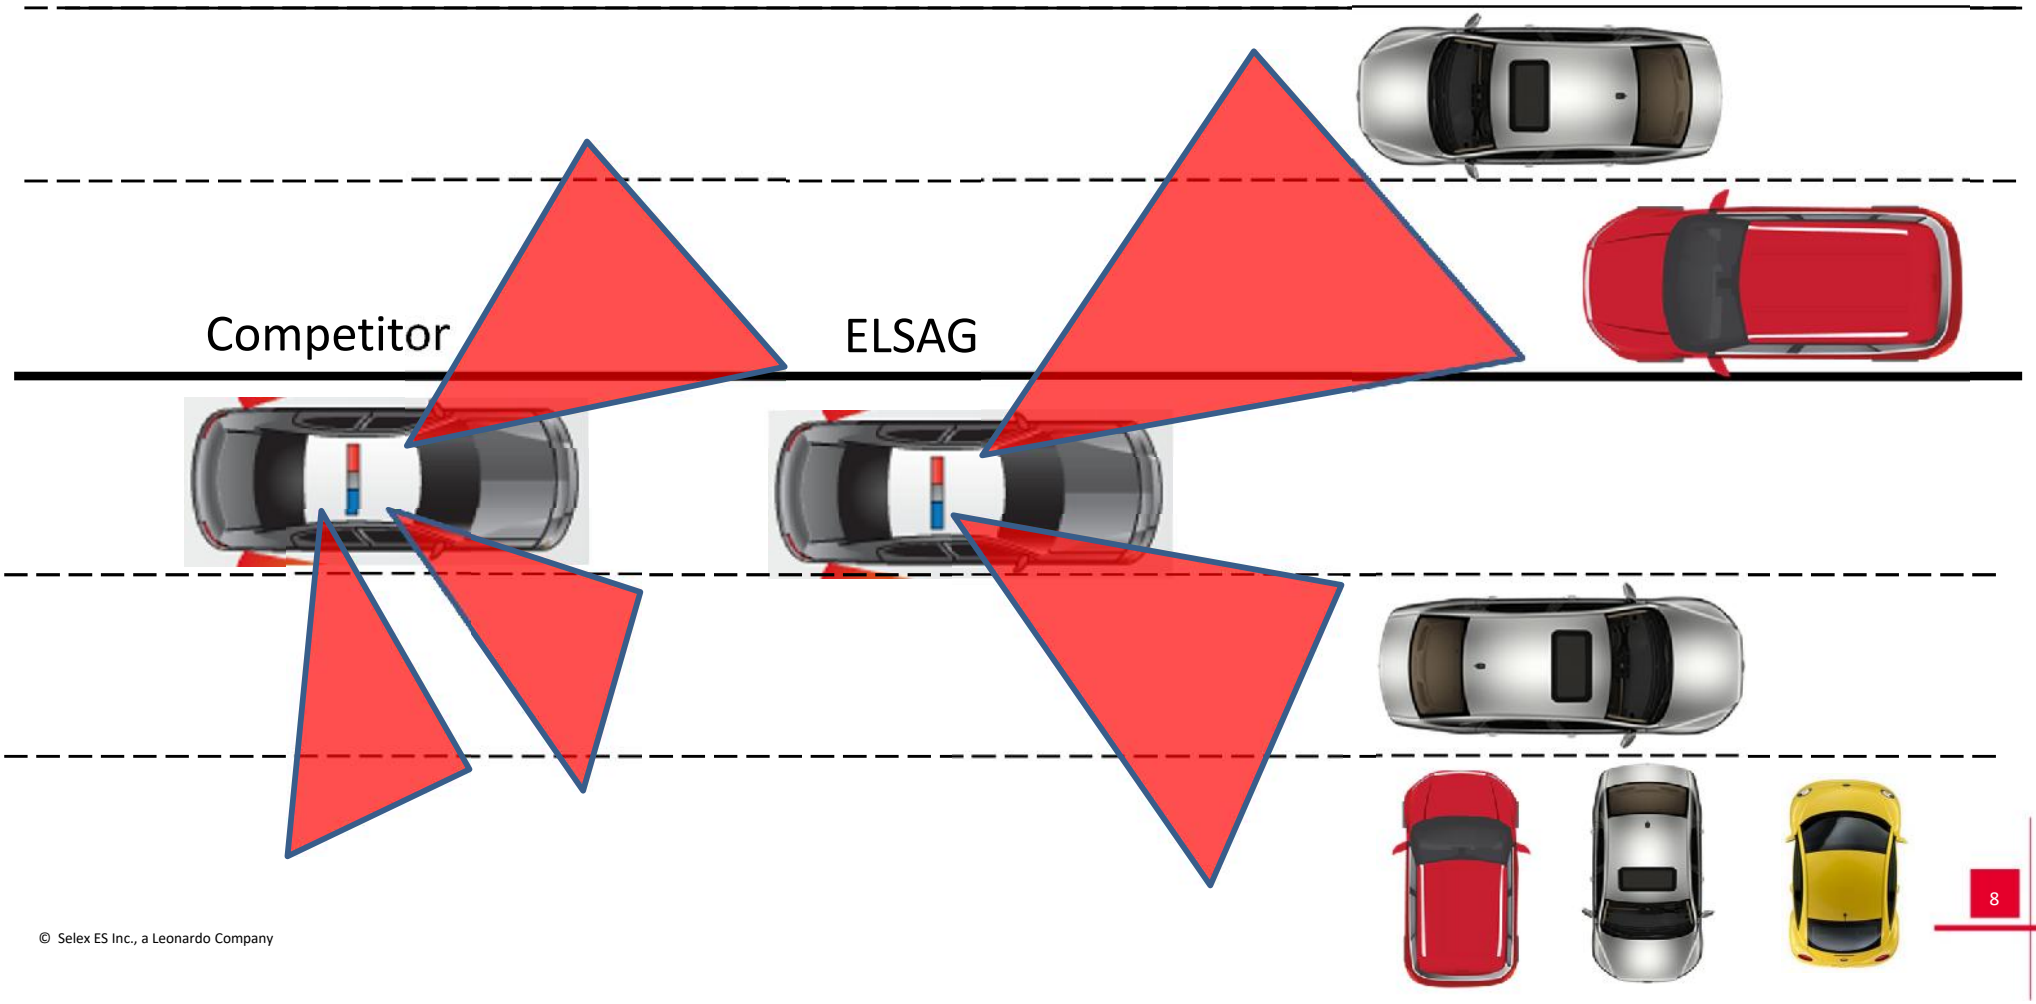


- A Mobile ALPR system capturing over 900 reads per minute (15/sec)
- Captures vehicles in excess of 150 MPH / 250 KPH closing speeds.
- MPH-900 requires no driver intervention and runs against over 4.0 million lines of hot-list files for vehicles of interest.
- Milliseconds after a Hot list vehicle is captured, the system sounds an audible & visual alarm to the operator for immediate response.
- MPH-900 reads plates from all countries including difficult to read flat and vanity tags – 24 hours DAY or NIGHT in all kinds of weather.

MPH900
Mobile Plate Hunter 900 Series

© Selex ES Inc., a Leonardo Company

ELSAG's Viewing Range vs The Competition



- ELSAG's Viewing Range is nearly twice the size of the other LPR systems
- ELSAG's Digital High Resolution (1280 x 1024) Cameras read plates with wider and higher viewing ranges than the other LPR systems
- ELSAG's Larger Viewing Range helps to identify more of the vehicle on color photos and capture more plates !

© Selex ES Inc., a Leonardo Company

Elsag MPH M7 Aiming Scenario : 16mm camera on Drivers Side; 12mm on Passenger side Wider viewing cameras capture cars in parallel lane and also 90 degree parked angles

Competitor Aiming Scenario : 3 cameras are needed since Passenger side camera viewing range is less wide, 1 camera is required to capture cars in parallel lane and an additional camera is needed for 90 degree parked angles

How ALPR Works

Infrared Cameras, work day or night to capture license plate alphanumeric string and convert into digital text sent to OCR processor.

Number plates can be read anywhere in the camera's field of view at Closing speeds in excess of 150 MPH

ENTERPRISE OPERATIONS CENTER

ELSAG

- Collects and Manages ALPR/ANPR data from all cameras together in one integrated system. Real Time uploads to Command Center.
  - Mobile systems
  - Fixed systems
  - Covert systems
- Centralizes and manages your ALPR/ANPR data to support analysis for investigations and intelligence gathering needs.
- Alarms transmitted remotely to users via PC or mobile phones immediately.
- Able to share data with specialized software programs via API.
- Easy Search/Query Functions in Real Time
- Advanced features include data sharing and white list applications.

Contract Summary

This is the Statewide Contract for Public Safety Equipment and Two-Way Radio supplies and services. This new Statewide Contract replaces and combines the public safety and two-way radio categories from statewide contract numbers FIR04/FIR04A and ITT57. OSD has rebranded the "FIR" and two-way radio statewide contracts to create a brand-new contract category entitled "PSE" to offer a single and cohesive contract for all public safety equipment, supplies and applicable services. The contract category "FIR" will no longer be used as a category of services.

COVID-19 Updates

As the CDC has found that COVID-19 is contracted primarily through airborne transmission, organizations may wish to reevaluate cleaning protocols and apply disinfectants to surface areas only as needed. Disinfectants used for this purpose should be listed on EPA's List N: Disinfectants for Use Against SARS-CoV-2, and it is recommended to choose safer disinfectants (find more information about safer disinfectants on the Toxics Use Reduction Institute's COVID-19: Safely Clean & Disinfect webpage) which may be found on the FAC118: Environmentally Preferable Cleaning Products, Programs, Equipment and Supplies contract. In addition, hand sanitizers must contain at least 60% ethanol per the Centers for Disease Control (CDC) guidance.

Contract Categories

This contract includes 5 categories of Public Safety Equipment and Two-Way Radio products/service as listed below:

- Category 1: Fire Equipment, Supplies, and Services
- Category 2: Emergency Medical Services (EMS) Equipment, Supplies, and Services
- Category 3: Police Equipment, Supplies, and Services
- Category 4: Marine Equipment, Supplies and Services
- Category 5: Two-way Radio Equipment, Supplies and Services

PLEASE NOTE: The items identified below **cannot** be purchased under the PSE01 Public Safety Equipment and Two-Way Radio, Supplies, Services and Repairs statewide contract:

- Firearms, Ammunitions, Related Training Products, Services Accessories and Less than Lethal Munitions, Tasers, etc.
- All vehicles including fire trucks and boats.
- Public Safety Broadband and LTE only communications equipment and services (the home Statewide Contract for this is ITT72).

Benefits and Cost Savings

Statewide contracts are an easy way to obtain benefits for your organization by leveraging the Commonwealth's buying power, solicitation process, contracting expertise, vendor management and oversight, and the availability of environmentally preferable products.

The statewide contract covers a broad array of public safety equipment, parts & services available through various authorized dealers of listed manufacturers. Competitive Pricing – The Strategic Sourcing Services Team (SST) has awarded the contract to those Contractors who provided the most competitive discounts for the manufacturers being offered. Complete award information for awarded Contractors is located in COMMBUYS https://www.commbuys.com/bso/advsearch/buyerAdvancedSearch.sdo. Please see instructions below for how to obtain the contract information in COMMBUYS.

Vendors on the PSE01 statewide contract also offer the following discounts which can vary for each Vendor: Prompt Pay Discounts, Dock Delivery Discounts, Volume Discounts, Trade-In's.

Find Bid/Contract Documents

- To find all contract-specific documents, including the Contract User Guide, RFR, specifications, and other attachments, visit COMMBUYS.com and search for PSE01 to find related Master Blanket Purchase Order (MBPOs) information. All common contract documents are located in the "Master Contract Record" Master Blanket Purchase Order (MBPO) for PSE01 and can be accessed directly by visiting [list the Master MBPO hyperlink here, for example, Master Blanket Purchase Order PO-15-1080-OSD01-OSD10-00000003619].
- To find vendor-specific documents, including price sheets, see links to individual vendor MBPOs on the Vendor Information page.

Who Can Use This Contract

Applicable Procurement Law

Executive Branch Goods and Services: MGL c. 7, § 22; c. 30, § 51, § 52; 801 CMR 21.00
Construction Materials and Services: G.L. c. 149, s. 44A; G.L. c. 30, § 39M

Eligible Entities

Please see the standard list of Eligible Entities on our Eligible Entities Which May Use Statewide Contracts webpage.

Subcontractors

The awarded vendor's use of subcontractors is subject to the provisions of the Commonwealth's Terms and

Conditions and Standard Contract Form, as well as other applicable terms of this Statewide Contract.

Construction Requirements

Purchasers must ensure that **any** services involving construction are limited to $50,000 or less.

Purchasing entities are responsible for compliance with applicable construction law requirements. Information concerning specific , M.G.L. c. 149 and c. 30 construction requirements may be found in the Office of the Inspector General's Public Procurement Charts at: https://www.mass.gov/download-oig-public-purchasing-and-public-construction-manuals. It is the responsibility of the Eligible Entity to determine whether installation work includes construction as defined by M.G.L. c.149 or M.G.L. c.30, §39M. Chapter 30B Procurement Assistance from the Office of the Inspector General is available at https://www.mass.gov/how-to/get-public-procurement-assistance-from-our-chapter-30b-team. Access the 30B Hotline at 617-722-8838 or by email at: 30BHotline@mass.gov.

Questions about public construction bidding should be directed to Deborah Anderson, Counsel II for the Attorney General's Office, at 617-963-2371. Visit the Attorney General's Public Construction web page to learn more about Public Bidding Laws.

See Quotes Including Construction Services Requirements below for information on quoting these types of projects.

Supplier Diversity Requirements

When selecting contractors and placing orders, Executive departments shall utilize diverse and small businesses to the extent possible based on contract terms, SDO and departmental policies, laws, and regulations. Additionally, departments shall make a preference for contractors with higher SDP commitments and/or performance whenever such information is available (or is requested from contractors by the department) and the preference is feasible.

OSD provides up-to-date information on the availability of diverse and small businesses on statewide contracts through the Statewide Contract Index available on the COMMBUYS home page. See the "Programs (SDO and SBPP)" tab for current certification and small business status of contractors on this contract.

Pricing, Quote and Purchase Options

Purchase Options

The purchase options identified below are the only acceptable options that may be used on this contract:

- Purchases made through this contract will be direct, outright purchases

- This is a fee for service contract
- Product pricing may be found on the vendor information page, where links to all the vendors MBPOs are provided.

Pricing Options

- **Discount off Manufacturers Suggested Retail Price (MSRP):** Contract pricing is a specified discount off the MSRP* catalog price. Further negotiations can be made based on volume as PSE01 offer volume-based discounts.

**Please note not all items have a static MSRP price list. Due to varying brands and base models an exhaustive list of MSRPs is not always possible however, a vendor should always provide a quote showing a base price, your contracted discount and final contracted pricing.*

Product/Service Pricing and Finding Vendor Price Files

Manufacturer's Suggested Retail Price (MSRP) Files on COMMBUYS

At times during the duration of this contract, some PSE01 Vendors may have outdated MSRP* reference files on COMMBUYS. Because of this, Buyers should always request that a vendor provide them the most current MSRP at the time of quote. Buyers may then refer to the awarded vendor's PSE01 price file from COMMBUYS to check pricing. All Vendors have an awarded price file in Microsoft Excel format that indicates their approved manufacturers and their awarded discount off of MSRP for their starting price. If a vendor does not have a manufacturer listed in their awarded PSE01 price file, the vendor must work with OSD to get that manufacturer added before they can sell their products on PSE01. If a vendor is not honoring their discount pricing from the PSE01 price file, then the customer should contact the OSD Contract Manager.

**Please note not all items have a static MSRP price list. Due to varying brands and base models an exhaustive list of MSRPs is not always possible however, a vendor should always provide a quote showing a base price, your contracted discount and final contracted pricing.*

Setting Up a COMMBUYS Account

COMMBUYS is the Commonwealth's electronic Market Center supporting online commerce between government purchasers and businesses. If you do not have one already, contact the COMMBUYS Help Desk to set up a COMMBUYS buyer account for your organization: (888)-627-8283 or OSDhelpdesk@mass.gov.

When contacting a vendor on statewide contract, always reference PSE01 to receive contract pricing.

Quick Search in COMMBUYS

Log into COMMBUYS and use the Search box on the COMMBUYS header bar to locate items described on the MBPO or within the vendor catalog line items. Select Contract/Blanket or Catalog from the drop-down menu.

How to Purchase from the Contract

- This contract has been set up as a distributor model (solicitation enabled) Master Blanket Purchase Order (MBPO) in COMMBUYS. A Solicitation Enabled Distributor Model MBPO is a single MBPO that has multiple Vendors listed as distributors. This allows you to solicit quotes within COMMBUYS, award and place the order through COMMBUYS.

  There are fifty - five (55) total Vendors on this contract and five (5) different distributor model Master Blanket Purchase Orders (MBPO). Each Vendor MBPO contains a list of Vendor specific files. The Master Contract Record MBPO is a non-purchasing MBPO housing all pertinent SWC records including the Contract User Guide and the Statement of Work Template.

  The five (5) different distributor model Master Blanket Purchase Orders (MBPO) numbers are below, it allows buyers to solicit quotes from multiple vendors on PSE01:

  - **Category 1:** Fire Public Safety Equipment = **PO-22-1080-OSD03-SRC3-24071**
  - **Category 2:** EMS Public Safety Equipment = **PO-22-1080-OSD03-SRC3-24070**
  - **Category 3:** Police Public Safety Equipment = Solicitation Enabled MBPO = **PO-22-1080-OSD03-SRC3-24061**
  - **Category 4:** Marine Public Safety Equipment = Solicitation Enabled MBPO = **PO-22-1080-OSD03-SRC3-24067**
  - **Category 5:** Two Way Radio Public Safety Equipment = Solicitation Enabled MBPO = **PO-22-1080-OSD03-SRC3-24068**

  This COMMBUYS functionality provides a mechanism to easily obtain quotes, as specified by the Contract. The buyer would create a Release Requisition, and then convert it to a Bid. After approval by the buyer approving officer, the bid is then sent to selected vendors to request quotes. Buyers must include “PSE01 RFQ” when entering information in the Description field.

- **Select items from a PunchOut catalog and purchase through COMMBUYS**

  PunchOut catalogs offer the convenience of selecting Statewide Contract products from a vendor’s e-commerce website. The PunchOut or Government to Business (G2B) catalogs are available via COMMBUYS

only (login to COMMBUYS and select the settings option in the upper right-hand corner [] and choose the G2B PunchOut option). Once a vendor is selected in COMMBUYS, you are taken to the vendor's e-commerce site. After shopping is complete on the vendor's e-commerce site, selected items are pulled back into COMMBUYS, summarized on a COMMBUYS release Requisition, and are ready to submit for approval. Once approved, it is released to the vendor for processing and fulfillment.

For a description of how to complete this purchase in COMMBUYS, visit the Job Aids for Buyers webpage and select either:

- The Quick Reference Guide (QRG) section and choose the QRG – Creating a Punch Out Order job aid
- The COMMBUYS Purchase Orders section and choose the How to Purchase from a COMMBUYS PunchOut job aid.

- **Directly purchase a non-fixed price item ($0 line item) through COMMBUYS**
  All vendor MBPO pages have a $0.00 line item for placing orders. When placing an order in COMMBUYS a contract user needs to type in the total cost of the order and may add invoice/quote information as reference either by typing in the information or attaching as a PDF file.

  For a description of how to complete this purchase in COMMBUYS, visit the *Job Aids for Buyers* webpage and select:
  - The *COMMBUYS Requisitions* section, then choose the *Make a Statewide Contract Purchase in COMMBUYS* job aid.

Obtaining Quotes

Contract users should always reference PSE01 when contacting vendors to ensure they are receiving contract pricing. Quotes, not including construction services, should be awarded based on best value.

For a full description of how to complete a quote in COMMBUYS visit the Job Aids for Buyers webpage, and select:

- The COMMBUYS Purchase Orders section, then choose Request Quotes from Vendors on Statewide Contracts job aid.

Quotes Including Construction Services

Please note specific requirements that apply for quoting construction services, depending upon the scope of your bid:

- Where the construction services are less than $10,000: Select a vendor based on sound business practices, consistent with your entity's procurement policies and procedures.

- For construction services valued from $10,000-$50,000: Must solicit a minimum of three quotes and receive two written responses; award to lowest responsible bidder.

Quotes Not Including Construction Services:

Award based on best value, but it's strongly encouraged that Entities solicit at least three quotes from Vendors to be evaluated with best value criteria applied.

Prevailing Wage Requirements

The Massachusetts prevailing wage laws require that covered employees on public works projects be paid a minimum hourly rate set by the Department of Labor Standards (DLS). The prevailing wage laws apply to both union and non-union employers and employees. The buyer has a legal obligation to request a prevailing wage schedule from the Department of Labor Standards (DLS) at www.mass.gov/dols. To get the proper rates for your region/job, you must request a determination. Questions regarding the Prevailing Wage Law may be answered by accessing the DLS website or by calling the DLS Prevailing Wage Program at (617) 626-6953.

If prevailing wage is required, make sure to include this information in your quotes or bids so vendors know to include prevailing wage.

In addition, all contracts by a state agency or state-assisted contracts for design, construction, reconstruction, installation, demolition, maintenance, or repair must contain Workforce Participation Goals for minorities and women. This is required by M.G.L. c. 149, § 44A(2)(G). A "state-assisted contract" is a construction project undertaken by a political subdivision of the Commonwealth or two or more subdivisions thereof for planning, acquisition, design, construction, demolition, installation, repair, or maintenance whose costs are paid for, reimbursed, grant funded, or otherwise supported, in whole or in part, by the Commonwealth. An affected awarding authority's bid documents must include a reference to the specific goals that will be contained in the contract. The contract must also include the processes and procedures to ensure compliance with the Workforce Participation Goals, including reporting and enforcement provisions. For questions about the Workforce Participation Goals law, please contact Deborah Anderson at the Attorney General's Office at 617-963-2371 or visit the Attorney General's Public Construction Bidding in Massachusetts FAQ.

The Office of the Attorney General's Fair Labor Division is responsible for enforcing the prevailing wage laws. Visit www.mass.gov/prevailing-wage-enforcement for more information.

Instructions for MMARS Users

MMARS users must reference the MA number in the proper field in MMARS when placing orders with any contractor. Contact the Comptroller Help and Support Desk at 617-973-2468 or via email at Comptroller.Info@mass.gov for additional support.

Environmentally Preferable Products (EPP)

GreenScreen certified firefighting foams, which have been tested to be both free of Per- and polyfluoroalkyl substances (PFAS) and free of the chemicals of highest health and environmental concerns, are now available through this contract.

EPP Requirements:

State buyers are reminded that Environmentally Preferable Products (EPP) Procurement Program requirements for the use of environmentally preferable disinfectants, and some cleaning supplies, has been waived due to the availability of the products impacted by the demand caused by COVID-19. As the EPP supply replenishes, buyers are reminded that these disinfectants and other third-party certified products remain recommended for use and are selected for public health and environmental standards. For additional guidance, visit the Toxics Use Reduction Institute's COVID-19: Safely Clean & Disinfect webpage.

Contract Exclusions and Related Statewide Contracts

The items identified below **cannot** be purchased under the PSE01 Public Safety Equipment, Supplies, Services and Repairs statewide contract:

- Firearms, Ammunitions, Related Training Products, Services Accessories and Less than Lethal Munitions, Tasers, etc.
- All vehicles including fire trucks and boats.
- Public Safety Broadband and LTE only communications equipment and services (the home Statewide Contract for this is ITT72).

Emergency Services

Many statewide contracts are required to provide products or services in cases of statewide emergencies. ML - 801 CMR 21 defines emergency for procurement purposes. Visit the Emergency Response Supplies, Services and Equipment Contact Information for Statewide Contracts list for emergency services related to this contract.

Shipping/Delivery/Returns

All quotations shall be FOB destination. The term FOB destination shall mean delivered and unloaded to all the Commonwealth Departments, cities, towns and/or Political Subdivisions within the Commonwealth of Massachusetts, with all charges for transportation and unloading prepaid by the Contractor(s).

The Contractor(s) must deliver goods to the Department requesting the goods within 30 days after receipt of order (A.R.O.). Items delivered after 30 business days may be deemed unacceptable and returned to the Contractor at no cost to the Commonwealth. Delivery arrangements for custom-made items may be made by mutual agreement between purchasing Department and Contractor(s).

Surcharges: Vendors will not charge any additional fuel, shipping, transportation, energy*, insurance or any other type of surcharge or fee on any order received from departments. Departments will NOT be required to pay any additional surcharges upon receipt of contractor invoicing. **Cylinder Fees are allowed under this contract.*

At the discretion of the Commonwealth, shipping charges may be negotiated and allowed under extenuating circumstances including, but not limited to: rush shipping requests by the Commonwealth Agency, oversized or heavy items being repaired, etc. This exception will only be allowed with an Agency request. Vendors are not allowed to request an exception for shipping charges.

Additional Information/FAQs

Performance Bond

User Departments may request and require Contractors to furnish a performance and/or labor and materials bond, in a form and with surety satisfactory to the end user for those orders in the amount of $100,000 or more. The Contractor(s) shall be responsible for the cost of the bond(s).

Adding/Removing Products

The SST reserves the right to add products on an as needed basis despite their initial exclusion. Contractors must obtain authorization from OSD in order to add a product to the contract award. The products should comply with the specifications and scope/description established in the original Request for Response (RFR) and the Contractor must supply all supporting information and research available to the SST for consideration. A written recommendation may also be submitted to the SST from an eligible contract user requesting that specific brands and/or manufacturers' products be added to the contract. NO PRODUCTS MAY BE ADDED WITHOUT APPROVAL OF THE SST AND SSM.

Frequently Purchased Items on the Contract:

Fire Equipment & Supplies

Turnout gear, Urban Search and Rescue (USAR) gear, station work uniforms, dress uniforms, specialized outerwear, forestry clothing, any other firefighter personal protective equipment (PPE), self-contained breathing apparatus (SCBA) and SCBA cylinders, breathing air compressors, SCBA test benches, SCBA fit testers, self-contained smoke/fire hoods, firefighting foam, water applications (hoses, nozzles, gates), ladders, power tools, hand tools, emergency vehicle lighting, specialty equipment (meters, including air monitoring, radiological, etc., meter calibration equipment, meter calibration gases and meter parts; other types of specialty gas, bottled or otherwise, not currently covered under ENE46, HSP41 or their successor contracts), fire alarm equipment (control panels, smoke/heat devices, water flow devices, signaling, receiving and cabling items), associated software updates, training aids and not limited to the items identified. Services and/or repairs of any or all of the above listed items. (All vehicles excluded).

EMS Equipment & Supplies

Emergency and field EMS products, plus medical equipment and supplies used by first responders and all levels of EMT certification. Includes disaster management products, extrication, immobilization and transportation products, airway management equipment, resuscitation products, emergency and field medical services kits, EMS supplies, cardiac monitors, IV pumps, transport ventilators, assessment equipment (blood pressure units, pulse oximeters, thermometers, exam lights), associated software updates, training aids and not limited to the items identified. Services and/or repairs of any or all of the above listed items. (Excludes vehicles, medications, and drugs).

Police Equipment & Supplies

Night vision binoculars, breathalyzers, visibility clothing, firearms lockers, patrol car recording devices, GPS tracking devices, license plate recognition equipment, gloves, knee pads, helmets, handcuffs, tactical mirrors, vehicle emergency lights, sirens, body cameras, traffic and crowd control equipment, forensic equipment, helium, and acetylene gases, associated software updates, training aids, and not limited to the items identified. Services and/or repairs of any or all of the above listed items. (Excluded from this contract are the following: weapons, ammunition, lethal and less than lethal munitions, tasers and all vehicles).

Marine Equipment & Supplies

Equipment and supplies for the Maritime Incident Response Teams for port security, incident response, water training events, etc. including dry suits, multi-threat suits, personal floatation devices (PFDs), emergency position indicator radio beacons (EPIRBs), dry bags, marine ropes, re-breather apparatus, marine communication equipment, waterproof night vision cameras, marine locator equipment, craft systems and repair equipment,

scuba and snorkeling gear, swim equipment and not limited to the items identified. Services and/or repairs of any or all of the above listed items. (Excludes all boats and vehicles).

Two Way Radio Repairs and Services

Purchase, rental, installation, maintenance and service of Two-Way Radio and associated microwave radio systems, equipment, connected peripherals, parts and accessories. Services will include the design, engineering, frequency coordination, installation, maintenance and repair of two-way radio network and microwave systems. The products and services include two-way radio subscriber units and fixed station equipment, including dual mode (analog and P25 digital), and accessories; microwave systems, components and accessories; trunking and conventional two-way radio systems, components, accessories and infrastructure; analog and P25 digital two-way radio systems and infrastructure; marine and amateur radios and accessories; fixed mobile data and automatic vehicle location (AVL) systems; public safety paging systems; radio dispatch console systems, related components and accessories; radio dispatch console furniture and related components; desktop radio remote systems and related components; radio gateway systems (analog and digital) and related accessories; Land Mobile Radio (LMR) antenna system components; category associated software updates, and not limited to the items identified. Services and/or repairs of any or all of the above listed items. (Excluded from this contract: Public Safety Broadband and LTE only communications equipment and services).

Product Specifications, including Environmental Standards and Requirements

Selection of EPP Equipment – The contract provides equipment that represents environmentally preferable products wherever possible. Such Equipment may use alternative fuel (e.g., compressed natural gas), offer an opportunity for reduced fuel usage, or provide other environmental benefits.

Technical Support

Where technical support response is included, Vendors shall supply at no charge, limited telephone technical support accessible toll-free, from at least 8 A.M. – 6 P.M., Monday through Friday for three (3) years after purchase. The maximum response time for technical support calls is four (4) hours from initial request to on-scene arrival unless otherwise agreed in writing between the Purchasing Entity and the Contractor. Bidders must include the costs, if any, for technical support calls in the Cost Tables.

Warranties/Repairs and Services

The warranty for the Commonwealth shall be the manufacturer's standard warranty starting from the date of acceptance by the Purchasing Entity. New equipment under this contract must be factory new and equipment considered a "durable commodity" shall carry a guarantee that service, service parts and maintenance will be available from the Contractor for a period of at least five (5) years from date of equipment acceptance by the Purchasing Entity. All equipment shall be in excellent working condition and shall include the new OEM equipment guarantee.

Other Discounts

- **Prompt Pay Discounts:** A discount given to the buyer if paid within a certain time period. These discounts may be found in the Vendor List and Information section below. All discounts offered will be taken in cases where the payment issue date is within the specified number of days listed by vendor and in accordance with the Commonwealth's Bill Paying Policy. Payment days will be measured from the date goods are received and accepted / performance was completed OR the date an invoice is received by the Commonwealth, whichever is later to the date the payment is issued as an EFT (preferred method) or mailed by the State Treasurer. The date of payment "issue" is the date a payment is considered "paid" not the date a payment is "received" by a Contractor.
- **Volume Discounts:** A discount is provided to buyer if a certain volume of product or service is purchased.
- **Dock Delivery Discount:** A discount is provided if product is delivered directly to the loading dock

If the Needed Product Can Not be Found

If a product or service cannot be found in the vendor's catalog, price sheet or PunchOut, it is recommended to contact the vendor directly to inquire if it is available for purchase on this contract. If the product or service meets the scope of the product category, the vendor may be able to add it to their product offerings with prior approval to add from the OSD contract manager.

If the product is not listed in the scope of the product category, a buyer may contact the Strategic Sourcing Lead to inquire whether the product may be purchased.

Performance and Payment Time Frames Which Exceed Contract Duration

All term leases, rentals, maintenance, or other agreements for services entered into during the duration of this Contract and whose performance and payment time frames extend beyond the duration of this Contract shall remain in effect for performance and payment purposes (limited to the time frame and services established per each written agreement). No written agreement shall extend more than twelve (12) months beyond the current contract term of this Statewide Contract as stated on the first page of this contract user guide. No new leases, rentals, maintenance, or other agreements for services may be executed after the Contract has expired.

Memorandum of Understanding/Statement of Work

Contract users must complete a detailed Statement of Work for any service engagement to be completed under this contract. The SOW template can be found under the "Attachment" tab in COMMBUYS under the PSE01 Master Blanket MBPO; it is recommended that Buyers use this format to request the following list and any other information as required by the engaging entity:

- Scope of Services/Deliverables Dates & Location of Service
- Detailed Budget
- Estimated Total Costs
- # Of Staff/Rate(s) Per Hour

Required Documentation from Contractor:

- Vendors are required to submit completed payment vouchers, and all required signed documentation to the designated Buyer personnel for processing. Vendors are obligated to pay prevailing wage rates to their employees who work in Commonwealth owned or rented facilities under this contract. Please report any known or suspected underpayment or non-payment of the prevailing wage to OSD for referral to the Attorney General's Office and the Department of Labor and Workforce Development. There is no Commonwealth form to report weekly janitorial prevailing wage, as there is for construction.

For non-Commonwealth owned or rented facilities, invoices for services rendered during the previous month must be submitted to the hiring entity according to the terms of the Statement of Work.

Massachusetts Department of State Police
Automated License Plate Recognition (ALPR) System
Memorandum of Understanding and Agreement

THIS AGREEMENT, made and entered into this _31_____ day of __May_____, 2022 by and between the Department of State Police, hereinafter referred to as "Department," and the

___Raynham Police Department_____,
a public entity, hereinafter referred to as "Agency," collectively referred to as "Parties."

WHEREAS, the Department contracts the services of one or more vendors to host an Automated License Plate Recognition (ALPR) database to store ALPR data; and

WHEREAS, the Parties provide public safety services within their respective jurisdictions; and

WHEREAS, the Parties have found it to be of mutual benefit to provide for the most efficient utilization of their resources and services in the application to public safety efforts within their respective jurisdictions; and

WHEREAS, the Parties are committed to cooperation and coordination in providing the highest level of public safety services to the public, guided by the principle that performing cooperatively is in the best interest of the public; and

WHEREAS, the Agency desires to use the ALPR system contracted and managed by the Department to facilitate the storage of ALPR information generated by the Agency; and

WHEREAS, the Agency desires to share law enforcement information owned by the Agency under the conditions set forth in this Agreement.

NOW, THEREFORE, for and in consideration of the covenants contained herein, IT IS HEREBY AGREED, by and between the Parties as follows:

1. PURPOSE:

The purpose of this Agreement is to provide a standardized approach and method of storage, retention, sharing, and access of ALPR data between the Department and Public Safety Agencies hosting ALPR data on the Department's ALPR system.

2. COSTS:

The Department shall be responsible for the costs of purchasing and maintaining the ALPR system as long as such funding is available to the Department and authorized by the appropriate authorities of the Commonwealth. Participating agencies shall be responsible for the costs of purchasing, servicing, maintaining, repairing, and/or licensing the ALPR equipment used by their respective agency. The Department shall not be responsible for any costs incurred by the Agency for the purchasing, servicing, maintaining, repairing, and/or licensing of the ALPR equipment owned or used by the Agency. The Agency shall inspect the Agency's ALPR equipment on a regular basis and document each inspection. Any irregularities or malfunctions of any ALPR equipment owned by the Agency or of any ALPR information shall be reported to the Department immediately and shall be addressed and repaired by the Agency as soon as reasonably possible.

3. DATA ACCESS AND SECURITY REQUIREMENTS:

a. System Availability: The Department will work with the vendor(s) to keep the ALPR system software and servers online and available with downtime limited to necessary system maintenance activities or to any outages that are beyond the control of the Department.

b. Data Sharing: ALPR data contributed by the Agency will be accessible for official purposes to all Agencies that have entered into an ALPR Agreement with the Department. The Agency shall not otherwise share ALPR data with or provide ALPR data to any person, entity, or government agency, other than a law enforcement agency, unless such disclosure is authorized by policy or court order or unless such disclosure is required by the Massachusetts Rules of Criminal Procedure or Rules of Superior Court governing discovery in criminal matters.

c. Security Requirements: The Department and the Agency agree to enforce and maintain security requirements for the information stored in the ALPR system as specified in the Agreement. The Agency agrees that the information hosted in the ALPR system shall be used for law enforcement purposes only and that only law enforcement agency employees that have been subject to appropriate background screening shall be allowed access to the system.

   Background screenings must be fingerprint-based and include check of both the state and national criminal history repositories. If a felony conviction of any kind is found, access to ALPR system shall not be granted. The Agency agrees not to share

passwords, user logins, or allow the ALPR software to be otherwise used by Agencies who have not entered into an Agreement with the Department allowing such activity.

An employee of the Agency may operate an ALPR unit that is connected to the Department's ALPR system or access the Department's ALPR system software only if the person has been designated as an authorized user by the Chief of the Agency or designee, and has received training from the Agency or the Department on the proper use and operation of ALPRs and any policy or procedures governing the use of ALPRs and ALPR data issued or adopted by the Agency.

4. IMPLEMENTATION OF POLICY:

The Agency shall, within 30 days of execution of this Agreement, adopt the Department's General Order TRF-11 as the policy and procedure document that will govern the Agency's use of and interaction with the Department's ALPR system. The Agency agrees that it has been provided with physical or electronic copy of General Order TRF-11, has had sufficient time to read, review, and understand the document in its entirety, and agrees to be bound by the provisions contained therein. The Department agrees to inform the Agency of any updates or modifications to General Order TRF-11, and the Agency understands and agrees that any updates to General Order TRF-11 will be binding upon the Agency unless the Agency elects to terminate the Agreement and withdraw from participation in the Department's ALPR system.

5. BENEFITS TO AGENCY:

a. Data Links: The centralized storage of ALPR data will provide a solution to the problem of inaccessible or irretrievable information due to disconnected ALPR systems and the difficulty in sharing information across jurisdictional boundaries.

b. Reduction of Costs: The centralized storage of ALPR data will reduce the financial burden to the Agency that is associated with purchasing and maintaining ALPR software.

6. RECORDS AND REPORTS:

The Department protects all ALPR information as personally identifiable information (PII) because ALPR information may be combined with other information to specifically identify a unique individual. As such, all information retained in the Department's ALPR system is the sole property of the Department. The Agency agrees that information stored in the ALPR system for the Agency may be subject to disclosure under certain circumstances. The Agency will refer to the Department for review all information requests for Agency information, including, but not

limited to, public records requests, court orders, legal motions, subpoenas, and/or summonses. The Department's Legal Department shall determine the best manner of responding to all requests for Agency information.

7. RETENTION

All ALPR information obtained by the Agency from the Department's ALPR system shall be retained pursuant to the Department's General Order TRF-11.

8. AMENDMENTS:

Any changes and additions to this Agreement shall be made by written amendments to this Agreement and shall not be effective until approved in writing by the Parties. A joint review of this Agreement may be requested at any time by either of the Parties to identify needed changes, which may be amended by written mutual agreement of the Parties.

9. DURABILITY:

This Agreement shall become operational and effective upon execution by the Parties. Parties may terminate the Agreement at any time by giving written notice to the other Parties at least thirty (30) days prior to the effective date of termination. The Agreement may also be terminated by the Department without prior notice to the Agency in the event of executive, legislative, or judicial mandate which requires the unanticipated discontinuation or modification of the ALPR program. In the event of such termination, the Department will notify the Agency as soon as practicable.

10. BENEFITS:

The Parties shall agree that the provisions of this Agreement are not intended to directly benefit and shall not be enforceable by any person or entity not a party to this Agreement. This Agreement is not intended to confer any legal rights or benefits on any person or entity other than the Parties of this Agreement.

11. INDEMNIFICATIONS:

Parties shall defend, indemnify, and hold harmless every other party and its officers, agents, employees, and representatives from any and all losses, liability, damages, claims, suits, actions and administrative proceedings, and demands and all expenditures and cost relating to acts or omissions of the indemnitor, its officers, agents, or employees arising out of or incidental to the

performance of any of the provisions of this Agreement. Parties do not assume liability for the acts or omissions of persons other than their respective officers, its employees, agents, and MOU officers.

The Agency releases the Department from any liability relating to the loss or destruction of data contributed by the Agency. The Agency further releases the Department from any liability relating to the loss of the Agency's access to the ALPR system due to system outage, commercial vendor failure or malfeasance, or executive, legislative, or judicial mandate which requires the unanticipated discontinuation or modification of the ALPR program. The Agency further releases the Department from any liability relating to the release of data or information contributed by the Agency pursuant to a lawful procedure or order.

12. ASSIGNMENT PROHIBITED:

Parties to this Agreement may not assign any right or obligation pursuant to this Agreement. Any attempted or purported assignment of any right or obligation pursuant to this Agreement shall be void and of no effect.

IN WITNESS WHEREOF, the parties hereto have executed this Agreement on the date as written below.

Features & Improvements

Release Notes

Version 59.0.0

Permission by device

- Device permissions per groups – Configuration in groups to select active devices. The device management phase from the Devices screen is pending.
- Reports permissions per group.
- Filters only return devices selected in the group.

Auto-notification of hotlist and hot plate expiration

- Hotlist with manual hotplates will send an email with the expiration date of the hotlist and a PDF file with the hotplates that are near to expire.
- Hotlist with a hotsource will send an email with the expiration date of the hotlist.
- Reports- Decommissioned devices are returned when creating reports.
- Search- The device's full name is displayed using a tooltip.
- Vehicular traveling- Change the remaining text suspicious travel to vehicular traveling.
- Reads Report- Increase image size in report.
- VES-HUB validation- Control malformed events added to the VES MS.
- VES-HUB – Java upgrade 8 to 11 improving memory usage.
- Reports - When a user selects schedule report and selects 1 day the report will return the results of the previous 1-day calendar.

Fixes

- Fixed an issue when entering blank spaces in the Plate text input cause the process to generate reports to fail.
- Fixed an issue where a Reads Report containing more than 2M record was failing due to a wrong pagination.
- Fixed an issue where the key file used for the exporter was incompatible with certain SFTP services.

Release Notes

Version 58.0.0

- Devices- Redux updated to return the device changes correctly. (The redux version was updated to improve the update of information between components and states within the validations of the elements)
- Search- Improvements in response times using wildcards. (A new index was added to database records to improve search times)
- Search - Fixed Day/Night mantis filters now return the correct results. (The query did not contemplate the times of the readings, so the times in which the readings return and additional information from mantis were delimited to readjust the query, returning the corresponding values of the search)
- Search - Fixed Search time & date filter overlap with the calendar button. (Autofit function was added, only the text is displayed depending on the size of the device where boss4 was opened)
- Search - Fixed Search time & date filter start/end times no longer allow typed-in times. (A component was sought that would allow the values to be modified while maintaining the new functionality of the historical limit.)
- Search - Fixed virtual scroll jumps in devices and user filters. (Simplified scroll element actions and integrated native behaviors for pre-loading elements)
- Reports- Read Detail Report the double negative was eliminated in NTP status. (Tag name change)
- Reports- Read Detail Report fixed image aspect ratio. (Depending on the number of bytes in the image, the size of the image to be used in the report is calculated without affecting the proportions of the vehicle.)
- Reports- Reads Statistics Report Improve in report creation to avoid failures.
- Reports- Reads Statistics by Device Improve report creation to avoid failures.
- Reports- Hits by Hotlist Report Improve in report creation to avoid failures.
- Reports- Hits by Hotlist by Device Report Improve report creation to avoid failures.
- Reports- Login Pagis Report Improve in report creation to avoid failures.

(The database is directly consumed avoiding the use of ms and avoiding stressing them, having better results in report generation, and avoiding timeouts)

- Notifications- New text box to search by profile name/ username. (A search box was integrated that returns the names of notification profiles and/or usernames within a profile, facilitating the search for a user or profile)
- Notifications- New functionality to visualize the complete hotlist when the user is above the name. (Angular's native tooltip was integrated to display long names)
- Notifications- Fixed notification sorting names with spaces at the beginning. (Front end deletes the spaces at the begging when the user creates/updates a notification profile)

- Notification- Fixed data from field 1 of the hit is repeated. (The same data was being consumed in all the fields; it was solved by specifying the correct data in each field)
- Interoperability- Fixed the option to send a sharing request between environments. (Error messages and connections messages were not the same in the databases, the information was adapted to be equal in databases and enable the connections between instances)
- Hotlist- Fixed arrows keep working no matter the zoom value. (The original size of the elements was lost, now the size is persisted adjusting the element depending on the zoom)
- Formatters- Now working with includes and excludes in the same formatter. (The algorithm was adjusted to add the logic to be able to use both configurations in the same formatter)
- Read/Hit detailed report improvement - the database was consulted directly to avoid timeouts and improve time-generating the report.

Release Notes

Version 57.0.2

- Search- Search pagination increased from 15 to 50 results.
- Search- New option to configure a user group to access only a certain amount of historical data i.e., 1 day, 30 days, etc.
- Search- New calendar control for setting the DateTime filters.
- Device Notifications- “No Reads Received” option added to alert when a device is not sending reads.
- Device Notifications- Screen layout improved.
- Reports- New layout for the Read and Hit Reports. Includes larger vehicle overview picture.
- Reports - Read and Hit Report - Feature to download the full overview picture as a JPG file.
- Notifications- Profile templates are now sorted by name.
- Desktop App- Include API GW Port to customize the connection to BOSS4.
- Search- Fixed duplicated hotlist field information.
- Search- Fixed a bug where some reads disappeared from the search screen when updated by a PAGIS device.
- PAGIS MS- Improve stability of microservice.
- PAGIS- Improved synchronization with PAGIS 2.14 and 2.15

INTELLIGENCE DRIVEN INNOVATION

Contract Number: <# <Content Select="//contract_number" TrackName="contract_number" Optional="true"/> #>

EQUIPMENT AND SOFTWARE MASTER SUBSCRIPTION AGREEMENT

This Equipment and Software Master Subscription Agreement (this "**Agreement**") is dated as of (the "**Execution Date**"), and is made by (i) Rekor Recognition Systems, Inc. ("**Rekor**"), with an address of 6721 Columbia Gateway Drive, Suite 400, Columbia, MD 21046 and (ii) <# <Content Select="//account_name" TrackName="account_name" Optional="true"/> #> ("**User**"), with an address of <# <Content Select="//billing_address" TrackName="billing_address" Optional="true"/> #>. Each of Rekor and User is referred to herein as a "**Party**" and collectively, the "**Parties**".

*Whereas, Rekor sells equipment (the "Equipment") and services (each a "Service" and collectively the "Services") as specified in each Schedule executed from time to time by Rekor and User in a form acceptable to Rekor (each a "**Schedule**" and collectively the "**Schedules**"). Each Schedule forms part of and is subject to this Agreement and all terms and conditions in this Agreement will apply to all Schedules.*

Whereas, User desires to engage Rekor to provide Equipment and related Services in accordance with the commercial specifications as noted in each Schedule and the terms of this Agreement.

Now, therefore, in consideration of, and conditioned on, the covenants, terms and conditions stated and incorporated herein, and for other good and valuable consideration, the receipt and sufficiency of which the Parties hereby acknowledge, the Parties agree as follows:

1. EQUIPMENT AND SOFTWARE

1.1. Equipment. The equipment listed and described in the Schedule attached hereto and incorporated herein.

1.2. Acceptance. User shall inspect each item of Equipment delivered or installed pursuant to the Agreement. User shall immediately notify the Rekor of any discrepancies between such item of Equipment and the description of the Equipment in the Schedule. If the User fails to provide such notice before accepting delivery of the Equipment, the User will be conclusively presumed to have accepted the Equipment as specified in the Schedule.

1.3. Installation of Equipment. Installation of the Equipment is available subject to a fee. If Rekor will perform the installation, User shall provide Rekor with access to the infrastructure necessary to facilitate the performance under this Agreement. This access includes, but is not limited to, power, network and internet connectivity and applicable regulatory permitting. Any cost for the initial power connection and monthly power service are the responsibility of the User. Services such as construction, engineering drawings, permits or other activities would incur an extra charge. With respect to the existing physical locations where the Equipment will be installed, User warrants possession of the right and sufficient authority to approve the installation of the Equipment.

1.4. Software License Grant. Rekor hereby grants to User, solely for User's own internal use, a non-transferable, non-assignable, non-exclusive license to use the software described herein (the "**Software**") and provided by Rekor to User. The User shall use the Software exclusively for the operation of the Equipment and shall not copy the Software in any form, whether in whole or in part, and shall not incorporate the Software, whether in whole or in part, or the Software's code, into any product for distribution or use by any third party. Except for the rights enumerated in the Agreement, the license hereby granted to User does not include a grant to User of any other rights to, title, ownership, security interest, or other interest, in any intellectual property of Rekor. The Software includes a collection of computer object code, documentation, precompiled binaries, and run time data used by the application code to analyze video stream data and perform various calculations and outputs.

1.5. Title to Software. The Software and all programs developed hereunder are proprietary to Rekor. Rekor shall retain exclusive right, ownership, title and interest in and to the Software, including all intellectual property rights. All applicable rights to patents, copyrights, trademarks and trade secrets in the Software or any modifications made at User's request are and shall remain in Rekor. User agrees to secure and protect each module, software product and documentation thereof in a manner consistent with the maintenance of Rekor's rights therein and to take appropriate action by instruction or agreement with its employees or consultants who are permitted access to each program or software product to satisfy its obligations hereunder. User agrees not to modify the software or create derivative products. Violation of any provision of this Section 1.5 shall be the basis for immediate termination of the Agreement.

1.6. Software Ownership. Rekor represents that it is the owner of the Software and all portions thereof and that it has the right to modify same and to grant User a license for its use.

1.7. Updates and Use. Rekor may provide User, from time to time, with updates (including minor adaptations, patches and bug fixes). User hereby warrants to keep the Software up-to-date and install all relevant updates. However, nothing in the Agreement shall require Rekor to provide updates, fixes or upgrades. User shall limit the use of the Software to its employees who have been appropriately trained.

1.8. Third Party Software. User acknowledges and agrees that the Rekor may use third party software with the Equipment. Such software may be subject to certain license agreements, regulations, conditions and terms established by such third parties in order to protect ownership and intellectual property rights in the software. The User acknowledges and agrees not to attempt to resell or redistribute such software.

2. WARRANTY

2.1. Rekor warrants that the Equipment and Software will conform, as to all substantial operational features, to Rekor's current published specifications when delivered or installed and will be free of defects which substantially affect system performance. The warranty is non-transferable.

2.2. **Software**. User must notify Rekor in writing, within 7 days of delivery of the Software to the User (not including delivery of any subsequent modifications to the Software), of its claim of

any such defect. If the Software is found defective by Rekor, Rekor's sole obligation under this warranty is to remedy such defect in a manner consistent with Rekor's regular business practices.

2.2.1. Modifications to the Software are strictly prohibited as is the creation of any derivative product. If any modifications are made to the Software by User during the warranty period, this warranty shall immediately be terminated. Correction for difficulties, defects or damages traceable to User's errors or systems changes shall be billed at Rekor's standard time and material charges.

2.2.2. User shall provide Rekor details regarding any bug, defect or failure in the Equipment or Software promptly and with no delay from such event. User shall also comply with Rekor's request for information regarding bugs, defects or failures and furnish with information and try to reproduce such bugs, defects or failures.

2.3 **Equipment**. The Equipment will be free from defects in material and workmanship and will conform and perform substantially in accordance with the documentation. The warranty period is:

2.3.1 Edge Pro: 3-years from the date of purchase.

2.3.2 Edge Max: 5-years from the date of purchase.

If, during the warranty period, the equipment does not conform to the above warranty and User provides Rekor with written notice of such nonconformance, Rekor will repair or replace nonconforming components or otherwise correct the nonconformity in accordance with its stated warranty service terms.

SUBJECT TO THE TERMS SPECIFIED IN THIS SECTION 2, THIS IS A LIMITED WARRANTY, AND SETS FORTH THE ONLY WARRANTIES MADE BY REKOR. NEITHER REKOR NOR ITS SUPPLIERS MAKE ANY OTHER WARRANTIES, CONDITIONS OR UNDERTAKINGS, EXPRESS OR IMPLIED, STATUTORY OR OTHERWISE, INCLUDING BUT NOT LIMITED TO WARRANTIES OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE OR NONINFRINGEMENT. USER MAY HAVE OTHER STATUTORY RIGHTS. HOWEVER, TO THE FULL EXTENT PERMITTED BY LAW, THE DURATION OF STATUTORILY REQUIRED WARRANTIES, IF ANY, SHALL BE LIMITED TO THE WARRANTY PERIOD OR ANY APPLICABLE EXTENDED WARRANTY PERIOD

3. DATA RIGHTS.

The data, images, and video produced from using the Services is the "Operational Data." User retains all rights and ownership in your Operational Data, and we do not claim any ownership rights in your Operational Data. User grants Rekor the right and license to use the Operational Data for: a) dissemination to other government entities, and b) training and performance enhancement of Rekor's AI system. The data, images, and video produced from using the Services, where the license plate characters have been removed, is the "De-Identified Data". User acknowledges and agrees that Rekor may use the De-Identified Data for any purpose and may disclose the De-Identified Data to third parties. User must inform Rekor in writing before using the Services if the

laws of the jurisdiction in which you use the Services restrict the use of Operational Data or De-Identified Data for the purposes defined in this Section 3.

4. PAYMENT TERMS; TAXES

4.1. Payments. During the period in which the Agreement and each Schedule is effective, the User shall deliver to the Rekor payments of the amount and frequency set forth in the related Schedule (the "Payments"). The first Payment shall be due on the Effective Date. The Payments are due whether or not the User has received notice that a Payment is due.

4.2. Service Charge; Fees. If any payment is not paid within five (5) days after the due date, User shall pay to Rekor a service charge of 5% of the payment due per month which shall accrue each month until the outstanding balance is paid in full. User acknowledges that its ability to access the Services may require the payment of third-party fees and that User is responsible for paying such fees.

4.3. Collection Costs. If User fails to make any payments due under the Agreement and Rekor retains the services of a collection agency or an attorney to collect such amounts, User agrees to promptly pay to Rekor all reasonable costs of collection, including, but not limited to, any collection agency fees, reasonable attorney's fees, and court costs.

4.4. Tax. User shall pay all taxes, including any applicable sales or use tax, and all other fees or charges on or arising out of the Rekor's delivery of Services or Equipment to the User; however, the User will not pay any federal or state income taxes, franchise taxes, or any other taxes imposed on the Rekor's net income.

5. CONFIDENTIALITY

User agrees that it shall not disclose to any third party any information concerning the trade secrets, methods, processes or procedures or any other confidential, financial or business information of Rekor which should be reasonably understood to be confidential or non-public, whether or not such information is marked confidential, which User learns, directly or indirectly, or which is made available to User, as a result of this Agreement, without Rekor's prior written consent. User shall promptly notify Rekor in the event User becomes aware of any actual or purported loss or disclosure of any information covered by the prior sentence. If User is required by a legal or administrative process, including but not limited to, applicable law, regulation, order, or similar process, to disclose any information covered by the first sentence of this Section 5, User shall promptly notify Rekor of such requirement (if such notification can be made without violating the terms of such required disclosure), so that Rekor may seek an appropriate protective order or waive compliance with the Agreement. User agrees not to oppose any effort by Rekor to resist or narrow such requirement or to seek a protective order or other appropriate remedy. If, in the absence of a protective order or the receipt of a waiver hereunder, User is, in the opinion of its legal counsel, required to disclose such information, Recipient may disclose only such information to the party requiring disclosure as is required by law, regulation, order, or similar process. In connection with such required disclosure, User shall use its reasonable efforts, at Rekor's request and expense, to obtain from the party to whom disclosure is made written assurance that confidential treatment will be accorded to such portion of the information as is disclosed.

6. TERM; TERMINATION

6.1 Term: The term of the Agreement shall begin on the Effective Date, and unless earlier terminated in accordance with Section 6.2, shall continue until the latest expiration date of all Schedules in effect, (the "Term").

6.2 Default: The occurrence of any of the following shall constitute an event of default under the Agreement ("Event(s) of Default"):

6.2.1 The failure to make a required payment under the Agreement and each related Schedule when due.

6.2.2 The violation of any provision or requirement under the Agreement (other than making required payments) that is not corrected within ten (10) days after notice of the violation is given.

6.2.3 The insolvency of User.

6.2.4 The voluntary or involuntary commencement of a proceeding in bankruptcy or receivership against User or its property; a general assignment for the benefit of creditors by User or if User enter into an agreement or composition with its creditors; if User is dissolved or otherwise discontinued; or if User ceases doing business as a going concern.

6.2.5 The subjection of any of User's property to any levy, seizure, assignment, application or sale for or by any creditor or government agency.

6.2.6 The existence of any encumbrance on the Software that has not been approved by Rekor in writing.

6.2.7 If any application, certificate, statements, trade references, representations and/or financial reports furnished by User and submitted to Rekor proves to be false in any material respect.

6.3 Rights on Default: Upon the occurrence of any Event of Default, Rekor may, after any applicable cure period, without further notice to User, and in Rekor's sole discretion, exercise any one or more of the following remedies:

6.3.1 Declare User's obligations hereunder immediately due and payable and recover as liquidated damages and not as a penalty an amount equal to: (i) reasonable attorneys' fees; plus (any charges, costs, expenses, interest or penalties properly assessable against User pursuant to the provisions of the Agreement or any other agreement(s) between the parties;

6.3.2 Enforce performance by User of the applicable covenants and terms of the Agreement or recover damages for the breach thereof;

6.3.3 Terminate the Agreement and each related Schedule, terminate the licenses and take possession of the Software and associated documentation, with or without demand or

notice to User and without order of court or other legal process, and without incurring any liability to User for any damages incurred by reason of such taking; and/or

6.3.4 any other remedies available in law or at equity.

No failure or delay on the part of Rekor to exercise any remedy hereunder shall operate as a waiver. No express or implied waiver by Rekor of any default shall constitute a waiver of any other default by User or waiver of Rekor's rights. No remedy is intended to be exclusive, but each shall be cumulative and concurrent to the extent permitted by law and shall be in addition to any other remedy otherwise available to Rekor at law or in equity.

6.4 Effect of Termination. Expiration, termination or cancellation of the Agreement and related Schedules shall not affect rights, obligations or liabilities of the parties which accrue prior to such expiration, termination or cancellation. Upon expiration, termination or cancellation of the Agreement, all rights, licenses and authorizations granted to User hereunder will immediately terminate and User will (a) immediately cease all use of and other activities with respect to the Equipment and Software; (b) within 15 days deliver to Rekor all Equipment and Software at User's expense, or upon request by Rekor destroy the Software, and permanently erase from all devices and systems User directly or indirectly controls, the Software, including all documents, files, and tangible materials containing, reflecting, incorporating, or based on any of the foregoing, whether or not modified or merged into other materials; and (c) certify to Rekor in a signed written instrument that it has complied with the requirements of this Section 6.4. The provisions of Sections 3, 4.2 - 4.4, 5, 8.1-8.3, 8.6 and 8.7 of this Agreement shall survive termination of the Agreement and related Schedules.

7. COMMUNICATIONS AND REFERENCES.

Rekor and its subsidiaries (collectively, "**Rekor**") are each permitted to issue a press release announcing that User has retained Rekor to provide the Services. Rekor may reference User and generally describe the nature of the Agreement and its outcomes in Rekor's promotional materials, presentations, and proposals to current and prospective Users.

8. MISCELLANEOUS

8.1 Notices: All notices, requests, consents, claims, waivers and other communications (collectively, "Notices") hereunder shall be sent to the addresses set forth in the preamble of the Agreement and/or email set forth on the signature page to the Agreement or such other addresses and/or email as a Party gives from time to time. All Notices shall be deemed to have been given (a) when delivered by hand; (b) when received by the addressee if sent by a nationally recognized overnight courier (receipt requested); (c) on the date sent by facsimile or email, if sent during normal business hours of recipient, and on the next business day if sent after normal business hours of recipient or (d) on the third day after the date mailed, by certified or registered mail, return receipt requested, postage prepaid. All Notices hereunder may be given by any other means but shall not be deemed to have been duly given unless and until it is actually received by the intended recipient.

8.2 Entire Agreement and Modification: The Agreement (including the Schedules, Annexes and Exhibits hereto, and the provisions incorporated by reference herein) constitutes the entire agreement and understanding among the Parties hereto with respect to the subject matter hereof and supersedes all prior agreements and understandings, whether written or oral, relating to such subject matter in any way to the subject matter hereof or thereof. No modification, waiver or amendment of the Agreement shall be effective unless in writing and signed by both Parties. The Agreement replaces any and all prior agreements between the Parties with respect to its subject matter. Waiver by a Party of any provision of the Agreement does not constitute, and is not to be construed as constituting, a waiver of such provision (or any other provision) at any other time.

8.3 Governing Law. The Agreement shall be governed and construed in accordance with the laws of the State of Maryland, without application of any principle of Maryland law which would require that the Agreement be governed and construed by the laws of any other jurisdiction.

8.4 Log-In Information; Individual Use. To gain access to and use the Services, User may be required to create a username and password or other log-in ID and password ("Log-In Information"). User is responsible for all activity occurring under its Log-In Information, and User must keep its Log-In Information confidential and not share such Log-In Information with other individuals or third parties other than those with a business need to know. Rekor has no obligation or responsibility with regard to User's use, disclosure, or management of Log-In Information. Rekor may require User to change its Log-In Information if such Log-In Information is inconsistent with the terms of the Agreement. Notwithstanding anything set forth in the Agreement to the contrary, Rekor makes Services available to User for only its use and not for use by any third party.

8.5 Assignment, Sublease or Sublicense by User. User shall not assign, sublet or sublicense any interest in the Agreement, the Software, or permit the Software to be used by anyone other than User or User's employees, without Rekor's prior written consent. Any such assignment, sublet, or sublicense by User without the prior written consent of Rekor shall be null and void. Rekor in its sole discretion, reserves the right to assign this Agreement in parts or in its entirety.

8.6 Investigations. If Rekor becomes aware of any possible violations by User of any provision of the Agreement, Rekor reserves the right to investigate such violations. If, as a result of such investigation, Rekor believes that criminal activity has occurred, Rekor reserves the right to refer the matter to, and to cooperate with, any and all applicable law enforcement authorities. Except to the extent prohibited by applicable law, Rekor is entitled to disclose any information in Rekor's possession in connection with User's use of the Software, and under any provision of the Agreement, to (a) comply with applicable law, legal process or governmental request; (b) enforce the Agreement; (c) respond to any claims or rights of third parties; (d) respond to User's requests for customer services; or (e) protect the rights, property or personal safety of Rekor, its users or the public, and law enforcement or other government officials, as Rekor in its sole discretion believes to be necessary or appropriate. User is solely responsible for its familiarity and compliance with any laws that may prohibit User from participating in or using any part of the Services.

8.7 Submission to Jurisdiction; Consent to Service of Process; Waiver of Jury Trial. Each Party hereby irrevocably submits to the exclusive jurisdiction of the state and federal courts of the State of Maryland for the purposes of any suit, action or other proceeding arising out of or relating to the Agreement and agrees that all claims in respect of the suit, action or other proceeding may be heard and determined in any such court. Each Party agrees to commence any such suit, action

or other proceeding either in the state or federal courts of the State of Maryland. Each Party waives any defense of improper venue or inconvenient forum to the maintenance of any action or proceeding so brought and waives any board, surety or other security that might be required of any other party with respect thereto. Any Party may make service on any other Party by sending or delivering a copy of the process to the Party to be served in the manner provided for the giving of notices in Section 8.1. Nothing in this Section 8.7, however, shall affect the right of any Party to serve legal process in any other manner permitted by law or at equity. Each Party agrees that a final judgment in any action or proceeding so brought shall be conclusive and may be enforced by suit on the judgment or in any other manner provided by law or at equity. EACH OF THE PARTIES HEREBY IRREVOCABLY WAIVES ANY AND ALL RIGHTS TO TRIAL BY JURY IN ANY ACTION ARISING OUT OF OR RELATING TO THE AGREEMENT.

8.8 Severability. If any portion of the Agreement shall be held to be invalid or unenforceable for any reason, the remaining provisions shall continue to be valid and enforceable. If a court finds that any provision of the Agreement is invalid or unenforceable, but that by limiting such provision, it will become valid and enforceable, then such provision shall be deemed to be written, construed, and enforced as so limited.

8.9 Exhibits; Schedules. Except to the extent expressly modified by the Agreement, the Parties by their execution and delivery hereof, affirm and incorporate herein by reference all of the terms, covenants and conditions of the Exhibits, Schedules and terms and conditions expressly referenced herein as if such terms, covenants and conditions were fully set forth in the Agreement.

8.10 Relationship of the Parties. Rekor (and any affiliate thereof providing Services hereunder) is an independent contractor and service provider to User, and the Agreement shall not be deemed to establish a joint venture, partnership, association or fiduciary or similar relationship between Rekor or any affiliate thereof, on the one hand, and User or any affiliate thereof, on the other hand, for United States tax purposes or for any other purpose.

8.11 Further Assurances The Parties shall furnish upon request to each other further information, execute and deliver to each other documents, and do other acts and things, all as another party may reasonably request for the purpose of giving effect to the intent or express terms of the Agreement and the documents referred to in the Agreement; provided, that no party shall be obligated to incur any material liability, expense or obligation pursuant to this Section 8.11 without its consent.

8.12 Counterparts. The Agreement may be executed in counterparts, each of which is deemed an original, but all of which together is deemed to be one and the same agreement. A signed copy of the Agreement delivered by facsimile, e-mail or other mean of electronic transmission is deemed to have the same legal effect as delivery of an original signed copy of the Agreement.

[Signature Page Appears on Next Page]

IN WITNESS WHEREOF, the Parties have caused this Equipment and Software Master Subscription Agreement to be executed by their duly authorized representatives as of the Execution Date.

COMMONWEALTH OF MASSACHUSETTS ~ STANDARD CONTRACT FORM

This form is jointly issued and published by the Office of the Comptroller (CTR), the Executive Office for Administration and Finance (ANF), and the Operational Services Division (OSD) as the default contract for all Commonwealth Departments when another form is not prescribed by regulation or policy. The Commonwealth deems void any changes made on or by attachment (in the form of addendum, engagement letters, contract forms or invoice terms) to the terms in this published form or to the Standard Contract Form Instructions and Contractor Certifications, the Commonwealth Terms and Conditions for Human and Social Services or the Commonwealth IT Terms and Conditions which are incorporated by reference herein. Additional non-conflicting terms may be added by Attachment. Contractors are required to access published forms at CTR Forms: https://www.macomptroller.org/forms. Forms are also posted at OSD Forms: https://www.mass.gov/lists/osd-forms.

CONTRACTOR LEGAL NAME: BainCor, Inc. (and d/b/a):	**COMMONWEALTH DEPARTMENT NAME:** Department of State Police **MMARS Department Code:** POL
Legal Address: (W-9, W-4): 763 South St, Holbrook, MA 02343	**Business Mailing Address:** 470 Worcester Rd, Framingham, MA 01702

Vendor Code Address ID (e.g. "AD001"): AD___. (Note: The Address ID must be set up for EFT payments.)	**MMARS Doc ID(s):**
	RFR/Procurement or Other ID Number: BD-20-1030-0P100-0P070-49476

_X_ NEW CONTRACT

PROCUREMENT OR EXCEPTION TYPE: (Check one option only)

__ **Statewide Contract** (OSD or an OSD-designated Department)
__ **Collective Purchase** (Attach OSD approval, scope, budget)
_X_ **Department Procurement** (includes all Grants - 815 CMR 2.00) (Solicitation Notice or RFR, and Response or other procurement supporting documentation)
__ **Emergency Contract** (Attach justification for emergency, scope, budget)
__ **Contract Employee** (Attach Employment Status Form, scope, budget)
__ **Other Procurement Exception** (Attach authorizing language, legislation with specific exemption or earmark, and exception justification, scope and budget)

___ CONTRACT AMENDMENT

Enter **Current Contract End Date** *Prior* to Amendment: _____, 20___.
Enter **Amendment Amount:** $ _____. (or "no change")

AMENDMENT TYPE: (Check one option only. Attach details of amendment changes.)

__ **Amendment to Date, Scope or Budget** (Attach updated scope and budget)
__ **Interim Contract** (Attach justification for Interim Contract and updated scope/budget)
__ **Contract Employee** (Attach any updates to scope or budget)
__ **Other Procurement Exception** (Attach authorizing language/justification and updated scope and budget)

The Standard Contract Form Instructions and Contractor Certifications and the following Commonwealth Terms and Conditions document are incorporated by reference into this Contract and are legally binding: (Check ONE option): _X_ Commonwealth Terms and Conditions __ Commonwealth Terms and Conditions For Human and Social Services

COMPENSATION: (Check ONE option): The Department certifies that payments for authorized performance accepted in accordance with the terms of this Contract will be supported in the state accounting system by sufficient appropriations or other non-appropriated funds, subject to intercept for Commonwealth owed debts under 815 CMR 9.00.

_X_ **Rate Contract.** (No Maximum Obligation) Attach details of all rates, units, calculations, conditions or terms and any changes if rates or terms are being amended.)

__ **Maximum Obligation Contract.** Enter total maximum obligation for total duration of this contract (or *new* total if Contract is being amended). $ _____.

PROMPT PAYMENT DISCOUNTS (PPD): Commonwealth payments are issued through EFT 45 days from invoice receipt. Contractors requesting accelerated payments must identify a PPD as follows: Payment issued within 10 days __% PPD; Payment issued within 15 days __ % PPD; Payment issued within 20 days __ % PPD; Payment issued within 30 days __% PPD. If PPD percentages are left blank, identify reason: __agree to standard 45 day cycle __ statutory/legal or Ready Payments (M.G.L. c. 29, § 23A); __ only initial payment (subsequent payments scheduled to support standard EFT 45 day payment cycle. See Prompt Pay Discounts Policy.)

BRIEF DESCRIPTION OF CONTRACT PERFORMANCE or REASON FOR AMENDMENT: (Enter the Contract title, purpose, fiscal year(s) and a detailed description of the scope of performance or what is being amended for a Contract Amendment. Attach all supporting documentation and justifications.) **Contract with MSP per multiple user option of MassDOT RFR and Commbuys bid # BD-20-1030-0P100-0P070-49476. See attached documentation.**

ANTICIPATED START DATE: (Complete ONE option only) The Department and Contractor certify for this Contract, or Contract Amendment, that Contract obligations:

_X_ 1. may be incurred as of the Effective Date (latest signature date below) and no obligations have been incurred prior to the Effective Date.

__ 2. may be incurred as of _____, 20___, a date LATER than the Effective Date below and no obligations have been incurred prior to the Effective Date.

__ 3. were incurred as of _____, 20___, a date PRIOR to the Effective Date below, and the parties agree that payments for any obligations incurred prior to the Effective Date are authorized to be made either as settlement payments or as authorized reimbursement payments, and that the details and circumstances of all obligations under this Contract are attached and incorporated into this Contract. Acceptance of payments forever releases the Commonwealth from further claims related to these obligations.

CONTRACT END DATE: Contract performance shall terminate as of **June 30, 2025**, with no new obligations being incurred after this date unless the Contract is properly amended, provided that the terms of this Contract and performance expectations and obligations shall survive its termination for the purpose of resolving any claim or dispute, for completing any negotiated terms and warranties, to allow any close out or transition performance, reporting, invoicing or final payments, or during any lapse between amendments.

CERTIFICATIONS: Notwithstanding verbal or other representations by the parties, the **"Effective Date"** of this Contract or Amendment shall be the latest date that this Contract or Amendment has been executed by an authorized signatory of the Contractor, the Department, or a later Contract or Amendment Start Date specified above, subject to any required approvals. The Contractor certifies that they have accessed and reviewed all documents incorporated by reference as electronically published and the Contractor makes all certifications required under the Standard Contract Form Instructions and Contractor Certifications under the pains and penalties of perjury, and further agrees to provide any required documentation upon request to support compliance, and agrees that all terms governing performance of this Contract and doing business in Massachusetts are attached or incorporated by reference herein according to the following hierarchy of document precedence, the applicable Commonwealth Terms and Conditions, this Standard Contract Form, the Standard Contract Form Instructions and Contractor Certifications, the Request for Response (RFR) or other solicitation, the Contractor's Response (excluding any language stricken by a Department as unacceptable, and additional negotiated terms, provided that additional negotiated terms will take precedence over the relevant terms in the RFR and the Contractor's Response only if made using the process outlined in 801 CMR 21.07, incorporated herein, provided that any amended RFR or Response terms result in best value, lower costs, or a more cost effective Contract.

Massachusetts Department of Transportation
CONTRACTOR AUTHORIZED SIGNATORY LISTING

CONTRACTOR LEGAL NAME: BainCor, INC.
CONTRACTOR VENDOR/CUSTOMER CODE: VC 0000506451

INSTRUCTIONS: Any Contractor (other than a sole-proprietor or an individual contractor) must provide a listing of individuals who are authorized as legal representatives of the Contractor who can sign contracts and other legally binding documents related to the contract on the Contractor's behalf. In addition to this listing, any state department may require additional proof of authority to sign contracts on behalf of the Contractor, or proof of authenticity of signature (a notarized signature that the Department can use to verify that the signature and date that appear on the Contract or other legal document was actually made by the Contractor's authorized signatory, and not by a representative, designee or other individual.)

NOTICE: ***Acceptance of any payment under a Contract or Grant shall operate as a waiver of any defense by the Contractor challenging the existence of a valid Contract due to an alleged lack of actual authority to execute the document by the signatory.***

For privacy purposes **DO NOT ATTACH** any documentation containing personal information, such as bank account numbers, social security numbers, driver's licenses, home addresses, social security cards or any other personally identifiable information that you do not want released as part of a public record. The Commonwealth reserves the right to publish the names and titles of authorized signatories of contractors.

AUTHORIZED SIGNATORY NAME	TITLE
Wayne Bainter	President
John Cordeiro	Vice President

I certify that I am the President, Chief Executive Officer, Chief Fiscal Officer, Corporate Clerk or Legal Counsel for the Contractor and as an authorized officer of the Contractor I certify that the names of the individuals identified on this listing are current as of the date of execution below and that these individuals are authorized to sign contracts and other legally binding documents related to contracts with the Commonwealth of Massachusetts on behalf of the Contractor. I understand and agree that the Contractor has a duty to ensure that this listing is immediately updated and communicated to any state department with which the Contractor does business whenever the authorized signatories above retire, are otherwise terminated from the Contractor's employ, have their responsibilities changed resulting in their no longer being authorized to sign contracts with the Commonwealth or whenever new signatories are designated.

Assistant District Attorney, Search Warrant Team

MOSAIC THEORY FOR TECHNOLOGICAL SURVEILLANCE

- CW v. McCarthy, 484 Mass. 493 (2020) adopted the "mosaic theory"
- Advancing technology undercuts checks on overly pervasive police presence because:
  1) Not limited by same practical constraints
  2) Proceeds surreptitiously
  3) Gives LE access to info "previously unknowable"
- Recognizes privacy interest in whole of one's public movements

ELSAG Mobile Plate Hunter MPH M7 ALPR System

Automatic License Plate Recognition

1: M7 Camera

Figure 2: Roof SUV Mounted M7 Camera

Figure 3: Trunk/Boot Mount M7 System

The new MPH M7 (7th generation) ALPR Camera System has a smaller trunkbox and thinner camera cables for easier and more compact installations of the High Definition 1280 x 1024 Cameras.

The product is suitable for:

- All vehicle makes and models.
- Compact design allows the ALPR/ANPR to fit in front of light bars on top of patrol cars or as a standalone unit attached by magnetic mounts. Unit is easily and rapidly transferable to a variety of police vehicles.
- Processor unit is the size of a small box for easy storage in trunk of a vehicle.
- The MPH M7 2 camera Number / License Plate Reader requires less than 20W of 12V DC (only about the draw of a car radio) to function.

The all-weather enclosure contains two cameras: a Black/White camera (with one IR illuminator) and one color overview camera. The B/W camera connected with an IR illuminator is designed to tackle variations of lighting conditions, from night to full sunlight.

For each plate read, the ELSAG Plate Hunter system provides:

- Black & white close-up photo of plate (from which the OCR Optical Character Recognition is done)
- Color overview photo of car and surrounding scene
- GPS Coordinates and mapping to show location that the plate was scanned
- Time and Date stamp

Elsag is a ALPR product of Selex ES, Inc. a Leonardo Company

MPH M7 Camera Specifications

Figure 4: M7 Camera Views

M7 CAMERA SYSTEM SPECIFICATIONS	
B/W CAMERA	1280 x 1024 Monochrome CMOS Sensor (1/1.8")
Color Camera	1280 x 1024 Color CMOS Sensor (1/1.8")
Optics Interface	C Mount B&W, S Mount Color
IR Illumination	740nm LED illuminator synchronized with camera shutter, (870nm optional)
Camera Interface	Proprietary 8 pin Military grade connector IP67 rated
Camera Communication Protocol	LVDS Digital Interface
Optics	25mm, 16mm, 12mm 8mm (Black/White reading camera)
Operating Temperature	-40 – +60'C (-40 – +140'F)
Housing Protection	IP67
Operating Humidity	10-90% non condensing
Overall Size	53mm x 145mm x 160mm (without base) 2.09" x 5.75" x 6.31" inches (without base)
Camera Weight	2.5 lbs/1.14 kg (without base)
Camera Base Options	Magnet Mount, Security Mount, Clicker Base Mount, Permanent Bulkhead Mount, Lightbar Interface Mount, SUV Roof Mount
Safety Feature	Class 1 Illuminator, EN60825-1

MPH M7 Processor Unit

Figure 6: Two Camera M7 Processor

M7 PROCESSOR SPECIFICATONS	
Processing Board	LINUX based RISC processor
Input Power	12 VDC from vehicle battery with 12VDC ignition key signal 2 Camera System: <20W
Interfaces	2 Camera, 1 Power, 2 Ethernet Mil-spec IP67
Housing Protection	IP67
Network Switch	100 Mbit fast Ethernet adapter
Data packet	For each Read system generates; - Read License Plate String - Date-Time Stamp - GPS Coordinates on map - Camera Identifier - JPEG compressed color overview of car - JPEG black/white close-up plate photo
Optical Character Recognition Training	Regionalized OCR optimization
Operating Temperature	-40 – +60'C (-40 – +140'F)
Operating Humidity	10-90%
Processor Dimensions	159 x 298mm x 70mm 6.25" x 11.75" x 2.75" inches
Weight	2.2kg (4.9 lbs.)
Vanity and Special Plates	A special algorithm allows reading non-structured vanity and special plates.

Non-reflective plates	An enhanced power illuminator and special low-contrast algorithms allow system to achieve accurate results where non-reflective plates are in use.
Red ink character plates	IR Illumination unique wavelength allows the system to have accurate results on red ink plates where higher wavelength IR cameras fail to get the necessary contrast.
Software Suite	CD ROM includes 1. Touch screen enabled on-board User Interface with live display of plate reads, alarms management, Hot List management, shift reporting, and data export. 2. Fast bulk-loading hot list software (from USB thumb drive)
Documentation	Software Installation Manual and User Manual

EPHM7 Camera Cables

Cable SPECIFICATIONS	
Connector	8 Pin Military Grade, IP67 rated
Cable	Proprietary 8 Conductor Composite Cable, Jacket-Black Poly Urethane
Dimensions	Connector: 1 inch dia. (30.4mm) (both ends) Cable: 0.35 inch dia (9mm) multiple lengths available

EPHM6 Global Positioning System Antenna

ANTENNAE SPECIFICATIONS	
Interface	USB
Datum	WGS-84
GPS protocol	NMEA or Garmin
Data Rate	4800 bps

EPHM7 CarSystem 6.0 Software Suite

CARSYSTEM SOFTWARE SPECIFICATONS	
Operating System Capability	All released versions of Microsoft Windows 7/8 /10 operating systems.
Connectivity	The system is capable downloading Hot-List data files and uploading ANPR Detection and Hot records via the following methods: • 802.11 Wi-Fi • Cellular
Buffering	All records are buffered if connectivity to the server is interrupted. Once connection is restored, all data transactions that occurred during the interruption are updated in the order of their priority.
Comprehensive Search Utility	Search mechanism enables the operator to search manually: all vehicle detection records, all Hot List records, and/or all Hit activities. Searches can be performed using partial license plate entries
Custom Note Capabilities	The system allows operators to add customized notes to all records and upload them to the server for use by all other operators
System Integrity and Change Tracking	Each record is dealt with as precious information that should never be lost under reasonable operating conditions. The database engine allows for data changes to be made as an atomic operation, which protects against any data corruption as a result of sudden power loss or temporary storage hardware failure. Protection for committed data will also be provided by the database page checksums. Changes are tracked via history tables in the database. This is done for replication to the server database, for auditing purposes, and for record integrity. Changes/audits are searchable on the server and maintain their own retention logic settings.

Data Transmission	The central server has a persistent connection to all in-car systems. Immediately on any change applicable to a particular system, the server transmits updates to Hot Lists and receives all new Reads and Alarm records generated by the in-car system. The communication uses history tables in the in-car system's database to determine what changes must be transmitted between the two systems.
Alarm Notification	While the in-car system is communicating with the server, it transmits all Alarms and Reads to the server. When the server receives an Alarm, and as it processes each Alarm, it checks to see if the Alarm is of a type that requires an email address for notification. If it is, it generates and transmits an email with the Alarm information to that email address. Additionally, whenever an alarm occurs, if the ELSAG Tactical Operations System is running in conjunction with CarSystem, it will send a simultaneous notification to the dispatcher and to other vehicles that are subscribed to that event.
Filtering	Hot lists can be filtered by location (geo-fencing) or by any other search parameter. Hit visibility is determined based on access levels to the particular agency containing that list and the user's current agency
Data Queuing	All data records in queue waiting for transmittal are prioritized by type. A hit's text data, followed shortly by its image data, is always sent before anything else, except confirmations of data received (when in full duplex operation). Additionally, large objects like images, are sent in chunks so that they can be interrupted immediately in case of very high priority data such as hits to be sent. Interrupted transfers will continue where they were left off once network connectivity returns and/or the critical priority data has completed transmission.
Log-In Credentials/Authentication/Privileges	The system allows any number of operators to log into the in-vehicle system. The system administrator controls login credentials. The administrator can set a user's privileges in such a way that they may or may not customize the default settings of certain in-car system features. The system provides each user a unique account. Each account has a user-modifiable profile associated with it. The profile allows the operator to choose the default settings for things like type of alarms that will sound, display language, volume settings, etc. After completing operator authentication, the in-car system will communicate with the central server and synchronize the Hot Lists on the car so that the in-car database contains data only for those Hot Lists that the operator has access to.

Collection and Retention of ANPR Data	The system currently captures the following information when a number plate is read: • The date/time the image was taken; • The date/time the read was recorded in the database; • The ID of the user who was operating the vehicle; • The ID of the organization that owns the record; • The number plate as read by the camera; • The state of the number plate, as determined by the camera; • The country of the number plate, as determined by the camera; • The camera's confidence in the read, on a scale of 1 to 100; • The ID of any Alarm group that was generated from this read; • The latitude of the car's position at the time the read was generated; • The longitude of the car's position at the time the read was generated; • The error radius associated with the car's position; • The car's east to west speed; • The car's north to south speed; • The ID of the group associated with the data owner Each number plate read occupies up to 140 bytes, plus the images. A color overview image occupies about 40K bytes on average while a black and white plate image occupies about 12K on average. That gives a total of about 53K bytes on average per read. The individual read records are maintained in the in-car system's database for a period of time that is set by the system administrator. The retention period can be set to any length desired. Removal of data from the server takes place in the order of oldest records first.
Connection Between CarSystem and Servers	The in-car software periodically connects to the central server automatically and checks for updates to Hot Lists. The update frequency can be configured by the system administrator. The in-car system connection to the server is constantly being monitored and displayed to the user. It also allows the operator to send test messages to the server at any time to ensure proper communication.
Alarm Stacking	After receiving a read from one or more cameras, the in-car system checks for Hot List matches automatically, no matter what the operator is doing with the front-end software. Each match raises an Alarm; all alarms are "stacked" until the operator acknowledges them or they time-out.

Camera Displays	The in-car system can display up to four (4) camera views on the same screen at once. Each view can be toggled between color and IR images and will display a live stream of the reads and data coming from that particular camera.
Alarm/Hit Screen Display	The system Alarm or 'Hit' Screen includes: • Hot-List alert name or type • The Hot-List source name (i.e. US-NCIC, CA-DOJ, etc.) • Includes date the Hot-List record was created or made active • Two images – color overview of vehicle & infrared of the number plate • Each image shall allow user to view in full screen via double click • OCR interpretation of plate • GPS coordinates for location • Narrative comment text, Hot-List notes available • Registered Owner • Vehicle parameters (i.e. make, model, color, etc.) • Camera designated name that scanned matching vehicle • Detection rating to allow the User to: • Designate if read is correct/incorrect • Correct plate read if incorrect
GUI Operation Indicators	The system GUI provides the following operational status indicators to alert the operator when an error or failure has occurred within the system. • Wireless connectivity status between system and ANPR server is either connected or not connected with reason code • GPS satellite signal status indicating if properly receiving with live coordinate display or if not receiving signal with reason code • ANPR camera status of both color and infrared cameras indications if system is receiving video or not receiving video with reason code • ANPR processor status indicating if ANPR processor is properly functioning or if not functioning with reason code

Manual Hot-List Entry	Assuming the administrator has given the necessary permissions, an operator can enter a Hot List record that includes: • Number plate number • State of registration • Alert Name w/ priority status • Up to three custom note fields with titles • Up to 255 character vehicle comment with subject • Set an expiration time period for the Hot-List record to remain active. Subsequent to the expiration date, the Hot-List record shall automatically be rendered as inactive • Distribution to all ANPR systems, server, recorded in the database (and made available to Users with appropriate permissions) and then automatically redistributed through the ANPR network to allow all ANPR systems to receive the Hot-List record as an active target vehicle in which to alert upon. • Notify (via an alert) the user who entered the record prior to the expiration date.
System Response Time	The system compares a captured plate against multiple large databases comprising of more than 3,000,000 records with a less than 2-second response time.
GUI Light Setting Modes	The system GUI is available in both a daytime and nighttime modes that is selectable by the operator if permission is granted by the system Administrator. Nighttime viewing mode decreases the light emitted from the screen during dark nighttime conditions.

View of Camera

Camera Size:

- Standard 12mm (covers 12 feet wide by 15 feet long or 3.6 meters by 4.5 meters) and 16mm (covers 12 feet wide by 24 feet long or 3.6 meters by 7.3 meters). Only one camera on the right is required to perform all plate reading missions including adjacent lanes or parked vehicles (90⁰ or diagonal or parallel parked).

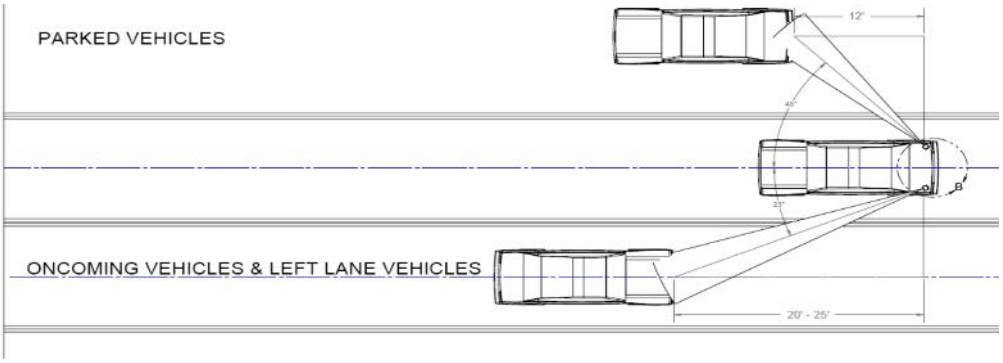

Figure 7 – Camera Range

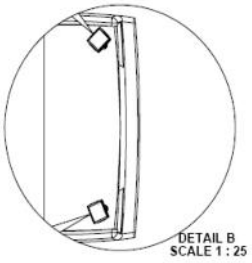

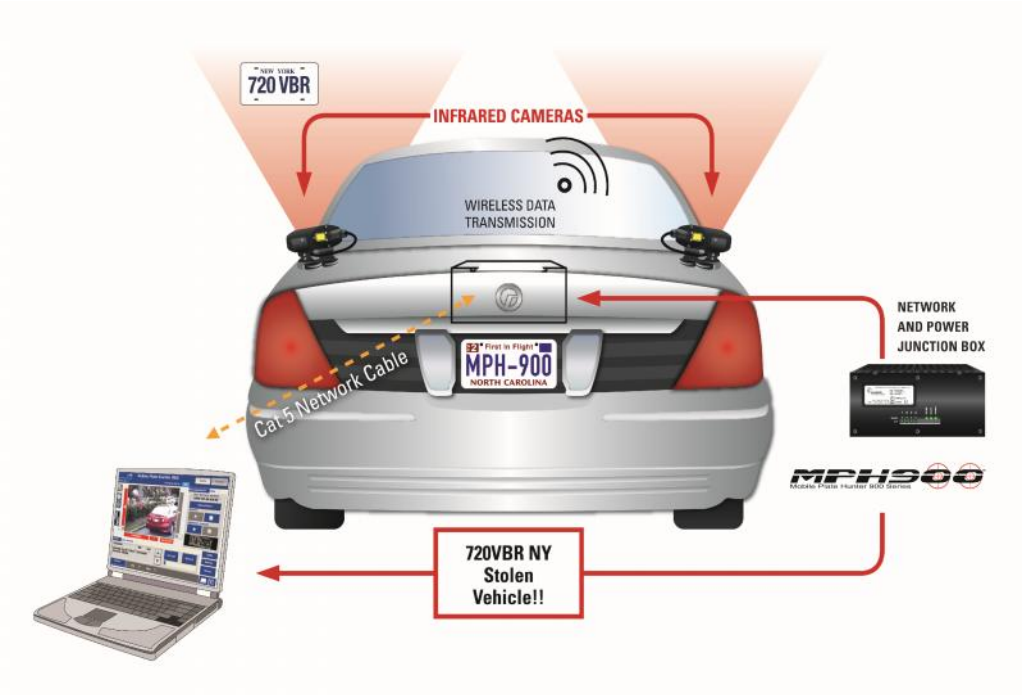

Figure 8- A two camera configuration with trunk mount

Figure 9 – Camera Snapshot comparable to competition.

How It Works

- Infrared cameras read plates of parked and moving vehicles across 4 lanes of traffic.
- Processor Box compares data with Hot List records of suspect vehicles
- Wireless connectivity sends images to software uploaded on Mobile Data Terminal (MDT).
- Alarm sounds when suspect vehicle is passed.

MDT Mobile Data Terminal

Compatibility with on-board PC or Mobile Data Terminals

The ANPR cameras need an on-board PC to host the user interface.
It is usually possible to utilize existing Mobile Data Terminals (MDT) if they comply with the following minimal requirements
The computer on which you install Car System must meet the following requirements at a minimum:

- Intel® Core™2 Duo CPU with at least 2 GB RAM
- 800X600 minimal display Resolution
- 5 GB hard disk space available (more HD space is required for longer retention locally on the PC)
- LAN data port for connecting the PC to the Processing Unit (the Unit must have STATIC IP addresses); if an on-board LAN is already present, a switch port must be available and the IP address of the unit can be adapted for the existing IP class. If a firewall is present, UDP and TCP traffic shall be enabled between the PC and the Unit.
- 1 open USB 2.0 port
- Windows 7 or higher

- The Hot List is a standard TXT file and must be generated by the User. The hot list file is the database of the wanted plates and shall be downloaded onto the on-board PC by means of a USB memory stick. It is also possible to download the Hot List wirelessly by means of Wi-Fi or cellular broadband.
- The on-board MDT may be optionally touch screen enabled
- GPS devices, compliant with NMEA 0183 version 2.0 or later, can be installed on any serial (COM) or USB port; if available all the read license plate could be associated to a location for further analysis.

Operations Center Software Suite – Enterprise Operations Center (EOC)

(to be ordered as a separate item)

When a fleet of cars are equipped with MPH™900 or if it is preferable to have a separate workstation placed in an office environment for after action analysis, the optional Operation Center software is the right solution. Wireless communication capability allows automatic Hot List download and mission data upload. An ANPR unit that maintains a wireless connection to the EOC will receive an automatic data download to include the most up to date hot list.

The EOC provides archiving of all the collected data (both alarms and normal reads) as well as database search functions. An included mapping module allows the system to display alarms and reads on a map.

Cellular high-speed networks are supported.

Wireless network deployment and installation is not included. The design of the wireless network can be provided as a separate service.

Not included:

OP-Center Server PC with the following minimal requirements.
This Server configuration example below is for less than 5 mobile units and data storage for up to 6 months.
If the requirements exceed these constraints the Server specification must be evaluated on a case by case basis and a hardware sizing guide is available.

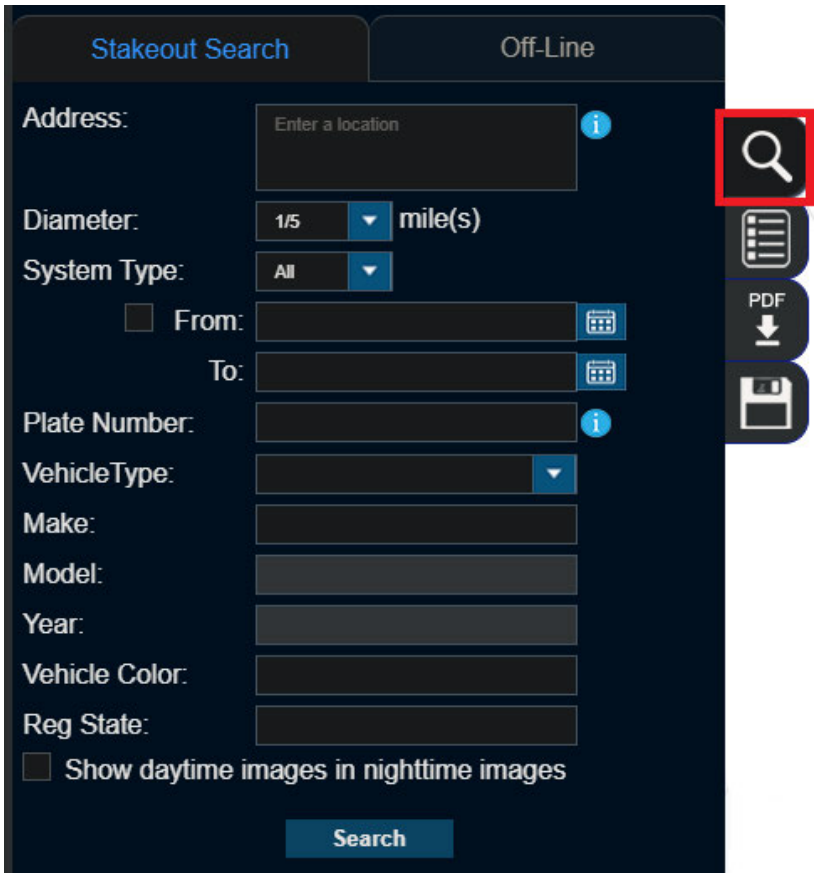
SERVER	
Functions	Aggregator, Trans DB, Staging DB, Web Service, Image Storage
Minimum	Intel i7 Quad Core
Recommended	Intel Xeon Dual Core
RAM	
Minimum	16 GB
Recommended	32 GB
Hard Drive	
OS	7.5k RPM, 100GB (page.sys located here)
IMAGES	7.5k RPM, 100GB to 750GB/yr *See Capacity Planning Worksheet
SQL	7.5k RPM, *See Capacity Planning Worksheet (meta data storage - no images)
Software	
OS	
Minimum	Windows Server 2008 R2 64bit version, Windows 7 Professional 64bit
Recommended	Windows Server 2012 R2 64bit version
SQL	Microsoft SQL Server 2008 R2, or 2012 or 2014 (any version) 64bit versions
.NET	
Minimum	.NET 4.6 required
Recommended	.NET 4.6.2

Custom Hot List Input Format

Adaptation software will be provided to convert any kind of input text file into the proprietary system format.

Maintenance and Support

Warranty Year 1	Included
On Site Training	Included
Phone Support	Included



VIGILANT VEHICLEMANAGER QUICK GUIDES

STAKEOUT

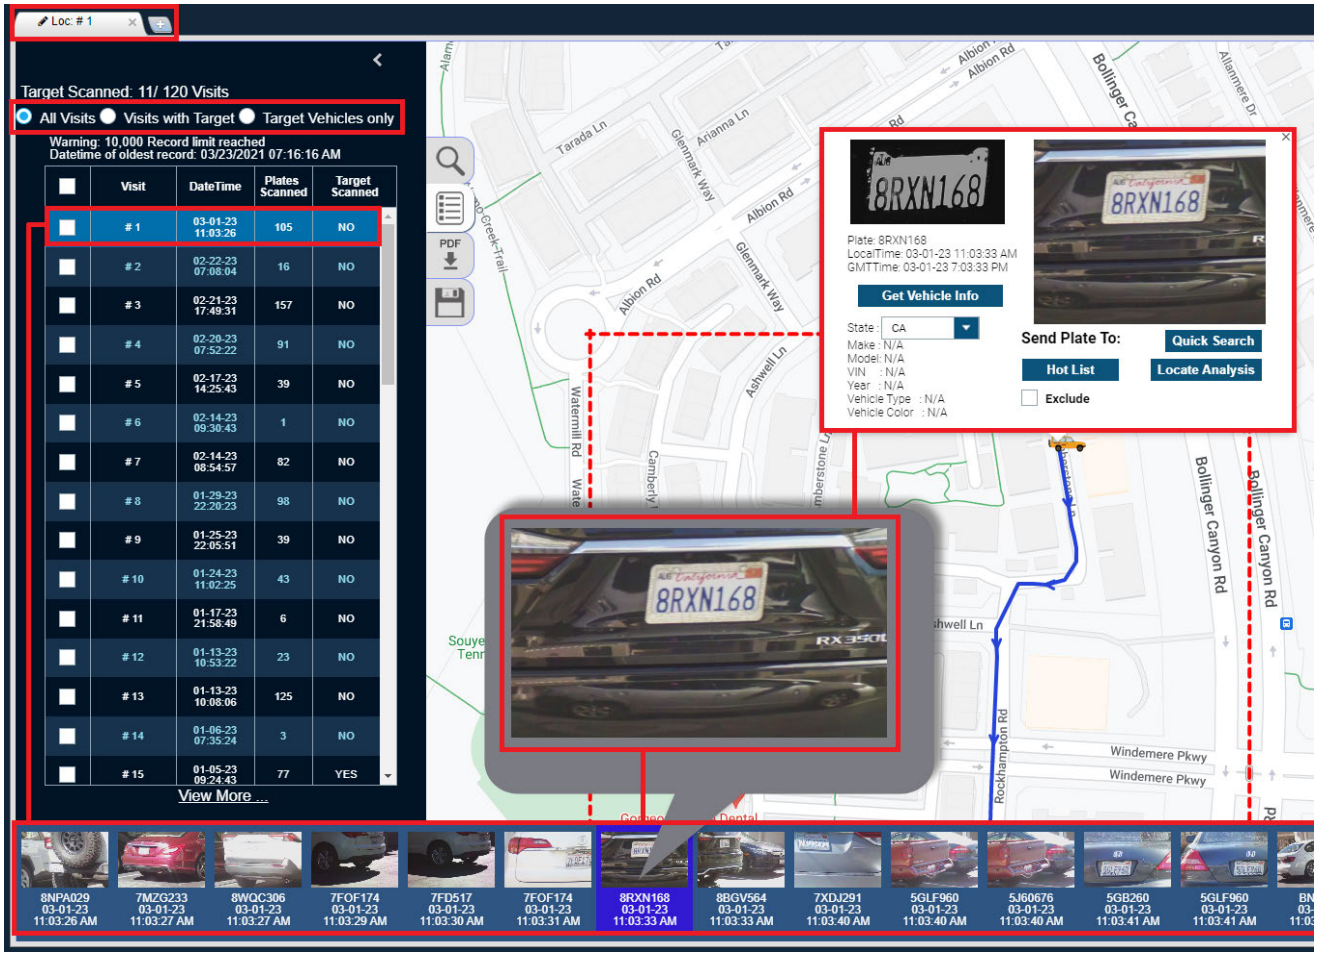
This guide describes how Users can use the **Stakeout** feature of VehicleManager to search for vehicle detections grouped by their visits to a location.

- **Stakeout** searches a 4 mile radius defined by address or geozone for vehicles that have visited that location themselves, or along with a specific target vehicle in a specified time frame. Locations must have detections made by a CarDetector system from within the geozoned boundary to return results. Only an address is required to perform a Stakeout search, but additional details will help narrow the results and make them more useful.
- The **Visits Tab** filters results to include only visits made along with the target location vehicle, or only visits made by the target vehicle.

PERFORMING STAKEOUT SEARCHES

1. Login to VehicleManager and navigate to **Stakeout**.
2. To perform a Stakeout Search, click on the **Search Tab (Magnifying Glass)** and then the **Stakeout Search** tab.

© 2023, Motorola Solutions. All rights reserved. MOTOROLA, MOTO, MOTOROLA SOLUTIONS, and the Stylized M Logo are trademarks or registered trademarks of Motorola Trademark Holdings, LLC and are used under license. All other trademarks are the property of their respective owners.



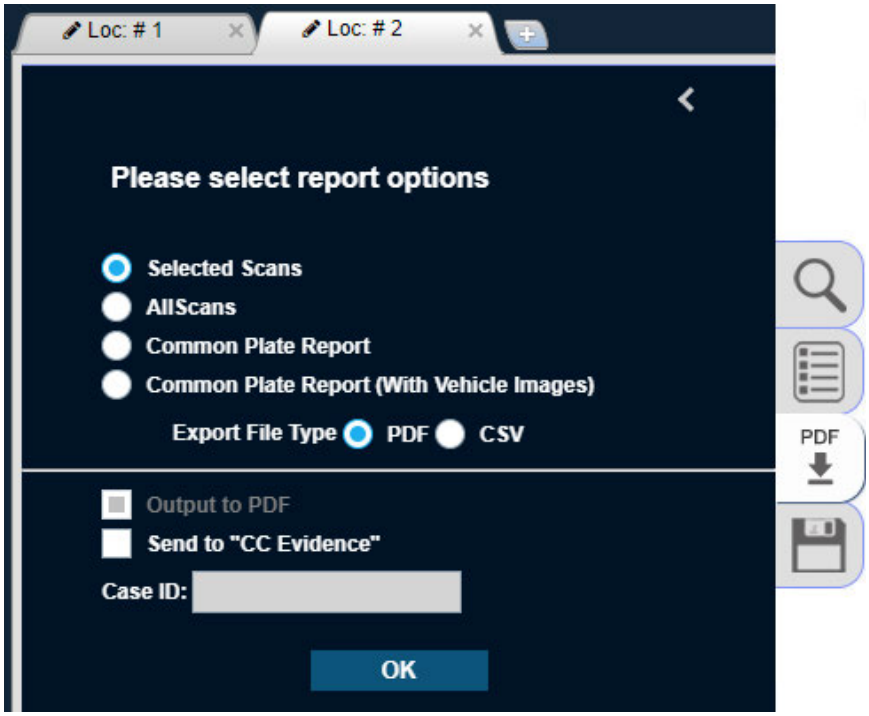
3. Select from the following options to define a search address and a target vehicle:

	Option	Description
1	Geo-zoned Locations	Select from a list of pre-made Locations defined by a geozoned border. Locations are created and managed by Site Managers.
2	Address	Enter an address to focus the map on that location.
3	Radius	Instead of using a geozone, use this value as the largest distance from the address that will be searched. The radius is limited to 2 miles to prevent long search times. **NOTE:** This option is disabled when a Geo-zoned Location is selected.
4	System Type	Search for detections made by fixed systems, mobile systems, or both.
5	From/To Date	Enable the checkbox and click on the **Calendar Icons** to set a date and time range. Only detections made within this period will be returned in the search results.
6	Plate Number	Enter a single license plate number to search for. Click on the **Information (i)** icon to view formatting rules for performing wildcard searches.
7	Minimum Speed	Set a minimum speed for vehicle detections by systems with speed calibration enabled. Only detections generated by vehicles traveling at a speed greater than this value will be returned.
8	VehicleType	Set a type of vehicle to be searched for.
9	Make	Click to view a list of vehicle makes and set a specific vehicle Make to be searched for.
10	Model	If the vehicle make is set, click to view a list of that vehicle make's models and select a specific model to search for.
11	Year	If the vehicle make is set, click to set the make or model year to search for.
12	Show daytime images in nighttime images	If the search returns detections that were made at night, this option enables the overlay of a detection from the same vehicle made during the day on to the nighttime image. This is useful for verifying visual details about the vehicle.

4. Click **Search** to perform the search. Results will be displayed in the **Visits** tab and on the map.

© 2023, Motorola Solutions. All rights reserved. MOTOROLA, MOTO, MOTOROLA SOLUTIONS, and the Stylized M Logo are trademarks or registered trademarks of Motorola Trademark Holdings, LLC and are used under license. All other trademarks are the property of their respective owners.

VIEWING RESULTS IN THE VISITS TAB



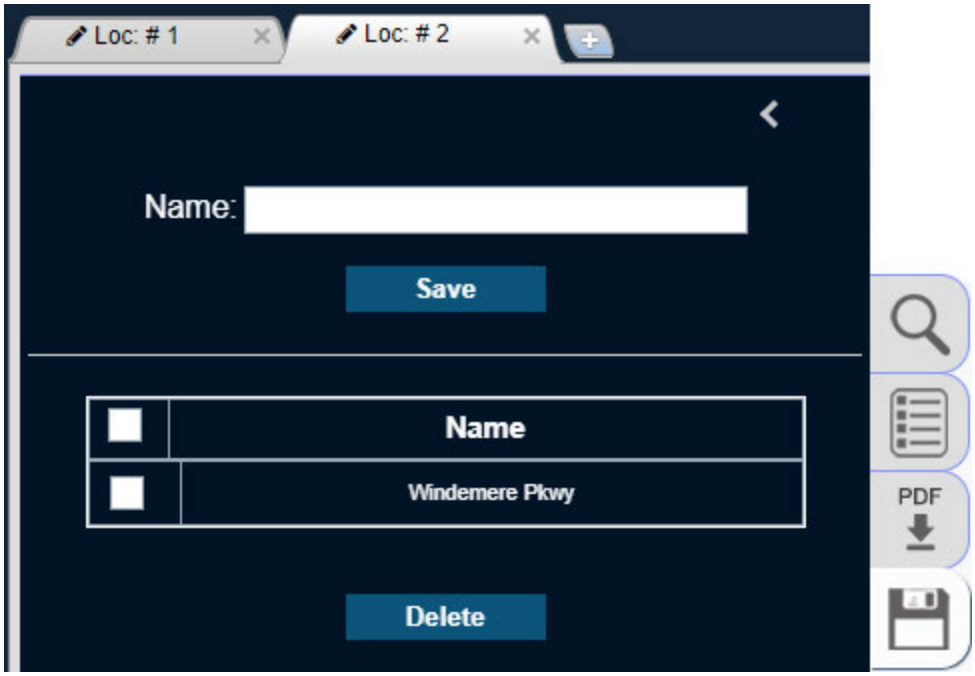
1. In the **Visits** tab, select from the filtering and tabbing options to view the search results:

Option	Description
Visits List	A selectable list of all the detections made in the location, grouped by visit.
Detection Filmstrip	A selectable list of each detection and plate image made during the visit.
Location Tabs	Use the **Plus (+)** sign at the top of the map to create a new location tab. Up to 30 location tabs can be created. Each search will be shown on the map by a pin with a corresponding tab number. Right click on a tab to **Rename**, **Duplicate**, or **Close** it.
All Visits	View all visits made by vehicles to the location.
Visits with Target	View only vehicles that visited the location with the target vehicle searched for in the search tab.
Target Vehicles Only	View only visits made by the target vehicle searched for in the search tab.

© 2023, Motorola Solutions. All rights reserved. MOTOROLA, MOTO, MOTOROLA SOLUTIONS, and the Stylized M Logo are trademarks or registered trademarks of Motorola Trademark Holdings, LLC and are used under license. All other trademarks are the property of their respective owners.

2. Click on a visit in the **Visits List** to populate the **Detection Filmstrip**. Hover the mouse over a detection to view an enlarged plate image. Click on the detection to show the vehicle information popup.

GENERATING STAKEOUT REPORTS



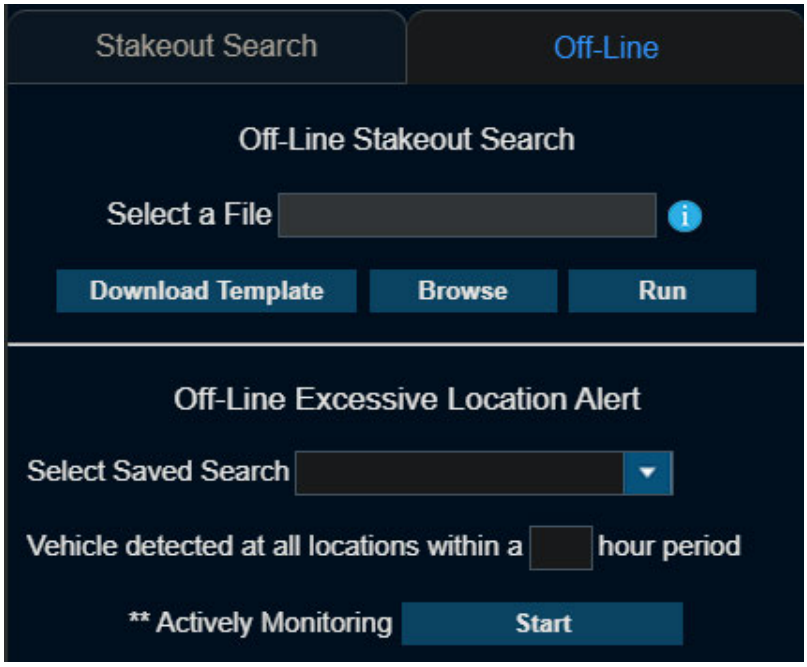
The **Report Tab (PDF)** generates reports from the search results. To generate a **Common Plate Report**, two location tabs must be open and have active searches in them. Large reports may be generated without images to speed up the process.

1. To generate a report of the search results, click on the **Report Tab (PDF)**.
2. Select from the reporting options:

Option	Description
Selected Scans	Only the checkmarked scans in the visits tabs of each location will be included in the report. Each location is sent as a separate report combined in a .zip file.
All Scans	All scans present in the visits tabs of each location will be included in the report. Each location is sent as a separate report combined in a .zip file.
Common Plate Report	Each location and any detections common to both locations will be included in the report.
Export File Type	Choose a file format to receive the report as: **.PDF** or a **.CSV** file

© 2023, Motorola Solutions. All rights reserved. MOTOROLA, MOTO, MOTOROLA SOLUTIONS, and the Stylized M Logo are trademarks or registered trademarks of Motorola Trademark Holdings, LLC and are used under license. All other trademarks are the property of their respective owners.

SAVING STAKEOUT SEARCHES



The **Save Tab (Disk Icon)** saves the search results from the currently selected location tab. Saved searches can be re-opened later in a new location tab.

1. To save the current search, click on the **Save Tab (Disk Icon)**.
2. Enter a name for the saved search and click **Save**.
3. To open a saved search, use the **Plus Sign (+)** to open a new location tab and click the **Save Tab (Disk Icon)**. Click on a saved search to re-open it.
4. To delete saved searches, check the boxes next to each search to be deleted and click **Delete**.

© 2023, Motorola Solutions. All rights reserved. MOTOROLA, MOTO, MOTOROLA SOLUTIONS, and the Stylized M Logo are trademarks or registered trademarks of Motorola Trademark Holdings, LLC and are used under license. All other trademarks are the property of their respective owners.

PERFORMING OFF-LINE STAKEOUT SEARCHES

Off-Line Stakeout Search functions like Stakeout Search but without the search radius limitations. Offline searches take longer, but are processed by the server in the background and delivered to the specified emails when compilation is complete. Offline search parameters are defined in a .XLS file and uploaded to VehicleManager. Use Off-Line Stakeout Search when the area to search is large or there are many locations to search.

1. To perform an Off-Line Stakeout Search, click on the **Search Tab (Magnifying Glass)** and then the **Off-Line** tab.
2. Click the **Download Template** button to download a .XLS file with pre-filled headers. For each row, define a Unique Location Name, Address, and search radius in miles.
3. Select a period in hours or days to search into the past, during which detections must have been made to be returned in the search results.
4. Click **Browse** and select the completed template file with the search locations and radii.
5. Click **Run** to begin the search operation. The results will be sent as a .PDF or .TXT file to the User's email address on file.

© 2023, Motorola Solutions. All rights reserved. MOTOROLA, MOTO, MOTOROLA SOLUTIONS, and the Stylized M Logo are trademarks or registered trademarks of Motorola Trademark Holdings, LLC and are used under license. All other trademarks are the property of their respective owners.

OFF-LINE EXCESSIVE LOCATION ALERT

Off-Line Excessive Location Alert uses a saved Stakeout Search to monitor the locations defined by the search off-line and will deliver email alerts to the specified email address when a target vehicle is detected at any of the locations within a set period of hours or days.

This feature is useful for investigating vehicles that consistently visit multiple locations within a set time period.

1. To begin off-line excessive location alerting, configure the desired search areas and target vehicles in the **Stakeout Search** tab. Use the **Save Tab (Disk Icon)** to save the search.
2. Return to the **Off-Line** tab and select the saved search in the **Select Saved Search** dropdown menu.
3. Enter an email address in the **Email addresses** field to send the alerts to. To send alerts to more than one email address at once, separate each address with a semicolon (;).
4. To send alerts when a vehicle visits each of the search locations within a certain period of time, set the period in hours or days in the **Vehicle detected at all locations** field and drop down menu.
5. Click **Start** to begin the monitoring.

© 2023, Motorola Solutions. All rights reserved. MOTOROLA, MOTO, MOTOROLA SOLUTIONS, and the Stylized M Logo are trademarks or registered trademarks of Motorola Trademark Holdings, LLC and are used under license. All other trademarks are the property of their respective owners.

Massachusetts Department of State Police
Automated License Plate Recognition (ALPR) System
Memorandum of Understanding and Agreement

THIS AGREEMENT, made and entered into this **Twenty-Third** day of **March, 2023** by and between the Department of State Police, hereinafter referred to as "Department," and the **City of Taunton – Police Department**, a public entity, hereinafter referred to as "Agency," collectively referred to as "Parties."

WHEREAS, the Department contracts the services of one or more vendors to host an Automated License Plate Recognition (ALPR) database to store ALPR data; and

WHEREAS, the Parties provide public safety services within their respective jurisdictions; and

WHEREAS, the Parties have found it to be of mutual benefit to provide for the most efficient utilization of their resources and services in the application to public safety efforts within their respective jurisdictions; and

WHEREAS, the Parties are committed to cooperation and coordination in providing the highest level of public safety services to the public, guided by the principle that performing cooperatively is in the best interest of the public; and

WHEREAS, the Agency desires to use the ALPR system contracted and managed by the Department to facilitate the storage of ALPR information generated by the Agency; and

WHEREAS, the Agency desires to share law enforcement information owned by the Agency under the conditions set forth in this Agreement.

NOW, THEREFORE, for and in consideration of the covenants contained herein, IT IS HEREBY AGREED, by and between the Parties as follows:

1. PURPOSE:

The purpose of this Agreement is to provide a standardized approach and method of storage, retention, sharing, and access of ALPR data between the Department and Public Safety Agencies hosting ALPR data on the Department's ALPR system.

2. COSTS:

The Department shall be responsible for the costs of purchasing and maintaining the ALPR system as long as such funding is available to the Department and authorized by the appropriate authorities of the Commonwealth. Participating agencies shall be responsible for the costs of purchasing, servicing, maintaining, repairing, and/or licensing the ALPR equipment used by their respective agency. The Department shall not be responsible for any costs incurred by the Agency for the purchasing, servicing, maintaining, repairing, and/or licensing of the ALPR equipment owned or used by the Agency. The Agency shall inspect the Agency's ALPR equipment on a regular basis and document each inspection. Any irregularities or malfunctions of any ALPR equipment owned by the Agency or of any ALPR information shall be reported to the Department immediately and shall be addressed and repaired by the Agency as soon as reasonably possible.

3. DATA ACCESS AND SECURITY REQUIREMENTS:

a. System Availability: The Department will work with the vendor(s) to keep the ALPR system software and servers online and available with downtime limited to necessary system maintenance activities or to any outages that are beyond the control of the Department.

b. Data Sharing: ALPR data contributed by the Agency will be accessible for official purposes to all Agencies that have entered into an ALPR Agreement with the Department. The Agency shall not otherwise share ALPR data with or provide ALPR data to any person, entity, or government agency, other than a law enforcement agency, unless such disclosure is authorized by policy or court order or unless such disclosure is required by the Massachusetts Rules of Criminal Procedure or Rules of Superior Court governing discovery in criminal matters.

c. Security Requirements: The Department and the Agency agree to enforce and maintain security requirements for the information stored in the ALPR system as specified in the Agreement. The Agency agrees that the information hosted in the ALPR system shall be used for law enforcement purposes only and that only law enforcement agency employees that have been subject to appropriate background screening shall be allowed access to the system.

   Background screenings must be fingerprint-based and include check of both the state and national criminal history repositories. If a felony conviction of any kind is found, access to ALPR system shall not be granted. The Agency agrees not to share passwords, user logins, or allow the ALPR software to be otherwise used by Agencies who have not entered into an Agreement with the Department allowing such activity.

An employee of the Agency may operate an ALPR unit that is connected to the Department's ALPR system or access the Department's ALPR system software only if the person has been designated as an authorized user by the Chief of the Agency or designee, and has received training from the Agency or the Department on the proper use and operation of ALPRs and any policy or procedures governing the use of ALPRs and ALPR data issued or adopted by the Agency.

4. IMPLEMENTATION OF POLICY:

The Agency shall, within 30 days of execution of this Agreement, adopt the Department's General Order TRF-11 as the policy and procedure document that will govern the Agency's use of and interaction with the Department's ALPR system. The Agency agrees that it has been provided with physical or electronic copy of General Order TRF-11, has had sufficient time to read, review, and understand the document in its entirety, and agrees to be bound by the provisions contained therein. The Department agrees to inform the Agency of any updates or modifications to General Order TRF-11, and the Agency understands and agrees that any updates to General Order TRF-11 will be binding upon the Agency unless the Agency elects to terminate the Agreement and withdraw from participation in the Department's ALPR system.

5. BENEFITS TO AGENCY:

a. Data Links: The centralized storage of ALPR data will provide a solution to the problem of inaccessible or irretrievable information due to disconnected ALPR systems and the difficulty in sharing information across jurisdictional boundaries.

b. Reduction of Costs: The centralized storage of ALPR data will reduce the financial burden to the Agency that is associated with purchasing and maintaining ALPR software.

6. RECORDS AND REPORTS:

The Department protects all ALPR information as personally identifiable information (PII) because ALPR information may be combined with other information to specifically identify a unique individual. As such, all information retained in the Department's ALPR system is the sole property of the Department. The Agency agrees that information stored in the ALPR system for the Agency may be subject to disclosure under certain circumstances. The Agency will refer to the Department for review all information requests for Agency information, including, but not limited to, public records requests, court orders, legal motions, subpoenas, and/or summonses.

The Department's Legal Department shall determine the best manner of responding to all requests for Agency information.

7. RETENTION

All ALPR information obtained by the Agency from the Department's ALPR system shall be retained pursuant to the Department's General Order TRF-11.

8. AMENDMENTS:

Any changes and additions to this Agreement shall be made by written amendments to this Agreement and shall not be effective until approved in writing by the Parties. A joint review of this Agreement may be requested at any time by either of the Parties to identify needed changes, which may be amended by written mutual agreement of the Parties.

9. DURABILITY:

This Agreement shall become operational and effective upon execution by the Parties. Parties may terminate the Agreement at any time by giving written notice to the other Parties at least thirty (30) days prior to the effective date of termination. The Agreement may also be terminated by the Department without prior notice to the Agency in the event of executive, legislative, or judicial mandate which requires the unanticipated discontinuation or modification of the ALPR program. In the event of such termination, the Department will notify the Agency as soon as practicable.

10. BENEFITS:

The Parties shall agree that the provisions of this Agreement are not intended to directly benefit and shall not be enforceable by any person or entity not a party to this Agreement. This Agreement is not intended to confer any legal rights or benefits on any person or entity other than the Parties of this Agreement.

11. INDEMNIFICATIONS:

Parties shall defend, indemnify, and hold harmless every other party and its officers, agents, employees, and representatives from any and all losses, liability, damages, claims, suits, actions and administrative proceedings, and demands and all expenditures and cost relating to acts or omissions of the indemnitor, its officers, agents, or employees arising out of or incidental to the performance of any of the provisions of this Agreement. Parties do not assume liability for the

acts or omissions of persons other than their respective officers, its employees, agents, and MOU officers.

The Agency releases the Department from any liability relating to the loss or destruction of data contributed by the Agency. The Agency further releases the Department from any liability relating to the loss of the Agency's access to the ALPR system due to system outage, commercial vendor failure or malfeasance, or executive, legislative, or judicial mandate which requires the unanticipated discontinuation or modification of the ALPR program. The Agency further releases the Department from any liability relating to the release of data or information contributed by the Agency pursuant to a lawful procedure or order.

12. ASSIGNMENT PROHIBITED:

Parties to this Agreement may not assign any right or obligation pursuant to this Agreement. Any attempted or purported assignment of any right or obligation pursuant to this Agreement shall be void and of no effect.

IN WITNESS WHEREOF, the parties hereto have executed this Agreement on the date as written below.

Colonel John E. Mawn, Jr.
Massachusetts State Police

Representative: **Edward J. Walsh, Chief**
Agency: **Taunton Police Department**

Part 3 – Time Settings

Neology UK

28th April 2021

Time Settings

Q: Why do we care about the time?
A: All events are stamped with a time. Without an accurate clock, the event may become “unusable” because we can no longer be sure the time is correct.

Q: Why do we need an external time-source?
A: The camera cannot know the correct time on it’s own – it needs an “authoritative” time source to tell it the correct time. This can be either an external NTP server (which will have further time-sources of it’s own), or a GPS receiver to use the GPS satellites as the time-source.

Q: How do we check if the time is good?
A: The camera tracks whether time is synchronized with an external time source and reports this status in the logs. It can also stamp images with this status.

Q: Are all “time not synchronized” events useless? Shouldn’t we just delete all events without time sync?
A: Not necessarily – just because time is not synchronized it does not necessarily mean the clock is wrong – just that we can no longer be 100% sure it is correct. Assuming time was previously set correctly, it is expected that time will only drift by small amounts, so long as synchronization is not lost for a long time. The sequence of events is also still likely to be correct, and so there may be independent ways to verify the times.

Time Settings – Key Concepts

Concept	Purpose
Camera system time	Tracks the current time according to the camera, and is the clock used when stamping events with timestamps.
Camera hardware clock	Battery backed “realtime clock” chip in the camera used to set initial camera system time when the camera has been powered down.
“Network Time Protocol” (NTP)	NTP is an industry standard mechanism for synchronising clocks between devices. On start-up it will synchronise the local system time to the same as the remote server, and then tracks that the clocks remain synchronised.
Timezone + UTC offset	System time, hardware clock, and NTP all use “UTC” – the timezone for the camera should be set if local-time output is desired.
GPS as time source (not available on P492)	If your camera has a GPS device this is a reliable time-source, and can be used with NTP to get very accurate times regardless of network comms.

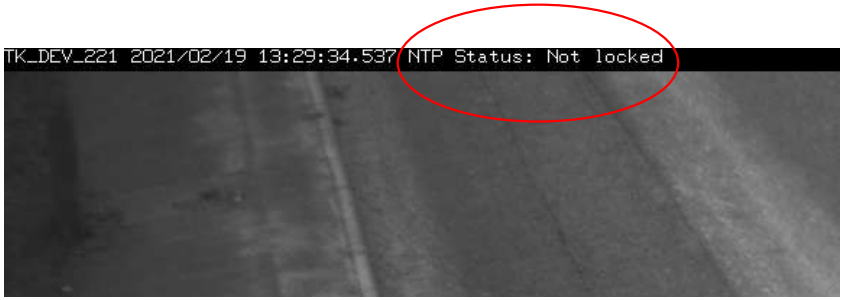
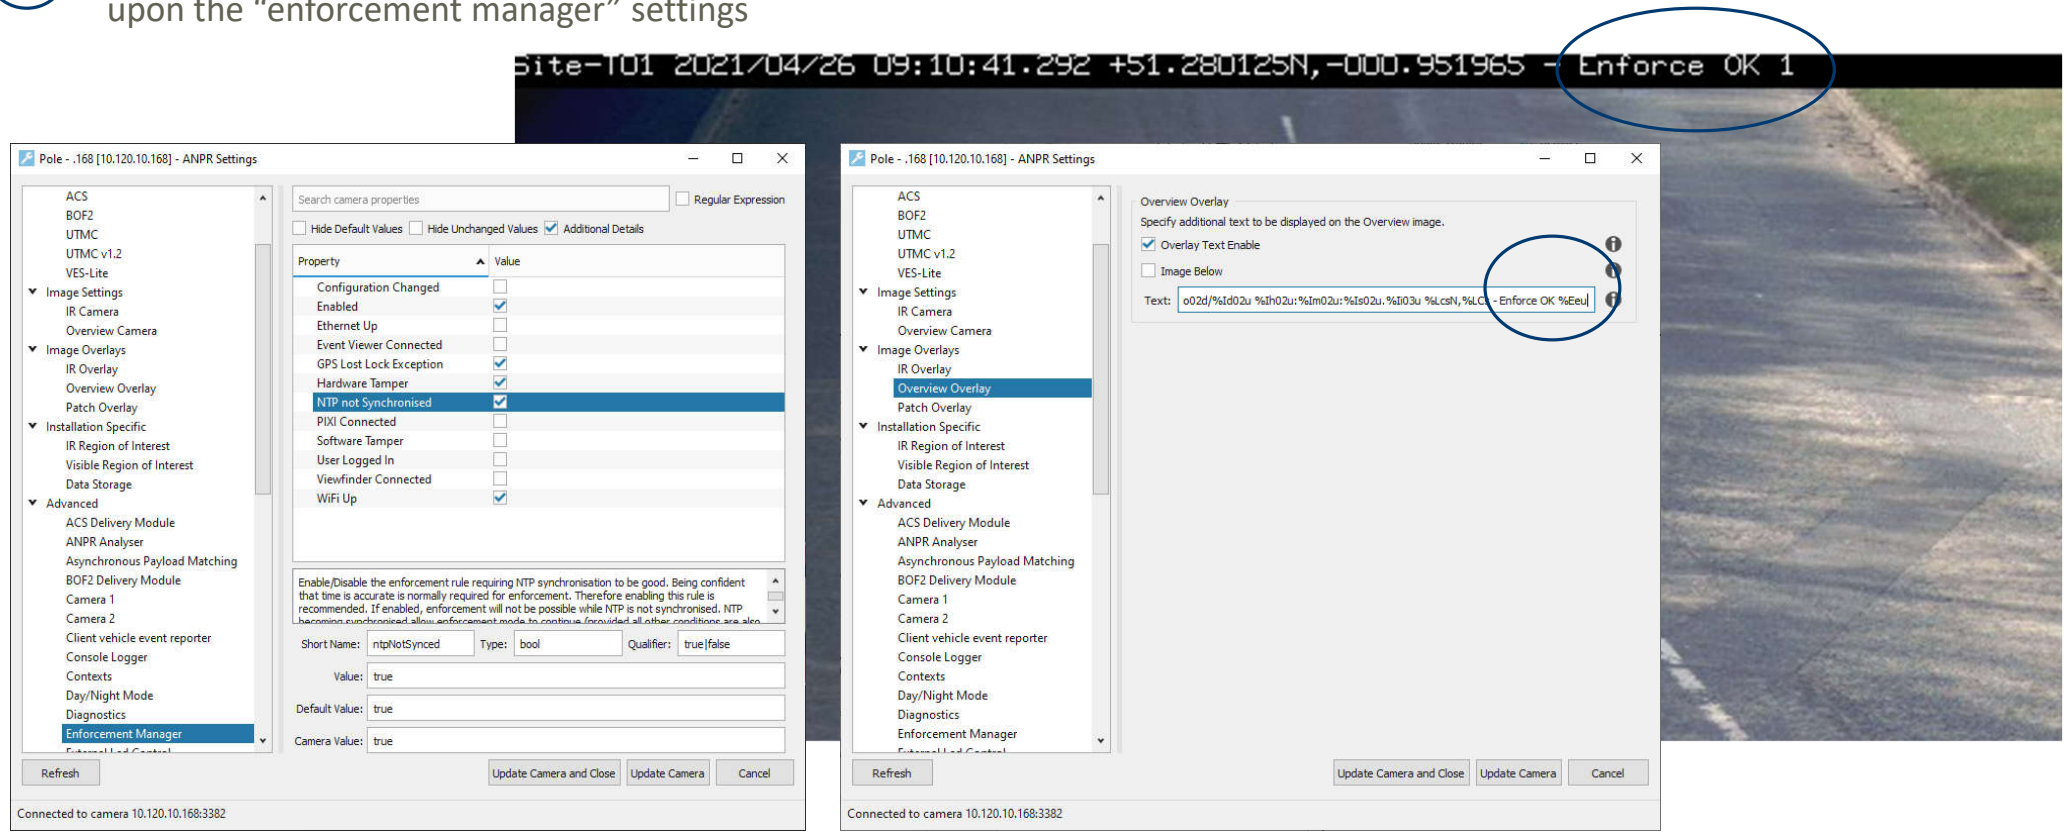
Time Setting – NTP lock status



NTP status can be placed in each image alongside the timestamp, and other useful metadata such as “site id”, or GPS coordinates.

Overview Image

NTP Locked



NTP not available

NTP and Time Deep Dive

Copyright © 2021 Neology, All Rights Reserved.

Deep Dive – NTP - Overview

- NTP is an industry standard mechanism for synchronising clocks between devices. On start-up it will synchronise the local system time is the same as the remote server, and then tracks that the clocks remain synchronised.
- NTP is used in almost all internet connected devices – Windows and Linux PCs, phones, web-servers, “Internet of Things” devices etc.
- In almost all cases, it shouldn’t be necessary to worry about details of exactly how it works, beyond simply knowing the answers to two questions:
  - Is NTP enabled and configured with a remote peer?
  - Is NTP currently synchronized?
- The answers to those two were covered earlier, but for those who want to know more detail of what exactly NTP does, this “deep dive” can answer some further questions.

Copyright © 2021 Neology, All Rights Reserved.

Deep Dive – NTP – Process

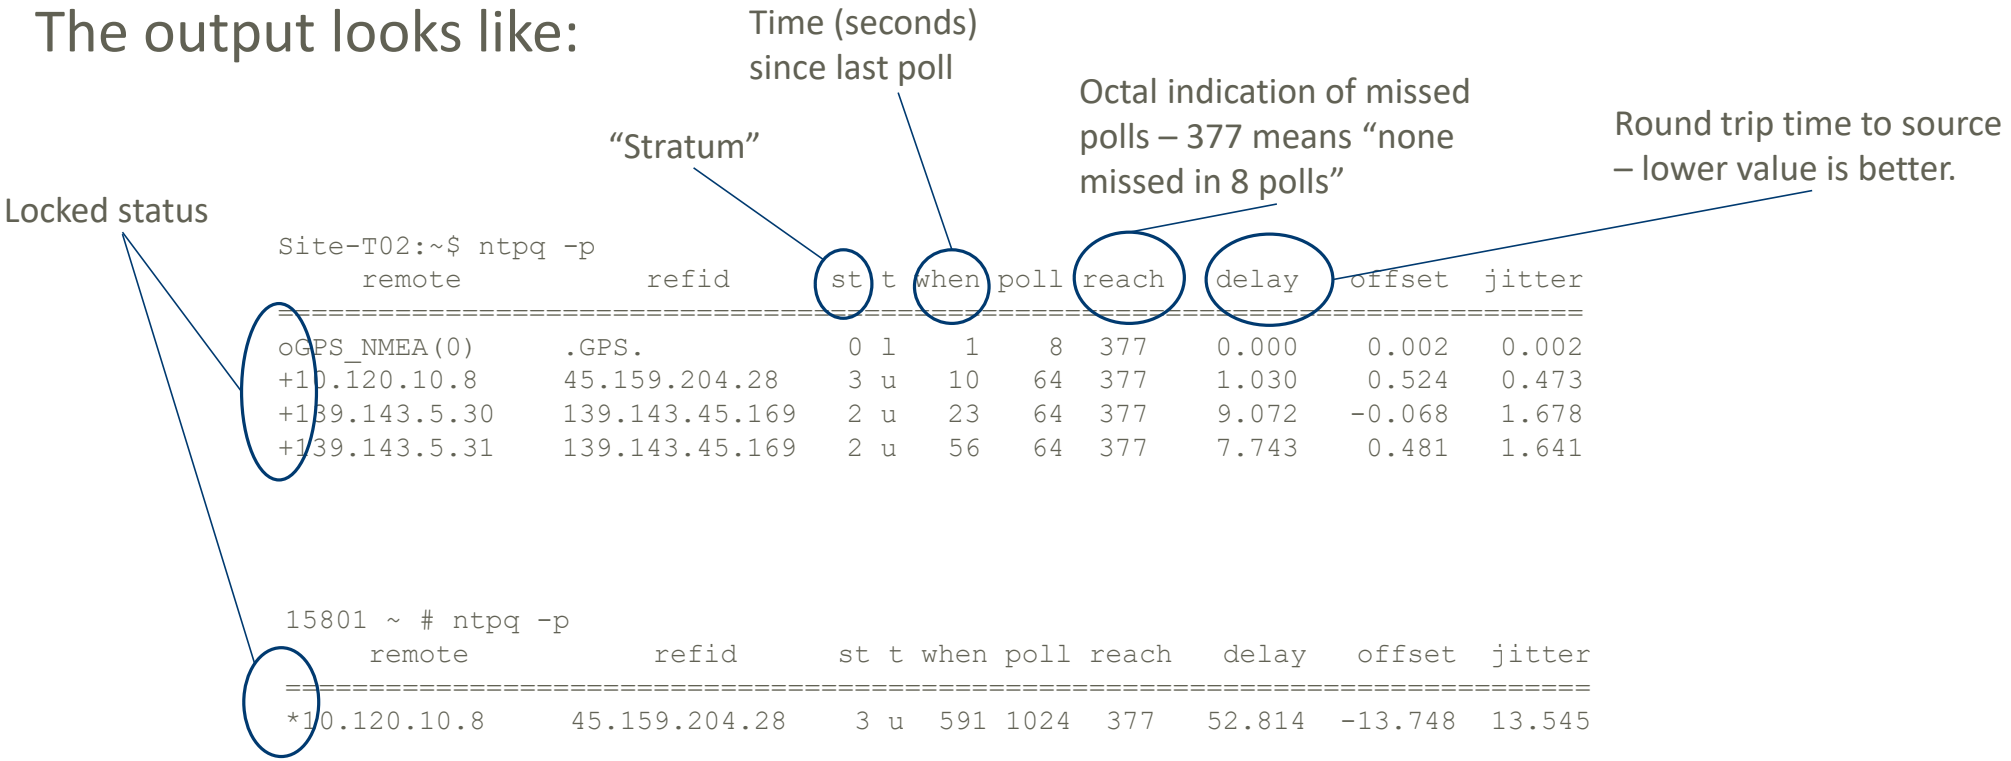
- Fundamentally, the process for NTP is that:
  - On start-up, request the current time from an external time-source (“peer”). If the time is different to the current system time, update the system time to match the peer.
  - After start-up, constantly keep track of the time on the remote peer, monitoring the offset and jitter between the local system time and the remote time, while measuring and taking account of time taken to communicate with the remote peer.
  - During this time, parameters for the local clock are tuned to “speed up” or “slow down” the clock if it is observed the clocks are drifting apart, such that the two clocks will remain in sync with each other.
  - If access to the external time-source is lost, such that the local system time cannot be verified as in sync, then the time will be marked as “not locked”, although that does not necessarily mean the time is wrong. Indeed, the time should remain accurate for many hours.

Copyright © 2021 Neology, All Rights Reserved.

Deep Dive – NTP – Process

- On top of standard Linux functionality, Neology cameras additionally:
  - Monitor if the NTPD process has stopped and will automatically restart it if it isn't running.
  - Monitor if the remote peer is marking as "not synchronized" and record this fact in it's logs and event metadata.
  - Make configurable the number of polls missed before reporting the time as "not locked" to warn of comms failures with NTP earlier. (NTP only flags a loss of synchronization after 8 missed polls).
  - On IRIS the optional GPS receiver may be used:
    - As a "stratum 0" time source for NTP.
    - To discipline a second clock independent of NTP and the system clock. This provides an independent clock that can used to verify the NTP controlled system time.

Copyright © 2021 Neology, All Rights Reserved.



Deep Dive – NTP – Polling frequency

- Default behavior of ntpd:
  - On startup it will poll once every 64 seconds
  - It will gradually increase the period between polls, 64s, then 128s then 256s eventually settling on once every 1024 seconds (1024s = approximately 17 minutes).
  - The ntpd itself will only flag “loss of synchronization” after 8 consecutive polls have been missed (no response). The expectation is that the time will remain stable for at least that long.
  - Assuming ntpd has reached its final poll period of 1024 seconds, it will take **2 hours 16 minutes and 32 seconds** before ntpd reports a remote peer as lost sync. However to reach this level, the local clock must have been synchronized for a long time already, and so the clock parameters should have been tuned to minimize drift.
- It is possible to adjust the polling frequencies (although it remains non-linear), however it is **strongly recommended** that these parameters are left at the defaults, as adjusting these has an impact on the accuracy of the time.

Copyright © 2021 Neology, All Rights Reserved.

Deep Dive – Understanding NTPQ output

- The camera is monitoring the output of NTP, but this can also be inspected manually via Webmin / command line.
- The output looks like:

Copyright © 2021 Neology, All Rights Reserved.

Deep Dive – Time – Interactions with power failures

- Neology cameras have RTC (“Realtime clock”) chips which should keep the clock “ticking” even in the case of power failures – although obviously not synchronised to a remote server.
- However, these are battery (or in some cases “super-capacitor”) powered, and so can run out of power.
- If the RTC power fails, system time may be reset to some default / unpredictable state, and the camera will not know that this has occurred until time is successfully synchronized again with an NTP remote time source.
- **However**, the camera will know that NTP is not synchronised at this time, so it’s “ok” for the camera to be in this state so long as the NTP status is checked.

Department of State Police
General Order

Effective Date:	Number:
November 10, 2021	**TRF-11**
Subject:	
Automatic License Plate Recognition	

Policy

The availability and use of the Automatic License Plate Recognition (ALPR) System provides opportunities for enhancing the productivity and effectiveness of law enforcement agencies. The ALPR System also provides opportunities to increase public and officer safety.

The Department shall only utilize the technology in furtherance of official and legitimate law enforcement operations and public safety. All Department Employees shall abide by the guidelines set forth herein when using the ALPR System.

Purpose

To establish guidelines and procedures for the proper use and application of the ALPR System within the Department of State Police, and to provide guidelines and principles for the collection, access, use, dissemination, and retention of ALPR information by members to ensure that this information is used only for legitimate law enforcement purposes and the privacy, civil rights, and civil liberties of individuals are not violated.

Definitions and Acronyms

Alert: A visual and/or auditory notice that is triggered when the ALPR System receives a potential hit on a license plate.

Alert Data: Information captured by an ALPR relating to a license plate that matches the license plate on a hot list.

ALPR Data: Scan files, alert data, and any other documents or data generated by, or obtained through, utilization of the ALPR System.

ALPR Data Query Logs: A record of a search or query of ALPR data.

Automatic License Plate Recognition (ALPR): Automatic license plate recognition technology uses high-speed cameras combined with sophisticated computer algorithms capable of converting the images of license plates to electronically readable data. The ALPR System captures an image of a license plate and converts it to a text file using Optical Character Recognition (OCR) technology. The technology also compares the digital images of license plates to the CJIS-NCIC Hot file database. The ALPR System is configured as either fixed, mobile, or portable.

Definitions and Acronyms, continued

Hit: An alert that a license plate matches a record maintained in the ALPR database related to stolen vehicles, wanted vehicles, or other alert type files that support investigation or which have been manually registered by a user for further investigation.

Hot List: License plate numbers of vehicles of interest, such as stolen vehicles, unregistered vehicles, vehicles owned by persons of interest, and vehicles associated with AMBER Alerts, Missing Child Alerts, Missing College Student Bulletins, Silver Alerts, Incapacitated or Endangered Persons, Be On Look Out (BOLO), Attempt To Locate (ATL), and Wanted or Missing Person broadcasts or bulletins in which a license plate number is included, or other license plate numbers of interest entered by the Department or an authorized officer.

Hot List Download: The method by which the hot list data is transferred to a computer within a law enforcement vehicle.

Optical Character Recognition (OCR): The technology that supports the automated reading and digitizing of images of license plates that are captured by the ALPR System.

Authorized Uses

The provisions of this policy are provided to support authorized uses of ALPR information. Authorized uses may include, but are not limited to, the following:

- Investigation and prosecution of suspected criminal (including terrorist) incidents; the resulting justice system response; the enforcement of sanctions, orders, or sentences; or the prevention of crime;
- Enhance Department's AMBER/SILVER or other law enforcement alerts and real-time response capability by deploying and networking ALPRs across the state to more rapidly identify and locate vehicles related to potential child-abduction or other serious crimes;
- Alert law enforcement that a particular license plate on a "hot list" (e.g., a stolen vehicle or a vehicle associated with a wanted individual) is in close proximity to an ALPR to dramatically reduce the recovery time of stolen vehicles and assist in locating dangerous and wanted individuals;
- Identify plates associated with potential witnesses and/or victims of crime;
- Support the Department's homeland security mission by protecting critical infrastructure from subjects who intend to damage or disrupt the systems and locations that allow for travel and the free flow of commerce;

Authorized Uses, continued

- Identify vehicles linked to stolen license plates or other motor vehicle traffic violations;
- Provide situational awareness for law enforcement related to public safety or otherwise relevant to their authorized duties;
- Support local, state, federal, and tribal public safety departments in the identification of subjects associated with/as targets of criminal investigations;
- Support law enforcement response to critical incident responses and special events;
- Support special operations, such as high-crime-area patrols, gang investigation/suppression, operating under the influence initiatives, enforcement details, directed criminal investigations, and other investigations; and
- Support emergency and public safety situations including, but not limited to terrorist threats, kidnappings, missing persons, and felons actively traveling to or from a crime scene.

ALPR Administrator

The Division Commander of Field Services (DFS) shall:

- Designate a Commissioned Officer as the ALPR Administrator; and
- Ensure the ALPR Administrator has oversight for the ALPR System deployment, operations, and maintenance.

The ALPR Administrator shall:

- Ensure the proper selection of personnel approved to operate the ALPR System and maintain an adequate number of trained and authorized users;
- Authorize any requests for ALPR System use or data access according to Department policy;
- Coordinate with all Divisions to ensure resources are available and deployed to meet Departmental investigative needs;
- Ensure that designated, trained personnel check equipment on a regular basis to ensure functionality, camera alignment, and removing from service any equipment that falls outside expected functionality until deficiencies are corrected;
- Designate users who have been properly trained in the use and operational protocols of the ALPR System;
- Allow access to the ALPR System for those users with an approved login and password; and
- Ensure that any changes in hardware, software, policy, or law are the subject of continuing in-service training or bulletins.

ALPR Procedures

The use of ALPR technology shall be approved by the Colonel/Superintendent or designee.

ALPR System and information shall be:

- Accessed and used only for official and legitimate law enforcement purposes;
- Used for searches of historical ALPR data, in accordance with this policy and other Department policies or regulations where applicable; and
- Used for searches of ALPR data by members of this Department or by other law enforcement agencies through the ALPR Administrator.

ALPR Operations

Members using the ALPR System shall:

- Ensure, at the start of each shift, the ALPR System has been updated with the most current hot lists available;
- Verify, prior to use, the aim of the ALPR camera(s) to ensure it is focused on the correct lanes of traffic;
- Ensure ALPR equipment is cleaned and maintained according to the manufacturer's recommendations; and
- Notify the ALPR Administrator of any malfunctions promptly.

ALPR Alerts/Hits

The member shall, prior to initiation of a stop based on an ALPR Hit or Alert:

- Visually verify that the vehicle plate number matches the plate number run by the ALPR System, including both:
  - Alphanumeric characters of the license plate; and
  - The state of issue.
- Verify the current status of the plate through:
  - The Commonwealth's Criminal Justice Information System (CJIS), or
  - National Crime Information Center (NCIC), or
  - Department's Records Management System (RMS), or
  - Another appropriate source of data, as soon as practicable.

ALPR Alerts/Hits, continued

License plate numbers and date/time location collected through an ALPR, when taken alone, may not be sufficient to identify the individual associated with the vehicle. The Department may be able to link the ALPR information to an individual through, or in combination with, additional information from other sources, such as a check of vehicle registration. It is thus the investigative process that ultimately identifies individuals and not solely a reliance on the information obtained from the ALPR system's automated collection of license plate numbers.

Manual Entry of Data/Manual Hot List

Manual entries may include, but should not be limited to:

- AMBER Alerts;
- Missing Child Alerts;
- Missing College Student Bulletins;
- Silver Alerts;
- Be On Look Out (BOLO);
- Investigative needs;
- Attempt To Locate (ATL); or
- Wanted or Missing Person broadcast or bulletin in which a license plate number is included.

Manual entries entered into the ALPR System shall be:

- Manually updated when the information changes or is no longer current;
- Documented with the specific reason by the member;
- Documented with agency case number; and
- Given a retention date of one (1) year or less.

ALPR Data: Logs, Sharing, Dissemination, and Retention

The following process shall apply to ALPR Data:

- A Query Log is internally maintained by each instrument for each transaction;
- Data can be accessed, retrieved, or shared for official and legitimate law enforcement business only; and
- Retention of data shall be determined by the Department of Criminal Justice Information Services (DCJIS) Policy.

The Department will prohibit access, use, or dissemination of ALPR information for:

- Any purpose that violates the Constitutions or laws of the United States or the Commonwealth of Massachusetts, including the protections of the Fourth Amendment;

ALPR Data: Logs, Sharing, Dissemination, and Retention, continued

- Based solely on an individual's or organization's religious, political, or social views or activities; their participation in a particular noncriminal organization or lawful event; or their race, ethnicity, citizenship, place of origin, age, disability, gender, gender identity, sexual orientation, or other classification protected by law;
- Non-law enforcement or personal purposes;
- The purpose of prohibiting, infringing upon, or deterring individual activities protected by the First Amendment, such as freely practicing one's religion, freedom of speech and peaceful assembly, freedom of the press, and the right to petition the government for the redress of grievances;
- Harassing and/or intimidating any individual or group;
- Targeting of any individual or group by means of camera placement or data use in a discriminatory manner; and
- Any other access, use, disclosure, or retention that would violate applicable law, regulation, or policy.

The Department protects all ALPR information as personally identifiable information (PII) because ALPR information may be combined with other information to specifically identify a unique individual (i.e., the identity of an individual could be directly or indirectly inferred by using information that is linked or linkable to that individual).

Information Quality Assurance

Original ALPR information will not be altered, changed, or modified in order to protect the integrity of the data. Any changes will be maintained as a separate and additional record, and such record will be identified as having been modified.

The Department will correct, notate, delete, or refrain from using ALPR information the Department originated and found to be erroneous or deficient. Originating agencies external to the Department are responsible for reviewing the quality and accuracy of the ALPR information provided to the Department and must take reasonable steps to correct or amend the information upon learning that it is inaccurate or deficient.

The Department will advise the appropriate point of contact, in writing or electronically, when the Department's ALPR information is alleged, suspected, or found to be erroneous or deficient.

Security

The following shall apply to ALPR system and information security:

- The Department of Criminal Justice Information Services of the Executive Office of Public Safety and Security will operate ALPR servers in a secure facility protected from external intrusion and will utilize secure internal and external safeguards against network intrusions. Any access to DCJIS ALPR information from outside the facility will be allowed only over secure networks;
- The Department and DCJIS will store ALPR information in a manner that ensures that it cannot be added to, modified, accessed, or purged except by personnel authorized to take such actions;
- Access to Department ALPR information will be granted only to personnel whose positions and job duties require such access and who have successfully completed a background check and training;
- Usernames and passwords to ALPR information are not transferrable, must not be shared by Department personnel, and must be kept confidential;
- Queries made to the Department's ALPR information will be logged into the system identifying the user initiating the query. All user access, including participating agency access, and queries are subject to review and audit; and
- The Department and DCJIS will maintain an audit trail of accessed, requested, or disseminated Department-held ALPR information. The audit trail will be retained for a minimum of one year. It will include all requests for access to ALPR information, the specific purposes for each request, and what ALPR information was disseminated to each individual in response to that request.

State Central Repository

The Department has agreed to:

- Electronically submit captured ALPR data to the state repository maintained by the DCJIS at the Commonwealth's Public Safety Data Center.

The Department and its users agree to the terms of this policy and to the Commonwealth of Massachusetts *Global Justice and Public Safety Information Sharing Policy* of the DCJIS.

Policy Review

The ALPR Administrator shall:

- Annually review this General Order and the procedures contained herein; and
- Make recommendations for any necessary amendments through channels to the Colonel/Superintendent or designee.

Because existing technology may progress and new technology may develop, giving rise to both legal and technological issues, the Department will monitor and assess the appropriateness of this policy, and make amendments as necessary.

Definitions and Acronyms (Continued)

Hit: An alert that a license plate matches a record maintained in the ALPR database related to stolen vehicles, wanted vehicles, or other alert type files that support investigation or which have been manually registered by a user for further investigation.

Hot List: License plate numbers of vehicles of interest, such as stolen vehicles, unregistered vehicles, vehicles owned by persons of interest, and vehicles associated with AMBER Alerts, Missing Child Alerts, Missing College Student Bulletins, Silver Alerts, Incapacitated or Endangered Persons, Be On Look Out (BOLO), Attempt To Locate (ATL), and Wanted or Missing Person broadcasts or bulletins in which a license plate number is included, or other license plate numbers of interest entered by the Department or an authorized officer.

Hot List Download: The method by which the hot list data is transferred to a computer within a law enforcement vehicle.

Optical Character Recognition (OCR): The technology that supports the automated reading and digitizing of images of license plates that are captured by the ALPR System.

Authorized Uses

The provisions of this policy are provided to support authorized uses of ALPR information. Authorized uses may include, but are not limited to, the following:

- Investigation and prosecution of suspected criminal (including terrorist) incidents; the resulting justice system response; the enforcement of sanctions, orders, or sentences; or the prevention of crime;
- Enhance Department's AMBER/SILVER or other law enforcement alerts and real-time response capability by deploying and networking ALPRs across the state to more rapidly identify and locate vehicles related to potential child-abduction or other serious crimes;
- Alert law enforcement that a particular license plate on a "hot list" (e.g., a stolen vehicle or a vehicle associated with a wanted individual) is in close proximity to an ALPR to dramatically reduce the recovery time of stolen vehicles and assist in locating dangerous and wanted individuals;
- Identify plates associated with potential witnesses and/or victims of crime;
- Support the Department's homeland security mission by protecting critical infrastructure from subjects who intend to damage or disrupt the systems and locations that allow for travel and the free flow of commerce;

Continued on next page

Authorized Uses, continued

- Identify vehicles linked to stolen license plates or other motor vehicle traffic violations;
- Provide situational awareness for law enforcement related to public safety or otherwise relevant to their authorized duties;
- Support local, state, federal, and tribal public safety departments in the identification of subjects associated with/as targets of criminal investigations;
- Support law enforcement response to critical incident responses and special events;
- Support special operations, such as high-crime-area patrols, gang investigation/suppression, operating under the influence initiatives, enforcement details, directed criminal investigations, and other investigations; and
- Support emergency and public safety situations including, but not limited to terrorist threats, kidnappings, missing persons, and felons actively traveling to or from a crime scene.

ALPR Administrator

The Division Commander of Field Services (DFS) shall:

- Designate a Commissioned Officer as the ALPR Administrator; and
- Ensure the ALPR Administrator has oversight for the ALPR System deployment, operations, and maintenance.

The ALPR Administrator shall:

- Ensure the proper selection of personnel approved to operate the ALPR System and maintain an adequate number of trained and authorized users;
- Authorize any requests for ALPR System use or data access according to Department policy;
- Coordinate with all Divisions to ensure resources are available and deployed to meet Departmental investigative needs;
- Ensure that designated, trained personnel check equipment on a regular basis to ensure functionality, camera alignment, and removing from service any equipment that falls outside expected functionality until deficiencies are corrected;
- Designate users who have been properly trained in the use and operational protocols of the ALPR System;
- Allow access to the ALPR System for those users with an approved login and password; and
- Ensure that any changes in hardware, software, policy, or law are the subject of continuing in-service training or bulletins.

Continued on next page

ALPR Procedures

The use of ALPR technology shall be approved by the Colonel/Superintendent or designee.

ALPR System and information shall be:

- Accessed and used only for official and legitimate law enforcement purposes;
- Used for searches of historical ALPR data, in accordance with this policy and other Department policies or regulations where applicable; and
- Used for searches of ALPR data by members of this Department or by other law enforcement agencies through the ALPR Administrator.

ALPR Operations

Members using the ALPR System shall:

- Ensure, at the start of each shift, the ALPR System has been updated with the most current hot lists available;
- Verify, prior to use, the aim of the ALPR camera(s) to ensure it is focused on the correct lanes of traffic;
- Ensure ALPR equipment is cleaned and maintained according to the manufacturer's recommendations; and
- Notify the ALPR Administrator of any malfunctions promptly.

ALPR Alerts/Hits

The member shall, prior to initiation of a stop based on an ALPR Hit or Alert:

- Visually verify that the vehicle plate number matches the plate number run by the ALPR System, including both:
  - Alphanumeric characters of the license plate; and
  - The state of issue.
- Verify the current status of the plate through:
  - The Commonwealth's Criminal Justice Information System (CJIS), or
  - National Crime Information Center (NCIC), or
  - Department's Records Management System (RMS), or
  - Another appropriate source of data, as soon as practicable.

Continued on next page

ALPR Alerts/Hits

License plate numbers and date/time location collected through an ALPR, when taken alone, may not be sufficient to identify the individual associated with the vehicle. The Department may be able to link the ALPR information to an individual through, or in combination with, additional information from other sources, such as a check of vehicle registration. It is thus the investigative process that ultimately identifies individuals and not solely a reliance on the information obtained from the ALPR system's automated collection of license plate numbers.

Manual Entry of Data/Manual Hot List

Manual entries may include, but should not be limited to:

- AMBER Alerts;
- Missing Child Alerts;
- Missing College Student Bulletins;
- Silver Alerts;
- Be On Look Out (BOLO);
- Investigative needs;
- Attempt To Locate (ATL); or
- Wanted or Missing Person broadcast or bulletin in which a license plate number is included.

Manual entries entered into the ALPR System shall be:

- Manually updated when the information changes or is no longer current;
- Documented with the specific reason by the member;
- Documented with agency case number; and
- Given a retention date of one (1) year or less.

ALPR Data: Logs, Sharing, Dissemination, and Retention

The following process shall apply to ALPR Data:

- A Query Log is internally maintained by each instrument for each transaction;
- Data can be accessed, retrieved, or shared for official and legitimate law enforcement business only; and
- Retention of data shall be determined by the Department of Criminal Justice Information Services (DCJIS) Policy.

The Department will prohibit access, use, or dissemination of ALPR information for:

- Any purpose that violates the Constitutions or laws of the United States or the Commonwealth of Massachusetts, including the protections of the Fourth Amendment;

Continued on next page

ALPR Data: Logs, Sharing, Dissemination, and Retention, continued

- Based solely on an individual's or organization's religious, political, or social views or activities; their participation in a particular noncriminal organization or lawful event; or their race, ethnicity, citizenship, place of origin, age, disability, gender, gender identity, sexual orientation, or other classification protected by law;
- Non-law enforcement or personal purposes;
- The purpose of prohibiting, infringing upon, or deterring individual activities protected by the First Amendment, such as freely practicing one's religion, freedom of speech and peaceful assembly, freedom of the press, and the right to petition the government for the redress of grievances;
- Harassing and/or intimidating any individual or group;
- Targeting of any individual or group by means of camera placement or data use in a discriminatory manner; and
- Any other access, use, disclosure, or retention that would violate applicable law, regulation, or policy.

The Department protects all ALPR information as personally identifiable information (PII) because ALPR information may be combined with other information to specifically identify a unique individual (i.e., the identity of an individual could be directly or indirectly inferred by using information that is linked or linkable to that individual).

Information Quality Assurance

Original ALPR information will not be altered, changed, or modified in order to protect the integrity of the data. Any changes will be maintained as a separate and additional record, and such record will be identified as having been modified.

The Department will correct, notate, delete, or refrain from using ALPR information the Department originated and found to be erroneous or deficient. Originating agencies external to the Department are responsible for reviewing the quality and accuracy of the ALPR information provided to the Department and must take reasonable steps to correct or amend the information upon learning that it is inaccurate or deficient.

The Department will advise the appropriate point of contact, in writing or electronically, when the Department's ALPR information is alleged, suspected, or found to be erroneous or deficient.

Continued on next page

Security

The following shall apply to ALPR system and information security:

- The Department of Criminal Justice Information Services of the Executive Office of Public Safety and Security will operate ALPR servers in a secure facility protected from external intrusion and will utilize secure internal and external safeguards against network intrusions. Any access to DCJIS ALPR information from outside the facility will be allowed only over secure networks;
- The Department and DCJIS will store ALPR information in a manner that ensures that it cannot be added to, modified, accessed, or purged except by personnel authorized to take such actions;
- Access to Department ALPR information will be granted only to personnel whose positions and job duties require such access and who have successfully completed a background check and training;
- Usernames and passwords to ALPR information are not transferrable, must not be shared by Department personnel, and must be kept confidential;
- Queries made to the Department's ALPR information will be logged into the system identifying the user initiating the query. All user access, including participating agency access, and queries are subject to review and audit; and
- The Department and DCJIS will maintain an audit trail of accessed, requested, or disseminated Department-held ALPR information. The audit trail will be retained for a minimum of one year. It will include all requests for access to ALPR information, the specific purposes for each request, and what ALPR information was disseminated to each individual in response to that request.

State Central Repository

The Department has agreed to:

- Electronically submit captured ALPR data to the state repository maintained by the DCJIS at the Commonwealth's Public Safety Data Center.

The Department and its users agree to the terms of this policy and to the Commonwealth of Massachusetts *Global Justice and Public Safety Information Sharing Policy* of the DCJIS.

Continued on next page

Policy Review

The ALPR Administrator shall:

- Annually review this General Order and the procedures contained herein; and
- Make recommendations for any necessary amendments through channels to the Colonel/Superintendent or designee.

Because existing technology may progress and new technology may develop, giving rise to both legal and technological issues, the Department will monitor and assess the appropriateness of this policy, and make amendments as necessary.

MPAC: 41.3.9

Promulgated By: Christopher S. Mason, Colonel/Superintendent

Department of State Police
General Order

Effective Date:	Number:
June 27, 2023	**TRF-11**
Subject:	
Automatic License Plate Recognition	

Policy

The availability and use of Automatic License Plate Recognition (ALPR) technology provides opportunities to increase public and officer safety and to enhance the effectiveness of law enforcement agencies. The use of ALPR technology shall be approved by the Colonel/Superintendent or designee.

The Department shall only utilize ALPR technology in furtherance of official and legitimate law enforcement operations and public safety. All Department employees shall abide by the guidelines set forth herein when using ALPR systems.

Purpose

To establish guidelines and procedures for the proper use and application of ALPR technology within the Department of State Police, and to provide guidelines and principles for the collection, access, use, dissemination, and retention of ALPR information to ensure that this information is used only for legitimate law enforcement purposes and the privacy, civil rights, and civil liberties of individuals are not violated.

Definitions and Acronyms

Alert: A visual and/or auditory notice that is triggered when the ALPR system receives a potential hit on a license plate.

ALPR Data: Data generated by ALPR devices, including the license plates observed by the ALPR device, the date and time of reads, the ALPR device that sourced the reads, and related data.

Automatic License Plate Recognition (ALPR): Automatic license plate recognition (also commonly referred to as automated license plate reader) technology uses cameras to capture images of license plates and computer algorithms such as Optical Character Recognition (OCR) to convert the images to readable text data. ALPR systems can also compare the recognized license plates to Hot Lists such as Criminal Justice Information System (CJIS) and National Crime Information Center (NCIC) Hot File databases.

Exigent Circumstances: Emergency situations involving imminent and immediate threat to the safety, health, and well-being of an individual or the public based on specific, reasonable intelligence. Such emergency situations shall include, but are not limited to, terrorist threats, Amber Alerts, Silver Alerts, kidnappings, missing persons, and felons traveling to or from a crime scene.

Definitions and Acronyms, continued

Hit: A match between a license plate observed by an ALPR camera and a record maintained on a Hot List.

Hot List: License plate numbers of vehicles of interest, such as stolen vehicles or stolen plates, vehicles associated with missing or endangered persons, AMBER & Silver alerts, kidnappings, wanted fugitives, and others of specific interest to law enforcement that have a license plate number associated to them, including vehicles which are the subject of ongoing public safety or criminal investigations that are entered by the Department or an authorized officer.

Non-Departmental ALPR Systems: ALPR systems which are not managed, purchased, or subscribed to by the Department.

Optical Character Recognition (OCR): The technology that supports the automated reading and digitizing of images of license plates that are captured by the ALPR System.

Authorized Uses

This policy is provided to support authorized uses of ALPR information. Authorized uses shall include the following:

- Enhance the Department's AMBER/Silver and other law enforcement alerts programs, situation awareness, and real-time response capability by deploying ALPRs to more rapidly identify and locate vehicles related to potential child abductions, kidnappings, missing persons, or other emergency situations or serious crimes;
- Support the Department's homeland security mission through the investigation, prosecution, and prevention of terrorist incidents and the protection of critical infrastructure and locations that allow for travel and the free flow of commerce from subjects who intend to damage or disrupt the systems;
- Support law enforcement response to critical incidents and the protection of high-profile public events or locations which may be a potential target of a terrorist attack or mass-casualty incident;
- Protect the safety of the motoring public and alert law enforcement in real-time that a particular license plate (e.g., a stolen vehicle or a vehicle associated with a wanted individual) is in close proximity to an ALPR to dramatically reduce the recovery time of stolen vehicles, aid in the removal of unsafe vehicles and operators from the roadway, and assist in locating dangerous and wanted individuals;
- Support the Department's public safety mission through the investigation and prosecution of suspected criminal (including terrorist) incidents;
- The follow-up investigation of motor vehicle pursuits which have been terminated for public safety reasons or when an unlawfully fleeing subject escaped apprehension;
- Support local, state, federal, and tribal public safety agencies through the use of ALPR technology as allowed by this policy; and
- Support other lawful Department public safety operations, as directed by the Colonel/Superintendent or designee.

Prohibited Uses

The Department will prohibit access, use, or dissemination of ALPR information for:

- Any purpose that knowingly violates the Constitutions or laws of the United States or the Commonwealth of Massachusetts, including the protections of the Fourth Amendment;
- Based solely on an individual's or organization's religious, political, or social views or activities; their participation in a particular noncriminal organization or lawful event; or their race, ethnicity, citizenship, place of origin, age, disability, gender, gender identity, sexual orientation, or other classification protected by law;
- Non-law enforcement or personal purposes;
- The purpose of prohibiting, infringing upon, or deterring individual activities protected by the First Amendment, such as freely practicing one's religion, freedom of speech and peaceful assembly, freedom of the press, and the right to petition the government for the redress of grievances;
- Harassing, targeting, and/or intimidating any individual or group by means of camera placement or data use in a discriminatory manner;
- The sole purpose of locating or removing persons due to their citizenship or immigration status; and
- Any other access, use, disclosure, or retention that would violate applicable law, regulation, or policy.

ALPR Administrator

The Division Commander of the Division of Homeland Security and Preparedness shall:

- Designate a Commissioned or Non-Commissioned Officer as the ALPR Administrator; and
- Ensure the ALPR Administrator has oversight for the ALPR System deployment, operations, and maintenance.

The ALPR Administrator shall:

- Manage access to the ALPR system and conduct or authorize training for designated personnel in the use and operational protocols of the ALPR system;
- Coordinate with all Divisions and appropriate personnel to ensure that resources are available and deployed to meet Departmental needs;
- Maintain proficiency and familiarity with ALPR technology and systems, coordinate with other law enforcement agencies, and assist with investigations involving ALPR;
- Ensure that designated, trained personnel install equipment, check equipment on a regular basis to ensure functionality, and remove from service any equipment that falls outside expected functionality until deficiencies are corrected;
- Conduct testing and evaluation of ALPR systems and coordinate the purchase, deployment, and installation of ALPR systems and equipment;
- Conduct intermittent audits of ALPR system usage to ensure functionality and policy compliance; and
- Ensure that any substantive changes in policy or law are the subject of in-service training or bulletins.

Legal Considerations

In additional to the procedural safeguards outlined by this policy, members should conduct ALPR inquiries in the least intrusive manner as necessary and appropriate for the particular circumstances and should consider consulting with a prosecutor of jurisdiction regarding the potential need for legal process prior to accessing extensive or widespread ALPR data in active criminal investigations that do not involve exigent circumstances. See Commonwealth v. McCarthy, 484 Mass. 493 (2020).

Search Procedures

The Commonwealth Watch Center (CWC) and Commonwealth Fusion Center (CFC) shall serve as the primary ALPR resource for the Department. Search requests submitted to the CWC/CFC shall include, at a minimum:

- Case number or reference;
- Type of investigation or reason for request;
- Plate number(s) and vehicle description (if available);
- Requested search time period; and
- Requested search area (devices or region).

Searches of the ALPR system shall also observe the following guidelines:

- Properly complete justification fields;
- Limit search parameters to be reasonable and consistent with the geographic and temporal needs of the incident or investigation; and
- Document the parameters of the search.

The member who conducts or requests the search is responsible for ensuring that the procedures herein are followed. CWC/CFC may deny or refer to the ALPR Administrator any requests that they believe to be overly intrusive or otherwise inconsistent with law, policy, or best practices.

Manual Hot List Entries

Manual entries of a license plate onto a Hot List may include vehicles associated with:

- AMBER or Silver Alerts;
- Missing child, missing person, or kidnapping broadcasts or bulletins;
- Incapacitated or endangered persons;
- Be-On-Look-Out (BOLO) broadcasts or other public safety alerts;
- Investigation of terrorist or criminal offenses; or
- Wanted persons, arrest warrants, or search warrants.

Manual entries onto a Hot List shall be:

- Entered with the vehicle description, if available;
- Entered with a case number or reference;
- Updated or removed when information changes, is no longer current, or is no longer necessary or reasonable;
- Given special attention to rental and short-term use vehicles;
- Given special attention to incidents that may be quickly resolved;
- Entered with an automatic expiration date no longer than thirty (30) days; and
- Approved by a supervisor, except in exigent circumstances.

Manual Hot List Entries, continued

Designated and trained ALPR system users may conduct manual Hot List entries. All others should contact the Commonwealth Watch Center for assistance. The member who enters or requests a manual Hot List entry shall be responsible for ensuring that the information is removed per the guidelines above.

Mobile Operations

Department members operating a cruiser that is equipped with a mobile ALPR System shall:

- Ensure, at the start of each shift, that the ALPR system is activated and online, unless such use is incompatible with the member's duties at the time, the system is malfunctioning, or authorized by a supervisor;
- Ensure, upon activation of the ALPR system, that the ALPR system has been updated with the most current hot lists available;
- Verify, prior to use, the aim of the ALPR camera(s) to ensure it is focused on the correct lanes of traffic;
- Ensure ALPR equipment is cleaned and maintained according to the manufacturer's recommendations; and
- Notify the ALPR Administrator of any malfunctions promptly.

Hit/Alert Confirmation

Prior to initiation of a stop or enforcement action based upon an ALPR hit or alert, members shall confirm the hit or alert, to include:

- *Verify the plate:* Visually verify that the vehicle plate matches the ALPR system's interpretation;
- *Verify the state:* Visually verify that the state of the vehicle plate matches the state of the plate in the Hot List information; and
- *Verify the status:* Verify the current status of the plate that generated the hit/alert (e.g., is the vehicle still stolen), through:
    - Criminal Justice Information System (CJIS);
    - National Crime Information Center (NCIC);
    - Department's Records Management System (RMS); or
    - Another appropriate source of data.

Use of Non-Departmental ALPR Systems

In the course of their official duties, members may contact other law enforcement agencies to request assistance with information, records, or data from non-departmental ALPR systems.

Supervisors and analysts assigned to the Commonwealth Watch Center/Commonwealth Fusion Center and the ALPR Administrator may access non-departmental ALPR systems for official law enforcement purposes as authorized by this policy. Other members, through their position with the Department, shall not obtain accounts with non-departmental ALPR systems unless authorized by the Division Commander of the Division of Homeland Security and Preparedness.

Members shall be mindful that non-departmental ALPR systems may use different technology, retention, and quality assurance standards than the Department's ALPR system. Members shall be mindful to preserve, export, or obtain copies of records or reports that are of known relevance to an incident or investigation prior to the expiry of the records.

Requests for Equipment and Accounts

Requests for the deployment or issuance of ALPR equipment or system accounts shall be directed through channels to the ALPR Administrator.

The ALPR administrator will approve, deny, or forward requests for deployment, equipment, and accounts as authorized under this policy, based upon the state-wide needs of the ALPR program, the availability of suitable equipment and personnel, and/or as directed by the Division Commander of Homeland Security and Preparedness.

Data: PII, Sharing, and Retention

License plate numbers and date/time location records collected by an ALPR do not identify the individual operating or associated with a vehicle. Investigators may be able to link an individual to a vehicle through, or in combination with, additional information from other sources, such as a check of vehicle registration records or other investigative steps. It is thus the investigative process that may identify individuals and not solely a reliance on the information obtained from the ALPR system's automated observation of license plate characters. The Department protects all ALPR information as personally identifiable information (PII) because ALPR information may be combined with other information to identify a unique individual.

The Department and members shall not share ALPR data with or provide ALPR data to any person, entity, or agency, other than a law enforcement agency with an originating agency identifier (ORI) making a request for official purposes, unless such disclosure is authorized by law or court order or is required by rules of Massachusetts or federal courts governing discovery in criminal matters.

Data contained in the ALPR system may include data contributed by other law enforcement agencies. Agencies that are authorized to share data with the Department and/or access the Department's ALPR system shall be subject to the provisions of this policy or any superseding MOU or agreement in regard to use of the Department's ALPR system. Such outside agencies are responsible for their own designation, management, and supervision of that agency's system users, equipment, and any other systems or databases.

The ALPR system does not collect or retain video or audio recordings or intentional photographs of any individuals.

Retention of data shall be determined by the Department of Criminal Justice Information Services (DCJIS) policy. Members shall be mindful to preserve, export, or obtain copies of records or reports that are of known relevance to an investigation or prosecution prior to the expiry of the records.

Data: Quality Assurance

Original ALPR information will not be altered, changed, or modified in order to protect the integrity of the data. Any changes will be maintained as a separate and additional record, and such record will be identified as having been modified.

The Department will correct, notate, delete, or refrain from using ALPR information the Department originated and found to be erroneous or deficient. Originating agencies external to the Department are responsible for reviewing the quality and accuracy of the ALPR information provided to the Department and must take reasonable steps to correct or amend the information upon learning that it is inaccurate or deficient. The Department will advise the appropriate points of contact, in writing or electronically, if the Department's ALPR data is found to be erroneous or deficient.

The Department will ensure that appropriate protocols are utilized by the ALPR system to allow for the verification of the accuracy of ALPR read times, which may include the use of a watermark or other observable system indicator. In the event that system time is not verifiably synchronized for a particular read, the reported time should be corroborated using other data or observations to ensure accuracy prior to use in an investigation or legal proceeding.

Data: Security & Audit

The following shall apply to ALPR system and information security:

- Access to the Department's ALPR system will be granted only to sworn or civilian personnel whose positions and job duties justify such access, who have successfully completed a pre-employment background check, and who have completed appropriate training as designated by the ALPR Administrator, to include discussion of best practices and privacy considerations;
- Usernames and passwords to the ALPR system are not transferrable, must not be shared by Department personnel, and must be kept confidential; the only exception to this requirement is for mobile ALPR systems in pool cruisers in use by outside agencies, in which case the credentials can be used to activate the in-car camera system only and not to access or search the database; in such case the agency must maintain another tracking mechanism to identify the specific system operator, if needed;
- Queries made to the Department's ALPR system will be logged into the system identifying the user initiating the query. All user access and queries, including participating agencies' access, are subject to monitoring, review, and audit at any time;
- Abuse of the Department's ALPR system will result in termination of system access and progressive disciplinary action; and
- The Department will ensure that ALPR data is stored in a secure manner, on CJIS-compliant systems or servers, in a manner that ensures that it cannot be added to, modified, accessed, or purged except by personnel authorized to take such actions.

Policy Review

Existing technology may progress, and new technology may develop, giving rise to both legal and technological changes. The Department will monitor and assess the appropriateness of this policy and make amendments as necessary.

The ALPR Administrator shall:

- Annually review this General Order and the procedures contained herein; and
- Make recommendations for any necessary amendments through channels to the Colonel/Superintendent or designee.

Reservations

These guidelines are set forth solely for the purpose of internal Department guidance. They are not intended to, do not, and may not be relied upon to create any rights, substantive or procedural, enforceable at law by any party in any matter, civil or criminal, nor do they place any limitation on otherwise lawful investigative and legal prerogatives of the Massachusetts State Police or the Commonwealth of Massachusetts.

Promulgated By: John E. Mawn Jr., Colonel/Superintendent

Department of State Police
General Order

Effective Date:	Number:
November 10, 2021	**TRF-11**
Subject:	
Automatic License Plate Recognition	

Policy

The availability and use of the Automatic License Plate Recognition (ALPR) System provides opportunities for enhancing the productivity and effectiveness of law enforcement agencies. The ALPR System also provides opportunities to increase public and officer safety.

The Department shall only utilize the technology in furtherance of official and legitimate law enforcement operations and public safety. All Department Employees shall abide by the guidelines set forth herein when using the ALPR System.

Purpose

To establish guidelines and procedures for the proper use and application of the ALPR System within the Department of State Police, and to provide guidelines and principles for the collection, access, use, dissemination, and retention of ALPR information by members to ensure that this information is used only for legitimate law enforcement purposes and the privacy, civil rights, and civil liberties of individuals are not violated.

Definitions and Acronyms

Alert: A visual and/or auditory notice that is triggered when the ALPR System receives a potential hit on a license plate.

Alert Data: Information captured by an ALPR relating to a license plate that matches the license plate on a hot list.

ALPR Data: Scan files, alert data, and any other documents or data generated by, or obtained through, utilization of the ALPR System.

ALPR Data Query Logs: A record of a search or query of ALPR data.

Automatic License Plate Recognition (ALPR): Automatic license plate recognition technology uses high-speed cameras combined with sophisticated computer algorithms capable of converting the images of license plates to electronically readable data. The ALPR System captures an image of a license plate and converts it to a text file using Optical Character Recognition (OCR) technology. The technology also compares the digital images of license plates to the CJIS-NCIC Hot file database. The ALPR System is configured as either fixed, mobile, or portable.

Definitions and Acronyms, continued

Hit: An alert that a license plate matches a record maintained in the ALPR database related to stolen vehicles, wanted vehicles, or other alert type files that support investigation or which have been manually registered by a user for further investigation.

Hot List: License plate numbers of vehicles of interest, such as stolen vehicles, unregistered vehicles, vehicles owned by persons of interest, and vehicles associated with AMBER Alerts, Missing Child Alerts, Missing College Student Bulletins, Silver Alerts, Incapacitated or Endangered Persons, Be On Look Out (BOLO), Attempt To Locate (ATL), and Wanted or Missing Person broadcasts or bulletins in which a license plate number is included, or other license plate numbers of interest entered by the Department or an authorized officer.

Hot List Download: The method by which the hot list data is transferred to a computer within a law enforcement vehicle.

Optical Character Recognition (OCR): The technology that supports the automated reading and digitizing of images of license plates that are captured by the ALPR System.

Authorized Uses

The provisions of this policy are provided to support authorized uses of ALPR information. Authorized uses may include, but are not limited to, the following:

- Investigation and prosecution of suspected criminal (including terrorist) incidents; the resulting justice system response; the enforcement of sanctions, orders, or sentences; or the prevention of crime;
- Enhance Department's AMBER/SILVER or other law enforcement alerts and real-time response capability by deploying and networking ALPRs across the state to more rapidly identify and locate vehicles related to potential child-abduction or other serious crimes;
- Alert law enforcement that a particular license plate on a "hot list" (e.g., a stolen vehicle or a vehicle associated with a wanted individual) is in close proximity to an ALPR to dramatically reduce the recovery time of stolen vehicles and assist in locating dangerous and wanted individuals;
- Identify plates associated with potential witnesses and/or victims of crime;
- Support the Department's homeland security mission by protecting critical infrastructure from subjects who intend to damage or disrupt the systems and locations that allow for travel and the free flow of commerce;

Authorized Uses, continued

- Identify vehicles linked to stolen license plates or other motor vehicle traffic violations;
- Provide situational awareness for law enforcement related to public safety or otherwise relevant to their authorized duties;
- Support local, state, federal, and tribal public safety departments in the identification of subjects associated with/as targets of criminal investigations;
- Support law enforcement response to critical incident responses and special events;
- Support special operations, such as high-crime-area patrols, gang investigation/suppression, operating under the influence initiatives, enforcement details, directed criminal investigations, and other investigations; and
- Support emergency and public safety situations including, but not limited to terrorist threats, kidnappings, missing persons, and felons actively traveling to or from a crime scene.

ALPR Administrator

The Division Commander of Field Services (DFS) shall:

- Designate a Commissioned Officer as the ALPR Administrator; and
- Ensure the ALPR Administrator has oversight for the ALPR System deployment, operations, and maintenance.

The ALPR Administrator shall:

- Ensure the proper selection of personnel approved to operate the ALPR System and maintain an adequate number of trained and authorized users;
- Authorize any requests for ALPR System use or data access according to Department policy;
- Coordinate with all Divisions to ensure resources are available and deployed to meet Departmental investigative needs;
- Ensure that designated, trained personnel check equipment on a regular basis to ensure functionality, camera alignment, and removing from service any equipment that falls outside expected functionality until deficiencies are corrected;
- Designate users who have been properly trained in the use and operational protocols of the ALPR System;
- Allow access to the ALPR System for those users with an approved login and password; and
- Ensure that any changes in hardware, software, policy, or law are the subject of continuing in-service training or bulletins.

ALPR Procedures

The use of ALPR technology shall be approved by the Colonel/Superintendent or designee.

ALPR System and information shall be:

- Accessed and used only for official and legitimate law enforcement purposes;
- Used for searches of historical ALPR data, in accordance with this policy and other Department policies or regulations where applicable; and
- Used for searches of ALPR data by members of this Department or by other law enforcement agencies through the ALPR Administrator.

ALPR Operations

Members using the ALPR System shall:

- Ensure, at the start of each shift, the ALPR System has been updated with the most current hot lists available;
- Verify, prior to use, the aim of the ALPR camera(s) to ensure it is focused on the correct lanes of traffic;
- Ensure ALPR equipment is cleaned and maintained according to the manufacturer's recommendations; and
- Notify the ALPR Administrator of any malfunctions promptly.

ALPR Alerts/Hits

The member shall, prior to initiation of a stop based on an ALPR Hit or Alert:

- Visually verify that the vehicle plate number matches the plate number run by the ALPR System, including both:
  - Alphanumeric characters of the license plate; and
  - The state of issue.
- Verify the current status of the plate through:
  - The Commonwealth's Criminal Justice Information System (CJIS), or
  - National Crime Information Center (NCIC), or
  - Department's Records Management System (RMS), or
  - Another appropriate source of data, as soon as practicable.

ALPR Alerts/Hits, continued

License plate numbers and date/time location collected through an ALPR, when taken alone, may not be sufficient to identify the individual associated with the vehicle. The Department may be able to link the ALPR information to an individual through, or in combination with, additional information from other sources, such as a check of vehicle registration. It is thus the investigative process that ultimately identifies individuals and not solely a reliance on the information obtained from the ALPR system's automated collection of license plate numbers.

Manual Entry of Data/Manual Hot List

Manual entries may include, but should not be limited to:

- AMBER Alerts;
- Missing Child Alerts;
- Missing College Student Bulletins;
- Silver Alerts;
- Be On Look Out (BOLO);
- Investigative needs;
- Attempt To Locate (ATL); or
- Wanted or Missing Person broadcast or bulletin in which a license plate number is included.

Manual entries entered into the ALPR System shall be:

- Manually updated when the information changes or is no longer current;
- Documented with the specific reason by the member;
- Documented with agency case number; and
- Given a retention date of one (1) year or less.

ALPR Data: Logs, Sharing, Dissemination, and Retention

The following process shall apply to ALPR Data:

- A Query Log is internally maintained by each instrument for each transaction;
- Data can be accessed, retrieved, or shared for official and legitimate law enforcement business only; and
- Retention of data shall be determined by the Department of Criminal Justice Information Services (DCJIS) Policy.

The Department will prohibit access, use, or dissemination of ALPR information for:

- Any purpose that violates the Constitutions or laws of the United States or the Commonwealth of Massachusetts, including the protections of the Fourth Amendment;

ALPR Data: Logs, Sharing, Dissemination, and Retention, continued

- Based solely on an individual's or organization's religious, political, or social views or activities; their participation in a particular noncriminal organization or lawful event; or their race, ethnicity, citizenship, place of origin, age, disability, gender, gender identity, sexual orientation, or other classification protected by law;
- Non-law enforcement or personal purposes;
- The purpose of prohibiting, infringing upon, or deterring individual activities protected by the First Amendment, such as freely practicing one's religion, freedom of speech and peaceful assembly, freedom of the press, and the right to petition the government for the redress of grievances;
- Harassing and/or intimidating any individual or group;
- Targeting of any individual or group by means of camera placement or data use in a discriminatory manner; and
- Any other access, use, disclosure, or retention that would violate applicable law, regulation, or policy.

The Department protects all ALPR information as personally identifiable information (PII) because ALPR information may be combined with other information to specifically identify a unique individual (i.e., the identity of an individual could be directly or indirectly inferred by using information that is linked or linkable to that individual).

Information Quality Assurance

Original ALPR information will not be altered, changed, or modified in order to protect the integrity of the data. Any changes will be maintained as a separate and additional record, and such record will be identified as having been modified.

The Department will correct, notate, delete, or refrain from using ALPR information the Department originated and found to be erroneous or deficient. Originating agencies external to the Department are responsible for reviewing the quality and accuracy of the ALPR information provided to the Department and must take reasonable steps to correct or amend the information upon learning that it is inaccurate or deficient.

The Department will advise the appropriate point of contact, in writing or electronically, when the Department's ALPR information is alleged, suspected, or found to be erroneous or deficient.

Security

The following shall apply to ALPR system and information security:

- The Department of Criminal Justice Information Services of the Executive Office of Public Safety and Security will operate ALPR servers in a secure facility protected from external intrusion and will utilize secure internal and external safeguards against network intrusions. Any access to DCJIS ALPR information from outside the facility will be allowed only over secure networks;
- The Department and DCJIS will store ALPR information in a manner that ensures that it cannot be added to, modified, accessed, or purged except by personnel authorized to take such actions;
- Access to Department ALPR information will be granted only to personnel whose positions and job duties require such access and who have successfully completed a background check and training;
- Usernames and passwords to ALPR information are not transferrable, must not be shared by Department personnel, and must be kept confidential;
- Queries made to the Department's ALPR information will be logged into the system identifying the user initiating the query. All user access, including participating agency access, and queries are subject to review and audit; and
- The Department and DCJIS will maintain an audit trail of accessed, requested, or disseminated Department-held ALPR information. The audit trail will be retained for a minimum of one year. It will include all requests for access to ALPR information, the specific purposes for each request, and what ALPR information was disseminated to each individual in response to that request.

State Central Repository

The Department has agreed to:

- Electronically submit captured ALPR data to the state repository maintained by the DCJIS at the Commonwealth's Public Safety Data Center.

The Department and its users agree to the terms of this policy and to the Commonwealth of Massachusetts *Global Justice and Public Safety Information Sharing Policy* of the DCJIS.

Policy Review

The ALPR Administrator shall:

- Annually review this General Order and the procedures contained herein; and
- Make recommendations for any necessary amendments through channels to the Colonel/Superintendent or designee.

Because existing technology may progress and new technology may develop, giving rise to both legal and technological issues, the Department will monitor and assess the appropriateness of this policy, and make amendments as necessary.

AGREEMENT BETWEEN AGENCIES

Automatic License Plate Recognition (ALPR) Equipped Law Enforcement Agencies

FOR SHARING LAW ENFORCEMENT INFORMATION

I. OVERVIEW

a. Introduction:

The purpose of this "Agreement" is to outline conditions under which the Agency Parties will share and use "scanned plate" and "hotlist" information. This Agreement is meant to be a "single sign on" agreement where there are multiple Agency Parties but an Agency Party can pick any or all Agency Parties with which to share data.

b. Background:

Automatic License Plate Recognition (ALPR) is a computer-based system that utilizes emerging technology to capture a color image, as well as an infrared image, of the license plate of a vehicle. The infrared image is converted into a text file utilizing Optical Character Recognition (OCR) technology. The text file is automatically compared against an "informational data file," also known as a "hotlist," and can contain information on stolen or wanted vehicles as well as vehicles associated with Amber Alerts, warrant subjects, and agency defined-information.

ALPR cameras can be mobile (mounted on vehicles) or on fixed positions such as freeway overpasses or traffic signals. ALPR systems have all the necessary equipment to scan plates, notify the user of a vehicle hit, and upload the scanned plate information into an ALPR repository for retention and research.

The Agency entering into this Agreement hereinafter referred to as "Agency Party," realizing the mutual benefits to be gained by sharing information, seek to share scanned plate and hotlist information. The specific technological means for securely connecting these informational sources will be approved by agency ALPR administrators.

II. AUTHORIZED RELEASE OF INFORMATION

a. Sharing of Information:

Each Agency Party authorizes the release of scanned plate and hotlist information residing in their respective databases or networks to other Agency Parties as permitted by law. An Agency Party that does not want certain information made available to any other Agency Party is responsible for ensuring that the information is not available for data exchange. There is no obligation to share scanned plate or hotlist information with any Agency Parties based solely on their acceptance of this Agreement.

b. Limitation on Information Sharing:

Scanned plate and hotlist information shall only be shared with or released to other Agency Parties. Only authorized employees who have an approved login and password ("Authorized Users"), and a need and/or right to know, will be allowed to access any other Agency Party's scanned plate and hotlist information.

c. Liability:

Each Agency Party is solely responsible for any and all claims (including, without limitation, claims for bodily injury, death, or damage to property), demands, obligations, damages, actions, causes of action, suits, losses, judgements, fines, penalties, liabilities, costs and expenses (including, without limitation, attorney fees, disbursements and court costs), and claims of every kind and nature whatsoever, arising in any manner by reason of the negligent acts, errors, omissions, or willful misconduct incident to the performance of this Agreement, including the use or alleged or actual misuse of scanned plate and hotlist information by that Party, its officers, agents or employees, this is to include data breaches.

III. INFORMATION OWNERSHIP

a. Ownership:

Each Agency Party retains control of all information in its ALPR repository. Each Agency Party is responsible for creating, updating, and deleting records in its own repository according to its own retention policies. Each Agency Party shall use reasonable efforts to ensure the completeness and accuracy of its data.

b. Release of Information:

Agency Parties and authorized users shall release or make available information accessed from an ALPR repository only to persons or entities authorized to receive ALPR information.

c. Unauthorized Requests:

If an Agency Party receives a request for information in an ALPR repository by anyone who is not authorized to receive information from the ALPR repository, that Agency Party shall refer the request to the law enforcement agency that originated the requested information ("Source Agency").

d. Public Record Requests, Subpoenas, and Court Orders:

Any Agency Party receiving a public records request, subpoena, or court order ("Legal Request") for information in an ALPR repository not authored by or originated by that Agency Party shall immediately provide a copy of the Legal Request to the Source Agency, prior to providing a response to the Legal Request.

IV. UNDERSTANDING ON ACCURACY OF INFORMATION

a. Accuracy of Information:

Agency Parties agree that scanned plate and hotlist information consists of information assumed to be accurate. Agency Parties will participate in routine testing sessions to validate and ensure that its information is accurate. However, data inaccuracies can arise for multiple reasons (e.g., entry errors, misinterpretation, outdated data, etc.). It shall be the responsibility of the Agency Party requesting or using the data to confirm the accuracy of the information with the Source Agency prior to taking any enforcement-related action.

b. Timeliness of Hotlist Data:

Each Agency Party shall determine the frequency with which its hotlist data will be refreshed. Since changes or additions to hotlist data do not get updated on a real-time basis, Agency Parties recognize that information may not always be timely and relevant. It shall be the responsibility of the requesting Agency Party to confirm the timeliness and relevance of the information with the Source Agency. Additionally, a data refresh schedule will be made available by each system administrator to enable a user to determine the potential timeliness of each Agency Party's data. Agency Parties shall not store shared hotlist data on any system for more than a 24-hour period without refreshing it.

V. USER ACCESS

a. Login Application Process:

Each Agency Party's system administrator is responsible for management of user accounts at that Agency Party. Each Agency Party agrees that all authorized users shall be limited to current employees who are legally authorized to review criminal history data for crime prevention and detection purposes. Each potential user shall submit a request for a login and password to the Agency system administrator. The Agency system administrator shall have discretion to deny or revoke individual access.

b. Login Assignment:

Each Authorized User will be issued a user login and a default password by the Agency system administrator. Authorized Users may be assigned to groups that have different levels of access rights based on the level of restriction of the information.

c. Termination of Logins:

Each Agency system administrator is responsible for timely removal of any login accounts as Authorized Users leave the Agency, no longer qualify for access into the system, or are denied access by the Agency system administrator for any other reason.

d. Intended Use:

Each Authorized User agrees that scanned plate, hotlist information, and the networking resources are to be used solely for law enforcment purposes only and consistent with the law. Authorized Users shall not use or share the information for any unethical, illegal, criminal, or commercial purpose.

e. Limitations of Use of Logins:

An Authorized User shall not access information in an ALPR repository by using a name or password that was assigned to another user. An Authorized User shall not give his or her password to another person, including another user, to access the system.

f. Audit Trail:

Each transaction on an ALPR repository is to be logged, and an audit trail created. Each Agency system administrator shall conduct an internal audit on a periodic basis to ensure information is reasonably up to date and user queries are made for legitimate law enforcement purposes only. This information shall be recorded and retained to allow the system administrator to complete the internal audit. Each system administrator shall maintain the audit trail pursuant to the retention policies of that Agency Party. Requests for transaction logs shall be made in writing to the Agency system administrator, who shall provide the logs to the requesting party within a reasonable amount of time.

VI. CONFIDENTIALITY OF INFORMATION

a. Information Confidentiality:

Information in an ALPR repository is confidential and is not subject to public disclosure, except as required by law. Only Authorized Users are allowed to view and use the information in an ALPR repository. Otherwise, the information shall be kept confidential.

b. Internal Requests for Information:

An Authorized User who receives a request from a non-authorized requestor for information in an ALPR repository shall not release that information, but may refer the requestor to the Source Agency.

c. Removal or Editing of Records:

Agency Parties shall determine their own schedule for record deletion and other edits to their own data. This will be determined by policy, legal requirements, storage, and technical capability.

VII. SYSTEM ACCESS

a. Network Access:

Access to scanned plate and hotlist information will be provided via such method that is mutually acceptable to the Agency Parties.

b. System Availablility:

ALPR repositories shall operate 24 hours a day, seven days a week, with downtime limited to those hours required for any necessary maintenance activities.

VIII. AGREEMENT TERMS

a. Term:

This Agreement will commence on the date that it is executed by all Agency Parties. It will terminate only as allowed by Section IX.

b. Amendments:

Any change in the terms of this Agreement shall be incorporated into this Agreement by a written amendment properly executed and signed by the person authorized to bind the Agency Parties.

c. Controlling Law and Venue:

Any dispute that arises under or relates to this Agreement (whether contract, tort, or both) shall be adjudicated according to the laws of the State of California.

d. Severability:

If any term or portion of this Agreement is held to be invalid, illegal, or otherwise unenforceable by a court of competent jurisdiction, the remaining provisions of this Agreement shall continue in full force and effect.

IX. TERMINATION

Either Agency Party to this Agreement may terminate this Agreement upon giving the other Agency Party at least ten (10) days written notice prior to the effective date of such termination, which date shall be specified in such notice.

X. SIGN-OFF ON EXECUTION OF AGREEMENT

By executing this Agreement, each Party acknowledges that it has received a copy of this Agreement, and will comply with its terms and conditions. The person executing this Agreement certifies that the person is authorized by its Party to execute this Agreement and legally bind its Party to the terms herein. This Agreement may be executed in one or more counterparts, each of which will be deemed an original, but all of which together will constitue one and the same instrument.

MANUFACUTRES HARDWARE WARRANTY AGREEMENT

Intelligent Enclosure Product Line

I. AGREEMENT OVERVIEW

This warranty document outlines the standard terms and conditions for the hardware warranty for the Vetted Security Solutions Intelligent Enclosure series of products. The models covered through this warranty include (but are not always limited to):

1) VSS-LPR-MAIN
2) VSS-LPR-BRG
3) VSS-SOLAR-MAIN
4) VSS-CCTV-MAIN
5) VSS-CCTV-LPR-MAIN

The Vetted Solutions enclosure line is manufactured in Saint Petersburg, FL using an E-Verified work force. Vetted Solutions Intelligent Enclosures are the industry leader in terms of both quality and warranty coverage provided with the Enclosure Units. The Vetted Intelligent Enclosure series is covered by a complete component level warranty of 12 months (1 year).

Each component on the tray is tracked to primary enclosure serial number. In the event of a failure, a complete replacement tray preprogrammed to your account specifications. This makes plug and play replacement possible and mitigates long term service cost as well as serves to mitigate downtime in the event of failures.

During this warranty period Vetted Security Solutions LLC (Vetted) warrants to the original end user that each product of its manufacture is free from defects in material and workmanship if properly installed, serviced, and operated under normal conditions.

Vetted's obligation under this warranty is limited to correcting without charge at its factory any part or parts thereof which shall be returned to its factory prepaid within 12 months after purchase by the original user, and which upon examination shall disclose to Vetted's satisfaction to have been originally defective.

This warranty shall not apply to any Vetted product that must be replaced because of normal wear, that has been subject to misuse, negligence, or accident, or that has been

repaired or altered outside of Vetted's factory unless authorized by Vetted personnel in writing.

Vetted makes no warranties with respect to, camera optics, pole infrastructure (when customer supplied pole), or other component parts or accessories not manufactured by Vetted, same being subject only to such warranties, if any, as may be made by their respective manufacturers. Vetted does warrant that it will put forth reasonable effort on behalf of the original users of its products to assure that such manufacturers' warranties are satisfactorily performed.

Use on any Vetted product of replacement parts other than Vetted-certified replacement parts purchased through Vetted or an authorized Vetted distributor shall void this warranty.

THIS WARRANTY, AND VETTED'S OBLIGATION HEREUNDER, IS IN LIEU OF ALL OTHER WARRANTIES, EXPRESS, IMPLIED, OR STATUTORY, INCLUDING ANY WARRANTIES OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE, and all other obligations or liabilities including special or consequential damages or contingent liabilities arising out of the failure of any product or part to operate properly.

Vetted shall not be liable for any special, indirect, incidental, or consequential damages whether in contract, tort, under any warranty, or otherwise, beyond the warranty quoted herein for products or parts.

No person is authorized to give any other warranty or to assume any additional obligation on Vetted's behalf unless made in writing and signed by an officer of Vetted.

This warranty, dated December 2021, supersedes all prior and undated warranty statements, except statements authorized by Vetted in individual contracts.

II. DURING THE SERVICE / WARRANTY PERIOD

- **a.** Vetted Security Solutions provides standard support line available at 727-440-3245, excluding legal holidays. A 24-hour support ticket system is available at https://vettedsecuritysolutions.com/support/and allows users to create a ticket automatically which will give send you an email you're your ticket number allowing you to track the status of your issue and view tech responses.
- **b.** Vetted Security Solutions will diagnose the issue and provide analysis of cause of issue within a 72-hour period of being notified of issue if trailer unit is still online. If trailer is left offline or inoperable it is the agency POC responsibility to leave time in ticket, phone message, or with technician when remote access can be made available to troubleshoot downed unit.

c. Vetted Security Solutions will provide a maximum fourteen (14) day turn-a-round on repairs from the date of receipt of the item in back to headquarters in Saint Petersburg, FL. Attention should be Vetted Security Solutions RMA Number with reference number for service ticket.

d. Vetted Security Solutions will assure that repairs are completed within specifications with OEM parts.

e. Repaired equipment to have complete warranty for 6-month period or original warranty period whichever is longer. Warranty to start at agency's receipt of repaired equipment. Shall include all labor and parts.

f. This warranty does not cover vandalism or units that have been physically damaged in any way.

g. All enclosures will come with QR code sticker with links to documentation, support information, and RMA forms.

III. MAINTENANCE AND SHIPPING

a. All shipping charges to get equipment to Vetted Solutions designated address are the responsibility of agency or partner. Vetted Solutions will cover return shipping cost of any approved warranty return.

b. Software maintenance includes free access to software updates and software hot fixes. Includes updates / patches to software at quarterly increments. Instructions for updates in house to server / client software will also be provided to the agency

SUPPORT CALL PROCESS

For technical support the customer should call the Vetted Security Solutions office number at (727) 440-3245 and then dial 1. This will take you direct to our Service desk.

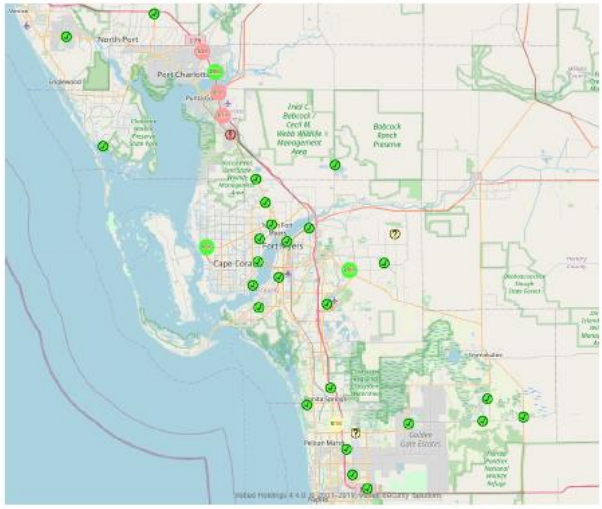
Another option for support is to create a service ticket through our website. Those steps are outlined below:

1) Go to https://vettedsecuritysolutions.com/support

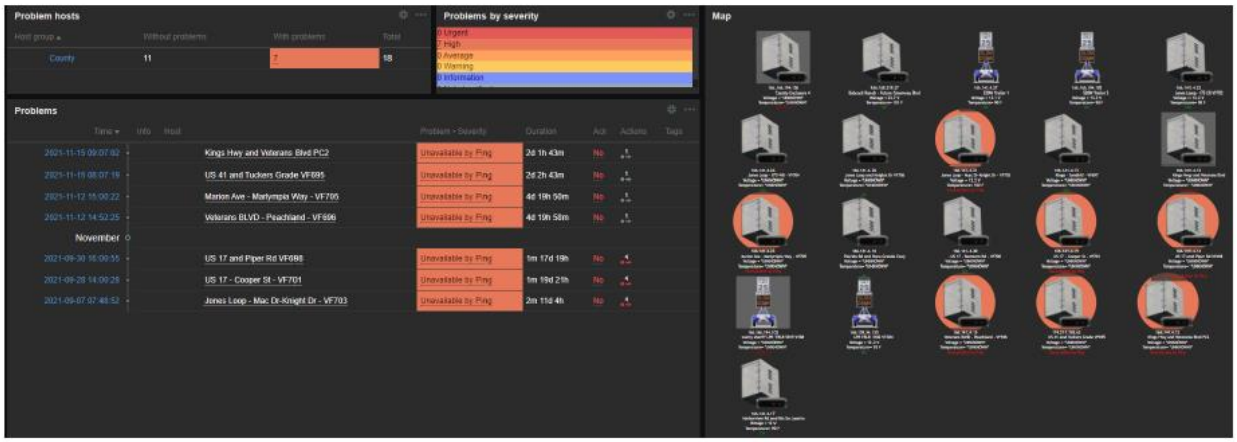
2) Choose tech support

3)Choose technical support

4) Provide a summary and description of the issue you are having, and we will have record of the ticket in our system.



5) Once the ticket is closed it will send you an email notifying you that has been done.



REMOTE SUPPORT TOOL

Some support calls require further analysis of the client's database, process or setup to diagnose a problem or to assist with a question. Vetted Security Solutions will, at its discretion, use an industry-standard remote support tool. Support can quickly connect to the client's desktop and view the site's setup, diagnose problems, or assist with screen navigation. More information about the remote support tool that Vetted Security Solutions uses is available upon request.

Please contact support@vettedsecuritysolutions.com for more information regarding remote support capabilities or sales@vettedsecuritysolutions.com for inquiries on adding Vetted Virtual Technician (VVT) to your agencies support procedures.

VVT is optional add on that allows agency managers and power users to view all deployed equipment, receive alerts, have automated corrective actions taken in event of field level issues, and a host of other customizable features. Screenshot of map interface and dashboard overview included below:

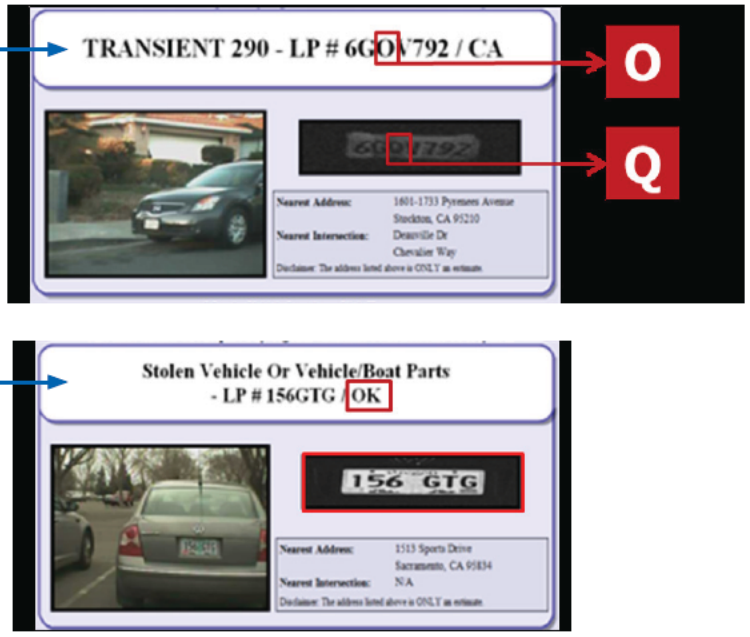
ACTIVE HIT PROTOCOL

Active Hit Protocol is a step-by-step guideline to ensure you are reacting correctly to a detected license plate alert.

WARNING: Active Hit Protocol should be used every time an alert or hit is received.

STEP ONE



Compare the detection to the translation and check for misreads.

STEP TWO

Confirm the state of the hot list source to the scanned plate.

STEP THREE

Conduct a records check on the plate and ensure it is wanted and in the system.

For further questions or training, please email

COVERT SURVEILLANCE ENCLOSURES

VETTED'S COVERT ENCLOSURES ARE THE IDEAL WAY TO GATHER LPR OR VIDEO SURVEILLANCE DATA SIMPLY AND DISCREETLY. EASY TO USE AND NEARLY IMPOSSIBLE TO DETECT.

Gather data with subtly using the latest technology with Vetted's Covert Enclosures.

Featuring concealed sensors, plexiglass windows, internal batteries, and more to create a camouflaged data capture system designed to look like common infrastructure components and blend into the surroundings. Designed for special operations this series offers devices that can be quickly deployed and retrieved for short-duration missions and fixed-mounted devices for long-term operations. These complete surveillance systems include an onboard processor, modem, camera, and more for accurate day and night captures in all-weather environments providing you with essential intelligence.

Advanced ALPR

Powered by Vigilant LEARN, Vetted's covert solutions provide high-performance license plate scanning with Optical Character Recognition and OptimizedIR. These systems are designed to capture plate images day or night, across multiple lanes, and at various speeds.

Configured for Valuable Analytics

Custom hotlists, real-time alerts, and comprehensive search and report capabilities are just a few of the valuable analytics included with Vetted's ALPR camera systems. Create and share hotlists with other agencies and download data from national databases such as NCIC to close more cases.

Ready to Deployment

Vetted's robust covert camera systems are ready for permanent or temporary deployments. With features like rapid installation, quick-connect power, and rapid positioning the covert family of products delivers functional performance and options to match the mission.

CUSTOMIZED UTILITY BOX

This enclosure is designed to blend in with common street-side traffic and electrical cabinets. The interior contains a positionable camera, modem, and video processor. These systems can be deployed quickly and are designed for short and long term missions.

	UTILITY BOX ENCLOSURE	
Part #	VSS-CVRT-UTILITY-ENC-850	VSS-CVRT-UTILITY-ENC-940
Highlighted Features	• Axis Q1700-LE camera with long-range optimized IR • HD 1080p with 32x optical zoom • 850nm or 940nm custom IR camera ring • Covers 2 lanes at distances of 66-328 ft • 155 mph max capture speed • Vigilant LEARN software with LINC • Axis Lightfinder 2.0	• Quick-swappable mount for Sierra Wireless RV50/RV55 modem with permanent MIMO antenna • Internal power cable routing with quick disconnect • 120V AC to 24V 10amp power supply • Rugged PoE switch • Vetted Virtual Technician ready
Dimensions (L X W X H)	8.75 in x 12.5 in x 14.25 in	

5G CELLULAR NODE ENCLOSURE

Designed to look like a common cellular pole top antenna. This enclosure features a compact polymer exterior concealing the purpose-built aluminum skeleton that supports the surveillance electronics. These systems are designed for long term deployments.

	CUSTOM MADE 5G ANTENNA ENCLOSURE	
Part #	VSS-CVRT-5G	
Highlighted Features	• Axis Q6135-LE PTZ camera • HD 1080p with 32x optical zoom • Long-range optimized custom 940nm IR • Video capture range up to 820 ft • Covers 2 lanes at distances of 66-328 ft • 155 mph max capture speed • Vigilant LEARN software with LINC • Autotracking 2 with orientation aid • Axis Lightfinder 2.0 • Axis object analytics	• Tycon web monitor • Quick-swappable mount for Sierra Wireless RV50/RV55 modem with permanent MIMO antenna • Internal power cable routing with quick disconnect • 120V AC to 24V 10amp power supply • Rugged PoE switch • Vetted Virtual Technician ready
Dimensions*	22.5 in x 13.5 in	

*Antenna enclosure size without mount arm. Total size with mount arm is 33.5 in x 21.5 in.

VETTEDSECURITYSOLUTIONS.COM

VETTED SECURITY SOLUTIONS

© 2022 Vetted Security Solutions. All Rights Reserved. Revised 07.2022

VETTED VIRTUAL TECHNICIAN

MINIMIZE TRIAGE AND ON-SITE VISITS AND SEAMLESSLY MONITOR THE HEALTH OF IP CONNECTED ALPR, CCTV CAMERAS, AND OTHER DEVICES ONLINE.

Vetted Virtual Technician (VVT) powered by FINDER Software Solutions is a web-based application that allows system administrators and authorized users to view the current status and health of their IP connected ALPR, surveillance, and communications equipment in the field.

Whether you have fixed or trailer-mounted systems, VVT monitors all the key hardware and software components of your security intelligence portfolio. This includes each system's power supply, battery, solar recharging performance, CPU, modem, and network communication.

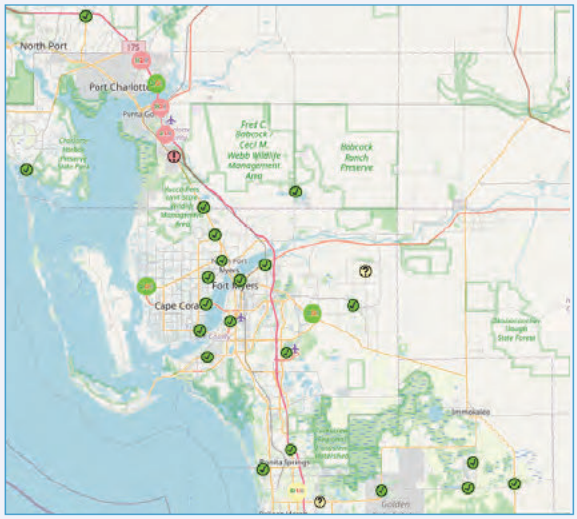
Self-Corrective Steps

VVT automatically resolves common issues that would normally require a field visit, through its self-corrective capabilities.

Multi-Channel Alerts

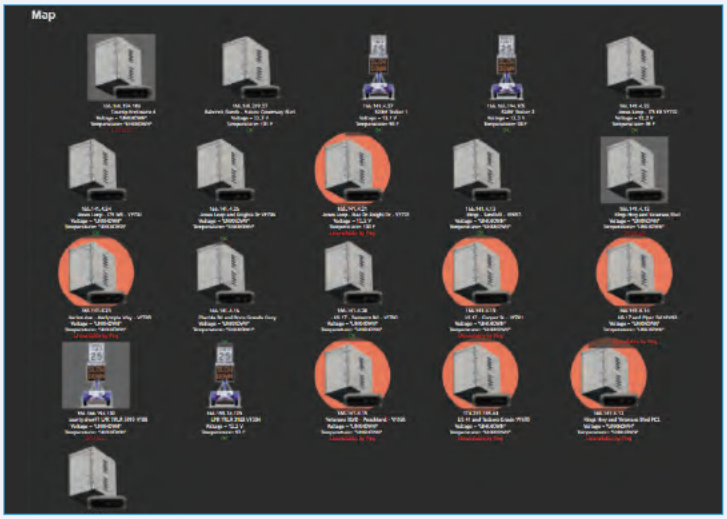
Alert emails and text messages can be sent to multiple agency administrators when a problem or specific trigger event occurs.

Full Customization



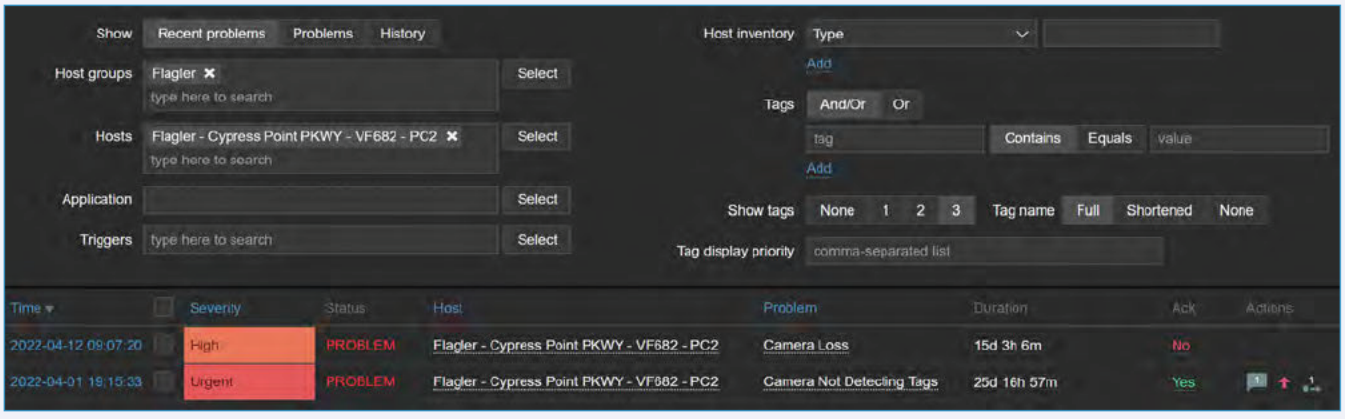
This solution supports unusual and non-standard devices along with customizable alert settings and corrective measures.

ALERT, SO YOU ARE ALWAYS AWARE



Vetted Virtual Technician is an online tool that monitors the health of all of your field hardware devices in a single, simple-to-use interface.

This includes license plate readers, CCTV cameras, wireless radios, trackers, and other IP connected devices that allow for an automated triaged support response and rebooting. The system can run self-corrective steps to automatically resolve common issues that would normally require a field visit. VVT can also be customized to monitor unusual and non-standard devices. Alert emails and text messages can be sent to multiple agency administrators when a problem or specific trigger event occurs to accelerate corrective action.



VVT IN ACTION

Site Map provides a visual representation of all monitored sites.

Site Dashboard provides snapshot of all monitored sites and relevant information.

Alert Dashboard provides detailed informtion concerning a problem or trigger event.

vettedsecuritysolutions.com

VETTED VIRTUAL TECHNICIAN

Vetted Virtual Technician is an online tool that monitors the health of all of your field hardware devices in a single, simple-to-use interface. This includes license plate readers, CCTV cameras, wireless radios, trackers, and a host of other devices that allow for an automated triaged support response and rebooting. The system can run self-corrective steps to automatically resolve common issues that would normally require a field visit. VVT can also be customized to monitor unusual and non-standard devices. Alert emails and text messages can be sent to multiple agency administrators when a problem or specific trigger event occurs.

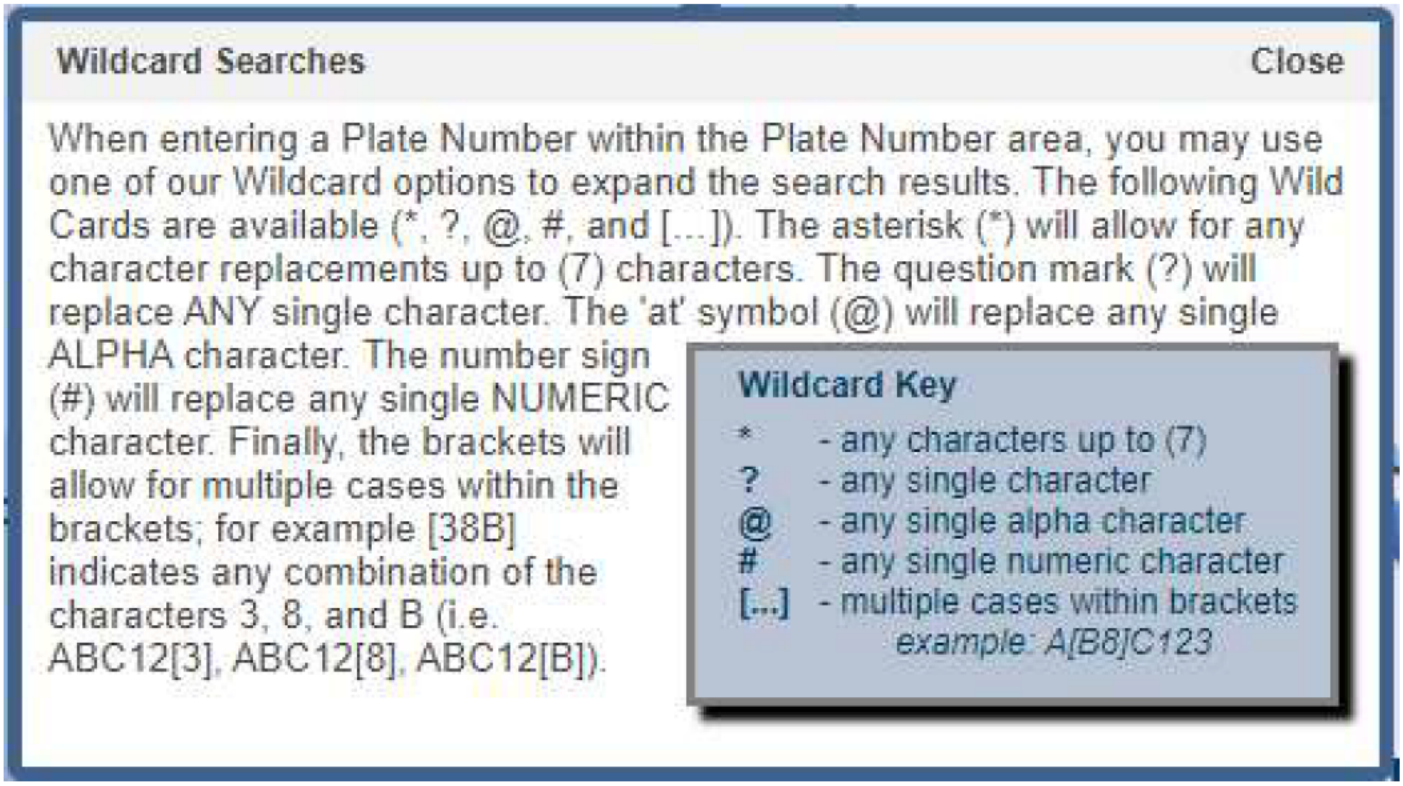
Subject: Mid-Shift Notification Criteria

Steve,



These are the criteria in which the duty offices were instructed to notify me on the mid-shift. This has not been reiterated to the Troop Majors in this current administration; as such I am going to request authorization from LTC Ball to resend at To-From containing these since there are many new duty lieutenants since the last time this was sent.

In the case of extraordinary incidents occurring on the Mid-shift, the Duty Office is asked to please notify Office of Media Relations Director Dave Procopio, either directly or through MSP Operations, of the following specified types of significant incidents that may be expected to generate media interest or present a public safety concern warranting public notification.

- A mass casualty incident;
- An active shooter incident;
- A homicide, shooting, or sexual assault for which MSP is the primary responding agency, for example, a shooting from a vehicle on a highway, or a sexual assault in a state park.
- A police-involved shooting involving a department member;
- Serious or fatal injury to a department member;
- Any incident causing major personal injury or major property damage, for example, an explosion; an aircraft crash; or a catastrophic infrastructure failure such as the Lawrence gas leaks;
- A serious motor vehicle crash involving mass casualties, involving the fatality of a child or children;
- A pending AMBER Alert;
- A missing child or person believed to be in imminent danger for whom investigators want to release descriptive information to the public immediately to assist in the search;
- A State Police pursuit that results in injuries to a department member or member of the public;
- A wanted suspect about whom we want to release information to the public, either in the interest of developing information about the suspect's location or in the interest of public safety;
- Any other significant incident for which the Troop commander requests notification to Media Relations.

In such instances, the Media Relations director will determine whether immediate action is needed, and, if so, whether to handle the incident himself or call out a member of the Media Relations section.

Dave Procopio
Director, Media Communications

CJIS 2021-2024 Audit Guide

CJIS DOCUMENTATION

1. **CJIS User Agreement**
   - The CJIS User Agreement sets forth the mutual responsibilities of the Department of Criminal Justice Information Services (DCJIS) as the CJIS Systems Agency (CSA) for the Commonwealth of Massachusetts and each user agency of CJIS as it relates to the operation, maintenance and security of the systems and services provided.

2. **Global Justice and Public Safety User Agreement**
   - The Global Justice and Public Safety User Agreement establishes guidelines for the access, use, dissemination, and sharing of criminal justice information (CJI) collected and maintained within the systems and networks operated, maintained, and managed by the Executive Office of Public Safety and Security (EOPSS) and/or the Massachusetts Department of Criminal Justice Information Services (DCJIS).
   - Applications covered under the Global Justice and Public Safety User Agreement: *Automated License Plate Readers (ALPR), CopLink, EOPSS Data Cross Tracking System, EOPSS National Incident Based Reporting System (NIBRS), My License Office (MLO) and Victim Notification Registry (VNR)*

3. **Memorandum of Understanding- *Police, University, Housing Authority***
   - A memorandum of understanding is required to define the terms, conditions, and mutual responsibilities of each agency for the purpose of enabling the User to access the Host's/User's internal Computer-Aided Dispatch (CAD) system and/or Records Management System (RMS) via mobile data terminals utilizing the Host's CJIS router and switch.

4. **Memorandum of Understanding – *Fire***
   - A memorandum of understanding is required to define the terms, conditions, and mutual responsibilities of each agency for the purpose of enabling the User to access the Host's/User's internal Computer-Aided Dispatch (CAD) system and/or Records Management System (RMS)

5. **Memorandum of Understanding – *Regional Dispatch***
   - A memorandum of understanding is required to define the terms, conditions, and mutual responsibilities of each agency for the purpose of enabling the User to access the Host's/User's internal Computer-Aided Dispatch (CAD) system and/or Records Management System (RMS) via mobile data terminals utilizing the Host's CJIS router and switch.

6. **Management Control Agreement – *Local IT and/or Vendor IT***
   - The management control agreement covers the overall supervision of all local agency systems, applications, equipment, systems design, programming, and operational procedures associated with the development, implementation, and maintenance of any system that accesses criminal justice information. This agreement must be executed with your agency IT and/or your vendor IT.

7. **FBI Security Addendum – *Vendors, contractors***

- The FBI Security Addendum ensures that adequate security is provided for criminal justice systems while under the control or management of a private entity or connectivity to FBI CJIS systems has been provided to a private entity (contractor/vendor)

8. **Vendor Non-Disclosure Agreement**
   - All vendors are required to complete a non-disclosure agreement stating that s/he has been advised that any disclosure of CORI except as permitted under the sections of law and regulations cited above can result in a fine of up to five thousand dollars ($5,000.00) and/or one year imprisonment in jail or house of correction, in addition to civil liability for damages pursuant to § 177 including exemplary damages, and a civil fine of up to five hundred dollars ($500.00) per violation if the DCJIS finds such a willful violation.

9. **Individual Non-Disclosure Agreement**
   - While not required, CJIS highly recommends that each agency have every member of staff sign an Individual Non-Disclosure Agreement and keep on file at your agency.

CJIS POLICIES

10. **CJIS Comprehensive Policy**

The CJIS comprehensive policy is a collection of policies that each department is required to have within their departmental policies to address regulations, procedures, and requirements as outlined in the FBI Security Policy as well as Code of Massachusetts Regulations 803.

The following policies are individual policies listed within the comprehensive policy that address the following subject areas. These policies should be included in your departmental policies:

10A. Acceptable Use Policy
- All agencies must have policies and procedures for the acceptable use of all CORI and criminal justice information

10B. Misuse Policy
- All agencies must outline the penalties for the improper access, dissemination, and handling of CJIS data

10C. Media Disposal Policy
- All agencies must have proper procedures in place the proper disposal of all media and criminal justice information

10D. Physical Security Policy
- All agencies must have proper procedures in place for the physical protection and security control of all criminal justice information.

10E. Computer Security Incident Report Policy
- All computer security incidents must be reported with forty-eight (48) hours to the Department of Criminal Justice Information Services (DCJIS), regardless of whether the incident involved the CJIS network or CJIS systems.

10F. Secondary Dissemination
- All agencies must maintain central secondary dissemination log to record any dissemination of CORI outside this organization, including dissemination at the request of the subject.

10G. Employee Fingerprinting Policy
- The CJIS User Agreement and the FBI CJIS Security Policy require each CJIS agency to conduct fingerprint-based criminal record checks on all personnel

prior to hire and at least once every five years thereafter.
- In addition, agencies must conduct fingerprint-based criminal record checks on all other individuals who have unescorted access to secure (non-public) areas of the agency prior to allowing access. These individuals include IT personnel, contractors, vendors, custodians, and volunteers.

10H. Civil Fingerprinting Policy
- The purpose of this document is to establish uniform policies and procedures for the collection and submission of civil fingerprints by municipalities to screen applicants for certain municipal licenses and for the collection of fees associated with this process

10I. Automated License Plate Reader Policy (if applicable)
- All agencies, if applicable, must have policies and procedures for the acceptable use of Automated License Plate Readers

INFORMATION TECHNOLOGY

11. Maintenance Agreement
- The maintenance agreement is the proof of purchase of services by a CJIS certified vendor to maintain and provide support for your CJIS router located within your agency. To meet this requirement, the agency is required to provide a current invoice with Integration Partners or any CJIS certified vendor indicating that these services have been procured by the agency.

12. CJIS Network Diagram
- The CJIS Network Diagram is a diagram that documents how your agency's information technology equipment is connected to the CJIS router and switch.

13. System Use Notification Screen ("Splash Screen")
- The system use notification screen is a warning screen that is commonly referred to as a "splash screen." The splash screen should appear before a user can log into their computer. The following language should be at minimum in the system use notification:

  "This system is owned by _____ and contains confidential information. Access to this system is restricted to authorized users for the purposes of fulfilling their duties of employment. Use of this system may be monitored and is subjected to all applicable laws, regulations, and _____ policies and procedures.

14. Advanced Authentication
- Advanced Authentication (AA) provides for additional security to the typical user identification and authentication of login ID and password on mobile devices. Examples include but are not limited to such as: biometric systems, public key infrastructure (PKI)), authenticator is sent on demand via text message, phone call, etc.), or high-risk challenge/response questions.

15. FIPS-2 Encryption certificate
- When CJI is transmitted or accessed from outside a physically secure location, it is required that the cryptographic module is FIPS 140-2 certified and uses a symmetric cipher key strength of at least 128-bit strength to protect Criminal Justice Information (CJI). All agencies should be prepared to provide FIPS 140-2 certificates associated with all access and transmission of CJI outside the physically secure locations.

16. Strong Password Policy
- In keeping with the FBI CJIS Security Policy and industry best practices, access to any CJIS application requires the use of a strong password. These requirements will ensure the security and integrity of all CJIS and FBI systems and the information they contain.

17. **Event Logging**
    - Event logging is required on the local domain level to ensure that if a security-related event occurred in relation to FBI/CJI, your agency could identify who did it, where (what information systems), and when it happened. CJIS is responsible for the collection of this information for applications CJIS manages. Local agencies do not need to include CJIS managed information systems/applications in the event log. If the agency is using CJIS Single Sign-On through Windows Active Directory, some logs may already be maintained at the domain level.

CJIS REPRESENTATIVE RESPONSIBILITIES

18. **Agency Head CJIS Responsibilities**
    - All Agency Heads are responsible for ensuring compliance with FBI and CJIS rules, regulations, and procedures. It is recommended that your agency codify within your departmental policies the responsibilities of an agency head as prescribed in the CJIS User Agreement

19. **CJIS Representative Responsibilities**
    - All CJIS Representatives are responsible for ensuring compliance with FBI and CJIS rules, regulations, and procedures. It is recommended that your agency codify within your departmental policies the responsibilities of a CJIS Representative as prescribed in the CJIS User Agreement

20. **User Account Validation Policy**
    - All internal network accounts and RMS user accounts shall be reviewed at least every six months by the terminal agency coordinator (TAC) or his/her designee to ensure that access and account privileges commensurate with job functions, need-to- know, and employment status on systems that contain Criminal Justice Information.

21. **NexTest - Security Awareness Training**
    - All authorized CJIS users must complete NexTest Security Awareness training before being granted CJIS user account credentials, and every two (2) years thereafter. At the time of your audit, your agency's NexTest expiration report should indicate that all authorized users are up to date with their security awareness training to be in compliance.

22. **CJISOnline.com –Security Awareness Training**
    - Any unescorted staff that do not have CJIS users accounts and are not authorized to use CJIS, but have access to secured areas, must take Security Awareness Training at CJISonline.com
        - **Security and Privacy Basic Role (formerly Level 1)**
            - Administrative staff, custodial services, maintenance, vendors, etc.
        - **Security and Privacy Privileged Role (formerly Level 4)**
            - Information Technology personnel including system administrators, security administrators, network administrator, vendors, etc.
        - **Security and Privacy Security Role (formerly LASO Certification)**
            - Each agency must have a user designated as the Local Agency Security Officer who must complete this training.

23. **XML/CAD roster**

- All agencies who run queries through their records management system (RMS/CAD) must provide CJIS with an XML/CAD roster with the unique identifier/username for each user within your agency

DATA QUALITY REVIEW

24. Data Quality Review

- During your CJIS Audit, an on-site data quality review is conducted. Your auditor will compare NCIC (OpenFox) records against agency case files and original documents to determine the validity, accuracy, completeness, and timely entry/removal of records are verified. A list of records to pull for review will be forwarded to you before your audit.

FELONY ARRAIGNMENT REVIEW

25. Felony Arraignment Review

- Pursuant to M.G.L. c. 263, § 1A and 803 CMR 7.08, DCJIS is tasked with auditing law enforcement agencies to ensure compliance with the statutory requirement that any person arrested and charged with a felony be fingerprinted. Your agency will be provided with a list of felony arraignments that will need to be reviewed.

FROM: Melissa Comeau, Director of Billing, Receivables and Grants, Massachusetts State Police

RE: COPS Anti-Heroin Task Force 2020 – Grant Adjustment Modification, Award # 2020HPWX0004

Dear Program Manager Williford,

The Massachusetts State Police (MSP) respectfully requests a grant budget modification transferring $439,250 from the Contracts and Consultants category and transferring $125,750 from the Other Costs category and moving $564,000 to the Equipment and Technology category and moving $1,000 to the Supplies category.

The MSP's Anti-Heroin Task Force strategy focuses on disrupting and dismantling Drug Trafficking Organizations. Critically important to this mission is the ability to apprehend offenders who traffic and distribute heroin/fentanyl and to seize the heroin and fentanyl in their possession, preventing it from circulating in our communities. High-level narcotics offenders routinely flee from police when attempts are made to stop and apprehend them. The StarChase GPS vehicle mounted launcher (VML) is pursuit mitigation technology, which allows law enforcement to deploy a temporary GPS tracking device onto a target vehicle during an attempted arrest. This allows investigators to monitor the movement of the target vehicle in real time while backing off the pursuit. This technology would allow MSP to apprehend high-level narcotics offenders while simultaneously reducing risks to the public, police, and the suspects and would increase the successful seizure of narcotics, firearms, and evidence. The MSP requests to purchase (30) StarChase VML devices and two portable devices at a total cost of $340,000. StarChase devices would be strategically deployed to support MSP drug units and uniformed Troopers that are involved in arrests of high-level narcotics offenders and the vehicle pursuits that often follow.

The MSP operates an Automatic License Plate Recognition (ALPR) camera system that allows MSP to get near real-time alerts (hits) on the locations of suspected drug traffickers. It provides historical search capability for identified drug trafficking vehicles for patterns of activity. The Massachusetts State Police manages the ALPR system and allows local and federal law enforcement to access data from the system, thus solidifying partnerships and promoting the open exchange of information among agencies. The MSP wishes to purchase ALPR equipment at a total cost of $110,000 to replace current aging equipment.

The MSP's Technical Services Unit (TSU) assists Federal, State, and Local police by providing technical support and technology-based tools to aid in heroin and fentanyl investigations. The MSP requests to purchase Oculus covert surveillance equipment that will be used to collect audio and video evidence for investigations directly related to heroin and fentanyl distribution and trafficking. In addition, The MSP also requests to purchase G3 Technologies NOMOS WIFI Spectrum Clearing Tools for officer safety purposes during investigations directly related to heroin/fentanyl distribution and trafficking. The TSU has recently received multiple requests to provide such support and have been unable to assist. These tools will allow investigators to

safely gather critical evidence to further enhance heroin/fentanyl investigations and contribute greatly to successful prosecutions.

The MSP's Technical Services Unit (TSU) is responsible for management of video evidence related to narcotics investigations with a focus on heroin and fentanyl distribution and trafficking. The TSU is in need of external hard drives for storage of video evidence. The MSP requests to purchase (12) – 8TB, (16) – 6TB and (25) – 4TB external drives in the supplies category.

Acquisition of the above updated technology will greatly enhance MSP's anti-heroin and other opioid long-term strategy and goals by providing a user-friendly and effective tool to assist with investigative leads, identify potential drug shipment alerts as well as track DTO's.

Proposed modifications are as follows:

A. SWORN OFFICERS - No changes requested

B. CIVILIAN AND NON-SWORN PERSONNEL - No changes requested

C. EQUIPMENT AND TECHNOLOGY

- Increase category by $564,000 for pursuit mitigation equipment, ALPR and surveillance equipment.

D. SUPPLIES

- Increase category by $1,000 for external hard drives

E. TRAVEL/TRAINING

- No changes requested

F. CONTRACTS AND CONSULTANTS

- Decrease category by $439,250

G. OTHER

- Decrease Other Costs category by $125,750

RE: COPS Anti-Heroin Task Force 2020 – Grant Adjustment Modification, Award # 2020HPWX0004

Dear Program Manager Williford,

The Massachusetts State Police (MSP) respectfully requests a grant budget modification transferring $425,500 from the Contracts and Consultants category and $164,000 from the Other Costs category. We would like to reallocate to the following categories: $584,000 to Equipment and Technology and $5,500 to Supplies.

The MSP's Anti-Heroin Task Force strategy focuses on disrupting and dismantling Drug Trafficking Organizations. Critically important to this mission is the ability to apprehend offenders who traffic and distribute heroin/fentanyl and to seize the heroin and fentanyl in their possession, preventing it from circulating in our communities. High-level narcotics offenders routinely flee from police when attempts are made to stop and apprehend them. The StarChase GPS vehicle mounted launcher (VML) is pursuit mitigation technology, which allows law enforcement to deploy a temporary GPS tracking device onto a target vehicle during an attempted arrest. This allows investigators to monitor the movement of the target vehicle in real time while backing off the pursuit. This technology would allow MSP to apprehend high-level narcotics offenders while simultaneously reducing risks to the public, police, and the suspects and would increase the successful seizure of narcotics, firearms, and evidence. The MSP requests to purchase (30) StarChase VML devices and two portable devices at a total cost of $340,000. StarChase devices would be strategically deployed to support MSP drug units and uniformed Troopers that are involved in arrests of high-level narcotics offenders and the vehicle pursuits that often follow.

The MSP operates an Automatic License Plate Recognition (ALPR) camera system that allows MSP to get near real-time alerts (hits) on the locations of suspected drug traffickers. It provides historical search capability for identified drug trafficking vehicles for patterns of activity. The Massachusetts State Police manages the ALPR system and allows local and federal law enforcement to access data from the system, thus solidifying partnerships and promoting the open exchange of information among agencies. The MSP wishes to purchase ALPR equipment at a total cost of $125,000 to replace current aging equipment.

The MSP's Technical Services Unit (TSU) assists Federal, State, and Local police by providing technical support and technology-based tools to aid in heroin and fentanyl investigations. The MSP requests to purchase Oculus covert surveillance equipment that will be used to collect audio and video evidence for investigations directly related to heroin and fentanyl distribution and trafficking.

In addition, The MSP also requests to purchase G3 Technologies NOMOS WIFI Spectrum Clearing Tools for officer safety purposes during investigations directly related to heroin/fentanyl distribution and trafficking. The TSU has recently received multiple requests to provide such support and have been unable to assist. These tools will allow investigators to safely gather critical evidence to further enhance heroin/fentanyl investigations and contribute greatly to successful prosecutions.

The MSP's Technical Services Unit (TSU) is responsible for management of video evidence related to narcotics investigations with a focus on heroin and fentanyl distribution and trafficking. The TSU is in need of external hard drives for storage of video evidence. The MSP requests to purchase (12) – 8TB, (16) – 6TB and (25) – 4TB external drives in the Supplies category.

The MSP's CINRET requests to purchase two GPS Tracking devices that are used under a court order to track target vehicles during narcotic investigations. The MSP's CINRET also requests to purchase four digital cameras to assist with their fentanyl and heroin investigation. They are needed to facilitate the proper documentation of evidence and surveillance photos of targets and locations.

The MSP's CLET requests to purchase a digital scale for weighing the seized precursor chemicals.

Acquisition of the above updated technology will greatly enhance MSP's anti-heroin and other opioid long-term strategy and goals by providing a user-friendly and effective tool to assist with investigative leads, identify potential drug shipment alerts as well as track DTO's.

Proposed modifications are as follows:

A. SWORN OFFICERS - No changes requested

B. CIVILIAN AND NON-SWORN PERSONNEL - No changes requested

C. EQUIPMENT AND TECHNOLOGY

- Increase category by $584,000 for pursuit mitigation equipment, ALPR and surveillance equipment.

D. SUPPLIES

- Increase category by $5,500 for external hard drives, digital cameras and digital scale

E. TRAVEL/TRAINING

- No changes requested

F. CONTRACTS AND CONSULTANTS

- Decrease category by $425,500

G. OTHER

- Decrease Other Costs category by $164,000

Thank you for your attention to this matter. If you have questions or need additional information regarding this budget modification, please contact me at 508-820-2137.

Sincerely,

Melissa Comeau

Director of Billing, Receivables & Grants

(508) 820-2137

Division of Homeland Security and Preparedness
Annual Report 2022

Commonwealth Fusion Center

Mission

The Commonwealth Fusion Center (CFC) collects and analyzes information to produce and disseminate actionable intelligence to stakeholders for strategic and tactical decision-making. This is done to identify, disrupt, or deter criminal activity and terrorism, both domestic and international.

Overview

The CFC, established in 2004, is an all-crimes fusion center that serves as the Commonwealth's Principal Center for Information Collection and Dissemination pursuant to Executive Order No. 476. The CFC works in collaboration with local, state, and federal agencies and the private sector to improve public safety and enhance homeland security throughout the Commonwealth, New England, and the Nation. Furthermore, it is the Commonwealth's central repository for homeland security information, criminal intelligence, and critical incident reporting.

The CFC emphasizes threat detection and reporting, creating new best practices, enhanced special event support, outreach efforts, and collaboration. The CFC also plays a lead role during critical incidents, special events, and important public safety initiatives.
The Commonwealth Fusion Center Program is comprised of four units, each working in cooperation with the others:

Anti-Terrorism Unit (ATU) –This unit performs investigatory functions, and its members serve on a Federal Bureau of Investigation Joint Terrorism Task Force.

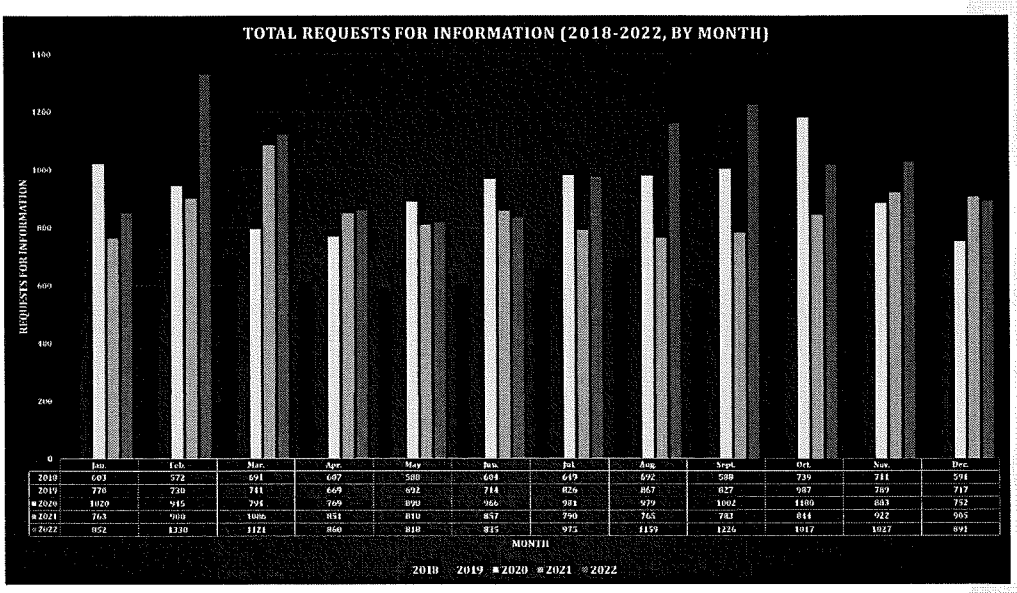
Criminal Information Section (CIS) – This section is responsible for activities associated with protecting critical infrastructure, cybersecurity, and drug enforcement.

Intelligence Services Unit (ISU) – The ISU is comprised of civilian analysts and support staff who perform Watch Center functions, intelligence analysis, case support, special event support, and suspicious activity vetting.

Watch Center Unit (Watch) – The Watch operates 24/7. It performs situational awareness functions and provides tactical intelligence during critical incidents.

Programs

Massachusetts Cybersecurity Program (MCP)- The MCP program focuses on cybersecurity threat reporting, training, education, and awareness. As a part of its activities, the MCP routinely distributes cybersecurity intelligence products, situational awareness messages, and a monthly open-source bulletin to its members. During 2022, the MCP created and disseminated 16 Cybersecurity awareness products and 12 monthly cybersecurity bulletins and re-disseminated 136 cyber intelligence products and alerts on behalf of other agencies to over 697 local, state, federal, and private sector members. Additionally, MCP members provided 54 cybersecurity briefings.



The MCP Vulnerability and Threat Intelligence Project was established in March 2020 to identify municipalities and critical infrastructure sector partners within the Commonwealth with critical cyber vulnerabilities that pose an immediate threat of exploitation by threat actors, including ransomware and data breaches. Once these cyber vulnerabilities are identified, the Massachusetts Cybersecurity Program notifies the affected organizations and over one hundred notifications have been made since the program's inception. In addition, 13 cyber incidents were reported to the MCP in 2022.

Commonwealth Critical Infrastructure Program (CCIP)- The CFC runs the CCIP, created in 2005 to implement a statewide, coordinated approach to identifying and protecting the Commonwealth's critical infrastructure and key resources. The CCIP disseminated 16 CCIP bulletins and 109 critical infrastructure-related products on behalf of other agencies in 2022.

Requests for Information (RFI)

During 2022, the CFC received & responded to 13,487 RFIs from local, state, and federal law enforcement agencies. This was a 31% increase over the previous year. A single RFI may require the performance of multiple database checks, the submission or response to an HSIN Exchange Request, the creation of a GIS map or other product, a response to a Terrorist Screening Center (TSC) hit, or a response to a request for technical support. In 2022, of the 13,487 Requests for Information received: 12,111 (89%) were for CFC database checks.

- State/Local Agencies: 11,212
- Federal Agencies: 538
- Other Fusion Centers: 290
- Other/Unclassified: 71

INTERPOL

The CFC is the state liaison coordinator for Interpol in Massachusetts. The CFC Interpol liaison coordinates with Interpol Washington to support members of the international law enforcement community. In 2022, the CFC received and responded to 31 Interpol requests for information or assistance from 20 countries, including the United Kingdom, Ireland, Jamaica, Romania, France, the Netherlands, Switzerland, and Canada.

The CFC has assisted Interpol partner agencies with investigations ranging from fraud, human trafficking, threats to life, and homicide, as well as identifying, locating, and facilitating well-being checks on suicidal and missing persons.

Suspicious Activity Reporting (SARs) and Criminal Tips

During 2022, the Commonwealth Fusion Center processed 209 criminal tips with no potential nexus to terrorism and 260 Suspicious Activity Reports (SARs) with a potential nexus to terrorism. Of the 260 SARs with a potential nexus to terrorism, 215 were forwarded to eGuardian.

Situational Awareness and Intelligence Products

In 2022, the CFC produced four quarterly threat assessments focused on pertinent intelligence that could impact the Commonwealth of Massachusetts. In addition, the CFC produced numerous situational awareness messages related to terrorist attacks, violent criminal incidents, mass casualty attacks, civil unrest, products related to physical threats, and cybersecurity threats to critical infrastructure. The CFC created new, innovative product lines in 2022, including the weekly *Massachusetts Tactical Research & Intelligence Exchange (Matrix)* and two new quarterly products, including the *MSP Quarterly Crime Gun Review* and a joint CFC and NEHIDTA *Massachusetts Drug Trafficking Trends - Quarterly Intelligence Bulletin.*

In 2022, the CFC disseminated **1,955** Situational Awareness Bulletins, Intelligence Products, and other advisories to local, state, and federal law enforcement agencies.

Training and Seminars

In 2022, CFC personnel provided in-person and virtual training to local, state, and federal law enforcement partners. Training on CFC Resources, Coplink, Privacy/Civil Rights and Civil Liberties (P/CRCL), the Current Threat Environment, and Threat Reporting was provided to **793** individuals.

The CFC also held three specialized seminars.

- **School Safety and Security Seminar**
  The CFC's 5th Annual School Safety and Security Seminar was held in December 2022. There were more than **130** attendees at this year's event. The seminar included the following topics of discussion: Massachusetts Cybersecurity Program Overview, Common Cyber Attacks / Threats, Electronic Evidence Considerations, Cyber Hygiene & Best Practices, and Reporting to Law Enforcement.

- **Faith-Based Safety and Security Seminar**
  The CFC held its 4th Annual Faith Based Safety and Security Seminar in November 2022. There were **120** faith-based partners in attendance including local, state, and federal government members. The seminar focused on the physical threat environment, including the targeting of faith-based organizations, and the cyber threat environment, including the targeting of faith-based organizations, suspicious activity reporting protocols, and grants opportunities.

- **Private Sector Safety and Security Seminar**
  The CFC held its 3rd Annual Private Sector Safety and Security Seminar focused on cybersecurity and physical security in November 2022 for more than **60** private sector attendees. Topics of discussion included a critical infrastructure threat overview, a cybersecurity threat overview, and threat reporting protocols.

Boston Marathon

The CFC provided intelligence and special event support for the 126th Boston Marathon, which was held on April 18, 2022. Special event support included: Commanding the Intelligence/Investigations Working Group; Overseeing the development of a Joint Special Event Assessment; Providing intelligence briefings for key stakeholders and decision-makers throughout the special event planning process as well as during the event itself; Deploying intelligence analysts to command posts to assist with vetting suspicious activity and suspicious individuals.

Success Stories

On March 28, 2022, the CFC observed a post directed to the official MSP Facebook page from a concerned citizen regarding a YouTube video in which a MA registered vehicle is shown with an electronic scrolling sign displaying multiple expressed/implied threats. One of the messages directly threatened U.S. President Joe Biden. A query of the MA registration identified a registered owner/operator that was the subject of a similar Suspicious Activity Report (SAR) in 2020. Members of the MSP Anti-Terrorism Unit (ATU) and U.S. Secret Service (USSS) were advised and investigated the incident.

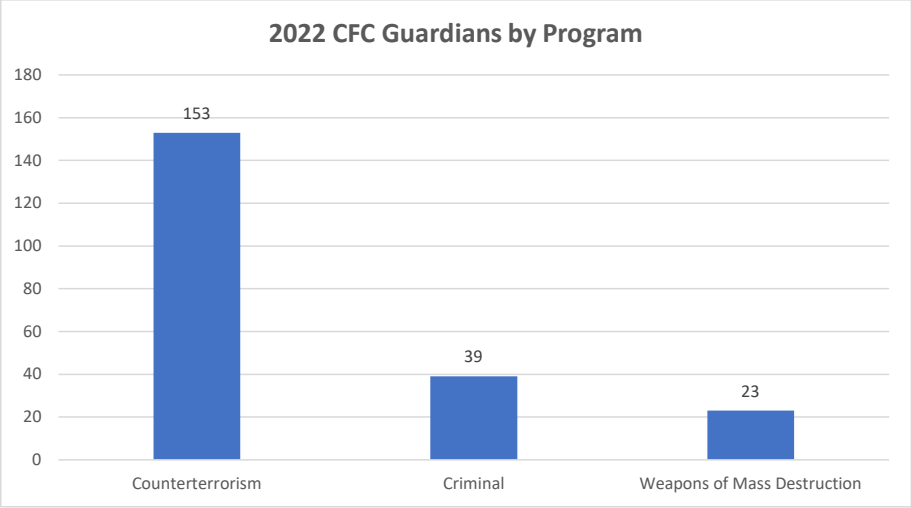
On July 9, 2022, the CFC was made aware of an individual residing in MA who threatened to travel to San Francisco, CA, and blow-up Reddit Headquarters with a pipe bomb. The suspect allegedly learned how to manufacture explosive devices from the internet and suffered from mental health issues. A BOLO/Officer Safety was created by the CFC and distributed to partner fusion centers. Partner law enforcement agencies in multiple states, including RI, NY, IN, WY, and MN, responded with information and Automated License Plate Recognition data on the suspect's vehicle, allowing investigators to attempt to intercept the vehicle. A full extradition warrant was issued for the suspect. After multiple days of investigation, the suspect was ultimately located in Springfield, MO, and taken into custody without incident.

On August 11, 2022, the CFC was advised of a suspicious phone call made to the Massachusetts Bar Association. The caller stated that he had just killed his brother and needed an attorney.

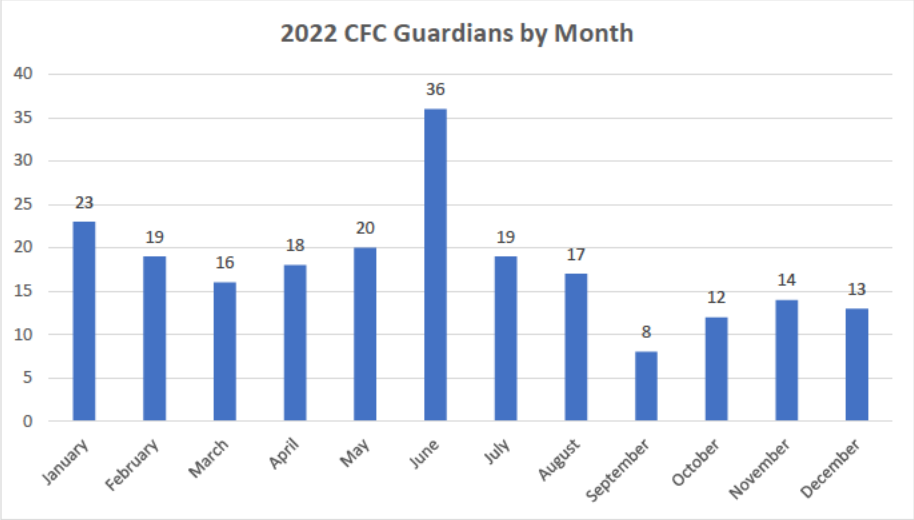
Using law enforcement and open-source investigative tools, personnel assigned to the CFC tentatively identified the caller and potential victim and contact the local police departments in Easton, Brockton, and Weymouth, where the suspect and victim had associated addresses. While investigators attempted to locate the victim, State Police Operations initiated a 'ping' on the suspect's phone through T-Mobile. They obtained geolocation data for the caller in Hingham, MA. The alleged victim was located and reported that his brother had assaulted him with a firearm and fired shots at his residence. The Hingham Police Department was contacted and coordinated with the Weymouth Police Department to locate and initiate a motor vehicle stop on the suspect's vehicle. The suspect was ultimately taken into custody without incident. Due to effective coordination and collaboration between the Commonwealth Fusion Center, State Police Operations, and local law enforcement partners (Weymouth, Easton, Brockton, Hingham), the total elapsed time from the initial call to the apprehension of the shooter was approximately one (1) hour.

Anti-Terrorism (ATU)

Overview



The Anti-Terrorism Unit (ATU) is a state-wide investigative unit under the Massachusetts State Police Division of Homeland Security and Preparedness. State Police ATU members are jointly assigned through a memorandum of agreement (MOU) to the Boston Division of the Federal Bureau of Investigation (FBI) Joint Terrorism Task Force (JTTF). All members are deputized as Special Deputy US Marshalls with authority to investigate US Code Title 28 violations further defined as "The unlawful use of force and violence against persons or property to intimidate or coerce a government, the civilian population, or any segment thereof, in furtherance of political or social objectives."



Mission

The Anti-Terrorism Unit's primary mission is to investigate and seek prosecution of individuals who violate federal statutes relating to domestic and international terrorism. These responsibilities include working with the United States Attorney's Office to write unclassified and classified Foreign Intelligence Surveillance Act (FISA) search warrants; conduct Guardian threat assessments; conduct preliminary and full investigations; and provide liaison to the FBI and other federal, state, and local law enforcement agencies relating to homeland security matters. ATU members routinely conduct surveillance, recruit, train, and handle Confidential Human Sources (CHS), collect domestic and international intelligence, and prepare intelligence briefings for special events. Additionally, the ATU provides 24-hour land-based security for Liquid Natural Gas (LNG) deliveries, assists federal partners in search/arrest warrants, and protects dignitaries when traveling through the Commonwealth.

2022 Metrics

- Investigated 338 leads within ACISS
- 260 suspicious activity reports (SARs) were received and vetted in 2022
- 215 of the SARs were forwarded to the JTTF for further action
- Investigated 132 Guardian leads
- Conducted 127 federal and state agency assists
- 10 LNG security/intelligence missions performed
- Conducted intelligence for 2022 protests
  - Conducted intelligence for the Boston Marathon, 4th of July Celebration, LIV Golf Tournament, and New England Patriots games
- ATU members are on-call 24/7/365 for all terrorism matters

Behavioral Observation and Suspicious Activity Recognition (BOSAR)

MISSION

The BOSAR Unit, short for Behavioral Observation and Suspicious Activity Recognition, is the Department's key asset for plainclothes, covert observation, and surveillance during large-scale events. Its primary objective is to swiftly detect any "hostile" behavior and mitigate potential harm to the public, essentially to prevent the preventable. BOSAR carries out two distinct missions, namely training and operational, to fulfill its mission effectively.

From 2014 to 2022, the BOSAR team has trained more than 2,700 law enforcement officers at the federal, state, and local levels across the United States and globally. In 2022 alone, 216 officers underwent the two-day training program, comprising classroom and practical training segments.

The BOSAR Unit comprises 82 sworn members ranging from Trooper to Detective Lieutenant. It has been deployed operationally at numerous events throughout Massachusetts, leading to increased popularity and relevance in recent years. With the current local, national, and international climate, the BOSAR program's importance is expected to grow significantly in ensuring event security.

[redacted]

G.L. c. 4.sec. 7. cl.26(f)(investigative)

Cyber Crime Unit (CCU)

MISSION

The **Cyber Crime Unit** (**CCU**) conducts technical investigations. It provides digital forensic support for the search and seizure of digital evidence in all types of crimes, including homicides, sexual assaults, child exploitation cases, narcotics violations, financial crimes, and cyberstalking, among many others. The specially trained Troopers respond 24/7 for investigative and forensic missions. Unit members routinely become involved in some of the most highly technical, complex, and sensitive cases that law enforcement agencies encounter. The CCU supports Massachusetts State Police personnel and our local, state, and federal partners. Unit Troopers serve as Task Force Officers on the Homeland Security Investigations-Boston Cyber Crimes and Child Exploitation Group, the Federal Bureau of Investigation Child Exploitation Unit, the Federal Bureau of Investigation Regional Computer Forensic Laboratory, and the United States Secret Service Cyber Crime Task Force.

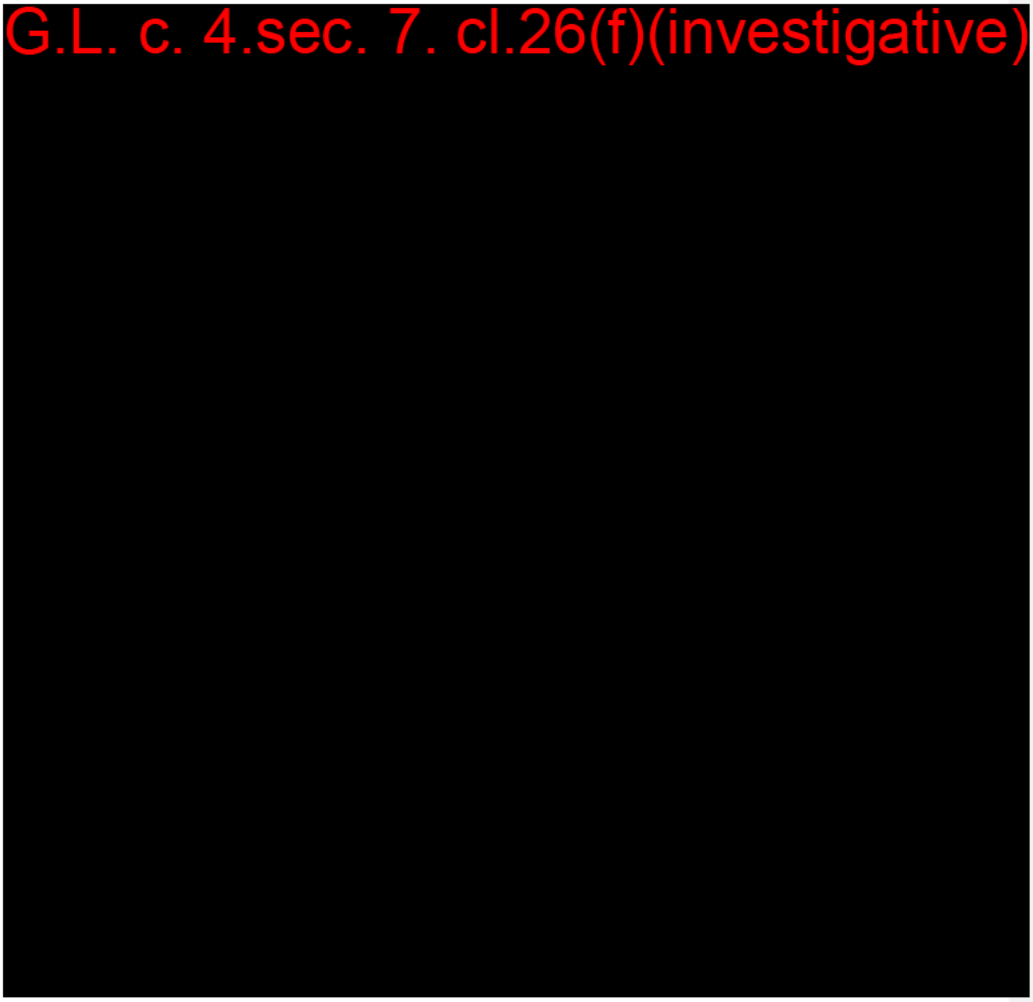
Digital Forensics

They also have a lead role in the Internet Crimes Against Children Task Force for Massachusetts. Cyber Crime Unit members, certified in digital forensics, are also dedicated to collecting, preserving, and analyzing computers and digital evidence. Forensic services include examining hard drives, removable media, cellular devices, mobile devices, GPS devices, wireless & Wi-Fi devices, and providing video surveillance capture and clarification of digital video files, web video, analog video, still cameras, or scanned images. The CCU will have a new Mobile Computer Forensics Van in early 2023, a fully equipped lab that allows Digital Forensic

Electronic Scent Detection (ESD) K-9

Examiners to respond 24/7 to preview and examine digital media on-scene in a sanitary lab environment. In January 2022, the newest member of the MSP CCU, ESD K-9, "Griffin," completed training through Jordan Detection K-9. K-9 Griffin joined CCU after being awarded to the Massachusetts State Police through the not-for-profit organization Operation Underground Railroad. K-9 Griffin is certified and capable of detecting many electronic storage devices, including DVDs, USB drives, hard drives, SD cards, and microSD cards. Trooper Benesh and K-9 Griffin have assisted on more than thirty (30) search warrants. Trooper Benesh and K-9 Griffin have also assisted New Hampshire ICAC with many search warrants.

INTERNET CRIMES AGAINST CHILDREN TASK FORCE



The MSP's Cyber Crime Unit operates the federally funded multi-agency **Internet Crimes Against Children** (**ICAC**) Task Force in Massachusetts, which helps state and local law enforcement agencies investigate predators who exploit and victimize children using computers and the Internet. The ICAC supports a multi-pronged strategy to combat online child exploitation, including undercover online investigations, nationwide investigation coordination, search warrant preparation and execution, investigative and analytical support, training for police officers and prosecutors, public awareness campaigns, and outreach activities to schools, parents, and community groups. As members of the national Internet Crimes Against Children Task Force, CCU members are often involved in some of the most heinous and sensitive investigations, referred to the CCU by the National Center for Missing & Exploited Children (NCMEC) in Virginia. The NCMEC refers CyberTipline reports to the MSP Cyber Crime Unit, which as the lead agency, is the clearinghouse for Massachusetts. The information gathered in the CyberTipline reports determines whether an investigation is warranted. Cyber tips sent to the Massachusetts ICAC Task Force have increased by over forty percent (40%) since 2021.

Cyber Crime Unit Activity, 2023	
Cybertip Investigations Opened	1,504
Search Warrants	152
Arrests/Criminal Complaints	92
CyberTipline Reports Received	9,532

Significant Activities and Investigations

G.L. c. 4.sec. 7. cl.26(f)(investigative)

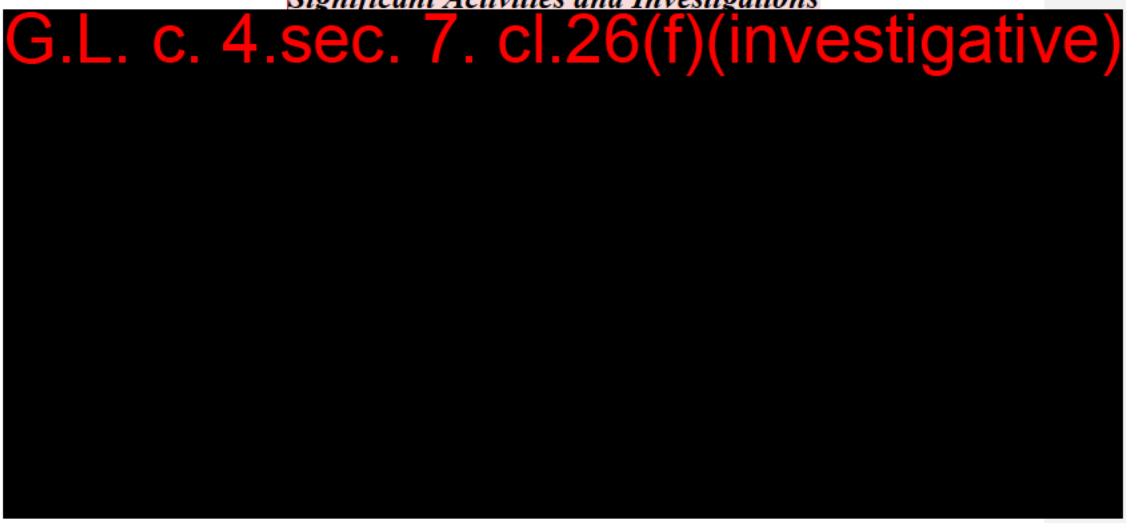
[redacted]

Fraud Identification Unit

MISSION

The Fraud Identification Unit (FIU) is an investigative Unit working in concert with the Massachusetts Registry of Motor Vehicles. In 2022, the Unit was staffed with one Lieutenant and three Troopers. Members of this Unit conduct investigations related to the false procurement of official RMV documents, manage the RMV facial recognition program, investigate attempts to obtain RMV credentials fraudulently, investigate threats related to and crimes committed against RMV facilities or employees as well as investigate crimes committed

by RMV employees as they relate to their official duties. Members also investigate the misuse of personal information obtained through the RMV ATLAS database by RMV employees, insurance companies, car dealerships, etc., who have access to this information.



Further, members also assist local, state, and federal law enforcement agencies with collaborative investigations involving RMV documents, facilities, or employees. FIU works with the Alcoholic Beverages Control Commission when they discover a pattern of fraudulently obtained licenses for the underage purchase of alcohol, Homeland Security Investigations on their Document and Benefit Fraud Task Force, and the Department of Transportation Auditors on cases they uncover where there may be criminal activity on the part of RMV employees or where changes in RMV protocols may mitigate such activity.

Unit members participate in a multi-agency task force targeting the misuse of RMV-issued Handicapped Parking Placards. FIU members handle "State to State" cases forwarded by other state jurisdictions when a subject in another state is trying to obtain a credential using information already in existence in Massachusetts, or vice versa.

Fraud Identification Unit 2022 Activity

Arrests	**34**
Summons	38
Arrest Warrants Obtained	10
Facial Recognition Criminal Cases Generated	967
Assistance Rendered to Other Agencies	119
RMV Document Requests	174
State To State Investigations	69
External Facial Recognition Requests	13

Significant Activities and Investigations

G.L. c. 4.sec. 7. cl.26(f)(investigative)

State Identification Section (SIS)

MISSION

The State Identification Section (SIS) provides efficient and accurate real-time identification and criminal history services for law enforcement and specifically authorized civil applications to further public safety. SIS serves as the statewide repository of fingerprint records for arrests, sex offender registrations, deceased persons, license-to-carry applicants, and law enforcement and civilian employment applicants. SIS responsibilities include the following:

- Processing criminal records and fingerprint submissions for Statewide Applicant Fingerprint Identification Services (SAFIS), including teachers, social workers, DYS, and DCF, and processing fingerprint background checks for agencies issuing licenses.
- Managing court disposition updates, expungement orders, and court-ordered fingerprint-based criminal history records sealing.
- Assisting local police departments in procuring Livescan fingerprint devices, network configurations, and setups with DCJIS and vendors through grant funding.
- SIS has oversight of the latent print services for authorized forensic analysts in the Commonwealth. There are nine (9) agencies in the state with latent workstations.
- Criminal records in AFIS are utilized to confirm the identity of CODIS/DNA hits.
- SIS assists the OCME's offices across the state in identifying deceased individuals.

G.L. c. 4.sec. 7. cl.26(f)(investigative)

[redacted]
G.L. c. 4.sec. 7. cl.26(f)(investigative)

Unit Metrics

SIS received and processed 366,906 Ten Print (fingerprint) record submissions in 2022. This was an increase of 29,572 submissions from 2021. These submissions are broken down as follows:

- Criminal Arrests from Livescan booking and hard cards totaling 85,894
- Law Enforcement Applicants and CJIS Certification, totaling 7,384
- User fee applicants such as Firearms, Teachers, DYS, Gaming Commission, and Local Bylaw Applicants (ex., taxi drivers, ice cream vendors), totaling 226,033
- Sex Offender Registration totaling 611
- Criminal Inquiries, such as protective custody and victim ID, totaling 605
- Other, totaling 43,514 (includes 6,248 OCME portable Livescan submissions of deceased persons)
- The AFIS System provided 1,847 candidates at the state and FBI level that hit to latent prints entered by MSP CSSS and local agencies. An additional 75 candidates were provided as new fingerprint cards were entered into the AFIS system and hit on older, registered prints that had not provided prior identification to MSP CSSS and local agencies.

ACISS

Overview and Mission

The Division of Homeland Security and Preparedness continues to support all Divisions within the Organization with the use of the ACISS Application. ACISS is an acronym for 'Augmented Criminal Investigations Support System', which continues to meet the Department's needs. DIS, DHS, DST, and DAS utilize all aspects of ACISS, from case and lead management to telephone analysis. Initially procured as a solution to meet case management needs of DIS, the application has continued to mature, expanding its features, adding new functionality, and providing data integrations with other 3rd party applications. In 2022 funding was secured to expand ACISS and migrate the current user base to the AZURE Government Cloud environment. Throughout the year, work has progressed with representatives from EOTTS to assist with the technical aspects of this migration. ACISS was also provided funding to expand the applications user base to the Division of Field Services. This expansion and creation of a "Call Tracking" and "Mobile" platform are within the testing stages for future deployment with the Massachusetts State Police.

Evidence Systems Initiative (ACISS)

Members of the Office of the Division Commander for the Division of Homeland Security launched an initiative to update the Department's evidence storage and handling systems and procedures. The initiative will help the agency protect at-risk populations and civil rights by providing the procedural and technological best practices to ensure evidence is appropriately stored pre- and post-conviction. The initiative included evaluating, selecting, and purchasing equipment and technology and reviewing legal, professional, and policy standards. The installation of new evidence technology solutions in the Division of Field Services was completed in 2022. This initiative is ongoing, as evidence officers are trained and supported throughout the Divisions. The Division of Administrative Services, Long Term Evidence Unit also supports the ACISS Property and Evidence Initiative. Divisions within Investigation Services, Homeland Security, and Field Services now have a central location to store evidence that needs to be kept secure for extended periods of time.

Automatic License Plate Recognition Program (ALPR)

The Division of Homeland Security and Preparedness administers the Department's Automatic License Plate Recognition (ALPR) program. This system uses cameras to recognize the numbers and letters on the registration plates of passing vehicles and converts the image into characters that computer applications can process. The cameras can be temporarily deployed strategically for public safety events, mounted on cruisers, or affixed to structures near critical infrastructure

sites or major roadways. Over the course of 2022, the Department completed the transition of the ALPR system from an older, locally hosted server at DCJIS to a modern, cloud-based program. DHS staff reviewed the locations of ALPR sites to ensure that they were placed to provide maximum public safety benefits and provided training to system users on best practices and privacy considerations. The ALPR program provided increased security and situational awareness to support major public events such as the Boston Marathon and July 4th celebrations at the Esplanade. Over the past year, the Department used ALPR technology to solve or obtain critical investigative leads in a variety of public safety and criminal matters, including:

Success Stories

- Armed home invasion in Attleboro
- Human trafficking investigation involving juveniles from the Berkshires
- Identification of a vehicle used in the shooting of a female in New Bedford
- Arrest of a suspect wanted for attempted murder and sexual assault in South Carolina
- Identification of a vehicle that fled from a pursuit in Vermont
- Hit & run of a pedestrian with serious injuries in Springfield
- Arson of a business with injuries in Holyoke
- Bank robbery pattern in the Boston area
- AMBER alert and reported child abduction in Fall River
- Safe recovery of a missing endangered elderly male from Connecticut
- Identification and apprehension of a suspect in fatal hit & run of bicyclist in Holyoke

Air Wing

Overview and Mission

The State Police Air Wing provides statewide aviation support for all Massachusetts police, fire, and public safety operations. The unit operates twenty-four hours a day and is the most comprehensive public safety aviation unit in New England. The Air Wing operates four turbine powered helicopters and two fixed-wing airplanes. The helicopters are Airbus EC-135's and H-135's. They are equipped with state-of-the-art technology, allowing the crews to successfully complete various missions. The fixed-wing airplanes are a Cessna 182 and a Cessna Grand Caravan 208 EX. The Cessna 182 serves primarily as a training aircraft but can be used for photography and transportation missions. The Grand Caravan is a sophisticated aircraft for long-term surveillance, transportation, and searches.

In 2022, the Air Wing flew 1,578 missions totaling 1,780 flight hours. Nearly half of the missions were in support of local law enforcement agencies. These missions included searches for missing and wanted persons, surveillance and reconnaissance, aerial photography, SafetyNet,

firefighting, large crowd demonstrations/protests, motor vehicle pursuits, and ceremonial fly-bys. The Air Wing frequently responds to searches for wanted, missing, or endangered persons. The aircraft's FLIR (Forward Looking Infrared camera) is critical in locating these subjects. The camera's technology allows crew members to locate people in remote, concealed, or no light environments. The camera's video images can be transmitted to fixed-based receivers, allowing incident commanders to view real-time video to gain situational awareness and assessment during critical/tactical incidents, natural disasters, and large-scale public events. This allows viewers to see the video from any device with internet access. In October of 2022, the Air Wing received funding through the Homeland Security Grant Program to improve downlink capabilities in western Massachusetts. This funding will be used to install a fixed-base receiver in the Mt. Greylock area.

The Air Wing began to make improvements to the Department's helicopters through a previous Homeland Security Grant (Awarded in October 2021). The funding allows the department to replace aging mission equipment, including airborne monitors and recorders. These electronics are critical to the success of Air Wing missions. Upgrades are expected to be completed in Spring 2023.

In April 2022, the Air Wing took delivery of its newest helicopter. The Airbus H-135 is an improved version of the current EC-135. The aircraft's state-of-the-art cockpit includes a four-axis autopilot, providing additional safety measures for flight crews. It is also equipped with the most advanced mapping system, FLIR camera, police radios, microwave downlink, and other mission-critical components. This technology will increase Air Wing mission success and efficiency.

Air 2 (New H-135) at Gillette stadium.

ACISS

The Division of Homeland and Security and Preparedness continues to support all Divisions within the Organization with the use of the ACISS Application. ACISS continues to meet the Departments needs by DIS, DHS, DST and DAS utilize all aspects of ACISS, from case and lead management to telephone analysis. Initially procured as a solution to meet case management needs of DIS, the application has continued to mature, expanding its features, adding new functionality and providing data integrations with other 3rd party applications. In 2022 funding was secured to expand ACISS and migrate the current user base to the AZURE Government Cloud environment. Throughout the year, work has progressed with representatives from EOTTS to assist with the technical aspects of this migration. ACISS was also provided funding to expand the user base of the application to the Division of Field Services. This expansion and creation of a "Call Tracking" and "Mobile" platform is within the testing stages for future deployment with the Massachusetts State Police.

Evidence Systems Initiative (ACISS)

Members of the Office of the Division Commander for the Division of Homeland Security launched an initiative to update evidence storage and handling systems and procedures across the Department. The initiative will help the agency protect at-risk populations and civil rights by providing the procedural and technological best practices needed to ensure that evidence is properly stored pre- and post-conviction.

The initiative included evaluation, selection and purchase of equipment and technology; reviews of legal, professional and policy standards. The installation of new evidence technology solutions in the Division of Field Services was completed in 2022. This initiative is ongoing, as evidence officers are trained and supported throughout the Divisions. The ACISS Property and Evidence Initiative is also supported by the Division of Administrative Services, Long Term Evidence Unit. Divisions within Investigation Services, Homeland Security and Field Services now have a central location to store evidence that needs to be kept secure for longer periods of time.

Automated License Plate Reader Program (ALPR)

The Division of Homeland Security and Preparedness continues to implement and roll out a network of Automated License Plate Reader (ALPR) cameras across the Commonwealth. These cameras capture the numbers and letters located on the registration plate of a vehicle and convert the image into characters that can be processed by various computer applications. This technology has been successfully used in a variety of public safety and criminal matters to include: missing persons, child abduction and AMBER Alerts, crimes of breaking and entering, homicide, opiate trafficking, stolen and wanted vehicles and Silver Alerts. The cameras can be strategically placed for a particular area in which a crime may have occurred, mounted on cruisers or permanently mounted at major traffic locations.

The Commonwealth Watch Center is a vital component of the ALPR program and monitors and maintains the "hot lists" into which the registration plate(s) in question are entered. The Watch Center communicates with police partners across the Commonwealth as well as other states throughout the country, that have a public safety or criminal investigation nexus to a registration plate. Watch Center

staff are also available to assist investigators by communicating with other states that have similar technology that may help recover a missing person or solve a crime in Massachusetts.

The current Massachusetts policy allows for data retention for a one-year period at which point it is expunged; New York and New Jersey currently store their ALPR data for five years. DHS recently attended a two-day meeting held in New Jersey and New York City in which the sharing of this information among several east coast police agencies, was discussed.

41.3.9	License Plate Readers	ACCREDITATION Mandatory	Revision Date: 09/15/2022	Written Directive Written Documentation
Note to Accreditation Managers and Assessors				Proofs of Compliance
This standard requires written guidelines for the use of License Plate Readers (LPR's) and establishes the responsibilities of the LPR Operator.				❑ Written Directive ❑ Documentation of Operator Training

STANDARD / EVALUATION MEASURES:

1. The agency utilizes License Plate Readers (LPRs). **Y N**

If **No**, the agency provided a WAIVER conditionally approved by the Commission's Executive Director.
Y N

If **Yes**, the standard applies to the agency and the following info in the below table must be met.

2.	The agency has a written directive governing the use of License Plate Readers.	**Y N**
3.	The written directive addresses:	
A	Guidelines for use	**Y N**
B	Operator responsibilities	**Y N**
C	Operator training	**Y N**
D	Data entries	**Y N**
E	Data storage and security	**Y N**
F	Access to data	**Y N**
G	Data retention	**Y N**
4	Agency provided documentation demonstrating LPR Operators received required training. Name(s) sampled:	**Y N**

Policy Changes – Privacy Protection Highlights

- Hotlist manual entries:
  - Hot plate max allowable time reduced from 1 year to 30 days (not system retention)
  - Added requirement for supervisory approval to hotlist a plate
  - Added notice that user requested hotlist add must also remove it
  - Added special attention to rental and short-term use vehicles;
  - Added special attention to incidents that may be quickly resolved;
  - Added that entries must be for the shortest time necessary or reasonable;

- Search guidelines section:
  - Introduced and revised privacy protection guidelines
  - Added requirements to limit temporal and geographic parameters of search
  - Added that we may deny requests believed to be overly intrusive or otherwise improper

- Added legal considerations section:
  - discussion of McCarthy opinion and legal factors
  - suggestion to consult with ADA for longer term use

- Allowable/prohibited uses:
  - Added restriction against system use for immigration enforcement
  - Several other language modifications to improve clarity and specificity

- Records preservation and discovery:
  - Added explicit requirement to preserve or export reports for discovery prior to expiration

- Outside LPR systems:
  - Added requirement that that tightly restricts access to outside systems
  - Access to outside systems is limited essentially to watch/fusion center & ALPR admin
  - Added cautionary notice on different technology/retention of outside systems.
  - All searches of outside systems must also otherwise comply with MSP policy for its own system

- Training & Privacy:
  - Added requirement that all users receive training to include best practices and privacy considerations

- Other relevant updates:
  - Improved and clarified section on verifying an LPR hit prior to taking any enforcement action for field cruisers

Commonwealth Fusion Center
Standard Operating Procedure

Effective Date	Number
April 4, 2023	CFC- 12

POLICY FOR THE UTILIZATION OF VIDEO SYSTEMS IN THE COMMONWEALTH WATCH CENTER

GENERAL

The availability and use of video at the Commonwealth Watch Center provide opportunities for enhancing security for the Commonwealth's infrastructure, major events, government agencies, and coastal maritime and port operations. The use of video systems increases the productivity and effectiveness of law enforcement and public safety agencies and provides opportunities to increase officer and public safety.

It is the policy of the Department of the State Police (Department) to respect the privacy interests of all persons in the Commonwealth. The Watch Center shall only utilize video systems in furtherance of official and legitimate law enforcement operations and public safety or security and shall comply with all applicable laws and Department Policies and Procedures, Rules and Regulations, Fusion Center, and/or unit-specific operating procedures.

PURPOSE & APPLICABILITY

A. To establish guidelines and procedures for the proper use and application of video systems utilized by the Commonwealth Watch Center.

B. To provide guidelines and principles for collecting, accessing, disseminating, and retaining video system recordings, data, and information.

C. To ensure that such recordings, data, and information are used for legitimate law enforcement purposes and that individuals' privacy, civil rights, and civil liberties are not violated.

D. Excluding Cruiser Mounted Cameras and Body Worn Cameras governed by ADM-35 and Automatic License Plate Recognition (ALPR) technology governed by TRF-11, this policy applies to any and all live-feed video systems, with or without video recording capabilities, accessible within the Commonwealth Watch Center, including, but not limited to:

(1) Department Video Systems;

(2) External Video Systems;

(3) Massachusetts Coastal Maritime Security Video System (CMSVS);

(4) MassDOT Highway Cameras; and

(5) Any additional live-feed video systems, with or without video recording capabilities, utilized on a long-term or temporary basis including instances such as covert operations, special events, or demonstration/trial purposes.

DEFINITIONS

Department Video Systems: All video camera systems operated and maintained by the Department with live-feed viewing, with or without video recording capabilities, but not limited to, Department-operated building and infrastructure security camera systems and video cameras operated by the MSP Air Wing with the ability to provide live-feed video or imagery, with or without recording capabilities, through the use of aviation aircraft and unmanned aerial vehicles (UAVs), but excluding Cruiser Mounted Cameras and Body Worn Cameras as governed by ADM-35 and Automatic License Plate Recognition (ALPR) technology as governed by TRF-11

External Video Systems: All video camera systems operated and maintained by agencies, municipalities, or private entities outside of the Department that provide the Commonwealth Watch Center with live-feed video or imagery with or without video recording capabilities.

Live-Feed Video or Imagery: All video or images, digital or analog, streamed or transmitted from a live, not recorded, source.

Grant Provisions: The provisions of the U.S. Department of Homeland Security / Federal Emergency Management Agency Port Security Grant (Sub Account No. EMW-2020-PU-0056) awarded to the Massachusetts Executive Office of Public Safety and Security (EOPSS), effective on July 1, 2022, and any/all subsequent related grants or award(s).

Massachusetts Coastal Maritime Security Video System (CMSVS): A U.S Department of Homeland Security / Federal Emergency Management Agency grant funded, Executive

Office of Public Safety and Security secure network of port and maritime security cameras connected to an isolated server designed to be both interoperable with existing Department of Homeland Security Urban Security Initiative and United States Coast Guard camera systems and accessible to participating federal, state, and municipal agencies.

MassDOT Highway Cameras: A Massachusetts Department of Transportation video camera system providing live-feed video or imagery, with or without recording capabilities, of highways, roadways, and other location points throughout the Commonwealth.

ADMINISTRATION & OPERATION

A. The Department shall manage, maintain, and oversee all Department video systems. Department equipment, recordings, data, and information shall be acquired, processed, maintained, disseminated, and/or disposed of in accordance with this policy, Department policy, Fusion Center Standard Operating Procedures, grant provisions, and all applicable laws.

B. External video systems shall be managed, maintained, and overseen by the respective agencies and municipalities responsible for such systems. External video system recordings, data, and information shall be acquired, processed, maintained, disseminated, and/or disposed of in accordance with any applicable agreement with the entity responsible for each external video system as well as this policy, Department policy, Fusion Center Standard Operating Procedures, grant provisions, and all applicable laws.

C. The Department shall, as delegated by the Colonel or a designee and on behalf of and by agreement with EOPSS, manage, maintain, and oversee CMSVS. CMSVS equipment, recordings, data, and information shall be acquired, processed, maintained, disseminated, and/or disposed of in accordance with this policy, Department policy, Fusion Center Standard Operating Procedures, grant provisions, and all applicable laws.

AUTHORIZED ACCESS AND USES

A. Access to video systems viewable at the Commonwealth Watch Center that are not available to the general public shall be restricted to authorized Watch Center employees, Fusion Center employees, Department employees with Watch Center access, and other individuals authorized by the Commonwealth Watch Center supervisor, Fusion Center Commander, Division Commanders, or the Colonel or designee.

B. Use of video systems viewable at the Commonwealth Watch Center video is strictly limited to law enforcement and public safety purposes only. The following are valid law enforcement and public safety purposes:

(1) Preventing, monitoring and/or mitigating any threat to infrastructure, government, homeland security, port or coastal security, major events, law enforcement, or public health and safety;

(2) Supporting law enforcement and public safety agencies during major events, critical incident responses, and exigent circumstances;

(3) Criminal investigations;

(4) Crime analysis; and

(5) Criminal intelligence gathering.

C. Watch Center personnel and other authorized users shall not utilize video systems to monitor or gather information about:

(1) Individuals or organizations solely on the basis of their religious, political, social views or activities; or

(2) An individual's or organization's participation in a particular non-criminal organization or lawful event; or

(3) An individual's age, race, ethnicity, religion, citizenship, place of origin, disability, gender, gender identity, genetic information, or sexual orientation unless such information is relevant to the individual's criminal conduct or activity or if required to identify the individual.

RESTRICTED USES & LIMITATIONS

A. Transmitting or recording audio on a Commonwealth Watch Center video device is strictly prohibited. Due to the possibility of violating legitimate privacy expectations, inadvertently recording protected conversations, or unintentionally violating M.G.L. c. 272, §99 (Interception of Wire and Oral Communications), all Commonwealth Watch center video system devices shall be configured so they do not transmit or record audio unless otherwise permitted by law.

B. Using or requesting the use of Commonwealth Watch Center video systems for personal use is strictly prohibited and considered employee misconduct as well as a violation of this policy.

C. Commonwealth Watch Center video equipment and technology shall not be intentionally used for viewing, recording, or transmitting images or video in a criminal investigation at any location or property where a person has a reasonable expectation of privacy unless:

(1) A warrant or court order has been approved for the search of the property;

(2) Consent by the owner or person responsible for the property is obtained; or

(3) Exigent circumstances exist, including but not limited to: search and rescue missions, tactical missions, crash/accident scenes, crime scenes, fire scenes, hazmat scenes and/or natural disasters.

PROSECUTORIAL & COURT ORDERED RESTRICTIONS

Commonwealth Watch Center video system recordings, data, and information are subject to state and federal laws and any court of competent jurisdiction orders. Video recordings shall be preserved, stored, and retained in accordance with the requests, directions, and orders of appropriate prosecutorial and/or judicial authorities.

PRESERVATION OF VIDEO SYSTEM DATA

All Commonwealth Watch Center video system recordings, data, and information shall be processed, maintained, disseminated, preserved and/or destroyed in accordance with applicable Department and/or Fusion Center policies and procedures, including but not limited to those concerning public records, privacy, and the preservation of evidence.

MCSAP Qualifying Conditions Review

State of: Massachusetts **Date Completed:** 1/25/2023

FMCSA Representative: John Toto **Phone:** 857-292-3122 **Email:** john.toto@dot.gov

State Representative (1): Lt Vincent Noe **Phone:** 781-858-3708 **Email:** Vincent.noe@state.ma.us

State Representative (2): **Phone:** **Email:**

Instructions:

1) Complete the questionnaire using the information from the most recent submitted eCVSP for FY 2021.
2) If you need to attach materials to support an answer, in the box provided please reference the attachment and identify where the information is located in the attachment (e.g., page number, legislative citation, etc.).
    a. It is only necessary to attach information relevant to the review, e.g. for omnibus safety bills, it is only necessary to provide the relevant MCSAP sections and not the entire bill.
3) If more space is needed to complete the questions, include additional information in a separate document.
4) If you have any questions about the review, contact your Division office.
    a. The User Guide provides details about the process, timeline, and next steps.

Item No.	Federal Regulation or Policy	Question/Topic	Yes/ No	Comments/Explanation
1.	350.207(a)(1)	Does the State document have the designation of Lead State Agency? If yes: Provide the document. If no: Explain.	YES	The MSP has been the lead Agency since the inception of the MCSAP Program and have not had any change in designation since that time.
2.	350.207(a)(2)	Does the State assume responsibility for improving motor carrier safety by adopting and enforcing compatible safety laws and regulations, standards, and orders, except as may be determined by the Administrator to be inapplicable to a State enforcement program?	YES	The State has certified via their eCVSP. The State has adopted all regulations identified as: *540CMR14.03 and 540CMR14.04*
3.	350.207(a)(3)	Does the State ensure cooperation in the enforcement of financial responsibility requirements under part 387? If yes: Provide the State statute or regulation that allows enforcement of financial responsibility requirements. If no: Explain.	YES	The State has the regulatory authority under 540CMR14.04. The State utilizes their INSPECT program, which gives them the ability to check a for-hire Carrier's compliance with Part 387 and the roadside protocol requires the Troopers to check Insurance cards. Additionally, the State utilizes their access to Query Central and CVIEW to check operating authority to ensure the Carrier has the correct amount of financial responsibility. The State conducts New Entrant Audits and verifies the Carrier has the proper insurance by requesting copies of their MCS-90 Financial Endorsement. The State does not conduct CR's at this time.

Item No.	Federal Regulation or Policy	Question/Topic	Yes/ No	Comments/Explanation
4.	350.207(a)(4)	Does the State enforce the registration requirements under 49 U.S.C. 13902 and 31134 by prohibiting the operation of any vehicle discovered to be operated by a motor carrier without a registration issued under those sections or operated beyond the scope of the motor carrier's registration? If yes: Provide the State statute or regulation that permits enforcement of registration requirements. If no: Explain.	YES	540CMR2 Massachusetts is in full participant in the PRISM program. The protocol for the Roadside Inspectors who are State Troopers is to interview the driver, verify registration requirements through their access with Inspect, the software program used to complete Roadside inspections. The Trooper will utilize L&I through the portal to verify compliance as well. If a Carrier is determined to be violating an OOS order, while in Interstate commerce, the Trooper takes appropriate action by placing the driver/carrier OOS.
5.	350.207(a)(5)	Does the State provide a right of entry (or other method a State may use that is adequate to obtain necessary information) and inspection to carry out the CVSP? If yes: Provide the State statute or regulation that permits right-of-entry inspections. If no: Explain.	YES	Under M.G.L 90-19L
6.	350.207(a)(6)	Does the State give satisfactory assurances in its CVSP that the Lead State Agency has the legal authority, resources, and qualified personnel necessary to enforce compatible safety laws and regulations, standards, and orders?	YES	The State uses sworn State Troopers who have the power of constables and police officers throughout the Commonwealth of MA. All MCSAP Troopers are trained in the North American Part A, B, General HM and are required to maintain their certification as required in CVSA Policy. The MSP CVES unit conducts in-service training and conducts weekly audits of their personnel to ensure compliance with Part 350. Under statute authority granted to them in M.G.L. 90-19L, they have the authority to conduct SA's, CR's and inspections.

7.	350.207(a)(7)	Does the State provide satisfactory assurances that the State will undertake efforts that will emphasize and improve enforcement of State and local traffic laws and regulations related to CMV safety?	YES	*MA works with UMassSafe on mapping the high crash corridors in the state and then patrols are directed to conduct enforcement in those areas.* *The State has conducted 5,063 traffic enforcement initiatives inspections ytd out of a projected 10,000 inspections. The state participates in Operation Road check and Operation Safe Drive each year. The state also conducts enforcement blitzes throughout the state several times a year.*

Item No.	Federal Regulation or Policy	Question/Topic	Yes/ No	Comments/Explanation
8.	350.207(a)(8)	Does the State give satisfactory assurances that the State will devote adequate resources to the administration of the CVSP throughout the State, including the enforcement of compatible safety laws and regulations, standards, and orders?	YES	*The Colonel of the MSP signs and certifies the CVSP. MSP monitors any progress or changes to any proposed legislation.* *The Commercial Vehicle Enforcement Section for the MSP currently has 24 full-time troopers assigned to it. These troopers are assigned throughout the state. CVES deploys its troopers to high crash corridors daily to conduct enforcement.* *CVES has recently added and trained 15 part-time troopers to assist with conducting traffic enforcement throughout the state.* *CVES currently has 1 Sergeant and 1 Trooper assigned to New Entrant Audits full-time and 5 additional troopers doing to on a part-time basis.*
9.	350.207(a)(9)	Does the State provide that the MOE of the Lead State Agency will be maintained each fiscal year in accordance with 49 CFR 350.225?	YES	The Massachusetts State Police maintains MOE through expenditures for vehicles, vehicle maintenance and parts, law enforcement equipment & supplies, facility infrastructure maintenance & repair, and fuel for vehicles and buildings.
10.	350.207(a)(10)	Does the State provide that all reports required in the CVSP be available to FMCSA upon request, meet the reporting requirements, and use the forms for recordkeeping, inspections, and investigations that FMCSA prescribes?	YES	*Fully Cooperative.*

11.	350.207(a)(11)	Does the State implement performance-based activities, including deployment and maintenance of technology, to enhance the efficiency and effectiveness of CMV safety programs?	YES	*The state is currently installing aLPR's on all cruisers assigned to the commercial vehicle unit. The state works with UmassSafe on current crash trends and high crash areas throughout the state. The state is in the process of purchasing and installing Tire anomaly systems at inspections site around the state.* *During each inspection troopers run the driver and DOT# through CVIEW.*
12.	350.207(a)(12)	Does the State establish and dedicate sufficient resources to a program to ensure that accurate, complete, and timely motor carrier safety data are collected and reported, and to ensure the State's participation in a national motor carrier safety data correction system prescribed by FMCSA?	YES	*We monitor data quality standard monthly and make corrections to as needed to stay in the green. The State utilizes a full-time data analysist to monitor data quality and ensure crash/inspection accuracy. The State also answers all Data-Qs in a timely manner. The State has received 410 Request to review in the past 365 days. The State has processed these reviews on average within 10 days of the Data Q request. At this time the reviews are being processed and adjusted by Lt. Noe.* *Good Rating*
13.	350.207(a)(13)	Does the State ensure that the Lead State Agency will coordinate the CVSP, data collection, and information systems with the State highway safety improvement program under 23 U.S.C. 148(c);	YES	*Fully participate in the SHSP planning and development. Lt. Noe is the chair of the large truck portion of the states SHSP.*
14.	350.207(a)(14)	Does the State ensure participation in information technology and data systems as required by FMCSA for jurisdictions receiving MCSAP funding;	YES	*Yes, Massachusetts had deployed Inspect for roadside inspections and CVIEW, which both interface with FMCSA systems. They also complement the software that FMCSA deploys, All MCSAP personnel have portal accounts that allow for access to all software, namely MCMIS, ACE, QC, Safer, NEWS, CAPRI, A&I, Data-Q and AIM. MCSAP personnel are required to utilize these systems to verify Carrier status, conduct NE audits, complete Data-Q requests and MSP utilizes Safety net to ensure timeliness uploads of Crash and Inspection.*

Item No.	Federal Regulation or Policy	Question/Topic	Yes/ No	Comments/Explanation
15.	350.207(a)(15)	Does the State ensure that information is exchanged with other States in a timely manner;	YES	*We provide states with what they need upon request. Always in a timely manner. The State SSDQ is currently in the green with a good rating. Crash record timeliness is at 92% and Inspection Upload timeliness is at 100%.* *State is in Green rating.*

16.	350.207(a)(16)	Does the State grant maximum reciprocity for inspections conducted under the North American Standard Inspection Program through the use of a nationally accepted system that allows ready identification of previously inspected CMVs?	YES	The MSP issues CVSA decals pursuant to the CVSA Operational Policy after a successful completion of a Level 1 inspection with no critical defects. All MCSAP personnel are trained in the proper issuance along with training in identifying vehicles that have a current and valid decal. The Division office has conducted a sampling of Level 1 inspections to verify compliance with this policy. Interviews were conducted with three MCSAP personnel to determine their understanding of the policy and gain an understanding of when they issue a decal.
17.	350.207(a)(17)	Does the State conduct comprehensive and highly visible traffic enforcement and CMV safety inspection programs in high-risk locations and corridors?	YES	*We work with UMassSafe on mapping high-risk corridors and direct patrols to conduct enforcement of those areas.*
18.	350.207(a)(18)	Does the State ensure that driver or vehicle inspections will be conducted at locations that are adequate to protect the safety of drivers and enforcement personnel?	YES	*Yes, we work with MassDOT to maintain function and cleanliness of the states weigh stations/Inspection sites where Level 1 inspections are conducted. The State may also conduct a roadside inspection other than a Level 1 on rural roads and highways when performing traffic enforcement and consistent with the training received in Part A North American Inspector Course that all MCSAP personnel took and are certified. Refresher training is also conducted on a quarterly basis. The MSP has a policy on conducting MV stops. This has been provided.*
19.	350.207(a)(19)	Except in the case of an imminent or obvious safety hazard, does the State ensure that an inspection of a vehicle transporting passengers for a motor carrier of passengers is conducted at a bus station, terminal, border crossing, maintenance facility, destination, or other location where a motor carrier may make a planned stop (excluding a weigh station)?	YES	*Yes, we conduct regular passenger CMV enforcement at destination locations, like Logan airport and South Station. There are times when passenger carriers may be stopped roadside for an unsafe traffic infraction and care is taken to select a safe and reasonable location to maximize safety of everyone.*

20.	350.207(a)(20)	Does the State provide satisfactory assurances that the State will address activities in support of the national program elements listed in Sec. 350.203, including activities? (i) Aimed at removing impaired CMV drivers from the highways through adequate enforcement of regulations on the use of alcohol and controlled substances and by ensuring ready roadside access to alcohol detection and measuring equipment;	YES	*Every Trooper conducting CMV inspections is certified in field sobriety and the used of Portable Breath Test machines. Also, majority of the troopers are Advanced Roadside Impaired Driving Enforcement. (ARIDE) Our eCVSP outlines initiatives and additional taskforces projected during our 3-year plan and demonstrates our compliance with the NRSS.* *During FY2022, we identified 73 violations of 392.4 and the violations were noted on roadside inspections.*
21.		(ii) Aimed at providing training to MCSAP personnel to recognize drivers impaired by alcohol or controlled substances; and	YES	*All troopers are trained and certified*

Item No.	Federal Regulation or Policy	Question/Topic	Yes/ No	Comments/Explanation
22.		(iii) Related to criminal interdiction, including human trafficking, when conducted with an appropriate CMV inspection and appropriate strategies for carrying out those interdiction activities, including interdiction activities that affect the transportation of controlled substances (as defined in section 102 of the Comprehensive Drug Abuse Prevention and Control Act of 1970 (21 U.S.C. 802) and listed in 21 CFR part 1308) by any occupant of a CMV.	YES	*We are planning a joint operation with the MSP Human Trafficking Unit. The Human Trafficking Unit will deploy to the weigh stations with CVES troopers. All MCSAP certified Troopers handle these investigations and are trained as required.*
23.	350.207(a)(21)	Does the State ensure that detection of criminal activities and size and weight activities described in 350.227(b), if financed through MCSAP funds, will not diminish the effectiveness of the development and implementation of the programs to improve motor carrier, CMV, and driver safety?	YES	The state has personnel that are dedicated to size and weight enforcement. Criminal activity enforcement is conducted as needed and typically from a result of an CMV inspection. This does not impact the CVSP.
24.	350.207(a)(22)	Does the State ensure consistent, effective, and reasonable sanctions?	YES	*Fines are set by state statue. In FY2022 the state conducted 14,639 inspections. 11,903 resulted in a warning and 2,736 resulted in a citation being issued.*

25.	350.207(a)(23)	Does the State include information on best practices for driving safely in the vicinity of CMVs and non-CMVs in the training manuals for the licensing examinations to drive a CMV and non-CMVs? If yes: Provide a copy of the training manual for the licensing examinations. If no: Explain.	YES	Mass RMV driver manual
26.	350.207(a)(24)	Does the State require all registrants of CMVs to demonstrate their knowledge of applicable FMCSRs, HMRs, or compatible State laws or regulations, standards, and orders?	YES	*In MA all CMV's are required to have DOT numbers regardless of Interstate or Intrastate. They must affirm they know the rules.* *540CMR14.00*

Item No.	Federal Regulation or Policy	Question/Topic	Yes/ No	Comments/Explanation
27.	350.207(a)(25)	Does the State transmit to inspectors the notice of each Federal exemption granted under subpart C of part 381 and Sections 390.23 and 390.25 of this subchapter that relieves a person or class of persons in whole or in part from compliance with the FMCSRs or HMRs that has been provided to the State by FMCSA and identifies the person or class of persons granted the exemption and any terms and conditions that apply to the exemption? If yes: Provide a copy of the notice of exemptions sent to inspectors. If no: Explain.	YES	This is emailed to all the troopers in the Commercial vehicle enforcement section of the MSP. Email provided

28.	350.207(a)(26)	Does the State conduct new entrant safety audits of interstate and, at the State's discretion, intrastate new entrant motor carriers in accordance with subpart D of part 385?	YES	The State conducts New Entrant audits on Interstate carriers only at this time. MA has 74 Overdue Onsite audits and 248 Offsite audits. The State utilizes one Two Troopers full-time and five part time Troopers to actively conduct New Entrant audits and works closely with the Division office to ensure prioritization of overdue and expedited action audits.
29.	350.207(a)(27)	Does the State participate fully in PRISM by complying with the conditions for full participation, or receiving approval from the Administrator for an alternative approach for identifying and immobilizing a motor carrier with serious safety deficiencies in a manner that provides an equivalent level of safety? If yes: Identify current PRISM participation level. If no: Explain.	YES	The State of MA is participating in the Enhanced Participation and working on Leveling Up to Expanded.

Item No.	Federal Regulation or Policy	Question/Topic	Yes/ No	Comments/Explanation
30.	350.207(a)(28)	Does the State cooperate in the enforcement of hazardous materials safety permits issued under subpart E of part 385 of this chapter?	YES	*Troopers are given North American HM training and certification along with refresher training. Use MCMIS database to access validity of permit during roadside. This done as part of every inspection.*
31.	350.207(a)(29)	*Applies only to Border States; skip to question #32 if not applicable.* Does the State conduct a border CMV safety program focusing on international commerce that includes enforcement and related projects, or forfeit all funds allocated for border-related activities?	N/A	N/A
32.	350.207(b)	Does the State use third parties to conduct new entrant safety audits?	No	*N/A*

33.		Does the agency maintain a copy of the required Title VI plan and other documents, policies, procedures, etc. related to Title VI requirements?	YES	Lt. Vincent Noe is the POC of this document. The document has been sent and reviewed by all troopers assigned to the unit. The document is maintained at the CVES office and the MSP legal section.

JOHN E. MAWN JR.
COLONEL/SUPERINTENDENT

JOHN D. PINKHAM
DEPUTY SUPERINTENDENT

August 03, 2023

To: Lieutenant Colonel Brian P. Connors, #2145, Division Commander, D.I.S.
Lieutenant Colonel Mark D. Cyr, #2728, Division Commander, DHS
Major Michael E. Farley, #2352, Deputy Division Commander, D.I.S.
Detective Captain Eric Benson, #3389, Executive Officer, D.I.S.

From: Detective Lieutenant John B. Sullivan, #3359, Unit Commander, V.F.A.S.

Subject: Permission for V.F.A.S. to Utilize Flock Safety ALPR's

1. "Flock Safety" is the name of the company. It's an American Company that basically sells ALPR technology to law enforcement agencies and neighborhood associations. Flock's cameras read license plates and send instant alerts to law enforcement officers based on a populated list. (Stolen cars, vehicles of interest). Unlike many other ALPR Systems, Flock camera's allow searches based on the car's color and various other visual features. TFR-11 addresses **"Use of Non-Departmental ALPR Systems"** of page 5 (of 8)**.** The policy allows MSP members to contact other agencies to request assistance with information. Additionally, the policy states that that supervisors and analysts from Watch Center & ALPR Administrator can access non departmental systems. However, the policy specifically states that other members shall not obtain/utilize accounts without permission from the Division Commander of the Division of Homeland Security and Preparedness.

2. V.F.A.S. members, respectfully, would like to continue utilizing Flock Accounts for fugitive investigations. Revere PD has voluntarily set up accounts for the Metro Guys and a member of VFAS North is able to utilize Lynn PD's Flock Account because he was a former Lynn Police Officer. Each account has a unique sign in (Job email address & strong password) to access the data and each user leaves a footprint. Currently, the Flock Map lists Quincy, Lynn, Revere, Winthrop, Everett & Malden as participating agencies. Each local police department has an administrator for Flock & that Admin. can asked permission (via email) to view participating agencies Flock Cameras. As recent as last Sunday (July 30, 2023), A member of V.F.A.S. Metro was able to utilize the Winthrop Flock Camera to apprehend a career violent felon who was wanted for a stabbing that occurred in Revere.

3. Members of V.F.A.S. are not using Flock ALPRs to develop PC or in the furtherance of an ongoing investigation/case. Flock has been a proven successful tool in multiple fugitive investigations assisting the apprehension of multiple violent felons. Additionally, per M.S.P. policy, V.F.A.S. gets called for Ambert Alert Activations and other exigency type cases that are time sensitive and Flock information can be obtained independently by investigating officers. Thank you for consideration in this matter.

Respectfully Submitted,

DLT. John B. Sullivan

John B. Sullivan, #3359
Detective Lieutenant, V.F.A.S.

State of Massachusetts benefits of LPR on MA DOT Roadways:

- AMBER Alert, Silver Alert, kidnapping/abductions, and other public safety and real-time emergency capabilities. (*i.e., recent Mass Shooting in Maine*)

- Investigation and prevention of terrorism and the protection of critical infrastructure and public events such as the Boston Marathon, and the investigation of major crimes and critical incidents.

Safeguards:

- Lawful use only with respect to privacy considerations, MSP carefully limits and monitors system use, follows all applicable laws, and has a thorough and up-to-date policy on ALPR use. (*ref. General Order TRF 11*)

Current uses:

- Successful (MSP / MA DOT) partnership exists. We have previously co-located LPR equipment with MA DOT on the Cape Cod Bridges since 2014.

- MSP has historically used solar trailers for other highway-based equipment needs; however, weather-related power problems have resulted in outages with missed important public safety information.

Request:

- MSP is asking for MA DOT to provide access only to existing state-owned infrastructure on MA DOT-managed highways. (No installation cost - MSP will install equipment on sites acceptable to MA DOT)

- Power draw, equipment weight, and footprint are very limited. No new construction or structural modifications are requested.

Macrimenet: Overview of Activities and Responsibilities

- Intake, review, edit and redistribution of incoming email and outgoing intelligence-related email for distribution to upwards of 2,000 individual recipients 365 days a year.
- Annual selective distribution by county, of approximately 4,000 emails to the email network which includes representatives of almost every State, Local and Federal Agency in Eastern and Central MA, neighboring states, Bank Industry Security Professionals and Retail Asset Protection Professionals.
- CFC Liaison to Area Detective's Meetings providing notification, invitation and published bulletins covering crimes and arrests of regional significance.
- Comprehensive review and re-distribution in excel spreadsheet format of Pawnshop Information provided by more than a dozen local agencies including highlighting of persons of interest.
- Statewide liaison to NABI (National Association of Bunco Investigators)
- Review and redistribution of Intelligence published by NESPIN and NEORCA.
- Complete responsibility for the addition, subtraction and update of email addresses stored in the 'listserv manager".
- Maintenance, upkeep and distribution of a home-grown Area Wide Detectives Contact List with email and telephone contact information from 1,800 sources.
- Routine access to CJIS systems to perform RMV, CJIS and NCIC related inquiries pertaining to email traffic.
- Routine access to Coplink and other data sources (TLO) to assist local detectives in providing photographs, known associates, associated vehicles and prior incidents while assisting in investigations pertaining to email traffic.
- Routine access and review of ALPR's to provide investigative assistance and documentation to local Law Enforcement, specifically in connection with Organized Crime organizations based out of State but operating in MA and the surrounding New England States.
- Daily review of Area Crime Bulletins from municipal agencies including the BRIC, Cambridge, Everett, Lynn, and others as they are distributed. (Many of whom re-post information previously distributed on Macrimenet).
- Guest presenter to New Area Detectives providing an overview of what services the CFC provides for local Law Enforcement.
- Liaison/conduit to announce and assist in coordination of area Intelligence Meetings specifically directed to targeted crimes such as ATM B&E's, Robberies, Regional Check Frauds or outbreaks of commercial or residential B&Es.
- Daily review of national Crimedex Alerts to ascertain links to other incidents occurring across the country. (ie: Panera Bread Thefts, Felony Lane Gang, and Transient Scams)

MA Crimenet is a listserv that began as a local effort by a few police officers many years ago. A retired DLT from Wilmington Police Dept., J. Chris Neville, who is currently employed as a part-time, 960 employee of the MSP started the eastern MA portion. There was also a

central MA version of this program, which had been run by the former Leicester police chief. After his retirement, this service ceased. (A separate detailed description of MA Crimenet is attached.) Over 4000 emails a year are sent to over 2000 recipients. Intel is shared about organized criminal activity, for example, breaking and entering crews; travelers taking advantage of the elderly; wanted parties or identification needed etc. MA Crimenet also involves organized retail crime investigators and bank investigators. The one individual working on MA Crimenet attends detectives meetings, runs database checks to help solve the information being shared and maintains the listserv all while only being paid for 960 hours a year. He works many more hours than he is paid for, including from other countries while on vacation. Many of the CFC's partners have asked for this service to be expanded to other parts of the state but we currently do not have the bandwidth to handle any more people or information. There are numerous success stories from this listserv each week, often spanning multiple states. With additional personnel, the CFC could expand MA Crimenet to other regions of the state and glean additional intelligence or products from this information. It would give us a better understanding of the smaller, quality of life crimes affecting MA communities. At this point in time, the 960 running MA Crimenet is barely able to keep up with sending emails, let alone, conducting value-added searches, participating in outreach such as detective meetings. In order for MA Crimenet to work and run efficiently, the individuals involved must know about everything being sent or looked at via MA Crimenet. It would not work to have analysts pick up bits and pieces of work related to MA Crimenet if/when time allows. The current staff is extremely busy in their given functions. Currently, MA Crimenet is busiest from mid-morning until 7 or 8 pm. During the early morning, the current employee catches up on information from overnight, and when time allows, reviews crime bulletins, pawn data, information from other intelligence sharing forums and conducts checks of databases to add value. Additional staff on both shifts would allow for all of these functions to be completed as well as bulletins when necessary. Therefore, we request two Intelligence Analyst II's be hired to run MA Crimenet, one on the day shift and one on the eve shift Monday through Friday. Additional personnel would allow us to keep up with the legacy functions of MA Crimentel as well as expand its reach across the Commonwealth and add value by having the analyst produce bulletins when they notice patterns, identify SARs from the MA Crimenet data and funnel information to the correct CFC subject matter expert when appropriate.

Cyber Training Program Coordinator (Vacant/Grant Position)

Duties:

- Assess the instructional or training needs of personnel including CFC Cyber Intel Analysts, Liaison officers/analysts, local, state, federal and private sector partners
- Consult technical, professional, educational and other training personnel through meetings and/or correspondence
- Design curricula and formulate appropriate course content , materials, and terms for Cyber training programs
- Evaluate suitability and effectiveness of Cyber training programs
- Schedule training and awareness seminars and conferences
- Maintain and update training records and files
- Review and write progress reports
- Compile and analyze statistical data and other information for use in research on Cyber training programs, needs assessments
- Perform research and review professional literature
- Attend meetings, conferences, training, and workshops

Education:

- Bachelor's degree in cybersecurity, computer science, computer engineering, information systems, software engineering or a closely related discipline, or an equivalent combination of training, experience, and education including graduate or undergraduate certificates earned at an accredited university or college in computer networking, cloud computing, cyber operations, cybersecurity digital forensics and other cybersecurity related fields

Qualifications:

- Experience working with Cyber Threat Intelligence functions
- Experience working with Incident Response or a Security Operations Center functions
- Understanding of basic threat and vulnerability assessment methodololgies
- Experience creating and implementing cirruculum and lesson plans
- Familiarity with NIST Cybersecurity and MITRE ATT&CK frameworks
- Ability to successfully complete required trainings

Cyber Program Coordinator (Vacant/CIKR Grant Position)

Duties:

- Coordinate and monitor assigned program activities to ensure program effectiveness and compliance with standards, policies, and procedures
- Confer with management staff and other agency personnel to determine program requirements and availability of resources and develop criteria and standards for program evaluation
- Review and analyze data concerning assigned agency programs in order to determine progress and effectiveness, make recommendation for changes and improvements

- Develop and implement procedures and guidelines
- Review reports, intelligence products, memoranda for completeness, accuracy, and content
- Compile and analyze statistical data and other information for use in research on Cybersecurity, Cyber Threat Intelligence, needs assessments
- Respond to inquiries from agency staff and others in order to provide information concerning agency programs
- Provide on-the-job training and orientation for employees
- Liaison and conduct outreach with local, state, federal private sector partners in order to share information and solve problems
- Attend meetings, conferences, training, and workshops
- Review and write progress reports
- Maintain and update records and files

Qualifications:

Education:

- Bachelor's degree in cybersecurity, computer science, computer engineering, information systems, software engineering or a closely related discipline, or an equivalent combination of training, experience, and education including graduate or undergraduate certificates earned at an accredited university or college in computer networking, cloud computing, cyber operations, cybersecurity digital forensics and other cybersecurity related fields

Qualifications:

- Experience working with Cyber Threat Intelligence functions
- Experience working with Incident Response or a Security Operations Center functions
- Experience in project management, handling multiple, concurrent high priority projects
- Understanding of basic threat and vulnerability assessment methodololgies
- Familitiarity with NIST Cybersecurity and MITRE ATT&CK frameworks
- Ability to successfully complete required trainings

MSP & DOT Equipment Collocation Request – Summary for July 2023

History of Request:

LTC Cyr and Sgt. Pack spoke to Joseph Foti and Tony Wade on October 11, 2022 and explained the request, receiving a supportive response.

A follow-up letter was sent by LTC Cyr via email on October 26, 2022. No response was received.

Follow-up calls by Sgt. Pack to Tony Wade have not been productive.

Final call at end of June 2023, Wade informed Sgt. Pack that Foti had told him he had been told that DOT has not historically allowed MSP access to state resources for this purpose and a change in policy would be needed.

Benefit to the Commonwealth:

The Department is working to upgrade and improve its response to AMBER Alert, Silver Alert, kidnapping/abductions, and other public safety and real-time emergency awareness capabilities throughout the Commonwealth. Automatic License Plate Recognition (ALPR) equipment is a critical and indispensable part of this mission. ALPR also supports the Department's homeland security mission, including the investigation and prevention of terrorism and the protection of critical infrastructure and public events such as the Boston Marathon, and the investigation of major crimes and critical incidents. ALPRs alert in real-time when a missing or endangered person is located and can be used to identify vehicles associated with a kidnapping or abduction. There is no other technology or tool that can do that as effectively and efficiently in an emergency.

Why is this Necessary

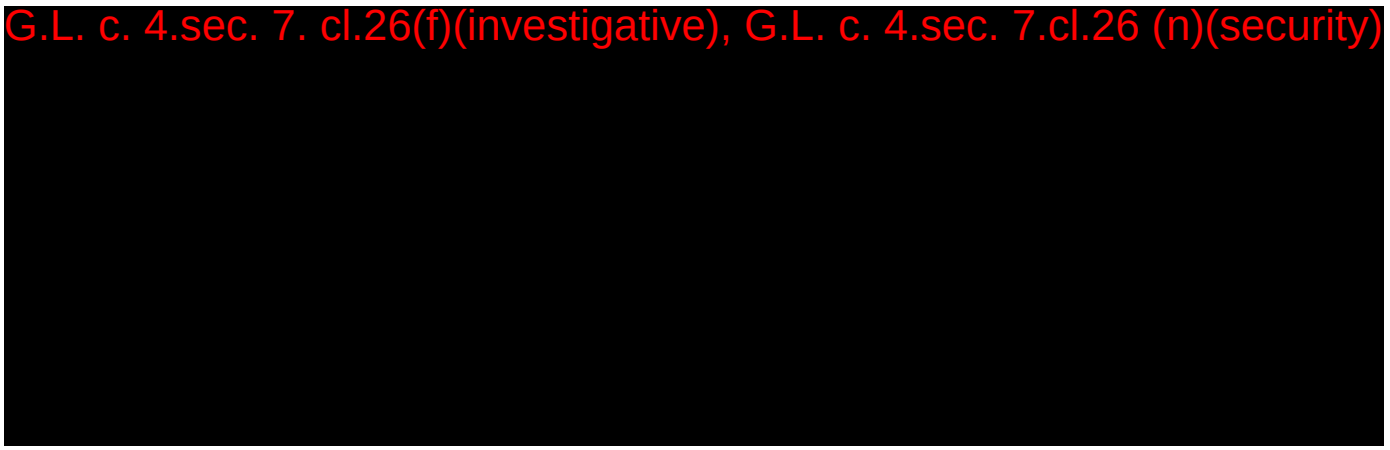
Currently a child could be abducted in city of Boston and the suspect could drive straight out of Massachusetts along several major highways with absolutely no means of identifying the license plate. Without ALPR, that vehicle's plate may never be identified, and certainly not in a timely manner. According to a 2006 Child Homicide Study conducted by the Washington State Attorney General's Office, which reviewed over 600 child abduction homicides, in 76 percent of the missing children homicide cases studied, the child was dead within three hours of the abduction, and in 88.5 percent of the cases the child was dead within 24 hours.

MSP has identified this as a significant gap in public safety protection in our area of responsibility and is asking for assistance with closing this gap by facilitating the installation of ALPR equipment at a limited number of locations along major highways in the Commonwealth. The locations associated with this request would be selected along major public roadways to provide maximum benefit to the

Commonwealth in emergency situations with negligible privacy implications due to the highly public locations. Additionally, to ensure lawful use and respect privacy considerations, MSP carefully limits and monitor system use, follows all applicable law, and has a thorough and up to date policy on ALPR use.

Request

MSP is asking for DOT to provide access to existing state-owned infrastructure (variable message sign boards and camera poles) on DOT managed highways. No construction or structural modifications are requested. Access to tolling related sites or structures is not requested. We have previously collocated equipment with DOT on the Cape Cod brides since 2014 but have not been assisted with any other locations.



By allowing collocation of equipment, DOT would not assume any financial responsibility, and MSP would continue to be responsible for maintenance and administration. DOT would have no data management access or responsibilities related to our equipment. DOT assistance would be limited to facilitating access to existing power sources and providing instruction on acceptable installation sites and standards. Power draw and equipment weight and footprint are very limited.

MSP has historically had to use solar trailers for highway-based equipment. Solar is a problematic power source, and it has resulted in outages with missed information that could have been important to public safety events. Solar equipment also faces damages from plows and often needs to be removed in winter, rendering the roadways unprotected.

Example of Requested Sites

We have identified the following locations as being critically important to the Commonwealth based on public safety and homeland security factors. Each of these locations has already had MSP equipment deployed currently or in the past along the associated roadway. We have also identified specific DOT sites where we would suggest collocating our equipment.

G.L. c. 4.sec. 7. cl.26(f)(investigative), G.L. c. 4.sec. 7.cl.26 (n)(security)

Massachusetts Department of Transportation, Highway Division

Tony Wade
Director of Statewide Communications and Electronic Systems
Massachusetts Department of Transportation, Highway Division

From: Lieutenant Colonel Mark D. Cyr, #2728
Division of Homeland Security and Preparedness, Division Commander

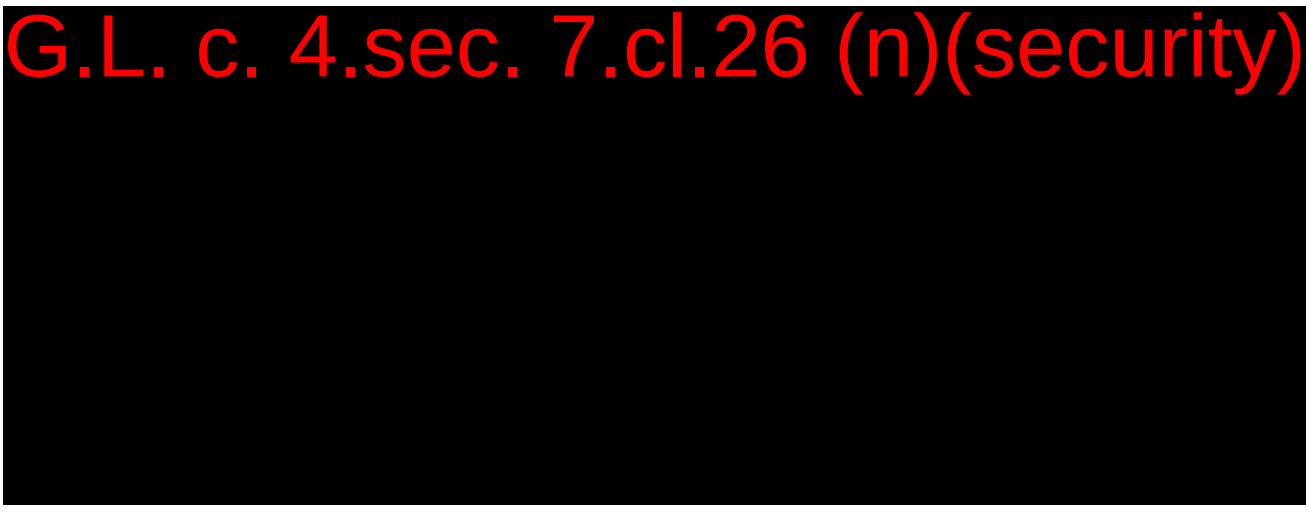
Subject: MSP & DOT Interagency Equipment Collocation Request

Good morning Mr. Foti and Mr. Wade,

Thank you for taking the time to speak with us on October 11. As we discussed, my division (Homeland Security and Preparedness) is responsible for public safety and homeland security technology projects for the Department of State Police. To that end the Department operates a small number of cameras on highways and major roadways that have the capability of recognizing the license plates of passing vehicles.

This resource is a critical part of the Department's public safety mission and real-time response capability to emergencies in the Commonwealth, including perhaps most importantly to the AMBER Alert and Silver Alert programs. This resource also supports the Department's homeland security mission, including the investigation and prevention of terrorism and the protection of critical infrastructure and public events such as the Boston Marathon.

Except for the Cape Bridges, where we have collocated equipment with DOT since 2014, we use solar power for our highway-based equipment. Solar has proven to be a problematic power source, and it has unfortunately resulted in outages and lost information during critical time periods. As winter approaches this problem is getting worse, and our equipment faces increased outages and damage from weather and plows.



We are working to upgrade equipment that is at or near its end of life, and we are hoping to improve power sources and mounting locations to increase year-round safety and reliability. We are respectfully asking for MassDOT to permit us to collocate equipment on a small number of VMS boards and camera poles that are at or near our existing equipment.

The locations identified herein are associated with pre-existing equipment sites which have been vetted, approved, and carefully selected on major public roadways to provide maximum benefit to the Commonwealth in emergency situations. We do not consider this request to represent an expansion of our system, as we have selected locations along highways where equipment is already in use. Additionally, to ensure lawful use and respect privacy considerations, we carefully limit and monitor system use, follow applicable law, and have a controlling policy.

By collocating our equipment DOT would not assume any financial responsibility for it, and we would continue to be responsible for maintenance, system administration, and data management. We expect that lane closures for installation would be limited and brief, and we would observe any DOT directives regarding timing and traffic control.

We manage and install our equipment and do not subcontract for this purpose. Depending on the site, we may ask for DOT assistance with cable management and accessing/connecting to the on-site power source, but we are not requesting any construction or structural modifications. We have requested (and will provide upon receipt) detailed information on the dimensions and power draw of our equipment. We do not anticipate that either will prove to be a limiting factor.

We have identified the following locations as being critically important to the Commonwealth based on public safety and homeland security factors. Each of these locations has already had MSP equipment deployed along the associated roadway. We have also identified specific DOT ITS sites where we would suggest collocating our equipment. Should any of these specific sites not work, there are other possibilities in each location:

We owe MassDOT a debt of gratitude for the agency's past support and assistance, and we look forward to our continued inter-agency coordination and excellent working relationship. Sgt. Noah

Pack is managing this project for my team and will coordinate with your team on our behalf. Please do not hesitate to reach out to me or him with any questions/concerns.

Respectfully submitted,

Lieutenant Colonel Mark D. Cyr, #2728
Division Commander
Division of Homeland Security and Preparedness

COMMONWEALTH
v.
Jerron PERRY.

SJC-13144
|
Argued December 8, 2021.
|
Decided April 1, 2022.

Synopsis

Background: Defendant was charged with murder in the first degree, attempted masked armed robbery, masked armed robbery, and unlawful possession of a firearm, based on allegations that he robbed multiple convenience stores and gasoline stations at gunpoint and that he shot and killed a store clerk during attempted robbery of one store. Defendant moved to suppress evidence obtained from "tower dumps" of cell site location information (CSLI) for all devices that connected to specific cell towers during a particular time frame. The Superior Court Department, Suffolk County, Robert L. Ullmann, J., denied motion. Defendant filed application in the county court seeking leave to pursue interlocutory appeal. A single justice of the Supreme Judicial Court, Suffolk County, Georges, J., reserved and reported the case to the full court.

Holdings: The Supreme Judicial Court, Gaziano, J., held that:

[1] Commonwealth's use of CSLI, in the aggregate, intruded upon defendant's reasonable expectation of privacy;

[2] first search-warrant affidavit established probable cause to search CSLI from defendant's cell phone;

[3] second search-warrant affidavit failed to establish probable cause to search CSLI from defendant's cell phone;

[4] first warrant described places to be searched and items to be seized with requisite particularity;

[5] only a judge may issue a search warrant for tower dumps of CSLI; and

[6] rule that only judge could issue search warrant for tower dumps of CSLI was "new," and thus applied prospectively.

Affirmed in part, reversed in part, and remanded.

Procedural Posture(s): Appellate Review; Pre-Trial Hearing Motion.

West Headnotes (47)

[1] Criminal Law

Ordinarily, in reviewing a decision on a motion to suppress, an appellate court accepts the judge's subsidiary findings of fact absent clear error but conducts an independent review of the ultimate findings and conclusions of law.

[2] Criminal Law

Where the trial judge's findings concerning a motion to suppress are based exclusively on documentary evidence, an appellate court reviews the judge's findings of fact, as well as his or her conclusions of law, de novo.

[3] Searches and Seizures

The Fourth Amendment to the United States Constitution and the Massachusetts Declaration of Rights protect the right to be free from unreasonable searches. U.S. Const. Amend. 4; Mass. Const. pt. 1, art. 14.

 © 2022 Thomson Reuters. No claim to original U.S. Government Works.

[4] **Criminal Law**

State constitutional rules do not constrain Federal authorities unless they operate as part of an essentially State investigation.

[5] **Criminal Law**

An investigation is essentially a State investigation, and thus Federal authorities are constrained by State constitutional rules, where, for example, the purpose of the investigation was to bring State charges, State officials retained significant authority over the investigation, or the State's involvement was otherwise so substantial that it negated the essentially Federal nature of the investigation.

[6] **Searches and Seizures**

For the Fourth Amendment's and Massachusetts Declaration of Rights' protections from unreasonable searches to be applicable, the Commonwealth's conduct must constitute a search in the constitutional sense. U.S. Const. Amend. 4; Mass. Const. pt. 1, art. 14.

[7] **Searches and Seizures**

A "search" occurs for purposes of the Fourth Amendment and the Massachusetts Declaration of Rights when the government's conduct intrudes on a person's reasonable expectation of privacy. U.S. Const. Amend. 4; Mass. Const. pt. 1, art. 14.

[8] **Searches and Seizures**

An individual has a "reasonable expectation of privacy" for purposes of the Fourth Amendment and the Massachusetts Declaration of Rights where (1) the individual has manifested a subjective expectation of privacy in the object of the search, and (2) society is willing to recognize that expectation as reasonable. U.S. Const. Amend. 4; Mass. Const. pt. 1, art. 14.

[9] **Searches and Seizures**

In applying the reasonable-expectation-of-privacy test to technological surveillance, courts must be careful to assure preservation of that degree of privacy against government that existed when the Fourth Amendment was adopted. U.S. Const. Amend. 4.

[10] **Searches and Seizures**

The mosaic theory for determining whether technological surveillance violates a defendant's reasonable expectation of privacy under the Fourth Amendment and the Massachusetts Declaration of Rights requires that courts consider the governmental action as a whole and evaluate the collected data when aggregated. U.S. Const. Amend. 4; Mass. Const. pt. 1, art. 14.

[11] **Searches and Seizures**

Because the whole reveals far more than the sum of the parts, a series of acts may be a search

 © 2022 Thomson Reuters. No claim to original U.S. Government Works.

under the mosaic theory for determining whether technological surveillance violates a defendant's reasonable expectation of privacy under the Fourth Amendment and the Massachusetts Declaration of Rights, even where each step in isolation is not. U.S. Const. Amend. 4; Mass. Const. pt. 1, art. 14.

[12] Searches and Seizures

Whether technological surveillance reveals the whole of a defendant's movements, and thus constitutes a search under the mosaic theory, turns on the duration of the surveillance, as well as its degree of comprehensiveness. U.S. Const. Amend. 4; Mass. Const. pt. 1, art. 14.

[13] Searches and Seizures

Long-term technological surveillance raises particular concerns about whether the surveillance constitutes a search under the mosaic theory because it uncovers types of information not revealed by short-term surveillance, such as what a person does repeatedly, what he does not do, and what he does ensemble, thus providing an intimate window into a person's life as it existed throughout the duration of the surveillance; such a pattern of activity is far more revealing than details from isolated incidents. U.S. Const. Amend. 4; Mass. Const. pt. 1, art. 14.

[14] Searches and Seizures

A record created through technological surveillance is considered to be "comprehensive," for purposes of determining whether the surveillance constitutes a search under the mosaic theory, if it has sufficiently voluminous and detailed information from which investigators can derive a relatively complete picture of an individual's comings and goings over time, even if there are gaps in the record. U.S. Const. Amend. 4; Mass. Const. pt. 1, art. 14.

[15] Searches and Seizures

Privacy in one's associations, whether political, religious, or simply amicable, plays a crucial role in maintaining democracy, and therefore is protected under the article of the Massachusetts Declaration of Rights establishing freedom from unreasonable searches and seizures. Mass. Const. pt. 1, art. 14.

[16] Searches and Seizures

Where technological surveillance falls short of revealing the whole of an individual's movements, it nonetheless may constitute a search when it reveals highly intimate details that practically would not have been obtainable using traditional surveillance. U.S. Const. Amend. 4; Mass. Const. pt. 1, art. 14.

[17] Searches and Seizures

Commonwealth's use, during investigation of series of robberies and a homicide, of "tower dumps" of cell site location information (CSLI), in the aggregate, intruded upon defendant's reasonable expectation of privacy, where investigators obtained seven tower dumps spanning seven different days over course of slightly more than one month, collection and analysis of tower dumps provided investigators with highly personal and previously unknowable details of defendant's life, and although each

 © 2022 Thomson Reuters. No claim to original U.S. Government Works.

tower dump was limited in time to period immediately before and after specific robbery for which CSLI was sought, collective whole of personal and private information obtained would have been impossible to obtain through use of traditional surveillance techniques. U.S. Const. Amend. 4; Mass. Const. pt. 1, art. 14.

[18] Searches and Seizures

The rights secured by the article of the Massachusetts Declaration of Rights establishing freedom from unreasonable searches and seizures are specific to the individual. Mass. Const. pt. 1, art. 14.

[19] Searches and Seizures

In determining whether a search occurred, for purposes of the article of the Massachusetts Declaration of Rights establishing freedom from unreasonable searches and seizures, a court focuses exclusively on the defendant's privacy interests, and cannot consider the privacy interests of others. Mass. Const. pt. 1, art. 14.

[20] Searches and Seizures

The Massachusetts Declaration of Rights requires that all searches and seizures be reasonable. Mass. Const. pt. 1, art. 14.

[21] Searches and Seizures

Searches and seizures conducted outside the scope of a valid warrant are presumed to be unreasonable, and therefore unconstitutional. Mass. Const. pt. 1, art. 14.

[22] Searches and Seizures

To be "reasonable" in the constitutional sense, a search conducted pursuant to a warrant must be supported by probable cause. Mass. Const. pt. 1, art. 14.

[23] Searches and Seizures

To comport with constitutional protections, an affidavit in support of a search warrant for cell site location information (CSLI) must demonstrate probable cause to believe (1) that a particularly described offense has been, is being, or is about to be committed, and (2) that the CSLI being sought will produce evidence of such offense or will aid in the apprehension of a person who the applicant has probable cause to believe has committed, is committing, or is about to commit such offense. Mass. Const. pt. 1, art. 14.

[24] Searches and Seizures

An affidavit in support of a search warrant for cell site location information (CSLI) must show a sufficient nexus between the criminal activity for which probable cause has been established and the physical location of the cell phone recorded by the CSLI. Mass. Const. pt. 1, art. 14.

[25] Searches and Seizures

 © 2022 Thomson Reuters. No claim to original U.S. Government Works.

A nexus between criminal activity for which probable cause has been established and the physical location of the cell phone recorded by cell site location information (CSLI) is sufficient to establish probable cause for a search warrant to obtain the CSLI where the information available to police provides a substantial basis for concluding that evidence connected to the crime will be found in the location to be searched. Mass. Const. pt. 1, art. 14.

[26] Searches and Seizures

To establish probable cause to search the contents of a cellular telephone, it is not enough that the object of the search may be found in the place subject to search; rather, the affidavit in support of the search warrant must demonstrate that the items sought will be located in the particular data file to be searched. U.S. Const. Amend. 4; Mass. Const. pt. 1, art. 14.

[27] Searches and Seizures

General statements in a search-warrant affidavit concerning the ubiquity of cellular telephones are insufficient to establish the required nexus between the commission of offenses and the contents of a telephone, as is required to establish probable cause to search the telephone. U.S. Const. Amend. 4; Mass. Const. pt. 1, art. 14.

[28] Searches and Seizures

The more narrow and demanding standard for establishing a nexus between the commission of offenses and the contents of an electronic device, as is required to establish probable cause to search the device, is applicable to searches of cellular telephones and computer-like devices, and not to searches of cell site location information (CSLI); while a search of the contents of a cellular telephone permits police to view vast amounts of sensitive and private data, the same concerns are not present in the context of CSLI, where the cell phone's location, and not its contents, is sought. U.S. Const. Amend. 4; Mass. Const. pt. 1, art. 14.

[29] Searches and Seizures

When seeking a warrant to search cell site location information (CSLI), investigators need not establish that the defendant actually used or possessed his or her cell phone during the commission of the crimes, which they would be required to do in order to search its contents; rather, the nexus requirement is satisfied as long as there is a substantial basis to conclude that the defendant used his or her cellular telephone during the relevant time frame, such that there is probable cause to believe the sought after CSLI will produce evidence of the crime. U.S. Const. Amend. 4; Mass. Const. pt. 1, art. 14.

[30] Searches and Seizures

Search-warrant affidavit submitted by police officer investigating series of robberies established probable cause to search cell site location information (CSLI) from defendant's cell phone by obtaining "tower dumps" for all devices that connected to specific cell towers during particular time frames, where affidavit described several notable similarities between offenses, evidence indicating that suspected coventurer had acted as getaway driver in at least three offenses, and facts suggesting some reason to believe that defendant and coventurer had communicated with one another from a distance, either prior to or after commission of offense, and thus there was probable cause to believe that either defendant's or coventurer's

 © 2022 Thomson Reuters. No claim to original U.S. Government Works.

cell phone would have produced CSLI that would appear in tower dumps. U.S. Const. Amend. 4; Mass. Const. pt. 1, art. 14.

[31] **Searches and Seizures**

Search-warrant affidavit submitted by police officer investigating series of robberies failed to establish probable cause to search cell site location information (CSLI) from defendant's cell phone by obtaining "tower dumps" for all devices that connected to specific cell towers during particular time frames, where affidavit did not set forth any particularized information that perpetrator or suspected coventurer owned cell phone or communicated with one another from a distance, and only ground in affidavit upon which to conclude that defendant had possessed or used cell phone to aid in accomplishing crimes was affiant officer's general statement that "it is very common for a person to have a cellular telephone with them at all times." U.S. Const. Amend. 4; Mass. Const. pt. 1, art. 14.

[32] **Searches and Seizures**

Warrant to search cell site location information (CSLI) from defendant's cell phone by obtaining "tower dumps" for all devices that connected to specific cell towers during particular time frames described places to be searched and items to be seized with requisite particularity, although warrant did not identify suspect by name or telephone number, scope of search authorized by warrant, on its face, was not entirely clear, and, if read in isolation, warrant would have permitted investigators to analyze any and all CSLI in tower dumps, where supporting affidavit explained that investigators sought to obtain tower dumps in order to identify commonalities within CSLI, and thus warrant authorized search of only narrow subset of CSLI, for purposes of identifying a common suspect. U.S. Const. Amend. 4; Mass. Const. pt. 1, art. 14.

[33] **Searches and Seizures**

The article of the Massachusetts Declaration of Rights establishing freedom from unreasonable searches and seizures requires that a search warrant describe with particularity the places to be searched and the items to be seized. Mass. Const. pt. 1, art. 14.

[34] **Searches and Seizures**

The requirement that a search warrant describe with particularity the places to be searched and the items to be seized both defines and limits the scope of the search and seizure. Mass. Const. pt. 1, art. 14.

[35] **Searches and Seizures**

The dual purposes of the requirement that a search warrant describe with particularity the places to be searched and the items to be seized are (1) to protect individuals from general searches and (2) to provide the Commonwealth the opportunity to demonstrate, to a reviewing court, that the scope of the officers' authority to search was properly limited. Mass. Const. pt. 1, art. 14.

[36] **Searches and Seizures**

A search warrant must describe the object of the search with enough specificity that investigators can identify, with reasonable certainty, that

which they are authorized to search, thus ensuring that they search only those items for which probable cause exists. Mass. Const. pt. 1, art. 14.

[37] **Searches and Seizures**

The precise degree of particularity required in a search warrant necessarily varies according to the circumstances and the type of items involved. Mass. Const. pt. 1, art. 14.

[38] **Searches and Seizures**

More generality in a search warrant's description of the places to be searched and the items to be seized may be tolerated where a more precise description would be impracticable. Mass. Const. pt. 1, art. 14.

[39] **Searches and Seizures**

A supporting affidavit can remedy a particularity defect in a search warrant where (1) the warrant makes specific reference to the affidavit and (2) the officer who submitted the affidavit in support of the warrant was one of the officers executing the warrant. U.S. Const. Amend. 4; Mass. Const. pt. 1, art. 14.

[40] **Searches and Seizures**

Unlike an arrest warrant, a search warrant need not identify a specific criminal suspect, although frequently it does. U.S. Const. Amend. 4; Mass. Const. pt. 1, art. 14.

[41] **Searches and Seizures**

Search warrants are often employed early in an investigation, perhaps before the identity of any likely criminal and certainly before all the perpetrators are or could be known, and requiring police to identify a presently unknown suspect by name would unreasonably thwart the ability of the police to investigate a crime. U.S. Const. Amend. 4; Mass. Const. pt. 1, art. 14.

[42] **Searches and Seizures**

Under the statute granting the Supreme Judicial Court general superintendence of inferior courts, the Court may impose requirements, by order, rule or opinion, that go beyond constitutional mandates, including those governing the issuance and content of search warrants. Mass. Const. pt. 1, art. 14.

[43] **Searches and Seizures**

Only a judge may issue a search warrant for "tower dumps" of cell site location information (CSLI), and the warrant must include protocols for the prompt and permanent disposal of any and all data that does not fit within the object of the search following the conclusion of the prosecution. Mass. Const. pt. 1, art. 14.

[44] **Searches and Seizures**

Constitutional rule of criminal procedure, that

 © 2022 Thomson Reuters. No claim to original U.S. Government Works.

only judge could issue search warrant for "tower dumps" of cell site location information (CSLI), was "new," and thus applied prospectively, where no existing statute or prior judicial opinion would have obligated investigators to obtain search warrant before acquiring or analyzing tower dumps. Mass. Const. pt. 1, art. 14.

[45] Criminal Law

The retroactivity of a constitutional rule of criminal procedure turns on whether the rule is "new" or "old."

[46] Criminal Law

A case announces a "new" constitutional rule of criminal procedure, for purposes of determining whether the holding applies retroactively, if the result was not dictated by precedent; a holding is not so dictated unless it would have been apparent to all reasonable jurists.

[47] Criminal Law

New rules of constitutional rules of criminal procedure apply retroactively if the rule is substantive, defining a class of conduct that cannot be deemed criminal, or prohibiting imposition of a type of punishment on a particular class of defendants or establishes a watershed rule of criminal procedure that is implicit in the concept of ordered liberty, implicating the fundamental fairness of the proceeding.

INDICTMENTS found and returned in the Superior Court Department on July 12, 2019.

A pretrial motion to suppress evidence was heard by Robert L. Ullmann, J.

An application for leave to prosecute an interlocutory appeal was allowed by Georges, J., in the Supreme Judicial Court for the county of Suffolk, and the case was reported by him.

Attorneys and Law Firms

Eric Tennen, Boston, for the defendant.

Cailin M. Campbell, Assistant District Attorney (Jennifer J. Hickman, Assistant District Attorney, also present) for the Commonwealth.

Mason A. Kortz, for Surveillance Technology Oversight Project, amicus curiae, submitted a brief.

Brett Max Kaufman, Ashley Gorski, & Patrick Toomey, of New York, Jennifer Granick, Jennifer Lynch, & Andrew Crocker, of California, Matthew Spurlock, Committee for Public Counsel Services, Matthew R. Segal, Jessie J. Rossman, Jessica J. Lewis, Nathan Freed Wessler, & Joshua M. Daniels, for American Civil Liberties Union & others, amici curiae, submitted a brief.

Present: Budd, C.J., Gaziano, Lowy, Cypher, Kafker, Wendlandt, & Georges, JJ.

Opinion

GAZIANO, J.

***1** As law enforcement capabilities continue to develop in the wake of advancing technology, so too must our constitutional jurisprudence. To this end, we must grapple with the constitutional implications of "tower dumps," a relatively novel law enforcement tool that provides investigators with the cell site location information (CSLI) for all devices that connected to specific cell

towers during a particular time frame.

Here, the Commonwealth obtained search warrants for seven tower dumps,[1] corresponding to the locations of six robberies and an attempted robbery that resulted in a homicide, all of which investigators believed to have been committed by the same individual. After analyzing the information contained in the tower dumps, investigators determined that the defendant had been near the scenes of two of the crimes. The defendant subsequently was charged with the robberies and the homicide, and he moved to suppress all evidence obtained from the tower dumps as the fruits of an unconstitutional search. A Superior Court judge denied the motion, and the defendant filed an application in the county court seeking leave to pursue an interlocutory appeal; the single justice reserved and reported the case to the full court.

[1] As is customary, each single tower dump included information from multiple cell towers operated by different cellular service providers. See discussion, infra.

The defendant argues that the Commonwealth's use of the tower dumps intruded upon his reasonable expectation of privacy, and therefore effectuated a search under the Federal and State Constitutions. He also contends that search warrants for tower dumps are per se unconstitutional because they necessarily lack particularity. In addition, the defendant asserts that, here, the warrants were not supported by probable cause.

We agree that the government's use of the seven tower dumps was an intrusion upon the defendant's reasonable expectation of privacy, and therefore constituted a search under art. 14 of the Massachusetts Declaration of Rights. We do not agree, however, that warrants for tower dumps are per se unconstitutional. Accordingly, investigators may use tower dumps so long as they comply with the warrant requirements of art. 14.

Here, the second of the two search warrants was sufficiently particular and supported by probable cause, and therefore the use of the information obtained from it does not offend the Massachusetts Declaration of Rights. The first warrant, however, was not supported by probable cause, and accordingly, any evidence obtained as a result of it must be suppressed.[2]

[2] We acknowledge the amicus briefs submitted by the Surveillance Technology Oversight Project and by the American Civil Liberties Union, the American Civil Liberties Union of Massachusetts, Inc., the Committee for Public Counsel Services, the Electronic Frontier Foundation, and the Massachusetts Association of Criminal Defense Lawyers in support of the defendant.

1. Background. a. CSLI and tower dumps. An overview of the technology at issue is necessary to a discussion of the issues in this case. Cellular telephones "make calls, send text messages and emails, and access the internet by connecting to a set of radio antennas called 'cell sites' " (quotation and citation omitted). United States v. Thorne, 548 F. Supp. 3d 70, 113 (D.D.C. 2021). See Carpenter v. United States, —— U.S. ——, 138 S. Ct. 2206, 2211, 201 L.Ed.2d 507 (2018). To receive cellular service, "a cellular telephone will connect to the cell site which provides the strongest signal, typically, albeit not always, the nearest one." Commonwealth v. Jones, 477 Mass. 307, 313 n.11, 77 N.E.3d 278 (2017). "The typical cell site covers a more-or-less circular geographic area," with "three (or sometimes six) separate antennas pointing in different directions" which divide the site's radius into smaller, wedge-shaped sectors. Carpenter, supra at 2225 (Kennedy, J., dissenting).

***2** Once a cellular telephone connects with a cell site (either to send or receive communications), the site will "generate[ ] a time-stamped record known as [CSLI]."[3] Id. at 2211. Among other information, this record contains the precise location of the cell site, as well the specific sectors that provided service to the cellular telephone. See Commonwealth v. Augustine, 467 Mass. 230, 237-238, 4 N.E.3d 846 (2014), S.C., 470 Mass. 837, 26 N.E.3d 709 and 472 Mass. 448, 35 N.E.3d 688 (2015) (Augustine I). When a cellular telephone establishes a connection with a particular sector of a cell site, it can be inferred that the user was located within that sector's range of service, or "coverage area," at the time of the connection. Commonwealth v. Wilkerson, 486 Mass. 159, 174, 156 N.E.3d 754 (2020). Service providers retain CSLI for their own business purposes, such as finding weak areas of their network, but it also has proved useful to law enforcement in order to approximate an individual's location at a given time. Carpenter, 138 S. Ct. at 2212.

[3] There are two forms of CSLI. See Commonwealth v. Augustine, 467 Mass. 230,

 © 2022 Thomson Reuters. No claim to original U.S. Government Works.

238 & n.18, 4 N.E.3d 846 (2014), S.C., 470 Mass. 837, 26 N.E.3d 709 and 472 Mass. 448, 35 N.E.3d 688 (2015) (Augustine I). Telephone call CSLI is generated only when a cellular telephone uses cell service, such as by placing or receiving a call or a text message. Id. at 238, 4 N.E.3d 846. Registration CSLI, by contrast, is created without any action by the user, as cellular telephones "regularly identify themselves to the nearest cell site with the strongest signal, through a process known as 'registration.' " Id. at 238, 4 N.E.3d 846 n.18. Only telephone call CSLI is at issue here.

The precision with which police are able to approximate an individual's location varies significantly. Some CSLI only enables investigators to place an individual within "an area miles in diameter," whereas other CSLI allows investigators to "calculate users' locations with precision that approaches that of GPS.[4]" ECPA Reform and the Revolution in Location Based Technologies and Services: Hearing Before the Subcomm. on the Constitution, Civil Rights, and Civil Liberties of the H. Comm. on the Judiciary, 111th Cong., at 23, 25 (2010) (testimony of Professor Matt Blaze) (Blaze Testimony I). The degree of precision largely depends on the size of the sector's coverage area and the technology in use. See id. at 25. The size of the coverage area, in turn, depends on the number of nearby cell sites; "[t]he greater the concentration of cell sites, the smaller the coverage area." Carpenter, 138 S. Ct. at 2211. "As cellular telephone use has grown, cellular service providers have responded by adding new cell sites to accommodate additional customers," resulting in increasingly precise CSLI. See Augustine I, 467 Mass. at 239, 4 N.E.3d 846.

4 Global positioning system.

CSLI also is more precise if the cell site uses newer, more advanced technology. In areas such as Boston that use what is referred to as "small cell" technology, CSLI can identify an individual's location precisely, down to the specific floor of a particular building. See State v. Earls, 214 N.J. 564, 578, 70 A.3d 630 (2013), quoting Blaze Testimony I, supra at 25. See also National League of Cities, Small Cell Wireless Technology in Cities, at 8-9 (2018) (discussing Boston's use of small cell technology).[5] This technology is becoming increasingly ubiquitous; "[b]y some estimates, the number of these small-scale cellular base stations equaled or outstripped the number of conventional cells in the [United States] in 2010, and their deployment continues to grow at a very fast rate." ECPA, Part 2: Geolocation Privacy and Surveillance: Hearing Before the Subcomm. on Crime, Terrorism, and Homeland Security of the H. Comm. on the Judiciary, 113th Cong., at 55 (2013) (testimony of Professor Matt Blaze).

5 Available at https://www.nlc.org/wp-content/uploads/2018/08/CS_SmallCell_MAG_FINAL.pdf [https://perma.cc/8CKW-KJZ8].

***3** In conducting a criminal investigation, law enforcement officers may obtain targeted CSLI, which provides a log of every cell site to which an individual cellular telephone has connected within a given time frame, thus enabling investigators retroactively to reconstruct an individual's movements over time. See Augustine I, 467 Mass. at 239, 4 N.E.3d 846. A tower dump, by contrast, provides officers with CSLI from every device that connected to a particular cell site within a specified period; allowing law enforcement to infer that the owners of those devices most likely were present in that site's coverage area during that time. See Carpenter, 138 S. Ct. at 2220 (tower dump is "a download of information on all the devices that connected to a particular cell site during a particular interval"). Tower dumps have proved particularly useful in investigating serial crimes, because they enable investigators to isolate individual devices that were near the scene of multiple offenses. See Owsley, The Fourth Amendment Implications of the Government's Use of Cell Tower Dumps in Its Electronic Surveillance, 16 U. Pa. J. Const. L. 1, 6 (2013).

b. Factual background. On September 22, September 27, September 28, October 4, October 25, and October 31, 2018, clerks at six stores in Boston, Canton, and Cambridge were robbed at gunpoint by an unidentified perpetrator. On October 6, 2018, an unidentified individual shot and killed a store clerk in Boston during an attempted robbery. Almost all of the stores were convenience stores or gasoline stations, and one sold cellular telephones. Because each of the robberies was perpetrated in a comparable manner by a man fitting a similar description, police suspected that the same person had been responsible for all seven incidents. Based on surveillance footage and witness statements, investigators also believed that the perpetrator was at least occasionally assisted by a coventurer who acted as a getaway driver.

Boston police detectives worked together with agents from the Federal Bureau of Investigation (FBI) to identify a suspect. They sought to do so by cross-referencing a series of tower dumps in order to determine if any device had been near the scenes of two or more of the incidents. To this end, on October 26, 2018, an agent with the FBI obtained a search warrant from a Federal magistrate judge, see 18 U.S.C. § 2703, for tower dumps corresponding to the robberies in Boston, Canton, and Cambridge on September 22, September 27, September 28, and October 4, 2018 (first warrant). The first warrant required four service providers with one or more cell sites near the scenes of the robberies to produce the tower dumps. For each date, the tower dump was to include the CSLI for all cellular telephones that had connected to any cell site providing cellular service to the address where the robbery occurred, within a fifteen-minute period surrounding the time of the incident.

On January 30, 2019, a Boston police detective sought and obtained a search warrant from a judge in the Boston Municipal Court, see G. L. c. 276, §§ 1-7, for tower dumps corresponding to the robberies in Boston and Canton on October 25 and October 31, 2018, as well as the attempted robbery and homicide in Boston on October 6, 2018 (second warrant). The application for this second warrant did not reference or otherwise rely upon any evidence obtained from execution of the first warrant. The second warrant required the same four service providers to produce the tower dumps. For each date, the tower dump was to include CSLI for all cellular telephones that had connected to any cell site serving the address where the crime occurred, within a forty-minute period around the time of each incident.

Both warrants sought the same categories of information. For each cellular telephone that connected to the relevant cell site, the providers were required to furnish (1) the location and sector of the cell site providing service; (2) the telephone number and unique identifier,[6] either of which could be used to identify the owner of the telephone; (3) the type of communication initiated or received when the connection occurred; (4) the telephone number of the device initiating the communication (known as the "source number"); (5) the telephone number of the device receiving the communication (the "destination number"); and (6) the date, time, and duration of each communication.

[6] A "unique identifier" is a distinctive series of numbers that cellular service providers use to identify a device or its user. See Citizen Lab of the Munk School of Global Affairs at the University of Toronto, The Many Identifiers in Our Pockets: A Primer on Mobile Privacy and Security (May 13, 2015), https://citizenlab.ca/wp-content/uploads/2015/05/The-ManyIdentifiers-in-Our-Pockets-A-primer-on-mobile-privacy-andsecurity-_reportPDF.pdf [https://perma.cc/55P6-G43X].

***4** Collectively, execution of the search warrants produced information on over 50,000 unique telephone numbers. Investigators then cross-referenced the data from each tower dump in an effort to identify any telephone numbers that appeared in two or more of the tower dumps, and discovered that a particular telephone number appeared in the tower dump corresponding to the homicide on October 6, 2018, as well as the tower dump corresponding to the robbery on October 31, 2018. Investigators determined, by searching a police database, that this number belonged to the defendant.[7] They also learned that, at around the time of the shooting on October 6, 2018, the defendant's telephone had been in communication with another device, which they suspected to have belonged to the getaway driver. Investigators were able to determine the identity of the suspected coventurer, as well as the fact that his cellular telephone number appeared in the tower dumps corresponding to the robberies on September 22, October 6, and October 31, 2018.

[7] Following an unrelated traffic accident, the defendant previously had provided his telephone number to police.

Based on this, investigators identified the defendant as a suspect in six of the incidents, including the homicide.[8] The defendant was indicted on a charge of murder in the first degree, G. L. c. 265, § 1; attempted masked armed robbery, G. L. c. 274, § 6; five counts of masked armed robbery, G. L. c. 265, § 17; and six counts of unlawful possession of a firearm, G. L. c. 269, § 10 (a). He moved to suppress all of the evidence obtained as a result of the tower dumps, on the ground that it was the fruit of an unconstitutional search.

[8] After having obtained the first warrant, but before applying for the second warrant, the Commonwealth decided that it could not "definitively" determine that the perpetrator who

 © 2022 Thomson Reuters. No claim to original U.S. Government Works.

carried out the other offenses was responsible for the robbery on September 28, 2018.

Following a nonevidentiary hearing, a Superior Court judge denied the motion. The judge concluded that the defendant had a reasonable expectation of privacy in his CSLI, and therefore had standing to challenge the purported search. Nonetheless, because the search warrants had been supported by probable cause, the judge decided that the CSLI, and the evidence subsequently derived from it, had been obtained lawfully. The judge found that both search warrants were sufficiently particular and limited in scope, and rejected the defendant's argument that they amounted to "overbroad, unparticularized general warrants." The defendant then sought leave to pursue an interlocutory appeal in the county court. A single justice of this court allowed the application and reserved and reported the matter to the full court.

[1] [2]2. Discussion. a. Standard of review. Ordinarily, "[i]n reviewing a decision on a motion to suppress, 'we accept the judge's subsidiary findings of fact absent clear error but conduct an independent review of [the] ultimate findings and conclusions of law" (quotation omitted). Commonwealth v. Ramos, 470 Mass. 740, 742, 25 N.E.3d 849 (2015), quoting Commonwealth v. Colon, 449 Mass. 207, 214, 866 N.E.2d 412, cert. denied, 552 U.S. 1079, 128 S.Ct. 810, 169 L.Ed.2d 611 (2007). Where, as here, the judge's findings are based exclusively on documentary evidence, we review the judge's findings of fact, as well as his or her conclusions of law, de novo. See Commonwealth v. Johnson, 481 Mass. 710, 714, 119 N.E.3d 669, cert. denied, —— U.S. ——, 140 S. Ct. 247, 205 L.Ed.2d 138 (2019).

[3] [4] [5] [6] [7] [8]b. Whether a search occurred. i. Legal standards. The Fourth Amendment to the United States Constitution and art. 14 protect the right to be free from unreasonable searches.[9] See Commonwealth v. Feliz, 486 Mass. 510, 514, 159 N.E.3d 661 (2020). Of course, for those protections to be applicable, "the Commonwealth's conduct must constitute a search in the constitutional sense." See Johnson, 481 Mass. at 715, 119 N.E.3d 669. Such a search occurs "when the government's conduct intrudes on a person's reasonable expectation of privacy."[10] Augustine I, 467 Mass. at 241, 4 N.E.3d 846. "An individual has a reasonable expectation of privacy where (i) the individual has 'manifested a subjective expectation of privacy in the object of the search,' and (ii) 'society is willing to recognize that expectation as reasonable.' " Johnson, supra, quoting Augustine I, supra at 242, 4 N.E.3d 846.

9 State constitutional rules "do[ ] not constrain Federal authorities unless they operate as part of an 'essentially' State investigation." Commonwealth v. Brown, 456 Mass. 708, 713, 925 N.E.2d 845 (2010), S.C., 466 Mass. 1007, 995 N.E.2d 1091 (2013). An investigation is essentially a State investigation where, for example, the purpose of the investigation was to bring State charges, State officials retained significant authority over the investigation, or the State's involvement was otherwise so substantial that it "negate[d] the essentially Federal nature of the investigation." Commonwealth v. Gonzalez, 426 Mass. 313, 317-318, 688 N.E.2d 455 (1997). The Commonwealth does not dispute that the investigation in this case was essentially a State investigation. Accordingly, the Federal agents involved in the investigation were constrained by the State Constitution. See Commonwealth v. Jarabek, 384 Mass. 293, 297, 424 N.E.2d 491 (1981).

10 Because the defendant does not contend that the government "physically intrud[ed] on a constitutionally protected area," we do not consider whether a physical search occurred. See Commonwealth v. Johnson, 481 Mass. 710, 715, 119 N.E.3d 669, cert. denied, —— U.S. ——, 140 S. Ct. 247, 205 L.Ed.2d 138 (2019), quoting Grady v. North Carolina, 575 U.S. 306, 309, 135 S.Ct. 1368, 191 L.Ed.2d 459 (2015).

***5** [9]In applying this test to technological surveillance, we must be careful to "assure[ ] preservation of that degree of privacy against government that existed when the Fourth Amendment was adopted." Carpenter, 138 S. Ct. at 2214, quoting Kyllo v. United States, 533 U.S. 27, 34, 121 S.Ct. 2038, 150 L.Ed.2d 94 (2001). In practice, doing so is anything but a simple exercise; advancements in technology have resulted in a quantity and quality of surveillance that never could have been imagined, let alone realized, at the time of the founding. See United States v. Jones, 565 U.S. 400, 420, 132 S.Ct. 945, 181 L.Ed.2d 911 (2012) (Alito, J., concurring in the judgment). Thus, while we have "acknowledged the

usefulness of these tools in crime detection," we also have "caution[ed] against allowing the 'power of technology to shrink the realm of guaranteed privacy.' " Commonwealth v. Henley, 488 Mass. 95, 109, 171 N.E.3d 1085 (2021). See Commonwealth v. Blood, 400 Mass. 61, 69, 507 N.E.2d 1029 (1987), quoting Lopez v. United States, 373 U.S. 427, 469, 83 S.Ct. 1381, 10 L.Ed.2d 462 (1963) (Brennan, J., dissenting) ("[i]t must be plain that electronic surveillance imports a peculiarly severe danger to the liberties of the person").

To this end, where police use technology to engage in long-term surveillance, we have analyzed their actions in the aggregate. We first did so with respect to CSLI in Augustine I, 467 Mass. at 253, 4 N.E.3d 846. There, we held that the government effectuated a search when it used targeted CSLI to obtain a list of every cell site to which the defendant's cellular telephone had connected over a two-week period. Id. at 254-255, 4 N.E.3d 846. In so holding, we considered the "cumulative nature of the information collected"; that is, rather than evaluating whether the defendant had a reasonable expectation of privacy in each isolated cell site connection, we evaluated whether the defendant had such a reasonable expectation in the two weeks of CSLI as a whole. Id. at 253-255, 4 N.E.3d 846.

[10] [11]The aggregation principle we used in Augustine I developed into what is now known as the mosaic theory. See Commonwealth v. McCarthy, 484 Mass. 493, 503, 142 N.E.3d 1090 (2020). "The mosaic theory requires that we consider the governmental action as a whole and evaluate the collected data when aggregated." Henley, 488 Mass. at 109, 171 N.E.3d 1085. Thus, rather than "asking if a particular act is a search, the mosaic theory asks whether a series of acts that [may not be] searches in isolation amount to a search when considered as a group." Kerr, The Mosaic Theory of the Fourth Amendment, 111 Mich. L. Rev. 311, 320 (2012). Because "the whole reveals far more than the sum of the parts," a series of acts may be a search even where each step in isolation is not. McCarthy, supra at 504, 142 N.E.3d 1090. See District of Columbia v. Wesby, —— U.S. ——, 138 S. Ct. 577, 588, 199 L.Ed.2d 453 (2018). "As the analogy goes, the color of a single stone depicts little, but by stepping back one can see a complete mosaic." McCarthy, supra. See United States v. Tuggle, 4 F.4th 505, 517 (7th Cir. 2021), cert. denied, —— U.S. ——, 142 S. Ct. 1107, —— L.Ed.2d —— (2022), quoting Kugler & Strahilevitz, Actual Expectations of Privacy, Fourth Amendment Doctrine, and the Mosaic Theory, 2015 Sup. Ct. Rev. 205, 205 (2015) ("the mosaic theory attempts to capture the idea that the 'government can learn more from a given slice of information if it can put that information in the context of a broader pattern, a mosaic' ").

In determining whether a series of acts constitutes a search under the mosaic theory, courts have considered "whether the surveillance was so targeted and extensive that the data it generated, in the aggregate, exposed otherwise unknowable details of a person's life." Commonwealth v. Mora, 485 Mass. 360, 373, 150 N.E.3d 297 (2020). See Carpenter, 138 S. Ct. at 2217-2218 ("Mapping a cell phone's location [using targeted CSLI] over the course of 127 days" constituted search because it revealed "an intimate window into a person's life" that could not be obtained using traditional surveillance); United States v. Wilford, 961 F. Supp. 2d 740, 771 (D. Md. 2013), aff'd, 689 Fed. Appx. 727 (4th Cir. 2017), cert. denied, —— U.S. ——, 138 S. Ct. 2707, 201 L.Ed.2d 1100 (2018), quoting United States v. Graham, 846 F. Supp. 2d 384, 401-403 (D. Md. 2012), aff'd, 824 F.3d 421 (4th Cir. 2016), cert. denied, 138 S. Ct. 2700 (2018) (mosaic theory turns on whether "discrete acts of surveillance ... in the aggregate ... 'paint an "intimate picture" ' of a defendant's life").

***6** To answer this question, our limited precedent to date primarily has focused on three general concerns: the extent to which the surveillance reveals the whole of an individual's public movements; the character of the information obtained; and whether the surveillance could have been achieved using traditional law enforcement techniques. See Henley, 488 Mass. at 113, 171 N.E.3d 1085; Mora, 485 Mass. at 373-374, 150 N.E.3d 297; McCarthy, 484 Mass. at 506, 508-509, 142 N.E.3d 1090; Augustine I, 467 Mass. at 248, 253, 4 N.E.3d 846. The same concerns have animated the Federal cases that have addressed the issue. See Carpenter, 138 S. Ct. at 2217-2218 (targeted CSLI provides "an all-encompassing record of the holder's whereabouts" and therefore reveals "an intimate window into a person's life" that could not have been obtained under traditional surveillance). See, e.g., United States v. Trice, 966 F.3d 506, 518 (6th Cir. 2020), cert. denied, —— U.S. ——, 141 S. Ct. 1395, 209 L.Ed.2d 133 (2021), quoting Carpenter, supra (in evaluating duration of surveillance, considering whether it "provided law enforcement with information that was 'otherwise unknowable,' " and "provided an 'intimate window into a person's life' "). (4th Cir. 2021) (electronic aerial surveillance violates reasonable expectation of privacy because it "yield[s] 'a wealth of detail' " that "surpassed ordinary expectations of law enforcement's capacity and provided enough information to deduce details from the whole of individuals' movements" [citation omitted]); State v. Jones, 2017 S.D. 59, ¶¶ 29, 31, 36, 903 N.W.2d 101, cert. denied, —— U.S. ——, 138 S. Ct. 1011, 200 L.Ed.2d 275 (2018) (search occurred where surveillance that "allowed law enforcement to enhance their senses" revealed "the aggregate of all of [the defendant's] coming and going from the home," thus providing investigators with "a mosaic of intimate details of [the defendant's] private life and associations").

[12] [13]Whether surveillance reveals the whole of a defendant's movements turns on the duration of the surveillance, as well as its degree of comprehensiveness. See, e.g., Augustine I, 467 Mass. at 254, 4 N.E.3d 846. Long-term surveillance raises particular concerns because it uncovers "types of information not revealed by short-term surveillance, such as what a person does repeatedly, what he does not do, and what he does ensemble," United States v. Maynard, 615 F.3d 544, 562 (D.C. Cir. 2010), aff'd, 564 U.S. 1036, 131 S.Ct. 3064, 180 L.Ed.2d 885 (2011), thus providing "an intimate window into a person's life" as it existed throughout the duration of the surveillance, Carpenter, 138 S. Ct. at 2217. Such a pattern of activity is far more revealing than details from isolated incidents. See Mora, 485 Mass. at 375-376, 150 N.E.3d 297. "The difference is not one of degree but of kind, for no single journey reveals the habits and patterns that mark the distinction between a day in the life and a way of life ...." Maynard, supra. By way of illustration, a single trip to the liquor store reveals little about an individual, but daily trips over the course of a month reveal much more.

[14]A record is considered to be comprehensive if it has sufficiently voluminous and detailed information from which investigators can derive a relatively complete picture of an individual's "comings and goings" over time, even if there are gaps in the record. See Carpenter, 138 S. Ct. at 2219. For example, in Augustine I, 467 Mass. at 254-255, 4 N.E.3d 846, we determined that the defendant had a reasonable expectation of privacy in the whole of his public movements, as revealed by targeted CSLI from a single cellular telephone that had accompanied him during a two-week trip, despite the fact that his location was only revealed when he made or received a telephone call. See Jones, 565 U.S. at 404, 132 S.Ct. 945 (electronic tracking of particular vehicle's location provided investigators with whole of defendant's movements, even though tracking only revealed defendant's location while in vehicle); Leaders of a Beautiful Struggle, 2 F.4th at 342-343 (rejecting argument that "gaps in the data" nullified reasonable expectation of privacy in public movements). Even where a record does not include each and every one of a defendant's movements, "the likelihood a stranger would observe all those movements is not just remote, it is essentially nil. It is one thing for a passerby to observe or even to follow someone during a single journey as he goes to the market or returns home from work. It is another thing entirely for that stranger to pick up the scent again the next day and the day after that, week in and week out, dogging his prey until he has identified all the places, people, amusements, and chores that make up that person's hitherto private routine." McCarthy, 484 Mass. at 504, 142 N.E.3d 1090, quoting Maynard, 615 F.3d at 560.

***7** We also have considered the extent to which the surveillance, even if less comprehensive, tended to reveal highly intimate or personal details. See, e.g., Mora, 485 Mass. at 370-372, 150 N.E.3d 297. Because "art. 14 protects against warrantless intrusion into private places," we have expressed particular concern over surveillance that reveals individuals in private settings. See, e.g., Augustine I, 467 Mass. at 253, 4 N.E.3d 846 ("we cannot ignore the probability that, as CSLI becomes more precise, cellular telephone users will be tracked in constitutionally protected areas"). Such surveillance permits investigators to infer whether and when an individual is in constitutionally sensitive areas, such as the home or a place of worship. See Commonwealth v. Yusuf, 488 Mass. 379, 386, 173 N.E.3d 378 (2021), quoting Caniglia v. Strom, —— U.S. ——, 141 S. Ct. 1596, 1599, 209 L.Ed.2d 604 (2021) ("The very core of [the constitutional] guarantee is the right of a man to retreat into his own home and there be free from unreasonable governmental intrusion" [alterations in original]). Once investigators obtain such information, they are able to piece together "a highly detailed profile, not simply of where we go, but by easy inference, of our associations -- political, religious, amicable and amorous, to name only a few -- and the pattern of our professional and avocational pursuits.' " McCarthy, 484 Mass. at 504-505, 142 N.E.3d 1090, quoting Commonwealth v. Connolly, 454 Mass. 808, 834, 913 N.E.2d 356 (2009) (Gants, J., concurring), cert. denied, 574 U.S. 1085 (2015).

This information is private and personal even when

anonymized, but it provides a much richer profile of an individual if it is linked to his or her identity. See United States Dep't of State v. Ray, 502 U.S. 164, 176, 112 S.Ct. 541, 116 L.Ed.2d 526 (1991) ("Although disclosure of [certain] personal information constitutes only a de minimis invasion of privacy when the identities of the [individuals] are unknown, the invasion of privacy becomes significant when the personal information is linked to particular [individuals]"). There is, after all, a significant difference between knowing that an anonymized somebody was at a specific political rally and knowing that "John Smith" was at that rally. See Globe Newspaper Co. v. Boston Retirement Bd., 388 Mass. 427, 435 n.14, 446 N.E.2d 1051 (1983) (anonymized information "which did not allow the identification of any individual" was not "of a personal nature").

[15]Providing law enforcement with such personal information is of particular concern because it risks chilling the associational and expressive freedoms that our State and Federal Constitutions strive to protect. See Jones, 565 U.S. at 416, 132 S.Ct. 945 (Sotomayor, J., concurring) ("Awareness that the government may be watching chills associational and expressive freedoms"); United States v. Moore-Bush, 381 F. Supp. 3d 139, 148 (D. Mass. 2019) (long-term surveillance "risks chilling core First Amendment activities"). Privacy in one's associations, whether political, religious, or simply amicable, plays a crucial role in maintaining our democracy, and therefore is protected under art. 14. See, e.g., National Ass'n for the Advancement of Colored People v. Alabama, 357 U.S. 449, 462, 78 S.Ct. 1163, 2 L.Ed.2d 1488 (1958) (recognizing "the vital relationship between freedom to associate and privacy in one's associations"); Blood, 400 Mass. at 69, 507 N.E.2d 1029 (art. 14 protects "the right to be known to others and to know them, and thus to be whole as a free member of a free society").

We also have considered whether the electronic surveillance generated a category or quantity of information that could not have been obtained using traditional law enforcement tools. See, e.g., McCarthy, 484 Mass. at 500, 142 N.E.3d 1090. To this end, we have examined whether the surveillance allowed the government to "track and reconstruct a person's past movements, a category of information that never would be available through the use of traditional law enforcement tools of investigation" (emphasis in original). See Augustine I, 467 Mass. at 254, 4 N.E.3d 846. Even where the surveillance at issue theoretically could have been accomplished using traditional surveillance methods, we have taken into account whether those methods would have been prohibitively expensive or otherwise impracticable. See, e.g., McCarthy, supra at 499-500, 142 N.E.3d 1090, quoting Jones, 565 U.S. at 429, 132 S.Ct. 945 (Alito, J., concurring) ("[I]n the pre-computer age, the greatest protections of privacy were neither constitutional nor statutory, but practical. Traditional surveillance for any extended period of time was difficult and costly and therefore rarely undertaken"). Because "[h]umans are imperfect note-takers and not all blessed with photographic memory," traditional surveillance often cannot achieve the same level of volume, detail, and precision as electronic surveillance. Moore-Bush, 381 F. Supp. 3d at 149. Moreover, as it is "unlikely that investigators could ... maintain[ ] in-person observation over the course of multiple months without [their targets] becoming aware of their presence," technological surveillance that proceeds surreptitiously empowers investigators to engage in long-term, secret surveillance that would not otherwise be possible. See Mora, 485 Mass. at 374, 150 N.E.3d 297.

***8** While these factors have emerged as preeminent in the few cases in which we have applied the mosaic theory to date, we emphasize that the question whether electronic surveillance exposes otherwise unknowable details of a person's life must be answered in light of the totality of the circumstances in each case. Accordingly, these factors are not exhaustive, and no one factor is determinative. A few examples are illustrative.

In McCarthy, 484 Mass. at 508-509, 142 N.E.3d 1090, for instance, we decided that police did not intrude on a defendant's reasonable expectation of privacy where they used information obtained from four automatic license plate readers (ALPRs),[11] in fixed positions on either side of two bridges, to determine when, over a period of months, a defendant crossed the bridges. We recognized that the ALPRs provided police with surveillance capabilities that exceeded what would have been possible using traditional law enforcement techniques, but nonetheless reasoned that the limited number of ALPRs, positioned on public highways leading to and from the Cape Cod peninsula, did not "allow the Commonwealth to monitor the whole of the defendant's public movements" or otherwise "reveal 'the privacies of life.' " Id. at 509, 142 N.E.3d 1090, quoting Carpenter, 138 S. Ct. at 2217. We noted, however, that even a limited number of ALPRs located near "constitutionally sensitive locations," such as the home or a place of worship, could intrude upon a reasonable expectation of privacy because they "reveal more of an individual's life

and associations." McCarthy, supra at 506, 142 N.E.3d 1090.

[11] "Automatic license plate readers are cameras combined with software that allows them to identify and 'read' license plates on passing vehicles. When an ALPR identifies a license plate, it records a photograph of the plate, the system's interpretation of the license plate number, and other data, such as the date, time, location, direction of travel, and travel lane." Commonwealth v. McCarthy, 484 Mass. 493, 494, 142 N.E.3d 1090 (2020).

[16]Thus, where surveillance falls short of revealing the whole of an individual's movements, it nonetheless may constitute a search when it reveals highly intimate details that practically would not have been obtainable using traditional surveillance. See Mora, 485 Mass. at 369, 150 N.E.3d 297. In Mora, supra at 375-376, 150 N.E.3d 297, we decided that police had effectuated a search by installing and monitoring two pole cameras pointed at the defendants' residences. The cameras revealed when the defendants were at home, when they received visitors, and who those visitors were, and therefore did not reveal the whole of the defendants' movements. See id. at 371-372, 150 N.E.3d 297. Nonetheless, we concluded that the cameras intruded upon the defendants' reasonable expectations of privacy because the information revealed by the surveillance provided investigators with highly intimate details of the defendants' lives that could not have been obtained using traditional surveillance methods. See id. at 374, 150 N.E.3d 297, quoting Jones, 565 U.S. at 420 n.3, 132 S.Ct. 945 (Alito, J., concurring) ("replicating pole camera surveillance 'would have required either a very large [pole], a very tiny constable, or both' ").

[17]ii. Application. Here, we must determine whether the government's actions with respect to the seven tower dumps, in the aggregate, intruded upon the defendant's reasonable expectation of privacy by providing investigators with otherwise unknowable details of life.[12] We begin by aggregating the several actions investigators took in acquiring and analyzing the defendant's CSLI. See Henley, 488 Mass. at 113, 171 N.E.3d 1085. Investigators first obtained seven tower dumps, spanning seven different days over the course of slightly more than one month; each tower dump was limited in time to the period immediately before and after the specific robbery for which the CSLI was sought. Investigators then cross-referenced the information obtained from the tower dumps to isolate particular telephone numbers that appeared at more than one location. Thereafter, investigators analyzed the CSLI associated with those telephone numbers, among them the defendant's telephone number, to determine (1) the approximate location of the connecting cellular telephone, (2) the identity of the telephone's user, and (3) the identity of the person with whom the user was communicating.

[12] The Commonwealth does not dispute that the defendant manifested a subjective expectation of privacy in his CSLI records. The defendant submitted an affidavit averring that he never affirmatively permitted law enforcement officers to access his CSLI. See Augustine I, 467 Mass. at 255 & n.38, 4 N.E.3d 846 (subjective expectation of privacy was satisfied where defendant averred that he "never permit[ed] the police or other law enforcement officials access to his telephone records"). Accordingly, we focus on the reasonableness of the defendant's subjective expectation.

***9** These actions, viewed in their entirety, provided investigators with information of a highly personal and private nature. Because tower dumps locate individuals when they are in private settings just as easily as when they are in public settings, they have "the potential to track a cellular telephone user's location in constitutionally protected areas." Augustine I, 467 Mass. at 249, 4 N.E.3d 846. Moreover, tower dumps enable investigators to infer the identity of the individual with whom the user of a particular device was communicating at the moment the device connected to the cell site, and therefore provide investigators with significant insight into the individual's associations.

An owner's location and associations are tied to his or her telephone number and unique identifier, which, here, were used to discern the defendant's identity and that of his suspected accomplice. Moreover, because investigators obtained seven tower dumps spanning seven distinct dates over the course of more than one month, they also were able to piece together a pattern of behavior, that is, not only where an individual was and with whom he or she associated on one occasion, but also where the individual had been and with whom the individual had associated on multiple different occasions.

The collective whole of this personal and private information would have been impossible to obtain

through the use of traditional surveillance techniques. The government learned the defendant's comings and goings during a period of time before he was a suspect, something that could not have been achieved through visual surveillance. See Augustine I, 467 Mass. at 254, 4 N.E.3d 846. Indeed, the sheer volume of information investigators obtained from the tower dumps would have been impossible to gather using traditional surveillance. See id. There is no historic analogue for the ability effortlessly to compile and document the locations, identities, and associations of tens of thousands of individuals, just in case one might be implicated in a criminal act.[13] Even if such a feat were possible, it certainly would be impossible to execute surreptitiously; yet, here, investigators were able to compile and catalogue the locations of more than 50,000 individuals at varying points over more than one month, without any one of them ever knowing that he or she was the target of police surveillance.

[13] Traffic cameras might provide the closest analogue, insofar as they can reveal the retrospective location of potentially a substantial number of people. Traffic cameras, however, only locate a person in public areas, whereas tower dumps provide information about public and private locations. Moreover, while traffic cameras may reveal an individual's physical features, tower dumps enable investigators to determine a person's precise identity using his or her telephone number or unique identifier.

In light of these factors, and in the totality of the circumstances, the collection and subsequent analysis of the seven tower dumps at issue here provided investigators with highly personal and previously unknowable details of the defendant's life. Accordingly, the Commonwealth's use of the seven tower dumps intruded upon the defendant's reasonable expectation of privacy.

The Commonwealth contends that the government's actions here should not be considered a search because the seven tower dumps only produced, in total, three hours of CSLI. In support of its position, the Commonwealth points to Commonwealth v. Estabrook, 472 Mass. 852, 858, 38 N.E.3d 231 (2015), where the court held that no search takes place when police obtain six or fewer hours of targeted CSLI, giving them a list of each cell site with which an identified cellular telephone has connected during that period. We reasoned that, although government collection and use of targeted CSLI over a longer period of time intrudes upon an individual's reasonable expectation of privacy, location information covering six hours or less is too brief in duration to do so. Id.

***10** [18] [19]While Estabrook, 472 Mass. at 855, 38 N.E.3d 231, involved targeted CSLI, its reasoning also is applicable to tower dumps. Given that tower dumps reveal an individual's locations at discrete moments in time, the individual privacy interests implicated by tower dumps are akin to those implicated by targeted CSLI.[14] Compare McCarthy, 484 Mass. at 509, 142 N.E.3d 1090 (no reasonable expectation of privacy in location of individual's vehicle, as revealed by limited number of cameras in particular public location, at specific point in time), with Commonwealth v. Rousseau, 465 Mass. 372, 382, 990 N.E.2d 543 (2013) (reasonable expectation of privacy in entirety of vehicle's movements over thirty-one days). The court's holding in Estabrook, supra at 858, 38 N.E.3d 231, is inapplicable here; the holding permits a warrantless search of up to six continuous hours of CSLI, where, here, the government obtained small increments of CSLI, each falling on a separate day. The rationale in Estabrook was that analyzing six hours or less of telephone call CSLI could not be a search "because the duration is too brief to implicate the person's reasonable privacy interest." See id., quoting Augustine I, 467 Mass. at 254, 4 N.E.3d 846. While the court has determined that analyzing six continuous hours of CSLI does not intrude upon a reasonable expectation of privacy, analyzing small increments of CSLI over the course of several days does. Whereas the former reveals at most one-quarter of one day's activities, the latter reveals a pattern of activity, which implicates comparatively greater privacy interests. See Mora, 485 Mass. at 375-376, 150 N.E.3d 297. Accordingly, although Estabrook, supra, enables the Commonwealth to obtain one or more tower dumps spanning six hours or less without a warrant, it provides no refuge where, as here, the tower dumps span multiple days.

[14] The defendant argues that there is a heightened privacy interest in the context of tower dumps because they provide CSLI on "potentially thousands of innocent persons." The rights secured by art. 14, however, "are specific to the individual." Commonwealth v. Delgado-Rivera, 487 Mass. 551, 554, 168 N.E.3d 1083 (2021), cert. denied, —— U.S. ——, 142 S. Ct. 908, —— L.Ed.2d —— (2022). Thus, in

determining whether a search occurred, we focus exclusively on the defendant's privacy interests, and cannot consider the privacy interests of others. See id. at 556, 564, 168 N.E.3d 1083 (defendant could not rely on codefendant's reasonable expectation of privacy in cellular telephone in establishing that search occurred).

c. Whether the Commonwealth's acquisition of the tower dumps was constitutionally infirm. Because the Commonwealth's actions constituted a search, we must determine whether its conduct in effectuating that search was reasonable.

[20] [21] [22] [23] [24] [25]Article 14 "require[s] that all searches and seizures be reasonable." Commonwealth v. Alexis, 481 Mass. 91, 97, 112 N.E.3d 796 (2018). "Searches and seizures conducted outside the scope of a valid warrant are presumed to be unreasonable," and therefore unconstitutional. Commonwealth v. Balicki, 436 Mass. 1, 8, 762 N.E.2d 290 (2002). "To be reasonable in the constitutional sense," a search conducted pursuant to a warrant must be supported by probable cause. Commonwealth v. Neilson, 423 Mass. 75, 77, 666 N.E.2d 984 (1996). To comport with constitutional protections, an affidavit in support of a search warrant for CSLI must demonstrate "probable cause to believe [1] 'that a particularly described offense has been, is being, or is about to be committed, and [2] that [the CSLI being sought] will produce evidence of such offense or will aid in the apprehension of a person who the applicant has probable cause to believe has committed, is committing, or is about to commit such offense' " (alterations in original). Estabrook, 472 Mass. at 870, 38 N.E.3d 231, quoting Augustine I, 467 Mass. at 256, 4 N.E.3d 846. Accordingly, the warrant affidavit must show "a sufficient nexus between the criminal activity for which probable cause has been established and the physical location of the cell phone recorded by the CSLI." Commonwealth v. Hobbs, 482 Mass. 538, 547, 125 N.E.3d 59 (2019). A nexus is sufficient where "the information available to police 'provide[s] a substantial basis for concluding that evidence connected to the crime will be found [in] the [location to be searched].' " See Commonwealth v. Ortiz, 487 Mass. 602, 606, 169 N.E.3d 172 (2021), quoting Commonwealth v. Escalera, 462 Mass. 636, 642, 970 N.E.2d 319 (2012).

i. Probable cause. The defendant argues that the search of the CSLI here was unlawful because neither supporting affidavit established probable cause. Specifically, he maintains that the search warrant affidavits did not demonstrate a nexus between the commission of the offenses and the CSLI to be searched, as the affidavits did not set forth particularized evidence that the perpetrator had used a cellular telephone during the commission of the offenses, or in the periods immediately before or thereafter. Relying on Commonwealth v. Morin, 478 Mass. 415, 426, 85 N.E.3d 949 (2017), the defendant contends that the only statements in the affidavits demonstrating that the perpetrator "possessed a phone during the robberies" were general conclusions about the ubiquity of cellular telephones, which cannot be used to establish probable cause.[15] See id. (in demonstrating existence of probable cause to search contents of cellular telephone, "police may not rely on the general ubiquitous presence of cellular telephones in daily life, or an inference that friends or associates most often communicate by cellular telephone, as a substitute for particularized information that a specific device contains evidence of a crime").

15 The affidavit in support of the second warrant stated that "[s]mart phone/electronic device utilization is one of the most common activities today and the vast majority of American society bring their device [wherever] they go, almost by habit." Similarly, the affidavit in support of the first warrant stated that "it is very common for a person to have a cellular telephone with them at all times, even during and after the commission of a crime."

***11** [26] [27] [28] [29]As the defendant contends, to establish probable cause to search the contents of a cellular telephone, "it is not enough that the object of the search may be found in the place subject to search.... Rather, the affidavit must demonstrate that ... the items sought will be located in the particular data file ... to be searched" (emphasis in original). Commonwealth v. Broom, 474 Mass. 486, 496, 52 N.E.3d 81 (2016). General statements concerning the ubiquity of cellular telephones are insufficient to establish the required nexus. See Morin, 478 Mass. at 426, 85 N.E.3d 949. This "more narrow and demanding standard," however, is applicable to searches of cellular telephones and computer-like devices, see Hobbs, 482 Mass. at 547 n.11, 125 N.E.3d 59, quoting Commonwealth v. Holley, 478 Mass. 508, 524, 87 N.E.3d 77 (2017), and not to searches of CSLI. While a search of the contents of a cellular telephone permits police to view "vast amounts of sensitive and private data," the "same

concerns are not present in the context of CSLI, where the cell phone's location, and not its contents, is sought." Hobbs, supra. Thus, when seeking a warrant to search CSLI, investigators need not establish "that the defendant actually used or possessed his [or her] cell phone during the commission of the crimes" (emphasis added), which they would be required to do in order to search its contents. See id. at 546, 125 N.E.3d 59. Rather, the nexus requirement is satisfied as long as there is a substantial basis to conclude that the defendant used his or her cellular telephone during the relevant time frame, such that there is probable cause to believe the sought after CSLI will produce evidence of the crime. See id.

Here, it is undisputed that the Commonwealth established probable cause to believe that the offenses described in the warrant had been committed. Accordingly, we consider whether each warrant affidavit established a substantial basis to believe that a search of the requested tower dumps would produce evidence of the crimes under investigation, or would aid in the apprehension of the perpetrator. See Estabrook, 472 Mass. at 870, 38 N.E.3d 231. Because the probable cause analysis is "fact-intensive and [must] be resolved on a case-by-case basis," we review each warrant application separately. See Commonwealth v. Vasquez, 482 Mass. 850, 867, 130 N.E.3d 174 (2019), S.C., 485 Mass. 405, 150 N.E.3d 723 (2020), cert. denied, —— U.S. ——, 141 S. Ct. 2601, 209 L.Ed.2d 735 (2021). We begin with the second warrant, in which the warrant affidavit discussed all of the offenses under investigation in depth, before considering the less-detailed first warrant.[16]

16 The affidavit in support of the second warrant did not rely on any evidence obtained pursuant to the first warrant. Accordingly, suppression of the evidence from the first warrant would have no bearing on the admissibility of the evidence obtained pursuant to the second warrant. See Commonwealth v. Tyree, 455 Mass. 676, 692, 919 N.E.2d 660 (2010).

[30]A. Second warrant. The second search warrant affidavit described several notable similarities between the offenses. Each robbery, as well as the attempted robbery, was committed against a clerk at a store, almost always a convenience store, in or around Boston, sometime during the period between dusk and dark. The perpetrator always brandished a black semiautomatic pistol, which he held in his right hand. Witnesses consistently described the perpetrator as a light-skinned Black or Hispanic male, approximately six feet, two inches tall, with a medium to thin build, dressed in a black hooded jacket, dark-colored pants, black gloves, black shoes, and a black or red mask. In addition, on two occasions, surveillance footage showed a hole or a light-colored blemish on the robber's jacket. Collectively, this evidence provided a substantial basis to believe, see Escalera, 462 Mass. at 642, 970 N.E.2d 319, that the same individual had committed all of the offenses, see Commonwealth v. Marrero, 427 Mass. 65, 71-72, 691 N.E.2d 918 (1998), quoting Commonwealth v. Cordle, 404 Mass. 733, 740, 537 N.E.2d 130 (1989), S.C., 412 Mass. 172, 587 N.E.2d 1372 (1992) ("Although the circumstances of the ... offenses were not identical, we think they were sufficiently similar to justify the inference that they were the product of the same mind" [alterations in original]).

The second warrant affidavit also described evidence indicating that a suspected coventurer had acted as a getaway driver in at least three of the offenses under investigation. The robberies took place from two to eleven miles apart, and some of the locations were not near any public transportation. On October 4, 2018, the store clerk saw the perpetrator enter the passenger's side of a dark-colored sedan, without removing his mask, before quickly departing the scene. On October 6, 2018, a surveillance camera recorded video footage of a dark-colored sedan or coupe traveling at a high rate of speed along the perpetrator's path of flight, as recorded by a separate surveillance camera. Moreover, on October 31, 2018, police canines detected the perpetrator's scent along his reported flight path, but the scent ended abruptly in a public area with no nearby public transportation, which could have indicated that the perpetrator entered a vehicle. See Wilkerson, 486 Mass. at 172, 156 N.E.3d 754 (considering existence of and coordination with coventurer in finding probable cause to obtain CSLI).

***12** The search warrant affidavit also described facts suggesting some reason to believe that the defendant and a coventurer had communicated with one another from a distance, either prior to or after the commission of the offense. The detective seeking the search warrant averred that, based on his experience and training, violent crimes such as those at issue often require some level of coordination amongst coventurers. See Holley, 478 Mass. at 522, 87 N.E.3d 77 (statement that particular crime often involves coordination among codefendants by cellular telephone was considered as one factor in probable cause analysis). This coordination could have taken place while the perpetrators were apart; the robber appeared to travel some distance on foot prior to or after most of the robberies, and therefore was at least temporarily separated from the getaway driver. The evidence that the perpetrator

and the coventurer communicated from a distance, when combined with the affiant's statements about the over-all ubiquity of cellular telephones, provided reasonable grounds to believe that the robber and the getaway driver had used cellular telephones to communicate. See Commonwealth v. Almonor, 482 Mass. 35, 45, 120 N.E.3d 1183 (2019), quoting Augustine I, 467 Mass. at 245-246, 4 N.E.3d 846 (cellular telephones "exist as 'almost permanent attachments to [their users'] bodies' " and "physically accompany their users everywhere").

Because there was reason to believe that the perpetrator used a cellular telephone to communicate with a coventurer around the time of the offenses, there also was probable cause to believe that either the perpetrator's telephone or the coventurer's telephone would have produced telephone call CSLI that would appear in the requested tower dumps, and likely in more than one of the tower dumps. This CSLI, in turn, would enable investigators to isolate potential suspects by determining which, if any, individuals had been near the scene of two or more of the offenses. See Hobbs, 482 Mass. at 546, 125 N.E.3d 59 (location of cellular telephone as recorded by CSLI can be "reasonably expected to be the location of the person possessing the cell phone"). Accordingly, the second warrant affidavit was supported by probable cause.

[31]B. First warrant. The affidavit in support of the first warrant, much like the affidavit in support of the second warrant, outlined significant similarities amongst the offenses then under investigation, and therefore afforded a substantial basis to believe that the offenses had been committed by the same individual. Additionally, the affidavit demonstrated reason to believe that the perpetrator had been, at least occasionally, assisted by a coventurer.

The first warrant affidavit did not, however, set forth any particularized information that the perpetrator or the coventurer owned a cellular telephone or communicated with one another from a distance. Compare Commonwealth v. Louis, 487 Mass. 759, 765, 169 N.E.3d 1173 (2021) (evidence showed that suspect "communicated with another robbery suspect via cell phone on the date of the murder"); Hobbs, 482 Mass. at 547, 125 N.E.3d 59 (affidavit for targeted CSLI must show that "suspect was known to own or use a particular cell phone"). Moreover, the first warrant affidavit did not discuss the need for coventurers to communicate when committing a robbery, nor did it point to any evidence that the perpetrator and the coventurer had been separated during the commission of the crime such that they would have had to communicate from a distance.

Thus, the only ground in the first affidavit upon which to conclude that the perpetrator had possessed or used a cellular telephone to aid in accomplishing the crimes was the affiant officer's statement that "it is very common for a person to have a cellular telephone with them at all times." See Commonwealth v. Rossetti, 349 Mass. 626, 632, 211 N.E.2d 658 (1965) (probable cause must be based on particularized facts, not "simply general conclusions"). Therefore, the evidence obtained pursuant to the first warrant must be suppressed. See Commonwealth v. Andre, 484 Mass. 403, 408, 142 N.E.3d 60 (2020).

[32]ii. Particularity.[17] The defendant also argues that the search here was unreasonable because the search warrants themselves lacked particularity, and therefore were unconstitutional general warrants. He maintains that, if the search of the CSLI was a search in the constitutional sense with respect to him, it necessarily follows that everyone whose CSLI was contained in the tower dumps also was searched. This would render the warrants unconstitutional general warrants because they permitted law enforcement to search the CSLI of third parties who merely were present in the vicinities of the offenses being investigated, without any probable cause. In the defendant's view, the only way to ensure that the scope of a search is sufficiently narrow is to require warrants for CSLI to identify the targeted suspect by name or telephone number.

[17] Having concluded that the first warrant was not supported by probable cause, we need not consider whether it lacked particularity.

***13** [33] [34] [35] [36]As the defendant emphasizes, art. 14 "require[s] that a search warrant describe with particularity the places to be searched and the items to be seized." Commonwealth v. Perkins, 478 Mass. 97, 106, 82 N.E.3d 1024 (2017). The particularity requirement "both defines and limits the scope of the search and seizure." Commonwealth v. Pope, 354 Mass. 625, 629, 241 N.E.2d 848 (1968). "The dual purposes of the particularity requirement are '(1) to protect individuals from general searches and (2) to provide the Commonwealth the opportunity to demonstrate, to a reviewing court, that the scope of the officers' authority to search was properly limited.' " Holley, 478 Mass. at 524, 87 N.E.3d 77, quoting Commonwealth v. Valerio, 449 Mass. 562, 566-567, 870 N.E.2d 46 (2007). See Riley

v. California, 573 U.S. 373, 403, 134 S.Ct. 2473, 189 L.Ed.2d 430 (2014) (general searches "allowed British officers to rummage through homes in an unrestrained search for evidence of criminal activity"). To this end, a warrant must describe the object of the search with enough specificity that investigators can identify, with reasonable certainty, that which they are authorized to search, thus ensuring that they search only those items for which probable cause exists. See Commonwealth v. Treadwell, 402 Mass. 355, 359, 522 N.E.2d 943 (1988).

[37] [38]The precise degree of particularity required "necessarily var[ies] according to the circumstances and the type of items involved." See Commonwealth v. Freiberg, 405 Mass. 282, 298, 540 N.E.2d 1289, cert. denied, 493 U.S. 940, 110 S.Ct. 338, 107 L.Ed.2d 327 (1989), quoting United States v. Johnson, 541 F.2d 1311, 1314 (8th Cir. 1976). More generality may be tolerated where a more precise description would be impracticable. See, e.g., Henley, 488 Mass. at 119, 171 N.E.3d 1085 (warrant for search of contents of cellular telephone need not particularly identify specific electronic file to be searched "where officers had no knowledge of where on the cell phone evidence might be located, or in what format, but specifically identified the type of evidence sought"); Commonwealth v. McDermott, 448 Mass. 750, 775, 864 N.E.2d 471, cert. denied, 552 U.S. 910, 128 S.Ct. 257, 169 L.Ed.2d 188 (2007) (warrant permitting search of computer files relating to defendant's mental health did not lack particularity because "[t]he lack of further specificity was practical in the circumstances, and the mental health category was limited as much as possible in the circumstances").

We do not agree that all of the individuals whose CSLI was revealed by the tower dumps were subjected to a search in the constitutional sense. The defendant's reasonable expectation of privacy was invaded not simply by law enforcement's possession of his anonymized CSLI, but also by the investigating officers' possession and analysis of that CSLI, the aggregate of which provided investigators with a revealing mosaic of the defendant's private life. See Henley, 488 Mass. at 109, 171 N.E.3d 1085 (search inquiry under mosaic theory focuses on "the governmental action as a whole"). See also Kerr, supra at 320 (search occurs where government "collection and subsequent analysis" of data reveals mosaic [emphasis added]). A cursory examination of anonymized CSLI would not permit investigators to infer the identity of any given individual, where within the cell site's radius that person had been, or with whom he or she had associated; thus, such an examination would not intrude upon a reasonable expectation of privacy. See Andresen v. Maryland, 427 U.S. 463, 482 n.11, 96 S.Ct. 2737, 49 L.Ed.2d 627 (1976); McCarthy, 484 Mass. at 504, 142 N.E.3d 1090. Only those individuals whose CSLI was subject to further analysis -- such as the defendant -- were subject to a search within the meaning of art. 14. The question, then, becomes whether the second warrant sufficiently limited the set of telephone numbers and their associated CSLI that investigating officers were permitted to analyze, and therefore to search.

As the defendant maintains, the scope of the search authorized by the warrant, on its face, is not entirely clear. Under "property to be searched," the warrant lists the "records and information associated with the cellular telephone towers/sites ('Cell Towers/Sites') that provided cellular service" in the vicinity of the crimes during the forty-minute period surrounding each offense. With respect to "particular items to be seized," the warrant identifies the categories of information that the service provider must disclose, including, inter alia, the telephone number of the connecting cellular telephone and the sector of the cell site providing service to each connecting telephone. Thus, if read in isolation, the warrant would permit investigators to analyze, without limitation, any and all CSLI in the tower dumps. Investigators permissibly could select any telephone number from among the 50,000 provided and thereafter conduct a search by determining the identity of that individual, his or her location, and with whom he or she had been communicating, all without even an iota of suspicion. Judicial authorization of such "general exploratory rummaging" undoubtedly would violate the particularity requirements of art. 14. See Balicki, 436 Mass. at 7, 762 N.E.2d 290.

***14** [39]Any deficiencies in the warrant itself, however, were remedied by the supporting affidavit, which adequately limited the scope of the search.[18] See Commonwealth v. Dorelas, 473 Mass. 496, 499 n.3, 43 N.E.3d 306 (2016) (although warrant lacked particularity on its face, search was permissible because affidavit limited scope of search). The supporting affidavit explained that investigators sought to obtain the tower dumps in order "to identify and/or verify commonalities within [the] requested records." Thus, police were permitted to isolate and analyze the CSLI of those telephone numbers that appeared in two or more tower dumps, but no others. Otherwise put, because the warrant authorized the search of only a narrow subset of the CSLI, for purposes of identifying a common suspect, it was sufficiently particular.[19]

[18] A supporting affidavit can remedy a particularity defect in a warrant where (1) the warrant makes "specific reference to the affidavit" and (2) the officer who submitted the affidavit in support of the warrant was "one of the [officers] executing the warrant." See Commonwealth v. Todisco, 363 Mass. 445, 450, 294 N.E.2d 860 (1973). See also E.B. Cypher, Criminal Practice and Procedure § 5:101 (4th ed. 2021).

[19] The scope of the search was further limited because the warrant permitted investigators to obtain data only for brief periods of time (measured in minutes) surrounding the commission of the offenses. See Commonwealth v. Hobbs, 482 Mass. 538, 546, 549, 125 N.E.3d 59 (2019) (duration of search of targeted CSLI must be limited to period of time bearing sufficient nexus to crime under investigation); Commonwealth v. Dorelas, 473 Mass. 496, 503, 43 N.E.3d 306 (2016) (search of electronically stored information must be limited to electronic files where evidence of crime "may reasonably be found").

[40] [41]As the scope of the search was limited in this manner, that the warrant did not identify a suspect by name or telephone number did not render it insufficiently particular. Unlike an arrest warrant, a search warrant "need not identify a specific criminal suspect -- although frequently it does." Commonwealth v. Martinez, 476 Mass. 410, 419, 71 N.E.3d 105 (2017). See Commonwealth v. Mora, 477 Mass. 399, 404, 77 N.E.3d 298 (2017) ("it is not necessary for the [warrant] application to identify a suspect"). "[S]earch warrants are often employed early in an investigation, perhaps before the identity of any likely criminal and certainly before all the perpetrators are or could be known." Zurcher v. Stanford Daily, 436 U.S. 547, 561, 98 S.Ct. 1970, 56 L.Ed.2d 525 (1978). Requiring police to identify a presently unknown suspect by name "would unreasonably thwart the ability of the police to investigate a crime." See Freiberg, 405 Mass. at 299, 540 N.E.2d 1289. Although limiting a search of CSLI to an identified suspect might be the better practice where possible, it is not required where, as here, the suspect's identity is unknown and the scope of the search is appropriately limited through other means. Compare id. at 299-300, 540 N.E.2d 1289 (warrant permitting seizure of "instrument[s] used in crime" was sufficiently particular because "the exact characteristics of [the instruments] were not known to [police]" and warrant affidavit "made it reasonably clear that the 'instrumentalities' sought were related to a crime of violence"), with Commonwealth v. Taylor, 383 Mass. 272, 276, 418 N.E.2d 1226 (1981) (warrant was not sufficiently particular where "the particularization was available but was not used in the warrant").

[42]c. Prospective limits on tower dump warrants. General Laws c. 211, § 3, grants this court "general superintendence of the administration of all courts of inferior jurisdiction." Under this authority, we may "impose requirements (by order, rule or opinion) that go beyond constitutional mandates," Commonwealth v. O'Brien, 432 Mass. 578, 584, 736 N.E.2d 841 (2000), quoting Commonwealth v. Bastarache, 382 Mass. 86, 102, 414 N.E.2d 984 (1980), including those governing the issuance and content of warrants, see, e.g., Preventive Med. Assocs., Inc. v. Commonwealth, 465 Mass. 810, 821-822, 992 N.E.2d 257 (2013); Rodriques v. Furtado, 410 Mass. 878, 888, 575 N.E.2d 1124 (1991). Although this power "is to be used sparingly," it appropriately may be exercised "in exceptional circumstances and where necessary to protect substantive rights in the absence of an alternative, effective remedy" (citation omitted). MacDougall v. Commonwealth, 447 Mass. 505, 510, 852 N.E.2d 1080 (2006).

***15** While the decision we reach today is grounded in individual rights protected by art. 14, we recognize the potential invasions of privacy that could befall those innocent and uninvolved third parties whose CSLI is revealed once an application for a search warrant is allowed. See generally Owsley, supra at 44. Unlike defendants in criminal cases, these individuals may never know that their CSLI was provided to law enforcement, let alone be able to exercise any sort of control or oversight over how their data is used. See id. at 46. Such a situation presents far too great a risk of unwarranted invasions of privacy, whether intentional or inadvertent, malicious or innocent. Cf. Preventive Med. Assocs., Inc., 465 Mass. at 821-822, 992 N.E.2d 257 (exercise of superintendence power was warranted given risk of irreparable invasion of privacy).

[43]Accordingly, in all future cases, only a judge may issue a search warrant for tower dumps. See id. at 822, 992 N.E.2d 257 ("as an exercise of our supervisory powers, we shall require in all future cases that only a Superior Court judge may issue a search warrant seeking e-mails of a criminal defendant under indictment"); Rodriques,

410 Mass. at 888, 575 N.E.2d 1124 ("under the exercise of our general superintendence powers, we shall deem a warrant authorizing the search of a body cavity to be invalid unless issued by the authority of a judge"); G. L. c. 272, § 99 F 1 ("warrant to intercept wire or oral communications" must be issued by Superior Court judge).

The warrant must include protocols for the prompt and permanent disposal of any and all data that does not fit within the object of the search following the conclusion of the prosecution. See Matter of the Application of the U.S.A. for an Order Pursuant to 18 U.S.C. §§ 2703(c) & 2703(d) Directing AT&T, Sprint/Nextel, T-Mobile, Metro PCS & Verizon Wireless to Disclose Cell Tower Log Info., 42 F. Supp. 3d 511, 519 (S.D.N.Y. 2014) (warrant application for tower dump must "outline[ ] a protocol to address how the Government will handle the private information of innocent third-parties whose data is retrieved"); Matters of the Search of Cellular Tel. Towers, 945 F. Supp. 2d 769, 771 (S.D. Tex. 2013) ("the Government is ordered to return any and all original records and copies ... to the Provider, which are determined to be not relevant to the Investigative Agency's investigation"); Matter of the Application of the U.S.A. for an Order Pursuant to 18 U.S.C. § 2703(d) Directing Providers to Provide Historical Cell Site Locations Records, 930 F. Supp. 2d 698, 702 (S.D. Tex. 2012) (warrant for tower dump must include protocol for handling of "data related to innocent people who are not the target of the criminal investigation"). See also G. L. c. 276, § 3 ("all property seized [pursuant to a search warrant] shall be restored to the owners thereof" "[a]s soon as may be").

[44] [45] [46]d. Retroactivity. Because we are announcing a constitutionally mandated requirement for the first time, we also must consider whether our holding is to be applied retroactively. The retroactivity of a constitutional rule of criminal procedure turns on whether the rule is "new" or "old." Commonwealth v. Ashford, 486 Mass. 450, 457, 159 N.E.3d 125 (2020). "[A] case announces a new rule if the result was not dictated by precedent" (emphasis in original). Commonwealth v. Bray, 407 Mass. 296, 301, 553 N.E.2d 538 (1990), quoting Teague v. Lane, 489 U.S. 288, 301, 109 S.Ct. 1060, 103 L.Ed.2d 334 (1989). "[A] holding is not so dictated ... unless it would have been 'apparent to all reasonable jurists.' " Chaidez v. United States, 568 U.S. 342, 347, 133 S.Ct. 1103, 185 L.Ed.2d 149 (2013), quoting Lambrix v. Singletary, 520 U.S. 518, 527-528, 117 S.Ct. 1517, 137 L.Ed.2d 771 (1997).

[47]The rule we announce today undoubtedly is new; we are unaware of any existing statute or prior judicial opinion that would have obligated investigators to obtain a search warrant before acquiring or analyzing tower dumps. See Augustine I, 467 Mass. at 257, 4 N.E.3d 846. Accordingly, our holding applies prospectively and to those cases that are active or pending on direct review on the date of issuance of the rescript in this case.[20] See Diatchenko v. District Attorney for the Suffolk Dist., 466 Mass. 655, 664, 1 N.E.3d 270 (2013), S.C., 471 Mass. 12, 27 N.E.3d 349 (2015).

20 New rules apply retroactively if the rule "is 'substantive,' defining a class of conduct that cannot be deemed criminal, or prohibiting imposition of a type of punishment on a particular class of defendants" or "establishes a 'watershed' rule of criminal procedure that is 'implicit in the concept of ordered liberty,' implicating the fundamental fairness of the proceeding." Augustine I, 467 Mass. at 257 n.39, 4 N.E.3d 846, quoting Diatchenko v. District Attorney for the Suffolk Dist., 466 Mass. 655, 665, 1 N.E.3d 270 (2013), S.C., 471 Mass. 12, 27 N.E.3d 349 (2015).

***16** 3. Conclusion. The Commonwealth's actions in this case intruded upon the defendant's reasonable expectation of privacy and therefore effectuated a search under art. 14. Nonetheless, because the second warrant was sufficiently particular and supported by probable cause, the evidence obtained pursuant to the second warrant need not be suppressed. All evidence stemming from the tower dumps provided pursuant to the first warrant, however, must be suppressed because the warrant was not supported by probable cause. Our decision is prospective, and also applies to those cases that are active or pending on direct review on the date of issuance of the rescript in this case. Henceforth, before acquiring and analyzing a series of tower dumps, the Commonwealth must obtain a warrant from a judge. Before issuing the requested warrant, the judge must ensure that it provides a protocol for the disposal of any data that falls outside the scope of the search.

So ordered.

To: Lieutenant Colonel John D. Pinkham, #2772, Deputy Superintendent
Lieutenant Colonel Mark D. Cyr, #2728, Division Commander, DHS
Major Jimi Grasso, #2529, Deputy Division Commander, DHS
Detective Captain John B. Nunes, #2426, Executive Officer

From: Lieutenant Michael A George #2998, Technical Services Unit Commander

Subject: TSU Posting for (1) Sergeant – ALPR Administrator – Interview & Selection

1. On June 22, 2023, Human Resources posted an opening on Power DMS for one (1) Sergeant to serve in the Technical Services Unit within the Division of Homeland Security & Preparedness for the position of Supervisor & ALPR Administrator. Any interested Sergeant was required to submit a To/From and resume to Human Resources and Detective Captain John Nunes, no later than 1700 hours on Monday, July 3rd, 2023. The following two Department members, listed by preference, applied, and were interviewed for the TSU posting om 7/11/23:

Sergeant Ryan M Walczak #3731, State Police Millbury
Sergeant Jason R Macomber #3307, Commercial Driver Licensing

All candidates were interviewed by Major Jimi Grasso, Detective Captain John Nunes and I at GHQ. Lt Colonel Mark Cyr was also present during the interviews. Each candidate was presented with the following standardized questions:

1. Please explain why you applied to be the ALPR Coordinator of the TSU and describe your understanding of the TSU
2. Please explain additional experiences, qualifications, and/or any skill set you feel would be important to the position of TSU/ALPR coordinator.
3. Can you summarize MSP Policy TRF-11 “ALPR”
4. The ALPR Administrator is responsible for training, supervision, and ALPR program management. Please describe any projects you have initiated or have been assigned from inception to completion.
5. Are you willing to be on-call and available to work on short notice, including nights and weekends? Are you able to provide a multi-year commitment and attend out of state training?
6. We are interviewing several candidates for this position, why are you the candidate we should select.
7. This position requires a candidate with strong interpersonal skills. How would you describe your ability to interact with others inside and outside of the department?
8. Why are you leaving your current position?
9. Where do you see yourself in two years?
10. Do you have any questions for us?

3. At the conclusion of the interviews, Major Grasso, Detective Captain Nunes, and I discussed the candidates and their qualifications. Candidates were evaluated on their resumes and responses to the interview questions to determine who would best fulfill the mission of the Technical Services Unit. The following synopsis of each candidate interview provides details of their suitability to make the most significant contribution to the Technical Services Unit.

4. On Tuesday July 11, 2023, at 1200 hrs D-Capt Nunes and I interviewed Sgt Ryan Walczak at GHQ. Sgt Walczak was attired in a business suit and presented neatly and professionally. His responses were knowledgeable, thoughtful, and articulate. His resume showed extensive investigative experience in specialty units including SERT, CAT teams and the Gang Unit where he participated in wiretap investigations, GPS tracking invests and pole camera operations. His interaction with the interviewers was enthusiastic and left a positive impression. He had a high understanding of the TSU responsibilities, he recited all the key points of the ALPR policy (TRF-11) and case law (CW v McCarthy), has experience in project management in the Gang Unit and has experience creating power point presentations and presenting to MSP Academy and Local PD's while in the Gang Unit.

5. On Tuesday July 11, 2023, at 1235 hrs D-Capt Nunes and I interviewed Sgt Jason Macomber at GHQ. Sgt Macomber was attired in a business suit and presented neatly and professionally. His responses were knowledgeable, thoughtful, and articulate. His resume showed experience in specialty units including CODIS, Dive Team and CDL licensing. His interaction with the interviewers was enthusiastic and left a positive impression. He understood the TSU responsibilities; he recited all the key points of the ALPR policy (TRF-11) and case law (CW v McCarthy). He has experience in project management while in the CODIS Unit and has presented water safety training to the MSP Academy recruits while on the Dive Team.

6. Both candidates interviewed well and proved capable of assuming the ALPR administrator position. To narrow the selection process, I spoke with members of the specialty units both members had recently left (SERT and the Dive Team) as well as members of TSU to gain an understanding of interpersonal relationships and work ethic. Both candidates received good reviews however Sgt Walczak received the highest praise on interpersonal skills, work ethic and unit cohesion. This information was shared with Major Grasso and Detective Captain Nunes.

7. Based on all the factors listed above I respectfully suggest the selection of Sgt Ryan Walczak #3731 for the TSU/ALPR Administrator position.

Respectfully submitted,

Lt Michael A George #2998
Division of Homeland Security and Preparedness
Technical Services Unit

Subject: UTILIZATION OF VIDEO SYSTEMS IN THE COMMONWEALTH WATCH CENTER

Policy:

The availability and use of video at the Commonwealth Watch Center provide opportunities for enhancing security for the Commonwealth's infrastructure, major events, government agencies, and coastal maritime and port operations. The use of video systems increases the productivity and effectiveness of law enforcement and public safety agencies and provides opportunities to increase officer and public safety.

It is the policy of the Department of the State Police (Department) to respect the privacy interests of all persons in the Commonwealth. The Watch Center shall only utilize video systems in furtherance of official and legitimate law enforcement operations and public safety or security and shall comply with all applicable laws and Department Policies and Procedures, Rules and Regulations, Fusion Center, and/or unit-specific operating procedures.

Purpose and applicability:

A. Establish guidelines and procedures for the proper use and application of video systems utilized by the Commonwealth Watch Center.

B. To provide guidelines and principles for collecting, accessing, disseminating, and retaining video system recordings, data, and information.

C. To ensure that such recordings, data, and information are used for legitimate law enforcement purposes and that individuals' privacy, civil rights, and civil liberties are not violated.

D. Excluding Cruiser Mounted Cameras and Body Worn Cameras governed by ADM-35 and Automatic License Plate Recognition (ALPR) technology governed by TRF-11, this policy applies to any and all live-feed video systems, with or without video recording capabilities, accessible within the Commonwealth Watch Center, including, but not limited to:

(1) Department Video Systems;

(2) External Video Systems;

(3) Massachusetts Coastal Maritime Security Video System (CMSVS);

(4) MassDOT Highway Cameras; and

(5) Any additional live-feed video systems, with or without video recording capabilities, utilized on a long-term or temporary basis including instances such as covert operations, special events, or demonstration/trial purposes.

Definitions:

Department Video Systems: All video camera systems operated and maintained by the Department with live-feed viewing, with or without video recording capabilities, but not limited to, Department-operated building and infrastructure security camera systems and video cameras operated by the MSP Air Wing with the ability to provide live-feed video or imagery, with or without recording capabilities, through the use of aviation aircraft and unmanned aerial vehicles (UAVs), but excluding Cruiser Mounted Cameras and Body Worn Cameras as governed by ADM-35 and Automatic License Plate Recognition (ALPR) technology as governed by TRF-11

External Video Systems: All video camera systems operated and maintained by agencies, municipalities, or private entities outside of the Department that provide the Commonwealth Watch Center with live-feed video or imagery with or without video recording capabilities.

Live-Feed Video or Imagery: All video or images, digital or analog, streamed or transmitted from a live, not recorded, source.

Grant Provisions: The provisions of the U.S. Department of Homeland Security / Federal Emergency Management Agency Port Security Grant (Sub Account No. EMW-2020-PU-0056) awarded to the Massachusetts Executive Office of Public Safety (EOPSS), effective on July 1, 2022, and any/all subsequent related grants or award(s).

Massachusetts Coastal Maritime Security Video System (CMSVS): A U.S Department of Homeland Security / Federal Emergency Management Agency grant funded, Executive Office of Public Safety and Security secure network of port and maritime security cameras connected to an isolated server designed to be both interoperable with existing Department of Homeland Security Urban Security Initiative and United States Coast Guard camera systems and accessible to participating federal, state, and municipal agencies.

MassDOT Highway Cameras: A Massachusetts Department of Transportation video camera system providing live-feed video or imagery, with or without recording capabilities, of highways, roadways, and other location points throughout the Commonwealth.

Administration & Operation:

A. The Department shall manage, maintain, and oversee all Department video systems. Department equipment, recordings, data, and information shall be acquired, processed, maintained, disseminated, and/or disposed of in accordance with this policy, Department policy, Fusion Center Standard Operating Procedures, grant provisions, and all applicable laws.

B. External video systems shall be managed, maintained, and overseen by the respective agencies and municipalities responsible for such systems. External video

system recordings, data, and information shall be acquired, processed, maintained, disseminated, and/or disposed of in accordance with any applicable agreement with the entity responsible for each external video system as well as this policy, Department policy, Fusion Center Standard Operating Procedures, grant provisions, and all applicable laws.

C. The Department shall, as delegated by the Colonel or a designee and on behalf of and by agreement with EOPSS, manage, maintain, and oversee CMSVS. CMSVS equipment, recordings, data, and information shall be acquired, processed, maintained, disseminated, and/or disposed of in accordance with this policy, Department policy, Fusion Center Standard Operating Procedures, grant provisions, and all applicable laws.

Authorized Access and Uses:

A. Access to video viewable at the Commonwealth Watch Center that are not available to the general public shall be restricted to authorized Watch Center employees, Fusion Center employees, Department employees with Watch Center access, and other individuals authorized by the Commonwealth Watch Center supervisor, Fusion Center Commander, Division Commanders, or the Colonel or designee.

B. Use of video viewable at the Commonwealth Watch Center video are strictly limited to law enforcement and public safety purposes only. The following are valid law enforcement and public safety purposes:

(1) Preventing, monitoring and/or mitigating any threat to infrastructure, government, homeland security, port or coastal security, major events, law enforcement, or public health and safety;

(2) Supporting law enforcement and public safety agencies during major events, critical incident responses, and exigent circumstances;

(3) Criminal investigations;

(4) Crime analysis; and

(5) Criminal intelligence gathering.

C. Watch Center personnel and other authorized users shall not utilize video systems to monitor or gather information about:

(1) Individuals or organizations solely on the basis of their religious, political, social views or activities; or

(2) An individual's or organization's participation in a particular non-criminal organization or lawful event; or

(3) An individual's age, race, ethnicity, religion, citizenship, place of origin, disability, gender, gender identity, genetic information, or sexual orientation unless such information is relevant to the individual's criminal conduct or activity or if required to identify the individual.

Restricted Uses and Limitations:

A. Transmitting or recording audio on a Commonwealth Watch Center video device is strictly prohibited. Due to the possibility of violating legitimate privacy expectations, inadvertently recording protected conversations, or unintentionally violating M.G.L. c. 272, §99 (Interception of Wire and Oral Communications), all Commonwealth Watch center video system devices shall be configured so they do not transmit or record audio unless otherwise permitted by law.

B. Using or requesting the use of Commonwealth Watch Center video for personal use is strictly prohibited and considered employee misconduct as well as a violation of this policy.

C. Commonwealth Watch Center video equipment and technology shall not be intentionally used for viewing, recording, or transmitting images or video in a criminal investigation at any location or property where a person has a reasonable expectation of privacy unless:

(1) A warrant or court order has been approved for the search of the property;

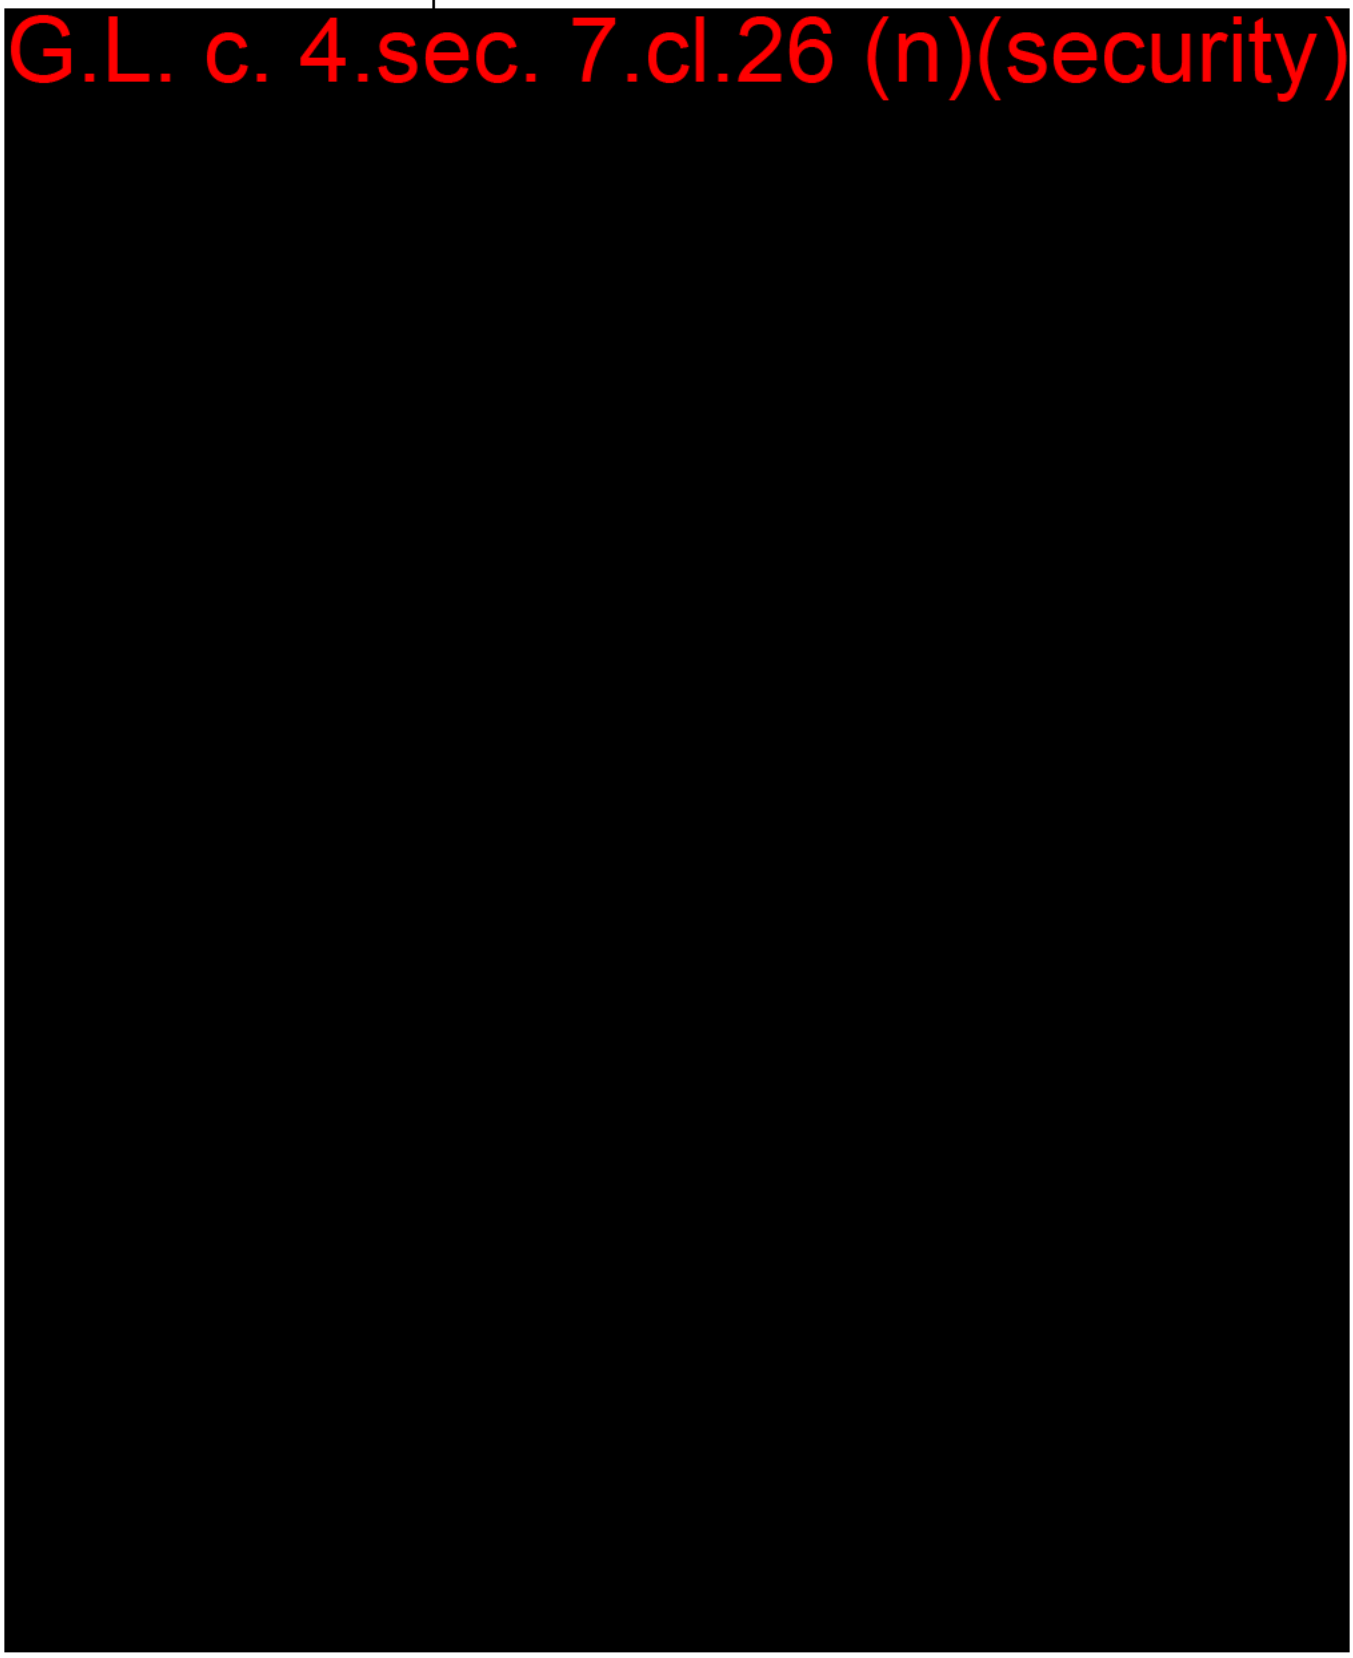
(2) Consent by the owner or person responsible for the property is obtained; or

(3) Exigent circumstances exist, including but not limited to: search and rescue missions, tactical missions, crash/accident scenes, crime scenes, fire scenes, hazmat scenes and/or natural disasters.

Prosecutorial & Court Ordered Restrictions:

Commonwealth Watch Center video data, and information are subject to state and federal laws and any court of competent jurisdiction orders. Video recordings shall be preserved, stored, and retained in accordance with the requests, directions, and orders of appropriate prosecutorial and/or judicial authorities.

Preservation of Video System Data:



All Commonwealth Watch Center video recordings, data, and information shall be processed, maintained, disseminated, preserved and/or destroyed in accordance with applicable Department and/or Fusion Center policies and procedures, including but not limited to those concerning public records, privacy, and the preservation of evidence.

Department of State Police
DIVISION COMMANDER'S ORDER

Issue Date	**Number**
September X, 2023	**2023-DHS-00X**
Subject: **ALPR Data Retention & Access**	

The Division of Homeland Security and Preparedness is responsible for the administration of the Department's Automatic License Plate Recognition System (ALPR). The availability and use of ALPR technology significantly enhances public safety by augmenting the operational and investigative effectiveness of law enforcement agencies.

The use of ALPR technology is governed by General Order TRF-11 "Automatic License Plate Recognition". In addition, the use of ALPR systems shall be subject to the guidelines set forth in this Order unless superseded by General Order TRF-11.

Pursuant to General Order TRF-11, the retention of ALPR data collected by the Department shall be determined by the Department of Criminal Justice Information Services (DCJIS) policy. Furthermore, ALPR systems operated by the Department shall be configured to restrict data visibility for a maximum duration of sixty (60-) days from the date of the initial request.

Users requesting to access records beyond sixty (60) days shall contact the Commonwealth Watch Center, the ALPR Administrator, or other administrator authorized by the Division Commander of Homeland Security and Preparedness. The request will be reviewed on a case-by-case basis. In the absence of exigent circumstances, the user may be required to revise their request, consult with a District Attorney's Office of jurisdiction, or to submit legal process to obtain the requested records.
